WHEREAS, according to the United States Small Business Administration, there are currently 30.2 million small businesses in the United States, that represent 99.7 percent of all businesses with employees and small businesses, are responsible for 65.9 percent of net new jobs created from 2000 to 2017; and

WHEREAS, small businesses employ 47.5 percent of the employees in the private sector; and

WHEREAS, 94% of consumers in the United States value the contributions small businesses make in their community; and

WHEREAS, 96% of consumers who plan to shop on Small Business Saturday® said the day inspires them to go to small, independently-owned retailers or restaurants that they have not been to before, or would not have otherwise tried; and

WHEREAS, 92% of companies planning promotions on Small Business Saturday said the day helps their business stand out during the busy holiday shopping season; and

WHEREAS, 59% of small business owners said Small Business Saturday contributes significantly to their holiday sales each year; and

WHEREAS, Roseville, California celebrates local small businesses that create jobs, contribute to the economy, and support the community; and

WHEREAS, advocacy groups, and public and private organizations across the country have endorsed the Saturday after Thanksgiving as Small Business Saturday; and

NOW, THEREFORE, I, JOHN B. ALLARD II, MAYOR OF THE CITY OF ROSEVILLE, CALIFORNIA, do hereby proclaim **November 30, 2019** as **SMALL BUSINESS SATURDAY** and encourage the community to patronize small business and appreciate the value they bring to the community.

SIGNED this 23rd day of October, 2019.

JOHN B. ALLARD II, MAYOR

COUNCIL COMMUNICATION

CC #: 0356
File #: 0800-02

Title: Roseville Groundwater Program Update
Contact: Sean Bigley 916-774-5513 sbigley@roseville.ca.us

Meeting Date: 10/23/2019
Item #: 8.1.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council hear a presentation regarding Roseville's Groundwater Program's status currently, as well as future activities.

BACKGROUND

Since the early 2000's, Roseville has made a significant investment in Aquifer Storage and Recovery (ASR) groundwater infrastructure, as well as securing key regulatory approvals at the state and federal levels. As a result, Roseville has six ASR groundwater wells that are currently active.

Starting in early 2018, the Environmental Utilities Department undertook a new effort to build upon this earlier investment and began to move Roseville's Groundwater Program into the next stages of development with the ultimate goal of realizing the original vision of a fully conjunctive use capable program that would provide Roseville with additional water supply reliability. Conjunctive use is a water management concept of using groundwater during dry hydrological periods when surface water is less available and conversely shifting to using surface water during wetter hydrological periods.

Also, starting in late 2018, significant momentum around the development of a Sacramento Regional Groundwater Bank, recognized by the U.S. Bureau of Reclamation, has gained traction under the leadership of the Regional Water Authority. With a functional federally-recognized groundwater bank in place, a regulatory, governance, and finance structure, the Sacramento regional water agencies could begin to work together in managing water supplies in the region in a conjunctive manner (maximize the best supply to the current hydrological conditions).

Functionally, it will require active groundwater infrastructure to be in place for the groundwater bank to operate. Roseville is one of the few water providers in the region with active and growing groundwater infrastructure and Roseville is being looked at as a functional hub for the proposed Sacramento Regional Groundwater Bank.

Staff will provide information to the City Council on the current status of Roseville's Groundwater Program and the next steps in the development of the program in the context of local water supply reliability and Roseville's water resources role in the Sacramento region.

FISCAL IMPACT

There is no fiscal impact as a result of this presentation to the City Council.

ECONOMIC DEVELOPMENT / JOBS CREATED

Not applicable.

ENVIRONMENTAL REVIEW

Not applicable.

Title: Temporary Water Transfer - Reimbursement Agreement
Contact: Sean Bigley 916-774-5513 sbigley@roseville.ca.us

Meeting Date: 10/23/2019
Item #: 8.2.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council authorize the City Manager to execute a Reimbursement Agreement to allow for a three (3) year, limited term, Central Valley Project Improvement Act (CVPIA) In-Basin Water Transfer of up to 6,000 acre-feet of water per year from Sacramento Municipal Utility District (SMUD) to the City of Roseville.

BACKGROUND

Staff from the City and SMUD have developed a proposed in-basin water transfer, as authorized in the CVPIA, of up to 6,000 acre-feet per year of SMUD Central Valley Project (CVP) water to the City for up to a three (3) year period starting as early as December 2019.

The water transfer would only occur with the approval of the United States Bureau of Reclamation's (USBR) Central Valley Operations Office, which operates Folsom Reservoir.

The expressed use of the transfer water by the City would be to continue with testing and further perfecting Roseville's Groundwater Program by utilizing existing and any future well infrastructure during that three-year period.

Based on current well infrastructure capacity, it is likely that Roseville would only be able to recharge the basin with approximately 2,000 acre-feet of water per year. To ensure that Roseville has flexibility to schedule more water, however, if Roseville expands infrastructure during that three-year period as planned, up to 6,000 acre-feet of SMUD transfer water is proposed to be made available per year.

Roseville would only pay for actual water delivered through our intake at Folsom Reservoir. The cost per acre-foot proposed by SMUD is $250.00 per acre foot of water delivered to the City.

As such, the following not-to-exceed amounts, are proposed:

FISCAL YEAR (FY) **(July 1 – June 30)**	FY2019-20	FY2020-21	FY2021-22

Acre-feet (maximum purchase)	6,000	6,000	6,000
Not-to-Exceed amount for purchased SMUD water at $250/acre-foot	$1,500,000	$1,500,000	$1,500,000

As part of the usual environmental review process, the Bureau of Reclamation (Reclamation) published a draft Environmental Analysis (EA) to comply with the National Environmental Policy Act (NEPA) for public review and comment. The determination of the EA was a Finding of No Significant Impact (FONSI) and Reclamation subsequently finalized the EA for the proposed SMUD-Roseville water transfer.

Additionally, the proposed water transfer was reviewed for compliance with the California Environmental Quality Act (CEQA). The project was determined to be exempt from CEQA as it requires only use of existing infrastructure and transfer amounts are nominal to the extent that no disturbance to environmental resources would occur.

Any purchased water from SMUD will be paid from the Water Construction Fund, currently budgeted in FY2019-20 in the SMUD Water Reassignment Capital Improvement Project. This project is funded from water connection fee revenue.

FISCAL IMPACT

Any purchased water will be paid from the Water Construction Fund, currently budgeted in FY2019-20 in the SMUD Water Reassignment Capital Improvement Project ($650,000.00). This project is funded from water connection fee revenue. Due to current infrastructure limitations, staff estimates that a maximum of 2,000 acre-feet of SMUD water could be used to recharge the groundwater basin in FY2019-20 at an estimated cost of $500,000.00. As additional Aquifer Storage & Recovery (ASR) groundwater wells are built, more recharge capacity would allow more SMUD transfer water to be potentially scheduled in FY2020-21 and FY2021-22 by the City, within the limits of budgeted resources.

ECONOMIC DEVELOPMENT / JOBS CREATED

Not applicable.

ENVIRONMENTAL REVIEW

The proposed project involves basic data collection, research, experimental management, and resource evaluation activities which do not result in a serious or major disturbance to an environmental resource. This activity is categorically exempt from California Environmental Quality Act (CEQA) as a Class 6 Exemption (State CEQA Guidelines Section 15306). The proposed project involves the temporary transmission, treatment and subsurface injection of transferred water using existing infrastructure to advance experimental groundwater management, resource evaluation and data collection relative to the City's approved groundwater program. There would be no new construction or disturbance to environmentally sensitive resources; therefore the Class 6 Categorical Exemption is applicable to the project. The Exemption has been prepared and no further CEQA action is required.

Resolution No. 19-445

Reimbursement Agreement

FONSI

Final Environmental Analysis

RESOLUTION NO. 19-445

APPROVING A REIMBURSEMENT AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND SACRAMENTO MUNICIPAL UTILITY DISTRICT, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a Reimbursement Agreement to allow for a three (3) year, limited term, Central Valley Project Improvement Act (CVPIA) In-Basin water transfer of up to 6,000 acre-feet of water per year from Sacramento Municipal Utility District, by and between the City of Roseville and Sacramento Municipal Utility District, has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said agreement is hereby approved and that the City Manager is authorized to execute it on behalf of the City of Roseville; and

PASSED AND ADOPTED by the Council of the City of Roseville this_____day of _____, 2019, by the following vote on roll call:

SMUD – ROSEVILLE TEMPORARY CVP WATER TRANSFER REIMBURSEMENT AGREEMENT

THIS REIMBURSEMENT AGREEMENT ("Agreement") is made and entered into this ___ day of _____, 20__, by and between the City of Roseville, a municipal corporation ("CITY"), and Sacramento Municipal Utility District, a municipal utility district ("SMUD").

W I T N E S S E T H:

WHEREAS, CITY is interested in acquiring a portion of additional Central Valley Water Project ("CVP") water supply, by permanent contract assignment, from SMUD; and

WHEREAS, the reassigned project water would be stored in the aquifers under CITY using CITY's Aquifer Storage and Recovery ("ASR") equipped groundwater wells; and

WHEREAS, CITY has a current need to prove out the "real world" injection capacity of CITY's existing ASR wells and the data to be gathered would help justify to the U.S. Bureau of Reclamation ("Reclamation") the capacity of the ASR system to potentially acquire a permanent contract assignment of a portion of SMUD's CVP water service contract entitlement at some future date under separate agreement; and

WHEREAS, SMUD and CITY agree that a temporary CVP water transfer of up to six thousand (6,000) acre-feet per year over a three (3) year period beginning from December 1, 2019 through February 28, 2022 is an appropriate means of providing the needed ASR data to continue reassignment discussions with the U.S. Bureau of Reclamation, SMUD and CITY; and

WHEREAS, any water used as part of the proposed CVP transfer would be used for purposes of the limited testing of the City's ASR groundwater and injection well capacity and for developing ASR groundwater system readiness.

NOW, THEREFORE, the parties agree as follows:

1. Purchase of Water by CITY. SMUD agrees to transfer up to six thousand (6,000) acre-feet of project water per year to CITY from SMUD's CVP contract entitlement over an established three (3) year period of December 1, 2019 through April 30, 2022 with such amounts of water not exceeding the annual Not-To-Exceed Reimbursement Amounts established herein as EXHIBIT A. CITY acknowledges and understands the completion of a transfer in any given year is dependent upon Reclamation's determination of whether the water is available and whether Reclamation approves the transfer. SMUD makes no representation or warranty as to the successful completion of one or any of the proposed transfers.

2. Costs and Reimbursements. In exchange for the transfer of available and CVP approved water during the established three (3) year period, CITY will compensate SMUD at the rate of $250 per acre-foot of water actually received by CITY from SMUD's CVP contract entitlement. CITY shall also bear all costs of reimbursing Reclamation for associated staff work on the transfer, as well as the hiring of necessary consultant(s) for environmental documentation needed for each transfer. Any consultant(s) reasonably hired by SMUD to facilitate the completion of any transfer must be preapproved by the CITY in writing before any such related costs are incurred for reimbursement by CITY, which approval shall not be unreasonably withheld. For avoidance of doubt, costs SMUD incurs as part of it and the CITY's joint retention of Stantec and ESA to prepare an environmental analysis of the transfer is a reimbursable cost under this Agreement.

If CITY disputes any costs claimed by SMUD for a reasonable cause, the amounts and reasons for the disputed item(s) will be documented in writing to SMUD within thirty (30) days after receipt of an invoice. CITY has the right to request additional documentation, and

accounting, and/or audit of the costs presented by SMUD. SMUD shall provide all documents reasonably requested by CITY. All undisputed costs will be reimbursed by CITY within 60 days following receipt of an invoice from SMUD. As to any disputed costs that are not resolved by their respective staffs, CITY and SMUD will each assign a senior leader to seek to reach an agreement.

3. System Validation. CITY shall be responsible for, at its own cost, the current and planned recharge capacity of CITY'S ASR groundwater infrastructure to determine the technical feasible annual schedule of transferred water, in increments, up to six thousand (6,000) acre-feet of water per year.

4. Term. This Agreement commences upon execution and shall naturally expire by its terms on April 30, 2022 and may be terminated at any time by either party upon providing a thirty (30) day written notice.

5. Completion of Project. CITY shall fully perform all necessary tasks to complete the project in a timely and cost-effective manner. If the project cannot be completed as originally scoped, CITY must, at its own expense, ensure that the project is in a safe condition for the public, that completed components are in service, and that any work performed is completed in a workmanlike fashion.

6. Independent Contractor/No Joint Venture. In the performance of this Agreement and completion of the project, each party will act as and be an independent contractor and not an officer, employee or agent of the other. Neither party has authority to bind or commit the other to any decision or course of action and will not represent to any person or business that it has such power. CITY has and will retain the right to exercise full control of the supervision of the work and the employment, direction compensation and discharge of all persons assisting CITY in the

performance of work funded by this Agreement. This Agreement does not create a joint venture, partnership or any other relationship of association or agency among the parties.

7. Indemnification. SMUD shall indemnify, defend and hold harmless CITY, and CITY's officers, directors, agents, employees, and volunteers against all claims, liabilities, damages and expenses ("Claims") including, without limitation, claims for injury to or death of any person, or damage (including contamination) to any property, natural resources or the environment to the extent caused by or arising out of SMUD's performance or failure to perform its obligations under this Agreement unless the Claim(s) is subject to CITY's Indemnification, below.

CITY shall indemnify, defend and hold harmless SMUD, its officers, directors, agents, employees and volunteers against all claims, liabilities, damages and expenses ("Claims") including, without limitation, claims for injury to or death of any person, or damage (including contamination) to any property, natural resources or the environment to the extent caused by or arising out of CITY's performance or failure to perform its obligations under this Agreement unless the Claim(s) is subject to SMUD's indemnification, above.

It is the intention of CITY and SMUD that when fault is determined to have been contributory, principles of comparative fault will be followed and each party shall bear the proportionate cost of any damage attributable to the fault of that party, its officers, directors, agents, employees, contractors, volunteers, and CITY Council. The foregoing requirements are not intended to and may not in any manner limit or qualify the liabilities and obligations otherwise assumed by CITY or SMUD pursuant to this Agreement.

8. Third Party Beneficiaries. Nothing in this Agreement is intended to make the public or any member thereof a third party beneficiary hereunder, and no term or condition or other provision of this Agreement is intended to establish a standard of care owed to the public or any member thereof.

9. Insurance. Each party, at its sole cost and expense, shall carry insurance, or self-insure, its activities in connection with this Agreement, and obtain, keep in force and maintain, insurance or equivalent programs of self-insurance, for general liability, workers compensation, and business automobile liability adequate to cover its potential liabilities hereunder. Each party agrees to provide the other 30 days' advance written notice of any cancellation, termination, or lapse of any of the insurance or self-insurance coverages.

9. Third Party Obligations. SMUD is solely liable to third parties with whom it, in its sole discretion, enters into contracts to facilitate one or more transfers under this Agreement. SMUD will pay directly such parties for all amounts due. SMUD must indemnify and hold CITY harmless from any and all claims and liabilities arising from contracts between SMUD and third parties. CITY's only obligation with respect to such third parties will be limited to reimbursement to SMUD for those expenses that CITY is obligated to reimburse pursuant to Section 2.

10. Time is of the Essence. Time is of the essence of this Agreement.

11. Compliance with Laws. Each party shall comply with all federal, state and local laws, ordinances and policies as may be applicable to its obligations under this Agreement.

12. Governing Agreement. In the event of any conflict between this Agreement and its EXHIBITS, the provisions of this Agreement shall govern. In the event of any conflict between any of the EXHIBITS, the provisions of the first in order of attachment shall govern.

13. Assignment. Neither party may assign this Agreement without the prior written consent of the other.

14. Successors in Interest. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

15. Attorney's Fees; Venue; Governing Law. If either party commences any legal action against the other party arising out of this Agreement or the performance hereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorney's fees. Any action arising out of this Agreement shall be brought in any county other than Sacramento or Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

16. Modification. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

17. Severability. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

18. Notices. Any notices to parties required by this Agreement shall be delivered personally or mailed, U.S. first class postage prepaid, addressed as follows:

CITY OF ROSEVILLE	SMUD
City of Roseville City Clerk's Department 311 Vernon Street, Roseville, CA 95678	Sacramento Municipal Utility District Power Contracts Administration, MSA404 6301 S Street Sacramento, CA 96817-1899

Either party may amend its address for notice by giving notice to the other party in writing.

19. Integrated Agreement. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ___ day of _____, 20__, and SMUD has caused this Agreement to be properly executed.

Mission Statements

The Department of the Interior conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner in the interest of the American public.

Background

In conformance with the National Environmental Policy Act of 1969 (NEPA), as amended, the U.S. Department of the Interior, Bureau of Reclamation (Reclamation) has prepared an Environmental Assessment (EA) to evaluate and disclose any potential environmental impacts related to Reclamation's approval of the short-term transfer of up to 6,000 acre-feet annually (AFA) of Central Valley Project (CVP) water supply from Sacramento Municipal Utility District (SMUD) to the City of Roseville (City) occurring between December and February during Contract Years 2019 through 2021 (i.e., March 1, 2019, through February 28, 2022).

Both SMUD and the City are CVP contractors in the American River Division with previous long-term water supply contracts that expired in 2012 and 2010, respectively, but continue to receive CVP water supply through interim contracts. Reclamation recently renewed those interim contracts with SMUD (No. 14-06-200-5198A-IR4) and the City (No. 14-06-200-3474A-IR5) through February 2021.

Reclamation's statutory authority to allow this transfer is Public Law 102-575, Title XXXIV, Central Valley Project Improvement Act (CVPIA), Section 3405(a). CVPIA Section 3405(a)(1) provides for allowable water supply transfers, subject to review of potential water supply and environmental impacts. This proposed in-basin CVP water transfer satisfies all conditions for transfers in CVPIA Section 3405(a)(1). CVPIA Section 3405(a)(1)(M) clarifies that in-basin transfers among CVP contractors (such as this proposed transfer) would not be limited to the actual use by SMUD.

This transfer is pursuant to Article 9 of SMUD's current CVP contract (Sales, Transfers, or Exchanges of Water). SMUD's CVP contract requires SMUD to obtain written approval from Reclamation's Contracting Officer for the transfer of specified contract quantities. The City will use the transferred water in its existing and approved Aquifer Storage and Recovery (ASR) program for conjunctive use purposes in its service area.

Alternatives Including the Proposed Action

No Action Alternative

Under the No Action Alternative, Reclamation would not approve the proposed short-term, 3-year CVP water transfer as described in the Proposed Action. Because the alternate means of supporting the ASR program are at the City's discretion, the No Action Alternative assumes, for this EA, no CVP water transfer between SMUD and the City would occur.

Under the No Action Alternative, Reclamation would operate the CVP, including Folsom Reservoir, in accordance with regulatory and approved operational constraints, analyzed and mitigated in the Coordinated Long-Term Operation of the Central Valley Project and State Water Project (LTO) Environmental Impact Statement (EIS) and associated Record of Decision (ROD) (Reclamation 2016). Reclamation is currently under a reinitiation of consultation (ROC) under the Endangered Species Act of 1973, as Amended, for the LTO and associated NEPA

compliance. The resulting ROD from the ROC would become the governing document when completed, superseding the 2016 ROD. Implementation of certain CVPIA water transfers is also covered in the LTO. All American River Division CVP contractors, including the City and SMUD, would divert their CVP contract water supplies at the point(s) of delivery specified in their contracts, and the delivery amounts would be subject to Reclamation's CVP Municipal and Industrial Water Shortage Policy. For SMUD, CVP water delivery would be through the Folsom South Canal at Nimbus Dam.

During the three years of the proposed CVP water transfer, it is not anticipated that SMUD would use this portion of its CVP water supply. This condition would not preclude the proposed transfer, as further explained in the Proposed Action.

Proposed Action

The Proposed Action is for Reclamation to approve a short-term, 3-year water transfer of up to 6,000 AFA of SMUD's CVP supply under its current interim renewal contract and subsequent contracts with Reclamation to the City (also a CVP American River Division contractor). SMUD and the City propose this in-basin CVP water transfer pursuant to Section 3405(a) of the CVPIA and Article 9 of SMUD's CVP Contract (Sales, Transfers, Exchanges). CVPIA Section 3405(a)(1)(M) clarifies that in-basin transfers among CVP contractors (such as this proposed water supply transfer) would not be limited to the actual use by SMUD. This CVP water transfer would comply with all Federal, State, and local laws and regulations, and Tribal laws or requirements imposed for the protection of the environment and Indian Trust Assets.

The proposed CVP water transfer would be implemented in the period of December 1 through the last day of February in CVP Contract Years 2019, 2020, and 2021. Delivery would be made during the period of seasonal high inflow to Folsom Reservoir from December through February to avoid potential impacts to Reclamation's operation of Folsom Reservoir for all authorized purposes. A CVP Contract Year is from March 1 of the current calendar year through the last day of February of the following calendar year. Therefore, the proposed transfer could start as early as in December 2019, if approved, and expire on February 28, 2022. Due to the current interim contract with SMUD expiring in February 2021, the proposed transfer during December through February of Contract Year 2021 (from March 2021 through February 2022) would be subject to the terms and conditions of SMUD's subsequent renewed interim contract or its long-term contract, if available.

The actual amount transferred each year would be subject to the annual request by the City to SMUD, and SMUD would notify Reclamation of that need in a schedule request. Reclamation would consider the request following announcement of SMUD's CVP water allocation. Based on the available hydrologic forecast, the City and SMUD would coordinate closely with Reclamation to determine the timing and pattern for diverting transferred water supply in the December through February period to avoid any adverse impacts to Reclamation's operation of Folsom Reservoir.

Delivery of the transferred water would be through the City's existing intake and conveyance at Folsom Dam, the same facilities the City uses currently for diverting its own CVP contract

water. There would be no new facilities required for diverting, conveying, and storing the transferred water.

Comments on the EA

Reclamation received one comment letter from Save the American River Association (SARA) dated July 15, 2019 for the EA posted for public review from June 17, 2019 through July 17, 2019 on Reclamation's NEPA document website (https://www.usbr.gov/mp/nepa). This letter presented comments regarding the EA analysis and expressed specific concerns with the methods used to determine effects, the absence of steelhead from the list of federal-status species in Table 3-1, the effects on temperature and flow in the lower American River, the lack of specificity of water year-type conditions required for diversions, and Reclamation's finding that winter diversions will be insignificant.

Reclamation has evaluated the SARA comment letter carefully and prepared the below responses.

Effects Analysis

Per the SARA comment letter, the EA stated that the impact from the transferred amount of less than 0.4, 0.6, 1.1, 1.9, and 2.9 percent of the flow in December through February in wet, above normal, below normal, dry and critically dry years would be insignificant. The EA should utilize science-based methods to determine the effects of the diversion on recreation, fisheries, American River Parkway, Delta, and other CVP water users. The EA should also analyze the effect of existing, cumulative diversions to determine whether there is additional capability to divert more water.

Response

The EA presents information about potential environmental consequences to water resources on pages 10 through 11 and states, based on the simulated American River flow below Nimbus Dam in the preferred alternative of the 2016 Coordinated Long-Term Operation of the Central Valley Project and State Water Project (LTO) Environmental Impact Statement (EIS) and associated Record of Decision (ROD), the transferred amount would be less than 0.4, 0.6, 1.1, 1.9, and 2.9 percent of the flow in December through February in wet, above normal, below normal, dry, and critical years, using the Sacramento Valley Index. The Proposed Action would not have adverse effects on operation of Folsom Reservoir because of: (1) the above-mentioned low percentages of the proposed transfer amount compared to Folsom Reservoir releases, and (2) the commitment in the Proposed Action for the City and SMUD to closely coordinate with Reclamation to determine the actual quantity, timing, and pattern of transfer to minimize potential adverse effects on Reclamation's operation of Folsom Reservoir.

Page 3 of the EA states that the Proposed Action is to approve a short-term, 3-year water transfer of up to 6,000 AFA of SMUD's CVP supply under its current interim renewal contract (and subsequent CVP contracts with Reclamation) to the City (also a CVP American River Division contractor). This in-basin CVP to CVP water transfer is pursuant to Section 3405(a) of the CVPIA and Article 9 of SMUD's CVP Contract (Sales, Transfers, Exchanges).

Page 4 of the EA states that the delivery of the transferred CVP water would be through the City's existing intake and conveyance at Folsom Dam, which are the same facilities the City uses currently for diverting its own CVP contract water. There would be no new facilities required for diverting and conveying the transferred CVP water.

Federally Listed Steelhead

The SARA comment letter raised the following issue concerning steelhead: Table 3-1 in the EA lists federal-status species that may occur in the Proposed Action Area. The list did not include steelhead, which is a federally listed species present in the American River.

Response

Central Valley Steelhead, Central Valley Spring-run Chinook salmon, Sacramento River Winter-run Chinook Salmon, Central Valley fall/late fall-run Chinook salmon and Green Sturgeon were inadvertently left off Table 3-1 "Federal Status Species Potentially Found in the Proposed Action Area" on page 12 of the EA. Table 3-1 on page 12 of the EA has been revised to include the following:

Common Name	Scientific Name	Status	Effects	Potential for Occurrence in the Action Area
Central Valley Steelhead distinct population segment	Oncorhynchus mykiss	T	No Effect	**Absent.** This DPS spawns, rears, and migrates in the Lower American River downstream of Nimbus Dam and critical habitat is designated in the Lower American River from its confluence with the Sacramento River upstream to Nimbus Dam.
Central Valley Spring-run Chinook salmon evolutionarily significant unit	Oncorhynchus tshawytscha	T	No Effect	**Absent.** This ESU occasionally rears in the Lower American River downstream of Nimbus Dam and critical habitat is designated in the Lower American River from its confluence with the Sacramento River upstream to the Watt Avenue bridge.
Sacramento River Winter-run Chinook salmon evolutionarily significant unit	Oncorhynchus tshawytscha	E	No Effect	**Absent.** This ESU occasionally rears in the Lower American River downstream of Nimbus Dam but no critical habitat is designated in the Lower American River.
Central Valley fall- / late fall-run Chinook salmon evolutionarily significant unit	Oncorhynchus tshawytscha	Unlisted species of concern	No Effect	**Absent.** This ESU spawns, rears, and migrates in the Lower American River downstream of Nimbus Dam and the Lower American River from its confluence with the Sacramento River upstream to Nimbus Dam is designated as essential fish habitat for Chinook salmon under the Magnuson-Stevens Fishery Conservation and Management Act.
Green Sturgeon Southern distinct population segment	Acipenser medirostris	T	No Effect	**Absent.** This DPS has not been observed in the Lower American River but critical habitat is designated in the Lower American River from its confluence with the Sacramento River upstream to the Highway 160 bridge.

The addition of these fish species to Table 3-1 does not change the environmental consequences analysis contained in Section 3.3 “Biological Resources” on page 15 of the EA, as the Proposed Action would be consistent with requirements described in the 2008 U.S. Fish and Wildlife Service (USFWS) Formal Endangered Species Act Consultation on the Proposed Coordinated Operations of the Central Valley Project and State Water Project (2008 USFWS BO), the National Marine Fisheries Service (NMFS) 2009 Biological Opinion and Conference Opinion on the Long-Term Operations of the Central Valley Project and State Water Project (2009 NMFS BO) and the 2016 LTO EIS and associated ROD.

Temperature and Flow Effects

SARA stated in their comment letter that increased winter diversions would result in reduced reservoir storage, decreased downstream flows during the year, and depletion of the cold-water pool. The EA should analyze the temperature and flow effects on steelhead and salmon throughout the year.

Response

Page 11 of the EA states that the Proposed Action would have no impact on the cold-water pool and temperature management in the lower American River because the proposed transfer period in December through February would be after the temperature management period.

Page 10 of the EA states that, Under the Proposed Action, the transfer would be executed during December through February when seasonal high inflows to Folsom Reservoir occur in the American River. The actual amount transferred each year would be subject to the annual request by the City to SMUD, and Reclamation’s approval of SMUD’s subsequent request to schedule the transfer. Reclamation would consider the request following announcement of SMUD’s CVP water allocation. Based on the available hydrologic forecast, the City and SMUD would coordinate closely with Reclamation to determine the timing and pattern for diverting transferred water supply in the December through February period to avoid any adverse impacts to Reclamation’s operation of Folsom Reservoir.

In addition, page 10 of the EA states that changes in Folsom Reservoir releases, with transferring up to 6,000 AFA in the 3-month period, would be minimal compared to the total flows through Lake Natoma in December through February (i.e., 825,000 acre-feet on average, based on the 1988 – 2018 period of record [California Department of Water Resources 2018]).

Page 15 of the EA provides information on the potential environmental consequences to fisheries as a result of the Proposed Action.

Diversion Limitations and Water Year-Type Analysis

Per the SARA comment letter, the proposed transfer would allow groundwater withdrawals in all water year types. The EA should specify the conditions when river diversions should not be allowed and evaluate the impacts in each water year type.

Response

Page 2 of the EA states that the City will use the transferred water in its existing and approved ASR program for conjunctive use purposes in its service area, shown in Exhibit A of the City's existing CVP contract. The transferred water will augment local groundwater resources, improving overall health of the groundwater basin and City's dry year water supply protection.

Analysis of Winter Diversions

Per the SARA comment letter, the EA should include an analysis of why removing three percent of the winter flow in critical years is not significant.

Response

Page 15 of the EA states that the Proposed Action would be consistent with requirements described in the 2008 USFWS/2009 NMFS BOs and the 2016 LTO EIS and associated ROD. In addition, as stated on page 10 of the EA, under the Proposed Action, the transfer would be executed during December through February when seasonal high inflows to Folsom Reservoir occur in the American River. Based on the available hydrologic forecast, the City and SMUD would coordinate closely with Reclamation to determine the timing and pattern for diverting transferred water supply in the December through February period to avoid any adverse impacts to Reclamation's operation of Folsom Reservoir. Page 15 of the EA states that operations associated with the Proposed Action would be within the historic limits covered by the consultations for the Programmatic EIS for the CVPIA. However, Section 3405(a)(1)(L) of the CVPIA provides Reclamation an additional opportunity to reject any proposed transfer or exchange action that falls within the general criteria of the Proposed Action if it is anticipated to have a significant environmental impact. In critical years, and any year type, Reclamation may not be able to facilitate a transfer of SMUD's CVP contract water in the quantity or schedule requested.

Findings

Based on the attached EA, Reclamation finds that the Proposed Action is not a major Federal Action that will significantly affect the quality of the human environment and preparation of an EIS is not required.

The EA describes the affected environment and the existing resources in the Proposed Action area and evaluates the effects of the No Action and Proposed Action alternatives on the resources. Reclamation prepared the EA in accordance with the NEPA, Council on Environmental Quality regulations (40 Code of Federal Regulations [CFR] 1500-1508), and

Department of the Interior Regulations (43 CFR Part 46); all are hereby incorporated by reference.

The following provides the reasons why the impacts of the Proposed Action will not be significant:

1. Indian Trust Asset (ITA) - There are no known ITAs or treaty rights exercised by tribes, nor are there any reservations or trust lands located within or adjacent to the Proposed Action area that will be affected. The Proposed Action does not have a potential to affect ITAs (512 Department Manual [DM] 2 Policy Memorandum dated December 15, 1993)

2. Indian Sacred Sites - There are no identified Indian Sacred Sites within the action area and therefore this project will not inhibit use or access to any Indian Sacred Sites (Executive Order [EO] 13007 and 512 DM 3).

3. Environmental Justice - The Proposed Action will not have any disproportionately negative impact on low-income or minority individuals within the Proposed Action area. Conditions under the Proposed Action will be identical to conditions under the No Action Alternative (EO 12898).

4. Public Health and Safety -The Proposed Action will not significantly affect public health and safety (40 CFR 1508.27(b)(2)).

5. Important Natural Resources - The Proposed Action will not significantly impact natural resources and unique geographic characteristics such as historic or cultural resources; parks, recreation and refuge lands; wilderness areas; wild or scenic rivers; national natural landmarks; sole or principal drinking water aquifers; prime farmlands; wetlands (EO 11990); floodplains (EO 11988); national monuments; migratory birds; and other ecologically significant areas (40 CFR 1508.27(b)(3) and 43 CFR 46.215(b)).

6. Highly Controversial Effects -There is no potential for the effects to be considered highly controversial (40 CFR 1508.27(b)(4)).

7. Uncertain or Unknown Risks - The Proposed Action will not have effects on the human environment that are highly uncertain or involve unique or unknown risks (40 CFR 1508.27(b)(5)).

8. Precedence - The Proposed Action will neither establish a precedent for future actions with significant effects nor represent a decision in principle about a future consideration (40 CFR 1508.27(b)(6)).

9. Cumulative Effects -The Proposed Action will not have significant cumulative impacts (40 CFR 1508.27(b)(7)).

10. Cultural Resources - The Proposed Action will not adversely affect any districts, sites, highways, structures, or objects listed in or eligible for listing in the National Register of Historic Places (40 CFR 1508.27(b)(8). Pursuant to 54 USC §306108, commonly known as Section 106 of the National Historic Preservation Act, and its implementing

regulations 36 CFR Part 800, Reclamation determined the undertaking would have no potential to affect historic properties. A cultural resources compliance memorandum was completed April 26, 2019.

11. Biological Resources - The Proposed Action will not have any adverse effect on species either currently federally listed or proposed for listing as candidate, endangered, or threatened species, and will have no adverse effect on designated critical habitat (40 CFR 1508.27(b) (9)).

12. Compliance with Existing Law - The Proposed Action will not violate Federal, state, local law or requirements imposed for the protection of the environment (40 CFR 1508.27(b)(10)).

13. Facility Operations - Implementation of the Proposed Action does not change hydrology of the water sources within the Proposed Action area. Reclamation is currently operating the overall CVP system to meet all regulatory requirements, downstream water needs, and environmental requirements, and will continue to do so under the Proposed Action.

RECLAMATION

Managing Water in the West

Environmental Assessment

Short-Term Central Valley Project Water Transfer Between Sacramento Municipal Utility District and City of Roseville

Mission Statements

The Department of the Interior conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner in the interest of the American public.

Section 1
Introduction

In conformance with the National Environmental Policy Act of 1969 (NEPA), as amended, the U.S. Department of the Interior, Bureau of Reclamation (Reclamation) has prepared this Environmental Assessment (EA) to evaluate and disclose any potential environmental impacts related to Reclamation's approval of the short-term transfer of up to 6,000 acre-feet annually (AFA) of Central Valley Project (CVP) water supply from Sacramento Municipal Utility District (SMUD) to the City of Roseville (City) occurring between December and February during Contract Years 2019 through 2021 (i.e., March 1, 2019, through February 28, 2022).

1.1 Background

Both SMUD and the City are CVP contractors in the American River Division with previous long-term water supply contracts that expired in 2012 and 2010, respectively, but continued to receive CVP water supply through interim contracts. Reclamation recently renewed those interim contracts with SMUD (No. 14-06-200-5198A-IR4) and the City (No. 14-06-200-3474A-IR5) through February 2021. Water supply conditions of these two contractors and their needs for CVP water are summarized in the *Finding of No Significant Impact and Environmental Assessment for Central Valley Project Interim Renewal Contracts for City of Roseville, Sacramento Municipal Utility District, and Sacramento County Water Agency 2019-2021* (Reclamation 2018).

Reclamation's statutory authority to allow this transfer is Public Law 102-575, Title XXXIV, Central Valley Project Improvement Act (CVPIA), Section 3405(a). CVPIA Section 3405(a)(1) provides for allowable water supply transfers. Subject to review of potential water supply and environmental impacts, this proposed in-basin CVP water transfer satisfies all conditions for transfers in CVPIA Section 3405(a)(1). CVPIA Section 3405(a)(1)(M) clarifies that in-basin transfers among CVP contractors (such as this proposed water supply transfer) would not be limited to the actual use by SMUD.

This transfer is pursuant to Article 9 of SMUD's current CVP contract (Sales, Transfers, or Exchanges of Water). SMUD's CVP contract requires SMUD to obtain written approval from Reclamation's Contracting Officer for the transfer of specified contract quantities.

1.2 Purpose and Need

The purpose of the Proposed Action is for Reclamation to facilitate and approve the proposed water transfer in compliance with applicable laws and regulations, including CVPIA Section 3405(a) for water transfers and Subparagraphs (H) and (I) of Section V of Reclamation's 1993 *Interim Guidelines for Implementation of the Water Transfer Provisions of the Central Valley*

Project Improvement Act (Title XXXIV of PL 102-575), as amended. The transfers allowed in the CVPIA are to increase water-related benefits provided by the CVP and improve CVP operational flexibility.

The City will use the transferred water in its existing and approved Aquifer Storage and Recovery (ASR) program for conjunctive use purposes in its service area, shown in Exhibit A of the City's existing CVP contract. The transferred water will augment local groundwater resources, providing additional water-related beneficial use of CVP water and improving overall health of the groundwater basin. The City is a signatory to the Water Forum Agreement (WFA) which was signed in 2000 by Sacramento area water purveyors, environmental groups, and economic interests to facilitate regional economic growth and protect the lower American River. Under its Purveyor Specific Agreement in the WFA, the City is to use groundwater to provide supplemental water supply during dry years to facilitate its voluntary reductions in diversions from the American River in those years, including CVP water deliveries. As Reclamation is not a signatory to the WFA, it cannot rely on the relief provided by the voluntary reductions in diversions.

Section 2
Alternatives Including the Proposed Action

This EA considers two possible actions: the No Action Alternative and the Proposed Action. The No Action Alternative reflects future conditions over the 3-year period without the Proposed Action and serves as a basis of comparison for determining potential effects to the human environment.

2.1 No Action Alternative

Under the No Action Alternative, Reclamation would not approve the proposed short-term, 3-year CVP water transfer as described in the Proposed Action. Because the alternate means of supporting the ASR program are at the City's discretion, the No Action Alternative assumes, for the purpose of environmental impact assessment, no CVP water transfer between SMUD and the City would occur.

Under the No Action Alternative, Reclamation would operate the CVP, including Folsom Reservoir, in accordance with regulatory and approved operational constraints, analyzed and mitigated in the Coordinated Long-Term Operation of the Central Valley Project and State Water Project (LTO) Environmental Impact Statement (EIS) and associated Record of Decision (ROD) (Reclamation 2016). Reclamation is currently under a reinitiation of consultation (ROC) under the Endangered Species Act of 1973, as Amended, for the LTO and associated NEPA compliance. The resulting ROD from the ROC would become the governing document when completed, superseding the 2016 ROD. Implementation of certain CVPIA water transfers is also covered in the LTO. All American River Division CVP contractors, including the City and SMUD, would divert their CVP contract water supplies at the specified point(s) of delivery specified in their contracts, and the delivery amounts would be subject to Reclamation's CVP Municipal and Industrial (M&I) Water Shortage Policy (WSP). For SMUD, CVP water delivery would be through the Folsom South Canal (FSC) at Nimbus Dam.

During the three years of the proposed CVP water transfer, it is not anticipated that SMUD would use this portion of its CVP water supply. This condition would not preclude the proposed transfer, as further explained in the Proposed Action.

2.2 Proposed Action

The Proposed Action is for Reclamation to approve a short-term, 3-year water transfer of up to 6,000 AFA of SMUD's CVP supply under its current interim renewal contract and subsequent contracts with Reclamation to the City (also a CVP American River Division contractor). SMUD and the City propose this in-basin CVP water transfer pursuant to Section 3405(a) of the CVPIA and Article 9 of SMUD's CVP Contract (Sales, Transfers, Exchanges). CVPIA Section 3405(a)(1)(M) clarifies that in-basin transfers among CVP contractors (such as this proposed

water supply transfer) would not be limited to the actual use by SMUD. This CVP water transfer would comply with all Federal, State, and local laws and regulations, and Tribal laws or requirements imposed for the protection of the environment and Indian Trust Assets.

The proposed CVP water transfer would be implemented in the period of December 1 through the last day of February in CVP Contract Years 2019, 2020, and 2021. Delivery would be made during the period of seasonal high inflow to Folsom Reservoir from December through February to minimize potential impacts to Reclamation's operation of Folsom Reservoir for all authorized purposes. A CVP Contract Year is from March 1 of the current calendar year through the last day of February of the following calendar year. Therefore, the proposed transfer could start as early as in December 2019, if approved, and expire on February 28, 2022. Due to the current interim contract with SMUD expiring in February 2021, the proposed transfer during December through February of Contract Year 2021 (from March 2021 through February 2022) would be subject to the terms and conditions of SMUD's subsequent renewed interim contract or its long-term contract, if available.

The actual amount transferred each year would be subject to the annual request by the City to SMUD, and SMUD would inform Reclamation of that need in a schedule request. Reclamation would consent to the request following announcement of SMUD's CVP water allocation. Based on the available hydrologic forecast, the City and SMUD would coordinate closely with Reclamation to determine the timing and pattern for diverting transferred water supply in the December through February period to avoid any adverse impacts to Reclamation's operation of Folsom Reservoir.

Delivery of the transferred water would be through the City's existing intake and conveyance at Folsom Dam, the same facilities the City uses currently for diverting its own CVP contract delivery. There would be no new facilities required for diverting, conveying, and storing the transferred water.

2.2.1 Action Area

The Action Area consists of Folsom Reservoir the 6.8-mile reach of the American River from Folsom Dam (the diversion location on the American River for the City's CVP water delivery) to Nimbus Dam (the diversion location on the American River for SMUD's CVP water delivery), and the FSC as shown in Figure 2-1. For reference, the City's service area, as depicted in its current interim renewal contract with Reclamation and where the City's ASR program is located, is also shown in the figure for reference.

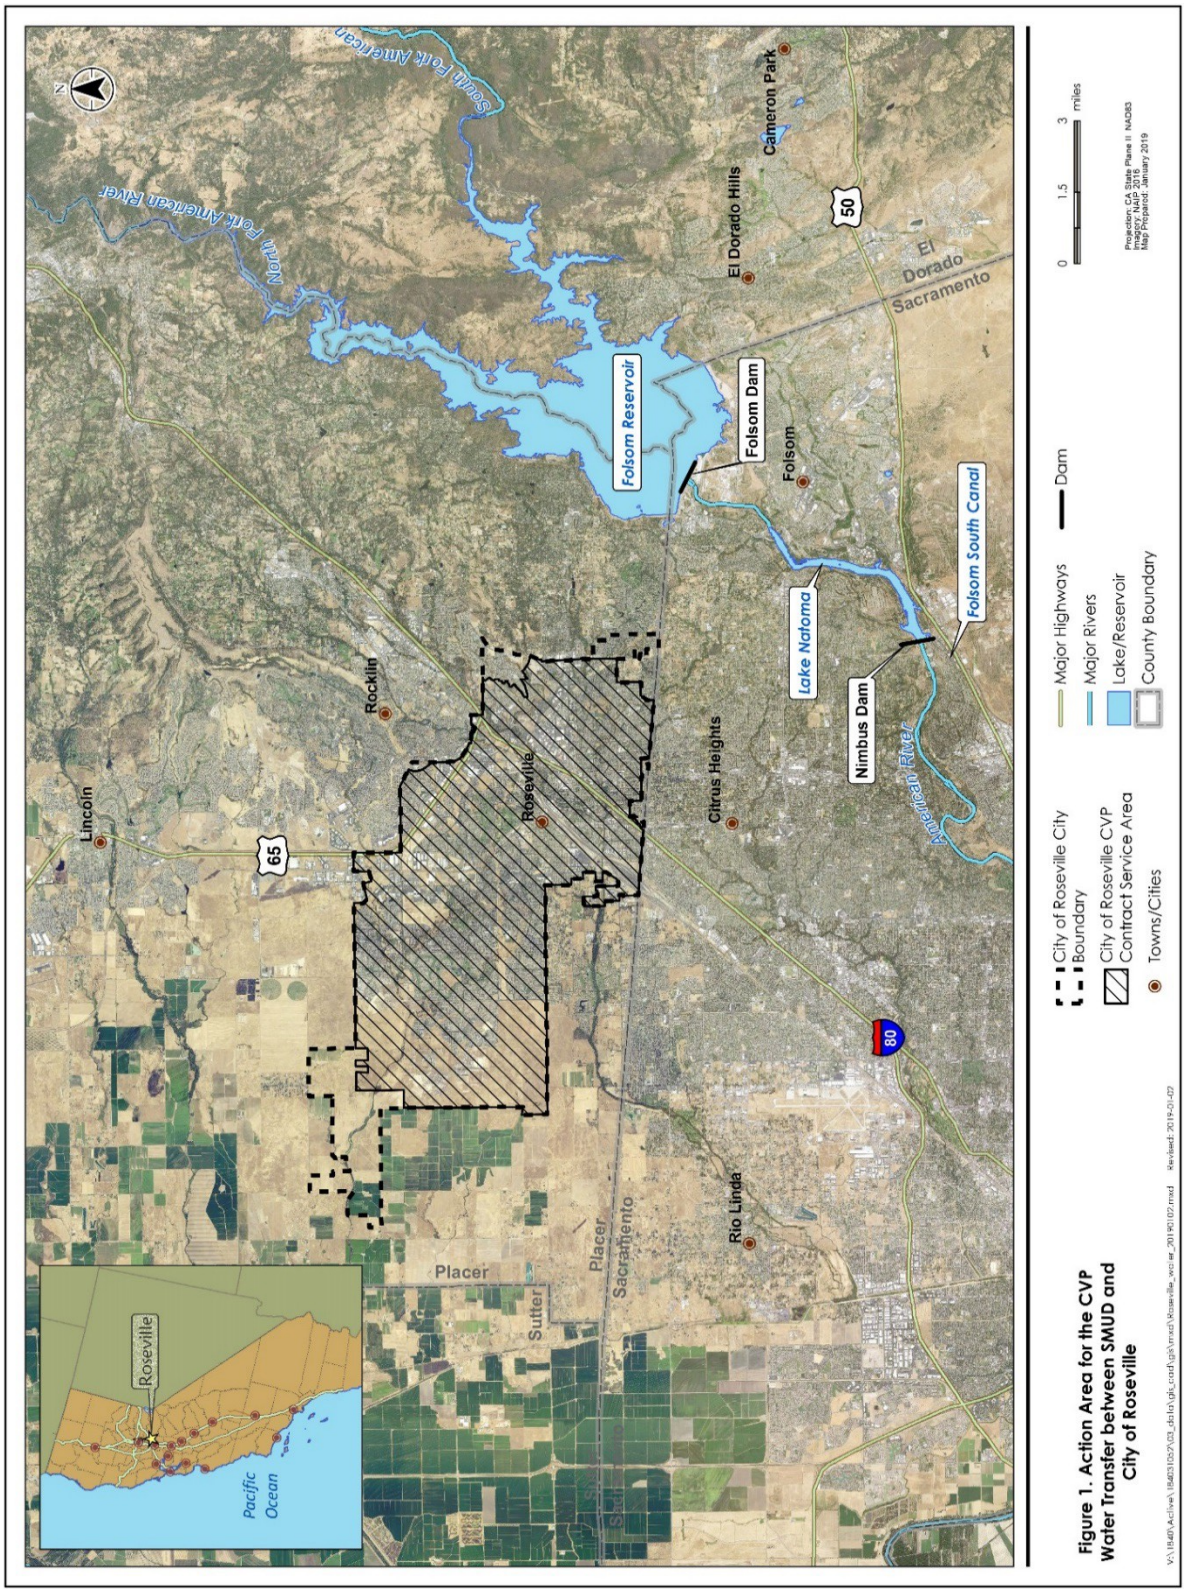

Figure 2-1. Action Area for the CVP Water Transfer Between SMUD and City of Roseville

This page left blank intentionally.

Section 3
Affected Environment and Environmental Consequences

This section identifies the potentially affected environment and the environmental consequences that could result from the No Action Alternative and the Proposed Action to determine the potential direct, indirect, and cumulative effects to environmental resources of concern.

3.1 Resources Not Analyzed in Detail

Department of the Interior Regulations, Executive Orders, and Reclamation guidelines require discussion of Indian Trust Assets, Indian Sacred Sites, National Historic Preservation Act Section 106, and Environmental Justice when preparing environmental documentation. Impacts to these resources were considered and found to be minor or absent. Brief explanations supporting the minor or absent impacts are provided below.

3.1.1 Land Use

There would be no land use development or land conversion under either the No Action Alterative or the Proposed Action. Therefore, land use would not change under either of the alternatives.

3.1.2 Cultural Resources

The Proposed Action is the type of activity that does not have the potential to affect historic properties pursuant to 36 CFR § 800.3(a)(1), resulting in no impacts to cultural resources under the No Action or Proposed Action. Reclamation would continue to operate the CVP consistent with all requirements as described in the 2016 LTO ROD and the subsequent ROD from the ROC, and any fluctuations in Folsom Reservoir or Lake Natoma as a result of the Proposed Action would be within historical ranges (see Section 3.2.2). In addition, CVP water would be conveyed through existing facilities to existing users without any new construction or ground disturbances.

3.1.3 Global Climate

Neither the No Action Alternative nor the Proposed Action would affect the global climate. Water would move through existing facilities and using existing pumps. Water delivered to SMUD and the City is predominantly moved via gravity and electric pumps at the FSC (Nimbus Dam) and the conveyance facilities at Folsom Dam, respectively. Recharging water into the underlying groundwater aquifer would use existing electric-powered injection wells. The limited quantity of the proposed water transfer would not result in a substantial increase in greenhouse gas emissions. Consequently, neither the No Action Alternative nor the Proposed Action would have a contributing effect toward global climate change.

Continued changes in global climate are expected to have some effect on the snow pack of the area and the runoff regime. Water made available to CVP contractors is dependent on a number of factors, including but not limited to, hydrologic conditions, and instream flow, and water quality requirements in the CVP/State Water Project (SWP) system. Long-term climate change would not affect the proposed short-term transfers in Contract Years 2019 through 2021.

3.1.4 Indian Sacred Sites

There would be no impacts to Indian Sacred Sites under either the No Action Alternative or the Proposed Action. Reclamation would continue to operate the CVP consistent with all requirements as described in the 2016 LTO ROD and the subsequent ROD from the ROC, and any fluctuations in Folsom Reservoir or Lake Natoma as a result of the Proposed Action would be within historical ranges (see Section 3.1.2). Both alternatives would maintain existing land use practices, would not involve construction or ground disturbance on Indian Sacred Sites, and would not limit access to, and ceremonial use of, Indian Sacred Sites, or significantly adversely affect the physical integrity of such sacred sites.

3.1.5 Socio-Economic Resources

There would be no impacts to socio-economic resources from the No Action Alternative. Allowing a transfer under the Proposed Action would not adversely affect the quality of human environment but would allow for additional groundwater recharge and increased flexibility to meet water demands when the City's surface water supplies become limited during droughts or otherwise restricted conditions.

3.1.6 Environmental Justice

There would be no impacts related to Environmental Justice under either the No Action Alternative or the Proposed Action. The No Action Alternative and the Proposed Action assume that water demands in the City's CVP service area would continue to be met with existing water supplies. Neither alternative would cause dislocation; changes in employment; increase flood, drought, or disease; or disproportionately affect minority populations. Therefore, there would be no Environmental Justice issues associated with either the No Action Alternative or the Proposed Action.

3.1.7 Indian Trust Assets

There would be no impacts to Indian Trust Assets under the No Action Alternative or the Proposed Action. Both alternatives would maintain existing land use practices at existing locations; not involve any construction on lands; or not have impacts to water, hunting, fishing, or ceremonial rights.

3.1.8 Air Quality

Neither the No Action Alternative nor the Proposed Action would result in significant changes to air quality. There would be no new facility required for the proposed transfer; water would move through existing facilities using existing pumps. After being diverted from Folsom Reservoir, transferred water would move via gravity and electric-powered pumps before being injected into the groundwater aquifer using wells. The limited quantity of the proposed water transfer would not result in a substantial increase in emissions. Since no impacts to air quality would occur, a determination of general conformity under the Clean Air Act is not required.

3.2 Water Resources

3.2.1 Affected Environment

The American River Basin in California covers an area of approximately 2,100 square miles and has an average annual unimpaired runoff of 2.7 million acre-feet; however, annual runoff has varied from 900,000 acre-feet to 5,000,000 acre-feet (USACE 2017). The major tributaries in the American River system include the North Fork American River, Middle Fork American River, and South Fork American River, all of which eventually flow into Folsom Reservoir.

The Folsom Dam and Reservoir on the American River is the major facility of the American River Division of the CVP. Reclamation operates Folsom Dam and Reservoir for all authorized purposes, including: flood control, meeting water right and contract obligations, CVP water service contract deliveries, environmental flow requirements and temperature management in the lower American River, and helping to meet Delta water quality standards (Reclamation 2017). At an elevation of 466 feet above mean sea level (National Geodetic Vertical Datum 29), Folsom Reservoir is the largest reservoir on the American River with a normal full-pool storage capacity of approximately 975,000 acre-feet and a drainage area of approximately 1,875 square miles (USACE 2017). Lake Natoma, which is impounded by Nimbus Dam, another facility of the CVP American River Division, is located seven miles downstream from Folsom Dam. Lake Natoma serves as a regulating afterbay for Folsom Dam with a total storage capacity of approximately 8,760 acre-feet, and Nimbus Dam serves a diversion dam for the FSC (Reclamation 2018). From Nimbus Dam, the lower American River extends 23 miles to the confluence with the Sacramento River near downtown Sacramento.

Reclamation holds both direct diversion and storage rights on the American River and uses these rights in combination to deliver water to local users under CVP water service contracts and to meet downstream regulatory requirements and water contract deliveries in and south of the Delta. SMUD and the City are two of eight long-term Water Service Contractors in the American River Division of the CVP, which also includes the City of Folsom, Sacramento County Water Agency, San Juan Water District, Placer County Water Agency (PCWA), El Dorado Irrigation District (EID), and East Bay Municipal Utility District. Reclamation facilities, including Folsom Dam and Reservoir, are also used to deliver non-CVP water to senior water rights holders, and many of these water rights holders take delivery from Folsom Reservoir (Reclamation 2005).

SMUD receives its CVP contract deliveries via the FSC, diverting at Nimbus Dam, and the City receives its CVP contract deliveries and its MFP contract deliveries through the City's intake and conveyance facilities at the Hinkle Wye, diverting at Folsom Dam. Both the City and SMUD service areas are in the CVP Consolidated Place of Use under Reclamation's water right permits.

The City has made major investments in ASR facilities and supporting interties and conveyance infrastructure to facilitate in-lieu groundwater recharge opportunities and emergency groundwater delivery capabilities throughout the City's service area. Under the City's ASR program, treated surface water can be injected into the aquifer during wet times (normal/wet years or during the rainy season) and withdrawn when the City needs additional water supplies. The ASR program uses include augmenting surface water supplies during droughts or "peak-shaving" (i.e., seasonal storage). In 2012, the City certified the *Aquifer Storage and Recovery Program Final Focused Environmental Impact Report* (State Clearing House No. 2009072018)

(Roseville 2012) which evaluated the environmental effects of the ASR program and obtained all permits for the ASR program in 2013. As of 2019, the City has successfully recharged water into the groundwater aquifer using its ASR facilities.

3.2.2 Environmental Consequences

No Action Alternative

Implementation of the No Action Alternative would mean that there would be no transfer of SMUD's CVP contract delivery to the City. The No Action Alternative assumes that water demands in the City's CVP service area would continue to be met with existing water supplies, but without the proposed transfer. The City would continue to use its CVP and MFP water supplies and other transferred water as approved for its ASR program and drought protection. Under the No Action Alternative, Reclamation would continue to operate the CVP, including Folsom Reservoir, consistent with all requirements as described in the 2008 U.S. Fish and Wildlife Service (USFWS) Formal Endangered Species Act Consultation on the Proposed Coordinated Operations of the Central Valley Project and State Water Project (2008 USFWS BO) and the National Marine Fisheries Service (NMFS) 2009 Biological Opinion and Conference Opinion on the Long-Term Operations of the Central Valley Project and State Water Project (2009 NMFS BO) and the 2016 LTO ROD and the subsequent ROD from the ROC.

SMUD has used a portion of its CVP water supply historically and expects to use a portion of its CVP water supply in the future. However, during the three years of the proposed CVP water supply transfer, it is not anticipated that SMUD would use its CVP water supply.

Proposed Action

Implementation of the Proposed Action would mean that up to 6,000 acre-feet of SMUD's CVP contract water would be transferred to the City in CVP Contract Years 2019, 2020, and 2021. The transfer would occur during December through February, and the water would be used in the City's ASR program in its service area to improve groundwater conditions, advance regional conjunctive use practices, and provide additional drought protection for the City.

Under the Proposed Action, the transfer would be executed during December through February when seasonal high inflows to Folsom Reservoir occur in the American River. The actual amount transferred each year would be subject to the annual request by the City to SMUD, and SMUD would inform Reclamation of that need in a schedule request. Reclamation would consent to the request following announcement of SMUD's CVP water allocation. Based on the available hydrologic forecast, the City and SMUD would coordinate closely with Reclamation to determine the timing and pattern for diverting transferred water supply in the December through February period to avoid any adverse impacts to Reclamation's operation of Folsom Reservoir.

Changes in Folsom Reservoir releases, with transferring up to 6,000 acre-feet in the 3-month period, to Lake Natoma would be minimal compared to the total flows through Lake Natoma in December through February (i.e., 825,000 acre-feet on average, based on the 1988 – 2018 period of record [California Department of Water Resources 2018]). Based on the simulated American River flow below Nimbus Dam in the preferred alternative of the 2016 LTO EIS, the transferred amount would be less than 0.4, 0.6, 1.1, 1.9, and 2.9 percent of the flow in December through February in wet, above normal, below normal, dry, and critical years, using the Sacramento

Valley Index. The Proposed Action would not have adverse effects on operation of Folsom Reservoir because of (1) the above-mentioned low percentages of the proposed transfer amount compared to Folsom Reservoir releases, and (2) the commitment in the Proposed Action for the City and SMUD to closely coordinate with Reclamation to determine the actual quantity, timing, and pattern to minimize potential adverse effects on Reclamation's operation of Folsom Reservoir. Similarly, the Proposed Action would have no impact on the cold-water pool and temperature management in the Lower American River because the proposed transfer period in December through February would be after the temperature management period.

The Proposed Action does not include any modification of the operation of facilities upstream of Folsom Reservoir owned and operated by other entities including PCWA, SMUD, EID, Georgetown Division Public Utility, and other individual water right holders. Therefore, it would not result in any changes in facility operations upstream of Folsom Reservoir. Similarly, the Proposed Action does not include any action downstream of Lake Natoma on the American River or the rest of CVP/SWP system. Under the Proposed Action, Reclamation would continue to operate the entire CVP system consistent with all requirements as described in the 2008 USFWS BO/2009 NMFS BO and 2016 LTO ROD. As discussed above, there would be minimal changes in CVP reservoir storage and operations, surface water elevations, and release patterns in the CVP system. Furthermore, the transferred amount would be subject to the same CVP M&I WSP as the No Action Alternative. Therefore, the Proposed Action would not have any effect on water supply allocations or deliveries for other CVP contractors, and no other CVP water users would be affected. The Proposed Action would not result in impacts to water resources.

3.3 Biological Resources

3.3.1 Affected Environment

Official lists of Federally-listed Candidate, Threatened, and Endangered species that may occur in or near the Action Area and were generated on December 7, 2018, by accessing the San Francisco Bay-Delta and Sacramento Fish and Wildlife Office's databases through the Information for Planning and Conservation (IPaC) (USFWS 2018a). The lists represent species that may occur in affected areas of El Dorado, Placer, and Sacramento counties, and were used to determine the effects of the No Action Alternative and the Proposed Action and a summary of the rationale supporting the determinations (Table 3-1). Information obtained from the IPaC reports was refined using habitat information obtained from the USFWS' Environmental Conservation Online System (ECOS) (USFWS 2018b) and species occurrences documented in the California Natural Diversity Database (California Department of Fish and Wildlife 2018).

Special-status species reported on the species lists that have no potential to be present in the Action Area, either due to lack of suitable habitat and/or because the species' range does not include the Action Area, include the: California red-legged frog (*Rana draytonii*), giant garter snake (*Thamnophis gigas*), California tiger salamander (*Ambystoma californiense*), delta smelt (*Hypomesus transpacificus*), El Dorado Bedstraw (*Galium californicu*m ssp. Sierra), Layne's Butterweed (*Senecio layneae*), Pine Hill Ceanothus (*Ceanothus roderickii*), Pine Hill Flannelbush (*Fremontodendron californicum* ssp. Decumbens), Stebbin's Morning-glory (*Calystegia stebbinsii*).

Some special-status species (valley elderberry longhorn beetle [*Desmocerus californicus dimorphus*], conservancy fairy shrimp [*Branchinecta conservation*], vernal pool fairy shrimp [*Branchinecta lynchi*], vernal pool tadpole shrimp [*Lepidurus packardi]*) would have the potential to occur in the Action Area (which includes the City's service area that uses CVP water). However, the proposed action is limited to the use of existing infrastructure and there would be no land use changes. As such, these species would not occur in the existing pipes and pumps that comprise the City's service area.

The remainder of the species listed in Table 3-1 are known or believed to occur in the Action Area

Table 3-1. Federal Status Species Potentially Found in the Proposed Action Area

Common Name	Scientific Name	Status	Effects	Potential for Occurrence in Action Area
Amphibians / Reptiles				
California red-legged frog	*Rana draytonii*	T, X	NE	**Absent.** Designated Critical Habitat is outside the action area.
California tiger salamander	*Ambystoma californiense*	T, X	NE	**Absent.** Designated Critical Habitat is outside the action area.
giant garter snake	*Thamnophis gigas*	T	NE	**Possible.** Habitat consists of rice fields or managed marshes with emergent wetland vegetation for cover and foraging, grassy banks for basking and upland burrows for refuge in inactive season. No Critical Habitat established.
Fishes				
delta smelt	*Hypomesus transpacificus*	T, X	NE	**Absent.** Designated Critical Habitat is outside the action area.
Central Valley Steelhead distinct population segment	*Oncorhynchus mykiss*	T	No Effect	**Absent.** This DPS spawns, rears, and migrates in the Lower American River downstream of Nimbus Dam and critical habitat is designated in the Lower American River from its confluence with the Sacramento River upstream to Nimbus Dam.
Central Valley Spring-run Chinook salmon evolutionarily significant unit	*Oncorhynchus tshawytscha*	T	No Effect	**Absent.** This ESU occasionally rears in the Lower American River downstream of Nimbus Dam and critical habitat is designated in the Lower American River from its confluence with the Sacramento River upstream to the Watt Avenue bridge.
Sacramento River Winter-run Chinook salmon evolutionarily significant unit	*Oncorhynchus tshawytscha*	E	No Effect	**Absent.** This ESU occasionally rears in the Lower American River downstream of Nimbus Dam but no critical habitat is designated in the Lower American River.
Central Valley fall- / late fall-run Chinook salmon evolutionarily significant unit	*Oncorhynchus tshawytscha*	Unlisted species of concern	No Effect	**Absent.** This ESU spawns, rears, and migrates in the Lower American River downstream of Nimbus Dam and the Lower American River from its confluence with the Sacramento River upstream to Nimbus Dam is designated as essential fish habitat for Chinook salmon under the Magnuson-Stevens Fishery Conservation and Management Act.

Common Name	Scientific Name	Status	Effects	Potential for Occurrence in Action Area
Green Sturgeon Southern distinct population segment	*Acipenser medirostris*	T	No Effect	**Absent.** This DPS has not been observed in the Lower American River but critical habitat is designated in the Lower American River from its confluence with the Sacramento River upstream to the Highway 160 bridge.
Insects				
valley elderberry longhorn beetle	*Desmocerus californicus dimorphus*	T, X	NE	**Present.** Habitat consists of riparian habitat only in the vicinity of their host plant, the elderberry.
Crustaceans				
conservancy fairy shrimp	*Branchinecta conservatio*	E, X	NE	**Absent.** Designated Critical Habitat is outside the action area.
vernal pool fairy shrimp	*Branchinecta lynchi*	T, X	NE	**Present.** Habitat consists of vernal pools and occasionally other freshwater aquatic habitats including ditches, road ruts, and other natural and artificial temporary water bodies.
vernal pool tadpole shrimp	*Lepidurus packardi*	E, X	NE	Present. Habitat consists of vernal pools and other freshwater aquatic habitats including ponds, reservoirs, ditches, road ruts, and other natural and artificial temporary water bodies.
Flowering Plants				
El Dorado bedstraw	*Galium californicum ssp. Sierra*	E	NE	**Absent.** Designated Critical Habitat is outside the action area.
Layne's butterweed	*Senecio layneae*	T	NE	**Absent.** Designated Critical Habitat is outside the action area.
pine hill ceanothus	*Ceanothus roderickii*	E	NE	**Absent.** Designated Critical Habitat is outside the action area.
pine hill flannelbush	*Fremontodendron californicum ssp.*	E	NE	**Absent.** Designated Critical Habitat is outside the action area.
Sacramento orcutt grass	*Orcuttia viscida*	E, X	NE	**Present.** Habitat consists of bottoms of vernal pools in eastern Sacramento County. Designated Critical Habitat intersects portions of the action area.
Stebbin's morning-glory	*Calystegia stebbinsii*	E	NE	**Absent.** Designated Critical Habitat is outside the action area.
Birds				
bald eagle	*Coccyzus americanus*	N/A	NE	**Present.** May breed in action area sometime in January 1 to August 31.
California thrasher	*Charadrius alexandrinus nivosus*	BCC	NE	**Present.** May breed in action area sometime in January 1 to July 31.
Clark's grebe	*Strix occidentalis caurina*	BCC	NE	**Present.** May breed in action area sometime in January 1 to December 31.
common yellowthroat	*Charadrius alexandrinus nivosus*	BCC	NE	**Present.** May breed in action area sometime in May 20 to July 31.
Costa's hummingbird	*Strix occidentalis caurina*	BCC	NE	**Present.** May breed in action area sometime in January 15 to June 10.
golden eagle	*Charadrius alexandrinus nivosus*	BCC	NE	**Present.** May breed in action area sometime in January 1 to August 31.

Common Name	Scientific Name	Status	Effects	Potential for Occurrence in Action Area
Lawrence's goldfinch	*Strix occidentalis caurina*	BCC	NE	**Present.** May breed in action area sometime in March 20 to September 20.
Lewis's woodpecker	*Charadrius alexandrinus nivosus*	BCC	NE	**Present.** May breed in action area sometime in April 20 to September 30.
long-billed curlew	*Strix occidentalis caurina*	BCC	NE	**Possible.** Breeds elsewhere.
marbeled godwit	*Charadrius alexandrinus nivosus*	BCC	NE	**Possible.** Breeds elsewhere.
Nuttall's woodpecker	*Strix occidentalis caurina*	BCC	NE	**Present.** May breed in action area sometime in April 1 to July 20.
oak titmouse	*Charadrius alexandrinus nivosus*	BCC	NE	**Present.** May breed in action area sometime in March 15 to July 15.
rufous hummingbird	*Strix occidentalis caurina*	BCC	NE	**Present.** Breeds elsewhere.
song sparrow	*Charadrius alexandrinus nivosus*	BCC	NE	**Present.** May breed in action area sometime in February 20 to September 5.
spotted towhee	*Strix occidentalis caurina*	BCC	NE	**Present.** May breed in action area sometime in April 15 to July 20.
tricolored blackbird	*Charadrius alexandrinus nivosus*	BCC	NE	**Present.** May breed in action area sometime in March 15 to August 10.
wrentit	*Strix occidentalis caurina*	BCC	NE	**Present.** May breed in action area sometime in March 15 to August 10.
Yellow-billed magpie	*Charadrius alexandrinus nivosus*	BCC, X	NE	**Present.** May breed in action area sometime in April 1 to July 31.

Key:
BCC = Bird of Conservation Concern
NE = No Effect
E = Endangered - Listed as being in danger of extinction
N/A = Not Applicable
T = Threatened - Listed as likely to become endangered in the foreseeable future
X = Critical Habitat is designated for this species
XP = Critical Habitat is proposed for this species

3.3.2 Environmental Consequences

No Action Alternative

There would be no new impacts to fish and wildlife, listed species, or Critical Habitat from the No Action Alternative. Under the No Action Alternative, Reclamation would continue to operate the CVP, including Folsom Reservoir, consistent with all requirements as described in the 2008 USFWS BO/2009 NMFS BO and the 2016 LTO ROD and the subsequent ROD from the ROC.

Proposed Action

The Proposed Action would not change Reclamation's CVP water allocation process or practice. The transfer would be a water management action to support existing uses and conditions.

Under the Proposed Action, the transfer would be executed during December through February when seasonal high inflows to Folsom Reservoir occur in the American River. The City would further coordinate closely with CVO to determine the timing and pattern for diverting the transferred water to minimize any impacts to the operation of Folsom Reservoir. The changes in releases, of up to 6,000 AF in the 3-month period, to Lake Natoma would be insignificant compared to the total flows through Lake Natoma in December through February (i.e., 825,000 acre-feet in average); therefore, there would be no new impacts to fish and wildlife as compared to the No Action Alternative. In addition, the transferred water would only be diverted through existing diversions, further limiting the potential for impacts to fish species. The Proposed Action would result in a minor shift in the location of water use; however, it would remain in the American River watershed and in the Place of Use for Reclamation's water right permits. There would be no anticipated impact to fish species or habitat from the Proposed Action and the transfer would be consistent with all requirements in 2008 USFWS BO/2009 NMFS BO and 2016 LTO ROD and the subsequent ROD from the ROC. Likewise, there would be no conditions of the transfer actions that would alter Reclamation's finding of "not likely to adversely affect" terrestrial species, including but not limited to, the giant garter snake, with which the USFWS concurred in the 2008 BO. No change to refuge water supplies would occur from the Proposed Action. In addition, the Proposed Action would have no impact on the cold-water pool and temperature management in the Lower American River because the proposed transfer period from December through February would be after the temperature management period. There would be no effect on operations upstream of Folsom Reservoir or downstream of Lake Natoma. Because this action would occur entirely in the American River Basin, there would be no concerns for species present south of the Delta.

Operations associated with the Proposed Action would be within the historic limits covered by the consultations for the Programmatic Environmental Impact Statement for the CVPIA. However, Section 3405 (a)(1)(L) of the CVPIA provides Reclamation an additional opportunity to reject any proposed transfer or exchange action that falls within the general criteria of the Proposed Action but is anticipated to have a significant environmental impact. In critical years, and any year type, Reclamation may not be able to facilitate a transfer of SMUD's CVP contract water in the quantity or schedule requested.

3.4 Cumulative Impacts

According to the Council on Environmental Quality regulations for implementing the procedural provisions of NEPA, a cumulative impact is defined as the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time. Reclamation has reviewed existing or foreseeable projects in the same Action Area that could affect or could be affected by the Proposed Action.

As in the past, hydrological conditions and other factors are likely to result in fluctuating water supplies that would drive requests for CVP water transfers. Water districts would continue to provide water to their customers based on available water supplies and timing, while attempting to minimize costs. Farmers would continue to irrigate and grow crops based on these conditions and factors. A myriad of water service actions would be approved and executed each year to

satisfy water needs. It is likely that over the course of the Proposed Action, water districts would continue to request various water service actions, such as transfers, exchanges, and Warren Act contracts (conveyance of non-CVP water in CVP facilities). Each water service request involving Reclamation would be required to undergo environmental review prior to approval. In addition, the Proposed Action would not involve construction or modification of facilities. Therefore, there would be no cumulative impacts to existing facilities or other contractors.

The Proposed Action and the approval of other similar projects would not hinder or effect the normal operations of the CVP and Reclamation's obligation to deliver water to its contractors or to fish and wildlife habitats. Under the Proposed Action, the transfer would occur during December through February when seasonal high flows occur in the American River Basin. The City would further coordinate closely with CVO to determine the timing and pattern for diverting the transferred water to minimize any impacts to the operation of Folsom Reservoir. As described in detail in Section 3.2, the changes in releases, of up to 6,000 AF in the 3-month period, to Lake Natoma would be insignificant compared to the total flows through Lake Natoma in December through February (i.e., 825,000 acre-feet in average). Similarly, the Proposed Action would have no impact on the cold-water pool and temperature management in the Lower American River because the proposed transfer period from December through February would be after the temperature management period, and the City and SMUD would be committed in the Proposed Action to coordinate closely with Reclamation to determine the quantity, timing, and pattern to minimize any adverse effects on Reclamation's operation of Folsom Reservoir. Therefore, the Proposed Action, when considered cumulatively with all comparable transfer actions, would have no effect on river flows. Likewise, it would not be expected to have an effect on protected species reliant on the maintenance of minimum flows.

There are no known past, present, or reasonably foreseeable actions that would cumulatively result in significant impacts to the human environment when considered in conjunction with the Proposed Action.

Section 4
Consultation and Coordination

In consideration of the lack of significant impacts identified from the Proposed Action, no consultation or coordination with other Federal agencies were performed.

4.1 Public Review Period

Reclamation is providing the public with an opportunity to comment on the EA for a 30-day period starting on June 17, 2019. Reclamation received one comment letter from Save the American River Association for the EA. Reclamation has evaluated the comments carefully and included responses contained in the Finding of No Significant Impact (FONSI).

Appendix A: Cultural Resources Compliance Memo

CULTURAL RESOURCES COMPLIANCE
Division of Environmental Affairs
Cultural Resources Branch (MP-153)

MP-153 Tracking Number: 19-CCAO-131

Project Name: Short-term Central Valley Project (CVP) Water Transfer Between Sacramento Municipal Utility District (SMUD) and City of Roseville (City)

NEPA Document: EA-19-05

NEPA Contact: Spencer Marshall, Natural Resources Specialist

MP 153 Cultural Resources Reviewer: BranDee Bruce, Architectural Historian

Date: April 26, 2019

Reclamation proposes to approve a short-term, 3-year water transfer of up to 6,000 acre-feet of SMUD's CVP supply under its current interim renewal contract and subsequent contracts with Reclamation to the City. The proposed CVP water transfer would be implemented in the period of December 1 through the last day in February in CVP contract years 2019, 2020, and 2021. Water delivered as part of the proposed undertaking would be from the City's existing intake and conveyance facilities at Folsom Dam, with no proposed construction or modification of facilities needed for delivery of this water.

Reclamation determined the proposed action constitutes a Federal undertaking, as defined at 36 CFR § 800.16(y), that has no potential to cause effects to historic properties pursuant to 36 CFR § 800.3(a)(1). As such, Reclamation has no further obligations under Title 54 U.S.C. § 306108, commonly known as Section 106 of the National Historic Preservation Act (NHPA). I have reviewed the draft EA-19-05 and the proposed action will not have significant impacts on properties listed or eligible for listing in the in the National Register of Historic Places.

This document conveys the completion of the cultural resources review and NHPA Section 106 process for this undertaking. Please retain a copy of this document in the administrative record for the proposed action. Should changes be made to the proposed action, additional NHPA Section 106 review, possibly including consultation with the Tribal Historic Preservation Officer or State Historic Preservation Officer, may be necessary.

Appendix B: Indian Trust Assets Compliance Memo

ITA Determination: EA

The closest ITA to the proposed Short-Term Central Valley Project Water Transfer Between Sacramento Municipal Utility District and City of Roseville activity is the _Shingle Springs Miwok Rancheria about 14 miles to the east. (See attached image).

Based on the nature of the planned work it does not appear to be in an area that will impact Indian hunting or fishing resources or water rights nor is the proposed activity on actual Indian lands. It is reasonable to assume that the proposed action will not have any impacts on ITAs.

COUNCIL COMMUNICATION

CC #: 0341
File #: 0206-03-01

Title:	Community Facilities District No. 3 (Municipal Services) - Annexation 23 (The Ranch at Sierra Vista)
Contact:	Jeannine Thrash 916-774-5473 jthrash@roseville.ca.us Dennis Kauffman 916-774-5313 dkauffman@roseville.ca.us

Meeting Date: 10/23/2019
Item #: 9.1.

RECOMMENDATION TO COUNCIL

It is recommended that the City Council conduct a public hearing and adopt the following resolutions:

- A Resolution of Annexation to Territory to Community Facilities District No. 3 (Municipal Services) Authorizing the Levy of a Special Tax Lien and Submitting Levy to Tax to Qualified Electors
- A Resolution Declaring Results of Special Annexation Election for Community Facilities District No. 3 (Municipal Services) Determining Validity of Prior Proceedings, and Directing Recording of Amended Notice of Special Tax Lien.

BACKGROUND

As a condition of the Development Agreement between the City of Roseville and Baseline P&R, LLC relative to the Sierra Vista Specific Plan, the landowner shall annex into Community Facilities District No. 3 (Municipal Services) (CFD No. 3). The property is being annexed into CFD No. 3 in order to offset the property's impact on the City's General Fund resources available to pay for municipal services citywide, including the annexation area. The intent to annex was approved by Council on September 4, 2019 with Resolution No. 19-383. A Public Hearing was set for October 23, 2019.

FISCAL IMPACT

The annexation into CFD No. 3 helps offset the property's impact on the City's General Fund resources available to pay for municipal services, and therefore will not negatively impact the General Fund.

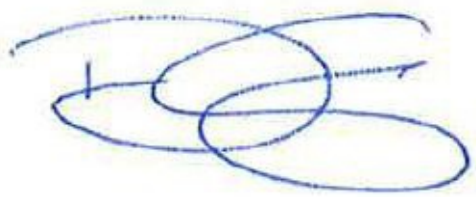
ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Adoption of the resolutions meet the above criteria and are not subject to CEQA. No additional environmental review is required.

Respectfully Submitted,

Jeannine Thrash, Administrative Analyst

Dennis Kauffman, Chief Financial Officer



_____

Dominick Casey, City Manager

Description

Resolution No. 19-442

Resolution No. 19-443

Notice of Public Hearing

Amended Notice of Special Tax Lien

CITY COUNCIL OF THE CITY OF ROSEVILLE

RESOLUTION NO. 19-442

A RESOLUTION OF ANNEXATION OF TERRITORY TO COMMUNITY FACILITIES DISTRICT, AUTHORIZING THE LEVY OF A SPECIAL TAX AND SUBMITTING LEVY OF TAX TO QUALIFIED ELECTORS

CITY OF ROSEVILLE
Community Facilities District No. 3
(Municipal Services)

Annexation No. 23 (The Ranch at Sierra Vista)

WHEREAS, the City Council (the "Council") of the City of Roseville (the "City") on September 4, 2019, adopted Resolution No. 19-383, entitled "A Resolution of Intention to Annex Territory to Community Facilities District and to Authorize the Levy of Special Taxes Therein" (the "Resolution of Intention"), stating its intention to annex territory to the City's Community Facilities District No. 3 (Municipal Services) (the "CFD"), pursuant to the Mello-Roos Community Facilities Act of 1982, as amended (the "Act");

WHEREAS, a copy of the Resolution of Intention, incorporating a description and map of the proposed boundaries of the territory to be annexed to the CFD and stating the services to be provided and the rate and method of apportionment of the special tax to be levied within the territory to be annexed to the CFD, is on file with the City Clerk and the provisions thereof are fully incorporated herein by this reference as if fully set forth herein;

WHEREAS, said annexation boundary map, labeled Annexation Map No. 23 of Community Facilities District No. 3 (Municipal Services) (The Ranch at Sierra Vista), has been recorded with the County Recorder of the County of Placer on September 13, 2019, in Book 3 at Page 41-18 of Maps of Assessment and Community Facilities Districts, which map shows the territory to be annexed to the CFD;

WHEREAS, on the date hereof, this Council held a noticed public hearing as required by the Act and the Resolution of Intention relative to the proposed annexation of territory to the CFD;

WHEREAS, at said hearing all interested persons desiring to be heard on all matters pertaining to the annexation of territory to the CFD and the levy of said special taxes within the area proposed to be annexed were heard and a full and fair hearing was held; and

WHEREAS, prior to the time fixed for said hearing, written protests had not been filed against the proposed annexation of territory to the CFD by (i) 50% of more of the registered voters, or six registered voters, whichever is more, residing in the existing CFD, or (ii) 50% or more of the registered voters, or six registered voters, whichever is more, residing in the territory proposed to be annexed to the CFD, or (iii) owners of one-half or more of the area of land in the territory proposed to be annexed to the CFD.

NOW, THEREFORE, be it resolved by the City Council of the City of Roseville:

1. All prior proceedings taken by this Council with respect to the CFD and the proposed annexation of territory thereto have been duly considered and are hereby determined to be valid and in conformity with the Act, and the CFD has been validly established pursuant to the Act.

2. The description and map of the boundaries of the territory to be annexed to CFD, as described in the aforementioned Annexation Map No. 23 on file with the Clerk are hereby finally approved, are incorporated herein by reference, and shall be included within the boundaries of the CFD, and said territory is hereby ordered annexed to the CFD, subject to voter approval of the levy of the special taxes therein as hereinafter provided.

3. The provisions of the Resolution of Intention as heretofore adopted by this Council are by this reference incorporated herein, as if fully set forth herein.

4. Pursuant to the provisions of the Act, the proposition of the levy of the special tax within the territory to be annexed to the CFD shall be submitted to the voters of the area to be annexed to the CFD at an election called therefor as hereinafter provided.

5. This Council hereby finds that fewer than 12 persons have been registered to vote within the territory proposed to be annexed to the CFD for each of the 90 days preceding the close of the hearing heretofore conducted and concluded by this Council for the purposes of these annexation proceedings. Accordingly, and pursuant to Section 53326 of the Act, this Council finds that for purposes of these proceedings the qualified electors are the landowners within the territory proposed to be annexed to the CFD and that the vote shall be by said landowners, each having one vote for each acre or portion thereof such landowner owns in the territory proposed to be annexed to the CFD.

6. Pursuant to Section 53326 of the Act, the election shall be conducted by mail ballot under Section 4000 of the California Elections Code. This Council hereby determines that paragraphs (a), (b), and (c)(1) of said Section 4000 and Section 4108 of the California Elections Code are applicable to this election, provided however, the City has received written waivers from the owner of all the territory to be annexed and the election may be expedited.

7. The Council hereby calls a special election to consider the measure described in the ballot referred to in paragraph 8 below, which election shall be held on October 23, 2019 at the City of Roseville Civic Center Council Chambers located at 311 Vernon Street, Roseville, California 95678.

8. The City Clerk is hereby appointed as the election official to conduct the election and cause to be provided to each landowner(s) in the territory to be annexed to the CFD, a ballot in the form of Exhibit A hereto, which form is hereby approved.

9. The City Clerk shall accept the ballots of the qualified electors received prior to 6:00 p.m. on October 23, 2019, whether received by mail or by personal delivery.

10. This Council hereby further finds that the provision of Section 53326 of the Act requiring a minimum of 90 days to elapse before said election is for the protection of voters, that the voters have waived such requirement and the date for the election hereinabove specified is established accordingly.

11. Under Section 50075.1 of the Government Code, the following accountability provisions shall apply to the special taxes: (a) the provision and/or acquisition of the services

and the incidental costs thereof, all as defined in the Resolution of Intention, shall constitute the specific single purpose; (b) the proceeds shall be applied only to the specific purposes identified in (a) above; (c) there shall be created special account(s) or funds(s) into which the proceeds shall be deposited; and (d) there shall be caused to be prepared an annual audit and report of the CFD.

OFFICIAL BALLOT
SPECIAL TAX ELECTION

This ballot is for the special landowner election to annex property into City of Roseville Community Facilities District No. 3 (Municipal Service). You must return this ballot to the office of the City Clerk of the City of Roseville **no later than the hour of 6:00 p.m. on October 23, 2019, either by mail or in person**. The Clerk's office is located at 311 Vernon Street, Roseville, CA 95678.

To vote, mark a cross (X) on the voting line after the word "YES" or after the word "NO." All marks otherwise made are forbidden. All distinguishing marks are forbidden and make the ballot void. If you wrongly mark, tear, or deface this ballot, return it to the City Clerk and obtain another.

AN "X" OR OTHER MARK WILL CAST ALL VOTES ASSIGNED TO THIS BALLOT, OR THE VOTER MAY WRITE NUMBERS IN THE SPACES PROVIDED.

The amount of money to be raised annually by the special tax levied in the territory to be annexed is $_____ for Fiscal Year 2019-20 (and subject to escalation annually), the duration of the special tax is perpetual, and the rate of the special tax shall be determined in accordance with the rate, method of apportionment, and manner of collection of special tax for the CFD.

BALLOT MEASURE: Shall the City of Roseville (the "City"), by and for its Community Facilities District No. 3 (Municipal Services) (the "CFD"), be authorized to levy special taxes within the territory annexed to the CFD pursuant to and as described in "A Resolution of Annexation of Territory to Community Facilities District, Authorizing the Levy of a Special Tax and Submitting Levy of Tax to Qualified Electors," adopted by the City Council of the City on October 23, 2019?	**YES:**_____ **NO:**_____

By execution in the space provided below, you also indicate your waiver of (i) the time limit pertaining to the conduct of the election, (ii) any requirement for analysis and arguments with respect to the ballot measure, and (iii) any irregularity in the proceedings that may be claimed as a result of the this vote or the application of such waivers.

CITY COUNCIL OF THE CITY OF ROSEVILLE

RESOLUTION NO. 19-443

A RESOLUTION DECLARING RESULTS OF SPECIAL ANNEXATION ELECTION, DETERMINING VALIDITY OF PRIOR PROCEEDINGS, AND DIRECTING RECORDING OF AMENDED NOTICE OF SPECIAL TAX LIEN

CITY OF ROSEVILLE
Community Facilities District No. 3
(Municipal Services)

Annexation No. 23 (The Ranch at Sierra Vista)

WHEREAS, in proceedings heretofore conducted by the City Council (the "Council") of the City of Roseville (the "City") pursuant to the Mello-Roos Community Facilities Act of 1982, as amended (the "Act"), this Council has heretofore adopted a resolution calling a special election of the qualified landowner electors in the territory of land proposed to be annexed to Community Facilities District No. 3 (Municipal Services) (the "CFD");

WHEREAS, pursuant to the terms of the resolution which is hereby incorporated herein by this reference, the special election has been held and the City Clerk has filed a Canvass of Votes Cast in Special Election, a copy of which is attached hereto as Exhibit A; and

WHEREAS, this Council has reviewed the Canvass and hereby approves it;

NOW, THEREFORE, be it resolved by the City Council of the City of Roseville:

1. The issue presented at the special election was the levy of a special tax within the territory annexed to the CFD, to be levied in accordance with the formula heretofore approved by this Council on September 4, 2019, entitled, "A Resolution of Annexation of Territory to Community Facilities District, Authorizing the Levy of a Special Tax and Submitting Levy of Tax to Qualified Electors."

2. Pursuant to the Canvass on file with the City Clerk, the issue presented at the special election was approved by the landowners of the territory annexed to the CFD by more than two-thirds of the landowners voting at the special election.

3. Pursuant to the voter approval, said annexed territory to the CFD is hereby declared to be fully annexed to and part of the CFD and this Council may levy special taxes therein as heretofore provided in these proceedings.

4. It is hereby found that all prior proceedings and actions taken by this Council pursuant to the CFD and the territory annexed thereto were valid and in conformity with the Act.

5. Within 15 days of the date hereof, the City Clerk shall execute and cause to be recorded in the office of the County Recorder of the County of Placer, an amendment to the Notice of Special Tax Lien as required by Section 3117.5 of the California Streets and Highways Code.

NOTICE OF PUBLIC HEARING

CITY OF ROSEVILLE
Community Facilities District No. 3
(Municipal Services)

Annexation No. 23 (The Ranch at Sierra Vista)

Notice is hereby given by the City of Roseville (the "City") with respect to its Community Facilities District No. 3 (Municipal Services) (the "CFD") that on September 4, 2019, the City Council of the City, as the legislative body for the CFD, adopted its Resolution No. 19-383, "A Resolution of Intention to Annex Territory to Community Facilities District and to Authorize the Levy of Special Taxes Therein" (the "Resolution of Intention"). Reference is hereby made to the Resolution of Intention, on file with the City Clerk of the City for further particulars. The following is a summary of the provisions of the Resolution of Intention.

Pursuant to the Resolution of Intention, the Council determined that the public convenience and necessity require that certain territory, as more particularly described in the Resolution of Intention, be annexed to the existing CFD, all as provided in the Mello-Roos Community Facilities Act of 1982, as amended (Sections 53311 et seq., California Government Code (the "Act'). The Resolution of Intention provides that the special taxes heretofore caused to be levied in the CFD for financing the services provided through the CFD shall be levied in the territory proposed to be annexed, subject to public hearing and landowner election proceedings as specified in the Act.

Notice is further given that Wednesday, October 23, 2019 at 6:00 p.m. or as soon as possible thereafter, at the City of Roseville Civic Center Council Chambers located at 311 Vernon Street, Roseville, California 95678, are the time and place when and where the Council of the City as the legislative body for the CFD, will conduct a public hearing on the annexation of the territory described in the Resolution of Intention to the CFD and finally consider and determine whether the public convenience and necessity require the annexation of said territory to the CFD and the levy of special taxes therein.

Notice is further given that at the hearing, the testimony of all interested persons for and against the annexation of said territory to the CFD or the levying of special taxes within the territory proposed to be annexed will be heard.

AMENDMENT TO NOTICE OF SPECIAL TAX LIEN

CITY OF ROSEVILLE
COMMUNITY FACILITIES DISTRICT NO. 3 (MUNICIPAL SERVICES)
COUNTY OF PLACER, STATE OF CALIFORNIA

Annexation No. 23 (The Ranch at Sierra Vista)

Pursuant to the requirements of Section 3117.5 of the Streets and Highways Code of California and the Mello-Roos Community Facilities Act of 1982, as amended, section 53311, et. seq., of the California Government Code (the "Act"), the undersigned City Clerk of the City of Roseville (the "City"), County of Placer, State of California, hereby gives notice that a lien to secure payment of a special tax which the City is authorized to levy for Community Facilities District No. 3 (Municipal Services) (the "CFD"), County of Placer, State of California, is hereby imposed on the property described herein. The special tax secured by this lien is authorized to be levied for the purpose of paying the costs of public services in and according to the rate and method of apportionment set forth in that certain Notice of Special Tax Lien heretofore recorded in the Office of the County Recorder of the County of Placer, State of California on October 22, 2004, as Document No. 2004-0140669, to which recorded Notice of Special Tax Lien and amendment thereto reference is hereby made and the provisions of which are hereby incorporated by this reference.

This Amended Notice of Special Tax Lien amends the Notice of Special Tax Lien to add to the territory of Community Facilities District No. 3 (Municipal Services) of the City Roseville the lands set forth in that certain "Annexation Map No. 23" to Community Facilities District No. 3 (Municipal Services), County of Placer, State of California," heretofore recorded on September 13, 2019 at Book 3 Maps of Assessment and Community Facilities Districts at Page 41-18 in the office of the County Recorder of the County of Placer, State of California.

Pursuant to the requirements of Section 3114.5 of the Streets and Highways Code and Section 53324 of the Government Code, the undersigned, City Clerk of the City of Roseville, hereby gives notice that a lien to secure payment of a special tax which the City Council of the City of Roseville, County of Placer, State of California is authorized to levy is hereby imposed. The special tax secured by this lien is authorized to be levied for the purpose of paying for public services as described in **Exhibit A** attached hereto, and the incidental expenses related thereto.

The assessor's tax parcel(s) numbers of all parcels or any portion thereof which have been annexed to Community Facilities District No. 3 (Municipal Services), as shown in the Annexation Map referred to above, are thus included in this Amended Notice of Special Tax Lien, together with the name(s) of the

owner(s) thereof, as they appear on the latest secured assessment roll as of the date of recording hereof or as are otherwise known to the City are as set forth in **Exhibit C** attached hereto and hereby made a part hereof.

The special tax is authorized to be levied against the parcel(s) described in **Exhibit C** attached hereto, which parcel(s) has been annexed into Community Facilities District No. 3 (Municipal Services), City of Roseville, County of Placer, State of California, which has been officially formed and the lien of the special tax is a continuing lien which shall secure each annual levy of the special tax and which shall continue in force and effect unless the special tax obligation is canceled in accordance with law or the special tax ceases to be levied and a notice of cessation of special tax is recorded in accordance with Section 53330.5 of the Government Code.

The amended rate, method of apportionment and the manner of collection of the authorized special tax is shown on **Exhibit B** attached hereto. The rate, method of apportionment, and the manner of collection of the authorized special tax does not contain conditions under which the obligation to pay the special tax may be prepaid and permanently satisfied.

Notice is further given that upon the recording of this notice in the office of the county recorder, the obligation to pay the special tax levy shall become a lien upon all nonexempt real property within the Community Facilities District No. 3 (Municipal Services), City of Roseville, in accordance with Section 3115.5 of the Streets and Highways Code.

For further information concerning the current and estimated future tax liability of owners or purchasers of real property subject to this special tax lien, interested persons should contact the City Administrator of the City of Roseville, 311 Vernon Street, Roseville, CA 95678, telephone number (916) 774-5319.

CITY OF ROSEVILLE
COMMUNITY FACILITIES DISTRICT NO. 3
(MUNICIPAL SERVICES)

LIST OF AUTHORIZED SERVICES

The Community Facilities District No. 3 (Municipal Services) (the "CFD") shall include the City services authorized under Section 53313 of the Community Facilities Act of 1982, Chapter 2.5 of Division 2 of Title 5 of the California Government Code, commencing with Section 53311 (the "Act"), which include the following services, to the extent that such services are in addition to those provided in the territory of the CFD before the CFD was created (or, as to territory which may be annexed to the CFD, before such territory was annexed to the CFD.) In accordance with Section 53313 of the Act, the additional services may not supplant services already available within the territory when the district was created.

(a) Police protection services, including, but not limited to, criminal justice services. However, criminal justice services are limited to providing services for jails, detention facilities, and juvenile halls.
(b) Fire protection and suppression services, and ambulance and paramedic services.
(c) Recreation program services, library services, maintenance services for elementary and secondary school sites and structures, and the operation and maintenance of museums and cultural facilities, subject to the limitations contained in Section 53313 of the Act.
(d) Maintenance of parks, parkways, and open space.
(e) Flood and storm protection services, including, but not limited to, the operation and maintenance of storm drainage systems, and sandstorm protection systems.
(f) Services with respect to removal or remedial action for the cleanup of any hazardous substance released or threatened to be released into the environment, subject to the limitations contained in Section 53313 of the Act.

(MUNICIPAL SERVICES)

RATE AND METHOD OF APPORTIONMENT OF SPECIAL TAX

A Special Tax applicable to each Assessor's Parcel in Community Facilities District No. 3 (Municipal Services) [herein "CFD No. 3"] shall be levied and collected according to the tax liability determined by the City Council, acting in its capacity as the legislative body of CFD No. 3, through the application of the appropriate Special Tax rate, as described below. All of the property in CFD No. 3, unless exempted by law or by the provisions of Section E below, shall be taxed for the purposes, to the extent, and in the manner herein provided.

A. DEFINITIONS

The terms hereinafter set forth have the following meanings:

"Acreage" or **"Acre"** means the land area making up an Assessor's Parcel as shown on an Assessor's Parcel Map, or if the land area is not shown on an Assessor's Parcel Map, the land area shown on the applicable final subdivision map or other parcel map recorded at the County Recorder's Office.

"Administrative Expenses" means the costs incurred by the City to determine, levy and collect the Special Tax, including salaries of City employees and fees of consultants and the costs of collecting installments of the Special Taxes upon the general tax rolls; preparation of required reports, and any other costs required to administer the CFD as determined by the Finance Director.

"Administrator" means the person or firm designated by the City to administer the Special Taxes according to this Rate and Method of Apportionment of Special Tax.

"Affordable Housing Director" means, at any point in time, the person within the City who services as head of the department that is in charge of the City's affordable housing program.

"Affordable Unit" means a Unit built on a Parcel for which an Affordable Purchase Development Agreement or similar agreement has been recorded on title of the property designating the Unit as affordable (as determined by the City) and resulting in a deed of trust on the Parcel in favor of the City. The City's Affordable Housing Director shall determine which Units are designated as Affordable Units and maintain an Affordable Unit Listing which shall contain all designated buildable parcels by tract and lot number. The Affordable Unit Listing shall also be updated to reflect those Units no longer qualifying as Affordable Units, also known as Market Rate Units. The Affordable Unit Listing, which shall contain all qualifying Affordable Units as of April 30,

shall be made available to the Administrator by July 1 of each year for purposes of determining the Maximum Special Tax for Parcels pursuant to Section C.

"Affordable Unit Assignment" means a reduction in the Maximum Special Tax for a Parcel due to the assignment of an Affordable Unit(s) to the Parcel.

"Annual Tax Escalation Factor" means an annual increase in the Maximum Special Tax following the Base Year in an amount equal to the lesser of: (i) the combined percentage increase, if any, in the City of Roseville General Fund Operating Budget for police and fire services, or (ii) four percent (4%).

"Assessor's Parcel" or **"Parcel"** means a lot or parcel shown in an Assessor's Parcel Map with an assigned Assessor's Parcel number.

"Assessor's Parcel Map" means an official map of the County Assessor designating parcels by Assessor's Parcel number.

"Authorized Services" means the public services authorized to be funded by CFD No. 3 as set forth in the documents adopted by the City Council when the CFD was formed.

"Base Year" means Fiscal Year 2009-10.

"City" means the City of Roseville.

"City Council" means the City Council of the City of Roseville, acting as the legislative body of CFD No. 3.

"County" means the County of Placer.

"Developed Property" means, in any Fiscal Year, both of the following:

- For Condominium Conversion Parcels, all individual Units for which an escrow has closed prior to June 30 of the preceding Fiscal Year; and
- All other Parcels of Taxable Property within the CFD for which a use permit or building permit for new construction of a residential or non-residential structure was issued prior to June 30 of the preceding Fiscal Year.

"**Finance Director**" means the Finance Director for the City of Roseville or his or her designee or successor.

"**Fiscal Year**" means the period starting on July 1 and ending on the following June 30.

"Land Use Designation" means the land use designated to be built on a particular Parcel based on reference to an adopted community plan or specific plan or, to the extent that such a plan has not been approved for a Parcel, to the City's general plan.

"Market Rate Unit" means a Unit that is not an Affordable Unit.

"Multi-Family Property" means, in any Fiscal Year, all Parcels in CFD No. 3 for which a building permit was issued or may be issued for construction of a residential structure with multiple units that share common walls, all of which are offered for rent to the general public.

"Maximum Special Tax" means the maximum Special Tax determined in accordance with Section C below that can be levied on Taxable Property in any Fiscal Year.

"Public Property" means any property within the boundaries of CFD No. 3 that is owned by the federal government, State of California, County, City, or other public agency.

"Single Family Attached Property" means, in any Fiscal Year, all Parcels in CFD No. 3 for which a building permit was issued for construction of a residential structure consisting of two or more Units that share common walls and are offered as for-sale Units, including such residential structures that meet the statutory definition of a condominium contained in Civil Code Section 1351.

"Single Family Detached Property" means, in any Fiscal Year, all Parcels in CFD No. 3 for which a building permit was issued for construction of a Unit that does not share a common wall with another Unit.

"Special Tax" means any tax levied to pay for Authorized Services.

"Taxable Property" means all Assessor's Parcels within the boundaries of CFD No. 3 which are not exempt from the Special Tax pursuant to law or Section E below.

"Unit" means an individual single-family detached unit or an individual residential unit within a duplex, triplex, fourplex, townhome, condominium, or apartment structure.

"Zoning Designation" means, for a particular Parcel, the designation of zoning for the Parcel based on the zoning map symbols set forth in the City's zoning ordinance or, if the designation is inconsistent with the City's zoning ordinance, as determined by the Administrator.

B. CATEGORIZING PARCELS FOR ANNUAL TAX LEVY

Each Fiscal Year, the Administrator shall identify the current Assessor's Parcel numbers for all Parcels of Developed Property within CFD No. 3. The Administrator shall then identify the Land Use Designation for each Parcel of Developed Property to determine the appropriate Maximum Special Tax pursuant to Section C below. If a Land Use Designation has not been assigned to a Parcel of Developed Property, the Administrator shall determine the Zoning Designation for the Parcel and reference Table 1 below to determine the Maximum Special Tax associated with that Zoning Designation. If the Zoning Designation for the Parcel applies to more than one Land Use Designation as reflected in Table 1, the Administrator shall determine the appropriate Maximum

Special Tax rate for the Parcel by identifying the Maximum Special Tax shown in Table 1 for the land use category that is most similar to the land use that will be built on the Parcel.

For Single Family Attached Property or multi-family property, the number of Units shall be determined by referencing the condominium plan, apartment plan, site plan or other development plan for the property. For Condominium Parcels, the Administrator shall also determine the date of which escrow closed for any Units that were sold to individual buyers in the prior Fiscal Year.

For Parcels with a Land Use Designation of Residential, Mixed Use; Village Center – Medium Density Residential; Village Center – High Density Residential; or Commercial, Mixed Use, the Administrator shall determine whether (i) residential units that have been or will be built on the Parcel will be offered for sale to individual home buyers and (ii) a separate Assessor's Parcel number will be assigned to the airspace parcel associated with each residential unit. Once separate Parcel numbers have been assigned to the residential airspace Parcels, the Administrator shall assign a Maximum Special Tax to the airspace Parcel for each residential unit. In addition, the Administrator shall tax the commercial land uses on the Parcel using the Maximum Special Tax for the appropriate commercial Land Use Designation in Table 1 below. The acreage to be used to calculate the Maximum Special Tax on the commercial uses shall be the full land area of the underlying Assessor's Parcel on which the residential and commercial land uses are located.

Upon recordation of each Final Map creating Single Family Detached Property and/or Single Family Attached Property, the ECS Director is to determine the number of Affordable Units included within the Final Map. When building permits are issued for the Affordable Units designated on each Parcel, the Administrator shall reduce the Maximum Special Tax for each Affordable Unit to fifty percent (50%) of the Maximum Special Tax that applies to the Market Rate Units with the same Zoning Designation. After May 1 of each Fiscal Year, the Administrator shall obtain the Affordable Unit Listing from the Affordable Housing Director to confirm which Parcels qualify for an Affordable Unit Adjustment in the following Fiscal Year.

C. MAXIMUM SPECIAL TAX

All Taxable Property within the CFD shall be subject to a Maximum Special Tax that will be levied each Fiscal Year to pay for Authorized Services. As discussed above, the Administrator shall rely first on the Land Use Designation for a Parcel to determine the appropriate Maximum Special Tax in Table 1 below but, in the absence of an assigned Land Use Designation, the Administrator shall refer to the Zoning Designation and land use to be built on the Parcel. The following Maximum Special Tax rates apply to all Parcels of Developed Property within CFD No. 3:

Table 1 Maximum Special Taxes		
Land Use Designation	**Zoning Designation**	**Maximum Special Tax (Fiscal Year 2009-10) ***
Low Density Residential (LDR)	R1	$342.00 per Unit
Medium Density Residential (MDR)	RS R2	$200.00 per Unit
High Density Residential (HDR)	R3	$100.00 per Unit
Community Commercial	CC	$932.00 per Acre
General Commercial	GC	$932.00 per Acre
Highway Commercial	HC	$932.00 per Acre
Regional Commercial	RC	$932.00 per Acre
Central Business District	CBD	$932.00 per Acre
Business Professional	BP, MP	$801.00 per Acre

* Beginning July 1, 2010 and each July 1 thereafter, the Maximum Special Taxes shown above shall be adjusted by applying the Annual Tax Escalation Factor. The Maximum Special Tax for Affordable Units within a particular Zoning Designation shall be fifty percent (50%) of the amount shown above for that Zoning Designation, as adjusted by the Annual Tax Escalation Factor.

D. METHOD OF LEVY AND COLLECTION OF SPECIAL TAX

Each Fiscal Year, the Administrator shall levy the Maximum Special Tax on each Parcel of Developed Property in CFD No. 3. The Special Tax for CFD No. 3 shall be collected in the same manner and at the same time as ordinary ad valorem property taxes provided, however, that CFD No. 3 may (under the authority of Government Code Section 53340) in any particular case bill the taxes directly to the property owner off the County tax roll, and the Special Tax will be equally subject to foreclosure if delinquent.

E. LIMITATIONS

Notwithstanding any other provision of this Rate and Method of Apportionment of Special Tax, no Special Tax shall be levied on Public Property.

F. INTERPRETATION OF SPECIAL TAX FORMULA

The City reserves the right to make minor administrative and technical changes to this document that does not materially affect the rate and method of apportioning the Special Taxes. In addition, the interpretation and application of any section of this document shall be left to the City's discretion. Interpretations may be made by the City by ordinance or resolution for purposes of clarifying any vagueness or ambiguity in this Rate and Method of Apportionment of Special Tax.

COUNCIL COMMUNICATION

CC #: 0353
File #: 0400-04-13-2 & 0400-02 & 0400-03

Title:	Creekview Specific Plan General Plan and Specific Plan Amendment, Rezone, and Development Agreement Amendment
Contact:	Charity Gold 916-774-5247 cgold@roseville.ca.us

Meeting Date: 10/23/2019
Item #: 9.2.

RECOMMENDATION TO COUNCIL

At the September 12, 2019 Planning Commission hearing, the Planning Commission recommended that the City Council take the following actions:

A. Consider the Addendum to the Creekview Specific Plan EIR;
B. Adopt a resolution approving the amendment to the General Plan text and land use;
C. Adopt a resolution approving the amendment to the Creekview Specific Plan text and land use;
D. Adopt the two (2) findings of fact and introduce the first reading of the ordinance rezoning the property; and
E. Consider the five (5) findings of fact and introduce for first reading an ordinance approving the First Amendment to the Creekview Specific Plan Development Agreement.

BACKGROUND

This Council Communication provides a summary evaluation of the project and a summary of the September 12, 2019 Planning Commission hearing. More detailed background and evaluation is provided in the Planning Commission staff report, included as Attachment 1.

Background/Project Description

The Creekview Specific Plan (CSP) is located in the northwest portion of the City, south of the Amoruso Specific Plan, north and west of the West Roseville Specific Plan, and east of the Al Johnson Wildlife Area. The project will modify the land uses within the CSP area, resulting in a redistribution of Low Density Residential (LDR), Medium Density Residential (MDR), and High Density Residential (HDR) land uses and a reduction of business professional and commercial uses. No overall change to the residential unit count within the plan area is proposed with this project. Amendments to the text within the CSP and an amendment to the CSP development agreement are proposed with this project.

Summary Evaluation:

The proposed General Plan Amendment, Specific Plan Amendment, and Rezone have been analyzed for consistency with the goals and policies of the General Plan, as discussed on pages 2-11 of the attached Planning Commission staff report. The proposed changes in land use and

zoning are consistent with the City's General Plan, and no conflicts with General Plan goals and policies related to Land Use, Traffic and Circulation, or Utilities have been identified. The proposed Development Agreement Amendment has been analyzed as discussed on pages 11-12 of the attached Planning Commission staff report. The proposed amendment is consistent with the requirements of Zoning Ordinance Section 19.84.040.

Summary of Planning Commission Hearing:

The project was heard by the Planning Commission on September 12, 2019. During the hearing, staff and the applicant's representative presented the legislative items and responded to questions from the Planning Commission related to the proposed reduction in commercial acreage. Staff stated that the City's commercial needs are evaluated holistically and that the northwest quadrant of the City currently has adequate commercial land use to serve the residents in that portion of the City. The applicant added that the proposed commercial acreage is sized to meet the current market demand.

On September 11, 2019, staff received a letter from Brookfield Sunset LLC (Brookfield) regarding concerns that certain modifications to the Development Agreement (DA), which affect timing of the CSP electric substation, could delay development within the Amoruso Ranch Specific Plan (ARSP). Prior to the hearing staff coordinated with the applicant, Brookfield, and Roseville Electric on a resolution that would satisfy all parties. The DAs for both the CSP and the ARSP will be amended to ensure that development within the ARSP is not affected by the amendment to the CSP DA. The proposed CSP amendment includes the modifications discussed at the Planning Commission hearing, and the ARSP DA amendment is currently being processed by staff. A more detailed background of this issue is provided in the Planning Commission Memorandum included as Attachment 2.

The attorney representing the property owner for the ARSP spoke in support of the Development Agreement Amendment modifications. The Planning Commission, by a vote of 4-0, considered the Addendum to the Creekview Specific Plan EIR; and recommended that the City Council approve the General Plan Amendment (Exhibit B), Specific Plan Amendment Text and Land Use (Exhibits C and D), Rezone (Exhibit E), and Development Agreement Amendment (Exhibit F).

Public Outreach:

The proposed project was distributed to the various agencies and departments which have requested notice of City applications, and all comments were considered and incorporated into the Conditions of Approval, as appropriate. Notice of the application was also distributed to the Roseville Coalition of Neighborhood Associations and public notices of the Planning Commission hearing and the City Council hearing were distributed to all property owners and residents within 300 feet of the project site. As mentioned above, one comment was received from Brookfield Sunset, LLC prior to the Planning Commission hearing. This letter is discussed in the Planning Commission hearing summary above. No comments were received in response to the City Council hearing notice.

FISCAL IMPACT

A technical report was prepared for the proposed specific plan amendment to evaluate the impact of the proposed project on the CSP Public Facilities Financing Plan (PFFP) (Attachment 3). The memorandum concluded that the funding obligation for the amended CSP would be greater than the funding obligation under the current plan, with the total funding obligation for backbone infrastructure, public facilities (including neighborhood parks, citywide parks, bike trails, and paseos), and development impact fees going from $151.2 million to $209 million.

No modifications are proposed to the CSP funding strategy within the existing PFFP. The City and Developer are working on the formation of a Community Facilities Districts (CFD) to finance a

portion of the backbone infrastructure (Infrastructure CFD), a CFD to fund annual ongoing maintenance of roadways/parks/open space/landscaping/etc. (Maintenance CFD), and annexation of the CSP into the City Municipal Services CFD (CFD No. 3). The three CFDs reduce the overall owner equity needed to construct the CSP and provide the annual funding for City services that are required by the CSP.
The project will have a net neutral cost effect on the City with a net positive fiscal impact.
Economic Development Jobs Created:
The project will create construction jobs during initial development of the site and retail jobs once constructed.

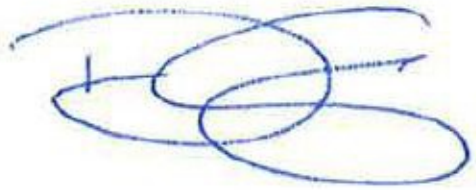
ENVIRONMENTAL REVIEW

As part of the project, an Addendum to the Creekview Specific Plan EIR (SCH# 02008032017) has been prepared consistent with California Environmental Quality Act Section 15164. At the September 12, 2019 Planning Commission hearing, the Planning Commission considered the Addendum to the CSP EIR before making a recommendation to City Council. Based on the environmental analysis of the Addendum, the proposed project does not have the potential to result in any new impact that was not previously disclosed, and will in general result in reduced impacts compared to the previous analyses. The Addendum is included as Exhibit A for consideration by the City Council.

Respectfully Submitted,

Charity Gold, Associate Planner

Mike Isom, Development Services Director



_____
Dominick Casey, City Manager

ITEM 6.2: General Plan Amendment, Specific Plan Amendment, Rezone, Development Agreement Amendment, and Tentative Subdivision Map Modification – 3764 Westbrook Blvd. – Creekview Specific Plan Amendment – PL18-0190

REQUEST

The applicant requests approval of a General Plan Amendment, Specific Plan Amendment, Rezone, Development Agreement Amendment, and Tentative Subdivision Map Modification for: 1) General Plan Amendment and Specific Plan Amendment to change the land use designations as follows: General Commercial (GC) from 15.5 acres to 9.3 acres; eliminate the Community Commercial/Business Professional (CC/BP) zoned lot; Medium Density Residential (MDR) from 66.0 acres to 51.2 acres; High Density Residential (HDR) from 18.7 acres to 17.7 acres; and Low Density Residential (LDR) from 157.3 to 182.7 acres; 2) Specific Plan Amendment to transfer 17 HDR units and 49 MDR units from lots south of the creek to lots north of the creek; 3) Rezone consistent with the land use changes; 4) Development Agreement Amendment to reflect these changes; and 5) Small Lot Tentative Subdivision Map Modification to create 1,133 residential lots.

Applicant – Kris Steward, Phillips Land Law, Inc.
Property Owner –Anthem United Creekview Developments, LP

SUMMARY RECOMMENDATION

The Planning Division recommends that the Planning Commission take the following actions:

A. Consider the Addendum to the Creekview Specific Plan EIR,
B. Recommend the City Council approve the General Plan Text and Land Use Amendments,
C. Recommend the City Council approve the Specific Plan Text and Land Use Amendments,
D. Recommend the City Council adopt the two (2) findings of fact and approve the Rezone,
E. Recommend the City Council approve the Development Agreement Amendment,
F. Adopt the three (3) findings of fact and approve the Tentative Subdivision Map Modification subject to (127) conditions of approval.

SUMMARY OF OUTSTANDING ISSUES

There are no outstanding issues associated with this request. The applicant has reviewed and is in agreement with the recommended conditions of approval.

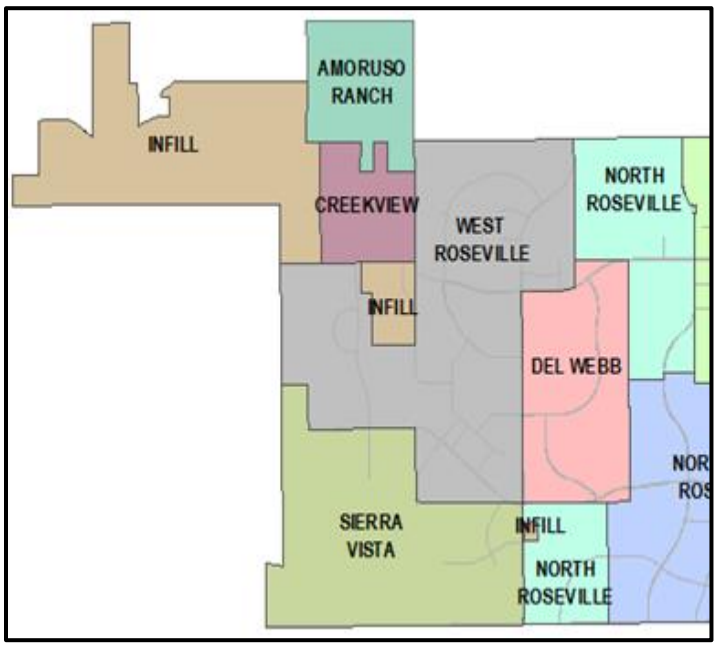
BACKGROUND

The project is located in the northwest portion of the City, south of the Amoruso Specific Plan, north and west of the West Roseville Specific Plan, east of the Al Johnson Wildlife Area, and within the Creekview Specific Plan (CSP) (Figure 1).

The CSP was approved by City Council on September 19, 2012, and established the land use designations and zoning for the specific plan area. With approval of the specific plan a Development Agreement was negotiated between the landowners and the City that set the terms, rules, conditions, regulations, entitlements, responsibilities, and other provisions relating to development of the plan area over a 30 year period.

On February 28, 2013, the Planning Commission approved a Large Lot Tentative Subdivision Map to divide the site into 53 large lots consistent with the adopted land use plan (2007PL-059). On January 28, 2016, the Planning Commission approved a Specific Plan Amendment, Small Lot Tentative Subdivision Map, Design Review for Residential Subdivision (DRRS), and Tree Permit to allow development consistent with the approved large lot map and to transfer residential units between the specific plan large lots (PL14-0522). Minor acreage adjustments to the large lots and unit transfers within those lots were included with these approvals. Although the unit transfer exceeded 20% triggering an amendment to the specific plan, the overall residential unit amount remained at 2,011 as originally approved with the CSP. On April 2, 2018 the Planning Manager approved an extension of the Tentative Subdivision Map, DRRS, and Tree Permit for six (6) years expiring on January 28, 2024.

Figure 1: Project Location



Presently, the applicant is requesting a General Plan, Specific Plan Amendment, and Rezone to modify the land uses in Phase 1 of the Creekview Specific Plan, resulting in a reduction of commercial uses, and a redistribution of LDR, MDR, and HDR units with no overall change to the residential unit count within the plan are, and a Large Lot Tentative Map Modification and Development Agreement Amendment to reflect these changes..

SITE INFORMATION

Location: 3764 Westbrook Boulevard

Total Size: Approximately 501 acres

Topography and Setting: Pleasant Grove Creek and its associated riparian corridor bisects the plan area from east to west. On the north side of the creek the site consists of relatively flat topography, while on the south side of the creek the site consists of gently undulating topography. Overall the site consists of annual grasslands, native oak trees, and wetlands. Properties to the north, east, and south of the site are designated for urban development, while the property to the west of the site is designated as a wildlife area.

EVALUATION GENERAL PLAN AMENDMENT, SPECIFIC PLAN AMENDMENT, AND REZONE

Proposed amendments to the General Plan and Specific Plan are analyzed for consistency with the goals and policies of the plan. For the proposed rezone, Zoning Ordinance Section 19.86.050 specifies that recommendations for approval or denial of a rezone shall include consideration of the proposed amendment's consistency with:

1. **The public interest, health, safety, or welfare of the City, and**

2. **The General Plan and any applicable Specific Plan.**

The project proposes a General Plan Amendment, Specific Plan Amendment, and Rezone to modify the approved land use designations and zoning within the Creekview Specific Plan (CSP), and amendments to the text within the CSP to reflect these changes.

The requested amendments would redistribute the land uses and zoning within the approved boundaries of the Creekview Specific Plan area while the overall dwelling unit allocation will remain at 2,011. Approximately 10.1 acres of Community Commercial and Business Professional land use would be eliminated and replaced by single-family housing. The majority of the land use changes will occur within Phase 1 of the plan area, which encompasses the entire plan area south of Pleasant Grove Creek. Land use changes north of the creek are limited to rezoning to align the zoning with the proposed lot type. All lots designated R1/DS will be rezoned to RS/DS, no other changes to the lots north of the creek are proposed. The proposed land use and zoning changes are detailed in Table 1 and Figure 2, below.

Although the R1/DS lots north of the creek will be rezoned to RS/DS, no other changes to these lots will occur. The size, shape, and location of these lots were approved with the previous tentative map and no modifications to that portion of the map are proposed. The rezoned lots will continue to support single-family homes on conventional lots with lot sizes between 3,600 and 7,500. No changes to the associated large lots are proposed and the density will remain 0.5 to 6.9, as required for LDR lots.

Table 1: Land Use Summary

		Acreage			Dwelling Units		
Land Use Designation		Approved	Proposed	Difference	Approved	Proposed	Difference
Residential Uses

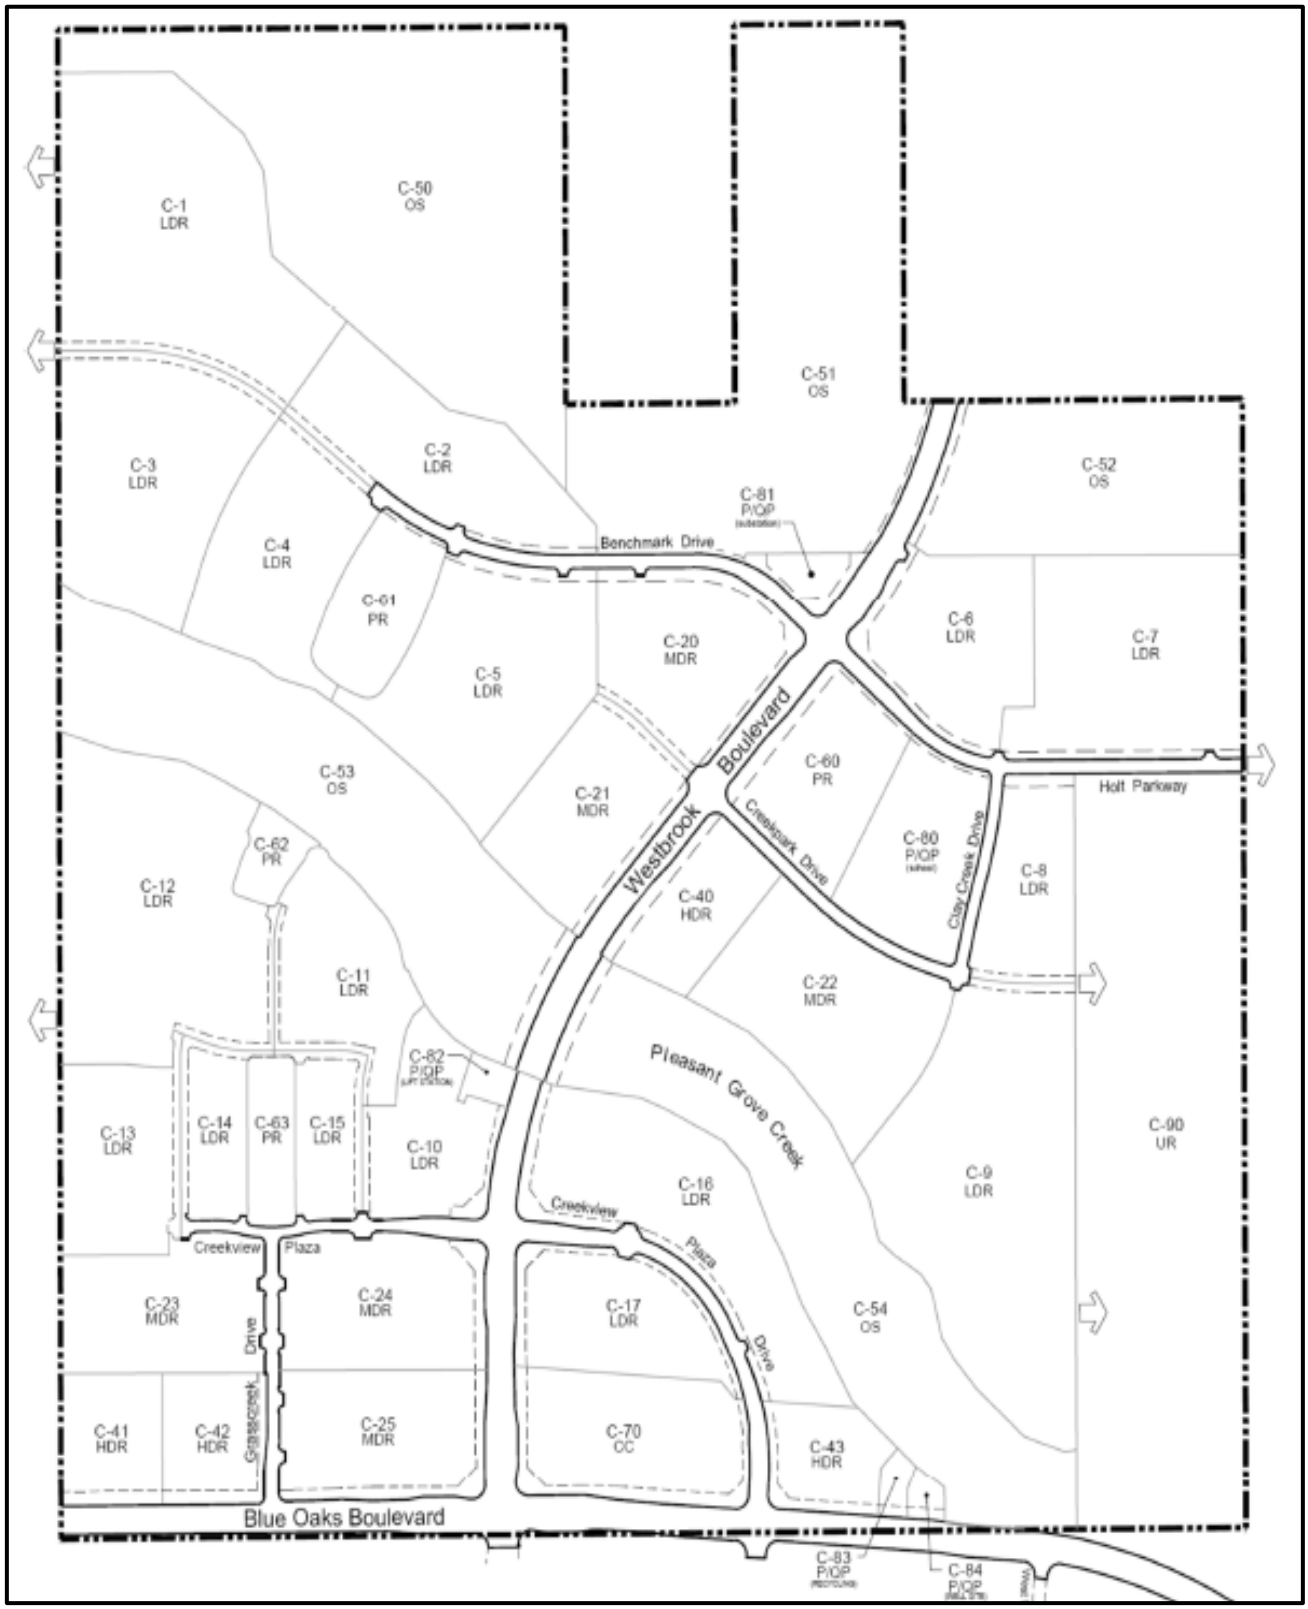
Figure 2: Proposed Land Use Designations



The proposed project results in the loss of 6.3 acres of Community Commercial and 3.8 acres of Community Commercial/Business Professional land uses, leaving the CSP with a total of 9.2 acres of Community Commercial land uses. At the time the CSP was approved the Community Commercial site was sized to provide commercial services to the northwest section of the City, both in the CSP and the West Roseville Specific Plan. Since the adoption of the CSP, the City has approved the Amoruso Ranch Specific Plan (ARSP) and annexed this approximately 700 acre area. The ARSP includes two Community Commercial parcels, totaling 51 acres, within a 1.5 mile radius of the entire CSP area. The commercial land uses within the ARSP, along with the 9.2 acres commercial parcel in the CSP, will serve the commercial needs of northwest Roseville. Staff can support the reduction of commercial acreage within the CSP, with the inclusion of the commercial acreage in the ARSP.

Land Use Compatibility

The proposed project would reorient the land uses south of Pleasant Grove Creek while leaving the land uses north of the creek unchanged. The low density residential units within the plan area will be increased by moving 141 units from medium density lots to low density lots; however the overall unit count will remain unchanged at 2,011. To accommodate the additional LDR units, additional LDR acreage will be added south of the creek by reducing the commercial acreage from 15.5 to 9.2 and eliminating 3.8 acres of community commercial/business professional land use.

For the most part, the proposed changes consist of minor adjustments to the location of the land uses. On the east side of Westpark Boulevard the changes include replacing; the MDR lots with LDR lots, the CC/BP lot with a HDR lot, and a portion of the CC lot with a LDR lot. This change will result in residential uses being located adjacent to commercial uses. The specific plan design guidelines have been amended to address this interface with the addition of sound attenuating features, landscaping and a paseo.

On the west side of Westbrook Boulevard the park site has been modified from an east/west layout surrounded by MDR land uses to a north/south layout surrounded by LDR uses and Grasscreek Drive has been shifted east to align with the park. The combination of uses on this side of Westbrook Boulevard are considered internally compatible. Furthermore, consistency with the Design Guidelines will limit conflicts between these uses.

To improve access and safety, Roseville Electric has requested that the proposed 60kV overhead electrical transmission line be relocated from the south edge of the Pleasant Grove Creek open space corridor to the northern edge of Blue Oaks Boulevard and the eastern edge of Westbrook Boulevard. This change will place the 60kV line adjacent to the rear yards of the residential lots backing on to the eastern side of Westbrook Boulevard. Where adjacent to residential uses, the transmission line will be located within a 50-foot landscape corridor and separated from the residential rear property boundaries by a 6-foot masonry wall. As currently approved, the line would be located at the rear yards of the residences backing on to the open space corridor, separated by open fencing, with a similar setback. Staff is supportive of this revision as the proposed change would not result in more residences adjacent to the transmission line than would occur with the existing plan.

Non-Residential Conversion

As discussed above, staff can support the elimination of 10.1 acres of commercial designated lands; however, the land use amendments are required to be evaluated against the City's non-residential conversion policies. In 2004, in response to increased requests to rezone industrial properties to residential uses, the City Council adopted guidelines for the conversion of land from non-residential to residential uses. A copy of the guidelines is provided as Attachment 1. As stated in the guidelines, the purpose is to make clear the City's expectations related to the loss of job-generating land uses. The

overarching goal to be applied to land use changes outside of the infill portion of the City is to maintain the City's fiscal balance and prevent the loss of jobs and existing job centers while maintaining a balanced community. The guidelines include evaluating fiscal impacts, noise, park dedication, public services, affordable housing, schools, utilities, and traffic when contemplating residential land use allocations.

Below is summary of the provisions of the Non-Residential Rezone Guidelines, for areas within a Specific Plan:

1. A region-wide employment and land inventory study shall be required of each project that is equal to or greater than 50 acres.
2. Land use changes will not have a negative fiscal impact to the City. Each project shall be modeled individually for citywide impacts utilizing the City's fiscal model.
3. Projects that are 50 acres or greater in size shall maintain employment options and a favorable jobs-housing balance.
4. New housing development shall meet the City's 10% goal consistent with the Housing Element (4% affordable to very low, 4% affordable to low, and 2% affordable to middle income).
5. Projects shall provide a specific public benefit that may be in the form of a community benefit fee.
6. Increases in general fund service demands shall be mitigated by establishment of or annexation into a Community Facilities Mello Roos Assessment District to offset the costs of the project. The assessment may be utilized to offset the cost of the following: public safety; parks and open space maintenance; storm water management; and other costs identified by the City.
7. Parks obligation to include payment of citywide and neighborhood park fees. Active park needs shall be provided by the project. An in-lieu parkland dedication fee may be negotiated in lieu of land based on the project. For each acre of parkland dedication mitigated by an in-lieu fee a corresponding in-lieu fee shall be paid for park improvements. The in-lieu fees shall provide improvements of local benefit.
8. Place emphasis on the dedication of parklands within specific plan areas rather than acceptance of an in-lieu fee for land dedication.
9. Utilities (e.g. water, sewer, electric) shall not be impacted as to conveyance or capacity.
10. School impacts shall be mitigated through new impact agreements executed with the school districts to ensure that the project’s student generation is accommodated.
11. Residential units not utilized within a specific plan area shall be reallocated within that plan area and school district. Otherwise, requests for units shall be considered as additive to the City's existing unit allocation.
12. Encourage higher density residential mixed-use projects with consideration to the relaxing of any one guideline or multiple guidelines to promote and provide incentives for innovative higher density residential mixed use projects.

The total number of residential units proposed within the CSP will remain at 2,011, therefore, many of the issues addressed by the Non-Residential Rezone Guidelines do not apply to the proposed project. Because there is no increase in residential units, staff is not recommending imposing a public benefit fee for the proposed project. A public benefit fee is typically associated with projects that increase the need for City services through the addition of residential units. The CSP will continue to meet the City’s affordable housing goals by ensuring that 10% of the total units are made available as affordable housing. A total of 201 units are allocated for middle, low and very-low income households. The existing provision of park acreage and park fees obligation is sufficient to support the 2,011 units in the plan area. School district boundaries and school impact fees are not affected by the proposed project. The applicant has

prepared a technical memorandum to show that planned utilities are sufficient to accommodate the proposed project, and the City's Environmental Utilities and Electric Departments have reviewed and concurred.

A fiscal impact analysis was prepared for the project to examine the proposed change in land uses (see Attachment 2). The study determined that the amended project will have a greater funding obligation for backbone infrastructure, public facilities, and development fees than the approved project and would result in a net positive fiscal impact on the City. Consistent with the original approvals for the CSP, the proposed project will offset costs to the General Fund by annexing into Community Facilities District #3.

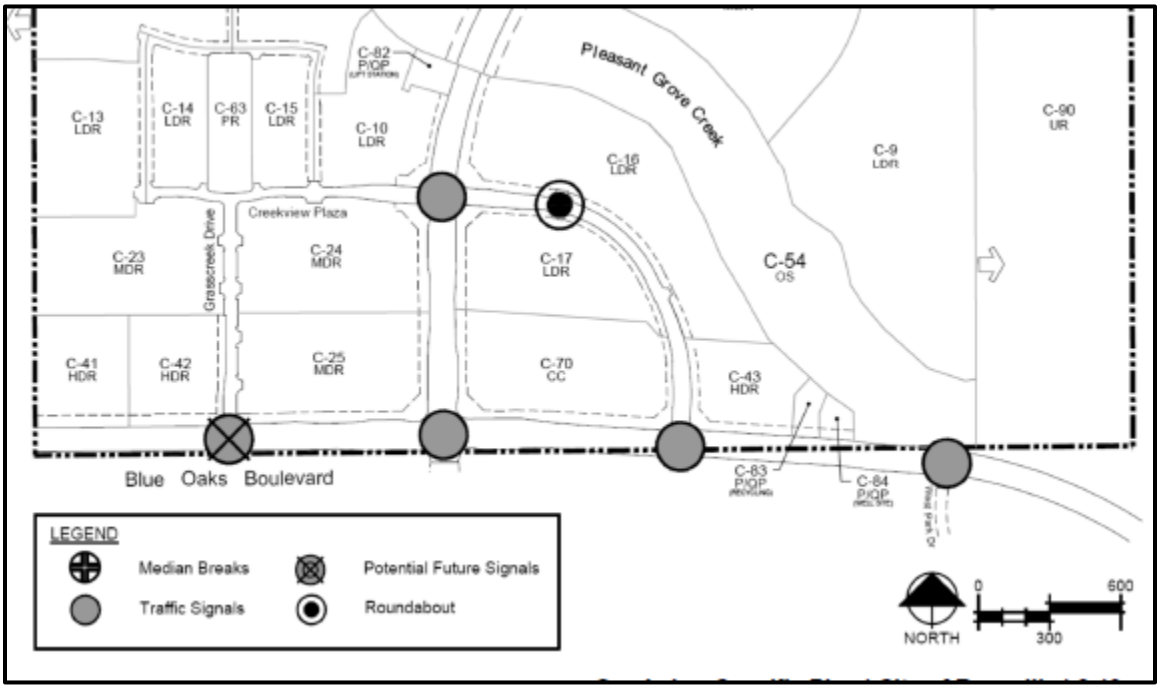
Traffic and Circulation

The proposed amendment to the land use plan would result minor revisions to the roadway network south of Pleasant Grove Creek. These revisions include modification of residential roadways consistent with the map modifications discussed below and an eastward shift of Grasscreek Drive toward Westbrook Boulevard. A Technical Memorandum was prepared for the proposed project by Fehr and Peers (Attachment 3) to compare the proposed changes in land use and circulation to the existing CSP and determine if any additional infrastructure was needed. The memorandum compared the trip generation and vehicle miles traveled (VMT) anticipated from the proposed project to the trip generation anticipated under the current scenario (2016 CSP) and determined that a reduction in trips would occur due to the removal of commercial and business professional land. Additionally, the memorandum determined that VMT would be reduced due the elimination of these uses and the corresponding long trip lengths associated with traveling from central Roseville to office space located within CSP. No additional infrastructure or analysis were warranted.

The memorandum included an evaluation of the intersection of Blue Oaks Boulevard and Grasscreek Drive. The evaluation determined that while the intersection of Blue Oaks Boulevard and Grassceek Drive does not currently warrant a signal, a signal may be warranted in the future if Placer Parkway is extended to Santucci Boulevard. The proposed location of Grasscreek Boulevard is approximately 900 feet west of the Westbrook Boulevard/Blue Oaks Boulevard intersection (Figure 3). Because this spacing does not meet City standards, an exception would need to be granted if a signal were to be warranted at this location. This intersection is identified as a possible location for a future signal in the specific plan and the development agreement. The City will coordinate with the applicant should a signal be needed in the future, presently no signal is required.

The proposed roundabout on Creekview Plaza was also evaluated. This roundabout is located approximately 400 feet east of the Westbrook Boulevard and Creekview Plaza intersection (Figure 3, above). The intersection is expected to carry modest traffic volumes, and is anticipated to operate acceptably as a single-lane roundabout. The final design will be constructed in accordance with City standards.

Figure 3: Grasscreek Drive/Blue Oaks Boulevard Intersection



Noise

The following includes a noise analysis that would typically be included within a project's environmental analyses and therefore not replicated in the staff report; however, this analysis is no longer required as a part of the California Environmental Quality Act (CEQA) as it relates to noise impacts on the project as opposed to noise generated by the project itself. Although, no longer required as part of a CEQA, the City's the General Plan includes policies intended to protect City residents from exposure to excessive noise. Accordingly, the following noise discussion focuses on the project's consistency with the City's General Plan Noise Element.

The City's noise polices require that the noise levels from transportation noise sources at the outdoor activity area of new noise-sensitive land uses not exceed 60 dB L_{dn}/CNEL and that the interior noise level at these uses not exceed 45 dB L_{dn}/CNEL (Table IX-1). For non-transportation noise sources, the noise level measured at the property line of noise-sensitive uses shall not exceed either 50 dB Hourly L_{eq} and/or 70 dB_{max} between the hours of 7 a.m. and 10 p.m., and 45 dB Hourly L_{eq} and/or 65 dB_{max} between the hours of 10 p.m. and 7 a.m (Table IX-3). The proposed project will place the rear yards of single-family residences adjacent to Westbrook Boulevard and Blue Oaks Boulevard, and will place new multi-family and single family uses within the 50 dB L_{eq} noise contour of the Roseville Energy Park (REP), which were not previously proposed.

The anticipated noise levels at the rear yards adjacent to Westbrook Boulevard and Blue Oaks Boulevard were modeled using the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108) and average daily trip (ADT) rates from the CSP EIR Table 4.6-10. The results are detailed in Table 2 below. As illustrated in the table, the 6-foot masonry wall proposed at the single-family property boundary interfaces with Westpark Boulevard and Blue Oaks Boulevard will attenuate the adjacent transportation noise to within City standards.

Table 2: Predicted Transportation Noise

Roadway Segment	Distance (centerline to property)	Noise Level (without barrier)	Noise Level (proposed 6-foot wall)	City Standard Met (60 L_{dn} dB)
Westbrook – North of Blue Oaks	101 Feet	65 L_{dn} dB	59 L_{dn} dB	Yes
Blue Oaks – West of Westbrook	100 Feet	62 L_{dn} dB	56 L_{dn} dB	Yes

As stated above, the addition of residential uses where commercial/business professional uses were previously proposed will place new residences within the REP 50 dB L_{eq} noise contour. The REP is considered a non-transportation noise source subject to the General Plan noise standards in Table IX-3, which establishes a 50 dB Hourly L_{eq}, and a 70 dB_{max}. Although new residential uses will be placed within the 50 L_{eq} noise contour, Table IX-3 include an exception for municipal power plants that allows the standard to be increased by 10 dB(A), but not beyond 55 dB(A). The predicted location of the 55 dB(A) contour is approximately 850 feet from the center of the REP. The HDR lot is approximately 1,200 feet from the center of the REP and the LDR lots are approximately 1,300 feet away. At these distances no conflict with the REP is anticipated.

Unit Transfer

The project includes a request to transfer 17 HDR units and 49 MDR units from lots south of the creek to lots north of the creek. Because the CSP includes a residential unit allocation for each residential large lot within the specific plan area, an amendment to the specific plan is needed to modify the allocated units. Due to the combination of unit transfers, land use changes resulting in elimination of large lots, and changes to large lot acreage many of the transfers exceed the 20 percent threshold, and two of the lot densities exceed the allowable units allowed within the applicable CSP land use designation. The proposed unit transfers are shown in Table 3 below. All units are being transferred within the boundaries of the CSP.

The current density allowed within the CSP HDR land use designation is 13 to 30 units per acre; however, two of the proposed HDR lots (Lots C-40 and C42) will have densities that that exceed the 30 dwelling unit maximum. The proposed amendment to the specific plan includes a modification to the Land Use Plan chapter to align the density maximum with the City's General Plan, which does not place a density restriction on the HDR land use designation, and remove the density cap on the HDR designation. With approval of the amendment the CSP HDR density allowance will be amended to "13.00 units per acre or greater" thereby allowing a density of 31.4 units per acre for lot C-42 and 32.3 units per acre for lot C-40 consistent with the General Plan. There will be no change in the overall unit count within the plan area and all other densities will remain within the appropriate ranges.

Table 3: Residential Unit Transfers

Lot Number	Allocated Units (E)	SP Gross Acres (E)	Allocated Units (P)	SP Gross Acres (P)	Unit Difference	Approximate Percent unit change	Resulting Density (units/acre)
C-40	151	5.2	168	5.2	+17	11%	32.3
C-41	176	6	127	4.27	-49	28%	29.7
C-42	220	7.5	136	4.33	-84	38%	31.4
C-43	0	0	3.88	116	+116	100%	29.9
C-10	44	7.10	36	5.99	-8	18%	6
C-11	28	6.90	34	7.54	+6	21%	4.5
C-12	84	17.10	95	17.28	+11	13%	5.5
C-13	65	10.00	50	8.55	-15	23%	5.8
C-14	0	0	20	3.72	+20	100%	5.4
C-15	0	0	20	3.59	+20	100%	5.6
C-16	0	0	71	12.93	+71	100%	5.5
C-17	0	0	36	6.92	+36	100%	5.2
C-23	80	6.70	61	8.13	-19	24%	7.5
C-24	69	7.50	59	8.12	-10	14%	7.3
C-25	25	3.90	62	7.25	+37	148%	8.6
C-26	21	3.10	0	0	-21	100%	-
C-27	50	4.50	0	0	-50	100%	-
C-28	39	3.90	0	0	-39	100%	-
C-29	44	4.30	0	0	-44	100%	-
C-30	44	4.40	0	0	-44	100%	-

According to the unit transfer criteria HDR units may be transferred until they are encumbered by an Affordable Housing Regulatory Agreement. The units proposed to be transferred between HDR lots have not been encumbered by a housing agreement, but Lots C-42 and C-43 are obligated to provide 80 and 81 affordable units respectively. Though no affordable housing agreement has been entered in to, this requirement is reflected in the proposed Development Agreement Amendment.

The proposed unit transfers will facilitate development within the CSP consistent with the proposed land use and zoning revisions. The proposed unit transfers will not increase the total number of units approved within the specific plan and therefore will not result in impacts to planned infrastructure, roadways, schools, or other public facilities that were not identified in the CSP EIR. The proposed unit transfer will not adversely affect or be materially detrimental to the public health, safety or welfare, public property or improvements. For these reasons, staff supports the proposed specific plan amendment to allow these unit transfers.

Conclusion

The proposed land use changes are generally consistent with the originally approved CSP. The proposed changes will reduce the commercial land use within the plan area while increasing the low density single-family product in response to market demand. Staff finds that the request will not conflict with the public interest, health, safety, or welfare of the City and that the request is consistent with the General Plan and the Creekview Specific Plan.

EVALUATION: DEVELOPMENT AGREEMENT AMENDMENT

Zoning Ordinance Section 19.84.040 specifies that recommendations for approval or denial of a Development Agreement, including Amendments, shall include consideration of the following:

1. Consistency with the objectives, policies, programs, and land use designations of the City of Roseville General Plan.

2. Consistency with the City of Roseville Zoning Ordinance.

3. Conformity with the needs of public health, safety, and welfare.

4. The effect on the orderly development of property or the preservation of property values.

5. Whether the provisions of the Agreement shall provide sufficient benefit to the City to justify entering into the agreement.

Development Agreements are binding contracts that set the terms, rules, conditions, regulations, entitlements, responsibilities, and other provisions relating to the development of the covered properties. The proposed amendments to the Development Agreement include changes to the sections affected by the proposed amendments to the land use plan, unit transfers, and associated infrastructure changes to make those sections consistent with the proposed amendments to the CSP as follows:

- Section 2.2 related to vested entitlements has been updated to reflect the number of units in each land use designation.

- Section 2.6.1 and 2.6.2 related to affordable housing have been updated to reflect revised large lots and to include provisions requiring the applicant to enter into an Affordable Housing Agreement, and establishing that the City will not provide affordable rental units with any subsidy.

- Section 3.5.3.1 related to bus transfer station location was updated to reflect the relocation of these facilities to the west side of C-70 and the east side of C-25.

- Section 3.12 related to parks, open space, and bike trails has been revised to reflect updated acreages.

- Section 3.12.1 related to parks and open space dedications has been revised to reflect updated acreages.

- Section 3.12.8 related to open space preserves has been revised to reflect updated acreages.

- Section 3.17.1.2 (i) related to fee deferrals has been modified to remove the landowner's ability to defer fees, with the exception of 50% of the SPRTA Tier II Traffic fee. For all new DAA requests in recent years, the City has consistently removed this fee deferral option.

As amended the Development Agreement maintains consistency with items 1-5 above.

EVALUATION TENTATIVE SUBDIVISION MAP MODIFICATION

The City of Roseville Subdivision Ordinance (Section 18.06.290) establishes the processes by which an approved Tentative Subdivision Map may be modified. There are two types of modifications established: minor amendments and major amendments. A minor amendment involves changes that are substantially consistent with the intent of the original approval. These are generally limited to changes which make small modifications to lot shapes and sizes or other small amendments to the subdivision layout. Any other type of modification is a major modification. The proposed Tentative Subdivision Map Modification includes changes to roadway locations, adds residential lots where commercial lots were previously anticipated, changes lot locations, and include new small lots not previously included. Therefore, the proposed modification is considered major.

Section 18.06.180 of the City of Roseville Subdivision Ordinance requires that three findings be made in order to approve or conditionally approve a tentative subdivision map. The three findings are listed below in ***italicized, bold*** text and are followed by an evaluation of the map in relation to each finding.

1. ***The size, design, character, grading, location, orientation and configuration of lots, roads and all improvements for the tentative subdivision map are consistent with the density, uses, circulation and open space systems, applicable policies and standards of the General Plan or any applicable specific plan for the area, whichever is more restrictive, and the design standards of this Title.***

2. ***The subdivision will result in lots which can be used or built upon. The subdivision will not create lots which are impractical for improvement or use due to: the steepness of terrain or location of watercourses in the area; the size or shape of the lots or inadequate building area; inadequate frontage or access; or, some other physical condition of the area.***

3. ***The design and density of the subdivision will not violate the existing requirements prescribed by the Regional Water Quality Control Board for the discharge of waste into the sewage system, Pursuant to Division 7 of the Water Code.***

All of the proposed modifications will occur on the portion of the map located south of Pleasant Grove Creek. No modifications to the approved small lots and large lots north of the creek are proposed with this modification and no modifications to the primary arterial roadways are proposed. Minor adjustments to modified collectors and residential streets are proposed as discussed below. Public facilities such as the lift station, electric substation, and well site remain unchanged. For the following discussion, the proposed modifications south of the creek will be discussed as occurring on either the east or west side of Westbrook Boulevard.

Subdivision Design

On the west side of Westbrook Boulevard the modifications include changes to the shape and locations of the two park lots and the roadway networks around them. The parks will generally maintain their size but park C-63 will be shifted so from an east west orientation to a north south orientation. This results in improved alignment with park C-62 to the north. The shape of park C-62 is modified slightly, but connection to the adjacent open space is maintained. Grass Creek Drive, which provides access from Blue Oaks Boulevard, has been moved eastward and will now line up with park C-63. The lotting pattern around these parks and the roadway have been adjusted and the small lots have been included on the MDR large lots.

On the east side of Westbrook Boulevard, the tentative map now includes small lots within previously approved large lots. The locations of the large lots are generally the same, but commercial large lot C-70 has been reduced in size and a new residential village (C-17) is proposed adjacent to its northern boundary. North and northeast of Village C-17 the MDR lots have been replaced with LDR lots within Village C-16. And, south of Village C-16 the commercial/business professional lot has been replaced with an HDR lot C-43. A pedestrian paseo will be constructed with Village C-16, which will align with the paseo along the northern boundary of C-70. Ultimately, this paseo will provide a connection to the bike trail system along Pleasant Grove Creek.

The currently approved map includes 856 single-family lots distributed on both the north and south sides of the creek. The amended map includes a total of 923 HDR, MDR, and LDR residential units, which includes 544 LDR and MDR single-family lots south of the creek. The proposed project includes additional single-family lots south of the creek that were not previously included; however, the overall unit count within the CSP has not changed and remains at 2,011 dwelling units and the proposed map will facilitate development that is consistent with the CSP as amended.

Lot Design

The proposed subdivision will create developable residential lots that range in size from 3,600 square feet to 5,500 square feet. However, LDR lots C-10 and C-13, and MDR lots C-23, C-24, and C-25 contain lots that are smaller than the CSP RS/DS standards. The proposed lot sizes are anticipated in the specific plan with development standards as specified in the Zoning Ordinance. The small lot product is intended to provide a variety of housing products and lot configurations. The proposed lot sizes will help provide a variety of density within the CSP. Similar housing types have been approved and constructed in the West Roseville Specific Plan, the Sierra Vista Specific Plan, and the North East Roseville Specific Plan. These products provide reduced lots sizes, bringing buildings and active areas closer to the sidewalk, which emphasizes the streetscape and encourages pedestrian activity

A Design Review Permit for Residential Subdivision (DRRS) was approved with the original Small Lot Tentative Subdivision Map approved in 2016. The DRRS included a request for reductions in lot size and setbacks for RS/DS lots; however, specific information regarding the development standards, site layout, floor plans, and architectural styles were not available at the time the DRRS was approved. The project was evaluated against other similar projects that had been approved within the specific plans mentioned above and conditioned to submit a second DRRS application prior to issuance of building permits.

The approved DRRS remains applicable to the proposed project and the DRRS condition has been modified to include the additional small lots proposed with this modification.

PUBLIC OUTREACH

The proposed project was distributed to the various agencies and departments which have requested notice of City applications, and all comments were considered and incorporated into the Conditions of Approval, as appropriate. Notice of the application was also distributed to the Roseville Coalition of Neighborhood Associations. No comments were received. A public notice of the Planning Commission hearing was published on August 30, 2019, and was distributed to all property owners within 300 feet of the project site. To date, no comments have been received.

CONCLUSION

As demonstrated by the analyses in the foregoing sections, the proposed project is consistent with the policies and intent of the General Plan and the Creekview Specific Plan. Staff supports the proposed project as it will not be detrimental to public health or safety, nor will it be detrimental to the public welfare.

ENVIRONMENTAL DETERMINATION

As part of the project, an Addendum to the Creekview Specific Plan EIR (SCH# 02008032017) has been prepared consistent with California Environmental Quality Act Section 15164. The Addendum was prepared for consideration by the City's Planning Commission before taking action on the project. A copy of the addendum is provided herein as Exhibit A. Based on the environmental analysis of the Addendum, the proposed project will not have the potential to result in any new impact that were not previously disclosed, and will in general result in reduced impacts compared to the previous analyses.

RECOMMENDATION

The Planning Division recommends the Planning Commission take the following actions:

A. Consider the Addendum to the Creekview Specific Plan EIR.

B. Recommend the City Council approve the **GENERAL PLAN AMENDMENT – 3764 Westbrook Blvd. – Creekview Specific Plan Amendment – PL18-0190**.

C. Recommend the City Council approve the **SPECIFIC PLAN AMENDMENT – 3764 Westbrook Blvd. – Creekview Specific Plan Amendment – PL18-0190**.

D. Recommend the City Council adopt the two (2) findings of fact as stated in the staff report and approve the **Rezone – 3764 Westbrook Blvd. – Creekview Specific Plan Amendment – PL18-0190**.

E. Recommend the City Council approve the **DEVELOPMENT AGREEMENT AMENDMENT – 3764 Westbrook Blvd. – Creekview Specific Plan Amendment – PL18-0190**.

F. Adopt the findings of fact as stated in the staff report and approve the **TENTATIVE SUBDIVISION MAP MODIFICAITON – 3764 Westbrook Blvd. – Creekview Specific Plan Amendment – PL18-0190** subject to (127) conditions of approval.

CONDITIONS FOR TENTATIVE SUBDIVISION MAP MODIFICATION (PL18-0190)

1. This Tentative Subdivision Map Modification shall expire on **January 28, 2024** pursuant to Condition 18 for PL18-0026 below. (Planning)

2. The project is approved as shown in Exhibits F and G and as conditioned or modified below. (Planning)

3. The Tentative Subdivision Map shall not be deemed approved until the actions on the Rezoning, Development Agreement and Specific Plan Amendment are approved and become effective. (Planning)

4. The project is subject to the previously approved conditions of approval for the CSP Large Lot Tentative Subdivision Map (2007PL-059) and Tentative Subdivision Map (PL14-0522), except as conditioned or modified below. (Planning)

5. Prior to issuance of building permits for construction of homes within CSP MDR Villages, the home builder shall be required to submit a Design Review Permit for Residential Subdivision (DRRS for review of consistency with the Zoning Ordinance development standards for RS/DS lots and consistency with the CSP Design Guidelines. (Planning)

6. The project shall comply with all required environmental mitigation identified in the CSP EIR, including Addendum. (Planning)

7. The applicant shall submit a digital CAD file, of the modified small lot tentative subdivision map data, via Accela. (Business Services)

8. The applicant shall submit a street name application with proposed street names. The application can be found HERE. After city review, the applicant will receive the application identifying approved or rejected street names. If enough street names are approved, the applicant shall submit a map with the approved street names to receive a stamp and to be used as the approved street name exhibit. This shall be included in the submittal for improvement plans. (Business Services)

9. All storm drainage, including roof drains, shall be collected on site and treated with Best Management Practices (BMP's) per the City's Stormwater Quality Design Manual. All storm water shall be routed to the nearest existing storm drain system or natural drainage facility. Drain outfalls shall extend down to the receiving water and shall be constructed with adequate velocity attenuation devices. The grading/improvement plans for the site shall be accompanied with a shed map that defines that area tributary to this site and all drainage facilities shall be designed to accommodate the tributary flow. At completion of construction, the drainage analysis will be required to be updated, if necessary, to reflect as-built conditions. (Engineering)

10. Any modifications to the City's Flood plain as a result of this development will require the submittal of the new flood plain boundaries in GIS shape files aligned with the City's coordinates. (Engineering)

11. The cost of any facilities which are identified in the CIP and are beyond those needed for this project may be reimbursed to the developer. In accordance with §66485 and §66486 of the Subdivision Map Act, any improvements constructed by the subdivider which contain supplemental size, capacity, number, or length for the benefit of property not within the subdivision and which improvements are to be dedicated to the public, the subdivider shall be entitled to reimbursement for that portion of the cost of the improvements which is in excess of the construction required for the subdivision. (Engineering)

12. Testing of all fire systems shall be performed prior to the sales office can be opened for business. (Fire)

13. Within new subdivisions that are compact in development (i.e. parcels that are roughly less than 3000 sq ft), all interior roads that are 20 ft. in width, and classified as alleys or not clearly classified as roads, must be identified as a road with the type of Place. In these compact development subdivisions, houses will be addressed off of roads *within* the development. If the front doors of the houses within the subdivision face interior streets, they will be addressed off the front doors first. Where the front doors of the houses are facing walkways, common areas, or to streets outside the subdivision, the houses will be addressed off of the street the garage is facing. In all of these developments, the developer is required to provide signage on both front and back sides of the house identifying the Street Number and Street Name the houses are addressed off of. (Fire)

14. Affordable Purchase housing units affordable to Middle Income households at 95% of the Area Median Income shall be provided consistent with Section 2.6.1 of the Development Agreement as follows: (Housing)

Parcel	Middle Income Purchase Units
C-20	10 middle income units
C-22	20 middle income units
C-25	10 middle income units

15. Prior to the approval of each final small residential lot subdivision map containing lots for affordable purchase, (C20, C-22, & C-25) the developer shall enter into City's current Affordable Purchase Housing Agreement for such residential purchase units affordable to middle-income households. (Housing)

16. An Affordable Housing Rental Agreement shall be executed prior to issue of building permits for C-42 and C-43. (Housing)

17. All small open space lots, split because of the bike trail connections and adjacent to residential streets and home lots, shall be finished with grouted cobble. (Parks)

CONDITIONS FOR TENTATIVE SUBDIVISION MAP EXTENSION (PL18-0026)

18. This Tentative Subdivision Map shall be valid for a period of six (6) years from the original expiration date and shall expire if a Final Map is not recorded by **January 28, 2024**. Pursuant to the Subdivision Map Act, no additional extension shall be granted for this map. The approval of the DRRS and Tree Permit shall expire on the same date as the Tentative Subdivision Map. (Planning)

19. The final map shall include recordation of a pedestrian/bike access and maintenance easement over those locations of the open space where trails are planned. (Alternative Transportation, Engineering, Electric, Environmental Utilities)

CONDITIONS FOR TENTATIVE SUBDIVISION MAP (PL14-0522)

20. The approval of a Tentative Map and/or tentative site plan does not constitute approval of proposed improvements as to size, design, materials, or location, unless specifically addressed in these conditions of approval. (Engineering)

21. The design and construction of all improvements shall conform to the Design and Construction Standards of the City of Roseville, or as modified by these conditions of approval, or as directed by the City Engineer. (Engineering)

22. The developer shall not commence with any on-site improvements until such time as grading and/or improvement plans are approved and grading, underground utility and/or encroachment permits are issued by the Engineering Division. (Engineering)

23. The applicant shall pay City's actual costs for providing plan check, mapping, GIS, and inspection services. This may be a combination of staff costs and direct billing for contract professional services. (Engineering, Environmental Utilities, Finance)

24. Prior to the issuance of any improvement plans owner must have obtained issuance of a 404 permit as defined by the Development. (Engineering)

25. The applicant shall provide a future all-weather accessible crossing of University Creek capable of providing emergency and maintenance vehicle access to areas north of the creek, to the satisfaction of Planning, Fire, and Parks & Recreation. Development of an access road to the crossing or beyond the crossing is not required. The all-weather accessible crossing shall be provided prior to substantial completion of the first subdivision within Parcels C-1 or C-2. (Fire, Park, Recreation & Libraries)

PRIOR TO ISSUANCE OF A GRADING PERMIT AND/OR IMPROVEMENT PLANS

26. Landscape Plans shall be submitted with the Improvement Plans for all landscape corridors and all landscaped common areas. Landscaping shall be installed prior to approval of the Certificate of Completion for the subdivision and/or infrastructure improvements. The landscape plan shall comply with the CSP and the City of Roseville Water Efficient Landscape Requirements (Resolution 93-55). (Planning, Engineering, Parks, Fire, Environmental Utilities)

27. Grading around the native oak trees or other natural features shall be as shown on the improvement plans or as approved in these conditions. (Planning)

28. Improvement plans shall include Neighborhood Entry detail, including masonry wall and fence detail, (architectural design for wall, fence & pilasters), and pilaster locations in accordance with the CSP Design Guidelines. (Planning, Engineering)

29. The applicant shall submit to the Engineering Division the appropriate Army Corps of Engineers permit or clearance, the California Department of Fish and Game Stream Bed Alteration Agreement, and/or the Regional Water Quality Control Board Water Quality Certificate. (Planning, Engineering)

30. The grading and improvement plans shall be designed in accordance with the City's Design and Construction Standards and shall reflect the following:

    - Street improvements including, but not limited to, curb, gutter, sidewalk, pavement, drainage systems, traffic striping, signing, medians and markings, etc. along all existing and proposed City streets, as required by Engineering.

    - Grading shall comply with the City grading ordinance.

    - A rough grading and/or underground utility permit may be approved by the Engineering Division prior to approval of the improvement plans.

    - Access to the floodplain as required by Engineering and the Streets Divisions.

    - Standard access ramps shall be installed at all curb returns per City Standards. (Engineering)

31. For all work to be performed off-site, permission to enter and construct shall be obtained from the property owner, in the form of a notarized right-of-entry. Said notarized right-of-entry shall be provided to Engineering prior to approval of any plans. (Engineering)

32. The applicant shall obtain an encroachment permit from the Engineering Division prior to any work conducted within the City right-of-way. (Engineering)

33. The applicant shall remove and reconstruct any existing damaged curb, gutter, and sidewalk along the property frontage. During site inspection Engineering will designate the exact areas to be reconstructed. (Engineering)

34. All Lots/Parcels shall conform to Class 1 drainage, pursuant to the adopted City of Roseville Design and Construction Standards, except as shown on the tentative map, as approved in these conditions or as otherwise approved by the City Engineering. (Engineering)

35. Prior to the approval of the improvement plans, it will be the project proponent's responsibility to pay the standard City Trench Cut Recovery Fee for any cuts within the City streets that are required for the installation of underground utilities. (Engineering)

36. The CSP shall be mass graded in conformance with the Development Agreement and consistent with the approved Utility and Roadway Phasing Guide (February 18, 2015) and Creekview Infrastructure Phasing Matrix (July 2, 2019), as applicable by phase. (Engineering)

37. Per Section 3.10.5 of the Development Agreement, the Pleasant Grove Creek Bypass Channel Improvements shall be constructed with the first phase of construction and be deemed substantially complete by the City prior to issuance of the first building permit. (Engineering)

38. All pad grades shall be elevated to a minimum of 2-feet above the 100-year water surface elevation, based on the future, fully-developed condition of the watershed upstream of the project, or, all finished floor elevations shall be elevated to a minimum of 2-feet above the 200-year water surface elevation, based on the future, fully-developed condition of the watershed upstream of the project, whichever is greater in elevation. (Engineering)

39. Prior to the issuance of grading permits, the applicant shall obtain a Conditional Letter of Map Revision (CLOMR) from FEMA for the proposed grading shown within the FEMA Special Revision Flood Hazard Area. The applicant shall also obtain a Letter of Map Revision (LOMR) from FEMA prior to issuance of building permits for any structure located within the current FEMA floodplain. (Engineering)

40. A note shall be added to the grading plans that states:

    "Prior to the commencement of grading operations, the contractor shall identify the site where the excess/borrow earthen material shall be imported/deposited. If the borrow/deposit site is within the City of Roseville, the contractor shall produce a report issued by a geotechnical engineer to verify that the exported materials are suitable for the intended fill, and shall show proof of all approved grading plans. Haul routes to be used shall be specified." (Engineering)

41. The following note shall be added to the Grading and/or Improvement Plans:
    To minimize dust/grading impacts during construction the applicant shall:

    a. Spray water on all exposed earth surfaces during clearing, grading, earth moving and other site preparation activities throughout the day.
    b. Use tarpaulins or other affective covers on all stockpiled earth material and on all haul trucks.
    c. Sweep the adjacent streets frontages at least once a day or as needed to remove silt and other dirt which is evident from construction activities.
    d. Ensure that construction vehicles are cleaned prior to leaving the construction site to prevent dust and dirt from being tracked off site. (Engineering)

42. The City shall have the authority to stop all grading operations, if in the opinion of city staff, inadequate dust control measures are being practiced or excessive wind conditions contribute to fugitive dust emissions. (Engineering)

43. A standard bus shelter turnout and pad shall be installed in the following locations:

- Northwest corner of Blue Oaks Blvd. at Westbrook Blvd.
- Northeast corner of Westbrook Blvd. at Blue Oaks Blvd Lot C-70 (Shelter #288).
- Southwest corner of Westbrook Blvd. at Creekview Plaza C-29.

The two stops on Creekview Plaza Drive and the two stops on Westbrook Boulevard at Creekview Plaza Drive shall include stubs for electricity and fiber. (Engineering)

44. Developer shall be responsible for the installation of a bus shelter and related improvements conforming to the city's current standards on the shelter pad as conditioned above. Upon installation and final inspection by the City of Roseville, the bus shelter and related improvements shall become property of the City of Roseville. The Developer and City may enter into a deferred improvement or other agreement based upon a construction cost of $10,000 per shelter for future construction of the Bus Shelters.

45. Per Section 3.12.6 of the Creekview Development Agreement, the mass grading plans and/or subdivision grading plans adjacent to the open space shall include rough grading for the open space bike trails and extension of subdivision drainage facilities as needed to accommodate the trails, consistent with the tentative map and the existing bridge planning studies as may be updated to meet the freeboard requirements of the Central Valley Flood Protection The developer shall be responsible for the cost of preliminary design, necessary permits and resource mitigation, rough grading and extension of drainage facilities without reimbursement. The trail shall meet City and state standards for Class I bikeways, including but not limited to turning radius and setbacks from roadways and obstructions. (Alternative Transportation, Engineering)

46. Per Section 3.12.6 of the Creekview Development Agreement, bike trail construction may be incorporated into the project improvement plans per the following:

    a. Prior to approval of improvement plans for subdivisions adjacent to open space trails, the developer shall submit a cost estimate for design and construction of adjoining trail improvements, including bridge abutments and bridges.

    b. If the City determines that sufficient funding is available all or part of the adjoining trail shall be included with the project improvements and the City and developer shall enter into a reimbursement agreement for the work.

    c. If sufficient funds are not available, the City shall be responsible for trail construction at a later date, except the city may elect to have developer construct the westerly bridge abutments, with reimbursement being made to the constructing party over time as funds become available and in accordance with a reimbursement agreement between the City and the developer.

    d. The trail shall meet City and state standards for Class I bikeways (Alternative Transportation, Engineering)

47. The applicant shall dedicate all necessary rights-of-way for the widening of any streets required with the tentative map. A separate document shall be drafted for approval and acceptance by the City of Roseville, and recorded at the County Recorder’s Office. (Engineering)

48. The proposed arterial roadways shall be constructed and funded as set forth in Section 3.5.2 of the Development Agreement. Developer shall enter into a Funding, Construction and Acquisition Agreement with the City for those improvements in excess of Developer's obligation. (Engineering)

49. All bridge crossings, both vehicular and pedestrian, shall be designed to meet the freeboard standards of the Central Valley Flood Protection Board. The freeboard shall be measured from the soffit of the bridge to the 200-year water surface elevation. (Engineering, Alternative Transportation)

50. Traffic Signals shall be constructed and funded as set forth in Section 3.5.7 of the Development Agreement. Temporary traffic signals installed on Blue Oaks Blvd or Westbrook Blvd, in locations other their ultimate locations, shall not be eligible for reimbursements as outlined in Section 3.5.7 of the Development Agreement. (Engineering)

51. Reimbursements to the West Roseville Specific Plan for oversized improvements serving the CSP, shall be reimbursed per Section 3.25 of the Development Agreement. (Engineering)

52. Phasing of infrastructure improvements shall be consistent with the Development Agreement and the approved Utility and Phasing Guide (February 18, 2015) and the Creekview Infrastructure Phasing Matrix (July 2, 2019), as applicable by phase. Phases A and B shall be considered sequential phasing, meaning Phase A and B improvements shall be deemed substantially complete prior to Phase C improvements being deemed substantially complete. All other phases may develop independently per the Utility and Roadway Phasing Guide. (Engineering)

53. The grading plans for the site shall be accompanied with a shed map that defines that area tributary to this site. All drainage facilities shall be designed to accommodate the tributary flow. All on-site storm drainage shall be collected on site and shall be routed to the nearest existing storm drain stub of natural drainage coarse. (Engineering)

54. The drainage outfalls shall extend down to the receiving water and shall be constructed with adequate velocity attenuation devices. All permanent structures, including headwalls for drainage outfalls, shall be constructed within the open space buffer, unless it can be demonstrated that the appropriate permits have been obtained by the Developer and the construction is consistent with the City's Overarching Open Space Management Plan. (Engineering)

55. Access ramps shall be provided for all drainage swales within the open space to ensure maintenance vehicles can adequately gain access to the upstream end of the swale. (Engineering)

56. The grading plans shall be accompanied with engineered structural calculations for all retaining walls greater than 4 feet in height. All retaining walls shall be of either split faced masonry units, keystone type construction, cast in place concrete with fascia treatment or rockery walls as approved by the City Engineering. (Engineering)

57. The developer shall be responsible for any necessary relocation of signal interconnect cables that may require re-location as a result of the construction of turn lanes and/or driveways. (Engineering)

58. Signal interconnect conduit shall be stubbed to parcels C-84, C-83, C-63, C-82 and C-60 with the construction of the respective roadways serving these parcels. (Parks, Environmental Utilities, Engineering)

59. To ensure that the design for any necessary widening, construction, or modifications of public streets does not conflict with existing dry utilities generally located behind the curb and gutter, and prior to the approval of design drawings for those frontage improvements, the project proponent shall have the existing dry utilities pot holed for verification of location and depth. (Engineering)

60. Sight distances for all driveways shall be clearly shown on the improvement plans to verify that minimum standards are achieved. It will be the responsibility of the project proponent to provide appropriate landscaping and improvement plans, and to relocate and/or modify existing facilities as needed to meet these design objectives. (Engineering)

61. Prior to construction within any phase of the project, high visibility temporary construction fencing shall be installed along the parcels adjacent to the open space parcels (C-50 through C-54). Fencing shall be maintained daily until permanent fencing is installed, at which time the temporary fencing shall be removed from the project site. (Engineering, CDD, Planning)

62. With the exception of access required for maintenance and/or emergency vehicles, the project shall be designed to prevent vehicle access into open space parcels (C-50 through C-54). Post and cable fencing or other improvements shall be utilized to meet this requirement. (Engineering, CDD, Planning)

63. Landscaping adjacent to the open space parcels (C-50 through C-54) shall be California native, drought-tolerant groundcover, shrubs, plants and trees. (CDD, Planning, Parks, Recreation & Library)

64. Prior to the approval of the Improvement Plans, the project proponent shall prepare and submit a Storm Water Pollution Prevention Plan (SWPPP) to the City, as defined by the Regional Water Quality Control Board. (Engineering)

65. Prior to the issuance of a grading permit or approval of Improvement Plans, the grading plans shall clearly identify all existing water, sewer and recycled water utilities within the boundaries of the project (including adjoining public right of way). Existing utilities shall be identified in plan view and in profile view where grading activities will modify existing site elevations over top of or within 15 feet of the utility. Any utilities that could potentially be impacted by the project shall be clearly identified along with the proposed protection measures. The developer shall be responsible for taking measures and incurring costs associated with protecting the existing water, sewer and recycled water utilities to the satisfaction of the Environmental Utilities Director. (Environmental Utilities)

66. Water and sewer infrastructure shall be designed and constructed pursuant to the adopted City of Roseville Improvement Standards and Construction Standards and shall reflect the following:

    a. Sewer and water service laterals shall not be allowed off of water and sewer mains larger than 12 inches in diameter. (Environmental Utilities)

    b. Utilities or permanent structures shall not be located within the area which would be disturbed by an open trench needed to expose sewer trunk mains deeper than 12' unless approved by Environmental Utilities in these conditions. The area needed to construct the trench is a sloped cone above the sewer main. The cone shall have 1:1 side slopes. (Environmental Utilities)

    c. Water and sewer mains shall not exceed a depth of 12' below finished grade, unless authorized in these conditions. (Environmental Utilities)

    d. All sewer manholes shall have all-weather 10-ton vehicular access unless authorized by these conditions. (Environmental Utilities)

67. Recycled water infrastructure shall be designed pursuant to the adopted City of Roseville Improvement Standards and the City of Roseville Construction Standards. The applicant shall pay all applicable recycled water fees. Easements shall be provided as necessary for recycled water infrastructure. (Environmental Utilities)

68. Any backflow preventers visible from the street shall be painted green to blend in with the surrounding landscaping. The backflow preventers shall be screened with landscaping and shall comply with the following criteria:

    a. There shall be a minimum clearance of four feet (4'), on all sides, from the backflow preventer to the landscaping.

    b. For maintenance purposes, the landscaping shall be installed on a maximum of three sides and the plant material shall not have thorns.

    c. The control valves and the water meter shall be physically unobstructed.

    d. The backflow preventer shall be covered with a green cover that will provide insulation. (Environmental Utilities)

69. A note shall be added to the Improvement Plans stating that all water backflow devices shall be tested and approved by the Environmental Utilities Department prior to the Notice of Completion for the improvements. (Environmental Utilities)

70. Fire hydrants shall be located as required by the Fire Department. The maximum distance between fire hydrants shall not exceed 500' on center. Fire hydrants shall not be located at the end of any residential court. Preferred location would be street corners and entry points to a subdivision. (Fire)

71. Minimum fire flow is 1,500 gallons per minute with 20 lbs. residual pressure. The fire flow and residual pressure may be increased, as determined by the Fire Marshall, where the project utility lines will serve non-residential uses. (Fire)

72. Framing of combustible construction cannot commerce until access roads and public fire hydrants are approved by the Fire Department. (Fire)

73. If this project will be phased, the fire department requirements for access and circulation throughout shall be approved by the City for such proposal. Access road shall comply in accordance with the California Fire Code, 2013 with the City of Roseville's Amendments. A separate phasing plan shall be reviewed and approved by this department. (Fire)

74. Any facilities proposed for placement within public/electric utility easements shall be subject to review and approval by the Electric Department before any work commences in these areas. This includes, but is not limited to, landscaping, lighting, paving, signs, trees, walls, and structures of any type. (Electric)

75. All Electrical Department facilities, including street lights where applicable, shall be designed and built to the "City of Roseville Specifications for Residential Trenching". (Electric)

76. The design for electrical service for this project will begin when the Electric Department has received a full set of improvement plans for the project. (Electric)

77. All landscaping in areas containing electrical service equipment shall conform with the "Electric Department Landscape Design Requirements" as outlined in Section 7.00 of the Electric Department's "Specifications for Residential Trenching". (Electric)

78. Over-grading onto the adjacent park shall be prohibited. (Parks, Recreation & Library)

79. Drainage shall be installed on the project's property to collect increased run-off due to development. Drainage shall not daylight onto City property, with the exception of the bypass channel on the AJWA property. (Parks, Recreation & Library)

80. Damage to any trees to be preserved, during the course of construction, shall be the property owner's responsibility. (Parks, Recreation & Library)

81. Accent lighting at entry monuments shall be above ground types. In-ground lighting will not be accepted. (Parks, Recreation & Library)

82. Signage at entry monuments shall be monolithic and bolted in place. (Parks, Recreation & Library)

83. Utilities for parks shall be coordinated with Parks, Recreation & Libraries. (Parks, Recreation & Library)

84. A master access plan for open space along the entire project shall be prepared and submitted. The plan shall show proposed vehicle access points at a frequency that allows access to the entire open space areas. The following items should be included in the plan exhibit:

    a. The exhibit should show the location of outfalls and other open space improvements or features that require maintenance so the City can determine where open space facility maintenance access is needed.

    b. The exhibit should show the open space resources and drainages to better understand access constraints within the open space parcels (C-50 though C-54). Swales and drainages can cut off access to some locations.

    c. Demonstrate that the access locations shown work for required equipment from a grade and turning radius perspective.

    Once approved, the master access plan shall be included in improvement plans for phases or sub-phases. (Parks, Recreation, & Libraries)

85. Costs for GIS mapping of city-maintained parcels shall be part of the project costs. (Parks, Recreation & Library)

86. Locate fences and walls on the private property side of the property line, where parks and publically maintained landscape lots are adjacent to residential parcels. (Parks, Recreation & Library)

87. All plant material for streetscapes and medians shall be maintained under a 30 calendar day establishment period after initial planting. Upon completion of the establishment period, all plant material shall remain under warrantee for an additional 11 months minimum. Any plant material which does not survive during the establishment period shall be immediately replaced. Any trees or shrubs which do not survive during the warrantee period shall be replaced one month prior to the end of the warrantee period. Tree or shrub replacement made necessary due to acts of God, neglect or vandalism shall be exempt from the warrantee. (Parks, Recreation, & Libraries)

88. Replace all references to "No Mow" turf with another plant. (Parks, Recreation, & Libraries)

89. The location and design of the gas service shall be determined by PG&E. The design of gas service for this project shall not begin until PG&E has received a full set of City approved improvement plans for the project. (PG&E)

90. It is the developer's responsibility to notify PG&E of any work required on PG&E facilities. (PG&E)

PRIOR TO OR UPON RECORDATION OF FINAL/PARCEL MAP

91. The following easements shall be provided and shown on the Final/Parcel Map or by separate instrument, unless otherwise provided for in these conditions:

    a. A 12.5 foot wide public utilities easement along all road frontages;
    b. Water and sewer easements; and,
    c. Per the Development Agreement, if a bike trail is completed prior to City's acceptance of open space within which the trail is located, City shall be responsible for trail maintenance. In that case, the City and Developer shall memorialize the maintenance obligations through recordation of a temporary maintenance and pedestrian/bike access easement. (Alternative Transportation, Engineering)
    d. The applicant shall dedicate a separate easement to the City of Roseville for all bus stops located within the Creekview Specific Plan and not located within a lettered lot to be dedicated to the City. The easement documents shall be drafted for approval and acceptance by the City of Roseville and recorded at the County Recorders' office. (Alternative Transportation, Engineering, Electric, Environmental Utilities)

92. Easement widths shall comply with the City's Design and Construction Standards. (Environmental Utilities, Electric, Engineering)

93. All existing easements shall be maintained, unless otherwise provided for in these conditions. (Environmental Utilities, Electric, Engineering)

94. With the recordation of the first Final Map all roadway Irrevocable Offers of Dedication (IOD's), Public Utility Easements (PUE') and Access Easements (AE's) with rights to construct shall be dedicated, as outlined in the Development Agreement and the "Utility and Roadway Phasing Guide" and as modified in the Creekview Infrastructure Phasing Matrix (July 2, 2019). (Engineering)

95. Separate document easements required by the City shall be prepared in accordance with the City's "Policy for Dedication of Easements to the City of Roseville". All legal descriptions shall be prepared by a licensed land Surveyor (Environmental Utilities, Electric, Engineering)

96. A declaration of Conditions, Covenants and Restrictions (CC&Rs), in a form approved by the City Attorney, shall be recorded on the entire property concurrently with the Final/Parcel Map. The CC&Rs shall include the following items:

    a. CC&Rs for Villages C-6, C-20, C-24, C-25 and C-70 shall disclose the location of bus stops and the possible operation of bus service in the locations identified.

    b. A clause prohibiting the amendment, revision or deletion of any sections in the CC&Rs required by these conditions of approval without the prior written consent of the City Attorney. (Attorney, Planning)

97. Parcels C-50, C-51, C-52, C-53, and C-54 will not be accepted by the City, either in fee or as an easement, until after the subdivider has fulfilled the terms of the Permit from the Department of Fish and Game or Army Corps of Engineers. Upon completion of the monitoring period, the owner shall notify the City of Roseville Planning Department. (Planning, City Attorney)

98. The City shall not approve the Final Map for recordation until either:

    a. A subdivision agreement is entered into along with the necessary bonds and insurance as required by the City. Said agreement shall be in a form acceptable to the City Attorney. OR;

b. The improvement plans are approved, and the improvements are constructed and accepted as complete. In this case, the subdivider shall enter into a one-year maintenance agreement concurrent with the recordation of the Final Map. (Engineering)

99. Any structures crossing Lot/Parcel lines created by the Final/Parcel map shall be removed. (Engineering)

100. Per the Development Agreement, the developer shall pay $20,000 for the Creekview Specific Plan area's fair share contribution towards update of the Long Range and Short Range Transit Plans and the Bicycle Master Plan. (Building, Alternative Transportation)

101. Per Section 3.5.20 of the Development Agreement, an access easement shall be maintained to the Wagner Property with the recordation of the first Final Map. (Engineering)

102. The street names shall be approved by the City of Roseville. (Engineering)

103. Applicant has the option of forming a Community Facilities District – Public Facilities (CFD) for the purpose of financing the construction and/or acquisition of public infrastructure and facilities within the project area. In order to allow the CFD to be in place at the beginning of the Levy cycle, the documentation shall be provided to the Finance Department not later than March 15 of the year preceding the Levy cycle in which the CFD will become effective. (Finance)

104. A Community Facilities District – Public Services (Services CFD) shall be formed for the subject property prior to the issuance of the first residential building permit, excluding permits for model homes or certificates of occupancy for non-residential uses. This district is being formed in order to fund maintenance of landscaping, open space, trails and neighborhood parks. It is the applicant's responsibility to cooperate with the Finance Department in preparing the appropriate documentation for the formation of the Services CFD. In order to allow the CFD to be in place at the beginning of the Levy cycle, the documentation shall be provided to the Finance Department not later than March 15 of the year preceding the Levy cycle in which the Services CFD will become effective. (Finance)

105. The subject property shall be annexed into Municipal Services District #3 (Muni CFD) prior to the issuance of the first residential building permit, excluding permits for model homes or certificates of occupancy for non-residential uses. This property is being added into this district in order to provide the funds required to offset the property's impact on City general fund resources available to pay for municipal services citywide, including the project area. It is the applicant's responsibility to cooperate with the Finance Department in preparing the appropriate documentation for the annexation of this property into the CFD. In order to allow the CFD to be in place at the beginning of the Levy cycle, the documentation shall be provided to the Finance Department not later than March 15 of the year preceding the Levy cycle in which the Muni CFD will become effective. (Finance)

106. The Final/Parcel Map shall include an irrevocable offer to dedicate public rights-of-way and public and/or private easements as required by the City. Lettered Lots/Parcels along major roads shall be dedicated in fee to the City as right of way. (Engineering)

107. The words "traffic control appurtenances" shall be included in the list of utilities allowed in public utilities easements (PUE's) located along public roadways. (Engineering)

108. The Final/Lot/Parcel/Parcel Map shall be submitted per, "The Digital Submittal of Cadastral Surveys". Submittal shall occur after Engineering approval but prior to Council approval (Engineering)

109. Electric construction costs incurred by the City of Roseville Electric Department for this project shall be paid for by the developer per the applicable policy. (Electric)

110. The applicant shall pay all applicable water and sewer fees. (Environmental Utilities)

OTHER CONDITIONS OF APPROVAL

111. The applicant shall pay City's actual costs for providing plan check, installation and inspection services. This may be a combination of staff costs and direct billing for contract professional services (Environmental Utilities, Engineering)

112. Any relocation, rearrangement, or change to existing electric facilities due to this development shall be at the developer's expense. (Electric)

113. It is the responsibility of the developer to insure that all existing electric facilities remain free and clear of any obstructions during construction and when the project is complete. (Electric)

114. Existing public facilities damaged during the course of construction shall be repaired by the applicant, at the applicant's expense, to the satisfaction of the City. (Engineering)

115. The project is subject to the noise standards established in the City's Noise Ordinance. In accordance with the City's Noise Ordinance project construction is exempt between the hours of seven a.m. and seven p.m. Monday through Friday, and between the hours of eight a.m. and eight p.m. Saturday and Sunday. Provided, however, that all construction equipment shall be fitted with factory installed muffling devices and that all construction equipment shall be maintained in good working order. (Engineering)

116. If site survey or earth moving work results in the discovery of hazardous materials in containers or what appears to be hazardous wastes released into the ground, the contractor shall notify the Roseville Fire Department immediately. A representative from the Fire Department will make a determination as to whether the incident is reportable or not and if site remediation is required. Non-emergency releases or notifications about the presence of containers found shall be reported to the Fire Department. (Fire)

117. Improvement plans shall show the Open Space and Preserve boundaries and label them as a protected areas The Pre-Construction meeting shall address the presence of the Open Space or Preserve, the sensitive habitats present and minimization of disturbance to the Open Space or Preserve. During grading and construction the Open Space or Preserve area shall be avoided and shall not be used for parking, storage, or project staging. The contractor shall remove all trash blown into the Open Space or Preserve from adjacent construction on a daily basis. After construction is complete, the temporary fencing shall be removed from the Open Space or Preserve, along with all temporary erosion control measures (e.g., straw bales, straw waddles and stakes, silt fencing). (Engineering, CDD, Planning, and Parks, Recreation & Libraries)

118. Landscape plans are required with the second submittal and shall include a master irrigation plan showing all phases of work. The master irrigation plan shall include all mainline layout/size, points of connection/sizes, controller location, valves and phasing with limit of work lines. This plan shall be included in all phased submittals. All irrigation and landscaping shall comply with the Parks Construction Standards. (Parks, Recreation & Libraries)

119. Clearly delineate City-maintained landscaping from privately maintained landscaping with a concrete mowband consistent with the Parks Construction Standards. (Parks, Recreation & Libraries)

120. For streetscapes to be City-maintained, provide a 2' bench between back of walk and toe of slope sloped away from the back of walk to decrease nuisance run-off from irrigated and landscaped slopes. (Parks, Recreation & Libraries)

121. Slopes along the developed property line and open space shall be 3:1 or less (severe). (Parks, Recreation & Libraries)

122. The dedication of parkland (future parks and/or open space) shall be deeded to the City through an Irrevocable Offer of Dedication (IOD). As a default, park and open space parcels shall be excluded from acceptance through the mapping approvals and completed as a separate deed process. (Parks, Recreation & Libraries, Development Services)

123. For Park parcels, the transfer of property shall be at the City's request, generally, timed to coincide with the start of the specific park design phase of work, unless otherwise noted or requested. (Parks)

124. For Open Space parcels, the transfer of property shall occur once all mitigation measures, Developer construction activity immediately surrounding the parcel and implementation measures identified in the Overarching Open Space Management Plan have been completed and verified as complete by the Open Space Division of Parks & Recreation, unless otherwise noted or requested. (Parks)

125. For streetscapes to be City-maintained, the lots shall be separate parcels and accepted through the standard Certificate of Compliance (COC) process for street improvements. The establishment period shall be complete at COC unless a letter of agreement outlining establishment responsibilities beyond the COC has been executed between the City and Developer. All HOA maintained landscaping shall be clearly identified on the landscape plans at time of plan approval. (Parks)

126. The project shall comply with all applicable environmental mitigation measures identified in the CSP EIR, including Addendum. (Planning)

MAP ADVISORY NOTES

127. The school/park campus shall be planned and coordinated between the Developer, City and School District prior to any application or submittal to the State Architects for review and approval. (Parks, Recreation & Library)

Guidelines for Conversion of Non-Residential Land Uses

August 4, 2004

Intent:

In response to pressures to convert portions of the City's non-residential land use inventory the City has developed the following guidelines for the consideration of land use changes. The intent of the guidelines is to articulate the City's expectations relating to land use change proposals. These guidelines are to be applied as performance measures in the preparation and review of any such proposals. The guidelines are not intended to be inclusive of all City development requirements, but rather supplement those requirements by identifying or emphasizing concepts particularly important or unique to potential land use changes. It is expected that the City's emphasis on certain concepts or requirements will change overtime. Therefore, the guidelines are to be a fluid document to be revisited every two years and updated to reflect the City's present need.

In consideration of the unique attributes and constraints of various areas of the City, the guidelines have been divided in two areas those guidelines that are applicable to the infill area and those that are applicable to the balance of the City. A map depicting these areas is attached.

Infill

The overarching goal to be applied to land use changes within the infill portion of the City is to encourage and emphasize reinvestment and revitalization without creating undue burdens and barriers to development while preserving neighborhood compatibility.

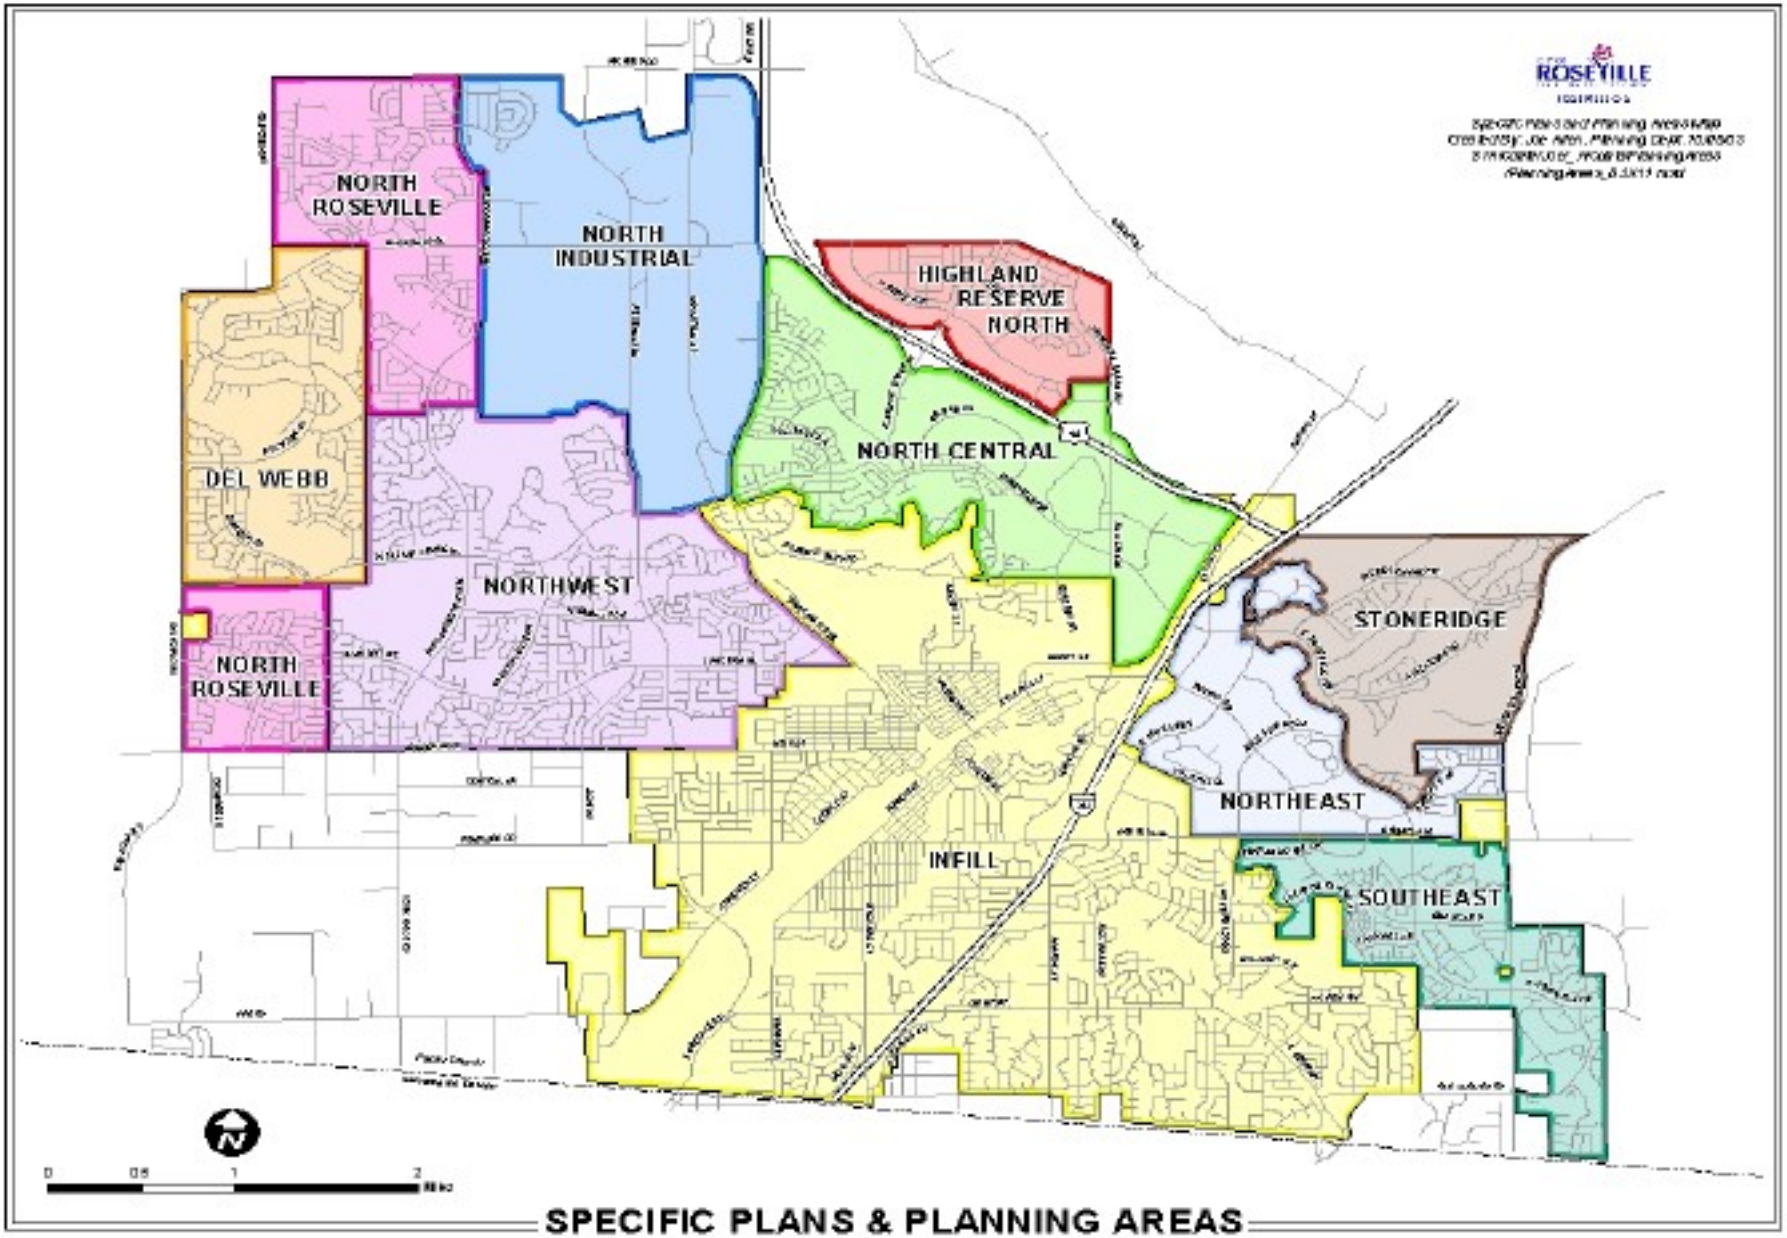
1. Infill properties are identified as those properties located within the City's infill planning area as designated on the City's Zoning Map.
2. Parks obligation to include payment of citywide and neighborhood park fees. Neighborhood Park fees are to be applied to infill neighborhood park improvements as identified on an infill park CIP projects list. Where the Parks Department demonstrates a park need a Parkland dedication or in-lieu park fee for land dedication may be negotiated and evaluated on a project by project basis, based on the nature of the project and the benefit to the City.
3. Encourage the use of private passive open space in-lieu of land dedication for infill projects.
4. Off site utilities (e.g. water, sewer, electric) that serve more than the specific project are not the sole responsibility of the project. Over-sizing of improvements or upgrading to City standards may be available for City reimbursement. The City may develop a CIP for off site improvements for which a project may pay an impact fee in lieu of constructing the improvement. Each project shall be reviewed on a case-by-case basis and shall be conditioned accordingly.
5. School impacts shall be mitigated through new impact agreements executed to reflect the payment of the City's existing infill school impact fees.
6. New housing development shall meet the City's 10% goal (4% affordable to very low, 4% affordable to low, and 2% affordable to middle income) except redevelopment areas shall provide 15%. (Of those 40% affordable to very low income and the balance affordable to low/middle income).
7. A land use change on the Placer County Fair Grounds shall require a master plan.

8. Encourage higher density residential mixed-use projects with consideration to the relaxing of any one guideline or multiple guidelines to promote and provide incentives for innovative higher density residential mixed-use projects.

Balance of the City

The overarching goal to be applied to land use changes for the balance of the City is to maintain the City's fiscal balance and prevent the loss of jobs and existing job centers while maintaining a balanced community.

1. Balance of the City includes properties within all specific plans and the North Industrial Plan area.
2. A region wide employment and land inventory study shall be required of each project that is equal to or greater than 50 acres.
3. Land use changes will not have a negative fiscal impact to the City. Each project shall be modeled individually for citywide impacts utilizing the City's fiscal model.
4. Projects that are 50 acres or greater in size shall maintain employment options and a favorable jobs housing balance.
5. New housing development shall meet the City's 10% goal consistent with the Housing Element (4% affordable to very low, 4% affordable to low, and 2% affordable to middle income).
6. Projects shall provide a specific public benefit that may be in the form of a community benefit fee.
7. Increases in general fund service demands shall be mitigated by establishment of or annexation into a Community Facilities Mello Roos Assessment District to offset the costs of the project. The assessment may be utilized to offset the cost of the following: public safety; parks and open space maintenance; storm water management; and other costs identified by the City.
8. Parks obligation to include payment of citywide and neighborhood park fees. Active park needs shall be provided by the project. An in-lieu parkland dedication fee may be negotiated in lieu of land based on the project. For each acre of parkland dedication mitigated by an in-lieu fee a corresponding in-lieu fee shall be paid for park improvements. The in-lieu fees shall provide improvements of local benefit.
9. Place emphasis on the dedication of parklands within specific plan areas rather than acceptance of and in-lieu fee for land dedication.
10. Utilities (e.g. water, sewer, electric) shall not be impacted as to conveyance or capacity.
11. School impacts shall be mitigated through new impact agreements executed with the school districts to ensure that the projects student generation is accommodated.
12. Residential units not utilized within a specific plan area shall be reallocated within that plan area and school district. Otherwise, requests for units shall be considered as additive to the City's existing unit allocation.
13. Encourage higher density residential mixed-use projects with consideration to the relaxing of any one guideline or multiple guidelines to promote and provide incentives for innovative higher density residential mixed-use projects.



SPECIFIC PLANS & PLANNING AREAS

MEMORANDUM

To: Mike Meyer, Anthem Communities

From: Jamie Gomes and Elliot Kilham

Subject: Creekview Rezone Fiscal Impact Analysis; EPS #192021

Date: June 25, 2019

Introduction

Anthem Communities (Applicant) retained Economic & Planning Systems, Inc. (EPS) to prepare the Fiscal Impact Analysis (Analysis) for the proposed rezone of the Creekview Specific Plan (Project), an approximately 500-acre development located in the City of Roseville (City).

This Analysis examines the Project's estimated fiscal impact on the City's annual General Fund budget, based on the Fiscal Year (FY) 2018-2019 Adopted Budget. Specifically, the Analysis estimates whether projected revenues from the Project will cover the costs of delivering citywide services (e.g., police protection, fire protection, and parks and recreation) to the Project's residents and employees. The Analysis is based on the assumption that these services will be provided by the City.

At the City's request, EPS analyzed the estimated fiscal impacts to the City for the following two land use scenarios:

- **Scenario 1**—Existing Land Uses (with commercially zoned area of approximately 19 acres).
- **Scenario 2—**Proposed Land Uses (with commercially zoned area reduced to approximately 9 acres).

This memorandum provides an overview of the Project and two scenarios, then summarizes annual fiscal impacts of each scenario based on assumed buildout of the Project area. Finally, this memorandum summarizes the methodology used to calculate the fiscal impacts and presents detailed calculations and result in the appendices.

Project and Scenario Overview

The Project site is approximately 500 acres, located northwest of the City. **Map 1** shows the Project's location in its local context. The Project site generally is bounded by the proposed Amoruso Ranch Specific Plan to the north, the Reason Farms area to the west, and the City to the east and south. The Project remains undeveloped:

- **Scenario 1**, the approved land use plan, includes entitlement for up to 2,011 residential units on 242 acres of land and 210,000 square feet of commercial space on 19.30 acres of land, as shown in **Table 1**.
- In **Scenario 2**, the Applicant proposes to build the same number of residential units, but to increase the number of low-density (LDR) units from 810 to 955 and reduce the number of medium-density (MDR) units from 654 to 509. This increase in LDR units results in the residential acreage of the Project increasing by 9.42 acres to 251.42 acres. The Applicant also proposes decreasing the commercial land uses in the Project to 100,000 square feet on 9.2 acres of land. In summary, the Applicant has proposed a Project that is lower density and has less commercial space. **Map 2** shows the land use zoning and parcel acreage in this scenario.

Creekview Specific Plan
Proposed Land Use Plan (2019)

The primary difference between the two scenarios is a proposed reduction to the amount of commercial land uses in the Specific Plan. It is important to note that EPS, under a separate analysis, is working with the City to help the City examine the potential cumulative impact of proposed commercial-to-residential rezones such as is proposed by the Applicant. That work, along with other information, may inform the City's determinations regarding the rezone request. The purpose of this Analysis is to compare the estimated fiscal impacts to the City under the current entitlement, as compared to the results from the proposed rezone, without making judgement as to the merit of the rezone request.

Overview of Results

The Analysis comparing the fiscal impacts to the City of the existing versus proposed zoning yielded the following results:

- **For both scenarios, annual revenues are anticipated to exceed annual expenditures for the Project before and after accounting for estimated annual taxes from Community Facilities District (CFD) No. 3 (Municipal Services).** At buildout, the Project in **Scenario 1** is estimated to generate a net annual General Fund surplus of approximately $321,000 before special taxes and assessments, and approximately $938,000 after CFD No. 3 revenues (approximately $617,000 in CFD No. 3 revenues). **Scenario 2** is estimated to generate a net annual surplus of approximately $174,000 before special taxes and assessments, and $806,000 after CFD No. 3 revenues (approximately $632,000 in CFD No. 3 revenues). Please see **Table 2** for a comparison of results between the 2 scenarios. Even though **Scenario 2** reduces potential net revenues to the City's General Fund, the rezone application does not create a situation where the rezoned land uses are anticipated to create a drain on the City's General Fund.

- **Estimated annual revenues in Scenario 2 are approximately $207,000 lower as compared to Scenario 1.** With significantly more commercial square footage possible under the existing zoning, estimated annual sales tax revenues that may accrue to the City under **Scenario 1** are greater than compared to **Scenario 2**. The difference in estimated sales tax revenues is the primary driver in the total difference in estimated revenues between the 2 scenarios.

- **Scenario 2 is estimated to slightly decrease annual expenditures at Project buildout by approximately $60,000.** The proposed change in residential and nonresidential land uses in **Scenario 2** decrease the demand on City services as compared to **Scenario 1**. The main departments contributing to the decreased expenditures are police ($28,000) and fire ($22,000). The higher expenditures in **Scenario 1** primarily result from having a higher number of employees as a result of the higher amount of commercial square footage.

Memorandum Organization

Data, assumptions, and detailed calculations underlying the Analysis are provided in the following four appendices attached to this memorandum:

- **Appendix A** contains the land use plan and detailed valuation assumptions, including population and employment factors.
- **Appendix B** contains detailed revenue estimates and revenue-estimating assumptions.
- **Appendix C** contains detailed expenditure estimates and expenditure-estimating procedures.
- **Appendix D** contains property tax allocation assumptions, including Project valuation and household income assumptions.

Methodology and Assumptions

This section details the underlying methodology and assumptions used to estimate the fiscal impact of the Project on the City. It describes assumptions concerning municipal service delivery, land development, and General Fund budgeting. In addition, it details the methodology used to forecast the Project's General Fund revenues and expenditures at buildout.

Municipal Service Provision

Citywide Services

This Analysis examines the Project's ability to generate adequate revenues to cover the City's costs of providing public services to the Project. The services analyzed in this Analysis comprise General Fund services (e.g., police, fire, and general government).

The Analysis excludes any services that may be funded privately, it does not address activities budgeted in other Governmental Funds or Proprietary Funds, nor does it include an evaluation of capital facilities or funding of capital facilities needed to serve new development.

General Assumptions

The Analysis is based on the City's FY 2018-2019 Adopted Budget, tax regulations, statutes, and other general assumptions discussed herein. Each revenue item is estimated based on current State of California (State) legislation and current City practices. Future changes by either State legislation or City practices can affect the revenues and expenditures estimated in this Analysis. All costs and revenues are shown in constant 2018 dollars. General fiscal and demographic assumptions are detailed in **Table A-1** in **Appendix A**.

This Analysis also uses information from the City, the Applicant, and historical and projected demographic data from the California Department of Finance (DOF), the U.S. Census Bureau, and the U.S. Bureau of Labor Statistics. Other critical assumptions that may affect the results of this Analysis are actual home prices versus estimated home prices or other changes in residential assumptions (e.g., residential densities, product types, and persons-per-household factors). The land use information in this Analysis was taken from the Specific Plan and proposed Specific Plan Amendment. The results of this Analysis will vary if development plans or other assumptions change from those on which this Analysis is based.

General Fund Revenue- and Expenditure-Estimating Assumptions

This Analysis considers only discretionary General Fund revenues that will be generated by the Project. Offsetting revenues, which are General Fund revenues that are dedicated to offset the costs of specific General Fund department functions, are excluded from this Analysis. Departmental costs funded by offsetting revenues or not affected by development also are excluded from this Analysis. Calculations used to exclude offsetting revenues from the Analysis were reviewed by City staff and are shown in **Table B-1** in **Appendix B**. Calculations used to estimate costs are shown in **Table C-1** in **Appendix C**.

Development Assumptions

Listed below are brief summaries of the land use and other development-related assumptions:

- **Land Use:** The Creekview Specific Plan Amendment Exhibit, dated February 12, 2019, was used for this Analysis, which examines the fiscal impacts of the Project at buildout.
- **Residential and Employee Estimates:** Population projections are calculated using an average persons-per-household factor of 2.67 for residential units, which was referenced from the City's FY 2018-2019 Adopted Budget. Employee estimates are based on factors of average square feet per employee for Project nonresidential land uses.
- **Residential Assessed Value:** The estimated assessed valuation of single-family residential development is based on prices of comparable residential projects in the City as provided by the Project Applicant. EPS also independently researched estimated finished home sales price data from The Gregory Group's New Home database as of 2018 Q4. The estimated assessed valuation of multifamily residential development is based on an average price per unit from CoStar, a third-party data source that provides sales and lease data for commercial real estate. Estimated buildout assessed values for the total Project are calculated in **Table D-2** in **Appendix D**.
- **Nonresidential Assessed Value:** EPS used a sales comparison approach to estimate finished nonresidential values for the Analysis. Sales comparison data came from Costar, as well as other current real estate market indicators and historic trends.
- **Property Turnover Rates:** The Analysis is based on the assumption that a for-sale residential unit will turn over once every 7 years, and multifamily residential rental properties and nonresidential properties will turn over once every 15 years.
- **Persons-Served Methodology:** In estimating service demands of the Project and those of the existing City, EPS used a factor to approximate the service demands of an employee in Project nonresidential land uses as compared to a Project resident. EPS used a factor of 0.5 to estimate an employee's impact on services as compared to a resident's impact, which is consistent with the persons-served methodology the City has used in the past.
- **Income of Households:** The average household income of each residential land use category (e.g., low density, medium density, high density) in the Project was estimated to forecast household retail expenditures. This calculation was derived using the following assumptions and data inputs:

- Estimated home values for product types proposed under each residential land use category, as described in **Table D-3** in **Appendix D**.
- A 5.5 percent, 30-year, fixed-rate mortgage with a 20 percent down payment and 2 percent annual taxes and insurance. Taxes and insurance include ad valorem taxes, as well as existing and proposed special taxes and assessments for infrastructure and services.
- For owner-occupied homes, 30 percent of income dedicated to mortgage payments, taxes, and insurance.
- For renter-occupied homes, 30 percent of income dedicated to monthly rent.

Estimated household incomes by land use type are calculated in **Table D-3** in **Appendix D**.

Revenue-Estimating Methodology

EPS used either a marginal-revenue case-study approach or an average-revenue approach to estimate Project-related General Fund revenues.

The marginal-revenue case-study approach simulates actual revenue generation resulting from new development. The case-study approach for estimating sales and use tax revenues, for instance, forecasts market demand and taxable spending from the Project's new residents, as well as taxable sales generated by the Project's on-site retail. Case studies used in this Analysis are discussed in greater detail later in this section.

The average-revenue approach uses the City's FY 2018-2019 Adopted Budget revenue amounts on a citywide per capita or per-persons-served basis to forecast revenues derived from estimated residents of the Project.[1]

Revenue sources *not* expected to increase as a result of development are excluded from this Analysis. These sources of revenue are not affected by development because either they are one-time revenue sources not guaranteed to be available in the future or there is no direct relation between increased employment growth and increased revenue.

A listing of all City General Fund revenue sources and the corresponding estimating procedure used to forecast future Project revenues are shown in **Table B-1** in **Appendix B**.

Reader's Note: The discussion of revenues in this memorandum generally reflects the order of the revenues presented in the tables. In some cases, however, this order may vary for purposes of organizing the background discussion and in describing similarly estimated revenue items.

[1] A *per capita* basis of estimating revenues is based on the assumption that only residents have a fiscal impact on City revenues. A *per-persons-served* basis of estimating revenues is used to take into account that businesses (and their employees) have a fiscal impact on many City revenues but at a lower level than residential development's impact.

Property Tax

Estimated annual property tax revenue resulting from development in the Project is presented in **Table B-3** in **Appendix B**. To be consistent with the City's budget data, the estimated assessed values for Project land uses are assumed to remain static in 2018 dollar values—real growth in assessed value is not estimated. The share of property taxes the City is assumed to receive from the Project is derived from the total assessed value of the Project and the City's property tax allocation share of the 1 percent ad valorem property tax, as shown in **Table D-1** in **Appendix D**.

The Project is in three Tax Rate Areas (TRAs): 005-068, 005-072, and 005-073. As shown in **Table D-1** in **Appendix D** for each TRA, the City is shown to receive all the property tax revenue before adjusting for the City's Educational Revenue Augmentation Fund (ERAF) adjustment factor. The gross property tax is adjusted by the ERAF factor to derive the post-ERAF share of property tax revenue available for tax sharing of approximately 33.31 percent. Based on the terms of the City and Placer County (County) property tax- and sales tax-sharing agreement, EPS understands the City is to remit to the County an equivalent of 18.25 percent of the post-ERAF property tax. That assumption is modeled in this Analysis.

Property Tax in Lieu of Vehicle License Fees

A formula provided by the State Controller's Office was used to forecast Property Tax in Lieu of Vehicle License Fees (PTIL VLF). PTIL VLF are calculated by taking the percentage increase of the City's assessed value resulting from the Project and applying that percentage share to the City's current State allocation of PTIL VLF. This calculation is shown in **Table B-3** in **Appendix B**.

Real Property Transfer Tax

Real property transfer tax is based on the assessed value of the Project's land uses and the anticipated turnover of residential properties over time. As stated earlier, the Analysis is based on the assumption the Project's for-sale residential property will turn over 14.3 percent per year (or once every 7 years), and multifamily rental and nonresidential property will turn over 6.7 percent per year (or once every 15 years). Real property transfer tax revenue projections are identified in **Table B-4** in **Appendix B**.

Sales Tax

Sales tax revenues are based on taxable sales generated in the City. The sales tax components examined in this Analysis include the Bradley-Burns 1 percent local sales tax rate and Measure B ½-cent local sales tax. The Bradley-Burn estimate considers a 16 percent tax-sharing agreement with the County, subtracting this share from the Project estimate. The 16 percent adjustment is the maximum possible amount that may be subject to sales tax sharing with the County. The initial agreement amount is 11.5 percent and is set to automatically increase to 16 percent, subject to a limited number of agreement reopener provisions. Using the maximum potential sharing percentage reflects the most conservative approach to examining estimated fiscal impacts to the City. Estimated sales tax revenues to the City are summarized in **Table B-5** in **Appendix B**.

The Analysis uses 2 methodologies to estimate taxable sales generated by the Project:

1. The **Market Support Method** measures taxable sales generated from new Project residents and employees.

2. The **Retail Space Method** measures taxable sales from the Project's retail land uses.

In addition to the above methodologies, the Analysis includes estimates of taxable sales revenues derived from anticipated business-to-business spending from Project commercial land uses.

Market Support Method

New Households

This Analysis estimates retail expenditures of future residents in the Project by type of retail category and the share of expenditures that will be captured in the City (e.g., generate sales in the City's retail establishments). The amounts and types of expenditures made by residents generally depends on their household income. Data for this Analysis are based on estimated Project resident incomes, household spending patterns, and retail demand and supply market conditions in the City.

Specifically, this Analysis estimates retail expenditures of future residents by:

- Estimating the total income of new households based on the projected home sales prices and monthly rent expenses. EPS assumes household income estimates are based on owner-occupied tenure, with home purchase financed by a 30-year fixed-rate mortgage.[2] EPS estimates residents in renter-occupied units spend approximately 30 percent of their total income on monthly rent.

- Evaluating Consumer Expenditure Survey (CES) data from the U.S. Bureau of Labor Statistics, which reports the proportion of income spent on various household goods and services by income group.

Based on these methods, EPS estimates future household incomes to be $143,000 for LDR units (assumed to be owner-occupied), $117,000 for MDR units (assumed to be owner-occupied), and $66,000 for high-density (HDR) units (assumed to be renter-occupied). Typical household expenditure patterns from the Bureau of Labor Statistics' CES suggests, at these income levels, Project residents for owner-occupied homes and renter-occupied units are estimated to spend 23.3 percent and 31.5 percent, respectively, of their household income on taxable retail expenditures. These assumptions and estimates are summarized in **Table D-3** in **Appendix D**.

The Analysis also is based on the assumption the City's retail businesses would capture roughly 85 percent of the Project's household retail demand. The estimate is not based on market analysis; rather, EPS developed the capture rate based on a qualitative appraisal of existing shopping centers in the Project's market area.

[2] The income estimate is based on the assumption that annual payment for the mortgage (30-year, 5.5 percent fixed interest, 20 percent down payment), property taxes, and insurance equal 30 percent of income. Property taxes and insurance are assumed at 2 percent of home value.

New Employees

The sales tax analysis accounts for taxable retail expenditures made by the new employees generated by development of nonresidential land uses in the Project. The number of employees is estimated by using the total occupied building square footage for each nonresidential land use and applying an average square foot per employee factor for each corresponding land use (see **Table A-3** in **Appendix A**). EPS estimates employees spend approximately $10 per business day on taxable goods.[3] The amount of taxable sales from new employees is discounted to avoid double counting employees who also are residents.

Total sales revenues generated for the City by the Project's new households and new employees and corresponding calculations for the Market Support Method are shown in **Table B-5A** in **Appendix B**.

Retail Space Method

Annual taxable sales generated by retail uses in the Project were calculated by taking an "annual sales per square foot" factor, published in the Urban Land Institute's *Dollars and Cents of Shopping Centers: 2008*, and escalating it to 2018 dollars using the Consumer Price Index. To prevent double counting, the Project's total taxable sales estimated from the Retail Space Method are reduced by the on-site taxable sales estimated by the Market Support Method (Project residents and employees).

The Retail Space Method also accounts for Project-related sales resulting from the displacement of taxable sales from existing retail outlets outside the Project area but inside the City. Accordingly, 5 percent of net taxable sales (total taxable sales less market support) at the Project's retail are assumed to represent a shift away from existing retail centers in the City.

Total sales revenues and corresponding calculations for the Retail Space Method are shown in **Table B-5B** in **Appendix B**.

Proposition 172

Revenues from the City's share of the County's half-cent sales tax for public safety are included in the Analysis and calculated in **Table B-5** in **Appendix B**. The City's public safety sales tax share is based on estimated citywide taxable sales from the City's FY 2017-2018 Adopted Budget rather than FY 2018-2019. The percentage of this revenue the City receives from the County does not fluctuate much from year to year, so the prior FY amount is reflective of current conditions.

CFD No. 3 (Municipal Services)

Project revenues from CFD No. 3 for police, fire, and library services are estimated in **Table B-6** in **Appendix B**. Estimates are based on fees per unit for residential land and per acre for commercial land.

Expenditure-Estimating Methodology

Expenditure estimates are based on the City's FY 2018-2019 Adopted Budget and supplemental information from City staff. All City General Fund expenditure items are listed on **Table C-1** in **Appendix C**. As described herein, the Project fiscal impact analyses rely on an "average-cost"

[3] This Analysis is based on the assumption there are 240 business days per year.

methodology to estimate all General Fund expenditure impacts of new development on the City. An average-cost methodology is a common fiscal impact analysis methodology that divides the City's net cost of service, for a given service function, by the service population to which that service is provided. In this manner, the average-cost method is based on the assumption the marginal cost of agency services to new Project residents and employees would equal the City's existing average-cost structure.

This Analysis applies adjustment factors to several General Fund department average-cost multipliers to reflect the fact that new residents and employees may not increase certain General Fund department expenditures on a 1:1 ratio. Some departments have fixed costs not anticipated to increase with new development (see **Table C-1** in **Appendix C**). These adjustment factors are based on EPS's experience with similar fiscal impact analyses and account for the size and land use of the Project as compared to that of the existing City.

Expenditures affected by residents and employees are projected using a *per-person-served* average expenditure multiplier and include the department functions listed below:

General Government
- City Council
- City Manager
- City Attorney
- Finance
- Public Affairs & Communication
- Human Resources
- Information Technology
- City Clerk
- Central Services

Other
- Economic Development & Housing
- Development Services/Planning
- Public Works
- Police
- Fire

Community Grants costs and Parks, Recreation & Libraries costs are estimated using a *per capita* average-cost multiplier because generally these departments' functions primarily serve residential development.

Technical Appendices

The technical calculations used in this Analysis are shown in **Appendices A** through **D** (**Tables A-1** through **D-3**) of this memorandum:

- **Appendix A** indicates the proposed land uses and general assumptions used in this Analysis.
- **Appendix B** identifies the projected revenues that will be generated by the Project for the City's General Fund.
- **Appendix C** details the estimated expenditures for the City to provide General Fund services to the Project and shows the offsetting revenue analysis, which allocates dedicated General Fund revenues to General Fund department functions.
- **Appendix D** shows the projected assessed value of the Project, which serves as the basis for calculating property tax revenues. In addition, this appendix provides detail on the portion of the Assembly Bill 8 allocation of property tax revenues provided to the City and includes the calculation of estimated average household income.

[1] Not expected to be affected by the Project and therefore no revenue multipliers are estimated in this analysis.
[2] This analysis assumes that all or part of these revenues are fully dedicated to specific General Fund departmental costs (Offsetting Revenues). Because these revenues are budget-neutral and are not discretionary, they are not included in estimating discretionary Project revenues.
[3] Sum of offsetting revenues (footnote 1) dedicated to specific General Fund department functions. These revenues are budget neutral and are netted out of both total revenues and total costs. See Table C-1. Amounts exclude one-time grant revenues.

Taxable City Sales outside Project Area		$41,659,488	$42,017,612

sales tax a

Source: BLS; Consumer Expenditure Survey; and EPS.

[1] See Table D-3. Rounded to the nearest $500.
[2] Total retail sales in the City exceeds resident's retail spending potential, indicating no sales leakage for Roseville, so this analysis marginal leakage for the Project households' retail spending.
[3] EPS estimate of resident/employee spending split between retail stores in the Project and stores outside the Project
[4] Discounted by 50% to avoid double-counting employees who are also residents and to account for taxable sales from new employees that occur outside the City.

Table B-5B
Roseville Creekview Rezone Fiscal Impact Analysis
Estimated Annual Taxable Sales Generated from On-Site Nonresidential (2018$)

On-Site Commercial Development	Assumption	Formula	Scenario 1 Existing Land Uses	Scenario 2 Proposed Land Uses
Community Commercial (CC)				
Taxable Sales per Sq. Ft. [1]	$210	*a*

Less On-Site Market Support [3]		*h*	$4,628,832	$4,668,624
Subtotal Annual Sales less Market Support		*i = g - h*	**$29,589,168**	**$15,239,377**
Less Shift of Sales from Existing Retail Stores to the Project [4]	5%	*j = g * 0.05*	$1,710,900	$995,400
Net Annual On-Site Taxable Sales		*k = i - j*	**$27,878,268**	**$14,243,977**
Amount Subject to Property Tax Sharing with County [5]	16%	*l = g 0.16*	$5,474,880	$3,185,280

sales tax b

Source: Urban Land Institute & ICSC, *Dollars & Cents of Shopping Centers/The SCORE 2008* ; BOE; and EPS.

[1] Derived from ULI's Dollars & Cents of Shopping Centers: 2008. Values inflated to 2018 dollars using the CPI for the West Urban Region, All Urban Consumers. Taxable Retail Sales Factor based on taxable sales information from the CA Board of Equalization.

Retail Type	2008 Annual Sales per Sq. Ft.	Inflated 2018$ Annual Sales per Sq. Ft.	Taxable Retail Sales Factor	Taxable Sales per Sq. Ft.*
Community Commercial (CC)	$395	$473	44%	$210
Office				$10

**Rounded to the nearest $5.*

[2] Refers to new sales in the Project from customers other than new Project residents and employees. This total gross amount is subject to sales tax sharing with Placer County per the approved tax sharing agreement.
[3] Derived in Table B-5A.
[4] Represents a discount factor to account for taxable sales transactions that may shift from existing City retail centers to those inside the Project based on a preliminary review of existing retail demand and supply. This assumption was developed in accordance with DPFG for the Amoruso Ranch Specific Plan Fiscal Analysis.
[5] Reflects the maximum potential sales tax sharing by the City to the County per the sales tax sharing agreement.

FEHR PEERS

TECHNICAL MEMORANDUM

Date: June 28, 2019
To: Matthew Todd – City of Roseville
From: John Gard and Rod Brown – Fehr & Peers
Subject: *Transportation Impact Assessment of Proposed Land Use Amendment to Creekview Specific Plan*
RS19-3787

This memorandum presents the assumptions, analysis methods, and results of an evaluation of the transportation-related effects of proposed changes to the Creekview Specific Plan (CSP).

Background

The CSP was approved in 2012 and included 2,011 residential units and community commercial, community commercial/business professional, school, park, open space, quasi-public, and urban reserve uses. A Specific Plan Amendment was approved in 2016 (2016 SPA) that maintained the overall land use pattern, maintained the unit count of 2,011 that was approved in 2012, and shifted residential units among parcels.

Proposed Land Use Changes

Amendments to the CSP are proposed (2019 SPA) to align residential housing types to meet market demand and to reduce the burden of Phase 1 infrastructure costs. Elimination of Community Commercial (CC) and Community Commercial/Business Professional (CC/BP) uses is also proposed, driven by the surplus of land designated for commercial uses within a short distance of the CSP and the reduced demand for commercial uses resulting from changing consumer preferences. Land use changes between the 2016 SPA and 2019 SPA are shown in **Table 1**, and the updated circulation plan is shown in **Figure 1**. All proposed modifications to circulation are only for the area south of Pleasant Grove Creek. The primary circulation change would be the shift of Grasscreek Drive (north-south collector west of Westbrook Boulevard) slightly further east.

The square footage of the remaining Community Commercial land use was estimated using a floor area ratio of 0.4 per email direction from Charity Gold of the City of Roseville, dated May 22, 2019.

Trip Generation Comparison

We compared the project's trip generation based on the approved 2016 SPA with the proposed 2019 SPA, using rates from the City of Roseville 2035 CIP travel demand model. **Table 2** shows the results of these calculations and indicates that the proposed land use modifications in the 2019 SPA would result in fewer trips being generated. These results suggest that traffic volumes in the vicinity of the project would be reduced during both peak hours and daily as a result of the land use changes.

Table 2
Trip Generation Comparison – 2016 SPA vs. 2019 SPA

Land Use	Amount	Trip Rate [1]			Trips		
		AM Peak Hour	PM Peak Hour	Daily	AM Peak Hour	PM Peak Hour	Daily
2016 SPA

Multi-Family Residential	547 du's	0.41	0.58	6.5	223	317	3,556
Retail	162 ksf	0.87	2.67	35	141	433	5,670
Office	0 ksf	2.11	1.68	17.7	0	0	0
School	600 students	0.35	0.04	1	213	24	600
Park	16 acres	0.06	0.17	2.2	1	3	35
				Total	**1,611**	**1,918**	**23,037**
				Difference	**-316**	**-286**	**-3,126**

Notes:
1. Daily and PM peak hour trip rates from the City of Roseville travel demand model. AM peak hour rate estimated by calculating ratio of the *Trip Generation Manual* (ITE, 2017) AM peak hour rate to the ITE daily rate and applying this factor to the City of Roseville travel demand model daily rate.

ksf = thousand square feet. du's = dwelling units.
Source: Fehr & Peers, 2019.

Vehicle Miles of Travel Comparison

The proposed land use changes and roadway network changes were entered into the City of Roseville 2035 travel demand model. Vehicle miles of travel (VMT) was calculated for both the 2016 SPA and the 2019 SPA, using the boundary method for the City of Roseville. This method estimates the VMT for all roadways within the City.

According to model output, the scenario comprising the 2019 SPA was calculated to have a total VMT of 5,374,879; in contrast, the scenario comprising the 2016 SPA was calculated to have a total VMT of 5,378,872. Thus, the 2019 SPA would result in a reduction of 3,993 VMT. Model output for this calculation is included in Appendix A.

The VMT reduction caused by the 2019 SPA is likely largely due to the elimination of the CC/BP and reduction in the CC land uses within the CSP. Appendix A includes a plot of daily trips traveling to and

from the CC/BP land use based on the 2016 SPA. As shown in the plot, only a small portion of these trips are fully contained within the CSP, and many connect to destinations throughout Roseville and beyond City limits. VMT generation for office space in the CSP area is likely to be higher than VMT generation for office space located more centrally within Roseville.

Evaluation of 2019 SPA Roadway Network

The City of Roseville 2035 CIP travel demand model was used to estimate cumulative AM and PM peak hour traffic volumes at the following intersections, assuming the 2019 SPA in place:

1. Blue Oaks Boulevard/Grasscreek Drive
2. Blue Oaks Boulevard/Westbrook Boulevard
3. Westbrook Boulevard/Creekview Plaza
4. Creekview Plaza Drive/Street PP (evaluated for 2019 SPA only)

These volumes are shown in **Figure 2**. As shown in Figure 2, traffic volumes on Blue Oaks Boulevard and Westbrook Boulevard would be reduced due to the changes in land use.

Figure 2 also displays the traffic volumes at Intersection 1. Using the California *Manual of Uniform Traffic Control Devices* (2016) peak hour traffic volume signal warrant, this intersection would not meet the warrant (see Appendix A). While there is sufficient traffic on the Grasscreek Drive approach to warrant a signal, there is not adequate volume on Blue Oaks Boulevard to meet the warrant. It should be noted that this version of the 2035 travel demand model does not assume the extension of Placer Parkway to Santucci Boulevard. As a result, the segment of Blue Oaks Boulevard west of Westbrook Boulevard carries approximately 15,200 daily trips. Modeling conducted for the Amoruso Ranch Specific Plan indicated that the connection of Placer Parkway to Santucci Boulevard would cause the volume on this segment to increase to 38,000 daily trips. Under such a condition, a signal would be warranted at the Blue Oaks Boulevard/Grasscreek Drive intersection. Therefore, The City and applicant should coordinate to decide the following:[1]

1. When and by whom a traffic signal should be installed, and
2. If access should be restricted to right-turns only until such time that a signal is installed.

According to the Phase 1 Lotting Study (McKay & Somps, May 16, 2018), the proposed spacing of Intersections 1 and 2 on Blue Oaks Boulevard is approximately 900 feet. City standards recommend traffic signals be spaced a minimum of 1/4-mile apart. However, exceptions to this standard have been allowed under certain circumstances. The Blue Oaks Boulevard/Grasscreek Drive intersection would be a T-intersection, meaning the majority of intersection green time would be provided for the more

[1] Due to the uncertainty of the timing of Placer Parkway, development phasing of Creekview properties, and decisions regarding how infrastructure will be funded, these discussions are warranted.

heavily traveled eastbound and westbound approaches. Therefore, installation of a traffic signal would not adversely affect progression of traffic along this segment of Blue Oaks Boulevard.

Intersection 3 (Westbrook Boulevard/Grasscreek Drive) is planned to be signalized. The proposed 2019 SPA would not alter the needed lane configurations or need for signalization at this intersection.

Intersection 4 is a planned roundabout on Creekview Plaza Drive east of Westbrook Boulevard. It would carry modest volumes of traffic and operate acceptably as a single-lane roundabout. The *Tentative Subdivision Map* (MacKay & Somps, March 2019) shows a conceptual layout of the roundabout. We recommend its final design be constructed in accordance with City standards including geometric details, accommodation of large vehicles, pedestrian facilities, etc. It is also recommended that additional analysis be conducted to review the proposed driveway (shown below) that would serve Lot C-70 due to the potential for limited sight distance due to the street's horizontal curvature.

CITY OF ROSEVILLE CALIFORNIA

DEVELOPMENT SERVICES DEPARTMENT – PLANNING DIVISION
311 Vernon Street, Roseville, CA 95678 (916) 774-5276

MEMORANDUM

To: Planning Commission

From: Greg Bitter, Planning Manager

Date: September 12, 2019

Re: Correspondence regarding the Creekview Specific Plan Amendment (PL18-0190)

On September 12, 2019, the City received a letter from Brookfield Sunset LLC (Attachment 1), regarding the proposed amendments to the Creekview Specific Plan Development Agreement (DA). Brookfield Sunset LLC is the developer of the Amoruso Ranch Specific Plan (ARSP) area, which is located immediately north of the Creekview Specific Plan (CSP). Specifically, the letter expressed concerns regarding amendments that: 1) impact and/or limit the ability of Amoruso Ranch to use right-of-way or public-purpose parcels within the CSP in order to advance the development of the ARSP, and 2) delay the availability and dedication of CSP Parcel C-81 to Roseville Electric for the development of an electric substation. The letter concluded with a request to continue the project to allow time to address these concerns.

Staff has the following responses to these concerns:

1) The City Engineer has confirmed that Irrevocable Offers of Dedication (IOD's) for Blue Oaks Boulevard and Westbrook Boulevard will be required to be dedicated with the first Creekview final map. This dedication will meet the requirements as outlined in Section 3.3.1 of the Creekview DA, and will not limit and/or impact the ability of the ARSP to rely on these sites.

2) Staff from Roseville Electric has worked with representatives of Brookfield Sunset LLC to ensure that development of the ARSP will not be delayed due to the proposed amendments to the Creekview Development Agreement, related to the provision of the electric substation parcel. Brookfield Sunset LLC has recently submitted an application to amend the ARSP, which includes an amendment to the ARSP DA. Draft language (Attachment 2) has been developed for the Development Agreement Amendment (DAA) that will allow ARSP to develop up to 500 dwelling units prior to the dedication of CSP Parcel C-81. There is also a minor addition to the Creekview DAA (Attachment 3) that will ensure the substation site is defined as a "public improvement". Staff is recommending the Planning Commission include this language with the proposed Creekview DAA.

Representatives of Brookfield Sunset LLC have indicated they are satisfied with the above responses and are no longer requesting a continuance of this project.

Please contact me at gbitter@roseville.ca.us or at 916-774-5294 if you have any concerns.

Brookfield Sunset LLC

Re: Creekview Specific Plan Amendment (Item 6.2, 9/12 Planning Commission Mtg.)

Mr. Bitter:

As I shared with you in our discussion yesterday, there are several concerns that we feel need to be addressed regarding the Creekview Specific Plan Amendment project, in particular, the proposed Development Agreement Amendment, as well as the final mapping process on a go-forward basis , prior to the Creekview SPA application proceeding to hearing before the Planning Commission.

Although we support the Creekview project and have done so as it proceeded through the prior approval process, and in general, the proposed land use changes being considered, here are our specific concerns and/or questions:

1. **Road IOD's/Phasing:** The proposed phasing should not in any way supersede the ability of Amoruso Ranch to use right of way or public purpose parcels within the Creekview Specific Plan (CSP) pursuant to provisions in both the Creekview Development Agreement and the Amoruso Ranch Development Agreement, in particular, Sections 3.2 and 3.3.1 of the Creekview Development Agreement, and any other sections related to same. Most important of these is Blue Oaks Blvd, and Westbrook Blvd to the southern boundary of the Amoruso Ranch Specific Plan (ARSP). We have been in discussions with Anthem United for several years about our likely intent to tie into their first phase improvements if they haven't yet initiated their later phases. As an example, we've coordinated our sewer force main connection to their gravity system, and sought proposals for design work associated with closing the gap between the end of their first phase at Creekview Plaza, and extending Westbrook Blvd to the southern boundary of ARSP. The most recent discussions occurred from August 2018 through March of 2019. Although there is correspondence between Anthem and Brookfield confirming these discussions, we are now formally providing notice to both the City of Roseville, and Anthem United of our intent to construct public improvements within CSP. We would like confirmation that IOD's for Blue Oaks Boulevard and Westbrook Boulevard will be dedicated at the first Creekview final map which will close the gap between their first phase, and our southern boundary. This should also include any frontage necessary for the substation site (C-81) discussed below, and the access and construction easements the width of the

2271 Lava Ridge Court, Suite 220, Roseville, CA 95661
916-783-1177 Fax: 916-783-1161

ultimate road rights-of-way plus the lesser of 25 feet or to the back of the landscape corridor along the entire lengths of those two arterials, as required by Section 3.3.1 of the Creekview Development Agreement.

2. **Electric Substation Trigger Modification:** There are two concerns as relates to the electric substation located in CSP. The first relates to making sure that the right of way, and 0.9 acre parcel can be available to construct the frontage road, and pad grading necessary for Roseville Electric to do their design, and facility acquisition on a timely basis as required by the Creekview Development Agreement and the Amoruso Ranch Development Agreement. The second relates to the significant change proposed for the Creekview Development Agreement that calls for significantly delaying the Creekview threshold for delivering the graded and compacted substation site and access road to the substation site at the 500th residential building permit in the existing Creekview Development Agreement to the 923rd residential building permit in the proposed Development Agreement Amendment. The 500 unit trigger was also stated in the ARSP Development Agreement , and depends on the timely delivery of this substation site by Creekview in order to serve not only that plan but also Amoruso Ranch. Nearly doubling the trigger will potentially add two or more years to the delivery of the substation site plus the two year procurement process for the substation itself, thus resulting in the potential total delay of 4 or more years for energizing the facility so that electric service to Amoruso Ranch.

In summary, the development agreement changes have not been shared with us other than us reviewing the public agenda, and materials online. Since we have not had time to fully review the potential impacts to ARSP, we are requesting a continuance of this item to a later date. We have outreached to the City and Anthem United, and will continue to work towards a cooperative solution. As I stated previously, we are supportive of the Creekview Specific Plan, but need some mutual issues fully identified, and resolved prior to action. At the very least, we ask that the Planning Commission defer recommending approval of the raised 923 unit threshold to the City Council, and give the various parties time to work out a solution.

Please feel free to contact myself or our counsel Marcus Lo Duca regarding any questions.

Respectfully,

John W. Norman, VP

PROPOSED REVISED DEVELOPMENT AGREEMENT SECTION 3.11.3

3.11.3 CSP Electric Substation. Pursuant to the development agreement in the CSP, CSP landowners are required to dedicate to City, grade and provide access to a parcel in the CSP (designated Parcel C-81 in the Specific Plan) for an electric substation to serve the CSP (the "Substation Site"). Under the development agreement between CSP landowners and City, such Substation Site must be provided to City prior to issuance of the 500th residential building permit, or combination of building permits, in the CSP. Should the Substation Site not have been dedicated to City, graded with access provided at the time that Landowner wishes to proceed with development of the Project, Landowner shall have the right to cause such dedication, grading and provision of access to the Substation Site for City to construct the electric substation that will serve both the CSP and the Project. Where the CSP Developer has not provided the substation site and associated improvements required in the CSP development agreement, then, provided that Landowner provides an access road, power line, temporary easements, and substation site as defined in the CSP development agreement prior to the issuance of the 500th residential building permit within the ARSP, the City shall not restrict the issuance of any additional building permits in the ARSP beyond the 500 residential building permits noted herein on the basis of insufficient electrical service capacity for the balance of the Project. Should there be a delay by the CSP Developer or Landowner, as provided herein, in dedicating the substation site and associated improvements as required in the CSP development agreement, such delay shall result in the delay in the availability of power to the ARSP until such time as the substation is fully operational with the ability to serve the remainder of the ARSP. Landowner acknowledges that, in the absence of any available capacity utilizing temporary lines that could serve the Project on an interim basis, the CSP electric substation must be in operation and 12kV circuits extended to the Project for electric service to be provided to the Plan Area, subject to the provisions set forth above. In addition to the Substation Site, Landowner shall install an all-weather access road along the south side of Pleasant Grove Creek from the southeast corner of the CSP to the Westbrook Boulevard bridge crossing over Pleasant Grove Creek sufficient to allow the construction and maintenance of the 60kV overhead power line required to feed the CSP electric substation.

DRAFT

Staff is recommending the following modification to the Creekview Development Agreement Amendment (DAA) be included in any motion to forward the DAA to City Council.

3.2 Public Improvements to be Dedicated, Constructed or Financed by Developer. In conjunction with each phased Final Map, or as otherwise required by this Agreement, Developer agrees to dedicate, construct or acquire the improvements or facilities and to perform the obligations set forth in this Section 3, at its expense, subject only to reimbursements or credits specified in this Agreement. Prior to dedication of sites to City, Developer shall obtain and fulfill the terms of any state and federal permits needed for anticipated development (e.g., CoE 404 Permit(s), CDFG 1600 Streambed Alteration Agreements, RWQCB General Construction Permit as needed) and complete said development if said development is a Developer responsibility under this Agreement. At the time of City acceptance of any land dedications, the land shall be free and clear of environmental or other constraints or encumbrances (the "Encumbrances") inconsistent with the intended use of the Property (e.g., all wetlands shall be filled in accordance with applicable 404 Permits), unless expressly waived by the City. In the event, however, that the land dedication by Developer is triggered by the proposed construction by a third party of a public improvement (including the electric substation site (parcel C-81) identified in Section 3.11.3 of this Agreement) identified in this Agreement, such third party shall assume the obligation to assure that, at the time of City acceptance, the land dedicated is free and clear of all Encumbrances, unless expressly waived by the City. Developer agrees to cooperate with such third parties to use is best commercially reasonable efforts under the circumstances to remove all Encumbrances, subject to lender or mortgagee consent, as may be required. Such cooperation by Developer shall be at the sole cost to the third party requesting removal of the Encumbrances prior to dedication. Title shall be conveyed to City in fee simple and without restriction or limitation on use(s), unless approved otherwise by the City Attorney. Signage shall be installed in accordance with Section 3.24. With respect to the wetland obligation referenced in Section 2.7.1 above, the third party shall assume the obligation to remove such wetland environmental constraint on the Property to be dedicated to the City triggered by the third party's construction of the public improvement(s).

DPFG
DEVELOPMENT PLANNING & FINANCING GROUP, INC.

Memorandum

To:	Jeanine Thrash, City of Roseville
From:	Development Planning & Financing Group
Date:	September 11, 2019
Subject:	Creekview Specific Plan - Financing Plan Update Technical Memo

The following technical memorandum describes and evaluates the impact of the proposed Creekview Specific Plan (CSP) Specific Plan Amendment (SPA) on the CSP Public Facilities Financing Plan (PFFP or Financing Plan). Pursuant to Section 4.7 of the CSP Development Agreement (DA) this memorandum demonstrates that the proposed SPA results in a "financial commitment of the same or greater magnitude as those made by Developer," as described in the DA.

The CSP was approved in 2012 and includes 2,011 residential units, approximately 136 acres of open space, 15.7 acres of neighborhood parks, a 7-acre school site, 2.6 acres of utilities sites, and 19.3 acres of Community Commercial (CC) and Community Commercial/Business-Professional (CC/BP) uses (2012 CSP). The 2012 CSP was adopted in September 2012 and amended in 2016. The Creekview Financing Plan (dated April 2011) was approved with the 2012 CSP and is referred to herein as the 2012 PFFP.

A. Land Use

Amendments are proposed to the 2012 CSP to modify the land plan and arrange of land uses south of Pleasant Grove Creek (2019 CSP SPA). The proposed 2019 CSP SPA shifts 141 medium density residential (MDR) units to low density residential (LDR) but does not result in a change to the overall unit count. The 2019 CSP SPA also includes a reduction to the Community Commercial (CC) site size from 15.5 acres to 9.3 acres and eliminates the 3.8-acre Community Commercial/Business Professional (CC/BP) site.

The 2019 CSP SPA includes minor adjustments to acreages of non-residential land uses such as park and public/quasi-public uses. **Table 1** summarizes land uses for the approved 2012 CSP and proposed 2019 CSP SPA.

B. Backbone Infrastructure

Backbone infrastructure includes roadways, sewer, storm drainage, potable water, recycled water, and capital improvement projects (CIP) improvements to serve the CSP. The 2012 PFFP estimated the backbone infrastructure cost at $49M. The backbone network in the 2012 PFFP included improvements along Blue Oaks Boulevard, Westbrook Boulevard, Creekview Plaza, and Benchmark Drive.

In proposed 2019 CSP SPA, the total backbone infrastructure cost is estimated at $55M and includes the backbone infrastructure in the 2012 CSP as well as the addition of Creekpark Drive, as shown on **Figure 1**. The cost comparison for the 2012 CSP and the 2019 CSP SPA is shown in **Table 2**.

C. Public Facilities

The public facilities identified in the 2012 PFFP include neighborhood parks, Citywide parks, bike trails, and paseos.

With the 2019 CSP, estimated costs for neighborhood parks have increased from $4.6M to $6.4M and paseos increased from $324,000 to $3.4M, as shown in **Table 2**. These increases are partly due to changes to the land plan and the addition of Creekpark Drive which was not included as a backbone roadway in the 2012 PFFP. **Table 3** and **Table 4** allocate the costs across the land use categories to establish a building permit fee amount.

The Citywide Park and Bike Trail fee was $3,200 per unit in the 2012 PFFP. The ENR 20-City Average CCI was applied to the rate from July 2011 to July 2019 to establish the current fee amount of $4,086 per unit, as shown in **Table 5**. This fee includes both a city-wide park land in-lieu component in addition to the bike trail component that created the Citywide Park and Bike Trail Fee.

D. Development Impact Fees

Estimated development impact fees are shown in **Table 6** and **Table 7** and utilizes an average LDR, MDR, and HDR unit to estimate the building permit fees. Fees are listed in four main categories: building permit fees, City impact fees, development agreement fees, and school fees.

The total residential fee burden, including the SPRTA Tier II fee deferral is approximately $85,200 (LDR), $83,300 (MDR), and $49,300 (HDR). The total non-residential fee burden, including the SPRTA Tier II fee deferral is approximately $388,600 per acre or $35.68 per square foot for Community Commercial.

A fee burden comparison or the 2012 CSP and the 2019 CSP SPA is shown in **Table 8**. Building permit fees have increased from $6.1M to 9.3M, City impact fees have increased from $47.2M to $69.3M, development agreement fees have increased from $30.9M to $38.2M, and school fees have increased from $30.1M to $44.3M. After the assumed fee deferral to the extended-term CFD, the total fees in the 2012 CSP were $102.5M compared to $154.3M in the 2019 CSP SPA. In the 2019 CSP SPA, the extended-term CFD includes deferral of only the SPRTA Tier II fee where the 2012 CSP included deferral of the City-Wide Park and Bike Trail Fee, City Public Facilities Fee and the City Public Benefit Fee.

The West Plan Reimbursement Cost is included in the development impact fees. The West Plan Reimbursement amount and fee allocation were escalated by CCI, as shown in **Table 9.**

E. Fiscal Impact Analysis

An updated Fiscal Impact Analysis (FIA) (June 2019) compared the 2012 CSP with the 2019 CSP SPA. The 2012 CSP had an estimated annual surplus of $938,041 while the 2019 CSP SPA generates a yearly surplus of $806,297 (see **Appendix A**). Both land use configurations meet the City's policy of funding all required City services, and not creating a burden on the remainder of the City.

F. Funding Strategy

No modifications are proposed to the CSP funding strategy described in the 2012 PFFP. The City and Developer are working on the formation of a Community Facilities Districts (CFD) to finance a portion of the backbone infrastructure (Infrastructure CFD), a CFD to fund annual ongoing maintenance of roadways/parks/open space/landscaping/etc. (Maintenance CFD), and annexation of the CSP into the City Municipal Services CFD.

The Infrastructure CFD bond sizing is shown in **Table 10** and is in two parts: south and north of the Pleasant Grove Creek. The estimate of total bonds for the area south of the creek is $20.8M and north of the creek is $31.3M, for a total CFD of $52.1M.

The Maintenance CFD was estimated using the City's Annual Maintenance Costs for Maintenance CFDs report (December 2018) and quantities provided by project engineer, MacKay & Somps. The total annual cost is $712,495 and is spread over residential and non-residential land uses. **Table 11** details the quantities and costs and **Table 12** allocates the CFD rate to each land use.

The three CFDs reduce the overall owner equity needed to construct the CSP and provide annual funding for City services required by the CSP. With the 2019 CSP SPA, the CFDs, along with other property taxes and special taxes and assessments are estimated to result in a total tax burden as a percentage of home value of 1.6% for LDR and MDR, and a 1.8% for HDR. See **Table 13** for detailed calculations.

G. Conclusion

The proposed 2019 CSP SPA satisfies the obligation that any subsequent proposed development must have a "financial commitment of the same or greater magnitude as those made by Developer under this Agreement." The 2019 CSP SPA has greater funding obligations for backbone infrastructure, public facilities (including neighborhood parks, Citywide parks, bike trails, and paseos), and development impact fees, as summarized in **Table 14**. The total funding obligation in the 2012 CSP was $151.2M and the 2019 CSP SPA has a funding obligation of $209M.

The project also meets and exceeds the obligation for a net neutral cost effect on the City with a net positive fiscal impact based on the FIA.

CITY OF ROSEVILLE CALIFORNIA

DEVELOPMENT SERVICES DEPARTMENT–PLANNING DIVISION

311 Vernon St, Roseville, CA 95678 (916) 774-5276

ADDENDUM TO CREEKVIEW SPECIFIC PLAN FINAL ENVIRONMENTAL IMPACT REPORT (SCH #02008032017, ADOPTED ON SEPTEMBER 19, 2012)

Project Title/File Number:	Creekview Specific Plan General Plan Amendment, Specific Plan Amendment, Rezone, and Tentative Subdivision Map Modification; File Number PL19-0190
Project Location:	The project site is located approximately 6 miles west of Interstate 80 and State Route 65, 10 miles northeast of the City of Sacramento, 10 miles east of State Route 99, 5 miles west of downtown Roseville, and four miles east of the Sutter County line. The site is on the north side of the future Blue Oaks Boulevard.
Project Description:	The applicant requests a **General Plan Amendment** and **Specific Plan Amendment** to the Creekview Specific Plan (CSP) to reduce the General Commercial land use designation from 15.5 acres to 9.2 acres, Community Commercial/Business Professional designation from 3.8 acres to zero acres, the Medium Density Residential designation from 66.0 acres to 51.2 acres, and the High Density Residential designation from 18.7 acres to 17.7 acres; and increase the acreage of Low Density Residential from 157.3 to 182.8; a **Specific Plan Amendment** to transfer 17 HDR units and 49 MDR units from parcels south of the creek to parcels north of the creek; a **Rezone** to eliminate the R1/DS and CC/BP zoning designation, decrease the R3 zoning by 1.02 acres and the CC/BP and CC zoning by 6.28 acres, and to add increase the RS/DS zoning designation to 51.72 acres; a **Development Agreement Amendment** to reflect these changes; and a **Tentative Subdivision Map Modification** to create a total of 1,218 total lots consisting of 1,133 single-family lots, a commercial lot, open space lots, park lots, paseo lots, landscape lots, right-of-way lots, and public facility lots.
Project Applicant:	Kris Steward, Phillips Land Law, Inc.
Property Owner:	Anthem United Creekview Developments, L.P.
Lead Agency Contact:	Charity Gold, Associate Planner, 916-774-5272

An Addendum to a previously certified and adopted negative declaration or environmental impact report may be prepared for a project if only minor technical changes or additions are necessary or none of the conditions calling for the preparation of a subsequent EIR or negative declaration have occurred (California Environmental Quality Act Guidelines [CEQA] Section 15164). Consistent with CEQA Guidelines Section 15164, the below analysis

has been prepared in order to demonstrate that none of the conditions described in Section 15162 of the CEQA Guidelines calling for preparation of a subsequent EIR have occurred and that only minor technical changes or additions are necessary in order to deem the adopted negative declaration adequate to describe the impacts of the proposed project. CEQA Guidelines Section 15164 also states that an addendum need not be circulated for public review, but can be included in or attached to the adopted negative declaration for consideration by the hearing body. This Addendum focuses only on those aspects of the project or its impacts which require additional discussion.

PROJECT DESCRIPTION

Project Location

The project site is located approximately six miles west of Interstate 80 and State Route 65, 10 miles northeast of the City of Sacramento, 10 miles east of State Route 99, five miles west of downtown Roseville, and four miles east of the Sutter County line. The site is on the north side of the future Blue Oaks Boulevard extension.

Background

2012 Project

On September 19, 2012 the City Council adopted a resolution certifying the Creekview Specific Plan Final Environmental Impact Report (FEIR) as adequate, complete, and in compliance with CEQA. Findings and a statement of overriding considerations were made for the Significant Impacts identified in the EIR and Mitigation Measures were adopted. The EIR identified Significant and Unavoidable Impacts which could not be reduced, Significant Impacts that could be reduced to Less Than Significant, and Less Than Significant Impacts that would occur as a result of the project. The project included the adoption of the Creekview Specific Plan (CSP) for approximately 501 acres of undeveloped land adjacent to the northwest boundary of the City of Roseville for which annexation was proposed. The Specific Plan included the following mix of land uses:

- 2,011 dwelling units
    - 836 Low Density Residential
    - 655 Medium Density Residential
    - 520 High Density Residential
- 19.3 acres Community Commercial (CC) and Community Commercial/Business Professional (CC/BP)
- 9.6 acres Public/Quasi-Public (Elementary School, Electric Substation, etc.)
- 15.7 acres Neighborhood Parks
- 136.2 acres Open Space

With approval of the CSP a Development Agreement was negotiated between the landowners and the City that set the terms, rules, conditions, regulations, entitlements, responsibilities, and other provisions relating to the development of then the plan area of a 30 year period.

2016 Project

On March 16, 2016 the City Council approved an amendment to the CSP to transfer residential units between 23 of the specific plan large lot parcels and to adjust the acreage of some of those large lot parcels. A Tentative Subdivision Map, Design Review for Residential Subdivision, and Tree Permit were approved. City Council recognized the exempt status of this project under Section 15182 and acknowledged that none of the conditions requiring a Subsequent, Supplemental, or Addendum to the Creekview EIR existed. The amended specific plan resulted in the following land use distribution:

- 2,011 dwelling units
    - 810 Low Density Residential
    - 654 Medium Density Residential
    - 547 High Density Residential
- 19.3 acres Community Commercial and CC/Business Professional
- 9.6 acres Public/Quasi-Public (Elementary School, Electric Substation, etc.)
- 15.7 acres Neighborhood Parks
- 136.2 acres Open Space

Environmental Setting

The project site is characterized by gently rolling topography and large, open annual grassland areas with valley oak riparian woodland habitat. The site's natural features include Pleasant Grove Creek, which traverses the southern portion of the site in a westerly direction, to the western edge of the project site.

University Creek, a small tributary to Pleasant Grove Creek is located in the northern portion of the site and runs in an east-west direction. Seasonal wetlands, including vernal pools and seasonal drainages, are scattered throughout the site, but are concentrated in the north.

Approximately 500 trees are present on the project site. The majority of the trees are located along the Pleasant Grove corridor through the middle of the Project Area, with a few scattered trees near the northern portion of the site. Most of the trees along Pleasant Grove Creek are cottonwoods, oaks and willows.

The land south of the creek is generally flat grassland areas. North of the creek the topography includes more rolling hills. Land north of the creek has been used for cattle grazing and agricultural enterprises. Most of the land located south of the creek has been idle since 1989. The site elevation ranges from approximately 75 to 95 feet above mean sea level.

Pursuant to the approved 2016 CSP, tree removal and grading have commenced for the portion of the project south of Pleasant Grove Creek and for a grading borrow area located north of the creek. Grading operations include construction of the Pleasant Grove Creek bypass channel on the CSP site and off-site on the Al Johnson Wildlife Area (AJWA). Construction is underway for the segment of Westbrook Boulevard north of Blue Oaks Boulevard to Creekview Plaza and the extension of Blue Oaks Boulevard along the project frontage to Westbrook Boulevard.

Proposed Project

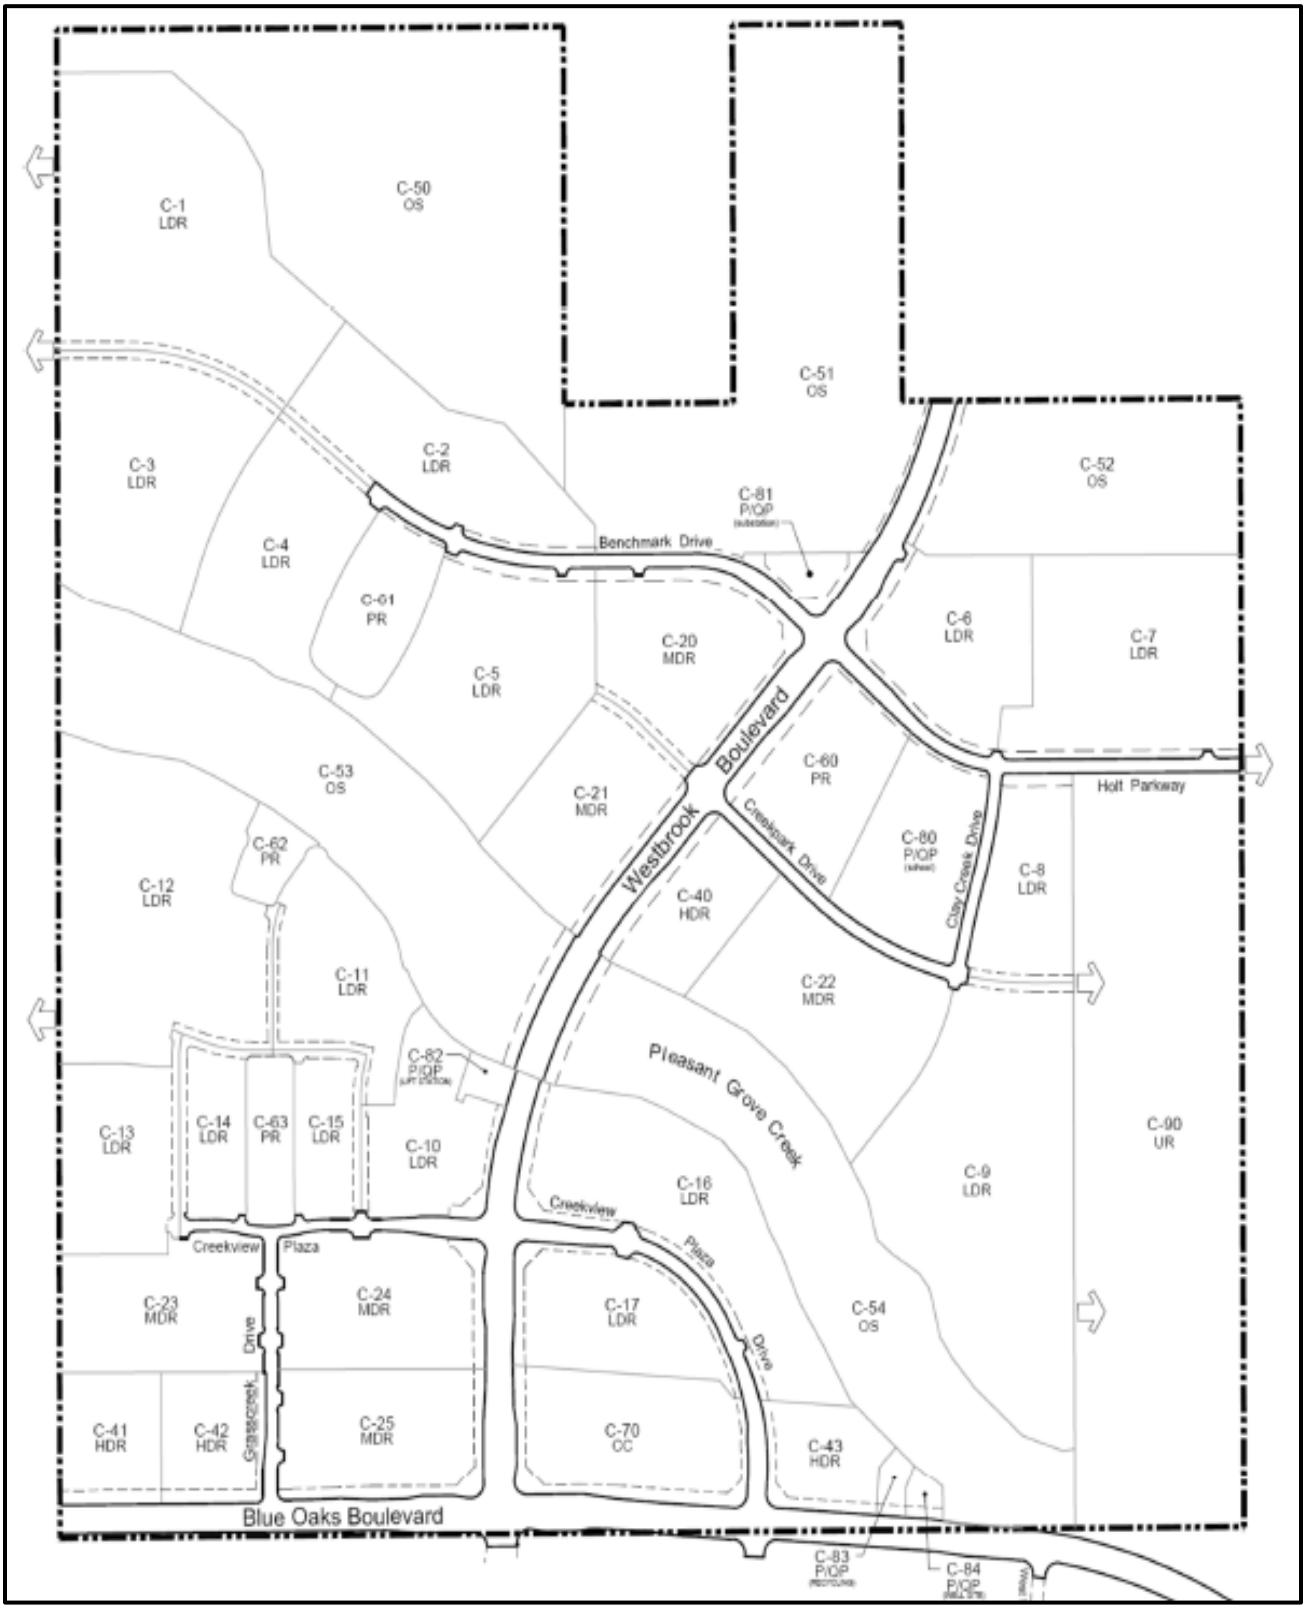
Presently, the applicant requests an amendment to the 2016 Creekview Specific Plan (CSP) (Creekview Specific Plan Specific Plan Amendment or CSP SPA) to redistribute the land uses and residential units within the approved 501 acre site and modify the large and small lot tentative maps. With the CSP SPA, the overall dwelling unit allocation will remain at 2,011 and 141 units will be transferred from Medium Density Residential (MDR) to Low Density Residential (LDR) villages. No changes are proposed to the number of High Density Residential (HDR) units. Lotting patterns of the LDR and MDR large lot parcels have been revised to reflect housing types. Acreage in Community Commercial (CC) will decrease by 6.3 acres and Community Commercial/Business Professional (CC/BP) uses will be eliminated. The applicant also requests an amendment to the Development Agreement to reflect the proposed changes to the project. The proposed land use distribution is summarized below and shown on the Land Use Plan in Figure 1.

- 2,011 dwelling units
    - 951 Low Density Residential
    - 513 Medium Density Residential
    - 547 High Density Residential
- 9.2 acres Community Commercial
- 9.6 acres Public/Quasi-Public (Elementary School, Electric Substation, etc.)
- 16.3 acres Neighborhood Parks
- 136.9 acres Open Space

The majority of the requested changes will occur in the portion the plan arealocated south of Pleasant Grove Creek. North of the creek a rezone is requested to align the zoning with the proposed lot type. The proposed

CSP SPA warrant some minor changes and additions to the EIR; however the changes are not substantial and none of the conditions described in Section 15162 apply.

Figure 1: Proposed Land Use Plan



PURPOSE AND SCOPE OF ADDENDUM

This Addendum has been prepared to identify and assess the anticipated environmental impacts of the above-described project. The document relies on previous environmental documents and site-specific studies prepared to address in detail the effects or impacts associated with the project as well as updated technical analyses, prepared by qualified consultants. This document has been prepared to satisfy the California Environmental Quality Act (CEQA), (Public Resources Code, Section 21000 et seq.) and the State CEQA Guidelines (14 CCR 15000 et seq.). CEQA requires that all state and local government agencies consider the environmental consequences of projects over which they have discretionary authority before acting on those projects.

Where, as here, an EIR addressing an earlier version of the project has been previously prepared and certified, the lead agency considers the relevance of that prior EIR in light of the current modified version of the project and changed circumstances since the time of the preparation of the prior EIR. Pursuant to CEQA Guidelines §15162-15163, if the lead agency determines, based on substantial evidence, that new information of substantial importance, or changes to the project or surrounding circumstances will require major revisions to the previous EIR due either to a new significant effect or a substantial increase in the severity of a previously identified significant effect on the environment, the lead agency is required to prepare a Subsequent EIR or an EIR Supplement to analyze the project at hand. Pursuant to CEQA Guidelines §15164, if the agency finds no basis for requiring the preparation of either a Subsequent EIR or an EIR Supplement, but some changes or additions are necessary, an Addendum shall be prepared.

The Creekview Specific Plan EIR was adopted by City Council on September 19, 2012. The document analyzed the impacts that would occur as a result of annexing the approximately 501-acre site to the City for urban development, adopting the Creekview Specific Plan (CSP), approving General Plan land use designation and text amendment, pre-zoning and the associated large lot map and development agreement. A copy of the CSP EIR is available for review at https://www.roseville.ca.us/cms/One.aspx?portalId=7964922&pageId=8774592. The EIR is also available for review during normal weekday business hours at the City of Roseville Development Services Department, 311 Vernon Street Roseville, CA.

In accordance with CEQA, it was determined that the CSP would result in significant impacts on the environment and a Final EIR was prepared for the project (SCH 02008032017). A Notice of Completion was filed with the State of California Office of Planning and Research. The FEIR was certified by the City Council on September 19, 2012.

The CSP EIR is used in the evaluation of this project. It should be noted that the CSP EIR included an analysis of a portion of the CSP identified as Urban Reserve. This addendum does not include an analysis of consistency with the Urban Reserve analysis as no changes to that portion of the plan area are proposed.

The City Council adopted a Statement of Overriding Considerations with certification of the EIR for the following significant and unavoidable impacts:

- Potential incompatibility from overflight operations
- Inducement of population growth
- Degradation of the existing visual character
- Light and glare
- Short-term construction emissions
- Long-term operational emissions
- Consistency with plans and policies
- Short-term construction emissions
- Subsurface archaeological, historical, or human remains (potentially significant and unavoidable)
- Construction noise
- Traffic noise

- Impacts on Placer County roadway segments and intersections
- Impacts to Sutter County roadway segments
- Impact to State Highways
- Increased demand at the landfill
- Landfill expansion
- Construction and demolition debris

The EIR identified project-specific mitigation measures for the CSP, which were adopted by the City Council with the CSP. The development footprint of the proposed project remains unchanged from what was analyzed in the EIR. The project consists mainly modifications to the amount and location of the approved land uses and text amendments to reflect those changes. In most cases the mitigation adopted with the CSP remains applicable; however, minor modifications are made to the measures where needed to reflect the revisions to referenced lot numbers.

ENVIRONMENTAL CHECKLIST FOR ADDENDUM ENVIRONMENTAL REVIEW

The purpose of this checklist is to evaluate the categories in terms of any "changed condition" (i.e. changed circumstances, project changes, or new information of substantial importance) that may result in a changed environmental result. A "no" answer does not necessarily mean there are no potential impacts relative to the environmental category, but that there is no change in the condition or status of the impact since it was analyzed and addressed in prior environmental documents.

EXPLANATION OF CHECKLIST EVALUATION CATEGORIES

Where Impact was Analyzed
This column provides a cross-reference to the pages of the prior environmental documents where information and analysis may be found relative to the environmental issue listed under each topic.

Do Proposed Changes Involve New Significant Impacts?
Pursuant to Section 15162(a)(1) of the CEQA Guidelines, this column indicates whether the changes represented by the current project will result in new significant impacts that have not already been considered and mitigated by the prior environmental review documents and related approvals, or will result in a substantial increase in the severity of a previously identified impact.

Any new Circumstances Involving New Impacts?
Pursuant to Section 15162(a)(2) of the CEQA Guidelines, this column indicates whether there have been changes to the project site or the vicinity (circumstances under which the project is undertaken) which have occurred subsequent to the certification or adoption of prior environmental documents, which would result in the current project having new significant environmental impacts that were not considered in the prior environmental documents or that substantially increase the severity of a previously identified impact.

Any new Information Requiring New Analysis or Verification?
Pursuant to Section 15162(a)(3)(A–D) of the CEQA Guidelines, this column indicates whether new information of substantial importance which was not known and could not have been known with the exercise of reasonable diligence at the time the previous environmental documents were certified or adopted is available requiring an update to the analysis of the previous environmental documents to verify that the environmental conclusions and mitigation measures remain valid. Either "yes" or "no" will be answered to indicate whether there is new information showing that: (A) the project will have one or more significant effects not discussed in the prior environmental documents; (B) that significant effects previously examined will be substantially more severe than shown in the prior environmental documents; (C) that mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or (D) that mitigation measures or alternatives which are considerably different from those analyzed in the prior environmental

documents would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. If "no," then no additional environmental documentation (supplemental or subsequent EIR) is required.

Mitigation Measures Implemented or Addressing Impacts
Pursuant to Section 15162(a)(3) of the CEQA Guidelines, this column indicates whether the prior environmental documents provide mitigation measures to address effects in the related impact category. In some cases, the mitigation measures have already been implemented. A "yes" response will be provided in any instance where mitigation was included, regardless of whether the mitigation has been completed at this time. If "none" is indicated, this environmental analysis concludes a significant impact does not occur with this project, no mitigation was previously included, and no mitigation is needed.

DISCUSSION AND MITIGATION SECTIONS

Discussion
A discussion of the elements of the checklist is provided under each environmental category in order to clarify the answers. The discussion provides information about the particular environmental issue, how the project relates to the issue and the status of any mitigation that may be required or has already been implemented.

Mitigation Measures
Applicable mitigation measures from the prior environmental review that apply to the project are listed under each environmental category.

Conclusions
A discussion of the conclusion relating to the analysis contained in each section.

CHECKLIST

I. Aesthetics

	Where Impact Was Analyzed in Prior Environmental Documents	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a. Have a substantial adverse effect on a scenic vista?	4.14-18	No	No	No	Compliance with the City's General Plan, Community Design Guidelines and the CSP Design Guidelines
b. Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	4.14-18	No	No	No	Compliance with the City's General Plan, Community Design Guidelines and the CSP Design Guidelines
c. Substantially degrade the existing visual character or quality of the site and its surroundings?	4.14-13	No	No	No	None Available
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	4.14-15	No	No	No	MM 4.14-1 Sight Lighting to Minimize Nuisance, MM 4.14-2 Low Glare Materials for New Development, and MM 4.14-3 Avoid Light Spill Over into Pleasant Grove Creek and Open Space Areas

Discussion: The CSP EIR concluded that the conversion of the site to urban uses was a significant and unavoidable impact for which no feasible mitigation was available and that that the change in the level of light and glare from the project would result in a significant and unavoidable impact even with mitigation measures requiring site lighting to minimize nuisance, low-glare materials for new development, and avoidance of light spill over into Pleasant Grove Creek and Open Space Areas.

The visual character of the CSP area is dominated by open, rolling grasslands, and is visible from a variety of short- and long-range viewpoints. The area to the east of the CSP area is partially developed with residential uses (approved Fiddyment Farms portion of the West Roseville Specific Plan). Development of the CSP would extend this urban edge. Although the CSP development would be visually compatible with surrounding developed and approved development to the east, it would substantially and permanently alter the existing visual character of the CSP area by introducing an extensive roadway network, houses, commercial uses and other urban facilities into an undeveloped area.

The development that will occur under the CSP SPA is generally consistent with the currently approved CSP as it relates to the aesthetics of the project and the effect of the project on adjacent uses within the project area. The roadway network will remain substantially the same with no change proposed east of Westbrook Boulevard. West of Westbrook Boulevard the roadway network would be modified by shifting Grasscreek Drive east approximately 339 feet toward Westbrook

Boulevard. This roadway will align with the proposed park on parcel C-63 and provide a direct link from Blue Oaks Boulevard to this park and the adjacent residential development. The location of the proposed 60kV overhead electrical transmission lines, previously proposed to be located along the south edge of the Pleasant Grove Creek open space corridor, will now extend west along the northern edge of Blue Oaks Boulevard and then north along the eastern edge of Westbrook Boulevard. This change is consistent with the location of the transmission lines east of the project site and will not result in any aesthetic impacts beyond those that were assumed in the CSP EIR. As stated in the CSP EIR, mitigation measures and implementation of General Plan policies and the CSP Design Guidelines would help to reduce the significant impacts, but not to less-than-significant levels. Impacts from the visual alteration of the site as well as light and glare impacts from the project are significant and unavoidable.

Mitigation Measures:

Mitigation Measure MM 4.14-3 has been revised to reflect the amended large lot parcel numbers. New parcels are shown in **bold** and eliminated parcels are shown in ~~strikethrough~~.

MM 4.14-1 ***Site Lighting to Minimize Nuisance (Impact 4.14-2- CSP)***

Light producing uses, such as ball fields, within the CSP Area shall be located and oriented to minimize visual impacts on adjacent residential areas. Lighting shall be shielded and designed to distribute light in the most effective and efficient manner, using the minimum amount of light to achieve the necessary illumination for the use, as defined by suggested lighting standards for competitive play.

MM 4.14-2 ***Low-Glare Materials for New Development (Impact 4.14-2- CSP)***

In order to reduce the effects of daytime glare from development of commercial or office uses within the CSP Area, building developers shall make use, when feasible, of low-glare materials.

MM 4.14-3 ***Avoid Light Spill Over into Pleasant Grove Creek and Open Space Areas (Impact 4.14-2- CSP) (Amended)***

Outdoor lighting shall be placed, designed and directed so as to avoid light spillover into the habitat of Pleasant Grove Creek and the Open Space Preserve areas located immediately adjacent to the open space and shown on the Land Use Map as parcels C-1 to C-7, C9 to C-12, **C-16**, C-20 to C-22, ~~C-23, C-24,~~ C-40, **C-43**, C-61, C-62, ~~C-71,~~ and C-81 to C-84.

II. Agricultural & Forestry Resources

	Where Impact Was Analyzed in Prior Environmental Documents	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	4.1-64	No	No	No	MM 4.1-2 Agricultural Conversion Policies
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	4.1-45, 4.1-57	No	No	No	None
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	No Impact	No	No	No	Not Applicable
d) Result in the loss of forest land or conversion of forest land to non-forest use?	No Impact	No	No	No	Not Applicable
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	4.1-64	No	No	No	MM 4.1-2 Agricultural Conversion Policies

Discussion:

The CSP EIR concluded that the conversion of 368 acres of grazing and cultivated land to developed uses would result in a significant impact that could be reduced to less than significant with mitigation requiring agricultural compensation and habitat preservation. Items c and d related to timberland and forest land were not part of the CEQA Guidelines when the CSP EIR was prepared and therefore were not discussed explicitly; however, according to the CSP EIR, the

project site is characterized as fallow agricultural land and no forestry or timberland resources are present. The proposed CSP SPAwill not result in any changes to the scope of the approved project and the prior conclusions of the CSP EIR remain appropriate. Project impacts remain less than significant.

Mitigation Measures:

MM 4.1-1 ***Agricultural Compensation (Impact 4.1-1 and 4.1-5 CSP)***

One acre of open space shall be preserved within Placer County for each acre of open space impacted within the Specific Plan area. This is to be accomplished through the recordation of conservation easements that result in the formation of preserve lands (each a "mitigation property or "preserve site" and collectively, "mitigation lands" or "preserve lands"). For purposes of mitigation for specific development project, the term "open space" shall include any and all undeveloped land proposed to be preserved by conservation easement or otherwise required by any governmental agency to be preserved for any reason, specifically including all lands preserved for habitat or agricultural mitigation as set forth below and lands in agricultural use. No additional agricultural mitigation is required beyond the 1:1 open space requirement as long as a substantial portion of the mitigation lands acquired, as determined by the Planning Director, are: (1) in agricultural production, (2) undeveloped and have an NRCS soils classification of the same or greater value than lands being affected within the specific plan property at issue, or (3) undeveloped and have the same or higher value CDC categorization as lands being affected within the specific plan property at issue.

In-kind mitigation is not required for agricultural land developed within the Specific Plan area.

MM 4.1-2 ***Agricultural Conversion Policies (Impact 4.1-5 Urban Reserve)***

Specific Plans and/or other development proposals for the Urban Reserve shall be developed to minimize loss of grassland and agricultural conversion. Measures should include policies to preserve like areas of open space/agricultural land that can provide preservation of grassland in perpetuity.

III. Air Quality

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Conflict with or obstruct implementation of the applicable air quality plan?	4.4-43	No	No	No	WMM 4.4-4 Project Measures to Reduce Operational Emissions; MM 4.4-1 Dust and Construction Control Measures

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	4.4-28, 4.4-32, 4.4-36	No	No	No	MM 4.4-1 Dust and Construction Control Measures; 4.4-2 A-H Short-term Construction Related Impacts WMM 4.4-4 Project Measures to Reduce Operational Emissions; WMM 4.4-6 Operational Emissions Policies
c) Result in a cumulatively considerable net increase of any criteria for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors)?	4.4-28, 4.4-32, 4.4-36	No	No	No	WMM 4.4-4 Project Measures to Reduce Operational Emissions; WMM 4.4-6 Operational Emissions Policies
d) Expose sensitive receptors to substantial pollutant concentrations?	4.4-38	No	No	No	WMM 4.4-7 (a) Risk Assessment and Site Specific Measures; MM 4.4-3 Screening Health Risks
e) Create objectionable odors affecting a substantial number of people?	4.4-42	No	No	No	None

Discussion:

The air quality emissions provided in CSP EIR were estimated using URBEMIS 2007 Version 9.2.4. Using the modeled emissions, the CSP EIR concluded that the approved CSPwould result in significant and unavoidable impacts related to short-term construction, long-term operational, and consistency with plans and policies. Because the URBMIS model is no longer the Placer County Air Pollution ControlDistrict's (PCAPCD) preferred model for air quality analyses, an air quality analysis was prepared to compare the approved 2016 CSP and proposed CSP SPA using the PCAPCD's preferred California Emissions Estimator Model (CalEEmod) to better quantify the differences in emissions (Attachment 1; Air Quality Impact and Greenhouse Gas Analysis Creekview Specific Plan Amendment, July 2019). The following discussion summarizes the analysis as it relates to each checklist item.

a,b) An air quality analysis was prepared for the project by Raney Planning & Management, Inc. (Attachment 1) to compare the construction and operational emissions from the proposed CSP SPA to the approved 2016 CSP. The analysis quantified the CSP SPA's operational emissions using the CalEEMod software version 2016.3.2 with the model's inputs adjusted to reflect project-specific trip generation rates provided by Fehr and Peers (Attachment 3) and Roseville Electric's electricity consumption emissions intensity factor. The modeling assumed an operational year of 2026, when construction of all phases of the proposed CSP SPA will be complete and includes emissions estimates for the currently allowed development (2016 CSP) as well as the proposed project (CSP SPA).

Construction Emissions

Because the construction phasing plan has not changed and construction equipment emissions have substantially decreased since the original project approval construction emissions for the project would be equal to or less than what was previously modeled. The project would not result in construction emissions impacts beyond those that were previously disclosed. Impacts related to construction emissions remain significant and unavoidable in the short term.

Operational Emissions

Table 1 presents a comparison of the operational emissions associated with the approved 2016 CSP and the proposed CSP SPA to determine the net new emissions associated with the proposed CSP SPA. Traffic consultants, Fehr and Peers, provided project-specific trip generation and vehicle miles travelled (VMT) for both the approved 2016 CSP and 2019 CSP SPA.

Table 1
Total Operational Emissions

Pollutant	2016 CSP Projected Emissions (lbs/day)	2019 CSP SPA Projected Emissions (lbs/day)	Net New Emissions (lbs/day)	PCAPCD Significance Threshold (lbs/day)
ROG	125.66	118.56	-7.10	55
NO_X	193.33	175.58	-17.75	55
PM_{10}	16.03	15.95	-0.08	82

Source: CalEEMod, June 2019 (see Appendix A of Attachment 1).

As shown in Table 1, while the overall emissions associated with both the 2016 CSP and 2019 CSP SPA would exceed the PCAPCD significant thresholds, the CSP SPA would result in a reduction in emissions as compared to the development currently allowed in the 2016 CSP and no additional impact will occur and impacts related to air quality emissions remain significant and unavoidable.

Cumulative Emissions

c) The major pollutant concentrations of concern are localized CO emissions and toxic air contaminant (TAC) emissions. According to the air quality analysis performed for the CSP SPA, the proposed project would result in net reduction of 15.73 lbs/day maximum mobile source CO emissions and construction activities that have the potential to generate DPM emissions (considered TACs) are consistent with those analyzed in the CSP EIR. The CSP SPA would not result in an increased exposure of any sensitive receptors to substantial concentrations of any pollutants beyond what was disclosed in the CSP EIR and no new impacts related to CO emissions and TAC exposure will occur. Impacts remain less than significant.

d,e) Emissions of pollutants have the potential to adversely affect sensitive receptors within the project area. Pollutants of principal concern include emissions leading to odors, emissions of dust, or emissions considered to constitute air pollutants (air pollutants are discussed above). The project is required to comply with rules and regulations of the PCAPCD, which will ensure that the project does not result in dust emissions that would adversely affect adjacent uses. Furthermore, the proposed uses are not typically associated with substantial objectionable odors. With compliance with all applicable PCAPCD rules and regulations, as required, impacts remain less than significant.

Mitigation Measures:

WMM 4.4-4 ***Project Measures to Reduce Operational Emissions (Impact 4.4-2 and 4.4-6 CSP and Urban Reserve)***

Following receipt of an application for a Tentative Maps (excluding the large lot subdivision map), Design Review Permit, conditional use permits and/or all discretionary permits**,** as found to be in compliance with the 30% reduction analysis applicable for individual projects with the Specific Plan, the City will forward an early consultation notice to the Placer County Air Pollution Control District (PCAPD). Where the PCAPD provides comments on a specific development proposal, the City shall consult with PCAPD and the developer to incorporate measures recommended by the PCAPD and agreed to by the City into the project. Where the PCAPD does not provide comment on a specific development proposal, the City shall incorporate measures that reduce vehicle emissions and operation emissions from the proposed development. This measure will be implemented through project design, conditions of approval, noticing and disclosure statements, or through the City's plan check and inspection processes. This process is intended to ensure that best available and practical approaches are used to reduce operational emissions in specific tentative map and design review permit applications. The following is a listing of measures that shall be implemented for the purpose of reducing vehicle and operational emissions.

- Provide tree plantings that meet or exceed the requirements of the City's Community Design Guidelines to provide shading of buildings and parking lots.
- Landscape with native drought-resistant plants (ground covers, shrubs and trees) with particular consideration of plantings that are not reliant on gas-powered landscape maintenance equipment.
- Require all flat roofs on non-residential structures to have a white or silver cap sheet to reduce energy demand.
- Provide conductive/inductive electric vehicle charging station and signage prohibiting parking for non-electric vehicles within designated spaces within non-residential developments.

- Provide vanpool parking only spaces and preferential parking for carpools to accommodate carpools and vanpools in employment areas (e.g. community commercial, business-professional uses)

- All truck loading and unloading docks shall be equipped with one 110/208 volt power outlet for every two-dock doors. Signs shall be posted stating "Diesel trucks are prohibited from idling more than five minutes and trucks requiring auxiliary power shall connect to the 110/208-vot outlets to run auxiliary equipment".

- Design streets to maximize pedestrian access to transit stops.

- Require site design to maximize access to transit lines, to accommodate bus travel, and to provide lighted shelters at transit access points.

- Develop the plan consistent with the higher residential densities (within approved residential density ranges of zone) provided around the village nodes and transit corridors.

- Include photovoltaic systems in project design and/or participate in Roseville Electric incentive programs for energy-efficient development where feasible.

Measures for Residential Units:

- Require electrical outlets be installed on the exterior walls of both the front and back of residences to promote the use of electric landscape maintenance equipment.

- Require installation of a gas outlet in the rear of residential buildings for use of outdoor cooking appliances, such as gas burning barbeques.

- Require installation of low nitrogen oxide (NOx) hot water heaters (beyond District Rule 246 requirements)

- Provide notice to homebuyers of incentive and rebate programs available through Roseville Electric or other providers that encourage the purchase of electric landscape maintenance equipment.

- Prior to approval of Tentative Maps: provide notice to homebuyers through CC&Rs or other mechanisms to inform them that only gas fireplaces would be permitted.

WMM 4.4-6 ***Operational Emissions Policies (Impact 4.4-2 CSP and Urban Reserve and 4.4-6 Urban Reserve)***

Specific plans and/or development proposals for the Urban Reserve shall include measures to reduce operational emissions. Such measures may include but would not be limited to transit and pedestrian-oriented facilities (e.g., park and ride lots, bus stops), bike trails and facilities,

energy-saving measures in buildings, as well as the measures described in WM 4.4-4. Appropriate measures shall be selected in consultation with the city and PCPCD.

WMM 4.4-7 (a) - ***Risk Assessment and Site Specific Measures (Impact 4.4-4 CSP and Urban Reserve)***

Users that could generate toxic air contaminants will be required to submit a Permit to Operate to the PCAPCD. The District will review the use and if a proposed project would cause the combined emissions of TACs to exceed the risk standard of ten in one million at residences or public uses (schools, parks, etc), additional modeling and/or environmental review would be required to demonstrate emissions from that use or other uses would be reduced so that the standard is not exceeded. For example, an applicant could propose to retrofit an existing operation in order to lower the total TAC emissions in the CSP area.

MM 4.4-1 ***Dust and Construction Control Measures (Impact 4.4-1 CSP)***

In accordance with the Placer County Air Pollution Control District (PCAPCD), the applicant shall comply with all applicable rules and regulations as listed above (e.g., Rule 202, 218 and 228). In addition, prior to the approval of a discretionary permit, the applicant(s) shall implement the following measures unless superseded by state or other more stringent standards:

A. Construction equipment exhaust emissions shall not exceed Placer County APCD Rule 202 Visible Emission limitations. Operators of vehicles and equipment found to exceed opacity limits are to be immediately notified by APCD to cease operations and the equipment must be repaired within 72 hours. *(Based on APCD Rule 202)*

B. The contractor shall suspend all grading operations when fugitive dust exceeds Placer County APCD Rule 228 (Fugitive Dust) limitations. The prime contractor shall be responsible for having an individual who is CARB-certified to perform Visible Emissions Evaluations (VEE). This individual shall evaluate compliance with Rule 228 on a weekly basis. It is to be noted that fugitive dust is not to exceed 40% opacity and not go beyond the property boundary at any time. Lime or other drying agents utilized to dry out wet grading areas shall not exceed Placer County APCD Rule 228 Fugitive Dust limitations. Operators of vehicles and equipment found to exceed opacity limits will be notified by APCD and the equipment must be repaired within 72 hours. *(Based on APCD Rule 228)*

C. During construction, traffic speeds on all unpaved surfaces shall be limited to 15 miles per hour or less. *(Based on APCD Rule* 228 / *section 401.2)*

D. During construction, no open burning of removed vegetation shall be allowed unless permitted by the PCAPCD. All removed vegetative material shall be either chipped on site or taken to an appropriate recycling site, or if a site is not available, a licensed disposal site. *(Based on APCD Rule 310)*

E. A person shall not discharge into the atmosphere volatile organic compounds (VOC's) caused by the use or manufacture of Cutback or Emulsified asphalts for paving, road construction or road maintenance, unless such manufacture or use complies with the provisions Rule 217. *(Based on APCD Rule 217).*

F. Processes that discharge 2 pounds per day or more of air contaminants, as defined by Health and Safety Code Section 39013, to the atmosphere may require a permit. Permits may be required for both construction and operation. Developers/contractors should contact

the District prior to construction and obtain any necessary permits prior to the issuance of a Building Permit. *(Based on the California Health & Safety Code section 39013:* http://www.leginfo.ca.gov

The following mitigation measures shall be implemented to reduce short-term construction-related air quality impacts. In addition, dust control measures are required to be implemented by all projects in accordance with the City of Roseville Grading Ordinance, and the PCAPCD Fugitive Dust Rule 228.

MM 4.4-3 Screening Health Risks (Impact 4.4-4 CSP)

For those projects which include stationary sources (i.e. gasoline dispensing facility, auto painting, dry cleaning, large HVAC units, etc.), the applicant shall obtain an Authority to Construct (ATC) permit prior to the issuance of a Certificate of Occupancy NOTE: A third party detailed Health Risk Assessment may be required as a part of the permitting process.

If significant acute, chronic, or carcinogenic health risks are predicted, then measures shall be identified that reduce all health risks to less than significant levels. Such analysis and mitigation may include:

- Land use and site design requirements including building setbacks and building orientation.
- Consideration of the distance between industrial uses (emissions) and the location of potential sensitive receptors and implementation of setbacks to maximize distance.

Application of scrubbers or other modifications to uses to further reduce emissions.

MM 4.4-4 Operational Emissions (Impact 4.4-2 CSP)

The proposed project exceeds the cumulative air quality thresholds as established by the APCD (a maximum of 10 pounds per day of ROG and/or NOx) In order to mitigate the projects contribution to long-term emission of pollutants, the applicant shall either:

a. Establish mitigation on-site by incorporating design features within the project. This may include, but not be limited to: "green" building features such solar panels, energy efficient heating and cooling, exceeding Title 24 standards, bike lanes, bus shelters, etc. NOTE: The specific amounts of "credits" received shall be established and coordinated through the Placer County Air Pollution Control District.

b. Establish mitigation off-site within the same region (i.e. east or west Placer County) by participating in an offsite mitigation program, coordinated through the Placer County Air Pollution Control District. Examples include, but are not limited to participation in a "Biomass" program that provides emissions benefits; retrofitting, repowering, or replacing heavy duty engines from mobile sources (i.e. busses, construction equipment, on road haulers); or other program that the project proponent may propose to reduce emissions.

c. Participate in the Placer County Air Pollution District Offsite Mitigation Program by paying the equivalent amount of money, which is equal to the projects contribution of pollutants (ROG and NOx), which exceeds the cumulative threshold of 10 pounds per day. The estimated payment for the proposed project is based on $14,300 per ton for a one year period. The actual amount to be paid shall be determined, and satisfied per current California Air Resource Board guidelines, at the time of recordation of the Building Permit.

d. Any combination of a, b, or c, as determined feasible by the Director of APCD.

NOTE: All mitigation measures (either a, b, c, or d) must be satisfied prior to issuance of a Building Permit. It is the applicant's responsibility to forward written proof of satisfaction of this condition to APCD.

IV. Biological Resources

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	4.8-48, 4.8-51, 4.8-53, 4.8-56, 4.8-57, 4.8-68, 4.8-70, 4.8-71, 4.8-72, 4.8-73	No	No	No	MM 4.8-1 (a) No Net Loss of Wetlands; MM 4.8-1 (b) Wetland Avoidance/Mitigation Plan; MM 4.8-4 Onsite and Offsite Preservation of Grassland Habitat MM 4.8-7 Off-site Surveys; MM 4.8-1 (a) Ensure No Net Loss of Wetlands; MM 4.8-1 (b) Wetland Avoidance/Mitigation Plan; MM 4.8-2 Relocate Western Spadefoots; MM 4.8-3 Avoid Nesting Sites; MM 4.8-4 Off-site and On-site Preservation of Grassland Habitat; MM 4.8-5 Wildlife Movement Protection Policies; MM 4.8-6 Habitat Restoration/Onsite Preservation
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	4.8-61, 4.8-66	No	No	No	MM 4.8-4 On-site and Off-site Preservation of Grassland Habitat MM 4.8-5 Wildlife Movement Protection Policies; MM 4.14-3 Avoid Light Spillover

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	4.8-42,	No	No	No	MM 4.8-1 (a) Ensure No Net Loss of Wetlands; MM 4.8-1 (b) Wetland Avoidance/Mitigation Plan
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	4.8-62	No	No	No	MM 4.8-5 Wildlife Movement Protection Policies; MM 4.14-3 Avoid Light-Spillover
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	4.8-65, 4.8-74	No	No	No	None Tree Preservation Ordinance
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	4.8-75	No	No	No	None

Discussion:

The CSP EIR identified significant impacts to biological resources due to the conversion of a substantial amount of undeveloped land to urban uses. Mitigation measures were adopted to reduce impacts to wetlands, vernal pool crustaceans, and their habitat, special status plants, western spadefoot, Swainson's hawk, burrowing owl, and other protected raptors nesting and foraging habitat, grassland habitat, resident and migratory wildlife species, riparian habitat to less-than-significant levels. Because the CSP SPA does not expand the limits of the development footprint or the project's physical impact boundary, no additional analysis is required. The mitigation measures adopted with certification of the CSP EIR remain applicable and no additional impacts will occur. Impacts remain less than significant upon compliance with the applicable mitigation measures.

Mitigation Measures:

MM 4.8-1 (a): ***Ensure No Net Loss of Wetlands (Impacts 4.8-1, 4.8-2, 4.8-3, 4.8-4 and 4.8-11-CSP)***

The City shall not issue a grading permit for the CSP project unless a Clean Water Act Section 404 permit is first obtained from the USACE [or an equivalent approval for waters of the state is obtained from the RWQCB] The Clean Water Act Section 404 permit process (including Section 7 Consultation under FESA) is the standard method for developing mitigation for projects that affect wetlands and vernal pool species such as special-status plants, vernal pool crustaceans, and western spadefoots. Through this process, project applicants will be required to obtain the necessary permits and approvals to implement their proposed project while remaining in compliance with the Clean Water Act and FESA. If a 404 permit is not obtained, the City shall not issue a grading permit for the CSP project. The obligation to obtain the 404 permit will ensure no net loss to federally protected wetlands. Even after obtaining such a permit, however, the applicants must demonstrate to the City's Planning Director that they have also achieved no net loss of wetlands. Mitigation shall consist of a combination of the preservation of on-site vernal pool habitat and the acquisition of off-site property with existing vernal pool habitat for preservation.

Mitigation shall include off-site creation and/or restoration of vernal pool habitat, and/or participation in a mitigation credit program from a wetlands mitigation bank approved by the USACE and USFWS. These banks charge fees in exchange for credits that are based upon the mitigation obligation of the applicant. If the applicant chooses to buy mitigation credits, the applicant shall pay fees that shall be used to restore, create, enhance, and/or preserve wetlands at an established mitigation bank. The credits shall be in direct proportion to the wetland impacts resulting from the project. The project applicants have identified appropriate off-site mitigation in the form of preservation and restoration, as shown in Figure 4.8-3. This restoration mitigation, coupled with on-site creation, will be a component of the required compensation for the project.

All wetland restoration and creation shall be conducted in a manner consistent with applicable USACE and USFWS mitigation guidelines and policies.

Additionally, mitigation shall include off-site creation and/or restoration of vernal pool habitat, and/or participation in a mitigation credit program from a wetlands mitigation bank approved by the Corps and USFWS. These banks charge fees in exchange for credits that are based upon the mitigation obligation of the applicant. The fee is used for wetlands that have been restored, created, enhanced, and/or preserved at an established mitigation bank. The credits shall be in direct proportion to the wetland impacts resulting from

the project. The project applicants have identified appropriate off-site mitigation as shown in Figure 4.8-3. This restoration coupled with on-site creation will be a component of the required compensation for the project.

All wetland restoration and creation shall be conducted in a manner consistent with applicable Corps of Engineers and USFWS mitigation guidelines and policies.

MM 4.8-1 (b) ***Wetland Avoidance/Mitigation Plan (Impact 4.8-1, 4.8-2, 4.8-3 and 4.8-11- CSP)***

For any wetlands to be restored or created outside of an approved mitigation bank, Applicant shall submit a Wetland Mitigation Plan to mitigate for impacts to wetlands that describes the specific method(s) to be implemented to mitigate any on- or off-site project related impacts. This detailed Wetland Mitigation Plan shall be prepared in accordance with applicable USACE and USFWS policies and regulations, and the City of Roseville Grading and Erosion Control Ordinance. A copy of the 404 permit, the biological opinion, and the Wetland Mitigation Plan shall be provided to the City at the time of specific entitlements (grading permit, tentative map, etc), and the Wetland Mitigation Plan shall ensure the following to the satisfaction of the City:

- Describe the location of the proposed wetland mitigation site(s), including a detailed map showing the acreage, distribution, and type of wetlands to be restored/created to ensure no net loss in wetland habitat acreage, values and functions. The compensation wetlands shall be designed, at a minimum, to meet or exceed the functions of the existing wetlands to be impacted.

- Include a monitoring plan to assess whether the compensation wetlands are functioning as intended. Specific performance standards for hydrologic, floral, and faunal parameters shall be proposed to determine success of the created wetlands. The monitoring plan shall specify the corrective measures/ modifications to be implemented in the event that monitoring indicates that the performance standards are not being met.

- Include a long-term maintenance plan for the wetland preservation/mitigation areas describing the measures to be implemented to assure that they are maintained as wetland habitat in perpetuity.

- Require that fencing be installed around all existing wetlands that are within fifty feet of any haul route, spoil zone, stockpile zone, creation zone, or other construction area. The fencing shall be of high visibility material. Fencing shall be placed no closer than 10-feet to the delineated, verified perimeter of wetlands. This fencing shall be maintained until all adjacent construction activities are completed.

- A qualified biological resources monitor, approved by the City, shall be on the site(s) at all times when working in the open space corridor or other sensitive areas to ensure compliance with identified mitigation for the duration of all the proposed activities. The biological resources monitor shall submit bi-annual compliance reports to City monitor for review for a period of five years after completion of construction or until all performance standards have been satisfied.

- The wetland mitigation site(s) shall be surveyed by a qualified biologist, no more than 30 days prior to the start of construction, for the presence of raptor and federal and state listed bird nesting sites, unless it is determined that construction will occur

outside of the breeding season for all species likely to occur on site or observed present. If active nesting sites are observed, all state and federal guidelines pertaining to active nesting sites shall be strictly adhered to in consultation with a qualified biologist.

- Applicant shall grant full access to the wetland mitigation site(s) to the City for the monitoring of construction activities and mitigation compliance. Access shall be granted during all construction activities and the City monitor may issue stop work orders if mitigation non-compliance is identified.

- Applicant shall specify measures for reuse or disposal of excavated material that is suitable for use in the project area. The plan should minimize the elapsed time between excavation and reuse and provide adequate stockpile coverage and protection from wind and water erosion during the entire storage period. If excavated material is unsuitable for reuse at the project area, the plan shall include specific information regarding the eventual reuse or disposal site, transportation method(s), disposal reuse management, and schedule.

- The Wetland Avoidance Mitigation Plan shall include a spill prevention and response plan to the satisfaction of the City.

- All disturbed areas shall be re-vegetated by the following methods: hydro seeding, drill seeding, or spreading of upland seed bearing soil. The method of re-vegetation shall be approved by a qualified wetland specialist and the City.

- The applicant shall apply non-toxic soil stabilizers according to manufacturer's specifications to all inactive construction areas. Non-toxic binders shall be applied to exposed areas after cut and fill operations and hydro seeded areas. The wetland mitigation site shall be watered as directed by the City of Roseville Public Works Department. The frequency shall be based on the type of operation, and soil and wind exposure.

- To reduce air emissions, idling time for all construction vehicles shall be limited to a maximum of 10 minutes. Additionally, the City may curtail construction during high ambient pollutant concentrations, including but not limited to, ceasing construction during peak-hour vehicular traffic on adjacent or nearby roadways. Additionally, all land clearing, grading, earth moving or excavation activities shall be suspended when winds exceed 15 mph.

- The applicants shall ensure that all inactive storage/stock piles are adequately covered, and that all trucks hauling dirt, sand, soil, or other loose materials also are adequately covered or maintain at least two feet of freeboard (i.e., minimum vertical distance between the top of the load and top of the trailer) in accordance with the requirements of the California Vehicle Code (CVC) section 23114.

MM 4.8-2: ***Relocate Western Spadefoots (Impact 4.8-4 and 4.8-11- CSP)***

The location of pools that are occupied by western spadefoot shall be determined through surveys conducted during the appropriate season (generally February), by a qualified biologist. Those pools that are found to support western spadefoot shall be avoided if feasible. If avoidance is not feasible, then the CDFW shall be consulted for its recommendation with respect to an adult or larval or egg masses capture and relocation plan. Although there is no set protocol for this type of activity, the capture and relocation of reptile and amphibian species from areas that will be destroyed to areas of unoccupied suitable habitat is a fairly standard part of both USFWS and CDFW procedures and recommendations for mitigating impacts. When done in combination with habitat restoration and preservation,

the procedure is known to be successful in preserving displaced populations. These measures would mandate that, where habitat avoidance is infeasible, western spadefoots displaced from pools that are destroyed during construction shall be relocated to protected areas of suitable habitat.

MM 4.8-3 ***Avoid Nesting Sites (Impact 4.8-6 and 4.8-11 CSP)***

To ensure that fully protected bird and raptor species are not injured or disturbed by construction in the vicinity of nesting habitat, the project applicant shall implement the following measures:

Raptors

a) When feasible, all tree removal shall occur between August 30th and February 15th to avoid the breeding season of any raptor species that could be using the area, and to discourage hawks from nesting in the vicinity of an upcoming construction area.

b) For Swainson's hawk, if avoidance of tree removal outside the breeding season is not feasible, and a nest is present, the applicants would be required to obtain a 2081 permit from CDFW to mitigate for potential "take" under CESA. If no nesting is occurring, a take permit would not be required.

c) Prior to the beginning of mass grading, including grading for major infrastructure improvements, during the period between February 15th and August 30th, all trees and potential burrowing owl habitat within 350 feet of any grading or earthmoving activity shall be surveyed for active raptor nests or burrows by a qualified biologist no more than 30-days prior to disturbance. If active raptor nests or burrows are found, and the site is within 350-feet of potential construction activity, a highly visible temporary fence shall be erected around the tree or burrow(s) at a distance of up to 350-feet, depending on the species, from the edge of the canopy to prevent construction disturbance and intrusions on the nest area.

d) Preconstruction and non-breeding season exclusion measures shall be developed in consultation with CDFW, and shall preclude burrowing owl occupation of the portions of the project site subject to disturbance such as grading. Burrowing owls may be passively excluded from burrows in construction areas by placing one-way doors in the burrows according to CDFW protocol. The one-way doors must be in place for a minimum of three days. All burrows that may be occupied by burrowing owls regardless of whether they exhibit signs of occupation must be cleared with the one way doors. Burrows that have been cleared through the use of the one-way doors shall then be closed or backfilled to prevent owls from entering the burrow.

e) No construction vehicles shall be permitted within restricted areas (i.e., raptor protection zones) unless directly related to the management or protection of the legally protected species.

f) If a legally protected species nest is located in a tree designated for removal, the removal shall be deferred until after August 30th or until the adults and young of the year are no longer dependent on the nest site as determined by a qualified biologist.

Black Rails and Tri-colored Blackbirds

Prior to earth moving that would disturb marsh habitat, a qualified biologist shall conduct surveys to determine whether the California black rail or Tri-colored blackbird is present. If either of these species is found, all earth moving within 250 feet shall stop and measures, including establishing nest protection buffers along both sides of Pleasant Grove Creek during the nesting season (generally February 1 through August 31st) shall be implemented.

Rookeries

No heron rookeries are present within the plan area. Prior to earthmoving that would disturb marsh habitat or tree removal of the eucalyptus grove, pre-construction surveys should be conducted to verify that no rookeries have been established. If rookeries are present all earth moving within 250-feet shall stop, during the breeding season.

MM 4.8-4 ***Off-site and On-site Preservation of Grassland Habitat (Impact 4.8-2, 4.8-4, 4.8-6, 4.8-7 and 4.8-11-CSP)***

Swainson's Hawk

a) CDFW recommends that projects that result in the loss of potential foraging habitat for Swainson's hawk (which includes grasslands) within 10-miles of an active nest site provide mitigation for that loss. To the extent feasible, strategies for preserving on-site grasslands as raptor and migratory bird foraging habitat will be addressed in the Operations and Maintenance Plan prepared pursuant to the Section 404 Permit. Some of these strategies could include; but are not necessarily limited to, grazing for grassland management, monitoring for biological values, and adaptive management. Mitigation for Swainson's hawk foraging habitat would concurrently mitigate for loss of habitat for a number of other wildlife species in the region such as burrowing owl, red-tailed hawk, white-tailed kite, northern harrier, Ferruginous hawk, and logger-head shrike among others.

   Based on information obtained through consultation with CDFW and otherwise, a Swainson's Hawk Grassland Habitat Mitigation Plan shall be developed to mitigate for the loss of grassland foraging habitat, consistent with the ratios set forth in Table 4.8-5. Areas within Placer County including the This would reduce the impacts to Swainson's Hawk to a **less than significant** level.

TABLE 4.8-5 (of CSP EIR)
SWAINSON'S HAWK MITIGATION RATIOS
(IN ACRES)

Distance from Nest (miles)	Potential On-site Foraging Habitat Impacted	Mitigation Ratio	Mitigation Acres	Total Net Foraging Habitat Required	On-site Open Space Preservation
0-1	368	1:1	368	368	136

Long-billed Curlew, Burrowing Owls

Mitigation for the Swainson's hawk would ensure that adequate grassland is preserved at ratios identified in Table 4.8-5. For foraging within one mile of an active nest, mitigation would be 1:1. Greater than a mile would be at an amount of .75:1. This would set aside adequate grassland that would reduce impacts from loss of grasslands to these species to a **less than significant** level.

MM 4.8-5 ***Wildlife Movement Protection Policies (Impact 4.8-8, 4.8-10 and 4.8-11-CSP and 4.8-10 Urban Reserve)***

To protect the long term habitat of the stream channels and the WAPA corridor and their potential use by wildlife as movement corridors, the project applicants shall ensure that movement corridors are not obstructed. Through compliance with Section 1600 of the CDFW Code, the applicant(s) will enter into a Streambed Alteration Agreement prior to conducting any construction activities within a stream corridor, which sets forth mitigation measures that the applicant must implement. These measures shall include, but not be limited to; the use of either bridges or culverts that are large enough that wildlife have enough space to pass through road crossings without having to travel over the road surface, the implementation of bank stabilization measures, and/or restoration and re-vegetation of stream corridor habitat that has been damaged due to the project's construction. Furthermore, the recreational trails shall be lined by post and rail fence and signage would be used to direct trail users to stay within the designated trail corridor. The trails would be closed after dark and no exterior lighting would be used.

MM 4.8-6 ***Habitat Restoration/Onsite Preservation (Impact 4.8-11-CSP)***

Wetlands will be preserved within and along the preserved open space corridors (as shown in Figure 2-7, Project Description). As indicated there are opportunities to create an additional acre of wetlands onsite. The wetlands shall be constructed during the dry season when surface water generally is not present. Design features shall be implemented in order to avoid ponding conditions during the late spring and summer to minimize mosquito breeding. Other design features specified in the hydrology report (Appendix O) shall be implemented to ensure channel stability and reduce potential for siltation and intensive maintenance obligations.

To protect the long term viability of the channel improvements, the following policies shall be implemented:

a) The project applicants shall provide permanent post and cable fencing and/or a landscape barrier to discourage access to the riparian habitat by humans or pets. The fencing and/or landscape barrier shall be placed at the boundary of the open space and developed area. The proposed recreation trails shall be on the project side of the fence/landscape barrier. The posts shall be constructed of wood or other natural materials and shall allow for the viewing of habitat while discouraging access.

b) Interpretive signs shall be posted along the border of the area to educate the public and route access away from sensitive areas. These information signs will be posted at intervals of not less than ¼ mile or as deemed appropriate by the City of Roseville Parks and Recreation Director. The signs shall provide information on the objectives of the creek and habitat protection and benefits of the project for storm detention and water quality. Signs should also include information regarding the importance of restricting access by household pets.

MM 4.8-7 ***Off-site Surveys (Impact 4.8-11- CSP)***

Prior to construction of any off-site infrastructure, a qualified biologist shall perform detailed, and if necessary, focused biological surveys of any undisturbed areas that would be affected by infrastructure development. Because infrastructure for the proposed project would be located in road right-of-way, or undeveloped land similar to the project site, the biological resources that would be expected to occur would not differ substantially from those identified in this EIR. If it is determined that wetland resources or sensitive species would be impacted MM 4.8-1 (a) and (b) and MM 4.8-2 shall be implemented, as appropriate to the resource. If it is determined that active nests exist within the off-site improvement location, MM 4.8-3 shall be implemented as appropriate to the species. MM 4.8-4 shall be implemented to address grassland impacts. If it is determined the off-site improvement is located within or adjacent to a wildlife movement corridor, MM 4.8-5 shall be implemented.

V. Cultural, Archeological, or Paleontological Resources

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Cause a substantial adverse change in the significance of an historic resource as defined in Section 15064.5?	4.9-16, 4.9-19	No	No	No	MM 4.9-3 Conduct Appropriate Off-site Studies
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	4.9-19	No	No	No	MM 4.9-1 Cease Work Consult with Qualified Archaeologist; MM 4.9-3 Conduct Appropriate Off-site Studies
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	4.9-17, 4.9-19	No	No	No	MM 4.9-2 Cease Work and Consult with Qualified Paleontologist; MM 4.9-3 Conduct Appropriate Off-site Studies
d) Disturb any human remains, including those interred outside of dedicated cemeteries?	4.9-14	No	No	No	MM 4.9-1 Cease Work Consult with Qualified Archaeologist

Discussion:

The project site, as well as the adjacent Al Johnson Wildlife Area (AJWA) site, were surveyed for cultural resources by Peak & Associates in 2006 and 2010. No evidence of cultural resources were identified on or off the site. Though no known resources were found on the site the CSP EIR concluded that the potential to damage subsurface resources during grading, excavation, and construction was potentially significant but that this impact could be mitigated to less than significant. Additionally, mitigation was adopted to require surveys for off-site cultural resources prior to construction of off-site infrastructure. Because the proposed project does not expand the limits of the development footprint or the project's physical impact boundary, no additional analysis is required. The mitigation measures adopted with certification of the CSP EIR remain applicable and no additional impacts will occur. Impacts remain potentially significant and unavoidable.

Mitigation Measures:

MM 4.9-1: ***Cease Work and Consult with Qualified Archaeologist (Impacts 4.9-1 and 4.9-4 – CSP)***

	Should any cultural resources, such as structural features, any amount of bone or shell, artifacts, human remains, or architectural remains, be encountered during any subsurface development activities, work shall be suspended within 100-feet of the find. The City of Roseville Planning and Public Works Staff shall be immediately notified. At that time, the City of Roseville shall coordinate any necessary investigation of the site with qualified archaeologists as needed, to assess the resource (i.e., whether it is an "historical resource" or a "unique archaeological resource") and provide proper management recommendations should potential impacts to the resources be found to be significant. Possible management recommendations for important resources could include resource avoidance or, where avoidance is infeasible in light of project design or layout or is unnecessary to avoid significant effects, data recovery excavations. The contractor shall implement any measures deemed feasible and necessary by City staff, in consultation with the archaeologists, to be to avoid or minimize significant effects to the cultural resources. In addition, pursuant to Section 5097.98 or the California Public Resources Code, and Section 7050.5 of the California Health and Safety Code, in the event of the discovery of human remains, the County Coroner shall be immediately notified. If the remains are determined to be Native American, guidelines of the Native American Heritage Commission shall be adhered to in the treatment and disposition of the remains.
MM 4.9-2	***Cease Work Until Review Conducted by Qualified Paleontologist and Recommendations Implemented (Impacts 4.9.3 and 4.9.4-CSP)*** Should any evidence of paleontological resources (e.g., fossils) be encountered during grading or excavation, work shall be suspended within 100 feet of the find, and the City of Roseville shall be immediately notified. At that time, the City shall coordinate any necessary investigation of the site with a qualified paleontologist to assess the resource and provide proper management recommendations. Possible management recommendations for important resources could include resource avoidance, if feasible in light of project design or layout, or data recovery excavations. The contractor shall implement any measures deemed feasible and necessary by City staff in consultation with the paleontologist for the protection of the paleontological resources.
MM 4.9-3	***Conduct Appropriate Off-Site Studies (Impact 4.9-4 – CSP)*** Prior to undertaking construction of off-site infrastructure, the City shall determine whether or not cultural resource surveys have been undertaken for any areas to be disturbed during construction. If surveys were conducted, the City shall document that any identified resources were treated as recommended in the studies. If no studies or surveys were conducted, the City shall ensure that a qualified archaeologist conducts the appropriate level of study. If resources are found, recommendations, including the possible management recommendations listed in MM 4.9-1 and MM4.9-2, shall be implemented to ensure that the resources are avoided, protected and/or recorded, as determined to be feasible and appropriate by City staff.

VI. Geology and Soils

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:		No	No	No	
i) Ruptures of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to Division of Mines and Geology Special Publication 42.)	4.7-23	No	No	No	None
ii) Strong seismic ground shaking?	4.7-23	No	No	No	None
iii) Seismic-related ground failure, including liquefaction?	4.7-23	No	No	No	None
iv) Landslides?	4.7-23	No	No	No	None
b) Result in substantial soil erosion or the loss of topsoil?	4.7-19; 4.7-22	No	No	No	None
c) Be located in a geological unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	4.7-21	No	No	No	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	4.7-21	No	No	No	None

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	4.7-2	No	No	No	None

Discussion:

The CSP EIR determined that impacts related to the loss of soil, soil erosion from grading, expansive soils, and seismic activity were less than significant and no mitigation was required. No change to the proposed development footprint will occur as a result of the proposed CSP SPA and no additional impacts to the geology or soils in the plan area will occur as a result of this project. Impacts remain less than significant.

Mitigation Measures: None Required.

VII. Greenhouse Gases

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	4.5-33	No	No	No	MM 4.5-1 Air Quality Measures and MM 4.5-2 Additional Measures to Reduce GHG Emissions
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	4.5-37	No	No	No	None

Discussion:

The CSP EIR concluded that impacts related to the project's emissions of greenhouse gases were significant and unavoidable and mitigation measures were adopted to reduce the project's greenhouse gas emissions and resultant impacts. The changes introduced by the CSP SPA and/or new circumstances relevant to the project would not, as compared to the CSP EIR, result in a new significant impact or significant impacts that are substantially more severe than significant impacts previously disclosed. In addition, there is no new information indicating that the project would have one or more significant effects not previously discussed or that any previously examined significant effects would be substantially more severe than significant effects shown in the previous EIR. In fact, as presented in the air quality analysis and illustrated in Table 2 below, the CSP SPA will result in a reduction of greenhouse gas emissions as compared to the

approved project. The mitigation measures adopted with certification of the CSP EIR remain applicable and no additional impacts will occur. The prior conclusions of the CSP EIR remain applicable.

Table 2
2016 Unmitigated Project Operational GHG Emissions vs. CSP SPA 2019 Unmitigated Project Operational GHG Emission

Emission Source	2016 CSP Annual GHG Emissions ($MTCO_2e$/yr)	2019 CSP SPA Annual GHG Emissions ($MTCO_2e$/yr)	Net Change ($MTCO_2e$/yr)
Area	1,459.04	1,459.03	-0.01
Energy	6,332.60	5,865.71	-469.89
Mobile	5,280.63	4,878.83	-401.80
Solid Waste	1,101.74	1,025.89	-75.85
Water	511.60	434.72	-76.88
TOTAL ANNUAL GHG EMISSIONS	**14,685.61**	**13,664.18**	**-1,024.43**

Source: Air Quality Impact and Greenhouse Gas Analysis; July 2019 (Attachment 1).

Mitigation Measures:

MM 4.5-1 ***Air Quality Measures* (*Impact 4.5-1 CSP and Urban Reserve*)**

Implement Mitigation Measure 4.4-1. Implementation of the Air Quality Mitigation Measure 4.4-1, listed in Section 4.4 *Air Quality*, would reduce operational and construction-related emissions of criteria air pollutants and precursors, and would also act to reduce GHG emissions associated with project construction and operation. Mitigation Measure 4.4-1 is relevant to Impact 4.5-1 because both criteria air pollutant and GHG emissions are frequently associated with combustion byproducts.

MM 4.5-2 ***Additional Measures to Reduce GHG Emissions (Impact 4.5-1- CSP and Urban Reserve)***

Development within the CSP area as a whole shall demonstrate that GHG emissions from project construction and operation will be reduced by 30% from business-as-usual emissions levels projected for 2025. Reductions in GHG emissions from the base-case "business-as-usual" scenario[1] shall be calculated and applied to specific development within the CSP in accordance with the handbook *Quantifying Greenhouse Gas Mitigation Measures* (CAPCOA, August 2010. or as may be subsequently revised or updated.) ("CAPCOA Handbook"). GHG emissions reduction credit shall be given both for Specific Plan-wide mitigation measures and project design features that reduce GHG emissions, as well as for additional specific measures implemented for each increment or phase of development within the Specific Plan in order to achieve the full 30% reduction.

[1] The CAPCOA Handbook defines the "business as usual" scenario to mean "the normal course of business or activities for an entity or project before the imposition of greenhouse gas emission reduction requirements or incentives.".

In conjunction with each phase of development within the CSP area, the developer shall prepare and submit a Greenhouse Gas Reduction Plan for City review and approval. Each Greenhouse Gas Reduction Plan shall demonstrate how the proposed development phase will achieve a 30% reduction in GHG emissions, through a combination of Specific Plan-wide and project-specific emissions reduction measures. Each Greenhouse Gas Reduction Plan shall identify the base case "business-as-usual" level of GHG emissions in accordance with the CAPCOA Handbook, along with a description of each proposed GHG reduction measures and the calculated emissions reduction attributable to each measure. Emissions reductions shall be calculated for each measure in the manner provided by the CAPCOA handbook. A developer may propose, and the City may approve, the implementation of an emission reduction measure not identified in the CAPCOA Handbook, if the effectiveness of the proposed measure in reducing GHG emissions can be demonstrated and quantified to the satisfaction of the City.

Following approval of the Greenhouse Gas Reduction Plan by the Planning Director, the emissions reduction measures identified in the approved Greenhouse Gas Reduction Plan shall be adopted as enforceable conditions of approval by the City for the development phase in question.

Specific development shall rely on the CAPCOA Handbook and other effective and accepted methods for reducing greenhouse gas emissions, including recommended measures by the PCAPCD, unless and until regulatory measures are adopted that impose different requirements. The following measures are examples of the types of feasible mitigation measures that may be implemented and the percentage of greenhouse gas emissions from particular project sources that would be expected to be reduced from business as usual:

- Design buildings to meet CEC Tier II requirements (e.g., exceeding the requirements of the Title 24 (as of 2007) by 35%).
- Implement roundabouts. (30% intersection emissions reduction)
- Provide the necessary facilities and infrastructure to encourage the use of low or zero-emission vehicles (e.g., electric vehicle charging facilities and conveniently located alternative fueling stations) (0.5-1.5% emissions reduction).
- Incorporate bicycle lanes, routes, and intersection improvements into street systems within the Specific Plan (1% emissions reduction).
- For commercial land uses, provide adequate bicycle parking near building entrances to promote cyclist safety, security, and convenience (1% emissions reduction).
- Create Class II bicycle lanes and walking paths directed to the location of schools, parks and other destination points (1% emissions reduction).
- Construction of transit facility/amenity (bus shelters, bicycle lockers/racks, etc.) for existing public and private transit (0.5% emissions reduction).

In addition, the PCAPCD recommends the following measures that may be implemented:

Prior to the approval of a building permit for residential structures, construction of each dwelling include the following design features (a-d or e) in order to reduce energy consumption. Floor plans submitted to the Building Division shall demonstrate compliance with each requirement listed in a-e or as an alternative to a-d meet the requirements of option "e" as follows:

a) An AC unit which exceeds the Seasonal Energy Efficiency Ratio (SEER) by two points in effect at the time of the building permit submittal shall be installed in each residential dwelling. Floor plans submitted to the Building Division must clearly show that this condition is being met.

b) Include energy-efficiency heating and efficient ventilation methods on all new residential units. Furnaces to be low-NOx with an AFUE of 94 percent.

c) A "whole house fan" shall be installed within each residential dwelling. Floor plans submitted to the Building Division must clearly show that this condition is being met.

d) All dwellings shall have installed a "tankless" water heater or high-efficiency water heater with an external insulation of an R-value of 16 and an efficiency value of 0.65.

Or in place of a-d, the builder may choose to install solar panels or photovoltaic roofing tiles. Prior to the issuance of a building permit for residential structures, Building Plans shall show provisions for the installation of solar panels or photovoltaic roofing tiles.

VIII. Hazards and Hazardous Materials

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	4.10-22	No	No	No	None
b) Create a significant hazard to the public or the environment though reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	4.10-30	No	No	No	None

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within on-quarter mile of an existing or proposed school?	4.10-26	No	No	No	None
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	4.10-28	No	No	No	MM 4.10-1 Identify and Remediate Soil Contamination
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	4.10-1	No	No	No	None
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing in the project area?	4.10-1	No	No	No	None
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	4.10-25	No	No	No	None
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	4.10-25	No	No	No	None

Discussion:

The CSP EIR concluded that compliance with the City's existing General Plan policies, Stormwater Management program, Household Hazardous Waste program, as well as Roseville Fire Department Standards and federal and State laws and regulations would ensure that impacts related to hazards and exposure to hazardous materials were less than significant and no mitigation was required. Mitigation requiring remediation of existing soil contamination was required to ensure the potentially significant impacts due to exposure to contaminated soil were less than significant. The mitigation measures adopted with certification of the CSP EIR remain applicable and no additional impacts will occur. Impacts remain less than significant.

In the proposed CSP SPA, the location of the proposed 60kV overhead electrical transmission lines, previously proposed to be located along the south edge of the Pleasant Grove Creek open space corridor, will now extend west along the northern edge of Blue Oaks Boulevard and then north along the eastern edge of Westbrook Boulevard. This change will place the 60kV line adjacent to the rear yards of the residential lots backing on to the eastern side of Westbrook Boulevard

south of Pleasant Grove Creek instead of the rear yards of the residential lots adjacent to the Pleasant Grove Creek open space corridor. The change to the location of this transmission line will not result in any new impacts that were not previously disclosed. As stated in the CSP EIR, mitigation measures and consistency with existing regulations and policies will ensure that impacts remain less than significant.

Mitigation Measures:

MM 4.10-1 ***Identify and Remediate Soil Contamination* (*Impact 4.10-4-soil contamination, tank or well sites, lead based paint and/or asbestos-CSP)***

Prior to site development in the CSP, recommended testing and remediation by the applicant, if needed, shall occur. Groundwater wells shall be properly closed.

If evidence of soil contamination, septic tanks, or other underground storage tanks are encountered in the CSP area, work shall cease until the area can be tested, and, if necessary, contaminated materials shall be removed and properly disposed or remediated, and regulatory site closure obtained. Remediation activities could include removal of contaminated soil, and/or treatment. The City shall ensure that any necessary investigation and/or remediation activities are coordinated with the Roseville Fire Department, Placer County Division of Environmental Health, and if needed, other appropriate federal, state and local agencies. Once a site is remediated to the satisfaction of the appropriate regulatory agency, construction can continue.

IX. Hydrology and Water Quality

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Violate any water quality standards or waste discharge requirements?	4.13-35	No	No	No	MM 4.13-1 Implementation of Construction Activity Stormwater Protection Standards

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	4.12.1-74, 4.12.1-78;	No	No	No	None
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on or off-site?	4.13-20, 4.13-22	No	No	No	None
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site?	4.13-20, 4.13-22	No	No	No	None
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted water?	4.13-28	No	No	No	WMM 4.12-2 Pay Fair Share of Roseville Regional Stormwater Retention Facility Improvements
f) Otherwise substantially degrade water quality?	4.13-35	No	No	No	MM 4.13-1 Implementation of Construction Activity Stormwater Protection Standards
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	4.13-30	No	No	No	None
h) Place within a 100-year flood hazard area structures, which would impede or redirect flood flows?	4.13-30	No	No	No	None

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	4.13-4	No	No	No	None
j) Inundation by seiche, tsunami, or mudflow?	4.13-20	No	No	No	None

Discussion:

The CSP EIR concluded that significant impacts due to alteration of the stormwater runoff pattern into Pleasant Grove Creek and increased stormwater runoff volume could be reduced to less than significant with the implementation of mitigation measures requiring a fair share payment toward the region's planned stormwater retention facility improvements; and that significant impacts related to construction erosion and runoff could be reduced to less than significant with mitigation requiring construction activity stormwater protection standards. Significant impacts to surface water quality from urban stormwater runoff could be reduced to less than significant with mitigation requiring compliance with the NPDES and implementation of Stormwater Management measures.

A technical memorandum to the CSP Drainage and Stormwater Master Plan was prepared to evaluate the CSP SPA (Attachment 2). The technical memorandum evaluated the differences between the approved CSP (2016) and the CSP SPA and analyzed the effects of the proposed land use changes on planned drainage and stormwater facilities within the watershed. As discussed in Attachment 2, the proposed conversion of commercial and business professional land uses to single-family uses on the south side of Pleasant Grove Creek will reduce the overall amount of pervious surfaces in this portion of the plan area resulting reduced runoff from the site. The planned drainage and stormwater improvements are sufficient to accommodate the proposed land use changes. In fact, the reduction of flows into the Pleasant Grove Creek bypass channel may help with hydromodification compliance at the project's west boundary. The stormwater facilities as approved in the CSP Drainage and Stormwater Master plan remain sufficient.

The proposed CSP SPA and resulting changes to the anticipated runoff will not result in additional impacts that have not already been addressed in the CSP EIR. The CSP SPA will not result in development outside those areas previously identified and the intensity of development will be reduced. The mitigation measures adopted with certification of the CSP EIR remain applicable and will ensure that impacts remain less than significant.

Mitigation Measures:

MM 4.13-1 ***Implementation of Construction Activity Stormwater Protection Standards (Impact 4.13-5- CSP and Urban Reserve)***

Prior to the issuance of a City grading permit and the commencement of construction activities, compliance with the State's General Construction permit, the City of Roseville's Construction Standards and the City's Stormwater BMP Guidance Manual shall be met. This compliance shall include the creation of a Storm Water Pollution Prevention Plan (SWPPP) that will identify the site, the location of sensitive habitats or watercourses, drainage areas, discharge locations, soil disturbance areas, and the locations of all runoff, erosion control, and sediment control Best Management Practices (BMPs). Ongoing monitoring shall be conducted, and adjustments to the SWPPP shall be implemented when needed to address changes in the field as construction activities evolve.

MM 4.13-2 ***Stormwater Management Development Standards (Impact 4.13-6 - CSP and 4.13-5 – Urban Reserve)***

	At the tentative map or site development stage, development shall be conditioned to include source control and treatment control measures, including but not limited to LID strategies and BMP treatment as required by the City's then current design standards and the City's then current General Phase II Water Quality Permit issued by the State. The measures shall include, but are not limited to, the measures identified above and in Table IV.B.2 *Applicable LID Measures by Development Type*, found in the *Creekview Drainage and Stormwater Master Plan* found in O of this report.
MM 4.13-3	***Storm Water Quality Policies* (*Impact 4.13-5 and Impact 4.13-6- Urban Reserve)*** Specific Plans and/or other development proposals for the Urban Reserve shall identify measures to reduce water quality impacts as a result of construction. Future development shall include low impact development (LID) measures. LID improvements shall be required to be constructed as a condition of approval of the proposed development.

X. Land Use and Planning

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Physically divide an established community?	4.1-45	No	No	No	None
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	4.1-45, 4.1-52, 4.1-62; 4.6-36	No	No	No	None
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	4.1-66	No	No	No	None

Discussion:

The approved (2016) CSP includes a mix of residential, commercial, office, open space, park and public/quasi-public uses designed to incorporate elements that are consistent with SACOG Blueprint Objectives such as compact development, a variety of housing and transportation choices, and substantial natural resource conservation. Because the plan area has been designed consistent with the SACOG Blueprint, would be internally compatible, does not conflict with the alignment of Placer Parkway, and is consistent with the City's General Plan, the CSP EIR determined that impacts related to conflicts with land use and conservation plans were less than significant.

The land use changes proposed with the CSP SPA would reorient the land uses planned south of Pleasant Grove Creek while leaving the land uses north of the creek unchanged. The LDR units within the plan area will be increased by moving 141 units from MDR parcels to LDR parcels; however the overall unit amount will remain unchanged at 2,011. To accommodate the additional LDR units, additional LDR acreage will be added south of the creek by reducing the Community Commercial (CC) acreage from 15.5 to 9.2 and eliminating 3.8 acres of Community Commercial/Business Professional (CC/BP) land use.

For the most part, the proposed changes associated with the CSP SPA consist of minor adjustments to the location of the land uses. On the east side of Westbrook Boulevard the modifications include replacing the MDR parcels with LDR parcels, the CC/BP parcel with a HDR parcel, and a portion of the CC parcel with a LDR parcel. These changes will place residential uses (Parcel C-17) immediately adjacent to commercial uses (Parcel C-70). The CSP Design Guidelines have been amended to address this interface with the addition of sound attenuating features, landscaping and a paseo. On the west side of Westbrook Boulevard the park site (Parcel C-63) has been modified from a horizontal shape surrounded by MDR land uses to a vertical shape surrounded by LDR uses and Grasscreek Drive has been shifted east to align with the park. The combination of uses west of Westbrook Boulevard are considered internally compatible. Consistency with the CSP Design Guidelines and the Community Design Guidelines will limit conflicts between these uses and no new impacts are anticipated that were not previously disclosed. Impacts remain less than significant.

Mitigation Measures: None required.

XI. Mineral Resources

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	4.7-11	No	No	No	None

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	4.7-11	No	No	No	None

Discussion:

The project site is identified as an area of no known mineral occurrence by the California. No impacts will occur.

Mitigation Measures: None required.

XII. Noise

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents' Mitigation Measures Implemented or Addressing Impacts.
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	4.6-17; 4.6-21; 4.6-3; 4.6-25; 4.6-26; 4.6-28; 4.6-31; 4.6-33	No	No	No	MM 4.6-1 Construction Noise Reduction; MM 4.6-2 Commercial Noise Controls; MM 4.6- 3: Traffic Noise Attenuation; MM 4.6-3 Traffic Noise Attenuation;
b) Generation of excessive ground borne vibration of ground borne noise levels?	4.6-17	No	No	No	MM 4.6-1 Construction Noise Reduction

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	4.6-17	No	No	No	None

Discussion:

The CSP EIR determined that short-term impacts from noise generated during construction of infrastructure projects within the CSP area were significant and unavoidable even after mitigation measures were applied. Because the CSP SPA does not expand the limits of the development footprint or the project's physical impact boundary, no additional analysis is required. The mitigation measures adopted with the CSP EIR remain applicable and no additional impacts will occur. Remaining impacts related to construction noise impacts remain significant and unavoidable. The EIR determined that impacts from new noise generating uses introduced as a result of the approved CSP, such as commercial uses, would result in a significant impact that could be reduced to less than significant with mitigation. The mitigation measures adopted with certification of the CSP EIR will apply to noise generating uses within the CSP SPA and no new impacts that were not previously disclosed will occur. Impacts remain less than significant.

The CSP EIR also analyzed noise impacts related to placing residential uses within proximity to noise generating uses such as roadways and the Roseville Energy Park (REP). Though the previous document analyzed the effects of transportation noise and noise from the Roseville Energy Park (REP) on the proposed residential uses, the CEQA checklist items related to noise impacts have been updated and that analysis in no longer required. No additional analyses of the impact from existing and future noise sources on residential properties is required. Though not required as part of the CEQA analysis, this issue will be addressed in staff's evaluation of the requested planning entitlements.

The CSP EIR also analyzed the project's consistency with General Plan Noise Element Policy C-6 related to placing noise sensitive receptors within the Roseville Energy Park's 45 dB and 50 dB noise contours. The CSP EIR determined that this was a significant impact that would be reduced to less than significant with approval of the proposed General Plan Amendment that would allow the noise levels at municipal power plants to exceed the allowable noise levels by 10 dB. The proposed modifications to the land use plan would place residential uses within the 50 dB contour where commercial/office uses had previously been planned with the approved CSP (2016). Under the proposed CSP SPA, the 3.8-acre Community Commercial/Business Professional parcel planned immediately north of the Blue Oaks Boulevard and the REP would be replaced with a HDR parcel (Parcel C-43) which would introduce residential uses at a location previously planned for non-residential uses, within the 50 dB contour. Although additional residential uses would be introduced within the 50 dB contour, this conflict was previously identified in the CSP EIR. Furthermore, as amended, the General Plan allows municipal power plants to exceed the allowable noise levels and no conflict exists. No new impact that was not previously disclosed would occur and the impact remains less than significant.

Mitigation Measures:

MM 4.6-1: ***Construction Noise Reduction (Impact 4.6-1-CSP and Urban Reserve)***

MM 4.6-1(a): Construction activities shall comply with the requirements of the City of Roseville Noise Ordinance.

MM4.6-1(b): Locate fixed construction equipment such as compressors and generators as far as possible from sensitive receptors. Shroud or shield all impact tools, and muffle or shield all in-take and exhaust ports on power construction equipment.

MM 4.6-1(c): Designate a construction disturbance coordinator and conspicuously post the Coordinator's contact information around the project site and in adjacent public spaces. The disturbance coordinator will receive all public complaints about construction noise disturbances, and will be responsible for determining the cause of the complaint, and implementing any feasible measures to be taken to alleviate the problem.

MM 4.6-1(d): Well drilling shall occur prior to construction of the adjacent subdivision, to the extent feasible. If construction timing for the wells occurs after subdivision construction, then measures to reduce noise shall include; hanging flexible sound control curtains around the drilling apparatus, and the drill rig, to the degree feasible as determined by the Environmental Utilities Director, if located within 1,000-feet of an occupied residence.

MM 4.6-2: ***Commercial Noise Controls (Impact 4.6-2-CSP)***

For all commercial uses within 150 feet of residential uses, the developer shall implement the following or equally effective measures:

- Where commercial land uses adjoin residential property lines, the following measures shall be included in the design of the commercial use. If the primary noise sources are parking lot noise, HVAC equipment and light truck deliveries, then 6-7 foot tall masonry walls shall be constructed to provide adequate isolation of parking lot and delivery truck activities. HVAC equipment shall be located either at ground level, or when located on roof-tops the building facades shall include parapets for shielding.

- Where commercial uses adjoin common residential property lines, and loading docks or truck circulation routes face the residential areas, the following mitigation measures shall be included in the project design:

    - Loading docks and truck delivery areas shall be a minimum distance of 30 feet from residential property lines;

    - Property line barriers shall be 6 to 8 feet in height. Circulation routes for trucks shall be located a minimum of 30-feet from residential property lines;

    - All heating, cooling and ventilation equipment shall be located within mechanical rooms where possible;

    - All heating, cooling and ventilation equipment shall be shielded from view with solid barriers;

    - Emergency generators shall comply with the local noise criteria at the nearest noise-sensitive receivers;

    - In cases where loading docks or truck delivery circulation routes are located less than 100 feet from residential property lines, an acoustical evaluation shall be submitted to verify compliance with the City of Roseville Noise Level Performance Standards.

MM 4.6- 3: ***Traffic Noise Attenuation (Impact 4.6-7 and 4.6-8 CSP)***

MM 4.6-3(a): In areas requiring sound attenuation, noise barrier walls shall be constructed of concrete panels, concrete masonry units, earthen berms, or any combination of these materials. Wood is not recommended for construction due to eventual warping and degradation of acoustical performance.

MM 4.6-3(b): Tentative map applications for residential uses located along Blue Oaks Boulevard, Westbrook Boulevard, Holt Parkway, Benchmark Drive and Creekview Plaza shall include an analysis of interior noise levels. The analysis and report shall be conducted by a qualified

acoustical engineer and shall specify the measures required to achieve compliance with the City of Roseville 45 dB Ldn interior noise level standard.

XIII. Population and Housing

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents Mitigation Measures Implemented or Addressing Impacts.
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, though extension of roads or other infrastructure)?	4.2-18	No	No	No	None
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	4.2-17	No	No	No	None
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	4.2-17	No	No	No	None

Discussion:

The CSP EIR concluded that the project would result in significant and unavoidable growth inducing impacts which were attributed to the physical impacts of development on natural environmental resources. Because the CSP SPA does not expand the limits of the development footprint or the project's physical impact boundary no additional analysis is required. This impact remains significant and unavoidable. Impacts related to displacement of existing housing and people were identified as less than significant because there is no existing housing on the site. No changes in circumstance related to existing housing and people have occurred and no additional analysis is required for the CSP SPA. Impacts remain less than significant.

Mitigation Measures: None required.

XIV. Public Services

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents Mitigation Measures Implemented or Addressing Impacts.
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any the public services:					
a) Fire protection?	4.11-11	No	No	No	None
b) Police protection?	4.11-5	No	No	No	None
c) Schools?	4.11-21	No	No	No	MM 4.11-3 Safe Routes to School
d) Parks?	4.11-25	No	No	No	None
e) Other public facilities?	None	No	No	No	None

Discussion:

The CSP EIR evaluated the increased demands for fire services, police services, schools, and parks as a result of the new residential population. Impacts were determined to be less than significant for fire, police, and parks because the project includes mechanism for construction and funding of the facilities need to provide these services. The EIR identified potentially significant impacts related to providing safe routes to school, but determined that those impacts could be reduced to less than significant with mitigation requiring that the applicant work with the school districts to provide safe routes to school. The proposed project does not change the prior analysis conclusions, because the overall number of residential units will not be affected by the proposed CSP SPA. In addition, the project was routed to the affected City's departments for review and no comments related to service provision were received.

The proposed CSP SPA would not result in new significant impacts that are substantially more severe than impacts previously disclosed relative to public services. In addition, there is no new information of substantial importance showing that the project would have one or more significant effects not previously discussed or that any previously examined significant effects would be substantially more severe than significant effects shown in the previous EIR. Nor is there new information of substantial importance showing (i) that mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or

alternative or (ii) that mitigation measures or alternatives considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects, but the proponents decline to adopt the mitigation measure or alternative.

Mitigation Measures:

MM. 4.11.3 ***Safe Routes to School (Impact 4.11-3 CSP)***

The applicants shall work with the school districts to identify safe routes to school. The school districts should encourage an appropriate mechanism for transporting students to schools, both within the specific plan area and outside the project area. Bus programs would reduce traffic congestion and reduce potential air quality impacts.

XV. Recreation

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents Mitigation Measures Implemented or Addressing Impacts.
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that physical deterioration of the facility would occur or be accelerated?	4.11-31	No	No	No	None
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	4.11-31	No	No	No	None

Discussion:

The CSP EIR evaluated the increased demands for park and recreation services as a result of the new residential population. Impacts were determined to be less than significant because the project includes mechanism for construction and funding of the facilities need to provide these services. The physical impacts of construction of these facilities were addressed in separate chapters of the CSP EIR as appropriate. The proposed CSP SPA meets the City's standards for City-wide parks, neighborhood parks, and open space and no additional impacts will occur as a result of the project. Impacts remain less than significant.

Mitigation Measures: None required.

XVI. Transportation/Traffic

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents Mitigation Measures Implemented or Addressing Impacts.
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	4.3-77, 4.3-77; 4.3-79; 4.3-99; 4.3-104; 4.3-164;	No	No	No	MM 4.3-2 Pay Fair Share Toward Transit Improvements; MM 4.3-7: Contribute Fair Share Costs to State Interchanges; MM 4.3-8: Contribute Fair Share Costs to State Roadway Segments

b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	4.3-57; 4.3-77; 4.3-80; 4.3-81; 4.3-83; 4.3-87; 4.3-90; 4.3-92; 4.3-95; 4.3-98; 4.3-113; 4.3-147; 4.3-149; 4.3-151; 4.3-153; 4.3-155; 4.3-157; 4.3-158; 4.3-160;	No	No	No	MM 4.3-2 Pay Fair Share Toward Transit Improvements; MM-4.3-3, Placer County: Contribute Fair Share Costs to Roadways; MM-4.3-3 Placer County Intersections: Pay Fair Share Cost of Improvements; MM 4.3-4 Pay Fair Share of Improvements (Walerga Road); MM 4.3-5 Contribute Fair Share Costs to Sacramento County Facilities; MM 4.3-6 Contribute Fair Share Costs to Sutter County Facilities; MM 4.3-1 Pay Fair Share Improvements to the CIP
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	4.3-18	No	No	No	None
d) Substantially increase hazards due to a design feature(s) (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	4.3-2	No	No	No	None
e) Result in inadequate emergency access?	4.3-2	No	No	No	None
f) Conflict with adopted policies, plans, or programs supporting public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	4.3-144; 4.3-146;	No	No	No	MM 4.3-2 Pay Fair Share Toward Transit Improvements

Discussion:

A Traffic Impact Analysis was prepared for the CSP EIR to analyze the impacts of the proposed urban development including the addition of new and extended roadways. The analysis included a quantification of traffic from the CSP under existing and future (2025) conditions. The EIR identified significant impacts related to transit services that would be reduced to less than significant with fair share payment toward planned improvements; and significant impacts from

increased traffic volumes on roadways and intersection delays within the City of Roseville that would be reduced to less than significant with mitigation requiring fair share payment toward CIP improvements.
Impacts to roadways and intersections within Sacramento County and the Cities of Lincoln and Rocklin were identified as less than significant.

Significant impacts to Sutter County roadways, Placer County roadways and intersections, and increased traffic volumes on State Highways were identified and mitigation was adopted to require fair share payment for cost of improvement on the affected infrastructure; however, due to uncertainty related to the feasibility and timing of those improvements given that they improvements are outside the City's jurisdiction, the EIR concluded that the impact would remain significant and unavoidable even with mitigation requiring fair share payment toward roadway improvements.

The proposed CSP SPA includes an update to the circulation network south of Pleasant Grove Creek. The project includes minor revisions to the internal roadway network and will shift Grasscreek Drive east. Grasscreek Drive is considered a collector that provides north south access to the development west of Westbrook Boulevard from Blue Oaks Boulevard. A Technical Memorandum was prepared by Fehr and Peers (Attachment 3) to compare the proposed changes in land use and circulation associated with the CSP SPA to the existing approved CSP (2016). The analysis compared the trip generation anticipated from the proposed CSP SPA to the trip generation anticipated under the current scenario (2016 CSP) and determined that due to anticipated reduction in trips, traffic volumes in the vicinity of the project would be reduced during both peak hours and daily.

The City of Roseville 2035 travel demand model was used to estimate the expected change to vehicle miles traveled (VMT) that result from the proposed land use changes in the CSP SPA. Due to the proposed elimination of CC/BP land uses and the reduction in CC land uses with the CSP SPA, the proposed project will result in a reduction in VMT (5,374,879) as compared to the existing condition (2016 CSP VMT 5,378,872). As detailed in the technical memorandum, only a small portion of the trips to and from the CC/BP land use are fully contained with the CSP and most connect to destinations in other parts of the region. Eliminating this destination also eliminates those trips resulting in a reduction. Given the anticipated reduction in peak and daily trips as well as the reduction to VMT, no additional impacts are anticipated and the conclusions and mitigation measures from the CSP EIR remain applicable.

Mitigation Measures:

MM 4.3-1 ***Roseville Intersections*: *Pay Fair Share of Improvements in the CIP (Impact 4.3-1, 4.3-14 CSP and Urban Reserve)***

Improvements would be necessary to the following intersections, as part of the project to achieve acceptable service levels under the 2025 CIP plus Project scenario. However, as noted, many intersections cannot be mitigated because of constraints.

1. **Blue Oaks Boulevard and Diamond Creek Boulevard** This intersection currently has a southbound left turn lane and a southbound shared left/thru/right lane. It could be mitigated by changing the southbound shared left/thru/right lane to a shared thru/right lane and adding a separate southbound right turn lane. This improvement is feasible and will be added to the City of Roseville's Capital Improvement program. Development within the Creekview Specific Plan Area will be required to pay fair share costs for this improvement.

2. **Pleasant Grove Boulevard and Fiddyment Road -** This intersection could be mitigated by adding a second westbound through lane. This improvement is feasible and will be added to the City of Roseville's Capital Improvement program. Development within the Creekview Specific Plan Area will be required to pay fair share costs for this improvement.

3. **Pleasant Grove Boulevard and Washington Boulevard -** This intersection could be mitigated by adding a fourth eastbound through lane. Due to the proximity of homes in the area and the associated right-of-way that would be required, this mitigation is not feasible.

4. **Roseville Parkway and Chase Drive -** This intersection could be mitigated by adding a second westbound left-turn lane. The improvement would require the addition of a second southbound receiving lane. Due to the proximity of homes in the area and the associated right-of-way that would be required, this mitigation is not feasible.

5. **Woodcreek Oaks Boulevard and Baseline Road -** This intersection could be mitigated by adding a second westbound left turn lane. This improvement is feasible and will be added to the City of Roseville's Capital Improvement program. Development within the Creekview Specific Plan Area will be required to pay fair share costs for this improvement.

6. **Industrial Avenue and Alantown Drive -** This intersection could be mitigated by adding a second southbound through lane. This improvement is feasible and will be added to the City of Roseville's Capital Improvement program. Development within the Creekview Specific Plan Area will be required to pay fair share costs for this improvement.

The CSP will develop over a period of years. Therefore, these impacts would occur over a period of time. As with other improvements in the 2025 CIP, the City will monitor traffic conditions and determine when specific improvements are needed. The City of Roseville's traffic impact fees should be revised to include the CSP area. Specific Plans and/or development proposals shall provide for fair share contributions of the cost of the improvements through the updated traffic impact fees.

MM 4.3-2 ***Transit Services: Pay Fair Share Toward Transit Improvements*** **(Impacts 4.3-2 and 4.3-16 CSP)**

CSP shall contribute its fair share towards the capital improvements for expanded transit services to the project area. This includes bus turn-outs, shelter pads, shelters, and a transfer station. The amount of transit services needed would be identified in an updated Short Range Transit Plan and updated Long Range Transit Master Plan prepared for the Project.

MM 4.3-3 ***Placer County Intersections*****:** ***Pay Fair Share of Improvements including Improvements to the Following Intersections*** **(Impacts 4.3-7 and 4.3-18 CSP and Urban Reserve)**

- Fiddyment and Athens: This intersection is not included in the City/County fee program.

Consistent with Placer County's Mitigation Measure 4.7-2a for the Placer Vineyards Specific Plan and Mitigation Measure 6.12-1 for the Regional University Specific Plan, the City of Roseville, in working with Placer County to provide funding for improvements not already subject to an existing inter-agency fee program, shall negotiate in good faith with Placer County to enter into additional fair and reasonable arrangements with the intention of achieving within a reasonable time period after approval of the Creekview Specific Plan commitment for the provision of adequate fair share mitigation from the Specific Plan for significant impacts on Placer County roadways. In reaching an accommodation with Placer County, the City and Placer County, in order to better ensure an effective sub-regional approach to mitigating transportation-related impacts, may choose to include within the same agreements or Joint Powers Authority additional public

agencies with whom it must work to mitigate transportation-related impacts, such as Sacramento County, Sutter County, and Caltrans. As the City strives to achieve agreement(s) with one or more of these other agencies, the City shall insist that "fair share" fee obligations be reciprocal, in the sense that the other local agencies, in accepting fair share contributions from the CSP developers, must agree to require new development occurring in their own jurisdictions to make fair share contributions towards mitigating the significant effects of such development on the City's transportation network. Any such arrangement(s), with just Placer County or with additional agencies, shall account for existing inter-agency fee programs in order to avoid requiring redundant mitigation or fee payments exceeding fair share mitigation levels.

The City intends that its arrangement(s) with Placer County and any other agencies shall permit the participating agencies flexibility in providing cross-jurisdictional credits and reimbursements consistent with the general "fair share" mitigation standard, and require an updated model run incorporating the best available information in order to obtain the most accurate, up-to-date impact assessment feasible and to generate the most accurate, up-to-date estimates of regional fair share contributions. These arrangements, moreover, should also include provisions that allow for periodic updates to the traffic modeling on which fair share payment calculations depend in order to account for (i) newly approved projects cumulatively contributing to transportation-related impacts and that therefore should contribute to the funding of necessary improvements (e.g., the Curry Creek Community Plan in Placer County), (ii) additional physical improvements necessitated in whole or in part by newly approved projects, (iii) changing cost calculations for the construction of needed improvements based on changes in the costs of materials, labor, and other inputs.

The City of Roseville will monitor traffic volumes and coordinate with the County regarding traffic mitigation fees to fund regional improvements.

M 4.3-4 ***Placer County Segments*: Pay Fair Cost of Improvements (Impact 4.3-7 CSP and Urban Reserve)**

- Walerga Road south of Baseline: This segment is not included within the existing City/County Fee Program.

The City shall determine the means of providing the project's fair share to fund these improvements with Placer County through the inter-agency agreement or other arrangement required by Mitigation Measure 4.3-3. Widening of Walerga Road south of Baseline to six lanes is identified in the Dry Creek Community Plan.

M 4.3-5 ***Sacramento County Facilities: Contribute Fair Share Costs to Sacramento County Facilities*** **(Impact 4.3-9, CSP and Urban Reserve)**

- Walerga Road

Consistent with Placer County's Mitigation Measure 4.7-2a for the Placer Vineyards Specific Plan and Mitigation Measure 6.12-1 for the Regional University Specific Plan, which require Placer County to attempt to enter into an agreement with Sacramento County in order to mitigate the significant effects of the those two Placer County projects within Sacramento County, the City of Roseville shall negotiate in good faith to enter into a fair agreement with Sacramento County regarding Creekview's fair share mitigation for this improvement. In reaching an accommodation with Sacramento County, the City and Sacramento County, in order to better ensure an effective sub-regional approach to mitigating transportation-related impacts, may choose to include within the same agreements or Joint Powers Authority additional public agencies with whom it must work to mitigate transportation-related impacts, such as Placer County, Sutter County, and

Caltrans. As the City strives to achieve agreement(s) with one or more of these other agencies, the City shall insist that "fair share" fee obligations be reciprocal, in the sense that the other local agencies, in accepting fair share contributions from the CSP developers, must agree to require new development occurring in their own jurisdictions to make fair share contributions towards mitigating the significant effects of such development on the City's transportation network. Any such arrangement(s), with just Sacramento County or with additional agencies, shall account for existing inter-agency fee programs in order to avoid requiring redundant mitigation or fee payments exceeding fair share mitigation levels. The City intends that its arrangement(s) with Sacramento County and any other agencies shall permit the participating agencies flexibility in providing cross-jurisdictional credits and reimbursements consistent with the general "fair share" mitigation standard, and require an updated model run incorporating the best available information in order to obtain the most accurate, up-to-date impact assessment feasible and to generate the most accurate, up-to-date estimates of regional fair share contributions. These arrangements, moreover, should also include provisions that allow for periodic updates to the traffic modeling on which fair share payment calculations depend in order to account for (i) newly approved projects cumulatively contributing to transportation-related impacts and that therefore should contribute to the funding of necessary improvements (e.g., the Curry Creek Community Plan in Placer County), (ii) additional physical improvements necessitated in whole or in part by newly approved projects, (iii) changing cost calculations for the construction of needed improvements based on changes in the costs of materials, labor, and other inputs. Implementation of MM 4.3-5 would reduce impacts to a less than significant level; however, these improvements lie outside the jurisdiction of the City of Roseville.

MM 4.3-6 ***Sutter County Facilities: Contribute Fair Share Costs to Sutter County Facilities (Impact 4.3-10 CSP and Urban Reserve)***

- Riego Road and Pleasant Grove South:

The City of Roseville shall negotiate in good faith to enter into a fair agreement with Sutter County regarding Creekview's fair share mitigation for this improvement. In reaching an accommodation with Sutter County, the City and Sutter County, in order to better ensure an effective sub-regional approach to mitigating transportation-related impacts, may choose to include within the same agreements or Joint Powers Authority additional public agencies with whom it must work to mitigate transportation-related impacts, such as Placer County, Sacramento County, and Caltrans. As the City strives to achieve agreement(s) with one or more of these other agencies, the City shall insist that "fair share" fee obligations be reciprocal, in the sense that the other local agencies, in accepting fair share contributions from the CSP developers, must agree to require new development occurring in their own jurisdictions to make fair share contributions towards mitigation the significant effects of such development on the City's transportation network. Any such arrangement(s), with just Sutter County or with additional agencies, shall account for existing inter-agency fee programs in order to avoid requiring redundant mitigation or fee payments exceeding fair share mitigation levels. The City intends that its arrangement(s) with Sutter County and any other agencies shall permit the participating agencies flexibility in providing cross-jurisdictional credits and reimbursements consistent with the general "fair share" mitigation standard, and require an updated model run incorporating the best available information in order to obtain the most accurate, up-to-date impact assessment feasible and to generate the most accurate, up-to-date estimates of regional fair share contributions. These arrangements, moreover, should also include provisions that allow for periodic updates to the traffic modeling on which fair share payment calculations depend in order to account for (i) newly approved projects cumulatively contributing to transportation-related impacts and that therefore should contribute to the funding of necessary improvements (e.g., the Curry Creek Community Plan in Placer County), (ii) additional physical improvements necessitated in whole or in part by newly approved projects, (iii) changing cost calculations for the construction of needed improvements based on changes in the costs of materials, labor, and other

inputs. Implementation of MM 4.3-6 would reduce impacts to a less than significant level; however, these improvements lie outside the jurisdiction of the City of Roseville.

MM 4.3-7 ***State Facilities Interchanges: Contribute Fair Share Costs to State Roadway Segments*** **(Impact 4.3-12 and 27 CSP and Urban Reserve**)

- I-80 Eastbound at Taylor Road/Eureka Boulevard:

The City of Roseville is currently moving forward with the design for improvements at this interchange as part of the CIP. The funding for the improvement is currently included within the City's Capital Improvement Program and development within the Creekview's Specific Plan Area will be required to pay fair share costs for these improvements.

MM 4.3-8 ***State Facilities Segments: Contribute Fair Share Costs to State Roadway Segments*** **(Impact 4.3-13 and 4.3-27 CSP and Urban Reserve)**

No specific improvements have been identified to mitigate project impacts on I-80, SR 70/99, or SR 65; however, the City is willing to work with Caltrans & the Placer County Transportation Planning Agency (PCTPA) to establish a regional approach to institute a fee program for the purpose of funding improvements on these facilities. If and when Caltrans and the City enter into an enforceable agreement, the Project shall pay impact fees to the City of Roseville in amounts that constitute the Project's fair share contributions to the construction of transportation facilities and/or improvements, consistent with the Mitigation Fee Act (Gov. Code, § 66000 et seq.).

The City shall determine the means of providing the project's fair share of the funds for these improvements to Caltrans through the inter-agency agreement or other arrangement.

XVII. Tribal Cultural Resources

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents Mitigation Measures Implemented or Addressing Impacts.
Would the project cause a substantial adverse change in the significance of a Tribal Cultural Resource as defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:					
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?	4.9-16	No	No	No	None
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1 the lead agency shall consider the significance of the resource to a California Native American tribe.	Not Applicable	No	No	No	

Discussion:

In addition to archeological resources, tribal cultural resources are also given particular treatment. Tribal cultural resources are defined in Public Resources Code Section 21074, as either 1) a site, feature, place, geographically-defined cultural landscape, sacred place, or object with cultural value to a California Native American Tribe, that is listed or eligible for listing on the California Register or Historical Resources, or on a local register of historical resources or as 2) a resource determined by the lead agency, supported by substantial evidence, to be significant according to the historical register criteria in Public Resources Code section 5024.1(c), and considering the significance of the resource to a California Native American Tribe. This section was added to the CEQA Guidelines after the certification of the Creekview EIR, but cultural resources were addressed in that document.

Mitigation Measures: None

XVIII. Utilities and Service Systems

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents Mitigation Measures Implemented or Addressing Impacts.
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	4.12.3-16; 4.12.3-23	No	No	No	MM 4.12.3-1 Treatment Plant Capacity; MM 4.12.3-2 Treatment Plant Expansion
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	4.12.3-14; 4.12.3-14; 4.12.3-21; 4.12.1-69; 4.12.1-71	No	No	No	MM 4.12.3-2 Treatment Plant Expansion
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	4.13-28	No	No	No	WMM 4.12-2 Pay Fair Share of Roseville Regional Stormwater Retention Facility Improvements

d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	4.12.1-49; 4.12.1-54	No	No	No	None
e) Result in a determination by the wastewater treatment provider which serves the project that it has adequate capacity to serve the project's projected demand in addition of the provider's existing commitments?	4.12.3-16;	No	No	No	MM 4.12.3-1 Treatment Plant Capacity
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	4.12.4-10; 4.12.4-12; 4.12.4-14; and 4.12.4-15	No	No	No	WMM 4.11-7 Expand the WRSL Landfill; WMM 4.11-7 Expand the WRSL Landfill; WMM 4.11-11 Divert Construction Debris
g) Comply with federal, state, and local statutes and regulations related to solid waste?	4.12.4-5; 4.12.4-15	No	No	No	WMM 4.11-11 Divert Construction Debris

Discussion:

Wastewater

The CSP EIR determined that the impact related to the expansion of the PGWWTP facility and service area needed to accommodate growth from the project would result in a significant impact that could be reduced to less than significant with mitigation measures requiring expansion of the service area, connection fees, and a fair share payment for environmental review. The significant physical impacts related to construction of new facilities would be reduced to less than significant with implementation of mitigation measures identified in the Wastewater Master Plan EIR.

Water Supply

The total projected potable water demand for the originally approved project is 58,099 acre feet per year (AFY). As presented in the CSP EIR, the City's normal/wet year water supply from the American River of 58,900 AFY would meet the project's water demand with a surplus of 801 AFY. In dry years, the City supplements the water supply from the American River with ground water and maintains its supply. Furthermore, the capacity of the existing water treatment plant exceeds the anticipated buildout demand. The CSP EIR determined that the existing supply and treatment plant would serve the CSP and that impacts were less than significant.

A technical memorandum was prepared for the proposed project to determine how the proposed modification would affect the overall water demand for the project. The memorandum determined that the proposed land use changes would result in a 2 AFY annual water demand reduction.

Solid Waste

The CSP EIR determined that the solid waste generated by the CSP would exceed the ultimate capacity of the landfill by 501 tons per day ultimately reducing the lifetime of the landfill by 3 months and that this resulted in a Significant Impact. Although the CSP is required to pay collection fees toward expansion of the landfill the impact was determined to be Significant and Unavoidable because the City cannot guarantee expansion of the landfill. Additionally, impacts to biological and agricultural resources associated with the future expansion of the landfill and impacts from the increased construction and demolition debris expected from the project were identified as Significant and Unavoidable even with the adoption of mitigation measures.

Conclusion

The proposed project would not result in a new significant impacts that are substantially more severe than impacts previously disclosed. In addition, there is no new information of substantial importance showing that the project would have one or more significant effects not previously discussed or that any previously examined significant effects would be substantially more severe than significant effects shown in the previous EIR. Nor is there new information of substantial importance showing (i) that mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative or (ii) that mitigation measures or alternatives considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects, but the proponents decline to adopt the mitigation measure or alternative. The CSP SPA will not result in development outside those areas previously identified for development and, with the CSP SPA, the intensity of development will be reduced. The prior conclusions and mitigation measures of the CSP EIR remain applicable.

Mitigation Measures:

MM 4.12.3-1 ***Treatment Plant Capacity (Impacts 4.12.3-2 CSP)***

Prior to issuance of building permits for development in the CSP area, the applicant shall demonstrate to the City that the SPWA has approved expansion of the SPWA 2005 Service Area Boundary to include the CSP. All applicants shall participate financially in the construction of additional wastewater treatment capacity sufficient to accommodate projected flows through payment of connection fees. Applicant shall also participate on a fair share basis in other financial mechanisms for any additional environmental review required to secure approvals necessary to increase wastewater discharges from the plant, including approval by the SPWA for expansion of the service area boundary. It is recognized that the CSP applicant will rely on the City (on behalf of the SPWA partners) to construct regional treatment and regional transmission facilities needed to treat and discharge wastewater produced within the service area boundary. In the event the City is unable to obtain all required permits (e.g. NPDES permit and WDRs) or is unable to complete the required facility expansion(s), development within the service area boundary may continue until existing capacity has been exhausted, at which time any remaining development shall be curtailed until such time as sufficient wastewater treatment and discharge capacity becomes available.

MM 4.12.3-2 ***Treatment Plant Expansion (Impacts 4.12.3-3 CSP and Urban Reserve, Impact 4.12.3-4 CSP)***

The applicant and/or the City, as specified, shall implement all relevant construction related mitigation measures for expansion of the PGWWTP listed in certified Final EIR Appendix J and all water quality and aquatic resource mitigation measures applicable to this project as listed in certified Final EIR Table 4.12.3-5.

WMM 4.11-7 ***Expand the WRSL Landfill (Impact 4.12.4-2 and 4.12.4-3 – CSP and Urban Reserve)***

Development in the CSP Area and Urban Reserve shall pay collection fess to the City of Roseville, a portion of which shall be used to service bonds necessary to fund landfill expansion.

Since preparation of the WRSP FEIR, the City has implemented a green waste program whereby all new residential customers receive green waste bins. Therefore this mitigation measure is no longer required because it is a standard operating procedure.

WMM 4.11-11 ***Divert Construction Debris (Impact 4.12.4-4 – CSP and Urban Reserve)***

Developers of the CSP and Urban Reserve areas shall ensure a 50% diversion of development's construction waste stream from landfill disposal. In Developer contracts with construction contractors and their sub-contractors, the Developer shall require that the amount of construction waste be diverted from landfill disposal by no less than 50%. The Developer shall further require that contractors and sub-contractors submit records of diversion and disposal to the City's Environmental Utilities Department in order to verify compliance with this requirement.

XIX. Other Considerations

Since the publication of the EIR, the Office of Planning and Research (OPR) has updated CEQA Guidelines Appendix G (Environmental Checklist Form). These updates address legislative changes to CEQA, clarify language, and update language consistent with case law. None of the changes to the checklist require new analysis related to impacts which were not known or which could not have been known at the time the CSP EIR was prepared. The majority of the checklist changes clarify language, reorganize existing language, or eliminate analysis requirements. For analysis requirements which have been eliminated, this is in response to case law affirming that analysis must focus on impacts caused by the project, not impacts to the project. An example of each of these types of changes is included below:

- Cultural Resources (a): Cause a substantial adverse change in the significance of an historic resource ~~as defined in~~ pursuant to Section 15064.5?

  The replacement of "as defined in" with "pursuant to" is a phrasing change which has no impact on required analysis.

- Cultural Resources (c) has been moved to Geology and Soils (f).

  Moving the topical section of this analysis requirement (which is related to paleontological resources) from Cultural Resources to Geology and Soils has no impact on required analysis.

- Noise (b): ~~Exposure of persons to or g~~eneration of excessive ground borne vibration of ground borne noise levels?

  The above changes redirect the analysis from considering overall exposure of persons to ground borne vibration, and focus the analysis on any ground borne vibration generated by a project. This same change is reflected in all other checklist questions related to noise. Therefore, the CSP EIR and this Addendum includes more analysis than is currently required, because it included analysis related to exposing neighboring areas to noise, but also analyzed the effect of noise on the proposed uses; the latter analysis is no longer required.

The updated CEQA Guidelines Appendix G also includes two new sections (Tribal Cultural Resources and Energy) and includes new and modified requirements as part of the Transportation/Traffic section. Although Tribal Cultural Resources section is new, the analysis of this impact area was included in the CSP EIR as part of the Cultural Resources section. The new Energy section was formerly included in CEQA Guidelines Appendix F, but has been moved into the Appendix G, so while it is new to the checklist it is not new to the CEQA Guidelines. The changes to the Transportation/Traffic section—which is now called simply Transportation—refocuses the analysis on vehicle miles traveled (VMT). However, while

OPR has promulgated these changes, the legislation requiring the use of VMT in CEQA analysis specifies that the requirement for lead agencies to use VMT goes into effect on July 1, 2020. Therefore, a VMT analysis is not currently required, and has not been included in this Addendum.

Based on the foregoing, none of the modifications to CEQA Guidelines Appendix G require new analysis related to impacts which were not known or which could not have been known at the time the EIR was prepared. Therefore, an Addendum is the appropriate environmental document to describe the impacts of the proposed project.

XX. Mandatory Findings of Significance

	Where Impact Was Analyzed in Prior Environmental Documents.	Do Proposed Changes Involve New Significant Impacts or Substantially More Severe Impacts?	Any New Circumstances Involving New Significant Impacts or Substantially More Severe Impacts?	Any New Information Requiring New Analysis or Verification?	Prior Environmental Documents Mitigation Measures Implemented or Addressing Impacts.
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of an endangered, threatened or rare species, or eliminate important examples of the major periods of California history or prehistory?	See prior sections	No	No	No	See prior sections
b) Does the project have impacts which are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	See prior sections	No	No	No	See prior sections
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	See prior sections	No	No	No	See prior sections

Discussion: Based on the environmental analysis of this Addendum, the proposed project will not have the potential to result in any of the mandatory findings of significance, and will in general result in reduced impacts compared to previous analyses.

ENVIRONMENTAL DETERMINATION:

In reviewing the site specific information provided for this project and acting as Lead Agency, the City of Roseville, Development Services Department, Planning Division has analyzed the potential environmental impacts created by this project and determined that the findings of CEQA Section 15162 concerning the decision not to prepare a subsequent EIR or negative declaration and the findings of CEQA Section 15164 concerning the decision to prepare an Addendum can be made. As supported by substantial evidence within the Addendum to the Creekview Specific Plan Final Environmental Impact Report (SCH # 02008032017, adopted September 19, 2012), the Lead Agency makes the following findings:

[**X**] No substantial changes are proposed in the project which would require major revisions of the previous EIR.

[**X**] No substantial changes have occurred with respect to the circumstances under which the project is undertaken.

[**X**] There is no new information of substantial importance which was not known and could not have been known with the exercise of due diligence at the time the previous EIR was certified as complete.

[**X**] Only minor technical changes or additions are necessary in order to deem the adopted environmental document adequate.

Introduction

This Air Quality Impact and Greenhouse Gas Analysis identifies and analyzes the potential environmental impacts of the modifications to the original Creekview Specific Plan (CSP) related to air quality and greenhouse gas (GHG) emissions. The modifications to the project will hereby referred to as the proposed project. The information and analysis in this document is organized in accordance with the checklist in Appendix G of the California Environmental Quality Act (CEQA) Guidelines. If the analysis provided in this document identifies potentially significant environmental effects of the project, mitigation measures that should be applied to the project are prescribed. All modeling results are included as Appendix A to this document.

Project Background

The CSP consists of 501 acres north and west of the West Roseville Specific Plan (WRSP) in the City of Roseville, California (see Figure 1). The CSP is bound by the planned extension of Blue Oaks Boulevard (along the Phillip Road alignment) within the WRSP on the south, the Fiddyment Ranch portion of the WRSP to the east, the City of Roseville's Johnson Wildlife Area property to the west, and agriculturally-zoned properties within unincorporated Placer County to the north (see Figure 2). Pleasant Grove Creek bisects the vacant project site flowing southeast. North and west of the site is vacant land, and southeast and southwest of the site is an existing residential development. The land directly to the south includes the Roseville Energy Park and the Pleasant Grove Waste Water Treatment Plant (WWTP). Directly east of the project site is vacant land and east of the vacant land is a residential subdivision currently under development.

In 2012, the proposed project was approved for development of 2,011 residential units and included community commercial, community commercial/business park, school, park, open space, quasi-public and urban reserve uses. The approved land use of the CSP consisted of 157.30-acres of Low Density Residential (LDR), 66.00-acres of Medium Density Residential (MDR), 18.70-acres of High Density Residential (HDR), 15.50-acres of Community Commercial (CC), 3.80-acres of Community Commercial/Business Professional (CC/BP), and 240-acres of open space and other public uses (see Figure 3). In 2013, a Large Lot Tentative Map was approved to subdivide the 501-acre CSP into 53 large lots, consistent with the adopted 2012 CSP land use plan. Following the approval of the Large Lot Tentative Map, a Specific Plan Amendment was proposed to shift residential units among large lots while maintaining the approved land use pattern and acreage. The modification was subsequently approved in 2016 along with a Small Lott Tentative Subdivision Map, Design Review for Residential Subdivision, and a Tree Permit. A summary of the approved residential units from the 2012 project plans compared to the 2016 project plans is presented in Table 1 below.

Creekview Specific Plan
Existing Land Use Plan (2012)

Project Summary

The proposed project consists of amendments to the CSP (2019 SPA) to align residential housing types to meet market demand and to reduce the burden of Phase 1 infrastructure. All modifications to circulation, lotting, parcel sizes, and configurations are proposed for only the parcels south of Pleasant Grove Creek. Additionally, the 2019 SPA includes text amendments to the CSP, Development Standards, and Design Guidelines to describe and implement the proposed land use revisions described below.

Revised Land Use Plan

The 2019 SPA proposes modifications to the land use plan (see Figure 4); however, the 2019 SPA does not propose to change the development footprint or size of the CSP.

The HDR parcels south of Pleasant Grove Creek are proposed for adjustment. HDR Parcel C-42 is reoriented and enlarged slightly to increase frontage along Blue Oaks Boulevard and HDR Parcel C-41 was moved east of Westbrook Boulevard. Additionally, the 2019 SPA includes a 3.9-acre parcel, HDR Parcel C-43, east of Creekview Plaza. Due to the above adjustments, 17 HDR units are proposed to be shifted to HDR Parcel C-40 north of the creek; however, the shape and size of Parcel C-40 remains the same.

With respect to Service and Employment, the CC parcel is proposed to be reduced from 15.5 acres to 9.3 acres and the 2019 SPA includes elimination of the CC/BP land use. The reduction of commercial land uses is due to a surplus of land designated or commercial uses within a short distance of the CSP, thus, reducing the demand for commercial uses. The 3.8-acre CC/BP parcel north of Blue Oaks Boulevard is now proposed as HDR.

With respect to Open Space and Public, the 2019 SPA includes an increased total park acreage by 0.2 acres and increased ROW by 0.2 acres. The 2019 SPA would maintain the current OS and P/QP parcels in size and placement. Additionally, the 2019 SPA includes relocation of the transit transfer center previously planned north of Commercial Parcel C-70 to the east side of C-70 on Creekview Plaza, north of Blue Oaks Boulevard.

A summary of the currently approved land use map versus the proposed land use map that includes the proposed amendments is provided in Table 2 on the following page.

Table 2 2012 Approved Land Uses vs. 2019 Proposed Land Uses			
Approved Land Uses 2012		**Approved Land Uses 2016**

Residential Unit Count and Distribution

The 2019 SPA includes adjustments to the residential unit and distributions due to residential parcels being reconfigured west and east of Westbrook Boulevard and south of the Pleasant Grove Creek. Additionally, the 2019 SPA revised land uses resulting in the addition of LDR parcels increasing the LDR residential unit count and distribution. A summary of the approved residential unit count from the 2016 SPA compared to the proposed residential unit count as part of this proposed 2019 SPA is presented in Table 3 below.

Creekview Specific Plan
Proposed Land Use Plan (2019)

Construction and Design

The following is a discussion of the project construction phases and site features associated with the proposed project modifications.

Construction Phases

Construction of the CSP is anticipated to occur over three phases, A, B and C. As part of the 2019 SPA, the phasing plan has been modified to reflect the revisions to the land use plan; however, the area of disturbance in each phase remains the same.

Phase A includes the development of all parcels and associated infrastructure south of Pleasant Grove Creek and consists of 66.5 acres of LDR, 23.5 acres of MDR, 12.5 acres of HDR, 9.3 acres of CC, 4.0 acres of PR, 49.7 acres of OS, and 1.8 acres of P/QP.

Phase B includes the development of all parcels and associated infrastructure in the northeast corner of the project site (C-52, C6, C-7, and C-8) and consists of 27.6 acres of LDR and 15.1 acres of OS.

Phase C includes the development of the remaining parcels and infrastructure north of Pleasant Grove Creek and consists of 88.6 acres of LDR, 27.7 acres of MDR, 5.2 acres of HDR, 12.2 acres of PR, and 7.9 aces of P/QP.

Site Development Features

It should be noted that the proposed project would incorporate a variety of sustainable design features, which would include, but not necessarily be limited to, the following:

- Land use plan with compact form and higher density uses, consistent with the SACOG Blueprint and the City's Blueprint Implementation Strategies, proximate to transit services, schools, and parks;
- Development of a commercial center that provides services proximate to residential areas to reduce reliance on vehicles;
- Provision of a park and ride lot, electric charging stations, bus transfer station, bus stops, and right of way for future bus rapid transit;
- Provision of traffic calming measures and streets designed to maximize connectivity,
- Provision of physical improvements, such as sidewalk improvements, walkway enhancements, landscaping, pavement markings, and bicycle parking that would act as incentives for pedestrian and bicycle modes of travel;
- Provision of a planned pedestrian and bike network containing Class I and Class II facilities;
- Connection of the site with a regional bikeway/pedestrian trail system;
- Improvements to the existing bikeway/pedestrian trail network, including landscape treatment and widening in some locations; and
- Provision of direct, safe, attractive pedestrian access from project land uses to transit stops and adjacent development.

Furthermore, due to the project location, the following site features are inherent in the proposed project design:

- Within walking distance to public transportation;
- Existing network of pedestrian and bicycle connections;
- Near major transportation route (i.e., SR 65);
- Near residential development; and
- Near existing commercial uses, including retail and restaurants.

Discussion

a,b. The proposed project site is located within the Sacramento Valley Air Basin (SVAB) and is under the jurisdiction of the Placer County Air Pollution Control District (PCAPCD). The SVAB is designated nonattainment for the federal particulate matter 2.5 microns in diameter ($PM_{2.5}$) and the State particulate matter 10 microns in diameter (PM_{10}) standards, as well as for both the federal and State ozone standards. The federal Clean Air Act requires areas designated as federal nonattainment to prepare an air quality control plan referred to as the State Implementation Plan (SIP). The SIP contains the strategies and control measures for states to use to attain the national ambient air quality standards (NAAQS). The SIP is periodically modified to reflect the latest emissions inventories, planning documents, rules, and regulations of air basins as reported by the agencies with jurisdiction over them. In compliance with regulations, the PCAPCD periodically prepares and updates air quality plans that provide emission reduction strategies to achieve attainment of the NAAQS, including control strategies to reduce air pollutant emissions via regulations, incentive programs, public education, and partnerships with other agencies.

The current applicable air quality plan for the proposed project area is the *Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan* (Ozone Attainment Plan), adopted September 26, 2013. The U.S. Environmental Protection Agency (USEPA) determined the motor vehicle emission budgets in the Plan to be adequate and made such findings effective August 25, 2014. On January 9, 2015, the USEPA approved the 2013 Ozone Attainment Plan.

The 2013 Ozone Attainment Plan demonstrates how existing and new control strategies would provide the necessary future emission reductions to meet the CAA requirements, including the NAAQS. It should be noted that in addition to strengthening the 8-hour ozone NAAQS, the USEPA also strengthened the secondary 8-hour ozone NAAQS, making the secondary standard identical to the primary standard. The SVAB remains classified as a severe nonattainment area with an attainment deadline of 2027. On October 26, 2015, the USEPA released a final implementation rule for the revised

NAAQS for ozone to address the requirements for reasonable further progress, modeling and attainment demonstrations, and reasonably available control measures (RACM) and reasonably available control technology (RACT). With the publication of the new NAAQS ozone rules, areas in nonattainment must update their ozone attainment plans and submit new plans by 2020/2021.

General conformity requirements of the regional air quality plan include whether a project would cause or contribute to new violations of any NAAQS, increase the frequency or severity of an existing violation of any NAAQS, or delay timely attainment of any NAAQS. In order to evaluate ozone and other criteria air pollutant emissions and support attainment goals for those pollutants that the area is designated nonattainment, the PCAPCD adopts recommended thresholds of significance for emissions of PM_{10}, and ozone precursors – reactive organic gases (ROG) and oxides of nitrogen (NO_X). On October 13, 2016, the PCAPCD adopted updated significance thresholds for the aforementioned pollutants.

The significance thresholds, expressed in pounds per day (lbs/day), listed in Table 4 are the PCAPCD's recently updated thresholds of significance for use in the evaluation of air quality impacts associated with proposed development projects. The City of Roseville, as lead agency, uses the PCAPCD's recommended thresholds of significance for CEQA evaluation purposes. Thus, if the proposed project's emissions exceed the pollutant thresholds presented in Table 4, the project could have a significant effect on air quality, the attainment of federal and State AAQS, and could conflict with or obstruct implementation of the applicable air quality plan.

Table 4
PCAPCD Thresholds of Significance

Pollutant	Construction Threshold (lbs/day)	Operational Threshold (lbs/day)
ROG	82	55
NO_X	82	55
PM_{10}	82	82

Source: Placer County Air Pollution Control District. Placer County Air Pollution Control District Policy. Review of Land Use Projects Under CEQA. October 13, 2016

The proposed project's operational emissions were quantified using the California Emissions Estimator Model (CalEEMod) software version 2016.3.2 – a statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions, including GHG emissions, from land use projects. The model applies inherent default values for various land uses, including construction data, trip generation rates, vehicle mix, trip length, average speed, compliance with the California Building Standards Code (CBSC), etc. Where project-specific information is available, such information should be applied in the model. For the proposed project, project-specific trip generation rates provided by traffic consultants were input into the model. The emissions intensity factor for electricity consumed at the project site was updated to reflect Roseville Electric's progress towards achieving the State's Renewable Portfolio Standards (RPS). All CalEEMod results are included in Appendix A.

The proposed project's potential air quality impacts associated with construction and operations are discussed in further detail below. A discussion of the proposed modifications' contribution to cumulative air quality conditions is provided below as well.

Construction Emissions

During construction of the project, various types of equipment and vehicles would temporarily operate on the project site. Construction exhaust emissions would be generated from construction equipment, vegetation clearing and earth movement activities, construction worker commutes, and construction material hauling for the entire construction period. The aforementioned activities would involve the use of diesel- and gasoline-powered equipment that would generate emissions of criteria pollutants. Project construction activities also represent sources of fugitive dust, which includes particulate matter (PM) emissions. As construction of the proposed project would generate air pollutant emissions intermittently within the site, and the vicinity of the site, until all construction has been completed, construction is a potential concern because the proposed project is in a non-attainment area for ozone and PM_{10} and $PM_{2.5}$.

The proposed project would be required to comply with all PCAPCD rules and regulations for construction, which would be noted on City-approved construction plans. The applicable rules and regulations would include, but not be limited to, the following:

- Rule 202 related to visible emissions;
- Rule 217 related to cutback and emulsified asphalt paving materials;
- Rule 218 related to architectural coatings;
- Rule 228 related to fugitive dust; and
- Rule 501 related to general permit requirements.

The proposed project's compliance with the above PCAPCD rules would minimize construction-related emissions. For example, Rule 228 includes implementation of dust control measures, such as minimizing track-out on to paved public roadways, limiting vehicle travel on unpaved surfaces to 15 miles per hour, and stabilization of storage piles and disturbed areas. A Dust Control Plan must also be submitted to the PCAPCD per Rule 228 prior to the start of earth-disturbing activities.

Construction of the proposed project would not change the three project phases and the construction disturbance area in each phase is consistent with the currently approved CSP. Therefore, the construction emissions for the 2019 SPA would be consistent with the emissions that would occur with the current CSP. Thus, the proposed project's construction emissions were not modeled as part of this analysis. It should be noted that given the passage of time, construction equipment has generally become more efficient in design resulting in reduced emissions during construction. As such, the proposed project's construction emissions can be assumed to be equal to or less than what was previously anticipated for the CSP. Because the proposed project would not result in emissions beyond what has already been anticipated for the CSP, construction emissions

would not result in any additional or more severe impacts associated with construction air quality emissions.

Operational Emissions

Operational emissions of ROG, NO_X, and PM_{10} would be generated by the proposed project from area, energy, and mobile sources. Area sources include architectural coating vapors, landscape maintenance equipment exhaust, and use of consumer products (e.g., deodorants, cleaning products, spray paint, etc.). Energy sources include electricity and natural gas consumption. Mobile-source emissions would result from the future employee and patron vehicle trips. As stated above, the proposed project would be required to comply with all applicable PCAPCD rules and regulations, including the following related to operations:

- Rule 205 related to nuisances;
- Rule 231 or Rule 247 related to commercial water heaters and boilers; and
- Rule 502 related to review of new sources of emissions.

The modeling assumes an operational year of 2026, when all three phases of the proposed project are complete. The modeling includes emissions estimates for the currently allowed development (2016 CSP) as well as the proposed project (2019 SPA). Table 5 presents a comparison of the operational emissions associated with the 2016 CSP and the proposed project to determine the net new emissions associated with the proposed amendment. Traffic consultants, Fehr and Peers, provided project-specific trip generation and vehicle miles travelled (VMT) for both the 2016 CSP and 2019 SPA.

Table 5
Total Operational Emissions

Pollutant	2016 CSP Projected Emissions (lbs/day)	2019 SPA Projected Emissions (lbs/day)	Net New Emissions (lbs/day)	PCAPCD Significance Threshold (lbs/day)
ROG	125.66	118.56	7.10	55
NO_X	193.33	175.58	17.75	55
PM_{10}	16.03	15.95	0.08	82

Source: CalEEMod, June 2019 (see Appendix A).

As shown in Table 5, while the overall emissions associated with both the 2016 CSP and 2019 SPA would exceed the PCAPCD significant thresholds, the proposed project would result in a reduction in emissions as compared to the development currently allowed in the CSP. Therefore, because the proposed project's operational emissions would result in an emissions reduction, the proposed project would not be considered to conflict with air quality plans during project operations beyond what has already been anticipated from the CSP.

Cumulative Emissions

A cumulative impact analysis considers a project over time in conjunction with other past, present, and reasonably foreseeable future projects whose impacts might compound those of the project being assessed. Due to the dispersive nature and regional sourcing of air pollutants, air pollution is already largely a cumulative impact. The nonattainment status of regional pollutants, including ozone and PM, is a result of past and present development, and, thus, cumulative impacts related to these pollutants could be considered cumulatively significant.

To improve air quality and attain the health-based standards, reductions in emissions are necessary within nonattainment areas. The project is part of a pattern of urbanization occurring in the greater Sacramento ozone nonattainment area. The growth and combined vehicle usage, and business activity within the nonattainment area from the project, in combination with other past, present, and reasonably foreseeable projects within Roseville and surrounding areas, could either delay attainment of the standards or require the adoption of additional controls on existing and future air pollution sources to offset emission increases. Thus, the project could cumulatively contribute to regional air quality health effects through emissions of criteria and mobile source air pollutants.

The PCAPCD recommends using the region's existing attainment plans as a basis for analysis of cumulative emissions. If a project would interfere with an adopted attainment plan, the project would inhibit the future attainment of AAQS, and thus result in a cumulative impact. As discussed above, the PCAPCD's recommended thresholds of significance for ozone precursors and PM_{10} are based on attainment plans for the region. Thus, the PCAPCD concluded that if a project's ozone precursor and PM_{10} emissions would be less than PCAPCD project-level thresholds, the project would not be expected to conflict with any relevant attainment plans, and would not result in a cumulatively considerable contribution to a significant cumulative impact. As a result, the PCACPD established operational phase cumulative-level emissions thresholds identical to the operational thresholds identified above, in Table **4**4.

While the proposed project would amend the land uses anticipated under the approved 2016 CSP, the emissions associated with the 2019 SPA would reduce emissions anticipated from the CSP, and, thus, would not be considered to result in a cumulatively considerable contribution to citywide emissions.

Conclusion

It should be noted that the currently approved project had been previously analyzed by the City under CEQA and was determined to result in a significant and unavoidable impact related to criteria pollutant emissions. However, based on the modeling conducted for the proposed project, the 2019 SPA would result in reduced criteria air pollutant emissions.

As stated previously, the applicable regional air quality plans include the 2001 Ozone Attainment Plan and the 2017 CAP. Because the proposed project would not result in construction-related or operational emissions of criteria air pollutants in excess of what has already be anticipated for the CSP, conflicts with or obstruction of the implementation of the applicable regional air quality plans would not occur beyond what has already been anticipated for the CSP. In addition, the project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state AAQS. Thus, a ***less-than-significant*** impact would result.

c. Some land uses are considered more sensitive to air pollution than others, due to the types of population groups or activities involved. Heightened sensitivity may be caused by health problems, proximity to the emissions source, and/or duration of exposure to air pollutants. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Sensitive receptors are typically defined as facilities where sensitive receptor population groups (i.e., children, the elderly, the acutely ill, and the chronically ill) are likely to be located. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, playgrounds, childcare centers, retirement homes, convalescent homes, hospitals, and medical clinics.

The proposed project involves the construction and operation of a specific plan that includes a mix of uses. The residences to the south of the project site would be considered sensitive receptors. The major pollutant concentrations of concern are localized CO emissions and toxic air contaminant (TAC) emissions, which are addressed in further detail below.

Localized CO Emissions

Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. Implementation of the proposed project would increase traffic volumes on streets near the project site; therefore, the project would be expected to increase local CO concentrations. Concentrations of CO approaching the AAQS are only expected where background levels are high, and traffic volumes and congestion levels are high. The statewide CO Protocol document identifies signalized intersections operating at Level of Service (LOS) E or F, or projects that would result in the worsening of signalized intersections to LOS E or F, as having the potential to result in localized CO concentrations in excess of the State or federal AAQS, as a result of large numbers of cars idling at stop lights. [1]

In accordance with the statewide CO Protocol, the PCAPCD has established screening methodology for localized CO emissions, which are intended to provide a conservative indication of whether project-generated vehicle trips would result in the generation of localized CO emissions that would contribute to an exceedance of AAQS and potentially

[1] University of California, Davis. *Transportation Project-Level Carbon Monoxide Protocol*. December 1997.

expose sensitive receptors to substantial CO concentrations. Per the PCAPCD's screening methodology, if the project would result in vehicle operations producing more than 550 lbs/day of CO emissions and if either of the following scenarios are true, the projects could result in localized CO emissions that would violate CO standards:

- Degrade the peak hour level of service (LOS) on one or more streets or at one or more intersections (both signalized and non-signalized) in the project vicinity from an acceptable LOS (i.e., LOS A, B, C, or D) to an unacceptable LOS (i.e., LOS E or F); or
- Substantially worsen an already existing unacceptable peak hour LOS on one or more streets or at one or more intersections in the project vicinity. "Substantially worsen" includes an increase in delay at an intersection by 10 seconds or more when project-generated traffic is included.

According to the Air Quality analysis performed for the proposed project, the 2019 SPA would result in net reduction of 15.73 lbs/day maximum mobile source CO emissions associated with the CSP. (see Appendix A). Consequently, CO emissions related to operation of the proposed project would CO exposure. Therefore, according to the PCAPCD's screening methodology for localized CO emissions, the proposed project would not be expected to generate localized CO emissions that would contribute to an exceedance of AAQS and the proposed project would not expose sensitive receptors to substantial concentrations of localized CO beyond that already anticipated for the CSP.

TAC Emissions

Another category of environmental concern is TACs. The *CARB's Air Quality and Land Use Handbook: A Community Health Perspective* (Handbook) provides recommended setback distances for sensitive land uses from major sources of TACs, including, but not limited to, freeways and high traffic roads, distribution centers, and rail yards. The CARB has identified diesel particulate matter (DPM) from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Health risks from TACs are a function of both the concentration of emissions and the duration of exposure. Health-related risks associated with DPM in particular are primarily associated with long-term exposure and associated risk of contracting cancer.

Construction activities have the potential to generate DPM emissions related to the number and types of equipment typically associated with construction. Off-road heavy-duty diesel equipment used for site grading, paving, and other construction activities would result in the generation of DPM. However, construction is temporary and occurs over a relatively short duration in comparison to the operational lifetime of the proposed project. Operation of construction equipment would be regulated by the PCAPCD and would likely occur intermittently throughout the course of a day. Furthermore, considering the short-term nature of construction activities, as well as the regulated and intermittent nature of the operation of construction equipment, the likelihood that any one sensitive receptor would be exposed to high concentrations of DPM for any extended period of time would be low. As discussed above, the proposed project would not change

the anticipated construction emissions associated with the CSP. As such, construction of the proposed project would not be expected to generate substantial DPM emissions that could result in health risks beyond what could currently occur. As such, project construction would not be result in an increase in exposure of sensitive receptors to substantial TAC concentrations.

Conclusion

Based on the above, the proposed project would not result in an increased exposure of any sensitive receptors to substantial concentrations of any pollutants. Therefore, impacts related to exposing sensitive receptors to substantial pollutant concentrations would be ***less than significant***.

d. Emissions of pollutants have the potential to adversely affect sensitive receptors within the project area. Pollutants of principal concern include emissions leading to odors, emissions of dust, or emissions considered to constitute air pollutants. Air pollutants have been discussed in sections "a" through "c" above. Therefore, the following discussion focuses on emissions of odors, dust, and exhaust.

Examples of common land use types that typically generate significant odor impacts include, but are not limited to wastewater treatment plants; composting/green waste facilities; recycling facilities; petroleum refineries; chemical manufacturing plants; painting/coating operations; rendering plants; and food packaging plants. The proposed project would include residential, retail, office, school, and park uses. The proposed uses are not typically associated with substantial objectionable odors.

Although less common, diesel fumes associated with substantial diesel-fueled equipment and heavy-duty trucks, such as from construction activities, freeway traffic, or distribution centers, could be found to be objectionable. However, as discussed above, construction is temporary and diesel emissions would be minimal and regulated through compliance with the PCAPCD's rules and regulations. The aforementioned regulations would help to minimize air pollutant emissions, as well as any associated odors. Considering the short-term nature of construction activities and the regulated and intermittent nature of the operation of construction equipment on the site, construction of the proposed project would not be expected to create objectionable odors affecting a substantial number of people.

It should be noted that PCAPCD Rule 205, Nuisance, addresses the exposure of "nuisance or annoyance" air contaminant discharges, including odors from restaurants and construction, and provides enforcement of odor control. Rule 205 is complaint-based, where if public complaints are sufficient to cause the odor source to be considered a public nuisance, then the PCAPCD is required to investigate the identified source, as well as determine and ensure a solution for the source of the complaint, which could include operational modifications to correct the nuisance condition. Thus, although not anticipated, if odor or air quality complaints are made upon development of the proposed project, the PCAPCD would be required (per PCAPCD Rule 205) to ensure that such complaints are addressed and mitigated, as necessary.

As noted previously, construction of projects in the City are required to comply with all applicable PCAPCD rules and regulations. The aforementioned rules would act to reduce construction-related dust by implementing dust control measures. Following project construction, vehicles operating within the project site would be limited to paved areas of the site, which would not have the potential to create substantial dust emissions. Thus, project operations would not include sources of dust that could adversely affect a substantial number of people.

For the aforementioned reasons, construction and operation of the proposed project would not result in emissions (such as those leading to odors) adversely affecting a substantial number of people, and a ***less-than-significant*** impact would result.

VII. GREENHOUSE GAS EMISSIONS. *Would the project:*	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	✖	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?	☐	☐	✖	☐

Discussion

a,b. Emissions of greenhouse gases (GHGs) associated with human activities that contribute to global climate change are associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on earth. An individual project's GHG emissions are at a micro-scale level relative to global emissions and effects to global climate change; however, an individual project could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. As such, impacts related to emissions of GHG are inherently considered cumulative impacts.

Implementation of the proposed project would cumulatively contribute to increases of GHG emissions. Estimated GHG emissions attributable to future development would be primarily associated with increases of carbon dioxide (CO_2) and, to a lesser extent, other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O) associated with area sources, mobile sources or vehicles, utilities (electricity and natural gas), water usage, wastewater generation, and the generation of solid waste. The primary source of GHG emissions for the project would be mobile source emissions. The common unit of measurement for GHG is expressed in terms of annual metric tons of CO_2 equivalents ($MTCO_2e$/yr).

Recognizing the global scale of climate change, California has enacted several pieces of legislation in an attempt to address GHG emissions. Specifically, Assembly Bill (AB) 32, and more recently Senate Bill (SB) 32, have established statewide GHG emissions reduction targets. Accordingly, the CARB has prepared the Climate Change Scoping Plan for California (Scoping Plan), which was approved in 2008 and updated in 2014. The Scoping Plan provides the outline for actions to reduce California's GHG emissions and achieve the emissions reductions targets required by AB 32. In concert with statewide efforts to reduce GHG emissions, air districts, counties, and local jurisdictions throughout the State have implemented their own policies and plans to achieve emissions reductions in line with the Scoping Plan and emissions reductions targets, including AB 32 and SB 32.

On October 13, 2016, the PCAPCD adopted GHG emissions thresholds in concurrent with the criteria pollutant threshold update. The updated thresholds begin with a

screening emission level of 1,100 MT CO_2e/yr. Any project below the 1,100 MT CO_2e/yr threshold is judged by the PCAPCD as having a less-than-significant impact on GHG emissions within the District and thus would not conflict with any state or regional GHG emissions reduction goals. Projects that would result in emissions above the 1,100 MT CO_2e/yr threshold would not necessarily result in substantial impacts, if certain efficiency thresholds are met. The efficiency thresholds, which are based on service populations and square footage, are presented in Table 6.

Table 6
PCAPCD Operational Thresholds of Significance

Efficiency Thresholds			
Residential (MT CO_2e/capita)		**Non-Residential (MT CO_2e/1,000 sf)**	
Urban	**Rural**	**Urban**	**Rural**
4.5	5.5	26.5	27.3

Source: Placer County Air Pollution Control District. Placer County Air Pollution Control District Policy. Review of Land Use Projects Under CEQA. October 13, 2016.

Projects which involve emissions below the 1,100 MT CO_2e/yr threshold or below the efficiency thresholds presented in Table 6, are considered to result in less-than-significant impacts in regards to GHG emissions within the District and thus would not conflict with any state or regional GHG emissions reduction goals. Finally, the PCAPCD has also established a Bright Line Cap, which shall be the maximum limit for any proposed project. The Bright Line Cap is 10,000 MT CO_2e/yr for all types of projects.

Buildout of the proposed project would contribute to increases of GHG emissions that are associated with global climate change during construction and operations. Based on the Traffic Memo prepared for the project, the 2019 SPA would result in an overall reduction in vehicle trips, and thus, would result in reduced GHG emissions associated with mobile sources. The proposed project's short-term construction-related and long-term operational GHG emissions are discussed below.

Short-Term Construction GHG Emissions

Construction-related GHG emissions are a one-time release and are, therefore, not typically expected to generate a significant contribution to global climate change, as global climate change is inherently a cumulative effect that occurs over a long period of time and is quantified on a yearly basis.

As previously discussed, construction of the proposed project would not change the three project phases and the construction disturbance area in each phase remaining consistent with the currently approved CSP. As such, the proposed project's construction-related GHG emissions can be assumed to be equal to or less than what was previously anticipated for the CSP. Because the proposed project would not result in GHG emissions beyond what could currently occur for the CSP, construction-related GHG emissions would not result in any additional or more severe impacts associated with short-term construction-related GHG emissions.

Long-Term Operational GHG Emissions

The proposed project's estimated GHG emissions at full buildout (2026) would result in a net decrease in GHG emissions of 1,024.43 MT CO_2e/yr as compared to the current CSP (see Table 7). Although the estimated emissions of both the 2016 CSP and 2019 SPA would be in excess of the 10,000 MTCO_2e/yr Bright Line Cap, the proposed amendment would reduce emission from what could currently occur on site. Because the proposed modifications would result in a reduction of GHG emissions, the proposed project would not create GHG emissions, either directly or indirectly, that may have a significant impact on the environment or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions beyond what is already anticipated with buildout of the CSP, and a ***less-than-significant*** impact associated with the proposed 2019 SPA would occur.

Table 7
2016 Unmitigated Project Operational GHG Emissions vs. 2019 Unmitigated Project Operational GHG Emission

Emission Source	2016 CSP	2019 SPA	Net Change (MTCO_2e/yr)
	Annual GHG Emissions (MTCO_2e/yr)	Annual GHG Emissions (MTCO_2e/yr)	
Area	1,459.04	1,459.03	-0.01
Energy	6,332.60	5,865.71	-469.89
Mobile	5,280.63	4,878.83	-401.80
Solid Waste	1,101.74	1,025.89	-75.85
Water	511.60	434.72	-76.88
TOTAL ANNUAL GHG EMISSIONS	**14,685.61**	**13,664.18**	**-1,024.43**

SUBJECT: Addendum #1 to the Drainage and Stormwater Master Plan for the Creekview Specific Plan

Introduction

This Technical Memorandum functions as an Addendum to the Drainage and Stormwater Master Plan, dated October 18, 2012 and updated in 2014 and 2015, prepared for the Creekview Specific Plan (CSP). The purpose of this Technical Memorandum is to evaluate the differences, relative to drainage and stormwater, between the CSP land use plan approved in 2012 (Approved Project) shown in Exhibit A and the proposed CSP land use plan (2019) (Proposed Project), shown in Exhibit B. Together, this Addendum and the Master Plan provide technical data and analysis to guide buildout of Creekview's backbone infrastructure as depicted on the Proposed Project's Land Use Plan.

Definitions

- **Master Plan:** The approved Drainage and Stormwater Master Plan, dated October 18, 2012.
- **Approved Project:** The CSP project as shown in the 2012 Master Plan and subsequent updates, including 2014 update to System D and the 2015 update to System B.
- **Proposed Project:** Based upon the Approved Project but with new land use plan dated July 26, 2019.

Background

The Master Plan (2012) evaluated the infrastructure requirements for the Approved Project. The Proposed Project (Exhibit B) reflects the following revisions to the land uses and parcel configurations south of Pleasant Grove Creek:

- Land uses in the southwest quadrant of the CSP (south of Pleasant Grove Creek and west of Westbrook Blvd.) have been reconfigured and re-lotted, while maintaining a mix of low-, medium-, and high-density residential uses and park sites.
- Land uses in the southeast quadrant of the CSP (south of Pleasant Grove Creek and east of Westbrook Blvd.) have been reconfigured, including:
  - Converting parcels C-24 and C-23 from MDR to LDR.
  - Converting a portion of parcel C-70 from CC to LDR, resulting in a 9.2-acre CC site and a 6.9-acre LDR site.
  - Converting parcel C-71 from CC/BP to HDR.
- Reconfigured land uses result in a rebalancing of acreages and unit allocations for LDR, MDR, and HDR, as shown in Table 1.
- Two north/south roadway connections between Blue Oaks Blvd. and Creekview Plaza Drive were consolidated into one street, resulting in an eastward shift in the alignment of Grasscreek Drive.
- Park sites and paseos have been adjusted and reconfigured while maintaining a connectivity between residential villages and Pleasant Grove Creek.

- The overall unit count of 2,011 units is unchanged.

The table below summarizes the differences between the Approved Project and the Proposed Project.

Table 1: Comparison of Approved and Proposed Land Uses and Development Assumptions

Land Use Designation		Acreage			Dwelling Units		
		Approved (2012)	Proposed (2019)	Difference	Approved (2012)	Proposed (2019)	Difference
Residential Uses							
LDR	Low Density Residential	155.8 ac	182.8 ac	27.0 ac	836 du	951 du	115 du
MDR	Medium Density Residential	64.3 ac	51.2 ac	-13.1 ac	655 du	513 du	-142 du
HDR	High Density Residential	17.1 ac	17.7 ac	0.6 ac	520 du	547 du	27 du
	Subtotal	237.2 ac	251.7 ac	14.5 ac	2,011 du	2,011 du	0 du
Service & Employment							
CC	General Commercial	15.5 ac	9.2 ac	-6.3 ac			
CC/BP	Community Comm/ Bus. Prof.	3.8 ac	0.0 ac	-3.8 ac			
	Subtotal	19.3 ac	9.2 ac	-10.1 ac			
Open Space and Public							
OS	Open Space	136.2 ac	136.9 ac	0.7 ac			
PR	Park	15.7 ac	16.3 ac	0.6 ac			
P/QP	Public/Quasi-Public	9.6 ac	9.7 ac	0.1 ac			
UR	Urban Reserve	39.9 ac	39.9 ac	0.0 ac	405 du	405 du	0 du
ROW	Right of Way	43.4 ac	37.7 ac	-5.7 ac			
	Subtotal	244.8 ac	240.4 ac	-4.4 ac	405 du	405 du	
TOTAL		**501.3 ac**	**501.3 ac**	**0.0 ac**	**2,416 du**	**2,416 du**	**0 du**

Note: The allocation of 405 units to the Urban Reserve land use is included in approved utility master plans, but not the approved Specific Plan, which has an allocation of 2,011 units.

Analysis

An evaluation of the differences between the Approved Project and the Proposed Project, as described in the Background section above, was conducted to determine if changes in the overall project occurred. Table 2 below shows the differences in contributary areas and percent impervious rates between the Approved Project and the Proposed Project by outfall. Only those outfalls affected by the proposed changes are shown in Table 2. Minor differences can be observed at each shed contributory to each outfall and overall there is a decrease in percent impervious rates. Slight changes to the onsite facilities proposed in the Drainage and Stormwater Master Plan (Master Plan) and subsequent updates are expected due to these minor changes.

The contributory areas and their percent impervious rates for each outfall that are affected by the proposed land use are tabulated in Table 2. Included, is an excerpt of the update to the Master Plan's Storm Drain Exhibit dated October 2014 (Exhibit C) as well as an exhibit with the Proposed Project's land use and revised shed areas (Exhibit D) that depicts the data tabulated in Table 2.

In the Approved Project, peak flow attenuation occurs within a parallel channel to Pleasant Grove Creek that is proposed to be built with the Creekview Specific Plan. The portion of Creekview Specific Plan to the south of Pleasant Grove Creek discharges directly to this parallel channel referred to as the bypass channel. The bypass

channel uses weirs to distribute peak flows to and from Pleasant Grove Creek. The bypass channel provides additional conveyance and storage capacity which returns the floodplain water surfaces to levels found prior to the creation of the constriction within Pleasant Grove Creek in this area and exposes developable land previously inundated (Master Plan, 2012).

Table 2: Comparison of Approved and Proposed by Outfall Contributory Areas

	Contributory Area			Percent Impervious Rates		
Outfall	**Approved**	**Proposed**	**Difference**	**Approved**	**Proposed**	**Difference**
OTA	31.4 ac	34.2 ac	2.8 ac	80.4%	65.0%	-15.3%
OTB	142.8 ac	145.6 ac	2.9 ac	52.7%	51.5%	-1.2%
OTC	33.3 ac	14.1 ac	-19.3 ac	59.9%	60.0%	0.1%
OTD	66.4 ac	79.4 ac	13.0 ac	45.4%	44.6%	-0.8%
OTK	17.4 ac	17.9 ac	0.6 ac	50.0%	48.2%	-1.8%
TOTAL	291.2 ac	291.2 ac	0.0 ac	54.7%	51.4%	-3.3%

Notes:

- Only outfalls with sheds that have proposed land use changes are listed above. No changes are proposed for areas north of Pleasant Grove Creek.
- Outfalls OTB and OTD include offsite contributary areas, 135.1 acres and 23.1 acres respectively, in both the approved and proposed scenarios.
- Percent Impervious Rates are weighted averages.

Flood Control: Contributing Watershed & Bypass Channel

The Pleasant Grove watershed contributing to the downstream project boundary of the Creekview Specific Plan is approximately 19,200±acres. The CSP sheds contributory areas including offsite shed areas that discharge through the development discussed herein are approximately 1.5% of the Pleasant Grove watershed. The onsite sheds (OTA, OTB, OTC, OTD, and OTK) have the proposed land use changes discussed above total 133.1 acres and are approximately 0.7% of the Pleasant Grove watershed area. The slight decrease in impervious area for the onsite sheds and the slight shifts in subshed boundaries onsite would produce negligible changes to the peak flow, peak flow timing, water surface elevations, hydromodification, and volumetric impacts within the bypass channel and Pleasant Grove Creek through the project and at the previously established points of compliance.

The volume created with the proposed bypass channel and the system of weirs to connect the bypass channel and Pleasant Grove Creek has a significant impact to peak flow, peak flow timing, water surface elevations, and hydromodification. It is observed in the approved SDMP model that flows passing over the weirs and within the bypass channel are greater than that contributed through the outfalls of the CSP. This demonstrates the bypass channel's function to return the Pleasant Grove Creek floodplain characteristics to pre-constriction conditions that were brought about with the agricultural activities in the area. The impact of the bypass channel on the key markers of compliance including peak flow, peak flow timing, and water surface elevations is greater than that of hydrologic changes to the southern portion of the CSP which is 0.7% of the contributing watershed area.

Due to the reduction of imperviousness of the site, it is expected that the total flows discharging to the bypass channel would slightly decrease. However, the resultant flows are not expected to have a noticeable effect on the flows in Pleasant Grove Creek and bypass channel due to the proportion of the CSP to the upstream watershed and the underlying type D soils. It is known that type D soils have a higher runoff potential in flood control events and changes to impervious rates of a developed site does not have as great as an impact on type D soils as it does on more infiltrative type soils such as type B or type C. Additionally, because of the volume created by the bypass channel, the proposed weirs, and the overall size of the upstream watershed, it is expected that little to no effects in hydraulic function due to onsite hydrological changes would be observed.

Currently, the bypass channel and a portion of the weirs are in construction. The bypass channel and weirs are being constructed as proposed in the Approved SDMP. The construction of the weirs is a phased plan per the

request of the City of Roseville thus weir #6 and features of weir #1 are not being constructed at this time. As the regional retention facility at Reason Farms is developed, weirs #1 and #6 will be completed. A LOMR will be prepared for the constructed bypass channel system. As a part of the LOMR process, a review of the hydrologic data will be performed to ensure consistency with the proposed project.

Onsite Drainage

To convey storm water runoff to the drainage corridor, conceptual trunk storm drain pipes are analyzed in the Master Plan and subsequent updates including improvement plans. The storm drain systems included in the Phase 1 portion of the Specific Plan are in the improvement plan stage at this time and are analyzed with the land use changes described herein. These trunk storm drain pipes are sized to the 10-year 24-hour event with the consideration of overland flows in the streets from infrequent high intensity storm events such as the 100-year 24-hour event. As previously mentioned, generally, higher percent impervious land use types have decreased while lower percent impervious land use types have increased with the Proposed Project. Localized increases and decreases in trunk storm drain pipes may occur, however, the overall inventory of pipes should not change.

Hydromodification & Storm Water Quality

In addition to flood control, the bypass channel contributes to providing hydromodification compliance at the project boundary for the 2-year 24-hour event. Hydromodification compliance is met by the incorporation of onsite Low Impact Development (LID) measures described below and the proposed bypass channel described above. The approved SDMP discusses how the imperviousness of a site influences hydromodification. By implementing Low Impact Development (LID) features, the retention and infiltration of stormwater effectively reduces the imperviousness of the site. Given that the proposed project has a reduced impervious rate due to land use changes, the runoff volume for the hydromodification event should be the same or less than previously analyzed.

Low Impact Development measures are proposed onsite to clean and reduce storm water at discharge points for the 85th percentile 24-hour event. LID measures proposed in the Master Plan are tree planting and preservation, disconnected impervious areas, soil amendments, and vegetated swales. The quantity of each LID feature was allocated by land use and the bypass channel functions as a vegetated swale. Since LID features were determined by land use type in the Master Plan, proposed land use changes herein do not alter the rates of application found in the Master Plan. The storm water quality standards from the West Placer Storm Water Quality Design Manual are applied in the recent Storm Water Quality Evaluation for Creekview Tentative Subdivision Map dated March 8, 2019. These standards are new since the analyses in Master Plan were performed, however, the types and rates of application of LID features were not changed. And, in general, higher percent impervious land use types have been replaced with lower percent impervious land use types as can be observed in Table 1.

Retention

The Creekview Specific Plan is a part of the Natomas Cross Canal watershed. It has been found that upstream development in the watershed increases the potential flooding in the lower portion of Natomas Cross Canal watershed. Due to this, mitigation by way of retention for the 100-year 8-day event is required for the proposed project. Mitigation for the 100-year 8-day event is not affected or reduced by LID or flood control features such as the bypass channel. Mitigation will occur downstream of the project in the City of Roseville's Reason Farms Facility (Master Plan, 2012). To determine the required retention volume for Creekview, the equations in the Pleasant Grove Watershed Mitigation Fee (2010) are used in the Master Plan. The Pleasant Grove/Curry Creek Watershed Mitigation Fee report was updated by Civil Engineering Solutions, Inc. in 2017 for the City of Roseville. A revision to Table V.A from the Master Plan using the updated volumetric impact rates and resultant retention volume by land use are presented in Table 3 below. The equations in both studies use soil types and percent impervious rates to determine the required volume for retention of a contributing area. Due to an update to the volumetric impact rates, the resultant retention volume has increased. These increases would be more than what is shown in Table 3 if the overall percent impervious rate of the site remained as it was in the Approved Project due to the increase in the land use impact rate.

Table 3: Comparison of Approved and Proposed Volumetric Impact Rates in Type D Soils

Land Use Designation		Land Use Impact Rate (ac-ft/ac)			Land Use Impact (acre-feet)		
		Approved	Updated	Difference	Approved	Updated	Difference
LDR	Low Density Residential	0.072	0.090	0.018	11.22	16.51	5.29
MDR	Medium Density Residential	0.126	0.146	0.020	8.10	7.47	-0.63
HDR	High Density Residential	0.206	0.229	0.023	3.52	4.06	0.54
CC/BP	Com. Commercial/ Bus. Prof	0.233	0.313	0.024	4.50	2.37	-2.13
OS	Open Space	0	0	0.000	0.00	0.00	0.00
PR	Park	-0.115	-0.104	0.011	-1.81	-1.70	0.11
P/QP	Public/Quasi-Public	0.126	0.146	0.020	1.21	1.42	0.21
UR	Urban Reserve	0	0	0.000	0.00	0.00	0.00
ROW	Right of Way	0.313	0.341	0.028	13.58	12.85	-0.73
					40.32	42.97	2.65

Notes:

- The Land Use Impact Rate is based upon type D soils and are calculated using formulas presented in the update to the Pleasant Grove/Curry Creek Watershed Mitigation Fee report updated by Civil Engineering Solutions, Inc. in 2017.
- The increase in retention volume is due to the increased Land Use Impact Rate.

Conclusions

Based on the analysis above, it is determined that the facilities proposed in the Drainage and Stormwater Master Plan and subsequent updates would not be significantly impacted by the proposed land use changes. The largest proposed impact to the peak flow rates, timing, and volume is the bypass channel system. The bypass channel and five of the weirs are in construction at the time of writing and are being constructed as proposed in the Master Plan with the exception of weirs #1 and #6. Per the request of the City, weir#6 and the culverts in weir#1 will be constructed at a later date to correspond with the construction of the downstream retention facility at Reason Farms. The bypass channel and weirs as further described in the Master Plan and herein, restores the Pleasant Grove floodplain to pre-agricultural conditions.

The bypass channel may see a slight reduction in contributing flows due to the reduced impervious cover which may help with peak flow and hydromodification compliance at the project boundary. It is commonly known that lower impervious rates generate less runoff volume meaning a lower peak flow rate overall. Only storm water quality and trunk drainage facilities may undergo minor increases and decreases based on contributing area. However, at the master plan level of analysis, these facilities remain adequately sized in the approved Master Plan and subsequent updates to provide a foundation for the improvement plan analyses' when a greater level of detail is warranted. In summary, the analysis demonstrates that the changes between the Approved Project and the Proposed Project are not significant.

Re: Addendum #1 to the Drainage and Stormwater Master Plan for the Creekview Specific Plan

Mr. Brian Walker,

In response to the comments dated August 5, 2019, our responses to these issues are as follows:

1) Comment: The conclusions within the TM are straightforward and believable; however, there are a few noted deficiencies below:

Response: Please see responses below.

2) The City possesses a "Drainage and Stormwater Master Plan for the Creekview Specific Plan" (I'll refer to as "2012 drainage master plan update") dated 10/18/2012 (by CESI) (that I understand is the most current version) that is not referenced within this TM. Therefore, a revised MacKay & Somps TM that clarifies the role of the 10/18/2012 drainage master plan update in relation to the analysis provided is needed

Response: The reference to the Master Plan has been updated.

3) Comment: The 2018 drainage master plan update does not address or provide sufficient insight on several technical issues analyzed within the 2012 drainage master plan update, which need to corrected. These are:
   a. The Hydromodification Evaluation of Post-Project Hydrology Model (section II.E) including timing of peak flows released into the receiving waters/bypass channel
   b. Update of summary of findings, including values in Table II.F.1A1 (for PGC), Figure II.F.1A (Comparison of PG Cr Hydrographs), Table II.F.1A2 FEMA Basis 100-year& 10-year peak flow comparison (PG Crk), Table II.F.1B – Required Attenuation Creation Areas (100-year).
   c. (stormwater) Values in Table IV.C.2A and Table IV.C.2B
   d. Peak flow response, including updated Figure IV.D.2A
   e. Volumetric response, including updated Figure IV.D.3A and Table IV.D.4A

f. Volumetric impacts, including updated Table V.A
g. Hydraulics – a discussion of whether and how much the Proposed Project alters the water surface elevations including update results in Table III.A.3F and whether/how/if the previously submitted CLOMR still sufficiently describes the project (or not)

Response: In response to Comments 3a-3e, and 3g: Additional language is added to the TM discussing the effects of the minor changes in land use. It should be noted that the upstream contributing shed of Pleasant Grove to the Creekview Specific Plan area is approximately 19,200 acres (30.1 sq. mi.) and the relatively small size of the CSP indicates that a minor decrease to the impervious rate of 133.1 acres (0.21 sq. mi.) of the CSP would not have an observable impact to peak flow rates, peak flow timing, volume, or hydromodification. It is commonly known that lower impervious rates generate less runoff volume meaning a lower peak flow rate overall. Since it is a minor decrease in imperviousness, if a change were to be observed, a decrease would be expected in peak flow rates, timing, and volume which would be an improvement for both flood control events and hydromodification.

Minor shed shifts were also made with the Proposed Project. This increases some outfalls' contributary area and decreases others. Sheds OTA, OTB, and OTK have small increases in contributary areas (<10%). Shed OTC has a decrease of 19.3 acres (58% decrease) while shed OTD has an increase of 13.0 acres (20% increase). Sheds OTC and OTD are located relatively close to one another and both discharge to the bypass channel. While some localized differences in water surface elevations may be observed near these outfalls, the large flows in the bypass channel and Pleasant Grove Creek would soon override the small fluctuations in the local water surface elevations.

Hydromodification was proven achievable in the Master Plan and is attributed to the effects of Low Impact Development measures. The goal of LID measures is to assist a developed site in mimicking the runoff characteristics of the existing site. LID measures do this through increase infiltration, retention, and evapotranspiration. The proposed LID measures in the Master Plan are applied to the site as a rate per land use type and effectively lower the imperviousness of the site. Minor changes in land use do not decrease the effectiveness of the LID measures proposed to be applied therefore no discernible impacts are expected for hydromodification. An updated storm water quality analysis is presented in the Storm Water Quality Evaluation for Creekview Tentative Subdivision Map dated March 8, 2019.

The largest proposed impact to the peak flow rates, timing, and volume is the bypass channel system. The bypass channel and five of the weirs are in construction at the time of writing. Per the request of the City, Weir#6 and the culverts in Weir#1 will be constructed at a later date to correspond with the construction of the downstream retention facility at Reason Farms. The bypass channel and weirs as further described in the Master Plan and in the TM, restores the Pleasant Grove floodplain to pre-agricultural conditions. The volume created with the bypass channel and the system of weirs to connect the bypass channel and Pleasant Grove Creek has a

significant impact to peak flow, peak flow timing, water surface elevations, and hydromodification.

Prior to the LOMR, a review of the hydrologic data will be performed to ensure consistency with the proposed project.

In response to Comment 3f: Since the Master Plan was approved, the volumetric impact rates used to calculate retention volume for the 100-year 8-day event have increased. The rates are from the Pleasant Grove/Curry Creek Watershed Mitigation Fee report which was updated by Civil Engineering Solutions, Inc. in 2017 for the City of Roseville. This is the only aspect of CSP expected to have an increase and it is not due to the changes in the land use. The required volume using the updated rates with the Approved Project land use, would have netted a larger increase in required retention volume to mitigate the site. Since the overall land use imperviousness has decreased, the update to the rates has a smaller impact on the retention volume required for the CSP.

Please do not hesitate to call if you have any questions.

Sincerely,

MacKay & Somps Civil Engineers, Inc.

TECHNICAL MEMORANDUM

Date: June 28, 2019
To: Matthew Todd – City of Roseville
From: John Gard and Rod Brown – Fehr & Peers
Subject: *Transportation Impact Assessment of Proposed Land Use Amendment to Creekview Specific Plan*
RS19-3787

This memorandum presents the assumptions, analysis methods, and results of an evaluation of the transportation-related effects of proposed changes to the Creekview Specific Plan (CSP).

Background

The CSP was approved in 2012 and included 2,011 residential units and community commercial, community commercial/business professional, school, park, open space, quasi-public, and urban reserve uses. A Specific Plan Amendment was approved in 2016 (2016 SPA) that maintained the overall land use pattern, maintained the unit count of 2,011 that was approved in 2012, and shifted residential units among parcels.

Proposed Land Use Changes

Amendments to the CSP are proposed (2019 SPA) to align residential housing types to meet market demand and to reduce the burden of Phase 1 infrastructure costs. Elimination of Community Commercial (CC) and Community Commercial/Business Professional (CC/BP) uses is also proposed, driven by the surplus of land designated for commercial uses within a short distance of the CSP and the reduced demand for commercial uses resulting from changing consumer preferences. Land use changes between the 2016 SPA and 2019 SPA are shown in **Table 1**, and the updated circulation plan is shown in **Figure 1**. All proposed modifications to circulation are only for the area south of Pleasant Grove Creek. The primary circulation change would be the shift of Grasscreek Drive (north-south collector west of Westbrook Boulevard) slightly further east.

The square footage of the remaining Community Commercial land use was estimated using a floor area ratio of 0.4 per email direction from Charity Gold of the City of Roseville, dated May 22, 2019.

Trip Generation Comparison

We compared the project's trip generation based on the approved 2016 SPA with the proposed 2019 SPA, using rates from the City of Roseville 2035 CIP travel demand model. **Table 2** shows the results of these calculations and indicates that the proposed land use modifications in the 2019 SPA would result in fewer trips being generated. These results suggest that traffic volumes in the vicinity of the project would be reduced during both peak hours and daily as a result of the land use changes.

Table 2
Trip Generation Comparison – 2016 SPA vs. 2019 SPA

Land Use	Amount	Trip Rate [1]			Trips		
		AM Peak Hour	PM Peak Hour	Daily	AM Peak Hour	PM Peak Hour	Daily

				Difference	**-316**	**-286**	**-3,126**

Notes:
1. Daily and PM peak hour trip rates from the City of Roseville travel demand model. AM peak hour rate estimated by calculating ratio of the *Trip Generation Manual* (ITE, 2017) AM peak hour rate to the ITE daily rate and applying this factor to the City of Roseville travel demand model daily rate.

ksf = thousand square feet. du's = dwelling units.
Source: Fehr & Peers, 2019.

Vehicle Miles of Travel Comparison

The proposed land use changes and roadway network changes were entered into the City of Roseville 2035 travel demand model. Vehicle miles of travel (VMT) was calculated for both the 2016 SPA and the 2019 SPA, using the boundary method for the City of Roseville. This method estimates the VMT for all roadways within the City.

According to model output, the scenario comprising the 2019 SPA was calculated to have a total VMT of 5,374,879; in contrast, the scenario comprising the 2016 SPA was calculated to have a total VMT of 5,378,872. Thus, the 2019 SPA would result in a reduction of 3,993 VMT. Model output for this calculation is included in Appendix A.

The VMT reduction caused by the 2019 SPA is likely largely due to the elimination of the CC/BP and reduction in the CC land uses within the CSP. Appendix A includes a plot of daily trips traveling to and

from the CC/BP land use based on the 2016 SPA. As shown in the plot, only a small portion of these trips are fully contained within the CSP, and many connect to destinations throughout Roseville and beyond City limits. VMT generation for office space in the CSP area is likely to be higher than VMT generation for office space located more centrally within Roseville.

Evaluation of 2019 SPA Roadway Network

The City of Roseville 2035 CIP travel demand model was used to estimate cumulative AM and PM peak hour traffic volumes at the following intersections, assuming the 2019 SPA in place:

1. Blue Oaks Boulevard/Grasscreek Drive
2. Blue Oaks Boulevard/Westbrook Boulevard
3. Westbrook Boulevard/Creekview Plaza
4. Creekview Plaza Drive/Street PP (evaluated for 2019 SPA only)

These volumes are shown in **Figure 2**. As shown in Figure 2, traffic volumes on Blue Oaks Boulevard and Westbrook Boulevard would be reduced due to the changes in land use.

Figure 2 also displays the traffic volumes at Intersection 1. Using the California *Manual of Uniform Traffic Control Devices* (2016) peak hour traffic volume signal warrant, this intersection would not meet the warrant (see Appendix A). While there is sufficient traffic on the Grasscreek Drive approach to warrant a signal, there is not adequate volume on Blue Oaks Boulevard to meet the warrant. It should be noted that this version of the 2035 travel demand model does not assume the extension of Placer Parkway to Santucci Boulevard. As a result, the segment of Blue Oaks Boulevard west of Westbrook Boulevard carries approximately 15,200 daily trips. Modeling conducted for the Amoruso Ranch Specific Plan indicated that the connection of Placer Parkway to Santucci Boulevard would cause the volume on this segment to increase to 38,000 daily trips. Under such a condition, a signal would be warranted at the Blue Oaks Boulevard/Grasscreek Drive intersection. Therefore, The City and applicant should coordinate to decide the following:[1]

1. When and by whom a traffic signal should be installed, and
2. If access should be restricted to right-turns only until such time that a signal is installed.

According to the Phase 1 Lotting Study (McKay & Somps, May 16, 2018), the proposed spacing of Intersections 1 and 2 on Blue Oaks Boulevard is approximately 900 feet. City standards recommend traffic signals be spaced a minimum of 1/4-mile apart. However, exceptions to this standard have been allowed under certain circumstances. The Blue Oaks Boulevard/Grasscreek Drive intersection would be a T-intersection, meaning the majority of intersection green time would be provided for the more

[1] Due to the uncertainty of the timing of Placer Parkway, development phasing of Creekview properties, and decisions regarding how infrastructure will be funded, these discussions are warranted.

heavily traveled eastbound and westbound approaches. Therefore, installation of a traffic signal would not adversely affect progression of traffic along this segment of Blue Oaks Boulevard.

Intersection 3 (Westbrook Boulevard/Grasscreek Drive) is planned to be signalized. The proposed 2019 SPA would not alter the needed lane configurations or need for signalization at this intersection.

Intersection 4 is a planned roundabout on Creekview Plaza Drive east of Westbrook Boulevard. It would carry modest volumes of traffic and operate acceptably as a single-lane roundabout. The *Tentative Subdivision Map* (MacKay & Somps, March 2019) shows a conceptual layout of the roundabout. We recommend its final design be constructed in accordance with City standards including geometric details, accommodation of large vehicles, pedestrian facilities, etc. It is also recommended that additional analysis be conducted to review the proposed driveway (shown below) that would serve Lot C-70 due to the potential for limited sight distance due to the street's horizontal curvature.

RESOLUTION NO. 19-450

AMENDING THE GENERAL PLAN TO CHANGE THE LAND USE DESIGNATION ON CERTAIN REAL PROPERTY IN THE CITY OF ROSEVILLE AND TO CHANGE THE TEXT WITHIN THE LAND USE ELEMENT

WHEREAS, a proposal has been submitted to amend the General Plan 2035 – Land Use Map of the City of Roseville for that portion of certain real property within the City of Roseville known as the Creekview Specific Plan as follows: Community Commercial (CC) from 15.5 acres to 9.3 acres; Community Commercial/Business Professional (CC/BP) from 3.8 acres to zero (0) acres; Medium Density Residential (MDR) from 66.0 acres to 51.2 acres; High Density Residential (HDR) from 18.7 acres to 17.7 acres; and Low Density Residential (LDR) from 157.3 to 182.7 acres (Exhibit B); and

WHEREAS, changing the land use designations necessitates updates to the text related to said property within the Land Use Element of the General Plan of the City of Roseville; and

WHEREAS, the Planning Commission held a public hearing on the proposed amendments to the General Plan on September 12, 2019; and

WHEREAS, on September 12, 2019, the Planning Commission considered an Addendum to the Creekview Specific Plan Environmental Impact Report (EIR); and

WHEREAS, on October 23, 2019, the City Council held a public hearing at which time the proposed amendments were considered; and

WHEREAS, on October 23, 2019, the City Council considered the Addendum to the Creekview Specific Plan EIR; and

WHEREAS, the Council of the City of Roseville desires to approve said amendments to the Roseville General Plan as conducive to public interest, health, safety and welfare, and consistent with the land use practices of the City.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Roseville that the amendments changing the Land Use Map and the text within the Land Use Element (attached as Exhibit B) are hereby adopted.

BE IT FURTHER RESOLVED, that the Development Services Director is hereby directed to retain said General Plan Amendments on permanent public display in the Development Services Department of the City of Roseville.

PASSED AND ADOPTED by the Council of the City of Roseville this ____ day of _____, 2019, by the following vote on roll call:

RESOLUTION NO. 19-451

AMENDING THE CREEKVIEW SPECIFIC PLAN

WHEREAS, a proposal has been submitted to amend the land use designations in the Creekview Specific Plan as follows: Community Commercial (CC) from 15.5 acres to 9.3 acres; Community Commercial/Business Professional (CC/BP) from 3.8 acres to zero (0) acres; Medium Density Residential (MDR) from 66.0 acres to 51.2 acres; High Density Residential (HDR) from 18.7 acres to 17.7 acres; and Low Density Residential (LDR) from 157.3 to 182.7 acres (Exhibit C); and

WHEREAS, changing the land use designation necessitates amendments to the text related to said property within the Creekview Specific Plan (Exhibit D); and

WHEREAS, the Planning Commission held a public hearing on the proposed amendments to the Creekview Specific Plan on September 12, 2019; and

WHEREAS, on September 12, 2019, the Planning Commission considered an Addendum to the Creekview Specific Plan Environmental Impact Report (EIR); and

WHEREAS, the Specific Plan Amendment is consistent with the adopted City of Roseville General Plan, as proposed and revised; and

WHEREAS, on October 23, 2019, the City Council considered the Addendum to the Creekview Specific Plan EIR; and

WHEREAS, the Council of the City of Roseville has reviewed the findings of the Planning Commission recommending approval of the Specific Plan Amendment, and makes the following findings:

The Specific Plan Amendment is consistent with the objectives, policies, general land uses, and programs specified in the City of Roseville General Plan and the Creekview Specific Plan;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Roseville that the amendments changing the specific plan land use designations and specific plan text within the Creekview Specific Plan (attached as Exhibits C and D) are hereby adopted.

Section 1

Introduction

The Creekview Specific Plan (CSP) establishes a comprehensive land use and regulatory framework to guide development of an approximately 501.3-acre site located north and west of the West Roseville Specific Plan, north of the future extension of Blue Oaks Boulevard, in the northwest corner of the City of Roseville. The Specific Plan is within the City's Sphere of Influence and is recognized as a logical growth extension for the City.

1.1 Project Objectives

The ultimate development pattern and urban framework for the CSP are guided by the following objectives:

- **Complete Comprehensive Planning for the CSP Area:** Formulate a specific plan and related land use planning documents and regulatory approvals for the CSP as a means of expanding the City in an orderly manner, accommodates Roseville's share of future regional population growth, is compatible with surrounding land uses, complements the pattern and intensity of existing development in the City, and provides new benefits to the City.
- **Mix of Land Uses:** Create a comprehensively planned, residential-based community with a mix of land uses within the CSP to create a balanced community with approximately 2,000 residential units, commercial and business professional uses, parks and open space and supporting public/quasi-public uses.

- **Existing Policies:** Satisfy the City policies, regulations and expectations as defined in the General Plan, City/Placer County Memorandum of Understanding (MOU), City/U.S. Fish and Wildlife Service (USFWS) MOU, Growth Management Visioning Committee recommendations, Council Edge Policy, Zoning Ordinance, Improvement Standards, and other applicable plans, documents, and programs adopted by the City.
- **Blueprint Consistency:** Provide for development which meets the City's nine identified Blueprint implementation strategies to achieve the Blueprint Principles adopted by the City Council in June 2005. Achieve project design characteristics reflective of the general policy direction embodied in the City's adopted General Plan and Blueprint Implementation Strategies, including connectivity among neighborhoods, commercial uses, and schools and parks.
- **Housing Opportunities:** Plan for approximately 2,000 residential units to provide housing choices in varying densities to respond to a range of market segments, including opportunities for rental units and affordable housing consistent with the City's General Plan.
- **Regional Housing Needs Allocation:** Aid the City in meeting its obligation to accommodate a percentage of future population growth in the region (as embodied in the Regional Housing Needs Allocation [RHNA] identified by the Sacramento Council of Governments [SACOG] and the California Department of Housing and Community Development [HCD]) by increasing the residential holding capacity in an area identified as appropriate for such development in the City/County MOU, the SACOG Blueprint Project Preferred Alternative (December 2005), and the Creekview Specific Plan Feasibility Analysis (2007).
- **Community Form:** Shape the physical form and character of development that is functional and creates a sense of place in order to:
  - Create a land use transition and connection from the existing City of Roseville westerly to the Johnson Wildlife Area.
  - Organize neighborhoods to be identifiable and walkable, and to incorporate gathering places such as commercial areas, parks, and schools; and
  - Provide adequate school services to students generated in the CSP area.

- **Area Roadways:** Provide a safe and efficient circulation system that interconnects uses and promotes pedestrian circulation and alternate transportation options. Create a circulation network which complements north/south and east/west circulation routes.
- **Pedestrian and Bicycle Connections:** Provide connections via a system of open space, creek crossings, paseos, and Class IA bikeways. Develop a system of Class I and II bikeway facilities to provide an alternative transportation mode and connect with planned City bikeway facilities on adjacent lands.
- **Public Transportation Options:** Through implementation of City arterial and collector street improvement standards, provide the opportunity to install fixed-route bus stops and transit facilities in support of the City's overall transit planning efforts.
- **Resource Avoidance:** Design a land use plan where the development footprint avoids impacts to wetland resources to the extent feasible. In consultation with resource agencies, develop a plan that avoids and preserves the highest quality wetland resources on-site.
- **Resource Management:** Append the CSP to the City's Open Space Preserve Overarching Management Plan to ensure open space preserve areas are managed consistent with the City's strategy.
- **Contribute to Regional Preserve Planning:** Create open space preserves that provide regional benefit for habitat, resources and open space amenities.
- **Habitat Conservation & Creation:** Balance development with resource protection, including preservation of the creek corridors, sensitive habitat and wetland resources in an inter-connected, permanent open space. Create multi-functional habitat within the open space corridors which provide on-site habitat and contribute to water quality. Develop the CSP and associated on- and off-site mitigation to complement the Placer County Conservation Plan (PCCP).
- **Pleasant Grove Creek Enhancement:** Design improvements to the Pleasant Grove Creek corridor to minimize potential for flood damage by providing for the safe movement of floodwaters through the City and preserve, protect and enhance the natural habitat, open space and recreational values found along the City's floodplain and creek environments.
- **Fiscal Contribution:** Include a mix of land uses and facilities which are fiscally feasible and implement funding mechanisms to maintain a neutral/positive fiscal impact to the City's General Fund.

- **Long Term Growth:** Plan for long-term growth to be positioned to react to market demand. The CSP is intended to guide development over a 20-year horizon.
- **Roseville Energy Park:** Orient land uses in the CSP to be compatible with the Roseville Energy Park facilities and other intensive public uses located adjacent to the Roseville Energy Park.
- **Program-Level Objectives for Urban Reserve Parcel:** The objective for the Urban Reserve (Harris) parcel is to provide a platform for orderly and systematic future development consistent with General Plan policies, Guiding Principles and the natural features of the land. The property is a logical location for future growth as identified in the City of Roseville and Placer County MOU. The program-level analysis in the EIR will provide a basis for the City to carry out a comprehensive planning process to ensure the area ultimately develops to City of Roseville standards. In addition, the inclusion of the Urban Reserve parcel in the CSP will allow the City to adequately plan for and size future infrastructure appropriately. No additional or specific project objectives have been identified for the parcel because there are no specific development plans or proposals for the parcel at this time.

1.2 Specific Plan Tool

A specific plan is a planning and regulatory tool intended to implement a city or county general plan through the development of policies, programs, and regulations which provide an intermediate level of detail between the general plan and individual development projects. The CSP is the primary land use, policy, and regulatory document used to guide the overall development of the site. The CSP establishes a development framework for land use, circulation, utilities and services, resource protection, and implementation. The intent is to promote the systematic and orderly development of the site, consistent with the overarching vision for the community. All subsequent development projects and related activities are required to be consistent with the CSP.

The authority to prepare and adopt specific plans and the requirements for content are set forth in Sections 65450 through 65457 of the California Government Code (Planning and Zoning Law). As a mechanism for the implementation of the goals and policies of the City General Plan, State law stipulates specific plans can only be adopted or amended if they are consistent with the jurisdiction's adopted General Plan. This specific plan is consistent with the policies of the City of Roseville 2025 General Plan, as well as other applicable State and local regulations.

1.3 Specific Plan Organization

The Creekview Specific Plan document is organized into the following chapters:

Chapter 1 Introduction. Summarizes the purpose, organization, authority, and objectives of the specific plan and related documents.

Chapter 2 Context. Describes the site location and setting, and identifies the features and policy objectives which influence the design and location of land uses and project features.

Chapter 3 Vision and Principles. Identifies overarching vision, organizing principles, and community form elements which shape the CSP.

Chapter 4 Land Use Plan. Identifies the land use plan and corresponding land use designations.

Chapter 5 Affordable Housing Plan. Outlines an affordable housing program, identifying the location and distribution of affordable units.

Chapter 6 Circulation Plan. Describes the circulation system for movement of vehicles, pedestrians, bicyclists, and transit.

Chapter 7 Public Services Plan. Identifies public services including parks open space, schools, library, police and fire services.

Chapter 8 Utilities Plan. Describes water, wastewater, recycled water, storm drainage, electric, natural gas, and solid waste services.

Chapter 9 Resource Management. Describes existing resources and approach to protect biological, open space, and cultural resources.

Chapter 10 Implementation. Describes various specific plan-related documents, the phasing plan, financing of public improvements, subsequent approval actions, amendment procedures, and unit and square footage transfers.

Appendix A Development Standards. Describes applicable zoning and development standards for the CSP and identifies residential housing types which could be accommodated in the RS/DS zone.

Appendix B Design Guidelines. Describes design attributes for consistent streetscapes, entry features, walls, fencing, identification signage, and other common landscape elements and other site specific considerations.

1.4 Related Documents

Several documents work in tandem with this Specific Plan to provide policy guidance for implementation of the project. Existing documents including the City's General Plan, Municipal Code, Community Design Guidelines, Design and Construction Standards, Storm Water Design Manual, Open Space Preserve Overarching Management Plan, and various City master plans (i.e., parks, utilities, bikeways, open space preserves, etc.), have been previously adopted by the City and are actively used to plan for, and implement, development projects. In addition, concurrent with adoption of the CSP, General Plan amendments, development agreement, large lot subdivision map, and an environmental impact report, including a mitigation monitoring and reporting plan, were approved, each providing guidance for the ultimate buildout of the CSP.

The application and deviation from these documents and master plans are further discussed in Chapter 10, Implementation.

Section 2

Context

The Creekview Specific Plan (CSP) is located in southwestern Placer County. The CSP is bounded by the planned extension of Blue Oaks Boulevard (along the Phillip Road alignment) within the West Roseville Specific Plan (WRSP) on the south, the Fiddyment Ranch portion of the WRSP to the east, the Amoruso Ranch Specific Plan to the north, and the City of Roseville's Al Johnson Wildlife Area property to the west. ~~Agriculturally-zoned properties within unincorporated Placer County are located north of the CSP.~~ The Roseville Energy Park and the WRSP are located south of the CSP, south of the future Blue Oaks Boulevard alignment. The City of Roseville is located on the Interstate-80 corridor and the CSP is located approximately in the northwest portion of the City, as shown on Figure 2-1, Regional Context and

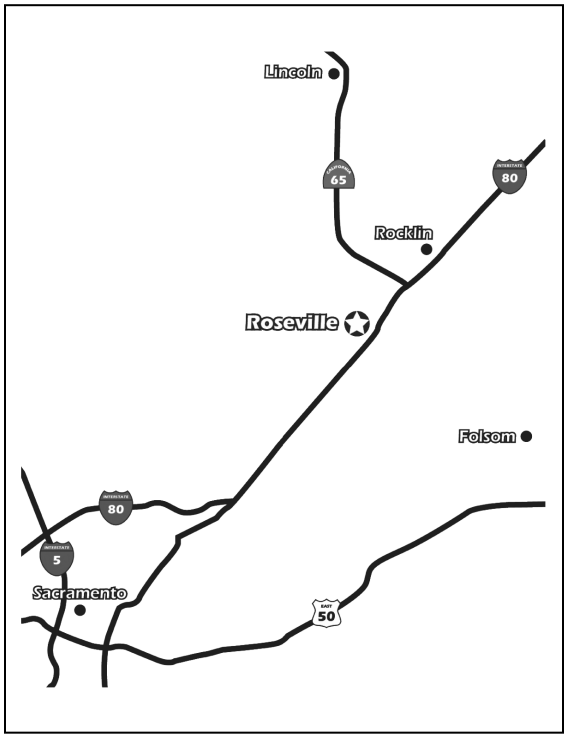

Figure 2-1: Regional Context

Figure 2-2: Plan Area Location [UPDATED EXHIBIT]

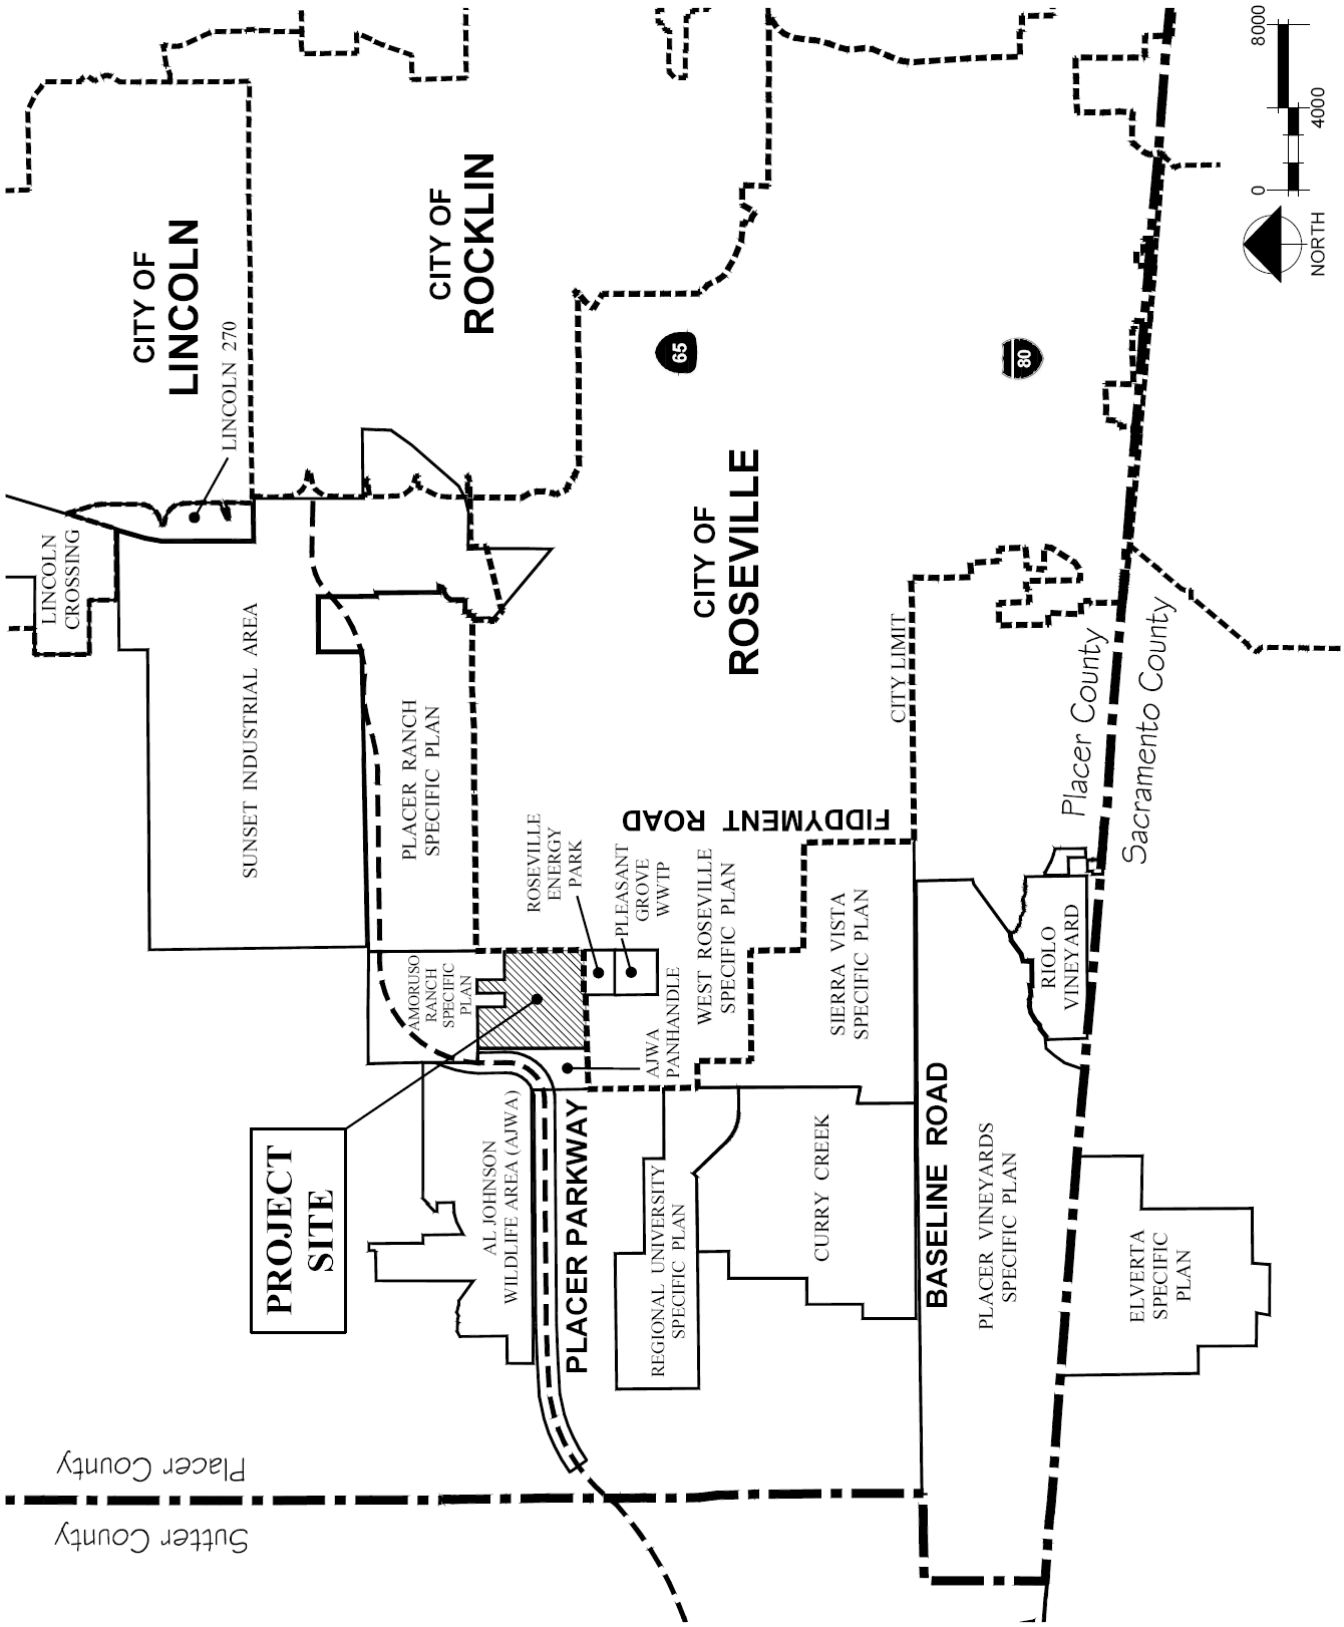

Figure 2-2, Plan Area Location. At the time of specific plan approval, the CSP site was within unincorporated Placer County and within the City of Roseville's sphere of influence.

2.1 Project Setting

A. Regional Setting

During the 1990's and through the mid-2000's, the six-county region including the City of Roseville experienced significant growth. While the pace of new development slowed after 2005, according to the Sacramento Area Council of Governments (SACOG), the region is expected to add over 1-million jobs and 800,000 residential units by the year 2050. A majority of the growth is expected to occur adjacent to existing urbanization, a large portion of which is projected for the cities of Elk Grove, Folsom, Sacramento, and Roseville. As the region grows, there will continue to be strong demand for residential development in the Roseville area, particularly as the City continues its role as a major employment center in the region.

Figure 2-2 shows the location of several other master planned developments in proximity to the CSP. Each development proposal incorporates a mix of land uses, such as residential, commercial, office, park, school, university, and public/quasi-public uses. These include:

- **Placer Vineyards Specific Plan**, a 5,230-acre project located immediately southwest of Roseville, south of Baseline Road. This project was approved by the Placer County Board of Supervisors in July 2007.

- **Regional University Specific Plan**, a 1,157-acre project located southwest of CSP, along the planned extension of Watt Avenue/Santucci Boulevard. This project was approved by the Placer County Board of Supervisors in December 2008.

- **Sierra Vista Specific Plan (SVSP),** a 2,064-acre project located south of the WRSP, north of Baseline Road and west of Fiddyment Road. The project includes 6,650 units and 215.9 acres of commercial and office uses. The SVSP was approved by the City of Roseville in May 2010.

- **Placer Ranch Specific Plan**, a 2,213-acre project located north east of the CSP, adjacent to the Roseville City limits and the WRSP area. It could include a new California State University campus and a mix of residential, office and commercial uses. This ~~plan~~ proposed plan is ~~currently on hold and is not actively~~ being processed by Placer County.

- **Amoruso Ranch Specific Plan (ARSP)~~Study Area~~,** an approximately ~~660~~695-acre land area located immediately north of the CSP area and west of the proposed Placer Ranch Specific Plan area is a mixed-use project

that includes 2,827 residential units and approximately 51 acres of commercial uses. The ARSP was approved by the City of Roseville in 2016 and subsequently annexed in 2018. ~~designated as a future study area. At the writing of this specific plan document, Brookfield Land Company has expressed interest in annexing the Amoruso Ranch area into the City of Roseville.~~

Another future project, not yet planned, but included as geographic areas of interest for development include:

- **Curry Creek Community Plan,** an approximately 4,189-acre land area located in unincorporated Placer County to the west of the SVSP.

In addition to the planned development projects noted above, the WRSP is located west and south of the CSP. The WRSP is a 3,100-acre project with 8,633 units which was approved and annexed by the City of Roseville in 2004 and began construction in 2005. It is partially constructed.

B. Site Conditions and Uses

At the time of CSP approval, the site was primarily undeveloped. The area south of the creek is characterized by flat and open annual grassland areas and north of the creek are grasslands on gently-rolling topography. Pleasant Grove Creek and associated riparian corridor and oak woodland traverse the site diagonally in a northwesterly direction. A tributary of Pleasant Grove Creek, University Creek, is located in the northern portion of the site. Seasonal wetlands, including vernal pools and seasonal drainages are dispersed with a concentration in the northern section of the site.

Trees are concentrated along the Pleasant Grove Creek corridor and scattered in the northern portion of the site near University Creek. Riparian vegetation surrounds Pleasant Grove Creek and native oaks are present along Pleasant Grove and its tributaries. Previous on-site uses consisted of limited agricultural enterprises such as grazing and dry farming. Two residences and out structures associated with past agricultural activities exist on the site, generally in the central portion of the site, accessible from Phillip Road. Two small bridge structures crossing Pleasant Grove Creek are located in the southeast portion of the site. Grass fires have impacted vegetation and structures.

2.2 Factors Influencing the Specific Plan

The CSP development plan was influenced by several factors, which are reflected in the organization and mix of land uses and location of roadways on the land use plan. Some of these factors were physical, with the development plan influenced by existing natural features which create various site constraints or site opportunities. Other factors influencing the Specific Plan were reflective of City policies (General Plan, Blueprint implementation strategies,

etc.), and the City and developer's individual objectives. The following sub-sections summarize the key factors, opportunities, constraints, and regulatory context in which the development plan for CSP was created.

A. Site Opportunities and Constraints

The site's location, natural and man-made features, and proximity to newly urbanizing areas provide significant opportunities for the form and organization of land uses and roadways within the CSP.

- **Pleasant Grove Creek.** Pleasant Grove Creek transects the property diagonally, through the center of the CSP. The creek corridor is an opportunity to create a linear open space amenity to function as a natural feature and connection through the CSP. The creek corridor provides scenic vistas from adjacent land uses and a sense of openness to adjacent neighborhoods. As a linear feature, the creek corridor is ideal for passive recreation including a pedestrian and bicycle path to connect to the City's existing path system in the WRSP and ultimately to the Al Johnson Wildlife Area, west of the CSP.

  Historic farming practices have created a man-made constriction of the creek, immediately downstream of the CSP. The constriction creates a bottleneck in the conveyance of floodwaters that creates a floodplain condition. This setting is an opportunity to reclaim the historic floodplain of Pleasant Grove Creek by constructing a bypass channel immediately adjacent to the creek channel. The bypass channel would improve stormwater conveyance, provide opportunities for stormwater treatment and enhance existing riparian vegetation within the creek corridor.

- **Natural Resources.** A variety of wetland types are located on the CSP including vernal pool complexes, drainage swales and stream corridors. The greatest concentration of resources and the highest quality resources are in the northern portion of the site. These features constrain development of some land uses and provide opportunities for other uses – such as open space. Wetland features in the northern portion of the site have been avoided and preserved within the Northern Preserve and create an open space buffer transition along the northern edge of the CSP. The Northern Preserve offers open space amenities, passive recreation and a pedestrian/bike trail. The limits of the Northern Preserve and the northern alignment of Westbrook Boulevard were identified in consultation with state and federal resource agencies.

- **Al Johnson Wildlife Area.** The City of Roseville's 1,700-acre Al Johnson Wildlife Area (AJWA)

property is located immediately west of the CSP. The AJWA property is undeveloped and planned for a regional flood control project as well as compatible recreation and environmental restoration features. The CSP was designed to relate to planned uses in the AJWA. The CSP includes construction of stormwater conveyance and treatment facilities within the Pleasant Grove Creek corridor which will extend west to AJWA and further the City's overall flood control and restoration goals. Multi-use paths within CSP are located along the creek corridor and streets connect to future path systems in the AJWA. The CSP is the link between existing uses within the City and amenities planned at AJWA. The AJWA will also provide open space along the western edge of the CSP.

- **Blue Oaks Boulevard and Westbrook Boulevard Corridors.** In planning for anticipated growth in western Placer County through the year 2050, Blue Oaks Boulevard and Westbrook Boulevard are components of the area circulation network. Blue Oaks Boulevard is an east/west travel corridor extending from Highway 65, west through Roseville and will ultimately link to future Placer Parkway, west of the CSP. Westbrook Boulevard is a north/south travel corridor extending from Baseline Road, north through the Sierra Vista and West Roseville Specific Plans and through the CSP. The CSP incorporates segments of these corridors and provides land uses and densities compatible with roadways of this scale. The CSP orients higher density and non-residential uses along these roadways, with an emphasis of high-density residential uses and the commercial/employment node at the intersection of Blue Oaks and Westbrook Boulevards.
- **Roadways.** The placement, alignment, and design of roadways within the CSP were influenced by pre-existing conditions. Roadway connections to the CSP respond to existing and planned roadways adjacent to the site, which include Blue Oaks Boulevard, Westbrook Boulevard, Westpark Drive, and Holt Parkway. CSP's major roadways are planned as one component of an overall regional traffic planning solution for western Placer County, enabling future regional connections (i.e. to proposed Placer Parkway) and north/south and east/west links to complete the City's circulation network.
- **Adjacent Neighborhoods.** The WRSP area is located on the eastern edge and a portion of the southern edge of the CSP. The eastern edge of the CSP is adjacent to neighborhoods planned within the Fiddyment Ranch portion of the WRSP. Land uses, residential densities and the circulation pattern along the

eastern edge of the CSP were influenced by the land use pattern of planned neighborhoods in Fiddyment Ranch. The southern boundary of the CSP is defined by the future extension of Blue Oaks Boulevard. The Westpark portion of the WRSP and undeveloped properties owned by the City of Roseville are located in the area south of the future extension of Blue Oaks Boulevard.

- **Roseville Energy Park.** The Roseville Energy Park (REP) is located south of the CSP, south of the planned extension of Blue Oaks Boulevard. The REP is a 160-megawatt power generation facility operated by the City of Roseville. The REP typically provides between 40 and 60 percent of the City's current electricity needs, depending on alternative economic power market opportunities, and is an important part of the City's sustainable infrastructure. The CSP land use pattern was designed with consideration of land uses compatible with the REP. Non-residential land uses (commercial, office, public/quasi-public, open space) are located along Blue Oaks Boulevard to minimize potential incompatibilities.

B. Blueprint

The Sacramento Region Blueprint Transportation Land Use Study was a regional planning effort initiated by the Sacramento Area Council of Governments (SACOG) in 2002 which examined how transportation and land use planning could be better linked to accommodate future growth. Through a two-year process, SACOG, in association with participating jurisdictions in the six-county region (including Roseville), developed a number of land use scenarios, depicting how the region could accommodate an anticipated additional population of 1.7 million people and associated homes and jobs by the year 2050. The effort culminated in December 2004 when SACOG adopted a "Preferred Blueprint Scenario" for growth in the region's six counties. For Placer County, the preferred scenario anticipated a significant portion of future growth would occur in the western portion of the County's "greenfields," between Roseville's western limits and the eastern edge of Sutter County. SACOG's Preferred Blueprint Scenario included six key growth principles, which directly apply to newly-developing greenfield areas:

- **Transportation Choices:** To provide alternative modes of transportation to the automobile and create land use patterns to encourage people to walk, ride bicycles, ride public transit, and carpool.
- **Mixed-Use Developments:** To establish places where mixed-use development can occur in an effort to provide a variety of goods and services in proximity to residential uses, and further, to support

alternative transportation modes such as walking and biking.

- **Compact Development:** To utilize land in a more efficient manner by creating environments that are more compactly built, thereby reducing reliance on the automobile and encouraging walking, biking, and use of public transit.
- **Housing Choices:** To provide residents with opportunities for a mix of housing choices, which include apartments, condominiums, townhouses, and single-family detached homes on varying lot sizes, which collectively respond to multiple demographic, pricing, and market segments.
- **Natural Resource Conservation:** To conserve and preserve natural resource areas, including prominent vernal pool concentrations and drainages, through the designation of permanent open space.
- **Quality Design:** To foster attractive communities with a strong sense of place, to use land efficiently.

In support of this regional effort, in May 2005, the City of Roseville adopted a set of Implementation Strategies to guide both infill and greenfield development projects in Roseville. These strategies are intended to encourage several "smart growth" development principles which were outcomes of the Blueprint effort. The CSP incorporates elements of these smart growth principles in support of the City's adopted Blueprint Implementation Strategies. Specifically, the plan offers higher density neighborhoods, fosters transportation choices with provisions for bikeways and commercial corridors in support of transit, and promotes more compact development with a variety of housing choices for multiple market segments. These strategies are defined in greater detail throughout Chapter 3, Vision and Principles, and Chapter 4, Land Use.

C. General Plan Growth Management Policies

Guiding Principles

The City's General Plan Growth Management Element includes several "Guiding Principles" to direct the City's review of new development proposals located outside the City's corporate boundaries. The intent of these principles is to ensure new development meets or exceeds the City's existing policies, standards, and expectations, and does not unduly impact services to existing City residents. While some of the Guiding Principles address the City's governmental services and long-term fiscal sustainability, other principles address matters that guide the physical form of the CSP land use plan. These include provisions to:

- Maintain the integrity of existing neighborhoods and create a sense of place in new neighborhoods.

- ❑ Aid in regional traffic solutions and in right of way preservation.
- ❑ Incorporate mechanisms to ensure new schools are available to serve the residents and shall not impact existing schools.
- ❑ Include a significant interconnected public open space component/conservation plan in coordination with the City of Roseville/ U.S. Fish and Wildlife Service Memorandum of Understanding.

Western Edge

The City's General Plan Growth Management Element includes several policies intended to provide for a 'distinctive edge' and 'physical and visual transition area' between the City and County lands to the west. These policies state:

> *"Development proposed on the western edge of the City shall provide a distinctive open space transition to create a physical and visual buffer between the City and County to assure that the identity and uniqueness of the City and County will be maintained."*
>
> *"As new development is proposed in City's Sphere of Influence to the west of Fiddyment Road, require project proponents to provide a transitional area between City and County lands, through a system of interconnecting Open Space land areas."*

The CSP supports the City's Growth Management policies related to the Guiding Principles for new development and the creation of a distinctive western edge, which are represented in the final design and form of the new community. The CSP is bound on the west by the City's 1,700-acre AJWA property where the City is undertaking development of a regional stormwater retention project. In addition, there are future opportunities for recreational uses compatible with the retention basin facility. A separate portion of the AJWA property is used as an environmental preserve. The AJWA property creates a natural, distinctive edge to the west side of the CSP.

D. Growth Management Visioning Committee

The Roseville City Council enacted the Growth Management Visioning Committee (GMVC) in August 2004 to develop a vision to guide the City's growth through the year 2025. The committee was formed partially in response to a growing number of large-scale development proposals being considered in unincorporated land areas adjacent to the City. The goal was to gain a high-level understanding of the potential impacts which planned growth could have on the City's character, quality of life, boundaries, and population. Through extensive public involvement and facilitated meetings, the GMVC developed a vision for Roseville's future. The vision was supported by several growth management policy concepts and action steps recommended to implement the vision. The GMVC's report and

recommendations were approved by the City Council in 2005.

E. City/County Memorandum of Understanding

In 1997, the County of Placer and City of Roseville entered into an agreement regarding the future development of a 5,540-acre 'transition area' west of Fiddyment Road and north of Baseline Road, adjacent to Roseville's western city limits in Placer County. The CSP, south of Pleasant Grove Creek, is within the MOU Transition Area. In 2010, the agreement was refined to, among other things, include all of the CSP. This MOU is intended to promote interagency communication and to foster cooperative land use planning within the transition area. The MOU specifies the mutually-agreed-upon requirements for processing development applications within the transition area, and allows development applications to be processed either by the County or the City. Its terms include provisions for City/County consultation and review, application submittal, mitigation of project impacts, and minimum development standards. The CSP was processed in accordance with the City/County MOU.

F. Resource Agency Early Consultation

In August 2000, the City and the United States Fish & Wildlife Service (USFWS) entered into a Memorandum of Understanding (MOU) to prepare a Habitat Conservation Plan (HCP) or equivalent to minimize incidental take of vernal pool species from future City growth. Consistent with this agreement, the City of Roseville, the CSP Landowners, the USFWS, the US Army Corps of Engineers, and the U.S. Environmental Protection Agency (EPA) conducted an extensive early consultation process. The group met on over fifteen occasions and conducted field trips to review on-site resources and off-site mitigation properties with the following objective: to reach basic agreement on a land use plan and mitigation strategy which could be permitted under Section 404 of the Clean Water Act utilizing a Section 7 Consultation process for Endangered Species Act compliance. Feedback received through this process influenced the land use plan and resulted in additional and expanded avoidance areas.

Section 3

Vision and Principles

The vision for the Creekview Specific Plan (CSP) is to create a new community that meets or exceeds the City's development standards through amenities and services, and distinguishes itself through an efficient design and development pattern. The CSP is the smallest of the City's specific plans and is designed as a residential community.

The CSP is bound on the west by the City-owned 1,700-acre Al Johnson Wildlife Area (AJWA) property and on the east and south by the West Roseville Specific Plan (WRSP). In this position, the CSP completes the land use pattern and makes connections between existing development in the City and AJWA. These connections include the creation of urban land uses, expansion of open space preserves, new circulation linkages, and extensions of the City's extensive pedestrian and bicycle network.

Building upon Roseville's established growth patterns, the CSP supports the City's implementation of smart growth principles rooted in SACOG's Regional Blueprint. In addition to advancing the City's efforts to meet its fair share obligation of the region's housing needs, the CSP demonstrates an emerging approach to development which results in a more efficient use of land, with higher densities and significant open space preservation.

The land use plan for CSP includes a diversity of housing types, compact design, a local-serving community commercial node with office and business professional uses, efficient

vehicular, pedestrian and bicycle circulation, resource conservation and proximate access to parks and open space.

3.1 Community Form

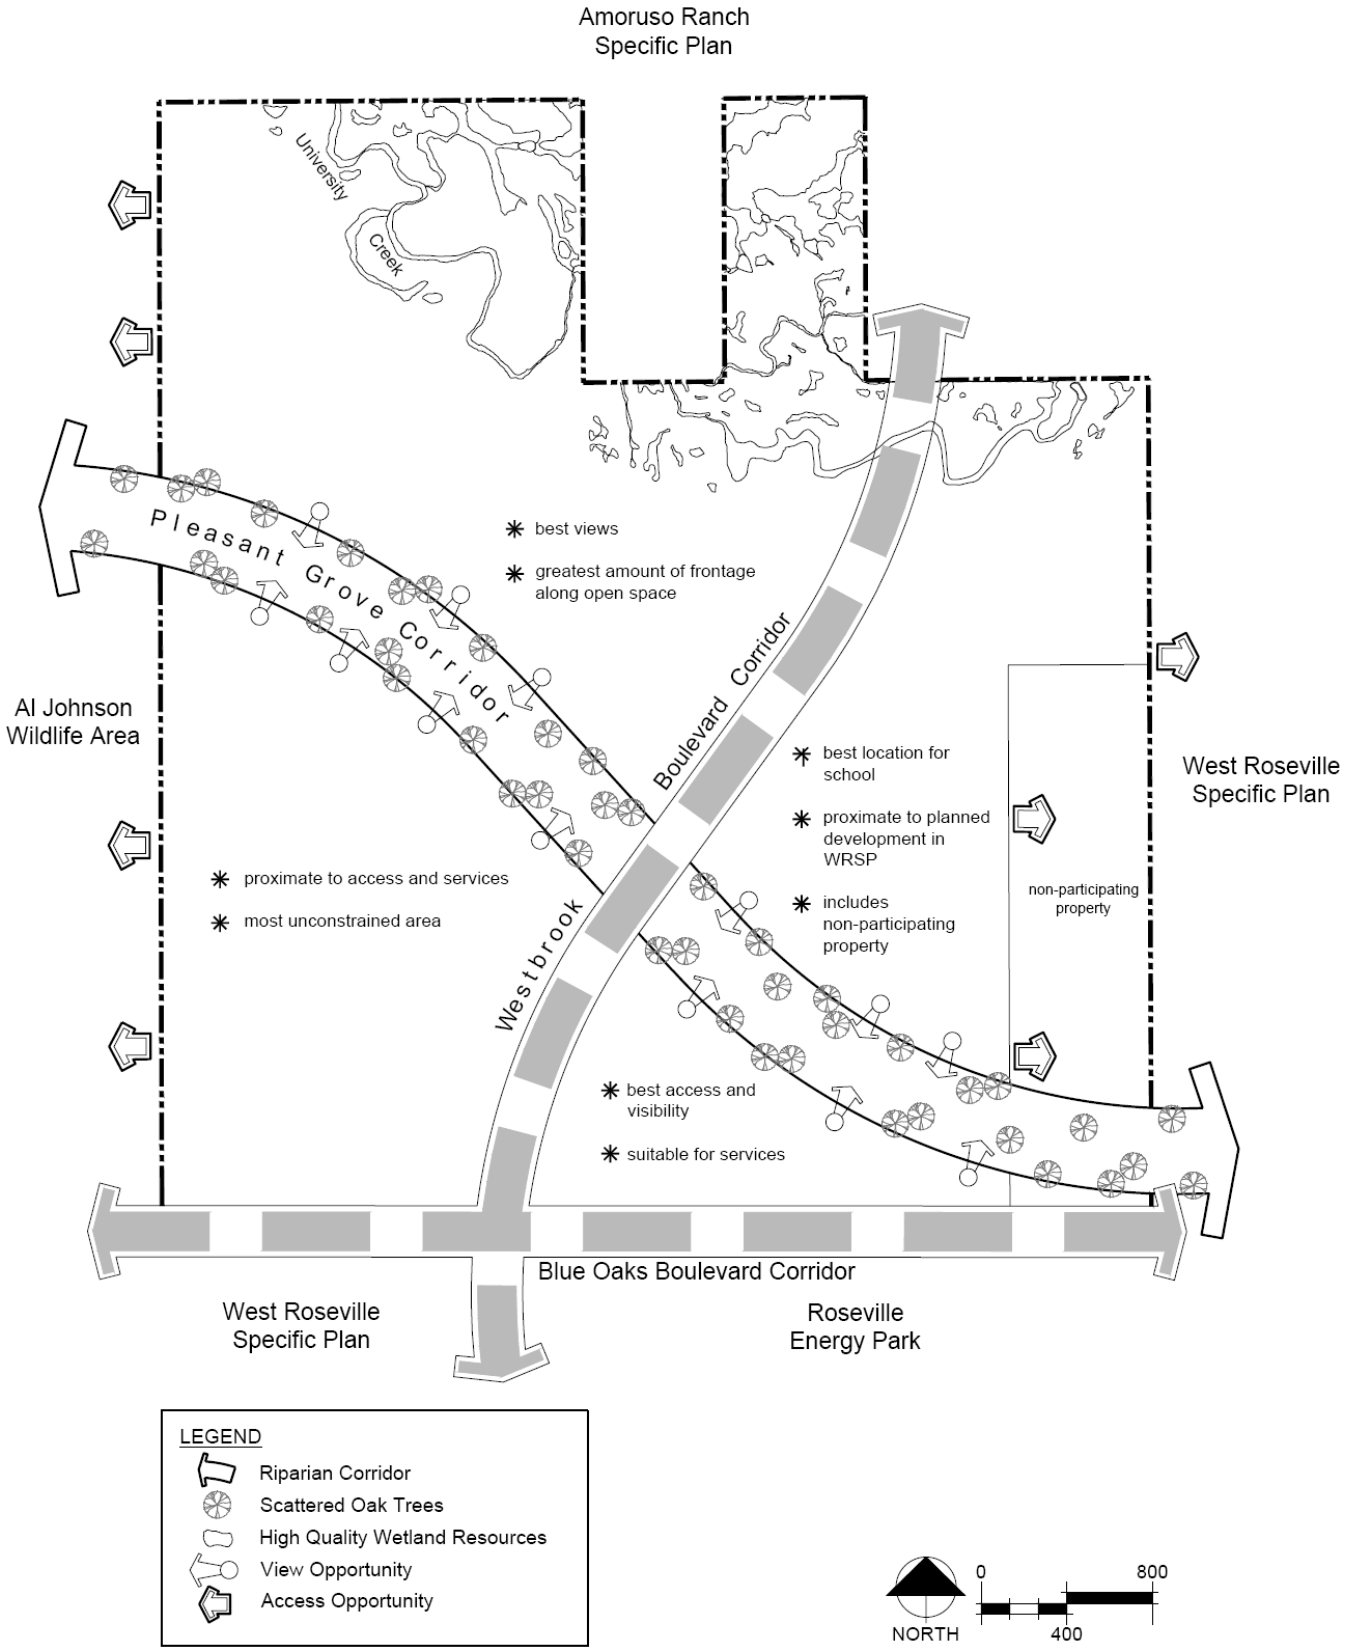
The physical form and development pattern of the CSP is shaped by site opportunities and constraints and policy factors described in Chapter 2, Context. Factors influencing the community's form include existing site features and natural resources (to address feedback from resource agencies regarding resource avoidance), adjacent development patterns and roadways, the City's Guiding Principles for new development west of Fiddyment Road, Blueprint principles, and the Growth Management Visioning Committee's vision.

3.2 Community Form Elements

The overall CSP land use plan is shaped by four overarching form elements. The elements influencing the community form in each of these quadrants are described below and shown on Figure 3-1.

- ❑ Blue Oaks/Westbrook Mixed Use Node
- ❑ Residential Neighborhoods
- ❑ Parks and Open Space
- ❑ Circulation Systems

Figure 3.1: Community Form Elements [UPDATED EXHIBIT]



A. Blue Oaks/Westbrook Commercial

The intersection of Blue Oaks Boulevard and Westbrook Boulevard creates the site's best opportunity for a commercial node featuring ~~community~~ commercial~~, business professional~~ and residential uses. The triangular area is bound by Pleasant Grove Creek and Blue Oaks and Westbrook Boulevard – two arterial roadways.

The Community Commercial ~~and Business Professional~~ site will support approximately ~~190,000~~ 100,000 square feet of uses which ~~will~~ could include local-serving retail and office uses such as a grocery store, drug store, retail services, restaurants, personal services and professional offices.

~~Medium density r~~Residential uses (Parcels C-16, C-17, and C-43 ~~C-24 and C-25~~) are adjacent to ~~wrap around the top of~~ the community commercial site ~~and business professional sites~~ and together they create a mixed use node where ~~higher-density~~ residential uses are proximate to ~~employment and~~ services.

Residents west of Westbrook Boulevard and north of the creek are within a one-quarter mile walk of the commercial area. Neighborhoods in the plan are connected to the mixed use node by a unique system of walking paths and trails, and bridges over Pleasant Grove Creek.

B. Residential Neighborhoods

CSP's residential neighborhoods are a significant element of the community. The design criteria for residential neighborhood development focus on the public realm (the street) and how it relates to the private realm (the home). This is accomplished with a combination of residential development standards, neighborhood design guidelines, and roadway design standards. These standards and guidelines are aimed at achieving the following outcomes in residential neighborhoods:

- ❑ Narrower collector streets with on-street parking, where appropriate, which calm traffic;
- ❑ Opportunities for landscape paseos along collector street edges, planted with trees with tall and wide canopies, which provide shade, define the public realm and create a neighborhood scale for pedestrians;
- ❑ Paseo systems with sidewalks separated from the street with minimal interruptions and provide connectivity among residential neighborhoods;
- ❑ Living spaces and porches which may be oriented to the street and enhance each home's architectural streetscape appearance;
- ❑ Smaller parks within the residential neighborhoods to create places and hubs for activities and gathering;
- ❑ Subdivision walls which open to adjacent streets to allow multiple connections and visual connectivity;
- ❑ Connectivity among all neighborhoods via landscape corridors, paseos, and creek crossings.

The residential neighborhoods are generally divided by the geography of the site into four irregularly-sized quadrants. Each of the four quadrants has constraints of its own including adjacent land uses, natural resources and circulation requirements.

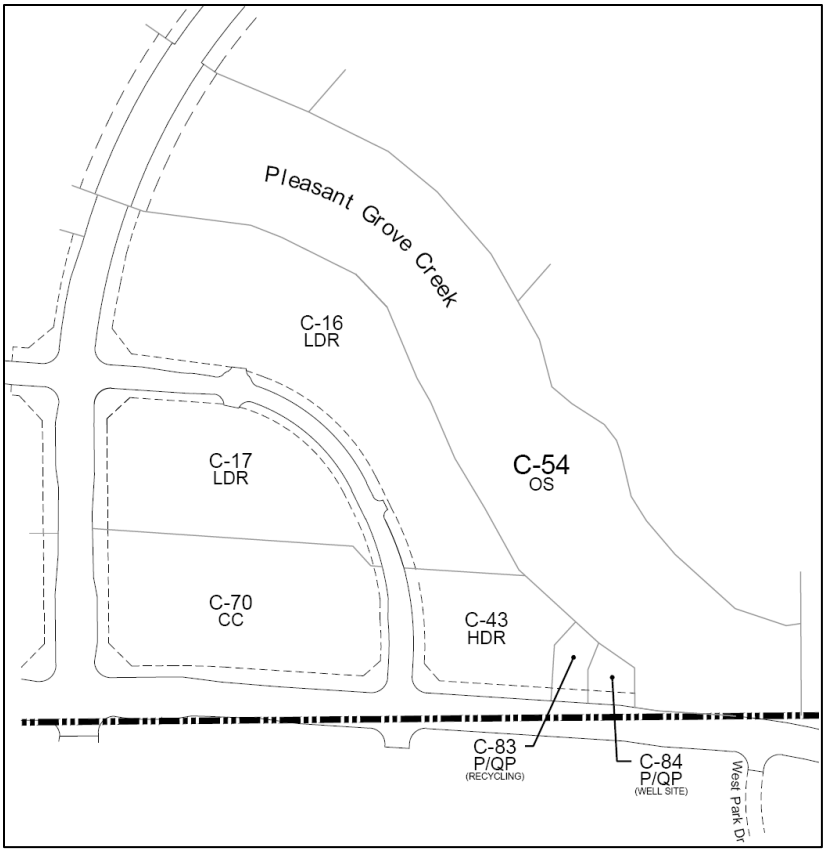
Southeast Quadrant

The southeast quadrant is bounded by Pleasant Grove Creek open space area, Westbrook Boulevard and Blue Oaks Boulevard which create a triangular-shaped area. Creekview Plaza provides access to uses in this quadrant.

Land uses in this quadrant benefit from access and proximity to two arterial roadways – Westbrook Boulevard and Blue Oaks Boulevard. Uses in this area were selected and positioned to be compatible with the Roseville Energy Park, which is located south of Blue Oaks Boulevard.

This mixed use area includes low density (C-16 and C-17) and ~~medium~~ high density (C-43) residential uses ~~(C-23 and C-24)~~ in close proximity to community commercial ~~and business professional~~ uses. The residential ~~is~~ uses are adjacent and oriented to open space with access to the pedestrian/bike trail. A pedestrian bridge crossing creates a link to land uses north of the creek.

[UPDATED EXHIBIT]

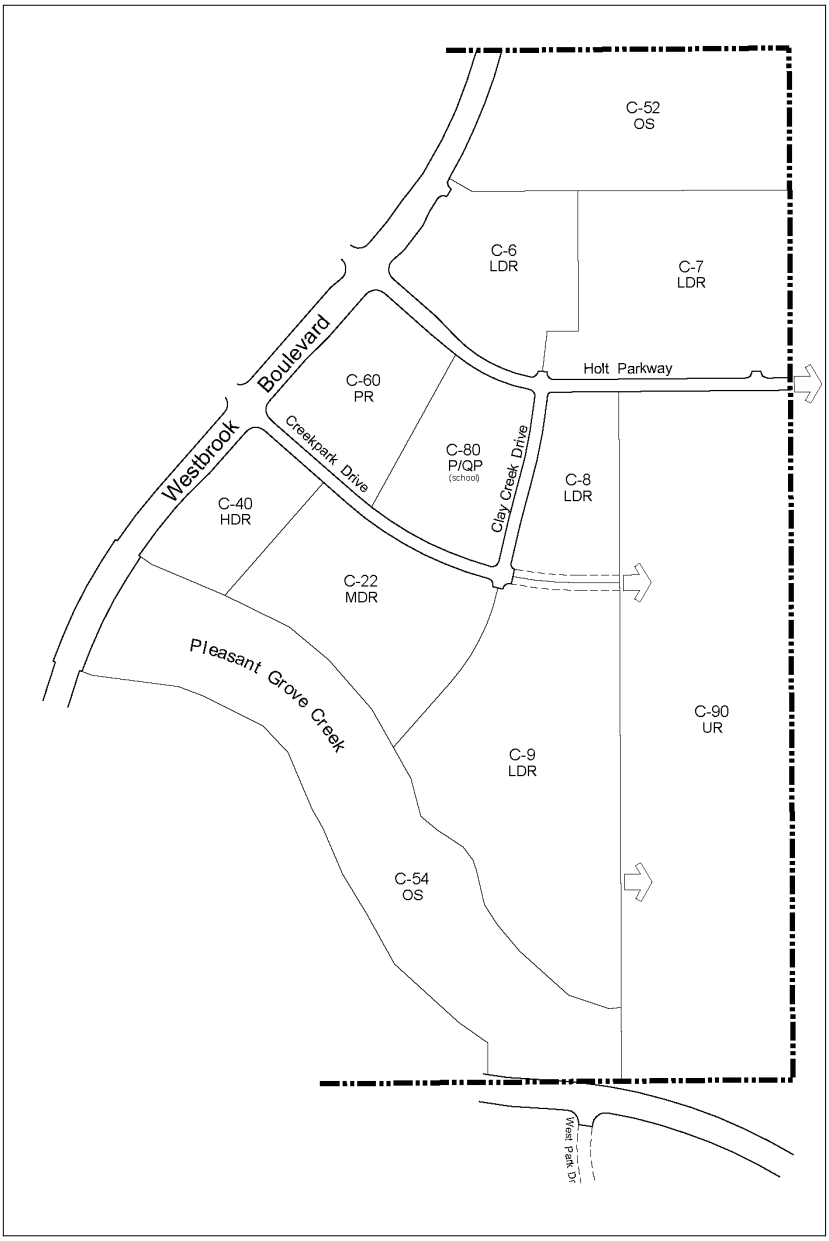


Northeast Quadrant

Most of the eastern portion of the CSP is included in the northeast quadrant. It is bordered by Westbrook Boulevard, Pleasant Grove Creek and the eastern edge of the CSP. The CSP is adjacent to residential uses in the Fiddyment portion of the WRSP and land uses in this area are designed to be compatible. The 39.9-acre Urban Reserve parcel (C-90) is the predominant use along the border of the CSP with Fiddyment and is anticipated to develop in the future with a mix of residential, open space and park uses.

The primary feature is the activity hub created by the elementary school (C-80) and neighborhood park (C-60). The circulation pattern is designed for efficiency as it relates to school and park-related traffic. Access to this portion of the CSP is available from Westbrook Boulevard and Holt Parkway, a limited access collector, which provides access from Fiddyment west to Westbrook Boulevard. Additional connections are made on residential streets.

The northern open space (Northern Preserve) and Pleasant Grove Creek bound this area on the north and south, respectively, and provide opportunities for views and access to open space. The intent is for some single-loaded streets to provide some public views of these open space areas.



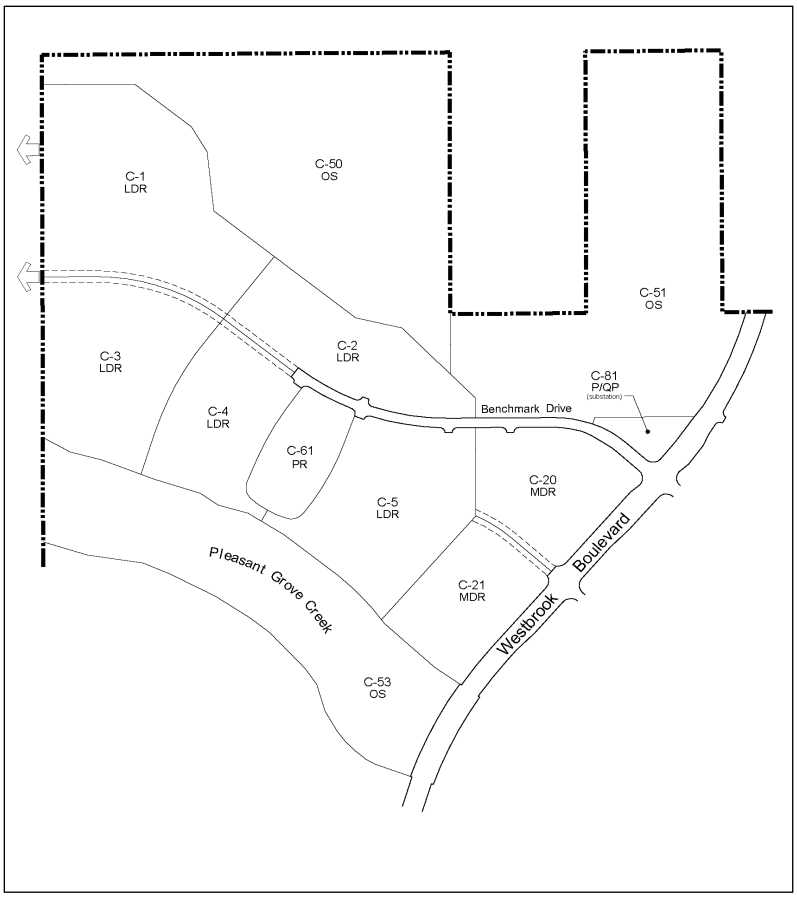
Northwest Quadrant

The northwest quadrant is the largest residential area in the CSP and is predominantly low density residential with two parcels of medium density uses near Westbrook Boulevard and lower densities continuing west.

Located north of Pleasant Grove Creek and Westbrook Boulevard, this area has the greatest frontage along open spaces in the CSP which lends itself to the creation of interesting neighborhoods. Opportunities for views to open space are provided by the Northern Preserve parcels (the largest preserve in the CSP) and Pleasant Grove Creek, as well as the City's AJWA property adjacent to the west of the CSP.

Access to this area is from Westbrook Boulevard and the extension of Parkway One, west of Benchmark Drive. Local circulation will serve residential areas. Low density residential uses along the Northern Preserve will have views of open grasslands with scattered oaks and uses along the creek will have views into the riparian corridor. In addition, incorporation of some single loaded streets will also provide some public views of these open spaces.

A neighborhood park (C-61) north of the creek, south of Parkway One, includes a play field and passive recreation facilities and links to the park (C-62) located south of the creek via a pedestrian bridge crossing of the creek. A pedestrian and bicycle path along the southern edge of the Northern Preserve connects to the AJWA and existing trails in the City.



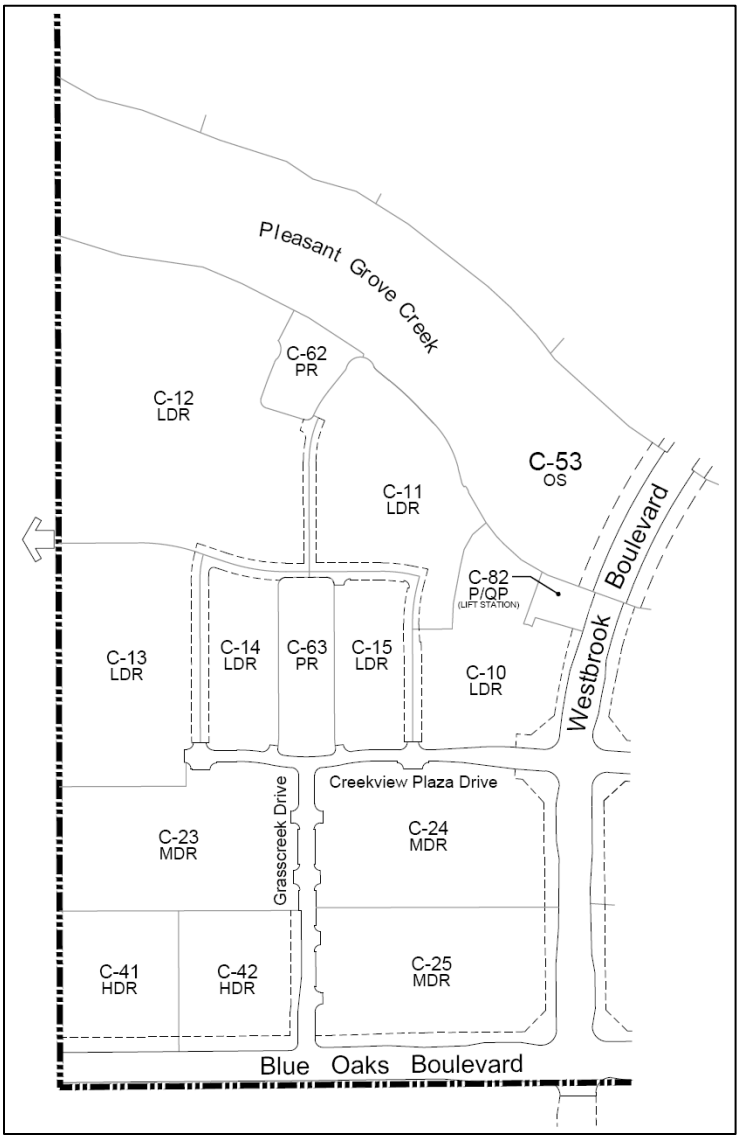
Southwest Quadrant

The southwest quadrant of the CSP is a residential neighborhood and features the highest density mix of residential uses in the Plan Area. Higher density residential uses are located in this area because it is proximate to arterial roadways and commercial~~, office~~ and transit uses.

Westbrook and Blue Oaks Boulevards and smaller roadways such as Creekview Plaza and Grasscreek Drive access this quadrant. Community-serving commercial uses, located east of Westbrook Boulevard, are a short walk away across the signalized intersection at Westbrook Boulevard and Creekview Plaza.

Two small neighborhood parks provide recreation opportunities. One park (C-62) is south of the creek and features passive recreation and views into the riparian corridor along the creek. A pedestrian bridge links the parks on the north and south sides of the creek which, taken together with the creek, creates the sense of a much larger open space area. A second small park (C-63) is designed with active recreation areas to serve surrounding residential areas. A pedestrian and bicycle path located along the southern edge of the Pleasant Grove Creek open space, connecting to future uses at AJWA and to existing trails in the City.

[UPDATED EXHIBIT]



C. Parks and Open Space

Over thirty percent (30%) of the Plan Area is planned for park and open space uses, which is equivalent to 30 ~~28~~ acres of park and open space per 1,000 residents. The open space preserve and park network is the most community-defining element of the CSP, which supports Roseville's long-standing heritage as a City with high-quality parks and open spaces.

The approach for park sites is to include several smaller neighborhood parks ranging from 1.5 to 7.4 ~~7.6~~ acres in size, with the largest park adjacent to the elementary school. The neighborhood parks have been distributed among the four residential neighborhoods and located adjacent to open space where possible to make them feel larger. The park and the school are located adjacent to one another to encourage joint-use which creates efficiencies in design and encourages a broader range of recreational opportunities with the park and school.

Several natural features in the CSP will be within ~~preserved as~~ open space areas, including the Pleasant Grove Creek and University Creek corridors and significant, high-quality natural resources within the Northern Preserve. The 87-acre Northern Preserve creates an open space link among the open space preserve in the Fiddyment portion of the WRSP and the AJWA. The open space area ~~preserve~~ along Pleasant Grove Creek will link the on-site creek corridor upstream in the City with the AJWA.

D. Circulation System

The CSP includes many of the City's Blueprint Implementation Strategies for multi-modal circulation, providing multiple transportation choices to address vehicles, public transit, bicyclists, and pedestrians.

For vehicles, the backbone roadway system includes a combination of arterial and collector streets to provide connections from existing and planned roadways adjacent to the Plan Area. These roadways are designed to accommodate future anticipated local and area traffic demands, with ultimate connections to future planned Placer Parkway and to roadways leading to the City of Lincoln. The design of the backbone roadway system supports the creation of a smaller 'neighborhood' network of local roadways.

Public transit, another transportation choice supported by the plan, may include a combination of bus service systems via Roseville Transit, with connections to Sacramento Regional Transit and Placer County Transit. These services will utilize the CSP's roadway systems to provide local and regional transit connections for community residents. Blue Oaks Boulevard and Westbrook Boulevard are planned to accommodate a future route for bus rapid transit (BRT), which would provide direct regional access from the community to downtown

Sacramento employment centers and other destinations. A bus transfer station is planned adjacent to the community commercial site ~~at~~ along Westbrook Boulevard, immediately north of Blue Oaks Boulevard~~/Westbrook Boulevard~~.

The CSP system of pedestrian and bike paths and paseos add to the mix of transportation choices available for residents. Off-street Class I and Class IA bike paths are included in landscape corridors and open space areas. On-street Class II bike lanes are provided on arterials, collectors, and modified collectors. In places, this system of pedestrian paths and bikeways provides off-street linkages, connecting with Roseville's existing facilities, and with AJWA and the Pleasant Grove Creek corridor via planned bikeway facilities in the WRSP. This system of pedestrian and bike paths are enhanced by street design standards which place priority on pedestrian comfort and safety.

Through these circulation elements, CSP's planned transportation systems are intended to provide multiple choices for community residents and employees, in compliance with the City's adopted Blueprint Implementation Strategies for multi-modal circulation.

Section 4

Land Use Plan

The Creekview Specific Plan (CSP) includes a mix of land uses including low-, medium-, and high-density residential uses; commercial and office uses; public/quasi-public uses for schools and civic facilities; parks and open space uses; and urban reserve land use, which functions as an urban designation for a parcel in the southeastern corner of the CSP. At buildout, the CSP will provide approximately 2,011 dwelling units, accommodate approximately 5,108 residents and add approximately ~~190,000~~ 100,000 square feet of retail and office uses, and provide approximately ~~445~~ 235 permanent jobs.

4.1 Land Use Plan

The CSP land use designations are summarized on Table 4-1 and shown on the Land Use Plan on Figure 4-1.

4.2 Land Use Designations

Land uses within the CSP are implemented through the zoning district applied to each parcel. This includes the application of the Development Standards (DS) and Special Area (SA) overlay zones to provide customized development standards, as allowed by the City's Zoning Ordinance. Specific details related to permitted uses and development standards are included in the City of Roseville Zoning Ordinance. In addition, for projects subject to a Design Review for Residential Subdivision (DRRS) permit, development standards may be defined as part of the City's subdivision review process. The following summarizes the CSP's land use designations, with descriptions for each land use, related density, and applied zoning districts.

Table 4-1: Land Use Summary

Land Use Designation		Applied Zoning District	Acres	% of Total Acres	Units	% of Total Units
Residential						
LDR	Low Density Residential	~~R1/DS~~ RS/DS	182.81 ~~159.20~~	36.47% ~~31.66%~~	951 ~~810~~	47.29% ~~40.28%~~

Updated July 2019~~May 11, 2017~~

A. Residential

The residential component of the CSP utilizes three residential land use designations: Low Density Residential (LDR), Medium Density Residential (MDR), and High Density Residential (HDR). A range of housing densities is planned which will enable a range of housing types. The CSP supports development of LDR conventional-style, single family, detached units on both large and small lots, including provisions for potential gated, executive, and custom home communities. In addition, higher density residential types (MDR and HDR) on smaller lots can be accommodated, which could include detached cluster housing, detached townhomes, and a variety of detached and attached residential units. Residential neighborhoods also include HDR uses which may include unit types such as apartments, townhomes, or condominiums.

The mix of housing types addresses future growth anticipated in the City of Roseville and neighboring regions. Approximately 73% ~~74%~~ of CSP's units are designated for low and medium densities, and the remaining units, nearly 27, ~~26%,~~ are planned as high-density units.

Residential neighborhoods are enhanced by access to and views into adjacent open space and small, local parks accessible along pedestrian and bicycle paths through landscape corridors, paseos and other open space linkages. Neighborhoods are proximate to an elementary school and commercial services.

Residential Unit Transfers

There may be a desire or need to adjust (reduce or increase) the number of units assigned to some large-lot residential parcels. These adjustments may be permitted, pursuant to the provisions outlined in Section 10.7 (Residential Unit Transfers) of this specific plan.

Custom Homes

Custom homes may be designated for construction in any low density residential subdivision in the CSP. Custom homes are single-family residential units with unique exterior styling and individualized interior floor plans, and each home's architectural design is distinct from others in the subdivision. Typically, custom homes have detailed architectural features and upscale amenities which give them an appearance and character similar to, or qualitatively exceeding individually designed homes found in the City's other custom and/or executive housing neighborhoods.

While the CSP does not pre-determine the location of custom home subdivisions, they may be created subject to market demand and economic conditions. If proposed, custom home subdivisions may be approved through the City's tentative subdivision map process.

	Low Density Residential (LDR)	Medium Density Residential (MDR)	High Density Residential (HDR)
Density	0.5 to 6.9 dwelling units per acre	7.0 to 12.9 dwelling units per acre	13.0 ~~to 30.0~~ dwelling units per acre or greater
Applied Zoning District	~~R1/DS - Single Family Residential/ Development Standards Overlay and~~ RS/DS - Small Lot Residential/ Development Standards Overlay	RS/DS Small Lot Residential/ Development Standard Overlay	R3 Attached Housing
Description	The Low Density Residential (LDR) land use designation supports single-family detached homes on conventional lots within the density range above. Lot sizes range from 3,600 ~~4,500~~ to 7,500 ~~6,000~~ square feet and could be smaller or larger depending on site configuration, features and neighborhood design. A variety of detached, single-family residential housing types are possible in this density range. However, single-family front-loaded housing on conventional lots is anticipated as the primary product type. Half-plexes are permitted.	The Medium Density Residential (MDR) land use designation accommodates both single-family detached and attached residential units. Lot sizes are typically smaller than those in LDR areas. Within this density range, single-family detached housing may be provided on a wide range of lot types including small, standard or alley-loaded lots, courtyard lots, green court lots, auto courts, alley clusters, zero-lot lines, and z-shaped lots. In addition, duet/half-plex homes, townhomes, or condominiums may also be accommodated in MDR areas.	The High Density Residential (HDR) land use designation primarily accommodates attached housing. Depending on the unit type, HDR could also include some detached housing. The types of housing units which could be accommodated in the HDR designation could include, but are not limited to, townhomes, courtyard townhomes, condominiums, garden-style apartments, and podium design apartments or condominiums. Multi-family housing types may be applied to for-sale or rental units. The R3 zone also allows other similar and compatible uses including community care facilities.
Permitted Uses	As specified in the City of Roseville Zoning Ordinance.	As specified in the City of Roseville Zoning Ordinance.	As specified in the City of Roseville Zoning Ordinance.
Development Standards	Development standards as specified in the City of Roseville Zoning Ordinance or established or established by the subdivision map and a Design Review for Residential Subdivision approval. As further described in Appendix A, the ~~R1/DS~~ RS/DS (Small Lot Residential/Development Standard Overlay) zone district is applied to provide the potential for variation to development standards. ~~at the lower end of the LDR density range (less than 5.0 units/acre). The RS/DS zone district provides the potential for variation in development standards at the upper end of the LDR density range (greater than 5.0 units/acre).~~ Design standards are the Community Design Guidelines and the Creekview Design Guidelines (Appendix B).	Development standards as specified in the City of Roseville Zoning Ordinance or established by the subdivision map and a Design Review for Residential Subdivision approval. As further described in Appendix A, the RS/DS (Small Lot Residential/Development Standard Overlay) zone district provides the potential for variation in development standards. Design standards are the Community Design Guidelines and the Creekview Design Guidelines (Appendix B).	As specified in the City of Roseville Zoning Ordinance, Community Design Guidelines and Creekview Design Guidelines (Appendix B).

B. Commercial ~~and Office~~

~~Employment~~ Retail and service uses are planned within the CSP Community. Commercial ~~and employment center~~ uses are located in the northeast quadrant of Blue Oaks and Westbrook Boulevards. This location takes advantage of the visibility and access provided by projected traffic volumes along these corridors.

	Community Commercial (CC)	~~Community Commercial/ Business Professional (CC/BP)~~
Typical FAR	Up to 0.4 FAR	~~Up to 0.4 FAR~~
Applied Zoning District	CC – Community Commercial	~~CC/BP – Community Commercial/Business Professional~~
Description	The Community Commercial (CC) land use designation provides a broad range of neighborhood serving retail goods and services such as a grocer, drug store, restaurants, cafes, offices, personal services, and shops. One 9.22~~15.5~~-acre parcel (Parcel C-70~~40a~~) is planned at the northeast quadrant of Westbrook Boulevard and Blue Oaks Boulevard. Located at the intersection of two arterial roadways, this site is suitable for retail and has excellent access needed for a commercial site. Pedestrians and bicyclists from the north and west can access the commercial site via the Pleasant Grove Creek crossings and paseo system throughout the Plan. Creekview Plaza creates the northern and eastern edge of the site and provide access to Blue Oaks and Westbrook Boulevard. A transit transfer station is planned along Creekview Plaza, north of Blue Oaks Boulevard~~east of Westbrook Boulevard~~. The site is planned for a commercial center of approximately 100,000 ~~150,000~~ square feet. See Figure B-8 for a concept plan of the CC site.	~~The Community Commercial/Business Professional (CC/BP) – Commercial/Office Mixed Use land use is a combined designation which accommodates a mixture of non-residential uses. One 3.8-acre CC/BP site is planned north of Blue Oaks Boulevard, east of the Community Commercial site and Creekview Plaza. The site is intended to accommodate approximately 40,000 square feet of commercial and/or business professional uses.~~ ~~The parcel may develop with a mixture of commercial and office, or may be solely commercial or office.~~
Permitted Uses	As specified in the City of Roseville Zoning Ordinance.	~~As specified in the City of Roseville Zoning Ordinance.~~
Development Standards	As specified in the City of Roseville Zoning Ordinance, Community Design Guidelines, and meeting the design concepts identified in Figure B-8 of the Creekview Design Guidelines.	~~As specified in the City of Roseville Zoning Ordinance, Community Design Guidelines.~~

C. Parks and Open Space

~~Nearly~~ Over 30% of the CSP is planned for parks and open space. The CSP features four neighborhood parks and two significant open space corridors which contribute to the regional open space landscape.

The CSP was designed to enhance and maximize views and access to the open space. Open space accounts for one quarter of the CSP.

	Parks & Recreation (PR)	Open Space (OS)
Applied Zoning District	PR – Parks & Recreation	OS – Open Space
Description	The Parks and Recreation (PR) land use designation is applied where formal, developed park facilities are planned. A combination of active and passive recreation facilities is planned within four neighborhood parks. Four neighborhood parks ranging from 1.5 to 7.43 acres in size are distributed throughout the plan. **School Park.** The largest park (C-60) is located adjacent to the elementary school to maximize joint-use opportunities for outdoor recreation facilities. **Parks Adjacent to Open Space.** Two neighborhood parks adjacent to Pleasant Grove Creek complement open space uses along the creek corridor and include viewing opportunities into the open space. A creek crossing links two neighborhood parks located on opposite sides of the Pleasant Grove Creek. **Neighborhood Park ~~for Higher Density Neighborhood~~.** The neighborhood park in the southwest quadrant of the CSP is designed to provide additional outdoor recreation opportunities to higher density neighborhoods with residential units with less private yard space. Park sites are linked to other land uses through a system of paseos. Parks and recreation facilities are further described in the Public Services Plan (Chapter 7).	The Open Space (OS) land use designation is generally applied to lands which are environmentally sensitive or otherwise significant due to habitat and floodplain. In the CSP, the OS land use designation is applied to natural features (Pleasant Grove Creek, Northern Preserve) which provide opportunities for views, passive recreation, pedestrian/bike paths, water conveyance and detention, stormwater quality/treatment and resource avoidance and preservation. **Northern Preserve.** The most significant and highest-quality wetland resources are located in the northern portion of the CSP. The Northern Preserve is a 87.2-acre (Parcels C-50, C-51 and C-52) open space preserve created to avoid impacts to and preserve these features. The Northern Preserve creates a natural edge, a transition to agricultural land uses north of the CSP, and adjoins the open space preserve in the northern portion of the WRSP. It also provides an opportunity to create a bicycle/pedestrian pathway through the northern portion of the CSP. The Northern Preserve is planned for permanent preservation as open space and would complement open space preservation in surrounding areas **Pleasant Grove Creek.** Pleasant Grove Creek transects the property diagonally, through the center of the site. The creek corridor (Parcels C-53, C-54) is an opportunity to create a heavily wooded, linear open space amenity which offers a bicycle/pedestrian pathway through the CSP connecting the WRSP and the Al Johnson Wildlife Area. In addition to the crossing of Pleasant Grove Creek at Westbrook Boulevard, two additional creek crossings planned within the open space corridor connect the north and south areas of the Plan. ~~The creek is planned for permanent preservation as open space.~~
Permitted Uses	As specified in the City of Roseville Zoning Ordinance.	As specified in the City of Roseville Zoning Ordinance.
Development Standards	As approved by the City Council for individual parks. Conceptual park plans are shown in Figures 7-2, through 7-5.	As specified in the City of Roseville Zoning Ordinance.

D. Public/Quasi-Public

Five parcels are designated and sized for Public/Quasi-Public (P/QP) uses, consistent with General Plan policies and standards.

	Public/Quasi-Public (P/QP)
Applied Zoning District	P/QP – Public/Quasi-Public
Description	The Public/Quasi-Public (P/QP) land use designation accommodates public-serving uses and facilities. In the CSP, P/QP is the designation for an elementary school (C-80), electric substation (C-81), sewer lift station (C-82), solid waste recycling center (C-83) and well site (C-84). Municipal services and school facilities are discussed in more detail in Public Services Plan and Utilities Plan (Chapters 7 and 8). Conceptual site plans for Parcels C-81, C-82, C-83 and C-84 are shown on Figures B-10, B-11 and B-12.
Permitted Uses	As specified in the City of Roseville Zoning Ordinance.
Development Standards	As specified in the City of Roseville Zoning Ordinance and the Creekview Design Guidelines (Appendix B).

E. Urban Reserve

One 39.9-acre parcel (C-90), located in the southeastern portion of the CSP, is designated for Urban Reserve.

	Urban Reserve (UR)
Applied Zoning District	UR – Urban Reserve
Description	The Urban Reserve (UR) land use designation is applied to lands anticipated to receive urban land use entitlements in the future. While no development is proposed within the Urban Reserve area, it is anticipated these areas may ultimately develop with land uses and densities similar to the balance of the CSP.
Permitted Uses	As specified in the City of Roseville Zoning Ordinance.
Development Standards	As specified in the City of Roseville Zoning Ordinance and the Creekview Design Guidelines (Appendix B).

Section 5

Affordable Housing Plan

State law (California Government Code Section 65584) requires each city and county plan accommodate a fair share of the region's housing needs through zoning and land use. In urban areas, state law provides for councils of governments to prepare regional housing need allocation plans that assign a share of the region's housing need to each city and county. In the six-county greater Sacramento region, the Sacramento Area Council of Governments (SACOG) is the entity authorized to determine the future housing needs for the region. SACOG adopted the most recent Regional Housing Need Allocation Plan (RHNAP) in February 2008. Each city and county receives a total number of housing units it must plan for within a 7.5 year time frame. Each housing allocation includes a distribution for housing affordable to very-low, low and moderate income households.

The City of Roseville General Plan Housing Element, which is consistent with the SACOG RHNAP, establishes a citywide goal to provide decent, safe, adequate and affordable housing in sufficient quantities for all economic segments of the community. Given the nature of the housing market in Roseville and the South Placer area, it is a challenge to create housing opportunities affordable to middle-, low-, and very-low income households. Typically, such affordable housing opportunities require market restriction and/or subsidies.

In an attempt to maximize efforts to meet affordable housing needs and to provide a mechanism whereby the City, property owners, and business community can actively work together in developing new affordable housing, the City's Housing Element specifies an Affordable Housing Goal of ten percent (10%) of all new housing units in the City be affordable to middle-, low- and very-low income households.

Housing in the Creekview Specific Plan (CSP) is planned to have a mix of housing types in low, medium, and high-density residential neighborhoods. Similar to existing low-density residential (LDR) areas of Roseville, it is anticipated the CSP's LDR neighborhoods will provide market-rate housing affordable predominantly to moderate- and above-moderate income households. The CSP's medium-density (MDR) and high-density (HDR) residential areas will provide greater opportunities for creating affordable housing for all income ranges. As outlined later in this chapter, the CSP affordable housing plan focuses on MDR and HDR parcels, and is structured to be consistent with the General Plan's affordable housing goals.

5.1 Definition of Housing Affordability

Housing affordability is based on household income categories defined by the U.S. Department of Housing and Urban Development (HUD). These five income categories are used for comparative purposes and are based on a percentage of the county median income, adjusted for household size (Table 5-1).

Table 5-1: Definition of Household Income Categories

Income Category	Percent of Median Income
Very Low-Income	Less than 50% of Median
Low-Income	50% to 80% of Median
Middle-Income	80% to 100% of Median
Moderate-Income	100% to 120% of Median
Above Moderate-Income	120% + of Median

All jurisdictions within Placer County, including Roseville, use the same basic income calculations regardless of actual income level distribution in the community.

Based on sales and rental prices, and the definition of affordability, the City's Housing Element includes the following housing assistance needs identified for each income group:

- **Very Low-Income Households** not currently owning their own home will not be able to qualify for home ownership without substantial subsidies, unless their incomes rise significantly. Rental subsidies for very-low income households are needed to maintain affordability.
- **Low-Income Households** not currently owning their own home will require loan subsidies to afford and qualify for homeownership. Rental subsidies for low-income households are needed to maintain affordability.
- **Middle- and Moderate-Income Households** may require some assistance in purchasing a home, since the price range of new homes in Roseville may exceed their ability to pay. This group is likely to afford rental units without financial assistance.
- **Above Moderate Income Households** are considered financially able to find affordable units, both for purchase and rent, within Roseville's housing market.

Numerous assumptions are required to translate household income to affordable rental rates and purchase prices. Lenders ultimately determine the actual purchasing power of household income at a given point in time. A household can qualify to purchase a home based on annual income, down payment, level of other long-term financial obligations and interest rates.

For planning purposes, the City of Roseville assumes for rental units, low- and very-low income households should not spend more than thirty percent (30%) of their monthly gross income on housing costs, including utilities. For middle-income households, thirty-five percent (35%) of monthly gross income is used to determine housing affordability. Purchase housing costs include payment of principal, interest, taxes, insurance, and any homeowner's association dues.

It is recognized that various factors which determine affordability continually change, and project-specific affordability standards need to be established and adjusted as development occurs. To that end, the 10% affordable housing goal is calculated for each specific plan area based on the total residential units mapped.

5.2 Affordable Housing Program

Consistent with the General Plan affordable housing goal, ten percent (10%) of the units in the CSP have been designated for middle-, low- and very low-income households. This includes a mix of purchase housing affordable to middle-income households, and rental housing affordable to low- and very low-income households pursuant to the provisions of the Development Agreement. Approximately twenty percent (20%) of the affordable housing goal will be available to middle-income residents, forty percent (40%) to low-income residents and forty percent (40%) to very low-income households. The CSP affordable housing goal is summarized in Table 5-2.

5.3 Allocation of Affordable Housing Units

The affordable housing units within the CSP have been allocated to specific MDR and HDR parcels as identified in Table 5-3, with designated parcels reflected on Figure 5-1. The intent is to distribute affordable units throughout the CSP.

Table 5-2: Affordable Housing Goal

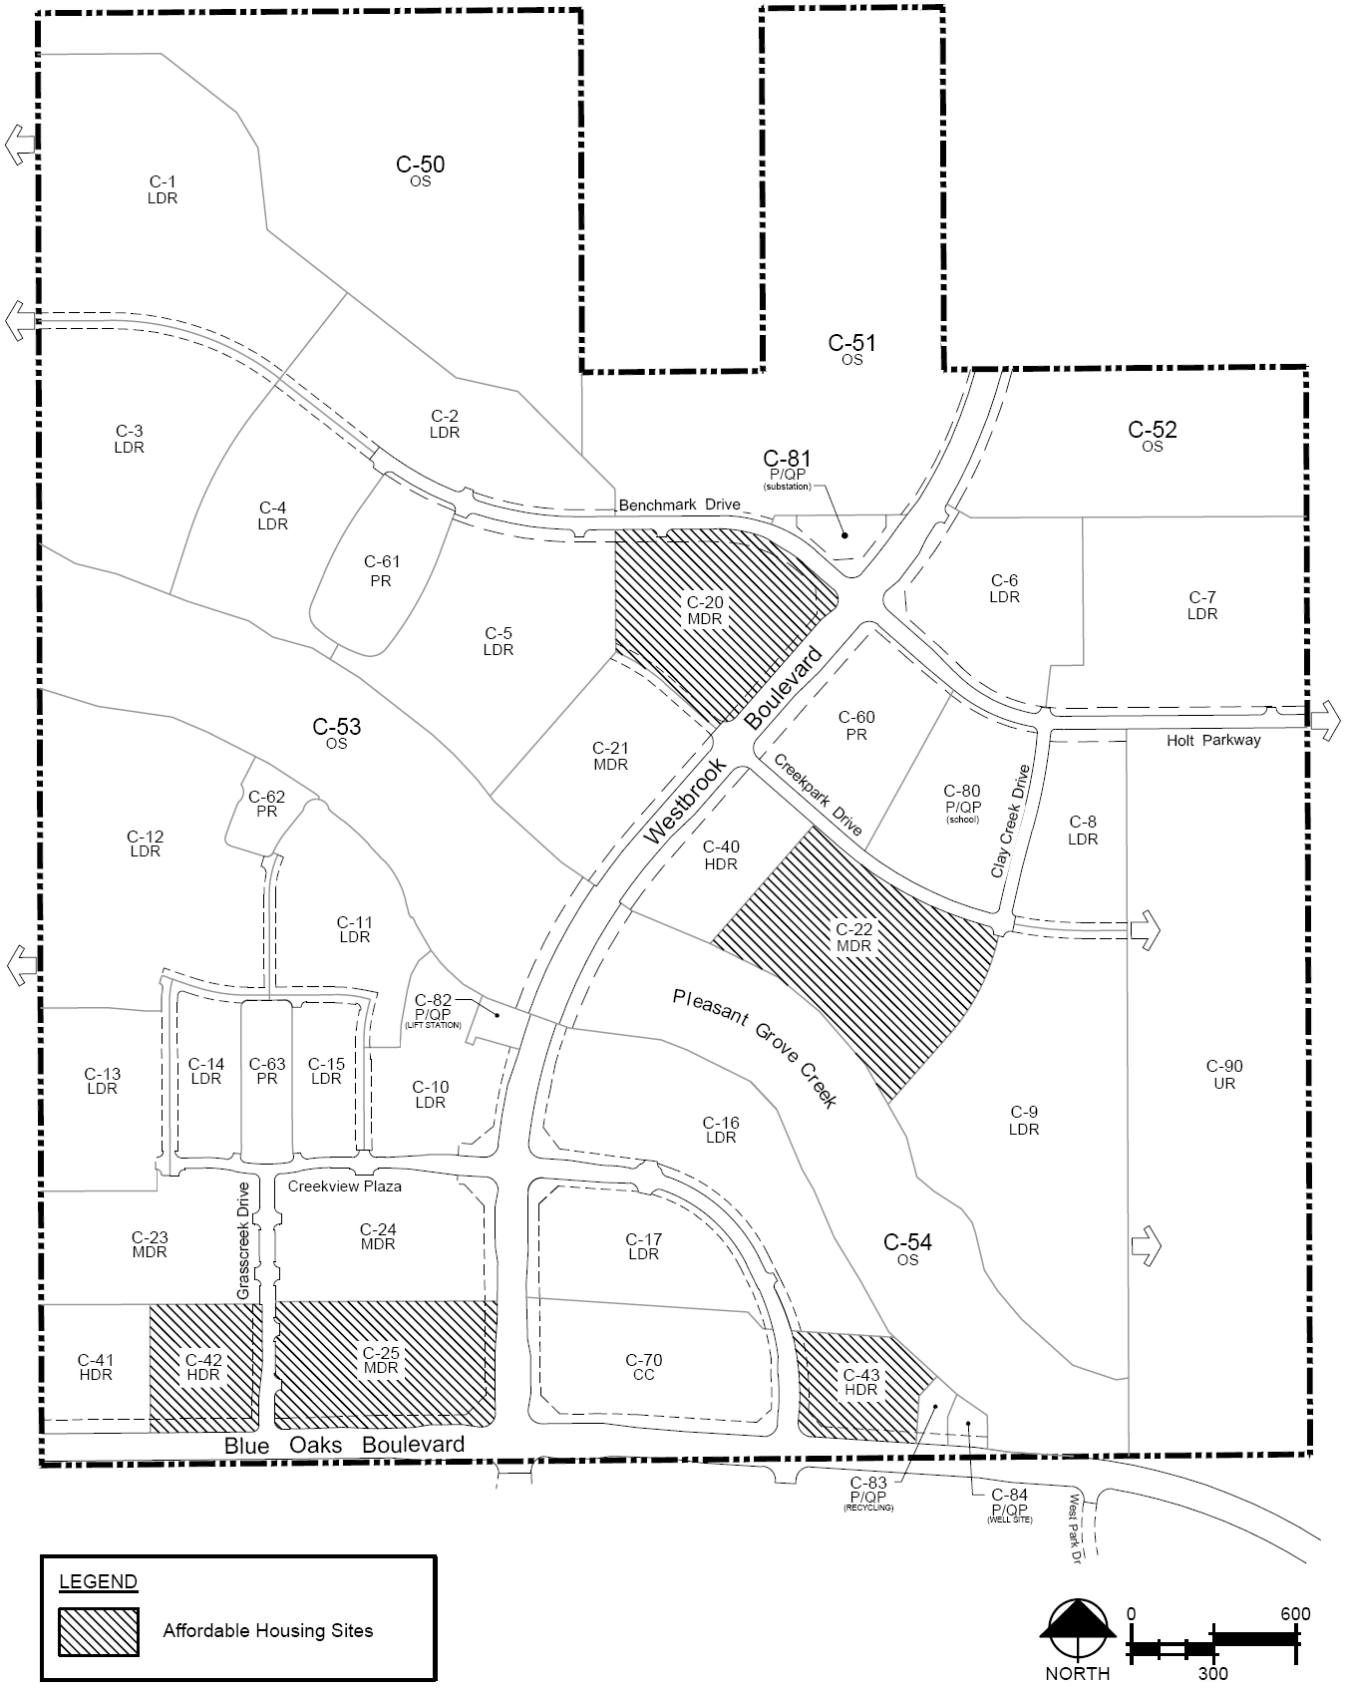
Total Dwelling Units	2,011 units
10% Affordable Housing Goal	201 units
Middle-Income (purchase)	40 units (20%)
Low-income (rental)	80 units (40%)
Very-Low income (rental)	81 units (40%)

Table 5-3: Affordable Housing Allocation

Parcel	Land Use	Total Units in Parcel	Total Affordable Allocation	Very Low Income Rental	Low Income Rental	Middle Income Purchase
C-20	MDR	106 ~~75~~	10			10
C-22	MDR	127 ~~105~~	20			20
C-25~~30~~	MDR	62 ~~40~~	10			10
C-42	HDR	136 ~~220~~	80 ~~161~~	40 ~~81~~	40 ~~80~~	
C-43	HDR	116	81	41	40	
Total			201	81	80	40

Note: The CSP Section 5.4 allows for the transfer of affordable units. Check with the Housing Division to confirm current affordable housing allocations.

Figure 5-1: Affordable Housing Sites [UPDATED EXHIBIT]



5.4 Administration and Implementation

Residential builders are encouraged to explore creative approaches in providing a range of housing opportunities to meet the needs of middle-, low-, and very-low income households. Over time, housing markets, income categories, funding programs, and other factors change, and it is important to retain some level of flexibility to ensure affordable housing goals are achieved. The City's affordable housing goal is intended to be flexible in recognition of the actual number of affordable units constructed depends on the level of available subsidies.

The options outlined below may be considered to assist in achieving the CSP affordable housing goal. The City reserves the right to consider alternatives to achieve affordable housing within the CSP should the cost of producing the affordable housing preclude the City from accessing federal and state financing programs, or if legislation mandates the City alter its approach to affordable housing.

A. Transfers and Credits

Subject to approval by the director of the City's Housing Division, the affordable housing allocations identified on Table 5-3 may be transferred among parcels within the CSP. In addition, to the extent the number of affordable units produced on a parcel exceeds the number of affordable units allocated to the parcel, the excess units may be credited toward meeting the CSP affordable housing goal assigned to other parcels. Transfer and/or credits may be approved by the director of the City's Housing Division without the need for amendments to this Specific Plan or related Affordable Housing Regulatory Agreements or Development Agreement if it is determined:

- ❑ The transfers/credits are applied to parcels within the CSP and covered by the same Development Agreement; and
- ❑ The transfers/credits improve the ability to produce affordable units and achieve the CSP affordable housing goal.

Requests for transfers and/or credits shall include information as deemed necessary by the City to ensure consistency with the CSP's affordable housing program. In addition, a revised affordable housing allocation (Table 5-3) shall be provided reflecting adjusted affordable unit allocations.

The City's Housing Division shall maintain all revisions to Table 5-3 as the official CSP affordable housing allocation record. The affordable housing unit transfer shall be memorialized with a recorded Memorandum of Understanding (or substitute form as specified by the City).

B. Density Bonus

The City may, in accordance with its Density Bonus Ordinance (Zoning Ordinance, Chapter 19.28) assign additional residential units to projects for the purpose of achieving the affordable housing goal. The increase in units provided by a density bonus is intended to reduce average per unit development costs.

In the CSP, a density bonus is implemented by City approval of an Affordable Regulatory Agreement (or substitute form as specified by the City) to individual projects on a case-by-case basis, and may constitute a portion of the subsidy (if required) for the provision of affordable units.

C. In-Lieu Fee

To the extent an in-lieu affordable housing fee is adopted on a citywide basis, a portion of the affordable housing allocations identified on Table 5-3 may be satisfied with an in-lieu fee subject to approval by the director of the City's Housing Division.

D. Affordable Housing Regulatory Agreement

An Affordable Housing Regulatory Agreement (or substitute form as specified by the City) is required for each parcel with an affordable housing allocation to detail and secure specific requirements and obligations. Among other provisions, the Affordable Housing Regulatory Agreement will:

- ❑ Specify the number of affordable units to be reserved at each income level.
- ❑ Specify the term of the affordability obligation.
- ❑ Set initial rent or purchase prices for the designated affordable units.
- ❑ Establish criteria and a basis for annual rent or purchase price increases.
- ❑ Provide the City with a mechanism to monitor actual rents and purchase prices paid.
- ❑ Identify any City or other subsidies required to assist in meeting the affordability requirement and, if applicable, the basis and terms for refunding such subsidies.

Affordable Housing Regulatory Agreements require City approval prior to the issuance of building permits, or recordation of a final small lot map where a subdivision map is required, for any large-lot parcel with an affordable housing allocation. The total number of affordable units required is to be calculated based on the number of final units mapped.

Section 6

Circulation Plan

The circulation system for the Creekview Specific Plan (CSP) includes a hierarchy of roadways and other improvements designed to link with existing and planned City and regional facilities. These facilities address mobility within the CSP and include roadways, bikeways, pedestrian paths, and public transit, which, collectively, are intended to provide multiple transportation options and encourage people to rely less on automobile travel.

The design of CSP's mobility systems emphasizes connectivity among uses, transportation choices, and the provision of a safe and efficient circulation system for automobile drivers, bicyclists, and pedestrians.

This chapter discusses each element of the circulation plan including roadways, bikeways, pedestrian paths, paseos, public transit, park and ride lots, as well as other transportation system management tools.

6.1 Roadways

A. Existing System and Connections

At the time of Specific Plan approval, several existing and planned roadways provided access to the CSP. These include:

- **Westbrook Boulevard**. Westbrook Boulevard is a north/south six-lane arterial roadway. The planned alignment of Westbrook Boulevard begins at Baseline Road and extends north to intersect the future extension of Blue Oaks Boulevard, at the southern boundary of the CSP. Westbrook Boulevard is located between and parallel to Fiddyment Road and the planned extension of Santucci Boulevard.
- **Blue Oaks Boulevard.** Blue Oaks Boulevard, a six-lane arterial which provides east/west circulation through the City, lies along the southern boundary of the CSP. Existing Blue Oaks Boulevard extends from Highway 65 west to approximately Hayden Parkway.
- **Phillip Road**. Phillip Road is a paved rural roadway located along the southern edge of the CSP. Phillip Road extends west in unincorporated Placer County and provides another access to the site.

Each of the above-described roadways provides or will provide access to the CSP and demonstrate how the existing circulation systems link to the Plan Area, to Roseville and the western portion of Placer County.

B. Planned System and Improvements

The CSP roadway system includes arterial, collector, and local roadways, which are illustrated on Figure 6-1, with lane capacity, right-of-way, and landscape requirements summarized in Table 6-1. Typical roadway design sections are illustrated in this chapter, with corresponding landscaping standards and related design details included in the CSP Design Guidelines (Appendix B). Construction of arterial and collector roadways will be phased as described in the CSP Development Agreement. All public roads will be constructed to City of Roseville standards.

Off-site neighborhood connections (as shown on Figure 4-1, Land Use Plan and Figure 6-1, Roadway System) will be made to the east and west of the CSP. These connections will be further identified and detailed with small lot development in the future.

Table 6-1: Roadway Summary

Roadway Type/Name	Roadway		Landscape Corridor		Landscape Median	Parking	Figure
	Reserved Lane Capacity	Right of Way	Adjacent to LDR & MDR [1]	Adjacent to Other Uses [2]			
Arterial Roadways [3]							
Blue Oaks Boulevard - East of Westbrook Boulevard	6	100’	35’	50’	14’	None	6-2
Blue Oaks Boulevard - West of Westbrook Boulevard	6	100’	35’	50’	14’	None	6-3, 6-4
Westbrook Boulevard	6	100’	35’	50’	14’	None	6-5
Westbrook Boulevard - Adjacent to OS (C-51 and C-52)	6		-		8’	None	6-6
Collector Roadways [3]							
Holt Parkway	2	48’	30’/45’ [4]	-	14’	None	6-7
Benchmark Drive - West of Westbrook Blvd to C-61	2	48’	25’/45’ [5]	-	14’	None	6-8
Creekview Plaza – West of Westbrook Blvd to East Edge of Park C-63	2	72’~~70’~~	30’/45’	-	10’~~8’~~	None	6-9
Creekview Plaza - Westbrook to Blue Oaks Boulevard	2	52’~~48’~~	25’/35’ ~~20’/40’~~	25’/35’ ~~20’/35’~~	12’~~14’~~	None	6-10
Local Roadways							
Primary Residential - Attached Walk	2	46’	-	-	-	on street	6-11
Primary Residential - Detached Walk [6]	2	58’	-	-	-	on street	6-12
Minor Residential - Attached Walk	2	42’	-	-	-	on street	6-13a
Minor Residential - Detached Walk	2	54’	-	-	-	on street	6-13b
Minor Residential - Park Couplet (One-Way)	1	32’	-	-	-	on-street	6-14
Alley	2	22’	-	-	-	Varies	6-15

1. Landscape corridors adjacent to LDR and MDR along arterial and collector roadways will be incorporated within the right of way.

2. Landscape corridors will not be constructed adjacent to parks. Adjacent to open space, a PUE/LSE is provided (width varies) with post and cable fencing constructed 3’ from back of walk. At bridge crossings, sidewalk is monolithic. On Blue Oaks Boulevard, adjacent to the WRSP open space preserve (W-81), landscape corridor width varies and street and landscape corridor improvements do not extend beyond the south edge of pavement of existing Phillip Road. See Figure 6-4.

3. Auxiliary lanes, turn lanes, bus turn-outs, and standard tapers are permitted reductions to the landscape corridors (PUE/LSE) or paseos. See Figure 6-16. Minimum landscape corridor width of 20’ shall be maintained behind bus shelters.

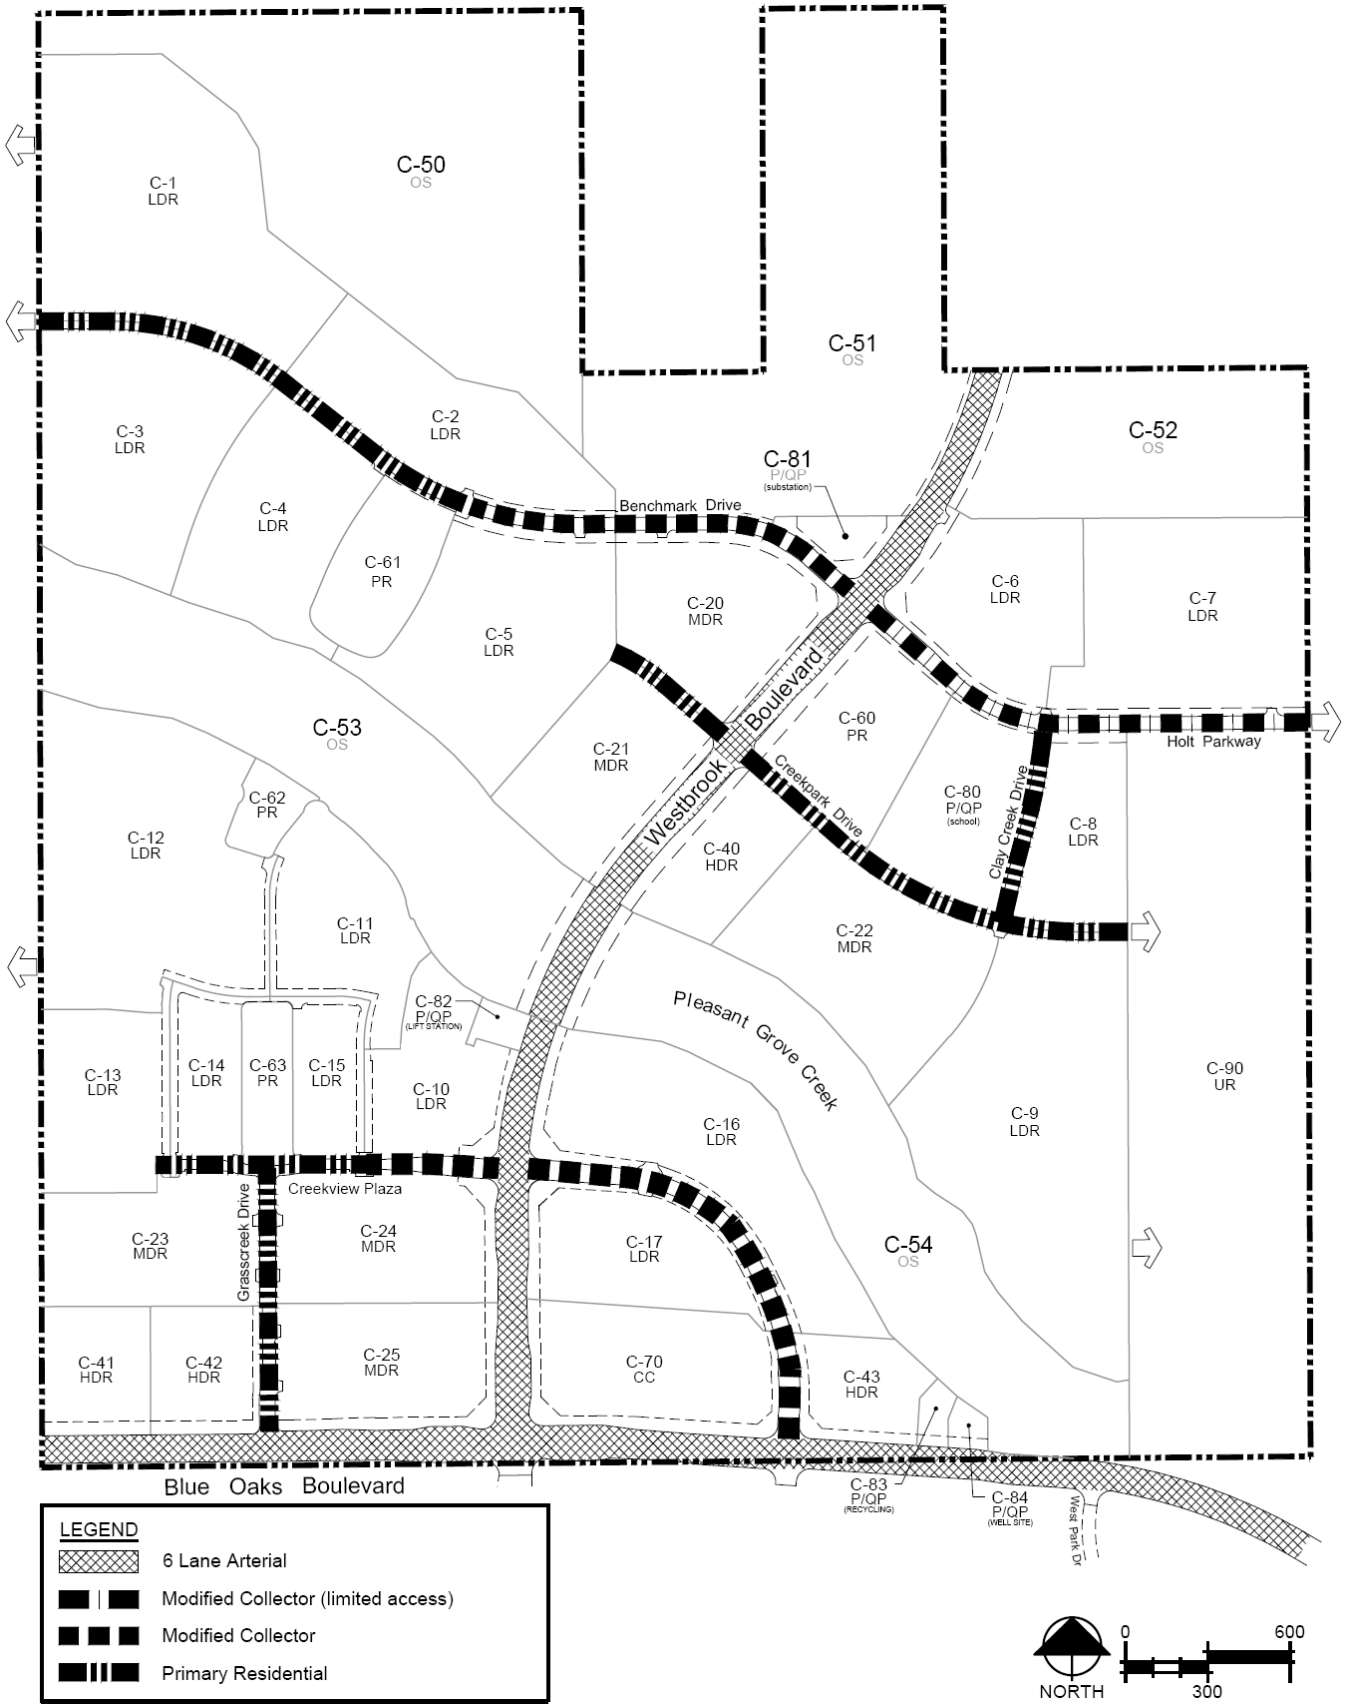
4. Standard paseo geometry varies at Park (C-60) and School (C-80) to 10’ planter and 10’ detached sidewalk.

5. On Benchmark Drive west of Westbrook Boulevard at Open Space (C-51) and P/QP-electric substation (C-81) a 10’ detached walk will be constructed.

6. Rolled curb and gutter is permitted with detached walks where residential unit driveways access the street.

Figure 6.1: Roadway System

[UPDATED EXHIBIT]



Arterial Roadways

Arterial roadways are primary circulation routes which provide linkages between sections of the City and the regional circulation system. Arterial roadways carry relatively high traffic volumes and do not permit on-street parking. In the CSP, arterials are six (6) lanes and include landscape medians, on-street bike lanes, and adjacent landscape corridors with eight-foot (8') detached sidewalks. The eight-foot (8') sidewalks along arterial streets also function as Class IA paths, which provide an option for bicyclists to ride on a street-separated path versus riding on the street. Figures 6-2 through 6-6 depict CSP arterial roadway design. Where adjacent to LDR and MDR land uses, the right-of-way dedication will include the landscape corridor.

The CSP includes two arterial roadways:

- ❑ Blue Oaks Boulevard
  Figures (6-2, 6-3, 6-4)
- ❑ Westbrook Boulevard
  Figures (6-5, 6-6)

- **Blue Oaks Boulevard.**
  (Figures 6-2, 6-3 and 6-4)
  Blue Oaks Boulevard will be constructed and improved in phases, with an ultimate section of six lanes (100-foot right-of-way). Blue Oaks Boulevard includes a 14-foot landscaped median, portions of which can be used for left turn pockets where appropriate. On the north side of Blue Oaks Boulevard, the landscape corridor width is 50 feet. On the south side of Blue Oaks Boulevard, the future landscape corridor is 50 feet east of Westbrook Boulevard, off-site.

Figure 6-2
Blue Oaks Boulevard
East of Westbrook Boulevard

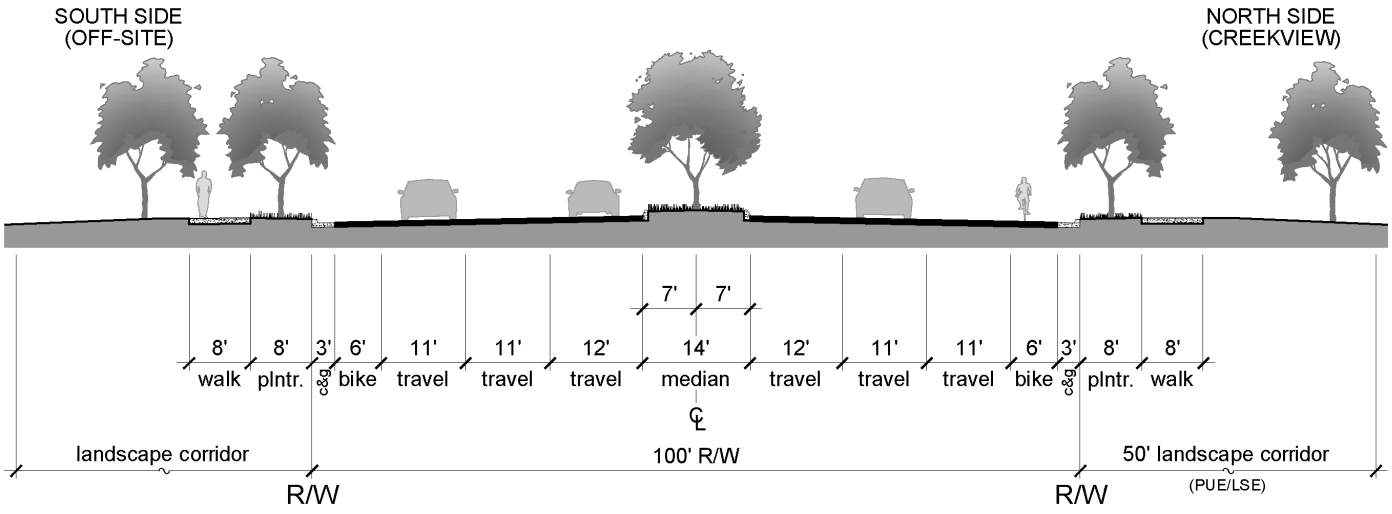


Figure 6-3
Blue Oaks Boulevard
West of Westbrook Boulevard

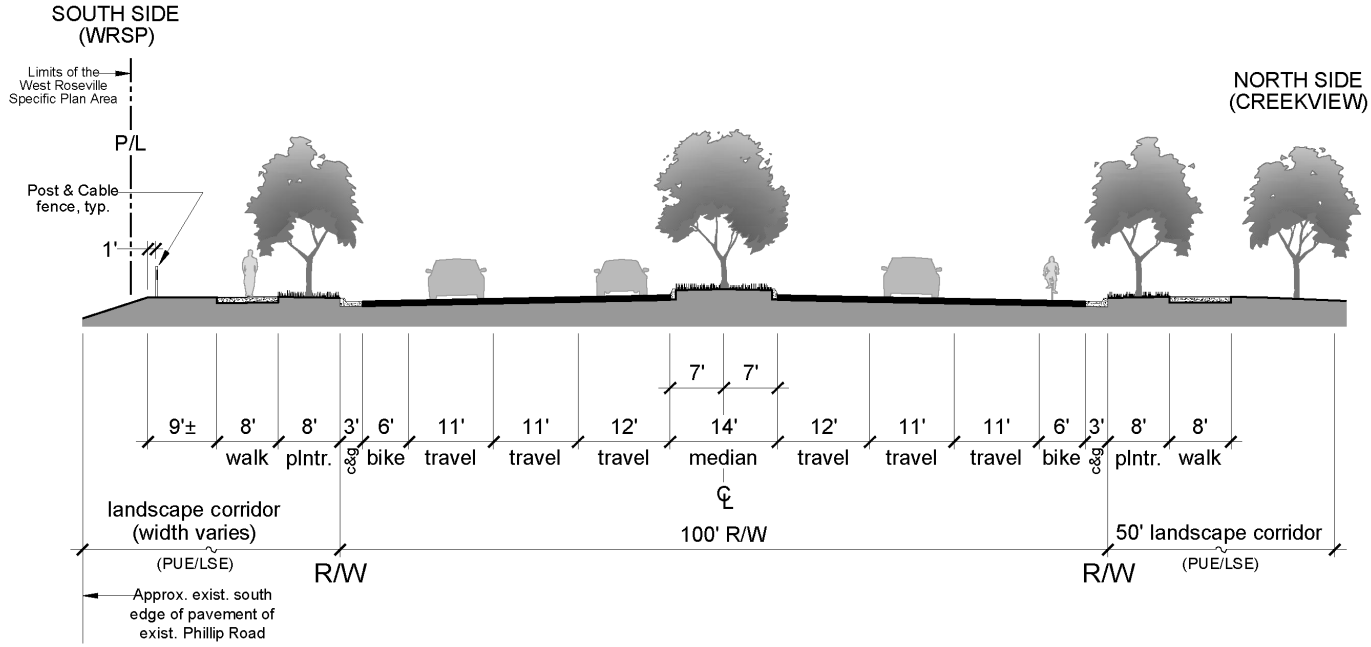

Figure 6-4 illustrates the geometry of the south side of Blue Oaks Boulevard, west of Westbrook Boulevard and adjacent to Open Space Parcel W-81 in the West Roseville Specific Plan. Sections A-A and B-B are relative to the paved portion of existing Phillip Road and the existing conservation easement on Open Space Preserve (Parcel W-81).

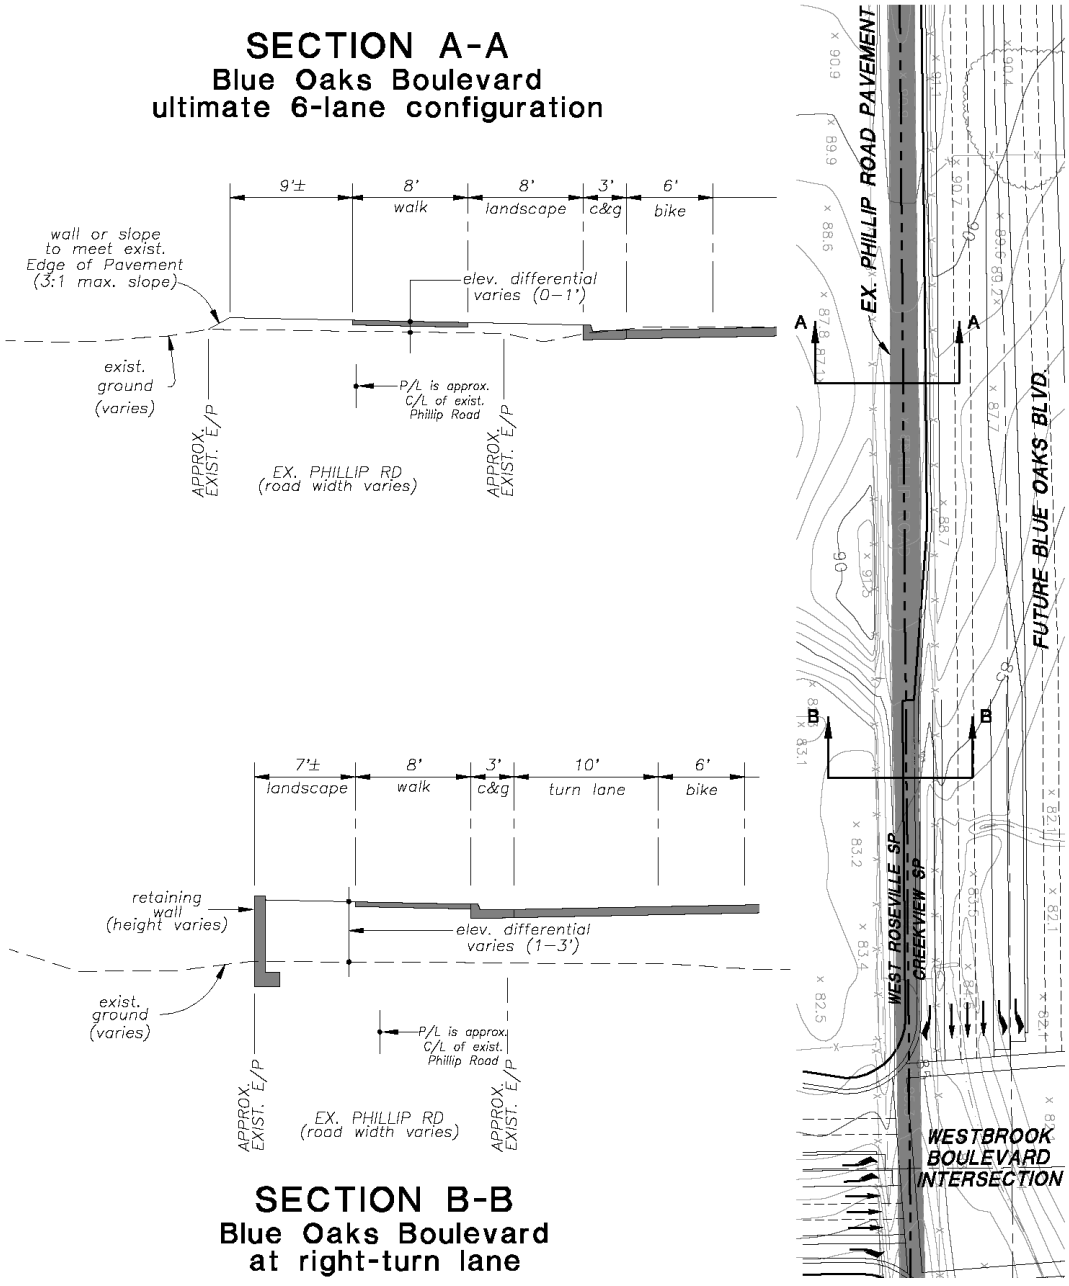
Figure 6-4
Blue Oaks Boulevard
Interface with WRSP Open Space W-81



- **Westbrook Boulevard**. (Figures 6-5 and 6-6) Westbrook Boulevard will be constructed and improved in phases, with an ultimate section of six lanes (100-foot right-of-way). Westbrook Boulevard includes a 14-foot landscaped median, portions of which can be used for left turn pockets where appropriate. Landscape corridors are located on both sides of the right of way.

  To accommodate 60kV power lines, the landscape corridor on the east side of Westbrook Boulevard~~, north of the Pleasant Grove Creek crossing~~ will be 50 feet ~~for all land uses~~. Where Westbrook Boulevard is located adjacent to or crosses resources, the design shall be coordinated with 404 permit requirements.

  At the Pleasant Grove Creek crossing, there is no landscape corridor and an 8-foot (8') walkway is on the bridge structure and the 60kV powerlines are within open space. At the creek crossing, the landscape median is replaced by an opening mid-way on the bridge structure.

Figure 6-5
Westbrook Boulevard

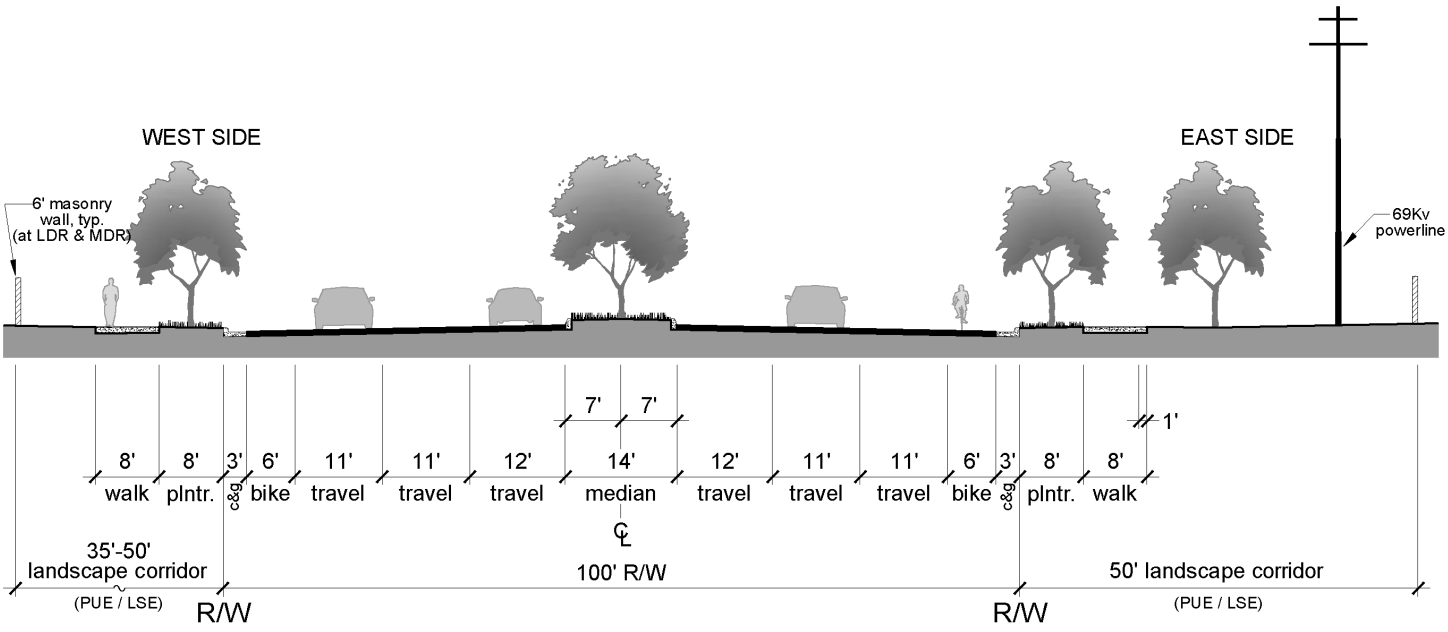


Figure 6-6
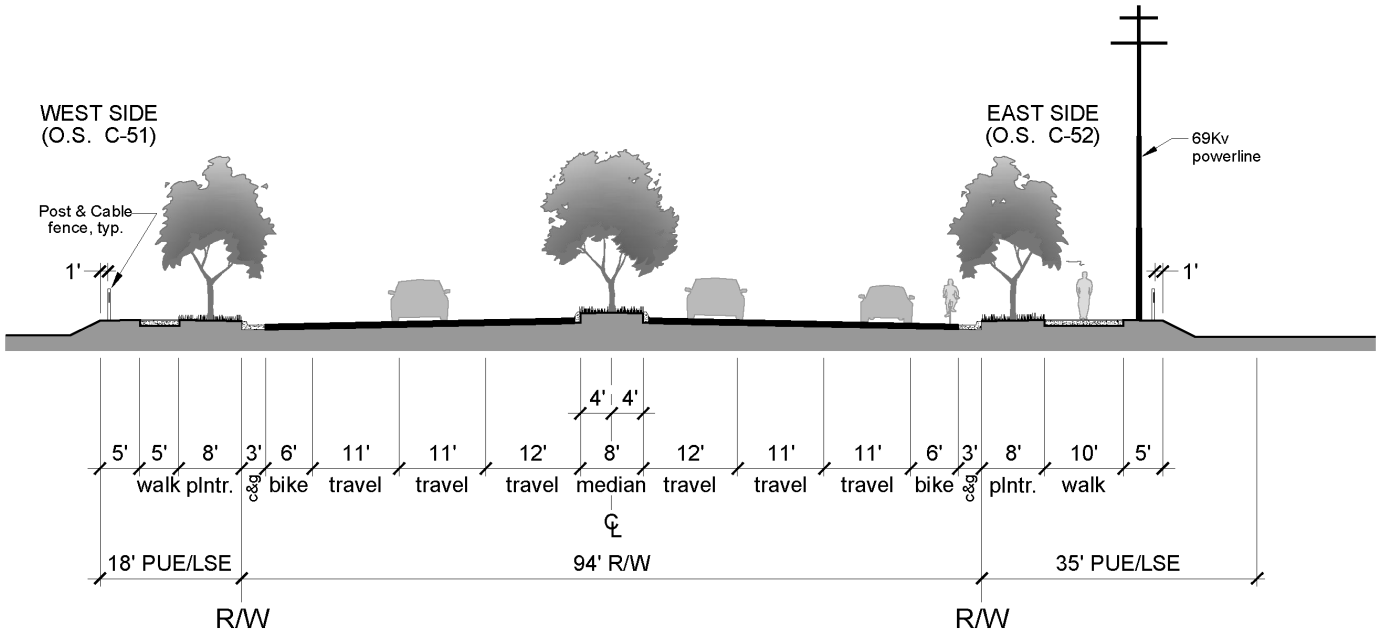
Westbrook Boulevard
Adjacent to Open Space Parcels C-51 and C-52



Collector Roadways

Collector streets are secondary circulation routes which distribute trips from the arterial street system to the local street system. Consistent with the City's improvements standards, collector streets provide two travel lanes and on-street Class II bike lanes. A modification to the City's standard collector street design is incorporated in the CSP, which reduces the pavement and travel lane widths to accommodate neighborhood design objectives~~by fourteen feet (14')~~.

This modification, in combination with an enhanced landscape corridor (i.e. paseos) is intended to reduce travel speeds and create more walkable street corridors for pedestrians.

Where adjacent to LDR and MDR land uses, the right-of-way dedication will include the landscape corridor. Design standards for collectors in the CSP include paseos along the street edge.

Design standards for each street are illustrated in Figures 6-7 through 6-10.

Figure 6-7
Holt Parkway

Creekview Plaza
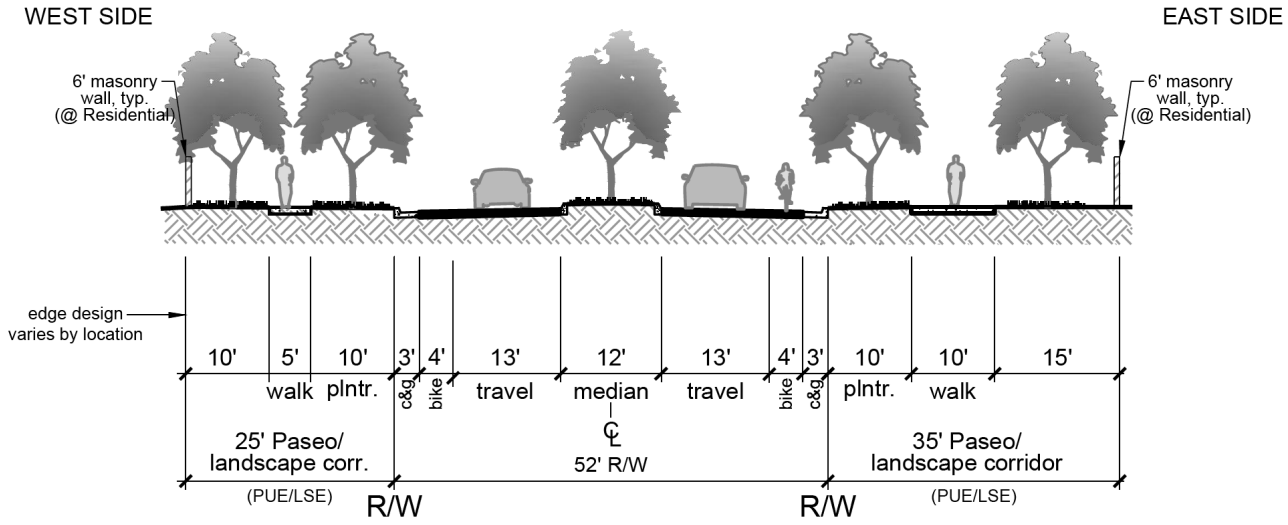
Westbrook Boulevard to Blue Oaks Boulevard



Local Roadways and Alleys

Local roadways provide direct access from collector streets through neighborhoods to residential units. The typical design standards for local streets include two travel lanes with space for on-street parallel parking and an adjacent attached or detached sidewalk. The CSP plans several types of local roadway design standards, depending on the location and desired interface between homes and the street. The CSP provides options for the design of local streets, which allow use of either detached or attached sidewalks. These street types are provided in several classifications as summarized below:

- **Primary Residential Street.** (Figures 6-11 and 6-12) Primary Residential Streets are used to accommodate higher traffic volumes and are placed adjacent to schools and parks, consistent with the City's roadway improvement standards. Type 2 (vertical) curbs are used adjacent to open space areas, schools, and parks. The sections differ in the right-of-way width to accommodate attached and detached sidewalk conditions. The CSP provides two design standards, one with an attached four-foot (4') wide sidewalk, and one with a five-foot (5') wide sidewalk separated from the curb by a five-foot (5') wide planter.

Figure 6-11
Primary Residential Street
Detached Walk

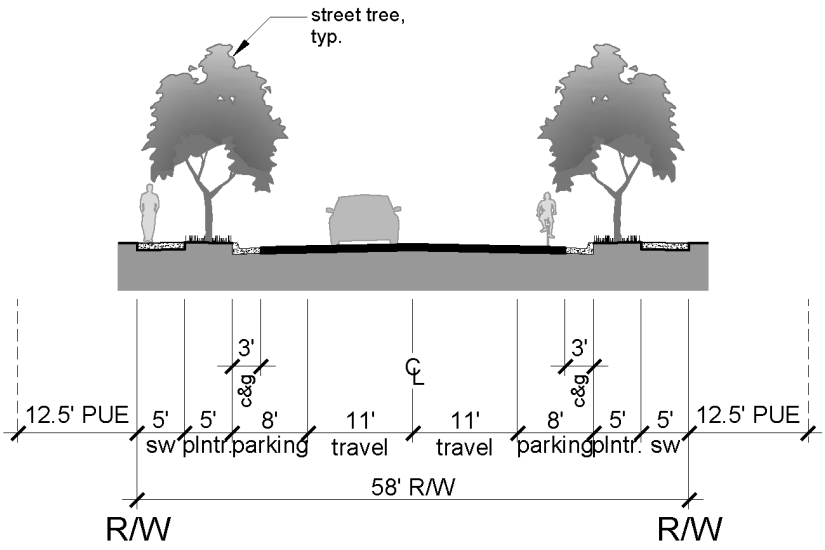


Figure 6-12
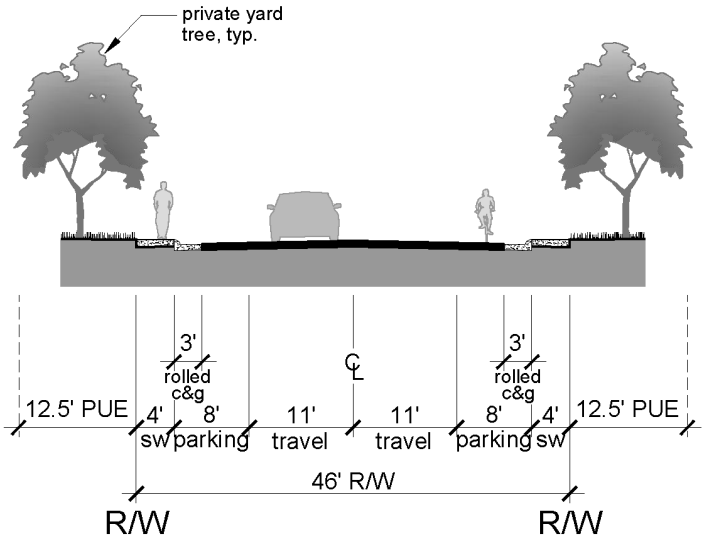
Primary Residential Street
Attached Walk



❑ **Minor Residential Street.**
(Figures 6-13 and 6-14)

Minor Residential Streets are used to carry lower traffic volumes than Primary Residential Streets, consistent with the City's roadway improvement standards. ~~Two~~ Three design sections are provided, ~~both~~ two of which include two travel lanes and on-street parallel parking. These sections differ in their right-of-way width to accommodate attached and detached sidewalk conditions. Additionally, a design section for a one-way street at Park Parcel C-63 is included, which includes one travel lane and on-street parking for one side of the street.

The CSP provides ~~two~~ three design standards, one with an attached four-foot (4') wide sidewalk, ~~and~~ one with a five-foot (5') wide sidewalk, separated from the curb by a five-foot (5') wide planter, and one with a five-foot (5') wide attached sidewalk along Park Parcel C-63.

Figure 6-13a
Minor Residential Street
Detached Walk

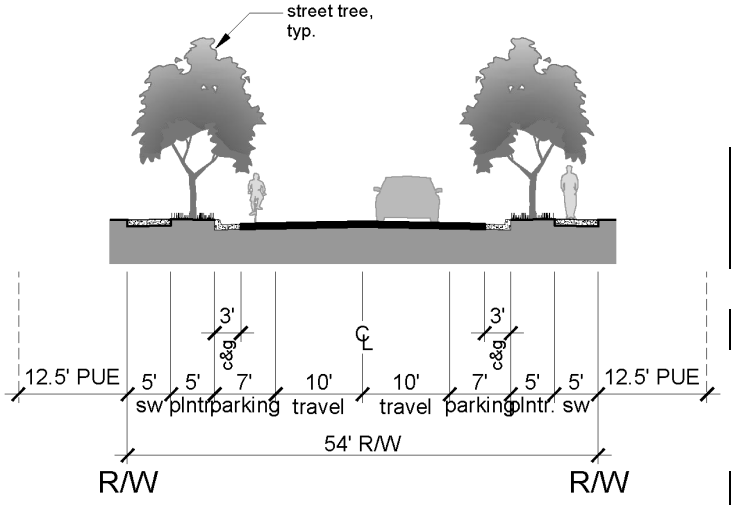


Figure 6-13a
Minor Residential Street
Detached Walk

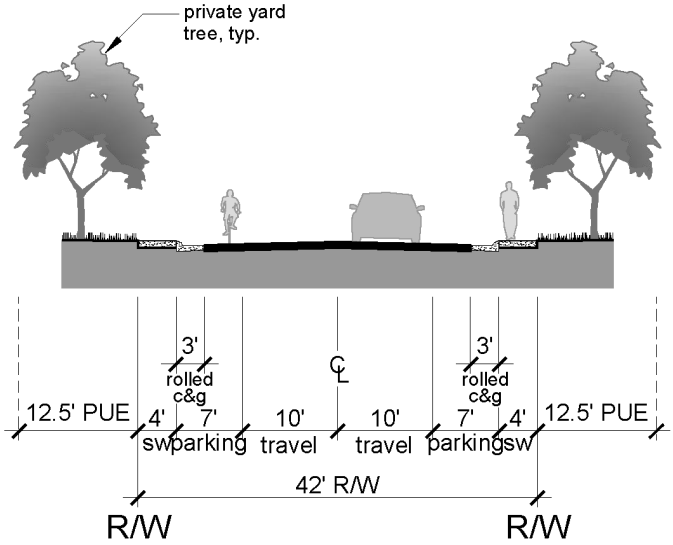

Figure 6-14
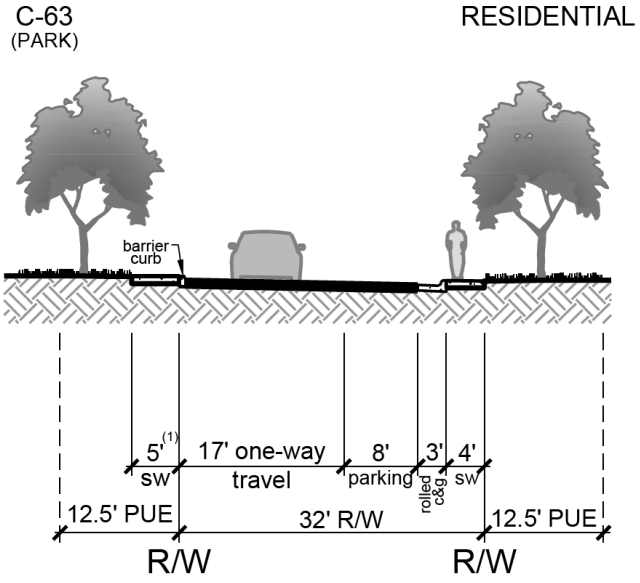
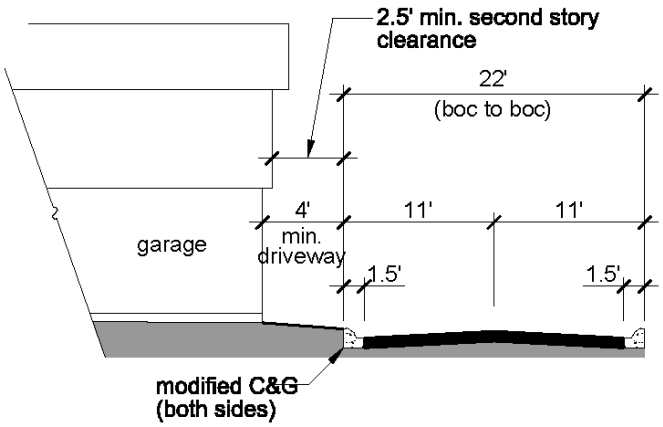
Minor Residential Street
Park Couplet (one-way)

[NEW STREET SECTION]



- **Alley.** (Figure 6-15) Alleys are used to provide automobile access and service areas for residential lots with rear-loaded garages. The design standard for this street type provides a 22-foot wide back-of-curb to back-of-curb dimension to allow two-way travel.

Figure 6-15
Alley



C. Additional Street Standards

Intersection Corner Clips

As noted in the design standards for arterial and collector streets, standard City turn lanes such as turn pockets, acceleration/deceleration lanes/tapers, and bus turn outs must be accommodated at street intersections. A design standard for corner clips will compensate for width reduction of landscape corridors at street intersections. The corner clip design accommodates landscaping at major roadway intersections to ensure a high-quality streetscape, while accommodating the additional lanes needed for efficient automobile travel. The minimum design standard for intersections, including a typical design for a corner clip, is illustrated in Figure 6-16.

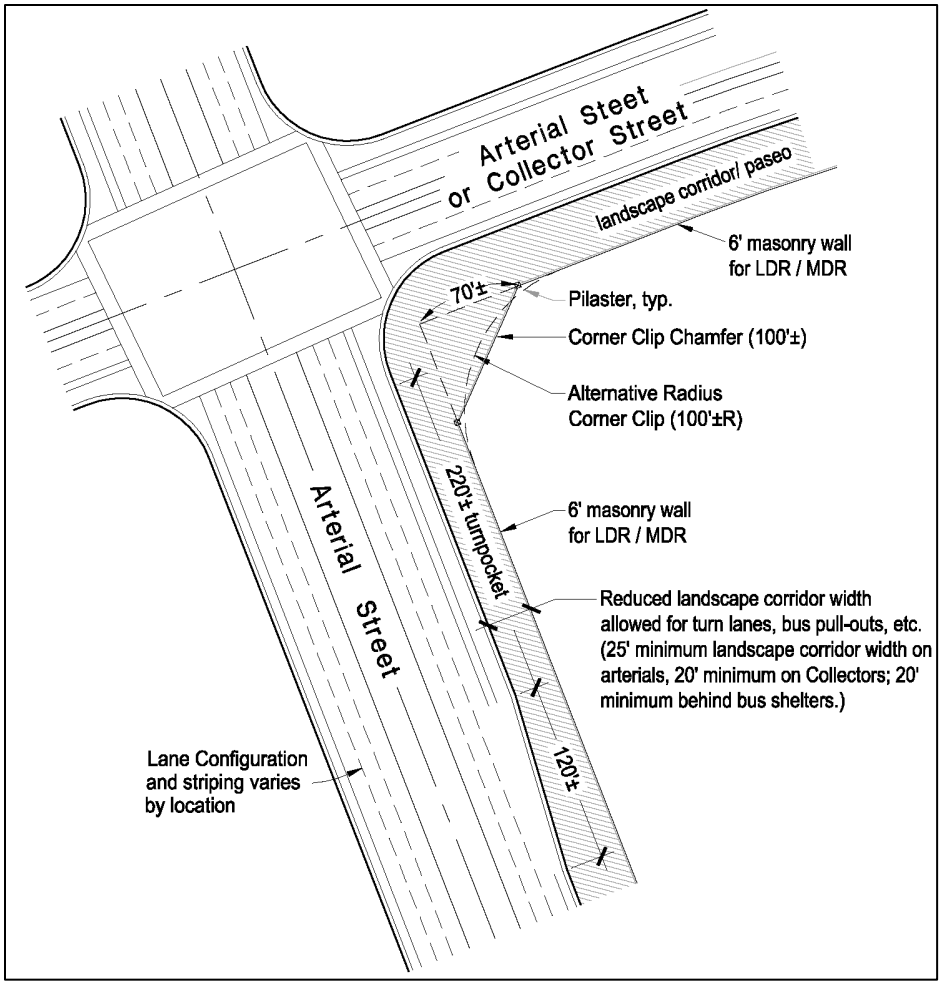


Figure 6-16: Corner Clip Design Standard

Traffic Signals, Roundabouts, and Median Breaks

The arterial and collector roadway circulation system is designed to maximize efficiency for automobiles and enable safe movement for bicyclists and pedestrians. Locations of traffic signals, roundabouts, and median breaks are identified to plan for left turn movements along arterial roadways, thereby enhancing the efficiency of traffic flow and minimizing interruptions to landscaped medians. Additional median breaks may be allowed without amending this Specific Plan subject to approval by the Public Works and Planning Departments. Locations of signals and median breaks are illustrated on Figure 6-17.

6.2 Bikeway and Pedestrian Network

A comprehensive system of multi-use paths and bikeways is planned throughout the CSP, complementing the transportation choices available for residents, employees, and visitors. This network is an important component in providing connectivity for non-vehicular travel within the CSP. The system of bikeways and multi-use paths provides off-street linkages and connects with Roseville's existing facilities, and with facilities planned in the Al Johnson Wildlife Area and with the Pleasant Grove Creek corridor via planned bikeway facilities in the West Roseville Specific Plan.

For the CSP, this network consists of the following components:

- Paseos
- Class IA Paths
- Class I and II Bikeways
- Sidewalks

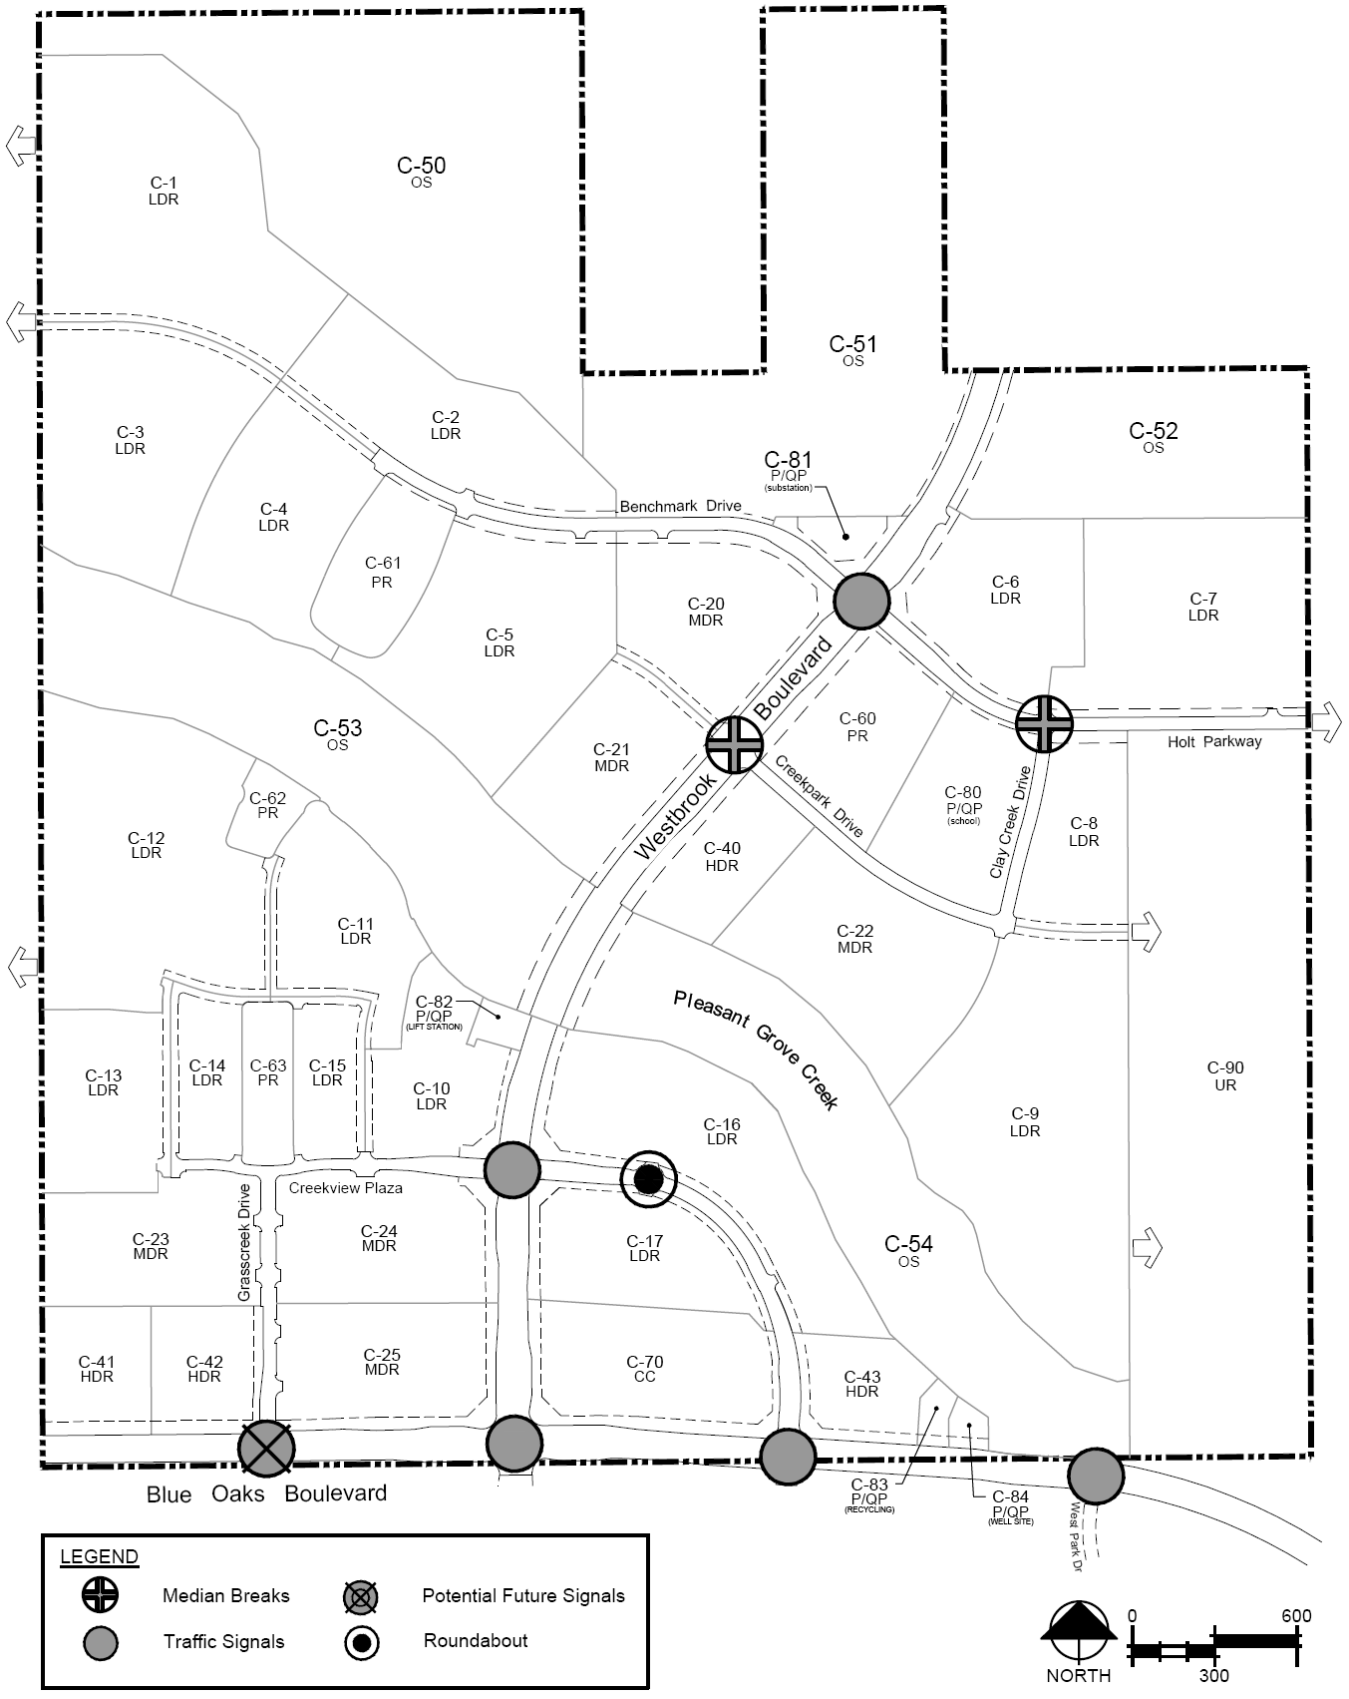
Enhanced pedestrian paths consist of two key elements: the multi-use pathways located in the system of paseos, and Class 1A paths located along arterial roadways. These features are the most prominent elements of the bikeway and pedestrian network, providing street-separated linkages throughout the community.

A. Paseos

Paseos are specially-designed landscape corridors, along key roadways which form a plan-wide network of street-separated pathways for bicycle and pedestrian circulation. Within the paseo corridors, pathways are ten (10') feet wide and serve both bicycles and pedestrians. They are also a significant component of CSP's circulation system which enhances neighborhood design and streetscape and enhances the quality of life for future residents.

Paseos are planned along collector streets and through some neighborhoods along primary residential streets for cross

Figure 6-17: Traffic Signals, Roundabouts, and Median Breaks [UPDATED EXHIBIT]



connectivity. Neighborhood paseos link to the two pedestrian/bicycle bridges located east and west of the Westbrook Boulevard bridge. Paseos range in width, depending on the location. Improvements typically include water conserving landscaping, recycled water for irrigation, efficient low water use irrigation systems and controls, and security lighting.

Details regarding paseo design and interfaces with residential areas and use application in the CSP are provided in Section B.5 of the CSP Design Guidelines (Appendix B).

B. Class IA Paths

A principal component of the pedestrian path system is the Class IA paths within the landscape corridors of arterial roadways. These pathways typically consist of an eight-foot (8') wide sidewalk and are multi-use, providing connections among parks, schools, open space areas, and residential neighborhoods within the CSP. The Class IA paths also connect to the natural open space areas, linking with the Class I bikeway system to provide enhanced connections among land uses. Class IA paths are illustrated in the various street sections for arterial roadways in Section 6.2.

C. Class I and II Bikeways

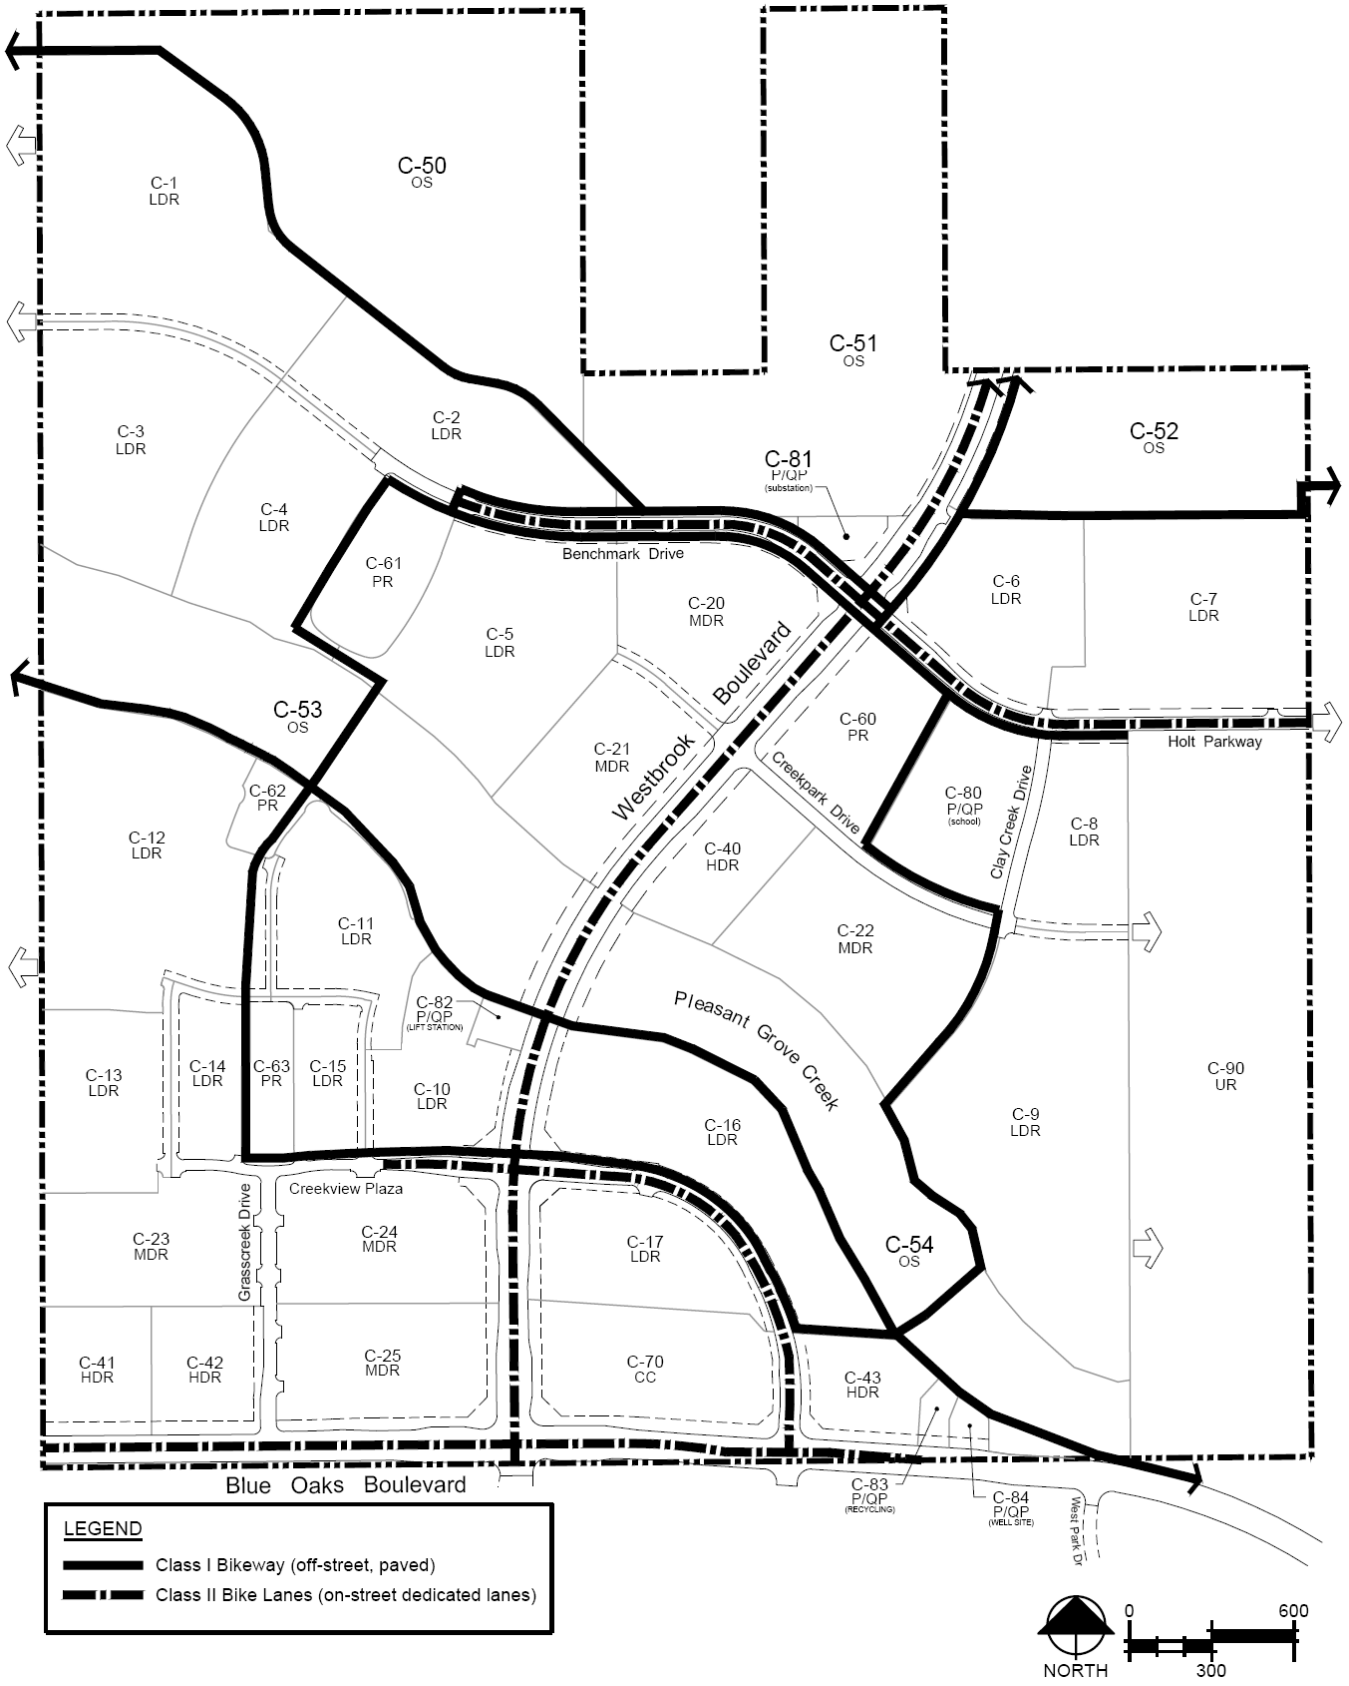
The bikeway network consists of approximately 3.5 miles of Class I and Class II bikeways, as shown on Figure 6-18. The bikeway system encourages pedestrian and bicycle movement within the CSP and provides linkages among land uses and to existing and planned pedestrian and bicycle facilities in the City and region.

The planned network of bikeways consists of two components: Class I bike paths located in or adjacent to open space corridors with no vehicular interruptions, and Class II bikeways within arterial and collector streets. Together, these components provide a comprehensive system of on and off-street bikeways to link all neighborhoods of the community.

Class I bike paths are located along the south side and portions of the north side of the Pleasant Grove Creek corridor and along the south side of the Northern Preserve (Parcels C-50, C-51 and C-52). These corridors provide east/west connections through the CSP which connect on the east with paths in the West Roseville Specific Plan and on the west to future facilities in the Al Johnson Wildlife Area. Per City standards, these facilities typically consist of a ten-foot (10') wide paved path with lane striping and two-foot (2') decomposed granite/gravel shoulders on each side. Where paths are adjacent to resources, the design shall be coordinated with the 404 Permit requirements to avoid resources.

Class II bikeways are designated bike lanes located on arterial roadways and collector streets. The width of these lanes varies depending on the roadway type and bike lanes are delineated with signage and painted

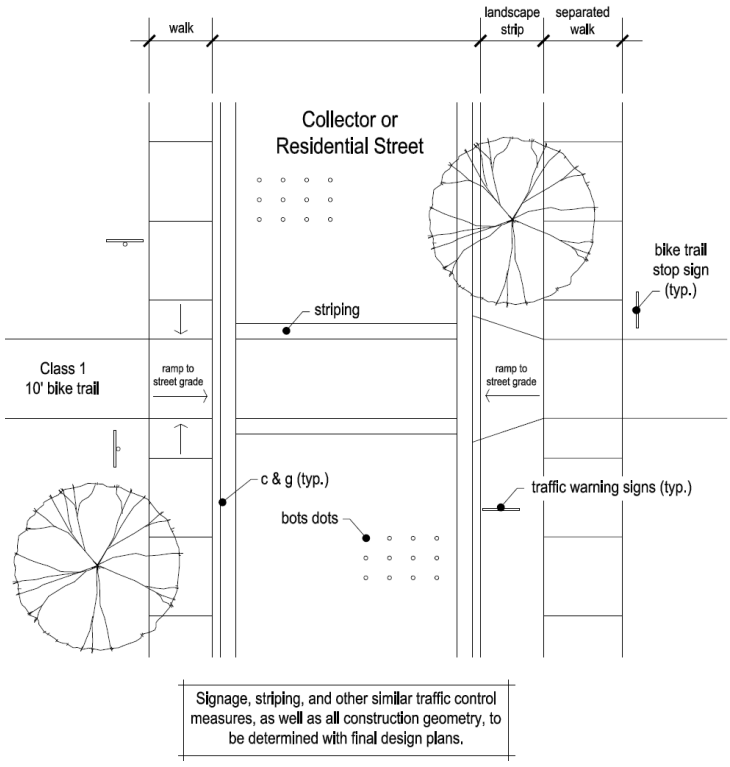
Figure 6-18: Class I and II Bikeways [UPDATED EXHIBIT]



stripes. Locations of Class II bikeways are identified in street sections on Figures 6-2 through 6-10.

The Class I bikeway system is designed to minimize barriers and reduce potential travel disruptions. At grade crossings of streets will occur where Class I paths intersect at or near signalized intersections. Signage and delineation of bikeway crossings will be provided at these crossings, per City standards, as shown on Figure 6-19.

Figure 6-19
Bike Path Street Crossing



The CSP promotes frequent connections between the Class I system and adjacent uses. Where a single loaded street abuts open space, park or paseos, the Class I path (separated from street) may replace the standard sidewalk on the open space side of the street and paved links to the Class 1 bikeway will be provided. Where a cul-de-sac or loop street, multi-family or non-residential project abuts the Class I path, a paved link may be provided to the path when feasible. The Class I system within an open space area may meander to minimize impacts and to create visual interest.

Barriers (bollards, rail fence, vertical curbs, post and cable, posts, etc.) will be used along bike paths to separate the pathways from open space preserve areas, if required by a Section 404 permit issued under the federal Clean Water Act. Such barriers shall comply with the 404 permit regarding use of the preserve area, and with City design, maintenance and public safety requirements.

D. Sidewalks

Sidewalks are required along all CSP public roadways (except alleys). For local streets, sidewalks consist of either a four-foot (4') wide attached sidewalk or a five-foot (5') wide detached sidewalk. Collector streets include an eight to ten foot (8-10') wide detached sidewalks within landscape corridors. Where a paseo is located along a collector or primary residential street, the sidewalk is ten feet (10') wide and is designed to be shared by pedestrians and bicyclists. (refer to CSP Design Guidelines in Appendix B for more information). The typical eight-foot (8')

wide detached sidewalks within landscape corridors along arterial streets are considered Class IA enhanced pedestrian paths, which are also shared by bicyclists and pedestrians.

6.3 Public Transit

Public transit, another transportation choice supported in the CSP, may include a combination of bus service systems via Roseville Transit with connections to Sacramento Regional Transit and Placer County Transit. These services will utilize CSP's roadway systems to provide local and regional transit connections for community residents.

Roseville Transit provides fixed route and Dial-A-Ride services within the City, as well as fixed route commuter services between Roseville and downtown Sacramento, and between Roseville and the Highway 50 corridor. The fixed route local and commuter systems operate on regularly scheduled routes, with the Dial-A-Ride system providing demand responsive curb-to-curb service. Roseville Transit users connect to Placer County Transit and Sacramento Regional Transit at transfer points at the Roseville Galleria and Orlando Avenue at Louis Street.

Blue Oaks Boulevard and Westbrook Boulevard are planned to accommodate future bus rapid transit (BRT) routes. BRT transit stops are planned at the intersection of Creekview Plaza and Westbrook Boulevard, as shown on Figure 6-20. BRT would provide an express bus commuter service throughout western Placer County and to downtown Sacramento employment centers. This service would also provide connections to other transit hubs, including light rail facilities in Sacramento County.

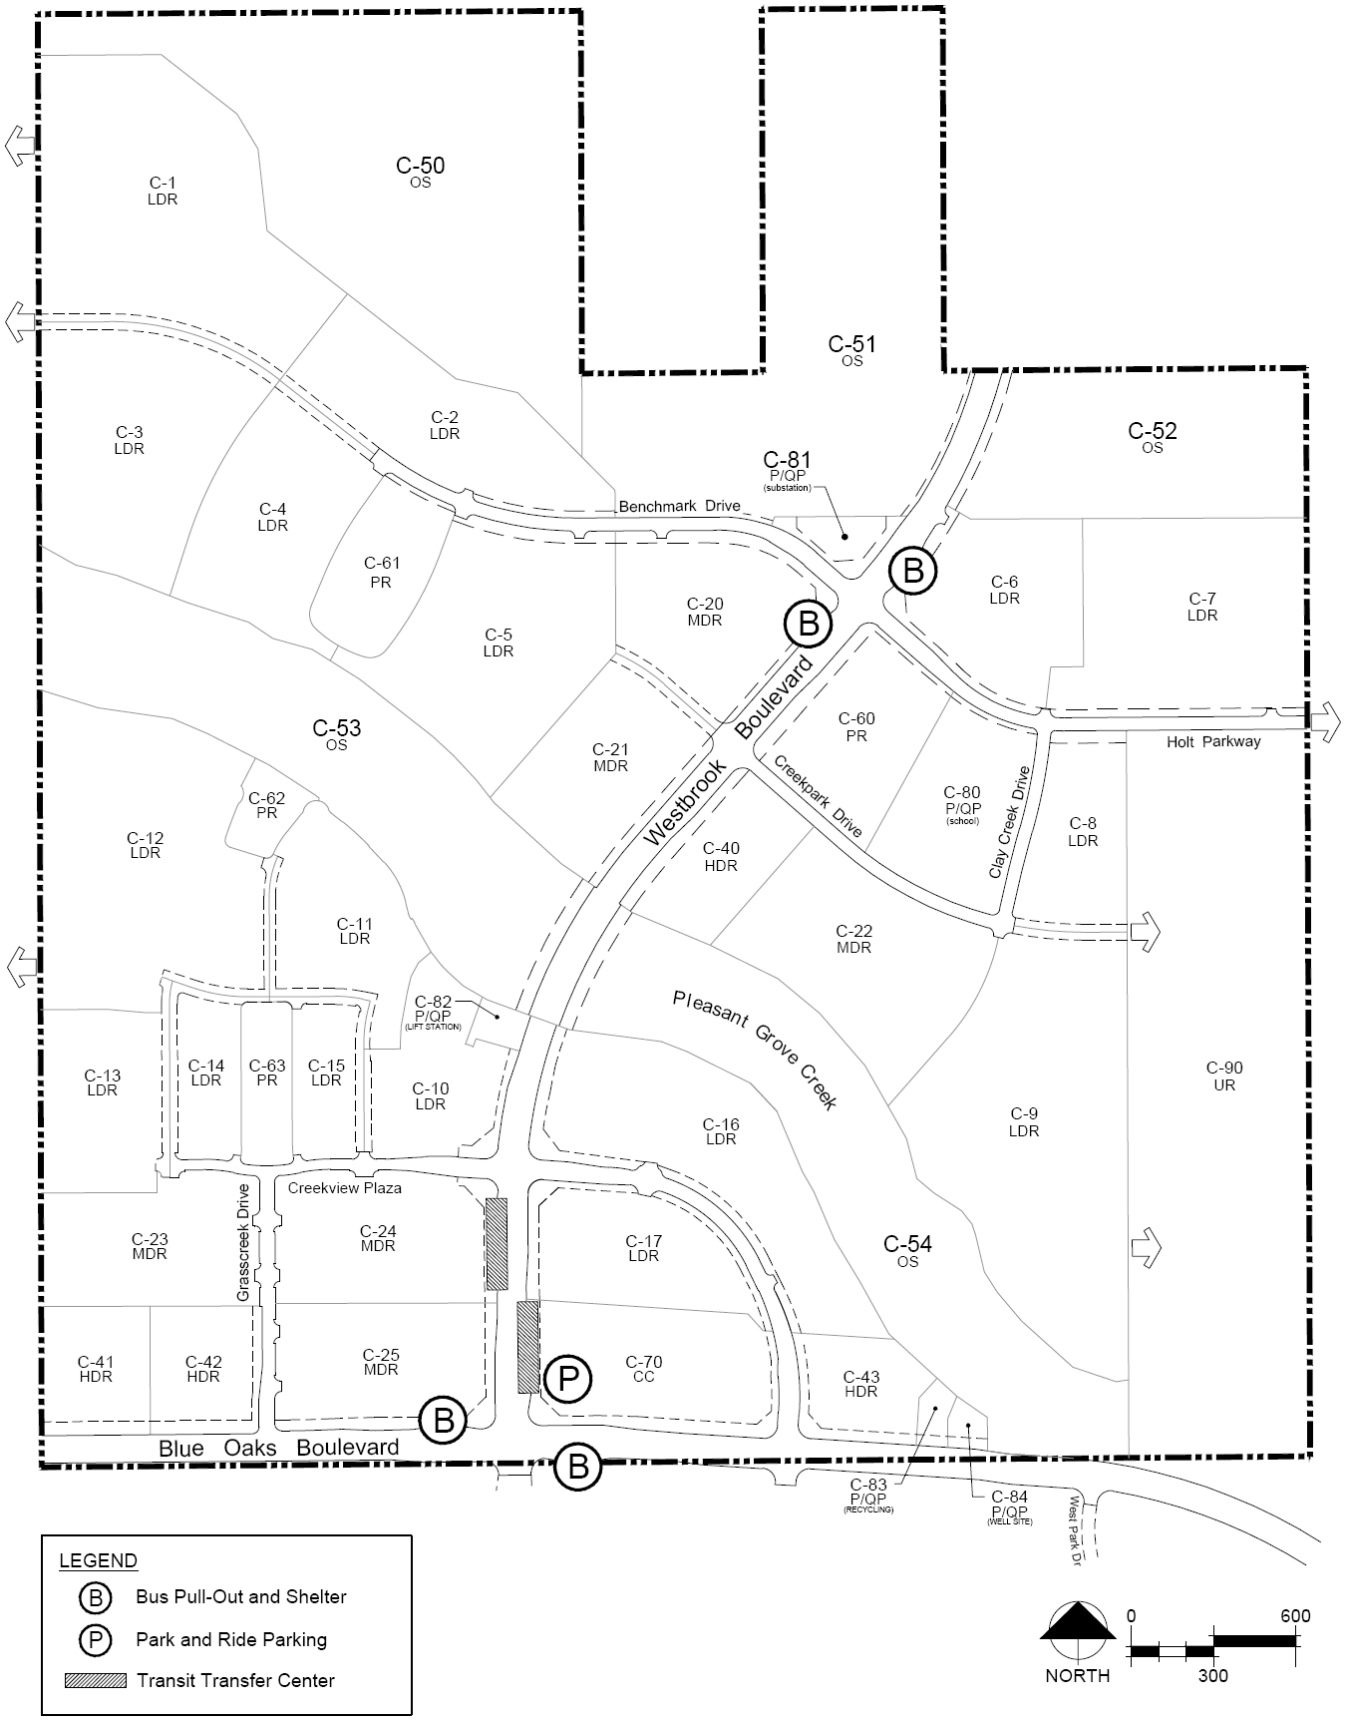
To facilitate the expansion and use of transit, higher-intensity land uses are planned near transportation corridors and transit stops. These uses include high density residential and, commercial ~~and employment~~ uses located south of the creek. ~~along the Westbrook Boulevard corridor.~~

A ~~bus~~ transit transfer center is planned on Westbrook Boulevard, between Blue Oaks Boulevard and Creekview Plaza, ~~east of the intersection at Westbrook Boulevard~~. The transfer center will include queuing space for buses, a pedestrian shelter area, and other amenities as described in the Development Agreement and show on Figure B-9 of the Creekview Design Guidelines.

The transit transfer center would enable riders of BRT and Roseville Transit to transfer routes. Bus turnouts and shelters will be located and constructed in accordance with City Improvements Standards and as otherwise required by the Public Works Director for specific projects.

Figure 6-20: Transit Facilities

[UPDATED EXHIBIT]



6.4 Park and Ride Facilities

Park and ride lots provide parking for commuters to leave their vehicles to meet carpools, vanpools or access transit services. In the CSP, a park and ride lot is planned at the commercial center (Parcel C-70 ~~C-40~~) located at Westbrook Boulevard and Blue Oaks Boulevard. The park and ride facilities will include twenty-five (25) park and ride spaces of which two spaces will provide electric car charging stations. The site designated to provide park and ride facilities is identified on Figure 6-20.

Park and ride lots are intended to be made available to commuters during normal commute hours on a daily basis. Park and ride spaces will be provided in addition to the minimum required parking spaces for the project development and maintained by the project developer. Additional information regarding the obligations for the construction of park and ride lot, including related facilities, is included in the CSP Development Agreement.

6.5 Transportation Systems Management

Transportation System Management (TSM) measures are designed to reduce the number and length of home-to-work commute trips through actions such as ridesharing, flexible work hours, and support of public transportation. Any project site, common work location, or employer with fifty (50) or more employees is required to comply with the City of Roseville TSM Ordinance and shall incorporate TSM measures to the degree required by the Ordinance.

Section 7

Public Services

The following is an overview of the public services and facilities required to meet the needs of Creekview Specific Plan (CSP) residents, in accordance with the City's General Plan. Services addressed include parks and recreation, schools, libraries, police and fire protection/emergency services. Phasing and financing obligations relating to public services are outlined in the Creekview Development Agreement and in Chapter 10, Implementation. Table 7-1 summarizes the public service providers to the CSP.

Table 7-1: Public Service Providers

Service	Provider
Parks and Recreation	City of Roseville
Schools	Roseville City School District Roseville Joint Union High School District
Library	City of Roseville
Police Protection	City of Roseville
Fire and Emergency Services	City of Roseville

7.1 Parks and Recreation

The CSP features a system of neighborhood parks and open space which provides active and passive recreation, open space amenities, and pedestrian linkages.

A. Parks and Open Space Requirements

The CSP's park and recreational facilities as well as open space areas comply with the policies and requirements of the City's General Plan Parks and Recreation Element. For new development areas, the General Plan requires nine acres of parkland provided for every 1,000 residents. This requirement is satisfied through three land-dedication components: three acres each of citywide park, neighborhood park, and open space.

Table 7-2: General Plan Park Dedication Requirements

Park Type	General Plan Standard	Credited Acreage Required
Citywide Park	3 acres per 1,000 residents	15.3 acres
Neighborhood Park	3 acres per 1,000 residents	15.3 acres
Open Space	3 acres per 1,000 residents	15.3 acres
Total Requirement		45.9 acres

The 2,011 dwelling units in the CSP generate an estimated population of 5,108 residents based on an average household size of 2.54 residents. With this estimated population, the City's provision of nine acres per 1,000 residents requires 45.9 acres of parkland in the Plan Area. The City's General Plan parkland dedication requirements are summarized below in Table 7-2.

Parks and Open Space Provided

Over 150 acres of the CSP is designated for neighborhood parks, and open space. Specifically, the CSP designates approximately 16.2 ~~15.7~~ acres for neighborhood parks and 136.9~~2~~ acres for open space areas. CSP's parklands are summarized in Table 7-3 and shown on Figure 7-1.

Credited Parks and Open Space

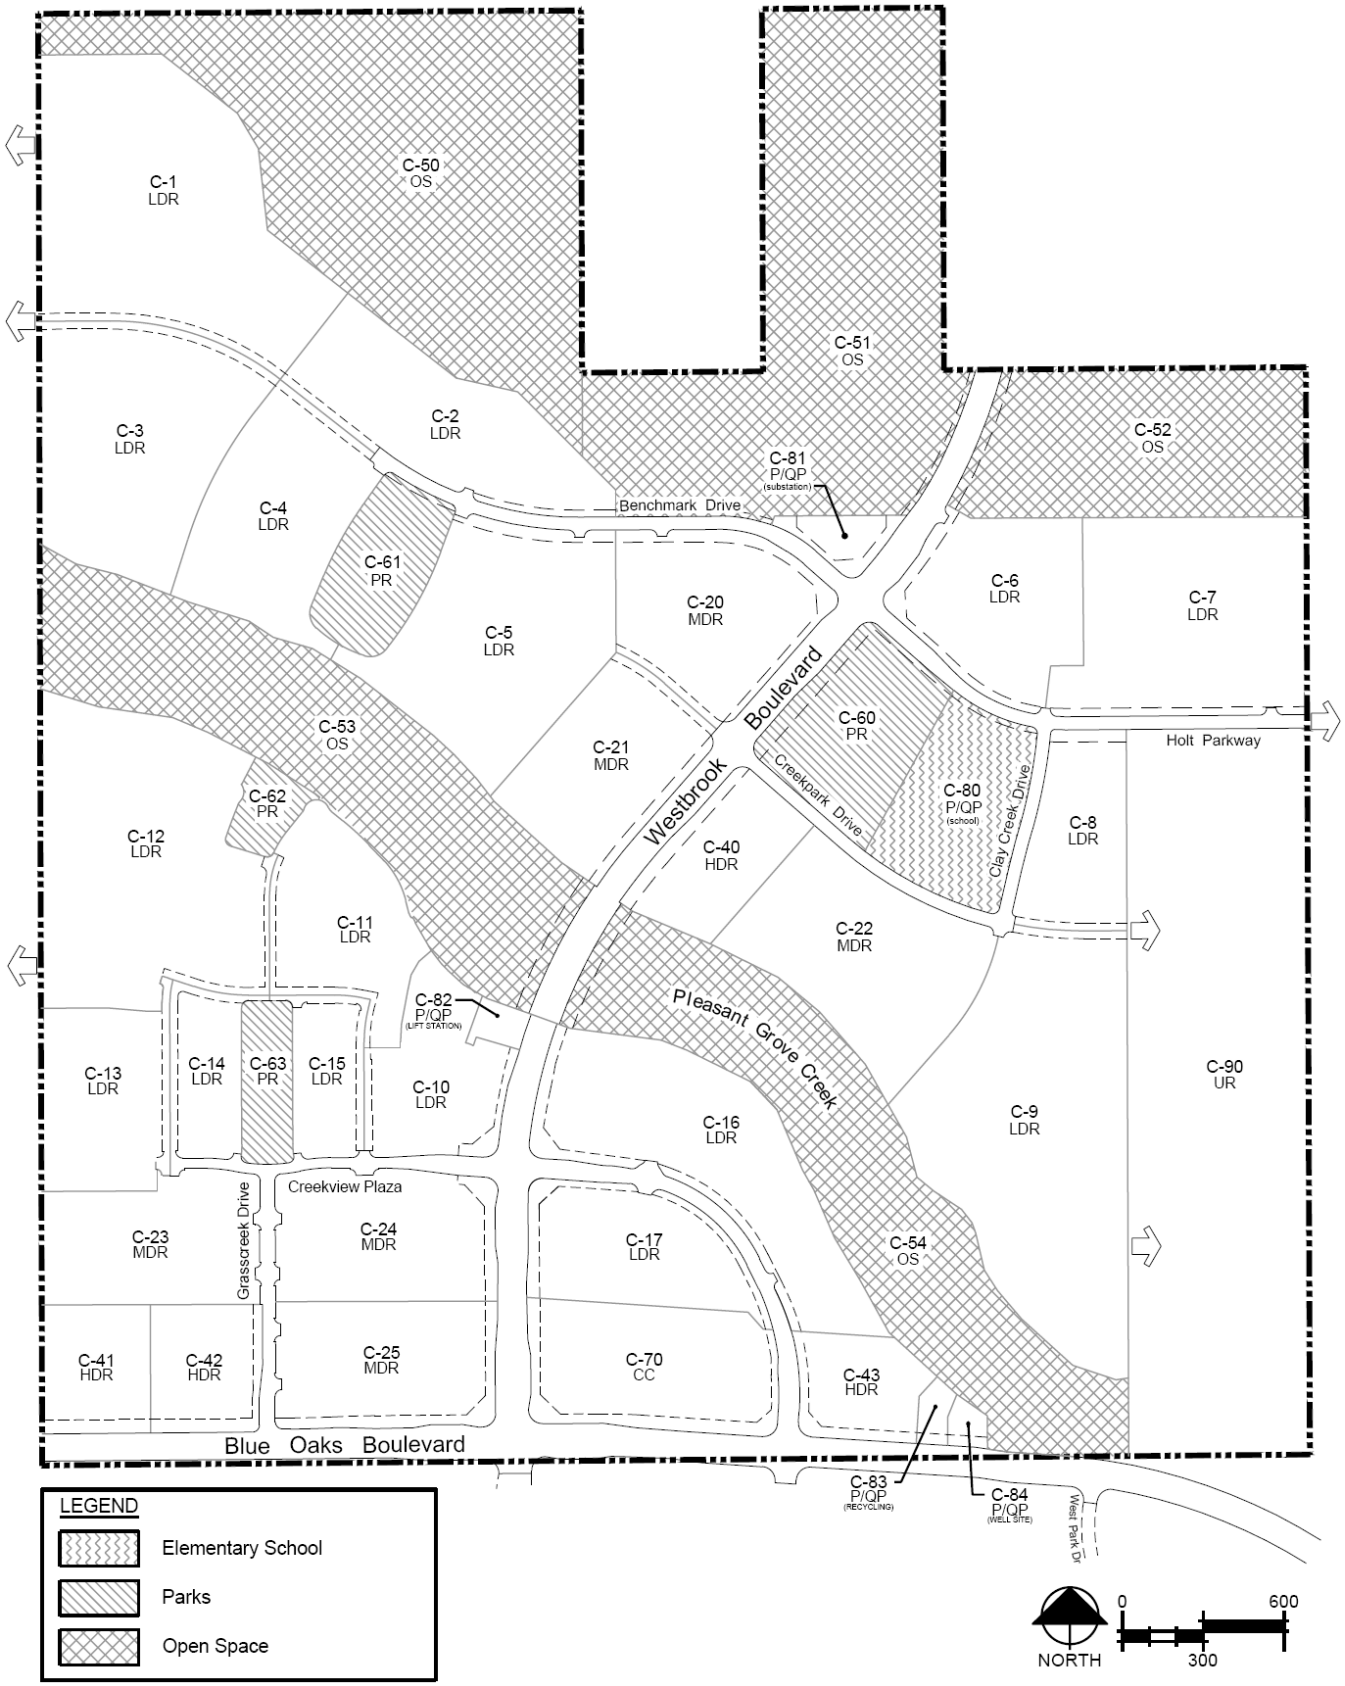
Each acre set aside for active park use is credited as a full acre towards meeting the General Plan park dedication requirement. Depending on the ultimate use, recreational value, or application of CSP's open space parcels, full or partial credit may be granted for open space land containing informal recreational facilities, open space amenities, or natural features.

Parkland credits for park and open space parcels are outlined in Table 7-3. The credits applied are reflective of each parcel's recreational value as a park or open space amenity.

Table 7-3: Park and Open Space Lands and Credit by Parcel

Parcel	Type	Acreage	Credit Ratio	Credited Acreage
Neighborhood Parks				
C-60	Neighborhood Park (Joint Use)	7.4 ~~3~~	1:1	7.4 ~~3~~
C-61	Neighborhood Park	4.8 ~~7~~	1:1	4.8 ~~7~~
C-62	Neighborhood Park	1.5	1:1	1.5
C-63	Neighborhood Park	2.5 ~~2.2~~	1:1	2.5 ~~2.2~~
	Subtotal	16.2 ~~15.7~~		16.2 ~~15.7~~
Open Space				
C-50	Open Space – Northern Preserve	36.5 ~~4~~	0.2:1	7.30 ~~28~~
C-51	Open Space – Northern Preserve	35.6 ~~8~~	0.2:1	7.12 ~~6~~
C-52	Open Space – Northern Preserve	15.1 ~~0~~	0.2:1	3.02 ~~0~~
C-53	Open Space – Creek Corridor	25.1 ~~4.8~~	0.5:1	12.55 ~~40~~
C-54	Open Space – Creek Corridor	24.6 ~~2~~	0.5:1	12.30 ~~10~~
	Subtotal	136.9 ~~2~~		42.29 ~~1.94~~
	Total	153.1 ~~151.9~~		58.49 ~~57.64~~

Figure 7-1: Parks, Open Space and School Site [UPDATED EXHIBIT]



As shown on Table 7-4, CSP satisfies the City's open space and neighborhood parkland dedication requirements. The Citywide parkland dedication requirement will be satisfied using the City's park in-lieu fee, pursuant to General Plan policy and the In-Lieu Park Fee Ordinance.

Table 7-4: Park Credit Summary

Park Type	Credited Acreage Required	Total Acreage Provided	Credited Acreage Received	Surplus/ Shortfall
Citywide	15.3 acres	Satisfied through in-lieu Citywide park fees for land dedication		
Neighborhood	15.3 acres	16.2 ~~15.7~~ acres	16.2 ~~15.7~~ acres	+ 0.9 acres
Open Space	15.3 acres	136.9 ~~2~~ acres	42.29 ~~41.94~~ acres	+ 26.99 ~~64~~ acres

In addition to park and open space areas, the CSP includes a comprehensive system of paseos. Paseos are landscaped features with walkways and bike paths in an enhanced pedestrian environment. The portions of paseos in excess of landscape corridor requirements are eligible to receive a 1:1 acre open space parkland credit. The CSP includes adequate open space to meet the General Plan open space parkland requirement. Paseos are described in Chapter 6, Circulation and in the Creekview Design Guidelines (Appendix B).

B. Park and Open Space Concept Plans

CSP's park and open space system is designed to provide linkages and recreational opportunities within proximity to all residents and employees. Park designs include reduced turf areas as a water conservation consideration focused on active recreational uses. Park designs target a 60% turf goal based on total park acreage in the CSP. Park designs will increase the use of water conserving landscapes, utilize recycled water for irrigation, and include water efficient irrigation systems and controls.

Neighborhood Parks

CSP's park system features four neighborhood parks, responsive to the recreational needs of the neighborhoods in which they are located. All of the parks are linked via the planned system of paseos and open space corridors which enhances pedestrian and bicycle access through the CSP and provides connections to existing and planned facilities throughout the City. Neighborhood parks range in size from 1.5 to 7.4 ~~3~~ acres. All parks will incorporate water conservation measures including turf limitations (60% on average), recycled water use for irrigation, low water use plantings and smart irrigation systems or centrally controlled irrigation systems. Below are conceptual plans for each of the park sites. The park plan concepts are subject to change based on funding, environmental conditions or other factors.

Neighborhood Park/School Parcel C-60

The largest neighborhood park is the ~~7.3~~ 7.4-acre park (C-60) adjacent to the elementary school on the southwest corner of Holt Parkway and Westbrook Boulevard. School adjacency allows joint-use opportunities for outdoor recreation facilities.

Facilities in the park include active ball fields for baseball and soccer as well as a turfed play area, play structure and seating areas. Pedestrian and bicycle paths will connect through the park.

Although Park C-60 and the adjacent elementary school are located at the intersection of Westbrook Boulevard and Holt Parkway, vehicular access will be provided from Creekpark Drive on the south side of the park. Parking will be shared by the park and school.

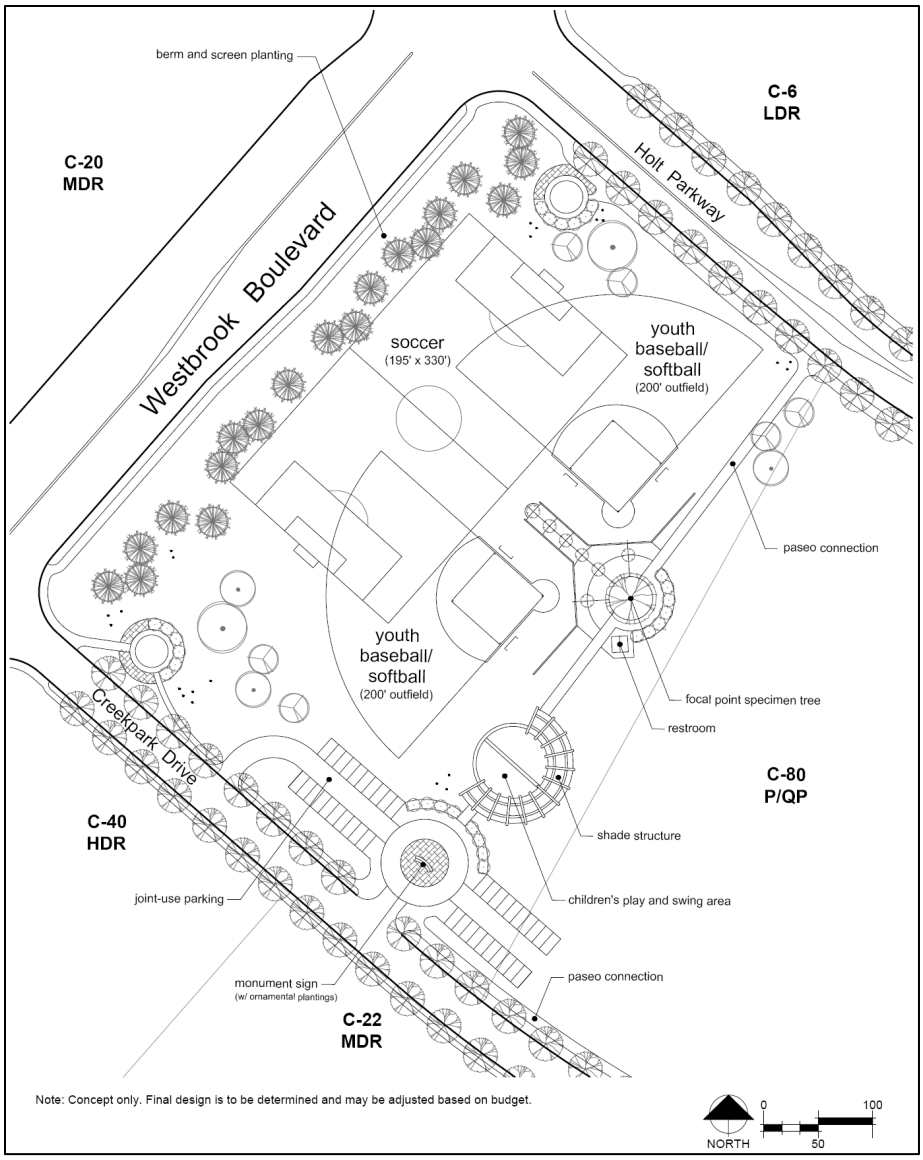


Figure 7-2: Concept Plan for Neighborhood Park/School (C-60)

The park is accessible from surrounding residential neighborhoods. Berms and screen plantings are planned along the western edge of the park to screen Westbrook Boulevard, creating a barrier to the street. Final park design may change based on the available funding and costs.

Neighborhood Park
Parcel C-61

The second largest park (C-61) is ~~4.7~~ 4.8 acres, located north of the creek and south of Benchmark Drive, in the western portion of the CSP.

The park is intended to serve the northwest quadrant of the CSP. The park is accessible to adjacent neighborhoods via Benchmark Drive and from the south by way of the pedestrian and bicycle crossing of Pleasant Grove Creek. Parking for the park will be on-street. A soccer field is the primary feature in this park as well as a play structure and seating areas.

Pedestrian and bicycle paths will extend into the park from the bridge crossing, through the park to the paseo on Benchmark Drive.

Where the creek crossing enters the park, a hardscape feature will create a viewing area for seating and vistas to the creek. Final park design may change based on available funding and costs.

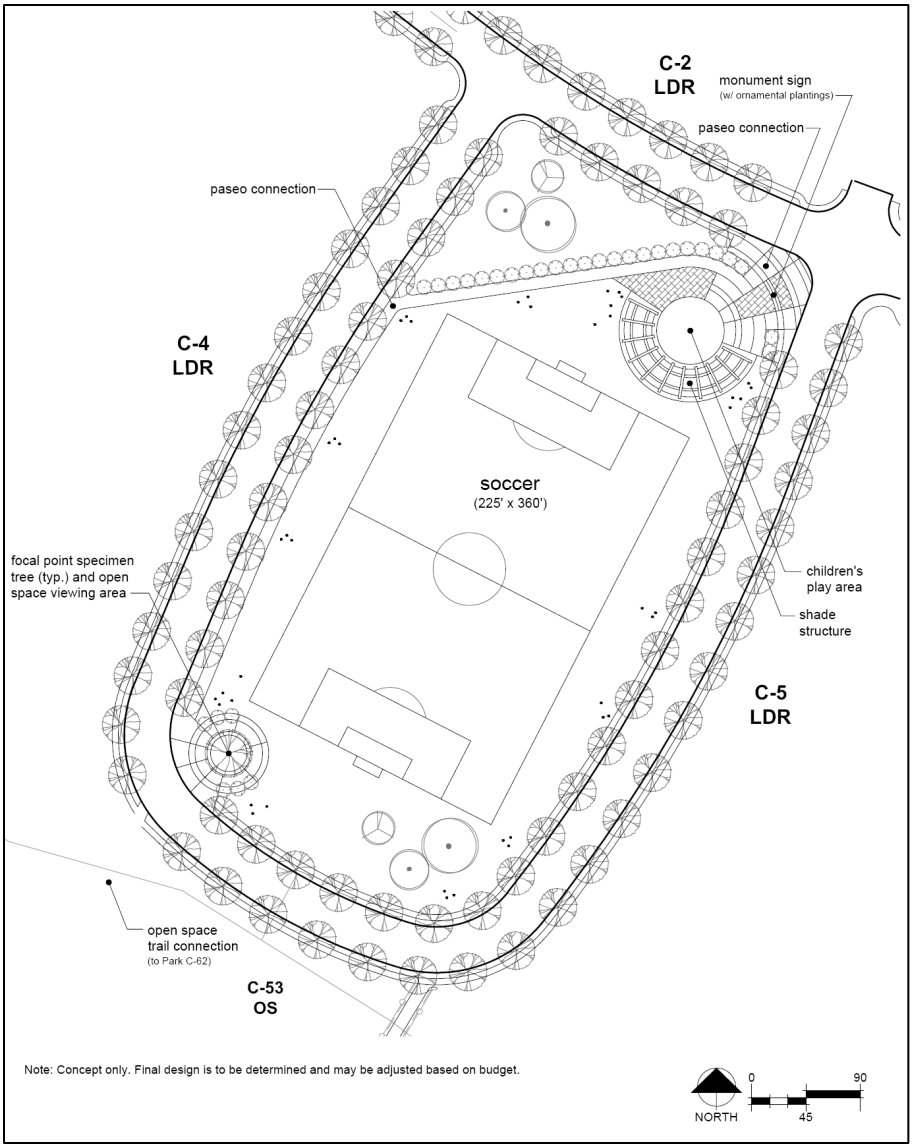

Figure 7-3: Concept Plan for Neighborhood Park (C-61)

Neighborhood Park
Parcel C-62

In the southwest quadrant of the CSP, a small, 1.5-acre park (C-62) is planned south of the creek. It will connect to the Pleasant Grove Creek open space and to the park (C-61) north of the creek via the pedestrian/bicycle creek crossing.

Park C-62 is planned with informal recreation facilities oriented toward the creek. Facilities will include a multi-use turf area, children's play area, shade structures and seating areas. Where the creek crossing enters the park, a hardscape feature will create a viewing area for seating and vistas to the creek.

The park is accessible from adjacent residential neighborhoods south of the creek. Pedestrian and bicycle paths will connect through the park and on-street parking will be available. Final park design may change based on the available funding and costs.

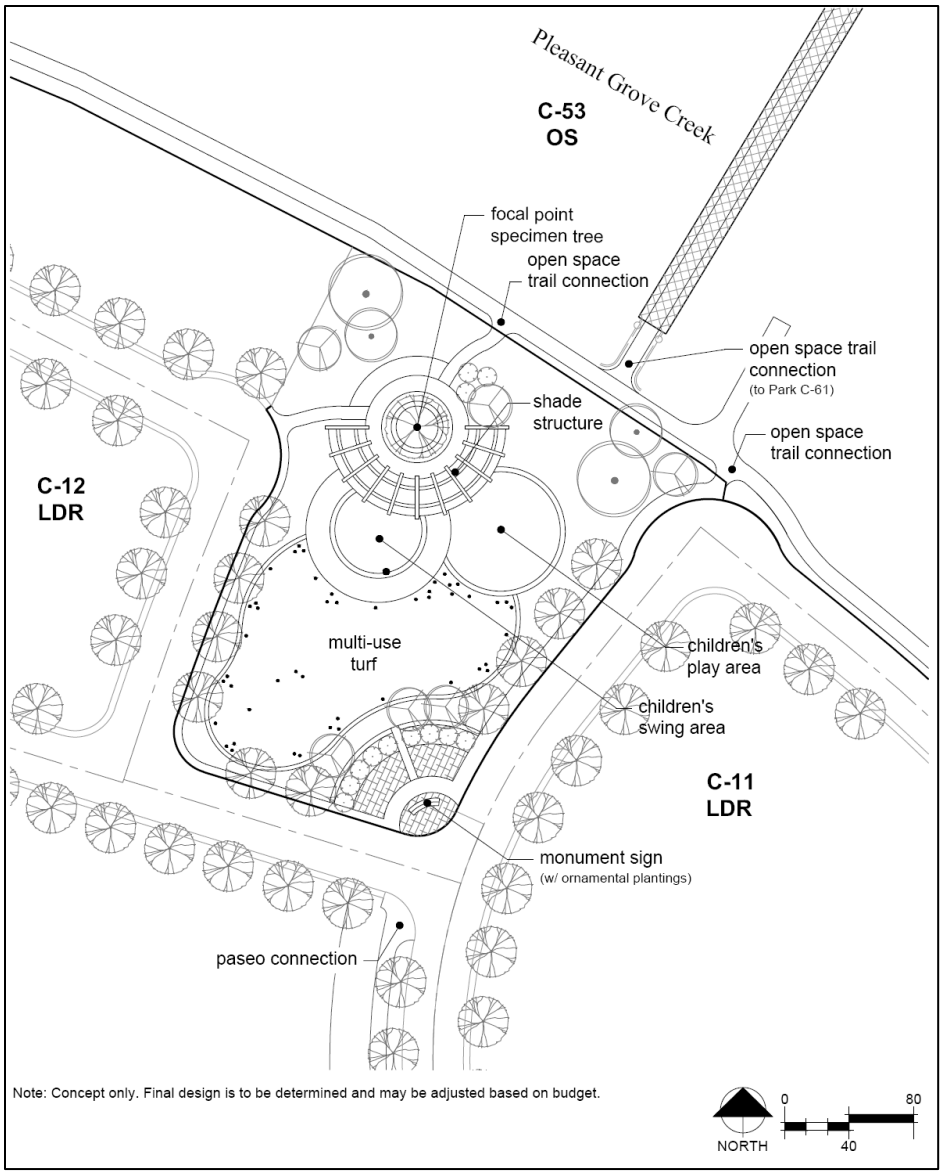

Figure 7-4: Concept Plan for Neighborhood Park (C-62)
[UPDATED EXHIBIT]

Neighborhood Park
Parcel C-63

A ~~2.2~~ 2.5-acre park site (C-63) is located north of Creekview Plaza in the southwest quadrant of the CSP.

This neighborhood park is intended to provide recreation facilities in the portion of the Plan Area where residential densities are the highest and active play areas may be of greater demand. The park is accessible to adjacent neighborhoods from Creekview Plaza and Grasscreek Drives. Parking for the park will be on-street.

Active recreation facilities are planned such as sand volleyball courts and half-courts for basketball. A children's play area, shade structure and seating areas are also provided. Pedestrian and bicycle paths will extend through the park to link adjacent paseos. Final park design may change based on the available funding and costs.

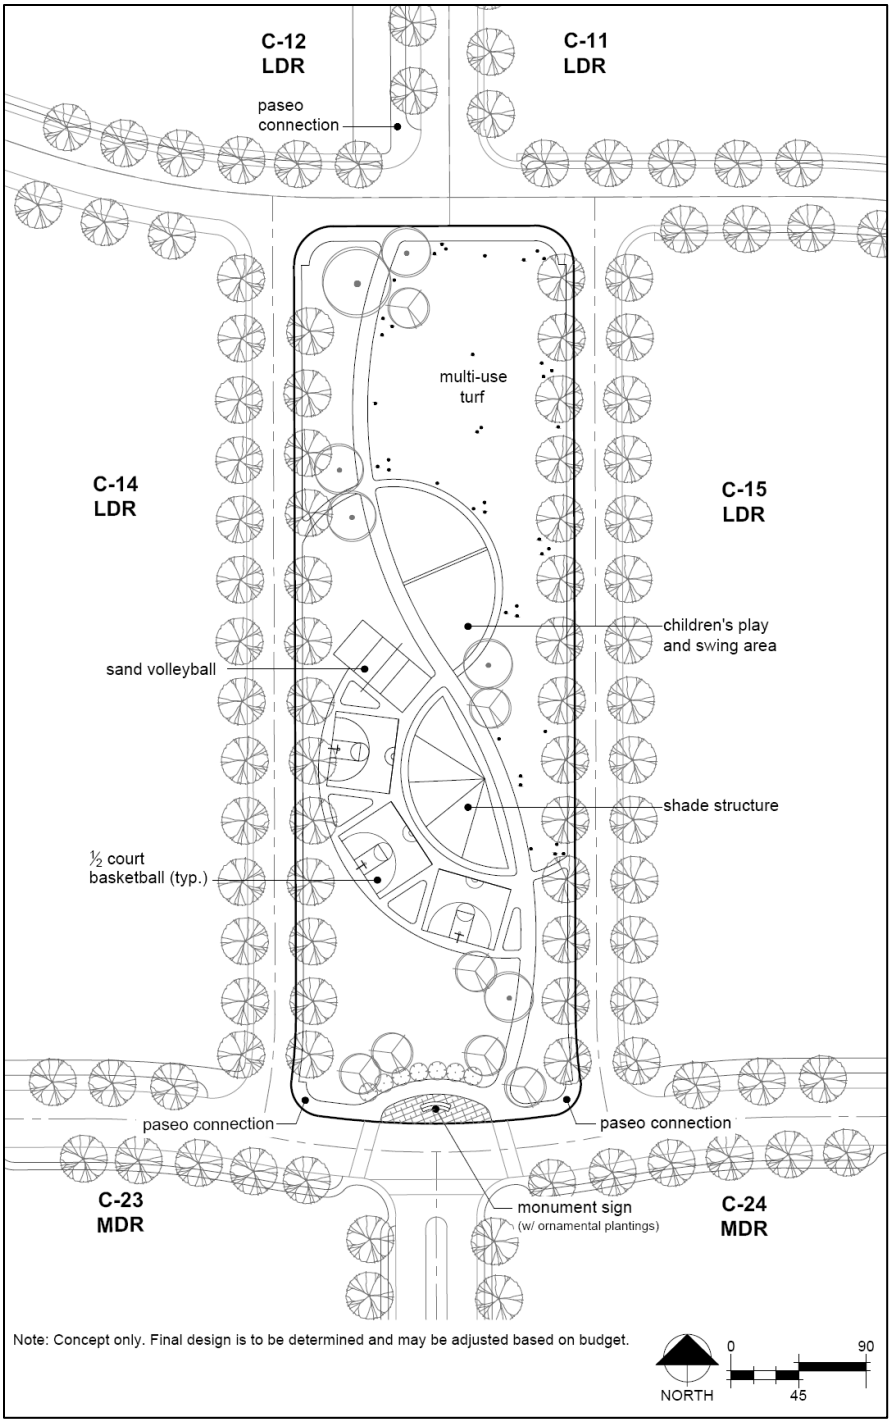

Figure 7-5: Concept Plan for Neighborhood Park (C-63)
[UPDATED EXHIBIT]

Open Space Areas ~~Preserves~~

Open space areas within the CSP total approximately 136.2 acres, nearly thirty percent (30%) of the CSP. In general, environmentally sensitive or significant land due to the presence of habitat, resources, natural features, or man-made features is designated as an open space preserve. The CSP open space ~~preserve~~ system was planned and designed in consultation with state and federal resource agencies. The open space system consists of two main components: the Northern Preserve and the Pleasant Grove Creek Corridor. Both the Northern Preserve and Pleasant Grove Creek Corridor provide opportunities for scenic vistas, passive recreation, pedestrian/bike paths, water conveyance and retention, stormwater quality/treatment, and resource avoidance and preservation.

The most significant and highest-quality wetland resources are located in the northern portion of the CSP. The Northern Preserve is an 87-acre (Parcels C-50, C-51 and C-52) open space preserve created for impact avoidance and preservation of wetland resources. The Northern Preserve includes scattered oak trees and a small tributary of Pleasant Grove Creek, known as University Creek, runs from east to west, near the southern edge of the Northern Preserve. The Northern Preserve creates a natural edge to the CSP and transition to agricultural land uses north.

The Northern Preserve is planned for permanent preservation as open space. Open space parcels C-51 and C-52 of the Northern Preserve are separated by the Westbrook Boulevard corridor, including the roadway and landscape corridor. Bicycle and pedestrian pathways are planned on the southernmost edge of the Northern Preserve to connect east and west of the site. The Northern Preserve will contribute to a much larger regional open space area when combined with open space at the Al Johnson Wildlife Area, open space parcels preserved within the West Roseville Specific Plan (WRSP) and open space opportunities north of the City.

The second component of the CSP's open space system is the Pleasant Grove Creek corridor (Parcels C-53 and C-54). Pleasant Grove Creek transects the property diagonally, through the center of the site. The creek flows in a northwesterly direction continuing through the Al Johnson Wildlife Area, west of the site. The creek is a riparian corridor, lined with trees, including oaks. Flood control improvements planned for the project will create additional riparian habitat opportunities.

The creek corridor creates a linear open space amenity which functions as a natural feature and connection for a bicycle/pedestrian pathway through the CSP. The bicycle trail will be grade separated as it crosses under Westbrook Drive. In addition to the Westbrook Boulevard crossing of Pleasant Grove Creek, two pedestrian/bicycle creek crossings are planned within the open space corridor. Management of open space ~~preserve~~ areas is discussed in Chapter 9, Resource Management.

7.2 Schools

A. School Requirements

The CSP is located within the Roseville City School District (RCSD) and Roseville Joint Union High School District (RJUHSD). The RCSD serves students in grades K-8 and the RJUHSD serves students in grades 9-12. At buildout, the CSP generates an estimated 605 ~~508~~ elementary school (K-5) students and 207 middle school (6-8) students in the RCSD, and 259 high school (9-12) students in the RJUHSD, as shown on Table 7-5.

B. School Facilities Provided

The number of elementary school students (K-5) generated creates sufficient demand for one elementary school in the CSP. One 7.0-acre elementary school (Parcel C-80) is planned in the northeast quadrant of the CSP. The school is located south of Holt Parkway, east of Westbrook Boulevard, and adjacent to a neighborhood park site to create opportunities for joint use of recreation facilities. The school site will be accessed from the southerly or easterly directions on Clay Creek Drive or Creekpark Drive, respectively, with access prohibited from Holt Parkway. The school is planned to be a two-story facility. Students in the CSP in grades K-5 will attend the elementary school within the CSP. The elementary school site is shown on Figure 7-1.

Middle school students in the CSP will attend RCSD middle schools outside of the CSP, such as Cooley Middle School or Chilton Middle School. High school students will attend the RJUHSD high school planned in the WRSP, on Hayden Parkway.
The elementary school site within the CSP is reserved for the RCSD. Facility planning and the timing of development of the site will be determined by the RCSD.

The CSP is required to enter into mutual benefit impact fee agreements and to fully mitigate school impacts in accordance with the Creekview Development Agreement and funding agreements with the respective school districts.

Table 7-5: Student Generation

	LDR/MDR Factor	HDR Factor	Students Generated	School Capacity	Schools Required
Roseville City School District					
Grades K-5	0.3620 ~~0.2930~~	0.1365	605 ~~508~~	600	1.01 ~~0.85~~
Grades 6-8	0.1247	0.0407	207	1,000	0.21
Roseville Joint Union High School District					
Grades 9-12	0.161	0.036	259	1,800	0.14

7.3 Library

The City of Roseville operates a public library system consisting of three individual facilities. The City's original main library is located in the downtown Roseville area, a branch library facility is located in Maidu Regional Park and the Martha Riley Community Library is located at Mahany Park. The libraries provide print and online access library services to all City residents. The Martha Riley Community Library is a joint-use facility which includes a community TV studio and Utility Exploration Center.

7.4 Police Protection

The Roseville Police Department serves the CSP. The Police Department provides all operations and patrols out of its central station located on Junction Boulevard, approximately four miles from the CSP's eastern boundary. The CSP will comply with City of Roseville Police Department requirements regarding safety and security.

7.5 Fire and Emergency Services

The Roseville Fire Department provides fire protection, suppression, emergency medical services, and hazardous materials management to the CSP. ~~The planned fire station~~ Fire Station #9 on Hayden Parkway and Fire Station #5 on Sun City Boulevard, both located southeast ~~west~~ of the CSP, will provide primary and secondary response.

Section 8

Utilities Plan

The Creekview Specific Plan (CSP) includes utility infrastructure required to serve the Plan. Each component of the utility infrastructure system is designed to accommodate build out of the CSP. Phasing of infrastructure improvements and funding obligations are detailed in the Specific Plan Development Agreement. Table 8-1 summarizes the utility providers to the CSP.

Utility infrastructure will be constructed, dedicated, and easements provided consistent with this Specific Plan, the CSP Development Agreement, and other applicable standards and requirements of the City of Roseville.

Table 8-1: Utility Providers

Service	Provider
Potable Water	City of Roseville
Wastewater	City of Roseville
Recycled Water	City of Roseville
Drainage and Flood Control	City of Roseville
Electric Service	City of Roseville
Natural Gas	Pacific Gas & Electric
Communications	AT & T Surewest Comcast Wave Broadband
Solid Waste Disposal	City of Roseville

8.1 Potable Water

The City of Roseville will provide potable water service (supply, treatment, and conveyance) to the CSP. Water will be delivered to the site via the City's backbone system at connection points along Blue Oaks Boulevard and Westbrook Boulevard.

A. Water Supply and Demand

Water demand for the CSP is approximately 1,102 ~~1,105~~ acre feet per year (AFY). Water demand is reduced to 898 ~~900~~ AFY through the implementation of water conservation measures described in Section B. Water demand, after conservation measures, will be satisfied with a combination of both potable and non-potable (recycled) water sources. The recycled water component will be utilized for irrigation purposes as outlined in Section 8.2, Recycled Water. The City identified a strategy to reliably supply water to the CSP. The City's existing water supply is sufficient to serve the CSP. To supplement water supply during "dry" years when the City's contracted surface water may be reduced, the CSP includes provisions for one on-site groundwater well on Parcel C-41. The well will be capable of providing up to 1,800 gallons per minute (gpm).

B. Water Conservation Measures

The CSP includes significant water-saving measures aimed at reducing overall water demands for potable and/or recycled water to the extent feasible and practicable. The following water conservation measures will be implemented in the CSP in an effort to reach the City's water conservation goals:

- **Turf Reductions in Residential Areas.** This measure involves limiting the amount of turf in the front yards of residential properties and using a higher percentage of low-water use plant species in lieu of turf. Typically, about 70% of a total residential front yard is assumed to consist of landscaping, with the balance consisting of driveways, planter, or walkways. For the CSP, limitations will be placed on the landscaped portion of each front yard, allowing up to 42% of the total landscaped area to be turf, with the remaining landscaped area comprised of low water use plant species which use between 65-75% less water than an average lawn.
- **Turf Reductions in Parks, Paseos, and Landscape Corridors.** This measure involves limiting the use of turf on non-residential parcels, with a focus on water efficiencies at parks, paseos, and landscape corridors. For these areas, landscape design will reduce the area of turf and increase the area of low-water-use plant species, as compared to the design of these features in other specific plan areas. To achieve the desired water conservation, the following criteria will be implemented:

- **Parks.** It is assumed approximately 80% of a typical park's square footage consists of turf. The CSP parks will have a maximum aggregate turf area of 60%, with the remaining 20% area comprised of low water use plant species. Less than 60% turf is acceptable provided it is compatible with the amenities planned for the park.
- **Paseos and Landscape Corridors.** It is assumed paseos and landscape corridors are typically comprised of 80% turf area. The CSP paseos and landscape corridors will have a maximum of 30% turf area, with the remaining 50% of the area comprised of low water use plant species.

- **Smart/Centrally Controlled Irrigation Controllers.** Smart and centrally controlled irrigation controllers restrict irrigation to times and water application rates necessary to maintain landscaping. They account for changes in the demand for water, which varies with weather patterns and seasonal influences. In the CSP, smart irrigation controllers will be required for residential, commercial, and quasi-public parcels subject to turf reduction measures, and centrally controlled irrigation controllers for larger commercial and publicly maintained parcels.
- **Re-circulating Hot Water Systems.** Re-circulating hot water systems feature a pump on a residential hot water line system which reduces time necessary to receive hot water at any hot water faucet. This type of system will be included on all residential units to generate additional water conservation.

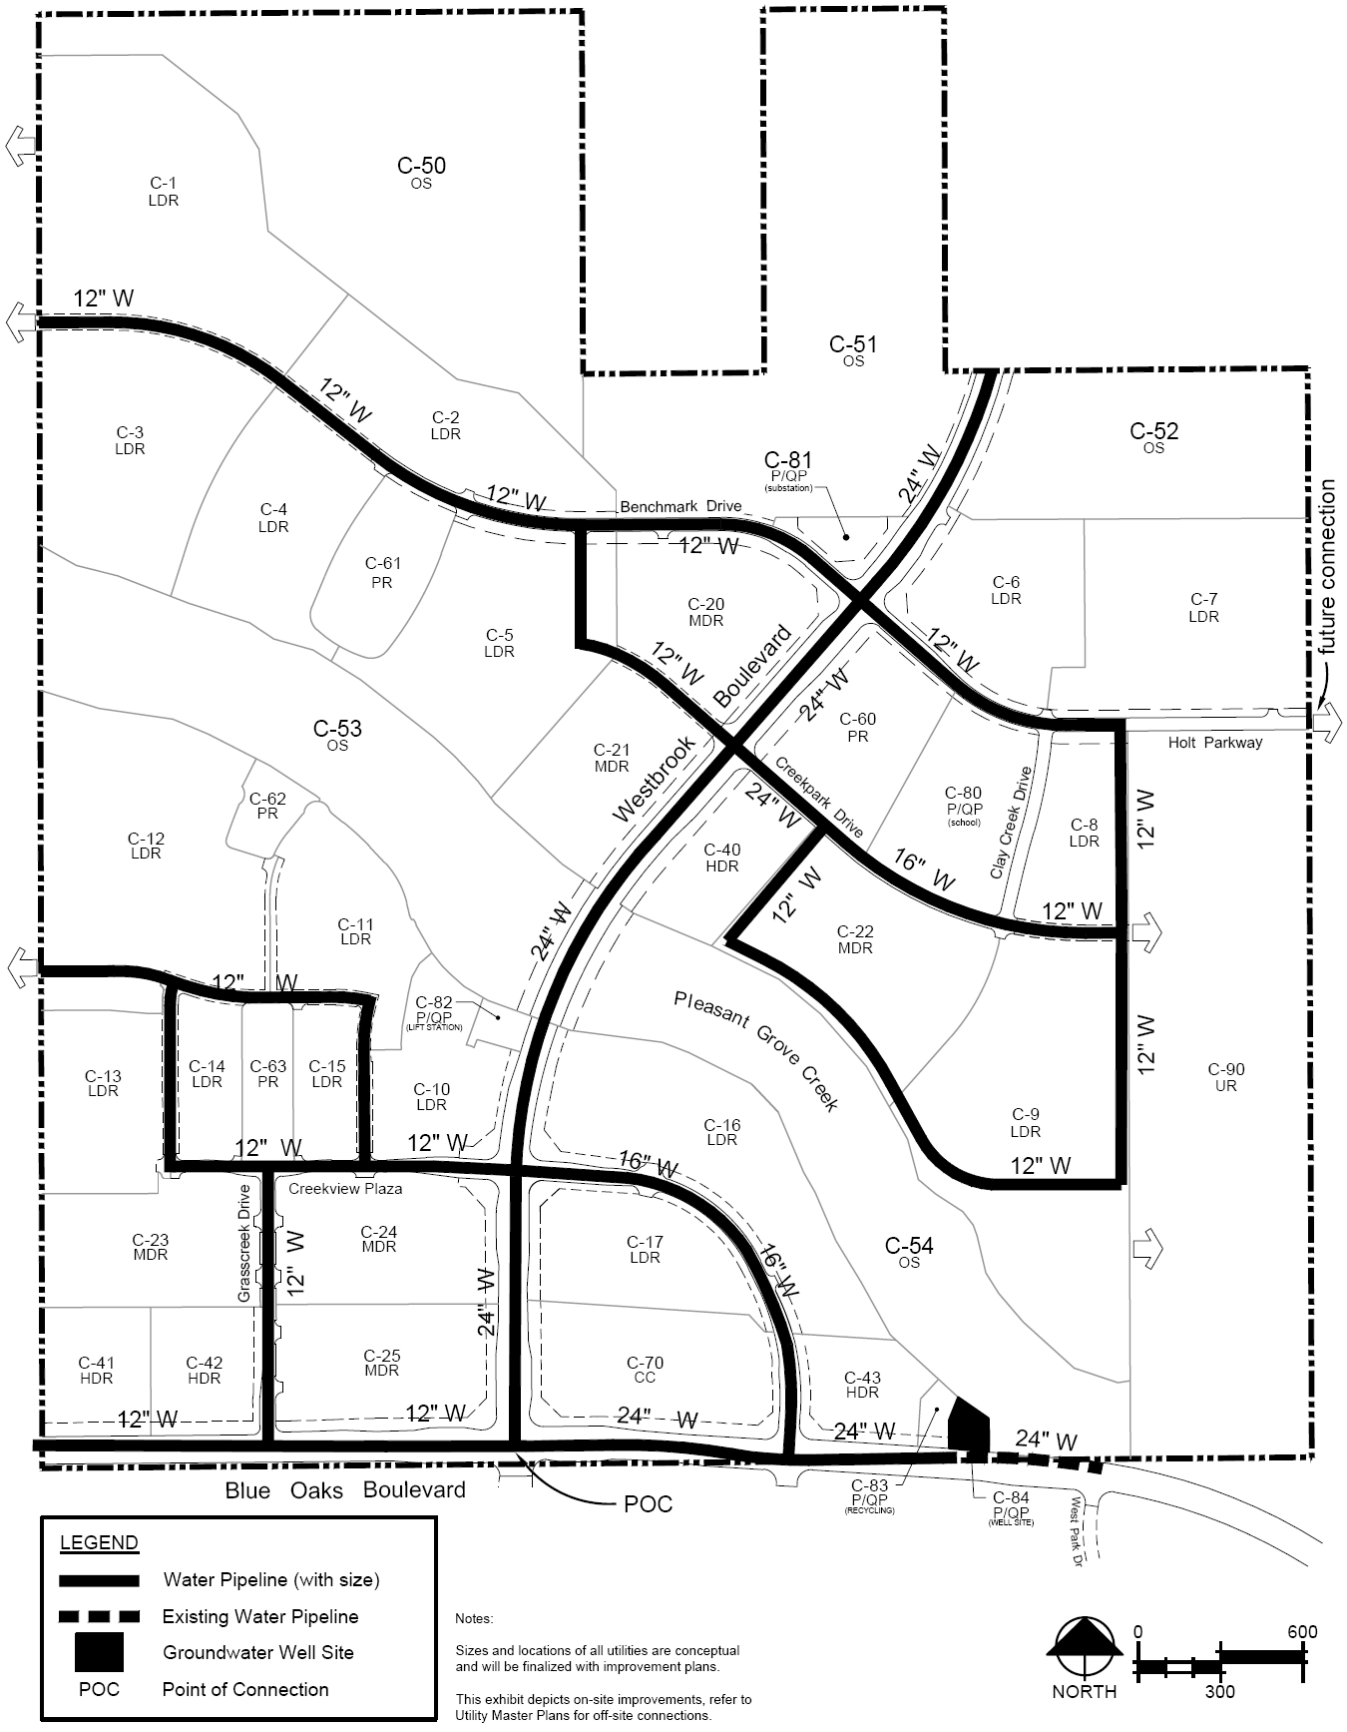
With full implementation, the water conservation measures outlined above will reduce the CSP's overall water demand by approximately 204 ~~205~~ AFY.

C. Water Transmission System

The CSP will tie into the City's existing Pressure Zone 4 for potable water. Pressure Zone 4 includes the Del Webb – Sun City area, the North Roseville Specific Plan, the West Roseville Specific Plan (WRSP), Sierra Vista Specific Plan and areas west of the pressure-reducing valves connecting Pressure Zones 1 and 4. Zone 4 has an approximate elevation range of 75-140 feet, and includes the CSP.

The City distribution system will supply water to the CSP through connection points with Pressure Zone 4 at various locations needed to provide a reliable water network. These planned connections include 24-inch mains in Blue Oaks Boulevard and Westbrook Boulevard, immediately south of the site, and a 12-inch main in Holt Parkway, east of the CSP. The planned water transmission system is shown on Figure 8-1.

Figure 8-1: Water Facilities [UPDATED EXHIBIT]



Water will be distributed within the CSP via looping systems which parallel collector and arterial roadways on a transmission main grid. The transmission and distribution system consists of 12 to 24-inch diameter mains, as illustrated on Figure 8-1.

All water improvements will be constructed to the City's standards using a phased approach. The CSP includes one groundwater well (Parcel C-41) which will provide the City with a backup water supply during dry years or during emergency conditions.

Water storage for the CSP will be located within the WRSP at the City's planned Westside Tank and Pump Station site, south of the CSP on Westpark Drive. The storage tank will serve the CSP during high flow periods (i.e. peak hour) and emergency fire flow demand periods and will refill during periods of low demand.

Details regarding the water facilities are contained in the CSP Master Water Study on file with the City.

8.2 Recycled Water

The City will ultimately provide the CSP with recycled water from the Pleasant Grove Wastewater Treatment Plant (PGWWTP). The CSP will use recycled water to irrigate landscaping at parks, schools, commercial, business professional, and multi-family projects, as well as publicly landscaped areas (including roadway landscape corridors and medians). The estimated annual recycled water demand in the CSP is 182 ~~198~~ AFY. Through implementation of water conservation measures described in Section 8.1B, this demand is reduced by 73 ~~79~~ AFY to 109 ~~122~~ AFY (182 ~~201~~ AFY – 73 ~~79~~ AFY). The use of recycled water for irrigation purposes offsets potable water demand typically needed for irrigation.

Recycled water will be supplied to the CSP by expanding the WRSP distribution system to include the CSP. This would be accomplished by adding storage and pumping capacity at the existing WRSP recycled water storage tank and pump station site, and connecting the WRSP to the CSP at the 36-inch transmission main planned on Blue Oaks Boulevard.

During the initial phases of development, the CSP, with approval from the City, may utilize potable water on an interim basis for irrigation. As the CSP develops and recycled water infrastructure is added to the system, landscape areas which may utilize potable water will be transitioned to recycled water.

The planned distribution system within the CSP will be a looped system, with interties to the recycled water system within the WRSP. Pipelines in the CSP, ranging in size from 6 to 16 inches, are planned in roadways with pipes extending to parcels requiring recycled water service.

An additional 0.56 million gallons of storage is necessary for the CSP and can be accommodated at the existing WRSP storage tank site, located south of the CSP. The recycled water backbone distribution system is illustrated on Figure 8-2.

All recycled water improvements will be constructed to the City's standards using a phased approach. Specific details regarding the recycled water facilities and supplies, including technical analysis, are contained in the CSP Recycled Water Study on file with the City.

8.3 Wastewater

Sanitary sewer service will be provided by the City of Roseville with treatment at the Pleasant Grove Wastewater Treatment Plant (PGWWTP). This facility is located south of the CSP adjacent to the WRSP area. The CSP is estimated to generate approximately 0.36 ~~0.37~~ million gallons per day (mgd) average dry weather wastewater flow.

The backbone wastewater collection system is illustrated on Figure 8-3. Wastewater flows from the CSP will be directed to the PGWWTP by a network of pipes installed within street rights of way or easements. Sewer collection pipes will range in size from 8 inches to 15 inches. The sanitary sewer system will require one lift station (Parcel C-82) in the southwestern portion of the CSP, west of Westbrook Boulevard. A conceptual plan of the lift station site is shown in Figure B-11.

All sewer improvements will be consistent with the South Placer Regional Wastewater and Recycled Water Systems Evaluation and will be constructed to the City's standards using a phased approach. Details regarding the sanitary sewer system are contained in the CSP Sanitary Sewer Master Plan on file with the City.

8.4 Drainage and Flood Control

The CSP is wholly contained within the Pleasant Grove Creek watershed, which is located within the larger Natomas Cross Canal watershed of northwestern Placer County and southeastern Sutter County. The Pleasant Grove Creek watershed drains to the Pleasant Grove Canal, to the Natomas Cross Canal, and then to the Sacramento River.

Pleasant Grove Creek, a perennial stream, traverses the site diagonally, entering in the southeast corner and extended northwesterly to the western edge of the CSP. The reach of Pleasant Grove Creek within the CSP flows year-round. Most of the CSP drains to Pleasant Grove Creek by overland flow or through the few wetland swales and ephemeral drainages on the site. The existing Pleasant Grove Creek floodplain extends nearly 1,500 feet south of the creek in the southwest portion of the CSP. Within the CSP, the main channel of Pleasant Grove Creek is within open space parcels C-53 and C-54.

The northern bank of Pleasant Grove Creek through the CSP is steep and extends well above the 100-year floodplain through most of the project reach. The southern bank is laid back at a gentle slope, allowing floodplain to extend in a southerly direction in several areas.
University Creek, an intermittent stream tributary to Pleasant Grove Creek, enters the site in the northeast corner and extends westerly through the northern portion of the CSP, joining the main branch of Pleasant Grove Creek west of the CSP. University Creek is currently channeled with little riparian vegetation. The floodplain of University Creek is shallow and extends approximately 100 feet onto the northwestern corner of the CSP.. The northern third of the CSP drains toward University Creek. Within the CSP, University Creek is located in open space parcels C-50, C-51 and C-52.

In the pre-project condition, immediately downstream of the CSP on the Al Johnson Wildlife Area (AJWA) property, the Pleasant Grove Creek and University Creek channels narrow abruptly because of past farming practices and land leveling from decades ago.

This constriction creates a bottleneck which restricts the downstream conveyance of floodwaters resulting in an unnatural expanded 100-year floodplain on the CSP and raises water surface elevations higher than the historic floodplain conditions.

A. Pleasant Grove Creek Bypass Channel

The CSP includes construction of a bypass channel adjacent to Pleasant Grove Creek to provide additional conveyance and floodplain storage capacity through the CSP. The system, created by the bypass channel and Pleasant Grove Creek together, will function to reclaim the historic floodplain of the Pleasant Grove Creek

within the CSP area and remove developable lands from the 100-year floodplain. The bypass channel will be constructed with inlet and outlet gates but will function as a passive improvement requiring no manual operation to divert a portion of the high water flows from Pleasant Grove Creek upstream of the major channel constriction, and re-introduce the flows back into the existing channel downstream of the constriction.

The bypass channel would be constructed generally parallel to and south of the southern bank of the main channel of Pleasant Grove Creek. In the CSP, the bypass channel would be located within open space corridor (parcels C-53 and C-54). The bypass channel would begin at a point east of the Westbrook Boulevard crossing of Pleasant Grove Creek (north of parcel C-40) and continue west, off-site, onto the AJWA property where it will rejoin Pleasant Grove Creek downstream, as shown on Figure 8-4.

The bypass channel improvements include construction of a concrete inlet and outlet structure at either end of the bypass channel and six intermediate, soft-armored weir connections along the extent of the main Pleasant Grove Creek channel to enable transfer of stormwaters to and from the main channel. Within the bypass channel, a low flow channel will transfer low flows introduced from the CSP. Disturbed riparian habitat will be restored and new riparian habitat will be created.

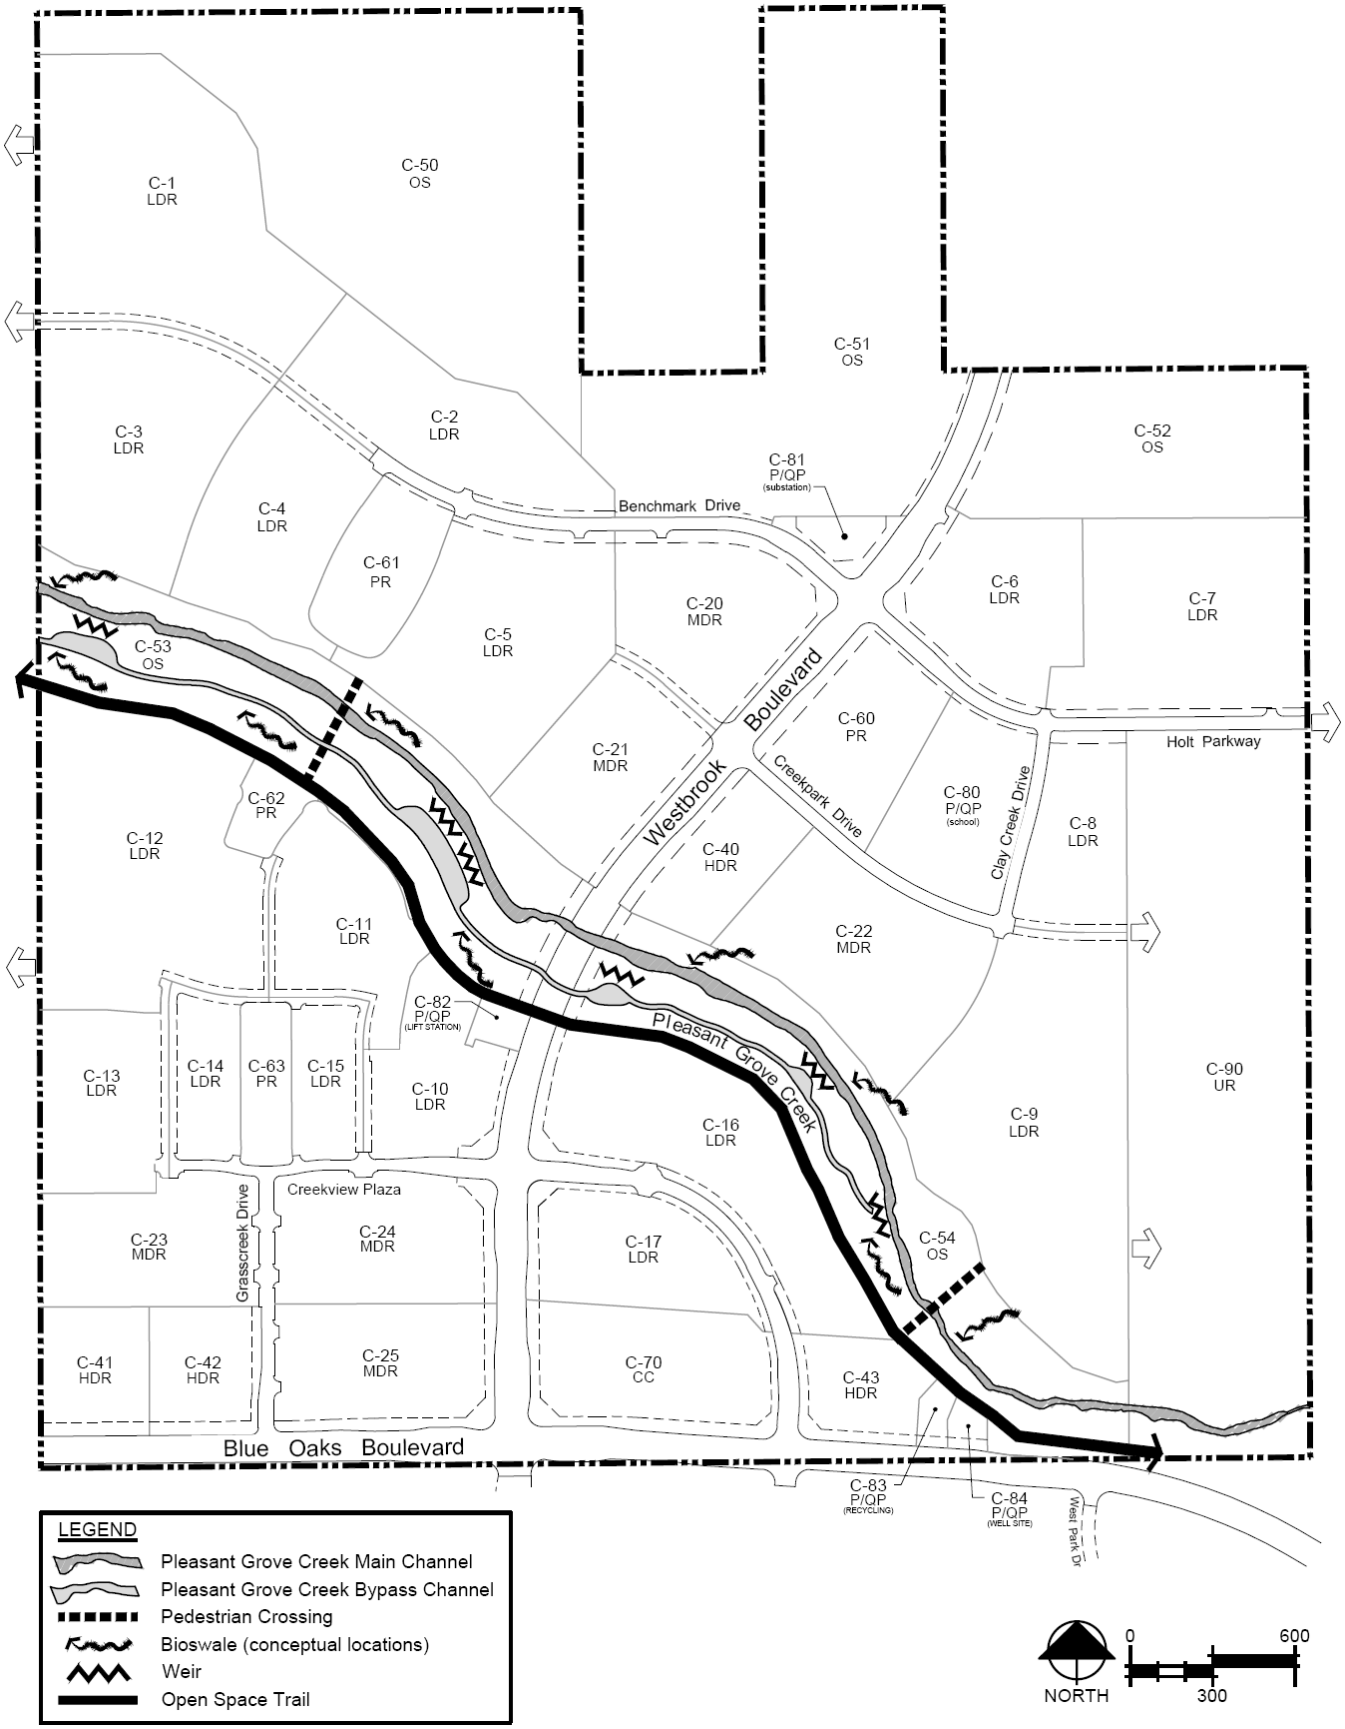
The floodplain improvements, including construction of the bypass channel and associated improvements will not adversely impact the proposed operation of the AJWA flood control facilities or reduce the available storage within the AJWA retention basin.

B. University Creek Channel

Similar to Pleasant Grove Creek, in the pre-project condition, the University Creek channel narrows abruptly, immediately downstream of the CSP on the AJWA property. The narrowing is the outcome of past farming practices resulting in a man-made constriction which restricts downstream conveyance and affects flooding conditions on the CSP site.

To address this condition on University Creek, the CSP will create a modified channel within the northwest portion of Open Space parcels C-50. The area around the channel will be enhanced with riparian plantings which will result in an enhanced environment over the pre-project condition. In the northwest portion of the CSP, University Creek would be restored to a more natural sinuous stream course with an adjacent floodplain.

Figure 8-4: Pleasant Grove Creek Bypass Improvements [UPDATED EXHIBIT]



C. Drainage System

Peak flow rate increases which would result from proposed development will be mitigated through attenuation features including the creation of wetland habitat areas, vegetated treatment swales and creation of additional conveyance with the overbank areas of Pleasant Grove Creek created by the bypass channel improvements. The bridge at Westbrook Boulevard and the western creek crossing of Pleasant Grove Creek will be utilized to constrict peak flows and increase the storage characteristics of the creek by metering downstream flows. Traditional permanent detention basins for peak stormwater flow-attenuation are not planned.

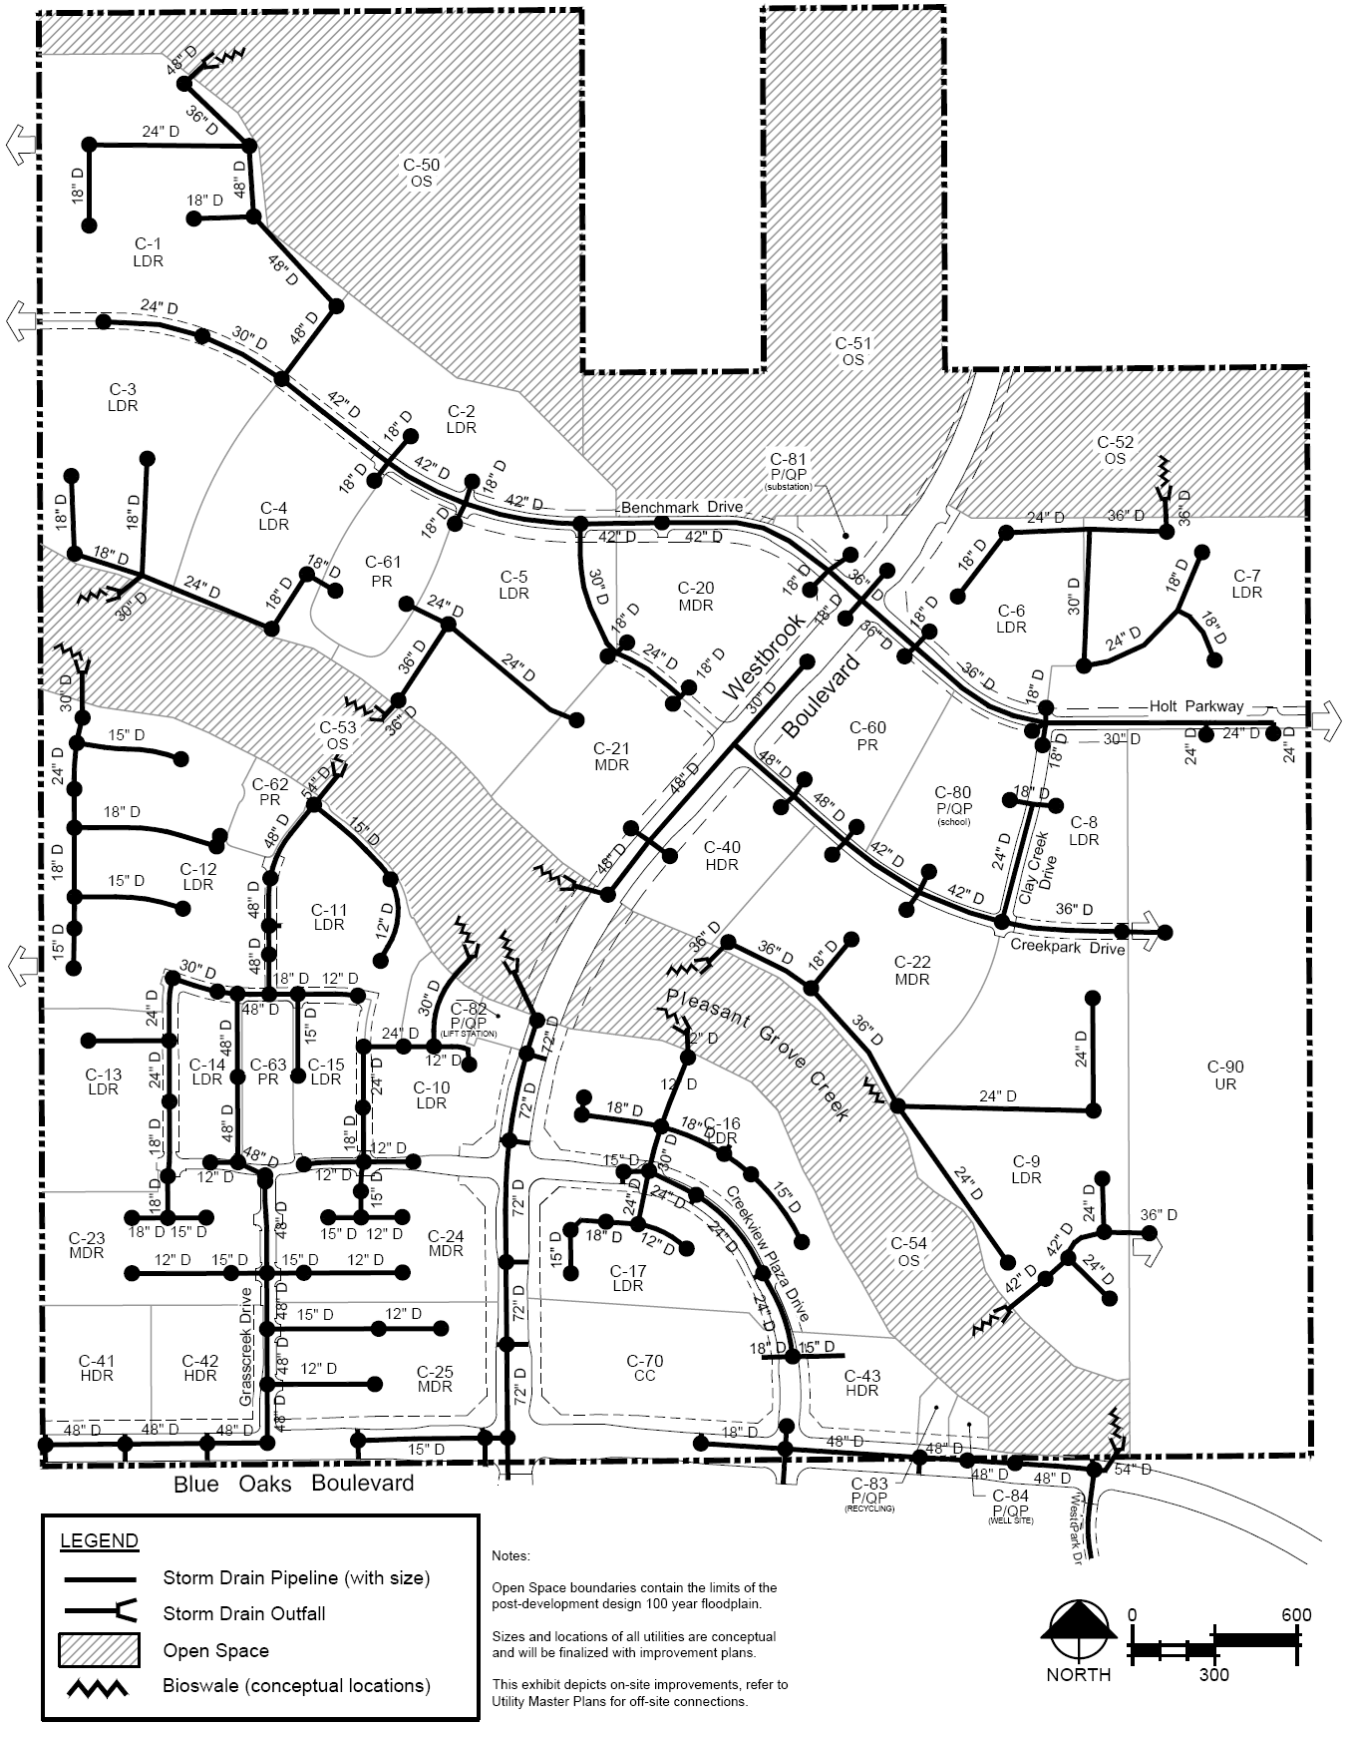
The attenuation enhancement features will provide adequate mitigation to reduce peak runoff rates exiting the site without increasing the 100-year hydraulic grade line elevations at the Plan boundaries and offsite. Onsite drainage improvements and open space corridors are shown on Figure 8-5.

In addition to detention of peak flood flows within the Pleasant Grove Creek watershed, the CSP will contribute toward construction of the Reason Farms Retention Basin project (on the AJWA property) through payment of a Pleasant Grove Watershed Mitigation Fee. This regional stormwater retention facility provides a volumetric mitigation for waters entering the Sacramento River Basin and is located on the City's AJWA site, immediately west of the CSP.

On-site drainage improvements consist of a combination of conventional subsurface and surface drainage systems, construction of pipe conveyance systems, and construction of culverts and bridges at roadway and trail crossings of creeks and tributaries. Stormwater will be discharged through outfalls into open space corridors. Vegetated swales, soft armoring, mechanical storm filters, structural interceptors and other best management practices will be utilized at pipe outfalls or other appropriate locations for water quality management, and to convey stormwater runoff to receiving waters while minimizing impacts to open space resources. Where applicable, outfall structures will be extended past any planned bikeway alignments in the open space areas.

The number and locations of outfalls shown on Figure 8-5 are based on the best available information and is subject to refinement during the subdivision map and improvement plan approvals, as well as state/federal permitting. Drainage facilities will be designed and constructed in conformance with the City of Roseville Improvement Standards, the City's Stormwater Quality Design Manual, the Placer County Flood Control Agency's Stormwater Management Manual, and the Open Space Preserve Overarching Management Plan required by the Clean Water Act 404 permit.

Figure 8-5: Drainage Improvements [UPDATED EXHIBIT]



The City's Open Space Preserve Overarching Management Plan includes requirements to minimize erosion and direct drainage away from vernal pool habitat by employing conceptual drainage improvements such as swales, outfalls, energy dissipation, and erosion control measures. The CSP will append to the City's Overarching Plan of Roseville Preserve Area Overarching Management Plan. Specific detail regarding the drainage system is contained in the CSP Drainage and Storm Water Master Plan on file with the City.

8.5 Stormwater Quality

The CSP provides a comprehensive plan for the management of urban runoff for flow control and water quality improvement. The integrated stormwater management system plan is reflected, in part, in specific design criteria contained in this section. The objectives of the CSP Stormwater Management Plan (SWMP) are intended to fulfill the requirements of the City's National Pollutant Discharge Elimination System (NPDES) Phase II Permit, as issued by the State Water Resources Control Board, and to minimize the effects of urban stormwater runoff on the natural open space areas, including wetland areas and principal drainage corridors.

The CSP SWMP will be in accordance with permit criteria applicable at the time of development. The SWMP provides the framework for stormwater treatment during two components of the development process. First, during the construction phase while infrastructure is being built to support the community, and, then during the post-construction phase which will be part of the improvements that make up the community and continue to protect the natural resources in perpetuity.

A. Stormwater Management During Construction Activities

The release of on-site stormwater runoff during construction activities is regulated by the State General Construction Permit issued by the Regional Water Quality Control Board for all construction sites greater than one acre. The General Construction permit requires a Storm Water Pollution Prevention Plan (SWPPP) address how stormwater from the construction site will be maintained and treated prior to being discharged from the site. The SWPPP is an evolving document which changes with the dynamics of the site development. The use of Best Management Practices (BMPs) during the construction process will generally incorporate erosion controls and sediment controls. Erosion and sediment control BMPs include such things as applying straw mulch to disturbed areas, the use of fiber rolls and silt fences, sedimentation basins, drain inlet protection, stabilized construction accesses, and material management. The final sizing and selection of non-mechanical BMPs will consider requirements specific to the Pleasant Grove watershed and proposed developed activities.

B. Post Construction Stormwater Management

Post construction stormwater management is intended to treat the urban runoff generated on-site in perpetuity. The BMP techniques within the site will reduce and/or eliminate the pollutants from the urban stormwater runoff and prevent the contamination of receiving waters.

The CSP will work with the permit criteria applicable at the time of development and in conformance with the City of Roseville Improvement Standards, the City's Stormwater Quality Design Manual, the Placer County Flood Control Agency's Stormwater Management Manual, and the City's Open Space Preserve Overarching Management Plan, to design and address post construction stormwater treatment.

Post construction stormwater treatment is composed of three general elements: source control, runoff reduction and treatment of runoff. All three elements will be used in the CSP SWMP. The basic practice of source control is to minimize the potential for constituents to enter runoff at the source. Low Impact Development (LID) measures are the main tool the CSP will employ for runoff reduction.. Implementation of LID includes construction of decentralized small-scale improvements to provide local infiltration and treatment opportunities to reduce the quantity of runoff entering the storm drain systems during a rainfall event. LID will be implemented to offset runoff increases which occur with the development as a matter of the conversion of native ground surfaces to impervious cover. Additional Treatment control BMPs may be located at the end of the pipe and provide further treatment of the stormwater before it enters into the natural creek system.

Low Impact Development (LID)

Low impact development (LID) is an approach to stormwater management emphasizing the use of small-scale, natural, constructed and proprietary drainage features integrated throughout the city to capture urban runoff and precipitation. LID measures can slow, clean, and infiltrate runoff, improving the quality and reducing the quantity of urban runoff entering the city storm drain systems. The added opportunities for infiltration offered by the use of LID can add water to local aquifers, increasing water reuse. It is a sustainable practice which benefits water quality protection, stream stability and can contribute to water supply.

The intent is to incorporate the systems of natural processes into the built environment. In addition to traditional stormwater management, which collects and conveys stormwater runoff through storm drains, pipes, or other conveyances to a centralized stormwater facility, LID within the CSP will take a different approach by using site design elements, LID and stormwater management to minimize

changes to the site's predevelopment runoff rates and volumes.

Key principles of low impact development include:

- ❑ Decentralize and manage urban runoff to integrate stormwater management throughout the watershed.
- ❑ Preserve the ecosystem's natural hydrological functions and cycles.
- ❑ Account for a site's topographic features in its design.
- ❑ Reduce directly connected impervious surfaces to slow runoff and provide additional infiltration opportunities.
- ❑ Reduce impervious ground cover and maximize infiltration on-site.

As the CSP develops, specific LID techniques, tools, and material, specified in construction documents, will control the amount of impervious surface, increase infiltration, and improve water quality by reducing runoff from the developed sites. The CSP Master Drainage Study accounted for the percent of runoff reduction expected with the implementation of these LID practices.

Additional project design elements within the open space areas will also provide hydrograph modification benefits. The created swale and riparian elements will provide additional floodplain storage capacity which is factored into the project hydrology analysis. The created swales also provide LID and treatment potential which has not been factored into the project mitigation, which include: added infiltration opportunities, evapo-transpiration opportunities, nutrient uptake, biological filtering, and stream buffers. LID elements may be implemented into development plans with CSP to achieve an overall reduction in stormwater runoff. The selection and use of these elements may vary by development project, depending on the runoff reduction needed. The various LID options may include, but are not limited to, the following:

- ❑ Disconnected roof drains;
- ❑ Disconnected and separated pavement;
- ❑ Bio-retention facilities, rain gardens, and bioswales;
- ❑ Tree Planting;
- ❑ Grass swales and channels;
- ❑ Curb cuts and vegetated filter strips;
- ❑ Impervious surface reduction – permeable pavements and porous pavements;
- ❑ Stream Buffers;
- ❑ Soil Amendments; or
- ❑ Pollution prevention and good housekeeping practices.

End of Pipe Stormwater Treatment Control

In addition to the implementation of the above-referenced LID measures, the storm drain system will be designed to provide additional protection of the natural environment and receiving water of Pleasant Grove Creek and University Creek by providing non-mechanical end of pipe treatment techniques. This element adds to the treatment train and consists of final treatment elements such as grass treatment swales.

Special consideration will be taken to capture, convey and release the urban stormwater to the creek system. The treatment and conveyance of storm runoff in and through the open spaces will be made part of the Corp of Engineers 404 permitting process. Standard practices include the use of headwall structures, directly at the outfall location, to stabilize and protect the outlet pipe, surrounding topography and aid in velocity attenuation while minimizing future maintenance costs. Conveyance “grassy swales” which direct stormwater from the pipe outlets to receiving waters and avoid sensitive habitat while distributing concentrated pipe flows will be used at every outfall. Depending on the size of and frequency of particular storm events, and the actual drainage area being conveyed, the conveyance swales will be armored with geo-synthetics to minimize the potential for future erosion and rilling of the open space. Soft-armoring will provide opportunities to create grassy swales and additional wetland habitat to aide in stormwater filtration and infiltration. Based on the LIDs planned, the need for additional filtration units is not anticipated. However, additional structural BMPs can be added to the treatment train and end of pipe treatment if needed. These may include such devices as:

- ❑ Installation of “fossil filter” or equivalent petroleum absorbing insert assemblies in the project drop inlets;
- ❑ Trash screen vaults; or
- ❑ Other structural BMPs as approved by the City.

The final selection of BMPs will consider requirements specific to the Pleasant Grove Creek watershed and proposed development flows. Other BMPs will involve prompt re-vegetation of disturbed areas and proper erosion protection per the NPDES permit during construction.

8.6 Dry Utilities

A. Electric Service

Roseville Electric, the City's electric utility, will provide electric service to the CSP. Roseville Electric operates the Roseville Energy Park (REP), a 160-megawatt natural gas-fired, electric power plant, which uses state-of-the-art equipment to locally generate approximately half of the City's electricity needs. The Roseville Energy Park is located south of the CSP. Additional electricity resources needed to serve CSP, including state and federal mandated renewable electricity resources, will be purchased from outside sources or generated by new Roseville-owned generating facilities. As required by state regulations, Roseville will use energy efficiency programs and initiatives to meet electricity demand, before acquiring new electricity sources.

Electric Energy Efficiency and Conservation

The CSP includes implementation of cost-effective energy efficiency, load management, and renewable energy programs to meet electricity demand, before new electricity sources are acquired.

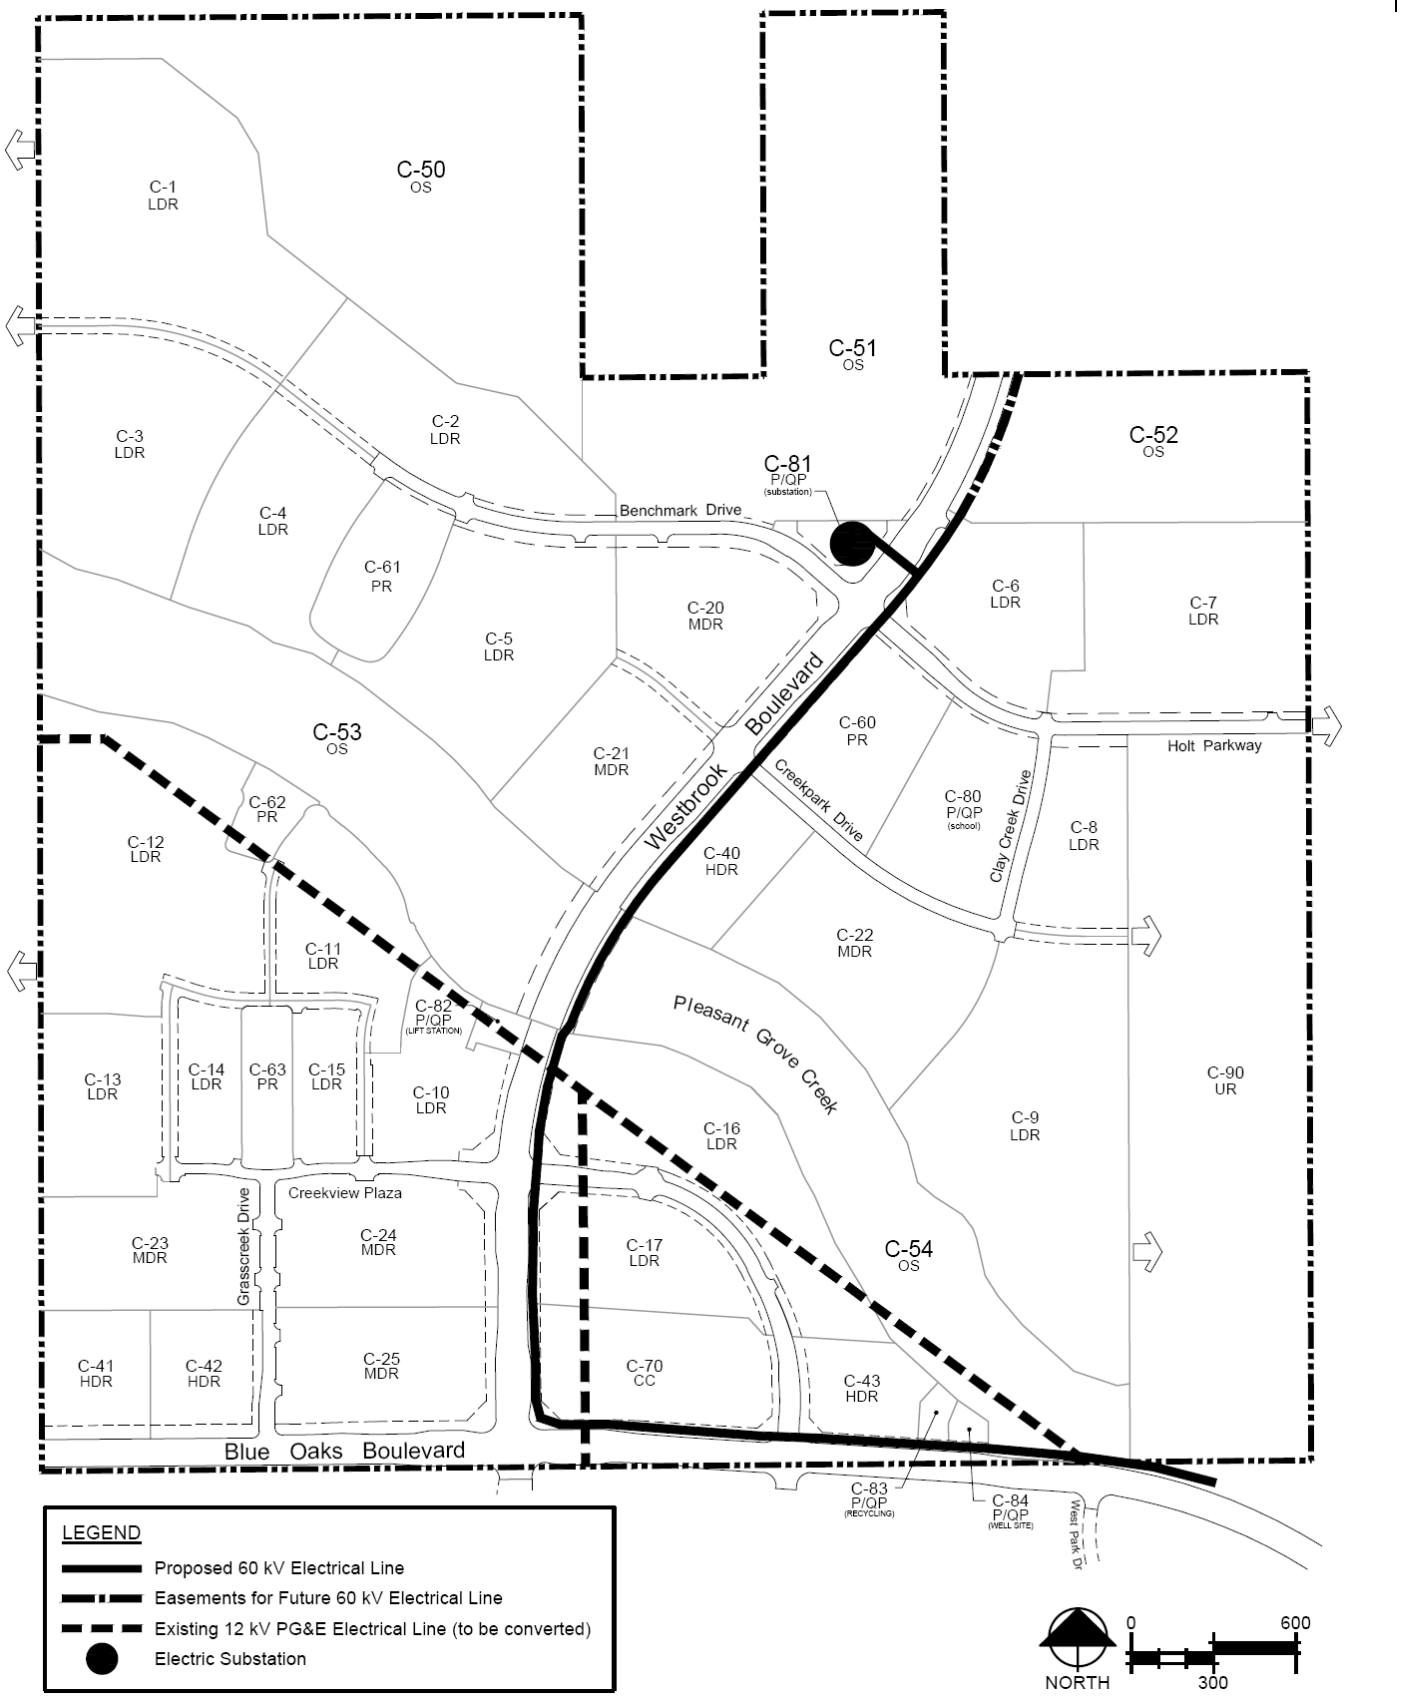
Peak Electric Demand and Distribution

Peak electric demand for electrical service is estimated to be 11.7 Mega volt amps (MVA) within the CSP. Planned electric backbone facilities include a substation and a 60kV transmission line corridor. The CSP provides a 0.9-acre site (Parcel C-81) for a substation, west of Westbrook Boulevard, south of the open space preserve (Parcel C-51), in the northern portion of the site. This substation will connect with Roseville Electric's existing 60kV overhead transmission lines which extends through the CSP, to complete a loop in West Roseville and provide connections to the REP switchyard and the substation in the WRSP. A conceptual plan of the substation site is shown in Figure B-10.

60kV power lines will be extended into the CSP from the east. The 60kV line is planned on the north side of Blue Oaks Boulevard~~, along the south side of the Pleasant Grove Creek corridor~~ to Westbrook Boulevard. The line continues north, on Westbrook Boulevard and will connect to the substation near Holt Parkway. The location of the electric substation and conceptual alignment of the 60kV power line are shown on Figure 8-6.

Underground electrical distribution will be extended to individual parcels in conjunction with roadway improvements or as phasing requirements dictate. In addition, street lighting will be provided along all public streets as part of the roadway frontage improvements. All electric and street light facilities will be constructed to the City's standards at the time of construction.

Figure 8-6: Electric Facilities [UPDATED EXHIBIT]



B. Natural Gas

Pacific Gas & Electric Company (PG&E) will provide natural gas upon request and in accordance with the rules and tariffs of the California Public Utilities Commission. PG&E's long-range plans provide for availability of gas service to accommodate increased demand. Service will be provided to the CSP from existing infrastructure adjacent to the site on Blue Oaks Boulevard. Delivery of gas service to individual projects in the CSP will be reviewed by PG&E at the time of proposal.

C. Communication

The CSP is within the service areas of Surewest Communications, AT&T, Comcast, and Wave Broadband. Together, these providers offer both voice and data communication services. Distribution lines to individual parcels will be extended from existing infrastructure adjacent to the CSP in accordance with the infrastructure Phasing Plan for dry utilities. The providers will review delivery of telephone, cable television, and high-speed data line services to individual projects in the CSP at the time of proposal.

8.7 Solid Waste

The City of Roseville will provide solid waste services to the CSP. Solid waste will be collected and delivered to the Western Placer Waste Management Authority facility located north of the City at Athens Avenue and Fiddyment Roads. The Authority owns a Material Recovery Facility (MRF) that receives, separates, processes, and markets recyclable materials removed from the waste stream. Residual waste is transferred to the Authority's Western Regional Sanitary Landfill located on the same site for disposal.

At full buildout, the CSP is anticipated to generate approximately 8,017 tons of solid waste annually. A 0.6-acre solid waste recycling area is planned within the CSP on Parcel C-83. This site will provide residents with a location to off-load recyclable materials. Vehicular access to this site is provided from Blue Oaks Boulevard and from within the adjacent commercial center, as shown on Figure B-12.

Section 9

Resource Management

The natural undeveloped character of the Creekview Specific Plan (CSP) area consists of relatively flat to gently rolling terrain situated at an elevation of approximately 75 to 95 feet above mean sea level. Historic use of the site included ground disturbance associated with agricultural operations and minimal disturbance through structural development and associated grading activities.

Annual grasslands and a valley oak riparian corridor are the dominant vegetation communities with herbaceous weed species interspersed with the non-native annual grasses. Wetland features are dispersed throughout the site. Pleasant Grove Creek flows from east to west, entering the site from the southeast, then continuing diagonally through the Plan Area. University Creek, a small tributary of Pleasant Grove Creek, is located in the northern portion of the site. A number of trees are present in the southwest portion of the site, primarily within the Pleasant Grove Creek corridor and adjacent to University Creek.

The CSP is consistent with the goals of City of Roseville General Plan Open Space and Conservation Element. The CSP establishes contiguous open space areas formed to protect some of the most prominent natural resource areas. The form of CSP's open space plan and the resource preservation areas within it, were guided by input received during early consultation with federal and state resource agencies. The resource management approach is designed to be consistent with the Pleasant Grove Wastewater Treatment Plant (PGWWTP)

Memorandum of Understanding (MOU) between the City and U.S. Fish and Wildlife Service (USFWS) from May 2000, which addresses annexation projects proposed on the City's western boundary, such as the CSP. To this end, the CSP will append to the City's Open Space Preserve Overarching Management Plan for management of on-site open space ~~preserve~~ areas.

The CSP and related off-site preservation and restoration efforts are intended to complement larger-scale regional conservation strategies, such as the proposed Placer County Conservation Plan, the County's proposed habitat conservation plan. Coordination with other agencies and conservation efforts is a fundamental principle and key objective of the CSP resource management approach. In addition to resource protection, the open space areas help define the visual character of the site and provide for passive recreation opportunities, pedestrian and bike access, storm water drainage and treatment, flood water conveyance, utility infrastructure, and land use buffering.

Based on the characteristics of the site, the resource management approach in the Specific Plan focuses on wetland resources, vegetation and wildlife, trees and cultural and historic resources. Additional resources are further addressed in the CSP EIR.

9.1 Wetland Resources

A. Pre-Development Conditions

Several types of wetland features exist in the pre-development condition of the CSP site. The most prominent of these are wetland swales which are found throughout the site and carry water briefly during winter rainfall. The second greatest wetland type by size is Pleasant Grove Creek a perennial drainage which flows year round as a result of upstream urban runoff. Seasonal wetlands, vernal pools and a seasonal marsh are found primarily within grassland areas. A total of 33.83 acres of wetlands and other waters of the United States occur within the CSP in its pre-development condition, as listed on Table 9-1.

Table 9-1: Jurisdictional Wetland Summary

Wetland Type	Pre-Development Acreage	Impacted Acreage	Preserved Acreage
Vernal Pool	1.75	1.28	0.47
Seasonal Wetland	7.43	4.68	2.75
Wetland Swale	14.42	5.15	9.27
Seasonal Marsh	2.70	2.70	0
Total Wetlands	26.30	13.841	12.49
Ephemeral Stream	0.08	0.04	0.04
Intermittent Stream	1.77	0	1.77
Perennial Stream	5.68	0.32	5.36
Total Waters	7.53	0.36	7.17
Total	33.83	14.17	19.66

B. Avoidance and Mitigation Strategies

Avoidance

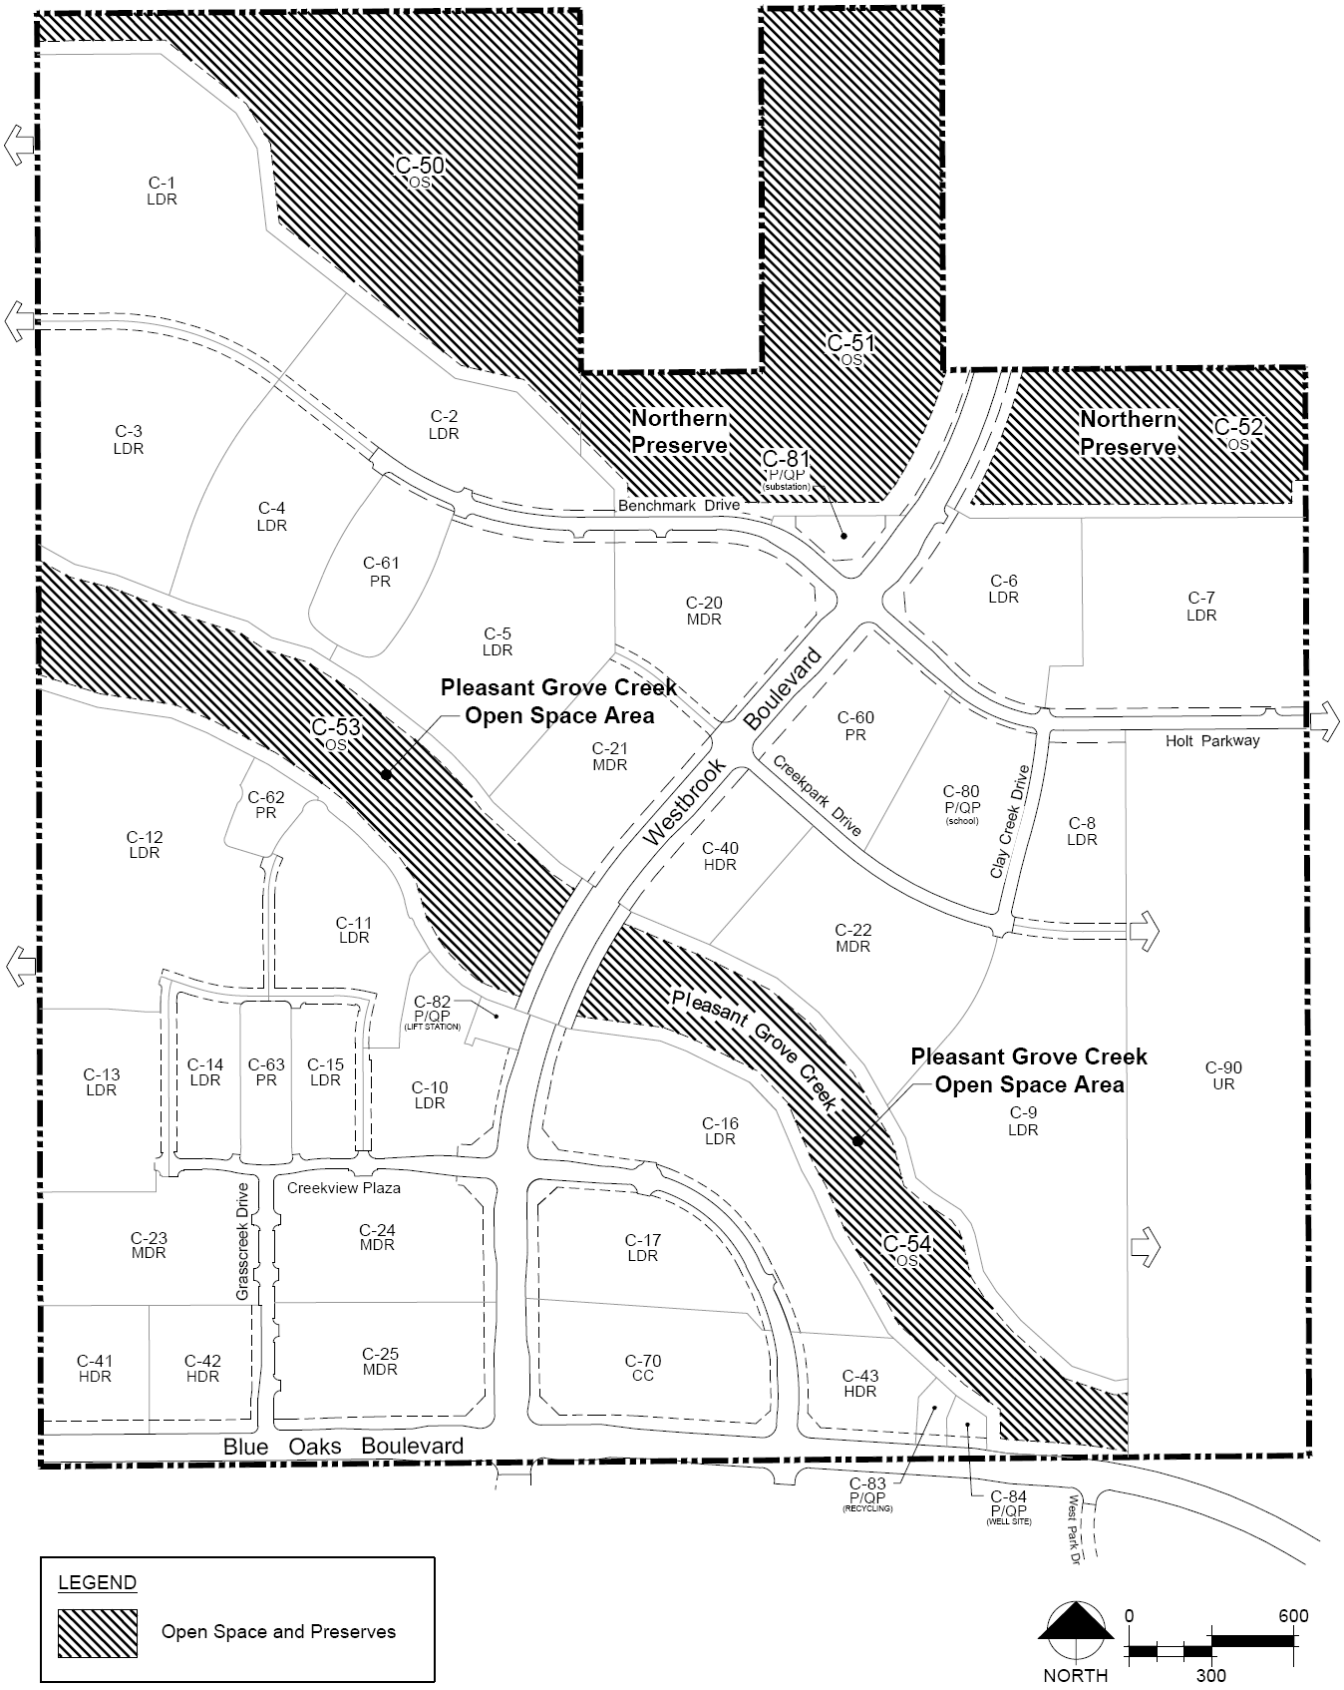
The CSP development plan is the result of extensive planning and its design is influenced by the desire to reduce impacts on wetlands and habitat for endangered species. The Open Space Plan, as illustrated on Figure 9-1, is configured to minimize impacts on Pleasant Grove Creek, to create an extensive open space preserve in the northern portion of the site and to provide buffers for habitat protection. The system is designed to avoid impacts to resources to the fullest extent feasible. Most of the avoidance occurs in the open space preserve (Northern Preserve) along the northern edge of the site and the corridor surrounding Pleasant Grove Creek. A minimum of 19.66 acres of in-kind wetland habitat will be preserved on-site resulting in a ratio of approximately 1.39 acres of wetlands preserved for each acre of wetland impacted. Information regarding impacted and avoided wetlands, including mitigation strategies, is provided in the CSP Environmental Impact Report.

Development of the CSP will be subject to approvals from state and federal resource agencies including the U.S. Fish & Wildlife Service (USFWS), U.S. Army Corps of Engineers (USACE), the California Regional Water Quality Control Board (CRWQCB) and California Department of Fish and Game (CDFG). Prior to submittal of an application for the CSP, the City and Applicant worked extensively with representatives of various federal and state agencies to arrive at a design to minimize impacts to resources, creates open space preserves of regional benefit and preserves the highest quality wetland resources on the site. The CSP open space preserve design involved extensive early consultation with the resource agencies to ensure compliance with the Clean Water Act and Endangered Species Act.

On-Site Resource Preservation and Enhancement

Wetland features and habitat within the CSP open space system will be preserved ~~in perpetuity,~~ within on-site preserves and open space areas, and ultimately will be dedicated to the City for management and maintenance. Two preserve areas will be created: ~~the~~ The system includes a 49-acre open space area (C-53 and C-54), ~~preserve~~ which includes Pleasant Grove Creek and associated riparian corridor, and ~~the~~ a 87.2-acre open space preserve (C-50, C-51, C-52) ~~area~~ in the northern portion of the CSP known as the Northern Preserve. Within the Northern Preserve, there are opportunities for vernal pool and seasonal wetland restoration. In addition, the areas adjacent to Pleasant Grove Creek provide opportunities for riparian enhancement and creation.

Figure 9-1: Open Space and Preserve Areas [UPDATED EXHIBIT]



To ensure these ~~preserve~~ open space features are maintained, grading and drainage plans in development areas will be designed to minimize impacts on the existing hydrology. Long-term maintenance and management of the preserves in the CSP will be conducted in accordance with the City of Roseville Open Space Preserve Overarching Management Plan, discussed further in Section 9.3 ~~4~~ below.

Off-Site Mitigation

Where biological resources cannot be avoided and preserved within the CSP open space preserves (14.17 acres of resources), off-site mitigation is required to provide wetland habitat and land to offset the loss of property designated within and/or proximate to the Vernal Pool Recovery Plan designated Core Area in Western Placer County. To meet the resource preservation objectives outlined above, the CSP mitigation program includes the preservation of resource areas on off-site lands and the use of approved mitigation banks. Mitigation sites have been identified in Western Placer County and are described in the 404 permit application. These sites will provide areas for preservation, restoration, and creation of wetland features. In addition, some mitigation will be provided as habitat credits in previously established and agency-approved mitigation banks located in Placer County. The use of off-site lands and habitat credits as mitigation to satisfy the on-site impacts on wetland resources will be assessed by the appropriate federal and state resource agencies and subject to various permit approvals prior to development activity within the CSP.

9.2 Vegetation and Wildlife

Annual grasslands and a valley oak riparian corridor are the two primary biological communities present within the CSP. Annual grassland is the dominant vegetation community within the CSP. It is comprised primarily of non-native annual grasses and herbaceous weed species. The most common species found within CSP include soft chess, ripgut brome and wild oat. Other non-native herbaceous species include yellow star thistle, filaree, Fitch's tarweed, and tarplant. Wetland features such as emergent marsh, wetland swales, vernal pools and seasonal wetlands and streams are embedded in the grassland habitat. The riparian corridor along Pleasant Grove Creek is dominated by valley oak. Himalyan blackberry is common and forms a shrubby understory along with willows and an occasional white alder tree. In more open areas, the understory consists of nonnative annual grasses and forbs.

CSP's biological communities support wildlife species. These include waterfowl, wading birds, shorebirds, and several amphibian species which use the wetland areas in the winter and spring. In addition, the grassland habitat supports several raptor species, including Swainson's hawk,

by providing foraging habitat. Swainson's hawk is a state-listed threatened species and is protected pursuant to the California Endangered Species Act. One nest is documented in the southwestern portion of the CSP. Several prey species have also been documented on the site including jackrabbit, gopher and meadow vole.

Grassland habitat and valley oak riparian corridor habitat will be preserved as part of the CSP open space preserve system. Active management of grasses by mowing, harvesting, discing, or grazing is anticipated to provide prey opportunities for wildlife species. Preservation and management of the grassland areas and valley oak riparian corridor will be regulated by the Operations and Management Plan, as outlined in sub-Section 9.3.

9.3 Operations and Management Plan

An Operations and Management Plan (O&M Plan) will be implemented in accordance with the applicable 404 permits to continually monitor, report, and correct disturbance, if any, to the open space/preserve areas. This document will ultimately be approved by the regulatory agencies and will specify the permitted activities and features within the CSP preserves. For the CSP, preserve and open space areas will be managed in accordance with the City of Roseville Open Space Preserve Overarching Management Plan. The Preserve Overarching Management Plan governs management of other City-owned preserve areas and provides mechanisms for consistent application of preserve management strategies throughout the City. At minimum, preserve management strategies will address fire/fuel modification zones, mowing activities, grading and construction activities, pedestrian and bikeway paths, storm drainage systems (including outfall locations and the treatment and transfer of stormwater to receiving waters), utility crossings, and other permitted and prohibited activities. In addition, standards will be established to minimize potential future impacts on vernal pools from sources of pollution, including urban runoff and neighboring land uses. Following habitat creation and completion of success monitoring by the applicant, on-site open space preserves will be dedicated to and managed by the City in accordance with the Preserve Overarching Management Plan. Funding for the management of on-site preserve and open space areas will be provided by an annual tax levy via creation of a Community Facilities District (or other funding mechanism).

9.4 Trees

Riparian and oak woodlands are found in the central portion of the CSP generally along Pleasant Grove Creek and in the northern open space. Limited woodlands exist outside of these corridors. The riparian woodland occurs immediately adjacent to the

creeks and includes valley oak, cottonwood, alder, willow, ash and other species. The oak woodland occurs upland and adjacent to the riparian woodlands and creek channels, and consists primarily of blue oak, with small amounts of interior live oak and valley oak. Both the riparian and oak woodlands are an important habitat for a variety of wildlife species, and a significant visual amenity. The portion of University Creek in the northwest corner of the CSP supports approximately thirty (30) mature valley oak trees along its upper bank. There are 458 native oak trees on the CSP site, totaling 9,522 aggregate diameter inches. Nearly 90% of the oak woodlands will be preserved in the CSP within open space areas or park sites.

Development in the CSP and impacts to trees as a result of public and private improvements is subject to the City of Roseville Tree Preservation Ordinance. Regulated activities within the protected zones of native oaks, and proposed tree removals, are subject to approval of a tree permit by the City. The Tree Ordinance requires trees approved for removal be compensated on an inch-for-inch basis either through regeneration/replanting or payment of mitigation fees. Oak woodland compensation on-site in the CSP will occur within the Pleasant Grove Creek corridor and/or in the northern open space preserve. A regeneration/replanting receiving area will be adjacent and connected to preserved woodland areas. Tree mitigation plans are coordinated through the City's Urban Forester for planting specifications, locations and monitoring.

9.5 Cultural and Historic Resources

Most of the CSP site surface was modified in the past to accommodate agricultural activities which suggest a relatively low sensitivity for surviving cultural resources. Two resources were identified as part of this analysis. The first is an agricultural feature including a residence, barn and corn crib (1981) used to store corn. The residence and barn have been destroyed and the concrete corn crib remains on the site. The second feature is a residence, dating to the 1950s or 1960s which has been completely destroyed.

Structures and deposits in the CSP do not appear to be eligible for the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR). The CSP EIR provides a detailed analysis of the site's cultural and historic resources, including mitigation and direction for further analysis of project-related impacts on cultural and historic resources, and how to proceed if any previously undiscovered or subsurface archaeological artifacts or historical sites are discovered.

Section 10

Implementation

Government Code Section 65451 requires every specific plan include a program of implementation measures necessary to carry out its proposed land uses, infrastructure, development standards, and criteria.

Implementation of the Creekview Specific Plan (CSP) is to be administered by the City of Roseville and carried out in accordance with the terms and conditions of several related and approved development agreements, phasing plans, a financing plan, and an environmental impact report, which augment the policies and regulations set forth in the City's General Plan and Municipal Code.

Implementation would also be consistent with State and Federal permit conditions and the federal environmental review document. Implementation of the CSP is intended to result in the systematic and orderly development of the CSP.

The Specific Plan includes a conceptual program for the phasing of units to support financing, and construction of public improvements, review of individual development projects, transfer of residential units, and process for Specific Plan amendments/minor modifications. These programs are summarized in this chapter, with details and specific requirements included in the above-referenced documents.

10.1 Relationship to City Plans and Policies

A. General Plan

The City of Roseville General Plan serves as the long-term policy guide for the physical and economic development of the City. The City's core values are the foundation of the General Plan and the underlying basis for its vision and direction.

The CSP implements the goals and policies of the City's General Plan, and augments these goals and policies by providing specific direction to reflect conditions unique to the CSP. At the time of Specific Plan approval, the City's General Plan and incorporated documents were amended to reflect CSP's land uses and development program. The CSP is consistent with the City's General Plan and incorporated documents as amended.

B. Municipal Code

The Roseville Municipal Code is one of the primary tools for implementing the General Plan. For new development areas, the Municipal Codes' key components are the City's Zoning Ordinance, Subdivision Ordinance, Storm Water Ordinance, Grading Ordinance and Tree Ordinance, which are used in tandem with this Specific Plan to implement the development program. Development standards contained in the City's Zoning Ordinance apply to the CSP. The CSP Development Standards (Appendix A) identify potential housing variations in the MDR density range and acknowledge the need to define custom development standards as part of tentative map processing for these projects. Where this Specific Plan is silent, the Zoning Ordinance's regulations prevail.

10.2 Specific Plan Related Documents

A. Environmental Impact Report

An Environmental Impact Report (EIR) was certified concurrent with approval of the CSP. The EIR, prepared in accordance with the California Environmental Quality Act (CEQA), examines the potential direct and indirect environmental effects associated with development of the CSP and identifies appropriate mitigation measures to reduce impacts determined to be significant. The EIR analyzes the CSP at a project level, and serves as the base environmental document for purposes of evaluating subsequent CSP-related entitlements. The EIR evaluates the Urban Reserve parcel at a program level.

B. Development Agreement

The property owners within the CSP have executed a development agreement with the City of Roseville to vest the development rights of their properties. The development agreement was approved by the City in accordance with applicable State and local codes, and as such, functions as

legal and binding contracts between the City of Roseville, the property owners, and their successors-in-interest. The development agreement outlines the specific development rights, establishes obligations for infrastructure improvements and land dedications, secures the timing and methods for financing improvements, and specifies other performance obligations for development of the CSP.

C. Development Standards and Design Guidelines

Concurrent with the approval of the project, the Creekview Development Standards (Appendix A) and Creekview Design Guidelines (Appendix B) were approved by the City of Roseville. The Development Standards reference applicable zoning regulations for the CSP and describe a process to achieve a development pattern which would not be otherwise permitted by standard application of the City's Zoning Ordinance. For matters where the Development Standards are silent, the City's Municipal Code prevails.

The Creekview Design Guidelines work in tandem with the City's Community Design Guidelines to provide additional detail in the design, review, and approval of individual projects within the CSP. Elements addressed include subdivision and site design, architecture, landscaping, streetscapes, entries, lighting, signage, and low impact development concepts. All development within the CSP is required to comply with the Creekview Development Standards and Creekview Design Guidelines.

10.3 Phasing Plan for Public Facilities

The CSP provides for a comprehensively planned infrastructure system with coordinated phasing and construction of facilities. Three infrastructure construction phases (Phases A, B and C) are anticipated as the CSP builds out. The boundary of each phase is reflected on Figure 10-1, with residential unit and land use allocations by phase summarized in Table 10-1.

In general, the phasing plan is structured to ensure the improvements in each phase can support its respective development in compliance with City policies and standards, and the development in each phase can support the costs of the required improvements.

Infrastructure phases identified in the phasing plan may be modified at the discretion of the City, in consultation with all affected City departments.

The infrastructure requirements for each phase of development include all on-site backbone infrastructure and off-site facilities necessary for the build out of each phase as described in the CSP Development Agreement.

These include roadways, sewer, water, recycled water, storm drainage, dry utility, paseos, schools, parks, and other facilities and improvements. All in-tract sewer, storm drain, water, dry utilities, and recycled water (if applicable) will be installed as part of local project improvements.

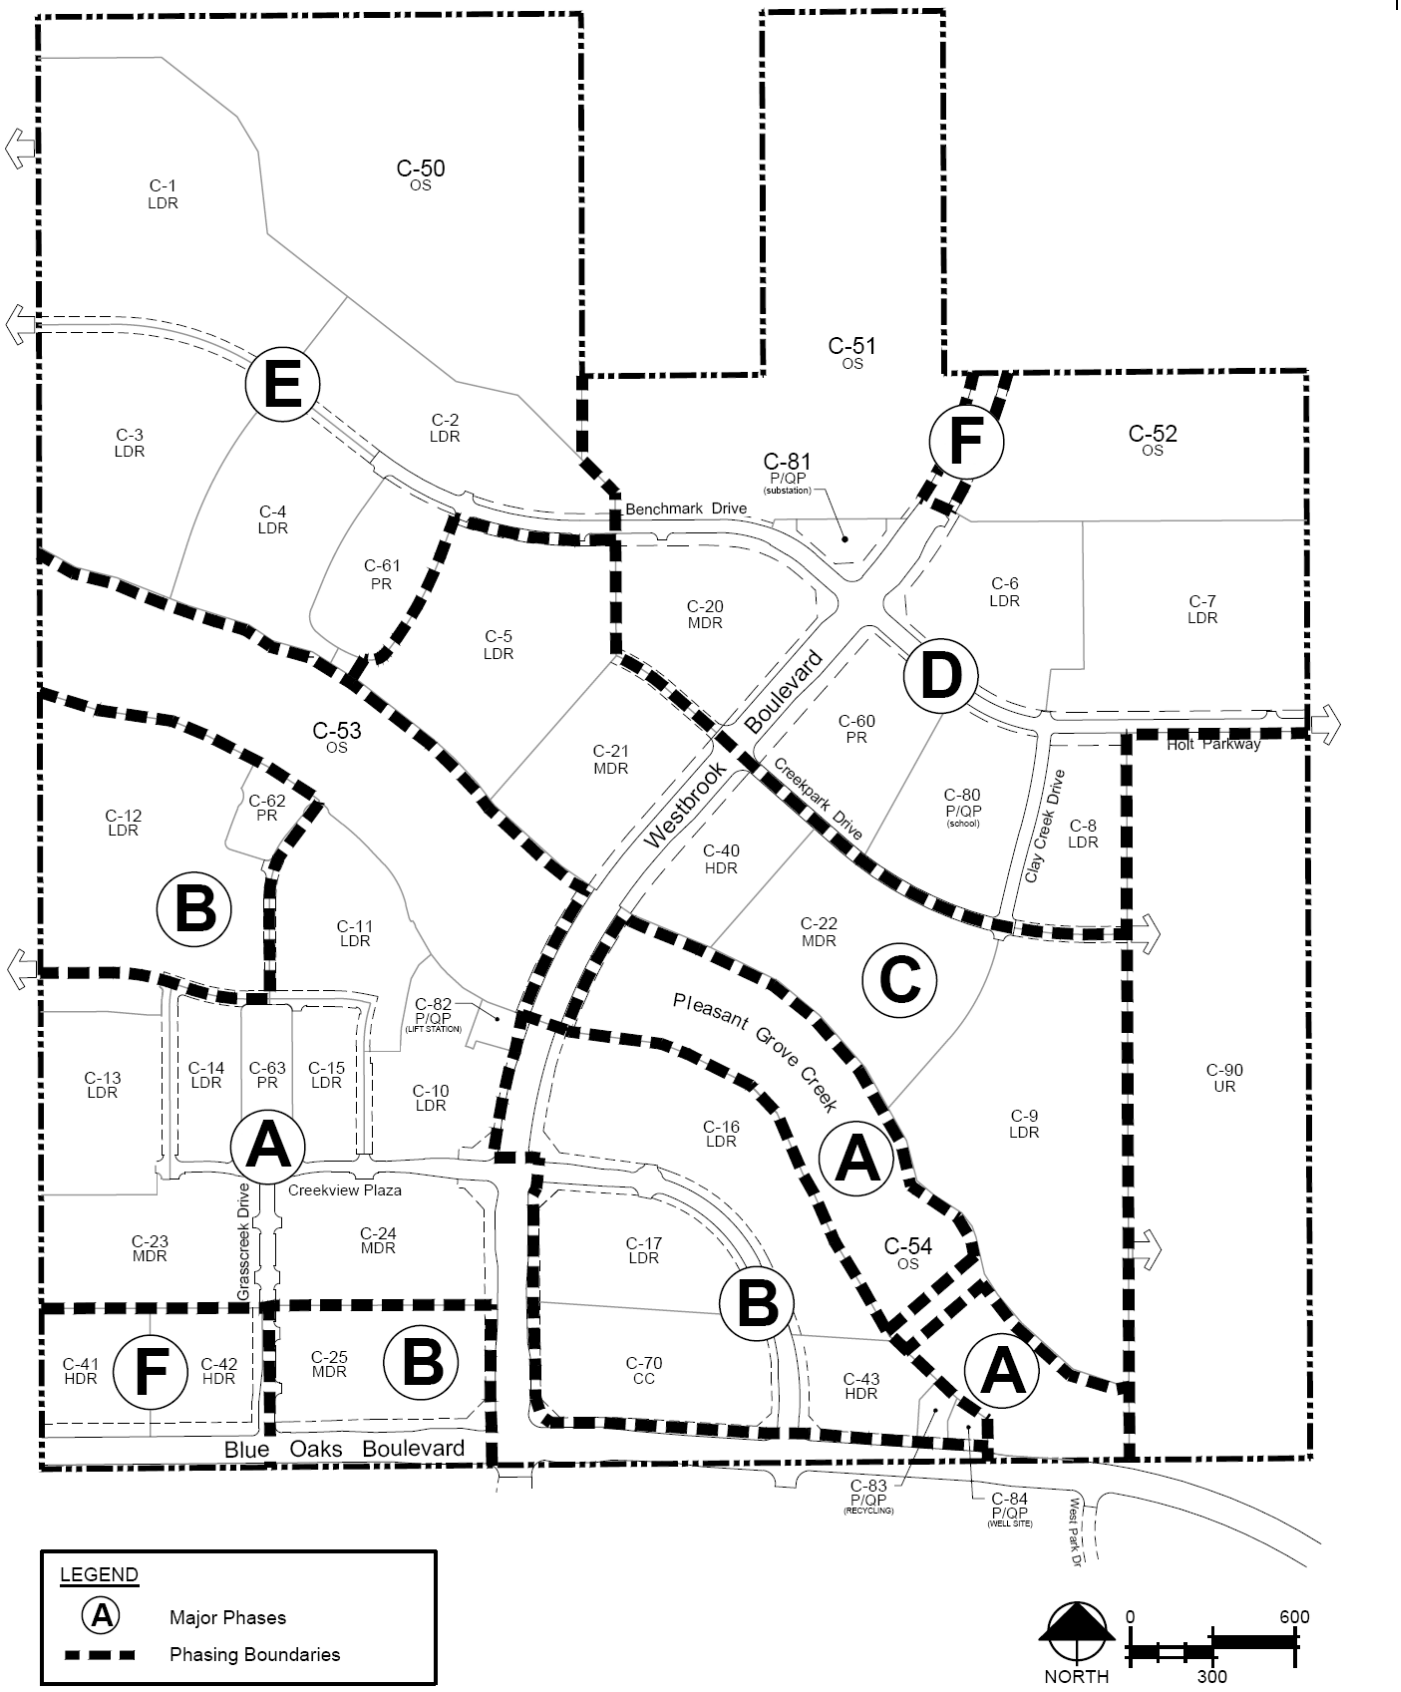
Figure 10-1: Conceptual Phasing Plan [UPDATED EXHIBIT]



10.4 Financing of Public Improvements

Construction of public improvements to serve the CSP will be funded by a variety of mechanisms including establishment of one or more Community Facilities Districts (CFD), City impact fees, school impact fees, developer financing and other methods. The CSP Financing Plan, hereby incorporated by reference, demonstrates feasibility and financing mechanisms which could be used to construct the CSP's public facilities. These financing mechanisms are summarized in Table 10-2.

For specific details on financing, refer to the CSP Financing Plan, available at the City of Roseville Finance Department.

- **Developer Financing.** Direct developer/merchant builder financing may be used to contribute toward backbone improvements and facilities, shortfall financing, and in-tract subdivision improvements.

- **City Impact Fees.** The City of Roseville adopted a set of development impact fees to finance capital improvements. The fee structure requires the payment of fees prior to issuance of a building permit. The City collects park fees, drainage fees, sewer connection fees, solid waste fees, water connection fees, traffic mitigation fees, and public facilities fees.

- **Community Facilities District.** One or more Community Facilities Districts (CFD) may be established to help fund the construction and/or acquisition of backbone infrastructure and facilities to serve the CSP. The 1982 Mello Roos Community Facilities Act enables cities and other entities to establish a CFD to fund various facilities and services.

  The proceeds of the Mello-Roos special tax can be used for direct funding of facilities and/or to service debt. A separate CFD for Services will be established for maintenance of certain facilities which provide special benefit to the CSP. Such facilities may include landscape corridors and medians, open space preserves, paseos, bike paths, bus stops and shelters, drainage and storm water treatment facilities and neighborhood parks. In addition, the CFD for Services may be used to fund governmental services which directly benefit residents of the CSP, including police, fire, library and other governmental services.

- **School Impact Fees.** The various school districts have established fees, in accordance with Section 17620 of the California Education Code, to be used to construct school facilities. Pursuance to Section 65995 of the California Government Code, these school impact fees will be collected by the school district prior to issuance of a building permit.

As noted, other financing mechanisms may be utilized, including creation of private districts or associations to fund maintenance of certain facilities within the CSP. Specific financing requirements, improvement obligations, fees, reimbursements, land and easement dedications and conveyances, maintenance, and other financing and improvement related obligations are detailed in the development agreement.

Table 10-2: Public Improvement Financing Mechanisms

Improvement/Facility	Financing Options
Roadway Improvements	CFD/Traffic Fees/Developer Financing
Storm Drain Infrastructure	CFD/Developer Financing
Water Infrastructure	CFD/Water Connection Fee/Developer Financing
Sewer Infrastructure	CFD/Sewer Connection Fee/Developer Financing
Recycled Water Infrastructure	CFD/Developer Financing
Electric Facilities	CFD/Utility Rates/Developer Financing
Parks	Park Fees/Developer Financing
Paseos	Paseo Fees/CFD/Developer Financing
Bike Trails	Bike Trail Fee/CFD/Developer Financing
Open Space Amenities	CFD/Park Fees/Developer Financing
Library	Public Facilities Fee
Schools	School Impact Fees/State Funding
Other City Facilities	General Fund/CFD/Developer Financing
County Facilities	County-Wide Facilities Fee
Maintenance Services[1]	General Fund/CFD
Governmental Services[2]	General Fund/Public Facilities Fee/CFD

1 Landscape corridors and medians on roadways, parks and related facilities, paseos, open space areas, bike and pedestrian paths and/or trails, bus stops and shelters, detention and storm water treatment facilities.
2 Police, fire, library, or general governmental services.

10.5 Subsequent Entitlements and Approvals

A. City Processing

Individual development projects within the CSP are subject to review and approval of subsequent permits and entitlements by the City of Roseville (e.g. subdivision review, design review, conditional use permits, variances, and/or other permits). Application and processing requirements shall be in accordance with the City's Zoning Ordinance and other regulations, unless otherwise modified by this Specific Plan.

All subsequent development projects, public improvements and other activities shall be consistent with this Specific Plan and accompanying Development Standards and Design Guidelines, the development agreement, applicable City of Roseville policies, requirements and standards and all State and Federal permit conditions and environmental review documents (CEQA and NEPA). In acting to approve a subsequent project or permit, the City may impose conditions as are reasonably necessary to ensure the project is in compliance with the Specific Plan and all applicable plans and regulations.

B. Environmental Review

Each subsequent development project shall be reviewed to ensure compliance with the California Environmental Quality Act (CEQA).

The Creekview Specific Plan Environmental Impact Report (EIR), certified concurrent with approval of the Specific Plan, serves as the base environmental document for subsequent entitlements. Development applications will be reviewed on a project-by-project basis to determine consistency with the EIR.

In general, if a subsequent project is determined to be consistent with the Specific Plan and within the scope of the EIR, further environmental review may not be necessary. Section 65457(a) of the California Government Code and Section 15182(a) of CEQA provide no EIR or negative declaration is required for any residential project undertaken in conformity with an adopted Specific Plan for which an EIR has been certified. If it is determined a development application is inconsistent with the Specific Plan and/or substantial evidence exists to support the occurrence of any of the events set forth in CEQA Guidelines Section 15183, a determination will be made as to the appropriate subsequent environmental document.

A mitigation monitoring program has been adopted with the CSP EIR in accordance with Public Resources Code 21081.6 to help ensure implementation of EIR mitigation measures.

C. Approvals from Other Agencies

Appropriate Local Agency Formation Commission (LAFCO), state, and federal approvals and permits are required prior to any development activity within the CSP. Plan implementation would be carried out consistent with all applicable permit conditions and the federal environmental review document.

10.6 Amendments and Minor Modifications

Proposed changes to a specific plan typically require approval of a Specific Plan Amendment (SPA). Specific Plan Amendments are processed in the same manner as the initial Specific plan adoption, requiring review by the Planning Commission and action by the City Council.

However, because the CSP will build out over several years, it is anticipated the Specific Plan may need to respond to changing market conditions and City expectations during the course of buildout. To provide a degree of flexibility in responding to changing conditions, the CSP allows for administrative approval of Minor Revisions to the Specific Plan, including the Creekview Development Standards and Creekview Design Guidelines in Appendices A and B. The ~~Planning, Housing and Redevelopment~~ Development Services Director, or designee, shall determine whether a proposed revision is minor, and may act upon a minor revision to the Specific Plan and appendices administratively, as specified below.

A minor revision to the Specific Plan may be processed and acted on administratively if determined by the ~~Planning, Housing and Redevelopment~~ Development Services Director to be in substantial conformance with:

1. The overarching vision and community design principles intended for the Creekview Specific Plan, including applicable development standards and design guidelines;
2. The Specific Plan development agreement(s);
3. The City of Roseville General Plan; and
4. The Specific Plan Environmental Impact Report.

Examples of minor revisions to the CSP include, but are not limited to:

- ❑ The addition of new or updated information which does not substantively change the Specific Plan.
- ❑ Minor adjustments to land use boundaries of residential, commercial, or park parcels, to open space edges between developable and non-developable land, or to street alignments, where the general land use pattern is maintained.
- ❑ Minor modifications to, and interpretations of, the development standards, as permitted by Section 19.74.020 of the Roseville Municipal Code for Administrative Variances, if it is determined such changes are equal to or better than the original intent of the CSP.
- ❑ Changes to the provision of public infrastructure and facilities do not impact the level of service provided

or affect the development capacity in the CSP.

- ❑ Modifications to the Design Guidelines (such as revisions to design treatments or changes in specified plant materials, alterations of site concept plans, etc.) if it is determined design intent is maintained.
- ❑ Modifications to the provisions for infrastructure and construction timing which do not change the ability to provide adequate infrastructure for the development.

Any proposed minor revision to the CSP may, at the sole discretion of the ~~Planning, Housing and Redevelopment~~ Development Services Director, be referred to the Planning Commission and City Council for action. Determinations and actions by the ~~Planning, Housing and Redevelopment~~ Development Services Director may be appealed to the Planning Commission.

If the ~~Planning, Housing and Redevelopment~~ Development Services Director determines a proposed amendment does not meet the above criteria, a Specific Plan Amendment (SPA) shall be required.

10.7 Minor Residential Unit Transfers

The large lot parcels on Creekview's land use plan are assigned a residential dwelling unit allocation, with associated gross land use density. These assignments were made at the time of Specific Plan approval based on an assessment of the constraints and opportunities of each large-lot parcel and anticipated long-term demand for various housing types. As individual residential small-lot parcel maps are processed over time, a more detailed assessment of site, market, and other conditions will occur. It is anticipated this process may result in the need to adjust (reduce or increase) the number of units assigned to some large-lot residential parcels.

This Specific Plan includes a provision which allows the City to approve minor residential density adjustments and permit the transfer of residential units between large lot parcels. The ~~Planning, Housing and Redevelopment~~ Development Services Director may administratively approve a residential unit transfer/density adjustment between any Specific Plan large lot parcels provided the following conditions are satisfied:

1. The transfer and receiving parcels are located within the Creekview Specific Plan and are subject to a development agreement;
2. The transfer of units does not result in a change to the land use designation, specifically, the transfer does not: (a)

reduce the number of units from the transfer parcel below the minimum number of units allowed by the applicable land use designation; or (b) increase the number of units to the receiving parcel above the maximum number of units allowed by the applicable land use designation;

3. The transfer of units does not result in increased impacts beyond those identified in the Specific Plan EIR and does not preclude the ability of the parcels to conform to the applicable standards or regulations contained in this Specific Plan and related Development Standards and Design Guidelines;
4. The transfer of units does not adversely impact planned infrastructure, roadways, schools, or other public facilities, or fee programs and assessment districts;
5. The cumulative increase or decrease in units resulting from the adjustment does not change the unit allocation by more than 20% of the units to either the transfer or receiving parcel, as established at the time of the original approval of the specific plan;
6. HDR units designated as affordable units may be transferred administratively until such time they are encumbered by an Affordable Housing Regulatory Agreement (or other form as approved by the City); and
7. For HDR parcels, unit transfers may be approved between HDR parcels administratively, provided the resulting density of an affected HDR parcel does not fall below 20 units per acre.

The transfer of residential units, if consistent with the above criteria, is administrative in nature, is contemplated by and within the intent of this Specific Plan and the Specific Plan EIR, and will not require an amendment to the Specific Plan, zoning, the development agreement, or the City General Plan.

To request a residential unit transfer, the owner or owners of both the transfer and receiving parcels shall submit a complete Administrative Permit application to the ~~Planning, Housing and Redevelopment~~ Development Services Director which (a) identifies the affected parcels; (b) designates the number of units being transferred; (c) provides other documentation as required by the ~~Planning, Housing and Redevelopment~~ Development Services Director to determine compliance with the above unit transfer criteria; and (d) includes a revised Specific Plan Table 4-1,Plan Area Land Use Summary and Table 4-2, Land Use, Zoning, & Acreage by Parcel, reflecting the adjusted unit counts and densities. The revised table will be the official record tracking unit allocations to each large lot residential parcel.

If the ~~Planning, Housing and Redevelopment~~ Development Services Director determines the residential unit transfer is not consistent with the above criteria, the residential unit transfer may be denied or may be

referred or appealed to the Planning Commission and/or City Council for action. Any determination of consistency may, at the discretion of ~~Planning, Housing and Redevelopment~~ Development Services Director, be forwarded to the Planning Commission for review. The applicant may request density adjustments which do not comply with the above criteria. Such requests shall require an amendment to the Creekview Specific Plan.

All unused units must be transferred prior to the City's approval of the last small lot final map or Design Review Permit for any residential large lot parcel within the CSP. Any units assigned to a large lot parcel which are not used by a tentative map/Design Review Permit or are not approved for transfer, shall revert to the City ~~unit pool~~ and landowners shall have no subsequent claim to such units.

Appendix A

Development Standards

A.1 Applicable Zoning and Development Standards

Zoning and development standards for the CSP residential parcels are referenced in the Creekview Specific Plan (CSP) document and included in the City of Roseville Zoning Ordinance. Figure 4-1 and Table 4-1 in Chapter 4, Land Use, of the CSP document identify zoning districts applied to the CSP parcels. For residential areas, these include ~~R1/DS,~~ RS/DS and R3, consistent with the Zoning Ordinance's districts and definitions for residential zones.

A.2 RS/DS Development Standards

Where applied, the RS/DS (Small Lot Residential/Development Standard Overlay) zone district establishes the development standards for both LDR and MDR densities. The RS/DS zone district allows a range of housing types and lot sizes to respond to different household needs and market segments.

Housing types can vary from detached to attached, front access to alley (rear) access, and cluster arrangements. Subdivisions in the RS/DS district, which deviate from the RS development standards, shall define a customized set of development standards when processing small lot tentative maps.

Customized development standards may include elements such as reduced setbacks, smaller lot sizes, modifications to lot coverage, and other features that are specific to a housing type. City review of modified development standards is to be in conjunction with a small lot tentative map process in order to justify deviations to the Zoning Ordinance's typical requirements.

A Design Review for Residential Subdivision (DRRS) consistent with the City's Community Design Guidelines is also required for housing product in the RS/DS zoning district that is greater than seven (7) dwelling units per acre.

A.3 Residential Product Types in the RS/DS Zone

The types of residential products which could be accommodated in the RS/DS zone are illustrated on the following pages. The samples of housing types shown herein illustrate the design flexibility permitted in a RS/DS zone to accommodate compact residential densities. Other housing types, not yet contemplated, may also be permitted with approval of a DRRS. Implementation of these housing product types may require defining new development standards, in support of the specific design characteristics, through the City's DRRS process. The City encourages a variety of housing types in the RS/DS district.

Appendix B

Design Guidelines

These design guidelines are an appendix to the Creekview Specific Plan (CSP) and supplement the City's Community Design Guidelines. They are intended to provide design guidance for the physical form and visual character of the CSP.

This chapter should be used in conjunction with applicable development standards in Appendix A, the Community Design Guidelines, design specifications approved for development projects via the City's DRRS process, as well as the various regulations and policy guidance provided throughout the Specific Plan. These elements are to be considered by City staff, Planning Commission, and City Council in their review of individual development projects.

The guidelines are intended to encourage quality and creativity for individual development projects in CSP. They are not to be applied as strict standards recognizing there are several design options which can achieve the desired intent. In addition, graphics, photos, and other imagery are used to help illustrate the successful application of guidelines, and do not dictate specific styles or architectural character.

Through these guidelines, the intent is to allow the community, commercial, neighborhood, and home design elements to respond to market conditions, site constraints and opportunities, and other factors. While flexibility is needed, application of these guidelines is important to achieve the quality community described in Chapter 3, Vision and Principles.

Relationship to City Documents

Other standards and guidelines applicable to the CSP are set forth in the following documents, which should be referenced in the design of all uses in the Plan Area:

- ❑ Roseville Municipal Code-Title 19, Zoning Ordinance
- ❑ Community Design Guidelines
- ❑ Roseville Sign Ordinance
- ❑ Roseville Water Efficient Landscape Ordinance
- ❑ Roseville Design and Construction Standards
- ❑ Roseville Parks Construction Standards
- ❑ Roseville Subdivision Ordinance
- ❑ Stormwater Quality Design Manual

Modifications to CSP Guidelines

These Design Guidelines are intended to help direct the design of CSP's community design elements. It is expected the Plan Area will build out over several years, and conditions may change. The City recognizes the need for flexibility in the implementation of these Guidelines and new conditions affecting the appropriateness of some of the Guidelines may arise. The Specific Plan provides for the administrative approval of minor modifications to these Design Guidelines. For administrative approval of minor modifications, requested deviations must be determined to be consistent with the spirit and intent of the design guidelines. Please refer to Section 10.6, Amendments and Minor Modifications, of Chapter 10, Implementation, for additional information regarding modifications.

B.1 Landscape Architecture

The guidelines for landscaping establish a basic landscape theme. The guidelines for landscaping unify elements of the CSP, reinforcing the sense of place envisioned for the planned community. Landscape plans prepared for roadway corridors, entrance gateways, and open space edges should conform to these guidelines. Landscape design should be appropriate for the local climate and soil conditions, use of water-conserving plant species whenever possible, utilize recycled water irrigation systems, install water efficient, low volume irrigation systems and controls, harmonize with the native vegetation, and provide an appropriate transition between the formal landscaping in developed areas and the natural character of the open space areas.

This section outlines landscape themes and street tree planting concepts.

A. Overview and Approach for Landscaping

The planting approach for CSP incorporates a hierarchy of trees, shrubs, and groundcovers to define the public realm. Along streetscapes, the landscape architecture should utilize a consistent application of plantings from the plant palette, with trees which hold a strong street edge and create an intimate environment for the pedestrian experience. In larger landscaped areas, such as entrance gateways, landscape concepts should reinforce the landscape theming concepts, with a diversity of trees, groundcovers, and shrubs used to visually punctuate these areas and make them distinct features in the landscape. Along Open Space preserve interfaces, the landscape design approach should enhance the Plan Area's existing setting by incorporating native plant species which create a visual transition from the developed environment.

Landscaping should utilize water-conserving plant species to the extent needed to comply with the Water Efficient Landscape Ordinance (WELO), recognizing groundcovers may be used in many areas and turf in select areas. Water-conserving plants should be selected on their ability to thrive without the use of spray irrigation when established.

Throughout the Plan Area, irrigation should be consistent with the requirements of the City's adopted Water Efficient Landscape Ordinance. In addition, water conservation standards are provided in Section 8.1 of Chapter 8, Utilities.

B. Planting Concept for Streetscapes (Major Roads)

Landscape corridors and medians (where applicable) on arterial and collector streets should be landscaped with a combination of trees, shrubs, and groundcover consistent with the following guidelines:

Primary Street Trees

Primary Street Trees should be planted between the street edge and sidewalk or in a front yard, as appropriate per each street design standard. Consistent application of a primary street tree will provide a scale to each street, helping define its form and visual character. Special consideration should be given to tree types in special places, such as entrance gateways or near the Westbrook/Blue Oaks Commercial Center, where a deviation in tree type will visually distinguish these features from the balance of the streetscape.

Primary street trees shall be:

- ❑ Large-scale, single-trunk trees, primarily deciduous, with high canopies growing over the roadway.
- ❑ Selected from the City's Tree List.
- ❑ Spaced 30-feet on center.
- ❑ Planted from a minimum 15-gallon container.
- ❑ Planted in a regular linear fashion, set back from the curb far enough to accommodate ultimate growth. Root barriers and deep root irrigation shall be installed on trees planted within 5-feet of a curb, paved surface, sidewalk or wall.

Secondary Street Trees

Where appropriate, secondary street trees should be used as background trees in the landscape corridors to add contrast to the linear plantings of primary street trees. Median trees are also considered secondary trees, and may duplicate the primary street trees or provide contrast in the median to reinforce a street's landscape theme.

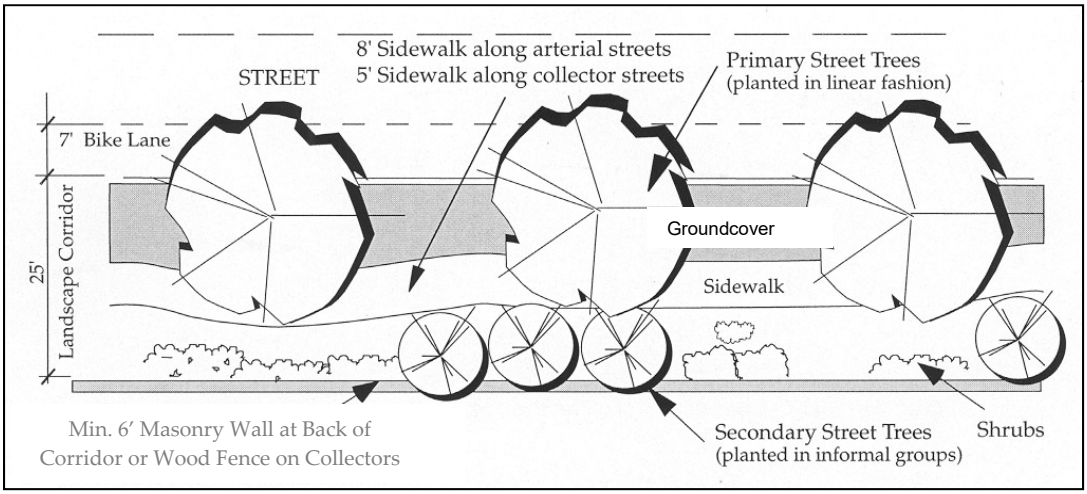

Figure B-1: Typical Landscape Corridor Street Planting Concept

Secondary trees should also be used to provide color and accents at neighborhood entries and at points of interest along the streetscape. Secondary trees shall be:

- Planted in informal fashion as determined by space and tree species in landscape planter.
- Selected from the palette in Appendix B-1.
- Distinctive in form and/or color.
- Complementary to the form of the primary street tree.
- Planted from a minimum 15-gallon container.
- Spaced an average of 30-feet on center, or in equivalent quantities if planted in clusters in landscape planters.
- Utilize recycled water for irrigation and water efficient irrigation systems and controls.
- Spaced at an average of 30-feet on center in medians.

Shrubs

Shrubs should be used in landscape corridors and medians to provide a visual barrier to fences, walls, and utility equipment, soften the ground plane, and visually link all landscape materials. Shrubs should be:

- Planted from a minimum one- to five-gallon container.
- Selected according to size, color, texture, water use, and seasonal interest.
- Placed to not obstruct important pedestrian or vehicular sight lines or threaten the safety of pedestrians.

Groundcover

Along major roadways including arterials and collectors, groundcover should be planted in all portions of landscape corridors, entrance gateways, and/or medians not planted with shrubs. Selection of plant material should also consider the pedestrian use of a particular area. High-activity areas such as parks and pedestrian corridors should be strategic in the use of turf in order to maximize water conservation. Groundcovers, particularly those utilizing drip or other low-volume irrigation, should be used in low-activity areas along arterials and collectors.

Utilization of groundcover should consider the following:

- Turf should be used sparingly in planter strips between the sidewalk and curb along arterial and collector streets. Usage should be consistent with the City's Water Efficient Landscape Ordinance.
- Non-turf groundcover (or a combination of turf and non-turf groundcover) is preferred behind the back of sidewalks on major roadways.

- Other non-living materials such as bark and boulders may be combined with ground- cover to add variety to the landscape.
- Hydroseeded areas should have strict weed-abatement measures implemented.
- Turf may be installed in areas with a maximum 4:1 slope. Non-turf groundcovers should be used on slopes steeper than 3:1.
- Drought-tolerant or water-conserving groundcover species requiring low-water usage and low flow irrigation are encouraged.

C. Street Tree & Groundcover Palettes (Major Roads)

Street trees and groundcover for landscaping along major roadways shall be consistent with the City's Tree List. The City's tree list includes groups of tree species based on their appropriate planter size, and should be used accordingly to select trees for various streets within the community.

A small, but consistent palette of trees should be selected from the Creekview Plant Palette (Appendix B-1) and applied uniformly throughout the Plan Area in order to create a strong, unified landscape framework. As described above for the application of primary and secondary street trees, proper use of this palette will help define CSP's character. Other plant species may be considered to augment this palette, subject to review and approval by the City.

D. Unique Landscape Design Considerations

Powerline Corridor on Westbrook and Blue Oaks Boulevards

In addition to the landscape guidelines noted above, the following additional standards shall apply to the portions of landscape corridor adjacent to Westbrook and Blue Oaks Boulevards within the powerline easement.

- Landscaping within the power line easement is restricted to shrubs, groundcover, turf, and low-growing trees, subject to review and approval by Roseville Electric.
- No permanent structures other than electric utilities may be placed within the electric easement.
- Lighting structures and landscaping within the powerline easement should not exceed 15-feet (at maturity) above ground elevation, and should not be within 25-feet of the nearest high-voltage transmission line conductor.
- Berms should not be placed next to the base of powerline poles.
- All grading, landscape structures (including lighting and fencing) and landscaping on a public-utility easement or near a public utility are subject to final approval by the City.

Median Breaks

Median breaks on arterial streets are limited to those shown on Figure 6-17 in Chapter 6, Circulation. The purpose of controlling the number and location of these breaks, in addition to controlling traffic movements, is to ensure a strong, continuous street tree and landscape treatment can be provided along the streetscape. On a limited basis, additional median breaks may be considered on a case by case basis. The following standards shall apply to median breaks:

- Additional median breaks will be considered when a demonstrated benefit is shown to increase the level of service of an otherwise already degraded signalized intersection adjacent to the location of the desired breaks.
- Median breaks along arterial streets should be spaced to allow for standard turn pocket and taper lengths.
- Breaks should be spaced to provide a sufficient area for median landscaping and to prevent small islands which cannot be landscaped due to size constraints.
- Median design should avoid creating conditions where hardscape must be installed in lieu of landscaping due to site distance requirements.
- A minimum of five (5) trees, spaced at maximum intervals of thirty feet (30') on-center, shall be provided in any one section of median.
- Special cases deviating from these standards may be considered at the discretion of the City Engineer on a case by case basis.

E. Landscape Guidelines for Residential Streetscapes

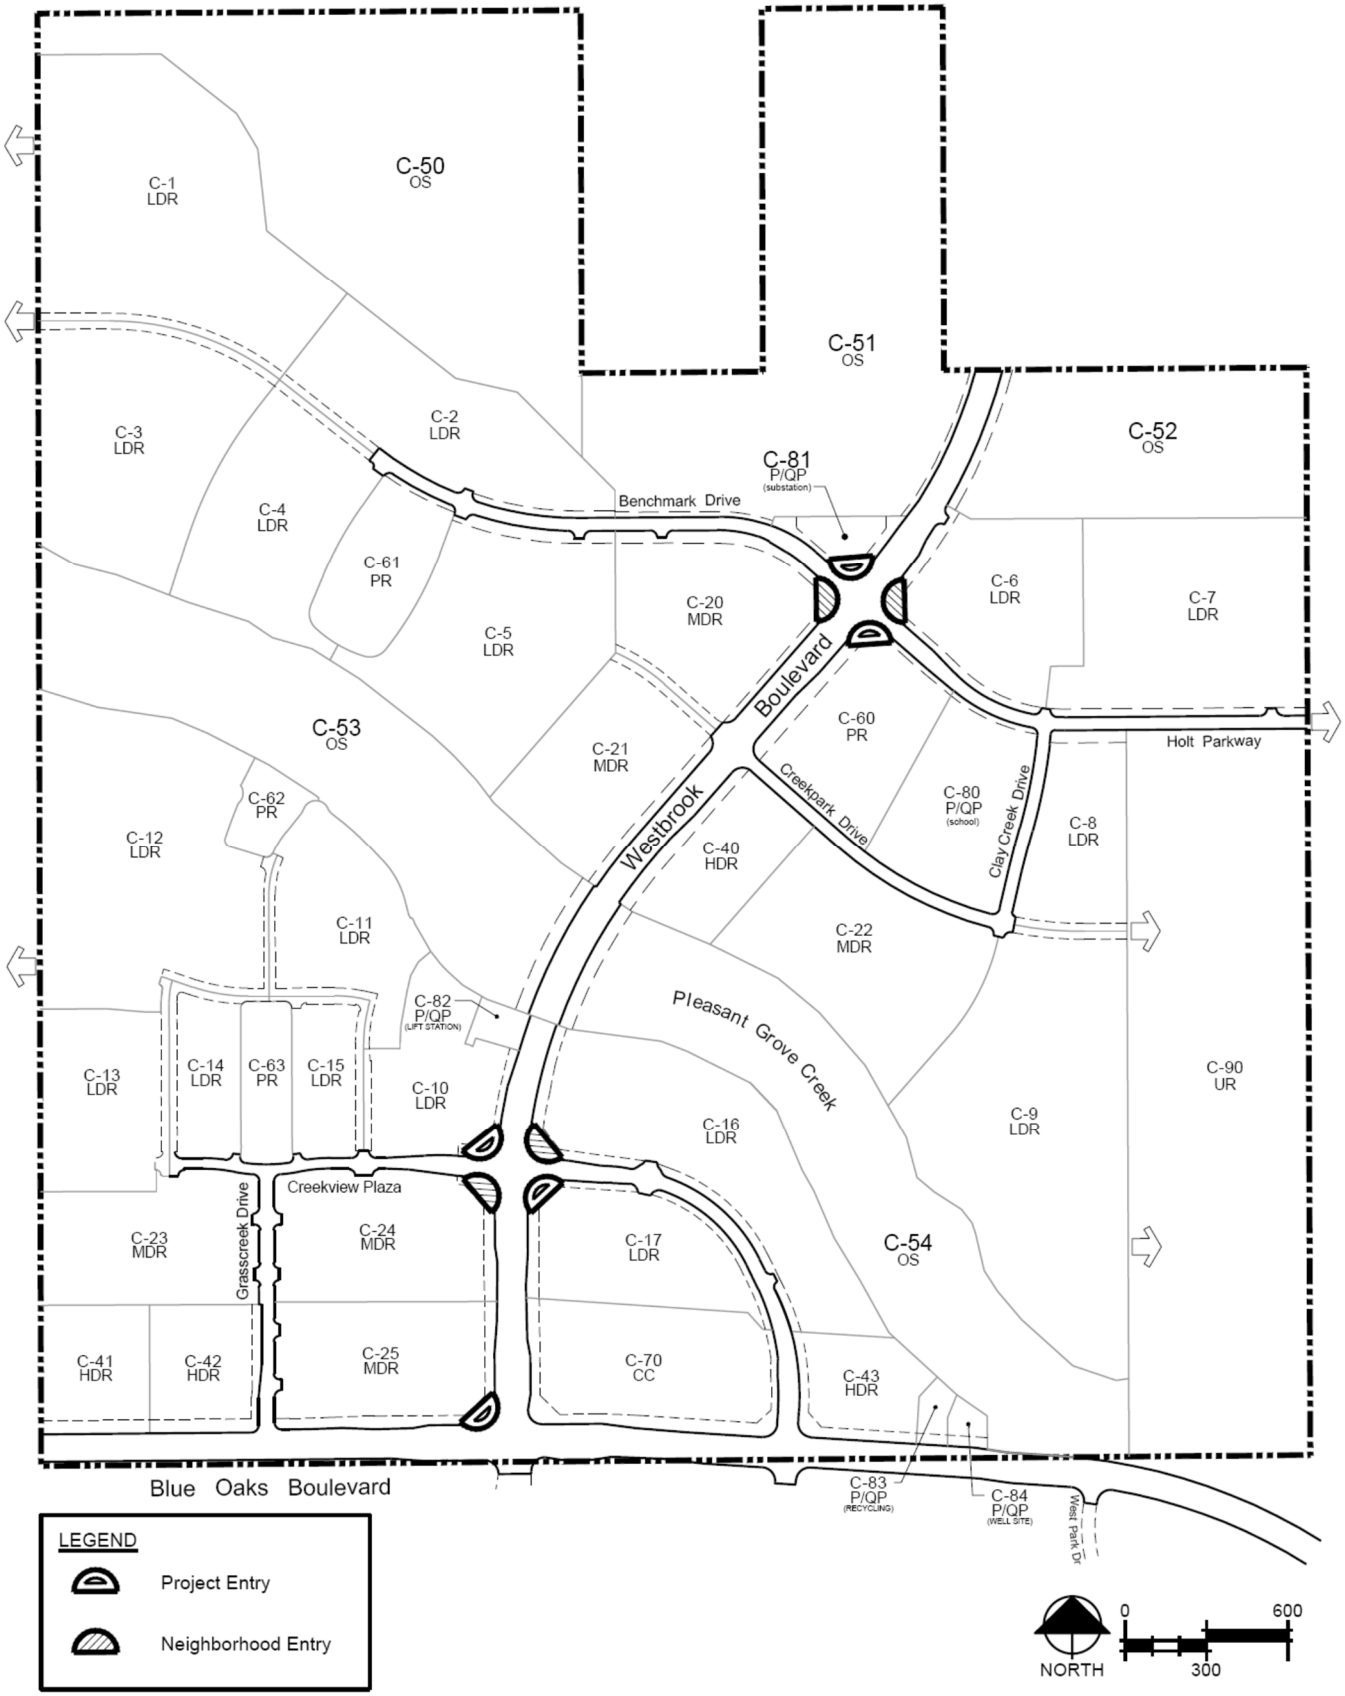
Front yard landscaping in residential areas (including planter strips between curb and sidewalk, where present) is subject to the provisions of the City's Water Efficient Landscape Ordinance (WELO) and the CSP Water Conservation Plan. The CSP encourages the use of water conserving plant species and selected use of turf and groundcovers. In instances where the WELO applies, landscaping and irrigation systems along residential streetscapes should comply with the following guidelines:

- When separated sidewalks are used within residential subdivisions, turf should be encouraged in planter strips between the sidewalk and the curb, provided the irrigation system complies with the City's Water Efficient Landscape Ordinance (WELO).
- Where turf is not feasible, other walk-on groundcovers may be used as specified in the Plant Palette (Appendix B-1).
- Front yard landscaping should be consistent with the guidelines for plan-wide water conservation, as outlined in Section 8.1 of Chapter 8, Utilities.

B.2 Entry Features and Signage

Entrance features are visually prominent elements of the public realm which create a sense of arrival into both the City and CSP. Sited at key locations, these features should have a unified application of hardscape elements, project icons, landscaping, and accent materials to define CSP's visual character. Through repetition of a consistent application of hardscape and landscape elements, the overall design theme of the public realm is reinforced. Two types of entry features are planned including Project Entries and Neighborhood Entries. Figure B-2 illustrates the location of project and neighborhood entry features described below:

Figure B-2: Entry Feature Locations [UPDATED EXHIBIT]



A. Project Entries

Project entries are elements which visually reinforce the streetscape theme within the Plan Area and announce arrival to the project. Project entries are intended to be more prominent in scale compared to neighborhood entries.

Project entries are planned at the entries to the project at Westbrook Boulevard/Blue Oaks Boulevard and Westbrook Boulevard/Northern Preserve Open Space (Parcels C-51 and C-52), along arterial roadways. The Westbrook Boulevard/Blue Oaks Boulevard entry will be most significant entry feature. The application of landscape and hardscape materials may vary between the two entry features, however the intent is for the appearance of both features to complement one another.

Project entries will be located in the landscape corridor within the right of way at the corners of intersections, typically where a corner clip is provided in the adjacent residential neighborhood, which creates an enlarged landscape corridor along the street. Elements of the project entry feature may be located in the median near the entry, subject to review by Public Works.

The design characteristics of project entry features shall be directed by the following guidelines:

- Large-scale iconic hardscape elements, such as masonry walls, pilasters, or obelisks, which flank each side of the roadway to visually demark entry into a neighborhood. Materials shall be natural and non-painted.
- Hardscape features should include iconic elements, such as monuments, walls, pilasters, raised planters, plazas, and/or architectural elements, derived from a common palette of materials, colors and exterior finishes.
- Low walls with decorative caps, used in conjunction with pilasters at street edges, reinforcing the sense of arrival.
- Hardscape elements clad with stone or other natural materials, which complement the streetscape design theme and reinforce the character of the landscape.
- Identification signage, if provided, incorporated into the design of hardscape features in a subtle manner, monolithic, bolt-in and non-metallic, as permitted by the Roseville Sign Ordinance.
- Landscape materials shall utilize water-conserving species and incorporate accent trees, shrubs, and groundcovers which harmonize with the overall landscape theme of CSP, visually punctuating the gateway as a significant element of the public realm.

- Indirect above-ground accent lighting incorporated with concealed fixtures to provide a subtle lighting wash across hardscape and landscape elements during nighttime hours.
- Evergreen and deciduous accent trees are selected and incorporated to further define the design and physical form of the entry feature, sized to complement hardscape elements and reinforce the sense of arrival.
- Water-conserving accent plants and groupings of shrubs and groundcovers to add color and variety to the entry.

B. Neighborhood Entries

Neighborhood entries are entry features which create or enhance a formal entrance into a subdivision. Neighborhood entries are intended to be smaller in scale than a Project Entry.

The design of neighborhood entries should utilize the same palette of materials, colors, and exterior finishes of the corresponding project entry, which may vary throughout the CSP. The overall appearance should be complementary to one another in order to maintain the overall visual character of CSP. The design characteristics of these features should be directed by the following guidelines:

- ❑ Typically located at a subdivision entrance, either in an entrance median or along each side of the street, at the primary access point from an arterial or collector street.
- ❑ Thematic wall or other hardscape features (such as trellises, raised planters, pilasters, etc.) consistent with the overall design theme established for the subdivision. Materials to be natural and non-painted.
- ❑ Subdivision identification signage incorporated into the design of hardscape features in a subtle manner, as permitted by the Roseville Sign Ordinance. Subdivision identification signage shall be monolithic, bolt-in and non-metallic.
- ❑ Iconic emblems, logos, or symbols used to identify the subdivision, which reinforces the streetscape theme.
- ❑ Features shall be monolithic, bolt-in and non-metallic.
- ❑ Design in a manner which does not impact site distance requirements for automobiles.
- ❑ The number, height, and size of all signs shall be consistent with the requirements of the Roseville Sign Ordinance.

C. Site Design for Entry Features

City gateways and project entry features should be located in "corner clips" (triangular landscape corridor enlargements at street intersections). The following parameters should be used to guide the site design and landscape/hardscape elements for all entrance features located at intersections:

- Where fencing is provided at the rear of corner clips, the fencing should consist of a masonry wall (with pilasters or columns) to match or accent the adjacent masonry wall.
- Improvements within corner-clip areas should allow adequate vehicular lines of sight at intersections.
- Corner-clip offset from the edge of the required landscape corridor should be consistent with the design standard in Figure 6-16, in Chapter 6, Circulation. Non-triangular corner clips are permitted (i.e., curved, stepped, etc.) provided they do not encroach into the minimum offset area.
- Corner clips ~~are to~~ should be landscaped in a manner compatible with the adjacent landscape corridors, and shall include accent plantings.
- Accent light fixtures ~~are to~~ should be an above-ground design.

D. Signage on Entry Features

Identification signage is permitted on entrance features, consistent with the Roseville Sign Ordinance. Sign text is permitted to identify CSP or specific community (i.e. Creekview or XYZ Communities) at project entries. Signage may also be used to identify subdivisions at neighborhood entrances.

Signage should utilize high-quality materials which will endure outdoor seasonal conditions and resist vandalism. Signs and sign lettering are encouraged to be monolithic or panels/plaques, versus individual letters, such as those listed below. All signs are subject to review and approval by the Parks and Recreation Department and subject to provisions in the Roseville Sign Ordinance.

Entry feature signage should feature the following types of characteristics:

- Flush mount channel letters
- Flush mount masonry Cast concrete signage

All sign elements on pilasters or walls shall use mounting hardware securely embedded into the surface onto which it is affixed. Salvageable materials (metals) shall be avoided. No epoxy-mounted elements are permitted. Where signs and monuments are to be up-lit, such lighting equipment shall be approved by the City.

B.3 Street Lighting

Themed street lighting may be used within the development to help establish an overall design theme for the Plan Area. Where desired, decorative, "acorn" fixtures may be used on collector and residential streets. Decorative light fixtures are also encouraged on private streets and on major driveways within medium-density and high-density residential developments.

All street lighting shall meet the street lighting standards established by Roseville Electric, including illumination standards and fixture style. Figure B-3 illustrates a City-approved design detail of an acorn-style light fixture.

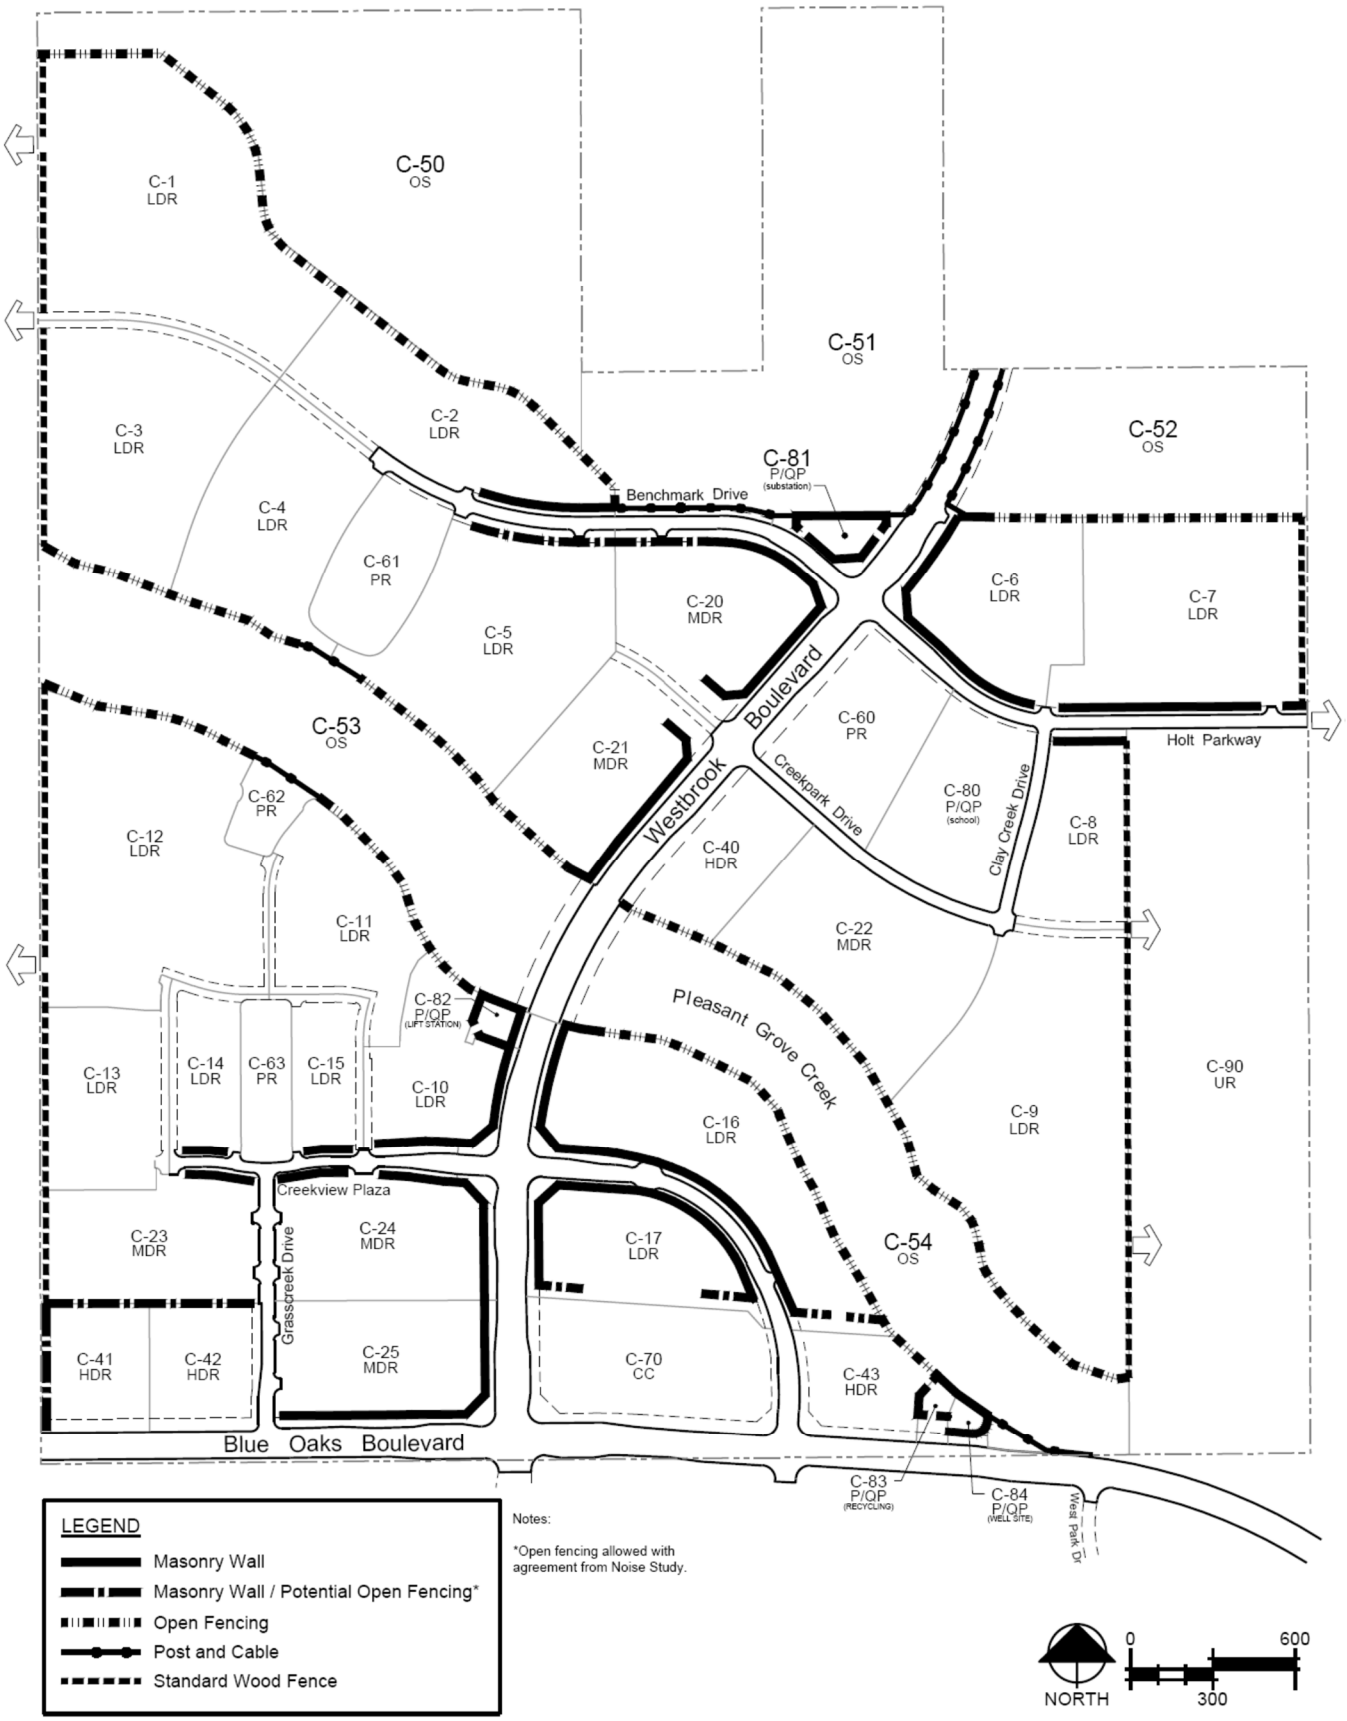
Figure B-3: Acorn-Style Street Light

B.4 Walls and Fencing

Walls and fences throughout the CSP are intended to provide screening to land uses, create a transition between developed areas and open space, secure off-site edges from public access, and provide privacy and security for private property. Design and material for walls and fencing varies throughout the Plan Area, depending on the specific purpose.

The location of each wall and fence type is shown on Figure B-4. Several wall and fence types are specified for use in CSP, with the general design characteristics for each specified below. Fence and wall types for individual uses shall be determined with Design Review Permits.

Figure B-4: Wall and Fence Locations [UPDATED EXHIBIT]



A. Masonry Walls

Masonry walls are intended to provide security, screening, privacy, and/or sound attenuation where appropriate along roadways or between differing land uses. The typical application of masonry walls is on arterial roadways, along the back edge of the landscape corridor where needed for sound attenuation, as illustrated on Figure B-4.

The guidelines below outline the key design requirements and common applications for masonry walls in the Plan Area:

- Masonry walls along public streets should be placed to avoid blocking views to the open space corridors and should not obstruct underground or above-ground electric, telephone, cable, water, or sewer services or equipment.
- Walls should be a minimum of 6'-high along arterial roads, or higher if necessary to meet the requirements of a site specific noise analyses. For walls higher than 6' in height, designs should be encouraged for walls to be constructed atop low earthen berms.
- Opportunities for wall openings between land uses should be included where appropriate to encourage and facilitate pedestrian connection/access between land uses (i.e. between residential and commercial sites and between residential neighborhoods to provide connectivity thought the plan).
- Wall materials shall have a textured face such as cast patterns, split-faced on the side facing the street or public view and include a trim cap which adds color and texture change and visual interest.
- Pilasters shall be used at each side of neighborhood vehicular and pedestrian entrances to define openings, and at each angle point or change in direction to enhance wall aesthetics.
- Continuity in theme and materials shall be incorporated among walls including design, color, block style, trim style, and cap style.

- Landscaping in front of the wall shall include shrubs close to the wall to break up any stretches of wall not interrupted by columns.
- Multiple pilasters at neighborhood entries are encouraged.
- Pilasters should have sufficient bulk and dimensions to appear in proportion to the height and mass of the wall. Pilasters and columns may not be less than 18" in any dimension at the base, and may be circular or square.
- Where adjacent to LDR and MDR neighborhoods, the maintenance obligation of the wall is the responsibility of the Community Facilities District (CFD).

B. Wood Fencing

Two types of wood fencing are specified for use in the Plan Area – Standard and Good Neighbor. Both fence types are intended to provide security, screening, and privacy. Standard wood fences are typically located along roadways where facing or abutting a residential street. Good Neighbor wood fences are located in areas not visible from public view, such as between residential properties.

Standard Wood Fence

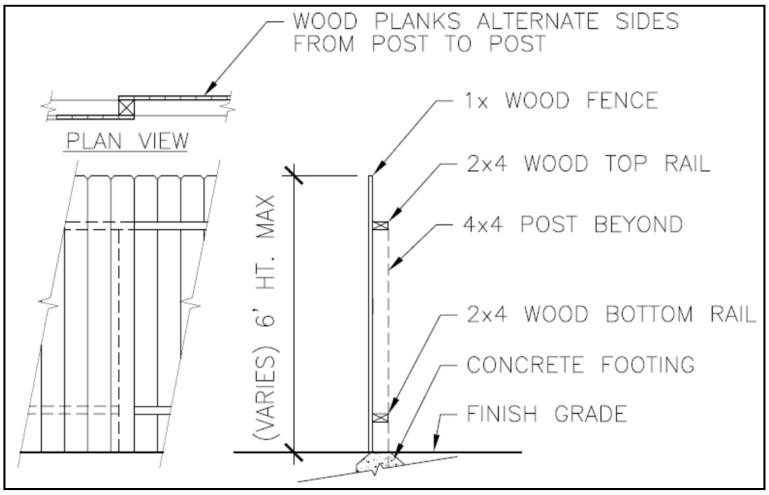
Standard wood fences have a consistent architectural design appearance on each side and incorporate decorative top rails. This fence type is typically located adjacent to parks and paseos or on lots which back or side to a residential street, where a masonry wall is not required.

Guidelines for standard wood fences are:

- Minimum height of solid wood fence along all residential streets within neighborhoods is 6'.
- Fence sections may be 8' to 10' in length supported by 4-by-4 posts.
- Are to be of redwood construction and painted or stained in an earth tone color.
- A 6'-high standards wood fence should be constructed where residential lots back up to schools.
- Minimum solid-wood fence height adjacent to parks is 6-feet.

Good Neighbor Wood Fence

Good neighbor wood fencing does not incorporate decorative top rails. It is intended to provide privacy and security between residential units. This fence type is typically located between private residential lots.



C. Open Fencing

Open fences are intended to provide a visually transparent barrier at developed edges adjacent to open space parcels and include materials such as wrought iron and tubular steel. Depending on the interface, open fencing may be used between open space areas and the rear and side property line of residential parcels, along a street adjacent to open space, or along pedestrian pathways at the edges of open space parcels. Open fences may also be used to separate different functions within landscape corridors (for example, to restrict access of dirt bikes and motorized vehicles) and at other miscellaneous locations within the Plan Area.

Open fencing is preferred fencing type adjacent to open space, where a single-loaded street is not located adjacent to open space.

The following guidelines should be used to direct the design and application of open fencing throughout the CSP, as appropriate for each location.

Fencing between Residential and Open Space

- Open fencing should be four to six feet in height and constructed of tubular steel or wrought iron and black or dark green in color.
- Brick or other masonry pilasters or columns may be used as an optional detail with tubular steel or wrought iron fences.
- Both sides of fencing are to be addressed aesthetically if they are visible from streets.
- Where residential lots back up to open space open fencing will be used. Open fencing at open space edges may incorporate masonry knee walls.

Other Fencing Conditions at Open Space

- Concrete rail or post-and-cable fencing should be used along the street edge adjacent to open space preserves to define the landscape edge and discourage access of dirt bikes and motorized vehicles.

Open Space Fencing at Parcels C-16 and C-43

- For Parcel C-16, rear yard fencing for residential lots adjacent to OS Parcel C-54 shall be open fencing.
- For Parcel C-43, fencing adjacent to OS Parcel C-54 shall be open fencing. Open fencing is permitted between Parcels C-43 and C-16 provided it does not encroach into the paseo that links Creekview Plaza with OS Parcel C-54.

B.5 Paseos

As described in Section 6.2, paseos are a key element which provide pedestrian and bikeway linkages throughout the CSP. Paseos are intended to be active, useable areas which encourage pedestrian activity, interaction among residents and connectivity between neighborhoods. See Figures B-5 and B-6 for Paseo Plan and Paseo Details.

The following design criteria apply to ensure paseos are adequately connected with adjacent neighborhoods to provide pedestrian/bicycle access:

- Where a subdivision edge adjoins a paseo along a public street, connections from the subdivision to the paseo shall be provided on an average of every 600 feet. Connections between a paseo and residential neighborhood may be achieved via roadways, live-end cul-de-sacs, sidewalk pass-throughs, or a combination thereof.
- Residential driveways shall not cross the paseo where MDR parcels abut a paseo adjacent to a public street. In addition, front doors of residential units should orient toward the paseo.
- It may not be possible or desirable, in all cases, to orient front doors of all residential units toward paseos. In such cases, other lotting design techniques may be utilized including, but not limited to, lots siding onto paseos. Where houses do not front the paseo, the location of fences, enhanced landscape treatments, pedestrian connections, and cul-de-sac openings shall be consistent with Figures B-5 and B-6. Final design of lotting configurations relative to adjacent paseos will be reviewed and approved in conjunction with the approval of the tentative map and the compact residential review for such units.

The CSP features various paseo designs based on location. Landscape designs for paseos shall be consistent with those outlined in the landscape design guidelines noted in Section B.1.

- **Collector Street Paseos**. Collector street paseos are located adjacent to collector roadways and include a widened landscape corridor along the street edge on both sides of the street. For this paseo type, homes will generally back or side to the paseo edge, with regular connection points provided between the paseo and adjacent neighborhood (per spacing requirements noted above).
- **Residential Street Paseos**. Residential street paseos are located internal to residential neighborhoods, generally between or on the edge of large lot parcels, as designated on Figure B-5.

  Residential street paseos feature a 10-foot wide sidewalk and a landscape strip along one street edge. For this paseo type, homes immediately adjoining the paseo

Figure B-5: Paseo Plan [UPDATED EXHIBIT]

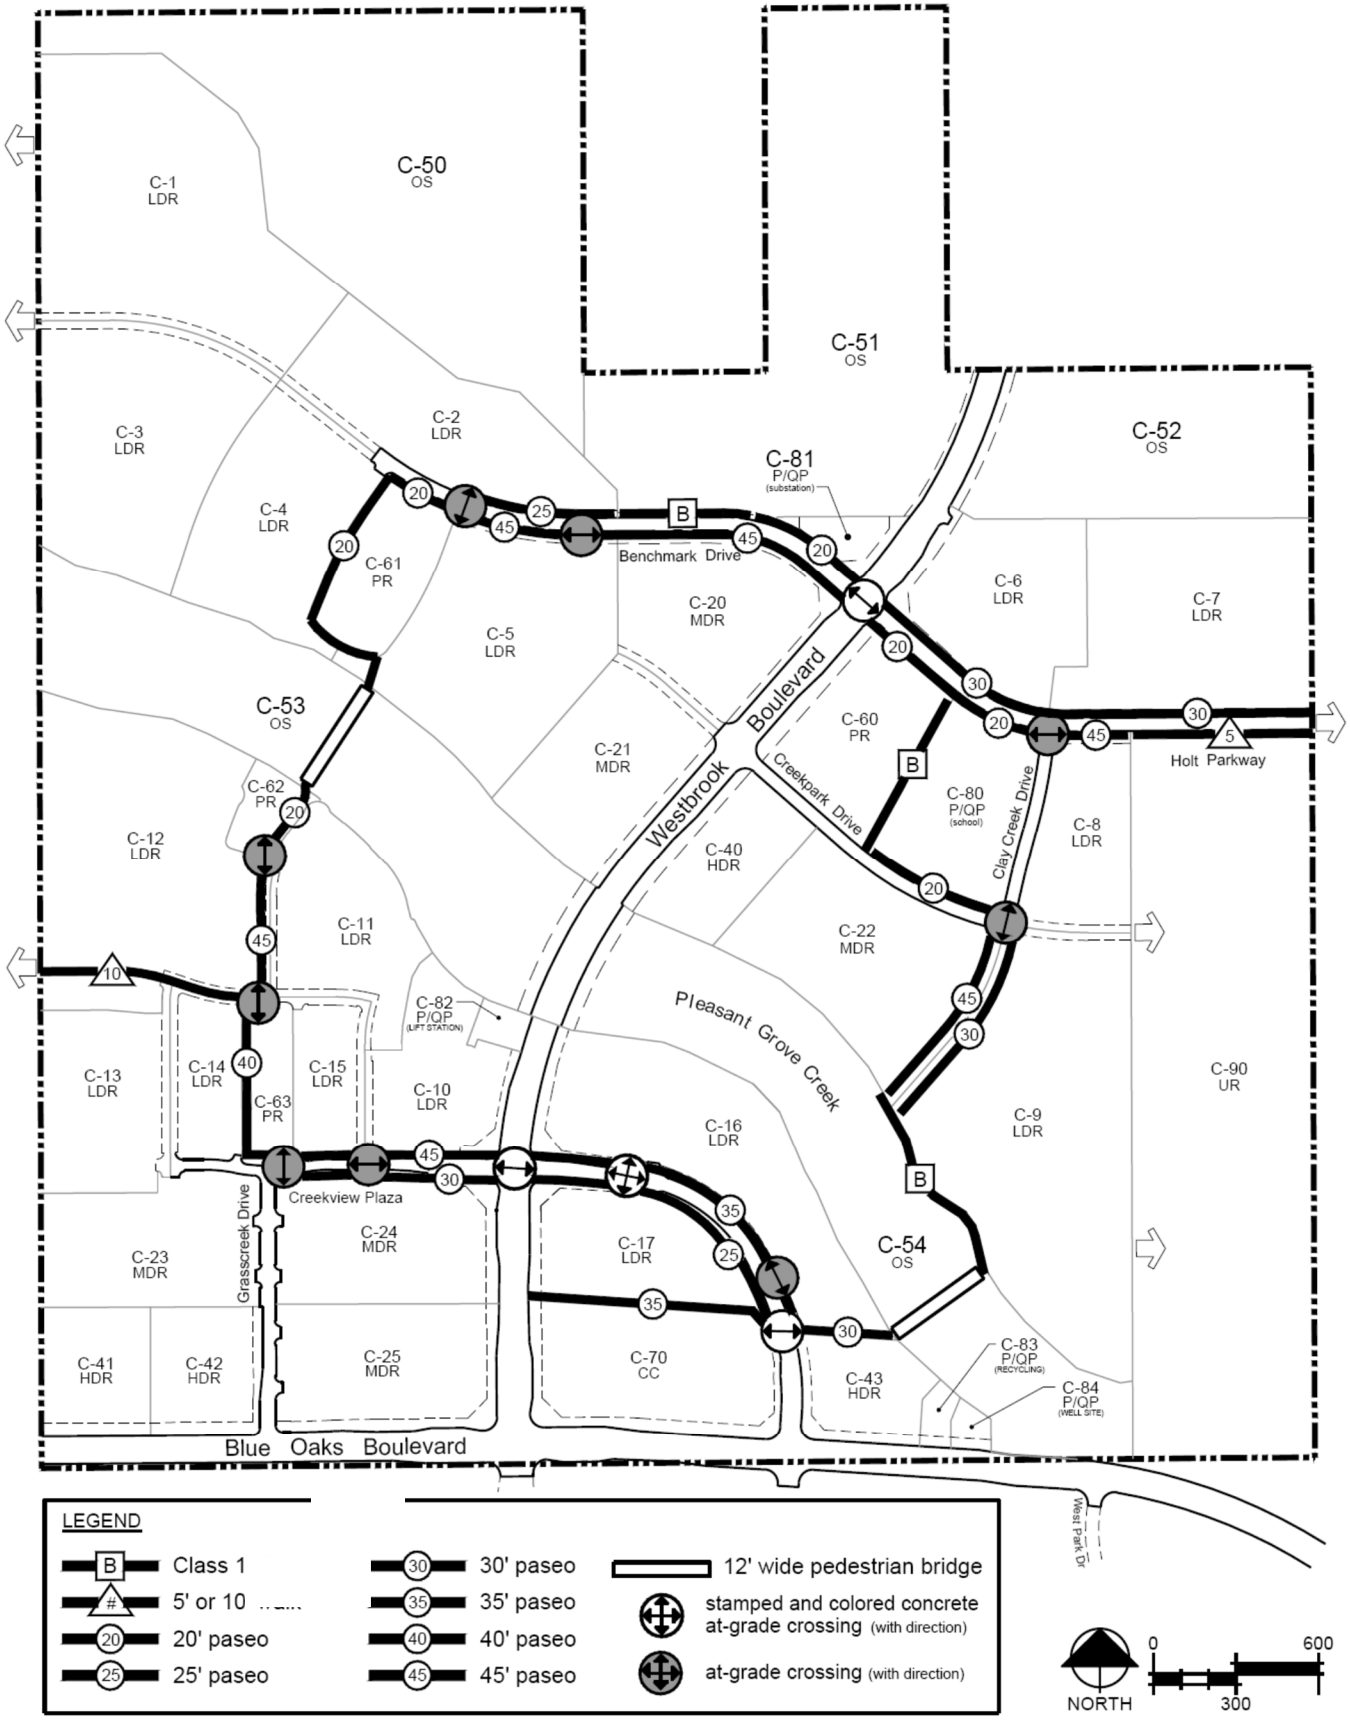


Figure B-6: Paseo Details [UPDATED EXHIBIT]

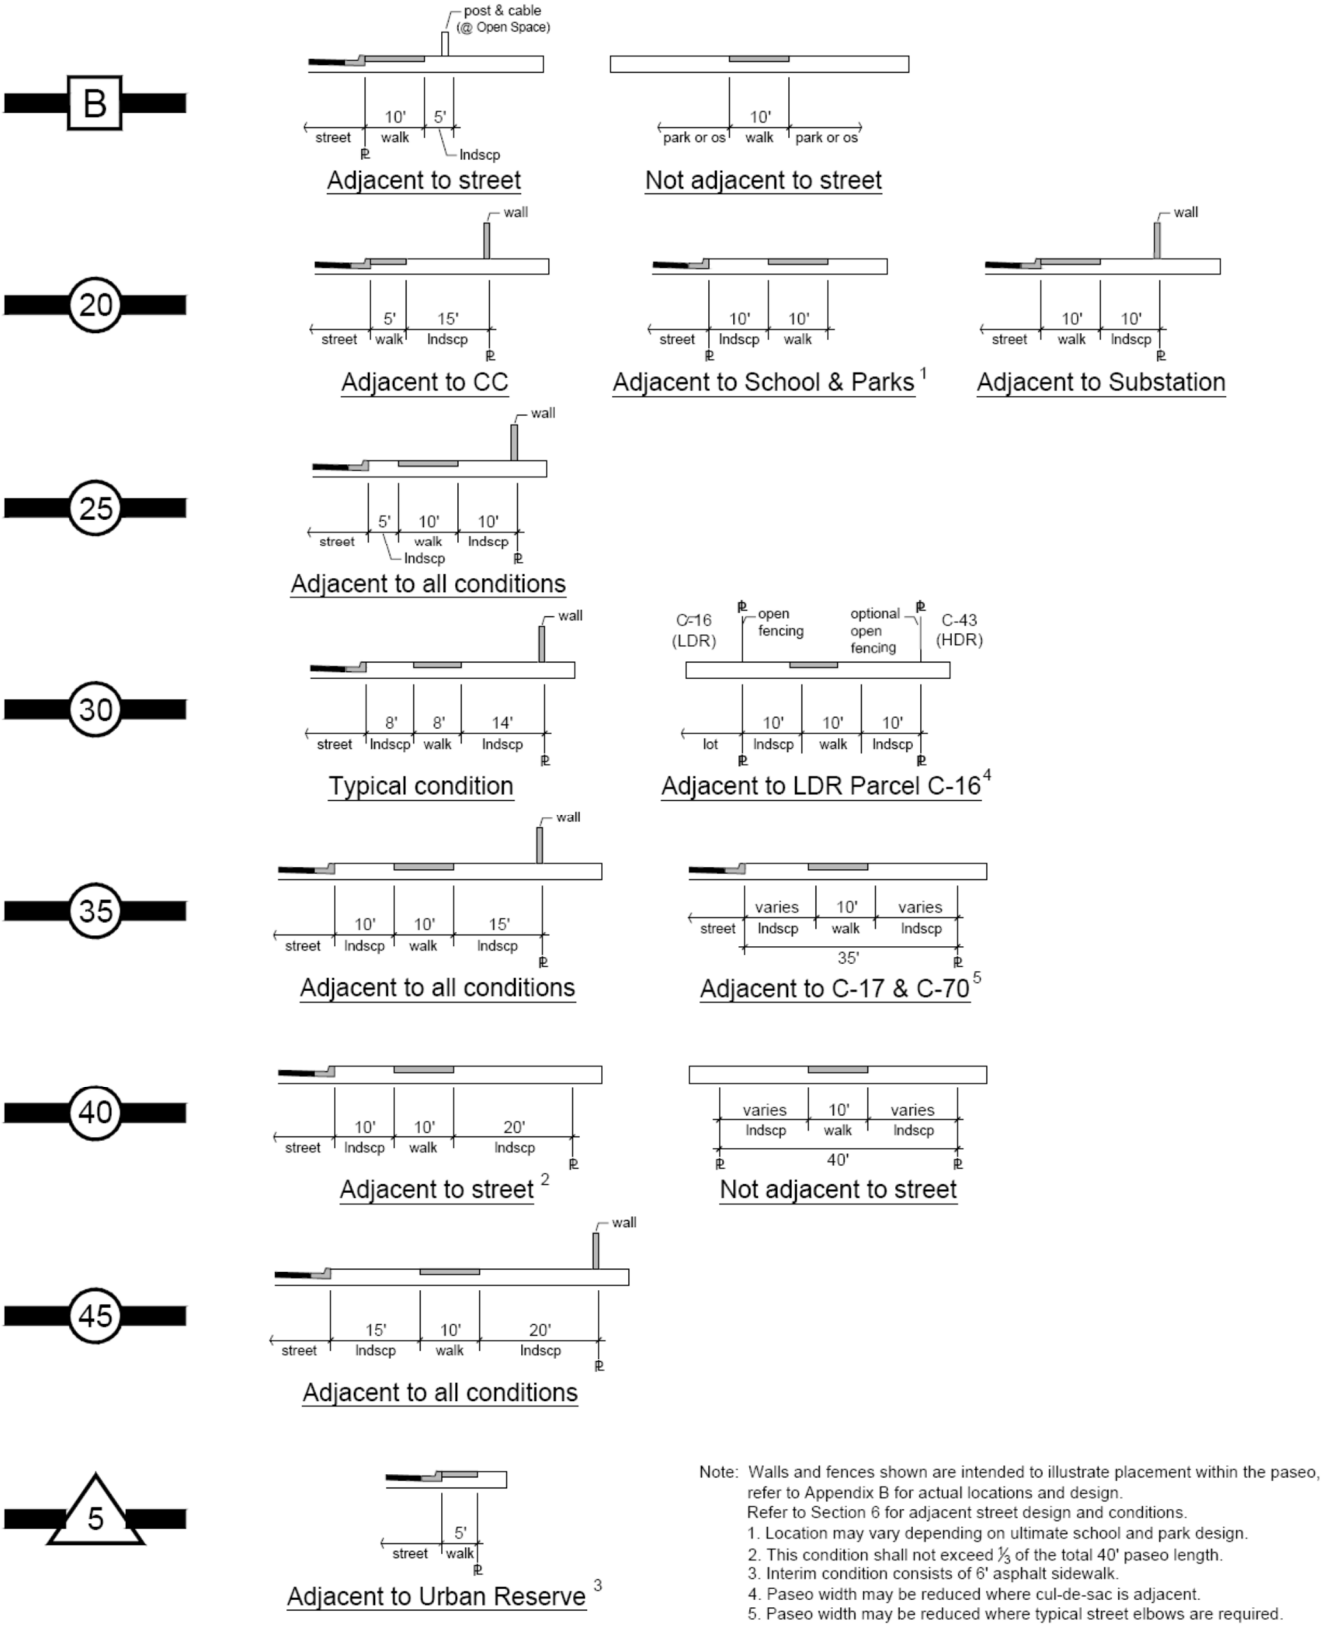

Note: Walls and fences shown are intended to illustrate placement within the paseo, refer to Appendix B for actual locations and design.
Refer to Section 6 for adjacent street design and conditions.

1. Location may vary depending on ultimate school and park design.
2. This condition shall not exceed ⅓ of the total 40' paseo length.
3. Interim condition consists of 6' asphalt sidewalk.
4. Paseo width may be reduced where cul-de-sac is adjacent.
5. Paseo width may be reduced where typical street elbows are required.

edge either front or side on to the paseo, and for MDR parcels, individual driveway cuts for each home are not permitted to cross the paseo.

- **Paseo Connections at School and Park Sites.** Where paseo linkages are planned at school and park sites, connections are provided via a sidewalk along the street edge matching the sidewalk width of the adjacent paseo. Pedestrian and bikeway linkages are made through park sites.

B.6 Residential Subdivision Design

Residential subdivisions are subject to design requirements of the City's Subdivision Ordinance. To ensure neighborhoods provide cross connectivity for automobiles, bicyclists, and pedestrians, subdivision design should be guided by the design goals in this sub-section. The intent is to design individual subdivisions that appear seamless and are well-connected.

While connectivity is desired, some neighborhoods may be gated provided they do not limit access to open space, trails, paseos, parks, or schools.

A. Neighborhood Connectivity

The compact design of the CSP encourages highly-connected residential neighborhoods. It is a design challenge to create neighborhood connectivity across hard edges such as arterial roadways, open space preserves, and other site features. Where large lot parcel edges are between subdivisions and the types of hard edges described above do not exist, providing connectivity between subdivisions is encouraged. This type of connectivity is typically achieved through street connections between residential subdivisions and can also be provided via pedestrian connections.

The exact locations of street connections will be determined through small lot subdivision design. If subdivisions for adjacent large lot parcels are processed at separate times, the first subdivision to be processed by the City will establish the location for cross connection points.

Guidelines to enhance the connectivity of neighborhood units are outlined below:

- To minimize barriers between neighborhoods and to enhance connectivity, street patterns should be encouraged to allow connection points between neighboring subdivisions.
- Paseos access should be used as a means for integrating multiple subdivisions, consistent with the Paseo Plan in Figure B-5.

B. Gated Subdivisions

Residential subdivisions may be planned as gated subdivisions during small lot subdivision design.

Residential parcels may be determined appropriate for a gated subdivision if it can be demonstrated the gates will not preclude adequate through-access for pedestrians, cyclists, or automobiles. Large lot parcels adjacent to parks, open space or paseos are not eligible for gating as to maintain public access to these amenities. Gating of subdivisions may be considered on a case-by-case basis, subject to approval by the Development Services Department. ~~Planning, Housing and Redevelopment Department and Public Works Department.~~

C. Edge Conditions

Where residential neighborhoods have an interface with an edge, such as an open space preserve or a park, design techniques should be employed to provide neighborhood access and visibility to these features. This will enhance the level of connectivity in the CSP. Guidelines for the various edges within the CSP are provided below:

Guidelines for Edges along Parks and Open Space Areas

The following guidelines apply to the design of neighborhoods adjacent to park and open space features:

- ❑ Where applicable, neighborhoods should provide access, for service and fire protection, to adjacent parks, natural creek corridors, pedestrian parkway corridors, or paseos. Locked gates into subdivisions are not permitted where they would preclude public access to a City park or open space area.
- ❑ Along open space parcels, frontage landscaping shall be native plants, as approved by the City.
- ❑ A subdivision's internal street system shall be designed to allow residents to walk easily to nearby parks.
- ❑ Residential units should be oriented toward (facing) parks, rather than backing up to them.
- ❑ Neighborhood parks should front on two single-loaded residential streets to provide visibility, create open access for residents, and incorporate the amenity into the surrounding neighborhood.
- ❑ Residential subdivisions located adjacent to open space areas shall provide visual and physical access to the Open Space.
  - Residential streets should provide views into open space areas at selected locations by providing opportunities for homes to front or side on to open space. This can be accomplished in a number of ways including single-loaded streets, loop streets, or live end cul-de-sacs.
  - Low and medium-density large lot residential parcels adjacent to Pleasant Grove Creek may utilize single-loaded streets adjacent to the open space edge to enhance public view and access to open space. Single-loaded streets adjacent to

open space are required in the locations shown on Figure B-8.

- Where residential lots back up or side onto the open space areas, the use of open-style fencing is appropriate. However, where privacy, security, or noise attenuation is of concern (such as adjacent to public trails), solid fencing may be used between residential lots and open space (subject to Fire Department standards).
- Where residential lots back or side onto an open space area, multiple connection points shall be provided, via live-end cul-de-sacs, paseos, or other means. Connection points should be provided.
- Pedestrian connection points to park and open space features should be easy to find within neighborhoods, along designated pedestrian/bicycle routes with high visibility to residents.
- Where residential lots side onto a bike trail access point and where small areas are formed in the open space parcel due to the trail connection, groundcover shall consist of grouted cobble.
- On HDR Parcel C-43, a connection shall be made to the trail in OS Parcel C-54 and the paseo trail along the southern edge of LDR Parcel C-16.

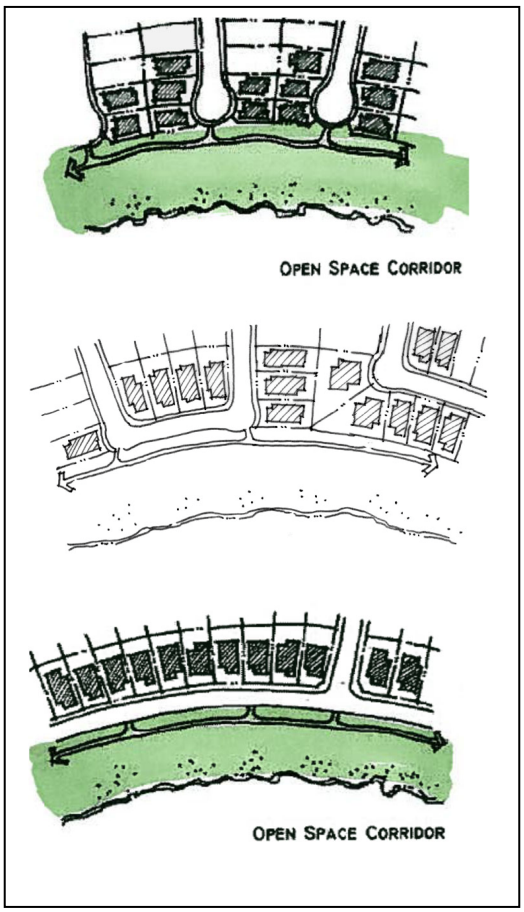

Figure B-7: Street Interface Options at Open Space Edges

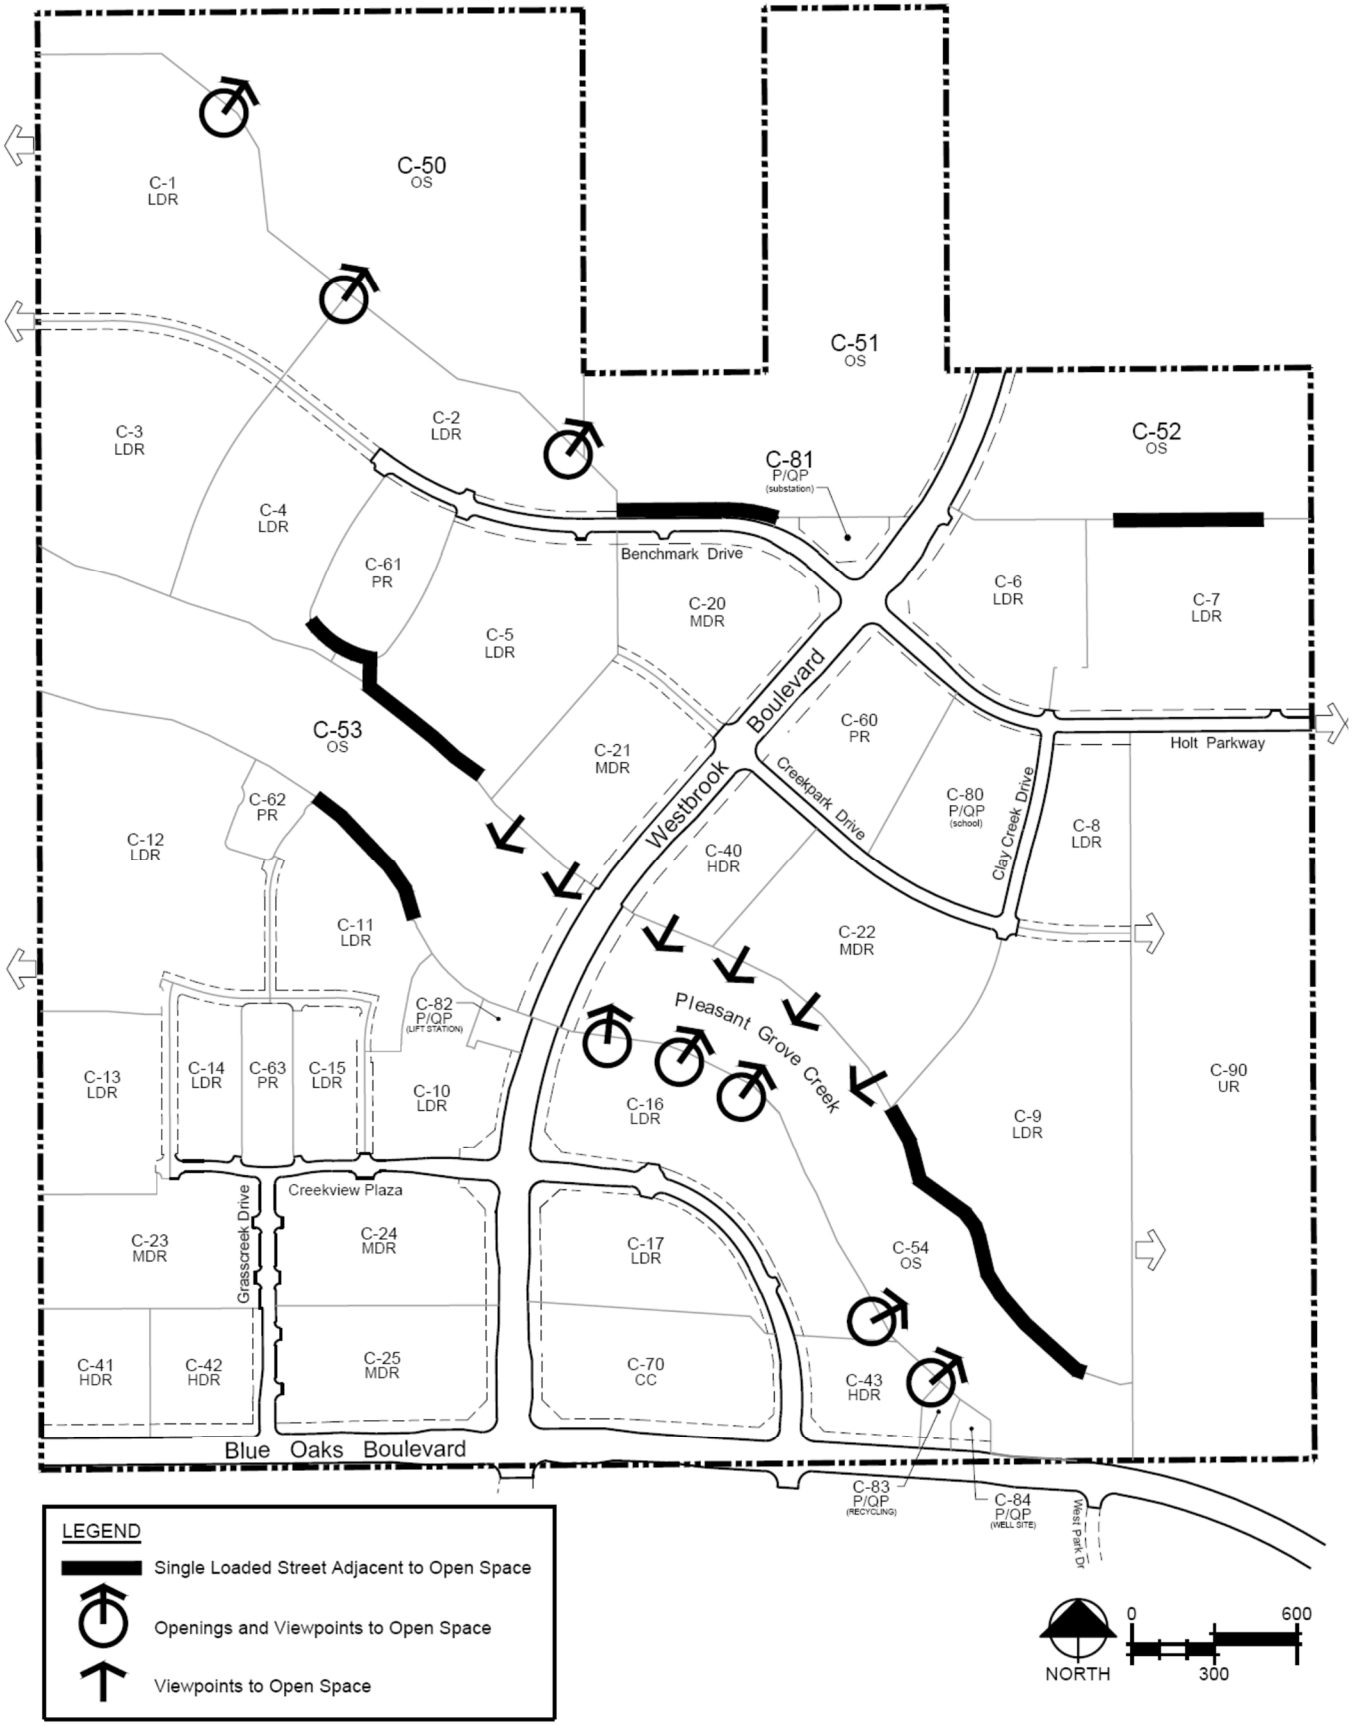
Guidelines for Edges Along Paseos

As applicable, ensure subdivision design provides the proper interface with, and designs for, any prescribed paseos. Refer to the comprehensive Paseo Plan (Figure B-5) and Paseo Details (Figure B-6). Where paseos are not adjacent to a street, they must be open on one side at all times to prevent a tunnel effect and create security concerns.

Figure B-8: Open Space Frontage Treatments [UPDATED EXHIBIT]



B.7 Blue Oaks/Westbrook Commercial Site Design

Parcels C-70 and C-71 are is located at the northeast corner of Blue Oaks Boulevard and Westbrook Boulevard and is planned for Community Commercial (CC) land uses. and Community Commercial/Business Professional (CC/BP) land uses, respectively. The two parcels are located at the northeast corner of Blue Oaks Boulevard and Westbrook Boulevard.

The 15.5 9.2-acre CC site (Parcel C-70) is planned for a neighborhood serving retail center. and the 3.8-acre CC/BP site (Parcel C-71) is planned for a mix of commercial and office uses. Together, the parcels When developed this parcel can support approximately 190,000 100,000 square feet of commercial and office uses.

Given the commercial site's visibility at the project entry and access to adjacent arterial roadways, Parcel C-70 can support neighborhood retail uses such as a grocermarket, drug store, bank, restaurants and shops.

Creekview Plaza, an arc-shaped roadway, provides access to the parcels from Blue Oaks Boulevard and Westbrook Boulevard. and separates the CC and CC/BP sites as well as the CC site from adjacent MDR sites (Parcels C-23 and C24).

A 35-foot paseo is planned between Parcel C-70 and LDR Parcel C-17 and will feature an enhancedinclude a 10-foot wide pedestrian walkway and landscaping (paseo) extending from the Westbrook Boulevard east and Creekview Plaza intersection, through the commercial site to the crossing of Creekview Plaza at the eastern entrance of the commercial site. The pedestrian walkway within the paseo will link to paseos west and east of the site and provide for pedestrian access to shops, cafes, and restaurants within the planned commercial center as well as a providing a linkage for access to bus and transit.

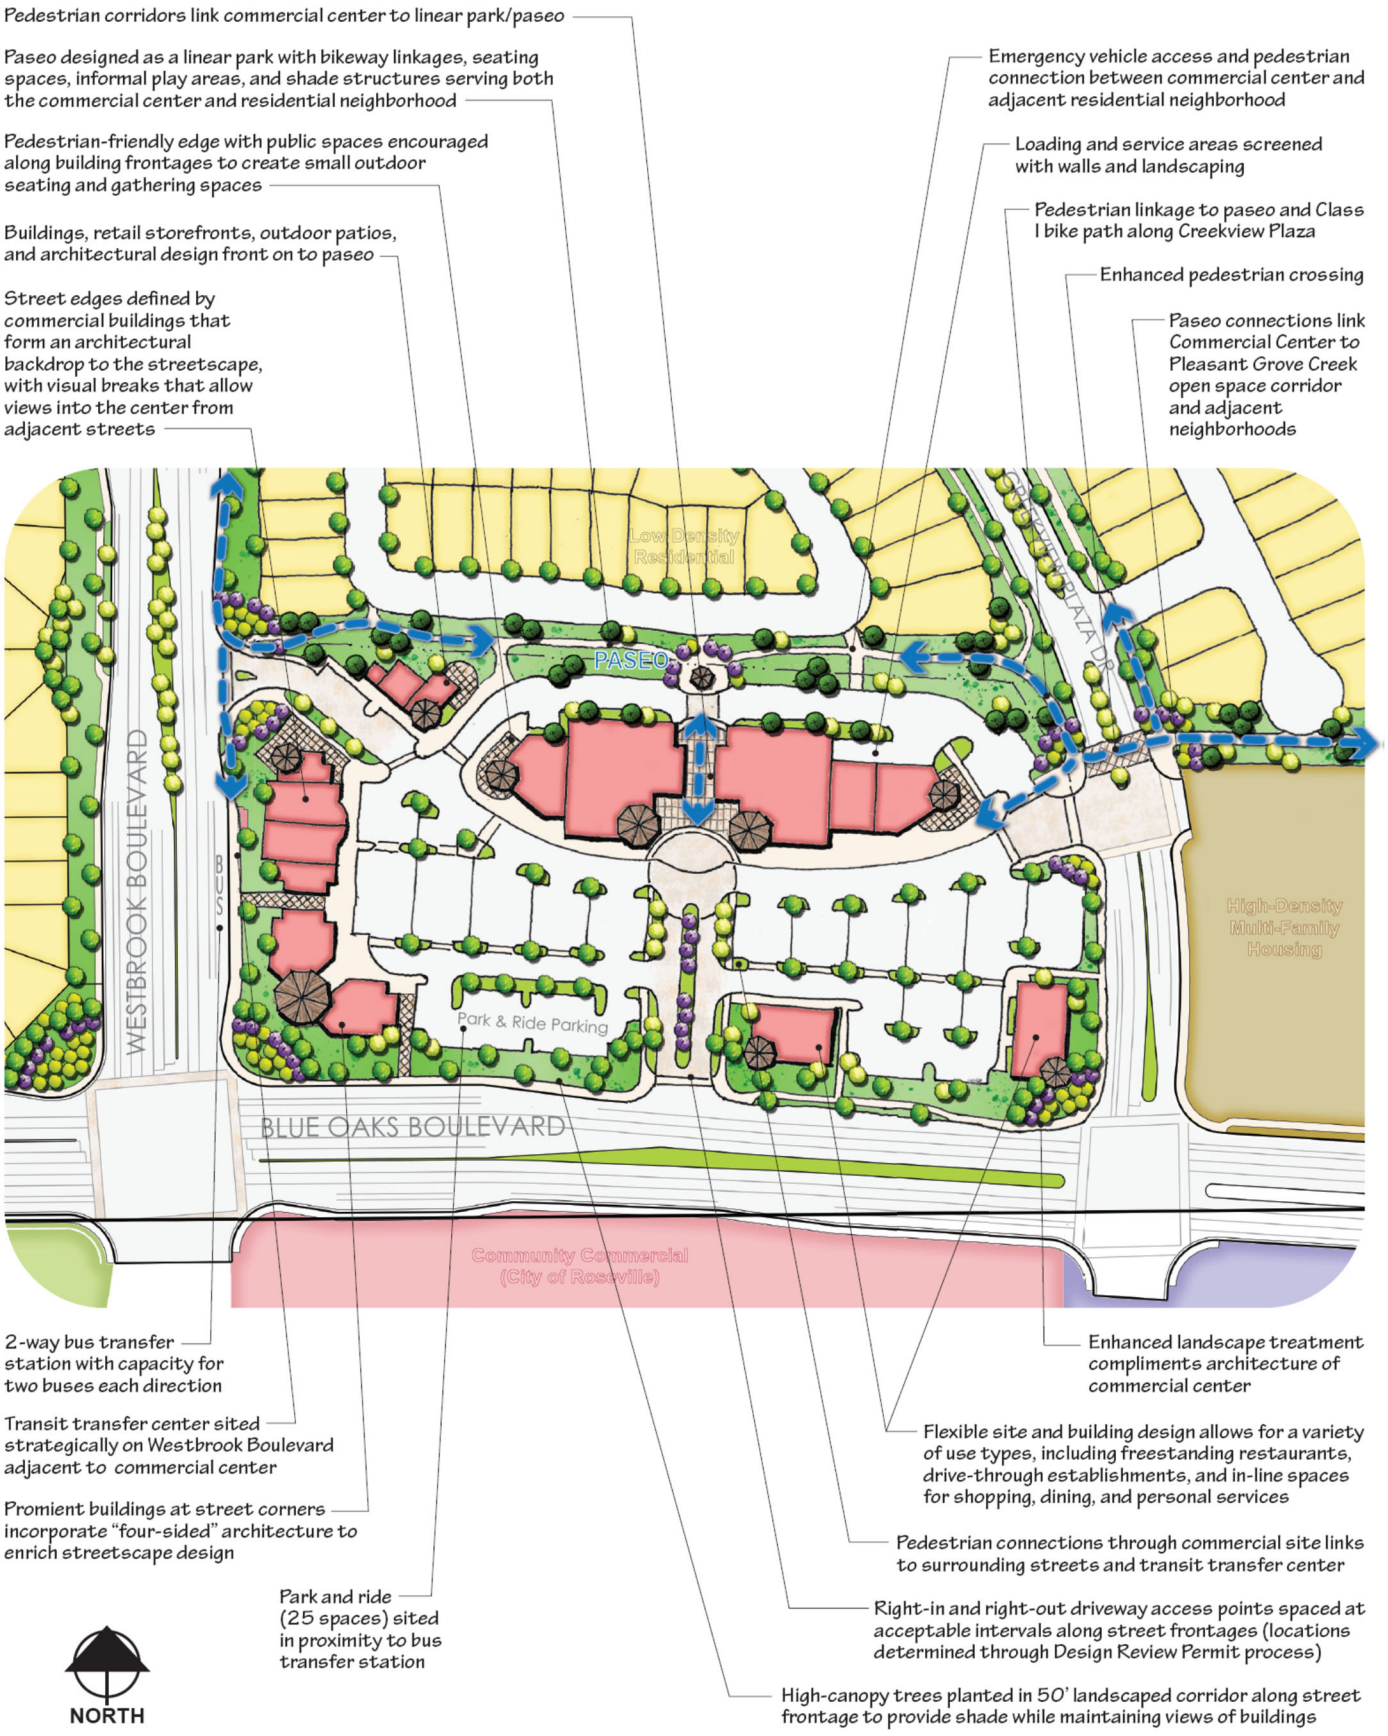
A 20-foot landscape planter is planned on the north side of the CC site which, together with the 35-foot paseo, will create a 55-foot landscaped feature between the CC site and adjacent LDR neighborhood (Parcel C-17). A conceptual site plan for the Community Commercial site (C-70) is shown in Figure B-9 that illustrates a conceptual layout for the commercial site and the design interface between Parcels C-70 and C-17. The concepts and guidelines in this illustrative are intended to augment the Community Design Guidelines.

The design of Parcel C-70 shall include the following features identified on Figure B-9, including:

- ❑ Enhanced pedestrian at-grade roadway crossings aton Westbrook Boulevard/ Creekview Plaza and on Creekview Plaza at the east entrance. Enhancement shall include a stamped and colored concreteroadway surface.

- ❑ Enhanced pedestrian walkway through commercial site from bus transfer station on Westbrook Boulevard~~/Creekview Plaza intersection~~ to ~~bus transfer station, through commercial site to~~ the east driveway on Creekview Plaza.
- ❑ Enhanced pedestrian walkway from corner of Westbrook Boulevard/Blue Oaks Boulevard ~~diagonally~~ into the site ~~to commercial uses~~.

Figure B-9: Community Commercial Conceptual Site Plan (Parcel C-70) [UPDATED EXHIBIT]



- ❑ Pedestrian features within the commercial center including enhanced walkways, seating areas, benches, enhanced landscape areas, trellis features with vines and other interest-creating features.
- ❑ Prominent architecture on corners, near road intersections.

The CC site will accommodate a park and ride lot for 25 vehicles and a ~~bus~~ transit transfer center ~~station~~ is planned immediately west ~~north~~ of the site.

B.8 Transit Transfer Center ~~Bus Transfer Station~~

A transit transfer center ~~bus transfer station~~ is planned ~~east~~ north of the Westbrook Boulevard and Blue Oaks Boulevard ~~Creekview Plaza~~ intersection, ~~north~~ west of the CC parcel (Parcel C-70), shown in Figure B-10.

The transfer center ~~station~~ will feature bus bays on each side of Westbrook Boulevard~~Creekview Plaza~~, with capacity for two buses in each direction. The transfer center ~~station~~ will feature bus shelters and benches for riders.

Figure B-10: Transit Transfer Center~~Bus Transfer Station~~ [UPDATED EXHIBIT]

B.9 Utility Sites Concept Plans

Four parcels are designated P/QP for the construction of utility infrastructure facilities to serve the CSP. These include:

- Electric Substation (Parcel C-81)
- Sewer Lift Station (Parcel C-82)
- Solid Waste Recycling Center (Parcel C-83)
- Groundwater Well Site (Parcel C-84)

Concept plans for each of these sites are provided in Figures B-11 to B-13. They are concept plans; actual design may vary depending on improvement needs at the time of construction. The concept plans should be used as a guide in the final design of each facility as backbone infrastructure improvement plans are prepared.

Figure B-11: Electrical Substation Concept Plan (Parcel C-81)

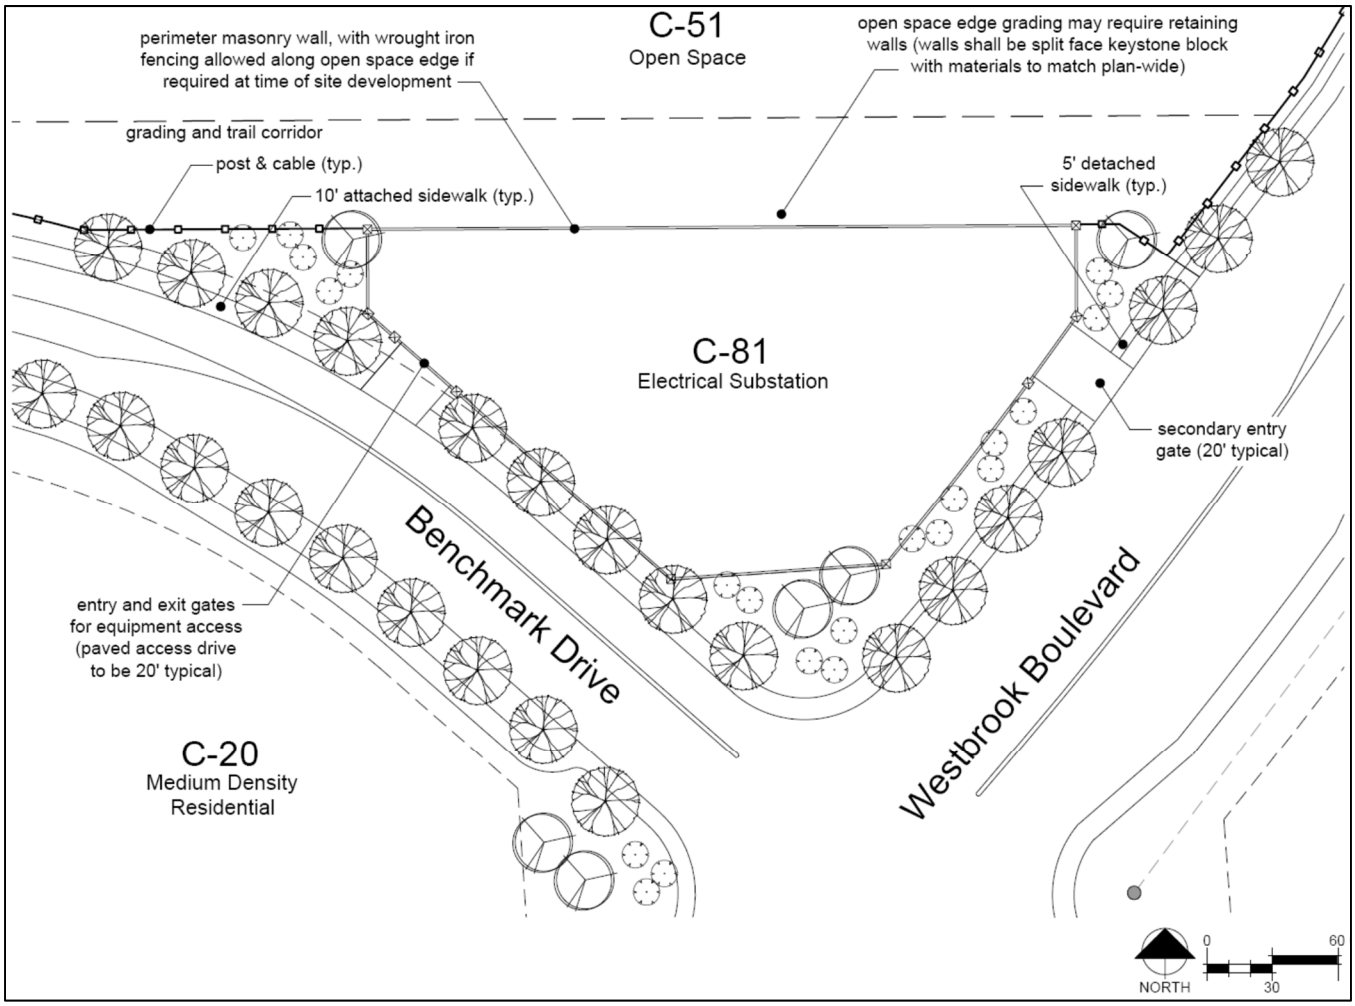


Figure B-12: Sewer Lift Station Concept Plan (Parcel C-82)

Appendix B-1
Plant Palette

Trees for Three-Foot Planter or Larger

Strawberry Tree	Arbutus unedo
Western Redbud	Cercis occidentalis
Eastern Dogwood	Cornus florida
Washington Hawthorn	Crataegus phaenopyrum
Goldenrain Tree	Laburnum anagyroides
Crape Myrtle	Lagerstroemia hybrids
Bechtel Crabapple	Malus ioensis 'Plena'
Crabapple 'Prariefire"	Malus ioensis 'Prariefire'
Japanese Snowdrop	Styrax japonicus
Fragrant Snowbell	Styrax obassia
English Hawthorn 'Paul's Scarlet'	Crataegus laevigata 'Paul's Scarlet'

Trees for Four-Foot Planter or Larger

Trident Maple	Acer buergerianum
Hedge Maple	Acer campestre
Japanese White Birch	Betula platyphylla japonica
European Hornbeam	Carpinus betulus 'Fastigiata'
American Hornbeam	Carpinus caroliniana
Eastern Redbud	Cercis canadensis
Golden Flame Tree	Koelreuteria bipinnata
Goldenrain Tree	Koelreuteria paniculata
Southern Magnolia 'St. Mary'	Magnolia grandiflora
Kobus Magnolia	Magnolia kobus
Saucer Magnolia	Magnolia x soulangeana
Tupelo / Sour Gum	Nyssa sylvatica
Japanese Red Pine	Pinus densiflora
Chinese Pistache	Pistacia chinensis
Carolina Laurel Cherry	Prunus caroliniana
Purple Leaf Plum	Prunus cerasifera
Ornamental Pear 'Capital'	Pyrus calleryana 'Capital'
Ornamental Pear 'Chanticleer'	Pyrus calleryana
Ornamental Pear 'Redspire'	Pyrus calleryana
Japanese Blueberry	Eleocarpus decipiens

Trees for Six-Foot Planter or Larger

Japanese Maple	Acer palmatum
Red Maple	Acer rubrum
Common Horsechestnut	Aesculus hippocastanum
Kentucky Coffee Tree	Gymnocladus dioica
Grecian Laurel	Laurus nobilis
Tulip Tree	Liriodendron tulipifera
Canary Island Pine	Pinus canariensis
Douglas Fir	Pseudotsuga menziesii
Blue Oak	Quercus douglasii
Holly Oak	Quercus ilex
Burr Oak	Quercus macrocarpa
Pin Oak	Quercus palustris
Willow Oak	Quercus phellos
Cork Oak	Quercus suber
Japanese Pagoda Tree	Sophora japonica
Black maple	Acer nigrum

Trees for Eight-Foot Planter or Larger

Incense Cedar	Calocedrus decurrens
Atlas (Blue) Cedar	Cedrus atlantica
Deodar Cedar	Cedrus deodara
Carob	Ceratonia siliqua
Arizona Cypress	Cupressus arizonica
Ginkgo Biloba (Male Only)	Ginkgo biloba
Honey Locust (thornless)	Gleditsia triacanthos
Italian Stone Pine	Pinus pinea
Sycamore	Platanus species
Valley Oak	Quercus lobata
Interior Live Oak	Quercus wislizenii
Western Red Cedar	Thuja plicata
Zelkova	Zelkova serrata
Purple Robe Locust	Robinia pseudoacacia

Trees for Twelve-Foot Planter or Larger

Southern Magnolia	Magnolia grandiflora
Chestnut-Leafed Oak	Quercus castaneafolia
Red Oak	Quercus rubra
Coast Redwood	Sequoia sempervirens
California Bay	Umbellularia californica

Groundcover between Curb and Sidewalk

Low water using turf (tall fescue blends)

Walk-on ground covers including:

- Creeping Thyme
- Blue Sedge
- Chamomile
- Fogfruit
- Asiatic Jasmine
- Blue Fescue
- Horseshoe Vetch
- California Fescue
- Dwarf Oregano
- Manzanita groundcovers
- Creeping Barberry

ORDINANCE NO.

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE
AMENDING ZONING ORDINANCE NO. 5428 OF THE CITY OF ROSEVILLE
CHANGING THE ZONING OF CERTAIN REAL PROPERTY LOCATED
WITHIN THE CITY OF ROSEVILLE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. Section 19.06.020 of the Zoning Ordinance of the City of Roseville, Ordinance No. 5428, is amended to change the zoning of that portion of certain real property within the City of Roseville known as the Creekview Specific Plan, as shown and so designated in Exhibit "E", which is attached hereto and incorporated herein by reference.

SECTION 2. This ordinance shall be effective at the expiration of thirty (30) days from the date of adoption.

SECTION 3. The City Clerk is hereby directed to cause this ordinance to be published in full at least once within fourteen (14) days after it is adopted in a newspaper of general circulation in the City, or shall within fourteen (14) days after its adoption cause this ordinance to be posted in full in at least three (3) public places in the City and enter in the Ordinance Book a certificate stating the time and place of said publication by posting.

PASSED AND ADOPTED by the Council of the City of Roseville this 23rd day of October, 2019, by the following vote on roll call:

AYES COUNCILMEMBERS:

NOES COUNCILMEMBERS:

ABSENT COUNCILMEMBERS:

_____
MAYOR

ORDINANCE NO.

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE ADOPTING A FIRST AMENDMENT TO THE DEVELOPMENT AGREEMENT BY AND BETWEEN THE CITY OF ROSEVILLE AND ANTHEM UNITED CREEKVIEW DEVELOPMENTS LIMITED PARTNERSHIP RELATIVE TO THE CREEKVIEW SPECIFIC PLAN AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. In accordance with Chapter 19.84 of Title 19 of the Roseville Municipal Code (the Zoning Ordinance) of the City of Roseville, the City Council has received the recommendation of the Planning Commission that the City of Roseville enter into a First Amendment to Development Agreement by and between the City of Roseville and Anthem United Creekview Developments Limited Partnership, pertaining to the property located within the Creekview Specific Plan area.

SECTION 2. Prior to considering the proposed First Amendment to Development Agreement, the City Council considered the Addendum to the Creekview Specific Plan Environmental Impact Report pursuant to the California Environmental Quality Act, California Public Resources Code Section 21000 *et seq.*

SECTION 3. The Council of the City of Roseville has reviewed the findings of the Planning Commission recommending approval of the First Amendment to Development Agreement, and makes the following findings:

1. The First Amendment to Development Agreement is consistent with the objectives, policies, programs and land use designations of the City of Roseville General Plan and the Creekview Specific Plan Amendment;

2. The First Amendment to Development Agreement is consistent with the City of Roseville Zoning Ordinance;

3. The First Amendment to Development Agreement is in conformance with the public health, safety and welfare;

4. The First Amendment to Development Agreement will not adversely affect the orderly development of the property or the preservation of property values; and

5. The provisions of the First Amendment to Development Agreement will provide sufficient benefit to the City to justify entering into said Amendment.

SECTION 4. The First Amendment to the Development Agreement, by and between the City of Roseville and Anthem United Creekview Developments Limited Partnership, a copy of which is on file in the City Clerk's Department and incorporated herein by reference, is hereby approved and the City Manager is authorized to execute it on behalf of the City of Roseville.

SECTION 5. The City Clerk is directed to record the executed Development Agreement Amendment within ten (10) days of the execution of the agreement by the City Manager with the County Recorder's Office of the County of Placer.

SECTION 6. This ordinance shall be effective at the expiration of thirty (30) days from the date of its adoption.

SECTION 7. The City Clerk is hereby directed to cause this ordinance to be published in full at least once within fourteen (14) days after it is adopted in a newspaper of general circulation in the City, or shall within fourteen (14) days after its adoption cause this ordinance to be posted in full in at least three (3) public places in the City and enter in the Ordinance Book a certificate stating the time and place of said publication by posting.

PASSED AND ADOPTED by the Council of the City of Roseville this ____ day of _____, 2019, by the following vote on roll call:

FIRST AMENDMENT OF DEVELOPMENT AGREEMENT BY AND BETWEEN THE CITY OF ROSEVILLE AND ANTHEM UNITED CREEKVIEW DEVELOPMENTS LIMITED PARTNERSHIP AS ASSIGNEE OF THE DEVELOPMENT AGREEMENT BY AND BETWEEN THE CITY OF ROSEVILLE AND GRANITE BAY DEVELOPMENT II, LLC, PHILLIPS ROAD 160 INVESTORS LIMITED PARTNERSHIP, PHILLIP ROAD LAND, LLC, J & KD ENTERPRSIES, LLC, SOULE INVESTMENTS, LLC, BENNETT WEST ROSEVILLE, LLC, DECOU WEST ROSEVILLE, LLC, BLUE OAKS - ROSEVILLE LP, AND CHUANG RELATIVE TO THE CREEKVIEW SPECIFIC PLAN

This First Amendment of Development Agreement ("Amendment") is entered into this _____ day of _____, 2019, by and between the CITY OF ROSEVILLE, a municipal corporation ("City") and ANTHEM UNITED CREEKVIEW DEVELOPMENTS LIMITED PARTNERSHIP, a Washington limited partnership ("Anthem" or "Developer"), pursuant to Sections 65864 through 65869.5 of the Government Code of California.

WITNESSETH:

A. On October 3, 2012, Developer's predecessors in interest, Granite Bay Development II, LLC ("Granite Bay"), Phillips Road 160 Investors Limited Partnership ("Phillips 160"), Phillip Road Land, LLC ("Phillip Land"), J & KD Enterprises, LLC ("J & KD"), Soule Investments, LLC ("Soule"), Bennett West Roseville, LLC ("Bennett West"), DeCou West Roseville, LLC ("DeCou West"), Blue Oaks-Roseville, LP (Blue Oaks – Roseville"), and Chau-Hsiung Chuang, Yueh-Jing Chuang, Felix Chuang, and Mark Chuang (collectively "Chuang") (collectively "Predecessors In Interest") and City entered into a Development Agreement (the "Development Agreement") which was recorded in the Official Records of Placer County on November 28, 2012 as Document No. 2012-0113752.

Phillips 160 assigned the Development Agreement to Developer pursuant to that certain Assignment of Development Agreement dated May 24, 2019 and recorded May 24, 2019 as Document 2019-0034779; Phillip Land, J & KD, and Soule assigned the Development Agreement to Developer pursuant to that certain Assignment of Development Agreement dated May 24, 2019 and recorded May 24, 2019 as Document 2019-0034780; Bennett West and DeCou West assigned the Development Agreement to Developer pursuant to that certain Assignment of Development Agreement dated May 24, 2019 and recorded May 24, 2019 as Document 2019-0034781; Blue Oaks – Roseville LP assigned the Development Agreement to Developer pursuant to that certain Assignment of Development Agreement dated May 24, 2019 and recorded May 24, 2019 as Document 2019-0034782; and Chuang assigned the

Development Agreement to Developer pursuant to that certain Assignment of Development Agreement dated December 11, 2018 and recorded March 13, 2019 as Document 2019-0015249. Anthem substituted itself as Developer pursuant to that certain Memorandum of Agreement which was recorded on July 5, 2019 as Document No. 2019-0046532.

Except as otherwise defined herein, all capitalized terms used herein shall have the meanings ascribed thereto in the Development Agreement.

B. City and Predecessors In Interest entered into the Development Agreement relative to development of the Creekview Specific Plan ("Specific Plan", "CSP", or "Plan Area"), as such is more precisely defined in Exhibits "A" and "B" of the Development Agreement (the "Property").

C. This Amendment amends the Development Agreement. It affects the Property as described on Exhibits "A" and "B" attached to the Development Agreement, and shall run with the land.

D. Concurrent with its consideration of this Amendment, City is processing a General Plan Amendment (Resolution No. _____), Specific Plan Amendment (Resolution No. _____), Rezone (Ordinance No. _____), Large Lot Tentative Subdivision Map (PL18-0190) and Small Lot Tentative Subdivision Map (PL18-0190) for purposes of redesignating, rezoning, and subdividing the Property. City and Landowner wish to enter into this Amendment to provide consistency with these land use approvals.

E. The Amendment is authorized by Section 1.4 of the Development Agreement.

NOW THEREFORE, THE PARTIES MUTUALLY AGREE AS FOLLOWS:

1. AMENDMENT OF DEVELOPMENT AGREEMENT. The following sections and exhibits of the Development Agreement are hereby amended as follows:

a. TABLE OF CONTENTS. The following entry is deleted from the Table of Contents:

"1.3.5 Substitution of New Development Entity as Developer"

b. TABLE OF CONTENTS. The following entry in the Table of Contents is revised in its entirety to read as follows:

"3.7.4 Water Conservation Goal"

c. TABLE OF CONTENTS. The following entry is added to the Table of Contents in its entirety to read as follows:

"3.14.11 Fence Removal"

d. REVISED RECITAL B. The last sentence of Recital B is revised to read as follows:

"Landowner owns the Property."

e. REVISED RECITAL C. Recital C is revised in its entirety to read as follows:

"C. Landowner and Developer Parties. For purposes of this Agreement, the terms "Developer" and "Landowner" are interchangeable and shall mean Anthem (including any subsidiaries or affiliates). Anthem intends to develop or oversee development of the Property in accordance with the terms and provisions of this Agreement and the Entitlements."

f. REVISED RECITAL L. Recital L is revised in its entirety to read as follows:

"The Property was annexed to City, effective April 25, 2013, and is located within the City's municipal boundary."

g. REVISED SECTION 1.2. Section 1.2 is revised in its entirety to read as follows:

"1.2 Binding Covenants. Upon satisfaction of the conditions to recordation of the Agreement set forth in Section 1.3.1 below, the provisions of this Agreement shall constitute covenants which shall run with the Property and the benefits and burdens hereof shall bind and inure to all successors in interest to and assigns of the parties hereto. Landowner represents that all parties holding legal or equitable interests in the Property shall be bound by this Agreement in the manner provided herein. Landowners are shown in Exhibit "D"."

h. DELETED SECTION 1.3.5. Section 1.3.5 (Substitution of New Development Entity as Developer) is deleted in its entirety.

i. REVISED SECTION 2.2. The summary table of Section 2.2 (Vested Entitlements) is revised as follows:

"Low Density Residential	951 units on 182.8 Net Acres;
Medium Density Residential	513 units on 51.2 Net Acres;
High Density Residential	547 units on 17.7 Net Acres;
Community Commercial	9.2 Net Acres;
Open Space	136.9 Net Acres;
Park	16.3 Net Acres;
Elementary School	7.0 Net Acres;
Electric Substation	0.9 Net Acres;
Well Site	0.5 Net Acres;
Lift Station	0.6 Net Acres;
Solid Waste Recycling Center	0.6 Net Acres;
Right of Way	37.7 Net Acres;"

j. REVISED SECTION 2.6.1. The table in Section 2.6.1 is revised as follows:

Parcel	Total Units in Parcel	Middle Income Purchase Units
C-20	75	10
C-22	105	20
C-25	62	10

k. REVISED SECTION 2.6.2.1. The table and text in Section 2.6.2.1 are revised as follows:

" 2.6.2.1 Affordable Obligation. Developer agrees that one hundred and sixty-one (161) affordable rental units will be reserved within the Property, including eighty-one (81) units for rental to very low income households and eighty (80) units for rental to low income households as follows:

Parcel	Total Units In Parcel	Total Affordable Unit Allocation	Very Low Income Rental Units	Low Income Rental Units
C-42	136	80	40	40
C-43	116	81	41	40
Total	252	161	81	80

Such units shall be distributed throughout the Parcel."

l. REVISED SECTION 2.6.2.2. Section 2.6.2.2 is replaced in its entirety to read as follows:

"2.6.2.2 Required Agreements. Prior to the issuance of a building permit for the applicable Affordable Parcel(s), the parties shall enter into City's then current form of Affordable Rental Housing Agreement (or other applicable City-approved form) for such residential rental units affordable to low income and very low income households, which shall identify the obligation to produce and deliver the applicable number of rental units affordable to very low or low income households to be provided by such Affordable Parcel. The term of the Agreement shall require the affordable units to be rented only to qualified affordable households for a period of fifty-five (55) years, commencing on the date of issuance of a certificate of occupancy for each affordable unit. Specific requirements of the agreement will be determined by the Economic Development Director or his/her designee."

m. REVISED SECTION 2.6.2.3. Section 2.6.2.3 is revised in its entirety to read as follows:

"2.6.2.3 No City Subsidies. Developer agrees to provide all of the affordable rental units without any subsidy from the City."

n. RENUMBERED SECTION 2.6.2.4. Previous Section 2.6.2.2 (Transfer/Satisfaction of Obligation) is renumbered as Section 2.6.2.4. No revisions are made to text.

o. RENUMBERED SECTION 2.6.2.5. Previous Section 2.6.2.4 (Community Facilities Districts) is renumbered as Section 2.6.2.5. No revisions are made to text.

p. REVISED SECTION 2.8. The first sentence in Section 2.8 is revised in its entirety to read as follows:

"By entering into this Agreement, Developer shall not be obligated to develop all or any portion of the Property."

q. REVISED SECTION 3.2. The fourth sentence in Section 3.2 is revised in its entirety to read as follows:

"In the event, however, that the land dedication by Developer is triggered by the proposed construction by a third party of a public improvement (including the electric substation site (parcel C-81) identified in Section 3.11.3) identified in this Agreement, such third party shall assume the obligation to assure that, at the time of City acceptance, the land dedicated is free and clear of all Encumbrances, unless expressly waived by the City."

r. REVISED SECTION 3.3. The first, second and third paragraphs of Section 3.3 (excluding the bullet points) (Project Phasing) are revised in their entirety to read as follows:

"3.3 Project Phasing. It is anticipated that there will be a single master developer of the CSP. Developer, or its successor(s) in interest, as master developer of the CSP, shall develop and construct the infrastructure necessary to serve the Project in Phases A through F substantially consistent with the Phasing Plan set forth in Exhibit "G" attached hereto. Grading and infrastructure may be constructed in sub-phases as approved at the discretion of the City, in consultation with all affected City departments.

City and Developer intend for the CSP to be mass graded in the multiple phases, with substantial volumes of earthen material moved from north of to south of Pleasant Grove Creek. Such mass grading is necessary to balance the material within the CSP and to avoid import or export of fill material (see Section 3.22).

In the event that the conceptual phases as shown in Exhibit "G" are proposed, or are modified or altered, or that smaller "sub-phases" are proposed within the identified Phases A thru F, the following criteria will be used to establish the conditions and requirements for that portion of work:"

s. REVISED SECTION 3.3, Recycled Water subsection. The Recycled Water subsection of Section 3.3 is revised in its entirety to read as follows:

- "Recycled Water – One point of connection required. A looped system is not required. Potable water may be utilized on an interim basis until and including the issuance of the 923rd building permit within the CSP or such later time as the Environmental Utilities Director makes a determination that potable water service can no longer be allowed. At that point in time, the system shall be switched over to recycled water by eliminating each potable water charging station and connecting to the West Roseville Specific Plan recycled water system, as described in Section 3.9 herein (Recycled Water Facilities). At the time that a water charging station is abandoned, a fire hydrant shall be installed to separate the potable water and recycled water systems. Three temporary potable water charging station connections to the recycled water system shall be allowed among phases A-F. The connection of the recycled water pipe to the potable water pipe shall consist of one gate valve and one backflow prevention device between the connections. The charging stations may be relocated within a phase or to another phase and multiple sub-phases can share a single station. Recycled water pipe lines shall be constructed concurrent with roadway construction and paving within a phase or sub-phase. Additional temporary potable water charging station connections to the recycled water system may be utilized subject to the approval of the Environmental Utilities Director."

t. REVISED SECTION 3.3.1. The first sentence in Section 3.3.1 is revised its entirety to read as follows:

"One Large Lot Tentative Map ("LLM") shall be prepared for the entire Plan Area, which will identify the phases as shown on Exhibit "G"."

u. REVISED SECTION 3.5.2(a). A new last sentence to the second paragraph of Section 3.5.2(a) is added to read as follows:

"Developer may exchange their responsibility to construct their portion of the median curbing and landscaping improvements for the construction of an equivalent portion of the CIP-reimbursable pavement."

v. REVISED SECTION 3.5.2(b). A new last sentence to the first paragraph of Section 3.5.2(b) is added to read as follows:

"The CIP-reimbursable adjacent inside lanes and median landscaping for Westbrook Boulevard from Blue Oaks Boulevard to the Pleasant Grove Creek crossing may be deferred, at the discretion of the City Engineer, until the first building permit is issued in Phase C, as shown in Exhibit "G"."

w. REVISED SECTION 3.5.3.1. The first sentence of Section 3.5.3.1 is revised in its entirety to read as follows:

"The design and location of the bus transfer station on the west side of parcel C-70 and east side of parcel C-24 shall be determined with the Design Review Permit or the Major Project Permits for those parcels (or another Major Project Permit for the parcels)."

x. REVISED SECTION 3.5.9. Section 3.5.9 is revised in its entirety to read as follows:

"3.5.9 Update of City Fee. Developer agrees that the Property shall be subject to and shall pay the City Traffic Mitigation Fee ("TMF"). To the extent that the Traffic Mitigation Fee adopted for the CSP is higher than that charged in the West Roseville Specific Plan Area, Developer shall pay the difference as a surcharge to future TMF obligations on a per-DUE basis for the remaining DUEs within the CSP. To the extent that the TMF adopted for the CSP is lower than that charged in the West Roseville Specific Plan Area, Developer shall receive a credit against future TMF payments until such time as the amount of the overpayment is exhausted."

y. REVISED SECTION 3.7.2. Section 3.7.2 is revised in its entirety to read as follows:

"3.7.2 Groundwater Well. If applicable, Developer shall dedicate to City parcel C-84 for one (1) groundwater well at the approximate location shown on Exhibit "R". The City shall be responsible for the construction of a monitoring well for determining water production and quality and the topside improvements. Developer shall be responsible for drilling and completing the production well (but not above ground well improvements such as pumping and treatment facilities) as further described below

("Well Construction Requirements"). To facilitate the drilling of the monitoring well, Developer will provide City and its contractors access to and within the well site to enable City to install the monitoring well to confirm desired capacity and water quality.

It is the intent of this Section 3.7.2 (and the Parties) that the groundwater well location identified within the CSP be capable of achieving a yield of approximately 1,800 gallons per minute and the groundwater is of such quality that only disinfection will be required to meet California Drinking Water Quality Standards. Should the City determine the available capacity or water quality does not achieve these objectives, Developer shall, at its own cost, work with the City to relocate the well site within the CSP until these objectives are satisfied.

The Developer shall contact the City Environmental Utilities Department prior to construction of the production well to obtain approval of the well design and drilling method prior to commencement of this work. The well shall be drilled prior to occupancy of any residential units within 500 feet of the well site. Developer shall include noise curtains for the well if, at the time of well construction, homes are occupied within 1000 feet of the well.

Notwithstanding the foregoing, if the City adopts a revised water connection fee which encompasses the costs of the Well Construction Requirements, the Developer shall be relieved of the Well Construction Requirements set forth in this Section 3.7.2."

z. REVISED SECTION 3.7.4. Section 3.7.4 is revised in its entirety to read as follows:

"3.7.4 Water Conservation Goal. The City has determined that the available water supply is sufficient to serve all phases of the Project. This determination was the conclusion of a review of the demand and source issues created by the projected build-out of the Project based upon the various technical studies completed in connection with the environmental review of the Project. The demand for water at build-out of the Project was determined by reference to the City's current information on water usage by the various land uses included and permitted within the City and the proposed land uses within the Project and by reference to the Creekview Specific Plan Water Conservation Plan as shown in Exhibit "S", which includes a reduction in water use by 18.3% over business-as-usual factors.

The sources for water evaluated for the Project are the same types of sources currently used throughout the City; namely, surface water contracts with federal and local agencies and the use of groundwater. City and Developer are satisfied, based upon detailed technical analysis, that the demand and source assumptions relied upon to assure water for the Project are valid."

aa. REVISED SECTION 3.9. The third paragraph of Section 3.9 is revised in its entirety to read as follows:

"City costs, estimated at $1.64 million, associated with the recycled water tank(s), pump station expansion, elimination of the potable water charging stations and connections to the West Roseville Specific Plan recycled water system, and appurtenant recycled water

facilities (hereinafter, the "Recycled Water Facilities"), which include, but are not limited to, permitting, design, construction, design support during construction phase, construction management, inspection, and City's administrative and labor costs, shall be paid through the CFD as outlined in the Financing Plan for the Project. Payment from the CFD will not be required until after the 923rd building permit as outlined in Section 3.3 herein. As an alternative to payment from the CFD, the City may adopt a revised water connection fee which encompasses the estimated $1.64 million in costs for the Recycled Water Facilities described in this paragraph."

bb. REVISED SECTION 3.10.5. The third paragraph of Section 3.10.5 is revised in its entirety to read as follows:

"Material excavated within the CSP shall remain within the CSP and material excavated within the AJWA property for construction of the improvements shall be placed as engineered fill on the Property as shown in Exhibit "BB"."

cc. REVISED SECTION 3.11.3. Section 3.11.3 is revised in its entirety to read as follows:

"Electric Substation. The Developer shall, prior to the issuance of the 923rd residential building permit or any combination of building permits within the CSP as set forth below, dedicate to City a 0.90 buildable acre site (parcel C-81) net of easements, wetlands, riparian corridors and required setbacks for use as an electrical substation, as shown on Exhibit "CC". The substation site shall not be encumbered by any easements or any other use constraints, except as approved by the Electric Utility Director. At Developer's expense, the substation shall be dedicated in fee, free and clear of all wetlands.

Developer shall, as set forth below, and at Developer's expense, provide the substation site graded and compacted to within six inches (6") of final grade as approved by the Electric Utility Director and consistent with the City's grading ordinance, and where retaining walls are required, provide the retaining wall with split face key stone style or comparable quality / design to be installed by Developer. The Developer shall provide an access road capable of transporting a 200,000 pound distribution transformer and associated transportation trailer. The road shall be designed to meet the truck and trailer minimum turning radii, shall be the width of twelve feet (12') plus two foot (2') aggregate base shoulders on each side of the road and shall have a structural section consisting of lime treated sub grade with 2" asphalt concrete over 4" aggregate base. The final design of the access road shall be reviewed and approved by the Public Works Director after consultation with the Electric Department's engineering group before it is constructed. In addition to the temporary access road, Developer shall complete the finished grading of the power line corridor as shown on Exhibit "CC". This grading will facilitate the installation of the final alignment of the 60KV overhead line that will serve the future substation in the CSP. The power line corridor will be graded to within 6" of final grade and will include a minimum of 6" aggregate base to serve as a temporary access road to the pole line installation. Any easements, access and dedications required to facilitate the installation of this pole line will also be provided by Developer. Developer shall grant a temporary easement for the temporary electric access road and dedicate the substation within the CSP as set forth below.

Provided that Developer provides an access road, power line corridor, temporary easements and substation site as defined above prior to the issuance of the 924th residential building permit, the City shall not restrict the issuance of any additional building permits on the basis of insufficient electrical service capacity for the balance of the Project. Should the Developer fail to provide the required sites and access by the 924th permit, Developer will only be allowed up to 923 permits, or DUE equivalents or any combination of building permits within the CSP that the City determines, in its sole discretion, is the equivalent to building permits for 923 single family residential detached units. Delays by Developer in dedicating the substation site and power line corridor will result in delays in the availability of power until such time as the substation is fully operational with the ability to serve the remainder of the CSP.

City shall construct the electric substation and all other tenant improvements on parcel C-81 at the time when needed to serve the development of the Plan Area provided the site is dedicated to City in sufficient time to allow for a reasonable time for City to construct the electric substation and that City has sufficient funds to construct the electric substation."

dd. REVISED SECTION 3.12. The first paragraph of Section 3.12 is revised in its entirety to read as follows:

"Developer shall dedicate to City a total of 16.3 acres of active park land and 136.9 acres of open space lands, pay fees for construction of city-wide park, park improvements, paseo improvements, road improvements, open space frontage improvements, and trail improvements and construct park frontage improvements as set forth in this Section and the Phasing Plan and as shown in Exhibit "DD"."

ee. REVISED SECTION 3.12.1. Section 3.12.1 is revised in its entirety to read as follows:

"3.12.1 Park and Open Space Dedications. Developer shall dedicate to City a total of 16.3 acres of active neighborhood parkland and 136.9 acres of open space. The following four park parcels, and five open space parcels shall be dedicated to City as described below and shown in Exhibit "DD":

1. A 7.4-acre, more or less, portion of the Property for the purposes of a public park, shown as parcel C-60;

2. A 4.8-acre, more or less, portion of the Property for the purpose of a public park, shown as parcel C-61;

3. A 1.5-acre, more or less, portion of the Property for the purpose of a public park, shown as parcel C-62;

4. A 2.5-acre, more or less, portion of the Property for the purpose of a public park, shown as parcel C-63;

5. A 36.5-acre, more or less, portion of the Property for the purposes of

drainage, flood control, bike trails, fuel modification (i.e., fire breaks), preservation of wetland habitat and open space, and open space linkages, shown as parcel C-50;

6. A 35.6-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), preservation of wetland habitat and open space, and open space linkages, shown as parcel C-51;

7. A 15.1-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), preservation of wetland habitat and open space, and open space linkages, shown as parcel C-52;

8. A 25.1-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), wetland habitat and open space, and open space linkages, shown as parcel C-53; and

9. A 24.6-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), wetland habitat and open space, and open space linkages shown as parcel C-54.

Developer shall dedicate to the City on the face of each Large Lot Final Map as an Irrevocable Offer to Dedicate (IOD) any park lands and open space parcels within the Property provided that the applicable final Large Lot Subdivision Map creating a separate parcel for the subject site has been recorded. City shall accept such dedication of any park lands and open space parcels at the time when all infrastructure improvements (e.g., curb and gutter, roadway, utilities, utility stubs, etc.) adjacent to the parcels, i.e., frontage along the parcel and parcel grading, are substantially complete and the City is prepared to improve and maintain the site per Section 3.3.1 above. In the event Developer uses any of the above mentioned parcels for temporary construction activity or staging (e.g., detention basins, rock crushing operations, dirt/debris stockpiling, etc.), Developer shall, prior to acceptance by City, restore the site to an acceptable rough graded condition and as approved as a part of the Project's rough grading plan. The final pad elevations shall be certified by a licensed civil engineer with deviations no greater than 0.10 feet. In the case where fill material is required to reclaim the site, fill shall be placed in engineered lifts. Developer shall submit a soils analysis report of the fill material to be used to the Parks, Recreation & Libraries Department for review and approval prior to placement of material. Prior to dedicating any open space parcels to City, Developer shall work with City to ensure City has complete and permanent access to such open space parcels for maintenance and emergency response purposes."

ff. REVISED SECTION 3.12.4.. The first sentence of Section 3.12.4 is revised in its entirety to read as follows:

"Developer shall pay the City-Wide Park and Bike Trail Fee at time of building permit."

gg. REVISED SECTION 3.12.8. Subsections 1 through 5 of Section 3.12.8 are revised in their entirety to read as follows:

"1. A 36.5-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), preservation of wetland habitat and open space, and open space linkages, shown as parcel C-50;

2. A 35.6-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), preservation of wetland habitat and open space, and open space linkages, shown as parcel C-51;

3. A 15.1-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), preservation of wetland habitat and open space, and open space linkages, shown as parcel C-52;

4. A 25.1-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), wetland habitat and open space, and open space linkages, shown as parcel C-53; and

5. A 24.6-acre, more or less, portion of the Property for the purposes of drainage, flood control, bike trails, fuel modification (i.e., fire breaks), wetland habitat and open space, and open space linkages, shown as parcel C-54."

hh. REVISED SECTION 3.14.2.1. Section 3.14.2.1 is revised in its entirety to read as follows:

"3.14.2.1 City Public Facilities Fee. Developer shall pay the City Public Facilities Fee (Roseville Municipal Code Chapter 4.52) at time of building permit."

ii. REVISED SECTION 3.14.3. Section 3.14.3 is revised in its entirety to read as follows:

"3.14.3 Public Benefit Fee. As partial consideration for this Agreement, to offset a portion of the impact of the Project and the associated tax sharing agreement with Placer County, and to ensure that the Project will benefit current and future residents of Roseville, Developer shall pay a Public Benefit Fee for each residential unit in the Project. The Public Benefit Fee for each low density and medium density residential unit shall be $ 1,280. The Public Benefit Fee for each high density residential unit shall be $845. Developer shall pay the Public Benefit Fee at time of building permit."

jj. NEW SECTION 3.14.11. New Section 3.14.11 is added in its entirety to read as follows:

"3.14.11 Fence Removal. Prior to the first building permit issued in the Project north of Pleasant Grove Creek, Developer shall remove existing cattle grazing fences on the Property, with the possible exception of the cattle and goat grazing fencing in the open space parcels (Parcels C-50 to C-54), should a cattle grazing plan be approved by the City. Cattle and goat grazing fencing shall not interfere with bike trail amenities."

kk. REVISED SECTION 3.17.1.2(f). Section 3.17.1.2(f) is revised in its entirety to read as follows:

"(f) Developer may utilize the Statewide Community Infrastructure Program ("SCIP") or the Bond Opportunities for Land Development ("BOLD") program for any eligible impact fee."

ll. REVISED SECTION 3.17.1.2(i). Section 3.17.1.2(i) is revised in its entirety to read as follows:

"(i) Bond proceeds from bond sales commencing in the year 31 timeframe shall, subject to SPRTA agreeing to the deferral of the SPRTA Tier II Traffic Fee, include an amount no greater than fifty percent (50%) of the SPRTA Tier II Traffic Fee, adjusted as the SPRTA Tier II Traffic Fee may be subsequently adjusted, that would normally be paid at time of building permits for low, medium and high density residential dwelling units. The SPRTA Tier II Traffic Fee deferral is subject to SPRTA review and approval and may be revised or discontinued by SPRTA if deemed appropriate as specified in the Tier II Development Fee Program and amendments.

Notwithstanding any provision in this Agreement to the contrary, any amount exceeding fifty percent (50%) of the SPRTA Tier II Traffic Fee, adjusted as the SPRTA Tier II Traffic Fee may be subsequently adjusted (or exceeding such actual lesser amount for MDR or HDR units determined by City), per residential unit shall be due and payable to City upon issuance of a building permit commencing with the first applicable building permit for the Project. Notwithstanding any other provision in this Agreement to the contrary, the SPRTA Tier II Traffic Fee required by City for non-residential development shall be collected upon issuance of building permit commencing with the first applicable building permit."

mm. REVISED SECTION 3.17.1.2, NEW SUBSECTION 3.17.1.2(j). Subsection (j) is added to Section 3.17.1.2 in its entirety to read as follows:

"(j) If a Project CFD(s) is formed, then, where adjustments (increases or reductions) in the number of allocated residential units or non-residential acreage involve transfer of residential units or non-residential acreage from one Large Lot parcel to another Large Lot parcel in the Project, City may, in its sole discretion, allow for the transfer of assigned special tax from one Large Lot parcel to another, but only if (i) all such proposed special tax adjustments are agreed to in writing by the affected Large Lot parcel owners and City's Chief Financial Officer, and (ii) there is no reduction in the CFD maximum special tax revenue as a result of the transfer between Large Lot parcels. Should such a transfer of special taxes from Large Lot parcel to another Large Lot parcel result in an amendment to attachments 1 or 2 of the notice of special tax lien for the CFD(s), the Large Lot parcel owner requesting the transfer of special taxes shall bear the cost to affect the transfer in the CFD documents, and that property owner shall prepare the required amendments to the notice of special tax lien, including amendments to attachments 1 and 2 thereto."

nn. REVISED SECTION 3.23, NEW SUBSECTIONS 18 and 19. Subsections 18 and 19 are added to Section 3.23 in their entirety to read as follows:

"18. Livestock grazing may occur within the open space preserve areas.

19. Every residential unit is equipped with a recirculating hot water system, or similar technology to provide instantaneous hot water at each hot water faucet."

oo. REVISED ARTICLE 10. The notice to Landowner section, including the nine addresses that follow, and the notice to Developer and address are deleted in their entirety and replaced with the following:

"Notice required to be given to Landowner and Developer shall be addressed as follows:

Anthem United Creekview Developments Limited Partnership
Attn: Brian Moore
3001 Douglas Boulevard, Suite 200
Roseville, CA 95661"

pp. REVISED LIST OF EXHIBITS. The following entries are revised in the List of Exhibits:

"Exhibit HH Open Space and Preserve Areas"
"Exhibit O Wastewater Facilities – Alternate Design"

qq. EXHIBITS. The exhibits attached to the Development Agreement are proposed to be deleted and replaced by new exhibits attached to this Amendment, in the case of the following exhibits:

2. CONSISTENCY WITH GENERAL PLAN. The City Council has found and determined that this Amendment of the Development Agreement is in the best interest of the public health, safety and general welfare and is consistent with the General Plan and the Creekview Specific Plan.

3. AMENDMENT. This Amendment amends, but does not replace or supersede, the Development Agreement, except as specified herein. In the event of any conflict, the language of this Amendment shall be controlling in all events or circumstances. As amended hereby, the Development Agreement remains in full force and effect.

4. FORM OF AMENDMENT. This Amendment is executed in two duplicate originals, each of which is deemed to be an original.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized of this Amendment in duplicate by its City Manager and attested to by its City Clerk under the authority of Ordinance No. _____, adopted by the Council of the City of Roseville on the _____ day of _____, 2019.

Title:	Public Input Regarding the Composition of the City's Voting Districts - Public Hearing 3
Contact:	Sonia Orozco 916-774-5269 sorozco@roseville.ca.us M. Sheidenberger 916-774-5325 msheidenberger@roseville.ca.us

Meeting Date: 10/23/2019
Item #: 9.3.

RECOMMENDATION TO COUNCIL

Recommend the City Council conduct Public Hearing 3 - a hearing to receive input on the composition of voting districts, select two to four "focus" maps, request any desired map revisions and receive or provide any additional information needed for Public Hearing 4 scheduled for Wednesday, November 6, 2019, at 6:00 p.m. in the City Council Chambers, 311 Vernon Street.

BACKGROUND

On September 4, 2019, the City Council unanimously adopted a resolution of intention to transition from at-large to by-district elections. Pursuant to Section 14026(b) of the California Elections Code, district-based elections means a method of electing members to the City Council in which the candidate must reside within an election district that is a divisible part of the City and is elected only by voters residing within that election district. The resolution of intention outlined a 2020 general election implementation date. The City of Roseville held two required public hearings over a period of no more than 30 days before any map or maps of the boundaries for the proposed voting districts were drawn. At the public hearings held on September 18 and October 2, 2019, the community was invited to provide input regarding the composition of the districts and transition to by-district elections. Eleven speakers provided public input.

This is the third public hearing to inform the community about the districting process and receive public input on the draft district map alternatives provided by the demographer, and the public. Friday, October 11, 2019 was the deadline to submit maps. Maps will be presented to the City Council and public providing for five districts based on Council direction at the October 2, 2019 City Council meeting.

At this public hearing, the City Council will identify two to four "focus" maps, and present the draft map or maps for public comment and review in subsequent public hearings. The City Council will then provide further direction to finalize a map, which will be presented to the City Council for a final vote at the Wednesday, November 20, 2019 public hearing, along with adoption of an

ordinance outlining steps and provisions for by-district elections.

The sequence of district elections has not yet been determined. The transition to by-district elections will be implemented in 2020, at which time three councilmember seats will be on the ballot, with two remaining councilmember seats on the ballot in the 2022 election year. Sequencing will occur once a proposed draft map is identified.

At the October 2, 2019 public hearing, two councilmembers expressed a preference for a rotating mayor, two councilmembers expressed a preference for a Council appointed mayor, and one councilmember expressed a preference for an at-large mayor. Based on the majority preference of the Council, self-selection could encompass both an appointed mayor system and a rotating mayor system, equating to five districts with a self-selected Mayor (either Council appointed or rotating).

The next federal decennial census will be performed in 2020. The City of Roseville will then be required to conduct a district boundary readjustment in 2021. The readjustment can either be performed by the City Council, or an independent redistricting committee following multiple public hearings. This could potentially result in realigned districts for the November 2022 election. If the City Council completes conversion to by-district elections at this time, only the seats up for election in November 2020 will be subject to the new districts before the city is required to re-draw its districts.

FISCAL IMPACT

There is no fiscal impact associated with the public hearing. Costs have previously been outlined and are estimated to be between $35,000.00 to $50,000.00. Costs include the contract for a demographer to assist with drawing boundaries for the voting districts, which was approved at the August 21, 2019 Council meeting, with a cost not to exceed $30,750.00. There will also be costs for time spent by the City Clerk's Department and the City Attorney's Office. Funds are available in the City Manager's Contingency budget to pay for these costs.

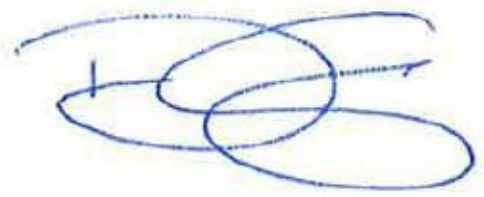
ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Staff's request for public input and information on district-based elections meets the above criteria and is not subject to CEQA. No additional environmental review is required.

Respectfully Submitted,

Sonia Orozco, City Clerk

Michelle Sheidenberger, Assistant City Attorney



Dominick Casey, City Manager

CITY OF ROSEVILLE
CALIFORNIA

October 23, 2019

City Council Public Hearing #3

ROSEVILLE PLAN MAP SUBMITTER COMMENTS

101 Bruce Hodgman ***NDC note: a partial, non-contiguous map.***

West Roseville Communities by census tracts.

102 Paul Frank ***NDC note: not population-balanced.***

This plan considers population, percent deviation, and neighborhood association cohesiveness only.

103 Paul Frank ***NDC note: not population-balanced.***

Supposed to be a smiley face because we are happy to live in Roseville

104 Tapani Lindgren

This plan distributes the high-growth western area between two districts: southwest and northwest to lessen the impact of the growth on any single district while distributing all the other smaller growth areas among the remaining districts and using the legally allowed 10% variation from 2010 data to compensate for some of the growth from 2010-2020.This version corrects two demographic oversights in my earlier proposal First the significant concentration of Hispanic residents in the Hidalgo Circle area is no longer separated from other Hispanic concentrations in the downtown area. These areas put together give a Hispanic population of 25.1% in the district which is still a minority but at least it's not diluted by the districting. Second the small Asian-American concentration around Festersen Park and Westpark Drive is no longer split in half by the artificial neighborhood association boundary between Westpark and Fiddyment Farm. Hayden Parkway now forms a more distinctive boundary between these districts. The new developments to be annexed Creekview and Amuroso Ranch would go to district 2.

105 Tapani Lindgren

This plan includes growth areas in all five districts: District 1 east includes strong growth in Stoneridge.- District 2 downtown-south central has the least growth but it includes the recently completed developments in the Stone Point Dr area. District 2 contains a significant Hispanic minority: 25.1% of the population. District 3 west-southwest includes heavy growth in Solaire and new growth in Sierra Vista. District 4 west central includes all of Westpark and the older parts of Fiddyment Farm and Blue Oaks. While Westpark is almost built up, there is new growth in Campus Oaks. District 4 contains a small concentration of Asian-American residents. District 5 north spans from north central to northwest and includes recent growth in Blue Oaks and fastest growing areas in Foothill Farm. It also includes future growth in Creekview and Amoruso Ranch. District 5 contains another small Asian-American concentration. The growth in west and north is still faster than in the east. To compensate, districts 3-5 are slightly smaller by 2010 numbers while staying within the allowed 10% variation.

106 Paul Frank

Generally based on neighborhood associations while also preserving districts for current elected council members.

107 Samatha Shapiro ***NDC note: not population-balanced.***

I like the idea of cross-sections for districts where the districts span narrow but long sections of the city.

108 Will Rogers

The Phobos Map is within 0.3% deviation until 2020 census. To preserve some of the magic of Roseville s fantastically whole-city-minded council, the districts are intended to spread across as much of Roseville as is practical. In doing so it attempts to hinder the growth of the fiefdoms we see in other district-embedded cities that slowly emerge over generations of council. As a citizen of Roseville I dread the day that I hear the words come out of a council member's mouth to "talk to your council member about that." This map aims to keep us united, despite the division districts impose upon our city.

109 Kevin Lachance ***NDC note: not population-balanced.***

Ensuring that districts include a cross section of the city with diverse needs and interests this map will assist the city in avoiding the pitfalls of districting limiting the vision of councilpersons to only one particular community to the detriment of the city as a whole.

110 Will Rogers ***NDC note: not population-balanced.***

Collaboration between Kevin Lachance & Will Rogers. Attempted as close to -10% deviation for districts that include developments that deviate from the 2010 census data. Nearly +10% deviation for the districts that had the least development since 2010.

111 Will Rogers ***NDC note: not population-balanced.***

This map attempts to integrate each councilperson's district across multiple diverse communities of interest and allowing the citizens of those same communities the opportunity to appeal to multiple councilpersons to address the needs unique to their people and region. This map also attempts to combine older areas of Roseville with the areas of active development which provides incentive for all districts to maintain interest in continued expansion and never leaving the legacy areas to be forgotten.

112 Dave Berlin

This map divides the population into five districts, splitting West Roseville into three districts in anticipation of future growth. These districts purposely deviate from the desired population anywhere from -1.3% to -2.9% in order to capture growth that has occurred since the 2010 census. The two remaining districts deviate 2.8% and 3.4% to acknowledge that most growth there has already occurred. This map sacrifices compactness, with a mean compactness of 0.18, in order to achieve the goal of splitting West Roseville among multiple districts.

113 Dave Berlin

This map evenly divides the population into five districts, with a 0.0% population deviation achieved across all districts and mean compactness of 0.44. Since each district deviates by

five total persons or fewer, it is the best possible split by population given the 2010 census data. In order to achieve this result, the map was built using the output from Auto-Redistrict http://autoredistrict.org as a starting point. Auto-Redistrict uses a genetic algorithm to test thousands of maps for both geometric contiguity, compactness, and equal population, and equality, competitiveness, proportionality, anti-partisan gerrymandering, and anti-racial gerrymandering criteria.

114 Dave Berlin

This map evenly divides the population into four districts, achieving a maximum population deviation of -0.7% and mean compactness of 0.43. In addition, it splits districts by major features wherever possible, making it easy to describe verbally. For example, the West Roseville district is everything west of Woodcreek Oaks Blvd. and East Roseville is very nearly everything east of I-80. In order to achieve the desired population result, the map was built using the output from Auto-Redistrict http autoredistrict.org as a starting point. Auto-Redistrict uses a genetic algorithm to test thousands of maps for both geometric contiguity, compactness, and equal population, and equality, competitiveness, proportionality, anti-partisan gerrymandering, and anti-racial gerrymandering criteria.

115 Dave Berlin

This map divides the population into four districts, preserving all of the Roseville Neighborhood Association boundaries. This keeps neighbors together and means that neighborhood-wide concerns are not split among multiple districts. In addition, many of us have strong ties to our neighborhoods and want to see them represented cohesively. It also allows for an at-large mayor, so that while neighborhoods are represented, so is the city as a whole. Despite these features, it only deviates from the population goal by as much as -5.8%, which is in the West Roseville district to account for future growth. And finally, it does not sacrifice compactness, with a mean compactness of 0.39.

112 -115 Dave Berlin (follow up comment to his maps 112, 113, 114 and 115)

I think my personal favorite is the "4 district neighborhood" map, which preserves all of Roseville's unique neighborhoods and leaves room for the at-large mayor to represent everyone. I know the current mayor brought that up a few times during the last two meetings, and after watching that I was inspired to make this one.

The last one I made is the "5 district growth" map, because so many people at the meetings talked about how most of the growth is happening in West Roseville and how we want to have districts that grow with that area. So I think that one will appeal to a lot of people.

But, the two "population" ones were fun to make too because I used Auto-Redistrict to get them down to almost perfectly balanced districts.

So they're all very different and try to achieve different goals that various people have discussed.

116 Bruce Houdesheldt ***NDC note: not population-balanced and not contiguous.***

It keeps community of interests together. . .provides 3 of the 5 Council Districts represent the Downtown Core. . .provides 4 of the 5 Districts represent areas east of I-80 and South of Douglas Blvd. Districts 1 and 3 have less population to reflect that the population is actually more than listed because this uses the 2010 census. A portion of Roseville is in Placer County Supervisorial District 4 and represents a community of interest.

117 NDC

A combination of ideas in 112, 116, and other maps, 117 keeps Sun City whole in a north-central district 1 that picks up some of the fast-growing western areas; extends three districts (3, 4 and 5) east of I-80; and combines fast-growth western areas for southwest/central areas in district 2. This map ensures that each district encompasses a diverse set of neighborhoods and concerns, and no one area is dominated by one Councilmember.

119 Larry Hufty

Respects most neighborhood association boundaries; Groups similar business types together (big corporations, retail, automotive); Very clean district boundaries/visually appealing; Districts numbered in a way to allow us to keep adding new district numbers as we continue to grow to the West.

120 Linda Nuffesse ***NDC note: not population-balanced.***

I think this map makes sense because . . . I have thought about the future. I have District 1 with less population because District 1 includes WestPark, Fiddyment farm and Campus Oaks, which is where most Roseville's growth will be. If you think of the future when you make your district map, you won't have such an out of whack map in a few years, like you do with the school district and police beats maps now. I kept all the neighborhoods together, which is what the post said was most important. If I split a few neighborhoods I could make the districts closer to 23,761, but I know Roseville's population is is much greater than 118,807.

125 Tapani Lindgren

This plan seeks to optimize the 5 districts for the current population distribution while adhering to the given conditions (no more than 10% deviation from the historical distribution in 2010 US census). The plan splits the fastest growing areas in the west between two districts, district 1 (southwest) and district 2 (northwest). Each of these would have been slightly smaller than the other districts in 2010 but they have already grown to be larger than the others. To maintain as much balance as possible, each of the other districts also contains some (smaller) growth areas (population units 73 and 122 in district 3, units 125-127 in district 4, and units 47 and 131 in district 5).

126 NDC

A "stretched" version of a four-district map, with districts extending east-west as much as possible, with two districts in the high-growth western regions.

127 NDC

An example of one approach to a six-district map.

128 Scott Alvord

I think this map makes sense because it takes into account what will happen after the 2020 census when the west will suddenly shrink in size. This assumes the odd numbered districts (1,3,5) are elected in 2020 and even numbered (2,4) in 2022. After the 2020 Census, this will allow district 5 to shrink back to the west of Fiddyment and will allow district 3 and 4 to absorb back towards the middle and west, with minor changes to the two eastern districts (1,2). It's very important that the neighborhood associations of Fiddyment Farm and Westbrook remain combined in the same district since these neighborhoods have extremely similar issues and have been meeting together as a combined board since the development began. The shape of district 2 and 4 don't really matter much for the 2020 election because they'll get adjusted for 2022, so Krista and Pauline's home can even theoretically be covered by district 3 and 5 because they'll shrink back after the Census.

City Council Public Hearing #3

PUBLIC COMMENT VIA EMAIL AND LETTERS

Sun City Roseville Community Association, Inc.

October 14, 2019

John B. Allard II, Mayor
City of Roseville
311 Vernon Street
Roseville, CA 95678

Subject: Mapping Request – Sun City Roseville Community Association

Dear Mayor Allard,

The Sun City Roseville Community Association is a common interest development in the state of California that serves an active 55+ community of 5000+ members. We are deeply concerned about the drawing of district maps within the City of Roseville that could potentially result in the division of our resident community into more than one district.

We strongly urge you to consider our Association of senior citizens a "community of interest" for purposes of district mapping per Section 2(d)(4) of Article XXI of the California Constitution. This provision states:

"A community of interest is a contiguous population which shares common social and economic interests that should be included within a single district for purposes of its effective and fair representation.... Communities of interest shall not include relationships with political parties, incumbents or political candidates."

Accordingly, we request that the Sun City Roseville Community Association be included within a single district as a community of interest for purposes of district mapping. Thank you for your consideration.

Sincerely,

Judy Arntson

Judy Arntson, President
Board of Directors
Sun City Roseville Community Association

Sonia,

Thank you for the memo. I have known several agencies who have received a demand letter. I am happy to hear Roseville is taking a proactive approach to this rather than wait and be reactive. Unfortunately, I will not be able to make the first two hearings but will plan on attending the future meetings.

Thanks again,
Debra Sedwick

Subject: Roseville City Council Moves Towards District-based Elections

Dear Board, Commission and Committee members,

Attached find a memorandum from City Manager Dominick Casey regarding transitioning to district-based elections which includes FAQs about City Council's decision to move forward. The memo also includes a timeline with dates the City Council will be holding specific public hearings in order to complete the process.

Questions can be directed to City Clerk Sonia Orozco at 916-774-5269 sorozco@roseville.ca.us or Public Affairs and Communications Director Megan MacPherson mmacpherson@roseville.ca.us 916-774-5455.

Well, I think it is sad.

Several District elections will cost way more money and serve to divide this wonderful city.

I don't get it. Anyone who *wants* to vote for Council members can vote. As it is, how does this impair the ability of a protected class to elect candidates of their choice?....or is it more of an "Electoral College" kind of issue (which I do get)???

To: JEANNE WADE
Subject: RE: District Based Elections

Good morning Ms. Wade,

Thank you for the email.

As a way of background, the California Voting Rights Act (CVRA) was signed into law in 2002. The law prohibits an at-large method of election that impairs the ability of a protected class (race, color or language minority group) to elect candidates of their choice or their ability to influence the outcome of an election. The intent of the law is to expand protections against vote dilution over those provided by the Federal Voting Rights Act of 1965. The CVRA makes it easy for plaintiffs to bring forth and prevail in lawsuits brought against public entities that elect their members of a governing body (Councilmembers) via an at-large system when they can prove the existence of racially polarized voting. Racially polarized voting happens when there is a difference in the choice of candidates that are preferred by voters of a protected class, and in the choice of candidates that are preferred by voters in the rest of the electorate.
Various California law firms have alleged racially polarized voting against numerous California jurisdictions regarding their at-large election system. In California, over 250 jurisdictions, water districts, school districts, community college districts and counties have been sued and have been forced to convert to by-district elections. The law firms represent a plaintiff and threaten litigation if the jurisdiction declines to voluntarily convert to district-based elections. Those jurisdictions that have chosen to defend against CVRA challenges have either **voluntarily** adopted district based elections, or been forced to adopt district based elections by the courts. Staff and our outside legal counsel is unaware of any jurisdiction that has prevailed in defending an at-large system of election. Judgments issued against jurisdictions who have fought voluntary

transition have resulted in courts imposing district elections and the cities paying legal fees ranging from hundreds of thousands of dollars up to millions of dollars.

The following Sacramento region jurisdictions have received demand letters from a plaintiff's attorney and are in the process of conversion:

- City of Davis
- City of Elk Grove
- City of West Sacramento
- City of Woodland
- City of Citrus Heights

It is not a question of "if" the City of Roseville is going to receive a demand letter, it is "when" Roseville will receive a demand letter. Regardless of whether the City agrees with the allegations, there is NO public agency that has successfully defended an "at-large" method of election, when challenged under the CVRA. That's because under the law, plaintiff's bringing a CVRA have a low bar to meet in order to prevail. They do not have to establish discriminatory intent or historical discrimination.

Roseville has agreed to move forward based on several advantages to taking action now:

1. The path forward for the 2020 City Council elections will be settled sooner rather than later, minimizing chaos that might otherwise result from receiving a letter further into the election cycle. This gives potential candidates more time to prepare and understand the new format. If Roseville receives a demand letter in 2020, the at-large election could be over-turned resulting in the city having to conduct a special election after districts have been established.
2. Roseville would determine the district boundaries instead of having them imposed by a court.
3. Roseville is in the midst of a once-a-decade charter review process, part of which determines our governance structure. The change to district elections will need to be incorporated in many charter provisions.

Below find the schedule of Public Hearings that are required by law:

Summary of Timeline for Conversion to District-Based Elections
Safe Harbor for Cities Converting by Ordinance as Prescribed by the
California Elections Code

Date 2019	Meeting Type	Public Hearing	Item Topic At Meeting
September 18, 2019	**Public Hearing**	**1**	Public input on composition of districts
October 2, 2019	**Public Hearing**	**2**	Further public input on baseline and census geography, race/ethnicity dot density, and zoning and general plan information (must be within 30 days of Public Hearing 1)
October 23, 2019	**Public Hearing**	**3**	Discussion of proposed district maps and sequence of elections including procedure to elect Mayor
November 6, 2019	**Public Hearing**	**4**	Public input and possible revisions to proposed District Map
November 20, 2019	**Public Hearing**	**5**	Adoption of District Map, transition to district elections Ordinance introduced
December 4, 2019	Regular Meeting		Second reading of Ordinance (effective date January 4, 2020)

Please feel free to call me at 916-774-5269 if you have any questions. I understand your concerns. I will pass along your email to the City Council, City Manager and City Attorney.

I am a new transplant from Santa Clara County (6/18).

Recently I watched a council meeting discussing breaking up into districts.....Just like San Jose. It made me sad to think that was going to happen here in Roseville. Today I got the What's Happening...email about this issue.

Moving from San Jose to Roseville was like moving to a different planet (traffic, not so much). It seems obvious to me that the tax money is being spent well....and where it should be. Everyone who comes and visits always says something positive about Roseville. Everyone.

Breaking up Roseville into different districts causes separation and distinct spots of the "have's and have not's" it seems, and politicizes everything and everyone. I think we are all growing weary of politics these days and just want our representatives to focus on what got them elected and to get the job done in a honest, thoughtful way.

It is obvious to me that you all are doing what you were elected to do and seem to be doing it well. I hope this decision is not inevitable. If it ain't broke, don't break it.

Jeanne Wade

Roseville City Counsel
311 Vernon St
Roseville, CA 95678

October 2, 2019

Dear Counsel,

It has recently come to my attention consideration is being given to changing how many districts there will be to vote for representation on the counsel. **Please leave current board representation as is!**

I strongly disagree with this idea/proposal. The current status of 5 districts and rotating mayor is the best way to go in my opinion. With Roseville area especially new growth will give newcomers the opportunity to approach our community with excitement on who they feel will represent them a bit more geographically. Having only 4 members on the council will limit how much time as counsel individuals will have to devote to residents of their newly formed LARGE DISTRICT instead of manageable size. Residents' concerns and input is very important as our town grows!

When Roseville was a small-town Counsel didn't use this formula. Why now when town is growing. Political reasons? Roseville is becoming the 'hub' for Placer County. Roseville is a great community and as a citizen I hope you take my input seriously.

I was very active in my local Bay Area city council & community but unfortunately, I'm currently away and cannot attend Board meeting tonight.

Thank you in advance for my concerns on the future of Roseville. If you have any questions, don't hesitate to contact me.

Sincerely,

Linda Johnsen

Subject: District preferences

EXTERNAL: This email originated from outside of the organization. Do not click on any links or open attachments unless you recognize the sender and know the content is safe.

My preferences are:

1) **5-districts** (for the 2019 districting) Then add a 6th district after we receive the 2020 census data to enable us to split the NW district into two separate districts in 2021 (minimizes impacts to the other 4 districts when we perform the 2nd re-districting since most of the growth from 2010 -> 2020 will be in the NW district)

2) **Rotating mayor**. Shows residents that all districts are treated equally because each district will eventually get someone from their district as mayor. Also, encourages council to work together because rotation determines who will be mayor, not the number of votes

3) **Use neighborhood association boundaries for creating districts**. Newer neighborhoods have different concerns than older neighborhoods. Neighborhood associations do a good job of merging together neighborhoods that were developed around the same time. Districts also need to reflect the differing concerns between older and newer neighborhoods so it makes sense to use those same neighborhood boundaries for districting.

Thank You,

Larry Hufty

Roseville 95747

FROM THE DESK OF PETE CONSTANT

TO: ROSEVILLE CITY COUNCILMEMBERS
FROM: PETE CONSTANT
SUBJECT: 10/02/2019 COUNCIL MEETING, AGENDA ITEM 10.1
DATE: OCTOBER 3, 2019
CC: PUBLIC RECORD

Thank you for the opportunity to address the city council at last evening's meeting. Unfortunately, due to time constraints I was not able to finish my comments on this very important topic.

As you are aware, I am a very engaged resident of our city. In addition to being the CEO of a national nonprofit organization headquartered in Roseville, I am the vice president of my neighborhood association, Fiddyment Farms Neighborhood Association, I am the chair of Board of Appeals, and vice chair of the Charter Review Commission. My comments last evening and in this letter, however, are my personal opinions.

I chose to move my family and bring the headquarters of my organization to Roseville because of its high quality of life and its history or being well run by people who truly care about our community. The thought of moving to district-based councilmembers is disheartening; I have seen up close and personal many cities where the "my district" mentality has led to myopic decision-making and poor policies. Of course, I understand the seriousness of CRVA and potential litigation and know there is no avoiding this transition. I hope that the future leaders of Roseville are able to keep the city-wide perspective and focus that has served us so well for so long.

While I understand the need to make the transition, I really don't understand the rush to move on this before the 2020 census is completed. The council is acting as if they have received a Demand Letter – yet they have not. It has not been alleged or demonstrated that Roseville has, in fact, impaired the ability of a protected class to influence an election. Nor has any dilution of voter been demonstrated.

I have heard many city leaders and councilmembers lamenting the fact that "we have to do this," when, in fact, this is a discretionary action of the city council. The council has *chosen* to act as if there is a demand letter, because they fear a demand letter.

It appears as if fear is guiding the process, rather than the best interests of the entire community.

There is much wisdom in the adage, Haste Makes Waste…

There are a number of issues with the accelerated timeline that has been established in an attempt to gain "safe harbor" protections for a *hypothetical threat of litigation.*

I believe moving forward in this manner will actually create *real* issues that will impact our residents, disenfranchise residents, create voter dilution, and expose the city to legal risk, including potentially being enjoined from implementing districts prior to the new census.

As you are well aware, Roseville has experienced a large amount of population growth since the last census. That growth has been concentrated in one geographic area – West Roseville (see population growth). Based on the recent growth rate, updating these projections to 2019 will likely add 2,500 additional people.

Year	Population	Growth	Annual Growth Rate	Year	Population	Growth	Annual Growth Rate
2018	139,117	4,016	2.97%	2013	126,659	2,348	1.89%
2017	135,101	2,402	1.81%	2012	124,311	1,715	1.40%
2016	132,699	2,738	2.11%	2011	122,596	2,801	2.34%
2015	129,961	1,657	1.29%	2010	119,795	39,874	4.13%
2014	128,304	1,645	1.30%				

Establishing districts based on the 2010 census would mean that over 20K residents primarily in one geographic area would be uncounted.

I am one of those residents that will not be counted

Due to the geographic dispersion and the layout of the city, there are limited options for spreading the "new" residents amongst more than one district as lines are drawn. I have tried myself and it will be extremely difficult – if not impossible.

Creating city council districts just prior to the 2020 census will create an actual, definable group of 20K people whose votes will be suppressed – additionally, the votes of the "counted" residents in the new district(s) will be diluted by the 20K additional uncounted people in the district. There are long-standing laws that prohibit the dilution of votes at the federal level. The courts have clearly and unambiguously stated that weighting votes differently according to where citizens happen to reside is discriminatory and that elected officials represent people, not areas. As far back as 1964 the Supreme Court held that The Equal Protection Clause requires substantially equal legislative representation for all citizens.

As noted by the demographers in their presentations, a concentration of Asian residents live in the area that will be uncounted. Asian-American residents comprise one of the city's largest minority group at 10%. Rushing to move to district elections will clearly create an environment wherein all "not counted" residents' votes are diluted and demonstrate a clear issue in regard to the CRVA violations.

While this may not be an issue if the city were to be forced into moving to elections, but I believe one could successfully argue that this is an oppressive government action when it is a purely discretionary action by the legislative body.

Under this timeline, these new districts would only be used for one election cycle, then immediately re-drawn in 2020 with the new census. Due to the large uncounted population the districts would have to be drastically redrawn. This could lead to people being in or out of a district one election cycle, then the opposite 2 years later. It is very likely that there will be voters that vote for district representatives 2 years in a row, while others don't vote for 6 years. There is no doubt that this will lead to voter confusion – voter confusion is known to suppress voter turnout.

Additionally, there are a number of charter provisions that relate to the elections of councilmembers that cannot be modified in time for the 2020 election. This means that in one election cycle – and only one election cycle – candidates will be guided by campaign finance regulations that are designed for campaigning citywide, while running in a district that is 1/4th, 1/5th, or potentially 1/7th the size of the city. In a time when people are

demanding to get money out of politics, this will exponentially increase spending on a per-voter basis for one election.

Waiting a short time in order to receive accurate census data will ensure the *intent* of FVRA and CVRA are afforded to all residents of Roseville. Clearly stating the council's intention to move to district elections and articulating the unique factors that necessitate an 2022 implementation, along with articulating why this implementation date will best serve to preserve the voting rights and equal protection of all residents will lay a clear foundation for mitigating the potential of receiving a demand letter and the risk of litigation. Councilmember Houdesheldt provided numerous examples of cities that have planned 2022 implementation dates.

I strongly suggest the city council rescind the prior council resolution and pass a new resolution that clearly states, but not necessarily limited to, the following:

- The council's intent to move to district elections
- The council's intent to preserve the voting rights and equal protection of all residents
- Acknowledges the city's unique situation having experienced substantial growth since the 2010 census that has increased population by approximately 20%, primarily in one geographic area
- Moving to district elections prior to receiving the new census data will result in a significant dilution of vote for tens of thousands of residents
- Moving to district elections prior to receiving the new census data will result in resident confusion and potential voter suppression due to immediately changing district boundaries
- Two changes in district boundaries within 2 adjacent elections will very likely create an environment in which some residents may vote for council representatives twice in two years, while other may only vote once in six years.
- The council has formed a Charter Review Commission and placed the issue of determining the appropriate number of council representatives and whether or not to move to city-wide mayoral representation on the commission's workplan
- The council has formed a Charter Review Commission to do a comprehensive review of all charter provisions that will or may be impacted by a move to district elections.
- Moving to district elections prior to review of inter-related charter provisions will cause significant disparities in the amount of campaign dollars raised and spent by members of the same city council due to incompatibility of current campaign finance law with district elections
- The only way to protect the voting rights of all residents under the CVRA and FVRA is to ensure that all residents are counted, preserving the legal requirement and moral imperative of *one person, one vote* and *equal protection under the law.*
- The only way to establish fair and equitable districts is to await the results of the impending federal census vote.

Again, the city is not "Forced" into doing this. The council has chosen to take this route due to a perceived – not actual – threat of litigation. Managing risk is important but *ensuring the integrity of your elections and the voice of the residents is More Important.* Not doing so, in my opinion, places the city in a higher level of risk due to its own, discretionary actions to create a crisis that doesn't yet exist and will create real issues of voter disenfranchisement, voter dilution, confusion, and community angst that are contrary to the intent of the CRVA and the FVRA.

Taking the course of action that is in the best interest of all residents will guide you to the safest harbor of all.

Thank you again for providing a forum for me to raise these important issues for the benefit of our community.
