On July 23 and 24, 2014, archaeologists conducted a field survey of the entire project site. The survey consisted of walking systematic parallel transects spaced 15 meters apart. The ground surface was examined for indications of surface or subsurface cultural resources. The general morphological characteristics of the ground surface were inspected for indications of subsurface deposits that may be manifested on the surface, such as circular depressions or ditches. Whenever possible, the locations of subsurface exposures caused by factors such as rodent activity, water or soil erosion, or vegetation disturbances were examined for artifacts or for indications of buried deposits.

The one previously recorded resource, the historic-period concrete building foundation (P-31-788), was not able to be located during the survey; based on recent and extensive road construction it appears that the resource was removed or demolished at some point. One feature was encountered during the survey (Dry-001), a concrete-encased sewer line; however this feature was determined not to meet the minimum requirements, as outlined in Attachment 4 of the Caltrans FHWA Section 106 Programmatic Agreement, and therefore the feature was not recorded or evaluated.

Following the field survey and preparation of an archaeological survey report, an XP1 study was conducted to better understand the potential for buried subsurface archaeological deposits along Dry Creek. Field work for the XP1 was performed by qualified archaeologists in March 2016 within the project site. Testing was focused on portions of the project site where deep excavation would occur (within constructed project facilities such as bridge abutments, culverts, and gabion basket walls). Subsurface testing was initiated by placing spiral manual auger holes at 20 locations where deep excavations would occur to install project facilities. The auger holes were excavated to investigate the presence or absence of archaeological deposits. Each auger hole consisted of a circular hole approximately 10 cm (4 inches) in diameter and was excavated in arbitrary 10- to 20-cm levels to depths of at least 40 to 60 cm, where feasible. Soil was then processed through 1/8-inch hardware mesh screens. A total of 53 spiral manual auger holes were excavated.

No buried cultural materials were found in any of the auger holes, which indicates that there is a low potential for archaeological sites present beneath the areas where deep ground disturbance would occur. The uniformity of soil type throughout the XP1 study area also indicates that there is a low potential for buried deposits throughout the project site as no midden or cultural material was observed in any of the auger holes. Furthermore, sites recorded within the vicinity of the project site exhibit surface manifestations, and therefore, any sites within the project site would be expected to be visible on the surface. Because no indications of buried archaeological sites were observed within the XP1 study area, there is a low potential for subsurface deposits throughout the project site.

4.4.3 Regulatory Setting

Cultural resources are protected and/or regulated by a variety of federal, state, and local laws and policies. Key regulatory and conservation planning issues applicable to the proposed project are discussed below.

FEDERAL

Section 106 of the National Historic Preservation Act

Federal protection of cultural resources is legislated by (a) the National Historic Preservation Act of 1966 as amended by 16 U.S. Code 470, (b) the Archaeological Resource Protection Act of 1979, and (c) the Advisory Council on Historical Preservation. These laws and organizations maintain processes for determination of the effects on historical properties eligible for listing in the National Register of Historic Places (NRHP).

Section 106 of the National Historic Preservation Act and accompanying regulations (36 Code of Federal Regulations [CFR] Part 800) constitute the main federal regulatory framework guiding cultural resources investigations and requires consideration of effects on properties that are listed in, or may be eligible for listing in the NRHP. The NRHP is the nation's master inventory of known historic resources. It is administered by the National Park Service and includes listings of buildings, structures, sites, objects, and districts that possess historic, architectural, engineering, archaeological, and cultural value.

The formal criteria (36 CFR 60.4) for determining NRHP eligibility are as follows:

1. The property is at least 50 years old (however, properties under 50 years of age that are of exceptional importance or are contributors to a district can also be included in the NRHP);

2. It retains integrity of location, design, setting, materials, workmanship, feeling, and associations; and

3. It possesses at least one of the following characteristics:

    a. Association with events that have made a significant contribution to the broad patterns of history (events).

    b. Association with the lives of persons significant in the past (persons).

    c. Distinctive characteristics of a type, period, or method of construction, or represents the work of a master, or possesses high artistic values, or represents a significant, distinguishable entity whose components may lack individual distinction (architecture).

    d. Has yielded, or may be likely to yield, information important to prehistory or history (information potential).

STATE

California Register of Historical Resources

All properties listed in or formally determined eligible for listing in the NRHP are eligible for the CRHR. The CRHR is a listing of State of California resources that are significant within the context of California's history. The CRHR is a statewide program of similar scope and with similar criteria for inclusion as those used for the NRHP. In addition, properties designated under municipal or county ordinances are also eligible for listing in the CRHR.

A historic resource must be significant at the local, state, or national level under one or more of the criteria defined in the California Code of Regulations (CCR) Title 15, Chapter 11.5, Section 4850. The CRHR criteria are similar to the NRHP criteria and are tied to CEQA because any resource that meets the criteria below is considered a historical resource under CEQA. As noted above, all resources listed in or formally determined eligible for the NRHP are automatically listed in the CRHR.

The CRHR uses four evaluation criteria for listing eligibility of a resource to the CRHR:

1. Is associated with events or patterns of events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States.

2. Is associated with the lives of persons important to local, California, or national history.

3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values.

4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

Similar to the NRHP, a resource must meet one of the above criteria and retain integrity. The CRHR uses the same seven aspects of integrity as the NRHP.

California Environmental Quality Act

CEQA requires public agencies to consider the effects of their actions on both "historical resources" and "unique archaeological resources." Pursuant to Public Resources Code (PRC) Section 21084.1, a "project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment." Section 21083.2 requires agencies to determine whether proposed projects would have effects on unique archaeological resources.

Historical Resources

"Historical resource" is a term with a defined statutory meaning (PRC, Section 21084.1; determining significant impacts to historical and archaeological resources is described in the State CEQA Guidelines, Sections 15064.5[a] and [b]). Under State CEQA Guidelines Section 15064.5(a), historical resources include the following:

1. A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Public Resources Code, Section 5024.1).

2. A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, will be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

3. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource will be considered by the lead agency to be historically significant if the resource meets the criteria for listing in the California Register of Historical Resources (Public Resources Code, Section 5024.1), including the following:

    a. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

    b. Is associated with the lives of persons important in our past;

    c. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

d. Has yielded, or may be likely to yield, information important in prehistory or history.

4. The fact that a resource is not listed in or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to Section 5020.1(k) of the Public Resources Code), or identified in a historical resources survey (meeting the criteria in Section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in PRC Section 5020.1(j) or 5024.1.

Unique Archaeological Resources

CEQA also requires lead agencies to consider whether projects will impact unique archaeological resources. Public Resources Code Section 21083.2, subdivision (g), states that unique archaeological resource means an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.

2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.

3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

California Native American Historical, Cultural, and Sacred Sites Act

The California Native American Historical, Cultural, and Sacred Sites Act applies to both State and private lands. The Act requires that upon discovery of human remains, construction or excavation activity cease and the county coroner be notified. If the remains are of a Native American, the coroner must notify NAHC. The NAHC then notifies those persons most likely to be descended from the Native American's remains. This act stipulates the procedures the descendants may follow for treating or disposing of the remains and associated grave goods.

California Health and Safety Code

Section 7052 of the Health and Safety Code states that the disturbance of Native American cemeteries is a felony. Section 7050.5 requires that construction or excavation be stopped in the vicinity of discovered human remains until the coroner can determine whether the remains are those of a Native American. If determined to be Native American, the coroner must contact the California NAHC. Section 7050.5 (b) of the California Health and Safety code specifies protocol when human remains are discovered. The code states:

> In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the human remains are discovered has determined, in accordance with Chapter 10 (commencing with Section 27460) of Part 3 of Division 2 of Title 3 of the Government Code, that the remains are not subject to the provisions of Section 27492 of the Government Code or any other related provisions of law concerning investigation of the circumstances, manner and cause of death, and the recommendations concerning treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in Section 5097.98 of the Public Resources Code.

Public Resource Code, Section 5097

PRC Section 5097 specifies the procedures to be followed in the event of the unexpected discovery of human remains on nonfederal land. The disposition of Native American burial falls within the jurisdiction of the NAHC. Section 5097.5 of the Code states the following:

> No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.

ASSEMBLY BILL 52

Assembly Bill (AB) 52, signed by Governor Edmund G. Brown, Jr., in September of 2014, establishes a new class of resources under CEQA: "tribal cultural resources." It requires that lead agencies undertaking CEQA review must, upon written request of a California Native American tribe, begin consultation once the lead agency determines that the application for the project is complete, prior to the issuance of an NOP of an EIR or notice of intent to adopt a negative declaration or mitigated negative declaration. AB 52 also requires revision to CEQA Appendix G, the environmental checklist. This revision would create a new category for "tribal cultural resources."

The procedural requirements for tribal consultation in AB 52 applies to those projects for which a lead agency has issued an NOP of an EIR or notice of intent to adopt a negative declaration or mitigated negative declaration on or after July 1, 2015. Because the NOP for the proposed project was issued on November 18, 2013, the consultation requirements of AB 52 do not apply. Nonetheless, as described previously in this section (see Native American Consultation and Other Interested Parties, above), the City of Roseville reached out to tribes and attempted communication with the T'si-Akim Maidu, who had requested to participate in project construction monitoring. The analysis addresses known and potential unknown cultural resources, including potential tribal cultural resources, which include as qualifying criteria listing on the state register or a local register, or a determination by the lead agency that an unlisted resource would be eligible for listing. None of the cultural resources identified in the EIR analysis meet these criteria, so no known tribal cultural resources are present in the project site. However, this requirement will apply to future projects where CEQA review is necessary.

LOCAL

City of Roseville General Plan

The Open Space and Conservation Element contains the following goal related to archaeological, historic, and cultural resources.

GOAL 1: Strengthen Roseville's unique identify through the protection of its archaeological, historic and cultural resources.

- **Policy 1:** When items of historical, cultural or archaeological significance are discovered within the City, a qualified archaeologist or historian shall be called to evaluate the find and to recommend proper action.
- **Policy 2:** When feasible, incorporate significant archaeological sites into open space areas.
- **Policy 3:** Subject to approval by the appropriate federal, state, local agencies, and Native American Most Likely Descendant (MLD), artifacts that are discovered and subsequently determined to be "removable" should be offered for dedication to the Maidu Interpretive Center.

4.4.4 Impacts

METHODS OF ANALYSIS

The impact analysis for prehistoric and historic-period archaeological resources is based on the findings and recommendations of the report titled *Archeological Survey Report for the Dry Creek Greenway Multi-Use Trail Project*, prepared by ECORP Consulting, Inc. (2014), and the *Dry Creek Greenway Multi-Use Trail Project Extended Phase I Report*, prepared by ECORP Consulting, Inc. (2016). The analysis is also informed by the provisions and requirements of federal, state, and local laws and regulations that apply to cultural resources. See the discussion above under "Archaeological Survey" for a description of the field surveys conducted for the proposed project.

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the proposed project was determined to result in a significant impact to cultural resources if it would:

- cause a substantial adverse change in the significance of an historical resource as defined in Section 15064.5 of the CEQA Guidelines;
- cause a substantial adverse change in the significance of an archaeological resource as defined in Section 15064.5 of the CEQA Guidelines;
- disturb any human remains, including those interred outside of formal cemeteries; or
- cause a substantial adverse change in the significance of a tribal cultural resource as defined in PRC Section 21074.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

No historic architectural resources were identified on the project site because no buildings of historic-age were identified on the project site. Therefore, project construction and use would have no impact on historical resources, and this issue is not discussed further in this EIR.

IMPACT ANALYSIS

Impact 4.4-1	Disturb archaeological resources, including tribal cultural resources.
Applicable Policies and Regulations	Section 106 of the National Historic Preservation Act CEQA pursuant to PRC 21083.2 California Register of Historical Resources California Native American Historical, Cultural, and Sacred Sites Act City of Roseville General Plan Open Space and Conservation Element
Significance with Policies and Regulations	Proposed Project: Potentially significant Alignment Option 1A: Potentially significant Alignment Option 1C: Potentially significant Alignment Option 5A: Potentially significant
Mitigation Measures	Mitigation Measure 4.4-1 (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts

The project is a 4.25-mile multi-use trail that would follow creek corridors along portions of Dry, Cirby, and Linda Creeks. The multi-use trail would generally consist of a 10-foot wide paved trail with two-foot wide shoulders. The project would also include the construction of up to eight bridges to provide creek crossings along with areas of bank stabilization.

No new cultural resources were recorded during the field survey of the project site. One feature was encountered during the survey (Dry-001), a concrete-encased sewer line; however, this feature was determined not to meet Caltrans' minimum requirements; therefore, the feature is not considered to be an historical or unique archaeological resource. Disturbing it would not be significant for the purposes of CEQA. Previously recorded site P-31-788 was not relocated during the survey.

Following the field survey and preparation of an archaeological survey report, an XP1 was performed to better understand the potential for buried subsurface archaeological deposits along Dry Creek within the project site. Excavation was focused on portions of the project site where deep excavation will occur (within constructed project facilities such as bridge abutments, culverts, and gabion basket walls), and a total of 53 spiral manual auger holes were excavated. As a result of the study, no buried cultural material was found in the auger holes and the uniformity of soil type throughout the study area also indicates that there is a low potential for buried deposits throughout the project site. Furthermore, sites recorded within the vicinity of the study area exhibit surface manifestations, and therefore, any sites within the project site would be expected to be visible on the surface. Because no indications of buried archaeological sites were observed within the study area, there is a low potential for subsurface deposits throughout the project site.

Based on the findings of the background research, records searches, and the results of the XP1 study, the project site has low sensitivity for prehistoric and historic-era archaeological resources. No evidence of a potential tribal cultural resources was found. Nonetheless, project construction could encounter previously undiscovered or unrecorded archaeological sites and materials during project-related preconstruction or construction-related ground disturbing activities, such as removing existing vegetation from the project site (i.e., trail footprint and construction zone), excavation and contouring to establish the trail bed, or excavation for retaining wall footings and bridge abutments. These activities could damage or destroy previously undiscovered archaeological resources.

Use-related Impacts

The proposed project is a multi-use bike trail and use of the project would consist primarily of pedestrian and bicycle users, although occasional utility access or emergency vehicle use is also expected. Uses would generally be confined to the paved trail and would not include grading, excavation, or other earth-moving activities.

Conclusion

The XP1 study focused the 53 auger tests throughout the project site where deep excavation would occur and found no buried cultural material and, therefore, concluded there is a low potential for subsurface deposits throughout the project site. While the depth, type, and location of project construction activities would have no impact on the likelihood of such a discovery, because the XP1 found no cultural material to indicate locational probability, it is possible that project construction could result in the disturbance or discovery of previously undiscovered or unrecorded archaeological sites and materials. If such resources were to represent "unique archaeological resources" or "tribal cultural resources" as defined by CEQA, any substantial change to, or destruction of, these resources would be a potentially significant impact. For these reasons, the project could result in the damage or destruction of an as yet undiscovered archaeological resource; therefore, this would be a **potentially significant** impact.

Alignment Option 1A
Construction activities under Alignment Option 1A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream.

As discussed above under the Proposed Trail Alignment, excavation and other ground-disturbing activities could damage or destroy as yet undiscovered archaeological resources. If such resources were to represent or "unique archaeological resources" or "tribal cultural resources" as defined by CEQA, this would be a **potentially significant** impact.

Alignment Option 1C
Construction activities under Alignment Option 1C would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek.

As discussed above under the Proposed Trail Alignment, excavation and other ground-disturbing activities could damage or destroy as yet undiscovered archaeological resources. If such resources were to represent or "unique archaeological resources" or "tribal cultural resources" as defined by CEQA, this would be a **potentially significant** impact.

Alignment Option 5A
Construction activities under Alignment Option 5A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. East of Eastwood Park, Alignment Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek.

As discussed above under the Proposed Trail Alignment, excavation and other ground-disturbing activities could damage or destroy as yet undiscovered archaeological resources. If such resources were to represent or "unique archaeological resources" or "tribal cultural resources" as defined by CEQA, this would be a **potentially significant** impact.

Mitigation Measures

Mitigation Measure 4.4-1: Proper Handling of Archaeological Resources.
This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A.

A minimum of seven days prior to beginning earthwork or other soil disturbance activities, the City shall notify UAIC of the proposed earthwork start-date. As part of this notification, a UAIC tribal representative shall be invited to inspect the project site, including any soil piles, trenches, or other disturbed areas, within the first five days of groundbreaking activity. During this inspection, a site meeting of construction personnel shall also be held to afford the tribal representative the opportunity to provide cultural resources awareness information. If any cultural resources, such as structural features, unusual amounts of bone or shell, artifacts, human remains, or architectural remains are encountered during this initial inspection or during any subsequent construction activities, work shall be suspended within 100 feet of the find, and the City's Project Manager shall immediately notify the City of Roseville Development Services Director. The City's Project Manager, in consultation with the City's Environmental Coordinator, shall coordinate any necessary investigation of the site with a qualified archaeologist approved by the City, and as part of the site investigation and resource assessment the archeologist shall consult with the UAIC and provide proper management recommendations should potential impacts to the resources be found by the City to be significant. A written report detailing the site assessment, coordination activities, and management recommendations shall be provided to the City by the qualified archaeologist. Possible management

recommendations for unique archaeological resources could include resource avoidance or, where avoidance is infeasible in light of project design or layout or is unnecessary to avoid significant effects, preservation in place or other measures. The contractor shall implement any measures deemed by City staff to be necessary and feasible to avoid or minimize significant effects to the cultural resources.

Significance after Mitigation

Implementation of Mitigation Measure 4.4-1 would reduce impacts associated with archaeological resources to a **less-than-significant** level because it would require the performance of professionally accepted and legally compliant procedures for the discovery of previously undocumented significant archaeological resources.

Impact 4.4-2	Accidental discovery of human remains.
Applicable Policies and Regulations	California Health and Safety Code Sections 7050.5 and 7052 California Public Resources Code Section 5097 California Native American Historical, Cultural and Sacred Sites Act City of Roseville General Plan Open Space and Conservation Element
Significance with Policies and Regulations	Proposed Project: Potentially significant Alignment Option 1A: Potentially significant Alignment Option 1C: Potentially significant Alignment Option 5A: Potentially significant
Mitigation Measures	Mitigation Measure 4.4-2 (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts

The project is a 4.25-mile multi-use trail that would follow creek corridors along portions of Dry, Cirby, and Linda Creeks. The multi-use trail would consist of a 10-foot wide paved trail with two-foot wide shoulders. The project would also include the construction of up to eight bridges to provide creek crossings along with areas of bank stabilization.

Based on documentary research, no evidence suggests that any prehistoric or historic-era marked or un-marked human interments are present within or in the immediate vicinity of the project site. However, there is a possibility that unmarked, previously unknown Native American or other graves could be present within the project site and could be uncovered by project-related construction activities. The location of grave sites and Native American remains can occur outside of identified cemeteries or burial sites. Construction of the proposed multi-use trail would require removal of vegetation and existing features, grading, construction of five roadway undercrossings, and construction or modification of up to eight bridges. These construction activities would create ground disturbance that could uncover previously unknown human remains.

Use-related Impacts

The proposed project is a multi-use bike trail and use of the project would occur primarily by pedestrians and bicyclists, although occasional utility access or emergency vehicle use is also expected. Uses would be generally confined to the paved trail and would not include grading, excavation, or other earth-moving activities.

Conclusion

Although there are no known prehistoric or early historic interments on the project site, project-related construction activities could uncover or otherwise disturb previously undiscovered or unrecorded human remains. Disturbance of human remains would be a **potentially significant** impact.

Alignment Option 1A

Construction activities under Alignment Option 1A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream.

As discussed above under the Proposed Trail Alignment, although there are no known prehistoric or early historic interments on the project site, project-related construction activities could uncover or otherwise disturb previously undiscovered or unrecorded human remains. Disturbance of human remains would be a **potentially significant** impact.

Alignment Option 1C

Construction activities under Alignment Option 1C would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek.

As discussed above under the Proposed Trail Alignment, although there are no known prehistoric or early historic interments on the project site, project-related construction activities could uncover or otherwise disturb previously undiscovered or unrecorded human remains. Disturbance of human remains would be a **potentially significant** impact.

Alignment Option 5A

Construction activities under Alignment Option 5A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. East of Eastwood Park, Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek.

As discussed above under the Proposed Trail Alignment, although there are no known prehistoric or early historic interments on the project site, project-related construction activities could uncover or otherwise disturb previously undiscovered or unrecorded human remains. Disturbance of human remains would be a **potentially significant** impact.

Mitigation Measures

Mitigation Measure 4.4-2: Stop work if human remains are discovered.

This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A.

If human remains are discovered during any construction activities, potentially damaging ground-disturbing activities in the area of the remains shall be halted immediately, and the project applicant shall notify the Placer County coroner and the NAHC immediately, according to Section 5097.98 of the State Public Resources Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined by the NAHC to be Native American, the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains. The City shall also retain a professional archaeologist with Native American burial experience to conduct a field investigation of the specific site and consult with the MLD, if any, identified by the NAHC. Following the coroner's and NAHC's findings, the archaeologist, and the NAHC-designated MLD shall determine the ultimate treatment and disposition of the remains and take appropriate steps to ensure that additional human interments are not disturbed. The responsibilities

for acting upon notification of a discovery of Native American human remains are identified in California Public Resources Code Section 5097.94.

Significance after Mitigation

Implementation of Mitigation Measure 4.4-2 would reduce potentially significant impacts related to disturbance of human remains, because actions would be implemented to avoid, move, record, or otherwise treat the remains appropriately, in accordance with pertinent laws and regulations. By providing an opportunity to avoid or minimize the disturbance of human remains, and to appropriately treat any remains that are discovered, this impact would be reduced to a **less-than-significant** level.

4.5 GEOLOGY AND SOILS

4.5.1 Introduction

This section identifies and evaluates potential impacts that could result from geologic or soil conditions as a result of implementation of the Dry Creek Greenway East Trail. This section is based primarily on the *Dry Creek Greenway Trail Fluvial Audit* (City of Roseville and Psomas 2014) and the *Preliminary Geotechnical Evaluation, Dry Creek Greenway Multi-Use Trail Project, City of Roseville, CA* (Parikh 2015), as well as the *Engineering Design Considerations and Evaluation based on Geomorphology Study* (Psomas 2014).

No comments related to geology and soils were received during public review of the Notice of Preparation.

4.5.2 Environmental Setting

REGIONAL SETTING

The project site is located in the Great Valley geomorphic province, which consists of the central part of California between the Coast Range and the Sierra Nevada. The Great Valley is an alluvial plain that is approximately 50 miles wide and 400 miles long where sediment has been deposited almost continually for roughly 160 million years. The proposed project would be located in the northern part of the Great Valley, which is drained by the Sacramento River (California Geological Survey [CGS] 2002).

LOCAL SETTING

Geology

The geology of the area consists of transitional formations between alluvial deposits of the valley and volcanic material of the Sierra Nevada. The City of Roseville is characterized by flat and rolling terrain, as well as rounded knolls and ridges separated by intermittent streams. Pleasant Grove Creek and its tributaries are the primary surface water drainages in northern Roseville; Dry Creek and its tributaries are the primary surface water drainages in southern Roseville. The area slopes gently westward toward the Sacramento River.

Subsurface conditions are mapped by CGS as alluvium deposited in the Holocene (i.e., between 11,700 years ago and the present time) along Dry Creek and Pleistocene-age (i.e., from about 2,588,000 to 11,700 years ago) alluvial deposits classified in the Modesto Formation and Turlock Lake Formation along Cirby and Linda Creeks. Samples indicate that subsurface soils are generally loose, granular (i.e., sandy or silty) materials within 10 to 20 feet of the surface that increase in density with depth. Groundwater is anticipated to fluctuate, but to generally be at or above creek level (Parikh 2015).

Paleontological Setting

Significant nonrenewable vertebrate and invertebrate fossils and unique geologic units have been documented throughout California. The fossil-yielding potential of a particular area is highly dependent on the geologic age and origin of the underlying rocks (refer to geologic timescale in Table 4.5-1). Paleontological potential refers to the likelihood that a rock unit will yield a unique or significant paleontological resource. All sedimentary rocks, some volcanic rocks, and some low-grade metamorphic rocks have potential to yield paleontological resources. Depending on location, the

paleontological potential of subsurface materials generally increases with depth beneath the surface, as well as with proximity to known fossiliferous deposits.

Table 4.5-1 Divisions of Geologic Time

Era	Period	Time in Millions of Years Ago (approximately)	Epoch
Cenozoic	Quaternary	< 0.01	Holocene
		2.6	Pleistocene
	Tertiary	5.3	Pliocene

Precambrian		2,500	

Source: U.S. Geological Survey 2010

Pleistocene or older (older than 11,000 years) continental sedimentary deposits are considered as having a high paleontological potential while Holocene-age deposits (less than 10,000 years old) are generally considered to have a low paleontological potential because they are geologically immature and are unlikely to have fossilized the remains of organisms. Metamorphic and igneous rocks have a low paleontological potential, either because they formed beneath the surface of the earth (such as granite), or because they have been altered under high heat and pressures, chaotically mixed or severely fractured. Generally, the processes that form igneous and metamorphic rocks are too destructive to preserve identifiable fossil remains.

The project site is located in the Great Valley geomorphic province, consisting of the central part of California between the Coast Range and the Sierra Nevada. The Great Valley is an alluvial plain that is approximately 50 miles wide and 400 miles long where sediment has been deposited almost continually for roughly 160 million years. The proposed project site is located in the northern part of the Great Valley, which is drained by the Sacramento River (CGS 2002). Geology in the area consists of transitional formations between alluvial deposits of the central valley and volcanic material of the Sierra Nevada.

Subsurface conditions are mapped by CGS as alluvium deposited in the Holocene (i.e., between 11,700 years ago and the present time) along Dry Creek and Pleistocene-age (i.e., from about 2,588,000 to 11,700 years ago) alluvial deposits classified in the Modesto Formation and Turlock Lake Formation along Cirby and Linda Creeks. Recognizing the age of alluvial soils, the potential exists to encounter paleontological resources. Samples indicate that subsurface soils are generally loose,

granular (i.e., sandy or silty) materials within 10 to 20 feet of the surface that increase in density with depth (Parikh 2015).

Faults and Seismicity

Seismically-induced ground rupture, the physical displacement of surface deposits in response to an earthquake's seismic waves, is considered most likely along faults that have a record of displacement sometime in the past 11,000 years (the Holocene Epoch). These faults are considered active. Faults on which an event is believed to have occurred during the Quaternary time (approximately the last 1.6 million years) are considered potentially active. All other faults are considered inactive.

The nearest known active fault is the Cleveland Hill Fault, located approximately 41 miles north of Roseville. The Dunnigan Hills and Midland faults, which both have unknown histories of activity and are located approximately 13 and 19 miles from the City of Roseville, respectively, present the highest potential to produce ground shaking at the project site. Ground shaking could also originate from seismic activity along the larger, but relatively distant Foothill or San Andreas fault systems, the nearest components of which are approximately 20 and 55 miles away from the City of Roseville, respectively (City of Roseville 2010).

There are also three inactive faults located near Roseville: the Volcano Hill fault, the Linda Creek fault, and one unnamed fault. The Volcano Hill fault is located northwest of Volcano Hill and extends northwesterly for approximately 1 mile starting just east of the city limits. The Linda Creek fault, the existence of which is disputed because of lack of recorded activity, is suspected to extend along a portion of Linda Creek through Roseville and a portion of Sacramento County. The unnamed fault extends in an east-west direction between Folsom Lake and the City of Rocklin. Portions of this unnamed fault are concealed, and it is possible that the fault is connected to the Bear Mountain Fault near Folsom Lake (City of Roseville 2010: 12-7).

Ground Shaking

Ground shaking is a general term referring to all aspects of motion of the earth's surface resulting from an earthquake, and is normally the major cause of damage in seismic events. The extent of ground shaking is controlled by the magnitude and intensity of the earthquake, distance from the epicenter, and local geologic conditions.

There is a 25 percent probability of an earthquake of greater than 5.0 magnitude occurring within the next 50 years on the project site due to nearby faults (U.S. Geological Survey 2009). An earthquake that registers 5.0 on the Richter magnitude scale (which is used to quantify the energy released by an earthquake) is of moderate intensity and would be widely felt but would not cause damage to buildings unless they are poorly constructed. The last nearby seismic event measuring at least 4.0 on the Richter scale occurred between Placerville and Roseville in 1908 on a north-south fault line between Folsom and Auburn (City of Roseville 2010:12-3). No significant seismic event has been recorded since that time within the vicinity of Roseville, and the South Placer area is classified as a low severity earthquake zone. No Alquist-Priolo Earthquake Fault Zones are located in the City of Roseville or in Placer County (CGS 2010).

Liquefaction and Lateral Spreading

Soil liquefaction is caused by pressure waves moving through the ground because of earthquakes. Loose, granular soils and non-plastic silts that are saturated by relatively shallow groundwater (generally less than 50 feet) are susceptible to liquefaction. Liquefaction causes soil to lose strength and "liquefy," triggering structural distress or failure because of the dynamic settlement of the ground or a loss of strength in the soils underneath structures. Liquefaction in a subsurface layer can in turn cause lateral spreading of the ground surface, which usually takes place along weak shear zones that have formed within the liquefiable soil layer.

Seismic Hazard Zones are regulatory zones mapped by CGS that encompass areas prone to liquefaction and earthquake-induced landslides. The CGS has not mapped the project site as a Seismic Hazard Zone; this indicates that the risk for liquefaction is low. However, based on review of the area geology and existing boring data, the preliminary geotechnical evaluation identified the potential for liquefaction in the project area because of the presence of sandy and granular soils, and the expectation of loose sand along the creeks (Parikh 2015:4).

Slope Failure

Slope failures, commonly referred to as landslides, include many phenomena that involve the downslope displacement and movement of material, triggered either by static (i.e., gravity) or dynamic (i.e., earthquake) forces. Soil slopes can experience soil slumps, rapid debris flows, and deep-seated rotational slides. Landslides can occur on slopes of 15 percent or less, but the probability is greater on steeper slopes. Slope stability can depend on a number of complex variables, including the geology, structure, and amount of groundwater, as well as external processes such as climate, topography, slope geometry, and human activity. Overall, the risk of landslides within and adjacent to the project site caused by seismic events or project activities is low.

Soil Characteristics

Soils in the Roseville area are generally associated with stream terraces and alluvial bottoms. These soils are typically deep and well drained, have low permeability, low shrink-swell potential, and low soil strength.

Table 4.5-2 provides a list of the soil map units identified by the Natural Resources Conservation Service (NRCS) as occurring within the project area. As indicated in Exhibit 4.5-1, most of the project site is characterized by xerofluvents (coarse textured stream deposits) that are occasionally or frequently flooded. These soils have moderate shrink-swell potential and low to moderate susceptibility to erosion. Staging areas and access ways are characterized by Cometa-Ramona sandy loams, Fiddyment loam, and cut and fill areas.

Table 4.5-2 Characteristics of Soils on the Project Site

Soil Map Unit Name	Shrink-Swell Potential[1]	Water Erosion Hazard[2]	Wind Erosion Hazard[3]	% of Total Project Site
Cometa-Fiddyment complex, 1 to 5% slopes	1.5	0.49	3	0.1
Cometa-Ramona sandy loams, 1 to 5% slopes	1.5	0.32	3	1.6
Fiddyment loam, 1 to 8% slopes	1.5	0.49	5	5.6
Urban land-Xerarents-Fiddyment complex, 0 to 8% slopes	-	-	-	0.1
Xerofluvents, frequently flooded	4.5	0.32	3	76.9
Xerofluvents, occasionally flooded	4.5	0.32	2	13.2
Xerorthents, cut and fill areas	-	-	-	2.6

Notes:

[1] Based on percentage of linear extensibility (i.e., the change in length of an unconfined clod as moisture content is decreased from a moist to a dry state). Linear extensibility of less than 3 indicates a low shrink-swell potential, 3 to 6 is associated with moderate potential,6 to 9 is associated with high potential, and over 9 is very high potential for shrink-swell conditions. Ratings over 3 are associated with damage buildings, roads, and other structures

[2] Based on the erosion factor "Kw," which indicates the erodibility of the whole soil (i.e., modified for the presence of rock fragments). The K factor is a measurement of relative soil susceptibility to sheet and rill erosion by water. Values range from 0.02 to 0.69; higher values are more susceptible to erosion.

[3] Based on the wind erodibility group designated by NRCS. The soils assigned to group 1 are the most susceptible to wind erosion, and those assigned to group 8 are the least susceptible.

Source: NRCS 2015

Exhibit 4.5-1

Soils

ASCENT ENVIRONMENTAL

Expansive Soils

Expansive soils contain substantial amounts of clay particles that have the ability to give up water (shrink) or take on water (swell). When these soils swell, the change in volume can exert pressures on loads that are placed on them, such as building and structure foundations or underground utilities, and can result in structural distress and/or damage. Often, grading, site preparations, and backfill operations associated with subsurface structures can eliminate the potential for expansion. Xerofluvents in areas that experience flooding, which comprise approximately 86.9 percent of the project site, are moderately expansive.

Erosion and Runoff

Erosion is a natural process whereby soil and highly-weathered rock materials are worn away and transported, most commonly by wind or water. Natural rates of erosion can vary depending on slope, soil type, and vegetative cover. Soils containing high amounts of silt are typically more easily eroded, while coarse-grained (sand and gravel) soils are generally less susceptible to erosion.

Soil erosion can become problematic when human intervention causes rapid soil loss and the development of erosional features (e.g., incised channels, rills, and gullies) that undermine roads, buildings, or utilities. Vegetation clearing and earth moving reduces soil structure and cohesion, resulting in accelerated erosion. The operation of construction-related heavy machinery and vehicles over access roads, staging areas, and work areas could compact soils and decrease their capacity to absorb runoff, resulting in rills, gullies, and excessive sediment transport.

As indicated in Table 4.5-3, the soils on the project site are generally moderately susceptible to erosion. NRCS also classifies soil according to suitability and limitations for use, including roads and trails. This mapping, which is based on regional data, indicates that approximately 87 percent of the project site has a low erosion hazard when used for roads and trails, another 11 percent has a moderate hazard, and the remaining area is not rated. Additionally, site-specific bank erosion severity has been mapped for the project site. As summarized in Table 4.5-3, below, most of the creek banks have moderately severe bank erosion.

Table 4.5-3 Bank Erosion Severity in Project Site

Bank Erosion Severity	Length (Feet)	% of Total
Minor	284.59	16
Moderate	880.32	50
Moderate-High	361.51	21
High	222.92	13
Total (feet)	**1,749.34**

4.5.3 Regulatory Setting

FEDERAL

National Pollutant Discharge Elimination System Program

Under Section 402 of the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) regulates point sources of pollution of waters of the United States. The California State Water Resources Control Board administers the NPDES permit program in California. Projects that disturb 1 acre or more

of soil must obtain coverage under the state's NPDES General Permit for Discharges of Storm Water Associated with Construction Activity. A stormwater pollution prevention plan (SWPPP) must be developed and implemented that provides specific construction-related best management practices (BMPs) to prevent soil erosion and loss of topsoil. The required components and BMPs commonly included in a SWPPP are described in greater detail in Section 4.8, "Hydrology and Water Quality."

STATE

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act was passed in 1972 to mitigate the hazard of surface faulting to structures for human occupancy. In accordance with this act, the State Geologist established regulatory zones, called "earthquake fault zones," around the surface traces of active faults and published maps showing these zones. The project site is not located in an Alquist-Priolo Earthquake Fault Zone.

Seismic Hazards Mapping Act

The Seismic Hazards Mapping Act was developed to protect the public from the effects of strong ground shaking and other hazards caused by earthquakes. This act requires the State Geologist to delineate "zones of required investigation" (i.e., seismic hazard zones) where site investigations are required to determine the need for mitigation of potential liquefaction and/or earthquake-induced landslide. There are no Seismic Hazard Zone maps for Placer County.

LOCAL

City of Roseville General Plan

The General Plan Safety Element includes policies intended to address potential geology, soils, and seismic impacts. These policies are implemented through the Building Permit process (for structures) and the Design and Construction Standards. The specific goals and policies applicable to the proposed project are:

<u>Seismic and Geologic Hazards</u>
GOAL 1: Minimize injury and property damage because of seismic activity and geologic hazards.

- **Policy 3:** Minimize soil erosion and sedimentation by maintaining compatible land uses, suitable building designs, and appropriate construction techniques.
- **Policy 6:** Require contour grading, where feasible, and re-vegetation to mitigate the appearance of engineered slopes and to control erosion.

City of Roseville Design and Construction Standards

The City of Roseville's Design and Construction Standards (last amended in April of 2015) provide a reference to the City's requirements for the design and construction of civil improvement projects, which are to be dedicated to the public and accepted by the City for maintenance or operation, and to provide for coordinated development of those facilities to be used by and for the protection of the public.

City of Roseville Guidance for Stormwater Quality Best Management Practices

Control of construction site stormwater runoff is required by the NPDES stormwater permit that the SWRCB issued the City in 2004. The *Stormwater Quality BMP Guidance Manual for Construction* (City of Roseville 2011) is designed to facilitate compliance with the City's Stormwater Management Plan. See Section 4.8, "Hydrology and Water Quality," for additional discussion of SWPPP requirements and BMPs.

Roseville Multi-Hazard Mitigation Plan

The Roseville Multi-Hazard Mitigation Plan is intended to provide a long-term planning vision to reduce the impacts of future disasters from multiple hazards, including drought, earthquake, flood, landslide, severe weather, and fire hazard.

City of Roseville Emergency Operations Plan

The City of Roseville Emergency Operations Plan is designed to guide users through emergency preparedness, response, recovery, and mitigation in response to extraordinary emergency situations associated with various potential disasters, including earthquakes.

4.5.4 Impacts

METHODS OF ANALYSIS

Potential impacts related to geologic and soil resources resulting from project construction were determined through review of available soil and fault maps for the project area, including the City of Roseville General Plan, U.S. Department of Agriculture NRCS Soil Surveys, and geologic data produced by CGS. The information obtained from these sources was reviewed and summarized to establish existing conditions and to identify potential environmental effects based on the standards of significance presented in this section.

In addition, this analysis incorporates the findings of the *Dry Creek Greenway Trail Fluvial Audit* (City of Roseville and PSOMAS 2014) and the *Preliminary Geotechnical Evaluation, Dry Creek Greenway Multi-Use Trail Project, City of Roseville, CA* (Parikh 2015). These reports were prepared to inform project design. Many of the recommendations of these studies and those contained in the *Engineering Design Considerations and Evaluation based on Geomorphology Study* (PSOMAS 2014), such as bank stabilization elements, have been incorporated into the project, as described in Chapter 3, “Project Description,” of this Draft EIR.

This assessment recognizes that bridge crossings and other areas with slope stability concerns would be designed with input from geotechnical professionals, based on existing data and supplemental geotechnical investigations, as appropriate. Special design features may include retaining walls with tie backs for added support and slope paving to reduce the potential for erosion. These elements would be designed and constructed to meet the California Department of Transportation’s (Caltrans) standard performance specifications.

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the proposed project was determined to result in a significant impact related to geology and soils resources if it would:

- expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:
  - rupture of a known earthquake fault, as delineated by the most recent Alquist-Priolo Earthquake Faulting Map issued by the State Geologist for the area or based on other substantial evidence of a known fault;
  - strong seismic ground shaking;
  - seismic-related ground failure, including liquefaction;
  - landslides;
- result in substantial soil erosion or the loss of topsoil;

- be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse;
- be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating a substantial risk to life or property;
- have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of wastewater; or
- directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

The proposed project would not include the construction or operation of restrooms, and the project would not include infrastructure to connect to the City of Roseville wastewater system, nor result in the need for septic tanks. Therefore, the potential for site soils to support septic tanks or alternative wastewater disposal systems is not evaluated in this section.

IMPACT ANALYSIS

Impact 4.5-1	Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving: rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, or landslides.
Applicable Policies and Regulations	City of Roseville Design and Construction Standards; Roseville Multi-hazard Mitigation Plan; City of Roseville Emergency Operations Plan
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

As noted in the environmental setting section above, the project site is not in an area where strong seismic ground shaking is anticipated. In addition, the potential for surface rupture is low because no active faults pass through the site. Geographic conditions, soil conditions, and surface terrain combine to minimize risk of major damage from landslides, subsidence, or other geologic hazards that could result from seismic activity and related natural forces in the City (City of Roseville 2013). Based on available geological and seismic data, the potential for strong ground shaking in the project area is moderate (Parikh 2015:3).

However, the site is predominantly composed of Xerofluvent soils, which could be subject to localized creep, slumping, and small landslides on over-steepened slopes, along incised drainages, and during periods of water saturation. Retaining walls, including gravity walls (reinforced concrete) and anchored walls (soil nail and tie back walls), are proposed at several locations where the proposed trail is located near an exposed bank or an area susceptible to slumping. The type and extent of the proposed retaining walls are shown in Table 3-3 in Chapter 3, “Project Description.”

Complete plans and specifications for the proposed multi-use trail would be submitted to the Public Works Engineering Division for review and approval prior to construction. Pursuant to Section 13 of the City of Roseville Design and Construction Standards, “Bikeways,” these plans would be based on soil tests taken at least every 1,000 feet along the trail alignment, or as directed by the City Engineer. The

structural section of the path would be designed to support a gross vehicular weight of 30,000 pounds where it would be used for access by maintenance or emergency vehicles.

The preliminary geotechnical evaluation indicates that, with information from these site-specific borings, the potential effects of liquefaction could be accommodated with implementation of standard design practices. Any effects of liquefaction potential would be considered in the structural design (Parikh 2015). Project elements, such as retaining walls, may be added or modified in the plans based on further geotechnical investigations.

Construction Impacts

The potential for a seismic event to result in a geologic hazard during construction is low because there is a lack of active faulting close enough to the project area to create a significant hazard. However, construction of the project would require excavation in an area with steep banks and loose, granular soils that could be susceptible to localized areas of slope failure. As discussed above, construction specifications would be developed for the project based on detailed soil testing and site specific geotechnical engineering.

Use-related Impacts

The project would not include any occupied structures, and trail design would include features, such as retaining walls, to provide support where bank cuts would occur below existing structures. This would reduce the exposure of the trail and bridges, along with people recreating on the trail, to loss or injury during a seismic event.

Conclusion

With the adoption of construction practices consistent with the City's Design and Construction Standards, and the incorporation of design features to prevent localized creep, slumping, and small landslides, the potential effects of localized ground failure would be **less than significant**.

Alignment Option 1A

Implementation of this alignment would not substantially change the potential for the project to expose people or structures to substantial adverse effects associated with rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, or landslides because it is located in the same general area as the Proposed Trail Alignment and would require the same construction techniques, adhere to the same standards, and include the same type of bank stabilization elements. The impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C

Implementation of this alignment would not substantially change the potential for the project to expose people or structures to substantial adverse effects associated with rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, or landslides because it is located in the same general area as the Proposed Trail Alignment and would require the same construction techniques, adhere to the same standards, and include the same type of bank stabilization elements. The impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A

Implementation of this alignment would not substantially change the potential for the project to expose people or structures to substantial adverse effects associated with rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, or landslides because it is located in the same general area as the Proposed Trail Alignment and would require the same construction techniques, adhere to the same standards, and include the same type of bank stabilization elements. The impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

None required.

Impact 4.5-2	Result in substantial soil erosion or the loss of topsoil.
Applicable Policies and Regulations	RWQCB NPDES Permit; City of Roseville General Plan; City of Roseville Design and Construction Standards
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

The potential for soil erosion is based on soil type and exposure to erosive forces. Table 4.5-4 summarizes the soil map units within the proposed project construction area. As discussed below, during construction the potential for erosion is mostly dependent on the disturbance of soil and loss of vegetation, which can expose soils to the erosive forces of wind and water runoff. During use, key areas of concern would be acceleration of erosion because of travel on the trail, and the potential hazards associated with ongoing streambank erosion.

Table 4.5-4 Acreage of Permanent and Temporary Impacts by Soil Map Unit

Alignment Option	Soil Type							Total (acres)
	Cometa-Fiddyment complex, 1-5% slopes	Cometa-Ramona sandy loams, 1-5% slopes	Fiddyment loam, 1-8% slopes	Urban land-Xerarents-Fiddyment complex, 0-8% slopes	Xerofluvents, frequently flooded	Xerofluvents, occasionally flooded	Xerorthents, cut and fill areas

Construction Impacts

Construction of the proposed project would involve removing existing vegetation from the project site (i.e., trail footprint and construction zone), excavation and contouring to establish the trail bed, excavation for retaining wall footings and bridge abutments, construction of temporary stream crossings, and temporary stockpiling of soil. These activities would temporarily expose soil to wind and water erosion. An estimated 15.51 acres would be temporarily disturbed by construction activities and 10.86 acres would be permanently impacted by trail development. Soils in the project area generally have a high susceptibility to wind erosion. The potential for water-driven erosion is generally moderate along the trail and higher in the staging and temporary access areas. Where vegetation would be removed from sloped areas or where soils are unconsolidated in newly graded areas, surface water and wind could result in accelerated erosion. The ground disturbance created by construction of a temporary creek crossing and the use of heavy equipment traffic could result in increased erosion.

Compliance with the City's Design and Construction Standards, which prescribe erosion/sediment control and grading requirements addressing erosion, and a SWPPP to comply with the NPDES General Permit administered by the State Water Resources Control Board would be required. The SWPPP would identify structural and nonstructural BMPs to control erosion.

Temporary soils stabilization BMPs may include: scheduling limitations during the rainy season; preservation of existing vegetation; application of hydraulic mulch to disturbed areas outside of the stream channel; use of geotextiles, plastic coves, and erosion control mats; instillation of silt fences; and use of fiber rolls along the slope contour above the high-water level to intercept runoff (Caltrans 2003). Stream flow and soil strength would also inform the design and restoration of temporary stream crossings, which would be approved by a registered engineer. Bridge footings would be cast-in-drilled-hole pilings constructed to Caltrans' standard specifications. Special construction practices (e.g., temporary steel casing) may be necessary because of the granularity of area soils.

As indicated in Table 4.5-2, most soils in the project area are xerofluvents. The xerofluvent and xerorthent soils do not have a developed soil structure or a nutrient rich upper horizon commonly referred to as "topsoil." However, a topsoil layer is found in the Cometa, Fiddyment, and Ramona soils, and grading of these areas could result in a loss of soil productivity, which can make successful revegetation of disturbed areas difficult, leading to chronic erosion and poor soil health in these areas. Topsoil would be excavated and stored during construction operations and respread over disturbed areas after construction activities are complete. Disturbed soil areas would be revegetated through planting of native grasses, shrubs, and trees.

Use-related Impacts

As summarized in Table 4.5-5, most of the soils in the area are classified by the NRCS as posing only a slight erosion hazard when used for roads and trails. Moreover, the pathway would be paved and

adjacent areas would be revegetated. Because the soils on the project site are suitable for trail use and the trail would be paved, there is low potential for use of the trail to result in substantial soil erosion.

Table 4.5-5 Proposed Alignment Erosion Hazard (Road/Trail)

	Erosion Hazard			Total (acres)
	Slight	Moderate	Not Rated	
Preferred Alignment	23.27	2.15	0.95	26.37
Permanent Impact	9.97	0.70	0.19	10.86
Temporary Impact	13.30	1.45	0.76	15.51

Source: NRCS 2015

As discussed in Chapter 3, "Project Description," of this Draft EIR, a geomorphic report was prepared to provide an assessment of the potential future risk to the proposed trail because of erosion associated with the expected future water flows and trajectories of Cirby and Linda Creeks. Most of the Proposed Alignment would be located adjacent to areas with moderate to high bank erosion severity (Table 4.5-6). The report identified six locations along the preferred alignment where there would be extreme or high risk to the trail due to soil conditions and the future water flows and trajectories of the creeks (City of Roseville and Psomas 2014). The recommendations of that report (including trail realignment, bank protection, and channel modifications) in these extreme and high-risk areas have been incorporated into the project design, except where existing constraints required alternative solutions. The areas of moderate risk are generally either near the creek or have existing soil erosion, but are not likely to present a substantial hazard to the use or integrity of the trail and, as such, did not require design modification. Through the design review process established in the City's Design and Construction Standards, the City Engineer would verify that the project has been designed to avoid contributing to soil instability.

Table 4.5-6 Proposed Alignment Bank Erosion Severity

	Bank Erosion Severity				Total (feet)
	Minor	Moderate	Moderate-High	High	
Preferred Alignment	43.08	185.47	159.38	131.12	519.05
Permanent Impact	39.38	-	69.48	34.29	143.15
Temporary Impact	3.70	185.47	89.90	96.83	37.59

Source: City of Roseville and PSOMAS 2014

After construction, disturbed areas of the site would be seeded and mulched to reestablish a vegetation cover in the upland portions of the project site that would resist erosion and increase bank stability by increasing tensile strength in the soil and increasing infiltration (Caltrans 2003).

Conclusion

Although construction would expose erosion-prone soils to the effects of wind and water, the project would implement the City's standards and BMPs identified in the SWPPP. Because the portion of the project site that would be traveled by bicyclists and pedestrians would be paved, open areas would be revegetated, and streambanks would be engineered to remediate existing erosion and prevent ongoing erosion. Therefore, the Dry Creek Greenway East Trail project would have a **less-than-significant** impact on soil erosion.

Alignment Option 1A
Option 1A would reduce the area of temporary and permanent impacts by 0.40 acre and 0.29 acre, respectively. There would be a corresponding 0.72-acre reduction in the area mapped as slight erosion hazard when used for roads and trail, and a 0.03 acre increase in area not rated. There would be no change in the bank erosion severity along the alignment. Because construction activities under Option 1A would be of the same type and magnitude as would occur under the Proposed Trail Alignment, implementation of this alignment would not substantially change the potential for the project to result in soil erosion or the loss of topsoil. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C
Option 1C would decrease temporary impacts by approximately 0.57 acre, while increasing permanent impacts by 0.59 acre. This would result in a net increase of 0.02 acre mapped as slight erosion hazard when used for trails and roads. There would also be an increase in the length of bank affected; an additional 146.29 linear feet of moderately eroded bank would be affected (67.98 feet of temporary impacts and 78.31 acres of permanent impacts).

With implementation of Alignment Option 1C, the trail would be located in an additional area of high risk, as identified in the trail risk assessment (PSOMAS 2014). The section of trail along the east side of Dry Creek downstream of the Darling Way Bridge would be located in proximity to the eroding creek bank in an area where the stream power is high. Key constraints in this area include the distance between the top of the creek bank and the existing fence line of the adjacent private properties, an existing sewer trunk line, and a number of large trees. A reinforced concrete retaining wall would be constructed along the property line, and the trail would be located up against the property line to maximize setback from the creek. Trail width would be reduced to 8 feet, and a post and cable fence would be constructed on the western side of the trail.

Other construction activities under Option 1C would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. Implementation of this option would not substantially change the potential for the project to result in soil erosion or the loss of topsoil. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A
Option 5A would increase temporary and permanent impacts by 0.13 acre and 0.22 acre, respectively. There would be a corresponding increase of 0.43 acre mapped as slight erosion hazard for roads and trails and a decrease of 0.07 acre not rated. Areas with moderate erosion hazard would be slightly less affected during construction (a reduction of 0.03 acre), but would make up slightly more of the project footprint (an increase of 0.02 acre). There would be no change in the bank erosion severity along the alignment. Because construction activities under Alignment Option 5A would be the same type as would occur under the Proposed Trail Alignment, implementation of this option would not substantially change the potential for the project to result in soil erosion or the loss of topsoil. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

None required.

Impact 4.5-3	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.
Applicable Policies and Regulations	City of Roseville Design and Construction Standards
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

The project site is not located in an area of underlying geologic instability. Localized surficial, slope failures could occur within the project site, however, primarily associated with incised and over steepened streambanks. As described above, the City's Design and Construction Standards require soil testing to inform bike path design. Where borings identify loose, sandy soils that have the potential to be subject to liquefaction, standard design practices for foundations and pilings would be incorporated to avoid potential effects on the proposed trail. For example, the standards include specifications regarding the thickness of aggregate base placed under the asphalt concrete based on the ability of soil samples to resist spreading because of an applied vertical load (the R-Value) where vehicles would use the path for maintenance or emergency access.

Raveling or caving is expected during drilling of bridge foundations because of the presence of granular material. Bridge footings would be cast-in-drilled-hole pilings constructed to Caltrans' standard specifications. Tie back walls would be used for excavation support where cuts are required next to existing bridge abutments or in steep terrain that has existing buildings in close proximity to the trail. Caltrans standard performance specifications for tieback systems would be used to attain the required design capacity.

Construction Impacts

Construction of the project would require excavation in an area with steep banks and loose, granular soils. As discussed above, construction specifications would be developed for the project based on detailed soil testing. Special construction practices (e.g., temporary steel casing) may be necessary during construction of bridge footings because of the granularity of area soils. In addition, to avoid failure of shoring walls, excessive settlement in the surrounding areas, and unsafe working conditions, controlled dewatering would be performed (when necessary) to prevent possible piping or blowout at the base of excavations. These construction practices would be consistent with the City's Design and Construction Standards.

Use-related Impacts

As discussed above, a geomorphic assessment of the potential future risk to the proposed trail developed solutions to address the potential for the trail to be located on unstable soils or soils that would become unstable as a result of the project. Through the design review process established in the City's Design and Construction Standards, the City Engineer would verify that the project has been designed to avoid contributing to a condition of soil instability.

Conclusion

With the adoption of construction practices and design features that are consistent with the City's Design and Construction Standards, the potential effects of localized, surficial ground failure would be **less than significant**.

Alignment Option 1A
Construction activities under Alignment Option 1A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment and would generally occur in the same types of soil as the Proposed Trail Alignment in this area. The impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C
Construction activities under Alignment Option 1C would be generally the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment and would generally occur in the same types of soil as the Proposed Trail Alignment in this area. Because trail design would reduce the hazard to the trail associated with unstable soils, the impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A
Construction activities under Alignment Option 5A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment and would generally occur in the same types of soil as the Proposed Trail Alignment in this area. The impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

None required.

Impact 4.5-4	Be located on expansive soil, creating a substantial risk to life or property.
Applicable Policies and Regulations	City of Roseville Design and Construction Standards
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment
The trail would be located in an area with moderately expansive soils. Repeated shrinking and swelling of soils could cause damage to the integrity of the trail surface (such as pavement cracking) and to bridge footings. However, grading activities and placement of base materials can effectively reduce or eliminate this potential, as discussed below.

Construction Impacts
Although soils in the project area are moderately expansive, they would not cause a potential for risks to life and property during construction, because the type of damage caused by expansive soils is incremental and generally associated with the built environment.

Use-related Impacts
Soil sampling would be conducted as part of the project, as required by the City's Design and Construction Standards. The potential effect of expansive soils on the trail and bridges would be addressed through this process, and specific design features, such as specialized bridge footings or abutments, would be incorporated into the design and specifications for the project, as appropriate, to avoid or minimize the extent of potential damage. A substantial risk to life or property would not occur.

Conclusion
The impact of locating the project on moderately expansive soils would be **less than significant**.

Alignment Option 1A
Construction activities under Alignment Option 1A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment and would generally occur in the same types of soil as the Proposed Trail Alignment in this area, although there would be one fewer bridge required with implementation of this option. The impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C
Construction activities under Alignment Option 1C would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment and would generally occur in the same types of soil as the Proposed Trail Alignment in this area, although Option 1C would not require the widening of the Darling Way bridge. The impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A
Construction activities under Alignment Option 5A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment and would generally occur in the same types of soil as the Proposed Trail Alignment in this area. Implementing Option 5A would change the location of one bridge (#14 rather than #13), but would not change the number of bridges proposed. The impacts would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures
None required.

Impact 4.5-5	Destroy a unique paleontological resource.
Applicable Policies and Regulations	California Public Resources Code Section 5097.5
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts
The project site is primarily underlain by alluvial deposits classified in the Modesto Formation and Turlock Lake Formation along Cirby and Linda Creeks. Samples indicate that subsurface soils are generally loose, granular (i.e., sandy or silty) materials within 10 to 20 feet of the surface that increase in density with depth. A search of the University of California Museum of Paleontology's (UCMP) database was conducted on June 19, 2015. The database listed 63 paleontological resources in Placer County, however all resources are located approximately 30 miles northeast of the City of Roseville, in Tahoe National Forest. The database did not list any paleontological resources from the Turlock Lake or Modesto formation (UCMP 2015).

Although no paleontological resources have been recorded near the project site, the soils along Cirby and Linda Creeks are classified as Pleistocene-age (i.e., from about 2,588,000 to 11,700 years ago) alluvial deposits. Pleistocene sedimentary deposits are considered to have a high paleontological sensitivity, while alluvial deposits are generally considered to have low paleontological sensitivity. These alluvial deposits contain vertebrate and invertebrate remains of extant, modern taxa, which are generally not considered paleontologically significant.

Use-related Impacts

The project is a multi-use bike trail and use of the project would not include grading, excavation, or other earth-moving activities that could affect the integrity of a paleontological site.

Conclusion

Because the types of soil formations that underlay the project site have a low sensitivity for important paleontological resources, the development of the proposed project would have a **less-than-significant** impact on paleontological resources.

Alignment Option 1A

Construction activities under Alignment Option 1A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream.

As discussed above under the Proposed Trail Alignment, there are no known paleontological sites of any kind near the project site. Because the types of soil formations that underlay the project site are not sensitive for paleontological resources, the development of Alignment Option 1A would have a **less-than-significant** impact on paleontological resources.

Alignment Option 1C

Construction activities under Alignment Option 1C would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek.

As discussed above under the Proposed Trail Alignment, there are no known paleontological sites of any kind near the project site. Because the types of soil formations that underlay the project site are not sensitive for important paleontological resources, the development of Alignment Option 1A would have a **less-than-significant** impact on paleontological resources.

Alignment Option 5A

Construction activities under Alignment Option 5A would be the same type and magnitude of physical activities and ground disturbance that would occur under the Proposed Trail Alignment. East of Eastwood Park, Alignment Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek.

As discussed above under the Proposed Trail Alignment, there are no known paleontological sites of any kind near the project site. Because the types of soil formations that underlay the project site are not sensitive for important paleontological resources, the development of Alignment Option 1A would have a **less-than-significant** impact on paleontological resources.

Mitigation Measure

None required.

4.6 GREENHOUSE GAS EMISSIONS AND CLIMATE CHANGE

4.6.1 Introduction

This chapter presents a brief summary of the current state of climate change science and greenhouse gas (GHG) emissions sources in California; a summary of applicable regulations; and quantification of project-generated GHG emissions and discussion about their potential contribution to global climate change.

The comment letter received from the Placer County Air Pollution Control District (PCAPCD) in response to the Notice of Preparation mentions that determination of significance and mitigation of GHG emissions should be addressed, using the PCAPCD CEQA Handbook. This letter was dated December 19, 2013. In October 2016, PCAPCD released an updated Handbook which was subsequently approved by the PCAPCD Board in August 2017. The analysis contained in this section addresses this comment.

4.6.2 Environmental Setting

GHG EMISSIONS AND CLIMATE CHANGE

The Physical Scientific Basis

Certain gases in the earth's atmosphere, classified as GHG emissions, play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected back toward space. This absorbed radiation is then emitted from the earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. The earth has a much lower temperature than the sun; therefore, the earth emits lower frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead "trapped," resulting in a warming of the atmosphere. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate on Earth.

Prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). Human-caused emissions of these GHGs in excess of natural ambient concentrations are believed responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the earth's climate, known as global climate change or global warming. It is "extremely likely" that more than half of the observed increase in global average surface temperature from 1951 to 2010 was caused by the anthropogenic increase in GHG concentrations and other anthropogenic forcings together (Intergovernmental Panel on Climate Change [IPCC] 2014:3, 5).

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of any particular GHG molecule is dependent on multiple variables and cannot be pinpointed, it is understood that more CO_2 is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, and other forms of sequestration. CO_2 sinks, or reservoirs, include vegetation and the ocean, which absorb CO_2 through

sequestration and dissolution, respectively, two of the most common processes of CO_2 sequestration. Of the total annual human-caused CO_2 emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused CO_2 emissions remains stored in the atmosphere (IPCC 2013:467).

The quantity of GHGs that it takes to ultimately result in climate change is not precisely known; suffice it to say, the quantity is enormous, and no single project alone would measurably contribute to a noticeable incremental change in the global average temperature, or to global, local, or micro climates. From the standpoint of CEQA, GHG impacts to global climate change are inherently cumulative.

Greenhouse Gas Emission Sources

Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the transportation, industrial/manufacturing, utility, residential, commercial, and agricultural emissions sectors (California Air Resources Board [CARB] 2014a). In California, the transportation sector is the largest emitter of GHGs, followed by electricity generation (CARB 2014a). Emissions of CO_2 are, largely, byproducts of fossil fuel combustion. CH_4, a highly potent GHG, primarily results from off-gassing (the release of chemicals from nonmetallic substances under ambient or greater pressure conditions) and is largely associated with agricultural practices and landfills. N_2O is also largely attributable to agricultural practices and soil management. Additionally, high-global warming potential (GWP) gases have atmospheric insulative properties that are hundred to tens of thousands of times greater than that of CO_2. HFCs, PFCs, and SF_6 are some of the most common types of high-GWP gases and result from a variety of industrial processes. HFCs and PFCs are used as refrigerants and can be emitted through evaporation and leakage. SF_6 is a powerful electrical insulator used in power transmission and semiconductor manufacturing and is emitted through evaporation and leakage into the atmosphere.

EFFECTS OF CLIMATE CHANGE ON THE ENVIRONMENT

IPCC was established in 1988 by the World Meteorological Organization and the United Nations Environment Programme to provide the world with a scientific view on climate change and its potential effects. According to the IPCC global average temperature is expected to increase relative to the 1986-2005 period by 0.3–4.8 degrees Celsius (°C) (0.5-8.6 degrees Fahrenheit [°F]) by the end of the 21st century (2081-2100), depending on future GHG emission scenarios (IPCC 2014: SPM-8). This temperature range represents the lower and higher bounds of five mitigation scenarios analyzed by the IPCC – two stringent scenarios, two intermediate scenarios, and a worst-case scenario. Temperatures in California are projected to increase 2.7°F above 2000 averages by 2050 and, depending on global emission levels, 4.1–8.6°F by 2100 (Moser et al. 2012:2).

Physical conditions beyond average temperatures could be indirectly affected by the accumulation of GHG emissions. For example, changes in weather patterns resulting from increases in global average temperature are expected to result in a decreased volume of precipitation falling as snow in California and an overall reduction in snowpack in the Sierra Nevada. Based upon historical data and modeling, California Department of Water Resources (DWR) projects that the Sierra snowpack will experience a 25 to 40 percent reduction from its historic average by 2050 (DWR 2008:4). An increase in precipitation falling as rain rather than snow also could lead to increased potential for floods because water that would normally be held in the Sierra Nevada until spring could flow into the Central Valley concurrently with winter storm events (Moser et al. 2012:5). This scenario would place more pressure on California's levee/flood control system.

Another outcome of global climate change is sea level rise. Sea level rose approximately 7 inches during the last century. The National Research Council (NRC), in their 2012 report on *Sea-Level Rise for the Coasts of California, Oregon, and Washington* projects that the sea level along the California coastline will change between -1 inch (fall) to 24 inches (rise) between 2000 and 2050 and 4 to 66 inches (rise)

between 2000 and the end of this century. This projection is based on projected future ice loss at the poles, steric and ocean dynamics, seismic trends affecting land subsidence, and other numerical models and extrapolations, accounting for increasing levels of uncertainty in future years (NRC 2012:6).

As the existing climate throughout California changes over time, the ranges of various plant and wildlife species could shift or be reduced, depending on the favored temperature and moisture regimes of each species. In the worst cases, some species would become extinct or be extirpated from the state if suitable conditions are no longer available (Moser et al. 2012:11, 12).

Changes in precipitation patterns and increased temperatures are expected to alter the distribution and character of natural vegetation and associated moisture content of plants and soils. An increase in frequency of extreme heat events and drought are also expected. These changes are expected to lead to increased frequency and intensity of large wildfires (Moser et al. 2012:11).

4.6.3 Regulatory Setting

Greenhouse gas emissions and responses to global climate change are regulated by a variety of federal, state, and local laws and policies. Key regulatory and conservation planning issues applicable to the proposed project are discussed below.

FEDERAL

Supreme Court Ruling of Carbon Dioxide as a Pollutant

The U.S. Environmental Protection Agency (EPA) is the federal agency responsible for implementing the federal Clean Air Act (CAA) and its amendments. The Supreme Court of the United States ruled on April 2, 2007 that CO_2 is an air pollutant as defined under the CAA, and that EPA has the authority to regulate emissions of GHGs. The ruling in this case resulted in EPA taking steps to regulate GHG emissions and lent support for state and local agencies' efforts to reduce GHG emissions.

Regulations for Greenhouse Gas Emissions from Passenger Cars and Trucks and Corporate Average Fuel Economy Standards

In October 2012, EPA and the National Highway Traffic Safety Administration (NHSTA), on behalf of the Department of Transportation, issued final rules to further reduce GHG emissions and improve corporate average fuel economy (CAFE) standards for light-duty vehicles for model years 2017 and beyond (77 FR 62624). NHTSA's CAFE standards have been enacted under the Energy Policy and Conservation Act since 1978. This national program requires automobile manufacturers to build a single light-duty national fleet that meets all requirements under both federal programs and the standards of California and other states. This program would increase fuel economy to the equivalent of 54.5 miles per gallon (mpg) limiting vehicle emissions to 163 grams of CO_2 per mile for the fleet of cars and light-duty trucks by model year 2025 (77 FR 62630).

In January 2017, EPA Administrator Gina McCarthy signed her determination to maintain the current GHG emissions standards for model year 2022-2025 vehicles. However, on March 15, 2017, the new EPA Administrator, Scott Pruitt, and Department of Transportation Secretary Elaine Chao announced that EPA intends to reconsider the final determination. EPA intends to make a new Final Determination regarding the appropriateness of the standards no later than April 1, 2018 (EPA 2017).

STATE

Executive Order S-3-05

Executive Order (EO) S-3-05, signed by Governor Arnold Schwarzenegger in 2005, proclaims that California is vulnerable to the impacts of climate change. It declares that increased temperatures could reduce the Sierra Nevada snowpack, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To combat those concerns, the executive order established total GHG emission targets for the state. Specifically, statewide emissions are to be reduced to 2000 levels by 2010, 1990 levels by 2020, and to 80 percent below 1990 levels by 2050.

This executive order was the subject of a California Appellate Court decision, *Cleveland National Forest Foundation v. San Diego Association of Governments* (SANDAG) (November 24, 2014) 231 Cal.App.4th 1056, which was reviewed by the California Supreme Court in January 2017. The Supreme Court decided a singular question in the case, which was released on July 13, 2017. The California Supreme Court ruled that SANDAG did not abuse its discretion by declining "to adopt the 2050 goal as a measure of significance in light of the fact that the Executive Order does not specify any plan or implementation measures to achieve its goal."

In addition to concluding that an EIR need not use this executive order's goal for determining significance, the Court described several principles relevant to CEQA review of GHG impacts, including: (1) EIRs should "reasonably evaluate" the "long-range GHG emission impacts for the year 2050;" (2) the 2050 target is "grounded in sound science" in that it is "based on the scientifically supported level of emissions reduction needed to avoid significant disruption of the climate;" (3) in the case of the SANDAG plan, the increase in long-range GHG emissions by 2050, which would be substantially greater than 2010 levels, was appropriately determined to be significant and unavoidable; (4) the reasoning that a project's role in achieving a long-range emission reduction target is "likely small" is not valid for rejecting a target; and (5) "as more and better data become available," analysis of proposed plan impacts will likely improve, such that "CEQA analysis stays in step with evolving scientific knowledge and state regulatory schemes." The Court also ruled that "an EIR's designation of a particular adverse environmental effect as 'significant' does not excuse the EIR's failure to reasonably describe the nature and magnitude of the adverse effect." The Court also recognized that the 40 percent reduction in 1990 GHG levels by 2030 is "widely acknowledged" as a "necessary interim target to ensure that California meets its longer-range goal of reducing greenhouse gas emission 80 percent below 1990 levels by the year 2050." Senate Bill (SB) 32 has since defined the 2030 goal in statute (discussed below).

Executive Order B-30-15

On April 20, 2015 Governor Brown signed EO B-30-15 to establish a California GHG reduction target of 40 percent below 1990 levels by 2030. The Governor's EO aligns California's GHG reduction targets with those of leading international governments such as the 28-nation European Union, which adopted the same target in October 2014. California is on track to meet or exceed the target of reducing GHG emissions to 1990 levels by 2020, as established in the California Global Warming Solutions Act of 2006 (Assembly Bill 32, discussed above). California's new emission reduction target of 40 percent below 1990 levels by 2030 sets the next interim step in the State's continuing efforts to pursue the long-term target expressed under Executive Order S-3-05 to reach the ultimate goal of reducing emissions 80 percent below 1990 levels by 2050. This is in line with the scientifically established levels needed in the U.S. to limit global warming below 2°C, the warming threshold at which major climate disruptions are projected, such as super droughts and rising sea levels.

Assembly Bill 32, the California Global Warming Solutions Act of 2006

In September 2006, Governor Schwarzenegger signed the California Global Warming Solutions Act of 2006 (Assembly Bill [AB] 32). AB 32 establishes regulatory, reporting, and market mechanisms to achieve quantifiable reductions in GHG emissions and a cap on statewide GHG emissions. AB 32

requires that statewide GHG emissions be reduced to 1990 levels by 2020. AB 32 also requires that these reductions "…shall remain in effect unless otherwise amended or repealed. (b) It is the intent of the Legislature that the statewide greenhouse gas emissions limit continue in existence and be used to maintain and continue reductions in emissions of greenhouse gases beyond 2020. (c) The (Air Resources Board) shall make recommendations to the Governor and the Legislature on how to continue reductions of greenhouse gas emissions beyond 2020" (California Health and Safety Code, Division 25.5, Part 3, Section 38551).

Assembly Bill 32 Climate Change Scoping Plan and Update

In December 2008, CARB adopted its Climate Change Scoping Plan, which contains the main strategies California will implement to achieve reduction of approximately 118 million metric tons (MMT) of CO_2-equivalent (CO_2e) emissions, or approximately 21.7 percent from the state's projected 2020 emission level of 545 MMT CO_2e under a business-as-usual scenario (this is a reduction of 47 MMT CO_2e, or almost 10 percent, from 2008 emissions).

In 2014, CARB adopted the *First Update to the Climate Change Scoping Plan* to identify the next steps in reaching AB 32 goals and evaluate the progress that has been made between 2000 and 2012 (CARB 2014b:4 and 5). According to the update, California is on track to meet the near-term 2020 GHG limit and is well positioned to maintain and continue reductions beyond 2020 (CARB 2014b:ES-2). The update also reports the trends in GHG emissions from various emission sectors (e.g., transportation, building energy, agriculture). After releasing multiple versions of proposed updates in 2017 CARB adopted the next version titled *California's 2017 Climate Change Scoping Plan* (2017 Scoping Plan) in December of that same year (CARB 2017). The 2017 Scoping Plan indicates that California is on track to achieve the 2020 statewide GHG target mandated by AB 32 of 2006 (CARB 2017:9). It also lays out the framework for achieving the mandate of SB 32 of 2016 to reduce statewide GHG emissions to at least 40 percent below 1990 levels by the end of 2030 (CARB 2017).

The update also identifies how GHGs associated with proposed projects could be evaluated under CEQA. Specifically, it states that achieving "no net increase" in GHG emissions is an appropriate overall objective of projects evaluated under CEQA if conformity with an applicable local GHG reduction plan cannot be demonstrated. CARB recognizes that it may not be appropriate or feasible for every development project to mitigate its GHG emissions to zero and that an increase in GHG emissions attributable to a project may not necessarily imply a substantial contribution to the cumulatively significant environmental impact of climate change. In terms of current project-level thresholds, the Placer County Air Pollution Control District (PCAPCD) has developed an evidenced-based, bright-line numeric threshold consistent with the state's long-term 2030 GHG goal.

Senate Bill 32/Assembly Bill 197 (Statutes of 2016)

In August 2016, Governor Brown signed SB 32 and AB 197, which serve to extend California's GHG reduction programs beyond 2020. SB 32 amended the Health and Safety Code to include Section 38566, which contains language to authorize CARB to achieve a statewide GHG emission reduction of at least 40 percent below 1990 levels by no later than December 31, 2030. SB 32 codified the targets established by EO B-30-15 for 2030.

Senate Bill 375 (Statutes of 2008)

SB 375, signed by the Governor in September 2008, aligns regional transportation planning efforts, regional GHG emission reduction targets for cars and light duty trucks, and land use and housing allocation. SB 375 requires Metropolitan Planning Organizations (MPOs) to adopt a Sustainable Communities Strategy (SCS) or Alternative Planning Strategy, showing prescribed land use allocation in each MPO's Regional Transportation Plan. CARB, in consultation with the MPOs, is to provide each affected region with reduction targets for GHGs emitted by passenger cars and light trucks in their respective regions for 2020 and 2035.

The applicable MPO in the project region is the Sacramento Area Council of Governments (SACOG), which includes Placer County except for of the Lake Tahoe Basin. SACOG adopted its first SCS in 2012, which was subsequently updated and adopted in 2016 (SACOG 2016). SACOG was tasked by CARB to achieve a 9 percent per capita reduction by 2020 and a 16 percent per capita reduction by 2035, which CARB confirmed the region would achieve by implementing its SCS (CARB 2013).

Advanced Clean Cars Program

In January 2012, CARB approved the Advanced Clean Cars program which combines the control of GHG emissions and criteria air pollutants, as well as requirements for greater numbers of zero-emission vehicles, into a single package of regulatory standards for vehicle model years 2017 through 2025. The new regulations strengthen the GHG standard for 2017 models and beyond. This will be achieved through existing technologies, the use of stronger and lighter materials, and more efficient drivetrains and engines. The program's zero-emission vehicle regulation requires battery, fuel cell, and/or plug-in hybrid electric vehicles to account for up to 15 percent of California's new vehicle sales by 2025. The program also includes a clean fuels outlet regulation designed to support the commercialization of zero-emission hydrogen fuel cell vehicles planned by vehicle manufacturers by 2015 by requiring increased numbers of hydrogen fueling stations throughout the state. The number of stations will grow as vehicle manufacturers sell more fuel cell vehicles. By 2025, when the rules will be fully implemented, the statewide fleet of new cars and light trucks will emit 34 percent fewer GHGs and 75 percent fewer smog-forming emissions than the statewide fleet in 2016 (CARB 2016).

Senate Bill 97

The Senate Bill 97 (Statutes of 2007) (SB 97) directed the California Natural Resources Agency to adopt amendments to the CEQA Guidelines to specifically address GHG emissions. The Amendments became effective on March 18, 2010. This EIR complies with these Amendments and the CEQA checklist questions added to Appendix G of the CEQA Guidelines in response to SB 97 are discussed under the Significance Criteria heading below.

LOCAL

Placer County Air Pollution Control District

In October 2016, PCAPCD adopted new significance thresholds for GHG emissions in October 2016. These thresholds are included PCAPCD's updated 2017 CEQA Air Quality Handbook (August, 2017). The District's CEQA Air Quality Handbook outlines expectations and methodologies for the analysis of GHG emissions generated by a proposed project, and guidance on determining the significance of impacts and appropriate mitigation. PCAPCD recommends that both construction and operations-related GHG emissions be quantified for a proposed project, and that the significance of GHG emissions be determined in a manner based on whether such emissions are cumulatively considerable.

City of Roseville General Plan 2035

The City of Roseville General Plan 2035 contains a number of goals and policies applicable to the proposed project that address air quality and climate change. Key provisions from the Air Quality and Climate Change Element are summarized below. Numerous other General Plan elements also address sustainability and the reduction of GHG emissions, including the Circulation Element, Land Use Element, and Public Facilities Element.

Air Quality and Climate Change Element Goals

GOAL 3: Encourage the coordination and integration of all forms of public transport while reducing motor vehicle emissions through a decrease in the average daily trips and vehicle miles traveled and by increasing the commute vehicle occupancy rate by 50 percent to 1.5 or more persons per vehicle.

GOAL 4: Increase the capacity of the transportation system, including the roadway system and alternate modes of transportation.

GOAL 5: Provide adequate pedestrian and bikeway facilities for present and future transportation needs.

GOAL 7: While recognizing that the automobile is the primary form of transportation, the City of Roseville should make a commitment to shift from the automobile to other modes of transportation.

Air Quality and Climate Change Element Transportation and Circulation-Related Policies

- **Policy 6.** Develop consistent and accurate procedures for mitigating transportation emissions from new and existing projects.
- **Policy 7.** Encourage alternative modes of transportation including pedestrian, bicycle, and transit usage.
- **Policy 10.** Conserve energy and reduce air emissions by encouraging energy efficient building designs and transportation systems.

Air Quality and Climate Change Element Implementation Measures

6. Mitigation Strategies – Motor Vehicles

- Develop mitigation strategies to reduce air emissions from motor vehicles. These strategies, which may consist of improvements and refinements to the transportation and circulation infrastructure, may include:
  - Maintaining acceptable levels of service as specified in the Circulation Element;
  - Minimizing the number of intersections along major arterials;
  - Requiring traffic counter loops and traffic management hardware at major garage entrances, driveways, new intersections, and other appropriate locations;
  - Synchronizing traffic signals on arterial streets to the extent possible to facilitate the flow of traffic and minimize stops or delays;
  - Considering high occupancy vehicle lanes in street and highway widening and new construction projects for arterials and wider rights-of-way; and
  - Filling gaps or missing links in infrastructure systems (i.e., bike/pedestrian trails, bridge crossings, railroad crossings, street extensions) prior to the construction and occupancy of residential developments utilizing that infrastructure.

- Develop strategies to minimize the number and length of vehicle trips, which may include:
  - Promoting commercial/industrial project proponent sponsorship of van pools or club buses;
  - Encouraging commercial/industrial project day care and employee services at the employment site;
  - Encouraging the provision of transit, especially for employment-intensive uses of 200 or more employees;
  - Providing subscription bus service to major trip generators or events;
  - Discouraging single-occupant vehicle trips through parking supply and pricing controls or other measures identified by the PCAPCD;
  - Providing incentives for the use of transportation alternatives;
  - Providing expansion and improvement of public transportation services and facilities;
  - Encouraging public transit use and the formation of car pools in new areas by requiring bus turnouts, bus shelters, and/or park-and-ride lots;
  - Locating public facilities in areas easily served by public transportation; and

- Requiring that large developments (e.g. Specific plans, large commercial or residential uses) dedicate land for use as park-and-ride lots if suitably located, or requiring large developments to provide park-and-ride spaces if located adjacent to regional transit facilities.

7. Mitigation Strategies – Motor Vehicle Alternatives

- Encourage transportation alternatives to motor vehicles by developing infrastructure amenable to such alternatives by doing the following:
  - Implement the Bicycle Master Plan and Long-Range Transit Plan as specified in the Circulation Element;
  - Consider right-of-way requirements for bike usage in the planning of new arterial and collector streets and in street improvement projects;
  - Require that new development be designed to promote pedestrian and bicycle access and circulation;
  - Provide safe and secure bicycle parking facilities at major activity centers, such as public facilities, employment sites, and shopping and office centers;
  - Provide convenient and safe pedestrian and bike movement through the large parking areas that surround large retail and office centers;
  - Provide safe pathways that link residential areas to schools, parks, services, and employment areas and transit facilities;
  - Promote project design that encourages pedestrian and cyclist use, including grade separated crossing at major arterials, clear and safe connections between projects and uses;
  - Install sidewalks in residential and commercial developments with protective curbing and adequate lighting and pedestrian amenities.

City of Roseville Communitywide Sustainability Action Plan

The Roseville Communitywide Sustainability Action Plan (SAP) sets forth a comprehensive strategy to reduce GHG emissions, as well as to promote economic growth based on clean technology and sustainable practices (City of Roseville 2010). While the 2035 General Plan includes goals and policies that guide the City's approach to addressing sustainability and climate change, the SAP serves as a more detailed strategy to implement the City's sustainability and climate change policies.

As noted earlier in this section, the SAP contains the City's GHG emissions baseline inventory. The SAP also sets a GHG emissions reduction target of reducing emissions from the baseline level of 7.5 MT CO_2e per service population to 6.0 MT CO_2e per service population by 2020.

The SAP contains five sustainable action strategies, with specific measures under each designed to achieve the City's goals and targets. The actions include bike and pedestrian enhancements in the Transportation Strategy. The actions are summarized below in Table 4.6-1.

The City plans to complete a qualified communitywide climate action plan by late 2018 (City of Roseville 2017).

Table 4.6-1 Roseville Sustainability Action Plan Strategies and GHG Emission Reductions

Sustainable Action Strategy	Summary of Measures	Total Estimated GHG Emission Reductions (MT CO_2e)	Percent of Total GHG Reductions Required to Meet Target
Transportation	Rideshare and Carpooling Transit Expansion Bike and Pedestrian Enhancements Alternative Fuel Infrastructure Intelligent Transportation Systems	49,130	66%
Land Use and Green Building	Urban Forestry Numerous supporting measures related to alternative transportation modes	1,580	2%
Energy	Retrofits of Existing Residential Buildings Retrofits of Existing Commercial Buildings New Residential Building Energy Efficiency New Commercial Building Energy Efficiency	19,460	26%
Solid Waste	Food Waste to Energy	1,090	1%
Water	Reduce Water Use 20% Per Capita	3,520	5%
Marketing and Education	Community-Based Social Marketing Promote sustainable lifestyles	NA	NA
Total		74,060	100%

Notes: Totals may not sum due to rounding

GHG = greenhouse gas; MT = metric tons, CO_2e = carbon dioxide equivalent. Totals may not be exact due to rounding.

Source: City of Roseville 2010; adapted and compiled by Ascent in 2017.

City of Roseville Municipal Climate Action Plan

The Roseville City Council adopted a Municipal Climate Action Plan (CAP) in 2009. The plan addressed GHG emission reductions from City facilities and operations, including buildings, vehicle fleets, treatment plants, and other infrastructure. The CAP established a baseline municipal emissions inventory of 28,858 MT CO_2e for the year 2006. The City Council approved a GHG reduction goal of 22.8 percent by 2035 through a variety of measures applicable to these sources (City of Roseville 2009). The Communitywide SAP described above is designed to complement the strategies contained in the Municipal CAP.

4.6.4 Impacts

METHODS OF ANALYSIS

Short-term construction-generated GHG emissions were calculated using the California Emissions Estimator Model (CalEEMod) Version 2016.3.1 computer program (South Coast Air Quality Management District 2016), as recommended by PCAPCD and other air districts in California. Modeling was based on project-specific information (e.g., size, amounts of demolition, area to be graded, area to be paved), where available; reasonable assumptions based on typical construction activities; and default values in CalEEMod that are based on the project's location.

Construction-related activities that would generate GHGs include worker commute trips, haul trucks carrying supplies and materials to and from the project site, and off-road construction equipment (e.g., dozers, loaders, excavators). Because the proposed project would be constructed in four segments,

annual construction emissions were modeled for each segment and phase separately, according to construction phasing and equipment anticipated for each segment.

The proposed project would include use of a multi-use trail by bicyclists and pedestrians and routine maintenance activities. Accordingly, no increases in motor vehicle trips and associated tailpipe emissions by users would be generated by the project, and maintenance-related emissions would be minimal. Similarly, no new buildings would be constructed or operated as part of the proposed project. Thus, calculations of operation-related GHG emissions are not needed. Operation-related GHG emissions, apart from the loss in carbon sequestration potential discussed below, are addressed qualitatively in the impact analysis.

The project also would involve the net removal of up to 0.7 acre of riparian forest and up to 4.3 acres of valley oak riparian woodland over the course of the project's four-year construction period. The net carbon sequestration losses from the net reduction in vegetation was estimated using CalEEMod's sequestration module. CalEEMod uses a separate set of land use types and units to estimate emissions from loss of stored carbon than to estimate emissions from lost sequestration potential. To estimate emissions from the loss of stored carbon, CalEEMod bases the calculation of a set of land use types (e.g., scrub, trees, cropland, grassland, wetland) and uses per-acre emissions factors. To estimate emissions from the loss of sequestration potential, CalEEMod bases the calculation on a set of tree types either lost or planted (e.g., mixed hardwood, juniper, cedar/larch, miscellaneous) and uses annual per-tree emission factors. Due to the variety of tree species that inhabit the project area, the "trees" land use category and the "miscellaneous" tree category in CalEEMod are assumed to best reflect both riparian forest and valley oak riparian woodland. CalEEMod assumes the "tree" land use type would store 111 MT CO_2/acre and "miscellaneous" tree types would sequester 0.0354 MT CO_2 per tree per year. Based on a general review of the project map, there are approximately 15 trees per acre within the project boundary. See Tables 11.11 and 11.2 of Appendix D of the CalEEMod Version 2016.3.1 for a list of the carbon loss and sequestration factors.

The loss of stored carbon in the removed vegetation is conservatively assumed to be completely returned to the atmosphere as CO_2, such as through burning, and these emissions are counted toward the project's construction emissions. This is a conservative approach to avoid the risk of understating an impact; it may come to pass that not all the carbon is returned to the atmosphere, if some of the wood is repurposed, rather than burned (such as for chipping and mulch). The resulting annual loss in carbon sequestration potential is counted toward the project's operational emissions. Due to the approximate nature of the carbon sequestration factors used above, the carbon losses estimated here are assumed to apply to all vegetation types within riparian forest and valley oak riparian woodland removed by the project. Also, the loss of stored carbon over the four-year construction period is assumed to be proportional to the construction activity in each year.

THRESHOLDS OF SIGNIFICANCE

Appendix G of the State CEQA Guidelines indicates that a proposed project would result in a potentially significant impact on climate change if it would:

- generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

In October 2016, PCAPCD adopted new CEQA thresholds of significance for evaluating whether the GHG emissions of different types of projects would be a cumulatively considerable contribution to climate change. These new thresholds are supported by PCAPCD's California Environmental Quality Act Thresholds of Significance Justification Report released in October 2016 and are included in the

PCAPCD's draft 2017 Handbook (PCAPCD 2016, 2017). PCAPCD's proposed GHG thresholds more accurately reflect the historical CEQA projects reviewed by PCAPCD over the last thirteen years (2003-2015) and the CEQA significance thresholds adopted by other air districts in the Sacramento Area (PCAPCD 2016:5). PCAPCD recommends an array of GHG thresholds for determining whether a project's GHG emissions would be cumulatively considerable. More specifically, PCAPCD's recommendations include:

- a "floor" mass emission threshold of 1,100 MT CO_2e/year, which, if not exceeded, means the project's GHGs would be less than cumulatively considerable (regardless of the project's GHG efficiency);
- a "bright-line cap" mass emission threshold of 10,000 MT CO2e/year levels, which, if exceeded, means the project's GHGs would be cumulatively considerable regardless of the project's GHG efficiency; and
- GHG efficiency-based thresholds for land use development projects, depending on whether the project is rural or urban and residential or non-residential (e.g., 4.5 MT CO_2e/year per capita and 26.5 MT CO_2e/year/1,000 square feet for residential and non-residential land uses in urban areas, respectively) (PCAPCD 2016:E-2).

With respect to construction-related emissions PCAPCD, considers a "bright-line cap" of 10,000 MT CO_2e for determining the level of significance for land use construction phases (PCAPCD 2016:22).

For this particular project, the City evaluates the net change in GHGs resulting from the project in light of the "floor" mass emission thresholds being proposed by PCAPCD. This is because per-capita and per-square footage efficiency metrics are not suitable for recreational sites that provide neither employment nor housing.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

The analysis in this section focuses on both construction-related and operational GHG emissions. There are no issues or potential impacts that were considered and dismissed from further evaluation.

IMPACT ANALYSIS

Impact 4.6-1	Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.
Applicable Policies and Regulations	Assembly Bill 32 (2006), Senate Bill 32 (2016) City of Roseville General Plan 2025, Sustainability Action Plan
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts

Construction-related activities that would generate GHGs include worker commute trips, haul trucks carrying supplies and materials to and from the project site, off-road construction equipment (e.g., dozers, loaders, excavators), and loss of carbon storage and sequestration potential.

Appendix E contains model input and output parameters, detailed assumptions, and annual construction emissions estimates, expressed in MT CO_2e/year. Construction emissions are summarized in Table 4.6-2. Based on the modeling, which assumes Segments A, B, and C would be constructed together within the same years (2021 and 2022), construction of the proposed project would result in maximum annual GHG emissions of approximately 406 MT CO_2e within the first year of construction, with lesser amounts in subsequent years. The maximum annual GHG emissions during construction would be below the 10,000 MT CO_2e/year mass emissions threshold of significance for construction activities. Thus, short-term construction-generated GHG emissions would not be cumulatively considerable.

Table 4.6-2 Summary of Maximum Annual GHG Emissions Associated with Project Construction Activities[1]

	2021 GHG Emissions (MT CO_2e/year)	2022 GHG Emissions (MT CO_2e/year)	2023 GHG Emissions (MT CO_2e/year)	2024 GHG Emissions (MT CO_2e/year)
Segment A: Darling Way – Eastwood Park	279	272	-	-
Segment B: Eastwood Park – Oak Ridge Drive	101	60	-	-
Segment C: Eich School – Rocky Ridge Dr	27	73	-	-
Segment D: Rocky Ridge Dr – Spahn Ranch Rd	-	-	228	145
Total Construction Activity Emissions (MT CO_2e/yr)	406	404	228	145
Total Emissions from Lost Carbon Storage from Permanent Vegetation Removal (MT CO_2/yr)	189	188	106	67
Total Maximum Annual Emissions (MT CO_2e/yr)	**594**	**592**	**334**	**212**
PCAPCD Construction Threshold of Significance (MT CO_2e/yr)	10,000	10,000	10,000	10,000

Notes: Totals may not sum due to rounding.

GHG = greenhouse gas emissions

MT CO_2e/year = metric tons of carbon dioxide-equivalent per year

PCAPCD = Placer County Air Pollution Control District

[1] Modeled values represent maximum annual GHG emissions that could occur in each year during all phases of construction for each segment of the proposed project. See Appendix E for detail on model inputs, assumptions, and project specific modeling parameters.

Source: CalEEMod 2016.3.1.; modeling conducted by Ascent Environmental in 2017

Use-related Impacts

The proposed project would include use of a multi-use trail by pedestrians and bicyclists and occasional routine maintenance. Accordingly, no substantial increases in motor vehicle trips and associated tailpipe emissions would be generated by the use and maintenance of the project. Similarly, no new buildings would be constructed and operated as part of the proposed project. The project would include a limited number of new outdoor lighting fixtures along some portions of the trail, such as along undercrossings and underneath or on bridges; however, energy consumption and GHG emissions associated with this lighting would be minimal. Occasional future trail maintenance activities could require the use of motor vehicles or motorized equipment related to landscaping or pavement repairs; however, the scope or frequency of such activities would be minor, short-term, and infrequent in nature and would result in minimal annual GHG emissions.

Loss of carbon sequestration potential from permanent removal of vegetation would result in approximately 2.6 MT CO_2 "emitted" per year, which is below PCAPCD's "floor" emissions threshold of 1,100 MT CO_2e/year.

Use of the multi-use trail project would be consistent with adopted policies and implementation measures in the City of Roseville General Plan and SAP (see Regulatory Setting above) designed to reduce GHG emissions from mobile sources, which is the largest existing and projected future source of GHG emissions within both the City and region. Key policies and measures include:

- expanding the capacity of the system for alternate modes (General Plan, Air Quality and Climate Change Goal 4);
- providing adequate pedestrian and bikeway facilities for present and future transportation needs (General Plan, Air Quality and Climate Change Goal 5);
- encouraging alternative modes of transportation including pedestrian, bicycle, and transit usage (General Plan, Air Quality and Climate Change Policy 7);
- implementing the Bicycle Master Plan and Long-Range Transit Plan as specified in the Circulation Element (General Plan, Air Quality and Climate Change Element Implementation Measures, 7. Mitigation Strategies – Motor Vehicle Alternatives);
- providing safe pathways that link residential areas to schools, parks, services, and employment areas and transit facilities (General Plan, Air Quality and Climate Change Element Implementation Measures, 7. Mitigation Strategies – Motor Vehicle Alternatives); and
- various bike and pedestrian measures contained in the City's SAP.

While it cannot be known with certainty how many motor vehicle trips or vehicle miles traveled (VMT) could be reduced by increased use of the proposed trail by bicyclists and pedestrians (in lieu of vehicle trips), over the long term it is expected that trail use would contribute to decreased motor vehicle travel, which would help achieve operational GHG emissions reductions identified in the adopted plans and measures designed to achieve communitywide GHG emissions reductions. These reductions would likely offset or exceed any potential increases in GHG emissions associated with energy consumed by new lighting or mobile-source emissions from trail maintenance activities, because energy-efficient lighting consumes minimal electricity and maintenance would be a minor, infrequent, and short-term activity in each instance. Additionally, the loss of carbon sequestration from permanently removed vegetation would be less than 3 MT CO_2e/year. As a result, increases in GHG emissions associated use of the proposed project would not exceed the "floor" mass emissions threshold of 1,100 MT CO_2e/year.

Conclusion

Both construction-related and operational GHG emissions associated with the proposed project would not generate GHG emissions, directly or indirectly, that would have a significant effect on the environment, and the proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. It is reasonably foreseeable that a net GHG benefit could accrue over the long term to the extent that bicycle or pedestrian travel occurs on the proposed trail in lieu of motor vehicle trips. Such a benefit would be consistent with the mobility enhancement goal of the proposed project. It is not feasible to precisely quantify the number of motor vehicle trips avoided, so a beneficial impact conclusion would not be a certainty. Consequently, for CEQA compliance purposes, this impact would be noted as **less than significant**.

Alignment Option 1A

Both construction and operational activities for Option 1A would be the same type and general magnitude of activities that would occur under the Proposed Trail Alignment. The total number of bridges constructed under Option 1A would be less than the number of bridges constructed under the Proposed Trail Alignment, which would result in fewer GHG emissions associated with bridge construction activities. Option 1A would require an additional 765 linear feet of retaining walls or streambank stabilization when compared to the Proposed Trail Alignment. However, construction

emissions would be less than under the Proposed Trail Alignment, because emissions from the lighter type of equipment needed to construct these elements would be less than emissions for the heavy construction equipment needed for bridge construction. Additionally, the area of permanent vegetation removed would be less under Option 1A than the Proposed Trail Alignment. Thus, construction and operational activities under Option 1A would be less than estimated emissions for the Proposed Trail Alignment and would not exceed PCAPCD's recommended "floor" mass emissions thresholds. Therefore, project construction or use under this option would not generate GHG emissions, directly or indirectly, that would have a significant effect on the environment; and, the proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. This impact would be **less than significant**.

Alignment Option 1C

Both construction and operational activities for Option 1C would be the same type and general magnitude of activities that would occur under the Proposed Trail Alignment. Option 1C would not require the widening of the Darling Way bridge, which would result in fewer emissions associated with bridge construction activities. Construction and operational activities under Option 1C would be less than estimated emissions for the Proposed Trail Alignment. The area of permanent vegetation removed would be slightly higher than the Proposed Trail Alignment, but still below PCAPCD's "floor" emissions threshold of 1,100 MT CO_2e/year. Thus, implementation of Option 1C would not exceed PCAPCD's recommended "floor" mass emissions thresholds. Therefore, project construction or use under this option would not generate GHG emissions, directly or indirectly, that would have a significant effect on the environment; and, the proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. This impact would be **less than significant**.

Alignment Option 5A

Both construction and operational activities for Option 5A would be the same type and general magnitude of activities that would occur under the Proposed Trail Alignment. Implementing Option 5A would change the location of one bridge (#14 rather than #13), but would not change the number of bridges proposed, which would result in the same emissions associated with bridge construction activities. Construction and operational activities under Option 5A would be the same as estimated emissions for the Proposed Trail Alignment. The area of permanent vegetation removed would be slightly higher than the Proposed Trail Alignment, but still below PCAPCD's "floor" emissions threshold of 1,100 MT CO_2e/year. Thus, implementation of Option 5A would not exceed PCAPCD's recommended "floor" mass emissions thresholds. Therefore, project construction or use under this option would not generate GHG emissions, directly or indirectly, that would have a significant effect on the environment; and, would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. This impact would be **less than significant**.

Mitigation Measures

None required.

4.7 HAZARDS AND HAZARDOUS MATERIALS

4.7.1 Introduction

This section describes existing and potential future hazards within the project area, including the potential for exposure to hazardous materials. This section is based primarily on the results of the Initial Site Assessment prepared for the project (ENGEO 2015) and a Limited Site Assessment Report (Crawford & Associates, Inc. 2016).

For purposes of this chapter, the term "hazardous materials" refers to both hazardous substances and hazardous wastes. A "hazardous material" is defined in the Code of Federal Regulations (CFR) as "a substance or material that … is capable of posing an unreasonable risk to health, safety, and property when transported in commerce" (49 CFR 171.8). California Health and Safety Code Section 25501 defines a hazardous material as: "…any material that, because of its quantity, concentration, or physical, or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment."

No comments related to hazards and hazardous materials were received during public review of the Notice of Preparation.

4.7.2 Environmental Setting

As described in Section 4.5, "Geology and Soils," the project site is generally underlain by loamy alluvial soils that are well drained. The surface creeks in the project area generally flow from east to west. Groundwater is 13 to 25 feet below the ground surface (ENGEO 2015:7).

The nearest sensitive receptors to the project site are single-family residences located on properties adjacent to the project boundary along the length of the proposed multi-use trail. There are three schools within 0.25-mile of the project site: Saint Rose School (633 Vine Avenue), George Cirby Elementary School/Head Start Preschool (814 Darling Way), and Warren T. Eich Middle School (1509 Sierra Gardens Drive). George Cirby Elementary School and Warren T. Eich Middle School are operated by the Roseville City School District. The Head Start Preschool is operated by the non-profit Placer Community Action Council. Saint Rose School is operated privately.

WILDLAND FIRE HAZARDS

The Roseville Fire Department's (RFD's) Fire Prevention Division conducts fire code enforcement, plan review services, hazardous materials enforcement, fire cause investigation, and hazard abatement activities. The Fire Prevention Division includes a program objective to reduce the fire hazard to structures caused by weeds and grass on all vacant lots within the city, and to respond to fire hazard complaints within 10 working days.

The potential for wildland fire is influenced by three factors: the presence of fuel (i.e., vegetation), the area's topography (i.e., slope and elevation), and air mass (i.e., temperature, relative humidity, wind speed and direction, cloud cover, precipitation amount and duration, and the stability of the atmosphere). The City of Roseville has identified much of the undeveloped land adjacent to the project site as areas of concern for wildland fire (Exhibit 4.7-1). Wildfire response access points have been established in these areas to help the fire department locate entrance points onto undeveloped lands in

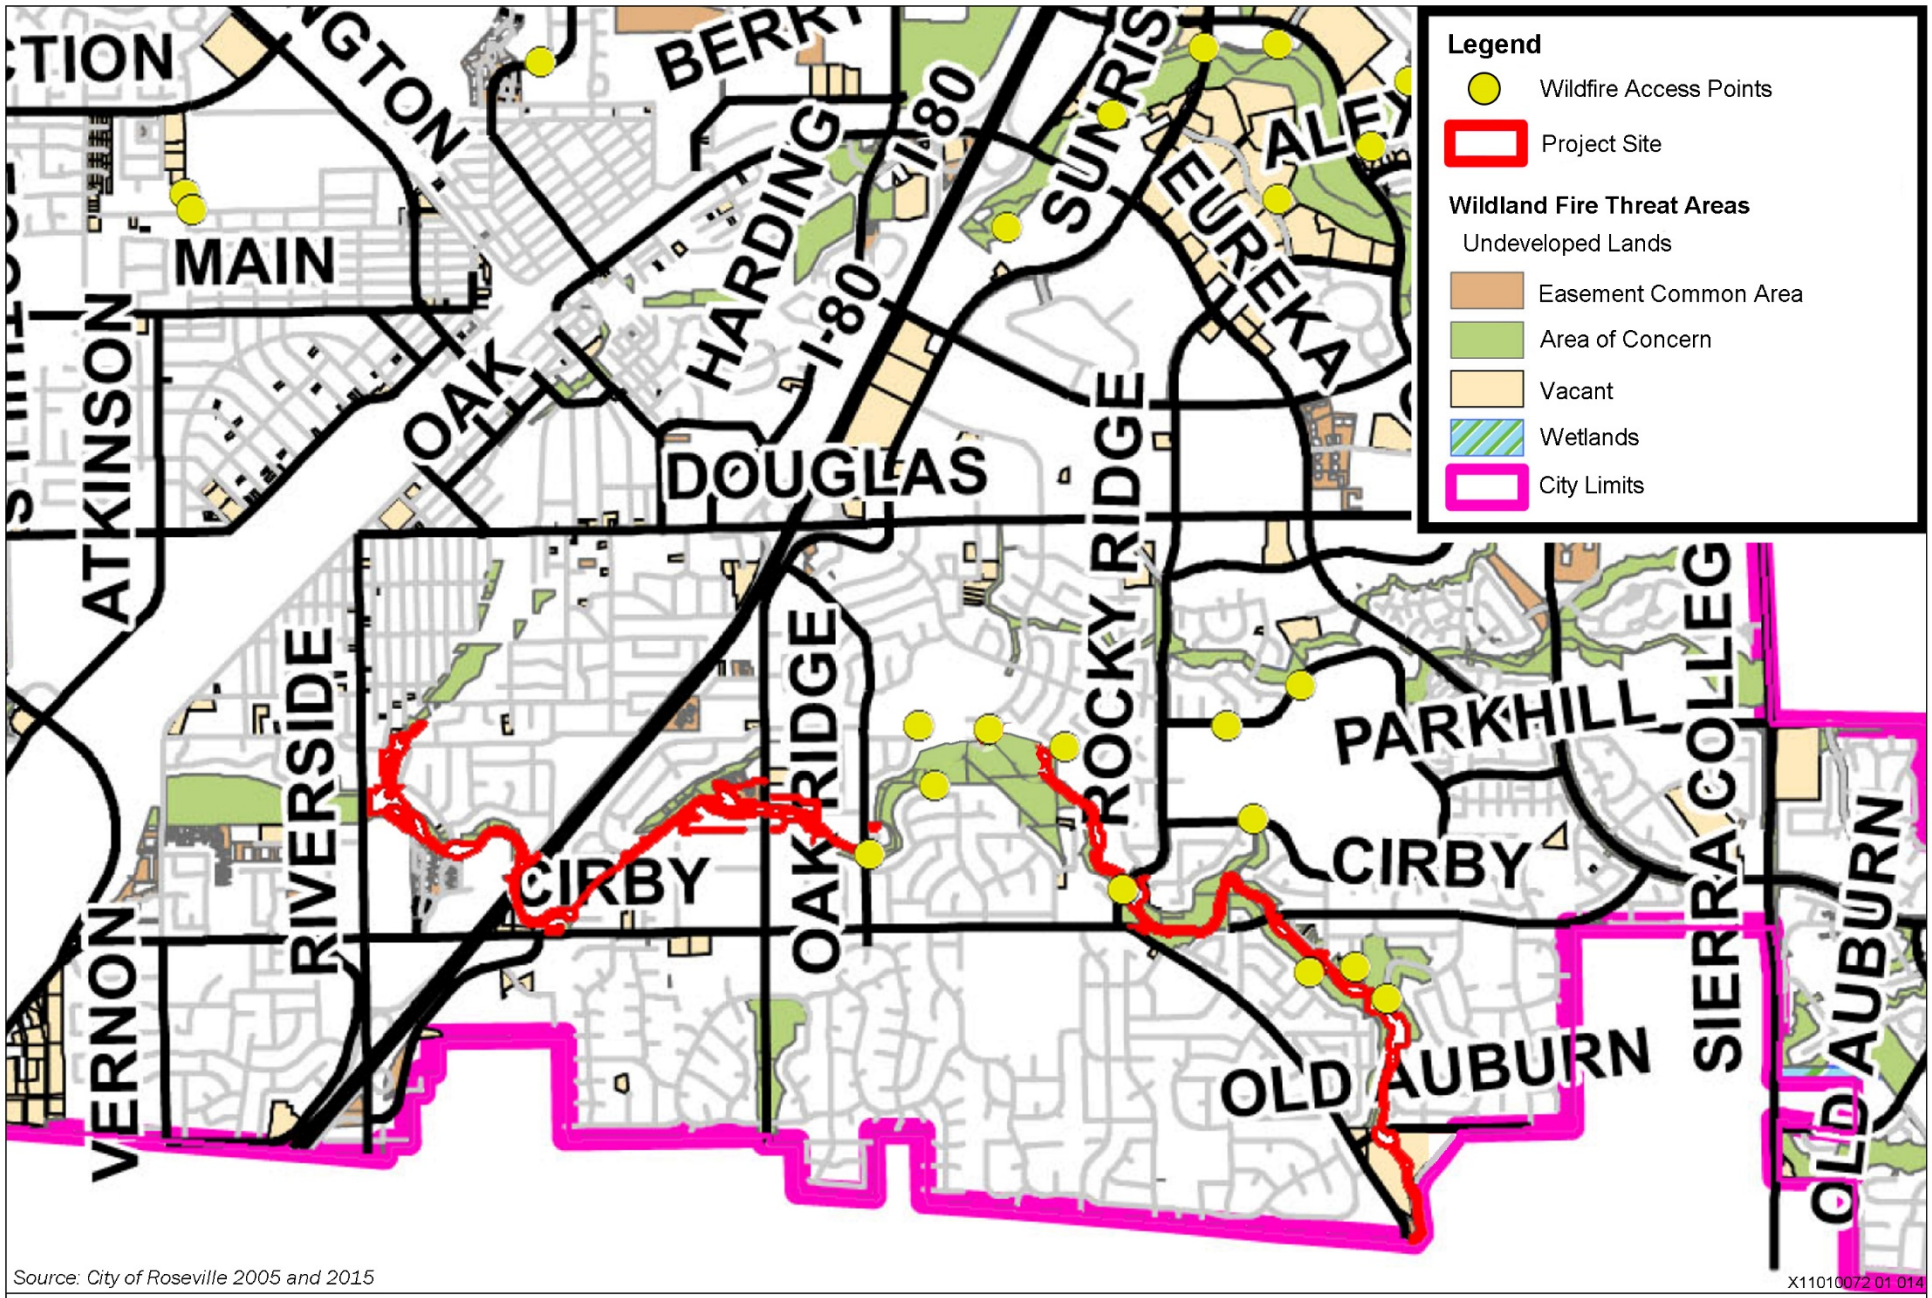

Exhibit 4.7-1

Wildland Fire Threat Areas

the event of a grass or wildland fire. Access points to the project site are located off Oak Ridge Drive, the western side of Eich Intermediate School, Sierra Gardens Drive, Meadow Lark Way, Rocky Ridge Drive, Champion Oaks Drive, Meadow Lane, and West Colonial Parkway (Exhibit 4.7-1). As a result of these planning efforts, wildland fires are typically easily accessible for firefighting apparatus and fires tend to be localized (City of Roseville 2005:14-10).

POTENTIAL SITES OF CONTAMINATION

The Initial Site Assessment (ENGEO 2015) did not identify any sites with recognized environmental conditions (i.e., sites with the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property because of any release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment) through review of public databases. In addition, no hazardous substances, petroleum products, aboveground storage tanks, or evidence of existing underground storage tanks (USTs) were observed during the site reconnaissance conducted as part of the Initial Site Assessment (ENGEO 2015).

Active buildings on properties designated for right-of-way acquisition include: 625 Riverside Avenue (auto sales), 641 Riverside Avenue (auto sales/smog/vehicle repair), 643 Riverside Avenue (auto sales), and 645 Riverside Avenue (commercial/industrial building). The building at 645 Riverside Avenue, which is currently vacant and has cinder block walls and large roll up doors, was constructed prior to 1971. There is evidence, including an old electrical panel, that another structure was historically located on this property. A small concrete pad and two pipes were noted adjacent to the south side of the building. In addition, a depression and concrete slab were visible at the southeast corner of the building. Underground storm or sewer manholes were noted along the eastern edges of 645 and 649 Riverside Avenue, along the bank of Dry Creek. According to RFD records, an unpermitted leach pit is located east of the building at 641 Riverside Avenue (ENGEO 2015).

A site assessment consisting of soil and groundwater sampling and a geophysical survey for USTs, product distribution piping, septic systems, and wells was conducted in 2016. This assessment found very low concentrations of motor fuel hydrocarbon-range compounds in soil samples and determined that effects on groundwater were unlikely. Metals were reported in all soil and groundwater samples at concentrations well below environmental screening limits and may represent background concentrations for the area. The geophysical survey did not identify any underground heating oil tanks, wells, and septic systems that were not detected in the site reconnaissance (Crawford & Associates Inc. 2016).

4.7.3 Regulatory Setting

The following federal, state, and local laws and policies related to hazards and hazardous materials apply to the proposed project.

FEDERAL

Federal laws require planning to ensure that hazardous materials are properly handled, used, stored, and disposed of, and if such materials are accidentally released, to prevent or mitigate injury to health or the environment. The U.S. Environmental Protection Agency (EPA) is the agency primarily responsible for enforcement and implementation of federal laws and regulations pertaining to hazardous materials. Applicable federal regulations are primarily contained in CFR Titles 29, 40, and 49. Hazardous materials, as defined in the CFR, are listed in 49 CFR 172.101.

Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act of 1976 (RCRA) (42 U.S. Code [USC] 6901 et seq.) is the law under which EPA regulates hazardous waste from the time the waste is generated until its final

disposal ("cradle to grave"). EPA has authorized the California Department of Toxic Substances Control (DTSC) to enforce hazardous waste laws and regulations in California. Under RCRA, DTSC has the authority to implement permitting, inspection, compliance, and corrective action programs to ensure that people who manage hazardous waste follow state and federal requirements. Generators must ensure that their wastes are disposed of properly, and legal requirements dictate the disposal requirements for many waste streams (e.g., banning many types of hazardous wastes from landfills).

Superfund Amendments and Reauthorization Act

The Superfund Amendments and Reauthorization Act of 1986 (Public Law 99-499; USC Title 42, Chapter 116), also known as the Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986, imposes hazardous materials planning requirements to help protect local communities in the event of accidental release. EPCRA requires states and local emergency planning groups to develop community emergency response plans for protection from a list of extremely hazardous substances (40 CFR 355 Appendix A). In California, EPCRA is implemented through the California Accidental Release Prevention Program.

Occupational Safety and Health Standards

The federal Occupational Safety and Health Administration (OSHA) is the agency responsible for assuring worker safety in the handling and use of chemicals identified in the Occupational Safety and Health Act of 1970 (Public Law 91-596, 9 USC 651 et seq.). OSHA has adopted numerous regulations pertaining to worker safety, contained in CFR Title 29. These regulations set standards for safe workplaces and work practices, including standards relating to the handling of hazardous materials and those required for excavation and trenching.

STATE

The primary state agencies with jurisdiction over hazardous materials management are DTSC and the Regional Water Quality Control Board. Other state agencies involved in hazardous materials management are the California OSHA (Cal/OSHA), the California Governor's Office of Emergency Services, California Department of Fish and Wildlife, Air Resources Board, California Department of Transportation (Caltrans), and California Integrated Waste Management Board.

California Public Resources Code Section 21151.4

California Public Resources Code Section 21151.4 requires the lead agency to consult with any school district with jurisdiction over a school within 0.25-mile of a project about potential impacts on the school if the project might reasonably be anticipated to emit hazardous air emissions, or handle an extremely hazardous substance or a mixture containing an extremely hazardous substance.

California Government Code Section 65962.5

California Government Code Section 65962.5 requires DTSC to compile and maintain lists of potentially contaminated sites located throughout the State of California. This "Cortese List" includes hazardous waste and substance sites from DTSC's database, leaking UST sites from the SWRCB's database, solid waste disposal sites with waste constituents above hazardous waste levels outside of the waste management unit, Cease and Desist Orders and Cleanup and Abatement Orders concerning hazardous wastes, and hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code.

Unified Hazardous Waste and Hazardous Materials Management Regulatory Program

In January 1996, the California Environmental Protection Agency adopted regulations implementing a Unified Hazardous Waste and Hazardous Materials Management Regulatory Program (Unified Program). The six program elements of the Unified Program are: hazardous waste generators and

hazardous waste on-site treatment, USTs, aboveground storage tanks, hazardous material release response plans and inventories, risk management plans, and Uniform Fire Code hazardous materials management plans and inventories. The program is implemented at the local level by a local agency – the Certified Unified Program Agency (CUPA). The CUPA is responsible for consolidating the administration of the six program elements within its jurisdiction. The Roseville Fire Department is the CUPA for the City of Roseville.

Hazardous Materials Release Response Plans and Inventory Law

The Hazardous Materials Release Response Plans and Inventory Law aims to minimize the potential for accidents involving hazardous materials and to facilitate an appropriate response to possible hazardous materials emergencies. The law requires businesses that use hazardous materials to provide inventories of those materials to designated emergency response agencies, to illustrate on a diagram where the materials are stored onsite, to prepare an emergency response plan, and to train employees to use the materials safely.

The California Health and Safety Code, Underground Storage Tank Regulations

Chapter 6.7 of the Health and Safety Code outlines the requirements for USTs. The code identifies requirements for corrective actions, cleanup funds, liability, and the responsibilities of owners and operators of USTs.

Worker and Workplace Hazardous Materials and Worker Safety

Cal/OSHA is responsible for developing and enforcing workplace safety standards and assuring worker safety in the handling and use of hazardous materials. Among other requirements, Cal/OSHA obligates many businesses to prepare Injury and Illness Prevention Plans and Chemical Hygiene Plans. The Hazard Communication Standard requires that workers are informed of the hazards associated with the materials they handle. For example, manufacturers are to appropriately label containers, material safety data sheets are to be available in the workplace, and employers are to properly train workers.

Cal/OSHA assumes primary responsibility for developing and enforcing workplace safety regulations within the state. Cal/OSHA standards are typically more stringent than federal OSHA regulations and are presented in Title 8 of the CCR.

Transport of Hazardous Materials and Hazardous Materials Emergency Response Plan

The State of California has adopted U.S. Department of Transportation regulations for the movement of hazardous materials originating within the state and passing through the state. State regulations are contained in Title 26 of the CCR. State agencies with primary responsibility for enforcing state regulations and responding to hazardous materials transportation emergencies are the California Highway Patrol and Caltrans. Together, these agencies determine container types used and license hazardous waste haulers to transport hazardous waste on public roads.

The State of California has developed an emergency response plan to coordinate emergency services provided by federal, state, and local governments and private agencies. Response to hazardous materials incidents is one part of the plan. The plan is managed by the Office of Emergency Services, which coordinates the responses of other agencies in the area.

California Fire Code

The California Fire Code (CFC) establishes standards for the storage of hazardous materials. The CFC also requires the fire chief to be notified immediately when an unauthorized discharge becomes reportable under state, federal, or local regulations. Section 503 of the CFC establishes requirements for fire apparatus access roads.

Caltrans Standards Specifications

The Federal Highway Administration is the National Environmental Policy Act (NEPA) lead agency for the project. Through a NEPA Assignment Memorandum of Understanding, Caltrans is serving the Federal Highway Administration's role as the NEPA lead agency. Therefore, the project would be required to comply with Caltrans' Standard Specifications. Section 14-11 includes regulations relating to hazardous waste and contamination. Specifically, Section 14-11.02 requires the immediate stop of work upon discover of unanticipated asbestos or a hazardous substance, Section 14-11.04 regulates dust control, and Section 14-11.5 regulates stock piling.

LOCAL

Roseville Multi-Hazard Mitigation Plan

The Roseville City Council adopted the Roseville Multi-Hazard Mitigation Plan (RMHMP) on July 20, 2005. The most recent update was submitted to California Governor's Office of Emergency Service in October 2016. This hazard mitigation plan update identifies resources, information, and strategies for reducing risk from natural hazards. The plan will help guide and coordinate mitigation activities throughout the City.

City of Roseville Fire Department Hazardous Materials Response Plan and Fire Prevention and Life Safety Standards

The RFD has primary responsibility for emergency response and is staffed with its own Hazardous Materials Response Team. RFD inspects and monitors facilities that are required to comply with federal and state regulations concerning inventory and reporting of hazardous materials.

The RFD has developed a Hazardous Materials Response Plan that describes organizational and operational responsibilities, including cleanup and decontamination procedures, in the event of a hazardous materials emergency. RFD has also published standards, which are adopted by the City Council and contained in the Roseville Municipal Code and Roseville Fire Code Ordinance that modify applicable state regulations.

The Emergency Vehicle Access standard provides guidelines pertaining to the creation and maintenance of fire department access roadways required by Section 503 of the 2013 CFC, as amended by local ordinance. Access plans must be submitted as part of the civil improvement package, and construction is prohibited until the plans have been approved.

City of Roseville Design and Construction Standards

The City of Roseville's Design and Construction Standards (last amended in April of 2015) provide a reference to the City's requirements for the design and construction of civil improvement projects, which are to be dedicated to the public and accepted by the City for maintenance or operation, and to provide for coordinated development of those facilities to be used by and for the protection of the public.

City of Roseville Guidance for Stormwater Quality Best Management Practices

Control of construction site stormwater runoff is required by the NPDES stormwater permit that the SWRCB issued the City in 2013. The *West Placer Storm Water Quality Design Manual* (Placer County et al. 2016) is designed to facilitate compliance with the City's Stormwater Management Plan. The manual includes a discussion specific to pre-construction evaluation of potential for existing soil or groundwater contamination and appropriate selection of design measures.

See Section 4.8, "Hydrology and Water Quality," for additional discussion of stormwater pollution prevention plan requirements and best management practices.

City of Roseville Emergency Operations Plan

The City of Roseville Emergency Operations Plan addresses planned response to extraordinary emergency situations associated with natural disasters, technological (human-caused) emergencies, and war emergency operations in, or affecting, the City of Roseville. The plan establishes an emergency management organization and the emergency operations center for field response. It is designed to guide users through emergency preparedness, response, recovery, and mitigation.

4.7.4 Impacts

METHODS OF ANALYSIS

This analysis is based on the results of the Initial Site Assessment (ENGEO 2015) and analysis of site conditions. Potential impacts resulting from project construction and use were determined by evaluating the relative potential for a hazardous condition to result from project implementation and the sensitivity of potential receptors to such conditions.

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the proposed project was determined to result in a significant impact because of hazards or hazardous materials if it would:

- create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
- create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
- emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or wastes within 0.25-mile of an existing or proposed school;
- be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment;
- for a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport of public use airport, result in a safety hazard for people residing or working in the project area;
- for a project within the vicinity of a private airstrip, result in a safety hazard for people residing or working in the project area;
- impair implementation of, or physically interfere with, an adopted emergency evacuation plan or emergency response plan; or
- expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are located adjacent to urbanized areas or where residences are intermixed with wildlands.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

There are no sites on the Cortese List, as established pursuant to Government Code Section 65962.5, within the boundaries of the project site. Therefore, the potential for a significant hazard to the public or the environment due to location of the project on such a hazardous materials site is not evaluated further.

There are no airports in close proximity to the project site. There are two private helistop facilities within Roseville at the Sutter and Kaiser hospitals (located approximately 2 miles and 1 mile north of the project site, respectively). Potential impacts related to airports or the helistop facilities are not discussed further.

IMPACT ANALYSIS

Impact 4.7-1	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.
Applicable Policies and Regulations	RCRA, EPCRA, OSHA and Cal/OSHA standards, Hazardous Materials Response Plans and Inventory Law, CFC, RMHMP, RFD Hazardous Materials Response Plan and Standards, City of Roseville Stormwater Quality permitting requirements
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts

The proposed project would involve construction activities such as site preparation, grading, and paving. These activities require the storage, use, and transport of potentially hazardous materials such as fuels, oils, paints, and adhesives. Construction workers, nearby persons or residents, and the surrounding environment could be exposed to hazards associated with accidental releases of the materials, whether through improper handling, unsound disposal methods, transportation accidents, or fires, explosions, or other emergencies.

Contractors would be required to comply with applicable federal, state, and local regulations for handling hazardous material. The requirements include reporting accidental release of hazardous materials. The City's established hazardous material emergency response plan and general emergency response plan would also reduce the potential for harm from accidental release by facilitating timely response to the release of potentially hazardous materials. The RFD is available to respond to hazardous materials complaints or emergencies, if any, during construction.

The City would implement the following plans and special provisions as part of the proposed project to avoid a significant hazard to the public or environment during construction:

- Comply with the RMHMP, which requires contractors to transport and store materials in appropriate and approved containers along designated truck routes, maintain required clearances, and handle materials using fire department.
- Implement a spill prevention and control plan to minimize the exposure of people and the environment to potentially hazardous materials. The spill prevention and control plan would ensure transport, storage, and handling of hazardous materials required for construction is consistent with relevant regulations and guidelines.
- Comply with the City of Roseville Design and Construction Standards and the *West Placer Storm Water Quality Design Manual* (Placer County et al. 2016).

Compliance with these plans would be achieved through the following project commitments:

- All heavy equipment would be stored in the designated staging areas and checked by the City inspector and maintained daily to prevent leaks of materials that if introduced to water could be deleterious to aquatic life.
- Raw cement/concrete (or washings thereof), asphalt, paint or other coating material, oil or other petroleum products, or any other substances associated with project-related activities that could be

hazardous to aquatic life would be prevented from contaminating the soil or entering creek channels.

- No materials would be placed in the creek channels, except as shown on the project plans. All debris and waste would be picked up daily and properly disposed of at an appropriate site. All construction debris and associated materials would be removed from the work site upon completion of the project.

Use-related Impacts

Hazardous materials would continue to be used and transported in varying amounts during long-term use of the proposed trail project. For example, weed control chemicals and asphalt for patching/crack sealing may be used by City employees or contractors during path maintenance. All maintenance materials required for project use (e.g., oils, grease, lubricants, antifreeze, and similar materials) would be stored off-site.

The project would continue to comply with applicable federal, state, and local regulations, including the City's Multi-Hazard Mitigation Plan. The City's established hazardous material emergency response plan and general emergency response plan would continue to apply to project use, and RFD would be available to respond to hazardous materials complaints or emergencies.

Conclusion

Because the proposed project would be required to implement and comply with existing hazardous material regulations, impacts related to the creation of significant hazards to the public or environment through the routine transport, use, and disposal of hazardous materials would be unlikely. Implementation and compliance with the uniformly applicable plans, standards, and special provisions described above would maintain any potential impacts during construction or trail use at a **less-than-significant** level.

Alignment Option 1A

Both construction and use-related activities under Option 1A would be the same type and general magnitude as would occur under the Proposed Trail Alignment. Because the proposed project would be required to implement and comply with existing hazardous material regulations, impacts related to the creation of significant hazards to the public or environment through the routine transport, use, and disposal of hazardous materials would be unlikely. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C

Both construction and use-related activities under Option 1C would be the same type and general magnitude as would occur under the Proposed Trail Alignment. Implementation of this alignment option would not substantially change the potential for creation of significant hazards to the public or environment through the routine transport, use, and disposal of hazardous materials because the proposed project would be required to implement and comply with existing hazardous material regulations. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A

Both construction and use-related activities under Option 5A would be the same type and general magnitude as would occur under the Proposed Trail Alignment. Implementation of this alignment option would not substantially change the potential for creation of significant hazards to the public or environment through the routine transport, use, and disposal of hazardous materials because the proposed project would be required to implement and comply with existing hazardous material regulations. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

None required.

Impact 4.7-2	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release or hazardous materials into the environment.
Applicable Policies and Regulations	EPCRA, OSHA and Cal/OSHA standards, California UST regulations, Caltrans' Standard Specifications, the Unified Program, CFC, RMHMP, RFD Hazardous Materials Response Plan and Standards
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Most of the proposed trail alignment is located within greenbelts along Dry, Cirby, and Linda Creeks that are undeveloped open space. The site reconnaissance and records review conducted in the Initial Site Assessment and Limited Site Assessment did not find documentation or physical evidence of soil or groundwater impairment associated with current or past uses of the project site or contaminated facilities that would reasonably be expected to impact the project site (ENGEO 2015; Crawford & Associates 2016). Based on this, there is a low risk of encountering soil or groundwater affected by materials release in these areas during construction of the proposed project. Although soil and groundwater sampling in the portion of the project site that extends through an industrial area along Riverside Avenue between Darling Way and Kenroy Lane did not identify any existing contamination, the potential to encounter unanticipated hazards is greater in this area (Crawford & Associates Inc. 2016). In addition, although none were detected in surveys, there is also a potential that underground heating oil tanks, wells, and septic systems remain on the property. If discovered, any remaining USTs, wells, and septic systems would need to be properly abandoned in accordance with City permit requirements.

Properties of potential concern include:

- 645 Riverside Avenue, which is in a commercial/industrial area and has had buildings constructed on the property since before 1947;
- 649 Riverside Avenue, which is in an industrial area and was developed with structures from at least 1947 to 1971; and
- 110 Darling Way, which is in an industrial area and was occupied prior to 1952, and is adjacent to a LUST case where soil vapor extraction and air sparge[1] remediation was performed.

There is also an ongoing investigation of PCE in shallow soil gas near the intersection of Darling Way and Riverside Avenue. PCE is not expected to have affected the project site, however; based on the direction of groundwater flow, the project site is upgradient of this contamination.

The disturbance of undocumented and unexpected hazardous wastes could also result in hazards to the environment and human health. Adverse impacts could result if construction activities inadvertently disperse contaminated material into the environment. Potential hazards to human health include ignition of flammable liquids or vapors, inhalation of toxic vapors in confined spaces such as trenches, and skin

[1] Air sparging is a subsurface contaminant remediation technique that involves the injection of pressurized air into contaminated groundwater, which changes the hydrocarbons from a dissolved to vapor state. The air is then sent to a vacuum extraction system to remove the contaminants.

contact with contaminated soil or water. In addition, inadvertent disturbance of asbestos in underground utilities could result in airborne asbestos fibers. Caltrans' Standard Specifications, Section 14-11 addresses discovery of hazardous materials and contamination during the course of construction work. It states that when the presence of asbestos or hazardous substances are not shown on the plans or indicated in the specifications and a construction contractor encounters materials that the Contractor reasonably believes to be asbestos or a hazardous substance as defined in Section 25914.1 of the Health and Safety Code, and the asbestos or hazardous substance has not been rendered harmless, the contractor may continue work in unaffected areas reasonably believed to be safe. The contractor would immediately cease work in the affected area and report the condition to the project engineer in writing. Following the standard specifications, the contractor would sample the affected area to determine if the material is hazardous and would develop a Sampling and Analysis Plan (SAP) to outline how to analyze, abate, manifest, transport, and dispose of all special and hazardous material as required by law. The SAP would be submitted to the City and would describe how the contractor intends to complete the work plan. The work plan would include the general order of work, a site-specific worker health and safety plan, and a SAP for testing of potentially hazardous materials. It would also include a list of disposal sites the contractor expects to use for the various type of waste and recyclables.

Conclusion

Incorporation of standard best management practices and avoidance measures into the project, as discussed above under Impact 4.7-1, and coordination with regulatory agencies would reduce the potential for negative effects that could result from construction on known contaminated sites. Compliance with standard construction specifications, including Caltrans' Standard Specifications, Section 14-11, would reduce the potential for negative effects that could result from undocumented contamination that has not been characterized or remediated. Therefore, this would be a **less-than-significant** impact.

Alignment Option 1A

Option 1A would result in construction proximate to the same properties of potential concern identified above for the Proposed Trail Alignment. The potential for trail construction to affect these properties would be the same as discussed for the Proposed Trail Alignment, except that Alignment Option 1A may require more activity in the southwest corner of the access and staging area on Riverside Avenue, which is the site of the former facilities at 649 Riverside Avenue. Option 1A would also reduce the area of temporary impacts by 0.40 acre, which would result in a proportional reduction in the potential to encounter undocumented contamination that has not been characterized or remediated. Based on these overall similarities and the existing regulations for known and unknown contamination, the impact associated with implementing Option 1A would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C

Option 1C would shift trail construction at the westernmost end of the project site from the west side of Dry Creek to the east side. This would separate earthwork that could encounter hazardous materials from the industrial and commercial properties along Riverside Avenue more than the Proposed Trail Alignment. Option 1C would also reduce the area of temporary impacts by approximately 0.57 acre, which would result in a proportional reduction in the potential to encounter undocumented contamination that has not been characterized or remediated. However, Alignment Option 1C would still include construction of the proposed trailhead and parking area on the west side of Dry Creek adjacent to the industrial and commercial properties on Riverside Avenue. Based on these overall similarities and the existing regulations for known and unknown contamination, the impact associated with implementing Option 1C would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A
Option 5A would not alter the potential for trail construction to affect properties of potential concern in the portion of the project site that extends through an industrial area along Riverside Avenue between Darling Way and Kenroy Lane, However, the alignment would increase the area of temporary impacts by 0.13 acre, which would result in a proportional increase in the potential to encounter undocumented contamination that has not been characterized or remediated. Based on these overall similarities and the existing regulations for known and unknown contamination, the impact associated with implementing Option 5A would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures
None required.

Impact 4.7-3	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or wastes within 0.25 mile if an existing or proposed school.
Applicable Policies and Regulations	RCRA, EPCRA, OSHA and Cal/OSHA Standards, Unified Program, California Highway Patrol and Caltrans hazardous materials transport regulations, RMHMP, RFD Hazardous Materials Response Plan and Standards
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment
Schools are considered a particularly sensitive receptor relative to hazardous material exposure because there is a concentration of children that is repeatedly exposed to environmental conditions at the school site for extended periods of time. As discussed above, there are three school sites within 0.25 mile of the project site, including a combination preschool and elementary school site, a middle school, and a private school. Also, as described in the environmental setting, no soil contamination was identified during the Initial Site Assessment. Furthermore, as described above under Impact 4.7-1, no significant emissions of hazardous materials would be anticipated during construction or use of the proposed project. And, because of the linear nature of the project, construction activities requiring the use of hazardous materials would occur for a limited duration in the general vicinity of each of the school sites.

During construction, demolition, and excavation activities, the project would potentially produce hazardous air emissions or involve the handling of hazardous wastes. As discussed above, the project would comply with federal and state regulations that are designed to reduce the potential for the release of large quantities of hazardous materials and wastes into the environment to an acceptable level. Existing protective measures and regulations would be sufficient to ensure that hazardous materials stored, used, transported, and disposed of as part of the proposed project would not pose a significant hazard to the public or the environment, including children at schools, under normal conditions.

Conclusion
Due to the limited quantities of potentially hazardous materials required for construction of the project and the applicability of federal, state, and local regulations that would reduce the potential for hazards associated with the transport, use, and storage of hazardous materials, the project would have a **less-than-significant** impact.

Alignment Option 1A
Implementing Alignment Option 1A would not change the proximity of construction activities to the identified school sites. Both construction and use-related activities for Option 1A would be the same type and general magnitude of activities as would occur under the Proposed Trail Alignment. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C
Implementing Alignment Option 1C would not change the proximity of construction activities to the identified school sites. Both construction and use-related activities for Option 1C would be the same type and general magnitude of activities as would occur under the Proposed Trail Alignment. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A
Implementing Alignment Option 5A would not change the proximity of construction activities to the identified school sites. Both construction and use-related activities for Option 5A would be the same type and general magnitude of activities as would occur under the Proposed Trail Alignment. The impact would be **less than significant** for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

None required.

Impact 4.7-4	Impair implementation of, or physically interfere with, an adopted emergency evacuation plan or emergency response plan.
Applicable Policies and Regulations	City of Roseville Emergency Operations Plan, City of Roseville Design and Construction Standards, Hazard Mitigation Plan
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts
Trail construction may involve the closure of traffic lanes where trails intersect with streets. The City of Roseville's Design and Construction Standards require that roadwork requiring traffic lane closure be accepted by the City of Roseville Public Works Department. Per the Design and Construction Standards, the project's contractor will implement traffic control measures in accordance with local, state and federal requirements. The construction documents would require the contractor to develop a traffic control plan to provide safe passage to vehicles and pedestrians through the work zone where traffic is allowed. These regulations further require that the police and fire departments, ambulance services, schools, and bus systems receive 48 hours of notice in advance of road closures.

Use-related Impacts
After completion, the proposed multi-use trail would improve access to the Dry Creek, Cirby Creek, and Linda Creek open space areas. Per the Design and Construction standards, the desired vertical clearance at undercrossings would be 12 feet to allow for passage of fire vehicle access. In constrained

areas or where fire vehicle access is not needed, the minimum vertical clearance at undercrossings would be 9 feet.

Conclusion

Construction of the trail could require temporary lane closures in limited locations where the trail would cross underneath a road, which may affect traffic and emergency access. Compliance with the Design and Construction Standards that require noticing of emergency services prior to road closures would permit emergency services adequate time to identify alternate routes and avoid impedance of access through locations of potential congestion. During use, enhanced access may benefit fire and police response to emergencies in these areas. This impact would be **less than significant**.

Alignment Option 1A

Construction and use-related activities associated with implementation of Option 1A would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **less-than-significant** impact on emergency evacuation or response plans for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C

Construction and use-related activities associated with implementation of Option 1C would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **less-than-significant** impact on emergency evacuation or response plans for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A

Construction and use-related activities associated with implementation of Option 5A would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **less-than-significant** impact on emergency evacuation or response plans for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

None required.

Impact 4.7-5	Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are located adjacent to urbanized areas or where residences are intermixed with wildlands during project construction.
Applicable Policies and Regulations	CFC, RMHMP, City of Roseville's Design and Construction Standards
Significance with Policies and Regulations	Proposed Project: Potentially significant Alignment Option 1A: Potentially significant Alignment Option 1C: Potentially significant Alignment Option 5A: Potentially significant
Mitigation Measures	Mitigation Measure 4.7-5 (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Potential losses from wildfire include human life, structures, and other improvements, and natural resources. There are no recorded incidents of loss of life from wildfires in Roseville, and the risk from wildfire has been deemed moderate by both the State and the RFD. Given the immediate response times to reported fires, the likelihood of injuries and casualties is generally low in the project area (City of Roseville 2005).

The Dry Creek Greenway East Trail would be constructed through open space areas where there is a risk of wildfire ignition. The risk is greatest in the dry summer months when drought conditions and dying trees and vegetation create fire-prone conditions. Trail construction has the potential to increase the risk of wildfires by introducing construction vehicles and equipment, such as power tools and torches, that may create sparks and ignite dry vegetation.

Conclusion

Construction activities would have a **potentially significant** impact related to exposure of people or structures to wildland fire because construction activities could ignite the dry grasses on, and adjacent to, the project site.

Alignment Option 1A

Construction activities associated with implementation of Option 1A would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **potentially significant** impact related to exposure of people or structures to wildland fire during project construction for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C

Construction activities associated with implementation of Option 1C would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **potentially significant** impact related to exposure of people or structures to wildland fire during project construction for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A

Construction activities associated with implementation of Option 5A would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **potentially significant** impact related to exposure of people or structures to wildland fire during project construction for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

Mitigation Measure 4.7-5: Clear flammable materials within the project site prior to construction.

This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A.

If dry vegetation or other fire fuels exist on or near staging areas, welding areas, or any other area on which equipment will be operated, contractors shall clear the immediate area of fire fuel prior to construction. To the extent feasible, areas subject to construction activities will be maintained free of fire fuel and debris during the course of construction. To avoid impacts to natural resources, areas to be cleared and appropriate clearing methods shall be identified with the assistance of a qualified biologist.

Significance after Mitigation

Implementation of this mitigation measure would reduce significant construction-related impacts associated with the potential for loss, injury, or death due to wildfire to a **less-than-significant** level by removing fire fuels from construction sites and substantially decreasing the potential for construction activities to ignite a wildfire.

Impact 4.7-6	Use-related exposure of people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are located adjacent to urbanized areas or where residences are intermixed with wildlands.
Applicable Policies and Regulations	CFC, RMHMP, City of Roseville's Design and Construction Standards
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Potential losses from wildfire include human life, structures, and other improvements, and natural resources. There are no recorded incidents of loss of life from wildfires in Roseville, and the risk from wildfire has been deemed moderate by both the State and the RFD. Given the immediate response times to reported fires, the likelihood of injuries and casualties is generally low in the project area (City of Roseville 2005).

The introduction of persons into open space, including maintenance workers and bike path users, has the potential to increase the risk of fire (City of Roseville 2008). However, much of the project site is already public land and can be accessed on segments of existing trails or unrestricted access points along and at the ends of public streets. The proposed trail would be designed to meet RFD's guidelines for trail construction to the extent feasible (see Impact 4.7-4, above); therefore, it would provide improved access to emergency responders compared to current conditions. The guidelines facilitate RFD's access to open space and enhance its ability to respond to wildfires. In addition, the City of Roseville has adopted several policies that are intended to reduce the risk of wildfires within open space and to reduce the potential for harm to people or structures resulting from wildfires. These include the City's Multi-Hazard Mitigation Plan, which identifies risk reduction measures for wildfires, including clearing potential fuels, implementing best management practices on public lands, and using goat grazing in City open space and preserve areas. RFD also actively promotes the creation of fire breaks between open space areas and adjoining developed properties. Active control of weeds adjacent to bike trails in all open space areas is conducted by the Parks & Recreation Department and Public Works Department, reducing the potential for accidental fires started by trail users or maintenance worker vehicles.

Conclusion

City of Roseville measures and policies, including RFD and the City's Multi-Hazard Mitigation Plan, would limit exposure to wildland fires from use of the trail, so trail use would not expose people or structures to significant hazards related to wildland fires (City of Roseville 2008). This impact would be **less than significant**.

Alignment Option 1A

Use-related activities associated with implementation of Option 1A would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **less-than-significant** impact for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C
Construction and use-related activities associated with implementation of Option 1C would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **less-than-significant** impact for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A
Construction and use-related activities associated with implementation of Option 5A would be of the same type and general magnitude as would occur with the Proposed Trail Alignment. This option would have a **less-than-significant** impact for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

None required.

4.8 HYDROLOGY AND WATER QUALITY

4.8.1 Introduction

This section provides the environmental and regulatory background necessary to analyze the impacts of the proposed Dry Creek Greenway East Trail project to hydrology and water quality. Sources of information used to evaluate impacts include: project specific hydrologic and engineering reports, regulatory documents, and existing planning and water quality documents for the surrounding area.

Comments received on the Notice of Preparation for the EIR addressed potential downstream effects from creek bank work, rainwater drainage runoff, maintaining floodway channel capacity, obtaining Flood Protection Board permits, and the potential for hydraulic impacts. These issues are addressed in the impact discussions in this section.

4.8.2 Environmental Setting

REGIONAL HYDROLOGY

The project area is located within the Dry Creek watershed, which covers approximately 101 square miles in Placer and Sacramento Counties and is part of the larger Sacramento River Basin. The Cities of Rocklin and Roseville and the Town of Loomis are wholly or partially contained within the watershed. The headwaters of Dry Creek are located in the upper portions of the Loomis Basin in the vicinity of Penryn and Newcastle at elevations of 900 to 1,200 feet above mean sea level (msl) (Placer County Flood Control and Water Conservation District [PCFCWCD] 2011). The mouth of Dry Creek at its confluence with Steelhead Creek, which connects to the Sacramento River, is at an elevation of approximately about 30 feet above msl (Placer County 2005). Antelope Creek and Clover Valley Creek form the northwestern boundary of the watershed, and Secret Creek and Miners Ravine comprise the northeast portion of the watershed. Antelope Creek, Secret Ravine, and Miners Ravine converge near Interstate 80 (I-80) to form Dry Creek. Cirby Creek, made up of the combination of Cirby and Linda Creeks and Strap Ravine, joins Dry Creek just upstream from Riverside Avenue in Roseville.

Land use within the watershed has changed from rural to urban. Urban development led to increased impervious areas, reduced riparian vegetation, channelization, structures that impede flows, and reduction of the natural floodplain (Placer County 2003). The total percentage of impervious surfaces within the watershed increased from 16.2 percent in 1992 to 19.9 percent in 2007 and is projected to reach 24.8 percent at build out (PCFCWCD 2011). The amount of impervious surfaces within a watershed is directly linked to stormwater runoff rates and volumes.

LOCAL HYDROLOGY

The project area is located in the Lower American hydrologic unit (HUC 18020111) within the Dry Creek watershed. The project area encompasses portions of Strap Ravine, Linda Creek, Cirby Creek, and Dry Creek. Linda Creek flows in a generally northwest direction towards Cirby Creek. Strap Ravine is a seasonal tributary to Linda Creek located north of the creek in the section between Rocky Ridge Drive and Champion Oaks Drive. The confluence of Linda Creek and Cirby Creek is located west of Sunrise and east of I-80, and Cirby Creek discharges into Dry Creek east of Riverside Avenue. All three main creek corridors are urban creeks and receive flows from adjacent development through culverts from the City storm drain system, sheet flow from adjacent riparian areas, and runoff from residential yards.

REGULATED FLOODPLAINS

The Dry Creek watershed is one of the four primary sources of flooding within Placer County (Placer County 2005). Dry Creek and its tributaries have an extensive record of historic flood, especially in the Roseville area. Damaging floods occurred in December 1955, April 1958, October 1962, December 1964, March 1983, February 1986, January 1995, January 1997, and January 2011. The floods of 1983, 1986, and 1995 were the largest and most damaging on record (Placer County 2005).

The one-percent annual chance ("100-year") floodplain is composed of two key components: the floodway and the floodway fringe (see Exhibit 4.8-1). The floodway fringe is the perimeter of the floodplain and is an area where development may be allowed provided that it does not raise the base flood elevation by more than one foot. The floodway is a fictitious boundary which marks the limit of a hypothetical channel that could hold the 100-year flood flows if the floodway fringe areas were developed. Within the floodway, development or disturbance can only be permitted if it does not result in any increase in the base flood elevation.

The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM) (06061C0479G, 06061C0478F, and 06061C0487F and Preliminary Digital FIRMs 06061C1031H, 06061C1032H, and 06061C1051H) and the City of Roseville (City) have mapped flood hazard zones in the City. Their flood zone dataset indicate that the project area is almost entirely located within the 100-year floodplain of Dry Creek, Cirby Creek, and Linda Creek. The 100-year floodplain refers to the area that is inundated by a flood that has a one percent chance in any given year of being equaled or exceeded. The 100-year flood is the national minimum standard to which communities regulate their floodplains. In general, the FIRM maps are developed for watersheds one square mile or larger (640 acres). The City developed its own flood hazard maps to inform planning decisions. These maps include 100-year flood zones for watersheds of 300 acres or larger (City of Roseville 2014). The FEMA FIRM and City of Roseville 100-year flood zones within the project area are shown on Exhibit 4.8-2.

ASCENT ENVIRONMENTAL

In addition to 100-year floodplains, the City of Roseville has mapped 200-year floodplains in relevant urban areas, as required by the Central Valley Flood Protection Act of 2008. Within the 200-year floodplain, habitable structures must be elevated to avoid flood hazards and bridges must be designed to provide a minimum of two feet of clearance above the design flood water surface (see section 4.8.3, "Regulatory Setting" for additional discussion).

The City is involved in several flood control projects and mitigation programs designed to protect residents and lessen the potential for flooding both within the City and within neighboring communities. These projects include constructing flood control improvements, removing restrictive structures in the floodplain, collecting drainage mitigation fees to alleviate downstream damage, development of a flood alert system, and a stream cleaning program in flood prone areas (COR 2014).

Jurisdictional Waters of the United States

A delineation of Jurisdictional Waters of the United States was completed by Ascent Environmental in April and June of 2014. This delineation will be submitted to the U.S. Army Corps of Engineers (USACE) for verification during the permitting phase of the project. Waters of the United States include essentially all navigable waters (waters used for transport or commerce) and their tributaries, all interstate waters and their tributaries, wetlands with a clear connection to these waters, and all impoundments of these waters. The USACE distinguishes between wetland and non-wetland waters (commonly referred to as "other waters"). Wetlands are defined as areas that are inundated or saturated by surface or groundwater for a sufficient duration to support a prevalence of vegetation adapted for life in saturated soil conditions (Title 33 CFR Section 328.3[b]).

The wetland delineation for the project site identified two wetlands. Other waters of the United States included portions of Strap Ravine, Linda Creek, Cirby Creek, Dry Creek, two unnamed perennial streams, an intermittent drainage, and an ephemeral drainage (Ascent Environmental 2015). Table 4.8-1 provides the acreage and linear feet of potential jurisdictional waters within the project site.

Table 4.8-1 Potentially Jurisdictional Wetlands and Other Waters within the Project Site

Type	Acres	Linear Feet
Other Waters		
Ephemeral Drainage	0.002	51
Intermittent Drainage	0.05	144
Perennial Stream	3.91	5,025
Drainage	0.02	164
Total Other Waters	**3.982**	**5,384**
Wetlands

Surface Water Quality

Urbanization of the Dry Creek Watershed has had a major effect on both short- and long-term water quality within the project area. Increasing development has resulted in an increase in impervious surfaces such as roofs, streets, sidewalks, and storm drains. These combine to decrease infiltration opportunities and (depending upon soil type) may increase the volume and rate of run-off. Increased

run-off velocity adds to the potential for channel erosion resulting in increased sediment into the watercourses. In addition, sediment deposited in streams from construction-related activities results in degradation of spawning, rearing, and food producing habitat for wildlife. Removal of riparian vegetation can result in effects such as increasing stream temperature and reducing the input of biologic materials into the streams.

Long-term impacts to water quality occur as a result of run-off from urbanization that enters the watercourses. Reduction in permeable surface areas limits the percolation and associated filtration processes beneficial to water quality. Urban run-off from surfaces such as streets, parking lots, driveways, and landscaped areas typically includes oil, grease, heavy metals, pesticides, herbicides, fertilizers, and sediments. Increases in urban run-off have been shown to impact, among other things, aquatic habitat.

Two locations along Dry Creek and Cirby Creek were monitored for surface water quality in 2008, 2009, and twice in 2010 as part of the Central Valley RWQCB's Safe-to-Swim program. Monitoring sites were sampled for *E. coli,* nutrients, and *Salmonella* (Central Valley Regional Water Quality Control Board [Central Valley RWQCB] 2009). During September of 2008 and 2010, the monitoring site at the confluence of Dry Creek and Cirby Creek exceeded the EPA *E. coli* limit for contact recreation (Central Valley RWQCB 2008 and 2010a). High levels of *E. coli* were also found at Dry Creek near Royer Park in June 2010 (Central Valley RWQCB 2010b) and at Linda Creek at Oak Ridge Drive in September 2010 (Central Valley RWQCB 2010a). In almost all cases, the temperature readings at sample points exceeded the ≤ 20°C water quality objective for surface water entering the Bay Delta. A warm, stagnant waterbody with readily available nutrients provides a favorable environment for the growth of bacteria, and it is possible that as flows decrease in Cirby Creek over the dry season, bacteria levels increase and contribute to the elevated levels of *E. coli* measured at the Dry Creek/Cirby Creek confluence (Central Valley RWQCB 2009). Additional monitoring data from the USEPA STOREST database indicates that during the summer months, dissolved oxygen levels in Dry Creek, Cirby Creek, and Linda Creek fall below the 7.0 mg/L threshold for cold water habitats (PSOMAS 2015a).

Groundwater

The project site is located within the North American (River) Groundwater Sub-Basin, within the larger Sacramento Valley Groundwater Basin (Placer County Water Agency [PCWA] 2007). The eastern sub-basin boundary is a north-south line extending from the Bear River south to Folsom Reservoir. This line represents the approximate edge of the alluvial basin where little or no groundwater flows into or out of the groundwater basin from the Sierra Nevada. The western portion of the sub-basin consists of nearly flat flood basin deposits from the Bear, Feather, Sacramento, and American Rivers, and several small east side tributaries (PCWA 2007). The water bearing geologic deposits within the North American Sub-Basin consists of an upper unconfined and moderately permeable aquifer system made up of the Riverbank and Turlock Lake/Laguna formations, and a lower semi-confined aquifer system composed primarily of the Mehrten Formation (PCWA 2007). These formations consist of lenses of sand, silt, and clay inter-bedded with coarse grained stream channel deposits that store water. They form a wedge that generally thickens from the east, where the Mehrten formation is at or near the ground surface, to the west, where it is buried more than 1,000 feet below the upper aquifer. Beneath the City of Roseville, the top of the Mehrten Formation can be found at approximately 300 feet below the ground surface (Petersen 2005).

Groundwater is not a large component of the Dry Creek Watershed supply and does not affect surface water resources. In fact, the portion of the watershed within the project area is in the groundwater recharge zone; an area where surface waters infiltrate into the soil to recharge underlying groundwater resources (Placer County 2003). Groundwater supplies are naturally recharged by rainwater that reaches the subsurface saturated zone of the soil. The rate and quantity of water reaching the saturation zone depends on factors that include the amount and duration of precipitation, soil type, moisture content of the soil, and vertical permeability of the unsaturated zone. Urbanization of the Roseville area has increased the amount of impervious surfaces and limited the areas where natural

recharge can take place. In general, the primary locations for groundwater recharge are along the City's major watercourses, including Dry, Cirby, and Linda Creeks. The highly permeable stream deposits along these creeks provide groundwater storage in the upper 0 to 100 feet, which can gradually move lower and recharge the semi-confined upper aquifer.

Soils

In the project area, the soils within and adjacent to the stream channels are known as Xerofluvents. These soils are composed of moderately well drained to poorly drained loamy alluvium, which are regularly shifted and repositioned by flowing water. The Natural Resources Conservation Service (NRCS) soil survey for the project site states that these soils have high to moderate infiltration rates and an Erosion Hazard Rating of "slight" (NRCS 2015). This rating means that erosion would be unlikely under normal conditions when 50 to 75 percent of the soil surface has been exposed by some kind of disturbance. These soils make up approximately 89 percent of the project site. Outside of the active alluvial area, the soils transition to well drained loams and sandy loams, the majority of which are underlain by consolidated sandstone or siltstone.

4.8.3 Regulatory Setting

Hydrologic resources are protected and/or regulated by a variety of federal, state, and local laws and policies. Key regulatory and conservation planning issues applicable to the proposed project are discussed below.

FEDERAL

Clean Water Act

The Clean Water Act (CWA) is the primary federal legislation governing water quality whose objective is "to restore and maintain the chemical, physical, and biological integrity of the nation's waters," which includes oceans, bays, rivers, lakes, ponds, and wetlands.

In 1972, the CWA was amended to require National Pollutant Discharge Elimination System (NPDES) permits for discharge of pollutant in "waters of the United States." The CWA was amended in 1987 to require that EPA establish regulations for permitting under the NPDES program of municipal and industrial stormwater discharges. The EPA published final regulations regarding stormwater discharges on November 16, 1990. The EPA regulations require that Municipal Separate Storm Water Sewer System (MS4) discharges to surface waters be regulated by an NPDES permit.

In addition, the CWA requires states to adopt water quality standards for water bodies and have those standards approved by the EPA. Water quality standards consist of designated beneficial uses (e.g., wildlife habitat, agricultural supply, fishing) for a particular water body along with water quality criteria necessary to support those uses. Water quality criteria are prescribed concentrations or levels of contaminants (e.g., lead, suspended sediment, and fecal coliform bacteria) or narrative statements that represent the quality of water that supports a particular use.

The State Water Resources Control Board (SWRCB) identifies waters of the state that do not meet water quality criteria and places them on the 303 (d) list of impaired waters. Once listed, a total maximum daily load (TMDL) must be developed for the impaired water body. The TMDL address all sources of the impairing pollutants from point, nonpoint, and natural sources that a water body may receive without exceeding applicable water quality standards (with a factor of safety included). Once established, the TMDL is allocated among current and future pollutant sources to the water body.

Sections of the CWA pertaining to regulating impacts on waters of the United States are described below.

Section 402
The 1972 amendments to the CWA established the NPDES permit program to control discharges of pollutants from point sources. In California, the SWRCB is authorized by the EPA to oversee the NPDES program through the regional board (see the related discussion in the section titled Porter-Cologne Water Quality Control Act below). The NPDES program provides for both general permits (those that cover a number of similar or related activities) and individual permits.

Section 404
CWA Section 404 regulates the discharge of dredged and fill materials into waters of the United States. Project proponents must obtain a permit from USACE for all discharges of dredged or fill materials into waters of the United States. Section 404 permits may be issued only for the "least environmental damaging practicable alternative." That is, the authorization of a proposed project discharge is prohibited if an existing practicable alternative would have less of an environmental impact and lacks other significant adverse consequences.

Before any actions that might affect surface waters are carried out, a delineation of jurisdictional waters of the United States must be completed following USACE protocols to determine if the project area encompasses wetlands or other waters of the United States that qualify for the CWA protection. These waters include any or all of the following:

- areas with ordinary high-water marks of a stream, including perennial streams with defined bed and bank and any stream channel that conveys runoff, even if it has been realigned; and/or
- seasonal and perennial wetlands, including coastal wetlands.

Wetlands are defined for regulatory purposes as areas "inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 CFR 328.3, 40 CFR 230.3).

Under CWA Section 401, applicants for a federal license or permit such as the Section 404 permit must obtain certification from the state that the activity will not adversely affect water quality. In California the authority to grant or waive the requirement is delegated by the SWRCB to the nine RWQCBs.

National Pollutant Discharge Elimination System
The 1972 amendment to the CWA (Section 402) established the NPDES permit program. The NPDES permit program outlined in the CWA contains effluent limitation guidelines, water quality requirements, and permit program requirements for discharges to waters of the U.S. The EPA has overall responsibility for the NPDES program, but administration of the program in California has been delegated to the SWRCB and the nine RWQCBs. The goal of the NPDES non-point source regulations is to improve the quality of stormwater discharged to receiving waters to the "maximum extent practicable" through the use of best management practices (BMPs). Phase 1 of the NPDES stormwater program addressed discharges from MS4s serving populations over 100,000 and industrial activities including discharges from construction activities disturbing five acres or more. Phase 2 (implemented in 1999) regulations address small urban MS4s serving a population of 100,000 or less to obtain a municipal stormwater permit.

National Flood Insurance Act of 1968

Congress passed the National Flood Insurance Act of 1968 and the Flood Disaster Protection Act of 1973 in response to increasing costs of disaster relief. These acts reduce the need for large publicly funded flood control structures and disaster relief by providing flood insurance and restricting development on

floodplains, respectively. FEMA administers the National Flood Insurance Program, which was created by the National Flood Insurance Act of 1968, to provide subsidized flood insurance for those communities that comply with FEMA regulations. FEMA issues flood insurance rate maps (FIRMs) that delineate flood hazard zones in the community and show which areas are prone to flooding.

FEMA established the design standard for flood protection, with the minimum level of flood protection for new development determined to be the 1-in-100 annual exceedances probability (AEP) event (i.e., the 100-year flood event). Specifically, where levees provide flood protection, FEMA requires the levee crown to have 3 feet of freeboard above the one-in-100 AEP water surface elevation, except in the vicinity of a structure, such as a bridge, where the level of the crown must have 4 feet of freeboard for a distance of 100 feet upstream and downstream of the structure.

STATE

Central Valley Flood Protection Board

Originally known at the Reclamation Board, the Central Valley Flood Protection Board (CVFPB) was created by the California legislature in 1911 to establish and enforce appropriate standards for flood control. California Code of Regulations (CCR) Title 23- Waters, Division 1 - Central Valley Flood Protection Board, defines the CVFPB's duties and scope. The Board has jurisdictional authority to review and approve all projects on or near the Sacramento and San Joaquin Rivers or their tributaries. Dry Creek, Cirby Creek, and Linda Creek are all regulated streams within the jurisdiction of the CVFPB. Projects that are located within the vicinity of regulated levees, floodways, or within 30 feet of CVPFB jurisdictional streams are required to meet the design standards of CCR Title 23, Division 1, Article 8 and to obtain an encroachment permit from the CVFPB. Section 128 of the design standards specifically addresses the construction of bridges. Among other requirements, the bottom member (sofit) of a proposed bridge must be at least three (3) feet above the level of the design flood. The required clearance may be reduced to two (2) feet on minor streams at sites where significant amounts of stream debris are unlikely. CVFPB classifies streams as "major" or "minor" on a project specific basis taking into consideration the volume of debris that could be carried by the stream in a flood event.

Central Valley Flood Protection Act of 2008

The Central Valley Flood Protection Act of 2008 (also known as SB5, 2007) requires cities and counties to amend their general plans to strengthen the linkage between local land use planning decisions and floodplain management practices and provide new requirements and standards for flood protection.

Since 2007, there have been legislative amendments to SB 5 that relate to land use planning requirements. SB 1278 (2012), AB 1965 (2012), and AB 1259 (2013) are the most recent amendments.

As currently amended, SB 5 requires regulation of specific locations within the 200-year floodplain (called the Urban Level of Flood Protection, or ULOP). There are five locational criteria which must all be met in order for the ULOP to apply. While all areas of the City of Roseville meet two of the criteria (the City is an urban area of more than 10,000 people and the City is within the Sacramento-San Joaquin Valley) only certain areas of the City meet the remaining three criteria. These are: 1) located within a flood hazard zone that is mapped as either a special hazard area or an area of moderate hazard on FEMA's official (i.e., effective) Flood Insurance Rate Map for the National Flood Insurance Program; 2) located within an area with a potential flood depth above 3 feet, from sources other than localized conditions; and, 3) located within a watershed with a contributing area of more than 10 square miles. In areas not subject to the ULOP standards, the 100-year floodplain standards continue to apply. The combination of ULOP and 100-year floodplains is referred to as the City's Regulatory Floodplain.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act of 1969 (Porter-Cologne Act) is California's statutory authority for the protection of water quality. The act sets forth the obligations of the SWRCB and RWQCBs under the CWA to adopt and periodically update water quality control plans, or basin plans. Basin plans are plans in which beneficial uses, water quality objectives, and implementation programs are established for each of the nine regions in California. The Porter-Cologne Act also requires waste dischargers to notify the RWQCBs of such activities by filing Reports of Waste Discharge and authorizes the SWRCB and RWQCBs to issue and enforce waste discharge requirements, NPDES permits, Section 401 water quality certifications, or other approvals.

State Water Resources Control Board

In California, SWRCB has broad authority over water quality control issues for the state. The SWRCB is responsible for developing statewide water quality policy and exercises the powers delegated to the state by the federal government under the CWA. Other state agencies with jurisdiction over water quality regulation in California include the California Department of Health Services (for drinking water regulations), the California Department of Pesticide Regulation, the California Department of Fish and Wildlife (CDFW) (formerly Department of Fish and Game), and the Office of Environmental Health and Hazard Assessment. Regional authority for planning, permitting, and enforcement is delegated to the nine regional water boards. The regional boards are required to formulate and adopt water quality control plans for all areas in the region and establish water quality objectives in the plans. The Central Valley RWQCB is responsible for the water bodies in the project vicinity.

Water Quality Control Plan for the Sacramento River and San Joaquin River Basins

The Water Quality Control Plan for the Sacramento River and San Joaquin River Basins (Basin Plan) (2011) presents water quality standards and control measures for surface and ground waters for a significant portion of the Central Valley Region, including the Dry Creek watershed. The Basin Plan designated beneficial uses for water bodies and established water quality objectives, waste discharge prohibitions, and other implementation measures to protect those beneficial uses. The Basin Plan contains both narrative and numeric water quality objectives for the region. Ambient water quality standards are set as objectives for a body of water and effluent limits (or discharge standards) are conditions in state or federal wastewater discharge permits, such as the NPDES permits. Land uses and activities that could degrade water quality and BMPs that could be used to address various nonpoint sources of pollution are identified in the Basin Plan.

Beneficial Uses

Every water body within the jurisdiction of the Central Valley RWQCB is designated a set of beneficial uses. Small tributary streams are designated with the same beneficial uses of the waterbody that they drain into. The project area is located within Hydrologic Unit 519.21, "Folsom Dam to Sacramento River," and the project area streams are assigned the following beneficial uses (Central Valley RWQCB 2011):

- **Municipal and Domestic Supply –** waters used for community, military, or individual water supply systems including, but not limited to, drinking water supply.
- **Agricultural Supply (Irrigation) –** waters used for farming, horticulture, or ranching, including, but not limited to, irrigation and support of vegetation for range grazing.
- **Industrial Service Supply –** waters used for industrial activities that do not depend primarily on water quality including, but not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, and fire protection.
- **Hydropower Generation –** water used for hydroelectric power generation.
- **Water Contact Recreation**- water used for recreational activities involving body contact with water where ingestion of water is reasonably possible. These include, but are not limited to swimming, water-skiing, fishing, and others.

- **Noncontact Water Recreation –** used of waters used for recreational activities involving proximity to water, but not normally involving body contact with water. These uses include, but are not limited to, picnicking, sunbathing, hiking, beachcombing, camping, boating, and others.
- **Warm Freshwater Habitat –** Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including vertebrates.
- **Cold Freshwater Habitat –** uses of water that support cold water ecosystems including, but not limited to, preservation and enhancement of aquatic habitats, vegetation, fish, and wildlife, including invertebrates.
- **Migration of Aquatic Organisms –** uses of waters that support habitats necessary for migration, acclimatization between fresh and salt water, or temporary activities by aquatic organisms, such as anadromous fish. Warm water species include striped bass, sturgeon, and shad. Cold water species include salmon and steelhead.
- **Wildlife Habitat –** uses of waters that support wildlife habitats including, but not limited to, the preservation and enhancement of vegetation and prey species, such as waterfowl.

Water Quality Objectives

The Porter-Cologne Water Quality Control Act defines water quality objectives as "…the limits or levels of water quality constituents or characteristics which are established for reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area." There are two forms of water quality objectives:

- **Narrative** objectives present a general description of water quality that must be attained through pollutant control measures and watershed management. They also serve as the basis for the development of detailed numerical objectives.
- **Numerical** objectives typically describe pollutant concentrations, physical and chemical conditions of the water, and toxicity of the water to aquatic organisms. Places where numerical limits are specified represent the maximum levels that will allow the beneficial use to continue unimpaired. In other cases, an objective may prohibit the discharge of specific substances, tolerate natural or "background" levels of certain substances or characteristics (but not increases over those values), or may express a limit, in terms of not impacting other beneficial uses. An adverse effect or impact on a beneficial use occurs where there is an actual or threatened loss or impairment of that beneficial use.

The Basin Plan established the water quality objectives listed in Table 4.8-2 in support of the beneficial uses within Hydrologic Unit 519.21 (including Dry Creek, Linda Creek, and Cirby Creek).

Table 4.8-2 Water Quality Objectives for Hydrologic Unit 519.21 – Folsom Dam to Sacramento River

Constituent/Parameter	Water Quality Objective
Arsenic, Copper, Cyanide, or Silver	0.01 mg/L
Barium or Zinc	0.1 mg/L
Iron	0.3 mg/L
Manganese	0.05 mg/L
Color	Water shall be free of discoloration that causes nuisance or adversely affects beneficial uses.
Dissolved Oxygen (DO)	The monthly median of the mean daily DO concentration shall not fall below 85 percent of saturation in the main water mass, and the 95 percentile concentration shall not fall below 75 percent of saturation. The DO concentrations shall not be reduced below the following minimum levels at any time: Waters designated WARM 5.0 mg/l

Table 4.8-2 Water Quality Objectives for Hydrologic Unit 519.21 – Folsom Dam to Sacramento River

Constituent/Parameter	Water Quality Objective
	Waters designated COLD 7.0 mg/l Waters designated SPWN 7.0 mg/l
Floating Material	Water shall not contain floating material in amounts that cause nuisance or adversely affect beneficial uses.
Oil & Grease	Waters shall not contain oils, greases, waxes, or other materials in concentrations that cause nuisance, result in a visible film or coating on the surface of the water or on objects in the water, or otherwise adversely affect beneficial uses.
pH	The pH shall not be depressed below 6.5 nor raised above 8.5.
Pesticides	No individual pesticide or combination of pesticides shall be present in concentrations that adversely affect beneficial uses.
Radioactivity	Radionuclides shall not be present in concentrations that are harmful to human, plant, animal or aquatic life nor that result in the accumulation of radionuclides in the food web to an extent that presents a hazard to human, plant, animal or aquatic life.
Salinity (Total Dissolved solids)	Shall not exceed 125 mg/L (90 percentile)
Sediment	The suspended sediment load and suspended sediment discharge rate of surface waters shall not be altered in such a manner as to cause nuisance or adversely affect beneficial uses.
Settleable Material	Waters shall not contain substances in concentrations that result in the deposition of material that causes nuisance or adversely affects beneficial uses.
Suspended Material	Waters shall not contain suspended material in concentrations that cause nuisance or adversely affect beneficial uses.
Tastes and Odors	Water shall not contain taste- or odor-producing substances in concentrations that impart undesirable tastes or odors to domestic or municipal water supplies or to fish flesh or other edible products of aquatic origin, or that cause nuisance, or otherwise adversely affect beneficial uses.
Temperature	The natural receiving water temperature of intrastate waters shall not be altered unless it can be demonstrated to the satisfaction of the Regional Water Board that such alteration in temperature does not adversely affect beneficial uses.
Toxicity	All waters shall be maintained free of toxic substances in concentrations that produce detrimental physiological responses in human, plant, animal, or aquatic life.
Turbidity	The turbidity shall be less than or equal 10 NTUs.

Source: Central Valley RWQCB 2011

National Pollutant Discharge Elimination System Permits

The SWRCB and Central Valley RWQCB have required specific NPDES permits for a variety of activities that have potential to discharge pollutants to waters of the state and adversely affect water quality. To receive an NPDES permit a Notice of Intent to discharge must be submitted to the Central Valley RWQCB and design and operational BMPs must be implemented to reduce the level of contaminated runoff. BMPs can include the development and implementation of regulatory measures (local authority of drainage facility design) various practices, including educational measures (workshops informing public of what impacts result when household chemicals are dumped into storm drains), regulatory measures (local authority of drainage facility design), public policy measures (label storm drain inlets as to impacts of dumping on receiving waters), and structural measures (filter strips, grass swales, and retention basins). All NPDES permits also have inspection, monitoring, and reporting requirements.

General Permit for Stormwater Discharges Associated with Construction Activity

The SWRCB adopted the statewide NPDES General Construction Permit in August 1999. The state requires that projects disturbing more than 1 acre of land during construction file a Notice of Intent with the RWQCB to be covered under this permit. Construction activities subject to the General Construction Permit include clearing, grading, stockpiling, and excavation. Dischargers are required to eliminate or reduce non-stormwater discharges to storm sewer systems and other waters. A storm water pollution prevention plan (SWPPP) must be developed and implemented for each site covered by the permit. The SWPPP must include BMPs designed to prevent construction pollutants from contacting stormwater and keep products of erosion from moving off-site into receiving waters throughout the construction and life of the project; the BMPs must address source control and, if necessary, pollutant control.

Dewatering Activities

While small amounts of construction-related dewatering activities are covered under the NPDES General Construction Permit, Central Valley RWQCB has also adopted a General Order for Dewatering and Other Low Threat Discharges to Surface Waters (General Dewatering Permit). This permit applies to various categories of dewatering activities and would likely apply to the proposed multi-use trail project if construction required dewatering in greater quantities than that allowed by the General Construction Permit and discharged effluent to surface waters. Permit conditions for discharge of these types of wastewaters to surface water are specified in the General Order for Waste Discharge Requirements for Limited Thread Discharges of Treated/Untreated Groundwater from Cleanup Sites, Wastewater from Superchlorination Projects, and Other Limited Thread Threat Discharges to Surface Waters (Central Valley RWQCB Order No. R5-2013-0073-01, NPDES No. CAG995002).

State Nondegradation Policy

In 1968, as required under the federal antidegradation policy described previously, the SWRCB adopted a nondegradation policy aimed at maintaining high quality for waters in California. The nondegradation policy states that the disposal of wastes into state waters shall be regulated to achieve the highest water quality consistent with maximum benefit to the people of the state and to promote the peace, health, safety, and welfare of the people of the state. The policy provides as follows:

a) Where the existing quality of water is better than required under existing water quality control plans, such quality would be maintained until it has been demonstrated that any change would be consistent with maximum benefit to the people of the state and would not unreasonably affect present and anticipated beneficial uses of such water.

b) Any activity which produces waste or increases the volume or concentration of waste and which discharges to existing high-quality waters would be required to meet waste discharge requirements.

LOCAL

Placer County Flood Control and Water Conservation District

The PCFCWCD was established by Senate Bill 1312, effective August 23, 1984. The PCFCWCD develops regional strategies for flood control management. In 1990, the PCFCWCD published the Stormwater Management Manual (SWMM) that contains specifications and policies for the design of storm drain facilities. The SWMM criteria are referenced in Section 10 of the City's Improvement Standards.

City of Roseville General Plan

The City of Roseville 2035 General Plan includes the following regulations and policies related to hydrology and water quality that are applicable to the proposed project:

Floodplain Development Regulations

Within the City of Roseville, no development is permitted within the regulatory floodway, but may be permitted within the floodway fringe in Infill areas. Exceptions may be provided for service facilities such as roads, infrastructure, and detention facilities provided that no feasible alternatives exist and the facility has been designed to minimize impacts and would not result in off-site increases in water surface elevation. Development within the City's Regulatory Floodplain shall be regulated as follows:

1. Infill Areas

   No development is permitted within the regulatory floodway. Development may be permitted by the City within the regulatory floodway fringe. Such development shall be limited to that falling within the assumed cumulative one-foot rise in the water surface elevation.

2. Remainder of the City (Specific Plans, and the North Industrial Area).

   No development is permitted within the City's Regulatory Floodplain (floodway and floodway fringe). Exceptions may be considered by the City for unusual conditions on a case-by-case basis if the encroachment is limited to only the floodway fringe and would not result in any off-site increase in the water surface elevation.

Essential Services Exceptions

On-site increases in the water surface elevation and/or fill within the regulatory floodplain, including the floodway, may be permitted by the City on an exception basis if associated with essential facilities and services such as roads, infrastructure, and detention facilities subject to the following criteria:

- No feasible[1] alternatives exist that would eliminate or reduce the need for fill and/or an increase in the water surface elevation and would result in a lesser impact to the environment.

The facility has been designed to result in the minimum amount of fill and impact necessary to achieve its intended purpose and results in no off-site increase in the water surface elevation.

Flood Protection Goals and Policies

GOAL 1: Minimize the potential for loss of life and property due to flooding.

GOAL 2: Pursue flood control solutions that are cost-effective and minimize environmental impacts.

- **Policy 1:** Continue to regulate, through land use, zoning, and other restrictions, all uses and development in areas subject to potential flooding and require new development to comply with the State Plan of Flood Control.
- **Policy 2:** Monitor and regularly update City flood studies, modeling, and associated land use, zoning, and other development regulations.
- **Policy 3:** Continue to pursue a regional approach to flood issues.
- **Policy 5:** Minimize the potential for flood damage to public and emergency facilities, utilities, roadways, and other infrastructure.
- **Policy 6:** Require new developments to provide mitigation to insure that the cumulative rate of peak runoff is maintained at pre-development levels.
- **Policy 7:** Continue to implement the Storm Maintenance Program to keep creeks and storm drain systems free of debris.
- **Policy 9:** Where feasible, maintain natural stream courses and adjacent habitat and combine flood-control, recreation, water quality, and open space functions.

[1] Feasible (in this context) is defined as capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors

Groundwater Recharge and Water Quality

GOAL 1: Continue to improve surface water quality and accommodate water flow increases.

GOAL 2: Enhance the quality and quantity of groundwater resources.

- **Policy 1:** Utilize cost-effective urban run-off controls, including Best Management Practices, to limit urban pollutants from entering watercourses.
- **Policy 2:** Implement erosion control and topsoil conservation measures to limit sediments within watercourses.
- **Policy 5:** Continue to monitor groundwater resources and investigate strategies for enhanced sustainable use. Areas where recharge potential is determined to be high shall be considered for designation as open space.
- **Policy 6:** Where feasible, locate stormwater retention ponds in areas where subsoil is suitable for groundwater recharge.

City of Roseville Stormwater Management Program

The City's Stormwater Management Program (SWMP) contains policies, activities, and strategies that comprise the City's minimum control measures and BMPs that address NPDES requirements for the Phase 2 Stormwater Permit. The six minimum control measures required under the NPDES permit are public outreach, public involvement, illicit discharge detection and elimination, construction site runoff, new development and redevelopment, and municipal operations (PCOR 2004). Some specific control measures described in the SWMP include storm drain labeling, development of a storm sewer system map, establishing a stormwater ordinance, site inspections to identify illicit connections and non-stormwater discharges to the storm sewer, and structural controls (such as detention ponds, vegetative areas, and runoff pretreatment) and non-structural controls (such as alternative construction methods, site design, and zoning) (City of Roseville 2004).

The City adopted the "Urban Stormwater Quality Management and Discharge Control Ordinance" in 2006 to establish a regulatory framework to implement construction and post-construction stormwater controls and regulate illicit discharges and connections to the City's stormwater conveyance system from both residential and business sources. The City has adopted the Stormwater BMP Guidance Manual for Construction and the West Placer Storm Water Quality Design Manual (Placer County 2016). The city has the authority during plan checks and site inspections to enforce SWMP. Additionally, prior to final approval, the owner of any stormwater control structure is required to submit an operations and maintenance manual and a proposed maintenance schedule.

Grading Ordinance

Section 16.20.040 of the Roseville Municipal Code regulates stockpiling and grading, and addressed conditions under which permits and grading plans are required. Section 16.20.070 identifies grading plan performance standards. Both Minor and Major grading plans are required by the City. A Major grading plan is required for any project that would result in the placement of fill in a channel or tributary that carries flow of 200 cubic feet/second or more during a 10-year storm event. Major grading plans must be reviewed and approved by the planning commission. All grading plans must comply with the following criteria:

A. Fill or cut slopes with a height exceeding five feet shall not exceed a slope of 4:1.

B. When grading around native oak trees:

    1. Cut or fill slopes exceeding two feet in height shall not be permitted within a distance of 1.5 times the radius of the tree's protected zone,

2. the grade shall not be raised or lowered around more than 50 percent of the protected zone, and

3. the grading shall not change the drainage pattern within a distance of 1.5 times the radius of the tree's protected zone.

If impacts to native oak trees cannot be avoided, the project must apply for a Tree Permit and comply with all protections included in the permit.

Section 16.20.020 requires that all grading be performed in accordance with either City of Roseville Improvement Standards or Chapter 16 of the Zoning Ordinance, whichever is more restrictive. A project applicant must have an Improvement and/or Grading Plan along with a site-specific SWPPP prior to the start of grading activities. Slopes or banks along creek channels must be designed with proper slope protection to prevent soil erosion and channel-bank undercutting.

Flood Damage Prevention Ordinance

Section 9.80 of the Roseville Municipal Code is the Flood Damage Prevention ordinance. As described in the applicable City of Roseville General Plan goals and policies listed above, land uses and development within the City's regulatory floodplain are restricted to protect residents and structures from risks associated with flooding. Railroads, streets, bridges, utility transmission lines, pipelines, and other similar uses of a primarily open space nature may be permitted in the floodplain with the approval of a flood encroachment permit. All uses permitted within the floodplain must comply with Section 19.80.040 of the municipal code which prohibits any development from increasing peak flows; adversely affecting the stream channel, increasing flood heights, or have an adverse effect on a proposed use. An adverse effect on base flood elevations is considered to be when the cumulative effect of the proposed development will increase the base flood elevations by one-tenth of one foot or more at any point outside of the property controlled by the developer (Section 9.80.040). Within the floodway (see Exhibit 4.8-1), all new development is prohibited unless a certified professional engineer certifies that the encroachment will not result in any increase in flood levels (Section 9.80.210). In addition, the following conditions apply:

- Any fill placed in the floodplain must be shown to serve some beneficial purpose, must be limited to the minimum amount necessary to meet its purpose, and any fill or excavation must be protected against erosion by rip-rap, vegetative cover, or bulkheading.
- Storage or processing of materials that are buoyant, flammable, toxic, explosive, or could be injurious to animal or plant life in time of flooding is prohibited. Storage of other materials may be allowed if it will not be damaged by floods and is readily removable from the area within the time available after flood warning. All materials stored in the floodplain must be anchored or be readily removable during flood season.

The City Council may grant a variance from these ordinances for a project, taking into consideration public safety, project engineering, and the public service provided by the project (Section 9.80.310). The City of Roseville regulatory floodplain is shown on Exhibit 4.8-3.

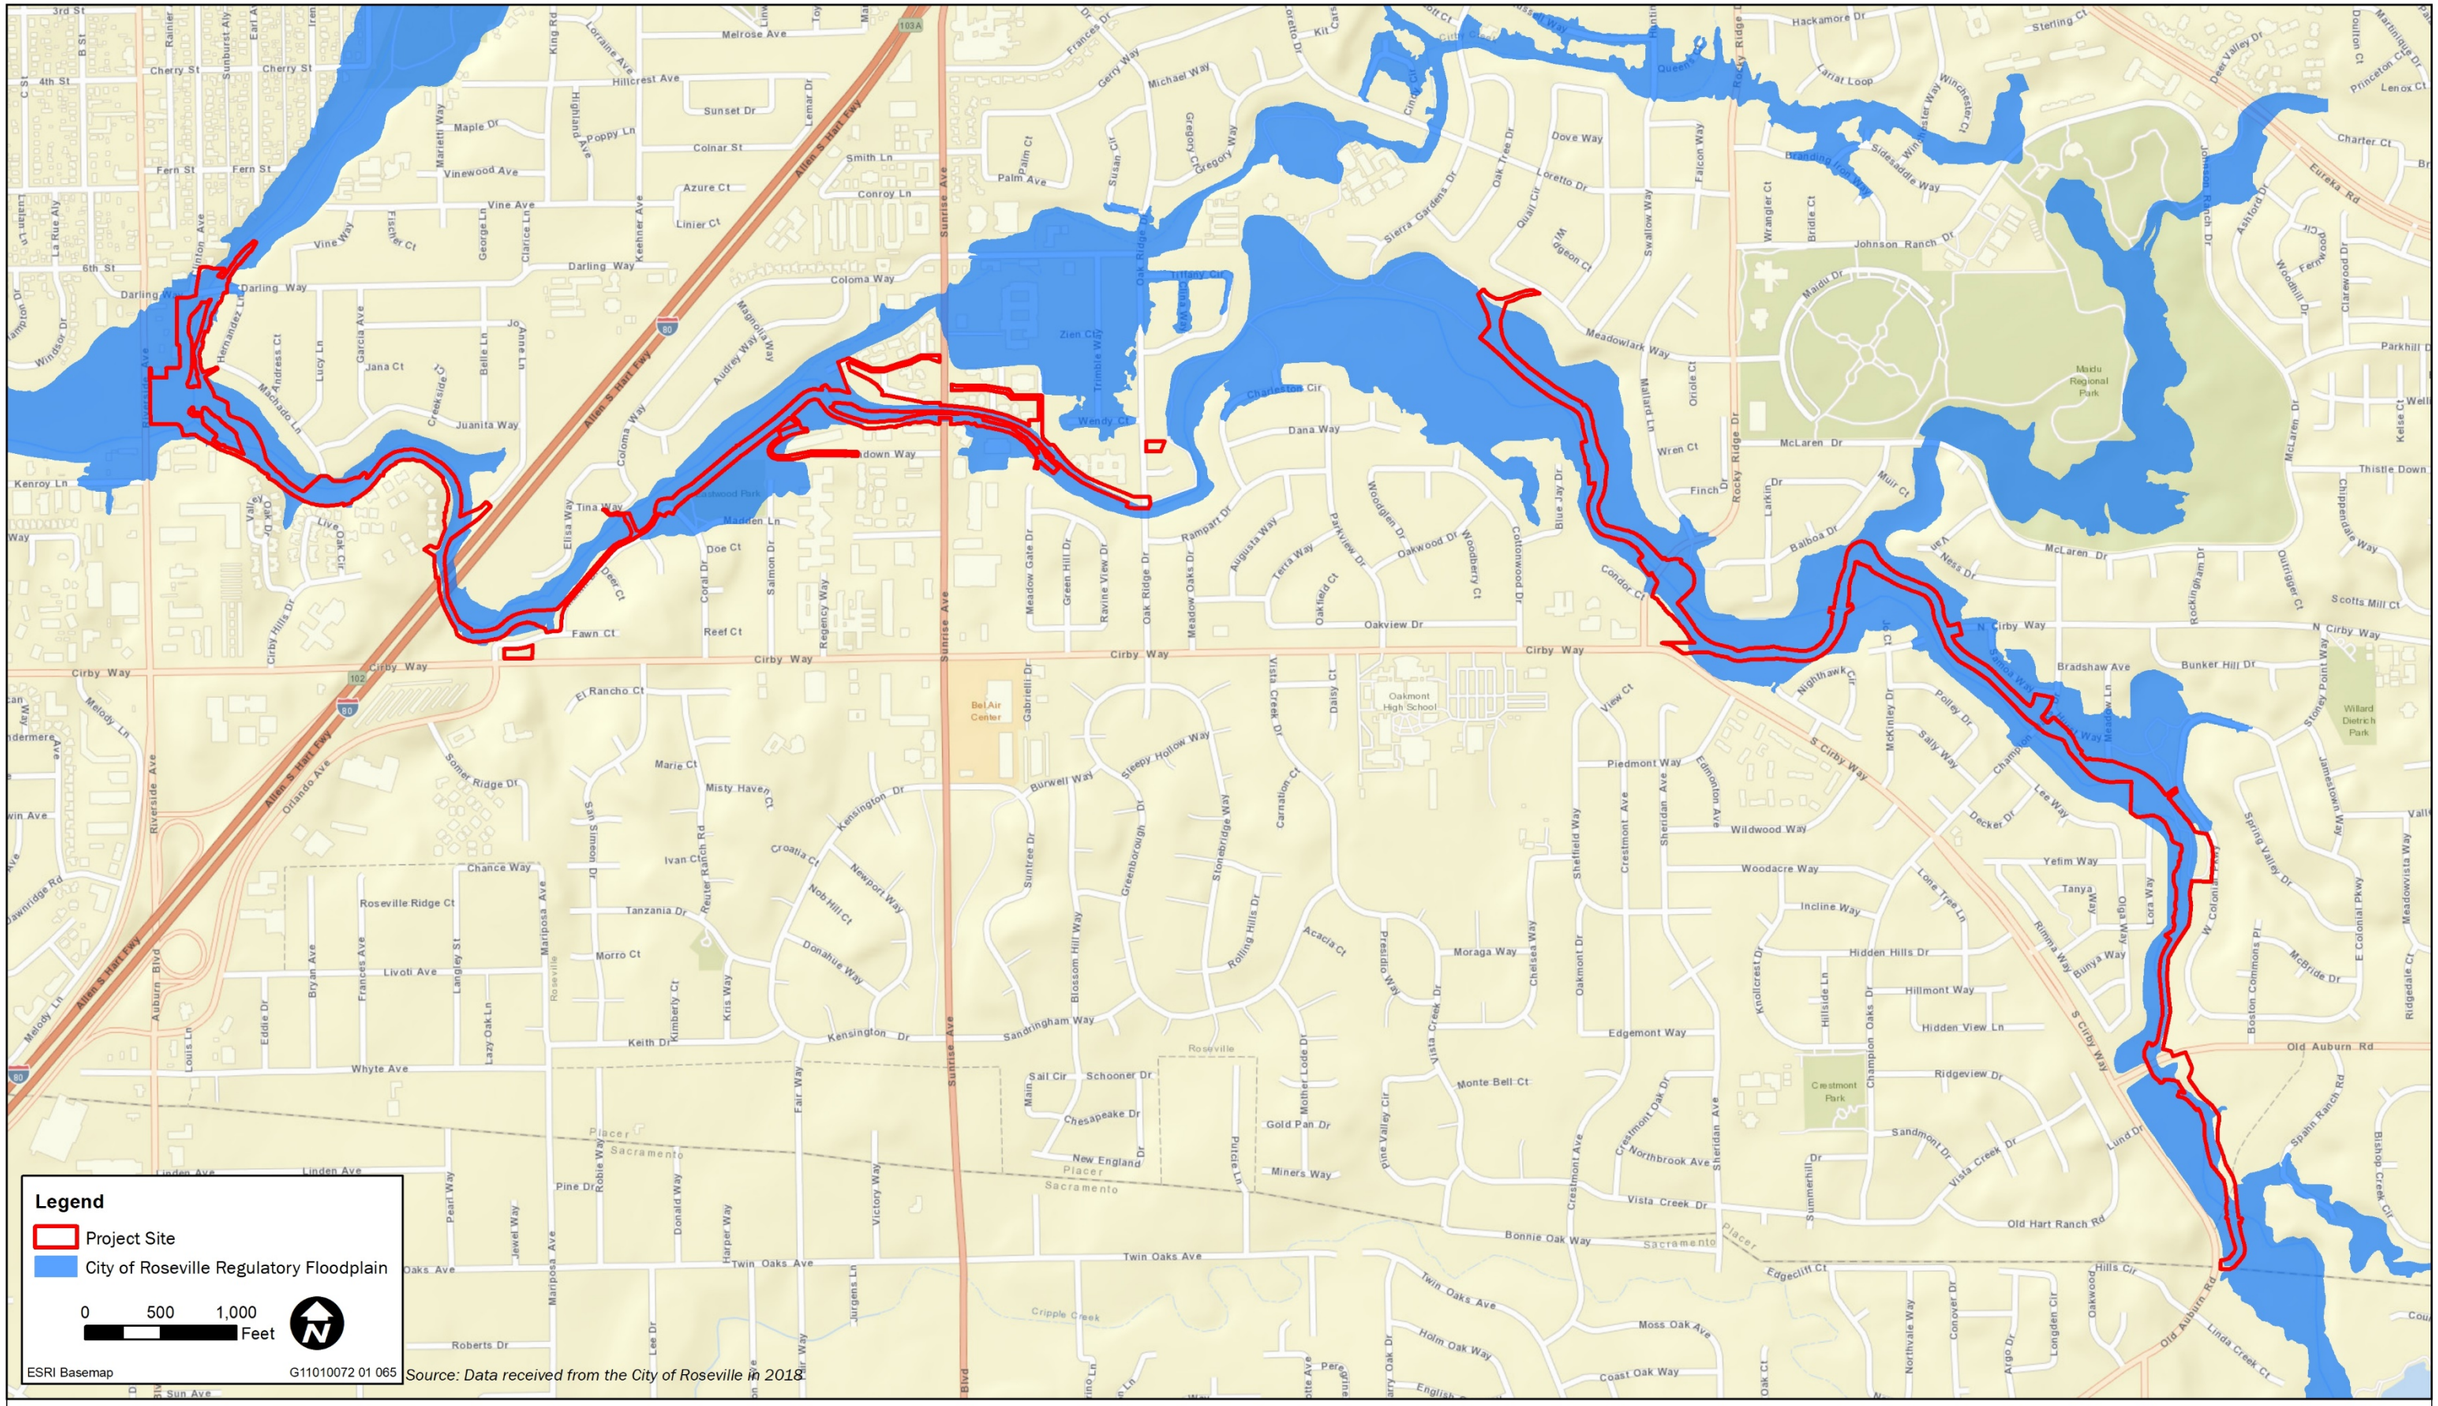

Exhibit 4.8-3

City of Roseville Regulatory Floodplain

4.8.4 Impacts and Mitigation Measures

METHODS OF ANALYSIS

Evaluation of potential hydrologic and water quality impacts was based on a review of information from the hydrologic studies completed for this project and previously completed documents that address water resources in the project vicinity. The information obtained from these sources was reviewed and summarized to establish existing conditions and to identify potential environmental effects, based on the standards of significance presented in this section. This analysis incorporates the findings of the *Dry Creek Greenway Trail Fluvial Audit* (CBEC 2014) (see Appendix F) and the *Preliminary Geotechnical Evaluation, Dry Creek Greenway Multi-Use Trail Project, City of Roseville, CA* (Parikh 2015). These reports were prepared to inform project design. Many of the recommendations of these studies and those contained in the *Engineering Design Considerations and Evaluation based on Geomorphology Study* (PSOMAS 2014), such as bank stabilization elements, have been incorporated into the project, as described in Chapter 3, "Project Description," of this Draft EIR. In determining the level of significance, the analysis assumes that the proposed project would comply with relevant federal, State, and local ordinances and regulations.

THRESHOLDS OF SIGNIFICANCE

To determine whether environmental impacts to hydrology and water quality are significant environmental effects, Appendix G of the State CEQA Guidelines asks whether a project would do any of the following:

- violate any water quality standards or waste discharge requirements;
- substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted);
- substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in substantial erosion, siltation or flooding on- or off-site;
- create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage, infiltration, and treatment systems or facilities resulting in increased sources of pollutants reaching surface waters or causing detrimental flooding to property or infrastructure;
- otherwise substantially degrade water quality;
- or Flood Insurance Rate Map or other flood hazard delineation map;
- place within a 100-year flood hazard area structures that would impede or redirect flood flows;
- expose people or structures to a significant risk of loss, injury, or death involving flooding; or
- result in substantial risk of inundation by seiche, tsunami, or mudflow.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

The project is not located near large water bodies that could create the risk of inundation by seiche or tsunami. The project would not involve pumping of groundwater and the narrow linear nature of the path would allow surface runoff to infiltrate in the natural area adjacent to the path; therefore, the project would have no effect on groundwater recharge in the area. Additionally, the proposed project would not involve the development of housing within a 100-year flood hazard area. These issues are not discussed further in this document.

IMPACT ANALYSIS

Impact 4.8-1	Potential to violate any water quality standards or waste discharge requirements, or to otherwise degrade water quality.
Applicable Policies and Regulations	Clean Water Act Porter Cologne Water Quality Control Act Sate Non-degradation Policy City of Roseville Stormwater Management Plan City of Roseville Grading Ordinance City of Roseville Streambed Alteration Agreement for Routine Maintenance Activities
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts

Construction of the proposed multi-use trail would require removal of vegetation and existing features, grading, placement of aggregate base material, and construction of five roadway undercrossings, construction or modification of up to eight bridges (refer to Table 3-2 in Chapter 3, “Project Description”), and approximately 27,000 square feet of retaining walls (refer to Table 3-3 in Chapter 3, “Project Description”). These activities would create ground disturbance in the adjacent upland area, along the stream banks, and within the stream channel of Dry, Linda, and Cirby Creeks. This could accelerate erosion and introduce nutrients or suspend sediments which could degrade the water quality of the creeks. Additionally, the heavy equipment and tools required for construction of the project have the potential to introduce oil, grease, and chemical pollutants through leakage or an accidental spill.

Ground disturbance and vegetation removal in upland areas and areas outside of the stream channel would be required for construction access corridors and staging areas and for construction of the multi-use trail. Generally, the soils of the project area to do not present a substantial risk of wind and water erosion (NRCS 2015) and the potential impacts to water quality related to ground disturbance in these areas would be minimal.

The project activities described above have the potential to negatively affect the water quality of the Dry, Linda, and Cirby Creeks; however, this potential would be minimized through compliance with protective city and state regulations. Both the City of Roseville Grading Permit and the SWRCB NPDES permit (which is required for all projects that disturb over one acre of soil), require the preparation of a SWPPP. A SWPPP has two major objectives: 1) to help identify the sources of sediment and other pollutants that affect the quality of storm water discharges; and 2) to describe and ensure the implementation of BMPs to reduce or eliminate sediment and other pollutants in stormwater and non-stormwater discharges. The SWPPP would be prepared by a qualified SWPPP practitioner and/or a qualified SWPPP developer that identifies water quality controls consistent with Central Valley RWQCB requirements and would ensure that runoff quality meets water quality objectives and maintains the beneficial uses of the project area streams. The SWPPP would describe the site controls, erosion and sediment controls, means of waste disposal, implementation of approved local plans, control of post-construction sediment and erosion control measures, and management controls unrelated to stormwater. The BMPs identified in the SWPPP would be implemented during all site development activities. The following would be required elements of the SWPPP:

- Temporary BMPs to prevent the transport of earthen materials and other construction waste materials from disturbed land areas, stockpiles, and staging areas during periods of precipitation or runoff, including: filter fence, fiber roll, erosion control blankets, mulch (such as wood chips); and temporary drainage swales and settling basins.
- Temporary BMPs to prevent the tracking of earthen materials and other waste materials from the project site to offsite locations, including stabilized points of entry/exit for construction vehicles/equipment and designated vehicle/equipment rinse stations, and sweeping.
- Temporary BMPs to prevent wind erosion of earthen materials and other waste materials from the project site, including routine application of water to disturbed land areas and covering of stockpiles with plastic or fabric sheeting.

A spill prevention and containment plan would be prepared and implemented. Project contractors would be responsible for storing on-site materials and temporary BMPs capable of capturing and containing pollutants from fueling operations, fuel storage areas, and other areas used for the storage of hydrocarbon-based materials. This would include maintaining materials on-site (such as oil absorbent booms and sheets) for the cleanup of accidental spills, drip pans beneath construction equipment, training of site workers in spill response measures, immediate cleanup of spilled materials in accordance with directives from the Central Valley RWQCB, and proper disposal of waste materials at an approved off-site location that is licensed to receive such wastes.

- Temporary BMPs to capture and contain pollutants generated by concrete construction including lined containment for rinsate (rinse water from truck washing) to collect runoff from washing of concrete delivery trucks and equipment.
- Protective fencing to prevent damage to trees and other vegetation to remain after construction, including tree protection fencing and individual tree protection such as wood slats strapped along the circumference of trees.
- Temporary BMPs for the containment of removal of drilling spoils generated from construction of bridge foundations and abutments.
- Daily inspection and maintenance of temporary BMPs. The prime contractor would be required to maintain a daily log of Temporary Construction BMP inspections and keep the log on site during project construction for review by Central Valley RWQCB.
- Tree removal activities, including the dropping of trees, would be confined to the construction limit boundaries.
- Construction boundary fencing to limit disturbance and prevent access to areas not under active construction.
- Post-construction BMPs and BMP maintenance schedule. Post construction BMPs must address water quality, channel protection, overbank flood protection and extreme flood protection.
- Revegetation of disturbed areas with approved native seed mixes as described in the City of Roseville Design Standards.

The SWPPP described above would be submitted to the City and the Central Valley RWQCB in conjunction with submission of the Improvement and Grading Plans and NPDES permit. City staff would review the SWPPP against the requirements of the City's municipal stormwater permit and the City's Urban Stormwater Quality Management and Discharge Control Ordinance. During construction, city staff would conduct regular inspections of the site to verify that effective stormwater BMPs are implemented and maintained.

Construction associated with the proposed project would require the use and handling of hazardous materials such as fuels, lubricants, coolants, hydraulic fluids, and cleaning solvents. The use and handling of these materials presents the potential to degrade water quality through accidental spills. Implementation of the Spill Response and Prevention Plan (a required component of the NPDES permit

SWPPP) would reduce the potential of directly and indirectly affecting water quality through construction-related hazardous material spills.

In-Stream Construction Activities

The proposed project would require temporary and permanent disturbance below the ordinary high-water mark of Dry, Cirby, and Linda Creeks for the installation of bridges, roadway undercrossings, and stabilization of stream banks. In-channel construction activities could result in a plume of sediments generated from the channel bottom and the channel side becoming suspended in the water. Suspended sediments could potentially generate turbidity levels during construction that exceed the water quality objectives (Turbidity of ≤ 10 NTU) established by Central Valley RWQCB (PSOMAS 2015a). Table 4.8-3 provides the extent of in-stream disturbance associated with the proposed project. Each type of disturbance is further discussed below.

Table 4.8-3 Disturbance Resulting from In-Stream Project Components

Disturbance Type	Bridges	Bank Stabilization	Undercrossings	Total
Permanent Disturbance				
Loss of streambed (square feet)	9	1,236	0	**1,245**
Temporary Disturbance				
Disturbance below the Ordinary High-Water Mark (acres)	0.26	0.26	0.22	**0.74**
Disturbance within Low Flow Channel (acres)	0.06	0.12	0.05	**0.23**

Source: PSOMAS 2015b, Instream elements detail drawings.

With one exception, all proposed bridges would fully span the low flow channel of the stream. Abutments would be supported by 24-inch diameter piles cast in holes drilled into the stream bank. The Darling Way bridge would require one pile to be installed within the low flow channel of the stream. The construction area for the in-stream pile would be isolated from the flow of the creek through the temporary use of a water tight coffer dam. The coffer dam would minimize the temporary increase in turbidity within the stream, prevent scour and maintain soil- and water-free footings to allow for pile construction. After construction of the footing, the coffer dam would be removed and the remaining portion of the bridge would be constructed. Additional BMPs such as barriers, silt fencing, and dust control would be implemented to avoid or minimize the movement of soils into the water; however, some temporary increase in turbidity would occur. This direct increase in turbidity levels would not be considered significant because turbidity would be monitored and construction work would be slowed or stopped if turbidity nears regulation thresholds. Turbidity levels would return to pre-project conditions after construction is completed.

The amount of in-stream disturbance resulting from construction of undercrossings would be minimized through the use of existing structures. Four of the undercrossings would be beneath existing bridges and would require excavation for the installation of retaining walls, excavation and removal of soil, and installation of concrete and rock slope protection. The fifth undercrossing (at Rocky Ridge Drive) would add a sixth box culvert to the series of culverts that comprise the stream crossing. This would require excavation for construction of retaining walls and wing walls, and installation of cutoff walls that isolate the work site from groundwater and minimize the need for dewatering.

Streambank stabilization using gabion baskets would be required in three locations and would result in the permanent loss of 1,236 square feet of steam bed. Installation of the gabions would involve excavation of areas within the stream bed and bank, stream diversions in two locations on Linda Creek and excavation of a sand bar in Cirby Creek to create a secondary low flow channel. Exhibit 4.8-4 provides an example of potential streambank stabilization work within Cirby Creek.

Exhibit 4.8-4

Cirby Creek Potential Streambank Stabilization Example

ASCENT ENVIRONMENTAL

Dewatering
Construction or modification of bridges would require the installation of deep bridge piles that extend approximately 25 feet below the soil surface. These piles would be cast-in-drilled-hole piles, in which the hole is excavated using a specialized drilling auger, reinforced, and then filled with concrete to form the pile. The wet soil and water would be pumped out of the hole and into a collection system. Water pumped from excavation activities in the stream channel or in areas of high groundwater would contain suspended sediments and other solids and could negatively affect water quality if discharged directly to the adjacent stream, wetlands or municipal storm drains.

The potential effects of dewatering discharge would be minimized through compliance with existing Central Valley RWQCB regulation. In addition to the SWPPP described above, dewatering activities associated with the proposed project would be covered under the Central Valley RWQCB General Dewatering Permit (Order No. R5-2013-0073-01, NPDES No. CAG995002). The General Dewatering Permit encourages disposal of wastewater on land where possible and requires applicants to evaluate land disposal as a first alternative. The General Dewatering Permit contains a comprehensive set of effluent limitations that must be met by all discharges to surface water through the implementation of site specific BMPs. These include:

- limitations on the amount of heavy metals, fertilizers, pesticides, hydrocarbons, Volatile Organic Compounds, and industrial contaminants;
- protections against negative physiological responses in human, plant, animal, or aquatic life;
- limitations on temperature, salinity, and pH;
- protections for color, taste, and odor;
- restrictions on oil and grease;
- protection of dissolved oxygen levels,
- limitations on suspended sediments and other suspended and settleable materials; and
- restrictions on turbidity so that the discharge shall not exceed:
  - more than 1 NTU where natural turbidity is between 1 and 5 NTUs;
  - more than 20 percent where natural turbidity is between 50 and 100 NTUs; and
  - more than 10 percent where natural turbidity is greater than 100 NTUs.

If information becomes available that shows there is a reasonable potential for a project dewatering discharge to exceed these limits or any other water quality objectives, the discharge must be immediately stopped. All dewatering associated with the proposed project would be required to comply with these conditions and protect the beneficial uses of Dry, Linda, and Cirby Creeks.

Stream Diversions
Temporary stream diversions (clear water diversions) would be installed for the construction of new bridges, the Darling Way bridge widening, the Rocky Ridge and Old Auburn Road undercrossings, and for the three stream bank stabilization components. Clear water diversions are used in waterways to enclose a construction area and reduce sediment pollution from construction work taking place in or adjacent to water. The diversions would consist of a temporary dam constructed just upstream of the existing bridge and temporary pipes of sufficient number and size to carry stream flow from the temporary dam, through the construction site, to a point downstream. In addition to a piped diversion, the Cirby Creek bank stabilization area would also include the excavation of a secondary low flow channel in a sand bar on the opposite side of the stream bed. This secondary channel would be vegetated with native grasses and would remain after completion of the project. After the completion of in-channel construction, the diversion dams would be removed and the stream bed restored.

The NPDES California general construction permit allows temporary stream diversions provided that the discharge complies with the BMPs described in the SWPPP, is filtered or treated, does not exceed numeric action levels for pH and turbidity, and will not cause or contribute to a violation of water quality standards (SWRCB 2009). The proposed stream diversions would isolate areas of ground disturbance from the flowing water of the stream and would reduce the potential for water quality degradation resulting from in-stream construction activity.

Implementation of the proposed project would require construction activities within the stream channel that would require dewatering and stream diversions. The estimated volume of dewatering waste produced and the design of infiltration basins, filtration systems, and other BMPs would be developed prior to the final design phase of the project. As required by the NPDES California general construction and General Dewatering permits, filtration devices and systems would be provided to remove pollutants and suspended sediments generated during dewatering activities. A dewatering plan approved by the Central Valley RWQCB would be prepared as a component of the SWPPP, and all dewatering waste discharged to surface water would meet the applicable water quality objectives (refer to beneficial uses and water quality objectives described above).

Because SWRCB, Central Valley RWQCB, and City of Roseville regulations are in place to minimize erosion and transport of sediment and other pollutants during construction, and appropriate project-specific measures would be defined to secure necessary permits and approvals, construction-related impacts would be minimized and would not result in substantial adverse effect on water quality.

Use-related Impacts

The long-term maintenance and repair of the multi-use trail would require the use of various tools and equipment that have the potential to introduce oil, grease, litter, and chemical pollutants into Dry, Linda, and Cirby Creeks. Additionally, potential users of the trail may inadvertently or intentionally introduce contaminants, such as litter, sanitary wastes, and pet wastes. Over time, these contaminants could accumulate and adversely affect the water quality of Dry, Linda, and Cirby Creeks.

The potential for long-term use and maintenance of the trail to affect water quality would be minimized through compliance with the existing CDFW Streambed Alteration Agreement for the City of Roseville Routine Maintenance of Streams and Drainage Facilities project (Agreement). This Agreement covers routine activities, such as trail maintenance, channel alignment maintenance, debris removal, facilities repair or replacement, vegetation control in channels, minor erosion control work, and bridge washing and painting. The Agreement includes limits on the extent and intensity of each activity and measures to protect water quality such as sediment control, pollutant and litter management, and prohibitions on the use of heavy equipment in streams (CDFW 2017).

The use and maintenance of the proposed multi-use trail would involve activities that could negatively affect water quality. However, the City of Roseville conducts maintenance of its trail system under an existing agreement with CDFW which prescribes water quality protections for operation and maintenance activities.

Conclusion

Because SWRCB, Central Valley RWQCB, CDFW, and City of Roseville existing protections are in place, construction and the long-term use and maintenance of the proposed multi-use trail would have a **less-than-significant** impact on water quality.

Alignment Option 1A

Option 1A is the same as the Proposed Trail Alignment until the approach to the Dry Creek/Cirby Creek confluence and the first bridge. Where the Proposed Trail Alignment would cross Dry Creek via Bridge #2 and continue on the northern bank of Cirby Creek, Option 1A would cross Dry Creek via Bridge #3. By remaining on the south bank of Cirby Creek, Option 1A would not require the construction of Bridge# 2 or Bridge #4. The streambank of Cirby Creek is moderately erosive in the Option 1A area,

and the proximity of private property would require the path to be located near the top of the bank. For this reason, Option 1A would require an additional 765 linear feet of retaining walls or streambank stabilization when compared to the Proposed Trail Alignment. As discussed in regards to the Proposed Trail Alignment above, construction of Option 1A would require compliance with SWRCB, Central Valley RWQCB, and City of Roseville regulations that would minimize the potential for construction-related water quality impacts. Additionally, the use and maintenance of the Option 1A alignment would comply with the protective conditions of the existing CDFW Routine Maintenance Agreement and would have a **less-than-significant** impact on water quality.

Alignment Option 1C

Option 1C is the same as the Proposed Trail Alignment with the exception that in the Sheet 1 Segment, the multi–use trail would be located on the northeastern side of Dry Creek. In the Sheet 1 Segment, the northeastern bank of Dry Creek is steep and erosive with little distance between the top of the bank and the adjacent private property (CBEC 2014 (see Appendix F)). Because of this, implementation of Option 1C would require an additional 1,080 linear feet of streambank stabilization. Option 1C would have the same bridges and undercrossings described above under the Proposed Trail Alignment, with the exception of the widening of the Darling Way Bridge (Bridge #1), and Option 1C would have the same construction and use-related impacts. As discussed under the Proposed Trail Alignment above, construction of Option 1C would require compliance with SWRCB, Central Valley RWQCB, and City of Roseville regulations which would minimize the potential for construction related water quality impacts. Additionally, the use and maintenance of the Option 1C alignment would comply with the protective conditions of the existing CDFW Routine Maintenance Agreement and would have a **less-than-significant** impact on water quality.

Alignment Option 5A

Option 5A deviates from the Proposed Trail Alignment just west of Bridge #13. Bridge #13 would not be constructed, and Option 5A would remain on the south bank of Cirby Creek until crossing to the north bank via Bridge #14. Option 5A would include both an undercrossing of Sunrise Avenue and connecting paths to both sides of Sunrise Avenue. Both the Proposed Trail Alignment and Option 5A would make extensive use of retaining walls through this section of the path; however, Option 5A would require an additional 635 linear feet when compared to the Proposed Trail Alignment. As discussed in regards to the Proposed Trail Alignment above, construction of Option 5A would require compliance with SWRCB, Central Valley RWQCB, and City of Roseville regulations which would minimize the potential for construction related water quality impacts. Additionally, the use and maintenance of the Option 5A alignment would comply with the protective conditions of the existing CDFW Routine Maintenance Agreement and would have a **less-than-significant** impact on water quality.

Mitigation Measures

None required.

Impact 4.8-2	Potential to substantially alter existing drainage patterns or to create runoff volume that would exceed the capacity of drainage systems or result in erosion, siltation, or flooding.
Applicable Policies and Regulations	Federal Clean Water Act – NPDES Permits City of Roseville Urban Stormwater Quality Management and Discharge Control Ordinance
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

The amount of stormwater runoff generated from an area is affected by development through conversion of vegetated or pervious surfaces to impervious surfaces and by the development of drainage systems that connect these impervious surfaces to streams or other water bodies. In this way, development can increase the rate of runoff and eliminate storage and infiltration that would naturally occur along drainage paths. As water runs off the land surface, it collects and carries materials and sediment, which can be potentially harmful to downstream receiving waters. Additionally, runoff from impervious surfaces can become concentrated, causing erosion and increased sediment transport.

The proposed project would result in the construction and use of a paved multi-use trail and would increase the amount of impervious surface; reducing the amount of infiltration and increasing runoff volume. The impervious surface of the proposed trail would be a narrow linear feature surrounded by a natural area having soils with high to moderate infiltration rates (NRCS 2015). Stormwater from the proposed trail would run off as sheet flow into the adjacent natural areas and infiltrate into the soil. The trail could incorporate drainage swales on one or both shoulders when the project engineer determines that they are necessary to protect the structural integrity of the trail. Additionally, the project would be required to install and maintain permanent post construction water quality BMPs such as revegetation and stabilization of disturbed areas and contouring to mimic natural drainage patterns (as required by the SWPPP described above).

The proposed project would not alter existing drainage patterns except for the installation of drainage swales where needed to ensure slope stability as required by City of Roseville Design Standards. This would be a minor alteration of existing drainage patterns and would not create an adverse hydrologic effect.

The proposed project would not significantly alter drainage patterns on the site. Additionally, runoff from the proposed project would be readily infiltrated into the adjacent natural areas, and BMPs to control stormwater runoff and prevent erosion would be required by the Central Valley RWQCB SWPPP.

Conclusion

The potential for the proposed project to create an adverse effect resulting from alteration of drainage patterns or an increase in surface runoff would be **less than significant**.

Alignment Option 1A

The potential impacts related to drainage patterns and runoff volume are the same for Option 1A as those discussed under the Proposed Trail Alignment above. For the same reasons, Option 1A would not result in a significant alteration of drainage patters or an increase in surface runoff. Therefore, the implementation of Option 1A would have a **less-than-significant** impact relative to these resources.

Alignment Option 1C

The potential impacts related to drainage patterns and runoff volume are the same for Option 1C as those discussed under the Proposed Trail Alignment above. For the same reasons, Option 1C would not result in a significant alteration of drainage patters or an increase in surface runoff. Therefore, the implementation of Option 1C would have a **less-than-significant** impact relative to these resources.

Alignment Option 5A

The potential impacts related to drainage patterns and runoff volume are the same for Option 5A as those discussed under the Proposed Trail Alignment above. For the same reasons, Option 5A would not result in a significant alteration of drainage patters or an increase in surface runoff. Therefore, the implementation of Option 5A would have a **less-than-significant** impact relative to these resources.

Mitigation Measures

None required.

Impact 4.8-3	Alter or redirect 100-year flood flows, or expose people or structures to risk of injury or damage by flood waters.
Applicable Policies and Regulations	National Flood Insurance Act of 1968 and all subsequent related legislation CVFPB 200-year Flood Protection Standards City of Roseville General Plan Safety Element City of Roseville Municipal Code, Section 19.80.040 City of Roseville Design and Construction Standards City of Roseville General Plan – Floodplain development
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

The proposed Dry Creek Greenway East Trail would be located within the City of Roseville Floodway and the 100-year Floodplain as defined by FEMA (see Exhibit 4.8-1). In areas where the trail would be located below the 10-year flood event water surface elevation (WSE), the trail would conform to Section 13 Bikeways, of the City's Design/Construction Standards. All segments of the trail located below the 10-year flood WSE or positioned more than 45 degrees to the directional flow of water would be made of Portland cement concrete or another approved material and would have toe protection to prevent the trail from being undermined during flood events. The decks of the eight bridge structures included in the proposed project would be above the 10-year WSE. With the exception of bridges 13 and 21, all bridges would be designed to allow 3 feet of clearance between the sofit and the 200-year WSE in compliance with CVFPB bridge design standards for major streams (CCR Title 23, Division 1, Article 8, Section 128). Bridges 13 and 21 would require a variance from CVFPB standards which would be considered by CVFPB during a public hearing. For the two bridges that have sofits above the 10-year WSE but below the 200-year WSE, bridge railings would be designed to sustain the 100-year flood event without damage and without human intervention. Finally, where feasible, the approach ramps to bridges would be armored and would facilitate water movement around the bridge rather than directly over it.

The Location Hydraulic Report (PSOMAS 2016) and the Supplemental Hydraulic Analysis (PSOMAS 2017) prepared for the project evaluated the potential for the proposed project to affect 100-year flood levels. The Supplemental Hydraulic Analysis confirmed the findings of the Location Hydraulic Report using more recent data. The majority of the Proposed Trail Alignment would be located at-grade and would have a negligible effect on the floodplain. Creek and roadway crossings would be located perpendicular to flood flows and have the potential to increase flood water elevations or re-direct flood waters. As required by City of Roseville design standards, hydraulic and structural calculations were prepared for all project bridges based on the assumption that the bridge trusses would completely block the flow of water (PSOMAS 2016). With the exception of Bridge #13, all stream crossings and roadway undercrossings are located in the floodway fringe (refer to Exhibit 4.8-2). Bridge #13 would be constructed with a new reinforced concrete flat slab bike/pedestrian bridge over Linda Creek. The 100-year floodway extends beyond the main Linda Creek channel at this location because of the confluence with Cirby Creek. Although the bridge approaches and abutments would be located outside of the Linda Creek main channel, they would encroach within the floodway. All bridges, including Bridge # 13, would have a negligible effect (<0.1 feet) on WSE for the 100-year storm event.

The trail itself would be designed to minimize impacts to the floodplain and to withstand flood events; however, during high water flows, portions of the trail and components such as bridge structures and trailheads may be unsafe for use by pedestrians and bicyclists. The City operates a flood warning system that uses television, internet, telephone, and radio to provide residents with information related to water levels. This system is intended to provide up to three hours of advance warning (City of Roseville 2012) to warn against trail use. In addition, the City of Roseville uses portable signs to prohibit trail access during high water events.

Although the proposed project would be located within the 100-year floodplain and would be located below the 10-year water surface elevation in some areas, the trail would conform to all City standards for construction of bikeways in floodplains. The trail and its structures would be armored and secured to withstand flooding events without damage, and signage and flood warning systems would prevent use of the trail during high water events. All bridges and encroachments within the regulated floodway have been designed so that they would not create an adverse increase in the 100-year water surface elevation.

Conclusion

The implementation of the Proposed Trail Alignment would have a **less-than-significant** impact on flood flows.

Alignment Option 1A

Option 1A would require the construction of Bridge #3 instead of Bridge #2 and Bridge #4 and would, therefore, have a smaller encroachment footprint within the 100-year floodplain when compared to the Proposed Trail Alignment. As described under the Proposed Trail Alignment, all portions of the trail located below the 10-year water surface elevation would conform to Section 13, “Bikeways” of the City’s Design/Construction Standards. The trail and its structures would be armored and secured to withstand flooding events without damage, and signage and flood warning systems would prevent use of the trail during high water events. No encroachments within the regulated floodway would result in an adverse increase in the 100-year WSE. Therefore, the implementation of Alignment Option 1A would have a **less-than-significant** impact on flood flows.

Alignment Option 1C

Option 1C would not require the widening of Darling Way Bridge (Bridge #1) and would therefore have a smaller encroachment footprint within the 100-year floodplain when compared to the Proposed Trail Alignment. As described under the Proposed Trail Alignment, all portions of the trail located below the 10-year water surface elevation would conform to Section 13, “Bikeways” of the City’s Design/Construction Standards. The trail and its structures would be armored and secured to withstand flooding events without damage, and signage and flood warning systems would prevent use of the trail during high water events. No encroachments within the regulated floodway would result in an adverse increase in the 100-year WSE. Therefore, the implementation of Alignment Option 1C would have a **less-than-significant** impact on flood flows.

Alignment Option 5A

Option 5A would deviate from the Proposed Trail Alignment just west of Bridge #13 and would therefore not create the 100-year floodway impacts described under the Proposed Trail Alignment because Bridge #13 would not be constructed. Option 5A would cross Linda Creek via Bridge #14 and would result in no encroachments within the regulated floodway and therefore would not result in an increase in the 100-year WSE. In addition, Bridge #14 would meet CVFPB bridge design standards and would not require a CFVPB variance. This would be considered a **less-than-significant** impact.

Mitigation Measures

None required.

This page intentionally left blank.

4.9 LAND USE AND PLANNING

4.9.1 Introduction

This section describes the existing land uses and applicable land use plans for the project area. The proposed project is evaluated for consistency with applicable land use plans as well as potential for conflicts with existing land use. The project area is not located within an adopted conservation plan or natural community conservation plan; the City of Roseville (City) is not participating in the Placer County Conservation Plan.

Comment letters received in response to the Notice of Preparation address the potential for diminishing property values, limiting future development, and the degree to which the proposed alignment supports the goal of a highly connected trail. While these are important issues for consideration of the project's merits, they are not environmental issues within the purview of CEQA. A discussion of the potential growth-inducing effects of the project are included in Section 5.2 in Chapter 5, "Other CEQA Considerations," of this Draft EIR. The goals and objectives of the proposed project are discussed in Chapter 3, "Project Description."

4.9.2 Environmental Setting

REGIONAL SETTING

Within the City of Roseville incorporated limits, there are fifteen subareas that have been planned for urban development. These include the Infill Area, the North Industrial area, and the City's 14 specific plan areas.

The project site is located in the Infill Area. The Infill Area constitutes what historically has been the central core of Roseville, as well as the areas that were the focus of growth in the City until the early 1980s. With the exception of scattered parcels of limited acreage, the Infill Area is close to being fully developed. The land uses in this area include a mix of residential neighborhoods, commercial and industrial uses, and amenities to serve the residents of the community. The Infill Area encompasses some of the oldest portions of the City, but excludes the Downtown Specific Plan area and Riverside Specific Plan area. Totaling 8,505 gross acres, the Infill Area is planned to accommodate approximately 43,000 residents at full buildout.

Site Location and Description

The proposed project would run through the creek corridors of developed neighborhoods and business districts in the City of Roseville. With the exception of a few scattered parcels, the properties surrounding the creek corridors are fully developed. The properties adjacent to the proposed trail corridor include a mix of residential, commercial, parks, open space and public/quasi-public uses. Flood control improvements, including floodwalls, berms, a bypass channel, bypass culverts, and a detention basin are located along the length of the proposed project from Interstate 80 (I-80), easterly to Old Auburn Road. A flood control bypass channel and detention basin are located along the south side of Linda Creek east of Rocky Ridge Drive and north of Cirby Way. Commercially-zoned properties are concentrated along Sunrise Avenue to the north and south of the project site along Linda Creek. Commercial areas are also found near the western part of the proposed trail along Riverside Avenue between Darling and Cirby Ways.

LAND USE DESIGNATIONS AND ZONING DISTRICTS

Land use designations in the Roseville General Plan associated with the proposed trail consist of Open Space, Community Commercial, and Low-Density Residential. Areas surrounding the project site consist of Low Density Residential, Medium Density Residential, High Density Residential, Community Commercial, Business Professional, Public/Quasi-Public, and Parks and Recreation. These General Plan land use designations are shown in Exhibit 4.9-1.

The proposed trail project would be located primarily within City-owned property zoned Open Space with Floodway or Floodway Fringe Overlays. Small segments of the trail would also be located on property zoned for residential, commercial, and parks and recreation use with the Floodway or Floodway Fringe Overlays, with some affected properties being privately owned. Exhibit 4.9-2 depicts zoning districts associated with the project site.

4.9.3 Regulatory Setting

Key regulatory and conservation planning issues applicable to the proposed project are discussed below.

FEDERAL

There are no applicable land use federal regulations and policies that pertain to the proposed project.

STATE

Government Code Section 65300 et seq. establishes the obligation of cities and counties to adopt and implement general plans. The general plan is a comprehensive, long-term, and general document that describes plans for the physical development of a city or county and of any land outside its boundaries that, in the city's or county's judgment, bears relation to its planning. The general plan addresses a broad range of topics, including, at a minimum, land use, circulation, housing, conservation, open space, noise, and safety. In addressing these topics, the general plan identifies the goals, objectives, policies, principles, standards, and plan proposals that support the city's or county's vision for the area. The general plan is a long-range document that typically addresses the physical character of an area over a 20-year period. Finally, although the general plan serves as a blueprint for future development and identifies the overall vision for the planning area, it remains general enough to allow for flexibility in the approach taken to achieve the plan's goals. The City of Roseville's General Plan includes policies relevant to the proposed project, which are summarized as follows.

LOCAL

City of Roseville General Plan

The City of Roseville General Plan 2035 contains a number of goals and policies applicable to the proposed project that land use. Key provisions from the Open Space and Conservation Element and the Parks and Recreation Element are summarized below.

<u>Open Space and Conservation Element</u>

GOAL 1: Establish a comprehensive system of public and private open space, including interconnected open space corridors that should include oak woodlands, riparian areas, grasslands, wetlands, and other open space resources.

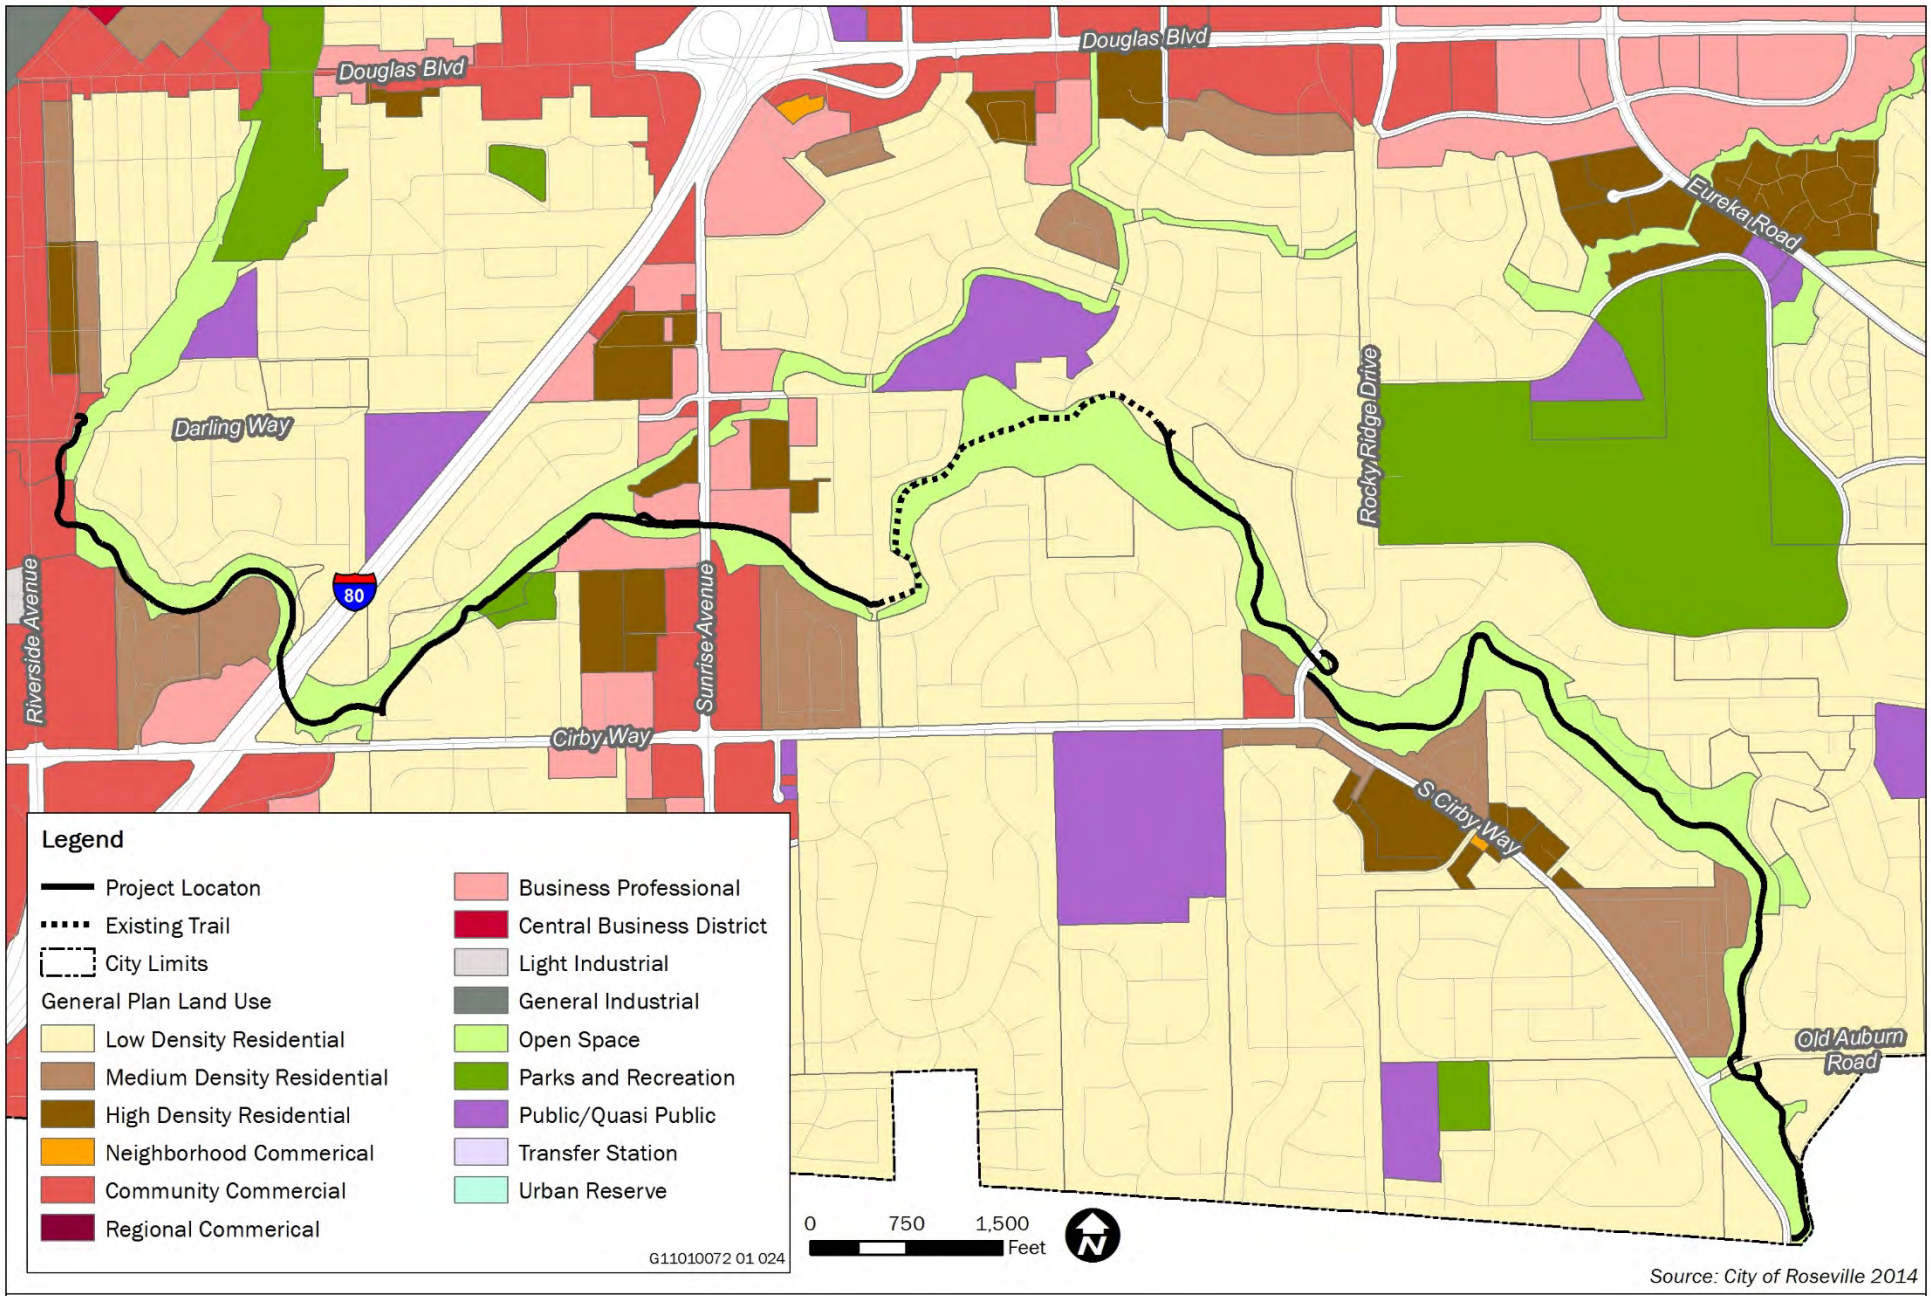

Exhibit 4.9-1

General Plan Land Use Designations

ASCENT ENVIRONMENTAL

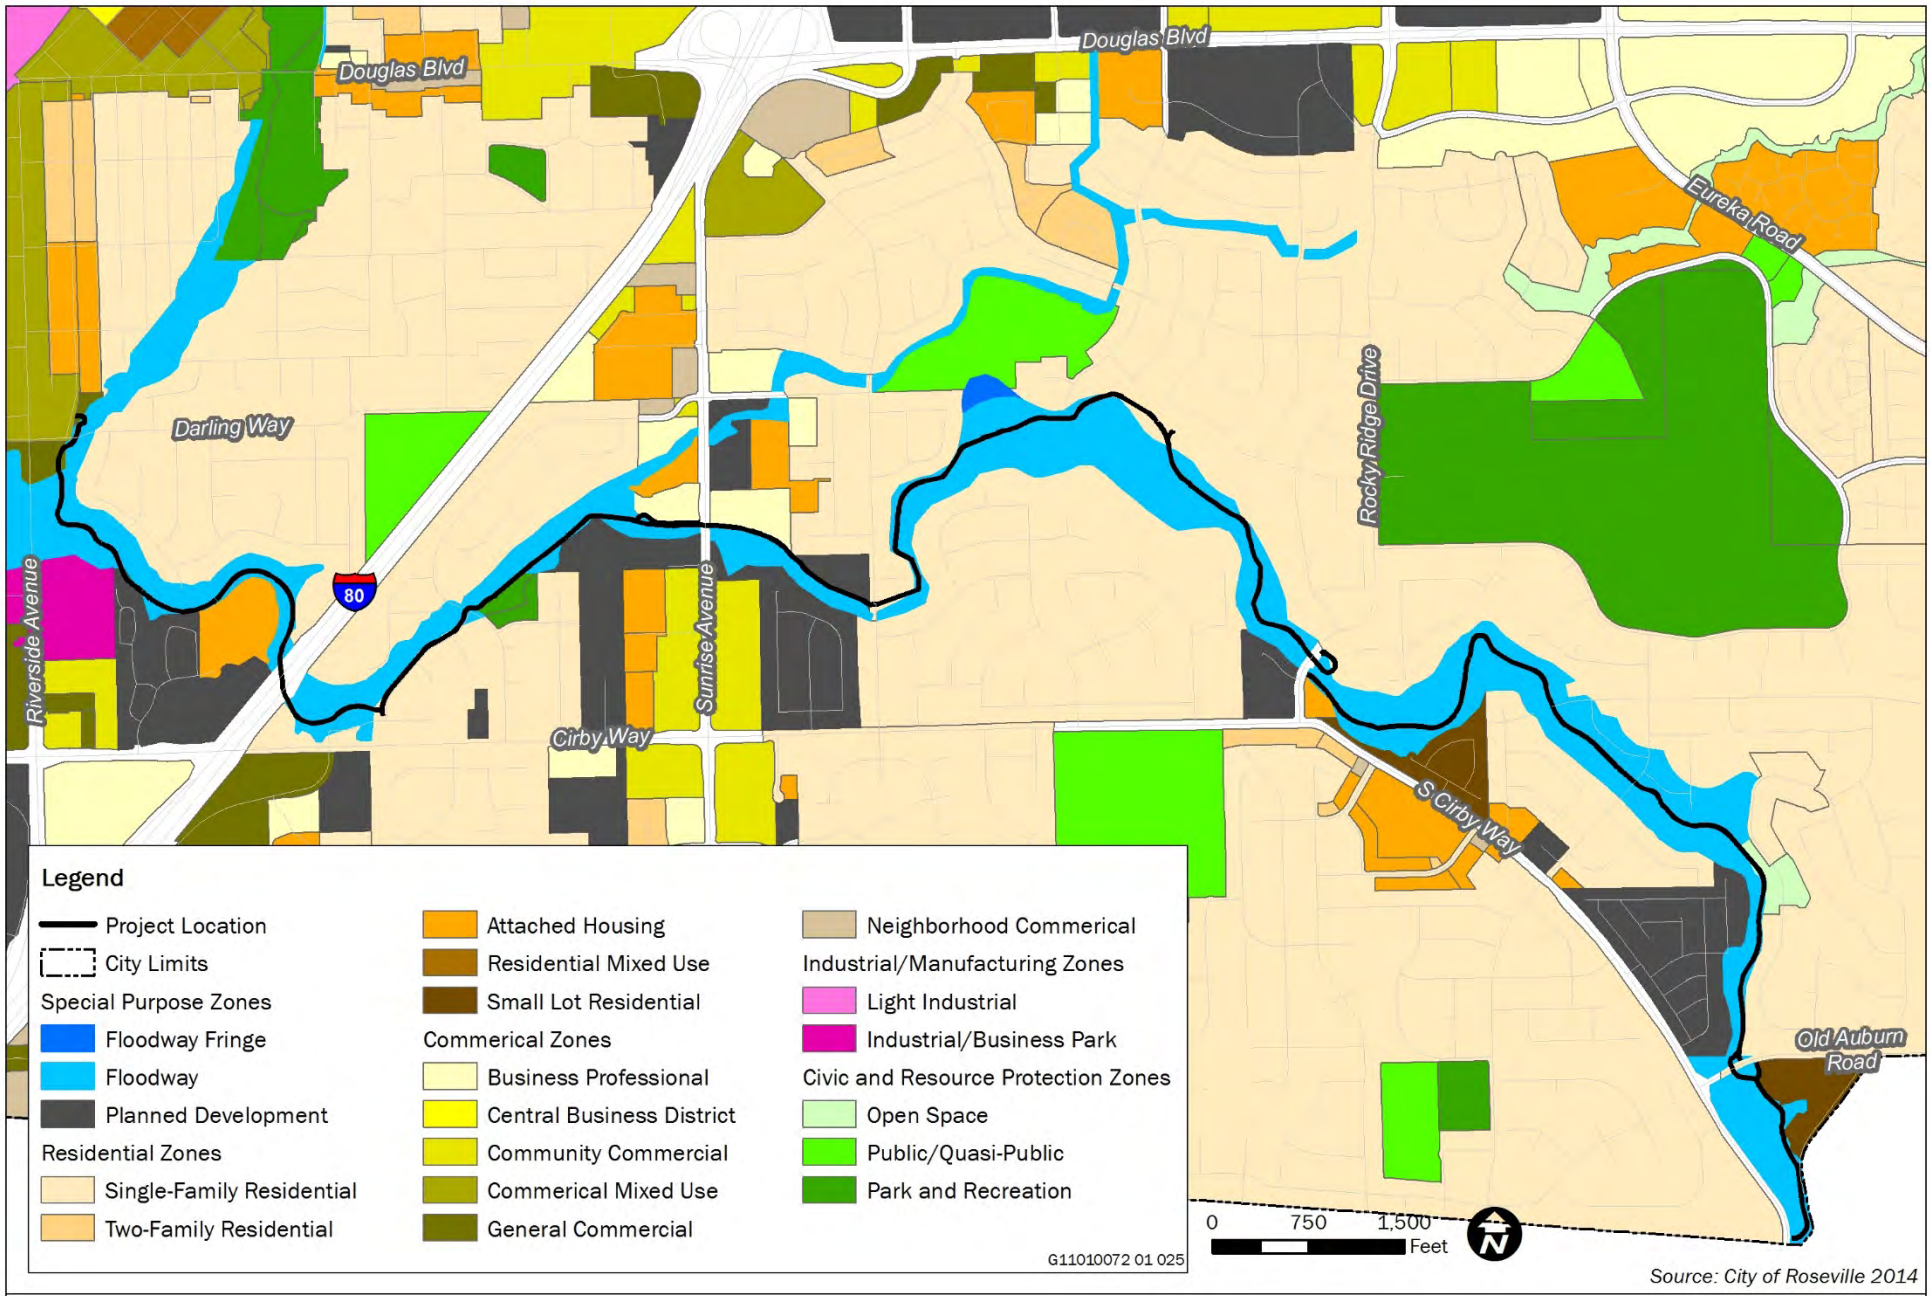

Exhibit 4.9-2

Zoning Designations

ASCENT ENVIRONMENTAL

GOAL 2: Utilize the open space system to connect neighborhoods and separate development areas within the City.

GOAL 3: Provide access to public open space areas through the establishment of a series of public linkages that will be adequately managed and protected.

GOAL 4: Integrate, where feasible, passive recreational and educational opportunities with the protection of wildlife and vegetation habitat areas.

- **Policy 1:** Provide an interconnecting system of open space corridors that, where feasible, incorporate bikeways and pedestrian paths.
- **Policy 2:** Provide interconnected open space corridors between open space and habitat resources, recreation areas, schools, employment, commercial service and residential areas.
- **Policy 5:** Provide access to public open space resources except in those areas determined by the City to be sensitive to human presence.
- **Policy 6:** Take into account consideration of natural habitat areas in developing linkages and in preserving open space areas. Identify alternate sites for linkages where sensitive habitat areas have the potential to be adversely impacted.

Parks and Recreation Element

GOAL 2: Provide residents with both active and passive recreation opportunities by maximizing the use of dedicated park lands and open space areas

- **Policy 9:** Continue to maintain and upgrade as necessary City parks and open space areas through the Parks and Recreation Department, to assure safe, clean and orderly facilities.
- **Policy 12:** Ensure that new public parks and recreation facilities, open space, paseos, landscape areas and greenways provide adequate funding for initial development, as well as ongoing maintenance and operation.

The City of Roseville General Plan 2035 also contains land use designations that address both public and private development and serve as a guide for zoning and other land use regulations. Because the land use map provides a guide for future development, it is possible that more than one zoning district may be consistent with any one land use designation. Designations applicable to the proposed project are summarized below and are shown above in Exhibit 4.9-1.

Land Use Element

Where appropriate, land use definitions are broad in scope to allow the flexibility necessary to achieve the General Plan's polices related to pedestrian orientation and convenience gained by allowing mixed-use projects. This is achieved through the permitted secondary uses associated with each land use designation. The extent of the secondary uses permitted, and conditions related to their use, are specified in the overlying zoning, specific plan, and/or other master plan.

Open Space

Purpose: The open space land use designation is used to preserve and protect public and private lands that are significant because of wild life habitat, natural features, or flood hazard. Within new development areas, the 100-year floodplain boundaries will be designated as Open Space. In addition, sensitive or unique natural features, including, but not limited to, wetlands, vernal pools, and oak woodlands are also to be designated as open space as part of specific plans and other major development review processes.

Primary Uses: Passive recreation and minor recreation facilities (picnic tables, restrooms), walking and bike trails, and resource interpretive facilities.

Secondary Uses: Resource mitigation and drainage detention.

Park and Recreation
Purpose: The park and recreation designation is used to identify public parks in Roseville and public and private recreation facilities.

Primary Uses: Public park and recreation facilities, including ball diamonds and fields, golf courses, pools, bike trails and community buildings; and private recreation uses when they include outside facilities such as golf course, tennis courts, etc.

Secondary Uses: Libraries, child/elder care facilities, resource mitigation, and drainage detention.

Low-Density Residential
Purpose: The low-density residential land use category is applied to lands where single-family dwelling units that comprise the majority of Roseville's housing supply are located. The lower densities are assigned to lands with the flexibility to accommodate development constraints (e.g. slopes, trees, etc.). Typically, low-density residential lands should require minimal grading or disturbance of natural features.

Primary Uses: Attached and detached single- family residences; and public parks, resource preservation and open space areas.

Secondary Uses: Secondary uses include public and private schools, religious assembly, private recreation; and limited office, commercial childcare facilities, and neighborhood retail and services.

Medium-Density Residential
Purpose: The medium density residential land use category is applied to lands characterized by small lot single family detached dwelling units and attached patio homes, half-plexes, townhouses, condominiums, and mobile home parks. This residential land use will accommodate a variety of housing types and designs, and is often located as a transition or buffer between higher intensity land uses and low density residential land use. It may also be applied as a transition between higher volume roadways and lower density residential uses.

Primary Uses: Attached and detached single family and multi-family residences; and public parks, resource preservation and open space areas.

Secondary Uses: Secondary uses include public and private schools, religious assembly, private recreation; and limited office, commercial childcare facilities, and neighborhood retail and services.

Community Commercial
Purpose: The community commercial land use category is distinguished from the neighborhood commercial designation by providing a broader range of goods and services to an expanded service area.

Primary Uses: Retail stores and businesses selling a full range of goods and services including auto sales and repair, and commercial child care facilities.

Secondary Uses: Professional offices uses, including medical offices and clinics.

Business Professional
Purpose: To provide areas for small and large office uses, including uses supportive of offices.

Primary Uses: The business professional land use category includes administrative, professional, government and medical offices, and research and development (not including any assembly or manufacturing). Hospitals and clinics may also be permitted by this land use designation.

Secondary Uses: Limited service commercial uses (e.g. banks, restaurants, day care centers, travel agencies, florists, etc.) are encouraged where they would minimize the need for vehicle travel for convenience trips, but only as secondary uses in proximity to large office parks and complexes. In association with clinics and hospitals, pharmacies and other medical related retail may be permitted.

Combining Designations

The following designations are only applied in combination with another land use designation and modify the uses and standards of that designation.

Floodplain

Purpose: The floodplain designation identifies those lands that are within the City's Regulatory Floodplain boundaries as defined in the Safety Element. Development of lands with a floodplain land use designation is strictly regulated by the City of Roseville. In areas with existing development, the floodplain designation is an overlay or combining land use. As part of a specific plan, the land use designation may be combined with an open space or parks designation, if found consistent with the policies of the Safety Element.

Permitted Uses and Standards: Uses are limited to those that minimize impacts on upstream and downstream areas and are consistent with both the policies of the Safety Element and the underlying land use designation.

City of Roseville Zoning Ordinance

A permitted use in the Single-Family Residential, Attached Housing, General Commercial, Business Professional, and Park and Recreation districts (defined below) is "resource related recreation," which includes facilities related to passive recreation use of open space areas, including bike and pedestrian trails, picnic areas, parking areas, and interpretive centers.

Single-Family Residential (R1) District: The R1, Single-Family Residential district is intended for detached, single-family homes and similar and related uses inclusive of half-plexes.

Attached Housing (R3) District: The R3, Attached Housing district is intended for multiple-family housing. The types of land use intended for the R3 zoning district include apartments, condominiums, townhomes, and similar and related compatible uses.

General Commercial (GC) District: The General Commercial district is intended to serve the entire community by providing areas for commercial facilities that are more of a service or heavy commercial character than are permitted in the Community Commercial District, and may involve outdoor display, storage or activity uses.

Business Professional (BP) District: The Business Professional district is intended to provide locations for a wide variety of office uses and other uses which are related to and supportive of office uses.

Park and Recreation (PR) District: The Park and Recreation district may be applied to both public and private recreation facilities. It is intended to be applied to larger parks especially community wide facilities, but may also be applied to smaller neighborhood facilities when it is important, due to the planned facilities or natural features, to designate the site for park and recreation uses.

The zoning ordinance also describes several Special Area districts. The Special Area district is an overlay district which allows modification of the underlying general district regulations (including both

permitted Use Types and Development Standards) by reference to regulations adopted either in a Specific Plan, which applies to the property so classified, or in the ordinance rezoning the property so classified. The proposed project is located within the Floodway (FW) and Floodway Fringe (FF) special areas. The "Floodway" and the "Floodway Fringe" refers to those areas in and along Dry, Linda, Cirby, and Antelope Creeks as shown in October 1973 aerial photographic maps designated as "Official Floodplain Maps" of the City of Roseville.

Floodway (FW) District: The following uses, having a low flood damage potential and not obstructing flood flows, are permitted within the FW District. Provided, however, that no such use shall include structures, fill, or storage of materials or equipment. And further provided, however, that no such use shall adversely affect the capacity of the channels or floodways, or of any tributary to the main stream, drainage ditch, or any other drainage facility or system, nor shall any use increase the water surface elevation of the base flood:

1. Agricultural uses such as general farming, pasture, grazing, outdoor plant nurseries, horticulture, viticulture, truck farming, forestry, sod farming and wild crop harvesting.

2. Accessory industrial-commercial uses such as loading areas, parking areas, airport landing strips.

3. Private and public recreational uses such as golf courses, tennis courts, driving ranges, archery ranges, picnic grounds, boat launching ramps, swimming areas, park, wildlife and nature preserves, game farms, fish hatcheries, shooting preserves, target ranges, trap and skeet ranges, hunting and fishing areas, and hiking and horseback riding trails.

4. Accessory residential uses such as lawns, gardens, parking areas and play areas.

Floodway Fringe (FF) District: The following uses are permitted within the Floodway Fringe (FF) District:

1. Uses or structures accessory to uses permitted by Article II (Zoning Districts and Allowable Land Uses), but not including any structure designed or used for human residence.

2. Circuses, carnivals, and similar temporary or transient amusement enterprises.

3. Drive-in theaters, new and used car lots, temporary roadside stands, and freestanding signs or billboards (where permitted by the Sign Ordinance of the City of Roseville, Roseville Municipal Code Title 17).

4. Extraction of sand, gravel, and other materials.

5. Marinas, boat rentals, docks, piers, and wharves.

6. Railroad, streets, bridges, utility transmission lines, and pipelines.

7. Storage yards for readily transportable equipment, machinery, or materials.

8. Kennels and stables.

9. Other similar uses of a primarily open space nature.

10. Structures, including residential structures and mobile homes.

11. Any use permitted under the FW District.

City of Roseville 2008 Bicycle Master Plan

The City's 2008 Bicycle Master Plan (BMP) includes a plan for development of over 28 miles of Class I trails in Roseville, including the Dry Creek Greenway East Trail. The proposed project is identified as a priority project in the BMP because of its potential to provide a safe, comfortable, and convenient bicycle route in an area of the City with limited existing options for bicyclists. The City periodically updates the BMP. The next planned update to the BMP will begin in 2018. The proposed project is also included in the Sacramento Area Council of Governments currently conforming Metropolitan Transportation Plan for 2035, Amendment #I, and the 2013/16 Metropolitan Transportation Improvement Program Administrative Modification #11.

4.9.4 Impacts

METHODS OF ANALYSIS

The evaluation of the potential land use impacts associated with implementation of the proposed project is based on a review of planning documents, including the various components and policies of the City General Plan and other City regulations affecting planning and implementation of the proposed project. Potential impacts and plan consistency issues associated with aesthetics and visual resources, biological and natural resources, cultural resources, and agricultural resources are addressed in other sections of this Draft EIR in Chapter 4, "Environmental Setting, Impacts, and Mitigation Measures." The reader is referred to the relevant sections of this Draft EIR for a detailed analysis of other relevant environmental effects as they relate to a particular issue.

Physical division of an established community would result from construction of a barrier that changes the connectivity between areas of a community. The division would result in an impact if it would change the connectivity, such that implementation of a project would separate individuals from an existing community. Examples of this types of impact include closure of a bridge or roadway or construction of an impediment (e.g., storm channel), resulting in the loss of a transportation route such as a roadway, pedestrian path, or bicycle path.

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the proposed project was determined to result in a significant impact to land use and planning if it would:

- physically divide an established community;
- conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the general plan, specific plan, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect; or
- conflict with an adopted conservation plan or natural community conservation plan.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

There are no adopted conservations plans or natural community conservation plans associated with the project site; therefore, this issue is not discussed further.

IMPACT ANALYSIS

Impact 4.9-1	Consistency with applicable land use plans.
Applicable Policies and Regulations	City of Roseville General Plan Open Space and Conservation Element City of Roseville Bicycle Master Plan
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

The proposed project would be a multi-use trail for pedestrians, bicyclists, and other non-motorized vehicle users that would connect neighborhoods, parks, schools, businesses, natural areas, and the on-street bikeway system across the south side of the City and would ultimately provide an important regional connection for the greater South Placer/Sacramento area. The multi-use trail would also serve as a paved, all-weather access for City maintenance crews. This would provide access to the City's sewer, water, and drainage outfalls that follow the creeks. The trail would also provide access for emergency service responders.

There are several utilities along the corridor that would require relocation or modifications during construction of the proposed trail. As described in Chapter 3, "Project Description," where the proposed trail alignment crosses or parallels sewer, water, telecommunications, or gas lines, adjustments to the grade of the trail or manholes may be needed, or the trail alignment would be shifted slightly to avoid the manholes. Existing gas and water lines at the Darling Way Bridge and Sunrise Avenue Bridge would also need to be relocated. Construction of the proposed project could result in scheduled and accidental interruptions of utility services. The City would positively locate public utilities within the potential impact area prior to construction, in compliance with state law (i.e., California Government Code 4216). The potential for disruption of utility systems during construction is low because of the established practices of utility identification.

Land use planning efforts relevant to the proposed project consist of the City's 2008 BMP and 2035 General Plan. The City's 2008 BMP includes a plan for development of over 28 miles of Class I trails in Roseville, including the proposed project. Class I off-street bike paths are most often used for recreational purposes, but they are also important for commuters where they allow bicyclists to avoid high traffic volume areas, such as highway interchanges or major arterial streets. The City of Roseville 2025 General Plan identifies the study area as an Infill planning area. With the exception of scattered parcels of limited acreage, the Infill area is close to being fully developed.

Land use designations associated with the proposed trail consist of Open Space, Parks and Recreation, Community Commercial, Business Professional, Low-Density Residential, and Medium Density Residential. The General Plan identifies walking and bike trails as a primary use for the Open Space and Parks and Recreation designations. A multi-use trail is not stated as a use for Community Commercial, Business Professional, or Low-Density Residential. Likewise, zoning districts associated with the trail alignment related to floodway are consistent with the City Code, while residential and commercial districts do not list multi-use trails as a primary use. While trail development is not listed as a primary use in these land use designations and zoning districts, it is a permitted use. In addition, the development of a multi-use trail would not interfere with existing or future residential or commercial uses.

The proposed project would be located primarily within City-owned property zoned Open Space with Floodway or Floodway Fringe Overlays. The floodway designation identifies those lands that are within the City's Regulatory Floodplain boundaries as defined in the Safety Element. Development of lands with a floodplain land use designation is strictly regulated by the City of Roseville. Trail development is a permitted use in the floodway designation. The majority of the proposed trail alignment would be located at-grade and would have a negligible effect on the floodplain and flood waters. With the exception of proposed Bridge #13, improvements for all stream crossings and roadway undercrossings are located in the floodway fringe and would have a negligible effect on water surface elevation for the 100-year storm event. Please also see Impact 4.8-3 in Section 4.8, "Hydrology" for a discussion of proposed Bridge #13.

In addition, the Open Space System goals in the City's General Plan include policies such as:

Open Space System Policy 1: providing an interconnecting system of open space corridors that, where feasible, incorporate bikeways and pedestrian paths;

Open Space System Policy 2: providing interconnected open space corridors between open space and habitat resources, recreation areas, schools, employment, commercial service, and residential areas; and

Open Space System Policy 6: take into account consideration of natural habitat areas in developing linkages and in preserving open space areas.

Conclusion

The proposed multi-use trail would be consistent with these policies because it extends from the existing Saugstad/Royer Park trail, follows creek corridors along portions of Dry, Cirby, and Linda Creeks through property primarily zoned Open Space with Floodway or Floodway Fringe Overlays, with the purpose of connecting neighborhoods, parks, schools, businesses, natural areas, and the on-street bikeway system across the south side of the City. In consideration of policy 6, design of the trail has to the extent feasible, avoided the larger trees along the creek corridor, especially the native oak trees, to minimize impacts to habitat and aesthetic values. For these reasons, the Dry Creek Greenway East Trail would be consistent with relevant land use plans and this impact would be **less than significant**.

Alignment Option 1A

Consistency with relevant land use plans under Alignment Option 1A would be the same as under the Proposed Trail Alignment because the option travels through the same land use designations and zoning, and contains the same elements as the Proposed Trail Alignment. Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream. For the reasons described above for the Proposed Trail Alignment, this option would be consistent with relevant land use plans and the impact would be **less than significant**.

Alignment Option 1C

Consistency with relevant land use plans under Alignment Option 1C would be the same as under the Proposed Trail Alignment because the option travels through the same land use designations, zoning, and contains the same elements as the Proposed Trail Alignment. Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek. For the reasons described above for the Proposed Trail Alignment, this option would be consistent with relevant land use plans and the impact would be **less than significant**.

Alignment Option 5A
Consistency with relevant land use plans under Alignment Option 5A would be the same as under the Proposed Trail Alignment because the option travels through the same land use designations, zoning, and contains the same elements as the Proposed Trail Alignment. East of Eastwood Park, Alignment Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek, and Bridge #13 would not be included. For the reasons described above under the Proposed Trail Alignment, this option would be consistent with relevant land use plans and the impact would be **less than significant**.

Mitigation Measures
None required.

Impact 4.9-2	Physically divide an established community.
Applicable Policies and Regulations	City of Roseville General Plan Open Space and Conservation Element City of Roseville Bicycle Master Plan
Significance with Policies and Regulations	Proposed Project: Beneficial Alignment Option 1A: Beneficial Alignment Option 1C: Beneficial Alignment Option 5A: Beneficial
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Beneficial (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment
The proposed project would be a multi-use trail for pedestrians, bicyclists and other non-motorized vehicle users that would connect neighborhoods, parks, schools, businesses, natural areas, and the on-street bikeway system across the south side of the City and would ultimately provide an important regional connection for the greater South Placer/Sacramento area. As discussed in the environmental analysis for the BMP, the construction of bikeways in Roseville would create linear travel corridors. These corridors would provide linkages through, rather than divide, the community. The connectivity that would be gained from the proposed project would create a new route that would enhance travel between existing communities.

As described in Chapter 3, “Project Description,” there are several utilities along the corridor that would require relocation or modifications during construction of the proposed trail. The utility lines and manhole covers that require relocation would be moved to a similar position as they currently exist. This construction would be temporary in nature and when complete would not divide the community.

The majority of the proposed trail alignment would be located within City of Roseville-owned property. There are some locations where the proposed trail alignment would pass through private property and would require the acquisition of right-of-way or permanent easements. Table 4.9-1 depicts the expected right-of-way and easement acquisition totals for the proposed trail and the alignment options. Exhibits 4.9-3 through 4.9-10 show the estimated right-of-way and easement requirements (Exhibits 4.9-7 and 4.9-8 only) along the proposed trail alignment. The square footage estimates are preliminary and approximate at this time, because planning has progressed to the concept level, and subsequent design development would refine the actual right-of-way needed. The right-of-way acquisitions and easements would not require the demolition or relocation of existing buildings and would not eliminate access to affected properties.

Total	**272,780 (6.57 acres)**	**12,466 (0.29 acres)**	**various**

Notes:

1. Total square footage, by parcel number, for the proposed project.

2. Permanent easement requirements are the same for the proposed trail alignment and alignment options.

3. Total square footage, by parcel number, for the trail with either Alignment Option 1A, 1C, or 5A. Unless noted, the total would be the same for any of the alignment options.

Source: Data compiled by Ascent Environmental, Inc. in 2014.

Portions of an existing access road west of residences on Mallard Lane would be relocated or reconstructed. If necessary, access gates and fences would also be relocated or reconstructed, and access would be maintained. One commercial property on Riverside Avenue, could require modifications to access to the rear of the property; however, the proposed project would not affect public access at the main entrance.

Conclusion

Although constructing the multi-use trail would create a linear travel corridor, the corridor would provide linkages through, rather than divide, the community. In addition, the project would not involve any change in access to the 38 parcels requiring right-of-way acquisition. Thus, this impact would be **beneficial**.

Alignment Option 1A

Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream. Effects on established communities under Alignment Option 1A would be the same type and of the same magnitude as under the Proposed Trail Alignment, although this option would require the acquisition of 17,984 more square feet than the Proposed Trail Alignment. Alignment Option 1A would include right-of-way requirements on one additional parcel and on a larger portion of one parcel than would be required under the proposed trail alignment. Exhibit 4.9-11 shows the estimated right-of-way and easement requirements under this alignment option. For the reasons described above for the Proposed Trail Alignment, this impact would be **beneficial**.

Alignment Option 1C
Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek. Effects on established communities under Alignment Option 1C would be the same type and magnitude of as under the Proposed Trail Alignment, although this option would require the acquisition of 55,881 fewer square feet than the Proposed Trail Alignment, because the trail would travel on the east side of Dry Creek instead of behind the commercial properties on Riverside Avenue. Exhibit 4.9-12 show the estimated right-of-way and easement requirements under this alignment option. Compared to the proposed project, Alignment Option 1C would include small right-of-way requirements on two parcels on the east side of Dry Creek and one parcel north of Darling Way. It would require less acquisition on five parcels along Riverside Avenue. For the reasons described above for the Proposed Trail Alignment, this impact would be **beneficial** under Alignment Option 1C**.**

Alignment Option 5A
East of Eastwood Park, Alignment Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek. Effects on established communities under Alignment Option 5A would be the same type and magnitude of as under the Proposed Trail Alignment, although this option would require the acquisition of 14,603 fewer square feet than the Proposed Trail Alignment. Exhibit 4.9-13 shows the estimated right-of-way and easement requirements under this alignment option. Compared to the proposed project, Alignment Option 5A would not require acquisition on five parcels north of Linda Creek, but it would require acquisition from three parcels south of Linda Creek. For the reasons described above under the Proposed Trail Alignment, this impact would be **beneficial**.

Mitigation Measures
None required.

4.10 NOISE

4.10.1 Introduction

This section includes a description of acoustic fundamentals, existing ambient noise conditions, and an analysis of potential noise impacts associated with implementation of the proposed project.

No comments related to noise and/or vibration were received in response to the Notice of Preparation.

4.10.2 Environmental Setting

BACKGROUND ON ENVIRONMENTAL NOISE AND VIBRATION

Fundamentals of Environmental Sound and Noise

Acoustics is the scientific study that evaluates perception and properties of sound waves. Sound that is loud, disagreeable, unexpected, or unwanted is generally defined as noise. Common sources of environmental noise and associated noise levels are presented in Table 4.10-1.

Table 4.10-1 Typical Noise Levels

Common Outdoor Activities	Noise Level (dB)	Common Indoor Activities
	110	Rock band
Jet flyover at 1,000 feet	100	
Gas lawnmower at 3 feet	90	
Diesel truck moving at 50 mph at 50 feet	80	Food blender at 3 feet, Garbage disposal at 3 feet
Noisy urban area, Gas lawnmower at 100 feet	70	Vacuum cleaner at 10 feet, Normal speech at 3 feet
Commercial area, Heavy traffic at 300 feet	60	
Quiet urban daytime	50	Large business office, Dishwasher in next room
Quiet urban nighttime	40	Theater, Large conference room (background)
Quiet suburban nighttime	30	Library, Bedroom at night, Concert hall (background)
Quiet rural nighttime	20	Broadcast/Recording Studio
Threshold of Human Hearing	0	Threshold of Human Hearing

Notes: dB=decibels; mph=miles per hour

Source: California Department of Transportation (Caltrans) 2013a:2-20

Sound Properties

Sound levels are measured using the decibel scale, developed to relate to the range of human hearing. A decibel is logarithmic; it does not follow normal algebraic methods and cannot be directly summed. For example, a 65-decibel (dB) source of sound, such as a truck, when joined by another 65 dB source results in a sound amplitude of 68 dB, not 130 dB (i.e., doubling the source strength increases the sound pressure by 3 dB). A sound level increase of 10 dB corresponds to 10 times the acoustical energy, and an increase of 20 dB equates to a 100-fold increase in acoustical energy.

The human ear is not equally sensitive to loudness at all frequencies in the audible spectrum. To better relate overall sound levels and loudness to human perception, frequency-dependent weighting networks were developed, identified as A through E. There is a strong correlation between the way humans perceive sound and A-weighted sound levels. For this reason, the A-weighted sound levels are used to predict community response to noise from the environment, including noise from transportation and stationary sources, and are expressed as A-weighted decibels. All sound levels discussed in this section are A-weighted decibels unless otherwise noted.

Noise can be generated by a number of sources, including mobile sources such as automobiles, trucks, and airplanes and stationary sources such as activity at construction sites, machinery, and commercial and industrial operations. As sounds travels through the atmosphere from the source to the receiver, noise levels attenuate (i.e., decrease) depending on ground absorption characteristics, atmospheric conditions, and the presence of physical barriers. Noise generated from mobile sources generally attenuate at a rate of 4.5 dB per doubling of distance from the source. Noise from stationary sources generally attenuates at a rate of 6 to 7.5 dB per doubling of distance from the source.

Atmospheric conditions such as wind speed, wind direction, turbulence, temperature gradients, and humidity also alter the propagation of noise and affect levels at a receiver. Furthermore, the presence of a barrier (e.g., topographic feature, intervening building, and dense vegetation) between the source and the receptor can provide substantial attenuation of noise levels at the receiver. Both natural (e.g., berms, hills, and dense vegetation) and human-made features (e.g., buildings and walls) may function as noise barriers.

All buildings provide some exterior-to-interior noise reduction. The manner in which older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dB with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dB or more. It should be noted the neighborhoods adjacent to the proposed project contain predominantly newer residential development, including both single family homes and multi-family apartments.

Common Noise Descriptors

The intensity of environmental noise fluctuates over time, and several different descriptors of time-averaged noise levels are used. The selection of a proper noise descriptor for a specific source depends on the spatial and temporal distribution, duration, and fluctuation of both the noise source and the environment. The noise descriptors most often used to characterize environmental noise are defined below (Caltrans 2013a:2-48).

- Equivalent Noise Level (L_{eq}): The average noise level during a specified time period; that is, the equivalent steady-state noise level in a stated period of time that would contain the same acoustic energy as the time-varying noise level during the same period (i.e., average noise level).
- Maximum Noise Level (L_{max}): The highest instantaneous noise level during a specified time period.
- Minimum Noise Level (L_{min}): The lowest instantaneous noise level during a specified time period.
- Day-Night Noise Level (L_{dn}): The 24-hour L_{eq} with a 10-dB penalty applied during the noise-sensitive hours from 10 p.m. to 7 a.m., which are typically reserved for sleeping.
- Community Noise Equivalent Level (CNEL): Similar to the L_{dn} described above with an additional 5-dB penalty applied during the noise-sensitive hours from 7 p.m. to 10 p.m., which are typically reserved for evening relaxation activities.
- Single Event Noise Levels (SEL): Sounds that occur in an irregular or non-repetitive manner, which makes them difficult to anticipate; these are usually measured by L_{max} noise levels.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given noise environment. The L_{eq}, or average noise level over a given period of time, is the foundation of composite noise descriptors such as L_{dn} and CNEL, which effectively indicate community response to ambient noise levels.

Effects of Noise on Humans

Excessive and chronic (long-term) exposure to elevated noise levels can result in auditory and non-auditory effects on humans. Auditory effects of noise on people are those related to temporary or permanent hearing loss caused by loud noises. Non-auditory effects of exposure to elevated noise levels are those related to behavior and physiology. The non-auditory behavioral effects of noise on humans are primarily subjective effects such as annoyance, nuisance, and dissatisfaction, which lead to interference with activities such as communications, sleep, and learning. The non-auditory physiological health effects of noise on humans have been the subject of considerable research into possible correlations between exposure to elevated noise levels and health problems, such as hypertension and cardiovascular disease. The mass of research implies that noise-related health issues are predominantly the result of behavioral stressors and not a direct noise-induced response. The extent to which noise contributes to non-auditory health effects remains a subject of considerable research, with no definitive conclusions.

With respect to how humans perceive and react to changes in noise levels, a 1-dB increase is imperceptible, a 3-dB increase is barely perceptible, a 6-dB increase is clearly noticeable, and a 10-dB increase is subjectively perceived as approximately twice as loud (Egan 2007: 21). These subjective reactions to changes in noise levels were developed on the basis of test subjects' reactions to changes in the levels of steady-state pure tones or broad-band noise and to changes in levels of a given noise source. It is probably most applicable to noise levels in the range of 50 to 70 dB, because this is the usual range of voice and interior noise levels. For these reasons, a noise level increase of 3 dB or more is a typical threshold of significance for degradation of the existing noise environment.

Negative effects of noise exposure include physical damage to the human auditory system, interference with daily activities, sleep disturbance, and disease. Exposure to noise may result in physical damage to the auditory system, which may lead to gradual or traumatic hearing loss. Gradual hearing loss is caused by sustained exposure to moderately high noise levels over a period of time; traumatic hearing loss is caused by sudden exposure to extremely high noise levels over a short period. Gradual and traumatic hearing loss both may be permanent. In addition, noise may interfere with or interrupt sleep, relaxation, recreation, and communication. Although most interference may be classified as annoying, the inability to hear a warning signal (for example) may be considered dangerous. Noise may also be a contributor to diseases associated with stress, such as hypertension, anxiety, and heart disease. The degree to which noise contributes to such diseases depends on the frequency, bandwidth, and level of the noise and the exposure time (Caltrans 2013a:2-59, 2-61).

Fundamentals of Vibration

Vibration is the periodic oscillation of a medium or object with respect to a given reference point. Sources of ground vibration include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, and landslides) and those introduced by human activity (e.g., explosions, machinery, traffic, trains, and construction equipment). Vibration sources may be continuous, (e.g., operating factory machinery) or transient in nature (e.g., explosions). Vibration levels can be depicted in terms of amplitude and frequency, relative to displacement, velocity, or acceleration.

Vibration amplitudes are commonly expressed in peak particle velocity (PPV) or root mean square (RMS) vibration velocity. Peak particle velocity is defined as the maximum instantaneous positive or negative peak of a vibration signal. Peak particle velocity is typically used in the monitoring of transient and impact vibration and has been found to correlate well with the stresses experienced by buildings (Federal Transit Administration [FTA] 2006:7-3; Caltrans 2013b:6). PPV and RMS vibration velocity are normally described in inches per second (in/sec).

Although PPV is appropriate for evaluating the potential for building damage, it is not always suitable for evaluating human response. It takes some time for the human body to respond to vibration signals. In a sense, the human body responds to average vibration amplitude. The RMS of a signal is the average of the squared amplitude of the signal, typically calculated over a 1-second period. As with

airborne sound, the RMS velocity is often expressed in decibel notation as vibration decibels (VdB), which serves to compress the range of numbers required to describe vibration (FTA 2006:7-3). This is based on a reference value of 1 micro (μ) in/sec.

The typical background vibration-velocity level in residential areas is approximately 50 VdB. Ground vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels (FTA 2006). Table 4.10-2 describes the general human response to different levels of ground vibration-velocity levels.

Table 4.10-2 Human Response to Different Levels of Ground Noise and Vibration

Vibration-Velocity Level	Human Reaction
65 VdB	Approximate threshold of perception.
75 VdB	Approximate dividing line between barely perceptible and distinctly perceptible. Many people find that transportation-related vibration at this level is unacceptable.
85 VdB	Vibration acceptable only if there are an infrequent number of events per day.

Notes: VdB = vibration decibels referenced to 1 μ inch/second and based on the root mean square (RMS) velocity amplitude.

Source: FTA 2006:7-8

NOISE SOURCES

The existing ambient noise environment in the project vicinity is defined primarily by vehicular traffic on Interstate 80 (I-80), major arterials and local roadways, and to a lesser extent by occasional aircraft over-flights and trains in the vicinity. Major arterials within the project area include Riverside Avenue, Rocky Ridge Drive, Sunrise Avenue, Cirby Way, and South Cirby Way. The project site is located approximately eight miles northeast of McClellan Airport and approximately 15 or more miles east of Sacramento International Airport; aircraft flyovers are infrequent. The Union Pacific Railroad and the Roseville rail yards are located approximately one mile or more to the west of the proposed project. Although railroad activity and aircraft over-flights are audible at the project site, distance from source to receptor and, in the case of railroad noise, shielding by intervening buildings, diminishes the perceived level of noise from these sources at the project site.

Most of the project area could be considered “quiet urban” with an expected background daytime ambient noise level of approximately 50 dB and nighttime ambient levels of approximately of 40 dB (Table 4.10-1). Locations along the trail alignment located more distant from roadways, such as the Sierra Gardens area and areas east of Rocky Ridge, may experience quieter ambient noise levels. Areas along the proposed trail alignment located closer to I-80, major arterials, and/or commercial areas, such as near Sunrise Avenue, are likely to experience higher background sound levels ranging from 60 dB to 70 dB, depending on daily activities.

SENSITIVE LAND USES

Noise-sensitive land uses generally include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Parks, schools, historic sites, cemeteries, and recreation areas are also generally considered sensitive to increases in exterior noise levels. Places of worship, and other similar places where low interior noise levels are of great importance are also considered noise-sensitive. Noise-sensitive land uses are also considered to be vibration-sensitive. Specifically, commercial and industrial buildings where ground vibration (including

vibration levels that may be well below those associated with human annoyance) could interfere with operations within the building would be most sensitive to ground vibration (e.g., hospitals, laboratories).

The project site is located within a natural creek corridor and is surrounded by a variety of developed urban land uses, including single-family and multi-family residential dwellings, retail and commercial businesses, medical offices, a senior assisted-living facility, parks, and schools. Residential back yards are adjacent to the project site along much of the alignment. As mentioned in the project description, the proposed trail would be aligned through, or adjacent to the Cherry Glen, Cirby Side, Cresthaven, Hillcrest, Maidu, Meadow Oaks, Sierra Gardens, and South Cirby neighborhoods.

The proposed paved trail and bridges would be located between 10 and over 200 feet from nearby residences and as close as two feet from existing commercial development and medical offices located at 720 and 729 Sunrise Avenue. The proposed construction staging areas for the project would include all proposed trail areas, driveways of some commercial and multi-family land uses, and vacant or undisturbed lots. The boundaries of the staging areas may be as close as 5 feet from existing structures.

4.10.3 Regulatory Setting

FEDERAL

Federal Noise Control Act of 1972

The basic motivating legislation for noise control in the United States was the Federal Noise Control Act (1972), which addressed the issue of noise as a threat to human health and welfare, particularly in urban areas. In response to the Noise Control Act, the U.S. Environmental Protection Agency (EPA) published Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety (EPA 1974). In summary, EPA findings were that sleep, speech, and other types of essential activity interference could be avoided in residential areas if the L_{dn} did not exceed 55 dB outdoors and 45 dB indoors. The EPA intent was not that these findings necessarily be considered as mandatory standards, criteria, or regulatory goals, but as advisory exposure levels below which there is no reason to suspect that the general population would be at risk from any of the identified health or welfare effects of noise. The EPA Levels report also identified 5 dB as an adequate margin of safety before an increase in noise level would produce a significant increase in the severity of community reaction (i.e., increased complaint frequency, annoyance percentages) provided that the existing baseline noise exposure did not exceed 55 dB L_{dn}.

LOCAL

City of Roseville General Plan

The Noise Element in the City of Roseville General Plan outlines policies and implementation measures to achieve the City of Roseville's (City) goals of protecting Roseville residents from the harmful and annoying effects of exposure to excessive noise and establishes separate acceptable noise level criteria for land uses affected by either fixed noise sources or transportation-related noise sources.

The following goals, policies and implementation programs of the Noise Element would apply to the proposed project:

GOAL 1: Protect City residents from the harmful and annoying effects of exposure to excessive noise.

- **Policy 10:** Regulate construction-related noise to reduce impacts on adjacent uses consistent with the City's Noise Ordinance.

City of Roseville Municipal Code

The City of Roseville has a Noise Ordinance (Chapter 9.24 of the City Code) that is designed to prohibit unnecessary, excessive, and annoying sound levels from all sources. Key provisions of the ordinance that may be applicable to the proposed project include:

- Section 9.24.030 provides exemptions for certain activities, including but not limited to: sound sources typically associated with residential uses (e.g., children at play, air conditioning and similar equipment, but not including barking dogs); property maintenance activities between the hours of 8:00 a.m. and 9:00 p.m.; and private construction between the hours of 7:00 a.m. and 7:00 p.m. Monday-Friday, and between 8:00 a.m. and 8:00 p.m. on Saturdays and Sundays, provided that all construction equipment is fitted with factory installed muffling devices and maintained in good working order (City of Roseville 2014).
- Section 9.24.100 establishes specific sound level standards by which exposure of sensitive receptors to noise is regulated for area-wide sources, including fixed sources, non-transportation sources, and amplified music. Hourly sound levels are limited to 50 dB L_{eq} in the daytime (7:00 a.m. to 10:00 p.m.) and 45 dB L_{eq} at nighttime (10:00 p.m. to 7:00 a.m.). Maximum sound levels are limited to 70 dB L_{max} in the daytime (7:00 a.m. to 10:00 p.m.) and 65 dB L_{max} at nighttime (10:00 p.m. to 7:00 a.m.).
- Section 9.24.140 exempts City operations and activities from the provisions of Chapter 9.24.

4.10.4 Impacts

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the proposed project was determined to result in a significant noise impact if it would result in any of the following:

- exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels;
- a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project;
- a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project;
- for a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; or
- for a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

The proposed project is not located within an airport land use planning area and is not within the vicinity of a private airstrip. Thus, potential impacts associated with exposure to aircraft noise are not discussed further.

IMPACT ANALYSIS

Impact 4.10-1	Short-term construction-related noise.
Applicable Policies and Regulations	Caltrans Standard Specifications City of Roseville General Plan 2035, Noise Element City of Roseville Municipal Code, Chapter 9.24 (Noise)
Significance with Policies and Regulations	Proposed Project: Potentially significant Alignment Option 1A: Potentially significant Alignment Option 1C: Potentially significant Alignment Option 5A: Potentially significant
Mitigation Measures	Mitigation Measures 4.10-1 (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Significant and unavoidable (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

During construction of the project, noise from construction activities may intermittently dominate the noise environment in the immediate area of construction. Caltrans Standard Specifications state that noise levels generated during construction shall comply with applicable local, state, and federal regulations, and that all equipment shall be fitted with adequate mufflers according to manufacturer specifications. Additionally, the City's noise ordinance exempts private construction noise from its standards during certain hours and exempts city operations and activities, including construction, altogether (see subsection 4.10.3).

Construction noise associated with the proposed project would be temporary and intermittent, and noise levels would vary depending on the type of construction activity. Construction activity would include site preparation (e.g., excavation, grading, and vegetation clearing), material delivery, worker commute vehicle travel to and from the site, trenching and asphalt paving, bridge construction, retaining wall construction and other related activities. Noise levels associated with anticipated project construction equipment are shown below in Table 4.10-3.

Table 4.10-3 Representative Ground Vibration and Noise Levels for Construction Equipment

Equipment	dBA L_{max} at 50 feet[1]
Backhoe	78
Chain Saw	85
Concrete Mixing Truck	79
Crane	81
Dozer	82
Drill Rig	84
Excavator	81
Grader	85
Jack Hammer	89
Loader	79
Off-Highway Trucks	76
Paver	77
Pump	81
Vibratory Roller	80

Notes: dBA L_{max}= maximum noise level

1. All equipment reference noise levels obtained from FHWA 2006 except the chainsaw which was obtained from Berger 2010.

Source: FHWA 2006, Berger 2010

Construction noise can be characterized based on the type of activity and associated equipment needed and, in this analysis, is evaluated by considering noise levels associated with site preparation (clearing/grubbing/grading), trail construction, bridge construction, and retaining wall construction. Based on anticipated equipment needed for each activity, a likely combination of simultaneous equipment use was modeled for each construction activity. Further, it is anticipated that bridge construction could occur at the same time as retaining wall construction. This represents the likely loudest construction noise scenario that could occur over the entire length of the proposed trail alignment. Modeled noise levels for each activity are shown below in Table 4.10-4.

Table 4.10-4 Noise Levels from Construction Activity

Construction Activity	Construction Noise (dBA) at 50 feet (L_{eq}/L_{max})	Construction Noise (dBA) at 100 feet (L_{eq}/L_{max})	Construction Noise (dBA) at 300 feet (L_{eq}/L_{max})
Site Preparation (Clearing/Grubbing/Grading)	84.6/90.2	78.6/84.1	69.0/74.6
Trail Construction	83.3/89.2	77.3/83.2	67.7/73.7
Bridge Construction (Darling Way)	86.0/90.5	80.0/84.5	70.5/74.9
Prefabricated Bridge Construction	82.8/87.7	76.8/81.6	67.3/72.1
Retaining Wall	82.0/86.2	76.0/80.2	66.4/70.6
Bridge and Retaining Wall simultaneously	87.5/91.9	81.4/85.9	71.9/76.3

Source: Modeled by Ascent Environmental. Inc, 2018

As shown in Table 4.10-4, the typical construction noise for each activity type would range from approximately 82 dBA L_{eq}/86 dBA L_{max} to 86 dBA L_{eq}/ 91 dBA L_{max} and the loudest construction noise levels could be approximately 88 dBA L_{eq}/ 92 dBA L_{max} at 50 feet. Further, as shown in Table 4.10-4, noise levels would decrease with increasing distance from the construction site.

The location and distance of residences and other sensitive receptors in relationship to the project site would vary considerably. In some cases, the rear property lines of residences would be several hundred feet or more from the proposed trail. In other cases, they could be within 50 feet or less. Backyards of residential homes would likely be areas most affected by construction activities. Noise from trail construction activities would also occur as close as 10 feet to commercial land uses directly north of the trail alignment between Sunrise Avenue and Oakridge Drive.

The majority of construction activities would be on the lower end of the expected ranges of noise levels, because the expected construction activities for the paved trail (the main project component) would not require extensive combined use of heavy (i.e., the noisiest) equipment in close proximity to each other. Further, construction activity along the 4.25-mile trail alignment would be temporary at any one location. Construction of the trail would occur in separate phases along each segment of the trail over a period of several years, such that construction would not take place along all segments of the 4.25-mile length of the proposed project simultaneously. While the majority of trail construction would be intermittent and transient, construction locations that include bridges and retaining walls would be more site specific and prolonged. Nevertheless, the highest construction noise at these locations is expected to be generated during the bridge construction phase, which includes the use of a jackhammer, resulting in 86 dBA L_{eq}/ 90.5 dBA L_{max} at 50 feet. If bridge construction were to combine with the retaining wall construction, noise levels would be up to 87.5 dBA L_{eq}/91.9 dBA L_{max}. Although City activities including construction are exempt from the regulations of the Noise Ordinance, construction activities for City projects typically occur within the daytime and early evening timeframes established by the Noise Ordinance for private construction (7:00 a.m. – 7:00 p.m. Monday-Friday and 8:00 a.m. – 8:00 p.m. Saturday and Sunday). Construction times may be adjusted when determined necessary by the City to reduce traffic

congestion or minimize construction noise impacts on sensitive receptors (including residential at various locations and the office buildings west of Sunrise Avenue).

Despite the exemption of public construction activities under the City's noise ordinance, project construction would temporarily increase ambient noise levels in the project's vicinity. The impact of construction noise at residences, businesses, and structures would depend on the existing outdoor noise levels, the distance from the noise source to the receptor, the type of construction, window treatments, and the presence or absence of insulation. As discussed above, background noise levels along the proposed trail alignment vary depending on distance from major transportation noise sources and intervening structures (such as fences and buildings) and topography. The proposed project could result in sudden increases of outdoor noise levels during construction, depending on the proximity of construction activities to existing receptors and the existing ambient noise levels. In some cases, existing receptors are as close as 10 feet from the proposed construction activity (i.e., commercial land uses north of the trail alignment between Sunrise Avenue and Oakridge Drive). Therefore, it is likely that construction noise could result in an increase in 10 dBA or more, which represents noise levels shown to be subjectively perceived as twice as loud as existing noise levels (Egan 2007:21). Thus, noise from project construction would be noticeable, although temporary, and construction of the proposed project would result in substantial temporary increases in noise levels in the project vicinity.

Conclusion

Implementation of the proposed project would create temporary substantial construction noise in close proximity to residences and commercial land uses that would be perceptible and potentially disturb residents and business operations. Construction during the typical daytime and early evening hours may lessen impacts to residents, but daytime construction could result in disturbances to normal business operations. Despite the exemption of public construction activities under the City's noise ordinance, the proximity of project construction to nearby residences and businesses would result in substantial temporary increases in noise levels at those locations. Thus, noise impacts from construction of the proposed project would be **potentially significant**.

Alignment Option 1A

Construction activities for Option 1A would be the same type and general magnitude of activities that would occur under the Proposed Trail Alignment. The location of construction activities under Option 1A would vary slightly based on differences in the alignment of the northernmost section of the trail south of Darling Way and east of Riverside Avenue. The multi-use trail would shift to the south side of Cirby Creek and would be closer to existing commercial land uses and further away from residential land uses located north of Cirby Creek. Additionally, the total number of bridges under Option 1A would be less than the number of bridges constructed under the Proposed Trail Alignment, which would result in less noise overall from bridge construction activities. Furthermore, Bridge #3 would be located further away from existing residential land uses located north of Cirby Creek than Bridges #2 and #4 under the Proposed Trail Alignment. For all other sections of the trail, both the trail alignment and bridge locations would be the same as the Proposed Trail Alignment. While there would be some differences in the locations of the trail and changes in proximity to sensitive receptors would occur, the magnitude, frequency, and duration of construction activities and associated noise would be similar to those identified in Table 4.10-4 and would not be substantially different under Option 1A compared to the Proposed Trail Alignment. This impact would be **potentially significant**.

Alignment Option 1C

Construction activities for Option 1C would be the same type and general magnitude of activities that would occur under the Proposed Trail Alignment. The location of construction activities under Option 1C would vary somewhat based on differences in the alignment of the northernmost section of trail near Darling Way and east of Riverside Avenue. The location of the multi-use trail under Option 1C would shift to the east side of Dry Creek and would be within 50 feet or less of existing residential land uses. Option 1C would not require the widening of the Darling Way bridge; therefore, the total number of bridges requiring construction under Option 1C in the areas near Darling Way and east of Riverside

Avenue would be less than the number of bridges constructed under the Proposed Trail Alignment, which would result in less noise overall from bridge construction activities; however, a series of retaining walls would be constructed under Option 1C along the trail alignment both north and south of Darling Way and north of Bridge #2. For all other sections of the trail, both the trail alignment and bridge locations would be the same as the Proposed Trail Alignment. The construction of retaining walls would result in construction activity occurring closer to residences under Option 1C than under the Proposed Trail Alignment. Apart from the construction of retaining walls, some other differences in the locations of the trail and changes in proximity to sensitive receptors would also occur. Thus, although the magnitude, frequency, and duration of construction activities under Option 1C would be similar compared to the Proposed Trail Alignment, the activities may occur closer to residences under Option 1C compared to the Proposed Trail Alignment. This impact would be **potentially significant**.

Alignment Option 5A

Construction activities for Option 5A would be the same type and general magnitude of activities that would occur under the Proposed Trail Alignment. The location of construction activities under Option 5A would vary from the Proposed Trail Alignment because of differences in the alignment of the trail near Sunrise Avenue along Linda Creek. The location of the multi-use trail under Option 5A would shift to the south side of Linda Creek, which would result in trail paving and construction activities located further away from existing residential land uses on the north side of Linda Creek. The alignment under Option 5A would be closer to existing commercial uses and some existing residential uses south of Linda Creek based on a trail spur that would connect to an existing path at Meadow Gate Drive. A series of retaining walls would be constructed under Option 5A along the trail alignment on both sides of Sunrise Avenue, compared to only on the north side of Linda Creek under the Proposed Trail Alignment. Option 5A would also require the construction of Bridge #14 over Linda Creek east of Sunrise Avenue, rather than Bridge #13 west of Sunrise Avenue. Thus, although the magnitude, frequency, and duration of construction activities under Option 5A would be similar to those identified in Table 4.10-4, the activities may occur closer to residences under Option 5A compared to the Proposed Trail Alignment. This impact would be **potentially significant**.

Mitigation Measures

Mitigation Measure 4.10-1: Employ Noise-Reducing Construction Practices

This mitigation will apply to the Proposed Trail Alignment and Alignment Options 1A, 1C, and 5A.

Feasible measures that can be used to limit construction noise include the following:

- Locate stationary noise generating construction equipment as far as feasible from noise-sensitive uses.
- Do not idle inactive construction equipment for prolonged periods (i.e., more than 5 minutes).
- Prohibit unmuffled engine exhaust systems. All construction equipment powered by gasoline or diesel engines shall have factory-installed sound control devices, or sound control devices that are at least as effective as those originally provided by the manufacturer, and all equipment shall be operated and maintained in good working order to minimize noise generation pursuant to Section 9.24.030 of the Noise Ordinance.
- The contractor shall provide advance written notification to owners and renters of buildings located within 50 feet of construction activities. The notice shall explain when construction is expected. The notice shall include contact information for the project manager.
- When construction occurs outside of the typical daytime and early evening hours (7:00 a.m. – 7:00 p.m. Monday-Friday and 8:00 a.m. – 8:00 p.m. Saturday and Sunday) or within 50 feet of noise sensitive commercial or office buildings, the use of noise-generating construction equipment will be avoided to the extent feasible. When not feasible, construction contractors will specify proposed noise-reducing construction practices or alternative schedules that will be employed to reduce construction noise. Measures specified by the contractors will be reviewed and approved by the

City prior to construction activities. In these situations, feasible noise reduction measures include the following:

- Alternative construction schedule to minimize disturbance to normal office operations; and/or
- Use temporary noise-reducing barriers positioned between noise-generating equipment (including hand operated jack hammers) and the sensitive receptor building. Such barriers may include commercially manufactured noise-insulating blankets/quilts or as equal materials with similar noise reduction performance as approved by the resident engineer. When temporary barrier units are joined together, the mating surfaces shall be flush with each other with no gaps.

Significance after Mitigation

Implementation of this mitigation measure would reduce impacts associated with construction activities; however, even with a reduction in construction noise through the above mitigation measure, disturbances could occur and project construction would still result in substantial temporary or periodic increases in ambient noise levels in the project vicinity above existing levels, and this impact would remain **significant and unavoidable**.

Impact 4.10-2	Long-term increases in use-related noise.
Applicable Policies and Regulations	City of Roseville General Plan 2035, Noise Element City of Roseville Municipal Code, Chapter 9.24 (Noise)
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

The proposed project would introduce new pedestrian and bicycle activities on a new paved multi-use trail. These are non-motorized activities that would not result in a substantial increase in noise levels above ambient noise conditions. The sound of people talking while using the trail could be audible at nearby residential uses or other sensitive receptors; however, such activities would be consistent with the level of noise typically experienced in residential neighborhoods where children may be playing or where neighbors may converse with one another.

Events such as fun runs may occur along the trail. Per City practices, these events occur during daytime hours and further meet the noise generation standards of section 9.24.130 of the Noise Ordinance.

No motorized vehicles would be permitted to use the trail with the exception of occasional City or other public agency vehicles or equipment for maintenance or inspection purposes. Any noise generated by City vehicles or maintenance equipment would be temporary in nature and is considered exempt under Chapter 9.24 of the Roseville Municipal Code.

The Proposed Trail Alignment is located in existing creek corridors in an urbanized area and passes beneath several existing roadways. Some of these roadways are major arterials, including I-80 where existing ambient sound levels associated with roadway noise are likely to be higher than along other portions of the alignment, such as adjacent to residential areas. However, any exposure of trail users to existing roadway noise while traveling underneath such roadways would be temporary in nature and thus would not result in adverse effects.

Conclusion

Long-term uses associated with the proposed project would be predominantly non-motorized activities and would not expose persons to or generate use-related noise levels in excess of adopted standards. This impact would be **less than significant**.

Alignment Option 1A

Use of Option 1A would result in activities and noise characteristics similar to those described under the Proposed Trail Alignment above. Therefore, use-related impacts under Option 1A would be **less than significant**.

Alignment Option 1C

Use of Option 1C would result in activities and noise characteristics similar to those described under the Proposed Trail Alignment above. Therefore, use-related impacts under Option 1C would be **less than significant**.

Alignment Option 5A

Use of Option 5A would result in activities and noise characteristics similar to those described under the Proposed Trail Alignment above. Therefore, use-related impacts under Option 5A would be **less than significant**.

Mitigation Measures

None required.

Impact 4.10-3	Exposure to construction-related groundborne vibrations.
Applicable Policies and Regulations	City of Roseville Municipal Code, Chapter 9.24 (Noise)
Significance with Policies and Regulations	Proposed Project: Potentially significant Alignment Option 1A: Potentially significant Alignment Option 1C: Potentially significant Alignment Option 5A: Potentially significant
Mitigation Measures	Mitigation Measure 4.10-3 (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C) Significant and unavoidable (Option 5A)

Proposed Trail Alignment

Construction activities generate varying degrees of temporary ground vibration, depending on the specific construction equipment used and activities involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. Construction-related ground vibration is normally associated with impact equipment such as pile drivers, jackhammers, and the operation of some heavy-duty construction equipment, such as dozers and trucks. The effects of ground vibration may be imperceptible at the lowest levels, result in low rumbling sounds and detectable vibrations at moderate levels, and high levels of vibration can cause sleep disturbance in places where people normally sleep or annoyance in buildings that are primarily used for daytime functions and sleeping.

The project would not include the development of any new permanent stationary sources of ground vibration or permanent transportation infrastructure that would also result in ground vibration from passing heavy duty vehicles and; therefore, this analysis focusses on construction-induced vibration. Depending on the specific construction equipment used and activities involved, such activities may result in varying degrees of temporary ground vibration and noise during construction.

Caisson drilling, the drilling of shafts for piers, would be required for bridge pier column installation for all proposed bridges. No pile driving would occur at any of the proposed bridges. In addition, other heavy-duty equipment (i.e., small dozers) would be used for construction activities and at bridge construction sites. Therefore, it is assumed that caisson drilling would occur as close as 88 feet from a sensitive receptor – between the easternmost pile of the proposed widening on Darling Way Bridge and a single-family home at the southwest corner of Darling Way and Hernandez Lane. Construction and drilling of other proposed bridges would occur no closer than 100 feet from existing structures.

Construction of the trail would result in activities with less intense vibration than drilling. Typical equipment could include small dozers and, in some instances, jack hammers for site preparation, and loaded trucks for materials delivery. Trail construction activity would mostly be located at least 15 feet away or more from nearby structures, but could in some instances occur within 15 feet of existing noise-sensitive receptors.

Staging areas (including construction access routes) would accommodate movement of loaded trucks carrying materials and equipment to and from the proposed trail alignment. Loaded truck activity could result in groundborne vibrations similar to drilling anywhere within the staging areas. Staging areas would be located at various locations along the alignment including near private driveways and in vacant lots. Some of these areas border neighboring residences and can be as close as 5 feet from an existing residential structure (such as the staging area on Oakridge Drive). Staging areas/construction access routes near/along private driveways at 720 Sunrise Avenue and 729 Sunrise Avenue could be located as close as 20 feet from noise-sensitive receptors such as medical offices and clinics.

Ground vibration and noise levels associated with various types of construction equipment and activities are summarized in Table 4.10-5.

Table 4.10-5 Representative Ground Vibration and Noise Levels for Construction Equipment

Equipment	PPV at 25 feet (in/sec)[1]	Approximate L_v (VdB) at 25 feet
Impact Pile Driver	1.518	112
Blasting	1.13	109
Sonic Pile Driver	0.734	104
Large Dozer	0.089	87
Caisson Drilling	0.089	87
Loaded Trucks	0.076	86
Rock Breaker	0.059	83
Jackhammer	0.035	79
Small Dozer	0.003	58

PPV = peak particle velocity; L_V = the root mean square velocity expressed in vibration decibels (VdB), assuming a crest factor of 4

Source: FTA 2006:p.12-6,12-8

Recommended standards from the FTA are used to determine if the project's construction activities would result in significant exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels. This impact would be significant if it would result in vibration levels that exceed FTA's recommended standard of 0.2 in/sec PPV with respect to the prevention of structural damage for non-engineered timber and masonry buildings or FTA's maximum acceptable level of 80 VdB with respect to human response for residential uses [i.e., annoyance] at nearby existing vibration-sensitive land uses. Table 4.10-6 shows the distances between equipment operation and receptors within which FTA thresholds would be exceeded. The selected equipment types represent what would most likely be used for construction of this project.

Table 4.10-6 Distance Standards between Vibratory Construction Equipment and Receptors

Equipment	Structural Damage Standard Minimum Distance to Reach 0.2 in/sec PPV (feet)	Human Disturbance Standard Minimum Distance to Reach 80 L_v (VdB) (feet)
Caisson Drilling/Large Dozer	15	43
Loaded Trucks	13	40
Jackhammer	8	23
Small Dozer	2	5

Note: Locating equipment operations within the distances above from a receptor would increase the structural damage standards above 0.2 in/sec PPV and the human disturbance threshold of 80 VdB at that receptor.

PPV = peak particle velocity; L_V = the root mean square velocity expressed in vibration decibels (VdB), assuming a crest factor of 4

Source: FTA 2006:p.12-6,12-8

FTA's vibratory structural damage and human disturbance standards would be exceeded if the minimum setback distances for the types of equipment listed in Table 4.10-6 cannot be maintained during construction. As described above, drilling would occur no closer than 88 feet away from an existing residence. Thus, drilling activities would occur within the distances described above that would not result in an exceedance of FTA's recommended threshold for human disturbance (i.e., 80 VdB) and/or structural damage (i.e., 0.2 in/sec PPV) and is not discussed further.

Structural Effects

According to Table 4.10-6, structural damage could occur when large construction equipment is operated within the following minimum setbacks from existing structures: large dozers and drilling 15 feet, loaded trucks 13 feet, Jackhammer 8 feet, and small dozer 2 feet. A review of the proposed trail alignment (Exhibits 3-5 through 3-12) indicates that construction activity within staging areas, along access routes, and along the trail alignment could exceed these set back requirements. For example, within the Oakridge Drive Staging Area, loaded trucks could operate within slightly greater than 5 feet of an existing adjacent residence and construction access routes located west of Sundown Way and east and west of Sunrise Avenue could result in loaded trucks operating within 20 feet of existing structures. Furthermore, trail construction could require use of jackhammers and small dozers within 5 feet of office buildings on the north side of Linda Creek at Sunrise Avenue. Thus, trail construction, and use of staging areas and access routes could, depending on the type of building materials and construction techniques, result in exceedances of FTA's structural damage thresholds when the minimum setback distances shown in Table 4.10-6 cannot be met.

Human Disturbance

According to Table 4.10-6, human disturbance could occur when large construction equipment is operated within the following minimum setbacks from existing occupied structures: large dozers and drilling 43 feet, loaded trucks 40 feet, Jackhammer 23 feet, and small dozer 5 feet. A review of the proposed trail alignment (Exhibits 3-5 through 3-12) indicates that at certain locations construction activity within staging areas, along access routes, and along the trail alignment could exceed these set back requirements. For example, within the Oakridge Drive Staging Area loaded trucks could operate within slightly greater than 5 feet of an existing adjacent residence and construction access routes located west of Sundown Way and east and west of Sunrise Avenue could result in loaded trucks operating within 20 feet of existing structures. Furthermore, jackhammers and small dozers may operate within 5 feet of office buildings. Thus, trail construction, and use of staging areas and access routes could, depending on the type of building materials and construction techniques, result in exceedances of FTA's human disturbance thresholds when the minimum setback distances shown in Table 4.10-6 cannot be met.

Conclusion

Construction activities would typically be during daytime hours, so the potential for human disturbance at residences would not occur when inhabitants are most likely to be sleeping. However, ground borne vibrations and noise levels could disturb residents who are home during the day and people present at nearby noise-sensitive receptors that operate during weekday business hours. Therefore, the proposed project would potentially expose persons and structures to generation of excessive ground borne vibration or ground borne noise levels for temporary periods of time during project construction. This impact would be **potentially significant**.

Alignment Option 1A

Construction of Option 1A would result in activities and vibration characteristics similar to those described under the Proposed Trail Alignment above, except Under Alignment Option 1A, Bridge #3 would be located closer to commercial uses on Riverside Avenue and farther away from the residential uses in the Hillcrest neighborhood (compared to the Proposed Trail Alignment Bridges #2 and #4) as shown on Exhibit 3-13 in Chapter 3, "Project Description." Construction activity for Bridge #3 would occur no closer than 85 feet from the nearest structure, a commercial land use, outside of the project boundary and no closer than 180 feet from the nearest residence. However, Option 1A would still include the same staging areas and other trails areas as the Proposed Trail Alignment. Therefore, impacts under Option 1A would be **potentially significant**.

Alignment Option 1C

Construction of Option 1C would result in activities and vibration characteristics similar to those described under the Proposed Trail Alignment, above, and would include both Bridge #2 and #4 in the same locations as the Proposed Trail Alignment (see Exhibit 3-14 in Chapter 3, "Project Description"). Construction activity at Bridge #4 would occur no closer than 85 feet from the nearest structure, a commercial land use, outside of the project boundary and no closer than 120 feet from the nearest residence. However, Option 1C would still include the same staging areas and other trails areas as the Proposed Trail Alignment. Therefore, impacts under Option 1C would be **potentially significant**.

Alignment Option 5A

Construction of Option 5A would result in activities and vibration characteristics similar to those described under the Proposed Trail Alignment above, except that the trail alignment along Linda Creek near Sunrise Avenue would travel along the south side of the creek instead of the north side (see Exhibit 3-15 in Chapter 3, "Project Description"). This option would move trail construction activities approximately 90 feet further south from the dental clinic at 720 Sunrise Avenue, but closer to other commercial uses along Sundown Way west of Sunrise Avenue and commercial and residential uses east of Sunrise Avenue. Construction would be located further away from existing residential land uses on the north side of Linda Creek, but it would be closer to existing commercial uses and some existing residential uses south of Linda Creek. A series of retaining walls would be constructed under Option 5A along the trail alignment on both sides of Sunrise Avenue, compared to only on the north side of Linda Creek under the Proposed Trail Alignment. Option 5A would also require the construction of Bridge #14 over Linda Creek east of Sunrise Avenue, rather than Bridge #13 west of Sunrise Avenue. Thus, although the magnitude, frequency, and duration of construction activities under Option 5A would be similar compared to the Proposed Trail Alignment, the activities may occur closer to residences under Option 5A compared to the Proposed Trail Alignment. The construction footprint for Bridge #14 would be no closer than 35 to 45 feet from the nearest residential structure (near homes along Meadow Gate Drive). This may be within the 43 foot range for human disturbance for caisson drilling. Therefore, impacts under Option 5A would be **potentially significant**.

Mitigation Measures

Mitigation Measure 4.10-3: Reduce exposure to construction-generated ground vibration.

This mitigation will apply to the Proposed Trail Alignment and Alignment Options 1A, 1C, and 5A.

Construction documents shall specify construction practices that reduce the adverse effects of ground vibration associated with project construction activities. Measures specified by the design engineer will be reviewed and approved by the City prior to approval of the plans and specifications and may include, but are not limited to, the measures listed below.

- Implement Mitigation Measure 4.10-1.
- All construction equipment on construction sites shall be operated as far away from vibration- and noise-sensitive sites as reasonably feasible.
- Earthmoving, dozing, and ground-impacting operations shall be phased so as not to occur simultaneously in areas close to offsite sensitive receptors, to the extent feasible. The total vibration level produced could be significantly less when each vibration source is operated at separate times.
- As part of final design, project engineers shall identify areas on the project plans where work may be constrained due to proximity of structures. The designs shall specify requirements that during project construction on the trail alignment, no heavy vibratory equipment (i.e., the types of equipment listed in Table 4.10-5), shall be operated within 13 feet of off-site building structures unless otherwise approved in writing by the City Engineer. Non-vibratory equipment, such as hand tools, and handheld vibratory compactors and rollers may be used. Use of different material types including slurry cement and concrete paving approved by the Engineer, may be used to reduce or eliminate the need for vibratory equipment. Those portions of the project site located within 13 feet of an off-site building structure shall be identified on construction documents and demarcated with stakes, flags, rope and/or markings on the ground.
- For Option 5A, locate caisson drilling for Bridge 14 forty-three (43) feet or greater from existing occupied structures, if feasible.
- Staging areas shall be adjusted and temporary fencing shall be installed to ensure that loaded trucks shall not operate within 13 feet of existing structures.

Significance after Mitigation

Implementation of Mitigation Measure 4.10-3 would reduce project-generated on-site groundborne vibration and noise levels during construction activities below FTA recommendations for preventing structural damage to off-site buildings and limit annoyance of area residents and noise- and vibration-sensitive businesses. As a result, this impact would be reduced to a **less-than-significant** level. Under Alignment Option 5A, if the caisson drilling for Bridge #14 cannot feasibly be located greater than 43 feet from occupied structures, vibration human disturbance impacts would be **significant and unavoidable** for Alignment Option 5A.

4.11 PUBLIC SERVICES

4.11.1 Introduction

This section describes existing public services and evaluates potential effects related to implementation of the Dry Creek Greenway East Trail. The public services discussed in this section include law enforcement, fire and emergency services, and schools. The project's effects on recreational facilities are addressed in Section 4.12, "Recreation."

No comments pertaining to public services were received in response to the Notice of Preparation (NOP); however, issues related to safety on the trail were discussed at the Public Scoping Meeting and at the Stakeholders Meetings before the NOP was published. Five major concerns include: (1) transient activity; (2) property owner safety and security (vandalism, graffiti, theft, and crimes against persons); (3) nuisance activity (noise, loss of privacy loitering, unauthorized motor vehicle use of the trail); (4) risk of wildfire; and (5) trail user safety.

These are all important issues for consideration by the City of Roseville (City) when evaluating the merits of the proposed project. With the exception of risk of wildfire, which is addressed in Section 4.7, "Hazards and Hazardous Materials," the topics are not within the purview of CEQA analysis. Potential direct and indirect effects on police protection service is discussed in this chapter under Impact 4.11-2.

4.11.2 Environmental Setting

FIRE AND EMERGENCY SERVICES

The City of Roseville Fire Department (RFD) provides primary fire protection services within the City limits (approximately 43 square miles). The RFD operates from eight fire stations and staffs eight engine companies, two ladder companies, and one battalion chief. These personnel cross staff three brush engines, two grass engines, one hazmat company, and one rescue company (City of Roseville 2015:21). RFD provides: fire suppression, emergency medical services (EMS), hazardous materials emergency response, technical rescue, public assistance and education, community risk reduction, tactical EMS paramedics supporting RPD SWAT team, and a paramedic bike team. The proposed project is located primarily in RFD Station According to the City of Roseville 2015 Standards of Cover, the RFD established six response performance measures, along with a benchmark time (goal to reach). The benchmark times range from 7.12 minutes for emergency medical services to 11.3 minutes for an effective response force ("building fires") (City of Roseville 2015:6). The benchmark goals are used as best-case scenarios and as a measurement to identify how the Fire Department can strive to improve in each area of response.

LAW ENFORCEMENT

The City of Roseville Police Department (RPD), headquartered at 1051 Junction Boulevard, provides primary law and traffic enforcement services within the City. In 2016, the RPD was authorized to staff up to over 129 sworn officers (Smithson, pers. comm., 2016). Emergency and non-emergency calls from the public are prioritized by dispatchers to determine the need for assistance from police, fire, or other related services (City of Roseville 2016). The RPD is responsible for patrol duty within the City limits, including parks and open space areas, responding to and investigating crimes and other calls for service, providing animal control services, and traffic safety (i.e., enforcing the Vehicle Code and responding to traffic collision or traffic hazard calls). Cooperation with the Union Pacific Railroad's

private police department provides back-up services within the UP railyard, as needed. The RPD employs Animal Control officers who respond to emergency and routine calls regarding animals and shelters stray, owner-relinquished, or impounded animals through a contract with the Placer County Society for the Prevention of Cruelty to Animals.

SCHOOLS

The City of Roseville contains one high school district and three elementary districts under one unified district to serve the needs of the student population. These include the Roseville Joint Union High, Eureka Union, Dry Creek Joint, Roseville City School, and Center Unified Districts. A total of six high schools, nine middle schools, and 28 elementary schools, and eight pre-school/kindergarten schools provide public education to the City of Roseville. The closest schools to the project include: Roseville Joint Union High School District, George Sargeant Elementary School, Warren T. Eich Middle School, and George Cirby Elementary School.

4.11.3 Regulatory Setting

Public services are protected and/or regulated by a variety of federal, state, and local laws and policies. Key regulatory and conservation planning regulations applicable to the proposed project are discussed below.

FEDERAL

There are no federal plans or policies addressing public services that pertain to the project.

STATE

California Occupational Safety and Health Administration

In accordance with California Code of Regulations, Title 8 Sections 1270 “Fire Prevention” and 6773 “Fire Protection and Fire Equipment,” the California Occupational Safety and Health Administration has established minimum standards for fire suppression and emergency medical services. The standards include, but are not limited to, guidelines on the handling of highly combustible materials, fire hose sizing requirements, restrictions on the use of compressed air, access roads, and the testing, maintenance and use of all firefighting and emergency medical equipment.

Office of Emergency Services

Title 19, Chapters 1 through 6, of the California Code of Regulations establishes regulations related to emergency response and preparedness under the California Governor’s Office of Emergency Services (OES). The OES serves as the lead state agency for emergency management. The OES coordinates the State response to major emergencies in support of local government. The primary responsibility for emergency management resides with local government. Local jurisdictions first use their own resources and, as they are exhausted, obtain more from neighboring cities and special districts, the county in which they are located, and other counties throughout the State through the Statewide Mutual Aid System. In California, the Standardized Emergency Management System provides the mechanism by which local government requests assistance. The OES is the lead agency for mobilizing and obtaining State and federal resources, overseeing the mutual aid system, and, during an emergency, coordinating response efforts. In addition, during an emergency, the OES is responsible for collecting, verifying, and evaluating information about the emergency, facilitating communication with local government and providing affected jurisdictions with additional resources when necessary. If necessary, OES may task State agencies to perform work outside their day-to-day and statutory responsibilities.

California Public Resources Code

The California Public Resources Code includes provisions that address fire prevention and minimum fire safety standards related to defensible space for industrial operations and other land uses in State Responsibility Area (California Public Resources Code Part 2, Chapters 1 and 2). Applicable fire safe regulations address road standards for fire equipment access, standards for signage, minimum water supply requirements for emergency fire use, and fuel breaks and greenbelts, among others.

LOCAL

City of Roseville General Plan

Police Services

GOAL: Maintain a professional law enforcement agency that proactively prevents crime; controls crime that the community cannot prevent; and, reduces fear and enhances the security of the community.

- **Policy 7:** Design parks to facilitate surveillance by adjoining residents, security services, and police.

Fire Protection

GOAL 1: Protect against the loss of life, property, and the environment by appropriate prevention, education, and suppression measures.

GOAL 2: Provide emergency services in a well-planned, cost-effective, and professional manner through the best utilization of equipment, facilities, and training available.

- **Policy 2:** Strive to achieve the following service levels:

  Urban Areas:
  - Four-minute response time for all emergency calls
  - ISO rating of 3 or better
  - 500 gallons of water per minute within 10 minutes of an alarm

Chapter 10.53 of the Municipal Code (Spray Paint and Graffiti) prohibits the intentional placement of graffiti upon public property, and the authority to remove graffiti discovered within the City.

4.11.4 Impacts

METHODS OF ANALYSIS

Potential impacts on public services resulting from project construction and use were identified by comparing existing service capacity against future demand associated with project implementation. Evaluations of potential public service impacts are based on a review of documents pertaining to the project area, including the City of Roseville General Plan.

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the proposed project was determined to result in a significant impact to public services if it would:

- result in substantial adverse physical impacts associated with the provision of or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, to maintain acceptable service ratios, response times, or other performance objectives for:

- fire protection,
- police protection, and
- schools.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

Impacts to Schools

The proposed project would not result in the construction of new housing or other project elements that would increase the permanent resident population in the City. No new schools would be required to support construction and use of the proposed project. Thus, this topic is not discussed further.

IMPACT ANALYSIS

Impact 4.11-1	Effects on fire protection and emergency services.
Applicable Policies and Regulations	City of Roseville General Plan Safety Element California Public Resources Code Part 2, Chapters 1 and 2
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

As stated above, the proposed project would not result in the construction of new housing or other project elements that would increase the permanent resident population in the City. Therefore, the project would not generate an increased demand for fire protection or emergency services related to an increase in permanent population in Roseville. While construction of the multi-use trail could increase the short-term risk of fire (see Impact 4.7-5 in Chapter 4.7, “Hazards and Hazardous Materials”), the trail would enhance access to the Dry Creek, Cirby Creek, and Linda Creek open space areas for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response access. Per the Design/Construction standards, the desired vertical clearance at undercrossings is 13 feet, 6 inches feet to allow for passage of fire vehicle access. In constrained areas or where fire vehicle access would not be needed, the minimum vertical clearance at undercrossings would be 9 feet. The proposed trail would, to the extent feasible, be designed to provide maintenance and emergency access for the City Environmental Utilities Department, open space and storm water maintenance crews, and the RFD. To the extent that additional fire response access is provided by the proposed, paved trail, it would be a benefit to fire service. It also would provide a route for walkers, joggers, cyclists, wheelchair users, and others traveling on non-motorized vehicles to access parks and other paths.

Visitors along Cirby Creek include neighbors and transitory users. Visitors could pose an increased risk of fire because of activities such as smoking or the setting of or use of small fires. While improved access along the creek corridor could lead to an increase number of people in the area, the trail would be designed to facilitate emergency vehicle access, including fire apparatuses. In addition, the multi-use trail would improve access of maintenances crews to clear fuels as necessary. The RFD has also stated that without the trail, their ability to respond to a fire in the open space is hampered (City of Roseville 2010:106-108).

Conclusion

The proposed project would be designed to facilitate emergency vehicle access and improve access of maintenances crews to clear fuels as necessary. Thus, this impact would be **less than significant**.

Alignment Option 1A

Effects on fire protection and emergency services under Alignment Option 1A would be the same as under the Proposed Trail Alignment because the option would be located in the same general location and contain the same design elements as the Proposed Trail Alignment. Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream. For the reasons described above for the Proposed Trail Alignment, this option would not substantially affect fire protection and emergency services and the impact would be **less than significant**.

Alignment Option 1C

Effects on fire protection and emergency services under Alignment Option 1C would be the same as under the Proposed Trail Alignment because the option would be located in the same general location and contain the same design elements as the Proposed Trail Alignment. Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek. For the reasons described above for the Proposed Trail Alignment, this option would not substantially affect fire protection and emergency services and the impact would be **less than significant**.

Alignment Option 5A

Effects on fire protection and emergency services under Alignment Option 5A would be the same as under the Proposed Trail Alignment because the option would be located in the same general location and contain the same design elements as the Proposed Trail Alignment. East of Eastwood Park, Alignment Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek, and Bridge #13 would not be included. For the reasons described above for the Proposed Trail Alignment, this option would not substantially affect fire protection and emergency services and the impact would be **less than significant**.

Mitigation Measures

None required.

Impact 4.11-2	Effects on police protection services.
Applicable Policies and Regulations	City of Roseville General Plan Safety Element City of Roseville Municipal Code Chapter 10.53
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

As stated above, the proposed project would not result in the construction of new housing or other project elements that would increase the permanent resident population in the City. Therefore, the project would not generate an increased demand for police protection services related to an increase in permanent population in Roseville. Property owners and residents commonly express concern regarding the potential for increased vandalism and illegal activities in areas where trails are

constructed. Public access exists for much of the proposed project corridor through public streets and cul-de-sacs, as well as segments of existing paths and trails that are not built to current City and California Department of Transportation (Caltrans) design standards. Community members have reported people being present in the creek corridors under existing conditions. Bike trails are patrolled by police officers on an as-needed basis (CRPOA 2010). Police personnel state that graffiti is commonly seen along bike trails (City of Roseville 2010:106-108). However, in accordance with the City's graffiti abatement program, graffiti on public property is abated within 10 days of notifications to the City.

During the feasibility study phase of this project, public outreach was conducted and residents of adjacent neighborhoods expressed concern related to safety issues. The RPD and RFD have not identified any trends in crime or significant safety or security concerns along Roseville's existing paths or trails. While no studies have been conducted to explore the potential safety effects that could occur from construction and use of the trail, studies and surveys completed in multiple contexts found that multi-use paths can benefit communities by providing exercise and recreation opportunities, transportation choices, a sense of community, increased property values, and lower crime. For instance, a 1998 study of 372 trails found that crimes rates are lower in trail networks than the overall crime rate for the region in which they are located (i.e., urban, suburban, or rural) (Tracey and Morris 1998). Similar results were found for studies that evaluated trail systems in the Seattle metropolitan area (Zarker and Bourey 1987) and Santa Rosa California (Murphy 1992), Generally, these studies reflect the observation made by the RPD and RFD that open space trails do not result in increased safety and security problems, and that trails are safe places to be on and live near. It would provide a safe route for walkers, joggers, cyclists, wheelchair users, and others traveling on non-motorized vehicles to access parks and other paths.

Furthermore, with respect to the recently-constructed Miners Ravine Trail, the RPD has found that having more responsible trail users present in the open space has helped provide observers that deter illegal activities. Also, the RPD has indicated that the trail users and enhanced patrol access assist police efforts to reduce loitering or illegal camping in the open space (City of Roseville 2010:106-108). It is expected that a trail designed to current City and Caltrans standards would improve public safety conditions, compared to the existing conditions, because it would provide enhanced police access to open space areas.

Conclusion

Construction of the proposed project is not expected to generate a significant increase in service calls leading to the need for new facilities to accommodate additional police protection services, and therefore there would be no associated environmental effects. Therefore, potential impacts related to police services would be **less than significant**.

Alignment Option 1A

Effects on police protection services under Alignment Option 1A would be the same as under the Proposed Trail Alignment because the option would be located in the same general location and contain the same design elements as the Proposed Trail Alignment. Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream. For the reasons described above for the Proposed Trail Alignment, this option would not adversely affect public safety and the impact would be **less than significant**.

Alignment Option 1C

Effects on police protection services under Alignment Option 1C would be the same as under the Proposed Trail Alignment because the option would be located in the same general location and contain the same design elements as the Proposed Trail Alignment. Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek. For the reasons described above for the

Proposed Trail Alignment, this option would not adversely affect public safety and the impact would be **less than significant**.

Alignment Option 5A

Effects on police protection services under Alignment Option 5A would be the same as under the Proposed Trail Alignment because the option would be located in the same general location and contain the same design elements as the Proposed Trail Alignment. East of Eastwood Park, Alignment Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek, and Bridge #13 would not be included. For the reasons described above for the Proposed Trail Alignment, this option would not adversely affect public safety and the impact would be **less than significant**.

Mitigation Measures

None required.

4.12 RECREATION

4.12.1 Introduction

This section describes existing recreational facilities in the project vicinity and presents a discussion of potential effects to such facilities, as well as the creation of new outdoor recreation opportunities resulting from implementation of the proposed trail. In addition, a discussion of the regulatory environment specific to recreation is provided below.

No comments received on the Notice of Preparation pertained to recreation.

4.12.2 Environmental Setting

REGIONAL SETTING

Roseville's park and recreation facilities are operated by the City of Roseville (City) Parks and Recreation Department. The Department is responsible for the development and maintenance of the City's various recreational facilities including parks, public golf courses, and open space areas. In addition, the Department manages a full range of recreation programs for the residents of the community.

The City has defined "park lands" to include public developed parks, recreational open space and joint-use park-school facilities. Based on the current General Plan land use allocation at buildout, Roseville has secured approximately 9 acres of park land per 1,000 residents (as of 2010). Table 4.12-1 provides 2015 park and open space acreage within the City (City of Roseville 2016).

Table 4.12-1 2015 Parks and Open Space Acreage

Use	Acres
Developed Parks	1,065
Golf Courses	678
Open Space/Park Preserve	4,569
Undeveloped Parks	515
Roadway Landscape Areas	266
Greenway/Paseos	70

Notes: * Roadway landscape areas consist of landscape corridors and medians only. This figure is comprised of existing Landscape and Lighting District maintained areas plus an estimate for the WRSP, SVSP/Westbrook and Creekview based on similar population from other plan areas.

** Greenways/Paseos consist of the paseos in the WRSP, SVSP/Westbrook and Creekview areas as well as the one existing greenway along the Sunrise Corridor.

Source: City of Roseville 2016

PARK DEFINITIONS

The City of Roseville defines several types of park facilities. These are described below.

Neighborhood Park

A neighborhood park can be generally defined as a landscaped park designed to serve a concentrated population or neighborhood. They are often developed as a recreation facility with a balance of passive

and active recreation areas serving all ages. Typical improvements are play areas, picnic tables (covered or uncovered), athletic fields, multi-use turf, hard courts, natural areas, pathways, security lighting and in some cases, unique or single-purpose amenities. Athletic fields in neighborhood parks will be without lights. The typical size range is 0.5 acres up to 8 acres.

Neighborhood/School Park

School park areas are facilities developed on or adjacent to school land and available for joint City and school use. Facilities would focus on clustering active ball fields whenever possible to alleviate demands on neighborhood parks and to provide more cost-effective maintenance practices. The facilities may be jointly owned, and/or developed. They are often developed as an active recreation facility serving all ages. Typical facilities may include play areas, athletic fields, picnic areas, hard courts, game courts, joint off-street parking, pathways, and security lighting. For larger sites, facilities may include turfed ball fields for organized sports that may have sports lights, swimming pools, gymnasiums, hard courts, sports courts, specialty elements and Adventure Clubs. Restrooms may be included, but are not required. The facilities could be subject to use restriction and/or maintenance agreements defined in a specific joint-use agreement between the school and the City. The multi-use of school and park facilities is also addressed in the school component of the Public Facilities Element. The typical size range of these joint use areas is 5.5 acres up to 20 acres.

Community/City-Wide Park

Community/city-wide parks are designed to accommodate a wider variety and higher intensity of recreational uses than neighborhood parks and are frequently identified as unique recreational centers serving the entire Roseville population. These facilities are designed to “cluster” active sport elements to accommodate city-wide or regional needs, such as tournaments, special events and or tourism to provide more cost-effective maintenance practices. These parks may include specialized recreational amenities, such as plazas, town centers, large specialty recreation facilities, swimming pools, libraries, community centers, outdoor areas, competitive sports complexes, tennis courts, sports courts and sports lighting, concessions, nature centers, large children’s play areas, large group picnic facilities, trail systems, transit stops, outdoor amphitheaters, water-oriented facilities for boating, swimming and fishing, restrooms, and park and ride within parking lots. Community/city-wide facilities may be stand alone or located adjacent to schools. The typical size range of these areas is 4 acres to over 200 acres.

Landscape Areas

Landscape areas are generally defined as linear public corridors (i.e., roadway landscaping and corridors, and other landscape frontages) that provide visual relief along major roadways and are important connections within the City between parks, schools, neighborhoods, businesses, and shopping areas. Typical components are usually sidewalks, trees, turf, shrubs, and ground covers designed by using berms and slopes. Landscape areas may also include benches, street furnishings, walls/fencing, city boundary markers, monuments, lighting, and signs.

Paseos

Paseos are provided to promote walking and biking by establishing connectivity between residences, parks, schools, local businesses, trail systems, and/or other connections. They may include similar landscaping components, such as sidewalks, plant materials, and bike/pedestrian trails. Paseos vary in width between 15 to 100 feet, depending on the intended use and location. Paseos are open to the surrounding neighborhood by maintaining a street frontage to one side so that paseos are not hidden. This allows visibility by residents and City personnel for security access.

Greenways

Greenways are defined as wide, usually linear, landscape corridors. They usually consist of simple landscaping features, such as turf, trees, shrubs, or no landscaping at all, and usually include sidewalks, and/or bike and pedestrian trails. They typically link streets together to provide passive

recreation opportunities, such as walking or biking, and they may be an important component of a Class I bike path system. They differ from paseos in that they can be undeveloped, may support transportation and mobility, and usually have greater widths and lengths. While containing some characteristics of open space areas, they may also contain formal landscaping features and irrigation.

BIKEWAYS

Bikeways are defined as specific routes and classes that meet minimum design standards for bicycle or multi-use purposes. Roseville generally follows Caltrans' design standards for the following classes of bikeways:

- Class I Bike Paths that provide a completely separated right-of-way designated for the exclusive use of bicycles and pedestrians with crossflows by motorists minimized. Class I paths often follow natural amenities such as creeks, drainage, or utility line easements, and are used by both commuter and recreational riders.
- Class II Bike Lanes that provide a restricted right-of-way designated for the exclusive or semi-exclusive use of bicycles with through travel by motor vehicles or pedestrians prohibited, but with vehicle parking and crossflows by pedestrians and motorists permitted. Class II lanes are generally developed within the right-of-way of collector streets and arterials.
- Class III Bike Routes that provide a right-of-way designated by signs or permanent markings and shared with motorists. Class III routes are generally located on local streets within residential neighborhoods.

Roseville also has an additional classification for bikeways:

- Class IA Bike Paths are paths that have been developed as parallel, widened (8-12 feet wide) sidewalk routes along major roadways and are separated from the roadway by a landscape strip. These paths are for the use of pedestrians and casual bicyclists. Caltrans does not consider sidewalk facilities to be Class I facilities and does not recommend that they be signed as bike routes. However, the Class IA facilities are still desirable for casual bicyclists such as children, as well as others who are hesitant to utilize on-street routes. Class IA bike paths are intended to supplement, not replace on-street bike Roseville General Plan III-47 Circulation Element lanes, but there may be occasions where they are used in lieu of on-street bike lanes.

Exhibit 4.12-1 shows the existing bikeways within the Roseville City limits by facility class. It shows that bikeway connections are currently limited in the City, especially in the older infill areas. Most of the existing bikeways are located in recently developed areas, associated with the City's 14 specific plans.

PARKS AND RECREATIONAL FACILITIES

The proposed trail would be located in close proximity to several parks, including Maidu Regional Park, Eastwood Park, and Willard Dietrich Park as shown on Exhibit 4.12-2. An existing multi-use trail along the east side of Rocky Ridge Drive, as well as on-street bike lanes on Rocky Ridge Drive currently provide connections from the proposed trail to Maidu Regional Park.

Park Facilities
ASCENT ENVIRONMENTAL

Maidu Regional Park – Located at 1550 Maidu Drive, this is a 152-acre regional park. The developed area of the park (54 acres) includes the Maidu Community Center, Maidu Branch Library, Veteran's Memorial Rose Garden and Maidu Museum & Historic Site. Other features of the park include a four-diamond lighted softball complex, a five-field lighted soccer complex, a six station batting cage, a regulation size lighted covered soccer arena, a skate park, one full basketball court, a pedestrian and bike path, numerous picnic areas and children's play equipment.

Eastwood Park – Located at 950 Madden Lane, this 4-acre neighborhood park features a school-aged play area, covered picnic area, baseball/softball field, multi-use field, and a basketball court.

Sierra Gardens Park – Adjacent to Eich Middle School located at 1509 Sierra Gardens Drive, this is a school field with running track, basketball courts, and soccer fields. The City of Roseville Parks and Places website updates field conditions at Sierra Gardens.

Willard Dietrich Park – Located at 1201 Stoney Point Drive, this 4.6-acre neighborhood park features pre-school and school-aged play areas, barbeques, covered picnic area, and multi-use turf.

Parks in the project area also include Saugstad Park at 100 Buljan Drive, Royer Park at 190 Park Drive, Crestmont Park at 1500 Champion Oaks Drive, Kenwood Oaks Park at 1022 Tanzania Drive, and Garbolino Park at 1015 Camelia Avenue.

4.12.3 Regulatory Setting

Recreation resources are protected and/or regulated by a variety of federal, state, and local laws and policies. Key regulatory and conservation planning issues applicable to the proposed project are discussed below.

FEDERAL AND STATE

No federal or state regulations pertaining to recreation are applicable to the proposed project.

LOCAL

The City of Roseville has an adopted standard of nine acres of park land per 1,000 residents. The nine-acre requirement is divided into three acres each for neighborhood, citywide, and open space areas. This requirement has historically been met through the dedication of park land by developers. Credits are granted against the 9-acre per 1,000 population standard and has varied dependent upon the recreational value of the land to City residents.

City of Roseville General Plan

Parks and Recreation

GOAL 2: Provide residents with both active and passive recreation opportunities by maximizing the use of dedicated park lands and open space areas.

- **Policy 5:** Cooperate with other jurisdictions to provide regional recreation facilities, where appropriate
- **Policy 7:** Plan for safe and secure parks and recreation areas.
- **Policy 12:** Ensure that new public parks and recreation facilities, open space, paseos, landscape areas and greenways provide adequate funding for initial development, as well as ongoing maintenance and operation.

Circulation Element
GOAL 1: Increase the percentage of all trips made by bicycles in Roseville.

GOAL 2: Establish and maintain a safe, comprehensive and integrated bikeway and trail system that encourage the use of bikes and walking for commuting, recreational and other trips.

- **Policy 1:** Develop a comprehensive and safe system of recreational and commuter bicycle routes and trails that provides connections between the City's major employment and housing areas and between its existing and planned bikeways.
- **Policy 2:** Coordinate Roseville's bikeway and trail system with those of neighboring jurisdictions to provide both local and regional connections.

City of Roseville Bicycle Master Plan

The Bicycle Master Plan is intended to guide and influence bikeway policies, programs and development standards to make bicycling in Roseville more safe, comfortable, convenient and enjoyable for all bicyclists. The ultimate goal of this effort is to increase the number of persons who bicycle in Roseville for transportation to work, school, and errands, and for recreation. The Bicycle Master Plan is developed in context of the Circulation Element of the Roseville General Plan (GP), which includes goals and policies to develop a balanced transportation system for automobiles, transit, bicycles and pedestrians. The Bicycle Master Plan contains goals and policies associated with its implementation. Those that are applicable to the proposed project are provided as follows.

GOAL 2: Establish a safe, comfortable, convenient and highly-connected bikeway system that meets the transportation and recreation needs of avid, regular, youth and beginning bike riders, while balancing the needs of other transportation types including automobiles, train, transit and pedestrians.

- **Policy 4:** Promote development patterns that enhance connectivity for transportation and recreation use and lessen distance of bicycle and pedestrian travel between uses.
- **Policy 6:** Class I Off-Street bike paths are preferred when they result in bikeway continuity, safe and preferably separated crossings of major roads, and minimal traffic cross-flow.
- **Policy 13:** Bicycle crossings should be located at appropriate intervals along new roadways as determined by the Public Works Director/City Engineer. The City will consider opportunities for grade-separated crossings where feasible and warranted based upon demand to improve bikeway safety, comfort and continuity. The City should work with Caltrans to provide safe, convenient and comfortable crossings of State highways and freeways at regular intervals.
- **Policy 16:** Work with Public Works, Planning and Parks & Recreation Department staff to provide continuity in the design & construction of bikeway facilities.

Encouragement
GOAL: Increase transportation and recreation bicycle riding to work, school, play and other destinations by 50 percent by 2020, and gain acceptance of bicycle commuting as a mainstream activity through incentive and encouragement efforts.

- **Policy 4:** Support recreational bikeway facilities, programs and events as an important part of the effort to cultivate acceptance of bicycling among the general populace.

4.12.4 Impacts

METHODS OF ANALYSIS

Potential impacts on recreation resources resulting from project construction were determined by comparing the existing conditions against implementation of the proposed project. The thresholds of

significance, described below, were used to determine if the project would result in an environmental effect associated with recreation. The proposed project is a recreation facility that would be used by pedestrians and bicyclists. The multi-use trail would meet Class I off-street bike path specifications, consisting of a paved, all-weather access for City maintenance crews. The potential environmental effects associated with construction and use of this project are described throughout this Draft EIR.

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the proposed project was determined to result in a significant impact to recreation resources if it would:

- increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated, or
- include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment.

IMPACT ANALYSIS

Impact 4.12-1	Increased use of existing neighborhood and regional parks.
Applicable Policies and Regulations	City of Roseville General Plan Open Space and Circulation Elements City of Roseville Bicycle Master Plan
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Under existing conditions, the bike path alignment contains some portions that could be accessible by pedestrians or cyclists; however, walking or biking the entire length from one end to the other is not possible. Implementation of the project would generally consist of a 10-foot wide paved trail with two-foot shoulders on each side (one composed of decomposed granite and one of aggregate base), for a total width of 14 feet (see Exhibit 3-3, Typical Trail Cross Section, in Chapter 3, “Project Description”). The trail may also include drainage swales on one or both shoulders, as needed.

The proposed project would not result in any new permanent residents and would therefore not directly generate new users. Improving the trail could attract additional recreationists for activities such as bicycling, walking, running, and dog-walking. In addition, it would create new access opportunities to nearby parks, in particular Maidu, Saugstad and Eastwood parks. The trail could also be used by commuting cyclists in lieu of vehicle trips. An increase in the use of a recreational facility could increase the rate of degradation and require improvements at a faster rate than originally designed. However, while access to existing parks would be altered, and potentially increased, user groups of the trails are anticipated to be existing members of the surrounding community. Entry onto nearby regional parks via the proposed trail would not be substantially incentivized through development of the multi-use trail, and the path would be used as an alternative route to arrive at City parks. In addition, much of the current path is already used by pedestrians and cyclists. Paving would reduce degradation of the dirt path and improve longevity of the alignment. Furthermore, the proposed project is listed in the Bicycle Master Plan and is, therefore, consistent with future recreation planning within the City.

Conclusion
The project is not expected to result in a substantial number of additional users at existing recreation facilities such that new facilities would need to be built to accommodate increased use. This impact would be **less than significant**.

Alignment Option 1A
Access to recreational facilities under Alignment Option 1A would be the same type and magnitude as the Proposed Trail Alignment. Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream.

As discussed above under the Proposed Trail Alignment, the project is not expected to result in a substantial number of additional users at existing recreation facilities such that new facilities would need to be built to accommodate increased use. Thus, this impact would be **less than significant**.

Alignment Option 1C
Access to recreational facilities under Alignment Option 1C would be the same type and magnitude as the Proposed Trail Alignment. Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek.

As discussed above under the Proposed Trail Alignment, the project is not expected to result in a substantial number of additional users at existing recreation facilities such that new facilities would need to be built to accommodate increased use. Thus, this impact would be **less than significant**.

Alignment Option 5A
Access to recreational facilities under Alignment Option 5A would be the same type and magnitude as the Proposed Trail Alignment. East of Eastwood Park, Alignment Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek.

As discussed above under the Proposed Trail Alignment, the project is not expected to result in a substantial number of additional users at existing recreation facilities such that new facilities would need to be built to accommodate increased use. Thus, this impact would be **less than significant**.

Mitigation Measures
None required.

This page intentionally left blank.

4.13 TRANSPORTATION AND CIRCULATION

4.13.1 Introduction

This section describes the existing transportation setting in the project area, including current levels of service, bicycle facilities, and transit services, and evaluates potential transportation effects related to implementation of the Dry Creek Greenway East Trail.

No comments pertaining to transportation and circulation were received in response to the Notice of Preparation. One comment addresses potential conflicts between skateboarders or cyclists and pedestrians.

4.13.2 Environmental Setting

PROJECT AREA ROADWAYS

The primary function of arterial roadways is to move large volumes of traffic through the City of Roseville (City) to other sections and beyond. The City has sixteen subareas that have been planned for urban development. These include the Infill area, the North Industrial area, and fourteen specific plan areas. The proposed project is located within the City's designated "Infill" area. In the specific plan areas, the right-of-way (ROW) for arterials varies from 76 feet to 100 feet and generally incorporates four to six travel lanes, bicycle lanes, and a landscaped median. Outside the City's specific plan areas, which includes the proposed project, some roadways function as arterials because of the current high traffic volumes and their key linkages between one section of the City and another. For these roadways, current ROW widths vary, but most contain more than two traffic lanes. Collector streets generally link local residential streets and the commercial and office parking areas to the arterials. According to the City's general plan, the project area consists of the following arterials and collectors (Table 4.13-1).

Table 4.13-1 Arterials and Collectors Within the Proposed Project Area

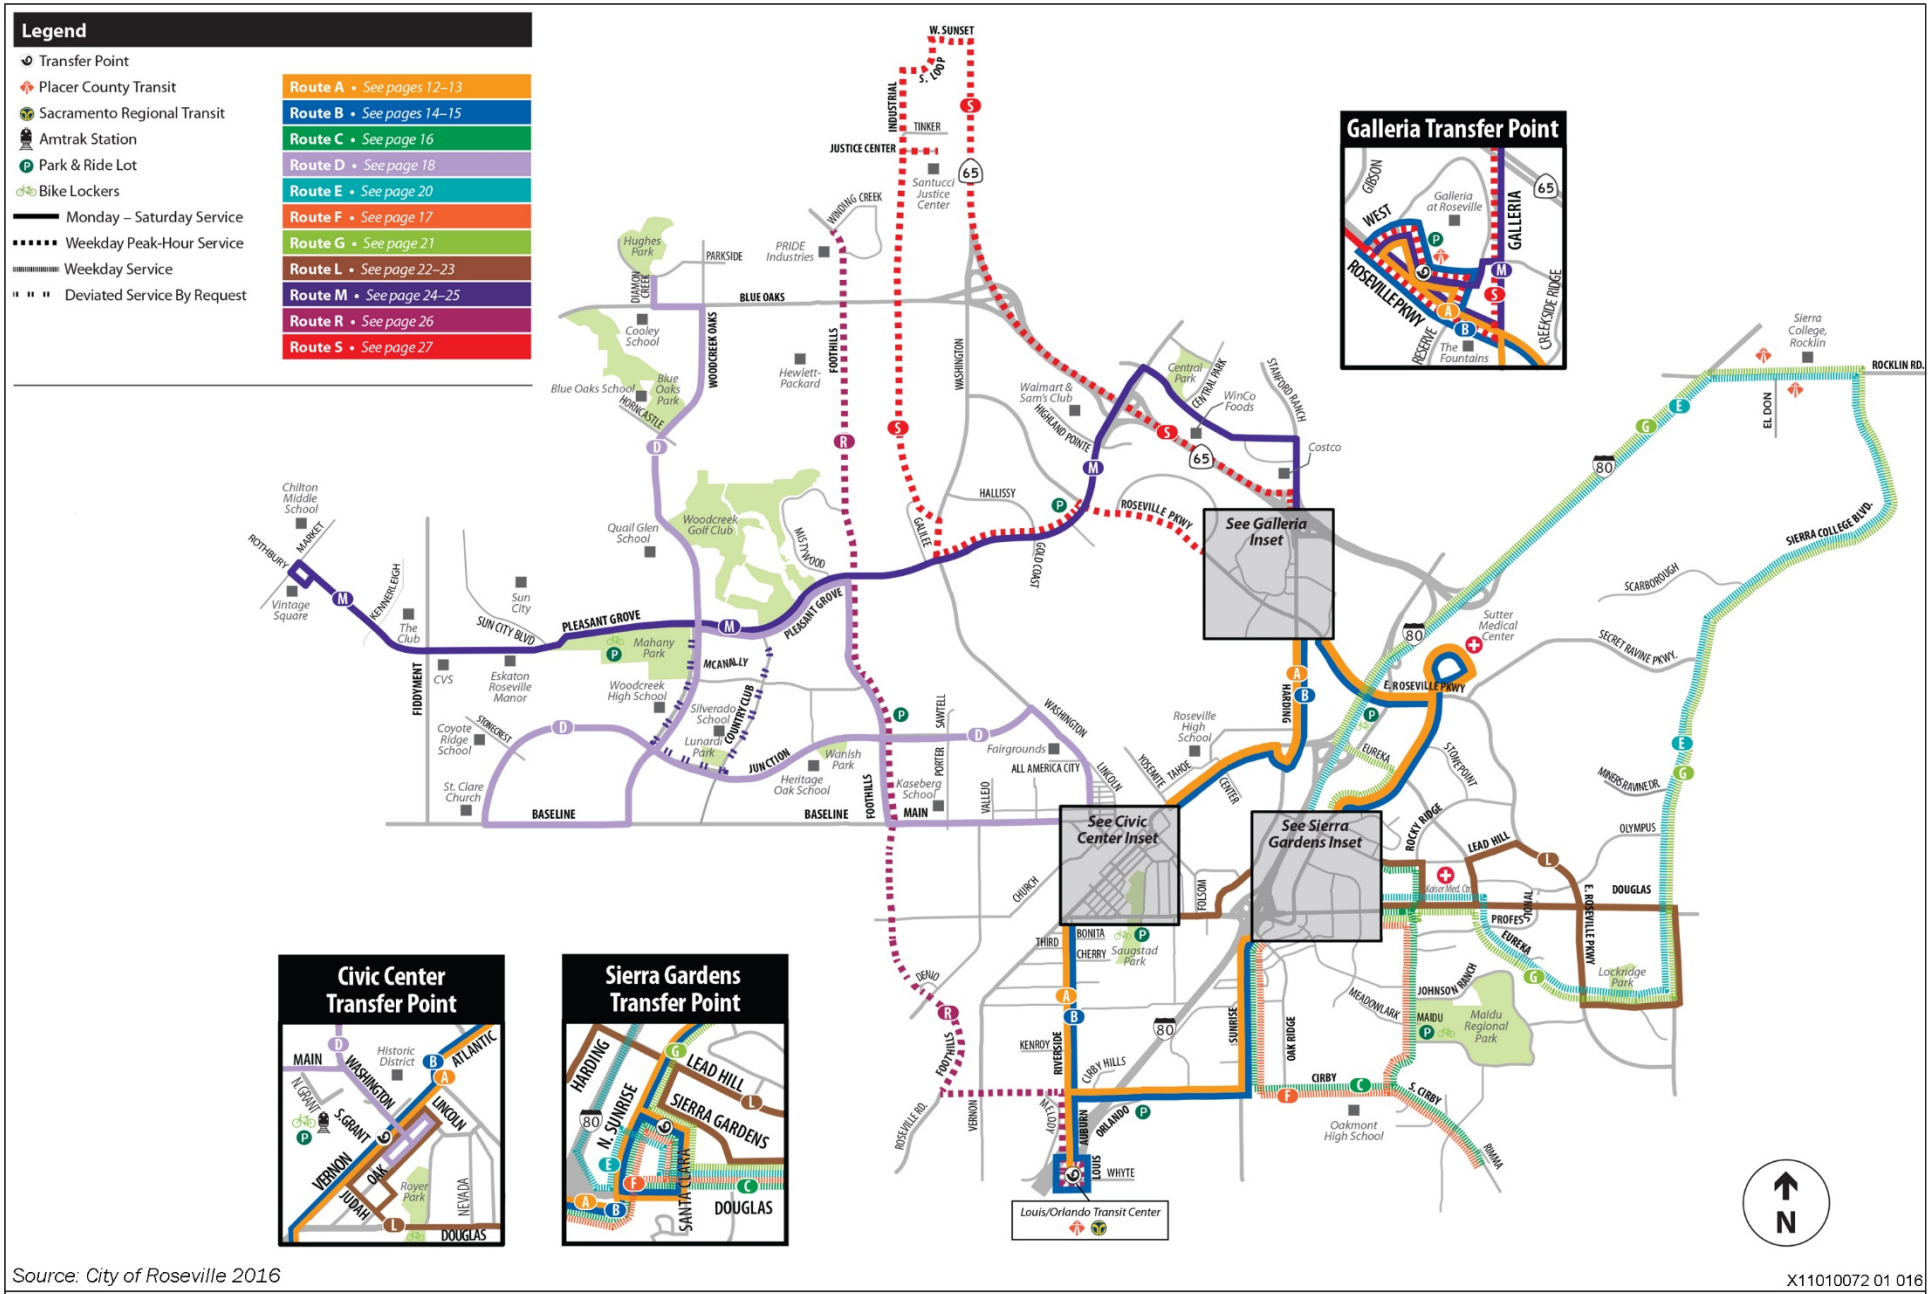
Arterials	Collectors
Cirby Way	Oak Ridge Drive
Riverside Avenue	Old Auburn Road (South Cirby to Sacramento County line)
Rocky Ridge Drive (south of Douglas Boulevard)	McLaren Drive
Sunrise Avenue	North Cirby Way

Source: Compiled by Ascent 2017.

TRANSIT FACILITIES

The City of Roseville operates Roseville Transit, which has a local fixed route service, a peak hour commuter service, and a dial-a-ride service. Roseville Transit provides approximately 435,000 trips annually (City of Roseville 2016:4.3-8). Roseville Transit routes are shown on Exhibit 4.13-1. Routes in the project area include A, B, C, and F.

Roseville Transit Commuter Service (commute service) is a fixed route weekday commute period service between Roseville and downtown Sacramento. Roseville Transit operates ten routes between Roseville and downtown Sacramento.



Source: City of Roseville 2016

X11010072 01 016

Exhibit 4.13-1

Roseville Transit Routes

ASCENT ENVIRONMENTAL

Roseville Transit Local Service (fixed route service) has 11 scheduled routes, most of which operate Monday through Friday from 5:45 a.m. to 10:00 p.m. and on Saturdays from 8:00 a.m. to 5:00 p.m. There are four transfer points where connections between buses can be made: Sierra Gardens, Galleria Mall, Civic Center, and Louis/Orlando. The Roseville Transit system connects to both Placer County Transit (at Galleria Mall and Louis/Orlando transfer points) and Sacramento Regional Transit (at Louis/Orlando transfer point).

Roseville Transit ADA Paratransit Service is an appointment service required by the Americans with Disabilities Act (ADA) for persons with disabilities preventing them from using Local Service. ADA Paratransit Service operates within a three-quarter mile radius of Local Service routes during Local Service hours.

Roseville Transit Dial-a-Ride (DAR) Service provides curb to curb appointment bus service within the City of Roseville for the general public, seven days a week. Roseville Transit dial-a-ride services operate Monday through Friday from 5:45 a.m. to 10:00 p.m. and on weekends from 8:00 a.m. to 5:00 p.m. (City of Roseville 2016:4.3-8).

PEDESTRIAN FACILITIES AND ON-STREET PARKING

The City of Roseville has an extensive network of pedestrian facilities. Most residential streets contain improved sidewalk facilities and crosswalks at intersections. Arterial roadways adjacent to existing residential development have wide sidewalks, often flanked by landscaping corridors.

The neighborhood streets surrounding the project site provide on-street parallel parking. The majority of the residential on-street parking is unrestricted, while adjacent commercial and office parking areas are restricted to customer and employee use.

BICYCLE FACILITIES

The City's existing bikeways are shown in Exhibit 4.13-2. Designated bikeways are specific routes that meet minimum local and state design standards. Roseville generally follows California Department of Transportation's (Caltrans) design standards for the following classes of bikeways:

- Class I bikeways are located within a completely separated ROW designated for the exclusive use of bicycles and pedestrians with cross flows by motorists minimized. Class I bikeways are a minimum of 10 feet wide. A 2-foot graded area should parallel the bikeway on both sides, and the bikeway should be a minimum of 5 feet from an adjacent roadway.
- Class II bikeways are frequently referred to as on-street bike lanes. Class II bikeways consist of a restricted ROW designated for the exclusive or semi-exclusive use of bicycles with through travel by motor vehicles or pedestrians prohibited, but with cross-flows by pedestrians and motorists permitted. Class II bikeways are typically 4–6 feet wide in Roseville and separated from vehicle traffic by a solid white stripe.
- Class III bikeways consist of on-street right-of-way designated by signs or permanent markings that is shared with motorists.

Exhibit 4.13-2

Existing and Proposed Bike Network

ASCENT ENVIRONMENTAL

4.13.3 Regulatory Setting

FEDERAL AND STATE

There are no federal or state plans or policies addressing transportation and circulation that pertain to the project.

LOCAL

City of Roseville General Plan

Circulation Element - Bikeways and Trails
GOAL 1: Increase the percentage of all trips made by bicycles in Roseville.

GOAL 2: Establish and maintain a safe, comprehensive and integrated bikeway and trail system that encourages the use of bikes and walking for commuting, recreational and other trips.

GOAL 3: Establish education, encouragement and enforcement programs that increase bicyclist and motorist awareness of the rights and responsibilities of bicyclists in order to foster a climate of acceptance for bike riding.

GOAL 4: Obtain the Bicycle Friendly Community Designation from the League of American Bicyclists.

- **Policy 1:** Develop a comprehensive and safe system of recreational and commuter bicycle routes and trails that provides connections between the City's major employment and housing areas and between its existing and planned bikeways.
- **Policy 2:** Coordinate Roseville's bikeway and trail system with those of neighboring jurisdictions to provide both local and regional connections.

Parks and Recreation Element
GOAL 2: Provide residents with both active and passive recreation opportunities by maximizing the use of dedicated park lands and open space areas.

- **Policy 12:** Ensure that new public parks and recreation facilities, open space, paseos, landscape areas and greenways provide adequate funding for initial development, as well as ongoing maintenance and operation.

Open Space and Conservation Element – Open Space System
GOAL 1: Establish a comprehensive system of public and private open space, including interconnected open space corridors that should include oak woodlands, riparian areas, grasslands, wetlands, and other open space resources.

GOAL 2: Utilize the open space system to connect neighborhoods and separate development areas within the City.

GOAL 3: Provide access to public open space areas through the establishment of a series of public linkages that will be adequately managed and protected.

GOAL 4: Integrate, where feasible, passive recreational and educational opportunities with the protection of wildlife and vegetation habitat areas

- **Policy 1:** Provide an interconnecting system of open space corridors that, where feasible, incorporate bikeways and pedestrian paths.
- **Policy 2:** Provide interconnected open space corridors between open space and habitat resources, recreation areas, schools, employment, commercial service and residential areas.

Design and Construction Standards

The 2016 Design and Construction Standards (as amended in January 2017) require that roadway improvements within the City of Roseville conform to a set of standard plans that detail City standards for pavement width, lighting, drainage, sewer, and other roadside facilities.

Bicycle Master Plan

The Bicycle Master Plan (BMP) calls for the development of a comprehensive bikeway system that would provide connections between the City's major employment and housing areas and between existing and planned bikeways. The BMP was updated in 2008. It provides guidelines for the development of a city-wide network of bicycle facilities and design standards for new bicycle facilities in Roseville. The City periodically updates the BMP. The next planned update to the BMP will begin in 2018.

Bikeway Route Development Goal 1: Achieve a balanced transportation system that, consistent with the Roseville General Plan Circulation Element and Smart Choices for Roseville's Future: Implementation Strategies to Achieve Blueprint Project Objectives, provides Roseville residents a variety of transportation choices, including automobile, transit, bicycle, and pedestrian options.

Bikeway Route Development Goal 2: Establish a safe, comfortable, convenient and highly-connected bikeway system that meets the transportation and recreation needs of avid, regular, youth and beginning bike riders, while balancing the needs of other transportation types including automobiles, train, transit and pedestrians.

- **Policy 1:** To meet needs of the various bike rider types, each area of the City should include a range of bikeway types, including bike lanes on arterial streets, bike lanes on collector streets, bike routes on selected low volume/low speed streets and off-street bike paths.
- **Policy 2:** The bikeway system should provide convenient and comfortable connections between residential areas, schools, parks, public transit stops, shopping centers, employment centers and other uses.
- **Policy 3:** The City should cooperatively pursue connections to neighboring jurisdictions to ensure regional bicycle accessibility.

Environmental Goal 1: Reduce traffic, improve air quality, and reduce emissions that contribute to climate change by providing a viable commute alternative to the automobile.

Environmental Goal 2: Enhance public access to open space and natural areas while, to the extent feasible, minimizing the environmental impacts of off-street bike path projects.

- **Policy 3:** Coordinate and where feasible and beneficial partner bike trail projects with stream bank restoration, native habitat restoration, flood control projects and other related open space projects.
- **Policy 4:** Bike trails through open space may, where appropriate and feasible, include interpretive signs informing the public of the environmental resources present and directing users to behave in a manner that reduces impacts on the open space.
- **Policy 5:** Bike path planning, construction and maintenance should be consistent with the Roseville Creek & Riparian Management Plan and open space preserve management plans.
- **Policy 6:** Comply with applicable local, State and federal environmental regulations.
- **Policy 7:** Bike trail projects, to the extent feasible, should minimize environmental impacts.

Pedestrian Master Plan

The City of Roseville Pedestrian Master Plan was adopted by the City Council in 2011 to establish policies, projects, and programs that improve the pedestrian system in Roseville and increase walking for transportation, recreation, and health. The Pedestrian Master Plan includes goals, policies, and implementation measures for pedestrian improvements and programs; a recommended pedestrian network; and a Capital Improvement Program that establishes a 20-year framework for improvements to the pedestrian environment.

GOAL 1: Achieve a balanced transportation system that, consistent with the Roseville General Plan Circulation Element and Smart Choices for Roseville's Future: Implementation Strategies to Achieve Blueprint Project Objectives, provides Roseville residents a variety of transportation choices, including automobile, transit, bicycle, and pedestrian options.

- **Policy 1:** Provide continuous and direct pedestrian connections between residential areas, schools, shopping areas, public services, employment centers, parks, and public transit stops.

4.13.4 Impacts

METHODS OF ANALYSIS

Impacts associated with construction and use of the multi-use trail are evaluated by assessing the potential for addition of users under the proposed project to affect the level of service at those facilities and/or result in conflicts with vehicles. This analysis also determines whether use of the proposed multi-use trail could affect emergency access and whether addition of user types under the proposed project could conflict with alternative transportation policies, plans, or programs.

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the project would result in a significant adverse effect related to transportation and circulation if it would:

- conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit;
- conflict with an applicable congestion management program, including, but not limited to level of service (LOS) standards and travel demand measures, or other standards established by the County congestion management agency for designated roads or highways;
- result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks;
- substantially increase hazards because of a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment);
- result in inadequate emergency access; or
- conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

Air Traffic Patterns

McClellan Airfield is the closest airport to the project site and is located approximately 7 miles southwest of the project's proposed trailhead. Lincoln Regional Airport is located approximately 12 miles to the north of the project's proposed trailhead. The project would not result in a change in air traffic patterns or contribute to an increase in demand for air travel. As a result, the issue is not evaluated further in this Draft EIR.

Level of Service

The proposed project would not result in the construction of new housing or other project elements that would increase the permanent resident population in the City. Therefore, the project, as a multi-use trail, would not add general vehicle trips to the project area.

It is possible that the proposed project could result in vehicle trips to the proposed trailhead parking area on Riverside Avenue, or to other available public parking areas near the project area such as on-street parking or Maidu Park. The trailhead and other public parking areas are easily accessed by the arterial and collector road network, and operational impacts to existing roadway's LOS is unlikely to be substantial. The timing of greatest trail use does not occur during the peak hours of traffic; trails tend to experience peak use during weekends (California State Parks 2012:4.15-5). Roadways and intersections, on the other hand, tend to experience peak congestion during morning and evening rush hours on weekdays. Therefore, the peak trail use periods would occur outside the peak traffic periods. Peak traffic hours typically provide the basis for the LOS standards.

While it cannot be known with certainty how many motor vehicle trips or vehicle miles traveled could be reduced by increased use of the proposed trail by bicyclists and pedestrians (in lieu of vehicle trips), over the long term it is expected that trail use would contribute to decreased motor vehicle travel.

IMPACT ANALYSIS

Impact 4.13-1	Safety-related traffic impacts.
Applicable Policies and Regulations	City of Roseville Design and Construction Standards and Community Design Guidelines Caltrans Highway Design Manual
Significance with Policies and Regulations	Proposed Project: Potentially significant Alignment Option 1A: Potentially significant Alignment Option 1C: Potentially significant Alignment Option 5A: Potentially significant
Mitigation Measures	Mitigation Measure 4.13-1 (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts

Implementation of the proposed project would result in temporary construction traffic near the specific location where the trial is being built. During construction of the multi-use trail, there would be a temporary increase in construction-related traffic from deliveries of materials, import and export of fill material, and construction workers traveling to and from the project site. The level of construction activity would vary over the multi-year construction period and would start and stop at intervals within the specific trail segment under development. Construction activities would occur between June 15 and October 15,

because of California Department of Fish and Wildlife restrictions regarding work within creek banks and channel beds during the low-flow period.

The maximum number of workers commuting to the project construction site any given time would be approximately 15, which would be infrequent and of short duration. Additionally, approximately five truck trips per day would access the site for materials delivered or exporting fill material. The increase in construction worker commute trips and deliveries would be in addition to ongoing daily trips generated by recreational users. As noted in the alignment descriptions and shown on the eight plan sheets in Chapter 3, "Project Description," the proposed project would include construction staging areas where equipment would be temporarily stored during project construction. Construction and related truck traffic could temporarily interfere with travel by motorists, bicyclists, pedestrians, or transit riders, such as the need to pause and be attentive to construction vehicles entering or leaving a project site or staging area. The most likely outcome would be potential inconvenience, but the possibility of a traffic safety or operational effect would exist.

Use-related Impacts

The proposed project would include a trailhead with accompanying parking lot at the western end of the trail, off Riverside Avenue just south of Darling Way. The parking lot would include approximately 35 parking spaces. This would be the only parking lot developed in connection with the project. This section of Riverside Avenue is a commercial area where parking lots of similar sizes are common. The parking lot size would be typical for the area and designed consistent with City code for ease of entry and exit, thereby not affecting the flow of traffic on Riverside Avenue or increasing congestion.

An important consideration in safe driveway operations is sight distance. In California, the *Caltrans Highway Design Manual* is the primary reference used to determine sight distance requirements. This section of Riverside Avenue is a straight, flat roadway and at the entrance to the proposed lower parking area, sight distance would be more than 450 feet for all applicable turning movements. The new entrance driveway would be constructed in accordance with the *Caltrans Highway Design Manual*. Any roadway or parking improvements constructed as part of the proposed project would be subject to the City's Design and Construction Standards and Community Design Guidelines and would be reviewed by the City Engineering Division. Construction of a driveway in accordance with applicable design standards for adequate lines of sight would ensure the entrance to the trailhead parking lot would not alter traffic safety conditions due to a design feature.

Conclusion

The design of the trailhead parking lot and driveway entrance would conform to applicable standards and be consistent with traffic safety and operational requirements, so no significant traffic effects would occur from use of the trail and parking lot after completion of the trail and trailhead improvements. Construction activity with its related truck and worker traffic could temporarily interfere with travel by motorists, bicyclists, pedestrians, or transit riders. Although the primary consequence would be inconvenience, to require preparation of a traffic management plan for protection from temporary, adverse construction traffic safety or operational impacts, the transportation effects of construction traffic would be considered **potentially significant**.

Alignment Option 1A

Alignment Option 1A would begin north of Darling Way and would travel on the west side of Dry Creek. At the confluence of Dry Creek and Cirby Creek, this option would cross to the south side of Dry Creek and travel along the south side of Cirby Creek as the trail heads upstream. Construction-related traffic impacts under Alignment Option 1A would be slightly less than under the Proposed Trail Alignment because Bridge #4 would not need to be constructed, and therefore construction staging would not be required southwest of Machado Lane. The impact would be **potentially significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 1C
Alignment Option 1C would begin north of Darling Way and would travel on the east side of Dry Creek before crossing to the south side of Cirby Creek upstream of the confluence with Cirby Creek. Construction-related traffic impacts under Alignment Option 1C would be slightly less than under the Proposed Trail Alignment because Darling Bridge would not be widening, therefore a construction staging area north of Darling Way would not be required. The impact would be **potentially significant** for the same reasons discussed above for the Proposed Trail Alignment.

Alignment Option 5A
East of Eastwood Park, Alignment Option 5A would remain on the south side of Linda Creek until east of Sunrise Avenue before crossing to the north side of the creek, and Bridge #13 would not be included. Construction-related traffic impacts under Alignment Option 5A would be the same as under the Proposed Trail Alignment because the option would be located in the same general location and contain the same design elements as the Proposed Trail Alignment. The impact would be **potentially significant** for the same reasons discussed above for the Proposed Trail Alignment.

Mitigation Measures

Mitigation Measure 4.13-1: Prepare traffic management plan.
This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A.

The City shall require the construction contractor to prepare for city approval and implement a traffic management plan before construction activities begin.

Before the beginning of construction on the project site, the contractor shall prepare a detailed traffic management plan that will be subject to review and approval by the City Department of Public Works. The plan shall ensure maintenance of safe and acceptable operating conditions for local roadways, bicycle and pedestrian facilities, and transit routes. The Traffic Management Plan shall regulate maintenance of traffic during each construction season and comply with agency standards to promote safe and efficient travel for the public and construction workers through the work zones. The plan shall include provisions for regular inspections to assess contractor compliance, signage to direct traffic, and public noticing, as appropriate. Methods in the plan may include (but are not limited to):

- appropriately sequencing activities (e.g., segment phasing, timing of grading, hours of construction) to minimize conflicts with traffic on affected roadways;
- maintaining traffic flow in the project area to the extent feasible;
- maintaining bicycle and pedestrian access along Riverside Avenue; and
- using flaggers to direct traffic, as needed, for ingress or egress of large trucks and other vehicles.

Significance after Mitigation
The Traffic Management Plan will include measures to ensure local traffic, including bicycle traffic and pedestrian use, is accommodated during construction and that traffic safety is maintained. This plan would include methods by which construction activities will be managed to minimize risk of traffic hazards related to large trucks. Therefore, implementation of Mitigation Measure 4.13-1 would reduce potentially significant impacts related to construction traffic to a **less-than-significant** level.

Impact 4.13-2	Conflict with an applicable plan, ordinance or policy which establishes measures of effectiveness for the performance of the circulation system or with an alternative transportation plan.
Applicable Policies and Regulations	City of Roseville 2008 Bicycle Master Plan City of Roseville Pedestrian Master Plan City of Roseville General Plan
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None required (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

As described in Chapter 3, "Project Description," the Purpose and Need Statement for the project states that "The Dry Creek Greenway trail is a vital component of the City of Roseville Bikeway and Trail system because it will provide a safe, comfortable, convenient, and highly connected bike route as an alternative to using City streets in an area of the City that is underserved by bicycle facilities." The City's 2008 BMP includes a plan for development of over 28 miles of Class I trails in Roseville, including the Dry Creek Greenway East Trail. The proposed project is identified as a priority project in the BMP, because of its potential to provide a safe, comfortable, and convenient bicycle route in an area of the City with limited existing options for bicyclists.

The proposed project has a number of opportunities for connections to the community and existing and proposed transportation facilities. Connections to other multi-use trails, on-street bikeways, neighborhoods, business districts and transit would increase trail access and promote trail use. Table 4.13-2 contains a list of existing connection and possibilities for future trail connections.

Table 4.13-2 Potential Circulation System Connections

Point of Connection	Facility Type	Purpose
Darling Way	Class III (e)	Connection to Riverside Avenue business district, Roseville Transit Routes A & B, and Hillcrest, Cherry Glen and Los Cerritos neighborhoods
Saugstad/Royer/ Miners Ravine Trails	Class I (e)	Connection to Miners Ravine Trail and Downtown Roseville, including Downtown transit stations, offering transportation and looped recreation opportunities
Riverside Avenue	Class I (p) & Class II (p)	Future trail connection to Atkinson Street, Morgan Creek, Dry Creek Parkway Ueda Parkway and Sacramento Northern Trails (part of regional looped trail system) Roseville Transit routes A & B
Hernandez/Machado Way	Class I (e)	Neighborhood connection to Hillcrest area
Cirby Hills Townhomes	Class I (p)	Neighborhood connection to residential community
Windscape Apartments	Class I (p)	Neighborhood connection to residential community
Marlin Drive	Class I/II (e)	Connection to Eastwood Park, Cirby Side neighborhood and Class II bike lane on Orlando Avenue, which connects to the Louis/Orlando transit station
Tina Way	Footbridge (e)	Connection to residential areas along Coloma Way
Sunrise Avenue	Class I (p)	Potential connection to Sunrise Avenue business district and Roseville Transit routes A, B & C
Meadow Gate Drive	Class I/III (p)	Potential connection to residential neighborhood

Table 4.13-2 Potential Circulation System Connections

Point of Connection	Facility Type	Purpose
Oakridge	Class III (e)	Connection to Meadow Oaks, Sierra Gardens and Cirby Ranch areas
Woodlake Lane	Class I (e)	Connections to Sierra Gardens Elementary School and Meadow Oaks area
Eich/Sierra Gardens Drive	Class I (e)	Connection to middle school and Sierra Gardens neighborhood
Meadowlark Lane	Class I (e)	Connection to Maidu Park and Sierra Gardens neighborhood
Rocky Ridge Drive	Class I/II	On-street and off-street connection to Maidu Park, including park-n-ride lot, Roseville Transit Route C, and Maidu/South Cirby neighborhoods
Champion Oaks/N. Cirby	Class III (e)	On-street connection to Maidu Park and Maidu/South Cirby areas
W. Colonial Parkway	Class III (p)	On-street connection to Maidu/South Cirby areas
Old Auburn Way	Class I/II (p)	Class III connection to Citrus Heights & future Class I regional connection to American River Parkway at Beals Point (part of regional looped trail system)

Note: (p) = proposed; (e) = existing

Class I = Off-Street Bike Paths, located in a separate right of way, for the exclusive use of bicycles and pedestrians, with minimal cross flow by motor vehicles.

Class II = On-Street Bike Lanes, areas within paved streets that are identified by striping and signs for preferential (semi-exclusive) bicycle use.

Class III = On-Street Bike Route, on-street routes where bikes share the road with cars.

Source: City of Roseville 2008

In addition, use of the multi-use trail project would be consistent with adopted policies and implementation measures in the City of Roseville General Plan and Sustainability Action Plan (see Section 4.6, “Greenhouse Gas Emissions and Climate Change”) designed to reduce greenhouse emissions from mobile sources. Key policies and measures include:

- expanding the capacity of the system for alternate modes (General Plan, Air Quality and Climate Change Goal 4);
- providing adequate pedestrian and bikeway facilities for present and future transportation needs (General Plan, Air Quality and Climate Change Goal 5);
- encouraging alternative modes of transportation including pedestrian, bicycle, and transit usage (General Plan, Air Quality and Climate Change Policy 7);
- implementing the Bicycle Master Plan and Long-Range Transit Plan as specified in the Circulation Element (General Plan, Air Quality and Climate Change Element Implementation Measures, 7. Mitigation Strategies – Motor Vehicle Alternatives);
- providing safe pathways that link residential areas to schools, parks, services, and employment areas and transit facilities (General Plan, Air Quality and Climate Change Element Implementation Measures, 7. Mitigation Strategies – Motor Vehicle Alternatives); and
- various Bike and Pedestrian measures contained in the City’s Sustainability Action Plan.

Conclusion

Generally, any increase in bicycle use would be consistent with the overarching goals and objectives of an alternative transportation plan, including the City BMP. The proposed project is identified as a priority project in the BMP. Therefore, the proposed project would be consistent with the City’s alternative transportation plans, and this impact would be **less than significant**.

Alignment Option 1A

Alternative transportation plan impacts under Alignment Option 1A would be the same as under the Proposed Trail Alignment because the multi-use trail would be located in the same location and contain

the same design elements as the Proposed Trail Alignment. For the reasons described above for the Proposed Trail Alignment, this option would not a result in conflicts with alternative transportation plans and this impact would be **less than significant**.

Alignment Option 1C

Alternative transportation plan impacts under Alignment Option 1C would be the same as under the Proposed Trail Alignment because the multi-use trail would be located in the same location and contain the same design elements as the Proposed Trail Alignment. For the reasons described above for the Proposed Trail Alignment, this option would not a result in conflicts with alternative transportation plans and this impact would be **less than significant**.

Alignment Option 5A

Alternative transportation plan impacts under Alignment Option 5A would be the same as under the Proposed Trail Alignment because the multi-use trail would be located in the same location and contain the same design elements as the Proposed Trail Alignment. For the reasons described above for the Proposed Trail Alignment, this option would not a result in conflicts with alternative transportation plans and this impact would be **less than significant**.

Mitigation Measures

None required.

4.14 UTILITIES

4.14.1 Introduction

This section describes the existing utilities and service systems that serve the project site and evaluates the proposed project's potential effect on these utilities.

No comments related to public utilities were received during public review of the Notice of Preparation.

4.14.2 Environmental Setting

REGIONAL AND LOCAL SETTING

The City of Roseville provides most of its own utilities, including: water, wastewater, reclaimed/recycled water, stormwater, electricity, and solid waste collection. Public utility providers in the City of Roseville are summarized in Table 4.14-1, below.

Table 4.14-1 Public Utility Providers in the City of Roseville

Service	Provider
Water services	City of Roseville San Juan Water District Placer County Water Agency
Wastewater services	City of Roseville
Flood control and drainage	City of Roseville
Solid waste	City of Roseville[1]
Electricity	City of Roseville (Roseville Electric Utility)
Natural gas	Pacific Gas and Electric
Street lighting and maintenance	City of Roseville
Cable television	Comcast, Consolidated Communications
Telephone	Consolidated Communications (formerly SureWest Communications)

1: Solid waste management services are provided by the Western Placer Waste Management Authority, of which the City is a partner.

Source: Roseville 2013

Water

The City obtains its water from Folsom Lake, which is part of the Central Valley Project operated by the U. S. Bureau of Reclamation. Water from Folsom Lake is treated at a plant east of the city limits and delivered to customers. Retail water demand for potable and raw water in the City's service area was 22,881 acre-feet in 2015 (Roseville 2016:4-3). Other contracts with the Placer County Water Agency and the San Juan Water District allocate an additional 34,000 acre-feet per year of water to the City for municipal and industrial purposes, and are relied upon to meet needs in excess of the water allocation through the Central Valley Project (Roseville 2013:VII-31). The City also maintains supplemental water supplies in a combination of groundwater wells, reservoirs, and interagency connections.

The water distribution system consists of water mains ranging in size from 4 to 66 inches in diameter. Pump stations provide sufficient water pressure to the higher elevations of the City and lift water into storage reservoirs. The system is designed to deliver an adequate supply of water throughout the community at an acceptable pressure level for domestic and fire flow purposes (Roseville 2013:VII-31). An existing water lines is located on the Darling Way Bridge and Sunrise Avenue Bridge.

Wastewater

The city's wastewater collection system is primarily a gravity flow system. Wastewater flows downhill in collector and trunk lines measuring up to 78 inches in diameter to the City's two regional treatment plants. Following treatment at the facilities, wastewater is either used as recycled water supply or discharged from the treatment plants into Dry Creek or Pleasant Grove Creek. The residual solids are transported to the Western Regional Sanitary Landfill located at the southwest corner of Athens Road and Fiddyment Road for disposal or are transported by a City-approved vendor for offsite land application.

Wastewater mains cross the project site in approximately 10 locations. Mains also roughly parallel the creeks within the project site along Cirby Creek north of Eastwood Park, along Linda Creek between approximately Eich Intermediate School and Rocky Ridge Drive, and at the eastern end of the project site from south of Champion Oaks Drive to Old Auburn Road (Exhibit 4.14-1). The existing improved and unimproved portions of the trail are used for infrastructure maintenance access for the City Environmental Utilities Department.

Stormwater

Stormwater in Roseville is directed via drain inlets into a series of underground pipes within roadways and other public parcels. These pipes outfall into the City creek system, at which point the water flows downstream. The amount of stormwater that enters the creek system increases as undeveloped ground is replaced by impervious surfaces. Linda Creek, Cirby Creek, and Dry Creek are part of the City's stormwater system. Stormwater mains enter the project site in over 20 locations from the adjoining neighborhoods and empty into the creeks.

Solid Waste

Collection of solid waste is conducted by the City of Roseville's Environmental Utilities Department. Following collection, waste is disposed of at the Western Regional Sanitary Landfill. The landfill is managed by the Western Placer Waste Management Authority, which was formed by the City of Roseville, the City of Lincoln, the City of Rocklin, and Placer County to provide solid waste management. The 231-acre landfill for non-hazardous (Class II and Class III) solid waste has capacity to accept solid waste through 2058 (CalRecycle 2016). The Solid Waste Facility Permit is reviewed every five years and is scheduled to next be reviewed in December, 2017 by Placer County Environmental Health. Hazardous materials are transported to Class I landfills outside of Placer County (Roseville 2013).

Electricity, Natural Gas, and Communications

Roseville Electric, the City's electric utility, obtains power from a variety of sources, including the Western Area Power Administration and the City's two natural gas generating facilities. The New Services section is responsible for the design and construction of the City of Roseville's 12kilovolt (kV) underground distribution system. This includes the coordination, design, and inspection of all new residential and commercial projects, 12kV mainline infrastructure, and roadway and pathway lighting. In 2009 Roseville Electric forecasted that electricity demand in 2018 would reach 1,635,476 megawatt hours (Roseville 2013:VII-24).

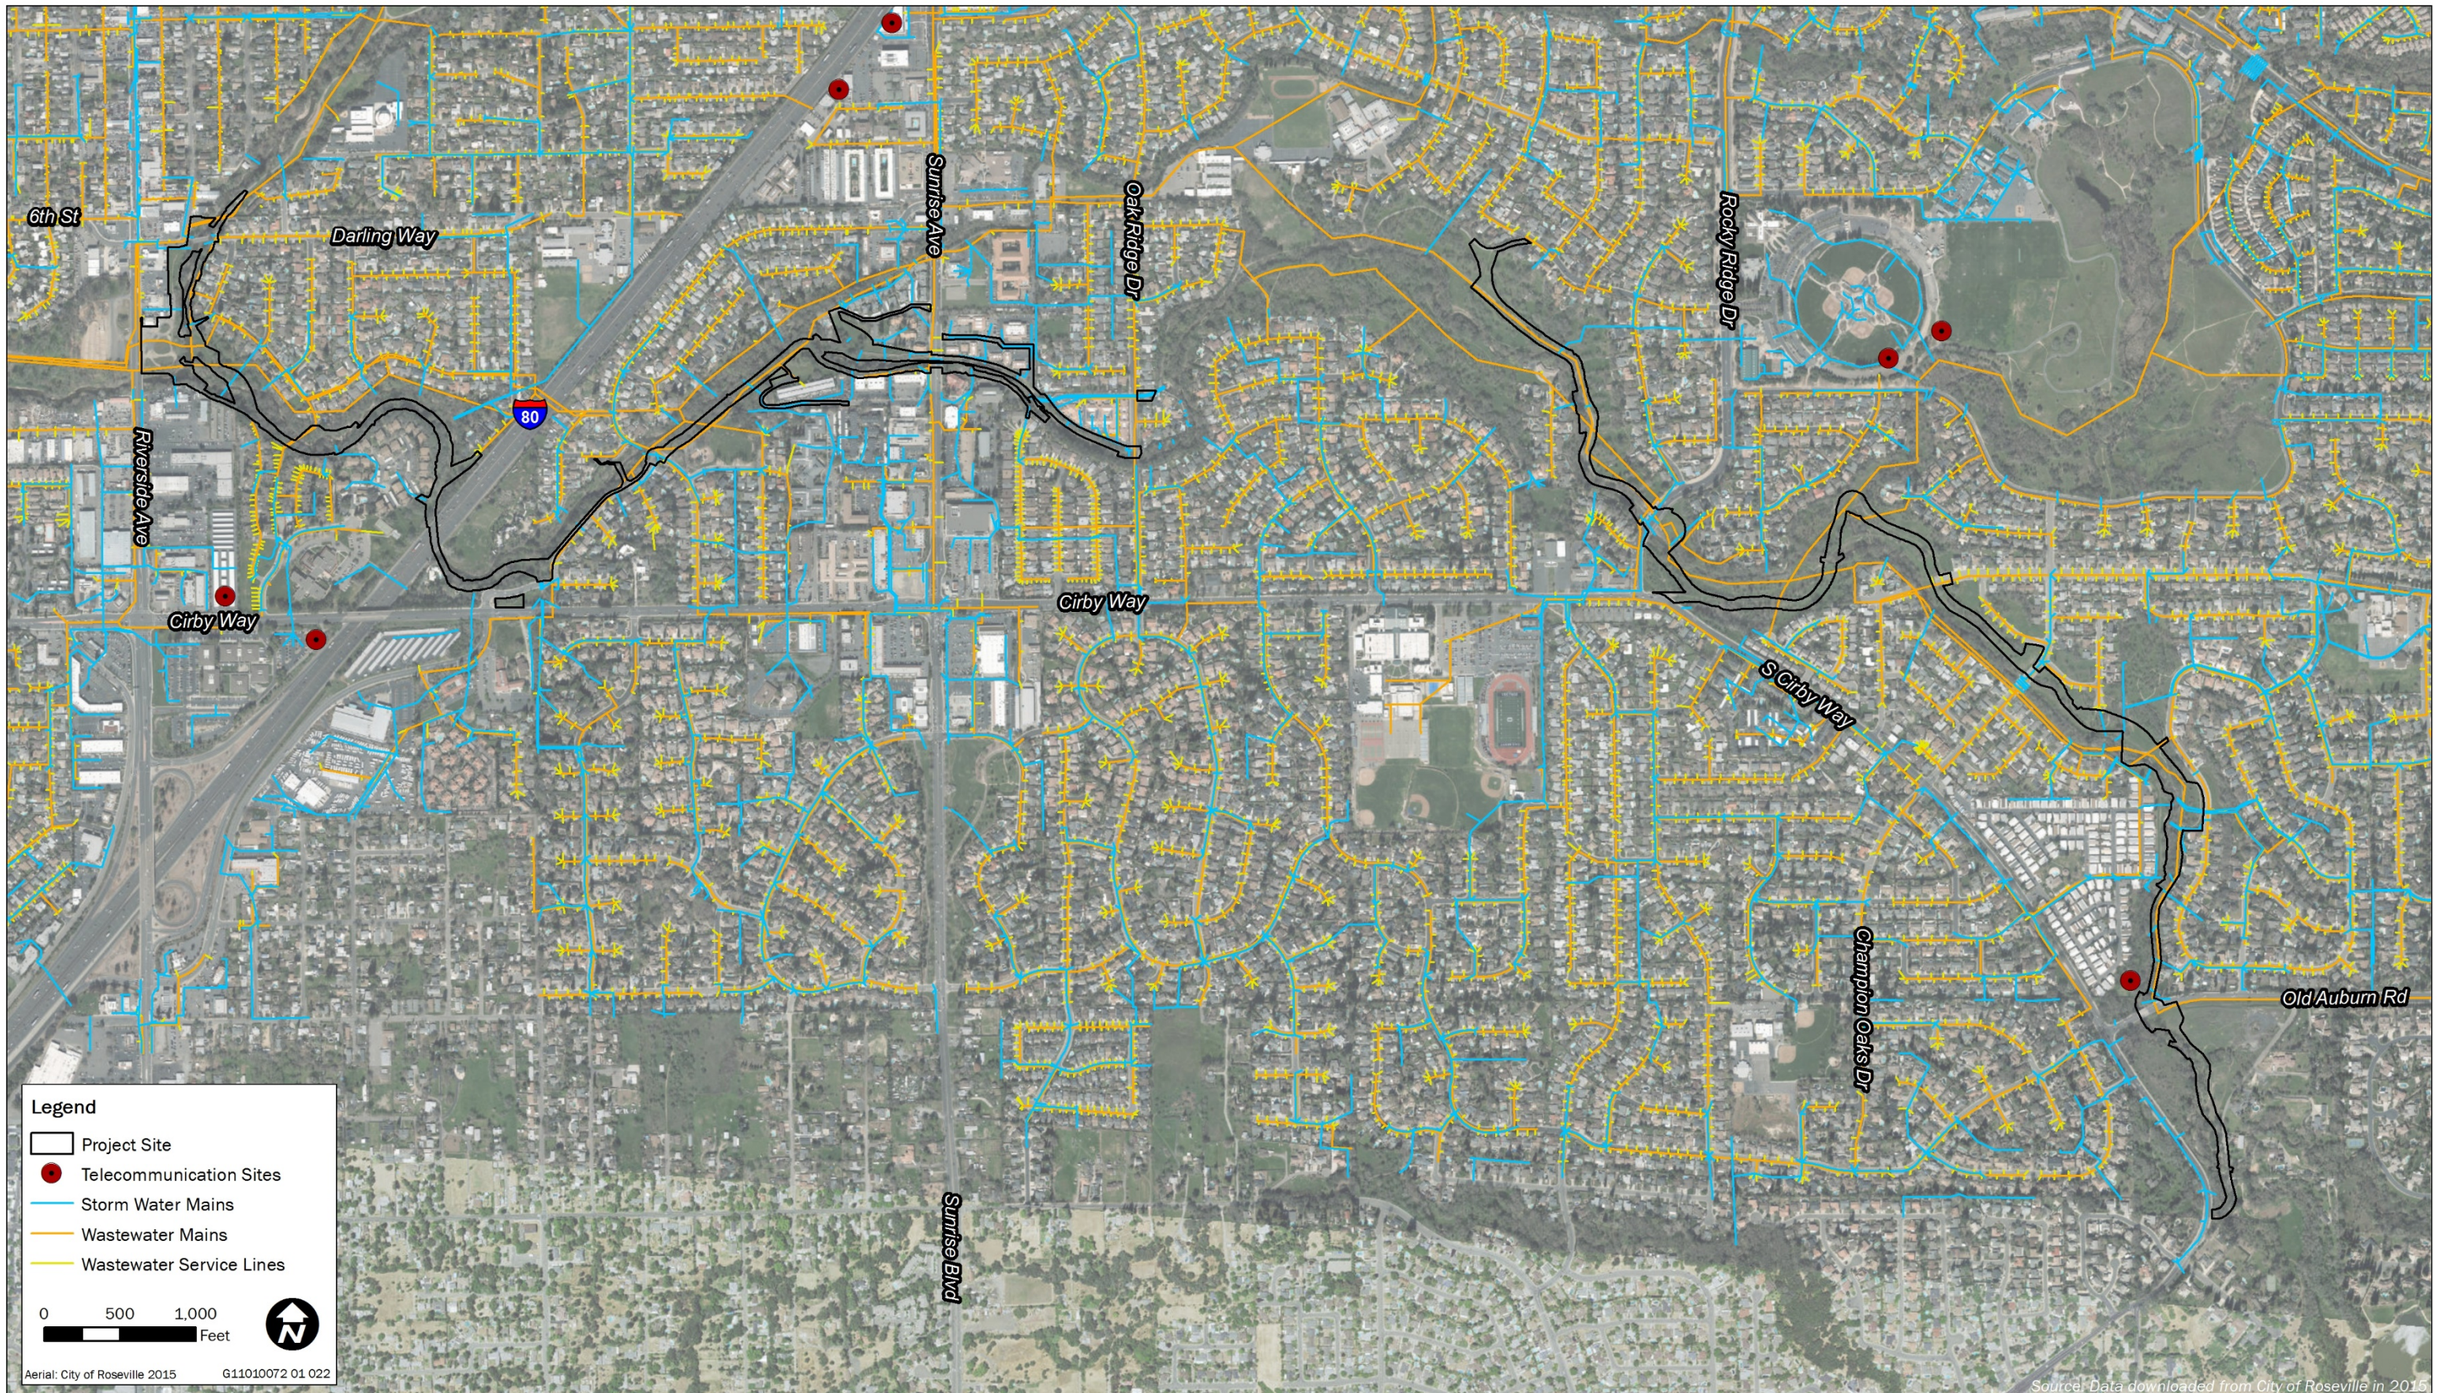

Exhibit 4.14-1

Utilities

ASCENT ENVIRONMENTAL

Pacific Gas and Electric provides natural gas to over 70,000 square miles of central and northern California. The Sacramento-Sierra Division serves over 1.3 million residents in Sacramento, Yolo, Solano, Colusa, Yuba, Sutter, Sierra, Nevada, Placer and El Dorado counties. There are no Pacific Gas and Electric gas transmission lines within the project site (PG&E 2016).

Consolidated Communications is a cable television, business and broadband communications provider serving customers across an 11-state service area (Consolidated Communications 2016). Comcast provides cable television to the area. Any number of alternative providers provide supplemental telephone, cellular, internet, and television service.

4.14.3 Regulatory Setting

FEDERAL

There are no federal regulations that pertain to public utilities that are applicable to the project.

STATE

Government Code Section 4216

California Government Code Section 4216 regulates excavations potentially affecting underground utilities including notification requirements by excavators, operator response requirements, and excavation practices. In accordance with Section 4216.1 every operator of a subsurface installation –such as water lines, gas lines, and sewer lines– must become a member of, participate in, and share in, the costs of a regional notification center. Underground Service Alert Northern California provides services to the study area. Any person planning to conduct an excavation must contact the regional notification center prior to commencing excavation (Section 4216.2). The operator of the utility must respond by locating and field marking the utility that may be affected by excavation (Section 4216.3). Section 4216.4 requires that the excavator determine the location of subsurface installations before using power driven equipment for excavating or boring, and requires the excavator to notify the operator or emergency services, as appropriate, in the event damage is discovered or caused by the excavator. Compliance with Section 4216 is required before commencement of excavation.

LOCAL

City of Roseville General Plan

The Roseville General Plan Public Facilities Element establishes standards for utility services within the City, including the following policies that relate to the proposed multi-use trail project:

Public Facilities Element – Water System

GOAL 1: Maintain a water system that adequately serves the existing community and planned growth levels, ensuring the ability to meet projected water demand and to provide needed improvements, repairs, and replacements in a timely manner

GOAL 2: Provide water services to all existing and future Roseville water utility customers. The provision of services by another provider may be considered where it is determined that such service is beneficial to the City and its utility customers or the provisions of City services is not feasible.

- **Policy 1:** Secure sufficient sources of water to meet the needs of the existing community and planned growth.
- **Policy 2:** Provide sufficient water treatment capacity and infrastructure to meet projected water demand.

- **Policy 3:** Initiate, upon 75 percent of treatment capacity, expansion studies to determine necessary improvements to meet projected water demand.

City of Roseville Municipal Code

14.08.130 Use of water for construction purposes
It is unlawful for any person to use the water service of another for construction purposes without first obtaining a permit from the environmental utilities director and the consent of the other person. All water service for construction purposes shall be metered as provided by Section 14.08.090, unless the environmental utilities director approves alternate measuring methods. All persons doing work on the public streets, public easements or rights-of-way, existing or proposed, shall apply for and be issued a permit prior to drawing water or obtaining service for construction purposes such as for the settling of earth, rock, gravel or dust.

City of Roseville Design/Construction Standards

The City of Roseville created Design and Construction Standards to provide the design engineers and contractors a reference to the City's requirements for the design and construction of civil improvement projects within the City of Roseville. It is the responsibility of the design engineers and contractors to be familiar with these standards. The Design Standards (which were last updated in January 2016) include specifications for grading, drainage, and bikeway design.

4.14.4 Impacts

METHODS OF ANALYSIS

The following analysis is primarily qualitative in nature because of the limited potential for trail construction or use to result in substantial utility usage and based on the conclusion in Section 5.2, "Growth Inducing Impacts," that the project would not induce growth that would increase utility demand.

The analysis assumes that there would not be restrooms at the trailhead or along the trail. Although there would be a drinking water fountain and shade trees at the trailhead, which would be irrigated with water supplied by the City, there would not be widespread irrigation for revegetation establishment. Therefore, the project would result in limited demand for water and would not generate wastewater.

THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the CEQA Guidelines, the proposed project was determined to result in a significant impact to utilities and service systems if it would:

- not meet the wastewater treatment requirements of the applicable Regional Water Quality Control Board;
- require or result in the construction of new water or wastewater treatment facilities, the construction of which could cause significant environmental effects;
- require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects;
- have insufficient water supplies available to serve the project from existing entitlements and resources, and new or expanded resources are needed;
- result in a determination by the wastewater treatment provider that serves or may serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments;

- be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs; or
- not comply with federal, state, and local statutes and regulations related to solid waste.

ISSUES OR POTENTIAL IMPACTS NOT DISCUSSED FURTHER

Wastewater Capacity and Treatment

The project would not generate wastewater during construction or use either directly (through use of water) or indirectly (by increasing population in the project vicinity). There would be no additional wastewater flows as a result of project development. Portable restrooms provided for construction crews during the construction period would be serviced by a contractor and wastewater would be taken offsite. Thus, no impacts would occur related to wastewater treatment capacity, meeting wastewater treatment requirements, or construction of new water or wastewater treatment facilities or expansion of existing facilities.

Natural Gas and Communications Demand

The project would not include elements that would result in demand for natural gas or communications facilities. These issues are not discussed further.

IMPACT ANALYSIS

Impact 4.14-1	Insufficient water supplies available to serve the project from existing entitlements and resources, or result in the construction of new water treatment facilities.
Applicable Policies and Regulations	General Plan Roseville Municipal Code (14.08.130)
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction activities would use water to prepare concrete, to increase the water content of soil to optimize compaction, to control dust, and to re-seed disturbed areas. Water would be obtained from existing hydrants in public rights-of-way or trucked into areas not served by public water lines. Water used for compaction and dust control would be provided via water truck from offsite sources. Minimal water would be required following project construction to establish and maintain landscape trees at the trailhead, and provide drinking water fountains at the trailhead. The proposed project would not result in the construction of new housing or other project elements that would increase the permanent resident population in the City. Therefore, the project would not generate an increased demand for water or water treatment related to use of the trail. The project would not result in the need for new or expanded water supplies or construction of new water treatment facilities.

Conclusion

Existing entitlements and resources would have sufficient capacity to support construction and use of the trail. This impact would be **less than significant**.

Alignment Option 1A
The modified trail alignment proposed under Option 1A would not alter the quantity of water required by the project. For the reasons described above for the Proposed Trail Alignment, existing entitlements and resources would have sufficient capacity to support construction and use of the trail. This impact would be **less than significant**.

Alignment Option 1C
The modified trail alignment proposed under Option 1C would not alter the quantity of water required by the project. For the reasons described above for the Proposed Trail Alignment, existing entitlements and resources would have sufficient capacity to support construction and use of the trail. This impact would be **less than significant**.

Alignment Option 5A
The modified trail alignment proposed under Option 5A would not alter the quantity of water required by the project. For the reasons described above for the Proposed Trail Alignment, existing entitlements and resources would have sufficient capacity to support construction and use of the trail. This impact would be **less than significant**.

Mitigation Measures

None required.

Impact 4.14-2	Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.
Applicable Policies and Regulations	Design/Construction Standards
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment
As discussed further in Section 4.8, “Hydrology and Water Quality,” the proposed project would increase the amount of impervious surface within the project site; reducing the amount of infiltration and increasing runoff volume. The impervious surface of the proposed trail would be a narrow linear feature surrounded by a natural area having soils with high to moderate infiltration rates. Stormwater from the proposed trail would runoff as sheet flow into the adjacent natural areas and infiltrate into the soil. The project would be required to install and maintain permanent post-construction water quality best management practices (BMPs), such as revegetation and stabilization of disturbed areas and contouring to mimic natural drainage patterns, in accordance with the Stormwater Pollution Prevention Plan (SWPPP) prepared in compliance with the City of Roseville Grading Permit and the State Water Resources Control Board National Pollutant Discharge Elimination System (NPDES) permit.

Construction Impacts
Construction of the multi-use trail would not result in the need for the construction of new stormwater drainage facilities or the expansion of existing facilities. As described in Section 4.8, “Hydrology and Water Quality,” both the City of Roseville Grading Permit and the NPDES permit require the preparation of a SWPPP, which although intended mainly to describe and ensure the implementation of BMPs to reduce or eliminate sediment and other pollutants in stormwater and non-stormwater discharges, would

also result in the implementation of measures to manage temporary stormwater discharges during the construction process. The SWPPP would be submitted to the City of Roseville and the Central Valley Regional Water Quality Control Board in conjunction with submission of the Improvement and Grading Plans and National Pollutant Discharge Elimination System permit. City staff would review the SWPPP to ensure that it meets the requirements of the City's municipal stormwater permit and the City's Urban Stormwater Quality Management and Discharge Control Ordinance (see Section 4.8, "Hydrology and Water Quality"). During construction, City staff would conduct regular inspections of the site to verify that effective stormwater BMPs and implemented and maintained.

Use-related Impacts

The rate and volume of stormwater leaving the project site would slightly increase from the existing condition as result of constructing the trail, which would involve expanded areas of impervious surface. The project would result in the permanent disturbance of 10.86 acres (see Impact 4.5-2 in Section 4.5, "Geology and Soils"), approximately 5.75 acres of which would replace existing surfaces with impervious surfaces. Because the new impervious surface area would be small in proportion to the Dry Creek watershed, and because most of the runoff from the trail would tend to infiltrate into the adjoining soil, there would be no need for the construction or expansion of new offsite stormwater infrastructure. Within the project site, the proposed trails may result in the need for new, and in some cases modified, drainage facilities. These would primarily be drainage swales with underground pipes spaced at intervals to convey surface water from the uphill side of the trail to the downhill side. These facilities are included in the description of the project and analyzed throughout this EIR.

Further, the Design/Construction Standards include Best Manage Practices to address the environmental effects associated with storm water drainage. The City's adopted Findings for Mitigating Policies and Standards include a determination that the requirements of the Design/Construction Standards would mitigate this potential impact to a less-than-significant level (City of Roseville 2003). In addition, the proposed trail would also serve as a paved, all-weather access for City maintenance crews to remove blockages within the stream channel, which would have the beneficial effect of facilitating the City's ability to maintain conveyance of stormwater.

Conclusion

Prior to construction a SWPPP would be prepared and City staff would conduct regular inspections of the site to verify that effective stormwater BMPs are implemented and maintained. The proposed project would not alter existing drainage patterns except for the installation of drainage swales where needed to ensure slope stability, as required by City of Roseville Design Standards. Therefore, the proposed project would have a **less-than-significant** impact on stormwater drainage.

Alignment Option 1A

Alignment Option 1A would be subject to the same requirements for preparation of a SWPPP to manage stormwater during construction and use as the Proposed Trail Alignment. Further, as described above for the Proposed Trail Alignment, the new impervious surface area would be small in proportion to the Dry Creek watershed. And, because most of the runoff from the trail would tend to infiltrate into the adjoining soil, there would be no need for the construction or expansion of new offsite stormwater infrastructure. For the reasons described above for the Proposed Trail Alignment, this option would not result in the construction of new stormwater drainage facilities or expansion of existing facilities, and the impact would be **less than significant**.

Alignment Option 1C

Alignment Option 1C would be subject to the same requirements for preparation of a SWPPP to manage stormwater during construction and use as the Proposed Trail Alignment. Further, as described above for the Proposed Trail Alignment, the new impervious surface area would be small in proportion to the Dry Creek watershed. And, because most of the runoff from the trail would tend to infiltrate into the adjoining soil, there would be no need for the construction or expansion of new offsite stormwater infrastructure. For the reasons described above for the Proposed Trail Alignment, this

option would not result in the construction of new stormwater drainage facilities or expansion of existing facilities, and the impact would be **less than significant**.

Alignment Option 5A

Alignment Option 5A would be subject to the same requirements for preparation of a SWPPP to manage stormwater during construction and use as the Proposed Trail Alignment. Further, as described above for the Proposed Trail Alignment, the new impervious surface area would be small in proportion to the Dry Creek watershed. And, because most of the runoff from the trail would tend to infiltrate into the adjoining soil, there would be no need for the construction or expansion of new offsite stormwater infrastructure. For the reasons described above for the Proposed Trail Alignment, this option would not result in the construction of new stormwater drainage facilities or expansion of existing facilities, and the impact would be **less than significant**.

Mitigation Measures

None required.

Impact 4.14-3	Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs or fail to comply with federal, state, and local statutes and regulations related to solid waste.
Applicable Policies and Regulations	City of Roseville Design/Construction Standards
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts

Clearing vegetation and removal of existing asphalt and gravel during construction would generate small amounts of solid waste, but this would not measurably affect landfill capacity because the amounts would not be substantial and would occur over a short period of time. Solid waste would be disposed of at the Western Regional Sanitary Landfill, which complies with all federal, state, and local regulations. As specified in the City's Design/Construction Standards for solid waste (Section 151), the City would ensure that its contractor meets with the designated Roseville Environmental Utilities inspector prior to beginning work to ensure that an approved plan is in place to store and dispose of all construction debris, according to relevant federal, state, and local statutes.

Use-related Impacts

As stated above, the proposed project would not result in the construction of new housing or other project elements that would increase the permanent resident population in the City. Therefore, the project would not generate an increased demand for solid waste disposal related to a new population. Trash receptacles would be located at the trailhead. The amount of trash collected would be minimal and would not substantially reduce the lifespan of the Western Regional Sanitary Landfill.

Conclusion

Solid waste generated by construction and use of the multi-use trail would be minimal. This impact would be **less than significant**.

Alignment Option 1A
Option 1A would not substantially alter the potential for construction of the trail to produce construction debris and would have no effect on the availability of trash receptacles at the trailhead. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Alignment Option 1C
Option 1C would not substantially alter the potential for construction of the trail to produce construction debris and would have no effect on the availability of trash receptacles at the trailhead. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Alignment Option 5A
Option 5A would not substantially alter the potential for construction of the trail to produce construction debris and would have no effect on the availability of trash receptacles at the trailhead. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Mitigation Measures

None required.

Impact 4.14-4	Result in a substantial increase in electrical demand.
Applicable Policies and Regulations	None
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment
Lighting would be installed where the trail passes under roadways and would be covered for a substantial span, such as the Interstate 80 and Rocky Ridge Drive undercrossings. Lights could also be installed on the bridges, at at-grade road crossings (Oakridge Drive, N. Cirby Way, Champion Oaks Drive), and in the trailhead parking lot. Conventional high-pressure sodium streetlights typically draw between 70 and 200 watts apiece for an average of 11 hours per day. If high-efficiency light-emitting diodes (LED) models are used, energy savings of 56 to 62 percent could be expected compared to high-pressure sodium streetlights (Sunnyvale et al. 2009). New lighting would connect to existing infrastructure. If required, conduit would be extended during grading for trail construction and would be placed under the trail shoulders.

In California, the household average daily energy consumption used for lighting is 3,804 watt-hours (U.S. Department of Energy 2012). Conservatively assuming a maximum of eight lights at the trailhead parking lot, four lights at the two identified undercrossings and at each of the eight bridges and three at-grade crossings, there would be 60 lights drawing a maximum of 12,000 watt-hours daily. If LED lights are used, this demand could be reduced to 5,280 watt-hours. Therefore, use of the project would result in a similar energy demand for lighting as between 1.4 to 3.2 residences.

Conclusion
The amount of electricity needed for the proposed lights would not have a substantial effect on electricity demand. This impact would be **less than significant**.

Alignment Option 1A
Option 1A would not substantially alter the electrical demand of the trail, although this option would require one less bridge, which would result in a nominal decrease in electricity demand because of fewer lights. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Alignment Option 1C
Option 1C would not substantially alter the electrical demand of the trail. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Alignment Option 5A
Option 5A would not substantially alter the electrical demand of the trail. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Mitigation Measures
None required.

Impact 4.14-5	Disrupt existing utility service.
Applicable Policies and Regulations	PRC 4216
Significance with Policies and Regulations	Proposed Project: Less than significant Alignment Option 1A: Less than significant Alignment Option 1C: Less than significant Alignment Option 5A: Less than significant
Mitigation Measures	None (Proposed Project, Option 1A, Option 1C, Option 5A)
Significance after Mitigation	Less than significant (Proposed Project, Option 1A, Option 1C, Option 5A)

Proposed Trail Alignment

Construction Impacts
Effects on utilities during construction could include lack of access to existing utilities, accidental disruption or utility rupture, and planned outages and relocations. No high priority utilities, as described in California Government Code, Section 4216 and adopted in the California Department of Transportation *Project Development Procedures Manual* (2016), including high-pressure natural gas lines, petroleum pipelines, pressurized sanitary sewer pipelines, electric supply lines over 60 kV, and hazardous materials pipelines that are potentially harmful to workers or the public if damaged, have been identified on the project site. Where utility lines are located within the project site, construction activities could temporarily interfere with the ability of City Public Works Department staff to perform maintenance activities. However, the project would be required to follow the City's project processing guidelines, which includes early consultation with all City service providers related to potential temporary obstruction of access.

Constructing the Dry Creek Greenway East Trail Project could result in scheduled and accidental interruptions of utility services. The City would positively locate public utilities within the potential impact area (by probing, potholing, electronic detection, as-built designs, or to other means) prior to construction, in compliance with state law (i.e., California Government Code 4216). The potential for disruption of utility systems during construction is low because of the established practices of utility identification.

Utilities along the corridor that would require relocation or modifications during construction include an existing sewer trunk line. Where the Proposed Trail Alignment crosses or parallels the sewer line, adjustments to the grade of the trail or manholes may be needed, or the trail alignment would be shifted slightly to avoid the manholes. Other facilities including water, telecommunications, and gas lines may also require relocation and/or adjustments of valves and manholes to grade.

Existing gas and water lines at the Darling Way Bridge and Sunrise Avenue Bridge would need to be relocated. Standard, mandatory construction techniques have been established to identify and avoid conflict with, or disruption of, existing utilities. Identification of utilities in this manner is a standard condition of construction approvals. Therefore, although the project would require the relocation of existing utility facilities and would occur in an area that includes underground utilities, because the exact location of all utility lines within project boundaries would be required to be identified before grading or earthmoving activities, contractors would avoid conflicts with these utilities. Relocations would occur in coordination with the resource provider to limit the potential for temporary service disruptions to the greatest extent possible.

Use-related Impacts

Utilities within the permanent project footprint would be either relocated or modified so that there is no damage or impairment to the use of these utilities. During use, the project would limit the potential for lengthy outages. Since Class I trails are designed to facilitate maintenance vehicle access to open space per the City's Design/Construction Standards, establishing trails in proximity to utility lines would benefit maintenance and emergency access to the lines.

Conclusion

Although the project would require the relocation of existing utility facilities, relocations would occur in coordination with the resource provider to limit the potential for temporary service disruptions to the greatest extent possible. The project would also be designed to facilitate maintenance vehicle access to benefit maintenance and emergency access to the lines. This impact would be **less than significant**.

Alignment Option 1A

Option 1A would not substantially alter the potential for the trail to conflict with existing utilities. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Alignment Option 1C

Option 1C would not substantially alter the potential for the trail to conflict with existing utilities. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Alignment Option 5A

Option 5A would not substantially alter the potential for the trail to conflict with existing utilities. The impact would be **less than significant** for the same reasons discussed above from the Proposed Trail Alignment.

Mitigation Measures

None required.

5 OTHER CEQA CONSIDERATIONS

5.1 CUMULATIVE IMPACTS

The State CEQA Guidelines (Section 15130) requires that an environmental impact report (EIR) discuss cumulative impacts of a project and determine whether the project's incremental effect is "cumulatively considerable." The definition of cumulatively considerable is provided in Section 15065(a)(3):

> "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

According to the State CEQA Guidelines (Section 15130[b])

> The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the project alone. The discussion should be guided by standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact.

For purposes of this EIR, the project would have a significant cumulative effect if it meets either one of the following criteria:

- The cumulative effects of related projects (past, current, and probable future projects) without the project are not significant but the project's incremental impact is substantial enough, when added to the cumulative effects, to result in a significant impact; or
- The cumulative effects of related projects (past, current, and probable future projects) without the project are already significant and the project represents a considerable contribution to the already significant effect. The standards used herein to determine "considerable contribution" are that the impact either must be substantial or must exceed an established threshold of significance.

Mitigation measures are to be developed, where feasible, that reduce the project's contribution to cumulative effects to less than considerable.

5.1.1 Geographic Scope of the Cumulative Analysis

The analysis of cumulative environmental impacts associated with development of the proposed project addresses the potential incremental impacts of the project in combination with those of other past, present, and probable future projects and land use changes. The geographic area that could be affected by development of the proposed project varies depending on the type of environmental resource being considered. The general geographic area associated with various environmental effects of construction and operation of the proposed project defines the boundaries of the area used for compiling the list of projects considered in the cumulative impact analysis. Table 5-1 presents the general geographic areas associated with the different resources addressed in this Draft EIR and evaluated for this cumulative analysis.

Table 5-1 Geographic Scope of Cumulative Impacts

Resource Issue	Geographic Area
Aesthetics	Local (immediate project vicinity)
Air Quality	Regional (Sacramento Valley Air Basin —pollutant emissions that have regional effects) Local (immediate project vicinity—pollutant emissions that are highly localized)
Biological Resources	Regional (Central Valley)
Cultural Resources	Regional (Central Valley)
Geology and Soils	Local (immediate project vicinity)
Greenhouse Gas Emissions and Climate Change	Global
Hazards and Hazardous Materials	Local (immediate project vicinity)
Hydrology and Water Quality	Local (immediate project vicinity—local watershed)
Land Use and Planning	Local (City of Roseville)
Noise	Local (immediate project vicinity)
Public Services	Local (City of Roseville)
Recreation	Local (City of Roseville)
Utilities	Regional (regional utility area)

Source: Data compiled by Ascent Environmental in 2015

5.1.2 Analysis of Cumulative Impacts

Aesthetics

Cumulative Impact 4.1-1: Substantially degrade the visual character or quality of the site and its surroundings.

Aesthetic and visual resources impacts are project-specific and highly localized. The proposed project would be aligned within the creek corridors of developed neighborhoods and business districts in the City of Roseville. With the exception of a few scattered parcels, the properties surrounding the creek corridors are fully developed. The properties adjacent to the proposed trail corridor include a mix of residential, commercial, parks, open space and public/quasi-public uses. Because of the project site's topography and vegetation, future projects outside of the immediate project vicinity, which is largely developed, would not be visible in combination with the proposed project. Therefore, the proposed project and alignment alternatives would not result in a considerable contribution to the cumulative degradation of the visual character or quality of the site. This cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.1-2: Create a new source of substantial light or glare that would adversely affect day or nighttime views of the area.

The project may include lit undercrossings in locations where the trail passes under roadways, including Darling Way east of Riverside Avenue, Interstate 80 (I-80) north of Cirby Way, Sunrise Avenue south of Coloma Way, Rocky Ridge Drive north of Cirby Way, and Old Auburn Road north of South Cirby Way. Bridges may also be illuminated and would have a weathered steel finish to blend into the natural environment and not cause glare. Lighting may also be installed at the trailhead parking lot and at-grade roadway crossings to enhance visibility of bicyclists and pedestrians to motorists. Lighting of the complete trail alignment is not proposed. In adherence with adopted City standards, all

proposed lighting would be limited to the amount required to safely illuminate roadways and sidewalks. Therefore, project lighting would be localized and would not contribute considerably to cumulative increases in light or glare. This cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Air Quality

Cumulative Impact 4.2-1: Short-term construction-generated emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$.

Ozone impacts are the result of cumulative emissions from numerous sources in the region and transported from outside the region. Ozone is formed in chemical reactions involving oxides of nitrogen (NO_X), reactive organic gases (ROG), and sunlight. All but the largest individual sources emit NO_X and ROG in amounts too small to have a measurable effect on ambient ozone concentrations by themselves. However, when all sources throughout the region are combined, they can result in ambient concentration of ozone that exceed the national and state standards. PM_{10} and $PM_{2.5}$ have a similar cumulative regional emphasis when particulates are entrained into the atmosphere and build to unhealthful concentrations over time. PM_{10} and $PM_{2.5}$ also have the potential to cause local impacts during periods of dry conditions accompanied by high winds and during periods of heavy earth disturbing activities. PM_{10} and $PM_{2.5}$ may have cumulative local impacts if, for example, several unrelated grading or earth moving activities are underway simultaneously at nearby sites. Operational-related PM_{10} and $PM_{2.5}$ are less likely to result in local cumulative impacts as operational sources of PM_{10} and $PM_{2.5}$ tend to be spread throughout the region (i.e., vehicles traveling on roads), not affecting any one receptor. Therefore, emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$ from cumulative development are significant in the air basin; the discussion below addresses whether the project's contribution of these criteria air pollutants and precursors are considerable.

Table 4.2-3 summarizes the daily emissions of ROG and NOx from project construction estimated for each year of construction activity. Emissions generated by construction would be below Placer County Air Pollution Control District's (PCAPCD) recommended CEQA project-level significance thresholds of 82 lbs/day of ROG and 82 lbs/day of PM_{10}. However, construction emissions would exceed PCAPCD's recommended CEQA project-level significance threshold of 82 lbs/day of NO_x. Implementation of Mitigation Measure 4.2-1 would reduce the magnitude of this impact to a less-than-significant level. Because the area surrounding the proposed project and alternate alignments is mostly built out and because construction emissions would be temporary, the short-term construction-generated emissions would not result in a considerable contribution to a cumulative impact. This cumulative impact would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.2-2: Long-term use-related emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$.

Over the long term, the proposed multi-use trail with accompanying parking lot is expected to decrease motor vehicle travel. Emissions generated by trail use would be below PCAPCD's project-level significance thresholds, and the project would not substantially contribute to air pollutant concentrations that exceed the National Ambient Air Quality Standards (NAAQS) or California Ambient Air Quality Standards (CAAQS). Therefore, the proposed project and alignment alternatives would not contribute to a cumulative increase in emissions, and this cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.2-3: Generation of local mobile-source CO emissions.

Concentrations of carbon monoxide (CO), which are examined under Impact 4.2-3, are pollutants of localized concern because CO disperses rapidly with distance from the source under normal meteorological conditions. Thus, it is unlikely that the concentration of CO at a single receptor would be the result of more than one source of CO, unless multiple sources of CO are located close together. The analysis under Impact 4.2-3 examines whether changes in vehicle trips generated under the

proposed project could result in localized CO concentrations that exceed the NAAQS and CAAQS for CO. The analysis determined that, over the long term, it is expected that trail use would contribute to decreased motor vehicle travel. Therefore, the proposed project would not result in a considerable contribution to a cumulative impact. This cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.2-4: Exposure of sensitive receptors to toxic air contaminant (TAC) emissions.

Toxic air contaminants (TACs), which are examined under Impact 4.2-4, are also pollutants of localized concern. Diesel particulate matter emissions are the primary TAC of concern regarding the construction and operation of new urban land uses and infrastructure. The project would not be a substantial source of TAC emissions. However, a portion of the proposed trail improvements would be located near or directly adjacent to the I-80 freeway, which could result in the exposure of trail users to mobile source TAC emissions. The exposure period of trails users would be relatively short and temporary in nature. Therefore, the proposed project would not result in a considerable contribution to a cumulative impact. This cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Biological Resources

Generally, the geographic extent of cumulative impacts on biological resources consists of the City of Roseville, western Placer County and the Central Valley region of California that supports similar biological resource values and functions to those of the project area. Past and present actions by humans have substantially altered biological resources in the Central Valley region of California. Past, present, and foreseeable future urbanization in Roseville and western Placer County has contributed substantially to the loss of grassland, wetland, and agricultural habitats that are important to many species in the region.

Cumulative Impact 4.3-1: Disturbance and loss of waters of the United States, waters of the state, and riparian habitat.

Executive Order 11990, Protection of Wetlands (1997), calls for no net loss of habitats referred to as wetlands and established a policy to avoid adverse effects on wetlands wherever there is a practicable alternative. Permanent impacts to jurisdictional wetlands would be mitigated with implementation of Mitigation Measure 4.3-1 to comply with the Clean Water Act and the standard of no net loss of wetlands. Additionally, impacts to wetlands and other waters and associated riparian habitat have been minimized during project design and is limited to bridge footings and stream bank stabilization/restoration measures intended to increase habitat function over the long term. The project would not isolate or fragment any wetlands or other waters, or change the function of the urban creek corridor. As a result of the mitigation to achieve no net loss of wetlands, and project design to ensure minimal wetlands impacts, the project contribution to the cumulative loss of wetlands and Waters would not be cumulatively considerable, and this cumulative impact would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.3-2: Interfere substantially with the movement of Central Valley steelhead and Central Valley fall-run Chinook salmon.

With avoidance and implementation of minimization measures, the proposed project would not substantially affect the distribution, population viability, or the regional population of Central Valley Steelhead, or Central Valley fall-run Chinook salmon; or cause a change in species diversity locally or regionally. Construction-related effects would be temporary and would be minimized with implementation of Mitigation Measure 4.3-2. Therefore, the project's contribution to the cumulative impact would not be cumulatively considerable, and this cumulative impact would be less than significant with mitigation for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.3-3: Disturbance or loss of Valley Elderberry Longhorn Beetle or its habitat.

With avoidance and implementation of Mitigation Measure 4.3-3, the proposed project would not substantially affect the distribution, population viability, or the regional population of valley elderberry longhorn beetle; or cause a change in species diversity locally or regionally. Therefore, the project's contribution to the cumulative impact would not be cumulatively considerable, and this cumulative impact would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.3-4: Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors; Cumulative Impact 4.3-5: Disturbances to special-status song birds; Cumulative Impact 4.3-6: Disturbance or loss of Western pond turtle; and **Cumulative Impact 4.3-7: Disturbance or loss of special-status bats – pallid bat and silver-haired bat.**

The proposed project would result in the construction and operation of a multi-use trail in areas that provide suitable habitat for special-status wildlife, as addressed in the project-specific impact in Section 4.3. If special-status wildlife are present in those areas, project construction could cause the disturbance or loss of those species. Implementation of the proposed project and the cumulative projects in the region would result in conversion and fragmentation of habitat, introduction of additional non-motorized and pedestrian traffic, sources of noise, and other effects that could disturb the foraging and movement patterns of individuals, affect breeding activities and reproductive success, cause direct mortality or injury, and disturb or remove suitable habitat for some special-status wildlife species. When combined with the cumulative projects with similar biological effects, implementation of the proposed project without mitigation could have an adverse cumulative effect on special-status wildlife species. However, Mitigation Measures 4.3-4, 4.3-5, 4.3-6, and 4.3-7 require conducting focused preconstruction surveys for special-status wildlife and, if needed, limiting construction operations during the sensitive breeding periods. Implementation of these measures would avoid the potential disturbance or loss of individuals, nests, and roost sites of these species during construction of the proposed project. Furthermore, implementation of Mitigation Measures 4.3-1, 4.3-2, and 4.3-8 requires that sensitive habitats (i.e., wetlands, riverine, riparian, valley oak woodland) are avoided to the extent feasible and that sensitive habitats that cannot be avoided are restored following construction, or if the habitat cannot be restored, that the City compensates for unavoidable losses. With recommended mitigation measures, the project would not substantially affect the distribution, breeding productivity, population viability, or the regional population of any special-status species; nor would it cause a change in species diversity locally or regionally, either directly through loss of individuals or indirectly through habitat modification. Therefore, with implementation of project-specific mitigation measures, the project's contribution to the cumulative impacts on special-status species would not be cumulatively considerable, and these cumulative impacts would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.3-8: Cumulative disturbance or loss of City protected trees, Valley Oak Woodland and other Sensitive Vegetation Alliances and Associations; and **Cumulative Impact 4.3-9: Cumulative Disturbance or loss of special-status plants – Sanford's arrowhead.**

Construction of the proposed trail in combination with other cumulative development in the region could result in permanent loss or temporary disturbance of wetland, perennial stream, riparian, and oak woodland habitats. These potential impacts would be cumulatively significant. Construction activities for the proposed project and other cumulative projects would be required to comply with existing federal, state, and local regulations and permitting requirements that protect wetland, riparian, and other sensitive habitats through avoidance, restoration, enhancement, and other means such that sensitive habitat values are maintained. For the proposed project, implementation of Mitigation Measures 4.3-1, 4.3-2, and 4.3-8 requires that sensitive habitats (i.e., wetlands, riverine, riparian, valley oak woodland) are avoided to the extent feasible and that sensitive habitats that cannot be avoided are restored

following construction, or if the habitat cannot be restored, that the City compensates for unavoidable losses. Mitigation Measure 4.3-9 would require the City to identify and avoid Sanford's arrowhead plants or provide compensation for loss of Sanford's arrowhead plants through enhancement of existing populations, creation, conservation easements and management of offsite populations. Because the project would implement the protective provisions of existing regulations as well as project-specific design features and mitigation measures, the project's contribution to these cumulative impacts would not be cumulatively considerable, and these cumulative impacts would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.3-10: Impacts on movement of native resident or migratory fish or wildlife species or migratory wildlife corridors or impede the use of native wildlife nursery sites.

All trail maintenance activities would be conducted consistent with the City's Open Space Preserve Overarching Management Plan and related US Fish and Wildlife Service Biological Opinion and the City's California Department of Fish and Wildlife Streambed Alteration Agreement for Routine Maintenance. The Overarching Plan and Routine Maintenance Agreement include requirements for worker training and pre-maintenance nesting surveys as well as monitoring and reporting when nests are found. In addition, the creation of impervious surfaces associated with the Proposed Trail Alignment could result in indirect impacts to Dry, Linda, and Cirby Creeks and other downstream waters as a consequence of runoff that could affect Central Valley steelhead and Central Valley fall-run Chinook salmon. Therefore, impacts on terrestrial wildlife movement corridors and/or terrestrial wildlife nursery sites would be less than significant. The project would have to secure permits from federal and state agencies (i.e. Sections 401, 404, and 1602 permits) that would restrict work windows to those when these species are not expected to be within the stream corridor and would require the City to mitigate for the loss of aquatic and riparian habitat, it would not result in substantial effects migratory fish movement or to their breeding or nursery sites. Therefore, with implementation of project-specific Mitigation Measures 4.3-1 and 4.3-2, the project's contribution to cumulative impacts on special-status species would not be cumulatively considerable, and this cumulative impact would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cultural Resources

The cumulative context for the cultural resources analysis considers a broad regional system of which the resources are a part. The cumulative context for archaeological resources and human remains is the Nisenan territory. Nisenan territory comprised the drainages of the Yuba, Bear, and American rivers, and the lower drainages of the Feather River.

Cumulative Impact 4.4-1: Cumulatively disturb archaeological resources, including tribal cultural resources.

Because all significant archaeological resources are unique and nonrenewable members of finite classes, all adverse effects or negative impacts erode a dwindling resource base. The loss of any one archaeological site affects all others in a region because these resources are best understood in the context of the entirety of the cultural system of which they are a part. The boundaries of an archaeologically important site extend beyond the site boundaries. As a result, a meaningful approach to preserving and managing cultural resources must focus on the likely distribution of cultural resources, rather than on project or parcel boundaries. The cultural system is represented archaeologically by the total inventory of all sites and other cultural remains in the region. The proposed project, in combination with other development in the region, could cause a substantial adverse change in the significance of an historical resource or unique archaeological resource. Project-related earth-disturbing activities could potentially damage archaeological resources; however, implementation of Mitigation Measure 4.4-1 would ensure that the proposed project would not contribute to a cumulative effect on cultural resources because it would require the performance of professionally accepted and legally compliant procedures for the discovery of previously undocumented significant archaeological resources. Thus, the project's contribution to cumulative impacts on archaeological resources would not

be considerable, and this cumulative impact would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.4-2: Cumulative accidental discovery of human remains.

Although no evidence suggests that any prehistoric- or historic-era, marked or unmarked human interments are present within or in the immediate vicinity of the proposed multi-use trail alignment, the proposed project, in combination with other development in the region, could contribute to the disturbance of human remains because of project-related construction activities. However, compliance with California Health and Safety Code Sections 7050.5 and 7052 and Public Resources Code (PRC) Section 5097 and Mitigation Measure 4.4-2 would ensure that the treatment and disposition of the remains occur in a manner consistent with Native American Heritage Commission guidance. Thus, the project's contribution to cumulative impacts on human remains would not be considerable, and this cumulative impact would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Geology and Soils

Geology, soils, and paleontological resource impacts are project specific and highly dependent on localized geologic and soil conditions. Therefore, the geographic extent for considering cumulative impacts for these resources is project sites within the vicinity of the proposed trail alignment.

Cumulative Impact 4.5-1: Cumulatively expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving: rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, or landslides; and **Cumulative Impact 4.5-3: Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially cumulatively result in on-or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.**

With the adoption of construction practices consistent with the City's Design and Construction Standards, and the incorporation of design features to prevent localized creep, slumping, and small landslides, the potential effects of localized ground failure would be less than significant. Seismic risk in the City is low and the project would not increase the number of people living or working in the region who would be exposed to seismic hazards. Therefore, the proposed project would not result in a considerable contribution to a cumulative impact. This cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.5-2: Cumulatively result in substantial soil erosion or the loss of topsoil; and **Cumulative Impact 4.5-4: Be located on expansive soil, creating a cumulatively substantial risk to life or property.**

The project, like all projects that would disturb more than 1 acre, would be required to adhere to the erosion control requirements of the National Pollutant Discharge Elimination System (NPDES) Construction General Permit. The permit requires construction projects to implement best management practices (BMPs) to control earthwork activities and prevent erosion. For this reason, the City and adjacent cities have generally found geologic hazards not to be substantial issues in the project vicinity. The project, as well as other current and future projects, would implement BMPs and would adhere to the NPDES Phase II MS4 drainage control requirements during the operational phases. Through these actions, the overall contribution to erosion and loss of topsoil would not be substantial and there would be no significant cumulative impact. Therefore, the proposed project would not result in a considerable contribution to a cumulative impact. This cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.5-5: Cumulatively destroy a unique paleontological resource.

Paleontological resources have been discovered in the region, and some regional geologic units are considered to have a high paleontological sensitivity. Unique paleontological resources are a nonrenewable resource. Destruction or loss of these resources during construction would contribute to a regional cumulative loss because paleontological resources are finite and contribute to our scientific repository of knowledge regarding the region. As described under Impact 4.5-5, the types of soil formations that underlay the project site have a low sensitivity for important paleontological resources, and there is no evidence to suggest that the proposed project, in combination with past, present, and reasonably foreseeable future projects, would result in a significant cumulative impact on paleontological resources. Therefore, the project's contribution to a cumulative impact on paleontological resources would not be cumulatively considerable, and this cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Greenhouse Gas Emissions and Climate Change

Cumulative Impact 4.6-1: Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

The quantity of greenhouse gas (GHG) emissions required to induce climate change is not precisely known; however, it is clear that the quantity is enormous, and no single project alone would measurably contribute to a noticeable incremental change in the global average temperature, or to global, local, or micro climate. Therefore, from the standpoint of CEQA, the contributions of any single project's GHG emissions to global climate change are inherently cumulative. Accordingly, the project-level impact analysis in Section 4.6 addresses whether the project's contribution of GHG emissions to global climate change is cumulatively considerable. As noted, the project's GHG emissions would not exceed the mass emission thresholds. In addition, the project would be consistent with adopted long-range plans and policies designed to reduce communitywide GHG emissions, consistent with Assembly Bill 32 and other local and State policies. Therefore, the project would not result in a cumulatively considerable contribution to a significant cumulative impact related to global climate change.

Hydrology and Water Quality

Cumulative Impact 4.8-1: Cumulative potential to violate any water quality standards or waste discharge requirements, or to otherwise degrade water quality.

Implementing the proposed project would result in construction activity and ground disturbance that would increase the potential for pollution of waterways. However, because the proposed project and all other foreseeable development and infrastructure projects in the region would be required to comply with applicable protective regulations, the potential for construction-related adverse water quality impacts would not be cumulatively considerable. Runoff from urban development can carry pollutants that can degrade water quality. However, because State Water Resources Control Board (SWRCB), Central Valley Regional Water Quality Control Board (CVRWQCB), and City of Roseville regulations are in place to minimize erosion and transport of sediment and other pollutants during construction, and appropriate project-specific measures would be defined to secure necessary permits and approvals, construction-related impacts would be minimized and would not result in substantial adverse effect on water quality. Additionally, water quality effects from long-term use and maintenance of the trail would be minimized through compliance with the existing California Department of Fish and Wildlife (CDFW) Streambed Alteration Agreement for the City of Roseville Routine Maintenance of Streams and Drainage Facilities project (Agreement). This Agreement covers routine activities, such as trail maintenance, channel alignment maintenance, debris removal, facilities repair or replacement, vegetation control in channels, minor erosion control work, and bridge washing and painting. Development projects in the area would be required to comply with low-impact development (LID) measures in Roseville and western Placer County (including in the Placer County LID Manual and the *West Placer Storm Water Quality Design Manual*) that implement the CVRWQCB municipal NPDES

permits. Because the proposed project and other foreseeable projects within the region would be required to comply with water quality measures for construction and operation, the proposed project would not make a considerable contribution to a significant cumulative impact related to water quality. This cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.8-2: Cumulative potential to substantially alter existing drainage patterns or to create runoff volume that would exceed the capacity of drainage systems or result in erosion, siltation, or flooding; and **Cumulative Impact 4.8-3: Cumulatively alter or redirect 100-year flood flows, or expose people or structures to risk of injury or damage by flood waters.**

The cumulative context for hydrologic impacts is the Dry Creek Watershed. The Dry Creek Watershed has experienced significant degradation as urban development has increased (Placer County 2003). Many stream channels have been modified or straightened and much of the native vegetation has been removed. As urban development has spread through the watershed, impervious surfaces have increased resulting in a corresponding increase in peak stormwater flows and bank erosion. This has resulted in an existing cumulative adverse condition. Open space preservation, prohibitions against development within floodways, and stream restoration projects, have begun to improve hydrologic conditions within the watershed. The development of multi-use trails within the 100-year flood plain was identified by the Dry Creek Watershed Resources Management Plan (Placer County 2003) as a potential opportunity to improve existing conditions through long-term management.

Federal, State, and Local protections for water bodies and flood plains have strengthened over the years. The proposed project would be required to comply with stormwater runoff controls and water quality objectives during construction and use of the proposed multi-use trail through compliance with SWRCB NPDES and City of Roseville Permit Conditions. These permits also require that the potential increase in stormwater runoff generated by the trails impervious surfaces be infiltrated by the adjacent natural area and through the installation of permanent BMPs. Finally, the trail would comply with the City of Roseville Design Standards for Bikeways in Floodplains and would not create a significant increase in base flood elevations. For these reason, the proposed project would not contribute to the existing cumulative adverse hydrologic condition within the Dry Creek Watershed. Therefore, the project's contribution to a cumulative impact would not be cumulatively considerable, and this cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Land Use

Cumulative Impact 4.9-1: Consistency with applicable land use plans.

The City of Roseville General Plan provides goals and policies related to land use in the City. The Zoning Ordinance implements the City's General Plan and Specific Plans, and establishes regulations governing the use, placement, spacing and size of land and buildings. The Zoning Ordinance also describes various permits available through the Planning Division, when they are needed, and the process for obtaining permits. The City's Bicycle Master Plan includes a plan for development of over 28 miles of Class I trails in Roseville, including the Dry Creek Greenway East Trail. The General Plan, Zoning Ordinance, and Bicycle Master Plan are long-term planning documents, therefore buildout under these plans is inherently cumulative in nature. In the course of environmental review, permitting, and approval, projects proposed in the City are reviewed for consistency with adopted land use guidance documents. Land use compatibility was considered for most of the facilities proposed in the Bicycle Master Plan during the adoption of the 2035 General Plan, and the City's various specific plans. The Bicycle Master Plan proposed several new Class I bike trails, including the proposed project, that were not previously included within any of these documents. The new Class I bike trails included in the 2008 Bicycle Master Plan were proposed within open space and park parcels. Class I bike trails are considered primary uses of open space areas and are principally permitted as within open space, parks and most other land uses as part of the Resource Related Recreation use type. The designation of new

bike trails within open space and parks and recreation areas would not result in a conflict with any adopted land use plan, policy or regulation, and the proposed project would be consistent with the intent of the City of Roseville General Plan, Zoning Ordinance, and Bicycle Master Plan. Therefore, **no cumulative impact** related to conflicts with any relevant land use plans, policies, designations, or zoning would occur under the proposed project, Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.9-2: Physically divide an established community.

As discussed under the project-specific impact, although constructing the multi-use trail would create a linear travel corridor, the corridor would provide linkages through, rather than divide, the community. In addition, the project would not involve any change in access to the parcels requiring right-of-way acquisition or construction easements, and this was identified as a beneficial impact. Because no significant impact to the established community would occur on a project-specific basis, the project would not contribute to any potential cumulative land use impacts. Therefore, the project's contribution to a cumulative impact would not be cumulatively considerable, and this cumulative impact would be less than significant for the proposed project and Option 1A, Option 1C, and Option 5A.

Noise

Cumulative Impact 4.10-1: Cumulative short-term construction-related noise.

Noise dissipates rapidly from its source. For construction impacts, only the immediate area around the project site would be included in the cumulative context. For example, construction impacts related to noise dissipate/attenuate quickly as the distance between the construction site and the receptor increases. As a result, only those construction projects located within a distance of no more than 1,000 feet would be considered within the cumulative context of construction noise. Cumulative impacts from construction-generated noise could result if construction activities of other planned projects were to take place at the same time in close proximity to the proposed project such that noise effects would cumulatively combine. The project area is predominately built out and no large-scale development and specific plan-type projects are planned for the surrounding area during the same construction timeline as the proposed project. As a result, the potential for the project construction noise to combine with other offsite construction activities at nearby receptors is considered unlikely. Implementation of Mitigation Measure 4.10-1 would reduce the magnitude of the project-specific noise impact, but not to a less-than-significant level. Recognizing the significant unavoidable project noise impact during the construction period, even though a combining of the project's construction noise with other temporary activities or substantial noise sources would be unlikely, for CEQA purposes the potential cannot be dismissed for a contribution by the significant project noise to other nearby noise generation, Therefore, this would remain a **potentially significant and unavoidable cumulative impact**.

Cumulative Impact 4.10-2: Cumulative long-term increases in use-related noise.

Long-term uses associated with the proposed project would be non-motorized activities and would not expose persons to or generate use-related noise levels in excess of adopted standards. Therefore, the project's contribution to a cumulative impact would not be cumulatively considerable, and the cumulative noise impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.10-3: Exposure to construction-related groundborne vibrations.

Cumulative impacts from construction-generated vibration could result if other future planned construction activities were to take place very close to other construction activities and cumulatively combine with construction vibration from the project. Vibration associated with construction activities is of primary concern within proximity (e.g., 550 feet) of sensitive land uses. At increasing distances from the source, vibration levels dissipate rapidly and have less potential to cause disturbance to people or damage to structures. In addition, vibration generated from construction is typically associated with foundation

construction activities that only occur during discrete phases of construction and for intermittent and brief periods at a time. For these reasons, and because of the unlikelihood of construction activities to combine during the proposed project timeframe, vibration impacts would remain local and would not combine with vibration source from other construction activities. Project-generated vibration levels would be mitigated with implementation of Mitigation Measure 4.10-3 for the proposed project and Option 1A and 1C. The impact would remain significant and unavoidable under Option 5A. However, because vibration levels would be limited to the vicinity of construction activities and would be minimized to the extent feasible, the cumulative short-term construction-generated vibration impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Public Services

Cumulative Impact 4.11-1: Effects on fire protection and emergency services; and Cumulative Impact 4.11-2: Effects on police protection services.

The cumulative context for police protection, fire protection, and emergency services is the city of Roseville, which is the service area for both the City of Roseville Fire Department and Police Department. As described in Section 4.11, Public Services, the City of Roseville is currently capable of meeting public service needs, including law enforcement and fire protection. As described in Impacts 4.11-1 and 4.11-2, construction and operation of the Dry Creek Greenway East Trail Project would not increase the risks to public safety associated with fire and public safety issues. Thus, implementation of the project would not contribute to a cumulative impact in these areas because the project site is already served by these agencies and the project would not increase the service area or add additional population that would require service. Therefore, the project's contribution to a cumulative impact would not be cumulatively considerable, and the cumulative public services impacts would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Recreation

Cumulative Impact 4.12-1: Increased use of existing neighborhood and regional parks.

The cumulative context for recreation is the City of Roseville. Roseville maintains approximately 12 acres of park land per 1,000 residents. The City of Roseville Department of Parks and Recreation strives to ensure new public parks and recreation facilities, open space, paseos, landscape areas and greenways are provided with adequate funding for initial development, as well as ongoing maintenance and operation. Thus, there is not an existing cumulative effect related to degradation of neighborhood and regional parks related to increased use. As discussed in Section 4.12, "Recreation," the proposed project would not result in any new permanent residents and would therefore not directly generate new recreation users such that new facilities would need to be built to accommodate increased use. On-going maintenance and funding for operation would continue for the foreseeable future. In addition, ratios related to acreage of park per resident would not be increased due to implementation of the project. Thus, the project would not combine with other reasonably foreseeable projects such that a significant cumulative effect would occur related to increased used of neighborhood and regional parks. The project's contribution to a cumulative impact would not be cumulatively considerable, and the cumulative recreation impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Transportation and Circulation

Cumulative Impact 4.13-1: **Safety-related traffic impacts.**

Design and operation of the proposed project would conform to applicable standards and be consistent with traffic safety and operational requirements, and no significant safety-related traffic effects would occur from use of the trail and parking lot after completion of the trail and trailhead improvements. Construction activity with its related truck and worker traffic could result in a significant construction-related safety impact. Implementation of Mitigation Measure 4.13-1 would require the preparation and

implementation of a traffic management plan. The traffic management plan would be specific to the portion of the project alignment under construction and would take into account existing conditions at the time and require regular inspections to assess contractor compliance. Therefore, the project's contribution to a cumulative impact would not be cumulatively considerable, and the cumulative impact would be **less than significant with mitigation** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.13-2: Conflict with an applicable plan, ordinance or policy which establishes measures of effectiveness for the performance of the circulation system or with an alternative transportation plan.

Generally, any increase in bicycle use would be consistent with the overarching goals and objectives of an alternative transportation plan, including the City Bicycle Master Plan. As explained above under "Land Use," the Bicycle Master Plan is a long-term planning document, therefore buildout under this plan is inherently cumulative in nature. The designation of new bike trails within open space and parks and recreation areas would not result in a conflict with any adopted land use plan, policy or regulation, and the proposed project would be consistent with the intent of the City of Roseville's alternative transportation plans and Bicycle Master Plan. Therefore, the project's contribution to a cumulative impact would not be cumulatively considerable, and the cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Utilities

Cumulative Impact 4.14-1: Insufficient water supplies available to serve the project from existing entitlements and resources, or result in the construction of new water treatment facilities; Cumulative Impact 4.14-3: Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs or fail to comply with federal, state, and local statutes and regulations related to solid waste; Cumulative Impact 4.14-4: Result in a substantial increase in electrical demand; and **Cumulative Impact 4.14-5: Disrupt existing utility service.**

As discussed in Section 4.14, "Utilities," the proposed project would not result in the construction of new housing or other project elements that would increase the permanent resident population in the City. Therefore, the project would not generate a substantial increased demand for electricity, solid waste disposal, water, or water treatment related to use of the trail. The project could require small amounts of electricity for bridge and undercrossing lighting and water to establish new plantings and maintain landscaping. The project would not result in the need for new or expanded water supplies or construction of new water treatment facilities. Thus, implementation of the project would not contribute to a cumulative impact in these areas because the project site is already served by providers with adequate capacity to serve the project and the project would not increase the service area or add additional population that would require service. Therefore, the project's contribution to a cumulative impact would not be cumulatively considerable, and the cumulative utilities impacts would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

Cumulative Impact 4.14-2: Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

As explained above under Cumulative Impact 4.8-2, as urban development has spread through the Dry Creek watershed, impervious surfaces have increased resulting in a corresponding increase in peak stormwater flows. This has resulted in an existing cumulative adverse condition. Open space preservation, prohibitions against development within floodways, and stream restoration projects, have begun to improve hydrologic conditions within the watershed. The development of multi-use trails within the 100-year flood plain was identified by the Dry Creek Watershed Resources Management Plan (Placer County 2003) as a potential opportunity to improve existing conditions through long-term

management. The proposed project would be required to comply with stormwater runoff controls during construction and use of the proposed multi-use trail through compliance with SWRCB NPDES and City of Roseville Permit Conditions. These permits also require that the potential increase in stormwater runoff generated by the trails impervious surfaces be infiltrated by the adjacent natural area and through the installation of permanent BMPs. Finally, the trail would comply with the City of Roseville Design Standards for Bikeways in Floodplains and would not create a significant increase in base flood elevations. For these reason, the proposed project would not contribute to the existing cumulative adverse hydrologic condition within the Dry Creek Watershed. Therefore, the project's contribution to a cumulative impact would not be cumulatively considerable, and this cumulative impact would be **less than significant** for the proposed project and Option 1A, Option 1C, and Option 5A.

5.2 GROWTH-INDUCING IMPACTS

CEQA specifies that growth-inducing impacts of a project must be addressed in an EIR (PRC Section 21100[b][5]). Specifically, the State CEQA Guidelines (Section 15126.2[d]) states that the EIR shall discuss the ways in which the proposed project could foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this analysis are projects which would remove obstacles to population growth (a major expansion of a wastewater treatment plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also, the EIR should discuss the characteristics of the project which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

Direct growth inducement would result if a project involved construction of new housing. Indirect growth inducement would result, for instance, if implementing a project resulted in any of the following:

- substantial new permanent employment opportunities (e.g., commercial, industrial, or governmental enterprises);
- substantial short-term employment opportunities (e.g., construction employment) that indirectly stimulates the need for additional housing and services to support the new temporary employment demand; and/or
- removal of an obstacle to additional growth and development, such as removing a constraint on a required public utility or service (e.g., construction of a major sewer line with excess capacity through an undeveloped area).

The State CEQA Guidelines do not distinguish between planned and unplanned growth for purposes of considering whether a project would foster additional growth. Therefore, for purposes of this EIR, to reach the conclusion that a project is growth-inducing as defined by CEQA, the EIR must find that the project would foster (i.e., promote or encourage) additional growth in economic activity, population, or housing, regardless of whether the growth is already approved by and consistent with local plans. The conclusion does not determine that induced growth is beneficial or detrimental, consistent with the State CEQA Guidelines (Section 15126.2[d]).

If the analysis conducted for the EIR results in a determination that a project is growth-inducing, the next question is whether that growth may cause adverse effects on the environment. Environmental effects resulting from induced growth fit the CEQA definition of "indirect" effects in the State CEQA Guidelines (Section 15358[a][2]). These indirect or secondary effects of growth may result in significant environmental impacts. CEQA does not require that the EIR speculate unduly about the precise location and site-specific characteristics of significant, indirect effects caused by induced growth, but a good-faith effort is required to disclose what is feasible to assess. Potential secondary effects of growth

could include consequences – such as conversion of open space to developed uses, increased demand on community and public services and infrastructure, increased traffic and noise, degradation of air and water quality, or degradation or loss of plant and wildlife habitat – that are the result of growth fostered by the project.

The decision to allow those projects that result from induced growth is the subject of separate discretionary processes by the lead agency(ies) responsible for considering such projects. Because the decision to allow growth is subject to separate discretionary decision making, and such decision making is itself subject to CEQA, the analysis of growth-inducing effects is not intended to determine site-specific environmental impacts and specific mitigation for the potentially induced growth. Rather, the discussion is intended to disclose the potential for environmental effects to occur more generally, such that decision makers are aware that additional environmental effects are a possibility if growth-inducing projects are approved. The decision of whether impacts do occur, their extent, and the ability to mitigate them is appropriately left to consideration by the agency responsible for approving such projects at such times as complete applications for development are submitted.

5.2.1 Growth-Inducing Impacts

Mechanisms by which a project may directly induce growth may include creating jobs that attract economic or population growth to the area, promoting the construction of homes that would bring new residents to the area, or removing an obstacle that impedes growth in the area. The proposed project does not include the construction of new homes and, therefore, would not directly bring new residents into the project area.

As described in Chapter 3, “Project Description,” construction of the project would occur in phases and a phasing plan would be developed to provide a logical sequence of implementation for each of the future phases. The project could be constructed over a total of up to four construction seasons. The project workforce would vary according to construction phase and type of design element being constructed; however, the number of construction workers at any given time would not be large. The maximum number of workers commuting to the project construction site any given time would be approximately 15 (see Section 4.13, “Transportation and Circulation”). Workers would come from the regional labor pool already available in the City and region. No substantial relocation of workers would occur, and no new demand for housing and public services would result. Therefore, project construction would not be growth inducing.

Post-project maintenance would be conducted by existing City employees and would not require additional employees. Therefore, long-term operation of the proposed project would not result in workers relocating to the area and would not be growth inducing.

The project site is located along the creek corridors of developed neighborhoods and business districts in the City of Roseville and would not result in an expansion of urban services or the pressure to expand beyond the City’s existing Sphere of Influence. It would not open additional undeveloped land to future growth or provide expanded utility capacity to serve future development.

Because construction and operation of the project would not create jobs that would fuel economic or population growth, promote the construction of homes that would bring new residents to the area, or remove an obstacle that impedes growth, the proposed project would not be growth inducing.

5.3 SIGNIFICANT ENVIRONMENTAL EFFECTS

Chapter 2, "Summary," and Sections 4.1 through 4.14 of this Draft EIR provide a comprehensive identification of the proposed project's environmental effects, including the level of significance both before and after mitigation. Project impacts found to be significant and requiring mitigation are listed below.

4.2-1 Short-term construction-generated and long-term use-related emissions of ROG, NO_X, $PM_{10,}$ and $PM_{2.5}$.

4.3-1 Disturbance and loss of waters of the United States, waters of the state and riparian habitat.

4.3-2 Central Valley steelhead and Central Valley fall/late fall-run Chinook salmon.

4.3-3 Disturbance or loss of valley elderberry longhorn beetle or its habitat.

4.3-4 Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors.

4.3-5 Disturbances to special-status song birds.

4.3-6 Disturbance or loss of Western pond turtle.

4.3-7 Disturbance or loss of special-status bats – pallid bat and silver-haired bat.

4.3-8 Disturbance or loss of City protected trees, oak woodlands and other sensitive vegetation alliances and associations.

4.3-9 Disturbance or loss of special-status plants – Sanford's arrowhead.

4.3-10 Impacts on movement of native resident or migratory fish or wildlife species or migratory wildlife corridors or impede the use of native wildlife nursery sites.

4.4-1 Disturb archaeological resources, including tribal cultural resources.

4.4-2 Accidental discovery of human remains.

4.7-5 Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are located adjacent to urbanized areas or where residences are intermixed with wildlands.

4.10-3 Exposure to construction-related groundborne vibrations. (proposed project, Option 1A, Option 1C)

4.13-1 Safety-related traffic impacts during construction.

5.3.1 Significant and Unavoidable Impacts

Section 15126.2(b) of the State CEQA Guidelines requires that an EIR describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. Chapter 4, "Environmental Setting, Impacts, and Mitigation Measures," provides a detailed analysis of all potentially significant, direct and indirect, environmental impacts of the proposed project; identifies feasible mitigation measures that could reduce or avoid the project's significant impacts; and describes whether these mitigation measures would reduce these impacts to less-than-significant levels. The

proposed project's significant cumulative impacts are discussed at the beginning of this chapter. If a specific impact cannot be reduced to a less-than-significant level, it is considered a significant and unavoidable impact.

As discussed under "Cumulative Impacts" above and in the technical sections of this Draft EIR, all but one potentially significant impact would be reduced to a less-than-significant level with mitigation:

4.10-1 Short-term construction-related noise.

4.10-3 Exposure to construction-related groundborne vibrations. (Option 5C only)

5.3.2 Significant and Irreversible Environmental Effects

The State CEQA Guidelines requires a discussion of any significant irreversible environmental changes that would be caused by the proposed project. Specifically, the Section 15126.2(c) states:

> Use of nonrenewable resources during the initial and continued phases of the project may be irreversible, since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

Generally, a project would result in significant irreversible environmental changes if:

- the primary and secondary impacts would generally commit future generations to similar uses;
- the project would involve a large commitment of nonrenewable resources;
- the proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy); or
- the project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project.

The Dry Creek Greenway East Trail project is a 4.25-mile multi-use trail that would follow creek corridors along portions of Dry, Cirby, and Linda Creeks. The multi-use trail would consist of a 10-foot wide paved trail with two-foot wide shoulders. The project would also include the construction of up to eight bridges to provide creek crossings along with areas of bank stabilization and retaining walls. Implementation would require the removal of aquatic, riparian, and oak woodland habitat, and the loss or disturbance of elderberry shrubs within the disturbance area (see Section 4.3, "Biological Resources"). This loss of habitat would be permanent as a result of paving and other necessary construction components. Uses of nonrenewable resources during construction of the project may be irreversible because a large commitment of such resources makes removal or reuse thereafter unlikely. Implementation of the project would result in permanent changes to the existing environment that have been described throughout this Draft EIR. Construction activities associated with the project would result in the irreversible consumption of nonrenewable resources. The irreversible commitment of limited resources is inherent in any construction project. Resources anticipated to be irreversibly committed would include: sand, gravel, concrete, petrochemicals, construction materials, and water. The project would also require the consumption of fossil fuels to meet energy demands associated with construction vehicles.

Implementation of the proposed project would result in the consumption of energy and materials. Fossil fuels would be required for construction of the project, as well as maintenance. Construction associated with the new bridges, the paved trail, and the areas of bank stabilization and retaining walls would require the manufacture of new materials (e.g., asphalt, concrete, rebar, paint, prefabricated steel). The

raw materials and energy required for the manufacture of the materials would result in an irretrievable commitment of natural resources.

The project does not provide for an appreciable increase in use of hazardous materials relative to existing conditions and would transport, use, and generate only small volumes of hazardous materials associated with construction. The construction contractor would prepare relevant hazardous materials management plans, including a Hazardous Materials Contingency Plan. With continued compliance with existing federal, state, and local laws and regulations related to hazardous materials, the proposed project would not be expected to result in environmental accidents that have the potential to cause irreversible damage to the natural or human environment (see Section 4.7, “Hazards and Hazardous Materials”).

6 ALTERNATIVES

6.1 INTRODUCTION

The California Code of Regulations (CCR) Section 15126.6(a) (State CEQA Guidelines) requires EIRs to describe "… a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather, it must consider a range of potentially feasible alternatives that will avoid or substantially lessen the significant adverse impacts of a project, and foster informed decision making and public participation. An EIR is not required to consider alternatives that are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason." This section of the State CEQA Guidelines also provides guidance regarding what the alternatives analysis should consider. Subsection (b) further states the purpose of the alternatives analysis is as follows:

> Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code [PRC] Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.

The State CEQA Guidelines require that the EIR include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed Dry Creek Greenway Multi-Use Trail. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative must be discussed, but in less detail than the significant effects of the project as proposed (CCR Section 15126.6[d]).

The State CEQA Guidelines further require that the "no project" alternative be considered (CCR Section 15126.6[e]). The purpose of describing and analyzing a no project alternative is to allow decision makers to compare the impacts of approving a proposed project with the impacts of not approving the proposed project. If the no project alternative is the environmentally superior alternative, CEQA requires that the EIR "…shall also identify an environmentally superior alternative among the other alternatives." (CCR Section 15126[e][2]).

In defining "feasibility" (e.g., "… feasibly attain most of the basic objectives of the project …"), CCR Section 15126.6(f) (1) states, in part:

> Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives.

In determining what alternatives should be considered in the EIR, it is important to consider the objectives of the project, the project's significant effects, and unique project considerations. These

factors are crucial to the development of alternatives that meet the criteria specified in Section 15126.6(a). Although, as noted above, EIRs must contain a discussion of "potentially feasible" alternatives, the ultimate determination as to whether an alternative is feasible or infeasible is made by the lead agency's decision-making body, here the City of Roseville City Council. (See PRC Sections 21081.5, 21081[a] [3].)

6.2 CONSIDERATIONS FOR SELECTION OF ALTERNATIVES

The purpose of the alternatives analysis is to determine whether or not a variation of the Dry Creek Greenway Multi-Use Trail Project would reduce or eliminate significant project impacts, while attaining most of the project's basic objectives.

6.2.1 Project Purpose and Objectives

One of the key factors in considering alternatives is whether they can feasibly attain most of the basic objectives of the project. As described in Chapter 3, "Project Description" of this Draft EIR, during development of the 2009 Dry Creek Greenway Planning and Feasibility Study the following Purpose and Need Statement was drafted by the Stakeholder Representative Group (SRG) and accepted by the City Council:

> "The Dry Creek Greenway multi-use trail is envisioned as a paved, off-street trail along Dry, Cirby, and Linda Creeks that will provide residents a place for bicycling, walking, running, and dog-walking, for fun, education, recreation, health, and transportation.
>
> The Dry Creek Greenway trail is a vital component of the City of Roseville Bikeway and Trail system because it will provide a safe, comfortable, convenient, and highly connected bike route as an alternative to using City streets in an area of the City that is underserved by bicycle facilities. The Dry Creek Greenway trail will connect schools and businesses to residential neighborhoods. The trail will also provide important regional connections as it is part of a series of existing and planned paths that will form a loop around the greater South Placer/Sacramento area."

The objectives for the Dry Creek Greenway Multi-Use Trail are to:

- Develop a safe and continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways.
- Enhance access to the Dry Creek, Cirby Creek, and Linda Creek open space areas for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response.
- Protect the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas, minimize the potential for loss of life and property due to flooding, enhance compatibility with private properties, and reduce the need for right-of-way acquisition.
- Seek the most effective and efficient balance of capital cost, operational and maintenance costs, environmental and community impacts, and public benefits.
- Direct consideration of cost is not required under CEQA. However, efforts to attain this objective are part of the design process employed by the City in meeting its health, welfare and economic obligations to the citizens of Roseville.

6.2.2 Significant Effects of the Dry Creek Greenway Multi-Use Trail

Impacts associated with implementation of the proposed project are evaluated in Chapters 4 and 5 of this Draft EIR. As identified in Table 2-1, "Summary of Impacts and Mitigation Measures," construction and/or use of the proposed project would have the potential to cause the following significant but mitigable environmental impacts:

4.2-1 Short-term construction-generated and long-term use-related emissions of ROG, NO_X, $PM_{10,}$ and $PM_{2.5}$.

4.3-1 Disturbance and loss of waters of the United States, waters of the state and riparian habitat.

4.3-2 Central Valley steelhead and Central Valley fall/late fall-run Chinook salmon.

4.3-3 Disturbance or loss of valley elderberry longhorn beetle or its habitat.

4.3-4 Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors.

4.3-5 Disturbances to special-status song birds.

4.3-6 Disturbance or loss of Western pond turtle.

4.3-7 Disturbance or loss of special-status bats – pallid bat and silver-haired bat.

4.3-8 Disturbance or loss of City protected trees, oak woodlands and other sensitive vegetation alliances and associations.

4.3-9 Disturbance or loss of special-status plants – Sanford's arrowhead.

4.3-10 Impacts on movement of native resident or migratory fish or wildlife species or migratory wildlife corridors or impede the use of native wildlife nursery sites.

4.4-1 Disturb archaeological resources, including tribal cultural resources.

4.4-2 Accidental discovery of human remains.

4.7-5 Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are located adjacent to urbanized areas or where residences are intermixed with wildlands.

4.10-3 Exposure to construction-related groundborne vibrations.

4.13-1 Safety-related traffic impacts during construction.

As discussed in the technical sections of this Draft EIR, all but one potentially significant impact would be reduced to a less-than-significant level with mitigation under the proposed project:

4.10-1 Short-term construction-related noise.

6.3 ALTERNATIVES CONSIDERED AND ELIMINATED FROM FURTHER EVALUATION

The State CEQA Guidelines state that an EIR should identify alternatives that were initially considered by the lead agency, but were rejected as infeasible and explain the reasons for the determination (Section 15126.6[c]). As described in Chapter 3, "Project Description" of this Draft EIR, the City has conducted an extensive planning process and consideration of alternatives for the proposed project, as reported in the 2009 Dry Creek Greenway Planning and Feasibility Study. For planning purposes, the path alignment was initially divided into twelve segments, numbered from west to east. Connections were considered to Hillcrest, Cirby Side, Sierra Gardens, Meadow Oaks, and Maidu neighborhoods, Eich Intermediate and Sierra Gardens Elementary Schools, and to Maidu Regional Park. The alternatives analysis considered 30 different creek crossing alternatives and in the end, eliminated 12 creek crossings from consideration. The 18 remaining creek crossings were carried forward to the next stage of project planning. Of these, 3 were existing bridges. Four areas along the path were recommended as trailhead access points: 1) Riverside Avenue; 2) Rocky Ridge Drive; 3) Eastwood Park; and 4) Old Auburn Road (north and south).

The study outlined the existing conditions, opportunities and constraints, alignment options, evaluation criteria, and a recommended alignment for a paved multi-use trail from Riverside Avenue and Darling Way to the City limits just south of Old Auburn Road. The SRG selected a preferred alignment based on criteria that included consideration of property owners, path users, public safety, environmental concerns, and municipal operations. There were two segments of the trail where the SRG did not reach a consensus on a recommended alignment. These were referred to as Segment 1 – Hillcrest and Segment 5 – Sunrise Avenue in the feasibility study. Segment 1 is the first portion of the proposed trail between the end of the Saugstad/Royer Trail at Darling Way to the area south of Machado Lane, west of the I-80 underpass. Segment 5 is located in the Cirby Side neighborhood to the east and west of Sunrise Avenue. Segment 5 begins near the Cirby Creek/Linda Creek confluence west of Sunrise Avenue to just east of the Sunrise Avenue bridge near the Meadow Gate connection. Four alignment options were identified for Segment 1 (1A, 1B, 1C, and 1D) and three alignment options were identified for Segment 5 (5A, 5B, and 5C).

The City then conducted an Alternatives Analysis in 2012 and 2013 to provide further information regarding alternative trail alignment options. Each of the alignment options were evaluated using criteria developed during for the 2009 Planning and Feasibility Study, in conjunction with the SRG, and based on the ability of each option to meet the project goals and objectives, as well as the feasibility criteria. A matrix was used to compare benefits, constraints, advantages, and disadvantages of each option. During this process, two of the options, Alternative 1D and Alternative 5C, were dismissed from further evaluation. The remainder of the alternative trail alignment options were carried forward. Options 1B and 5B were incorporated into the Proposed Trail Alignment and are part of the proposed project; Options 1A, 1C, and 5A are referred to as alignment options in this EIR and are described below and analyzed in each technical section of this EIR.

6.3.1 Alternative 1D

This alignment option would begin just before the existing terminus of the Saugstad/Royer trail, travel under the bridge on the east side of Dry Creek and continue south for approximately 700 ft. The trail alignment would continue along the east side of Dry Creek and Cirby Creek for approximately 500 feet before crossing Cirby Creek via Bridge #4 to the southern bank of Cirby Creek, and continue within the floodplain along the south side of Cirby Creek toward the I-80 underpass. Access to the proposed trailhead parking would be via Riverside Avenue. Ultimately access to the trailhead parking and future trail extension to lower Vernon Street, would be provided via Bridge #2.

As a result of limited access and no direct connection to the trail head parking, Alternative 1D ranked poorly in terms of the potential to create additional traffic and parking in the neighborhood and trail accessibility and connectivity. Costs associated with this alternative and minimal right-of-way requirements resulted in good ranking for these criteria. It was recommended that this option not be considered by City staff for recommendation to the City Council and Transportation Commission.

6.3.2 Alternative 5C

The alignment option would begin just south of the confluence of Cirby Creek and Linda Creek and cross Linda Creek via Bridge #13 and follow the northern bank of Linda Creek within the City owned property. The trail would tie into the existing maintenance path in front of the floodwalls on the north side of Linda Creek and travel eastward under Sunrise Boulevard overcrossing. The alignment would continue east, using the existing maintenance ramp in the vicinity of the existing drainage outfall structure, before continuing further east toward Oak Ridge Drive. No direct access would be provided to Sunrise Boulevard.

Alternative 5C ranked poorly in terms of accessibility and providing connectivity to surface streets compared to the Alternatives 5A and 5B. It also ranked lower than the proposed alignment and other alternatives related to visibility and emergency access to the trail. Visual impacts to adjacent property owners were considered low for this alternative. This alternative ranked well in terms of constructability using an existing bench on north side of Linda Creek; however, the elevation of this bench at the 2-year water surface elevation (WSE) would mean the trail would be unusable for storms greater than the 2-year event. This alternative would require minimal right-of-way acquisition. It was recommended that this option not be considered by City staff for recommendation to the City Council and Transportation Commission.

6.3.3 Additional On-street Portions of the Path

The City also previously considered an alternative design that would include more on-street bikeways. This alternative would create areas within paved streets identified by striping and signs for preferential (semi-exclusive) bicycle use (Class II bike paths). Proposed retaining walls in areas susceptible to slumping would not be constructed. Areas currently subject to localized creep, slumping, and small landslides on over-steepened slopes, along incised drainages, and during periods of water saturation would continue to be subject to localized ground failure. While this alternative could reduce the proposed project's effects to biological resources and construction-related noise impacts because construction along the creek corridors would be reduced, it would not implement the City's Bicycle Master Plan by providing a Class I off-site trail. Therefore, this alternative would not meet the proposed project objectives for the Dry Creek Greenway Multi-Use Trail. For these reasons, an alternative design with additional on-street portions of the trail was dismissed from further analysis in this EIR.

6.4 ALTERNATIVES CONSIDERED FOR DETAILED EVALUATION

As discussed above, during the 2013 Alternatives Analysis Options 1B and 5B were incorporated into the Proposed Trail Alignment and are part of the proposed project; Options 1A, 1C, and 5A are referred to as alignment options in this EIR and analyzed in each technical section.

6.4.1 No Project Alternative

Under the No Project Alternative, the Dry Creek Greenway Multi-Use Trail would not be constructed. The creek corridors along portions of Dry, Cirby, and Linda creeks would continue to contain segments of existing unimproved, natural-surface paths and paved multi-use paths, some of which do not meet current City design standards. Proposed retaining walls in areas susceptible to slumping would not be constructed, other bank stabilization elements would not be constructed, and access to the creek corridor for utility maintenance, open space maintenance, and emergency response would not be enhanced.

Aesthetics

Under the No Project Alternative, there would be no alteration of the visual quality or character of the project site. Views of the project site from surrounding vantage points would not change, and no new sources of light and glare would be created. This alternative would not introduce new pavement, structures, and recreational users into new areas. The No Project Alternative would avoid the less-than-significant impacts associated with the visual character of the site and sources of new light and glare, and Impacts 4.1-1 and 4.1-2 would not occur. Overall, impacts under this alternative would be less than those that would occur with the proposed project.

Air Quality

Under the No Project Alternative, no earthwork or ground-disturbing activities would occur, nor would any associated vehicle trips related to trial construction or maintenance, and this alternative would not result in the exposure of sensitive receptors to TAC levels. The less-than-significant construction and operation-related impacts identified for the proposed project would not occur. Air quality impacts under this alternative would be less than those that would occur with the proposed project.

Biological Resources

Under the No Project Alternative, no earthwork or ground-disturbing activities would occur. There would be no potential for construction-related disturbance of special-status plant or animal species or their habitat or disturbance or loss of oak woodlands, and disturbance or loss of wetlands or other waters of the U.S. would not occur. This alternative would avoid the project's potentially significant impacts to these resources, and no mitigation would be required under this alternative.

Cultural Resources

Under the No Project Alternative, no earthwork or ground-disturbing activities would occur. There would be no potential for disturbance to undiscovered human remains or archaeological resources. Therefore, no impacts related to cultural resources would occur and Mitigation Measures 4.4-1 and 4.4-2 would not be required. Cultural resource impacts under this alternative would be less than those that would occur with the project.

Geology and Soils

Because no development would occur under the No Project Alternative, there would be no construction requiring excavation in an area with steep banks and loose, granular soils that could be susceptible to localized areas of slope failure. Proposed retaining walls in areas susceptible to slumping would not be constructed. Areas currently subject to localized creep, slumping, and small landslides on over-steepened slopes, along incised drainages, and during periods of water saturation would continue to be subject to localized ground failure and no bank stabilization elements would be constructed. Future soil and streambank erosion could continue to occur, creating adverse environmental effects. Overall, impacts under this alternative would be slightly greater than those that would occur with the proposed project.

Greenhouse Gas Emissions and Climate Change

Under the No Project Alternative, the project site would remain undeveloped land. Because no construction would occur, this alternative would not increase emissions of greenhouse gases (GHG). Under the No Project Alternative, vehicle miles traveled would not be reduced because it is unlikely that vehicle commuters would commute by bicycle instead of motor vehicles without a contiguous paved path. Implementation of the No Project Alternative would generate slightly fewer emissions overall; therefore, overall impacts under this alternative would be less than those that would occur with the project.

Hazards and Hazardous Materials

Under the No Project Alternative, there would be no use of hazardous materials onsite for construction or operation, because the site would remain undeveloped land. This alternative would avoid exposing people or structures to wildland fire during construction activities that could ignite the dry grasses on, and adjacent to, the project site. This alternative would not result in a potentially significant impact related to public health and safety related to hazardous materials or hazards, and Mitigation Measure 4.7-5 would not be required. Overall, hazards and hazardous materials impacts under this alternative would be less than those that would occur with the project.

Hydrology and Water Quality

Under the No Project Alternative, no construction or soil disturbance would occur; therefore, there would be no construction-related water quality impacts and no potential to introduce oil, grease, litter, and chemical pollutants into Dry, Linda, and Cirby Creeks during long term maintenance and repair of the multi-use path. Additionally, there would be no encroachments within the regulated floodway. As discussed above under Geology and Soils, future soil and streambank erosion could continue to occur because retaining walls in areas susceptible to slumping would not be constructed and bank stabilization elements would not be constructed. Overall, impacts under this alternative would be slightly greater than those that would occur with the proposed project.

Land Use and Planning

The No Project Alternative would not construct the proposed multi-use trail. While this alternative would not require the acquisition of right-of-way from the 38 parcels, it would also not create a linear travel corridor that would provide linkages through the community. This alternative would not implement the City's Bicycle Master Plan, which includes a plan for development of Class I trails in Roseville. This alternative would not result in the beneficial impact associated with the proposed project related to the provision of linkages through the existing community. Overall, the No Project Alternative would result in less-than-significant impacts related to land use and planning that would be slightly greater than with the proposed project.

Noise

Under the No Project Alternative, no construction activities would take place, and there would be no increases in short-term construction-related noise or vibration. No increase in operational noise would occur, and this alternative would not expose persons to, or generate, operational noise levels in excess of adopted standards. The No Project Alternative would avoid the less-than-significant impacts associated with construction and operational noise impacts. It would also avoid the potentially significant vibration impact related to construction. Overall, impacts under this alternative would be less than those that would occur with the project, and Mitigation Measures 4.10-1a, 4.10-1b, 4.10-1c, and 4.10-3 would not be required.

Public Services

Under the No Project Alternative, the project site would remain undeveloped land and would not generate additional visitors along the creek, including neighbors and transitory users. This alternative would not facilitate utility or open space maintenance access, or emergency vehicle access, including fire apparatuses along the creek corridor. The RFD has stated that without the trail, their ability to

respond to a fire in the open space is hampered. Similarly, the RPD has indicated that the trail assists police efforts to reduce loitering or illegal camping in the open space. The No Project Alternative would result in less-than-significant impacts related to public services that would be slightly greater than with the proposed project.

Recreation

Unlike the proposed project, the No Project Alternative includes no new recreation facilities and would not include connections to local or regional tails or other recreation facilities. The proposed project results in less-than-significant impacts related to recreation. No recreation-related impacts would occur under the No Project Alternative.

Utilities

Under the No Project Alternative, the project site would remain undeveloped and there would be no need for preparation of a SWPPP to manage stormwater during construction and use as with the Proposed Trail Alignment. However, under this alternative the proposed trail would not be available to provide maintenance and emergency access for the City Environmental Utilities Department, open space and storm water maintenance crews, and the Roseville Fire Department. Overall, impacts under this alternative would be less than those that would occur with the project.

ABILITY TO ACHIEVE PROJECT OBJECTIVES

The No Project Alternative would not meet the project's basic objectives. Access to the Dry Creek, Cirby Creek, and Linda Creek open space areas would not be enhanced for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response. Effects to the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas would not occur; therefore, they would continue to be protected in the same manner as under existing conditions. The No Project Alternative would not meet the objective to develop a continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways. In addition, the proposed retaining walls in areas susceptible to slumping would not be constructed. Areas currently subject to localized creep, slumping, and small landslides on over-steepened slopes, along incised drainages, and during periods of water saturation would continue to be subject to localized ground failure.

6.4.2 Option 1A Alternative Alignment

Option 1A Alternative Alignment would begin at the existing terminus of the Saugstad/Royer trail, travel across Darling Way bridge (potentially requiring widening of the bridge) and loop under the bridge on the west side of Dry Creek. The alternative would continue south for approximately 900 feet, crossing Dry Creek via Bridge #3 to the southern bank of Cirby Creek, from where it would traverse the existing steep slope down to the existing bench located above the 2-year water surface elevation, and continue within the floodplain along the south side of Cirby Creek toward the I-80 undercrossing. This alternative would require a retaining wall on the south side of Cirby Creek, east of the confluence with Dry Creek. Prior to Bridge #3 (on the north side of Dry Creek), access would be provided to the proposed trail-head parking area at Riverside Avenue and to the future trail extension to Vernon Street. Option 1A Alternative Alignment would require Bridge #3, but would eliminate the need for Bridge #2 and Bridge #4. See Chapter 3, "Project Description," for a description of this alternative, including Exhibit 3-13 of the proposed Option 1A alignment.

As explained on page 4-3 of this Draft EIR, this alternative is analyzed in Chapter 4, and each technical section includes a discussion of the substantial evidence supporting the impact significance conclusion for the Option 1A Alternative Alignment. The discussion that follows is a summary of the technical

analyses for this alternative to explain how this alternative compares to the proposed project. For a full evaluation, please see the appropriate resource section in Chapter 4, "Environmental Setting, Impacts, and Mitigation Measures." See Table 6-1 at the end of this chapter for a summary comparison of impacts between the Option 1A Alternative Alignment and the proposed project.

Aesthetics

The Option 1A Alternative Alignment would cross under Darling Way as described for the Proposed Trail Alignment, but would remain on the south side of the creek, closer to the commercial uses on Riverside Avenue and further from the residences that front Machado Lane. The Option 1A Alternative Alignment would also cross Dry Creek with one bridge (Bridge #3) rather than the two bridges (Bridges #2 and #4) required for the Proposed Trail Alignment. The retaining wall for this option would be located on the south side of Dry Creek, closer to the commercial uses. For these reasons, the trail may be less visible to existing residents under this alternative than with the Proposed Trail Alignment. As with the Proposed Trail Alignment, the actual visual change due to implementation of the Option 1A Alternative Alignment would be relatively low. As discussed for the Proposed Trail Alignment, there would not be light and glare impacts associated with the construction of this alternative. Because there would be one fewer bridge with associated lighting, and the bridge would be further from residences, which have more potential to be light sensitive than commercial land uses, there would be less potential for the Option 1A Alternative Alignment to have adverse effects related to light and glare, and this would remain a less-than-significant impact (see Section 4.1, "Aesthetics").

Air Quality

Although the Option 1A Alternative Alignment would require an additional 765 linear feet of retaining walls or streambank stabilization when compared to the Proposed Trail Alignment, the total number of bridges constructed under the Option 1A Alternative Alignment would be fewer. Construction emissions would be less than under the Proposed Trail Alignment, because emissions from the type of equipment needed to construct these elements would be less than emissions for the heavy equipment needed for bridge construction. This would result in fewer emissions associated with construction activities. However, the Option 1A Alternative Alignment could still potentially exceed PCAPCD's recommended CEQA-level project significance threshold of 82 lbs/day of NO_x during construction; Mitigation Measure 4.2-1 would be required, and the impact would be less than significant after mitigation (see Section 4.2, "Air Quality").

Biological Resources

The Option 1A Alternative Alignment would permanently affect up to 0.75 acre of riparian forest (0.05 acre more than the Proposed Trail Alignment). Option 1A Alternative Alignment would permanently affect up to 4.10 acres of valley oak riparian woodland (0.2 acre less than the Proposed Trail Alignment). Although the Option 1A Alternative Alignment would affect less acreage of valley oak riparian woodland than the Proposed Trail Alignment, it would result in permanent loss and temporary disturbance of wetlands and other waters of the United States, waters of the state, and associated riparian habitat.

Because this option does not require the construction of Bridge #2 or Bridge #4, the total permanent impacts to salmonid aquatic habitat (i.e., aquatic habitat) is 0.01 acres less than the Proposed Trail Alignment (or 0.25 acres). Similarly, temporary impacts to aquatic habitat is 0.03 acres less than the Proposed Trail Alignment (or 0.55 acres). The Option 1A Alternative Alignment would permanently impact 0.023 acre of SRA habitat (or 0.017 acre less than the Proposed Trail Alignment) and would temporarily impact 0.034 acre SRA habitat (or 0.109 acre more than the Proposed Trail Alignment).

Under the Option 1A Alternative Alignment, a total of 12 elderberry shrubs (as compared to 15 elderberry shrubs under the Proposed Trail Alignment) could be adversely impacted through direct removal of elderberry shrubs, ground-disturbing construction (cut/fill) within the root zone of the shrubs, or permanent removal of riparian habitat within 165 feet of elderberry shrubs. It is anticipated that implementation of this

alternative would result in the removal of a total of 0.89 acres (as compared to 1.22 acres under the Proposed Trail Alignment) of suitable riparian habitat within 165 feet of elderberry shrubs.

Because this option does not require the construction of Bridge #2 or Bridge #4, the total permanent impacts to Sanford's arrowhead habitat is 0.01 acre less than the Proposed Trail Alignment (or 0.25 acres). Similarly, temporary impacts to Sanford's arrowhead habitat is 0.03 acres less than the Proposed Trail Alignment (or 0.55 acres).

The Option 1A Alternative Alignment would result in similar impacts to nesting raptors, nesting special-status birds, western pond turtle, roosting special-status bats, migratory fish, and similar impacts to sensitive habitats as would occur with the Proposed Trail Alignment.

On balance, the Option 1A Alternative Alignment would have slightly less impact on biological resources than the Proposed Trail Alignment; however, all mitigation measures identified for the Proposed Trail Alignment would be required (see Section 4.3, "Biological Resources").

Cultural Resources

The Option 1A Alternative Alignment would cross Dry Creek via Bridge #3. By remaining on the south bank of Cirby Creek, this alternative would not require the construction of Bridge# 2 or Bridge #4. The total number of bridges constructed under the Option 1A Alternative Alignment would be fewer than the number of bridges constructed under the Proposed Trail Alignment, which would reduce the area of construction for ground-disturbing activities that could damage or destroy as yet undiscovered archaeological resources or human remains as compared to the Proposed Trail Alignment. Mitigation Measures 4.4-1 and 4.4-2 would be required, and these impacts would be less than significant after mitigation (see Section 4.4, "Cultural Resources").

Geology and Soils

The Option 1A Alternative Alignment would reduce the area of temporary and permanent impacts by 0.40 acre and 0.29 acre, respectively. There would be a corresponding 0.72 acre reduction in construction in the area mapped as slight erosion hazard when used for roads and trail, and a 0.03 acre construction increase in areas not rated. There would be no change in the bank erosion severity along this alternative compared to the Proposed Trail Alignment. Overall, impacts under this alternative would be less than significant but to a lesser degree than those that would occur with the proposed project (see Section 4.5, "Geology and Soils").

Greenhouse Gas Emissions and Climate Change

The total number of bridges constructed under the Option 1A Alternative Alignment would be fewer than the number of bridges constructed under the Proposed Trail Alignment, which would result in fewer GHG emissions associated with bridge construction activities. Construction emissions would be less than under the Proposed Trail Alignment, because emissions from the lighter duty-type of equipment needed to construct these elements would be less than emissions for the heavy equipment needed for bridge construction. Thus, construction activities under Option 1A Alternative Alignment would be less than estimated emissions for the Proposed Trail Alignment and would also be a less-than-significant impact (see Section 4.6, "Greenhouse Gas Emissions and Climate Change").

Hazards and Hazardous Materials

The Option 1A Alternative Alignment could require more activity in the southwest corner of the access and staging area on Riverside Avenue, which is the site of the former facilities at 649 Riverside Avenue. The Option 1A Alternative Alignment would reduce the area of temporary impacts by 0.40 acre, which would result in a proportional reduction in the potential to encounter undocumented contamination that has not been characterized or remediated. Mitigation Measure 4.7-4 would be required. Overall, impacts under this alternative would be similar to those that would occur with the proposed project and would be less than significant (see Section 4.7, "Hazards and Hazardous Materials").

Hydrology and Water Quality

Where the Proposed Trail Alignment would cross Dry Creek via Bridge #2 and continue on the northern bank of Cirby Creek, the Option 1A Alternative Alignment would cross Dry Creek via Bridge #3. By remaining on the south bank of Cirby Creek, this alternative would not require the construction of Bridge #2 or Bridge #4. The streambank of Cirby Creek is moderately erosive in this area, and the proximity of private property would require the path to be located near the top of the bank. For this reason, the Option 1A Alternative Alignment would require an additional 765 linear feet of retaining walls or streambank stabilization when compared to the Proposed Trail Alignment. The Option 1A Alternative Alignment would require the construction of Bridge #3 instead of bridges #2 and #4 and would, therefore, have a smaller, but still significant, encroachment footprint within the 100-year floodplain when compared to the Proposed Trail Alignment. Additionally, the Option 1A Alternative Alignment would comply with the protective conditions of the existing CDFW Routine Maintenance Agreement and would have a less-than-significant impact on hydrology and water quality. Overall, impacts under this alternative would be slightly greater than those that would occur with the project (see Section 4.8, “Hydrology and Water Quality”).

Land Use and Planning

Consistency with relevant land use plans under the Option 1A Alternative Alignment would be the same as under the Proposed Trail Alignment because the alternative travels through the same land use designations and zoning and contains the same elements as the Proposed Trail Alignment. Effects on established communities under the Option 1A Alternative Alignment would be the same type and of the same magnitude as under the Proposed Trail Alignment, although this alternative would require the acquisition of 17,984 more square feet than the Proposed Trail Alignment. The Option 1A Alternative Alignment would include right-of-way requirements on one additional parcel and on a larger portion of one parcel than would be required under the proposed trail alignment. Overall, impacts under this alternative would be greater than those that would occur with the proposed project and would be less than significant (see Section 4.9, “Land Use and Planning”).

Noise

The location of construction activities under the Option 1A Alternative Alignment would vary slightly based on differences in the alignment of the northernmost section of the trail south of Darling Way and east of Riverside Avenue. This alternative would shift the trail alignment to the south side of Cirby Creek and would be closer to existing commercial land uses and further away from residential land uses located north of Cirby Creek. Additionally, the total number of bridges under the Option 1A Alternative Alignment would be fewer than the number of bridges constructed under the Proposed Trail Alignment, which would result in less noise overall from bridge construction activities. Furthermore, Bridge #3 would be located further away from existing residential land uses located north of Cirby Creek than Bridges #2 and #4 under the Proposed Trail Alignment. For all other sections of the trail, both the trail alignment and bridge locations would be the same as the Proposed Trail Alignment, so significant vibration impacts could occur. Mitigation Measures 4.10-1a, 4.10-1b, 4.10-1c, and 4.10-3 would be required, however impacts related to short-term construction noise would be remain significant and unavoidable after mitigation. While there would be some differences in the locations of the trail and changes in proximity to sensitive receptors would occur, the magnitude and duration of construction activities and associated noise would not be substantially different under the Option 1A Alternative Alignment compared to the Proposed Trail Alignment (see Section 4.10, “Noise”).

Public Services

The Option 1A Alternative Alignment would cross Dry Creek via Bridge #3. By remaining on the south bank of Cirby Creek, this alternative would not require the construction of Bridge# 2 or Bridge #4. This change in design would not affect potential impacts related to fire protection and police protection services. Overall, this alternative would result in the same less-than-significant impacts to existing utilities and service systems as identified for the proposed project (see Section 4.11, “Public Services”).

Recreation

Access to recreational facilities under the Option 1A Alternative Alignment would be the same type and magnitude as the Proposed Trail Alignment and is not expected to result in a substantial number of additional users at existing recreation facilities such that new facilities would need to be built to accommodate increased use. Recreation-related impacts associated under the Option 1A Alternative Alignment would be less than significant similar to the Proposed Trail Alignment (see Section 4.12, "Recreation").

Utilities

The Option 1A Alternative Alignment would cross Dry Creek via Bridge #3. By remaining on the south bank of Cirby Creek, this alternative would not require the construction of Bridge #2 or Bridge #4. This change in design would result in the same less-than-significant impacts to existing public services as identified for the Proposed Trail Alignment (see Section 4.13, "Utilities").

ABILITY TO ACHIEVE PROJECT OBJECTIVES

The Option 1A Alternative Alignment would be similar to the proposed project and would meet most of the project objectives in a similar manner as the proposed project. This alternative would meet the objective to develop a continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways. Access to the Dry Creek, Cirby Creek, and Linda Creek open space areas would be enhanced for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response. Effects to the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas would be similar to the proposed project. On balance, the Option 1A Alternative Alignment would have slightly less impact on biological resources than the Proposed Trail Alignment. This alternative would slightly reduce trail connectivity by not providing a connection to Hernandez Lane. Also, this alternative would reduce maintenance and public safety access to the open space behind Hernandez Lane. This alternative would not meet the project objective related to seeking the most effective and efficient balance of capital cost, operational and maintenance costs, environmental and community impacts, and public benefits because preliminary cost estimates determined that construction costs for Option 1A would be greater than the proposed project and Option 1C. In addition, construction of Option 1A would be more challenging than the proposed project because of the steep terrain.

6.4.3 Option 1C Alternative Alignment

The Option 1C Alternative Alignment would begin just before the existing terminus of the Saugstad/Royer trail, travel under the bridge on the east side of Dry Creek and continue south for approximately 700 feet. A spur to the west would provide access to the proposed trail head parking and future trail extension toward Vernon Street, via Bridge # 2 over Dry Creek. This alternative would continue along the east side of Dry Creek and Cirby Creek for approximately 400 feet before crossing Cirby Creek via Bridge #4 to the southern bank of Cirby Creek, from where it would continue within the floodplain along the south side of Cirby Creek toward the I-80 undercrossing. The Option 1C Alternative Alignment would not require the widening of the Darling Way bridge. However, three retaining walls on the east side of Dry Creek would be required. Similar to the Proposed Trail Alignment, this alternative would include the construction of two bridges (#2 and #4). See Chapter 3, "Project Description," for a description of this alternative, including an Exhibit 3-14 of the proposed Alignment Option 1C.

The discussion that follows is a summary of how this alternative compares to the proposed project for each resource topic. For a full evaluation, please see the appropriate resource section in Chapter 4, "Environmental Setting, Impacts, and Mitigation Measures." See Table 6-1 at the end of this chapter for

a table summarizing the comparison of impacts between the Option 1C Alternative Alignment and the proposed project.

Aesthetics

The Option 1C Alternative Alignment would require the same bridges and a similar undercrossing as the Proposed Trail Alignment, but would be located closer to the residences that front Hernandez and Machado Lanes. Because this alternative would result in constructing elements of the trail closer to residences than the Proposed Trail Alignment, there could be more potential for the perceived visual character or quality of the project area to be effected by construction or operation of the trail since it would be more visible to area residents. As discussed for the Proposed Trail Alignment, there would not be light and glare impacts associated with the construction of the Option 1C Alternative Alignment. This alternative would require the same bridges and a similar undercrossing as the Proposed Trail Alignment. The Darling Way undercrossing would be on the side of the creek closer to residences, but is unlikely to affect these receptors because any lighting would be below street level, and this would remain a less-than-significant impact (see Section 4.1, “Aesthetics”).

Air Quality

The Option 1C Alternative Alignment would not require the widening of the Darling Way bridge, which would result in fewer emissions associated with bridge construction activities. Thus, construction and use-related activities combined under the Option 1C Alternative Alignment would be less than estimated emissions for the Proposed Trail Alignment. However, the Option 1C Alternative Alignment could still potentially exceed PCAPCD’s recommended CEQA-level project significance threshold of 82 lbs/day of NO_x during construction; Mitigation Measure 4.2-1 would be required, and the impact would be less than significant after mitigation (see Section 4.2, “Air Quality”).

Biological Resources

Under the Option 1C Alternative Alignment permanent impacts to wetlands and/or waters would be 0.01 acre less than the Proposed Trail Alignment, and the Option 1C Alternative Alignment temporary impacts would be 0.05 acre less than the Proposed Trail Alignment. The Option 1C Alternative Alignment would permanently affect up to 1.25 acres of riparian forest (0.55 acre more than the Proposed Trail Alignment) and temporarily disturb up to 0.90 acre of riparian forest (0.20 acre more than the Proposed Trail Alignment). Project implementation with the Option 1C Alternative Alignment would permanently affect up to 4.25 acres of valley oak riparian woodland (0.05 acre less than the Proposed Trail Alignment) and temporarily disturb up to 4.85 acres of valley oak riparian woodland (0.05 acre less than the Proposed Trail Alignment).

Under the Option 1C Alternative Alignment permanent impacts to salmonid habitat (i.e., aquatic habitat) would be 0.01 acres less than the Proposed Trail Alignment (or 0.25 acres), and the Option 1C Alternative Alignment temporary impacts would be 0.05 acres less than the Proposed Trail Alignment. Implementation of the Option 1C Alternative Alignment would result in an anticipated removal of 0.032 acre of SRA (or 0.019 acre more than the Proposed Trail Alignment) and temporary effects on SRA to be 0.25 acre (or 0.072 acre more than the Proposed Trail Alignment).

Under the Option 1C Alternative Alignment, a total of 14 elderberry shrubs (as compared to 15 elderberry shrubs under the Proposed Trail Alignment) could be adversely impacted through direct removal of elderberry shrubs, ground-disturbing construction (cut/fill) within the root zone of the shrubs, or permanent removal of riparian habitat within 165 feet of elderberry shrubs. It is anticipated that implementation of the project would result in the removal of a total of 0.87 acres (as compared to 1.22 acres under the Proposed Trail Alignment) of suitable riparian habitat.

Under the Option 1C Alternative Alignment permanent impacts to Sandford’s arrowhead potential habitat would be 0.01 acres less than the Proposed Trail Alignment (or 0.25 acres), and Option 1C Alternative Alignment temporary impacts would be 0.05 acres less than the Proposed Trail Alignment.

The Option 1C Alternative Alignment would result in similar impacts to nesting raptors, nesting special-status birds, western pond turtle, roosting special-status bats, migratory fish, and similar impacts to sensitive habitats as would occur with the Proposed Trail Alignment.

On balance, the Option 1C Alternative Alignment would have slightly less impact on biological resources than the Proposed Trail Alignment, however all mitigation measures identified for the Proposed Trail Alignment would be required (see Section 4.3, “Biological Resources”).

Cultural Resources

The Option 1C Alternative Alignment would not require the widening of the Darling Way Bridge, which would reduce the amount of excavation and other ground-disturbing activities that could damage or destroy as yet undiscovered archaeological resources or human remains as compared to the Proposed Trail Alignment. Mitigation Measures 4.4-1 and 4.4-2 would be required, and these impacts would be less than significant after mitigation (see Section 4.4, “Cultural Resources”).

Geology and Soils

With implementation of the Option 1C Alternative Alignment, the trail would be located in an additional area of high risk, as identified in the trail risk assessment (PSOMAS 2014). The section of trail along the east side of Dry Creek downstream of the Darling Way Bridge would be located in proximity to the eroding creek bank in an area where the stream power is high. Key constraints in this area include the distance between the top of the creek bank and the existing fence line of the adjacent private properties, an existing sewer trunk line, and a number of large trees. A reinforced concrete retaining wall would be constructed along the property line, and the trail would be located up against the property line to maximize setback from the creek. Trail width would be reduced to 8 feet, and a post and cable fence would be constructed on the western side of the trail.

The Option 1C Alternative Alignment would decrease temporary impacts by approximately 0.57 acre, while increasing permanent impacts by 0.59 acre. This would result in a net increase of 0.02 acre mapped as slight erosion hazard when used for trails and roads. There would also be an increase in the length of bank affected; an additional 146.29 linear feet of moderately eroded bank would be affected (67.98 feet of temporary impacts and 78.31 acres of permanent impacts). Overall, impacts under this alternative would be less than significant but to slightly greater degree than those that would occur with the proposed project (see Section 4.5, “Geology and Soils”).

Greenhouse Gas Emissions and Climate Change

The Option 1C Alternative Alignment would not require the widening of the Darling Way bridge, which would result in fewer emissions associated with bridge construction activities. Thus, construction and use-related activities under the Option 1C Alternative Alignment would be less than estimated emissions for the Proposed Trail Alignment, and this would be a less-than-significant impact (see Section 4.6, “Greenhouse Gas Emissions and Climate Change”).

Hazards and Hazardous Materials

The Option 1C Alternative Alignment would shift trail construction at the westernmost end of the project site from the west side of Dry Creek to the east side. This would separate earthwork that could encounter hazardous materials from the industrial and commercial properties along Riverside Avenue more than the Proposed Trail Alignment. The Option 1C Alternative Alignment would also reduce the area of temporary impacts by approximately 0.57 acre, which would result in a proportional reduction in the potential to encounter undocumented contamination that has not been characterized or remediated. Mitigation Measure 4.7-4 would be required and impacts would be less than significant after mitigation. Overall, impacts under this alternative would be less than those that would occur with the proposed project (see Section 4.7, “Hazards and Hazardous Materials”).

Hydrology and Water Quality

The Option 1C Alternative Alignment is the same as the Proposed Trail Alignment with the exception that in the Sheet 1 Segment, the multi–use trail would be located on the northeastern side of Dry Creek. In the Sheet 1 Segment, the northeastern bank of Dry Creek is steep and erosive with little distance between the top of the bank and the adjacent private property (CBEC 2014). Because of this, implementation of this alternative would require an additional 1,080 linear feet of streambank stabilization. The Option 1C Alternative Alignment would have the same bridges and undercrossings described above under the Proposed Trail Alignment, with the exception of the widening of the Darling Way Bridge (Bridge #1), and this alternative would have the same construction and use-related impacts. Because the Option 1C Alternative Alignment would not require the widening of Darling Way Bridge (Bridge #1), it would therefore have a smaller encroachment footprint within the 100-year floodplain when compared to the Proposed Trail Alignment. Option 1C would have a less-than-significant impact on hydrology and water quality. Overall, impacts under this alternative would be slightly greater than those that would occur with the proposed project (see Section 4.8, “Hydrology and Water Quality”).

Land Use and Planning

Consistency with relevant land use plans under the Option 1C Alternative Alignment would be the same as under the Proposed Trail Alignment because the alternative travels through the same land use designations, zoning, and contains the same elements as the Proposed Trail Alignment. Effects on established communities under the Option 1C Alternative Alignment would be the same type and magnitude of as under the Proposed Trail Alignment, although this alternative would require the acquisition of 55,881 fewer square feet than the Proposed Trail Alignment, and this impact would be less than significant. Compared to the proposed project, Option 1C Alternative Alignment would include small right-of-way requirements on two parcels on the east side of Dry Creek and one parcel north of Darling Way. It would require less acquisition on five parcels along Riverside Avenue. Overall, impacts under this alternative would be less than those that would occur with the proposed project (see Section 4.9, “Land Use and Planning”).

Noise

The location of construction activities under the Option 1C Alternative Alignment would vary somewhat based on differences in the alignment of the northernmost section of trail near Darling Way and east of Riverside Avenue. The location of the trail alignment under this alternative would shift to the east side of Dry Creek and would be within 50 feet or less of existing residential land uses. This alternative would not require the widening of the Darling Way bridge; therefore, the total number of bridges requiring construction under the Option 1C Alternative Alignment in the areas near Darling Way and east of Riverside Avenue would be fewer than the number of bridges constructed under the Proposed Trail Alignment, which would result in less noise overall from bridge construction activities; however, a series of retaining walls would be constructed under this alternative along the trail alignment both north and south of Darling Way and north of Bridge #2. For all other sections of the trail, both the trail alignment and bridge locations would be the same as the Proposed Trail Alignment. The construction of retaining walls would result in construction activity occurring closer to residences under Option 1C Alternative Alignment than under the Proposed Trail Alignment. Mitigation Measures 4.10-1a, 4.10-1b, 4.10-1c, and 4.10-3 would be required, however impacts related to short-term construction noise would remain significant and unavoidable after mitigation. Although the magnitude, frequency, and duration of construction activities would be similar to those under the Proposed Trail Alignment, the activities may occur closer to residences under Option 1C Alternative Alignment compared to the Proposed Trail Alignment (see Section 4.10, “Noise”).

Public Services

The Option 1C Alternative Alignment would not require the widening of the Darling Way Bridge, but would include the construction of Bridge #2 and Bridge #4. This change in design would not affect potential impacts related to fire protection and police protection services. Overall, this alternative would

result in the same less-than-significant impacts to existing utilities and service systems as identified for the proposed project (see Section 4.11, “Public Services”).

Recreation

Access to recreational facilities under the Option 1C Alternative Alignment would be the same type and magnitude as the Proposed Trail Alignment and is not expected to result in a substantial number of additional users at existing recreation facilities such that new facilities would need to be built to accommodate increased use. Recreation-related impacts associated under the Option 1C Alternative Alignment would be less than significant and would be similar to the Proposed Trail Alignment (see Section 4.12, “Recreation”).

Utilities

The Option 1C Alternative Alignment would not require the widening of the Darling Way Bridge, but would include the construction of Bridge #2 and Bridge #4. This change in design would result in the same less-than-significant impacts to existing utilities and service systems as identified for the Proposed Trail Alignment (see Section 4.13, “Utilities”).

ABILITY TO ACHIEVE PROJECT OBJECTIVES

The Option 1C Alternative Alignment would be similar to the proposed project and would meet the project objectives in a similar manner as the proposed project. This alternative would meet the objective to develop a continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways. Access to the Dry Creek, Cirby Creek, and Linda Creek open space areas would be enhanced for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response. Effects to the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas would be similar to the proposed project. On balance, the Option 1C Alternative Alignment would have slightly less impact on biological resources than the Proposed Trail Alignment. This alternative would attain the project objective related to seeking the most effective and efficient balance of capital cost, operational and maintenance costs, environmental and community impacts, and public benefits in a similar manner as the proposed project because preliminary cost estimates were similar for Option 1C and Option 1B (the proposed project).

6.4.4 Option 5A Alternative Alignment

The Option 5A Alternative Alignment would begin just south of the confluence of Cirby Creek and Linda Creek and remain on the south side, following the southern bank of Linda Creek within City-owned property. The trail would travel eastward and pass beneath Sunrise Avenue. Connecting ramps would provide access to both sides of Sunrise Avenue. This alternative would continue to just east of the existing drainage outfall structure at which point it would cross to the north side of Linda Creek via Bridge #14, before continuing further east toward Oak Ridge Drive. The Option 5A Alternative Alignment would eliminate the need for Bridge #13 (see Chapter 3, “Project Description” Exhibit 3-15 Alignment Option 5A).

The discussion that follows is a summary of how this alternative compares to the proposed project for each resource. For a full evaluation, please see the appropriate resource section in Chapter 4, “Environmental Setting, Impacts, and Mitigation Measures.” See Table 6-1 at the end of this chapter for a summary comparison of impacts between the Option 5A Alternative Alignment and the proposed project.

Aesthetics

The Option 5A Alternative Alignment would cross under Sunrise Avenue on the south side of Linda Creek, rather than the north side as described for the Proposed Trail Alignment. With this alternative, the bridge over Linda Creek (Bridge #14) would be constructed on the eastern side of Sunrise Avenue, immediately adjacent to residences on either side of the creek. This bridge may be visible from nearby residences, while the corresponding bridge for the Proposed Trail Alignment (Bridge #13) would most likely not, because the residences located to the north of Bridge #13 are screened by at least 200 feet of dense vegetation. This alternative also includes a connection to the residences on Meadow Gate Drive, which would increase the visibility of the project. As discussed for the Proposed Trail Alignment, the actual visual change due to implementation of this alternative would be relatively low. Construction of the Option 5A Alternative Alignment would not result in substantial light or glare for the same reasons discussed for the Proposed Trail Alignment. In this commercial area, which already has ample street and business lighting, this change would not substantially affect views of the project area. Installation of Bridge #14 instead of Bridge #13 would result in a bridge with associated illumination in closer proximity to residences than the Proposed Trail Alignment. These impacts would be less than significant (see Section 4.1, “Aesthetics”).

Air Quality

Implementing the Option 5A Alternative Alignment would change the location of one bridge (#14 rather than #13), but would not change the number of bridges proposed, which would result in approximately the same emissions associated with bridge construction activities. Thus, estimated emissions for construction and use-related activities under the Option 5A Alternative Alignment would be the same as the Proposed Trail Alignment. However, Option 5A Alternative Alignment could still potentially exceed PCAPCD’s recommended CEQA-level project significance threshold of 82 lbs/day of NO_x during construction; Mitigation Measure 4.2-1 would be required, and the impact would be less than significant after mitigation (see Section 4.2, “Air Quality”).

Biological Resources

The Option 5A Alternative Alignment would have the same permanent and temporary riparian forest impact as the Proposed Trail Alignment. However, the Option 5A Alternative Alignment would permanently affect 4.60 acres of valley oak riparian woodland (0.30 acre more than the Proposed Trail Alignment) and temporarily disturb 5.10 acres of valley oak riparian woodland (0.20 acre more than the Proposed Trail Alignment). Project implementation would result in permanent loss and temporary disturbance of wetlands and other waters of the United States, waters of the state, and associated riparian habitat.

The permanent impacts to salmonid habitat under Option 5A Alternative Alignment would be 0.0005 acre more than the Proposed Trail Alignment, and the temporary impacts to wetlands and/or waters would be 0.001 acres less than the Proposed Trail Alignment. No riparian impacts are expected from implementation of Option 5A Alternative Alignment. However, based on the analysis for SRA, implementation of the Option 5A Alternative Alignment would result in an anticipated removal of 0.022 acre of SRA (or 0.009 acre more than the Proposed Trail Alignment) and temporary effects on SRA to be 0.16 acre (or 0.059 acre more than the Proposed Trail Alignment).

Adverse impacts to VELB habitat would be the same under Option 5A Alternative Alignment as compared to the Preferred Trail Alignment. Under Option 5A Alternative Alignment, total of 15 elderberry shrubs could be adversely impacted through direct removal of elderberry shrubs, ground-disturbing construction (cut/fill) within the root zone of the shrubs, or permanent removal of riparian habitat within 165 feet of elderberry shrubs. It is anticipated that implementation of the project would result in the removal of a total of 1.22 acres of suitable riparian habitat.

The permanent impacts to Sanford's arrowhead potential habitat under Option 5A Alternative Alignment would be 0.0005 acre more than the Proposed Trail Alignment, and the temporary impacts to Sadford's arrowhead potential habitat would be 0.001 acres less than the Proposed Trail Alignment.

The Option 5A Alternative Alignment would result in similar impacts to nesting raptors, nesting special-status birds, western pond turtle, roosting special-status bats, migratory fish, and similar impacts to sensitive habitats as would occur with the Proposed Trail Alignment.

On balance, the Option 5A Alternative Alignment would have slightly more impact on biological resources than the Proposed Trail Alignment, however all mitigation measures identified for the Proposed Trail Alignment would be required (see Section 4.3, "Biological Resources").

Cultural Resources

The Option 5A Alternative Alignment would change the location of one bridge (#14 rather than #13), but would not change the number of bridges proposed. Therefore, the amount of excavation and other ground-disturbing activities that could damage or destroy as yet undiscovered archaeological resources or human remains would be the same as the Proposed Trail Alignment. Mitigation Measures 4.4-1 and 4.4-2 would be required, and these impacts would be less than significant after mitigation (see Section 4.4, "Cultural Resources").

Geology and Soils

The Option 5A Alternative Alignment would increase temporary and permanent impacts by 0.13 acre and 0.22 acre, respectively. There would be a corresponding increase of 0.43 acre mapped as slight erosion hazard for roads and trails and a decrease of 0.07 acre not rated. Areas with moderate erosion hazard would be slightly less effected during construction (a reduction of 0.03 acre), but would make up slightly more of the project footprint (an increase of 0.02 acre). There would be no change in the bank erosion severity along the alignment. Overall, impacts under this alternative would be less than significant but to a greater degree than those that would occur with the proposed project (see Section 4.5, "Geology and Soils").

Greenhouse Gas Emissions and Climate Change

Implementing the Option 5A Alternative Alignment would change the location of one bridge (#14 rather than #13), but would not change the number of bridges proposed, which would result in the same emissions associated with bridge construction activities. Thus, construction and use-related activities under this alternative would be the same as estimated emissions for the Proposed Trail Alignment, and this would be a less-than-significant impact (see Section 4.6, "Greenhouse Gas Emissions and Climate Change").

Hazards and Hazardous Materials

The Option 5A Alternative Alignment would increase the area of temporary impacts by 0.13 acre, which would result in a proportional increase in the potential to encounter undocumented contamination that has not been characterized or remediated. Mitigation Measure4.7-5 would be required, and impacts would be less than significant after mitigation. Overall, impacts under this alternative would be slightly greater than those that would occur with the proposed project (see Section 4.7, "Hazards and Hazardous Materials").

Hydrology and Water Quality

The Option 5A Alternative Alignment deviates from the Proposed Trail Alignment just west of Bridge #13. Bridge #13 would not be constructed, and this alternative would remain on the south bank of Cirby Creek until crossing to the north bank via Bridge #14. The Option 5A Alternative Alignment would include both an undercrossing of Sunrise Avenue and connecting paths to both sides of Sunrise Avenue. Both the Proposed Trail Alignment and this alternative would make extensive use of retaining walls through this section of the path; however, this alternative would require an additional 635 linear

feet when compared to the Proposed Trail Alignment. Under the Option 5A Alternative Alignment, Bridge #13 would not be constructed, and this alternative would not result in the significant impact related to the 100-year floodway described under the Proposed Trail Alignment. This alternative would cross Linda Creek via Bridge #14 and would result in no encroachments within the regulated floodway and, therefore, would not result in an increase in the 100-year WSE; and the magnitude of the impacts would be less than those that would occur with the proposed project. Option 5A Alternative Alignment would have a less-than-significant impact on hydrology and water quality. (see Section 4.8, “Hydrology and Water Quality”).

Land Use and Planning

Consistency with relevant land use plans under the Option 5A Alternative Alignment would be the same as under the Proposed Trail Alignment because the alternative travels through the same land use designations, zoning, and contains the same elements as the Proposed Trail Alignment. Effects on established communities under the Option 5A Alternative Alignment would be the same type and magnitude of as under the Proposed Trail Alignment, although this alternative would require the acquisition of 14,603 fewer square feet than the Proposed Trail Alignment, and the impact would be less than significant. Compared to the proposed project, Option 5A Alternative Alignment would not require acquisition from five parcels north of Linda Creek, but it would require acquisition from three parcels south of Linda Creek. Overall, impacts under this alternative would be less than those that would occur with the proposed project (see Section 4.9, “Land Use and Planning”).

Noise

The location of construction activities under the Option 5A Alternative Alignment would vary from the Proposed Trail Alignment due to differences in the trail near Sunrise Avenue along Linda Creek. The location of the trail under this alternative would shift to the south side of Linda Creek, which would result in trail paving and construction activities located further away from existing residential land uses on the north side of Linda Creek. The alignment under this alternative would be closer to existing commercial uses and some existing residential uses south of Linda Creek based on a trail spur that would connect to Meadow Gate Drive. A series of retaining walls would be constructed under the Option 5A Alternative Alignment on both sides of Sunrise Avenue, compared to only on the north side of Linda Creek under the Proposed Trail Alignment. This alternative would also require the construction of Bridge #14 over Linda Creek east of Sunrise Avenue, rather than Bridge #13 west of Sunrise Avenue. Thus, although the magnitude, frequency, and duration of construction activities under Option 5A Alternative Alignment would be similar than compared to the Proposed Trail Alignment, the activities may occur closer to residences under Option 5A Alternative Alignment compared to the Proposed Trail Alignment. Mitigation Measures 4.10-1a, 4.10-1b, 4.10-1c, and 4.10-3 would be required, however impacts related to short-term construction noise would be remain significant and unavoidable after mitigation (see Section 4.10, “Noise”). If the caisson drilling for Bridge #14 cannot feasibly be located greater than 43 feet from occupied structures, vibration human disturbance impacts would also remain significant and unavoidable after mitigation.

Public Services

Implementing the Option 5A Alternative Alignment would change the location of one bridge (#14 rather than #13), but would not change the number of bridges proposed. This change in design would not affect potential impacts related to fire protection and police protection services. Overall, this alternative would result in the same less-than-significant impacts to existing utilities and service systems as identified for the proposed project (see Section 4.11, “Public Services”).

Recreation

Access to recreational facilities under the Option 5A Alternative Alignment would be the same type and magnitude as the Proposed Trail Alignment and is not expected to result in a substantial number of additional users at existing recreation facilities such that new facilities would need to be built to accommodate increased use. Recreation-related impacts associated under the Option 5A Alternative

Alignment would be less than significant and would be similar to the Proposed Trail Alignment (see Section 4.12, “Recreation”).

Utilities

Implementing the Option 5A Alternative Alignment would change the location of one bridge (#14 rather than #13), but would not change the number of bridges proposed. This change in design would result in the same less-than-significant impacts to existing utilities and service systems as identified for the Proposed Trail Alignment (see Section 4.13, “Utilities”).

ABILITY TO ACHIEVE PROJECT OBJECTIVES

The Option 5A Alternative Alignment would be similar to the proposed project and would meet the basic project objectives in a similar manner as the proposed project. This alternative would meet the objective to develop a continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways. This alternative would enhance trail connectivity when compared to proposed project by providing access to the west side of Sunrise Avenue and to Meadow Gate Drive neighborhood. Access to the Dry Creek, Cirby Creek, and Linda Creek open space areas would be enhanced for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response. Effects to the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas would be similar to the proposed project. On balance, the Option 5A Alternative Alignment would have slightly more impact on biological resources than the Proposed Trail Alignment. This alternative would be similar to the proposed project in attaining the project objective related to seeking the most effective and efficient balance of capital cost, operational and maintenance costs, environmental and community impacts, and public benefits because estimated construction costs would be similar. However, preliminary cost estimates for Option 5A were slightly higher than Option 5B (the proposed project).

6.5 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA Guidelines Section 15126.6(e)(2) states that when the No Project Alternative is identified as the environmentally superior alternative, the EIR must also identify an environmentally superior alternative from among the other alternatives. Per the analysis conducted for this Draft EIR for the Dry Creek Greenway Multi-Use Trail Project, the environmentally superior alternative would be the No Project Alternative because it would not result in new impacts on the project site. However, as discussed above, the No Project Alternative would not achieve any of the project’s objectives. Among the other alternatives, Option 1A Alignment Alternative would be the environmentally superior alternative.

As discussed above and in the analyses in Chapter 4, the magnitude of several impacts would be less than the proposed project with Option 1A Alignment Alternative (see Table 6-1). This alternative would result in the construction of one fewer bridge than under the proposed project because it would construct Bridge #3, rather than Bridges #2 and #4, but additional retaining walls would be required. This would result in less construction than under the proposed project. Under Alternative 5A, Impact 4.8-3 (Alter or redirect 100-year flood flows, or expose people or structures to risk of injury or damage by flood waters) would be less than significant because this alternative would not include the construction of Bridge #13.

Table 6-1 Comparison of the Environmental Impacts of the Alternatives in Relation to the Proposed Project

Environmental Topic	Proposed Project	No Project	Option 1A Alternative Alignment	Option 1C Alternative Alignment	Option 5A Alternative Alignment
Aesthetics	LTS	NI	LTS (Less)	LTS (Greater)	LTS (Greater)
Air Quality	LTS	NI	LTS (Less)	LTS (Less)	LTS (Similar)

Notice of Preparation

PUBLIC WORKS - ALTERNATIVE TRANSPORTATION

401 Vernon Street, Roseville, CA 95678 (916) 746-1304

NOTICE OF PREPARATION

Date: November 18, 2013

To: State Clearinghouse
Responsible Agencies
Trustee Agencies
Interested Parties

Subject: Notice of Preparation of an Environmental Impact Report for the proposed Dry Creek Greenway Multi-Use Trail and a Notice of Public Scoping Meeting

Project Title/File Number: Dry Creek Greenway Multi-Use Trail

NOP Comment Period: Written comments are due to the City's Public Works Department no later than December 19, 2013 by 5:00 p.m.

Public Scoping Meeting: In accordance with Public Resources Code Section 21083.9, notice is hereby given that the City of Roseville will conduct a public scoping meeting on **December 3, 2013 starting at 6 p.m., Maidu Community Center**, 1550 Maidu Drive, Roseville, CA 95661

Project Location: The proposed multi-use trail would extend along Dry, Cirby, and Linda Creeks from the existing Saugstad/Royer Park trail near the intersection of Riverside Avenue and Darling Way for 4.25 miles eastward to the City limits, just past the Old Auburn Road/South Cirby Way intersection.

Lead Agency and Contact Person:
City of Roseville Public Works - Alternative Transportation
Mike Dour, Alternative Transportation Analyst - Bikeways
401 Vernon Street
Roseville, CA 95678
Phone: (916) 746-1304
Fax: (916) 746-1333
Email: mdour@roseville.ca.us
Website: www.roseville.ca.us/pw

1 INTRODUCTION

This Notice of Preparation (NOP) has been issued to notify interested parties that an Environmental Impact Report (EIR) will be prepared, and to solicit feedback on the scope and content of the analysis in the EIR. The City of Roseville (City) will be the lead agency and will prepare an EIR for the Dry Creek Greenway Multi-Use Trail (referred to herein as the "proposed project" or "proposed trail"), which includes the project approvals listed in Section 4 of this NOP. The proposed project is also subject to compliance with the National Environmental Policy Act (NEPA). Caltrans, though a delegation agreement with the Federal Highway Administration, will be the NEPA lead agency. The proposed project description and vicinity and location maps are provided in this NOP.

NOP Comment Period: Due to the time limits mandated by state law, your response to this NOP must be sent at the earliest possible date and submitted to the City, but not later than 30 calendar days after November 18, 2013 (the date this notice was first posted). Please submit comments to the City of Roseville no later than 5 p.m. on December 19, 2013. Please provide written comments to:

Mike Dour, Alternative Transportation Analyst - Bikeways
Public Works - Alternative Transportation
City of Roseville
401 Vernon Street
Roseville, CA 95678
Phone: (916) 746-1304
Fax: (916) 746-1333
Email: mdour@roseville.ca.us

Public Scoping Meeting: A Public Scoping Meeting regarding the proposed project will be held on December 3, 2013 to receive comments from interested parties regarding the issues that should be addressed in the EIR. The time and location of the Public Scoping Meeting is provided on the first page of this NOP.

2 REGULATORY BACKGROUND

This NOP provides notification that an EIR will be prepared for the proposed project. This NOP has been prepared in accordance with the California Environmental Quality Act (CEQA), Public Resources Code Division 13 Section (§) 21000 et seq., and the State CEQA Guidelines, Title 14 California Code of Regulations §15000 et seq. According to CEQA Guidelines §15064, an EIR must be prepared if there is substantial evidence in light of the whole record that the proposed project may have a significant effect on the environment.

This NOP describes the proposed project in Section 3, and describes the requested project approvals in Section 4. The list of potential and probable environmental effects of the proposed project and the proposed scope of analysis for the EIR is identified in Section 5, and Section 6 discusses the project alternatives analysis. Section 7 discusses the cumulative impacts analysis, and Section 8 references previous studies and reports used in this analysis.

3 PROJECT DESCRIPTION

The Dry Creek Greenway Multi-Use Trail Project (proposed project or proposed trail) is a proposed 4.25 mile paved multi-use trail in the City of Roseville (City) (see Exhibit 1, Project Vicinity). The proposed project would be a shared-use trail for pedestrians, bicyclists and other non-motorized vehicle users that would connect neighborhoods, parks, schools, businesses, natural areas, and the on-street bikeway system across the south side of the City.

3.2 PROJECT LOCATION AND SETTING

The proposed 4.25 mile multi-use trail would extend from the existing Saugstad/Royer Park trail near the intersection of Riverside Avenue and Darling Way eastward to the City limits, just past the Old Auburn Road/South Cirby Way intersection (see Exhibit 2, Project Location). The trail would follow creek corridors along portions of Dry, Cirby, and Linda Creeks. These corridors currently contain segments of existing unimproved natural surface paths and paved multi-use trails, some of which do not meet current City design standards. Much of the corridor has been used historically for recreation, infrastructure maintenance access and transportation, and today it continues to be used for these purposes along both improved and unimproved segments.

EXISTING CONDITIONS

The proposed project would be located primarily within City-owned property zoned Open Space with Floodway or Floodway Fringe Overlays. Small segments of the trail would also be located on property zoned for residential, commercial, and parks and recreation use with the Floodway or Floodway Fringe Overlays, with some affected properties being privately owned. Trail development is a permitted use in all of these zone districts.

The proposed project would run through the creek corridors of developed neighborhoods and business districts in the City of Roseville. With the exception of a few scattered parcels, the properties surrounding the creek corridors are fully developed. The properties adjacent to the proposed trail corridor include a mix of residential, commercial, parks, open space and public/quasi-public uses. Flood control improvements, including floodwalls, berms, bypass channel, and bypass culverts are located along the length of the proposed project from Interstate 80 (I-80), easterly to Old Auburn Road. Commercially-zoned properties are concentrated along Sunrise Avenue to the north and south of the project site along Linda Creek. Commercial areas are also found near the western part of the proposed trail along Riverside Avenue between Darling and Cirby Ways.

Within the trail corridor, biological resources habitat quality ranges from disturbed, low quality land to high quality undisturbed habitat. Annual grassland occurs in open, cleared, or disturbed areas along the proposed trail and forms the understory of mixed riparian and valley oak woodland communities. The vegetation along the stream banks, bottoms, and adjacent floodplains varies throughout the trail corridor and depends on local hydrologic and soil conditions. Central Valley fall-run Chinook salmon have been previously documented in all three creeks; the creeks provide migration and spawning habitat for adult and rearing habitat for juvenile Chinook salmon. In addition to its natural qualities, the habitat offers passive recreation and interpretive opportunities.

Exhibit 1 **Project Vicinity**

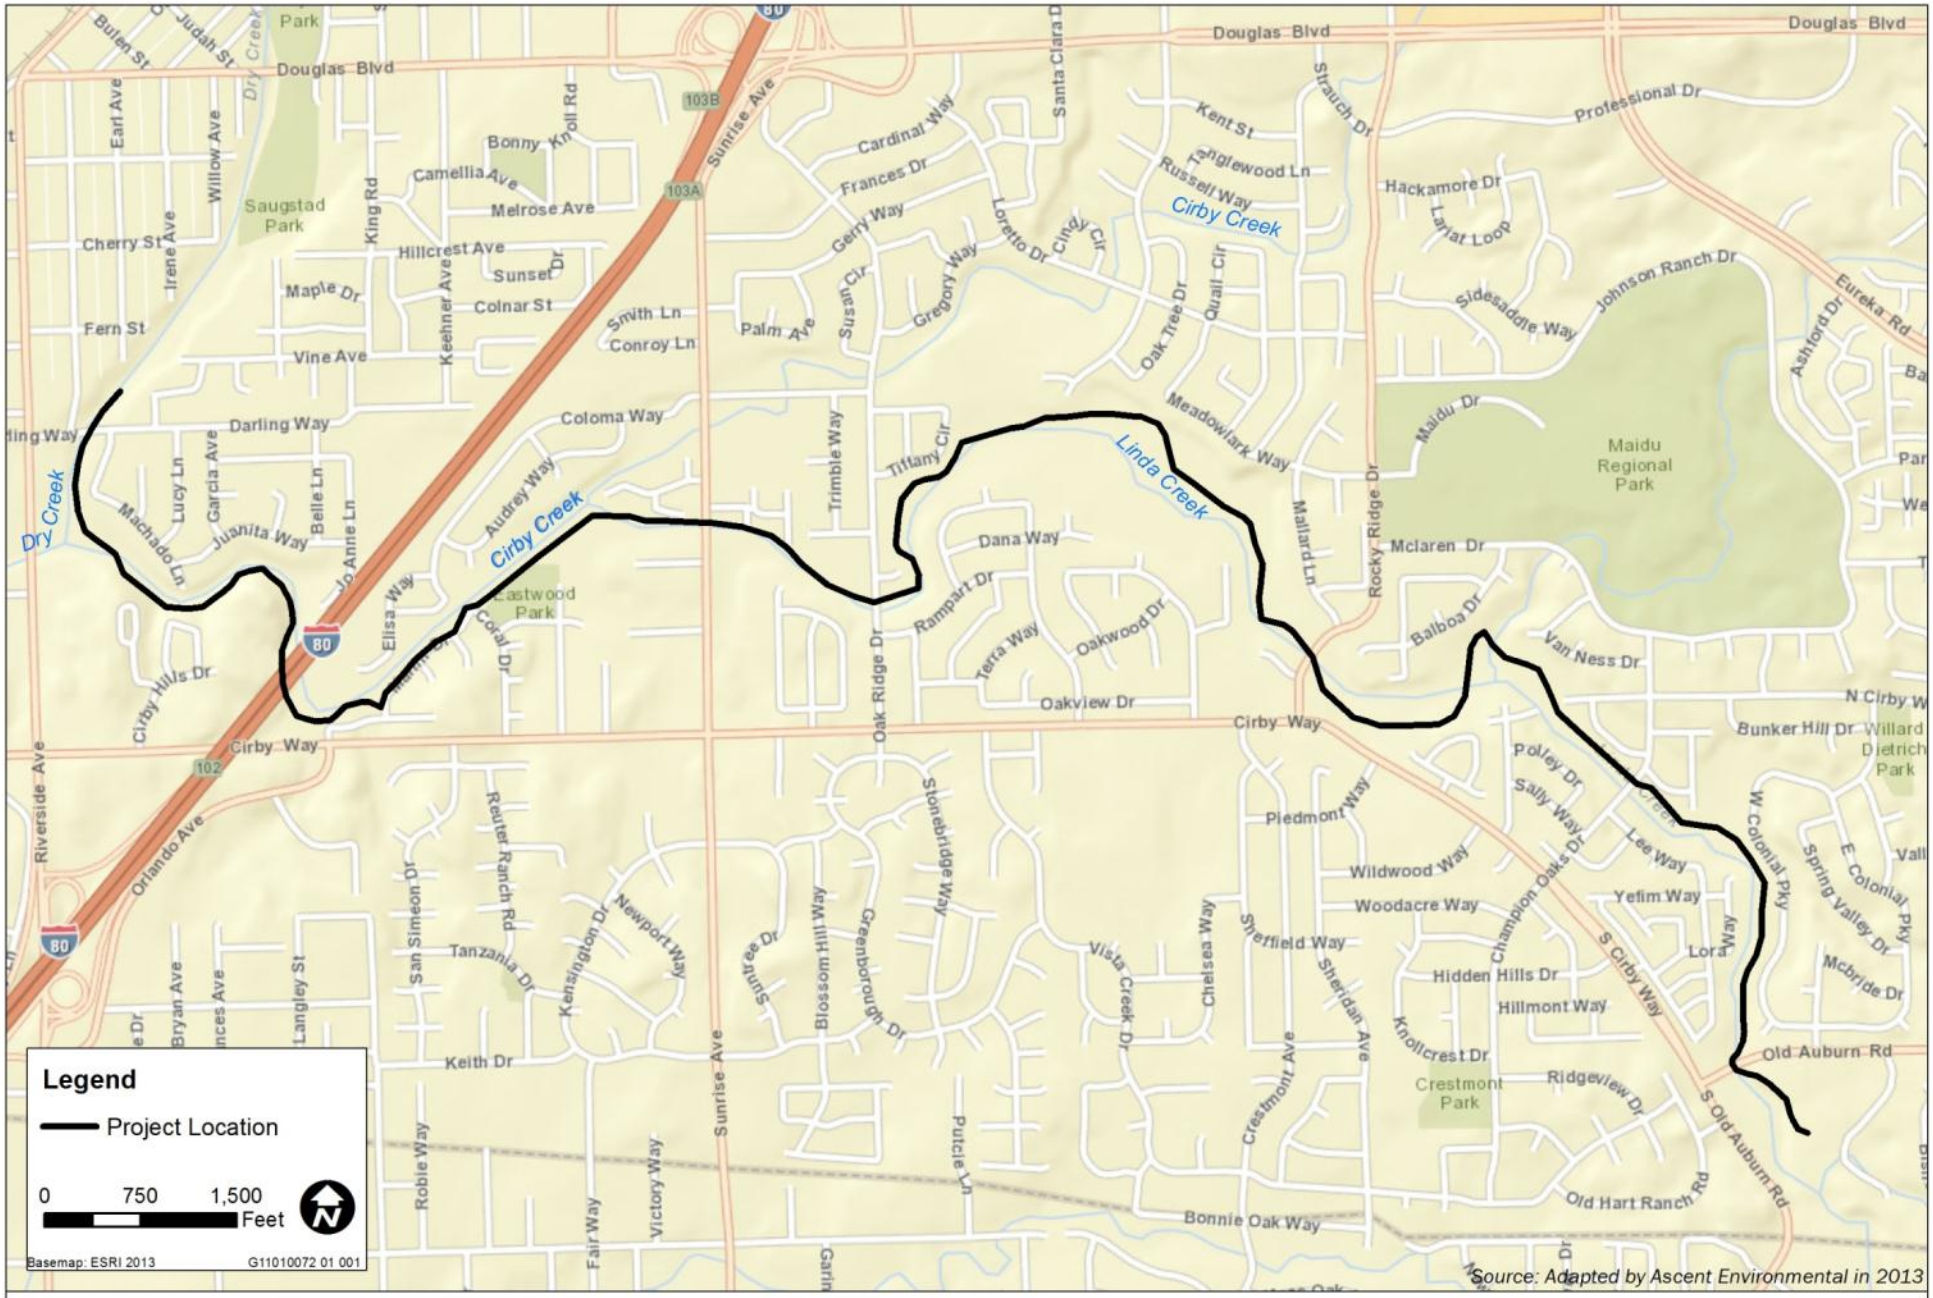

Exhibit 2

Project Location

PARKS AND NEIGHBORHOODS

The proposed trail would be located in close proximity to several parks, including Maidu Regional Park, Eastwood Park and Willard Dietrich Park as shown on Exhibit 2. An existing multi-use trail along the east side of Rocky Ridge Drive as well as on-street bike lanes on Rocky Ridge Drive currently provide connections from the proposed trail to Maidu Regional Park.

The City of Roseville is organized into neighborhood associations. The purpose of the neighborhood associations is to improve the social, physical, and economic health in the Roseville community by sharing information, facilitating training and education, providing resources, and encouraging communication and participation among neighbors, neighborhoods, government, businesses and other participants. There are currently 39 neighborhood association areas. The proposed Dry Creek Greenway Multi-Use Trail would be aligned through, or adjacent to the Cherry Glen, Cirby Side, Cresthaven, Hillcrest, Maidu, Meadow Oaks, Sierra Gardens, and South Cirby neighborhood associations.

BIKEWAY AND TRANSIT CONNECTIONS

Enhancing connectivity is an integral part of planning a successful multi-use trail system. Connections to other multi-use trails, on-street bikeways, neighborhoods, business districts and transit increase trail access and promote trail use. The proposed project has a number of opportunities for connections to the community and existing and proposed transportation facilities.

Access to the trail for all users would be a key element of its success. Accessibility guidelines for trails (as defined in the Design Standards and the ADA standards of the Advanced Notice of Proposed Rulemaking for Shared Use Paths) would be met where feasible. Neighborhood access would be achieved from local streets crossing the trail. Each street crossing would be identified and directional signs would be placed at street intersections identifying destinations and distances along the trail and within the surrounding community.

Trailheads (parking areas with a formal trail entrance) would serve all trail users. They would provide information about the trail (e.g., maps) and may have trail user facilities like restrooms, trash receptacles, information kiosks, water fountains, and benches. The proposed project would include a trailhead with accompanying parking lot at the western end of the trail, off Riverside Avenue. The parking lot would include approximately 35 parking spaces.

3.3 PROJECT BACKGROUND

The City's 2008 Bicycle Master Plan (BMP) includes a plan for development of over 28 miles of Class I trails in Roseville, including the Dry Creek Greenway Multi-Use Trail. The proposed project is identified as a priority project in the BMP because of its potential to provide a safe, comfortable, and convenient bicycle route in an area of the City with limited existing options for bicyclists.

The City prepared the Dry Creek Greenway Planning and Feasibility Study in 2009. The study outlined the existing conditions, opportunities and constraints, alignment options, evaluation criteria, and a recommended alignment for a paved trail from Riverside Avenue and Darling Way to the City limits just south of Old Auburn Road. The study also included design treatment options, cost estimates, and a phasing plan. The City Council accepted the study in 2010. The study was updated in 2013 to provide further information regarding alternative trail alignments.

During preparation of the original and updated feasibility study, the City used a community-based planning approach with an emphasis on public outreach. The public outreach efforts included establishment of a

Stakeholder Representative Group (SRG) that represented a broad array of community interests. The SRG met 10 times between 2008 and 2013. The public outreach efforts also included three community meetings, an online survey and numerous neighborhood meetings. The community input received during this process informed the proposed project's design and alignment. This input also informed several of the alternatives to the proposed project.

3.4 PURPOSE AND NEED

The proposed project would serve as an alternative for pedestrian and bicyclists to using busy City streets, as well as an important recreational amenity for residents and would ultimately provide an important regional connection for the greater South Placer/Sacramento area. Because there are currently limited options in the project vicinity for safe, comfortable, and convenient bicycle travel, the City has identified the need for development of additional separated bicycle paths. The BMP identifies Class I off-street bike paths as preferred by Roseville residents because of their scenic beauty and their limited motorist interaction and crossing flows. They are most often used for recreational purposes, but they are also important for commuters where they allow bicyclists to avoid high traffic volume areas, such as highway interchanges or major arterial streets.

The proposed trail would also serve as a paved, all-weather access for City maintenance crews. This would provide access to the City's sewer, water, and drainage outfalls that follow the creeks. In addition, the trail and its access points would provide creek maintenance crews with access to remove blockages within the stream channel and improve conveyance of stormwater. The trail would also provide access for emergency service responders.

During development of the 2009 Dry Creek Greenway Planning and Feasibility Study, the following Purpose and Need Statement was drafted by the Stakeholder Representative Group and accepted by the City Council:

> "The Dry Creek Greenway multi-use trail is envisioned as a paved, off-street trail along Dry, Cirby, and Linda Creeks that will provide residents a place for bicycling, walking, running, and dog-walking, for fun, education, recreation, health, and transportation.
>
> The Dry Creek Greenway trail is a vital component of the City of Roseville Bikeway and Trail system because it will provide a safe, comfortable, convenient, and highly connected bike route as an alternative to using City streets in an area of the City that is underserved by bicycle facilities. The Dry Creek Greenway trail will connect schools and businesses to residential neighborhoods. The trail will also provide important regional connections as it is part of a series of existing and planned paths that will form a loop around the greater South Placer/Sacramento area."

3.5 PROJECT DESIGN ELEMENTS

STANDARD DESIGN AND CROSS SECTION

The proposed project would be a paved, multi-use trail would that conforms to the City of Roseville Design Standards (Section 13 Bikeways) and other provisions of the City of Roseville Construction Standards. A typical cross-section for the proposed trail would consist of a 10-foot wide paved trail with two-foot shoulders on each side (one composed of decomposed granite and one of aggregate base), for a total width of 14 feet. The trail may also include drainage swales on one or both shoulders, as needed. The proposed trail may be narrowed to an eight-foot wide paved section with one- or two-foot wide shoulders for access spurs and in "pinch-point" locations that have severe physical or environmental constraints. The narrower cross section would still support safe, two-way travel, but would limit physical disturbance where design constraints prevent implementation of the standard cross-section. The proposed trail may also be widened in areas where additional shoulder or trail

width is desired to enhance user comfort and safety. In these instances, the shoulder width may be increased to between 5 and 10 feet on one side of the trail.

The profile of the trail has been set to minimize impacts to the floodplain/floodway and minimize impacts to private property and the environment. The profile closely follows the existing topography where feasible to reduce the trail footprint. The profile is in conformance with the City of Roseville's Design Standards (Section 13 Bikeways). The maximum grades are generally five percent; although in some locations where physical constraints exist, on approaches to bridges and at undercrossing locations, the grades are increased to eight percent. Per the Design/Construction standards, the desired vertical clearance at undercrossings is 12 feet to allow for passage of fire vehicle access. In constrained areas or where fire vehicle access is not needed, the minimum vertical clearance at undercrossings is 9 feet, unless otherwise approved by the Public Works Director.

The proposed trail would, to the extent feasible, be designed to provide maintenance and emergency access for the City Environmental Utilities Department, open space and storm water maintenance crews, and the Roseville Fire Department. It would provide a safe route for walkers, joggers, cyclists, wheelchair users, and others traveling on non-motorized vehicles to access parks and other trails.

ROADWAY UNDERCROSSINGS AND BRIDGE CROSSINGS

The proposed project includes undercrossings of the following roadways:

- Darling Way, east of Riverside Avenue,
- Interstate-80, north of Cirby Way
- Sunrise Avenue, south of Coloma Way
- Rocky Ridge Drive, north of Cirby Way
- Old Auburn Road, north of South Cirby Way

With one exception, all of the roadway undercrossings would be under bridge structures where the roads cross over creeks. The exception would be Rocky Ridge Drive, which uses a series of box culverts to allow passage of Linda Creek flows. The roadway undercrossing at Rocky Ridge Drive is anticipated to utilize one of the existing box culverts, with culvert improvements designed to accommodate trail use.

Implementation of the proposed project would include the construction or modification of up to nine bridges to provide creek crossings throughout the alignment. With the exception of one, all new bridges are proposed to be pre-fabricated steel truss bridges supported on abutments located outside the floodway. The pre-fabricated steel bridge structures are proposed to be a weathered steel finish to blend into the natural environment.

RETAINING WALLS

In general, the proposed trail alignments would be located within the floodplain and would be designed to minimize earthwork and impacts to the water surface elevation. Where required by existing topography and other constraints, retaining walls would be installed at several locations along the proposed alignment. The proposed wall types would include gravity walls (reinforced concrete) and anchored walls (soil nail and tie back walls).

Where the alignment passes under existing bridge structures, tie-back retaining walls would be constructed. This would avoid impacts to the existing bridge abutments and maintain the integrity of the existing structure. Concrete cut-off walls would be proposed on steep cross slopes and where the trail alignment is adjacent to the creek to avoid the potential for undermining of the trail. Depending on the type of wall and location of these walls, an architectural facing may be applied to the walls to improve the aesthetic quality of the walls and allow them to blend more naturally into the surrounding environment.

UTILITY RELOCATION OR MODIFICATION

There are several utilities along the corridor that would require relocation or modifications during construction of the proposed trail. An existing sewer trunk line runs along the creek corridor. Where the proposed trail alignment crosses or parallels the sewer line, adjustments to the grade of the trail or manholes may be needed, or the trail alignment would be shifted slightly to avoid the manholes. Other facilities including water, telecommunications and gas lines may also require relocation and/or adjustments of valves and manholes to grade.

Existing gas and water lines at the Darling Way Bridge and Sunrise Avenue Bridge would also need to be relocated. If the Darling Way Bridge is widened, the existing six-inch gas line attached to the north side of the bridge would be relocated onto the north side of the widened bridge, and the existing 12-inch water line supported on the south side of the bridge would be raised to provide better clearance for the trail users.

LANDSCAPING

The project may include landscaping where needed or desired to create a physical and visual separation between the trail and adjacent properties. Vegetative buffers would be multi-purpose, creating a natural privacy screen, providing habitat for some of the wildlife that live in the creek corridor (e.g., birds, small mammals), and stabilizing the creek bank.

SIGNS

Signs for the Dry Creek Greenway Multi-Use Trail would include both regulatory and wayfinding signs. Trail etiquette and other information would be available at trailheads. Interpretive signs may be located at selected locations throughout the trail corridor.

CONSTRUCTION STAGING AREAS

The proposed project would include construction staging areas where equipment would be temporarily stored during project construction. At the western end of the trail, a staging area would be located on the east side of Riverside Avenue, south of Darling Way, immediately north of Dry Creek. This area is currently a vacant lot and would ultimately be converted to a trailhead.

Additional potential staging areas being considered on existing City-owned parcels include: an area east of Rocky Ridge Drive, north of Linda Creek; an area between Cirby Way and Marlin Drive; an area west of North Cirby Way, north of Linda Creek; an area west of Champion Oaks Drive, north of Linda Creek; an area west of Colonial Parkway on an north of Linda Creek; and an area south of Old Auburn Road east of Linda Creek.

PROJECT PHASING

A phasing plan would be developed for this project to provide a logical sequence of implementation for each identified phase. The phasing would consider aspects such as right-of-way requirements, environmental impacts, estimated capital costs and funding opportunities, and connectivity to key nodes such as schools, parks, trailheads and neighborhoods.

4 PROJECT APPROVALS

Several agencies would be involved in the consideration of proposed project elements. Potential State and local approvals and permits would be considered for the proposed project related to wetlands, endangered species, floodplain encroachment, right of way encroachment (Caltrans), water quality, and streambed alteration. Responsible agencies would include:

- California Department of Transportation (Caltrans),
- U.S. Army Corps of Engineers (USACE)
- Central Valley Regional Water Quality Control Board (RWQCB),
- Central Valley Flood Protection Board,
- United States Fish and Wildlife Service (USFWS)
- National Oceanic and Atmospheric Administration (NOAA) Fisheries, and
- California Department of Fish and Wildlife (CDFW)

5 PROBABLE ENVIRONMENTAL EFFECTS AND SCOPE OF THE EIR

Pursuant to section 15063 (a), of the CEQA Guidelines, an Initial Study has not been prepared for the proposed project. Rather, it is anticipated that the EIR will analyze the project-related impacts to resources in the project area within the following resource areas:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions and Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Public Services
- Recreation
- Transportation and Circulation
- Utilities

6 PROJECT ALTERNATIVES ANALYSIS

As required by CEQA, the EIR will evaluate alternatives to the proposed project. As stated in CEQA Guidelines §15126.6(c), the primary intent of the alternatives evaluation in an EIR is to evaluate a range of alternatives to the project that "could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects." CEQA also requires that the project alternatives analysis include consideration of the "no project" alternative. The "no project" alternative may be defined as "no development" or it may be defined as "some other development."

7 CUMULATIVE IMPACTS ANALYSIS

As required by CEQA, the EIR will evaluate the cumulative impacts of the proposed project. As stated in CEQA Guidelines §15065(a)(3), projects should be evaluated to determine whether the project's impacts are "cumulatively considerable," which means that the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects."

SACRAMENTO, CA 95821
(916) 574-0609 FAX: (916) 574-0682
PERMITS: (916) 574-2380 FAX: (916) 574-0682

December 2, 2013

Mr. Mike Dour
City of Roseville Public Works - Alternative Transportation
401 Vernon Street
Roseville, California 95678

Subject: Regional Bicycle and Recreational Trails Master Plan
SCH Number: 2013112042
Document Type: Notice of Preparation

Dear Mr. Dour:

Staff of the Central Valley Flood Protection Board (Board) has reviewed the subject document and provides the following comments:

The proposed project is located adjacent to or within Dry Creek, Cirby Creek, and Linda Creek, which are under the jurisdiction of the Central Valley Flood Protection Board. The Board is required to enforce standards for the construction, maintenance, and protection of adopted flood control plans that will protect public lands from floods. The jurisdiction of the Board includes the Central Valley, including all tributaries and distributaries of the Sacramento River, the San Joaquin River, and designated floodways (Title 23 California Code of Regulations (CCR), Section 2).

A Board permit is required prior to starting the work within the Board's jurisdiction for the following:

- The placement, construction, reconstruction, removal, or abandonment of any landscaping, culvert, bridge, conduit, fence, projection, fill, embankment, building, structure, obstruction, encroachment, excavation, the planting, or removal of vegetation, and any repair or maintenance that involves cutting into the levee (CCR Section 6);

- Existing structures that predate permitting, or where it is necessary to establish the conditions normally imposed by permitting. The circumstances include those where responsibility for the encroachment has not been clearly established or ownership and use have been revised (CCR Section 6);

- Vegetation plantings will require the submission of detailed design drawings; identification of vegetation type; plant and tree names (i.e. common name and scientific name); total number of each type of plant and tree; planting spacing and irrigation method that will be utilized within the project area; a complete vegetative management plan for maintenance to prevent the interference with flood control, levee maintenance, inspection, and flood fight procedures (CCR Section 131).

Vegetation requirements in accordance with Title 23, Section 131 (c) states "Vegetation must not interfere with the integrity of the adopted plan of flood control, or interfere with maintenance, inspection, and flood fight procedures."

The accumulation and establishment of woody vegetation that is not managed has a negative impact on channel capacity and increases the potential for levee over-topping. When a channel develops vegetation that then becomes habitat for wildlife, maintenance to initial baseline conditions becomes more difficult as the removal of vegetative growth is subject to federal and State agency requirements for on-site mitigation within the floodway. The project should include mitigation measures to avoid decreasing floodway channel capacity.

Hydraulic Impacts - Hydraulic impacts due to encroachments could impede flood flows, reroute flood flows, and/or increase sediment accumulation. The project should include mitigation measures for channel and levee improvements and maintenance to prevent and/or reduce hydraulic impacts. Off-site mitigation outside of the State Plan of Flood Control should be used when mitigating for vegetation removed within the project location.

The permit application and Title 23 CCR can be found on the Central Valley Flood Protection Board's website at http://www.cvfpb.ca.gov/. Contact your local, federal and State agencies, as other permits may apply.

The Board's jurisdiction, including all tributaries and distributaries of the Sacramento River and the San Joaquin River, and designated floodways, can be viewed on the Central Valley Flood Protection Board's website at http://gis.bam.water.ca.gov/bam/.

If you have any questions, please contact me by phone at (916) 574-0651, or via e-mail at James.Herota@water.ca.gov.

Subject: **Dry Creek Greenway Multi-Use Trail, Notice of Preparation of a Draft Environmental Impact Report**

Dear Mr. Dour:

Thank you for submitting the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the Dry Creek Greenway Multi-Use Trail (Project) to the Placer County Air Pollution Control District (District) for review. The Project proposes the construction of a 4.25 mile paved multi-use trail for pedestrians, bicyclist, and other non-motorized vehicle users that would connect neighborhoods, parks, schools, businesses, natural areas, and the on-street bikeway system across the south side of the city.

The District recently developed a California Environmental Quality Act (CEQA) Air Quality Handbook (Handbook) to assist public agencies with the preparation of air quality analyses for land use projects within Placer County. This Handbook provides recommended analytical approaches and feasible mitigation measures when preparing air quality analyses for land use projects. The Handbook is available via the District's website at http://www.placer.ca.gov/departments/air/landusceqa. Additional detail relating to the following recommended items can be found within the Handbook.

1. The Project is located within the Sacramento Valley Air Basin (SVAB) and is under the jurisdiction of the District. The SVAB is designated as nonattainment for federal and state ozone (O_3) standards, nonattainment for the federal particulate matter standard ($PM_{2.5}$) and state particulate matter standard (PM_{10}). Within the Air Quality section of the Initial Study, the District recommends the discussion include the area designations for the federal and state standards for the SVAB.

2. The District recommends the use of the "Construction Mitigation Calculator" available on the Sacramento Metropolitan Air Quality Management District's website: http://www.airquality.org/ceqa/mitigation.shtml. When utilizing this tool, it is recommended that special attention be given to the amount and types of default equipment for each phase and use of default values that are appropriate for bike trail construction. Please also note that this tool allows for the elimination of construction phases and activities which may not be appropriate for trail construction (i.e., grubbing, utility placement, etc.).

3. The District recommends the following Project-level Thresholds of Significance when analyzing the project-related construction and operational activities to determine potential air quality impacts.

PCAPCD Recommended Project-Level Thresholds	
82 lbs/day	Nitrogen Oxide (NOx) Reactive Organic Gas (ROG) Particulate Matter (PM_{10})

4. The District recommends as a Condition of Approval, the requirement of a Dust Control Plan to be submitted and approved by the District prior to the commencement of any ground disturbance as follows:

   Prior to approval of Grading and/or Improvement Plans, the applicant shall submit a Construction Emission / Dust Control Plan to the APCD. The applicant shall provide written

evidence, provided by APCD, to the local jurisdiction that the plan has been approved prior to the commencement of any ground disturbance.

5. The District currently does not have an established significance threshold for construction or operational related greenhouse gas (GHG) emissions. However, a determination of significance should be reached and disclosed based on the Project's potential to interfere with GHG reduction goals established by regulatory requirements. Mitigation measures should be included to reduce potentially significant levels of GHG emissions. The CAPCOA guidance document "Quantifying Greenhouse Gas Mitigation Measures" provides additional resources to identify feasible mitigation measures and quantify emission reductions[1] as well as the District's CEQA Handbook within the following appendix.

6. In the event that the air quality analyses demonstrate the potential for the Project to cause or generate significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate significant adverse air quality impacts. Additional mitigation measures can be found in the District's CEQA Handbook within the following related appendices:

   Appendix A. Recommended Mitigation Measures (Construction)

   Appendix C. Recommended Mitigation Measures (Operational)

   Appendix G. Mitigation Measures (Greenhouse Gases)

Thank you for allowing the District this opportunity to review the project proposal. Please do not hesitate to contact me at 530.745.2333 or agreen@placer.ca.gov if you have any questions.

Sincerely,

Angel Green

Subject: NOP for DEIR for the Proposed Dry Creek Greenway Multi-Use Trail

Dear Mr. Dour,

Thank you for your invitation to consult on the above named project under SB18. Thank you for initiating formal consultations with the United Auburn Indian Community (UAIC) concerning the NOP for DEIR for the Proposed Dry Creek Greenway Multi-Use Trail. As you know, the UAIC is comprised of Miwok and Maidu people whose traditional homelands include portions of Placer and Nevada counties, as well as some surrounding areas. The UAIC is concerned about development within ancestral territory that has potential to impact sites and landscapes that may be of cultural or religious significance. We appreciate the opportunity to comment on this and other projects in your jurisdiction.

We would like to make a few general points for consideration in developing the scope and content of the NOP for DEIR for the Proposed Dry Creek Greenway Multi-Use Trails:

- The UAIC recommends that projects within the NOP for DEIR for the Proposed Dry Creek Greenway Multi-Use Trail jurisdiction be designed to incorporate known cultural sites into open space or other protected areas;
- The UAIC is interested in holding conservation easements for culturally significant prehistoric sites;
- The UAIC would like the opportunity to provide Tribal representatives to monitor projects if excavation and data recovery are required for prehistoric cultural sites, or in cases where ground disturbance is proposed at or near sensitive cultural resources;
- The UAIC is interested in receiving cultural materials from prehistoric sites where excavation and data recovery has been performed;
- The UAIC would like to receive copies of environmental notices and documents for projects within the jurisdiction of NOP for DEIR for the Proposed Dry Creek Greenway Multi-Use Trail.

We have reviewed the cultural resources assessment that you provided for the project and would like to arrange a meeting with your department to discuss how potential impacts to cultural resources of importance to the UAIC can best be addressed in any environmental documents. Thank you again for taking these matters into consideration, and for involving the UAIC early in the planning process. We look forward to reviewing the aforementioned documents as requested. Please contact Marcos Guerrero, Cultural Resources Manager, at (530) 883-2364 or email at mguerrero@auburnrancheria.com if you have any questions.

Sincerely,

Gene Whitehouse,
Chairman

Scoping Meeting for the
Dry Creek Greenway Multi-Use Trail Project EIR

EIR SCOPING COMMENTS

Please hand in during the scoping meeting, mail to the City at the address on back, email to Mike Dour at mdour@roseville.ca.us, or fax to 916-746-1333. Comments must be received by 5:00 p.m. on December 19, 2013. Please include "Dry Creek Greenway Multi-Use Trail Project EIR Scoping" in your subject line.

Name: Donna Wilson

Organization (if any): Friends of Linda Creek

Address (optional): 1611 Condor Court

City, State, Zip: Roseville, CA 95661

Email (optional): Donnawilson1@surewest.net

The City of Roseville invites you to provide specific comments on the scope of the Dry Creek Greenway Multi-Use Trail Project EIR. Thank you!

Comments

These are my concerns for the bike trail:

Environmental Set Back
Friends of Linda Creek feel t
This is essential. This should be a setback of at
least 20 from the creek before they start paving a bike trail to allow us to:
---keep the riparian habitat for wildlife
---stop the cementing of the creek as much as possible, which is a band aide approach and results in tearing up the next section
---allow for the City Open Space and Storm Water Depts. to continue their successful creek restoration program with Native Plants to protect the habitat for our barely surviving wildlife

If the EIR and geomorphology study does not support an Environmental Setback along Mallard, Condor, Blue Jay and along the Eich school area then we strongly support the City to use the alternate route. This route will meet the City's goal of a Regional Bike Trail Connecting the Parks and Open Space.

One reason the City does not want to do this is cyclists want to be only in the Open Space but at what cost? Their preference should not be the only thing that matters. Secondly, we have been told frequently by Mike Dour and city staff that the Survey they did in 2008 showed the cycling is the preferred activity in the greenbelt.

However, when we read this survey that is not quite true. Most of the questions regarding this in the survey have BICYCLING AND WALKING AS A COMBINED CHOICE! Some questions walking were ahead and this was the case with the Meadow Oaks neighbors, we wonder what it would say if it was done now!

The route would follow all the existing pave bike trails that run through our greenbelt from Oakridge to just past Eich school and then up the hill to Meadow Lark as planned. It would not be built just above the wetland area in the greenbelt. It would go up onto Meadow Lark, a quiet residential street. This street is very wide and already used by cyclists. A bike lane would have more separation from the street than the bike lane on Rocky Ridge!

The bike trail would cross Rocky Ridge safely at the intersection at Maidu Park and connect to those trails. The cyclists would never have to ride on Rocky Ridge. There is approximately a 30 foot buffer area of sidewalk, with 10 feet of paved bike trail already to down along the creek. This would be considered a Class II trail. Mike Dour, at a presentation that he gave to Meadow Oaks last week, stated that having both Class I and Class II trails would affect funding.

Advantages

The greenbelt would remain undeveloped open space all the way to Rocky Ridge.
The owners on Mallard would not have to sell any land.
The service road would continue to go up on to Meadow Lark homes.
It would preserve the habitat for wildlife.
There were would be no long ramp built too close to the creek bank to go under Rocky Ridge.
It would save millions of dollars in tax payer's money.

Many cyclists and pedestrians in Meadow Oaks and Sierra Gardens feel this should be not just the alternative but the number one route for the regional bike trail.

The City of Roseville invites you to provide specific comments on the scope of the Dry Creek Greenway Multi-Use Trail Project EIR. Thank you!

Comments

RE NOP 1. We strongly support the statement in the NOP that the proposed trail may be widened in areas where additional width is desired to enhance safety and comfort…"the shoulder width may be increased to 5' 10' on one side of the trail ". Friends of Linda Creek also emphatically supports an additional requirement that the total the total distance from the creek, be a minimum of 20 30 feet from the top of the creek bank. Our Oaks are at falling into the creek at very rapid rate and support work could also be done to save them.

We are very concerned that "minimum standards, mitigation policies allowing destruction of one area by planting young trees miles away, will be followed and devastate the creek. This could also occur because wildlife, not on the endangered or species of special concern list, like River Otters (who are considered extinct in 15 states) will be gone, or die from loss of territory and habitat including irreplaceable heritage oaks, as soon as the first front loader shows up on the creek to build this ROAD. These regulations are old and inadequate and the City of Roseville, so progressive in so many areas needs to step up and support this plan and the preservation of their treasured Open Space, in our opinion.

We are also concerned that disregard for adequate environmental setbacks (which were already used on new project planning on the west side of the City with the help of Dry Creek Conservancy and Sierra Club) will result in unnecessary cementing (armoring) which has proven to tear up the next section. We want natural creek restoration to

be used which is supported by the Parks, Recreation and Libraries Dept. as well as Storm Water Dept. This technique has already

been used successfully on 240 feet of bank along Condor Court. Linda Creek no longer breaks onto the Condor side first, since the 1995 flood, where homes, like mine are built very close to the creek. Based on the Dec. 2012 flood, it spilled over first onto the big flood plain on Mallard side which significantly decreased the overflow onto Condor side. This is huge. This is how it used to be (I am a 26 year resident and daily user of Linda Creek with first hand knowledge of impacts from flooding in this area).. The huge ramp of several hundred feet to the underpass under Rocky Ridge, could easily change this back…again as minimum standards may apply and put properties on Condor again taking the first flood water. Mother nature dominates and cannot be predicted. A ramp could change this back.

More space on back

Based on our research, first hand experience and common sense, all of this can be avoided with simple measures by the City acquiring a very small amount of additional property from 8 homes on the flood plain of Mallad

A fair price, plus, must be given to these homeowners. Most are environmentally conscious and would be much more amenable and supportive if these essential concerns were known and supported by the City. Hopefully, the City's decision to take the recommendation of Friends of Linda Creek neighbors and supporters for the Geomorphology study will support these suggestions.
Please note the Transportation Department has worked very hard for years and they are buried in regulation and their own bias of being road and bridge builders on a big scale. It is easy for them to accept spending millions on underpasses and roadways but seems to have an aversion to on spending nickels and dimes on purchasing land (my observation). This would cost a tiny amount of the $15,000,000 project and avoid other expensive impacts and possibly buying more land later from Mallard.

Thank you,

Donna Wilson

Address (optional): 1611 Condor Court

City, State, Zip: Roseville, CA 95661

Email (optional): donnawilson1@surewest.net

The City of Roseville invites you to provide specific comments on the scope of the Dry Creek Greenway Multi-Use Trail Project EIR. Thank you!

Comments 1. Retaining Walls Section

The report states that the City proposes the use of gravity walls (concrete) and tie back walls (soil and tie backs)
This makes sense for areas where the bridge embankments must be supported for the underpasses.

"The city states "CONCRETE cut-off walls would be proposed on step cross slopes and where the trail alignment is adjacent to the creek to avoid the undermining of the trail….with an architectural facing". We have steep slopes along Mallard/Condor and Blue Jay, as well as along the soccer field at Eich along Meadow Gate area as well.

I am in shock that there is no mention of using Bio-Engineering and the Native Bank Restoration technique! (Please refer to my NOP Comments form 1 and 2 for more detail). This is one of the most important points made again and again in the Public hearing process by Friends of Linda Creek and others. The desires of the public and residents were ignored. This is unacceptable to those of us who live here and are the guardians of this special greenbelt. I am very concerned that staff that only cares about building with concrete and asphalt. I am so disappointed in the City that this project was not a collaborative project with the Parks and Recreations Depts., Open Space and Storm Water who manage, work directly in the Open Space and have an environmental preservation orientation. Also, that the successful work in creek bank restoration in this city is also ignored, in spite of the fact that it was used recently to repair the collapsed trail at Saugastadd Park. Please, please, please do not allow this to take place. This is so disturbing.

The only reason that concrete is proposed is because this creek is being built way too close to the creek bank. That is choice not a requirement. Again, there is more information on this in my NOP

Comments 1 and 2.
It is unbelievable that the primary reason given for this is because cyclists prefer it. At what price? The view is great from 20 or 30 feet away. Secondly, for half the cyclists the view will be a blur, or they only look straight ahead. Someone with authority and expertise do not let this go on.

We need to do all we can to save our creeks and open space for future generations if this trail is pulled back, then let Mother Nature, who is the best builder of creek banks, lead the job with the support of this City and proven techniques and gentle hands. Please EIR people, take this into consideration with the alternatives that you propose.

In addition, the use of concrete is armoring and considered a “band aid” approach by experts in this field including Dry Creek Conservancy. It will tear up the next section continuing the devastation of our creek banks through severe erosion, loss of habitat, loss of Oak tree infrastructure and the killing of wildlife. Eventually our beloved Open Space will look like a cemented and dead LA creek we have seen, done decades ago when no one knew any better. WE know better now.

I am also concerned that the Roseville Flood plan manager supports the use of cement and is actually using his position to actively talk against the benefits of native restoration. He stated at the October Oakridge Bridge meeting that bio-engineering does the same armoring as cement. I understand this is not his field or background. Experts and research do not support this (it is possible in an individual situation). I request that the city use only the opinions of experts in this field as they are the only ones qualified to make this determination. This decision is the most important one for the city to make if they want to save the creek and the habitat.

Respectfully Submitted,

Donna Wilson

Crossing at Oakridge
Best would be an underpass
Secondary would be a pedestrian/Bike activation light (flashing) with entry into crosswalk
(many people go thru the Stop sign with a rolling stop and continue down the grade at a speed that would be hard to stop for a bike with a child or an elder stepping onto the street crossing.
note: an Elder Care home (Aeta Manor) a six bed care on the corner

Dike 1 walking Trail where the junction to meet down back and down the hill toward the existing service road.
Make sure the turn comes before the uphill climb: with enough visual space that faster bikes can see walkers on the Trail

Rocky Ridge
Be sure it is an underpass crossing as it is a school walking access for Maidu elementary, Junior High plus High school: Many "run" across now: don't want to see kids cross: would solve that dangerous practice

Comments

1) Coordinate planned renovation of the Oak Ridge bridge to allow trail to go under Oak Ridge rather than stop for auto traffic.

2) Keep the trail alignment flat from the Sierra Gardens, (Eich) Soccer Field to Rocky Ridge. Create an under pass at the Rocky Ridge bride. Many elderly people walk the trail but won't climb the hill to Meadowlar.

Comments

Since alignment to the City's Bicycle Master Plan is an element of the EIR, I hope to see ~~the~~ an assessment of the degree to which the proposed alignment supports the goal of a highly connected trail. The proposed routing where the trail intersects Sunrise is not the best routing for providing connectivity to/from both Northbound and Southbound Sunrise.

In addition, better connectivity will result in greater use of this trail for transportation, thereby maximizing the long term environmental value of this trail as a transportation route that requires no pollution-creating vehicles.

To: Dour, Mike
Subject: Dry Creek Greenway Multi-Use Trail Project

Dear Mr. Dour,

I have read the NOP. My property back-ups to the proposed bike trail. I cherish the adjacent City of Roseville Open Space and while I would rather the area remain undeveloped I am currently not opposed the trail improvement and have only two comments:

It is my hope that salmon will one day return to my section of the creek and the EIR should study the impact to potential salmon run.

The EIR should also include an analysis of the environmental impact to the creek of littered dog waste and proposed measures to encourage proper disposal (if it is deemed to adversely impact the water quality of the creek). The Maidu Neighborhood Association's annual clean-up of the West Colonial Parkway open space removed an estimated 20 pounds of desiccated dog waste this fall.

Thank you for your consideration;

Andrea (Ahnie) Walker

Comments:

Erosion control: It is critical when constructing the underpass at Rocky Ridge or doing any creek bank work, that consideration is taken to the effects downstream. The 200 year old native oaks on the creek banks have been seriously eroded. In my 20 years on Blue Jay Drive, we have the trees go down due to that erosion while the same trees in our yard continue to thrive. Habitat has also been washed downstream. We could not see across the bank the area was so thick with plant life and trees. We have lost nearly all native habitat. We once had blue heron and many fish. Our children fished in the creek. We also had salmon behind our house yearly. The failure to control flow has caused the river to flush out water h

Protection of habitat: We have a family of river otters living close to Condor Court. If we lose the downed trees when building the Rocky Ridge underpass, we will lose our otters. Roseville clears out all fallen trees making this one of the last places for the otters to live.

We also have western pond turtles. They have been spotted for years sunning in two locations between Rocky Ridge and Oak Ridge. However, the city has been removing debris leaving them less and less places to sun.

Red winged hawks have claimed territories and need the 200 year old native oaks for their nests. This spring three young circled our entire stretch screaming and establishing territory. Their load antics took several weeks before the area was claimed and the others moved on.

Pheasants can be found in our grasses and have less and less places to go due to loss of our riparian habitat.

Protection of next generation of native oak: When walking through Meadow Oaks along the creek trail, you will notice a line of 30 year old native oaks. They are all we have once the 200 year old trees half way down the creek banks are gone. It is critical to place the bike trail in a manner to save these 30 year old trees.

Comments Rain water run off for Quail Cir and Swallow is dumped on Tom Cervantes property via a 24" Pipe in the Side of his hill. His property at 1536 Meadowlark Way is adjacent to mine. The bike trail will create a dam for this water. This will create a significant pond on City Property that will back up onto To Tom and my property. The bike trail will eliminate the natural drainage path of this water with increased mosquitoes and related problems. You will need a site inspection to fully understand

Comments Maintenance of dense growth Oak Trees behind properties ~~beh~~ on Meadow Lark Way in open space. The trees shed limbs continuously from kindling size to 2" branches. They present a fire fuel and danger to high speed bicycling. that would require daily or at a minimum of weekly maintenance and removal. The city has not maintained this area in the past and this maintenance should be considered as an on going cost.

Comments

Meeting today (12-16-2013) with Michael Dour walking the proposed Dry creek bike path to address our concerns on parcels (APN # 472-180-013-000 and # 472-180-014-000)

It was presented to Mr. Dour the present bike path that runs along Dry creek, that has been used for decades, and is still presently being used today.

This property is owned by the City of Roseville. It was deeded in 1973 by William E Schmidt for the purpose of a paved bike path, which never materialized.

We feel this property indicated in yellow on the county plat map deeded for this purpose should be used for what it was intended for and enforce it.

Support this fully.

Respectfully

12-16-13 D E Schmidt

Comments

After being on site (12-16-2013) to view proposed bike path.

We respectfully oppose it.

We feel said bike path going on or through PARCELS (APN # 472-180-013-000 & # 472-180-014-000) would diminish the PROPERTIES value and limit or stop future development.

Respectfully,

12-16-2013 David E Schmidt

Email (optional): jim.williams@surewest.net

The City of Roseville invites you to provide specific comments on the scope of the Dry Creek Greenway Multi-Use Trail Project EIR. Thank you!

Comments

I am commenting on behalf of the many and increasing number of older neighbors (Senior Citizens) who utilize the trail system for the walking needed to maintain and improve each of their body's remaining quality of life. Many of us develop various debilitating age related disorders that are best mitigated by walking at least 30 – 60 minutes every day.

Keeping the trail flat and level is vital to those with heart murmurs, Parkinson's, arthritis, prosthetic joints, etc.

- I re-emphasize my support of the unanimous resolution of the Senior Commission recommendation to the City Council to approve the presented plan to improve and develop the existing "service" road for maximum utilization
- The Dry Creek Greenway Multi-Use Trail alignment does an excellent job of avoiding use of city streets
- The uphill grade from the creek up to Meadow Lark Drive will discourage many who would otherwise continue walking further
- Frequently skateboarders and young cyclists are using that downhill grade for an extra high-speed thrill that jeopardize any pedestrians at the blind curve.

Sent: Thursday, December 19, 2013 8:09 AM
To: Dour, Mike
Subject: Comments on NOP Dry Creek Greenway Multi-Use Trail

Mike Dour:

Bikes and walkers have successfully navigated this area of Linda Creek behind Eich School, and behind the houses of Mallard Court, Condor Court, and Blue Jay for years without pavement. It's a natural trail and a peaceful retreat from concrete and steel. I support leaving this area in its natural state without pavement.

Animals are barely hanging on here. This is a fragile environment. The ducks, the mink, the otter, Western Pond turtle all call this area home. Does the City of Roseville want to negatively affect what little wildlife we have left?

If the City simply cannot leave it alone, at least DO NO HARM. Keep any pavement at least 20 feet from the creek.

Sincerely,
Shirley Brown

IPaC Information for Planning and Consultation **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

Placer County, California

Local office

Sacramento Fish And Wildlife Office

(916) 414-6600
(916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service.

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.

The following species are potentially affected by activities in this location:

NOT FOR CONSULTATION

Reptiles

NAME	STATUS
Giant Garter Snake Thamnophis gigas No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4482	Threatened

Amphibians

NAME	STATUS
California Red-legged Frog Rana draytonii There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2891	Threatened
California Tiger Salamander Ambystoma californiense There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2076	Threatened

Fishes

NAME	STATUS
Delta Smelt Hypomesus transpacificus There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/321	Threatened

Insects

NAME	STATUS
Valley Elderberry Longhorn Beetle Desmocerus californicus dimorphus There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/7850	Threatened

Crustaceans

NAME	STATUS
Conservancy Fairy Shrimp Branchinecta conservatio There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/8246	Endangered
Vernal Pool Fairy Shrimp Branchinecta lynchi There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/498	Threatened

NAME	STATUS
Vernal Pool Tadpole Shrimp Lepidurus packardi There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/2246	Endangered

Flowering Plants

NAME	STATUS
Sacramento Orcutt Grass Orcuttia viscida There is **final** critical habitat for this species. Your location is outside the critical habitat. https://ecos.fws.gov/ecp/species/5507	Endangered

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any activity that results in the take (to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct) of migratory birds or eagles is prohibited unless authorized by the U.S. Fish and Wildlife Service[3]. There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured. Any person or organization who plans or conducts activities that may result in the take of migratory birds is responsible for complying with the appropriate regulations and implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or are known to have particular vulnerabilities in your project location. To learn more about the levels of concern for birds on your list, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your specific project area. To see maps of where birders and the general public have sighted birds in and around your project area, visit E-bird tools such as the E-bird data mapping tool (search for the scientific name of a bird on your list to see specific locations where that bird has been reported to occur within your project area over a certain time-frame) and the E-bird Explore Data Tool (perform a query to see a list of all birds sighted in your county or region and within a certain time-frame). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list can be found below.

NAME	BREEDING SEASON
Bald Eagle Haliaeetus leucocephalus This is not a Bird of Conservation Concern (BCC), but is of concern in this area either because of the Eagle Act, or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Mar 20 to Sep 15
Black Swift Cypseloides niger This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8878	Breeds Jun 15 to Sep 10
Black-chinned Sparrow Spizella atrogularis This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9447	Breeds Apr 15 to Jul 31
Burrowing Owl Athene cunicularia This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9737	Breeds Mar 15 to Aug 31
California Thrasher Toxostoma redivivum This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Jan 1 to Jul 31
Clark's Grebe Aechmophorus clarkii This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Jan 1 to Dec 31

NOT FOR CONSULTATION

Costa's Hummingbird Calypte costae This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9470	Breeds Jan 15 to Jun 10
Golden Eagle Aquila chrysaetos This is not a Bird of Conservation Concern (BCC), but is of concern in this area either because of the Eagle Act, or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Apr 1 to Aug 31
Lewis's Woodpecker Melanerpes lewis This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9408	Breeds Apr 20 to Sep 30
Long-billed Curlew Numenius americanus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/5511	Breeds elsewhere
Marbled Godwit Limosa fedoa This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9481	Breeds elsewhere
Nuttall's Woodpecker Picoides nuttallii This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9410	Breeds Apr 1 to Jul 20
Oak Titmouse Baeolophus inornatus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9656	Breeds Mar 15 to Jul 15
Rufous Hummingbird selasphorus rufus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8002	Breeds elsewhere
Short-billed Dowitcher Limnodromus griseus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480	Breeds elsewhere
Tricolored Blackbird Agelaius tricolor This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3910	Breeds Mar 15 to Aug 10
Whimbrel Numenius phaeopus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9483	Breeds elsewhere
White Headed Woodpecker Picoides albolarvatus This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9411	Breeds May 1 to Aug 15
Willet Tringa semipalmata This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds elsewhere
Wrentit Chamaea fasciata This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Mar 15 to Aug 10
Yellow-billed Magpie Pica nuttalli This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9726	Breeds Apr 1 to Jul 31

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds.

Probability of Presence ( )

Each green bar represents the bird's relative probability of presence in your project's counties during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

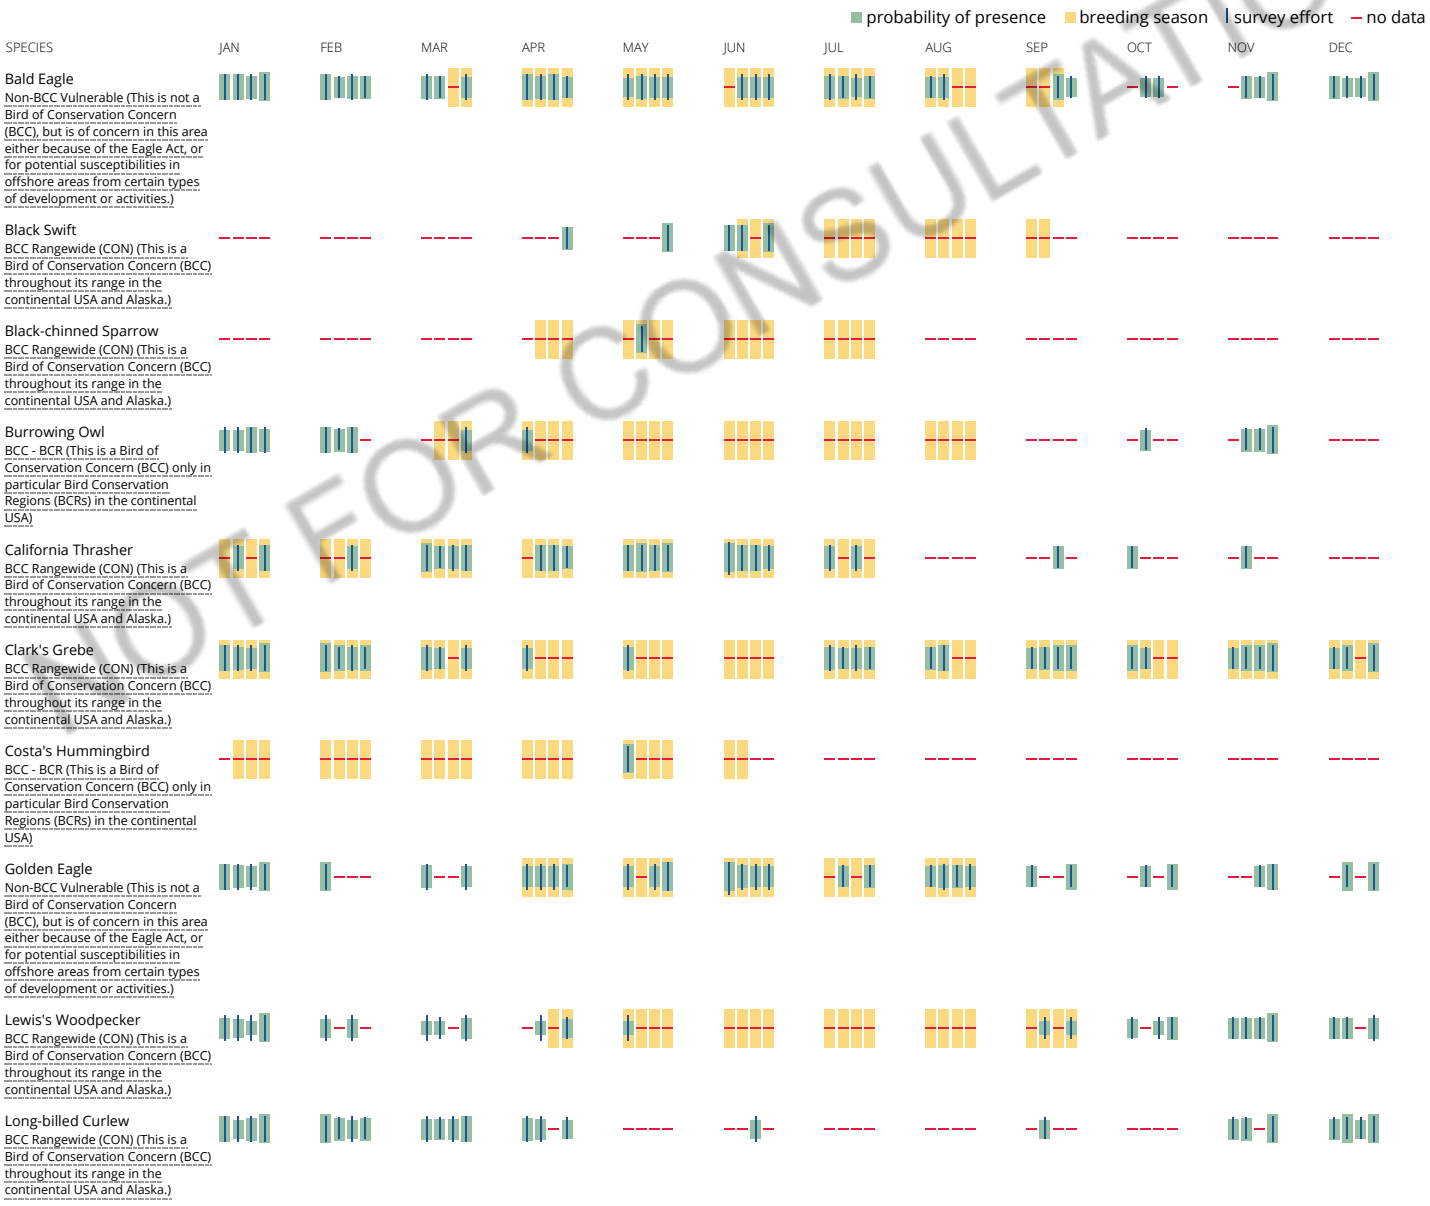
Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the counties of your project area. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

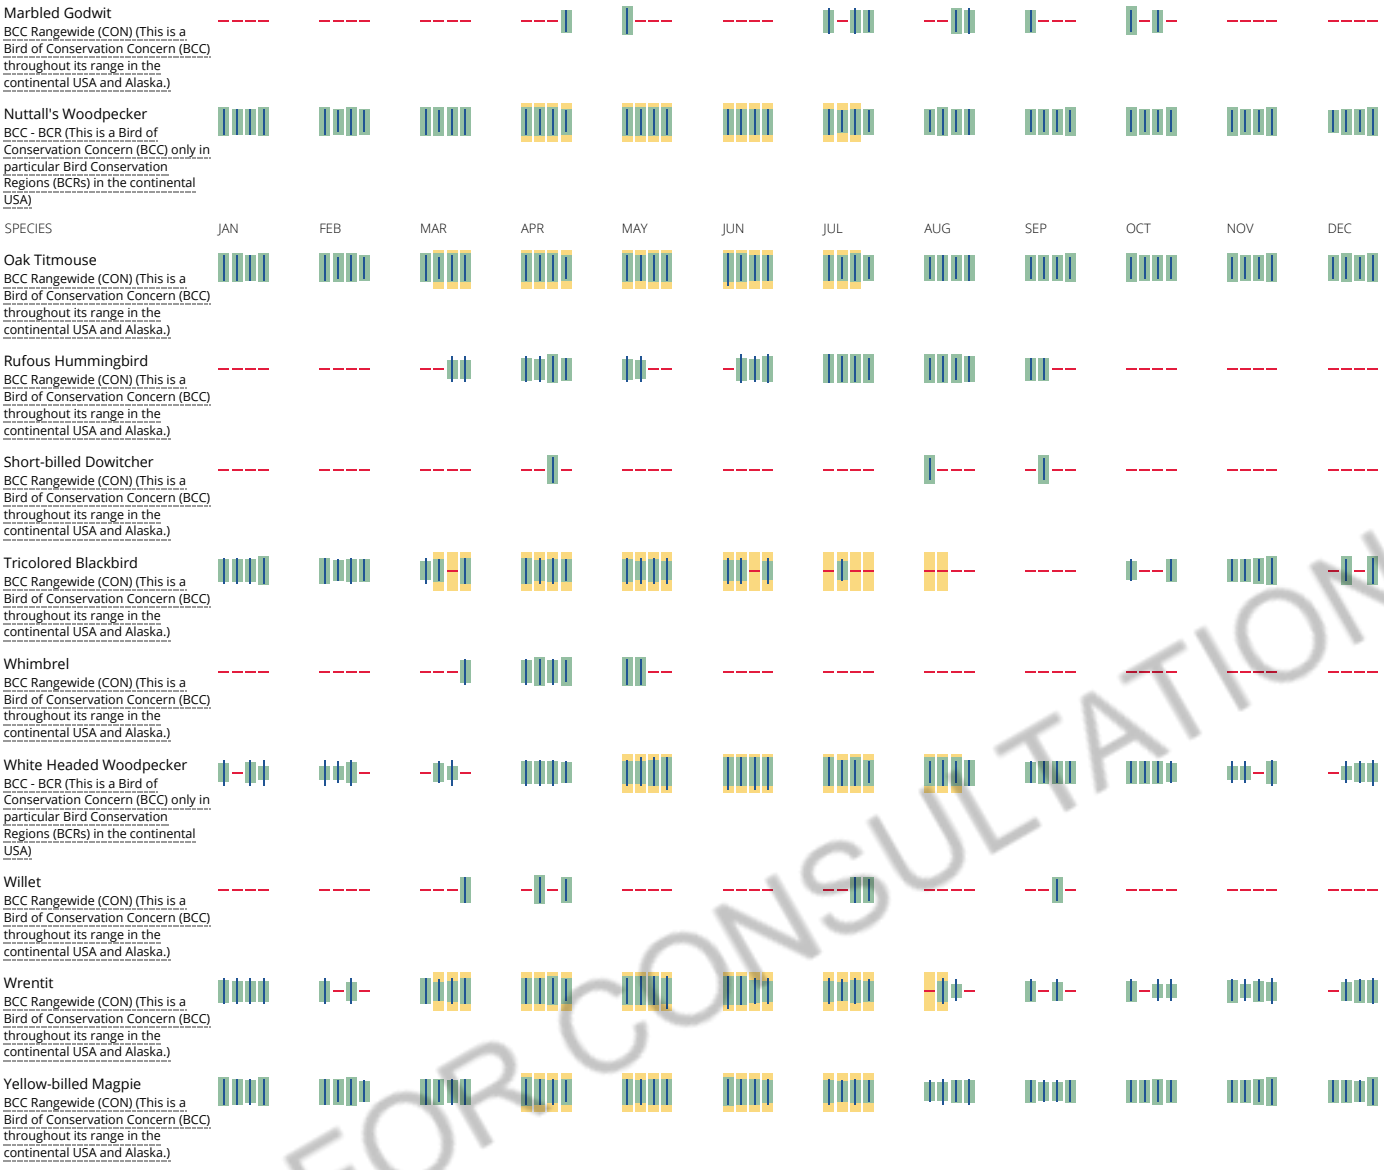
To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information.



NOT FOR CONSULTATION



NOT FOR CONSULTATION

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Such measures are particularly important when birds are most likely to occur in the project area. To see when birds are most likely to occur in your project area, view the Probability of Presence Summary. Special attention should be made to look for nests and avoid nest destruction during the breeding season. The best information about when birds are breeding can be found in Birds of North America (BNA) Online under the "Breeding Phenology" section of each species profile. Note that accessing this information may require a subscription. Additional measures and/or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) that might be affected by activities in your project location. These birds are of priority concern because it has been determined that without additional conservation actions, they are likely to become candidates for listing under the Endangered Species Act (ESA).

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets. The AKN list represents all birds reported to be occurring at some level throughout the year in the counties in which your project lies. That list is then narrowed to only the Birds of Conservation Concern for your project area.

Again, the Migratory Bird Resource list only includes species of particular priority concern, and is not representative of all birds that may occur in your project area. Although it is important to try to avoid and minimize impacts to all birds, special attention should be made to avoid and minimize impacts to birds of priority concern. To get a list of all birds potentially present in your project area, please visit the E-bird Explore Data Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird entry on your migratory bird species list indicates a breeding season, it is probable the bird breeds in your project's counties at some point within the time-frame specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Avoidance and minimization measures should be implemented to reduce impacts to birds on your list, and all other birds that may occur in your project area. Nationwide Standard Conservation Measures can be applied for any project, regardless of project type or location.

If measures exist that are specific to your activity or to any of the species on your list that are confirmed to exist at your project area, these should also be considered for implementation in addition to the Nationwide Standard Conservation Measures. Implementation of avoidance and minimization measures is particularly important for BCC birds of rangewide concern.

If your project has the potential to disturb or kill eagles, you will need to obtain a permit to avoid violating the BGEPA should such impacts occur.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

This location overlaps the following wetlands:

FRESHWATER FORESTED/SHRUB WETLAND
PFOA

A full description for each wetland code can be found at the National Wetlands Inventory website: https://ecos.fws.gov/ipac/wetlands/decoder

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical

NOT FOR CONSULTATION

scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	0.25	Acre	0.25	10,890.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	74
Climate Zone	2			**Operational Year**	2023
Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Off-road Equipment - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Roseville Dry Creek Trail_Segment A_Bridge #4 - Placer County APCD Air District, Summer

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 6,300 ft (1.2 miles)

Construction Phase - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Off-road Equipment - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 6,300 ft (1.2 miles)

Project Characteristics -

Land Use -

Construction Phase - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Off-road Equipment - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 6,300 ft (1.2 miles)

Roseville Dry Creek Trail_Segment A_Grading - Placer County APCD Air District, Summer

Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 6,300 ft (1.2 miles)

Construction Phase - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Off-road Equipment - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	4.00	Acre	4.00	174,240.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	74
Climate Zone	2			**Operational Year**	2023
Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B provided by Psomas, August 2014.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B provided by Psomas, August 2014.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, August 2014.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, August 2014.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, August 2014.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, August 2014.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Roseville Dry Creek Trail_Segment B_Finish Grading - Placer County APCD Air District, Summer

Roseville Dry Creek Trail_Segment C_Clearing and Grading

Placer County APCD Air District, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	5.00	Acre	5.00	217,800.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	74
Climate Zone	2			**Operational Year**	2023
Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Notes

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Construction Phase - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Off-road Equipment - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Roseville Dry Creek Trail_Segment C_Clearing and Grading - Placer County APCD Air District, Summer

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Notes

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Construction Phase - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Off-road Equipment - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Roseville Dry Creek Trail_Segment C_Finish Grading - Placer County APCD Air District, Summer

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Notes

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Construction Phase - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Off-road Equipment - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Roseville Dry Creek Trail_Segment C_Paving - Placer County APCD Air District, Summer

Project Characteristics - Notes

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 9,050 ft (1.7 miles)

Construction Phase - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Off-road Equipment - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 9,050 ft (1.7 miles)

Project Characteristics - Note

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 9,050 ft (1.7 miles)

Construction Phase - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Off-road Equipment - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 9,050 ft (1.7 miles)

Roseville Dry Creek Trail_Segment D_Final Grading - Placer County APCD Air District, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	8.50	Acre	8.50	370,260.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	74
Climate Zone	2			**Operational Year**	2025
Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Notes

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 9,050 ft (1.7 miles)

Construction Phase - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Off-road Equipment - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 6,300 ft (1.2 miles)

Construction Phase - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Off-road Equipment - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 6,300 ft (1.2 miles)

Roseville Dry Creek Trail_Segment A_Clearing and Grading - Placer County APCD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	6.00	Acre	6.00	261,360.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	74
Climate Zone	2			**Operational Year**	2023
Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Off-road Equipment - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 6,300 ft (1.2 miles)

Roseville Dry Creek Trail_Segment A_Grading - Placer County APCD Air District, Annual

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 6,300 ft (1.2 miles)

Construction Phase - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Off-road Equipment - Per Table 1: Construction Phases and Equipment - Segment A, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B provided by Psomas, August 2014.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B provided by Psomas, August 2014.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, August 2014.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Roseville Dry Creek Trail_Segment B_Clearing and Grading - Placer County APCD Air District, Annual

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, August 2014.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, August 2014.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, August 2014.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Roseville Dry Creek Trail_Segment B_Finish Grading - Placer County APCD Air District, Annual

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Construction Phase - Per Table 1: Construction Phases and Equipment - Segment B - Option 5A, provided by Psomas, September 2017.

Off-road Equipment - Per Table 1: Construction Phases and Equipment - Segment B - Option 5A, provided by Psomas, September 2017.gr

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Grading - No grading

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Construction Phase - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Off-road Equipment - Per Table 2: Construction Phases and Equipment - Segment B, provided by Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 3,900 ft (.7 miles)

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Date: Roseville Dry Creek Trail_Segment B - Option 5A_Finish Grading - Placer County APCD Air District, Annual

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Notes

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Construction Phase - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Off-road Equipment - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Roseville Dry Creek Trail_Segment C_Clearing and Grading - Placer County APCD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	0.25	Acre	0.25	10,890.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	74
Climate Zone	2			**Operational Year**	2023
Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Notes

Land Use -

Construction Phase - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Off-road Equipment - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Roseville Dry Creek Trail_Segment C_Drainage and Utilities - Placer County APCD Air District, Annual

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Notes

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Construction Phase - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Off-road Equipment - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 5,100 ft (1.0 miles)

Off-road Equipment - Per Table 3: Construction Phases and Equipment - Segment C, provided by Psomas, September 2017.

Roseville Dry Creek Trail_Segment C_Finish Grading - Placer County APCD Air District, Annual

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	0.25	Acre	0.25	10,890.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	74
Climate Zone	2			**Operational Year**	2025
Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Note

Land Use -

Construction Phase - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Off-road Equipment - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Roseville Dry Creek Trail_Segment D_Existing Bridge 21 - Placer County APCD Air District, Annual

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Note

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 9,050 ft (1.7 miles)

Construction Phase - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Off-road Equipment - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Grading - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 9,050 ft (1.7 miles)

Roseville Dry Creek Trail_Segment D_Final Grading - Placer County APCD Air District, Annual

City Park	0.25	Acre	0.25	10,890.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	74
Climate Zone	2			**Operational Year**	2025
Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Note

Land Use -

Construction Phase - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Off-road Equipment - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Utility Company	Roseville Electric				
CO2 Intensity (lb/MWhr)	793.8	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Notes

Land Use - Acres value based on assumption of average of 20 feet disturbance on either side of centerline, for 9,050 ft (1.7 miles)

Construction Phase - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Off-road Equipment - Per Table 4: Construction Phases and Equipment - Segment D, provided by Psomas, September 2017.

Trips and VMT - Assume 10 avg employees on site in all phases, 4 vendor trips/day. Hauling mileages & trips based on total truck miles stated in construction phases and equipment list, Psomas, September 2017.

Roseville Dry Creek Trail_Segment D_Paving - Placer County APCD Air District, Annual

1 INTRODUCTION

1.1 PROJECT OVERVIEW

The City of Roseville is planning construction of a multi-use trail along approximately 4.5 miles of Dry, Cirby and Linda Creeks between Darling Way and Spahn Ranch Road. To assess potential risk to the trail due to the future trajectory of the creek, and to prioritize mitigative measures, cbec employed a processed-based geomorphic assessment (as per Beechie et al., 2010). This approach coupled desk-based analysis of historical aerials, LiDAR data and specific stream power with a field-based fluvial audit. The fluvial audit approach consists of characterizing various indicators of geomorphic process (e.g., channel reach type, bank erosion, depositional sedimentary bars) as well as factors influencing channel and floodplain morphology (e.g., bank protection, sediment input, large woody debris, etc). Feature locations were collected using Real Time Kinematic (RTK) Global Positioning System (GPS) and mapped with GIS software.

Field data and desk-based findings were used to characterize the channel's geomorphic regime and to develop a trail alignment risk assessment methodology with five risk classifications. An initial evaluation of risk was made on the basis of primary criteria (bank erosion and proximity of trail to the edge of the channel) which was then corroborated or modified through consideration of secondary criteria. Six trail locations with extreme or high risk were identified as well as 48 segments with moderate risk (a number which includes trail segments adjacent to higher risk areas as well as clusters of multiple areas exposed to moderate risk). To address the extreme or high levels of risk to the trail at these six sites, concept-level mitigative measures were developed and prioritized.

1.2 REPORT STRUCTURE

The report is generally divided in two sections. The first section covers both the desk-based watershed analysis and the field component of the fluvial audit. The second section details the trail erosion risk assessment and suggested measures for addressing proposed trail sections exposed to extreme, high and moderate risk. All figures are presented at the end of the report, which include site photos, maps depicting fluvial audit data and the trail risk assessment, and concept designs for select high-risk trail locations.

2 WATERSHED ANALYSIS

2.1 HISTORICAL CHANNEL ASSESSMENT

Aerial imagery dating from 1990 to 2013 was used to identify areas of significant historical channel migration and dynamic behavior. Aerials from 1990 were scanned by Roseville and georeferenced by cbec. Psomas provided aerials from 2001, 2003, 2005, 2007, 2011 and 2013 in the form of MrSID and TIF files that were already georeferenced. Given the relatively small size of the channel and presence of riparian canopy cover, discerning channel alignments was challenging or infeasible for a significant portion of the study reach. As a result of the segmented nature of this assessment, figures are not provided depicting historical channel alignments. However, the aerials did help inform historic channel

behavior and the trail risk assessment in a number of locations. Notes regarding locations of historical dynamic behavior and their influence on risk assessment are included in Figures 14 through 19.

2.2 LIDAR ASSESSMENT

Inspection of LiDAR data provides a powerful tool for identifying historical channel alignments, side channels, floodplain extents and flood bypass channels that are not easily discernible in the field due to vegetation cover or the subtle relief of some features. LiDAR data provided by Psomas in the form of 2-foot contour lines was analyzed for the full length of the fluvial audit. Several observations were made using the LiDAR data that are of particular relevance to the trail:

1. Roughly 400 feet upstream of the confluence of Cirby and Dry Creeks is a high-flow side channel on the southern side of Cirby Creek's main channel (see Figure 1). At the downstream end of the side channel, the main channel has exhibited considerable dynamic behavior and bank retreat since 1990. This dynamic behavior and the presence of the side channel should be considered in assessing trail location and the design of a stream crossing and any associated bridge abutments.
2. In the open space south of Sierra Gardens Drive and Meadowlark Way, the relatively wide floodplain area shows evidence of numerous historical channel alignments (see Figure 2). While historical aerials do not indicate dramatic shifts in channel alignment since 1990, it is important to note that this section of Linda Creek and its floodplain have demonstrated significant dynamic behavior over longer historical time frames.
3. Between Rocky Ridge Drive and Champion Oaks Drive, a high-flow flood bypass channel is present in the Linda Creek floodplain (see Figure 3). This flood bypass channel interacts with the main channel in a number of locations and likely influences in-channel hydraulics and bank erosion. The proposed trail's proximity to the flood bypass channel may increase erosion risk to the path at several locations.

2.3 SPECIFIC STREAM POWER ANALYSIS

A specific stream power analysis was performed for the study reach along Dry, Cirby and Linda Creeks to quantitatively characterize the 'geomorphic energy regime' (i.e., the sediment transport capacity) of the system. Specific stream power was calculated using outputs from the HEC-RAS model developed by Psomas for the 2-year flood event[1]. Specific stream power[2] is defined as:

$$\omega = \frac{\rho g Q S}{w} \ (Watts/m^2)$$

Where:

ρ = density of water (kg/m^2)
g = gravity term (m/s^2)
Q = flow rate (m^3/s)
S = channel slope (m/m)
w = bankfull width (m)

[1] A 2-year flood event refers to a flood event that has a 50% probability of occurring during a given year.
[2] Specific stream power is typically presented in Watts/m^2. As such, calculations for this parameter are provided in metric units to facilitate meaningful comparison with relevant literature.

In the case of the specific stream power calculation for the 2-year event, the width term was the wetted width at each cross section resulting from the 2-year discharge. Similarly, the slope term was the energy grade slope computed at each cross section for the 2-year event. Specific stream power was calculated at each HEC-RAS cross section, then linearly interpolated between cross sections for display in Figures 4 and 5. Given that the stream power calculations were performed at the scale of the HEC-RAS cross section spacing, the stream power results are only meaningful at a scale larger than that spacing. In other words, stream power calculations should probably only be applied for comparison between reaches at a scale 10 times the channel width or greater as the stream power calculation does not reflect in-channel conditions at a finer resolution.

Specific stream power values for Dry, Cirby and Linda Creeks ranged from 0.17 to 87.0 Watts/m^2. Compared to the spectrum of stream power values present in the landscape, these values fall on the low end of the spectrum, thus indicating that the stream is a fairly low energy system. As a comparative example, stream power in mountain channels often exceeds 1,000 W/m^2 (Nanson and Croke,1992). Despite this, the variability in stream power offers a useful indicator of the relative differences in sediment transport capacity on a reach by reach basis. The stream power calculations informed the assessment of the channel's capacity for dynamic behavior and the degree of risk to the proposed trail.

2.4 FIELD BASED ASSESSMENTS

The field component of the fluvial audit was conducted in 2013 between October 23rd to 25th. The creeks were surveyed beginning with Dry Creek at the Darling Way bridge, heading downstream to the confluence with Cirby Creek, and then upstream along Cirby and Linda Creeks to Spahn Ranch Rd. The field assessment consisted of characterizing relevant features with written observations, photos and Real Time Kinematic (RTK) Global Positioning System (GPS) spatial location. RTK GPS was used in conjunction with California Survey and Drafting Supply (CSDS) VSN mobile base network to provide positional corrections to the Trimble R8 GNSS Receiver. The various features collected during the field survey were then mapped using ESRI's ArcMap GIS software platform. Relevant feature mapping is provided in six sheets (Figures 14 through 19). These maps also include the proposed trail alignment as well as the trail risk assessment which are described in detail in section 3.

The following is a summary of the various features of interest and how they were characterized as part of the field component of the fluvial audit:

2.4.1 Bank Erosion

Erosion severity was classified as high, moderate-high, moderate or minor. GPS positions were taken at the upstream and downstream extents to provide an estimate of length and approximate height of erosion was noted. Sections of historic or recovering bank erosion were also observed and typically classified as minor. Bank erosion was present throughout much of Dry, Cirby and Linda Creeks, with locations and severity indicated in feature mapping (see Figures 14 through 19). Figures 20 through 26 provide photographs of sites experiencing significant erosion that may affect the proposed trail. These areas are discussed in more detail later in the report.

2.4.2 Bank Protection

Observed bank protection along Dry, Cirby and Linda Creeks consisted of both hard and soft engineering measures. In this study, hard engineering refers to the use of concrete or rock protection along channel banks and this type of protection was further categorized into classes of large scale and small scale. Large scale hard engineering (HE-LS) referred to actions armoring a significant portion of the bank such as boulder rip-rap, concrete walls, and concrete lock-block. Small scale hard engineering (HE-SS) included features such as a line of small boulders at the edge of baseflow wetted channel or old concrete blocks covering only a small portion of the bank (see Figures 6 and 7 for examples). The soft engineering (SE) observed included more natural bank protection measures such as the installation of geotextile fabric, willow spiling and vegetation planting on channel banks (see Figure 8 for examples).

2.4.3 Depositional Sedimentary Features

Sediment is stored within a stream channel in depositional bar features (e.g., point bars, lateral bars[3]) as well as along the channel bed. Along the reaches of interest of Dry, Cirby and Linda Creeks, the majority of sediment storage features were lateral bars. There were also numerous instances of considerable in-channel sand storage on the stream bed, which typically occurred upstream of an artificial base level control such as a cobble weir. In addition to annotating the feature type, the sediment material (i.e. sand or gravel) and the vegetation cover, if present, were recorded. Most of the bar features observed were bare or had small amounts of young riparian vegetation, suggesting they had been recently activated during storm events (see Figure 9 for examples). However, several large bar features with mature vegetation were observed, suggesting that they had not been altered significantly in recent years. Depositional bars are classified in the report maps as either (1) bare/vegetated or (2) mature to distinguish more recently activated features from older or less regularly activated features.

2.4.4 Dominant Bed Material

During the fluvial audit, the dominant bed material was identified based on the grain size of the stream bed's sediment. The study reaches of Dry, Cirby and Linda Creeks were predominantly sand-bed channels. There were also numerous instances of "bedrock" exposure, where hydromodification of contributing watersheds had likely resulted in channel incision to the cohesive hard-pan layer (Mehrten formation) present in much of the lowland eastern slope of the Sacramento Valley region. Additionally, there were short sections of gravel beds typically associated with natural and artificial riffle features as well as what appeared to be intentionally constructed cobble, boulder and concrete sections of the channel bed. Most of these engineered sections of the channel bed were associated with bridges, pipe crossings and other grade control structures (also referred to in this study as a type of hydraulic control).

2.4.5 Reach Type Characterization

This qualitative classification is based largely on bedforms and the stream gradient or slope. The reach type was typically characterized over a section of channel at least several (if not 10 or more) channel widths in length, rather than at a specific point or individual morphological unit. The majority of Dry,

[3] Point bars and lateral bars are depositional sedimentary features typically composed of well-sorted alluvium. Point bars occur on the inside bend of a river while lateral bars typically form along the margin of relatively straight sections of channel. More detailed descriptions of these features can be found in most fluvial geomorphology text books or via an internet search.

Cirby and Linda Creeks was categorized by a slow glide (SG)[4] morphology. There were also sections of pool-riffle (P-R)[5] morphology, as well as reaches with a morphologic classification between these two channel gradients (e.g., SG/P-R). Reach types are mapped in Figures 14 through 19.

2.4.6 Hydraulic Control Points

Hydraulic control points refer to both natural features (e.g., bedrock outcrops) and manmade structures along the channel bed that control stream gradient (i.e. grade control structures). Along the study reaches of Dry, Cirby and Linda Creeks were numerous instances of natural and artificial hydraulic control points. The natural hydraulic controls consisted of "bedrock" or cohesive hard-pan. The artificial hydraulic control points consisted largely of weir structures (poured concrete, cobble, and concrete rubble) as well as several pipe crossings. A number of these weir structures appeared fairly old and may no longer be serving a necessary function (see Figures 10 and 11 for examples). The artificial grade control structures often exhibited a significant longitudinal impact on in-channel conditions, causing lengthy stretches of backwater effects which in turn influenced reach type characterization along much of the stream length. These backwater impacts were strongly apparent during base flow conditions. At higher flows, many of the grade control structures may have a significant effect on upstream water surface slope but additional quantitative assessment or hydraulic modeling would be necessary to characterize these impacts over the range of flows experienced in the system.

2.4.7 Large Woody Debris

Instances of large woody debris along Dry, Cirby and Linda Creeks were very liminted, suggesting regular maintenance activities to remove large wood from the channel. Where present, the location, general size, orientation and extent to which the feature spanned the channel were recorded as these factors determine the impact of large wood on fluvial processes.

2.4.8 In-Channel Vegetation

Sections of the channel bed exhibiting extensive macrophyte cover (i.e. emergent, submergent or floating aquatic plants growing in the channel) were recorded. There were also numerous instances of dense macrophyte cover coupled with significant in-channel sand deposition across the stream bed.

2.4.9 Stormwater Outfalls

The location, general size, associated bank armoring and severity of erosion were recorded for stormwater outfalls present along the study reaches. There were numerous stormwater outfalls observed along the study reach. Most appeared to be in fairly stable condition while a small handfull were likely eroding significant amounts of sediment during large storm events (see Figure 12 for examples).

---

[4] A slow glide (SG) channel morphology is characterized by low velocity, low slope and a relatively homogenous bed morphology. Reaches exhibiting this morphology typically have low sediment transport capacity and low sediment supply.

[5] Pool-riffle (P-R) channel types are characterized by alternating sequences of pools (regions of relatively deep and slow flow with a low water surface slope) and riffles (features with relatively fast and shallow flow over a high water surface slope and coarse bed).

2.4.10 Tributary Confluences

The location of tributary confluences were noted along with their relative contribution to in-channel sediment supply. Depositional sedimentary bars located at and downstream of tributary confluences suggest that, at least in recent years, the tributaries along Cirby and Linda Creeks do not supply large volumes of sediment.

2.5 GENERAL FINDINGS REGARDING STREAM CHARACTER

The sections of Dry, Cirby and Linda Creeks surveyed as part of the fluvial audit are located in riparian corridors of varying width, typically bordered by residential, light commercial or open space land uses. Much of the reach length is fairly incised, and in many areas the channel has scoured down to the cohesive "hard-pan" or "clay-pan" (Mehrten formation) typical of the area. Fluvial processes are frequently constrained both vertically and laterally by the presence of artificial grade control structures and bank protection measures. The lower (downstream) reaches are dominated by a slow glide morphology that appears to result largely from the backwater conditions generated by grade control structures. A greater diversity in reach types exists further upstream along Linda Creek where the channel varies between a slow slide and pool-riffle morphology.

It appears that large woody material is actively removed as part of channel management as only a small number of logs were present in the channel and influencing morphology. Some lower-energy reaches exhibit dense macrophyte growth and significant sand accumulation along the bed. Tributaries appear to contribute only small to moderate amounts of sediment while several eroding stormwater outfalls appear to provide local sources of sands and smaller-grained material. Overall, the channel appears to be fairly stable and significant geomorphic change seems to be limited to fairly large flood events (we suspect events in the 5 to 10 year range, but this may vary along the channel length). However, a more detailed quantitative study and hydraulic modeling would be necessary to confirm this initial assessment of stability and the size of flood events driving significant geomorphic alterations.

3 TRAIL EROSION RISK ASSESSMENT

3.1 CRITERIA FOR ASSESSING RELATIVE RISK

A large number of criteria were integrated into the assessment of relative erosion risk to the proposed trail. These criteria were divided into two general categories (primary and secondary) based on their relative weighting or influence on the assessment. The following sections describe the primary and secondary criteria, and their utility in the risk assessment.

3.1.1 Primary Criteria

3.1.1.1 Trail proximity to edge of channel (top of bank)

The approximate location of the channel's top of bank was digitized in ArcGIS using the LiDAR-derived 2-ft contour data provided by Psomas. It is important to note that locating the top-of-bank is a subjective interpretation, and the coarseness of the contour intervals and the potential for erroneous vegetation

returns (rather than true ground surface returns) in the LiDAR data may have contributed error to this exercise.

The proximity of the proposed trail to the channel's adjacent top of bank was divided into 4 categories based on distance: (1) less than 10 feet, (2) between 10 and 30 feet, (3) between 30 and 60 feet, and (4) greater than 60 feet. The specific values of 10, 30 and 60 feet are somewhat arbitrary but provide a useful framework for assessing trail proximity to the channel. Using ArcGIS, the approximate top of bank line was offset by these distances of 10, 30 and 60 feet and the proposed trail bracketed into distance classes based on the location of edge of pavement relative to these offset lines.

3.1.1.2 Presence and severity of erosion on adjacent stream bank

The presence and severity of erosion on the stream bank adjacent to the trail provided a strong indicator of the channel's potential for dynamic behavior and the likelihood of channel migration toward the trail during flood events. It is important to note that areas of historic/recovering bank erosion (which were typically classified with minor erosion severity) have the capacity to be reactivated in larger flood events (i.e. 5-yr return interval[6] or greater, though modeling would be required to more accurately assess activation thresholds) and can be the locations of considerable bank retreat. While there is a significant difference between the erosion severity classifications of minor and high, the presence of any bank erosion was considered significant as indicated by the weighting factors applied in Tables 1 and 2 (discussed in section 3.2).

3.1.2 Secondary Criteria

3.1.2.1 Nearby channel pattern/curvature

The existing curvature of the stream provided an additional indicator of the channel's potential future trajectory. Of particular relevance was whether the proposed trail was located on the outside of a meander bend.

3.1.2.2 Presence of existing bank protection measures

While bank protection is sometimes implemented as a preventative measure near key infrastructure (e.g., bridges, utility pipe crossings, stormwater culverts), it is typically located in areas historically facing bank erosion problems and is therefore indicative of sections of channel with higher potential of exhibiting dynamic behavior. Bank protection measures may also deflect bank erosion to unprotected sections of the channel bank at its upstream or downstream ends, or, in some instances, to the opposite bank .

3.1.2.3 Specific stream power

Specific stream power provided an indication of how the channel's sediment transport capacity varied from reach to reach. As a secondary criteria, stream power provided a helpful tool to qualify or modify assessments of channel dynamism and potential risk to the trail.

[6] The 5-year flood event is a flood event that has a 20% probability of occurring in a giver year

3.1.2.4 Historical channel adjustments

Specific reaches or meander bends experiencing significant channel adjustment over the last 25 years (as demonstrated in historical aerials), were considered in evaluating channel trajectory and trail risk.

3.1.2.5 Presence of historical and high-flow channel alignments

Inspection of LiDAR data revealed historical alignments, historically dynamic floodplain areas and existing high-flow channels. The location and alignment of these features informed increases in risk assessments as described in notes present in Figures 14 through 19.

3.1.2.6 Proximity to flood bypass channels

The proximity of the proposed trail to the flood bypass channel (or excavated terrace), particularly between Rocky Ridge Dr and Old Auburn Rd, poses an increased erosion risk to the trail in several locations as demonstrated in Figures 3 and 18.

3.1.2.7 Dominant bed material

The stream bed material provides an indicator of potential for channel bed erosion. The presence of sand-dominated beds in some areas provided an understanding of a reach's susceptibility to geomorphic change in the absence of grade controls and bank protection.

3.1.2.8 Presence and maturity of depositional sedimentary features

The density, maturity and size of depositional bar features informed an understanding of channel dynamism on a reach by reach scale. Furthermore, historical aerials provided a sense of changes to sedimentary bars over time and insights into geomorphic dynamism.

3.1.2.9 Reach type

Reach type classifications provided an indication of channel gradient, stream energy and the longitudinal influence of grade control structures.

3.1.2.10 Grade control structures

The presence of artificial hydraulic controls (e.g., concrete weirs, cobble weirs) strongly influences local stream gradient, hydraulics and the dissipation of stream energy. The numerous grade control structures along Dry, Cirby and Linda Creeks influence their potential for dynamic channel behavior, particularly in areas immediately upstream of the structure. However, a more detailed assessment or modeling effort would be required to determine the specific impacts of these structures on channel dynamism.

3.1.2.11 Tributaries

Tributaries supply additional flows and sediment to the main channel and can shift the channel's geomorphic equilibrium. While the tributaries along Cirby and Linda Creeks appear to supply relatively minor amounts of sediment, changes in their contributing watersheds, riparian corridor or channel sediment dynamics could alter this supply and consequently change the channel dynamics of Dry, Cirby and Linda Creeks near tributary confluences.

3.1.2.12 Stormwater outfalls

The location of stormwater outfalls experiencing significant erosion provided a sense of potential influence on local sediment supply and greater likelihood for geomorphic shifts.

3.1.2.13 Large woody debris

The location and orientation of the few large woody debris members present along the study reach were considered in assessing potential geomorphic trajectory of the channel in which they were located.

3.1.2.14 In-channel vegetation

The location of dense macrophyte growth were used as indicators of low-energy reaches and the channel's capacity to accumulate or trap sediment along the bed.

3.2 ASSIGNMENT OF RELATIVE RISK

Trail erosion risk was initially assessed using the two primary criteria: proximity to top of bank and bank erosion severity. Weighting factors were assigned to the various levels of erosion severity and trail distances from the top of bank. These factors were then combined in a matrix (see Table 1) to provide an initial predictive score of erosion risk. It is important to note that the assignment of the weighting factors was a subjective process and that the risk scores generated were intended to guide a general comparison of relative risk. Potential risk was categorized into five levels (extreme, high, moderate, minor and negligible) and each combination of erosion level and channel proximity was assigned a risk category based on the scores (see Table 2).

Table 1. Initial trail risk assessment matrix with scoring

Proximity to Stream								
	Very Close	< 10 ft	10	25	60	75	90	100
	Nearby	10 to 30 ft	7	17.5	42	52.5	63	70
	Distant	30 to 60 ft	3	7.5	18	22.5	27	30
	Very Distant	> 60 ft	1	2.5	6	7.5	9	10
		Weighting factor		2.5	6	7.5	9	10
				Negligible	**Minor**	**Moderate**	**Mod-High**	**High**
				Erosion Level				

Table 2. Initial trail risk assessment matrix with risk categorization

Proximity to Stream								
	Very Close	< 10 ft	10	Moderate	Moderate	High	Extreme	Extreme
	Nearby	10 to 30 ft	7	Minor	Moderate	Moderate	High	High
	Distant	30 to 60 ft	3	Negligible	Minor	Minor	Moderate	Moderate
	Very Distant	> 60 ft	1	Negligible	Negligible	Negligible	Minor	Minor
		Weighting factor		2.5	6	7.5	9	10
				Negligible	**Minor**	**Moderate**	**Mod-High**	**High**
				Erosion Level				

The initial risk assessment generated by the primary criteria matrix was then corroborated or modified through a reach-by-reach analysis incorporating the full suite of secondary criteria. Evaluation of the secondary criteria resulted in an increased risk assessment for a number of sections of the trail. These risk modifications are typically annotated in the Figures 14 through 19. Example situations for increases in risk assessment include high levels of historical channel adjustment, potential trail interaction with a high-flow side channel and trail location on the outside of an eroding meander bend. Furthermore, if the risk assessment for a given section of trail bordered two risk levels, the higher risk level was typically assigned.

This five-level risk assessment was applied to the entire greenway trail as shown in Figures 14 through 19. In the case of proposed pedestrian bridges, the risk assessment was typically dropped to minor (despite the relative proximity to the channel) unless there was evidence of nearby bank erosion or other indicators of higher potential for dynamic behavior. This assessment of minor risk has been made because proposed bridges and supporting abutments will be designed and constructed with scour protection meeting the 200-year flood standard.

3.3 TRAIL SECTIONS REQUIRING ACTION

There are six segments of the proposed greenway trail assessed with extreme or high erosion risk. These sites are named DRY-H1, CIRBY-H1, LINDA-H1, LINDA-H2, LINDA-H3 AND LINDA-H4 and are labeled as such in Figures 14 through 19 as well as Figures 27 through 33. While a quantitative assessment of bank retreat rates was not performed as part of this fluvial audit, the stream appears to be on a trajectory that may affect or undermine the integrity of the trail at these six sites. As indicated in Table 3, some combination of trail realignment, bank protection measures and channel modification are strongly advised for these sections of trail. Notes about the risk assessment and prioritized mitigative measures for these six locations are summarized in the subsequent sections.

Table 3. Risk levels and corresponding actions

Risk Levels	Suggested Action
Extreme	Trail realignment, bank protection and/or channel modification strongly advised
High	Trail realignment, bank protection and/or channel modification advised
Moderate	Trail realignment and/or bank protection measures encouraged
Minor	No actions suggested
Negligible	No actions suggested

It is important to note that the options specifying channel modification will require quantitative analysis (and potentially hydraulic modeling) to determine appropriate designs and to assess impacts on in-channel hydraulics and bed shear stresses. Additionally, any actions armoring a bank may change reach hydraulics and affect the erosive forces acting upstream or downstream, or on the opposite bank. The impacts and risks associated with proposed bridges and trail approaches to bridge crossings would be better assessed with more detailed quantitative analysis and two dimensional hydraulic modeling, especially given the increased complexity of flows and the significant infrastructure investments.

3.3.1 DRY-H1

This section of trail along the left-bank of Dry Creek downstream of the Darling Way bridge runs parallel to a section of moderate severity bank erosion (see Figure 20 and 27). The proposed trail is less than 10 feet from the approximate location of the top of the eroding bank. The sections of trail immediately upstream and downstream of this area were assessed with moderate risk, despite their not being adjacent to an eroding bank. However, their proximity to the channel, the nearby bank erosion and the bank protection measures in the reach that were already implemented along the opposite bank informed a moderate risk assessment. Given the relatively narrow space available between the top of bank and the private property fence line, the following actions are suggested in order of priority:

1. Eliminate the proposed trail on the eastern side of Dry Creek from the plans and construct only the proposed trail alignment on the western side of the channel.
2. If the eastern trail is to be constructed:
    a. Move the path alignment as close to the fence line (i.e. as far east) as possible.
    b. Implement bank protection measures to address existing bank protection along the high-risk section and potentially along parts or all of the moderate risk sections immediately upstream and downstream of the high risk segment.

3.3.2 CIRBY-H1

The proposed trail between I-80 and the confluence of Dry and Cirby Creeks has a segment of extreme and high erosion risk near Cirby Hills Drive and Machado Lane (see Figures 22 and 28). This section of trail along the southern side of the channel is the most concerning section of the proposed path along the entire length of the fluvial audit. The ongoing severe erosion and the limited space between the top of bank and the toe of the hill slope will likely jeopardize the integrity of the trail. The following actions are suggested in order of priority:

1. Bypass this section of the corridor altogether by connecting the trail with an existing path or sidewalk in the neighborhood to avoid constructing the trail in a highly risk-prone area. However, we understand this would not be consistent with the overall goal of the multi-use trail project to create a separate off-street Class 1 trail.
2. Realign the trail along the northern bank as indicated in Figure 28 to avoid locating the trail along the problematic southern bank although this would require construction of two additional bridge structures with associated visual impacts.
3. If the trail is to be constructed as proposed, implement a suite of measures as indicated in Figure 29:
    a. Construct a log crib wall (or similar structural measures) along the southern bank and locate the trail on top of the wall. The crib wall could be outfitted with root wads that would further protect the bank from erosion while also generating a habitat feature.
    b. Terrace the opposite floodplain to generate additional flow area and dissipate erosive energy directed at the outside bank during bankfull and larger flood events. A small backwater channel could be created near the toe of the new bank to further increase flow area and to provide a habitat feature.

c. Depending on the wall orientation and size, additional bank protection measures further upstream and downstream may be advisable.

3.3.3 LINDA-H1

LINDA-H1 is the furthest downstream segment of trail along Linda Creek with a high risk classification. The trail is located adjacent to a lengthy section of bank erosion (see Figures 23 and 30) and is positioned on the outside of a relatively large radius meander bend. The extent of bank erosion may be enhanced somewhat by a pipe crossing the channel with an angled alignment rather than one that is perpendicular to flow. The angled alignment may be directing erosive energy towards this outside bank, contributing to bank erosion at the site. Given the close proximity of the proposed trail alignment to the top of bank, the following actions are suggested in order of priority:

1. Adjust the trail alignment east to increase distance from top of bank to edge of path. It is understood, though, that an existing large sewer trunk main runs roughly parallel to the creek at this location. Moving the trail would reduce potential for erosion to the trail, however the risk to the sewer line from creek bank erosion will remain without other measures being implemented. In addition, moving the trail to the west would increase the right-of-way acquisition required of adjacent private property owners.
2. Consider a slightly narrower path width in the sections with high and moderate trail risk.
3. Implement bank protection measures along the eastern bank where there is ongoing erosion.
4. Construct a log or rock vane just downstream of the existing pipe crossing that extends from the eastern bank to a point partly or fully across the channel (as indicated by the yellow line in Figure 30). The vane may help direct erosive energy away from the outside bank to the center of the channel. More in-depth site analysis would be required to identify the ideal location and configuration of a vane structure. A curved cross vane alignment may also be appropriate.

NOTE: If a decision is made to install bank protection measures on the eastern bank and/or a vane in the channel, hydraulic modeling would be advisable to determine the effects on the opposite bank.

3.3.4 LINDA-H2

The high risk at LINDA-H2 was assessed due to the proposed trail's proximity to the outside of an actively eroding meander bend (see Figures 24 and 31). Suggested actions include slight trail adjustment, bank protection and/or channel reconfiguration. Setting the trail back may not adequately reduce risk on its own given the limited space available between the top of bank and the eastern flood wall. Suggested measures include:

1. To the extent possible, set the trail alignment further back from the channel in the direction of the floodwall.
2. Address bank erosion through one of the following sets of actions:
    a. Applying standard bank protection measures along the outside, eroding bank to protect against further erosion.
    b. Applying the suite of options indicated in Figure 32:

i. Lay back both existing banks and create an inset floodplain terrace on the inside of the bend, thereby increasing flow area and reducing erosive energy.
ii. Outfit the new toe of the bank with root wads or stone protection and willow staking to protect against future erosion.
iii. Plant the banks with native grasses (or fabric hydroseed).

NOTE: These options will require additional analysis during final engineering with consideration of available space between creek bank and floodwall, and presence of an existing sewer line. Additionally, the bank lay-back option may not be feasible due to existing storm drain infrastructure.

3.3.5 LINDA-H3

LINDA-H3 was given a high risk assessment due to the trail's proximity to the top of bank and ongoing severe erosion (see Figures 25 and 31). The suggested actions are the same as those specified in LINDA-H2 but the bank protection and channel modification measures would need to be somewhat tailored to the site-specific conditions at LINDA-H3.

3.3.6 LINDA-H4

LINDA-H4 is located on a fairly dynamic section of channel adjacent to an actively eroding bank (see Figures 26 and 33). Further upstream the channel has numerous active bar features as well as several larger bar features that appear to not have been activated since the last large flood event (i.e. likely older than 5 years). There is also a fairly significant application of bank protection further upstream. Given the dynamic nature of this reach and the presence of undeveloped property near the channel, a trail setback could be an appropriate measure to reduce risk to the trail. However, we understand trail realignment may be restricted by residential home development planned for the property. If a trail setback of 30 feet or more is not feasible, we suggest a combination of the following measures:

1. To the extent possible, adjust the trail alignment to the east to increase the distance between the edge of trail and the top of bank.
2. Apply bank protection measures to the eastern bank along the high-risk section of trail, and potentially along the moderate-risk sections upstream and downstream.

NOTE: Following field reviews, the trail alignment at LINDA-H4 has been revised to provide additional buffer space between the creek and trail.

3.3.7 Moderate Risk Sections

In addition to the 6 extreme and high risk sections of trail, 48 segments of trail were assigned moderate risk. These 48 locations included trail segments adjacent to higher risk sites as well as clusters of moderate risk segments which were given a single label (see LINDA-M3 in Figure 16 for an example). In locations where the risk assignment was increased from minor to moderate due to consideration of the secondary criteria listed in section 3.1.2, notes are provided in Figures 14 through 19 regarding the rationale. Where space is available, additional setbacks from the top of the bank may be advisable for moderate risk trail segments. Where setbacks are infeasible and ongoing erosion is present, bank protection measures may be advisable if a reduction in trail risk is desired. Some moderate risks are assigned to creek crossings or trail segments located under bridges where the higher risk is due in part

to the trail's forced proximity to the channel. In these cases, appropriate bank and trail protection measures should be installed and adequate bridge abutments and foundation armoring should be constructed. Trail sections assigned moderate risk that are not adjusted or protected should be monitored routinely such that potential erosion problems can be identified and remedied before affecting the trail's integrity.

4 CONCLUSIONS

The application of cbec's fluvial audit methodology provided a process-based understanding of Dry, Cirby and Linda Creeks' current geomorphic regime and the future trajectory of their channels. A desk-based analysis of historical channel alignments, LiDAR-derived topographic contours and specific stream power was combined with a field-based geomorphic assessment. Potential risk to the proposed trail alignment was initially evaluated on the basis of two primary criteria: bank erosion severity and trail proximity to the top of the bank. Secondary criteria were used to corroborate or modify risk assessment based on their indication of the channel's capacity for dynamic behavior. Along the approximate 4.5 mile length of the proposed greenway trail, six areas of concern with extreme or high trail risk were identified. Specific mitigative measures were prioritized to address these extreme and high levels of risk. Several dozen moderate risk areas were also identified and general suggestions provided to address them. It is important to note that the mitigative actions presented represent preliminary suggestions and that more quantitative analysis (and potentially hydraulic modeling) are advisable to appropriately size, locate and design these measures.

Notes: The bank lay-back option may not be feasible due to existing storm drain infrastructure. A determination of the minimum trail setback distance from the top of the new bank would require a more detailed site analysis including additional field assessment (e.g., soil types, vegetation characteristics), potentially hydraulic modeling, trail design details, risk tolerance assessment and project longevity.

1 INTRODUCTION AND LIST OF COMMENTERS

1.1 PURPOSE OF THIS DOCUMENT

This document includes all agency and public comments received on the draft environmental impact report (Draft EIR, SCH # 2013112042) for the Dry Creek Greenway East Trail Project (proposed project). Written comments were received by the City of Roseville during the public comment period held from April 13, 2018 to May 29, 2018. This document includes written responses to each comment received on the Draft EIR. The responses clarify, amplify, and/or correct information presented in the Draft EIR, as appropriate. These changes do not alter the environmental impact or significance conclusions of the Draft EIR.

This document (hereafter called the Final EIR), the Draft EIR, and Appendices constitute the full EIR for the proposed project that will be considered by the decision-makers during project review and hearings. The EIR has been prepared in accordance with the California Environmental Quality Act (CEQA) (Public Resources Code [PRC] Sections 21000-21177) and the State CEQA Guidelines (California Code of Regulations [CCR], Title 14, Division 6, Chapter 3, Sections 15000-15387).

1.2 BACKGROUND

1.2.1 Summary Description of the Proposed Project

The project analyzed in the Draft EIR proposes a 4.25-mile multi-use trail that would extend from the existing Saugstad/Royer Park trail near the intersection of Riverside Avenue and Darling Way eastward to the City limits, just past the Old Auburn Road/South Cirby Way intersection. The trail would follow creek corridors along portions of Dry, Cirby, and Linda Creeks. These corridors currently contain segments of existing unimproved natural surface paths and paved multi-use paths, some of which do not meet current City design standards. Much of the corridor has been used historically for recreation and for access and transportation of infrastructure maintenance vehicles and equipment. The corridor continues to be used for these purposes along both improved and unimproved segments.

The proposed project would be a paved, multi-use trail that would conform to the City of Roseville Design Standards (Section 13 Bikeways) and other provisions of the City of Roseville Construction Standards. A typical cross-section for the proposed trail would consist of a 10-foot wide paved trail with two-foot shoulders on each side (one composed of decomposed granite and one of aggregate base), for a total width of 14 feet. The trail may also include drainage swales on one or both shoulders, as needed. The proposed trail may be narrowed to an eight-foot wide paved section with one- or two-foot wide shoulders for access spurs and in “pinch-point” locations that have severe physical or environmental constraints. The narrower cross section would still support safe, two-way travel but would limit physical disturbance where design constraints prevent construction of the standard cross-section. The proposed trail may also be widened in areas where additional shoulder or trail width is desired to enhance comfort and safety of the various user types. In these instances, the shoulder width may be increased to between 5 and 10 feet on one side of the trail.

As a result of existing topography, retaining walls would be required at several locations along the proposed alignment. The proposed walls would include gravity walls (reinforced concrete) and anchored walls.

The proposed project would include several roadway and creek crossings. Undercrossings are proposed to pass beneath existing roadways, including Darling Way, Interstate 80, Sunrise Avenue, Rocky Ridge Drive, and Old Auburn Road. The project would also include the construction or modification of up to eight bridges to provide creek crossings throughout the alignment. Finally, the project could include elements, such as benches, lighting on lengthy portions of the undercrossings, utility relocations, and regulatory and wayfinding signs.

The proposed trail would, to the extent feasible, be designed to provide maintenance and emergency access for the City Environmental Utilities Department, open space and storm water maintenance crews, and the Roseville Fire Department. It would provide a safe route for walkers, joggers, cyclists, wheelchair users, and others traveling on non-motorized vehicles to access parks and other trails.

1.2.2 Project Review Process

Before the City can approve the proposed project, the City Council must certify that the EIR was completed in compliance with the requirements of CEQA, that the decision-making body has reviewed and considered the information in the EIR, and that the EIR reflects the independent judgment and analysis of the City of Roseville. Approval of the project also requires adoption of a Mitigation Monitoring Plan (MMP), which specifies the methods for monitoring mitigation measures required to eliminate or reduce the project's significant effects on the environment (see Chapter 4 of this Final EIR). The City would also adopt CEQA Findings of Fact regarding any significant effects on the environment and, for any effects determined to be significant and unavoidable, a Statement of Overriding Considerations, as part of project approval. Action by the City Council would follow a recommendation from the City of Roseville Transportation Commission.

After certification of the EIR, the City will consider approval of a trail alignment from the choices between the proposed alignment and its options. If the City approves a trail alignment, the City will also authorize staff to pursue final design, permitting, right-of-way acquisition, and construction funding for phased construction. Also, if the City approves a project, it would file a Notice of Determination with the County Clerk and State Clearinghouse to conclude the CEQA process.

Several agencies would be involved in the consideration and approval of proposed project elements. Federal, state, and regional agency approvals and permits that would be considered for the proposed project would include wetlands verification, encroachment, water quality, and streambed alteration permits. State and regional responsible agencies and federal agencies with approval authority would include:

- Regional and State Responsible Agencies:
  - California Department of Fish and Wildlife
  - Central Valley Regional Water Quality Control Board
  - Central Valley Flood Protection Board
  - California Department of Transportation (Caltrans)
- Federal Agencies:
  - U.S. Army Corps of Engineers
  - U.S. Fish and Wildlife Service
  - National Oceanic and Atmospheric Administration Fisheries
  - Federal Highway Administration (NEPA authority delegated to Caltrans)

In accordance with PRC Section 21092 and CCR Section 15082, the City issued a Notice of Preparation (NOP) on November 18, 2013 to inform agencies and the general public that an EIR was being prepared and to invite comments on the scope and content of the document. The NOP was

submitted to the State Clearinghouse, posted on the City of Roseville website (http://www.roseville.ca.us/transportation/bikeways/dc_study.asp), made available at the City clerk's office and the City of Roseville Permit Center, and distributed directly to potential responsible and trustee agencies. The NOP was circulated for 30 days, from November 18, 2013 through December 19, 2013. In accordance with PRC Section 21083.9 and CCR Section 15082(c), a noticed scoping meeting for the EIR occurred on December 3, 2013 at 6:00 p.m. at the Maidu Community Center, 1550 Maidu Drive, Roseville, California, 95661. The NOP and comment letters received on the NOP are included in Appendix A and Appendix B of the Draft EIR, respectively.

A Notice of Completion and copies of the Draft EIR were filed with the State Clearinghouse on April 13, 2018 and the Clearinghouse distributed the Draft EIR to all state CEQA Trustee and Responsible Agencies. A 45-day public review period for the Draft EIR was provided, ending on May 29, 2018. The Notice of Availability and the Draft EIR are posted on the City's website (http://www.roseville.ca.us/EnvironmentalDocs). A public hearing during the public comment period was held at the City of Roseville Transportation Commission meeting on May 21, 2018. The public had the opportunity to provide comments on the Draft EIR at that Commission hearing. The City also invited the public to submit written comments during the review period.

Copies of the Draft and Final EIR are available for review at the following locations:

City of Roseville Permit Center
311 Vernon Street
Roseville, CA 95678
(Open to the public Monday – Friday from 8:00 am to 5:00 pm)

Maidu Library
1530 Maidu Drive
Roseville, CA 95661 (Open to the public: Monday – Wednesday 10:00 am - 7:00 pm;
Thursday / Saturday 10:00 am - 5:00 pm)

1.3 ORGANIZATION OF THE FINAL EIR

The Final EIR is organized as follows:

Chapter 1 – Introduction and List of Commenters: This chapter summarizes the project under consideration and describes the contents of the Final EIR. This chapter also contains a list of the agencies, organizations, or persons who submitted comments on the Draft EIR during the public review period, presented in order by agency, organization, individual and date received.

Chapter 2 – Comments and Responses: This chapter contains the comment letters received on the Draft EIR followed by responses to individual comments. Each comment letter is presented with brackets indicating how the letter has been divided into individual comments. Each comment is given a binomial with the letter number appearing first, followed by the comment number. For example, comments in Letter 1 are numbered 1-1, 1-2, 1-3, and so on. Immediately following the letter are responses, each with binomials that correspond to the bracketed comments.

If the subject matter of one letter overlaps that of another letter, the reader may be referred to more than one group of comments and responses to review all information on a given subject. Where this occurs, cross-references to other comments are provided.

Some comments on the Draft EIR do not pertain to CEQA environmental issues or address the adequacy of the analysis contained in the Draft EIR. Although CEQA requires responses to comments on environmental issues, responses to non-environmental comments are also included to provide

additional information. When a comment does not directly pertain to environmental issues analyzed in the Draft EIR, does not ask a question about the adequacy of the analysis contained in the Draft EIR, expresses an opinion related to the merits of the project, or does not challenge an element of or conclusion of the Draft EIR, the response will note the comment and provide additional information, where appropriate. The intent is to recognize the comment and refer it to decision-makers. Many comments express opinions about aspects of the proposed project and these are included in the Final EIR for consideration by the City.

Chapter 3 – Revisions to the Draft EIR: This chapter summarizes text changes made to the Draft EIR in response to comments made on the Draft EIR and/or staff- initiated text changes. Changes to the text of the Draft EIR are shown by either a strikethrough line through the text that has been deleted or a double underline where new text has been inserted. The revisions contain clarification, amplification, and corrections that have been identified since publication of the Draft EIR. The text revisions do not result in a change in the environmental analysis, conclusions, or significance determinations presented in the Draft EIR.

Chapter 4 – Mitigation Monitoring Plan: This chapter contains the MMP to aid the City in its implementation and monitoring of measures adopted in the EIR.

1.4 LIST OF COMMENTERS

The City of Roseville received 22 comment letters during the public review period on the Draft EIR for the proposed project. In addition, five people provided public comments during the Draft EIR hearing at the City of Roseville Transportation Commission meeting on May 21, 2018. Table 1-1 below indicates the numerical designation for each comment letter, the author of the comment letter or hearing statement, and the date of the comment.

Table 1-1 Comment Letters Received on the Draft EIR

This page intentionally left blank.

2 COMMENTS AND RESPONSES

2.1 INTRODUCTION

This section contains the comment letters that were received on the draft environmental impact report (Draft EIR). Following each comment letter is a response intended to either amplify, clarify, or correct information provided in the Draft EIR or refer the reader to the appropriate place in the document where the requested information can be found. Comments that are not directly related to environmental issues may be discussed or noted for the record. Where text changes in the Draft EIR are warranted based upon comments on the Draft EIR, those changes are presented following the response to comment and in Chapter 3.

2.2 MASTER RESPONSES

Numerous comments raised similar and/or related issues or questions that are answered or clarified in one comprehensive or "master" response. For this Final EIR, Master Response 1 was prepared to address several commenter's concerns regarding safety and security related to future operation of the proposed multi-use trail. A cross-reference to the master response is provided, where relevant, in responses to individual comments.

2.2.1 Master Response 1 – Safety and Security

Safety and security have been long-standing issues of concern regarding the proposed trail. While safety and security does not fall within the purview of the California Environmental Quality Act (CEQA), the City recognizes that it is an important concern to the community, has evaluated it extensively, and included it in design strategies for the proposed project. For instance, the 2010 Dry Creek Greenway Trail Planning and Feasibility Study (City of Roseville 2010) included a discussion addressing "Safety and Security." The study included the results of a public opinion survey as well as comments received during public workshops and Stakeholder Representative Group meetings. Safety and security concerns were raised regarding potential transient activity and the use of the open space around the trail by homeless people; nuisance activity related to noise, loss of privacy and trail user parking; property owner security related to potential vandalism, graffiti, theft, and crimes against persons; risk of wildfire; trail user safety; and conflicts with vehicles. Throughout the feasibility and planning portions of the project, City representatives, including Police and Fire Department representatives have discussed these concerns with the public. The 2010 Planning and Feasibility Study states that paths are like any other facility in the City and are not immune from safety concerns; however, the Roseville Police Department (PD) and Fire Department (FD) had not identified any trends in crime or major safety or security concerns along Roseville's existing paths or trails.

As noted in several comments received on the Draft EIR, these continue to be concerns of nearby residents. While safety related to trail user conflicts and security from crime are not environmental issues within the purview of CEQA, the Draft EIR discusses the potential environmental effects from an increased need for police or fire protection because of project implementation. Potential impacts related to police protection are discussed under Impact 4.11-1 in the Draft EIR. As discussed in the Draft EIR, the proposed project would not result in the construction of new housing or other project elements that would increase the permanent resident population in the City. Therefore, the project would not generate an increased demand for police protection services related to an increase in permanent population in Roseville. Property owners and residents commonly express concern regarding the potential for

increased vandalism and illegal activities in areas where trails are constructed. Public access exists for much of the proposed project corridor through public streets and cul-de-sacs, as well as segments of existing paths and trails that are not built to current City and California Department of Transportation (Caltrans) design standards. Community members have reported people being present in the creek corridors under existing conditions. Bike trails are patrolled by police officers on an as-needed basis, and police personnel state that graffiti is commonly seen along bike trails. However, in accordance with the City's graffiti abatement program, graffiti on public property is abated within 10 days of notifications to the City.

The Draft EIR also noted that, during the feasibility study phase of this project, public outreach was conducted and residents of adjacent neighborhoods expressed concern related to safety issues. The Roseville PD and Roseville FD have not identified any trends in crime or significant safety or security concerns along Roseville's existing paths or trails. While no studies have been conducted to explore the potential safety effects that could occur from construction and use of the trail, studies and surveys completed in multiple contexts found that multi-use trails can benefit communities by providing exercise and recreation opportunities, transportation choices, a sense of community, increased property values, and lower crime. For instance, a 1998 study of 372 trails found that crimes rates are lower in trail networks than the overall crime rate for the region in which they are located (i.e., urban, suburban, or rural) (Tracy and Morris 1998). Similar results were found for studies that evaluated trail systems in the Seattle metropolitan area (Zarker and Bourey 1987) and Santa Rosa, California (Murphy 1992). Generally, these studies reflect the observation made by the Roseville PD and FD that open space trails do not result in increased safety and security problems, and that trails are safe to use and live near. The proposed project would provide a safe route for walkers, joggers, cyclists, wheelchair users, and others traveling on non-motorized vehicles to access parks and other trails.

In a review of the Miners Ravine Trail, the Roseville PD has found that having more responsible trail users present in the open space has helped provide observers that deter illegal activities. Also, the Roseville PD has indicated that the trail users and enhanced patrol access provided by multi-use trails assist police efforts to reduce loitering or illegal camping in the open space (City of Roseville 2010:106-108). A trail designed to current City and Caltrans standards would improve public safety conditions, compared to the existing conditions, because it would provide enhanced police access to open space areas. The public is allowed to access and pass through City-owned open space. Without trails and the added surveillance that comes with the presence of trail users, City maintenance vehicles, and Roseville Police Department patrols, public safety risks would be greater in unimproved and isolated areas. The Draft EIR concluded that construction of the proposed project would not generate a significant increase in service calls leading to the need for new facilities to accommodate additional police protection services, and therefore there would be no associated environmental effects, and this was identified as a less-than-significant impact.

2.3 LETTERS AND RESPONSES

The following pages contain the comment letters received on the Draft EIR followed by responses to individual comments. Each comment letter is presented with brackets indicating how the letter has been divided into individual comments. Each comment is given a binomial with the letter number appearing first, followed by the comment number. For example, comments in Letter 1 are numbered 1-1, 1-2, 1-3, and so on. Immediately following the letter are responses, each with binomials that correspond to the bracketed comments.

Re: SCH # **2014032087**
City of Roseville Dry Creek Greenway East Trail Project

The State Clearinghouse distributed the above-referenced **Draft EIR** on **April 13, 2018** to your agency for review and comment. It has come to our attention that the document was issued a State Clearinghouse Number in error. For all future correspondence regarding this project, please use the original State Clearinghouse Number **2013112042**. We apologize for any inconvenience this may have caused. All other project information remains the same.

Present Land Use/Zoning/General Plan Designation:
Open Space w/Floodwy or Floodwy Fringe Overlay. Some residen., commerc., park & rec w/Floodwy or Floodwy Fringe Overlay

Project Description: *(please use a separate page if necessary)*
The Dry Creek Greenway East Trail Project is a proposed 4.25 mile paved multi-use trail in the City of Roseville. The proposed project would be a shared-use trail for pedestrians, bicyclists and other non-motorized vehicle users that would connect neighborhoods, parks, schools, businesses, natural areas, and the on-street bikeway system across the south side of the City. The proposed trail would extend from the existing Saugstad/Royer Park trail near the intersection of Riverside Avenue and Darling Way eastward to the City limits, just past the Old Auburn Road/South Cirby Way intersection. The trail would follow creek corridors along portions of Dry, Cirby, and Linda Creeks. These corridors currently contain segments of existing unimproved natural surface paths and paved multi-use paths, some of which do not meet current City design standards.

Letter 1 Response	**Governor's Office of Planning and Research, State Clearinghouse and Planning Unit** Scott Morgan, Director April 16, 2018

1-1 The comment states that the State Clearinghouse number for the project should be 2013112042.

The comment is noted, and the cover and title page of the EIR have been corrected. Please see Chapter 2, "Revisions to the Draft EIR," of this Final EIR for the correction to the Draft EIR title page. Future notices will include the correct Clearinghouse number.

City of Roseville Dry Creek Greenway East Trail Project

Dear Mark Morse:

Thank you for including the California Department of Transportation (Caltrans) in the environmental/application review process for the project referenced above. The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. The Local Development-Intergovernmental Review (LD-IGR) Program reviews land use projects and plans through the lenses of our mission and state planning priorities of infill, conservation, and travel-efficient development. To ensure a safe and efficient transportation system, we encourage early consultation and coordination with local jurisdictions and project proponents on all development projects that utilize the multimodal transportation network.

The project proposal is for a paved 4.25-mile multi-use trail (Dry Creek Greenway East Trail Project) in the City of Roseville. The new trail would be for shared-use of pedestrians, bicyclists, and other non-motorized vehicle users. The project would connect neighborhoods, parks, schools, businesses, nature areas, and the on-street bikeway stem across the south side of the city. The project site is located on Saugstad/Royer Park trail near the intersection of Riverside Avenue and Darling Way eastward to the city limits, just past the Old Auburn Road/South Cirby Way intersection in Roseville, California. These comments are based on the Draft Environmental Impact Report (DEIR) received.

2-1

Right of Way

Caltrans owns the Right of Way (ROW) portion crossing underneath I-80 located approximately at postmile 0.82. This is an access controlled freeway. However, there is a grade separation between this project and the operating State ROW. In order, to accommodate the construction and maintenance of this project, an agreement and/or permit would be required. Please see attached ROW maps pertaining to the project location.

"Provide a safe, sustainable, integrated, and efficient transportation system to enhance California's economy and livability"

To apply for the encroachment permit, please submit the application, environmental documentation, and five sets of plans clearly indicating State ROW must be submitted to:

Moe Azar
California Department of Transportation
District 3, Office of Permits
703 B Street
Marysville, CA 95901

2-1 cont

Please provide our office with copies of any further actions regarding this project. We would appreciate the opportunity to review and comment on any changes related to this development. If you have any question regarding these comments or require additional information, please contact David J Smith, Intergovernmental Review Coordinator for Placer County, by phone (530) 634-7799 or via email to david.j.smith@dot.ca.gov.

Letter 2 Response

California Department of Transportation
Kevin Yount, Branch Chief
May 22, 2018

2-1 The comments summarize the proposed project and state that Caltrans owns the right of way (ROW) portion crossing underneath I-80 located approximately at postmile 0.82. It states that, to accommodate the construction and maintenance of this project, an agreement and/or permit would be required.

The comment is noted. The City of Roseville will coordinate future construction and ROW with Caltrans staff.

2-2 The comment requests that the Caltrans office be provided with copies of any further actions regarding the project.

The comment is noted. The City of Roseville will continue to coordinate with Caltrans during final design and construction.

2-3 The comment refers to attached ROW maps.

The comment is noted. Please see response to comment 2-1.

RE: Dry Creek Greenway East Trail Project, Notice of Availability of Draft Environmental Impact Report (DEIR)

Mark:

We have reviewed the DEIR for the subject project and have the following comments:

a) We have determined that a new Preliminary FEMA Flood Insurance Study (FIS) and revised floodplain mapping dated 11/15/17 for Dry Creek, Cirby Creek and Linda Creek, which flow within this site, should be considered as the most current best available information as this development moves forward. This new FEMA FIS and mapping is scheduled to become effective (final) November 2, 2018, prior to construction of the proposed project. Both a 100-year floodplain and regulatory floodway for the referenced streams exist at the site. Any proposed increases to the established 100-year base flood elevations due to proposed development totally or partially within the regulatory floodway will require the applicant process a Conditional Letter of Map Revision (CLOMR) through FEMA per the National Flood Insurance Program (NFIP). 4-1

b) It is the District's understanding that the City of Roseville has an agreement with the Central Valley Flood Protection Board (CVFPB) that allows the CVFPB to comment on all applicable City projects (i.e., including both those that do and do not need a variance) prior to issuance of a permit. 4-2

Please call me at (530) 745-7541 if you have any questions regarding these comments.

Brad Brewer, M.S., P.E., CFM, QSD/P
Development Coordinator

3091 County Center Drive, Suite 220 / Auburn, CA 95603 / Tel: (530) 745-7541 / Fax: (530) 745-3531

Letter 4 Response

Placer County Flood Control and Water Conservation District
Brad Brewer
May 29, 2018

4-1 The comment identifies a newly published preliminary floodplain map for the project area that is expected to become effective before construction of the proposed project.

This comment is correct and is noted for future reference. The floodplain analysis in the Draft EIR is based on the best data available at the time of writing. The revised map does not provide information that changes the environmental conclusions or significance determinations. Project engineering and design will continue after selection of a final trail alignment and will incorporate updated floodplain mapping.

4-2 This comment states the Placer County Flood Control and Water Conservation District (District) understands that an agreement exists between the City of Roseville and the Central Valley Flood Protection Board (CVFPB or Board) that allows the Board to comment on all applicable City Projects prior to issuance of a permit.

An agreement between the City of Roseville and the State Reclamation Board does exist in the form of a Memorandum of Understanding (MOU) dated December 10, 1976. This MOU recognizes City authority to issue Flood Encroachment Permits within City limits and provides the Board with a 90-day review and comment period on all City issued draft permits. MOU Section 4. Board Approval states: *No permit issued by City of Roseville for bridges, dams, utility crossings, excavations, levees, dikes, pipe, fills or other structures or facilities so designed as to obstruct or divert flood waters shall be effective until the expiration of ninety (90) days after such permit has been mailed to the Board for approval. Such submittal to Board will be accomplished by proper environmental documentation and by such supporting data as necessary to permit proper appraisal of the application. If Board takes no action on the permit draft within ninety (90) days, the permit shall be deemed approved*.

In 2007, the State Reclamation Board was restructured and renamed the Central Valley Flood Protection Board (CVFPB). As such, the CVFPB maintains the same authority and rights afforded to the State Reclamation Board under the 1976 MOU. Therefore the District's understanding that an agreement exists that allows the CVFPB to comment on City Projects prior to permit issuance is correct. In fact, more recently the CVFPB and City have agreed that the Board take the lead role in the review and processing of "Floodway District Encroachment Permits" (an MOU term) for City Projects (i.e., those proposed by the City of Roseville – as opposed to private development projects) and it is expected that the CVFPB would similarly process said permits for the proposed project as well.

Per the California Water Code and California Code of Regulations Title 23 (Title 23), the CVFPB has permit authority for the components of the Dry Creek Greenway East Trail Project within the floodplain. The permit requirements of Title 23 are in addition to the provisions of the above described MOU. The CVFPB's role as a permitting agency, and therefore a Responsible Agency under CEQA, is recognized in Section 3.4.1 of the EIR.

Subject:	Dry Creek Greenway East Multi-Use Trail Draft EIR Comments
Date:	Thursday, May 31, 2018 4:05:04 PM
Attachments:	3_Mitigation_Measures_CEQA_NativeAmericanMonitors.docx

Hello Mark,

Thank you for your recent phone call for this project. We did look over the EIR and had concerns with respect to Tribal Monitoring and with respect to Mitigation Measure 4.4-2 (similar to the concerns that we had sent for the same mitigation measure for the Community Solar Project on 5/17/2018).

While the EIR did identify that UAIC had requested tribal monitoring, it did not include a tribal monitoring mitigation measure. I have attached our standard Native American monitoring mitigation measure. In our correspondence with ECORPS, we had requested tribal monitors at the following three sensitive locations (P-31-194 , P-31-32, and the confluence of Linda Creek & Cirby Creek). I would be happy to prepare a map that depicts the boundaries for these three areas where we are requesting tribal monitoring.

5-1

Is it possible to revise the Native American Burials mitigation measure so that it follows the language of the State Law more closely, and does not incorrectly give the archaeologist authority that the State Law placed with the MLD? Please see the proposed changes below:

- Mitigation Measures Mitigation Measure 4.4-2: Stop work if human remains are discovered. This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A

  If human remains are discovered during any construction activities, potentially damaging grounddisturbing activities in the area of the remains shall be halted immediately, and the project applicant shall notify the Placer County coroner and the NAHC immediately, according to Section 5097.98 of the State Public Resources Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined by the NAHC to be Native American, the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains. The City shall also retain a professional archaeologist with Native American burial experience to assist the City of Roseville and the MLD with any management steps prescribed in California Health and Safety Code Section 7050.5 and California PRC Section 5097.98. ~~conduct a field investigation of the specific site and consult with the MLD, if any, identified by the NAHC~~. Following the coroner's and NAHC's findings, ~~the archaeologist, and~~ the NAHC-designated MLD shall determine the ultimate treatment and disposition of the remains and take appropriate steps to ensure that additional human interments are not disturbed. The responsibilities for acting upon notification of a discovery of Native American human remains are identified in California Public Resources Code Section 5097.94.

5-2

-

The EIR also states that implementation of mitigation measure 4.4-2 would reduce impacts to a less-than-significant level. It is UAIC's belief that disturbances to Native American human remains can never be reduced to a less-than-significant level.

Thank you for your follow-up, please let me know if these requested changes to the mitigation measures will be implemented, and if you would like a map depicting the boundaries for the three culturally sensitive areas?

5-3

Sincerely,
Melodi McAdams
Cultural Resources Supervisor
Tribal Historic Preservation Department
United Auburn Indian Community of the Auburn Rancheria
10720 Indian Hill Road
Auburn, CA 95603

Nothing in this e-mail is intended to constitute an electronic signature for purposes of the Electronic Signatures in Global and National Commerce Act (E-Sign Act), 15, U.S.C. §§ 7001 to 7006 or the Uniform Electronic Transactions Act of any state or the federal government unless a specific statement to the contrary is included in this e-mail.

Native American Monitoring Mitigation Measure

To minimize the potential for destruction of or damage to existing or previously undiscovered archaeological and Cultural resources and to identify any such resources at the earliest possible time during project-related earthmoving activities, THE PROJECT PROPONENT and its construction contractor(s) will implement the following measures:

1. Paid Native American Monitors from culturally affiliated Native American Tribes will be invited to monitor the vegetation grubbing, stripping, grading, or other ground-disturbing activities in or near cultural sites to determine the presence or absence of any cultural resources. Native American Representatives from cultural affiliated Native American Tribes act as a representative of their Tribal government and shall be consulted before any cultural studies or ground-disturbing activities begin.

2. Native American Representatives and Native American Monitors have the authority to identify sites or objects of significance to Native Americans and to request that work be stopped, diverted, or slowed if such sites or objects are identified within the direct impact area; however, only a Native American Representative can recommend appropriate treatment of such sites or objects.

5-4

Letter 5 Response

United Auburn Indian Community of the Auburn Rancheria
Melodi McAdams, Cultural Resources Supervisor
May 31, 2018

5-1 The comment states that United Auburn Indian Community of the Auburn Rancheria (UAIC) has requested tribal monitoring and has expressed concerns regarding sites P-31-194, P-31-32, and the confluence of Linda Creek and Cirby Creek. Previous communication with UAIC addressed concerns related to these locations.

Because of concerns related to these sites and to confirm the level of cultural sensitivity for the project area, an Extended Phase 1 (XP1), which consists of subsurface auger testing, was conducted on locations of the project where deep excavation would occur. Field work for the XP1 was performed by qualified archaeologists in March 2016 and the City of Roseville arranged for UAIC to monitor this field work. No cultural material was found in any of the 53 auger holes. Please see page 4.4-6 of the Draft EIR for additional discussion.

As stated in an email from ECORP Consulting to Melodi McAdams, Cultural Resources Supervisor for UAIC, dated November 23, 2016, the site record and tribal oral history had different boundaries for site P-31-194; UAIC expressed a need for a site visit at this location. As detailed in the XP1 Report that was emailed to UAIC on September 30, 2016, one of the locations tested was in the vicinity of P-31-194; no cultural materials were found. Testing was monitored by a tribal monitor assigned by UAIC who inspected both sides of the creek on the same day.

The email also addressed site P-31-32, stating that after reviewing the records, ECORP believes UAIC was referring to P-31-332, which was recorded in 1975 on the terrace above Linda Creek; this site is not located within the project site. Additionally, based on site records/notes, field reconnaissance conducted in 1983 suggested that the site was likely located under the homes built in the 1970s and destroyed by the construction of the neighborhood on the terrace.

Concerning the confluence of Linda Creek and Cirby Creek, the November 2016 email states that the North Central Information Center had no record of a site at that location, though the UAIC database did. Project components are located south of the confluence of these two creeks. The entire project area was subjected to an intensive pedestrian survey in July 2014; no cultural resources were identified in this location. At the confluence of Linda Creek and Cirby Creek four auger samples were taken; no cultural materials were found.

Because the XP1 determined that the level of sensitivity for the project site is low because UAIC already monitored the subsurface archaeological testing, and the concerns related to the three sites have been adequately addressed (and communicated to UAIC in November 2016), construction monitoring is not warranted. Nevertheless, Mitigation Measure 4.4-1, “Proper handling of archaeological resources,” includes the notification of UAIC seven days before beginning earthwork or other soil disturbance activities. As part of this notification, a UAIC tribal representative shall be invited to inspect the project site, including any soil piles, trenches, or other disturbed areas, within the first five days of groundbreaking activity. Please see Draft EIR page 4.4-13 for additional information.

5-2 The comment requests a revision to Mitigation Measure 4.4-2, "Stop work if human remains are discovered." The text on page 4.4-15 of the Draft EIR is revised as follows: (deleted text shown in strikeout and new text shown in double underline):

> If human remains are discovered during any construction activities, potentially damaging ground-disturbing activities in the area of the remains shall be halted immediately, and the project applicant shall notify the Placer County coroner and the NAHC immediately, according to Section 5097.98 of the State Public Resources Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined by the NAHC to be Native American, the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains. The City shall also retain a professional archaeologist with Native American burial experience to assist the City of Roseville, the landowner, and the MLD with any management steps prescribed in California Health and Safety Code Section 7050.5 and California PRC Section 5097.98 ~~conduct a field investigation of the specific site and consult with the MLD, if any, identified by the NAHC~~. Following the coroner's and NAHC's findings, ~~the archaeologist, and~~ the NAHC-designated MLD and the landowner shall determine the ultimate treatment and disposition of the remains and take appropriate steps to ensure that additional human interments are not disturbed. The responsibilities for acting upon notification of a discovery of Native American human remains are identified in California Public Resources Code Section 5097.94.

5-3 The comment expresses the opinion that UAIC does not believe that disturbances to Native American human remains can be mitigated to a less-than-significant level.

As stated on page 4.4-14 of the Draft EIR, no evidence suggests that any prehistoric or historic-era marked or un-marked human interments are present within or in the immediate vicinity of the project site. As discussed above in Response to Comment 5-1 the XP1 was conducted to gain a better understanding for the potential sensitivity of the area; no cultural material was revealed, further lowering the likelihood of discovery of human remains. Additionally, Mitigation Measure 4.4-2 requires that any remains found are treated appropriately, in accordance with pertinent laws and regulations, which results in a less-than-significant impact.

5-4 The comment presents a suggested mitigation measure for Native American construction monitoring.

Please see Response to Comment 5-1.

Letter 6

From: [redacted]
To: Morse, Mark
Subject: East - Dry Creek Greenway Project
Date: Tuesday, April 17, 2018 1:51:09 PM

Written comments regarding this project:

I live in the Cirby Hills Condo subdivision. We are SWAMPED by "projects" that the city or county has approved that are negatively affecting our area.

First: the expansion of the Placer County Mental Health facility. Allowing the Yolo Continium of Care to locate in that building has left us with zero street parking, huge traffic backups, increased crime and pollution- everything from used needles, medications, medical waste, and medical records dumped into the fields.

Second: the Kaiser expansion. What little parking that is not clogging our streets by the mental health facility, has now been taken over by Kaiser employees. I challenge anyone from Roseville City to PLEASE come view the state of Cirby Hills Drive. Our school children are dumped off IN TRAFFIC because there are no areas left for a school bus stop.

6-1

Third: Homelessness is becoming a huge problem in the area. The homeless camp out on the banks of dry creek directly behind the condos to the north of us. They camp out under the overpass of Cirby to the east of us. They are all over Cirby businesses. Some of these people are very mentally ill. I encounter them several times a week while taking my dogs out for walks.

Why do we need to provide them with an unsupervised highway through Roseville? Crime, homelessness, and traffic issues need to be addressed before we spend more money on glorified bike trails, that are really just avenues for the homeless to travel around the city- hidden from view.

6-2

Stacy Jastram

Letter 6 Response	**Stacy Jastram** April 17, 2018

6-1 The comment lists recent projects that the City or county have approved, including the expansion of the Placer County Mental Health Facility and the Kaiser expansion.

The comment refers to increasing traffic related to the cited projects. The comment does not address the proposed project or the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

6-2 The comments states that homelessness is becoming a huge problem in the area and states that crime, homelessness, and traffic issues need to be addressed before money is spent on bike trails.

Please see Master Response 1, which addresses this issue.

Letter 7

From: Donna Wilson
To: Dour, Mike
Subject: Re: Update on Bike Trail
Date: Friday, April 20, 2018 1:26:21 PM

Mike,

Thank you for responding to my email so quickly with the information requested and the references. As discussed much before and during the meetings, the two feet is not adequate, as this ends up being an eroded gutter for the bike trail. It is not maintained. This is **a safety hazard and liability for the City**, especially in light of the fact that this has been pointed out several times and will be again. The City needs to commit to that. 7-1

Thanks again,

Donna

7-1 The comment states that the two feet [of proposed shoulder] is not adequate, and states it ends up being an eroded gutter for the bike trail and is a safety hazard and liability for the City.

As noted in the Project Description in Chapter 3 of the Draft EIR (see Draft EIR Exhibits 3-9 and 3-10), a typical cross- section for the proposed trail would consist of a 10-foot wide paved trail with two-foot shoulders on each side. The proposed trail may also be widened in areas where additional shoulder or trail width is desired to enhance user comfort and safety. In these instances, the shoulder width may be increased to between 5 and 10 feet on one side of the trail. For example, the project proposes a 5-foot wide shoulder in the segment running parallel to Mallard Lane, where the trail and the existing path are on the same alignment and where space allows. In the area west of Mallard Lane, where sufficient space exists, an 8- to 10-foot wide shoulder is proposed. The shoulders would be composed of aggregate base and decomposed granite. The City would be responsible for maintaining the integrity of the path and shoulders. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

Letter 8

From: Ron Evans
To: Morse, Mark
Subject: Roseville Dry Creek Greenway Planning and Feasibility study
Date: Thursday, May 10, 2018 2:37:31 PM

Dear Mark

I live at [redacted]. As proposed the greenway will go through the back of our homes along Linda Creek. When this plan was developed Roseville owned the property on which my and my neighbors houses occupy. Since that time Tim Lewis purchased and developed homes along the Linda Creek preserve – at a substantial lot premium for some given that there was a preserve behind our homes. We were unaware of the plans when we purchased our homes. I appreciate the need for the greenway but question why the greenway needs to be on the side of the creek that borders our residential property. Wouldn't it be better on the other side of the creek where our homes would not be so affected? 8-1

I understand its late in the game but if this change were made I'm sure the residents here would be appreciative.

Thank you.

Ron Evans
[redacted]

Letter 8 Response

Ron Evans
May 10, 2018

8-1 The comment questions why the trail needs to be on the side of the creek that borders new residential property.

The 2010 Dry Creek Greenway Trail Planning and Feasibility Study (City of Roseville 2010) identified a key issue along this portion of the potential alignment related to steep slopes along the southerly leg of Old Auburn Road along what was identified in the Study as "Alignment 12-2," which would have crossed under Old Auburn Road using the west span of the existing Old Auburn Road Bridge over Linda Creek. In addition, the Biological Resources Study Report prepared for the Planning and Feasibility Study identified a mitigation/restoration site on the west side of the creek. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

Letter 9

From: Scott Larson
To: Morse, Mark
Subject: East- Dry Creek Greenway Project
Date: Thursday, May 10, 2018 7:29:03 AM

Dear Mr. Morse:

I support the project as proposed.

My property borders the project Adamson Court. I use the existing trail daily to walk my dogs, run/walk to Maidu Park, and look forward to using the new trail to ride my bike to downtown and access the Miner's Ravine trail system. I believe the Miners Revise trail system is a good example of the potential for Dry Creek. The proposed Dry Creek system will improve public safety access, provide recreation for bikes, runners, walkers, and quite retreats for nature observation in a busy city. 9-1

Sincerely
Scott Larson
[redacted]
Roseville

Letter 9 Response	**Scott Larson** May 10, 2018

9-1 The comment expresses support for the project as proposed.

The comment expresses an opinion that the trail will improve public safety access, provide recreation for bikers, runners, walkers, and quiet retreats for natures observation. The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration.

Letter 10

From: mary whitney
To: Morse, Mark
Subject: Dry Creek Greenway East Project
Date: Monday, May 14, 2018 6:54:57 PM

Dear Mr. Morse:

I have lived at [redacted] since 1978. My property backs up to the Linda Creek flood plain. I have followed the development of this project since at least 1997. I expressed my opinion at town meetings, by phone calls to the various agencies involved, and at community meetings regarding the project. Once again, I am against the portion of project that is in the flood plain between Rocky Ridge and Old Auburn Rd. 10-1

When I moved to Roseville the creek was dry in the summer. Now it flows year around due to run-off from irrigation.

This area is a unique riparian habitat, a special place within our city limits. Over the years I've watched the bank erode. I've watched heritage oaks fall into the creek, then be removed. The creek is now close to encroaching on my property. If/when the creek fells the oaks on my property, huge chunks of my land will go with them. This leads to property value issues. It threatens my peace of mind. 10-2

A paved path along the creek will inhibit water absorption. This will send more water rushing along the banks and cause further erosion. The construction itself will disturb the banks.

I'm concerned about unknown persons passing so close to my property. I've already had one residential burglary at my home. I don't want another. 10-3

At the very least, locate the path on the south side of the bypass channel, as far away from the creek as possible. 10-4

Sincerely,

Mary M Whitney
[redacted]

[redacted]

Letter 10 Response

Mary Whitney
May 14, 2018

10-1 The comment expresses opposition to the portion of the project that is in the floodplain between Rocky Ridge and Old Auburn Road.

The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA. The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration. Please see response to comment 10-2.

10-2 The comment discusses Linda Creek and states that the creek used to be dry in the summer, the area is a unique riparian habitat, and that the bank has eroded over the years. The comment states that a paved path along the creek will inhibit water absorption causing further erosion and that construction will disturb the banks.

The potential impact on riparian habitat is discussed in Impact 4.3-1 (Disturbance and loss of waters of the United States, waters of the state and riparian habitat) of the Draft EIR. The EIR addresses existing stream conditions and erosion extensively in Chapter 4.5, “Geology and Soils,” and Chapter 4.8, “Hydrology and Water Quality.” Potential effects related to erosion area addressed in Impacts 4.5-2, 4.8-1, and 4.8-2. As discussed under Impact 4.5-2, the Dry Creek Greenway East Trail project would have a less-than-significant impact on soil erosion. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

10-3 The comment expresses concern about unknown persons passing close to the commenter’s property.

Please see Master Response 1.

10-4 The comment states a preference for the location of the path on the south side of the bypass channel, as far away from the creek as possible.

The comments express an opinion on the trail alignment and does not address the adequacy of the Draft EIR environmental analysis. The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration. For information purposes in this document, the path is proposed at the edge of and on the south side of the bypass channel.

Letter 11

From: William Connell
To: Morse, Mark
Cc: City Council Mail; Mrs. Kathy Connell
Subject: Bike Path
Date: Friday, May 25, 2018 10:38:20 AM

Mark Morse, Environmental Coordinator
Roseville City Manager's Office
311 Vernon Street
Roseville, CA. 95678

Dear Mr. Morse,

The paragraphs below are a letter, from April of 2013, my wife and I had written to the Roseville City Council. Our opinions have not changed, in fact they have solidified after yet another few close calls with speeding bikers. Additionally after reviewing the recent literature on the project we're quite concerned about the loss of habitat, especially the old oak trees. They are impossible to replace. In any event see our prior letter to the City Council and thank you for your consideration. 11-1

The proposed bike trail is a major safety hazard to the residents of both Meadow Oaks and Sierra Gardens. Both of our neighborhoods share the open space along the Linda Creek Salmon Habitat. We all enjoy the area, walking, running, playing soccer, or walking our dogs. As residents, we are people in all phases of life: mothers with strollers, children walking to school and back, and senior citizens getting exercise from a leisurely walk. If the proposed bike trail is built all of this will change.

This new extended bike trail will put everyone on the outlook for bicyclists speeding down the trail and hitting one of us. When this happens, and it will, serious injuries will occur. Many of us have already experienced "close calls" by speeding and rude road hog bike riders who we narrowly miss colliding with, forcing us off the trail. They often times shout profanity at us for being in their way. THIS IS A FACT! 11-2

It doesn't take much to imagine what will happen when these same bicyclists, multiplied a hundred fold, have a "presumed" dedicated path right through our open space. The City of Roseville believes unsightly signs will prevent any injuries. I dare say they are wrong. Who can read a sign traveling at 30 MPH?

Please prevent the extension of this path. Not only is it a safety hazard, it ruins the relaxed and beautiful environment of our Linda Creek open space. Ours is not the same environment as other bike trails in Roseville. Our neighborhoods are older were established when only children rode bicycles.

The bike trail will demolish the charm and the beauty of an established Roseville neighborhood. It will destroy Majestic Oak Trees, the Wetlands and Riparian areas. The old oaks are impossible to replace. The Wetlands have served their purpose well by draining the excess rain fall into its sponge-like essence. Once there is pavement above the Wetlands they no longer function. The Riparian areas are loaded with all sorts of wildlife, including many protected migratory species. 11-3

Please protect the environment! Save our trees! Save our Wetlands!

Please do not unleash hordes of entitled arrogant belligerent bicyclists into our neighborhoods!

Thank You,
William and Kathy Connell

Letter 11 Response

William and Kathy Connell
May 25, 2018

11-1 The comment addresses potential loss of oak trees and associated habitat.

The loss of oak trees is addressed in Impact 4.3-8 (Disturbance of City protected trees, Valley Oak Woodland, and other Sensitive Vegetation Alliances and Associations) in the Draft EIR. The potential impact on riparian habitat is discussed in Impact 4.3-1 (Disturbance and loss of waters of the United States, waters of the state and riparian habitat), Impact 4.3-4 (Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors), and Impact 4.3-5 (Disturbances to special-status song birds). With the implementation of mitigation measures identified in the Draft EIR, these impacts would be reduced to less-than-significant levels.

11-2 The comment discusses potential safety hazards to trail users due to speeding bicyclists. While safety related to trail user conflicts is an important issue for consideration by the City when evaluating the merits of the proposed project, the topic is not within the purview of CEQA analysis. This comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration.

11-3 The comment addresses oak trees, wetlands, and riparian areas.

See response to comment 11-1.

Regarding: Public Review and Comments on Dry Creek Greenway East Trail Project DRAFT EIR

Dear Mr Morse;

We have reviewed the EIR and have the following concerns regarding the stretch of the bikepath and multi-use trail that runs behind twelve homes on West Colonial Parkway (Index Map Section 7):

Pages 3-31 & 4.1-11; West Colonial Parkway east of Linda Creek. The staging area will obliterate a large portion of the frequently used decomposed granite looped walking trail. We urge the city to have the existing decomposed granite trails restored throughout the open area, including the north most section that was washed out and raked back, uncompacted, several years ago and specifically the staging area be restored and kept star-thistle free as it is now. 12-1

Page 4.1-9, Last ¶ Regarding Impact Analysis; In addition to the locations listed it is imperative to give design consideration to screening the trail from the existing twelve homes on West Colonial Parkway.... Exhibit 4.3-2g clearly shows the narrow setbacks from residences along West Colonial Parkway. The EIR must address current ground level and proposed finish grade elevation in regard to the eye level of adult cyclists vs the top of the Corp of Engineers floodwall that runs the length of the stretch of the bikepath and multi-use trail that runs behind twelve homes on West Colonial Parkway. 12-2

Page 4.1-12 states "Once complete, the amount of visual change because of project implementation would be relatively low" **We contest this statement as it relates to stretch behind our homes.** "The trail has been designed in consideration of visual resources, including: setbacks from native oaks, riparian areas, and wetlands; topography; setbacks from residences; and compliance with adopted design standards. Where there is an 12-3

Page 1 of 3

existing trail, the type of use on the project site would remain the same," **The existing trail is a minimally used foot trodden path.** "although the pathway may appear more prominent" **That is an understatement as it relates to stretch behind our homes.**

Page 4.1-14 Use Related Impact 4.1-1 Aesthetics Conclusion states "Therefore, although the visual quality of the site would be temporarily degraded during construction, implementation of the Dry Creek Gateway East Trail would have a less-than-significant impact on the visual character or quality of the site and its surroundings" **We vigorously disagree that the impact to our section could be less than significant aesthetic impact to the homes on West Colonial that back up to Linda Creek. We will strongly contest for mitigation of the primary impact of having strangers peer into our backyards and living spaces as they pass by. In addition we request a City serviced doggie waste station at both ends of the constricted section behind the homes on West Colonial Parkway and a dog waste litter pick up program be implemented.**

12-3 cont

Impact 4.10-2 Long Term Increases in Use Related Noise; Page 4.10-11 " The proposed project would introduce new pedestrian and bicycle activities on a new paved multi-use trail. These are non-motorized activities that would not result in a substantial increase in noise levels above ambient noise conditions." **We strongly disagree; cyclists converse at significantly higher levels than people just walking and talking.** "The sound of people talking while using the trail could be audible at nearby residential uses or other sensitive receptors; however, such activities would be consistent with the level of noise typically experienced in residential neighborhoods where children may be playing or where neighbors may converse with one another."

12-4

The proposed project will result in a significant noise impact to the homes along West Colonial Parkway because it will definitely result in a *substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.* The trail will have significant impact to the homes on West Colonial that back up to Linda Creek as a result of the noise of pedestrians' barking dogs and cyclists yelling to to be heard by each other which will alert our dogs to natural protective barking.

Appendix B Friends of Linda Creek say "support work could be done to help prevent old oaks from falling into the creek." We are in agreement that the oaks between the creek and the new trail need to be saved, by whatever means, from falling into the creek and we make reference to Sheet 4.1-11: "In fact, as described in Chapter 3, Project Description, bank stabilization elements would be constructed in this vicinity because the bank of the creek adjacent to these trees is currently eroding." Therefore, the project could

12-5

3 Views of proximity of proposed project to residences

Oak trees leaning into creek.

Current eye level view.

View of proximity of creek to proposed project.

have a beneficial effect on the scenic value of these trees because the gabion baskets could serve to protect the trees in the future. 12-5 cont

In conclusion we feel that that the proposed project will result in a significant aesthetic and noise impact to the homes along West Colonial Parkway and that the EIR Report does not adequately consider the unique considerations of West Colonial Parkway community due to the close proximity to Linda Creek. 12-6

Sincerely;

Rich & Andrea Walker

Letter 12 Response

Rick and Andrea Walker (+ 12 additional signers)
May 25, 2018 (May 29, 2018)

12-1 The comment states that the temporary construction staging area to be located along West Colonial Parkway, as described on page 3-31 and depicted on Exhibit 3-11 of the Draft EIR, will destroy a large portion of an existing decomposed granite walking trail. The comment requests that when construction is complete, the City restore the trail through the open area, including the north-most section that was washed out and raked back, uncompacted, several years ago.

The comments have been forwarded to the City's Parks and Recreation Department to review the existing trails for any maintenance that is needed at this time. When this phase of the project is constructed, any existing decomposed granite trails affected by the project would be restored to the same or similar condition. Further, as identified under Impact 4.8-1, any disturbed areas, including the staging areas, would be revegetated with approved native seed mixes per the City of Roseville design standards. The native seed mixes would not include star thistle, and the use of native seeds to revegetate the area would discourage the growth of non-native plants. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

12-2 The comment expresses the opinion that the residences along West Colonial Parkway need to be added to the list of locations for consideration of screening the trail from existing residential and urban development.

It should be noted that Class 1 trails in Roseville are often built in neighborhoods with open fencing (such as wrought iron) and, therefore, it is not unusual for trail users to have views into private rear yards. While it is recognized that the proposed trail is closer to the property lines in this location than in some newer development areas where a minimum 10-foot setback is typically maintained, views would be mostly blocked by the solid floodwall with only partial views over the wall available to taller trail users and/or bicyclists. The comment addresses the proposed project and is not a comment on the adequacy of the EIR analysis. Loss of privacy or change in circumstances that may result in more viewers onto a private property is an important social consideration for the community and adjacent residents, but it is not an environmental issue within the purview of CEQA. The CEQA Guidelines state that economic and social changes resulting from a project shall not be treated as significant effects on the environment (section 15064(e)). Nonetheless, the fifth bullet on page 4.1-9 of the Draft EIR is revised as follows (new text shown in double underline):

> In addition, where appropriate, consideration would be given to screening the trail from existing residential and urban development, such as at the intersection of Sunrise Avenue south of Coloma Way, Oak Ridge Drive north of Rampart Drive, Rocky Ridge Drive north of Cirby Way, ~~and~~ Old Auburn Road north of South Cirby Way<u>, and West Colonial Parkway south of the decomposed granite loop to Old Auburn Road</u>.

It should be noted that any proposed physical modification to the existing floodwall, such as planting screening vegetation or adding a panel to the floodwall top to screen views from the proposed trail, would be subject to review and approval by FEMA consistent with the Code of Federal Regulations (44 CFR 59.1). Should FEMA

approve a "screening" modification to the existing floodwall, it could potentially include conditions that make implementation infeasible. For example, if "approval" would also trigger other substantial improvements (such as modifying structural elements "to comply with current code"), adding a screening element could be found infeasible.

12-3 The comment disagrees with the Draft EIR statement on page 4.1-12 related to the amount of visual change related to project implementation. The comment states that the project has not been designed in consideration of setbacks for the stretch of 12 homes along West Colonial parkway and that implementation of the proposed project would be a substantial change.

Setbacks were used as much as possible during project design, however, the topography of some portions of the trail does not allow for much separation between the trail and the property lines. In general, the most "visual" elements of the project (bridges and retaining walls) would be set back a bit from residences. Behind these particular houses on West Colonial, the project elements will be low profile, with no bridges or retaining walls being constructed.

With respect to the existing trail and type of use, the third sentence of the second paragraph on page 4.1-12 of the Draft EIR is revised as follows (new text shown in double underline):

> Where there is an existing paved trail, the type of use on the project site would remain the same, although the pathway may appear more prominent.

The comment also disagrees with the conclusion for Impact 4.1-1, that implementation of the Dry Creek Greenway East Trail would have a less-than-significant impact on the visual character or quality of the site and its surroundings. The comment expresses the opinion that mitigation is needed for the impact of having strangers peer into backyards and living spaces, resulting in loss of privacy. As discussed above in Response 12-2, while privacy is an important issue for consideration by the City when evaluating the merits of the proposed project, the topic is not within the purview of CEQA analysis. Therefore this comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration. Please also see Master Response 1.

Additionally, the comment requests a City-serviced doggie waste station at both ends of the constricted section behind the homes on West Colonial Parkway and that a dog-waste litter pick-up program be implemented. The City of Roseville has installed dog "waste stations" at key locations in parks and open space areas in the past. This comment is acknowledged and will be forwarded to the decision-makers for consideration and implementation as part of final design.

12-4 The comment expresses the opinion that cyclists converse at significantly higher levels than people just walking and talking, therefore the proposed project will result in a substantial increase in the existing ambient noise level.

Page 4.10-11 of Section 4.10, "Noise," of the Draft EIR acknowledges that sound of people talking while using the trail could be audible at nearby residential uses or other sensitive receptors; however, such activities would be consistent with the level of noise typically experienced in residential neighborhoods where children may be playing or where neighbors may converse with one another. A project must be considered against established thresholds to determine a level of significance, in this case, the related threshold on page 4.10-6 of the Draft EIR, states "a substantial

temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project." While cyclists may converse louder than people just walking and talking, this would not be substantially higher than typical residential neighborhood noise, therefore it is not a significant impact. Further, it should be noted that the existing flood wall located at the rear property line of West Colonial Parkway homes could also function as a sound wall to reduce rear yard trail user noise.

12-5 The comment states that the proposed project could have a beneficial effect on the scenic value of the trees near Rocky Ridge Drive because the gabion baskets could serve to protect the trees.

This comment expresses support for the project and does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

12-6 The comment expresses the opinion that the proposed project will result in significant aesthetic and noise impacts to the homes along West Colonial Parkway and that the EIR does not adequately consider the unique considerations of West Colonial Parkway community.

Please see Responses to Comments 12-1 through 12-4.

Attachments: Dec-19-1973-Res-73-122-PubNecessity.pdf; Meeting Minutes Feb 9 1967 B&W 200.pdf

This is possibly the largest Crime in Placer County. It is also Criminal since it has taken my families lives. I (John Zisk) was 9 years old and present at this Planning Commission Meeting Feb. 9, 1967 as shown below in the meeting Minutes. Also notice, Keith Sparks was the Roseville City Attorney present at this meeting giving my family approvals so we may build our home on our beautiful R1 buildable creek front property. After we used our trucking business and did 7 years of work, required by the City of Roseville... there was a resolution of necessity, as shown below, on Dec, 19,1973 for eminent domain to take most of my property. There was no plan, no purpose, no public necessity, no EIR, no feasibility study, no offer, no negotiations, no appraisal, no public meeting,.... All of this needs to be done prior to eminent domain. It has now been over 44 years. The city did not follow Due Process required by law or our constitution, and to the present date, still have not. There are dozens of other issues I would love to illustrate, however I do not have the time for this public comment time period. The city has recently put asphalt on my property that has nothing to do with the land they said they needed 44 years ago. This is another crime I need to illustrate. The City is not using the land they said they needed for the past 44 years. Here is a taste of how our local Gov. works. My family and I have maintained and held possession of all of this property our entire lives. It has been fenced, locked and posted my entire life. The City of Roseville has never owned Zisk land. Many council and managers have conceded to that fact and have told me so. In 1973 Keith Sparks (city attorney) was in extreme conflict when he Presided over the Zisk family in Superior Court 7 years after Keith was involved giving our approvals in 1967. Then after Superior court, Keith Sparks furthering his extreme conflict, Presides over the Zisk Family AGAIN in the Appellate Court when he was appointed to the court by Gov. Brown whom was Governor I believe 1976-81. These kinds of things are not supposed to occur in this country. The Roseville officials do not have enough integrity to object to their friends and co-workers being the Judge. Keith Sparks even authored the opinion and stated that the Zisk family did not apply for a permit to build their home until 1973, which is not true; because Keith Sparks was at the meeting in 1967 and my family was there getting this permit with Keith present. These are lies and the City of Roseville knows of these dirty activities. The citizens of this city need to know the truth. Gavin Newsom's father, Judge William Newsom was also the Judge. Sparks and Newsom are both buddies and I hear they live next to each other. This is all after the city require my family to invest millions into our property. In

13-3

1

Federal court, the city hires the Judges daughters law firm to represent the city of Roseville when her father is the Judge. Where can that happen in the United States of America? I keep asking the city simple questions and they refuse to answer. They state they answered them. That is not true. If they did then just give me a copy. I would like to explain to the people why all of this occurs. I know the answers. I now want the people to know before they go through what I have been through. Most of the previous upstream property people are walking on belongs to my family and is everything we own. We completed what the City of Roseville asked of us so we may build a home. We got approvals, however it has not yet happened. Also, the city if filling, and filling Dry Creek. What happened to ethics, morals, our local government, and our court system? Judges here who's wife was the Mayor of Roseville, presided as judge over my property in Connecticut. That is 3 times this local issue. I have only pointed out 2% of what has occurred. I also have tens of thousands of photos. And, thousands of other documents. Visit [redacted]

It all began at my home, [redacted] For over 40 years the City of Roseville never stepped foot on this property (my property, Zisk land). There never was a trail in the City of Roseville. The city did not even want the land adjoining/next to mine until about 3 decades later. My family and I have lived this torture for 51+ years. This said "trail" is still not complete, and is built on Non-Condemned property that me and my family have owned throughout my lifetime. The city is not using what they said they needed. More and more laws are broken every day. I want to know "why" my father did not get a vacation the last 32 years of his life, and the last 24 years for my mother. Please contact me at [redacted] and I will show you more including maps, videos, photos, Transcripts, meetings, etc..... In Court the City Experts stated my parcel of land has a total value of $225. I have told and shown thousands of residents. They all laugh. It is so ridiculous, they laugh. Anyone whom has walked the Miners Ravine Trail knows my property is worth more than two hundred twenty five dollars. This story takes an entire day to explain. Many people cry. Many city officials and employees have admitted to these facts.

13-3 cont.

Since this trail was placed on my property, I have been burglarized and vandalized over a dozen times. The trail goes right through my property next to my home. The city took out my fence. Residents should know what they are doing when they let the city get away with these crimes. There have been hundreds of crimes just at my property. All the trucking equipment is bashed in, cars are destroyed, theft, theft, theft, house windows busted.... Can anyone imagine how much crime will occur on another 4 mile section of trail. Most of the windows busted out of my home and all of my vehicles and all of my trucking equipment. These crimes have been committed numerous times; not just once. I spend each day picking up what the city allows people to destroy. Homeless camp under my home, light fires, Defecate everywhere, are violent, people shoot all fish and animal life in the area, spear fish, throw rocks and throw rocks at me, take all the fruit from my trees then break them off, steal from my garden, I do not talk to them but they threaten me, people urinate right in front of

2

me. They walk next to my home to defecate, have stolen most of my families belongings, motorcycle, $4000.00 lawn mower, disassembled my tractor, etc. etc. etc..... It would take an entire book of writing to illustrate all the crimes that this trail has created. There was never any plan to police it. 44 years ago? Police tell me they will not patrol and do not have the time unless it is an emergency. There are fires every other year. I have seen days on end of countless Drug Deals. I can show anyone the thousands of photos. There is so much that the police much of the time do not even respond. I would like for council, managers, employees, and residents to see what this trail has created. The city is responsible for what has taken place. At my home I grew up with quail, fox, coyotes, deer, muskrats, geese, peacocks, beavers, chickens (off leash dogs rip apart now), cats, swans, ducks, squires, some varmints, and a lot of other life. Most of this life is no longer present at my home due to people intentionally killing everything they see. Almost nothing but destruction. Council members state they want to preserve the creek and wildlife. These are politicians for you. This is so untrue, I just shake my head in disgust. Some residents do not understand, as council does not understand that animal life leaves when people walk through. People come to the creek with their CO2 guns and shoot all the fish. Police have told me it is ok that people Spear the fish (salmon, steelhead, trout, etc.) Please let me show you. [redacted]

13-3 cont.

My father has been illustrating extensive Fraud with water levels and water studies. I now want the people to view these maps and studies. I have collected this data for the past 50 years. It is impossible to go through what is inside this current EIR. The city is only following procedures now because they have not yet followed them from the past. The city of Roseville changes flood levels by illegally filling. Please let me show you.

13-4

The first thing the city did was to remove endangered species of plants. The city did not even tell me they were bulldozing through my property. They tore out Elderberry trees (endangered Elderberry Beatles) exactly where the asphalt was set. They pushed the dirt into the creek filling more and more. I would like for the people to learn about the deception and lies portrayed. Grandfathered oak trees are ripped out. They blocked the roads to the back of my property. I have saved a homeless persons life that fell into hi-water when he was drunk and urinating in the creek, and actually saved all of dry creek from fire also (many times). This is what I do most every day. There are so many camps that people are frightened to use the trail. Eight year old children sometimes play after dark in the water and in the brush with the after dark bad people around. I walk them home to their parents. This subject will also take a book of writing also.

13-5

The city has removed the water banks protecting my home. City officials refuse to visit me to see what they have done. The city has illegally filled thousands and thousands of yards of fill into the middle of dry creek. It was strategically place is certain section of the creek to erode and block the channel to lower the flooding in downtown Roseville. The city used outdated 1956 maps for flood studies values. FEMA and Army Corp. of Engineers and other agencies

need to visit to see this. Tree and creek flood Maintenance only occurred sometimes until my father died. Now the city will not speak with me and vegetation is out of control. The city intentionally blocked and dammed the water at my property with thousands of yards of illegal fill/rocks to lower the flood elevations of downtown Roseville and to hide the fraudulent flood studies of the past. Please let me illustrate how much danger the residents are in. I have more photos of flooding and can illustrate where and how much water goes in each part of Roseville. There needs to be a Federal Investigation. Please help me inform Congress and federal agencies. I will show you these studies and maps. I can only imagine the number of schemes the city is planning on a new 4.25 mile section.

This land is beautiful because my father and I made it that way. We did it for a home. On a beautiful day or sometimes parts of a weekend people see the beauty. I want citizens to see what I am living the other 99% of the time they don't. I also want people to see the History of my property, from the railroad tracks, to water, to business, to location, to historic monuments, and much more.... I am trying to put some closure to this. The city is destroying this land, my home, my belongings, my business, my family, my life, and now my children's lives. It is mind blowing what the council and some officials have told me. Please demand the city answer my questions. Large law firms tell me I am right and the city is wrong. They all want $1,000,000.00 to start another law suit. I will not live that long.

13-5 cont.

Now this issue is being complicated by the East – Bike Trail.

I own about 1500 feet of Dry Creek. The only parcel of land the city ever wanted is my 3.72 acre parcel located in the "Heart" of Roseville that just happened to have held the Water and Electric Franchise to the City of Roseville. It's all about WATER. Not a trail.

I love bike riding. I love trails. I love all the people whom have walked the trails. I care for the homeless. I love all animals. Most all City police and employees are great. There is a proper way to do a trail system, and it is not the way the City of Roseville has done it. I have many ideas and suggestions. Please help.

13-6

Please remember, this is only 3 percent of what is occurring. It is not what the city tells you; it is what they do not tell you. Omission is the same as lying.

Please require the City of Roseville to clean up their mess before they start another one.

John Zisk

[redacted]

1967 My family and I got a use permit, grading permit, fish and game permit, purchased a dragline to dredge the creek doubling the flow capacity, and for the next 7 years completed what the city requested we do.

RESOLUTION NO. 73-122

RESOLUTION OF PUBLIC NECESSITY AND CONVENIENCE FOR CONDEMNATION OF REAL PROPERTY FOR PUBLIC PARK AND BICYCLE PATH PURPOSES

BE IT RESOLVED that the City Council of the City of Roseville, State of California, does hereby find and determine that the public interest and necessity require the acquisition of the fee simple title in and to the property hereinafter described for a public use; namely, for public park and bicycle path purposes, and for such other public uses as may be authorized by law. That the said property is necessary for such public use and purpose and is a use authorized by law, and that such proposed public improvement and use are located in a manner which will be most compatible with the greatest public good and the least private injury; and

BE IT FURTHER RESOLVED that the City Attorney of the City of Roseville is hereby authorized and directed to institute eminent domain proceedings in the Superior Court of the State of California, for the County of Placer, for the purpose of acquiring the fee simple title in and to the said property, as more particularly described in Exhibit "A", attached hereto and made a part hereof, for said public use.

The foregoing resolution was adopted by a 4/5th vote of the City Council of the City of Roseville, State of California, this 19th day of December, 1973, as indicated below on roll call:

ROSEVILLE PLANNING COMMISSION MEETING MINUTES
February 9. 1967

A regular meeting of the Roseville Planning Commission was held at 8:00 P.M. in the Council Chambers of the City Hall with Chairman Bert Zerbe presiding on February 9, 1967.

ROLL CALL: Members Present: Victor Schulman, George Campbell, Elmer Nevis, John Zannon, Bert Zerbe.

Members Absent: Dr. P. Dugan. D. E. Vittetoe.

Advisory: P. Hollick, City Planner; Keith Sparks, Asst. City Attorney. Staff: Elsie Schimpf, Recording Secretary.

Audience: Mrs. G. Campbell, V. Harrigan, J. Woodworth, G. Chilton, Mr. & Mrs. Bill Zisk & sons, N. Nichols, B. Golgoski, Miles Morris.

FILED
FEB 1967
CITY OF ROSEVILLE

MINUTES.
Motion by Zannon, seconded by Campbell, that minutes of January 26, 1967 be approved as mailed out. Motion carried-unanimously.

Mr. Zerbe brought up that since Mr. Chilton's resignation there is no official Secretary for the Commission. Motion by Nevis, seconded by Schulman, that Mr. Zannon be nominated as Secretary and that nominations be closed. Motion carried-unanimously and Mr. Zannon was elected as Secretary.

CORRESPONDENCE AND OTHER ACTIONS:
Information on service station criteria was submitted to Commission with agenda for their information.

Letter from Hospital Planning Council was submitted by Planner on hospital facilities and will be studied by Commissioners and discussed at next meeting.

USE PERMIT (CONTINUED), EASTWOOD PARK REALTY:
Held over pending removal of sign on freeway. Action on the sign at the southwest corner of Coloma Way and Sunrise Avenue has been held over for the last two meetings pending the removal of the tract advertising sign deteriorating along Interstate 80 at the lower end of the subdivision. This sign has been removed by Eastwood Park Realty and, therefore, the use permit for the new sign at Coloma Way and Sunrise Avenue can be granted, as indicated earlier by the Commission.
Motion by Campbell, seconded by Zannon, that use permit for new sign as per plan submitted be approved at Coloma Way and Sunrise Avenue for Eastwood Park Realty for one year. Motion carried-unanimously.
Mr. Zerbe asked that since plan shows lighting would this still be installed and Mr. Harrigan advised there is no place to get electricity from at present but this would be considered later when such is available.

FLOOD PLAIN REGULATIONS:
Discussion and recommendation if proposed ordinance is available. It was the Planning Commission's indication at the meeting of January 26th with the Park & Recreation Commission, that we review the proposed flood plain regulation ordinance and make our recommendations to the Council at this meeting of February 9th. The Director of Public Works has met with the City Attorney and discussed the proposed ordinance. However, some changes were suggested by the City Attorney and he is now in the process of drawing up a revised ordinance, which has not been received by this office as of the date of this agenda. If it is available by the 6th or 7th from the Attorney's office, I will distribute it to you immediately so that we can still possibly take action on the 9th. However, if we don't receive it in time for review for the meeting of the 9th, I suggest then that we hold it over until an opportunity for review can be had. In the meantime, I suggest that if any of you still have questions that you contact Mr. Atteberry's office and discuss with him any problems.
Since ordinance was not ready this matter was held over until it is available. Public Works Department has finished flood plain maps and they are available in the Engineering office.

MATTERS NOT ON THE AGENDA:

Members Absent: Dr. P. Dugan, D. H. Vitteloe.

Advisory: P. Hollick, City Planner; Keith Sparks, Asst. City Attorney. Staff: Elsie Schimpf, Recording Secretary.

Audience: Mrs. G. Campbell, V. Harrigan, J. Woodworth, G. Chilton, Mr. & Mrs. Bill Zisk & sons, M. Nichols, B. Goligoski, Miles Morris.

FLOOD PLAIN REGULATIONS:

Discussion and recommendation if proposed ordinance is available. It was the Planning Commission's indication at the meeting of January 26th with the Park & Recreation Commission, that we review the proposed flood plain regulation ordinance and make our recommendations to the Council at this meeting of February 9th. The Director of Public Works has met with the City Attorney and discussed the proposed ordinance. However, some changes were suggested by the City Attorney and he is now in the process of drawing up a revised ordinance, which has not been received by this office as of the date of this agenda. If it is available by the 6th or 7th from the Attorney's office, I will distribute it to you immediately so that we can still possibly take action on the 9th. However, if we don't receive it in time for review for the meeting of the 9th, I suggest then that we hold it over until an opportunity for review can be had. In the meantime, I suggest that if any of you still have questions that you contact Mr. Atteberry's office and discuss with him any problems.

Since ordinance was not ready this matter was held over until it is available. Public Works Department has finished flood plain maps and they are available in the Engineering office.

MATTERS NOT ON THE AGENDA:

Mr. Miles Morris submitted a fence sketch plan in order to get approval to he can get a business license for an auto dismantling yard on Berry Street. The plan was studied and the matter of burning discussed with Mr. Morris. According to new ordinance businesses could burn for two years if permit was obtained to do so from City. Mr. Morris wants to get permission to open his business whether he is allowed to burn or not. Mr. Schulman discussed the plan submitted and Mr. Hollick advised the trouble with the zoning ordinance is that there is no criteria listed for construction of fences for this type of business. Mr. Zerbe gave oral report on requirements listed for fence put in on Berry Street.

2/9/67 Commission Minutes.

Motion by Schulman, seconded by Campbell, based on sketch plan submitted and on fence standards to be vertical board fence, new lumber, go clear around property, 30' gate, fence painted or stained, solid redwood fence, at least 6' high, no signs or auto parts to be hung on outside of fence-that fence be approved. Motion carried-unanimously.

The Zink use permit application had not been reviewed by Public Works Department as yet so will be considered at next meeting.

REPORTS FROM PLANNER:

Joint meeting February 16, 1967-streambeds and park system report from Consultant. As indicated at our last joint meeting, we were looking towards this date of the 16th to consider in more detail the work being done by EBS on the park system as well as the streambed details. It appears now that this date will be definite and, therefore, we will plan to meet February 16th with the Park & Recreation Commission at 8:00 P.M. in the Council Chambers.

Mr. Hollick pointed out that flood plain ordinance and map is for flood control and does not refer to how much land will be wanted for greenbelt although the City will want to use portion of flood plain in greenbelt system.

STATUS REPORT OF PROPOSED PLANNING PROJECTS AND ORDINANCES:

Sign Committee-progress report. Mr. Zannon gave a brief oral report advising the Committee had received ordinances from four other cities. He feels worst problem is with A-frame signs at service stations and used example of one at Douglas Blvd. and Keehner Avenue which blocks view of traffic. He believes Commission should check with Counsel on any proposed amendments to see that they do not exceed authority and provisions can be enforced. Mr. Nevis advised of the new signs up on business on Douglas Blvd. that are built back and no higher than buildings which look very nice. Mr. Hollick feels areas to be covered should be decided upon such as billboard signs, political signs, etc.

Mr. Zerbe brought up problem that ordinance is not enforced on illegal signs as the stations on Douglas Blvd. and Keehner Avenue has permission for only one free standing sign on use permit. Mr. Zannon feels Commission should take a trip around town at approximately 4:30 P.M. to observe signs and how they affect traffic. General discussion was held on sign provisions in other cities and how they are enforced. Mr. Zerbe asked if Service Station Assn. had been contacted on this matter as they will help to enforce rules. Mr. Hollick will go through ordinances received and pick out sections that may help Roseville and then after these have been studied by Commission they can be put into ordinance form for incorporation into law. Mr. Zerbe suggested setting up of front set-back with no parking or placement of any objects in such. Problem of S.P. property where sign locations are leased was discussed and signs along State freeway. There should be ordinance provisions for such signs so that when they leave State control the City can regulate them.

Mr. Zannon suggested the Sign Committee might appear at next Chamber of Commerce meeting and advise them of the Commission's intentions in this matter and also will contact Service Station Assn. and possibly sign construction people for their help. Mr. Houser, Secretary-Manager of Chamber will be invited to next sign ordinance discussion.

Wrecking Yard Committee-progress report. Mr. Schulman advised he found very little on standards for such businesses and submitted a written report in two parts for study of Commissioners and comment at next meeting. He stated report is not quite complete and he will have suggested list of trees and shrubs for landscaping and also sketches of types of fences, etc.

ADJOURNMENT:

Motion by Zannon, seconded by Schulman, that meeting be adjourned at 9:15 P.M. Motion carried-unanimously.

Meeting adjourned.

Respectfully submitted,

Elsie Schimpf

Elsie Schimpf,
Recording Secretary.

72

placement of any objects in such. Problem of S.P. property where sign locations are leased was discussed and signs along State freeway. There should be ordinance provisions for such signs so that when they leave State control the City can regulate them.

Mr. Zannon suggested the Sign Committee might appear at next Chamber of Commerce meeting and advise them of the Commission's intentions in this matter and also will contact Service Station Assn. and possibly sign construction people for their help. Mr. Hauser, Secretary-Manager of Chamber will be invited to next sign ordinance discussion.

Wrecking Yard Committee-progress report. Mr. Schulman advised he found very little on standards for such businesses and submitted a written report in two parts for study of Commissioners and comment at next meeting. He stated report is not quite complete and he will have suggested list of trees and shrubs for landscaping and also sketches of types of fences, etc.

ADJOURNMENT:

Motion by Zannon, seconded by Schulman, that meeting be adjourned at 9:15 P.M. Motion carried-unanimously.

Meeting adjourned.

Recording Secretary.

February 23, 1967

A joint Planning Commission-Park and Recreation Commission meeting was held at 6:15 P.M. in the Council Chambers of the City Hall on February 23, 1967 for the purpose of reviewing streambed policy and maps as developed by EBS Management Consultants, Inc.

Roll Call: Planning Commissioners Present: D.E. Vittetoe, Victor Schulman, George Campbell, John Zannon, Dr. P. Dugan, Bert Zerbe. Park & Recreation Commissioners: Fred Wittsche, A. Anderson, Ed Alexander, Frank Lopez, Robert Pullen, N. Fratis, Jr. Advisory Staff Present: P. Hollick, City Planner; E. Mahany, Director of Parks & Recreation; S. Markus, Park Supt.; M. Ucovich, Recreation Supervisor; Recording Secretary-Elsie Schimpf. Del Davis of EBS Management. Audience: J. Woodworth, Mr. & Mrs. Wm. Zisk & sons, N. Nichols, B. Goligoski.

Mr. Hollick introduced Mr. Davis of EBS Management to present further details on park system study and streambed plan. Mr. Davis first presented proposed overall objectives: 1. Meet the present and projected recreation needs of the community by providing those facilities which the local residents now, or in the near future, will deem desirable. 2. Accommodate and further stimulate a varied recreation program. 3. Stimulate diversity in the patterns of land use development. 4. Encourage private development which will complement and extend the public park and recreation system. 5. Encourage quality in development by setting outstanding examples.

Mr. Davis then gave a brief explanation for each objective and asked for suggestions or ideas on same. When approved the objectives will become the overall goals of the park system development. On map submitted Mr. Davis pointed out planned pedestrian, biking and equestrian pathways and scenic vista area and discussed impact adjacent communities would have on their use. He pointed out available recreation area under power lines in 500' wide swath. If landscape freeway system is planned this could possibly be tied into the greenbelt system, tieing together the natural areas which can be a problem. Development of parkway is dependent on Council action as this is land above the area provided for cars. Suggested for roadways are Sierra College Blvd., Cirby Way, Auburn-Folsom Road, Baseline Road which would make nice landscaped areas. Streambed areas were pointed out on map and distances between major areas. City streets to use to tie areas together will have to be checked.

To do study EBS broke total community into reasonable geographic areas and established population projections for same. They then studied each area and where it was felt population would have greatest growth and projected park needs for same. Then community areas were broken down into neighborhood park areas that children could get to without crossing a major street. Scenic overlook type locations were suggested for Sierra College Blvd. and possibility of public golf course in this area. Policy decisions will have to be made on whether to serve only Roseville area instead of Sacramento Metropolitan Area.

Mr. Davis advised of meeting between he, Mr. Hollick and Mr. Ucovich to correlate plan and they will have further meetings to develop final report and they will have definite recommendations in this report as to facilities needed, sizes and lengths of areas, etc. Mr. Schulman stated lines can be marked on map but developers may be building in crosspurposes to plan and City needs guide to establish restrictions to keep areas needed open. Mr. Davis stated plan will be submitted in detail so decision can be made as to definite areas desired for development and will specify crucial areas for immediate action. Mr. Zerbe asked how map ties into General Plan and with County planning and Mr. Davis advised it is drawn to fit into General Plan of City but County is not doing any planning at present. They are mostly interested in park areas to serve larger sections. There has been no planning to the

west. Mr. Hollick feels County is looking to City to provide impetus as they have a limited staff and are not in a position to do much in this line. They are in the process of developing a General Plan for County and City should watch recreation element to see if it conforms to our General Plan but he feels they will be well integrated. County has set up a County Coordinating Committee to deal with recreation and parks and this will create exchange of information in joint meetings. Mr. Zannon expressed his doubt at the projected 110,000 ultimate population. Mr. Davis explained that Roseville is in prime area to attract major industries which creates population growth.

Mr. Schulman stated it is not necessary to take whole plan at once but do crucial work before land is not available. Mr. Markus feels land should be acquired while cheap and still open, and mentioned possibility of revenue bonds to purchase land so that those using land at present would pay their share and those using it in the future would also pay their share. Mr. Davis brought up possible option method for land and Mr. Hollick advised such a plan is being devised for City and large land holders are very much interested in plan as it would help pay taxes. Mr. Pullen advised of AB1150 on setting up of ordinance requiring if lands are developed City can request certain portions to be set aside for park and recreation or require moneys to be deposited in lieu for service of people in certain area that is developed. Dr. Dugan asked if flood plain is to be integrated into greenbelt and Mr. Davis stated greenbelt is complimentary to flood plain but is not to be basis for lands required for greenbelt area. Mr. Vittetoe feels population influx depends on how City plans to handle same. Mr. Markus believes City should have a Master Plan for park and recreation system same as it has a General Plan and this way land can be acquired and be available when needed. Mr. Hollick pointed out one of troubles in past was individual subdivisions coming in and City not knowing how much land was going to be needed for parks. Mr. Davis advised final park and recreation plan will be keyed for priority. Mr. Sparks asked if there will be any estimate of how much land will need to be acquired by purchase and how much will be available by dedication. Mr. Davis stated they will give estimate of how much should be considered for acquisition and will list source of funds available for assistance in developing park system and natural areas.

Mr. Hollick advised that City has received patent for 40 acre parcel near Johnson Ranch for park purposes from government. Mr. Davis stated that when final plan is accepted layout and architectural design will be needed and discussed possible homeowner's association for maintenance and policing as used in other cities.

Meeting was adjourned at 7:55 P.M.

- - - - - - - - - - - - - -

A study session meeting of the Roseville Planning Commission was held at 8:00 P.M. in the Council Chambers of the City Hall on February 23, 1967 with Chairman Bert Zerbe presiding.

Present: Planning Commissioners: John Zannon, D.E. Vittetoe, Dr. P. Dugan, G. Campbell, V. Schulman, Bert Zerbe. Advisory: K. Sparks, P. Hollick; Del Davis, EBS Management. Staff-Elsie Schimpf. Audience: N. Nichols, M. Ucovich, D. Osborn, J. Woodworth, B. Goligoski, Mr. & Mrs. Wm. Zisk & sons, members of Service Station Assn.: Mr. Arcuri, Mr. Atwood, Mr. Harris, Mr. Sachs, Mr. Emerton, Mr. D. Harris and 3 other members.

MINUTES:
Motion by Zannon, seconded by Campbell, that minutes of 2/9/67 be approved as mailed out. Motion carried-unanimously.

CORRESPONDENCE AND OTHER ACTIONS:
Letter-Hospital Planning Council (continued from last meeting). This letter is from the Hospital Planning Council requesting we set up a policy and procedure for referring use permits on convalescent hospitals and related uses for review by the Hospital Planning Advisory Council. As a matter of procedure, if this is acceptable to the Commission, when a use permit is submitted to the Planning Department I would immediately refer it to the Hospital Planning Council for review. This would be prior to an applicant formally and officially submitting the application for Planning Commission procedure and before he has paid his fee. Once I have received the report from the Hospital Planning Council I would then set an appointment with the applicant and we would go over the report. At that time, pending the results of the report from the Hospital Planning Council, he could then either withdraw his tentative application or go ahead and submit to the Planning Commission for action. The Commission could set this in the form of a policy that would be adopted as part of the Rules and Regulations procedure.
Procedure was discussed. Motion by Zannon, seconded by Schulman, that Commissioners are in agreement with procedure proposed ab ove for use permits on convalescent hospitals and Planner is authorized to follow such procedure. Motion carried-unanimously.

Letter-California Roadside Council, referral from City Council. Letter from Roadside Council has to do with the Federal Highway Beautification Act of 1965 and requests that local jurisdictions pass a resolution opposing certain sections of the Act, specifically the compensation requirement for the removal of billboards. If after the review of the letter the Planning Commission feels a resolution justified it can then be referred to the City Council for appropriate action. Mr. Hollick advised the Roadside Council feels the section questioned is apt to prove expensive for cities and is not needed. Proposed resolution was studied and discussed and Commissioners feel it has merit.

74

Motion by Campbell, seconded by Zannon, that Commission approves proposed resolution as requested by the California Roadside Council and refers same to Council for action with recommendation for adoption. Roll call vote: Ayes-Zannon, Vittetoe, Dugan, Campbell, Zerbe. Noes-Schulman. Motion carried.

Sketch-Troy Sanders, re: street name changes. Troy Sanders has requested some street name changes on Main and Lincoln Streets. Inasmuch as the diagram and some explanation of the recommendation is required I think it would be better if we took this up at the Commission meeting together.

Recommendation was discussed by Mr. Hollick who pointed out proposed change of Lincoln Street to Church Street and Church Street to Lincoln Street which involves a number of business addresses and since there is definite turn in street does not feel change is beneficial here. Chairman ordered letter filed and reply sent to Mr. Sanders explaining feelings of Commission that change as proposed is not justified but if Mr. Sanders wishes to pursue the matter further he should submit an official request for change and state reasons for such changes as he feels needed.

MATTERS NOT ON THE AGENDA:

Chairman requested Secretary to send letter of appreciation to Mr. Nevis for his services to the Commission.

Mr. Hollick brought up matter of policy on Cirby Way Assessment District in regard to streets to be developed and Commission is by law to find whether streets will be constructed to standards set up in General Plan. Cirby Way will be constructed as a major street and Coloma Way as a minor street. Standards in feet as required by Subdivision Ordinance were reviewed and Mr. Schulman asked how this assessment district will tie into parkway as planned for Cirby Way in recreation system study. Mr. Hollick advised parkway would be area beyond what is planned for street.

Motion by Schulman, seconded by Campbell, that Commission finds that after review of street plans for Cirby Way Assessment District and finds that streets will be built and plan for construction shows that they will meet standards as set in City General Plan with Cirby Way planned for a major street and Coloma Way as a minor street. Motion carried-unanimously.

HEARING, USE PERMIT, W. ZISK APPLICANT:

Mr. Zisk requests to construct two dwellings in R-1 FP (Residential Flood Plain) Dry Creek near Thomas Street. Mr. Zisk requests that he be allowed to build two dwelling units in the flood plain area on Dry Creek south of the extension of Thomas Street. The Engineering Division has this proposal under consideration and will submit a report for Planning Commission review at the meeting. Since I have not received a report yet from them, it is impossible for me to make any recommendations at this time. In addition to the application for use permit, Mr. Zisk will also have to file with the Planning Commission a lot split map inasmuch as he is wanting more than one dwelling unit on a parcel. The two that he proposes, plus the one existing, constitutes a total of three dwelling units, therefore he will have to split the property into at least three pieces under the R-1 zoning.

Public Works memo: "In our original review of this project with Mr. Zisk, it was stated that he requested permission to build up a small area shown in brown cross hatching on the attached map, for purposes of constructing a single family residence. It is the opinion of the Public Works Department that this could be accomplished with a minimum of disturbance to the flood plain and in exchange for this permission to raise this area, Mr. Zisk had agreed to do certain cleaning of the existing channel. The Public Works Department would recommend approval of this portion of the plan, contingent upon a written agreement between the City and Mr. Zisk for cleaning of the channel through his property. In addition to this original request, Mr. Zisk is now requesting permission to construct a levy, (the brown line shown on the attached map) which would remove approximately 12 acres from flood plain. The Public Works Department has not had sufficient time to analyze this request and makes no recommendations concerning the matter at this time."

Mr. Zisk advised joint tenancy of property is reason for requesting two home sites. There are two existing houses on the property at present. Flood plain area affecting property was studied and Engineering Division feels area proposed for new homes is almost all out of the flood plain. Mr. Zisk advised of process he would use in dredging to fill pad and would clear sand bars out of stream and not disturb spawning area or natural habitat. He plans to landscape the area and terrace creek side for beautification. He would like to salvage existing pond if possible but it is now a mosquito problem. He does not wish to split the property but leave as a large parcel. Mr. Zerbe explained that lot splits were necessary in order to construct two homes requested and access to such lots should be delineated on lot split map. He would be required to put in street to City standards as a condition of the lot split. This is an R-1 Zone and since it is only one parcel lot splits are needed (at least into three lots) to construct two new homes on the property. Two existing homes are non-conforming use. Mr. Zerbe asked if existing homes are connected to sewer line and Mr. Zisk advised he did not know but there is City sewer easement along property and City has granted three hook ups in return for easement. Mr. Zerbe believes lot split map should be filed so definite lots and where houses sit on lots will be shown so that Building Department will know where setbacks are and can see lot lines. Possibility of allowing clearing of channel and building of pad was discussed but it is felt lot split map must be submitted before this can be allowed. Mr. Zisk questioned if rezoning would help and leave property in one piece but Commission does not feel area should be rezoned. Chairman ordered hearing continued until Mr. Zisk can submit further information as required.

REPORTS FROM PLANNER:

"A" frame sign control. The Association representing the gasoline stations within the City will be present to discuss this general problem with us. I will develop some criteria which I think they can apply on their own and will present it at the meeting. If it is acceptable to them we can then incorporate it into our own sign control ordinance which we are developing.

Mr. Hollick submitted a projectile showing proposed setbacks for service stations and pointed out area of concern re: A frame signs; this would set back 35' on corners and 15' on sides and eliminate signs in this area. Mr. Atwood advised that local and Auburn Service Station Assn. are willing to cooperate to eliminate such signs and also feel work should be done toward beautification as well as traffic hazard elimination such as building types, tenancy instead of ownership. Mr. Harris advised they have 20 members in their Assn. and this does not include all Roseville stations, approximately 14 of their members are in the City and the rest outside. They feel all signs could be eliminated except one brand identification sign. Mr. Schulman discussed the special sale signs which could be put on windows of stations instead of on A frames. Association would also like elimination of banners and streamers included in ordinance. Mr. Sparks asked if City passed an ordinance prohibiting A frame signs if this would hurt their business and those present felt it would not. Promotional product advertising was discussed and Mr. Atwood advised advertisement is done for other than car accessory and use articles. Mr. Zerbe asked about state and national associations and was advised there are such organizations which could supply information upon request and was supplied with an address for such contact. Commissioners feel it will be best to get ordinance into effect as soon as possible and in the meantime to request local stations to cooperate and remove A frame signs.

Mr. Sachs asked if it would be any help to pass a petition around to stations asking for removal of signs and see what percent would cooperate. Commissioners feel this is a good idea. Mr. Hollick advised that he should be able to put an ordinance together in the near future and incorporate requirements wanted. Mr. Zerbe asked for written opinion from Service Station Assn. on restrictions wanted and ways for removal of signs and clean up of stations and Mr. Atwood advised he would get a letter on same from their Board of Directors. Mr. Zannon stated he would take proposed ordinance around to all stations when it is drawn up to get opinions on same. Mr. Emerton advised if all stations in the City were cleaned up it would be to benefit of City but if some will not cooperate it ruins the efforts of all the rest. Mr. Atwood discussed the new ordinances limiting stations to two corners of streets and if this applies in City and Mr. Zerbe advised the City does not have such an ordinance as yet. Mr. Emerton advised the City of Auburn has adopted such an ordinance and it is quite effective. Matter will be brought up again when ordinance has been made up.

TENTATIVE MAP, WESTWOOD TERRACE UNITS 5, 6 AND 7:

South of Darling Way and west of Garcia Avenue, 18.2 acres, 66 lots, Zoning R-1. Subdivider: Frank A. Garcia & Gabrielli Construction Co.; Engineer: Murray & McCormick, Inc. This map has been submitted to us approximately one year ago and was approved at that time. However the one year time limit is running out and therefore they have to resubmit the map for renewal. Since the time of prior submission the Engineering Division has completed their flood plain studies and several problems exist which we will have to clarify at this time. Several of the lots are in the flood plain which we knew previously, but did not have the technical data to back it up. It appears the Planning Commission has several alternatives in reviewing this particular map at this time. One is to approve the map subject to the conditions of the Engineering Division for fill and channel work; to deny the map and have the subdivider resubmit, taking those lots which would be in the flood plain out of the new design completely. Here again, the Engineering Division has this problem under advisement and will be in a position to give a specific recommendation at the meeting date.

Public Works memo: "The Subdivision Committee met on Friday, February 10, 1967, to review the proposed tentative map for Westwood Terrace Units 5, 6 and 7. The following comments are offered for consideration: 1. The Fire Department has recommended that a fire hydrant be placed at the end of Jesse Court. 2. The Water Department has recommended that a 6" water line be required to serve Jesse Court and the proposed fire hydrant. 3. Subsequent to the original approval of this tentative map, the Engineering Division has completed the Dry Creek/Linda Creek Flood Plain Study. This study has put the flood plain elevation at 131 feet. This puts all or portions of the six lots on Clara Court within the flood plain. It is the recommendation of the Public Works Department and the Subdivision Committee that these lots be removed from this tentative map."

Mr. Davis brought out that map could be denied on grounds of public safety, health and welfare in flood plain area now that map is completed. Commissioners questioned that creek would back up and cause flooding in other places if filled. Mr. Schulman feels the fact that filling would be inimical to recreation plan in area as well as cause flooding should be pointed out. Commission feels this matter should be held over for further information from the Public Works Department. Mr. Barnett advised time on map will be checked to see when action is required and Chairman ordered matter held over until the next regular meeting or special meeting if needed.

Counsel brought out that flood plain ordinance would be further strengthened by adoption of a conservation element for the General Plan. Most of information needed for thie element is available and could be put into writing and adopted as a City policy. Mr. Hollick advised money is available for professional services to have this document drawn up and put together. Commission is in favor of such action that will strengthen the flood plain

ordinance, and feels element on conservation to be added to General Plan should be done if the Public Works Director is in favor of the action and if it will not delay the passage of the ordinance in any way.

STATUS REPORT OF PROPOSED PLANNING PROJECTS AND ORDINANCES:
Auto dismantling yards and their control-Committee report. If you have had the opportunity to read the report on this matter it can be discussed at this meeting.
Chairman ordered this matter held over until the next meeting for further study of the report. Mr. Schulman advised he would have additional information available by that time.

Land use report. Enclosed with this report will be a copy of the land use report that was done as part of the 701 Program. This is a land use survey of the existing uses in the City as related to zoning. There is considerable data in this report that we can use in later studies for land use control. Copies were studied by Commissioners and will be kept in their individual files for ready access.

ADJOURNMENT:
Motion by Vittetoe, seconded by Schulman, that meeting be adjourned at 10:25 P.M. Motion carried-unanimously.

Meeting adjourned.

Elsie Schimpf
Recording Secretary.

2MDIII

The foregoing instrument is a correct copy of the original on file in the office of the Planning Dept.
ATTEST:
City Clerk of the City of Roseville, California
DEPUTY CLERK

March 9, 1967

A regular meeting of the Roseville Planning Commission was held at 8:00 P.M. on March 9, 1967 in the Council Chambers of the City Hall with Chairman Bert Zerbe presiding.

ROLL CALL: MEMBERS PRESENT: M.J. Royer, Jr., George Campbell, Victor Schulman, Bert Zerbe.
MEMBERS ABSENT: D.E. Vittetoe, Dr. P. Dugan, John Zannon. ADVISORY: P. Hollick, City Planner; K. Sparks, Asst. City Attorney. Staff: Elsie Schimpf, Recording Secretaty.
AUDIENCE: J. Woodworth, B. Goligoski, G. Chimenti, N. Nichols, M. Harmon.

Chairman Zerbe wlecomed new member Mr. Royer to the Commission.

MINUTES:
Motion by Campbell, seconded by Royer, that minutes of February 23rd be approved as mailed out. Motion carried-unanimously.

CORRESPONDENCE AND OTHER ACTIONS:
Appointment to Hospital Planning Advisory Council. Due to the resignation of Elmer Nevis from the Planning Commission, it is necessary that the Chairman appoint someone to take his palce on the Hospital Planning Council Advisory Committee. This is not a very time consuming appointment inasmuch as the Advisory Committee meets probably only once every three months. The primary purpose of this appointment is to designate someone to receive the Hospital Planning Advisory Council correspondence and brochures.
Chairman Zerbe appointed M.J. Royer, Jr. to this post and Hospital Planning Advisory Council will be contacted to advise of this appointment and that Mr. Royer is a member of the Roseville Hospital Board of Directors.

TENTATIVE MAP (HELD OVER FROM FEBRUARY 23RD MEETING):
Westwood Terrace 5, 6 and 7. This map was held over from the Feb. 23rd meeting to further clarify the eventual use of those lots which the Engineering Division considers in the flood plain and to apply the criteria developed by EBS relating to greenbelts in the Dry Creek area which traverses the proposed tentative map on the west side. Meeting with the engineers of the tentative map will be held and it is hoped that a satisfactory solution can be worked out prior to the meeting.
Letter from Murray & McCormick advising the developers of Westwood Terrace 5, 6 and 7 wish to withdraw the subdivision at this time was read. Commission approves the withdrawal.

PUBLIC HEARING, ZONING AMENDMENT:
R-1 to R-4, Applicant: O. Spencer; Location-north side Cirby Way, 350 feet west of Sunrise Ave, 2.4 acres. After Study of the General Plan which indicates commercial at the northwest corner of Sunrise Avenue and Cirby Way, it appears that the R-4 zoning would be appropriate in that it would provide a transition area between the proposed commercial and the residential development, which would take place to the west.
Utilizing our land use report which we have just recently completed and which you have a copy of, it indicates that we have approximately 83 acres zoned R-4 within the City at this time. A majority of this acreage, or 51 acres, is classified with residential uses meaning either single family, duplexes or multiple family uses. 14.6 acres is in the services classification which indicates a professional office building use or some related retail uses. Approximately 17 acres therefore remain undeveloped. This 17 acres of undeveloped land represents approximately 20% of the total zone for R-4 uses. This would

April 2, 2004

Mr. Mark Morse, Environmental Coordinator City of Roseville,
Community Development Department
311 Vernon Street
Roseville, CA 95678

RE: RESPONSE TO DRAFT ENVIRONMENTAL IMPACT REPORT FOR HARDING BOULEVARD TO ROYER PARK BIKEWAY PROJECT DATED FEBRUARY 2004

State Clearing House No. 2000122078
Lead Agency: City of Roseville
Environmental Consultant: Jones & Stokes
Review Period: February 18, 2004 to April 20, 2004

Mr. Mark Morse:

Thank you for the opportunity to respond to the Draft Environmental Impact Report for the proposed phase two portion of the proposed Harding Boulevard to Royer Park bikeway project, which is dated February, 2004, State Clearinghouse No. 2000122078.

The City of Roseville proposes to construct a bikeway from Harding Boulevard to Royer Park. The proposed project site is located in the City of Roseville in southwestern placer county. The proposed project area encompasses the riparian corridor along Dry Creek and various existing surface streets between Lincoln Estates Park and Royer Park. The proposed project area is generally bounded by Atlantic street on the north, Harding Boulevard on the south and east, and Douglas Boulevard on the west. The City, as the state lead agency undertaking the proposed project, is required to prepare an appropriate environmental document, in this case an environmental impact report (EIR), under the California Environmental Quality Act (CEQA). This EIR alleges to disclose the environmental effects associated within the proposed alignment, and construction and operation of the proposed bikeway to the satisfaction of CEQA requirements. Compliance with NEPA is also required because funds for preliminary engineering and environmental assessment for the proposed project were provided in part under the federal Intermodal Surface Transportation Efficiency Act (ISTEA).

1

This response to the draft environmental impact report will focus on the inadequacy and errors and omissions of the DEIR as it relates to the CEQA/NEPA requirements, as well as the alleged claims of ownership of Zisk property by the City of Roseville, and the wrongful death of my spouse, Lois E. Zisk resulting from the thirty (30) years of extended ongoing willful and reckless disregard for her health and safety. This response to the DEIR will also focus on the prior thirty (30) years of conspiracy to violate and violation of civil rights; deprivation of the constitutional requirements of equal treatment and application of the law; damages in inverse condemnation; negligence; intentional tortuous conduct; personal injury and property damage, intentional infliction of emotional distress; constructive fraud; search and seizure; invasion of privacy; malicious prosecution, discrimination, duress and obstruction of justice.

On March 9, 2004, a public hearing was held before the City of Roseville transportation commission to hear testimony on the DEIR. During the public hearing William J. Zisk testified to his claim of purchase and ownership of the 205 Thomas Street, Roseville, CA property, consisting of twelve and two tenths (12.2) acres (parcel(s) No.(s) 013-040-003, 013-040-004, and 013-040-005). I briefly referenced our application to the Roseville planning commission for a lot split and use permit to section off a half (1/2) acre portion at the southeast corner of our privately owned property to construct our new single family residence on the secluded passive surroundings adjacent to Dry Creek, and the thirty (30) year history of interference that followed by the City of Roseville into our private residential and business affairs and the ability to use and enjoy "OUR" private property.

William J. Zisk requested a continuance of the March 9, 2004 public hearing before the transportation commission and an extension of time of the comment period to enable the submittal of the prior thirty (30) year history of the property of William J. Zisk and Lois E. Zisk, 205 Thomas Street, Roseville, CA into the DEIR for the proposed phase two of the Harding Boulevard to Royer Park bike trail. The commission granted the continuance of the public hearing and extension of the public comment period to April 20, 2004. The submittal of the prior thirty (30) year history of the Zisk property into the DEIR follows:

VERIFIED STATEMENT OF THE HISTORY OF THE PROPERTY OF WILLIAM J. ZISK AND LOIS E. ZISK, 205 THOMAS STREET, ROSEVILLE, CALIFORNIA, 95678

Petitioners William J. Zisk and Lois E. Zisk purchased the 12.2 acre parcel of land in central Roseville in 1966, located at 205 Thomas Street, Roseville, California (hereafter subject property). The parcel contains two (2) single family residences and two (2) assessory buildings and fifteen hundred feet of Dry Creek traverses the subject property.

At the time of purchase, the zoning and land use designation was R1 and R1-FP, medium density, single family residences. The majority of the entire parcel was designated above and outside of the established 100-year floodplain elevations. The site has been the basis of sand and gravel and trucking operations since the turn of the century. Petitioners are self employed and have resided and conducted their sole livelihood in the sand and gravel and trucking business on the subject property since 1966.

On February 23, 1967 petitioners presented an application to respondents City of Roseville planning department to construct a new single family residence on petitioners private property. Present in an advisory capacity during the public hearing was then Roseville city attorney, Keith F. Sparks. As a condition of approval, respondents required petitioners must first clean and straighten the portion of Dry Creek and adjacent that traverses the subject property and obtain a lot split. No time constraints were placed on the conditional use permit application as granted. Petitioners immediately obtained the necessary stream alteration permits from the California Department of Fish and Game, purchased the necessary heavy duty dragline equipment for dredging the stream, utilized petitioners dump truck and rubber tired front end loader and commenced to fulfill respondents conditional requirements precedent to construction of petitioners new residential dwelling, while continuing to maintain the sand and gravel and trucking business operations on site.

On March 20, 1968 by Resolution Number 68-21, respondents adopted a Park and Streambed Plan as an element of the General Plan showing petitioners' entire 12.2 acre parcel as a "future" proposed public park site.

Upon petitioners nearing completion of the monumental herculean task commenced on February 23, 1967 as required by respondents, on December 8, 1971, respondents then required of petitioners by Interim "Emergency" Ordinance Number 1158, that in order to complete the permit application, an additional grading permit and renewal of the California Department of Fish and Game stream alteration permit would now be required. Petitioners immediately applied for the "additional" grading permit which was subsequently granted on January 24, 1972.

On August 30, 1972, by Resolution Number 72-75, respondents adopted an "Interim" Open Space Plan as an element of the General Plan. Petitioners R-I zoned property was now designated as open space.

On November 29, 1972, respondents adopted Ordinance Number 1190 relating to environmental review of permits issued by the City of Roseville, and declaring the same to be an "emergency measure" to take effect immediately.

On March 1, 1973 petitioners requested the parcel map and lot split to create a parcel to build their new home on the subject property in compliance with the original conditional use permit application granted on February 23, 1967. On March 14, 1973, respondents now determined that the construction of petitioners new single family residence on their R-1 zoned parcel would now have a "non-trivial" effect on the environment and an environmental impact report was now required before any further processing of petitioners permit application would be allowed even though no such E.I.R. was required back on February 23, 1967. Petitioners appealed such determination to the Roseville City Council, pursuant to Ordinance No. 1190, which was subsequently denied on April 25, 1973.

3

On April 25, 1973 respondent public works director, Frederick L. Barnett, revoked his previous granted January 24, 1972 grading permit and directed that all work within seventy-five feet of Dry Creek on petitioners' property shall cease.

Petitioners immediately retained the services of a local engineering firm, Atteberry and Associates, at substantial cost to petitioners, to fulfill the requirements of respondents, as set forth in Resolution 72-94. Petitioners submitted the environmental study entitled - ENVIRONMENTAL IMPACT STATEMENT FOR BILL ZISK RESIDENCE, THOMAS STREET, ROSEVILLE, CALIFORNIA 95678, dated June 1973.

The purpose of the E.I.S. was to identify, assess and quantify the impact of the development of a single-family residential structure adjacent to Dry Creek on the physical, biological and socio-economic aspects of the Roseville community. The purpose of the project is to provide a home for the Zisk family adjacent to and overlooking Dry Creek in an area of outstanding beauty. The proposed home site is located above and outside the Intermediate Floodplain (146.00 feet above mean sea level) as determined by a study of the United States Army Corps of Engineers, dated May 1973.

The work performed by Mr. Zisk on cleaning and straightening the channel of Dry Creek has changed the channel's coefficient of roughness and has consequently increased the channel's flood carrying capacity approximately 200%. The E.I.S. concluded with:

> "The proposed project is the culmination of a seven year program undertaken by the Zisk family in 1967 to clean up and improve a piece of creek side property that has been exploited for many years and allowed to deteriorate into an eyesore and community health problem. It is in compliance with existing zoning and has no long-range unavoidable adverse impact. The work accomplished to date by the Zisk family indicates the quality of their goals and the ultimate benefit to the community in improved health conditions and scenic qualities".

By Ordinance Number 1190, adopted by respondents on November 29, 1972, the E.I.S. would be approved if respondent registered no objection within fifty (50) days of submittal. Over one hundred (100) days later, without prior objection to the E I.S., the Planning Commission refused to issue the lot split and use permit on September 13, 1973.

On June 20, 1973, by resolution Number 73-56, respondent adopted an Open-Space and Conservation Element of the City of Roseville General Plan. Petitioners property was thereby designated open space for park purposes.

On July 13, 1973, in responding to the draft environmental impact report for the Bill Zisk residence in Roseville, California, the United States Army Corps of Engineers stated that since in the case in point the house itself would be outside of the intermediate regional flood zone, the project itself would not have a significant effect on water surface elevations on Dry Creek during the occurrence of the intermediate regional flood.

4

On July 24, 1973, respondent planning director wrote to the Sacramento District Corps of Engineers requesting a "re-study" of the proposed parcel map of the Zisk property and would therefore withhold further processing of the proposed parcel map.

On August 29, 1973 respondent City Council adopted a "tentative" plan for a "future" proposed bicycle trail through the middle of petitioners proposed residential home site location.

On August 31, 1973, respondent public works director, Frederick L. Barnett, wrote to the Sacramento District Corps of Engineers requesting transposition of floodplain mapping, based upon outdated "1956" topographic maps, which did not reflect any of the Zisk family seven year reclamation project on Dry Creek on petitioners property.

On September 5, 1973, respondent public works director, Frederick L. Barnett wrote to respondent Planning Director Leo Cespedes, recommending denial of a parcel map for petitioners' property, based upon the adverse impacts of a "tentative" plan for a "future" proposed bicycle trail through the middle of petitioners proposed home site.

On or about September 13, 1973, the respondent Planning Commission in furtherance of a total and conjunctive plan, purpose, scheme and design of the Park, Streambed and Recreation Element, and the various Floodplain Ordinances heretofore mentioned, the Open Space and Conservation Element of the General Plan and the Open Space Zoning Ordinance and in ignoring the Environmental Impact Report of June 1, 1973 which states that plaintiffs' development would have no adverse impact on the environment, and for no valid or lawful cause and without any evidence to the contrary, did summarily deny petitioners' February 23, 1967 application for a land use permit and lot split. Said denial was in furtherance of the aforementioned plan, purpose, scheme and design of respondents.

Petitioners appealed said decision to respondent City Council and on or about October 3, 1973, said City Council, pursuant to and in furtherance of the plan, purpose, scheme and design of the Park, Streambed and Recreation Element and the Open Space and Conservation Element, and in spite of the June 1, 1973 Environmental Impact Report, and for no valid or lawful cause, and with no evidence to the contrary, and in violation of law did summarily deny petitioners' said appeal for the following reasons as specified by the October 3, 1973, Council Meeting Minutes:

> "Motion by Reed, seconded by Waltrip, that the Planning Commission's decision to deny the use permit for property at 205 Thomas Street be affirmed on the basis of evaluation of City of the Environmental Impact Report, the conflict with the bike and pedestrian trail as "tentatively" approved by the City Council and conflict with its development, and further that the plan is in conflict with the Park and Streambed Plan, an Element of the General Plan, and that council give notice that City intends to purchase a bike and pedestrian trail system along the streambed".

5

Said denial without a hearing or other procedure as required by the Fifth and Fourteenth Amendments to the United States Constitution did constitute a denial of substantive and/or procedural due process of law as guaranteed by said amendments to the United States Constitution.

All of respondents hereinbefore stated acts, conduct and statements were initiated and consummated with the sole motive and intent being to deny petitioners there due Constitutional rights, by deliberately and fraudulently preventing William J. Zisk and Lois E. Zisk from developing either the portion of the subject property subsequently condemned or its remainder for any lawful use, other than parks and recreation use, and hence in furtherance of the respondent express and/or implied purpose, plan, scheme and design to depress the fair market value of the subject property and/or prevent an increase in the fair market value of the subject property so as to economically benefit the respondents to acquire the subject property.

The adoption of the aforesaid Park, Streambed and Recreation Element, the various Floodplain Ordinances, the Open Space and Conservation Element to the General Plan and the aforementioned Open Space Ordinance by respondents, was designed to and did in fact depreciate the full market value of all of petitioners' subject property; did constitute a de facto taking of all of the subject property; did prevent any development for its highest and best use; did deprive petitioners of any practical, beneficial or economical use of the subject property; and was confiscatory in nature as applied to the subject property and therefore in violation of the Fifth and Fourteenth Amendment to the United States Constitution and Article 1, Section 19 of the California State Constitution.

As a direct and proximate result of all of respondents' acts, conduct and statements, petitioners' subject property has been rendered without any practical, beneficial or economical use and petitioners have further been required to hold said property solely for the use and benefit of respondents' public use, without just compensation in violation of the Fifth and Fourteenth Amendments to the United States Constitution and Article 1, Section 19 of the California State Constitution.

Respondents' acts, conduct and statements in denying petitioners' application for use permit and lot split as herein alleged, are unreasonable, oppressive discriminatory confiscatory as applied and a prelude to a direct condemnation action in violation of the Fifth and Fourteenth Amendments to the United States Constitution and Article 1, Section 19 of the California State Constitution, that as a direct and proximate consequence and result of respondents' acts, conduct and statements, petitioners have been prevented from using or developing said property for any lawful private purpose and have been unable to derive value, rents, revenues or profits from the subject property, all the while being required to spend money for taxes and other holding costs in maintaining the subject property.

All of respondents' acts and conduct herein alleged and otherwise were and are illegal, oppressive and unreasonable, and constitute a de facto taking and damaging of the subject property, for and in connection with a public use and purposes, to-wit: park, recreational and open space uses, without just compensation and in violation of the Constitution and laws of the

State of California including, but not limited to Article I, Section 13, and Article 1, Section 19, of the Constitution of the State of California, and all in derogation of the Constitution and laws of the United States, including, but not limited to, the Fourth, Fifth and Fourteenth Amendments of the Constitution of the United States.

Petitioners believe and therefore allege that their administrative remedies, pursuant to respondents' ordinances and state law, were effectively exhausted on October 3, 1973, the date of taking, that to apply to respondent, city, or any of its agents or departments would constitute an idle act.

Thereafter, in furtherance of the plan, purpose, scheme and design as alleged herein, and to further accomplish a depreciation in the fair market value of the subject property taken by respondents for a public use, so as to avoid payment of just compensation, respondents' Floodplain Committee and Planning Commission, both agents of said respondents and while acting within their respective scope of employment, determined to further restrict use of the subject property by including all of said property within a permanent floodplain area. Petitioners attended public hearings precedent and relative to respondents' final adoption of permanent Floodplain Ordinance. On such occasions, objected to said Floodplain Ordinance and the proposed floodplain zone area as being vague, arbitrary, and in furtherance of respondents' plan, purpose, scheme and design to acquire the subject property for a public use, after depreciating its fair market value. Petitioners related to respondents that a Petition for Writ of Mandate relative to Respondents' October 3, 1973, denial of petitioners' request for use permit and lot split, had been filed against respondent on November 1, 1973, and that a claim, pursuant to the provisions of Title 1, Division 3.6 of the Government Code of the State of California, had been filed against respondent on November 12, 1973, for damages in inverse condemnation.

Respondent City Council thereafter, in spite of petitioners' Petition for Writ of Mandate and claim for damages, on or about November 28, 1973, and in furtherance of respondents' plan, purpose, scheme and design to acquire the subject property for public use after depreciating its fair market value, did adopt Ordinance No 1224 relative to permanent regulations of land uses within possible flood areas and Ordinances No. 1227, adding Subsections 161 and 162 to Section 30.01A of Article 3 of respondents' Ordinance No 802, designating certain property in and along Dry, Linda, Cirby, and Antelope Creeks as within the permanent FW (Floodway) and FF (Floodway Fringe) combining zones, all in furtherance of the plan, purpose, scheme and design as herein alleged.

Petitioners are informed and believe and thereon allege that in adopting Ordinance No. 1224 and Ordinance No. 1227 the respondents relied in part on a study specially prepared for respondents by the Sacramento District Corps of Engineers, Department of Army, when the Roseville City Council adopted the aforementioned Floodplain Ordinances. Petitioners are informed and believe and thereon allege that, in fact, this report by the Corps of Engineers was conducted in May, 1973 for the benefit of respondents and does not reflect the actual boundaries of previous floods or determinative flood histories or studies, and were fraudulently applied to antedated "1956" topographic maps, which were allegedly furnished to the Corps by

the Roseville Public Works Department and did not reflect the current topography of the subject property in 1973 and therefore cannot properly be relied upon by the respondents.

All of the subject property is now included within the boundaries of said Floodplain Ordinances and said boundaries coincide, in furtherance of respondents plan, purpose, scheme and design as mentioned above, with the Open Space and Conservation Element, the aforementioned Open Space Ordinance, and the aforementioned Park, Streambed and Recreation Element of the General Plan.

All of the subject property referred to immediately above has been discriminated against by respondents, its agents and various departments. Only the subject property is covered by the Floodplain Ordinances and the Park, Streambed and Recreation Element of the General Plan hereby imposing a double restraint upon petitioners' property. No other property in the area is covered with such a "double restraint."

The placing of a "double restraint" on petitioners' property was done in furtherance of respondents aforementioned plan, purpose, scheme and design.

The adoption of said permanent Floodplain Ordinances, are vague and arbitrary in terms of boundaries was in fact a gross misexercise of police power and a further de facto taking and further devaluation by direct legal restraint of petitioners property, all in furtherance of the plan, purpose scheme and design as alleged herein.

Pursuant to the provisions of Title I, Division 3.6 of the Government Code of the State of California relative to claims for damages against local public entities petitioners could not file the complaint in inverse condemnation until their pending claim against respondents was approved or denied, or upon the expiration of forty-five days from the date of filing said claim.

On or about November 12, 1973, petitioners did file a claim for damages, and that on December 19, 1973, respondent did approve petitioners' claim in part and did deny the claim in part.

Thereafter, and in furtherance of and pursuant to the total plan, purpose, scheme and design herein alleged, and in an attempt to deny to petitioners their legal remedies secured by an action in inverse condemnation, respondents' City Council, did also on December 19, 1973, adopt Condemnation Resolution No. 73-122 relative to a portion of the subject property for public park and "future" bicycle path purposes, and on December 20, 1973, respondent filed a complaint in eminent domain in Placer County Superior Court Action No. 41104 to acquire a portion of the subject property for said proposed public use, without complying with all of the legal conditions precedent to filing an action in eminent domain and contrary to the express intent of the Legislature.

Respondents herein alleged conduct and cursory acts were in furtherance of the aforementioned plan, purpose, scheme and design of respondent city, and was consummated in defiance of such conditions precedent relative to the institution of an eminent domain action by a

public entity as are specified in Government Code Section 7267 requiring an appraisal of the property to be taken and good faith negotiations with the property owner, and respondent also failed to demonstrate whether sufficient public funds are available to acquire said portion of the subject property and whether the "proposed" public park and bicycle path are so compatible with the subject property environment as to comply with State and Federal environmental regulations.

Respondents herein alleged conduct was in derogation of State and Federal statutes mentioned above, but not limited thereto; the Constitution of the State of California; and the Constitution of the United States of America in that, among other things respondents had, as evidenced by their unprecedented immediate filing of an eminent domain suit in violation of the aforementioned statutes and constitutional provisions, decided before hearing all the evidence in the case that respondents plan was to be taken in part rather than in the whole and thus depriving petitioners of their right to a hearing under the due process clause of the United States Constitution and in denial of the aforementioned statutes and constitutional provisions.

Petitioners, on or about November I, 1973, did file an action in Administrative Mandate against respondent city and its councilmen to comply with all requirements for exhaustion of administrative remedies. All of the actions of respondents herein referred to were null and void because not enacted in the manner provided by law, that said acts were unreasonable, arbitrary, discriminatory, fraudulent, and an abuse of legislative discretion vested in the City Council and all agencies and commissions of the City and that said acts would and did constitute a taking and/or damaging of petitioners' property without payment of just compensation contrary to the provisions of the Constitutions as hereinabove alleged, and such acts were done in furtherance of respondents aforementioned plan, purpose, scheme and design.

Respondents commenced the eminent domain proceeding on December 20, 1973, Placer County Superior Court No. 41104, to take over one-half of petitioners' subject property as described herein above. In furtherance of and pursuant to the total plan, purpose, scheme and design as herein alleged, and in further attempt to deprive petitioners of due process, just compensation and equal protection of the law, respondents failed or refused to timely deposit the "total sum" of the judgment into court. As a direct and proximate result and consequence of the wrongful, illegal, and oppressive activities and conduct of respondents, petitioners have not received one cent in any form of compensation to the present date, in violation of the Constitution and laws of the State of California including, but not limited to Article I, Section 13, and Article 1, Section 19, of the Constitution of the State of California, and all in derogation of the Constitution and laws of the United States, including, but not limited to, the Fourth, Fifth and Fourteenth Amendments of the Constitutions of the United States.

On November 6, 1973 a petition for writ of mandate was filed to compel issuance of the use permit prior to the adoption of the floodplain zoning ordinance. A claim was also presented to the City for damages on November 12, 1973. On November 28, 1973, the City Council adopted permanent floodplain zoning ordinances numbers 1224 and 1227, to take effect in thirty days.

9

On December 19, 1973 respondent City Council adopted a Resolution of Intent to Condemn (No. 73-122), pertaining only to Petitioners new home site and only with respect to the portion adjacent and parallel to the stream, which had been the subject of the seven year reclamation effort. The condemnation resolution was passed even though the City did not, and had not adopted any specific bicycle trail project or plan, and prior thereto, did not conduct a feasibility study, did not demonstrate that sufficient funds were available for acquisition, did not have any part of the Zisk property appraised to establish the fair market value or severance damages, did not make an offer to purchase, did not enter into any negotiations for acquisition, did not certify an E.I.R. for a proposed project, and to this very day have not done so for any other adjoining property in the City.

A race to the courthouse occurred the very next day, December 20, 1973. The City filed an instant action in eminent domain, Placer Superior No. 41104, and petitioners filed their inverse condemnation and civil rights complaint just minutes apart on the "same date" (Placer County Superior Court No. 41105). The trial court entered a judgment dismissing the civil rights action, and abating by interlocutory judgment the inverse condemnation cause of action due to the pendency of the city's condemnation action and to retain jurisdiction over the subsequent action. Petitioners were now being required to proceed within the confines of the city's eminent domain action.

Petitioners property was thus condemned for a "speculative, future purpose" contrary to the express requirements for the exercise of eminent domain powers which thirty years after its exercise, remains as unfulfilled as it did in 1973. In that period of time, petitioners' property is the only parcel ever interfered from private ownership in the entire city. The abuse of the eminent domain power was clear then and is even more compelling now.

On November 6, 1974, without "any" knowledge, whatsoever, or participation of petitioners, petitioners attorney, Richard F. Desmond and respondent city attorney, G. Richard Brown mutually agreed to enter into a "secret" stipulation, purporting to waive petitioners' right to recover their litigation expenses and attorney fees in the condemnation proceedings. Attorney Desmond did not divulge the existence of the secret stipulation to petitioners until November 23, 1977, at the conclusion of the six (6) week eminent domain trial, while William J. Zisk was on the witness stand.

The trial court, per Judge Harold P. Wolters, then dismissed petitioners' civil rights cause of action in Placer County Superior Court No. 41105, Zisk v. City of Roseville, 56 C.A. 3d 41; 127 Cal. Rptr. 896, thereby generating appeal Civil No. 15121 in the Third District Court of Appeals on February 20, 1976, "prior" to commencement of the eminent domain proceeding (No. 41104) on November 1, 1977.

Six appeals have been generated throughout the condemnation proceeding. The only opinion that has been published is contained in Zisk v. City of Roseville 56 Cal. App. 3d at 41-51. The opinion itself contains an important error in the introductory portion, which purports to review the factual and procedural history of the case. The error remains significant because

every subsequent appeal considered this opinion to be an impeccable source of information regarding the earliest history of the case. The erroneous portion relates to the timing of petitioners' original application for the building permit, and the adoption by respondent of a Park and Streambed Element to the General Plan. The opinion correctly recites that respondents adoption of the Park and Streambed Plan occurred in March 1968, while incorrectly reciting that the application for petitioners building permit did not occur until March, 1973. The appellate court relied upon this chronology to conclude, "the plan was adopted five years 'before' petitioners applied for the land use permit" (56 Cal. App 3d at p 51). In fact, petitioners applied for the first and only land use permit on "February 23, 1967", which is recorded in the hearing minutes and was granted upon petitioners satisfaction of the seven (7) year reclamation project on the subject property and obtaining a lot split. The condemnation trial was delayed and set to commence on November 1, 1977. On June 15, 1977, by Resolution No. 77-54, approximately four (4) months "before" the condemnation trial was set to begin, respondents adopted Resolution of the Council of the City of Roseville adopting the General Plan and repealing "former" General Plans and Plan Elements. In so doing, respondents "repealed" the Park and Streambed Plan Element of the General Plan (Resolution No. 68-21); the Interim Open Space Plan (Resolution No. 72-75); and the Open Space and Conservation Element of the General Plan (Resolution No. 73-56). The repealed elements were the basis of commencing the eminent domain proceeding in the first instance.

At this point, petitioners again encountered Keith F. Sparks who had been elevated to the Placer County Superior Court since his participation as respondent city attorney in the original permit application process. This time his role was to preside over the pre-trial conference for the eminent domain action, Placer Superior Court No. 41104. The circumstances mandated recusal upon his own initiative. Judge Sparks presided over the conference and issued a ruling, which aggrieved petitioners to this day. He ruled that evidence of bad faith and prejudicial pre-condemnation activities by the respondents would be excluded from jury consideration in the eminent domain trial.

The effect of this ruling cannot be overstated. The appellate decision on the demurrer stated that the abatement of the inverse condemnation action would be permanant "if the eminent domain proceeding is carried through to a dispositive conclusion", 56 Cal App 3d p. 48. "If for any reason the eminent domain action aborts, the first cause of action will become viable", 56 Cal App 3d p. 48.

Therefore, the City only had to survive the condemnation action to escape liability for its pre-condemnation activities. It was the obvious intention and understanding of the appellate court that all issues related to the taking of petitioners' property to be resolved in one action. Now the trial court, through Judge Sparks (former city attorney for City of Roseville), was effectively granting immunity for pre-condemnation activities by precluding their discussion altogether. Further, the land was down-zoned to floodplain "after" the time of the taking, which meant that valuation would be determined on that basis as opposed to R-I, which it had been prior to the zoning changes improperly implemented and only against petitioners property.

11

Armed with this devastating ruling, the city proceeded to offer $13,110.00 for the six acres of now improved, lush, level streamside property into which petitioners had poured over $200,000.00 of personal funds and seven years of continuous daily efforts to meet the city's conditions for the issuance of the building permit for their new home.

Faced with Judge Sparks evidentiary ruling excluding valuations based upon anything other than floodplain zoning, the jury verdict awarded $96,381.00, or approximately one-quarter of its R-1 zoning value.

At this point petitioners first became aware that they not only needed to be concerned about actions taken by respondents but those taken by petitioners' own attorneys. Law in effect at that time, C.C.P. 1249.3 specified, if the final offer of the public agency for the condemned property was unreasonable, the property owner could recover litigation expenses including attorneys fees, for defending the condemnation action. The disparity between the final offer of the City and petitioners final demand, when considered in light of the jury verdict clearly indicated litigation expenses would be appropriately awarded. On the motion to award litigation expenses, however, the court ruled that litigation expenses would not be awarded because petitioners' attorney, Richard F. Desmond and respondent attorney G. Richard Brown had executed a written stipulation on November 6, 1974, which purported to waive petitioners' rights to receive such litigation expenses. The existence of the "secret" stipulation came as a complete surprise and shock to petitioners especially since Desmonds' attorney's fees approximated the entire award and various trial strategies had been reluctantly agreed to, solely to improve petitioners' ability to recover all litigation expenses.

Desmond admitted to petitioners on November 23, 1977, that he had committed malpractice by entering into stipulation with respondent city attorney and that, as a consequence, he had a conflict of interest. The fact that the stipulation had been in existence for three years previously without disclosure to petitioners indicates that a conflict existed during most of the course of his representation. Nonetheless, Desmond agreed to pursue reversal of the denied expenses and exclusion of evidence regarding the pre-condemnation actions taken by the respondent to down zone the subject property. Desmond later filed a notice of appeal specifying only a "portion" of the judgment to be appealed and then withdrew from representation. Petitioners then hired attorney William Sherwood, to pursue the litigation expenses when Desmond reversed by surprise and withdrew from representation during appeal before the Third District Court of Appeals.

Sherwood was successful in obtaining a reversal of denial of litigation expenses on appeal and the matter was remanded to the trial court for further proceedings consistent with its ruling. The condemnation judgment specified deposit of the "total sum", including accruing interest at 7%, as a condition of entry of a final order of condemnation. However, the respondent was granted the final order of condemnation without paying the total sum of the judgment into court. Respondent waited the full 30 days after the remittitur issued from the appellate court before making any deposit whatsoever. Said deposit occurred on May 15, 1981, and consisted of the principal amount of the judgment only, with no interest whatsoever. The respondent argued that it was entitled to offset interest because of petitioners' possession of the property

after judgment and filed a motion to have the right to offset interest. Sherwood filed a concurrent motion for award of litigation expenses, and both motions were heard on June 12, 1981. Justice William Newsom, who had presided over the eminent domain trial, considered the issue of offset against the accrued interest and ruled that the value of the possession under the circumstances was nominal and that $750.00 per year could be offset against interest.

With respect to the question of litigation expenses, the purpose and scope of the hearing was to determine "entitlement" to expenses in accordance with the statutory prerequisites for such an award, not the amount to be awarded if such entitlement were found. The court set a later date for a determination based upon evidence to be submitted at that time, when it ruled that petitioners were to be awarded litigation expenses. The subsequent hearing on the appropriate amount of litigation expenses was never held. It was obscured by the issue that had arisen between petitioners and respondent regarding the deposit of the correct amount of interest and whether its earlier deposit of the principal amount of the judgment stopped the running of interest. This matter was argued to the court and submitted for ruling on the correct calculation of interest at the same time as the litigation entitlement issue and interest offset issue. The minute order granting litigation expenses however failed to address the interest calculation issue.

Thereafter, on September 28, 1981, petitioners' attorney Sherwood filed a motion for implied abandonment and dismissal of the condemnation proceedings, based upon former Code of Civil Procedure Section 1255a. The respondent responded by filing a motion to reconsider the award of litigation expenses. On October 9, 1981 or four days prior to the hearing on the pending motion to dismiss, the respondent deposited interest accrued to the date of deposit (May 15, 1981) of the principal amount, less the annual interest offset, in the amount of $20,748.77. This amount had been withheld by the respondent based upon the claim of offset for petitioners' post-judgment possession of the subject property. The deposit occurred five months "after" deposit of the principal amount of the judgment. It was the respondents' position that interest on the latter funds was not required.

The motion to dismiss based upon C.C.P. Section 1255a and the respondents' motion to reconsider the litigation expense award were submitted on October 13, 1981. No ruling was forthcoming from Justice Newsom until March 16, 1982. The ruling did not address either motion, but ruled instead on a matter never argued or requested, namely, the amount of litigation expenses that petitioners would recover.

Justice Newsom awarded $20,000.00 for trial counsel Desmond, $20,000.00 for Sherwood, and $2,500.00 in miscellaneous costs. The order was subsequently amended to include $18,500.00 for appraisal and engineering fees incurred in the condemnation.

The arbitrary nature of the award is evident from the fact that counsels' fees were equal when in fact petitioners were billed $69,556.72 by petitioners' trial counsel Desmond and $21,200.52 by counsel Sherwood up to the time of the court's award. To equal the value of counsels is patently arbitrary and capricious given the evidence of actual cost incurred. This is especially true when such an award does not relieve a party of the responsibility of paying more

than the court believes is reasonable. Petitioners moved to set aside this ruling on the grounds that petitioners had not been afforded a hearing, had not requested the order in the first instance and that it was patently insufficient. The motion was denied.

It was at this point that attorney Sherwood declined to represent petitioners further with respect to appeal of the litigation expenses and denial of the motion to dismiss and also with respect to an independent malpractice action against attorney Desmond. After exhaustive search, petitioners retained the third attorney J. Collinsworth Henderson. The difficulty in locating substitute counsel arose from several factors, the complexity of condemnation actions generally, the relatively small number of attorneys who practice condemnation law, and most importantly, the reluctance of many area attorneys to pursue a malpractice action against a prominent and powerful local attorney such as Desmond. Attorney Henderson affirmatively misrepresented petitioners. Contrary to what petitioners were told, attorney Henderson had no experience whatsoever either in condemnation practice or in malpractice litigation and had no jury trial experience.

Appeal was filed asserting the impropriety of entry of a final order in condemnation, when the conditions of payment specified in the judgment had not been satisfied. Such failures resulted in an implied abandonment of the judgment and further that the litigation expenses were insufficient and fixed without an opportunity to be heard on the amount to be awarded.

Henderson prepared and filed briefs, indicating petitioners were proceeding "in propria persona". The Court of Appeal disagreed with each contention purporting that an implied abandonment required some subjective intent on the part of the public entity to abandon the proceedings before the judgment would be nullified.

The statute in question, former CCP Section 1255a, stated: "Failure to comply with Section 1251 of this code shall constitute an implied abandonment of the proceeding." Former Section 1251 stated in relevant part: "The plaintiff must within thirty days after final judgment pay the sum of money assessed . . ."

The court reasoned that the legislature intended to "protect the public entity" by enacting this section, relying upon secondary commentary of a C.E.B. author and disregarding the observations of its brethren on the bench who agreed with County of Los Angles v. Bartlett (1963) 223 Cal App. 2d 353, 358 that . . ."every requirement of the statute giving the least semblance of benefit to the owner must be complied with . . ." it was the legislative intention to require dismissal when the award has not been paid as provided by Section 1251 . . ."30 days".

The litigation expense issue was dispensed with summarily as well. The court held the trial judge was sufficiently aware of the value of trial and appellate counsel's services to make a determination, even in the absence of any presentation of evidence or argument directly upon the matter at issue.

Petitioners did not obtain an abandonment of the condemnation judgment or a reversal of the order awarding litigation expenses. Attorney Desmond then filed a lien against the

condemnation judgment for attorneys fees in the full amount charged, which meant that approximately $69,000.00 of the $96,000.00 judgment was claimed as attorneys fees in a case where petitioners had been awarded attorneys fees. In addition, Sherwood placed a lien on the judgment for an additional $13,231.65 in fees, disallowed by Justice Newsom because they related to the abandonment and dismissal motion which he refused to grant.

The evidence was uncontroverted that respondent failed to deposit "any" interest until four days before the hearing on the motion to dismiss, by which time all of Sherwood's fees had been incurred, although petitioners had never been billed. The exclusion of the fees from the litigation expense award eroded the compensatory portion of the judgment and in fact deprived petitioners of just compensation as required by both State and Federal Constitutions.

At this point the condemnation action was splintered into a malpractice action against Desmond and a conflict with Sherwood over the claimed balance of his fees. Sherwood had agreed to handle oral argument on the implied abandonment and litigation expense issue if petitioners agreed to give him a specific lien on any "additional" litigation expenses to be awarded by the Court of Appeal. Petitioners agreed and attorney Henderson prepared a document, which appeared to express this agreement in plain terms. When the Appellate Court refused to increase the litigation award to cover the additional fees claimed by Sherwood, he filed a motion in the original condemnation action to be paid out of the original judgment, contrary to the clear language of the agreement that such a lien would arise upon, and be solely payable out of any supplementary award by the Court of Appeal or by the trial Court on remand.

Prior to hearing on Sherwoods' motion for payment out of the condemnation fund, Henderson had been concurrently handling the malpractice against Desmond. Henderson was given summons and complaint for amendment and service on Desmond, and appeared to have the matter under control. The history of that action reveals the inadequacy of his representation.

Desmond filed his own action for payment of attorneys fees, and, in what was then described as "an abundance of caution" by Henderson, a cross-complaint in malpractice was filed in Desmonds' fee action.

Shortly thereafter and at a point in which Henderson had been handling the Desmond malpractice action, Desmond successfully obtained a dismissal for Hendersons' failure to timely return the original summons and proof of service. Petitioners were then forced to rely solely upon the cross-complaint. This put petitioners in the procedural posture of having filed malpractice of Desmond only after he had filed against petitioners for his attorney fees, a terrible disadvantage.

Petitioners continued to receive regular and extensive billings from Henderson for work allegedly performed in preparing for trial with Desmond. Henderson had the case for 3 years without even taking Desmonds' deposition or engaging in any substantial discovery whatsoever. Sherwood filed the motion for payment of his fees out of the condemnation judgment, which remained intact pending appeal of petitioners' motion to dismiss the condemnation for implied abandonment. Henderson declared a conflict based upon his preparation of the Sherwood

agreement and filed a motion to withdraw as petitioners' attorney of record. Both Hendersons' motion and Sherwoods' motion were scheduled for hearing the same day. Prior to the hearing of both motions, but while both were pending, Henderson appeared at a trial setting conference and committed petitioners to a trial date on the Desmond attorneys fee and malpractice case. Henderson then appeared at the motion to withdraw hearing and over petitioners' objections, was allowed to withdraw. The moment the order was out of Judge Wayne Wylies' mouth, Henderson was taking the witness stand to testify that he understood the Sherwood agreement he prepared to specify the conditions of payment to Sherwood to require payment immediately in full, out of the condemnation fund, and contrary to petitioners understanding, payment was not conditional upon recovery of additional amounts and even though he was petitioners attorney and used the term "lien", what he really meant was an assignment of a portion of the funds such that no separate action or trial was necessary for Sherwood to establish his right to the fees and payment out of the condemnation fund. Judge Wylie, incredibly granted the motion and Sherwood, was allowed to withdraw the sum of $13,231.65 immediately from the condemnation fund.

Now petitioners had to face a trial against Desmond, in pro per, to a complex malpractice case and were not prepared. Petitioners began a virtually statewide search to obtain counsel. Again, several factors consistently militated against any attorney becoming involved. The best petitioners could do was to obtain a conditional agreement to petition the trial court for a continuance of the trial date to allow discovery to be conducted by substitute counsel. Judge Wylie was not receptive to such a continuance and repeatedly berated petitioners for not having obtained counsel sooner, despite testimony that petitioners had contacted dozens of attorneys in the several months since Hendersons' withdrawal. At the continuance motion hearing, before Judge Richard Couzens, the attorneys for Desmond countered that they had discussed the case at length with the prospective attorney and his response was non-committal. Judge Couzens phoned the attorney and was not personally satisfied that he would accept the case if a continuance were granted. Judge Couzens denied the continuance request and petitioners were required to appear in propria persona at Desmonds' trial.

In petitioners' cross-examination of Desmond at trial, Desmond admitted the stipulation was a mistake, but he qualified his testimony by saying that he informed petitioners that "maybe" he had committed malpractice. Petitioners testified that his words were direct and unqualified, that he admitted he had committed malpractice by execution of the secret stipulation.

The trial Judge, Charles T. Fogerty, non-suited Petitioners on the cross-complaint, stating on the record that petitioners needed to have an expert witness testify that it was malpractice and that Desmonds' testimony and prior admission was not sufficient. Case law indicates an admission of negligence by a professional is sufficient to take the case to jury.

The jury verdict reduced Desmonds' fees from $69,556.72 to $48,000.00. Judge Couzens increased the amount by granting prejudgment interest to Desmond of $19,918.36. The prejudgment interest was absolutely unjustified because Desmonds' demand was always more than he was entitled to. Petitioners could not have avoided the accrual of interest except

by paying more than was owed. Petitioners were entitled to an offset which was unliquidated and had not been determined by a court or jury and was not therefore subject to calculation.

The failure to grant a continuance, the non-suit and the prejudgment interest award were all appealed. During the pendency of the appeal Desmonds' attorneys applied ex parte, for a writ of execution against the condemnation funds on deposit and obtained possession of the entire amount claimed, including the prejudgment interest, before petitioners were aware of the action.

Again, petitioners encountered Justice Keith F. Sparks, sitting on the panel at the state Court of Appeal, stating the denial of the continuance was not an abuse of discretion because of warning by the trial judge on several occasions to obtain new counsel and petitioners allegedly neglected or refused to do so. That the non-suit was also proper because petitioners needed an expert witness to establish damage as a result of the secret stipulation.

The trial court focused on the necessity of an expert to establish negligence, not damage, resulting there from. Damage was subject to proof, because Sherwood had to be employed to prosecute the appeal, to have the effect of the stipulation voided. The trial Court would have awarded fees in the first instance. The stipulation was secret, collusive and a fraud. Petitioners testified to the mental and emotional anguish it caused. Such is cognizable legal damage, which must come from the victim, not from the lawyer.

At this point petitioners turned to the actions and abuses of Henderson to provide some form of relief for the morass of actions taken and purportedly committed for petitioners' benefit over the prior three years.

Petitioners finally procured the services of yet another attorney, George Mandich, to pursue the malpractice action against Henderson. Mandich gave petitioners every indication of capability and desire to handle the malpractice action to conclusion. He was aware of petitioners' prior history of misfortune and he was particularly aware of petitioners' susceptibility to severe emotional distress and breakdown if we were once again abandoned or deceived by counsel. He assured us that he was a man of integrity.

As should be apparent by the course of things past, such was not to occur. Henderson complained for $15,000.00 "additional" fees, but quickly dismissed the action at the commencement of trial upon advice of counsel. However, Henderson did persuade the trial judge, George Yonehiro, to rule that any actions taken by Henderson after the order granting withdrawal was issued, was irrelevant and would not be discussed before the jury. This ruling was issued in response to a motion in limine to exclude evidence of any post-withdrawal conduct. The order could not have been more erroneous or contrary to statute, rules of ethics and existing case law.

Attorney Mandich asked Judge Yonehiro if he could conduct voir dire of petitioner William Zisk as an offer of proof to test the evidentiary limits of the court's ruling. This was allowed, but when Mandich inquired as to Henderson's conduct, the court stated that he was violating the

terms of the in limine order by inquiring into such matters. At this time, Henderson's counsel moved for a non-suit on the basis of insufficiency of the offer of proof.

While petitioner William J. Zisk was still on the stand with wife Lois E. Zisk in the audience, Mandich, our attorney, "left the courtroom". Everyone present assumed that the departure was temporary, but after a few minutes of silence, the court ordered the bailiff to summon Mr. Mandich back to the courtroom. Mandich was located at his car in the parking lot and stated that he would not be returning because of the court ruling.

The bailiff returned to court and reported Mandichs' response, which was a tremendous blow to petitioners. The fact that the nightmare could continue and even intensify in such a manner was and is beyond comprehension, beyond mere coincidence, misfortune, and literal belief. Judge Yonehiros' response was to question whether Henderson's counsel wanted to renew his non-suit motion. The motion was renewed. The court asked petitioners for any response, acknowledging that petitioners were operating under a "vast handicap". When no coherent response was forthcoming, the motion was granted and judgment entered for Henderson.

Petitioners filed Notice of Appeal in propria persona on August 4, 1986, discharging Mandich from representation in the process. When the members of the panel in the Third District Court of Appeal was announced to include Justice Keith F. Sparks, "again", petitioners requested recusal based upon prior involvement in the case to the point where he could not be impartial. This recusal motion was denied by written order dated March 22, 1988. A decision written by Justice Keith F. Sparks was issued April 13, 1988 which purports to grant a new trial against Henderson.

Respondents continued to purposefully and fraudulently increase the floodplain elevations on petitioners subject property from 146.0 feet to 151.0 feet above mean sea level.

On October 16, 1991, petitioners filed a complaint in Placer County Superior Court (No. S-1495) seeking (1) declaratory relief to determine validity of ordinance, Code of Civil Procedure § 1060 (2) damages for negligence and intentional tortuous conduct causing personal injury and property damage (3) intentional infliction of emotional distress.

The complaint was amended and served on respondents on October 14, 1994. On November 19, 1994 respondent moved to dismiss for lack of prosecution and in the alternative, demurrer to the verified complaint.

On December 27, 1994 pursuant to California Code of Civil Procedure § 170.3 (C), (1), petitioners filed objection to selection of Judge[s] James L. Roeder, J. Richard Couzens and James D. Garbolino. On the same date, pursuant to Code of Civil procedure § 170.1, petitioners filed statements of disqualification's for named judges to hear or participate in this matter. Respondents failed to respond within ten (10) days and were disqualified "as a matter of law". Respondents proceeded to "whiteout and back-date" court documents to avoid

disqualification and then Judge Roeder summarily dismissed petitioners complaint on January 30, 1995.

On February 14, 1995, petitioners filed in the Supreme Court of the State of California, a verified petition for review of the denial of writ of mandate by the Third District Court of Appeal. The California Supreme Court denied petitioners' petition for review on April 12, 1995.

On November 24, 1995 petitioners filed No. Civ.-S-95 2134 EJG/GGH in Federal District Court for violations of the Fifth and Fourteenth Amendments to the Constitution of the United States and conspiracy to violate and violation of petitioners civil rights.

The complaint was amended and served on respondents on February 6, 7, and 8, 1996. Absolutely "no written response", whatsoever, was received by petitioners from respondents, or the district court during the twenty (20) days that followed.

Judge Garcia voluntarily recused himself on February 29, 1996, due to his prior affiliation as a partner in respondent counsels' law firm of Porter, Scott, Weiberg & Delehant. Judge Garcia was replaced with Judge William A. Shubb, whom petitioners learned had his daughter, Carrisa A. Shubb, employed as an attorney with the very same respondent counsels' law firm, Porter Scott, Weiberg & Delehant.

Before Judge Shubb made "any" rulings in the case, petitioners requested his "immediate" recusal pursuant to title 28 U.S.C.A. § 455(a). Judge Shubb refused to recuse, refused to enter default and proceeded to summarily dismiss all but one (1) cause of action in petitioners' verified civil complaint, then recused.

Judge Shubb was replaced with Judge Garland E. Burrell Jr., who refused to vacate Judge Shubbs' orders, refused to enter default and then summarily dismissed petitioners last remaining cause of action.

The record in this proceeding is uncontroverted. Respondents are in default, have never been relieved of default and are still in default.

The history of this litigation has been spawned by respondents' deceptive and fraudulent actions so long ago. Petitioners have been the victims of a continuous stream of tortuous conduct engaged from 1967 forward and implemented and perpetuated by every attorney, trial judge and appellate justice who has participated thereafter. Laws designed to protect citizens and property owners from the tyrannous abuse of authority and power have been disregarded at every stage of litigation resulting from condemnation. The courts have refused to correct the abuse and lawlessness upon the fallacious and destructive justification that the end justifies the means. The abuses and injustices have continued with the participants undoubtedly encouraged by court inaction.

It is clear that something more than misfortune or coincidence is at work in these cases. Could such a tale be the product of our legal system operating within ordinary tolerances for error and occasional injustice? The legal system to this point has utterly failed because all participants' without petitioners' knowledge have combined to make it so. As a consequence, petitioners have improved their property by their own hands at tremendous expense of time and effort, forcibly removed from petitioners by fraudulent means, upon purported compensation that was itself preyed upon by voracious and unethical attorneys. Is this the true character of our constitutional rights and justice under our legal system?

Is it nothing more than a dangerous and foul back alley, populated by thugs who are free to gang up on all who enter seeking only what is promised at the entrance, impartial justice and the right to redress for wrongs committed? If it is not so characterized, how has it become so, for petitioners?

Petitioners pray for investigation that is not only necessary but appropriate to redress the wrongs obviously and demonstrable committed, to correct and punish the abuses chronicled herein. Petitioners have never had an opportunity to present to an impartial tribunal, the fraud and deceit and deprivation of constitutional rights practiced upon petitioners, which has taken petitioners' private property, years of petitioners lives, petitioners entire life savings, retirement securities, emotional tranquility, and petitioners right in pursuit of happiness to build the home of our dreams on our private property.

Issue orders to annul the eminent domain action Nunc Pro Tunc, based upon the extrinsic frauds perpetrated, including violations of due process, equal treatment and deprivation of just compensation allowed to pass uncorrected by the interested state and federal courts. Order the City of Roseville, California, and the attorneys and judges involved to show cause why the matters transpired have been allowed to mock our system of justice. Order each to show cause that any matter stated herein is not the absolute demonstrable truth, that there are definite unclean hands.

The present status of matters is a travesty of justice, and every moment it continues is a continuing infliction of pain upon petitioners and a decay of democracy. Windows have been broken out of our vehicles and home, the cabin trashed, outbuildings set on fire, strange people and vehicles on our property, crank calls and we fear daily for our lives. The recent deaths of my spouse Lois E. Zisk on November 22, 2000, and my son William Zisk Jr. on February 17, 2002 are very suspect. Petitioners pray this madness and abuse stops and that those perpetrating the terrorism be brought to justice, as the result to petitioners simply seeking to keep property that is rightfully ours, and not that of the City of Roseville.

The only resolution and relief that remains is complete investigation and prosecution by Federal and State Jurisdictional Authority.

Petitioners hereby respectfully request a full scale investigation to correct and vacate the massive continuous stream of controlling errors of law and abuses chronicled above.

"Thirty-five years ago", petitioners embarked on a project to build a home of our dreams on "our private property". The application as submitted to respondents was in full compliance with all land use zoning regulations and general plans at that time. Today, not only does petitioners not have the home of our dreams on our private property, but our property itself has been forcibly and fraudulently removed from our possession, for no lawful reason, whatsoever, after tremendous expenditures in preparation of our home site as required by respondents. Petitioners have been forced to expend vast amounts of litigation expenses and attorney fees defending respondents abusive and unwarranted actions, while respondents systematically and fraudulently down-zoned petitioners' entire 12.2 acre parcel to a public use as noted above.

During the course of this entire thirty-five (35) year ordeal, petitioners have never received one cent in any form of compensation, while being required to expend hundreds of thousands of dollars of our personal funds to defend the massive continuous stream of controlling errors of law and abuses chronicled above. Is this the true character of our constitutional civil rights?

I, William J. Zisk, declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this verified statement was executed on April 2, 2004 at Roseville, California.

_____

William J. Zisk

VERIFICATION

I, William J. Zisk, am the spouse of the deceased Lois E. Zisk in the above captioned matter. I have read the foregoing VERIFIED STATEMENT OF THE HISTORY OF THE PROPERTY OF WILLIAM J. ZISK AND LOIS E. ZISK, 205 THOMAS STREET, ROSEVILLE, CALIFORNIA 95678, and am familiar with its content. The matters stated herein based on personal knowledge and information are true and correct. If called to testify as a witness in this matter I can competently testify as to matters of fact.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this April 2, 2004 at Roseville, California, 95678.

William J. Zisk
205 Thomas Street
Roseville, California 95678-1858
Telephone: (916) 782-2233

As to the alleged claim of ownership of Zisk property, Assessors Parcels No.(s) 013-040-003 and 013-040-005 by the City of Roseville, on March 23, 2004 William J. Zisk hand carried a written request under the public information act to Roseville city attorney, Mark Doane to provide me with an immediate written response to twelve (12) direct questions relating to the City of Rosevilles' alleged claim to legal title ownership of parcel(s) 013-040-003 and 013-040-005. The March 23, 2004 letter to Mr. Doane was as follows:

23

William J. Zisk
205 Thomas Street

MAR 2 3 2004
CITY ATTORNEY

March 20, 2004

Mark J. Doane
City Attorney
City of Roseville
311 Vernon Street
Roseville, CA 95678

RE: Parcels: 013-040-003-000
013-040-004-000
013-040-005-000

Subject: LEGAL TITLE OWNERSHIP

Mr. Mark J. Doane:

As the city attorney for the City of Roseville, you have publicly stated City fee simple title ownership of all or portions of parcels 013-040-003, 013-040-004, and/or 013-040-005. Pursuant to the Public Information Act, provide me with an immediate written response to the following:

1. THE EXACT DATE(S) OF PURPORTED ACQUISITION.

2. THE EXACT APPRAISED VALUE(S) OF EACH OF THE PURPORTED ACQUISITION(S).

3. THE ZONING AND LAND USE DESIGNATION OF EACH OF THE PURPORTED ACQUISITION(S) ON THE DATE(S) OF PURPORTED ACQUISITION(S).

24

4. THE EXACT DATES OF NEGOTIATIONS FOR THE PURPORTED ACQUISITION(S).

5. THE EXACT REASON(S) OR PURPOSE(S) THAT REQUIRED THE PURPORTED ACQUISITION(S).

6. THE SPECIFIC PROJECT(S) THAT REQUIRED THE PURPORTED ACQUISITION.

7. THE SPECIFIC PUBLIC NECESSITY THAT REQUIRED THE PURPORTED ACQUISITION(S).

8. THE EXACT DATE(S) IN WHICH THE PAYMENT OF THE TOTAL SUM OF THE ACQUISITION(S) WAS PURPORTEDLY PAID TO WILLIAM J. ZISK AND LOIS E. ZISK.

9. THE EXACT DATE(S) IN WHICH THE CITY PURPORTEDLY TOOK POSSESSION OF THE PURPORTED ACQUISITION(S).

10. THE EXACT DATE(S) IN WHICH THE CITY FULFILLED THE CEQA REQUIREMENT FOR THE PURPORTED ACQUISITION(S).

25

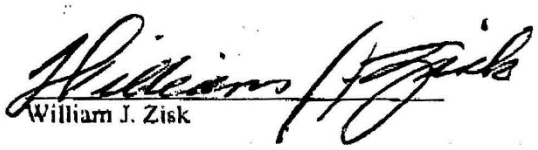
11. THE EXACT DATE(S) IN WHICH THE CITY PROVIDED A PUBLIC HEARING FOR THE BENEFIT OF WILLIAM J. ZISK AND LOIS E. ZISK REGARDING THE PURPORTED PUBLIC NECESSITY FOR THE PURPORTED ACQUISITION(S).

12. THE EXACT DATE(S) IN WHICH THE CITY ACQUIRED ANY AND ALL ADJOINING PARCEL(S), INCLUDING EXACT TOTAL ACREAGE, TOTAL APPRAISAL VALUE, AND TOTAL ACQUISITION PRICE, THE PURPOSE OR PUBLIC NECESSITY OF THE ACQUISITION(S), THE DESIGNATED ZONING AND LAND USE FOR EACH PARCEL, AND THE DATE(S) IN WHICH THE CITY TOOK POSSESSION.

If you have any question(s) on the foregoing, please do not hesitate to contact me immediately at the above.

Thank you for your courtesy.

Sincerely,



26

On March 24, 2004, at approximately 5:15 p.m., city attorney Mark Doane hand carried a large brown envelope to me at my residence at 205 Thomas Street. The envelope contained nine (9) pages, purportedly in response to the twelve questions that William J. Zisk had hand carried to him at his office at 311 Vernon Street the day before, regarding his claim of ownership by the City of Roseville of Parcel(s) No.(s) 013-040-003 and 013-040-005 of the Zisk property. The brown envelope contained a two page letter dated March 24, 2004 addressed to William J. Zisk from city attorney Mark Doane, summarizing a small isolated "portion" of thirty-one (31) years of litigation between the City of Roseville and William J. Zisk and Lois E. Zisk; a three page document entitled final order of condemnation, dated April 19, 1982 and August 30, 1983; a copy of a one page document entitled order re trust funds on deposit, dated April 9, 1982; a copy of a document entitled accounts payable document in the amount of $99,329.57 to William J. Zisk and Lois E. Zisk, dated April 9, 1992; a copy of a one page document entitled County of Placer office of auditor-controller admittance advice with a copy of a check in the amount of $99,329.57 to William J. Zisk and Lois E. Zisk, dated April 17, 1992; a one page copy of an envelope postmarked April 20, 1992, purportedly addressed to William J. Zisk and Lois E. Zisk. The nine page contents of the brown envelope clearly does not support any claim of ownership by the City of Roseville of Parcel(s) No.(s) 013-040-003 and 013-040-005 of the Zisk property, nor does it respond to the twelve questions regarding claim of ownership posed to city attorney Mark Doane by William J. Zisk on March 23, 2004.

Review of the above twenty (20) page VERIFIED STATEMENT OF THE HISTORY OF THE PROPERTY OF WILLIAM J. ZISK AND LOIS E. ZISK, 205 THOMAS STREET, ROSEVILLE, CALIFORNIA 95678, will controvert any and all claims of ownership by the City of Roseville.

Mr. Doane did not respond to any and all of the twelve questions regarding ownership.

There is no valid response to any of the questions which are simple requirements to obtaining ownership. The City of Roseville does not hold ownership of any part of the Zisk property. A thorough investigation is needed to resolve this matter.

For clarification purposes the nine page contents of the brown envelope hand delivered by Mr. Doane on March 24, 2004 to William J. Zisk at his residence on the subject property at 205 Thomas Street, Roseville, California 95678 is as follows:

27

CITY OF ROSEVILLE
TRADITION · PRIDE · PROGRESS

City Attorney
311 Vernon Street
Roseville, California 95678-2649

March 24, 2004

Mr. William J. Zisk
205 Thomas Street
Roseville, CA 95678

Dear Mr. Zisk:

This responds to the letter you hand delivered to me yesterday, March 23rd, regarding the City of Roseville's acquisition of a portion of your property for public purposes. Preliminarily, I need to note that on a number of past occasions you and I have reviewed the same information and questions contained in your latest letter. The matters referenced in your letter stretch back over a thirty-one year period and involve no less than six state or federal lawsuits [1] including appeals, not to mention numerous related lawsuits between you and the lawyers who represented you in those actions. Since you were the primary litigant in all of those cases, and since I only arrived on the scene in 1994, your memory and files are undoubtedly more extensive than mine. Accordingly, this letter will not attempt to exhaustively list every milepost in your lengthy dispute with the City. Rather, I intend to concentrate on the core issues: the City's ownership of the property in question; the amount and location of the funding for the acquisition; and the public necessity for the acquisition.

The City's acquisition of the property referenced in your letter dates back to a Final Order of Condemnation issued by the Placer County Superior Court on April 19, 1982 (copy attached). That Final Order condemned a fee simple ownership interest in the property to the City of Roseville for "public park, recreational, bicycle, hiking and maintenance purposes". The Order further notes that the City had deposited with the Court the correct amount of money to pay for the property, including interest and costs.

Following the entry and recording of that Final Order of Condemnation, you filed several appeals, and lawsuits were exchanged between you and your lawyers [2] that resulted in adjustments being made to the amount that the City had deposited with the Court. For example, attorney Sherwood succeeded in obtaining a court order permitting him to withdraw $13,231 from the condemnation deposit to satisfy unpaid legal billings. At any rate, once the dust from all that litigation settled the Placer County Superior Court

[1] City vs. Zisks (1973) Placer Superior Court No. 41104 (Condemnation); Zisk vs. Roseville (1984) Placer Superior Court No. 69081 (Flood Ordinance); Zisk vs. Roseville (1986) Placer Superior Court No. 77050 (Flood Damage); City vs. Zisk (1989) Placer Superior Court No. 84527 (Nuisance); Zisk vs. City (1994) Placer Superior Court No. S-1495 (Zoning Ordinance); Zisk vs. City (1995) Federal District Court No. CIV-S-95-2134 EJG (Civil Rights)

[2] For example: Desmond vs. Zisk, Superior Court No. 54839; Sherwood vs. Zisk, Municipal Court No. CV 2-93; Zisk vs. Henderson – case citation unknown

28

issued an Order on April 9, 1992 which noted that the remaining monies on deposit in the (now 19 year old) condemnation action had not been claimed by the Zisks, even though the case had been "fully litigated and final judgment...entered" in the case. The Order therefore, ordered the court clerk to pay over the remaining funds in the account over to you and your wife (a copy of the Order is attached).

The court clerk and the County Auditor complied almost immediately. A check in the amount of $99,329.57 and payable to you and your wife was issued on April 17, 1992. The check was mailed on April 20, 1992 (copies of the accounts payable warrant, the check and the postmarked envelope are attached). For reasons unknown to me, you never cashed that check. Later, due to a change in the law the account holding the deposited condemnation proceeds was transferred from Placer County to the State Treasurer's Office, where it remains to this day. The account contained $71,210.55 in June, 1994. The City has had no power or control over the account since at least the April 9, 1992 court order. I am informed that you may withdraw the remaining funds on account at any time you choose.

Finally, I draw your attention to the last two lawsuits listed in footnote 1. Recall that in those lawsuits you challenged a variety of City zoning, floodway and bike trail project activities under a variety of legal theories, including inverse condemnation, conspiracy to violate civil rights, intentional infliction of emotional distress and declaratory relief. Those lawsuits (and appeals) were decided against you and the cases were ultimately dismissed with prejudice. That means that you are legally barred from relitigating those issues or facts.

Sincerely,

MARK J. DOANE
City Attorney

The purpose of the DEIR is to identify, assess and quantify the impacts associated with the proposed development of a proposed bicycle trail within the Dry Creek corridor between Harding Boulevard and Royer Park on the physical, biological and socio-economic aspects of the Roseville community.

William J. Zisk and my deceased spouse, Lois E. Zisk have been resident property owners within the City of Roseville during the course of the past fifty (50) years and currently the owners, since 1966, of the 12.2 acre parcels located at 205 Thomas Street, commonly identified as assessor parcel(s) number(s) 013-040-003, 013-040-004 and 013-040-005, which includes approximately 1500 feet of Dry Creek. I/We have been consistently responding to a multitude of "proposed" bicycle trail environmental impact reports, which would directly impact our property located at 205 Thomas Street. We have consistently expressed our extreme opposition to any such proposal which has and would continue to significantly impact our property. CEQA requires the EIR to address the cumulative impacts in a unified and effective way and provide an individual project-level analysis.

For the record in this DEIR, I wish to continue to express my objection and extreme opposition to any consideration of a proposed bicycle trail on the north side of Dry Creek for the following reasons:

In order to understand the magnitude of impacts of such a proposal, it is necessary to summarize the thirty-five (35) year history of significant impacts endured by the Zisk family at 205 Thomas Street, which predate the suspect premature wrongful deaths of my spouse, Lois E. Zisk, on November 22, 2000 and my son William Zisk Jr. on February 17, 2002.

In 1966, William J. Zisk and Lois E. Zisk (Zisks') purchased the property at 205 Thomas Street (subject property), which consists of 12.2 acres geographically located in the center of Roseville and contiguous to a section of Dry Creek. The zoning and land use at that time was R1 and R1-FP, single family dwellings, medium density, and was in full compliance with the General Plan of the City of Roseville.

The Zisks have conducted a Sand and Gravel and Trucking business in Roseville since 1952, and have operated that business at 205 Thomas Street, Roseville, CA since 1966, in the same non-conforming use as did the prior owner of the subject property, and the one prior, dating back to the turn of the century.

In 1966 the Zisks embarked on a massive project to clean and restore the subject property, which had been allowed to deteriorate into an eyesore and community health problem. The primary intent of the Zisks was to construct a new home on a portion of the subject property situated adjacent to the secluded peaceful and beautiful natural setting of Dry Creek.

In the beginning of 1967, the Zisks applied to the Roseville Planning Commission for a use permit to construct a new home on the subject property. At the use permit application public hearing of **February** 23, 1967, the city attorney, who was in attendance in an advisory capacity was Keith F. Sparks. The commission conditionally approved the application of the

37

Zisks and continued the hearing to allow the Zisks to fulfill the requirements of the permit application. No time constraints were placed on the Zisks at the hearing, in which to complete the conditional requirements for the permit. The Zisks did in fact immediately commence the required massive streambed improvement project on Dry Creek through the subject property, which was completed on October 1, 1973.

On **March 30, 1967** the Zisks, received Streambed Alterations Notification No. 976 from the California Department of Fish and Game, purchased a dragline (dredger), and did in fact commence the major improvements to the portion of Dry Creek that traverses the subject property, as required by the Roseville Planning Commission as a condition of issuance of the use permit to construct a new home on the subject property.

Beginning in early 1968, the City of Roseville, through the City Council members, city attorneys, city commission members, agents, and City employees purposefully embarked on a vexatious, conspiratorial and collusive scheme to intentionally seize, damage and deprive the Zisks of any and all economic use and enjoyment of the subject property, in violation of the Fourth, Fifth, and Fourteenth Amendment of the Constitution of the United States, and Article I, Section 1, Section 3, Section 6, Section 7(a) & (b), Section 9, Section 13, Section 15, Section 16, Section 17, Section 19, Section 24 and Section 26 of the Constitution of the State of California.

The scheme was initiated by the City Council on **March 20, 1968** by adoption of a Park, Streambed and Recreation Element of the General Plan of the City of Roseville. The only property which has been effected by the adoption of this plan is the subject Zisk property. The plan envisioned the use of open space and floodplain zoning as a means of preserving future park sites. All of the subject Zisk property was shown on the plan for future use as a public park for the City.

Thereafter, the members of the Roseville City Councils, commissions, and city employees proceeded to adopt a series of Open Space and Floodplain Zoning Regulations which were calculated to fraudulently prevent the Zisks from any use, return or enjoyment of the subject property at 205 Thomas Street, Roseville, California 95678.

While other similarly situated properties within the City were permitted to use and enjoy their property, the Zisks were held in a falsified restraint, and the council members, commissions, and city employees proceeded with a policy of "selective enforcement" of the adopted Ordinances and Regulations

On **March 20, 1968,** by Resolution No. 68-21, the Roseville City Council adopted a Park, Streambed and Recreation Element of the General Plan of the City of Roseville, showing the entire subject Zisk property, to be planned for future use as a public park.

On **December 8, 1971,** the Roseville City Council adopted Emergency Ordinance No. 1158, AN INTERIM ORDINANCE PROHIBITING CONSTRUCTION UPON OR GRADING OF PROPERTY WITHIN CERTAIN AREAS SUBJECT TO FLOODING ADJACENT TO DRY, LINDA, CIRBY AND ANTELOPE CREEKS AND STRAP RAVINE, UNLESS A PERMIT HAS BEEN ISSUED. The Zisks applied for the required permit and on March 3, 1972 the Public Works Director,

Frederick L. Barnett, issued a grading permit to Bill Zisk to excavate the vicinity of Dry Creek, and to place excavated material adjacent to Dry Creek on the subject property, as shown on the submitted plan dated 1-24-72. The permit was issued pursuant to Chapter 70 of the Uniform Building Code and the requirements of the Department of Fish and Game of State of California. This permit was granted pursuant to Ordinance No. 1158, adopted by the City Council on 12-8-71, and was for the purpose of completing the channel improvements to Dry Creek as required by the use permit application submitted by the Zisks on February 23, 1967.

On **March 23, 1972,** the Zisks received a letter of approval from Public Works Director, Fredrick L. Barnett to place a barbwire type fence on the property boundaries in order to discourage trespassers and control livestock.

On **August 30, 1972** the City Council, by Resolution No. 72-75 approved AN INTERIM OPEN SPACE PLAN - GENERAL GOALS AND POLICIES AND ACTION PROGRAM. The plan envisioned the Zisk property be designated as open space.

On **November** 29,1972 the City Council adopted Ordinance No. 1190 - ENACTING ARTICLE 8A OF THE CODE OF THE CITY OF ROSEVILLE RELATING TO ENVIRONMENTAL REVIEW OF PERMITS ISSUED BY THE CITY OF ROSEVILLE AND DECLARING THE SAME TO BE AN EMERGENCY MEASURE TO TAKE EFFECT IMMEDIATELY.

On **March 1. 1973** the Zisks submitted a request to the City Planning Department for a parcel map and lot split to create a parcel for the purpose of obtaining a loan to build a new home for the owners.

On **March 14, 1973,** the City Planning Department made a determination that an environmental Impact Report was now required in connection with the Zisk permit application, despite the fact that the use permit application was submitted on February 23, 1967 and the project was commenced long before the California Environmental Quality Act (CEQA) of 1970 was enacted, and the request was in full compliance with all existing city ordinances and land use regulations, and the property was properly zoned for the intended use. The Roseville planning department made the following findings:

It is expected that the proposed parcel map and ultimate single family development of Parcel "A" will have a non-trivial effect on the environment because:

1. *Parcel ' A " is located within the floodplain of Dry Creek*
2. *Parcel "A " is included in the Park and Streambed Plan for public use and development.*

On **March 22, 1973** the Zisks appealed the denial of the request for a parcel map and lot split.

On **April 25, 1973** the City Council upheld the Planning Departments denial of the request for a parcel map and lot split, and further directed that an Environmental Impact Report be required before any further processing of the Zisk's February 23, 1967 permit application.

39

On **April 25, 1973** the Public Works Director, Fredrick L. Barnett sent a letter to the Zisks, advising them to cease all work within 75 feet of the waters' edge of Dry Creek on their property and re-apply for a new permit to complete the 2-23-67 use permit application requirements.

In **May, 1973** the City received the results of their requested study conducted by the U.S. Army Corps of Engineers in Sacramento entitled, FLOODPLAIN INFORMATION, DRY CREEK AND TRIBUTARIES, ROSEVILLE, CALIFORNIA, MAY 1973. It showed that a small portion of the Zisk property adjacent to Dry Creek was within the limits of a projected 100year flood. However, the maps submitted to the Corps by the City in making this determination were flown on **February 4, 1956 and April 18, 1956** and in no way reflected the physical topography of the streambed on the Zisk property in **May *1973*** especially taking into consideration the improvements to the channel of Dry Creek the Zisks had made, which improved the flow capacity by 200%. This fact was brought to the attention of the City who then requested the Corps of Engineers conduct a special study of the Zisk property. This new study revealed that the Zisk property was above and outside the projected 100-year floodplain elevations and that the Corps did not object to the building of a new home at the designated location. The City has never accepted this revised position.

Between **May 11 and June 8, 1973** the Zisks did in fact re-apply to various agencies within the City and the State of California Fish and Game for renewal of the permits, which were subsequently granted on **June 8, 1973.**

On **June 1, 1973,** the Zisks, through their engineer, Atteberry & Associates of Roseville CA., filed an Environmental Impact Report with the City, examining the effect on the environment of the construction of a single family home on a half acre portion at the westerly boundary of the Zisk property. The EIR summarized the following at page 14:

> *"The proposed project is the culmination of a seven year program undertaken by the Zisk family in 1967 to clean up and improve a portion of creek side property that had been exploited for many years and allowed to deteriorate into an eyesore and community health problem. It is in compliance with existing zoning and has no longrange unavoidable adverse impacts. The work accomplished to date by the Zisk family indicates the quality of their goals and the ultimate benefit to the community in improved health conditions and scenic qualities "*

On **June 20, 1973** the City Council adopted an Open Space and Conservation Element to the General Plan by Resolution No. 73-56, which changed the land use designation of the Zisk property from R-1 and R-I-FP, single family dwellings, to open space for park purposes.

On **July 13, 1973** the Corps of Engineers reported to the City Planning Department that the proposed lot split and construction by the Zisks would not have a significant effect on water surface elevations in the floodplain and the Corps did not object to the construction of the Zisk family new home.

On **July 24, 1973** the City Planning Director, Leo Cespedes, wrote to the Corps of Engineers asking them to restudy their determinations and further stating that the planning Department would withhold further processing the Zisk application for a Lot Split and Use Permit until a reply was received from the Corps of Engineers.

On **August 29, 1973** the City Council adopted a "tentative" plan for a "proposed trail system" on Dry Creek, but only through the Zisk property, and directed staff to send notification to Mr. Zisk. No other upstream or downstream property owners were notified or effected.

On **August 31, 1973,** the Director of Public works for the City of Roseville Frederick L. Barnett wrote to the Corps of Engineers, summarizing a determination of the Roseville Floodplain Committee that no development be allowed within the designated primary floodway, and the secondary zone of floodway fringe be utilized for greenbelt, agricultural, parks and recreation uses.

On **September 5, 1973** the Public Works Director Frederick L. Barnett in commenting on the **June 1. 1973** Environmental Impact Report submitted by the Zisks, wrote to the Planning Director and advised that although his determination of the work of excavating and grading done by the Zisks on the subject property showed a rise in the floodplain on the property, the decisive fact in evaluating the Environmental Impact Report was that construction of the home by the Zisks on the proposed lot would interfere with the "tentative" proposed bicycle path and streambed acquisition, and that, therefore the Zisk project would have an adverse impact on the environment.

On **September 7 1973** the Roseville City Manager, Robert Hutchison, wrote to the Zisks and officially notified them that the City intended to acquire portions of the subject property for a "tentative" plan for a bicycle trail and that the City's project was in conflict with the **Zisk's February 23, 1967** plan to build a home on a half acre portion of the subject property.

On **September 10, 1973** the City Planning Director wrote a memorandum to the Planning Commission recommending denial of the Zisks permit because no final Corps of Engineers report had been received as of yet and because the Zisks' development of their property interfered with and was in conflict with the "tentative" proposed bicycle path.

On **September 13, 1973** the Roseville Planning Commission denied the Zisks' application. Evidence submitted at the hearing in opposition to the Zisk application, was the proposal to build a home on the subject property conflicted with the Park and Streambed Plan, the Open Space Element of the General Plan, and the plan for proposed acquisition of a bicycle trail across the *subject* property. No adjacent property upstream or downstream was affected.

Pursuant to Notice of Appeal by the Zisks of the Planning Commission denial of the Zisk application for a permit, the Roseville City Council did on **October 3, 1973**, deny the appeal by the Zisks, ***"on the basis of evaluation by the City of the Environmental Impact Report, the conflict with the bike and pedestrian trail as tentatively approved by the City Council and conflict with its development, and further, that the plan is in conflict with the Park and Streambed Element of the General Plan, and the Council give notice that City intends to purchase a bike and pedestrian trail system along the streambed ".*** During the public

41

hearing the Public Works Director, Frederick L. Barnett, stated that the Zisks home site was above and outside of the 100-year floodplain. Since October 3, 1973 the Zisks did no further physical development on their property.

On **October 5, 1973**, there was a joint meeting between the Roseville Planning Commission and the City Floodplain Commission for a public hearing on Ordinance No. 1224 which was the Floodplain Ordinance to preserve everything within the boundaries as natural area for park and recreation and that the application to buy the Zisk property was consistent with the Park and Recreation element of the General Plan. No other property was affected.

On **October 25, 1973** the Roseville Planning Commission passed Floodplain Ordinance No. 1224, finding the ordinance consistent with the Open Space and Conservation element and the Park and Streambed Plan.

On **November 1, 1973,** the attorney for the Zisks, Richard F. Desmond, filed a Writ Of Mandamus in Placer County Superior Court (No. 40862) to require issuance of the qualified permit application. Within 30 days, Roseville City Attorney, William Owens, answered the Writ Of Mandamus filed by defense attorney Desmond. In furtherance of this collusive conspiratorial scheme, all further proceedings on the Writ Of Mandamus, Placer Superior Court No. 40862, were abandoned by both attorneys.

On **November 12, 1973,** the Zisks attorney, Richard Desmond filed with the City of Roseville, a claim for damages for Inverse Condemnation of their property.

On **November 26, 1973**, the City Attorney, William Owen, wrote a letter to the Mayor and City Council stating that one of the purposes of the Floodplain Ordinance is to protect Open Space and Parks and Recreation.

On **November 27, 1973** a special meeting of the Roseville Planning Commission was held to discuss acquisition of the Zisk property.

On **November 28, 1973** the City Council adopted Floodplain Ordinance No. 1224, and Floodplain Zoning Ordinance No 1227. The Zisk Property was rezoned from R-1 and R1-FP to permanent Floodway and Floodway Fringe (FW & FF).

In furtherance of the plan and scheme, on November 28, 1973 the City Council down zoned virtually the entire Zisk property to permanent floodplain (FF & FW). Prior to the down zoning, both the U. S. Army Corps of engineers and the Director of Public Works for the City of Roseville, Frederick L. Barnett, publicly acknowledged during the hearings, that the majority of the Zisk property was above and outside the limits of the 100-year floodplain. Numerous other properties throughout the city, including City property, that had been designated by the U. S. Army Corps of Engineers as being within the 100-year floodplain, were completely excluded from the boundaries of the 100-year floodplain on the Official Floodplain Zoning Map of the City of Roseville, and were allowed to be completely developed. The Zisk property is the only property that is above the 100-year floodplain that has been placed within the boundaries of the 100-year floodplain.

42

An actual controversy has arisen and now exists in that the floodplain zoning ordinances are tortuously false, discriminatory, invalid, illegal and unenforceable, both on their face and as construed, because they placed the subject Zisk property under floodplain zone restrictions, when the property is above the 100 year floodplain elevation, thus decreases value and prohibits the full use and enjoyment of the subject Zisk property, all of which is in violation of the Fourth, Fifth, Thirteenth and Fourteenth Amendments of the Constitution of the United States, the deprivation of Civil Rights under Title 42 of the U.S. Code, Sections 1983 and 1985, and Article I, Sections 1, 3, 6, 7, (a) (b), 9, 13, 15, 16, 17, 19, 24, and 26 of the Constitution of the State of California.

On **December 6, 1973** the Roseville Planning Commission met again to consider acquisition of the Zisk property and ended up in a tie vote.

On **December 19, 1973** the Roseville City Council acted on the Zisk claim for damages. The claim was partially approved by the Council, but the amount of damages was denied.

On the same date and time, **December 19, 1973** the City Council duly adopted Condemnation Resolution No 73-122, authorizing acquisition of over half of the Zisk Property. The Zisks were not given an opportunity to be heard before or during adoption of the Resolution to condemn.

Prior to filing of the eminent domain action in Placer County Superior Court (No. 41104), the Zisks were never made an offer of settlement for their property, nor had their property been appraised by the City, nor had the City complied with the California Environmental Quality Act of 1970, nor did the City have an officially adopted "project", nor did the City make any attempt to acquire any adjoining property upstream or downstream of the Zisk property.

On **December 20, 1973**, the City Council voted to institute an action in eminent domain (Placer County Superior Court No. 41104), to take over one half (1/2) of the Zisk property for the "tentative" plan for a bicycle trail across the Zisk property. Prior to the filing of the eminent domain proceeding:

1. The Zisks were not given an opportunity to be heard at a public hearing before the adoption of a Resolution of Intent to Condemn (NO. 73-122).
2. There was no adopted "project" to necessitate condemnation.
3. There was no compliance with the California Environmental Quality Act (CEQA) of 1970.
4. There was no compliance with the requirements of Government Code Sections 7267.1 to 7267.7 inclusive.
   (a) No negotiations to acquire the Zisk property.
   (b) No appraisal of the Zisk property.
   (c) No offer of just compensation for the taking and damaging of the Zisk property.

The eminent domain proceeding (No. 41104) was filed on **December 20, 1973,** but the actual trial was delayed until **November 1, 1977.** During the four-year delay in furtherance of this collusive conspiratorial scheme, Plaintiff City Attorney, G. Richard Brown, and defense attorney, Richard F.

Desmond, "secretly" waived the statutory rights of William and Lois Zisk to recover their litigation costs in the eminent domain proceeding. And, in furtherance of this scheme, during the pleading stage and before the eminent domain action went to trial, the Third District Court of Appeal rendered a published opinion (ZISK v. CITY OF ROSEVILLE: 56C.A.3d41:127 Cal.Rptr.896), which was based on a complete reversal of the timing of the factual chronology of the merits of this action (Placer Superior Court No. 41104). The record in these proceedings verifies that fact.

Since the filing of the eminent domain proceeding (No. 41104) on the Zisk property on **December 20, 1973,** no other property within the entire City of Roseville has ever been condemned for a "tentative" plan for a bicycle trail.

On **December 20. 1973** the City of Roseville filed eminent domain action No. 41104 in Placer County Superior Court. Five (5) minutes later on the same date, Inverse Condemnation Action No. 41105 was filed by the Zisks attorney, Richard F. Desmond. The proceedings in the Inverse Condemnation Action No. 41105 were abated and were subsequently raised in the Eminent Domain Action No. 41104 by answer and cross-complaint. The inverse condemnation issues raised by the cross-complaint were abated by order of the trial court, and have not been heard by any court to the present date.

In furtherance of this collusive conspiracy, the former City Attorney, Keith F. Sparks, had extensive prior involvement with circumstances of this proceeding. First, as an attorney representing the City of Roseville, second, as a superior court judge presiding over aspects of the original eminent domain proceeding (No. 41104), and third as an associate Justice of the Third District Court Of Appeals. As attorney for the City of Roseville, Keith F. Sparks advocated then on behalf of the passage of a Floodplain Ordinance, which ultimately provided a vehicle for the City of Roseville to seize the Zisk property. As a superior court judge, he presided over the pretrial conferences in the Eminent Domain Action No. 41104, and made rulings excluding from the jury's consideration, important issues regarding the City's fraudulent use of open space and floodplain zoning to freeze development of the Zisk property.

Moreover, given the prior, personal participation of Keith F. Sparks (former City of Roseville attorney) in the decision-making process that underlies every piece of litigation generated at a time prior to his appointment as a Superior Court Judge, and Justice of the Third District Court of Appeal, it would appear that all contact with the case in a judicial role was and remains objectionable.

Keith F. Sparks (former City of Roseville attorney) presided as an appellate justice of the panel considering an appeal in a related case, attorney Richard F. Desmond v. William and Lois Zisk, 3 Civil 24543, which involved a cross-complaint for legal malpractice against the attorney representing the Zisk interests in the Eminent Domain Action No. 41104. In fact, Justice Sparks personally authored the opinion, which upheld the granting of a non-suit in favor of attorney Desmond, despite sufficient legal evidentiary support for a contrary ruling.

Keith F. Sparks (former City of Roseville attorney) presided as an Appellate Justice of the panel considering an appeal in another related case, Henderson v. Zisk and related cross-actions, 3 Civil 0000651 (26512), (Placer Superior Court No. 70229), which involved a cross-complaint for legal

malpractice against the Zisks attorney Henderson for his representation in the legal malpractice against Attorney Richard Desmond, in the Citys' Eminent Domain Action No. 41104. Keith F. Sparks (former City of Roseville attorney) also authored the Appellate opinion in that Appeal.

The City of Roseville filed the Eminent Domain proceedings, Placer Superior Court No. 41104, against the Zisks on **December 20. 1973.** The action was delayed, and did not proceed to trial until **November 1, 1977,** and was concluded on **December 15, 1977.** At the concluding portion of the Jury trial, on **November 23. 1977** the Zisks were informed by their defense counsel Desmond, of the "secret" waiver of the Zisks statutory rights to recover their litigation cost. The "secret" waiver had been signed by Attorney Desmond and City of Roseville Attorney, G. Richard Brown, on **November 6, 1974.** The Zisks were completely unaware of the "secret" waiver during the entire 3 years of representation by Attorney Richard F. Desmond.

In furtherance of this collusive conspiratorial scheme, on **March 21, 1978** the Interlocutory Judgment was entered in the City of Rosevilles' eminent domain proceedings, Placer County Superior Court No. 41104. The relevant pertinent portion of the judgment reads as follows:

> "It is hereby ordered, adjudged and decreed that the just compensation to be paid for the taking of Parcels A and B - - - is the amount of $96,381, which is the amount assessed by the verdict herein, together with interest thereon at the rate of seven percent (7%) per annum from the date of entry of Judgment herein to the date of payment of said total sum into court."

The final date that the City of Roseville was to pay the "total sum" of the judgment into court was **May 15,1981.** The City made late partial token payments into the court on **May 18,1981; October 13, 1981; June 14,1983; August 22.1983;** and **December 19,1983.** However, the City of Roseville has never paid the "total sum" of the judgment into Court, and consequently, the Zisks have never received one cent in any form of compensation to the present date.

In furtherance of the collusive plan and scheme, commencing in 1970, the City Councils, Planning Commissions, and city employees have purposefully embarked on a program to allow the streambeds and floodways within the City to be overgrown and congested, so as to obstruct and impede the free flow of floodwaters. In addition, chain link fences, footbridges, pipelines, and structures were placed across and within the floodway to further impede the passage of floodwaters. In addition, floatable materials and debris was allowed to be stored in the floodway during the winter rain season. In addition, City landfill dumpsites were maintained within the floodway, raising the land elevations within the floodway to further impede the flow of floodwaters and create uncontrolled detention facilities. In addition, fill materials, roadbeds and bridge structures were placed across the floodway, to further impede the passage of floodwaters.

In 1983 the City entered the Federal Emergency Management Agency (FEMA) flood insurance program. FEMA had conducted a study of the Dry Creek Drainage Basin within the City of Roseville, based on information and data obtained from the U.S. Army Corps of Engineers. The results of the FEMA/Corps of Engineers study placed the majority of the Zisks property above and

outside of the limits of the 100-year floodplain. The 1983 FEMA 100-year Flood Boundary Map places the Zisk property in Zone ***"B", above*** the 100-year floodplain.

On **November 30, 1983** the Roseville City Council adopted floodplain ORDINANCE NO. 1751, ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE REPEALING AND REENACTING ARTICLE 23 OF ORDINANCE 802, THE ZONING ORDINANCE OF THE CITY OF ROSEVILLE, RELATING TO REGULATION OF LAND USE IN FLOOD PRONE AREAS. In adopting Ordinance No. 1751, the City Council merely changed the text of the Ordinance to qualify for participation in the FEMA flood Insurance program. However, the boundaries of the l00-year floodplain were not changed to coincide with the 100-year floodplain boundaries as depicted on the 1983 FEMA Flood Boundary Map, which places the *subject* Zisk property in Zone "B", above the 100-year floodplain. In furtherance of the collusive plan and scheme, the subject Zisk property is the only property above the established 100-year floodplain boundary elevations on the 1983 FEMA Flood Boundary Map, that remained in the fraudulent 100-year floodplain zoning designation on the Official Floodplain Zoning Map of the City of Roseville, dated **October, *1973.*** Numerous other parcels of land, including City parcels, that were designated within the 100-year floodplain boundaries on the 1983 FEMA Flood Boundary Map, were excluded from the 100-year floodplain map as depicted on the Official Floodplain Zoning Map of the City of Roseville, dated **October 1973,** and were allowed to be filled and fully developed.

During 1983, the city attorney for the City of Roseville, Michael Dean, filed a criminal misdemeanor action in Municipal Court of Placer County at Roseville, Case No. 8062, falsely charging William J. Zisk with an alleged violation of the Zoning Ordinance of the City of Roseville. No evidentiary support was ever submitted to support the alleged zoning violation and the cause of action, Placer Municipal Court No. 8062, was dismissed in October, 1984.

In furtherance of the conspiratorial collusive plan and scheme, commencing in 1984, the members of the City Councils, City Planning Commissions, and city employees expanded the land use zoning to 4 new Specific Plan areas throughout the City, the Southeast, Northeast, North-Central and Northwest. Each specific plan was given approval on an independent "piecemeal" basis without addressing the overall "cumulative impacts" on drainage capabilities throughout the City, as required by the California Environmental Quality Act (CEQA) of 1970.

Thereafter, in **January, 1984,** in furtherance of the overall collusive, conspiratorial plan and scheme, the City of Roseville embarked on a new flood study by employing the services of Nolte and Associates of Stockton/Sacramento.

The information and data used to compile the Nolte study was as follows:

1. The resistant "n" factor of the streams within the City of Roseville were calculated and estimated from aerial photography flown on December 13, 1984, when the streams were in the most congested and overgrown condition since 1970.

2. The stream gage flow data from the gages within the Dry Creek Basin were discarded, and stream flow gage data from a drainage basin outside of the Dry Creek Drainage Basin was used to convolute estimated discharge flows.

3. The *peak* discharge flow estimates were grossly exaggerated to incorporate a "worst case scenario" for a "future" full build-out of all of South Placer County. FEMA does not recognize or except "future conditions," in a Flood Insurance Study.

4. The City of Roseville forwarded the fraudulent convoluted "future condition" study to FEMA with a request for revision of the 100-year flood boundaries within the City. The Corps of Engineers peak discharge flow on Dry Creek through the Zisk property was determined to be 7300 CFS for a 100-year flood event. The Nolte Study was commenced 60 *days after* the FEMA floodplain Maps were adopted on **December 15, 1983**, and increased the fraudulent peak discharge flow on Dry Creek through the Zisk property to 16,140 CFS for a 100-year flood event. This would constitute a falsified rise of the flood elevation on the Zisk property by 4 to 5 feet.

A duplicate verified copy of the computer runs and work product maps used in the 1984 Nolte Study have confirmed the fact that the study represents "future conditions" and not the "present conditions" as required by FEMA Flood Insurance Studies.

In **February 1986,** the City of Roseville was subjected to the most severe and prolonged concentration of rainfall on record, which resulted in the most severe flooding in Roseville of record. As a result of the foregoing negligent acts and omissions of the members of the City Councils Planning Commissions, and city employees, in furtherance of the conspiratorial collusive plan and scheme, the Zisks have been subjected to continued intentional infliction of pain and suffering, and physical and emotional damage to their health, welfare and safety, and the use and enjoyment of their property and livelihood.

On **February 17, 1988** the Roseville City Council adopted ORDINANCE NO. 2091, ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE REPEALING AND REENACTING ARTICLE 23 OF ORDINANCE OF THE CITY OF ROSEVILLE, RELATING TO FLOOD PRONE AREAS.

In adopting Ordinance No. 2091, the following Finding of Fact is stated in relevant part under Article 23, Section 23.01 (a): --- these flood losses are caused by the cumulative effect of obstructions in areas of special flood hazard which increase flood heights and velocities ---

Under Section 23.01 (b): Regulation of areas of special flood hazard is necessary because of the compelling need to insure safety and the availability of flood insurance to the residents of the City of Roseville, in that the Government of the United States, through the Federal Emergency Management Agency and the Federal Insurance Agency, requires that these regulations be adopted before flood insurance can be obtained by residents.

47

Article 23, Section 23.14 reads:

23.14 Maintenance of Pre-existing uses. Nothing in this Article shall be construed to prohibit the normal, ordinary, or necessary maintenance or repair of a pre-existing, nonconforming use or structure in accordance with Article 29 of this Zoning Ordinance. It is the intent of this section that current lawful uses of flood prone lands shall be grandfathered and permitted.

As stated earlier, the Zisks have maintained the same residence and business operation on the subject property since 1966, the same as the prior owners, dating back to the turn of the century.

On **March 2, 1989** Roseville City Attorney, Michael F. Dean, and Deputy City Attorney, Steven Bruckman filed another lawsuit against William J. Zisk and Lois E. Zisk, Placer County Superior Court No. 84527. The false allegations in Placer County Superior Court No. 84527 are virtually the same as the false allegations City Attorney Michael F. Dean filed during 1983, in the criminal misdemeanor action against William J. Zisk in Placer County Municipal Court No. 8062, which was dismissed by that court in October, 1984. As was the case in Placer Municipal Court No. 8062, no factual evidence was presented to support the allegations in Placer Superior Court No. 84527. The City of Roseville has forced the Zisks to "defend" constant litigation in the Courts for over 30 years.

On **June 29, 1988,** *City* Attorney, Michael F. Dean and former City Attorney G. Richard Brown filed another complaint in Eminent domain on the subject Zisk property, Placer County Superior Court No. 82206, for the purpose of removing a " live " 15 inch sewer line on the subject Zisk property, and installing a 63 inch sewer line in its place. The contractor employed by the City of Roseville to accomplish this task, purposefully and maliciously destroyed every single living fruit and nut tree and domestic landscaping on the Zisk property in a swath 100 feet wide and 750 feet long. In the course of construction, the Zisks were severed from access to their home and business, their domestic water supply was severed 4 times, and raw untreated sewerage was spilled on the ground and stored in cesspools on the Zisk property, creating a health problem. William Zisk sustained sores over his body and required medical attention.

On **April 17, 1989** William J. Zisk was publicly slandered in the local newspaper with false allegations of illegal activity on the subject property. A substantial character impact on the Zisk sole business and livelihood has occurred.

On **May 12, 1989** deputy City Attorney, Steve Brockman, Public Works director, Fredrick L. Barnett, City employees, agents and City excavating equipment entered onto the subject Zisk property without a writ or warrant and trenched 7 excavations to depths of 15 feet, and surveyed and photographed the entire Zisk property. Shortly thereafter, Deputy City Attorney, Steve Bruckman later seized and searched the Zisk private business records without a writ or warrant.

On **November 7, 1990,** in furtherance of the conspiratorial collusive plan and scheme, the Roseville City Council adopted ORDINANCE NO. 2374, ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE ADDING CHAPTER 9.80 TO TITLE 9 OF THE ROSEVILLE MUNICIPAL CODE RELATING TO FLOOD DAMAGE PREVENTION. This Ordinance was adopted under

TITLE 9 of the HEALTH AND SAFETY CODE of the City of Roseville, and incorporated the Federal Emergency Management Agency (FEMA) Flood Insurance Study of September 28, 1990. The **September 28. 1990** Flood Insurance Study contains and applies the falsified fraudulent "future conditions," study of the City of Rosevilles' 1984 NOLTE STUDY, which raised the flood elevations on the Zisk property by 4 to 5 feet over the previous 1983 FEMA Flood Insurance Study.

On **March 20,1991** the Roseville City Council adopted Ordinance No. 2408, ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE ADDING SECTION 23.23 TO ARTICLE 23 OF ORDINANCE 802, THE ZONING ORDINANCE, RELATING TO FLOOD PRONE AREAS. The fraudulent "future conditions" of the 1984 Nolte Study were fraudulently applied to the Official Floodplain Zoning Map of the City of Roseville. The flood elevations on the subject Zisk property have been fraudulently raised by 4 to 5 feet. The entire subject Zisk property has been systematically, purposefully and fraudulently down-zoned to "permanent floodplain." Irreparable harm, damage, and injury has been done and will further follow, unless the acts and conduct of the members of the City Councils, City Commissions, City agents, and City employees, as heretofore complained of are enjoined, because the acts and conduct have the effect of altering the course of waters traveling through the City of Roseville and purposefully redirecting and increasing the flow of waters onto property owned by William J. Zisk and Lois E. Zisk.

William J. Zisk and Lois E. Zisk seek a determination as to the validity of the Ordinances, both on their face and as applied to their property, and a judicial declaration is necessary and appropriate so that the Zisks may ascertain their rights and duties.

The members of the City Councils, City Commissions, City agents and City employees and each of them, exhibited conduct which was intentional and malicious and done for the purpose of causing the Zisks to suffer and continue to suffer humiliation, mental anguish, and emotional and physical distress, and confirmed and ratified the conduct of each of the other members of the City Councils, City commissions, City agents, City employees and each of them, and such confirmation and ratification was done with knowledge that emotional distress would be and was hereby increased.

The Zisk's have been deprived of due process and equal treatment during the ongoing proceedings in which by law, a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the decision making body. William J. Zisk has been deprived of his inalienable right to speak freely on all subjects during the public hearings and he was restrained and abridged of his constitutional right to submit testimony on all subjects during the public hearings which related to the applications by the City of Roseville for flood encroachment permits, repugnant to the Declaration of Rights, Article 1, Section 1 of the State of California and Title 42 U.S.C.A. Sections 1983 and 1985 and the Fifth and Fourteenth Amendments to the Constitution of the United States.

The Zisks have been deprived of the fact that the Roseville City Councils and the Roseville Planning Commissions did not consider the fact that the hydraulic analysis for the applications of flood encroachment permits of past, present and future proposed projects on Dry Creek, Miners Ravine Creek, Antelope Creek, Cirby Creek and Linda Creek in Roseville, has been compared to the 1984

Nolte Flood Plain Study ***(future conditions).*** The Nolte Study measured channel widths, depths and "n" factors of the creeks in Roseville as they existed on **December 13, 1984.** The 1984 channel widths and depths were of the most congestive, restrictive and impeding conditions that existed during the course of the prior twenty-five (25) years. These 1984 congestive channel widths and depths have been considered the baseline by the City for assessing encroachments into the floodplain of the creeks within the City of Roseville. Any requests for encroachment into the floodplain are measured against the channel widths and depths as they existed in **December 1984,** *without any considerations for the significant adverse increased Peak discharge flows that have been and continue to be injected into the streams in Roseville since December 1984, and the overall cumulative effects of obstructions in areas of special flood hazards which increases flood heights and velocities.* For hydraulic modeling purposes, a significant impact has occurred, effecting significant changes in geometry, hydraulic conditions, significant increases in Manning Roughness factors ("n" values), higher floodwater surface elevations and backwater effects. The foregoing amounts to the seizure and taking and damaging of property without due process and the payment of just compensation as required by the Fourth, Fifth, and Fourteenth Amendments to the Constitution of the United States.

The Zisks have been deprived of the fact that the Roseville City Council and the Roseville Planning Commission have not considered the incremental cumulative impacts of past, present and future proposed projects, obstructing the free flow of floodwaters within the floodplain of Dry Creek, Antelope Creek, Cirby Creek, Linda Creek, and Miners Ravine Creek, which include but are not limited to:

The encroachment of approximately twenty thousand (20,000) cubic yards of fill into the designated floodplain on the west bank of Dry Creek adjacent to *Royer* Park where the public safety building currently sets; the encroachment of the basement of the main Taylor Street library into the floodway on the west bank of Dry Creek adjacent to Royer Park; the encroachment within the floodway of the concrete floodwall and gabion structures on the west bank of Dry Creek adjacent to Royer Park; the placement of a sixty-six (66) inch diameter sewer line across and adjacent to Dry Creek within Royer Park; the encroachment of gabion structures and limestone rip-rap within the east bank of the *'floodway channel'* of Dry Creek in Royer Park; the encroachment of three (3) footbridges within the *'floodway channel'* of Dry Creek in Royer Park (two have been swept away during past floods and lodged within the *'floodway channel'* during peak flows); the huge trees which have eroded away within the *floodway channel"* and lodged within the channel and against all of the bridges; chain link fences have been anchored across the *"floodway channel"* with cables, collecting floating debris (torn loose during peak flows of past floods); the Veterans Memorial Building within the floodplain, immediately adjacent to the east bank of Dry Creek in Royer Park; the twenty-four (24) inch diameter sewer line placed immediately adjacent to the foundation of the Veterans Memorial Building on the cast bank of Dry Creek in Royer Park, coupled with the gabion structures and rip-rap later placed in the *"floodway channel"* of Dry Creek, in an attempt to protect the sewer line; the placement of Rosevilles' first landfill *"dump site"* within the seventeen (17) acre portion of the floodplain of Dry Creek in what is now Saugstad Park; the fifty (50) thousand cubic yards of fill dirt imported to the Saugstad Park site to cap the raised filled *"dump site";* the sewer lines running parallel and perpendicular to the flow of Dry Creek in Saugstad Park; the Darling way bridge; the gabion structures on the east bank of Dry Creek in Saugstad Park; at the confluence of

Cirby Creek, with the raised surface exposed sewer line running perpendicular to the flow of Dry Creek; the Riverside Avenue Bridge; the BMX bicycle facility; the Vernon Street bridge; the Southern Pacific Subway Railroad Bridge; the Atkinson Road and parallel Southern Pacific Railroad Bridges and Regional Wastewater Treatment Plant settling ponds off of Booth Road.

The Lincoln Street Bridge; the sixty-six (66) inch sewer line upstream on the west bank of Dry Creek; the encroachment of an additional two hundred (200) cubic yards of rip-rap extending *into the floodway channel'* of Dry Creek at 140 Folsom Road (McCurry dental facility); the six (6) inch sewer line placed perpendicular to the flow, two (2) feet above the ground level of Dry Creek (since destroyed by prior floods); the Folsom Road Bridge; the sixty-six (66) inch and twenty-four (24) inch sewer lines, again just upstream of the Folsom Road Bridge, encroaching into the *floodway channel" of Dry* Creek with fill material, gabion structures, rip-rap structures and steel wall structures on the west bank of Dry Creek, and solid wooden and chain link fences on the east bank perpendicular to the flow of floodwaters on the east designated *"floodway" of* Dry Creek; the encroachment of five hundred (500) cubic yards of limestone rip-rap into the *' floodway channel'* on the west bank of Dry Creek at the terminus of Columbia Avenue; the gabion structure placed on the east bank *of* Dry Creek at the terminus of Marilyn Avenue (since failed and eroded, sliding directly into and obstructing the *floodway channel" of* Dry Creek; the placement of an eighteen (18) inch sewer line on the northwest bank of Dry Creek (at rear of Adelante School facility), which eroded during high waters and collapsed into Dry Creek, discharging raw untreated sewerage into Dry Creek; the placement of two hundred (200) cubic yards of broken concrete, cement dust and debris encroaching into the east bank of Dry Creek at the rear of 339 Evelyn Avenue (Marion Residence); the six hundred (600) cubic yards of concrete rubble and dust and debris currently dumped on the southeast bank of Dry Creek forming *a "wine-dam"* at the rear of 318 Maciel Avenue (Roberta Bechtel residence) and encroaching, without permission, onto property owned by William J. Zisk and Lois E. Zisk; the filling of a historical natural *"drainage swale"* and *"wetlands"* at the *rear* of 706 Atlantic Street and the placing of a three (3) story sanctuary on top of the filled drainage swale (Abundant Life Church); the encroachment into the entire width of the Dry Creek *"floodway"* and *`wetlands"* at the confluence of Antelope Creek, Secret Ravine and Miners Ravine in 1984, with the continuous solid raised filling of a four (4) lane roadbed structure at what is currently Harding Boulevard, and the placement of floatable massive bundles of wooden trusses which were stored on the upstream side (Latham lumber) of the filled Harding Boulevard structure, which floated over the top of the filled structure during the 1986 flood and lodged within the ` *floodway channel'* and against the downstream bridges. A human fatality occurred at this location during the 1986 flood.

Traveling further upstream on the Antelope Creek tributary of Dry Creek; the encroachment into the floodplain and *"wetlands"* of Antelope Creek, of the placement of over twenty thousand (20,000) cubic yards of fill dirt to raise the approach to the Harding Blvd. overcrossing structure over Atlantic Street at the Southern Pacific railroad track; the filling of the Harding Blvd. on-ramp bridge over Antelope Creek at Wills Road; the encroachment into the *`floodplain and wetlands"* during the widening of Atlantic Street over Antelope Creek; the narrow Southern Pacific railroad bridge over Antelope Creek; the narrow culvert bridge crossing over Antelope Creek to the City of Roseville raised Berry Street land fill *"dump site",* and the encroachment into the *"floodplain and wetlands"* of Antelope Creek, of the City of Roseville Berry Street raised land fill *"dump site,"* itself.

51

Neither, the Berry Street land fill *"dump site"* (within the floodplain of Antelope Creek), nor the Saugstad Park land fill *"dump site"* (within the floodplain of Dry Creek) incorporated any barrier protection to the underground water table and neither *"dump site"* incorporated any restrictions as to the quality and contents of the disposal buried on site, nor was there conducted any environmental assessments of the proposed projects prior to commencement of the *"landfill dump sites"*. Currently, erosion at the Saugstad Park dump site on Dry Creek has exposed buried *"blacktop"* and landfill debris within the " *floodway channel of* Dry Creek.

Traveling further upstream on the Miner's Ravine tributary of Dry Creek: the encroachment into the *"wetland and floodplain"* of the pristine Miners Ravine Creek with the placement of sewer lines and five *(5) restrictive and obstructive "low lever'* concrete bicycle trail bridges crossing the streambed (1994), all five (5) of the *obstructive "low level"* bicycle trail bridges failed and were heavily damaged and eroded during the peak discharge flows of the 1995 flood. All five (5) of the *obstructive "low level"* bicycle trail bridges were repaired and replaced in 1998 (using federal FEMA funding) in the identical same locations and elevations as was the original *obstructive "low level"* bridge structures.

The forgoing statements and facts relating to the incremental cumulative impacts are verified and supported by a study prepared especially for the City of Roseville by the United States Army Corps of Engineers, entitled: FLOOD PLAIN INFORMATION, DRY CREEK AND TRIBUTARIES, ROSEVILLE, CALIFORNIA, DATED, MAY 1973.

The hydrology analysis of these projects has been assessed on the basis of a "multiple choice" of hydrology studies, some of which have been fraudulently applied to achieve the purpose intended, especially on the Zisk twelve (12) acre parcel located at 205 Thomas Street.

The first and most accurate hydrology study was performed for the City of Roseville by the Sacramento Branch of Corps of Engineers in 1973. The peak discharge flows for a one hundred (100) year event on Zisk property were calculated to be 7,300 cfs.

A second hydrology study was performed by Gill & Pulver in 1983 for FEMA for flood insurance purposes. The peak discharge flows for a 100 year event on Zisk property were calculated to remain approximately the same at 7,300 cfs.

A third hydrology study was performed for the City of Roseville by Nolte and Associates in 1984. The peak discharge flows for a 100 year event on Zisk property were calculated by Nolte to be 16,140 cfs, fraudulently raising the 100 year flood elevations by approximately 5 feet on the Zisk property.

A fourth hydrology study was performed by Montgomery for Placer County in 1992. The peak discharge flows for a 100 year event on the Zisk property was calculated to be 10,360.

Currently, the City of Roseville is utilizing a Swanson Hydrology Study which does not appear to calculate peak discharge flows for a 100 year event but rather simply states that the current proposed project will not change the water surface elevations on Dry Creek. The same

Swanson Study also states that the planting of thousands of trees in the "floodway" of Dry Creek will not effect the "n" factor, backwater or water surface elevations!!

It does not take a rocket scientist to determine that the placement of thousands of trees in the "floodway", coupled with the placement of gabion structures, boulder revetments, weirs, concrete walls and sewer lines, narrowing the "floodway" width and raising the bottom of the streambeds, as well as the increases in peak discharge flows from 7,300 cfs to 16,140 cfs will obviously result in environmental consequences and significant "cumulative impacts", as well as significant impacts on human beings, either directly or indirectly.

The foregoing verified statement of the history of the property of William J. Zisk and Lois E. Zisk, 205 Thomas Street, Roseville, CA 95678 is by no means adequate and complete. It is only the tip of the iceberg.

The City of Roseville, as lead agency, in preparing this environmental document has an absolute conflict of interest in completing the preparation of CEQA/NEPA requirements.

The City of Roseville, as lead agency, is utilizing federal and state financial assistance and grants to cover-up and conceal the prior thirty (30) years of extended ongoing willful and reckless disregard for health and safety; the conspiracy to violate and violations of civil rights; deprivation of the constitutional requirements of equal treatment and application of the law; damages in inverse condemnation; negligence; intentional tortuous conduct; personal injury and property damage; intentional infliction of emotional distress; constructive fraud; search and seizure; invasion of privacy; malicious prosecution; discrimination; duress and obstruction of justice that has been incurred on the 12.2 acre Zisk parcel as a result of the Zisk familys' simple request to pursue the "American Dream" to build the home of our dreams on "OUR" privately owned property, located within the quiet, peaceful, passive surroundings adjacent to Dry Creek. The quiet peaceful passive surroundings were the result of the Zisk familys' seven (7) year reclamation project "so long ago" as well as the blood and sweat and financial burdens the Zisk family endured to achieve their goals. The DEIR remains silent on all of these issues and significant impacts.

The City of Roseville, as lead agency in the preparation of the DEIR remains silent on the issue of the history of the Citys' attempts to reposition the physical boundaries between the Zisk Property and the former Taylor property and the Citys' ownership uncertainties that exist at that location. (Parcel No. 013-040-003 and 013-040-004)

The photographic mapping used in the DEIR to illustrate a proposed alignment of a proposed bike trail on the north side of Dry Creek does not depict an accurate current topography of the centerline of Dry Creek and the adjacent land conditions as they currently exist in relation to a proposed bike trail alignment (Parcel(s) No.(s) 013-040-003 and 013-040-005).

The City of Roseville, as lead agency in the preparation of the DEIR remains silent as to the presence and existence of the historical natural drainage swale that originates at Atlantic Street and the Enwood District, travels through the Zisk property and exits into Dry Creek (Parcel(s) No.(s) 013-040-003, 013-040-004 and 013-040-005).

The City of Roseville, as lead agency in the preparation of the DEIR remains silent as to the presence and existence of the Zisk family historical, established water rights, both domestic and riparian on Assessors Parcels Numbers 013-040-003, 013-040-004 and 013-040-005.

The City of Roseville, as lead agency in the preparation of the DEIR remains silent as to a proposed bicycle trail alignment on the north side of Dry Creek at the west end of Parcel No. 013-040-005 and 013-040-004 that would require cutting, grading and filling of the steep embankment adjacent to the narrow section of Dry Creek at that location that has protected the Zisk property from hazards of flooding since 1966. The opposite bank of this narrow section of Dry Creek has already had the placement of over six hundred (600) yards of rip-rap placed into the channel of Dry Creek by Roberta Bechtel of 318 Maciel Drive, forming a wing dam and diverting floodwaters and currently eroding the north bank. At this same location, at the top of the north bank of Dry Creek, a proposed bike trail alignment would meet directly with a large oak tree and a large growth of elderberry bushes which provides habitat and nourishment for the protected and endangered elderberry beetle.

The City of Roseville, as lead agency in the preparation of the DEIR remains silent in desperation to attempt to overcome and conceal the thirty (30) years of conspiracy and tortuous conduct as described above, by falsely claiming ownership of assessors parcels 013-040-003 and 013-040-005 of the Zisk property. By taking this position in the DEIR the city is purposefully concealing the CEQA/NEPA requirements to respond to the past, present and future "significant cumulative impacts" of a proposed alignment of a proposed bike trail on the north side of Dry Creek through the Zisk property. By taking this position the city is attempting to avoid the liabilities and responsibilities of invasion of privacy, vandalism, break-ins, thefts, trespass, property damage, noise, pollution, wildfires, and the complete destruction of the passive natural surroundings adjacent to Dry Creek that the Zisk family worked so hard to achieve so long ago. The abillty of the city to maintain control of any potential trail users to stay within the confines of a proposed alignment on the north side of Dry Creek would be a near impossibility.

The only logical and feasible and safe alternative alignment is to continue from the recently completed alignment of phase one on the south side of Miners Ravine Creek and continue beneath the Harding Boulevard bridge to the south side of Dry Creek and continue on the south side of "city owned" property on through to Lincoln Estates Park, and if so desired continue on through on "city owned" property to Evelyn Avenue. I have personally walked the portion of "city owned" property form Evelyn Avenue to Harding Boulevard on the south side of Dry Creek on several occasions and found that a narrow pathway currently exists in that area that is currently being used by both bicycles and pedestrians and is perfectly adaptable to expansion and use.

As to the history of the Zisk property and assessors parcels number 013-040-003, 013-040-004, and 013-040-005, I believe that a full scale and thorough state and federal investigation is necessary to resolve this matter.

Respectfully submitted,

_____
William J. Zisk

I, William J. Zisk, declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this verified statement was executed on April 19, 2004 at Roseville, California

_____
William J. Zisk

VERIFICATION

I, William J. Zisk, am the spouse of the deceased Lois E. Zisk in the above captioned matter. I have read the foregoing RESPONSE TO DRAFT ENVIRONMENTAL IMPACT REPORT FOR HARDING BOULEVARD TO ROYER PARK BIKEWAY PROJECT DATED FEBRUARY 2004, and am familiar with its content. The matters stated herein based on personal knowledge and information are true and correct. If called to testify as a witness in this matter I can competently testify as to matters of fact.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this April 19, 2004 at Roseville, California 95678

Questions Presented for Review

Refer to:

1. Whether the City of Roseville, et al, has conspired to deny the Zisk family a valid qualified building permit to construct a new home on their passive residential zoned private property **"after"** the Zisk family had completed **"ALL"** of the prerequisite requirements as set forth in the use permit application submitted to the City of Roseville Planning Commission on February 23, 1967.
see Reference : February 23, 1967 planning commission meeting minutes and Brief - 1, Brief - 2, Brief - 3.

Brief - 1
Brief - 2
Brief - 3

2. Whether the City of Roseville has any valid claim of ownership to any portion of Placer County assessors parcels Number 013-040-003, 013-040-004, and 013-040-005, of the Zisk family private property commonly known as 205 Thomas Street, Roseville, California 95678, with the unlawful institution of an action in eminent domain, Placer County Superior Court Number 41104, City of Roseville versus William J. Zisk and Lois E. Zisk, dated December 20, 1973, without a public necessity, without a public project, without an appraisal of the Zisk property, without any negotiations, without any offer of just compensation, without prior notice of a public hearing, without the availability of budgeted public funds for acquisition, without any environmental assessment to the impacts to the Zisk family private property, without acquisition of any adjoining property upstream or downstream of the Zisk family private property, without compliance to California Environmental Quality Act (CEQA) and without compliance to California Government Code 7267.1 et seq., and **"over thirty-two (32) years prior to any proposed public use of Zisk family private property."**
see COMPLAINT IN EMINENT DOMAIN (DATED DECEMBER 20, 1973), JUDGMENT IN CONDEMNATION (DATED MARCH 21, 1978) , and FINAL ORDER OF CONDEMNATION (DATED APRIL 19, 1982)

4. Whether the City of Roseville et al conspired to take Zisk family private property for public use by fraudulent land use zoning and abusive eminent domain powers without procedural due process, equal treatment and just compensation.

Brief - 1
Brief - 2
Brief - 3

5. Whether the Zisk family private property has been seized and searched without writ or warrant nor supported by probable cause.

Brief - 1
Brief - 2
Brief - 3

6. Whether City of Roseville former city attorney Keith Sparks has deprived the Zisk family impartial procedural due process, equal treatment and just compensation while acting in triple capacity - first as Roseville city attorney in denial of Zisk family qualified application for a residential building permit on February 23, 1967 - secondly, as Placer County state superior court judge presiding over City of Roseville abusive eminent domain proceedings applied to Zisk family private property on December 20, 1973 - thirdly, as justice of California State Court of Appeals personally deciding related actions.

Brief - 1
Brief - 2
Brief - 3

7. Whether lower Placer County state court judges Roder, Garbolino and Cousins, deemed disqualified as matter of law has jurisdiction to deprive the Zisk family of procedural due process, just compensation and equal treatment with **summary dismissal** of the Zisk family verified civil complaint, Placer County Superior Court Number S 1495 filed on October 16, 1991. (involves court documents being whited out with altered date replacements)

Brief - 1
Brief - 2
Brief - 3

8. Whether Federal District Court Chief Judge William B. Shubb, with daughter employed as attorney in City of Roseville counsels' law firm, violated the mandates of Title 28 U.S.C.A. § 455(a) (b)(1)(5)(ii)(iii) and exceeded jurisdiction with **summary dismissal** of Zisk Family verified amended civil complaint (DC # CV-95-02134-GEB/GGH) **"prior to his recusal"**. see Brief - 1, Brief - 2, Brief - 3

Brief - 1
Brief - 2
Brief - 3

9. Whether Federal District Court Chief Judge William B. Shubb refusal to enter default in DC # CV-95-02134-GEB/GGH for City of Roseville failure to plead or otherwise respond to Zisk family verified complaint **"within required time period"** denied Zisk family equal treatment and due process opportunity to be heard. see declaration of

Director of parks & recreation Ed O. Mahaney memo to Roseville City Council regarding adoption of "TENATIVE" plan for "TENATIVE" trail system on Dry Creek streambed northerly from Royer Park - DATED AUGUST 29, 1973.

August 31, 1973

Letter from City of Roseville public works director Frederick L. Barnett to Mr. Rex Bronson, chief, flood plain management, Sacramento District Corps of Engineers - RE: Flood Plain Information - Roseville area - with city public works department transposed information onto OUTDATED "1956" aerial topographic photo mapping indicating the

areas of flooding for a 50 and 100 year flood event - DATED AUGUST 31, 1973.

September 5, 1973

Memorandum from the City of Roseville public works director Frederick L. Barnett to the city planning director regarding the public works department falsified cross-section of the incomplete Zisk stream channel improvement project results which were by no means final, showing a steep rise in water surface, rather than a decrease as indicated by the Bill Zisk environmental impact report prepared by Atteberry and Associates. - DATED SEPTEMBER 5, 1973.

September 7, 1973

Letter from Roseville city manager Robert G. Hutchison to Mr. Bill Zisk concerning Zisk property along Dry Creek off Thomas Street notifying officially of the city council's intention to acquire a strip of land along Dry Creek for a "FUTURE" bicycle and pedestrian trail along the creek and the possibility that the city's plans may be in conflict with Zisk development plans in the same area - DATED SEPTEMBER 7, 1973.

September 10, 1973

Memo from City of Roseville planning director, Leo Cespedes to the Roseville planning commission regarding the February 23, 1967 Bill Zisk use permit - parcel map application at 205 Thomas Street and recommending denial of the use permit and parcel map as proposed because of conflict with bicycle and pedestrian trail - DATED SEPTEMBER 10, 1973.

September 13, 1973

Roseville planning commission meeting agenda for Thursday September 13, 1973 at 8:00 P.M. in the council chambers of the city hall with agenda item 5(c) use permit - Wm. Zisk, single family dwelling in R-1 FP zone 205 Thomas Street - DATED SEPTEMBER 13, 1973.

September 13, 1973

City of Roseville planning commission meeting minutes of September 13, 1973 "DENYING" the Zisk family February 23, 1967 application for a parcel map and use permit to construct a single family residence at 205 Thomas Street, since plan is in conflict with bicycle and pedestrian trail and Corps of Engineers report is needed to determine if property is in flood plain as to whether this is proper building site - DATED SEPTEMBER 13, 1973.

September 14, 1973

Letter of "Notice of Appeal" from Atteberry and Associates, civil engineers-land surveyors, 1804 Tanglewood Lane, Roseville, California 95678 to Roseville city council appealing the action and findings of the Roseville planning commission denial of the application of Bill and Lois Zisk for a use permit to construct a home adjacent to Dry Creek at the end of Thomas Street - DATED SEPTEMBER 14, 1973.

September 26, 1973

Letter from Myron McAntyre, an adjacent land owner along Dry Creek to George Buljan, Mayor of the City of Roseville in support of the notice of appeal of the denial of the Bill Zisk application to build a home on his land beside the creek - DATED SEPTEMBER 26, 1973.

September 27, 1973 & September 22, 1972

1972 - 1973 Article in Sacramento Bee "PUBLIC INTEREST V. PRIVATE PROPERTY" RE COURT CASES Klopping v. City of Whittier - Dated September 22, 1972 Selby v. City of Buenaventura - DATED SEPTEMBER 27, 1973.

September 28, 1973

Letter from attorney Lloyd Hinkelman, Kronick, Moskovitz, Tiedemann & Girard, 555 Capitol Mall, Suite 855, Sacramento, California 95814 to Mr. and Mrs. William Zisk, 205 Thomas Street Roseville, California, in reference to a letter dated September 12, 1973 from George C. Weddell, Chief, Engineering Division of the Corps of Engineers to Fred Barnett, Director of Public Works for the City of Roseville noting a correction of the water surface elevation for the intermediate flood at station 82.00, based upon the city's erroneous cross-section profiles sent to the Corps of Engineers - DATED SEPTEMBER 28, 1973.

October 2, 1981

Article in Roseville Press Tribune entitled: "CREEKBED BIKE PATHS HINGE ON RIDER SAFETY" - DATED OCTOBER 2, 1981.

October 3, 1973

Roseville City Council upholding the planning commission September 13, 1973 "DENIAL" of the Zisk family February 23, 1967 application for a parcel map and use permit to construct a single family residence at 205 Thomas Street since plan is in conflict with citys' "**FUTURE PROPOSED**" bicycle and pedestrian trail. Public works director, Fred Barnett pointed out that latest calculations from the Corps of Engineers determined the Zisk house site would be above the 100 year flood plain - DATED OCTOBER 3, 1973.

October 8, 1973

Special meeting of the Roseville Parks and Recreation Commission meeting minutes for October 8, 1973 with recommendation to city council that the city acquire property area along Dry Creek from Royer Park to East Street for a future bike trail. - DATED OCTOBER 8, 1973.

October 31, 1973

Legal description of the Bill Zisk Parcel Map and lot split as submitted to the city by Zisk engineer, W.G. Atteberry of Atteberry and Associates, 1807 Tanglewood Lane, Roseville, California - DATED OCTOBER 31, 1973.

November 28, 1973 (A)

Re: - Roseville City Council adoption of floodplain ORDINANCE NO. 1224 - AN ORDINANCE AMENDING SECTION 2.02; REPEALING AND REENACTING ARTICLE 23 OF ORDINANCE 802, THE ZONING ORDINANCE OF THE CITY OF ROSEVILLE, RELATIVE TO THE ENACTMENT OF REGULATIONS OF LAND USES WITHIN FLOOD PRONE AREAS - to take effect in 30 days (December 28, 1973) or 8 days "AFTER" the city filed eminent domain proceedings (Placer Sup. CT. No 41104) on Zisk family private property - the ordinance was falsely applied to outdated "1956" city topo graphic maps that did not reflect the current seven (7) year reclamation project on Zisk property, which increased the floodway channel carrying capacity by 200% - DATED November 28, 1973.

November 28, 1973 (B)

Re: - Roseville City Council adoption of zoning ORDINANCE NO. 1227 - AN

ORDINANCE ADDING SUBSECTIONS 161 AND 162 TO SECTIONS 3.01A OF ARTICLE 3 OF ORDINANCE 802, THE ZONING ORDINANCE OF THE CITY OF ROSEVILLE, ZONING CERTAIN PROPERTY IN AND ALONG DRY, LINDA, CIRBY, AND ANTELOPE CREEKS AS WITHIN THE FW (FLOODWAY FRINGE) COMBINING ZONES - the "Official floodplain maps" of city of roseville "FALSELY" included the majority of the Zisk property which had been determined to be above the 100 year floodplain by both the U.S. Army Corps of Engineers and the Public Works Director of the City of Roseville Fredrick L. Barnett - DATED November 28, 1973.

December 19, 1973

Roseville City Council Resolution No. 73-122 - Resolution of public necessity and convenience for condemnation of real property for public park and bicycle path purposes - DATED DECEMBER 19, 1973.

December 20, 1973

COMPLAINT IN EMINENT DOMAIN , Placer County Superior Court Number 41104, City of Roseville vs. William J. Zisk and Lois E. Zisk, dated December 20, 1973.

October 23, 1974

Letter from George C. Weddell, Chief, Engineering Division, Department of Army, Sacramento District, Corps of Engineers to Kenneth M. James, Assistant City engineer, City of Roseville in response to a request for a flood hazard evaluation for a proposed subdivision site located adjacent to Coloma Way and Oakridge Drive - DATED October 23, 1974.

June 15, 1977

Roseville City Council Resolution No. 77-54 - Resolution of the council of the city of roseville adopting the roseville general plan and "REPEALING FORMER GENERAL PLANS AND PLAN ELEMENTS" - Resolution 68-21 park, streambed and recreation element and resolution 73-56, open-space and conservation element were the basis for instituting the action in condemnation of the Zisk private property in the first instance and was "REPEALED" four and a half (4 1/2) months "PRIOR" to commencement of the eminent domain proceeding on November 1, 1977 and concluded on December 15, 1977 - DATED June 15, 1977.

Sept 1977 8.71MB

CLERKS TRANSCRIPTS ON APPEAL
IN THE COURT OF APPEAL OF THE STATE OF CALIFORNIA IN AND FOR THE THIRD APPELLATE DISTRICT - CITY OF ROSEVILLE et al Plaintiffs, Respondents and Cross-Appellants vs WILLIAM ZISK AND LOIS ZISK et al Defendants, Appellants and Cross-Respondents - CLERKS TRANSCRIPTS ON APPEAL - APPEAL FROM THE JUDGEMENT OF THE SUPERIOR COURT OF THE STATE OF CALIFORNIA IN AND FOR THE COUNTY OF PLACER KEITH E. SPARKS, JUDGE - DATED September 1977.

March 21, 1978

Complaint in Eminent Domain, Placer County Superior Court Number 41104, City of Roseville vs. William J. Zisk and Lois E. Zisk, **JUDGMENT IN CONDEMNATION**, dated March 21, 1978.

On the email below, Carl Walker did not respond nor did any of my questions get answered. I also have 100 more questions. The 12 basic questions answered would be a good start. Just Simple Answers will do.

Subject: Harding Boulevard to Royer Park Bikeway Project

Carl Walker:

I received your letter today, 4 days after the postmarked date of July 14, 2009. Please note that the address to which you sent the letter is incorrect and revise your records per my contact information below. Your letter to me contains notification of preconstruction and construction activities related to bike trail improvements along Dry Creek, and I see it has also been sent to several city officials. By the date of your letter, this work apparently began prior to my receipt of the notification, which I do not at all appreciate. Notifying me after construction activities have commenced is not notifying me.

I would like to have been apprised in a timely manner rather than subjected to what appears as procedural gamesmanship. I ask you to please clarify several points. Are these construction activities the same activities that were said to have commenced 36 years ago? The same activities set in motion by an improper and illegal abuse of eminent domain powers? There is no bike trail on my property nor has there ever been one, so I am exceedingly curious as to when this project actually began?

I would like to clarify my own position as owner of the property. It is not appropriate for you to give notification of work and assume you have the right to pass through my property. I have not, nor do I grant you this permission. You also do not have my permission to remove my 100 year old fence, which has been in place since my family purchased this property in 1966. This fence has existed as the de facto property line for all prior owners and neighbors. It is quite clear the Taylors, who own property adjacent to mine, never owned the land on my side of the fence. Prescriptive easement law applies regarding this fenced boundary as well. To state it as plainly as possible: You do not have my permission to remove any other fences bordering my property. To do this, you must provide me with a court order. My property is fenced, posted, and has been through most of my life. You do not have my permission to pass.

You do not have my permission to build any fences, which modify existing property lines. The city has not gone through any legal process with me to redefine boundaries or to overturn the existing prescriptive easements on property use. It is I and my family who have been maintaining this property for the past 43 years. You do not have the right to trespass and build randomly placed borders which prohibit my access to all my property. What sets our American democracy apart in the world is that we are a society of laws, yet I do not believe the City of Roseville has exercised due process with regard to my property. Instead, it appears that whatever is convenient for the city is what happens, regardless of the harm it may do to the individual citizen in the way. This is not just or fair, and I appeal to you to follow the law you are sworn to uphold, even if it is not convenient. Please protect my private property rights and listen to my words as a property owner: You do not have my permission to pass and I grant you no agreement regarding passage or use of my property. My property has always been well posted as private property. A previous city attorney has already acknowledged my family's ownership and even asked us what we are going to do with our property. As I mentioned, my family and I have maintained possession of this property from 1966 to the present date. This was established when you, Rob Jensen, and Craig Robinson met with me on my property. You, Craig, and Rob did not disagree with this fact.

Since 1966, 43 years has passed. The city has not set foot on this property. I have kept all trespassers from entering. But there has also been no due process for 43 years; only a pervading conflict of interest on the part of the city, and endless legal battles over technicalities. Does the city really wish to continue these methods, forcing me into court as they did my father before me? We all know law too well, and it has not yielded any understanding and fairness thus far. Instead, the situation has become criminal and justice is needed.

Judges would tell my father, privately in their chambers that although my father was correct; they would not go by the law book. Instead they would go by their own personal law... because it was their courtroom. The judges would then proceed to award the city what they wanted. I believe this is not the way justice should occur. I believe there is a need for an unbiased and detailed investigation into the how the city conducted the eminent domain process regarding my property. It is time for understanding and fairness. I believe the public should know the truth about what occurred throughout my life including all that follows.

Long ago I asked you for all information in reference to the city's interest in my property including all legal actions, grants, flood levels, and public information. You said okay to this request, but I have never received any documentation or letters or communications from you, other than this after-the-fact notification today. I am confused. I ask you to please do what you promised. My address is well known. Why send a letter to the wrong address? I would have thought it a secretarial error, if this had not been done to my father so many times. The only time my father would receive city council agendas was when there was not an issue related to his property on the agenda. I have had this same experience, as have many others who have dealt with the city. You should know the reputation the city is developing.

My father had integrity and honor. He was an honest man. He tried to keep up with the devious tactics, always trying to correct the twisted spin on the truth. But this game playing is a waste of time. We both know the truth and so does the city. You and the city know there are hundreds of illegal issues beyond the understanding of

most. I can prove the truth of what has happened to the right authorities if necessary, and hope you are not a party to these activities. As you looked into my eyes, I hoped your handshake held sincerity. Mine did.

Mike Dour forwarded me some internal departmental communications, forwarded throughout the city, about 2 weeks ago. These were filled with lies, misstatements, and omissions. Communicating in partial truths to convince is the same as lying. I offered to discuss this, but the city has not been willing to discuss. The city knew certain items should have not been on the agendas. To make sure you are correctly informed, I can forward you these communications along with others. Please let me know if you want to know the truth. I believe you should know the whole truth before you or others attempt to trespass on my property. I know this is a hard choice for you must decide to either stand behind the city with your job, or provide the whole truth without strategic omission of pertinent facts. I have found people who will support me. Although the city resists giving public information, this can be easily exposed. I have a lot of public support on this.

Powerful people had told my father he would own this city someday. I am beginning to believe this is true. I know the city cannot prove ownership of my property, and have the entire paper trail to prove this. The city has not followed laws, procedures, and orders. I have consulted with large law firms, and they have informed me that I own the property on which the city intends to construct a bike trail. They have said it is a ridiculous notion for the city to proceed.

I have come to you in good faith, looking for clarity. I have asked for simple questions to be answered. My questions referring to ownership have not been answered. I have hundreds of maps from the turn of the century, as well as nearly every newspaper, with videos, thousands of photos, and hundreds of letters all pertaining to my property's title. To illustrate a small portion of the paper trail, please visit RosevillePolitics.com and ConnecticutFraud.com. Please answer the 12 simple questions the city has refused to confront:

1. WHAT IS(ARE) THE EXACT DATE(S) OF PURPORTED ACQUISITION?

2. WHAT IS(ARE) THE EXACT APPRAISED VALUE OF EACH OF THE PURPORTED ACQUISITION(S)?

3. WHAT IS THE ZONING AND LAND USE DESIGNATION OF EACH OF THE PURPORTED ACQUISITION(S) ON THE DATE(S) OF PURPORTED ACQUISITION(S)?

4. WHAT IS THE EXACT DATE(S) OF NEGOTIATIONS FOR THE PURPORTED ACQUISITION(S)?

5. WHAT IS(WAS) THE EXACT REASON(S) OR PURPOSE(S) THAT REQUIRED THE PURPORTED ACQUISITION(S),

6. WHAT IS(WAS) THE SPECIFIC PROJECT(S) THAT REQUIRED THE PURPORTED ACQUISITION?

7. WHAT IS(WAS) THE SPECIFIC PUBLIC NECESSITY THAT REQUIRED THE

PURPORTED ACQUISITION(S)?

8. WHAT WAS THE EXACT DATE(S) IN WHICH THE PAYMENT OF THE TOTAL SUM OF THE ACQUISITION(S) WAS PURPORTEDLY PAID TO WILLIAM J. ZISK AND LOIS E. ZISK?

8.1 WHAT PAPER EVIDENCE EXISTS TO PROVE THIS SUM WAS PAID OUT BY THE CITY OF ROSEVILLE AND THAT THIS SUM WAS RECEIVED AND CASHED BY WILLIAM J. ZISK AND LOIS E. ZISK?

9. WHAT WAS THE EXACT DATE(S) IN WHICH THE CITY PURPORTEDLY TOOK POSSESSION OF THE PURPORTED ACQUISITION(S)?

10. THE EXACT DATE(S) IN WHICH THE CITY FULFILLED THE CEQA REQUIREMENT FOR THE PURPORTED ACQUISITION(S)?

11. THE EXACT DATE(S) IN WHICH THE CITY PROVIDED A PUBLIC HEARING FOR THE BENEFIT OF WILLIAM J. ZISK AND LOIS E. ZISK REGARDING THE PURPORTED PUBLIC NECESSITY FOR THE PURPORTED ACQUISITION(S)?

12. THE EXACT DATE(S) IN WHICH THE CITY ACQUIRED ANY AND ALL ADJOINING PARCEL(S), INCLUDING EXACT TOTAL ACREAGE, TOTAL APPRAISAL VALUE, AND TOTAL ACQUISITION PRICE, THE PURPOSE OR PUBLIC NECESSITY OF THE ACQUISITION(S), THE DESIGNATED ZONING AND LAND USE FOR EACH PARCEL, AND THE DATE(S) IN WHICH THE CITY TOOK POSSESSION.

None of these questions have been answered. Don't you want to know that the answers to these questions exist? Any city worth its salt should be able to put its hands on the documentation necessary to answer these questions before abridging a citizen's property rights. I should think this was a matter of pride for you. Shouldn't it be a city official's job to be able to provide these answers and, if they cannot, are these officials competent to hold these positions? Aren't public servants supposed to serve and protect the public? Don't the taxpayers pay their salaries?

There are also other questions. Should the city attorney preside over our case as a superior court judge when he was previously involved as city attorney? The option to recuse oneself is there for a very good reason. Should the same attorney do it again at the appellate level? Should the city hire the judge's daughter's law firm and then have the judge refuse to let another justice decide? Shouldn't the city allow a public meeting before finalizing condemnation? Why didn't they? Should a judgment stand when argued by an attorney who openly admitted to malpractice with the city attorney and officials, and who conspired to secretly stipulate in the plaintiff's judgment to wave all awarded litigation expenses? Three and a half years after the judgment, my father's attorney admitted to being on the city's payroll when he represented my father. Why would our attorney admit to this conspiracy and admit to malpractice? Why would the city secretly stipulate? Were there payoffs? Should the city require us to invest $4 million of prerequisite work for 7 years (at current prices), condemn our R1 zoned property, and then lie in court to downzone our 2.73 acre, claiming it had a

value of $225? Then insult by stating a total value of $15k as to include another 4 acres? Then 36 years later state they own even more by rewriting deed numbers? Why does the current city council state they do not know why there was a condemnation attempt in 1973 when I asked them personally? If they don't know, then who does? Why is this information being hidden? Isn't this embarrassing for a person interested in integrity in city government? Why would we accept less than what was awarded in our judgment? Why would a huge developer attempt to bribe my father with a new vehicle to receive an interest in a valueless property? Why are council members appointed, then reelected with developer money? Why are the same committee members appointed by the same appointed council members? Why doesn't the council take the next highest vote recipient when there is an opening? Why would the city try to take our property for less than 2 cents on the dollar when a real estate agent was willing to give my family one million dollars for our property in 1973? Why did we spend 7 years improving and straightening the creek, per the city's direction and approval, increasing the flow capacity by 200% if they were going to condemn the property as a worthless flood plain? Why were 1954 maps submitted to FEMA for the Zisk property intentionally not showing any of the current topography and improvements up to 1973? Is this an example of fraud? Was it improper use of internal departments? Are these the methods that have been the basis of how each department will manipulate to get the answers they want? Why did the city give us permits to do the work if that was the general plan? Why couldn't we build our home? Why did "N" factors for water flow double overnight when the city wanted our property? Why did our case docket entries change in the United States Federal Supreme Court at about the same time 2 council members flew to Washington, D.C.?

When did the city take ownership of our land? When were there negotiations? When was there an appraisal? When were the funds acquired for a project that did not exist? When was the adjoining property acquired? 35 years later? I have a lot of why questions in reference to the Taylors' property which I will save for later. When was my property moved into the floodplain? Was it ever in the floodplain? Is it in the floodplain now? Is the flood plain designation by FEMA standards or City standards? Why did a council member come to our land in 1973, after we'd completed city prerequisites for construction of a single family residence, to tell us we did such a beautiful job improving the land that they were just going to have to take our property? Why in 1973, after completing the city's requirements and before the condemnation, would the Mayor, while having his favorite drink with my father, be bold enough to tell my father in his own living room that the city was going to take our property, take us into court, take all our litigation expenses, and drag it all out for years? Why would the Mayor want us to give the city our beautiful property where we were going to build our home after 7 years work and all our money? Did this have something to do with my grandfather Julius Brick Paolini, a Placer County Supervisor? Brown? Newsom? Reagan? Why are we harassed; cited for minor code infractions while others, with worse violations, are not cited? Why are neighbors and city workers allowed to block public roadways to my property? Why are neighbors allowed to remove my fencing? Why do neighbors above us develop without drainage plans? Why do crane operators, doing city work without proper permits or within legal easements, intentionally crush trees my family planted and raised along our fence? Are ordinances directed strictly to the Zisk's for a reason? Why is there selective enforcement of rules? Why does the city decide to route a bike trail through my

property when the McIntyre's had already donated property to the city for this purpose on the other side of the creek? Why are burglaries of our property not prosecuted or sentenced, even when the perpetrators are caught on film? These burglars have been allowed to keep $30k-$50k in stolen merchandise. Why are all our vehicles and the windows in our houses destroyed? Why did one of our houses mysteriously catch fire? Why are trespassers allowed to go through my mail, take my antiques, take my sprinklers, look in my windows, climb under my house, destroy my video system, without any consequence; even when I caught them on video doing all of this? Why are they caught and handcuffed by police, then back on my property 1 hour later? Why are trespassers allowed to take my pets and keep them? After catching the same criminals a dozen times, why doesn't the DA's office prosecute? Why are business records taken from our family without subpoenas or warrants? Why are police used to escort people illegally across my property?

Why do contractors show up at my house, park next to "no trespassing" signs, and tell me the city owns my property? Why do other contractors, the homeless, neighbors, police, and teenagers walk freely through my property? Why does the council encourage the public to continue doing this? Why is the current mayor's husband allowed to preside over my father's probate, using a handwritten copy of a small piece of paper as a will, while ignoring his formal will? Why would the current mayor's husband (as judge) not allow my father to speak at his own probate to his own property (3000 miles away, in Connecticut)? Why would the judge say my father owned nothing when his father died intestate placing him as an automatic inheritent? Was he in conflict because he was sued by my father? By not allowing my father's will to be executed properly, the city's connections have affected my father's multi-million dollar estate in Connecticut?

Why does a lieutenant governor tell my father and me that judges make their decisions over card games he participates in? Why are court document dates changed with whiteout so thick it can be peeled off, revealing the correct date seen on reverse side? Was it to protect the judges in default? Why was only one piece of property (previously Hemphill, but currently Zisk) pursued through eminent domain in this town, and why was this property tied to the estimated multi-billion dollar water and electric franchise indicated on the original 1906 manuscript? Perhaps I own the water and/or the electric franchise for Roseville? Why do old books of record disappear 12 hours after we have located them? Why are pages torn out of these books, which refer to my property? Why do I have many of Roseville's original, 100 year old fire hydrants right next to my house? There were said to be only 12 to 24 in the entire city by a historian when Roseville began. Is this property where the old railroad steam engines filled? Why does the Main Street/Vernon Street intersect to my property? Why is the history of my property kept from the public? Why is my property being taken from me and planned out for public use? Why was my property zoned open space after illegal condemnation, when it is located in the center of Roseville? Why were there train tracks and pump houses on my property? Why is my property located in the Sawtell district and named after the first mayor Roseville ever had? Why in heavy 100 year flood rains does Dry Creek not overflow its banks onto my property, but floods bridges, new structures, and much of Roseville in other areas? Why are these areas not designated as flood plains? Why were they allowed to build? Why would FEMA say my property is not in a flood plain, while the city claims it is? Why does the city have stricter standards for the Zisk's than for its other

citizens? Why were thousands of yards of fill removed from my property and not replaced after city projects, even when the director admits it is owed to us? Why does the city ignore for over a decade? Why did the city allow our neighbor to fill 600+ yards of huge rocks directly into and halfway across the creek at the bottom end of my property? Were they trying to create a flood zone? This would not be allowed in a real modern city. Why does the city redirect historic drainage from Atlantic Street onto my property without negotiating a water easement with me? Historically, this drainage always passed through the Taylor property. Several pieces of evidence, which I possess, prove this. Why does the city stone wall when these issues are mentioned? What is the city hiding? It is crazy to create such a liability through such inappropriate actions. Why is everything such a mystery? Can't we negotiate a way out of the mess?

Why does the city react by creating more issues for me to fight in court? Why throw frivolous, unproven cases at my family, with no proof? Is this designed to bankrupt my family? How does the city manage to convince itself that securing easements from my neighbor allows them to place their 66" sewer lines through my property? Did the city even have a permit to do so? Why does the city not pay me for the sewer easement even when I proved they had run pipes through our land without an easement? Why does the city ignore our proof of ownership? Don't deeds mean anything to this city?

Why does the 30" Folsom lake water line go through my property without an easement or agreement, and why does the city refuse to pay for that too? Is dishonesty really the best way to do business in this town? Why did water flow to my house through pipes on my property when the water main was turned off? Why did it stop flowing when my father mentioned this to the utilities director? Why did he then say he did nothing? Why didn't the city pay for the electric power line easement through my property? Why does the city refuse to recognize the written water rights to 10k gallons per resident per day? I believe this also stated 7 cents per hundred cubic feet thereafter. Perhaps when every water bill has been protested a larger amount might emerge? Why will the city not permit my entitled 3 sewer hookups? Am I required to go to court to have my proven property rights?

Why was my water pipe broken 5 times and raw sewage allowed to enter our property, filling a field and posing health dangers to my father? Why did the city fill pipes with concrete after agreeing my father could use them? Why does the water meter retrofit installation place our family in phase 1, then restrict us to a ¾" fitting reducer to supply 4" mains for two residents? Once again, a double standard for the Zisk's. Why were we told we were the highest water users of approximately 85,000 gallons of water per day? Through a ¾" fitting... when our water was mostly turned off? Please? This is not even possible? Why do I pay a water bill for my property if I don't own it? Amazing.

Why does the city have a piping network for all residents in town except my 12+ acre property? Why did the city want to fill our 4" mains throughout my property with concrete once they found out we had them? Why do council members tell me they heard it all before when they have never spoken with me? Who else is talking so profusely about our property and why? Why do mayors slander my father at the podium telling him he has been wrong for 29 years when the mayor has only been a resident for 16? Why will other council members refuse to return my phone call when I have never spoken with them? Why do council members constantly ask me if I can

afford to fight all these issues? Is it that easy to just hand money to law firms? Is this all about power and control? Why did my father not have a single vacation in the last 32 years of his life? Why did my mother not have a single vacation the last 24 years of her life? Are you literally joking when you say in your letter you are trying to build a trail with little inconvenience to me??? My family's life has been destroyed by the city, and you believe this to be convenient?

You asked me to give you questions, so I have. Could you or others please answer them? I know the answers to many of these questions. Most have to do with illegal actions taken by the city, which has cynically concluded that individual citizens cannot fight the power of city hall. The city also knows much of the truth, but has chosen to hide it. I have never hurt anyone in my life. I am honest as my dad was. I wonder what has become of morals and ethics? Why are you and the city doing this to me? Why don't you do your job and produce the records that prove the city acted properly?

There are even bigger issues which have been covered up, but I will save these for another time. The truth will out. I know way too much. I have lived this since I was 9 years old and watched it take my family alive. I loved my family. Do you love yours? Do all the city officials love theirs? If so, they should be able to understand how it would feel to have a powerful force take everything from them. As humans we all must possess some understanding and sympathy. But I have not seen any sympathy. Life's enjoyment has been taken from my family? If all this had not happened, my mother, father, and brother would all still be alive today. You, the city, and I all know this all has had nothing to do with a bike trail. It never did, but it has put my family to death.

My family has built a large part of this city. We have always been devoted to hard work and helping people. I have been kind and patient with the city as I have pursued getting answers. I have openly talked with the city since my father has passed. But I have observed it easier for the city to flex their muscles and to use their internal departments to get whatever they want. This wanting and taking has run for 43 years and claimed four lives. Must the last 3 Zisk's be sacrificed too? I will not argue or play procedural games. I know my parents did not die from the causes stated on their death certificates. Although my health is none of your concern, I have ongoing health problems from cancer. I am only asking for a simple life with my children, a small settlement, and to build a house on my land. The city is aware of my proposal, and I need to know if it is possible to negotiate a conclusion to the hell my family has had to endure.

I ask you to cease with any work you are planning on my property until we have discussed my proposal and settled on a solution. The direction of what we both need to do will be defined soon.

Sincerely,

John Zisk

Letter 13 Response	**John Zisk** Mary 27, 2018

13-1 The comment references the remainder of the commenter's correspondence and asks if all deadlines have been met.

The comments were received by the City of Roseville on May 27 before the close of the Draft EIR public comment period on May 29. The commenter's multiple pieces of correspondence, including attachments, are included in this Final EIR as one combined "Comment Letter 13."

13-2 The comment states that the comments relate to the "East – Draft EIR" and the entire trail system.

See responses to comments 13-3 through 13-6.

13-3 The comment discusses previous interactions with the City of Roseville in relation to the commenter's property.

The commenter's property is not located on the proposed Dry Creek Greenway East Trail alignment, but is approximately 1.2 miles northeast of the project proposed trailhead. The western terminus of the proposed project is located at the existing Saugstad/Royer Park trial near the intersection of Riverside Avenue and Darling Way. The comments address history related to the Miners Ravine Trail and the area around the commenter's property and do not address the proposed project or the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

13-4 The comment addresses the procedures for the "current" EIR.

It is unclear if the comment is addressing the Dry Creek Greenway East Draft EIR or a previous EIR for a separate project. The CEQA procedures that were followed for the Draft and Final EIR for the proposed project are described in Chapter 1, "Introduction" of the Draft EIR and Chapter 1, "Introduction and List of Commenters," of this Final EIR. The EIR has adequately followed the CEQA requirements for preparation of an EIR, as explained in these chapters.

13-5 The comment discusses conditions on the commenter's property, which is not located on the proposed Dry Creek Greenway East Trail alignment.

The comment does not address the proposed project or the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

13-6 The remainder of the commenter's materials include documents related to the commenter's property and previous projects proposed by the City of Roseville. The documents include previous comment letters and previous emails, such as the 2009 email sent to the City regarding the commenter's property that precedes the current planning and environmental process for the proposed project.

See response to comment 13-3. The materials do not address the proposed project or the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

From: [redacted]
To: Morse, Mark
Subject: Dry Creek Greenway East Trail Project ERI Comments
Date: Monday, May 28, 2018 7:58:50 AM

Hello Mark

We are residents on Spahn Ranch Road off Old Auburn. We are concerned about the trail that will be implemented in our community. Although we understand the significant benefits bike trails bring to the communities, we are concerned about the neighborhood safety, impact to wildlife, noise, etc. We purchased a house in this neighborhood to enjoy the beautiful and quiet scenery the creek offers. By putting a bike trail close to our neighborhood you are taking away our peaceful scenery, increasing the noise and population, and potential crime and transient occupancy. We are asking that the trail not end near Old Auburn near residential housing. We are not opposed to the bike trail, we ask for the trial to end closer to Maidu Park, which is a better location for the public with facilities and parking. 14-1

Best Regards,
Carrie Butler and Rafael Cruz

Letter 14 Response

Carrie Butler and Rafael Cruz
May 28, 2018

14-1 The comment expresses concern about neighborhood safety, impacts to wildlife, and noise.

Please see Section 4.10, “Noise” in the Draft EIR for a discussion of the existing noise environment along the proposed trail alignment and the potential impacts related to long-term increases in use-related noise (see Impact 4.10-2). The EIR discussed the potential for an increase in noise from activities related to trail use and maintenance. The EIR concludes that long-term uses associated with the proposed project would be predominantly non-motorized activities and would not expose persons to or generate use-related noise levels in excess of adopted standards, and this would be a less-than-significant impact. Regarding neighborhood safety, please see Impact 4.11-2 (Effects on police protection services) in the Draft EIR and Master Response 1 in this Final EIR. Impacts to wildlife are discussed extensively in Section 4.3, “Biological Resources” of the Draft EIR. The comment also expresses an opinion that the proposed trail should end closer to Maidu Park. This comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration.

Letter 15

From: Kyoung Mo
To: Morse, Mark
Subject: East Roseville bike path
Date: Monday, May 28, 2018 11:48:18 AM

Dear, Mr.Morse

I am currently living in [redacted] Roseville in Creekside community.
I send this email regarding bike path along with Linda Creek which
my home is wildly open to the open space.
I was pleased we would have a nice trail nearby, but I did not know the exact bath way. 15-1

You know, my neighbors and I have the same concern that the bike path would go through right behind our home back yard which would invade the privacy.

And also, the beautiful oak trees and lots of trees will be taken out that impact bird habitats and other wild life. 15-2

When I had city notice for Dry Creek Greenway about a month ago, I thought it would go along Linda Creek under Old Auburn Rd bridge ,not right behind our back yard. 15-3
We had some times of flood from Linda Creek in the open space which will block the bike path in rainy season, so that would be much better the bike path would go to the Old Auburn Rd level.

We had two homeless people living in their tents under the bridge of Old Auburn rd last autumn, so if the bike path is connected right after my back yard, I would really concern my family' safety. 15-4
Please consider my concern about the bike pathway.
Thank you so much.

Sincerely,
Kyoung Melanie Mo

Letter 15 Response

Kyoung Melanie Mo
May 28, 2018

15-1 The comment expresses concern regarding the trail alignment and potential loss of privacy in the Spahn Ranch Neighborhood east of Old Auburn Road.

Please see Master Response 1.

15-2 The comment addresses potential loss of oak trees and the impact to bird habitats.

The loss of oak trees is addressed in Impact 4.3-8 (Disturbance of City protected trees, Valley Oak Woodland, and other Sensitive Vegetation Alliances and Associations) in the Draft EIR. The potential impacts on riparian habitat and bird species are discussed in Impact 4.3-1 (Disturbance and loss of waters of the United States, waters of the state and riparian habitat) and Impact 4.3-4 (Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors) and Impact 4.3-5 (Disturbances to special-status song birds). With the implementation of mitigation measures identified in the Draft EIR, these impacts would be reduced to less-than-significant levels.

15-3 The comment addresses the trail placement and expresses a preference for the path to be placed along Old Auburn Road. The 2010 Dry Creek Greenway Trail Planning and Feasibility Study (City of Roseville 2010) identified a key issue along this portion of the potential alignment. Steep slopes were noted along the southerly leg of Old Auburn Road described in the Study as "Alignment 12-2," which would have crossed under Old Auburn Road using the west span of the existing Old Auburn Road Bridge over Linda Creek. In addition, the Biological Resources Study Report prepared for the Planning and Feasibility Study identified a mitigation/restoration site on the west side of the creek. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA. The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration.

15-4 The comment expresses concern safety related to homeless people living along the bike path.

Please see Master Response 1. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

Dear Mark,

I am Audra Owens residing at the new Tim Lewis Creekside Community, [redacted] This email serves as my opposition against the Dry Creek Greenway East Trail Project as it relates to the impact on the Creekside Community on the corner of Old Auburn Road in East Roseville.

This bike trail will negatively impact our beautiful Linda Creek open space behind the homes that we enjoy as our backyards. We have the following concerns regarding this proposal:

1. Privacy
2. Neighborhood Safety
3. Crime
4. Transient Occupancy
5. Security
6. Increased traffic
7. Noise
8. Removal of natural trees and greenery
9. Impact to wildlife and bird habitats

16-1

I have attached two photos (sent in the next two emails due to size exceedance), which were taken today (5/28) that show our backyard and the open green space. We chose this property for the privacy and natural beauty that we enjoy and invested in a significant lot premium to have these amenities.

Constructing a 14-foot bike path behind our home where all people going by can see into our private backyard is absolutely not acceptable. Also, removing any trees and greenery for such a bike path is environmentally wrong.

16-2

I 100% oppose this bike path in our beautiful open green space and request the Roseville Transportation Commission seek an alternative route that is not in this open green space.

Audra Owens

16-1 The comment expresses opposition to the project and expresses concerns regarding several biological issues as well as safety and security issues.

The loss of oak trees is addressed in Impact 4.3-8 (Disturbance of City protected trees, Valley Oak Woodland, and other Sensitive Vegetation Alliances and Associations) in the Draft EIR. The potential impacts on riparian habitat and bird species are discussed in Impact 4.3-1 (Disturbance and loss of waters of the United States, waters of the state and riparian habitat), Impact 4.3-4 (Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors), and Impact 4.3-5 (Disturbances to special-status song birds). With the implementation of mitigation measures identified in the Draft EIR, these impacts would be reduced to less-than-significant levels. Regarding neighborhood safety and other security issues, see Master Response 1. The comment also lists noise and increased traffic as topics of concern. These topics are addressed in Chapters 4.10, "Noise" and 4.13, "Transportation and Circulation," of the Draft EIR.

16-2 The comment refers to pictures of the commenter's property and expresses opposition to the proposed project.

The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration.

Letter 17

From: Ken White
To: Morse, Mark
Subject: Dry Creek Greenway East Trail Project EIR comments
Date: Monday, May 28, 2018 4:13:23 PM

Mark,

I am a homeowner along the proposed Dry Creek Greenway East Trail Project. My address: [redacted]

Although I support extending the paved bikepath, I am concerned about impact to the safety and security of our neighborhood if the path is developed on the east side of Linda Creek near our neighborhood. 17-1

It appears that you will have to construct a bridge to cross Cirby Creek near Eastwood park in order to follow Linda Creek. I suggest that the bridge be placed west of Eastwood park so that the path is West of Cirby Creek and Linda Creek from that point onward. The advantage of this is that the path will be developed in the open space and further away from homes than if the path were on the East side of the creek. 17-2

- Ken White

Letter 17 Response	**Ken White** May 28, 2018

17-1 The comment expresses support for the trail but concern regarding potential safety and security impacts from development of the trail near the Spahn Ranch Neighborhood east of Old Auburn Road.

Please see Master Response 1. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

17-2 The comment expresses a preference that a bridge to cross Cirby Creek near Eastwood Park be placed west of Eastwood Park so that the path is west of Cirby Creek and Linda Creek. As discussed in Draft EIR Section 2.2.3 Project Objectives, one objective is to maximize opportunities to connect parks. Relocating the trail to the opposite side of Cirby Creek from Eastwood Park would either eliminate the opportunity for this park connection or require an additional bridge, which would increase project costs and could result in additional environmental impacts. Initial investigations on potential trial alignments determined that topographic and property ownership constraints restricted the potential for placing the trail in the location described by the comment.

The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

Letter 18

From: Todd Beasley
To: Morse, Mark
Subject: Dry Creek Greenway East Trail Project
Date: Tuesday, May 29, 2018 8:51:33 AM

Mr Morse,

My name is Todd Beasley, and I live at [redacted] The neighborhood that would be directly adjacent to the new purposed Dry Creek Greenway East Trail Project.

Although my family and I are avidly outdoors, I have serious reservations about the location of this path as it pertains to our (and other) neighborhood.
For one, If you look locally, The Miners Ravine trail, which is beautiful, but also a super freeway for homeless who have also taken to setting up their camps at the waters edge.
That waters edge of the Dry Creek Greenway East Trail Project would be the backyard of our neighborhood. To be quite frank, I don't really feel like my brand new home which my wife and I have worked so hard for should now be littered with homeless and the crime, drugs, trash, human waste, etc that goes along with it.
I do believe it is the paths proximity to Linda Creek which brings my concerns to light.
Other cities, such as Folsom, have a fantastic trail system with very limited issue, but for the most part, there are no concealed water ways where the homeless can camp out.

18-1

I value your input in this mater, and appreciate your time

Todd Beasley

RE: Dry Creek Greenway East Trail Project – Segments 4/5

Dear Mr. Morse:

For the past 26 years I have lived at [redacted] just a few yards from Linda Creek. Because of this location, I am very familiar with the Meadow Oaks area between Oak Ridge Drive and Rocky Ridge Drive where multiple segments will be built.

Meadow Oaks is Unique

The existing unpaved path has enabled multiple generations to enjoy personal experiences in this natural habitat tucked away in the middle of a city. The combination of the path's short length, multiple access points to medium density neighborhoods, and proximity to two schools has produced a very popular and esteemed area for recreation.

Local realtors report that several Meadow Oaks home owners are second and third generation residents. They chose to remain in the neighborhood, so their children would have the same outdoor experience they enjoyed when young.

Adults speak fondly of walking to school through "the woods," catching tadpoles after school, building secret hiding places and so much more. A 90-year-old Condor Court resident said she remembers watching cattle driven along the maintenance path when she was a little girl. Her grandmother told her that the trail was originally formed by Maidu Indians traveling back and forth along the creek in search of food.

This area is used seven days a week at all hours of the day. Easter egg hunts and birthday parties are held in the meadow. Children walk to and from school. Eich Junior high PE classes even use it for distance running. After school students gather at the "green bridge" (Woodlake Lane footbridge). On weekends and during the summer children give fishing a try or head to their favorite "beach." People jog, walk, and push baby strollers. After years on the path, people recognize one another, and it is common to see small groups laughing together before heading on in opposite directions. Often the chatter is to discuss what had been spotted by a nature lover.

Photographers and bird watchers visit regularly. Dogs often play off leash and chase their favorite toys into the water. Bird lovers advise dog owners when it is nesting season and owners willingly limit their pets' activity. I have watched stunningly successful self-policing these 25 years.

It truly is an Andy Griffith's Mayberry experience along this stretch.

Concerns to be addressed in the final EIR:

•It is important to note the established uses and significance of the existing path. Users do not want to lose this unique habitat. It is critical to preserve what remains.

19-1

•Pedestrians, particularly those older and physically challenged living in the Oak Ridge assisted living facility, require protection from fast moving cyclists traveling around the blind curves present on the existing paved trail running from Oak Ridge Drive to Sierra Gardens.

•This is a generations old, established path with significant foot traffic. People are creatures of habit. They meander now and will continue to do so. They will not remain on a 2' shoulder. Potential exists for collision injuries on this unique stretch.

•Review historic records to determine the maintenance trail origin and uses. Consider informational trail signage to preserve any history (i.e. cattle drives/Maidu Indian movement).

19-1 cont

Project Objective 2.2.3 – Protect Natural Habitat and Special Wildlife Species.

Construction impact states that loss of riparian vegetation may lead to higher water temperatures that would be detrimental to fish. The report also states that the creek in its current condition is an unlikely habitat for salmon spawning (Table 4.3a). The report indicates that this creek is in decline.

What the researchers did not take into consideration is the actual history of the area.

Overlooked entirely is the fact that this was once a vibrant, lively waterway. Once the source of salmon for the Maidu Indians, my family enjoyed spotting them throughout the 90's and 00's.

Also overlooked is the fact that the reductions in fish and wildlife occurred within the last five years. Up until this time, river otters splashed in the deep water near Condor Court and tadpoles filled the shallow waters. A mink was spotted on numerous occasions. Western pond turtles were so abundant that a popular viewing area was dubbed "turtle cove." Blue herons patrolled the area and a great egret returned yearly to nest behind 1814 Blue Jay Drive. Coyotes trotted along the trail many times a week. Pheasant squawks were frequent and loud. Oak titmouse, turkey and mallard populations were sizeable.

Changes took place slowly over the past 25 years of erosion. During those years the creek lost a significant amount of riparian vegetation. Erosion also triggered the loss of over a dozen 200+ year old live oaks which once regulated water temperatures. The remaining oaks (live, valley and blue) have been severely compromised, and it is only a matter of time before they are also lost. Photo 25A, p. 40 the condition of all the remaining oaks growing on the creek banks.

19-2

The most noticeable changes have occurred in the last five years. During the drought, water levels were the lowest they had been in 25 years. Already compromised from losses due to erosion and drought, the area was dealt a serious blow when on multiple occasions a Granite Bay housing development both slowed and shut off entirely the water flow to Linda Creek. A final blow came when this same development released the chemicals used to clean their ponds into the creek. (The state is involved in an investigation.)

Linda Creek became a shadow of its former self. Wildlife vanished. One 23-year Blue Jay Drive homeowner commented on how quiet his back yard had become. At one point it was even difficult to spot a "blue jay" (scrub jay) on Blue Jay Drive.

Due to how recently the losses have been witnessed, there is potential to reverse the damage. People familiar with the creek know this because they are seeing and hearing the recovery. What researchers reported as limited wildlife and a creek in decline, is actually the evidence of a recovery. A great egret has returned. A young otter and a mink were spotted. Several hawks are establishing their territories and song birds are abundant once more. A few mallards are nesting, and a pheasant was spotted.

Because of this delicate recovery in progress, it is critical the area be protected from further destabilization. If the project is going to proceed, it is critical it does not impede upon the remarkable progress currently underway.

Further loss of shade, riparian habitat, and valley oak woodland has the potential to be the tipping point for this area.

Concerns to be addressed in the final EIR:

•The remaining oaks growing on the bank should be assessed and erosion protection for those trees included as a part of the bank stabilization element of the proposed project.

•Include the next generations of oaks growing several yards off existing bank as they are future shade for the creek and tree canopy for the city.

•Trail placement should be around trees as opposed to tree removal.

•If adequate right of way cannot be acquired to avoid removal of the trees within the designated "area of scenic quality" west of Rocky Ridge (p.4.1-11), the design should be modified. Protection of current and future creek canopy and beauty of the area should be the design priority, not the city objective for a class I multi-use trail.

•Determine if river otters still nest on the bank behind Condor Court and assess what can be done to minimize bank disruption. There is concern for the otters and the "area of scenic quality" as this area will be significantly altered with construction of the trail underpass.

•Restore bank impacted by construction to natural condition through bio-engineering.

19-2 cont

Mitigation Off Site Is Not An Answer to Tree Removal along Linda Creek

As is stated in the preliminary EIR, the Roseville Tree Preservation Ordinance lists scenic beauty as one of the reasons for native oak preservation. The ordinance also provides standards for mitigation when trees are removed.

However, it is important to take into considering the 2014 Roseville Urban Forest Master Plan (RCRMRP) which provides direction for "stewardship" of Roseville's creek system and for "preserving the benefits of this system to wildlife, flood management, and recreation." It specifically states, "Native trees are critical to the preservation and enhancement of the primary indicator of a healthy creek system (p.22).

It is imperative to face the fact that planting young trees elsewhere does absolutely nothing to mitigate the loss of a mature native oak. It does not protect the scenic beauty of this area, nor does it contribute to the preservation of the creek.

Over the past 25 years there have been numerous mitigation projects throughout the city. Despite the significant loss of tree canopy over the creek, not a single tree has been planted. When the city was asked why, the reply was that trees had to be placed where there was easy access for watering and other upkeep. Mitigations that that took place at both Maidu Park and Strap Ravine were mishandled. Too many trees were planted in a single area. Shade critical for the oaks' first few years was not provided. Loss was enormous and significant. At the time of RCRMRP's publication, Roseville's overall tree canopy was 15.7%. Meanwhile, Roseville's Greenprint Initiative goal is 35% canopy coverage in the region.

19-3

Concerns to be addressed in the final EIR:

•Off site mitigation is not an acceptable alternative for losses in this area and should not be considered an alternative.

•If tree removal is unavoidable between Oak Ridge and Rocky Ridge Drives, mitigation should occur in the same area. Include both the north and south banks from the Woodlake Lane entrance to Rocky Ridge Drive, as recipients of future mitigation plantings.

•Include both the north and south banks from Woodlake Lane to Rocky Ridge Drive for future mitigation plantings conducted by city.

•Prior to final plans, mark all trees scheduled for removal and hold an on-site public meeting with a neutral arborist to walk the area.

19-3 cont

Bank Stabilization at the City Sewer Line Behind 1810 Blue Jay Drive

Two 150+ year old live oaks once grew in this area. Between dense shrubbery and the oaks, the entire length was shaded. The planned gabion wall would be an eye sore and does nothing to promote the return or retention of wildlife.

Additional redirection of channel flow away from the north bank with a rock or log vane is also a concern. Currently water bounces off the north bank and flows into 1812 and 1814 Blue Jay Drive. A vane will create an even greater redirection of flow to the opposite bank opening it up to similar erosion. Redirection will also impact the rest of the creek as it must reach a new equilibrium. Quick fixes

Concerns to be addressed in the final EIR:

•Consider allowing natural equilibrium to be reached.

•Add root wads or other bioengineering to the proposed gabion wall to soften the force bouncing off the wall and improve aesthetics.

•Conduct geomorphic engineering on the creek before conducting individual, isolated repairs which will cause problems further downstream.

19-4

In closing, please note that most of the Blue Jay Drive residents have lived here for a long time, some as many as 32 years. People chose this street due to the proximity of Linda Creek and have a front row seat to the changes. There are many photos and videos documenting floods and bank changes. Despite our years of knowledge and the Roseville Urban Forest Master Plan instruction that "community participation and support will be needed to reach the Greenprint Initiative goal," no one has ever been contacted. We would be happy to supply any background information that might be useful as further creek assessments are conducted. All you have to do is ask.

19-5

Sincerely,

Rosalyn Clement

Rosalyn Clement

Segment 5: Standing at the point where the existing paved trail meets the existing pedestrian trail. The Woodlake entrance is at left. Linda Creek on right. This is all that remains of the valley oaks after losing the 200+ year old trees. Bank erosion has all the young trees to drop several feet. Roots are exposed and many are struggling to remain upright. The only unaffected trees (located several yards from the bank) are directly in the path of the proposed trail.

19-7

Segment 5 – Looking at north bank near Rocky Ridge Drive. This is the condition of the remaining trees currently shading Linda Creek.

19-8

2016
Shot from the south bank looking towards north bank behind Mallard. All 100+ year old live oaks and mature habitat has been lost to erosion. These trees use to sit several feet from the bank's edge and grew under the shade of 100+ year old live oaks. This is all that remains of the live oaks. They will also be lost as erosion continues to undercut them. All existing and future shade will be gone. This is the condition of all the young growth researchers saw during their assessments.

Letter 19 Response

Rosalyn Clement
May 29, 2018

19-1 The comment provides introductory information related to the history and use of the Meadow Oaks neighborhood. The comment also lists concerns that the commenter believes should be addressed in the Final EIR, including: 1) note the established use and significance of the existing path; 2) older and physically challenged pedestrians require protection from fast moving cyclists from Oak Ridge Drive to Sierra Gardens; 3) established users of the existing path will not remain on the 2-foot wide shoulder which creates the potential for collisions; and 4) use informational trail signs to display historic use of established path.

Items 1 and 4 are comments specific to the proposed project and do not address the adequacy of the analysis of the EIR; however, they will be forwarded to the decision-makers for their consideration. Related to items 2 and 3, while trail user safety is an important issue for consideration by the City when evaluating the merits of the proposed project, the topic is not within the purview of CEQA analysis. Additionally, please see Chapter 3, “Project Description,” of the Draft EIR for information related to trail design beginning on page 3-7.

19-2 The comment provides background information related to the biological changes that have occurred in the Meadow Oaks neighborhood and lists concerns that the commenter believes should be addressed in the Final EIR. These concerns include the following: “The remaining oaks growing on the bank should be assessed and erosion protection for those trees included as a part of the bank stabilization element of the proposed project” and “Include the next generations of oaks growing several yards off existing bank as they are future shade for the creek and tree canopy for the city.” These comments are specific to the proposed project and do not address the adequacy of the analysis of the EIR; however, they will be forwarded to the decision-makers for their consideration.

The comment states that trail placement should be around trees as opposed to tree removal. Tree removal is discussed in the Draft EIR on page 4.1-11 and under Impact 4.3-8. Design of the proposed trail would, to the extent possible, avoid the larger trees along the creek corridor, especially native oak trees, to minimize impacts to habitat and aesthetic values consistent with requirements of the City’s Tree Preservation Ordinance. Mitigation Measure 4.3-8 on page 4.3-79 states that “to the maximum extent feasible, oak and riparian trees shall be avoided where possible and protection measures shall be implemented to protect oak woodlands, riparian areas and associated native trees from project-related impacts.” The mitigation measure also includes measures that shall be implemented for oak and riparian trees that would be impacted by project activities to avoid and minimize potential impacts to individual oak and riparian trees.

The commenter also states that, if adequate right-of-way cannot be acquired to avoid removal of the trees within the designated "area of scenic quality" west of Rocky Ridge, the design should be modified. This comment is specific to the objectives of the proposed project and does not address the adequacy of the EIR; however, it will be forwarded to the decision-makers for their consideration.

"Restore bank impacted by construction to natural condition through bio-engineering." Construction and post-construction details are included in Chapter 3, "Project Description." Topsoil would be excavated and stored during construction operations and respread over disturbed soil areas after construction activities in that area are complete. Disturbed soil areas would be revegetated through planting of native grasses, shrubs, and trees. Please see page 3-32 of the Draft EIR for additional details.

19-3 The comment provides background information related to tree preservation activities that have occurred in the City and lists concerns that the commenter believes should be addressed in the Final EIR, including 1) offsite mitigation is not an acceptable alternative for losses in this area; 2) if tree removal is unavoidable between Oak Ridge and Rocky Ridge Drives, mitigation should occur in the same area; 3) include both the north and south banks from the Woodlake Lane entrance to Rocky Ridge Drive for future mitigation plantings; and 4) mark all trees scheduled for removal and hold an on-site public meeting with a neutral arborist to walk the area.

Related to items 1, 2, and 4, as stated under Mitigation Measure 4.3-8 of the Draft EIR, if native oak trees are removed, they would be replaced as outlined in the City's Tree Preservation Ordinance 19.66.070. According to the Ordinance, the preferred alternative for replanting is on-site replacement. Therefore, a Tree Planting and Maintenance Plan showing species, size, spacing and location of plantings, and the location and species of established vegetation would be prepared. A monitoring program would also be established to ensure compliance with any prescribed mitigation measures established by the project and to monitor the oak woodland restoration area. Please see page 4.3-79 of the Draft EIR for additional details. Item 4 includes a recommendation for an on-site public meeting with a neutral arborist. This is not required by Ordinance; however, the comment will be forwarded to the decision-makers for their consideration. For item 3, this comment includes a recommended location for future mitigation plantings conducted by the City and does not address the adequacy of EIR analysis. Therefore, the comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration and no further response is warranted for compliance with CEQA.

19-4 The comment provides background information related to creek flow and lists concerns that the commenter believes should be addressed in the Final EIR, including 1) consider allowing natural equilibrium to be reached; 2) add root wads or other bioengineering to the proposed gabion wall; and 3) conduct geomorphic engineering on the creek before conducting individual repairs.

Regarding item 1, allowing the creek flow to reach natural equilibrium would result in continued erosion of the banks which would reduce the ability for public safety and maintenance crews to access the open space. Also, this would likely result in the loss of trees and other vegetation.

Regarding item 2, a geomorphic study was conducted for the proposed project and provided as Appendix F to the Draft EIR. Ass stated on page 4.1-9 of the Draft EIR and based upon the analysis in Appendix F, where feasible, retaining walls would take the form of gabion baskets with timber facing and root wads or willow stalks to provide additional stabilization and to provide a more natural finish. The geomorphic study also included a recommendation for installation of a log or rock vane as proposed behind Blue Jay Drive (see Draft EIR Exhibit 3-9). These recommendations are based upon preliminary design drawings for the project. Final design of the project would include additional hydrologic/hydraulic analysis for this location to determine the exact location, configuration, and design of erosion control structures in this area.

Item 3 requests that the City conduct geomorphic engineering for isolated or separate creek stabilization efforts. Technical studies prepared for the Dry Creek Greenway East Project and EIR included a geomorphic analysis; therefore, it appears this comment is not specific to the proposed project and does not address the adequacy of the EIR analysis and is instead a request regarding the design of other isolated City creek stabilization projects. This comment will be forwarded to the decision-makers for their information and consideration.

19-5 The comment provides closing remarks. No response is necessary.

19-6 The picture shows a pedestrian using an existing trail. Please see Response to Comment 19-1.

19-7 The picture shows oak trees at the Woodlake entrance to the existing trail. Please see Responses to Comments 19-2 and 19-3.

19-8 The picture shows trees on the north bank of the creek near Rocky Ridge Drive and Mallard Lane. Please see Responses to Comments 19-2 and 19-3.

19-9 The pictures show examples of various wildlife. The comment does not address the adequacy of the analysis of the EIR; however, it will be forwarded to the decision-makers for their consideration.

Letter 20

To: Morse, Mark
Subject: Draft EIR Comments: Dry Creek Greenway East Trail Project
Date: Tuesday, May 29, 2018 6:48:44 AM
Attachments: Gregory Comments Draft EIR Dry Creek Greenway.pdf

Dear Mr. Morse,
We have the following comments to submit on the Draft EIR for the Dry Creek Greenway East Trail Project.

First, we would like to go on record stating that we were never properly noticed of a Dry Creek Greenway Trail project, much less that a Draft EIR had been prepared. We were out of town on May 21st, but would not have known about the meeting anyway since we knew nothing about the project. Neither Tim Lewis Communities nor the City of Roseville ever disclosed this project to us. On returning from our trip on May 23rd, we found a letter from neighbor Doug Owens stuck in our front door and this was the first we ever heard of a proposed bike path and Greenway project. 20-1

In November 2016 we purchased our home at [redacted] Roseville, located in the new Tim Lewis Communities "Creekside" development off Old Auburn Road. We have several concerns since the open space in its natural state was one of the appealing characteristics of the lot adjoining the Linda Creek open space. Given that we were not properly noticed, we have not had sufficient time to review the Draft EIR but chief among our concerns are the following:

1) **Diminished Privacy, Increased Traffic & Noise on the Brightside Court Cul-De-Sac** – our lot #12 at [redacted] Roseville, is located at the very end of a cul-de-sac which is open to the Linda Creek open space. Our property also adjoins and is contiguous to the Linda Creek open space along its entire length. Adding a trail will destroy the current privacy of the location and diminish property values. Given the proposed trail stub off Old Auburn Rd and route configuration that closely follows the cul-de-sac in front of our home (see PSOMAS Preliminary Layout Drawing, Sheet 17 – Old Auburn Road dated Feb. 2014), the City of Roseville is inviting the public on to a dead end cul-de-sac with minimal parking. **A bike path as configured will become an attractive nuisance**, inviting more people, noise and traffic with people coming and going and parking on the cul-de-sac, possibly for extended periods of time. These are impacts that are not easily mitigated and pose an ongoing cost to our way of life in the Creekside residential neighborhood. 20-2

2) **Increased Security Concerns & Decreased Property Value** – adding a bike path will invite access by the public with resultant increased security concerns and diminished property values. How does the City of Roseville plan to patrol the bike path when a large portion of it can't be seen from Old Auburn Road? The City of Roseville will be making it easier for persons with criminal intent to access our property from a paved and secluded bike path. How will the City of Roseville keep out the homeless from camping in the Linda Creek open space next to our property and trespassing into our yard and patio area to access our water supply, storage shed and other personal and private items in our side yard and back yard? These are impacts that are not easily mitigated and pose an ongoing law enforcement cost to the City of Roseville. 20-3

3) **Impact to Wildlife** – the oak wetlands area adjoining our lot is home to nesting raptors, herons, wild turkeys, squirrels, skunks, as well as numerous other bird species and wildlife. The open space and Linda Creek water should be preserved as open space and a wildlife habitat. There are plenty of other nearby areas like Maidu Park where people can ride bikes. This section of the Linda Creek greenway should be left in its natural state and not be dedicated for human intrusion, such as riding bikes, disrupting natural habitats, homeless encampments, and the resultant leaving of litter and trash. The likely impacts to wildlife in this section of Linda Creek are severe and without suitable mitigating measures. 20-4

We are strongly opposed to the addition of a bike trail and public access of any kind along Linda Creek with the proposed alignment adjacent to and adjoining our property line of Lot #12. We will take any and all actions necessary to prevent this project from moving forward. We purchased our home at this location for retirement and specifically to be next to the open space. After living far out in the country, we felt the home met our dream of living in an in-town location closer to our family with just the right amount of country feel and privacy. We felt being next to natural open space was worth the extra lot premium. However, had we known about the City's plans to develop the open space it certainly would have affected our decision to purchase the home in Roseville. 20-5

We respectfully urge the City of Roseville Transportation Commission and City Council to consider other options and alternatives.

Kindly acknowledge receipt of this email and letter given that today is the deadline for comments.

Sincerely,

- Kenneth & Teresa Gregory

Letter 20 Response

Kenneth and Teresa Gregory
May 29, 2018

20-1 The comment states that the commenters were not noticed of the Dry Creek Greenway Trail project, or that a draft EIR had been prepared.

A notice of availability was mailed to the address listed in the commenter's letter, as discussed below.

The City has conducted numerous outreach efforts to publicize the project and draft EIR. The City's 2008 Bicycle Master Plan includes a plan for development of over 28 miles of Class I trails in Roseville, including the Dry Creek Greenway East Trail. The currently proposed trail segment has been the focus of community outreach, feasibility studies and community workshops since 2008. Project outreach included formation of a Citizen Advisory Committee that provided formal feedback during the project feasibility stage. During preparation of the original and updated feasibility study, the City used a community-based planning approach with an emphasis on public outreach. The public outreach efforts included establishment of a Stakeholder Representative Group (SRG) that represented a broad array of community interests. The SRG met 10 times between 2008 and 2013. The public outreach efforts also included three community meetings, an online survey and numerous neighborhood meetings. The project has been routinely featured on the City's web site where a dedicated project webpage can also be found at www.roseville.ca.us/DryCreekEast project. Regarding publication of the Draft EIR, the City has publicized the project and release of the draft EIR via various social media outlets including: Facebook, Twitter, and Nextdoor; the City of Roseville's website for the proposed project; the City of Roseville email listing, with a distribution of 10,400; the Dry Creek Greenway East email newsletter, with a distribution of approximately 1,490; the project's alert email newsletters, with a distribution of approximately 4,600; and the Roseville Coalition of Neighborhood Associations. The public release was also shared with local news media.

The state CEQA Guidelines Section 15087 (a) requires that a draft EIR notice of availability be mailed to the last known name and address of all organizations and individuals who have previously requested such notice in writing, and shall also be given by at least one of the following procedures: 1) publication in a newspaper of general circulation; 2) posting a notice on and off the site where the project is located; and, 3) direct mailing to owners and occupants of property contiguous to the parcel or parcels on which the project is located. The City more than complied with CEQA's draft EIR notification requirements by placing an ad in the Roseville Press Tribune News paper and direct mailing to owners of contiguous properties (and to persons who previously requested such notice). According to the electronic distribution list prepared for this project, the address listed in the commenter's letter was sent a draft EIR Notice of Availability on April 13, 2018.

20-2 The comment expresses concern regarding loss of privacy and nuisance issues from development of the trail, such as vehicle parking by trail users. Please see Master Response 1. As stated on page 4.13-8 of the Draft EIR, it is possible that the proposed project could result in vehicle trips to available public parking areas near the project area such as the proposed trailhead, on-street parking, or Maidu Park. The Draft EIR addresses potential impacts from conflicts with an applicable plan, ordinance, or policy that establishes measures of effectiveness for the performance of

a circulation system. Also, while privacy is an important issue for consideration by the City when evaluating the merits of the proposed project, the topic is not within the purview of CEQA analysis. Therefore, this comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration.

20-3 The comment expresses concern regarding potential safety and security issues from development of the trail and diminished property values. the public is allowed to access and pass through City-owned open space. Without paved trails and the added surveillance that comes with the presence of trail users, City maintenance vehicles, and Roseville Police Department patrols, open space can harbor greater opportunities for illegal activities or theft due to the unimproved and isolated nature of the areas.

Property value has been an issue of concern regarding the proposed trail. While property value does not fall within the purview of CEQA, the City recognizes that property value is an important concern to the community, has evaluated it, and included it in design strategies for the proposed project.

Several studies have been conducted to evaluate the effect of trails on property values. The studies suggest that trails are likely to increase property values within a neighborhood and that some trails may act as a catalyst for neighborhood revitalization. For example, a 1994 study by the Maryland Greenways Commission titled Analysis of the Economic Impacts of the Northern Central Rail Trail asked residents near the trail corridor whether they thought value would be added to homes within walking distance of the trail. Sixty-two percent (62%) believed that a trail would add value, 7 percent (7%) believed that a trail would decrease home values, and 31 percent (31%) believed it would have no effect.

The study of Seattle's Burke-Gilman trail also attempted to evaluate the effect of the trail on property values. That study did not conclusively determine if the trail had any effect, negatively or positively, on property values. However, that study did produce some anecdotal information:

- The trail is regarded by real estate companies as an amenity that helps attract buyers and to sell property.
- Homes are regularly advertised as being near or on the trail.
- Some real estate agents claim that property sells for 6 percent more as a result of proximity to the trail.
- Residents who bought their homes after the trail was opened are most likely to view the trail as a positive factor that increases the value of their home.
- Long-time residents who bought their homes prior to the opening of the trail are generally less likely to view the trail as an economic asset.

These views are supported by a 2002 study by the National Association of Realtors and National Association of Home Builders. That study found that, out of 18 choices, trails were the second-most important community amenity people consider when making a decision to buy a home (freeway access was most important).

The studies are less conclusive about the effect of trails on the property value of homes that directly abut the trail corridor. Some studies suggest that the presence of a trail may result in a loss of property value, while others suggest that an adjoining trail would

increase property value. Factors that may influence a particular result include trail design in context with the neighborhood. By creating a trail in context with the neighborhood, City of Roseville staff believe that the Dry Creek Greenway East trail would fall within the ranks of trails that increase property values even for those properties abutting the open space.

Other communities and organizations have studied the community-wide economic impact of trails. These studies find that many trails result in economic benefits from increased tourism. The Dry Creek Greenway Trail would be part of a 70 to 80 mile loop trail around the South Placer/Sacramento region that will be a trail of regional and potentially national importance, with corresponding potential for economic benefits.

20-4 The comment expresses concern regarding existing wildlife and wildlife habitat in the project area.

The loss of oak trees is addressed in Impact 4.3-8 (Disturbance of City protected trees, Valley Oak Woodland, and other Sensitive Vegetation Alliances and Associations) in the Draft EIR. The potential impact on riparian habitat is discussed in Impact 4.3-1 (Disturbance and loss of waters of the United States, waters of the state and riparian habitat), Impact 4.3-4 (Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors), and Impact 4.3-5 (Disturbances to special-status song birds). With the implementation of mitigation measures identified in the Draft EIR, these impacts would be reduced to less-than-significant levels. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA.

20-5 The comment expresses opposition to the project.

The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA. The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration.

20-6 The comment references the topics included in the commenter's letter.

See responses to comments 20-1 through 20-4.

Comments,

Thank you for your hard work in the City of Roseville.

There are some requests related to this project.

First of all, according to this project, the trail will pass through our long backyard fence, so please pass far away to avoid personal life invasion as much as possible. 21-1

Second, there are many old trees behind our long backyard. Because of these trees, birds and animals are doing well.
I want you to do not remove as many trees as possible in relation to this project. 21-2

I attached my home map.

Sincerely,

Young Hwan Kim

RE: Dry Creek Greenway East Trail Project –Segments 4/5

Dear Mr. Morse,

I am submitting two comments specifically for the proposed bike trail segment between Oak Ridge Drive and Rocky Ridge Drive.

Comment 1. The only project alternatives considered in the EIR are "alignment" alternatives. There is no discussion or rationale given as to why a separated pedestrian and bike trail alternative was not considered in some areas (two trails). This is particularly significant in the segment between Oak Ridge Drive and Rocky Ridge Drive due to recreational impacts that will occur when a regional bike system with fast moving bicyclists enter this area. Not only will public safety issues arise but there will be impairment of the recreational experiences currently being enjoyed by more passive users. These current recreational actives are well described in the comments you received from Rosalyn Clement. They include families with small children, pets and slow-moving elderly people enjoying the quiet beauty of the natural area. A dual trail alternative needs to be included in the EIR and considered for this segment. 22-1

Conflicts between recreationists have been long recognized and studied. One that applies here was described in a recreational journal as the ISD Syndrome. It showed that more active forms of recreation can often impair, suppress, and even displace (ISD) less active recreationists. In other words there is a hierarchy of recreational pursuits from the most active forms to the most passive, and where a more active form often impacts a less active one while the reverse is not true. "Active" is defined by the sophistication of recreational equipment being used, type of propulsion, speed, and noise. The study looked at recreational facilities where there was an established use and where a change allowing more active recreational forms was to take place. As it applies here fast moving bicyclists will impair and possibly suppress long established uses in the area such as walking and nature observation. These impacts should be recognized and mitigated with a separate bike trail between the pedestrian creek crossing to the schools up to Rocky Ridge Drive. This segment currently includes a 22-2

2

paved section in the down creek portion however the opening to a regional bike system will create adverse impacts to the experience of walkers along this down creek section as well. The bike trail should be located away from the creek with a separate walkers trail nearer to the creek.

From the pedestrian bridge down to Oak Ridge Drive is an existing paved trail that will be used as the bikeway. It has passive use now along with occasional bicyclists. These bicyclists are typically slow-moving and limited to access to homes in the area. Once this segment is included in a throughway of a much larger bicycle trail system bike use and bike speed will increase significantly creating impairment of experiences of slow-moving pedestrians out for a stroll along the creek. The impacts cannot be mitigated by a dual trail in this section as it can up creek from the pedestrian bridge. The trail is narrowly hemmed in by private property and a floodwall. At one point the narrowly confined trail makes a 100 degree (nearly 90 degree) turn, a blind turn for bikes moving faster than 5 mph. It should be an extreme safety concern and mitigations should be considered. Because it is not an area proposed for new paved trail it has not been adequately addressed in the EIR as to safety and the impairment of the current users. Mitigations to reduce this impact should be included in the EIR including physical techniques to reduce bike speed. 22-2 cont

Overall, the natural park along Linda Creek between Oak Ridge and Rocky Ridge Drives has been a popular area for walking and nature observation. The ambiance is quiet and peaceful with people moving slowly through the area. The introduction of a regional bikeway trail will adversely impact recreational experiences of this long-established use. Conversely, bicyclists will not be adversely affected by passive recreationists as they move quickly through the area. The least the City could do is to protect the experience of current users of this area by creating a separate trail for bicyclists to the extent feasible.

Comment 2. The gabion basket wall #4 and log or rock vane #1 will cause stream bank erosion downstream, most likely to the private property at 1812 Blue Jay and possibly elsewhere. I have spoken on site with City engineers about the problem and I don't believe they have the interest or expertise to prevent further impacts to the creek channel. Their approach is a band-aid approach treating the specific site with a "fix" only to find that the fix creates new stream adjustments and further bank problems downstream. The City created the current bank instability when they removed channel vegetation and installed bank armoring up creek just below the Rocky Ridge Bridge. High runoff water passes faster through this section carrying more sediment and energy and this likely led to the current bank instability area. Fluvial hydrologists and geologists understand the dynamics of creek channels and the natural sinuosity that a water 22-3

course will establish based on bank full runoff, slope, substrate and other factors. It is certainly not natural that we have lost so many old oaks along the creek in the 32 years I have lived in this area, but the engineer I spoke with held to that belief. The City needs to consult with appropriate experts so that whatever measures are taken the result will be a more stable creek channel.

22-3 cont

Further, hard engineering solutions to this natural park area are not appropriate. Park organizations such as the national and state parks deal with sensitive resources. They bring the best expertise to these types of problems to protect further damage to resources and to ameliorate conspicuous man-made intrusions. There are many techniques that use natural materials such as root wads, boulders and logs to stabilize water courses in a natural sinuosity while preserving the natural aesthetics. Such techniques should be used here to mitigate impacts to the area.

22-4

Thank you.

Jim Trumbly

Letter 22 Response

Jim Trumbly
May 29, 2018

22-1 The comment states that the only alternatives are alignment alternatives and questions why a separated pedestrian and bike trail alternative was not considered to maintain the existing recreational experience of users of unpaved dirt trails, particularly for the proposed trail segment between Oak Ridge Drive and Rocky Ridge Drive.

Previous feasibility studies for the trail described the intent of the project, as well as the constraints. The City's Bicycle Master Plan identifies Class I off-street bike paths as preferred by Roseville residents. Class I bikeways are off-street bike paths located in a separate right-of-way, for the exclusive use of bicycles and pedestrians, with minimal cross flow by motor vehicles. In Roseville, the standard path design for Class I bikeways consists of a minimum 10-foot wide paved path for two-way bike paths with 2-foot shoulders on each side, per the City of Roseville Design Standards. Previous feasibility studies for the project also identified several constraints along the alignment, including steep topography and land ownership/right-of-way, that would make a separate path in addition to a Class I bike path infeasible in most areas. In addition, some communities have found that even when separated bicycle and pedestrian paths are provided, some trail users choose to walk on the designated bike path and bicycle on the designated pedestrian path. For these reasons, creating separate pedestrian and bike paths was not identified as a project objective. Further, provision of a separate walking path would increase the project footprint and, therefore would not avoid or lessen the physical environmental effects of the project. As a result, providing a separate walking path was not identified as a project alternative.

As discussed in Chapter 6, "Alternatives," in the Draft EIR, the California Code of Regulations (CCR) Section 15126.6(a) (State CEQA Guidelines) requires EIRs to describe "… a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather, it must consider a range of potentially feasible alternatives that will avoid or substantially lessen the significant adverse impacts of a project, and foster informed decision making and public participation. An EIR is not required to consider alternatives that are infeasible.

Furthermore, the CEQA Guidelines state that the lead agency shall consider direct physical changes in the environment that may be caused by the project, including reasonably foreseeable indirect physical changes. The Guidelines also state that economic and social changes resulting from a project shall not be treated as significant effects on the environment (section 15064(e)). The potential of the proposed project to change to the recreational experience currently enjoyed by residents is not a physical change to the environment and is not subject to review. While providing a separate pedestrian path does not fall within the purview of CEQA, the City recognizes that the recreational experience provided by, or modified by, the project is an important concern to the community. The area between Oak Ridge Drive and Rocky Ridge Drive includes existing well-worn foot paths in the public open space and a gravel road across public and private property intended for utility and private property access that have been used by the public for walking, jogging and biking. Local residents of the area have expressed

concern over future trail user compatibility if the existing paths or access road are merely replaced with the proposed trail.

The project retains most of this area's existing unimproved paths in their current condition. However, for approximately 1/3-mile the proposed project would be located over the existing gravel access road. In this location, the project plans allow for the installation of an enhanced shoulder 4 feet, 10 inches wide to provide additional walking space for pedestrians as discussed in Draft EIR Chapter 3, Project Description, for the Sheet 5 Segment of the trail (Draft EIR page 3-21) and as shown on Draft EIR Exhibit 3-9. This design also retains but re-locates the existing rear yard access road to Mallard Lane and Meadowlark Way residences.

22-2 The comment lists concerns related to trail safety and conflicts between potential trail uses and states that a dual trail alternative needs to be included in the EIR. The comment also addresses existing safety concerns along portions of the trail that are not part of the proposed project.

While trail user safety is an important issue for consideration by the City when evaluating the merits of the proposed project, the topic is not within the purview of CEQA analysis. Additionally, please see Chapter 3, "Project Description," of the Draft EIR for information related to trail design beginning on page 3-7. See also response to comment 22-1.

22-3 The comment asserts that the gabion basket wall #4 and log or rock vane #1 will cause stream bank erosion downstream. The comment discusses previous and existing creek channel issues and states that the City needs to consult with appropriate experts.

As discussed in the Draft EIR, a Geomorphology Study and Fluvial Audit was completed by cbec in December 2014, and this was one of several technical studies that were prepared to inform project design. Many of the recommendations of these studies and those contained in the *Engineering Design Considerations and Evaluation based on Geomorphology Study* (PSOMAS 2014), such as bank stabilization elements, have been incorporated into the project, as described in Chapter 3, "Project Description," of the Draft EIR. As discussed in the above-referenced geomorphology report, the proposed log or rock vane may help direct erosive energy away from the outside bank to the center of the channel. Final design of the project will include additional hydrologic/hydraulic analysis for this location to determine the exact location, configuration and design of erosion control structures in this area.

22-4 The comment states that hard engineering solutions to the natural park area are not appropriate. The comment states that there are many techniques that use natural materials, such as root wads, boulders, and logs.

Bank stabilization and protection measures will be evaluated in more detail during the design phase, including natural materials options, where appropriate based upon further hydrologic/hydraulic analysis. Use of root wads and other natural materials could be used, as depicted in Exhibit 4.8-4 in Chapter 4.8, "Hydrology and Water Quality," in the Draft EIR.

Public Hearing Response — May 21, 2018 Public Hearing (Speakers)

N/A	Robert MacNicholl	May 21, 2018	Hearing
N/A	Doug Owens	May 21, 2018	Hearing
N/A	Mary MacNicholl	May 21, 2018	Hearing
N/A	Jennifer Allen	May 21, 2018	Hearing
N/A	Phil Kister	May 21, 2018	Hearing

The following are comments received during the Draft EIR public hearing during the City Transportation Commission meeting on May 21, 2018.

PH-1 Robert MacNicholl addressed the Commission in support of the project and requested more information on the alignment of the trail Segment 5.

The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration. City staff followed up with the commenter with additional project information.

PH-2 Doug Owens addressed the Commission regarding the new 32 lot subdivision where he purchased his home a little more than a year ago. He mentioned his desire to keep the green space behind his home and expressed concerns with privacy issues and alignment issues because his home has as see through rear yard fence. He suggested that the trail be put on the other side because he feels there is more open space on the other side.

The 2010 Dry Creek Greenway Trail Planning and Feasibility Study (City of Roseville 2010) identified a key issue along this portion of the potential alignment related to steep slopes along the southerly leg of Old Auburn Road along what was identified in the Study as “Alignment 12-2,” which would have crossed under Old Auburn Road using the west span of the existing Old Auburn Road Bridge over Linda Creek. In addition, the Biological Resources Study Report prepared for the Planning and Feasibility Study identified a mitigation/restoration site on the west side of the creek. The comment does not address the adequacy of the Draft EIR, and no additional response is warranted for compliance with CEQA. The comment, along with others received on the Draft EIR, will be forwarded to the decision-makers for their consideration.

PH-3 Mary MacNicholl expressed concern with this being a wider trail than normal that could possibly encroach on trees and into the creek area. Her property extends almost to the creek.

The loss of oak trees is addressed in Impact 4.3-8 (Disturbance of City protected trees, Valley Oak Woodland, and other Sensitive Vegetation Alliances and Associations) in the Draft EIR. With the implementation of mitigation measures identified in the Draft EIR, this impact would be reduced to a less-than-significant level.

PH-4 Jennifer Allen expressed concern with the current homeless encampments along the creek. She believes the trail will only increase the homeless population.

Please see Master Response 1. Ms. Allen requested that her email address be blacked out on any future agendas. Mike Dour, Alternative Transportation Manager, confirmed that email addresses were necessary for noticing of further meetings. However, addresses on comment letters and emails have been redacted from this Final EIR.

PH-5 Robert MacNicholl requested additional information on how the existing easement behind his home will be dealt with and if there will be a separation between the proposed bike trail and existing easement.

This comment asks a design question related to an existing easement and does not address the adequacy of the Draft EIR. City staff followed up with the commenter with additional project information.

PH-6 Phil Kister requested that “restricted area” signs and restricted access be in place so that the trail cannot be accessed from Jo Anne Lane which is a dead end street; suggested that access be given for trimming of trees only. Mr. Kister expressed concern about the current homeless activity and possible increase in homeless activity due to the trail. Mike Dour, Alternative Transportation Manager, confirmed that there would be construction access only and no additional access was proposed as part of the project. Please also see Master Response 1.

This page intentionally left blank.

3 REVISIONS TO THE DRAFT EIR

3.1 INTRODUCTION

This section contains changes to the text of the draft environmental impact report (Draft EIR) in response to certain comments or as initiated by city staff. These changes are generally referenced in the responses to comments in Chapter 2, "Comments and Responses," or are provided to be consistent with changes referenced in Chapter 2. The changes are presented in the order in which they appear in the Draft EIR and are identified by Draft EIR page number. Text deletions are shown in strikeout (~~strikeout~~) and additions are shown in double underline (double underline). The changes identified below do not alter the environmental analysis, conclusions of the EIR, or significance determinations; they do not require recirculation of the Draft EIR.

3.2 TEXT REVISIONS

3.2.1 Cover and Title Page

Per response to comment 1-1, the title page of the Draft EIR is revised as follows (deleted text shown in strikeout and new text shown in double underline):

Draft Environmental Impact Report
for the

Dry Creek Greenway East Trail Project

State Clearinghouse #~~2014032087~~ 2013112042

3.2.2 Chapter 4.1, Aesthetics

Per response to comment 12-2, the fifth bullet on page 4.1-9 of the Draft EIR is revised as follows (new text shown in double underline):

> In addition, where appropriate, consideration would be given to screening the trail from existing residential and urban development, such as at the intersection of Sunrise Avenue south of Coloma Way, Oak Ridge Drive north of Rampart Drive, Rocky Ridge Drive north of Cirby Way, ~~and~~ Old Auburn Road north of South Cirby Way, and West Colonial Parkway south of the decomposed granite loop to Old Auburn Road.

Per response to comment 12-3, the third sentence of the second paragraph on page 4.1-12 of the Draft EIR is revised as follows (new text shown in double underline):

> Where there is an existing paved trail, the type of use on the project site would remain the same, although the pathway may appear more prominent.

3.2.3 Section 4.4, Cultural Resources

Per response to comment 5-2, Mitigation Measure 4.4-2 on page 4.4-15 of the Draft EIR is revised as follows (deleted text shown in strikeout and new text shown in double underline):

> If human remains are discovered during any construction activities, potentially damaging ground-disturbing activities in the area of the remains shall be halted immediately, and the project applicant shall notify the Placer County coroner and the NAHC immediately, according to Section 5097.98 of the State Public Resources Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined by the NAHC to be Native American, the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains. The City shall also retain a professional archaeologist with Native American burial experience to assist the City of Roseville, the landowner, and the MLD with any management steps prescribed in California Health and Safety Code Section 7050.5 and California PRC Section 5097.98 ~~conduct a field investigation of the specific site and consult with the MLD, if any, identified by the NAHC~~. Following the coroner's and NAHC's findings, ~~the archaeologist, and~~ the NAHC-designated MLD and the landowner shall determine the ultimate treatment and disposition of the remains and take appropriate steps to ensure that additional human interments are not disturbed. The responsibilities for acting upon notification of a discovery of Native American human remains are identified in California Public Resources Code Section 5097.94.

4 MITIGATION MONITORING PLAN

4.1 INTRODUCTION

Section 15097 of the California Environmental Quality Act (CEQA) Guidelines requires public agencies to adopt monitoring or reporting programs for projects approved by a public agency whenever approval of a project includes environmental findings related to significant or potentially significant environmental impacts where mitigation measures are adopted as part of the project.

The following is the Mitigation Monitoring Plan (MMP) for the Dry Creek Greenway East Trail Project. The intent of the MMP is to prescribe the means for monitoring the implementation of the mitigation measures identified within the Draft EIR for this project.

4.2 MITIGATION MEASURES

The mitigation measures are taken from the Dry Creek Greenway East Trail Project Draft EIR, as modified by this Final EIR, if applicable, and are assigned the same number as in the Draft EIR. The MMP describes the actions that must take place to implement each mitigation measure, the timing of those actions, and the entities responsible for implementing and monitoring the actions.

4.3 ENVIRONMENTAL IMPACTS AND RECOMMENDED MITIGATION MEASURES

The components of the attached table, which contains applicable mitigation measures, are addressed briefly, below.

Impact: This column summarizes the impact stated in the Draft EIR.

Mitigation Measure: All mitigation measures that were identified in the Dry Creek Greenway East Trail Project Draft EIR are presented and numbered accordingly.

Action: For every mitigation measure, one or more actions are described. The actions delineate the means by which the mitigation measures will be implemented, and, in some instances, the criteria for determining whether a measure has been successfully implemented. Where mitigation measures are particularly detailed, the action may refer back to the measure.

Implementing Party: This item identifies the entity that will undertake the required action.

Timing: Implementation of the action must occur prior to or during some part of project approval, project design or construction or on an ongoing basis. The timing for each measure is identified.

Monitoring Party: The City of Roseville is primarily responsible for ensuring that mitigation measures are successfully implemented. Within the city, a number of departments and divisions would have responsibility for monitoring some aspect of the overall project. Other agencies, such as state and federal resource agencies and the Placer County Air Pollution Control District, may also be responsible for monitoring implementation of certain permit conditions. As a result, more than one monitoring party may be identified.

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
4.2 Air Quality					
Impact 4.2-1: Short-term construction-generated emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$.	**Mitigation Measure 4.2-1: Reduce construction-related NO_X emissions.** Before approval of grading permits, the construction contractor shall submit for PCAPCD approval, a written calculation demonstrating that the fleet of heavy-duty (> 50 horsepower) off-road equipment used during the project's construction, including owned, leased, and subcontractor vehicles, will achieve the necessary percent reduction in NO_X emissions during all construction phases, and for any periods during which multiple phases would overlap, as to not exceed 82 lb/day. Acceptable options for reducing emissions may include reduction in the number of segments constructed in a single day, use of late model-year engines, low-emission renewable diesel fuel, engine retrofit technologies, and/or other effective options as recommended by PCAPCD at the time (see Appendix C of the PCAPCD 2017 CEQA Handbook [PCAPCD 2017:75] for additional options). The calculation shall be provided using PCAPCD's Construction Mitigation Calculator.	Construction contractor shall submit for PCAPCD approval a written calculation demonstrating that the heavy-duty off-road equipment used during the project's construction, will achieve the necessary percent reduction in NO_X emissions during all construction phases.	Construction Contractor	Prior to issuance of grading permits	Development Services Department
4.3 Biological Resources					
Impact 4.3-1: Disturbance and loss of waters of the United States, waters of the state and riparian habitat.	**Mitigation Measure 4.3-1: Wetlands, Waters of the United States, and Water of the State.** This mitigation would apply for the Proposed Trail Alignment, Alignments Options 1A, 1C, and 5A. The City shall implement the following measures to compensate for the loss of wetlands, waters of the United States, waters of the State, and riparian habitat: a. The City shall submit a wetland delineation report to USACE and request a preliminary jurisdictional determination. Based on the jurisdictional determination, the City shall determine the exact acreage of waters of the United States and waters of the state that would be filled as a result of project implementation.	Submit a wetland delineation report to the United States Army Corps of Engineers (USACE) and request a preliminary jurisdictional determination	City of Roseville	Prior to construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	b. The City shall replace on a "no net loss" basis (minimum 1:1 ratio) (in accordance with USACE, CDFW, and/or RWQCB) the acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation. Wetland habitat shall be replaced at an acreage and location agreeable to USACE, CDFW, and the Central Valley RWQCB and as determined during the Section 401, Section 404 and Section 1602 permitting processes. The ratio of stream habitat restoration/replacement shall consider value for Central Valley steelhead and Chinook salmon (as discussed under Mitigation Measure 4.3-2). Habitat shall either be restored on the affected stream and within City property, or at an approved mitigation bank. In either instance, compensatory mitigation will be approved by USACE, CDFW, and RWQCB.	Replace the acreage and function of all wetlands and other waters that would be removed, lost, or degraded	City of Roseville	Prior to construction	Development Services Department
	c. The City shall obtain a USACE Section 404 Individual Permit, RWQCB Section 401 certification, and a Section 1602 streambed alteration agreement from CDFW before any groundbreaking activity within 50 feet of any wetland or water of the United States. The City shall implement all permit conditions, which may include contributions to an approved wetland mitigation bank or through the development and implementation of a Compensatory Wetland, Stream and Riparian Mitigation and Monitoring Plan for creating or restoring in-kind habitat in the surrounding area. If mitigation credits are not available, stream and riparian habitat compensation shall include establishment of riparian vegetation on currently unvegetated bank portions of streams affected by the project and enhancement of existing riparian habitat through removal of nonnative species, where appropriate, and planting additional native riparian plants to increase cover, continuity, and width of the existing riparian corridor along streams in the project site and surrounding areas. The ratio of riparian restoration/replacement shall consider value for Central Valley steelhead and Chinook salmon (as discussed under Mitigation Measure 4.3-2) as well as City Protected trees and Oak Woodland Habitat (as discussed under Mitigation Measure 4.3-8). Construction activities and compensatory mitigation shall be conducted in accordance with the terms of a streambed alteration agreement as required under Section 1602 of the Fish and Game Code.	Obtain a USACE Section 404 Individual Permit, RWQCB Section 401 certification, and a Section 1602 streambed alteration agreement from the California Department of Fish and Wildlife (CDFW)	City of Roseville	Prior to groundbreaking activity within 50 feet of any wetland or water of the United States	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	d. The Compensatory Wetland, Stream and Riparian Restoration and Mitigation and Monitoring Plan shall include the following: 1. identification of compensatory mitigation sites and criteria for selecting these mitigation sites; 2. in kind reference habitats for comparison with compensatory wetland, stream, and riparian habitats (using performance and success criteria) to document success; 3. monitoring protocol, including schedule and annual report requirements (Compensatory habitat shall be monitored for a minimum of three (3) years from completion of mitigation, or human intervention (including recontouring and grading), or until the success criteria identified in the approved mitigation plan have been met, whichever is longer.); 4. ecological performance standards, based on the best available science and including specifications for native riparian plant densities, species composition, amount of dead woody vegetation gaps and bare ground, and survivorship (based on characteristics of the existing impacted habitat); at a minimum, compensatory mitigation planting sites must achieve 80 percent survival of planted riparian trees and shrubs by the end of the three-year maintenance and monitoring period or dead and dying trees shall be replaced and monitoring continued until 80 percent survivorship is achieved; 5. corrective measures if performance standards are not met; 6. responsible parties for monitoring and preparing reports; and 7. responsible parties for receiving and reviewing reports and for verifying success or prescribing implementation or corrective actions.	Prepare Compensatory Wetland, Stream and Riparian Restoration and Mitigation and Monitoring Plan	City of Roseville	Prior to final Compensatory Wetland, Stream and Riparian Restoration and Mitigation and Monitoring Plan approval	Development Services Department
Impact 4.3-2: Interfere substantially with the movement of Central Valley steelhead and Central Valley fall-run Chinook salmon.	**Mitigation Measure 4.3-2: Central Valley Steelhead and Central Valley fall-run Chinook Salmon** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. The City shall implement the following measures, developed based on past consultations with NMFS, to avoid, minimize and/or mitigate potential effects on Central Valley steelhead and Central Valley fall-run Chinook salmon.				

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	a. Prior to the onset of work, the qualified biologist shall conduct a mandatory worker environmental awareness training. The training shall educate workers about the importance of avoiding impacts to Central Valley steelhead and Central Valley fall-run Chinook salmon and their habitat. The training shall also cover the relevant permit conditions and avoidance and minimization measures that protect sensitive species and habitats, as well as the penalties for non-compliance with state and federal laws, regulations, and permit requirements. The training shall include information about the life history and habitat requirements of Central Valley steelhead and Central Valley fall-run Chinook salmon and their potential to occur in the project site, as well as the terms and conditions of the Project's Biological Opinions or other authorizing documents (i.e. letter of concurrence).	Hire a qualified biologist to conduct mandatory worker environmental awareness training.	City of Roseville	Prior to construction activities within the creek banks and channel beds	Development Services Department
	b. Construction activities occurring within creek banks and channel beds shall be limited to the low-flow period (typically June 15 - October 15), unless earlier or later dates are approved by CDFW and NMFS during consultation. By limiting in-water construction activities to this time period, the Project shall limit construction activities to periods when low flow depths and velocities within the project streams are less likely to support Central Valley steelhead or Central Valley fall-run Chinook salmon life stages including adult migration, spawning, and egg incubation periods.	Limit construction activities within creek banks and channel beds	City of Roseville	During construction activities June 15 – October 15	Development Services Department
	c. Fish screens or temporary stream diversion structures shall be installed to exclude Central Valley steelhead and Central Valley fall-run Chinook salmon from areas where in-water and near-water construction activities would be conducted. Installation of fish screens or temporary diversion structures shall prevent access to affected areas in the unlikely event that Central Valley steelhead or Central Valley fall-run Chinook salmon are present in the project streams during the low-flow period (June 15 - October 15).	Install fish screens or temporary stream diversion structures in areas where in-water and near-water construction activities would be conducted, per Endangered Species Act (ESA) Section 7 consultation.	City of Roseville	During construction activities June 15 – October 15	Development Services Department
	d. The City shall retain a qualified biologist to monitor the installation of fish screens or temporary stream diversion structures, as well as any other near or in-water construction activities (e.g., installation of RSP along	Hire a qualified biologist to monitor installation of fish screens or temporary	City of Roseville	During construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	creek banks or below the OHWM, installation and removal of low water crossings, placement of new abutments, rock walls, gabions, and water diversions). Prior to the installation of fish screens or temporary stream diversion structures the biologist shall visually survey the in-water work area for Central Valley steelhead and Central Valley fall-run Chinook salmon.	stream diversion structures, as well as any other near or in-water construction activities, per ESA Section 7 consultation		activities June 15 – October 15	
	e. Once the biologist confirms that no Central Valley steelhead or Central Valley fall-run Chinook salmon are present in the in-water work area, fish screens or temporary diversion devices shall be installed in a downstream direction, installing the upstream fish screen or temporary diversion device. The biologist shall conduct a second visual survey before the downstream portion of the fish screen or temporary stream diversion is installed. If fish are present within the diversion area, the fish shall be guided out of the in-water work area with nets by the qualified biologist. The need for fish salvage is not anticipated because Central Valley steelhead or Central Valley fall-run Chinook salmon are not likely to be present in the project streams during the low-flow period (June 15 - October 15) – primarily because of excessive summer water temperatures that occur during this period in the project area. However, fish salvage (or relocation outside of the in-water work areas) shall be conducted as needed should fish be present.	Qualified biologist shall conduct a second visual survey and guide fish out of the in-water work area with nets, per ESA Section 7 consultation.	City of Roseville	During construction activities June 15 – October 15	Development Services Department
	f. Before the onset of construction activities, high visibility orange construction fencing shall be installed along the perimeter of Environmentally Sensitive Areas under the supervision of the qualified biologist. Fencing shall be installed along the limits of construction in riparian habitat, minimizing the disturbance of or encroachment on sensitive aquatic and riparian habitats. The contractor shall maintain the project's Environmentally Sensitive Area fencing for the duration of the project and remove it when the project is complete.	Install high visibility orange construction fencing along the perimeter of Environmentally Sensitive Areas	City of Roseville	Prior to construction activities within the creek banks and channel beds	Development Services Department
	g. Erosion control BMPs shall be implemented during construction to minimize the potential for erosion, and the mobilization of sediments to project waterways and be consistent with the Open Space Preserve Overarching Management Plan (and related USFWS Biological Opinion (81420-2008-F-1958-3). The following erosion and sediment control	Implement erosion and sediment control measures	City of Roseville	During construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	measures shall be implemented to prevent sedimentation and turbidity, as well as any identified in the SWPPP, 401, 404, or 1602 permits. 1. Soil exposure shall be minimized by limiting the area of construction and disturbance and through the use of temporary BMPs, groundcover, and stabilization measures. These measures may include mulches, soil binders and erosion control blankets, silt fencing, fiber rolls, temporary berms, sediment de-silting basins, sediment traps, and check dams. 2. Pursuant to Section 13-4.03C(3) of the Caltrans Standard Specifications, water pollution control practices shall be implemented within 72 hours of stockpiling material or before a forecasted storm event, whichever occurs first. If stockpiles are being used, soil, sediment, or other debris shall not be allowed to enter storm drains, open drainages, and watercourses. Active and inactive soil stockpiles must be covered with soil stabilization. 3. Plastic mono-filament netting (erosion control matting) or similar material that could trap wildlife shall not be used. Acceptable substitutes include, but are not limited to, jute, coconut coir matting, or tackified hydroseeding compounds. 4. Energy dissipaters and erosion control pads shall be provided at the bottom of slope drains as needed. Other flow conveyance control mechanisms may include earth dikes, swales, or ditches. Stream bank stabilization measures shall also be implemented. 5. Existing vegetation shall be protected, to the extent feasible, to reduce erosion and sedimentation. Vegetation shall be preserved by installing temporary fencing, or other protection devices, around areas to be protected. Where complete removal is not necessary, vegetation shall be cut to ground level with the root systems left intact to prevent erosion and facilitate the recovery of riparian vegetation after project activities are complete. 6. Exposed soils shall be covered by loose bulk materials or other materials to reduce erosion and runoff during rainfall events. 7. Exposed soils shall be stabilized, through watering or other measures, to prevent the movement of dust at the project site				

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	caused by wind and construction activities such as traffic and grading activities. 8. All construction roadway areas shall be properly protected to prevent excess erosion, sedimentation, and water pollution. 9. The contractor shall conduct periodic maintenance of erosion and sediment control measures. All erosion and storm water control measures shall be properly maintained for the duration of the project.				
	h. A Spill Prevention and Control Plan shall be developed and implemented by the City, or its contractor, for the duration of the project. Pollution prevention and control BMPs shall be implemented during construction to minimize the risk of hazardous materials being released into waters in the project site. The following pollution and contamination prevention measures shall be implemented to prevent the release of hazardous materials during construction: 1. All equipment and materials shall be stored at least 50 feet from wetlands or waters in the project site unless the equipment is on established paved areas. If storage of equipment or materials within 50 feet of wetlands or waters in the project site is necessary, secondary containment shall be utilized to contain the equipment and materials and prevent discharge of any harmful substances into the soil or aquatic resources. Staging and storage areas for equipment, materials, fuels, lubricants, and solvents shall be located outside of the channel and banks of Dry Creek, Cirby Creek, Linda Creek, and Strap Ravine. 2. Secondary containment shall be provided for stationary equipment such as motors, pumps, generators, and compressors located within or adjacent to the Dry Creek, Cirby Creek, Linda Creek, and Strap Ravine. Any equipment or vehicles driven or operated within or adjacent to these creeks shall be checked and maintained daily to ensure proper working conditions to avoid potential impacts such as leaks. 3. No fueling, cleaning or maintenance of vehicles or equipment, or placement of construction debris, spoils or trash should occur within 50 feet of wetlands or waters in the project site unless it occurs in designated refueling/staging areas on existing paved surfaces with	Develop and implement a Spill Prevention and Control Plan	Construction contractor	Prior to construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	secondary containment in place. Refueling of equipment should occur at approved fuel locations. Contractor shall inspect all equipment/vehicles for leaks prior to use and should inspected regularly during Project inspection. 4. For work that is to occur on existing structures over open flowing portions of Dry Creek, Cirby Creek, Linda Creek, or Strap Ravine, a method of containment such as netting, tarps or similar catchments shall be utilized to catch debris or other potential construction materials and prevent such material from falling into the waters.				
	i. Lighting design shall include measures to limit the amount of light "spill" on water surfaces at night that could lead to predation of juvenile salmonids. To minimize the effects of lighting on salmonids, the City shall prevent lighting that directly shines on the water surfaces of Dry Creek, Cirby Creek, and Linda Creek by minimizing the amount of lighting necessary to safely and effectively illuminate pedestrian areas on bridges and trails, and by shielding and focusing lights on the bridge and trail surfaces and away from water surfaces.	Design and install lighting that does not directly shines on the water surfaces of Dry Creek, Cirby Creek, and Linda Creek	City of Roseville	During project construction	Development Services Department
	j. The project shall avoid impacts to riparian vegetation where feasible, and shall incorporate restoration and enhancement of the riparian corridor into the final design plans and construction specifications and shall develop a riparian and restoration plan (RRP), as part of the Compensatory Wetland, Stream and Riparian Mitigation and Monitoring Plan discussed in Impact 4.3-1, Disturbance and loss of waters of the United States, and Mitigation Measure 4.3-1 that involves onsite enhancements and purchase of mitigation bank credits to compensate for permanent and temporal loss of riparian and SRA cover. The RRP shall include on-site measures such as enhancing riparian vegetation by the planting of native shrub, tree, and understory species to create a more diverse vegetation structure and thus a higher quality habitat for wildlife. The onsite measures in the RRP may also include the planting of willows and other fast-growing native riparian species, which can quickly compensate for the loss of riparian and SRA cover, and will be planted where erosion control (RSP, slope pavement etc.) is installed along stream banks. Permanent impacts to riparian vegetation can also be mitigated with the purchase of credits (1:1 for riparian and 1.7:1 for	Avoid impacts to riparian vegetation, incorporate restoration and enhancement of the riparian corridor into the final design plans and construction specifications, and develop a riparian and restoration plan	City of Roseville	As required by permit conditions	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	SRA cover), and 0.5:1 for temporal loss of riparian vegetation and SRA cover. Restoration and enhancement of the riparian vegetation in the project site (combined with mitigation bank credits) shall result in no net loss of riparian habitat acreage or function and shall increase the quality of habitat for Central Valley steelhead (including Critical Habitat), Central Valley fall-run Chinook salmon (including EFH), and shall be accomplished through development and implementation of the RRP. Permanent impacts to riparian, including SRA, and waters of the United States shall be further analyzed and determined based on final design for each construction phase during Section 7 consultation as part of USACE Section 404 and CDFW Section 1602 permitting.				
	k. Construction techniques shall be implemented to isolate near shore work from waterbodies in the project site. It is anticipated that clear water diversion using a cofferdam or gravel bag berm with impermeable layer would be used. Isolating in-water construction areas behind cofferdams would minimize the potential for turbidity and suspended sediments from reaching levels that could harm Central Valley steelhead, degrade existing Critical Habitat, harm Central Valley fall-run Chinook salmon, or degrade existing EFH. The extent of cofferdam footprints and dewatering shall be kept to the minimum necessary to support construction activities, and creek flow shall not be interrupted or reduced as a result of construction activities. Any fill material used in association with the cofferdams, such as sandbag fill, shall be composed of washed, rounded, spawning-sized gravel between 0.4 and 4 inches in diameter. If authorized by applicable state and federal permits, any of this gravel in contact with flowing water shall be left in place, and distributed manually with hand tools to allow passage for all life stages of fish. Installation and removal of cofferdams and/or gravel bag berms would be restricted to the summer low-flow period.	Isolate near shore work from waterbodies by clear water diversion using a cofferdam or gravel bag berm with impermeable layer	City of Roseville	Prior to construction activities within the creek banks and channel beds	Development Services Department
Impact 4.3-3: Disturbance or loss of valley elderberry longhorn beetle or its habitat.	**Mitigation Measure 4.3-3a: Avoidance and Minimization Measures** The following measures shall be implemented to avoid or minimize effects to VELB and/or its habitat during construction of the proposed project. a. A worker awareness training program for construction personnel shall be conducted by a qualified biologist prior to beginning construction activities. The program shall inform all construction personnel about the	A qualified biologist shall conduct a worker awareness training	City of Roseville	Prior to construction activities within	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	life history and status of the beetle, requirements to avoid damaging the elderberry plants, and the possible penalties for not complying with these requirements. Written documentation of the training shall be submitted to the USFWS within 30 days of its completion.	program for construction personnel, per ESA Section 7 consultation		the creek banks and channel beds	
	b. If elderberry shrubs can be retained within the project footprint, the City shall avoid indirect impacts by implementing the following measures, to the extent feasible, or equivalent measures agreed to in consultation with USFWS. Minimization measures include: 1. Avoidance Area. An avoidance area shall be established at least 20 feet from the drip-line of an elderberry shrub for any activities that may damage or kill the elderberry shrub (e.g., trenching, paving, etc.). 2. Fencing. All areas to be avoided during construction activities shall be fenced and/or flagged as close to construction limits as feasible. 3. Signage. Signage shall be posted every 50 feet along the buffer area with the following information, "This area is habitat of the valley elderberry longhorn beetle, a threatened species, and must not be disturbed. This species is protected by the Endangered Species Act of 1973, as amended. Violators are subject to prosecution, fines, and imprisonment." The signs shall be clearly readable from a distance of 20 feet and must be maintained for the duration of construction. 4. Timing. To the extent feasible, all activities that could occur within 165 feet of an elderberry shrub, shall be conducted outside of the VELB flight season (March - July). 5. Erosion Control and Revegetation. Erosion control measures will be implemented to restore areas disturbed within 165 feet of elderberry shrubs and the affected area will be re-vegetated with appropriate native plants. 6. Chemical Usage. Herbicides will not be used within the drip-line of the shrub. Insecticides will not be used within 100 feet of an elderberry shrub. All chemicals will be applied using a backpack sprayer or similar direct application method.	Implement minimization measures including, avoidance, fencing, signage, timing, erosion control and revegetation, chemical usage, mowing, surveys, monitoring, protection and management plan, per ESA Section 7 consultation	City of Roseville	Prior to construction activities within the creek banks and channel beds	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	7. Mowing. Mechanical weed removal within the drip-line of the shrub shall be limited to the season when adults are not active (August - February) and shall avoid damaging the elderberry. 8. Pre-construction and post-construction surveys. Pre-construction surveys shall document compliance with mitigation measures. The post-construction survey shall confirm that there was no additional damage to any of the elderberry shrubs than as described in this document. 9. Construction monitoring. A qualified biologist shall monitor the work area at project-appropriate intervals to assure that all avoidance and minimization measures are implemented. The amount and duration of monitoring will depend on the project specifics and shall be discussed with a USFWS biologist. 10. Elderberry Shrub Protection and Management Plan. The City will develop as part of the Section 7 consultation process with USFWS for the Dry Creek Greenway Multi-Use Trail project an elderberry shrub protection and management plan that will include how the buffer areas are to be protected, restored, and maintained after construction is completed and the City will ensure that ground-disturbing activities on the project site do not alter the hydrology for shrubs to be protected or otherwise affect the likelihood of vigor or survival of elderberry shrubs. The Elderberry Shrub Protection and Management Plan shall be consistent with the City's Open Space Preserve Overarching Management Plan.				
	Mitigation Measure 4.3-3b: Removing/Transplanting Individual Elderberry Shrubs a. Elderberry shrubs that are in the path of construction activities and cannot be avoided shall be removed and if feasible, transplanted, according to Table 4.3-5. A Biological Opinion from USFWS will be obtained prior to removal or transplanting of elderberry shrubs. Removal of a shrub may either include the roots or just the removal of the above-ground portion of the plant. If feasible, the entire root ball shall be removed, and the shrub transplanted. b. Elderberry shrubs requiring removal shall be transplanted as close as feasible to its original location within City-owned property or as approved	Remove or transplant elderberry shrubs that are in the path of construction activities, per Section 7 consultation. Obtain a Biological Opinion prior to removal or transplanting of elderberry shrubs	City of Roseville	Prior to construction or as required by permit conditions	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party

by USFWS. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to provide long-term protection to the shrub and ensure that the shrub becomes reestablished.

c. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site.

d. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access problems, may not be appropriate for transplanting. The following transplanting guidelines shall be used to guide removal and transplanting of elderberry shrubs on the project site:

1. A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures.
2. Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, GPS location of the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the USFWS and to the California Natural Diversity Database (CNDDB).
3. Elderberry shrubs shall be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves. Transplanting during the non-growing season will reduce shock to the shrub and increase transplantation success.
4. Transplanting shall follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (http://www.tcia.org/).

	Mitigation Measure 4.3-3c: Compensatory Mitigation for Loss of Riparian Habitat a. The following compensatory mitigation addresses impacts to VELB habitat through compensating for the permanent loss of riparian habitat within 165 feet of elderberry shrubs. Table 4.3-6 lists the total riparian habitat that is anticipated to be lost, according to the preliminary project design, and the corresponding credits that shall be purchased to replace habitat lost at a 3:1 ratio, as outlined in the VELB framework (USFWS	Compensate for the permanent loss of riparian habitat within 165 feet of elderberry shrubs at a 3:1 ratio, or similar ratio agreeable to the USFWS, per ESA Section 7 consultation	City of Roseville	Prior to construction or as required by permit conditions	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	2017b). The exact amount of compensation shall be as agreed to by USFWS, per Section 7 consultation under the Federal Endangered Species Act. **Table 4.3-6 Potential Valley Elderberry Longhorn Beetle Habitat-Level Compensation** Project Alternative Options / Compensation Ratio / Loss of Riparian Habitat (acres) / Acres of Credit[1] / Total Credit Purchase[2] Proposed Trail Alignment: 3:1 / 1.22 / 3.66 / 89 Alignment Option 1A: 3:1 / 0.89 / 2.67 / 65 Alignment Option 1C: 3:1 / 1.41 / 4.23 / 103 Alignment Option 5A: 3:1 / 1.22 / 3.66 / 89 [1] Acre(s) of credit = Compensation Ratio X Total Acres of Riparian Habitat Permanently Lost within 165 Feet of Elderberry Shrubs [2] Formula for Credit Purchase: 1 credit = 0.041 acres b. If the City chooses not to purchase credits at a USFWS-approved bank, they shall follow USFWS requirements for providing a permanent conservation area that meets USFWS criteria and approval, as described in the VELB Framework (USFWS 2017b).				
	Mitigation Measure 4.3-3d: Consultation with USFWS Caltrans, as the federal designated agency, will consult with USFWS under Section 7 of ESA for approval of transplanting and compensatory measures outlined in Mitigation Measures 4.3-3b and 4.3-3c prior to project construction.	Consult with USFWS for approval of transplanting and compensatory measures	Caltrans and City of Roseville	Prior to construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
Impact 4.3-4: Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors.	**Mitigation Measure 4.3-4: Nesting Raptors** This mitigation would apply for the Proposed Trail Alignment, Alternative Alignments 1A, 1C, and 5A. The following measures shall be implemented to avoid, minimize and fully mitigate impacts to Swainson's hawk, white-tailed kite, as well as other raptors. a. For project activities, including tree removal, that begin between February 15 and September 15, a qualified biologist shall conduct preconstruction surveys for nesting raptors and to identify active nests on and within 0.25 mile of the project site with direct line of sight from public access areas with the use of binoculars and spotting scopes to the proposed work areas. The surveys shall be conducted before the beginning of any construction activities between February 15 and September 15.	If trees are removed between February 15 and September 15, hire a qualified biologist to conduct preconstruction surveys	City of Roseville	Prior to tree removal or start of construction activities	Development Services Department
	b. The City shall attempt to initiate upland construction activities before the nest initiation phase (i.e., before February 15). If breeding raptors establish an active nest site, as evidenced by nest building, egg laying, incubation, or other nesting behavior, near the construction area, they shall not be harassed or deterred from continuing with their normal breeding activities.	Initiate upland construction activities before the nest initiation phase	City of Roseville	During construction	Development Services Department
	c. Impacts to nesting raptors shall be avoided by establishing appropriate buffers around active nest sites identified during preconstruction raptor surveys. No project activity shall commence within the buffer areas until a qualified biologist has determined the young have fledged, the nest is no longer active, or reducing the buffer, in coordination with CDFW, would not likely result in nest abandonment. CDFW guidelines recommend implementation of 500 feet for raptors, but the size of the buffer may be adjusted if a qualified biologist and the City, in consultation with CDFW, determine that such an adjustment would not likely adversely affect the nest. Monitoring of the nest by a qualified biologist during construction activities shall be required if the activity has potential to adversely affect the nest.	Establish appropriate buffers	City of Roseville	Prior to tree removal or start of construction activities	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	d. Trees shall not be removed during the breeding season for nesting raptors unless a survey by a qualified biologist verifies that there are not active nests within the trees or within 500 feet of the trees proposed to be removed. Loss of trees that provide potential nesting habitat shall be compensated by planting replacement trees according to Mitigation Measure 4.3-1 (wetlands/riparian trees) and Mitigation Measure 4.3-8 (protected oak trees).	Nesting habitat shall be compensated by planting replacement trees according to Mitigation Measure 4.3-1 and Mitigation Measure 4.3-8	City of Roseville	Post-construction activities as part of Riparian Restoration Plan	Development Services Department
Impact 4.3-5: Disturbances to special-status song birds.	**Mitigation Measure 4.3-5: Special-status birds** This mitigation would apply for the Proposed Trail Alignment, Alignment Option 1A, 1C, and 5A. The following measures shall be implemented and are intended to avoid, minimize, and fully mitigate impacts to nesting special-status birds. a. The City shall ensure that before any ground-disturbing project activities begin for a given proposed trail segment, a qualified biologist shall identify potential habitat for nesting special-status bird species in areas that could be affected during the breeding season by construction.	Hire a qualified biologist to identify habitat for nesting special-status bird species.	City of Roseville	Prior to ground disturbance or tree removal	Development Services Department
	b. If vegetation removal or other disturbance related to construction of the trail segment is required during the nesting season, focused surveys for active nests of special-status birds shall be conducted before and within 5 days of initiating construction by a qualified biologist. The appropriate area to be surveyed and timing of the survey may vary depending on the activity and species that could be affected. If no active nests are found during focused surveys, no further action under this measure shall be required.	Focused surveys for active nests of special-status birds shall be conducted.	City of Roseville	Before and within 5 days of initiating construction	Development Services Department
	c. If an active special-status bird nest is located during the preconstruction surveys, the biologist shall notify the City and the City shall notify CDFW. Construction shall be prohibited within a minimum of 25 feet of the nest to avoid disturbance until the nest is no longer active.	Notify CDFW; construction shall be prohibited within 25 feet of the nest.	City of Roseville	During preconstruction surveys	Development Services Department and CDFW
	d. If construction stops for more than 5 days during the nesting season, a follow up survey shall be conducted to make sure that no birds moved into the area and started nesting.	Conduct follow up survey	City of Roseville	If construction stops for more than 5 days	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
Impact 4.3-6: Disturbance or loss of Western pond turtle.	**Mitigation Measure 4.3-6: Western Pond Turtle.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. a. Implement Mitigation Measure 4.3-1.	Submit a wetland delineation report to USACE and request a preliminary jurisdictional determination	City of Roseville	Prior to construction	Development Services Department
	b. Before ground disturbance, all onsite construction personnel shall be instructed by a qualified biologist regarding the potential presence of western pond turtle, the importance of avoiding impacts on this species and its habitat, and recognition of western pond turtle and its habitat(s).	Hire a qualified biologist to train construction personnel on western pond turtle	City of Roseville	Prior to construction	Development Services Department
	c. Within 24 hours before beginning construction activities within 200 feet of suitable aquatic habitat for western pond turtle, a qualified biologist shall inspect areas of anticipated disturbance for the presence of western pond turtle nests and individuals. If nests are found, a 100-foot no disturbance buffer shall be erected and maintained until the turtles have hatched and no obstructions between the nest and aquatic habitat shall be created. No vegetation clearing will be allowed within the buffer to shelter the turtles from the elements and potential predators.	Hire a qualified biologist to inspect areas of anticipated disturbance for the presence of western pond turtle	City of Roseville	Within 24 hours before beginning construction activities	Development Services Department
	d. If adult and juvenile turtles are found during preconstruction, dewatering, or fish rescue operations, the biologist shall relocate the western pond turtle to the nearest suitable habitat outside of the area of disturbance. The construction area shall be re-inspected whenever a lapse in construction activity of two weeks or more has occurred. The biologist shall be available thereafter; if a turtle is encountered during construction activities, the biologist shall relocate the western pond turtle to the nearest suitable aquatic habitat outside the area of disturbance. As suitable habitat is located throughout the area, it is not anticipated that turtles would be relocated far from construction areas and that they would recolonize following construction.	Relocate the western pond turtle to the nearest suitable habitat outside of the area of disturbance	City of Roseville	During preconstruction, dewatering, or fish rescue operations	Development Services Department
	e. After completion of project-related construction activities, any temporary fill and construction debris shall be removed, and temporarily disturbed areas shall be restored to pre-project conditions. Restoration of grassland and riparian habitat shall be conducted as applicable under Mitigation Measure 4.3-1 (for riparian vegetation) and Mitigation Measure 4.3-4 (for grassland habitat) in proximity to the stream corridors.	Remove temporary fill and construction debris; restore habitat	City of Roseville	After completion of project-related construction activities	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
Impact 4.3-7: Disturbance or loss of special-status bats – pallid bat and silver-haired bat.	**Mitigation Measure 4.3-7: Special-status bats** This mitigation would apply for the Proposed Trail Alignment, Alternative Alignments 1A, 1C, and 5A. a. Bat surveys shall be conducted by a qualified wildlife biologist within 5 days before removal of trees that have suitable roosting habitat for bats. Specific survey methodologies shall be determined in coordination with CDFW, and may include visual surveys of bats (e.g., observation of bats during foraging period), inspection for suitable habitat, bat sign (e.g., guano), or use of ultrasonic detectors (e.g., Petterson, Anabat, Wildlife Acoustics). Removal of any significant roost sites located shall be avoided to the extent feasible with a non-disturbance buffer of 250-feet. If it is determined that an active roost site cannot be avoided and will be affected, bats shall be excluded from the roost site before the site is removed. The City shall first notify and consult with CDFW on appropriate bat exclusion methods and roost removal procedures. Exclusion methods may include use of one-way doors at roost entrances (bats may leave, but not reenter), or sealing roost entrances when the site can be confirmed to contain no bats. Once it is confirmed that all bats have left the roost, crews shall be allowed to continue work in the area. The City may have to provide temporary suitable bat roosting habitat (i.e. bat boxes), prior, during, and after exclusion to provide bat roosting habitat.	Hire a qualified biologist to conduct bay surveys	City of Roseville	Within 5 days before removal of trees that have suitable roosting habitat for bats	Development Services Department
	b. Exclusion efforts shall be restricted during periods of sensitive activity (e.g., during winter hibernation or while females in maternity colonies are nursing young [generally, April 15 through August 15]). If a hibernation or maternity roosting site is discovered, the project biologist and the City shall consult with CDFW to establish appropriate exclusionary buffers until all young are determined to be able to fly by the project biologist. Once it is determined that all young are able to fly, passive exclusion devices shall be installed and all bats will be allowed to leave voluntarily. Once it is determined by a qualified biologist that all bats have left the roost, crews shall be allowed to work within the buffer zone.	Restrict exclusion activities during period of sensitive activity. Consult with CDFW to establish exclusionary buffers if a hibernation or maternity roosting site is discovered.	City or Roseville City of Roseville	During construction April 15 through August 15 During construction April 15 through August 15	Development Services Department Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
Impact 4.3-8: Disturbance or loss of City protected trees, Valley Oak Woodland, and other Sensitive Vegetation Alliances and Associations.	**Mitigation Measure 4.3-8: Avoid impacts or mitigate for impacts to Valley Oak Woodland, and other Sensitive Vegetation Alliances and Associations (previously known as Sensitive Natural Communities)** This mitigation would apply for the Proposed Trail Alignment, Alignment Option 1A, 1C, and 5A. a. To the maximum extent feasible, oak and riparian trees shall be avoided where possible and protection measures shall be implemented to protect oak woodlands, riparian areas and associated native trees from project-related impacts. The following measures shall be implemented for oak and riparian trees that would be impacted by project activities to avoid and minimize potential impacts to individual oak and riparian trees: 1. Temporary protective fencing shall be installed at least one foot outside the dripline of the native oak tree before initiating construction to avoid damage to the tree canopy and root system. A circle with a radius measurement from the trunk of the tree to the tip of its longest limb will constitute the dripline protection area for each tree. Limbs must not be cut back to change the dripline. The area beneath the dripline is a critical portion of the root zone and defines the minimum protected area of each tree. Removing limbs that make up the dripline does not change the protected area. 2. No vehicles, construction equipment, mobile home/office, supplies, materials or facilities shall be driven, parked, stockpiled or located within the dripline of the native oak trees. 3. No grading shall be allowed within the dripline of the native oak tree. 4. No trenching shall be allowed within the dripline of the native oak tree. If it is necessary to install underground utilities within the dripline of the native oak tree, the utility line shall be jacked and bored under the supervision of a certified arborist. 5. Drainage patterns onsite shall not be modified so that water collects or stands within, or is diverted across, the dripline of any native oak tree. 6. If ground disturbance must occur within the protected zone of a native oak tree, all work shall occur consistent with the City's Tree Preservation Ordinance requirements.	Implement protection measures to protect oak woodlands, riparian areas and associated native trees from project-related impacts	City of Roseville	Prior to and during construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	b. For those trees that cannot be avoided, the City shall comply with any riparian habitat conditions to comply with the Compensatory Wetland, Stream and Riparian Mitigation and Monitoring Plan that will be developed during the Section 404, Section 401, and Section 1602 permitting process as described in Mitigation Measure 4.3-1. Additionally, the City shall implement the following: 1. An arborist report shall be conducted to identify the species and quantities of trees that will be removed to implement the project. 2. If native oak trees are removed, they shall be replaced as outlined in the City's Tree Preservation Ordinance 19.66.070. A Tree Planting and Maintenance Plan showing species, size, spacing and location of plantings, and the location and species of established vegetation shall be prepared. A monitoring program shall also be established to ensure compliance with any prescribed mitigation measures established by the project and to monitor the oak woodland restoration area. 3. Fully implement Mitigation Measure 4.3-1, which requires the City to secure and comply with a CDFW Streambed Alteration Agreement that would include a riparian restoration component.	Comply with the Compensatory Wetland, Stream and Riparian Mitigation and Monitoring Plan	City of Roseville	As required by permit conditions	Development Services Department
Impact 4.3-9: Disturbance or loss of special-status plants – Sanford's arrowhead.	**Mitigation Measure 4.3-9: Special-status plants – Sanford's arrowhead.** This mitigation would apply for the Proposed Trail Alignment, Alternative Alignments 1A, 1C, and 5A. The City shall implement the following measures to reduce potential impacts on Sanford's arrowhead: a. Prior to project construction and during the blooming period for Sanford's arrowhead (May – November), a qualified botanist shall conduct floristic-level surveys for Sanford's arrowhead in areas where potentially suitable habitat would be removed or disturbed by project activities. The normal blooming period for Sanford's arrowhead generally indicates the optimal survey period when the species is most identifiable. b. If no Sanford's arrowhead plants are found, the botanist shall document the findings in a letter report to the City of Roseville and CDFW and no further mitigation shall be required.	Qualified botanist shall conduct floristic-level surveys for Sanford's arrowhead Document findings in letter report	City of Roseville City of Roseville	Prior to project construction, between May and November Post survey	Development Services Department Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	c. If Sanford's arrowhead plants are found that cannot be avoided during construction, the City shall consult with CDFW to determine the appropriate mitigation measures for direct and indirect impacts that could occur as a result of project construction and shall implement the agreed-upon mitigation measures to achieve no net loss of occupied habitat or individuals. Mitigation measures may include preserving and enhancing existing populations, creation of offsite (but within the stream reach) populations on project mitigation sites through seed collection or transplantation, and/or restoring or creating suitable habitat in sufficient quantities to achieve no net loss of occupied habitat and/or individuals. Potential mitigation sites could include suitable locations along the stream but outside of the construction areas. A mitigation and monitoring plan shall be developed describing how unavoidable losses of special-status plants will be compensated. d. If relocation efforts are part of the mitigation plan, the plan shall include details on the methods to be used, including collection, storage, propagation, receptor site preparation, installation, long-term protection and management, monitoring and reporting requirements, success criteria, and remedial action responsibilities should the initial effort fail to meet long-term monitoring requirements. e. Success criteria for preserved and compensatory populations shall include: 1. The extent of occupied area and plant density (number of plants per unit area) in compensatory populations shall be equal to or greater than the affected occupied habitat. 2. Compensatory and preserved populations shall be self-producing. Populations shall be considered self-producing when: I. plants reestablish annually for a minimum of five years with no human intervention such as supplemental seeding; II. reestablished and preserved habitats contain an occupied area and flower density comparable to existing occupied habitat areas in similar habitat types in the project vicinity. 3. If off-site mitigation includes dedication of conservation easements, purchase of mitigation credits, or other off-site conservation measures, the details of these measures shall be included in the	Consult with CDFW to determine the appropriate mitigation measures	City of Roseville	Post survey	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	mitigation plan, including information on responsible parties for long-term management, conservation easement holders, long-term management requirements, success criteria such as those listed above and other details, as appropriate to target the preservation of long term viable populations.				
Impact 4.3-10: Impacts on movement of native resident or migratory fish or wildlife species or migratory wildlife corridors or impede the use of native wildlife nursery sites.	**Mitigation Measure 4.3-10: Movement of native resident or migratory fish or wildlife species or migratory wildlife corridors or impede the use of native wildlife nursery sites.** This mitigation would apply for the Proposed Trail Alignment, Alternative Alignments 1A, 1C, and 5A. Implementation of Mitigation Measure 4.3-1 and Mitigation Measure 4.3-2 would ensure that impacted habitats are mitigated for or restored, and work windows would prevent impact to migratory fish species. The work windows would allow the fish to freely use the stream corridors during migration to and from the streams. Impacted habitats (i.e., aquatic, riparian and SRA) would be restored or mitigated for and although affected their long-term function as breeding or nursery site would not be impacted. a. Implement Mitigation Measure 4.3-1 Wetlands, Waters of the United States, waters of the state and riparian habitat. b. Implement Mitigation Measure 4.3-2 Central Valley Steelhead and Central Valley Fall-run Chinook Salmon.	Restore or mitigate for Impacted habitats (i.e., aquatic, riparian and SRA).	City of Roseville	Post-construction activities, as required by permit conditions	Development Services Department
4.4 Cultural Resources					
Impact 4.4-1: Disturb archaeological resources, including tribal cultural resources.	**Mitigation Measure 4.4-1: Proper Handling of Archaeological Resources.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. A minimum of seven days prior to beginning earthwork or other soil disturbance activities, the City shall notify UAIC of the proposed earthwork start-date. As part of this notification, a UAIC tribal representative shall be invited to inspect the project site, including any soil piles, trenches, or other disturbed areas, within the first five days of groundbreaking activity. During this inspection, a site meeting of construction personnel shall also be held to afford the tribal representative the opportunity to provide cultural resources awareness information.	Notify UAIC of the proposed earthwork start-date	City of Roseville	Notify UAIC at least seven days prior to beginning earthwork or other soil disturbance activities; UAIC site inspection to occur within first 5 days of groundbreaking activity	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	If any cultural resources, such as structural features, unusual amounts of bone or shell, artifacts, human remains, or architectural remains are encountered during this initial inspection or during any subsequent construction activities, work shall be suspended within 100 feet of the find, and the City's Project Manager shall immediately notify the City of Roseville Development Services Director. The City's Project Manager, in consultation with the City's Environmental Coordinator, shall coordinate any necessary investigation of the site with a qualified archaeologist approved by the City, and as part of the site investigation and resource assessment the archeologist shall consult with the UAIC and provide proper management recommendations should potential impacts to the resources be found by the City to be significant. A written report detailing the site assessment, coordination activities, and management recommendations shall be provided to the City by the qualified archaeologist. Possible management recommendations for unique archaeological resources could include resource avoidance or, where avoidance is infeasible in light of project design or layout or is unnecessary to avoid significant effects, preservation in place or other measures. The contractor shall implement any measures deemed by City staff to be necessary and feasible to avoid or minimize significant effects to the cultural resources.	Suspend work within 100 feet of structural features, unusual amounts of bone or shell, artifacts, human remains, or architectural remains find	City of Roseville	During initial inspection or during any subsequent construction activities	Development Services Department
Impact 4.4-2: Accidental discovery of human remains.	**Mitigation Measure 4.4-2: Stop work if human remains are discovered.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. If human remains are discovered during any construction activities, potentially damaging ground-disturbing activities in the area of the remains shall be halted immediately, and the project applicant shall notify the Placer County coroner and the NAHC immediately, according to Section 5097.98 of the State Public Resources Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined by the NAHC to be Native American, the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains. The City shall also retain a professional archaeologist with Native American burial experience to assist the City of Roseville, the landowner, and the MLD with any management steps prescribed in California Health and Safety Code Section 7050.5 and California PRC Section 5097.98. Following the coroner's and NAHC's findings, the NAHC-designated MLD and the landowner shall determine	Halt ground disturbing activities and notify the Placer County coroner and the NAHC immediately	City of Roseville	During construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	the ultimate treatment and disposition of the remains and take appropriate steps to ensure that additional human interments are not disturbed. The responsibilities for acting upon notification of a discovery of Native American human remains are identified in California Public Resources Code Section 5097.94.				
4.7 Hazards and Hazardous Materials					
Impact 4.7-5: Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are located adjacent to urbanized areas or where residences are intermixed with wildlands during project construction.	**Mitigation Measure 4.7-5: Clear flammable materials within the project site prior to construction.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. If dry vegetation or other fire fuels exist on or near staging areas, welding areas, or any other area on which equipment will be operated, contractors shall clear the immediate area of fire fuel prior to construction. To the extent feasible, areas subject to construction activities will be maintained free of fire fuel and debris during the course of construction. To avoid impacts to natural resources, areas to be cleared and appropriate clearing methods shall be identified with the assistance of a qualified biologist.	Clear staging areas, welding areas, or any other area on which equipment will be operated of fire fuel	City of Roseville	Prior to start of construction activities	Development Services Department
4.10 Noise					
Impact 4.10-1: Short-term construction-related noise.	**Mitigation Measure 4.10-1: Employ Noise-Reducing Construction Practices** This mitigation will apply to the Proposed Trail Alignment and Alignment Options 1A, 1C, and 5A. Feasible measures that can be used to limit construction noise include the following: ◢ Locate stationary noise generating construction equipment as far as feasible from noise-sensitive uses. ◢ Do not idle inactive construction equipment for prolonged periods (i.e., more than 5 minutes). ◢ Prohibit unmuffled engine exhaust systems. All construction equipment powered by gasoline or diesel engines shall have factory-installed sound control devices, or sound control devices	Limit construction noise, per Mitigation Measure 4.10-1	Contractor and City of Roseville	Prior to and during construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
	that are at least as effective as those originally provided by the manufacturer, and all equipment shall be operated and maintained in good working order to minimize noise generation pursuant to Section 9.24.030 of the Noise Ordinance. ◢ The contractor shall provide advance written notification to owners and renters of buildings located within 50 feet of construction activities. The notice shall explain when construction is expected. The notice shall include contact information for the project manager. ◢ When construction occurs outside of the typical daytime and early evening hours (7:00 a.m. – 7:00 p.m. Monday-Friday and 8:00 a.m. – 8:00 p.m. Saturday and Sunday) or within 50 feet of noise sensitive commercial or office buildings, the use of noise-generating construction equipment will be avoided to the extent feasible. When not feasible, construction contractors will specify proposed noise-reducing construction practices or alternative schedules that will be employed to reduce construction noise. Measures specified by the contractors will be reviewed and approved by the City prior to construction activities. In these situations, feasible noise reduction measures include the following: ◤ Alternative construction schedule to minimize disturbance to normal office operations; and/or ◤ Use temporary noise-reducing barriers positioned between noise-generating equipment (including hand operated jack hammers) and the sensitive receptor building. Such barriers may include commercially manufactured noise-insulating blankets/quilts or as equal materials with similar noise reduction performance as approved by the resident engineer. When temporary barrier units are joined together, the mating surfaces shall be flush with each other with no gaps.				
Impact 4.10-3: Exposure to construction-related	**Mitigation Measure 4.10-3: Reduce exposure to construction-generated ground vibration.** This mitigation will apply to the Proposed Trail Alignment and Alignment Options 1A, 1C, and 5A.	Specify construction practices that reduce the adverse effects of ground vibration	Construction Contractor and City of Roseville	Prior to and during construction	Development Services Department

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
groundborne vibrations.	Construction documents shall specify construction practices that reduce the adverse effects of ground vibration associated with project construction activities. Measures specified by the design engineer will be reviewed and approved by the City prior to approval of the plans and specifications and may include, but are not limited to, the measures listed below. ◢ Implement Mitigation Measure 4.10-1. ◢ All construction equipment on construction sites shall be operated as far away from vibration- and noise-sensitive sites as reasonably feasible. ◢ Earthmoving, dozing, and ground-impacting operations shall be phased so as not to occur simultaneously in areas close to offsite sensitive receptors, to the extent feasible. The total vibration level produced could be significantly less when each vibration source is operated at separate times. ◢ As part of final design, project engineers shall identify areas on the project plans where work may be constrained due to proximity of structures. The designs shall specify requirements that during project construction on the trail alignment, no heavy vibratory equipment (i.e., the types of equipment listed in Table 4.10-5), shall be operated within 13 feet of off-site building structures unless otherwise approved in writing by the City Engineer. Non-vibratory equipment, such as hand tools, and handheld vibratory compactors and rollers may be used. Use of different material types including slurry cement and concrete paving approved by the Engineer, may be used to reduce or eliminate the need for vibratory equipment. Those portions of the project site located within 13 feet of an off-site building structure shall be identified on construction documents and demarcated with stakes, flags, rope and/or markings on the ground. ◢ For Option 5A, locate caisson drilling for Bridge 14 forty-three (43) feet or greater from existing occupied structures, if feasible. ◢ Staging areas shall be adjusted and temporary fencing shall be installed to ensure that loaded trucks shall not operate within 13 feet of existing structures.				

Table 4-1 Dry Creek Greenway East Trail Mitigation Monitoring Plan

Impact	Mitigation Measures	Action(s)	Implementing Party	Timing	Monitoring Party
4.13 Transportation and Circulation					
4.13-1: Safety-related traffic impacts.	**Mitigation Measure 4.13-1: Prepare Traffic Management Plan.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. The City shall require the construction contractor to prepare for city approval and implement a traffic management plan before construction activities begin. Before the beginning of construction on the project site, the contractor shall prepare a detailed traffic management plan that will be subject to review and approval by the City Department of Public Works. The plan shall ensure maintenance of safe and acceptable operating conditions for local roadways, bicycle and pedestrian facilities, and transit routes. The Traffic Management Plan shall regulate maintenance of traffic during each construction season and comply with agency standards to promote safe and efficient travel for the public and construction workers through the work zones. The plan shall include provisions for regular inspections to assess contractor compliance, signage to direct traffic, and public noticing, as appropriate. Methods in the plan may include (but are not limited to): ◢ appropriately sequencing activities (e.g., segment phasing, timing of grading, hours of construction) to minimize conflicts with traffic on affected roadways, ◢ maintaining traffic flow in the project area to the extent feasible, ◢ maintaining bicycle and pedestrian access along Riverside Avenue, and ◢ using flaggers to direct traffic, as needed, for ingress or egress of large trucks and other vehicles.	Construction contractor shall prepare and implement a traffic management plan	Construction Contractor and City of Roseville	Prior to start of construction activities	Department of Public Works

CEQA FINDINGS OF FACT

and

STATEMENT OF OVERRIDING CONSIDERATIONS

OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE

for the

DRY CREEK GREENWAY EAST TRAIL

February 2019

1 INTRODUCTION

The environmental impact report (EIR) prepared for the Dry Creek Greenway East Trail (project) addresses the potential environmental effects associated with constructing and operating a 4.25-mile paved multi-use trail along Dry, Cirby, and Linda Creeks from Riverside Avenue to Old Auburn Road. These findings have been prepared to comply with requirements of the California Environmental Quality Act (CEQA) (Public Resources Code [PRC] Section 21000 et seq.) and the CEQA Guidelines (California Code of Regulations Section 15000 et seq.). These findings refer to the Notice of Preparation (NOP) or Final EIR where the material appears in either of those documents. Otherwise, references are to the Draft EIR.

CEQA generally requires that a lead agency must take reasonable efforts to mitigate or avoid significant environmental impacts when approving a project. In order to effectively evaluate any potentially significant environmental impacts of a proposed project, an EIR must be prepared. The EIR is an informational document that serves to inform the agency decision-making body and the public in general of any potentially significant environmental impacts. The preparation of an EIR also serves as a medium for identifying possible methods of minimizing any significant effects and assessing and describing a reasonable range of potentially feasible alternatives to the project.

The EIR for this project was prepared by the City of Roseville (City) as the "lead agency" in accordance with CEQA and has been prepared to identify and assess the anticipated effects of the project. The City, as the lead agency, has the principal responsibility for approval of the project.

2 TERMINOLOGY OF FINDINGS

CEQA requires that, for each significant environmental effect identified in an EIR for a proposed project, the approving agency decision-making body must issue a written finding reaching one or more of the three allowable conclusions:

1. Changes or alterations which avoid or mitigate the significant environmental effects as identified in the EIR have been required or incorporated into the project;
2. Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and such changes have been adopted by such other agency or can and should be adopted by such other agency; or
3. Specific economic, legal, social, technological, or other considerations, including consideration for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Draft EIR (PRC Section 21081, subds. (a)(1)–(a)(3); see also CEQA Guidelines, Section15091, subds. (a)(1)–(a)(3)).

For purposes of these findings, the terms listed below will have the following definitions:

- "Mitigation measures" shall constitute the "changes or alterations" discussed above.
- "Avoid" refers to the effectiveness of one or more mitigation measures to reduce an otherwise significant effect to a less than significant level.
- "Feasible," pursuant to the CEQA Guidelines, means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors.

- "Selected Project" refers to the Transportation Commission-recommended selection for the proposed trail alignment. This alignment is described and analyzed in the Draft and Final EIR as Alignment Option 5A.

3 PROJECT DESCRIPTION

3.1 PROJECT OVERVIEW

The Dry Creek Greenway East Trail is a proposed 4.25-mile paved multi-use trail in the City of Roseville (City). The project would be a shared-use trail for pedestrians, bicyclists, and other non-motorized vehicle users that would connect neighborhoods, parks, schools, businesses, natural areas, and the on-street bikeway system across the south side of the City. The proposed trail would extend from the existing Saugstad/Royer Park trail near the intersection of Riverside Avenue and Darling Way eastward to the City limits, just past the Old Auburn Road/South Cirby Way intersection. The trail would follow creek corridors along portions of Dry, Cirby, and Linda Creeks.

3.2 THE PROJECT

The selected project would be a paved, multi-use trail would that would conform to the City of Roseville Design Standards (Section 13 Bikeways) and other provisions of the City of Roseville Construction Standards. A typical cross-section for the proposed trail would consist of a 10-foot wide paved trail with two-foot shoulders on each side (one composed of decomposed granite and one of aggregate base), for a total width of 14 feet. The trail may also include drainage swales on one or both shoulders, as needed. The proposed trail may be narrowed to an eight-foot wide paved section with one- or two-foot wide shoulders for access spurs and in "pinch-point" locations that have severe physical or environmental constraints. The narrower cross section would still support safe, two-way travel but would limit physical disturbance where design constraints prevent construction of the standard cross-section. The proposed trail may also be widened in areas where additional shoulder or trail width is desired to enhance user comfort and safety. In these instances, the shoulder width may be increased to between 5 and 10 feet on one side of the trail. As a result of existing topography, retaining walls would be required at several locations along the proposed alignment. The proposed walls would include gravity walls (reinforced concrete) and anchored walls. The project would include undercrossings to pass beneath existing roadways, including Darling Way, Interstate 80 (I-80), Sunrise Avenue, Rocky Ridge Drive, and Old Auburn Road. The project would also include the construction or modification of up to eight bridges to provide creek crossings throughout the alignment. Finally, the project could include elements such as benches, lighting on lengthy portions of the undercrossings, utility relocations, and regulatory and wayfinding signs.

The selected project would, to the extent feasible, be designed to provide maintenance and emergency access for the City Environmental Utilities Department, open space and storm water maintenance crews, and the Roseville Fire Department. It would provide a safe route for walkers, joggers, cyclists, wheelchair users, and others traveling on non-motorized vehicles to access parks and other trails.

3.3 PROJECT SITE

The selected project would be located primarily within City-owned property zoned as Open Space with Floodway or Floodway Fringe Overlays. Small segments of the trail would also be located on property zoned for residential, commercial, and parks and recreation use with the Floodway or Floodway Fringe Overlays. While most of the project corridor is on public property, use of some privately-owned parcels

is necessary. Trail development is a permitted use in all of these zone districts. The project would be aligned within the creek corridors of developed neighborhoods and business districts in the City of Roseville. With the exception of a few scattered parcels, the properties surrounding the creek corridors are fully developed. The properties adjacent to the proposed trail corridor include a mix of residential, commercial, parks, open space and public/quasi-public uses. Flood control improvements, including floodwalls, berms, bypass channel, bypass culverts, and a detention basin are located along the length of the project from I-80, easterly to Old Auburn Road. A flood control bypass channel and detention basin are located along the south side of Linda Creek east of Rocky Ridge Drive and north of Cirby Way. Commercially zoned properties are concentrated along Sunrise Avenue to the north and south of the project site along Linda Creek. Commercial areas are also found near the western part of the proposed trail along Riverside Avenue between Darling and Cirby Ways.

3.4 PROJECT OBJECTIVES

The project objectives for the Dry Creek Greenway East Trail are developed in consideration of CEQA, the City of Roseville General Plan, 2008 Bicycle Master Plan, and the 2009 Dry Creek Greenway Planning and Feasibility Study. The project objectives are as follows:

- Develop a safe and continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways.
- Enhance access to the Dry Creek, Cirby Creek, and Linda Creek open space areas for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response.
- Protect the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas, minimize the potential for loss of life and property because of flooding, enhance compatibility with private properties, and reduce the need for right-of-way acquisition.
- Seek the most effective and efficient balance of capital cost, operational and maintenance costs, environmental and community impacts, and public benefits.

Direct consideration of cost is not required under CEQA. However, efforts to attain this objective are part of the design process employed by the City in meeting its health, welfare and economic obligations to the citizens of Roseville.

3.5 PROJECT CONSTRUCTION

Construction of the proposed multi-use trail would require removal of vegetation and existing features, grading, placement of aggregate base material, construction of five roadway undercrossings, construction or modification of up to eight bridges, and approximately 27,000 square feet of retaining walls.

The project would include construction staging areas where equipment would be temporarily stored during project construction. The construction staging areas would occur within the City's existing right-of-way or on property acquired by the City for the permanent trail alignment or temporary construction use.

A phasing plan would be developed for this project to provide a logical sequence of implementation for each identified phase. The phasing would consider aspects such as right-of-way requirements, environmental impacts, estimated capital costs and funding opportunities, and connectivity to key

nodes such as schools, parks, trailheads and neighborhoods. It was estimated that the project would be constructed in up to four phases over up to 4 years, commencing in 2021.

3.6 REQUIRED DISCRETIONARY ACTIONS

The City of Roseville is the lead agency for the project. As required by Section 15124(d)(1)(B) of the CEQA Guidelines, the EIR must contain a list of permits and other approvals required to implement the project. The project requires the following approvals:

- **EIR Certification.** Before the City can approve the project, the City Council must certify that the EIR was completed in compliance with the requirements of the CEQA, that the decision-making body has reviewed and considered the information in the EIR, and that the EIR reflects the independent judgment of the City of Roseville. Approval of the project also requires adoption of a Mitigation Monitoring Plan, which specifies the methods for monitoring mitigation measures required to eliminate or reduce the project's significant effects on the environment. The City will also adopt CEQA Findings of Fact regarding any significant effects on the environment and, for any effects determined to be significant and unavoidable, a Statement of Overriding Considerations, as part of project approval. Action by the City Council follows a recommendation from the City of Roseville Transportation Commission. The City will file a Notice of Determination with the County Clerk and State Clearinghouse to conclude the CEQA process.
- **Trail project Approval.** After certification of the EIR, the City will consider approval of a trail alignment from the choices between the proposed alignment and its options. If the City approves a trail alignment, the City will also authorize staff to pursue final design, permitting, right-of-way acquisition, and construction funding for phased construction.

Several agencies would be involved in the consideration and approval of project elements. Federal, state, and regional agency approvals and permits that would be considered for the project would include wetlands verification, encroachment, water quality, and streambed alteration permits. State and regional responsible agencies and federal agencies with approval authority would include:

- Regional and State Responsible Agencies:
  - California Department of Fish and Wildlife
  - Central Valley Regional Water Quality Control Board
  - Central Valley Flood Protection Board
  - California Department of Transportation (Caltrans)
- Federal Agencies:
  - U.S. Army Corps of Engineers
  - U.S. Fish and Wildlife Service
  - National Oceanic and Atmospheric Administration Fisheries
  - Federal Highway Administration (NEPA authority delegated to Caltrans)

4 ENVIRONMENTAL REVIEW PROCESS

In accordance with PRC Section 21092 and CCR Section 15082, the City issued a Notice of Preparation (NOP) on November 18, 2013 to inform agencies and the general public that an EIR was being prepared and to invite comments on the scope and content of the document. The NOP was submitted to the State Clearinghouse, posted on the City of Roseville website (http://www.roseville.ca.us/transportation/bikeways/dc_study.asp), made available at the City clerk's office and the City of Roseville Permit Center, and distributed directly to potential responsible and trustee agencies. The NOP was circulated for 30 days, through December 19, 2013. In accordance with

PRC Section 21083.9 and CCR Section 15082(c), a noticed scoping meeting for the EIR occurred on December 3, 2013 at 6:00 p.m. at the Maidu Community Center, 1550 Maidu Drive, Roseville, California, 95661. The NOP and comment letters received on the NOP are included in Appendix A and Appendix B of the Draft EIR, respectively.

The Draft EIR was published on April 13, 2018. A CEQA Notice of Completion and copies of the Draft EIR were filed with the State Clearinghouse. A 45-day public review period for the Draft EIR was provided, ending on May 29, 2018. The Notice of Availability and the Draft EIR are posted on the City's website. A public hearing during the public comment period was held at the City of Roseville Transportation Commission meeting on May 21, 2018. In September 2018, the City published the Final EIR for the project. The Final EIR includes comments received on the Draft EIR, responses to issues raised in the comments, and revisions to the text of the Draft EIR. The Final EIR and the Draft EIR constitute the EIR for the project.

5 RECORD OF PROCEEDINGS

For the purposes of CEQA, and the findings herein set forth, the administrative record for the project consists of those items listed in PRC Section 21167.6, subdivision (e). The record of proceedings for the City's decision on the project consists of the following documents, at a minimum:

- The NOP and all other public notices issued by the City in conjunction with the project;
- The Draft EIR for the project and all documents relied upon or incorporated by reference;
- All comments submitted by agencies or members of the public during the 45-day comment period on the Draft EIR;
- The Final EIR for the project, including comments received on the Draft EIR; the City's responses to those comments; technical appendices; and all documents relied upon or incorporated by reference;
- The mitigation monitoring plan (MMP) for the project;
- All findings and resolutions adopted by the City in connection with the project, and all documents cited or referred to therein;
- The Transportation Commission staff report for May 21, 2018;
- Minutes and/or transcripts of the Transportation Commission public meeting held on May 21, 2018;
- The Transportation Commission staff report for December 18, 2018;
- Minutes and/or transcripts of the Transportation Commission meeting on December 18, 2018;
- The City Council staff report;
- Minutes and/or transcripts of the City Council public meeting held on March 20, 2019;
- All other reports, studies, memoranda, maps, staff reports, or other planning documents relating to the project prepared by the City or consultants to the City with respect to the City's compliance with the requirements of CEQA and with respect to the City's action on the project;
- All resolutions or findings adopted by the City regarding the project, and all staff reports, analyses, and summaries related to the adoption of those resolutions or findings;
- The City's General Plan and all updates and related environmental analyses;
- Relevant sections of the City's Zoning Code;
- Any documents expressly cited in these findings, in addition to those cited above; and
- Any other materials required for the record of proceedings by PRC Section 21167.6, subdivision (e).

Pursuant to Guidelines Section 15091(e), the administrative record of these proceedings is located at, and may be obtained from, the City's Development Services Department at 311 Vernon Street, Roseville, CA 95678. The custodian of these documents and other materials is the City Clerk.

The City Council has relied on all of the documents listed above in reaching its decisions on the project even if not every document was formally presented to the City Council or City Staff as part of the City files generated in connection with the project. Without exception, any documents set forth above not found in the project files fall into one of two categories. Many of them reflect prior planning or legislative decisions with which the City Council was aware in approving the project. (See *City of Santa Cruz v. Local Agency Formation Commission* (1978) 76 Cal.App.3d 381, 391-392; *Dominey v. Department of Personnel Administration* (1988) 205 Cal.App.3d 729, 738, fn. 6.) Other documents influenced the expert advice provided to City Staff or consultants, who then provided advice to the City Council as the final decision-making body.

For that reason, such documents form part of the underlying factual basis for the City Council's decisions relating to approval of the project. (See PRC, Section 21167.6, subd. (e)(10); *Browning-Ferris Industries v. City Council of City of San Jose* (1986) 181 Cal.App.3d 852, 866; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 153, 155.)

6 FINDINGS REQUIRED UNDER CEQA

PRC Section 21002 provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute provides that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects." Section 21002 goes on to provide that "in the event [that] specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof."

The mandate and principles announced in PRC Section 21002 are implemented, in part, through the requirement that agencies must adopt findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. As noted earlier, the first such finding is that changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR. The second permissible finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and such changes have been adopted by such other agency or can and should be adopted by such other agency. The third potential conclusion is that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Final EIR (CEQA Guidelines Section 15091). PRC Section 21061.1 defines "feasible" to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors." CEQA Guidelines Section 15364 adds another factor: "legal" considerations.

The concept of "feasibility" also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 410, 417 (*City of Del Mar*); (*Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1506-1509 [court upholds CEQA findings rejecting alternatives in reliance on applicant's

project objectives]; see also *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1001 *(CNPS) [“*an alternative ‘may be found infeasible on the ground it is inconsistent with the project objectives as long as the finding is supported by substantial evidence in the record’”] (quoting Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act* [Cont.Ed.Bar 2d ed. 2009] (*Kostka*), Section 17.309, p. 825); In *re Bay- Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1165, 1166 (*Bay-Delta*) [“[i]n the CALFED program, feasibility is strongly linked to achievement of each of the primary program objectives”; “a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal”].) Moreover, “‘feasibility’ under CEQA encompasses ‘desirability’ to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors.” (*City of Del Mar*, *supra*, 133 Cal.App.3d at p. 417; see also *CNPS*, *supra,* 177 Cal.App.4th at p. 1001 *[“an alternative that ‘is impractical or undesirable from a policy standpoint’ may be rejected as infeasible”*] [quoting Kostka, *supra,* Section 17.29, p. 824]; *San Diego Citizenry Group v. County of San Diego* (2013) 219 Cal.App.4th 1, 17.)

For purposes of these findings (including Table 2 as described below), the term “avoid” refers to the effectiveness of one or more mitigation measures to reduce an otherwise significant effect to a less-than-significant level. Although CEQA Guidelines Section 15091 requires only that approving agencies specify that a particular significant effect is “avoid[ed] *or* substantially lessen[ed],” these findings, for purposes of clarity, in each case will specify whether or not the effect in question has been “avoided” (i.e., reduced to a less-than-significant level).

CEQA requires that the lead agency adopt mitigation measures or alternatives, where feasible, to substantially lessen or avoid significant environmental impacts that would otherwise occur. Project modification or alternatives are not required, however, where such changes are infeasible or where the responsibility for modifying the project lies with some other agency (CEQA Guidelines Section15091, subd. (a), (b)).

The California Supreme Court has stated, “[t]he wisdom of approving . . . any development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law as we interpret and apply it simply requires that those decisions be informed, and therefore balanced.” (*Goleta II*, *supra*, 52 Cal.3d at p. 576.)

The EIR identified two noise impacts as significant and unavoidable resulting from the selected project, and thus a Statement of Overriding Considerations has been prepared.

7 LEGAL EFFECT OF FINDINGS

These findings constitute the City’s best efforts to set forth the evidentiary and policy bases for its decision to approve the selected project in a manner consistent with the requirements of CEQA. To the extent that these findings conclude that various mitigation measures outlined in the Final EIR are feasible and have not been modified, superseded or withdrawn, the City hereby binds itself to implement these measures. These findings, in other words, are not merely informational, but rather constitute a binding set of obligations that will come into effect when the City adopts a resolution approving the project.

8 MITIGATION MONITORING PLAN

A Mitigation Monitoring Plan (MMP) has been prepared for the selected project and is being approved by the City Council by the same Resolution that has adopted these findings. The City will use the MMP to track compliance with project mitigation measures. The MMP will remain available for public review during the compliance period. The MMP is found in Chapter 4 of the Final EIR and is approved in conjunction with certification of the EIR and adoption of these Findings of Fact.

9 SIGNIFICANT EFFECTS AND MITIGATION MEASURES

9.1 TABLE OF IMPACTS, MITIGATION MEASURES AND CEQA FINDINGS

The City Council's findings with respect to the selected project's significant effects and mitigation measures are set forth in the table attached to these findings ("Table 2"). The findings set forth in the table are hereby incorporated by reference and the Council adopts all of the mitigation measures identified therein. This table does not attempt to describe the full analysis of each environmental impact contained in the EIR. Instead, the table provides a summary description of each impact, describes the applicable mitigation measures identified in the Draft or Final EIR and adopted by the City Council, and states the City Council's findings on the significance of each impact after imposition of the adopted mitigation measures. A full explanation of these environmental findings and conclusions can be found in the Draft and Final EIRs, and these findings hereby incorporate by reference the discussion and analysis in those documents supporting the EIR's determinations regarding mitigation measures and the selected project's impacts and mitigation measures designed to address those impacts. In making these findings, the City Council ratifies, adopts, and incorporates into these findings the analysis and explanation in the Draft and Final EIRs, and ratifies, adopts, and incorporates in these findings the determinations and conclusions of the Draft and Final EIRs relating to environmental impacts and mitigation measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

9.2 MITIGATION MEASURES PROPOSED BY COMMENTERS

One comment letter suggested a revision to the measures recommended in the Draft EIR. In considering specific recommendations from commenters, the City has been cognizant of its legal obligation under CEQA to substantially lessen or avoid significant environmental effects to the extent feasible. The City, in determining whether to accept such suggestions, either in whole or in part, has considered the following factors, among others: (i) whether the suggestion relates to an environmental impact that can already be mitigated to less-than-significant-levels by proposed mitigation measures in the Draft EIR; (ii) whether the proposed language represents a clear improvement, from an environmental standpoint, over the draft language that a commenter seeks to replace; (iii) whether the proposed language is sufficiently clear as to be easily understood by those who will implement the mitigation as finally adopted; (iv) whether the language might be too inflexible to allow for pragmatic implementation; (v) whether the suggestions are feasible from an economic, technical, legal, or other standpoint; and (vi) whether the proposed language is consistent with the project objectives. City staff and consultants spent time carefully considering and weighing requested mitigation language. In this instance, the City revised Mitigation Measure 4.4-2 , while also developing additional language addressing the same issue that was of concern to a commenter. The revisions are included in the Final

EIR in Response to Comment 5-2 in Chapter 2 (Comments and Responses) and in Chapter 3 (Revisions to the Draft EIR).

10 FINDINGS REGARDING RECIRCULATION OF THE DRAFT EIR

The City Council adopts the following findings with respect to whether to recirculate the Draft EIR. Under Section 15088.5 of the CEQA Guidelines, recirculation of an EIR is required when "significant new information" is added to the EIR after public notice is given of the availability of the Draft EIR for public review but prior to certification of the Final EIR. The term "information" can include changes in the project or environmental setting, as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation includes, for example, a disclosure showing that (CEQA Guidelines Section 15088.5):

1. A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
2. A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
3. A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.
4. The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR. The above standard is "not intend[ed] to promote endless rounds of revision and recirculation of EIRs." (*Laurel Heights Improvement Assn. v. Regents of the University of California* (1993) 6 Cal. 4th 1112, 1132.) "Recirculation was intended to be an exception, rather than the general rule." (*Ibid.*)

The City Council recognizes that the Final EIR contains responses to comments received, the MMP, and modifications to the Draft EIR. As noted above, one comment on the Draft EIR resulted in revisions to a mitigation measure. However, this revision is merely a clarification of an existing mitigation measure. The information contained within the Final EIR involves no "significant new information" triggering recirculation because the information did not result in any new significant environmental effects or any substantial increase in the severity of any previously identified significant effects, and did not otherwise trigger recirculation. Under such circumstances, the City finds that recirculation of the EIR is not required.

11 PROJECT ALTERNATIVES

11.1 BASIS FOR ALTERNATIVES

As discussed previously, CEQA requires that the lead agency adopt mitigation measures or alternatives, where feasible, to substantially lessen or avoid significant environmental impacts that would otherwise occur. Project modification or alternatives are not required, however, where significant

environmental impacts will not occur. As is evident from the text of the EIR and the attached table describing the disposition of the significant effects of the project, most significant effects of the selected project have been avoided (that is, rendered less than significant) by the adoption of feasible mitigation measures. There are only two impacts that remain significant and unavoidable.

Under CEQA, project alternatives are developed in order to give agency decision-makers options for reducing or eliminating significant environmental effects of proposed projects while still meeting most, if not all, of the basic project objectives. "Alternatives and mitigation measures have the same function – diminishing or avoiding adverse environmental effects." (*Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376, 403.) The City Council sets forth below its reasons for concluding that all such alternatives are infeasible within the meaning of CEQA.

11.2 ALTERNATIVES CONSIDERED AND DISMISSED FROM FURTHER CONSIDERATION

As noted previously, the purpose of an alternatives analysis is to develop alternatives to a proposed project that substantially lessen at least one of the significant environmental effects identified as a result of the project, while still meeting most, if not all, of the basic project objectives. The State CEQA Guidelines state that an EIR should identify alternatives that were initially considered by the lead agency but were rejected as infeasible and explain the reasons for the determination (Section 15126.6[c]). As described in the Draft EIR, the City conducted an extensive planning process and consideration of alternatives for the project, as reported in the 2009 *Dry Creek Greenway Planning and Feasibility Study*. For planning purposes, the path alignment was initially divided into twelve segments, numbered from west to east. The alternatives analysis considered 30 different creek crossing alternatives and ultimately eliminated 12 creek crossings from consideration. The 18 remaining creek crossings were carried forward to the next stage of project planning.

The 2009 *Dry Creek Greenway Planning and Feasibility Study* outlined the existing conditions, opportunities and constraints, alignment options, evaluation criteria, and a recommended alignment for a paved multi-use trail from Riverside Avenue and Darling Way to the City limits just south of Old Auburn Road. The Stakeholder Representative Group (SRG) selected a preferred alignment based on criteria that included consideration of property owners, path users, public safety, environmental concerns, and municipal operations. There were two segments of the trail where the SRG did not reach a consensus on a recommended alignment. These were referred to as Segment 1 – Hillcrest and Segment 5 – Sunrise Avenue in the feasibility study. Segment 1 is the first portion of the proposed trail between the end of the Saugstad/Royer Trail at Darling Way to the area south of Machado Lane, west of the I-80 underpass. Segment 5 is located in the Cirby Side neighborhood to the east and west of Sunrise Avenue. Segment 5 begins near the Cirby Creek/Linda Creek confluence west of Sunrise Avenue to just east of the Sunrise Avenue bridge near the Meadow Gate connection. Four alignment options were identified for Segment 1 (1A, 1B, 1C, and 1D) and three alignment options were identified for Segment 5 (5A, 5B, and 5C).

The City then conducted an Alternatives Analysis in 2012 and 2013 to provide further information regarding alternative trail alignment options. Each of the alignment options were evaluated using criteria developed during for the 2009 *Planning and Feasibility Study*, in conjunction with the SRG, and based on the ability of each option to meet the project goals and objectives, as well as the feasibility criteria. A matrix was used to compare benefits, constraints, advantages, and disadvantages of each option. During this process, two of the options, Alternative 1D and Alternative 5C, were dismissed from further evaluation. The remainder of the alternative trail alignment options were carried forward. Options 1B and 5B were incorporated into the project; Options 1A, 1C, and 5A are referred to as alignment options in the EIR and are described below and analyzed at an equal level of analysis in each technical section of the EIR.

11.3 ALTERNATIVES CONSIDERED IN THE EIR

The alternatives analyzed in the Draft EIR are briefly described below.

- No Project Alternative
- Option 1A Alternative Alignment
- Option 1C Alternative Alignment
- Option 5A Alternative Alignment

11.3.1 No Project Alternative

DESCRIPTION

Under the No Project Alternative, the Dry Creek Greenway East Trail would not be constructed. The creek corridors along portions of Dry, Cirby, and Linda creeks would continue to contain segments of existing unimproved, natural-surface paths and paved multi-use paths, some of which do not meet current City design standards. Proposed retaining walls in areas susceptible to slumping would not be constructed, other bank stabilization elements would not be constructed, and access to the creek corridor for utility maintenance, open space maintenance, and emergency response would not be enhanced.

COMPARATIVE ANALYSIS OF ENVIRONMENTAL EFFECTS

The No Project Alternative would produce no changes on the project site, because the site would remain in its current condition, effectively eliminating the project impacts discussed in the Draft EIR. There would be no air emissions associated with project construction and there would be no increases in short-term construction-related noise or vibration. There would be no potential for construction-related disturbance of special-status plant or animal species or their habitat or disturbance or loss of oak woodlands, and disturbance or loss of wetlands or other waters of the U.S. would not occur. There would be no potential to unearth any unknown subsurface cultural or historic resources. However, proposed retaining walls in areas susceptible to slumping would not be constructed. Areas currently subject to localized creep, slumping, and small landslides on over-steepened slopes, along incised drainages, and during periods of water saturation would continue to be subject to localized ground failure and no bank stabilization elements would be constructed. Future soil and streambank erosion could continue to occur, creating adverse environmental effects. Impacts related to geology and soils and hydrology and water quality would be greater that the proposed project or the Option 1A, Option 1C or Option 5A alternatives.

FEASIBILITY/RELATIONSHIP TO PROJECT OBJECTIVES

The No Project Alternative would not meet the project's basic objectives. Access to the Dry Creek, Cirby Creek, and Linda Creek open space areas would not be enhanced for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response. Effects to the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas would not occur; therefore, they would continue to be protected in the same manner as under existing conditions. The No Project Alternative would not meet the objective to develop a continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways. In addition, the proposed retaining walls in areas susceptible to slumping would not be constructed. Areas currently subject to localized creep, slumping, and small landslides on over-steepened slopes, along incised drainages, and during periods of water saturation would continue to be subject to localized ground failure.

The City Council finds these project objectives related to providing access to open areas and developing a continuous trail alignment compelling. Because the No Project Alternative would not meet the project's basic objectives, the City Council rejects the No Project Alternative set forth and evaluated in the EIR because this alternative fails to meet objectives for the project. Therefore, the City finds that there is substantial evidence, including evidence of economic, legal, social, technological, and other considerations described under CEQA Guidelines Section 15091(a)(3), that make this alternative infeasible. In making this determination, the City Council is aware that CEQA defines "feasibility" to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors."

11.3.2 Option 1A Alternative Alignment

DESCRIPTION

Option 1A Alternative Alignment would begin at the existing terminus of the Saugstad/Royer trail, travel across Darling Way bridge (potentially requiring widening of the bridge) and loop under the bridge on the west side of Dry Creek. The alternative would continue south for approximately 900 feet, crossing Dry Creek via Bridge #3 to the southern bank of Cirby Creek, from where it would traverse the existing steep slope down to the existing bench located above the 2-year water surface elevation, and continue within the floodplain along the south side of Cirby Creek toward the I-80 undercrossing. This alternative would require a retaining wall on the south side of Cirby Creek, east of the confluence with Dry Creek. Prior to Bridge #3 (on the north side of Dry Creek), access would be provided to the proposed trail-head parking area at Riverside Avenue and to the future trail extension to Vernon Street. Option 1A Alternative Alignment would require Bridge #3, but it would eliminate the need for Bridge #2 and Bridge #4.

COMPARATIVE ANALYSIS OF ENVIRONMENTAL EFFECTS

Under the Option 1A Alternative Alignment the magnitude of several impacts would be less than the project due to the construction of one fewer bridge than under the project. This would result in fewer emissions associated with construction activities, a 0.72 acre reduction in construction in the area mapped as slight erosion hazard, and would reduce the area of construction for ground-disturbing activities that could damage or destroy as yet undiscovered archaeological resources or human remains. Because there would be one fewer bridge with associated lighting, and the bridge would be further from residences, which have more potential to be light sensitive than commercial land uses, there would be less potential for the Option 1A Alternative Alignment to have adverse effects related to light and glare. However, the Option 1A Alternative Alignment would require an additional 765 linear feet of retaining walls or streambank stabilization when compared to the project, which would result in greater hydrology and water quality impacts.

FEASIBILITY/RELATIONSHIP TO PROJECT OBJECTIVES

The Option 1A Alternative Alignment would be similar to the project and would meet most of the project objectives in a similar manner as the project. This alternative would meet the objective to develop a continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways. Access to the Dry Creek, Cirby Creek, and Linda Creek open space areas would be enhanced for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response. Effects to the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas would be similar to the project. On balance, the Option 1A Alternative Alignment would have slightly less impact on biological resources than the Proposed Trail Alignment. This alternative

would slightly reduce trail connectivity by not providing a connection to Hernandez Lane. Also, this alternative would reduce maintenance and public safety access to the open space behind Hernandez Lane. This alternative would not meet the project objective related to seeking the most effective and efficient balance of capital cost, operational and maintenance costs, environmental and community impacts, and public benefits because preliminary cost estimates determined that construction costs for Option 1A would be greater than the selected project and Option 1C. In addition, construction of Option 1A would be more challenging than the selected project because of the steep terrain. As indicated in the City staff report for the December 18, 2018 Transportation Commission meeting, the Option 1A Alternative Alignment reduces access options for the Hillcrest neighborhood since access to Hernandez/Machado is not provided.

Therefore, the City Council rejects the Option 1A Alternative Alignment set forth and evaluated in the EIR because the City finds that there is substantial evidence, including evidence of economic, legal, social, technological, and other considerations described under CEQA Guidelines Section 15091(a)(3), that make this alternative infeasible. In making this determination, the City Council is aware that CEQA defines “feasibility” to mean “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors.”

11.3.3 Option 1C Alternative Alignment

DESCRIPTION

The Option 1C Alternative Alignment would begin just before the existing terminus of the Saugstad/Royer trail, travel under the bridge on the east side of Dry Creek and continue south for approximately 700 feet. A spur to the west would provide access to the proposed trail head parking and future trail extension toward Vernon Street, via Bridge # 2 over Dry Creek. This alternative would continue along the east side of Dry Creek and Cirby Creek for approximately 400 feet before crossing Cirby Creek via Bridge #4 to the southern bank of Cirby Creek, from where it would continue within the floodplain along the south side of Cirby Creek toward the I-80 undercrossing. The Option 1C Alternative Alignment would not require the widening of the Darling Way bridge. However, three retaining walls on the east side of Dry Creek would be required. Similar to the selected project, this alternative would include the construction of two bridges (#2 and #4).

COMPARATIVE ANALYSIS OF ENVIRONMENTAL EFFECTS

Impacts under the Option 1C Alternative Alignment would be similar to the project. The Option 1C Alternative Alignment would not require the widening of the Darling Way bridge, which would result in fewer emissions associated with bridge construction activities. Impacts associated with biological resources, cultural resources, and hazardous materials would be slightly less. Although the magnitude, frequency, and duration of construction activities would be similar to those under the selected project, the activities may occur closer to residences under the Option 1C Alternative Alignment. Additionally, implementation of this alternative would require an additional 1,080 linear feet of streambank stabilization, which would result in slightly greater impacts than those that would occur with the project.

FEASIBILITY/RELATIONSHIP TO PROJECT OBJECTIVES

The Option 1C Alternative Alignment would be similar to the project and would meet the project objectives in a similar manner as the project. This alternative would meet the objective to develop a continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks,

transit, and other existing and planned trails, bikeways and walkways. Access to the Dry Creek, Cirby Creek, and Linda Creek open space areas would be enhanced for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response. Effects to the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas would be similar to the project. On balance, the Option 1C Alternative Alignment would have slightly less impact on biological resources than the selected project. This alternative would attain the project objective related to seeking the most effective and efficient balance of capital cost, operational and maintenance costs, environmental and community impacts, and public benefits in a similar manner as the project because preliminary cost estimates were similar for Option 1C and Option 1B (the project), with current estimates indicating construction costs would be slightly less under Option 1C. However, as indicated in the City staff report for the December 18, 2018 Transportation Commission meeting, the combination of limited space, proximity of property line fences, steep banks along the creek, and the location of sewer main and manholes present significant challenges to the construction of the Option 1C Alternative Alignment. Option 1C requires challenging construction including the installation of large retaining walls along the south side of Dry and Cirby Creeks (walls 35, 36 and 37 as shown on Exhibit 3-13 of the Draft EIR).

Therefore, the City Council rejects the Option 1C Alternative Alignment set forth and evaluated in the EIR because the City finds that there is substantial evidence, including evidence of economic, legal, social, technological, and other considerations described under CEQA Guidelines Section 15091(a)(3), that make this alternative infeasible. In making this determination, the City Council is aware that CEQA defines “feasibility” to mean “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors.”

11.3.4 Option 5A Alternative Alignment

DESCRIPTION

As described in the Draft EIR, the Option 5A Alternative Alignment would begin just south of the confluence of Cirby Creek and Linda Creek and remain on the south side, following the southern bank of Linda Creek within City-owned property. The trail would travel eastward and pass beneath Sunrise Avenue. Connecting ramps would provide access to both sides of Sunrise Avenue. This alternative would continue to just east of the existing drainage outfall structure at which point it would cross to the north side of Linda Creek via Bridge #14, before continuing further east toward Oak Ridge Drive. The Option 5A Alternative Alignment would eliminate the need for Bridge #13.

COMPARATIVE ANALYSIS OF ENVIRONMENTAL EFFECTS

Under the Option 5A Alternative Alignment the magnitude of several impacts would be greater than the project because, although Bridge #13 would not be constructed, this alternative would include the construction of Bridge #14 and an additional 635 linear feet of retaining wall. This would result in a greater potential for adverse effects related to light and glare, slightly more impact on biological resources, and a significant and unavoidable construction-related vibration impact (Impact 4.10-3 in the Draft EIR) that would be similar to the construction-related noise impact (Impact 4.10-1 in the Draft EIR). However, under Alternative 5A, Impact 4.8-3 (Alter or redirect 100-year flood flows, or expose people or structures to risk of injury or damage by flood waters) would be less than significant because this alternative would not include the construction of Bridge #13. Option 5A Alternative Alignment would also result in a less severe impact related to land use because it would require less acquisition of estimated right-of-way than the EIR proposed trail alignment (see Impact 4.9-2, beginning on page 4.9-12 of the Draft EIR).

FEASIBILITY/RELATIONSHIP TO PROJECT OBJECTIVES

The EIR stated that the Option 5A Alternative Alignment would be similar to the EIR proposed project and would meet the basic project objectives in a similar manner. This alternative would meet the objective to develop a continuous trail alignment that maximizes opportunities for bicycle and pedestrian travel separate from roadway vehicle traffic by connecting neighborhoods, shopping and employment, schools, parks, transit, and other existing and planned trails, bikeways and walkways. This alternative would enhance trail connectivity when compared to the EIR proposed project by providing access to the west side of Sunrise Avenue and to Meadow Gate Drive neighborhood. Access to the Dry Creek, Cirby Creek, and Linda Creek open space areas would be enhanced for public recreational and educational opportunities, utility maintenance, open space maintenance, and emergency response. Effects to the natural habitat and special-status wildlife species of the Dry Creek, Cirby Creek, and Linda Creek open space areas would be similar to the project. On balance, the Option 5A Alternative Alignment would have slightly more impact on biological resources than the EIR Proposed Trail Alignment. In addition, preliminary cost estimates for Option 5A were higher than Option 5B (the EIR Proposed Trail Alignment). However, as indicated in the City staff report for the December 18, 2018 Transportation Commission meeting, Option 5A provides direct and convenient access to the west and east sides of Sunrise Avenue and requires less right-of-way acquisition. Option 5B (the EIR Proposed Trail Alignment) does not provide access to the east side of Sunrise Avenue, and access to the west side of Sunrise Avenue is not convenient as it begins over 500 feet from Sunrise Avenue. The limited access to Sunrise Avenue is a concern because there are no safe and convenient options for bicyclists and pedestrians to cross Sunrise Avenue. Finally, Bridge 13 of Option 5B is proposed as a low-flow bridge across Linda Creek (similar to the bridges on Miners Ravine) because the regulatory floodway is very wide at the confluence of Cirby and Linda Creeks. This may result in permitting challenges with the Central Valley Flood Protection Board since a variance would be required.

Therefore, the City Council selects the Option 5A Alternative Alignment as set forth and evaluated in the EIR for the reasons discussed above. The Option 5A Alternative Alignment was fully analyzed in the Draft EIR, and the potential impacts and required mitigation measures are included in the EIR.

11.3.5 Alternatives Conclusion

The following key considerations inform the staff recommendation for the Segment 5 Sunrise Area:

- Option 5A provides direct and convenient access to the west and east sides of Sunrise Avenue.
- Option 5A requires less right-of-way acquisition.
- Option 5B does not provide access to the east side of Sunrise Avenue, and access to the west side of Sunrise Avenue is not convenient as it begins over 500’ from Sunrise Avenue. The limited access to Sunrise Avenue is a concern because there are no safe and convenient options for bicyclists and pedestrians to cross Sunrise Avenue.
- Both Option 5A and 5B would place the trail in relatively close proximity to existing office buildings. As noted in the EIR, this will require careful construction practices at either site to minimize the potential for vibratory noise impacts.
- Bridge #14 of Option 5A has a higher cost than Bridge #13.
- Bridge 13 of Option 5B is proposed as a low-flow bridge across Linda Creek (similar to the bridges on Miners Ravine) because the regulatory floodway is very wide at the confluence of Cirby and Linda Creeks. This may result in permitting challenges with the Central Valley Flood Protection Board since a variance would be required.
- Both options 5A and 5B result in significant and unavoidable construction noise impacts. Due to the proximity of Bridge 14 to homes on Meadow Gate Drive, the vibratory noise impacts of Option 5A are greater than those of Option 5B.

As explained above, the City Council selects the Option 5A Alternative Alignment as set forth and evaluated in the EIR. The Option 5A Alternative Alignment was fully analyzed in the Draft EIR. The following Statement of Overriding Considerations applies to the selected project, which includes alignment options 1B and 5A.

12 STATEMENT OF OVERRIDING CONSIDERATIONS

In determining whether to approve a project, CEQA requires all public agencies to balance the benefits of a project against its unavoidable environmental impacts. The City Council approves the selected project despite the significant unavoidable adverse impacts identified in the EIR. The EIR consists of two text volumes and associated appendices: The Draft EIR and the Draft EIR technical appendices, and the Final EIR text. The EIR determined that the selected project is expected to result in two significant and unavoidable impacts as noted in Table 2 and discussed below.

12.1 SIGNIFICANT AND UNAVOIDABLE IMPACTS OF THE PROJECT

The EIR identifies the following significant and unavoidable impacts for the selected project:

Impact 4.10-1: Short-term construction-related noise.

Impact 4.10-3: Exposure to construction-related ground-borne vibrations.

12.2 BENEFITS OF THE PROJECT

Pursuant to PRC Section 21081 and Section 15093 of the State CEQA Guidelines, the City Council of the City of Roseville adopts and makes the following statement of overriding considerations regarding the remaining significant unavoidable impacts of the selected project, as discussed above, and the anticipated economic, social, and other benefits of the project.

The City Council finds and determines that (1) the majority of the significant impacts of the selected project will be reduced to acceptable levels by implementation of the mitigation measures recommended in these findings (see Table 2); (2) the City Council's approval of the selected project will result in two significant adverse environmental effects that cannot be avoided or reduced to a less-than-significant level even with the incorporation of all feasible mitigation measures into the project; and (3) there are no other feasible mitigation measures or feasible project alternatives that will further mitigate, avoid, or reduce to a less-than-significant level the remaining significant environmental impact.

In light of the environmental, social, economic, and other considerations identified in the findings above, and the considerations set forth below related to this project, this City Council chooses to approve the selected project because, in its view, the economic, social, technological, and other benefits resulting from the selected project substantially outweigh the project's significant and unavoidable adverse environmental effects.

The following statements identify the reasons why, in the City Council's judgment, the benefits of the selected project outweigh the significant and unavoidable impacts. The substantial evidence supporting the enumerated benefits of the project can be found in the preceding findings, which are herein incorporated by reference; in the project itself; and in the record of proceedings as defined above. The overriding consideration set forth below constitutes a separate and independent ground for finding that

the benefits of the selected project outweigh its significant adverse environmental effect and is an overriding consideration warranting approval.

12.2.1 Implementation of the 2008 Bicycle Master Plan

The City's 2008 Bicycle Master Plan (BMP) includes a plan for development of over 28 miles of Class I trails in Roseville, including the Dry Creek Greenway East Trail. The project is identified as a priority project in the BMP because of its potential to provide a safe, comfortable, and convenient bicycle route in an area of the City with limited existing options for bicyclists.

The trail would be located in close proximity to several parks, including Maidu Regional Park, Saugstad Park, Eastwood Park, and Willard Dietrich Park. An existing multiuse path along the east side of Rocky Ridge Drive as well as on-street bike lanes on Rocky Ridge Drive currently provide connections from the proposed trail to Maidu Regional Park. Much of the corridor passes through pastoral settings of oak woodland, grassland, and riparian settings, offering opportunities for a variety of recreational pursuits.

The project is identified in the City of Roseville General Plan and the BMP as an alternative for pedestrians and bicyclists to using busy City streets, as well as an important recreational amenity for residents. Because there are currently limited options in the project vicinity for safe, comfortable, and convenient bicycle travel, the City identified the need for development of additional separated bike paths. The BMP identifies Class I off-street bike paths as preferred by Roseville residents because of their alignments through areas with scenic beauty and their limited motorist interaction and crossing vehicle traffic flows. As discussed in the EIR, they are most often used for recreational purposes, but they are also important for commuters where they allow bicyclists to avoid high traffic volume areas, such as highway interchanges or major arterial streets.

12.2.2 Enhanced Connectivity and Access

Enhancing connectivity is an integral part of planning a successful multi-use trail system. Connections to other multi-use trails, on-street bikeways, neighborhoods, business districts and transit increase trail access and promote trail use. The selected project has a number of opportunities for connections to the community and existing and proposed transportation facilities. Table 1 is a list of potential trail connections.

Table 1 Potential Bicycle Trail, Path, and Route System Connections

Point of Connection	Facility Type	Sheet number*	Purpose
Darling Way	Class III (e)	1	Connection to Riverside Avenue business district, Roseville Transit routes A & B, Cirby Elementary School, and Hillcrest, Cherry Glen and Los Cerritos neighborhoods
Saugstad/Royer/ Miners Ravine Trails	Class I (e)	1	Connection to Miners Ravine Trail and Downtown Roseville, including Downtown transit stations, offering transportation and looped recreation opportunities
Riverside Avenue	Class I (p) & Class II (p)	1	Future trail connection to Atkinson Street, Morgan Creek, Dry Creek Parkway Ueda Parkway and Sacramento Northern Trails (part of regional looped trail system) Roseville Transit routes A & B
Hernandez/Machado Way	Class I (e)	1	Neighborhood connection to Hillcrest area

Table 1 Potential Bicycle Trail, Path, and Route System Connections

Point of Connection	Facility Type	Sheet number*	Purpose
Cirby Hills Townhomes	Class I (p)	1	Neighborhood connection to residential community
Windscape Apartments	Class I (p)	1	Neighborhood connection to residential community
Marlin Drive	Class I/II (e)	2	Connection to Eastwood Park, Cirby Side neighborhood and Class II bike lane on Orlando Avenue, which connects to the Louis/Orlando transit station
Tina Way	Footbridge (e)	2	Connection to residential areas along Coloma Way
Sunrise Avenue	Class I (p)	3	Potential connection to Sunrise Avenue business district and Roseville Transit routes A, B, C, & F
Meadow Gate Drive	Class I/III (p)	3	Potential connection to residential neighborhood
Oakridge	Class III (e)	4	Connection to Meadow Oaks, Sierra Gardens and Cirby Ranch areas
Woodlake Lane	Class I (e)	4	Connections to Eich Middle School and Meadow Oaks area
Eich/Sierra Gardens Drive	Class I (e)	5	Connection to middle school and Sierra Gardens neighborhood
Meadowlark Lane	Class I (e)	5	Connection to Maidu Park and Sierra Gardens neighborhood
Rocky Ridge Drive	Class I/II	6	On-street and off-street connection to Maidu Park, including park-n-ride lot, Roseville Transit Routes C & F, and Maidu/South Cirby neighborhoods
Champion Oaks/N. Cirby	Class III (e)	7	On-street connection to Maidu Park and Maidu/South Cirby areas
W. Colonial Parkway	Class III (p)	7 & 8	On-street connection to Maidu/South Cirby areas
Old Auburn Way	Class I/II (p)	8	Class III connection to Citrus Heights & future Class I regional connection to American River Parkway at Beals Point (part of regional looped trail system)

Note: * See Exhibit 3-4 of the Draft EIR for an overview of the map sheet locations.

(p) = proposed; (e) = existing

Class I = Off-Street Bike Paths, located in a separate right of way, for the exclusive use of bicycles and pedestrians, with minimal cross flow by motor vehicles.

Class II = On-Street Bike Lanes, areas within paved streets that are identified by striping and signs for preferential (semi-exclusive) bicycle use.

Class III = On-Street Bike Route, on-street routes where bikes share the road with cars.

Source: City of Roseville's 2008 Bicycle Master Plan - compiled by Psomas Engineering 2013.

As discussed in the Draft EIR (page 3-6), the selected project would also serve as a paved, all-weather access for City maintenance crews. This would provide access to the City's sewer, water, and drainage outfalls that follow the creeks. In addition, the trail and its access points would provide creek maintenance crews with access to remove blockages within the stream channel and maintain conveyance of stormwater. The trail would also provide access for emergency service responders.

12.2.3 Provide Bank Stabilization Elements

During the planning and feasibility study phase, the City identified a need for a fluvial audit to assess the potential risk to the trail because of the future trajectory of the creek and existing bank erosion. The analysis employed a processed-based geomorphic assessment which coupled desk-based analysis of historical aerials, LiDAR data, and specific stream power with a field-based fluvial audit. The fluvial audit characterized various indicators of geomorphic process (e.g., channel reach type, bank erosion, depositional sedimentary bars) as well as factors influencing channel and floodplain morphology (e.g.,

bank protection, sediment input, large woody debris, etc). The analysis concluded there are some areas where there could be future risks of erosion to the trail. As a result, some bank stabilization elements were added in certain areas of the project. The Project Description (Chapter 3 of the Draft EIR) includes a description of these elements.

Without the selected project, the proposed retaining walls in areas susceptible to slumping would not be constructed. Areas currently subject to localized creep, slumping, and small landslides on over-steepened slopes, along incised drainages, and during periods of water saturation would continue to be subject to localized ground failure. Future soil and streambank erosion could continue to occur, creating adverse environmental effects.

12.2.4 Conclusion

Having reduced many of the effects of the project by adopting all feasible mitigation measures and balancing the benefits of the project against the selected project's significant and unavoidable adverse environmental impacts, the City Council hereby determines that the specific overriding social, environmental, and economic benefits of the project set forth above outweigh the potential unavoidable adverse effects of the project on the environment. The City Council finds that the overriding considerations set forth above constitutes a separate and independent basis for finding that the benefits of the project outweigh the unavoidable adverse environmental effect, and warrants approval of the selected project.

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
4.1 Aesthetics			
Impact 4.1-1: Substantially degrade the visual character or quality of the site and its surroundings.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.1-2: Create a new source of substantial light or glare that would adversely affect day or nighttime views of the area.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
4.2 Air Quality			
Impact 4.2-1: Short-term construction-generated emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$.	**Mitigation Measure 4.2-1: Reduce construction-related NO_X emissions.** Before approval of grading permits, the construction contractor shall submit for PCAPCD approval, a written calculation demonstrating that the fleet of heavy-duty (> 50 horsepower) off-road equipment used during the project's construction, including owned, leased, and subcontractor vehicles, will achieve the necessary percent reduction in NOX emissions during all construction phases, and for any periods during which multiple phases would overlap, as to not exceed 82 lb/day. Acceptable options for reducing emissions may include reduction in the number of segments constructed in a single day, use of late model-year engines, low-emission renewable diesel fuel, engine retrofit technologies, and/or other effective options as recommended by PCAPCD at the time (see Appendix C of the PCAPCD 2017 CEQA Handbook [PCAPCD 2017:75] for additional options). The calculation shall be provided using PCAPCD's Construction Mitigation Calculator.	LTS	**Finding:** Compliance with Mitigation Measure 4.2-1, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by achieving NO_x reductions sufficient to ensure construction-generated levels of NO_x would be less than Placer County Air Pollution Control District's threshold. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in construction emissions that could exceed applicable thresholds for NO_x and thus, contribute to the existing nonattainment status of

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
			the Sacramento Valley Air Basin with respect to the California Ambient Air Quality Standards (AAQS) and National AAQS. Significant impacts associated with construction emissions would be reduced to a less-than-significant level by requiring that the off-road construction equipment used or other options as recommended by PCAPCD can be demonstrated to not exceed the District's 82 lb/day threshold (Draft EIR, pp. 4.2-14 through 4.2-17).
Impact 4.2-2: Long-term use-related emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.2-3: Generation of local mobile-source CO emissions.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.2-4: Exposure of sensitive receptors to toxic air contaminant (TAC) emissions.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
4.3 Biological Resources			
Impact 4.3-1: Disturbance and loss of waters of the United States, waters of the state and riparian habitat.	**Mitigation Measure 4.3-1: Wetlands, Waters of the United States, and Water of the State.** This mitigation would apply for the Proposed Trail Alignment, Alignments Options 1A, 1C, and 5A.	LTS	**Finding:** Compliance with Mitigation Measure 4.3-1, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by compensating for the loss of wetlands,

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	The City shall implement the following measures to compensate for the loss of wetlands, waters of the United States, waters of the State, and riparian habitat: a. The City shall submit a wetland delineation report to USACE and request a preliminary jurisdictional determination. Based on the jurisdictional determination, the City shall determine the exact acreage of waters of the United States and waters of the state that would be filled as a result of project implementation. b. The City shall replace on a "no net loss" basis (minimum 1:1 ratio) (in accordance with USACE, CDFW, and/or RWQCB) the acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation. Wetland habitat shall be replaced at an acreage and location agreeable to USACE, CDFW, and the Central Valley RWQCB and as determined during the Section 401, Section 404 and Section 1602 permitting processes. The ratio of stream habitat restoration/replacement shall consider value for Central Valley steelhead and Chinook salmon (as discussed under Mitigation Measure 4.3-2). Habitat shall either be restored on the affected stream and within City property, or at an approved mitigation bank. In either instance, compensatory mitigation will be approved by USACE, CDFW, and RWQCB. c. The City shall obtain a USACE Section 404 Individual Permit, RWQCB Section 401 certification, and a Section 1602 streambed alteration agreement from CDFW before any groundbreaking activity within 50 feet of any wetland or water of the United States. The City shall implement all permit conditions, which may include contributions to an approved wetland mitigation bank or through the development and implementation of a Compensatory Wetland, Stream and Riparian Mitigation and Monitoring Plan for creating or restoring in-kind habitat in the surrounding area. If mitigation credits are not available, stream and riparian habitat compensation shall include establishment of riparian vegetation on currently unvegetated bank portions of streams affected by the project and enhancement of existing riparian habitat through removal of nonnative species, where appropriate, and planting additional native riparian plants to increase cover, continuity, and width of the existing riparian corridor along streams in the project site and surrounding areas. The ratio of riparian restoration/replacement shall		waters of the United States, waters of the State, and riparian habitat. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in overall permanent loss of wetlands and other waters of the United States and waters of the state and associated riparian habitat. Significant impacts associated with the disturbance or loss of these waters would be reduced to a less-than-significant level by requiring that wetlands and waters be avoided to the extent feasible and that wetlands and waters that cannot be avoided are restored following construction, or if the habitat cannot be restored, that the City compensates for unavoidable losses in a manner that results in no net loss of wetlands and waters. (Draft EIR, pp. 4.3-43 through 4.3-48)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	consider value for Central Valley steelhead and Chinook salmon (as discussed under Mitigation Measure 4.3-2) as well as City Protected trees and Oak Woodland Habitat (as discussed under Mitigation Measure 4.3-8). Construction activities and compensatory mitigation shall be conducted in accordance with the terms of a streambed alteration agreement as required under Section 1602 of the Fish and Game Code. d. The Compensatory Wetland, Stream and Riparian Restoration and Mitigation and Monitoring Plan shall include the following: 1. identification of compensatory mitigation sites and criteria for selecting these mitigation sites; 2. in kind reference habitats for comparison with compensatory wetland, stream, and riparian habitats (using performance and success criteria) to document success; 3. monitoring protocol, including schedule and annual report requirements (Compensatory habitat shall be monitored for a minimum of three (3) years from completion of mitigation, or human intervention (including recontouring and grading), or until the success criteria identified in the approved mitigation plan have been met, whichever is longer.); 4. ecological performance standards, based on the best available science and including specifications for native riparian plant densities, species composition, amount of dead woody vegetation gaps and bare ground, and survivorship (based on characteristics of the existing impacted habitat); at a minimum, compensatory mitigation planting sites must achieve 80 percent survival of planted riparian trees and shrubs by the end of the three-year maintenance and monitoring period or dead and dying trees shall be replaced and monitoring continued until 80 percent survivorship is achieved; 5. corrective measures if performance standards are not met; 6. responsible parties for monitoring and preparing reports; and 7. responsible parties for receiving and reviewing reports and for verifying success or prescribing implementation or corrective actions.		

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
Impact 4.3-2: Interfere substantially with the movement of Central Valley steelhead and Central Valley fall-run Chinook salmon.	**Mitigation Measure 4.3-2: Central Valley Steelhead and Central Valley fall-run Chinook Salmon** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. The City shall implement the following measures, developed based on past consultations with NMFS, to avoid, minimize and/or mitigate potential effects on Central Valley steelhead and Central Valley fall-run Chinook salmon. a. Prior to the onset of work, the qualified biologist shall conduct a mandatory worker environmental awareness training. The training shall educate workers about the importance of avoiding impacts to Central Valley steelhead and Central Valley fall-run Chinook salmon and their habitat. The training shall also cover the relevant permit conditions and avoidance and minimization measures that protect sensitive species and habitats, as well as the penalties for non-compliance with state and federal laws, regulations, and permit requirements. The training shall include information about the life history and habitat requirements of Central Valley steelhead and Central Valley fall-run Chinook salmon and their potential to occur in the project site, as well as the terms and conditions of the Project's Biological Opinions or other authorizing documents (i.e. letter of concurrence). b. Construction activities occurring within creek banks and channel beds shall be limited to the low-flow period (typically June 15 - October 15), unless earlier or later dates are approved by CDFW and NMFS during consultation. By limiting in-water construction activities to this time period, the Project shall limit construction activities to periods when low flow depths and velocities within the project streams are less likely to support Central Valley steelhead or Central Valley fall-run Chinook salmon life stages including adult migration, spawning, and egg incubation periods. c. Fish screens or temporary stream diversion structures shall be installed to exclude Central Valley steelhead and Central Valley fall-run Chinook salmon from areas where in-water and near-water construction activities would be conducted. Installation of fish screens or temporary diversion structures shall prevent access to affected areas in the unlikely event that Central Valley steelhead or Central Valley fall-run	LTS	**Finding:** Compliance with Mitigation Measure 4.3-2, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by implementing measures to avoid, minimize and/or mitigate potential effects on Central Valley steelhead and Central Valley fall-run Chinook salmon. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would create construction noise, vibrations, lighting, temporary diversion structures, and temporary creek crossings, resulting in temporary sedimentation and turbidity effects, accidental spills of hazardous materials, potential noise-related disturbances, and loss of shaded riverine aquatic habitat. Significant impacts to Central Valley steelhead and Central Valley fall-run Chinook salmon would be reduced to a less-than-significant level by limiting construction to summer periods, requiring that a qualified biologist be present during the installation of fish screens, requiring the project to incorporate night lighting design that

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	Chinook salmon are present in the project streams during the low-flow period (June 15 - October 15). d. The City shall retain a qualified biologist to monitor the installation of fish screens or temporary stream diversion structures, as well as any other near or in-water construction activities (e.g., installation of RSP along creek banks or below the OHWM, installation and removal of low water crossings, placement of new abutments, rock walls, gabions, and water diversions). Prior to the installation of fish screens or temporary stream diversion structures the biologist shall visually survey the in-water work area for Central Valley steelhead and Central Valley fall-run Chinook salmon. e. Once the biologist confirms that no Central Valley steelhead or Central Valley fall-run Chinook salmon are present in the in-water work area, fish screens or temporary diversion devices shall be installed in a downstream direction, installing the upstream fish screen or temporary diversion device. The biologist shall conduct a second visual survey before the downstream portion of the fish screen or temporary stream diversion is installed. If fish are present within the diversion area, the fish shall be guided out of the in-water work area with nets by the qualified biologist. The need for fish salvage is not anticipated because Central Valley steelhead or Central Valley fall-run Chinook salmon are not likely to be present in the project streams during the low-flow period (June 15 - October 15) – primarily because of excessive summer water temperatures that occur during this period in the Project area. However, fish salvage (or relocation outside of the in-water work areas) shall be conducted as needed should fish be present. f. Before the onset of construction activities, high visibility orange construction fencing shall be installed along the perimeter of Environmentally Sensitive Areas under the supervision of the qualified biologist. Fencing shall be installed along the limits of construction in riparian habitat, minimizing the disturbance of or encroachment on sensitive aquatic and riparian habitats. The contractor shall maintain the project's Environmentally Sensitive Area fencing for the duration of the project and remove it when the project is complete. g. Erosion control BMPs shall be implemented during construction to minimize the potential for erosion, and the mobilization of sediments to project waterways and be consistent with the Open Space Preserve		does not directly shine light on water surfaces, and restoration and enhancement of the riparian corridor. (Draft EIR, pp. 4.3-48 through 4.3-57)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	Overarching Management Plan (and related USFWS Biological Opinion (81420-2008-F-1958-3). The following erosion and sediment control measures shall be implemented to prevent sedimentation and turbidity, as well as any identified in the SWPPP, 401, 404, or 1602 permits. 1. Soil exposure shall be minimized by limiting the area of construction and disturbance and through the use of temporary BMPs, groundcover, and stabilization measures. These measures may include mulches, soil binders and erosion control blankets, silt fencing, fiber rolls, temporary berms, sediment de-silting basins, sediment traps, and check dams. 2. Pursuant to Section 13-4.03C(3) of the Caltrans Standard Specifications, water pollution control practices shall be implemented within 72 hours of stockpiling material or before a forecasted storm event, whichever occurs first. If stockpiles are being used, soil, sediment, or other debris shall not be allowed to enter storm drains, open drainages, and watercourses. Active and inactive soil stockpiles must be covered with soil stabilization. 3. Plastic mono-filament netting (erosion control matting) or similar material that could trap wildlife shall not be used. Acceptable substitutes include, but are not limited to, jute, coconut coir matting, or tackified hydroseeding compounds. 4. Energy dissipaters and erosion control pads shall be provided at the bottom of slope drains as needed. Other flow conveyance control mechanisms may include earth dikes, swales, or ditches. Stream bank stabilization measures shall also be implemented. 5. Existing vegetation shall be protected, to the extent feasible, to reduce erosion and sedimentation. Vegetation shall be preserved by installing temporary fencing, or other protection devices, around areas to be protected. Where complete removal is not necessary, vegetation shall be cut to ground level with the root systems left intact to prevent erosion and facilitate the recovery of riparian vegetation after project activities are complete. 6. Exposed soils shall be covered by loose bulk materials or other materials to reduce erosion and runoff during rainfall events.		

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	7. Exposed soils shall be stabilized, through watering or other measures, to prevent the movement of dust at the project site caused by wind and construction activities such as traffic and grading activities. 8. All construction roadway areas shall be properly protected to prevent excess erosion, sedimentation, and water pollution. 9. The contractor shall conduct periodic maintenance of erosion and sediment control measures. All erosion and storm water control measures shall be properly maintained for the duration of the project. h. A Spill Prevention and Control Plan shall be developed and implemented by the City, or its contractor, for the duration of the project. Pollution prevention and control BMPs shall be implemented during construction to minimize the risk of hazardous materials being released into waters in the project site. The following pollution and contamination prevention measures shall be implemented to prevent the release of hazardous materials during construction: 1. All equipment and materials shall be stored at least 50 feet from wetlands or waters in the project site unless the equipment is on established paved areas. If storage of equipment or materials within 50 feet of wetlands or waters in the project site is necessary, secondary containment shall be utilized to contain the equipment and materials and prevent discharge of any harmful substances into the soil or aquatic resources. Staging and storage areas for equipment, materials, fuels, lubricants, and solvents shall be located outside of the channel and banks of Dry Creek, Cirby Creek, Linda Creek, and Strap Ravine. 2. Secondary containment shall be provided for stationary equipment such as motors, pumps, generators, and compressors located within or adjacent to the Dry Creek, Cirby Creek, Linda Creek, and Strap Ravine. Any equipment or vehicles driven or operated within or adjacent to these creeks shall be checked and maintained daily to ensure proper working conditions to avoid potential impacts such as leaks. 3. No fueling, cleaning or maintenance of vehicles or equipment, or placement of construction debris, spoils or trash should occur within		

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	50 feet of wetlands or waters in the project site unless it occurs in designated refueling/staging areas on existing paved surfaces with secondary containment in place. Refueling of equipment should occur at approved fuel locations. Contractor shall inspect all equipment/vehicles for leaks prior to use and should inspected regularly during Project inspection. 4. For work that is to occur on existing structures over open flowing portions of Dry Creek, Cirby Creek, Linda Creek, or Strap Ravine, a method of containment such as netting, tarps or similar catchments shall be utilized to catch debris or other potential construction materials and prevent such material from falling into the waters. i. Lighting design shall include measures to limit the amount of light "spill" on water surfaces at night that could lead to predation of juvenile salmonids. To minimize the effects of lighting on salmonids, the City shall prevent lighting that directly shines on the water surfaces of Dry Creek, Cirby Creek, and Linda Creek by minimizing the amount of lighting necessary to safely and effectively illuminate pedestrian areas on bridges and trails, and by shielding and focusing lights on the bridge and trail surfaces and away from water surfaces. j. The project shall avoid impacts to riparian vegetation where feasible, and shall incorporate restoration and enhancement of the riparian corridor into the final design plans and construction specifications and shall develop a riparian and restoration plan (RRP), as part of the Compensatory Wetland, Stream and Riparian Mitigation and Monitoring Plan discussed in Impact 4.3-1, Disturbance and loss of waters of the United States, and Mitigation Measure 4.3-1 that involves onsite enhancements and purchase of mitigation bank credits to compensate for permanent and temporal loss of riparian and SRA cover. The RRP shall include on-site measures such as enhancing riparian vegetation by the planting of native shrub, tree, and understory species to create a more diverse vegetation structure and thus a higher quality habitat for wildlife. The onsite measures in the RRP may also include the planting of willows and other fast-growing native riparian species, which can quickly compensate for the loss of riparian and SRA cover, and will be planted where erosion control (RSP, slope pavement etc.) is installed along stream banks. Permanent impacts to riparian vegetation can also be mitigated with the purchase of credits		

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	(1:1 for riparian and 1.7:1 for SRA cover), and 0.5:1 for temporal loss of riparian vegetation and SRA cover. Restoration and enhancement of the riparian vegetation in the project site (combined with mitigation bank credits) shall result in no net loss of riparian habitat acreage or function and shall increase the quality of habitat for Central Valley steelhead (including Critical Habitat), Central Valley fall-run Chinook salmon (including EFH), and shall be accomplished through development and implementation of the RRP. Permanent impacts to riparian, including SRA, and waters of the United States shall be further analyzed and determined based on final design for each construction phase during Section 7 consultation as part of USACE Section 404 and CDFW Section 1602 permitting. k. Construction techniques shall be implemented to isolate near shore work from waterbodies in the project site. It is anticipated that clear water diversion using a cofferdam or gravel bag berm with impermeable layer would be used. Isolating in-water construction areas behind cofferdams would minimize the potential for turbidity and suspended sediments from reaching levels that could harm Central Valley steelhead, degrade existing Critical Habitat, harm Central Valley fall-run Chinook salmon, or degrade existing EFH. The extent of cofferdam footprints and dewatering shall be kept to the minimum necessary to support construction activities, and creek flow shall not be interrupted or reduced as a result of construction activities. Any fill material used in association with the cofferdams, such as sandbag fill, shall be composed of washed, rounded, spawning-sized gravel between 0.4 and 4 inches in diameter. If authorized by applicable state and federal permits, any of this gravel in contact with flowing water shall be left in place, and distributed manually with hand tools to allow passage for all life stages of fish. Installation and removal of cofferdams and/or gravel bag berms would be restricted to the summer low-flow period.		
Impact 4.3-3: Disturbance or loss of valley elderberry longhorn beetle or its habitat.	**Mitigation Measure 4.3-3a: Avoidance and Minimization Measures** The following measures shall be implemented to avoid or minimize effects to VELB and/or its habitat during construction of the proposed project. a. A worker awareness training program for construction personnel shall be conducted by a qualified biologist prior to beginning construction	LTS	**Finding:** Compliance with Mitigation Measures 4.3-3a through 4.3-3d, which have been required or incorporated into the project, will reduce this impact to a less-than-significant level by implementing

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	activities. The program shall inform all construction personnel about the life history and status of the beetle, requirements to avoid damaging the elderberry plants, and the possible penalties for not complying with these requirements. Written documentation of the training shall be submitted to the USFWS within 30 days of its completion. b. If elderberry shrubs can be retained within the project footprint, the City shall avoid indirect impacts by implementing the following measures, to the extent feasible, or equivalent measures agreed to in consultation with USFWS. Minimization measures include: 1. Avoidance Area. An avoidance area shall be established at least 20 feet from the drip-line of an elderberry shrub for any activities that may damage or kill the elderberry shrub (e.g., trenching, paving, etc.). 2. Fencing. All areas to be avoided during construction activities shall be fenced and/or flagged as close to construction limits as feasible. 3. Signage. Signage shall be posted every 50 feet along the buffer area with the following information, "This area is habitat of the valley elderberry longhorn beetle, a threatened species, and must not be disturbed. This species is protected by the Endangered Species Act of 1973, as amended. Violators are subject to prosecution, fines, and imprisonment." The signs shall be clearly readable from a distance of 20 feet, and must be maintained for the duration of construction. 4. Timing. To the extent feasible, all activities that could occur within 165 feet of an elderberry shrub, shall be conducted outside of the VELB flight season (March - July). 5. Erosion Control and Revegetation. Erosion control measures will be implemented to restore areas disturbed within 165 feet of elderberry shrubs and the affected area will be re-vegetated with appropriate native plants. 6. Chemical Usage. Herbicides will not be used within the drip-line of the shrub. Insecticides will not be used within 100 feet of an elderberry shrub. All chemicals will be applied using a backpack sprayer or similar direct application method.		measures to avoid or minimize effects to VELB and/or its habitat during construction. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in the direct removal of elderberry shrubs, ground-disturbing construction within the root zone of the shrubs, and permanent removal of riparian habitat. Significant impacts to VELB would be reduced to a less-than-significant level by requiring the protection of those elderberry shrubs that would not need to be removed, and in consultation with USFWS the transplanting of elderberry shrubs to a USFWS-approved location and the purchasing of credits. (Draft EIR, pp. 4.3-57 through 4.3-66)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	7. Mowing. Mechanical weed removal within the drip-line of the shrub shall be limited to the season when adults are not active (August - February) and shall avoid damaging the elderberry. 8. Pre-construction and post-construction surveys. Pre-construction surveys shall document compliance with mitigation measures. The post-construction survey shall confirm that there was no additional damage to any of the elderberry shrubs than as described in this document. 9. Construction monitoring. A qualified biologist shall monitor the work area at project-appropriate intervals to assure that all avoidance and minimization measures are implemented. The amount and duration of monitoring will depend on the project specifics and shall be discussed with a USFWS biologist. 10. Elderberry Shrub Protection and Management Plan. The City will develop as part of the Section 7 consultation process with USFWS for the Dry Creek Greenway Multi-Use Trail project an elderberry shrub protection and management plan that will include how the buffer areas are to be protected, restored, and maintained after construction is completed and the City will ensure that ground-disturbing activities on the project site do not alter the hydrology for shrubs to be protected or otherwise affect the likelihood of vigor or survival of elderberry shrubs. The Elderberry Shrub Protection and Management Plan shall be consistent with the City's Open Space Preserve Overarching Management Plan. **Mitigation Measure 4.3-3b: Removing/Transplanting Individual Elderberry Shrubs** a. Elderberry shrubs that are in the path of construction activities and cannot be avoided shall be removed and if feasible, transplanted, according to Table 4.3-5. A Biological Opinion from USFWS will be obtained prior to removal or transplanting of elderberry shrubs. Removal of a shrub may either include the roots or just the removal of the above-ground portion of the plant. If feasible, the entire root ball shall be removed, and the shrub transplanted. b. Elderberry shrubs requiring removal shall be transplanted as close as feasible to its original location within City-owned property or as approved by USFWS. Elderberry shrubs may be relocated adjacent to		

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact

the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the City is able to provide long-term protection to the shrub and ensure that the shrub becomes reestablished.

c. If these criteria cannot be met, the shrub may be transplanted to an appropriate USFWS-approved mitigation site.

d. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that would be extremely difficult to move because of access problems, may not be appropriate for transplanting. The following transplanting guidelines shall be used to guide removal and transplanting of elderberry shrubs on the project site:

1. A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures.
2. Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, GPS location of the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the USFWS and to the California Natural Diversity Database (CNDDB).
3. Elderberry shrubs shall be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves. Transplanting during the non-growing season will reduce shock to the shrub and increase transplantation success.
4. Transplanting shall follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (http://www.tcia.org/).

Mitigation Measure 4.3-3c: Compensatory Mitigation for Loss of Riparian Habitat

a. The following compensatory mitigation addresses impacts to VELB habitat through compensating for the permanent loss of riparian habitat within 165 feet of elderberry shrubs. Table 4.3-6 lists the total riparian habitat that is anticipated to be lost, according to the preliminary project

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact

design, and the corresponding credits that shall be purchased to replace habitat lost at a 3:1 ratio, as outlined in the VELB framework (USFWS 2017b). The exact amount of compensation shall be as agreed to by USFWS, per Section 7 consultation under the Federal Endangered Species Act.

Table 4.3-6 Potential Valley Elderberry Longhorn Beetle Habitat-Level Compensation

Project Alternative Options	Compensation Ratio	Loss of Riparian Habitat (acres)	Acres of Credit[1]	Total Credit Purchase[2]
Proposed Trail Alignment	3:1	1.22	3.66	89
Alignment Option 1A	3:1	0.89	2.67	65
Alignment Option 1C	3:1	1.41	4.23	103
Alignment Option 5A	3:1	1.22	3.66	89

[1] Acre(s) of credit = Compensation Ratio X Total Acres of Riparian Habitat Permanently Lost within 165 Feet of Elderberry Shrubs

[2] Formula for Credit Purchase: 1 credit = 0.041 acres

b. If the City chooses not to purchase credits at a USFWS-approved bank, they shall follow USFWS requirements for providing a permanent conservation area that meets USFWS criteria and approval, as described in the VELB Framework (USFWS 2017b).

Mitigation Measure 4.3-3d: Consultation with USFWS

Caltrans, as the federal designated agency, will consult with USFWS under Section 7 of ESA for approval of transplanting and compensatory measures outlined in Mitigation Measures 4.3-3b and 4.3-3c prior to project construction.

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
Impact 4.3-4: Disturbance or loss of Swainson's hawk, white-tailed kite, and other nesting raptors.	**Mitigation Measure 4.3-4: Nesting Raptors** This mitigation would apply for the Proposed Trail Alignment, Alternative Alignments 1A, 1C, and 5A. The following measures shall be implemented to avoid, minimize and fully mitigate impacts to Swainson's hawk, white-tailed kite, as well as other raptors. a. For project activities, including tree removal, that begin between February 15 and September 15, a qualified biologist shall conduct preconstruction surveys for nesting raptors and to identify active nests on and within 0.25 mile of the project site with direct line of sight from public access areas with the use of binoculars and spotting scopes to the proposed work areas. The surveys shall be conducted before the beginning of any construction activities between February 15 and September 15. b. The City shall attempt to initiate upland construction activities before the nest initiation phase (i.e., before February 15). If breeding raptors establish an active nest site, as evidenced by nest building, egg laying, incubation, or other nesting behavior, near the construction area, they shall not be harassed or deterred from continuing with their normal breeding activities. c. Impacts to nesting raptors shall be avoided by establishing appropriate buffers around active nest sites identified during preconstruction raptor surveys. No project activity shall commence within the buffer areas until a qualified biologist has determined the young have fledged, the nest is no longer active, or reducing the buffer, in coordination with CDFW, would not likely result in nest abandonment. CDFW guidelines recommend implementation of 500 feet for raptors, but the size of the buffer may be adjusted if a qualified biologist and the City, in consultation with CDFW, determine that such an adjustment would not likely adversely affect the nest. Monitoring of the nest by a qualified biologist during construction activities shall be required if the activity has potential to adversely affect the nest. d. Trees shall not be removed during the breeding season for nesting raptors unless a survey by a qualified biologist verifies that there are not active nests within the trees or within 500 feet of the trees proposed to be removed. Loss of trees that provide potential nesting habitat shall	LTS	**Finding:** Compliance with Mitigation Measure 4.3-4, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by implementing measures to avoid, minimize and fully mitigate impacts to Swainson's hawk, white-tailed kite, as well as other raptors. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in removal of trees within oak woodland and riparian habitat, leading to the potential direct removal or disturbance of active raptor nests. Significant impacts to nesting raptors would be reduced to a less-than-significant level by identifying nests, removing vegetation and trees outside of the nesting season, conducting pre-construction surveys if construction activities are to occur during the nesting season, and mitigating for the loss of oaks and riparian trees. (Draft EIR, pp. 4.3-66 through 4.3-69)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	be compensated by planting replacement trees according to Mitigation Measure 4.3-1 (wetlands/riparian trees) and Mitigation Measure 4.3-8 (protected oak trees).		
Impact 4.3-5: Disturbances to special-status song birds.	**Mitigation Measure 4.3-5: Special-status birds** This mitigation would apply for the Proposed Trail Alignment, Alignment Option 1A, 1C, and 5A. The following measures shall be implemented and are intended to avoid, minimize, and fully mitigate impacts to nesting special-status birds. a. The City shall ensure that before any ground-disturbing project activities begin for a given proposed trail segment, a qualified biologist shall identify potential habitat for nesting special-status bird species in areas that could be affected during the breeding season by construction. b. If vegetation removal or other disturbance related to construction of the trail segment is required during the nesting season, focused surveys for active nests of special-status birds shall be conducted before and within 5 days of initiating construction by a qualified biologist. The appropriate area to be surveyed and timing of the survey may vary depending on the activity and species that could be affected. If no active nests are found during focused surveys, no further action under this measure shall be required. c. If an active special-status bird nest is located during the preconstruction surveys, the biologist shall notify the City and the City shall notify CDFW. Construction shall be prohibited within a minimum of 25 feet of the nest to avoid disturbance until the nest is no longer active. d. If construction stops for more than 5 days during the nesting season, a follow up survey shall be conducted to make sure that no birds moved into the area and started nesting.	LTS	**Finding:** Compliance with Mitigation Measure 4.3-5, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by implementing measures to avoid, minimize and fully mitigate impacts to nesting special-status birds. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in vegetation clearing and other construction activities which could result in the loss of individuals or nests, or disruptions to nesting attempts, special-status bird species if they nest in the project area in the future. Significant impacts to nesting special-status birds would be reduced to a less-than-significant level by identifying potential habitat, conducting pre-construction surveys if construction activities are to occur during the nesting season, and prohibiting construction within a minimum of 25 feet of an active nest. (Draft EIR, pp. 4.3-70 through 4.3-72)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
Impact 4.3-6: Disturbance or loss of Western pond turtle.	**Mitigation Measure 4.3-6: Western Pond Turtle.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. a. Implement Mitigation Measure 4.3-1. b. Before ground disturbance, all onsite construction personnel shall be instructed by a qualified biologist regarding the potential presence of western pond turtle, the importance of avoiding impacts on this species and its habitat, and recognition of western pond turtle and its habitat(s). c. Within 24 hours before beginning construction activities within 200 feet of suitable aquatic habitat for western pond turtle, a qualified biologist shall inspect areas of anticipated disturbance for the presence of western pond turtle nests and individuals. If nests are found, a 100-foot no disturbance buffer shall be erected and maintained until the turtles have hatched and no obstructions between the nest and aquatic habitat shall be created. No vegetation clearing will be allowed within the buffer to shelter the turtles from the elements and potential predators. d. If adult and juvenile turtles are found during preconstruction, dewatering, or fish rescue operations, the biologist shall relocate the western pond turtle to the nearest suitable habitat outside of the area of disturbance. The construction area shall be re-inspected whenever a lapse in construction activity of two weeks or more has occurred. The biologist shall be available thereafter; if a turtle is encountered during construction activities, the biologist shall relocate the western pond turtle to the nearest suitable aquatic habitat outside the area of disturbance. As suitable habitat is located throughout the area, it is not anticipated that turtles would be relocated far from construction areas and that they would recolonize following construction. e. After completion of project-related construction activities, any temporary fill and construction debris shall be removed, and temporarily disturbed areas shall be restored to pre-project conditions. Restoration of grassland and riparian habitat shall be conducted as applicable under Mitigation Measure 4.3-1 (for riparian vegetation) and Mitigation Measure 4.3-4 (for grassland habitat) in proximity to the stream corridors.	LTS	**Finding:** Compliance with Mitigation Measure 4.3-6, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by avoiding or relocating western pond turtles. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in vegetation-clearing and other construction activities that could result in the loss of individuals or nests, or disruptions to nesting attempts, of western pond turtle. Significant impacts to western pond turtles would be reduced to a less-than-significant level by identifying and avoiding western pond turtle nest sites or temporarily relocating individuals outside of the construction area. (Draft EIR, pp. 4.3-72 through 4.3-74)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
Impact 4.3-7: Disturbance or loss of special-status bats – pallid bat and silver-haired bat.	**Mitigation Measure 4.3-7: Special-status bats** This mitigation would apply for the Proposed Trail Alignment, Alternative Alignments 1A, 1C, and 5A. a. Bat surveys shall be conducted by a qualified wildlife biologist within 5 days before removal of trees that have suitable roosting habitat for bats. Specific survey methodologies shall be determined in coordination with CDFW, and may include visual surveys of bats (e.g., observation of bats during foraging period), inspection for suitable habitat, bat sign (e.g., guano), or use of ultrasonic detectors (e.g., Petterson, Anabat, Wildlife Acoustics). Removal of any significant roost sites located shall be avoided to the extent feasible with a non-disturbance buffer of 250-feet. If it is determined that an active roost site cannot be avoided and will be affected, bats shall be excluded from the roost site before the site is removed. The City shall first notify and consult with CDFW on appropriate bat exclusion methods and roost removal procedures. Exclusion methods may include use of one-way doors at roost entrances (bats may leave, but not reenter), or sealing roost entrances when the site can be confirmed to contain no bats. Once it is confirmed that all bats have left the roost, crews shall be allowed to continue work in the area. The City may have to provide temporary suitable bat roosting habitat (i.e. bat boxes), prior, during, and after exclusion to provide bat roosting habitat. b. Exclusion efforts shall be restricted during periods of sensitive activity (e.g., during winter hibernation or while females in maternity colonies are nursing young [generally, April 15 through August 15]). If a hibernation or maternity roosting site is discovered, the project biologist and the City shall consult with CDFW to establish appropriate exclusionary buffers until all young are determined to be able to fly by the project biologist. Once it is determined that all young are able to fly, passive exclusion devices shall be installed and all bats will be allowed to leave voluntarily. Once it is determined by a qualified biologist that all bats have left the roost, crews shall be allowed to work within the buffer zone.	LTS	**Finding:** Compliance with Mitigation Measure 4.3-7, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by implementing measures to avoid and minimize impacts to special-status bats. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in vegetation clearing and other construction activities that could result in the loss of individuals or bat roosts, or disruptions to maternity roosts, of silver-haired bat and pallid bat. Significant impacts to special-status bats would be reduced to a less-than-significant level by conducting bat surveys and restricting exclusion efforts during periods of sensitive activity. (Draft EIR, pp. 4.3-74 through 4.3-77)
Impact 4.3-8: Disturbance or loss of City protected trees, Valley Oak Woodland, and other	**Mitigation Measure 4.3-8: Avoid impacts or mitigate for impacts to Valley Oak Woodland, and other Sensitive Vegetation Alliances and Associations (previously known as Sensitive Natural Communities)**	LTS	**Finding:** Compliance with Mitigation Measure 4.3-8, which has been required or incorporated into the

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
Sensitive Vegetation Alliances and Associations.	This mitigation would apply for the Proposed Trail Alignment, Alignment Option 1A, 1C, and 5A. a. To the maximum extent feasible, oak and riparian trees shall be avoided where possible and protection measures shall be implemented to protect oak woodlands, riparian areas and associated native trees from project-related impacts. The following measures shall be implemented for oak and riparian trees that would be impacted by project activities to avoid and minimize potential impacts to individual oak and riparian trees: 1. Temporary protective fencing shall be installed at least one foot outside the dripline of the native oak tree before initiating construction to avoid damage to the tree canopy and root system. A circle with a radius measurement from the trunk of the tree to the tip of its longest limb will constitute the dripline protection area for each tree. Limbs must not be cut back to change the dripline. The area beneath the dripline is a critical portion of the root zone and defines the minimum protected area of each tree. Removing limbs that make up the dripline does not change the protected area. 2. No vehicles, construction equipment, mobile home/office, supplies, materials or facilities shall be driven, parked, stockpiled or located within the dripline of the native oak trees. 3. No grading shall be allowed within the dripline of the native oak tree. 4. No trenching shall be allowed within the dripline of the native oak tree. If it is necessary to install underground utilities within the dripline of the native oak tree, the utility line shall be jacked and bored under the supervision of a certified arborist. 5. Drainage patterns onsite shall not be modified so that water collects or stands within, or is diverted across, the dripline of any native oak tree. 6. If ground disturbance must occur within the protected zone of a native oak tree, all work shall occur consistent with the City's Tree Preservation Ordinance requirements. b. For those trees that cannot be avoided, the City shall comply with any riparian habitat conditions to comply with the Compensatory Wetland, Stream and Riparian Mitigation and Monitoring Plan that will be		project, will reduce this impact to a less-than-significant level by implementing measures to avoid, minimize and fully mitigate impacts to sensitive vegetation alliances. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in vegetation clearing and other construction activities that could result in the loss of sensitive vegetation alliances, such as valley oak riparian woodlands and riparian habitat. Significant impacts to sensitive vegetation alliances would be reduced to a less-than-significant level because the City would be required to identify and avoid oaks, oak woodlands and riparian habitat or provide compensation for loss of oaks, riparian trees, oak woodland and riparian habitat through enhancement of existing habitats, creation and management of oak woodland and riparian habitat, conservation easements, or other appropriate measures. (Draft EIR, pp. 4.3-77 through 4.3-80)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	developed during the Section 404, Section 401, and Section 1602 permitting process as described in Mitigation Measure 4.3-1. Additionally, the City shall implement the following: 1. An arborist report shall be conducted to identify the species and quantities of trees that will be removed to implement the project. 2. If native oak trees are removed, they shall be replaced as outlined in the City's Tree Preservation Ordinance 19.66.070. A Tree Planting and Maintenance Plan showing species, size, spacing and location of plantings, and the location and species of established vegetation shall be prepared. A monitoring program shall also be established to ensure compliance with any prescribed mitigation measures established by the project and to monitor the oak woodland restoration area. 3. Fully implement Mitigation Measure 4.3-1, which requires the City to secure and comply with a CDFW Streambed Alteration Agreement that would include a riparian restoration component.		
Impact 4.3-9: Disturbance or loss of special-status plants – Sanford's arrowhead.	**Mitigation Measure 4.3-9: Special-status plants – Sanford's arrowhead.** This mitigation would apply for the Proposed Trail Alignment, Alternative Alignments 1A, 1C, and 5A. The City shall implement the following measures to reduce potential impacts on Sanford's arrowhead: a. Prior to project construction and during the blooming period for Sanford's arrowhead (May – November), a qualified botanist shall conduct floristic-level surveys for Sanford's arrowhead in areas where potentially suitable habitat would be removed or disturbed by project activities. The normal blooming period for Sanford's arrowhead generally indicates the optimal survey period when the species is most identifiable. b. If no Sanford's arrowhead plants are found, the botanist shall document the findings in a letter report to the City of Roseville and CDFW and no further mitigation shall be required. c. If Sanford's arrowhead plants are found that cannot be avoided during construction, the City shall consult with CDFW to determine the appropriate mitigation measures for direct and indirect impacts that	LTS	**Finding:** Compliance with Mitigation Measure 4.3-9, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by implementing measures to avoid, minimize and fully mitigate impacts to Sanford's arrowhead. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in vegetation clearing and other in-water construction activities

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	could occur as a result of project construction and shall implement the agreed-upon mitigation measures to achieve no net loss of occupied habitat or individuals. Mitigation measures may include preserving and enhancing existing populations, creation of offsite (but within the stream reach) populations on project mitigation sites through seed collection or transplantation, and/or restoring or creating suitable habitat in sufficient quantities to achieve no net loss of occupied habitat and/or individuals. Potential mitigation sites could include suitable locations along the stream but outside of the construction areas. A mitigation and monitoring plan shall be developed describing how unavoidable losses of special-status plants will be compensated. d. If relocation efforts are part of the mitigation plan, the plan shall include details on the methods to be used, including collection, storage, propagation, receptor site preparation, installation, long-term protection and management, monitoring and reporting requirements, success criteria, and remedial action responsibilities should the initial effort fail to meet long-term monitoring requirements. e. Success criteria for preserved and compensatory populations shall include: 1. The extent of occupied area and plant density (number of plants per unit area) in compensatory populations shall be equal to or greater than the affected occupied habitat. 2. Compensatory and preserved populations shall be self-producing. Populations shall be considered self-producing when: I. plants reestablish annually for a minimum of five years with no human intervention such as supplemental seeding; II. reestablished and preserved habitats contain an occupied area and flower density comparable to existing occupied habitat areas in similar habitat types in the project vicinity. 3. If off-site mitigation includes dedication of conservation easements, purchase of mitigation credits, or other off-site conservation measures, the details of these measures shall be included in the mitigation plan, including information on responsible parties for long-term management, conservation easement holders, long-term management requirements, success criteria such as those listed		that could result in the loss of Sanford's arrowhead. Significant impacts to Sanford's arrowhead would be reduced to a less-than-significant level by requiring the City to identify and avoid Sanford's arrowhead plants or provide compensation for loss of Sanford's arrowhead plants through enhancement of existing populations, creation and management of offsite populations, conservation easements, or other appropriate measures. (Draft EIR, pp. 4.3-80 through 4.3-83)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	above and other details, as appropriate to target the preservation of long term viable populations.		
Impact 4.3-10: Impacts on movement of native resident or migratory fish or wildlife species or migratory wildlife corridors or impede the use of native wildlife nursery sites.	**Mitigation Measure 4.3-10: Movement of native resident or migratory fish or wildlife species or migratory wildlife corridors or impede the use of native wildlife nursery sites.** This mitigation would apply for the Proposed Trail Alignment, Alternative Alignments 1A, 1C, and 5A. Implementation of Mitigation Measure 4.3-1 and Mitigation Measure 4.3-2 would ensure that impacted habitats are mitigated for or restored, and work windows would prevent impact to migratory fish species. The work windows would allow the fish to freely use the stream corridors during migration to and from the streams. Impacted habitats (i.e., aquatic, riparian and SRA) would be restored or mitigated for and although affected their long-term function as breeding or nursery site would not be impacted. a. Implement Mitigation Measure 4.3-1 Wetlands, Waters of the United States, waters of the state and riparian habitat. b. Implement Mitigation Measure 4.3-2 Central Valley Steelhead and Central Valley Fall-run Chinook Salmon.	LTS	**Finding:** Compliance with Mitigation Measure 4.3-10, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by ensuring that impacted habitats are mitigated for or restored, and work windows would prevent impact to migratory fish species. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Project implementation would result in disturbances that have the potential to harass and disrupt migratory behavior and spawning sites of Central Valley steelhead and/or Central Valley fall-run Chinook salmon. Significant impacts to migratory fish, their breeding and nursery habitat to less-than-significant level because the City would have to secure permits from Federal and State Agencies (i.e. Sections 401, 404, and 1602 permits) that would restrict work windows to those when these species are not expected to be within the stream corridor, would require the City to mitigate for the loss of aquatic and

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
			riparian, and although the aquatic and riparian habitat would be temporarily affected, it would not result in substantial effects migratory fish movement or to their breeding or nursery sites. (Draft EIR, pp. 4.3-83 through 4.3-85)
4.4 Cultural Resources			
Impact 4.4-1: Disturb archaeological resources, including tribal cultural resources.	**Mitigation Measure 4.4-1: Proper Handling of Archaeological Resources.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. A minimum of seven days prior to beginning earthwork or other soil disturbance activities, the City shall notify UAIC of the proposed earthwork start-date. As part of this notification, a UAIC tribal representative shall be invited to inspect the project site, including any soil piles, trenches, or other disturbed areas, within the first five days of groundbreaking activity. During this inspection, a site meeting of construction personnel shall also be held to afford the tribal representative the opportunity to provide cultural resources awareness information. If any cultural resources, such as structural features, unusual amounts of bone or shell, artifacts, human remains, or architectural remains are encountered during this initial inspection or during any subsequent construction activities, work shall be suspended within 100 feet of the find, and the City's Project Manager shall immediately notify the City of Roseville Development Services Director. The City's Project Manager, in consultation with the City's Environmental Coordinator, shall coordinate any necessary investigation of the site with a qualified archaeologist approved by the City, and as part of the site investigation and resource assessment the archeologist shall consult with the UAIC and provide proper management recommendations should potential impacts to the resources be found by the City to be significant. A written report detailing the site assessment, coordination activities, and management recommendations shall be provided to the City by the qualified archaeologist. Possible management recommendations for unique archaeological resources could include resource avoidance or, where avoidance is infeasible in light of project design or layout or is	LTS	**Finding:** Compliance with Mitigation Measure 4.4-1, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by allowing a UAIC tribal representative to inspect the site during the first week of ground disturbance activities. If any resources are unearthed during construction all work will be suspended within 100 feet of the find and appropriate agencies contacted. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Construction of the proposed project could result in the discovery of unknown subsurface resources. Significant impacts associated with the potential disturbance of unknown archeological resources would be reduced to a less-than-significant level by ensuring a UAIC tribal monitor is

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	unnecessary to avoid significant effects, preservation in place or other measures. The contractor shall implement any measures deemed by City staff to be necessary and feasible to avoid or minimize significant effects to the cultural resources.		present and the proper agencies are contacted in the event something is discovered. (Draft EIR, pp. 4.4-11 through 4.4-14)
Impact 4.4-2: Accidental discovery of human remains.	**Mitigation Measure 4.4-2: Stop work if human remains are discovered.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. If human remains are discovered during any construction activities, potentially damaging ground-disturbing activities in the area of the remains shall be halted immediately, and the project applicant shall notify the Placer County coroner and the NAHC immediately, according to Section 5097.98 of the State Public Resources Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined by the NAHC to be Native American, the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains. The City shall also retain a professional archaeologist with Native American burial experience to assist the City of Roseville, the landowner, and the MLD with any management steps prescribed in California Health and Safety Code Section 7050.5 and California PRC Section 5097.98. Following the coroner's and NAHC's findings, the NAHC-designated MLD and the landowner shall determine the ultimate treatment and disposition of the remains and take appropriate steps to ensure that additional human interments are not disturbed. The responsibilities for acting upon notification of a discovery of Native American human remains are identified in California Public Resources Code Section 5097.94.	LTS	**Finding:** Compliance with Mitigation Measure 4.4-2, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by notifying the Placer County coroner and the NAHC immediately upon discovery of any human remains during construction activities, according to PRC Section 5097.98and Section 7050.5 of California's Health and Safety Code. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Construction of the proposed project could result in the discovery of human remains. Significant impacts associated with the potential disturbance of human remains would be reduced to a less-than-significant level by ensuring actions would be implemented to avoid, move, record, or otherwise treat the remains appropriately, in accordance with pertinent laws and regulations (Draft EIR, pp. 4.4-14 through 4.4-16)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
4.5 Geology and Soils			
Impact 4.5-1: Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving: rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, or landslides.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.5-2: Result in substantial soil erosion or the loss of topsoil.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.5-3: Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.5-4: Be located on expansive soil, creating a substantial risk to life or property.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.5-5: Destroy a unique paleontological resource.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
4.6 Greenhouse Gas Emissions and Climate Change			
Impact 4.6-1: Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
4.7 Hazards and Hazardous Materials			
Impact 4.7-1: Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.7-2: Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release or hazardous materials into the environment.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.7-3: Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or wastes within 0.25 mile if an existing or proposed school.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.7-4: Impair implementation of, or physically interfere with, an adopted emergency evacuation plan or emergency response plan.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.7-5: Expose people or structures to a significant risk of loss, injury, or death involving	**Mitigation Measure 4.7-5: Clear flammable materials within the project site prior to construction.**	LTS	**Finding:** Compliance with Mitigation Measure 4.7-5, which has been required or incorporated into the

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
wildland fires, including where wildlands are located adjacent to urbanized areas or where residences are intermixed with wildlands during project construction.	This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. If dry vegetation or other fire fuels exist on or near staging areas, welding areas, or any other area on which equipment will be operated, contractors shall clear the immediate area of fire fuel prior to construction. To the extent feasible, areas subject to construction activities will be maintained free of fire fuel and debris during the course of construction. To avoid impacts to natural resources, areas to be cleared and appropriate clearing methods shall be identified with the assistance of a qualified biologist.		project, will reduce this impact to a less-than-significant level by clearing staging areas, welding areas, or any other area on which equipment will be operated of fire fuel. The City Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Construction of the proposed project could expose people or structures to wildfire risks. Significant impacts associated with construction-related impacts associated with the potential for loss, injury, or death due to wildfire would be reduced to a less-than-significant level by removing fire fuels from construction sites and substantially decreasing the potential for construction activities to ignite a wildfire. (Draft EIR, pp. 4.7-14 through 4.7-15)
Impact 4.7-6: Use-related exposure of people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are located adjacent to urbanized areas or where residences are intermixed with wildlands.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
4.8 Hydrology and Water Quality			
Impact 4.8-1: Potential to violate any water quality standards or waste discharge requirements, or to otherwise degrade water quality.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.8-2: Potential to substantially alter existing drainage patterns or to create runoff volume that would exceed the capacity of drainage systems or result in erosion, siltation, or flooding.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.8-3: Alter or redirect 100-year flood flows, or expose people or structures to risk of injury or damage by flood waters.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
4.9 Land Use and Planning			
Impact 4.9-1: Consistency with applicable land use plans.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.9-2: Physically divide an established community.	None required	Beneficial	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
4.10 Noise			
Impact 4.10-1: Short-term construction-related noise.	**Mitigation Measure 4.10-1: Employ Noise-Reducing Construction Practices**	SU	**Finding:** Compliance with Mitigation Measure 4.10-1, which has been required or incorporated into the

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	This mitigation will apply to the Proposed Trail Alignment and Alignment Options 1A, 1C, and 5A. Feasible measures that can be used to limit construction noise include the following: ◢ Locate stationary noise generating construction equipment as far as feasible from noise-sensitive uses. ◢ Do not idle inactive construction equipment for prolonged periods (i.e., more than 5 minutes). ◢ Prohibit unmuffled engine exhaust systems. All construction equipment powered by gasoline or diesel engines shall have factory-installed sound control devices, or sound control devices that are at least as effective as those originally provided by the manufacturer, and all equipment shall be operated and maintained in good working order to minimize noise generation pursuant to Section 9.24.030 of the Noise Ordinance. ◢ The contractor shall provide advance written notification to owners and renters of buildings located within 50 feet of construction activities. The notice shall explain when construction is expected. The notice shall include contact information for the project manager. ◢ When construction occurs outside of the typical daytime and early evening hours (7:00 a.m. – 7:00 p.m. Monday-Friday and 8:00 a.m. – 8:00 p.m. Saturday and Sunday) or within 50 feet of noise sensitive commercial or office buildings, the use of noise-generating construction equipment will be avoided to the extent feasible. When not feasible, construction contractors will specify proposed noise-reducing construction practices or alternative schedules that will be employed to reduce construction noise. Measures specified by the contractors will be reviewed and approved by the City prior to construction activities. In these situations, feasible noise reduction measures include the following: ◤ Alternative construction schedule to minimize disturbance to normal office operations; and/or ◤ Use temporary noise-reducing barriers positioned between noise-generating equipment (including hand operated jack hammers) and the sensitive receptor building. Such barriers may include commercially manufactured noise-insulating blankets/quilts or as equal materials with similar noise reduction performance as		project, would reduce noise impacts associated with construction activities, but not to a less-than-significant level. The City Council, therefore, finds that there are no feasible changes or alterations that could be incorporated into the project to avoid the significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** There are no other feasible mitigation measures or feasible project alternatives that will further mitigate, avoid, or reduce to a less-than-significant level this temporarily significant environmental impact. This City Council chooses to approve the project because, in its view, the economic, social, technological, and other benefits resulting from the project substantially outweigh the significant and unavoidable short-term construction-related noise impact, per the Overriding Considerations described above.

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	approved by the resident engineer. When temporary barrier units are joined together, the mating surfaces shall be flush with each other with no gaps.		
Impact 4.10-2: Long-term increases in use-related noise.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.10-3: Exposure to construction-related groundborne vibrations.	**Mitigation Measure 4.10-3: Reduce exposure to construction-generated ground vibration.** This mitigation will apply to the Proposed Trail Alignment and Alignment Options 1A, 1C, and 5A. Construction documents shall specify construction practices that reduce the adverse effects of ground vibration associated with project construction activities. Measures specified by the design engineer will be reviewed and approved by the City prior to approval of the plans and specifications and may include, but are not limited to, the measures listed below. ◢ Implement Mitigation Measure 4.10-1. ◢ All construction equipment on construction sites shall be operated as far away from vibration- and noise-sensitive sites as reasonably feasible. ◢ Earthmoving, dozing, and ground-impacting operations shall be phased so as not to occur simultaneously in areas close to offsite sensitive receptors, to the extent feasible. The total vibration level produced could be significantly less when each vibration source is operated at separate times. ◢ As part of final design, project engineers shall identify areas on the project plans where work may be constrained due to proximity of structures. The designs shall specify requirements that during project construction on the trail alignment, no heavy vibratory equipment (i.e., the types of equipment listed in Table 4.10-5), shall be operated within 13 feet of off-site building structures unless otherwise approved in writing by the City Engineer. Non-vibratory equipment, such as hand tools, and handheld vibratory compactors and rollers may be used. Use of different material types including slurry cement and concrete paving approved by the Engineer, may be used to reduce or eliminate the need	SU	**Finding:** Compliance with Mitigation Measure 4.10-3, which has been required or incorporated into the project, would reduce ground vibration impacts associated with construction activities, but not to a less-than-significant level. The City Council, therefore, finds that there are no feasible changes or alterations that could be incorporated into the project to avoid the significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** There are no other feasible mitigation measures or feasible project alternatives that will further mitigate, avoid, or reduce to a less-than-significant level this temporarily significant environmental impact. This City Council chooses to approve the project because, in its view, the economic, social, technological, and other benefits resulting from the project substantially outweigh the significant and unavoidable short-term construction-generated ground vibration impact, per the Overriding Considerations described above.

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	for vibratory equipment. Those portions of the project site located within 13 feet of an off-site building structure shall be identified on construction documents and demarcated with stakes, flags, rope and/or markings on the ground. ◢ For Option 5A, locate caisson drilling for Bridge 14 forty-three (43) feet or greater from existing occupied structures, if feasible. ◢ Staging areas shall be adjusted and temporary fencing shall be installed to ensure that loaded trucks shall not operate within 13 feet of existing structures.		
4.11 Public Services			
Impact 4.11-1: Effects on fire protection and emergency services.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.11-2: Effects on police protection services.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
4.12 Recreation			
Impact 4.12-1: Increased use of existing neighborhood and regional parks.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
4.13 Transportation and Circulation			
4.13-1: Safety-related traffic impacts.	**Mitigation Measure 4.13-1: Prepare Traffic Management Plan.** This mitigation would apply for the Proposed Trail Alignment, Alignment Options 1A, 1C, and 5A. The City shall require the construction contractor to prepare for city approval and implement a traffic management plan before construction activities begin.	LTS	**Finding:** Compliance with Mitigation Measure 4.13-1, which has been required or incorporated into the project, will reduce this impact to a less-than-significant level by requiring the preparation and implementation of a traffic management plan. The City

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
	Before the beginning of construction on the project site, the contractor shall prepare a detailed traffic management plan that will be subject to review and approval by the City Department of Public Works. The plan shall ensure maintenance of safe and acceptable operating conditions for local roadways, bicycle and pedestrian facilities, and transit routes. The Traffic Management Plan shall regulate maintenance of traffic during each construction season and comply with agency standards to promote safe and efficient travel for the public and construction workers through the work zones. The plan shall include provisions for regular inspections to assess contractor compliance, signage to direct traffic, and public noticing, as appropriate. Methods in the plan may include (but are not limited to): ◢ appropriately sequencing activities (e.g., segment phasing, timing of grading, hours of construction) to minimize conflicts with traffic on affected roadways, ◢ maintaining traffic flow in the project area to the extent feasible, ◢ maintaining bicycle and pedestrian access along Riverside Avenue, and ◢ using flaggers to direct traffic, as needed, for ingress or egress of large trucks and other vehicles.		Council hereby directs that this mitigation measure be adopted. The City Council, therefore, finds that changes or alterations have been required in, or incorporated into, the project that avoid the potentially significant environmental effect as identified in the EIR. **Explanation/Facts in Support of Finding:** Construction of the proposed project could expose people to safety-related traffic impacts. Significant impacts associated with construction-related traffic impacts would be reduced to a less-than-significant level by preparing a traffic management plan which would include methods by which construction activities will be managed to minimize risk of traffic hazards related to large trucks. (Draft EIR, pp. 4.13-8 through 4.13-10)
4.13-2: Conflict with an applicable plan, ordinance or policy which establishes measures of effectiveness for the performance of the circulation system or with an alternative transportation plan.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
4.14 Utilities			
Impact 4.14-1: Insufficient water supplies available to serve the project from existing entitlements and resources, or result in the construction of new water treatment facilities.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)

Table 2 Selected Project Impacts and Findings of Fact

Impacts	Mitigation Measures	Significance after Mitigation	Findings of Fact
Impact 4.14-2: Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.14-3: Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs or fail to comply with federal, state, and local statutes and regulations related to solid waste.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.14-4: Result in a substantial increase in electrical demand.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)
Impact 4.14-5: Disrupt existing utility service.	None required	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (PRC Section 21002; CEQA Guidelines, Sections 15126.4, subd. (a)(3), 15091.)

COUNCIL COMMUNICATION

CC #: 9845

Title:	Historic District Parking Project - Professional Services Agreement
Contact:	Stefanie A. Kemen 916-746-1300 skemen@roseville.ca.us

Meeting Date: 3/20/2019
Item #: 7.2.

RECOMMENDATION TO COUNCIL

Staff recommends the City Council adopt a resolution to approve the professional services agreement with Interwest Consulting Group, Inc. to negotiate the acquisition of property in the Historic Old Town district for a planned parking project.

BACKGROUND

At the October 18, 2017 Council meeting, the City Council provided feedback to staff in support of an at-grade parking lot identified as Alternative 2 (attached) in the Historic Old Town Third Track parking analysis, which provides approximately 129 off-street parking spaces in the Historic Old Town District. Alternative 2 parking is meant to mitigate for the near term impacts of the Capitol Corridor Third Track project (3rd Track) and the Junction Crossings project.

In order to advance the Alternative 2 parking project, the City will need to acquire real property from Union Pacific Railroad and a private property owner. This professional services agreement with Interwest Consulting Group includes the appraisals of, and subsequent negotiations to secure, the required parcels necessary to construct the alternative 2 parking facilities. The not-to-exceed fee of Interwest Consulting Group's services for this work is $34,725.00.

FISCAL IMPACT

These professional services will be funded from General Fund Contingency account. No additional General Fund resources are required as there are adequate resources in the General Fund Contingency account to fund the recommended agreement.

ECONOMIC DEVELOPMENT / JOBS CREATED

Based on Federal guidelines of one job created for every $92,000 in government spending, about 1/3 of 1 job will be created with the approval of this Professional Service Agreement with

Interwest Consulting Group, Inc.

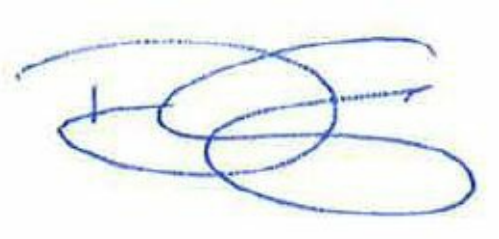
ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(b)(3)). Approval of the Professional Design Services Agreement with Interwest Consulting Group, Inc. does not include the potential for a significant environmental effect, and therefore is not subject to CEQA.

Respectfully Submitted,

Stefanie A. Kemen, Senior Engineer

Jason Shykowski, Acting Public Works Director



_____

Dominick Casey, City Manager

RESOLUTION NO. 19-74

APPROVING A PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND INTERWEST CONSULTING GROUP, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a professional services agreement for property acquisition services for the historic district parking project, by and between the City of Roseville and Interwest Consulting Group, Inc., has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said agreement is hereby approved and that the City Manager is authorized to execute it on behalf of the City of Roseville.

PASSED AND ADOPTED by the Council of the City of Roseville this ___ day of _____, 20__, by the following vote on roll call:

AYES COUNCILMEMBERS:

NOES COUNCILMEMBERS:

ABSENT COUNCILMEMBERS:

City Clerk

PROFESSIONAL SERVICES AGREEMENT

Historic District Parking Project

THIS AGREEMENT is made and entered into this ___ day of _____, 20__, by and between the City of Roseville, a municipal corporation ("CITY"), and Interwest Consulting Group, Inc., a Colorado corporation ("CONSULTANT"); and

W I T N E S S E T H:

WHEREAS, CITY desires professional services consisting of real estate services for the acquisition of property for additional parking in the historic district of the City of Roseville, and;

WHEREAS, CONSULTANT has prepared a proposal dated January 24, 2019, which describes the scope of work to be performed by CONSULTANT, the budget for the work, and the schedule for performance of the work; and

WHEREAS, CONSULTANT is qualified and experienced to provide such professional services.

NOW, THEREFORE, the parties agree as follows:

1. Services. CONSULTANT shall perform, at the direction of CITY, the scope of services as described in EXHIBIT "A," attached hereto and incorporated herein by this reference.

2. Compensation. For its services provided hereunder, CONSULTANT shall be compensated on a time and expense basis in accordance with the budget estimate as described in

EXHIBIT "B," attached hereto and incorporated herein by this reference. Total compensation shall not exceed thirty-four thousand, seven hundred twenty-five dollars ($34,725.00).

CONSULTANT shall submit one monthly invoice for its services. Such invoices shall be delineated by task, the person performing the services, and the hourly rate, which shall be stated in time increments of not greater than one tenth (1/10) hours. CITY shall pay invoices within thirty (30) days after receipt, if the services specified in the invoice have been satisfactorily completed.

3. Indemnification. To the fullest extent allowed by law, CONSULTANT shall defend, indemnify, and save and hold harmless CITY, its officers, agents, employees and volunteers from any claims, suits or actions of every name, kind and description brought forth, or on account of, injuries to or death of any person (including but not limited to workers and the public), or damage to property, resulting from or arising out of CONSULTANT's willful misconduct or negligent act or omission while engaged in the performance of obligations or exercise of rights created by this Agreement, except those matters arising from CITY's sole negligence or willful misconduct. The parties intend that this provision shall be broadly construed.

CONSULTANT's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Agreement for the full period of time allowed by law. The defense and indemnity obligations of this Agreement are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Agreement.

4. Insurance. CONSULTANT agrees to continuously maintain, in full force and effect, the following minimum policies of insurance during the term of this Agreement.

COVERAGE	LIMITS OF LIABILITY
Workers' Compensation	Statutory
Commercial General Liability	$1,000,000 each occurrence $2,000,000 aggregate Personal Injury: $1,000,000 each occurrence $2,000,000 aggregate
Automobile Liability	$1,000,000 combined single limit
Professional Liability (errors and omissions)	$1,000,000 per claim $2,000,000 aggregate

a. Form. CONSULTANT shall submit a certificate evidencing such coverage for the period covered by this Agreement in a form satisfactory to Risk Management and the City Attorney, prior to undertaking any work hereunder. Any insurance written on a claims made basis is subject to the approval of Risk Management and the City Attorney.

b. Additional Insureds. CONSULTANT shall also provide a separate endorsement form or section of the policy showing CITY, its officers, agents, employees and volunteers as additional insureds for each type of coverage, except for Workers' Compensation and Professional Liability. Such insurance shall specifically cover the contractual liability of CONSULTANT. The additional insured coverage under the CONSULTANT's policy shall be primary and noncontributory, as evidenced by a separate endorsement or section of the policy, and shall not seek contribution from CITY's insurance or self-insurance. In addition, the additional insured coverage shall be at least as broad as the Insurance Services Office ("ISO") CG 20 01 Endorsement. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and

limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

c. Cancellation/Modification. CONSULTANT shall provide ten (10) days written notice to CITY prior to cancellation or modification of any insurance required by this Agreement.

d. Umbrella/Excess Insurance. The limits of insurance required in this Agreement may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of CITY (if agreed to in a written contract) before CITY's own insurance shall be called upon to protect it as a named insured.

e. Subcontractors. CONSULTANT agrees to include in its contracts with all subcontractors the same requirements and provisions of this Agreement, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, CONSULTANT shall require its subcontractors to agree to be bound to CONSULTANT and CITY in the same manner and to the same extent as CONSULTANT is bound to CITY under this Agreement. Additionally, CONSULTANT shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of CITY's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request.

f. Self-Insured Retentions. All self-insured retentions ("SIR") must be disclosed to Risk Management for approval and shall not reduce the limits of liability. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or CITY. CITY reserves the right to obtain a full

certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

g. Waiver of Subrogation. CONSULTANT hereby agrees to waive subrogation which any insurer of CONSULTANT may acquire from CONSULTANT by virtue of the payment of any loss under a Workers Compensation, Commercial General Liability or Automobile Liability policy. All Workers Compensation, Commercial General Liability and Automobile Liability policies shall be endorsed with a waiver of subrogation in favor of CITY, its officers, agents, employees and volunteers for all worked performed by CONSULTANT, its employees, agents and subcontractors.

h. Liability/Remedies. Insurance coverage in the minimum amounts set forth herein shall not be construed to relieve CONSULTANT of liability in excess of such coverage, nor shall it preclude CITY from taking such other actions as are available to it under any other provisions of this Agreement or law.

5. Records. CONSULTANT and its subcontractors shall maintain all files and records relating to the services performed hereunder during the term of this Agreement and for a period of not less than one (1) year after the date of termination or expiration. Provided, however, that in the event of litigation or settlement of claims arising from the performance of this Agreement, CONSULTANT and its subcontractors shall maintain all files and records until such litigation, appeals or claims are resolved. Duly authorized representatives of CITY shall have right of access during normal business hours and after reasonable notice to CONSULTANT's and subcontractors' files and records relating to the services performed hereunder, and may review and copy the files and records at appropriate stages during performance of the services and during the one (1) year period following termination or

expiration of this Agreement. CONSULTANT shall include this provisions in its contracts with all subcontractors.

6. Time is of the Essence. Time is of the essence of this Agreement.

7. Compliance with Laws. CONSULTANT shall comply with all federal, state and local laws, ordinances and policies as may be applicable to the performance of services under this Agreement.

8. Ability to Perform. CONSULTANT agrees and represents that it has the time, ability and professional expertise to perform the services required under this Agreement.

9. Governing Agreement. In the event of any conflict between this Agreement and its EXHIBITS, the provisions of this Agreement shall govern. In the event of any conflict between any of the EXHIBITS, the provisions of the first in order of attachment shall govern.

10. Assignment. CONSULTANT is employed to perform unique personal services. CONSULTANT shall not assign this Agreement without the prior written consent of CITY. CONSULTANT shall not employ or otherwise incur any obligation to pay other specialists or experts for services in connection with this Agreement, without prior written consent of CITY.

11. Independent Contractor. CONSULTANT shall act as an independent contractor, and covenants and agrees that it will conduct itself consistent with such status, that it will neither hold itself out as, nor claim to be, an officer or employee of CITY by reason of this Agreement.

12. Representations and Warranties. CONSULTANT warrants that it has not employed or retained any company or person, other than a bona fide employee working for CONSULTANT, to solicit or secure this Agreement, and that it has not paid or agreed to pay any company or person, other than a bona fide employee, any fee, commission, percentage, brokerage fee, gift or any other consideration, contingent upon or resulting from the award or

making of this Agreement. For breach or violation of this warranty, CITY shall have the right to terminate as void this Agreement, without liability, or, in its discretion, to deduct from the Agreement price or consideration, or otherwise recover, the full amount of such fee, commission, percentage, brokerage fee, gift or contingent fee.

13. Successors in Interest. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

14. Copyright, Ownership and Use of Materials. All tangible material ("Material") created or delivered pursuant to this Agreement is considered a work made for hire under the Copyright Act. To the extent such Material does not qualify as a work made for hire, CONSULTANT hereby assigns to CITY all right, title, and interest, including but not limited to all copyrights, in all Material created by CONSULTANT in its performance under this Agreement. Material constitutes the scope of work outlined in Exhibit A and attached hereto, and all written and other tangible expressions, including but not limited to, drawings (including computer aided drawings), papers, documents, reports, surveys, renderings, exhibits, sketches, maps, models, prints, paintings or photographs, in any and all media or formats in which such materials have been created or are maintained. All Material furnished by CONSULTANT is, and shall remain, the property of CITY.

CONSULTANT shall execute any documents necessary to effectuate such assignment. In the event that CONSULTANT uses, employs, designates, or retains any person or entity who is not an employee of CONSULTANT, to perform any work required of it pursuant to this Agreement, CONSULTANT shall require said person or entity to execute an agreement containing the preceding paragraph.

15. Termination of Agreement. The City may terminate this Agreement without cause by giving CONSULTANT ten (10) days advance written notice from the City Manager. CONSULTANT may terminate this Agreement without cause by giving CITY thirty (30) days advance written notice. In the event of termination through no fault of CONSULTANT, CITY shall compensate CONSULTANT for services performed as of the date of termination, upon the release to CITY of all Material hereunder, in any and all media or formats in which such materials have been created or are maintained. CITY retains the right to receive and use any Material, notwithstanding any termination or any dispute regarding the amount to be paid.

16. Attorney's Fees; Venue; Governing Law. If either party commences any legal action against the other party arising out of this Agreement or the performance hereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorney's fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

17. Modification. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

18. Severability. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

19. Notices. Any notices to parties required by this Agreement shall be delivered personally or mailed, U.S. first class postage prepaid, addressed as follows:

CITY OF ROSEVILLE	CONSULTANT
Jason Shykowski Acting Public Works Director 311 Vernon Street Roseville, CA 95678	Julie D. Cline Director of Real Estate Services 1613 Santa Clara Drive, Ste. 100 Roseville, CA 95661

Either party may amend its address for notice by giving notice to the other party in writing.

20. Integrated Agreement. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ___ day of _____, 20__, and CONSULTANT has caused this Agreement to be executed.

SUBJECT: Proposal for Real Estate Services – City of Roseville
Acquisition of Property for Additional Parking in Historic District

Dear Stefanie:

Interwest Consulting Group, Inc. (Interwest) is pleased to provide our proposal to provide Real Estate Services to the City of Roseville to acquire property needed to construct additional parking to support businesses in the Historic District. Interwest is prepared to offer the scope of services described in the attached Proposal in the areas of:

- Task A – Project Initiation, Planning, & Coordination
- Task B – Acquisition/Negotiation Services
- Task C - Coordinate Due Diligence & Appraisal Services
- Task D – Title & Escrow Coordination

Interwest will sub-contract with the appraisal firm of Integra Realty Resources to prepare independent appraisals to support the City's efforts to acquire the property.

The hourly rates for the above-described services are outlined in the Scope of Work and would be billed to the City on a monthly basis. Any material costs incurred would be billed directly to the City.

If you have any questions concerning the above, please feel free to call me directly at (916) 203-6740.

Sincerely,

Julie D. Cline

Julie D. Cline
Director of Real Estate Services

1613 SANTA CLARA DRIVE | SUITE 100 • ROSEVILLE, CALIFORNIA 95661

OUR UNDERSTANDING OF THE PROJECT

The City of Roseville (City) is seeking to secure real estate support services to acquire real property interests needed to construct additional parking to support various businesses located in the City's Historic District. The proposed parking areas would be located east of Lincoln Street between Sierra Boulevard and Pacific Street, with the railroad tracks on the east.

According to the preliminary design layout provided by the City, approximately 129 parking spaces are estimated to be constructed to supplement available parking in this area of the City. The City is proposing two full acquisitions in fee simple, totaling approximately 10.23 AC, and a partial fee simple acquisition of an area to be determined.

Based on information and mapping provided by the City, the areas required for the Project span three separate parcels. Two of the parcels are owned by Union Pacific Railroad (UPRR), one of which is partially improved for public parking. The third parcel is owned by a private owner and is currently listed for sale. Below is a summary of the property proposed to be acquired for the Project:

APN	Property Owner	Parcel Size (AC)	Fee Acquisition Area
013-250-017-000	UPRR	7.091 AC	To Be Determined (Partial Acquisition)
013-250-025-000	UPRR	9.744 AC	To Be Determined (Partial Acquisition)
011-147-014-000	Pearl Gladys Manring	0.482 AC	0.482 AC (Full or Partial Acquisition)

Based on preliminary research, the Manring property is a vacant lot, zoned Commercial, and currently is listed for sale, along with two commonly-owned adjacent parcels (430 and 502 Lincoln Street). The adjacent parcels are zoned residential and are improved with an older home on each parcel that appear to be in poor condition. The Listing Agent, Victoria Shaw, is with Realty One Group Complete. We contacted Ms. Shaw and confirmed the current listing price is $825,000 for the three properties ($19.90 per square foot). The owner would consider selling off the vacant parcel separately; however, the preference would be to sell the three parcels as a single sale. Please note, that the Listing Agent also mentioned having received a cash offer for an amount close to the List Price on January 23rd. As of today's date, the status of the listing is still "active".

APPROACH

As discussed with City staff, the City would like to acquire the Manring parcel in full, if possible, and a portion of the two UPRR parcels to construct the parking improvements. Our approach would involve preparing Letters of Intent (LOI) outlining the terms under which the City would consider a purchase, including an offer price based on a fair market value estimate. The LOI is non-binding and subject to the City performing due diligence activities.

The due diligence activities, at minimum, include securing an independent appraisal, environmental site assessment (ESA) and title search for each property. Once the City and

Seller agree on terms, a Purchase Agreement would be drafted and approved by City Council. The terms of the Purchase Agreement would include language whereby the contract could be cancelled for any reason prior to the expiration of the due diligence period. Additionally, we would seek the right to adjust the purchase price based on the outcome of the appraisal and/or the ESA if remediation work is required.

This proposal assumes:

- The acquisition of property will be on a voluntary basis and is not under the threat of eminent domain.
- The City will be using local funding for this project.
- The City will perform and contract for a Phase 1 and Phase 2 (if required) Environmental Site Assessment.
- Interwest Consulting Group (Interwest) will order and review preliminary title reports for each ownership.

WORK PLAN

Gina Wong will handle the real estate negotiations on behalf of the City and will coordinate with City staff and the Appraiser, as required, throughout the acquisition process. The Scope of Service includes the following:

- Task 1 | Project Initiation, Planning & Coordination
- Task 2 | Coordinate Due Diligence/Appraisal Services
- Task 3 | Acquisition/Negotiation Services
- Task 4 | Escrow Coordination Services

Interwest will utilize the methodology listed below to secure the necessary land rights for the City.

A. PROJECT INITIATION, PLANNING, & COORDINATION

Our team is committed to managing the real property acquisition process. We will work closely with City staff and will provide the team with regular, ongoing progress reports regarding the status of all real estate activities. As a part of our project initiation and coordination activities, Interwest will:

- Review Project preliminary design plans for a full understanding of the project and design.
- Research properties and gather pertinent information on potential sites, including fair market value estimates;
- Outreach with property owners;
- Arrange and attend site tours, if requested;
- Confer with City staff and legal counsel with developing initial documents, including LOIs, Agreement for Sale and a full set of forms and documents utilized during the acquisition process;
- As necessary, schedule and attend meetings with City Staff to discuss progress and

next steps;

- Identify potential issues, resolve problems and recommend solutions;
- Monitor the Acquisition budget; and
- Assist City staff with preparing closed session or open session information to seek authority for LOIs.

B. ACQUISITION/NEGOTIATION SERVICES

- Prepare the LOIs (based upon the market value of the fee simple interest in each property);
- Prepare draft Purchase Agreements, conveyance documents, and other documents necessary to consummate the sale for City Attorney's review and approval;
- Meet with property owners to discuss the proposed acquisition and tender LOI and/or make offers to purchase;
- Explain the LOIs and/or offers, make follow-up contacts and secure the necessary documentation upon acceptance of the offer for closing escrow and securing title insurance;
- Respond to inquiries made by the property owners, verbally and in writing;
- Maintain owner contact logs and parcel diaries with all pertinent information and contracts concerning the parcel;
- Continue negotiations with property owners on terms until an agreement is reached; and
- Transmit signed documentation to the City promptly for acceptance and processing.

C. COORDINATE DUE DILIGENCE/APPRAISAL SERVICES

Interwest will coordinate and assist with acquiring documents to determine the feasibility of purchasing the properties, including the following:

- Coordinate and manage the appraisal process; and
- Thorough review of preliminary title information.

Interwest will contract with Integra Realty Resources to provide appraisal reports for the properties. The appraisals will be prepared according to the Uniform Standards of Professional Practice (USPAP), as established by the Appraisal Foundation and adopted by the Appraisal Institute. Appraisal services will include the following tasks:

- A physical inspection of the subject properties and neighborhoods;
- Gathering of factual information concerning the subject properties through the examination of public records and interviews with persons knowledgeable of each site and neighborhood;
- Viewing floodplain, zoning and land use information and maps of the City to ascertain the potential use of the subject parcels for a non-public purpose;
- Review of easements and restrictions listed in the preliminary title reports and subsequently estimating the affect of any existing encumbrances on property utility and

value, if any;

- Market research for sales and listings of comparable properties and confirmation with directly involved parties when possible;
- Analysis of the data gathered and reconciling it into a conclusion of land value;
- Preparation of formal written appraisal reports; and
- Responding to questions or comments subsequent to the submission of the appraisal reports.

D. TITLE AND ESCROW COORDINATION

- Interwest will order Preliminary Title Reports;
- Thoroughly review preliminary title information including the title exceptions and encumbrances affecting the properties;
- If applicable, coordinate with Title Company and property owners to obtain partial deed(s) of re-conveyance, subordination(s), lien releases for deed(s) of trusts and other encumbrances of record;
- Prepare Escrow Instructions;
- Obtain signatures from property owner(s) of record on the conveyance documents;
- Notary Verification;
- Prepare a transmittal memorandum to the City summarizing each acquisition;
- Verify payment of all real property taxes and other assessments owed on each property; and
- Verify disbursement of sale proceeds to the property owners and other parties of interest.

E. COMPENSATION AND METHOD OF PAYMENT

Services to be provided by Interwest will be billed on a straight time and material basis based on the hourly rate schedule below. The City will be billed monthly for direct labor and material charges.

REAL ESTATE SERVICES
2019 BILLING RATES AND CLASSIFICATIONS

Project Management	$150.00/Hr
Senior Real Property Agent	$135.00/Hr
Real Property Agent	$110.00/Hr
Real Estate Technician	$ 85.00/Hr
Administrative Support	$ 65.00/Hr

COUNCIL COMMUNICATION

CC #: 9857
File #: 0721 & 0214

Title:	Authorization to Submit Grant Application to Sacramento Area Council of Governments
Contact:	Alison Winter 916-746-1316 awinter@roseville.ca.us

Meeting Date: 3/20/2019
Item #: 7.3.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution authorizing the City Manager or his designee to submit a Sacramento Area Council of Governments (SACOG) Discretionary Federal Transit Administration (FTA) Transit Programming Application and to execute all related forms and agreements to purchase one (1) zero-emission battery electric bus to expand commuter service.

BACKGROUND

The Sacramento Area Council of Governments (SACOG) oversees the disbursement of Federal Transit Administration (FTA) grant funds in the Sacramento area. Some FTA funds are allocated directly to the City of Roseville as "formula" funds. SACOG also sets aside a percentage of the regional FTA funds for disbursement through a competitive application process that occurs every 2 years. SACOG recently released the call for projects for the competitive applications for the 2018 and 2019 fiscal years, with $6,987,160 in FTA 5307/5339 program funding available on a competitive basis to transit operators within the 6-county SACOG region.

Roseville Transit currently runs a total of ten (10) morning and ten (10) evening weekday commuter routes between Roseville and downtown Sacramento. The commuter service is very successful and there are times when buses are full. To add capacity and provide more service options, the Roseville Short Range Transit Plan (SRTP) 2018-2025 proposes to increase Roseville commuter service by up to two trips in each of the morning and evening times, and also by adding a midday run. In order to add commuter service as proposed in the SRTP, Roseville Transit would need to expand our commuter fleet by up to three (3) buses.

Proposed Grant Application: Staff recommends that the City Council authorize submittal of a grant application to SACOG in the amount of $688,556 for the purchase of one new battery-electric commuter bus. This would expand the fleet by one bus and allow Roseville Transit to add one morning and one evening commuter route consistent with the SRTP. SACOG staff has already informed us that this grant proposal is likely to be funded.

The California Air Resources Board's recently approved new fleet rules that mandates the conversion of transit fleets to zero emission fuel sources. As a result, the City is already embarking on a process to purchase four battery-electric commuter buses. As presented to the City Council in 2018, these four buses would replace older commuter buses. If the proposed grant is approved, a 5th bus would be added to the battery-electric bus procurement. Since bus purchases take 2-3 years, the buses would not be delivered until 2022 and we could not expand commuter service until that time.

FISCAL IMPACT

The total cost of one (1) battery-electric bus and other associated capital equipment is estimated at $1,010,695.00. The SACOG discretionary FTA grant is for up to $688,556. The balance of the funding would come from:

- $150,000.00 from the California Air Resources Board (CARB) Hybrid and Zero-Emission Truck and Bus Voucher Incentive Project (HVIP) voucher program; and
- $172,139.00 from the Local Transit Fund.

Staff will present a final funding plan for the project to the City Council at a future meeting. No General Fund resources will be used for this project.

ECONOMIC DEVELOPMENT / JOBS CREATED

This project supports job growth at the state and national level through an emerging zero-emission bus (ZEB) market for manufacturing advanced technology. This project is expected to create 10.99 jobs based on federal guidelines that suggest one job is created for every $92,000.00 in direct government spending. The number of induced jobs in the ZEB market in California alone is anticipated to grow by 3,011 jobs between 2018 and 2020.

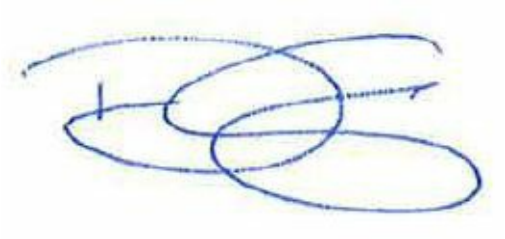
ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(b)(3). Authorizing submittal of a grant application does not include the potential for a significant environmental effect, and therefore is not subject to CEQA.

Respectfully Submitted,

Alison Winter, Administrative Analyst

Jason Shykowski, Acting Public Works Director



Dominick Casey, City Manager

Title:	Exclusive Right to Negotiate Agreement for Property Exchange (West Roseville Specific Plan Parcels F-55, W-60a, W-60b)
Contact:	Lauren Hocker 916-774-5272 lhocker@roseville.ca.us

Meeting Date: 3/20/2019
Item #: 7.4.

RECOMMENDATION TO COUNCIL

Staff recommends City Council adopt the attached resolution approving the proposed Exclusive Right to Negotiate Agreement with West Roseville, LLC for the exchange of West Roseville Specific Plan (WRSP) Parcel F-55 (City Property) for WRSP Parcels W-60a and a portion of W-60b. This initial action does not result in any costs to the City or construction commitments.

BACKGROUND

The City intended to create a multi-field sports facility on the City Property (Parcel F-55) in order to meet the community's increasing demands for long field facilities for soccer, lacrosse, rugby, and other sports, and to create another venue for sports tourism in the City. The City began planning for this facility, which included the development of conceptual layouts and the completion of supporting technical studies. The technical studies documented severe development and environmental constraints as well as natural terrain issues, which significantly reduced the developable area for the park facilities. The site is also challenged by the lack of existing infrastructure, an irregular shape that constrained long-field developent, and proximity to residential parcels.

Westpark owns WRSP Parcels W-60a and W-60b, which have a non-residential land use designation and are located between Westpark Boulevard and the Pleasant Grove Wastewater Treatment Plant. These parcels have a more regular shape on flat land and have frontage on a completed roadway with installed water and sewer infrastructure. In addition, the Westpark properties have approved wetland permits and all mitigation obligations have been met. The site is adjacent to another City-owned park site, and development of the site with a multi-field sports facility would provide a buffer between the treatment plant to the east and residential parcels across Westbrook Boulevard to the west. Long-term, this site will also provide better circulation and access opportunities.

The purpose of the Exclusive Right to Negotiate Agreement (Agreement) is to set forth a framework by which the City and West Roseville, LLC can negotiate for the property exchange. The Agreement establishes a feasibility period of 45 days, by which time West Roseville, LLC (at

its cost) must provide the City with all documents, studies, and reports which demonstrate the property is feasible to use for the City's purposes, including:

- A current Title Report
- A Phase I and II Environmental Site Assessment
- Wetland clearance documentation

The Agreement establishes that the City's Attorney will prepare the Purchase Agreement, and further establishes that the City and West Roseville, LLC will each pay the other $10 in cash for the properties being exchanged. The Purchase Agreement will require City Council approval.

FISCAL IMPACT

Any property exchange agreement resulting from the exclusive negotiations would require future City Council approval. Aside from Development Services, City Attorney, and City Manager staff time associated with negotiations, there are no direct impacts to the General Fund as a result of this Agreement.

ECONOMIC DEVELOPMENT / JOBS CREATED

This initial step will not result in the creation of jobs.

ENVIRONMENTAL REVIEW

The project is exempt from the California Environmental Quality Act (CEQA) based on the general rule that CEQA applies only to projects which have the potential for causing a significant effect on the environment (CEQA Guidelines Section 15061(b)). This project does not result in any physical construction or other impacts, nor does it commit the City to future construction activities. Therefore, it can be seen with certainty that there is no possibility the project will have a significant effect on the environment.

Respectfully Submitted,

Lauren Hocker, Senior Planner

Mike Isom, Development Services Director

EXCLUSIVE RIGHT TO NEGOTIATE AGREEMENT
FOR PROPERTY EXCHANGE
(WRSP Parcels F-55 and W-60a and W-60b)

THIS AGREEMENT ("Agreement") is entered into this ____ day of _____, 2019, by and between the City of Roseville, a municipal corporation ("CITY") and West Roseville, LLC, a California limited liability company ("WESTPARK").

W I T N E S S E T H:

WHEREAS, CITY owns West Roseville Specific Plan ("WRSP") Parcel F-55 which is approximately 25.67 acres and is identified as Placer County Assessor Parcel Number 492-012-004 (the "City Property"); and

WHEREAS, CITY intended to create a multi-field sports facility on the City Property in order to meet the community's increasing demands for long field facilities for soccer, lacrosse, rugby and other sports and to create another venue for sports tourism for CITY; and

WHEREAS, due to severe development and environmental constraints, lack of existing infrastructure, proximity to adjacent residential parcels, and natural terrain issues, CITY has been challenged to develop the City Property as initially envisioned; and

WHEREAS, WESTPARK owns WRSP Parcels W-60a (25.2 acres) and a portion of W-60b (0.47 acres) totaling approximately 25.67 acres and which are identified as Placer County Assessor Parcel Numbers 496-020-033 (W-60a) and a portion of 496-020-034 (W-60b) (the "Westpark Property"); and

WHEREAS, the Westpark Property provides better geometrics to accommodate multiple sports fields, contains all road frontage improvements, contains all water and sewer

infrastructure, has all approved wetland permitting and mitigation compliance, is adjacent to another City-owned park site, provides a buffer between residential parcels and the Pleasant Grove Wastewater Treatment Plant, and long term will provide better circulation than the City Property; and

WHEREAS, unlike the Westpark Property, the City Property has the opportunity to create additional housing to meet the growing demands of housing needed in California; and

WHEREAS, the parties have determined it is in the community's best interest to explore the feasibility of entering into an agreement to exchange the City Property for the Westpark Property ("Property Exchange"); and

WHEREAS, the purpose of this Agreement is to set forth a framework by which the parties intend to negotiate an agreement for the Property Exchange; and

WHEREAS, specifically it is the intent of the parties to:

A. Negotiate the scope and related timelines of the Property Exchange;

B. Secure necessary state agency approvals;

C. Conduct and process any applicable permit applications and environmental review and documents;

D. Negotiate the terms and conditions for the Property Exchange;

E. Negotiate and reach agreement on a Purchase and Sale Agreement and any other necessary contracts and related documents for the Property Exchange (collectively, "Purchase Agreement"); and

WHEREAS, CITY and WESTPARK desire to negotiate the terms and conditions of the parties' participation in the Property Exchange based on the terms and conditions set forth below.

NOW, THEREFORE, CITY and WESTPARK agree as follows:

1. Exclusive Right to Negotiate. The parties hereby agree to diligently and in good faith negotiate and prepare a Purchase Agreement, subject to the terms and conditions herein, for consideration by CITY and for execution between CITY and WESTPARK with respect to the Property Exchange. CITY shall not negotiate with any other person or entity regarding exchange or development of the parcels subject to this Agreement during the term of this Agreement. WESTPARK acknowledges that CITY retains the authority to process applications for other similar projects, in locations other than the parcels identified above, in regards to planning and building entitlements within the City of Roseville during the term of this Agreement.

The parties shall keep the negotiations confidential and shall not disclose the substance of negotiations to any third party except pursuant to any of the following: (1) if any matter relating to the Property Exchange is placed on a public meeting agenda for consideration by a CITY discretionary review body; (2) as may be required by law or legal process; (3) upon written permission by both parties; or (4) following termination or expiration of this Agreement.

2. Feasibility Period. The Feasibility Period shall be for a period of forty-five (45) calendar days commencing from the execution date. The Feasibility Period may be extended upon written request by either party for a reasonable period(s) subject to the approval of the City Manager of CITY, at his or her sole discretion. All references to the "City Manager" in this Agreement shall also refer to the City Manager's designee.

During the Feasibility Period, WESTPARK shall, at its cost, and to the City Manager's reasonable satisfaction, complete all of the following Property Exchange feasibility activities:

a. Provide CITY with any and all documents, notices, studies, reports,

surveys, agreements and other documents related to the Westpark Property in WESTPARK's possession or control that may assist with CITY's inspection of the Westpark Property within fifteen (15) calendar days of execution of this Agreement.

b. Provide CITY with any Phase I and Phase II Environmental Site Assessments in WESTPARK's possession or control within fifteen (15) calendar days of execution of this Agreement.

c. Provide CITY with a title report for the Westpark Property that was generated within the past six (6) months.

d. Provide CITY with wetlands clearance from the appropriate resource agency for the Westpark Property.

e. Submit such other reasonably related information or authorizations as may be required by the City Manager and/or Roseville City Attorney.

All feasibility activities must be completed prior to the expiration of the Feasibility Period, unless extended by the parties. The City Manager shall, in consultation with the Roseville City Attorney, evaluate and determine whether all feasibility activities have been satisfactorily completed. If the foregoing requirements have not been met, as determined by the City Manager, and the City Manager has provided WESTPARK with a written deficiency letter, and WESTPARK has not requested an extension of the Feasibility Period, the Agreement may be deemed terminated at the sole discretion of the City Manager by written notice to WESTPARK.

During the Feasibility Period, the Roseville City Attorney shall determine the types of contracts, financial instruments, and other documentation that will be required as a Purchase Agreement. The Roseville City Attorney shall prepare the Purchase Agreement, except where

the Roseville City Attorney determines that WESTPARK should prepare or submit any particular contractual, financial instruments, and other documentation. The Purchase Agreement shall include at a minimum the following terms: (1) escrow shall be opened with Placer Title Company, 1508 Eureka Road, Suite 150 in Roseville; (2) CITY shall pay to WESTPARK the sum of ten dollars ($10.00) for the Westpark Property; (3) WESTPARK shall pay to CITY the sum of ten dollars ($10.00) for the City Property; (4) the purchase prices shall be paid in cash at the close of escrow; and (5) the close of escrow shall occur thirty-five (35) days following the approval of the Entitlements by the Roseville City Council.

The City Manager's and the Roseville City Attorney's satisfaction with the Purchase Agreement may be signified by a written notice executed by the City Manager prior to the expiration of the term of this Agreement. If the City Manager determines that the Purchase Agreement's terms and conditions cannot be negotiated to the satisfaction of CITY or the parties are otherwise at impasse, the City Manager may terminate this Agreement by written notice to WESTPARK. WESTPARK may terminate this Agreement at any time upon written notice to CITY.

3. Progress Reports and Technical Assistance. Upon reasonable notice, as from time to time may be requested by CITY, WESTPARK agrees to make oral and written progress reports advising CITY on all matters and all studies being made by WESTPARK. Should WESTPARK fail to complete and submit to CITY any of the specific items listed in this Agreement in a timely fashion in accordance with the schedule of performance in this Agreement, CITY may at its option immediately terminate this Agreement by written notice to WESTPARK.

CITY will assist and cooperate by providing WESTPARK with reasonable and

appropriate technical information and assistance in fulfilling the WESTPARK's obligations set forth in above.

4. Execution of Purchase Agreement. A Purchase Agreement resulting from the negotiations pursuant to this Agreement shall become effective only after and if the Purchase Agreement has been considered and approved by the Roseville City Council at a public hearing called for such purpose. If a Purchase Agreement is approved by CITY and is fully executed by CITY and WESTPARK, the Purchase Agreement shall thereafter govern the rights and obligations of the parties with respect to the Property Exchange and this Agreement shall thereafter be null and void.

5. Indemnification. To the fullest extent allowed by law, WESTPARK shall defend, indemnify, and save and hold harmless CITY, its officers, agents, employees and volunteers from any claims, suits or actions of every name, kind and description regarding the legality of the transfer of the City Property and/or the marketability of title to the City Property, and from any claims, suits or actions from any person or entity claiming a property interest in the City Property. The parties intend that this provision shall be broadly construed. WESTPARK's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Agreement for the full period of time allowed by law.

6. No Reimbursement or Public Financial Commitment. WESTPARK shall have no right to be reimbursed by CITY for any costs incurred by WESTPARK pursuant to this Agreement. Upon termination of this Agreement, neither party shall accrue any further rights or incur any further obligations or liability to the other under this Agreement. By execution of this Agreement, CITY is not committing itself or agreeing to undertake:

a. Acquisition of land;

b. Disposition of land to WESTPARK;

c. Pre-commitment or commitment of any public funds; or

d. Any other act or activities requiring the subsequent independent exercise of discretion by CITY or any department of it.

CITY reserves final discretion and approval as to the Property Exchange, Purchase Agreement, permits, entitlements, environmental review, and all related matters in connection therewith. However, nothing in this Agreement shall limit the type or extent of obligations or commitments, including the commitments set forth above, which CITY may elect to include in the Purchase Agreement. Similarly, WESTPARK reserves discretion and approval as to the items listed in this paragraph and, further, the right to terminate this Agreement by immediate notice to CITY if CITY imposes terms and conditions as part of the permit and approval process which are unacceptable to WESTPARK.

This Agreement does not constitute a disposition of property or exercise of control over property owned by CITY. Execution of this Agreement by CITY is merely an agreement to enter into a period of negotiations according to the terms of this Agreement, reserving final discretion and approval by CITY as to any Purchase Agreement and all proceedings and decisions in connection therewith.

7. WESTPARK's Representations and Warranties. WESTPARK hereby represents and warrants that it has made full disclosure to CITY of its principals, officers, major stockholders, major partners, joint venturers, key managerial employees and other associates, and other material information relating to the Property Exchange concerning WESTPARK and its associates. Any significant or material change in such management ownership or control of WESTPARK or such information shall be reported to CITY and is subject to the approval of

CITY prior to the execution of the Purchase Agreement. Notwithstanding the foregoing, WESTPARK reserves the right in its discretion to join and associate with other entities and joint ventures, partnerships or otherwise for the purpose of developing the residential units on the City Property, provided that WESTPARK retains management and control of such entities and remains fully responsible to CITY pursuant to this Agreement. All persons executing this Agreement on behalf of WESTPARK represent and warrant that they are authorized to do so.

8. Agreement and Residential Units Subject to Applicable Policies and Laws. This Agreement and any development of the residential units are subject to all applicable policies and laws, including but not limited to, the provisions of the Roseville General Plan, the Roseville Municipal Code and the Zoning Ordinance as they currently exist, or may hereafter be amended. The parties acknowledge that approval of the residential units will be subject to the California Environmental Quality Act ("CEQA").

9. Consultant Fees, Commissions and Brokerage Fees. CITY shall not be liable for any consultant fees, real estate commissions or brokerage fees which may arise from this Agreement. WESTPARK agrees to hold CITY harmless from any consultant, broker, agent, or finder retained by WESTPARK.

10. Assignment. CITY enters into this Agreement solely because of the resources, skills, characteristics, and abilities which are unique to WESTPARK, and which CITY believes are necessary for a successful Property Exchange. Therefore, the obligations of WESTPARK pursuant to this Agreement may not be assigned.

11. Attorney's Fees; Venue; Governing Law. If either party commences any legal action against the other party arising out of this Agreement or the performance hereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses,

including but not limited to, court costs, expert witness fees, discovery expenses, and attorney's fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

12. Modification. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

13. Severability. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

14. Notice. Any notices to parties required or permitted by this Agreement shall be delivered personally or mailed, U.S. first class postage prepaid, addressed as follows:

CITY OF ROSEVILLE	WEST ROSEVILLE, LLC
Lauren Hocker Senior Planner City of Roseville 311 Vernon Street Roseville, CA 95678	John M. Tallman, Jr. Westpark Communities 1420 Rocky Ridge Drive, Suite 265 Roseville, CA 95661

Either party may amend its address for notice by giving notice to the other party.

15. Integrated Agreement. This is an integrated agreement, and contains all of the terms, considerations, understandings and promises of the parties. It shall be read as a whole.

Title:	HOUSING SUCCESSOR AGENCY/CITY COUNCIL - Homeless Prevention and Rapid Rehousing Funding Allocations and Budget Adjustment
Contact:	Danielle Foster 916-774-5446 dfoster@roseville.ca.us

Meeting Date: 3/20/2019
Item #: 8.1.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council, acting on behalf of the Housing Successor and the City:

1) Adopt the attached resolution that will approve the funding recommendations for use of the $250,000.00 in Homeless Prevention and Rapid Rehousing grant funds and $125,000.00 of matching Sutter Health *Getting to Zero* grant funds, and authorize the City Manager or his designee to execute all related grant agreements; and
2) Adopt an ordinance to approve the necessary budget adjustment to add the $125,000.00 in Sutter Health grant funds to the City's budget.

BACKGROUND

Through the adoption of Senate Bill 341 in late 2013, the state amended Chapter 796 of state code and approved the use of the low and moderate income funds (low/mod funds) being held and used by Housing Successors of dissolved redevelopment agencies for the purposes of Homeless Prevention and Rapid Rehousing Services. Under this legislation, Housing Successors, after meeting certain obligations, can use up to $250,000.00 per year for this new purpose. This will be the third year that the City of Roseville, acting as the Housing Successor, has received matching funds for this program in partnership with Sutter Health and will be awarding funding for this purpose. Over the past year, this funding had a significant impact on the Roseville community, assisting 5,880 individuals in either maintaining their housing (avoiding homelessness) or gaining housing after being homeless.

Last year the City of Roseville's Housing Successor funds were matched by $125,000.00 of Sutter Health Foundation's *Getting to Zero* grant program. Sutter Health has provided $125,000.00 again this year as a matching source for these grants. Completion of these funding allocations and adoption of the enclosed budget adjustment will allow for homeless prevention and rapid rehousing funding and other homeless services funding to be infused into the community again this year through service contracts with local non-profit partner organizations.

This year, the City received three applications in response to the Notice of Funding Availability (NOFA) for this funding. The chart below summarizes the applicants, application amounts and overviews, and provides summary information on the 2018 program outcomes for each applicant.

Applicant	Requested Amount (2019)	Type of Request & Overview (HPRR or Other Homeless Services)	Served in 2018, per person cost, total housed
ASSK (Advocates for Mentally Ill Housing (AMIH), St. Vincent De Paul, Stand Up Placer, Kids First)	$250,000.00	HPRR- rental assistance, case management, and other services to families and individuals	392, $482/person housed 392 housed*
The Gathering Inn & The Lazarus Project	$250,000.00	Rapid Rehousing- rental assistance to move from transitional to permanent housing, case management, supportive services to individuals	383, $330/person served & $775/person housed 163 housed*
Salvation Army	$60,000.00	HPRR- rental assistance, hotel vouchers, and other assistance to families, matching funds	5,325, $17.31/person housed 5,325 housed*

*Homeless Prevention and Rapid ReHousing (permanent and transitional housing)

The goals of homeless prevention and rapid rehousing funding are: to provide temporary assistance to prevent an individual or family from losing permanent housing and experiencing homelessness; and to provide temporary assistance to assist a currently homeless individual or family in obtaining permanent housing.

Eligible services for this grant funding include the following types of homeless prevention and rapid rehousing activities: short-term or medium-term rental assistance, short-term hotel vouchers until permanent housing is available (for up to 30 days), housing relocation and stabilization services including housing search/housing navigation services, mediation or outreach to property owners, credit repair, security or utility deposits, utility payments, rental assistance for a final month at a location, moving and short-term storage cost assistance, case management related to these activities, and other appropriate activities for homeless prevention and rapid rehousing of persons who have become homeless. Due to constraints of state law, the low/moderate housing funding cannot be used for health or mental health services, food, clothing, emergency shelter, or other services that do not directly assist an individual with avoiding or exiting homelessness. There is greater flexibility in the Sutter grant funds that can be used for homeless prevention, rapid rehousing and other related critical homeless services.

As part of this funding, the City has evaluated applications using the follow criteria, consistent with the criteria used last year and the City Council's direction to place greatest weight on measureable outcomes from prior year awards:

- 2018 Outcomes: reviewed the extent to which the applicant(s) was successful in providing this type of service with the 2018 funding, the success of housing individuals, and the range of services offered with funding.
- Collaboration and Coordination with other nonprofits, government agencies, and the community:

reviewed whether the applicant(s) was submitting a collaborative application, the number, roles, and capacity of collaborators, and existing connections and acceptance of referrals in the community.

- Demonstrated Need of the Services being provided: considered information referenced in application and ranked differently for projects that served single individuals rather than just families, as the need for assistance to individuals is great.
- Cost per Beneficiary and the Leveraging of Funds to ensure efficient delivery of services: accounted for the overall cost per beneficiary as well as the ability to leverage outside resources, like direct matching funds and/or additional resources to Roseville's homeless population.

A review panel of City Housing and Economic Development staff and city Police Department Social Services Unit staff reviewed the 2019 application information and 2018 program outcomes against the above-stated criterion. Here is a summary of the application review process scoring and resulting funding recommendations:

Applicant	**2018 Outcomes (5 points)**	**Collaboration & Coordination (5 points)**	**Demonstrated Need/ Gap in Services (5 points)**	**Cost per Beneficiary / Leveraging (5 points)**	**Total Points & Recommendation (20 points possible)**
ASSK (AMIH, St. Vincent, Stand Up Placer, Kids First)	4	5	5	4	18/$200,000
The Gathering Inn & The Lazarus Project	2.5	3	5	3	13.5/$115,000
Salvation Army	5	4	5	5	19/$60,000

Staff is recommending that the City Council, acting as the Housing Successor and the City Council, approve the attached resolution and budget adjustment that adopts the above funding recommendation and provides authorization to the City Manager for the execution of grant agreements to start the grant year.

Grantees are required to submit a six-month and one-year report on a specified number of outcomes, consistent with information gathered in the 2018 grant year. These reports have been and continue to be useful and important to the City for high performance under these grants. The City continues working to improve collaboration, efficiency, and outcomes by managing grants with performance-based measurements. As a result of these local policies, staff is seeing increased collaboration that is reaching beyond city grant contracts. The grant year, for these grant funds, will start immediately upon signature of the grant agreements and run through January 2020.

FISCAL IMPACT

The recommended actions in this report do not result in a cost to the General Fund. Further, creation of the Homeless Prevention and Rapid Rehousing program has decreased General Fund expenses by $30,000.00 annually by redirecting funding of the City's previously existing Salvation Army funding commitment for hotel vouchers and rapid re-housing services to the low/mod housing fund. Further, creating a Homeless Prevention and Rapid Rehousing grant program reduces instances and durations of homelessness in Roseville, thereby reducing indirect costs to the community as well.

ECONOMIC DEVELOPMENT / JOBS CREATED

Estimates of total employment created can be based on expenditure data, consistent with guidance from the Council of Economic Advisers (CEA). Total employment not only includes direct and indirect jobs, but also induced jobs. CEA estimates that total employment is increased by one job-year for every $92,000.00 in direct government spending. Therefore, this project has the potential to generate 4 job years with the expenditure of these funds.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment. (CEQA Guidelines §15061(b)(3)). The allocation of low/mod funds via grants does not include the potential for a significant environmental effect, and therefore is not subject to CEQA.

Respectfully Submitted,

Danielle Foster, Housing Manager

Laura Matteoli, Economic Development Director

Resolution No. 19-90

Ordinance No. 6064

Budget Adjustment- Sutter Health Grant Funds

RESOLUTION NO. 19-90

APPROVING FUNDING RECOMMENDATIONS AND AUTHORIZING THE CITY MANAGER OR DESIGNEE TO EXECUTE GRANT AGREEMENTS ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, under Senate Bill 341, Housing Successors, after meeting certain obligations, can use up to $250,000.00 per year for the purposes of Homeless Prevention and Rapid Rehousing Services; and

WHEREAS, through the Sutter Health Foundation's Getting to Zero grant program, the City received additional funds of $125,000.00 to bring the available funding to $375,000.00; and

WHEREAS, the City recently issued a Notice of Funding Availability (NOFA) regarding the availability of these funds as grants, for which three applications were received; and

WHEREAS, a review panel of City Housing and Economic Development staff and staff from the City's Social Services unit of the Police department met to review applications and submitted funding recommendations for $375,000.00; and

WHEREAS, separate funding recommendations have been submitted in the event the City receives additional funding from the Sutter Health Foundation; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that the funding recommendations for $375,000.00 as identified in the staff report are hereby approved and that the City Manager or his designee is authorized to execute all related grant agreements on behalf of the City of Roseville.

ORDINANCE NO. 6064

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE AUTHORIZING CERTAIN AMENDMENTS TO THE 2018-19 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. The City of Roseville Annual Budget, Fiscal Year 2018-19, is hereby amended by transferring appropriation to and from the activities indicated below:

Appropriate funds for Homeless Prevention and Rapid Rehousing funding allocations, per request of the Economic Development Department, as listed on the attached Request for Budget Adjustment in the amount of $125,000.00.

SECTION 2. This ordinance is hereby declared to be an appropriation measure, immediately effective pursuant to the provisions of Section 5.03 of the Charter.

SECTION 3. The City Clerk is hereby authorized and directed to post a true copy of the foregoing ordinance in each of three (3) conspicuous locations in the City and she shall immediately after such posting enter in the ordinance book, under the record of the ordinance, a certificate under her hand stating the time and place of such publication by posting.

Title:	Statewide Community Infrastructure Program Participation
Contact:	Laura Matteoli 916-774-5284 lmatteoli@roseville.ca.us

Meeting Date: 3/20/2019
Item #: 11.1.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution:

1. Authorizing the City of Roseville to participate in the Statewide Community Infrastructure Program ("SCIP") and for the program financing to include a City administrative fee, per the City's master fee schedule at 100% full cost recovery, to cover staff time involved with the processing and tracking of SCIP applications.

BACKGROUND

The Statewide Community Infrastructure Program (SCIP) is sponsored by the California Statewide Communities Development Authority ("CSCDA") and is a joint powers authority with the League of California Cities and the California State Association of Counties. The City of Roseville has been a SCIP member agency since 2004. The request before you today is to **reaffirm** the City of Roseville's partnership and participation in SCIP by adopting a new and updated resolution.

Currently, there are 391 cities and 56 counties member agencies throughout California, including the City of Roseville (the "City") participating in the program. SCIP was instituted by CSCDA in 2002 and authorizes property owners, in participating cities and counties, to finance the development impact fees that would be payable by property owners upon receiving development entitlements or building permits. The program has since been expanded to include financing of public capital improvements directly. The City first joined SCIP in 2004 for the payment of development impact fees and expanded the authorization in 2007 to finance public capital improvements directly, see Attachments 1 and 2 for a copies of SCIP participation staff report and resolutions. In order to continue to participate in the SCIP program and allow the financing of development impact fees and public capital improvements, and for CSCDA to continue to issue bonds, it is necessary that the City conduct a public hearing, make certain findings, and adopt an updated resolution.

If a property owner chooses to participate, the selected public capital improvements and the development impact fees owed to the City will be financed by the issuance of tax-exempt bonds by CSCDA. CSCDA will impose a special assessment on the owner's property to repay the

portion of the bonds issued to finance the fees paid with respect to the property. With respect to impact fees, the property owner will either pay the impact fees at the time of permit issuance, and will be reimbursed from the SCIP bond proceeds when the SCIP bonds are issued; or the fees will be funded directly from the proceeds of the SCIP bonds. In the former case, the City is required to pay the fees over to SCIP, and in the latter case, SCIP holds the bond proceeds representing the fees. In both cases the fees are subject to requisition by the City *at any time* to make authorized fee expenditures. But by holding and investing the money until it is spent, SCIP is able to monitor the investment earnings (which come to the City) for federal tax law arbitrage purposes. SCIP encourages the City to spend those amounts *before* any other fee revenues of the City. If the fees are paid by the property owner and bonds are never issued, the fees are returned to the City by SCIP. In this way, the City is never at risk for the receipt of the impact fees.

The benefits to the property owner include:

- Only property owners who choose to participate in the program will have assessments imposed on their property.
- Instead of paying cash for public capital improvements and/or development impact fees, the property owner receives low-cost, long-term tax-exempt financing of those fees, freeing up capital for other purposes.
- The property owner can choose to pay off the special assessments at any time.
- For home buyers, paying for the costs of public infrastructure through a special assessment is superior to having those costs "rolled" into the cost of the home. Although the tax bill is higher, the amount of the mortgage is smaller, making it easier to qualify. Moreover, because the special assessment financing is at tax-exempt rates, it typically comes at lower cost than mortgage rates.
- Owners of smaller projects, both residential and commercial, can have access to tax-exempt financing of infrastructure. Before the inception of SCIP, only projects large enough to justify the formation of an assessment or communities facilities district had access to tax-exempt financing.

The benefits to the City include:

- As in conventional assessment financing, the City is not liable to repay the bonds issued by CSCDA or the assessments imposed on the participating properties.
- CSCDA handles all district formation, district administration, bond issuance and bond administration functions. A participating city can provide tax-exempt financing to property owners through SCIP while committing very little staff time to administer the program.
- Providing tax-exempt financing helps participating cities and counties cushion the impact of rising public capital improvements costs and development impact fees on property owners.
- The availability of financing will encourage developers to pull permits and pay fees in larger blocks, giving the participating city immediate access to revenues for public infrastructure, rather than receiving a trickle of revenues stretched out over time. As part of the entitlement negotiation process, the possibility of tax-exempt financing of fees can be used to encourage a developer to pay fees up front through the SCIP program.
- In some cases, the special assessments on successful projects can be refinanced through refunding bonds. Savings achieved through refinancing will be directed back to the participating city for use on public infrastructure, subject to applicable federal tax limitations.

The proposed resolution authorizes CSCDA to issue bonds for SCIP projects within the City's jurisdictional boundaries. It also authorizes miscellaneous related actions and makes

certain findings and determinations required by law.

The SCIP financing program will include a City administrative fee that will cover the City staff time involved with the processing and tracking of SCIP applications. The administrative fee is consistent with the City's administrative fee for City fee deferrals with a 100% cost recovery rate, per the City's master fee schedule. This administrative fee for FY2018-2019 is $463 per single family dwelling permit and $1,295 per non-residential building permit. The administrative fees adjust annually on July 1st by 2% (or the consumer price index from October to October) and will cover staff time involved with the processing and tracking of SCIP applications.

FISCAL IMPACT

Participation in the SCIP program will not result in a fiscal impact to the City. The SCIP financing program will include a City administrative fee that will cover the City staff time involved with the processing and tracking of SCIP applications. The administrative fee is consistent with the City's administrative fee for City fee deferrals with a 100% cost recovery rate, per the City's master fee schedule. This administrative fee for FY2018-2019 is $463 per single family dwelling permit and $1,295 per non-residential building permit. The administrative fees adjust annually on July 1st by 2% or the consumer price index from October to October. Therefore, there is no fiscal impact associated with the project.

ECONOMIC DEVELOPMENT / JOBS CREATED

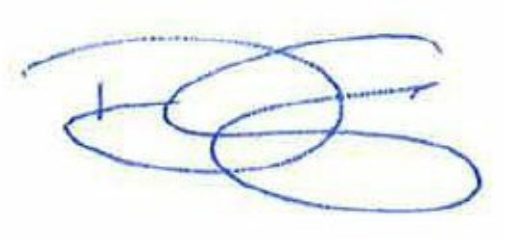
The continued partnership with SCIP will generate increased opportunities to promote economic growth and job creation within the City. Specifically, the SCIP financing program will strengthen Roseville's economic development efforts to grow its economy through new business, business expansion and retention opportunities. These opportunities result in increased property values and retail sales and property taxes that add to City revenues. Property tax and sales tax are the foundation of our sustainable economy.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(b) (3)). The proposed participation of the SCIP financing program does not include the potential for a significant environmental effect, and therefore is not subject to CEQA.

Respectfully Submitted,

Laura Matteoli, Economic Development Director



Dominick Casey, City Manager

Resolution No. 19-92

RESOLUTION NO. 19-92

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE AUTHORIZING THE CALIFORNIA STATEWIDE COMMUNITIES DEVELOPMENT AUTHORITY TO ISSUE LOCAL OBLIGATIONS WITHIN THE JURSDICTIONAL BOUNDARIES OF THE CITY FROM TIME TO TIME FOR THE STATEWIDE COMMUNITY INFRASTRUCTURE PROGRAM AND AUTHORIZING RELATED ACTIONS

WHEREAS, the California Statewide Communities Development Authority (the "Authority") is a joint exercise of powers authority the members of which include numerous cities and counties in the State of California, including the City of Roseville (the "City"); and

WHEREAS, the Authority has established the Statewide Community Infrastructure Program ("SCIP") to allow the financing of certain development impact fees (the "Fees") levied in accordance with the Mitigation Fee Act (California Government Code Sections 66000 and following) and other authority providing for the levy of fees on new development to pay for public capital improvements (collectively, the "Fee Act") through the levy of special assessments pursuant to the Municipal Improvement Act of 1913 (Streets and Highways Code Sections 10000 and following) (the "1913 Act") and the issuance of improvement bonds (the "Local Obligations") under the Improvement Bond Act of 1915 (Streets and Highways Code Sections 8500 and following) (the "1915 Act") upon the security of the unpaid special assessments; and

WHEREAS, SCIP will also allow the financing of certain public capital improvements to be constructed by or on behalf of property owners for acquisition by the City or another public agency (the "Improvements"); and

WHEREAS, by resolutions of this City Council, Resolution No. 04-150, adopted on April 21, 2004, and Resolution No. 07-524, adopted on October 3, 2007, the City of Roseville (the "City") joined SCIP; and

WHEREAS, the City desires to allow the Authority to issue Local Obligations under the 1915 Act to finance Fees levied on such properties and Improvements, provided that owners of the land subject to the assessment voluntarily agree to participate and consent to the levy of such assessments; and

WHEREAS, pursuant to Government Code Section 6586.5, notice was published at least five days prior to the adoption of this resolution at a public hearing, which was duly conducted by this Council concerning the significant public benefits of SCIP and the financing of the Improvements and the public capital improvements to be paid for with the proceeds of the Fees;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Roseville as follows:

Section 1. The City hereby consents to the issuance of Local Obligations under the 1915 Act on any property within the jurisdictional boundaries of the City as such jurisdictional

boundaries may exist from time to time; provided that the provisions of Section 1 of Resolution No 04-150 are satisfied.

Section 2. The City hereby finds and declares that the issuance of bonds by the Authority in connection with SCIP will provide significant public benefits, including without limitation, savings in effective interest rate, bond preparation, bond underwriting and bond issuance costs and the more efficient delivery of local agency services to residential and commercial development within the City.

Section 3. The City hereby adopts an Administrative Fee consistent with the City's master fee schedule. This administrative fee for FY2018-2019 is $463 per single family dwelling permit and $1,295 per non-residential building permit. The administrative fees adjust annually on July 1st by 2% or the consumer price index from October to October.

Section 4. This Resolution shall take effect immediately upon its adoption. The City Clerk is hereby authorized and directed to transmit a certified copy of this resolution to the Secretary of the Authority.

COUNCIL COMMUNICATION

CC #: 9853
File #: 0206-03

Title:	Schedule of Maintenance Costs and Charges for Maintenance Community Facilities Districts Adoption
Contact:	Jeannine Thrash 916-774-5473 jthrash@roseville.ca.us Dennis Kauffman 916-774-5313 dkauffman@roseville.ca.us

Meeting Date: 3/20/2019
Item #: 11.2.

RECOMMENDATION TO COUNCIL

Staff recommends the City Council approve the resolution adopting the Schedule of Maintenance Costs and Charges for Maintenance Community Facilities Districts (CFDs) effective March 20, 2019, through June 30, 2020.

BACKGROUND

A Maintenance CFD is a special taxing district that allows the financing of maintenance of certain public improvements, such as preserves, open spaces, parks, streetscapes, and stormwater facilities. Currently, the costs of such services is individually negotiated for each individual Maintenance CFD.

The proposed Schedule of Maintenance Costs and Charges for Maintenance CFDs identifies costs for services provided by the City at the request of, or on behalf of, individual districts, as opposed to the public at large. This schedule of costs and charges is intended for application to all future maintenance CFD annexations as well as any new maintenance CFDs planned and formed by the City. Prior to this uniform schedule, costs for services for existing CFDs have been negotiated individually with the City, resulting in divergent charges and potentially disparate recovery of the costs of service.

The Schedule of Maintenance Costs and Charges for Maintenance CFDs is intended to be reviewed annually. The proposed schedule of costs and charges, effective March 20, 2019 through June 30, 2020, is based on the results of a study completed in September 2018. The report is included as an attachment to this City Council communication.

In interim years between cost of service studies, it is proposed that maintenance costs and charges for CFDs be authorized to be adjusted based on the Consumer Price Index (CPI) change from October to October of the immediately preceding year.

Maintenance costs and charges for CFDs are to be established by the City Council via

Resolution.

As part of the City's adoption of the Annual Maintenance Costs for Maintenance CFDs, City staff notified stakeholder groups of the proposed schedule. Staff also presented the proposed plan and schedule, and answered questions, to the North State Building Industry Association (BIA) at their meeting on January 16, 2019.

Public Hearing

This item and staff's recommendations are intended to be considered upon completion of a public hearing. The public hearing provides all interested parties with an opportunity to comment or request clarification regarding the proposed Schedule of Maintenance Costs and Charges for Maintenance CFDs. Prior to the public hearing, the City published a newspaper notice of the public hearing, and notified all interested parties that have requested to be notified regarding proposed fee updates.

As part of the City's adoption of the annual maintenance costs for maintenance CFDs, the City notified stakeholder groups, including meeting with the BIA on January 16, 2019, where the City presented the proposed plan and were available for questions/comments.

Proposed Change to Practice

The following provides a brief summary of changes to practices which the City Council is being asked to consider:

Implement a New Schedule of Maintenance Costs and Charges for Maintenance Community Facilities Districts (CFDs)

Though not provided in every CFD, nor to the same level of service, the following broad categories of ongoing maintenance services are provided by the City to CFDs throughout the community:

- Preserve and open space maintenance
- Park maintenance
- Streetscape maintenance
- Stormwater management

In absence of a uniform schedule of costs and charges for maintenance services provided to CFDs, the individual interests representing each entity in the planning stages are inadvertently given opportunity to negotiate applied costs. This overly burdens City resources, subjects CFDs to divergent charges from one another, extends the district formation process, and potentially compromises the City's intended recovery of the full cost of services.

In an effort to correct existing inefficiencies in cost recovery practices related to maintenance CFDs, a Master Schedule of Maintenance Costs and Charges applicable to all future CFDs is recommended for approval by the City Council. The complete schedule of costs and charges is attached.

FISCAL IMPACT

Implementation of this schedule of costs and charges is intended for application to all future maintenance CFD annexations and formation of new districts to which the schedule would apply; therefore, no fiscal impact is estimated at this time. However, it can be stated that the proposed Schedule of Maintenance Costs and Charges for Maintenance CFDs is intended to target full cost recovery in a fair and reasonable manner for all future maintenance CFDs once implemented.

It is important to note that while establishing a universal schedule of costs and charges might provide a fiscal impact in the form of additional revenue, the revenue is not intended to be used to fund new services, rather the revenue is intended to offset the costs of providing existing services that are recoverable from the schedule. Consequently, while charges may rise annually, typically labor costs (the primary driver of service costs) also rise annually. Recalibration of the schedule of costs and charges simply provides an offset of existing expenditures/needs rather than a source of funding for expanded service levels.

ECONOMIC DEVELOPMENT / JOBS CREATED

Periodically adjusting the schedule of costs and charges to recover some or all of the costs of providing maintenance services provides multiple benefits including, but not limited to:

- Increasing the availability of General Fund revenues to be used for services and activities available to all Roseville residents and businesses, such as public safety services or citywide economic development initiatives.
- Avoiding fee spikes that are more likely to occur when municipalities leave fees unchanged for a multi-year period.
- Providing the payers of these charges (e.g. developers and residents), city staff, and city policymakers with a pattern of consistency that provides information for forecasting and decision-making purposes.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(b)(3)). The adoption of a schedule does not include the potential for a significant environmental effect, and therefore is not subject to CEQA.

Description

Resolution No. 19-79

Maintenance CFD Cost Schedule and Report

Public Hearing Notice

RESOLUTION NO. 19-79

ADOPTING A SCHEDULE OF MAINTENANCE COSTS AND CHARGES FOR COMMUNITY FACILITIES DISTRICTS

WHEREAS, the City has adopted goals and policies concerning use of the Mello-Roos Community Facilities Act of 1982 ("Act"), and

WHEREAS, the purpose of these goals and policies is to establish for the City a format to establish the public benefit and guidelines for the financial aspects of Community Facilities Districts ("CFD's"). The underlying principles behind the proposed policies are public interest and benefit, fairness to current and future property owners and homeowners, avoidance of future failure of the project and/or property owner protest, protection of the City's financial position, and reimbursement to the City of its incurred expenses; and

WHEREAS, the City can uniformly identify the costs of providing many of the commonly required services and maintenance activities provided within the CFDs on a recurring basis; and

WHEREAS, it is expected that a uniform schedule of costs will support a more streamlined process for negotiating CFD conditions, improved cost recovery, and equity between districts; and

WHEREAS, adopting a uniform schedule of costs for certain services and activities will not preclude the City from recovering other CFD related service and maintenance costs, authorized by the Act, that are identified and established as part of the process of forming each CFD or annexing into an existing CFD; and

WHEREAS, implementation of this schedule of costs and charges is subject to formation of new districts (or annexations into existing districts) to which the schedule would apply, but will not affect previously established districts or districts that have initiated proceedings, as of the date of adoption of the resolution, to form a CFD (or annex into an existing CFD) to finance services authorized by the Act; and

WHEREAS, staff recommends adopting the schedule of maintenance costs and charges for CFDs, effective upon adoption, through June 30, 2020, attached hereto as Exhibit "A;" and

WHEREAS, staff further recommends authorizing the Chief Financial Officer to make automatic annual inflationary adjustments for the various maintenance costs and charges identified in the schedule based on all-urban Consumer Price Index (CPI) for the San Francisco-Oakland-Hayward area; and

WHEREAS, inflationary adjustments will be based on the CPI change from October to October of the immediately preceding year; and

WHEREAS, if the CPI does not change or goes down, no change shall be made to the schedule for that year unless an adjustment is made to targeted cost recovery levels or cost study findings indicate that an adjustment is appropriate; and

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said schedule of maintenance costs and charges for community facilities districts, effective March 20, 2019 through June 30, 2020 is hereby adopted.

BE IT FURTHER RESOLVED, the Chief Financial Officer has authority to make automatic annual inflationary adjustments for the various costs and charges identified in the schedule based on the yearly change in the all-urban Consumer Price Index (CPI) for the San Francisco-Oakland-Hayward area.

Annual Maintenance Costs for Maintenance CFDs

Dear Dennis:

ClearSource Financial Consulting submits the following report to the City of Roseville describing the findings of our assistance to the City in developing a schedule of annual maintenance costs for services provided to Community Facilities Districts (CFDs) throughout the community.

Please refer to the Executive Summary for the key findings that will support your process in seeking approval from the City Council on this topic, while the balance of the report and its appendices provide the necessary documentation for implementation of those outcomes.

Thank you for the opportunity to once again serve the City on cost of service and cost recovery topics. We are happy to continue discussion on this CFD maintenance cost and fee schedule as the need arises or consult with you on additional topics.

Sincerely,

TERRY MADSEN, PRESIDENT | CLEARSOURCE FINANCIAL CONSULTING

PHONE NUMBER: 831.288.0608
EMAIL ADDRESS: tmadsen@clearsourcefinancial.com

EXECUTIVE SUMMARY

PROJECT

The City of Roseville is considering implementation of a schedule identifying annual maintenance costs for services provided to Community Facilities Districts (CFDs) throughout the community. The purpose of this schedule is to provide a **uniform set of costs** to adequately and proportionately recover the cost of operations, maintenance, and administration of services within maintenance CFDs in a transparent, efficient, and consistently applied manner.

It is expected that a uniform schedule of costs will support a more streamlined process for negotiating CFD conditions, improved cost recovery, and equity between districts. Currently, cost recovery is set district by district and is heavily negotiated as new CFDs are developed, yielding divergent outcomes inconsistent with preferred practices and policies of the City at large.

FINDINGS

During the course of study, information was generated in detail and is discussed substantively throughout this report and appendices. However, outcomes of particular interest to City leadership and policymakers are highlighted below:

1 | A Comprehensive Array of Services are Provided by the City which are of Benefit to Districts

Though not all used by every CFD, nor to the same level of service, the following broad categories of ongoing maintenance services are provided by the City to CFDs throughout the community:

- Preserve and open space maintenance
- Park maintenance
- Streetscape maintenance
- Stormwater management

2 | Prevailing Practices Result in Divergent Unit Costs among Districts for Like Services

Despite similarities in the source and provision of maintenance services in special financing districts, the City's existing CFDs are subject to divergent charges (or unit cost bases) for the City to recover the costs it incurs to serve. Without further explanation, this yields the appearance, if not the actual effect, of disparate cost recovery to the City and treatment of individual districts.

3 | Prevailing Practices Create Excessive Negotiation over Cost Recovery for New Districts

In absence of a uniform schedule of costs for services provided to CFDs, the individual interests representing each entity – particularly those in the planning stages – are inadvertently given opportunity to negotiate applied costs. This overly burdens City resources and further exacerbates the divergent outcomes cited above.

Furthermore, negotiation of applied costs risks a level of cost recovery less than adopted City policy, which targets full cost recovery for services of individual use or benefit, except where indicated by other established policy.

4 | City Data Management Enables More Consistent Unit Cost Derivation

The City of Roseville deploys ample means for tracking workload and cost data in the services related to, if not directly provided, to these districts. In a data-driven organization, justifying, maintaining, and applying formal uniform schedules of cost recovery is reasonably enabled. Use of such data in valuable ways, such as cost recovery and workload management, also increases the quality of these data management practices over time.

5 | Uniform Schedule of Costs Results in a More Efficient, Predictable, and Fair Cost Recovery System

In an effort to correct existing inefficiencies in cost recovery practices related to maintenance CFDs, a **Master Schedule of Maintenance Costs and Charges** applicable to all future CFDs is developed.

Refer to **Appendix A** to view the service array, costs of service, and proposed maintenance charges for CFDs.

FINANCIAL IMPACTS

At this time, no financial impacts associated with implementation are estimated. Further efforts to determine individual district application – feasibility and according to known attributes and service requirements – is required. Overall, it can be stated that this Schedule of Costs is intended to **target full cost recovery in a fair and reasonable manner for all future maintenance CFDs** once implemented.

ACTION

This report and the proposed **Schedule of Costs and Charges for Maintenance CFDs** is presented to City leadership and the City Council for review, scheduling of public hearing, and consideration of approval.

PROJECT ORIENTATION

SCOPE OF STUDY

The City of Roseville completed a project to develop a **schedule identifying annual maintenance costs for services provided to maintenance Community Facilities Districts (CFDs) throughout the community**. ClearSource Financial Consulting, as an incumbent provider of other user/regulatory fee and cost recovery consulting for the City, has assisted the City with this effort. Key outcomes expected of the uniform schedule of maintenance costs for CFDs include the following:

- A comprehensive array of maintenance services provided by the City to maintenance CFDs throughout the community.
- Consistent unit costs applied for like services.
- Reduction and eventual elimination of negotiation over unit costs of services and cost recovery from individual districts.
- Congruence of CFD cost recovery with broader City policy on recovery of costs for services of individual use or benefit.
- Enhanced utilization of City data management tools to more accurately record levels of activity and associated costs of providing service.
- A uniform schedule of costs and consistently applied cost recovery.

APPLICATION OF STUDY OUTCOMES

The outcome of this project – a uniform schedule of costs as a cost recovery system for maintenance CFDs citywide – is intended for application for all new CFDs planned and formed by the City.

Values expressed in this report are appropriate for Fiscal Year 2018-2019. Future use will require inflationary adjustments, comparable to City practices for other user and regulatory fees, and periodic analysis of underlying costs of service, in order to ensure costs and charges are appropriately quantified and structured.

At this time, no revenue projections and impacts to individual district funds are estimated. Further efforts to determine the feasibility of implementation district by district will be necessary, including cataloging individual attributes of service to which fees would be applied in each maintenance CFD.

CONSIDERATIONS FOR IMPLEMENTATION

If the City decides to adopt or otherwise utilize outcomes generated through this study, it should:

- **Update Systems for Fees, Charges and Cost Recovery Outcomes** – Ensure that City staff begin using updated annual cost and charge information for maintenance CFDs, once the Schedule of Maintenance Costs and Charges becomes effective. This will include efforts in two areas:
  - Administration: Applying unit costs of service in the schedule to the individual attributes of each district, to the degree feasible.
  - Workload Management: Preparing the array of attributes and statistics by district that related to the services provides, such as various measurements of different maintained areas.
- **Actively Encourage and Monitor the Use of Data Tracking Systems that Support Cost of Service-Based Charges** – In order to portray accurate and eligible costs of service, the City should be diligent about tracking time to tasks and recording statistics describing scale of tasks. This will ensure costs and charges continue to be developed following actual activity levels as intended.
- **Periodically Review and Adjust Charge Methodologies** – To ensure continued cost recovery targeted, costs and charges should be updated annually, following industry cost inflation metrics. Furthermore, as a new schedule of costs and charges, a more in-depth examination of underlying costs of service and effectiveness of cost recovery should occur every two years until systems and application are more established. Afterward, a comprehensive study of costs and charges can follow timelines more consistent with other City user and regulatory fees.

Areas recommended for future consideration as this Schedule of Maintenance Costs and Charges for maintenance CFDs continues to be updated are noted in relevant sections elsewhere in this document.

MASTER SCHEDULE OF MAINTENANCE COSTS AND CHARGES FOR MAINTENANCE CFDs

Purpose

The purpose of a schedule of maintenance cost and charges for maintenance CFDs is to provide a uniform set of costs and charges to adequately and proportionately recover the cost of maintenance services within CFDs in a transparent, efficient, and consistently applied manner.

Once implemented, the schedule of costs and charges is intended to be **applicable to all future maintenance CFDs**: When applied to the individual attributes of each district, charges are intended to recover the annual costs of service for the maintenance service provided.

Services Provided

This schedule of maintenance costs and charges identifies uniform cost recovery for various direct services provided to maintenance CFDs throughout the community. It is important to note that not all maintenance CFDs demand each service, or even the same *level* of service. Actual application of costs and charges will be based on the services necessitated by the formation documents of each individual district.

A description of each direct service listed in the schedule of costs and charges is as follows:

- **Preserve and Open Space Maintenance** – The City maintains open space/preserves within maintenance CFDs. Activities include, but are not limited to:
  - General Biological Inspection
  - Vernal Pool Grasslands
  - Upland Grassland Monitoring
  - Understory Grassland Monitoring
  - Oak Species Composition and Recruitment
  - Residual Dry Matter Monitoring
  - Ground Nesting Bird Survey
  - California Department of Fish and Wildlife Routine Maintenance Agreement
  - General Maintenance Inspection (three levels of service)
  - Tree Assessment for Health and Vigor
  - Tree Assessment in Target Safety Zone
  - Winter and Spring Corridor Assessment (three levels of service)
  - General Routine Maintenance (three levels of service)
  - General Non-Routine Maintenance (three levels of service)
  - Public Interaction (three levels of service
  - Vegetation Abatement
  - Creek Corridor Routine Maintenance (three levels of service)
  - Creek Corridor Non-Routine Maintenance (three levels of service)

- **Park Maintenance** – The City maintains recreational parks and facilities within maintenance CFDs. Activities include:
  - Maintenance of Basic Neighborhood Park up to Five Acres
  - Maintenance of Neighborhood/School Park up to 12 Acres +/-, including the following standard amenities *:
    - Organized sports fields
    - Hard sports courts
    - Two game courts
    - One standard, two-room restroom
    - One specialty park feature
    - Maintained turf
    - Large group shaded picnic area, six tables or more
    - Off-street parking lot, 15 stalls or more
    - Asphalt trail

  * Actual amenities are based on city-wide needs, gaps, recreation trends and developable acres.

- **Streetscape Maintenance** – The City maintains space and facilities as part of the streetscape within maintenance CFDs. Activities include:
  - Landscape Corridor/Paseo/Median Maintenance
  - Leaf Pickup
  - Street sweeping
  - Bike Trail Maintenance
  - Masonry Wall Maintenance and Repair and Graffiti Removal

- **Stormwater Management** – Maintenance CFDs participate in the City's stormwater management program, including maintaining water quality structural controls such as drainage swales constructed between storm drain facilities and receiving waters.

☑ **Future Consideration** – In subsequent updates of the schedule of maintenance costs and charges for maintenance CFDs, the City should continue to review the array of services listed in the schedule to ensure it is a complete inventory of all activities occurring to serve these districts and portrayed at an adequate level of detail for effective, proportional application.

Cost of Service Basis for Fees

Refer to the next section and the appendices of this report for a comprehensive list of data sources used as the cost of service justification for costs and charges presented. In summary, the following types of information were used to determine the basis for values in the schedule:

- Adopted City budget and actual performance, reflecting revenues, expenditures, organizational structure, and accounting structures, such as types of expenses recorded and fund configuration
- Workload management databases utilized by operational departments which track statistics such as:

  - Staff time to tasks and/or projects, programs, or "clients"
  - Work order activity, such as time and materials needed for individual tasks
- Specialized studies that analyze aspects of the costs of services, such as:
  - Unit cost analysis of maintenance activities
  - Fully burdened hourly rates, labor multipliers, and other outcomes related to user and regulatory fees
  - Indirect cost allocation plan
- Hearing reports and other formal documentation associated with existing maintenance CFDs

☑ **Future Consideration** – To support subsequent updates of the schedule of costs and charges for maintenance CFDs, the City should actively monitor workload management databases, particularly staff time-tracking, to ensure all personnel are recording time as completely as possible at a level of detail that can support cost recovery practices linked to a "cost of service" basis. Active use and periodic monitoring ensure more accurate databases compiled over time.

Charge Methods

Costs and charges are based on certain attributes of each maintenance CFD, which would indicate amount of service provided and create proportionality in outcomes between districts. Charge methods reflected in the schedule are as follows:

- **Amenity Size** – This reflects measurements of maintained areas related to the services provided. This includes acres, square feet, miles, and lineal feet of different types of space and facilities maintained.
- **Service Base** – This would describe the population served. For example, each residential unit may be used as an applicable service base.
- **Service Cost** – This method uses other costs as a metric, such as a percentage of other direct costs of service or total expenditures recorded to the district.
- **Actual Cost** – This method creates a pass-through: actual costs billed, such as metered utilities to the physical location (e.g., electricity, water) or specialized, contracted services necessitated.
- **Frequency** – A frequency for each fee amount is indicated in the fee schedule, such as yearly.

Cost Recovery Policy

The City's budget messaging consistently states, "Fairly allocating costs to the services provided creates value and predictability for our customers and reimburses the City for expenses requested by a single party, as compared to the public at large. Fees in general ensure equity; those who benefit the most should pay the most, and pricing ensures that users pay appropriate fees." (*Annual Budget Fiscal Year 2017-18*)

Furthermore, the City published *Goals and Policies Concerning the Use of Mello-Roos Community Facilities Act of 1982*, effective January 2017. A revised policy is expected to be approved at the beginning of calendar year 2019. Although yet to be finalized, the draft policy states: "The purpose of the services/maintenance district is to fund the ongoing costs of parks and open space, public landscaping, police and fire protection services and library services and maintenance not funded by other sources; and to pay for any unfunded ongoing City maintenance or service costs associated with the development project."

The policies and goals described in that document provide a structure that among other objectives, seeks:

- Fairness to current and future property owners
- Protection of the City's financial position
- Reimbursement to the City of incurred expenses

It is expected that a schedule of maintenance costs and charges for CFDs will enable consistency of cost recovery in line with City policies such as these, whereas current negotiation-based practices not only create an inefficient process overly burdensome to City resources, but also, divergent outcomes between districts utilizing similar services and the actual recovery level of costs incurred.

Cost and Charge Amounts

The annual cost and charge amounts proposed for the maintenance services described in this report are listed in the **Schedule of Maintenance Costs and Charges for Maintenance CFDs** attached as **Appendix A**. Values shown reflect applicability in Fiscal Year 2018-2019.

To ensure continued cost recovery targeted, costs and charges should be updated annually, following industry cost inflation metrics. Furthermore, as a new schedule of costs and charges, a more in-depth examination of underlying costs of service and effectiveness of cost recovery should occur every two years until systems and application are more established. Afterward, a comprehensive study of costs and charges can follow timelines more consistent with other City user and regulatory fees.

COST OF SERVICE BASIS FOR FEES

This project served as a means for accumulating individual cost of service analysis and information developed by the City across its organization that can support a uniform schedule of maintenance costs and charges for special financing districts. The following section describes the documentation associated with each service category and/or activity in the schedule. The **Appendix B** series shows each data source.

Preserve and Open Space Maintenance

The City recently developed a study of preserve and open space maintenance costs at the activity level. **Appendix B-1** shows the report *Preserve and Open Space – Summary of Estimated Cost Analysis*. Unit costs derived in this report are reflected in the schedule of costs and charges.

Park Maintenance and Landscape Corridor/Paseo/Median Maintenance

The City's Parks Department analyzed annual parks maintenance time to service basic and full-service neighborhood parks. Maintenance time was multiplied by fully-burdened labor rates, which resulted in the final acreage-based maintenance costs reflected in the schedule of costs and charges.

Details regarding these maintenance time estimates and cost of service are included in **Appendix B-2**.

Bike Trail Maintenance

The City documents a budget for Fiscal Year 2018-2019 for the routine maintenance of bike trails, as included in the appendix. This information is included in **Appendix B-3**.

Leaf Pickup

The City tracks labor and materials to leaf removal activities. This reporting information was used to develop the time and labor cost estimates detailed in **Appendix B-4**.

Street Sweeping

The City tracks labor and materials to street sweeping activities. This reporting information was used to develop the time and labor cost estimates detailed in **Appendix B-5**.

Masonry Wall Maintenance and Repair / Graffiti Removal

Cost of service information for this maintenance category is in the process of being determined. Once available, it will be added to this report.

Stormwater Management

The City documents a budget for Fiscal Year 2018-2019 for the management of the City's stormwater program. This information aids in the allocation of costs attributable to maintenance CFDs. This documentation is included as **Appendix B-6** of this report.

PRESERVE AND OPEN SPACE MAINTENANCE

Preserve and Open Space - Summary of Estimated Costs Analysis

The costs of comprehensive maintenance of the City's preserve and open space areas is not insignificant. The range of work encompassed in all the various tasks responds to multiple directives. These include the direction on the Roseville Open Space Preserve Overarching Management Plan; the public's expectations; the Roseville Urban Forest Master Plan (UFMP); and agreements between the City and natural resource regulatory agencies. The table below provides a list of maintenance and monitoring tasks with corresponding source of directive.

Directives for Maintenance Tasks

Task	Overarching Plan	Public Expectation	UFMP	Regulatory Requirements
Contract Biologist				
General Biological Inspection	■			■
Wet Season VP Hydrology and Invertebrates	■			■
Dry Season VP Hydrology and Floristics	■			■
Vernal Pool Upland Grassland	■			■
Oak Woodland Understory Grassland	■			■
Oak Species Composition and Requirement	■			■

Contracted Maintenance				
Vegetation Abatement - Grazing	■	■		■
Vegetation Abatement - Mowing	■	■		■

In order to adequately fund the management and maintenance of Roseville's more than 4,440 acres of preserves and general open space, annual cost estimates have been developed for the various monitoring and maintenance tasks for each preserve/open space area. Cost estimates may also be used to project the level of funding needed to support management and maintenance of future preserve and general open space acquisitions associated with new development entitlements.

These cost estimates draw from several sources. They include existing and projected cost for contracted services; current costs for City staff based on job duties; and the historical experience of Open Space staff regarding time and effort required to complete certain tasks. Cost are expressed in 2017 dollars and should be adjusted annually to account for inflation and the level of actual versus estimated expenditures over time.

Monitoring and Reporting

Biological inspections of preserve areas are required in order to comply with agreements between the City and the regulatory agencies. There is no requirement for biological inspections in general open space areas, however the City recognizes the potential benefit of performing these inspections in the general open space areas to preserve natural resources and enhance residents' enjoyment of these areas.

Biological inspections are conducted by contractors with the specialized experience in resource monitoring and the required regulatory permits. The type and frequency of inspections required for each preserve depends on the natural resources present in the preserve. The Overarching Plan identifies a number of additional biological inspections that are to be conducted at various times during the year. The specific inspections and frequency vary depending on the type of habitat present.

6.1 GENERAL BIOLOGICAL INSPECTIONS

According to the Overarching Plan, general biological inspections should be conducted twice a year in all habitat types. Inspections are done in the summer to maximize probability of detecting invasive plant species. These inspections include:

- General biological function and health of habitat
- Populations of existing or newly established invasive plant species
- Status of any enhancement and restoration efforts
- Presence of any human-caused disturbances to habitat
- Problematic storm water runoff, erosion, or beaver dams

6.1.1 GENERAL BIOLOGICAL INSPECTIONS - COSTS

The cost for this task is derived from analysis of the 5-year contract for biological monitoring services between the City of Roseville and Vollmar Natural Lands Consulting Inc. that was approved in April 2015. The cost includes labor for the designated task as well as an apportioned share of costs for field preparation and reporting. The total cost is then divided by the number of units to be monitored to arrive at a cost per unit per inspection. The Overarching Plan recommends that the general biological inspections occur twice each year, so the resultant cost is doubled to provide an annual cost/unit.

Unit:	acre
Cost per Unit:	$24.13 for 1x/year
Recommended Frequency:	2x/year
Annual Cost/Unit:	$48.26

6.2 VERNAL POOL GRASSLANDS

The Overarching Plan specifies that surveys of wet season vernal pool hydrology and invertebrates; dry season vernal pool hydrology and floristics; and upland grassland are to be conducted in the vernal pool grassland habitat areas.

6.2.1 WET SEASON VERNAL POOL HYDROLOGY AND INVERTEBRATES

Field surveys of vernal pool hydrology and invertebrates are conducted twice during the wet season (December through March) in preserve areas that include vernal pool grassland habitat. Approximately 10 percent of the pools in these preserves are monitored, with a minimum of 5 pools per preserve or all pools if there are fewer than 5. The preferred target per the Overarching Plan is monitoring for 20 percent of all vernal pools. The wet season vernal pool invertebrate monitoring includes visual inspection of the water column and dip-netting for large brachiopods. About one-fourth of the pools are also sampled for all aquatic invertebrates to determine the presence and abundance of other species. Other environmental data is also collected such as water depth, percent of inundation, temperature, and turbidity. Any hydrological issues such as lack of ponding or flooding from an adjacent creek are also noted.

6.2.2 WET SEASON VERNAL POOL HYDROLOGY AND INVERTEBRATE SURVEY -COSTS

The source and methodology for deriving the cost for this task is the same as described above under General Biological Inspections.

Unit:	vernal pool
Cost per Unit:	$178.79 for 2x/year
Recommended Frequency:	2x/year
Annual Cost/Unit:	$178.79

6.2.3 DRY SEASON VERNAL POOL HYDROLOGY AND FLORISTICS

The dry season monitoring of vernal pool hydrology and floristics occurs once a year typically in April or May depending on the timing of peak blooming season. The same pools that are monitored in the wet season are monitored in the dry season. Data recorded at each pool include vegetative cover, dominant species, relative cover of vernal pool species, water depth and cover, bloom status, and a list of all present species. Hydrological data gathered include potential and maximum water depth, percent inundation, and observations of alterations to the natural hydrology such as landscape runoff or man-made features inhibiting drainage.

6.2.4 DRY SEASON VERNAL POOL HYDROLOGY AND FLORISTICS - COSTS

The source and methodology for deriving the cost for this task is the same as described above under General Biological Inspections.

Unit:	vernal pool
Cost per Unit:	$178.79 for 1x/year
Recommended Frequency:	1x/year
Annual Cost/Unit:	$178.79

6.2.5 UPLAND GRASSLAND

The Overarching Plan calls for monitoring upland areas each year in late April in the preserves with vernal pool grassland habitat. Each plot is to be 3 meters x 3 meters. All of the selected upland areas are within preserves. The purpose of the monitoring is to document the species composition and any changes in the native and non-native species and thatch accumulation over time. Upland management practices are intended to be adjusted based on the findings. Currently, upland grassland monitoring is being conducted once a year. The plots will be monitored annually in late spring (may be adjusted to ensure good data as needed). Data recorded for each plot will include a species list for the plot, the total cover of vegetation for the plot, the absolute cover of each species listed, and trends noted such as an increase in the presence of invasive plants. The presence of recently established invasive plant species (including problematic species), as well as the expansion of existing populations will be assessed each year in June or July by walking meandering transects through the vernal pool grassland and using data collected earlier in the year during upland grassland monitoring. The results will be used to update the City-wide invasive plant map. Relative cover will be calculated. One plot per 25 acres should be installed.

6.2.6 UPLAND GRASSLAND MONITORING - COSTS

The source and methodology for deriving the cost for this task is the same as described above under General Biological Inspections.

Unit: 25 acres of preserve/general open space

Number of Units:	1
Cost per Unit:	$1,595
Recommended Frequency:	1x/year
Annual Cost/Unit:	$1,595

6.3 OAK WOODLAND/SAVANNAH

The Overarching Plan indicates that understory grassland and oak tree health and regeneration are to be monitored in the oak woodland/savannah habitat areas.

6.3.1 UNDERSTORY GRASSLAND MONITORING

The understory grassland monitoring is to follow the same methods as for the upland grassland monitoring (described above).

6.3.2 UNDERSTORY GRASSLAND MONTIORING - COSTS

If monitoring were to be conducted it would follow the same protocol used for upland grassland monitoring with the same costs.

Unit:	25 acres of preserve/general open space
Number of Units:	1
Cost per Unit:	$1,595
Recommended Frequency:	1x/year
Annual Cost/Unit:	$1,595

6.3.3 OAK SPECIES COMPOSITION AND RECRUITMENT

In addition to the annual general assessment of oak tree health conducted as part of the general biological monitoring at each preserve/general open space, the Overarching Plan calls for monitoring oak species composition and regeneration in a minimum of 20 oak woodland/savannah plots every five years during June to July. The designated plots are located in both preserve and general open space areas. One-half of the plots were randomly selected and the remainder selected intentionally in areas were regeneration has been problematic. The goal of the monitoring is to determine if oak recruitment is occurring and if thatch accumulation or grazing practices are inhibiting recruitment. The monitoring protocol calls for establishing 50 meter x 100 meter plots and marking the corners with posts. The location, species, diameter at breast height (DBH) (if applicable), height estimate, and health of each oak tree greater than 3' in height are to be recorded within each plot. Any non-native trees and shrubs are also to be noted. Focused monitoring of the seedlings in the quadrats is done to establish rates and potential cause of mortality.

6.3.4 OAK SPECIES COMPOSITION AND RECRUITMENT - COSTS

The source and methodology for deriving the cost for this task is the same as described above under General Biological Inspections.

Unit:	25 acres preserve/general open space
Cost per Unit:	$603
Recommended Frequency:	1x/year
Annual Cost/Unit:	$603

6.4 RESIDUAL DRY MATTER MONITORING

The Overarching Plan calls for Residual Dry Matter (RDM) monitoring in the late summer or early fall in the same upland and understory grassland plots that are monitored earlier in the year. The purpose of the RDM monitoring is to determine if excess thatch accumulation is inhibiting oak seedling recruitment or encroaching into the vernal pools. RDM monitoring can occur in the understory grassland, in conjunction with the oak recruitment monitoring, if feasible.

Upland Grassland - The Monitoring Biologist will make an annual determination of thatch accumulation using Wildland Solutions Residual Dry Matter monitoring guide used in grazing monitoring (OSPOMP Appendix 29) at the same locations data is gathered for upland grassland monitoring. If excess thatch is present in the uplands (residual dry matter (RDM) exceeding 1,200 lbs./ac.) or marginal grass species are observed encroaching into the

vernal pools during vernal pool floristic monitoring, the Monitoring Biologist will work with the Open Space Manager to determine the best removal practice for each particular site. Several management practices can be used to address this thatch including controlled burning, mowing, or grazing

Oak Woodland/Savannah - The Monitoring Biologist will make an annual determination of thatch accumulation by using the Residual Dry Matter monitoring guide used in grazing monitoring (OSPOMP Appendix 29) at same locations data is gathered for understory grassland monitoring. If excess thatch is present and appears to be inhibiting the natural recruitment of oak trees, represents a fire hazard, or is in excess of 1,200 lbs./ac., the Monitoring Biologist will work with the Open Space Manager to determine the best removal practice for each particular site. Several management practices can be used to address this thatch including controlled burning, mowing, or grazing.

6.4.1 RESIDUAL DRY MATTER MONITORING - COSTS

The source and methodology for deriving the cost for this task is the same as described above under General Biological Inspections.

Unit:	25 acres of preserve/general open space
Cost per Unit:	$586.30
Recommended Frequency:	1x/year
Annual Cost/Unit:	$586.30

6.5 GROUND NESTING BIRD SURVEYS

Ground nesting bird surveys are to be completed in June prior to any mowing. Open Space staff contract for the ground nesting bird surveys to occur in coordination with scheduled mowing (manual or flail) activities or RMA activities

6.5.1 GROUND NESTING BIRD SURVEYS - COSTS

Costs for ground nesting bird surveys are based on input from Foothill Associates professional biologists who routinely perform these services in habitats consistent with those found in the City of Roseville preserve and general open space areas.

Unit:	acre
Time per Unit:	3 hours
Recommended Frequency:	1x/year
Cost per Labor Hour:	$110
Annual Cost/Unit:	$330

6.5.2 Routine Maintenance Agreement (CDFW)

The City entered into a Routine Maintenance Agreement (RMA) to perform maintenance within California Department of Fish and Wildlife (CDFW) jurisdiction. CDFW jurisdiction covers maintenance activities that would take place within creeks, improved and unimproved drainage channels, detention basins and constructed water quality swales, associated riparian vegetation, and low floodplains. The agreement requires specific habitat, cultural resource and nesting surveys be conducted and a verification requests forms (VRF) be submitted and approved prior to any maintenance activities on any water.

Costs are based on current surveys being conducted by Vollmar Natural Lands Consulting. Cost for areas in Sierra Vista TM#1 are $1145.00, which includes habitat and nesting surveys with reporting and VRF fee.

7.1 GENERAL MAINTENANCE INSPECTION

The Overarching Plan recommends a general maintenance inspection be performed every month in each preserve and general open space areas. However, due to funding limitations general maintenance inspections will be made quarterly to ensure the integrity of City's open space and to locate any problem areas. Inspections of areas that are classified as Riparian Woodland/Wetland habitat are not included in the General Maintenance Inspection as they are assessed in the spring and winter during creek corridor inspections.

Inspections will concentrate on an evaluation of the following factors: fire hazard reduction (in addition to Fire Department monitoring), fencing integrity, condition of signage, trash accumulation, and vandalism. The entire perimeter of the preserve/general open space will be covered, as well as meandering transects through its interior.

An inspection sheet will be utilized to evaluate the above criteria during each field visit.
Previous inspection sheets will be reviewed before each visit to ensure that a possible or recurring problem area is not missed. If any problems are identified, more frequent inspections will be conducted to closely track any problems and to ensure that remedial actions are effective. To account for this variability, three levels (A, B, and C) of general maintenance inspection have been established. Level A provides for an average of up to 10 minutes of labor per acre four times per year.
Level B provides 20 minutes of labor per acre, and level C provides 30 minutes of labor per acre over the same period. This approach also recognizes that maintenance labor is not equally spread throughout the year, with some seasons being more labor intensive than others.

7.1.1 GENERAL MAINTENANCE INSPECTION - COSTS

General maintenance inspections are performed by Open Space staff. Costs are based on one staff person experienced with performing these inspections and using burdened labor costs.

Unit:	acre
Time per Unit:	10 minutes (Level A)
	20 minutes (Level B)
	30 minutes (Level C)

Recommended Frequency: 4x/year

Cost per Labor Hour:	$95
Annual Cost/Unit:	$63 (Level A)
	$126 (Level B)
	$190 (Level C)

7.2 TREE ASSESSMENT FOR HEALTH AND VIGOR BY HABITAT TYPE

Tree assessments are to be conducted under the oversight of the City's Urban Forester. These assessments differ from the oak recruitment monitoring done by contract staff in that they are looking at all tree species and the condition of the overall woodland as a component of the City's urban forest.
Tree assessment is to be done every third year.

The tree health and vigor assessment of the riparian woodland/wetland and oak woodland/savannah habitat areas includes a general visual inspection of the stands/individual trees to identify evidence of issues such as disease, structural damage, and predation that might indicate a threat to the health and vigor of the habitat. The objective of the assessment is to identify any evident sources of these problems such as excess runoff, vandalism, and root zone compaction that should be addressed through maintenance or management actions. Problem trees are to be tagged and recorded for further action or monitoring; healthy trees are not recorded in order to keep assessment costs down. This tree assessment process is comparable to the Level I visual assessment as

defined by the International Society of Arboriculture (ISA) Best Management Practices and ANSI A300 (Part 9) but with a focus on habitat function/value.

7.2.1 TREE ASSESSMENT FOR HEALTH AND VIGOR - COSTS

Costs for tree assessment for health and vigor will vary by habitat type to account for the difference in tree density between oak woodland and riparian woodland. Costs for these tree assessments are based on input from the City of Roseville Urban Forester and Foothill Associates ISA certified arborists who routinely perform these services in habitats consistent with those found in the City of Roseville preserve and general open space areas.

Unit:	acre
Time per Unit:	3 hours (oak woodland) 8 hours (riparian woodland)
Recommended Frequency:	1x every 3 years – assume 1/3 acre surveyed each year
Cost per Labor Hour:	$90
Annual Cost/Unit:	$90 (oak woodland) $240 (riparian woodland)

7.3 TREE ASSESSMENT IN TARGET ZONE SAFETY

Per the City's Urban Forest Master Plan (pg. 43), objectives 2.B and 2.C, this assessment of trees within the Target Zone focuses on trees within the preserve/general open space boundary that interface with residential/commercial properties or are in proximity to trails and other accessible locations.
These assessments are to be done every year. Each individual tree is to be assessed for both tree health and structure (comparable to an ISA Level II survey, e.g. ground-based only). All trees are to be inspected by an arborist holding the ISA Tree Risk Assessment Qualification (TRAQ) with findings recorded on the ISA Basic Tree Risk Assessment Form (Appendix B). All trees will also be tagged, and locations captured as GPS data that will be added to the City's existing GIS-based tree inventory.

7.3.1 TREE ASSESSMENT IN TARGET SAFETY ZONE - COSTS

Costs for this task are based on input from the City of Roseville Urban Forester and Foothill Associates ISA certified arborists who routinely perform these services in habitats consistent with those found in the City of Roseville preserve and general open space areas. The labor rate for this tree assessment is slightly higher than for the woodland assessments due to the greater level of experience required. The recommended frequency assumes that 1/3 of all trees will be inspected every year and the remaining 2/3 of trees will be inspected every fifth year. This reflects the likelihood that most of the trees will be found to be in good condition upon their initial inspection and will only need to be re-examined every fifth year. Only those trees that show potential for developing issues will be looked at annually.

Unit:	tree
Time per Unit:	1 hour
Recommended Frequency:	1/3 of all trees every year and 2/3 of all trees every 5th year
Cost per Labor Hour:	$105
Annual Cost/Unit:	$105

7.4 SPRING AND WINTER CREEK CORRIDOR ASSESSMENT

All Riparian Woodland/Wetland habitat areas are to be inspected once a year in the spring through summer to identify any maintenance actions that need to take place prior to the close of the maintenance period specified by the regulatory agencies.

The same areas are also to be inspected once a year in the winter months to identify any issues that may be impacting flood conveyance, public safety, or habitat conditions. Specific things to be noted during both spring

and winter inspections include erosion, sedimentation, debris, beaver dams/ damage, bank condition, downed trees, and invasive species.

The area classified as The RCRMP includes descriptions of reference creek segments with desired conditions for each of the creek systems in the City. This information may be used as a benchmark when evaluating creek corridor conditions. An inspection sheet will be utilized to evaluate the above criteria during each field visit. Previous inspection sheets will be reviewed before each visit to ensure that a possible or recurring problem area is not missed. If any problems are identified, more frequent inspections will be conducted to closely track any problems and to ensure that remedial actions are effective.

7.4.1 WINTER AND SPRING CREEK CORRIDOR ASSESSMENT - COSTS

Winter and spring creek corridor assessments are performed by Open Space staff. The level of effort required in each preserve/open space area will vary depending on the density of the riparian vegetation, channel characteristics, and the influence of surrounding land uses. Three levels (A, B, and C) have been established to reflect this variability. Costs are based on 2-person teams using burdened labor costs.

Unit:	acre
Time per Unit:	10 minutes (Level A)
	20 minutes (Level B)
	30 minutes (Level C)
Recommended Frequency:	2x/year (Winter and Spring)
Staffing:	2 people
Cost per Labor Hour:	$95
Annual Cost/Unit:	$63 (Level A)
	$126 (Level B)
	$190 (Level C)

8.0 MAINTENANCE AND MANAGEMENT ACTIONS

Maintenance and management actions in the preserve/general open space areas include scheduled tasks such as maintaining firebreaks; ongoing tasks such as trash removal; and tasks performed on an as-needed basis in response to unpredictable events like vandalism or storms. Maintenance tasks are performed by both Open Space Staff and contract staff depending on the particular task.

8.1 GENERAL MAINTENANCE

General maintenance is to be performed in each preserve/open space area in order to protect the natural resources and for the safety and enjoyment of residents who use or live adjacent to the area. General maintenance is typically performed by Open Space or other City staff. General maintenance tasks may include activities such as:

- Trash removal
- Maintenance of open space edge condition
- Fence installation or repair
- Installation and repair of bollards and gates
- Interpretive signage maintenance
- Informational/ordinance/regulatory signage maintenance
- Transient camp removal
- Invasive species removal/management
- Repairs/restoration/clean-up due to vandalism
- Repairs/restoration/clean-up do to unauthorized uses (bike jumps, forts, OHVs, social trails, etc.)
- Removal of encroachments

The need for general maintenance activities will be identified as part of the quarterly general inspection of each preserve/general open space area. Consequently, each inspection may generate a list of follow-up maintenance actions that are needed. For the sake of cost efficiency, some of these actions may be delayed until a significant quantity of work has accumulated and then all actions will be handled in a single visit as routine maintenance. Other actions will require immediate response due to the nature of the issue and are considered non-routine.

The amount of time typically needed for both routine and non-routine general maintenance in each preserve/general open space area on an annual basis varies depending on multiple factors. These include size of the preserve/general open space area; adjacent land uses; proximity to schools or commercial areas; level and types of recreational use; presence of trails; degree of seclusion; and vegetation density. In some situations, multiple staff are sent out to address issues. Staff time also needs to account for equipment preparation and clean-up time.

To account for this variability, three levels (A, B, and C) of routine and three levels (A, B, and C) of non-routine (A, B, and C) general maintenance have been established. For routine general maintenance,
Level A provides for an average of up to 1 hour of labor per acre two times per year. Level B provides 2 hours of labor per acre, and level C provides 4 hours of labor per acre over the same period. This approach also recognizes that maintenance labor is not equally spread throughout the year, with some seasons being more labor intensive than others. For non-routine maintenance, Level A allows for up to 2 incidents per year, with Levels B and C allowing for up to 4 and up to 6 annual incidents respectively.

8.1.1 GENERAL ROUTINE MAINTENANCE – COSTS

General maintenance is performed by Open Space staff. Costs are based on one person with experience with performing these inspections and use burdened labor costs. Three levels of maintenance have been established to reflect variability in maintenance required at individual preserve/general open space areas.

Unit:	acre
Time per Unit:	1 hour (Level A)
	2 hours (Level B)
	4 hours (Level C)
Recommended Frequency:	2x/year
Cost per Labor Hour:	$95
Annual Cost/Unit:	$190 (Level A)
	$380 (Level B)
	$760 (Level C)

8.1.2 GENERAL NON-ROUTINE MAINTENANCE – COSTS

General non-routine maintenance is performed as needed by Open Space staff. Costs are based on the number of anticipated incidents over the course of a year, assuming 1 person will respond to each incident, and using burdened labor costs. Three levels of non-routine general maintenance have been established to reflect variability in maintenance required at individual preserve/general open space areas.

Unit:	preserve
Number of Incidents:	Up to 2 (Level A)
	Up to 4 (Level B)
	Up to 6 (Level C)
Number of Labor Hours/Incident:	1.50
Cost per Labor Hour:	$95
Annual Cost:	$285 (Level A)
	$570 (Level B)
	$855 (Level C)

8.2 PUBLIC INTERACTION

In addition to performing general maintenance at the preserve/general open spaces, Open Space staff also need to respond to general inquiries from residents and develop materials for public outreach and education related to preserve/general open space protection. Some preserve/general open space areas generate calls from residents more frequently than others. The effort required to respond to residents' questions and address their needs can vary widely depending on the nature of the issue. In some cases, a simple phone conversation is adequate, while in others multiple calls, research, and follow-up correspondence are needed. Based on historical experience, Open Space staff have developed a relative sense for which types of preserve/general open space areas require more frequent public interaction than others.

To account for this variability, three levels (A, B, and C) of public interaction have been established. Level A provides for up to 12 hours of labor per preserve/general open space area per year. Level B provides 24 hours of labor, and level C provides up to 48 hours of labor over the same period. Labor includes Open Space staff time to interact with residents, coordinate with other City staff, and develop outreach materials as needed.

8.2.1 PUBLIC INTERACTION - COSTS

Public interaction includes receiving calls and responding to issues. Costs are based on Open Space staff historical experience and burdened labor costs. Three levels of public interaction have been established to reflect variability in issues arising from individual preserve/general open space areas.

Unit:	preserve/general open space
Time per Unit:	12 hours (Level A)
	24 hours (Level B)
	48 hours (Level C)
Recommended Frequency:	1x/year
Cost per Labor Hour:	$95
Annual Cost/Unit:	$1,140 (Level A)
	$2,280 (Level B)
	$4,560 (Level C)

8.3 VEGETATION ABATEMENT

Vegetation abatement includes both habitat management practices and fire break maintenance. Grazing is typically used for habitat enhancement to reduce thatch buildup that had negative effects on habitat. The need for grazing to address habitat issues is identified through the biological monitoring activities. Open Space staff determine what areas are to be grazed and execute an agreement for the total work to be completed on a per acre cost. In some areas, cattle are grazed at no cost to the City. The grazed acres addressed in the OSMMP pertain only to those grazed by sheep and/or goats since there is an annual cost associated with this practice.

The City's Fire Department works with Open Space staff to identify areas where fire breaks are needed. In places where fire breaks overlap with grazed areas, the grazing practice sufficiently addresses the necessary vegetation abatement. In areas not grazed prior to July 1 deadline or areas not suitable for grazing, where fire breaks are needed, mechanical methods such as flailing or hand crews are used. These services are normally performed on a contract basis. Disking is not an acceptable abatement method due to the excessive degree of habitat disturbance. The City has currently identified 2,133 acres of land within preserve/general open space areas for grazing, and an additional 214 acres for supplemental vegetation abatement to implement fire breaks in non-grazed areas.

8.3.1 VEGETATION ABATEMENT - COSTS

Vegetation abatement costs are based on current contracts between the City of Roseville and contractors providing grazing and mowing services.

Unit:	acre
Cost per Unit:	$300 (grazing) $480 (mowing)
Recommended Frequency:	1x/year
Annual Cost/Unit:	$300 (grazing) $480 (mowing)

8.4 CREEK CORRIDOR MAINTENANCE

The need for specific creek corridor maintenance activities is identified during the winter and spring creek corridor surveys of the Riparian Woodland/Wetland habitat areas. The RCRMP and the Overarching Plan specifically address methods and limitations to be observed when performing creek maintenance so that City actions comply with regulatory requirements. Creek corridor maintenance tasks may include activities such as:

- Trash removal
- Removal of beaver dams
- Clearing fallen trees or other conveyance obstructions
- Bank erosion stabilization/restoration
- Invasive species removal/management
- Transient camp removal
- Repairs/restoration/clean-up due to vandalism
- Repairs/restoration/clean-up do to unauthorized uses such as unauthorized bridges and creek crossings
- Excessive sedimentation or unauthorized fill

The amount of time needed for creek corridor maintenance varies in each preserve/general open space area depending on various factors including width of the channel; extent and character of riparian vegetation; associated watershed size and conditions; ease of access; and degree of human interaction.
The number of staff and type of equipment will also vary depending on the extent and complexity of the issue. Some maintenance activities are considered routine and recur on a regular basis, while others area non-routine and are performed only as needed. Staff time also needs to account for travel time to and from the site, and equipment preparation and clean-up time.

To account for this variability, costs for creek corridor maintenance has been divided into routine and non-routine activities. Three levels (A, B, and C) of effort have been established for each. For routine creek corridor maintenance, Level A provides for an average of up to 2 hours of labor per acre two times per year. Level B provides 4 hours of labor per acre, and level C provides 6 hours of labor per acre over the same period. This approach also recognizes that maintenance labor is not equally spread throughout the year, with some seasons being more labor intensive than others. For non-routine maintenance, Level A allows for up to 2 incidents per year, with Levels B and C allowing for up to 4 and up to 6 annual incidents respectively.

8.4.1 CREEK CORRIDOR ROUTINE MAINTENANCE - COSTS

Creek corridor maintenance is performed by Open Space staff. Costs are based on one staff person with experience with performing maintenance and use burdened labor costs. Three levels of maintenance have been established to reflect variability in maintenance required at individual preserve/general open space areas.

Unit:	acre
Time per Unit:	2 hours (Level A) 4 hours (Level B) 6 hours (Level C)
Recommended Frequency:	2x/year
Cost per Labor Hour:	$95
Annual Cost/Unit:	$380 (Level A) $760 (Level B) $1,140 (Level C)

8.4.2 CREEK CORRIDOR NON-ROUTINE MAINTENANCE – COSTS

Non-routine creek maintenance is performed as needed by Open Space staff. Costs are based on the number of anticipated incidents over the course of a year, assuming 4-person teams will respond to each incident and using burdened labor costs. Three levels of non-routine creek maintenance have been established to reflect variability in maintenance required at individual preserve/general open space areas.

Unit:	preserve
Number of Incidents:	Up to 2 (Level A) Up to 4 (Level B) Up to 6 (Level C)
Number of Labor Hours/Incident:	4.00
Cost per Labor Hour:	$95
Annual Cost:	$760 (Level A) $1,520 (Level B) $2,280 (Level C)

NOTICE OF PUBLIC HEARING

Notice is hereby given that on **March 20, 2019** at 7 pm, or as soon thereafter as the matter may be heard, the **City Council** of the City of Roseville will hold a Public Hearing at **the City Council Chambers located at 311 Vernon Street, Roseville, CA** to consider adoption of a schedule of maintenance costs and charges for community facilities districts.

If adopted, the schedule of costs and charges will apply for formation of new Community Facilities Districts, but will not affect previously established districts or districts that have initiated proceedings, as of the date of adoption of the resolution, to form a Community Facilities District to finance services.

If adopted, the schedule of costs and charges will be effective upon adoption through June 30, 2020.

For further information contact the City's Chief Financial Officer, Dennis Kauffman at (916) 774-5200. Written communications may be directed to: City Council, 311 Vernon Street, Roseville, CA 95678.

If you challenge the decision in court, you may be limited to raising only those issues you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Clerk at, or prior to the Public Hearing.

ROSEVILLE CITY COUNCIL
Sonia Orozco, CMC City Clerk
