1. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings and as herein specified to include;

a. Boot flashing
b. Coping(s)
c. Roof flashing and skirt counter flashing, inside & outside corners
d. Refer to drawings

2. Size:

a. Boot flashing:

1) One installed and can be part of final construction

b. Coping:

1) 10’-0” section with outside corner

c. Roof flashing and skirt counter flashing, inside & outside corners:

1) 3’- 0” minimum with an inside and outside corner

3.6 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer’s recommendations, as herein specified and in accordance with drawings.
2. Fabricate in compliance with SMACA guidelines and contract documents.

a. Most restrictive shall govern

B. Workmanship

1. Specifications herein are minimum required; provide such extra materials and workmanship as necessary to obtain required results. Install work in accordance with recognized standards and best trade practices.

2. Finish shapes true and straight as shown or as required to match existing adjoining sheet metal.

3. Where members intersect each other, cope to precise fit and securely solder; solder slowly with well-heated coppers; neat and with full flowing joints; thoroughly clean materials at joints before soldering; scrape exposed soldering on finished surfaces smooth; make lock seam work flat and true to line and sweated full of solder; thoroughly wash acid fluxed work with soap suds and water solution after soldering.
4. Install sheet metal work to provide allowances for expansion and contraction and weather tightness throughout and as hereinafter specified.
5. Clean and coat with asphaltic primer all surfaces that will be in contact with roofing materials or that will not be exposed after installation.
6. Allow to dry thoroughly before installation.
7. Touch up painting
    a. Where new or existing galvanizing is damaged by fabrication or installation, repair surfaces with "Galvalloy" or "Galvweldalloy," or Zincalume compatible material, applying in accordance with manufacturer's printed directions.
        1) Float full, grind, and buff smooth.
    b. Touch up material shall be compatible with substrate.

3.7 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator
    1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
    2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Touch up:
    1. Where new or existing galvanizing is damaged by fabrication or installation, repair surfaces with "Galvalloy" or "Galvweldalloy," or Zincalume compatible material, applying in accordance with manufacturer's printed directions. Float full, grind, and buff smooth.
    2. Touch up material shall be compatible with substrate.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 07 62 00

SECTION 07 72 33 – ROOF HATCHES AND SAFETY RAILINGS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified and as necessary to complete the work including, but not limited to;

1. Roof Hatches with integral curb
2. Roof Hatch Safety Railing

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. Occupational Safety and Health Administration (OSHA), United States Department of Labor, www.osha.gov

1. OSHA – Regulations Standards – 29 (CFR) as approved by State of California
2. OSHA – Regulations Standards – 29 (CFR), Section 1926 Occupational Safety and Health Standards for Construction as approved by State of California

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Product information
2. Sizes for each unit
3. Railing assembly type

E. Submit samples.

1. Color samples for;

a. Roof hatches
b. Safety Railings

F. Certification:

1. OSHA compliance for Safety Railing

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Roof Hatch Railing System: Furnish manufacturer's additional **seven (7)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

D. Roof Hatches: Furnish manufacturer's additional **five (5)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Roof Construction
2. Access Ladder and Accessories
3. Roofing
4. Flashing

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 07 54 00tpo – TPO Membrane Roofing

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding operation of the equipment.
2. Complete instructions regarding maintenance of the equipment, materials, finishes, etc.
3. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Roof Hatches with integral curb:

a. Bilco www.bilco.com
b. Babcock-Davis, www.babcock-davis.com
c. Acudor www.acudor.com

2. Hatch Safety Railings:

a. KeeHatch, www.keehatch.com, www.keesafety.com

C. Reviewed Equivalent by **Architect.**

1. Substitutions and Deviations shall require **Architect's** approval and shall be given in letterform.
2. Refer to Division 1 for substitution, deviation and/or submittal procedures.
3. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

D. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

E. Refer to drawings, details, and other related specification section whether listed or not.

F. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS - HATCHES

A. Hatches:

1. General

a. Hatches shall be as indicated and required in the drawings.

1) Full welded corner joints; insulated hatch lids and integral support curbs; complete with integral counterflashings to roof flashing system and flanges on support curbs for anchorage to roof deck.

b. Hatch Opening hardware: Manufacturer's standard manually operating type capable of ensuring effortless control and smooth operation without causing damage to hatch and roofing system; capable of being opened from inside and outside; complete with hold-open mechanism and padlock hasp(s).

2. Hatches:

a. ROOF HATCH AT FIXED WALL MOUNTED LADDERS.

1) Manufacturer: Bilco
2) Type: Roof Access Hatch & Curb
3) Size: 2'-6" x 3'-0"
4) Model:

a) Type S-20

i. Frame & Cap Flashing:

a. 14 gauge G-90 paint bond galvanized Steel
b. Fully welded corners

ii. Cover:

a. 14 gauge G-90 paint bond galvanized Steel
b. 3" beaded, overlapping flange
c. Fully welded corners
d. Internally reinforced for 40 psf live load

iii. Cover Liner: 14 gauge P.B. Steel
iv. Cover insulation: 1" Fiberglass
v. Finish: Custom color as selected by the **Architect**

5) Curb:

a) 6" min. high with integral capflashing
b) 1" fiberboard insulation
c) Fully welded corners
d) 3-1/2" mounting flange with 7/16" holes provided for securing frame to the roof deck

6) Gasket:

a) Extruded EPDM rubber gasket permanently adhered to cover

7) Hinges:

a) Heavy duty pintle hinges with 3/8" Type 316 stainless steel hinge pins

8) Latch:

a) Slam Latch with interior and exterior turn handles and padlock hasps

9) Lift Assistance:

a) Compression spring operators enclosed in telescopic tubes. Automatic hold-open arm with grip handle release.

10) Finish:

a) Steel: Galvanized

11) Hardware:

a) Steel: All hardware is zinc plated/chromate sealed

12) Safety post: None

a) See safety railing system as herein specified

2.3 MATERIALS - SAFETY RAILINGS

A. Roof Hatch Safety Railing:

1. RAILING.

   a. Manufacturer: KeeHatch, Kee Industrial Products, Inc.
   b. Size: Size to fit hatch
   c. Model:

      1) Exit Forward:

         a) Hatch hinges at back of railing system directly behind railing gate opening

   d. Compliance: OSHA Standard CFR 29 1910.23 and CFR 29 1910.27(c)(7) or most current

      1) Loading: 200lbs

   e. Materials:

      1) Flat Bar: A36 mild steel
      2) Pipe: 1-1/4" ID A53 Grade B seamed steel
      3) Weld Filler: Metal NR211 e70XX (AWS)
      4) Gate: Self Closing
      5) Pipe Caps: Weather and light resistant vinyl 1-1/2" deep and to fit snugly over pipe ends
      6) Finish: Galvanized – hot dipped
      7) Bolts and Washers: Hex head bolts 3/8" x 2 ½" grade Z, zinc plated. Fender washers for inside of hatch curb and standard flat washers outside
      8) Railing: KeeKlamp fittings for pipe

   f. Installation: Install per manufacturers instructions.

2.4 FABRICATION

A. Fabricated roof hatches and curbs watertight, and free of visual distortions and defects.

B. Safety railing secured to curb.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.

2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 INSTALLATION

A. Install roof hatches, Safety Railings and curbs in accordance with manufacturer's recommendations.
   1. Coordinate with installation of roofing system and related flashings.
   2. Provide weather-tight installation.
   3. Adjust opening hardware for proper operation.
   4. Coordinate with Access Ladder work.

B. Apply paint on primed steel surface of roof hatch; refer to Section 09 90 00.
   1. Paint Color as selected by **Architect**.

3.5 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator
   1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
   2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.
   1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 07 72 33

SECTION 07 84 00 - FIRESTOPPING

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Verify applicable dimensions at the jobsite.

C. Furnish materials and perform labor required per this specification to execute this work as indicated on the drawings, as specified, as required by local and state codes and regulations and as necessary to complete the work and fireproofing including the following but not limited to:

1. Through penetration, edge treatment and other firestop and smoke stop treatment for all fire-rated walls, floors and roofs, including, but not limited to:

a. HVAC duct penetrations
b. Pipe penetrations
c. Conduit penetrations
d. Structural member penetrations
e. Slab edge
f. Roof edge

2. Edge bonding and core material for fire-resistant/fire rated door and window assemblies.
3. Bottom of wall fire stopping and top of wall firestopping

a. Fire stopping at fire rated walls
b. Construction joint firestops within walls, or the intersection of top of walls to structure

4. Duct wrap assembly

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC), www.bsc.ca.gov current edition at time of permit issuance.

1. Including, but not limited to;

a. CBC Chapter 7 including but not limited to;

1)	Wall penetrations	Section 712 and its sub sections
2)	Fire resistive Joint Systems	Section 713 and its sub sections
3)	Opening Protectives	Section 715 and its sub sections
4)	Ducts and Air Transfer Openings	Section 716 and its sub sections
5)	Concealed spaces	Section 717 and its sub sections
6)	Thermal and Sound-insulating Materials	Section 719 and its sub sections
7)	Prescriptive Fire Resistance	Section 720 and its sub sections
8)	Calculated Fire Resistance	Section 721 and its sub sections

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

2. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Firestops
3. ASTM E119 - Standard Test Method for Fire Tests of Building Construction Materials
4. ASTM E1399 - Standard Test Method for Cyclic Movement and Measuring of Joint Systems
5. ASTM E1725 - Standard Test Methods for Fire Tests of Fire-Resistive Barrier Systems Electrical Systems Components
6. ASTM E1966 - Standard Test Methods for Fire Tests of Joints
7. ASTM E2307 - Standard Test Method for Determining Fire Resistance of Perimeter Fire Barrier Systems Using Intermediate-Scale Multi-Story Test Apparatus

E. International Fire Council guidelines for evaluating Firestop Systems Engineering judgments.

F. National Fire Protection Agency (NFPA), www.nfpa.org

1. NFPA 80 Standard Fire Door and Window Assembly Tolerances
2. NFPA 252 Standard Fire Test for Fire Rated Doors (not specified for positive or Negative furnace test pressure)
3. NFPA 257 Standard Fire Test for Fire Rated Windows (not specified for positive or negative furnace test pressure)
4. NFPA 101 Life Safety Code
5. NEC 70 National Electrical Code

G. Underwriters Laboratory (UL), www.ul.com

1. UL 723 - Surface Burning Characteristics of Building Materials
2. UL 1479 - Fire Tests of Through-Penetration Firestops, including optional air leak test
3. UL 2079 - Fire Tests of Building Joint Firestop Systems
4. UL Fire Resistance Directory (Component Listing Test Criteria)
   a. HW designs: Volume 2A
5. F – Ratings, UL designs: ASTM E 814 & UL 1479
6. T – Ratings, UL designs: ASTM E 814 & UL 1479
7. L - Ratings, UL designs: ASTM E 814 & UL 1479

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	Name of Test	Performance	Testing Std.
Firestopping design	F-Rated Systems: (fire)	Provide firestop systems with F-ratings indicated, but not less than that equaling or exceeding fire-resistance ratings of the construction assemblies listed.	ASTM E814
	T-Rated Systems: (temperature)	Provide firestop systems with T-ratings indicated, where systems protected penetrating items exposed to potential contact with adjacent materials in occupiable floor areas.	ASTM E814 and ASTM E119,
	L-Rated Systems	Provide firestop systems with L-ratings indicated, where systems maintain a barrier to cold smoke at all: penetrations, connections with other surfaces, separations required to permit building movement, sound or vibration absorption, and other construction gaps	UL2079,ASTM EB99 and ASTM E814,
	Flame Spread	25 or less	ASTM E84
	Smoke developed	450 or less	
Construction joint/gap systems	cyclic movement	meet or exceed 500 cycles at 10 cycles per minute.	UL 2079 and ASTM E1399
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing / Inspection by others:**

Item	Name of Test	Performance Results	By Whom
Firestopping systems and assemblies	Design compliance	Comply	Special Inspector Inspection service as approved by agency having jurisdiction
Cost for independent inspections shall be borne by **General Contractor**			

E. **Construction Monitoring/Observations by others**:

Item	Name of Test	Performance Results	By Whom
Firestopping systems and assemblies	Const. Waste Management	Comply	Refer to Division 1 for construction waste management and

			disposal/recycling requirements

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified

C. Refer to Division 1 for sustainability requirements Submit Manufacturer's data and shop drawings.

1. Manufacturer's product literature for each type of firestop material as follows:

a. Product characteristics, typical uses, installation procedures, performance and limitation criteria
b. Material Safety Data Sheets (MSDS)
c. Firestop system products bear classification marking of qualified testing and inspecting agency
d. Firestop systems correspond to those indicated by reference to firestop system designations listed in these specifications and/or in the drawings by the following:

1) Assembly type
2) UL in "Fire Resistance Directory"
3) ITS (Warnock Hersey) in "Directory of Listed Products"
4) Omega Point Laboratories
5) Factory Mutual

e. Local and State regulatory requirements: Submit forms of acceptance for proposed assemblies not conforming to specific UL Firestop System numbers or UL classified devices.

2. Submit manufacturer's installation procedure for each type of product.

a. For each firestop system show construction conditions, relationships to adjoining construction, dimensions, description of materials and finishes, component connections, anchorage methods, hardware and installation procedures, plus the following:

1) Firestop design designation of testing and inspecting agency acceptable to authorities having jurisdiction that confirms compliance with requirements for each condition indicated.

b. Documentation, including illustrations, from a qualified testing and inspection agency that is applicable to each firestop system configuration for construction and penetrating items. Factory 2nd/ or manufacturer furnished installation details are not acceptable in lieu of published documents by approved testing agencies (UL, OPL, Warnok Hersey, etc).
c. Where Project conditions require modification of a qualified testing and inspecting agency's illustration to suit a particular firestop condition, submit illustration, with modifications marked, approved by firestop system manufacturer's fire-protection engineer.

d. Submit manufacturer's drawings for all non - standard applications where no UL tested system exists. All drawings must indicate the "Tested" UL system upon which the judgment is based so as to asess the relevance of the judgment to some known performance.
e. Engineering judgment drawings must follow requirements set forth by the International Firestop Council.

3. List of 3M supplied assembly Identification labels

D. Submit samples.

1. Coordinate with Inspector

E. Site mock-up, refer to "Mock-Up" heading.

F. Certification:

1. For firms and persons specified in "Quality Assurance" Section to demonstrate their capabilities and experience, include a list of names and addresses of completed projects, **Architects** and **Owners** and other information specified.
2. **Product Certificates:** Signed by manufacturers of firestop system products certifying that products furnished, comply with requirements.
3. **Product Test Reports:** From a qualified testing agency indicating that firestop system complies with requirements, based on comprehensive testing of current products.
4. **Engineering Judgments:** Submit manufacturer's drawings for all non-standard applications where no UL tested system exists. All drawings must indicate the "Tested" UL system upon which the judgment is based so as to assess the relevance of the judgment to some known performance.
5. **Approved Applicator:** Submit document from manufacturer wherein manufacturer recognizes the installer as qualified or submit a list of past projects to demonstrate capability to perform intended work.
6. Certification upon completion, installer shall provide written certification that materials were installed in accordance with the manufacture's installation instructions and details.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Stipulations:

1. Firestopping systems (materials & design):

a. Shall conform to both Flame (F) and Temperature (T) ratings as required by local building codes and as tested by nationally accepted test agencies per ASTM E814 or UL 1479 fire tests in a configuration that is representative of field conditions. The (F) rating must be a minimum of one (1) hour but not less than the fire rating of the assembly being penetrated.

b. Shall conform to assembly rating per UL2079
c. Firestopping materials shall be asbestos and lead free and shall not incorporate nor require the use of hazardous solvents.
d. Firestopping materials shall not shrink upon drying as evidenced by cracking or pulling back from contact surfaces.
e. Firestopping materials shall be moisture resistant, and shall not dissolve in water after curing.
f. Provide firestop systems that are produced and installed to resist the spread of fire according to requirements indicated, resist passage of water, smoke and other gasses, and maintain original fire-resistance rating of constructed assembly.

2. **Fire Protection Installer's Qualifications:** Engage an experienced installer, (including individual traded people such as: electrical, mechanical, insulators, etc.) who is qualified by having the necessary experience, staff, and training to install manufacturer's products per specified requirements, plus the following:

   a. Acceptable to or licensed by manufacturer, state or local authority
   b. Established a record of successful in-service experience with firestop systems or completion of manufacturer's certified product installation training.
   c. Installation of firestopping systems shall be performed by a contractor (or contractors) trained or approved by the firestop manufacturer.
   d. Submit document from manufacturer wherein manufacturer recognizes the installer as qualified or submit a list of past projects to demonstrate capability to perform intended work.

3. Source Limitations:

   a. Obtain firestop systems for each kind of penetration and construction condition indicated, from a single manufacturer.

4. **Fire-Test-Response Characteristics:** Provide firestop systems that comply with the following requirements and those specified in "Performance Requirements".

   a. Firestopping tests and follow-up inspection services for firestop systems are performed by qualified testing and inspection agency acceptable to authorities having jurisdiction.
   b. Firestop systems are identical to those tested as herein listed and comply with the appropriate requirements:
   c. Firestop system products shall bear classification marking of a qualified testing and inspecting agency

      1) Firestop systems correspond to those indicated by reference to firestop system designations listed by the following:

         a) UL in "Fire Resistance Directory"
         b) ITS (Warnock Hersey) in "Directory of Listed Products"
         c) Omega Point Laboratories
         d) Factory Mutual

   d. Local and State regulatory requirements: Submit forms of acceptance for proposed assemblies not conforming to specific UL Firestop System numbers or UL classified devices.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Agenda for meeting shall include, but not be limited to;

1. All locations to receive protection assemblies and/or treatment
2. Assemblies that have been altered from design
3. Inspection schedule **General Contractor** shall request meeting 5 days in advance of construction.

F. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

G. Miscellaneous criteria:

1. For firestop systems exposed to view, traffic, moisture, sunlight and physical damage, provide products that after curing do not deteriorate when exposed to these conditions both during and after construction. Firestopping materials shall not shrink upon drying as evidenced by cracking or pulling back from contact surfaces.
2. Firestopping materials shall be asbestos and lead free and shall not incorporate nor require the use of hazardous solvents.
3. Firestopping materials shall not shrink upon drying as evidenced by cracking or pulling back from contact surfaces.
4. Firestopping materials shall be moisture resistant, and shall not dissolve in water after curing.
5. Installation of firestopping systems shall be performed by a contractor (or contractors) trained or approved by the firestop manufacturer.
6. All top of wall conditions, penetrations, etc. will need to be installed to withstand vertical and lateral movement.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver firestop system products to project site in original, unopened containers or packages with intact and legible manufacturer's labels identifying product and manufacturer, date of manufacture, lot number, shelf life, qualified testing and inspection agency's classification marking, curing time, and mixing instructions.

C. Store and handle materials for firestop systems to prevent their deterioration or damage according to manufacturer's instructions.

D. All firestop materials shall be installed prior to expiration of shelf life.

E. Comply with recommended procedures, precautions or remedies described in material safety data sheets as applicable.

1.7 JOB CONDITIONS

A. Existing Conditions:

1. Verify the condition of the substrates and correct unsatisfactory conditions before installing firestop system products; follow manufacturer's instructions.

B. Environmental Limitations:

1. Comply with manufacturer's recommendations for temperature and humidity conditions before, during and after installation of firestop systems.

C. Ventilation:

1. Ventilate firestop systems during installation per manufacturer's written instructions by natural means or, where this is inadequate, forced-air circulation.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

1. Provide masking and drop clothes to prevent contamination of surfaces by firestop system materials.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

D. Provide masking and drop clothes to prevent contamination of surfaces by firestop system materials.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Wall construction
2. Roof construction

B. Related sections include, but are not limited to the following:

1. Division 1
2. Section 03 30 00 - Cast-in-Place Concrete
3. Section 04 22 00 – Concrete Unit Masonry

4. Section 05 40 00 – Cold Formed Metal Framing
5. Section 06 10 00 – Rough Carpentry
6. Section 07 21 00 – Building Insulation
7. Section 07 92 00 – Sealants and Caulking
8. Section 08 11 13 – Steel Doors & Frames
9. Section 08 11 16 – Interior Aluminum Doors and Frames
10. Section 08 41 00 – Entrances, Window Walls, Storefront System and Curtain Walls
11. Section 09 22 16 – Non-Structural Metal Framing
12. Section 09 29 00 - Gypsum Board and Sheathing Substrates
13. Divisions 21 through 28

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

1.13 GENERAL SYSTEM DESCRIPTION

A. This Section Includes, but not limited to these as typical conditions and installations;

1. Firestop systems for **through-penetrations** of the following fire-resistance-rated assemblies, including both empty openings and openings containing penetration items:

a. Walls and partitions
b. Smoke barriers
c. Construction enclosed compartmentalized areas.

2. Firestop systems for **construction joints/gaps** occurring between the following fire-resistance rated assemblies:

a. Walls and the intersection of the top of walls to structure
b. Smoke barriers

3. Firestop systems for **containment of fire, heat and smoke for pipes and conduits** passing through the following fire-resistance-rated areas:

a. Occupied rooms and storage spaces
b. Mechanical/electrical rooms, shafts and closets
c. Construction enclosed compartmentalized areas:

4. Firestop systems for **composition edge banding and care materials** for fire-resistance-rated door/window styles and rails to seal joints and gaps, helping to retain fire-resistant components within their frames and retard the spread of flames, smoke and hot gases.

a. Fire-resistance-rated door and window assemblies to comply with UBC7-2-1997 ("positive pressure" requirements).
b. Special limitations apply to the entire fire-resistance-rated door/window assembly being specified for "positive pressure" (assembly includes the door/window, frame and hardware).

1.14 DEFINITIONS

A. Including the following, but not limited to:

1. **Assembly**: Particular arrangement of materials specific to a given type of construction defined in referenced documents.
2. **Barrier:** Any bearing or non-bearing floor, wall, or ceiling assembly that has an hourly fire or smoke rating.
3. **Construction Gap:** Any joint or opening, whether static or dynamic, within or between adjacent sections of interior or exterior walls, floors, ceilings or roof decks.
4. **Engineering judgment:** Evaluations that are developed by a manufacturer for a new firestop system that complies with similar UL approved designs or tests that are acceptable to the code enforcing authorities.
5. **Drawings:** Must follow requirements set forth by the International Firestop Council, most current edition.
6. **Firestopping:** Methods and materials applied in penetrations and unprotected openings to limit the spread of heat, fire, gasses, water and smoke.
7. **Firestop Systems:** The use of a specific firestop material or combination of materials in conjunction with a specific wall, floor, or ceiling construction type and a specific penetrating material(s) to achieve a rated fire barrier.
8. **Intumescent:** Materials that expand with heat to seal around objects threatened by fire.
9. **Penetration:** Opening or foreign material(s) is breached either in total or in part. Any item passing completely through a wall or floor.
10. **Sleeve:** Metal fabrication or pipe section that is part of a system that extends through a barrier.
11. **Annular Space:** The distance between a penetrating item and the surrounding opening.
12. **Percent Fill:** The cross-sectional area of an opening that is occupied by a penetrating item.

1.15 TESTING AGENT

A. Refer to Division 1 for Testing Laboratory service requirements.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer's fabricator shall be one of the following and as herein listed and in Drawings:

1. 3M Fire Protection Products/Dow Corning, St. Paul, MN www.3m.com
2. Hilti, Inc., Tulsa, OK (800) 879-8000 www.us.hilti.com

3. Specified Technologies Inc. / GE Pensil (STI), Somerville, NJ 08876, (800) 992–1180 www.stifierstop.com
4. Passive Fire Protection Partners (PFPP), www.firestop.com
5. Reviewed Equivalent by **Architect**.

    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIAL

A. General

1. Firestopping materials and systems shall meet the requirements specified herein.
2. Conditions are typical for all project conditions regardless if specifically noted or not.
3. All firestop products and systems shall be designed and installed so that the basic sealing system will allow the full restoration of the thermal and fire resistance properties of the barrier being penetrated with minimal repair if penetrations are subsequently removed.
4. **Owner** must approve in writing any alternates to the firestop systems and materials specified herein.
5. Compatibility: Provide firestop systems that are compatible with one another, with the substrates forming openings, and with the items, if any, penetrating through the firestop system, under conditions of service and application, as demonstrated by the firestop system manufacturer based on testing and field experience.
6. Accessories: Provide components for each firestop system that is needed to install fill materials and to comply with "Performance Requirements". Use only components specified by firestop systems manufacturer and approved by the qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:

    a. Permanent forming/damming/backing materials, including the following:

        1) Slag/rock-wool-fiber insulation
        2) Sealant used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state
        3) Fire-rated form board
        4) Fillers for sealant

    b. Temporary forming materials
    c. Substrate primers
    d. Collars and steel sleeves

2.3 MATERIAL - THROUGH-PENETRATION FIRESTOP SYSTEMS

A. Systems or devices listed in the UL Fire Resistance Directory under categories XHCR (firestop devices) and XHEZ (firestop systems) may be used, providing that they conform to the separate instance, and that the system symmetrical for wall applications.

B. Additional requirements: Withstand the passage of cold smoke either as an inherent property of the system, or by the use of a separate product included as a part of the UL system or devise, and designed to perform this function.

C. All through-penetration firestop system products must be from a single manufacturer.

1. All trades will use products from the same manufacturer.

D. **Acceptable products:** Those listed in the UL Fire Resistance Directory for the UL System involved and defined in the attached Systems and Applications Schedule or approved equal.

E. Design Schedule:

1. **1 & 2 Hour walls:**

a. Pipe penetrations - metallic

1) Size: 12″ dia or smaller
2) Material:

a) Schedule 10 or heavier
b) Service weight or heavier cast iron soil pipe
c) Class 50 or heavier ductile iron pressure pipe

3) Design Number: W-L-1001
4) Mfgr: 3M
5) Product: CP 25WB+

b. Conduit penetrations – metallic

1) Size: 6″ dia. or smaller
2) Material:

a) Steel conduit
b) Type L or heavier copper tubing

3) Design Number: W-L-1001
4) Mfgr: 3M
5) Product: CP 25WB+

c. Conduit penetrations – metallic

1) Size: 4″ dia. or smaller
2) Material:

a) Steel electrical metallic tubing

3) Design Number: W-L-1001
4) Mfgr: 3M

5) Product: CP 25WB+

d. Conduit penetrations – metallic

1) Size: 1" dia. or smaller
2) Material:
   a) Flexible steel conduit
3) Design Number: W-L-1001
4) Mfgr: 3M
5) Product: CP 25WB+

e. Pipe penetrations – non metallic

1) Size: 6" dia. or smaller
2) Material:
   a) Schedule 40 PVC pipe
   b) solid- core polyvinyl chloride
3) Design Number: W-L-2002
4) Mfgr: 3M
5) Product: FS – 195+, PPDs

f. Pipe penetrations – non metallic

1) Size: 4" dia. or smaller
2) Material:
   a) Schedule 40 PVC pipe
   b) Cellular core polyvinyl chloride
3) Design Number: W-L-2002
4) Mfgr: 3M
5) Product: FS – 195+, PPDs

g. Pipe penetrations – non metallic

1) Size: 4" dia. or smaller
2) Material:
   a) Schedule 40 ABS pipe
   b) Solid core acrytonitrile-butadiene-styrene (ABS)
3) Design Number: W-L-2002
4) Mfgr: 3M
5) Product: FS – 195+, PPDs

h. Pipe penetrations – non metallic

1) Size: 4" dia. or smaller
2) Material:

a) Schedule 40 ABS pipe
b) Fire retardant polypropylene (FRPP)

3) Design Number: W-L-2002
4) Mfgr: 3M
5) Product: FS – 195+, PPDs

i. Conduit penetrations – non metallic

1) Size: 4" dia. or smaller
2) Material:

a) Rigid non-metallic conduit formed of PVC

3) Design Number: W-L-2002
4) Mfgr: 3M
5) Product: FS – 195+, PPDs

j. Tubing penetrations – non metallic

1) Size: 1" dia. or smaller
2) Material:

a) Electrical non-metallic tubing formed of PVC

3) Design Number: W-L-2002
4) Mfgr: 3M
5) Product: FS – 195+, PPDs

k. Pipe penetrations – non metallic

1) Size: 6" dia. or smaller
2) Material:

a) Schedule 40 CPVC
b) Chlorinated polyvinyl chloride pipe (CPVC)

3) Design Number: W-L-2002
4) Mfgr: 3M
5) Product: FS – 195+, PPDs

l. Duct penetrations –metallic

1) Refer to mechanical documents and details for Fire/Smoke damper at this location.

m. Cable Tray penetrations –metallic

1) General:

a) Refer to pipe penetrations and electrical drawings.
b) Cable trays stop short of wall below access floor and continue thru wall via pipes.

2) Design No.:
3) Mfgr: 3M

4) Product:

n. Top of wall

1) Design Number:

a) Wall design: Gypsum Association, GA File No. ASW 1100
b) Top of Wall: As herein specified

o. Bottom of wall

1) Design Number:

a) Wall design: Gypsum Association, GA File No. ASW 1100
b) Bottom of Wall: Fire caulk between floor deck and gypsum board edge, refer to documents and details.

p. Wall Box protection

1) Size: 4" x4" max.
2) Material: Steel box
3) Design Number: CLIV
4) Mfgr: 3M
5) Product: Fire Putty

2.4 MATERIAL - CONSTRUCTION JOINT/GAP FIRESTOP SYSTEMS FOR FIRE-RATED ASSEMBLIES

A. General:

1. Fill, void or cavity materials listed in the UL Fire Resistance Directory under category XHHW may be used, providing it conforms to the construction type and fire rating involved in each separate instance.
2. Forming materials listed in the UL Fire Resistance Directory under category XHKU may be used, providing it conforms to the construction type and fire rating involved in each separate instance and meets UL 2079, ASTM E1966 and ASTM E2307.
3. Additional requirements: Withstand the passage of cold smoke either as an inherent property of the system, or by the use of a separate product included as a part of the UL system or devise, and designed to perform this function.
4. All construction joint/gap firestop system products must be from a single manufacturer. All trades will use products from the same manufacturer.
5. Acceptable products: Those listed in the UL Fire Resistance Directory for the UL System involved and defined in the attached Systems and Applications Schedule or approved equal.

B. Schedule of Top of Wall and Bottom of Wall, refer to heading 2.3.

2.5 MATERIAL - COMPOSITION EDGE BANDING AND CORE MATERIAL FIRESTOP SYSTEMS FOR FIRE-RESISTANT- FIRE-RATED DOORS/WINDOWS

A. General:

1. Fire-resistive rated door and window fire seal material listed and tested in compliance with UBC 7-2 (positive pressure), and UL 10C standards.
2. Additional requirements: withstand the passage of cold smoke either as an inherent property of the system, or by the use of a separate product included as a part of the UL system or devise, and designed to perform this function.
3. All composition edge banding and core material firestop system products must be from a single manufacturer. All trades will use products from the same manufacturer.
4. Acceptable products: Those listed in the UL Fire Resistance Directory for the UL system involved and defined in the material schedule below:

B. Schedule:

1. Fire resistive seal

a. 3M Graphite Intumescent Seal (GIS), 1/16" thick by ½" wide, flexible, adhesive backed, fiber/latex mat, containing highly expandable graphite.

1) Form: Supplied in roll form with adhesive backing and release liner

2. Color: Gray, black, dark brown as selected by **Architect**
3. Mfgr: 3M

2.6 MATERIAL - FIRESTOP SYSTEMS FOR ELECTRICAL POWER/LOW VOLTAGE PASSING THOUGH FIRE-RESISTANT-RATED WALLS.

A. General:

1. Electrical systems protection material listed in UL-classified systems UL-classified systems UL 1709, ASTM E119, ASTM E1529 and ASTM E1725.
2. All electrical firestop system products must be from a single manufacturer.
   a. All trades will use products from the same manufacturer.
3. **Acceptable products:** Those listed in the UL Fire Resistance Directory for the UL System involved and defined in the material schedule below:

1) Fire resistive mats: 3M Interam Endothermic Mats, .3" or .4" thick, 24.5" or 49" wide x 16'. 20', or 25; long rolls, foil encapsulated with 3M logo
2) Smoke and Flame Sealant: 3M FireDam 150 Caulk or Hilti FS-One Firestop sealant
3) Foil tape: 3M Interam T-49 Aluminum Foil Tape – used as a vapor barrier, radiant heat reflector, and installation aid
4) General Purpose Tape: Scotch 898 Filament Tape – used as installation aid
5) Composite Sheet: 3M Fire Barrier CS-195+ Composite Sheet – used to cover openings and as a collar at the termination of the fire protection envelopes
6) Firestoppoing Caulk: 3M Fire Barrier CP 25WB+ Caulk – used as a smoke and flame sealant
7) Firestopping Blocks: Hilti FS675 Fire Blocks

B. Schedule of Wall Penetrations, refer to heading 2.3

2.7 MATERIAL - WALLS SYSTEMS FOR FIRE-RATED ASSEMBLIES

A. General:

1. Assemblies:

   a. Top of Walls
   b. Bottom of Walls
   c. Construction Joints
   d. Construction Gaps
   e. Firestopping

2. Forming Material – Mineral Wool Fire Safing materials listed in the UL Fire Resistance Directory which conform to the construction type and fire rating involved in each separate instance.

   a. Density of material as dictated by UL Design requirements.

3. Forming materials listed in the UL Fire Resistance Directory under category XHKU may be used, providing it conforms to the construction type and fire rating involved in each separate instance and meets UL 2079 and ASTM E1966.
4. Fill, void or cavity Material – Spray applied "Fire Spray" material listed in the UL Fire Resistance Directory which conform to the construction type and fire rating involved in each separate instance and in accordance with listed product and manufacturer.
5. Additional requirements: Withstand the passage of cold smoke either as an inherent property of the system, or by the use of a separate product included as a part of the UL system or devise, and designed to perform this function.
6. Acceptable products: Those listed in the UL Fire Resistance Directory for the UL "HW-D" System involved and defined in the attached Systems and Applications Schedule or approved equal.

B. Schedule:

1. Top of wall

   a. Wall design:

      1) 1 Hour: Gypsum Association, GA File No. WP 1072

   b. Schedule:

1) UL Design:	Sealant	Mineral Wool:	Firespray:
a) HW-D-0024	PFPP, 4100NS, 4800DW, 3600EX	None	None
b) HW-D-0077	Hilti CP606	None	None
c) HW-D-0103	SpecSeal ES	None	None
d) WH-D-0111	3M FD-150+	None	None
e) HW-D-0144	WR Grace FS 900+	None	None
f) HW-D-0144	WR Grace FS 1900	None	None
g) HW-D-0256	TREMCO TREMstop	None	None

2. Bottom of Wall

   a. Design Number:
   b. Wall design:

1) 1 Hour: Gypsum Association, GA File No. WP 1072
2) 2 Hour: Gypsum Association, GA File No. WP 1522

c. Schedule:

1) UL Design: _____

a) BW-S-0004 – PFPP sealant
b) BW-S-0007 – 3M sealant

2) Sealant/Caulking:

a) Passive Fire Protection Partners (PFPP)

i. 4100NS
ii. 4800DW
iii. 3600EX

b) 3M

i. FB 1000 NS
ii. FB-2000
iii. FB-2000+
iv. FB-3000 WT sealant
v. FireDam 150+
vi. IC 15WB+
vii. CP 25WB+

d. Bottom of Wall: Fire caulk between floor deck and gypsum board edge, refer to documents and details.

2.8 MATERIAL – AIR DUCT WRAP SYSTEM

A. General:

1. Rating: 2-hour fire-resistive rated air duct enclosure materials listed in the UL Fire Resistance Directory under.
2. Product:

a. Mfgr: 3M

1) Hilti is optional mfgr.

b. Materials:

1) Wrap: 615+
2) Tape:

a) Model: 5A

i. High performance filament tape.
ii. Aluminum foil tape: Minimum 3” wide to seal cut blanket edges

3) Banding Material:

a) Carbon steel banding for < 1 – hour ratings; ½" to ¾" wide x 0.015" thick minimum
b) 304 Stainless Steel banding for 2-hour ratings; ½" to ¾" wide x 0.015" thick minimum

4) Insulation pins/washers:

a) Pins: 10 gauge, 4" to 5" long, copper coated steel; washers: 1.5" x 1/5" or 1.5" diameter galvanized steel speed clip

5) Through-penetration fire stop materials:

a) Packing material: Scrap pieces, 3M FireMaster Duct Wrap, 1.5" thick or 3 pcf mineral wool
b) 3M FB-2000+ Silicone Sealant

6) Grease duct access door:

a) Single angle opening frame
b) Access cover, minimum 16 gauge
c) Insulation pins
d) Speed clips, minimum 1.5" x 1.5" or 1.5" diameter galvanized steel

7) Hardware:

a) Threaded rods: 4" to 5" long, ¼" diameter galvanized steel with 1/4" wing nuts and 1/4" metal washers
b) 4" long steel hollow tubing to fit threaded rods

c. UPC #: As listed for each product and size
d. Compliance:

1) Testing:

a) ASTM:

i. ASTM C 518
ii. ASTM C 1338
iii. ASTM E 84
iv. ASTM E 119
v. ASTM E 136
vi. ASTM E 814
vii. ASTM E2336 grease duct standards

b) NFPA:

i. NFPA 92A
ii. NFPA 92B
iii. NFPA 96
iv. NFPA 101
v. NFPA 252 (UL 910)

c) ISO: ISO 6944 air duct test standard
d) ICC:

i. ICC ES AC101
ii. ICC-ES, ESR-1255

e) California State Fire Marshall
f) Third party:

i. Air Duct:

a. Intertek:

i). 3MU/FRD 120-15: Rectangular, 24" x85"
ii). 3MU/FRD 120-04: Round, 40" diameter

ii. UL: HNLJ.V-27

2) Surface burning and smoke compliance:

a) Flame Spread: <25 ASTM E 84
b) Smoke developed: <50 ASTM E 84

3. Design:

a. Air Duct:

1) Duct system:

a) Duct type:	Testing organization:	Design #:	Rating:
i. Rect. or round	UL	V-27	1 or 2 hour

2) Details:

a) General: UL Testing
b) Schedule:

i. Condition:	Type	Design #:	Rating:
a. 2hr.Metal stud wall	85" x 24" max	W-L-7180	2hr. – F & T
b. Conc./U wall	85" x 24" max	W-J-7104	2hr. – F & T
c. 1hr.Floor/Clg. – wd.	48" x 20" max	F-C-7054	1hr. – F & T
d. 2hr.Metal stud wall	10"dia. stl,sched 10 min	W-L-132340	2hr. – F & T
e. 2hr.Metal stud wall	10"dia. cast/ductile iron	W-L-132340	2hr. – F & T
f. 2hr.Metal stud wall	4"nom.dia. max.	W-L-132340	2hr. – F & 1.25 hr. T
1. Type L or heavier copper			
g. 2hr.Metal stud wall	4"nom.dia. max.	LW-L-132340	2hr.F & 1.25 hr. T
1. Regular type or heavier copper			

2.9 MATERIALS- SCHEDULE GENERAL

A. General:

1. Comply with design criteria.

B. Schedule:

1. Materials including these and as indicated in specific designs including, but not limited to;

a. Intumescent Firestop Sealants and Caulks:

1) 3M Fire Barrier Caulk CP25WB+
2) Hilti FS-One Firestop Sealant
3) STI SpecSeal S100 and S500 Sealant

b. Latex/Acrylic Firestop Sealant: (CP606 is an acrylic based firestop sealant)

1) STI SpecSeal LC150 Sealant
2) Hilti CP606 Flexible Firestop Sealant

c. Silicone Firestop Sealants and Caulks:

1) 3M Fire Barrier Silicone Sealant
2) Hilti CP601S Elastomeric Firestop Sealant
3) STI SpecSeal Pensil 100 and 300

d. Firestop Putty:

1) 3M Fire Barrier Moldable Putty
2) Hilti CP617/CP618 Putty Pads & Putty Stick
3) STI SpecSeal Firestop Putty Bars and Pads

e. Firestop Spray (head of wall joint):

1) Hilti CP 672 Firestop Joint Spray

a) Color: White
b) Paintable: yes

2) STI SpecSeal Elastomeric Acrylic Firestop Spray

f. Firestop Collars:

1) 3M Fire Barrier PPD's
2) Hilti CP642/643 Firestop Collars
3) STI SpecSeal Firestop Collars

g. Wrap Strips:

1) 3M Fire Barrier FS195 Wrap Strip
2) Hilti CP 645 Firestop Wrap Strip
3) STI SpecSeal Pensil 200

h. 2- Part Silicone Firestop Foam:

1) 3M Fire Barrier 2001 Silicone Foam
2) STI SpecSeal Pensil 200
3) CP 620

i. 2-Part Polyurethane Firestop Foam

1) Hilti CP 620 Fire Foam

j. Firestop Mortar:

1) STI SpecSeal Mortar
2) Hilti CP 637 Firestop Mortar

k. Composite Board:

1) 3M Barrier Sheet Material

l. Accessories:

1) Forming / Damming Materials: Mineral fiberboard or other type as per manufacturer recommendations.

m. Fire Safing and clip fasteners (Use Weight "pcf" as required by fire rated design)

1) Owens Corning, Safing Insulation, Mineral Wool

n. Hilti, Speed Plugs, CP 772 x 2" and/or CP 777 x 3" (Fire Safing at metal deck flutes)Firestop Blocks/Bags/Pillows

1) Hilti FS657 Fireblock

o. Cast-in-Place Firestop Devices

1) Hilti CP 680 Cast-in-Place Firestop Devices

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

C. Examine areas and conditions under which firestop system is to be installed and notify the **Architect** of conditions detrimental to proper or timely completion of the work.

D. Examine substrates to determine they are satisfactory to receive firestop system materials.

1. Conduct tests according to firestop systems manufacturer's written recommendations to verify that substrates are free of oil, grease, rolling compounds, incompatible primers, loose mill scale, dirt or other foreign substances capable of impairing bond of fire-resistive materials.

2. Verify objects penetrating firestop materials, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
3. Verify substrates are not obstructed by ducts, piping, equipment, and other suspended construction that will interfere with applying fire-resistive materials.

E. Do not proceed with installation of firestop system until unsatisfactory conditions have been corrected by the **General Contractor** in a manner acceptable to the **Architect**.

F. Where necessary, cleaning of surfaces to receive firestopping shall be the responsibility of the **General Contractor**.

1. Remove incompatible materials, which affect bond.

G. Insure that all clips, hanger supports, and other attachments for items that affect the firestopping material have been placed in their final position.

H. Verify that environmental conditions are safe and suitable for installation of firestop products.

I. Verify that all pipe, conduit, cable, and other items, which penetrate fire - rated construction, have been permanently installed prior to installation of firestops.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

C. Coordinate construction and sizing of sleeves, openings, core-drilled holes, cut openings and penetrating items to ensure that firestop systems are installed according to specified requirements.

D. Notify **Owner,** inspecting agency, General Contractor, and subcontractor at least seven days in advance of firestop system installations; confirm dates and times on days preceding each series of installations.

E. Do not cover-up or conceal firestop system installations behind other construction until **Owner,** inspecting agency and building inspector, if required by authorities having jurisdiction, have examined each installation.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Clean and repair substrates that could impair the adhesion or proper fitting of firestop materials, including oil, grease, rolling compounds, incompatible primers, and loose mill scale.

C. Secure all pipes, conduit, cable and other items, which penetrate firestop materials.

D. Provide masking and temporary covering, as required, to prevent contamination of adjacent surfaces by firestop materials.

3.4 CONDITIONS REQUIRING FIRESTOPPING - GENERAL

A. General:

1. Provide and install firestopping for conditions specified whether or not firestopping is indicated, and if indicated, whether such material is designed as insulation, safing, or otherwise.

B. Through - Penetrations:

1. Firestopping shall be installed in all open penetrations and in the annular space in all penetrations in any bearing or non-bearing fire - rated barrier.

C. Construction Joints / Gaps:

1. Firestopping shall be provided and installed:

a. Between the head of walls and the underside of structure above.
b. At intersection of rated wall partitions and walls.

D. Smoke - Stopping:

1. As required per ASTM E-814 testing and in accordance with building and fire codes:

a. As required by the other Sections, Smoke - Stops shall be provided for Through - Penetrations, Membrane - Penetrations, Construction Gaps and edge of floor to wall conditions with a material/system approved.

3.5 INSTALLATION

A. General:

1. Installation of firestops shall be performed by an applicator/installer qualified and trained by the manufacturer.
2. Installation shall be performed in strict accordance with manufacturer's detailed instruction procedures.
3. Apply firestops in accordance with fire test reports, fire resistance requirements, acceptable sample installations, and manufacturer's recommendations.
4. Unless specified and approved and retested, all insulation used in conjunction with through - penetrations shall remain intact and undamaged and may not be removed.
5. In high traffic, protect firestopping materials from damage.

a. If the opening is large, install firestopping materials capable of supporting the weight of a human.

6. All combustible penetrates (e.g. non - metallic pipes) shall be firestopped using products and systems tested in a configuration representative of the field conditions.

B. Dam Construction:

1. When required to properly contain firestopping materials within openings, damming or packing materials may be utilized.

a. U.L. approved combustible backer rod material may be used when part of tested assembly.
b. Noncombustible damming materials may be left as permanent component of the firestop system.

C. Extend firestop material in full thickness over entire area of each substrate or opening to be protected.

D. Protect firestop material from damage on surfaces subject to traffic/construction.

E. Consult with mechanical engineer, project manager and damper manufacturer prior to installation of UL Firestop systems that might hamper the performance of fire dampers as it pertains to duct work.

3.6 INSTALLATION -THROUGH-PENETRATION FIRESTOP SYSTEMS

A. General:

1. Install through-penetration firestop systems to comply with "Performance Requirements" and firestop systems manufacturer's written installation instructions and published drawings for products and applications indicated. (See "Through-penetration Firestop Systems Schedule")
2. Install forming/damming/backing materials and other accessories or types required to support fill material during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.

    a. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop system.

3. Install fill materials for firestop systems by proven techniques to produce the following results:

    a. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items as required to achieve fire-resistance ratings indicated.
    b. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
    c. For fill materials that will remain exposed after completing work, finish to produce smooth, uniform surfaces that are flush with adjoining surfaces.

B. Field Quality Control

1. Proceed with inclosing through-penetration firestop systems with other construction only after inspection and approval by code authorities.
2. Where deficiencies are found, repair or replace through-penetration firestop systems so they comply with requirements.
3. Inspection Agency: If required, **Owner** will engage a qualified independent inspecting agency to inspect through-penetration firestop systems comply with or deviate from requirements.

C. Identification

1. Typical:

    a. Type: Identify through-penetration firestop systems with pressure-sensitive, self-adhesive, preprinted vinyl labels.
    b. Installation: Attach labels permanently to surfaces of penetrated construction on both sides of each firestop system installation where labels will be visible to anyone seeking to remove penetrating items or firestop systems.
    c. Supplied by: Label shall be as supplied by 3M
    d. Exposed conditions shall be coordinated with **Architect** and **Owner** for application.

D. Cleaning and Protection

1. Clean off excess fill materials adjacent to openings as work progresses by methods and with cleaning materials that are approved in writing by through-penetration firestop systems manufacturer and that do not damage materials in which openings occur.
2. Provide final protection and maintain conditions during and after installation that ensure through-penetration firestop systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs, cut out and remove damaged or deteriorated through-penetration firestop systems immediately and install new materials to produce through-penetration firestop systems complying with specified requirements.

3.7 INSTALLATION OF CONSTRUCTION JOINT FIRESTOP SYSTEM

A. General:

1. Install construction joint firestop systems to comply with "Performance Requirements" and firestop systems manufacturer's written installation instruction and published drawings for products and applications.
2. Install forming/damming/backing materials and other accessories of types required to support fill material during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
    a. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop system.
3. Install fill "Forming Materials" for firestop systems by proven techniques to produce the following results:
    a. Fill voids and cavities formed by openings, forming materials, and accessories as required achieving fire-resistance ratings indicated.
    b. Apply materials so they contact and adhere to substrates formed by openings.
    c. For fill materials that will remain exposed after completing work, finish to produce smooth, uniform surfaces that are flush with adjoining surfaces.

B. Field Quality Control

1. Proceed with enclosing construction joint firestop systems with other construction only after inspection and approval code authorities.
2. Where deficiencies are found, repair or replace construction joint firestop systems so they comply with requirements.
3. Inspection Agency: If required, **Owner** will engage a qualified independent inspecting agency to inspect construction joint firestop systems comply with or deviate from requirements.

C. Cleaning and Protection

1. Clean off excess fill materials adjacent to openings as work progresses by methods and with cleaning materials that are approved in writing by construction joint firestop systems manufacturer and that do not damage materials in which openings occur.
2. Provide final protection and maintain conditions during and after installation that ensure constriction joint firestop systems are without damage or deterioration at time of substantial completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated construction joint firestop systems immediately and install new

materials to produce construction joint firestop systems complying with specified requirements.

3.8 INSTALLATION OF DUCT WRAP FIRESTOP SYSTEMS – AIR AND GREASE

A. General:

1. Install Grease Duct and Air Duct wrap firestop system to comply with firestop system manufacturer's written installation instructions and published drawings for products and applications indicated.
2. Install in accordance with listed and approved testing designs.
3. Install duct wrap firestop system in direct contact with the duct type and size that is enclosed.
    a. Protect every portion of duct with no less than listed layers of wrap.
    b. Overlap both perimeter and longitudinal joints with listed dimensional requirements.
4. Locate grease duct access doors at horizontal cleanouts are required by local codes.
    a. Protect with layers of duct wrap firestop system material as listed and overlapping previous layers on all sides and in accordance with manufacturer's instructions.
5. Protect floor and wall penetrations with an approved through-penetration firestop system having an F and T hourly rating not less than that of the assembly penetrated and installed in accordance with manufacturer's instructions as follows:
    a. **Grease Ducts (1 or 2-hour enclosure**):
        1) Option A: 2 layers of duct wrap firestop system material per manufacturer's installation instructions, maintaining 3" transverse and longitudinal overlaps continuous through the penetration.
        2) Option B: Tightly butt duct wrap firestop system material to the floor or wall on both sided of the assembly. Fill remaining annular space (3" minimum) between the wrapped duct (Option A) or bare steel duct (Option B) and periphery of the opening with 4 ¼" thickness of scrap duct wrap firestop opening. Apply ¼" minimum 2000+ Silicone over packing material, within the annulus, flush with top surface of floor or both surfaces of wall.
    b. **Air Ducts (1-hour enclosure):**
        1) Option A: 1 layer duct wrap firestop system material per manufacturer's installation instructions, maintaining 3" transverse and longitudinal overlaps or optional 3" perimeter overlap with longitudinal butt joints plus duct wrap firestop system collar over exterior layer joints.
        2) Option B: Tightly butt duct wrap firestop system material to the floor or wall on both sides of the assembly. Fill remaining annular space between the wrapped duct (Option A) or bare steel duct (Option B) and periphery of the opening with 4 ¼" thickness of scrap duct wrap firestop material or 4 1'4" pcf material wool batt firmly packed into opening. Apply ¼" minimum 2000+ Silicone over packing material within the annulus, flush with top surface of floor or both surfaces of wall.
    c. **Air Ducts (2-hour enclosure):**

1) Same as 1-hour air duct enclosure system except apply 2 layers of duct wrap firestop system material per manufacturer's installation instructions.

B. Repair Procedure

1. Repair damaged duct wrap firestop system material in accordance with manufacturer's instructions.
2. Remove damaged section. Apply a new section of the same dimension. Place and fit ensuring same overlap that existed previously. Place banding around new duct wrap firestop system material and tension to sufficiently hold in place.
3. If damage has penetrated to interior layer, remove affected sections and reinstall inb accordance with manufacturers written specifications.

3.9 INSTALLATION OF COMPOSITION EDGE BANDING AND CORE MATERIAL FIRESTOP SYSTEMS

A. Preparation

1. Clean surfaces to be in contact with adhesive face of intumescent seal material of dirt, grease, oil, loose materials, rust or other substances that may affect proper fitting and adhesion.

B. Installation

1. Peel off release liner and press graphite intumescent seal (GIS) into place around door/window frame (head and jamb) at point of contact between door and frame
2. Trim off excess and paint to match the frame

3.10 FILL AND FORMING MATERIALS

A. Installation

1. Forming Material:

a. Install and repair endothermic mats in accordance with manufacturer's published installation guidelines and drawing packages
b. Compression fit in accordance with UL Design and product manufacturer's recommendations.
c. Fit between flutes for tight fit prior to application of Fill Material – Fire Spray.

2. Fill Material:

a. Install in accordance with product manufacturer's recommendations.
b. Spray applied products shall be install in accordance with UL Design and product manufacturer's recommendations.
c. Install with proper overlap onto gypsum wallboard and metal deck and/or concrete deck in accordance with UL Design and manufacturer's recommendations.

3. General:

a. See Through Penetration Firestop System Schedule for penetrating items for UL approved systems

3.11 FIELD QUALITY CONTROL

A. Prepare and install firestopping systems in accordance with manufacturer's printed instructions and recommendations.

B. Follow safety procedures recommended in the Material Safety Data Sheets.

C. Finish surfaces of firestopping, which are to remain exposed in the completed work to a uniform and level condition.

D. All areas of work must be accessible until inspection by the applicable Code Authorities.

E. Correct unacceptable firestops and provide additional inspection to verify compliance with this section.

3.12 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer’s recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.
Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of “Certificate of Substantial Completion”.

END OF SECTION 07 84 00

SECTION 07 92 00 – SEALANTS AND CAULKING

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Furnish and install primers, sealant, caulking and back-up material where required, as indicated and as herein specified to provide a weather-tight building, including, but not limited to**:**

a. Sealant joints
b. Lap joints
c. Troweled sealant bed below thresholds, sill flashings, etc.
d. Sealant bed under door thresholds
e. Sealant at wall to floor and wall to deck / structure, acoustical and non-acoustical assemblies

1) Rated conditions; refer to Section 07 84 00 – Firestopping

f. Sealant around all wall penetrations, acoustical and non-acoustical assemblies

1) Rated conditions; refer to Section 07 84 00 – Firestopping

2. Furnish and install two side adhesive tapes and primers.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Architectural Manufacturers Association (AAMA)

1. AAMA 850 - Voluntary Specifications and Test Methods for Sealants

E. American Concrete Institute (ACI)

1. ACI 302.1R - Guide for Concrete Floor and Slab Construction.

F. American Society for Testing and MATERIALS (ASTM):

1. ASTM C412 - Standard Specification for Concrete Drain Tile
2. ASTM C510 - Multi Component Joint Sealants
3. ASTM C603 - Standard Test Method for Extrusion Rate and Application Life of Elastomeric Sealants
4. ASTM C639 - Standard Test Method for Rheological (Flow) Properties of Elastomeric Sealants
5. ASTM C661 - Standard Test Method for Indentation Hardness of Elastomeric-Type Sealants by Means of a Durometer
6. ASTM C719 - Adhesion & Cohesion of Elastomeric Joint Sealants under Cycle Movement
7. ASTM C790 - Guide for Use of Latex Sealants.
8. ASTM C792 - Effects of Heat Aging on Weight Loss, Cracking & Chalking of Elastomeric Sealants
9. ASTM C794 - Adhesion and Peel of Elastomeric Sealants
10. ASTM C804 - Practices for Use of Solvent - Release Type Sealants.
11. ASTM C834 - Specifications for Latex Sealing Compounds.
12. ASTM C881 - Specifications for Epoxy - Resin Bonding Systems for Concrete.
13. ASTM C919 - Practices for Use of Sealants in Acoustical Applications.
14. ASTM C920 - Specification for Elastomeric Joint Sealants.
15. ASTM C1135 - Standard Test Method for Determining Tensile Adhesion Properties of Structural Sealants
16. ASTM C1184 - Specification for Structural Sealants.
17. ASTM C1193 - Standard Guide for Use of Joint Sealants.
18. ASTM C1247 - Standard Test Method for Durability of Sealants Exposed to Continuous Immersion in Liquids
19. ASTM C1248 - Staining of Porous Substrates by Joint Sealants
20. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers-Tension
21. ASTM D614 - Tear strength
22. ASTM D624 - Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers
23. ASTM D1149 - Standard Test Method for Rubber Deterioration-Surface Ozone Cracking in a Chamber
24. ASTM D1850 - Specification for Concrete Joint Sealer Cold-Application Type
25. ASTM D2240 - Standard Test Method for Rubber Property - Durometer Hardness
26. ASTM D3960 - Standard Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings
27. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials

G. Federal Specifications (FS):

1. SS-S-200E Sealants, joint, Two - Component, Jet - Blast - Resistant, Cold - Applied, for Portland Cement Paving

2. TT-S-001657 Sealing Compound: Single Component, Butyl Rubber Based, Solvent ReleaseType (For Buildings and Other Types of Construction)
3. TT-S-00227E All multi-component, cold applied formulations for sealing, glazing, etc. in buildings
4. TT-S-1543A One-part silicone based cold applied non-sag formulations for sealing, glazing, etc. in buildings

H. Sealant, Waterproofing and Restoration Institute (SWRI) - Sealant and Caulking Guide Specification. www.swrionline.org

I. Underwriters Laboratories (UL):

1. UL 263

J. Dow Corning:

1. Technical Manual
2. Accelerated Weathering and Heat Stability of Various Perimeter Sealants
3. Application and Maintenance Guide, ALLGuard Silicone Elastomeric Coating
4. Waterproofing Sealant Guide

K. Laticrete installation instructions and literature for System Warranty assemblies and sealant applications.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Sealant	Refer to Materials Heading(s)	Refer to Materials Heading(s)	Refer to Materials Heading(s)
Primers	Refer to Materials Heading(s)	Refer to Materials Heading(s)	Refer to Materials Heading(s)
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Monitoring/Observations by others:**

Item	**Name of Test**	**Performance Results**	**By Whom**
Sealant and backer rod	Const. Waste Management	Comply	Refer to Division 1 for construction waste management and disposal/recycling requirements

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit the following items for **Architect's** review; refer to Section 01 33 00 – Submittal Procedures for definitions, specific requirements for each type of submittal, and minimum quantities.

1. Manufacturer's Product & Technical Data
2. Manufacturer MSDS Sheets
3. Manufacturer Installation Instructions
4. Samples:

a. Digital samples will not be accepted for any product requiring color selection by **Architect**.
b. When indicate by these specifications, drawings or associated specifications, provide sample of required Custom color for **Architect's** review.

1.5 MOCK-UPS:

A. Erect an Assembly Mockup at Project site at location acceptable to **Owner** and **Architect**.

1. Refer to individual specification sections for coordination with other Assembly components.
2. Refer to Section 01 33 00 – Submittal Procedures for additional information relating to Mock-Ups.

1.6 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

C. **Manufacturer** shall have been in business for **ten (10)** years providing/installing/finishing similar size projects and complexity.

D. Sealants, which come in contact with each other, shall be of same manufacturer and sealant type to ensure that materials, which come in contact with one another, will be compatible. Installer shall supply a letter from the manufacturer certifying the compatibility of all sealants with one another, and with all construction materials with which they will come in contact on the project.

E. Lead Times**:**

1. **General Contractor** shall coordinate with supplier to verify product lead times during bids and at award of contract, and account for such lead times in their costs and schedules.
2. **General Contractor** shall provide an itemized list of materials which might have or are confirmed to have a lead time problem and what the anticipated lead time is.

3. **General Contractor** shall certify in writing that all materials have acceptable lead times as they relate to availability for sub-contractor and **General Contractor** to meet construction schedule and sequence of construction.

F. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid

G. Stipulations:

1. All work must be installed in accordance with SWRI Guide Specifications and ASTM C1193.
2. Perform acoustical sealant application work in accordance with ASTM C919.

H. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.
Agenda for meeting shall include, but not be limited to;

1. Substrate preparation
2. Colors and where applied
3. Sequence of sealant installation and other paints, sealers, etc.
4. **General Contractor** shall request meeting 5 days in advance of construction.

I. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.
Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements.
Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

J. Miscellaneous criteria:

1. Manufacturer to instruct applicator in procedure for intersecting sealants.
2. Workmanship shall be of the highest quality in accordance with the best practice, an in strict

1.7 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver materials in factory sealed containers with manufacturer's original labels attached.

1.8 JOB CONDITIONS

A. Field verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Do not apply sealants at temperatures below 40ºF (4ºC) unless additional steps are taken to prevent freezing and frost buildup.

C. Apply waterproofing, water repellents, and preservatives after application of sealants unless manufacturer's approval is obtained prior to applying sealant.

1.9 PROTECTION

A. Protect finish surfaces at all times from concrete adjacent to them.

B. Inspect forming against such work and establish tight leak proof seal before concrete is placed within or against the forming.

C. Finish work defaced with concrete on surface shall be replaced.

D. Concrete to be left exposed: Do not place materials such as Visqueen or Burlap, etc. on concrete, which might leave a pattern and/or imprint.

1.10 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **twenty (20)** year "Weather Seal" warranty/warrant agreeing to replace sealant material work which has failed as a result of defects in materials or workmanship.

1. Upon notification of Owner within the warranty period, such defects shall be repaired and replaced at no cost to the Owner.

1.11 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Water tight wall penetrations
2. Air tight wall penetrations
3. Wall construction
4. Floor construction
5. Ceiling construction
6. Roof construction
7. Windows, doors, etc.
8. Site work / flatwork and paving
9. Flashing
10. Door thresholds

B. Related sections include, but are not limited to the following:

1. Division 1
2. Section 07 84 00– Firestopping

1.12 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.13 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

1.14 EXTRA MATERIAL

A. Submit as part of project closeout:

1. Provide extra material for each product type, color, finish, etc. in same lot as installed product.
    a. Furnish written certification that extra materials supplied have been inspected and Re-confirmed to be the same as those used in the work.
2. Provide extra material in unopened fully labeled containers.
    a. Do not supply anything less the full carton containers.
    b. Furnish in factory packaged and labeled cartons and identify cartons with Project name.
    c. Deliver materials to project premises just prior to substantial completion, and store in the location directed by the **Owner**.
3. Provide the following:
    a. 6 tubes/ sausages of each type and color of sealant used.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturer shall be one of the following and as herein listed and in Drawings:

1. Exterior: Dow Corning, www.dowcorning.com
2. Interior at specific locations: Pecora Corporation, www.pecora.com
3. Interior typical unless indicated otherwise: Dow Corning, www.dowcorning.com
4. Interior Tile installation, Typical Laticrete, www.laticrete.com or Merkrete
    a. Refer to Section 09 30 00 – Tile and Stone for warranty criteria for assembly
5. Two sided adhesive tapes: 3M, http://solutions.3m.com
6. Mastic / Sealant to set door thresholds in: Tremco, www.trimcosealants.com
7. Reviewed Equivalent by **Architect**.
    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures

c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.
d. No acceptable substitutions for exterior 100% silicone sealants, unless herein otherwise indicated.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS – SEALANT JOINT SCHEDULE

A. **Sealant- Exterior Joints:**

1. General:

a. Intent is that buildings be rendered weathertight in every respect.
b. Intent is that wall and roof assemblies be rendered watertight at sealant joints.
c. Render wall penetrations airtight.
d. Render bottom of wall conditions airtight.
e. Workmanship shall be of the highest quality in accordance with the best practice, an in strict compliance with the recommendations of the manufacturer of the material being used.

2. Horizontal and Vertical joints, typ. u.o.n., including but not limited to:

a. Concrete, Masonry, Natural Stone, Simulated Stone, Terra Cotta and Wood:

1) Dow Corning: 795 Type 3

b. Painted Metals, Anodized Aluminum, Mill Finish Aluminum, PVC, Glass, Ceramic and/or Porcelain Tile, Glazed Terra Cotta, Glazed Ceramic and/or Porcelain tile:

1) Dow Corning: 795 Type 3

c. Concrete Flatwork:

1) Dow Corning SL (Self Leveling) Type 6 – Level Conditions
2) Dow Corning NS (Non Sag) Type 6 – Sloped conditions

3. Metal Coping: (Cross joints)

a. Dow Corning: 795 Type 3

4. Vertical concealed joints in:

a. Metal curtain wall, lapped joints, and metal building panels:

1) Dow Corning: 795 Type 3

b. Exterior Gypsum Sheathing:

1) Dow Corning: 795 Type 3

c.	Vehicular drives:	Dow Corning	FC (Fast Cure)	Type 5 – Extreme movement conditions
d.	Dow Corning	SL (Self Leveling)		Type 5 – Level conditions
e.	Dow Corning	NS (Non Sag)		Type 6 – Sloped conditions

B. **Sealant - Interior Joints – Horizontal and Vertical:**

1. Expansion and control joints, typ. u.o.n.:
   a. Non – Sanitary conditions:
      1) Pecora Dynatred 40+ Type 10
   b. Horizontal traffic surfaces
      1) Pecora Dynatred 40+ Type 10
   c. Subject to heavy traffic loads or point loading such as high heel traffic:
      1) Pecora Dynatred 40+ Type 10
   d. Warehouse Floors
      1) Sonneborn EPOLITH - P Type 12 Horizontal applications
      2) Sonneborn EPOLITH - G Type 12 Vertical applications
2. Trim or finish joints subject to minimal movement:
   a. Pecora AC-20 + Silicone Type 9
3. Concealed applications:
   a. Requiring acoustical seal:
      1) Pecora AC-20 + Silicone Type 9
      2) Pecora AC-20 FTR Type 9 (Rated conditions)
   b. Base of wall between gypsum board and concrete floor:
      1) Pecora AC-20 + Silicone Type 9
      2) Pecora AC-20 FTR Type 9 (Rated conditions)
   c. Wall penetrations seal:
      1) Pecora AC-20 + Silicone Type 9
      2) Rated conditions: refer to Section 07 84 00 – Firestopping
4. Horizontal and vertical joints exposed to harsh chemicals:
   a. Pecora GC-2 Synthacalk Type 13

2.3 MATERIALS – SEALANT SPECIALTY SCHEDULE

A. Below Door Thresholds:
   1. Application: Set threshold in full bed of sealant also indicated as mastic

2. Product options:

    a. Mfgr: Tremco
    b. Type: One part polyurethane
    c. Model: Vulkem 116
    d. Color: Black
    e. Application: 1/2" thick maximum bed prior to compressing down with threshold

B. Below Storefront and/or Curtainwall Sill Mullions:

1. Application: Set sill in full bed of sealant also indicated as mastic

2. Product options:

    a. Mfgr: Tremco
    b. Type: One part polyurethane
    c. Model: Vulkem 116
    d. Color: Black
    e. Application: 1/2" thick maximum with bed prior to compressing down with threshold

2.4 MATERIALS - SEALANTS / CAULKING TYPES

A. Schedule and Data:

1. **Sealant Type 1:**

    a. Type: Single component, ultra low modulus, silicone rubber sealant;
    b. Standards

        1) ASTM: C661, C679, C719, C794, C1135, C1248, D412, D624, D2240, D3960
        2) VOC: 43g / liter max.

    c. Movement capability: 100% extension, 50% compression.
    d. Mfgr: Dow Corning
    e. Product: **790** Silicone Building Sealant – H.P.
    f. Features: USDA approved
    g. Primer: Refer to Table I of Spec-Data sheet for sealant, to include:

        1) 1200 Prime Coat
        2) 1593 Cleaner/Primer

    h. Backer rod / Tape:

        1) Closed-cell polyethylene, non-gasing polyolefin, polyethylene tape
        2) Open-cell polyurethane required at nonporous substrates
        3) Open-cell polyurethane required at double joint conditions

    i. Colors:

        1) **Architect** to pick color(s) from mfgr's full line of colors.

2. **Sealant Type 2:**

   a. Type: Single component, medium modulus, elastomeric silicone sealant;
   b. Standards
      1) ASTM: C603, C639, C679, C794, C1135, C1248, D624, D2240, D3960
      2) VOC: 46g / liter max.
   c. Movement capability: 50% extension, 50% compression.
   d. Manufacturer: Dow Corning
   e. Product: **791** Silicone Perimeter Sealant
   f. Features: Appropriate for End-dams and Internal seals
   g. Primer: Confirm with sealant manufacturer and test surface for adhesion
   h. Backer rod / tape:
      1) Closed-cell polyethylene foam
      2) Open-cell Polyurethane
      3) Polyethylene tape
      4) Open-cell polyurethane required at nonporous substrates
      5) Open-cell polyurethane required at double joint conditions
   i. Color:
      1) **Architect** to pick color(s) from mfgr's full line of colors.

3. **Sealant Type 3:**

   a. Type: Single component, silicone rubber sealant;
   b. Standards
      1) ASTM: C510, D412, D624, D1149, D2240, D3960, E119
      2) UL: 263
      3) VOC: 28g / liter max.
   c. Movement capability: 50% extension, 50% compression.
   d. Manufacturer: Dow Corning
   e. Product: **795** Silicone Building Sealant
   f. Features: Structural, non-structural and weatherproofing
   g. Primer:
      1) Confirm with sealant manufacturer and test surface for adhesion
      2) Use recommended primer
   h. Backer rod / tape types:
      1) Closed-cell polyethylene foam
      2) Open-cell Polyurethane
      3) Polyethylene tape
      4) Mineral Wool – Fire rated assemblies
      5) Compression Gasket

6) Open-cell polyurethane required at nonporous substrates
7) Open-cell polyurethane required at double joint conditions
8) Color:

a) **Architect** to pick color(s) from mfgr's full line of colors.

4. **Sealant Type 4**:

a. Type: Two part, ultra-low modulus, cold applied, self-leveling, fast-cure silicone rubber;
b. Condition: Extreme movement
c. Standards

1) ASTM: C719, C1135, D412, D2240, D3960
2) VOC: 30g / liter

d. Movement capability: 100% extension, 50% compression.
e. Slope: Up to 6%
f. Manufacturer: Dow Corning
g. Product: **FC**
h. Features: Fast cure, parking structure sealant
i. Primer: 950 PDX, 1205 Prime Coat
j. Backer Rod: Open-cell
k. Color:

1) Dark Grey

5. **Sealant Type 5:**

a. Type: One-part, ultra-low modulus, cold applied, self-leveling silicone rubber;
b. Condition: Level Conditions
c. Standards

1) ASTM: C719, C1135, D412, D2240, D3960
2) VOC: 30g / liter max.

d. Movement capability: 100% extension, 50% compression.
e. Slope: Up to 6%
f. Manufacturer: Dow Corning
g. Product: **SL**
h. Features: Fast cure, parking structure sealant – cures with air moisture
i. Primer: Confirm with sealant manufacturer
j. Backer Rod: Closed-cell polyethylene foam
k. Color: Grey

6. **Sealant Type 6:**

a. Type: One-part, low modulus, cold applied, silicone rubber;
b. Condition: Sloped or vertical Condition

c. Standards

1) ASTM: C661, C719, C794, C1135, D412, D3960
2) VOC: 37g / liter max.

d. Movement capability: 100% extension, 50% compression.
e. Slope: Horizontal and Vertical
f. Manufacturer: Dow Corning
g. Product: **NS**
h. Features: Non-sagging, cures with air moisture
i. Primer: Confirm with sealant manufacturer
j. Backer Rod: Closed-cell polyethylene foam
k. Color: Grey

7. **Sealant Type 7:**

a. Type: Single component, ultra-low modulus, elastomeric silicone sealant;
b. Standards

1) FED TT-S-001543A & TT-S-00230C Class A
2) ASTM: D3960
3) VOC: [fill in]

c. Movement capability: 100% extension, 50% compression.
d. Manufacturer: Dow Corning
e. Product: **890 SL** Silicone Building Sealant
f. Features: Self leveling & tooling not required
g. Primer: Not required
h. Backer Rod: Closed cell
i. Color: Dark Grey

8. **Sealant Type 8:**

a. Type: Single component sealant;
b. Standards

1) ASTM: D412, D624, D2240, D3960
2) VOC: 40g / liter max.

c. Movement capability: 25% extension, 25% compression.
d. Manufacturer: Dow Corning
e. Product: **999-A** Silicone Building & Glazing Sealant
f. Features: FDA & USDA approved
g. Primer: Refer to "Surface Preparation Guide, No. 61-182"
h. Backer rod / tape:

1) Closed-cell polyethylene foam
2) Polyurethane

3) Polyethylene tape

i. Color:

1) **Architect** to pick color(s) from mfgr's full line of colors.

9. **Sealant Type 9:**

a. Type: (Type II) Single component, acrylic latex sealant;
b. Standards

1) ASTM: C834, D3960
2) VOC: 31g / liter

c. Movement capability: 7.5% extension and 7.5% compression.
d. Manufacturer: Pecora
e. Product: **AC-20 + Silicone** (AC-20 FTR rated conditions)
f. Features: Non-sag (FTR designation at fire rated conditions)
g. Backer Rod: Soft Polyethylene or Denver Foam (Ultra block at fire rated conditions)
h. Primer: Refer to manufacturer's product data
i. Color:

1) **Architect** to pick color(s) from mfgr's full line of colors.

10. **Sealant Type 10:**

a. Type: (Type II) Two component, non-sag polyurethane rubber;
b. Paintability: Yes
c. Standards

1) ASTM: C920, C1247, D1850, D3960
2) VOC:

a) Activator: 104g / liter
b) Base: 14g / liter

d. Movement capability: 25% extension and 25% compression.
e. Manufacturer: Pecora
f. Product: Dynatread 40+
g. Features: Traffic sealant
h. Backer Rod: Closed-cell Polyethylene
i. Primer: Refer to manufacturer's product data
j. Color:

1) **Architect** to pick color(s) from mfgr's full line of colors.

11. **Sealant Type 11:**

a. Type: (Type I) Two component urethane
b. Standards
    1) ASTM: C920, D1850, D3960
    2) VOC: 0g / liter
c. Movement capability: 25% extension and 25% compression
d. Manufacturer: Pecora
e. Product: NR-200 Urexpan
    1) Activator
    2) Base
f. Features: Traffic grade sealant
g. Backer Rod: Closed-cell Polyethylene
h. Primer: Refer to manufacturer's product data
i. Color:
    1) **Architect** to pick color(s) from mfgr's full line of colors.

12. **Sealant Type 12:**

a. Type: (Type II) Two component, 100% solids epoxy
b. Standards
    1) ASTM: D638, D3960
    2) VOC:
        a) Epolith P: < 3g / liter
        b) Epolith G: 0g / liter
c. Movement capability: 75% elongation.
d. Manufacturer: Sonneborn
e. Product
    1) Horizontal: **Epolith-P**
    2) Vertical: **Epolith-G**
f. Backer rod / tape: Refer to manufacturer's product data
g. Primer: Refer to manufacturer's product data
h. Color: Grey

13. **Sealant Type 13:**

a. Type: Two component, polysulfide rubber sealant;
b. Standards
    1) ASTM: C920, C510, D3960
    2) VOC: 20g / liter
c. Movement capability: 12.5% extension and 12.5% compression.

d. Manufacturer: Pecora
e. Product: Synthacalk GC-2+
f. Features: Not self leveling
g. Backer Rod: Closed-cell Polyethylene
h. Primer: Refer to manufacturer's product data
i. Color: Dark Grey

14. **Sealant No. 14:**

a. Type: One part Butyl Rubber compound
b. Standards

1) ASTM: C1085, D3960
2) VOC: < 250g / liter

c. Movement capability: 5% extension and 5% compression
d. Manufacturer: Pecora
e. Product: **BC-158**
f. Features: USDA Approved
g. Backer rod / tape:

1) Pecora #92 Green rod
2) #91 Denver Foam
3) Bond break or tape

h. Primer: Not required
i. Color:

1) **Architect** to pick color(s) from mfgr's full line of colors.

15. **Sealant No. 15:**

a. Type: Two part, non-sag, security grade polyurethane sealant;
b. Paintability: Yes
c. Standards

1) ASTM: C920, D3960
2) VOC: 15 g / liter

d. Movement capability: 12.5% extension and 12.5% compression
e. Manufacturer: Pecora
f. Product: **Dynaflex**
g. Features: Physical abuse tolerant
h. Backer Rod: Closed cell Polyethylene
i. Primer: P-75, P-120
j. Temp. range: -20º – 180º
k. Color:

1) **Architect** to pick color(s) from mfgr's full line of colors.

16. **Sealant No. 16:**

a. Type: (Type II) Single component, acrylic latex sealant;
b. Standards
    1) ASTM: C834, D3960
    2) VOC: 31g / liter
c. Movement capability: 7.5% extension and 7.5% compression.
d. Manufacturer: Pecora
e. Product: **AC-20 + Silicone** (AC-20 FTR rated conditions)
f. Features: Non-sag (FTR designation at fire rated conditions)
g. Backer Rod: Soft Polyethylene or Denver Foam (Ultra block at fire rated conditions)
h. Primer: Refer to manufacturer's product data
i. Color:
    1) **Architect** to pick color(s) from mfgr's full line of colors.

2.5 MATERIALS – TAPES

A. Schedule and Data:

1. **Tape:**

a. General:

1) Mfgr: 3M
2) Series: VHB and as noted
3) Reference: 3M Design Guide for Metal Fabrication
4) Coordinate with Section 10 14 00 - Signage

b. Schedule:

1) **Painted metal to painted metal:**

a) Material: Closed cell acrylic foam

i. Product: 4979F

a. Width: 1″
b. Thickness: 1.6 mm (± 1/16″)
c. Adhesive: Acrylic
d. Liner Type: B (5 mil clear polyethylene film)
e. Color: Black

2) **Painted metal to bare painted metal:**

a) Material: Closed cell acrylic foam

i. Product: 5962

a. Width: 1″
b. Thickness: 1.6 mm (± 1/16″)
c. Adhesive: Synthetic

d. Liner Type: D (5 mil red polyethylene film)
e. Color: Dark Grey

3) **Powder coated metal to powder coated painted metal:**

a) Material: Closed cell acrylic foam

i. Product: 4645

a. Width: 1″
b. Thickness: 1.6 mm (± 1/16″)
c. Adhesive: Acrylic
d. Liner Type: D (5 mil red polyethylene film)
e. Color: Dark Grey

4) **Bare metal to bare metal:**

a) Material: Closed cell acrylic foam

i. Product: 4955

a. Width: 1″
b. Thickness: 2.0 mm (± 5/64″)
c. Adhesive: Synthetic
d. Color: White

5) **Plastics and powder coated metals:**

a) Material: Closed cell acrylic foam

i. Product: 5962

a. Width: 1″
b. Thickness: 62 mil
c. Adhesive: Adhesive 300 Acrylic & polyester carrier
d. Liner Type: Densified Kraft
e. Colors:

i). White
ii). Black
iii). Red

2.6 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

1. Primers, Solvents and Backing Material

a. General:

1) Use acceptable type as recommended by each specific sealant used and the respective manufacturer.

2) Material shall be manufactured by manufacturer of sealant being used, unless approved otherwise by sealant manufacturer.
3) Materials shall be delivered to the job in sealed containers with manufacturer's original labels attached and associated installation instructions.
4) Materials shall be used according to manufacturer's printed instructions.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.

2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify. Prior to all work of this Section, carefully inspect and verify that the installed work of all other trades is complete to the point where this work may properly commence.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. General:

1. Prepare work, substrates, etc. in accordance with manufacturer’s recommendations.

B. Joint Preparation:

1. Preparation, cleaning, priming and installation shall be performed in strict accordance with sealant manufacturer’s recommendations.
2. Refer to REFERENCE STANDARDS heading for sealant manufacturers guidelines.

C. Surface Preparation

1. Sealants

a. General:

1) Typically seal joints before painting, coordinate with wall finish type, material and manufacturer’s written recommendations for all exceptions.

2) Joints and surfaces, which are to be caulked or sealed, shall be clean, dry, frost free, free of dust, loose mortar, and other foreign materials.
3) Temperature Installation Requirements: 40ºF minimum application temperature for joint sealant installations because of the possibility of moisture and/or frost contamination on sealing surfaces: (Comply with sealant manufacturer's written recommendations)
    a) However, it is recognized that applications may have to be made at lower temperatures. When this is necessary, steps must be taken to assure dry, frost-free surfaces and is the responsibility of the caulking subcontractor. Additionally these procedures must be in compliance with sealant manufacturer's written recommendations.
4) Clean ferrous metals of all rust, mill scale and temporary coatings by wire brushing, grinding, or sandblasting.
5) Remove oil and grease with high performance cleaners as approved by sealant manufacturer.
6) On joints adjacent to porous substrates install appropriate primer prior to application of sealant.
7) Joint dimensions for sealant should be reviewed and installed in accordance with sealant manufacturer's printed instructions. In no case should the sealant application be less than 1/4" wide and 1/2" deep, except in specific metal-to-metal curtainwall applications and then as recommended by the sealant manufacturer.
8) Precast concrete, cast-in-place concrete, or masonry joint surfaces shall be wire brushed, then brushed clean or blown clean with dry, oil free compressed air.
    a) The joint interface must be free of form release agents, curing and sealing compounds or chemical retarders which may interfere with sealant cure, adhesion and performance.
9) Sealants shall not be applied to masonry joints where a water repellent or masonry preservative has been applied prior to caulking.
    a) Waterproofing treatments shall be applied after caulking.
10) Do not caulk joints until they are in compliance with requirements of the approved manufacturers of the materials, the details as shown on the drawings, and the specific requirements of other sections of this Specification.

b. Silicone Sealants:

1) Basic steps for proper joint preparation:
    a) Clean – Joint surfaces must be clean, dry, dust free, and frost free.
    b) Prime – If required, primer is applied to the surface(s). (Refer to Sealant Manufacturer's written recommendations.
    c) Pack – Backer rod or bond breaker as required for sealant joint and in accordance with manufacturer's written instructions.
    d) Shoot – Sealant is applied by "pushing the bead" into the joint cavity.

e) Tool – Dry tooling techniques are used to strike a flush joint and make certain the sealant has the proper configuration and fully contacts the joint walls.

2) Clean – Substrate Cleaning Procedures

a) General procedures for porous and non-porous substrates key to good sealant adhesion is a clean surface. Always check with the supplier of the substrate to ensure that the cleaning procedures and solvents are compatible with the substrate.

i. Organic Solvent Usage

a. Not every contamination is effectively removed by every solvent, and some substrates can be seriously damaged by certain solvents. Please follow the solvent manufacturer's safe handling recommendations and local, state and federal regulations regarding solvent usage.

ii. Non-Porous Substrates

a. Non-porous surfaces must be cleaned with a solvent before the sealant is applied.
b. Use the "two-cloth" cleaning method explained later in this section.

iii. Porous Substrates

a. Building materials such as EIFS, cement board panels, concrete, granite, limestone and other stones or cementitious materials that absorb liquid are considered porous substrates.
b. Dusting alone may be sufficient cleaning for new porous substrates. Depending on the condition of the surface, porous substrates may require abrasion cleaning, solvent cleaning or both. Laitance and surface dirt must be completely removed. Concrete form-release agents, water repellents and other types of surface treatments, protective coatings, and old sealant all affect sealant adhesion. Removal of these treatments, coatings or sealants by abrasion cleaning may be required to obtain acceptable adhesion.
c. Abrasion cleaning involves grinding, saw cutting, sand or water blasting, mechanical abrading or a combination of these methods. Remaining dust and loose particles should be removed by dusting the surface with a stiff brush, vacuuming, or blowing the joints with oil-free compressed air. Once the abraded surface is clean and dry, the sealant can be applied. If the surface is dirty, it must be solvent cleaned with the "two-cloth" method explained later in this section. Some porous materials will trap solvents after cleaning or priming. Allow this solvent to evaporate before sealant is applied.
d. Please note sealant recommendations for removal of existing sealants, substrate cleaning, joint preparation and installation of sealants are not intended and may not be appropriate for remedial work involving

existing sealants and/or joints containing PCB's, asbestos, or other potentially hazardous substances. If you know or suspect that the existing sealants and/or joints contain PCB's or other hazardous substances, contact project Owner **General Contractor** and a knowledgeable authority on appropriate removal, handling and disposal procedures.

iv. Masking

a. Silicone primers and sealants cannot be removed with organic solvents. It is imperative that uncured silicone primers and sealants do not contact non-abradable surfaces where the silicone is not intended. Mask these surfaces or use extreme care to prevent any silicone contact with the surface during priming and sealant application.

v. "Two Cloth" Cleaning/Priming Method

a. (Using DOW CORNING P5200 Cleaner/Primer)

i). Clean, soft, absorbent, lint-free cloths must be used. The two-cloth cleaning method consists of a solvent wipe followed by a dry cloth wipe.
ii). Thoroughly clean all surfaces of loose debris. Mask or tape joints before applying Cleaner/Primer. If a bond breaker tape will be used instead of backer rod, the tape should be applied before the cleaner/primer.
iii). Clean and apply Cleaner/Primer product in accordance with manufacturer's written recommendations.

2. Tapes

a. Prepare per manufacturer's recommendations.
b. Prime as required by manufacturer for each specific tape.

3.4 INSTALLATION

A. Sealant

1. General:

a. Clean, prime and apply materials in accordance with printed recommendations of manufacturer of material used.
b. Insure that if two sealant-curing types are used which have different curing times, that the first installed sealant is fully cured prior to the application of the second sealant.

1) Confirm application with sealant manufacturer.

c. Insure that if two different sealant composition types are used, that the proper sealant is installed first to insure adhesion between the two different sealants.

1) Confirm application with both sealant manufacturers.

d. Install joint backing with a blunt instrument so as not to puncture the surface skin.

1) Size of closed cell joint backing should be determined by adding 25% to the joint width to assure proper compression of the rod.
2) With other types of joint backing, consult manufacturer's printed instructions for proper use.

e. Apply sealant with a caulking gun, using proper nozzles. Use sufficient pressure to properly fill the joints with sealant to the backup material.

1) After joints have been completely filled, they shall be neatly tooled to eliminate air pockets or voids and to provide a smooth, neat finish in intimate contact with interfaces. Dry tooling is preferred.
2) After tooling, surface of sealant shall be free from ridges, wrinkles, sags, air pockets and embedded impurities.

f. Immediately clean adjacent materials, which have been soiled. Leave work in a neat, clean condition.

g. Joint Dimensions

1) Size and shape as shown on Drawings but not to exceed joint size recommended by sealant manufacturer.

a) Typically install backer rod at all joints unless specified to be bond breaker tape, other material as specified and /or detailed or no backer material in accordance with sealant manufacturer's printed directions.

i. Sealant depth to width ratio shall be installed in accordance with sealant manufacturer’s written instructions.

2. Silicone:

a. General:

1) Apply materials in accordance with printed recommendations of manufacturer of material used.

b. Schedule:

1) Prime – Primer Application Procedure

a) DOW CORNING P5200 Cleaner/Primer Coat should be applied as follows:

i. Joint surfaces should be clean and dry.
ii. Apply masking tape to the surfaces next to the joint to keep excess primer and sealant off areas where they are not intended.
iii. Apply Cleaner/Primer in accordance with manufacturer’s written recommendations.

2) Pack – Packing with Backer rod / tape

a) Moving Joint Considerations

i. When designing moving joints, the following points also need consideration:

a. A minimum ¼" joint width is recommended. Wider joints accommodate more movement than narrow joints. (Refer to Drawings for design intent joint widths)
b. Three-sided adhesion limits the amount of movement that a joint accept without inducing a tear. Three-sided adhesion can be eliminated by the addition of a bond breaker tape or backer rod. With three-sided adhesion, no more than +15% movement can be accommodated.
c. A thin sealant joint (1/4" + 1/8" depth) will absorb more movement than a thick joint. Sealants are designed to deliver optimum performance when the joints are shaped like an hourglass
d. As a practical matter, as the sealant joint width becomes larger than 1", the depth should be held at approximately 3/8". There is no need to increase the depth beyond 3/8".

b) Movement During Cure

i. One-part sealants cure by taking moisture out of ambient air. Joint movement during cure can cause unsightly aesthetics due to joint wrinkling. Premature adhesion loss can also occur because the adhesive characteristics of the sealant are obtained after the sealant has cured. Adhesion loss due to movement during cure can be minimized by the use of a primer. Primers can decrease the adhesion cure time lag. Minimize wrinkling by following these suggestions:

a. Use open-cell polyurethane backer rod / tape in non-EIFS or vertical applications.
b. Seal when the joint surface is cool and will experience minimum temperature changes, typically in the late afternoon or early evening.
c. Place no more than 1/4" of sealant over the backer rod / tape at the center.

3) Shoot – Sealant Application Procedure

a) It is critical that the sealant fills the entire joint or cavity and firmly contact all surfaces intended to receive sealant.
b) To obtain full adhesion, sealants require a clean, dry, frost-free surface.
c) Sealant shall be applied as follows:

i. As previously indicated, masking tape should be used to keep excess sealant from contacting adjacent areas where it is not intended to ensure an aesthetically-pleasing job.
ii. Apply the sealant in a continuous operation using a caulking gun or pump. A positive pressure, adequate to fill the entire joint width, should be used. This can be accomplished by "pushing" the sealant ahead of the application nozzle. Care must be taken to ensure complete fill of the sealant cavity.

4) Tool

a) Tool the sealant with light pressure before a skin begins to form (typically 10 to 20 minutes). Tooling forces the sealant against the back-up material and the joint surfaces. Do not use liquid tooling aids such as water, soap or alcohols; i.e. These materials may interface with sealant cure and adhesion and create aesthetic issues.
b) Remove the masking tape before the sealant skins over (within about 15 minutes of tooling).

B. Polyurethane and Butyl Rubber:

1. Storefront and/or Curtainwall Sills & Door Thresholds

a. Clean substrate and underside of threshold
b. Installation:

1) 1st. Prime substrate with mfgr's approved primer
2) 2nd. Install full bed of sealant to substrate x ½" maximum thickness
3) 3rd. Install full bed of sealant to underside of threshold x 3/8" and set together.
4) 4th. Trim sealant that pushes out from under threshold.
5) 5th. Install mechanical fasteners.

C. Tape

1. Clean surfaces as herein listed.
2. Prime substrates per manufacturer's recommendations.
3. Install per manufacturer's written instructions.

3.5 COMMISSIONING

A. Provide factory-certified field service engineer to a site visit to ensure proper system installation of exterior sealant.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator.

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. The sealant applicator shall certify in writing that the sealant application is in accordance with the sealant manufacturer's recommendations

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

   1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 07 92 00

SECTION 08 11 13 – STEEL DOORS AND FRAMES

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. STEEL DOORS: (fully welded assembly)
    a. Interior:
        1) Non-rated
    b. Exterior:
        1) Non-rated
        2) Door vision panel frames
            a. Rated proprietary design and manufacturers
2. STEEL DOOR FRAMES: (fully welded assembly)
    a. Interior:
        1) Non-rated
    b. Exterior:
        1) Non-rated
3. GLASS:
    a. Door lites: As herein specified
    b. Framed windows: Refer to Section 08 80 00 – Glass and Glazing

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	Name of Test	Performance	Testing Std.
Door Frames	Anchorage	Jambs: Anchors shall be located on each jamb starting from 4" from top and 24" on center maximum on down with floor anchor at base	NAAMM Standards HMMA 840, 861 & 830
		Head: Provide anchors at head not more than 24 inches on center and not less than two per door head.	
	Anchors	Jamb and Head: Anchors shall be 14 gauge galvanized steel of size and length or shape required by construction.	HMMA 830 & 863
		Floor: 12 gauge galvanized angles welded to bottom of each door jamb and vertical mullions with two holes in bottom leg for ¼ inch wedge anchor each.	
		Concrete Block Wall: UL approved wedge anchor at dimpled holes centered on stop face of frame jambs and/or head.	
	Hardware Reinforcing	Comply	HMMA 830 Hardware Preparation Standard HMMA 861 Guide Specification
	Grout Slump	4" max. slump Pump into frame jambs and head	HMMA 820 TH01-03 HMMA 862
	Grout type	Mortar, not plaster	HMMA 862
Door Frames	Assembly	Non Rated	HMMA 820 & 861
		Rated, UL or FM Labeled	HMMA 850 & 861
	Types	Security	HMMA 862
		Detention	HMMA 863
		Acoustical (STC 44 min, u.n.o.)	HMMA 865
	Gauge/thickness	Typical: 0.053" / 16 gauge	NAAMM Standards
		4'-0" or greater opening: 0.067" / 14GA	
Door Glazing	Type	Safety & fire protected	CBC, Section 715.4.7.4

Door Frame Plinths (Splats)	Assembly	Shall be same thickness as frame and flush with all jamb surfaces. (not a wrap-around surface applied component)	NAAMM Standards HMMA 820
Doors	Core	22 gauge steel stiffeners with insulation core	NAMM Standards
	Assembly	Non Rated:	HMMA 810
		Rated, UL or FM Labeled	HMMA 850
	Types	Security	HMMA 862
		Detention	HMMA 863
		Acoustical (STC 44 min, u.n.o.	HMMA 865
	Face	Interior: 0.042" / 18 gauge	HMMA 861
		Exterior: 0.053" / 16 gauge	HMMA 861
	Edges		HMMA 861
	U-Value	0.18 max	SDI-113-79
HMMA 861 Guide Specification	HMMA 861 Guide Specification	HMMA 861 Guide Specification	HMMA 861 Guide Specification
Door Openings	Typical	Install 16 gauge channel within door body at all sides of opening	
	Vision panel frames	0.032" / 20gauge	
	Louver frames	0.0432" / 18 gauge	SDI-100-91
Steel Frames & Doors	Painting	Comply	HMMA-840 TN01-07 & Section 09 90 00
Steel Sheets	Hot Dipped Galvanized	Comply	ASTM A653-96 coating designation A60 mill phosphatized
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturer's data and shop drawings.

1. Indicate construction, configuration, jointing methods, reinforcements, and locations of cut-outs of steel doors and frames.
2. Submit catalog cuts or other data indicating details of construction, gauges of metals, dimensions, hardware preparation, core, label compliance, profiles and specifications for shop priming.
3. Label Construction Certification:

a. For door assemblies required to be fire-rated and exceeding sizes of tested assemblies, submit manufacturer's certification for that each door and frame assembly has been constructed to conform to design, materials and construction equivalent to requirements for labeled construction.

4. Identify each door and frame with Metal labels indicating similar applicable fire-rating.
5. Schedule:
    a. Submit a schedule of doors and frames using the same reference numbers for details and openings as indicated on the Contract Drawings.
    b. Indicate coordination of glazing frames and stops with glass and glazing requirements.
6. Secure templates from finish hardware supplier for specified hardware and mounting locations.

E. Submit samples.

1. One 6" x 6" of each glass type
2. Glazing tape

F. Certification:

1. Fire rating of glass, doors, frames and glass lite frames

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for five (5) years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for five (5) years providing/installing/finishing projects of similar size and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid

E. Stipulations:

1. Manufacture all labeled frames in strict accordance with the specifications and procedures of Underwriters Laboratories, Inc. (UL).

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;
2. Preparation for hardware
3. Electrified hardware, power supply, conduit and wiring

G. Miscellaneous criteria:

1. Templates shall be furnished by hardware supplier for preparing shop drawings and for preparing and reinforcing hollow metal work to receive hardware.
2. Where fire-resistance classification is shown or scheduled, provide fire-rated assemblies.
    a. Identify each door, frame and vision lite with UL labels, indicating applicable fire-rating.

b. Provide approved fill material within door frame at acoustically labeled door/frame assemblies.

3. Fire Rated Door Assemblies: Meet the requirements of CCR Title 24 Part 2, CBC Chapter 7 – Fire Resistant Materials and Construction for the fire resistive ratings indicated, and which are labeled by Warnock Hershey International. Fire doors and frames to comply with UBC 7-2-1997 (UL 10C) positive pressure part 1 and/or part 2 where applicable.

   a. Temperature Rise Rating: At stairwell enclosures, provide doors which are labeled for a maximum transmitted temperature end point not to exceed 250° above the ambient at the end of 30 minutes of fire exposure.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Store doors and frames at building site under cover. Place units upright on at least 4 inch high wood sills in a manner that will prevent rust and damage.

1. Avoid the use of non-vented plastic or canvas shelters which could create a humidity chamber.
2. If cardboard wrapper on door or frames becomes wet, remove the carton immediately.
3. Provide a space between stacked doors to promote air circulation.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Wall Construction and finish
2. Hardware supplied by others
3. Hardware preparation and installation
4. Electrified hardware

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 08 71 00 – Door Hardware
3. Section 08 80 00 – Glazing

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. Preparation and painting of frames and doors

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Doors, Door frames and Window frames

a. Metal Manufacturing Company, Sacramento, CA, metalmfgco1@lycos.com 916-922-3484
b. Stiles Custom Metal, Inc., www.hollowmetal.com 209-538-3667
c. Forderer Cornice Works, San Francisco, CA, (415) 431-4100
d. Titan Metal Products, Inc., Sacramento, CA., www.titanmetalproducts.com 916-920-2555
e. Door Components Inc., Fontana, CA, www.doorcomponents.com, 866-989-3667, 909-770-5700
f. Security Metal Products Corp, www.seet.com 310-641-6601

2. Door Lite Assembly Frame & Glazing Compound

a. Anemostat, www.anemostat.com 213-775-7441

3. Door Lite Assembly Frame Glazing

a. TGP, Technical Glass Products, www.tgpamerica.com www.fireglass.com

4. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

1. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

C. Refer to drawings, details, and other related specification section whether listed or not.

D. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General

1. Hot Dip Galvanized Steel Sheets
2. Honeycomb Core Material
3. Polystyrene Core Material
4. Mineral Fiberboard Core Material
5. Shop Applied Primer: Rust-inhibitative enamel or paint, either air drying or baking, suitable as a base for specified finish paints.

B. Doors

1. General:

a. Comply with NAAMM Standards, most current published edition as herein specified.

1) Unless otherwise indicated, provide fire ratings as indicated on the drawings, and as required by building code.
2) Glazing shall be as approved for rated assemblies and in accordance with glazing specifications.
3) Glazing shall be as approved for safety assemblies and in accordance with glazing specifications.

C. Door Frames

1. General:

a. Comply with NAAMM Standards, most current published edition as herein specified.
b. Shop assembled where possible, size as scheduled or indicated, gauges as herein specified.
c. Except at fire assemblies, furnish and install three rubber silencers for strike jambs of single frames and two for heads of double frames, U.N.O., in hardware groups.
d. All glazing stops shall have miter corners as standard requirement.
e. Fabricate as "fully & continuously" welded assembly.
f. Fabricate with continuous watertight 2” wide nailing flange at jamb and head – exterior side of frame.

2. Comply with NAAMM Standards, most current published edition;

a. Hollow metal frames: Refer to standards as herein specified
b. Hardware prep for hollow metal frames: Refer to standards as herein specified
c. Guide Specifications – Commercial: Refer to standards as herein specified

3. Anchors:

a. Comply with HMMA 861, including, but not limited to Article 2.05 A, B, C.
b. Three at jambs, min. and one floor anchor per jamb, typical unless required differently per frame type application.

D. Hardware reinforcement

1. Comply with NAAMM Standards, most current published edition;

   a. HMMA 830 Hardware Preparation Standard
   b. HMMA 861 Guide Specification

E. Glass lites in doors

1. Glazing:

   a. Mfgr: TGP, Technical Glass Products, www.tgpamerica.com www.fireglass.com
   b. Size: Maximum size, refer to frame maximum lite size criteria
   c. Color: Clear
   d. Tempered: Yes
   e. Testing: ANSI Z97.1 – 2004
   f. Schedule:

Rating:	**Product:**	**Thk:**	**Description:**
1) None	Fireglass20	1/4"	Impact/safety rated

2. Frame:

   a. Mfgr: Anemostat
   b. Material: 20ga. cold rolled steel
   c. Color: Factory grey primer for field painting – as selected by **Architect**
   d. Attachment: Self attaching
   e. Profile: Low profile
   f. Door thickness:

      1) Typical: 1-3/4"
      2) LoPro-IS-G: Refer to door schedule for door thickness

   g. Ratings Schedule: Rating as required, refer to drawings and door schedule.

Rating:	**Maximum visible lite size**
1) 20 min.	3204 sq.in
2) 45/60 min.	2772 sq.in
3) 90 min.	1296 sq.in.
4) 180 min.	100 sq.in.

   h. Schedule:

Profile:	**Product:**	**Size:**	**Glass thickness**
1) Rectangular	LoPro	Refer to drawings	1/4", 3/16" & 5/16"
2) Custom	LoPro-CS	Refer to drawings	1/4", 3/16" & 5/16"

3. Tape:

   a. Glazing tape:

      1) Mfgr: Anemostat
      2) Product: Fire Rated Glazing Tape
      3) Series: GT
      4) Rating: 20/45/60/90/180 minute
      5) Listing: UL, WHI, BS-476.22 & EN-1634

6) Material:

a) Use thickness as required for frame opening and glass thickness
b) Schedule:

i. GT-132: 1/32" thick x 3/8" wide
ii. GT-116: 1/16" thick x 3/8" wide
iii. GT-18: 1/8" thick x 3/8" wide

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION (comply with HMMA 820, 830)

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

C. Hardware supplier / contractor shall supply hardware templates for preparing shop drawings and for preparing and reinforcing hollow metal work to receive hardware to hollow metal frame and door contractor.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 FABRICATION

A. Fabricate doors, frames, concealed stiffeners, anchors, hardware reinforcement, edge channels, louvers, moldings, stops and vision panel frames from the following commercial qualify carbon steel. (maintain minimum standards per each tested assembly)

1. Hot-rolled steel sheets and strips, pickled and oiled, complying with ASTM A569.
2. Cold-rolled steel sheets, complying with ASTM A366.
3. Galvanized steel sheets, complying with ASTM A526, G90 zinc coating.

4. Inserts, bolts and fasteners shall be standard manufacturer's units, except hot-dip galvanized items to be built into walls, complying with ASTM A153, Class C or D as applicable.
5. Comply with NAAMM Standard, current published edition;

    a. Guide Specifications – Commercial:

        1) Hollow metal frames, Typical: HMMA 861
        2) Hollow metal frames, Security: HMMA 862
        3) Hollow metal frames, Detention: HMMA 863
        4) Hollow metal doors, Acoustical: HMMA 865

    b. Manufacturing Standard: MMMA 802

B. Steel doors, door frames and window frames shall be "Machine-Mitered and Full-Welded" joint construction, rigid, neat in appearance and free from defects, warp or buckle.

1. Full welded mitered joints, continuously, grind, dress, and make smooth, flush and invisible.
2. Install Knock-Down Window frames at locations that prohibit built-in place conditions where fully welded window assembly is feasible.

C. Accurately form metal to required size and profiles.

1. Shop-fit and assemble wherever practical
2. Site assembled units shall be of welded construction meeting all requirements of factory assembled units.
3. Construction joints shall be reinforced and machine-mitered at corners.
4. Exposed fasteners shall be provided countersunk pre-fitted holes at through bolting on doors.
5. Concealed fasteners at face of frame and glazing molding stops shall be pre-drilled countersunk or dimpled holes.

    a. Supply flat head Phillips machine or Teks screws pre-fitted for field applied glazing putty.

6. Reinforce doors and frames to receive surface-applied hardware, and shall be as follows.

    a. Drilling and tapping for surface-applied hardware may be done at project site. Door shall have internal reinforcing at all surface-applied hardware.
    b. Provide drilled holes for door silencers when required by Section 08 71 00 - Door Hardware.
    c. Hinges; 10 gauge x 1 1/2 inches wide x 6 inches longer than hinge; full perimeter fillet weld at bearing each end.
    d. Strike plate clips; 10 ga. x 1 1/2 inches wide x 3 inches long; full perimeter fillet weld at bearing.
    e. For Surface-applied closers; 10 gauge x required width and length, secured in both doors and frames whether or not closers are indicated. Spot welded in place. For future and/or required closer.

D. Paint all steel frames:

1. General:

    a. Clean steel surfaces of mill scale, rust, oil, grease, dirt and other foreign materials before applying shop primer.
    b. Apply pretreatment to clean metal surfaces, using cold phosphate solution (SSPC-PT 2), hot phosphate solution (SSPC-PT 4) or basic zinc chromate-vinyl butyl solution (SSPC-PT3).

c. Install barrier coating at inside of all frames including the ones to be fully grouted with mortar.

2. Primer:

a. Apply shop primer within time limits recommended by pretreatment manufacturer.
b. Apply a smooth primer coat of even consistency to provide a uniform dry film thickness of not less than 2 mils, on all hollow metal surfaces.

1) Door primer surface shall be completely smooth to the touch and visual.

3. Painting:

a. Shop paint 1st. coat when possible
b. Finish painting shall be in accordance with Paint Specification Section 09 90 00.
c. Paint frame and doors custom color as directed by **Architect**.

3.5 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

a. Installed metal doors, door frames and window lite frames and accessories in accordance with drawings, reviewed Shop Drawings, manufacturer's data, and as specified here.
b. Hang with clearance indicated in Section 08 71 00 - Door Hardware. Install in accordance with HMMA 840 and 861.

2. All interior metal frames shall be;

a. Filled with insulating foam at non rated conditions

1. Brace frames to eliminate any potential bowing of frame.

b. Filled with mineral wool at rated conditions

3. All exterior metal frames shall be;

a. Painted inside frame with barrier coating.
b. Holes in frame filled, bondo filled, sanded smooth and finished after grouting.

4. Prime coat touch-up;

a. Immediately after erection, sand smooth any rusted or damaged areas of prime coat and apply touch-up of compatible air-drying primer in accordance with Section 09 90 00.

5. Finish paint frames after installation, refer to Painting Section 09 90 00.
6. Except for frames located at in-place concrete or concrete block which can be installed after wall is placed, place frames prior to construction of enclosing walls and ceilings.

a. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set.

1) After wall construction is completed, frames are grouted or filled with appropriate material, remove temporary braces and spreaders leaving surfaces smooth and undamaged.

B. Anchorage:

1. Frame anchors shall be located on each jamb starting 4" from top and 24" on center maximum on down with floor anchor at base. Provide anchors at head not more than 24 inches on center and not less than two per door head.
2. Anchors shall be 14 ga. galvanized steel of size and length or shape required by construction.
3. Anchor to floors:

    a. 12 gauge galvanized angles welded to bottom of each door jamb and vertical mullions with two holes in bottom leg for 1/4 inch wedge anchor each.

4. Comply with NAAMM Standard, HMMA 840, current published edition.

C. Install Metal Doors

1. Inspection:

    a. Examine door frames and verify that they are of the correct type and have been installed as required for proper hanging of corresponding doors.

        1) Correct conditions detrimental to the proper and timely installation of plastic faced wood doors; do not proceed with installation until unsatisfactory conditions have been corrected.

2. Installation:

    a. Install doors and fit hardware to doors in accordance with manufacturer's instructions.
    b. Fit doors to frames and machine for hardware to whatever extent not previously worked at factory as required for proper fit and uniform clearance at each edge.
    c. Replace doors which have been improperly prepared at factory and which cannot be adjusted without damage to surfaces.
    d. Clearances: (Unless otherwise required by testing labeling of rated doors and mfgr. to be different)

        1) For non-fire-rated doors provided clearances of;

            a) 1/8" at jambs and head
            b) 1/8" at meeting stiles for pairs of door
            c) 1/2" from bottom of door to top of decorative floor finish or covering.

                i. Except where threshold is shown or scheduled provided 1/4" clearance from bottom of door to top of threshold.

    e. Operation:

        1. Re-hang or replace doors which do not swing or operate freely.
        2. Replace doors damaged during installation.

    f. Folding, Bi-parting, sliding and other specialty door shall be installed in accord with indicated details, reviewed shop drawings and manufacturer’s recommendations.
    g. Location of finishes and hardware as listed and detailed shall be used as a guide and shall be field verified to achieve a smooth and effortless operation.

3.6 ADJUSTING

A. Hardware adjustment shall be done by others under hardware specifications section.

3.7 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END SECTION 08 11 13

SECTION 08 11 16 – INTERIOR ALUMINUM DOORS AND FRAMES

PART 1 - **GENERAL**

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Pre-finished aluminum door frames for interior use.
2. Pre-finished aluminum framing systems for interior use.
3. Pre-finished aluminum doors for interior use.

B. Related Sections:

1. Division 01 Section “Sustainable Design Requirements” for additional LEED documentation and requirements.
2. Division 08 Section "Glazing" for glass view panels in interior aluminum doors.
3. Division 08 Section "Aluminum Entrances and Storefront" for glazed aluminum doors and framing used in exterior walls and vestibule enclosures.
4. Division 08 Sections "Flush Wood Doors", "Clad Wood Doors”, and "Stile and Rail Wood Doors" for wood doors used in interior aluminum frames.
5. Division 08 Sections "Door Hardware" and "Access Control Hardware" for door hardware used on interior aluminum doors and frames.
6. Division 26 "Electrical" Sections for electrical connections including conduit and wiring for door controls and operators installed on interior aluminum frames.
7. Division 28 Section "Access Control" for access control devices installed at interior aluminum frame openings and provided as part of a security access system.

C. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. AAMA 603.8 Performance Requirements and Test Procedures for Pigmented Organic Coatings on Extruded Aluminum.
2. AAMA 607.1 Guide Specification and Inspection Methods for Clear Anodize Finishes for Architectural Aluminum.
3. AAMA 608.1 Guide Specification and Inspections Methods for Electrolytically Deposited Color Anodic Finished for Architectural Aluminum.
4. AAMA 609 & 610-02 Cleaning and Maintenance Guide for Architecturally Finished Aluminum.
5. ASTM B221 Standard Specification for Aluminum and Aluminum-alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
6. ASTM E90 Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.

7.	ASTM E413	Classification of Sound Rating Insulation.
8.	NAAMM	"Metal Finishes Manual for Architectural and Metal Products".
9.	ANSI/NFPA 80	Standard for Fire Doors and Fire Windows; National Fire Protection Association.
10.	NFPA 252	Standard Method of Fire Tests of Door Assemblies.
11.	ANSI A117.1	Accessible and Usable Buildings and Facilities.
12.	ICC/IBC	International Building Code.

1.3 SUBMITTALS

A. Submit under the provisions of Section 01 33 00-Submittal Procedures.

B. Product Data: For each type of product indicated. Include construction details, material descriptions, hardware reinforcements, profiles, anchors, fire-resistance rating, and finishes.

C. Templates: Door hardware supplier is to furnish templates, template reference number and/or physical hardware to the interior aluminum door and frame supplier in order to prepare the doors and frames to receive the finish hardware items.

D. Shop Drawings: Include the following:

1. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
2. Locations of reinforcement and preparations for hardware.
3. Details of each different wall opening condition. Include requirements for steel framing at partitions for fit and securing of frames, partition widths and tolerances, direction of framing members, clips and attachments.
4. Details of anchorages, joints, field splices, and connections.
5. Details of accessories.
6. Details of moldings, removable stops, and glazing.
7. Elevations of each door design.
8. Details of doors, including vertical and horizontal edge details and metal thicknesses.
9. Details of preparations for power, signal, and control systems.

E. Samples for Verification: Provide at the request of architect, prepared Samples as indicated below:

1. Framing Member: 12 inches long.
2. Corner Fabrication: 12-by-12-inch-long, full-size window corner, including full-size sections of extrusions with factory-applied color finish.
3. Aluminum chips in full range manufacturer's standard finishes for architect's color selection.

F. Interior Aluminum Door and Frame Schedule: Use same designations indicated on Drawings. Coordinate with Door Hardware schedule and glazing.

G. Informational Submittals

1. Certificates of Compliance: Submit any product test report or information necessary to indicate compliance with this specification section.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain interior aluminum frames and doors through one source from a single qualified manufacturer.

B. Manufacturer Qualifications: A firm experienced in the manufacturing of interior aluminum framing systems and doors with a minimum five (5) years successful in-service performance providing product similar to those indicated for this project, including pre-engineering and pre- fabricating all components of aluminum framing systems and doors.

C. Installer Qualifications: An experienced installer with a minimum five years (5) experience who has completed aluminum framing systems and door installations similar in material, design, and extent to those indicated for this project and whose work has resulted in construction with a record of successful in-service performance.

D. Aesthetic Effects: Do not modify intended aesthetic effects, as judged solely by **Architect**, except with **Architect's** approval. If modifications are proposed, submit comprehensive explanatory data to **Architect** for review.

E. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 (neutral pressure at 40" above sill) or UL 10C.

1. Provide labels permanently fastened on each frame or door within size limits established by NFPA and the testing authority.

F. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257. Label each individual glazed lite.

G. Smoke-Control Door Assemblies: Comply with NFPA 105.

H. Pre-Installation Conference: Conduct conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for installing interior aluminum frames and doors and to verify installation of electrical knockout boxes and conduit at frames with electrified or access control hardware.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver interior aluminum frames and doors individually protective wrapped within cartons and marked for the corresponding scheduled opening. Do not bulk pack frames.

B. Inspect frames upon delivery for damage.

1. Repair minor damage to pre-finished products as recommended by manufacturer.
2. Replace frames that cannot be satisfactorily repaired.

C. Store interior aluminum frames and doors at Project site under cover and as near as possible to final installation location. Do not use covering material that will cause discoloration of aluminum finish.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of interior aluminum frame openings by field measurements before fabrication and indicate measurements on Shop Drawings submittals.

B. Do not install aluminum frames and doors until area of work has been completely enclosed and interior is protected from the elements.

C. Maintain temperature and humidity in areas of installation within reasonable limits, as close as possible to final occupancy standards. If necessary, provide artificial heating, cooling and ventilation to maintain required environmental conditions.

1.7 WARRANTY

A. Provide manufacturer's written warranty against defects in materials and workmanship upon final completion and acceptance of Work in this section.

1. Warrant framing and door finishes against defects and excessive fading and non- uniformity in color for a period of 5 years.

PART 2 - **PRODUCTS**

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Frameworks Manufacturing.
2. Raco.
3. Versatrac Frames, a Division of American Door Products Inc.
4. Western Integrated Materials, Inc.

B. Substitutions: Material from alternate interior aluminum framing system and door fabricators will not be accepted on jobsite without prior written and sample approval in accordance with requirements specified in Section 01 25 00 - Substitution and Deviation Procedures and at the discretion of **Architect** and their designated openings consultant.

2.2 MATERIALS

A. Extruded Aluminum: ASTM B 221 alloy 6063-T5 or alloy and temper required to suit structural and finish requirements.

B. Recycled Content of Aluminum Products: Postconsumer recycled content plus one-half of pre-consumer recycled content not less than 50 percent.

C. INTERIOR ALUMINUM FRAMES

1. Provide interior aluminum framing components complying with dimensions, profiles, and relationships to adjoining work of components as indicated on Drawings. Provide frames that are adjustable for partition types and throat openings, or that are fitted to each partition type,

meeting the throat opening and required clearances per frame manufacturer's recommendations. Reinforce for specified hinges, strikes, and closers.

2. Type I Framing System: Provide frames with the following characteristics:
    a. Rectilinear design.
    b. 1-1/2 inch face profile, 9/32 inch return.
    c. .062 inch rabbet wall thickness.
    d. Throat sizes (drywall partition thickness): 3-3/4", 4-7/8".
3. Type II Framing System: Provide frames with the following characteristics:
    a. Rectilinear design.
    b. 1-1/2 inch face profile.
    c. Snap on trim:
        1) 1-1/4 inch.
        2) 1-1/2 inch.
        3) 2 inch.
    d. .062 inch rabbet wall thickness.
    e. Standard throat sizes (drywall partition thickness): 3-1/2", 3-3/4", 4-5/8", 4-7/8", 5- 1/4", 5-1/2", 6-1/8" and 7-1/4".
    f. Adjustable throat frames expandable from 2-7/8" up to 8-3/8".
4. Glass Trim: Extruded aluminum, not less than 0.062 inch thick, designed for glass thickness indicated with removable snap-in casing trim, glazing stops, and door stops without exposed fasteners.
5. Fire Rated Frames: Fabricate frames in accordance with NFPA80, listed and labeled by a qualified testing agency. Maximum fire rating required is 20 minutes (without hosestream test).

D. INTERIOR ALUMINUM DOORS

1. General: Provide 1-3/4 inch doors of type and design indicated, not less than 0.062 inch thick material.
2. Aluminum Stile & Rail Type Swinging Doors: Door stiles and rails to have tubular design with the following characteristics:
    a. Stiles:
        1) Wide Stile (6").
    b. Rails:
        1) 6" Top Rail.
        2) 12" Bottom Rail.
3. Snap-in stops with factory applied glazing gaskets for 1/4", 3/8", or 1/2" thick glass.

2.3 ACCESSORIES

A. Fasteners: Aluminum, nonmagnetic, stainless-steel or other noncorrosive metal fasteners compatible with frames, stops, panels, reinforcement plates, hardware, anchors, and other items being fastened.

B. Door Silencers: Manufacturer's standard continuous mohair, wool pile, or vinyl seals.

C. Glazing Gaskets: Manufacturer's standard extruded or molded plastic, to accommodate glazing thickness indicated.

D. Glazing: Comply with requirements in Section 08 80 00 - Glazing.

E. Hardware: As specified in Section 08 71 00 - Door Hardware.

2.4 FABRICATION

A. FRAME CONSTRUCTION

1. Factory pre-engineer and pre-cut interior aluminum frame components to the greatest extent practical. Linear glazing components fabricated in the field are not allowed. Allow for 2 inches excess vertical length for scribing to suit floor conditions. Face trim to be pre-cut to match jamb lengths. Machine jambs and prepare for hardware, with concealed plates, drilled and tapped as required, fastened in frame with concealed screws.
2. Provide concealed corner reinforcements and alignment clips for precise joints at butt or mitered connections.
3. Hardware Preparation: Factory interior aluminum frames to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates as specified in Division 08 Section, "Door Hardware."
    a. Reinforce frames to receive surface mounted door hardware. Machine jambs and prepare for hardware, with concealed reinforcement plates, drilled and tapped as required and fastened within frame with concealed screws.
    b. Locate hardware as indicated.
4. Fabricate frames for glazing with removable stops to allow glazing replacement without dismantling frame.
5. Fabricate all components to allow secure installation without exposed fasteners.

B. DOOR CONSTRUCTION

1. Factory pre-engineer aluminum doors and components to the greatest extent practical.
2. Hardware Preparation: Factory interior aluminum doors to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates as specified in Section 08 71 00 - Door Hardware.
    a. Reinforce doors to receive surface mounted door hardware. Machine and prepare for hardware, with concealed reinforcement plates, drilled and tapped as required and fastened within door with concealed screws.
    b. Locate hardware as indicated.
3. Clearances for Non-Fire-Rated Door Frames: Not more than 1/8 inch at jambs and heads, not more than 1/4 inch between pairs of doors. Not more than 3/4 inch at bottom.

4. Fabricate kits for glazing with removable stops to allow glazing replacement without dismantling.

2.5 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products' for recommendations for apply and designated finishes. Exposed surfaces to be free of scratches and other serious blemishes.

B. Factory finish extruded frame components so that any part exposed to view upon completion of installation will be uniform in finish and color.

C. Polyester Finish: Comply with AAMA 603.8; multiple-stage electrostatically applied thermoset polyester finish, baked to assure hardness.

1. Color: Custom paint color to match architect sample.
2. Color: Manufacturer's standard bronze.
3. Color: Manufacturer's standard gray.
4. Color: Manufacturer's standard black.
5. Color: Manufacturer's standard white.

D. Clear anodic coating: Comply with AAMA 607.1.

1. Class 2, AAM12C22A31 clear anodized coating, 0.4-.07 mill thickness minimum.

E. Color anodic coating: Comply with AAMA 608.1.

1. Class 2, AAM12C22A34 color coating electrolytically deposited, 0.4-0.7 mill thickness minimum.

a. Color: Bronze anodized.
b. Color: Black anodized.

2. Class 2, AAM12C22A44 color coating electrolytically deposited, 0.4-0.7 mill thickness minimum.

a. Color: Bronze anodized.
b. Color: Black anodized.

PART 3 - **EXECUTION**

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify wall thickness does not exceed standard tolerances allowed by specified frame throat sizes.

C. General Contractor to verify the accuracy of dimensions given to frame and door manufacturer for pre-cut openings.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install and set interior aluminum frames plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

B. Install frame components in the longest possible lengths with no component less than 48 inches.

1. Fasten to suspended ceiling grid at 48 inches on center maximum, using #6 sheet metal screws or other fasteners approved by frame manufacturer.
2. Use concealed installation clips to produce tightly fitted and aligned splices and connections.
3. Secure clips to extruded main-frame components and not to snap-in or trim members.
4. Do not use screws or other fasteners exposed to view when installation is complete.

3.3 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition.

B. Clean exposed frame surfaces promptly after installation, using cleaning methods recommended by frame manufacturer and according to AMMA 609 & 610.

C. Touch up marred areas so that touch up is not visible from a distance of 48 inches. Remove and replace frames that cannot be satisfactorily repaired.

3.4 PROTECTION

A. Provide protection as required to assure that frames will be without damage or deterioration upon substantial completion of the project.

END OF SECTION 08 11 16

SECTION 08 14 00 – WOOD DOORS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Door schedule:

a. Interior
b. Door vision panel frames

2. Glass:

a. Door lites:

1) As herein specified
2) As provided by door manufacturer

1.3 PERFORMANCE

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Door / Frame Assembly: Rated Assembly	General	Comply	UL 10A, 10C, 14B, 14C & WDMA I.S.1A, Item C-8
	Positive Pressure	"S" Label compliance – (After 5 minutes into test, the neutral pressure plane should be at 40" Temperature rise at 250 degrees)	UL, CBC
	Smoke & Draft Control	Comply	UL 1784 & WDMA I.S.1A, Item P-3
	Fire Rated Assembly	Comply	CBC 711.8, 715.4 & table 715.4 & WDMA I.S.1A, Item P-3
	Fire Rated Corridors and Smoke Barriers / Smoke Control	Comply	CBC 715.4.3 & 715.4.3.1

	Fire Rated Assemblies, Exit Enclosures & Exit Passageways	Comply	CBC 715.4.4 & 715.4.4.1
	Glazing in Doors	Comply	CBC 715.4.4.1
	Labeling of Protective Openings	Comply	CBC 715.4.5 & 715.4.5.1 & 715.4.5.3
Door Construction	Construction Performance Testing	Comply	WDMA IS 1A
	Construction type	Heavy Duty construction	
	Dimensional Tolerances	Width: +/-1/16" not prefit +/-1/32" factory prefit Height:: +/-1/16" Thickness: +/-1/16"	WDMA I.S.1A, Item P-3
	Hardware matching tolerances	Comply	
	Vertical & Horizontal Edge material	Wood veneer to match face of door	WDMA I.S.1A, Item C-4 & P-1
	Vertical & Horizontal Edge bonding	Bonded assembly	WDMA I.S.1A, Item C-5
	Adhesive	Type II, minimum	WDMA I.S.1A, Item C-6
	Core and Wood Blocking	Wood veneer Particleboard Core: PC-5 & HB-3 & HB-8 Wood veneer Fire Resistant Core: FD-45/60/90-5 & HB-3 & HB-8	WDMA I.S.1A, Item C-10
		Wood veneer HPDL Particleboard Core: PC-5 & HB-3 & HB-8 Wood veneer HPDL Fire Resistant Composite Core: FD-45/60/90-5 & HB-3 & HB-8	WDMA I.S.1A, Item C-11
Face Veneer:	Grade: Transparent Finish	Premium Grade Door: Veneer for Transparent finish • Veneer is required to be of sufficient thickness (minimum 1/50" at 12% MC) to preclude sand-through, show-through of core, and glue bleed. • UV set sealers applied twice and sanded in between • Finish coat applied last • Protective peel off film applied for protection	WDMA I.S.1A, Item A-8 & C-1 WI – Woodwork Institute
	Grade: Designation	Grade A: (All species except as herein listed) • The Veneer shall be smooth, tight-cut and full-length.	

		• When the face consists of more than one Veneer component or piece, the edge shall appear parallel and be edge matched. • Species specified for natural color will allow color contrasts, but must be book matched, unless otherwise specified. • The components of plain-sliced (flat-cut) will be book matched, unless otherwise specified with a running, balanced, or center matched arrangement. • Unless otherwise specified, components in plain-sliced faces will have a matching arrangement selected by the manufacturer. • Plain-sliced faces will consist of two or more components with no component less than 152mm (6 inches) wide except for outside components which may be less than 152mm (6 inches) to allow for certain types of matching or panel edge trim loss. • No plain-sliced components will have a split heart. • Not full quarter-cut is allowed in plain-sliced faces. • The width of any single component in quarter-cut, rift-cut or comb grain faces shall not be less than 76mm (3 inches) except for outside components which may be less than 76mm (3 inches) to allow for certain types of matching or door edge trim loss.	
		Grade B: White Maple	
	Matching Spliced veneers	Running & Continuous	WDMA I.S.1A, Item A-5
		Matching • Plain Sliced (flat cut): Book match • Quarter Cut Sliced: Slip match • Rift Cut: Center match	WDMA
	Appearance of doors in pairs - single	Pair Match	WDMA I.S.1A, Item A-6
	Appearance of pairs of doors in sets	Set Match	

SECTION 08 31 00 – ACCESS DOORS AND PANELS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Providing and installing rated and/or non-rated access doors at all ceiling and wall locations for access to, but not limited to;

   a. Plumbing and fire sprinkler valves and such.
   b. Mechanical fire damper controls, dampers, etc.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

   a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. Underwriters Laboratories (UL), www.ul.com

1. UL 10A, UL 14B and UL 14C
2. UL 1784 – Smoke and Draft control

E. National Fire Protection Agency (NFPA), www.nfpa.org

   a. NFPA 80 Labeled Protective assemblies
   b. NFPA 105 Installation of Smoke and Draft Control of 20 minute labeled door assemblies
   c. NFPA 252 Smoke and Draft Control of 20 minute labeled door assemblies
   d. NFPA 257 Glazing in Fire Rated Door Assemblies
   e. NFPA 288 Floor Fire Door Assemblies

F. Provide door assembly with "S" label

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Access Panels	Fire Ratings	Where fire-resistance classification is shown or scheduled, provide fire-rated metal door and frames. Identify each door and frame with UL Labels, indicating applicable fire-rating.	UL
Labeled doors and glazing:	Floor Fire Door Assemblies	Comply	CBC, Section 715.4.1, 715.4.2, 715.4.3, 715.4.4, 715.4.5, 715.4.6.2, 715.4.8, 715.4.8.1, 715.4.8.2 & 715.4.8.3
	Fire Door and Shutter Assemblies		CBC, Section 715.4
	Fire Door and Fire Shutter Fire Protection Ratings		CBC, Table 715.4
	Door Assemblies in Corridors and Smoke Barriers		CBC, Section 715.4.3
	Smoke and Draft Control		CBC, Section 715.4.3.1 & 715.4.6.3
	Doors in Exit Enclosures and Exit Passage ways		CBC, section 715.4.4
	Labeled Protective Assemblies		CBC, Section 715.4.6, 715.4.6.1 & 715.4.6.4
	Fire Door Labeling Requirements		CBC, Section 715.4.6.1
	Fire Door Labeling Requirements		CBC, Section 715.4.6.1
Refer to drawings and as herein specified			

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Indicate construction, configuration
2. Confirm and list all sizes and locations
3. Submit manufacturer's literature
4. Submit schedule of doors and frames using the same reference numbers for details and openings as indicated on the Contract Drawings.

E. Submit samples.

1. Finishes

F. Site mock-up, refer to "Mock-Up" heading.

G. Certification:

1. Label Construction Certification:

a. For door assemblies required to be fire-rated and exceeding sizes of tested assemblies, submit manufacturer's certification that each door and frame assembly has been constructed to conform to design, materials and construction equivalent to requirements for labeled construction.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Stipulations:

1. Manufacture all labeled frames in strict accordance with the specifications and procedures of Underwriters Laboratories, Inc. (UL).

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.
Agenda for meeting shall include, but not be limited to;

1. Locations of access doors
2. Size of doors
3. Items being accessed
4. Rated conditions
5. **General Contractor** shall request meeting 5 days in advance of construction.

F. Miscellaneous criteria:

1. Access doors at rated conditions shall be UL Labeled.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Store access doors at building site under cover.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Wall and Ceiling Framing
2. Wall and Ceiling Sheathing
3. Wall and Ceiling Finishing
4. Mechanical, Plumbing and Electrical Equipment and components requiring access.

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 05 40 00 – Cold-Formed Steel Framing
3. Section 06 10 00 – Rough Carpentry
4. Section 09 22 16 – Non-Structural Metal Framing
5. Section 09 29 00 – Gypsum Board & Sheathing Substrates
6. Section 09 30 00 – Tile and Stone
7. Section 09 90 00 – Paintings and Coatings

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding operation of the equipment.
2. Complete instructions regarding maintenance of the equipment, materials, finishes, etc.
3. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Acudor Access Doors, (201) 857 – 1800 www.acudor.com
2. Babcock-Davis, www.babcock-davis.com
3. Elmdor, www.elmdor.com

5. KARP Associates, Inc. 800.888-4212, www.karpinc.com
6. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Schedule

1. General

a. Manufacturer: Acudor
b. Construction: (unless noted otherwise on specific door)

1) Door and Trim: 14 ga. steel or aluminum, see specific model
2) Return Frame: 16 ga. steel or aluminum, see specific model
3) Insulation
    a) If applicable: 1-7/8" thick mineral wool between 22 ga. steel
4) Hinges: Continuous concealed piano with 90 deg. min. opening.
5) Latches/Locks: Mortise cylinder typ. & Self-latching at rated doors.
6) Automatic Panel Closer: At all doors
7) Inside Panel Release: At all doors
8) Finish:
    a) Steel: Baked prime coat final color as selected by **Architect**.
    b) Aluminum: Mill finish

2. Applications:
    a. WALLS:
        1) Schedule:
            a) Tile:
                i. Schedule:
                    a. **Flush recessed with taping flange and cement board insert for tile finish**
                        i). Application: Typical, uno.
                        ii). Model: Bauco Plus II, Tile access door
                        iii). Finish: Factory primed
                        iv). Options: Cement board insert for tile finish.
                        v). Size: General
                            a. 12″ x 12″
                            b. Required size per code, agency having jurisdiction and as required to provide full access to valves, equipment, dampers, etc.
                        vi). Criteria:
                            a. 12″ x 12″ for access to valves
            b) Security: (flush,exposed trim)
                i. Model: SD-6000
                    a. Size:
                        i). General:
                            a. Required size per code, agency having jurisdiction and as required to provide full access to valves, equipment, dampers, etc.

b. Submit available sizes for selection by **Architect**.

ii). Criteria:

a. 12" x 12" for access to valves

b. CEILINGS AND SOFFITS:

1) Schedule:

a) **Flush recessed with taping flange and gypsum board insert**

i. Application: Typical, uno.
ii. Model: Bauco Plus, Drywall access door
iii. Finish: Factory primed
iv. Options: Drywall insert for tile finish.

a. Match wall gypsum board type

v. Size: General

a. 24" x 24"
b. Required size per code, agency having jurisdiction and as required to provide full access to valves, equipment, dampers, etc.

vi. Criteria:

a. 24 x 36 where physical access by a person is required thru door

c. SECURITY: (flush,exposed trim)

1) Model: SD-6000

d. VALVE BOXES:

1) Model:

a) Non Rated: ARVE
b) Rated: N/A

2) Finish: Stainless Steel

2.3 ANCHORAGE

A. Frame anchors shall be located & installed per by manufacturer's recommendations.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.

2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 INSTALLATION

A. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

B. Installed Access Doors and frames and accessories in accordance with reviewed Shop Drawings and manufacturer's data, and as specified here.

C. Prime coat touch-up; Immediately after erection, sand smooth any rusted or damaged areas of prime coat and apply touch-up of compatible air-drying primer.

3.5 ADJUSTING

A. Test operation of equipment, components, etc. and adjust as needed to produce fully functioning units that comply with requirements.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

   1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **District**.

F. After completion of work in this, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 08 31 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 08 41 13 – ENTRANCES, WINDOW WALLS, STOREFRONTS AND CURTAIN WALLS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Window wall systems:
    a. Storefront:
2. Doors:
    a. Aluminum Storefront Doors
3. Flashing/Accessories:
    a. Coordinate with Section 07 62 00 – Sheet Metal Flashing and Trim.
    b. Sill Extension/Stool:
        1) Aluminum with watertight end dams
            a) Extruded when an accessory to specified system.
        2) Fastening clip
4. Glazing:
    a. Provide for and install glass and glazing supplied under Section 08 80 00
5. Hardware:
    a. Provide and prepare for Finish Hardware supplied under Section 08 71 00, unless noted otherwise to be supplied under this specification.
6. Accessories/Specialty Items:
    a. Provide and install fasteners, weather-stripping, sealant and other necessary components.
    b. Brake shape transition component to be installed between glass and end of interior walls.
    c. Integral steel reinforcing at window mullions.
    d. Sealants

1.2 REFERENCE STANDARDS

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	Name of Test	Performance	Testing Std.
Aluminum	Recycled Content	45% minimum	Third party confirmation
Aluminum Window System	Air infiltration	Not to exceed 0.06 CFM. Per sq. ft. of fixed area at 6.24 PSF	ASTM E-283
	Water infiltration-Curtain Wall	No water at 12psf	AAMA-501 / ASTM E331
	Water infiltration-Storefront	No water at 8 psf	AAMA-501 / ASTM E331
Design Criteria	Wind Loading	Comply	CBC Section 1609
Glazing	Refer to Section 08 80 00		
Doors - Single	Air infiltration	Not to exceed 0.50 CFM per linear foot of perimeter crack at 6.24 PSF pressure differential	ASTM E283 for single doors
Doors - Double	Air infiltration	Not to exceed 1.00 CFM per linear foot of perimeter crack at 1.567 PSF pressure differential	ASTM E283
System Design Criteria	Wind exposure	Refer to Structural drawings for Exposure Category	Building Code, ASCE 7-16
	Design Wind Pressure	Per storefront window manufacturer and structural engineer stamping the shop drawings	Building Code, ASCE 7-16 ASTM E330
	Min. basic wind speed	Refer to Structural drawings for Wind Speed ("V")	Building Code, ASCE 7-16 ASTM E330
Fasteners	Types and design	Self drilling structural fasteners	ICC Evaluation Service, ER-4780
		Concrete expansion anchors	ICC Evaluation Service, ESR-2427

Window / Door System	Deflection and stress design	Normal to the plane of the wall vertical deflection of framing members at design pressure shall • not exceed L/175 of span length or ¾" per individual pane of glass	AAMA TIR-A11-1996 or most current adopted edition
		Normal to the plane of the wall horizontal deflection of framing members at design pressure shall not exceed L/360 of span length or 1/8" maximum, whichever is less. Door head shall not exceed L/360 at 1/16" maximum	
		In the plane of the wall deflection of framing members when carrying their full design deadload shall not reduce the glass or panel bite below 75% of the design dimension, and shall not reduce the glass or panel edge clearance below 25% of the design dimension or 1/8", whichever is greater. Restrict deflection further if required for proper assembly and fit of components.	
		At connection points of framing members to anchors: Anchor deflection in any direction shall not exceed 1/16".	
		Stresses must take into account interaction and shall not exceed the allowable values established by the specifications listed under References. In no case shall allowable values exceed the yield stress.	
		At one and one-half times design pressure, permanent deflections of framing members must not exceed 1/1000 of span length, and components must not experience failure or gross permanent distortion. At connection points of framing members to anchors, anchor deflection in any direction shall not exceed 1/8" and permanent set shall not exceed 1/16".	
	Thermal Design	Provide for free and noiseless vertical and horizontal thermal movement of component parts, for an ambient temperature range of 20ºF to 180ºF. Buckling, opening of joints, glass brakeage, undue stress on fasteners, vibration harmonics, wind whistles, failure of sealants or any other detrimental effects due to the thermal movement of component parts will not be permitted. Fabrication and erection procedures shall take into account the ambient temperature range at the time of the respective operations	
	Seismic Design	• The system and its attachments to the structure shall comply with the seismic	

		lateral force requirements established by the applicable building code and the limitations described below and herein. • No failure or deterioration of any kind may occur when the system is displaced in the amount corresponding to the maximum allowable story drift as indicated on drawings. • At twice the above displacement, wedge gaskets may disengage and perimeter weather seals may experience adhesive or cohesive failure, but no other failure or deterioration of any kind may occur. • Glass contact with the system framing members may not occur during either displacement. • Story drift, refer to also to structural drawings	
Aluminum Finish, U.N.O.	Type	Kynar 500 Finish: Color: Custom Standard color as selected by **Architect** Class: Class 1 Product: Fluropon 70% Kynar 500 or Hylar 5000	AAMA 605.2
Hardware- Hand Activated	Operation	Comply	CBC 1133B, 1133B.2 & 1133B.2.5.2

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing**:

Item	Name of Test	Performance	Testing Std.
Storefront assembly	Water infiltration; Perform testing as herein specified in Part 3 – Execution	No water at 8psf	ASTM E1105 Procedure B
Sill can assembly	Water infiltration; Perform testing as herein specified in Part 3 – Execution	No water leakage	AAMA 511

Threshold assembly	Water infiltration; Perform testing as herein specified in Part 3 – Execution	No water leakage	ASTM E1105 Procedure B

E. **Construction Testing / Inspection by others**:

Item	Name of Test	Performance Results	By Whom
System installation	General compliance with manufacturers written installation instructions and warranty criteria	Comply	Authorized window manufacturer representative

F. **Construction Monitoring/Observations by others**:

Item	Name of Test	Performance Results	By Whom
Aluminum	Const. Waste Management	Comply	Refer to Division 1 for construction waste management and disposal/recycling requirements

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturer's data and shop drawings.

1. Data:

a. Submit manufacturer's data for all components.
b. Schedule of all materials including fasteners, anchors, sealants, primers, back-up materials, tapes, gaskets, separators, and related items including the location where each material is to be used, methods of application, special instructions, cross-references to the shop drawings, and explanatory details as required to insure and appraise the complete application of all sealants.
c. Detailed instruction for the installation and reglazing of glass units including explanatory details indicating the sequence of installation, method of installation for all materials, location of specific items and any special instructions as may be required.
d. In addition to complying with pertinent regulations of governmental agencies having jurisdiction. Submit ICC report certifying the following compliance with ASTM standards herein listed.
e. Precautionary instructions which will prevent damage to and prolong the life of the system components.
f. Detailed instructions for cleaning the various materials, including methods and acceptable cleaning products, as well as those which should not be used.
g. Instructions for the removal and replacement of glazing materials.

2. Design calculations:

a. Prepare and submit (with shop drawings) structural calculations for all work of this Section, including mock-up. Comply with current design rules of the Aluminum Association, AISC, AISI, and ACI. Include analysis for wind, dead load and seismic load on framing members and anchors. Show section property computations for framing members and submit full-size die drawings.

    1) Existing test reports shall not be an acceptable substitute for calculations.

    2) In no case shall glass be considered as a lateral brace for framing members.

    3) Anchor clips with slotted holes shall be calculated in the most extended conditions.

    4) Calculations shall dimensionally limit the stacking of shims in regard to bending stresses in bolts, clips, etc.

    5) Calculations shall be signed and sealed by a registered licensed structural engineer in the State of California.

    6) In addition, provide the following:

        a) Cross-references to the shop drawings.
        b) Certification that the responsible engineer has reviewed the shop drawings and that the structural performance requirements of this specification have been met and properly interpreted on the shop drawings.

            i. Certification shall be by letter to the **Owner** and by engineer's signature on shop drawings.

    7) Each specific manufacturer's Storefront, Window Wall and Curtain Wall Systems may require additional internal steel reinforcing which is integral to their specific system and provided as a component of their specific system.

        a) This reinforcing shall be furnished under this section of Work and completely detailed and included in shop drawings.

a. Submittal to be signed & stamped by a California Licensed Structural Engineer.
b. Indicate all steel reinforcing to be replaced in mullions by storefront manufacturer per storefront manufacturer's design requirements.
c. Submit wind loads and deflection calculations that prove frame systems shall support and resist listed loads required by this specification.
d. Wind resistance loads and deflection maximums.
e. Water resistance test standards listed.
f. Provide test reports from AAMA accredited laboratories certifying the performance.

3. Shop drawings:

    a. Submit a detailed diagram to the glass manufacturer indicating how his product will be used in the system, as well as written information describing application and/or installation techniques, wind load, wall and building movement, magnitude of thermal expansion, blocking and sealing and any other procedures, operations or exposures which may affect the performance of his product.

        1) Glass manufacturer shall review and approve in writing, this submittal for responsible use of his product relative to the specific application based on the information supplied

therein, and shall note on the submittal any procedures he believes will not allow his product to perform.

2) Review of this submittal by the manufacturer shall not relieve the **General Contractor** from responsibility for the performance of the system.
3) Submit elevation drawings and sections for all windows and incorporate architectural reference for window types and details in shop drawings.
4) Coordinate with Section 08 80 00 - Glazing.

b. Provide and incorporate in the shop drawings data indicating pertinent dimensioning, general construction, steel reinforcing, anchorage methods and locations, slab edge attachment, hardware locations and job specific details (manufacturer's standard details not acceptable).
c. Details showing journey techniques, provision for horizontal and vertical expansion, glass and metal thicknesses, framing and anchor member profiles.
d. Identify all materials, including adjacent materials and substrates.
e. Show relative layout of all adjacent walls, beams, columns and slabs, all correctly dimensioned to each other and grid lines.
f. Dimension position of glass edge relative to face of frame, channel and face of stud.
g. Include provisions for containing and draining to the exterior any water which accesses window internal cavities.
h. Indicate and specifically note any deviations from contract drawings and specifications.
i. Hardware mounting heights and indication of coordination with hardware specified in Section 08 71 00 – Door Hardware.
j. All related flashing, bituminous membrane and vapor / moisture barrier membrane.
k. Include all steel reinforcing to be installed integral to mullions.
l. Submit shop drawings and any other pertinent data to the manufacturer of the proposed sealant for his use in preparing a written recommendation for the proper, specific material for each application. The written recommendations shall be provided with the shop drawings when submitted.

E. Submit samples

1. The following samples shall be submitted for review, sized to provide a true representation of color, flatness, texture and workmanship, properly identified with labels and in quantities to be determined by the **Owner**:

   a. Aluminum, extruded and / or sheet, with specified finish.
   b. Cured sealants for color selection and manufacturer's data sheets.
   c. All door and frame metal, with specified finish.
   d. All flashing metal, with finish to match frame finish.

F. Submit Warranty

1. Submit in a form acceptable to the **Owner**, a warranty to be executed by an authorized officer of the subcontractor, subject to the conditions herein set forth.

G. Certification:

1. Provide written certification that the following materials conform to the specifications, including the responsibility for ensuring that all items required for the complete and proper

functioning installation are included, even though not specifically indicated herein, and at no additional cost to the **Owner**:

a. Aluminum alloys and finishes (including test reports for anodic finish).
b. Steel alloys and finishes.
c. Sealants.
d. Glass.
e. Glazing Materials.
f. Fasteners.
g. Window and door hardware.
h. Recycled content of aluminum

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer shall have been in business for **five (5)** years providing / finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **ten (10)** years providing/installing/finishing similar size projects and complexity.

D. Test reports shall be accompanied by the window manufacturer's letter of certification stating that the tested window meets or exceeds the referenced criteria for the appropriate ANSI/AAMA 101 window type.

E. Perform water testing as herein specified and witnessed by **Owner** or **Architect**.

F. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid.

G. Stipulations:

1. **General Contractor's** Responsibilities:

a. The responsibility for the system is totally that all designs and resolutions proposed in the shop drawings, calculations and related documentation and certification must be demonstrated, not only in the test procedure but also throughout the warranty periods herein specified. No compensation for omission and errors on the part of the Subcontractor in the execution of this contract will be awarded.
b. Perform any actions required to fulfill the intent of this specification even though not specifically called for in this document. Included in this responsibility are instances of overlapping (or shared) duties with other sections of the project specification, in which case the **General Contractor** must coordinate and insure that all materials, labor, etc., are furnished to the extent required for completing the installed system.
c. Design and Engineering of entire window and door system, and related flashings.
d. Submit written notification of any deficiencies or discrepancies that would affect the proper or timely installation of the work in this section. Obtain written authorization for any modification to the system caused by deficiencies, discrepancies, or other conflicts with approved documents.

e. Advise **Owner** where supplemental bracing of beams may be required if system requires bracing to bottom flange of beams, etc. This notification must occur prior to the fabrication of the entrance, storefront and window system and the structural steel framing members.
f. Coordinate and verify, by measurement at the jobsite, lines, location, details and dimensions affecting his work.
g. Compliance with the codes and regulations of all governing agencies having jurisdiction.
h. Coordinate hardware with requirements and products specified in Section 08 71 00 - Door Hardware.

H. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Review areas of potential interference and conflicts, and coordinate layout, sequencing, and support provisions for interfacing work.
b. At meeting, the attendees shall review the installation procedures and assemble & install an actual sample window installation, including moisture barrier, kraft paper, bituminous waterproof sheet flashing, metal flashing, and cementitious backer board.

1) **General Contractor** shall provide all materials, pieces, parts, tools and labor to install sample.

a) The purpose of the sample is to insure understanding of the system, the related parts and the sequencing.
b) The sample shall not be part of the finished complete installation, and shall be removed as directed by the **Owner**.

c. Coordinate sealants used in window system with those specified and used at window system perimeter at cementitious backer board, stone veneer, plaster, concrete tilt-up and steel door frames, to insure complete compliance with and compatibility of the sealants and all the systems and products.

2. Attendees recommended for meeting are;

a. **General Contractor, Owner, Architect**, Window Consultant, System installer, installers of other work including door, metal support systems, wall substrates and finishes, flashing, moisture barrier, sealants and electrical work.

I. Manufacturer's Representative: Make arrangements necessary to have a representative of the window manufacturer on-site periodically during installation of window wall systems to review installation procedures and installed windows.

1. Sheet membrane:

a. Make arrangements necessary to have a representative of the sheet membrane manufacturer on-site periodically during installation of waterproof membrane at window openings to review installation procedures prior to installing windows.

b. Manufacturer's representative shall review and advise in writing if they find anything in their general observation that appears to not meet manufacturer's written instructions and/or not in accordance with warranty criteria.

1) Written Observation review shall be sent to the **Architect** by the manufacturer's representative.
2) Observation by window manufacturer does not constitute an inspection and/or supervision of installation which is the responsibility of installer and **General Contractor.**

J. Miscellaneous criteria:

1. System

a. The system shall be provided in accordance with the drawings, approved shop drawings, test reports, product data and submittals.
b. System proposed by the **General Contractor** must be equal to or better in design, performance and material standards than as described on the drawings and specified in this specification.
c. In addition to meeting the required design, performance and material criteria, the system must also:

1) Incorporate the "pressure equalization" concept, and provide details on drawings.
2) Have a positive method of preventing rotation of horizontal members without restricting thermal movement.
3) Allow for drainage to the exterior through the systems and to weeps and weep tubes.
4) Provide for the replacement of glazed materials from the exterior without modification of the system or adjacent materials and without projecting exterior stops
5) Accommodate acceptable construction tolerances.
6) Not utilize snap-engaged components as structural members.
7) Include butt joint mullions and glazing where indicated on the drawings and per the requirements of Section 08 80 00 - Glass and Glazing.

d. Deviations from the drawings and specifications must be specifically documented on the submittals for review by the **Owner**, who will be the sole judge as the acceptance or rejection of any or all deviations.
e. Any steel members and connections required to support or connect the system are to be designed, furnished and installed by the **General Contractor**, unless specifically indicated on the structural drawings as being the responsibility of others.
f. System shall be installed correctly so all water intrusion drains to the exterior of the building.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver all parts ready for erection; store in close proximity to final locations.

C. Package and store materials in a manner that will prevent surface damage, contamination, distortion, brakeage or structural weakening. Adhesive papers or sprayed-on coatings which bond when exposed to sunlight or weather are not permissible.

D. Replace any materials damaged during manufacture, shipping, storage or installation.

E. Protect stored and /or in place materials from contamination and damage.

F. Follow glass manufacturer's instructions for receiving, storing, handling and cleaning glass, as well as treatment of insulated (dual glazed) units which have air space pressure compensation provision for shipping.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial one (1) year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional five (5) year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

D. Under the terms of these warranties, the **General Contractor** agrees to repair or replace defective materials, workmanship or failures, in a timely, satisfactory manner, at no cost to the **Owner**. Defective materials /workmanship include (but are not necessarily limited to) the following:

1. Any abnormal deterioration, aging or weathering.
2. Water or air leakage exceeding the limits herein specified, including that caused by shifted glass lites.
3. Structural failure resulting from wind loads or forces not exceeding design criteria.
4. Adhesive failure, cohesive failure, cracking or discoloration of sealants.
5. Disengagement of gaskets or weatherstrips under conditions not exceeding specified design criteria.
6. Glass lites which:

a. Experience brakeage due to nickel sulfide inclusions, shifting of glass, or wind pressures and forces not exceeding design criteria.
b. When heat-treated, have a surface compression stress greater than 6000 psi.
c. Experience cracking, peeling or discoloration of reflective coating or contain coating flaws in excess of those outlined in PPG Coating Quality Criteria.
d. Experience deterioration of insulating glass edge seal due to causes other than brakeage which results in intrusion of dirt or moisture, internal condensation or fogging, deterioration of protected internal glass coating, and any other visual evidence of seal failure or performance.

7. Damage to other materials caused by falling glass which has broken due to defects.
8. Hi-Performance organic coating and anodic coating not in compliance with:

a. Coating thickness requirements
b. Coating weight requirements
c. Performance requirements for stain resistance

9. Malfunctioning of entrance doors.
10. Material, Craftmanship, etc. warranty periods as herein listed: (not for finish)

a. Storefront: 5 year
b. Entrances: Limited Lifetime
c. Thermal barrier: 10 year
d. Operable Windows: 2 year

E. Finish Warranties:

1. Kynar 500

a. Film integrity 20 years,(No change)
b. Chalk Resistance 20 years. @ value 6 (ASTM D659)
c. Color change 20 years @ 7NBS max.
d. Salt spray, air pollution & smog without any adverse affect = 5yrs.
e. Adhesion to aluminum: 20 years

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Floor Slab
2. Wall Framing and Finish
3. Finish Caulking
4. Support head frame at building storefront glazing, manufacturer & installer per this section shall coordinate their work with others to insure that proper support and framing is provided for window wall system.
5. Structural framing.
6. Intermediate floor slab edges.

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 05 50 00 – Miscellaneous Metal Fabrications

3. Section 07 92 00 – Sealants and Caulking
4. Section 08 71 00 – Door Hardware
5. Section 08 80 00 – Glass and Glazing

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

1.13 GENERAL SYSTEM DESCRIPTION

A. System Design Criteria

1. The system shall be weather-tight, structurally sound, self-draining and will allow no water infiltration (infiltration is defined as the appearance of uncontrolled water other than condensation on the indoor face of any portion of the system).
2. The details shown indicate the preferred profiles and dimensions to achieve the design concept. Dimension and profile adjustments to those shown may be made, provided that the visual design concept and intent of the specifications are maintained.
3. All components, assemblies and completed work shall conform to the following performance criteria and comply with the applicable codes of governing agencies. Except when applicable codes make other provisions, or as noted herein, loads shall act in combinations that provide the most unfavorable conditions. Wind loading need not be considered as additive to seismic loading.

a. System shall be designed for flexural, shear and torsional stresses resulting from positive and negative wind pressures of a magnitude established. Refer to "General Manufacturing Requirements" heading.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as listed herein and in Drawings:

1. Storefront / Window Wall system & Entrances

a. Arcadia, www.arcadiainc.com, Vernon, CA

b. Oldcastle Glass (Vistawall Products), www.oldcastleglassbe.com ,Terrell, TX
c. Kawneer Company, Inc., www.alcoa.com Phone No. (916) 638-5744. Kawneer Company, Inc., www.alcoa.com Phone No. (916) 638-5744.
d. Efco, www.efco.com

2. Sealant (concealed)

a. CR Laurence CO., Inc., www.CRLaurence.com

3. Reviewed Equivalent by **Architect.**

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of aluminum extrusion thickness, load capabilities, chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related sections whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General

1. Aluminum:

a. Alloy for aluminum extrusions shall satisfy requirements for 6063-T5. Provide a minimum nominal well thickness as required for structural members; 1/16" for nonstructural.

1. Manufacturer shall provide notarized certification letter that substantiates how much recycled billet is used and submit to **Architect** during submittal phase.

b. Alloy for clear anodized formed aluminum shall be equal to 5005 or 5052 and 3003 for non-exposed material. Provide a minimum nominal thickness which best suits application.
c. Provide alloy and temper recommended by the manufacturer for strength, corrosion resistance, and application of required finish; comply with ASTM B221 for extrusion, bars, wires and rods and ASTM B209 for sheet or plate.
d. Aluminum Sheets and Brakeshapes: Minimum 0.032" thickness. Provide alloy and temper as recommended by the producer or finisher for type of use and finish indicated, and with not less than the strength and durability properties specified in ASTM B209 for 5005-H15.
e. Standard commercial tolerances as listed in "Aluminum Standards and Data" shall apply to finished, fabricated and assembled materials except where stricter ones are required for proper function of system.
f. Recycled Content: As herein specified.

2. Steel:

a. Hot-rolled shapes and plate shall comply with ASTM A36.
b. Cold-formed steel shall conform to one of the material specifications listed in the AISI "Specification for the Design of Cold-Formed Steel Structural Members" and ASTM A611.
c. All steel plates and shapes shall be prime painted, hot dipped galvanized or electro-galvanized. Any damage to protective coatings shall be touched up in the field with an appropriate coating.
d. Hot-rolled sheet and strip shall comply with ASTM A570.
e. Integral steel reinforcing at mullions

3. Glass:

    a. Shall conform with requirements specified in Section 08 80 00 - Glass and Glazing.

        1) Glass for doors is specified in sub sections below.

4. Glazing Materials:

    a. Shall conform to requirements specified in Section 08 80 00 - Glass and Glazing.
    b. Provide glazing sealants, gaskets, splines, and other glazing materials which are recommended and guaranteed by the manufacturer to remain permanently elastic, non-shrinking, non-migrating and weatherproof for the life of the building. Comply with recommendations of sealant, gasket and glass manufacturers for selection of glazing materials which have performance characteristics suitable for the applications indicated and for conditions at the time of installation. Select materials which are compatible with surfaces contacted in the installation, as demonstrated by testing and field experience.
    c. Gaskets and weather seals: (weatherseals)

        1) It is the responsibility of the Subcontractor to provide gaskets of a hardness and design such that they will be in contact at all times with adjacent elements during dynamic loading, building and thermal movements and provide a watertight seal as required to meet the performance criteria. They shall be sized in length to prevent pull-back at corners.

            a) Sponge gaskets shall be extruded black neoprene with a hardness of 50+ /-5 durometer shore A and conforming to ASTM C509-70.

                i. Design sponge gaskets to provide 20%-30% compression.

        2) Dense gaskets shall be extruded black neoprene with a shore A hardness of 75+ / -5 for hollow profiles and 60+ /-5 for solid profiles, and conforming to ASTM C864.

            a) Dense gaskets of EPDM are also acceptable, provided the material conforms to all requirements, of ASTM C864 except for flame propagation.

        3) Mold all corners of all gaskets, where compatible with installation procedure.

5. Sealants:

    a. General Sealant requirements:

        1) Locate and identify all sealants by product name on shop drawings.
        2) Sealants and joint fillers, both for joints within the entrance storefront and window system construction and for joints at the interface of entrance, storefront and window

system construction and other work, shall comply with requirements specified in Section 07 92 00 – Sealants and Caulking and Section 08 80 00– Glass and Glazing.

3) Structural glazing sealant shall be Silicone Glazing Sealant specifically designed and tested for structural glazing, as specified in Section 07 92 00 – Sealants and Caulking and approved by glazing manufacturer.
4) Perimeter and flashing sealant shall be Silicone Sealant as specified in Section 07 92 00 – Sealants and Caulking.

6. Entry Doors

a. Storefront Doors:

1) Profile as herein specified
2) Constructed of tubular extruded aluminum sections.
3) Structurally joined at corners with heavy concealed reinforcement brackets secured with fasteners and deep penetration welds.
4) Accurately prepared and reinforced for hardware, specified in this section and for hardware specified in Section 08 71 00 - Door Hardware.
5) Glass for aluminum framed entry doors shall be fully tempered.

a) Glass color to match window vision glass, except where note on drawings to be clear.

6) Weatherstripped to meet specified performance criteria.
7) Fabricated to facilitate replacement of glass or panels, without disassembly of stiles and rails. Furnished with snap-on extruded aluminum stops also mechanically attached requiring special tool for removal.
8) Without exposed screws.
9) Adjustable after installation for frame/door clearance.
10) Welded corner construction.

7. Miscellaneous Materials:

a. Fasteners:

1) Type, size, alloy, quantity and spacing of all fasteners and anchorage devices shall be as required for performance.
2) All screws, bolts, nuts, washers and rivets in wetting locations, window and door assembly and hardware fasteners in non-wetting locations can be stainless steel or an approved equal. Identify wetting and non-wetting areas on drawings.
3) Exposed fasteners will be permitted only where approved by the Owner and shall be stainless steel with countersunk oval head, Phillips drive, finished to match adjacent finish.
4) All anchor bolts and nuts shall have self-locking devices incorporating nylon insets or patches similar to those manufactured by USM Corporation, Nylock Fastener Division.
5) "TEK" screws / fasteners are not allowed for any use or at any location.

b. Inserts for anchorage in concrete shall be steel with integral or welded projections for embedment, and be prime painted, hot dip galvanized rolled steel, or hot dip galvanized formed steel complying with ASTM A386.

c. Weep hole baffles shall be 45 pore per inch open cell plastic coated clear urethane foam, compressed 30%-50%.
d. Slip pads:
    1) Provide eel slip, nylatron, high impact polystyrene or approved equal slip pads between moving parts at all dynamic connections.
    2) Provide minimum thickness of 1/16" for nylatron and polystyrene, and 1/8" for eel slip.
    3) Do not use nylatron or polystyrene in close proximity to a field weld.
e. Flashings in direct relationship with the aluminum framing system shall be of 24 gauge galvanized steel or aluminum meeting the requirements of Section 07 62 00 - Flashing and Sheet Metal.
    1) Exposed flashings shall have hemmed edges where exposed to view to provide stiffness and a retainer for splice sleeves.
    2) Flashings shall be finished to match finishes for aluminum framing system in this specification.
f. Brake-shapes glazed into the System shall be of 1/8" plate aluminum.
    1) Provide stiffeners as required and pocket reducer / retainers as required to install brake-shape.
    2) Brake-shape shall be finished in accordance with the aluminum framing system in this specification.
g. Shims, blocking and spacers:
    1) Unless otherwise noted on the drawings, metals used for shims, blocking and spacers shall be zinc chromate painted steel, incorporating separators for dissimilar materials and at dynamic connections.
    2) Do not use aluminum or plastic shims at structural connections or horseshoe (U) shaped shims at dynamic or other connections where they may work free.
    3) Shims of wood or other organic materials are not acceptable.
h. Prime Paint:
    1) All steel and unpainted aluminum in contact with steel, masonry or concrete shall be painted with zinc chromate.
    2) All unpainted aluminum flashing installed at sills shall be painted with zinc chromate.
    3) Prime paint steel part of anchors, reinforcement and supports with zinc chromate. After field welding, remove weld slag and touch up primed surface.
    4) Provide minimum dry film thickness of one mil for zinc chromate, and 30 mils for bituminous paint.
        a) Zinc chromate primer shall conform to Fed. Spec. TT-P-645.
i. Kraft Paper: Kraft paper with reinforcing mesh.

8. Bituminous Waterproof Membrane Flashing: Provide a cold-applied, self-adhering membrane composed of high-strength polyethylene film coated on one side with a layer of adhesive-consistency rubberized asphalt.

a. Refer to Section 07 13 26 – Cold Applied Self-Adhering Membrane (CASAM).

9. Coordinate all requirements, including type of switch, wire leads and location on door with control system and security **General Contractor** prior to submittals, fabrication and installation.

B. General Manufacturing Requirements

1. Submit ICC certified report of the following:

a. Component parts and accessories shall be double-plated steel, aluminum, polycarbonate, or other corrosion resistant materials.
b. Provide bolts or screws min. as required by manufacturer.

1) Fasteners shall be sized and spaced to resist the tensile & shear loads imposed, with no exposed screws and/or bolts beads; no aluminum fasteners.
2) Exterior aluminum flashing system shall comply with the shape as shown on drawings and may be either extrusion or bent shaped.

2. Metal alloy and coating shall be verified by manufacturer with required submittal of an ANSI/AAMA Report.
3. Provide aluminum window systems and aluminum doors as dimensioned and shown on the Drawings, complete with anchors of the type needed for installation and complying with the following standard as defined in ANSI A134.1.

2.3 MATERIALS - PRODUCTS SCHEDULE

A. STOREFRONT SYSTEM

1. Shall be:

a. System: Series 3000 Thermal Multiplane
1) Type: SF Type 01
2) Mfgr: Oldcastle Glass (Vistawall Products)
3) Glazing:

a) Installation: Outside Glazed
b) Glass joints: Captured
c) Glass Location at Mullion- Options:

i. Center

d) Glass Type:

i. Vision: 1" Insulated
ii. Refer to Section 08 80 00 – Glass and Glazing

4) Profiles: 2" x 4-1/2"
5) Construction:

a) Integral steel reinforcing to accommodate spans & wind loads
b) Thermally broken frame
c) Sill: As indicated on drawings

6) Accessories: (as required & filler extrusions as required for complete installation, including, but not limited to;)

a) Head Receptor: M0-678/M0-224 with seals

B. SEALANT

1. Exposed Conditions:

a. Refer to Section 07 92 00 – Sealants and Caulking

2. Mastic bed below sills:

a.	Manufacturer:	Tremco
b.	Product:	Vulkem 116
c.	Type:	One part polyurethane
d.	Color:	Black or approved alternate

3. Concealed fasteners:

a.	Manufacturer:	CR Laurence Co., Inc.
b.	Product Type:	Silicone
1.	Model:	No. 33 S

4. Miscellaneous conditions:

a.	Manufacturer:	CR Laurence Co., Inc. (confirm with window wall mfgr.)
b.	Product Type:	Silicone
c.	Model:	No. 33 S (confirm with window wall mfgr.)
d.	Applications:	Pressure Plates, Shear Blocks, locations as directed by Mfgr.

5. Door thresholds:

a. Refer to Sealants, Caulking & Adhesive Tape Specification Section

2.4 ENTRANCES – (Aluminum Storefront Entrance doors)

A. Options:
1. Mfgr: Oldcastle Glass (Vistawall Products)
2. **#500** Wide style doors

a. Vertical Stiles:

1.	Meeting Stile:	5 3/4" overall	D-70 and D-25
2.	Jamb Stiles:	5 3/4" overall	D-13

b.	Top Rails:	8 3/4" overall	D-71
c.	Bottom Rails:	10 3/4" overall	D-61

1. Construction:
a. Provide square glazing receptor & seals for glass.
2. Provide Muntins at glass for true divided lites. Refer to Storefront Window Types as indicated on Drawings.

3. Hardware:

a. Provided under Section 08 71 00 Door Hardware (unless noted otherwise)

1. Doors shall be prepared for all specified hardware and all other necessary associated hardware for a complete assembly.
2. Automatic door bottoms:

a. Preparation of door bottom for Automatic Door Bottom;(Refer to Hardware Specifications)
b. Prepare door for Automatic Door Bottom (supplied under hardware specification) - remove portion of hinge side vertical stile web to accommodate height of automatic door bottom such that mechanism extends to extent of door edge at hinge side.
c. Prepare door Vertical stile at strike side same as above if door is not supplied w/ concealed vertical rods, if door is to have Concealed Vertical Rods, then Strike Side vertical stile shall remain its standard integrity.
d. Provide written manufacturers warrantee for doors after factory modifications.

2.5 GLAZING

A. Refer to Section 08 80 00 - Glass and Glazing.

2.6 OTHER MATERIALS

A. Provide aluminum entrance and fixed window wall and storefront system as dimensioned and shown on the Drawings, complete with anchors of the type needed for installation.

1. Provide anchor bolts or screws minimum as required by manufacturer. Fasteners shall be sized and spaced to resist the tensile and shear loads imposed, with no exposed screws and/or bolts beads, no aluminum fasteners.
2. Exterior flashing system shall comply with the shape as shown on drawings and may be either extrusion or bent shaped aluminum.
3. All members shall be extruded aluminum alloy 6063-T5. Component parts and accessories shall be double-plated steel, aluminum, and polycarbonate.
4. Provide flashing components as detailed and as required to provide a weathertight assembly.

B. Integral & concealed steel reinforcing within mullions.

1. Supplied and installed under scope of work of this section.

C. Brake shape transition components to be installed between glass and end of interior walls:

1. Material: Aluminum
2. Finish: Match window mullions
3. Size: Full height between horizontal mullions x finish wall width.
4. Attachment: Two sided neoprene tape

a. Color: Black
b. Size: Full width and length of brake shape where it butts against glass

D. Copings, flashings, etc.

1. Material: Aluminum
2. Finish: Match window mullions

3. Size: Refer to documents.
4. Attachment: Refer to documents
5. Construction:

    a. Provided as part of this section.
    b. Installed under this section scope of work.
    c. Design to be in compliance with this section and Section 07 62 00 – Sheet Metal Flashing and Trim

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 MOCK-UP

A. Erect at location approved by **Architect**.

1. Mock-up shall be part of final construction once approved by **Architect and Owner Representative**.
2. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.

B. Mock-up

1. Size: One window with mullions

3.5 INSTALLATION

A. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Install framing, glazing and adjust the work of this Section in strict accordance with the manufacturer's recommendations as reviewed by the **Architect**, anchoring all units firmly into position square, plumb, straight and true.

C. Dissimilar materials:

1. Where aluminum surfaces come in contact with metals other than stainless steel, zinc, or white bronze, then isolate the aluminum by one of the following methods:

a. Paint the dissimilar metal with a prime coat of zinc-chromate primer, followed by two coats of aluminum metal-and-masonry paint.
b. Apply a good quality sealant material between the aluminum and the dissimilar metal complies with "Sealants & Caulking" specifications.

D. Sills

1. Install full bed of sealant below sill in conjunction with shims, press down firmly and remove sealant that presses out past sill mullion.
2. Install finish backer rod & sealant at outer edge of sill.
3. Isolate the dissimilar metals with non-absorptive tape or gaskets.

E. Face caps when applied to mullions shall be installed such that no deformations are evident on face of cap face - all locations with imperfections shall be replaced by **General Contractor** at no additional cost.

F. Test all window installations at jambs & sills for water penetration with hose spray test after installation.

G. Copings, flashings and other brake shapes associated with the windows shall be installed and provided under this section and coordinated with Section 07 62 00 – Sheet Metal Flashing and Trim.

H. Sealant:

1. Exterior:

a. Sealant exposed face shall be set flush with face of mullion, unless noted or detailed otherwise.
b. Sealant shall be tooled with smooth concave face in compliance with sealant manufacturer's recommendations.
c. Install at all locations as indicated on manufacturers details and as directed by manufacturer and their specifications.

2. Interior:

a. Sealant at sill mullions at floor shall be set back ½" from face of mullion to allow floor covering material to fit below mullion.
b. Jamb and head sealant shall be flush with face of mullion, unless noted or detailed otherwise.

1) Sill sealant at floor mounted mullions shall typically be inset ¼" minimum to allow floor finish to pass under mullion.

c. Sealant shall be tooled with smooth concave face in compliance with sealant manufacturer's recommendations.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.7 TESTING

A. Storefront Windows:

1. General:

a. Perform tests witnessed by **Owner** and **Architect**.
b. Failing opening assemblies shall be removed and replaced / repaired to meet test requirements at no additional cost to **Owner.**

2. Type: Spray Rack test
3. Scope: **General Contractor** shall spray test the openings with water to ensure that the assembly is watertight.

a. **General Contractor** shall provide required lifts, apparatus and such to perform tests.
b. Coordinate with sill can assembly testing.

4. Description:

a. **General Contractor** shall spray test with water to ensure that the assembly is watertight and protects against water intrusion.
b. Involves a rectangular, calibrated piping system with spray nozzles every 12 inches to cover the building component with a uniform spray pattern.

1) The unit is placed 12 inches away from the building component and is pressurized with pumps to provide adequate pressure according to listed standards.

5. Quantity: 3 locations per building

a. **Owner**, **Architect**, and **General Contractor** shall select locations which represent the combination of storefront types, storefront conditions/details, and surrounding building materials, and weather exposures found in the project.

6. Duration: 15 minutes
7. Failure: Should testing result in leakage, eliminate the causes of such leakage at no additional cost to the **Owner.**

a. Remedial measures must maintain standards of quality and durability and are subject to approval.

1) Leakage, in this specification, is defined as being any appearance of uncontrolled water other than condensation on the indoor face of any part of the wall.

a. Provide sill can assembly testing as specified herein.
b. Provide threshold assembly testing as specified herein.

B. Thresholds:

1. General:

a. Perform threshold assembly testing at no additional cost to the **Owner** when initial storefront water infiltration testing results in leakage.
b. Perform tests witnessed by **Owner** and **Architect**.
c. Failing windows shall be replaced and repaired to meet test requirements at no additional cost to **Owner**.

2. Type: Spray Rack test
3. Scope: **General Contractor** shall spray test the openings with water to ensure that the assembly is watertight.

a. **General Contractor** shall provide required lifts, apparatus and such to perform tests.
b. Coordinate with sill can assembly testing.

4. Description: **General Contractor** shall spray test with water to ensure that the assembly is watertight and protects against water intrusion.

a. Involves a rectangular, calibrated piping system with spray nozzles every 12 inches to cover the building component with a uniform spray pattern.

1) The unit is placed 12 inches away from the building component and is performed at a specified air pressure differential while simultaneously spraying water onto the exterior face of the assembly at 5gph/ft2 according to listed standards.

5. Quantity: Test one single door opening and one double door opening.
6. Duration: 15 minutes
7. Failure: Should testing result in leakage, eliminate the causes of such leakage at no additional cost to the Owner**.**

a. Remedial measures must maintain standards of quality and durability and are subject to approval.

1) Leakage, in this specification, is defined as being any appearance of uncontrolled water other than condensation on the indoor face of any part of the wall.

C. Sealant:

1. General:

a. Perform tests witnessed by Sealant mfgr's representative**.**
b. Failing sealant assemblies shall be removed and replaced.

2. Type: Pick and adhesion test
3. Scope: **General Contractor** shall periodically test sealants in place for adhesion, using methods recommended by sealant manufacturer.

a. **General Contractor** shall provide required lifts, apparatus and such to perform tests.

4. Description:

a. Comply with sealant mfgr's recommendations.

5. Quantity: Test one 36" long section at one location for each exterior building elevation and floor level, min.
6. Failure: Should testing result in adhesion failure, remove, clean, prime and reinstall sealant at no additional cost to the **Owner.**

a. Remedial measures must maintain standards of quality and durability and are subject to approval.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this section prior to and during installation, and protect the installed work and materials of other trades.

D. Labels:

1. Leave all labels in place, intact and legible, until reviewed and approved by the Architect.
2. Do not at any time remove required AAMA labels.

E. Prior to completion of the work, thoroughly clean all exposed surfaces and glazing.

1. Use only the cleaning materials and techniques recommended by the manufacturer of the material being cleaned.
2. Do not scratch or otherwise damage the glass, screen, or aluminum finish.

F. Institute protective measures and other precautions required to assure that aluminum entrances and storefronts will be without damage or deterioration, other than normal weathering, at time of acceptance.

G. All damaged fabrications, including but not limited to damaged mullions, muntins and face caps caused by fastener read through shall be replaced at no cost to Owner.

H. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

I. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

J. Provide record drawings in accordance with Division 1 closeout submittal procedures t.

K. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 08 41 13

THIS PAGE IS INTENTIONALLY BLANK

SECTION 08 51 13 – ALUMINUM WINDOWS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified and as necessary to complete the work including but not limited to:

1. Aluminum full lite nail flange windows:
    a. Custom sizes
    b. Standard or specified anchorages, trim and attachments to substrates.
    c. Including the following types:
        1) Single Hung Window Units
2. Provide insulated glazing units
3. Provide accessories, weather stripping, latching & locking mechanisms, etc.
4. Provide dual concealed flashing at all window and door openings.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

C. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction
    a. All occupancy types

D. American Society for Testing and Materials (ASTM):

1. ASTM E283 - Standard Test Method for Rate of Air Leakage Through Exterior Windows, Curtain Walls and Doors
2. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls and Doors by Uniform Static Air Pressure Difference
3. ASTM E547 - Standard Test Method for Water Penetration of Exterior Windows, Curtain Walls, and Doors by Cyclic Static Air Pressure Differential
4. ASTM E774 - Specification for Sealed Insulating Glass Units
5. ASTM C 1036 - Standard Specification for Flat Glass

E. Test samples shall comply with requirements in AAMA 101V -86 for test samples size and methods.

F. ANSI/AAMA 101-88 F-R25

1. Wind loading = 95 m.p.h. Basic Wind Speed
2. Exposure = C

G. National Glass Association (NGA), www.glass.org

1.3 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturers data and shop drawings.

E. Shop Drawings: Submit shop drawings with specified finish for each type of window specified and detailing for building substrate.

F. Samples:

1. Submit corner section with specified finish.
2. Include 12" x 12" samples of all glazing types along with literature of quality of construction, and specified finish.

G. Product Data:

1. Submit manufacturer's product specifications, technical support data, installation and maintenance recommendations and standard details for each type of window unit required. Include finishing methods, hardware and accessories.
2. Window flashing components and design.

H. Quality Control Submittals:

1. Certificates: Submit manufacturer's certifications indicating compliance with specified performance and design requirements, certification shall be by recognized, independent testing laboratory certifying that each required type of window complies with performance requirements indicated.

1.4 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Air Infiltration: Not more than 0.15 cfm per square foot of overall frame area at an inward test pressure of 1.57 psf.

C. Water Penetration: No water penetration as defined in the test method at an inward test pressure of 3.0 psf.

D. Structural Performance: No glass breakage, damage to hardware, permanent deformation that

would impair operation of the unit, or residual deflection at a positive (inward) and negative (outward) test pressure of 37.5 psf.

E. Material:

1. Frame & Sash – extruded aluminum alloy 6063-T5
2. Components & Accessories – stainless steel

1.5 DELIVERY, STORAGE, AND PRODUCT HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver in original packaging, store off the ground, and protect from weather.

C. Store units in an upright position in a clean and dry storage area.

D. Prime or seal wood surfaces, including surfaces to be concealed by wall construction, if more than 30 days will expire between delivery and installation.

1.6 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures. Submit a written warranty, executed by the window manufacturer, agreeing to repair or replace units that fail in materials or workmanship for a period of 3 years after substantial completion. Materials and labor are to be covered in full by the manufacturer. Insulated glass units are 10-year pro-rated warranty.OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding operation of the equipment.
2. Complete instructions regarding maintenance of the equipment, materials, finishes, etc.
3. Refer to Division 1 for closeout submittal procedures.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Manufacturer shall be subject for compliance with all requirements, provide products from the following list:

1. Windows:
   a. Milgard Windows
2. Window Flashing:
   a. Fortifiber www.fortifiber.com
   b. WR Grace www.grace.com
3. Reviewed Equivalent by Architect.
   a. Substitutions shall require **Architect's** approval and shall be given in letterform.

b. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. All specified materials indicated are as manufactured by: Milgard and shall be installed according to current listed specification requirements.

C. Refer to drawings, details, and other related specification section whether listed or not. Details shall set requirements for size and configuration of systems.

2.2 MATERIALS

A. General: Comply with requirements of ANSI/AAMA 101 - 88

B. Aluminum Structural Components:

1. Extruded aluminum alloy shall be 6063-T5 for strength, corrosion resistance and application of required finish.

2. Extrusion members are to be 0.060" in thickness for structural walls.

C. Fasteners:

1. Provide aluminum, non-magnetic steel, epoxy adhesive, or other materials warranted by the manufacturer to be non-corrosive and compatible with window members, trim, hardware, anchors and other components of the window units.

2. Where fasteners screw-anchor into aluminum frame members less than 0.125" thick, reinforce the interior with aluminum to receive screw threads, or provide standard, non-corrosive, pressed-in, splined grommet nuts.

D. Anchors, Clips and Window Accessories:

1. Fabricate anchors, clips and window accessories of aluminum or non-magnetic stainless steel.

2. Anchor clips and window accessories fabricated of hot-dip zinc coated steel or iron may be used for concealed work.

E. Hardware:

1. Provide the mfgr's standard hardware fabricated from a corrosive-resistant material and of sufficient strength to perform its intended function.
2. For application of exposed hardware, use fasteners that match the finish of the hardware being fastened.
3. Rollers shall have stainless steel wheels with ball bearings encased within a polycarbonate housing.
4. Lock shall be injection-molded polycarbonate with a spring-activated latch mounted in the meeting stile.
5. Secondary lock shall be a two position concealed friction secured deadbolt mounted in the vent lock stile. The primary position locks the window vent fully closed. The secondary position locks the window vent open 2 inches for ventilation.

F. Weather-stripping:

1. Provide the mfgr's compressible weatherstripping at each edge of each operating sash.
2. Weatherstripping shall be concealed when sash is closed.

G. Glazing Stops:

1. Provide glazing stops (beads) coordinated with glass section indicated. **(beveled snap on stop not acceptable)**
2. Finish glazing stops to be same finish and color as exterior window frame finish.

H. Insect Screens:

1. Provide removable insect screen panel for each operable sash, with 18" x 16" replaceable mesh and vinyl retainer spline.

I. Glass & Glazing:

1. Provide the mfgr's standard:
   a. Sealed insulated dual pane unit: (provide design to accommodate wind loading)
      1) Thickness: 3/4" overall
         a) 3/16" low - E exterior
         b) 3/16" clear interior
      2) Standards:
         a) Complies with ASTM E774 Level A and is at least 3/4" in overall thickness.
2. Glass types / Glazing specifications:
   a. Select from mfgr's standard options:

Type:	Gas Fill	U-Value	SHGC	VLT
1. SunCoat /clear	air	0.41	0.32	0.58
2. SunCoat /clear	Argon	0.37	0.31	0.58
3. SunCoat Max/clear	air	0.40	0.24	0.54
4. SunCoat Max/clear air 0.	Argon	0.36	0.23	0.54

   b. Safety glass at locations indicated and in compliance with applicable local codes & CBC.

J. Mullion types: (submit with shop drawings for Architects review and approval)

1. Full lite design:
   a. Single hung – Series 1520
      1) Frame: 2-5/8"

K. Finishes:

1. Select from one of the following standard mfgr's finishes:
   a. Clear Anodized
      1) 0.4 mills thick, typ. & min.

L. Window flashing

1. Three Component assembly:

a. Schedule:

1) 1st:

a) Mechanically attached first layer at jambs and sill of window opening;

i. Mfgr: Fortifiber
ii. Product: Moistop Flashing
iii. Width: 9″
iv. Fasteners: As approved by product manufacturer.

2) 2nd:

a) Sealant

i. Mfgr: Fortifiber
ii. Product: Moistop Sealant
iii. Width: 12″
iv. Fasteners: As approved by product manufacturer.

3) 3rd:

a) Self adhering waterproof membrane flashing installed over nail flange at jambs and head in shiplap fashion.

i. Mfgr: Fortifiber
ii. Product: E-Z Seal Flashing
iii. Width: 12″
iv. Fasteners: As approved by product manufacturer.

4) 4th:

a) Wall membrane installed over entire wall and butted to window.

i. Refer to wall material specification.

2.3 CONSTRUCTION

A. All window frames shall be a minimum of 2 1/8″ deep, with corners mortised and securely joined with double plated steel screws engaging integral extruded screw races. All frame joints shall be sealed.

B. Window vents and fixed panels shall be assembled around the glass utilizing full channel vinyl gaskets. The frame corners are to be rigidly held with double plated steel screws engaging integral extruded screw races in the horizontal members. Vent weather-stripping shall be a single plane, and shall be polypropylene pile.

C. Locking device of window shall be able to withstand a force of 300 pounds in any direction.

2.4 ACCESSORIES AND TRIM

A. Installation Accessories:

1. Nailing Fin: Typical at jambs, sill and head.

B. Weep System:

1. Provide rectangular weep holes located in the frame sill for effective drainage and moisture control.

C. Screen:

1. Provide bug screens at all operable vent locations, typ.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions: Before installation, verify that openings are plumb and square and of proper dimension. Report frame defects or unsuitable conditions to the **General Contractor** before proceeding.

B. Acceptance: Beginning of installation means acceptance of existing conditions.

3.2 FABRICATION

A. General: Fabricate window units to comply with indicated standards.

B. Preglaze: Fabricate units at the factory for applications indicated.

3.3 INSTALLATION

A. Comply with manufacturer's specifications and recommendations for installation of window units, hardware, operators, accessories and other window components.

B. Comply with reviewed shop drawings.

C. Install sealant and related backing materials at perimeter of assembly in accordance with Section 07 92 00 – Sealants and Caulking. Do not use expansive foam sealant.

D. Windows shall be factory sized to fit in framed opening.

E. Windows shall be fabricated to rough opening size with ½" deductions automatically made, so that no calculations will be required.

F. Opening panels must be closed and locked during installation. Windows must be installed level, plumb and square with ¼" clearance on all sides with weep holes at bottom.

G. All windows shall be installed by skilled workmen, trained for this type of work.

H. All openings shall be fully prepared to receive windows. Any shoring or debris must be removed and any corrective work completely finished prior to the start of window installation.

I. Windows shall be installed level, square and plumb without bind. The vents shall be aligned and adjusted for optimum weathering contact to the frame and ease of operation. After installation the primary and secondary locks shall be checked and adjusted for proper function.

J. Nail fin windows shall be securely attached t the framing with #6d or larger galvanized nails or other corrosion resistant fasteners.

K. Headers:

1. Must not be nailed.

L. Fastening:

1. Nail through fin into framing along sides and base.
2. At the head, nails may be placed ½" above fin and bent down over fin to allow for header deflection, but shall not interfere with siding, sheathing, trim, etc.
3. Install fastener screws such that operable panel cannot be lifted from window assembly.

M. Adjust operating sash and hardware to provide tight fit at contact points and weatherstripping.

N. Lubricate hardware and moving parts.

O. Install flashing and building paper and building wrap at window opening in shiplap fashion.

P. Install window opening multiple flashing assembly in accordance with manufacturer's recommendations with components as herein specified.

3.4 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Cover windows during spray painting or other construction operations that might cause damage.

C. Protection of all installed window shall be the responsibility of the **General Contractor**.

D. Labels:

1. Leave all labels in place, intact and legible, until reviewed and approved by the Architect.
2. Do not at any time remove required AAMA labels.

E. Promptly after, thoroughly clean all exposed surfaces and glazing interior and exterior.

1. Use only the cleaning materials and techniques recommended by the manufacturer of the material being cleaned.
2. Do not scratch or otherwise damage the glass, screen, or aluminum finish.

F. Institute protective measures and other precautions required to assure that aluminum entrances and storefronts will be without damage or deterioration, other than normal weathering, at time of acceptance.

G. Repair all minor damage to finishes as approved by Architect, replace all other.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

END OF SECTION 08 51 13

THIS PAGE IS INTENTIONALLY BLANK

SECTION 08 62 00 – UNIT SKYLIGHTS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with roof construction and related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified and as necessary to complete the work including, but not limited to:

1. Aluminum metal framed skylight design, engineering and fabrication of the extruded aluminum framing, integral closures, trim and perimeter flashing as shown on the contract drawings and as herein specified.
2. Fasteners, anchors and related reinforcement.
3. Glass and glazing materials including gaskets, sealants, spacers, blocking and related materials.
4. Installation of entire Skylight System.

E. Coordinate work and materials with Division 16 and Electrical Drawings for required power, switching and wiring connection to lighting controls.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Acrylic lens plastic	Construction	Pass	ATI – CCRR-0113
Skylight assembly – Structural Performance, Durability & Burning			ATI – Report No: 89255.01-301-18, test date 02.03.09 & ATI, AAMA/WDMA/CSA 101/I.S.2/A440-05, Test date 12.22.09
Glazing:	Shading coefficient	Pass	Tait Solar Co., Inc test No. 93074-A
	Transmission Haze	Comply	ASTM D1003 and tested per ASTM E167
	Heat Transfer Coefficient – 3/16" Clear prismatic lens	Pass	Tait Solar Co., Inc test No. 93074-A
Glazing integrity	Withstand 200lb. weight dropped from 2'-0" above glazing	Pass	Mfgr.
	Withstand 500lb. concentrated load placed on glazing	Pass	Mfgr.
Refer to drawings and as herein specified			

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Schedule of all skylights including, but not limited to:

a. Designation to match drawings
b. Glazing types and layers
c. Sizes

2. Installation instructions for skylights

E. Submit samples.

1. N/A

F. Certification:

1. Testing agency report(s)

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **ten (10)** years providing / installing / finishing similar size projects and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid

E. Stipulations:

1. One lens as part of glazing assembly shall be diffuse type

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Agenda for meeting shall include, but not be limited to:

1. Curbs and roofing
2. Framed openings at roof
3. **General Contractor** shall request meeting 5 days in advance of construction.

G. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures and operation at project closeout.

1. Provide complete calibration of all motorized operations, photo cells and interconnect wiring with controls, line and low voltage control and monitoring system.

H. Miscellaneous criteria:

1. Separate dissimilar metals from each other by painting each metal surface at area of contact with a bituminous coating.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver all components ready for erection; store above grade, blocked and under cover to prevent warping.

C. Keep protective covering on skylight until installation is complete and in accordance with manufacturer's recommendations.

1.7 JOB CONDITIONS

A. Field verify that all roof openings, roofing, components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **ten (10)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of Owner within the warranty period, such defects shall be repaired and replaced at no cost to the Owner.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Roof construction
2. Roof curbs
3. Finish work inside skylight well

B. Related Sections include, but are not limited to the following:

1. Division 1

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding operation of the equipment.
2. Complete instructions regarding maintenance of the equipment, materials, finishes, etc.
3. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as herein listed and in Drawings:

1. SUNOPTICS, www.sunoptics.com (800) 289 – 4700, An Acuity Brands Company, www.acuitybrands.com

2. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General: All skylights shall be factory fabricated extruded aluminum framed units, in locations as shown and as detailed on the Contract documents. All skylights shall be designed to carry all tributary roof loads as specified in Building Code (20 psf min.)

B. Sizes: As indicated on the Contract documents and herein specified.

C. Assembly Construction:

1. Skylights shall be factory assembled with glazing ready for installation.
2. Skylight frame shall have integral condensate and weepage gutter which drain interior moisture to outside.
3. Corners shall be mitred and welded.
4. Skylight frames shall be insulated and thermally broken.
5. The acrylic glazing shall be separated from the skylight frame with an EPDM rubber aire seal gasket.

D. Materials:

1. Skylight frame:

a.	Framework:	Extruded aluminum, 6063T5
b.	Aluminum finish:	Mill finish - AA-C22-A41
c.	Gaskets:	Extruded neoprene strips as recommended by skylight manufacturer.
d.	Fasteners:	As recommended by skylight manufacturer.

2. Skylight Glazing:

a. Skylights – typical, u.n.o.

1) Double Hip and/or Pyramid skylights shall be triple-glazed

a) Schedule: Prismatic Acrylic Lenses

i.	Outer:	SR 60 Clear Acrylic
ii.	Middle:	SR 25 UVA White Acrylic
iii.	Inner:	SR 20 Clear Acrylic

b) Properties

i.	Visible light transmittance:	0.63
ii.	SHGC:	0.42
iii.	Winter U-value shall be:	0.62
iv.	Light Diffusion:	100%

3. Sealants: In accordance with Section 07920.

2.3 MATERIALS – SKYLIGHTS SCHEDULE

A. Fixed skylights

1. Model No. 800 MB

a. Profile:

1) Pyramid profile: square size

b. Curb: Fixed curb mounted type
c. Glazing:

1) Refer to Materials heading
2) Structurally Domed by: "Sunoptics"
3) Triple glazed

d. Frame: Insulated Thermal Break
e. Accessories:

1) Safety / Security grill

2. Sizes: (as herein scheduled and indicated on Drawings)

a. Nominal:	Outside curb:	Inside Curb:	Designation:
1) 4′-0″ x 4′-0″	49-1/2″ x 49-1/2″	46-1/2″ x 46-1/2″	4040

2.4 OTHER MATERIALS

A. Provide all miscellaneous fasteners, brackets, supports, connectors and accessory items as indicated on the Contract documents and as required by the product manufacturer for a complete & proper installation of the materials, products, systems specified herein.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Inspect curb framing & roof flashing to assure that installation can proceed in accordance with reviewed shop drawings & Contract documents.

C. Installation to be by the skylight manufacturer or approved authorized representative of the skylight mfg. in strict accordance with reviewed shop drawings & Contract documents.

D. Install perimeter frames on pre-installed walls/curbs using 6" x 3/16" foam rubber gaskets.

1. Cut foam rubber gasket to match width of curb/wall

2. Securely fasten frames to curb by approved mechanical fasteners.

E. Install glazing, gaskets and retaining rings for a complete watertight assembly.

F. After other trades have completed work on adjacent materials, carefully inspect skylight installation and make adjustments necessary to ensure proper installation and weather-tight conditions.

G. Clean all exposed surfaces and materials of adhesives, smear, and stain at completion of installation.

3.5 ADJUSTING

A. Adjust all louvers and other moving parts to operate smoothly, quietly & without binding or jamming.

3.6 COMMISSIONING

A. Provide factory-certified field service engineer to a site visit to ensure proper system installation and operation under following parameters:

1. Skylight louver and photocell operation and integration with building controls.

3.7 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.

2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.8 DEMONSTRATING

A. Provide factory-certified field service engineer to a site visit to instruct user in proper system operation.

3.9 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 08 62 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 08 62 23 – TUBULAR DATLIGHT DEVICES

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein, and as necessary to complete the work required by project conditions including, but not limited to:

1. Tubular daylight devices and accessories.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

1. Daylight Reflective Tubes:

   a. Spectralight Infinity with INFRAREDuction Technology combines ultra-high Visible Light reflectance with Ultra-low Infrared (IR) reflectance.
   b. Patented spectrally-selective optical surface yields an average total- and specular-reflectance greater than 99.5 percent for the Visible Light spectrum (400 nm to 700 nm) providing maximized visible light transmission and less than 25 percent reflectance for Infrared (IR) heat wavelengths (750 nm to 2500 nm) for minimized heat transmission, resulting in a spectrally-selective Total Solar Spectrum (250 nm to 2500 nm) reflectance less than 37 percent, as measured using a Perkin Elmer Lambda 1050 spectrophotometer with a Universal Reflectance Accessory.
   c. Color: a* and b* (defined by CIE L*a*b* color model) shall not exceed plus 2 or be less than minus 2 as determined in accordance to ASTM E 308.

2. Performance Requirements:

Item	**Name of Test**	**Performance**	**Testing Std.**
SolaMaster 750 DS-C (Closed Ceiling) and SolaMaster 750 DS-O (Open Ceiling)	-	Class CW-PG70, 21" dia.: Type TTDDCC Type TDDOC	AAMA/WDMA/CSA 101/IS2/A440
	Air Infiltration Test:	Air infiltration will not exceed 0.30 cfm/sf aperture with a pressure delta of 1.57 psf across the tube when tested in accordance with ASTM E 283.	ASTM E 283
	Water Resistance Test:	Passes water resistance; no uncontrolled water leakage with a pressure differential of 10.7 psf (512 Pa) or 15 percent of the design load (whichever is greater) and a water spray rate of 5 gallons/hour/sf for 24 minutes.	ASTM E 547 ASTM E331

	Uniform Load Test	All units tested with a safety factor of (3) for positive pressure and (2) for negative pressure, acting normal to plane of roof.	ASTM E 330
		No breakage, permanent damage to fasteners, hardware parts, or damage to make daylighting system inoperable or cause excessive permanent deflection of any section when tested at a Positive Load of 150 psf (7.18 kPa) or Negative Load of 70 psf (3.35 kPa).	
	Fall Protection Performance	Passes fall protection test: No penetration of dome or curb cap when subject to 400 lb (160 Kg)/42 inch (1066 mm) impact drop test	OSHA 29 CFR 1926.506(c) Safety Net Systems
		Passes fall protection test	California State OSHA Fall Protection Code of Regulations, Title 8, Section 3212 (e)(1) Skylight Screens
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit:

1. Manufacturer Product & Technical Data
2. Manufacturer Installation Instructions
3. Shop Drawings:
    a. Schedule of all skylights with designations to match the Drawings
    b. Solatube layout: Reflected Ceiling Plan, Roof Plan, and Sections including rough opening and framing dimensions

c. Details showing product components, anchorage, flashing, and accessories.

E. Certifications:

1. Manufacturer Approved/Trained/Certified Installer/Applicator

F. Test Reports:

1. Independent testing agency or evaluation service reports verifying compliance with specified performance requirements.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor /Installer/Fabricator shall have been in business for **fifteen (15) years** providing/installing/finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **twenty (20) years** manufacturing tubular daylighting devices.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to:

a. Roof Framing
b. Roof Curbs
c. Roofing
d. Ceiling

2. **General Contractor** shall request meeting 5 days in advance of construction.

F. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures and operation at project closeout.

1. Provide complete calibration of all motorized operations including but not limited to photo cells, wiring, line and/or low voltage control and monitoring system.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver products in manufacturer's original containers, dry, undamaged, seals and labels intact.

C. Store products in manufacturer's unopened packaging until ready for installation.

1.7 JOB CONDITIONS

A. Field verify that all roof openings, roofing, components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1) year** written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **ten (10)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Roof construction / framing / substrate
2. Roof curbs
3. Suspended acoustical ceilings

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 05 12 00 – Structural Steel Framing
3. Section 06 10 00 – Rough Carpentry
4. Section 07 41 13 – Metal Roof Panels
5. Section 07 54 00tpo – Thermoplastic Polyolefin (TPO) Membrane Roofing
6. Section 07 62 00 – Sheet Metal Flashing and Trim
7. Section 07 9 2 00 – Sealants and Caulking
8. Section 09 51 00 – Acoustical Ceiling Suspension System and Tile

1.11 OPERATION AND MAINTENANCE DATA

A. Refer to Division 1 for closeout submittal procedures.

B. Submit as part of project closeout:

1. Complete instructions regarding operation of the equipment.
2. Complete instructions regarding maintenance of the equipment, materials, finishes, etc.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as herein listed and in Drawings:

1. Solatube, www.solatube.com
2. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.

b. Refer to Division 1 for substitution, deviation and/or submittal procedures.

c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General: Transparent roof-mounted skylight dome and self-flashing curb, reflective tube, and ceiling level diffuser assembly, transferring sunlight to interior spaces; complying with ICC AC-16.

B. Tubular Daylight Device Assembly:

1. Manufacturer: Solatube
2. Series: SolaMaster
3. Model:

a. 750 DS-O Open Ceiling

1) AAMA Type TDDOC

2) 21″ diameter

4. Capture Zone:
   a. Roof Dome Assembly: Transparent, UV and impact resistant dome with flashing base supporting dome and top of tube.
      1) Outer Dome Glazing
         a) Type DA, 0.125 inch (3.2 mm) minimum thickness injection molded acrylic classified as CC2 material; UV inhibiting (100 percent UV C, 100 percent UV B and 98.5 percent UV A), impact modified acrylic blend.
            i. Raybender 3000: Variable prism optic molded into outer dome to capture low angle sunlight and limit high angle sunlight.
      2) Tube Ring: 0.090 inch (2.3 mm) nominal thickness injection molded high impact PVC. Prevents thermal bridging between base flashing and tubing and channel condensed moisture. Attached to base of dome ring with butyl glazing rope 0.24 inch (6 mm) diameter; to minimize air infiltration.
      3) Dome Seal: Adhesive backed weatherstrip, 0.63 inch (16 mm) tall by 0.28 inch (7 mm) wide.
5. Dome Options:
   a. Dome Edge Protection Band for Curb Cap: Type PBC, for fire rated Class A, B or C roof applications with 750 DS Domes on Curb Cap Flashing installations. Galvanized steel. Nominal thickness of 0.039 inch (1 mm). For use with Curb Cap Flashing (Type FC), only.
6. Flashings:
   a. Roof Flashing Base:
      1) Two Piece: Two-piece, inverted flange Metal Roof Flashing for Standing Seam Rib roof profile with greater than 14-3/8 inch (365 mm) minimum distance between ribs permitting a required greater than 2 inch (51 mm) clearance between flashing and rib: Type FSM. Aluminum 1060 Alloy, corrosion resistant conforming to ASTM B 209, 0.059 inch (1.5 mm) thick.
   b. Flashing Options: **[Specifier: following flashing components are optional. Select those required and delete those not required. Flashing insulator is intended to seal the roof opening and prevent condensation forming on the flashing interior from exposure to humid air in unventilated spaces. Note Curb Cap Insulation (CCI) is required for applications requiring FEMA P-361 and ICC 500 Compliance.]**
      1) Flashing Insulator: Type FI, Thermal isolation material for use under flashing.
      2) Curb Insulator: Curb Insulator, Type CI, Thermal isolation. **[Specifier: For use with Flashing Type FC.]**
      3) Curb Cap Insulation: Type CCI, Nominal 1-inch thick thermal insulation pad to reduce thermal conduction between curb-cap and tubing and thermal convection between

room air and curb-cap. Rated R-6 ($^{O}Fxft^{2}xhr/Btu$) Insulation is Polyisocyanurate foam utilizing CFC, HCFC, and HFC free blowing agent. Type-1 Class-1 per ASTM C 1289; Passes UL 1715 (15-minute thermal barrier per IBC 2603.4); Attic ventilation may be required per IBC 1203.2($^{O}Fxft^{2}xhr/Btu$). **[Specifier: For use with Flashing Type FC.]**

4) Roof Flashing Turret Extensions: Provide manufacturer's standard extension tubes for applications as required: **[Specifier: The following turret extension components are optional. Select those required and delete those not required. If more than one size is required indicate locations on the Drawings. Roof Flashing Turret Extension are used to raise the height of the dome above roof level. This extends the height of the turret found on the curb cap or self-flashing. Must order additional tubing to include the added height of turret.]**

a) Type T12: Additional lengths of 12 inches (305 mm) extension

b) Type T24: Additional lengths of 24 inches (610 mm) extension

c) Type T36: Additional lengths of 36 inches (914 mm) extension

d) Type T48: Additional lengths of 48 inches (1219 mm) extension

5) Membrane Counter Flashing: Type MCF, one piece, seamless, spun Aluminum Alloy 1100, functioning as a counter flashing for use with F8 or F11 Flashings, only, when applied to membrane roofs. Corrosion resistant conforming to ASTM B 209, 0.059 inch (1.5 mm) thick. **[Specifier: Select for use with Self Mounted flashing Types F8 or F11; delete if not applicable.]**

7. Transfer Zone:

a. Extension Tubes: Aluminum sheet, thickness 0.018 inch (0.5 mm) conforming to ASTM B 209.

1) Reflective Tubes.

a) Reflective extension tube, Type EXX and Type EL with total length of run as indicated on the Drawings.

b) Interior Finish: Spectralight Infinity with INFRAREDuction Technology combining ultra-high Visible Light reflectance with Ultra-low Infrared (IR) reflectance.

2) Tube Options: **[Specifier: Select the following optional Extension Tube and Angle Adapters as required. Delete options not required. Note that at least one 24 inch extension tube is required for diffuser.]**

a) Extension Tube Angle Adapter: Provide manufacturer's standard adapters for applications requiring:

i. Type A1 one 0 to 90 degree extension tube angle adapter.

ii. Type A2 two 0 to 90 degree extension tube angle adapters.

b) Top Tube Angle Adapter, Type TA: Reflective 45 degree adjustable Top Tube Angle Adapter, 16 inches (406 mm) long.

c) Thermal Insulation Panel: Type TIP, high-performance dual-glazed, thermally-broken tube insulation system.

d) Open ceiling trim ring: Type R, ABS Plastic, White; nominal thickness of 0.04 inch (1 mm).

8. Delivery Zone:

a. Diffuser Assemblies for Tubes Not Penetrating Ceilings (Open Ceiling): Solatube Model 750 DS-O. 21 inch (530 mm) diameter diffuser attached directly to bottom of tube.

1) Lens: Type L1, OptiView Fresnel lens design to maximize light output and diffusion. Visible Light Transmission shall be greater than 90 percent at 0.022 inch (0.5 mm) thick. Classified as CC2.

2) Diffuser Seal: Open cell foam, acrylic adhesive backed, 0.75 in (19 mm) wide by 0.125 in (3.2 mm) thick to minimize condensation and bug, dirt and air infiltration per ASTM E 283.

3) Diffuser Trim Ring: Injection molded acrylic. Nominal wall thickness 0.172 inches (4.4 mm).

2.3 ACCESSORIES

A. Fasteners: Same material as metals being fastened, non-magnetic steel, non-corrosive metal of type recommended by manufacturer, or injection molded nylon.

B. Suspension Wire: Steel, annealed, galvanized finish, size and type for application and ceiling system requirement.

C. Sealant: Polyurethane or copolymer based elastomeric sealant as provided or recommended by manufacturer.

2.4 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Verify that substrate conditions have no defects or errors which would result in poor or potentially defective application or cause latent defects in workmanship.
3. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.
4. Do not proceed with work until unsatisfactory conditions are corrected.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Clean surfaces thoroughly prior to installation.

C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
2. Coordinate installation with substrates, air and vapor retarders, roof insulation, roofing membrane, and flashing to ensure that each element of the Work performs properly and that finished installation is weather tight.
3. Install flashing to produce weatherproof seal with curb and overlap with roofing system termination at top of curb.
4. Provide thermal isolation when components penetrate or disrupt building insulation. Pack fibrous insulation in rough opening to maintain continuity of thermal barriers.
5. Coordinate attachment and seal of perimeter air and vapor barrier material.
6. Install required tubular shaft transition components to engage skylight at roof down to lens at ceiling.
7. Where metal surfaces of tubular unit skylights will contact incompatible metal or corrosive substrates, including preservative-treated wood, provide permanent separation as recommended by manufacturer
8. Align device free of warp or twist, maintain dimensional tolerances
9. After installation of first unit, field test to determine adequacy of installation. Conduct water test in presence of Owner, Architect, or Contractor, or their designated representative. Correct if needed before proceeding with installation of subsequent units.
10. Inspect installation to verify secure and proper mounting. Test each fixture to verify operation, control functions, and performance. Correct deficiencies.
11. After other trades have completed work on adjacent materials, carefully inspect solotube installation and make adjustments necessary to ensure proper installation and weather-tight conditions.
12. Clean exposed surfaces according to manufacturer's written instructions. Touch up damaged metal coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.

3.5 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Installer shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

E. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

F. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

G. After completion of work in this section, remove all erection equipment and implements of service, and debris; leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 08 62 23

SECTION 08 71 00 – DOOR HARDWARE

PART 1 - **GENERAL**

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions of Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes items known commercially as finish or door hardware that are required for swing, sliding, and folding doors, except special types of unique hardware specified in the same sections as the doors and door frames on which they are installed.

B. This Section includes the following, but is not necessarily limited to:

1. Door Hardware, including electric hardware.
2. Storefront and Entrance door hardware.
3. Gate Hardware.
4. Digital keypad access control devices.
5. Power supplies for electric hardware.
6. Thresholds, gasketing and weather-stripping.
7. Door silencers or mutes.

C. Related Sections: The following sections are noted as containing requirements that relate to this Section, but may not be limited to this listing.

1. Division 8: Section - Steel Doors and Frames.
2. Division 8: Section - Wood Doors.
3. Division 8: Section - Aluminum Storefront
4. Division 28: Section - Fire/Life-Safety Systems & Security Access Systems.

1.3 REFERENCES (USE DATE OF STANDARD IN EFFECT AS OF BID DATE.)

2. UL 305 - Panic Hardware

F. WHI - Warnock Hersey Incorporated

G. SDI - Steel Door Institute

1.4 SUBMITTALS & SUBSTITUTIONS

A. General: Submit in accordance with Conditions of the Contract and Division 1 Specification sections.

B. Submit product data (catalog cuts) including manufacturers' technical product information for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.

C. Submit six (6) copies of schedule organized vertically into “Hardware Sets” with index of doors and headings, indicating complete designations of every item required for each door or opening. Include following information:

1. Include a Cover Sheet with;

a. Job Name, location, telephone number.
b. Architects name, location and telephone number.
c. Contractors name, location, telephone number and job number.
d. Suppliers name, location, telephone number and job number.
e. Hardware consultant's name, location and telephone number.

2. Job Index information included;

a. Numerical door number index including; door number, hardware heading number and page number.
b. Complete keying information (referred to DHI hand-book "Keying Systems and Nomenclature"). Provision should be made in the schedule to provide keying information when available; if it is not available at the time the preliminary schedule is submitted.
c. Manufacturers' names and abbreviations for all materials.
d. Explanation of abbreviations, symbols, and codes used in the schedule.
e. Mounting locations for hardware.
f. Clarification statements or questions.
g. Catalog cuts and manufacturer’s technical data and instructions.

3. Vertical schedule format sample:

Heading Number 1 (Hardware group or set number – HW -1)						
			(a) 1 Single Door #1 - Exterior from Corridor 101	(b) 90°		(c) RH
			(d) 3' 0"x7' 0" x 1-3/4" x (e) 20 Minute (f) WD x HM			

(g) 1	(h)	(i) ea		(j) Hinges - (k) 5BB1HW 4.5 x 4.5 NRP (l) ½ TMS	(m) 626		(n) IVE
2	6AA	1 ea		Lockset - ND50PD x RHO x RH x 10-025 x JTMS	626		SCH

(a) - Single or pair with opening number and location. (b) - Degree of opening (c) - Hand of door(s) (d) - Door and frame dimensions and door thickness. (e) - Label requirements if any. (f) - Door by frame material. (g) - (Optional) Hardware item line #. (h) - Keyset Symbol. (i) - Quantity. (j) - Product description. (k) - Product Number. (l) - Fastenings and other pertinent information. (m) - Hardware finish codes per ANSI A156.18. (n) - Manufacture abbreviation.

D. Make substitution requests in accordance with Division 1. Substitution requests must be made prior to bid date. Include product data and indicate benefit to the project. Furnish samples of any proposed substitution.

E. Wiring Diagrams: Provide product data and wiring and riser diagrams for all electrical products listed in the Hardware Schedule portion of this section.

F. Keying Schedule: Submit separate detailed schedule indicating clearly how the Owner's final instructions on keying of locks has been fulfilled.

G. Templates for doors, frames, and other work specified to be factory prepared for the installation of door hardware. Check shop drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.

H. Furnish as-built/as-installed schedule with close-out documents, including keying schedule and transcript, wiring/riser diagrams, manufacturers' installation and adjustment and maintenance information.

I. Fire Door Assembly Testing: Submit a written record of each fire door assembly to the Owner to be made available to the Authority Having Jurisdiction (AHJ) for future building inspections.

1.5 QUALITY ASSURANCE

A. Obtain each type of hardware (latch and lock sets, hinges, closers, exit devices, etc.) from a single manufacturer.

B. Supplier Qualifications: A recognized architectural door hardware supplier, with warehousing facilities in the project's vicinity, that has a record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this project and that employs an experienced architectural hardware consultant (AHC) who is available to Owner, Architect, and Contractor, at reasonable times during the course of the Work, for consultation.

1. Responsible for detailing, scheduling and ordering of finish hardware.
2. Meet with Owner to finalize keying requirements and to obtain final instructions in writing. To maintain the integrity of patented key systems provide a letter of authorization from the

specified manufacturer indicating that supplier has authorization to purchase the key system directly from the manufacturer.

3. Stock parts for products supplied and are capable of repairing and replacing hardware items found defective within warranty periods.

C. Hardware Installer: Company specializing in the installation of commercial door hardware with five years documented experience.

D. Fire-Rated Openings: Provide door hardware for fire-rated openings that complies with NFPA Standard No. 80 and requirements of authorities having jurisdiction. Provide only items of door hardware that are listed and tested by UL or Warnock Hersey for given type/size opening and degree of label. Provide proper latching hardware, door closers, approved-bearing hinges and seals whether listed in the Hardware Schedule or not.

1. Where emergency exit devices are required on fire-rated doors, (with supplementary marking on doors' UL labels indicating "Fire Door to be Equipped with Fire Exit Hardware") provide UL label on exit devices indicating "Fire Exit Hardware".

E. Exit Doors: Operable from inside with single motion without the use of a key or special knowledge or effort.

1.6 DELIVERY, STORAGE AND HANDLING

A. Coordinate delivery of packaged hardware items to the appropriate locations (shop or field) for installation.

B. Hardware items shall be individually packaged in manufacturers' original containers, complete with proper fasteners. Clearly mark packages on outside to indicate contents and locations in hardware schedule and in work.

C. Provide locked storage area for hardware, protect from moisture, sunlight, paint, chemicals, etc.

D. Contractor to inventory door hardware jointly with representatives of hardware supplier and hardware installer until each all are satisfied that count is correct.

1.7 WARRANTY

A. Provide warranties of respective manufacturers' regular terms of sale from day of final acceptance as follows:

1. Locksets: "ND" Ten (10) years.
2. Electronic: One (1) year.
3. Closers: Thirty (30) years
4. Auto Operators: Two (2 years)
4. All other hardware: Two (2) years.

1.8 MAINTENANCE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

1.9 PRE-INSTALLATION CONFERENCE

A. Convene a pre-installation conference at least one week prior to beginning work of this section.

B. Attendance: Architect, Construction Manager, Contractor, Security Contractor, Hardware Supplier, Installer, Key Owner Personnel, and Project Inspector.

C. Agenda: Review hardware schedule, products, installation procedures and coordination required with related work. Review Owner's keying standards.

PART 2 - **PRODUCTS**

2.1 MANUFACTURERS

Item	Manufacturer	Acceptable Substitutes
Hinges	Ives	Hager, Stanley, McKinney
Locks, Latches & Cylinders	Schlage	Or Approved Equal
Exit Devices	Von Duprin	Or Approved Equal
Closers	LCN	Or Approved Equal
Push, Pulls & Protection Plates	Ives	Trimco, BBW, DCI
Flush Bolts	Ives	Trimco, BBW, DCI
Dust Proof Strikes	Ives	Trimco, BBW, DCI
Coordinators	Ives	Trimco, BBW, DCI
Stops	Ives	Trimco, BBW, DCI
Overhead Stops	Glynn-Johnson	Or Approved Equal
Thresholds	Zero	Pemko, National Guard
Seals & Bottoms	Zero	Pemko, National Guard

2.2 MATERIALS

A. Hinges: Exterior out-swinging door butts shall be non-ferrous material and shall have stainless steel hinge pins. All doors to have non-rising pins.

1. Hinges shall be sized in accordance with the following:

a. Height:

1) Doors up to 42" wide: 4-1/2" inches.
2) Doors 43" to 48" wide: 5 inches.

b. Width: Sufficient to clear frame and trim when door swings 180 degrees.
c. Number of Hinges: Furnish 3 hinges per leaf to 7'-5" in height. Add one for each additional 2 feet in height.

2. Furnish non-removable pins (NRP) at all exterior out-swing doors and interior key lock doors with reverse bevels.

B. Continuous Hinges: As manufactured by Ives, an Allegion Company. UL rated as required.

C. Schlage "L" Series as scheduled with "06" Style Lever and "A" Style Rose.

1. Locksets to comply with ANSI A156.13, Series 1000, Operational Grade 1 and Security Grade 1 with all standard trims. Locksets shall also comply with UL10C Positive Pressure requirements
2. Lock case shall be manufactured with heavy 12 gauge steel with fully wrapped design. Lock cases with exposed edges are not acceptable. Lock case shall be multi-functional allowing transformation to a different function without opening lock case.
3. Latchbolt shall have ¾" throw and be non-handed, field reversible without opening the lock case. Solid latchbolts and / or plastic anti-friction devices are not acceptable.
4. The deadbolt, when used, shall be 1" throw stainless steel with a ¾" internal engagement when fully extended.
5. All trim shall be through-bolted with the spring cages supporting the trim attached to the lock cases to prevent torqueing.
6. Levers to have independent rotation in both directions. Exterior lever assembly to be one-piece design attached by threaded bushing. Interior lever assembly shall be attached by screwless shank
7. Thru-bolt lever assemblies through the door for positive interlock. Locks using a through the door spindle for attachment are not acceptable. Spindles shall be independent, designed to "break-away" at a maximum of 75psi torque.
8. Hand of lock chassis to be changeable by simply moving one screw from one side to the case to the other and pulling and reversing the latchbolt.
9. Cylinders to be secured by a cast stainless steel, dual retainer. Locks utilizing screws and / or stamped retainers are not acceptable.

D. Exit devices: Von Duprin as scheduled.

1. Provide certificate by independent testing laboratory that device has completed over 1,000,000 cycles and can still meet ANSI/BHMA A156.3 - 2001 standards.
2. All internal parts shall be of cold-rolled steel with zinc dichromate coating.
3. Mechanism case shall have an average thickness of .140".
4. Compression spring engineering.
5. Non-handed basic device design with center case interchangeable with all functions.
6. All devices shall have quiet return fluid dampeners.
7. All latchbolts shall be deadlocking with ¾" throw and have a self-lubricating coating to reduce friction and wear.
8. Device shall bear UL label for fire and or panic as may be required.
9. All surface strikes shall be roller type and utilize a plate underneath to prevent movement.

10. Lever Trim: "Breakaway" design, forged brass or bronze escutcheon with a minimum of .130" thickness, match lockset lever design.
11. Removable Mullions: Removable with single turn of building key. Securely reinstalled without need for key.
12. Furnish glass bead kits for vision lites where required.
13. All Exit Devices to be sex-bolted to the doors.
14. Panic Hardware shall comply with CBC Section 11B.404.2.7 and shall be mounted between 34" and 44" above the finished floor surface.

    a. The unlatching force shall not exceed 5 lbs. applied in the direction of travel.

E. Closers: LCN as scheduled. Place closers inside building, stairs, room, etc.

1. Door closer cylinders shall be of high strength cast iron construction with double heat treated pinion shaft to provide low wear operating capabilities of internal parts throughout the life of the installation. All door closers shall be tested to ANSI/BHMA A156.4 test requirements by a BHMA certified testing laboratory. A written certification showing successful completion of a minimum of 10,000,000 cycles must be provided.
2. All door closers shall be fully hydraulic and have full rack and pinion action with a shaft diameter of a minimum of 11/16 inch and piston diameter of 1 inch to ensure longevity and durability under all closer applications.
3. All parallel arm closers shall incorporate one piece solid forged steel arms with bronze bushings. 1-9/16" steel stud shoulder bolts, shall be incorporated in regular arms, hold-open arms, arms with hold open and stop built in. All other closers to have forged steel main arms for strength, durability, and aesthetics for versatility of trim accommodation, high strength and long life.
4. All parallel arm closers so detailed shall provide advanced backcheck for doors subject to severe abuse or extreme wind conditions. This advanced backcheck shall be located to begin cushioning the opening swing of the door at approximately 45 degrees. The intensity of the backcheck shall be fully adjustable by tamper resistant non-critical screw valve.
5. Closers shall be installed to permit doors to swing 180 degrees.
6. All closers shall utilize a stable fluid withstanding temperature range of 120 degrees F. to -30 degrees F. without requiring seasonal adjustment of closer speed to properly close the door.
7. Provide the manufactures drop plates, brackets and spacers as required at narrow head rails and special frame conditions. NO wood plates or spacers will be allowed.
8. Maximum effort to operate closers shall not exceed 5 lbs., such pull or push effort being applied at right angles to hinged doors. Compensating devices or automatic door operators may be utilized to meet the above standards. When fire doors are required, the maximum effort to operate the closer may be increased but shall not exceed 15 lbs. when specifically approved by fire marshal. All closers shall be adjusted to operate with the minimum amount of opening force and still close and latch the door. These forces do not apply to the force required to retract latch bolts or disengage other devices that hold the door in a closed position. Per 11B-404.2.8.1, door shall take at least 5 seconds to move from an open position of 90 degrees to a position of 12 degrees from the latch jamb.

F. Flush Bolts & Dust Proof Strikes: Automatic Flush Bolts shall be of the low operating force design. Utilize the top bolt only model for interior doors where applicable and as permitted by testing procedures.

1. Manual flush bolts only permitted on storage or mechanical openings as scheduled.
2. Provide dust proof strikes at openings using bottom bolts.

G. Door Stops:

1. Unless otherwise noted in Hardware Sets, provide floor type with appropriate fasteners. Where wall type cannot be used, provide floor type. If neither can be used, provide overhead type.
2. Do not install floor stops more than four (4) inches from the face of the wall or partition (CBC Section 11B-307).
3. Overhead stops shall be made of stainless steel and non-plastic mechanisms and finished metal end caps. Field-changeable hold-open, friction and stop-only functions.

H. Protection Plates: Fabricate either kick, armor, or mop plates with four beveled edges. Provide kick plates 10" high and 2" LDW. Sizes of armor and mop plates shall be listed in the Hardware Schedule. Furnish with machine or wood screws of bronze or stainless to match other hardware.

I. Thresholds: As Scheduled and per details.

1. Thresholds shall not exceed 1/2" in height, with a beveled surface of 1:2 maximum slope.
2. Set thresholds in a full bed of butyl-rubber or polyisobutylene mastic sealant complying with requirements in Division 7 “Thermal and Moisture Protection”.
3. Use ¼” fasteners, red-head flat-head sleeve anchors (SS/FHSL).
4. Thresholds shall comply with CBC Section 11B-404.2.5.

J. Seals: Provide silicone gasket at all rated and exterior doors.

1. Fire-rated Doors, Resilient Seals: UL10C Classified complies with NFPA 80 & NFPA 252. Coordinate with selected door manufacturers' and selected frame manufacturers' requirements.
2. Fire-rated Doors, Intumescent Seals: Furnished by selected door manufacturer. Furnish fire-labeled opening assembly complete and in full compliance with UL10C Classified complies with NFPA 80 & NFPA 252. Where required, intumescent seals vary in requirement by door type and door manufacture -- careful coordination required.
3. Smoke & Draft Control Doors, Provide UL10C Classified complies with NFPA 80 & NFPA 252 for use on “S” labeled Positive Pressure door assemblies.

K. Door Shoes & Door Top Caps: Provide door shoes at all exterior wood doors and top caps at all exterior out-swing doors.

L. Silencers: Furnish silencers for interior hollow metal frames, 3 for single doors, 2 for pairs of doors. Omit where sound or light seals occurs, or for fire-resistive-rated door assemblies.

2.3 KEYING

A. Furnish a Proprietary Schlage masterkey system as directed by the owner or architect. Key system to be designated and combinated by the Schlage Master Key Department even if pinned by the Authorized Key Center, Authorized Security Center or a local authorized commercial dealer.

B. A detailed keying schedule is to be prepared by the owner and/or architect in consultation with a representative of Allegion or an Authorized Key Center or Authorized Security Center. Each keyed

cylinder on every keyed lock is to be listed separately showing the door #, key group (in BHMA terminology), cylinder type, finish and location on the door.

C. Extend the original Schlage masterkey system established for the project

D. Furnish all cylinders in the Full Size Interchangeable Core (FSIC). Pack change keys independently (PKI).

E. Furnish construction keying for doors requiring locking during construction.

F. Furnish all keys with visual key control.

1. Stamp key “Do Not Duplicate”.
2. Stamp (BHMA) key symbol on key.

G. Furnish all cylinders with visual key control.

1. Stamp (BHMA) key symbol on face of cylinder plug (VKC).

H. Furnish mechanical keys as follows:

1. Furnish 2 cut change keys for each different change key code.
2. Furnish 1 uncut key blank for each change key code.
3. Furnish 6 cut masterkeys for each different masterkey set.
3. Furnish 3 uncut key blanks for each masterkey set.
4. Furnish 2 cut control keys cut to the top masterkey for permanent I/C cylinders.
5. Furnish 1 cut control key cut to each SKD combination.

I. Furnish Schlage Padlocks and the cylinders to tie them into the masterkey system for gates, storage boxes, utility valve security, roof hatches and roll-up doors keyed as directed in the keying schedule.

1. Furnish KS43D2200 padlock for use with non-I/C Schlage cylinders. Furnish 47-413 (conventional) or 47-743-XP (PrimusXP) with above.
2. Furnish KS43G3200 padlock for use with FSIC Schlage cylinders. Furnish 23-030 (Classic / Everest) or 20-740 (PrimusXP) with above.
3. Furnish KS41D1200 padlock for use with SFIC Schlage cylinders. Furnish 80-037 (Everest-B) with above.

J. Furnish one Schlage cabinet lock for each cabinet door or drawer so designated on the drawings or keying schedule to match the masterkey system.

1. Furnish CL100PB for use with non-I/C Schlage cylinders.
2. Furnish CL77R for use with FSIC Schlage cylinders.
3. Furnish CL721G for use with SFIC Schlage cylinders.

2.4 FINISHES

A. Generally to be satin chrome US26D (626 on bronze and 652 on steel) unless otherwise noted.

B. Furnish push plates, pull plates and kick or armor plates in satin stainless steel US32D (630) unless otherwise noted.

C. Door closers shall be powder-coated to match other hardware, unless otherwise noted.

D. Aluminum items to be finished anodized aluminum except thresholds which can be furnished as standard mill finish.

2.5 FASTENERS

A. Screws for strikes, face plates and similar items shall be flat head, countersunk type, provide machine screws for metal and standard wood screws for wood.

B. Screws for butt hinges shall be flathead, countersunk, full-thread type.

C. Fastening of closer bases or closer shoes to doors shall be by means of sex bolts and spray painted to match closer finish.

D. Provide expansion anchors for attaching hardware items to concrete or masonry.

E. All exposed fasteners shall have a phillips head.

F. Finish of exposed screws to match surface finish of hardware or other adjacent work.

G. All Exit Devices and Lock Protectors shall be fastened to the door by the means of sex bolts or through bolts.

PART 3 - **EXECUTION**

3.1 INSPECTION

A. Verify that doors and frames are square and plumb and ready to receive work and dimensions are as instructed by the manufacturer.

B. Beginning of installation means acceptance of existing conditions.

C. Fire-Rated Door Assembly Inspection: Upon completion of the installation, all fire door assemblies shall be inspected to confirm proper operation of the closing device and latching device and that only the manufacturer's furnished fasteners are used for installation and that it meets all criteria of a fire door assembly per NFPA 80 (Standard for Fire Doors and Other Opening Protectives) 2013 Edition. A written record shall be maintained and transmitted to the Owner to be made available to the Authority Having Jurisdiction (AHJ). The inspection of the swinging fire doors shall be performed by a certified FDAI (Fire Door Assembly Inspector) with knowledge and understanding of the operating components of the type of door being subjected to the inspection. The record shall list each fire door assembly throughout the project and include each door number, an itemized list of hardware set components at each door opening, and each door location in the facility.

3.2 INSTALLATION

A. Install hardware in accordance with manufacturer's instructions and requirements of DHI.

B. Use the templates provided by hardware item manufacturer.

C. Mounting heights for hardware shall be as recommended by the Door and Hardware Institute. Operating hardware will to be located between 34" and 44" AFF.

D. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

E. Drill and countersink units that are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.

F. Set thresholds for exterior doors in full bed of butyl-rubber sealant.

G. If hand of door is changed during construction, make necessary changes in hardware at no additional cost.

H. Hardware Installer shall coordinate with security contractor to route cable to connect electrified locks, panic hardware and fire exit hardware to power transfers or electric hinges at the time these items are installed so as to avoid disassembly and reinstallation of hardware.

I. Hardware Installer shall also be present with the security contractor when the power is turned on for the testing of the electronic hardware applications. Installer shall make adjustments to solenoids, latches, vertical rods and closers to insure proper and secure operation.

J. All wiring for electro-mechanical hardware mounted on the door shall be connected through the power transfer and terminated in the interface junction box specified for in the Electrical Section.

K. Conductors shall be minimum 18 gage stranded, multicolored. A minimum 12 in. loop of conductors shall be coiled in the interface junction box. Each conductor shall be permanently marked with its function.

L. If a power supply is specified in the hardware sets, all conductors shall be terminated in the power supply. Make all connections required for proper operation between the power supply and the electro-mechanical hardware. Provide the proper size conductors as specified in the manufacturer’s technical documentation.

3.3 ADJUST AND CLEAN

A. Adjust and check each operating item of hardware and each door, to ensure proper operation or function of every unit. Replace units which cannot be adjusted to operate freely and smoothly as intended for the application made.

B. Clean adjacent surface soiled by hardware installation.

C. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy, return to that work area and make final check and adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

D. Instruct Owner's Personnel in proper adjustment and maintenance of hardware finishes, during the final adjustment of hardware.

E. Continued Maintenance Service: Approximately six months after the completion of the project, the Contractor accompanied by the Architectural Hardware Consultant, shall return to the project and re-adjust every item of hardware to restore proper functions of doors and hardware. Consult with and instruct Owner's personnel in recommended additions to the maintenance procedures. Replace hardware items which have deteriorated or failed due to faulty design, materials or

installation of hardware units. Prepare a written report of current and predictable problems (of substantial nature) in the performance of the hardware.

3.4 HARDWARE LOCATIONS

A. Conform to CCR, Title 24, Part 2; and ADAAG; and the drawings for access-compliant positioning requirements for the disabled.

3.5 FIELD QUALITY CONTROL

A. Contractor is responsible for providing the services of an Architectural Hardware Consultant (AHC) or a proprietary product technician to inspect installation and certify that hardware and its installation have been furnished and installed in accordance with manufacturers' instructions and as specified herein.

3.6 SCHEDULE

A. The items listed in the following schedule shall conform to the requirements of the foregoing specifications.

B. While the hardware schedule is intended to cover all doors, and other movable parts of the building, and establish type and standard of quality, the contractor is responsible for examining the Plans and Specifications and furnishing proper hardware for all openings whether listed or not. If there are any omissions in hardware groups in regard to regular doors they shall be called to the attention of the Architect prior to bid opening for instruction; otherwise, list will be considered Complete. No extras will be allowed for omissions.

C. The Door Schedule on the Drawings indicates which hardware set is used with each door.

END OF SECTION 08 71 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 08 81 00 – GLASS AND GLAZING

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Glass and glazing.
    a. Vision
2. Mirrors
3. Glazing Accessories

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Safety Glazing	Human Impact Loads	Comply	CBC 2406
	Identification		CBC Section 2406.3
	Hazardous Locations		CBC Section 2406.4
Glazing	General	Comply	CBC Section 2401
	Definitions		CBC Section 2402
	General Requirements		CBC Section 2403
	Wind, Snow, Seismic and Dead Loads on glass		CBC Section 2404
Mirrors	Human Impact Loads	Comply	CBC Section 2406
	Identification		CBC Section 2406.3
	Hazardous Locations		CBC Section 2406.4
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing**:

Item	**Name of Test**	**Performance Results**	**Testing Std.**
Framed glazing system	Hose stream test	Comply	Refer to specific window section

E. **Construction Monitoring/Observations by others**:

Item	**Name of Test**	**Performance Results**	**By Whom**
Window system installation	Periodic observation by window mfgr.	Comply	Refer specific window system section

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Schedule of all glass types with all listed performance criteria

a. Technical data substantiating compliance with these specifications.

2. Submit technical data for all sealants and other materials use in completing the work in this section.

E. Submit samples:

1. Five (5) 6" square samples for each required glass and construction type.

F. Certification:

1. Safety rating of glass
2. Fire ratings of glass
3. Technical values of glass

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid.

E. Stipulations:

1. Glazing in fired rated assemblies shall be labeled for the required fire protection rating and installed in accordance with their listing.
2. Glazing at tempered required locations and designated locations shall bear appropriate designation on glass

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to:;

a. Frames to receive glazing
b. Glazing types

2. **General Contractor** shall request meeting 5 days in advance of construction.

G. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

H. Miscellaneous criteria:

1. Protect glass from edge damage at all times during handling, and installation.
2. Comply with combined recommendations of glass manufacturer and manufacturer of sealants and other materials used in glazing, except where more stringent requirements are shown or specified.
3. Comply with "Reference Standards" specified above except as shown and specifically recommended otherwise by the manufacturers of the glass and glazing materials.
4. Inspect each piece of glass immediately before installation, and eliminate any, which have observable edge damage or face imperfections.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver glass crated to the jobsite to protect it against scratches, discoloration, breakage, or other damage. Deliver glazing compounds to jobsite in manufacturers factory sealed containers, bearing the brand name. Store materials under cover until their installation.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Do not proceed with installation of liquid sealants under adverse weather conditions, or when temperatures are below or above manufacturer's recommended limitations for installation.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **five (5)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and

replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Door lites
2. Window Frames

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 08 11 13 – Steel Doors and Frames
3. Section 08 12 16 – Knock Down Aluminum Frames
4. Section 08 14 00 – Wood Doors
5. Section 08 41 00 – Entrances, Window Walls, Storefronts and Curtain Walls

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

1.13 TESTING AGENT

A. Refer to Division 1 for Testing Laboratory service requirements.

B. Refer to specific window frame system specifications.

PART 2 **- PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as listed herein and in Drawings:

1. Glazing:

a. PPG, www.ppg.com,
b. Cardinal Glass Corporation, www.cardinalcorp.com
c. Viracon, www.viracon.com
d. As herein specified

2. Window Films:

a. 3M, 800.480-1704, www.glassscapes.com/3m

3. Fire glazing tapes:

a. Pemko, www.pemko.com

4. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS – GLAZING: INTERIOR VISION GLASS TYPES

A. Monolithic:

1. Application:

a. **Metal Framed Windows**

1) Schedule:

a) Mfgr: PPG www.ppg.com, PPG Glass Configurator
b) Type: Clear Glass (un- coated)
c) Product:
d) Color: Clear
e) Assembly: Single glazing
f) Thickness: 1/4"
g) Performance Data Requirements:

i. Rating: None
ii. Shading Coefficient: Not applicable
iii. U-value: Not applicable

h) Coordinate: Refer to Section(s)

2) Fully tempered safety glass at all locations.

b. **Framed Door Vision Lites**

1) Schedule:
a. Mfgr: PPG
b. Type: Clear laminated Glass (un- coated)
c. Product:
d. Color: Clear
e. Assembly: Laminated glazing
f. Thickness:
g. Performance Data Requirements:

1. Rating: None
2. Shading Coefficient: Not applicable

3. U-value: Not applicable

h. Coordinate: Refer to Section 08 14 00 – Wood Doors

2. Fully tempered safety glass at all locations.

c. **Storefront locations:**

1) Schedule:

a) Manufacturer: PPG , PPG Glass Configurator
b) Type: Clear Glass (un- coated)
c) Product:
d) Color: Clear
e) Performance Data Requirements:

i. Rating: None
ii. Shading Coefficient: Not applicable
iii. U-value: Not applicable

f) Coordinate: Refer to Section 08 41 00

2.3 MATERIALS – GLAZING: EXTERIOR VISION GLASS TYPES

A. Insulated

1. Application:

a. **Storefront Windows**

1) Type: Insulated units
2) Schedule:

a) Thickness:

i. Insulated: 1" overall with 1/2" airspace

b) IG spacer

i. Spacer® from Edgetech unless unit is not available with this spacer

3) Specifications: Refer also to 1.3 PERFORMANCE, TESTING AND INSPECTION

a) Insulated Glazing: (Values for glass unit, not overall window

i. Product:

a. Mfgr: Cardinal, www.cardinalcorp.com
b. Product: LoE^3 366, LoE^2 - 272
c. Color: Clear
d. Coating: Low E
e. Type:

i). Tempered at doors
ii). Fully tempered safety glass at all locations indicated and as required by CBC.

f. Fill: Insulated with Argon Fill
g. Performance:

Product (One lite)	U Factor-winter	Solar Blockage	Visible Light			Solar Heat Gain Coeff.	Shading Coeff.	Fading Transmission		
			Trans	Refl. Ext	Refl Int			UV	TDW-K	TDW
Insulating Glass										
LoE³ - 366 #2	0.24 Argon filled	73%	65%	11%	12%	0.27	0.31	0.05	N/A	0.43
Refer to drawings and as herein specified.										

b. **Storefront Doors**

1) Type: Insulated units
2) Schedule:

a) Thickness:

i. Insulated: 1" overall with ½" airspace

b) IG spacer

i. Spacer® from Edgetech unless unit is not available with this spacer

1) Specifications: Refer also to Performance heading 1.03.

a) Insulated Glazing: (Values for glass unit, not overall window)

i. Product: Match Storefront Windows
ii. Product:

a. Mfgr: Cardinal
b. Product: LoE³ 366, LoE² - 272
c. Color: Clear
d. Coating: Low E
e. Type:

i). Tempered at doors
ii). Fully tempered safety glass at all locations indicated and as required by CBC.
iii). Tempered at all windows and doors

f. Fill: Insulated with Argon Fill
g. Performance:

Product (One lite)	U Factor-winter	Solar Blockage	Visible Light			Solar Heat Gain Coeff.	Shading Coeff.	Fading Transmission		
			Trans	Refl. Ext	Refl Int			UV	TDW-K	TDW
Insulating Glass										
LoE³ - 366 #2	0.24 Argon filled	73%	66%	11%	12%	0.27	0.31	0.05	N/A	0.43
LoE² - 272 #2	0.25	59%	72%	11%	12%	0.41	0.470	0.16	0.33	0.55

c. **Metal Framed Windows**

1) Type: Insulated units
2) Schedule:

a) Thickness:

i. Insulated: 1" overall with ½" airspace

b) IG spacer

i. Spacer® from Edgetech unless unit is not available with this spacer

3) Specifications: Refer also to Performance heading 1.03.

a) Insulated Glazing: (Values for glass unit, not overall window)

i. Product:

a. Mfgr: Cardinal
b. Product: LoE^3 366, LoE^2 - 272
c. Color: Clear
d. Coating: Low E
e. Type:

i). Tempered at doors
ii). Fully tempered safety glass at all locations indicated and as required by CBC.

f. Fill: Insulated with Argon Fill
g. Performance:

Product (One lite)	U Factor-winter	Solar Blockage	Visible Light			Solar Heat Gain Coeff.	Shading Coeff.	Fading Transmission		
			Trans	Refl. Ext	Refl Int			UV	TDW-K	TDW
Insulating Glass										
LoE^3 - 366 #2	0.24 Argon filled	73%	66%	11%	12%	0.27	0.31	0.05	N/A	0.43
LoE^2 - 272 #2	0.25	59%	72%	11%	12%	0.41	0.470	0.16	0.33	0.55
Refer to drawings and as herein specified.										

2.4 MATERIALS – MIRRORS

A. Schedule:

1. Mfgr: Arch Armour, www.archarmour.net 800.432-8132
2. Type: Clear Glass coated
3. Product: Mirror
4. Color: Mirror reflective
5. Performance Data Requirements:

a. Color: Clear
b. Finish: High luster, highly reflective mirror finish

6. Type: Clear float glass
7. Standards: ASTM C1503-01 Std. Spec. for Silvered Flat Glass Mirror
8. Size: Fabricate from mfgr's standard sheet sizes.
9. Assembly:

a. Edges: Square unless noted otherwise on drawings.
b. Butt joints: Square
c. Construction: Install all indicated and required drilled holes, face patterns,

1) beveling, edge grinding, etc.

d. Accessories: Provide appropriate devices to mount/hang mirror to

1) substrate with hidden fasteners.

10. Construction:

a. Assembly: (from exposed side)

1) 1st. Glass
2) 2nd. Tin
3) 3rd. Silver
4) 4th. Copper
5) 5th. Roll Coat
6) 6th. Curtain coat

2.5 MATERIALS - ACCESSORIES

A. Sealant: Refer to Section 07 92 00 – Joint Sealants

B. Compounds:

1. Provide hardness of materials recommended by the manufacturer for the required application and condition of installation in each case.
2. Provide only compounds which are known (proven) to be fully compatible with contact surfaces.

a. Extra care shall be used in the selection and use of structural rated sealant.

C. Setting blocks: Neoprene, 70-90 durometer hardness, with proven compatibility with sealants used.

D. Spacers: Neoprene 40-50 durometer hardness, with proven compatibility with sealants used.

E. Compressible filler rod: Closed-cell or waterproof-jacketed rod stock of synthetic rubber or plastic foam, proven to be compatible with sealants used, flexible and resilient, with 5-10 psi compressive strength for 25% deflection. Confirm compatibility with sealants, refer to Section 07 92 00.

F. Cleaners, primers, and sealers: Type recommended by sealant and gasket manufacturer.

G. Glazing gaskets:

1. Use for interior glazing only.
2. Extruded, flexible DuPont Neoprene gaskets of the profile shown.
3. Confirm compatibility with sealant manufacturer.

H. Glazing - Fire tape:

1. Mfgr: Pemko
2. Schedule:

a.	FG3000S45	20minute openings	7/16” x 3/64” thick
b.	FG3000S90	90minute openings	7/16” x 5/64” thick

2.6 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect** or **Owner**.

PART 3 **- EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Preparation for Glazing

1. Clean the glazing channel, or other framing members to receive glass, immediately before glazing. Remove coatings, which are not firmly bonded to the substrate.
2. Apply primer or sealer to joint surfaces wherever recommended by sealant manufacturer.

C. Glazing

1. Install setting blocks or setting bed of proper size quarter points of sill rabbet. Set blocks or bed material in thin course of the heel-bead compound, if used.
2. Provide spacers inside and out, and of proper size and spacing, for all glass sizes larger than 50 united inches, except where gaskets and pre-shimmed tape are used for glazing. Provide 1/8" minimum bite of spacers on glass and use thickness equal to sealant width, except with sealant tape use thickness slightly less than final compressed thickness of tape. Glass to be 3/16" clear of frame, frame lap to be 5/16" minimum.

3. Voids and filler rods: Prevent exudation of sealant or compound by forming voids or installing filler rods in the channel at the heel of jambs and head (do not leave voids in the sill channels) depending on light size, thickness and type of glass, and complying with manufacturer's recommendations.
4. Do not attempt to cut, seam, or abrade glass, which is tempered, heat strengthened, or coated. Do not nip glass.
5. Force sealants into channel to eliminate voids and to ensure complete "wetting" or bond of sealant to glass and channel surfaces.
6. Glazing of interior window frames:
    a. Use pressure or foamed tape and sealant as noted to eliminate rattle and reduce sound transmission.
    b. Coordinate with window frame manufacturer.
7. Tool exposed surfaces of glazing liquids and compounds to provide a substantial "wash" away from the glass. Install pressurized tapes and gaskets to protrude slightly out of the channel, so as to eliminate innate dirt and moisture pockets.
8. Clean and trim excess glazing materials from the glass and stops or frames promptly after installation, and eliminate stains and discolorations.
9. Where wedge-shaped gaskets are driven into one side of the channel to pressurize the sealant or gasket on the opposite side, provide adequate anchorage to ensure that gaskets will not "walk" out when subjected to dynamic movement. Anchor gasket to stop with matching ribs, or by proven adhesives, including embedment of gasket tail in cured heel head.

D. Cure

1. Cure glazing sealants and compounds in compliance with manufacturer's instructions and recommendations, to obtain high early bond strength, internal cohesive strength and surface durability.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.7 TESTING

A. Testing shall be done under each specific window frame specification.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Remove and replace glass which is broken, chipped, cracked, and abraded or damaged in other ways during the construction period, including natural causes, accidents and vandalism.

C. Maintain glass in a reasonably clean condition during construction, so that it will not be damaged by corrosive action and will not contribute (by wash-off) to the deterioration of glazing materials and other work.

D. Wash and polish glass on both faces not more than 4 days prior to **Owner's** Beneficial Occupancy Date.

E. Keep areas of work and building free from accumulated debris, rubbish and waste materials as work progresses.

F. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.
2. Remove masking tape immediately after tooling joints, leaving finished work in neat and clean condition.
3. Clean up and leave premise broom clean. Clean adjoining work spotted or otherwise defaced by work of this Section.

G. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

H. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

I. After completion of work in this section, remove all erection equipment and implements of service, and debris. Leave entire area in a neat, clean, acceptable condition.

J. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

K. Provide record drawings in accordance with Division 1 closeout submittal procedures.

L. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END SECTION 08 80 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 09 22 16 – NON-STRUCTURAL METAL FRAMING

PART 1 – **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Metal wall framing – when not included as part of Section 05410

a. Non-load bearing steel wall framing
b. Non-load bearing steel soffit framing
c. Non-load bearing steel ceiling framing
d. Non-load bearing exterior metal soffit framing
e. Miscellaneous metal backing, bridging and metal backing for wall hung items
f. Non-load bearing custom fabricated sheet metal assemblies
g. Non-load bearing prefabricated headers as applicable
h. Non-load bearing metal framing at door frames
i. Non-load bearing metal framing at window frames
j. Insulate inside all built-up headers
k. Painting of all welds
l. Non-load bearing prefabricated metal headers

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Walls (Design unless noted in drawings to be more restrictive)	Deflection	Interior: L/240	CBSC
	Wall Loading	Interior: 5 psf	Design
	Wall Type	Interior: • Typical: Flexible • Stone or tile veneer: Brittle	Design
Framing	Tolerance	1/8" in 10'-0" non-accumulative	Design
Ceiling framing – damp – wet & damp areas	Construction	Comply	ICC #ER 4943P
	Spacing	12" o.c. maximum	CBSC/ Design
Studs	Lengths	Full height of wall extent w/o splices	Design
	Gauge Spacing	As indicated in contract documents, but never less than required by stud mfgr. for application requirements	Design and Mfgr. Refer also to listed wall designs
Framing and accessories	Gauge	20 gauge minimum if not listed otherwise.	Design
Metal	Recycled content	35% minimum	
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.

2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Submit typed list of all material and products proposed for use, which shall include manufacturer's published technical literature.
2. Framing components:
    a. Gauges, widths, flange dimensions, etc.
    b. Tracks, runners, backing, etc.
3. Wedge anchor and shot-in anchor capacity to resist lateral and tension loads.
4. Fasteners
5. Welded assemblies
6. Accessories
7. Detailed drawings that explicitly show, indicate and demonstrate all general connection types, profiles and fastening for review and acceptance.
    a. Supplemental strapping, bracing, splices, bridging, accessories, and details required for proper installation.

E. Submit samples.

1. N/A

F. Site mock-up, refer to "Mock-Up" heading.

G. Certification:

1. Stud manufacturers written tables for framing heights, loads, spans, etc
2. Provide Certification for percentage of total and post-consumer recycled content.
3. ICC and other applicable reports.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

D. Stipulations:

1. At proprietary assemblies use specified and tested manufacturer and specific products, including but not limited to the gypsum board, fastening, etc.
2. Framing shall be installed and finished by persons regularly engaged in this type of work.

a. Supervision:

1) Provide the services of a qualified and experienced superintendent who shall constantly be in charge of the work of this section and who shall remain at the site at all times that work is in progress.
2) He shall direct all work performed under this Section.

b. Qualifications for workmen:

1) Provide persons at all times during execution of this portion of the work who are thoroughly familiar with the type of materials being installed and the best methods for their installation.

c. Damp and wet locations:

1) Framing shall not exceed 12" o.c.

d. Assemblies:

1) Wall system shall provide for movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperatures.
2) Wall system shall accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

3. Welders: Qualified for welding in horizontal, vertical, and overhead positions in accordance with AWS D1.3.
4. Perform work in accordance with, but not limited to:

a. Gypsum Association GA-203
b. ASTM C754.
c. SSMA, Steel Stud Manufacturer's Association, ICC ER-4943P Technical Manual or most current edition
d. Contract Documents and Details
e. ANSI/ASTM A591 - Steel sheet, cold-rolled, electrolytic Zinc-Coated.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Agenda for meeting shall include, but not be limited to:

1. Building expansion joints
2. Skin system
3. Wall openings
4. Specialty framing
5. Damp area ceiling framing

F. Miscellaneous Criteria:

1. Inspections

a. As directed **Owner's** testing agency may inspect the maintenance of a quality control program including spot checking welds and welding procedures in accordance with AWS. Standards.
b. Full responsibility for quality control shall remain with the **General Contractor**.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Protect metal framing units, components, etc., from rusting, deformation, and other damage.

1. Deliver to project site in manufacturer's unopened containers or bundles, fully identified with name, brand, type and grade.

a. Store off ground in a dry ventilated space or protect with breathable waterproof tarpaulins.

1.7 JOB CONDITIONS

A. Field verify that all components, backing, etc provided by others are installed correctly before proceeding with installation of products as herein specified

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

``

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following,

1. Wall sheathing and finish
2. Seismic Control
3. Wall assemblies
4. Wall sheathing
5. Attachment to floors and structure
6. Acoustical and fire stopping
7. Ceiling construction
8. Insulation
9. Electrical & low voltage wiring, devices, etc.
10. Electrical work, conduit, etc.
11. Mechanical work, ducts, devices, etc.
12. Recessed components in walls, soffits and ceilings
13. Surface mounted components to walls
14. Wall Backing

B. Related sections include, but are not limited to, the following:

1. Division 1
2. Section 02 41 19 – Selective Building Demolition & Protection
3. Section 05 12 00 – Structural Steel Framing
4. Section 05 50 00 – Metal Fabrications
5. Section 06 10 00 – Rough Carpentry
6. Section 06 17 23 – Parallel Strand Lumber
7. Section 06 17 33 – Wood I-Joist
8. Section 06 18 13 – Glue Laminated Construction
9. Section 08 11 13 – Steel Doors and Frames
10. Section 08 11 16 – Interior Aluminum Doors and Frames
11. Section 09 29 00 – Gypsum Board and Sheathing Substrates

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 MANUFACTURERS

A. Manufacturers shall be subject for compliance with all requirements, provide products from the following list:

1. Stud Manufacturers:

a. Clark Dietrich Metal Framing, www.clarkdietrich.com
b. SCAFCO Steel Stud Manufacturer www.scafco.com
c. Studco Systems, www.studcosystems.com
d. Steeler Construction Supply, www.steeler.com
e. Cemco Steel, www.cemcosteel.com

2. Custom Fabrications:

a. B&R Metal Specialties, www.br-metal.com

3. Fasteners

a. Hilti, www.hilti.com
b. Steeler Inc., www.steeler.com

4. Prefabricated Headers

a. ProX Header by Cemco Steel, www.cemcosteel.com

5. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
b. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

B. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

C. Refer to drawings, details, and other related specification section whether listed or not.

D. Details shall set basic requirements for size and configuration of systems

2.2 MATERIALS

A. System Components:

1. With each type of metal framing required, provide and install per manufacturer's standard details and specifications, including but not limited to:

a. Standard steel studs, joists, angles, straps, steel runners (tracks), blocking, lintels, clip angles, shoes, reinforcements, fasteners, and accessories as recommended by manufacturer for applications indicated, as needed to provide a complete metal framing system.
b. Custom fabricated channels, angles, etc.
c. Fasteners

1) Mechanical Fasteners: Corrosion-resistant coated, self-drilling, self-threading steel drill screws.

a) Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

2) Welded Electrodes: Comply with AWS standards.

B. System Design:

1. Comply with size, gauge and spacing as indicated on the Drawings, conforming with manufacturer's design tables and in accordance with ICC and or other approved tested systems design as indicated.

C. Materials and Finishes:

1. General:

a. For 20-gauge and lighter units, fabricate metal framing components of commercial quality steel sheet with a minimum yield point of 33,000 psi; ASTM A446, A570, or A611.
b. Provide galvanized finish to metal framing components complying with ASTM A525 for minimum G60 coating.

D. Framing Components:

1. Studs:

a. Manufacturer's standard load-bearing steel Studs of size, shape, and gauge indicated on drawings & in conformance with manufacturer's Structural Property tables.

b. Designator section as required to comply with manufacturer's Structural Property tables.

2. Joists:

a. Manufacturer's standard Joist sections of size shape, and gauge indicated on drawings & in conformance with manufacturer's Structural Property tables.
b. Designator section as required to comply with manufacturer's Structural Property tables.
c. Damp and wet locations:

1) Framing shall not exceed 12" o.c.

3. Tracks:

a. Straight conditions:

1) General:

a) Manufacturer's standard load-bearing steel tracks of size, shape, and gauge indicated on drawings and in accordance with rated wall design requirements
b) Sizes as indicated in contract drawings
c) Custom leg lengths as indicated in drawings and/or details

2) Size:

a) Typical Tracks:

i. Width: To accommodate wall framing
ii. Flange: 1.5" min. length unless indicated otherwise
iii. Gauge: 20, min. unless noted to be heavier

b) Deflection Tracks:

i. Width: To accommodate wall framing
ii. Flange: 2" length, unless indicated otherwise
iii. Gauge: 18 min., unless noted to be heavier

c) Slotted Track:

i. Width: To accommodate wall framing
ii. Flange: 2.5"
iii. Gauge: 18 min. unless noted to be heavier

4. Channel Stud: (Coordinate with structural documents for alternate material, profiles, gauges, etc., structural documents shall govern.)

a. Manufacturer's standard load-bearing steel Channel studs of size, shape, and gauge indicated on drawings.

5. Furring Channel: (Hat channel)

a. "FC" Channel: (sizes – unless noted otherwise on drawings)

1. Width: 2.5"
2. Depth: 7/8"
3. Flange: 1/2"

b. Manufacturer's standard load-bearing Furring Channels of size, shape, and gauge indicated on drawings & in conformance with manufacturer's Structural Property tables.

c. Designator section as required to comply with manufacturer's Structural Property tables.

6. Resilient Channel:
   a. "RC" Channel: (sizes – unless noted otherwise on drawings)
      1) 2.5" overall width
      2) 1/2" deep
      3) 1.5" face width
   b. Manufacturer's standard load-bearing Resilient Channels of size, shape, and gauge indicated on drawings & in conformance with manufacturer's Structural Property tables.
7. Cold-Rolled Channel:
   a. "CR" Channel: (sizes – unless noted otherwise on drawings)
      1) Typical application, uno in specifications and/or drawings:
         a) 1.5" wide x 1/2" flange x 16 ga.
      2) Wall bracing @ 1-5/8" Studs
         a) 3/4" web x 1/2" flange x 16 ga.
      3) Window opening blocking:
         a) 2-1/2" x 1/2" flange x 16GA
         b) 3-5/8" x 1" flange x 20GA
         c) As indicated in details
   b. Manufacturer's standard load-bearing Cold-Rolled Channels of size, shape, and as indicated on drawings.
8. Z-Furring Channel:
   a. "ZF" Channel: (sizes – unless noted otherwise on drawings)
      1) 7/8" flange for securing to wall
      2) 1", 1.5", 2" or 3" depth
      3) 1.25" face width
   b. Manufacturer's standard Z-Furring Channels of size, shape, and gauge indicated on drawings.
9. Angle:
   a. Straight conditions:
      1) "AN" Angle: (sizes – unless noted otherwise on drawings)
         a) Standard sizes:
            i. 2' x 2"
            ii. 2.5" x 2.5"
      2) Custom sizes and gauges as indicated in drawings.
      3) Manufacturer's standard Angle of size, shape, and gauge indicated on drawings.
10. Flat stock:

a. "FS" Flat Stock:

1) Size as indicated and required.

b. Manufacturer's Flat Stock of size, shape, and gauge indicated on drawings.

11. Adjustable Wall Furring Bracket:

a. "AWFB" Bracket:

1) 20 ga. galvanized steel material with corrugated edges.
2) 1" wide x 3" long adjustable section x 2" fastening flange.

b. Manufacturer's standard load-bearing Adjustable Wall Furring Bracket of size, shape, and gauge indicated on drawings.

12. Header Assembly:

a. Straight conditions:

1) Assembly:

a) Built-up assembly, refer to Drawings and details
b) Prefabricated:

i. Mfgr: Brandy
ii. Series: Pro X Header
iii. Assembly:

a. Single component assembly for desired length and loads.
b. Multiple component assembly for desired length and loads
c. Clips for securing to jamb framing

iv. Performance:

a. Spans up to 14'-0"

E. Material Thickness: All sections are to be roll formed in various depths with the following minimum bare metal thicknesses: (Refer also to Structural Drawings)

Minimum Thickness (inch)	Minimum Design Thickness (inch)	Gauge	Mils
0.0179	0.0188	25	18
0.0329	0.0346	20	33
0.0428	0.0451	18	43
0.0538	0.0566	16	54
0.0677	0.0713	14	68
0.0966	0.1017	12	97
0.1180	0.1240	10	118

F. See Drawings for section properties and details.

G. Studs, tracks and joists shall be of the size, shape, and gauge indicated, with a flange and flange return lip as shown on the Structural Drawings. If gauge, flange size, etc. are more restrictive than manufacturer's guidelines, then Structural Drawings shall govern.

2.3 OTHER MATERIALS

A. Galvanized Repair Paint:

1. Mfgr: ZRC Worldwide, www.zrcworldwide.com, 800.831-3275
2. Product: ZRC ZERO VOC Water-Based Galvanizing Compound
3. Type: Two-pack Water-Based Galvanizing Compound
4. Standards: (Meets or exceeds)

a. ISO 9001 registered
b. MIL-P-26915A (USAF Zinc dust Primer)
c. SSPC-Paint 20 (Specification for Zinc Rich Primer)
d. ASTM Des. A239 Preece Test for hot dipping galvanizing
e. ASTM Des B117 10,000 salt spray without failure

5. Material:

a. 93% Zinc in the dry film using Type III "ultra pure" ASTM-D-520 zinc

6. Preparation:

a. Grease & Oils: Solvent clean to SSPC-SP1
b. Rust Scale: Power tool clean to SSPC-SP3 or SSPC-SP11 (SIS St. 2 or 3)

1) Sand blast (SSPC-SP6) at exterior exposed conditions.

c. Mill Scale: Sandblast to SSPC-SP6
d. Water Immersion: (100 degree F max.) Sandblast to SSPC-SP10 (near-white)

B. Welding Electrodes: E60XX

C. Metal Backing Plates

1. Horizontal 'C'- Studs 6" x 18 gauge x distance between vertical supporting studs 3 studs minimum). Refer to indicated details (for surface mounted items furnished by others).
2. Alternate when approved is 6" x 16 gauge steel plate continuous and spanning minimum two (2) studs past mounting location to each side.

2.4 METAL FRAMING AT DOOR & WINDOW JAMBS & HEADS

A. Comply with all requirements of 2.02 in addition to those listed here.

1. Jambs:

a. Provide double stud framing at all jambs, 20-gauge min. metal studs unless wall type requires a heavier stud and shall be spot-welded together at 6" O.C. (stud gauge shall not be less than wall stud framing gauge)
b. Jamb framing shall frame full height of wall such that jamb framing incorporates and attaches to built-up header.
c. Where cutouts are required at door jambs for hardware, etc., then install a third jamb stud to reinforce jamb framing.

2. Header:
    a. Provide built-up double joist header at all heads conditions.
        1. 20 gage min. metal studs and shall be fastened together (stud gauge shall not be less than wall stud framing gauge.
            a) Heavier gauge where noted in drawings.
            b) Heavier gauge when required by manufacturer for specific condition.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:
    1. Examine areas and conditions under which work is to be performed.
    2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.
    3. Do not proceed until unsatisfactory conditions are corrected.

B. Surface:
    1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 FABRICATION

A. General:
    1. Fabricate panels plumb, square, true to line and braced against racking with joints welded.
    2. Perform lifting of prefabricated panels in a manner to prevent damage or distortion

B. Fastenings:
    1. Attach similar components by welding or screw fasteners as indicated on structural drawings.

C. Fabrication Tolerances:
    1. Fabricate framing not to exceed a maximum allowable tolerance variation from plumb, level and true to line of 1/8" in 10'-0".

D. Install as detailed, herein specified and in accordance with manufacturers recommendations.

3.5 INSTALLATION

A. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Accurately layout partition and wall lines from the dimensions shown on Contract Drawings.

C. Install metal studs (NOT TO EXCEED 24 INCHES O.C. SPACING.) and accessories in strict accordance with manufacturer's recommendations, unless otherwise shown or specified; anchoring all components firmly into position.

D. Furring and bracing members: Same material and finish as studs, thickness to suit purpose.

E. Extend partition through suspended ceiling line to structural deck above, unless specifically noted otherwise.

F. Isolation of partitions: Provide slip or cushion-type joint between metal framing and structure to prevent transfer of structural loads or movements to partitions, except as otherwise indicated.

G. Studs: Use full-length studs between runner tracks. Friction fits studs to runner tracks by positioning and rotating into place. Provide positive attachment to runner tracks for studs; using #10x20x3/8" min. Pan Head self-tapping screws in both flanges of studs top and bottom.

1. Size and spacing: Use studs of the sizes and spacing indicated.
2. Provide additional studs to support inside corners at partition intersections and corners, and to support outside corners, termination of partitions and both sides of control joints.
3. Provide rough framing at openings, except doors, consisting of full-length studs adjacent to jambs, and horizontal header and sill tracks. Cut horizontal tracks to length and split flanges and bend webs at ends for flange overlap and screw to jamb studs. Install cut-to-length, intermediate studs above and below openings, at same spacing as full-length studs.
4. At door frames, provide two 18 gauge structural studs continuous at each side of openings and provide one additional stud located not more than 6" from jamb stud. Fasten jamb studs to metal frames with anchor clips using 2 self-tapping screws or bolts one each side. (3 clips minimum per jamb each side; 2 clips minimum at head). Clips not to exceed 24 inches on center.
5. At electrical cabinets and panel boards, provide one 18 gauge H.D.S. structural stud continuous at end side of opening for mounting fixture.
6. Where partitions will support ceramic tile, fixtures and wall cabinets, use 18 gauge "C"-studs, unless otherwise noted.
7. Shaft walls, install per listed design and in accordance with manufacturers system.

H. Provide rigid metal furring channels where gypsum board is to be applied over concrete substrates, except where full size studs are indicated.

1. Install channels at 16" O.C. maximum and provide additional framing at openings, cutouts, and corners. Fasten to concrete with concrete nails or power-driven fasteners not more than 24" O.C. and stagger on opposite flanges of hat-shaped channels.

I. Where connections of metal framing are indicated to be welded, all such welding shall be performed by certified welders and then tested in accordance with Code requirements.

J. Metal Backing Plates: Shall be applied as detailed and in locations as indicated on Drawing floor plans and interior room elevations.

K. Prepare and paint all welds with galvanized paint as herein specified.

3.6 TOLERANCES

A. Install members to provide surface plane with maximum variations of 1/8 inch in 10 feet in any direction.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

1. Galvanizing Repairs:

a. Prepare and repair damaged galvanized coatings on fabricated and installed metal framing with galvanizing repair paint according to ASTM A780 and the manufacturer's instructions.
b. Prepare and repair galvanized coatings on welds as part of fabricated and installed metal framing with galvanizing repair paint according to ASTM A780 and the manufacturer's instructions.

2. Touch-up painting:

a. Wire brush, clean, and paint scarred areas, welds, and rust spots on fabricated and installed prime-painted metal framing.

1. Touch-up painted surfaces with same type of shop paint used on adjacent surfaces.

F. Provide final protection and maintain conditions in a manner acceptable to manufacturer and installer to ensure that metal framing is without damage or deterioration at the time of Substantial Completion.

G. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END SECTION 09 22 16

SECTION 09 29 00 – GYPSUM BOARD AND SHEATHING SUBSTRATES

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the job site.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Gypsum wallboard and sheathing
2. Joint treatment
3. Surface treatment
4. Sealants and Backer rod
5. Drywall Primer / Sealer
6. Related accessories

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

Smooth Wall / Level 5	Smooth Wall with Darby full surface float		
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Definitions**:

1. Levels of gypsum board finish: (Typical)

a. **Scope.** The required level of finish of gypsum board wall and the ceiling surfaces is described with typical applications and is listed as a minimum allowable standard. All proposed deviations from these herein specifications shall be in written form of a request and approved by the **Architect** prior to installation.

b. **Terminology.** The following definitions are applicable to this document.

1. Accessories: Metal or plastic beads, trim or molding used to protect or conceal corners, edges or abutments of the gypsum board construction.
2. Back Roll: Rolling a spray painted surface with a paint roller immediately following spray application.
3. Coat: Paint, Varnish, or lacquer applied to a surface in a single application (one Layer) to form a properly distributed film when dry –ASTM

   Note: Shall be applied as installed per Painting specification.

4. Critical (Severe) Lighting: A condition whereby interior surfaces are flooded by natural or artificial lighting at an oblique angle; such as lighting from large expanses of windows, glass curtain walls, skylights, or surface mounted light fixtures. Strong side lighting from windows or surface-mounted light fixtures. - ASTM

   Note: See "comments" section of this document.

5. Drywall Primer: A paint material specifically formulated to fill the pores and minimize suction differences between gypsum board surfaces paper and the compound used on finished joints, angles, fastener heads, accessories, and over skim coating.

   Note: this shall be applied as part of gypsum board specification

6. Gloss: A subjective term used to describe the relative amount and nature of mirror like (specular) reflection.

   Note: FSCT

7. Joint Photographing (Telegraphing): The shadowing of the finished joint areas through the surface decoration and/or Smooth Wall

   Note: Syn telegraphing. – GA-214-96

8. Paint: Any pigmented liquid, liquefiable, or mastic composition designed for application to a substrate as a thin layer which is converted to an opaque solid film after application. Used for protection, decoration or identification or to serve some functional purpose, such as filling or concealing surface irregularities.

   Note: FSCT, shall be applied as part of painting specification

9. Properly Painted Surfaces: A surfaces that is uniform in appearance, color and sheen. It is one that is free of foreign material, lumps skins, runs, sags, holidays, misses, strike-through, or insufficient coverage. It is a surface, which is free of drips, spatters, spills, or overspray, which were caused by the **General Contractor's** work force. Compliance to meeting the criteria of a "Properly painted surface" shall be determined when viewed without magnification at a distance of five feet or more under normal lighting conditions and form a normal viewing position.

Note: A surface uniform in appearance, color and sheen may not be achieved with a coat of primer or a single coat of topcoat. Shall be applied as part of Painting specification. – PDCA

10. Prime/Sealer: A gypsum board prime/sealer manufactured by company explicitly for priming gypsum board and formulated to fill the pores and equalize the suction difference between gypsum board surface paper and the compound used on finished joints, angles, fastener heads, and accessories, and over skim coatings. See "comments" section of this document.

    Note: Primer shall be provided by Gypsum board mfgr. and installed by gypsum board finisher in addition to "primer and finish paint as installed under separate specification Section 09 90 00."

11. Skim Coat: A thin coat of herein listed joint compound installed over the entire surface of the gypsum board to fill imperfections in the joint work, smooth the paper texture, and provide a uniform surface for a Smooth Wall appearance. Compound will be installed with Steel Trowel or Knife blade.

    Note: Spray application is not allowed

12. Spotting: To cover fastener head with joint compound.
13. Texture: A decorative treatment of gypsum board surfaces.
14. Texturing: Regular or irregular patterns typically produced by applying a mixture of joint compound and water, or proprietary texture materials including latex base texture paint, to a gypsum board surface previously coated with primer/sealer.

    Note: Refer to Heading 2.05

15. Top Coat: The finish coat(s) of a coating system, formulated for appearance and or environmental resistance.

    Note: shall be applied as part of painting specification – PDCA

16. Wall covering: Any type of paper, vinyl, fabric, or specialty material that is pasted onto a wall or ceiling in a wide array of colors, patterns, textures, and performance characteristics, such as washability and abrasion resistance.

    Note: shall be applied as part of wall covering specification - FSCT

17. Wall covering Primer: Coatings formulated to seal the porosity of new drywall, joint compounds, and most surfaces. Also formulated to promote adhesion and serviceability under wall covering products.

    Note: Shall be applied as part of wall covering specification.

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Drywall products
2. Joint tapes for Interior and Exterior applications
3. Joint topping material
4. Skim coat joint compound material – Smooth wall Level 5
5. Fasteners
6. Tools for product application
7. Texturing products

E. Submit samples.

1. Three (3) each 20" square portable mockups on gypsum board that include:

a. Finish taping, mud and primer
b. Butt joint treatment
c. Edge treatment
d. Specific required finishes

F. Site mock up, refer to "Field Samples / Mock Up" heading.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

D. Lead Times:

1. **General Contractor** shall coordinate with supplier to verify product lead times during bids and at award of contract, and account for such lead times in their costs and schedules.
2. **General Contractor** shall provide an itemized list of materials which might have or are confirmed to have a lead time problem and what the anticipated lead time is.
3. **General Contractor** shall certify in writing that all materials have acceptable lead times as they relate to availability for sub-contractor and **General Contractor** to meet construction schedule and sequence of construction.
4. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must me documented at time of bid.

E. Stipulations:

1. At proprietary assemblies use specified and tested manufacturer and specific products, including but not limited to the gypsum board, fastening, etc.

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to; review of Smooth wall, taping for various wall coverings and texture of wall.

2. **General Contractor** shall request meeting 5 days in advance of construction.

G. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation membrane waterproofing work to review installation procedures.

1. Manufacturer's representative shall review and certify all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Comply with manufacturers recommendations

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Environmental:

1. Interior: Do not install gypsum board, joint compounds, skim coats and textures if building temperature is below 55ºF or if proper ventilation is not provided to eliminate excessive moisture from building.

a. Temperature shall be maintained after installation.

2. Exterior: Do not install gypsum board, joint compounds, skim coats and textures if the exterior temperature is below 45ºF.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Wall Framing

2. Electrical/Low Voltage Wiring & Devices
3. Wall Finish for Mechanical Work
4. Wall coverings
5. Rated wall penetrations
6. Acoustical wall assemblies and penetrations

B. Related Sections include, but are not limited to, the following**:**

1. Division 1
2. Section 05 40 00 – Cold-Formed Metal Framing
3. Section 05 50 00 – Miscellaneous Metal Fabrications
4. Section 09 22 16 – Non-Structural Metal Framing
5. Section 09 90 00 – Paints and Coatings

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 – **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Gypsum sheathing (Interior):
   a. Typical and as indicated:
      1) Georgia Pacific (GP), www.gp.com
      2) U.S Gypsum (USG), www.usg.com
      3) National Gypsum, Gold Bond www.national-gypsum.com
   b. Where indicated:
      1) U.S Gypsum (USG), www.usg.com
   c. Alternates where allowed:
      1) National Gypsum, Gold Bond & GridMarx, www.national-gypsum.com
      2) Pabco Gypsum, www.pabcogypsum.com
2. Joint treatment & finishing
   a. U.S Gypsum (USG), www.usg.com

b. National Gypsum, Gold Bond www.national-gypsum.com
c. Georgia Pacific (GP), www.gp.com
d. Bead-Ex www.usg.com
e. Hamilton www.hamiltonnw.com

3. Accessories:

a. U.S Gypsum (USG), www.usg.com
b. National Gypsum, Gold Bond & GridMarx, www.national-gypsum.com
c. Superior Metal Trim www.superiormetaltrim.com
d. Flannery, Inc., 818 837-7585, www.flannerytrim.com
e. Fry Reglet www.fryreglet.com
f. MILGO/BUFKIN, www.milgo-bufkin.com

4. Sealants:

a. Pecora, www.precora.com
b. Refer also to Sealant Specification Section 07 92 00.

5. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General

1. Conform to American National Standards Institute Specifications and Gypsum Association for Gypsum Wallboard finishes.
2. Sheathing type as herein specified and in accordance with manufacturer's recommendations.
3. Wall board shall be fire-rated typical, Type "X" typical, U.N.O. and comply with specified and detailed wall construction types.

B. Wallboard & Ceiling Board Sheathing

1. INTERIOR SCHEDULE:

a. General:

1) Type X Core, Fire Code C and/or Type XXX regarding if application is a rated assembly

b. Interior walls, U.N.O.:

1) Mfgr:

a) Typical: Georgia Pacific
b) Alternate 1: US Gypsum
c) Alternate 2: Pabco
d) Alternate 3: Nation Gypsum, Gold Bond

2) Brand:

a) Typical: ToughRock® Fireguard Type X
b) Alternate 1: Sheetrock
c) Alternate 2: Pabco
d) Alternate 3: Fire Shield

3) Product:

a) Typical: Type "X" Core
b) Alternate 1: Firecode "C" Core (if specific to approved design)
c) Alternate 2: Flame Curb

4) Size:

a) Thickness:

i. 5/8" typical
ii. 1/2" as indicated per plan details

b) Width x Length: 4'-0" wide x 8', 9', 10', 12' or 14' (size to minimize quantity of joints)

5) Material: Paper faced gypsum core board
6) Edge: Tapered
7) Standard: ASTM C36
8) Finish: As herein specified and indicated in drawings
9) Limitations:

a) See body of this specification for specific product types for specific conditions.
b) At interior face of Exterior walls use Dens Armour Plus Fireguard, High Performance Interior Panel as herein specified unless herein in indicated otherwise or an herein approved alternate.

c. Interior Face of Exterior Walls:

1) Application: Wall Sheathing

a) Full height from floor to underside of roof decking.
b) Exposed and concealed conditions

2) Schedule: Full Height

a) Material:

i. Schedule:

a. Mfgr: Georgia Pacific
b. Product: DensArmor Plus® Fireguard® Type X, High Performance Interior Panel
c. Size: 5/8"x 4'-0"x 8' & 10' (size to minimize quantity of joints)

d. Material: Gypsum sheathing with inorganic coated glass fiber mats on each face
e. Edge: Tapered
f. Rating: Type "X"

ii. Alternate product:

a. Mfgr: National Gypsum
b. Product: Gold Bond Fire-Shield
c. Size: 5/8" x 4'-0" x 8' & 10' (size to minimize quantity of joints)
d. Material: Gypsum sheathing with inorganic coated glass fiber mats on each face
e. Edge: Tapered
f. Rating: Type "X"

b) Limitations:

i. Do not use at the following locations requiring other sheathing as herein specified under the 'Wallboard & Ceiling Board for Interior conditions.

a. Curved walls – Specialty board - Non rated:
b. Curved walls – Non rated:
c. Shaft wall sheathing:
d. Abuse-resistant Impact locations – Moderate Duty:
e. Abuse-resistant Impact locations – Heavy Duty:
f. Wet locations – Showers:
g. Shaft wall sheathing:
h. Veneer wall and ceiling – non shower locations
i. Cement Plaster substrate:
j. Fully adhered Natural Stone substrate
k. Sound Damping Wall board:
l. Sound Damping Ceiling board:
m. Modular Brick Substrate

3) Finish: As herein specified and indicated in drawings including skim coat over entire surface prior to finishing.

d. Damp locations: (Non tile veneer conditions)

1) Application:

a) Toilet room walls & ceilings
b) Janitor room walls & ceilings
c) Locker rooms
d) Lounges and other rooms within the extents of Shower/Locker rooms

2) Schedule: Full Height

a) Material:

i. Mfgr: Georgia Pacific
ii. Product: DensArmor Plus® Fireguard® Type X, High Performance Interior Panel

iii. Size: 5/8"x 4'-0"x 8' & 10'(size to minimize quantity of joints)
iv. Material: Gypsum sheathing with inorganic coated glass fiber mats on each face
v. Edge: Tapered
vi. Rating: Type "X"
vii. Joints: Self adhering fiberglass mesh tape and approved tapping compound

3) Limitations:

a) Maximum ceiling framing not to exceed 12" o.c.
b) Do not use at shower ceilings, use Dens Shield Tile Guard (Backer Board)
c) Do not use at shower walls, use Dens Shield Tile Guard (Backer Board)

4) Standards: ASTM C630
5) Finish: As herein specified and indicated in drawings

e. Wet locations – Showers and water walls:

1) Applications:

a) Shower room walls and ceilings with Tile veneer

i. Schedule:

a. Mfgr: Georgia Pacific
b. Product: DensShield® Fireguard® Type X Tile Backer
c. Size: 5/8" x 4'-0" wide x 4'', 5', & 8' (size to minimize quantity of joints)
d. Material: Surface coated fiberglass and silicone-treated core
e. Edge: Square
f. Joints: Self adhering fiberglass mesh tape and approved tapping compound
g. Rating: Type X, UL approved for 1-hour wall construction
h. Joints: Self adhering fiberglass mesh tape and approved tapping compound

ii. Note: Waterproof liquid applied membrane, joint mesh and accessories; refer to Tile specifications.

b) Shower ceilings without Tile veneer

i. Schedule:

a. Mfgr: Georgia Pacific
b. Product: DensShield Tile Guard (Backer Board)
c. Size: 5/8" x 4'-0" wide x 4'', 5', & 8' (size to minimize quantity of joints)
d. Material: Surface coated fiberglass and silicone-treated core
e. Edge: Square
f. Joints: Self adhering fiberglass mesh tape and approved tapping compound
g. Rating: UL approved for 1-hour wall construction
h. Finish: Skim Coat for Level 5 finish

i. Note: Water proof liquid applied membrane, joint mesh and accessories; refer to Tile specifications.

f. Thin Veneer Wall and Ceiling Sheathing – non shower locations

1) Application:

a) Ceramic Tile veneer

2) Schedule Options:

a) Option 1:

i. Mfgr: Georgia Pacific
ii. Product: DensShield® Fireguard® Type X Tile Backer
iii. Size: 5/8" x 4'-0" wide x 4'', 5', & 8' (size to minimize quantity of joints)
iv. Material: Surface coated and silicone-treated core
v. Edge: Square
vi. Rating: Type X, approved for 1-hour wall construction
vii. Limitations: Maximum 16" o.c. framing spacing at Restroom ceilings
viii. Finish: Level 4
ix. Joints: Self adhering fiberglass mesh tape and approved tapping compound

b) Option 2:

i. Mfgr: USG
ii. Product: Fiberock Aqua Tough Interior Panel
iii. Size: 5/8" x 4'-0" wide x 4'', 8', & 12' (size to minimize quantity of joints)
iv. Material: High density paperless gypsum and cellulose wall panel
v. Edge: Tapered
vi. Tape: Sheetrock® brand joint tape – heavy use type
vii. Rating: UL approved for 1-hour wall construction
viii. Finish: Level 4 finish
ix. Joints: Self adhering fiberglass mesh tape and approved tapping compound

2.3 OTHER MATERIALS

A. Accessories: Trim accessories, including, but not limited to:

1. Joint treatment: Refer to Heading 2.04
2. Outside edge:

a. Mfgr: USG
b. Product: DUR-A-BEAD Corner Bead
c. Material: Standard galvanized steel units
d. Model: No.103 1-¼" x 1-¼"

3. Inside corner:

a. Mfgr: USG
b. Product: Sheetrock Brand
c. Material: Paper Faced Metal Trim x 90-degree angle
d. Model: Tape on Trim No. B2

4. Offset Inside corner:

    a. Mfgr: USG
    b. Product: Sheetrock Brand
    c. Material: Paper Faced Metal Trim x greater than 90 degree angle
    d. Model: B2 OS

5. "Z" shape trim for edge of board at step back reveal:

    a. Mfgr: USG
    b. Product: Sheetrock Brand
    c. Material: Paper Faced Metal Trim Tape on trim x "Z" profile
    d. Model: B4 NB

6. "L" shape trim for edge of board at Acoustical tile ceiling:

    a. Mfgr: USG
    b. Product: Sheetrock Brand
    c. Material: Galvanized Metal Trim x "L" shape 90-degree angle
    d. Model: No. 200 – B x ½" and/or ⅝"

7. "J" shape trim for edge of board, typical:

    a. Mfgr: USG
    b. Product: Sheetrock Brand
    c. Material: Galvanized Metal Trim
    d. Model: No. 200 – A x ½" and/or ⅝"

8. Control Joint:

    a. Mfgr: USG
    b. Product: Sheetrock Brand
    c. Material: Zinc
    d. Model: No. 093
    e. Profile: ¼" opening x $^{7}/_{16}$" depth x 10'-0" length

9. Drywall "L" trim:

    a. Mfgr: Flannery,
    b. Product: Drywall "L"
    c. Model: DWL
    d. Material: Mil Finish Aluminum

    e. Size:

        1) Width: ¼" thru 4-3/'4"

            a) Size to fit field condition

        2) Length: 10'-0"
        3) Tape flange: 7/8" wide

B. Substrate Fasteners

1. Nails: (Wood framing)

a. Size (1-1/2") (1-3/4")

1) 11-gauge, hot-dipped galvanized roofing nails with nominal 7/16" diameter head for wood framing.

2. Screws: (Metal stud framing)

a. 1" Type S-12 Bugle Head Corrosion-Resistant Screws for application of sheathing to steel studs.
b. 1-1/4" Type S-12 Pancake Head Corrosion-Resistant Screws for application of self-furring metal lath or brick ties through sheathing to steel studs.

C. Joint Treatment and Skim Coat Treatment - Interior

1. Schedule:

a. Applications:

1) Typical, interior dry conditions, U.N.O

a) Type:

i. Drying: water evaporation type unless application is;

a. In cold weather
a. Required to be Setting Compound by type of tape such as mesh fiberglass
b. Required by application
c. Required by sheathing mfgr.

b) Mfgr: USG
c) Brand: Sheetrock
d) Tape Product: Joint Tape – Heavy
e) Treatment Compound:

i. Product:

a. Initial installation of tape:

i). Product: Taping Compound

b. Secondary and final finishing compound:

i). Product: Toping Compound or Plus Three Compound

c. Skim Coat:

i). Product: Plus Three Compound

2) Interior Face of All Exterior Walls:

a) Substrate: DensArmor Plus

i. Mfgr: Georgia Pacific

b) Tape Product: Self adhering 10x10 x 2" wide woven glass mesh tape over all joints, inside corners and outside corners

i. Mfgr: Georgia Pacific
ii. Model: ToughRock, Fiberglass mesh tape

c) Treatment Compound:

i. Mfgr: USG
ii. Type: Setting Compound (chemical hardening)
iii. Product:
iv. Installation: Per manufacturers recommendations
v. Finish: Level 5

a. Includes as herein specified with the entire surface of sheathing skim coated.

3) Wet conditions - Interior: Tile veneer finish

a) Substrate: DensShield Tile Backer Board

i. Mfgr: Georgia Pacific

b) Tape Product: Self adhering 10x10 x 2" wide woven glass mesh tape over all joints, inside corners and outside corners

i. Mfgr: Georgia Pacific
ii. Model: ToughRock, Fiberglass mesh tape

c) Treatment Compound:

i. Mfgr: USG
ii. Type: Setting Compound (chemical hardening)
iii. Product:
iv. Installation: Per manufacturers recommendations

4) Wet conditions - Interior: Non tile veneer finish

a) Substrate: DensShield Tile Guard

i. Mfgr: Georgia Pacific

b) Tape Product: Self adhering 10x10 x 2" wide woven glass mesh tape over all joints, inside corners and outside corners

i. Mfgr: Georgia Pacific
ii. Model: ToughRock, Fiberglass mesh tape

c) Treatment Compound:

i. Mfgr: USG
ii. Type: Setting Compound (chemical hardening)
iii. Product:
iv. Installation: Per manufacturers recommendations
v. Finish: Darby float Skim coat for level 5 finish and paint

5) Damp conditions – Interior: Non-shower areas

a) Substrate: Aqua Tough

i. Mfgr: USG

b) Tape Product: Self adhering 10x10 x 2" wide woven glass mesh tape over all joints, inside corners and outside corners

i. Mfgr: Georgia Pacific
ii. Model: ToughRock, Fiberglass mesh tape

c) Treatment Compound:

i. Mfgr: USG
ii. Type: Setting Compound (chemical hardening)
iii. Product:
iv. Installation: Per manufacturers recommendations
v. Finish: Darby float Skim coat for level 5 finish and paint

D. Wall finish, Texture Products and Schedule - Interior

1. General: Comply with USG Design Guidelines SA923
2. Finish Schedule:

a. Finish Texture:

1) Standard Texture:

a) Mfgr: USG
b) Texture designation:

i. Textured walls: Fine Orange Peel
ii. Smooth Wall Level Five: No texture

c) Schedule: At all walls and ceilings, U.N.O
d) Product Schedule:

i. Sealer / Primer:

a. Material: Gypsum board sealer/primer
b. Product: First Coat, Sheetrock brand
c. Application: Spray applied over entire surface Material

ii. Texture:

a. Material: Red Bag Wall Texture
b. Application: Spray applied
c. Coverage: Apply at rate of 20-40 pounds per square foot

2) Smooth Wall / Level 5 – Skim Coat

a) Mfgr: USG
b) Texture Designation: Smooth Wall, Level 5 - Darby
c) Schedule:

i. Locations indicated on Drawings, including , as herein listed:

a. Showers without tile veneer
b. Public spaces – walls and ceilings

ii. As herein specified

a. Public spaces – walls and ceilings

i). Lobbies
ii). Corridors
iii). All conditions

d) Product Schedule:

i. Skim Coat – Smooth Wall Level 5

a. Material: Plus Three
b. Application: Steel Trowel applied over entire surface of board.

ii. Sealer /Primer Coat: Level 4 and 5 finish

a. Material: Gypsum board sealer/primer
b. Product: First Coat, Sheetrock brand
c. Application: Spray applied over entire surface
d. Note: This is in addition to painters primer to be installed per Section 09 90 00 – Painting and Coatings.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 MOCK-UP

A. Erect at location approved by **Architect**.

1. Mock-up shall be part of final construction once approved by **Architect**.
2. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.
    a. Texture
    b. Level 5 finish

B. Mock-up

1. Size: 6' x 6'
2. Qty: One (1) each for each wall surface condition and finish

3.5 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
2. Perform work in accordance with herein listed standards.
3. Install with fiberglass tape at gypsum board requiring it as herein specified and required by mfgr.

B. Sheet arrangement layout: Conform to layouts and requirements indicated; use long sheets to restrict joints to minimum.

1. Edges of sheathing shall not align with the vertical and/or horizontal edges of window and/or door openings.

C. Interior Joints:

1. Perform work in accordance with gypsum board mfgr's requirements and to meet smooth wall and/or textured wall surface
2. Perform work in accordance with gypsum board mfgr's requirements and in accordance with wall veneer including, but not limited to;
    a. Tile

D. Typical:

1. Fasteners:
    a. Place fasteners 3/8 inch from edges of boards, except when using washers or clips with fasteners in joint.
    b. Install fasteners with heads dimpled slightly below surface; do not cut through skin.
    c. Space fasteners in accordance with ASTM C840 and manufacturer's recommendations, except as otherwise required by CBC.
    d. Install type of fastener and length in accordance with sheathing manufacturer.
    e. All ends and edges of all gypsum wallboard shall occur over framing members, except when joints are at right angles to framing members.
2. Ceilings:
    a. General:
        1. Place boards with long dimension at right angles to supports and end joints occurring over supports.
        2. Place perimeters of ceilings and edges of openings over solid bearing members.

b. Maximum joist spacing shall not exceed 12" O.C.

3. Partitions: Place boards with long dimension either vertical or horizontal (but not combination of both) on studs. Stagger joints on opposite sides of partitions. Locate joints at least 12 inches from jambs of openings. Keep end joints to minimum. Fasten double layer gypsum board as required by code, stagger joints in second layer.
4. Caulking: Using double bead of specified material, install at floors, wall intersections, where walls abut other materials and at all electrical boxes. Install wherever caulking materials is indicated in connection with gypsum board. Apply in accordance with manufacturer's printed directions.
5. Cutting and scribing: Cut neatly to fit around outlets, switch boxes and other protrusions, using keyhole saw or specially designed cutting tool for opening of exact shape and size needed.
6. Trim: Edge exterior corners with bead set to true, plumb line. Where gypsum board joins or abuts any material other than gypsum board, cover end of board with metal casing, leaving joint sufficient for installation of caulking (refer to Article 3.03 F above).

E. Finishing

1. Matrix: Joint treatment and Skim coat treatment:

a. USG matrix of materials and level of finish

1) For other products indicated, match that manufacturer's installation recommendations.

2. Levels Schedule

   a. **Levels of Finish.** The following levels of finish are established as a guide for specific final decoration and/or Smooth Wall finish and are a minimum standard for each condition.

      1) Level 0:

         a) Not Used

      2) **Level 1**:

         a) Schedule:

            i. Plenum areas above ceilings, in attics, in areas where the assembly including, but not limited to;

               a. Joints
               b. Fastener heads
               c. Around all wall penetrations

            ii. All joints, exterior angles, reveals and interior angles shall have tape embedded in joint compound.

               a. Surface shall be free of excess joint compound.
               b. Tool marks and ridges are acceptable.

      3) **Level 2**:

         a) Schedule:

            i. Use where water resistant tile backing board is used as a substrate for tile.
            ii. All joints, fasteners, exterior angles, reveals and interior angles shall have fiberglass mesh tape embedded in joint compound and one additional separate coat of joint compound applied over all joints, angles, fastener heads, and accessories. Surface shall be free of excess joint compound. Tool marks and ridges are acceptable.
            iii. Primer/Sealer: yes, entire gypsum board surface including treated joints, exterior angles, interior angles, reveals, fasteners, etc. shall be coated with a primer/sealer prior to the application of final finishes.

iv. Gypsum board primer/sealer must be applied as a requirement of this specification section in addition to any and all requirements of primer and paint specified and installed under Section 09 90 00 – Painting and Coatings.

4) **Level 3:**

a) Schedule:

i. Use at conditions where a material will be adhesively applied to gypsum board.

a. Not for use at tile applications.

ii. Texture: None
iii. Applications:

a. Where indicated in drawings
b. FRP panel substrate

b) Application:

i. All joints and angles shall have tape embedded in joint compound and wiped with a joint knife leaving a thin coating of joint compound over all joints and angles.

a. Joint compound applied over the body of the tape at the time of tape embedment shall be considered a separate coat of joint compound and shall satisfy the conditions of this level.

ii. All fasteners heads and accessories shall be covered with a coat of joint compound and wiped with a joint knife leaving a thin coating of joint compound.
iii. Surface shall be free of excess compound.
iv. Tool marks and ridges are acceptable.
v. Primer/Sealer: yes, entire gypsum board surface including treated joints, exterior angles, interior angles, reveals, fasteners, etc. shall be coated with a primer/sealer prior to the application of final finishes.

a. Gypsum board primer/sealer must be applied as a requirement of this specification section in addition to any and all requirements of primer and paint specified and installed under Section 09 90 00 – Painting and coatings.

5) **Level 4:**

a) Schedule:

i. Use at all conditions unless noted and/or specified to be Smooth Wall, Level 5 as specified herein, refer to "Level 5 (Smooth Wall) heading and Drawings.
ii. Texture; refer to Heading 2.05 for required texture.

b) Application:

i. All joints, fasteners, exterior angles, reveals and interior angles shall have tape embedded in joint compound and **three** separate coats of joint compound applied over all joints, fasteners, angles, fastener heads, and accessories. All joint compounds shall be smooth and free of tool marks and ridges. Refer to Heading 2.04 for schedule of specific products.

a. Taping Compound width schedule:

i). First coat: 8" wide
ii). Second coat: 10" wide
iii). Third coat: 12" wide

b. Primer/Sealer: yes, entire gypsum board surface including treated joints, exterior angles, interior angles, reveals, fasteners, etc. shall be coated with a primer/sealer prior to the application of final finishes.

i). Gypsum board primer/sealer must be applied as a requirement of this specification section in addition to any and all requirements of primer and paint specified and installed under Section 09 90 00 – Painting and Coatings.

c) Limitations:

i. At un-backed vinyl wall covering apply a Level 5 finish to wall substrate

6) **Level 5: (Smooth Wall / Skim Coat)**

a) Schedule:

i. Use this level of finish at:

a. All locations herein listed (walls, ceilings and soffits)
b. All locations with G.P. DensArmor Plus sheathing
c. All locations herein listed as indicated in drawings, including but not limited to;

i). Shower Ceilings without tile veneer
ii). Conference rooms
iii). Lobbies
iv). Corridors.
v). Other locations indicated on Drawings
vii). Locations herein specified

d. All High gloss painted surfaces

b) Application:

i. All joints, fasteners, exterior angles, reveals and interior angles shall be embedded in joint compound and three separate coats of specified compound applied over these conditions and one final "Skim Coat" of specified compound trowel applied over entire surface of gypsum board.

a. Taping Compound width schedule:

i). First coat: 8" wide
ii). Second coat: 10" wide
iii). Third coat: 12" wide
iv). Fourth: 12" wide to both sides of "Third coat"
v). Skim coat: Entire surface of board.

b. The thin "Skim Coat" of specified compound shall be applied to the entire gypsum board surface after the three separate applications of tapping compound have been installed at all joints, fasteners, exterior angles, reveals and interior angles.

i). Sand only taped joints prior to application of thin skim coat.
ii). Skim coat shall be applied prior to any sanding of non-taped board surface

c. Skim coat must be applied with a "Darby" steel trowel or knife blade.

i). Install mud to thickness as required to fill imperfections in surface using "Darby" method to fill surface up to ¼" in thickness.
ii). Use a minimum 4'-0" wide blade.

d. The surface shall be smooth and free of tool marks and ridges.

ii. Primer/Sealer: yes, entire gypsum board surface including treated joints, exterior angles, interior angles, reveals, fasteners, etc. shall be coated with a primer/sealer prior to the application of final finishes.

a. Gypsum board primer/sealer must be applied as a requirement of this specification section in addition to any and all requirements of primer and paint specified and installed under Section 09 90 00 – Painting and Coatings.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END SECTION 09 29 00

SECTION 09 30 00 – TILE AND STONE

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Interior floor and wall applications with the following requirements as herein specified and as indicated on Documents, including but not limited to:

a. Liquid applied Waterproof and Crack protection floor and base assembly
b. Shower room waterproof floor, base, wall and ceiling assembly

2. Grouts
3. Tile and Grout Sealers
4. Adhesives and Sealants
5. Transitions and Accessories

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Comply with manufacturer's standards.
2. Job site inspections shall be done as herein specified and as listed in drawings.
3. Testing shall be done as herein specified and as listed in drawings.

B. Standards:

1. **General:**

Item	Name of Test	Performance	Testing Std.
Subsurface	Subsurface level tolerance, typical	1/8″ in 10′-0″ non-cumulative	ANSI standards
		1/16″ in 1′-0″ non-cumulative	
	Subsurface level tolerance between adjoining edges of same or dissimilar materials	1/32″ max	
	Moisture level	Dry	ASTM D4263 and Section 07260
Flooring Installation	Slip Resistance Coefficient of Friction	0.6 min level to 5%	ASTM C 1028
	Slip Resistance Coefficient of Friction	0.8 min greater than 5%	
Movement Joints	Locations	Interior: not to exceed 24′-0″ to 36′-0″ in each direction over floor.	TCNA EJ171-07
Floor and Wall Finishes	Interior Surface Finishes	Materials shall be smooth, hard, non-absorptive material within boundaries indicated in building code and as revised to be more inclusive as indicated in contract documents.	CBC 1210.2
Wall to floor transition	Type	3/8″ min. radius cover of smooth, hard, non-absorptive material.	Health dept. having jurisdiction
Refer to drawings and as herein specified			

2. **Wall and Ceiling Sheathing**

   a. Refer to Section 09 29 00 - Gypsum Board & Sheathing Substrates.

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing:**

Item	Name of Test	Performance Results	Testing Std.
Sealers	Appearance of substrate not altered	Mockup on samples of tile shall be provided with submittal for visual approval by **Architect** prior to installation of tile.	

Shower Pan, Sauna and Steam room floor Assemblies	Flood Test	No leaks visible after 36 hours CPC, Section 411.8.1	Laticrete TDS 169 Flood Testing Procedures

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit product information, samples, and shop drawings in one complete submittal package:

1. Manufacturer Product & Technical Data for all assembly components.
2. Manufacturer MSDS Sheets
3. Manufacturer Installation Instructions
4. Manufacturer and Contractor Warranties
5. Manufacturer Certifications
6. Product Samples:

a. Provide three (3) of each type, color, size, and finish included in the work, noted with designation herein, and noted in the drawings, including:

1) Full size tile and trim shapes (without sealer)

a) Where tile has color or pattern variation, provide samples which represent the full potential range of variation.

2) Grout color samples
3) Sealant color samples
4) Prefabricated joints / transitions

b. Provide one (1) additional tile sample of each type, color, size, and finish included in the work, noted with designation herein, and noted in the drawings with sealer applied to the tile sample.

7. Shop drawings:

a. Submit drawings (plans, elevations) showing location for each type of tile and clearly indicating pattern, color, expansion joints, soft joints (sealant), and tile start points.

1) **Contractor** shall use as a guide the TCNA Manual, drawings and specifications, most current editions for expansion and sealant joint locations.

8. Mock-Ups:

a. Erect at locations approved by **Architect**.

1) Size: 4’-0” x 4’-0” minimum or as required to show color, texture, and pattern variations.
2) Mock-up shall be part of final construction once approved by **Architect** and **Owner**.

b. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.

1) Install a fully finished mock-up for each tile type and installation type for review and approval, including all components for the complete assembly, including but not limited to:

a) Floor tile
b) Base tile or transition
c) Wall tile
d) Outside corners
e) Inside corners
f) Trim pieces including at top edge of wall tile
g) Grout
h) Sealant
i) Sealer on grout mock-up shall be done in field in a non-conspicuous location for review by **Architect.**
j) Tile sealer mock-up shall be provided on tile as part of samples submittal.

c. Tile and grout mock-up will be reviewed for layout, color range, pattern, lippage, joint quality and consistency, and workmanship.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer shall have been in business for **five (5)** years providing/finishing similar size projects and complexity.

C. Installation System Manufacturer specializing in adhesive, mortar, grout and other tile assembly installation materials shall have minimum **ten (10)** years' experience and ISO 9001 certification.

1. Obtain installation materials from single source manufacturer to ensure consistent quality, full compatibility, and compliance with specified warranty requirements.

D. Lead Times:

1. Bidders and **General Contractor** shall coordinate with supplier to verify product lead times during bid and at award of contract, and account for such lead times in their costs and schedules.

a. Bidders shall certify in writing that all materials have acceptable lead times as they relate to availability for sub-contractor and **General Contractor** to meet construction schedule and sequence of construction.

1) Bidders shall provide an itemized list of materials which might have or are confirmed to have a lead time problem and what the anticipated lead time is.
2) Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid.

2. **General Contractor** and **Subcontractor** shall be responsible for preparing submittals and obtaining Architects review and acceptance of submittal, and for ordering materials in time to meet the construction schedule.

    a. Additional time required of **Architect** to reselect materials or review alternate proposed materials due to the failure of the **General Contractor** and **Subcontractor** to accommodate sufficient time for these activities, including the potential for submittal revision and resubmittals, may be back charged to the **General Contractor** by the **Owner**.

E. Stipulations

1. Installation materials including adhesive, thin set, grout and sealant shall be used from a single manufacturer in order to provide specified extended system warranty.
2. All finish floor surface material shall meet or exceed the minimum "ADA" Minimum Coefficient of Friction.
3. Tile contractor, by commencing the work of this section, assumes overall responsibility to assure that all assemblies, components and parts shown or required within the work of this section comply with contract documents and are compatible with each other and with the conditions and expected use.
4. Floors to receive tile finish shall not be leveled with gypsum- or asphalt-based compounds.

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to:

    a. Substrate preparation
    b. Substrate vapor emission & alkalinity testing and compliance
    c. Adhesion testing
    d. Flooring transitions
    e. Crack and waterproofing application to substrates
    f. Wall penetrations
    g. Caulking and sealing
    h. Joints – expansion and control
    i. Grout types
    j. Mock up

2. **General Contractor** shall request meeting at least three weeks prior to commencing work.

G. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

H. Installation of tile shall be done under finished (not temporary) lighting conditions to ensure tile is properly spaced, flush, and true.

I. Comply with ANSI Standard for Tile Installation Material and current Tile Council of America Handbook for products and materials indicated for setting and grouting.

J. Refer to drawings and to these specifications for criteria related to control joints at walls and floors.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver materials to building site in manufacturer's labeled, unbroken containers.

C. Store tile and installation system materials in a dry location; handle in a manner to prevent chipping, breakage, and contamination.

D. Protect latex additives, organic adhesives, epoxy adhesives and sealants from freezing or overheating in accordance with manufacturer's instructions; store at room temperature when possible.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

B. Comply with requirements of referenced standards and recommendations of material manufacturers for environmental conditions before, during and after installation.

C. Maintain environmental conditions and protect work during and after installation to comply with referenced standards and manufacturer's printed recommendations.

D. Maintain minimum and maximum temperature limits as recommended by manufacturers.

E. Illuminate the work area during installation providing the same level and angle of illumination as will be available for final inspection.

F. Do not apply materials on wet or damp surfaces.

G. Defer laying tile until other work that might cause damage to flooring has been completed.

H. Concrete surfaces shall be:

1. Cured a minimum of 28 days at 70° F, including an initial seven (7) day period of wet curing.
2. Wood float finished, or better, if the installation is to be done by the think bed method.
3. All curing compounds or topical vapor emissions treatments shall be removed and/or concrete floor scarified for proper adhesion of adhesives, mortars, membranes, etc.

I. Advise **General Contractor** of any surface or substrate conditions requiring correction before tile work commences.

1. Beginning of work constitutes acceptance of substrate or surface conditions.

J. Maintain ambient temperature not less than 50°F or more than 100°F during installation and for a minimum of seven (7) days after completion.

1. There should be no ice in/on slab.

a. Freezing after installation will not damage latex Portland cement mortars.

2. Protect Portland Cement based mortars and grouts from direct sunlight, radiant heat, forced ventilation (heat & cold) and drafts until cured to prevent premature evaporation of moisture.
3. Epoxy mortars and grouts require surface temperatures between 60°F and 90°f at time of installation.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish additional **25-year** System Warranty which is in addition to initial manufacturer and Contractor product and installation warranty.

1. Warranty shall cover the replacement of Finish tile material, all installed materials, sealants, adhesives, mortar bed, grout, etc. for a period as herein listed:

a. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner** by product manufacturer.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Concrete slab substrate
2. Concrete deck substrate
3. Wood deck substrate
4. Wall and ceiling framing
5. Wall sheathing and substrates
6. Wall, floor & ceiling penetrations
7. Plumbing
8. Electrical

B. Related Sections include, but are not limited to:

1. Division 1
2. Section 03 30 00 – Cast-in-Place Concrete
3. Section 05 40 00 – Cold-Formed Metal Framing
4. Section 06 10 00 – Rough Carpentry
5. Section 07 26 00 – Concrete Slab Vapor Emission Control Treatment
6. Section 07 92 00 – Sealants and Caulking
7. Section 09 22 16 – Non-Structural Metal Framing
8. Section 09 29 00 – Gypsum Board & Sheathing Substrates
9. Section 10 28 00 – Toilet Accessories

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. Proceed with tile work only after curbs, vents, drains, piping, and other projections through substrate have been installed and when substrate construction and framing of openings have been completed.

D. **General Contractor** shall coordinate slab vapor emission and PH testing of concrete floor treatments, or removal thereof, prior to the installation of finish flooring as herein specified. Coordinate with Section 07 28 00 Concrete Slab Vapor Emission and Alkalinity Control Treatment.

1.13 EXTRA MATERIAL

A. Submit as part of project closeout:

1. Provide extra material for each product type, color, finish, etc. in same lot as installed product.

   a. Furnish written certification that extra materials supplied have been inspected and confirmed to be the same as those used in the Work.

2. Provide extra material in unopened fully labeled containers

   a. Do not supply anything less the full cartons / containers.
   b. Furnish in factory packaged and labeled cartons and identify cartons with Project name, location(s) within building (room names/numbers).
   c. Deliver extra materials to location directed by the **Owner** just prior to substantial completion.

3. Provide the following:

a. 10% minimum of installed quantity of each full-size floor, wall, or coved base tile for each product, color, texture, etc. installed.

1) Provide material in sealed boxes and clearly labeled with:

a) Tile designation per drawings
b) Material manufacturer, product, color, finish, and texture

b. 10% minimum of each grout used labeled with:

1) Grout designation per drawings
2) Grout manufacturer, product type, product name, and color

c. 2 gallons of each cleaner and sealer used labeled with:

1) Sealer manufacturer and product names

d. 2 tubes of each sealant color labeled with:

1) Sealant manufacturer, product name, and color names

1.14 GENERAL SYSTEM DESCRIPTION

A. Tile and stone installation integral with membranes, adhesives, grouts, sealants, etc.

B. Installation of products from single manufacturer as required to meet extended system warranty specified herein.

1. Use of products from multiple manufacturers is not acceptable.

C. **Tile Assemblies, typical U.N.O.:**

1. TCNA F122 - Thin Set Tile Floor Assembly

a. Tile and Grout o/
b. Latex Portland Cement Mortar Bond Coat o/
c. (Bonded) Waterproofing / Anti-Fracture Membrane o/
d. Concrete or cured mortar bed

2. TCNA W245 – Thin-set Tile Interior Wall Assembly

a. Tile and Grout o/
b. Latex Portland Cement Mortar Bond Coat o/
c. Coated Glass Mat Water Resistant Gypsum Backer Board (per Section 09 29 00) o/
d. Wood or Metal Studs

D. **Shower Tile Assembly**

1. TCNA F121 – Cement Mortar Bed Tile Floor Assembly, typical @ showers in conjunction with TCNA B420 Shower Receptor **[requires a depressed slab]**

a. Tile and Grout o/
b. Latex Portland Cement Mortar Bond Coat o/
c. Reinforced Mortar Bed (1-1/4" min. to 2" max.) o/

d. Shower Pan o/
e. Sloped Concrete slab on grade or Sloped Concrete fill

2. TCNA W245 – Thin-set Tile Interior Wall Assembly

a. Tile and Grout o/
b. Latex Portland Cement Mortar Bond Coat o/
c. Bonded Waterproof Membrane o/
d. Coated Glass Mat Water Resistant Gypsum Backer Board (per Section 09 29 00) with Flexible Sealant joint between b.o. Backer Board and Mortar Bed o/
e. Wood or Metal Studs

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single-source responsibility specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers and installers shall be one of the following, and as listed herein and in Drawings:

1. Tile:

a. Refer to Drawings for specifications and manufacturer name(s).

2. Tile installation assembly products (all products from one manufacturer as required to meet specified warranties):

a. Laticrete, www.laticrete.com
b. MerKrete, www.merkrete.com
c. Custom Building Products, www.custombuildingproducts.com

3. Transition Trims

a. Schluter www.schluter.com
b. Blanke Corp., www.blankecorp.com

4. Sealers and Cleaners:

a. Laticrete, www.laticrete.com
b. MerKrete, www.merkrete.com
c. Custom Building Products, www.custombuildingproducts.com
d. Miracle Sealants, www.rustoleum.com/pages/miracle-sealants

5. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. **Wall and Ceiling Sheathing**

1. Refer to Section 09 29 00 – Gypsum Board and Sheathing Substrates

B. **Grout:**

1. Application: Typical, U.N.O.

a. Mfgr: Laticrete
b. Product: PermaColor
c. Material: High performance, fast setting polymer fortified grout featuring built-in Microban Anti-Microbial Protection
d. Standards:

1) ANSI A118.6
2) ANSI A118.7
3) EN 13888
4) ISO 13007

e. Properties:

1) Tensile Strength: 510 psi (3.5 MPa)
2) Compressive Strength: 4750 psi (32.8 MPa)
3) Flexural Strength: 1400 psi (9,65 MPa)
4) Linear Shrinkage: 0.065%
5) Water Absorption: 3.25%

f. Testing:

Test	Test Method	ISO 13007-3 CG2WA Specification	Results
28 Day Cure Abrasion Resistance	ISO 13007-4 4.4	Less than or equal to 1,000 mm3 (0.061 in3)	121–132 mm3 (0.0074– 0.0081 in3)
28 Day Cure Flexural Strength	ISO 13007-4 4.1.3	Greater than 2.5 MPa (362 psi)	8.5–9.2 MPa (1226–1340 psi)
6 Day 21 Day Water Soak 25 Freeze/Thaw Cycle Flexural Strength	ISO 13007-4 4.1.3	Greater than 2.5 MPa (362 psi)	3.31–3.79 MPa (480–550 psi)
28 Day Cure Compressive Strength	ISO 13007-4 4.1.4	Greater than 15 MPa (2175 psi)	35.7–36.8 MPa (5,176– 5,339 psi)

6 Day 21 Day Water Soak 25 Freeze/Thaw Cycle Compressive Strength	ISO 13007-4 4.1.4	Greater than 15 MPa (2175 psi)	30.4–31.2 MPa (4,408– 4,518 psi)
28 Day Cure Shrinkage	ISO 13007-4 4.3	Less than 3 mm/m (0.12 in./3.28 ft)	0.51–0.62 mm/m (0.02–0.024 in/3.28 ft)
28 Day Water Absorption Soaked 30 Minutes	ISO 13007-4 4.2	Less than 2 g (0.0044 lb)	0.09–0.14 g (0.0002–0.0003 lb)
28 Day Water Absorption Soaked 240 Minute	ISO 13007-4 4.2	Less than 5 g (0.011 lb)	0.54–0.7 g (0.0012–0.0015 lb)

C. **Latex Portland Cement Mortar Bond Coat, Mortar Bond Coat and/or Bond Coat:**

1. Mfgr: Laticrete
2. Product: 254 Platinum
3. Material: One-step, polymer fortified, thin-set mortar
4. Standards:
    a. ANSI A118.4
    b. ANSI A118.11
    c. ANSI A118.15
    d. EN 12004
    e. ISO 13007-1
5. Properties:

Test	Test Method	Results	Specification
28 day Cure Porcelain Tile Shear Strength	ANSI A118.15 7.2.5	475-575 psi (3.3-4.0 MPa)	>400 psi (2.76 MPa)
Shear Bond Porcelain Tile Water Immersion	ANSI A118.15 7.2.4	250-300 psi (1.7-2.4 MPa)	>200 psi (1.38 MPa)
28 day Heat Aging Tile Shear Strength	ANSI A118.15 7.2.7	600-700 psi (4.1-4.8 MPa)	>400 psi (2.76 MPa)
28 day Cure Quarry Tile to Plywood Shear Bond	ANSI A118.11 4.1.2	250-300 psi (1.7-2.1 MPa)	>150 psi (1.0 MPa)
28 Day Cure Tensile Adhesive Strength	ISO 13007-2 4.4.2	1 MPa (145 psi)	1.8 – 2.6 MPa (261-377 psi)
7 Day Cure 21 Day Water Immersion Tensile Adhesive Strength	ISO 13007-2 4.4.3	1 MPa (145 psi)	1.3-1.5 MPa (174-221 psi)
14 Day Cure 14 Day Heat Age Tensile Adhesive Strength	ISO 13007-2 4.4.4	1 MPa (145 psi)	2.4-3.0 MPa (345-438 psi)
7 Day Cure 21 Day Water Immersion 25 Freeze/Thaw Cycle Tensile Adhesive Strength	ISO 13007-2 4.4.5	1 MPa 145 psi)	2-1.7 MPa (171-247 psi)
Open Time After 30 Minutes	ISO 13007-2 4.1	0.5 MPa (73 psi)	1.3-1.9 MPa (190-283 psi)

Slip	ISO 13007-2 4.2	Less than or equal to 0.5 mm (0.02 inches)	0.5 mm (0.02 inches)
Transverse Deformation	ISO 13007-2 4.5	Greater than or equal to 2.5 mm (0.1 in.) and less than 5 mm (0.2 in.)	3.2-3.6 mm (0.13-0.14 in.)

D. **Bonded Membrane and/or Bonded Anti-Fracture Waterproofing Membrane:**

1. Application: Typical, U.N.O.

   a. Mfgr: Laticrete
   b. Product: HydroBan
   c. Properties:

Physical Property	Test Method	Results
7-day Hydrostatic Tes	ANSI A118.10	Pass
7-day Breaking Strength	ANSI A118.10	265–300 psi (1.8– 2.1 MPa)
7-day Water Immersion	ANSI A118.10	95–120 psi (0.7–0.8 MPa)
7-day Shear Bond	ANSI A118.10	200–275 psi (1.4– 1.9 MPa)
28-day Shear Strength	ANSI A118.10	214–343 psi (1.5– 2.3 MPa)
System Crack Resistance Test	ANSI A118.12.5.4	Pass (High)
Water Vapor Transmission	ASTM E 96– 00E1 Procedure B	0.515 grains/h • ft2 (0.3602 g/h • m2)
Water Vapor Permeance	ASTM E 96– 00E1 Procedure B	1.247 perms 71.21 (ng/Pa • s • m2)
System Performance	ANSI A118.10; ASTM C627; TCA Rating	cycles 1–14 "Extra Heavy"
Potability of Water Applicable to Waterproofing Systems	NBR 12170:2009 (Technical Norm from Brazil)	Pass
Tensile Strength for Elongation		250%
Thickness (Dried)		20–30 mils (0.5–0.8 mm)

2. Application: Showers

   a. Mfgr: Laticrete
   b. Product: HydroBan
   c. Properties:

Physical Property	Test Method	Results
7-day Hydrostatic Test	ANSI A118.10	Pass
7-day Breaking Strength	ANSI A118.10	265–300 psi (1.8– 2.1 MPa)
7-day Water Immersion	ANSI A118.10	95–120 psi (0.7–0.8 MPa)
7-day Shear Bond	ANSI A118.10	200–275 psi (1.4– 1.9 MPa)
28-day Shear Strength	ANSI A118.10	214–343 psi (1.5– 2.3 MPa)
System Crack Resistance Test	ANSI A118.12.5.4	Pass (High)
Water Vapor Transmission	ASTM E 96– 00E1 Procedure B	0.515 grains/h • ft2 (0.3602 g/h • m2)

Water Vapor Permeance	ASTM E 96– 00E1 Procedure B	1.247 perms 71.21 (ng/Pa • s • m2)
System Performance	ANSI A118.10; ASTM C627; TCA Rating	cycles 1–14 "Extra Heavy"
Potability of Water Applicable to Waterproofing Systems	NBR 12170:2009 (Technical Norm from Brazil)	Pass
Tensile Strength for Elongation		250%
Thickness (Dried)		20–30 mils (0.5–0.8 mm)

E. **Shower Pan:**

1. Application: Typical Shower Pan, u.o.n.

   a. Mfgr: Laticrete
   b. Product: HydroBan Sheet Membrane
   c. Material: Single component, self-curing liquid rubber polymer that forms a flexible, seamless waterproofing / crack isolation membrane that does not require the use of a fabric in the field.
   d. Standards:

      1) ANSI 118.10
      2) ANSI A118.12
      3) IAPMO PS106 approved

   e. Properties:

Physical Property	Test Method	Results
Seam Strength	ASTM D751	32.7 lbs/in. (0.6kg/mm)
Breaking Strength Transverse	ASTM D751 Procedure B	1298 psi (9.0 MPa)
Breaking Strength Longitudinal	ASTM D751 Procedure B	1867 psi (12.9 MPa)
Waterproofness	ASTM D4068	Pass
7-Day Dry Shear Strength	ASTM C482	175 psi (1.2 MPa)
7-Day Water Immersion Shear Strength	ASTM C482	107 psi (0.7 MPa)
4-Week Shear Strength	ASTM C482	103 psi (0.7 MPa)
12-Week Shear Strength	ASTM C482	105 psi (0.7 MPa)
100-Day Water Immersion Shear Strength	ASTM C482	113 psi (0.8 MPa)
Permeance	ASTM E96 Procedure E	0.06 Perm (inch-lb)
Water Vapor Transmission	ASTM E96 Procedure E	0.104 grain/hrft 2
Service Requirement	ASTM C627	Rated Extra Heavy (TCNA)
Resistance to Temperature:		min./max. -22°F / +194°F (- 30°C / + 90°C)

Total Thickness (approximate)	Physical measurement	20-30 mils (0.5-0.7 mm)

F. **Shower Accessories:**

1. Sealant and backer rod and/or bond breaker tape:

   a. Application: Expansion & Control Joints, typical
   b. Manufacture: Laticrete
   c. Product: Latasil
   d. Standards:

      1) ASTM C794
      2) ASTM C920
      3) Backer rod: As approved by sealant mfgr. and in accordance with details and TCNA
      4) Bond Breaker Tape: As approved by sealant mfgr. and in accordance with details and TCNA

   e. Properties:

Service Temperature Range	-40°F (-40°C) to +350°F (177°C)
Sag or Slump	None
Tack Free Time at 77° F (25° C), 50% RH	17 minutes
Tooling Time	7 – 10 minutes
Durometer Hardness -Shore A	27
Tensile Strength	280 psi (1.9 Mpa)
Dynamic Joint Movement	+/- 25%
Weatherability, 10,000 hours QUV Weatherometer	No change

   f. Joint Size: Match Grout Width, U.N.O.
   g. Color: As Selected by **Architect** for each Grout Color Condition
   h. Primer: Latasil 9118 Primer

2. Sealer - Floor Sealer & Slip Protection & Grout Sealer:

   a. Application: Typical, U.N.O.
   b. Manufacturer: Miracle Sealants & Abrasive Co.
   c. Product: 511 Impregnator – Natural look penetrating sealer
   d. Material: Polymerized Silicone
   e. Standard: Static coefficient of friction as herein specified

3. Sealer - Wall and Ceiling Grout Sealer:

   a. Application: Typical, U.N.O
   b. Manufacturer: Miracle Sealants & Abrasives Co.
   c. Products:

      1) Typical, u.o.n.: 511 Impregnator – Natural look penetrating sealer

2) Porous surfaces: 511 Porous Plus – Natural look penetrating sealer

a) Use for Sanded Grout

d. Material: Polymerized Silicone
e. Standard: 0.6 max "Static Coefficient of Friction"

4. Cleaner - Surface:

a. Application: Typical
b. Manufacturer: Miracle Sealants & Abrasives Co.
c. Product: Mira Clean #1

G. **Accessories:** **[Specifier, select from the following]**

1. Floors - Same Height Transitions:

a. Application: Tile to Carpet and Tile to Tile

1) Manufacturer: Schluter
2) Model: Schiene

a) Provide Schluter Schiene-R at radius conditions

3) Finish:

a) AE Satin Aluminum Anodized
b) A Aluminum
c) E Stainless Steel 304
d) EB Brushed Stainless Steel 304
e) M Solid Brass

[Specifier, additional finishes available in select heights; refer to website for available options and coordinate with tile height]

4) Height: To match finish height of tile when installed

b. Application: Tile to Carpet and Tile to Tile – with Edge Capture **[Specifier, this is a "T" shaped which can be used at retrofit applications where a transition flange cannot be placed under the tile]**

1) Manufacturer: Schluter
2) Model: Reno-T
3) Finish:

a) AE Satin Aluminum Anodized
b) AT Satin Nickel Anodized Aluminum
c) AK Satin Copper Anodized Aluminum
d) AM Satin Brass Anodized Aluminum
e) E Stainless Steel 304
f) EB Brushed Stainless Steel 304
g) M Solid Brass

4) Height: 11/32″ (9 mm)

2. Floors - Different Height Transitions:

a. Application: Tile to lower flooring materials (adjustable slope):

1) Manufacturer: Schluter
2) Model: Reno-V
3) Finish: AE Anodized Aluminum
4) Height: To match finish height of tile when installed
5) Slope Leg:

a) 3/4″
b) 1-3/16″
c) 1-9/16″

b. Application: Tile to lower flooring materials (fixed height)

1) Manufacturer: Schluter
2) Model: Reno-TK

a) Provide Schluter Reno-TK-R at radius conditions **[Specifier, not available in stainless steel]**

3) Finish:

a) AE Satin Aluminum Anodized
b) E Stainless Steel 304
c) EB Brushed Stainless Steel 304
d) M Solid Brass
e) ACB Bright Chrome Anodized Aluminum
f) AT Satin Nickel Anodized Aluminum
g) ATGB Brushed Nickel Anodized Aluminum
h) ABGB Brushed Antique Bronze Anodized Aluminum

4) Height: To match finish height of tile when installed

3. Cove Shaped Profile - Wall Tile to Floor tile:

a. Application: Aluminum Tile Wall to Tile Floor coved transition

1) Manufacturer: Schluter
2) Model: DILEX-AHK
3) Finish:

a) AE Satin Anodized Aluminum

4) Height: To match finish height of floor tile when installed

5) Accessories:

a) Outside Corner
b) Inside Corner

c) Connector
d) End Cap

b. Application: Stainless Steel Tile Wall to Tile Floor coved transition

1) Manufacturer: Schluter
2) Model: DILEX-EHK
3) Finish:

a) E Stainless Steel 304
b) EB Brushed Stainless Steel 304
c) EV4A Stainless Steel 316 L

4) Height: To match finish height of floor tile when installed
5) Accessories:

a) Outside Corner
b) Inside Corner
c) Connector
d) End Cap

4. Cove Shaped Profile - Wall Tile to Concrete or Top of Existing Floor:

a. Application: Tiled Wall to Concrete or Top of Existing Floor coved transition

1) Manufacturer: Schluter
2) Model: DILEX-AHKA
3) Finish:

a) AE Satin Anodized Aluminum
b) AT Satin Nickel Anodized Aluminum
c) ATGB Brushed Nickel Anodized Aluminum
[Specifier, additional finishes available; refer to website]

4) Height: To match finish height of floor tile when installed
5) Accessories:

a) Outside Corner
b) Inside Corner
c) Connector
d) End Cap

5. Wall Trim:

a. Application: Vertical Outside Corners, End Cap, and T.O. Tile Trim

1) Manufacturer: Schluter
2) Model: Jolly

a) Provide Schluter Jolly-R at radius wall t.o. tile trim conditions

3) Finish:

a) AE Satin Anodized Aluminum

b. Application: Vertical Mitered Outside Corners, End Cap, and T.O. Tile Trim

1) Manufacturer: Schluter
2) Model: Finec
3) Finish:

a) AE Satin Anodized Aluminum

H. Portland Cement Mortar Floor Bed: Consisting of uniform mortar thickness 1-1/4" min. to 2" max, conforming to ASTM C150, Type 1 and ASTM C144
I. Portland Cement: ASTM C150 Type 1
J. Sand: ASTM C144
K. Water: Potable

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Examine substrates where tiles will be installed for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
   a. Verify that substrates for setting tile are well cured; structurally sound dry, clean, and free from oil or waxy films, and curing compounds.
   b. Verify that substrate is clean and free of dust, dirt, oil, grease, sealers, curing compounds, laitance, efflorescence, form oil, loose plaster, paint, and scale.
   c. Verify that substrate is level and true to within ¼" in 10' from the required plane and no more than 1/16" in 12" when measured from the high points in the surface for applications by the thin bed method or for installation of veneer work over thin waterproofing membrane.
   d. Verify that substrate is not leveled with gypsum or asphalt-based compounds.
   e. Very substrate is dry per ASTM D4263 – Standard Test for Determining Moisture in Concrete by the Plastic Sheet Method.
3. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.
   a. Do not proceed with installation until unsatisfactory conditions have been corrected. Commencement of work signifies acceptance of substrate and installation conditions.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.
2. Confirm all surface treatments, including but not limited to waterproofing and crack isolation membranes, are installed properly before proceeding.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations

B. Prepare as follows, but not limited to:

1. Remove protrusions, bumps, and ridges by grinding or chipping.
2. Repair, fill, and level cracks, holes, depressions and rough or chipped areas in substrate using patching material recommended by setting materials manufacturer.
3. Concrete slab to have steel trowel or light broom finish when tile is installed by the thin-set method.
    a. Level floors in accordance with Section 03 00 61 - Concrete Floor Leveling, Patching and Grouting – Cementitious.
        1) Gypsum material is not allowed.
    b. Surfaces shall be clean and well cured.
4. Ensure substrate is within level tolerances:

3.4 INSTALLATION

A. General:

1. Perform work in accordance with ANSI standards, TCNA methods, manufacturer's installation instructions, and in accordance with the drawings; where in conflict, the most stringent shall apply.
2. Provide threshold trim strips or other edging material where tile terminates at dissimilar finishes, U.N.O.

B. Pre-Treatment

1. Cracks & Joints
    a. Fill all substrate cracks, cold joints and control joints to a smooth finish using a Laticrete latex-fortified thin-set.
2. Coves and Floor/Wall Intersections

a. Fill all substrate coves, floor/wall transitions and changes in plane to a smooth finish using a Laticrete latex-fortified thin-set.

3. Drains

a. Drains must be of the clamping ring type, with weepers as per ASME A112.6.3.
b. Waterproof membranes shall connect at the clamping ring (or the integrated bonding flange where specified by TCNA design) to manage water from floor into drain.

4. Penetrations

a. Allow for a minimum 1/8" space between drains, pipes, lights, or other penetrations and surrounding ceramic tile, stone or brick. Pack any gaps around pipes, lights or other penetrations with a Laticrete latex-fortified thin-set.

5. Main Application:

a. Allow any pre-treated areas to dry to the touch prior to proceeding.

C. Placement

1. Place tile material in accordance with patterns indicated or as directed by Architect; carefully plan tile layouts, ensure pattern is uninterrupted from one surface to the next and through doorways.
2. Neatly cut tile around fixtures and drains; accurately from corners, base, intersections and returns.

a. Use tile cutting saw to cut tile, typ.
b. Hone edges of all cut tiles to eliminate rough-cut edges.
c. At wall tile penetrations install hole cutout, do not notch.
d. Use inside and outside tile trim units as herein specified and/or indicated in Drawings.

3. Ensure tile joints are uniform in width, subject to normal variance in tolerance allowed in tile size. Ensure joints are tight, without voids, cracks, excess mortar or grout; spacers shall be used to set joints between tiles, typical.
4. Install metal edge trim at transitions to door frames.
5. **Back butter** all tile during installation
6. Sound tile after setting, remove and replace hollow sounding units.
7. Allow tile to set for a minimum 48 hours prior to grouting.

a. Provide and install required sealants and caulking at areas around through wall pipes, plumbing, and other wall penetrations.
b. Provide sealant joint where tile butts against other wall finishes.

D. Accessories

1. Install metal inside corner transition trim at floor to wall tile condition.
2. Internal wall angles, external angles and exposed edges shall be made with pre-formed trim shapes as herein specified and/or indicated in Drawings.

E. The word "tile" is used as general name for all floor, wall and counter top materials.

F. Floor area & wall base – Typical, u.n.o.

1. Slab shall be well cured, level and free of cracks
2. Sheet and Liquid Membranes:
    a. Install thin set mortar as slurry bond coat over substrate prior to installation of thick bed mortar.
    b. Install Crack Protection / Thin-set Sheet Waterproofing membrane over entire floor substrate and up face of wall 8" at tile base, typ.
    c. Install Shower Pan Sheet membranes at all shower floors and shower bases in accordance with TCNA and manufacturer's recommendations.
    d. Install waterproof membrane and backerboard at all shower walls and ceilings in accordance with TCNA design identified herein and manufacturer's recommendations.
    e. Test Waterproofing system/assembly with EFVM method or other measure as approved by **Architect**. Replace / repair all defective conditions discovered by testing.
    f. Install per manufacturer's recommendations.
3. Bond coat mortar:
    a. Install per manufacturer's recommendations, TCNA standards and as herein specified and modified.
4. Grout with color as selected by **Architect**.
5. Joints: Expansion, construction, isolation, contraction and perimeter joints
    a. Refer to most current TCNA Handbook, Method EJ171-07 for recommendations on locating, treating and detailing various types of construction joints.
        1) Joints not to exceed in spacing beyond 25'-0" for interior wall tile
        2) Install sealant with bond breaker tape at transitions to dissimilar material
        3) Install sealant with bond breaker tape at changes in plane of tile.
        4) Install using primer as recommended by sealant manufacturer.
        5) Install sealant with backer rod at expansion joints.
6. Tile installation
    a. General
        1) Custom cutting required to provide curved and miscellaneous special shapes use "Water Jet" cutting method exclusively.
        2) Jobsite Blending: blend tiles before installing in accordance with reference standards to produce an even range and distribution of color and finish.
    b. Installing Tile:
        1) Install tile in pattern indicated. Align joints when adjoining tiles on floor, base, walls, and trim are same size.
            a) Adjust to minimize tile cutting and to avoid tile less than half size.
        2) Smooth cut edges of tile and/or use appropriate cutter or wet saw to produce smooth cuts.

a) Provide straight cuts which align with adjacent materials.

3) Extend tile into recesses and under equipment and fixtures to form a complete covering without interruption.
4) Terminate tile neatly at obstructions, edges, and corners, without disruption of pattern or joint alignment.
5) Provide tile joints uniform in width, subject to variance in tolerance allowed in tile size.
    a) Make joints smooth and even, without voids, cracks, or excess mortar or grout.
6) Mix mortar in strict accordance with manufacturer's recommendations.
7) Apply setting material in accordance with manufacturer's directions and install tile before bonding mortar has started initial cure.
    a) For thin set mortar application, use a notch trowel that will achieve the recommended coverage of mortar after tiles have been installed.
    b) Reference standard coverage information and follow manufacturer's recommendations for trowel size when using mortars.
8) Do not spread more material than can be covered within 10 to 15 minutes. If "skinning" occurs, remove bonding mortar and spread fresh material. Spread bonding mortar with notches running in one direction, which shall be perpendicular to the pressing, pushing and pulling of tile during placement.
9) Place tile in fresh bonding mortar, press, push and pull the tile slightly to achieve as near 100% coverage and contact of tile with setting material and substrate as possible.
    a) The coverage shall be no less than 85% and be sufficiently distributed to give full support of the tile.
    b) Make sure that all corners and edges are well supported with mortar. Leave no hollow corners or edges.
        i. NOTE: 95-100% coverage is mandatory for wet or exterior areas.
    c) A small amount of bonding mortar can be placed onto the entire back of the tile using a trowel in order to assist in optimum adhesion and coverage of the bonding mortar being used.
10) Ensure there is a minimum 1/8" of bonding mortar between tile and substrate after proper bedding.
    a) Installer must periodically remove sheets or individual tiles to assure proper bond coverage consistent with industry specifications.
    b) If coverage is found to be insufficient, use a larger size notch trowel.
11) Use a beating block and hammer or rubber mallet so that faces and edges of individual tiles are flush and level with faces and edges of adjacent tiles, and to reduce slippage.

7. Thin Set Method:
    a. Install thin set mortar in compliance with herein specified standards and manufacturers recommendations.

b. Use the appropriate trowel notch size to ensure proper bedding of the tile, brick or stone selected.

1) Work the thinset mortar into good contact with the substrate and comb with notched side of trowel.
2) Spread only as much thinset mortar as can be covered while the mortar surface is still wet and tacky.
3) When installing tile/stone, rib/button, lug back tiles, pavers or sheet mounted ceramics/mosaics, spread thin set mortar onto the back of (back-butter) each piece/sheet in addition to troweling thinset mortar over the substrate.

a) Beat each piece/sheet into the thinset mortar with a beating block or rubber mallet to insure full bedding and flatness.
b) Allow installation to set until firm.
c) Clean excess thinset mortar from tile or stone face and joints between pieces.

3.5 INSTALLATION – GROUT AND SEALANT JOINTS

A. Grouting:

1. Install grout in accordance with manufacturer's written instructions.
2. Follow manufacturer's recommendations for minimum cure time prior to grouting.
3. Remove spacers and debris in grout joints; remove dust/dirt off tile faces using a wet sponge. Do not leave water standing in joints.
4. Spread using a sharp edged, firm rubber grout float; work grout diagonally across joints, packing them full.
5. Cut excess grout of the tile surface using the edge of the float held at a 90degree like a squeegee stroking diagonally to avoid pulling grout out of filled joints.
6. Initial cleaning of the remaining film/haze can begin approximately at the manufacturer's specified time after grouting (wait slightly longer at colder temperatures).

a. Dip a clean sponge into the bucket and then wring out cleaning solution until sponge is damp.
b. Wipe grout joints and tile surface in a light circular motion, loosening grout residue while keeping the joints smooth and full.
c. Drag a clean sponge diagonally over the scrubbed surfaces to remove any remaining grout residue.
d. Rinse sponge frequently and change wash water at least every 50 s.f.
e. Discard sponges as they become "gummy" with residue.
f. Check work as you clean. If necessary, repair any low spots with additional grout.

7. Final Cleaning

a. Allow cleaned areas to dry as with initial cleaning and inspect tile/stone surface.
b. Begin final cleaning when grout joints are hard to the touch, depending upon the size of the grout joint and the ambient temperature.

c. Use only clean water and simply dunk the white nylon scrub or scouring pad in the water and let all the water pour out – it should be nearly dry and then start to break up the grout haze left from the initial wash on the surface of the tiles.
d. Rinse scrub pad frequently, letting all water escape before continuing to clean.
e. Then, use a clean cloth to the scrubbed surfaces to remove any residue.
f. Allow cleaned areas to dry and inspect tile/stone surface.
    1) Make certain to check tile surface with adequate lighting after the tile surface is dry.
    2) Continue cleaning until all film/haze has been removed.
g. Inspect grout joint for pinholes/voids and repair them with freshly mixed grout.

8. Cautions:
    a. Do not use undiluted white vinegar on polished marble or limestone unless a test spot in an inconspicuous area indicates no change in finish appearance;
    b. Do not use acid cleaners on epoxy grout less than 7 days old.

B. Expansion and Control Joints:

1. Provide control joints (CJ), expansion joints (EJ) and transition joints as located in contract drawings and in full conformity, especially in width and depth, with architectural details and to include the following locations, but not limited to:
    a. Wall penetrations
    b. Edges of tile abutting dissimilar materials.
    c. Floor penetrations.
    d. Inside horizontal and vertical corners

2. Installation shall incorporate the following:
    a. Substrate joints must carry through, full width, through the tile & stone material.
    b. Install expansion joints in tile or stone over construction/cold joints or control joints in substrates.
    c. Install expansion joints where tile or stone abut restraining surfaces (such as perimeter walls, curbs, columns), changes in plane and corners.
    d. Joint width and spacing depends on application - follow TCNA "Handbook for Ceramic Tile Installation" Detail "EJ-171 Expansion Joints" and refer to grout assembly schedule.
        1) Joint width: ≥ ⅛" and ≤ 1".
        2) Joint width: depth ~2:1 but joint depth must be ≥ ⅛" (3mm) and ≤ ½".
    e. Layout (field defined by joints):
        1) 1:1 length: width is optimum but must be ≤ 2:1.
        2) Remove all contaminants and foreign material from joint spaces/surfaces, such as dirt, dust, oil, water, frost, setting/grouting materials, sealers and old sealant/backer.
        3) Use Laticrete Latasil™ 9118 Primer for underwater and permanent wet area applications, or for porous stone (e.g. limestone, sandstone etc…) installations.
        4) Install appropriate Backing Material (e.g. closed cell backer rod) based on expansion joint design and as specified in Section 07 92 00.

5) Apply masking tape to face of tile, brick or stone veneer.
6) Use caulking gun, or other applicator, to completely fill joints with sealant.
    a) Within 5-10 minutes of filling joint, 'tool' sealant surface to a smooth finish.
    b) Remove masking tape immediately after tooling joint.
    c) Wipe smears or excess sealant off the face of non-glazed tile, stone or other absorptive surfaces immediately.
7) Floor and wall grout joints shall align from floor to wall when same sizes are used.
8) Use spacers of width specified to set tile and maintain proper grout width.
9) Tool joints to be uniform and within tile edges, remove all grout from face of tile and at inside and outside corners.
10) Tool grout so surface of grout is even with tapered edge of tile.

3.6 INSTALLATION – SEALERS AND SLIP PROTECTION

A. Seal all grout with product as herein specified.

B. Install sealer in accordance with manufacturers.

1. After tile has been grouted, ensure that all grout residues is removed from the surface of the tile with a clean sponge and approved cleaner as herein specified and approved by tile manufacturer.
2. Clean surface to ensure that tile is free of lime and water spots in addition to oil, grease, etc.
3. Allow grout to dry for a minimum of 24 hours.
4. Once tile area has been cleaned and dried, proceed with the sealing of the grout and tile with a sealer as herein specified and approved by tile manufacturer and with manufacturer's approved applicators.
5. Install sealer per manufacturer's coverage chart.
6. Install sealer at minimum room temperature of 65ºF.
7. Wipe off excess sealer with a clean towel prior to drying.
8. Allow sealer to dry 60 minutes prior to foot traffic being allowed on the treated surface.

3.7 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.8 FLOOD TESTING

A. Refer to Division 1 for testing requirements.

B. Shower Pan, Sauna Floor and Steam room floor assemblies:

1. Description:

a. Consists of damming the shower drain followed by independent introduction of water into the shower to test the shower pan assembly for water leakage according to such Plumbing Code standards.

2. Duration: 24 hour

3.9 CLEANING AND PROTECTION OF INSTALLATION

A. If one has been used, remove grout release and clean tile surfaces so they are free of grout residue and foreign matter, in accordance with manufacturer's instructions. If a grout haze or residue remains, use a suitable grout haze remover or cleaner and contact grout manufacturer for recommendations. Flush surface with clean water before and after cleaning. Do not use harsh hydrochloric, muriatic or sulfuric acid or acid-based cleaners to clean glazed tiles or tiles grouted with latex modified grout.

B. When necessary, acceptable tile cleaning acids or heavy cleaning of grouted with Portland cement grout shall not be done sooner than 10 days after grouting. Tile and grout shall be soaked with water before cleaning. In the absence of a recommendation from the grout manufacturer, acid cleaning may be done with a saturated solution of phosphoric or sulfuric acid, mixed in accordance with manufacturer's recommendations.

C. After cleaning, provide protective covering and maintain conditions to protect tile work from damage or deterioration. Where tiled surfaces will be subject to equipment or wheel traffic or heavy construction traffic, and during move-in of furniture and equipment, cover protective covering with ¼" hardboard, plywood, or similar material.

D. Leave finished installation clean and free of cracked, chipped, broken, unbonded, and otherwise defective tile work.

E. Consult most current manufacturers "Care & Maintenance" for information on post installation cleanup and routine maintenance.

F. Keep floors installed with epoxy adhesive closed to foot traffic for 24 hours @ 70ºF, and to heavy traffic for 48 hours @ 70ºF unless instructed differently by manufacturer. Use kneeling boards, or equivalent, to walk/work on newly tiled floors. Cure tile work in swimming pools, fountains and other continuous immersion applications for 10 days @ 70ºF for epoxy grout and 14 days @ 70ºF for latex Portland Cement based grout before flood testing or filling installation with water. Extend period of protection of tile work at lower temperatures, below 60ºF, and at high relative humidity (>70% RH) due to retarded set times of mortar/adhesives. Replace or restore work of other trades damaged or soiled by work under this section.

G. Protect Crack Protection / Thin-set Waterproofing Membrane Assembly during construction prior to installation of tile.

3.10 MAINTENANCE

A. Product shall be installed, cleaned, and sealed as herein specified and in accordance with each specific flooring manufacturers recommendations to maintain the following of their installed product, but not limited to:

1. Slip Resistance
2. Published (ADA approved) Slip Resistance Coefficient of Friction
3. Warrantee requirements

B. Product shall be maintained by **Owner** after occupancy to maintain the Slip Resistance and coefficient of friction rating.

C. Refer also to PROTECTION AND CLEAN UP heading.

3.11 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition, so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the Architect after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 09 30 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 09 51 00 – ACOUSTICAL CEILING SUSPENSION SYSTEM AND TILE

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Suspended metal tee-bar grid system complete with wall trim, hanger wire, fasteners, seismic clips, compression posts, etc. and as specified and detailed.
2. Acoustical ceiling tile panels.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction:

a. All occupancy types.

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society for Testing and Materials (ASTM)

1.	ASTM C423	Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
2.	ASTM C635	Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings
3.	ASTM C636	Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels
4.	ASTM E84	Surface Burning Characteristics Classification.
5.	ASTM E119	Fire Tests of Building Construction and Materials.

E. Ceilings & Interior Systems Construction Association, www.CISCA.org

F. International Code Council, ICC

1. ICC-ES Evaluation Reports

G. Underwriters Laboratory (UL)

1. Fire Resistance Directory, Acoustical Materials (BYIT)

H. Ceilings & Interior Systems Construction Association (CISCA)

1. Ceiling Systems Installation Handbook, most current edition

I. Abbreviations:

1. AC: Articulation Class.
2. CAC: Ceiling Attenuation Class.
3. LR: Light Reflectance Coefficient.
4. NRC: Noise Reduction Coefficient.
5. HRC: Recycled Content
6. Recycled Content: Average percentage based on weight of component materials. Material recovered or diverted from the solid waste stream, either during the manufacturing process (pre-consumer) or after consumer use (post-consumer).

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:
1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Tee Bar Grid Assembly	Evaluation Report for construction	Comply	• ICC Evaluation Service, ICC-ES Evaluation Report, ESR-1308 • ASCE7 -05 to ASCE7-10 Seismic Technical Guide
	Grid Flame Spread	Class I, 25 or less	UL
	Main TEE load capacity	16 lbs./lf.	ASTM C635, CBC, ASCE/SEI 7 and CISCA Guidelines
	Cross TEE load capacity		TEE Bar grid mfgr.
	System Installation	Comply	CISCA Handbook and ASTM C636 Building code, Section 808
Compression Posts	Spacing	12'-0" x 12'-0" spacing	CBC Sect. 803.9, ASTM C-635 & 636 ESR-1222 DONN/USG
	Out of Plumb	1 horizontal x 6 vertical max	
	Slenderness Ratio	(kl/R) 200 or less	
	Attachment to main runner	Attach within 2" of cross member	
	Framing	Approved EMT	Suspension mfgr's assembly
		Stud framed posts	Refer to drawings

Assembly Seismic Rating	Design category	Heavy Duty Design Category D	Building Code chapter 16, ASCE7-05, CISCA, ASTM C-635, Structural drawings
	Earthquake Loads	Comply	Building Code, ASCE7-05, CISCA, ASTM C-635
Wires	Splayed wires angle	45 degrees max and taut	ASTM C-635 & 636
	Gauge	12 Ga.	
	Diagonal wire - Attachment turns	4 tight turns over a distance of 1.5" max	CBC Sect. 803.9, ASTM C-635 & 636
	Vertical wire - Attachment turns	3 tight turns over a distance of 1.5" max	
Seismic Clips	Seismic assembly and compliance	Comply	CBC and mfgr's design and product requirements
Attachment lag screws	Type	I type Lag Screws	ICC ER-5397 & Building code Section 808
Light fixtures	Hanging requirements	Min. 12ga. hanger wires must be attached to the supporting Cross Tee within 3" of the each corner of the fixture	CBC, ASCE/SEI 7 and CISCA Guidelines
Lay-In Panels	Sag Resistant	Comply for 30 years	ASTM C367
	Mold Growth	No growth for 30 years	
	Fire Rating	25 or less	ASTM E84
	Smoke Developed	Index 50	
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Catalog cuts or standard drawings showing details of system with project conditions clearly identified and manufacturer's recommended installation instructions.
2. Reflected ceiling plans:

a. Contractors shall submit a layout arrangement of ceiling design, dimensions and locations of related integrated lighting and air distribution components.

3. Installation drawings:
    a. Detail complete installation including suspension system, installation of related lighting and air distribution components, access requirements, sound absorption requirements, and fire rating requirements when applicable.
4. Compression posts assembly, compliance guidelines and details for assembly and attachment.

E. Submit samples.

1. (6) 6”x6” sample of each color and finish of all exposed materials.
2. (6) pieces of each type of Grid x 12” long
3. (6) Angle moldings pieces x 12” long
4. (6) Seismic clips

F. Certification and Test Reports:

1. UL Acoustical Compliance:
    a. For acoustical performance, each carton of material must carry Underwriters Laboratories certification for AC (if applicable), CAC and NRC.
2. UL Suspension System Load Compliance:
    a. Manufacturer must certify that the metal suspension system is UL Classified to be load compliant per ASTM C635. For load compliance, each carton of main tees must carry Underwriters Laboratories certification for load compliance.
3. Test reports: Manufacturer will provide test certification for minimum requirements as tested in accordance with applicable industry standards and/or to meet performance standards specified by various agencies.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for five (5) years providing / installing / finishing similar size projects and complexity.

C. Manufacturer shall have been in business for five (5) years providing / installing / finishing similar size projects and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid.

E. Stipulations:

1. Standard for terminology and performance: Applicable publications by Acoustical and Insulating Materials Association (AIMA), including "Performance Data, Architectural Acoustical Materials".

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. **General Contractor** shall request meeting 5 days in advance of construction. Agenda for meeting shall include, but not limited to:

1. Ceiling mounted fixtures, etc.
2. Ceiling penetrations

3. Sprinkler heads
4. HVAC ducting and grills
5. Compression posts – assembly/construction

G. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the Architect by the manufacturer's representative.

H. Miscellaneous criteria:

1. Changes from system: System performance following any substitution of materials change in assembly design must be certified by the manufacturer.
2. Seismic Bracing: Provide as required by Code and specific herein.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. All materials shall be delivered in their original unopened packages and stored in an enclosed shelter providing protection from damage and exposure to the elements.

C. Storage time of materials at the jobsite should be as short as possible, and environmental conditions should be as near as possible to those specified for occupancy, refer to "Environmental Conditions" heading.

1. Excess humidity during storage can cause expansion of materials and possible warp, sag, or poor fit after installation.
2. Chemical changes in the mat and/or coatings can be aggravated by excess humidity and cause discoloration during storage, even in unopened cartons.
3. Cartons should be removed from pallets and stringers to prevent distortion of material.
4. Long-term (6-12 months) storage under uncontrolled environmental conditions should be avoided.

D. Damaged or deteriorated materials should be removed from the premises.

1. Immediately before installation, to stabilize tile and panels, store them at a location where temperature and humidity conditions duplicate those ambient during installation and anticipated for occupancy.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Installation of acoustical panels shall not begin until building is enclosed, permanent heating and cooling equipment is in operation, and residual moisture from plaster, concrete, or other work as dissipated.

C. Do not use ceiling panels in extreme or continuous high humidity, or areas exposed directly to weather or water.

1. Ceiling panels are sized and designed for use within the standard occupancy range of temperature and humidity, 65-85°F (18-29°C), no more than 70% RH (relative humidity).
2. Humidity can greatly affect product dimensional stability and sag resistance.
3. Sag can become noticeable during periods of high humidity lasting only a few hours.

D. Allow time for dimensional changes in ceiling panels stored at temperature/humidity conditions well outside of those recommended for service.

1. With increases in temperature/humidity, these products expand (up to 1/64 in./ft. (4.3 mm/m) at 85°F (29°C)/90% RH) and may not fit into a fixed grid.
2. Conversely, with decreases, these products will be undersize, but expand to normal when standard ambient conditions return.

E. For some pattern edge details, if perimeter panels must be cut smaller, the cut edge must be field-rabbetted, or the wall angle must be lowered by (1/4") (3/8") (Reveal Depth).

F. Environmental requirements for interior installation:

1. Building shall be enclosed with windows and exterior doors in place and glazed, and roof watertight before installation of ceiling system and related ceiling components.
2. Climatic condition range of 60-85°F (16-29°C) with a max 75% RH.

G. Coordination with other work:

1. Mechanical work: Ductwork above ceiling shall be complete and permanent heating and cooling systems operating to climate conditions prior to installation of ceiling components.
2. Electrical work: Installation of conduit above ceiling shall be complete before installation of ceiling components.
3. Fire protection work: Fire protection lines and/or equipment occurring above ceiling shall be completed and tested before ceiling components are installed.

H. Protection: Protect completed work above ceiling system from damage during installation of ceiling components.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **thirty (30)** year warranty agreeing to repair and/or replace Suspension material that has had an occurrence of 50% or more of Red Rust as defined by ASTM test procedure work and has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner.**

D. Furnish manufacturer's additional **thirty (30)** year warranty agreeing to repair and/or replace lay in panels which show visible sag as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner.**

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Overhead Construction
2. Wall Construction
3. All Recessed/Attached Components, including, but not limited to:
    a. Sprinkler Heads
    b. Lighting – recessed and suspended
    c. Low Voltage Devices
    d. HVAC grills/diffusers
    e. Speakers
    f. Security camera's
    g. Floor or roof structure above
    h. Wall framing and finish
    i. Wall backing
    j. Ceiling framing

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 09 22 16 – Non-Structural Metal Framing
3. Section 09 29 00 – Gypsum Board & Sheathing Substrates

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

1.13 EXTRA MATERIALS

A. Submit as part of project closeout:

1. Provide extra material for each product type, color, finish, etc. in same lot as installed product.
    a. Furnish written certification that extra materials supplied have been inspected and reconfirmed to be the same as those used in the Work.

2. Provide extra material in unopened fully labeled containers.
    a. Do not supply anything less the full carton containers.
    b. Furnish in factory packaged and labeled cartons and identify cartons with Project name.
    c. Deliver materials to project premises just prior to substantial completion, and store at location directed by the **Owner**.
3. Provide the following
    a. 5% of total panels installed for each type

PART 2 **- PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as herein listed and in Drawings:

1. Acoustical Tile & Standard Grid:
    a. DONN/USG Interiors, Inc. www.usg.com
    b. Armstrong www.armstrong.com
    c. Linder, www.linderusa.com
2. Accessories:
    a. Flannery, Inc., www.flannerytrim.com
3. Fasteners:
    a. I-LAG Brand Screws
    b. Approved equivalent that meets ESR report herein listed
4. Reviewed Equivalent by **Architect**.
    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Acoustical Tiles:

1. Schedule:
    a. Type: **CL3** (Refer to Drawings)
        1. Mfgr: Armstrong

2. Type: Layin
3. Material: Wet-formed mineral fiber
4. Edges: Square
5. Model: Calla
6. Color: White
7. Standards:
    1. Fire Rating: No
    2. NRC: 0.85
    3. Light Reflect: 0.84
    4. CAC: 35
    5. R Factor:
        1. 2.9 (BTU units)
        2. 0.445 (WATTS units)
    6. Classifications:
        1. Type IV, Form 2, Pattern E (ASTM E 1264)
8. Item No. 2820
9. Size: 24" x 24" x 1"
10. Features:
    1. Recycled Content: 51% min.
    2. Sag Resistant: HumiGuard®
    3. VOC: Meets CA Dept. of Health Services Standard Practice
    4. Anti-Mold/Mildew: BioBlock® Plus
    5. Scrubs: 10,000 (withstand up to)
11. Warranty: 30 year system
12. Grid Options: 15/16"

B. Suspended Grid Systems:

1. General:
    a. Type:
        1. Restrained system
        2. Direct suspension, supported and braced by connections to overhead structures.
        3. Heavy-duty, meeting requirements Building Code Standards, and as specified.
    b. Components:
        1. Factory fabricated, punched, and otherwise prepared to facilitate rapid installation with minimum Field Work for typical conditions.
        2. Items of like type and size shall be readily interchangeable without modifications.
    c. Grid Runners:
        1. Type: Double-web section type, formed from steel strip in thickness required to meet heavy-duty classification.
    d. Exposed-grid Accessories:

1. Perimeter angles molding, reveals, and other items detailed; roll formed from electro galvanized steel strip to sizes indicated or required for Project conditions, and as accepted.
2. For fixed connection of runner ends to wall angels, 1/8-inch-diameter steel pop rivets, color matched to grid system.
3. Finish exposed components to meet requirements specified for grid system with which used.

e. Panel Hold-Down Clips:

1. Provide for panels less than typical field size, and panels within 20-feet radius of an exterior door.

f. Seismic Clips.

1. Mfgr's building code compliant clips.

2. Schedule:

a. Standards:

1. Fire Rating: None
2. Type: Heavy Duty
3. Recycled Content: Yes (HRC)

b. Finishes:

1. Flat White Standard Painted Metal - Manufacturer's factory finish

c. System:

1. Main TEE:

a. Manufacturer: Armstrong World Industries
b. Model No: 7301WH
c. Size: 15/16" face x 12'-0" long
d. Duty: Heavy
e. Recycled Content: Up to 63%

2. Cross TEE:

a. Manufacturer: Armstrong World Industries

b. Model No:	Length:	Height:	Recycled Content:
1. XL7328WH	2'-0"	1-11/16""	up to 63% total
2. XL7330WH	3'-0"	1-11/16"	up to 63% total
3. XL7340WH	4'-0"	1-11/16"	up to 63% total
4. Face Size:	Match Main Tee		

d. Accessories:

1. Including, but not limited to;

a. Perimeter wall angles & accessories:

1. Wall angle:

a. Mfgr: Armstrong World Industries

b. Type: Hemmed Angle Wall Moldings
c. Horizontal leg: 2″
d. Model: 7808WH

2. Seismic Clip – Main beam

a. Mfgr: Armstrong
b. Model: SJMR15

3. Seismic Clip – 4 way

a. Mfgr: Armstrong
b. Model: SJCG

4. Light Fixture Clip

a. Mfgr: Armstrong
b. Model: LFC

C. Suspension Materials & Fastenings:

1. General:

a. Comply with requirements of building code
b. Comply with standards as herein specified
c. Comply with mfgr's standards

2. Wire:

a. General: ASTM A641, galvanized steel, regular coating soft temper; factory pre-straightened units.
b. Hanger and Safety Wires: 12 gauge.
c. Ceiling and Partition Bracing Wires: 10 gauge

3. Turnbuckles: As required for leveling grid assemblies, of adequate size, electroplated.
4. Fastenings for Accessories:

a. General:

1. Bolts or screws or adequate size, in type appropriate for conditions and materials involved, and made corrosion-resistant materials or coated as accepted.
2. Concealed only, unless otherwise indicated or accepted.

b. I Lag Screws:

1. Mfgr: I-LAG Brand Screws or approved equivalent
2. Model:

1. Wood framing: 150 SD

3. Type: Self Tapping
4. Length: 2-3/4″
5. Material: Galvanized 1018 steel
6. Heat treated: Yes
7. Wire attachment hole: Round
8. Approvals: ICC ESR-5367

D. Miscellaneous Products

1. Perimeter Trim:

a. Steel channel type trim, color keyed to grid system.
b. White color closely keyed to tile color.
c. Required for each installation area, unless otherwise indicated.

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 **- EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Field dimensions must be verified prior to installation.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
2. Except as modified by this Section, install suspension system and acoustical tiles in accordance with manufacturer's instruction.
3. Layout acoustical ceilings to provide symmetrical borders not less than half the size of the tile or panel specified.
4. Install suspension systems and tile so that tile joints are aligned, perpendicular and parallel to room or space in which they are installed as indicated in the drawings. Install tiles with pattern runner in one direction.

5. Install the work of this Section so that completed ceilings will be level within 1/8" in 12 ft. of the ceiling line. Printed instructions; comply with governing regulations, requirements as indicated, and industry standards applicable work.

B. Standard reference:

1. Install ceiling panels and suspension system, including necessary hangers, grillage, splines, and other supporting hardware, in accordance with ASTM C636, CISCA Installation Stds., (UL Design) and any applicable code requirements.

C. Manufacturer's reference:

1. Install ceiling panels in exposed grid systems, supported on all edges, in accordance with manufacturer's current printed recommendations and in compliance with code and agency criteria.

D. Drawing reference:

1. Install ceiling panels in accordance with approved shop drawings and manufacturer's requirements.

E. Installation of Suspension System:

1. 12 ga. (min.) Hanger wires may be used for up to and including 4'-0" x 4'-0" grid spacing. Splices will not be permitted in any hanger wires.
2. Provide hanger wires within 8" of the ends of all main and cross runners or at 1/4 of the length of the end tee, whichever is least at the perimeter of the ceiling area.
3. Provide trapeze or other supplementary support members at obstructions to maintain hanger spacing. Provide addition hangers, struts or braces as required at all ceiling breaks, soffits of discontinuous areas. Hanger wires that are more than 1 in 6 out of plumb are to have counterbraced wires.
4. Ceiling grid members may be attached to not more than 2 adjacent walls.
    a. Ceiling grid members should be at least 1/2 inch free of other walls.
    b. If walls run diagonally to ceiling grid system runners, one end of main and cross runners should be free and a minimum of 1/2 inch clear of wall.
5. At the perimeter of the ceiling area where main or cross runners are not connected to the adjacent wall, provide interconnection between the runners at the free end to prevent lateral spreading. Where the perpendicular distance from the wall to the first parallel runner is 12" or less, this interlock is not required.
6. Provide sets of 4-#12 ga. splayed bracing wires oriented 90 degrees from each other and compression strut at the following spacing, and scope:
    a. Place sets of splay wires with compression strut at a spacing not more than 12 feet by 12 feet on center, and not more than 6 feet from all perimeter walls.
    b. Provide splay wires at the edge of vertical ceiling offsets.
    c. The slope of splayed wires should not exceed 45 degrees from the plane of ceiling and should be taut without causing the ceiling to lift. Splices in bracing wires are not permitted.
7. Fasten hanger wires with not less than 3 tight turns.
    a. Fasten splay wires with 4 tight turns.
    b. Make all tight turns within a distance of 1-1/2 inches.

c. Hanger or bracing wire anchors to the structure should be installed in such a manner that the direction of the work aligns as closely as possible with the direction of the forces acting on the wire.

8. Separate all ceiling hanging and bracing wires at least 6 inches from all unbraced ducts, pipes, conduits, etc.

   a. It is acceptable to attach lightweight items, such as single electrical conduit not exceeding 3/4-inch nominal diameter, to hanger wires using connector acceptable to manufacturer.

9. Attach all light fixtures to the ceiling grid runners (Or to the floor or roof structure above, in the case of pendent fixtures) to resist a horizontal force equal to the weight of the fixtures.
10. Flush or recessed light fixtures and air terminals or services weighing less than 56 pounds may be supported directly on the runners of a heavy duty grid system but, in addition, they must have a minimum of 2 - #12 ga. slack safety wires attached for diagonal corners and anchored to the structure above.

    a. All 4 ft. x 4 ft. light fixtures must have slack safety wires at each corner.

11. All flush or recessed light fixtures and air terminals or services weighing more than 56 pounds must be independently supported by not less than 4 #12 ga. taut wires attached to the structure above regardless of the type of ceiling grid system used.

    a. The 4 taut #12 ga. wires including their attachment to the structure above must be capable of supporting 4 times the weight of the unit.

12. Support surface mounted light fixtures by at least two positive devices which surround the ceiling runner and which are supported from the structure above by a #12 ga. wire.

    a. Spring clips or clamps that connect only to the runner are not acceptable.

13. Support pendant mounted light fixtures directly from the structure above with hanger wires or cables passing through each pendant hanger and capable of supporting 4 times the weight of the fixtures.

F. Installation of Acoustical Tile:

1. All cut edges of tile shall meet the following criteria;

   a. Cut new Tegular edge to match existing at Tegular tile.
   b. Paint edges of exposed cut tile with factory paint to match tile color.

G. Radius Components

1. General

   a. Attach the wall angle to the wall through metal hanger strap to insure a snug fit.

2. Outside Radius Installation

   a. A heat gun is required for outside radius installations.
   b. Attach one end of wall angle to wall with any standard fastener system, including industrial adhesives.

      1. However, if adhesives are used, a mechanical fastener must also be used.

c. Continue to 'walk' down the wall with any standard fastener, every 1 – 3" (depending on the radius) until entire wall angle section is installed.
d. To size length of wall angle, install as instructed above until the radius ends. Take a utility knife and SCORE the wall angle where you want the radius to run. Break the wall angle at the scored lines.

3.5 MAINTENANCE

A. Cleaning: Panels can be cleaned easily with a soft brush, vacuum, or dry chemical sponge.

B. Repainting:

1. Spray a thinned, non-bridging vinyl-acrylic flat wall paint.

a. The type of paint selected and the method of application can alter the acoustical performance and fire ratings of any acoustical product.

2. Clean exposed surface of acoustical ceilings, including trim, edge moldings and suspension member; comply with manufacturer's instructions for cleaning and touch-up of minor finish damage.

a. Remove and replace work, which cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.6 ADJUSTING

A. Adjust any sags or twists, which develop in ceiling systems, and replace any part, which is damaged or faulty.

3.7 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END SECTION 09 51 00

SECTION 06 65 13 – RESILIENT BASE AND ACCESSORIES

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Moldings

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. Aluminum Association (AA), www.aluminum.org

E. American Society for Testing and Materials (ASTM), www.astm.org

1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials
2. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source
3. ASTM E662 - Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials
4. ASTM F710 - Standard Practice for Preparing Concrete to Receive Resilient Flooring
5. ASTM F1861 - Standard Specification for Resilient Wall Base
6. ASTM F386 - Standard Test Method for Thickness of Resilient Flooring Materials Having Flat Surfaces

F. National fire Protection Association (NFPA), www.nfpa.org

1. NFPA 253 - Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Energy Source
2. NFPA 258 - Test Method for Specific Density of Smoke Generated by Solid Materials

3. NFPA 255 - Test Method of Test of Surface Burning Characteristics of Building Materials

G. International Code Council (ICC), www.iccsafe.org

H. National Sanitation Foundation (NSF), www.nsf.org

I. Occupational Safety and Health Administration (OSHA), www.osha.gov

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Installed Moldings	Accessible, change in level	Are accessible	ADA, Section 4.5.2 (Change in Level) & Section 4.5.3 (Carpet-Edge Trim Compliance)
Moldings	Flammability	Class 1, FS = 110 SDD = 870 Fuel Contribution = 55	ASTM E 648
Moldings	Fire Rating	Class 1	ASTM E 648
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Primers
2. Cut sheet of each product type with color selections
3. Adhesive for each product type

E. Submit samples.

1. Of each product type x 6" long

F. Site mock-up, refer to "Mock-Up" heading.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

D. Lead Times**:**

1. **General Contractor** shall coordinate with supplier to verify product lead times during bids and at award of contract, and account for such lead times in their costs and schedules.
2. **General Contractor** shall provide an itemized list of materials which might have or are confirmed to have a lead time problem and what the anticipated lead time is.
3. **General Contractor** shall certify in writing that all materials have acceptable lead times as they relate to availability for sub-contractor and **General Contractor** to meet construction schedule and sequence of construction.

E. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid

F. Stipulations:

1. Products shall be approved for each application

G. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Various heights of finish flooring and compliance with accessibility criteria related to slopes, changes in heights, etc.

2. **General Contractor** shall request meeting 5 days in advance of construction.

H. Miscellaneous criteria:

1. Installation of transition trim, moldings, etc. shall not be installed until shop drawing of layout is reviewed.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **two (2)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship for all moldings.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Substrate
2. Finish Flooring
3. Finish Base

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 03 30 00 – Cast-in-Place Concrete
3. Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious
4. Section 07 26 00 – Concrete Slab Vapor Emission Control Treatment
5. Section 09 30 00 – Tile and Stone
6. Section 09 65 16 – Resilient Sheet Flooring
7. Section 09 65 19 – Resilient Tile Flooring
8. Section 09 68 13 – Carpet Tile

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. Schedule slab vapor emission and PH testing of concrete floors prior to the installation of finish flooring.

1.13 EXTRA MATERIAL

A. Submit as part of project closeout:

1. Provide extra material for each product type, color, finish, etc. in same lot as installed product.

a. Furnish written certification that extra materials supplied have been inspected and reconfirmed to be the same as those used in the Work.

2. Provide extra material in unopened fully labeled containers

a. Do not supply anything less the full carton containers.
b. Furnish in factory packaged and labeled cartons and identify cartons with Project name.
c. Deliver materials to project premises just prior to substantial completion, and store at location directed by the **Owner**.

3. Provide the following (Include paint name, drawing designation, type and sheen)

a. Four (4) 12'-0" lengths of each molding type & color.

1.14 VAPOR EMISSION AND ALKALINITY CONTROL COMPLIANCE

A. Refer to Section 07 26 00 – Concrete Slab Vapor Emission Control Treatment

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as herein listed and in Drawings:

1. Roppe, www.roppe.com
2. Burke Mercer, www.burkemercer.com
3. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Resilient Base: **B1**

1. Product Name: **Pinnacles**, as manufactured by Roppe, www.roppe.com,
2. Material Specification: ASTM F1861 Type TS – rubber, vulcanized thermoset Group 1 – solid, (homogenous) Style A – Straight, Style B – Cove, Style C – Butt-to
3. Material Height: **4"** (101.6 mm)
4. Material Thickness: **1/8"** (3.2 mm) per ASTM F 386
5. Material Length: **48"** sections (1.22 m), 120' (36.58 m)
6. Limited Warranty: 1 year, Manufacturing Only
7. Material & Composition: 100% vulcanized homogenous rubber compound comprised of a premium blend & SBR rubber materials.
8. Color: **150 Dark Grey**
9. Surface Burning: ASTM E84/NFPA 255 Class B
10. Flammability/Critical Radiant Flux: ASTM E648 / NFPA 253 Class 1 (>0.45 Watts per sq. cm.), .082 W/cm2
11. Smoke Density: ASTM E662/NFPA 258 Passes (<450), 157 (flaming) - 197 (non-flaming)
12. Surface Burning: CAN/ULC-S102.2 FSR 50, SDS 175
13. Substrate Preparation: Per ASTM F710 and Roppe Technical Data Sheet

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

B. Installation Acrylic Adhesives:

1. Product Name: WB-600
2. Product Description: Acrylic Wall Base Adhesive
3. Product Usage: For standard, interior wall base installations over porous substrates only.
4. Product Name: AW-510
5. Product Description: Acrylic Wet-Set Adhesive
6. Product Usage: For interior wall base installations that require a more aggressive bond over porous substrates only
7. Product Name: C-630
8. Product Description: Water-Based Contact Adhesive
9. Product Usage: For interior wall base installations that require a more aggressive bond over porous or non-porous substrates.

C. Maintenance Cleaners:

1. Product Name: NC-900

2. Product Description: All-Purpose pH Neutral Cleaner
3. Product Usage: For initial, daily or routine maintenance and spot cleaning.
4. Product Name: PR-930
5. Product Description: Performance Finish Remover
6. Product Usage: For removal of finish that has been accidentally or erroneous applied to material.

PART 3 - **PART 3 - EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

3.5 MAINTENANCE

A. Product shall be installed, cleaned and sealed as herein specified and in accordance with each specific flooring manufacturers recommendations to maintain the following of their installed product, but not limited to;

1. Slip Resistance
2. Slip Resistance Coefficient of Friction of 0.6.
3. Warrantee requirements

B. Product shall be maintained by **Owner** after occupancy to maintain the Slip Resistance and coefficient of friction rating.

C. Refer also to PROTECTION AND CLEAN UP heading.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. The sealant applicator shall certify in writing that the sealant application is in accordance with the sealant manufacturer's recommendations

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 09 65 13

THIS PAGE IS INTENTIONALLY BLANK

SECTION 09 65 16 – RESILIENT SHEET FLOORING

PART 1 - **GENERAL**

1.1 DESCRIPTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the job site.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Linoleum sheet resilient flooring
2. Transition Trims and Accessories
3. Primers, adhesive and cleaners

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society For Testing and Materials (ASTM), www.astm.org

1. ASTM E 1643 - Standard Practice for Installation of Water Vapor Retarders Used in Concrete with Earth or Granular Fill Under Concrete Slabs
2. ASTM F 137 - Standard Test Method for Flexibility of Resilient Flooring Materials
3. ASTM F 710 - Practice for Preparing Concrete Floors and Other Monolithic Floors to Receive Resilient Flooring.
4. ASTM F 970 - Test Method for Static Load Limit.
5. ASTM F 1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
6. ASTM F 2034 - Standard Specification for Linoleum Sheet Flooring, Type 1.

E. National Fire Protection Association (NFPA), www.nfpa.org

1. NFPA 253 - Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Energy Source.
2. NFPA 258 - Test Method for Specific Density of Smoke Generated by Solid Materials.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Flooring	Slip Resistance Coefficient of Friction	0.6 min level to 5%	ASTM D 2047
	Slip Resistance Coefficient of Friction	0.8 min greater than 5%	ASTM D 2047
Movement Joints	Locations	Interior: not to exceed 24'-0" to 36'-0" in each direction over floor. Exterior: not to exceed 8'-0" to 12'-0" in each direction over floor.	TCNA EJ171-07
Floor and Wall Finishes	Interior Surface Finishes	Material shall be smooth, hard, non-absorptive material within boundaries indicated in building code and as revised to be more inclusive as indicated in contract documents.	CBC 1115B.3, Item 6
Concrete substrate	Vapor emission and alkalinity levels	Levels shall be acceptable to specific product manufacturers criteria as herein specified and indicated drawings.	Refer to Section 07 26 00
Linoleum	Standard spec for linoleum	Meets of exceeds	ASTM F 2034, Type 1
	Flexibility	Meets or exceeds	ASTM F 137
	Static load limit	0.002" compression with 250 psi static load	ASTM F 970
	Slip resistance	Meets or exceeds >0.5 for flat surfaces	ASTM D 2047
	Critical Radiant Flux (CRF)	Meets or exceeds Class 1 reqmts.	ASTM E 648, NFPA 253
	Smoke density	<450 smoke developed	ASTM E 662, NFPA 258
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Section 01 81 00 – Project Sustainability Requirements
2. Refer to Part 2 herein.

1.4 SUBMITTALS

A. Refer to Section 01 33 00 – Submittal Procedures

B. Submit O&M (Operation and Maintenance) manuals in accordance with Section 01700 – Record Documents and Project Closeout, and as herein specified.

C. Refer to Section 01 81 13 – Project Sustainability Requirements

D. Submit Manufacturer's data and shop drawings.

1. Components:

a. Submit cutsheet for each product

1) Flooring
2) Base
3) Primer
4) Adhesive
5) Adhesive cleaner

2. Maintenance Instructions:

a. Submit manufacturer's recommended maintenance practices for each type of flooring, base and accessory required to be included in maintenance manuals.

3. Product Data:

a. Submit manufacturer's technical information including application instructions for primers, adhesives, sealants, floor finishing compounds, and leveling compounds for all materials.

4. Compatibility:

a. Submit letter from each manufacturer that the material adhesive and moisture vapor emission membrane system are compatible with each other and compatible with floor curing compound, cure & seal compound and floor sealer/coating.

E. Submit samples.

1. Submit the following samples of each type, color and pattern of resilient flooring and flooring accessory required, showing full-range of color and pattern variations.

a. 12-inch long section of each resilient flooring accessory
b. 12-inch long section of base
c. 12-inch long section of all transition trim products

F. Site mock-up, refer to "Mock-Up" heading.

G. Certification:

1. Submit manufacturer's certificate stating that materials furnished comply with specified requirements. Include supporting certified laboratory-testing data indicating that material meets specified test requirements.

1.5 QUALITY ASSURANCE

A. Refer to Section 01 45 00 - Quality Control.

B. **Contractor** /Installer/Fabricator shall have been in business for **five (5)** years providing/installing/ finishing projects of similar size and complexity.

C. **Manufacturer** shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid.

E. Stipulations:

1. Shop drawing showing flooring and indicating all transitions shall be reviewed to meet design intent prior to installation proceeding.

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Agenda for meeting shall include, but not limited to:

1. Flooring thicknesses and transition trim types and locations to be installed.
2. **General Contractor** shall request meeting 5 days in advance of construction.

G. Miscellaneous criteria:

1. Installation of transition trim, moldings, etc. shall not be installed until shop drawing of layout is reviewed.

a. Primer shall be applied over existing substrate as needed to fully adhere new material and meet all warranty criteria.
b. Adhesion testing shall be done to confirm compatibility of assembly.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Section 01 66 00 - Product Delivery, Storage and Handling Requirements

B. Deliver materials in good condition to the jobsite in the manufacturer's original unopened containers that bear the name, model, color and brand of the manufacturer, project identification, and shipping and handling instructions.

C. Store materials in a clean, dry, enclosed space off the ground, and protected from the weather and from extremes of heat and cold.

1. Protect adhesives from freezing.
2. Store flooring, adhesives and accessories in the spaces where they will be installed for at least 48 hours before beginning installation.

1.7 JOB CONDITIONS

A. Field verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Maintain a minimum temperature of 70ºF (21ºC) in spaces to receive flooring and base for at least 48 hours prior to installation, during installation, and for not less than 48 hours after installation.

C. Subsequently, maintain minimum temperature of 55ºF (13ºC) in areas where work is completed. Do not install resilient flooring until they are at the same temperature as the space where they are to be installed.

D. Install flooring, base and accessories after other finishing operations, including painting, have been completed. Do not install resilient flooring over concrete slabs until the latter have been cured and are sufficiently dry to achieve bond with adhesive as determined by resilient flooring manufacturer's recommended bond and moisture test.

E. Maintain minimum temperature of 65ºF (18ºC) in spaces to receive vapor emission membrane system for a minimum of 48 hours prior to application. Concrete floors shall be surface dry and free from loose dirt or other contaminating materials including concrete curing compounds.

F. Subfloor Moisture Conditions: Moisture emission rate of not more than 3 lb/100 sq. ft./24 hours (14.6 kg/1000 sq. m./24 hours) when tested by calcium chloride moisture test in compliance with CRI 104, 6.2.1, with subfloor temperatures not less than 55ºF (12.7ºC).

   1. Refer to Section 07 28 00 – Concrete Slab Vapor Emission and Alkalinity control Treatment for additional information.

G. Coordinate schedule and sequence of installation of resilient base and accessories with other flooring and wall finish installations.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Section 01 78 00 – Closeout Submittals

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

   1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner** .

C. Furnish manufacturer's additional warrantees as herein scheduled agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

D. Furnish installing contractors additional warrantees as herein scheduled agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

E. Schedule:

1. Linoleum sheet: 5 year
2. Transition Trim: 5 year

1.10 RELATED WORK / SECTIONS

A. The following is related work including, but not limited to the following:

1. Floor substrate
2. Vapor emissions of substrate
3. Wall finish

B. The following are related sections, including, but not limited to the following:

1. Section 01 83 00 – Project Sustainability Requirements
2. Section 01 74 19 – Construction Waste Management and Disposal/Recycling
3. Section 03 30 00 – Cast in Place Concrete.
4. Section 07 28 00 – Concrete Slab Vapor Emission and Alkalinity Control Treatment
5. Section 09 65 13 – Resilient Base and Accessories

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Comply with Section 01 78 00 – Closeout Submittals.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. **General Contractor** shall coordinate slab vapor emission and PH testing of concrete floors and ensure that concrete treatment within criteria of finish flooring is complete prior to the installation of finish flooring as herein specified.

1.13 EXTRA MATERIAL

A. Submit as part of project closeout:

1. Provide extra material for each product type, color, finish, etc. in same lot as installed product.
2. Provide extra material in unopened fully labeled containers.
3. Provide the following:

a. Furnish five percent (5%) of total installed area/length of each type of flooring, base and accessory from same lot as used in work.

4. Mark containers of material with manufacturer's name, color pattern and label "Extra Stock".

1.14 VAPOR EMISSION AND ALKALINITY CONTROL COMPLIANCE

A. Refer to Section 07 28 00 – Concrete Slab Vapor Emission and Alkalinity Control Treatment

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from manufacturer specified.

B. Acceptable manufacturer/fabricator/installer shall meet the requirements as herein specified and also as indicated in the drawings.

1. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Section 01 25 00 – Substitution & Deviation Procedures and Section 01 33 00 – Submittals, Substitutions and Deviations.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIAL SCHEDULE

A. Single source responsibility, specified items shall be from manufacturer specified.

1. **Linoleum**: **RF3** – See plan document for finish materials and as herein listed:

a. Schedule:

1)	Mfgr:	Forbo Flooring, Inc.
2)	Product:	**Marmoleum**
3)	Sheet Width:	79" (2 meters)
4)	Length:	105' (32 meters)
5)	Gauge:	1/10" (2.5 meters)
6)	Backing:	Jute fabric
7)	Material:	Homogeneous floor covering made from natural ingredients including flax seed oil, rosin binders, wood flour, limestone and dry pigments mixed and then calendared onto a natural jute backing.
8)	Color:	**5249 Stonehenge**
9)	Adhesive:	As approved and recommended by manufacturer
10)	Trim:	**ArmorCove** prefabricated cove backing

2. **Transition Trim/Accessories** - See plan document for finish materials and as herein listed:

a. General:

1) For patching, smoothing, and leveling monolithic subfloors, provide manufacturer's recommended and approved products.
2) Provide transition/reducing strips tapered to meet abutting materials.
3) Provide threshold of thickness and width as shown on the drawings.
4) Provide metal edge strips of width shown on the drawings and of required thickness to protect exposed edges of the flooring. Provide units of maximum available length to minimize the number of joints. Use butt-type metal edge strips for concealed anchorage, or overlap-type metal edge strips for exposed anchorage. Unless otherwise shown, provide strips made of extruded aluminum with a mill finish.

2.3 PRIMERS, SEALERS, AND ADHESIVES

A. Type as recommended by manufacturer for conditions of installation.

B. Schedule:

1. Linoleum sheet resilient flooring: Adhesive as recommended by manufacturer

a. Adhesive: Forbo Sustain 1195, Forbo Sustain 100, Forbo L 885 or Forbo 600

2.4 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect Owner**

B. Type as recommended by manufacturer for conditions of installation.

C. Adhesives and fasteners not specifically described but required for a complete and proper installation of resilient flooring, shall be only as recommended by the manufacturer of the material to which it is applied, and shall be subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.
2. Examine substrate prior to installation to determine that surfaces are smooth and free from cracks, holes, ridges, and other defects that might prevent adhesive bond or impair durability or appearance of the flooring material.

3. Inspect subfloors prior to installation to determine that surfaces are free from curing, sealing, parting and hardening compounds; residual adhesives; adhesive removers; and other foreign materials that might prevent adhesive bond.
    a. Visually inspect for evidence of moisture, alkaline salts, carbonation, dusting, mold, or mildew.
4. Concrete Subfloors: Verify that concrete slabs comply with American Society of Testing and Materials (ASTM) F 710 and the following:
    a. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials whose presence would interfere with installation of vapor emission membrane system and bonding of adhesive. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by vapor emission membrane system and resilient flooring manufacturer.
    b. Finishes of subfloors comply with tolerances and other requirements specified in Section 03 30 00 - Cast-in-Place Concrete for slabs receiving resilient flooring.
    c. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits of any kind.
        1) Comply with Section 07 28 00 – Concrete Slab Vapor Emission and Alkalinity Control Treatment
5. Perform bond and moisture tests on concrete subfloors to determine if surfaces are sufficiently cured and dry as well as to ascertain presence of curing compounds as recommended by vapor emission membrane system and flooring manufacturer. Provide 1 Calcium Chloride test in every 1,000 sq. ft. area or fraction thereof.
6. Do not proceed with installation until unsatisfactory conditions have been corrected. Proceeding with the work signifies that the **General Contractor** accepts the substrate, surfaces & conditions and any problems related to the substrate shall be repaired to the satisfaction of the **Owner's** Representative without any additional cost to the **Owner.**

C. Work of all other trades, including painting, shall be substantially completed before start of laying flooring and permanent heating system must be in operation.

D. Failure to call attention to defects or imperfections will be construed as acceptance and approval of the subfloor. Installation indicates acceptance of substrates with regard to conditions existing at the time of installation.

3.2 COORDINATION

A. Refer to Section 01 31 13 – Project Coordination.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. General area and each room where resilient flooring is scheduled for installation shall have **ALL** debris, rubbish and waste materials removed before any finish flooring is installed.

C. Immediately Prior to Installation of Resilient Flooring:

1. Provide subflooring surfaces thoroughly dry, broom clean, free of grease, oil, paint, varnish, curing compounds, hardeners, sprinkled cement, dirt, crumbly or scaly surfaces and any foreign matter that will impair adhesion, or show through finish flooring surface if covered over.

D. Subflooring surfaces shall be between 68ºF +/- 5ºF and level with on more than 1/8 inch in 10 feet variation from level.

1. Variation shall not be collective.

a. Fill holes, cracks and all other irregularities in subfloor with patching, leveling compounds before proceeding.

2. Submit resilient floor manufacturers recommended filling, patching and leveling compounds for required subfloor to **Architect's** Review before proceeding with the work.

a. Thickness as required to provide level transition between sheet goods and carpet.

3. Patching and leveling compounds supplied shall be warranted to meet the following requirements.

a. Recommended by manufacturer as the appropriate product that will bond to the surface material for which it is being applied. Bond strength 150 - 200 psi./Meet or exceed compressive strength of 2,500 psi.

4. Steel troweled (slick) finished concrete floors shall be properly roughened to ensure adhesion.
5. All concrete subfloors shall be prepared according to American Society of Testing and Materials (ASTM) F710-82, preparing concrete floors and other monolithic floors to receive resilient flooring.
6. All curing, hardening and breaking compounds must be removed.

E. Remove paint, varnish, oils, release agents, sealers, and waxes. Remove residual adhesives as recommended by the flooring manufacturer. Remove curing and hardening compounds not compatible with the adhesives used, as indicated by a bond test or by the compound manufacturer's recommendations for flooring. Avoid organic solvents.

F. Starting of work shall be construed as acceptance of the condition of the underflooring by Installer.

G. Perform subfloor "Vapor Emission and Alkalinity Testing"/Calcium Chloride Tests (and Bond Tests) as herein specified and described in manufacturer's publications to determine if surfaces are dry; free of curing and hardening compounds, old adhesive, and other coatings; and ready to receive flooring.

1. Refer to and coordinate with Section 03 30 00 – Cast in Place Concrete

H. Vacuum or broom-clean surfaces to be covered immediately before the application of flooring. Make subfloor free from dust, dirt, grease, and all foreign materials.

I. Prime subfloors before installing resilient flooring. Submit manufacturer's complete catalog and/or brochure for each type of subfloor primer to be used.

3.4 INSTALLATION

A. General:

1. Install materials in strict compliance with detailed instructions issued by manufacturer of material, considering the use of "should" as indicating mandatory requirements. Work of all other trades, including painting, shall be substantially completed before start of laying flooring and permanent heating system must be in operation.
2. Install materials in compliance with;

    a. RFCI, “Recommended Work Procedures for Resilient Floor Coverings.”

3. Where different colored materials occur in adjoining rooms or spaces, make color change on a line centering, under door when closed, unless indicated/noted otherwise.
4. Lay materials true to line, level, and with tight joints. Cut materials to and around permanent fixtures, equipment and bases.
5. Maintain reference markers, holes, or openings that are in place or plainly marked for future cutting by repeating on finish flooring as marked on subfloor. Use chalk or other non-permanent marking device.
6. Coordinate installation to maintain pattern and colors indicated in the drawings and schedules.

B. Areas to be Covered: For spaces schedule to receive flooring, include closets and similar openings, toe spaces, door reveals, alcoves or recesses opening off these spaces. Covering required under permanently built-in furniture.

C. Linoleum Sheet Resilient Flooring:

1. Install with adhesives, assuring solid contact with subflooring and producing smooth, even finished surfaces with tightly jointed, accurately aligned manner, all in accordance with installation directions.
2. Seal joints around pipes and other vertical surfaces with adhesive.
3. Flooring shall be free from blisters, cracks, protruding particles, embedded foreign materials or other physical defects affecting its appearance or serviceability, and accurately cut with straight edges, corners.

D. Edging Strips: Except where thresholds are noted, where covered by rubber base, provide adhesive applied edging reducer strips at all exposed resilient flooring edges. Where flooring terminates at door opening, center strip under door when door is in a closed position, U.N.O.

E. Rubber/Resilient Base:

1. Adhesive:

    a. Use extreme care not to spread adhesive above top of base.
    b. Base material shorter than 48" in length shall not be used unless wall length from corner to corner is less.
    c. Do not install base until backing material is thoroughly dry.

d. Where voids are found to exist at top of base because of wall irregularities, fill neatly flush to top of base.
e. Install base so as to obtain full adhesion to the backing over 100% of base contact surface.

2. Where rubber base or resilient is scheduled, provide around entire perimeter or space, including casework, pilasters, or other projections.
3. Apply top set wall base to walls, columns, casework, and other permanent fixtures in areas where top-set base is required. Install base in lengths as long as practical, with inside corners fabricated from base materials that are mitered coped. Tightly bond base to vertical substrate with continuous contact at horizontal and vertical surfaces.

   a. Install inside and exterior corners before installing straight pieces.
   b. On irregular substrates, fill voids along top edge of resilient wall base with manufacturer's recommended adhesive filler material.
   c. Place resilient accessories so that they are butted to adjacent materials of type indicated and bond to substrates with adhesive.
   d. Cut base into accurate lengths to minimize the number of joints/seams and double cut ends. Install butt joint ends tightly so that joint width is not greater than 1/64.
   e. Scribe base accurately at adjacent materials. Press firmly into adhesive and downward so that bottom edge follows floor profile. Do not cause top edge or seam to gap or pull away from the wall.
   f. Miter internal corners. Backcut running base and form exterior corners. Install preformed end stops at exposed ends of base. Edges, seams and surface of base and corners shall conform to wall, adjacent base and flooring without gaps.

4. Fill voids with plastic filler along the top edge of the resilient wall base or integral cove cap on masonry surfaces or on similar irregular substrates.

3.5 INSTALLATION OF ACCESSORIES

A. Place edge strips/transition trims tightly butted to flooring, and secure with adhesive recommended by the edge strip manufacturer.

   1. Install edge strips at edges of flooring that would otherwise be exposed.

B. Apply metal edge strips where shown on the drawings and as specified.

   1. Section units to the substrate, complying with the edge strip manufacturer's recommendations.

3.6 ADJUSTING, CLEANING AND FINISHING

A. Cleaning: After flooring and base materials have set sufficiently to become seated, that welded seams have cured, wash with neutral cleaner to remove excess mastic/adhesive. Leave floor clean, free of debris, waste & defects.

B. When work of all trades is 100% complete, replace damaged flooring/base material with new. Immediately prior to final inspection (not sooner than 5 days following installation), have floor thoroughly cleaned with neutral cleaner, dried and apply finishing material in accordance with

manufacturer's recommendations. Polish thoroughly. Delay cleaning and finishing until just prior to occupancy by **Owner**.

C. Clean floor substrate with manufacturers recommended material.

D. Polish floor with manufacturers recommended products and quantity of coats for "High Traffic" areas.

E. Apply sealer to flooring in accordance with manufacturers recommendations.

F. Polish base with manufacturers approved liquid emulsion polish in accordance with manufacturer's written instructions.

3.7 PROTECTION AND CLEAN UP

A. Refer to Section 01 74 00 – Protection and Cleaning.

B. Keep areas of work and building free from accumulated debris, rubbish and waste materials.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or VOC compliant solvent as necessary, avoiding damage to other materials.
2. Remove masking tape after tooling joints, leaving finished work in neat and clean condition.
3. Clean-up and leave premise broom clean. Clean adjoining work spotted or otherwise defaced by work of this Section.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Section 01 78 00 – Closeout Submittals.

H. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 09 65 16

THIS PAGE IS INTENTIONALLY BLANK

SECTION 09 65 19 – RESILIENT TILE FLOORING

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Resilient Solid Vinyl Tile material and installation
2. Adhesives

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society For Testing and Materials (ASTM), www.astm.org

1.	ASTM E 648	Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source
2.	ASTM E 662	Standard Test Method for Specific Optical Density of 450 Smoke Generated by Solid Materials
3.	ASTM F 1700	Standard Specification for Solid Vinyl Tile
4.	ASTM F 1869	Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
5.	ASTM F 2170	Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using In-situ Probes

E. Refer to standards herein listed with specific products/materials.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.

2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Vinyl material surface	Class III, Type B – Embossed Surface.	Comply	ASTM F 1700
Vinyl material	resistance to heat and resistance to light	resistance to heat and resistance to light	ASTM F 1700
Vinyl tile	Installation procedures	Comply	Armstrong Guaranteed Installation System", F-5061.
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing:**

Item	**Name of Test**	**Performance Results**	**Testing Std.**
Final Substrate as provided by **General Contractor**	Moisture – Vapor Emissions level (MVER)	MVER shall not exceed 7 lbs./1000 sq. ft./24 hrs.	• Section 07 28 00 – Concrete Slab Vapor Emission And Alkalinity Control Treatment • ASTM F 1869,"Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride"
Final Substrate as provided by **General Contractor**	Relative humidity	Relative humidity shall not exceed 90%.	• Section 07 28 00 – Concrete Slab Vapor Emission And Alkalinity Control Treatment • ASTM F 2170, "Standard Test Method for Determining Relative Humidity in Concrete

			Slabs Using *in-situ* Probes"
Final Substrate as provided by **General Contractor**	Bond strength	Comply	• Section 07 28 00 – Concrete Slab Vapor Emission And Alkalinity Control Treatment • Bond Tests as described in publication F-5061, "Armstrong Guaranteed Installation System Chloride"
Water Vapor Emissions per mfgr's recommendations and acceptance of existing substrate			

E. **Construction Testing / Inspection by others:**

Item	Name of Test	Performance Results	By Whom
Substrate	Vapor and alkalinity levels	Comply with adhesive used for vinyl tile	Refer to Section 07 28 00 – Concrete Slab Vapor Emission And Alkalinity Control Treatment
Substrate	Moisture – Vapor Emissions level (MVER) and Relative humidity	• MVER shall not exceed 7 lbs./1000 sq. ft./24 hrs. • Relative humidity shall not exceed 90%.	Section 07 28 00 – Concrete Slab Vapor Emission And Alkalinity Control Treatment

F. **Construction Monitoring/Observations by others:**

Item	Name of Test	Performance Results	By Whom
Vinyl Tile	Const. Waste Management	Comply	Refer to Division 1 for construction waste management and disposal/recycling requirements

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Submit shop drawings including, but not limited to;

a. Layout plan with starting points
b. Seaming plan
c. Coving details
d. Manufacturer's technical data, installation and maintenance instructions.

1) Latest edition of "Armstrong Guaranteed Installation System," F-5061 for flooring and accessories.

E. Submit samples.

1. Samples of all colors and finishes indicated in drawings
2. Accessories

F. Certification:

1. Sustainability criteria
2. Manufacturer's certification that the flooring has been tested by an independent laboratory and complies with the required fire tests.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid

E. Stipulations:

1. Installer shall be competent in the installation of Armstrong solid vinyl tile and plank flooring.

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Substrate preparation
b. Substrate treatment for vapor emissions and/or alkalinity control
c. Layout

2. **General Contractor** shall request meeting 5 days in advance of construction.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Store materials in a clean, dry, enclosed space off the ground, and protected from the weather and from extremes of heat and cold. Protect adhesives from freezing. Store flooring, adhesives and accessories in the spaces where they will be installed for at least 48 hours before beginning installation.

C. Maintain a minimum temperature in the spaces to receive the flooring and accessories of least 48 hours before, during, and for not less than 48 hours after installation. At;

1. 65ºF (18ºC) minimum
2. 100ºF (38ºC)] maximum temperature
    a. 85ºF (29ºC) for Epoxy Adhesive
3. Thereafter the 48 hours after installation, maintain a minimum temperature of 55ºF (13ºC) in areas where work is completed.
    a. Protect all materials from the direct flow of heat from hot-air registers, radiators, or other heating fixtures and appliances.

D. Install flooring and accessories after the other finishing operations, including painting, have been completed. Close spaces to traffic during the installation of the flooring. Do not install flooring over concrete slabs until they are sufficiently dry to achieve a bond with the adhesive, in accordance with the manufacturer's recommended bond and moisture tests.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **fifteen (15)** year written commercial warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Floor slab
2. Raised deck floor slabs
3. Vapor emissions and alkalinity control treatment

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 03 00 51 – Concrete Cleaning
3. Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious
4. Section 03 30 00 – Cast-In-Place Concrete
5. Section 07 28 00 – Concrete Slab Vapor Emission and Alkalinity Control Treatment
6. Section 09 65 13 – Resilient Base and Accessories

C. Related Documents include, but are not limited to the following:

1. Division 1 - Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. **General Contractor** shall coordinate slab vapor emission and PH testing of concrete floors and ensure that concrete treatment within criteria of finish flooring is complete prior to the installation of finish flooring as herein specified.

1.13 EXTRA MATERIAL

A. Submit as part of project closeout:

1. Provide extra material for each product type, color, finish, etc. in same lot as installed product.

a. Furnish written certification that extra materials supplied have been inspected and reconfirmed to be the same as those used in the Work.

2. Provide extra material in unopened fully labeled containers.

a. Do not supply anything less the full carton containers.
b. Furnish in factory packaged and labeled cartons and identify cartons with Project name.
c. Deliver materials to project premises just prior to substantial completion, and store at location directed by the **Owner**.

3. Provide the following

    a. 5% of tile installed
    b. Enough of adhesive to install a minimum of 5% additional tiles

1.14 VAPOR EMISSION AND ALKALINITY CONTROL COMPLIANCE

A. Refer to Section 07 28 00 – Concrete Slab Vapor Emission and Alkalinity Control Treatment

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as listed herein and in Drawings:

1. Armstrong World Industries, www.armstrong.com/commflooringna
2. Reviewed Equivalent by **Architect**.

    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. Luxury Vinyl Tile: **RF1**

B. Tile:

1. Mfgr: CityWide LVT
2. Series: No pad
3. Color: **CW 12001 Wilshire Boulevard**, or as selected by **Architect**

    a. Refer also to drawings Finish Schedule for additional information

4. Thickness: 0.0787 in. (2.0 mm) gauge nominal total thickness
5. Size:

    a. 7 in. x 48 in.
    b. Refer to drawings, Finish Schedule

6. Composition:

a. Tough, clear, unfilled, polyurethane-coated, 12 mil thick wear layer composed of polyvinyl chloride resins, plasticizers, stabilizers, and processing aids over a printed film on an intermediate layer over a filled vinyl backing.

1) Flooring shall meet composition, size, thickness, squareness, flexibility, residual indentation, resistance to chemicals, resistance to heat and resistance to light requirements of ASTM F 1700, "Standard Specification for Solid Vinyl Tile," Class III, Type B – Embossed Surface.

C. Base:

1. Refer to Section 09 65 13 – Resilient Base & Accessories

D. Adhesive:

1. Mfgr: Metroflor
2. Products: **Prevail 6000 adhesive**

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

B. Accessories:

1. For patching, smoothing, and leveling monolithic subfloors (concrete, terrazzo, quarry tile, ceramic tile, and certain metals), provide;
2. For sealing joints between the top of wall base or integral cove cap and irregular wall surfaces such as masonry, provide plastic filler applied according to the manufacturer's recommendations.
3. Provide transition/reducing strips tapered to meet abutting materials.
4. Provide threshold of thickness and width as shown on the drawings.
5. Provide resilient edge strips of width shown on the drawings, of equal gauge to the flooring, homogeneous vinyl or rubber composition, tapered or bullnose edge, with color to match or contrast with the flooring, or as selected by the **Architect** from standard colors available.
6. Provide metal edge strips of width shown on the drawings and of required thickness to protect exposed edges of the flooring.

a. Provide units of maximum available length to minimize the number of joints.
b. Use butt-type metal edge strips for concealed anchorage, or overlap-type metal edge strips for exposed anchorage.
c. Unless otherwise shown, provide strips made of extruded aluminum with a mill finish.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Field measure and examine substrates, supports, and other conditions under which work is to be performed.

B. Examine subfloors prior to installation to determine that surfaces are smooth and free from cracks, holes, ridges, and other defects that might prevent adhesive bond or impair durability or appearance of the flooring material.

C. Inspect subfloors prior to installation to determine that surfaces are free from curing, sealing, parting and hardening compounds; residual adhesives; adhesive removers; and other foreign materials that might prevent adhesive bond.

   1. Visually inspect for evidence of moisture, alkaline salts, carbonation, dusting, mold, or mildew.

D. Report conditions contrary to contract requirements that would prevent a proper installation.

   1. Do not proceed with the installation until unsatisfactory conditions have been corrected.

E. Failure to call attention to defects or imperfections will be construed as acceptance and approval of the subfloor.

   1. Installation indicates acceptance of substrates with regard to conditions existing at the time of installation

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Smooth concrete surfaces, removing rough areas, projections, ridges, and bumps, and filling low spots, control or construction joints, and other defects with filler as herein specified and as recommended by the flooring manufacturer.

C. Remove paint, varnish, oils, release agents, sealers, and waxes.

   1. Remove residual adhesives as recommended by the flooring manufacturer.
   2. Remove curing and hardening compounds not compatible with the adhesives used, as indicated by a bond test or by the compound manufacturer's recommendations for flooring.
   3. Avoid organic solvents.

D. Moisture – Vapor emissions and alkalinity testing and remedial treatment shall be performed and treated by others in accordance with Section 07 28 00 – Concrete Slab Vapor Emission And Alkalinity Control Treatment

   1. Perform subfloor moisture testing in accordance with herein listed standards to floor substrate as provided for final installation of flooring to determine if substrate is acceptable.

2. Perform subfloor humidity testing in accordance with herein listed standards to floor substrate as provided for final installation of flooring to determine if substrate is acceptable.
3. Perform subfloor bond strength testing in accordance with herein listed standards to floor substrate as provided for final installation of flooring to determine if substrate is acceptable.
    a. Determine if surfaces are dry; free of curing and hardening compounds, old adhesive, other coatings and if substrate if treated under separate section is ready to receive flooring
4. Perform subfloor pH tests on concrete floors regardless of their age or grade level.
5. All test results shall be documented and retained.

E. Broom clean and vacuum surfaces to be covered immediately before the application of flooring.

1. Make subfloor free from dust, dirt, grease, and all foreign materials.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer’s recommendations, as herein specified and in accordance with drawings.

B. Flooring:

1. Install flooring in strict accordance with the latest edition of flooring manufacturer’s written instructions.
2. Install flooring wall to wall before the installation of floor-set cabinets, casework, furniture, equipment, movable partitions, etc. Extend flooring into toe spaces, door recesses, closets, and similar openings as shown on the drawings.
3. If required, install flooring on pan-type floor access covers. Maintain continuity of color and pattern within pieces of flooring installed on these covers. Adhere flooring to the subfloor around covers and to covers.
4. Scribe, cut, and fit to permanent fixtures, columns, walls, partitions, pipes, outlets, and built-in furniture and cabinets.
5. Install flooring with adhesives, tools, and procedures in strict accordance with the manufacturer's written instructions. Observe the recommended adhesive trowel notching, open times, and working times.

C. Accessories:

1. Apply top set wall base to walls, columns, casework, and other permanent fixtures in areas where top-set base is required if included under this scope of work.
    a. Install base in lengths as long as practical, with inside corners fabricated from base materials that are mitered or coped.
    b. Tightly bond base to vertical substrate with continuous contact at horizontal and vertical surfaces.
2. Fill voids with plastic filler along the top edge of the resilient wall base or integral cove cap on masonry surfaces or other similar irregular substrates if included under this scope of work..

3. Place resilient edge strips tightly butted to flooring, and secure with adhesive recommended by the edge strip manufacturer. Install edge strips at edges of flooring that would otherwise be exposed if included under this scope of work.
4. Apply butt-type and/or overlap metal edge strips where shown on the drawings,[before and/or after flooring installation.
    a. Secure units to the substrate, complying with the edge strip manufacturer's recommendations.

3.5 MAINTENANCE TREATMENT

A. Perform initial maintenance in accordance with flooring manufacturer’s recommendations.
    1. Refer to Armstrong Guaranteed Installation System," F-5061.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator
    1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer’s specifications.
    2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Protect installed flooring as recommended by the flooring manufacturer against damage from rolling loads, other trades, or the placement of fixtures and furnishings.
    1. See Finishing The Job in "Armstrong Guaranteed Installation System," F-5061.

3.7 TESTING

A. Refer to Testing Heading, Part one of this specification.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.
    1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer’s recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 09 65 19

SECTION 09 68 13 – CARPET TILE

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. **Tile Carpet** and necessary accessories as specified, indicated in drawings and/or or not to complete this section, including but not limited to:

    a. Carpet tiling
    b. Adhesive & tapes
    c. Carpet tiling edge guards, trim, and accessories as indicated and required to provide finished product, transitions to concrete, carpet tile, resilient flooring and comply with applicable codes and acts.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

    a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society For Testing and Materials (ASTM)

E. ASTM

1.	ASTM F 710	Standard Practice for Preparing Concrete to Receive Resilient Flooring
2.	ASTM E 1643	Standard Practice for Selection, Design, Installation and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs
3.	ASTM F 1869	Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
4.	ASTM F 2170	Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using In-situ Probes

F. Carpet tile and Rug Institute (CRI), www.**carpet tile**-**rug**.org

1. California Law for Carpet tile Stewardship, AB 2398

a. Carpet tile America Recovery Effort

G. National Fire Protection Agency (NFPA)

H. Refer to standards herein listed with specific products/materials.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Carpet tile Mfgr's	Carpet tile Stewardship Program	Comply and have a written plan	California Law for Carpet tile Stewardship, AB 2398 Carpet tile America Recovery Effort
Substrate Testing	Moisture Vapor Transmission Rate (MVER)	Comply	Refer to Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment
Substrate Testing	Alkalinity	Comply	Refer to Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment
Substrate Testing	Relative Humidity	Comply	Refer to Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment
Carpet tile Installation	Environment	Temperature: (Outdoor) • Air temperature shall not be less than 65° F and a maximum of 95° F • Substrate temperature	CRI

		shall between 65° F and 85° F	
Carpet tile Installation	Environment	Temperature: (Indoor) Maintain at 50° F or better	CRI
Carpet tile Installation	Carpet tile relaxing	Indoor: Allow carpet tile to relax a minimum of 24 hours at allowable room temperature Outdoor: All carpet tile to relax when air temperature is maintained between 55° F and 95° F	CRI and carpet tile mfgr.
Carpet tile Installation	CRI Carpet tile Installation Standard	Comply	CRI
Carpet tile Installation	Self tacky carpet tile (Carpet tile over substrate)	Comply	CRI and carpet tile mfgr.
Carpet tile Installation	Direct Glue-Down (Carpet tile over substrate)	Comply	CRI and carpet tile mfgr.
Carpet tile Installation	Adhesive application	Comply	CRI and carpet tile mfgr.
Carpet tile	Stability	Dimensional stability within .10%	ISO 2551
	Soil Propensity	Minimum value of 6	AATCC Test Method 123 SMF evaluated by AATCC Method 121
	Static	3.0 kv when tested under the Standard Shuffle Test 70°F – 20% R.H.	
	Flammability	Passes	DOC-FF-1-70 Pill Test
	Smoke Density	Less than 450 flaming mode	NFPA-258 NBS Smoke Chamber
	Smoke rating	Less than 450	CBC Section 804, 804.4.1 ASTM E 84
	Flooring Radiant Panel Test	Meets Criteria	NFPA Class 1 per ASTM E648 glue down
	General	Comply	CBC Section 804.1
	Classification	Comply	CBC Section 804, 804.2 - 804.4.1

		Comply	NFPA 253
	Testing & Certification	Comply	CBC Section 804.3 & NFPA 253
	Requirements	Comply	CBC Section 804.4
	Total VOCs	0.5 mg/m^2/hr	Carpet tile and Rug Institute Green Label Testing Program Standards
	4-Phenylcyclohexene	0.05 mg/m^2/hr	Carpet tile and Rug Institute Green Label Testing Program Standards
	Formaldehyde	0.05 mg/m^2/hr	Carpet tile and Rug Institute Green Label Testing Program Standards
	Styrene	0.4 mg/m^2/hr	Carpet tile and Rug Institute Green Label Testing Program Standards
Carpet tile – Occupancy Group A, B, E, H, I-4, M, R-1, R-2 & S	Classification – Minimum critical radiant flux in exit enclosures, exit passageways and corridors	Class II minimum in non-sprinklered and sprinklered buildings	CBC Section 804, 804.4.1 NFPA 253 ASTM E84 & E648
Adhesives	Total VOCs	10.0 mg/m^2/hr	(CRI) Carpet tile and Rug Institute Green Label Testing Program Standards
	Formaldehyde	0.05 mg/m^2/hr	(CRI) Carpet tile and Rug Institute Green Label Testing Program Standards
	2-Ethyl-1-Hexanol	3.0 mg/m^2/hr	(CRI) Carpet tile and Rug Institute Green Label Testing Program Standards
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing:**

Item	Name of Test	Performance Results	Testing Std.
Water Vapor Emissions per mfgr's recommendations and acceptance of existing substrate			

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturer's data and shop drawings:

1. Manufacturer's certification that carpet tile other than specified items (identified by mill registration numbers) are in compliance with Contract Documents stating quantity and materials used.

2. Manufacturer's specifications and installation instructions.

   a. Building address
   b. Date of drawing
   c. Scale
   d. Floor number and location in building
   e. Compass direction on each sheet
   f. Drawing for each area to be carpeted (color coding is preferable)
   g. Construction of substrate for each area
   h. Required floor preparation, materials and quantities.
   i. Type of installation for each area
   j. Quantities of carpet tile needed for each area, including roll length requirements, pattern repeat, manufacturer installation sequencing and cut list.
   k. Exact notations where dye lot changes occur
   l. Excess material in each area and how it is to be used
   m. Seam layout of each area
   n. Allow tolerance by cutting carpet tile 3-4 inches (75-100 mm) longer than the area measurement
   o. Carpet tile pile direction for each area
   p. Name of manufacturer, style, backing system and color of carpet tile for each area.
   q. Large scale drawings showing treatment of step areas or other detail work
   r. Location and type of expansion joints and edge transitions.
   s. Type of wall base in each area.

3. Product literature for accessories, including but not limited to:

   a. Primers
   b. Adhesive

c. Adhesive cleaner
d. Tape

E. Submit samples:

1. Six (6) 18" x 18" minimum size samples of each carpet tile type

F. Submit Maintenance Manual:

1. Cleaning techniques and care of carpet tile shall be defined in writing.

G. Site mock up, refer to "Field Samples / Mock Up" heading.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

D. Lead Times**:**

1. **General Contractor** shall coordinate with supplier to verify product lead times during bids and at award of contract, and account for such lead times in their costs and schedules.

2. **General Contractor** shall provide an itemized list of materials which might have or are confirmed to have a lead time problem and what the anticipated lead time is.

3. **General Contractor** shall certify in writing that all materials have acceptable lead times as they relate to availability for Subcontractor and **General Contractor** to meet construction schedule and sequence of construction.

E. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Substrate acceptance

1) Vapor emissions and alkalinity levels of substrate

G. Miscellaneous criteria:

1. Do not use sweeping compounds on substrate

a. Primer shall be applied over existing substrate as needed to fully adhere new material and meet all warranty criteria.
b. Adhesion testing shall be done to confirm compatibility of assembly.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver and store products suitable wrapped or packaged to protect against damage. Do not remove protective coverings until time of installation.

1. Protect finish and edges in accordance with panel manufacturer's recommendations.
2. Store material in accordance with panel manufacturer's recommendations.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Do not install materials unless ambient temperature of 70ºF is maintained 24 hours prior to and during laying and until all materials have been stored at site for 24 hours at that temperature.

C. Do not apply materials on wet or damp surfaces.

D. Defer laying until other work that might cause damage to flooring has been completed.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish each carpet tile manufacturer’s additional Lifetime Commercial Limited Warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.
2. Manufacturer will guarantee the long term performance of the product, judged by comparison to an appearance standard, whereby the Manufacturer will replace carpet tiling that does not live up to said standard.
3. Furnish additional warranties as herein listed for each specific carpet tile type.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Floor substrate
2. Floor cleaning
3. Concrete floor Vapor emission and alkalinity testing and treatment
4. Base
5. Other flooring types and materials

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 03 00 51 – Concrete Cleaning
3. Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious
4. Section 03 30 00 – Cast-In-Place Concrete
5. Section 07 28 00 – Concrete Slab Vapor Emission and Alkalinity Control Treatment
6. Section 09 65 13 – Resilient Base and Accessories

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. Coordinate with the slab vapor emission and PH testing of concrete floors prior to the installation of finish flooring.

1.13 EXTRA MATERIAL

A. Submit as part of project closeout:

1. Provide extra material for each product type, color, finish, etc. in same lot as installed product.

a. Furnish written certification that extra materials supplied have been inspected and reconfirmed to be the same as those used in the Work.

2. Provide extra material in unopened fully labeled containers

a. Do not supply anything less the full carton containers of carpet tile
b. Furnish in factory packaged and labeled cartons and identify cartons with Project name.
c. Deliver materials to project premises just prior to substantial completion, and store at location directed by the **Owner**.

3. Provide the following :

a. 5% of installed square yards of each carpet tile type, color & lot number.

1.14 VAPOR EMISSION AND ALKALINITY CONTROL COMPLIANCE

A. Refer to Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable Manufacturers shall be one of the following, and as listed herein and in drawings.

1. Carpet Tile:

a. As herein specified and as noted in documents

2. Reviewed Equivalent by **Architect.**

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. All materials shall be new and of domestic manufacture.

a. Carpet tile is to be of "first" quality and from the same dye lot for each type and color to be installed.
b. No seconds, imperfects or special runs will be accepted.
c. Materials, construction and appearance, are based on the following specifications.

B. Carpet Tile

1. Schedule:

a. Item: **C1** Shaw Habitat Tile 5T390

1) Specifications:

a) Manufacturer: Shaw Contract
b) Collection: Canopy
c) Product Name: Habitat Tile

d) Product Number: 5T390
e) Color/Number: Deep Sky/88485
f) Recycled Content (Certified by independent third party, scientific certification system)

i. Total recycled content: 59%
ii. Total post consumer content: 0 %

g) Construction: Multi-Level Pattern Loop
h) Gauge: 1/12 inch
i) Stitches: 9.0 per inch
j) Finished Pile Thickness: 0.248 inch
k) Face Yarn: Ecosolution Q100™ Nylon
l) Dye System: 100% Solution Dyed
m) Backing Materials:

i. Primary: Synthetic
ii. Secondary: Ecoworx Tile

n) Total Weight: 19 oz/yd^2

o) Size: 9" x 36"

2) Warranties**:** Lifetime Commercial Limited Warranty

C. Accessories:

1. Tape: As approved by carpet tile manufacturer
2. Adhesive: As approved by carpet tile manufacturer and with zero VOCs.

a. Types:

1) Seams
2) Carpet tile body

b. Manufacturer(s): As approved by specific carpet tile manufacturer
c. Product(s): As approved by specific carpet tile manufacturer

3. Miscellaneous Materials: Provide types of adhesives, and other items recommended by carpet tile manufacturer for the conditions of installation and use.
4. Shims:

a. Transition (or approved equal) shim to adjust for pile height difference between carpet tiles to establish flush/level transition.

5. Floor Patching/Leveling Compound

a. Refer to Section 03 00 61 – Concrete Floor Leveling, Patching & Grouting - Cementitious

D. Transition Components

1. At resilient flooring, refer to Section 09 65 13 - Resilient Base & Accessories.
2. At Ceramic Tile, Porcelain and/or Stone - Refer to Section 09 30 00 – Tile and Stone.
3. At carpet tile to carpet tile:

a. Refer to details for transition components
b. Butt carpet tile to carpet tile where transition components not called out and/or specified.
c. Refer to other flooring sections for conditions where carpet tile abuts other flooring materials.
d. Refer to Section 09 65 13 - Resilient Base & Accessories.

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.
3. Vapor emissions and alkalinity levels of substrate shall be acceptable prior to installing carpet tile.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Take all necessary measurements in the field to ensure proper dimensions.

C. Subfloor:

1. Vacuum and wet mop substrate immediately prior to carpet tile installation, and remove all deleterious substances, which could interfere with the installation or be harmful to the work.

a. Repair minor irregularities in subfloor surface.
b. Surface shall be dry prior to installation

2. Sub flooring surfaces shall be smooth and level with no more than 1/8 inch in 10 feet variation from level, fill holes, cracks and all other irregularities in subfloor with patching, leveling compounds before proceeding.

a. All concrete slabs shall be leveled to 1/8" in 10' with applied leveling compound.
b. Do not proceed until unsatisfactory conditions have been corrected.

3. **General Contractor** shall notify **Architect** in writing of any condition deemed adverse to satisfactory carpet tile installation.

a. Starting of installation shall constitute acceptance of substrate surface conditions, and **General Contractor** shall be held responsible to furnish satisfactory carpet tile installation.
b. Any carpet tile work not acceptable shall be replaced at no cost to **Owner**.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
2. Carpet tile shall be laid out and allowed to relax in accordance with CRI standards and carpet tile manufacturer's standards.
3. Seal edges of all carpet tile.
4. Roll all carpet tiles after adhered to substrate.
5. Finish clean along all walls.
6. Use appropriate trowel notch size for installation type, adhesive and carpet tile types.
7. Install tack strips where reviewed acceptable during submittal phase.
8. Install cushion where applicable and in accordance with reviewed submittal.
9. Seam all carpet tile seams in accordance with applicable standards.

B. System of Installation:

1. Carpet tile Tiles:

a. Carpet tile tiles adhered to substrate

1) Direct Glue Down

a) Carpet tile is glued directly to subfloor

C. Carpet tile Edge Strips or Edgings:

1. Provide wherever carpet tiling abuts other types of floors, floor covering & exposed concrete. Install straight and true. Fasten to floors using adhesive and fasteners in accordance with manufacturer's directions. Where carpet tile terminates at door openings, center strips under doors.

D. Transition Components

1. In compliance with flooring & transition manufacturers.

3.5 MAINTENANCE

A. Product shall be installed, cleaned and treated as herein specified and in accordance with each specific flooring manufacturers recommendations to maintain the following of their installed product, but not limited to;

1. Warrantee requirements

B. Refer also to PROTECTION AND CLEAN UP heading.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.

2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. The sealant applicator shall certify in writing that the sealant application is in accordance with the sealant manufacturer's recommendations.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After installation is complete, clean adhesive, dirt, and debris from carpet tile surfaces.

1. Clean spots with approved spot remover.

2. Cleaning techniques and care of carpet tile shall be defined in writing and submitted to the **Architect** for review.

G. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 09 68 13

SECTION 09 90 00 – PAINTING AND COATINGS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, Division 0, and Division 1 requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable extents of work at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Surface preparation, priming and coats of paint specified are in addition to shop priming and surface treatment specified under other Sections of Work.

2. Painting in any room in which finishing work is performed, including painting new surfaces as specified and repainting all existing painted surfaces one coat same as last coat specified for similar new work.

3. Painting of all exposed and semi-exposed surfaces.

4. Painting of all surfaces indicated in Drawings, and as herein specified.

5. Painting the primer for wall finish (in addition to and) after Drywall primer/sealer is installed per Section 09 29 00.

6. Work includes sandblasting of all interior and exterior steel to be painted, refer to Section 04 01 80.

7. Stencil painting for pipe identification.
   a. Refer to Divisions 21 through 28

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

   a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. Leadership in Energy and Environmental Design (LEED), www.usgbc.org/LEED (United States Green Building Council (USGBC)

1. Refer to Division 1 for version of LEED Rating System and Reference Guide applicable to project.

E. Collaborative for High Performance Schools (CHPS), www.chps.net

F. American Society for Testing and Materials:

1. ASTM D523 Standard Test Method for Specular Gloss

G. Gypsum Association (GA)

1. GA-232 Painting New Gypsum Board

H. National Fire Protection Agency (NFPA), www.nfpa.org

1. NFPA 703 - Standard for Fire-Retardant Treated Wood and Fire-Retardant Coatings for Building Materials

I. The Society for Protective Coatings (SSPC), www.sspc.org

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Refer to Division 1 for additional requirements for DSA projects

B. **Standards:**

Item	Name of Test	Performance	Testing Std.
Interior Applied Paints	V.O.C.	Comply with California Criteria and as herein required when more restrictive.	California Air Resources Board (CARB) or local AHJ whichever is more stringent
			South Coast Air Quality Management District Rule 1113
Refer to drawings and as herein specified			

C. **Sustainability:**

2. Refer to Division 1 sustainability requirements.
3. Refer to product criteria identified herein.

1.4 SUBMITTALS AND MOCKUPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Refer to Division 1 for sustainability requirements

C. Submittals:

1. Product & Technical Data
2. MSDS Sheets
3. Manufacturer Installation Instructions

D. Samples:

1. Brush Outs:
   a. On 8 x 12 inch heavy cardstock paper, provide four (4) samples of each color, paint type and sheen.
   b. Samples shall be labeled with paint designation number as indicated in drawings and paint type as herein indicated.
   c. Resubmit each sample as requested until acceptable sheen and color is achieved.
2. Physical Samples of Wood Stain / Penetrating Finish:
   a. Three (3) 2'-0" long sections of each type and species of wood substrate with proposed Stain and Finish Coat, and/or Oil Based Penetrating finish for review and approval prior to field application.

E. Mock-Ups:

1. Erect at location approved by **Architect**.
   a. Size:
      1) Exposed Steel: 4'-0" long section
      2) Gypsum Board: 4'-0" square
   b. Mock-up shall not be part of final construction once approved by **Architect**.
   c. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.

F. O&M Manuals

1. As part of O&M (Operation and Maintenance) manual submittals per Division 1 requirements, provide the following:
   a. Two (2) copies of coating maintenance manual, equivalent to Sherwin Williams' "CUSTODIAN"; maintenance manual shall include the following:
      1) Location of manufacturer's paint store closest to the project site
      2) Area summary with finish schedule
      3) Area detail designating where each product, color and finish was used
      4) Product Data Sheets and MSDS sheets for each product used

5) Color formulations for each color used
6) Cleaning instructions
7) Touch up procedures
8) Color samples of each color and finish used

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **ten (10)** years providing similar size projects and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid.

E. Stipulations:

1. Steel preparation shall comply with SSPC (Steel Structures Painting Council) guidelines and as herein required when more stringent.
2. Provide finish coats which are compatible with prime paints used.
    a. Review other Sections of these Specifications in which prime paints are to be provided to ensure compatibility of total coatings system for various substrates.
3. Number of coats specified herein are minimum; uniform coverage, free from defects or blemishes is required.

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. **General Contractor** shall request meeting **5 days** in advance of construction. Agenda for meeting shall include, but not be limited to;

1. Substrate preparation
2. Colors

G. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

H. Miscellaneous criteria:

1. Upon request from other subcontractors, furnish information on characteristics of finish materials proposed for use, to ensure that compatible prime coats are used.
    a. Provide barrier coats over incompatible primers or remove and re-prime as required.
    b. Notify **Architect** in writing of any anticipated problems using coating systems as specified with substrates primed by others.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver all materials to job site in original, new and unopened packages and containers bearing manufacturer's name and label, and the following information, including but not limited to:

1. Product Information:
    a. Paint type
    b. Manufacturer's name, stock number and date of manufacture
    c. Contents by volume, for major pigment and vehicle constituents (VOC)
    d. Thinning instructions
    e. Application instructions
    f. Manufacturer’s color name and number
2. Designation Information:
    a. Project paint designation, ie: “P1”, “P2”, “P3”, etc.
    b. Sheen type

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, substrates, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Apply water-based paints only when temperature of surfaces to be painted and surrounding air temperatures are between 55ºF and 90ºF unless otherwise permitted by paint manufacturer's printed instructions.

C. Apply VOC compliant solvent-thinned paints only when temperature of surfaces to be painted and surrounding air temperatures are between 45ºF and 95ºF, unless otherwise permitted by paint manufacturer's printed instructions.

D. Do not apply primers, paint and/or stain in rain, fog, and/or mist, when relative humidity exceeds 85%, or to damp or wet surfaces, unless otherwise permitted by paint manufacturer's printed instructions.

E. Painting may be continued during inclement weather only if areas and surfaces to be painted are enclosed and heated within temperature limits specified by paint manufacturer during application and drying periods.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **five (5)** year warranty agreeing to repair and/or replace paint which has failed as a result of defects in materials or workmanship including fading, chipping, rust bleed thru, cracking and chalking.

1. Upon notification of Owner within the warranty period, such defects shall be repaired and replaced at no cost to the Owner.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Wall substrates
2. Floor substrates
3. Component substrates
4. Metal substrates
5. Railings and Assemblies
6. Stairs
7. Coordinate with surfaces which might be finished by and/or shop painted, including but not limited to: **[Specifier review, edit and add to as necessary]**

a. Texturing of gypsum board

b. Interior and/or Exterior Flashing

c. Chimney Flue Caps

d. Railings – Prefinished

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 03 30 00 – Cast in Place Concrete
3. Section 03 47 13 – Tilt-Up Concrete
4. Section 04 01 80 – Masonry Shot & Sandblasting
5. Section 04 22 00 – Concrete Unit Masonry
6. Section 05 12 00 – Structural Steel Framing
7. Section 05 31 00 – Steel Decking
8. Section 05 50 00 – Metal Fabrications
9. Section 05 52 00 – Metal Railings
10. Section 06 10 00 – Rough Carpentry
11. Section 06 18 13 – Glue Laminated Construction
12. Section 06 20 00 – Finish Carpentry
13. Section 06 46 00 – Exterior Wood Trim
14. Section 07 62 00 – Sheet Metal Flashing and Trim
15. Section 07 81 23 – Intumescent Fireproofing
16. Section 09 24 00 – Portland Cement Plaster Assembly
17. Section 09 29 00 – Gypsum Board & Sheathing Substrates
18. Section 09 96 53 – Elastomeric Coatings

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required cleaning of substrates prior to the installation of materials, components, etc.

1.13 EXTRA MATERIAL

A. Submit as part of project closeout:

1. Provide Three (3) 1-gallon containers of extra material in each finish paint type, color, sheet, etc. and in same lot as installed product.
    a. Provide in factory packaged and labeled containers; identify containers with project name, manufacturer's paint system, color name and number, and paint sheen as indicated in documents and in accordance with specifications.
    b. Do not supply anything less the full containers.
    c. For paint that is available only in 5-gallon containers provide one (1) 5-gallon container.
    d. Deliver materials to project premises just prior to substantial completion, and store at location directed by the **Owner**.

1.14 PAINTING EXCLUSIONS AND CLARIFICATIONS **[SPECIFIER, COORDINATE THIS WITH SHOP FINISHED AND/OR SHOP PAINTED ITEMS]**

A. Following categories of work are not included as part of field-applied finish work, or are included in other Sections of these Specifications:
    1. Shop priming: Unless otherwise specified, initial shop priming of metal items is included under various Sections for structural steel, miscellaneous metal items, hollow metal work, and similar items, and for such fabricated components, wood casework, and shop-fabricated or factory-built mechanical and electrical equipment or accessories.
        a. This shop priming shall not replace the final priming required as herein specified.
        b. Shop priming shall be compatible with priming and painting as herein specified.
        c. Steel which will be welded in the field shall be primed and painted after erection and shop priming material shall be compatible with painting products as herein specified.
    2. Pre-finished items: Unless otherwise indicated, do not include painting when factory-finishing or installer-finishing is specified for such items as (but not limited to) toilet partitions, finish hardware, plastic laminate casework, exterior insulation system, carpeting, ceramic tile, louver blinds, knock-down steel or aluminum drywall frames, finished electrical equipment including light fixtures, and finished mechanical equipment.
    3. Concealed surfaces: Unless otherwise indicated, painting is not required on wall or ceiling surfaces in concealed areas and generally inaccessible areas, such as foundation spaces, furred areas, pipe spaces and duct shafts.
        a. Mechanical and Electrical rooms are to be painted.
        b. Back side of all casework shall be painted.
    4. Finished metal surfaces: Metal surfaces of anodized aluminum, stainless steel, chromium plate, copper, bronze and similar finished materials will not require finish painting, unless otherwise indicated.

5. Operating parts and labels: Moving parts of operating units, mechanical and electrical parts, such as valve and damper operators, linkages, sensing devices, motor and fan shafts will not require finish painting unless otherwise indicated.
    a. Do not paint over any code-required labels, such as Underwriter's Laboratories and Factory Mutual, or any equipment identification, performance rating, name, or nomenclature plates.

B. "Paint" as used herein means all coating systems materials, which includes primers, emulsions, enamels, stain, sealers and fillers, and other applied materials whether used as prime, intermediate or finish coats.

C. Paint all exposed surfaces whether or not colors are designated in any "schedule", except where natural finish of material is specifically noted as surface not to be painted.
    1. Where items or surfaces are not specifically mentioned, use paint systems of adjacent similar materials in color/finish selected by **Architect**.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each paint type.

B. Acceptable manufacturers shall be one of the following, as herein listed and in Drawings:
    1. General Paint:
        a. Sherwin Williams, www.sherwinwilliams.com
        b. Dunn Edwards, www.dunnedwards.com
        c. Benjamin Moore, www.benjaminmoore.com
    2. Specialty Touch-up paint for galvanized framing
        a. ZRC Worldwide, www.zrcworldwide.com
    3. Elastomeric Paint: **[Specifier, choose between this and Elastomeric Coating such as Dryvit or Omega per Section 09 96 53. If using Elastomeric Paint noted here, Cement Plaster Section must be adjusted to include the 3rd finish coat within the plaster assembly section.]**
        a. Sherwin Williams, www.sherwinwilliams.com
    4. Exterior Wood – Penetrating Oil Based Finish:
        a. Flood, www.flood.com
    5. Interior Fire Retardant wood paint
        a. Flame Control Coatings, LLC www.flamecontrol.com

6. Anti-Slip paint / coating
    a. Wooster Products, www.wooster-products.com
7. Reviewed Equivalent by **Architect.**
    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

2.2 PRODUCT SCHEDULE - EXTERIOR SURFACES [SPECIFIER, EDIT OUT SUBSTRATES THAT DO NOT APPLY]

A. **General:**

1. Application: Typical for specified type/substrate unless otherwise noted.

B. **Exterior Masonry (Painted)**

1. Substrates: Concrete Masonry Units (CMU) **[Specifier: where standard exterior paint is final finish]**
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	16.0 wet 8.1 dry	<50	ConFlex Block Filler CF01 Series	Smooth BLOCFIL Select SBSL00	UltraSpec Hi-Build Block Filler #571
2nd & 3rd Coats	Finish	Flat Gloss Low Sheen Satin **[Specifier – select desired sheen]**	4.0 wet 1.5 dry	<50	A-100 Exterior Latex A6 Series (Flat) A12 Series (Low Sheen)	Spartashield SSHL10 (Flat) SSHL40 (Low Sheen) SSHL30	Ultra Spec EXT #447 (Flat) #455 (Low Lustre)

					A82 Series (Satin) A8 Series (Gloss)	(Egg Shell) SSHL60 (Gloss)	#448 (Satin) #449 (Gloss)

C. **Exterior Masonry (Elastomeric Paint)**

1. Substrates: Concrete Masonry Units (CMU) **[Specifier: where elastomeric paint is final finish]**
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	16.0 wet 8.8 dry	<50	Loxon Acrylic Block Surfacer LX01 Series	Smooth BLOCFIL Select SBSL00	Ultra Spec Masonry Sealer #608
2nd Coat	Finish	Flat	13.0-16.0 wet 6.0-7.5 dry	<50	ConFlex XL Elastomeric High Build Coating CF11 Series	ENDURA-LASTIC 5 EDLV10	Ultra Spec Elastomeric Waterproof Coating #359
3rd Coat	Finish (Smooth)	Flat	13.0-16.0 wet 6.0-7.5 dry	<50	ConFlex XL Elastomeric High Build Coating CF11 Series	ENDURA-LASTIC 5 EDLV10	Ultra Spec Elastomeric Waterproof Coating #359
3rd Coat	Finish (Smooth, Sand, or Medium, Texture) ***[Specifier, if texture is desired delete smooth 3rd coat as well as the non-***	Flat	20-23 wet 8.8-10.1 dry	<100	ConFlex XL Elastomeric High Build Coating CF12 Series	ENDURA-LASTIC 5 EDLV10	Coronado Texcrete #3194 (Smooth Texture) #3192 (Sand Texture) #3196 (Medium Texture)

	desired textures in this cell]						

D. **Exterior Concrete (Paint)**

1. Substrates:
   a. Cementitious Siding, Paneling and Trim
   b. Tilt-Up Concrete Construction
   c. Pre-Cast Concrete
   d. Cast-in-Place Concrete
2. Application: Typical, u.o.n.
   a. Do not use @ cast-in-place concrete elements including, but not limited to, concrete seat walls
   b. Do not use @ cast-in-place concrete exposed foundation walls and curbs @ b.o. exterior walls unless noted on the drawings
3. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	5.3-8.0 wet 2.1-3.2 dry	<50	Loxon Concrete & Masonry Primer LX02 Series	EFF-STOP Select ESSL00	Ultra Spec High Build Masonry Primer #609
2nd & 3rd Coats	Finish	Flat Gloss Low Sheen Satin **[Specifier – select desired sheen]**	4.0 wet 1.5 dry	<50	A-100 Exterior Latex A6 Series (Flat) A12 Series (Low Sheen) A82 Series (Satin) A8 Series (Gloss)	Spartashield SSHL10 (Flat) SSHL40 (Low Sheen) SSHL30 (Egg Shell) SSHL60 (Gloss)	Ultra Spec EXT #447 (Flat) #455 (Low Lustre) #448 (Satin) #449 (Gloss)

E. **Exterior Concrete / Cementitious Substrates (Elastomeric Paint)** **[Specifier: WP preference is the inclusion of Section 09 96 53 – Elastomeric Coatings rather than the use of Elastomeric Paint as specified herein]**

1. Substrates:
   a. Tilt-Up Concrete Construction
   b. Pre-Cast Concrete
   c. Cast-in-Place Concrete
   d. Cement Plaster (scratch, brown, & finish coat) **[specifier: coordinate with Cement Plaster section 09 24 00 – verify that the 3rd coat/finish coat is included therein]**
2. Application: Typical, u.o.n.
   a. Do not use @ cast-in-place concrete elements including, but not limited to, concrete seat walls
   b. Do not use @ cast-in-place concrete exposed foundation walls and curbs @ b.o. exterior walls unless noted on the drawings
3. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mils)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	8.0 wet 3.2 dry	<50	Loxon Concrete & Masonry Primer LX02 Series	EFF-STOP Select ESSL00	Ultra Spec High Build Masonry Primer #609
2nd Coat	Finish	Flat	13.0 – 16.0 wet 6.0 - 7.5 dry	<50	ConFlex XL Elastomeric High Build Coating CF11 Series	ENDURA-LASTIC 5 EDVL 10	Ultra Spec Elastomeric Waterproof Coating #359
3rd Coat (smooth)	Finish	Flat	13.0 – 16.0 wet 6.0 - 7.5 dry	<50	ConFlex XL Elastomeric High Build Coating CF11 Series	ENDURA-LASTIC 5 EDVL 10	Ultra Spec Elastomeric Waterproof Coating #359
3rd Coat (textured)	Finish (Fine, Medium, Extra Coarse) ***[Specifier,***	Flat	13.0 – 16.0 wet 6.0 - 7.5 dry	<50	ConFlex XL Elastomeric High Build Coating CF12 Series	ENDURA-LASTIC 5 EDVL 10	Coronado Texcrete #3194 (Smooth Texture)

	if texture is desired delete smooth 3rd coat as well as the non-desired textures in this cell]						#3192 (Sand Texture) #3196 (Medium Texture)

F. **Exterior Concrete / Cementitious Substrates (Elastomeric Coating)** **[Specifier: this is for Elastomeric Coating per 09 96 53, i.e. DryVit or Omega finish coats]**

1. Substrates:
   a. Tilt-Up Concrete Construction
   b. Pre-Cast Concrete
   c. Cast-in-Place Concrete
   d. Cement Plaster (scratch & brown) **[specifier: coordinate with Cement Plaster section 09 24 00 – verify that the 3rd coat/finish coat has been deleted in favor of the Dryvit coating within Section 09 96 53 – Elastomeric Coatings]**
2. Refer to Section 09 96 53 – Elastomeric Coatings
3. Application: Typical, u.o.n.
   a. Do not use @ cast-in-place concrete elements including, but not limited to, concrete seat walls
   b. Do not use @ cast-in-place concrete exposed foundation walls and curbs @ b.o. exterior walls unless noted on the drawings

G. **Exterior Ferrous Metal (Non-Exposed Steel)**

1. Substrates: Exterior ferrous and non-galvanized metals, typical u.o.n.
2. Application: Non-exposed conditions, typical u.o.n.
3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	5.0-10.0 wet 1.9-3.8 dry	<50	Pro-Industrial Pro-Cryl	ENDURA-PRIME ENPR00	Ultra Spec HP Acrylic Metal

					Universal Acrylic Primer B66 Series		Primer #HP04
2nd & 3rd Coats	Finish	Semi-Gloss	6.0-12.0 wet 2.2-4.2 dry	<50	Pro-Industrial Acrylic B66 Series	ENDURA-PRIME ENPR00	Ultra Spec HP Acrylic DTM #HP29

H. **Exterior Ferrous Metal (Architectural Features / Exposed Steel)**

1. Substrates: Exterior Architecturally Exposed Structural Steel (AESS) and other exposed exterior ferrous metals.
2. Application: Exposed conditions, typical, u.o.n.
3. Exceptions:
   a. Flashing:
      1) Associated with storefront, curtain wall and/or window wall, Section 08 41 00 shall be provided by storefront / curtain wall manufacturer and have same finish as storefront / curtain wall, U.N.O. **[Specifier, select for storefront conditions]**

   b. Reveals, expansion joints, etc.**[Specifier, include note if reveals/joints are included in Section 09 24 00]**
      1) Finish: **[Specifier, Select which one]**
         a) Manufacturer finish per Section 09 24 00 – Portland Cement Plaster Assembly
         b) Painted per Section 09 90 00 – Painting and Coatings
         c) Painted per Section 09 96 53 – Elastomeric Coatings
4. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	Low Sheen	5.0-10.0 wet 1.8-3.6 dry	<100	ProIndustrial ProCryl Universal Acrylic Primer B66-310	US Coatings EpoxyGrip 2300	Acrylic Metal Primer #HP04
2nd & 3rd Coats	Finish	Semi-Gloss Gloss	4.0-5.0 wet 1.4-1.7 dry	<50	ProIndustrial Waterbased Alkyd Urethane	US Coatings UreGrip 3000 HS VOC	Ultra Spec HP D.T.M. system:

					B53-1150 Series (Semi-Gloss) B53-1050 Series (Gloss)		Semi-Gloss #HP29 Gloss #HP28

Specifier: As an alternate, more robust system you could specify the following in lieu of the system above (more expensive, but more 'bulletproof')

	Application				***Manufacturer's Product***		
	Product Type	***Sheen***	***Dry Film Thickness (mil)***	***VOC Limit (g/L)***	***Sherwin Williams***	***Alternate: Dunn Edwards***	***Alternate: Benjamin Moore***
1st Coat	*Primer*	*Semi-Gloss*	*7.0-13.5 wet 5.0-10.0 dry*	*< 100*	*Macropoxy 646-100 Fast Cure Epoxy*	-	*Corotech 100% Solids Epoxy Pre Primer #V155*
2nd & 3rd Coats	*Finish*	*Semi-Gloss (Part A)*	*3.6-4.8 wet 3.0-4.0 dry*	*< 100*	*Hi-Solids Polyurethane B65 Series*	-	*Corotech Aliphatic Acrylic Urethane #V500*
Hardener	*Finish*	*Gloss (Part B)*	*3.6-4.8 wet 3.0-4.0 dry*	*< 100*	*Hi-Solids Polyurethane Hardener B65 Series*	-	*Corotech Aliphatic Acrylic Urethane V500 Catalyst*

I. **Exterior Galvanized Metal & Aluminum, typical u.o.n.**
   1. Substrates:
      a. Exterior Galvanized Metals, typical u.o.n. (includes reveals and expansion joints unless specifically noted not to be painted)
      b. Aluminum
   2. Application: Typical u.o.n., excluding galvanized handrail and guardrail assemblies
   3. Exceptions:
      a. Flashing:

1) Associated with storefront, curtain wall and/or window wall, Section 08 41 00 shall be provided by storefront / curtain wall manufacturer and have same finish as storefront / curtain wall, U.N.O. **[Specifier, select for storefront conditions]**

b. Reveals, expansion joints, etc.**[Specifier, include note if reveals/joints are included in Section 09 24 00]**

1) Finish: **[Specifier, Select which one]**

a) Manufacturer finish per Section 09 24 00 – Portland Cement Plaster Assembly

b) Painted per Section 09 90 00 – Painting and Coatings

c) Painted per Section 09 96 53 – Elastomeric Coatings

4. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	5.0-10.0 wet 1.9-3.8 dry	<50	Pro-Industrial Pro-Cryl Universal Acrylic Primer B66 Series	ULTRA-SHIELD Galvaninzed Metal Primer ULGM00	Ultra Spec HP Acrylic Metal Primer #HP04
2nd & 3rd Coats	Finish	Semi-Gloss	6.0-12.0 wet 2.2-4.2 dry	<50	Pro-Industrial Acrylic B66 Series	ENDURA-COAT ENCT50	Ultra Spec HP Acrylic D.T.M. #HP29

J. **Exterior Galvanized Handrail and Guardrail Assemblies**

1. Substrates: Galvanized metal handrail & guardrail assemblies
2. Application: Typical @ galvanized handrail and guardrail assemblies
3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	Semi-Gloss	7.0-13.5 wet 5.0-10.0 dry	<100 (un-reduced)	Macropoxy 646-100 Fast Cure Epoxy	US Coatings EpoxyGrip 2300	Corotech 100% Solids Epoxy Pre Primer #V155
2nd & 3rd Coats	Finish	Semi-Gloss (Part A)	3.6-4.8 wet 3.0-4.0 dry	<100	Hi-Solids Polyurethane	US Coatings	Corotech Aliphatic

					B65 Series	UreGrip 3000 HS VOC	Acrylic Urethane #V500
Hardener	Finish	Gloss (Part B)	3.6-4.8 wet 3.0-4.0 dry	<100	Hi-Solids Polyurethane Hardener B65 Series	US Coatings UreGrip 3000 HS VOC	Corotech Aliphatic Acrylic Urethane V500 Catalyst

K. **Exterior Wood – Painted**

1. Substrates: Exterior wood including, but not limited to Glu-Lam and Sawn Timber beams, columns, and diagonal members, shingles, decking, sheathing, trim, and fascia boards

2. Application: Typical, u.o.n.

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	4.0 wet 1.4 dry	<100	Exterior Latex Wood Primer B42 Series	EZ-PRIME EZPR00	Insl-X Blockout Primer #TB-1100
2nd & 3rd Coats	Finish	Flat Gloss Low Sheen Satin **[Specifier – select desired sheen]**	4.0 wet 1.5 dry	<50	A-100 Exterior Latex A6 Series (Flat) A12 Series (Low Sheen) A82 Series (Satin) A8 Series (Gloss)	Spartashield SSHL10 (Flat) SSHL40 (Low Sheen) SSHL30 (Egg Shell) SSHL60 (Gloss)	Ultra Spec EXT #447 (Flat) #455 (Low Lustre) #448 (Satin) #449 (Gloss)

L. **Exterior Wood – Stained (Semi-Transparent)**

1. Substrates: Exposed exterior natural wood surfaces including, but not limited to Glu-Lam and Sawn Timber beams, columns, and diagonal members, shingles, decking, sheathing, trim, and fascia boards

2. Application: Typical, u.o.n.

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Finish	-	-	<50	Duckback SuperDeck Exterior Waterborne Semi-Transparent Stain SD3 series	GEMINI TWP Total Wood Preservative 1500 Series	Arborcoat Waterborne Exterior Semi Transparent Stain #638
2nd Coat	Finish	-	-	<50	Duckback SuperDeck Exterior Waterborne Semi-Transparent Stain SD3 series	GEMINI TWP Total Wood Preservative 1500 Series	Arborcoat Waterborne Exterior Semi Transparent Stain #638

M. **<u>Exterior Wood – Penetrating Oil Based Finish (Transparent)</u>**

1. Substrates: Exposed exterior natural wood surfaces including, but not limited to Glu-Lam and Sawn Timber beams, columns, and diagonal members, shingles, decking, sheathing, trim, and fascia boards.
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				Manufacturer's Product
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**FLOOD**
1st Coat	Cleaner	-	-	-	Manufacturer's for substrate condition: New Wood: Flood Dekswood Cleaner and Brightener Previously Finished: FloodPro Series Stripper/Cleaner Weathered Wood: Flood Dekswood Cleaner and Brightener

2nd & 3rd Coats	Finish	-	-	<350	CWF UV-5 Oil

4. Preparation:
    a. Clean with Manufacturer's product for substrate condition
    b. When mildew is present the wood to receive Oil Based Finish:
        1) Clean with a solution of:
            a) 4 ounces of non-ammoniated detergent (TSP) +
            b) 1 quart of outdoor bleach +
            c) 3 quarts of fresh potable water
        2) Let solution set on surface for 10-15 minutes then rinse thoroughly with potable water.
        3) Refer to mfgr's instructions for additional information.
        4) Lightly sand any area where the grain has been raised with a maximum of 80 grit paper.
5. Installation:
    a. Typical
        1) Apply two coats of Flood's finish with sprayer
            a) Air-less sprayer .011 - .015 fluid tip / 700 - 800 psi or less
                i. Refer to mfgr's instructions for additional information.
            b) Touch-up with high quality synthetic stain brush.
            c) Back roll to insure penetration.
        2) Where the finish is not absorbed, wipe excess with a clean cloth.
            a) Cloth type shall be woven material that will not leave material residue on the beams.

2.3 PRODUCT SCHEDULE - INTERIOR SURFACES **[SPECIFIER, EDIT OUT SUBSTRATES THAT DO NOT APPLY]**

A. **Interior Concrete (Painted)**

1. Substrates:
    a. Tilt-Up Concrete Construction
    b. Pre-Cast Concrete
    c. Cast-in-Place Concrete
    d. Cementitious Siding, Paneling and Trim

2. Application: Typical, u.o.n.

3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	5.3-8.0 wet 2.1-3.2 dry	<50	Loxon Concrete & Masonry Primer LX02 Series	EFF-STOP Select ESSL00	Ultra Spec Acrylic High Build Masonry Primer #609
2nd & 3rd Coats	Finish	Eg-Shel Gloss Semi-Gloss Low-Gloss Eg-Shel Low Sheen Eg-Shel Flat **[Specifier – select desired sheen]**	4.0 wet 1.4-1.7 dry (depending on sheen)	<50	ProMar 200 Zero VOC Interior Latex B20 Series (Eg-Shel) B30 Series (Flat) B24 Series (Low Sheen Eg-Shel) B41 Series (Low Gloss Eg-Shel) B31 Series (Semi-Gloss) B21 Series (Gloss)	SPARTA Series SWLL30 (Egg Shell) SZRO10 (Flat) SWLL40 (Low Sheen) SWLL50 (Semi-Gloss) SSHL60 (Gloss)	Ultra Spec 500 Zero VOC Interior Latex #538 (Eggshell) #536 (Flat) #537 (Low Sheen) #539 (Semi-Gloss) #540 (Gloss)

B. **Interior Masonry (Painted)**

1. Substrates:
   a. Concrete Masonry Units (CMU)
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	5.3-8.0 wet 2.1-3.2 dry	<50	PrepRite Block Filler B25 Series Or ConFlex Block Filler CF01 Series	Smooth BLOC-FIL Select SBSL00	Ultra Spec Hi-Build Block Filler #571
2nd & 3rd Coats	Finish	Eg-Shel Gloss Semi-Gloss Low-Gloss Eg-Shel Low Sheen Eg-Shel Flat **[Specifier – select desired sheen]**	4.0 wet 1.4-1.7 dry (depending on sheen)	<50	ProMar 200 Zero VOC Interior Latex B20 Series (Eg-Shel) B21 Series (Gloss) B31 Series (Semi-Gloss) B41 Series (Low Gloss Eg-Shel) B24 Series (Low Sheen Eg-Shel) B30 Series (Flat)	SPARTA Series SWLL30 (Egg Shell) SZRO10 (Flat) SWLL40 (Low Sheen) SWLL50 (Semi-Gloss) SSHL60 (Gloss)	Ultra Spec 500 Zero VOC Interior Latex #538 (Eggshell) #540 (Gloss) #539 (Semi-Gloss) #537 (Low Sheen) #536 (Flat)

C. **Interior Aluminum, Ferrous Metal (Non-exposed), and Galvanized Metal**

1. Substrates:
   a. Aluminum
   b. Interior ferrous metals, typical u.o.n.
   c. Galvanized metals, typical u.o.n. (excluding handrail and guardrails)

2. Application: Non-exposed conditions, typical u.o.n.
3. Exceptions:
   a. Flashing:
      1) Associated with storefront, curtain wall and/or window wall, Section 08 41 00 shall be provided by storefront / curtain wall manufacturer and have same finish as storefront / curtain wall, U.N.O. **[Specifier, select for storefront conditions]**
   b. Reveals, expansion joints, etc.**[Specifier, include note if reveals/joints are included in Section 09 29 00]**
      1) Finish: **[Specifier, Select which one]**
         a) Manufacturer finish per Section 09 29 00 – Gypsum Board & Sheathing Substrates
         b) Painted per Section 09 90 00 – Painting and Coatings
4. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	5.0-10.0 wet 1.9-3.8 dry	<50	Pro-Industrial Pro-Cryl Universal Acrylic Primer B66 Series	ENDURA-PRIME Metal Primer ENPR00	Ultra Spec HP Acrylic Metal Primer #HP04
2nd & 3rd Coats	Finish	Semi-Gloss Eg-Shel Satin Flat **[Specifier – select desired sheen]**	4.0 wet 1.7 dry	<50	Solo A76 (Semi-Gloss) Solo A75 (Eg-Shel) Solo A74 (Flat) Solo A75 (Satin)	SPARTA Series SWLL30 (Egg Shell) SZRO10 (Flat) SWLL40 (Low Sheen) SWLL50 (Semi-Gloss) SSHL60 (Gloss)	Ultra Spec 500 Zero VOC Interior Latex #538 (Eggshell) #536 (Flat) #537 (Low Sheen) #539 (Semi-Gloss)

							#540 (Gloss)

D. **Interior Galvanized Handrail and Guardrail Assemblies**

1. Substrates: Galvanized metal handrail & guardrail assemblies
2. Application: Typical @ galvanized handrail and guardrail assemblies
3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	Semi-Gloss	7.0-13.5 wet 5.0-10.0 dry	<100 (un-reduced)	Macropoxy 646-100 Fast Cure Epoxy	US Coatings EpoxyGrip2 300	Corotech 100% Solids Epoxy Pre Primer #V155
2nd Coat	Finish	Semi-Gloss (Part A)	3.6-4.8 wet 3.0-4.0 dry	<100	Hi-Solids Polyurethane B65 Series	US Coatings UreGrip 3000 HS VOC	Corotech Aliphatic Acrylic Urethane #V500
3rd Coat	Finish	Semi-Gloss (Part A)	3.6-4.8 wet 3.0-4.0 dry	<100	Hi-Solids Polyurethane B65 Series	US Coatings EpoxyGrip2 300	Corotech Aliphatic Acrylic Urethane #V500
Hardener	Finish	Gloss (Part B)	3.6-4.8 wet 3.0-4.0 dry	<100	Hi-Solids Polyurethane Hardener B65 Series	US Coatings UreGrip 3000 HS VOC	Corotech Aliphatic Urethane V500 Catalyst

E. **Interior DryFall Systems**

1. Substrates: Galvanized and non-galvanized metal
2. Application: Interior face of exposed metal roof deck, typical u.o.n. **[Specifier: consider this option for areas with high roofs such as multi-purpose rooms, stages, etc. Advantage is that the paint overspray turns to "dust" before it hits the floor allowing easy clean up via sweeping or vacuuming]**
3. Exceptions:

a. Do not use Dryfall Systems when temperature and humidity do not meet criteria set forth in manufacturer's product data / installation instructions.

4. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	5.0-10.0 wet 1.9-3.8 dry	<50	Pro-Industrial Pro-Cryl Universal Acrylic Primer B66 Series	N/A	Ultra Spec HP Acrylic Metal Primer #HP04
2nd & 3rd Coats	Finish	Semi-Gloss Flat Eg-Shel **[Specifier: select desired sheen and delete the others]**	6.0-9.0 wet 2.0-3.0 dry	<50	Pro-Industrial Waterborne Acrylic DryFall B42 Series	AQUAFALL Dry Fall AQUA10 AQUA 30	Latex Dryfall #397 Semi-Gloss #395 Flat #396 Eggshell

F. **Gypsum Board Walls and Ceilings**

1. Substrates: Gypsum Board substrates per Section 09 29 00 – Gypsum Board & Sheathing Substrates.
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	4.0 wet 1.0 dry	<50	ProMar 200 Zero VOC Latex Primer B28 Series	VINYLASTIC Select VNSL00	Ultra Spec 500 Latex Primer #534

2nd & 3rd Coats	Finish	Eg-Shel Gloss Semi-Gloss Low-Gloss Eg-Shel Low Sheen Eg-Shel Flat **Or** Refer to Interior Finish Legend **[Specifier – select desired sheen or reference interior finish legend]**	4.0 wet 1.4-1.7 dry (depending on sheen)	<50	ProMar 200 Zero VOC Interior Latex B20 Series (Eg-Shel) B21 Series (Gloss) B31 Series (Semi-Gloss) B41 Series (Low Gloss Eg-Shel) B24 Series (Low Sheen Eg-Shel) B30 Series (Flat) **[Specifier – if referencing interior finish legend, remove references to sheet series, ie B20, B31, etc.]**	SPARTA Series SSLL30 (Egg Shell) SZRO10 (Flat) SSLL20 (Velvet) SWLL40 (Low Sheen) SWLL50 (Semi-Gloss) SSHL60 (Gloss)	Ultra Spec 500 Zero VOC Interior Latex #538 (Eggshell) #536 (Flat) #537 (Low Sheen) #539 (Semi-Gloss) #540 (Gloss)

G. **Gypsum Board Walls & Ceilings @ Showers, Locker Rooms, and other High-Humidity Rooms**

1. Substrates: Gypsum Board substrates per Section 09 29 00 – Gypsum Board & Sheathing Substrates.
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**

1st Coat	Primer	-	4.0 wet 1.0 dry	<50	ProMar 200 Zero VOC Latex Primer B28 Series	VINYLASTIC Select VNSL00	Ultra Spec 500 Latex Primer #534
2nd & 3rd Coats	Finish	Refer to Interior Finish Legend **[Specifier: Eg-Shel and Gloss are only options; coordinate with Interiors]**	5.0-12.0 wet 2.0-5.0 dry	<50	Pro-Industrial Water Based Catalyzed Epoxy Part A B73 Series	US Coatings AquaGrip 2600	Corotech Pre Catalyzed Waterborne Epoxy V341
4TH Coat	Hardener		5.0-12.0 wet 2.0-5.0 dry	<50	Pro-Industrial Water Based Catalyzed Epoxy Part B B73 Series	US Coatings AquaGrip 2600	Single component

H. **Gypsum Board Walls & Ceilings @ Utility Rooms (Janitor, Storage, Electrical, Equipment, IDF/MDF, and Mechanical Rooms and Kitchens)**

1. Substrates: Gypsum Board substrates per Section 09 29 00 – Gypsum Board & Sheathing Substrates.
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	4.0 wet 1.0 dry	<50	ProMar 200 Zero VOC Latex Primer B28 Series	VINYLASTIC Select VNSL00	Ultra Spec 500 Latex Primer #534
2nd & 3rd Coats	Finish	Refer to Interior Finish Legend **[Specifier: Eg-Shel and Gloss are only options;**	5.0-12.0 wet 2.0-5.0 dry	<50	Pro-Industrial Water Based Catalyzed Epoxy Part A B73 Series	US Coatings AquaGrip 2600	Corotech Pre Catalyzed Waterborne Epoxy V341
4TH Coat	Hardener		5.0-12.0 wet 2.0-5.0 dry	<50	Pro-Industrial Water Based Catalyzed Epoxy Part B	US Coatings AquaGrip 2600	Single component

		coordinate with Interiors]			B73 Series		

I. **Interior Wood (Painted)**

1. Substrates: Interior wood including, but not limited to Glu-Lam and Sawn Timber beams, columns, and diagonal members, wood decking and sheathing, trim, and back of casework.
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	4.0 wet 1.4 dry	<50	Premium Wall & Wood Latex Primer B28 Series	Interkote IKPR00	Fresh Start All Purpose Primer #046
2nd & 3rd Coats	Finish	Eg-Shel Gloss Semi-Gloss Low-Gloss Eg-Shel Low Sheen Eg-Shel Flat **Or** Refer to Interior Finish Legend **[Specifier – select desired sheen or**	4.0 wet 1.4-1.7 dry (depending on sheen)	<50	ProMar 200 Zero VOC Interior Latex B20 Series (Eg-Shel) B21 Series (Gloss) B31 Series (Semi-Gloss) B41 Series (Low Gloss Eg-Shel) B24 Series (Low Sheen Eg-Shel) B30 Series (Flat)	SPARTA Series SSLL30 (Egg Shell) SZRO10 (Flat) SSLL20 (Velvet) SWLL40 (Low Sheen) SWLL50 (Semi-Gloss) SSHL60 (Gloss)	Ultra Spec 500 Zero VOC Interior Latex #538 (Eggshell) #540 (Gloss) #539 (Semi-Gloss) #537 (Low Sheen) #536 (Flat)

		reference interior finish legend]					

J. **Interior Wood (Painted Flame Retardant)**

1. Substrates: Interior backer boards, panel boards, and other locations noted in drawings.
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				**Manufacturer's Product**
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Flame Control Coatings, LLC**
1st Coat	Sealer	-	-	-	Not required
2nd Coat	Finish	Flat	7.6 wet 3.9 dry	45 g/L	Flame Control No. 20-20A Intumescent Fire Retardant (Waterbased) Paint

K. **Interior Wood – Stained**

1. Substrates: Exposed exterior natural wood surfaces including, but not limited to Glu-Lam and Sawn Timber beams, columns, and diagonal members, and interior trim / finish carpentry.
   a. Not for use on wood floors.
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Conditioner	-	-	<100	MinWax Waterbased Pre-Stain Wood Conditioner	N/A	Lenmar Interior Waterborne Wiping Stain #1WB.1300 UNTINTED
2nd Coat*	Stain	-	-	<250	MinWax Performance Series Tintable	GEMINI Craftsman Collection 240 VOC Wiping Stain	Lenmar Interior Waterborne Wiping Stain #1WB.1300

					Wood Stain 250 VOC		
3rd & 4th Coats	Clear Topcoat	Satin Gloss Semi-Gloss **[Specifier – select desired sheen and delete others]**		<275	MinWax Water Based Oil-Modified Polyurethane	GEMININ TITANIUM High Solids Urethane Modified Waterborne WB-02X0	Benwood Stays Clear Acrylic Polyurethane Flat #425 Low Lustre #423 High Gloss #422

*=Additional Coats may be necessary to achieve desired color.

L. **Interior Wood Floor – Stained and/or Clear Coated**

1. Substrates: Exposed interior natural wood floor surface.
2. Application: Dance floors, typical, u.o.n.
3. Product Schedule:

	Application				**Manufacturer's Product**		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Conditioner	-	-	<100	MinWax Waterbased Pre-Stain Wood Conditioner	N/A	Lenmar Interior Waterborne Wiping Stain #1WB.1300
2nd Coat*	Stain	-	-	<250	MinWax Performance Series Tintable Wood Stain 250 VOC	GEMINI Craftsman Collection 240 VOC Wiping Stain	Lenmar Interior Waterborne Wiping Stain #1WB.1300

3rd & 4th Coats	Clear Topcoat	Satin Semi-Gloss Gloss **[Specifier – select desired sheen and delete others]**		<275	MinWax Water Based Oil-Modified Polyurethane	GEMININ TITANIUM High Solids Urethane Modified Waterborne WB-02X0	Benwood Stays Clear Acrylic Polyurethane Flat #425 Low Lustre #423 High Gloss #422

*=Additional Coats may be necessary to achieve desired color.

M. **Interior Wood – Penetrating Oil Based Finish (Transparent)**

1. Substrates: Exposed interior natural wood surfaces when noted to match penetrating oil based finish @ exterior wood.
2. Application: Typical, u.o.n.
3. Product Schedule:

	Application				Manufacturer's Product
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**FLOOD**
1st Coat	Cleaner	-	-	-	Per manufacturer for substrate condition
2nd & 3rd Coats	Finish	-	-	<350	CWF UV-5 Oil

N. **Interior Pipe Identification**

1. Substrates: Metal Piping
2. Application: Typical where pipes are not specified to receive insulated pipe wraps, u.o.n.; coordinate with Mechanical drawings and specifications.
3. Product Schedule:

	Application				Manufacturer's Product		
	Product Type	**Sheen**	**Dry Film Thickness (mil)**	**VOC Limit (g/L)**	**Sherwin Williams**	**Alternate: Dunn Edwards**	**Alternate: Benjamin Moore**
1st Coat	Primer	-	4.0 wet 1.0 dry	<50	Pro-Industrial Pro-Cryl	ENDURA-PRIME	Ultra Spec HP Acrylic

					Universal Acrylic Primer B66 Series	Metal Primer ENPR00	Metal Primer #HP04
2nd & 3rd Coats	Finish	Gloss	4.0-5.0 wet 1.4-1.7 dry	<50	Pro-Industrial Waterbased Alkyd Urethane B53 Series	ENDURA-COAT ENCT60	Ultra Spec HP D.T.M. Gloss HP28

O. **Interior TRAFFIC MARKING**

1. Substrate:
   a. Concrete
   b. Asphalt
   c. Brick
2. Specified in "Pavement Markings Section 32 17 23"
3. VOCs: Compliant with current SCAQMD and LEED v4 VOC requirements.

P. **Interior GALVANIZED REPAIR PAINT**: (Coordinate with Specifications containing galvanized metal)

1. Mfgr: ZRC Worldwide, www.zrcworldwide.com, 800.831-3275
2. Product: ZRC ZERO VOC Water-Based Galvanizing Compound
3. Type: Two-pack Water-Based Galvanizing Compound
4. Standards: (Meets or exceeds)
   a. ISO 9001 registered
   b. MIL-P-26915A (USAF Zinc dust Primer)
   c. SSPC-Paint 20 (Specification for Zinc Rich Primer)
   d. ASTM Des. A239 Preece Test for hot dipping galvanizing
   e. ASTM Des B117 10,000 salt spray without failure
   f. VOCs: Compliant with current SCAQMD and LEED v4 VOC requirements
5. Material:
   a. 93% Zinc in the dry film using Type III "ultra-pure" ASTM-D-520 zinc
6. Preparation:
   a. Grease & Oils: Solvent clean to SSPC-SP1
   b. Rust Scale: Power tool clean to SSPC-SP3 or SSPC-SP11 (SIS St. 2 or 3)
      1) Sand blast (SSPC-SP6) at exterior exposed conditions.

c. Mill Scale: Sandblast to SSPC-SP6

d. Water Immersion: (100 degree F max.) Sandblast to SSPC-SP10 (near-white)

2.4 SPECIALTY PAINTS AND COATINGS

A. Anti-Slip Paint / Coating:

1. Schedule: Interior

a. As indicated in drawings

b. Stair tread contrasting stripe **[Specifer: select desired system and delete others]**

Manufacturer	Material	Name	VOCs	Color	Installation	Composition
Wooster – Products	Epoxy	WALK-A-SURED	Compliant with current SCAQMD and LEED v4 VOC requirements	Clear Black Grey **[Specifer: select desired color and delete others]**	Roll-on	2-part
					Trowel-on	2-part
	Acrylic Paint	SAFE & STRIDE		Black Grey Safety Yellow **[Specifer: select desired color and delete others]**		1-part
	Oil Paint	SAFE & STRIDE		Grey		1-part

2. Schedule: Exterior

a. As indicated in drawings

b. Stair tread contrasting stripe

Manufacturer	Material	Name	VOCs	Color	Installation	Composition
Wooster – Products	Epoxy – Heavy Duty (application – heavy duty, high traffic) EPOXY WP-70		Compliant with current SCAQMD and LEED v4 VOC requirements	Black Grey Safety Yellow Brown	Trowel & squeegee	2-part

2.5 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** and subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Applicator must examine areas and conditions under which painting work is to be performed and notify **General Contractor** in writing of conditions detrimental to proper and timely completion of work.

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.
2. Confirm water vapor emission of concrete surfaces to be painted do not exceed manufacturer's recommendations.
3. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions otherwise detrimental to formation of durable paint film
4. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to applicator.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

1. General:
    a. Perform all preparation and cleaning procedures in strict accordance with paint/stain manufacturer's instructions and as herein specified, for each particular substrate condition.
    b. Remove all hardware, hardware accessories, machined surfaces, plates, lighting fixtures, and similar items in place and not to be finish painted, or provide surface-applied protection prior to surface preparation and painting operations. Remove if necessary, for complete painting of items and adjacent surfaces. Following completion of painting of each space or area, reinstall removed items by workmen skilled in trades involved.
    c. Clean surfaces to be painted before applying material.

1) Remove oil and grease with clean cloths and cleaning solvents prior to mechanical cleaning. Program cleaning and painting so that dust and other contaminants from cleaning process will not fall in wet, newly painted surfaces.

2) Shot blast all area's to remove rust and other contaminants in accordance with SSPC guidelines.

2. Wood:

a. Clean wood surfaces to be painted of dirt, oil, or other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sandpaper smooth those finished surfaces exposed to view, and dust off.

b. Prime, stain, or seal wood required to be job painted immediately upon delivery to job. Prime edges, ends, faces, undersides, and backsides of such wood, including cabinets, counters, cases, etc; interior and exterior trim, fascia, wood doors and plywood.

c. When transparent finish is required, use spar varnish for backpriming.

d. Seal tops, bottoms and cut-outs and all edges not covered with veneer of wood doors with heavy coat of varnish or equivalent sealer immediately upon delivery to job.

e. Scrape and clean small, dry, seasoned knots and apply thin coat of white shellac or other recommended knot sealer, before application of priming coat.

f. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood-filler. Sandpaper smooth when dried.

3. Metal / Steel:

a. Ferrous metals:

1) Clean non-galvanized, ferrous surfaces that have not been shop-coated of all oil, grease, dirt, loose mill scale and other foreign substances by solvent or mechanical cleaning, complying with Steel Structures Painting Council (SSPC)-SP3.

2) Sand blast all non-galvanized, ferrous surfaces that have not been shop-coated of all rust and other foreign substances by mechanical blast cleaning, complying with Steel Structures Painting Council (SSPC)-SP6.

3) Comply with SSPC guidelines in addition to these instructions.

b. Galvanized surfaces

1) Clean free of oil and surface contaminates with acceptable non-petroleum based solvent.

2) Comply with SSPC guidelines in addition to these instructions.

c. Metal Decking

1) Factory Primed:

a) Field fog finish painted for acoustical deck locations, coordinate with metal deck manufacturer.

2) Factory Finish Painted:

a) Field tough up in accordance with this specification and paint in accordance with metal decking Section.

4. Exposed Architectural Steel: (Structural and non-structural components included)

a. All steel that is exposed to view at interior & exterior shall be cleaned, prepared and primed for an Architectural painted finish.

1) Ferrous metals:

a) Clean non-galvanized, ferrous surfaces that have not been shop-coated of all oil, grease, dirt, loose mill scale and other foreign substances by solvent and mechanical cleaning, complying with Steel Structures Painting Council (SSPC)-SP3.

b) Sandblast all non-galvanized, ferrous surfaces that have been shop-coated of all rust and other foreign substances by mechanical blast cleaning, complying with Steel Structures Painting Council (SSPC)-SP6.

c) Clean all non-galvanized, ferrous surfaces that have been shop-coated of all foreign substances by chemical cleaning, complying with Steel Structures Painting Council (SSPC)

d) Comply with SSPC guidelines in addition to these instructions.

e) Remove all burrs / scratches, etc.

f) Prepare all surfaces to be smooth – fill voids & imperfections to achieve smooth surfaces.

b. Galvanized surfaces

1) Clean free of oil and surface contaminates with acceptable non-petroleum based solvent.

2) Prepare all surfaces to be smooth – fill voids & imperfections to achieve smooth surfaces.

3) Remove all burrs / scratches, etc.

4) Fill all gaps left where welding occurs between two items to achieve a continuous & even joint.

5) Comply with SSPC guidelines in addition to these instructions.

5. Concrete:

a. Clean concrete surfaces to be painted of dirt, oil, or other foreign substances with scrapers, VOC compliant cleaners, and sandpaper, as required.

b. Prime concrete as required by paint manufacturer.

c. Tape the locations for stair tread stripes to install true and straight edges of contrasting stripes.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
2. Apply paint by brush, roller, spray, or other acceptable practice in accordance with manufacturer's directions.
    a. Use brushes best suited for type of material being applied. Use rollers of carpet, velvet back, or high pile sheep's wool as recommended by paint manufacturer for material and texture required.
        1) Roll apply 1st coat of paint typical at all wall and ceiling applications.
        2) Install finish coats with sprayer at all interior and exterior exposed Architectural/structural steel locations.
3. Number of coats and paint film thickness required is same regardless of application method. Do not apply succeeding coats until previous coat has completely dried and inspected. Sand between each enamel or varnish coat application with fine sandpaper or rub surfaces with pumice stone where required to produce even, smooth surface in accordance with manufacturer's directions.
4. Apply additional coats when undercoats, stains, or other conditions show through final coat of paint, until paint film is of uniform finish, color and appearance. Give special attention to insure that all surfaces, including edges, corners, crevices, welds, and exposed fasteners receive film thickness equivalent to that of flat surfaces.
5. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Paint surfaces behind permanently-fixed equipment or furniture with prime coat only.
6. Paint interior surfaces of ducts, where visible through registers or grilles, and other surfaces indicated on Drawings with flat non-specular black paint, before final installation of equipment.
7. Paint back sides of access panels, removable or hinged covers to match exposed surfaces.
8. Finish exterior doors on tops, bottoms, and side edges same as exterior faces, unless otherwise indicated.
9. Painting of mechanical and electrical work is limited to those items exposed in Mechanical Equipment Rooms and in occupied spaces.
10. Doors: Finish tops, bottoms and edges of doors to provide same appearance as balance of door; re-seal all trimmed edges and mortising on factory sealed doors immediately after fitting by the finish carpenter.
11. Provide "Wet Paint" signs as required to protect newly painted finishes. Remove temporary protective wrappings provided by others for protection of their work after completion of painting operations.

B. Mechanical items to be painted include, but are not limited to, following:

1. Piping, pipe hangers, and supports, when exposed in finished spaces.
2. Motors, mechanical equipment, and supports.
3. Accessory items.

C. Electrical items to be painted include, but are not limited to, following:

1. Conduit and fittings.
2. Switchgear.

D. Minimum coating thickness: Apply each material at not less than manufacturer's recommended spreading rate, to provide total dry film thickness as indicated.

E. Prime coats: Recoat primed and sealed walls and ceilings where there is evidence of suction spots or unsealed areas in first coat, to assure finish coat with no burn-through or other defects due to insufficient sealing.

F. Scheduling painting: Apply first-coat material to surfaces that have been cleaned, pre-treated, primed and/or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.

1. All materials shall be applied and cut in neatly to ensure uniform drying to the color and sheen specified, free from runs, sags, wrinkles, shiners, streaks and brush marks.
2. Allow sufficient time between successive coatings to permit proper drying. Do not recoat until paint has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and application of another coat of paint does not cause lifting or loss of adhesion of under coat.
3. Each coat of paint or finish must be inspected and approved before application of the succeeding specified coat, failure to comply with the inspection and approval requirements for successive coats will necessitate recoating at the painting contractor's expense wherever work is not properly credited. The painting contractor must furnish a report of each coat applied when completed for inspection and approval to comply with the above. Notify the **Architect** in advance of completed coats to be inspected.

G. Pigmented (opaque) finishes: Completely cover to provide opaque, smooth surface of uniform finish, color, appearance, and coverage.

1. Vary each coat of paint in shade from the preceding coat in a manner which renders each coat readily distinguishable without affecting finish color. Touch up all blemishes.

H. Transparent (clear) finishes: On exposed portions, use multiple coats to produce glass-smooth surface film continuity of even luster. Provide finish free of laps, cloudiness, color irregularity, runs, brush marks, orange peel, nail holes, or other surface imperfections.

I. Brush application: Brush-out and work all brush coats onto surfaces in even film. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable. Neatly draw all glass and color break lines.

J. Mechanical applicators: Use mechanical methods for paint application when permitted by governing ordinances and trade union regulations. If permitted, limit to only those surfaces impracticable for brush applications.

1. Limit roller application (generally) to interior wall and ceiling finishes for second and third coats. Apply each roller coat to provide equivalent hiding as brush-applied coats.

2. Where spray application is used, apply each coat to provide equivalent hiding of brush-applied primer. Do not double back with spray equipment for purpose of building up film thickness of two coats in one pass.

3.5 FIELD QUALITY CONTROL

A. Product Manufacturer shall provide field service support as requested by the Installer/Applicator

B. **General Contractor** and the Product Manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications. The Applicator shall be responsible for the proper application of the materials.

C. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 09 90 00

SECTION 10 14 00 - SIGNAGE

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, Division 0 and Division 1 requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified and as necessary to complete the work required by project conditions, including, but not limited to:

1. Code and ADA required signage:

a. All signage shall meet with standards and codes as herein listed, whether listed or not, and comply with the most restrictive requirements.

2. Accessories:

a. Adhesives, fasteners and accessories, as required for complete installed assembly, specified or not.
b. Posts and concrete footings.
c. Gravel

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. International Code Council (ICC), www.iccsafe.org

E. Refer to standards herein listed with specific products/materials.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Refer to Division 1 for additional requirements for DSA projects

4. Comply with Building Code, ADA, and CBC Title 24 most restrictive requirements and in accordance with DSA interpretations.

B. **Standards:**

Item	Name of Test	Performance	Testing Standard
Signage and Identification	General	Comply	California Building Code including, but not limited to CBC 11-B Division 7, and CBC Chapter 10 & ATBCB ADAAG.
Raised Characters	Depth	Comply	CBC 11B-703.2.1
	Case	Comply	CBC 11B-703.2.2
	Style	Comply	CBC 11B-703.2.3
	Proportions	Comply	CBC 11B-703.2.4
	Character height	Comply	CBC 11B-703.2.5
	Stroke thickness	Comply	CBC 11B-703.2.6
	Character spacing	Comply	CBC 11B-703.2.7
	Line spacing	Comply	CBC 11B-703.2.8
	Format	Comply	CBC 11B-703.2.9
Braille	Type	Comply	CBC 11B-703.3
	Dimensions & capitalization	Comply	CBC 11B-703.3.1 Table 11B-703.3.1
	Position	Comply	CBC 11B-703.3.2
Installation height and placement	Tactile signs (except for tactile characters at elevator car controls)	Comply	CBC 11B-703.4.1
	Location	Comply	CBC 11B-703.4.2
Visual Characters (non-Tactile signs)	Finish and Contrast	Comply	CBC 11B-703.5.1
	Case	Comply	CBC 11B-703.5.2
	Style	Comply	CBC 11B-703.5.3
	Character Proportions	Comply	CBC 11B-703.5.4
	Character Height	Comply	CBC 11B-703.5.5
	Height from finish floor or ground	Comply	CBC 11B-703.5.6
	Stroke thickness	Comply	CBC 11B-703.5.7
	Character spacing	Comply	CBC 11B-703.5.8
	Line spacing	Comply	CBC 11B-703.5.9
Pictograms	Pictogram field	Comply	CBC 11B-703.6.1
	Finish and contrast	Comply	CBC 11B-703.6.2
	Text descriptors	Comply	CBC 11B-703.6.3

Symbols of Accessibility	Finish and Contrast	Comply	CBC 11B-703.7.1
	Symbols	International Symbol of Accessibility	CBC 11B-703.7.2.1

		Cleaner Air Symbol	CBC 11B-703.7.2.5
		Toilet & Bathing Facility geometric symbols	CBC 11B-703.7.2.6
Sign Body	Thickness	1/4", U.N.O.	
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
    a. Refer to product criteria identified herein.

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit the following for **Architect's** review:

1. Manufacturer product data and technical data sheets
2. Product MSDS sheets
3. Shop drawings
    a. Floor plan showing each sign location
    b. Sign Schedule with sign type, room/location, sign message
    c. Drawings showing each sign configuration, including raised characters, braille and pictograms and colors
    d. Drawings showing poles/posts and footings (for exterior pole mounted signage)
4. Samples:
    a. Samples of each type of cast, cut or engraved signs including, but not limited to, Braille, Pictorial symbols, and raised characters
    b. 4" x 6" size color samples for selection of signage colors by **Architect**

E. Mock-up

1. Provide mockup of exterior and interior signs in each mounting configuration / location, i.e. door mounted, wall mounted, post mounted, adhesively applied, mechanically fastened, etc.
    a. Erect at location approved by **Architect**.
2. Mock-up shall be part of final construction once approved by **Architect**.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver and store products suitable wrapped or packaged to protect against damage. Do not remove protective coverings until time of installation.

1. Protect finish and edges in accordance with panel manufacturer's recommendations.
2. Store material in accordance with panel manufacturer's recommendations.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **Lifetime** warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Building walls, windows and doors

2. Site parking, flatwork, paving, footings, etc.

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 02 41 13 – Selective Site Demolition and Protection
3. Section 02 41 19 – Selective Building Demolition and Protection
4. Section 03 30 00 – Cast in Place Concrete
5. Section 04 22 00 – Concrete Unit Masonry
6. Section 08 11 13 – Steel Doors and Frames
7. Section 08 14 00 – Wood Doors
8. Section 08 41 00 – Entrances, Window Wall, Storefront and Curtain Walls
9. Section 08 80 00 – Glass and Glazing
10. Section 09 29 00 – Gypsum Board and Sheathing Substrates
11. Section 09 30 00 – Tile and Stone
12. Section 09 90 00 – Painting and Coating

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Signage Manufacturer:

a. Advance Corporation, Braille-Tac™ Division, www.advancecorp.com
b. Apco www.apcosigns.com
c. Gemini Incorporated, www.signletters.com
d. In-Pro Signscape, www.inprocorp.com
e. Interface Architectural Signage, Inc., www.interfacedesign.com
f. Mohawk Sign Systems, www.mohawksign.com
g. ProAd Signs, www.proadsigns.com
h. Takeform Architectural Graphics, www.takeform.net

2. Fire Extinguisher Signage:
    a. Seton, www.seton.com
3. Plastic Material:
    a. Rowmark, www.rowmark.com
4. Reviewed Equivalent by **Architect**.
    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS – SITE VEHICULAR, EXITING AND ACCESSIBILITY SIGNAGE

A. General:
1. Refer to details for additional information, design criteria and posts and footing requirements.
2. Coordinate with Section 03 30 00 – Cast-in-Place Concrete
3. Coordinate with Section 05 50 00 – Metal Fabrications.

B. Material:
1. Sign: Stainless steel
2. Text: Powder coated

C. Post Mounted:
1. Posts:
    a. Galvanized steel pipe
2. Footings: Concrete
3. Fasteners:
    a. Type: Tamper resistant machine bolt, washer, lock washer & tamper proof nut
    b. Material: Stainless steel
    c. Size: 1/4" dia. X length required

D. Wall Mounted:
1. Fasteners:
    a. Metal and wood stud framing
        1) Type: Self taping with washer and lock washer

2) Material: Stainless steel
3) Size: 1/8" dia. x length to penetrate framing 1" min.

E. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**

2.3 MATERIAL – EXTERIOR BUILDING MOUNTED SIGNAGE

A. General

1. Refer to documents for additional information and design criteria
2. Signage Type:

a. Partial Inlay, uno.

B. Material

1. Acrylic – Face of Sign
2. Vinyl – Raised Characters, Visual Characters and Pictograms

C. Raised Characters

1. Partial inlay
2. Raised 1/32"
3. Beveled edges

D. Visual Characters and Pictograms

1. Partial inlay

E. Braille

1. Partial inlay
2. Raised

a. Contracted Grade 2 California Braille

F. Configuration

1. Size: Refer to details
2. Sign Edges: Beveled Straight

G. Installation:

1. Door mounted signs shall be installed with 1" wide x 62 mil thick 3M VHB 5962 Conformable Tape applied continuously along all four sides of sign and set ¼" clear of outside edge of sign.

2. Wall mounted signs shall be installed with tamper resistant stainless steel fasteners at all four sides of sign, typical u.o.n.

a. Masonry/Stone: Drilled expansion anchors x 1-1/2" embedment
b. Metal Studs: Self taping x 1" embedment
c. Wood studs: Self taping x 1" embedment

d. Wall mounted signs shall be installed with 1" wide x 62 mil thick 3M VHB 5962 Conformable Tape applied continuously along all four sides of sign and set ¼" clear of outside edge of sign.

3. Glass mounted signs shall be installed with 1" wide x 62 mil thick 3M VHB 5962 Conformable Tape applied continuously along all four sides of sign and set ¼" clear of outside edge of sign.

a. Install blank sign on opposite side of glass which matches size & color of informative

H. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**

2.4 MATERIAL – INTERIOR SIGNAGE

A. Material:

1. Acrylic – Face of Sign
2. Vinyl – Raised Characters, Visual Characters and Pictograms

B. Raised Characters

1. Partial inlay
2. Raised 1/32"
3. Beveled edges

C. Visual Characters and Pictograms

1. Partial inlay

D. Braille

1. Partial inlay
2. Raised

a. Contracted Grade 2 California Braille

E. Configuration

1. Size: Refer to details

F. Sign Edges: Beveled Straight

G. Installation:

1. Door mounted signs shall be installed with 1" wide x 62 mil thick 3M VHB 5962 Conformable Tape applied continuously along all four sides of sign and set ¼" clear of outside edge of sign.
2. Wall mounted signs shall be installed with tamper resistant stainless steel fasteners at all four sides of sign, typical u.o.n.

a. Metal Studs: Self taping x 1" embedment
b. Wood studs: Self taping x 1" embedment

c. Wall mounted signs shall be installed with 1" wide x 62 mil thick 3M VHB 5962 Conformable Tape applied continuously along all four sides of sign and set ¼" clear of outside edge of sign.

3. Glass mounted signs shall be installed with 1" wide x 62 mil thick 3M VHB 5962 Conformable Tape applied continuously along all four sides of sign and set ¼" clear of outside edge of sign.

a. Install blank sign on opposite side of glass which matches size & color of informative sign.

H. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**

2.5 SIGN SCHEDULE:

A. General:

1. Refer to drawings for sign schedules, details, and other information, including but not limited to:

a. Sign size
b. Text size
c. Mounting height

2. Final sign colors shall be selected by **Architect** at time of submittal.

2.6 MATERIAL – FIRE EXTINGUISHER SIGNAGE

A. Fire Extinguisher Signage:

1. Mfgr: Seton
2. Model: 39429
3. Type: Luminous
4. Shape: 2-sided with fastening flanges
5. Size: 7.5" wide x 18" tall overall
6. Material: Glow-in-the-dark Contrasting Color with letters and graphics
7. Text: "Fire Extinguisher"
8. Graphics:

a. Symbol: Arrow pointing down with text in arrow
b. Location: Install centered above fire extinguisher; confirm height with Fire Department

9. Braille: None
10. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

C. Backing:

1. Coordinate that appropriate backing is installed for sign mounting.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Take all necessary measurements in the field to ensure proper dimensions.

3.4 FABRICATION

A. Fabricate signs in compliance with drawings, applicable codes, agencies having jurisdiction and ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines.

3.5 INSTALLATION

A. General:

1. Prior to installation, carefully inspect and verify that the installed work of other trades is complete to the point where this installation may properly commence.
2. Verify that specified items may be installed in accordance with the approved design.
3. All pole mounted sign poles shall be installed in concrete footing and in compliance with plan details.
4. Signage Mounting:

   a. Locations of all signs must be approved by the **Architect** prior to installation.
   b. Refer to specific sign type for mounting requirements.
   c. Coordinate with Drawings

B. Fastening

1. Use fasteners as herein specified.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 10 14 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 10 14 19 – DIMENSIONAL LETTER SIGNAGE

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, Division 0 and Division 1 requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Exterior address signage

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission

E. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit the following for **Architect's** review:

1. Manufacturer product data and technical data sheets
2. Shop drawings:
    a. Plans, sections, and elevation views of all sides; information to include, but not be limited to:
        1) Overall Size
        2) Letters – style/text type, size, color and finish
        3) Numbers – style/text type, size, color and finish
        4) Text schedule
        5) Mounting and Installation Instructions
3. Samples:
    a. 6" & 8" high samples of each type of individual letter, number and general sign surface materials and finishes
        1) Where color selection is required, provide color samples for **Architect's** selection of signage colors.
    b. Samples of each type of cast, cut or engraved letters, numbers, or monolithic sign

E. Mock-up

1. Provide mockup of dimensional letter signage in each type and mounting configuration.
    a. Erect at location approved by **Architect**.
2. Mock-up shall be part of final construction once approved by **Architect**.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver and store products suitable wrapped or packaged to protect against damage. Do not remove protective coverings until time of installation.

1. Protect finish and edges in accordance with panel manufacturer's recommendations.
2. Store material in accordance with panel manufacturer's recommendations.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Metal canopy construction.

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 05 50 00 – Metal Fabrications
3. Section 09 90 00 – Painting and Coating

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.

2. Refer to Division 1 for closeout submittal procedures.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Signage Manufacturer:
    a. Western Sign Company, Inc, www.westernsign.com, Diamond Springs, CA
    b. Signs and Graphic Design, www.singsandgraphic.com, Chico, CA
    c. Pacific Neon, www.pacificneon.com, Sacramento, CA
2. Reviewed Equivalent by **Architect**.
    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS – DIMENSIONAL LETTERS

A. **Sign Type BI-1**

B. Materials:

1. Clear Anodized Aluminum
2. Painted Aluminum
3. Aluminum Frame with Acrylic Face
4. Bronze
5. Brass
6. Stainless Steel
7. Copper

C. Lighting:

1. None

D. Character style (letters and numerals):

1. Flat Cutout characters – dimensional character cut from sheet or plate stock

E. Sign Schedule:

1. Sign "BI-1"
    a. To read: "1800"
    b. Font Style: Arial
    c. Height: 8"
    d. Depth/Thickness: 1"

e. Font Style, Size and Text to be verified with **Architect** and **Owner** prior to fabrication.

f. Mounting:

1) Individual Pin Mounted Letters

a) Cast-in
b) Welded
c) Mechanically Fastened

2) Pin Mounted connected letters/numerals

a) Cast-in
b) Welded
c) Mechanically Fastened

3) Refer to drawings for location and substrate information.

2. Sign "BI-2"

a. To read: "DRY CREEK WASTEWATER TREATMENT PLANT"

b. Font Style: Arial

c. Height: 6"

d. Depth/Thickness: 1"

e. Font Style, Size and Text to be verified with **Architect** and **Owner** prior to fabrication.

f. Mounting:

1) Individual Pin Mounted Letters

a) Cast-in

b) Welded

c) Mechanically Fastened

2) Pin Mounted connected letters/numerals

a) Cast-in

b) Welded

c) Mechanically Fastened

3) Refer to drawings for location and substrate information.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective installation or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Take all necessary measurements in the field to ensure proper dimensions, layout and location of sign.

C. Coordinate work under this Section with other trades whose work adjoins, combines, or aligns with it including, but not limited to:

3.4 INSTALLATION

A. Prior to installation, carefully inspect and verify that the installed work of other trades is complete to the point where this installation may properly commence.

B. Verify that specified items may be installed in accordance with the approved design.

C. Sign shall be constructed in accordance with reviewed Shop Drawings.

3.5 ADJUSTING AND CLEANING

A. Remove all dust, dirt, finger marks, etc. from finishes, characters and numerals, as recommended by manufacturer.

B. Keep area / site free from accumulated waste materials, rubbish and debris resulting from work identified herein.

1. Upon completion of said work, remove tools, appliances, surplus materials, waste materials, rubbish, debris and accessory items used in or resulting from said work, and legally dispose of off-site.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

G. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 10 14 19

THIS PAGE IS INTENTIONALLY BLANK

SECTION 10 21 18 – SOLID PLASTIC TOILET AND SHOWER COMPARTMENTS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Solid Plastic (HDPE) Ceiling Hung Partitions

a. Toilet Compartments
b. Urinal Screens

2. Hardware & Accessories

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American National Standards Institute (ANSI), www.ansi.org

1. ANSI A117.1 – Accessible and Usable Buildings and Facilities

E. American Society For Testing and Materials (ASTM), www.astm.org

1. ASTM E84 Surface Burning Characteristics of Building Materials

F. National Fire Protection Agency (NFPA)

1. NFPA 286 Standard Methods of Fire Test for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth.

G. National Sanitation Foundation (NSF), www.nsf.org

H. Underwriters Laboratory (UL), www.ul.com, www.ulstandardsinfoet.ul.com

I. Refer to standards herein listed with specific products/materials.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	Name of Test	Performance	Testing Std.
Panels	Flame Spread Index	Class "C" – 76 – 200 for panels, doors and stiles	ASTM E84
	Smoke Developed Index	Class "C" – 0 to 450 for panels, 95 for doors and stiles	
	Interior vertical or horizontal compartment finishes or materials	Comply with referenced standard	NFPA 286
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing:**

Item	Name of Test	Performance Results	Testing Std.
Doors	Swing and latching	Swing min. 90° & latch	
	Self-closing	All accessible stalls shall have self-closing door	

E. **Construction Monitoring/Observations by others:**

Item	Name of Test	Performance Results	By Whom
Panels	Const. Waste Management	Comply	Refer to Division 1 for Construction Waste Management and Disposal/Recycling requirements

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturer's data and shop drawings.

1. Data sheets for each product specified and indicated in drawings.
2. Shop drawings for each product specified, including the following:
    a. Plans, elevations, details of construction and attachment to adjacent construction.
    b. Show anchorage locations and accessory items.

c. Verify dimensions with field measurements prior to final production of toilet compartments.

E. Submit samples.

1. 4″ x 4″ in each color/texture combination specified.

F. Certification:

1. USA certificate of origin

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **ten (10)** years providing/installing/finishing projects of similar size and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Toilet and bath accessories
b. Solid Plastic Ceiling Hung Partitions

2. **General Contractor** shall request meeting 5 days in advance of construction.

F. Stipulations:

1. Panels, hardware and accessories shall all be fabricated and assembled in USA.

G. Miscellaneous criteria:

1. ZAMAC chrome plated metal, aluminum and/or plastic will not be accepted.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Partitions must be delivered to the job site in the manufacturer's original packages and marked to correspond with the approved shop drawings.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **fifteen (15)** year warranty for HPDE partitions against breakage, corrosion, delamination, and defects in factory workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Wall framing
2. Wall backing
3. Wall finish
4. Floor substrate
5. Floor finish
6. Ceiling framing
7. Ceiling finish

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 09 22 16 – Non-Structural Metal Framing
3. Section 09 29 00 – Gypsum Plaster
4. Section 09 30 00 – Tile and Stone
5. Section 10 28 00 – Toilet Accessories

C. Related Documents include, but are not limited to the following:

1. Division 1 - Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, components, finishes, etc.

2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as listed herein and in Drawings:

1. Scranton Products, www.scrantonproducts.com
2. ASI Global Partitions, www.globalpartitions.com
3. Hadrian, www.hadrian-inc.com
4. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. Mfgr: Scranton Products
2. Type: Solid plastic (HDPE)
3. Color: Grey
4. Finish Texture: Orange Peel
5. Material:

a. Doors, panels and pilasters to be 1" thick with homogeneous color throughout, constructed from high density polyethylene (HDPE) resins, which are waterproof non-absorbent and have a self-lubricating surface that resists markings from pens, pencils and other writing instruments.

6. Construction:

a. Doors, panels and pilasters shall be 1″ thick with uniformly machined edges.
b. Doors and panels shall be 55″ high and mounted at 14″ above the finished floor.
c. Doors and panels to have an extruded aluminum heat sink strip attached to the lower edge.
d. Pilasters are ceiling hung mounted with hardware provided by Scranton Products.

7. Hardware:

   a. Door hardware shall be as noted:

      1) Heavy-duty diecast (vault) zamac hinge shall have gravity-acting cams and are fabricated from a die cast aluminum alloy with a brushed finish and wrap around flanges. The cam is constructed from a ¾″ diameter nylon rod and a 3/8″ stainless steel pin. Slide latch, strike/keeper and hinges are through-bolted onto doors and pilasters using stainless steel vandal-resistant through bolts. Hinges are easily adjusted at the jobsite to a full close or partially open position, as required. Keeper provides for emergency access into the stall by lifting up on the bottom of the door.

      2) Optional: Heavy-duty 8″ aluminum hinge shall have gravity-acting cam. Slide latch, strike/keeper and hinges are through bolted onto doors and pilasters using stainless steel, vandal-resistant through bolts. Keeper provides for emergency access into the stall by lifting up on the bottom of the door

      3) Optional: Continuous stainless steel hinge. Slide latch, strike/keeper and hinges are through bolted onto doors and pilasters using stainless steel, vandal-resistant through bolts.

      4) Optional: Integral hinges shall be fabricated into the door and the pilaster with no exposed metal parts. The hinge mechanism is integrated into the door and pilaster with a ½″ diameter nylon gravity cam unit with a 3/16″ stainless steel center pin (at bottom) and a ½″ nylon rod (at top). Integral hinges are not factory set and are installed at the job site. (NOTE: Pilaster must be a minimum of 5″ wide.) Slide latch and strike/keeper are through bolted onto doors and pilasters using stainless steel vandal-resistant through bolts.

   b. Panel and pilaster brackets shall be as noted:

      1) Aluminum stirrup brackets shall be 2″ long made of heavy-duty anodized extruded aluminum (6063-T5 Alloy). Stirrup brackets shall be 1/8″ thick and mounted with stainless steel, vandal-resistant screws. Panels shall be attached with stainless steel, vandal-resistant through bolts. The attachment of brackets to the adjacent wall construction shall be accomplished with 2 ½″ stainless steel vandal-resistant screws and plastic anchors.

      2) Optional: Continuous heavy duty anodized extruded aluminum (6063-T5 alloy) wall brackets are pre-drilled. Wall brackets are mounted with stainless steel, vandal-resistant screws. The attachment of brackets to the adjacent wall construction shall be accomplished with 2 ½″ stainless steel vandal resistant screws and plastic anchors.

3) Optional: Continuous heavy duty stainless steel wall brackets are pre-drilled. Wall brackets are mounted with stainless steel, vandal-resistant screws. The attachment of brackets to the adjacent wall construction shall be accomplished with 2 ½" stainless steel vandal resistant screws and plastic anchors.

c. Headrail shall be made of heavy-duty anodized extruded aluminum (6063-T5 alloy). Headrail is anti-grip and attaches to the top of the pilaster with stainless steel, tamper-resistant screws. Headrail is attached to the adjacent wall construction with a headrail bracket.

d. Headrail brackets shall be made from a die cast aluminum alloy and shall be attached to the adjacent wall construction with 2 ½" stainless steel, tamper-resistant screws and plastic anchors.

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.

2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

1. Including but not limited to blocking and supports in walls and ceilings at points of attachment using methods recommended by the manufacturer for achieving the best result for the substrates under the project conditions.

a. Inspect areas scheduled to receive compartments for correct dimensions, plumbness of walls, and soundness of surfaces that would affect installation of mounting brackets.
b. Verify spacing of plumbing fixtures to assure compatibility with installation of compartments.

B. If preparation is the responsibility of another installer, notify **Architect** in writing of deviations from manufacturer's recommended installation tolerances and conditions.

C. Do not proceed with installation until substrates have been properly prepared with blocking and supports in walls and ceilings at points of attachment and deviations from manufacturer's recommended tolerances are corrected. Commencement of installation constitutes acceptance of conditions.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Verify blocking and supports in walls and ceilings has been installed properly at points of attachment.

C. Verify location does not interfere with door swings or use of fixtures.

D. Use fasteners and anchors suitable for substrate and project conditions

E. Install units rigid, straight, plumb, and level.

F. All doors and panels to be mounted at 14" above the finished floor.

G. Conceal evidence of drilling, cutting, and fitting to room finish.

H. Test for proper operation.

3.5 ADJUSTING

A. Test operation of equipment, components, etc. and adjust as needed to produce fully functioning units that comply with requirements.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.7 TESTING

A. Refer to Testing Heading, Part one of this specification.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 10 21 18

SECTION 10 28 00 – TOILET ACCESSORIES

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Toilet and/or restroom, janitor room, shower, etc. accessories as indicated on drawings, as herein specified and as needed for a complete installation.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing:**

Item	**Name of Test**	**Performance Results**	**Testing Std.**
Accessory Locks	Lock functions with key	Functions / comply	N/A
Soap Dispensers	Soap filled and dispenses fluid correctly	Functions / comply	N/A
Automatic Soap Dispensers	Power source connected/installed and sensitivity and flow amount adjusted	Comply	Mfgr.
Refer to drawings and as herein specified			

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Schedule of all accessories and indicated with designation to match Architectural drawings.
2. Cut sheets of all accessories
3. Warranty information
4. Finish options

E. Submit samples.

1. N/A

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **ten (10)** years providing/installing/finishing projects of similar size and complexity.

D. Stipulations:

1. Set toilet tissue dispenser in the proper location as the recessed unit is not dual handed.
2. The use of manufacturer's product numbers establishes required minimum standards and does not preclude other manufacturers.

a. Other manufacturers shall be assembly criteria and function criteria.
b. Refer to SUBMITTALS section/heading
c. Paper towel dispensers shall be Universal paper type, non proprietary type.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.
Agenda for meeting shall include, but not be limited to;

1. Layout both laterally and vertically of components at walls
2. Required recess depths for equipment / accessories
3. Coordination with plumbing fixture actually sizes which could affect layout and locations of accessories such as, but not limited to; toilet tissue dispensers.

F. Miscellaneous criteria:

1. Mounting heights for all accessories shall be confirmed and coordinated with drawings, building code and ADA.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Confirm all wall openings are set at proper locations to insure wall recessed accessories will comply with accessible heights and locations.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional warranties agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Schedule:

a. Toilet, Bath & Shower accessories: 3 years
b. Mechanical Soap Dispensers: 3 years
c. Mirrors: 15 years

1) Against silver spoilage

d. Electric Hand Dryers:

1) 3 years: motor brushes
2) 10 years: all other parts/components

e. Automatic Soap Dispensers: Lifetime

2. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Wall framing
2. Wall substrate and backing
3. Wall finish
4. Electrical wiring
5. Plumbing fixture layout and sizes

B. Related Sections include, but are not limited to, the following:

1. Division 1
2. Section 07 92 00 – Sealants and Caulking
3. Section 09 29 00 – Gypsum Board and Sheathing Substrates (includes and cement backer boards)
4. Section 09 30 00 – Tile and Stone
5. Section 09 90 00 – Painting

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding operation of the equipment.
2. Complete instructions regarding maintenance of the equipment, materials, finishes, etc.
3. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as listed herein and in Drawings:

1. Accessories:

a. Bobrick Washroom Equipment, Inc., www.bobrick.com
b. Gamco, www.gamcousa.com
c. Bradley Washroom Accessories, www.bradleycorp.com

2. Electric Hand Dryers

a. Bobrick Washroom Equipment, Inc.

3. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. Refer to Drawings for product type, model, locations & quantities, uno. and/or herein indicated
2. Manufacturer: As herein specified and/or indicated in drawings
3. Any substitutions shall be building code and ADA accessible and meet standards and features of listed mfgr. & product.

B. Schedule::

1. **Washroom/Shower Accessories, typ. U.N.O.:**

a. Manufacturers:

1) Specified

a) Bobrick

i. Series:

a. Typical: Contura
b. If Contura not manufactured: Classic

ii. Models: Refer to drawings

2) Alternate No. 1

a) Manufacturer: Gamco
b) Models: Equal to specified Bobrick item

3) Alternate No. 2

a) Manufacturer: Bradley
b) Series: Brandex
c) Models: Equal to specified Bobrick item

b. Material: As herein specified

c. Accessories:

1) Fasteners, and finish hardware shall be 100% stainless steel.
2) Full length concealed piano hinges.
3) Doors shall be pan type with 1/4" rigid fiberboard core.
4) Trim shall be one piece seamless construction.
5) Keying, all service keys shall be keyed alike.

2.3 PRODUCTS

A. **Recessed Seat Cover Dispenser / Toilet Tissue Dispenser:**

1. Material: 100% stainless steel construction
2. Mfgr: Bobrick or approved equivalent
3. Model: B-3474

B. **Partition Mounted Toilet Tissue / Seat Cover Dispenser:**

1. Material: 100% stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-347

C. **Recessed Seat Cover Dispenser & Toilet Tissue Dispenser - Women's:**

1. Material: 100% stainless steel construction
2. Mfgr: Bobrick or approved equivalent
3. Model: B-35745

D. **Partition Mounted Toilet Tissue / Seat Cover Dispenser – Women's:**

1. Material: 100% stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-3571

E. **Grab Bars: Water Closets**

1. Material: 100% stainless steel construction.
2. Mfgr: Bobrick or approved equivalent
3. Models: B-6806 x 42 & B-6806 x 24
4. Size:
    a. Diameter: 1-1/2 inch outside diameter
    b. Gauge: 18 gauge
    c. Material: Stainless steel
    d. Mounting: With concealed mounting flange and fastened into backing
5. Offset: 1-1/2 inch clear offset from well surface.
6. Mounting:
    a. Concealed mounting plate secured with minimum three 1/4 inch diameter stainless steel (teks) self-drilling or machine screws. Note concealed mounting plates shall have snap flange covers.
        1) Mounting: Grab bar manufacturer's mounting system and components
        2) Flange: 13 gauge
7. Notes:
    a. Refer also to drawings for additional information

F. **Folding Utility Shelf:**

1. Material: 100% stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-287

G. **Coat Hook: Accessible Stall:**

1. Material: 100% stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-2116

H. **Door Bumper:**

1. Material: Stainless steel & black nylon post with black neoprene bumper
2. Mfgr: Bobrick or approved equivalent
3. Model: B-687

J. **Coat Hook: Standard Stall**

1. Material: Solid aluminum with rubber bumper
2. Mfgr: Bobrick or approved equivalent
3. Model: B-212

K. **Surface Mounted Seat Cover / Toilet Tissue Dispenser:**

1. Material: 100% stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-3479

L. **Recessed Paper Towel Dispenser / Waste Receptacle:**

1. Material: 100% stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-3944

M. **Electric Hand Dryer:**

1. Mfgr: Mitsubishi Electric
2. Series: Jet Towel
3. Model: JT-SB116EH-G-UL
4. Power requirement: 120 volt
5. Operation: Hands free sensor
6. Color:
    a. Front: Silver
    b. Sides: Gray
    c. Body: White
    d. Bottom (Air Filter): Black
7. Mounting: Concealed steel mounting plate
8. Features:
    a. Dual Jet Drying
    b. Brushless DC motor
    c. Heat Storage for Instant Warm Air

d. Top and bottom sensors
e. Open side design
f. Independent Air Ducts

N. **Recessed Sanitary Napkin Dispenser:**

1. Material: Satin-finish stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-3706C

O. **Recessed Sanitary Napkin Disposal:**

1. Material: Satin-finish stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-353

P. **Countertop-Mounted Circular Waste Shute**

1. Material: 100% stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-529

Q. **Wall Mounted Soap Dispenser:**

1. Owner Furnish Contractor Installed

R. **NOT USED**

S. **Wall Mounted Baby Changing Station:**

1. Material: Polypropylene
2. Mfgr: Koala Kare or approved equivalent
3. Model: KB300-00

T. **Framed Mirror & Wardrobe Mirror:**

1. Material: Polished steel channel frame, mounted with concealed hangers/fasteners
2. Mfgr: Bobrick or approved equivalent
3. Model: B-165 18 x 30 (framed mirror)
   B-165 24 x 60 (wardrobe mirror)

U. **Two-Wall Horizontal Grab Bar: Shower**

1. Material: 100% stainless steel construction.
2. Mfgr: Bobrick or approved equivalent
3. Models: B-58616
4. Size:

   a. Diameter: 1-1/4 inch outside diameter,
   b. Gauge: 18 gauge
   c. Material: Stainless steel
   d. Mounting: With concealed mounting flange and fastened into backing

5. Offset: 1-1/2 inch clear offset from well surface.
6. Mounting:
    a. Concealed mounting plate secured with minimum three 1/4 inch diameter stainless steel (teks) self-drilling or machine screws. Note concealed mounting plates shall have snap flange covers.
        1) Mounting: Grab bar manufacturer's mounting system and components
        2) Flange: 13 gauge
7. Notes:
    a. Refer also to drawings for additional information

V. **Folding Shower Seat:**

1. Manufacturer: Bobrick or approved equivalent
2. Model: B-5181
3. Requirements:
    a. Width: 18" – 22"
    b. Depth: 16"
    c. Mounting Height: 18" above highest finish floor height

W. **Recessed Heavy Duty Soap Dish:**

1. Material: Stainless steel, matte polished finish
2. Mfgr: Bobrick or approved equivalent
3. Model: B-4380

X. **Extra-Heavy-Duty Shower Curtain Rod:**

1. Material: Polished steel channel frame, mounted with concealed hangers/fasteners
2. Mfgr: Bobrick or approved equivalent
3. Model: B-6047 x length req'd.

Y. **Shower Curtain:**

1. Material: Opaque, matte white vinyl, .oo8" (0.2mm) thick w/ white HDPE grommets
2. Mfgr: Bobrick or approved equivalent
3. Model: B-204-3

Z. **Double Robe Hooks:**

1. Material: Bright-polished stainless steel
2. Mfgr: Bobrick or approved equivalent
3. Model: B-672

AA. **Surface-Mounted Towel Shelf w/ Bar:**

1. Material: Stainless steel, 6-1/4" wide consisting of (4) 5/16" square tubes & 5/16" square tube bar below the shelf
2. Mfgr: Bobrick or approved equivalent

3. Model: B-676 x 24

AB. **Mop Rack w/ Shelf**

1. Material: Satin finished stainless steel w/ three anti-slip mop holders & four hooks
2. Mfgr: Bobrick or approved equivalent
3. Model: B-239 x 34

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.
3. Do not proceed until unsatisfactory conditions are corrected.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.
2. Examine all wall recesses are in proper location and proper depths.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. The **General Contractor** shall provide recesses, anchorage and back-up blocking in sizes and in locations as shown on approved Shop Drawings.

1. Coordinate with other trades where necessary to make provisions for installation.

B. Securely anchor all items in place in locations and at mounting heights indicated. Where specified dimensions are not noted, install as directed by **Architect**.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
    a. Comply with accessibility required mounting heights and horizontal locations.
2. Install the work of this Section in strict accordance with the manufacturer's recommendations as reviewed by the Architect, anchoring all units firmly into position square, plumb, straight and true.
3. Seal with backer rod and sealant for a watertight assembly at all penetrations through walls.
    a. Refer to Section 07 92 00 – Sealants and Caulking
4. Seal with backer rod and sealant for a watertight assembly at all penetrations through Shower walls, floors and ceilings.
    a. Refer to Section 07 92 00 – Sealants and Caulking
5. Install products with tamper proof mounting.
    a. Provide exact type of concealed mounting device and fasteners required by conditions of installation.
        1) Products shall be complete with items necessary to provide secure mechanical attachment as approved. Attachment with adhesives not permitted.

B. Provide and install grab bar manufacturers anchor plates for "in wall" anchor plates or approved equal for mounting specific manufacturer's grab bars.

1. Bobrick 256 series "in-wall" anchor plates
2. Bradley "in-wall" anchor plates
3. Approved equal for mounting specific manufacturer's grab bars.

3.5 ADJUSTING

A. Test operation of equipment, components, etc. and adjust as needed to produce fully functioning units that comply with requirements.

B. Adjust all components to manufacturer's standards.

C. Adjust such that all heights and clearances are met.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 10 28 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 10 44 00 – FIRE EXTINGUISHERS AND FIRE EXTINGUISHER CABINETS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the job site.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Wall Recessed Fire Extinguisher Cabinets and Fire Extinguishers:

a. As indicated on Drawings
b. As herein specified

E. Provide and install Fire Extinguisher signage above all wall mounted fire extinguishers and Fire Extinguisher cabinets.

1. Refer to Section 10 14 00 – Signage.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. National Fire Protection Agency (NFPA), www.nfpa.org

1. NFPA – 10 Table H.2
2. NFPA – 13

E. Underwriters Laboratory (UL), www.ul.com, www.ulstandardsinfoet.ul.com

1. UL 8 – Standard for Foam Fire Extinguishers
2. UL 154 – Standard for Carbon Dioxide Fire Extinguishers
3. UL 299 – Standard for Dry Chemical Fire Extinguishers
4. UL 626 – Standard for 2-1/2 Gallon Stored-Pressure, Water-Type Fire Extinguishers
5. UL 711 – Standard Rating for testing of Fire Extinguishers
6. UL 1803 – Standard for Factory Follow-up on Third Party Certified Portable Fire Extinguishers

7. UL 1093 – Standard for Halogenated Agent Fire Extinguishers.
8. UL 2129 – Standard for Halocarbon Clean Agent Fire Extinguishers

F. Conform to all applicable standards, local governing Fire Marshall & Building official for fire extinguisher types, sizes, locations and construction.

G. Refer to standards herein listed with specific products/materials.

1.3 PERFORMANCE, TESTING AND INSPECTION **[SPECIFIER, THIS PORTION NEEDS TO BE COMPLETED]**

A. General:

1. Comply with manufacturer's standards.
2. Comply with Building Code.

B. Standards:

Item	**Name of Test**	**Performance**	**Testing Std.**
Fire Extinguisher Agent	ABC, Multi-purpose dry-chemical	An effective agent in extinguishing class A, B, and C fires. The agent base is ammonium phosphate.	NFPA & UL
Fire Extinguisher Agent	Dry-Chemical – BC	An effective agent in extinguishing class B and C fires. The agent base is sodium bicarbonate.	NFPA & UL
Fire Extinguisher Agent	Purple-K Dry-Chemical	An effective agent in extinguishing class B and C fires. It is more effective than conventional dry-chemical agents. The agent base is potassium bicarbonate.	NFPA & UL
Refer to drawings and as herein specified			

C. Sustainability:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings

E. Submit product data

F. Submit installation instructions and drawings

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Catalog Standards:

1. Manufacturer's catalog numbers may be included on Drawings for convenience in identifying specified items. Unless modified by notation on Drawings or specified, catalog description for indicated number constitutes requirements for the item specified.

E. Labeling

1. The identification of the listing and labeling organization, the fire test, and the performance standard that the fire extinguisher meets or exceeds shall be clearly marked on each fire extinguisher.

2. An organization listing fire extinguishers used to comply with the requirements of this standard shall utilize a third party certification program for portable fire extinguishers that meets or exceeds ANSI/UL 1803.

3. Identification of Contents. A fire extinguisher shall have a label, tag, stencil, or similar indicator attached to it providing the following information:

a. The contents' product name as it appears on the manufacturer's Material Safety Data Sheet (MSDS)
b. Listing of the hazardous material identification in accordance with hazardous materials identification systems (HMIS) [in Canada, workplace hazardous materials identification systems (WHMIS)] developed by the National Paint & Coatings Association.
c. List of any hazardous materials that are in excess of 1.0 percent of the contents.
d. List of each chemical in excess of 5.0 percent of the contents.
e. Information as to what is hazardous about the agent in accordance with the Material Safety Data Sheet (MSDS).
f. Manufacturer's or service agency's name, mailing address, and phone number.

F. Extinguishers

1. The classification of fire extinguishers shall consist of a letter that indicates the class of fire on which a fire extinguisher has been found to be effective, preceded by a rating number (Class A and Class B only) that indicates the relative extinguishing effectiveness.
2. Fire extinguishers shall not be exposed to temperatures outside of the listed temperature range shown on the fire extinguisher label.

G. Fire Extinguisher Classifications Schedule:

Fire Classifications			
	Class A Fires in wood, paper, cloth, trash and other ordinary combustibles	Class B Fires in Flammable liquids.	Class C Fires that involve energized electric equipment
Letter Symbol			
Picture Symbol			
Agents:	See Below	See Below	See Below
Multi-Purpose Dry- Chemical	Yes	Yes	Yes
Water	Yes	No	No
FFFP	Yes	Yes	No
Regular Dry-Chemical	No	Yes	Yes
Purple-K Dry Chemical	No	Yes - Kitchens	Yes - Kitchens
Carbon Dioxide	No	Yes	Yes

H. Miscellaneous criteria:

1. All units shall be portable, rechargeable fire extinguishers with stainless steel discharge lever and fixed carry handle.

   a. Valve body shall be heavy-duty 'Dot' Steel cylinder.
   b. All units shall have a short hose/horn unless specified otherwise and visual pressure gauge.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver undamaged products to site in manufacturer's sealed containers or wrappings with legends intact. Store on site secure from weather, soil and physical damage.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish one (1) year written warranty signed by manufacturer and installer agreeing to repair and/or replace cabinets, brackets and fire extinguishers which has failed as a result of defects in materials or workmanship.

C. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK / SECTIONS

A. Related work includes, but is not limited to, the following:

1. Wall Substrate
2. Wall Framing

B. Related Sections include, but are not limited to, the following:

1. Division 1
2. Section 09 22 16 – Non-Structural Metal Framing
3. Section 09 29 00 – Gypsum Board & Sheathing Substrates
4. Section 10 14 00 – Signage

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding operation of the equipment.
2. Complete instructions regarding maintenance of the equipment, materials, finishes, etc.
3. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Coordinate scheduling of required testing with **General Contractor**.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as listed herein and in Drawings:

1. Cabinets / Extinguishers:

a. Potter – Roemer, (800) 366–3473, www.potterroemer.com
b. Larsen, (612) 571–1181, www.larsensmfg.com
c. J.L. Industries, (213) 726–9070, www.jlindustries.com

2. Signage: Refer to Section 10 14 00

3. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS - FIRE EXTINGUISHER TYPES

A. Schedule:

1. Corridors, Open Office & Laboratory:

a. Rating: 3A:40B:C
b. Manufacturer: Potter – Roemer
c. Model: **3006** x 5" diameter x 16" tall
d. Type: ABC Multi-purpose dry chemical
e. Capacity: 6 lbs.
f. Mounting: Cabinet:

1) Match with options below for appropriate size accommodation

g. FM Approved: Yes

2. MDF Room

a. Rating: 10B:C
b. Manufacturer: Potter – Roemer
c. Model: **3410** x 7" diameter x 24" tall
d. Type: Carbon Dioxide
e. Capacity: 10 lbs
f. Accessories: Discharge Horn
g. Mounting:

1) Cabinet where indicated: Match with options below for appropriate size accommodation

h. FM Approved: Yes

3. Kitchen:

a. Rating: 60B:C High Hazard
b. Class: K
c. Manufacturer: Potter – Roemer
d. Model: **3352**
e. Size: 5-1/4″ x x 18-1/2″ tall x 10-3/4″ overall width
f. Type: Purple-K Cartridge Dry Chemical x foam
g. Capacity: 9 pounds
h. Mounting:

1) Cabinet: Typical

i. FM Approved: Yes

2.3 MATERIAL - FIRE EXTINGUISHER CABINETS

A. Semi Recessed	Potter – Roemer	Potter – Roemer
1. Series:	7062 – DV	7067 – DV
2. Model:	Alta	Alta
3. Size: (inside cab)	9″ wide x 24″ tall x 5-3/4″ deep	12″ wide x 27″ tall x 8″ deep
4. Finish:	Stainless Steel, 304 - #4	Stainless Steel, 304 - #4
5. Door Style:	Duo-Vertical Panel	Duo-Vertical Panel
6. Glazing:	Obscure Tempered Safety	Obscure Tempered Safety
7. Lettering:	None	None
8. Extinguisher type:	**3006**	**3410**, **3352**
9. Fire rated cabinet:	Yes – FRC option at rated walls	Yes – FRC option at rated walls
10. Signage:	Refer to Signage specifications	Refer to Signage specifications
11. Trim:	2″ deep	3″ deep
12. Fin. Opening depth:		
a. Non rated:	4", verify with mfg.	5-1/4″, verify with mfgr.

2.4 MATERIAL - FIRE EXTINGUISHER SIGNAGE

A. Surface mounted Two-sided sign

1. Mount: On wall centered and directly above extinguisher / cabinet
2. Model: Refer to Section 10 14 00.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 INSTALLATION

A. Install in accordance with manufacturers instructions

B. Install using fire rated cabinets at all fire rated walls.

C. Install fire extinguishers where indicated and/or approved by **Architect**.

D. Install so that center of handle of fire extinguisher cabinet is 48" above finished floor line.

E. Fire extinguishers mounted in cabinets or wall recesses shall be placed so that the fire extinguisher operative instructions face outward.

1. The location of such fire extinguishers shall be marked conspicuously.

3.5 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 10 44 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 10 51 13 – METAL LOCKERS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the job site.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Metal wardrobe locker types as indicated on Drawings and herein specified, and as needed for a complete and proper installation.

    a. Provide accessible locker(s) with appropriate hardware, shelf heights, locker heights, etc.

2. Accessories:

    a. Latching
    b. Locking
    c. Integral side panel caps/fillers
    d. Integral Channel Sill
    e. Integral sloping top (roof) – cut to fit with integral end panels, splicers, mitered inside corner transitions, etc.
    f. Trim at wall recess locations.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction.

    a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society For Testing and Materials (ASTM), www.astm.org

1. ASTM – A1008/A1008M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvannealed) by the Hot-Dip Process.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	Name of Test	Performance	Testing Std.
Sheet metal material	Grade and coating	Comply	ASTM – A653/A653M
Doors, frames, shelves, tops, bottoms and exposed sides	Gauge	16	Mfgr.
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements
2. Refer to product criteria identified herein

D. **Construction Testing:**

Item	Name of Test	Performance Results	Testing Std.
Doors	Hinges work properly and doors latch	Comply	N/A
Locking	Doors lock properly	Comply	N/A

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturer's data and shop drawings.

1. Materials list of items proposed to be provided under this Section.
2. Manufacturer's specifications and other data needed to prove compliance with the specified requirements.
3. Manufacturer's recommended installation procedures which, when approved by the **Architect**, will become the basis for accepting or rejecting actual installation procedures used on the Work.
4. Layout elevations and sections for each location

E. Submit samples.

1. Color chips showing the standard and optional colors available in the proposed products, and showing extra cost to the **Owner** should the **Architect** select optional colors.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for five (5) years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for five (5) years providing/installing/finishing projects of similar size and complexity.

D. Stipulations:

1. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.
Agenda for meeting shall include, but not be limited to;

1. Wall backing is in place at correct heights and locations.
2. Floor and wall finish extents and installation are coordinated.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Verify location of 18 gauge gal. steel backing plates for locker anchorage

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish one (1) year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner.**

C. Furnish manufacturer's additional **[five] (5)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK / SECTIONS

A. The following is related work including, but not limited to the following;

1. Finish Floor
2. Wall Backing
3. Wall Finish
4. Ceiling/Soffit finish

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 09 22 16 – Non-Structural Metal Framing
3. Section 09 29 00 – Gypsum Board and Sheathing Substrates (includes tackable wall sheathing and cement backer boards)
4. Section 09 30 00 – Tile and Stone

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding operation of the lockers.
2. Complete instructions regarding maintenance of the equipment, materials, finishes, etc.
3. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Sentinel lockers by Tiffin Metal Products, www.sentinellockers.com
2. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.

c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. LOCKER SCHEDULE

1. General:

a. Construction: (rivet installation and spot welding per manufacturers' standard construction)

1) Door: 14 ga. Single piece formation shall be box formed stiffeners on the hinge side and latch side. Both formations shall have a ½" return flange spot welded to the face of the door. Top and bottom flanges shall have one 90° bend. **[Specifier, louvers in face of door an option]**

2) Door frame: 16 ga. Formed into 1" wide face channel shape with a continuous vertical door strike integral with the frame on both sides of the opening. Double and triple tier cross members to be 16 gauge.

3) Body: 24 ga. Steel uprights, backs, tops, bottoms, and compartment dividers.

4) Base: 6" H x 14 ga. Metal "Z" base.

5) Shelves: 24 ga. & flanged on (4) sides

a) Disabled accessible lockers: hasp **[Specifer – this is side reach design, confirm configurations and indicate accessible lockers on plans]**

i. Install additional shelf at 9" above finish floor at bottom of two tier locker arrangements.

ii. Install additional shelf at 9" above finish floor at bottom of single tier locker arrangements.

iii. Three tier locker shelves are acceptable.

6) Top: (Sloped) 24 ga. & flanged on (4) sides

7) Sloped Top / Ends: 18 ga. continuous

8) Fillers: 20 ga.

9) Hooks: Zinc plated steel coat hooks

10) Handle:

a) Lockers:

i. Typical:

a. Recessed padlock compatible.

ii. Disabled accessible:

a. Recessed stainless steel locking handle w/ padlock hasp **[Specifer, confirm that we have 1 for every 10 lockers ADA/Title 24 accessible]**

i). Disabled accessible handle at 1 per 10 lockers unless noted otherwise.

a. Location as directed by **Architect.**

11) Locking/Latching:

a) 11 gauge lug welded to the locker frame, located midway up the door. Door Handle to be 20 gauge drawn stainless steel, secured to the door with a slotless screw and nylon nut, includes a spring loaded latch to hold the door closed when not locked.
b) Frame Hook
c) Spot welded hinge reinforcing
d) Padlock hasp
e) Accessible operating hardware at handicap accessible locker(s)

i. Install Handicap accessible signage on accessible locker(s)

a. Model: #8690

12) Venting: Full perimeter opening, plus air flow slots in the top and bottom flanges of the door.
13) Hinges: 16 ga. continuous – riveted to frame full height of door.
14) Interior Equip: Manufacturers standard X zinc plated finish.
15) Identification: ½" tall black text on polished aluminum plates.
16) Arrangement: As indicated on Drawings, field verify opening prior to fabrication
17) Finish: Electrostatically applied powder coat enamel baked on at 350 – 400°.
18) Color **[Specifier, select]** Refer to Drawings finish schedule.

2. Locker Types:

a. Model: Configuration: Size:

1)	Guardian Defiant	Four Tier:	12" wide x 12" deep x 18" high	x 72" overall
2)	Guardian Defiant	Triple Tier:	12" wide x 15" deep x 24" high	x 72" overall
3)	Guardian Defiant	Double Tier:	12" wide x 15" deep x 36" high	x 72" overall
4)	Guardian Defiant	Single Tier:	12" wide x 15" deep x 72" high	x 72" overall

3. Bench (Movable)

a. Size: 9.5" wide x 1.25" thick
b. Ht: 17.5"
c. Bench: 9½' wide x 1¼' full laminated maple
d. Pedestal Legs: ¼" x 3" trapezoidal shape aluminum bar stool pedestal legs mounted to bench top (black anodized finish).
e. Arrangement: As indicated on Drawings

2.3 OTHER MATERIALS

A. Provide other materials not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 FABRICATION

A. General:

1. Construction:

a. Built on the unit principle - each locker shall have an individual door and frame, individual top, bottom, back and shelves with common intermediate uprights separating compartments.
b. Lockers shall be fabricated square, rigid and without warp. Doors shall be flat and free of distortion.

2. Door frame:

a. All door frame members to be not less than 16 gauge formed to a channel shape. Vertical members to have an additional flange to provide a continuous door strike. Intermembering parts to be mortised and tenoned and electrically welded together in a rigid assembly capable of resisting strains.

b. Cross frame members of 16 gauge channel shapes including intermediate cross frame on double and triple tier lockers shall be securely welded to vertical framing members to ensure rigidity.

3. Body:

a. Bolt spacing in locker body construction not to exceed 9"o.c.
b. All locker body components shall be made of cold rolled steel specially formed for added strength and rigidity and to ensure tight joints at fastening points.
c. Tops & bottoms shall be 24 gauge with three sides formed 90 degrees and the front offset formed to be flush with the horizontal frame member.
d. Shelves shall be 24 gauge with four sides formed to 90 degrees, the front edge shall have a second bend.
e. Backs & sides shall be 24 gauge.

4. Doors:

a. Doors 20" or higher shall be formed from one piece 14 gauge steel. Formations shall be box formed stiffeners on the hinge side and latch side. Both formations shall have a 1/2" flange spot welded to the inside face of the door. Top and bottom flanges shall have one 90 degree bend. For long life, the door shall be manufactured from one integral piece.
b. Door shall be manufactured to allow maximum ventilation and stiffness.

5. Door handle & latching 1, 2 & 3 tier:

a. Handles shall be recessed in the door. The formed pocket shall be brushed stainless steel securely fastened to the door with two lugs plus a positive tamper resistant fastener. The pocket shall be of sufficient depth to prevent a combination padlock, built-in combination lock or key lock from protruding beyond the face of the door. A lock hole cover plate shall be provided for use with padlocks. All pockets shall be 20 gauge drawn steel for superior strength. Door pull shall be formed in the pocket. Pocket and pull shall be integral.
b. Doors shall have a catch to retain unlocked doors in the closed position. Locking shall be accomplished by an 11 gauge lug welded to the locker frame. The lug shall include a surface for the bolt of a built-in combination or key lock to engage. A padlock staple shall protrude through the 20 gauge pocket. The lug shall include an anti-pry flange and notch to deter prying open when locked. Rubber door silencers shall be firmly attached to the locker frame.
c. Handicap accessible operating hardware at accessible locker(s).

6. Ventilation:

a. Shall be facilitated by air flow slots located in the top & bottom flange of the door. The door front shall be flush with no exposed louvers.

7. Number plates:

a. Each locker door to be supplied with a polished aluminum number plate, 2-1/4" wide x 1" high, with black numerals not less than 3/8" high. Number plates shall be attached to the face of the door with two aluminum rivets.

8. Interior equipment:

a. Single tier lockers 60" or higher shall have a hat shelf located approximately 9" below the top of locker; if less than 18" deep, locker shall have three single-prong hooks and one double-prong ceiling hook. Single tier lockers 18" or more in depth shall have a coat rod instead of a ceiling hook. 30" & 36" high lockers shall have three single-prong wall hooks and one double-prong ceiling hook. Hooks to be steel, ball tip zinc plated, attached with two bolts per hook. 20" & 24" high lockers to have three wall hooks for 12" wide and four wall hooks for 15" and wider.

9. Locker accessories:

a. Lockers shall be furnished with the accessories selected from the Accessory Specifications.

3.5 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Install metal lockers plumb, level and flush.

C. Anchor lockers to the floor and wall 48" on center or less as recommended by the manufacturer.

D. Install sloping hoods and metal fillers using concealed fasteners. Provide flush hairline joints against adjacent surfaces.

E. Deliver the keys to the **Owner** at the job site.

3.6 ADJUSTING

A. Test operation of equipment, components, etc. and adjust as needed to produce fully functioning units that comply with requirements.

3.7 CLEANING

A. Remove all dust, dirt, finger marks, etc. from signs and letters, as recommended by manufacturer.

B. Keep building and premises free from accumulated waste materials, rubbish and debris resulting from work described herein. Upon completion of said work, remove tools, appliances, surplus materials, waste materials, rubbish, debris and accessory items used in or resulting from said work, and legally dispose of off site.

C. Adjust doors and latches to operate without binding. Verify that latches are operating satisfactorily.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

E. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

F. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

G. After completion of work in this section, remove all erection equipment and implements of service, and debris.

H. Leave entire area in a neat, clean, acceptable condition.

I. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

J. Provide record drawings in accordance with Division 1 closeout submittal procedures.

K. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 10 51 13

SECTION 12 48 13 – ENTRANCE FLOOR MATS AND FRAMES - CARPETS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified and as necessary to complete the work.

1. Poured in place recessed Entry mat and frame.

a. Size and shape to accommodate Drawings.

2. Tread type, finish & color to match item specified.

E. Coordinate with related trades for appropriate slab recess, size, shape, etc.

1.2 SUBMITTAL

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Material list: Submit typed list of all material and products proposed for use, which shall include manufacturer's published technical literature.

1.3 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

1.4 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURER

A. Single source responsibility, specified items shall be from one manufacturer.

B. Manufacturer shall be subject for compliance with all requirements of the documents (**both Drawings and Specifications**), provide products from one of the following Acceptable manufacturers.

1. Construction Specialties Inc., www.c-sgroup.com (800) 233-8493
2. KADEE Industries www.kadeeindustries.com , (800) 321 – 3827

3. Babcock-Davis www.babcockdavis.com (888) 412-3726
4. Reviewed Equivalent by **Architect.**

   a. Substitutions shall require Architect's approval and shall be given in letterform.
   b. Refer to Division 1 for substitution, deviation and/or submittal procedures.

C. All specified materials indicated are as manufactured by listed company and shall be installed according to current listed specification requirements.

2.2 MATERIALS

A.	Frame:	Recessed Level Base (integral frame poured in place with the finish floor slab)
B.	Model No:	Pedigrid G1
C.	Overall thickness:	1-11/16"
D.	Tread Rails:	6105-T6 aluminum spaced 1-1/2" on the center
E.	Tread Insert:	Heavy duty carpet
1.	Color:	To be selected by Architect from manufacturer's standard colors

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Examine the areas and conditions under which work of this section will be performed. Correct conditions for proper completion of the work. Do not proceed until unsatisfactory conditions are corrected.

3.2 PREPARATION

A. Take all necessary measurements in the field to ensure proper dimensions

B. Coordinate work under this Section with other trades whose work adjoin, combine, or align with work under this section.

3.3 INSTALLATION

A. Install the work of this Section where shown on the drawings and in strict accordance with the manufacturers installation instructions.

1. Assemble frames and install in conjunction with the pouring of the finish concrete floor, provide a uniform recess in the slab to the required depth & insure a true, level and square installation of the frame.
2. Delay installation of the treads until the building enclosure and major interior finishes are completed to insure that treads are not damaged.
3. Protect frames after installation by use of a temporary plywood fill piece / cover. Be careful to provide a smooth cover without edges that would create a tripping hazard.

3.4 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Keep areas of work and building free from accumulated debris, rubbish and waste materials as work progresses & dispose of after work is completed.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no cost to the **Owner**.

E. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

F. Provide record drawings in accordance with Division 1 closeout submittal procedures.

END OF SECTION 12 48 13

THIS PAGE IS INTENTIONALLY BLANK

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. All Division 21 Sections.

B. Division 1.

1.02 SUBMITTALS

A. General:
   1. Refer to Section 01 00 00.
   2. Substitutions and changes from the approved drawings will be a deferred approval item. Such items must be signed by the Architect and approved by DSA prior to fabrication or installation.

B. Preparations.
   1. Prior to data collection and compilation, prepare and submit in duplicate an outline of the proposed organization and content.
   2. Compilation: Prepare and collect data concurrently with construction progress. Compile per submitted outline.

PART 2 - PRODUCTS

2.01 OPERATION AND MAINTENANCE MANUALS

A. Form of Submittals
   1. Prepare data in form of an instructional manual for use by Owner's personnel.
      a. Cover: Identify each volume with typed or printed title, "OPERATING AND MAINTENANCE INSTRUCTION". List:
      b. Title of Project.
      c. Provide indexed tabs.
      d. Identify of separate structure as applicable.
      e. Identity of general subject matter covered in the manual.
   2. Format:
      a. Size: 8-1/2" x 11".
      b. Paper: 20 pound minimum, white, for typed pages.
      c. Text: Manufacturer's printed data, or neatly typewritten.
      d. Drawings:
         1) Provide reinforced punched binder tab, bind in with text.
         2) Fold larger drawings to size of text pages.
      e. Provide fly-leaf for each separate product, or each piece of operating equipment.
         1) Provide typed description of product and major component parts of equipment.
         2) Provide indexed tabs.
   3. Binders:
      a. Commercial quality three-ring binders with durable and cleanable plastic covers.
      b. Maximum ring size: 1".
      c. When multiple binders are used, correlate the data into related consistent groupings.

PART 3 - EXECUTION

3.01 OPERATION AND MAINTENANCE DATA

A. General: Record data and operation and maintenance data are complimentary. Submittal items which may be required under both categories may be included only under one submittal if a statement to that effect is included in the other submittal.

B. Quality Assurance
   1. Preparation of data shall be done by personnel.
      a. Trained and experienced in maintenance and operation of described products.
      b. Familiar with requirements of this Section.
      c. Skilled as technical writer to the extent required to communicate essential data.
      d. Skilled as draftsman competent to prepare required drawings.

C. Content of Manual
   1. Neatly typewritten table of contents for each volume, arranged in systematic order.
      a. A list of each product required to be included, indexed to content of the volume.
      b. List, with each product, name, address and telephone number of:
         1) Subcontractor or installer.
         2) Maintenance contractor, as appropriate.
         3) Identify area of responsibility of each.
         4) Local source of supply for parts and replacement.
      c. Identify each product by product name and other identifying symbols as set forth in Contract Documents.
   2. Product Data:
      a. Include only those sheets which are pertinent to the specific product.
      b. Annotate each sheet to:
         1) Clearly identify specific product or part installed.
         2) Clearly identify data applicable to installation.
         3) Delete references to inapplicable information.
   3. Drawings:
      a. Supplement product data with drawings as necessary to clearly illustrate.
         1) Relations of component parts of equipment and systems.
         2) Control and flow diagrams.
      b. Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation
      c. Do not use Project Record Documents as maintenance drawings.
   4. Written text, as required to supplement product data for the particular installation.
      a. Organize in consistent format under separate headings for different procedures.
      b. Provide logical sequence of instructions for each procedure.
   5. Factory Authorized Start-Up Report.
      a. Provide a factory start-up report for each piece of equipment. Contractor start-up reports, unless contractor is a factory authorized representative will not be allowed.
   6. Copy of each warranty, bond and service contract issued.
      a. Provide information sheet for Owner's personnel, give:
         1) Proper procedures in event of failure.
         2) Instances which might affect validity of warranties or bonds.

D. Manual for Equipment and Systems:
   1. Submit three copies of complete manual in final form.
   2. Content, for each unit of equipment and system, as appropriate.
      a. Description of unit and component parts.
         1) Function normal operating characteristics, and limiting conditions
         2) Performance curves, engineering data and tests.
         3) Complete nomenclature and commercial number of replaceable parts.
      b. Operating procedures:
         1) Start-up, break-in, routing and normal operating instructions.
         2) Regulation, control, stopping, shut-down and emergency instructions.
         3) Summer and winter operating instructions.
         4) Special operating instructions.
      c. Maintenance Procedures:
         1) Routing operations.

2) Guide to “trouble-shooting”
3) Disassembly, repair and reassemble.
4) Alignment, adjusting and checking.

d. Servicing and lubrication schedule.
1) List lubricants required.

e. Manufacturer’s printed operating and maintenance instructions.

f. Description of sequence of operation by control manufacturer.

g. Original manufacture’s parts list, illustrations, assembly drawings and diagrams required for maintenance.
1) Predicted life of parts subject to wear.
2) Items recommended to be stocked as spare parts.

h. As-installed control diagrams by controls manufacturer.

i. Each contractor’s coordination drawings:
1) As-installed color-coded piping diagrams.

j. Charts of valve tag numbers, with location and function of each valve.

k. List of original manufacturer’s spare parts, manufacturer’s current prices, and recommended quantities to be maintained in storage.

l. Other data as required under pertinent sections of specifications.

3. Content for each electric and electronic system, as appropriate.
a. Description of system and component parts.
1) Function, normal operating characteristics, and limiting conditions.
2) Performance curves, engineering data and tests.
3) Complete nomenclature and commercial number of replaceable parts.

b. Circuit directories of panel boards.
1) Electric service.
2) Controls.
3) Communications

c. As-installed color coded wiring diagrams.

d. Operating procedures.
1) Routing and normal operating instructions.
2) Sequences required.
3) Special operating instructions.

e. Maintenance procedures.
1) Routine operations.
2) Guide to “trouble shooting”.
3) Disassembly, repair and reassembly.
4) Adjustment and checking.

f. Manufacturer’s printed operating and maintenance instructions.

g. List of original manufacturer’s spare parts, manufacturer’s current prices, and recommended quantities to be maintained in storage.

h. Other data as required under pertinent sections of specifications.

i. Additional requirements for operating and maintenance data: Respective sections of Specifications.

E. Submittal Schedule
1. Submit tow copies of preliminary draft of proposed formats and outlines of contents prior to start of work.
a. Architect will review draft and return one copy with comments.
2. Submit one copy of complete data in final form fifteen days prior to final inspection or acceptance.
a. Copy will be returned after final inspection or acceptance, with comments.
3. Submit specified number of copies of approved data in final form 10 days after final inspection or acceptance.

F. Instruction of Owner's Personnel.
   1. Prior to final inspection or acceptance, fully instruct Owner's designated operating and maintenance personnel in operation, adjustment and maintenance of products, equipment and systems
   2. Operating and maintenance manual shall constitute the basis of instruction.
      a. Review contents of manual with personnel in full detail to explain all aspects of operations and maintenance.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. All Division 21 Sections.

1.02 SUMMARY

A. Furnish and install all mechanical work shown on the drawings, specified herein, and as required for a complete and functional installation.

B. This section includes materials and methods applicable to the work described in all Division 21 Sections. Specific work requirements of individual Mechanical Sections take precedence if in conflict with requirements of this Section.

C. All chemicals utilized on site as part of coating, sealant, and other products shall not contain any chemical that is listed as part of Proposition 65 known carcinogens that are identified by NTP, IARC, and the USEPA California Proposition 65 chemical repository contractors are not allowed to bring these chemicals on any California Intel site.

1.03 DRAWINGS AND SPECIFICATIONS

A. For purposes of clearness and legibility, drawings are essentially diagrammatic and, although size and location of equipment are drawn to scale wherever possible, the Contractor shall make use of all data in all the contract documents and shall verify this information at building site.

B. Information presented on Drawings and in the Specifications is based upon latest data available during their preparation. The Drawings and Specifications are for the assistance and guidance of the Contractor and exact locations, distances, levels, etc. will be governed by the structures and the site the contractor shall accept same with this understanding.

C. The drawings indicate required size and points of termination of pipes, and suggest proper routes to conform to the structure, avoid obstructions and preserve clearances. However, it is not intended that drawings indicate all necessary offsets, and it shall be the work of the Contractor to make the installation in such a manner as to conform to structure, avoid obstruction, preserve headroom and keep openings and passageways clear.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Contractor shall be responsible for delivery, storage, protection and placing of all equipment and materials.

B. Equipment stored and installed at the job site shall be protected from dust, water or other damage. Cover all equipment stored exposed to weather.

1.05 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer.

1.06 CODES AND SAFETY ORDERS

A. All work and materials shall be in full accordance with the latest rules and regulations of the State Fire Marshall; the Safety Orders of the Division of Industrial Safety; the I.S.O. codes;
   1. The 2022 California Plumbing Code
   2. The 2022 Title 24, Part 5;
   3. The 2022 California Mechanical Code, Title 24, Part 4
   4. The 2022 California Building Code, Title 24, Part 2,
   5. Current NFPA Codes, and other applicable laws and regulations.
   6. Nothing in the Drawings or Specifications shall be construed to permit work not conforming to these codes. Drawings and Specifications take precedence when work and materials

called for exceed Code requirements.

1.07 INSTALLATION

A. Manufacturer's Instructions:
   1. When specifications require that installation comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation.
   2. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by specifications.
   3. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.
   4. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Engineer for further instructions.
   5. Do not proceed with work without clear understanding.

1.08 PERMITS AND FEES

A. Obtain all permits and pay all required fees for permits and/or utility services. Inspections required during the course of construction shall be arranged as required. On completion of the work furnish the owners representative with certificates of inspection.

1.09 SITE CONDITIONS

A. Assume all responsibility for damage to adjoining properties; and restore property to its original condition, should damage occur as a result of the work of this section. Contractor shall thoroughly familiarize themselves with all site conditions. Should utilities not shown on the drawings be found during excavations, promptly notify the Architect for instructions as to further action. Failure to do so will make the Contractor liable for any and all damage thereto arising from his operations subsequent to discovery of such utilities not shown on plans.

1.10 SUBMITTALS

A. General
   1. A submittal schedule shall be issued by the contractor within 15 days of award of the contract. This schedule shall allow for timely review and approval as required by the contract documents.
   2. These requirements apply only to substitutions, submittals, and shop drawings.
   3. The contractor shall review all submittals prior to submission to the Architect. Submittals not reviewed by the contractor will be returned to the contractor and will not be reviewed.
   4. Any deviations from specified requirements shall be clearly indicated in submittals.
   5. Any errors in or omissions from submittals and any consequences of these are the responsibility of the Contractor.
   6. Partial or incomplete submittals may be rejected as not complying with requirements; the Contractor shall be liable for any resultant consequences.
   7. Delayed submittals may be rejected as not complying with requirements. Whether accepted or rejected, delayed submittals will not be considered justification for extension of contract time or similar relief.
   8. Submittals not required or permitted by the Specifications but made at the option of the Contractor, will be returned without review unless accompanied with written valid justification.
   9. Submittal items improperly included with those of another category (such as a proposed substitution included with shop drawing submittal) are not valid and will be returned without review.
   10. Within 35 calendar days after award of the contract, and before fabrications and installation of any material or ordering of any materials, submit for approval one copy in PDF format of complete submittal data on specified and proposed substituted equipment and materials. Submittals shall list all materials proposed identified with drawing symbols and specific data on equipment such as arrangements, performance curves, sizes, capacity, motor locations,

and other pertinent data. Check all submittals for conformance to the requirements of the Construction Documents before forwarding to the architect for each item. No consideration will be given to substitutions submitted past 35 day limit. The contractor shall be responsible for all quantities and errors and omissions of submittals. Furnish samples when requested.

11. Equipment and materials specified as part of the specifications and drawings are listed by two manufacturer's names. The first named manufacturer is the basis of design. The second named manufacturer has been determined to be an equivalent in quality or utility. The second named has not been specifically determined to conform to the first named in size, layout, electrical power, voltage, or impacts to building structure. The contractor is bound by all requirements for substitutes, as described below, for all second named manufacturers and equivalent equipment or products.
12. Each reviewed submittal will be marked to indicate review and directions as stated below.
13. Acceptance of a submittal does not relieve the Contractor of responsibility for omissions from the submittal or errors in the submittal.

B. Requirements
   1. Refer to Division 1, Special Conditions.
   2. Submit on all items specified herein:
      a. Shop Drawings as specified by NFPA 13
      b. Material catalog data
      c. Calculations
      d. Welder Certificate for pipe welding
      e. The certificate of flushing and test results (on the National Automatic Sprinkler and Fire Contractors Association [NAS & FCA] form)

C. Review
   1. Submittals will be reviewed for general acceptability, not necessarily including all details. The engineer's review is for general conformance with the design concept of the project and the information given in the contract documents. The contractor is solely responsible for confirming and correlating all quantities and dimensions; selecting fabrication processes and techniques of construction; coordinating the work with that of other trades and performing all work in a safe and satisfactory manner. Corrections of comments made on this submittal during this review do not relieve contractor from compliance with the requirements of the contract documents or with its responsibilities listed herein.
      a. Proposed substitutes will be judged not only for the acceptability of the items themselves, but also how they will be used under the conditions of the particular project.
      b. Proposed substitutions will be judged also for compliance with qualifications and conditions stipulated in paragraph 1.13.
   2. Each reviewed submittal will be marked to indicate review and directions as stated below.
      a. Acceptance of a substitute does not waive the specified requirements.
      b. Once a substitution is accepted, no revision or resubmittal may be made except for pressing and valid reason and after receipts of approval to do so.

D. Review Directions
   1. The notation "No Exceptions Taken" indicates that no further submittal on the particular matter is required and that the Contractor may proceed with normally ensuing action. The notation may be applied to submittals on substitutions, shop drawings, record data, or operation and maintenance data. The submittal has only been reviewed for general conformance with the design concept of the Contract Documents. The contractor is responsible for the dimensions to be confirmed and correlated at the job site; information that pertains solely to the fabrication process or to the means and methods of construction; coordination of the work of all trades; and performing all work in a safe and satisfactory manner. This notation does not modify the contractor's duty to comply with the contract documents.
   2. The notation "Make Corrections Noted" indicates that no further submittal on the particular

matter is required, but the Contractor shall make all changes or corrections noted (but no others) before proceeding with normally ensuing action. The notation may be applied to submittals on substitutions or shop drawings (but usually not record data or operation and maintenance data).

3. The notation "Amend and Resubmit" indicates that the submittal is not accepted and must be revised, resubmitted, and reviewed again. In the case of submittal on substitutions and shop drawings so noted, the Contractor shall not proceed with any normally ensuing action until the resubmittal is reviewed. The notation may be applied to submittals on substitutions, shop drawings, record data, or operation and maintenance data.
4. The notation "Rejected - See Remarks" indicates that the submittal is not accepted and that resubmittal on the same subject matter is not allowed and will not be considered. The notation will be applied normally only to submittals on substitutions (usually not on shop drawings, record data, or operation and maintenance data).
5. The notation "Returned Without Review" indicates that the submittal or item has not been considered officially because it is either not proper, valid, required, or permitted by the Specifications and has no status or effect.

1.11 SHOP DRAWINGS

A. Prepare and furnish complete detailed plans for the installation of an automatic fire sprinkler system which will provide for maximum rate reduction in fire insurance premiums per requirements of, CBC, the State Fire Marshall, and conform to the supply main and riser locations as shown on the drawings.

B. These are working drawings of the building piping, as required by NFPA 13 and 24.

C. Include copies of the hydraulic calculations with each submittal prescribed above.

D. Submit six (6) sets of the above, bearing the "accepted" stamp of the, the local fire department for review and approval. Submit one set of final corrected record drawings. After review, make all corrections required and make final submittal of three (3) reproducible transparencies and 6 blue line sets to the Architect.

E. The drawings submitted by the sprinkler contractor must show sufficient detail and dimensions to clearly indicate that sprinkler lines will be concealed or arranged neatly in exposed areas and will not conflict with structural, mechanical or electrical provisions as shown on the plans. Show feed main hanger locations.

F. Closely coordinate the schedule of this work with the work schedules or all other contractors.

G. The contractor is responsible for providing all shop drawings as described below so that the design professional has the opportunity to determine if the contractor understands the contract documents. It is not the purpose of shop drawings to assure that the contractor is meeting the requirements of the contract documents. Review and approval of a submittal neither extends nor alters any contractual obligation.

H. Accompany all substituted equipment with shop drawings showing revised ductwork and/or piping layouts in order to ascertain that substituted equipment does not adversely affect layout or work of others. Shop Drawings: The following conditions apply to shop drawings:
   1. Shop drawings are not and do not become Contract Documents.
   2. Processed shop drawing submittals and any instructions or requirements noted thereon are a part of the work, but they may not be used as a means of increasing the scope of the work.
   3. If deviations, discrepancies, or conflicts between shop drawing submittals and the Contract Documents are discovered either prior to or after the submittals are processed, the Contract Document requirements shall govern.

1.12 SUBSTITUTIONS

A. Whenever any equipment, material, or process is indicated or specified by patent of proprietary

name and/or name of Manufacturer, in the Specifications and/or on the Drawings, it is understood that such specification is used to facilitate the description of the material and/or process and deemed to be followed by the words "or equal" unless noted "no substitute".

B. Substitute equipment and materials shall be equal in all respects including quality, arrangement, utility, physical size, capacity, and performance to those specified. Approval of substitute material will not relieve the contractor from complying with the requirement of the Drawings and Specifications. The contractor shall be responsible and at his own expense, for any changes caused by proposed substitutions which affect other parts of his own work or the work of other contractors.

C. The submittal of a proposed substitution shall clearly establish the following:
   1. The item can be transported into and installed in the intended space and in the manner shown.
   2. Required connections (electrical, piping, and other) can be properly made and adjoining work can be properly accomplished.
   3. The proposed substitute is similar to and of substance equal to that specified, is suited to the same use as that specified, and will perform the functions required by the design.
   4. Motors for proposed substitute equipment will have the same minimum differential between motor brake horsepower and motor nameplate horsepower as the specified equipment.
   5. All performance requirements shall be at least equal to the specified product or equipment including noise levels, cooling capacity, heating capacity, air flow quantity, etc.

D. By submitting a proposed substitution, the Contractor agrees to the following:
   1. He will assume full responsibility for any and all modifications and necessary alterations arising from the use of the substitute item or material including all cost incurred by all other trades.
   2. He will assume full responsibility for any delay in the construction schedule resulting from the use of the substitution.
   3. He will prove harmless and indemnify the Owner and the Owner's design consultants from real or alleged damages that may result from the installation, use, or performance of a substitute material or product.

E. The following conditions apply to substitutions:
   1. Submittals of substitutions are not and do not become part of the Contract Documents.
   2. Contractor shall not order, fabricate, use, or install any substitute product or procedure unless he has received acceptance of the substitute from the Engineer.
   3. Should the Contractor install any substitute product in violation of the above he shall remove it and install the specified product at his own expense.
   4. The Contractor shall provide a letter stating that all the above items shall apply to all substituted products and equipment.
   5. Any submittal for substituted equipment or product that does not clearly show that the substituted item is equal shall be marked rejected and no further submittal shall be allowed on the substituted item. Provide in submittal format documentation that the proposed item is exactly as specified in the contract documents.

1.13 GUARANTEE

A. Guarantee all work for one year from date of acceptance, against all defects in material, equipment and workmanship including repair of damage to any part of the premises resulting from leaks or other defects in material, equipment and workmanship. Guarantee shall be on form supplied by the owner's representative.

1.14 RECORD DRAWINGS

A. Indicate on reproducible drawings the actual location of all ductwork, piping and equipment as the work progresses. Dimension locations of underground service mains and branches. Deliver the drawings to the architect at the completion of the job.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Shop drawings:
   1. Make all drawings to an appropriate scale, large enough to show all pertinent aspects of the item and the method of its connection into the work.
   2. Make each drawing sheet in a reproducible form such a tracing, sepia, or Mylar transparency.

B. Grouping: Combine submittals in logical groupings; for example, submit Shop Drawings grouped by Sections of the Specifications, arranged in the specified sequence.

C. Shop Drawings: Four blue or black line prints of each for the Engineer.

D. Content:
   1. Shop drawings may be:
      a. Drawings or diagrams prepared by the Contractor, a supplier, a manufacturer, or other.
      b. Typewritten data or descriptions.
      c. Manufacturer's printed brochures, descriptions, charts, instructions, or data sheets.

E. Timing: Submit all shop drawings prior to installation of any items included in submittal.

2.02 CORROSION PROOFING

A. Corrosion Proofing / U.V. Protection: Products which will be installed outdoors, exposed to the weather, exposed to moisture, or other potentially damaging conditions shall be constructed to resist the effects of such exposure.

B. Exterior casings shall have lapped or gasketed joints effectively sealed to prevent intrusion of moisture or other injurious substances.

C. Casings, ducts, pipes, or product items shall be constructed of materials which are fully resistant to harmful substances they may normally contact, or (if ferrous) shall be galvanized after fabrication, or shall be fully protected from such substances by paint or other coating in appropriate thickness or number of coats.

D. All bolts, nuts, screws, and washers shall be galvanized unless specified to be plated or unprotected.

E. Any exposed plastic pipe must have a U.V. inhibitor.

2.03 MATERIAL AND EQUIPMENT

A. All material and equipment shall be new, of the type, capacity and quality specified and free from defects. All materials and equipment shall be of the same brand or manufacturer throughout for each class of material or equipment wherever possible.

2.04 ACCESS BOXES

A. For below grade valves and piping devices
   1. Christy Concrete Products Company, Brooks, with galvanized steel checker plate recessed traffic lid flush with rim of box. Lids for boxes located in areas subject to vehicular traffic shall be constructed to withstand H20 live loading as defined by the American Association of State Highway Officials (16,000 pound maximum individual wheel load). Service identification shall be conspicuously welded on lid before galvanizing. Provide manufacturer's box extensions to bring box bottom three inches below bottom of valve and box top flush with finish grade.

2. Box sizes (non traffic)

Type Valve	Valve Size	Box No.
Water	2 1/2" and smaller	B-9
Water	3" and 4"	B-16
Water	5" and 6"	B-30
Water	8"	B-36

2.05 ACCESS DOORS

A. Unless specified otherwise by the Architect, provide access doors of the following type:

B. Concealed hinges, prime coated with rust-inhibitive paint, style of door to suit wall, ceiling, floor or roof construction and fire rating.
   1. Milcor Type M
   2. Milcor Type UFR, fire resistive type Underwriters Laboratory Class B, 1-1/2 hour rating meets CBC, IBCO and BOCA codes for two hour rated walls self latching with key lock, Elmdor/Stonman Type FR or equal.

C. Minimum size; 18" by 18".

D. Wall and ceiling access doors: Furnish as required for access to ducts, damper operators, duct mounted access panels, etc.; coordinate size and location to obtain access.

E. See architectural drawings for further requirements.

2.06 MISCELLANEOUS EQUIPMENT AND MATERIALS

A. Furnish and install miscellaneous equipment and materials required for the systems described whether or not specifically shown or specified.

PART 3 - EXECUTION

3.01 ACCESSIBILITY

A. Do not install any equipment, valve, control, motor, filter, or any other device requiring maintenance or service in an inaccessible location or position. Install access doors as specified herein to render all such equipment serviceable whether specifically shown on the plans or not. Maintain code clearance to all equipment. Coordinate location of doors with lights, etc., and locate symmetrically with same.

3.02 PREPARATION

A. Observations: Check all project drawings and specifications; report any discrepancies before proceeding with the work and in time to avoid unnecessary rework.

B. Investigation: Examine the areas, conditions, and status of other work contiguous or connecting to the work to be performed; ensure that the time of installation is coordinated with other work.

C. Interruptions of Service: Portions of this work may involve connection to existing work, facilities, or utilities ties and may require interrupting shutdowns of same. Carefully plan, coordinate and execute such work so that any interruptions will be kept to a minimum in time and occurrence. Submit request for shutdowns and make shutdowns only after receiving written approval from the Owner.

D. Other: Correct any unsatisfactory conditions that may impede proper execution of the work. Ensure that all arrangements, personnel, materials, and tools are appropriate and adequate before proceeding.

3.03 INSTALLATION

A. General:
   1. Material and equipment incorporated in the work shall be used or applied only for the purpose intended or specified.
   2. Install piping and ductwork and all equipment that requires access with minimum vertical and horizontal clearances required by OSHA for service.
   3. All mechanical systems such as ductwork, pipes and all other equipment shall have 2 inches minimum clearance.
   4. Do not proceed with work without clear understanding.

B. Manufacturer's Instructions:
   1. When specifications require that installation comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation.
   2. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by specifications.
   3. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.
   4. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Engineer for further instructions.
   5. Do not proceed with work without clear understanding.

3.04 DEMOLITION

A. General
   1. Procedures shall be determined by the contractor.
   2. Demolition work shall not be commenced until all temporary work such as fences, barricades, and any required warning lights and apparatus are furnished and installed and as required by law, regulation, or ordinance, or elsewhere in this specification.
   3. Demolition work shall proceed in such a manner as to minimize the spread of dust and flying particles and to provide safe working conditions for personnel.
   4. Fires and explosives shall not be permitted.

B. Protection
   1. Contractor shall conform to all Federal, State, and local ordinances related to the protection of the public and Contractor’s personnel and the flow of traffic. Provide protection for persons and property throughout the progress of the work.
   2. Existing work damaged by the contractor in the execution of this Contract shall be restored to former condition by the contractor to the satisfaction of the Owner without an increase in the Contract Sum and without an extension of the Contract Time.

C. Disposition of Materials
   1. All materials and equipment not scheduled to be salvaged, including debris and all rejected salvaged materials, shall become the property of the Contractor and shall be disposed of off site in a legal manner. Location of dump and length of hall shall be the contractor’s responsibility.

3.05 LOCATION OF EQUIPMENT AND PIPING

A. Where job conditions do not permit the installation of piping, etc. in the location shown, it shall be brought to the engineer's attention immediately before fabrication of piping, etc. and the relocation required shall be determined in a joint conference.

B. The contractor will be held responsible for the relocating of any items installed without first obtaining the architect’s or engineer’s approval. Remove and relocate such items at The contractors expense as so directed by the architect or engineer.

C. Where piping is left exposed within a room, run in vertical or horizontal planes. Maintain uniform spacing between parallel lines and/or adjacent wall, floor or ceiling surfaces.

D. Horizontal runs of pipe suspended from ceilings shall provide for maximum clearance below.

E. Make minor changes in locations of equipment, piping, etc. from locations shown including minor offsets when directed by the engineer, at no additional cost to the owner.

3.06 CARE AND CLEANING

A. Clean and adjust all equipment at completion of installation to provide operating conditions satisfactory to the engineer. Remove broken, damaged or defective parts; repair or replace as directed by engineer. Remove surface material and debris resulting from this work when directed.

3.07 FLASHINGS

A. Furnish and install a waterproof flashing for each pipe, duct, or other penetration through roof or wall. Flashings shall be 4 lb. seamless lead flashings Semco 1100 series with counter flashing as detailed, except in metal roofs flashing for pipes through roof shall be furnished by the roofing contractor. Where details are not specifically delineated, submit details for review.

3.08 PAINTING

A. Painting is included under the Painting and Finishing Section. It shall be the responsibility of the Mechanical Contractor to properly protect all equipment and controls during painting operations and the Mechanical Contractor shall repair and/or replace any item damaged due to painting that was not properly protected.

3.09 ACCESS DOORS

A. Provide access doors to all concealed equipment, valves, controls, etc. Locate doors where shown or to be coordinated and symmetrically located with lights, diffusers, etc. Access doors furnished by the mechanical contractor shall be installed by the general contractor.

3.10 RECORD DATA

A. Compilation
   1. Record and collect information concurrently with construction progress and date all entries; make drawing entries within 24 hours after occurrence of change or installation requiring recording. Any concealed work covered before recording data shall be uncovered as directed or as necessary to obtain data.
      a. Record information on drawing prints using an erasable colored pencil (not ink or indelible pencil); describe clearly by note or graphic line as appropriate.
   2. Locate any concealed work adequately to allow future access with reasonable ease and accuracy.
      a. Identify the plan location of all stub outs, pipe lines, etc., which are buried or concealed in the structure, whether installed where shown on the contract drawings or in a different location; show actual field dimensions from column lines, wall lines, or other permanent reference lines or points.
      b. In many cases on the contract drawings, the arrangement of conduits, pipes, ducts, and similar items is shown schematically rather than as a precise scaled layout. Identify the actual location of these with horizontal and vertical dimensions. If such lines are exposed or readily accessible, omit dimensional identification.
      c. When any work is installed of size, dimension, slope, or location different from that shown on the contract drawings, note the deviation on the Project Record set. If the variations are substantial or cannot be shown clearly on the record drawings, make a new drawing and attach to the Record set.
   3. On other documents
      a. Where changes occur in specifications, clearly indicate same in ink, colored pencil, or rubber stamp.
      b. Where installed equipment differs from that specified (e.g., by accepted substitution or change order) note in the specifications and include complete data on same.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, SPECIAL CONDITIONS and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

B. All Division 21 Sections.

1.02 SUMMARY

A. Furnish and install all mechanical work shown on the drawings, specified herein, and as required for a complete and functional installation.

B. This section includes materials and methods applicable to the work described in all Division 15 Mechanical Sections. Specific work requirements of individual Mechanical Sections take precedence if in conflict with requirements of this Section.

1.03 RELATED SECTIONS

A. Division 3: Concrete Work

B. Division 16: Electrical Work

PART 2 - PRODUCTS

2.1 GATE VALVES

A. Gate valves shall be approved rising stem type (OS&Y).

2.2 VALVE BOXES

A. Underground valve box shall be "Brooks or "Christy" marked for service.

PART 3 - EXECUTION

3.1 TAMPER RESISTANCE

A. All exposed valves shall be chained to prevent accidental shutting of the valves.

B. All shut off valves shall be equipped with tamper switches.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, SPECIAL CONDITIONS and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

B. All Division 21 Sections.

1.02 SUMMARY

A. Furnish and install all mechanical work shown on the drawings, specified herein, and as required for a complete and functional installation.

B. This section includes materials and methods applicable to the work described in all Division 21 Mechanical Sections. Specific work requirements of individual Mechanical Sections take precedence if in conflict with requirements of this Section.

1.03 SUBMITTALS

A. Submit proposed alternative methods of attachment for review and approval by the Engineer, prior to deviating from the requirements given below.

B. For all seismic bracing systems, submit structural calculations and details prepared and signed by the Contractors licensed engineer which include all resultant forces applied to the building structure. Do not overstress building structure. The maximum allowable loads are as indicated in 3.01 of this specification. The submittal data required does not require an analysis of the building structural numbers and their reaction to the loads of the piping. The submittal data needs to address attachment methods and shall include calculations indicating the forces that are applied to the building structure at the point of attachment. Calculations will be reviewed for compliance with design criteria, not for arithmetic.

1.04 DRAWINGS AND SPECIFICATIONS

A. Information presented on Drawings and in the Specifications is based upon latest data available during their preparation. The Drawings and Specifications are for the assistance and guidance of the Contractor and exact locations, distances, levels, etc. will be governed by the structures and the site the contractor shall accept same with this understanding.

PART 2 - PRODUCTS

2.01 HANGERS AND SUPPORTS

A. B-Line, Superstrut, Tolco, Grinnell, or equal. Numbers are B-line.

B. Finish: Electro-Chromate or hot dipped galvanized.

C. Trapeze Suspension, for three or more pipes B-Line 1-5/8" width channel or a size suitable for load in accordance with manufacturer's published load ratings. No deflection to exceed 1/180 of a span.

D. Trapeze Supporting Rods: Diameter sufficient to support the load with a safety factor of 5. Anchor rods securely to building structure. See part three for minimum sizes.

E. Pipe Straps: copper coated for copper.

F. Size: For insulated pipe - pipe hangers sized to allow pipe insulation to pass continuously through the hanger.

G. Insulated Pipe Shields: Utilize isolated pipe supports at all insulated pipe hanger locations.

H. Isolators: Trisolator isolators at all hangers and clamps supporting un-insulated piping and tubing and at all points that pipe comes in contact with structure or other pipes.

PART 3 - EXECUTION

3.01 HANGERS AND SUPPORTS

A. General: Support all piping so that it is firmly held in place by approved iron hangers and supports and special hangers as required or as scheduled on the drawings.
   1. Rigidly fasten hose faucets, and similar items at ends of pipe branches to the building construction near point of connection.

B. Hanger Installation: On all insulated pipes, install the hangers on the outside of the pipe covering and not in contact with the pipe. Burning, welding, cutting, or drilling on any structural member may only be done if approved by the structural engineer. No valve or piece of equipment shall be used to support the weight of any pipe. Provide a hanger close to the point of change of direction of pipe run in either horizontal or vertical plane. Place supports and hangers for cast iron soil pipe as close as possible to joints; when hangers or supports do not come within one foot of a branch line fitting, install an additional hanger or support at the fitting. Protect insulation, when pipe is insulated, at each hanger with 180 degree, 18 gauge, 12 inch long G.I. Saddles.

C. Hanger Spacing Schedule:

Type of Pipe	1" dia to 1 1/4”	1 1/2 to 2" dia	2 1/2” dia & over
Steel Pipe	*12' - 0"	15' - 0"	15’ - 0"

D. Rod Size Schedule:

Pipe Size	1/2” – 2”	2 1/2" – 6”	8” & Over
Rod Size:	3/8”	3/8”	1/2"

E. Anchor pipe subject to expansion or contraction in a manner permitting strains to be evenly distributed.

F. Methods of attachment and sizes shall conform to NFPA 13 and FM data sheet 2-8.

G. All hangers and fasteners are subject to the approval of the Structural Engineer.

H. Provide beam clamp retaining straps for all pipe supports attached to structural beams.

I. Support fire-protection system piping independent of other piping.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, SPECIAL CONDITIONS and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

B. All Division 21 Sections.

1.02 SUMMARY

A. Furnish and install all mechanical work shown on the drawings, specified herein, and as required for complete and functional installation.

B. This section includes materials and methods applicable to the work described in all Division 21 Mechanical Sections. Specific work requirements of individual Mechanical Sections take precedence if in conflict with requirements of this Section.

1.03 SEISMIC RESISTANCE

A. Furnish and install all systems, units, equipment, and parts to meet or exceed current applicable requirements for seismic resistance specified by codes, regulations, or agencies having jurisdiction. Include all supports, anchors, braces and other restraining devices required. All seismic restraints will meet the following site specific seismic design criteria:
   1. For Seismic Design Category, refer to the structural engineers specifications and drawings.
   2. Seismic restraints are the responsibility of the contractor.

B. Design of seismic bracing shall meet requirements of 2022 CBC Chapter 16.

PART 2 - PRODUCTS

2.01 BRACING SYSTEMS

A. Provide approved types as manufactured by Hilti or Tolco.

PART 3 - EXECUTION

3.01 SWAY BRACING

A. Provide earthquake sway bracing in accordance with NFPA 13 and FM data sheet 2-8 on all feed and cross mains to meet current seismic requirements. Install exposed bracing in a neat workmanlike manner.

END OF SECTION

21 07 00
FIRE SPRINKLER SYSTEMS INSULATION
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

B. All Division 21 Sections.

1.02 SECTION INCLUDES

A. This Section describes insulation materials, methods, and applications for Mechanical Work, Special or specific details, applications, features, or methods may be described in work descriptions Sections or on the drawings.

1.03 REFERENCES

A. Thermal insulation materials shall meet the property requirements of one or more of the following specifications as applicable to the specific product or end use:

B. American Society for Testing of Materials Specifications:
   1. ASTM C 547, "Standard Specification for Mineral Fiber Pipe Insulation"
   2. ASTM C 585, "Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System)"
   3. ASTM C 1136, "Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation"

1.04 SYSTEM PERFORMANCE

A. Insulation materials furnished should meet the minimum thickness requirements of National Voluntary Consensus Standard 90.1 (Latest edition), "Energy Efficient Design of New Buildings," of the American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE).

B. Insulation materials furnished and installed hereunder shall meet the fire hazard requirements of applicable building codes when tested in composite form per one of the following nominally equivalent test methods:

C. American Society for Testing of Materials: ASTM E 84

D. Underwriters' Laboratories, Inc.: UL 723, CAN/ULC-S102-M88

E. National Fire Protection Association: NFPA 255

F. Molded pipe insulation shall be manufactured to meet ASTM C 585 for sizes required in the particular system.

G. Molded fibrous glass pipe insulation shall comply with the requirements of ASTM C 547.

1.05 QUALITY ASSURANCE

A. Qualifications of Installers: only a licensed firm employing installers specifically skilled and experienced in applying insulation to piping shall do Insulation work.

B. Insulation materials and accessories furnished and installed hereunder shall, where required, be accompanied by manufacturers' current submittal or data sheets showing compliance with applicable specifications listed in above.

C. Insulation materials, including all weather and vapor barrier materials, closures, hangers, supports, fitting covers, and other accessories, shall be furnished and installed in strict accordance with project drawings, plans, and specifications.

D. Insulation materials and accessories shall be installed in a workmanlike manner by skilled and experienced workers who are regularly engaged in commercial insulation work.

1.06 CODES AND STANDARDS:

A. California Code of Regulations - Title 24.

1.07 DELIVERY AND STORAGE OF MATERIALS

A. All of the insulation materials and accessories covered by this specification shall be delivered to the job site and stored in a safe, dry place with appropriate labels and/or other product identification.

B. The contractor shall use whatever means are necessary to protect the insulation materials and accessories before, during, and after installation. No insulation material shall be installed that has become damaged in any way.

C. If any insulation material has become wet because of transit or job site exposure to moisture or water, the contractor shall not install such material, and shall remove it from the job site. An exception may be allowed in cases where the contractor is able to demonstrate that wet insulation when fully dried out (either before installation or afterward following exposure to system operating temperatures) will provide installed performance that is equivalent in all respects to new, completely dry insulation. In such cases, consult the insulation manufacturer for technical assistance.

D. Batt acoustical insulation for interior wall construction.

E. Batt thermal insulation for exterior wall construction.

1.08 REFERENCES

A. ASTM C665 - Mineral Fiber Blanket Thermal Insulation

1.09 REGULATORY REQUIREMENTS

A. Comply with Title 24, Part 2, Chapter 7, fire resistivity ratings.

1.10 SUBMITTALS

A. Product Data:
   1. Submit materials list in accordance with Specifications.
   2. Prepare complete materials list identifying specific insulation types and applications.

1.11 PRODUCT HANDLING

A. Protection:

B. Deliver, store and handle all products in a manner to prevent damage and deterioration.

C. Use all means necessary to protect the installed work and materials of all other trades.

D. Deliver all materials in unopened bundles, labeled with date of manufacturer and testing agency approval.

PART 2 - PRODUCTS

2.01 FIRE SPRINKLER SYSTEMS PIPING INSULATION: SEE 21 07 19

PART 3 - EXECUTION

3.01 APPLICATION / INSTALLATION

A. Use the types and thickness of insulation specified in work description Sections.

B. Apply insulations in accordance with the manufacturer's recommendations and with instructions specified herein or noted on the drawings.

C. Install insulations only after the systems, items, and equipment have been installed and tested, inspected, and accepted. Exceptions: Slip-on piping insulation and equipment insulations installed at the factory.

D. Fit insulation snugly to the item being insulated; butt all joints tightly with no voids, spaces, or thin spots.

E. Seal all joints completely; where sealing tape is used, center the tape over the joint.

F. Except where specified or necessary, do not use staples or fasteners which penetrate vapor barrier jackets or covers on cold systems or equipment; where such penetrating fasteners are used, seal each penetration completely to maintain the vapor barrier integrity. All penetrations of the ASJ and exposed ends of insulation shall be sealed with vapor barrier mastic. Vapor seals at butt joints shall be applied at every fourth pipe section joint and at each fitting to provide isolation of water incursion.

G. Use adhesives, mastics, cements, sealants, and finishes undiluted unless specifically directed otherwise; apply per manufacturer's directions.

H. Install outdoor jacketing or other specified weather proofing or finishing on all insulations outdoors.

I. Install all indoor exposed insulation with extra care and finish neatly.

J. Follow specified methods of installation unless alternative methods are submitted and approved.

3.02 FINISHING

A. Finishes and Protection:
   1. Ensure that the exterior finish of all insulation is applied and complete as specified
   2. Make ready for painting, or painted to match existing including color where specified for paint.
   3. Install all metal jackets or protective sheathing where specified.

B. Repair, Touchup: Properly repair and touchup all dents, rips, tears, or other damage inflicted on jackets or exterior surfaces of insulation. Breaks or punctures in the vapor barrier of external insulation will not be accepted and must be repaired prior to project acceptance.

END OF SECTION

21 07 19
FIRE SPRINKLER SYSTEMS PIPING INSULATION
Dry Creek WWTP Operations and Lab Building
21005.01

PART 1 - GENERAL

1.01 GENERAL

A. A continuous, intact vapor barrier is critical for all pipes conveying fluids at temperatures less than 75° F.

B. All insulation material shall have a mold, humidity, and erosion resistant face, that meets the requirements of CMC Standard No. 6-1.

C. Insulation applied to the exterior surface of pipes located in buildings shall have a flame spread of no more than 25 and a smoke developed rating of not more than 50.

D. All requirements of Section 21 07 00 apply to this section.

PART 2 - PRODUCTS

2.01 IP-3 ELASTOMERIC FOAM

A. Insulation shall be Elastomeric Foam Insulation. Insulation should have a maximum service temperature of 210o F, a minimum service temperature of –40° F., and a "K" factor of .28 at 75° F. The flame spread of the insulation shall be 25 or less, and smoke density shall be 50 or less when tested in accordance with ASTM E84.

B. Provide U.V. protective coating for all outdoor applications.

C. Rubatex R-180-FS/R-1800-FS, Armstrong Armaflex or equal.

PART 3 - EXECUTION

3.01 PIPING APPLICATIONS

A. Fire Sprinkler Piping: Insulate all piping exposed outside of exterior walls, on the roof and under canopies.
   1. Use System IP-3 (Elastomeric Foam).
      a. 3/4” thickness with U.V. protection for all sizes.

3.02 INSTALLATION

A. Unless specifically excluded herein or on the drawings, insulate all parts of the piping systems, including fittings, flanges, valves, and pipe-mounted devices, except do not cover nameplates on devices.

B. Install insulation in removable sections over unions, flanges, and line components or devices requiring periodic maintenance.

C. Install insulation butted tightly to transitions such as insulated pipe shields, insulated pipe sleeves, equipment connections, etc.

D. Install insulation on piping systems so that condensation will not occur. Insulate pipe supports where hanger is directly in contact with pipe up to the point of connection to the building structure. All piping shall be supported in such a manner that neither the insulation nor the vapor/weather barrier is compromised by the hanger or the effects of the hanger. In all cases, hanger spacing shall be such that the circumferential joint may be made outside the hanger. On cold systems, vapor barrier shall be continuous, including material covered by the hanger saddle.

E. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full-length units of insulation, with single cut piece to complete run. Do not use cut pieces or scraps abutting each other. Butt insulation joints firmly to ensure complete, tight fit over all piping surfaces.

F. Maintain the integrity of factory-applied vapor barrier jacketing on all pipe insulation, protecting it against puncture, tears or other damage. All staples used on cold pipe insulation shall be coated with suitable sealant to maintain vapor barrier integrity.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, SPECIAL CONDITIONS and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

B. All Division 21 Sections.

1.02 SUMMARY

A. General: Furnish and install all engineering, design, materials, tools, equipment and perform all labor necessary for the complete installation of a fire sprinkler system and related items to provide complete functional systems in accordance with the requirements of NFPA 13 and the 2016 CBC, in all areas of the building.

B. Each system to include, but not limited to:
   1. All pipe, fittings, sprinklers, hangers, valves, braces and all other accessories as necessary or required for a complete and operational system complying with all applicable codes.

C. The contractor is responsible for securing approval from all agencies before submitting to the architect's office.

D. System design criteria and water supply information shall be obtained from City Fire Marshal prior to bid. The Contractor shall perform a water flow test at the nearest fire hydrant prior to commencing design of the fire sprinkler system.

E. Contractor shall provide seismic isolation at all building seismic joints. See 21 05 48.

1.03 QUALITY ASSURANCE

A. Standards: The system shall conform to the requirements of the National Fire Protection Association Standards for the Installation of Sprinkler Systems (NFPA 13, and 20). Provide coverage for various hazards in accordance with NFPA and local Fire Department requirements.

B. The system may be a "scheduled" pipe sized system or "calculated" pipe sized system that satisfies the 2022 CBC, NFPA - 13 requirements. Details and computations for calculated systems must be submitted for approval. Pipe sizes shown outside buildings and for risers are minimum regardless of hydraulic calculations.

C. Qualifications of Installers: A firm licensed to engineer and install fire protection systems such as that specified herein shall perform this work; the installing firm must also be regularly and currently engaged in the installation of such systems.

PART 2 - PRODUCTS

2.01 GENERAL

A. All materials and equipment shall be new and of latest design of the manufacturer and shall be tested and approved by the Underwriters Laboratories, Inc. and Factory Mutual.

B. Sprinkler heads: Regular automatic closed type heads, fusible link of temperature rating (indicated below or required by NFPA). Standard semi-recessed type heads (+ 7/8 below ceiling) shall be used at all finished ceiling and soffit locations. Heads in walls where freezing may occur (exposed to weather) shall be "dry pendant" sidewall type. Heads in areas without ceilings shall be standard pendant type. Fire sprinkler heads less than 2 ft, six inches from a supply register shall be intermediate temperature rated for 200 degrees. Escutcheons and canopies in lay-in ceilings shall be as selected by the architect.

C. Spare Sprinkler Heads: Furnish spare sprinkler heads placed in an emergency cabinet. For each cabinet provide one sprinkler wrench. The cabinet will be of No. 20 gauge pressure steel with red lacquer finish complete with manufacturer standard labeling. The spare heads shall be representative of, and in proportion to, the number of each type and temperature of heads installed. Locate cabinet where shown on plans or as directed by owner.

2.02 PIPE AND FITTINGS

A. Pipe fittings for installation below ground shall be cement lined, cast iron conforming to the requirements of American Water Works Association Standard Specification for cast iron special castings, Class D, 150 lb., AWWA C151 mechanical or push-on joint; with AWWA C104 cement-mortar lining, "Blue Brut" or PVC pressure pipe AWWA C900, UL approved for fire line service. If PVC permastran pipe is used with mechanical joint fittings, install according to manufacturer's requirements and recommendations.

B. Fire sprinkler piping, base of riser to 5'-0" outside building (Below ground):

C. Pipe: Acceptable piping materials are Class 50 cement-lined ductile iron with a working pressure of 250 psi per NFPA 24. All piping shall be listed for fire protection service.

D. Fittings: Fittings shall be rated to a minimum of 250 psi and meet applicable requirements of ANSI/AWWA and NFPA 24.

E. Materials shall comply with NFPA / ANSI & AWWA

F. The flange and spigot piece at the base of the riser shall be secured to the underground elbow at the base of the riser with four ¾" stainless steel tie rods for 8" risers, and two ¾" rods for 6" risers (for underground supply piping).

G. Pipe for installation above ground shall conform to ASTM A 795, A 53, or A135. Thin wall pipe with Victaulic couplings may be used for fire lines 2" and larger. Piping for line sizes 1½" and smaller shall be Schedule 40 pipe with screwed fittings. No thin wall pipe shall be used in conjunction with screwed fittings.

H. Gate valves shall be approved rising stem type (OS&Y).

I. Underground valve box shall be "Brooks or "Christy" marked for service.

J. All exposed valves shall be chained to prevent accidental shutting of the valves.

K. Sprinkler riser assemblies shall comply with all applicable codes. Furnish dry pipe valve and air compressor for all dry pipe systems. Provide insulation and heat tracing for riser freeze protection. All shut off valves shall be equipped with tamper switches.

L. Supports, Anchors, Bracing – See All Sections 21 05 29 and 21 05 48.

M. Piping Penetration Auxiliaries: Conform to NFPA 13 and the following:

N. Sleeves: Pipe Shields Inc., Model WFB, galvanized steel.

O. Plates/Collars: 24-gauge galvanized sheet metal. Escutcheons: Polished chrome plated brass or painted metal.

2.03 FIRE ALARM

A. Alarm Bell: Furnish and install UL listed, exterior and interior Fire Alarm Bells in a location approved by the architect.

2.04 SYSTEM TYPE

A. The fire protection system for this building shall be "WET" system, in accordance with NFPA 13 requirements.

B. All heads exposed to freezing conditions shall be dry pendant type heads. All piping shall be run inside building lines on the warm side of the building insulation.

PART 3 - EXECUTION

3.01 INSTALLATION

A. General
1. Install all work in accordance with requirements of NFPA 13 and the Fire Marshal. Notify the Fire Marshal in a timely manner when the installation progressed for required inspections.
2. Coordinate the installation of this work with adjacent or related work under other sections of the specifications. Any installed fire sprinkler work which interferes with other work or fails to meet the requirements of the Fire Marshal (as determined by progress or final observation) will be rejected and shall be removed, replaced, or revised to an acceptable condition at the contractor's expense.
3. Fire sprinkler, lines routed outside of the building insulation in soffits, overhangs, under canopies, or in ventilated un-insulated attics shall be protected by a “dry” compressed air charged or anti-freeze system.
4. Coordinate and install the work of this Section with related or adjacent work specified under other sections of the specifications.
5. System piping volume shall be capable of achieving water delivery to the inspector’s test pipe in less than sixty seconds, starting at the normal air pressure on the system and with any quick opening devices in operation.
6. Cutting, Notching and Patching:
7. Unless noted otherwise on Drawings, provide all cutting and notching required for work of this Section, including concrete saw cutting and core drilling; obtain Architect's approval before cutting or core drilling.
8. Provide all patching required for work of this Section, including concrete replacement; patch to match adjacent work and to architect's satisfaction.
9. Any fire sprinkler pipe located outside of the buildings shall be protected with heat tape.

B. Piping
1. Above-grade piping
    a. Use no coupling except where length of pipe between fittings exceeds 20 feet.
    b. Make reductions in pipe sizes with one piece reducing fitting. Bushings shall not be acceptable, except when standard fittings of proper size are not manufactured. Single bushings of the face type will be permitted up to 5% of total number of reducing fittings in the system. Where bushings are used, install with outer face flush with face of fitting opening being reduced.
    c. Install piping to clear lighting fixtures, air ducts, and other obstructions, minimum clearance 2 inches including concrete foundations, walls, and floors.
    d. All sprinkler piping shall be inspected prior to installation to ensure the pipe is free of welding slag and cutouts, and ensure that the welded fittings do not protrude into the path of water flow.
    e. Install piping level, plumb, and parallel to structure line except where shown otherwise or required by function or regulation to be angled or sloped.
    f. Install piping concealed within penetrations provided in the structure except where shown as exposed.
    g. Install piping without bending, springing, forcing, or placing undue stress on the pipe or fittings.
    h. Install piping to allow for expansion, contraction, and structural settlement.
    i. Install piping so it does not directly contact the structure except where shown or specified otherwise.

j. Install piping so that it does not interfere with equipment access.
k. The use of plain end pipe, fittings and coupling shall not be permitted, except for welded piping.
l. Penetrations through fire rated walls shall be sealed in accordance with a recognized UL/FM assembly.

C. Below grade piping
1. Piping installed under slab shall be cement lined cast iron, PVC or other plastic pressure piping shall not be allowed.
2. Install per NFPA 24 and NFPA 13 and local jurisdiction.
3. The flange and spigot piece at the base of the risers shall be secured to the underground elbow at the base of the riser with four 3/4” stainless steel tie rods for 8” risers, and two 3/4” rods for 6” and smaller risers.
4. Install thrust blocks at all changes in direction sized in accordance with Factory Mutual Data Sheet 3-10.
5. Pipe supports – See Sections 21 05 29 and 21 05 48.
6. Provide 2" clear space around all pipe penetrations passing through concrete foundations, walls or floors.

D. Drains
1. Install auxiliary drains at all low points in the system. Install the inspector's test drain at most remote high point in each system from the main riser. All inspectors' test connections shall be installed in a readily accessible location. Use angle type drain valves. Five or fewer trapped heads may be drained through a plugged fitting. Pipe drain valves shall discharge as shown on the drawings, and as approved by the architect, outside building unless noted otherwise. Install in accordance with NFPA 13.
2. All piping in finished areas must be run concealed above ceilings, in walls or as shown and noted on the plans. Piping shall be run so as to occur on the warm side of all building insulation. The location of exposed piping, if permitted at all, shall be approved by the engineer and architect.

3.02 SPRINKLER HEAD LOCATIONS

A. Sprinkler heads shall be located in finished ceilings, soffits, overhangs, etc., in accordance with NFPA and CBC requirements but conforming to ceiling lighting, and building modules which may require additional heads for symmetry.

B. Fire sprinkler heads for DSA projects shall have a one inch clearance around the fire sprinkler heads as required by ASCE 7-10. Provide a recessed canopy Coverage Extension as manufactured by Fire Protection Products, Inc, or equal.

C. Sprinkler heads in the areas without ceilings shall be located on exposed piping run to conform to building lines and as approved by the Architect. The location of all piping, heads and equipment shall be submitted for final approval by the Architect who shall have final authority of location of same. The contractor shall allow for additional sprinkler heads which may be required for aesthetic purposes.

D. Heads in exterior walls and exterior soffits shall be located as shown on architectural exterior elevations or as approved by the architect.

3.03 COORDINATION

A. The sprinkler contractor shall be responsible to coordinate the location of sprinkler piping with all other trades such as ductwork, electrical work and plumbing work. The sprinkler contractor shall off-set and modify the sprinkler system as may be required to coordinate the sprinkler system with all other systems as shown and/or detailed. All sprinkler piping shall clear all other building services by at least 2 inches.

3.04 REPORTS

A. The system(s) must be inspected, tested, and approved and certified by the owner's insurance carrier, DSA, and local fire department before acceptance of the project.

3.05 DETECTION, ALARM, AND ELECTRICAL WIRING

A. Electrical contractor shall be responsible for all fire detection and alarm and wiring.

B. Demonstrate proper operation of alarm systems.

C. Electrical contractor shall provide all electrical wiring:

END OF SECTION

PART 1 – **GENERAL**

1.01 INTENT OF SPECIFICATIONS

A. This specification outlines the requirements for a total flooding clean agent fire extinguishing system comprising Kidde Fire Systems equipment employing 3M™ Novec™ 1230 Fire Protection Fluid with an Aries Netlink Control Unit alarm and releasing panel. All requirements outlined in this specification shall be completed in their entirety. These requirements, which are in accordance with the items listed in Section 1.3, combined with good engineering practices must be followed in order to produce a safe and effective fire protection and suppression system.

B. The contractor shall provide all requirements as specified in 2015 NFPA 2001 as adopted in the 2022 CFC Ch. 80 for the deferred approval plans and specifications.

1.02 GENERAL DESCRIPTION

The clean agent fire extinguishing system shall perform as outlined in the following sub-sections.

A. Achieve a 4.5% (v/v) extinguishing concentration for Class A (Surface Type Fires) hazards.

B. Achieve a 5.85% (v/v) or greater, as required, extinguishing concentration for Class B (Flammable Liquids) hazards.

C. Achieve a 4.5% (v/v) extinguishing concentration for Class C (Energized Electrical Equipment) hazards.

D. Within 10 seconds, the clean agent fire extinguishing system shall discharge 95% of the required suppression agent mass.

E. The clean agent fire extinguishing system shall consist of one or more Kidde Fire Systems agent storage containers and related equipment. The containers may be either connected to a discharge pipe arrangement separately or connected to a common manifold and discharge pipe arrangement. The agent storage containers shall be filled with Novec 1230 fluid, and super pressurized with dry nitrogen to a working pressure of 360 PSIG at 70°F (24.8 bar gauge at 21°C).

F. The Kidde Aries Netlink addressable, distributed-intelligence control unit and fire alarm/suppression system shall perform fire alarm, supervisory, and trouble event initiation; occupant notification; event annunciation; local control functions; fire extinguishing system release, and off premises transmission.

G. The system's distributed intelligence shall extend to the SmartOne automatic initiating devices on the signaling line circuit. Each automatic initiating device shall have a microprocessor capable of independently determining whether or not a fire signature at its monitored location is of sufficient magnitude to warrant the issuance of an alarm signal to the control unit.

H. The contractor shall include all calculations and references on the deferred approval package submittal.

1.03 CODES AND COMPLIANCE

A. The design, installation, testing and maintenance of the integrated suppression shall be in accordance with the following applicable codes, standards and regulatory bodies:
   1. 2015 NFPA 2001 Clean Agent Fire Extinguishing Systems
   2. 2020 NFPA 70: National Electrical Code (NEC)
   3. 2019 NFPA 72: National Fire Alarm Code
   4. 2020 NFPA 75: Protection of Electronic Computer/Data Process Equipment
   5. 2020 NFPA 76: Fire Protection for Telecommunications Systems
   6. UL 864, 9th ed: Control Units and Accessories for Fire Alarm Systems
   7. UL 2166: Halocarbon Clean Agent Extinguishing System Units

8. UL 268: Standard for Smoke Detectors for Open Areas
9. UL 268A: Standard for Smoke Detectors for Duct Application
10. ANSI B1.20.1: Standard for Pipe Threads, General Purpose
11. Factory Mutual
12. Requirements of the CSFM
13. Manufacturer's Design, Installation, Operation & Maintenance Manual

B. The complete system shall have the applicable following listings and approvals:
   1. Underwriters Laboratories, Inc.
   2. Factory Mutual Global

1.04 SYSTEM DESIGN CRITERIA

A. All system components shall be manufactured and/or supplied by Kidde Fire Systems, 400 Main Street, Ashland, MA 01721, USA,

B. Only green suppression agents are allowed.

C. The system shall be supplied and installed by a Contractor. The Contractor shall be trained by the manufacturer to design, install, test and maintain the Kidde Novec 1230 System and Aries Netlink Control Unit shall be able to produce certificates stating such on request.

D. All materials and equipment shall be new and unused.

E. A total flooding, clean agent fire suppression system, filled with Novec 1230, shall be installed to meet a minimum design concentration per NFPA requirements and calculations.

1.05 QUALIFICATIONS

A. Manufacturer

1. The manufacturer/supplier of the system hardware and components shall have a minimum of fifteen (15) years experience in the design and manufacture of systems of similar type

2. The manufacturer/supplier of the systems shall be certified to ISO 9001 for a minimum period of five (5) years for the design, production and distribution of fire detection, fire alarm and fire suppression systems.

3. The name of the manufacturer/supplier and manufacturer part numbers shall appear on all major components.

4. All devices, components and equipment shall be the products of the same manufacturer/supplier.

5. The system manufacturer/supplier shall have the ability to provide multiple suppression system arrangements to accommodate the performance criteria required by the project.

6. All devices, components and equipment shall be listed by the standardizing agencies (ULC and/or FM).

7. The contractor and installer shall be a listed/certified company meeting all the requirements for design and installation per the manufacturer.

B. Contractor
   1. The system shall be supplied and installed by a factory authorized, Kidde Fire Systems distributor. The Contractor shall be trained by the manufacturer to calculate/design, install, test and maintain the fire suppression system and shall be able to produce a certificate stating such on request.
   2. The installing contractor shall employ a person who can show proficiency at least equal to a NICET level IV certification in special hazards design.

3. The Contractor shall confirm in writing that he stocks a full complement of spare parts and offers 24-hour emergency service for all equipment being furnished.

1.06 WARRANTY

A. The manufacturer shall warrant the system from the date of shipment from the factory as follows: Kidde Engineered System products for thirty-six (36) months; Kidde Aries Netlink Control Unit for sixty (60) months; and the SmartOne devices for twenty-four (24) months.

1.07 SUBMITTALS

A. The Engineer will review all submittals for conformance to the drawings and specifications. The contractor shall be required to resubmit any materials, with appropriate modifications, that are found to be in non-conformance with the requirements of the drawings and these specifications after review by the architect. Approval of the submittals by the architect shall not relieve the Contractor of their responsibility to meet the requirements of the drawings and specifications.

B. Engineered Design Drawings: The Contractor shall provide all required documents that shall include the following details:
   1. The contractor shall coordinate with the factory-authorized Kidde Fire Systems Distributor to provide all required installation drawings per 2015 NFPA 2001 as adopted in the 2019 CFC Ch. 80 as a deferred approval submittal.
   2. Plan and riser drawings showing the location of the Kidde Aries Netlink Control Unit and the locations and necessary installation and mounting details of all field devices such as smoke detectors, manual-release stations and notification appliances. Conduit routings shall be shown, with number of conductors, type of wire, and wire sizes indicated for each conduit segment.
   3. Point-to-point wiring diagram showing the termination points for all field-wiring circuits to the internal Kidde Aries Netlink PCB. All internal wiring and communications cabling shall be shown.
   4. A primary-power calculation that details the power requirements for the Kidde Aries Netlink Control Unit and all field devices such as smoke detectors, notification appliances and releasing solenoids. Include the required capacity of the main AC power-line feed from the commercial power and light company.
   5. A secondary power calculation that shows the quiescent and alarm power requirements for the Kidde Aries Netlink Control Unit and all field devices. Include the periods of time for which the quiescent and alarm power requirements shall be supported in order to determine the necessary standby battery capacity.
   6. The contractor shall submit a calculation justifying the capacity of batteries selected.

C. Flow Calculation Reports: The Contractor shall provide the following information in the flow calculation report.
   1. Customer information and project data.
   2. Enclosure information. At a minimum, enclosure information shall include minimum and adjusted design concentrations, minimum and maximum enclosure temperatures, minimum agent required and volume of enclosures, including non-permeable volume if applicable.
   3. Agent information. At a minimum, agent information shall include cylinder size and part number, quantity of cylinders, main and/or reserve cylinders, pipe take off direction and the floor loading for agent cylinder
   4. Pipe network information. At a minimum, pipe network information shall include pipe type, pipe diameter, pipe length, change in direction or elevation, pipe equivalent length and any added accessory equivalent length. In addition, the following nozzle information shall be provided; number of nozzles and identification of enclosure location, flow rate of associated nozzle, nozzle nominal size, nozzle type and nozzle orifice area

D. Pipes and pipe fittings. A detailed list of pipes and pipe fittings used in the design of the pipe network.

E. OPTIONAL: Three-Way Ball Valve Information. A calculation shall be completed for each directional valve in the piping network. Modeling of the Three-Way Ball Valve shall be shown in the ”90-deg” and “through” position.

F. Commissioning Equipment List: The Contractor shall provide a commissioning equipment list for each installed system. The equipment list shall identify all installed equipment and configurations. The Contractor shall submit the following:
   1. Four (4) sets of installation drawings for each installed system and one (1) set of calculation reports, owner’s manuals and product data sheets.
   2. A description of system functionality and a detailed matrix of all the initiating points, control modules, and field circuits that identifies the labeling of all components and shows the relationships and activation sequences among the various initiating points and the control modules and/or field circuits.
   3. The contractor shall submit a commissioning check sheet for each installed ASD detector. The check sheet shall list all installed equipment, configurations and measured ambient conditions
   4. The Contractor shall submit a test plan that describes how the system shall be tested. This shall include a step-by-step description of all tests and shall indicate type and location of test apparatus to be used. Tests shall not be scheduled or conducted until the engineer of record approves the test plan. At a minimum, the tests to be conducted shall be per the relevant referenced codes and any additional supplemental tests required by the CSFM/OSFM. Tests shall not be scheduled or conducted until the engineer of record approves the test plan.
   5. Upon completion of installation and commissioning acceptance, two (2) sets of “As-Built” installation drawings and One (1) set of the calculation report for each installed system.

G. Test Plan
   1. The distributor shall submit a test plan that describes how the system equipment and room integrity shall be tested. This shall include a step-by-step description of all tests and shall indicate type and location of test apparatus to be used. At a minimum, the tests to be conducted shall be per 2015 NFPA 2001 as adopted in the 2019 CFC Ch. 80 and any additional supplemental tests required by the CSFM/OSFM. Tests shall not be scheduled nor conducted until the engineer of record approves the test plan

H. Installation Drawings
   1. Four (4) sets of installation drawings for each installed clean agent fire extinguishing system and one (1) set of the calculation report, owner’s manual and product data sheets shall be submitted to the end-user/owner.
   2. Upon completion of installation and commissioning acceptance, two (2) sets of “As-Built” installation drawings and One (1) set of the calculation report for each installed clean agent fire extinguishing system shall be given to the owner/end-user for use and reference.

I. Documentation: The Contractor shall submit two (2) copies the following after complete installation:
   1. Kidde Fire System Design, Installation, Operation and Maintenance Manual.
   2. Kidde Aries Netlink Installation, Operation and Maintenance Manual.

PART 2 - SUPPRESSION SYSTEM REQUIREMENTS

2.01 GENERAL

A. The clean agent fire extinguishing system shall consist of NOVEC 1230, agent storage container(s), 1800-psig seamless nitrogen cylinders, Kidde actuation hardware and Kidde discharge nozzle(s) attached to a pipe network.

2.02 SYSTEM PERFORMANCE

A. System Discharge

1. The discharge time required to achieve 95% of the minimum design concentration for flame extinguishment shall not exceed 10 seconds.

B. Duration of Protection
   1. 85% of the minimum design concentration shall be maintained for 10-minutes or a sufficiently longer period of time to allow effective emergency action by trained personnel. A level 1 certification in room integrity testing, provided by a recognized manufacturer of room integrity testing equipment, is required.

C. Minimum System Design Limits
   1. Nozzles
      a. Nozzles shall be listed and approved for a maximum ceiling height of 16 feet (4.88 m) and a minimum ceiling height of 1 foot (0.31 m).
      b. Nozzle area coverage for both 360- and 180-degree nozzles shall be a maximum of 35.6 ft. x 35.6 ft. square (10.85 m x 10.85 m).
      c. System Nozzles shall be listed and approved to accommodate a maximum arrival time of 2.0 seconds and a maximum run-out time of 6.3 seconds.
      d. System Nozzles shall be listed and approved for a minimum of 60.3 PSIG (4.16 bar gauge) nozzle pressure.

2.03 PIPE AND FITTINGS

A. Distribution piping, and fittings, shall be installed in accordance with 2015 NFPA 2001 as adopted in the 2019 CFC Ch. 80, approved piping standards and the engineered fire suppression system manufacturer's requirements.

2.04 ACTUATION HARDWARE

A. The agent cylinders shall be actuated in accordance with the applicable design manual.

B. The suppression panel shall be UL Listed per UL 864, 9th Edition with the interfacing electric actuators.

2.05 NOZZLES

A. Total flooding clean agent extinguishing system nozzles shall be made of stainless steel.

B. Each nozzle shall be located in the space per the manufacturer's guidelines. Nozzles shall have either a 180- or a 360-degree discharge pattern.

C. Each nozzle discharge pattern shall be available in sizes ranging from 3/8-in NPT to 2-in NPT.

D. Within each nozzle size and style, the manufacturer shall offer multiple different orifice areas (minimum of 20).

E. Nozzles shall be UL Listed and FM Approved for use with the manufacturer's clean agent extinguishing system employing Novec 1230 fluid.

2.06 AGENT STORAGE CONTAINER ASSEMBLIES

A. Novec 1230 fluid shall be stored in containers manufactured and marked in accordance with US Department of Transportation (DOT) specification 4BW-500 or 4BA-500. The agent storage containers shall be conditioned to 360 PSIG @ 70°F (24.8 bar gauge @ 21°C). Cylinder and valve assemblies shall be dual marked with Transport Canada (TC) specification 4BW-M34 or 4BA-M34. The system manufacturer shall be able to provide US DOT documentation that the registration number marked on the agent storage container corresponds to a manufacturing location at a US address.
   1. Novec 1230 fluid containers shall be equipped with a pressure gauge to display internal pressures. The gauge shall be an integral part of the equipment and shall be color-coded for fast referencing of pressure readings.

2. A low-pressure switch shall be provided as standard equipment on the Novec 1230 fluid containers. A decrease in pressure will cause the normally open contacts to close, indicating a trouble condition at the control panel. The low-pressure switch shall be field removable/replaceable while the container is still fully charged.
3. Novec 1230 fluid containers with empty weights in excess of 105-lbm shall be equipped with an integral liquid level indicator (LLI). The LLI will allow the agent container to remain connected and secured in place while measuring the agent mass.

2.07 OPTIONAL EQUIPMENT

A. When protecting multiple hazard areas from a single supply of Novec 1230 fluid, Kidde Three-Way Directional Ball Valves shall be used.
   1. The Three-Way Directional Ball Valves shall be UL Listed or FM Approved for use with Novec 1230 fluid and Kidde Engineered Suppression Systems.
   2. The Three-Way Directional Ball Valves shall be installed and located in the piping network per the manufacturer's guidelines and design manual.

2.08 ELECTRICAL WORK

A. All electrical enclosures, raceways, and conduits shall be provided and installed in accordance with applicable codes and intended use, and shall contain only those electrical circuits associated with the fire-detection and control system. No circuit or circuits that are unrelated to the fire alarm or suppression system shall be routed through the enclosures, raceways, and conduits dedicated to the fire alarm or -suppression system.

B. Splicing of circuits shall be kept to a minimum, and is only permitted in an electrical box suitable for the purpose. Appropriate hardware shall be used to make the wire splices. Wires that are spliced together shall have the same color insulation.

C. White colored wire shall be used exclusively for the identification of the neutral conductor of an alternating-current circuit. Green colored wire shall be used exclusively for the identification of the earth-ground conductor of an AC or DC circuit. Appropriate color-coding shall be utilized for all other field wiring.

D. All electrical circuits shall be numerically tagged with suitable markings at each terminal point. All circuits shall correspond with the installation drawings.

2.09 GENERAL

A. Kidde Aries Netlink shall be an addressable, distributed-intelligence type Control Unit.

2.10 SYSTEM CONFIGURATION

A. Activation of the extinguishing system shall be via crossed-zoned smoke detection in the following optional combinations:
   1. SmartOne Photoelectric smoke detector.

B. Detection system layout shall be in accordance with NFPA 72 and it shall require the activation of at least one detector from each of the two crossed-zoned detector groupings to trigger the automatic release of the extinguishing system.

2.11 CONTROL PANEL

A. The control unit shall consist of a printed-circuit board (PCB), an integral display/control assembly, and terminations for all field circuits, a primary power supply and an enclosure with removable door and viewing window.

B. The PCB shall contain the main-system microprocessor, the real-time clock, the history buffers, the watchdog timer, one USB device port, and two RS-232 serial ports. It shall also provide terminations for the following field circuits:
   1. One (1) signaling line circuit (SLC)

2. Two (2) notification appliance circuits (NACs)
3. Two (2) combination NAC/releasing circuits (Combos)
4. Two (2) releasing circuits
5. Three (3) programmable relays
6. One (1) trouble relay
7. One (1) RS-485 communications circuit
8. Battery charging circuit
9. AC input power connections

C. The SLC shall serve as the hardware and software interface between the intelligent initiating and control devices and the Kidde Aries Netlink Control Unit. The SLC shall be capable of communicating with up to 255 automatic detectors, monitor modules, and control devices, in any combination, without restrictions on the numbers of each type of field device.

D. The two releasing circuits shall be capable of actuating electro-explosive initiators, control heads, or solenoid valves. Each releasing circuit shall be independently programmable to activate any of the following configurations of extinguishing-system actuators:
   1. Electro-explosive initiators, supervised and activated in series, subject to the constraints below:
      a. Maximum of six (6) P/N 93-002009-004
      b. Maximum of six (6) P/N 93-191001-001
   2. One (1) control head or solenoid valve
   3. Two (2) control heads or solenoid valves supervised in series and activated in parallel. It shall not be necessary to use identical solenoid valves when two valves are activated on one releasing circuit.
   4. The releasing circuits shall be capable of actuating Factory Mutual System classified valves (Groups A, B, D, E, G).

E. The two notification-appliance circuits (NACs) shall be independently programmable and configurable for either Class-A or -B operation.
   1. The input power to the NAC shall be filtered and regulated. The NAC shall be capable of delivering a current of up to 1.5 A @ 24 VDC to the notification appliances.
   2. It shall be possible to field-configure each Class-B, Style-Y NAC to activate notification appliances with any and all of the following parameters via a personal-computer-based configuration program:
      a. Twenty-character location
      b. Drill activation
      c. Silenceable/non-silenceable operation
      d. Walk-test activation
      e. Master-coded operation (60 bpm, 120 bpm, temporal per ANSI S3.41, continuous)
      f. Cutoff delay (5, 10, 15 minutes)
      g. Silence inhibit (1, 3, 5 minutes)
   3. It shall be possible to override one master code with another depending on the state (i.e., prealarm, prerelease, release, or time-limit-cutout) of the particular suppression zone. It shall also be possible to shut off and re-activate a NAC as required by the approved system operating sequence. No supplemental equipment shall be required to perform this functionality.
   4. It shall not be necessary to use external synchronization modules to synchronize the audible and visual notification signals created by any NAC
   5. Terminals for connection of field conductors to the NACs shall be large enough to accommodate #12 AWG wiring
   6. The basic power-supply / charger assembly shall consist of an AC to DC switching power unit. The power-supply / charger assembly shall be configurable to accept either 120 or 240 VAC input voltage, and shall provide 5.4 A at 24 VDC of filtered and regulated power to operate the system and charge the system’s standby battery. The charger assembly shall

be capable of charging batteries of capacities up to 70 AH. Two user-configurable auxiliary-power circuits shall be provided on the PCB to power peripheral devices. The auxiliary-power circuits shall be software programmable for either continuous or interruptible power output, and shall be rated for 1.0 A at 24 VDC. It shall not be necessary to set jumpers or dip switches on the PCB to make these outputs continuous or interruptible.

7. The system shall have the ability to use an optional Intelligent Communications Module (ICM). The ICM shall be a device server that provides Internet access to the Kidde Netlink Control Unit via any standard Web browser such as Chrome, Fire Fox or Edge. Browser interface shall support HTLM5. The ICM shall provide the following client services:
   a. Dial-up control-unit monitoring and status reporting
   b. Automatic event detection and reporting via e-mail
   c. Web-browser-based
   d. Emulated display for the control unit
   e. Access to items in the control unit's List Menu.

2.12 ANNUNCIATION

A. The following modules shall be provided for remote-event annunciation and operator control as indicated on the bid documents.
   1. Textual-Type Remote Display Control Module (RDCM)
      a. Model RDCM shall completely duplicate the display and operator-intervention capabilities of the main-control-unit display.
      b. The RDCM shall communicate with the Kidde Aries Netlink Control Unit via RS-485 communications, and the system shall be capable of supporting with up to 15 remote displays.
      c. The remote displays shall operate on 24 VDC power provided by the Kidde Aries Netlink power supply, or by any remote power supply that is UL Listed or FM Approved for fire alarm applications. The remote-display modules shall supervise their input-power connections.
      d. The main Kidde Aries Netlink Control Unit display or one RDCM shall be capable of being programmed as the master unit with immediate operator-intervention privileges upon the occurrence of any alarm or fault condition. The master unit shall have control for a minimum period of 30 seconds, and all other control points shall be locked out and notified of the locked-out condition if another operator attempts to intervene during the locked-out period imposed by the master control module.

B. Output Driver Modules
   1. The Model ATM-L Annunciator Driver Module shall provide the Kidde Aries Netlink Control Unit with up to 32 programmable outputs for remote LEDs, along with 6 system-level LEDs and 5 system-level functional switches.
   2. The Model ATM-R Relay Driver Module shall provide the Kidde Aries Netlink Control Unit with up to 32 programmable outputs for remote relays.
   3. The ATM-L and -R Modules shall communicate with the Kidde Aries Netlink Control Unit via the RS-485 communications circuit, with the most-remote module capable of being located up to 4,000 feet from the control unit. The ATM-Ls and ATM-Rs shall be capable of being installed in various combinations as long as the maximum number of 16 for each module type is not exceeded.
   4. Both modules shall be powered from the Kidde Aries Netlink power supply, or from an external, regulated, and power-limited power supply Listed and Approved for use with fire-protective-signaling systems, depending upon the total load of the remote outputs.

2.13 DETECTORS

A. Smart One Photoelectric Detector
   1. The SmartOne Photoelectric Detector, Model PSD-7252, shall be a microprocessor-based smoke detector. The photoelectric detector shall be a light scattering type, low profile,

intelligent detector that senses a broad range of smoldering and flaming-type fires. The sensing chamber shall permit a full 360° smoke entry.

2. Each photoelectric detector shall be electronically addressable and fully field-programmable. It shall be possible to set an alert threshold anywhere from 0.2 to 3.4% per foot obscuration in 0.1%-per-foot increments, and to set an alarm threshold anywhere from 0.5 to 3.5% per foot obscuration in 0.1%-per-foot increments. Alarm thresholds shall be dynamically adjustable as a result of another alarm event anywhere in the system. Where permitted, each detector shall be programmable for alarm verification in periods of up to 180 seconds in 1-second increments. Each detector shall provide a real-time value of current, local obscuration level in percent-per-foot readout when requested by an operator at the control unit.
3. It shall be possible to configure each photoelectric detector for non-latching operation to prevent inadvertent or spurious fire signatures from accidentally discharging a waterless extinguishing system. The control unit shall latch the alarm report, but the discharge sequence shall be interrupted if the fire signature at the detector drops below the detector's programmable alarm threshold
4. Detector calibration, address, alert and alarm thresholds, and drift-compensation algorithm shall be stored in each detector's non-volatile memory. Systems that store all detector parameters in the control unit (i.e., non-distributed-intelligence-to-the-device-level architecture) shall not be considered as equivalent.
5. A detector-housing, Model DH-2000, shall be available to allow a photoelectric detector to monitor for the presence of combustion products in an air duct. The detector housing shall be rated for air-duct velocities ranging from 500 to 4,000 feet per minute. It shall also be possible to mount the photoelectric detector in an air duct with velocities ranging up to 4,000 feet per minute.

B. SmartOne Thermal Detector
1. The SmartOne Thermal Detector, shall be a microprocessor-based heat detector. The thermal detector shall be a thermistor-type, low profile, intelligent detector that responds to a fixed temperature with minimal thermal lag. The sensing chamber shall permit a full 360° heat entry.
2. Each thermal detector shall be electronically addressable and fully field-programmable. It shall be possible to set both alert and alarm thresholds anywhere from 80°F to 155°F in 1°F increments. Each detector shall provide a real-time value of current, local temperature in °F readout when requested by an operator at the control unit.
3. It shall be possible to configure each thermal detector for non-latching operation to prevent inadvertent or spurious fire signatures from accidentally discharging a waterless extinguishing system. The control unit shall latch the alarm report, but the discharge sequence shall be interrupted if the fire signature at the detector drops below the detector's programmable alarm threshold.
4. Detector calibration, address, and alert and alarm thresholds shall be stored in each detector's non-volatile memory. Systems that store all detector parameters in the control unit (i.e., non-distributed-intelligence-to-the-device-level architecture) shall not be considered as equivalent.

2.14 CONDUCTORS AND CONDUITS

A. All conductors shall be enclosed in rigid or thin-walled, steel conduit unless open wiring is permitted by the local electrical code.

B. Any conduit or raceway exposed to dampness or other similar conditions shall be properly sealed and installed to prevent moisture entrapment. Provisions for draining and drying shall be employed as required.

C. All wiring shall be of the proper size to conduct the circuit current, but shall not be smaller than #18 AWG unless permitted by the local electrical code. Wiring for the signaling line circuit shall

be in accordance with the Kidde Aries Netlink Installation, Operation, and Maintenance Manual. Wire that has scrapes, nicks, gouges, or crushed insulation shall not be used. The manufacturer's minimum wire-bending radii shall be observed in all enclosures, raceways, and conduits. Aluminum wire shall not be used.

2.15 SUPPRESSION SYSTEM INSTALLATION

A. The system shall be supplied and installed by a factory-authorized, Kidde Fire Systems Contractor. The Contractor shall be trained and certified by Fenwal Protection Systems to design, install and maintain the Kidde fire suppression system. The Contractor shall install the system in accordance with the manufacturer's design, installation, operation and maintenance manual.

2.16 ELECTRICAL SYSTEM INSTALLATION

A. The contractor shall install the system in accordance with the appropriate Fenwal Protection Systems installation, operation and maintenance manual.

B. Locations of all electrical equipment, the Kidde Control Unit, and all system components are subject to the approval of the architect.

C. All final-acceptance tests shall be performed in the presence of the architect and the CSFM/OSFM. The contractor shall record all equipment, tests and system configurations in a format approved by the manufacturer and/or the CSFM/OSFM. A copy of the commissioning tests and results shall be provided to the architect, the CSFM/OSFM, and the end-user.

2.17 ROUTINE MAINTENANCE

A. Routine maintenance on equipment shall be performed as recommended by the manufacturer's installation, operation and maintenance manual. At a minimum the routine maintenance will include the following by a certified Kidde Fire System Distributor:
   1. Visual Check of Pipe network and distribution nozzles per the operation and maintenance manual.
   2. Weight and pressure of the Kidde Engineered System cylinders per the operation and maintenance manual.
   3. Inspect all cylinders and equipment for damage per the operation and maintenance manual.
   4. Pneumatic operation of the Three-Way Directional Ball Valve. Routine maintenance on the suppression system as a whole shall be performed as recommended by NFPA, current edition.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. All levels of 22 00 00

B. Preparations.
   1. Prior to data collection and compilation, prepare and submit in duplicate an outline of the proposed organization and content.
   2. Compilation: Prepare and collect data concurrently with construction progress. Compile per submitted outline.

PART 2 - PRODUCTS

2.01 OPERATION AND MAINTENANCE MANUALS

A. Form of Submittals
   1. Prepare data in form of an instructional manual for use by Owner's personnel.
   2. Cover: Identify each volume with typed or printed title, "OPERATING AND MAINTENANCE INSTRUCTION". List:
      a. Title of Project.
      b. Provide indexed tabs.
      c. Identify of separate structure as applicable.
      d. Identity of general subject matter covered in the manual.
   3. Format:
      a. PDF

PART 3 - EXECUTION

3.01 OPERATION AND MAINTENANCE DATA

A. General: Record data and operation and maintenance data are complimentary. Submittal items which may be required under both categories may be included only under one submittal if a statement to that effect is included in the other submittal.

B. Quality Assurance
   1. Preparation of data shall be done by personnel.
      a. Trained and experienced in maintenance and operation of described products.
      b. Familiar with requirements of this Section.
      c. Skilled as technical writer to the extent required to communicate essential data.

C. Content of Manual
   1. Neatly typewritten table of contents for each volume, arranged in systematic order.
      a. A list of each product required to be included, indexed to content of the volume.
      b. List, with each product, name, address and telephone number of:
         1) Subcontractor or installer.
         2) Maintenance contractor, as appropriate.
         3) Identify area of responsibility of each.
         4) Local source of supply for parts and replacement
      c. Identify each product by product name and other identifying symbols as set forth in Contract Documents.
   2. Product Data:
      a. Include only those sheets which are pertinent to the specific product.
      b. Annotate each sheet to:
         1) Clearly identify specific product or part installed.
         2) Clearly identify data applicable to installation.

3) Delete references to inapplicable information.

3. Drawings:
   a. Supplement product data with drawings as necessary to clearly illustrate.
      1) Relations of component parts of equipment and systems.
      2) Control and flow diagrams.
   b. Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation
   c. Do not use Project Record Documents as maintenance drawings.
4. Supplement product data for the particular installation.
   a. Organize in consistent format under separate headings for different procedures.
   b. Provide logical sequence of instructions for each procedure.
5. Factory Authorized Start-Up Report.
   a. Provide a factory start-up report for each piece of equipment. Contractor start-up reports, unless contractor is a factory authorized representative will not be allowed.
6. Copy of each warranty, bond and service contract issued.
   a. Provide information sheet for Owner's personnel, give:
      1) Proper procedures in event of failure.
      2) Instances which might affect validity of warranties or bonds.

D. Manual for Equipment and Systems:
   1. Submit one copy of complete manual in final form in PDF format.
   2. Content, for each unit of equipment and system, as appropriate.
      a. Description of unit and component parts.
         1) Function normal operating characteristics, and limiting conditions
         2) Performance curves, engineering data and tests.
         3) Complete nomenclature and commercial number of replaceable parts.
      b. Operating procedures:
         1) Start-up, break-in, routing and normal operating instructions.
         2) Regulation, control, stopping, shut-down and emergency instructions.
         3) Summer and winter operating instructions.
         4) Special operating instructions.
      c. Maintenance Procedures:
         1) Routing operations.
         2) Guide to "trouble-shooting"
         3) Disassembly, repair and reassemble.
         4) Alignment, adjusting and checking.
      d. Servicing and lubrication schedule.
         1) List lubricants required.
      e. Manufacturer's printed operating and maintenance instructions.
      f. Description of sequence of operation by control manufacturer.
      g. Original manufacture's parts list, illustrations, assembly drawings and diagrams required for maintenance.
         1) Predicted life of parts subject to wear.
         2) Items recommended to be stocked as spare parts.
      h. As-installed control diagrams by controls manufacturer.
      i. Each contractor's coordination drawings:
         1) As-installed color-coded piping diagrams.
      j. Charts of valve tag numbers, with location and function of each valve.
      k. List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.
      l. Other data as required under pertinent sections of specifications.
   3. Content for each electric and electronic system, as appropriate.
      a. Description of system and component parts.
         1) Function, normal operating characteristics, and limiting conditions.

2) Performance curves, engineering data and tests.
3) Complete nomenclature and commercial number of replaceable parts.

b. Circuit directories of panel boards.
1) Electric service.
2) Controls.
3) Communications

c. As-installed color coded wiring diagrams.

d. Operating procedures.
1) Routing and normal operating instructions.
2) Sequences required.
3) Special operating instructions.

e. Maintenance procedures.
1) Routine operations.
2) Guide to “trouble shooting”.
3) Disassembly, repair and reassembly.
4) Adjustment and checking.

f. Manufacturer’s printed operating and maintenance instructions.

g. List of original manufacturer’s spare parts, manufacturer’s current prices, and recommended quantities to be maintained in storage.

h. Other data as required under pertinent sections of specifications.

i. Additional requirements for operating and maintenance data: Respective sections of Specifications.

E. Submittal Schedule
1. Submit tow copies of preliminary draft of proposed formats and outlines of contents prior to start of work.
a. Architect will review draft and return one copy with comments.
2. Submit one copy of complete data in final form fifteen days prior to final inspection or acceptance.
a. Copy will be returned after final inspection or acceptance, with comments.
3. Submit specified number of copies of approved data in final form 10 days after final inspection or acceptance.

F. Instruction of Owner’s Personnel.
1. Prior to final inspection or acceptance, fully instruct Owner’s designated operating and maintenance personnel in operation, adjustment and maintenance of products, equipment and systems
2. Operating and maintenance manual shall constitute the basis of instruction.
a. Review contents of manual with personnel in full detail to explain all aspects of operations and maintenance.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. This section applies to all Division 22 Plumbing Sections.

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:

1. Service connections to on-site utilities provided under the work of this Section or other Sections of the Specifications.

2. All piping systems for conduction of cold water, heated water, soil, waste and other fluids as shown or specified for plumbing work.

3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.

4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

5. All low voltage wiring for automatic fixtures as required.

C. All chemicals utilized on site as part of coating, sealant, and other products shall not contain any chemical that is listed as part of Proposition 65 known carcinogens that are identified by NTP, IARC, and the USEPA California Proposition 65 chemical repository contractors are not allowed to bring these chemicals on any California Intel site.

1.03 RELATED SECTIONS

A. Division 23 - HVAC

B. Division 26 - Electrical Work

1.04 DRAWINGS AND SPECIFICATIONS

A. For purposes of clearness and legibility, drawings are essentially diagrammatic and, although size and location of equipment are drawn to scale wherever possible, the Contractor shall make use of all data in all the contract documents and shall verify this information at building site.

B. Information presented on Drawings and in the Specifications is based upon latest data available during their preparation. The Drawings and Specifications are for the assistance and guidance of the Contractor and exact locations, distances, levels, etc. will be governed by the structures and the site the contractor shall accept same with this understanding.

C. The drawings indicate required size and points of termination of pipes, and suggest proper routes to conform to structure, avoid obstructions and preserve clearances. However, it is not intended that drawings indicate all necessary offsets, and it shall be the work of the Contractor to make the installation in such a manner as to conform to structure, avoid obstruction, preserve headroom and keep openings and passageways clear.

1.05 DELIVERY, STORAGE AND HANDLING

A. Contractor shall be responsible for delivery, storage, protection and placing of all equipment and materials.

B. Equipment stored and installed at the job site shall be protected from dust, water or other damage. Cover all equipment stored exposed to weather.

1.06 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer.

1.07 CODES AND SAFETY ORDERS

A. All work and materials shall be in full accordance with the latest rules and regulations of the State Fire Marshall; the Safety Orders of the Division of Industrial Safety; the I.S.O. codes;

1. Latest edition of California Code of Regulations, 2019 Title 24, Part 6;

2. 2022 California Plumbing Code, Title 24, Part 5;

3. 2022 California Mechanical Code, Title 24, Part 4;

4. 2022 California Building Code, Title 24, Part 2;

5. NFPA Codes (versions as referenced in 2022 California Building Code, Title 24 Part 2, chapter 35 and 2022 California Fire Code, title 24, Part 9, chapter 80

6. Other applicable laws and regulations.

B. Nothing in the Drawings or Specifications shall be construed to permit work not conforming to these codes. Drawings and Specifications take precedence when work and materials called for exceed Code requirements.

1.08 INSTALLATION

A. Manufacturer's Instructions:

1. When specifications require that installation comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation.

2. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by specifications.

3. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.

4. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Engineer for further instructions.

5. Do not proceed with work without clear understanding.

1.09 PERMITS AND FEES

A. Obtain all permits and pay all required fees for permits and/or utility services. Inspections required during the course of construction shall be arranged as required. On completion of the work furnish the owners representative with certificates of inspection.

1.10 SITE CONDITIONS

A. Assume all responsibility for damage to adjoining properties; and restore property to its original condition, should damage occur as a result of the work of this section. Contractor shall thoroughly familiarize themselves with all site conditions. Should utilities not shown on the drawings be found during excavations, promptly notify the Architect for instructions as to further action. Failure to do so will make the Contractor liable for any and all damage thereto arising from his operations subsequent to discovery of such utilities not shown on plans.

1.11 SUBMITTALS

A. General

1. A submittal schedule shall be issued by the contractor within 15 days of award of the contract. This schedule shall allow for timely review and approval as required by the contract documents.

2. These requirements apply only to substitutions, submittals, and shop drawings.

3. The contractor shall review all submittals prior to submission to the Architect. Submittals not reviewed by the contractor will be returned to the contractor and will not be reviewed.

4. Any deviations from specified requirements shall be clearly indicated in submittals.

5. Any errors in or omissions from submittals and any consequences of these are the responsibility of the Contractor.

6. Partial or incomplete submittals may be rejected as not complying with requirements; the Contractor shall be liable for any resultant consequences.

7. Delayed submittals may be rejected as not complying with requirements. Whether accepted or rejected, delayed submittals will not be considered justification for extension of contract time or similar relief.

8. Submittals not required or permitted by the Specifications but made at the option of the Contractor, will be returned without review unless accompanied with written valid justification.

9. Submittal items improperly included with those of another category (such as a proposed substitution included with shop drawing submittal) are not valid and will be returned without review.

10. Within 35 calendar days after award of the contract, and before fabrications and installation of any material or ordering of any materials, submit for approval one copy in PDF format of complete submittal data on specified and proposed substituted equipment and materials. Submittals shall list all materials proposed identified with drawing symbols and specific data on equipment such as arrangements, performance curves, sizes, capacity, motor locations, and other pertinent data. Check all submittals for conformance to the requirements of the Construction Documents before forwarding to the architect for each item. No consideration will be given to substitutions submitted past 35-day limit. The contractor shall be responsible for all quantities and errors and omissions of submittals. Furnish samples when requested.

11. Equipment and materials specified as part of the specifications and drawings are listed by two manufacturer's names. The first named manufacturer is the basis of design. The second named manufacturer has been determined to be an equivalent in quality or utility. The second named has not been specifically determined to conform to the first named in size, layout, electrical power, voltage, or impacts to building structure. The contractor is bound by all requirements for substitutes, as described below, for all second named manufacturers and equivalent equipment or products.

12. Each reviewed submittal will be marked to indicate review and directions as stated below.

13. Acceptance of a submittal does not relieve the Contractor of responsibility for omissions from the submittal or errors in the submittal.

B. Review

1. Submittals will be reviewed for general acceptability, not necessarily including all details. The engineers review is for general conformance with the design concept of the project and the information given in the contract documents. The contractor is solely responsible for confirming and correlating all quantities and dimensions; selecting fabrication processes and techniques of construction; coordinating the work with that of other trades and performing all work in a safe and satisfactory manner. Corrections of comments made on this submittal during this review do not relieve contractor from compliance with the requirements of the contract documents or with its responsibilities listed herein.

    a. Proposed substitutes will be judged not only for the acceptability of the items themselves, but also how they will be used under the conditions of the particular project.

    b. Proposed substitutions will be judged also for compliance with qualifications and conditions stipulated in paragraph 1.13.

2. Each reviewed submittal will be marked to indicate review and directions as stated below.

    a. Acceptance of a substitute does not waive the specified requirements.

    b. Once a substitution is accepted, no revision or re-submittal may be made except for pressing and valid reason and after receipts of approval to do so.

C. Review Directions

1. The notation "No Exceptions Taken" indicates that no further submittal on the particular matter is required and that the Contractor may proceed with normally ensuing action. The notation may be applied to submittals on substitutions, shop drawings, record data, or operation and maintenance data. The submittal has only been reviewed for general conformance with the design concept of the Contract Documents. The contractor is responsible for the dimensions to be confirmed and correlated at the job site; information that pertains solely to the fabrication process or to the means and methods of construction; coordination of the work of all trades; and performing all work in a safe and satisfactory manner. This notation does not modify the contractor's duty to comply with the contract documents.

2. The notation "Make Corrections Noted" indicates that no further submittal on the particular matter is required, but the Contractor shall make all changes or corrections noted (but no others) before proceeding with normally ensuing action. The notation may be applied to submittals on substitutions or shop drawings (but usually not record data or operation and maintenance data).

3. The notation "Amend and Resubmit" indicates that the submittal is not accepted and must be revised, resubmitted, and reviewed again. In the case of submittal on substitutions and shop drawings so noted, the Contractor shall not proceed with any normally ensuing action until the resubmittal is reviewed. The notation may be applied to submittals on substitutions, shop drawings, record data, or operation and maintenance data.

4. The notation "Rejected - See Remarks" indicates that the submittal is not accepted and that resubmittal on the same subject matter is not allowed and will not be considered. The notation will be applied normally only to submittals on substitutions (usually not on shop drawings, record data, or operation and maintenance data).

5. The notation "Returned Without Review" indicates that the submittal or item has not been considered officially because it is either not proper, valid, required, or permitted by the Specifications and has no status or effect.

1.12 SHOP DRAWINGS

A. The contractor is responsible for providing all shop drawings so that the design professional has the opportunity to determine if the contractor understands the contract documents. It is not the purpose of shop drawings to assure that the contractor is meeting the requirements of the contract documents. Review and approval of a submittal neither extends nor alters any contractual obligation.

B. Accompany all substituted equipment with shop drawings showing revised piping layouts in order to ascertain that substituted equipment does not adversely affect layout or work of others. Shop Drawings: The following conditions apply to shop drawings:

1. Shop drawings are not and do not become Contract Documents.

2. Processed shop drawing submittals and any instructions or requirements noted thereon are a part of the work, but they may not be used as a means of increasing the scope of the work.

3. If deviations, discrepancies, or conflicts between shop drawing submittals and the Contract Documents are discovered either prior to or after the submittals are processed, the Contract Document requirements shall govern.

1.13 SUBSTITUTIONS

A. Whenever any equipment, material, or process is indicated or specified by patent of proprietary name and/or name of Manufacturer, in the Specifications and/or on the Drawings, it is understood that such specification is used to facilitate the description of the material and/or process and deemed to be followed by the words "or equal" unless noted "no substitute".

B. Substitute equipment and materials shall be equal in all respects including quality, arrangement, utility, physical size, capacity, and performance to those specified. Approval of substitute material will not relieve the contractor from complying with the requirement of the Drawings and Specifications. The contractor shall be responsible and at his own expense, for any changes caused by proposed substitutions which affect other parts of his own work or the work of other contractors.

C. The submittal of a proposed substitution shall clearly establish the following:

1. The item can be transported into and installed in the intended space and in the manner shown.

2. Required connections (electrical, piping, and other) can be properly made and adjoining work can be properly accomplished.

3. The proposed substitute is similar to and of substance equal to that specified, is suited to the same use as that specified, and will perform the functions required by the design.

4. Motors for proposed substitute equipment will have the same minimum differential between motor brake horsepower and motor nameplate horsepower as the specified equipment.

5. All performance requirements shall be at least equal to the specified product or equipment including noise levels, cooling capacity, heating capacity, air flow quantity, etc.

D. By submitting a proposed substitution, the Contractor agrees to the following:

1. Will assume full responsibility for any and all modifications and necessary alterations arising from the use of the substitute item or material including all cost incurred by all other trades.

2. Will assume full responsibility for any delay in the construction schedule resulting from the use of the substitution.

3. Will prove harmless and indemnify the Owner and the Owner's design consultants from real or alleged damages that may result from the installation, use, or performance of a substitute material or product.

E. The following conditions apply to substitutions:

1. Submittals of substitutions are not and do not become part of the Contract Documents.

2. Contractor shall not order, fabricate, use, or install any substitute product or procedure unless he has received acceptance of the substitute from the Engineer.

3. Should the Contractor install any substitute product in violation of the above he shall remove it and install the specified product at his own expense.

4. The Contractor shall provide a letter stating that all the above items shall apply to all substituted products and equipment.

5. Any submittal for substituted equipment or product that does not clearly show that the substituted item is equal shall be marked rejected and no further submittal shall be allowed on the substituted item. Provide in submittal format documentation that the proposed item is exactly as specified in the contract documents.

1.14 GUARANTEE

A. Guarantee all work for one year from date of acceptance, against all defects in material, equipment and workmanship including repair of damage to any part of the premises resulting from leaks or other defects in material, equipment and workmanship. Guarantee shall be on form supplied by the owner's representative.

1.15 RECORD DRAWINGS

A. The Contractor shall dedicate one complete full set of Contract Drawings for use in recording as-built conditions.

B. The Contractor shall update the Record Drawings as often as necessary to keep them current, but, no less than weekly.

C. Mark-up Procedure: During the construction period, maintain a complete, current set of Contract Drawings and Shop Drawings uploaded and updated within the Bluebeam program for Project Record Documents purposes. Label each document “AS-BUILT RECORD”. Keep all record documents current.

D. The Contractor shall provide a complete set of AS-BUILT RECORD Drawings in AutoCAD (drawing) file format and one complete set in PDF format.

E. A reference by number to Change Order, CCD, RFI, Field Order or other such document is not acceptable as sufficient record information on any document. Do not conceal any Work until required information has been recorded.

1. The Contractor shall mark AS-BUILT Record Drawings to indicate the actual installation where the installation varies appreciably from the installation shown originally. Give particular attention to information on concealed elements that would be difficult to identify or record later.

    a. Revisions or any modification to details shown on the Contract Drawings

    b. Depths of various plumbing related to the main floor level.

    c. Horizontal or vertical location of underground utilities.

d. Location of internal utilities concealed in construction.

e. Points of connection for underground work.

f. Revisions to pipe routing locations.

g. Incorporate changes made by Change order, CCD, ASI, RFI etc.

h. Any new details not shown on the Contract Drawings.

2. The Contractor shall mark completely and accurately AS-BUILT Record Drawing prints of Contract Drawings or Shop Drawings, whichever is the most capable of showing actual physical conditions. Where Shop Drawings are marked, show cross-reference on the Contract Drawings location.

3. The Contractor shall mark AS-BUILT Record Drawings within BLUEBEAM with red markings. Use other colors to distinguish between changes for different categories of Work at the same location.

4. The Contractor shall note Contractor Change Directives numbers; Bid Alternate numbers; if any, Change Order numbers, and similar identification.

F. Contractor shall prepare Record Drawings: Immediately prior to inspection for Certification of Substantial Completion of the Work, review completed marked-up AS-BUILT Record Drawings with District, Project Inspector to ensure accuracy of information. Once accuracy of information is confirmed, prepare and submit a full electronic set, professionally drafted in AutoCAD format, of as-built Contract Drawings and Shop Drawings.

1. Incorporate changes and additional information previously marked on print sets. Delete, redraw, and/or add details and notations where applicable. Identify and date each Drawing; include the printed designation “AS-BUILT RECORD DRAWING” and the date prepared in a prominent location on each Drawing.

2. Distribution: Whether or not changes and additional information were recorded, organize the original marked-up set of drawings that were maintained during the construction period within BLUEBEAM into manageable sets. The sets should be labeled with all appropriate identification, including titles, dates and other information on cover sheets and submit to Owner.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Shop drawings:

1. Make all drawings to an appropriate scale, large enough to show all pertinent aspects of the item and the method of its connection into the work.

2. Make each drawing sheet in a CAD and PDF format.

B. Grouping: Combine submittals in logical groupings; for example, submit Shop Drawings grouped by Sections of the Specifications, arranged in the specified sequence.

C. Shop Drawings: CAD and PDF format.

D. Content:

1. Shop drawings may be:

a. Drawings or diagrams prepared by the Contractor, a supplier, a manufacturer, or other.

b. Typewritten data or descriptions.

c. Manufacturer's printed brochures, descriptions, charts, instructions, or data sheets.

E. Timing: Submit all shop drawings prior to installation of any items included in submittal.

2.02 CORROSION PROOFING

A. Corrosion Proofing / U.V. Protection: Products which will be installed outdoors, exposed to the weather, exposed to moisture, or other potentially damaging conditions shall be constructed to resist the effects of such exposure.

B. Exterior casings shall have lapped or gasketed joints effectively sealed to prevent intrusion of moisture or other injurious substances.

C. Casings, pipes, or product items shall be constructed of materials which are fully resistant to harmful substances they may normally contact, or (if ferrous) shall be galvanized after fabrication, or shall be fully protected from such substances by paint or other coating in appropriate thickness or number of coats.

D. All bolts, nuts, screws, and washers shall be Galvanized unless specified to be Stainless Steel.

E. Any exposed plastic pipe must have a U.V. inhibitor or U.V. P.

2.03 MATERIAL AND EQUIPMENT

A. All material and equipment shall be new, of the type, capacity and quality specified and free from defects. All materials and equipment shall be of the same brand or manufacturer throughout for each class of material or equipment wherever possible.

2.04 ACCESS BOXES

A. For below grade valves and piping devices

1. Christy Concrete Products Company, Brooks, with galvanized steel checker plate recessed traffic lid flush with rim of box. Lids for boxes located in areas subject to vehicular traffic shall be constructed to withstand H20 live loading as defined by the American Association of State Highway Officials (16,000 pound maximum individual wheel load). Service identification shall be conspicuously welded on lid before galvanizing. For gas service, drill twelve 3/8" diameter vent holes through lid before galvanizing. Provide manufacturer's box extensions to bring box bottom three inches below bottom of valve and box top flush with finish grade.

2. Box sizes (non traffic)

Type Valve	Valve Size	Box No.
Water	2 1/2" and smaller	B-9
Water	3" and 4"	B-16

2.05 ACCESS DOORS

A. Unless specified otherwise by the Architect, provide access doors of the following type:

1. Concealed hinges, prime coated with rust-inhibitive paint, style of door to suit wall, ceiling, floor or roof construction and fire rating.

   a. Milcor Type M

   b. Milcor Type UFR, fire resistive type Underwriters Laboratory Class B, 1-1/2 hour rating meets UBC, IBCO and BOCA codes for two hour rated walls self latching with key lock, Elmdor/Stonman Type FR or equal.

2. Minimum size; 14" by 14".

3. Wall and ceiling access doors: Furnish as required for access to valves etc.; coordinate size and location to obtain access.

4. See architectural drawings for further requirements.

2.06 IDENTIFICATION

A. Equipment: Black Phenolic Plates engraved with 1/2” high white letters. The equipment shall be identified by the equipment schedule tag numbers shown on the plans (i.e. GWH-1). Coordinate identification numbers with electrical contractor to ensure that the disconnect switches and other electrical/mechanical equipment has consistent identification numbers.

2.07 MISCELLANEOUS EQUIPMENT AND MATERIALS

A. Furnish and install miscellaneous equipment and materials required for the systems described whether or not specifically shown or specified.

PART 3 - EXECUTION

3.01 ACCESSIBILITY

A. Do not install any equipment, valve, control, motor, filter, or any other device requiring maintenance or service in an inaccessible location or position. Install access doors as specified herein to render all such equipment serviceable whether specifically shown on the plans or not.

Maintain code clearance to all equipment. Coordinate location of doors with lights, etc., and locate symmetrically with same.

3.02 PREPARATION

A. Observations: Check all project drawings and specifications; report any discrepancies before proceeding with the work and in time to avoid unnecessary rework.

B. Investigation: Examine the areas, conditions, and status of other work contiguous or connecting to the work to be performed; ensure that the time of installation is coordinated with other work.

C. Interruptions of Service: Portions of this work may involve connection to existing work, facilities, or utilities ties and may require interrupting shutdowns of same. Carefully plan, coordinate and execute such work so that any interruptions will be kept to a minimum in time and occurrence. Submit request for shutdowns and make shutdowns only after receiving written approval from the Owner.

D. Other: Correct any unsatisfactory conditions that may impede proper execution of the work. Ensure that all arrangements, personnel, materials, and tools are appropriate and adequate before proceeding.

3.03 INSTALLATION

A. General:

1. Material and equipment incorporated in the work shall be used or applied only for the purpose intended or specified.

2. Install piping and all equipment that requires access with minimum vertical and horizontal clearances required by OSHA for service.

3. All pipes and all other equipment shall have 2 inches minimum clearance.

4. Do not proceed with work without clear understanding.

B. Manufacturer's Instructions:

1. When specifications require that installation comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation.

2. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by specifications.

3. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.

4. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Engineer for further instructions.

5. Do not proceed with work without clear understanding.

3.04 LOCATION OF EQUIPMENT AND PIPING

A. Where job conditions do not permit the installation of piping, etc. in the location shown, it shall be brought to the engineer's attention immediately before fabrication of piping, etc. and the relocation required shall be determined in a joint conference.

B. The contractor will be held responsible for the relocating of any items installed without first obtaining the architect's or engineer's approval. Remove and relocate such items at the contractors expense as so directed by the architect or engineer.

C. Where piping is left exposed within a room, run in vertical or horizontal planes. Maintain uniform spacing between parallel lines and/or adjacent wall, floor or ceiling surfaces.

D. Horizontal runs of plumbing suspended from ceilings shall provide for maximum clearance.

E. Make minor changes in locations of equipment and piping, etc. from locations shown including minor offsets when directed by the engineer, at no additional cost to the owner.

3.05 CARE AND CLEANING

A. Clean and adjust all equipment at completion of installation to provide operating conditions satisfactory to the engineer. Remove broken, damaged or defective parts; repair or replace as directed by engineer. Remove surface material and debris resulting from this work when directed.

3.06 EQUIPMENT AND CONTROL IDENTIFICATION

A. Identify all equipment with permanently attached plates.

3.07 FLASHINGS

A. Furnish and install a waterproof flashing for each pipe or other penetration through roof or wall. Where details are not specifically delineated, submit details for review.

3.08 PAINTING

A. Painting is included under the Painting and Finishing Section. It shall be the responsibility of the Contractor to properly protect all equipment and controls during painting operations and the Contractor shall repair and/or replace any item damaged due to painting that was not properly protected.

3.09 ACCESS DOORS

A. Provide access doors to all concealed equipment, valves, controls, etc. Locate doors where shown or to be coordinated and symmetrically located with lights, diffusers, etc. Access doors furnished by the contractor shall be installed by the general contractor.

3.10 OPERATION AND MAINTENANCE DATA

A. General: Record data and operation and maintenance data are complementary. Submittal items which may be required under both categories may be included only under one submittal if a statement to that effect is included in the other submittal.

B. Quality Assurance

1. Preparation of data shall be done by personnel

a. Trained and experienced in maintenance and operation of described products.

b. Familiar with requirements of this Section.

c. Skilled as technical writer to the extent required to communicate essential data.

d. Skilled as draftsman competent to prepare required drawings.

C. Form of Submittals

1. Prepare data in form of an instructional manual for use by Owner's personnel.

a. Cover: Identify each volume with typed or printed title, "OPERATING AND MAINTENANCE INSTRUCTION". List:

b. Title of Project

c. Provide indexed tabs.

d. Identity of separate structure as applicable.

e. Identity of general subject matter covered in the manual.

2. Format

a. Electronic PDF

3. Drawings

a. Provide supporting drawings as needed.

D. Content of Manual

1. Table of contents for each volume, arranged in systematic order.

a. Contractor, name of responsible principal, address and telephone number.

b. A list of each product required to be included, indexed to content of the volume.

c. List, with each product, name, address and telephone number of:

1) Subcontractor or installer.

2) Maintenance contractor, as appropriate.

3) Identify area of responsibility of each.

4) Local source of supply for parts and replacement.

5) Identify each product by product name and other identifying symbols as set forth in Contract Documents.

2. Product Data

a. Include only those sheets which are pertinent to the specific product.

b. Annotate each sheet to:

1) Clearly identify specific product or part installed.

2) Clearly identify data applicable to installation.

3) Delete references to inapplicable information.

3. Drawings

a. Supplement product data with drawings as necessary to clearly illustrate.

1) Relations of component parts of equipment and systems.

2) Control and flow diagrams.

b. Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation.

c. Do not use Project Record Documents as maintenance drawings.

4. Factory Authorized Start-Up Report.

a. Provide a factory start-up report for each piece of equipment. Contractor start-up reports, unless contractor is a factory authorized representative will not be allowed.

5. Copy of each warranty, bond and service contract issued.

a. Provide information sheet for Owner's personnel, give:

1) Proper procedures in event of failure.

2) Instances which might affect validity of warranties or bonds.

E. Manual for Equipment and Systems

1. Submit electronic PDF in final form.

a. Content, for each unit of equipment and system, as appropriate.

1) Description of unit and component parts.

2) Function, normal operating characteristics, and limiting conditions.

3) Performance curves, engineering data and tests.

4) Complete nomenclature and commercial number of replaceable parts.

5) Operating procedures

6) Start-up, break-in, routing and normal operating instructions.

7) Regulation, control, stopping, shut-down and emergency instructions.

8) Summer and winter operating instructions.

9) Special operating instructions.

10) Maintenance Procedures

11) Routing operations

12) Guide to "trouble-shooting".

13) Disassembly, repair and reassembly.

14) Alignment, adjusting and checking

15) Servicing and lubrication schedule.

16) List of lubricants required.

17) Manufacturer's printed operating and maintenance instructions.

18) Description of sequence of operation by control manufacturer.

19) Original manufacturer's parts list, illustrations, assembly drawings and diagrams required for maintenance.

20) Predicted life of parts subject to wear.

21) Items recommended to be stocked as spare parts.

22) As-installed control diagrams by controls manufacturer.

23) Each contractor's coordination drawings.

24) As-installed color coded piping diagrams.

25) Charts of valve tag numbers, with location and function of each valve.

26) List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.

27) Other data as required under pertinent sections of specifications.

28) Content, for each electric and electronic system, as appropriate.

29) Description of system and component parts.

30) Function, normal operating characteristics, and limiting conditions.

31) Performance curves, engineering data and tests.

32) Complete nomenclature and commercial number of replaceable parts.

33) Circuit directories of panel boards.

34) Electrical service.

35) Controls.

36) Communications

37) As-installed color coded wiring diagrams.

38) Operating procedures:

39) Routing and normal operating instructions.

40) Sequences required

41) Special operating instructions

42) Maintenance procedures

43) Routine operations

44) Guide to "trouble-shooting".

45) Disassembly, repair and reassembly.

46) Adjustment and checking.

47) Manufacturer's printed operating and maintenance instructions.

48) List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.

49) Other data as required under pertinent sections of specifications.

50) Additional requirements for operating and maintenance data: Respective sections of Specifications.

F. Instruction of Owner's Personnel

1. Prior to final inspection or acceptance, fully instruct Owner's designated operating and maintenance personnel in operation, adjustment and maintenance of products, equipment and systems.

2. Operating and maintenance manual shall constitute the basis of instruction.

    a. Review contents of manual with personnel in full detail to explain all aspects of operations and maintenance.

3.11 RECORD DATA

A. Compilation

1. Record and collect information concurrently with construction progress and date all entries; make drawing entries within 24 hours after occurrence of change or installation requiring recording. Any concealed work covered before recording data shall be uncovered as directed or as necessary to obtain data.

    a. Record information on drawing prints using an erasable colored pencil (not ink or indelible pencil); describe clearly by note or graphic line as appropriate.

2. Locate any concealed work adequately to allow future access with reasonable ease and accuracy.

    a. Identify the plan location of all stub outs, pipe lines, etc., which are buried or concealed in the structure, whether installed where shown on the contract drawings or in a different location; show actual field dimensions from column lines, wall lines, or other permanent reference lines or points.

    b. In many cases on the contract drawings, the arrangement of conduits, pipes and similar items is shown schematically rather than as a precise scaled layout. Identify the actual location of these with horizontal and vertical dimensions. If such lines are exposed or readily accessible, omit dimensional identification.

    c. When any work is installed of size, dimension, slope, or location different from that shown on the contract drawings, note the deviation on the Project Record set. If the variations are substantial or cannot be shown clearly on the record drawings, make a new drawing and attach to the Record set.

3. On other documents

    a. Where changes occur in specifications, clearly indicate same in ink, colored pencil, or rubber stamp.

    b. Where installed equipment differs from that specified (e.g., by accepted substitution or change order) note in the specifications and include complete data on same.

3.12 OPERATION AND MAINTENANCE DATA

A. Preparations: Prior to data collection and compilation, prepare and submit in duplicate an outline of the proposed organization and content.

B. Compilation: Prepare and collect data concurrently with construction progress. Compile per submitted outline.

C. See Section 22 01 00 Operation and Maintenance of Plumbing.

C. Division 21 Fire Suppression

PART 2 - PRODUCTS

2.01 GENERAL

A. Furnish two tee handle operators for each size to suit all valves which are installed below grade in access boxes and which are not fitted with integral handles; hub end valves shall be used where required.
   1. Valves on systems operating over 100 psi shall be rated for 150 psi or higher as required.

B. Shut-off service, domestic water
   1. Ball Valves:
      a. Sizes 2” and smaller: NIBCO T/S/PC-585-66-LF or T/S/PC-585HP-66-LF, 600-1000 psi rated, threaded or sweat ends, full port, teflon seat, quarter turn handle with stops, two-piece, lead free, bronze body and stainless steel ball.
      b. Sizes 2-1/2 to 4”: NIBCO T-FP-600A-LF, 400 psi rated, threaded ends, full port, teflon seat, quarter turn handle with stops, two-piece dezincification resistant brass body and stainless steel ball.

C. Balancing Valve
   1. 400 psi, 250º F rating, Bell & Gossett Circuit Setter Plus, Lead Free or NIBCO T/S/PC 1805-LF
      a. Sizes 1/2" to 3": Bell & Gossett Circuit Setter Plus Balancing Valve, and all metal parts of nonferrous copper alloy; positive shut off EPDM no drip seat; hidden memory stop; threaded connections. Valve to have differential pressure read-out ports across valve seat area.

D. Check Valves: Back flow prevention service
   1. Swing check, PTFE disc, NIBCO or equal.
      a. Sizes 2" and smaller: Fig. TS/PC-413-Y-LF, lead free; bronze body, threaded or soldered ends, plug type bonnet.
      b. Size 2-1/2 and larger: Webstone 1054W Series, lead free Brass body, threaded ends.
   2. Non-slam check Type NS, Bell & Gossett, NIBCO, or equal.
      a. Sizes 2” and smaller: NIBCO T/S/PC-480-Y-LF
      b. Size 2-1/2” to 4" and larger: NIBCO W/F-910-B-LF (200 psi rated) or W/F-960-B-LF (400 psi rated); wafer or flanged ends.
      c. Cast-iron body, bronze plug, seat and guide bushing, stainless steel helical spring.
      d. Flow area through valve shall exceed cross-sectional area of specified pipe size by no less than 10%.

E. Pressure Reducing Valve
   1. Sizes ½" – 3", Watts Model 223 or equal.
      a. Bronze body, sealed cage, removable disc holder to allow disc replacement. Rated for temperatures up to 160o F. Adjustable pressure range from 25 to 75 psig with 300-psig initial pressure.
      b. Provide with a separate strainer and built in bypass feature.

F. Y-Type, Armstrong
   1. Sizes 2" and smaller: 250 psi bronze body, threaded or soldered ends, threaded screen retainer. monel screen with .045" perforations.
   2. Sizes 2 ½" and larger: 125 psi body, 125 lb. flanged or grooved ends, bolted screen retainer. monel screen with .045" perforations.

2.02 VALVE BOXES

A. Underground valve box shall be "Brooks or "Christy" marked for service.

PART 3 - EXECUTION

3.01 GENERAL

A. Valves shall be full size of line in which installed. Furnish discs suitable for service intended. All valves shall be properly packed and lubricated. Unions shall be placed adjacent to each threaded or soldered valve or equipment connection 2" and smaller. Install flanges at all valves with stems vertical wherever possible. Stems shall not be placed below horizontal.

B. Install unions adjacent to each valve and at final connection to each piece of equipment.

C. All shutoff valves in water lines shall be or ball valves, unless otherwise shown.

D. Valves shall be provided with brass identification tags indicating service controlled. Tags may be omitted on lines exposed in equipment rooms where service is obvious.

END OF SECTION

22 05 29
HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. All Division 23 Mechanical Sections.

1.02 SUMMARY

A. Furnish and install all plumbing work shown on the drawings, specified herein, and as required for a complete and functional installation.

B. This section includes materials and methods applicable to the work described in all Division 22 Plumbing Sections. Specific work requirements of individual Sections take precedence if in conflict with requirements of this Section.

1.03 SUBMITTALS

A. Submit proposed alternative methods of attachment for review and approval by the Engineer, prior to deviating from the requirements given below.

B. For all seismic bracing systems, submit structural calculations and details prepared and signed by the Contractors licensed engineer which include all resultant forces applied to the building structure. Do not overstress building structure. The maximum allowable loads are as indicated in 3.01 of this specification. The submittal data required does not require an analysis of the building structural numbers and their reaction to the loads of the piping. The submittal data needs to address attachment methods and shall include calculations indicating the forces that are applied to the building structure at the point of attachment. Calculations will be reviewed for compliance with design criteria, not for arithmetic.

1.04 RELATED SECTIONS

A. Division 26 Electrical Work

B. Division 23 HVAC

1.05 DRAWINGS AND SPECIFICATIONS

A. Information presented on Drawings and in the Specifications is based upon latest data available during their preparation. The Drawings and Specifications are for the assistance and guidance of the Contractor and exact locations, distances, levels, etc. will be governed by the structures and the site the contractor shall accept same with this understanding.

PART 2 - PRODUCTS

2.01 HANGERS AND SUPPORTS

A. B-Line, Superstrut, Tolco, Grinnell, or equal. Numbers are B-line.

B. Finish: Electro-Chromate or hot dipped galvanized.

C. Trapeze Suspension, for three or more pipes B-Line 1-5/8" width channel or a size suitable for load in accordance with manufacturer's published load ratings. No deflection to exceed 1/180 of a span.

D. Trapeze Supporting Rods: Diameter sufficient to support the load with a safety factor of 5. Anchor rods securely to building structure. See part three for minimum sizes.

E. Pipe Straps: copper coated for copper.

F. Size: For insulated pipe - pipe hangers sized to allow pipe insulation to pass continuously through the hanger.

G. Insulated Pipe Shields: Utilize isolated pipe supports at all insulated pipe hanger locations.

H. Isolators: Trisolator isolators at all hangers and clamps supporting un-insulated piping and tubing and at all points that pipe comes in contact with structure or other pipes.

PART 3 - EXECUTION

3.01 HANGERS AND SUPPORTS

A. General: Support all piping so that it is firmly held in place by approved iron hangers and supports and special hangers as required or as scheduled on the drawings.
   1. Rigidly fasten hose faucets, and similar items at ends of pipe branches to the building construction near point of connection.

B. Hanger Installation: On all insulated pipes, install the hangers on the outside of the pipe covering and not in contact with the pipe. Burning, welding, cutting, or drilling on any structural member may only be done if approved by the structural engineer. No valve or piece of equipment shall be used to support the weight of any pipe. Provide a hanger close to the point of change of direction of pipe run in either horizontal or vertical plane. Place supports and hangers for cast iron soil pipe as close as possible to joints; when hangers or supports do not come within one foot of a branch line fitting, install an additional hanger or support at the fitting. Protect insulation, when pipe is insulated, at each hanger with 180 degree, 18 gauge, 12 inch long G.I. Saddles.

C. Hanger rods with C-clamp type structural attachment shall be equipped with retaining straps.

D. Metallic Pipe Hanger Spacing and Rod Size Schedule:

Type of Pipe	Spacing		
Pipe Size	½” – 2”	2 ½” – 5”	6” – 8”
Steel Pipe	*8' - 0"	10' - 0"	12’ - 0"
Copper Tubing	5’ - 0”	8’ – 0”	10’ – 0”
Cast Iron	Support at 8'- 0" intervals and on each side of and within 12" of joint.		
Rod Size:	3/8”	½”	5/8”

*1/2” gas piping shall be spaced 6’ – 0” maximum

E. Anchor pipe subject to expansion or contraction in a manner permitting strains to be evenly distributed.

F. All hangers and fasteners are subject to the approval of the Structural Engineer.

G. Provide beam clamp retaining straps for all pipe supports attached to structural beams.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. All Division 23 Mechanical Sections.

1.02 SUMMARY

A. See 22 05 00

1.03 RELATED SECTIONS

A. Division 26 Electrical Work

B. Division 23 HVAC

1.04 SEISMIC RESISTANCE

A. Furnish and install all systems, units, equipment, and parts to meet or exceed current applicable requirements for seismic resistance specified by codes, regulations, or agencies having jurisdiction. Include all supports, anchors, braces and other restraining devices required. All seismic restraints will meet the following site specific seismic design criteria:
   1. Seismic Design Category D, 2) Importance Factor, Ip = 1.0 except Ip = 1.5 for fire sprinklers; and 3) SDS = 1.147
   2. Seismic restraints are the responsibility of the contractor.

B. Design of seismic bracing shall meet requirements of CBC Chapter 16A.

PART 2 - PRODUCTS

2.01 BRACING SYSTEMS

A. Provide approved types as manufactured by Grinnell, Hilti or Tolco.

PART 3 - EXECUTION

3.01 SWAY BRACING

A. Provide earthquake sway bracing in accordance with CBC & ASCE 7 requirements. Install exposed bracing in a neat manner.

END OF SECTION

PART 1 - GENERAL

1.01 SEE SECTION 23 05 00

PART 2 - PRODUCTS

2.01 IDENTIFICATION

A. Equipment: Black Phenolic Plates engraved with 1/2" high white letters. The equipment shall be identified by the mechanical equipment schedule tag numbers shown on the plans (ie. GWH-1, CP-1).

2.02 PIPE IDENTIFICATION

A. Maximum spacing for identification shall be 10 feet.

B. Identification shall be provided per the following
   1. At both sides of floor or wall penetrations
   2. Adjacent to all valves and flanges
   3. Adjacent to all changes in direction
   4. To be visible from the point of normal approach

C. Indicate flow direction and type of fluid.

D. Provide plastic labels for mechanical engraving with predrilled holes for attachment hardware.
   1. Material: rigid plastic laminated impact acrylic, 2-layer, exterior grade, UV stable.
   2. Thickness: 3/16 inch minimum.
   3. Maximum label size: Length and width vary for required label content but, no less than 2 inches wide by 1 inch high.
   4. Background color:
   5. Normal power: Black, matte finish.
   6. Lettering: White, machine engraved, Futura font, 3/8 inch high, all caps.
   7. Maximum temperature: Able to withstand up to 160 degrees Fahrenheit.
   8. Fasteners: Self-tapping stainless-steel screws, except contact type permanent adhesive where screws cannot or should not penetrate substrate.
      a. Mounting screw type to be number 8 – 18 by ½ drilling or tapping style, ¼ inch hex washer head, stainless steel, or similar, appropriate for material in which sign is affixed to. A bead of silicone sealer shall be applied on back of sign and at screw locations prior to affixing sign to equipment.
      b. For signs larger than 3 inches by 3 inches, use a minimum of 4 mounting screws.

2.03 PAINTED IDENTIFICATION MATERIALS

A. Stencils: Standard fiberboard stencils, prepared for required applications with the letter sizes generally complying with recommendations of ANSI A13.1 for piping and similar applications but, not less than ¾ inch high letters for access door signs and similar operational instructions.

B. Stencil paint: Standard exterior type stenciling enamel; black, except as otherwise indicated; either brushing grade or pressurized spray can form and grade.

C. Identification paint: Standard identification enamel of colors indicated or, if not otherwise indicated for piping systems, comply with ANSI A13.1 for colors.

2.04 PIPE IDENTIFICATION

A. General requirements for Manufactured Pipe labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Self-adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing. Brady/Seton, Stranco, Rowmark or equal.

C. Small pipes: For external diameters less than 6 inches, provide full-band pipe markers, extending 360 degrees around the pipe at each location, fastened by one of the following methods:
1. Snap-on application of pre-tensioned semi-rigid plastic pipe marker.
2. Adhesive lap joint in pipe marker overlap.
3. Laminated or bonded application of pipe marker to pipe (or insulation).
4. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 3/4 inch wide; full circle at both ends of pipe marker, tape lapped 1-1/2 inches.
5. Pipe label contents: Include identification of piping service using piping system nomenclature as specified, schedules or shown, and abbreviate only as necessary for each application. Include pipe size and an arrow indicating direction of flow.
6. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
7. Lettering Size: At least 1-1/2 inches high.

D. Locate pipe markers as follows:
1. Within one foot of each valve, fitting, thermometer or gauge.
2. At each branch or riser take off.
3. At each passage through walls or ceiling construction.
4. At each passage to underground.
5. On all horizontal pipe runs every 20 feet, at least twice in each room.
6. Identify piping contents, flow direction, supply and return.
7. At wall and ceiling access panels.
8. Practible variations or changes in locations and spacing may be made with specific approval of the University's Representive to meet specific conditions.

E. Color code shall be as follows:
1. Domestic Cold Water – Green Background with White Lettering
2. Domestic Hot Water - Green Background with White Lettering
3. Domestic Hot Water Return - Yellow Background with Black Lettering
4. Lab Air – yellow background with white text
5. Lab Vacuum – White background with black text (could have checkerboard pattern)
6. Medical Air – Yellow background with black text
7. Oxygen – Green background with white text or white background with green text

F. Pipe Letter height shall be as follows:

Outside Pipe Diameter Including Insulation	Minimum Length of Label	Minimum Height of Letters
.75" – 1.25"	8"	.5"
1.5" – 2"	8"	.75"
2.5" – 6"	12"	1.25"
8" – 10"	24"	2.5"
Over 10"	32"	3.5"

PART 3 - EXECUTION

3.01 EQUIPMENT IDENTIFICATION

A. Identify all equipment with permanently attached plates.

B. Identify all controls and controllers except thermostats in finished areas.

3.02 IDENTIFICATION APPLICATIONS

A. Piping and Valves
   1. Provide identifications for all valves. Provide tags with lettered inscriptions (not numbered).

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. All Division 22 sections.

1.02 SECTION INCLUDES

A. This Section describes insulation materials, methods, and applications for Plumbing Work, Special or specific details, applications, features, or methods may be described in work descriptions Sections or on the drawings.

1.03 RELATED DIVISIONS

A. 22 00 00: Plumbing

B. 23 00 00: HVAC

1.04 REFERENCES

A. Thermal insulation materials shall meet the property requirements of one or more of the following specifications as applicable to the specific product or end use:
   1. American Society for Testing of Materials Specifications:
      a. ASTM C 547, "Standard Specification for Mineral Fiber Pipe Insulation"
      b. ASTM C 585, "Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System)"
      c. ASTM C 1136, "Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation"

1.05 SYSTEM PERFORMANCE

A. Insulation materials furnished should meet the minimum thickness requirements of National Voluntary Consensus Standard 90.1 (Latest edition), "Energy Efficient Design of New Buildings," of the American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE).

B. Insulation materials furnished and installed hereunder shall meet the fire hazard requirements of applicable building codes when tested in composite form per one of the following nominally equivalent test methods:

1. American Society for Testing of Materials	ASTM E 84
2. Underwriters' Laboratories, Inc.	UL 723, CAN/ULC-S102-M88
3. National Fire Protection Association	NFPA 255

C. Molded pipe insulation shall be manufactured to meet ASTM C 585 for sizes required in the particular system.

D. Molded fibrous glass pipe insulation shall comply with the requirements of ASTM C 547.

1.06 QUALITY ASSURANCE

A. Qualifications of Installers: only a licensed firm employing installers specifically skilled and experienced in applying insulation to piping shall do Insulation work.

B. Insulation materials and accessories furnished and installed hereunder shall, where required, be accompanied by manufacturers' current submittal or data sheets showing compliance with applicable specifications listed in above.

C. Insulation materials, including all weather and vapor barrier materials, closures, hangers, supports, fitting covers, and other accessories, shall be furnished and installed in strict accordance with project drawings, plans, and specifications.

D. Insulation materials and accessories shall be installed in a workmanlike manner by skilled and experienced workers who are regularly engaged in commercial insulation work.

E. Codes and Standards:
   1. California Code of Regulations - Title 24.
   2. National Fire Protection Association - 90A
   3. Insulation applied to the exterior or interior surface of ducts, and the exterior surface of piping, shall be UL labeled with maximum flame-spread rating of 25 and maximum smoke- developed rating of 50 according to ASTME 84, when tested as a composite installation including insulation, facing materials, and adhesives as normally applied.

1.07 DELIVERY AND STORAGE OF MATERIALS

A. All of the insulation materials and accessories covered by this specification shall be delivered to the job site and stored in a safe, dry place with appropriate labels and/or other product identification.

B. The contractor shall use whatever means are necessary to protect the insulation materials and accessories before, during, and after installation. No insulation material shall be installed that has become damaged in any way.

C. If any insulation material has become wet because of transit or job site exposure to moisture or water, the contractor shall not install such material, and shall remove it from the job site. An exception may be allowed in cases where the contractor is able to demonstrate that wet insulation when fully dried out (either before installation or afterward following exposure to system operating temperatures) will provide installed performance that is equivalent in all respects to new, completely dry insulation. In such cases, consult the insulation manufacturer for technical assistance.

PART 2 - PRODUCTS

2.01 PLUMBING EQUIPMENT INSULATION – SEE 22 07 16

2.02 PLUMBING PIPING INSULATION – SEE 22 07 19

PART 3 - EXECUTION

3.01 APPLICATION/INSTALLATION

A. Use the types and thickness of insulation specified in work description Sections.

B. Apply insulations in accordance with the manufacturer's recommendations and with instructions specified herein or noted on the drawings.

C. Install insulations only after the systems, items, and equipment have been installed and tested, inspected, and accepted. Exceptions: Slip-on piping insulation and equipment insulations installed at the factory.

D. Fit insulation snugly to the item being insulated; butt all joints tightly with no voids, spaces, or thin spots.

E. Seal all joints completely; where sealing tape is used, center the tape over the joint.

F. Except where specified or necessary, do not use staples or fasteners which penetrate vapor barrier jackets or covers on cold systems or equipment; where such penetrating fasteners are

used, seal each penetration completely to maintain the vapor barrier integrity. All penetrations of the ASJ and exposed ends of insulation shall be sealed with vapor barrier mastic. Vapor seals at butt joints shall be applied at every fourth pipe section joint and at each fitting to provide isolation of water incursion.

G. Use adhesives, mastics, cements, sealants, and finishes undiluted unless specifically directed otherwise; apply per manufacturer's directions.

H. Install outdoor jacketing or other specified weather proofing or finishing on all insulations outdoors.

I. Install all indoor exposed insulation with extra care and finish neatly.

J. Follow specified methods of installation unless alternative methods are submitted and approved.

3.02 FINISHING

A. Finishes and Protection:
   1. Insure that the exterior finish of all insulation is applied and complete as specified.
   2. Make ready for painting, or painted to match existing including color where specified for paint.
   3. Install all metal jackets or protective sheathing where specified.

B. Repair, Touchup: Properly repair and touchup all dents, rips, tears, or other damage inflicted on jackets or exterior surfaces of insulation. Breaks or punctures in the vapor barrier of external insulation will not be accepted and must be repaired prior to project acceptance.

END OF SECTION

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

A. A continuous intact vapor barrier is critical for all pipes conveying fluids at temperatures less than 75° F.

B. All insulation material shall have a mold, humidity, and erosion resistant face that has met the requirements of 2022 CMC Standard No. 6-1.

C. Insulation applied to the exterior surface of pipes located in buildings shall have a flame spread of no more than 25 and smoke developed rating of not more than 50.

D. All requirements of Section 22 07 00 apply to this section.

PART 2 - PRODUCTS

2.01 IP-1 RIGID MOLDED SECTIONAL/INDOOR CONCEALED JACKET

A. Regular shape (straight run).
   1. Molded sectional, factory fabricated of heavy density resin bonded fibrous glass, with integral factory applied all service jack of Kraft paper/aluminum foil/glass fiber reinforcement.
   2. Insulation shall have a thermal conductivity k factor of 0.23 at 75° F mean temperature and be suitable for direct application and service on piping having operating surface temperatures of -60° to 450°F.
   3. Jacket shall:
      a. Extend 1-1/2” (minimum) along one edge of longitudinal joint to form a sealing lap, which shall be faced inside with a paper protected pressure sensitive adhesive.
      b. Have a permanence rating of 0.02 perm/in. and a Beach puncture resistance of 50 units;
      c. Have an exterior suitable for painting with latex or water base paint.
   4. All insulation shall have composite (insulation, jacket, tape seal and adhesive used to adhere jacket to the insulation). Fire and Smoke Hazard ratings as tested under procedure ASTM E-84, NFPA 255 and UL 723, not exceeding Flame Spread of 25 and a Smoke Developed of 50. PVC fitting covers and accessories, such as adhesives, mastics, cements and cloth for fittings shall have the same component ratings.
   5. Paper laminate jackets shall be permanently flame and smoke resistant. Chemicals used for treating paper in jacket laminates shall not be water soluble and shall be unaffected by water and humidity.
   6. Fiberglass Schuler-Manville Micro-Lok, or equal.

B. Irregular shape (fittings, flanges, valves, etc.)
   1. Fibrous glass of same density, thickness, and other properties or characteristics as the adjacent regular shape insulation either pre-molded or field forged to fit the item being insulated. The pre-molded insulation shall be provided with weather protection cover.

2.02 IP-2 RIGID MOLDED SECTIONAL/OUTDOOR JACKET

A. Regular shape (straight run).
   1. Molded sectional, factory fabricated of heavy density resin bonded fibrous glass, with integral factory applied all service jacket of Kraft paper/aluminum foil/glass fiber reinforcement.
   2. Insulation shall have a thermal conductivity k factor of 0.23 at 75° F mean temperature and be suitable for direct application and service on piping having operating surface temperatures of -60° to 450°F.

3. Jacket:
4. Straight runs: .016” thick smooth sheet aluminum finish.
5. Irregular shapes:
   a. Amerisafe, factory molded aluminum covers, or
   b. Mitered aluminum sheet matching straight run jacketing, or
   c. Weather coating.
   d. Alternative jacketing: Schuler-Manville Type ML, metal jacketing system.
6. All insulation shall have composite (insulation, jacket, tape seal and adhesive used to adhere jacket to the insulation). Fire and Smoke Hazard ratings as tested under procedure ASTM E-84, NFPA 255 and UL 723, not exceeding Flame Spread of 25 and a Smoke Developed of 50. PVC fitting covers and accessories, such as adhesives, mastics, cements and cloth for fittings shall have the same component ratings.
7. Paper laminate jackets shall be permanently flame and smoke resistant. Chemicals used for treating paper in jacket laminates shall not be water soluble and shall be unaffected by water and humidity.
8. Fiberglass Schuler-Manville Micro-Lok, or equal.

B. Irregular shape (fittings, flanges, valves, etc.)
   1. Fibrous glass of same density, thickness, and other properties or characteristics as the adjacent regular shape insulation, either pre-molded or field forged to fit the item being insulated. The pre-molded insulation shall be provided with weather protection cover.

2.03 IP-3 ELASTOMERIC FOAM

A. Insulation shall be Elastomeric Foam Insulation. Insulation should have a maximum service temperature of 210° F, a minimum service temperature of -40°F, and a “K” factor of 028 at 75°F. The flame spread of the insulation shall be 25 or less, and smoke density shall be 50 or less when tested in accordance with ASTM E84.

B. Provide U.V. protective coating for all outdoor applications. Foster 30-64, Armacell WB Coating or K-Flex 374.

C. K-Flex R-180-FS/R-1800-FS, Armacell Armaflex or equal.

2.04 IP-4 CLOSED CELL POLYOLEFIN

A. Closed cell flexible plastic foam insulation should have a “k” factor of 0.27 or less at 75°F and water vapor permeability of .2 perm-inch or less. The manufacturer shall warrant the insulation to be able to be directly buried underground without any protective jacket.

B. Closed Cell Polyolefin in tubular form shall comply with ASTM C-534, UL 94HBF, UBC 42-1 Class I, ASTM E-84 (25/50), NFPA 255 (25/50), UL 723(25/50), FMCSS-302, CAN-ULC-S102.2-M88 (25/50) Flammability Classification, MEA#267-92-M, New York.

C. Provide U.V. protective coating for all outdoor applications.

D. IMCOA Imcolock or equal.

2.05 IP-5 RIGID MOLDED SECTIONAL/INDOOR EXPOSED JACKET

A. Regular shape (straight run)
   1. Molded sectional, factory fabricated of heavy density resin bonded fibrous glass, with integral factory applied all service jacket of Kraft paper/aluminum foil/glass fiber reinforcement.
   2. Insulation shall have a thermal conductivity k factor of 0.23 at 75°F mean temperature and be suitable for direct application and service on piping having operating surface temperatures of -60° to 450°F.
   3. Jacket:

a. Straight runs: PVC fitting covers with vapor barrier.
b. Irregular shapes:
c. Zeston, Snap-Form, factory molded PVC covers, or
d. Mitered aluminum sheet matching straight run jacketing, or
e. Alternative jacketing: Schuler-Manville Type ML, metal jacketing system.

4. All insulation shall have composite (insulation, jacket, tape seal and adhesive used to adhere jacket to the insulation). Fire and Smoke Hazard ratings as tested under procedure ASTM E-84, NFPA 255 and UL 723, not exceeding Flame Spread of 25 and a Smoke Developed of 50. PVC fitting covers and accessories, such as adhesives, mastics, cements and cloth for fittings shall have the same component ratings.
5. Paper laminate jackets shall be permanently flame and smoke resistant. Chemicals used for treating paper in jacket laminates shall not be water soluble and shall be unaffected by water and humidity.
6. Fiberglass Schuler-Manville Mico-Lok, or equal.

B. Irregular shape (fittings, flanges, valves, etc.)
1. Fibrous glass of same density, thickness, and other properties or characteristics as the adjacent regular shape insulation, either pre-molded or field forged to fit the item being insulated. The pre-molded insulation shall be provided with PVC protection cover.

PART 3 - EXECUTION

3.01 PIPING APPLICATIONS

Note: Where multiple systems are listed, contractor has the option to choose.

A. Condensate (CD) water piping above grade/indoors
1. Use System IP-3. (Elastomeric Foam) (R-value=6.0).
a. ¾" thickness for all sizes
2. Use System IP-4. (Closed Cell Polyolefin).
a. ¾" thickness for all sizes
3. Use System IP-1. (Rigid Molded Sectional/Indoor Jacket) with vapor barrier.
a. ¾" thickness for all sizes

B. Rain Water Leaders and Overflow Drains above grade/indoors:
1. Use System IP-3. (Elastomeric Foam) (R-value=6.0).
a. ¾" thickness for all sizes
2. Use System IP-4. (Closed Cell Polyolefin).
a. ¾" thickness for all sizes
3. Use System IP-1. (Rigid Molded Sectional/Indoor Jacket) with vapor barrier.
a. ¾" thickness for all sizes

C. Industrial Cold Water (ICW) piping above grade/indoors:
1. Use System IP-3. (Elastomeric Foam) (R-value=6.0).
a. ½" thickness for all sizes
2. Use System IP-4. (Closed Cell Polyolefin).
a. ½" thickness for all sizes
3. Use System IP-1. (Rigid Molded Sectional/Indoor Jacket) with vapor barrier.
a. ½" thickness for all sizes smaller than 1". Use 1" thickness for 1" thru 4"

D. Domestic cold water (CW) piping above grade/indoors (First 5'-0" of the cold-water pipe at the water heater) (R-value=7.7 for pipe sizes less than 1"; R-value=12.5 for pipe sizes 1" to 1-1/4";); R-value=11.0 for pipe sizes 1-1/2" to 3" & R-value=9.0 for pipe sizes 4" to 6":
1. Use System IP-3. (Elastomeric Foam).
a. ½" thickness for all sizes
2. Use System IP-4. (Closed Cell Polyolefin).
a. ½" thickness for all sizes

3. Use System IP-1. (Rigid Molded Sectional/Indoor Jacket) with vapor barrier.
   a. ½" thickness for all sizes smaller than 1". Use 1" thickness for 1" thru 4"

E. Domestic cold water (CW) piping above grade/outdoors
   1. Use System IP-2. (Rigid Molded Sectional/Outdoor Jacket) with vapor barrier. R-value=9.0
      a. 1 ½" thickness for all sizes
      b. All piping shall have heat trace installed to protect from freezing. Coordinate with the electrical contractor.

F. Domestic tempered water (TW) above grade/indoors

   1. Use System IP-1. (Rigid Molded Sectional/Indoor Jacket) with vapor barrier.
      a. For temperatures 105 to 140° F, 1" thickness for pipes smaller than 1" diameter (R-value=7.7), 1-1/2" thickness for 1" & 1-1/4" diameter pipe (R-value=12.5) and 1-1/2" thickness for 1-1/2" to 3" diameter pipe (R-value=12.5); 2" thickness for 2" diameter to 6" diameter pipe (R-value=14.0).

G. Domestic hot water (HW) above grade/indoors

   1. Use System IP-1. (Rigid Molded Sectional/Indoor Jacket) with vapor barrier.
      a. For temperatures 105 to 140° F, 1" thickness for pipes smaller than 1" diameter (R-value=7.7), 1-1/2" thickness for 1" & 1-1/4" diameter pipe (R-value=12.5) and 1-1/2" thickness for 1-1/2" to 3" diameter pipe (R-value=12.5); 2" thickness for 2" diameter to 6" diameter pipe (R-value=14.0).

H. Domestic hot water (HW) above grade/outdoors
   1. Use System IP-2. (Rigid Molded Sectional/Outdoor Jacket) with vapor barrier.
      a. All Sizes: 2" thick. R-value=14.0

3.02 INSTALLATION

A. Unless specifically excluded herein or on the drawings, insulate all parts of hot piping systems, steam piping, and condensate drains including fittings, flanges, valves, and pipe-mounted devices, except do not cover nameplates on devices.

B. Install insulation in removable sections over unions, flanges, and line components or devices requiring periodic maintenance.

C. Install insulation butted tightly to transitions such as insulated pipe shields, insulated pipe sleeves, equipment connections, etc.

D. Install insulation on piping systems so that condensation will not occur. Insulate pipe supports where hanger is directly in contact with pipe up to the point of connection to the building structure. All piping shall be supported in such a manner that neither the insulation nor the vapor/weather barrier is compromised by the hanger or the effects of the hanger. In all cases, hanger spacing shall be such that the circumferential joint may be made outside the hanger. On cold systems, vapor barrier shall be continuous, including material covered by the hanger saddle.

E. Treat equipment face piping as follows:
   1. Where piping is subject to condensation (domestic water systems, rain water leaders, condensate drains) and where installed above grade outdoors (either hot or cold systems) insulate piping completely to the point of equipment connection.
   2. Where not subject to condensation (hot systems) terminate insulation at the outlet side of the equipment shut-off valve, leaving the face piping un-insulated, 24" max, unless noted otherwise, except where exposed to outdoors.

F. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full-length units of insulation, with single cut piece to complete run. Do not use cut pieces or scraps abutting each other. Butt insulation joints firmly to ensure complete, tight fit over all piping surfaces.

G. Maintain the integrity of factory-applied vapor barrier jacketing on all pipe insulation, protecting it against puncture, tears or other damage. All staples used on cold pipe insulation shall be coated with Foster 30-65 or Childers CP-34 vapor barrier coating to maintain vapor barrier integrity.

H. Rigid Molded Sectional/Jacketed:
1. Comply with applicable general instructions above.
2. Apply to all hot water and piping (except where specified or noted otherwise) installed above grade indoors and outdoors, concealed or exposed.
3. Seal all transverse joints (except at PVC fitting jackets) with circumferentially applied 3" (minimum) width tape of same material as the jacket, faced with the same adhesive as the longitudinal lap, or seal with Hardcast 4" wide Type DT490-C mineral impregnated woven fiber tape (synthetic fiber indoors, cotton fiber outdoors) using Hardcast FTA-20 activator/adhesive applied by brush or roller. Seal transverse joints at PVC fittings jackets with color matching PVC tape and vapor barrier mastic adhesive.
4. Fittings and valves shall be insulated with pre-formed fiberglass fittings, fabricated sections of fiberglass pipe insulation, blanket insulation, or insulating cement. Thickness shall be equal to adjacent pipe insulation. Finish shall be with pre-formed PVC fitting covers or as otherwise specified on contract drawings.
5. Flanges, couplings and valve bonnets shall be covered with an oversized pipe insulation section sized to provide the same insulation thickness as on the main pipe section. An oversized insulation section shall be used to form a collar between the two insulation sections with low-density blanket insulation being used to fill gaps. Jacketing shall match that used on straight pipe sections. Rough-cut ends shall be coated with suitable weather or vapor resistant mastic as dictated by the system location and service.
6. On hot systems where fittings are to be left exposed, insulation ends should be beveled away from bolts for easy access.
7. On cold systems, particular care must be given to vapor sealing the fitting cover or finish to the pipe insulation vapor barrier. All valve stems shall be sealed with caulking to allow free movement of the stem but provide a seal against moisture incursion.
8. Fit insulation terminations with Zeston, Snap Form, end cap jackets, or seal with Hardcast tape as specified above for joints.
9. On all piping (except equipment face piping) installed outdoors, install outdoor jacketing. Install aluminum sheet jacket with all joints turned down at 45º below horizontal; secure in place with non-corroding bands and/or blind rivets (do not puncture vapor barrier insulation jacket). On equipment face piping (including equipment shut-off valve) coat the insulation with ¼" thick Foster 46-50 or Childers CP-10/11 (weatherproofing) mastic reinforced with glass fabric and finished with two (2) coats of aluminum paint.
10. Penetrations
    a. Extend piping insulation without interruption through walls, floors, and similar piping penetrations, except where otherwise specified.

I. Closed Cell Polyolefin:
1. Install pre slit, pre-glued closed cell polyolefin foam pipe insulation as per manufacturer's recommendations. Seal all joints and seams with Fuse-Seal Gun or with Armstrong 520 adhesive or equal in accordance with manufacturer's written instructions. Fabricate fitting covers from polyolefin foam insulation using same procedure.
2. Verify that work of this section may be installed in strict accordance with the original design, all pertinent codes and regulations, and all pertinent portions of the referenced standards.
3. In the event of discrepancy, immediately notify the Architect.

4. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

J. Install insulation in accordance with insulation manufacturer's instructions and as specified.

K. Install faced insulation with facing to occupied room side. Install non-rated facing in contact with unexposed surface of finish materials.

L. Do not install insulation over recessed light fixtures.

M. Trim insulation neatly to fit spaces. Fit insulation into crevices, spaces at outlet boxes and similar penetrations.

N. Maintain continuous foil faced vapor barrier. Provide fire resistive tape at all edges or penetrations of foil faced insulation, including batt ends.

O. Where wall insulation cavity exceeds 8 feet high, provide blocking or other approved support at 8 feet on center.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Section 22 05 00applies to this section.

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. Service connections to existing on-site utilities, and stubs for future connection to equipment provided under the work of this Section or other Sections of the Specifications.
   2. All piping systems for conduction of cold water and heated water as shown or specified for plumbing work.
   3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.03 RELATED SECTIONS

A. Section 22 05 00 – Plumbing

B. Section 22 07 00- Insulation

C. Section 23 00 00 - Heating, Ventilating, & Air Conditioning

1.04 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer. Where possible, offset vents and pipes rising in walls, concealed above ceilings, below plates and rise through roof. Where this is not possible, install vents and pipes through plates as detailed on structural drawings.

1.05 SUBMITTALS

A. Submit a general statement of materials and methods along with manufacturer's technical data and installation instructions for all equipment, fixtures, pipe and fittings, and plumbing specialties to be installed.

B. Record Drawings: Per specification section 22 05 00 requirements.
   1. Operation and Maintenance Manuals: Per specification section 22 01 00 requirements.

PART 2 - PRODUCTS

2.01 GENERAL

A. Adapters: Wrought copper male adapters shall be used wherever it is necessary to connect copper tubing to a valve or "tee" having threaded connections

2.02 PIPE PROTECTION

A. Bare copper pipe buried in the ground shall have a corrosion protective wrap of one of the following:
   1. Polyvinyl Chloride Tape: The tape shall be of a minimum thickness of 10 mils and shall be laminated with a suitable adhesive, or shall be applied with a suitable primer adhesive.

Width as recommended by the manufacturer for the pipe sizes being wrapped (4" minimum). Tape shall have continuous identification

2. 3M X-Tru-Coat, factory-applied plastic coating with additional field-applied double-layer wrapping of Scotchrap #51, 20-mil plastic tape, Trentex No. V-10, B-20, Scotchwrap No. 50 Polyvinyl chloride tape wrap, or thermofit sleeves.
3. Field Joint Cover: Tape coat, prime coat and one layer of Tape coat #20 heat-applied 62-mil tape.

PART 3 - EXECUTION

3.01 MINIMUM COVER

A. Provide trenching and backfill for buried piping and install at the following depth unless shown otherwise, cover is from top of pipe to finish grade.

B. Water - 30"

3.02 INSTALLATION OF PIPING SYSTEMS

A. General:
   1. Install exposed polished or enameled connections from fixtures or equipment with special care, showing no tool marks or threads at fittings. Inspect each piece of pipe and each fitting carefully for defective workmanship on pipe, or obstruction in pipes and fittings.
   2. Anchor pipe subject to expansion or contraction in a manner permitting strains to be evenly distributed and alleviated by swing joints or expansion loops which shall be installed as required and/or shown. Underground anchors shall consist of plates welded to pipe and encased in concrete. Anchor all domestic cold water piping at all toilet areas that have flush valve urinals or toilets.

B. Thrust Blocks: Provide concrete anchors or thrust blocks for all non-metallic water mains in the ground. Install at all changes in direction and at branch take-offs 2" and larger. Form Thrust Blocks by pouring concrete between the pipes and trench wall. They shall be adequate in size and placed to take all thrusts created by the maximum internal water pressure, as recommended by manufacturer.

C. Sleeves: Install sleeves of sufficient size to allow for free motion of pipe. Finish sleeves flush when in walls and extend a minimum of 2" above floor when passing through floor slabs and outside walls shall be caulked with oakum and mastic and made watertight. No visible leakage at sleeves will be permitted. Sleeves may be omitted for waste lines through slabs on grade and rising into a concealed space if wrapped with 1" insulation. Sleeve all pipes where pipes pass through footings with PVC pipe sleeves.

D. Fire-Barrier Penetrations: Seal pipe penetrations with fire-stopping sealant material specified in Division 7.

E. Cathodic Protection: Install insulated flanges or dielectric unions at points of connection between pipes and equipment as follows: (1) between copper or brass piping and steel or cast iron pipe. (2) Between copper or brass piping and any steel material. (3) Buried connections of copper or brass piping to steel or cast-iron piping shall be protected with a polyvinyl tape wrap 10 mils thick, extending 5' each way from connection.

F. Expansion: Install piping with sufficient offsets, loops, and/or swing joints to allow for expansion and contraction. Anchor piping at equipment to restrain movement at those locations.

G. Freeze Protection: Piping shall not be installed in a location subject to freezing conditions. All piping shall and must be installed on the “warm” side of building envelope insulation without exception. Where risers occur in outside walls, ensure that building insulation is adequate and

intact. All piping must be drainable. Provide drains required and all piping shall be run in or above heated portion of the building.

3.03 INSTALLATION OF UNDERGROUND PIPE PROTECTION

A. Apply covering to within four inches of ends for each pipe length on pre-wrapped pipe.

B. Clean all piping of all loose scale, rust, dirt, oil and grease before wrapping. Wire brush as required, use of a quality solvent for removal of oil and grease.

C. Field Joints and Fittings: Joints shall be wrapped to provide at least two full thickness' over the joint and to extend a minimum of 4" over the adjacent pipe covering. Tightly apply the tapes with a one-half minimum uniform lap, free from wrinkles and voids. Experienced operators shall wrap sections of piping to be wrapped that exceed 50' of continuous lengths with an approved wrapping machine.

D. Piping Protective Covering Testing. After applying covering, and before back filling. Test all protective covering using a Tinker and Rasor Holiday Detector, obtain certification upon completion of test. Correct any discovered faults in coating and repeat test until system is proved free of all faults.

E. Inspection: Damaged or defective wraps shall be repaired as directed. Do not cover wrapped pipe until the inspection and necessary repairs have been completed and approved by the Architect.

F. Defect Repair: Tape coat TC Cold prime and double wrap of Tape coat CT cold-applied tape spirally wrapped with half-tape width overlap of preceding layer.

G. Covering: Place all backfill carefully in order not to damage the wrap. No rocks or sharp edges shall be back filled against the wrap.

3.04 EXCAVATING AND TRENCHING

A. Perform all excavations as required for the installation of the work included under this section, including shoring of earth banks to prevent cave-ins and to protect workmen and equipment. Restore all surfaces, roadways, walks, curb, walls, existing underground installations, etc. damaged or cut as a result of the excavations to their original conditions in a manner approved by the architect. Excavations shall be ample in size to permit pipes or equipment to be laid at elevations intended, and to permit ample space for caulking and joining and compacting backfill around pipe. Maintain all warning signs, barricades, flares and red signal lanterns as required by the Safety Orders of the Division of Industrial Safety and local ordinances. Perform all pumping required to remove all water from trenches during installation of piping and backfilling.

B. Stop machine excavation for pipe trenches in solid ground, several inches above required grade, so that a firm and uniform bearing throughout entire length of pipe is provided. In lieu of above hand excavation on bottom of trench, the contractor may excavate to a depth one quarter of the nominal diameter of pipe, but in no case excavate less than 6" below required grade line, and place a bed of sand or granular soil, properly compacted to provide a uniform grade and to provide a firm support for pipe throughout its entire length. When pipe or underground conduit with insulation or protective coating is to be placed in the trench, clean sand only shall be used for bedding the pipe or conduit.

3.05 BACKFILLING

A. No backfilling operations shall begin until the required tests and inspections have been made and the Architect has given approval for backfilling. Should any of the work be enclosed or covered up before it has been approved, contractor shall, at his expenses, uncover the work. After it has been inspected, tested and approved, he shall make all repairs necessary to restore the work of the other contractor to the condition in which it was found at the time of uncovering.

Insulated pipe and pipe with protective coating shall be backfilled with clean, concrete grade sand for a minimum distance of 12" above the top of the pipe. Compact sand backfill by flooding or jetting. Protect pipe from uplift during jetting operation.

B. Except under existing paved areas, walks, roads, or similar surfaces, and in cases where rock is encountered, backfill more than 12" above the top of the pipe shall be made using suitable excavated material or other approved material as necessary. The backfill shall be placed in 6" layers, measured before compaction, and tamped either by hand or machine.

C. Machine tamping of backfill for excavations under existing or proposed pavement, walks, roads or similar surfaces, and under new slabs on grade, shall be made in accordance with the specifications. Backfill for excavation under pavement, slabs, walks, roads and similar surfaces shall be compacted as specified in the specifications. Surface work shall be replaced to match the existing work. Replace or repair to its original condition all sod, concrete, or other materials disturbed by the trenching or backfilling operation. Remove and dispose of all excess material.

3.06 CROSSING EXISTING UTILITIES

A. Extreme care shall be exercised during excavation across existing utility lines particularly gas and electrical lines for trenching to install new utility lines. Hand excavate all trenches in the proximity of existing lines so as not to damage or cut into them.

B. All existing utility and service lines shall be located by hand excavation prior to trenching with equipment.

C. The location, depth and invert elevations of all existing utilities to be crossed or to which connecting shall be determined before performing any other work or ordering any materials for the project.

3.07 PROTECTION FROM DAMAGE

A. Protect the work and materials of other trades as well as the Mechanical work and material from damage during construction. Cap and/or plug all piping at the completion of roughing-in and before backfilling. Cap all piping at the close of each day.

3.08 FINAL CONNECTIONS

A. Plumbing Contractor shall verify location of and make all final connections to site utilities, extend to buildings and furnish and install valves, valve boxes, pressure reducing valves, shut-off cocks, cleanouts, pressure regulating valves, adapters and other accessories shown and/or required to connect.

3.09 STUBS

A. All stubs for future connection shall be installed within 12” of location shown. Cap or plug stub at depth specified for service.

B. Install valves, valve boxes, regulators, and other accessories or devices specified and cap stub.

C. Furnish and install a #4 Rebar marker pin driven 24” into ground with a white rebar cap 12” above grade at each stub location. Provide brass identification tag.

3.10 FIELD QUALITY CONTROL

A. Water Sterilization
   1. Contractor shall provide all ports, valves and isolation of new piping for testing.
   2. After installation and before installing valves or making final connections, flush or purge piping systems clean of foreign substances; use water to flush piping conducting liquids and compressed air to clear piping conducting gases.

3. After completing cold and heated water systems, disinfect in accordance with current requirements of U.S. Public Health Department. Use 50 parts per million of chlorine with 8 hour retention and flush to leave a residual no greater than supply source. Submit written certification of disinfecting completion by independent laboratory. After sterilization take at least one (1) water sample per floor and have analyzed for "E-coli" to submit test results.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Section 22 11 00, Facility Water Distribution applies to this section.

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. Service connections to existing on-site utilities, and stubs for future connection to equipment provided under the work of this Section or other Sections of the Specifications.
   2. All piping systems for conduction of cold water, heated water, soil, waste, fuel gas, and other fluids or gases as shown or specified for plumbing work.
   3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.
   5. **No Pro-Press or similar copper pipe joining method will be accepted.**

1.03 RELATED SECTIONS

A. Section 22 05 00 - Plumbing

B. Section 22 07 00 - Insulation

C. Section 23 00 00 - Heating, Ventilating, & Air Conditioning

1.04 QUALITY ASSURANCE

A. All plumbing fixtures and equipment shall comply with California Code of Regulations, Title 24, Part 6, latest edition.

1.05 REFERENCES

A. Pipes and Tubes **(See 2.03 for application of pipe to be used)**
   1. Hard Copper Tube: ASTM B88, Types K, L and M, water tube, drawn temper.
   2. Soft Copper Tube: ASTM B88, Types K and L, water tube, annealed temper.

B. Fittings
   1. Wrought-Copper, Solder-Joint Pressure Fittings: ANSI B16.22.
   2. Cast-Copper-Alloy, Solder-Joint Pressure Fittings: ASME B16.18, ASTM B584.
   3. Cast-Copper-Alloy, Threaded -Joint Pressure Fittings: ANSI/ASME B16.15, ASTM B584.
   4. Bronze Flanges: ASME B16.24, Classes 150 and 300.
   5. Copper Unions: ASME B16.18, cast-copper-alloy body, hexagonal stock, with ball-and-socket joint, metal-to-metal seating surfaces, and solder-joint, threaded, or solder-joint and threaded ends. Threads complying with ASME B1.20.1.

C. Joining Materials
   1. Solder Filler Metal: ASTM B32, alloys to suit system requirements.
   2. Brazing Filler Metals: AWS A5.8, alloys to suit system requirements.

1.06 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer. Where possible, offset vents and pipes rising in walls, concealed above ceilings, below plates and rise through roof. Where this is not possible, install vents and pipes through plates as detailed on structural drawings.

1.07 SUBMITTALS

A. Submit a general statement of materials and methods along with manufacturer's technical data and installation instructions for all equipment, fixtures, pipe and fittings, and plumbing specialties to be installed.

B. Record Drawings: Per specification section 22 05 00 requirements.

C. Operation and Maintenance Manuals: Per specification section 22 01 00 requirements.

PART 2 - PRODUCTS

2.01 GENERAL

A. Adapters: Wrought copper male adapters shall be used wherever it is necessary to connect copper tubing to a valve or "tee" having threaded connections.

2.02 PIPE, FITTING, AND JOINING MATERIALS

A. Copper Water Pipe **(See 2.03 for application of pipe to be used)**
   1. Pipe: Above grade, Type M, L, or K hard drawn copper tubing per ASTM B-88, plain ends.
   2. Fittings: Solder type, wrought copper per ANSI Standard B16.22 or cast red bronze per ANSI Standard B16.18. Do not use T-drill.
   3. Unions: Solder type, cast red bronze.
   4. Joining Materials/Methods
      a. Canfield, Silvabrite or equal lead free solder with a non-corrosive water based flux.
      b. 15% silver brazing alloy, water based silver brazing flux. Silver content must be clearly identified on the brazing rod.
   5. Connections
      a. Copper to dissimilar metals: dielectric connector.
      b. Copper to threaded connections: cast brass adapters.

2.03 PIPE AND FITTING APPLICATIONS

A. Inside Building (to 5'-0" outside building line).
   1. Water Piping: Above grade, Type L drawn temper, joining methods, soldered connections, below grade, Type K drawn temper copper tubing, joining methods, brazed connections.
   2. **Plastic pipe and fittings shall not be used inside of buildings.**

B. Outside Building (from 5'-0" outside building line)
   1. Domestic Water
      a. 1 ½" and smaller, Schedule 40 PVC, solvent welded, pipe and Schedule 80 fittings.
      b. 2" & 2 ½", Schedule 80 PVC, solvent welded, pipe and Schedule 80 fittings.
      c. 3" and larger, Johns Mansville, C-900, Blue Brut, PVC pipe and fittings, Class 200, installed in strict accordance with manufacturer's published instructions.

PART 3 - EXECUTION

3.01 PIPING

A. Provide trenching and backfill for buried piping and install with the following minimum cover unless shown otherwise, cover is from top of pipe to finish grade.
   1. Water - 30"

B. Water piping
   1. On buried lines larger than 2-1/2” size, install concrete thrust blocks between pipe and undisturbed soil of trench wall at each change in direction (tees and ells) for lateral support.
   2. Where laid in same trench with sewer line, install on trench shelf at least 12" above top of sewer pipe.
   3. Where subject to freezing conditions water pipe shall be buried at least 30 inches deep or deeper to protect the water from freezing.
   4. Run water piping generally level. No piping shall be installed to cause an unusual noise from the flow of water under normal conditions.
   5. Locate water hammer arrestors at all flush valve water branches to a single fixture and where two or more fixtures are located in a row or battery.
   6. Adapters: Wrought copper male adapters shall be used wherever it is necessary to connect copper tubing to a valve or tee having threaded connections.
   7. Install Bare Metal Pipe Isolators: Stoneman "Trisolator", Superstrut "Cush-a-strip", Unistrut on all hot and cold domestic water piping.

3.02 FIELD QUALITY CONTROL

A. Water Sterilization
   1. Contractor shall provide all ports, valves and isolation of new piping for testing.
   2. After installation and before installing valves or making final connections, flush or purge piping systems clean of foreign substances; use water to flush piping conducting liquids and compressed air to clear piping conducting gases.
   3. After completing cold and heated water systems, disinfect in accordance with current requirements of U.S. Public Health Department. Use 50 parts per million of chlorine with 8 hour retention and flush to leave a residual no greater than supply source. Submit written certification of disinfecting completion by independent laboratory. After sterilization take at lease one (1) water sample per floor and have analyzed for "E-coli" to submit test results.

3.03 PIPING TESTING: TESTING CRITERIA

System	Medium	Pressure	Duration
Water	Water	150 psig	4 hours

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Section 22 05 00 applies to this section.

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. Service connections to existing on-site utilities, and stubs for future connection to equipment provided under the work of this Section or other Sections of the Specifications.
   2. All piping systems for conduction of water as shown or specified for plumbing work.
   3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.03 RELATED SECTIONS

A. Section 22 05 00 - Plumbing

B. Section 22 07 00 - Insulation

C. Section 23 00 00 - Heating, Ventilating, & Air Conditioning

PART 2 - PRODUCTS

2.01 PIPING ACCESSORIES

A. Unions
   1. Shall have the same pressure rating as pipe fittings.

B. Check Valves
   1. Swing check, Class 125 Buna-N Disc, NIBCO or equal.
      a. Sizes 2 inch and smaller: Fig. T-413; bronze body, threaded ends, plug type bonnet.
      b. Size 2-1/2 inch and larger: Fig. F-968: iron body, brass mounted, flanged ends, bolted bonnet.

C. Strainers
   1. Watts, Armstrong, Sarco, Arco, Sizes 4” and smaller, Watts Series 777, 400 psi WOG bronze body, threaded or soldered ends, 20 mesh stainless steel screen (up to 2 ½”), 3/64” perforated stainless steel screen (3”), 1/8” perforated stainless steel screen (4”), solid threaded screen retainer cap with gasket.
   2. Reduced Pressure Back Flow Preventers
   3. 3/4” to 2”, Watts Series 909, provide bronze strainer, resilient seated full port bronze ball valves, air gap fitting and drain line, replaceable bronze seats.
   4. 2-1/2” to 10”, Watts Series 909, provide bronze strainer, non-rising stem resilient seated gate valve shut-offs, air gap fitting and drain line, replaceable bronze seats.

D. Water Pressure Reducing Valves
   1. 3/4” to 3”, Watts Series 223, provide y-strainer, replaceable stainless steel seat, bronze body construction, water tight sealed cage assembly, removable disc holder, low pressure model adjustable from 10-35 psi., high pressure model adjustable from 50 to 145 psi (1/2” to 1”), 50 to 120 psi (1 ¼”), and 50 to 95 (1 ½” to 3”).

E. Piping Penetration Auxiliaries
   1. Sleeves Below Slab or Grade: Metraseal model MS or equal with schedule 80 PVC sleeve. The seal shall be capable of withstanding a hydrostatic pressure of 20 psig. The seal shall be constructed of synthetic rubber with heavy-duty plastic pressure plates. All bolts and nuts shall be constructed of stainless steel.
   2. Escutcheons: Polished chrome plated brass or painted metal.

PART 3 - EXECUTION

3.01 EQUIPMENT

A. Install equipment in accordance with the manufacturer's installation instructions, as specified herein, and as detailed on the drawings.

3.02 EXTERIOR HOSE BIBBS

A. Install at 18 inches above finished grade and be non-freeze type.

3.03 VALVES, UNIONS AND FLANGES

A. Valves shall be full size of line in which installed. Furnish discs suitable for service intended. All valves shall be properly packed and lubricated. Unions shall be placed adjacent to each threaded or soldered valve or equipment connection 2" and smaller. Install flanges at all valves with stems vertical wherever possible. Stems shall not be placed below horizontal.

B. Install unions adjacent to each valve and at final connection to each piece of equipment.

C. Valves shall be provided with brass identification tags indicating service controlled. Tags may be omitted on lines exposed in equipment rooms where service is obvious.

D. Cathodic Protection: Install insulated flanges or dielectric unions at points of connection between pipes and equipment as follows: (1) between copper or brass piping and steel or cast iron pipe. (2) Between copper or brass piping and any steel material. (3) Buried connections of copper or brass piping to steel or cast-iron piping shall be protected with a polyvinyl tape wrap 10 mils thick, extending 5' each way from connection.

E. Expansion: Install piping with sufficient offsets, loops, and/or swing-joints to allow for expansion and contraction. Anchor piping at equipment to restrain movement at those locations.

F. Freeze Protection: Piping shall not be installed in a location subject to freezing conditions. All piping shall and must be installed on the "warm" side of building envelope insulation without exception. Where risers occur in outside walls, ensure that building insulation is adequate and intact. All piping must be drainable; provide drains required. All piping shall be run in or above heated portion of the building.

3.04 FIELD QUALITY CONTROL

A. Piping Testing: Testing Criteria

System	Medium	Pressure	Duration
Water	Water	150 psig	4 hours

END OF SECTION

PART 1 - GENERAL

1.02 DESCRIPTION

A. Section includes:

B. Provide all equipment, and accessories for the HVAC systems as specified herein; place in satisfactory operation.

C. Noise and vibration isolation requirements as specified in Section 25 05 48 - Noise and Vibration.

D. Controls and Instrumentation as specified herein.

1.03 QUALITY ASSURANCE

A. Welding Qualifications: Welders shall be certified in accordance with American Welding Society "Standard Qualification Procedure".

PART 2 - PRODUCTS

2.01 IN-LINE CENTRIFUGAL PUMPS

A. Shall be Bell & Gossett, Paco, Taco, in-line single-stage, single suction, close coupled bronze fitted pumps furnished complete with motor.

B. Pump housing shall have gauge and drain tappings and shall be of Class 30 cast iron construction suitable for servicing the internal parts without disturbing the connecting piping.

C. Impeller shall be bronze, enclosed, statically and dynamically balanced, and fitted to shaft with a key and locked in place.

D. Pump shall have internally flushed mechanical seal with a ceramic seal seat and carbon seal ring fitted with a bronze shaft sleeve that shall completely cover the wetted area under the seal

E. See schedule on drawings for size, capacity and duty.

F. Motors shall have heavy duty grease lubricated ball bearings. All motors over 1 HP shall be NEMA Premium efficiency, Century Model E Plus III, Reliance XE, or equal, 1.15 service factor, single speed. Motor shall be of the enclosure type called for on the plans.. Motors shall be able to overcome starting load inertia as well as accelerating the load to rated speed under both rated and at 10 percent reduced voltage conditions during starting without excessive heating.

G. See schedule for power requirements.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Lubrication: Where equipment includes poorly accessible lubrication points, provide tubing extensions to readily accessible points and terminate with appropriate lubrication fitting.

B. Miscellaneous: Install belt and coupling guards and other miscellaneous items as required.

C. All pump bases shall be grouted.

END OF SECTION

FACILITY SANITARY SEWERAGE
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Section 22 05 00 applies to this section.

1.02 SUMMARY

A. This section includes plumbing waste pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. Service connections to existing on-site utilities, and stubs for future connection to equipment provided under the work of this Section or other Sections of the Specifications.
   2. All piping systems for conduction of soil, waste, and other fluids or gases as shown or specified for plumbing work.
   3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.03 RELATED SECTIONS

A. Section 22 05 00 - Plumbing

B. Section 22 07 00 - Insulation

C. Section 23 00 00 - Heating, Ventilating, & Air Conditioning

1.04 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer. Where possible, offset vents and pipes rising in walls, concealed above ceilings, below plates and rise through roof. Where this is not possible, install vents and pipes through plates as detailed on structural drawings.

1.05 SUBMITTALS

A. Submit a general statement of materials and methods along with manufacturer's technical data and installation instructions for all equipment, fixtures, pipe and fittings, and plumbing specialties to be installed.

B. Record Drawings: Per specification section 22 05 00 requirements.
   1. Operation and Maintenance Manuals: Per specification section 22 01 00 requirements.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION

3.01 MINIMUM COVER

A. Provide trenching and backfill for buried piping and install with the following unless shown otherwise, cover is from top of pipe to finish grade. Refer to plumbing plans for invert elevations.

3.02 INSTALLATION OF PIPING SYSTEMS

A. General
   1. Sleeves: Install sleeves of sufficient size to allow for free motion of pipe. Finish sleeves flush when in walls and extend a minimum of 2" above floor when passing through floor slabs and outside walls shall be caulked with oakum and mastic and made watertight. No visible leakage at sleeves will be permitted. Sleeves may be omitted for waste lines through slabs on grade and rising into a concealed space if wrapped with 1" insulation. Sleeve all pipes where pipes pass through footings with PVC pipe sleeves.
   2. Fire-Barrier Penetrations: Seal pipe penetrations with fire-stopping sealant material specified in Division 7.
   3. Expansion: Install piping with sufficient offsets, loops, and/or swing joints to allow for expansion and contraction. Anchor piping at equipment to restrain movement at those locations.

3.03 EXCAVATING AND TRENCHING

A. Perform all excavations as required for the installation of the work included under this section, including shoring of earth banks to prevent cave-ins and to protect workmen and equipment. Restore all surfaces, roadways, walks, curb, walls, existing underground installations, etc. damaged or cut as a result of the excavations to their original conditions in a manner approved by the architect. Excavations shall be ample in size to permit pipes or equipment to be laid at elevations intended, and to permit ample space for caulking and joining and compacting backfill around pipe. Maintain all warning signs, barricades, flares and red signal lanterns as required by the Safety Orders of the Division of Industrial Safety and local ordinances. Perform all pumping required to remove all water from trenches during installation of piping and backfilling.

B. Stop machine excavation for pipe trenches in solid ground, several inches above required grade, so that a firm and uniform bearing throughout entire length of pipe is provided. In lieu of above hand excavation on bottom of trench, the contractor may excavate to a depth one quarter of the nominal diameter of pipe, but in no case excavate less than 6" below required grade line, and place a bed of sand or granular soil, properly compacted to provide a uniform grade and to provide a firm support for pipe throughout its entire length. When pipe or underground conduit with insulation or protective coating is to be placed in the trench, clean sand only shall be used for bedding the pipe or conduit.

3.04 BACKFILLING

A. No backfilling operations shall begin until the required tests and inspections have been made and the Architect has given approval for backfilling. Should any of the work be enclosed or covered up before it has been approved, contractor shall, at his expenses, uncover the work. After it has been inspected, tested and approved, he shall make all repairs necessary to restore the work of the other contractor to the condition in which it was found at the time of uncovering. Insulated pipe and pipe with protective coating shall be backfilled with clean, concrete grade sand for a minimum distance of 12" above the top of the pipe. Compact sand backfill by flooding or jetting. Protect pipe from uplift during jetting operation.

B. Except under existing paved areas, walks, roads, or similar surfaces, and in cases where rock is encountered, backfill more than 12" above the top of the pipe shall be made using suitable excavated material or other approved material as necessary. The backfill shall be placed in 6" layers, measured before compaction, and tamped either by hand or machine.

C. Machine tamping of backfill for excavations under existing or proposed pavement, walks, roads or similar surfaces, and under new slabs on grade, shall be made in accordance with the specifications. Backfill for excavation under pavement, slabs, walks, roads and similar surfaces shall be compacted as specified in the specifications. Surface work shall be replaced to match

the existing work. Replace or repair to its original condition all sod, concrete, or other materials disturbed by the trenching or backfilling operation. Remove and dispose of all excess material.

3.05 CROSSING EXISTING UTILITIES

A. Extreme care shall be exercised during excavation across existing utility lines particularly gas and electrical lines for trenching to install new utility lines. Hand excavate all trenches in the proximity of existing lines so as not to damage or cut into them.

B. All existing utility and service lines shall be located by hand excavation prior to trenching with equipment.

C. The location, depth and invert elevations of all existing utilities to be crossed or to which connecting shall be determined before performing any other work or ordering any materials for the project.

3.06 PROTECTION FROM DAMAGE

A. Protect the work and materials of other trades as well as the Mechanical work and material from damage during construction. Cap and/or plug all piping at the completion of roughing-in and before backfilling. Cap all piping at the close of each day.

3.07 FINAL CONNECTIONS

A. Plumbing Contractor shall verify location of and make all final connections to site utilities.

3.08 STUBS

A. All stubs for future connection shall be installed within 12” of location shown. Cap or plug stub at depth specified for service.

B. Furnish and install a #4 Rebar marker pin driven 24” into ground with a white rebar cap 12” above grade at each stub location. Provide brass identification tag.

3.09 PIPING TESTING: TESTING CRITERIA

System	Medium	Pressure	Duration
Drainage and Vent	Water	10 feet water	15 minutes

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Section 22 05 00 applies to this section.

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. Service connections to existing on-site utilities, and stubs for future connection to equipment provided under the work of this Section or other Sections of the Specifications.
   2. All piping systems for conduction of soil, waste, and other fluids or gases as shown or specified for plumbing work.
   3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.03 RELATED SECTIONS

A. Section 22 05 00 - Plumbing

B. Section 22 07 00 - Insulation

C. Section 23 00 00 - Heating, Ventilating, & Air Conditioning

1.04 QUALITY ASSURANCE

A. All plumbing fixtures and equipment shall comply with California Code of Regulations, Title 24, Part 6, latest edition.

1.05 REFERENCES

A. Pipes and Tubes
   1. Steel Pipe: ASTM A53, Type S, Grade A, Schedule 40, seamless, black or galvanized, plain ends.
   2. Copper Drainage Tube: ASTM B306, Type DWV, drawn temper.
   3. Hubless, Cast-Iron Soil Pipe: CISPI 301.
   4. Polypropylene Pipe: ASTM D4101, NSF listed, Schedule 40.
   5. Polyethylene Pipe: ASTM D2513 produced to APWA/ULCC standards for color coding of gas distribution systems.

B. Fittings
   1. Wrought-Copper, Solder-Joint Pressure Fittings: ANSI B16.22.
   2. Cast-Copper-Alloy, Solder-Joint Pressure Fittings: ASME B16.18, ASTM B584.
   3. Cast-Copper-Alloy, Threaded -Joint Pressure Fittings: ANSI/ASME B16.15, ASTM B584.
   4. Bronze Flanges: ASME B16.24, Classes 150 and 300.
   5. Copper Unions: ASME B16.18, cast-copper-alloy body, hexagonal stock, with ball-and-socket joint, metal-to-metal seating surfaces, and solder-joint, threaded, or solder-joint and threaded ends. Threads complying with ASME B1.20.1.
   6. Steel Pipe Nipples: ASTM A733, made of ASTM A53 or ASTM A106, Schedule 40, seamless, galvanized, carbon-steel pipe.

7. Malleable-Iron Unions: ASME B16.39, Classes 150 and 300; hexagonal stock; with ball-and-socket joint; metal-to-metal bronze seating surfaces; and female threaded ends with threads complying with ASME B1.20.1.
8. Galvanized, Cast-Iron Threaded Fittings: ASME B16.4, Classes 125 and 250; standard pattern; with threads complying with ASME B1.20.1.
9. Wrought-Copper, Solder-Joint, DWV Drainage Fittings: ASME B16.29.
10. Cast-Copper-Alloy, Solder-Joint, DWV Drainage Fittings: ASME B16.23.
11. Plastic Pipe Sleeves: ASTM C564 rubber for cast-iron soil pipe and ASTM F477 elastomeric seal.
12. Polypropylene Plastic, NSF listed, plain and grooved ends.
13. Polyethylene Plastic: ASTM D2683 and D3261,socket or butt fusion fittings.

C. Joining Materials
1. CISPI Couplings for Hubless, Cast-Iron Soil Pipe and Fittings: CISPI 310, having ASTM C564 neoprene sealing sleeve, with 300 series stainless-steel, corrugated shield-and-clamp assembly.
2. Solder Filler Metal: ASTM B32, alloys to suit system requirements.
3. Brazing Filler Metals: AWS A5.8, alloys to suit system requirements.
4. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

D. Plastic Pipe Seals: ASTMF477, elastomeric gasket.

1.06 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer. Where possible, offset vents and pipes rising in walls, concealed above ceilings, below plates and rise through roof. Where this is not possible, install vents and pipes through plates as detailed on structural drawings.

1.07 SUBMITTALS

A. Submit a general statement of materials and methods along with manufacturer's technical data and installation instructions for all equipment, fixtures, pipe and fittings, and plumbing specialties to be installed.

B. Record Drawings: Per specification section 22 05 00 requirements.

C. Operation and Maintenance Manuals: Per specification section 22 05 00 requirements.

PART 2 - PRODUCTS

2.01 GENERAL

A. Adapters: Wrought copper male adapters shall be used wherever it is necessary to connect copper tubing to a valve or "tee" having threaded connections.

2.02 PIPE, FITTING, AND JOINING MATERIALS

A. Hubless Cast-Iron/Sleeve-Clamped Joints
1. Pipe: Service weight cast iron, hubless, with hot coal tar pitch coating inside and outside, per Cast-Iron Soil Pipe Institute Standard 301.
2. Fittings: Hubless type, Tyler No-Hub Coupling, each matched with pipe and identified with the manufacturer's name or trademark, the Cast-Iron Soil Pipe Institute symbol, and the pipe size. Those for connections to other types of piping - approved cast-iron adapter/transition type.
3. Joining Materials/Methods: Husky Series 4000 (Blue shield) or Mission Heavy Weight Orange shield), 4-band, on pipes over 3", neoprene sleeve type conforming to ASTM C564

specifically designed for connecting hubless cast-iron pipe, coated with manufacturer's recommended lubricant before installing; four type 304 stainless steel band clamps with a type 305 stainless steel worm drive screw, and corrugated shield over sleeve; use standard, 4-band, no-hub couplings on 3" and less.
        1) "Tyler, Standard", two band stainless steel coupling, Stainless Steel screw housing, Stainless Steel shield, shall be used for vent piping and sizes and is allowed for sanitary waste of size 2" of less.
    4. Wedge lock joints at rainwater leaders to underground drain.
    5. Cleanout Plugs: Use Armite Joint Seal compound No. 411, or Enterprise Commercial Thread-Seal.

B. Steel/Cast-Iron Threaded Drainage Fittings
    1. Pipe: Galvanized steel per ASTM A-120, threaded ends, standard weight Schedule 40.
    2. Fittings: Cast-iron threaded drainage type, black coated, with recessed shoulder and pitched threads, per ASTM A-126, Class B.

C. Copper DWV Pipe: DWV drainage tubing per ASTM B-306-86, plain ends for pipe 1 ½" and larger.
    1. Fittings shall be solder type, wrought copper drainage fittings per ANSI Standard B16.29-86.
    2. Joining Materials/Methods: Canfield, Silvabrite or equal lead free solder with a non-corrosive water based flux.
    3. Connections:
        a. Copper to dissimilar metals: dielectric connector.
        b. Copper to threaded connections: cast brass adapters.

D. Steel/Threaded Fittings
    1. Pipe: Black or galvanized steel per ASTM A-53 seamless, threaded ends, standard weight Schedule 40 or Schedule 80.
    2. Fittings
        a. Black or galvanized (to match pipe) banded malleable iron, threaded, ASTM A-197, 150 lb. standard or 300 lb. extra heavy per ANSI Standard B16.3 (to match pipe schedule).
        b. Black or galvanized (to match pipe) banded cast iron, threaded, per ASTM A-126 Class B, 125 lb. standard or 250 lb. extra heavy per ANSI Standard B16.4 (to match pipe schedule).
    3. Unions: AAR 300 lb. malleable iron, black or galvanized (to match pipe).
    4. Joining Materials/Methods
        a. Rectorseal or pure lead and graphite thread lubricant.
        b. Permacel, P-412 1/2" wide teflon pipe joint sealant.

E. Polypropylene plastic fusion welded joints

    1. Pipe: Schedule 40, plain ends.
    2. Fittings: Polypropylene fusion welded type.
    3. Joining Materials/Methods: Fusion welded, using fusion welding fittings, and the control unit meeting the following requirements.
        a. Microprocessor controlled
        b. Water proof
        c. Input and output voltage sensors
        d. Ambient temperature sensors
        e. Audible alarms to indicate cycle interruptions and completion of joining process.
    4. Connections: Utilize only adapters supplied by the same manufacturer of the pipe.

F. Polypropylene plastic mechanical joints

1. Pipe: Schedule 40, grooved ends.
2. Fittings: Polypropylene type designed to lock into a machined groove on the mating pipe.
3. Joining Materials/Methods: Mechanical joint utilizing fittings and pipe supplied by the same manufacturer.
4. Connections: Utilize only adapters supplied by the same manufacturer of the pipe.

G. Polyethylene plastic butt fusion welded joints

1. Pipe: Schedule 40, plain ends.
   a. Fittings: Polyethylene fusion welded type.
   b. Joining Materials/Methods: Fusion welded, using fusion welding fittings, and the manufacturers supplied control unit.
   c. Connections: Utilize only adapters supplied by the same manufacturer of the pipe.

H. Manville Ring-Tite PVC sewer pipe, SDR-35, ASTM D 3034. Use materials per utility standards off site - where applicable.

I. Johns Manville, C-900, Blue Brut, PVC pipe and fittings, Class 200, installed in strict accordance with manufacturer's published instructions.

J. Johns Manville Blue Brut PVC pipe and fittings U.L. approved for fire protection.

2.03 PIPE AND FITTING APPLICATIONS

A. Inside Building (to 5'-0" outside building line).
   1. Soil, waste and vent piping
      a. Below slab, service weight cast iron soil pipe and fittings, asphaltic coated for sizes 2 1/2" and smaller. Above floor from 6" above slab shall be galvanized steel pipe or service weight cast iron soil pipe and fittings, asphaltic coated for sizes 2 1/2" and smaller. Urinal waste shall be service weight cast iron soil pipe and fittings, asphaltic coated. Sizes 3" and larger shall be service weight cast iron soil pipe and fittings, asphaltic coated.
      b. Fittings
         1) Contractor may use "No-Hub" "Husky" joints per manufacturers published instructions for installation. No-Hub fittings for waste and soil pipe shall be four band stainless steel type for all pipe sizes.
            a) Two band stainless steel couplings, Stainless Steel screw housing, Stainless Steel shield may be used for waste piping of size 2" and less.
         2) "Tyler, Standard", two band stainless steel coupling, Stainless Steel screw housing, Stainless Steel shield, shall be used for vent piping.
      c. As an alternate use, copper DWV Pipe.
   2. Condensate Drain Piping:
      a. Inside buildings provide ASTM B88, Type M copper tubing and fittings. Provide Wye fittings with capped cleanout plug for tubing up to 1 inch size. Provide wrought or cast DWV fittings for sizes 1-1/4 inch and larger.
      b. Outside buildings provide ASTM B88, Type L copper pipe and fittings, cast iron drain pipe and fittings or Schedule 40 galvanized steel pipe and cast iron drain or vent fittings.]
      c. Connect condensate drains to mechanical equipment per equipment manufacturer's recommendations; provide P-trap where required. Slope piping to drain, with 1 inch in 10 foot minimum pitch. Provide di-electric couplings or unions at connections to dissimilar materials.
      d. Where Drawings indicate installation of mechanical equipment on spring isolation rails spring mounted curbs, or spring hangers, provide threaded metal connector at mechanical equipment, Metraflex Model SST, or equal by Unisource Mfg. Co., or

Flexicraft Industries. Arrange flexible connection to ensure drainage of condensate, and support flexible connection at each end of connector, to ensure proper alignment.

e. Where condensate drain P-traps are required, install trap using Wye fitting on inlet and outlet of trap. Provide cap on top of each Wye, made removable for cleaning and inspection. Drill 1/8 inch diameter hole in cap at outlet of the trap to allow venting of the system. Minimum depth of trap should be 4 inches, or as recommended by the manufacturer in printed literature.
f. Provide cleanout tees or “Y” at each change in direction.

3. Condensing-Type Equipment Condensate Drain Pipe: CPVC pipe and fittings conforming to ASTM D-2846.
   a. Provide CPVC condensate drain pipe for condensing water heaters, furnaces, and where shown on Drawings.
   b. Piping and fittings shall be as manufactured by Spears Manufacturing, Charlotte Pipe and foundry Co., or equal.
4. Plastic pipe and fittings shall not be used inside of buildings, except as permitted for acid waste and vent systems.
5. Grease Waste (GW) and Vent (GV) Pipe Underground to 6 Inches Aboveground: George Fisher Sloane, Inc., “Fuseal PP,” Orion Fittings, Inc., “Rionfuse CF,” IPEX, Inc., “Enfield,” or equal, Schedule 40 polypropylene pipe and fittings assembled with electrofusion joints. Piping shall comply with ASTM F1412.
6. Grease Waste (GW) and Vent (GV) Pipe Aboveground:
   a. In inaccessible spaces or within walls, George Fisher Sloane, Inc., “Fuseal PP,” Orion Fittings, Inc., “Rionfuse CF,” IPEX, Inc., “Enfield,” or equal, flame-retardant schedule 40 polypropylene pipe and fittings assembled with electrofusion joints. Piping shall comply with ASTM F1412.
   b. In accessible areas: George Fisher Sloan, Inc. “Fuseal PP,” Orion Fittings, Inc. “Blueline,” IPEX, Inc. "Labline," or equal, flame retardant Schedule 40 polypropylene drainage pipe and fittings, with mechanical joints. Piping shall comply with ASTM F1412.
   c. Vent pipe aboveground: 3 Inches and Larger: Service weight cast iron soil pipe and fittings; 2-1/2 inches and smaller: Schedule 40 galvanized steel pipe with black cast iron drainage fittings.
7. Acid Waste (AW) and Vent (AV) Pipe Underground to 6 Inches Aboveground: George Fisher Sloane, Inc., “Fuseal PP,” Orion Fittings, Inc., “Rionfuse CF,” IPEX, Inc., “Enfield,” or equal, Schedule 40 polypropylene pipe and fittings assembled with electrofusion joints. Piping shall comply with ASTM F1412.
8. Acid Waste (AW) and Vent (AV) Pipe Aboveground:
   a. In inaccessible spaces or within walls, George Fisher Sloane, Inc., “Fuseal PP,” Orion Fittings, Inc., “Rionfuse CF,” IPEX, Inc., “Enfield,” or equal, flame-retardant Schedule 40 polypropylene pipe and fittings assembled with electrofusion joints. Piping shall comply with ASTM F1412.
   b. In accessible areas: George Fisher Sloan, Inc. “Fuseal PP,” Orion Fittings, Inc. “Blueline,” IPEX, Inc. "Labline," or equal, flame retardant Schedule 40 polypropylene drainage pipe and fittings, with mechanical joints. Piping shall comply with ASTM F1412.

B. Outside Building (from 5'-0" outside building line)
   1. Install piping from street connection to the property line in accordance with local requirements.
   2. 4 inches and larger: PVC, ASTM D3034 - SDR 35; use matching Ring Tite fittings.
   3. 3 inches and smaller: Cast iron soil pipe and fittings, asphaltic coated, conforming to ASTM A888 and Cast Iron Soil Pipe Institute Standard 301 and so marked. Pipe and fittings shall be as manufactured by AB&I, Charlotte, Tyler pipe, or equal. Provide ANACO-Husky SD

4000, Clamp-All 125, or equal couplings and No-Hub fittings, meeting the requirements of FM 1680, SD Class I and ASTM C1540. Pipe and fittings shall be the product of a single manufacturer.

C. Temperature and Pressure Relief Valve Piping: ASTM B88, Type L copper tubing, hard-temper, with wrought copper fittings. Provide full solder cup for all fittings. Capped or plugged outlets shall be Schedule 40 screwed brass.

PART 3 - EXECUTION

3.01 EQUIPMENT

A. Install equipment in accordance with the manufacturer's installation instructions, as specified herein, and as detailed on the drawings.

3.02 PIPING

A. Provide trenching and backfill for buried piping and install with the following minimum cover unless shown otherwise, cover is from top of pipe to finish grade.
   1. Sewer - 30" (Outside the building perimeter onsite)

B. Sewer Piping: Run all horizontal sanitary piping inside of the building at a uniform grade of not less than ¼" per foot unless otherwise noted on the drawings. Sewers shall have invert elevations as shown and slope uniformly between given elevations. All drainage piping shall be run as straight as possible and shall have long radius bends. All offsets shall be made at an angle of 45 degrees or less. All vent piping shall be graded so as to free itself quickly of any water or condensation. Where possible, groups of vent risers shall be jointed together with one enlarged outlet through roof.
   1. Install clean-outs of the same diameter of pipe in all horizontal soil and waste lines where indicated and at all points of change in direction and at base of all soil or waste drops. Locate-clean outs not less than 18" from building construction so as to provide sufficient space for rodding. No horizontal runs of more than 100 feet shall be without clean-out.
   2. Clean-outs in floors shall be protected with a cover taped in place and removed at completion of concrete work.
   3. Provide trap at each inlet to sanitary sewer system. Provide trap primers where shown and as required by code.

C. Bury a No. 18 AWG insulated copper locating wire with all non-metallic pipe. Copper wire shall have at least 12" above grade at each end.

D. Condensate drain piping
   1. Provide "P" trap having 2" minimum trap seal.
   2. Install trap with top of trap outlet 2" minimum below bottom of condensate collection pan, and within 12" of pan outlet.
   3. Make changes in direction in the condensate drain line using tees; fit the free leg of the tee with a screwed plug for clean-outs. Provide additional such clean-outs where required by code or where necessary for cleaning drain line.
   4. Extend condensate drain line to appropriate disposal point, receptor, or sewer as prescribed by code or shown on drawings.
   5. Insulation: Provide insulation as shown or specified (Section 22 07 00).

3.03 VENT LOCATIONS

A. Plumbing fixture vents have been combined wherever possible to minimize the number of roof penetrations.

B. Roof penetrations have been coordinated with penetrations of other trades, etc.

C. Plumbing contractor shall not shift or relocate vents through the roof or other penetrations from the locations shown without prior approval of the Engineer.

3.04 FIELD QUALITY CONTROL

A. Piping Testing:
1. Testing Criteria

System	Medium	Pressure	Duration
Drainage and Vent	Water	10 ft water	15 minutes

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Section 22 01 00 applies to this section.

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. Service connections to existing on-site utilities, and stubs for future connection to equipment provided under the work of this Section or other Sections of the Specifications.
   2. All piping systems for conduction of cold water, heated water, soil, waste, fuel gas, and other fluids or gases as shown or specified for plumbing work.
   3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.03 RELATED SECTIONS

A. Section 22 05 00 - Plumbing

B. Section 22 07 00 - Insulation

C. Section 23 00 00 - Heating, Ventilating, & Air Conditioning

PART 2 - PRODUCTS

2.01 PIPING ACCESSORIES

A. Cleanouts: Model Numbers are Josam.
   1. Vertical: polished bronze cover.
   2. Floor: nickel-bronze cover. Provide carpet clean out marker in carpeted areas.
   3. Grade: C.I. with brass plug set in concrete.
   4. Use floor clean outs located in walks.

2.02 PIPING PENETRATION AUXILLIARIES

A. Sleeves Below Slab or Grade: Metraseal model MS or equal with schedule 80 PVC sleeve. The seal shall be capable of withstanding a hydrostatic pressure of 20 psig. The seal shall be constructed of synthetic rubber with heavy-duty plastic pressure plates. All bolts and nuts shall be constructed of stainless steel.
   1. Escutcheons: Polished chrome plated brass or painted metal.

PART 3 - EXECUTION

3.01 EQUIPMENT

A. Install equipment in accordance with the manufacturer’s installation instructions, as specified herein, and as detailed on the drawings.

3.02 VALVES AND FLANGES

A. Valves shall be full size of line in which installed. Furnish discs suitable for service intended. All valves shall be properly packed and lubricated. Unions shall be placed adjacent to each

threaded or soldered valve or equipment connection 2" and smaller. Install flanges at all valves with stems vertical wherever possible. Stems shall not be placed below horizontal.

B. Valves shall be provided with brass identification tags indicating service controlled. Tags may be omitted on lines exposed in equipment rooms where service is obvious.

C. Cathodic Protection: Install insulated flanges or dielectric unions at points of connection between pipes and equipment as follows: (1) between copper or brass piping and steel or cast iron pipe. (2) Between copper or brass piping and any steel material. (3) Buried connections of copper or brass piping to steel or cast-iron piping shall be protected with a polyvinyl tape wrap 10 mils thick, extending 5' each way from connection.

3.03 FIELD QUALITY CONTROL

A. Piping Testing: Testing Criteria

210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Section 22 05 00 applies to this section.

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. Service connections to existing on-site utilities, and stubs for future connection to roof drains provided under the work of this Section or other Sections of the Specifications.
   2. All piping systems for conduction of rain water as shown or specified for plumbing work.
   3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.03 RELATED SECTIONS

A. Section 22 05 00 - Plumbing

B. Section 22 07 00 - Insulation

C. Section 23 00 00 - Heating, Ventilating, & Air Conditioning

1.04 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer. Where possible, offset vents and pipes rising in walls, concealed above ceilings, below plates and rise through roof. Where this is not possible, install vents and pipes through plates as detailed on structural drawings.

1.05 SUBMITTALS

A. Submit a general statement of materials and methods along with manufacturer's technical data and installation instructions for all equipment, fixtures, pipe and fittings, and plumbing specialties to be installed.

B. Record Drawings: Per specification section 22 05 00 requirements.
   1. Operation and Maintenance Manuals: Per specification section 22 01 00 requirements.

PART 2 - PRODUCTS

2.01 SAME AS SEWERAGE SEE SECTIONS 22 13 00

PART 3 - EXECUTION

3.01 SAME AS SEWERAGE SEE SECTIONS 22 13 00

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Section 22 05 00 applies to this section.

B. See Section 22 07 19

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. Service connections to existing on-site utilities, and stubs for future connection to equipment provided under the work of this Section or other Sections of the Specifications.
   2. All piping systems for conduction of soil, waste, and other fluids or gases as shown or specified for plumbing work.
   3. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   4. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.03 RELATED SECTIONS

A. Section 22 05 00 - Plumbing

B. Section 22 07 00 - Insulation

C. Section 23 00 00 - Heating, Ventilating, & Air Conditioning

1.04 QUALITY ASSURANCE

A. All plumbing fixtures and equipment shall comply with California Code of Regulations, Title 24, Part 6, latest edition.

1.05 REFERENCES

A. Pipes And Tubes
   1. Steel Pipe: ASTM A53, Type S, Grade A, Schedule 40, seamless, black or galvanized, plain ends.
   2. Copper Drainage Tube: ASTM B306, Type DWV, drawn temper.
   3. Hubless, Cast-Iron Soil Pipe: CISPI 301.

B. Fittings
   1. Wrought-Copper, Solder-Joint Pressure Fittings: ANSI B16.22.
   2. Cast-Copper-Alloy, Solder-Joint Pressure Fittings: ASME B16.18, ASTM B584.
   3. Cast-Copper-Alloy, Threaded -Joint Pressure Fittings: ANSI/ASME B16.15, ASTM B584.
   4. Bronze Flanges: ASME B16.24, Classes 150 and 300.
   5. Copper Unions: ASME B16.18, cast-copper-alloy body, hexagonal stock, with ball-and-socket joint, metal-to-metal seating surfaces, and solder-joint, threaded, or solder-joint and threaded ends. Threads complying with ASME B1.20.1.
   6. Steel Pipe Nipples: ASTM A733, made of ASTM A53 or ASTM A106, Schedule 40, seamless, galvanized, carbon-steel pipe.
   7. Malleable-Iron Unions: ASME B16.39, Classes 150 and 300; hexagonal stock; with ball-and-socket joint; metal-to-metal bronze seating surfaces; and female threaded ends with threads complying with ASME B1.20.1.
   8. Galvanized, Cast-Iron Threaded Fittings: ASME B16.4, Classes 125 and 250; standard pattern; with threads complying with ASME B1.20.1.

9. PVC Plastic, Schedule 40 and Schedule 80, Socket-Type Pipe Fittings: ASTM D2466.
10. Wrought-Copper, Solder-Joint, DWV Drainage Fittings: ASME B16.29.
11. Cast-Copper-Alloy, Solder-Joint, DWV Drainage Fittings: ASME B16.23.

C. Joining Materials
1. CISPI Couplings for Hubless, Cast-Iron Soil Pipe and Fittings: CISPI 310, having ASTM C564 neoprene sealing sleeve, with 300 series stainless-steel, corrugated shield-and-clamp assembly.
2. Solder Filler Metal: ASTM B32, alloys to suit system requirements.
3. Brazing Filler Metals: AWS A5.8, alloys to suit system requirements.

1.06 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer. Where possible, offset vents and pipes rising in walls, concealed above ceilings, below plates and rise through roof. Where this is not possible, install vents and pipes through plates as detailed on structural drawings.

1.07 SUBMITTALS

A. Submit a general statement of materials and methods along with manufacturer's technical data and installation instructions for all equipment, fixtures, pipe and fittings, and plumbing specialties to be installed.

B. Record Drawings: Per specification section 15010 requirements.

C. Operation and Maintenance Manuals: Per specification section 15010 requirements.

PART 2 - PRODUCTS

2.01 GENERAL

A. Adapters: Wrought copper male adapters shall be used wherever it is necessary to connect copper tubing to a valve or "tee" having threaded connections.

2.02 PIPE, FITTING, AND JOINING MATERIALS

A. Hubless Cast-Iron/Sleeve-Clamped Joints
1. Pipe: Service weight cast iron, hubless, with hot coal tar pitch coating inside and outside, per Cast-Iron Soil Pipe Institute Standard 301.
2. Fittings: Hubless type, Tyler No-Hub Coupling, each matched with pipe and identified with the manufacturer's name or trademark, the Cast-Iron Soil Pipe Institute symbol, and the pipe size. Those for connections to other types of piping - approved cast-iron adapter/transition type.
3. Joining Materials/Methods: Husky Series 4000 (Blue shield) or Mission HeavyWieght Orange shield) on pipes over 3", neoprene sleeve type conforming to ASTM C564 specifically designed for connecting hubless cast-iron pipe, coated with manufacturer's recommended lubricant before installing; four type 304 stainless steel band clamps with a type 305 stainless steel worm drive screw, and corrugated shield over sleeve; use standard no-hub couplings on pipe 3" and less
4. Wedge lock joints at rainwater leaders to underground drain.
5. Cleanout Plugs: Use Armite Joint Seal compound No. 411, or Enterprise Commercial Thread-Seal.

B. Steel/Cast-Iron Threaded Drainage Fittings
1. Pipe: Galvanized steel per ASTM A-120, threaded ends, standard weight Schedule 40.
2. Fittings: Cast-iron threaded drainage type, black coated, with recessed shoulder and pitched threads, per ASTM A-126, Class B.

C. Copper DWV Pipe: DWV drainage tubing per ASTM B-306-86, plain ends for pipe 1 ½" and larger.
   1. Fittings shall be solder type, wrought copper drainage fittings per ANSI Standard B16.29-86.
   2. Joining Materials/Methods: Canfield, Silvabrite or equal lead free solder with a non-corrosive water based flux.
   3. Connections:
      a. Copper to dissimilar metals: dielectric connector.
      b. Copper to threaded connections: cast brass adapters.

2.03 PIPE AND FITTING APPLICATIONS

A. Inside Building (to 5'-0" outside building line).
   1. Rainwater leader piping
      a. Below slab, service weight cast iron soil pipe and fittings, asphaltic coated for sizes 2 1/2" and smaller. Above floor from 6" above slab shall be galvanized steel pipe or service weight cast iron soil pipe and fittings, asphaltic coated for sizes 2 1/2" and smaller. Sizes 3" and larger shall be service weight cast iron soil pipe and fittings, asphaltic coated.
      b. Fittings
         1.) Contractor may use "No-Hub" "Husky" joints per manufacturers published instructions for installation. No-Hub fittings for waste and soil pipe shall be four band stainless steel type.
      c. As an alternate use, copper DWV Pipe.
   2. Plastic pipe and fittings shall not be used inside of buildings.

B. Outside Building (from 5'-0" outside building line)
   1. Rainwater leaders: Pipe shall be first quality Johns Manville Ring-Tite PVC sewer pipe. Use cast iron pipe and fittings where 12" minimum bury cannot be maintained and other locations where indicated. Use materials per utility standards off site - where applicable.
      a. Contractors Option: first quality, extra strength, bell and spigot clay sewer pipe.

PART 3 - EXECUTION

3.01 EQUIPMENT

A. Install equipment in accordance with the manufacturer's installation instructions, as specified herein, and as detailed on the drawings.

3.02 PIPING

A. For underground pipe, provide trenching and backfill for buried piping and install with the following minimum cover unless shown otherwise, cover is from top of pipe to finish grade.
   1. Rainwater leaders - 30"

B. Rainwater Leader Piping: Run all horizontal piping inside of the building at a uniform grade of not less than ¼" per foot unless otherwise noted on the drawings. Pipe shall have invert elevations as shown and slope uniformly between given elevations. All drainage piping shall be run as straight as possible and shall have long radius bends. All offsets shall be made at an angle of 45 degrees or less.
   1. Install clean-outs of the same diameter of pipe in all horizontal lines where indicated and at all points of change in direction and at base of all drops. Locate-clean outs not less than 18" from building construction so as to provide sufficient space for rodding. No horizontal runs of more than 100 feet shall be without clean-out.
   2. Clean-outs in floors shall be protected with a cover taped in place and removed at completion of concrete work.

3. Provide trap at each inlet to rainwater system.

C. Bury a No. 18 AWG insulated copper locating wire with all non-metallic pipe. Copper wire shall have at least 12" above grade at each end.

3.03 FIELD QUALITY CONTROL

A. Piping Testing:
1. Testing Criteria

System	Medium	Pressure	Duration
Rainwater Leader	Water	10 ft water	15 minutes

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, SPECIAL CONDITIONS and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

B. Section 22 05 00 applies to this section.

1.02 SUMMARY

A. This section includes all plumbing fixtures.

1.03 RELATED SECTIONS

A. Section 22 05 00 – Common Work Results For Plumbing

B. Section 22 07 00 - Insulation

C. Section 21 00 00 - Fire Protection

1.04 QUALITY ASSURANCE

A. All plumbing fixtures and equipment shall comply with California Code of Regulations, Title 24, Part 6, latest edition.

B. 2022 CBC 11B-604

1.05 SUBMITTALS

A. Submit a general statement of materials and methods along with manufacturer's technical data and installation instructions for all equipment, fixtures, pipe and fittings, and plumbing specialties to be installed.

B. Record Drawings: Per specification section 22 05 00 requirements.

C. Operation and Maintenance Manuals: Per specification section 22 05 00 requirements.

PART 2 - PRODUCTS

2.01 GENERAL

A. See fixture and equipment schedules on drawings.

PART 3 - EXECUTION

3.01 PLUMBING FIXTURES

A. All fixtures shall be furnished as scheduled. All finished plumbing shall be accurately lined up and where batteries of fixtures occur, special care shall be taken with the roughing-in and finished plumbing.

B. The number and position of all plumbing fixtures are shown on the plumbing drawings. Consult architectural drawings for the location dimensions and mounting heights of fixtures. Heights shall comply with the C.B.C., the latest handicapped requirement, and all ADA requirements.

C. All water supplied to fixtures shall be provided with Speedway loose key compression shut-off stops. Combination fixtures shall have compression stop on each water supply fitting. Concealed stops shall be Crane 9H-313 or equal.

D. All finish for exposed metal trim on any fixture shall be polished chromium plated. This shall include wall flanges, nuts, and washers. Handles on all faucets and stops shall be of all metal, chromium plated. Porcelain caps secured with putty shall be provided and installed for all exposed bolt heads.

E. All fixtures shall be properly and securely installed and supported as required and approved. Fixtures set against concrete walls shall be bolted thereto. Fixtures secured to partitions shall be securely bolted to the wall carrier fittings with foot supports, and shall be provided in types as required to suit the particular installation and fixture.

F. Connection between fixtures and flanges on soil pipe shall be made absolutely gas tight and water tight with graphite type gaskets (wall hung fixture) or Fedar's closet setting compound (floor outlet fixtures). Rubber gaskets, or putty will not be permitted.

G. Fixtures not having integral traps shall be provided with "P" traps of chromium plated solderless seamless brass with trap screw at bottom and connected to concealed waste in wall sanitary fittings. All trap tail pieces shall be 17 gauge minimum.

H. Unions on waste pipes on fixture side of traps may be slip or flange joints with soft rubber or lead gaskets.

I. All flush valves shall be tested and adjusted so that each fixture receives the proper amount of water. All faucets, hose bibbs, drinking fountains, etc., shall be properly regulated to the approval of the Architect.

J. Comply with State handicapped requirements regarding flow control devices, fixture mounting heights, insulation of piping under fixtures, etc.

K. Furnish and install stainless steel Hudee frames for counter mounted fixtures unless "Self-Rimming".

L. Grout all voids between fixtures and adjacent surfaces with 100% white Dow Silicon sealant.

M. All hot water fixtures except kitchen and janitors sinks to be provided with thermostatic mixing valves (see Contract Drawings) set at 110F (unless served by tempered water systems).

END OF SECTION

22 63 13
AIR AND VACUUM PIPING
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 SCOPE

A. Section Includes

1. Plumbing Work to include compressed air piping, valves and all appurtenances required for a complete system.
2. Provide complete plumbing systems including
   a. All piping systems for conduction of compressed air as shown or specified for plumbing Work.
   b. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing Work.
   c. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.02 RELATED SECTIONS

A. Section 22 05 00 Common Work Results for Plumbing

B. Section 22 05 29 Hangers and Supports for Plumbing Piping and Equipment

1.03 QUALITY ASSURANCE

A. All plumbing fixtures and equipment shall comply with California Code of Regulations, Title 24, Part 6, latest edition.

B. All piping and joints shall be medical grade.

PART 2 - PRODUCTS

2.01 PIPE AND FITTING APPLICATIONS

A. Lab Air Piping

1. Piping
   a. One and one half inches and smaller, Type L Copper, hard drawn tubing per ASTM B-88, plain ends.
   b. Fittings: Solder type, wrought copper per ANSI Standard B16.22 or cast red brass per ASTM B-43, schedule 40, brazed.
2. Unions: Solder type, cast red bronze.
3. Joining Materials/Methods
   a. Canfield, Silvabrite or equal lead free solder with a non-corrosive water based flux.
   b. 15 percent silver brazing alloy, water based silver brazing flux. Silver content must be clearly identified on the brazing rod.
4. Connections
   a. Copper to dissimilar metals: dielectric connector.
   b. Copper to threaded connections: cast brass adapters.
5. Provide Bare Metal Pipe Isolators: Stoneman "Trisolator", Superstrut Cush-a-strip or equal on all hot and cold domestic water piping.

B. Vacuum Piping

1. Piping
   a. One and one half inches and smaller, Schedule 40 PVC, solvent welded, pipe and Schedule 80 fittings.
   b. Two inches to 3 inches, Schedule 80 PVC, solvent welded, pipe and Schedule 80 fittings.

PART 3 - EXECUTION

3.01 PIPING TESTING: TESTING CRITERIA

System	Medium	Pressure	Duration
Lab Air & Vacuum	Air	150 pounds per square inch gauge	4 hours

END OF SECTION

PART I - GENERAL

1.01 SUMMARY

A. Extent of high purity water systems, required by this section is indicated on drawings and by requirements of this section.

B. Types of system specified in this section include the following:

1. Deionized Water

C. Types of equipment and services specified in this section include the following:

1. Pipe and Fittings.

2. Valves and Piping Specialties.

3. Rinsing, Cleaning, Balancing and Testing.

1.02 SYSTEM DESCRIPTION

A. The system shall include supply and return piping, valves and piping specialties. The system shall connect to the existing DI system.

B. Design Requirements: The system shall be designed based on the following data.

1. System Flow: 10 GPM re-circulation rate in new loop.

C. Performance Requirements: The system shall maintain existing system water quality based on Owner provided information. Contractor shall obtain this information for the Owner prior to any on site activities.

1.03 REFERENCES

A. ASTM: American Society of Testing Materials

1.04 SUBMITTALS

A. Treatment Equipment Manufactures Qualifications: Submit data indicating experience in design and operation of similar systems in the area.

B. Product Data: Submit manufacturer’s technical product data, including rated capacities of selected components clearly indicated, weights (shipping, installed and operating), furnished specialties and accessories; and installation and start-up instructions.

C. Installers Qualifications: Submit qualifications for each installer.

D. Testing and Performance Data: Submit documentation including test procedures and laboratory results.

E. Samples: Submit sample joints as required.

F. Maintenance Data: Submit maintenance data and parts lists for each component. Include this data in maintenance manual; in accordance with requirements of Division 1.

1.05 QUALITY ASSURANCE

A. Installer's Qualifications: Firm and individuals with not less than five (5) years experiences in installation of high purity water systems similar in complexity and type to those required for this Project. Each installer shall demonstrate the ability to install acceptable high purity piping systems.

B. Manufacturers Qualifications: Firms regularly engaged in manufacture of water conditioners, of types, materials, and sizes required, whose products have been in satisfactory use in similar service for not less than five (5) years.

C. Welding: Qualify processes and operators according to the ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

D. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp flash tanks to comply with the ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Packing and Shipping: Deliver products in original unopened packaging with legible manufacturer's identification.

B. Storage and Protection Prior to Cleaning: Comply with manufacturer's recommendations.

1. Store all components in a cool, dry place out of direct sunlight.

2. Protect from damage by the elements and construction procedures.

3. Store fittings in original cartons.

4. Store at temperature above 40ºF.

5. Ends of piping, valves, and fittings shall be sealed.

6. Avoid rough handling of pipe and fittings.

1.07 PROJECT CONDITIONS

A. Field Measurements: Verify space requirements for installation, operation and maintenance.

1.08 SEQUENCE/SCHEDULING

A. Coordinate installation, cleaning and testing with Owner and all trades.

PART II - PRODUCTS

2.01 MANUFACTURERS

A. Piping:

1. Harvel LXT.
2. Normac.
3. Or equal.

B. Valves and Specialties:

1. Harvel LXT (Valves).
2. Normac.
3. Or equal.

2.02 PIPING AND FITTINGS

A. PVC: Harvel LXT, ASTM D-1785, Type II pressure rating, Schedule 80 pipe with socket-type Schedule 80 fittings with solvent weld joints.

B. Stainless Steel Pipe: ANSI 36.19, Type 316 L, Schedule 40.

C. Stainless Steel Fittings: 316 L, Schedule 40 butt-weld fittings and flanges, ANSI B16.9.

D. Welding Materials: Comply with Section II, Part C, of the ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.

E. Gasket Material: Thickness, material and type suitable for fluid to be handled; and design temperature and pressures.

F. Unions: Suitable for pressure and temperature and high-purity applications.

G. Factory cleaned and bagged for high purity service.

2.03 VALVES

A. PVC Ball Valves: Harvel LXT, full port, PTFE seats, true union ball valves with socket end connections.

B. Stainless Steel Ball Valves: Apollo Series 86 stainless steel ball valve with butt-weld ends.

C. Factory cleaned and bagged for high purity service.

2.04 PRESSURE REGULATORS

A. Automatic, adjustable pressure regulating valve to maintain constant downstream pressure, designed for high purity water service. 150 psig at 75ºF. rated, PVC construction (Plast-O-Matic, or equal).

B. Pressure Gages: PVC with Teflon diaphragm gage guards, with ¼" ball valves. 0-100 psig.

PART III - EXECUTION

3.01 EXAMINATION

A. Verification of Conditions: Examine areas and conditions under which Work is to be performed and identify conditions detrimental to proper or timely completion.

1. Do not proceed until unsatisfactory conditions have been corrected.

2. Manufacturer shall review proposed piping layout including pipe sizing, velocities and material for confirmation of system performance.

3.02 PIPING APPLICATIONS

A. DI Supply and Return Piping: PVC, Schedule 80.

B. DI Supply and Return Piping at Humidifiers: Stainless steel, 316L ball valves, Schedule 40 with butt-weld fittings.

3.03 VALVE APPLICATION

A. Shut-off and balancing: PVC ball valves.

B. Shut-off at Humidifiers: Stainless steel ball valves with butt-weld ends.

3.04 GENERAL

A. General: Install piping and valves in accordance with manufacturer's written instructions and as required to maintain system performance requirements.

3.05 PIPING INSTALLATION

A. Refer to Division 15, Section 15050 – Basic Mechanical Materials and Methods, for basic piping installation.

B. Supports: Provide continuous V channel support for all horizontal piping. Supports shall not occur at joints.

3.06 SYSTEM CLEANING, FLUSHING AND FILLING

A. Installed piping system including valves shall be flushed and cleaned prior to connecting to the existing system.

B. As a minimum perform the following flushing, cleaning and filling activities.

1. Initial water flush (CW).

2. Detergent strip cleaning and flush (Alkanoz or equal).

3. Post strip flush (CW).

4. Sanitization (5% hydrogen peroxide/water).

5. Post sanitation flush to meet inlet water quality (no trace hydrogen peroxide).

6. System fill per Owners requirements using DI water from approved outside source meeting existing system requirements.

3.07 BALANCING

A. Balance system to indicate volumes. Verify/record existing system operational (flow and pressure) conditions prior to field connection to existing system.

3.08 JOINT CONSTRUCTION

A. Per manufactures written instructions for high purity applications. The following are minimum requirements for PVC pipe:

1. All cut piping shall be square and true.

2. All pipe ends shall be deburred.

3. Piping shall be fully seated in fitting sockets without gaps in wetted portion.

4. Avoid excess amounts of solvent to minimize “puddling” on interior of finished joint.

B. Sample Joints: Each installer shall submit to the Owners representative one finished joint per day for inspection.

C. Provide transition and special fittings with pressure ratings equal to piping as approved by the manufacture and treatment equipment manufacturer requirements.

D. PVC Pipe Primers and Solvents: Record date of manufacturer and/or expiration date of all materials used.

3.09 VALVE INSTALLATION

A. Install valves per manufacturers written requirements.

B. Keep valve in factory package until installation.

3.10 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment and machines to allow service and maintenance.

C. Provide fittings and transition connections suitable for connection to fixtures and equipment.

3.11 FIELD QUALITY CONTROL

A. The following tasks shall be performed by the Contractor as work of this section.

1. Pipe, joint and valve assembly.

2. System rinsing, cleaning and filling.

3. System pressure testing.

4. System balancing.

5. Preparation of reports indicating compliance.

B. In addition to providing direction for the tasks listed above the treatment equipment manufacture shall perform the following tasks as work of this section:

1. Certification of system performance.

2. Submission of report including laboratory water analysis indicating system compliance.

3.12 CLOSEOUT PROCEDURES

A. Treatment equipment manufacturer's technical representative shall provide a one 8-hour day to instruct Owner's personnel in operation and maintenance of water conditioners.

1. Schedule training with Owner; provide at least 7-day notice to Contractor and Engineer of training date.

B. Complete instructions covering installation and operation of the deionized water system shall be provided in booklet form. All component parts must be easily identified, in exposed views, by an individual part number.

END OF SECTION

PART 1 - GENERAL

1.01 SUBMITTALS

A. Preparations.
   1. Prior to data collection and compilation, prepare and submit in duplicate an outline of the proposed organization and content.
   2. Compilation: Prepare and collect data concurrently with construction progress. Compile per submitted outline.

PART 2 - PRODUCTS

2.01 OPERATION AND MAINTENANCE MANUALS

A. Form of Submittals
   1. Prepare data in form of an instructional manual for use by Owner's personnel.
      a. Cover: Identify each volume with typed or printed title, "OPERATING AND MAINTENANCE INSTRUCTION". List:
      b. Title of Project.
      c. Provide indexed tabs.
      d. Identify of separate structure as applicable.
      e. Identity of general subject matter covered in the manual.
   2. Format:
      a. PDF.
      b. Text: Manufacturer's printed data.
      c. Drawings:
   3. Provide description of product and major component parts of equipment.
   4. Provide indexed tabs.

PART 3 - EXECUTION

3.01 OPERATION AND MAINTENANCE DATA

A. General: Record data and operation and maintenance data are complimentary. Submittal items which may be required under both categories may be included only under one submittal if a statement to that effect is included in the other submittal.

B. Quality Assurance
   1. Preparation of data shall be done by personnel.
      a. Trained and experienced in maintenance and operation of described products.
      b. Familiar with requirements of this Section.

C. Content of Manual
   1. Provide table of contents for each volume, arranged in systematic order.
      a. A list of each product required to be included, indexed to content of the volume.
      b. List, with each product, name, address and telephone number of:
         1) Subcontractor or installer.
         2) Maintenance contractor, as appropriate.
         3) Identify area of responsibility of each.
         4) Local source of supply for parts and replacement.
      c. Identify each product by product name and other identifying symbols as set forth in Contract Documents.
   2. Product Data:
      a. Include only those sheets which are pertinent to the specific product.
      b. Annotate each sheet to:

1) Clearly identify specific product or part installed.
2) Clearly identify data applicable to installation.
3) Delete references to inapplicable information.

3. Drawings:
   a. Supplement product data with drawings as necessary to clearly illustrate.
      1) Relations of component parts of equipment and systems.
      2) Control and flow diagrams.
   b. Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation
   c. Do not use Project Record Documents as maintenance drawings.
4. Supplement product data for the particular installation.
   a. Organize in consistent format under separate headings for different procedures.
   b. Provide logical sequence of instructions for each procedure.
5. Factory Authorized Start-Up Report.
   a. Provide a factory start-up report for each piece of equipment. Contractor start-up reports, unless contractor is a factory authorized representative will not be allowed.
6. Copy of each warranty, bond and service contract issued.
   a. Provide information sheet for Owner's personnel, give:
      1) Proper procedures in event of failure.
      2) Instances which might affect validity of warranties or bonds.

D. Manual for Equipment and Systems:
   1. Content, for each unit of equipment and system, as appropriate.
      a. Description of unit and component parts.
         1) Function normal operating characteristics, and limiting conditions
         2) Performance curves, engineering data and tests.
         3) Complete nomenclature and commercial number of replaceable parts.
      b. Operating procedures:
         1) Start-up, break-in, routing and normal operating instructions.
         2) Regulation, control, stopping, shut-down and emergency instructions.
         3) Summer and winter operating instructions.
         4) Special operating instructions.
      c. Maintenance Procedures:
         1) Routing operations.
         2) Guide to "trouble-shooting"
         3) Disassembly, repair and reassemble.
         4) Alignment, adjusting and checking.
      d. Servicing and lubrication schedule.
         1) List lubricants required.
      e. Manufacturer's printed operating and maintenance instructions.
      f. Description of sequence of operation by control manufacturer.
      g. Original manufacture's parts list, illustrations, assembly drawings and diagrams required for maintenance.
         1) Predicted life of parts subject to wear.
         2) Items recommended to be stocked as spare parts.
      h. As-installed control diagrams by controls manufacturer.
      i. Each contractor's coordination drawings:
         1) As-installed color-coded piping diagrams.
      j. Charts of valve tag numbers, with location and function of each valve.
      k. List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.
      l. Other data as required under pertinent sections of specifications.
      m. Content for each electric and electronic system, as appropriate.
      n. Description of system and component parts.

1) Function, normal operating characteristics, and limiting conditions.
2) Performance curves, engineering data and tests.
3) Complete nomenclature and commercial number of replaceable parts.

o. Circuit directories of panel boards.
1) Electric service.
2) Controls.
3) Communications

p. As-installed color coded wiring diagrams.

q. Operating procedures.
1) Routing and normal operating instructions.
2) Sequences required.
3) Special operating instructions.

r. Maintenance procedures.
1) Routine operations.
2) Guide to “trouble shooting”.
3) Disassembly, repair and reassembly.
4) Adjustment and checking.

s. Manufacturer’s printed operating and maintenance instructions.

t. List of original manufacturer’s spare parts, manufacturer’s current prices, and recommended quantities to be maintained in storage.

u. Other data as required under pertinent sections of specifications.

v. Additional requirements for operating and maintenance data: Respective sections of Specifications.

E. Instruction of Owner’s Personnel.
1. Prior to final inspection or acceptance, fully instruct Owner’s designated operating and maintenance personnel in operation, adjustment and maintenance of products, equipment and systems
2. Operating and maintenance manual shall constitute the basis of instruction.
a. Review contents of manual with personnel in full detail to explain all aspects of operations and maintenance.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, SPECIAL CONDITIONS and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

B. This section applies to all Division 23 Mechanical Sections.

1.02 SUMMARY

A. Furnish and install all mechanical work shown on the drawings, specified herein, and as required for a complete and functional installation.

B. This section includes materials and methods applicable to the work described in all Division 23 Mechanical Sections. Specific work requirements of individual Mechanical Sections take precedence if in conflict with requirements of this Section.

C. All chemicals utilized on site as part of coating, sealant, and other products shall not contain any chemical that is listed as part of Proposition 65 known carcinogens that are identified by NTP, IARC, and the USEPA California Proposition 65 chemical repository contractors are not allowed to bring these chemicals on any California Intel site.

1.03 RELATED SECTIONS

A. Division 26 - Electrical Work

B. Division 22 - Plumbing

1.04 DRAWINGS AND SPECIFICATIONS

A. For purposes of clearness and legibility, drawings are essentially diagrammatic and, although size and location of equipment are drawn to scale wherever possible, the Contractor shall make use of all data in all the contract documents and shall verify this information at building site.

B. Information presented on Drawings and in the Specifications is based upon latest data available during their preparation. The Drawings and Specifications are for the assistance and guidance of the Contractor and exact locations, distances, levels, etc. will be governed by the structures and the site the contractor shall accept same with this understanding.

C. The drawings indicate required size and points of termination of pipes, and suggest proper routes to conform to structure, avoid obstructions and preserve clearances. However, it is not intended that drawings indicate all necessary offsets, and it shall be the work of the Contractor to make the installation in such a manner as to conform to structure, avoid obstruction, preserve headroom and keep openings and passageways clear.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Contractor shall be responsible for delivery, storage, protection and placing of all equipment and materials.

B. Equipment stored and installed at the job site shall be protected from dust, water or other damage. Cover all equipment stored exposed to weather.

1.06 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer.

1.07 SEISMIC RESISTANCE

A. See Section 23 05 48.

1.08 CODES AND SAFETY ORDERS

A. All work and materials shall be in full accordance with the latest rules and regulations of the State Fire Marshall; the Safety Orders of the Division of Industrial Safety; the I.S.O. codes;

1. 2022 California Plumbing Code, Title 24, Part 5;
2. 2022 California Mechanical Code, Title 24, Part 4;
3. 2022 California Building Code, Title 24, Part 2;
4. NFPA Codes (versions as referenced in 2022 California Building Code, Title 24 Part 2, chapter 35 and 2022 California Fire Code, title 24, Part 9, chapter 80), and other applicable laws and regulations.

B. Nothing in the Drawings or Specifications shall be construed to permit work not conforming to these codes.

C. Drawings and Specifications take precedence when work and materials called for exceed Code requirements.

1.09 INSTALLATION

A. Manufacturer's Instructions:
1. When specifications require that installation comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation.
2. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by specifications.
3. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.
4. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Engineer for further instructions.
5. Do not proceed with work without clear understanding.
6. Arrange for pipe spaces, chases, slots and openings in building structure during progress of construction, to accommodate mechanical system installation.
7. Coordinate installation of supporting devices. Set sleeves in poured-in-place concrete and other structural components during construction.
8. Coordinate requirements for access panels and doors for mechanical items requiring access where concealed behind finished surfaces.
9. Coordinate with other trades equipment locations, pipe, duct and conduit runs, electrical outlets and fixtures, air inlets and outlets, and structural and architectural features. Provide information on location of piping and seismic bracing to other trades as required for a completely coordinated project.

1.10 PERMITS AND FEES

A. Obtain all permits and pay all required fees for permits and/or utility services. Inspections required during the course of construction shall be arranged as required. On completion of the work furnish the owners representative with certificates of inspection.

B. Include in bid all costs for gas service including meter, regulators and service line installed by a gas utility company or a gas utility company approved contractor.

1.11 SITE CONDITIONS

A. Assume all responsibility for damage to adjoining properties; and restore property to its original condition, should damage occur as a result of the work of this section. Contractor shall thoroughly familiarize himself with all site conditions. Should utilities not shown on the drawings be found during excavations, promptly notify the Architect for instructions as to further action. Failure to do so will make the Contractor liable for any and all damage thereto arising from his operations subsequent to discovery of such utilities not shown on plans.

1.12 SUBMITTALS

A. General
   1. A submittal schedule shall be issued by the contractor within 15 days of award of the contract. This schedule shall allow for timely review and approval as required by the contract documents.
   2. These requirements apply only to substitutions, submittals, and shop drawings.
   3. The contractor shall review all submittals prior to submission to the Architect. Submittals not reviewed by the contractor will be returned to the contractor and will not be reviewed.
   4. Any deviations from specified requirements shall be clearly indicated in submittals.
   5. Any errors in or omissions from submittals and any consequences of these are the responsibility of the Contractor.
   6. Partial or incomplete submittals may be rejected as not complying with requirements; the Contractor shall be liable for any resultant consequences.
   7. Delayed submittals may be rejected as not complying with requirements. Whether accepted or rejected, delayed submittals will not be considered justification for extension of contract time or similar relief.
   8. Submittals not required or permitted by the Specifications but made at the option of the Contractor, will be returned without review unless accompanied with written valid justification.
   9. Submittal items improperly included with those of another category (such as a proposed substitution included with shop drawing submittal) are not valid and will be returned without review.
   10. Within 35 calendar days after award of the contract, and before fabrications and installation of any material or ordering of any materials, submit for approval one copy in PDF format of complete submittal data on specified and proposed substituted equipment and materials. Submittals shall list all materials proposed identified with drawing symbols and specific data on equipment such as arrangements, performance curves, sizes, capacity, motor locations, and other pertinent data. Check all submittals for conformance to the requirements of the Construction Documents before forwarding to the architect for each item. No consideration will be given to substitutions submitted past 35 day limit. The contractor shall be responsible for all quantities and errors and omissions of submittals. Furnish samples when requested.
   11. Equipment and materials specified as part of the specifications and drawings are listed by two manufacturers names. The first named manufacturer is the basis of design. The second named manufacturer has been determined to be an equivalent in quality or utility. The second named has not been specifically determined to conform to the first named in size, layout, electrical power, voltage, or impacts to building structure. The contractor is

bound by all requirements for substitutes, as described below, for all second named manufacturers and equivalent equipment or products.

12. Each reviewed submittal will be marked to indicate review and directions as stated below.
13. Acceptance of a submittal does not relieve the Contractor of responsibility for omissions from the submittal or errors in the submittal.

1.13 REVIEW

A. Submittals will be reviewed for general acceptability, not necessarily including all details. The engineers review is for general conformance with the design concept of the project and the information given in the contract documents. The contractor is solely responsible for confirming and correlating all quantities and dimensions; selecting fabrication processes and techniques of construction; coordinating the work with that of other trades and performing all work in a safe and satisfactory manner. Corrections of comments made on this submittal during this review do not relieve contractor from compliance with the requirements of the contract documents or with its responsibilities listed herein.
   1. Proposed substitutes will be judged not only for the acceptability of the items themselves, but also how they will be used under the conditions of the particular project.
   2. Proposed substitutions will be judged also for compliance with qualifications and conditions stipulated in paragraph 1.16.

B. Each reviewed submittal will be marked to indicate review and directions as stated below.
   1. Acceptance of a substitute does not waive the specified requirements.
   2. Once a substitution is accepted, no revision or resubmittal may be made except for pressing and valid reason and after receipts of approval to do so.

1.14 REVIEW DIRECTIONS

A. The notation "No Exceptions Taken" indicates that no further submittal on the particular matter is required and that the Contractor may proceed with normally ensuing action. The notation may be applied to submittals on substitutions, shop drawings, record data, or operation and maintenance data. The submittal has only been reviewed for general conformance with the design concept of the Contract Documents. The contractor is responsible for the dimensions to be confirmed and correlated at the job site; information that pertains solely to the fabrication process or to the means and methods of construction; coordination of the work of all trades; and performing all work in a safe and satisfactory manner. This notation does not modify the contractor's duty to comply with the contract documents.

B. The notation "Make Corrections Noted" indicates that no further submittal on the particular matter is required, but the Contractor shall make all changes or corrections noted (but no others) before proceeding with normally ensuing action. The notation may be applied to submittals on substitutions or shop drawings (but usually not record data or operation and maintenance data).

C. The notation "Amend and Resubmit" indicates that the submittal is not accepted and must be revised, resubmitted, and reviewed again. In the case of submittal on substitutions and shop drawings so noted, the Contractor shall not proceed with any normally ensuing action until the resubmittal is reviewed. The notation may be applied to submittals on substitutions, shop drawings, record data, or operation and maintenance data.

D. The notation "Rejected - See Remarks" indicates that the submittal is not accepted and that resubmittal on the same subject matter is not allowed and will not be considered. The notation will be applied normally only to submittals on substitutions (usually not on shop drawings, record data, or operation and maintenance data).

E. The notation "Returned Without Review" indicates that the submittal or item has not been considered officially because it is either not proper, valid, required, or permitted by the Specifications and has no status or effect.

1.15 SHOP DRAWINGS

A. The contractor is responsible for providing all shop drawings as described below so that the design professional has the opportunity to determine if the contractor understands the contract documents. It is not the purpose of shop drawings to assure that the contractor is meeting the requirements of the contract documents. Review and approval of a submittal neither extends nor alters any contractual obligation.

B. Accompany all substituted equipment with shop drawings showing revised ductwork and/or piping layouts in order to ascertain that substituted equipment does not adversely affect layout or work of others. Shop Drawings: The following conditions apply to shop drawings:
   1. Shop drawings are not and do not become Contract Documents.
   2. Processed shop drawing submittals and any instructions or requirements noted thereon are a part of the work, but they may not be used as a means of increasing the scope of the work.
   3. If deviations, discrepancies, or conflicts between shop drawing submittals and the Contract Documents are discovered either prior to or after the submittals are processed, the Contract Document requirements shall govern.

1.16 SUBSTITUTIONS

A. Whenever any equipment, material, or process is indicated or specified by patent of proprietary name and/or name of Manufacturer, in the Specifications and/or on the Drawings, it is understood that such specification is used to facilitate the description of the material and/or process and deemed to be followed by the words "or equal" unless noted "no substitute".

B. Substitute equipment and materials shall be equal in all respects including quality, arrangement, utility, physical size, capacity, and performance to those specified. Approval of substitute material will not relieve the contractor from complying with the requirement of the Drawings and Specifications. The contractor shall be responsible and at his own expense, for any changes caused by proposed substitutions which affect other parts of his own work or the work of other contractors.

C. The submittal of a proposed substitution shall clearly establish the following:
   1. The item can be transported into and installed in the intended space and in the manner shown.
   2. Required connections (electrical, piping, and other) can be properly made and adjoining work can be properly accomplished.
   3. The proposed substitute is similar to and of substance equal to that specified, is suited to the same use as that specified, and will perform the functions required by the design.
   4. Motors for proposed substitute equipment will have the same minimum differential between motor brake horsepower and motor nameplate horsepower as the specified equipment.
   5. All performance requirements shall be at least equal to the specified product or equipment including noise levels, cooling capacity, heating capacity, air flow quantity, etc.

D. By submitting a proposed substitution, the Contractor agrees to the following:
   1. He will assume full responsibility for any and all modifications and necessary alterations arising from the use of the substitute item or material including all cost incurred by all other trades.
   2. He will assume full responsibility for any delay in the construction schedule resulting from the use of the substitution.

3. He will prove harmless and indemnify the Owner and the Owner's design consultants from real or alleged damages that may result from the installation, use, or performance of a substitute material or product.

E. The following conditions apply to substitutions:
1. Submittals of substitutions are not and do not become part of the Contract Documents.
2. Contractor shall not order, fabricate, use, or install any substitute product or procedure unless he has received acceptance of the substitute from the Engineer.
3. Should the Contractor install any substitute product in violation of the above he shall remove it and install the specified product at his own expense.
4. The Contractor shall provide a letter stating that all the above items shall apply to all substituted products and equipment.
5. Any submittal for substituted equipment or product that does not clearly show that the substituted item is equal shall be marked rejected and no further submittal shall be allowed on the substituted item. Provide in submittal format documentation that the proposed item is exactly as specified in the contract documents.

1.17 GUARANTEE

A. Guarantee all work for one year from date of acceptance, against all defects in material, equipment and workmanship including repair of damage to any part of the premises resulting from leaks or other defects in material, equipment and workmanship. Guarantee shall be on form supplied by the owner's representative.

1.18 RECORD DRAWINGS

A. The contractor is responsible to provide record drawings. Provide PDF drawings showing the actual location of all ductwork, piping and equipment. Dimension locations of underground service mains and branches. Deliver the PDF drawings to the architect at the completion of the job for review and approval by the engineer.

B. Mark-up Procedure: During the construction period, maintain a complete, current set of Contract Drawings and Shop Drawings uploaded and updated within the BLUEBEAM program for Project Record Document purposes. Label each document "AS-BUILT RECORD". Keep all record documents current.

C. On completion of the Work the Contractor will provide one complete set of AS-BUILT RECORD Drawings in AutoCAD (drawing) file format and one complete set in Adobe PDF file format.

D. A reference by number to a Change Order, CCD, RFI, RFQ RFP, Field Order or other such document is not acceptable as sufficient record information on any record document. Do not conceal any Work until required record information has been recorded.

E. Contractor shall mark AS-BUILT Record Drawings to indicate the actual installation where the installation varies appreciably from the installation shown originally. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later. Items required to be marked include, but are not limited to:

1. Revisions or any modification to details shown on the Contract Drawings
2. Depths of various elements (sanitary sewer, water etc. in relation to main floor level or survey datum.
3. Horizontal and vertical location of underground utilities and appurtenances referenced to permanent surface improvements.

4. Location of internal utilities and appurtenances concealed in construction referenced to visible and accessible features of structure.
5. Locations of underground work, points of connection with existing utilities, changes in direction, valves, manholes, catch basins, capped stub outs, invert elevations and similar items
6. Actual equipment locations
    a. Duct size and routing
7. Changes made by Change Order, CCD, ASI, or any other directive
    a. Details not on original Contract Drawings
    b. Contractor shall mark completely and accurately AS-BUILT Record Drawing prints of Contract Drawings or Shop Drawings, whichever is the most capable of showing actual physical conditions. Where Shop Drawings are marked, show cross-reference on Contract Drawings location.
    c. Contractor shall mark AS-BUILT Record Drawing sets within BLUEBEAM with red markings; use other colors to distinguish between changes for different categories of the Work at the same location.
    d. Contractor shall mark important additional information that was either shown schematically or omitted from original Drawings.
    e. Contractor shall note Contractor Change Directive numbers; Bid Alternate numbers, if any, Change Order numbers, and similar identification.
    f. Contractor shall be responsible for Mark-up: Where feasible, the individual or entity who obtained Project Record Drawing data, whether the individual or entity is the installer, Subcontractor or similar entity, is required to prepare the mark-up on AS-BUILT Record Drawings.
    g. Accurately record information in an understandable and legible drawing technique.
    h. Record data as soon as possible after it has been obtained. In the case of concealed installations, record and check the mark-up prior to concealment.

F. Contractor shall prepare Record Drawings: Immediately prior to inspection for Certification of Substantial Completion of the Work, review completed marked-up AS-BUILT Record Drawings with District, Project Inspector and Architect to ensure accuracy of information. Once accuracy of information is confirmed, prepare and submit a full electronic set, professionally drafted in AutoCAD format, of as-built Contract Drawings and Shop Drawings.

1. Incorporate changes and additional information previously marked on print sets. Delete, redraw, and/or add details and notations where applicable. Identify and date each Drawing; include the printed designation “AS-BUILT RECORD DRAWING” and the date prepared in a prominent location on each Drawing.
2. Distribution: Whether or not changes and additional information were recorded, organize the original marked-up set of drawings that were maintained during the construction period within BLUEBEAM into manageable sets. The sets should be labeled with all appropriate identification, including titles, dates and other information on cover sheets and submit to District.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Shop drawings:
1. Make all drawings to an appropriate scale, large enough to show all pertinent aspects of the item and the method of its connection into the work.

2. Make each drawing sheet in AutoCAD.

B. Grouping: Combine submittals in logical groupings; for example, submit Shop Drawings grouped by Sections of the Specifications, arranged in the specified sequence.

C. Shop Drawings: Four blue or black line prints of each for the Engineer.

D. Timing: Submit all shop drawings prior to installation of any items included in submittal.

2.02 CORROSION PROOFING

A. Corrosion Proofing / U.V. Protection: Products which will be installed outdoors, exposed to the weather, exposed to moisture, or other potentially damaging conditions shall be constructed to resist the effects of such exposure.

B. Exterior casings shall have lapped or gasketed joints effectively sealed to prevent intrusion of moisture or other injurious substances.

C. Casings, ducts, pipes, or product items shall be constructed of materials which are fully resistant to harmful substances they may normally contact, or (if ferrous) shall be galvanized after fabrication, or shall be fully protected from such substances by paint or other coating in appropriate thickness or number of coats.

D. All bolts, nuts, screws, and washers shall be galvanized unless specified to be plated or unprotected.

E. Any exposed plastic pipe must have a U.V. inhibitor.

2.03 MATERIAL AND EQUIPMENT

A. All material and equipment shall be new, of the type, capacity and quality specified and free from defects. All materials and equipment shall be of the same brand or manufacturer throughout for each class of material or equipment wherever possible.

2.04 FILTERS

A. A complete set of filters shall be supplied for use during the construction period. A complete set of new filters shall be installed before testing and balancing.

2.05 ACCESS BOXES

A. For below grade valves and piping devices
   1. Christy Concrete Products Company, Brooks, with galvanized steel checker plate recessed traffic lid flush with rim of box. Lids for boxes located in areas subject to vehicular traffic shall be constructed to withstand H20 live loading as defined by the American Association of State Highway Officials (16,000 pound maximum individual wheel load). Service identification shall be conspicuously welded on lid before galvanizing. For gas service, drill twelve 3/8" diameter vent holes through lid before galvanizing. Provide manufacturer's box extensions to bring box bottom three inches below bottom of valve and box top flush with finish grade.

2. Box sizes (non-traffic)

Type Valve	Valve Size	Box No.
Gas	1 1/2" and smaller	B-24
Gas	2" and 2 1/2"	B-36
Gas	3" and 4"	B-40
Gas	5" and 6"	B-48
Gas	8"	B-52

2.06 ACCESS DOORS

A. Unless specified otherwise by the Architect, provide access doors of the following type:
   1. Concealed hinges, prime coated with rust-inhibitive paint, style of door to suit wall, ceiling, floor or roof construction and fire rating.
      a. Milcor Type M
      b. Milcor Type UFR, fire resistive type Underwriters Laboratory Class B, 1-1/2 hour rating meets UBC, IBCO and BOCA codes for two hour rated walls self latching with key lock, Elmdor/Stonman Type FR or equal.
   2. Minimum size; 18" by 18".
   3. Wall and ceiling access doors: Furnish as required for access to ducts, damper operators, duct mounted access panels, etc.; coordinate size and location to obtain access.
   4. See architectural drawings for further requirements.

2.07 MISCELLANEOUS EQUIPMENT AND MATERIALS

A. Furnish and install miscellaneous equipment and materials required for the systems described whether or not specifically shown.

PART 3 - EXECUTION

3.01 PREPARATION

A. General:
   1. Do not install any equipment, valve, control, motor, filter, or any other device requiring maintenance or service in an inaccessible location or position. Install access doors as specified herein to render all such equipment serviceable whether specifically shown on the plans or not. Maintain code clearance to all equipment. Coordinate location of doors with lights, etc., and locate symmetrically with same.

B. Observations: Check all project drawings and specifications; report any discrepancies before proceeding with the work and in time to avoid unnecessary rework.

C. Investigation: Examine the areas, conditions, and status of other work contiguous or connecting to the work to be performed; ensure that the time of installation is coordinated with other work.

D. Interruptions of Service: Portions of this work may involve connection to existing work, facilities, or utilities ties and may require interrupting shutdowns of same. Carefully plan, coordinate and execute such work so that any interruptions will be kept to a minimum in time and occurrence. Submit request for shutdowns and make shutdowns only after receiving written approval from the Owner.

E. Other: Correct any unsatisfactory conditions that may impede proper execution of the work. Ensure that all arrangements, personnel, materials, and tools are appropriate and adequate before proceeding.

3.02 INSTALLATION

A. General:
   1. Material and equipment incorporated in the work shall be used or applied only for the purpose intended or specified.
   2. Install piping and ductwork and all equipment that requires access with minimum vertical and horizontal clearances required by OSHA for service.
   3. All mechanical systems such as ductwork, pipes and all other equipment shall have 2 inches minimum clearance.
   4. Do not proceed with work without clear understanding.

3.03 MANUFACTURER'S INSTRUCTIONS

A. When specifications require that installation comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation.

B. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by specifications.

C. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.

D. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Engineer for further instructions.

E. Do not proceed with work without clear understanding.

3.04 PROTECTION

A. Contractor shall conform to all Federal, State, and local ordinances related to the protection of the public and Contractor's personnel and the flow of traffic. Provide protection for persons and property throughout the progress of the work.

3.05 DISPOSITION OF MATERIALS

A. All materials and equipment not scheduled to be salvaged, including debris and all rejected salvaged materials, shall become the property of the Contractor and shall be disposed of off site in a legal manner. Location of dump and length of hall shall be the contractor's responsibility.

3.06 LOCATION OF EQUIPMENT, PIPING AND DUCT WORK

A. Where job conditions do not permit the installation of piping, ductwork, etc. in the location shown, it shall be brought to the engineer's attention immediately before fabrication of ductwork, piping, etc. and the relocation required shall be determined in a joint conference.

B. The contractor will be held responsible for the relocating of any items installed without first obtaining the architect's or engineer's approval. Remove and relocate such items at The contractors expense as so directed by the architect or engineer.

C. Where piping or ducting is left exposed within a room, run in vertical or horizontal planes. Maintain uniform spacing between parallel lines and/or adjacent wall, floor or ceiling surfaces.

D. Horizontal runs of plumbing and/or electrical conduit suspended from ceilings shall provide for maximum clearance.

E. Make minor changes in locations of equipment, piping, ducts, etc. from locations shown including minor offsets when directed by the engineer, at no additional cost to the owner.

3.07 CARE AND CLEANING

A. Clean and adjust all equipment at completion of installation to provide operating conditions satisfactory to the engineer. Remove broken, damaged or defective parts; repair or replace as directed by engineer. Remove surface material and debris resulting from this work when directed.

3.08 PAINTING

A. Painting is included under the Painting and Finishing Section. It shall be the responsibility of the Mechanical Contractor to properly protect all equipment and controls during painting operations and the Mechanical Contractor shall repair and/or replace any item damaged due to painting that was not properly protected.

3.09 ACCESS DOORS

A. Provide access doors to all concealed equipment, valves, controls, etc. Locate doors where shown or to be coordinated and symmetrically located with lights, diffusers, etc. Access doors furnished by the mechanical contractor shall be installed by the general contractor.

3.10 ELECTRICAL REQUIREMENTS

A. Provide working space around electrical equipment in compliance with the applicable Code and all Safety Orders.

B. Coordinate the Mechanical Work with the Electrical Work to comply with the above. Furnish and set in place all motors and duct or pipe installed controls.

C. Location of all new switches shall be verified with the architect or architect before roughing-in. Furnish necessary control diagrams and instruction for the proper installation of the controls.

D. Assume responsibility for the proper supervision and testing of the controls for sequence of operation.

E. Motors and control equipment shall conform to the Standards of the National Electrical Manufacturers Association.

F. All equipment electrical characteristics shall be as noted on the drawings, or as specified. Verify before ordering any equipment.

G. Before permitting operation of any equipment which is furnished, installed or modified under this contract, review all wiring connections that pertain to mechanical equipment or work, and verify that these connections are correct.

H. Ascertain that the over-load protection devices installed are of the correct type, rating and setting to properly protect this equipment.

3.11 INSTRUCTION OF OWNER'S PERSONNEL

A. Prior to final inspection or acceptance, fully instruct Owner's designated operating and maintenance personnel in operation, adjustment and maintenance of products, equipment and systems.

B. Operating and maintenance manual shall constitute the basis of instruction.
   1. Review contents of manual with personnel in full detail to explain all aspects of operations and maintenance.

3.12 RECORD DATA

A. Compilation
   1. Record and collect information concurrently with construction progress and date all entries; make drawing entries within 24 hours after occurrence of change or installation requiring recording. Any concealed work covered before recording data shall be uncovered as directed or as necessary to obtain data.
   2. Record information on drawing prints using an erasable colored pencil (not ink or indelible pencil); describe clearly by note or graphic line as appropriate.

B. Locate any concealed work adequately to allow future access with reasonable ease and accuracy.
   1. Identify the plan location of all stub outs, pipe lines, etc., which are buried or concealed in the structure, whether installed where shown on the contract drawings or in a different location; show actual field dimensions from column lines, wall lines, or other permanent reference lines or points.
   2. In many cases on the contract drawings, the arrangement of conduits, pipes, ducts, and similar items is shown schematically rather than as a precise scaled layout. Identify the actual location of these with horizontal and vertical dimensions. If such lines are exposed or readily accessible, omit dimensional identification.
   3. When any work is installed of size, dimension, slope, or location different from that shown on the contract drawings, note the deviation on the Project Record set. If the variations are substantial or cannot be shown clearly on the record drawings, make a new drawing and attach to the Record set.

C. On other documents
   1. Where changes occur in specifications, clearly indicate same in ink, colored pencil, or rubber stamp.
   2. Where installed equipment differs from that specified (e.g., by accepted substitution or change order) note in the specifications and include complete data on same.

END OF SECTION

PART 1 - GENERAL

1.01 SEE SECTION 23 05 00

1.02 REFERENCES AND STANDARDS

A. Where material or equipment is specified to conform to referenced standards, it shall be assumed that the most recent edition of the standard in effect at the time of bid shall be used.
   1. AABC - Associated Air Balance Council
   2. AFBMA - Anti Friction Bearing Manufacturer's Association
   3. AMCA - Air Moving and Control Association Inc.
      a. Standard 210 - Laboratory Methods of Testing Fans
   4. ANSI - American National Standards Institute
   5. ARI - Air-Conditioning and Refrigeration Institute
   6. ASHRAE - American Society of Heating, Refrigerating and Air Conditioning Engineers
   7. ASME - American Society of Mechanical Engineers
   8. ASTM - American Society for Testing and Materials
   9. CCR - California Code of Regulations
      a. Title 8 - Division of Industrial Safety, Subchapter 7; General Industry Safety Orders, Articles 31 through 36
   10. CSA – Canadian Standards Association International
   11. CSFM - California State Fire Marshal
   12. NCPWB - National Certified Pipe Welding Bureau
   13. NIST - National Institute of Standards and Technology
   14. NEMA - National Electrical Manufacturers' Association
   15. NFPA - National Fire Protection Association
   16. OSHA - Occupational Safety and Health Act
   17. SMACNA - Duct Manuals
   18. UL - Underwriters' Laboratories, Inc.

B. Requirements of Regulatory Agencies:
   1. The publications listed below form part of this specification; comply with provisions of these publications except as otherwise shown or specified.
      a. California Building Code, 2022.
      b. California Electrical Code, 2022.
      c. California Energy Code, 2022.
      d. California Fire Code, 2022.
      e. California Green Building Standards Code, 2022.
      f. California Mechanical Code, 2022.
      g. California Plumbing Code, 2022.
      h. California Code of Regulations, Title 24.
      i. California Health and Safety Code.
      j. CAL-OSHA.
      k. California State Fire Marshal, Title 19 CCR.
      l. National Fire Protection Association.
      m. Occupational Safety and Health Administration.
      n. Other applicable state laws.
   2. Nothing in Drawings or specifications shall be construed to permit work not conforming to these codes, or to requirements of authorities having jurisdiction. It is not the intent of Drawings or specifications to repeat requirements of codes except where necessary for clarity.

PART 2 - PRODUCTS

2.01 MOTOR AND STARTERS

A. Motors furnished as part of mechanical equipment shall be of size indicated and shall have starting torque sufficient to start and drive equipment load to which they are connected.

B. Electric motors shall be NEMA Premium efficiency. Provide one of the following or an equal product:
   1. U.S. Motors
   2. Century Electric
   3. General Electric
   4. Lincoln
   5. Gould

C. Motor enclosures shall be:
   1. Open drip proof for general use.
   2. Totally enclosed for wet or exterior use.
   3. Explosion-proof for hazardous location use.

D. Electric Motors of 1/2 HP rating and over, heavy duty, ball bearing, open (drip-proof), squirrel cage induction type, normal starting torque 60 cycle service, 40o F continuous rating, and shall conform in all respects to the latest applicable standard of NEMA and AIEE. Motors up to ¾ HP rating shall have sleeve or ball bearing. Electric motors which are not housed within equipment they serve, shall be stamped for Quiet-Operation. Motors shall be of an Energy Efficient design meeting C.E.C., Title 24.

E. Motor starters and contactors except those in motor control centers shall be included in the mechanical work.

F. Starters: Starters furnished integral to, or specifically for, mechanical equipment shall be Square D, General Electric, Cutler-Hammer, or equal and shall comply with the following:
   1. Enclosures shall be NEMA Standard to suit location/duty:
      a. Type 1: general purpose.
      b. Type 3: rain tight.
      c. Type 4: watertight.
      d. Type 7&9: explosion proof.
   2. Thermal overload protection devices shall be provided as follows:
      a. One for single-phase motors.
      b. Three for three-phase motors.
      c. One for each ungrounded conductor for each winding of multi-wound or multi-speed motors.
   3. Starters for motors up to 1/3 HP may be manual type if no interlocking is required; pilot light to indicate ON position is required.
   4. Starters for motors up to 30 HP shall be magnetic across-the-line type except as stipulated above.
   5. Starters for motors over 30 HP shall be transition-type magnetic-reduced voltage unless specified otherwise. Coordinate the characteristics to ensure adequate starting torque and to limit the starting current to a level compatible to the electrical system and acceptable to the utility company/agency.
   6. Magnetic starters shall be provided with:
      a. 120 volt control circuits.
      b. H-O-A switch in cover.
      c. Auxiliary contacts for necessary interlocking.
      d. Integral disconnect switch or circuit breakers for branch circuit, short-circuit and ground-fault protection.

7. Short-circuit interrupting capacity of starters and disconnects shall be adequate for voltage employed and for current to be interrupted. This may require use of high interrupting capacity breakers or current limiting fuses. If fuses are used, provide three spares for each disconnect.
8. Starters shall be compatible with the motor they control.

PART 3 - EXECUTION

3.01 ELECTRICAL REQUIREMENTS

A. Provide working space around electrical equipment in compliance with the applicable Code and all Safety Orders.

B. Coordinate the Mechanical Work with the Electrical Work to comply with the above. Furnish and set in place all motors and duct or pipe installed controls.

C. Location of all new switches shall be verified with the architect or architect before roughing-in. Furnish necessary control diagrams and instruction for the proper installation of the controls.

D. Assume responsibility to ensure that all motors are connected with flexible conduit per Division 26 requirements.

E. Assume responsibility for the proper supervision and testing of the controls for sequence of operation.

F. Motors and control equipment shall conform to the Standards of the National Electrical Manufacturers Association.

G. All equipment electrical characteristics shall be as noted on the drawings, or as specified. Verify before ordering any equipment.

H. Before permitting operation of any equipment which is furnished, installed or modified under this contract, review all wiring connections that pertain to mechanical equipment or work, and verify that these connections are correct.

I. Ascertain that the over-load protection devices installed are of the correct type, rating and setting to properly protect this equipment.

J. Where equipment motors are to be electrically interlocked with other equipment for simultaneous operation, utilize mechanical equipment wiring diagrams to coordinate with the electrical systems so that proper wiring of the equipment involved is affected.

END OF SECTION

PART 1 - GENERAL

1.01 SEE SECTION 23 05 00

1.02 SUBMITTALS

A. Submit proposed alternative methods of attachment for review and approval by the Engineer, prior to deviating from the requirements given below.

B. For all seismic bracing systems, submit structural calculations and details prepared and signed by the Contractors licensed engineer which include all resultant forces applied to the building structure. Do not overstress building structure. The maximum allowable loads are as indicated in 3.01 of this specification. The submittal data required does not require an analysis of the building structural numbers and their reaction to the loads of the piping. The submittal data needs to address attachment methods and shall include calculations indicating the forces that are applied to the building structure at the point of attachment. Calculations will be reviewed for compliance with design criteria, not for arithmetic.

PART 2 - PRODUCTS

2.01 PIPE SUPPORTS

A. All pipes within the outer casings shall be supported at not more than 10-foot intervals. These supports shall be designed to allow for continuous airflow and drainage of the conduit in place. The straight supports shall be designed to occupy not more than 10% of the annular air space. Supports shall be of the type where insulation thermally isolates the carrier pipe from the outer conduit. The surface of the insulation shall be protected at the support by a sleeve not less than 12 inches long, fitted with traverse and, where required, rotational arresters.

2.02 HANGERS AND SUPPORTS

A. Building Attachments: Powder-actuated-type, drive-pin attachments with pullout and shear capacities appropriate for supported loads and building materials, UL listing and FM approval for fire-protection systems. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping. Provide beam clamp retaining straps for all pipe supports where attached to steel beams.

B. Mechanical-Anchor Fasteners: Insert-type attachments with pullout and shear capacities appropriate for supported loads and building materials.

C. Load Distribution: Install hangers and supports so piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

D. Electro-Chromate or hot dipped galvanized.
   1. Pipe Straps: copper coated for copper.
   2. For insulated pipe - pipe hangers sized to allow pipe insulation to pass continuously through the hanger.
      a. Trapeze Supporting Rods: Diameter sufficient to support the load with a safety factor of 5.
      b. Isolators: Trisolator.

PART 3 - EXECUTION

3.01 PIPING HANGERS AND SUPPORTS

A. General
   1. Miscellaneous: Provide all supports, anchors, concrete pads, grouting, bedding, bracing, vibration isolation, and accessories required for pumps and other equipment.
   2. Support all piping with appropriate manufactured devices as specified use no wire or makeshift device.
   3. The engineer prior to installation shall approve all hanger material.
   4. Size hanger rods, screws, bolts, nuts, etc., according to manufacturer's recommendations. Size hangers to fit around bare pipe, isolator, or insulated pipe shield as appropriate.
   5. Use cadmium plated or galvanized hangers, attachments, rods, nuts, bolts and other accessories where exposed to weather. Hot dip galvanize all items which are not factory finished. Plating for hinged movements must be done at factory.
   6. Hanger rods with C-clamp type structural attachment shall be equipped with retaining straps.
   7. At each support on bare copper tubing or piping system, install an isolator; at each support point on insulated piping systems, install an insulated pipe shield.
   8. Burning, welding, cutting, or drilling on any structural member may only be done if approved by the structural engineer.
   9. No valve or piece of equipment shall be used to support the weight of any pipe.
   10. Provide a hanger close to the point of change of direction of pipe run in either horizontal or vertical plane.
   11. When hangers or supports do not come within one foot of a branch line fitting, install an additional hanger or support at the fitting.

B. Pipe Supports
   1. Horizontal Lines
      a. Suspend all horizontal pipes individually and not in contact with the structure except as specified below. Support each branch line with at least one hanger.

C. Parallel pipes may be supported on trapeze type hangers. Size trapeze hangers to support weight of piping plus a surcharge of 300 pounds. For three or more pipes use a size suitable for the load in accordance with manufacturers published load ratings. No deflection to exceed 1/180 of a span. Anchor rods securely to building structure.

3.02 LINES NEAR FLOOR

A. Support all piping near the floor individually by means of adjustable steel pipe stanchions with welded end plates properly secured to the pipe and to the floor. Alternate: Lines also near walls may be suspended as specified above for horizontal lines, from appropriately sized and mounted angle brackets.

B. Hanger Spacing Schedule:

Type of Pipe	1" dia. Or under	1¼" to 2" dia	2½" dia & over
Steel Pipe	8'-0"	10'-0"	12'-0"
Copper Tubing	6'-0"	8'-0"	10'-0"

Rod Size:	$^{3}/_{8}$"	½"	$^{5}/_{8}$"	$^{5}/_{8}$"
Pipe Size	(1/2" – 2")	(2-1/2" - 5")	(6" - 8")	(over 8")

23 05 30
HANGERS AND SUPPORTS FOR HVAC DUCTWORK
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, and DIVISION 1, GENERAL REQUIREMENTS, apply to the work in this section.

1.02 SECTIONS INCLUDE

A. General: Refer to Section 23 05 00, Mechanical - General.

B. Work Included: Provide all ductwork and ductwork accessories, auxiliaries, and adjuncts for all and systems as specified or shown.

C. Work Described Elsewhere: HVAC piping, equipment, and controls are specified in other HVAC Sections.

1.03 RELATED SECTIONS

A. All Sections of Division 23.

1.04 SUBMITTALS

A. Air Balancing: Provide submittals for air balancing work as specified in Section 23 05 93 HVAC General.

PART 2 - PRODUCTS

2.01 GENERAL

A. The contractor shall provide all miscellaneous metal to bridge between structural beams to provide connection for duct supports. As an alternate ductwork may be supported from the roof deck if approved by the owner and structural engineer.

B. Rectangular Ducts (Horizontal):
   1. Up to 30" duct width: Two 1-1/2" wide 16-gauge galvanized steel straps bolted to opposite sides of duct and firmly secured to overhead construction. Each strap must also be turned and screwed to bottom of duct.
   2. 30" and greater duct width: Trapeze assembly comprised of Unistrut, Powerstrut, channel supported at each end by rod firmly secured to overhead construction; affix duct to channel with angle bracket on each side. Each strap must also be turned and screwed to bottom of duct.
      a. 30" to 72" duct width: Use Unistrut P-1000 channel or equal, size as necessary, 3/8" diameter rods.
      b. 72" to 84" duct width: Use Unistrut P-1000 channel or equal, size as necessary,1/2" diameter rods.
      c. 84" and greater duct width: Use Unistrut P-1001 channel or equal, 1/2" diameter rods.

C. Round Ducts (Horizontal):
   1. Up to 40” in diameter: Two (2) 1-1/2” wide 18 gauge galvanized steel straps, firmly secured to overhead construction and extending around the entire perimeter of the duct and secured to the duct. Provide bracing to prevent duct sway as specified above for rectangular duct.
   2. Ducts over 40” in diameter: All supports for round ductwork over 40” must be approved by the structural engineer.

D. Vertical Ducts:
   1. Rectangular: Unistrut, Powerstrut, P-1000 channel riveted or bolted to side of duct and secured to the structure at each floor or other such level.
   2. Round: Fabricate two-piece angle iron collar, rivet or bolt to duct, secured to structure per above.

E. Kitchen Exhaust Ducts:
   1. Duct bracing and supports shall be of non-combustible material securely attached to the structure and designed to carry gravity and lateral loads.
   2. Bolts, screws, and other mechanical fasteners shall not penetrate duct walls.

F. Structure Attachments: See Contract Documents & Specification Section 23 05 48.

PART 3 - EXECUTION

3.01 DUCTWORK SUPPORTS

A. Supports
   1. Install ductwork in accordance with applicable details, SMACNA "Guidelines for Seismic Restraints of Mechanical Systems, Latest ed." recommendations, manufacturer's recommendations, and best practice, coordinate all ductwork support connection with the Structural Engineer.
   2. Install ducts rigidly, securely, and air tight.
   3. Support ducts independently of ductwork - connected equipment and visa-versa.
   4. Ducts shall be vibration isolated as described in 23 05 48.
   5. Penetrations:
      a. Description: All penetrations of walls separating shall have a minimum clearance of 1/2-inch and a maximum clearance of 3/4 inch.
      b. Materials: A minimum 1.5 lbs/cu.ft. fiberglass insulations shall be used and a nonhardening caulking compound.
      c. Installation: The opening around the penetration shall be filled loosely with the fiberglass insulation. The opening is then to be sealed airtight with the non-hardening caulking compound. Pipes, ducts, etc., shall be supported on either side of the wall with supports to roof structure.

END OF SECTION

PART 1 - GENERAL

1.01 SEE SECTION 23 05 00

A. Furnish and install all systems, units, equipment, and parts to meet or exceed current applicable requirements for seismic resistance specified by codes, regulations, or agencies having jurisdiction. Include all supports, anchors, braces, and other restraining devices required. All seismic restraints and isolation shall meet Seismic requirements and are the responsibility of the contractor.

B. Design and installation of seismic bracing shall be per 2022 CBC Chapter 16.

1.02 QUALITY ASSURANCE

A. General: All isolators furnished under this Section for a given application shall be of a single manufacturer who has been regularly engaged in the design and manufacture of the equipment.

B. Manufacturers must demonstrate to the satisfaction of the Engineer that the quality is equal to the equipment made by those manufacturers specifically named herein. Wherever possible, all materials and systems specified in this section shall be purchased from a single vibration isolation materials manufacturer to assure single responsibility for the performance of all isolation materials used.

C. Vibration and Noise: The completed installation must control vibration and noise to the specified limits. Systems equipment, or parts which vibrate or generate vibration unduly or which generate or emit undue noise while in operation shall: (1) be adjusted, repaired, or replaced as appropriate to obtain acceptable levels of vibration or noise, or (2) be supported on or fitted with suppression or absorption devices or means which effectively prevent the transmission of vibration or noise beyond the offending item.

1.03 SEISMIC RESISTANCE

A. Furnish and install all systems, units, equipment, and parts to meet or exceed current applicable requirements for seismic resistance specified by codes, regulations, or agencies having jurisdiction. Include all supports, anchors, braces and other restraining devices required. All seismic restraints will meet the following site specific seismic design criteria:

1. Seismic Design Category D, 2) Importance Factor, Ip = 1.0 and 3) SDS = 0.490

2. Seismic restraints are the responsibility of the contractor.

B. Design of seismic bracing shall meet requirements of 2022 CBC Chapter 16A.

1.04 SUBMITTALS

A. Manufacturer's Data:

1. Provide materials lists, catalog data sheets, manufacturer's drawings and technical literature covering details of all equipment or items specified or shown on drawings.
2. For Metal Spring Isolators provide the following as a minimum:
   a. Spring diameter.
   b. Static deflection.
   c. Compressed spring height.
   d. Solid spring height.

e. Number of active coils.
f. Ratio of horizontal to vertical stiffness.
g. Operating height.
h. Spring constant.
i. Vertical load for each spring.
j. Location and designation of each isolator.
k. Calculate horizontal and vertical loading and bending moment due to a horizontal force applied at the center of the gravity of the isolated equipment. Calculate bolt requirements.
l. Indicate all bases and rail clearance of one inch.

B. Shop Drawings:

1. Submit plans, elevations and sections and details showing installation, operating heights and spring constants.

C. Static seismic calculations for all equipment, piping and miscellaneous structural steel connections to building frame.

1. Calculations shall be performed by a California licensed structural engineer employed by the isolation manufacturer for a minimum of five years.

D. Certification of Seismic restraints include details of materials or methods which depart widely from those specified.

E. All mechanical equipment shall be anchored or braced to meet the horizontal and vertical forces prescribed in 2022 CBC.

F. The attachment of the following items shall be designed to resist the forces prescribed in Section 1613A, but need not be detailed on the plans:

G. Equipment weighing less than 400 pounds supported directly on the floor or roof.

H. Furniture required to be attached in accordance with Part 2, Title 24, C.C.R..

I. Temporary or movable equipment.

J. Equipment weighing less than 20 pounds supported by vibration isolators.

K. Equipment weighing less than 20 pounds suspended from a roof or floor or hung from a wall.

L. For those elements that do not require details on the approved drawings, the installation shall be subject to the approval of the Mechanical Engineer and the field representative of the Division of the State Architect.

M. The bracing and attachments to the structure shall comply with one of the OSHPD Pre-Approvals with an OPM #, such as Mason Industries.

N. Copies of the manual shall be on the jobsite prior starting hanging and bracing of the pipe and ductwork systems.

O. The structural engineer shall verify the adequacy of the structure to support the hanger and brace loads.

PART 2 - PRODUCTS

2.01 ELASTOMERIC ISOLATION PADS (EIP)

A. Elastomeric Isolation Pads:

1. Acceptable manufacturers include but are not limited to the following:
   a. Mason Industries, Inc. – Type Super W Pad
   b. Kinetics Noise Control, Inc. – Type RSP
   c. Vibration Mountings & Controls, Inc. Type NRC

2. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area. Acceptable manufacturers include but are not limited to the following:
   a. Mason Industries, Inc. – Type Super W Pad
   b. Kinetics Noise Control, Inc. – Type RSP
   c. Vibration Mountings & Controls, Inc. Type NRC
3. Size: Factory or field cut to match requirements of supported equipment.
4. Pad Material: Oil and water resistant with elastomeric properties.
5. Surface Pattern: Waffle pattern.

2.02 HOUSED-RESTRAINED-SPRING ISOLATORS (HRSI)

A. Freestanding, Steel, Open-Spring Isolators with Vertical-Limit Stop Restraint in Two-Part Telescoping Housing:

1. Acceptable manufacturers include but are not limited to the following:
   a. Mason Industries, Inc. – Type SSLFH
   b. Kinetics Noise Control, Inc. – Type SL
   c. Vibration Mounting & Controls – Type CAL

2. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators. Housings are equipped with adjustable snubbers to limit vertical movement.

   a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases shall limit floor load to 500 psig.
   b. Threaded top housing with adjustment bolt and cap screw to fasten and level equipment.

3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.03 TRISOLATORS (T)

A. Sheet metal sleeve with min 3/8” thick felt insert to be installed at attachment points of hangers or piping.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Semco.
   b. Elcen.
   c. Elmdor/Stoneman .
   d. or equivalent shop- fabricated device.

2.04 RESTRAINED SPRING CURB (RSC)

1. Acceptable manufacturers include but are not limited to the following:
   a. Mason Industries, Inc. – Type RSC
   b. Or approved equal.
   c. Curb must be Pre-Approved per OPA-0207

B. Description: Factory-assembled, fully enclosed, insulated, air- and watertight curb rail designed to resiliently support equipment.

C. Upper Frame: Upper frame shall provide continuous and captive support for equipment.

D. Lower Support Assembly: The lower support assembly shall be formed sheet metal section containing adjustable and removable steel springs that support upper frame. Springs to have a 3" deflection and 50% additional travel to solid. Spring diameters no less than 0.8 of the spring height at rated load. All spring locations shall have access ports with removable waterproof covers. The lower support assembly shall have a means for attaching to building structure and a wood nailer for attaching roof materials and shall be insulated with a minimum of 2 inches of rigid glass-fiber insulation on inside of assembly. Adjustable, restrained-spring isolators shall be mounted on elastomeric vibration isolation pads and shall have access ports, for level adjustment, with removable waterproof covers at all isolator locations. Isolators shall be located so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof.

E. Snubber Bushings: All-directional, elastomeric snubber bushings at least 1/4 inch thick.

F. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counterflashed over roof materials.

2.05 VIBRATION ISOLATION SCHEDULE

Equipment	Unit(s)	Design Deflection	Isolator
VRF Outdoor Unit and		2”	Super W
Condensing Units/Heat Pumps		2.0”	Super W
GENERAL VIBRATION ISOLATION REQUIREMENTS			
Incorporate a water hammer arrestor on connections to equipment using a quick closing valve.			
Flexible conduits at connections to motors and other vibrating equipment.			
Provide suitable flexible piping at connections to vibration isolated equipment such that vibration isolator efficiency is not reduced.			
Use resilient elements at all support points where permitted. Where permitted, make no rigid connections between equipment, piping, and the building structure which would degrade the noise and vibration isolation system.			
PLUMBING LINES VIBRATION ISOLATION SCHEDULE			
Miscellaneous Attachments		Type T	

PART 3 - EXECUTION

3.01 GENERAL

A. Specific application of products shall be as delineated in this and other Sections of the Division.

B. Installation of all vibration isolation materials, spring and equipment bases specified in this section of the specifications shall be accomplished following the manufacturer's written instructions.

C. Additional installation instructions may be specified in other Sections of the Division.

D. Acoustically Sensitive Areas: For purposes of noise and vibration control, the following areas are defined as Acoustically Sensitive:

1. Conference Rooms
2. Offices

E. The isolation materials manufacturer shall be responsible for the proper selection of spring rates to accomplish the specified minimum static deflections, for all spring and pad type isolators, based on the weight distribution of equipment to be isolated.

F. The isolation materials manufacturer shall be responsible for the structural design of steel beam bases, to support mechanical equipment scheduled to receive a supplementary base.

3.02 INSTALLATION OF ISOLATORS

A. General

1. Isolators shall be installed and loaded per the requirements of the manufacturer except as otherwise indicated.
2. All vibration isolators for a single piece of equipment shall be installed to provide equal deflection and load.

a. Adjust leveling devices as required to distribute loading uniformly onto isolators.
b. Shim units as required where leveling devices cannot be used to distribute loading properly.
c. Adjust to ensure that units do not exceed rated operating deflections or bottom out under loading and are not short-circuited by other contacts or bearing points.
d. Remove space blocks and similar devices (if any) intended for temporary protection against overloading during installation.

3. Locate isolation hangers as near the overhead support structure as possible.
4. All connections to vibration isolated equipment shall be through flexible connections. This shall include all piping, electrical connections, fuel lines, structural elements, etc.
5. Equipment installed on metal spring isolators shall rock freely or move freely within limits of stop or seismic snubber restraints.

B. Composite Rubber Isolator
1. Install isolator material under bolts and through bolt hole when securing equipment to structure. The isolator shall be separated from the bolt by a heavy flat washer that will not deform under the load.
2. The bolts shall be torqued per isolator manufacturer's guidelines and as required by the elevator equipment manufacturer.
3. Inspect that rubber isolator is not deflected to the point of excess deformation. Ensure that equipment does not contact the building structure.

3.03 FLEXIBLE CONNECTOR INSTALLATION

A. Duct Flexible Connectors

1. Provide at inlet and outlet of each supply and return fan and as shown on drawings.
2. Allow one inch (1") minimum free space between metal collars each side of fabric.
3. Connection shall be nominal six inches (6") wide with material taunt.

END OF SECTION

PART 1 - GENERAL

1.01 SEE SECTION 23 05 00

PART 2 - PRODUCTS

1.01 IDENTIFICATION

A. Equipment: Black Phenolic Plates engraved with 1/2" high white letters. The equipment shall be identified by the mechanical equipment schedule tag numbers shown on the plans (ie. AC-1, REF-1, ACCU-1). Coordinate identification numbers with electrical contractor to ensure that the disconnect switches and other electrical/mechanical equipment has consistent identification numbers.

B. Controls: Same as equipment above except 1/2" high letters.

1.02 PIPE IDENTIFICATION

A. Maximum spacing for identification shall be 10 feet.

B. Identification shall be provided per the following
1. At both sides of floor or wall penetrations
2. Adjacent to all valves and flanges
3. Adjacent to all changes in direction
4. To be visible from the point of normal approach

C. Indicate flow direction and type of fluid.

D. Provide plastic labels for mechanical engraving with predrilled holes for attachment hardware.
1. Material: rigid plastic laminated impact acrylic, 2-layer, exterior grade, UV stable.
2. Thickness: 3/16 inch minimum.
3. Maximum label size: Length and width vary for required label content but, no less than 2 inches wide by 1 inch high.
4. Background color:
5. Normal power: Black, matte finish.
6. Lettering: White, machine engraved, Futura font, 3/8 inch high, all caps.
7. Maximum temperature: Able to withstand up to 160 degrees Fahrenheit.
8. Fasteners: Self-tapping stainless-steel screws, except contact type permanent adhesive where screws cannot or should not penetrate substrate.
   a. Mounting screw type to be number 8 – 18 by ½ drilling or tapping style, ¼ inch hex washer head, stainless steel, or similar, appropriate for material in which sign is affixed to. A bead of silicone sealer shall be applied on back of sign and at screw locations prior to affixing sign to equipment.
   b. For signs larger than 3 inches by 3 inches, use a minimum of 4 mounting screws.

1.03 PAINTED IDENTIFICATION MATERIALS

A. Stencils: Standard fiberboard stencils, prepared for required applications with the letter sizes generally complying with recommendations of ANSI A13.1 for piping and similar applications but, not less than ¾ inch high letters for access door signs and similar operational instructions.

B. Stencil paint: Standard exterior type stenciling enamel; black, except as otherwise indicated; either brushing grade or pressurized spray can form and grade.

C. Identification paint: Standard identification enamel of colors indicated or, if not otherwise indicated for piping systems, comply with ANSI A13.1 for colors.

1.04 PIPE IDENTIFICATION

A. General requirements for Manufactured Pipe labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Self-adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing. Brady/Seton, Stranco, Rowmark or equal.

C. Small pipes: For external diameters less than 6 inches, provide full-band pipe markers, extending 360 degrees around the pipe at each location, fastened by one of the following methods:
   1. Snap-on application of pre-tensioned semi-rigid plastic pipe marker.
   2. Adhesive lap joint in pipe marker overlap.
   3. Laminated or bonded application of pipe marker to pipe (or insulation).
   4. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 3/4 inch wide; full circle at both ends of pipe marker, tape lapped 1-1/2 inches.
   5. Pipe label contents: Include identification of piping service using piping system nomenclature as specified, schedules or shown, and abbreviate only as necessary for each application. Include pipe size and an arrow indicating direction of flow.
   6. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
   7. Lettering Size: At least 1-1/2 inches high.

D. Locate pipe markers as follows:
   1. Within one foot of each valve, fitting, thermometer or gauge.
   2. At each branch or riser take off.
   3. At each passage through walls or ceiling construction.
   4. At each passage to underground.
   5. On all horizontal pipe runs every 20 feet, at least twice in each room.
   6. Identify piping contents, flow direction, supply and return.
   7. At wall and ceiling access panels.
   8. Practible variations or changes in locations and spacing may be made with specific approval of the University’s Representive to meet specific conditions.

A. Color code shall be as follows:
   1. Refrigerant Piping - Yellow Background with Black Lettering

B. Pipe Letter height shall be as follows:

Outside Pipe Diameter Including Insulation	Minimum Length of Label	Minimum Height of Letters
.75” – 1.25”	8”	.5”
1.5” – 2”	8”	.75”
2.5” – 6”	12”	1.25”
8” – 10”	24”	2.5”
Over 10”	32”	3.5”

PART 3 - EXECUTION

1.01 EQUIPMENT AND CONTROL IDENTIFICATION

A. Identify all equipment with permanently attached plates.

B. Identify all controls and controllers except thermostats in finished areas.

1.02 IDENTIFICATION APPLICATIONS

A. Piping and Valves
   1. Provide identifications for all valves. Provide tags with lettered inscriptions (not numbered).

END OF SECTION

PART 1 - GENERAL

1.01 SEE SECTION 23 05 00

A. Work Included: This Section describes balancing requirements for all phases of HVAC work. The work includes complete balancing, adjusting and testing of the air and hydronic equipment and systems.

1.02 QUALITY ASSURANCE

A. Testing and Balancing shall be performed in complete accordance with AABC National Standards for Field Measurement and Instrumentation only by an AABC or NEBB licensed contractor.

B. Work shall be performed by an independent test and balance agency that specializes in, and whose business is limited to testing and balancing of air conditioning systems.

C. Instruments used for testing and balancing of systems shall have been calibrated within a period of six (6) months and shall be checked for accuracy prior to start of work.

1.03 SUBMITTALS

A. Provide to the Owner and Contractor with four (4) copies of a balancing agenda prior to start of balancing work including:
   1. General description of each air system with its associate equipment and operational cycles for winter heating, reheat, humidification, and cooling. Where different cycles are used for day and night time operation, describe separately.
   2. A complete list of all flow and terminal measurements to be performed.
   3. Agenda shall also include specific procedures for determining test parameters for flow. Specify type of instruments to be used, method of instrument application and air terminal correction factors for:
      a. Air terminal configuration.
      b. Flow direction (supply, return, or exhaust).
      c. Effective area application to each size and type of air terminal.
      d. Density corrections.
   4. Furnish a copy of agenda to the engineer and Owner prior to start of work, including qualifications of key personnel assigned to the project.

B. Provide a PDF of final report, containing information outlined in AABC and in Part 3 - EXECUTION.

1.04 NOTIFICATION AND SCHEDULING

A. A pre-balance conference shall be held prior to start as scheduled by the Contractor. Attendees at the meeting shall include representatives of the Balancing Contractor, General Contractor, Mechanical Sub-contractor, Control Sub-contractor, and Owner.

B. The schedule for testing and balancing the HVAC system shall be established in coordination with the Balancing Contractor on a critical path network.

C. The Balancing Contractor is responsible for initiating this continuing coordination to determine schedule for final testing and balancing services.

1.05 COORDINATION WITH OTHER TRADES

A. To bring the HVAC system into a state of readiness for testing, adjusting and balancing, the Mechanical Contractor shall perform the following:

1. Ensure that all splitters, extractor, volume, smoke and fire dampers are properly located and functional. Dampers serving requirements of smoke, minimum and maximum outside, return, relief, and exhaust air shall provide tight closure and full opening, with a smooth and free operation.
2. Verify that all supply, return, exhaust, and grilles, registers, diffusers and terminal units are installed and operational.
3. Ensure that air handling or conditioning systems, units, and associated apparatus, such as heating and cooling coils, filter sections, access doors, etc., are blanked and/or sealed to eliminate excessive bypass or leakage of air. All fans and systems (supply, return, relief, and exhaust) are operating and free of vibration.

PART 2 - PRODUCTS

2.01 INSTRUMENT AND TOOLS

A. Furnish all instrumentation and tools required to perform a complete air and water balance of all systems on this project.

2.02 FLOW METERING SYSTEM

A. Use flow metering systems specified and/or furnished to perform air and water balance.

PART 3 - EXECUTION

3.01 GENERAL

A. Coordinate required locations of duct test openings and damper locations specified in other sections.

B. Coordinate work done by testing and balancing agency with work of other trades.

C. Plan Check and Review:
   1. Review location and type of volume dampers inlet conditions to air terminals, valves and HVAC equipment.
   2. Review location, type and size of balancing valve, flow metering stations and automatic control valves in the water flow system.
   3. Review location of pressure sensors in the air and water distribution systems.
   4. Review automatic control systems as they affect the test and balance procedure.
   5. Review sheet metal and piping shop drawings to verify the installation of flow control devices.

D. Job Site Inspections
   1. Check for necessary balancing hardware (dampers, flow meters, valves, pressure taps, thermometer wells, etc.) to determine if they are installed properly and readily accessible.
   2. Identify and report possible restrictions in systems (closed smoke/fire dampers, fire dampers, long runs of flexible duct, poorly installed duct fittings.
   3. The mechanical contractor shall make any changes in pulley, sheaves; supply new pulleys, sheaves, belts as required. In addition, the Mechanical Contractor to add dampers, etc. Necessary for correct balance at no additional cost to the Owner.
   4. Check for necessary balancing hardware (dampers, flow meters, valves, pressure taps, thermometer wells, etc.) to determine if they are installed properly and readily accessible.

E. Identify and report possible restrictions in systems (closed smoke/fire dampers, fire dampers, long runs of flexible duct, poorly installed duct fittings.

3.02 TESTING

A. Testing equipment shall be furnished by the contractor; testing personnel shall be competent to conduct the tests.

B. Test all ductwork for excessive leakage and/or noise. Testing on any completed section of the ductwork must be made before installation of the finished ceiling or before the ductwork is furred in inaccessible spaces. Any leaks found must be properly repaired or joints remade and the section retested until tight. Any leaks which cause an objectionable noise must be repaired, regardless of the amount of leakage.

C. Should any piece of an apparatus or any material or work fail in any of the tests, it shall be immediately removed and replaced by new material, and portion of the work replaced shall again be tested by Contractor at his own expense.

3.03 OPERATIONAL TESTS AND ADJUSTMENTS

A. Upon completion of the work, all equipment and systems shall be operated and tested for a period of at least three consecutive days to demonstrate their satisfactory overall operation. On the last day of this period, the Contractors shall arrange for an acceptance test and final inspection by the Owner. All necessary adjustments and corrections to the systems shall be made prior to acceptance test so that the systems are operating smoothly and properly and absolutely ready before check and acceptance.

B. Coordination of all items associated with the mechanical systems is the responsibility of the mechanical contractor, including all wiring in connection with mechanical equipment, and all temperature control work. It shall be this contractor's responsibility to determine that his systems, equipment and apparatus are properly wired and controlled and completely ready for satisfactory operation and test.

C. Immediately before starting tests, all air filters shall be replaced as hereinbefore specified. All motors checked for rotation and all bearings lubricated.

D. Operating and safety controls shall be tested at least three times, under ambient design conditions.

3.04 AIR BALANCE

A. Changes, additions and modifications to dampers, pulleys and/or drive belts and other equipment necessary for proper air balance shall be provided by the Mechanical Contractor at no additional cost to the Owner.

B. The Mechanical Contractor shall retain the services of an independent certified test and balance agency to provide a complete air balance. All work shall be done by using instruments certified accurate to limits used in standard practice for testing and balancing of air distribution for heating-cooling systems.

C. Study design specifications and engineering drawings and prepare schedule to physically inspect mechanical equipment for air distribution systems to be tested and balanced.

D. Prepare test and balancing schedule, test record forms and necessary technical information about the air distribution systems for installed heating-cooling equipment, and fan systems, for complete total air balance.

E. Recommend adjustments and/or corrections to mechanical equipment and air distribution systems that are necessary for proper balancing of air handling systems.

F. Upon completion of the air handling system, the Air Balance Agency shall complete tests, analysis and balance of the air handling systems for heating-cooling equipment. The

Air-Balance Agency then shall submit four copies of balance report to the Mechanical Contractor for forwarding to the Architect for evaluation and approval.

G. Air Balance Report shall include the following data
   1. Design specifications of air handling equipment
      a. CFM
      b. Static Pressure
      c. % of Outside Air
      d. Fan Motor HP
      e. Fan Motor BHP
      f. Fan RPM
   2. Installed equipment data
      a. Manufacturer
      b. Identifying Data
   3. Balancing test data
      a. Fan Speed
      b. Fan Operating amperes
      c. Fan Operating BHP
      d. Fan Duct sizes
      e. Air Velocity (avg.)
      f. Total CFM
      g. Static Pressures
      h. Design Specifications of grilles and/or diffusers
      i. Manufacturer No. and Data
      j. FPM
      k. CFM
   4. Installed equipment data
      a. Manufacturer No. and Data
      b. Location
   5. Balancing test data
      a. FPM
      b. CFM

H. All outlets shall be set for the air pattern shown on plans.

I. Supply and return air dampers shall be set for design CFM, on heating and cooling cycle.

J. Test and balance shall correct for air density at 6000 ft. elevation and above.

3.05 OWNERS INSTRUCTION

A. Review the installation of all equipment and controls with the Owner after all systems are operating automatically. Instruct the Owner in the adjustment of all control and equipment devices. Allow a minimum of 8 hours for this instruction.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, and DIVISION 01 00 00, GENERAL REQUIREMENTS, apply to the work in this section.

B. See 23 05 00

1.02 SECTIONS INCLUDE

A. This Section describes insulation materials, methods, and applications for HVAC Mechanical Work, Special or specific details, applications, features, or methods may be described in work descriptions Sections or on the drawings.

1.03 REFERENCES

A. Thermal insulation materials shall meet the property requirements of one or more of the following specifications as applicable to the specific product or end use:
   1. American Society for Testing of Materials Specifications:
      a. ASTM C 547, "Standard Specification for Mineral Fiber Pipe Insulation"
      b. ASTM C 585, "Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System)"
      c. ASTM C 1136, "Standard Specification for Flexible, Low Permeanace Vapor Retarders for Thermal Insulation"

1.04 SYSTEM PERFORMANCE

A. Insulation materials furnished should meet the minimum thickness requirements of National Voluntary Consensus Standard 90.1 (Latest edition), "Energy Efficient Design of New Buildings," of the American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE).

B. Insulation materials furnished and installed hereunder shall meet the fire hazard requirements of applicable building codes when tested in composite form per one of the following nominally equivalent test methods:
   1. American Society for Testing of Materials ASTM E 84
   2. Underwriters' Laboratories, Inc. UL 723, CAN/ULC-S102-M88
   3. National Fire Protection Association NFPA 255

C. Molded pipe insulation shall be manufactured to meet ASTM C 585 for sizes required in the particular system.

D. Molded fibrous glass pipe insulation shall comply with the requirements of ASTM C 547.

1.05 QUALITY ASSURANCE

A. Qualifications of Installers: only a licensed firm employing installers specifically skilled and experienced in applying insulation to piping shall do Insulation work.

B. Insulation materials and accessories furnished and installed hereunder shall, where required, be accompanied by manufacturers' current submittal or data sheets showing compliance with applicable specifications listed in above.

C. Insulation materials, including all weather and vapor barrier materials, closures, hangers, supports, fitting covers, and other accessories, shall be furnished and installed in strict accordance with project drawings, plans, and specifications.

D. Insulation materials and accessories shall be installed in a workmanlike manner by skilled and experienced workers who are regularly engaged in commercial insulation work.

E. Codes and Standards:
   1. California Code of Regulations - Title 24.
   2. National Fire Protection Association - 90A.

1.06 DELIVERY AND STORAGE OF MATERIALS

A. All of the insulation materials and accessories covered by this specification shall be delivered to the job site and stored in a safe, dry place with appropriate labels and/or other product identification.

B. The contractor shall use whatever means are necessary to protect the insulation materials and accessories before, during, and after installation. No insulation material shall be installed that has become damaged in any way.

C. If any insulation material has become wet because of transit or job site exposure to moisture or water, the contractor shall not install such material, and shall remove it from the job site. An exception may be allowed in cases where the contractor is able to demonstrate that wet insulation when fully dried out (either before installation or afterward following exposure to system operating temperatures) will provide installed performance that is equivalent in all respects to new, completely dry insulation. In such cases, consult the insulation manufacturer for technical assistance.

PART 2 - PRODUCTS

2.01 DUCT INSULATION – SEE 23 07 13

2.02 HVAC PIPING INSULATION – SEE 23 07 19

PART 3 - EXECUTION

3.01 APPLICATION / INSTALLATION

A. Use the types and thickness of insulation specified in work description Sections.

B. Apply insulations in accordance with the manufacturer's recommendations and with instructions specified herein or noted on the drawings.

C. Install insulations only after the systems, items, and equipment have been installed and tested, inspected, and accepted. Exceptions: Slip-on piping insulation and equipment insulations installed at the factory.

D. Fit insulation snugly to the item being insulated; butt all joints tightly with no voids, spaces, or thin spots.

E. Seal all joints completely; where sealing tape is used, center the tape over the joint.

F. Except where specified or necessary, do not use staples or fasteners which penetrate vapor barrier jackets or covers on cold systems or equipment; where such penetrating fasteners are used, seal each penetration completely to maintain the vapor barrier integrity. All penetrations of the ASJ and exposed ends of insulation shall be sealed with vapor barrier mastic. Vapor seals at butt joints shall be applied at every fourth pipe section joint and at each fitting to provide isolation of water incursion.

G. Use adhesives, mastics, cements, sealants, and finishes undiluted unless specifically directed otherwise; apply per manufacturer's directions.

H. Install outdoor jacketing or other specified weather proofing or finishing on all insulations outdoors.

I. Install all indoor exposed insulation with extra care and finish neatly.

J. Follow specified methods of installation unless alternative methods are submitted and approved.

3.02 FINISHING

A. Finishes and Protection:
   1. Insure that the exterior finish of all insulation is applied and complete as specified
   2. Make ready for painting, or painted to match existing including color where specified for paint.
   3. Install all metal jackets or protective sheathing where specified.

B. Repair, Touchup: Properly repair and touchup all dents, rips, tears, or other damage inflicted on jackets or exterior surfaces of insulation. Breaks or punctures in the vapor barrier of external insulation will not be accepted and must be repaired prior to project acceptance.

END OF SECTION

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

A. See Section 23 07 00

B. A continuous, intact vapor barrier is critical for ducts.

C. All insulation material shall have a mold, humidity, and erosion resistant face that has met the requirements of CMC Table 1701.

D. Insulation applied to the exterior surface of ducts located in buildings shall have a flame spread of no more than 25 and a smoke developed rating of not more than 50.

E. Insulate all above grade ductwork unless otherwise shown on the drawings or specified in Section 23 31 16 METAL DUCT.

PART 2 - PRODUCTS

2.01 ID-1 FLEXIBLE BLANKET/VAPOR BARRIER FACED

A. Glass fiber reinforced Kraft/aluminum foil faced flexible blanket of 1.5 PCF nominal density resin bonded fibrous glass, have a installed thermal conductivity k factor of 0.25 at 75° F.; suitable for direct application and service on cold and dual temperature ductwork.

B. Supply FSK jacket with a permeance of 0.02 or less

C. Fiberglass insulation with all service facing, Certainteed Type 150 with Type IV facing, Johns Manville Microlite with FSK facing.

PART 3 - EXECUTION

3.01 APPLICATIONS

A. Supply Air Ducts indoors/concealed
   1. Use System ID-1 (Flexible Blanket / Vapor Barrier Faced
      a. 2” thickness for all sizes; installed R-value = 6.3 minimum
      b. Applies to all cross sections (I.E. rectangular, circular, etc.)

B. Return Air Ducts indoors/concealed
   1. Use System ID-1 (Flexible Blanket / Vapor Barrier Faced
      a. 1 ½" thickness for all sizes; installed R-value = 4.7 minimum.
      b. Applies to all cross sections (I.E. rectangular, circular, etc.)

C. Do not externally insulate the following unless otherwise shown on the drawings or specified:
   1. Lined ductwork (indoors).
   2. Ducts constructed of fibrous glass (flexible or rigid).
   3. Above grade ducts conducting exhaust air or ventilating air (not heated or cooled and used for fresh air supply) unless otherwise noted.
   4. Exposed ducts located in conditioned space.

3.02 INSTALLATION FLEXIBLE BLANKET/VAPOR BARRIER FACED

A. Install on supply and return ductwork so that condensation will not occur.

B. Wrap around ducts, butt all joints. Secure with 3” (minimum) width tape at 18" (maximum) intervals along the duct; tape may be of the same material as the insulation facing with a pressure sensitive adhesive on one side or may be Hardcast DT490-C mineral impregnated woven synthetic fiber using Hardcast FTA-20 roller. In addition, on rectangular and cross

section ducts, secure to the flat bottoms more than 18" wide with SticKlip fasteners only with 1 ½" diameter washers at 16" centers both ways; one centered longitudinal row is sufficient for ducts up to 36" flat bottom width.

C. Seal all seams and joints with 3" (minimum) width tape centered along the edge of the lap;tape shall be as specified above.

D. Seal all fastener penetrations with 3" x 3" (minimum) tape centered over the washer; tape shall be as specified above.

E. Where strap type duct supports penetrate the insulation, slit the insulation and facing, fit around the straps, and seal with tape as specified above; tape shall be of size to suit the situation and be applied in the number of layers necessary to obtain complete sealing.

F. At trapeze or similar type duct supports, insert a 12" wide strip of Armaflex insulation, ½" thick between duct bottom and the supporting member across and 6" beyond both ends of the bearing surface. Lap ducts insulation over this insert and seal the same as other lapped seams.

G. Insulate all flexible duct connectors to the same thickness as adjacent duct insulation.

H. Continue insulation on terminal unit inlets to cover the entire inlet collar.

I. Insulate over all duct access doors with the same thickness as adjacent duct insulation. Provide removable insulation piece with an outer label on the insulation identifying the type of door.

3.03 INSTALLATION: FLEXIBLE BLANKET/COATED LINER

A. Apply a 1/16" thick coat of Foster 85-62 JacTac 3-M Company Scotch Grip #38, Childers-125-1, adhesive or duct butter on all end or edges of cuts, rips, etc., before or while installing.

B. Secure to the ductwork with welded or SticKlip, fasteners with 1 ½" diameter washers with cupped or beveled heads. Set at 16 (maximum) on centers both ways; provide a row of pins within 1" of all edges and joints, and one row of pins (minimum) on each flat duct or plenum face. In addition secure the entire perimeter of all edges at seams or joints with a 4" minimum width application of the above specified adhesive. The upstream edge of all duct liner shall have a sheet metal closure to protect against erosion.

C. Fasteners shall compress the liner no more than 1/8”.

D. Clip off protruding ends of fastener pins in plenums.

END OF SECTION

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

1.02 SEE SECTION 23 07 00.

A. A continuous, intact vapor barrier is critical for all pipes conveying fluids at temperatures less than 75° F.

B. All insulation material shall have a mold, humidity, and erosion resistant face that has met the requirements of CMC Table 1701.

C. Insulation applied to the exterior surface of pipes located in buildings shall have a flame spread of no more than 25 and a smoke developed rating of not more than 50.

D. All requirements of Section 23 07 00 apply to this section.

PART 2 - PRODUCTS

2.01 IP-1 RIGID MOLDED SECTIONAL.INDOOR CONCEALED JACKET

A. Regular shape (straight run)
   1. Molded sectional, factory fabricated of heavy density resin bonded fibrous glass, with integral factory applied all service jacket of Kraft paper/aluminum foil/glass fiber reinforcement.7
   2. Insulation shall have a thermal conductivity k factor of 0.23 at 75° F. mean temperature and be suitable for direct application and service on piping having operating surface temperatures of –60 degrees to 450 degrees F.
   3. Jacket shall:
      a. Extend 1 ½" (minimum) along one edge of longitudinal joint to form a sealing lap which shall be faced inside with a paper protected pressure sensitive adhesive;
      b. Have a permanence rating of 0.02 perm/in. and a Beach puncture resistance of 50 units;
      c. Have an exterior suitable for painting with latex or water base paint.
   4. All insulation shall have composite (insulation, jacket, tape seal and adhesive used to adhere jacket to the insulation) Fire and Smoke Hazard ratings as tested under procedure ASTM E-84, NFPA 255 and UL 723, not exceeding Flame Spread of 25 and a Smoke Developed of 50. PVC fitting covers and accessories, such as adhesives, mastics, cements and cloth for fittings shall have the same component ratings.
   5. Paper laminate jackets shall be permanently flame and smoke resistant. Chemicals used for treating paper in jacket laminates shall not be water soluble and shall be unaffected by water and humidity.
   6. Fiberglass Schuler-Manville Micro-Lok, or equal.

B. Irregular shape (fittings, flanges, valves, etc.)
   1. Fibrous glass of same density, thickness, and other properties or characteristics as the adjacent regular shape insulation either pre-molded or field forged to fit the item being insulated. The pre-molded insulation shall be provided with weather protection cover.

2.02 IP-2 RIGID MOLDED SECTIONAL/OUTDOOR JACKET

   1. Regular shape (straight run)
   2. Molded sectional, factory fabricated of heavy density resin bonded fibrous glass, with integral factory applied all service jacket of Kraft paper/aluminum foil/glass fiber reinforcement.

3. Insulation shall have a thermal conductivity k factor of 0.23 at 75 degrees F. mean temperature and be suitable for direct application and service on piping having operating surface temperatures of –60 degrees to 450 degrees F.
4. Jacket:
   a. Straight runs: .016" thick smooth sheet aluminum finish.
   b. Irregular shapes:
      1) Surefit Aluminum Pipe Fitting Covers for pipes up to 6”.
      2) Mitered aluminum sheet matching straight run jacketing for pipes over 6”.
   c. Alternative jacketing: Schuler-Manville Type ML, metal jacketing system.
5. All insulation shall have composite (insulation, jacket, tape seal and adhesive used to adhere jacket to the insulation) Fire and Smoke Hazard ratings as tested under procedure ASTM E-84, NFPA 255 and UL 723, not exceeding Flame Spread of 25 and a Smoke Developed of 50. PVC fitting covers and accessories, such as adhesives, mastics, cements and cloth for fittings shall have the same component ratings.
6. Paper laminate jackets shall be permanently flame and smoke resistant. Chemicals used for treating paper in jacket laminates shall not be water soluble and shall be unaffected by water and humidity.
7. Fiberglass Schuler-Manville Micro-Lok, or equal.

B. Irregular shape (fittings, flanges, valves, etc.)
   1. Fibrous glass of same density, thickness, and other properties or characteristics as the adjacent regular shape insulation, either pre-molded or field forged to fit the item being insulated. The pre-molded insulation shall be provided with weather protection cover.

2.03 IP-3 ELASTOMERIC FOAM

A. Insulation shall be Elastomeric Foam Insulation. Insulation should have a maximum service temperature of 210o F, a minimum service temperature of –40 degrees F., and a "K" factor of .28 at 75 degrees F. The flame spread of the insulation shall be 25 or less, and smoke density shall be 50 or less when tested in accordance with ASTM E84.

B. Provide U.V. protective coating for all outdoor applications similar to Fosters 30-64 coating.

C. Rubatex R-180-FS/R-1800-FS, Armstrong Armaflex or equal

2.04 IP-4 CLOSED CELL POLYOLEFIN

A. Closed cell flexible plastic foam insulation should have a "k" factor of 0.27 or less at 75 degrees F and water vapor permeability of .2 perm-inch or less. The manufacturer shall warrant the insulation to be able to be directly buried underground without any protective jacket.

B. Closed Cell Polyolefin in tubular form shall comply with ASTM C-534, UL 94HBF, UBC 42-1 Class I, ASTM E-84 (25/50), NFPA 255 (25/50), UL 723(25/50), FMVSS-302, CAN-ULC-S102.2-M88 (25/50) Flammability Classification, MEA#267-92-M, New York.

C. Provide U.V. protective coating for all outdoor applications

D. IMCOA Imcolock or equal.

2.05 IP-5 RIGID MOLDED SECTIONAL/INDOOR EXPOSED JACKET

A. Regular shape (straight run)

B. Molded sectional, factory fabricated of heavy density resin bonded fibrous glass, with integral factory applied all service jacket of Kraft paper/aluminum foil/glass fiber reinforcement.

C. Insulation shall have a thermal conductivity k factor of 0.23 at 75 degrees F. mean temperature and be suitable for direct application and service on piping having operating surface temperatures of –60 degrees to 450 degrees F.

1. Jacket:
   a. Straight runs: PVC fitting covers with vapor barrier.
   b. Irregular shapes:
      1) Amerisafe, factory molded aluminum covers, or
      2) Mitered aluminum sheet matching straight run jacketing; or
   c. Alternative jacketing: Schuler-Manville Type ML, metal jacketing system.
2. All insulation shall have composite (insulation, jacket, tape seal and adhesive used to adhere jacket to the insulation) Fire and Smoke Hazard ratings as tested under procedure ASTM E-84, NFPA 255 and UL 723, not exceeding Flame Spread of 25 and a Smoke Developed of 50. PVC fitting covers and accessories, such as adhesives, mastics, cements and cloth for fittings shall have the same component ratings.
3. Paper laminate jackets shall be permanently flame and smoke resistant. Chemicals used for treating paper in jacket laminates shall not be water soluble and shall be unaffected by water and humidity.
4. Fiberglass Schuler-Manville Micro-Lok, or equal.

D. Irregular shape (fittings, flanges, valves, etc.)
   1. Fibrous glass of same density, thickness, and other properties or characteristics as the adjacent regular shape insulation, either pre-molded or field forged to fit the item being insulated. The pre-molded insulation shall be provided with PVC protection cover.

PART 3 - EXECUTION

3.01 PIPING APPLICATIONS

NOTE: Where multiple systems are listed, contractor has the option to choose.

A. Condensate (CD) water piping above grade/indoors:
   1. Use System IP-3. (Elastomeric Foam).
      a. 1" thickness for all sizes
   2. Use System IP-4. (Closed Cell Polyolefin).
      a. 1" thickness for all sizes
   3. Use System IP-1. (Rigid Molded Sectional/Indoor Jacket) with vapor barrier.
      a. 1" thickness for all sizes

B. Condensate (CD) water piping below computer room floor:
   1. Use System IP-3 Elastomeric Foam with vapor barrier or IP-4 Closed Cell Polyolefin.
      a. 1" thickness for all sizes
      b. Insulate all waste piping downstream of condensate receptors (CDR) inside of the return air plenum.

C. Refrigerant (RS) – Suction piping above grade/indoors
   1. Use System IP-3 (Elastomeric Foam)
      a. 1" thickness for all sizes

D. Refrigerant (RS) – Suction piping above grade/outdoors
   1. Use System IP-2 (Elastomeric Foam)
      a. 1" thickness with U.V. protection for all sizes

E. Refrigerant (HG) – Hot gas piping above grade/indoors
   1. Use System IP-3 (Elastomeric Foam)
      a. 1" thickness for all sizes

F. Refrigerant (HG) – Hot gas piping above grade/outdoors
   1. Use System IP-2 (Elastomeric Foam)
      a. 1" thickness with U.V. protection for all sizes

3.02 INSTALLATION

A. Unless specifically excluded herein or on the drawings, insulate all parts of hot and chilled water piping systems, steam piping, and condensate drains including fittings, flanges, valves, and pipe-mounted devices, except do not cover nameplates on devices.

B. Install insulation in removable sections over unions, flanges, and line components or devices requiring periodic maintenance.

C. Install insulation butted tightly to transitions such as insulated pipe shields, insulated pipe sleeves, equipment connections, etc.

D. Install insulation on all chilled water piping systems so that condensation will not occur. Insulate all chilled water pipe supports where hanger is directly in contact with pipe up to the point of connection to the building structure. All piping shall be supported in such a manner that neither the insulation nor the vapor/weather barrier is compromised by the hanger or the effects of the hanger. In all cases, hanger spacing shall be such that the circumferential joint may be made outside the hanger. On cold systems, vapor barrier shall be continuous, including material covered by the hanger saddle.

E. Treat equipment face piping as follows:
   1. Where piping is subject to condensation (chilled water systems, domestic water systems, rain water leaders, condensate drains) and where installed above grade outdoors (either hot or cold systems) insulate piping completely to the point of equipment connection.
   2. Where not subject to condensation (hot systems) terminate insulation at the outlet side of the equipment shut-off valve, leaving the face piping un-insulated, 24” max, unless noted otherwise, except where exposed to outdoors.

F. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full-length units of insulation, with single cut piece to complete run. Do not use cut pieces or scraps abutting each other. Butt insulation joints firmly to ensure complete, tight fit over all piping surfaces.

G. Maintain the integrity of factory-applied vapor barrier jacketing on all pipe insulation, protecting it against puncture, tears or other damage. All staples used on cold pipe insulation shall be coated with suitable sealant to maintain vapor barrier integrity.

H. Rigid Molded Sectional/Jacketed:
   1. Comply with applicable general instructions above.
   2. Apply to all hot water and chilled water piping (except where specified or noted otherwise) installed above grade indoors and outdoors, concealed or exposed.
   3. Seal all transverse joints (except at PVC fitting jackets) with circumferentially applied 3" (minimum) width tape of same material as the jacket, faced with the same adhesive as the longitudinal lap, or seal with Hardcast 4" wide Type DT490-C mineral impregnated woven fiber tape (synthetic fiber indoors, cotton fiber outdoors) using Hardcast FTA-20 activator/adhesive applied by brush or roller. Seal transverse joints at PVC fittings jackets with color matching PVC tape and vapor barrier mastic adhesive.
   4. Fittings and valves shall be insulated with pre-formed fiberglass fittings, fabricated sections of fiberglass pipe insulation, blanket insulation, or insulating cement. Thickness shall be equal to adjacent pipe insulation. Finish shall be with pre-formed PVC fitting covers or as otherwise specified on contract drawings.
   5. Flanges, couplings and valve bonnets shall be covered with an oversized pipe insulation section sized to provide the same insulation thickness as on the main pipe section. An oversized insulation section shall be used to form a collar between the two insulation sections with low-density blanket insulation being used to fill gaps. Jacketing shall match that used on straight pipe sections. Rough-cut ends shall be coated with suitable weather or vapor resistant mastic as dictated by the system location and service.

6. On hot systems where fittings are to be left exposed, insulation ends should be beveled away from bolts for easy access.
7. On cold systems, particular care must be given to vapor sealing the fitting cover or finish to the pipe insulation vapor barrier. All valve stems shall be sealed with caulking to allow free movement of the stem but provide a seal against moisture incursion.
8. Fit insulation terminations with Zeston, Snap Form, end cap jackets, or seal with Hardcast tape as specified above for joints.
9. On all piping (except equipment face piping) installed outdoors, install outdoor jacketing. Install aluminum sheet jacket with all joints turned down at 45° below horizontal; secure in place with non-corroding bands and/or blind rivets (do not puncture vapor barrier insulation jacket). On equipment face piping (including equipment shut-off valve) coat the insulation with ¼" thick Fosters 30-80 or Childers CP-38 outdoor vapor barrier coating reinforced with fosters Mast a Fab or Childers Chil Glas #10 and finished with two (2) coats of aluminum paint.
10. Penetrations
    a. Extend piping insulation without interruption through walls, floors, and similar piping penetrations, except where otherwise specified.

I. Closed Cell Polyolefin:
1. Install pre slit, pre-glued closed cell polyolefin foam pipe insulation as per manufacturer's recommendations. Seal all joints and seams with Fuse-Seal Gun or with Armstrong 520 adhesive or equal in accordance with manufacturer's written instructions. Fabricate fitting covers from polyolefin foam insulation using same procedure.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED SECTIONS

A. The General Conditions of the Contract, Supplementary Conditions, and GeneralRequirements are part of this specification and shall be used in conjunction with this section as part of the contract documents. Consult the above for further instructions pertaining to this work. The Contractor is bound by the provisions of Division 1.

1.02 CONTROL SYSTEM DESCRIPTIONS

A. The Building Automation System (BAS) shall be as indicated on the drawings and described in these specifications. System shall include a network of commercial Internet-programmable thermostats, their accessories, and any other networked devices required for complete climate management. Devices shall communicate across a wireless network using IEEE 802.15.4 technical standards. Wireless communication shall be of an automated mesh communication type, which self-establishes network addresses, communication routes, and all other setup requirements to establish connection across the entire campus. A single Ethernet-connected Gateway shall be able to connect the wireless mesh network to the Internet, allowing for climate management through a cloud based web-application. This network design is to be used to isolate the BAS from the owner's private Ethernet network (LAN) and/or WiFi networks. IEEE 802.11 or any other wireless standard of communication or a wired network communication protocol between devices is not acceptable by these BAS specifications. The Gateway is to connect to a single outbound Ethernet connection on the owner's wide area network (WAN) over a TCP/IP connection. The owner's firewall shall not require any inbound port assignments for the Gateway to connect to the cloud servers. The Gateway shall not require a Public IP and it shall not run any standard available operating systems, such as Windows or Linux.

B. Access and control of BAS shall be through a web-based graphical management platform. The BAS platform shall sit on a cloud server and be accessible on both local personal computers and remotely by use of a web-browser that supports HTML5 or later.

C. No on-site servers are to be installed or used for the BAS. No licensing fees or future licensing fees shall be required as part of the BAS. These specifications and guidelines are to create a cohesive and secure network that provides full management over the facility's climate through the cloud BAS.

D. The BAS shall accommodate an unlimited simultaneous multiple-user operation. Access to the BAS shall be limiting based on security permissions of each operator's role managed by owner site Administrators.

1.03 APPROVED BUILDING AUTOMATION SYSTEM MANUFACTURERS

A. Pelican Wireless Systems

1.04 SUBMITTALS

A. Shop drawings and manufacturer's standard specification data sheets on all hardware shall be provided for this project. No work may begin on any segment of this project until the Engineer and Owner have reviewed submittals for conformity with the plan and specifications. For Engineered shop drawings specific to the mechanical equipment and design requirements, contact Tom Hardy of RSD/Total Control at 916.780.5929.

B. All submittals shall be bound, in a three-ring binder, or provided digitally on a USB stick with a table of contents and related section tabs. Five (5) copies shall be submitted to the Architect or Engineer for distribution and review.

C. Shop drawings shall include basic floor plans depicting locations of all equipment and wiring (installed by others) to be controlled by system and locations of thermostats, gateways, and other equipment provided under this section. Drawings shall also show location of electrical power, low voltage wiring and data ports, provided by others, required for proper installation of systems of this section.

D. The Engineer will make corrections, if required, and return to the Contractor. The Contractor will then resubmit with the corrected or additional data. This procedure shall be repeated until all corrections are made to the satisfaction of the Engineer and the submittals are fully approved.

1.05 SYSTEM STARTUP & COMMISSIONING

A. Each BAS component in the system shall be tested for both hardware and software functionality. In addition, each mechanical and electrical system under control of the BAS will be tested against the appropriate sequence of operation specified herein. Documentation shall be provided to the owner that proves installation and testing has been completed and points out any mechanical issues found which are not related to the installation of the BAS. Successful

B. Completion of the system tests shall constitute the beginning of the warranty period.

C. The BAS Contractor shall provide all manpower and engineering services required to assist the HVAC Contractor and Balancing Contractor in testing, adjusting, and balancing all systems in the building. The BAS Contractor shall have a trained technician available on request during the balancing of the systems. The BAS Contractor shall coordinate all requirements to provide a complete air balance with the Balancing Contractor and shall include all labor and materials in his contract to assist with functional testing of system as it relates to the BAS.

D. Upon completion of installation, submit three (3) copies of record documents. The documents shall be submitted for approval prior to final completion and include:
   1. Testing and Commissioning Reports and Checklists signed off by trainedfield commissioning personnel.
   2. Name, address and telephone number of Contractor personnel managing and installing equipment, along with service personnel responsible for supporting the ongoing warranty and services of the control system.
   3. Procedures for operating the BAS, including logging on/off, alarm management, reading reports, trends, modification of setpoints, scheduling, and other interactive system requirements.
   4. Provide information on how to receive support from Pelican Wireless Systems and communicate that they are a direct supporting resource. Contact information for Technical Support from Pelican Wireless Systems is to be provided.

1.06 CODES AND STANDARDS

A. Codes and Standards. Meet requirements of all applicable standards and codes, except when more detailed or stringent requirements are indicated by the Contract Documents, including requirements of this Section:
   1. California 2022 Title 24 Compliant
   2. California Energy Commission Occupant Control Smart Thermostat (OCST) certified
   3. OpenADR 2.0 certified

1.07 TRAINING

A. The BAS Contractor shall provide training for two (2) owner representatives and/or maintenance personnel. The BAS Contractor shall provide on-site training to the representative(s) and maintenance personnel per the following description:

a. On-site training shall consist of a minimum of (1) hours, as indicated above of hands-on instruction geared at the operation and maintenance of the systems. The curriculum shall include:

- System Overview
- System Application and Operation
- System Access
- Application Features Overview
- Changing Set Points and other attributes
- Scheduling
- Editing configurable variables
- Graphics
- Viewing Historical Reports
- Operational sequences including start-up, shutdown, adjusting and balancing
- Equipment maintenance

1.08 OPERATING AND MAINTENANCE MANUALS

A. The operation and maintenance manuals shall contain all information necessary for the operation, maintenance, replacement, installation, and parts procurement for the entire BAS.

B. Following project completion and testing, the BAS contractor will submit as-built documentation reflecting the exact installation of the system.

1.09 WARRANTY

A. The BAS contractor shall warrant the system for 12 months after system acceptance and beneficial use by the owner. During the warranty period, the BAS contractor shall be responsible for all necessary revisions as required to provide a complete and workable system consistent with the letter and intent of the Sequence of Operation section of the specification. BAS equipment shall include a limited-warranty by the manufacturer for a period of five (5) years from the time of system acceptance.

B. Limited-warranty by manufacturer is limited to replacement of defective products.

1.10 WORK REQUIRED BY THE CONTRACTOR

A. The BAS Contractor shall coordinate with other contractors prior to performing the work on this project and cooperate as necessary to achieve a complete and neat installation. **To that end, each contractor shall consult the drawings and specifications for all trades to determine the nature and extent of their work.**

B. Prior to fabrication and installation. The owner's representative shall be immediately notified if an area of conflict occurs between trades prior to fabrication and installation. BAS Contractor shall provide field supervision to the Contractor for pre-installation of control components.

C. Low-voltage thermostat wiring between equipment and thermostat locations shall be furnished and installed by the Contractor. Unless otherwise noted, all low-voltage wiring shall be multiple conductor thermostat wiring (wire count as indicated in Thermostat Manufacturer's Installation Instructions) installed per owner's specifications. Wiring shall be minimum three (3) conductor/18-gauge wires per BAS manufacturer's standard specifications, multiple conductor/18-gauge thermostat wiring preferred - see Installation Instructions for specific conductor counts depending on heating and cooling modes.

D. Related work provided by the Contractor:
1. 110V outlets shall be provided within five (5) feet of each Gateway orWireless Repeater location.

2. One (1) Ethernet data port shall be provided within ten (10) feet of each Gateway location.

E. Equipment start-up and servicing.

1.11 SCOPE OF WORK

A. Except where otherwise noted, the system shall consist of a network of commercial Internet-programmable thermostats, their accessories, and any other networked climate management device(s) required to fill the intent of the specification, sequence of operations, and provide for a complete and operable system.

B. The BAS contractor shall review and study building/site conditions where applicable and all construction drawings for the project including HVAC drawings and the entire project specifications to familiarize themselves with the equipment and system operation prior to bidding and submittal of a bid/price and notify the owner immediately of any conflicts between the project and the scope of work of this section.

C. All equipment and installation of control devices associated with the equipment listed below shall be provided under this BAS contractor.

D. When the BAS is fully installed and operational, the BAS contractor will make themselves available to meet with the designated representatives of the owner to review the as-installed condition of the system. At that time, the BAS contractor

E. Shall demonstrate the operation of the system and prove that it complies with the intent of the drawings and specifications.

F. The BAS contractor shall furnish and install a complete BAS control system, including all necessary hardware and all operating and applications software necessary to perform the control sequences of operation as called for in this specification.

G. Provide and install BAS controls for the HVAC Equipment as noted on the drawings.

H. Provide technical support necessary for commissioning of system in coordination with the HVAC Contractor, Balancing Contractor, and the owner's team.

I. Shall provide one training session in the operation of the system for owner's personnel.

J. All work performed under this section of the specifications will be in compliance with all codes and regulations as mandated by the authority having jurisdiction.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Unless otherwise noted, all product shall be of a single manufacturer. The standard of design and quality shall be products as manufactured by Pelican Wireless Systems.

2.02 COMMUNICATION

A. This project shall be comprised of a network of devices that use an IEEE 802.15.4 self-creating and self-healing wireless mesh communication network to reach an Ethernet Gateway.

B. The Gateway shall communicate to cloud servers via a single Ethernet connection at the owner’s wide area network (WAN) over a TCP/IP connection. The facility’s firewall shall not require any inbound port assignments for the Gateway to connect to the cloud servers. The Gateway shall not require a Public IP.

C. No BACnet, modBus, LON, or any other device-to-device wired communication protocol shall be used in the communication network.

2.03 OPERATOR INTERFACE

A. The BAS shall be controlled, managed, and configured using a Web-App on any personal computer, smartphone, and/or tablet that runs a browser with HTML5 or newer.

B. The Web-App platform shall run on cloud servers which allow for virtual access. Platform shall not run on a local on-site server.

C. The Web-App shall support at a minimum, the following functions:
   1. Personal user log-on identifications (email addresses) and unique passwords shall be required.
   2. Custom HTML programming shall not be required to display any graphics, data, or build the Web-App. There shall be no development cost, commissioning costs, or software upgrade cost required to obtain and use the Web-App.
   3. Storage of historical data shall reside on the cloud server and shall not sit within the client's computer, internal network, or other devices. A BAS, which requires on-site data storage, is not acceptable.
   4. System shall allow for administrator and user defined access privileges.
   5. A Push/Pull OpenAPI interface with XML data output shall be available.
   6. Servers shall not run a Windows operating system.

D. Control and Override
   1. The BAS shall provide view, override, and edit of the status of any object and property in the system. The status of the device shall be defined graphically and shall not require any custom programs or programming.
   2. Temporary Overrides. The BAS shall be able to provide temporary override (wherever an override is allowed) and automatically remove the override after a specified period of time.
   3. Any override and edit of a object virtually or at the device, if allowable, shall be historically tracked.

E. Scheduling
   1. The BAS shall provide users with scheduling of application devices through a graphical interface. Scheduling shall include, but is not limited to:
      a. Occupied/Unoccupied Schedules. Shall allow 12 scheduled set-time changes in a single day, be configurable for Daily, Weekly, and Weekday/Weekend layouts, and shall be able to be unique to individualdevices or easily shared between multiple devices, where applicable.
      b. Event Schedules. Shall allow for advanced one-time or repeating event type schedules. Event schedules shall override Occupied/Unoccupied Schedules. After the Event schedule ends, the device shall revert back to the Occupied/Unoccupied Schedule automatically.
      c. Vacation Schedules. A 360-day Calendar shall provide override of schedules during vacation days. Thermostats shall be able to automatically or be manually switched to follow Vacation Schedules instead of Occupied/Unoccupied Schedules.

F. Alarm Notification
   1. Alarm Notification(s) shall be generated if there are failures detected by devices part of the BAS. These failures shall be, but are not limited to: temperature deviations, temperatures missing targets, temperatures too high or too low, failures of equipment, etc. Alarm Notification(s) shall be posted on the BAS and shall be able to be sent either via email or text message to an unlimited number of users.

G. Reports and Logs
   1. Data shall be logged and stored on cloud servers for all devices part of BAS in real-time. Every device real-time "state change", when applicable, shall be stored and viewable for at

least one week, with the option of up to two (2) years.
   a. Each space temperature
   b. Each temperature set point(s)
   c. Each current call: heat, cool, number of stages, fan, economizer, etc.
   d. Each damper position
   e. Each valve position
   f. Each CO^2 change
   g. Each CO^2 setting
   h. Each current call for ventilation due to high CO^2
   i. Each Humidity change
   j. Each Humidity set point
   k. Each current call for dehumidification or humidification.
   l. Each Fan speed adjustment
   m. Supply duct static pressure
   n. Supply, Return, Outside air temperatures
2. Data shall be represented on historical graphs that allow for easy viewing of device state change at different times.
3. Excel outputs shall not be required to view data. Historical data shall be viewable through BAS.

2.04 APPLICATION-SPECIFIC CONTROLLERS

A. Application Specific Controllers shall not require custom programming and shall control specific equipment through simple configuration settings done through the cloud-based BAS. All configuration changes shall automatically upload into the device once set on the BAS and shall be stored by the device's internal memory.

B. Gateways are devices which connected to an Ethernet port and act as a bridge between the BAS cloud servers and the wireless mesh network.
   1. Shall be capable of providing Internet connection to up to 2,000 devices.
   2. Shall be capable of automatically addressing routing tables to all devices part of wireless mesh network and shall not require manual programming or addressing.
   3. Shall communicate to cloud servers over a TCP/IP outbound-only connection.
   4. Shall not require a Public IP address, custom VPNs, or any on-site servers.
   5. Shall communicate to other BAS devices over the dedicated and isolated
   6. 802.15.4 IEEE technical standard.
   7. Shall be secured using AES (Advanced Encryption Standards).

C. Internet-Enabled Thermostats are controllers which detect a space/zone temperature and operate equipment or dampers which supply heating, cooling, ventilation, or a combination of the three mechanical states, to their space/zone. Examples are thermostats for VAV, VVT, Fan-Powered Boxes, Fan Coil, Blower Coils, Unit Ventilators, Heat Pumps, Water Source Heat Pumps, and Conventional DX and/or Gas heat equipment.
   1. Shall be capable of providing 24VAC outputs which can be configured to provide control of the following: two stages of fan, three stages of cooling, two stages of heating, one stage of auxiliary heat (heat pumps), floating point zone dampers, two position zone dampers, floating point zone reheat valves, and two position zone reheat valves.
   2. Shall include a removable wiring terminal module that allows for thermostat installation even in situations where there are only three wires between equipment and where the thermostat is to be installed.
   3. Shall be available with the following internal sensors: temperature only, temperature and humidity, temperature, humidity, and CO^2, and temperature and CO^2. All sensors required by the specifications are to be internal to the thermostat and not require two devices on the wall.

4. Shall be able to accept expansion accessories that allow for more advanced control sequences, and additional temperature detection. Examples are economizer controllers, outside air ventilation control, supply air temperature detection, unit ventilator face/bypass control, and modulating control. All expansion accessories shall be Internet enabled and accessible through EMS.
5. Shall communicate with the wireless mesh network through an internal wireless antenna that runs on the 802.15.4 technical standards.
6. Shall be able to automatically repeat the wireless mesh network to additional devices part of the BAS.
7. Shall automatically push, in real-time, to the BAS all “state changes” so as to be viewable historically and in real-time from BAS. Examples are changes in equipment operation (heat, cool, fan), number of stages active, the temperatures in the space, damper position, valve position, temperature set-points, etc.
8. Shall be able to lock-out heat pump compressor(s) based on outside air temperature.
9. Shall provide set-point (heat & cool) temperature limitations through BAS.
10. Shall provide full local keypad lock-out from BAS.
11. Shall meet California 2016 Title 24 code standards.
12. Shall have a programmable three (3°F) degree heat/cool temperature range which auto-adjusts to a five (5°F) degree dead band.
13. Shall have both a heat setpoint, cool setpoint, and auto-changeover.
14. Shall have Optimum Start algorithms that will calculate start times based on at least seven (7) days of previous run-time temperature and rate-of-change historical data for its space. Optimum Start algorithm shall recalculate each optimized schedule time before each optimized schedule.
15. Shall be able to be manually overridden through BAS.
16. Shall be configured through BAS.

D. Wired Temperature Inputs are to be available to provide external temperature detection for specific BAS devices. Examples are to provide supply air temperature, water temperature, refrigeration temperature, outside air temperature, etc. to a thermostat or other device.
   1. Shall accept 10K type II thermistors.
   2. Shall push to the BAS real-time temperature changes so as to be viewable historically and in real-time from the BAS.
   3. Shall accept a thermistor at a maximum of up to 100 feet from input terminal.
   4. Shall be configured through the BAS.

E. Internet-Enabled Economizer Controller are controllers that modulate an outside air damper to provide ventilation and economization to a single zone.
   1. Shall only require a dry-bulb outside air temperature sensor and dry-bulb supply air temperature sensor. No dry-bulb return air temperature sensor or dry-bulb mixing box temperature sensor shall be required to meet full economizer functionality to at a minimum California 2016 Title 24 standards.
   2. Shall communicate with thermostat to determine space temperature and space temperature setpoint in order to decide when economization can be used.
   3. Shall continue to economize as its only source of cooling as long as the outside air temperature is able to keep the space temperature within 1°F of the cool temperature setpoint.
   4. Shall be able to enable mechanical cooling at the same time as economization.
   5. Shall be able to prevent the supply air temperature from dropping below a minimum temperature.
   6. Shall provide enthalpy by use of pulling humidity and barometric pressure information from the Internet based on the zip code of installation location. Enthalpy shall not require any additional probes other than the dry-bulb probe and shall be free to enable.
   7. If connected to a CO^2 thermostat, shall be able to provide demand ventilation control of outside air damper.

8. Shall have a minimum ventilation damper position and a maximum ventilation damper position.
9. Shall be able to be scheduled to not open the outside air damper for ventilation during unoccupied hours.
10. Shall be able to control a Variable Frequency Drive (VFD) with up to five (5) fan
11. speed inputs. Example of fan speed changes are during ventilation, stage one cooling, stage two cooling, stage one heating, stage two heating.
12. Shall modulate an outside air damper by use of a 0-10VDC signal.
13. Shall accept a 0-10VDC signal feedback input from the outside air damper actuator to confirm outside air damper is working correctly.
14. Shall meet all California 2016 Title 24 codes, including Fault Detection and Diagnostic requirements.
15. Shall send Fault Detection and Diagnostic information to the BAS.
16. Shall accept a minimum of three (3) 10K type II thermistors.
17. Shall be able to modulate a 0-10VDC hot water, steam, or electric SCR for heating and outside air tempering.
18. Shall be able to modulate a 0-10VDC chilled water or modulating DX for cooling and outside air tempering.
19. Shall be able to control a face/bypass damper.
20. Shall push all “state changes” to the BAS as to be viewable historically and in real-time from BAS. Examples are changes in equipment operation (heat, cool, fan, economization, ventilation), number of stages active, the supply air temperature, the return air temperature, hot water valve position, face/bypass damper position, variable speed fan setting, etc.
21. Shall be able to be manually overridden through the BAS.
22. Shall be configured through the BAS.

F. Internet-Enabled Power Relay Module are controllers which have dry-contact relays able to start/stop different electrical equipment. Examples are exhaust fans, lights, pumps, valves, boilers, chillers, etc.
   1. Shall have relays with a max rating of 120 VAC @ 15 AMPs or 240/277 VAC @10 AMPs.
   2. Shall have a low-voltage terminal for momentary contact override inputs. Override time shall be configurable for a specific amount of minutes through a configuration from the BAS.
   3. Shall be able to provide Lead/Lag sequencing between relays.
   4. Shall be able to accept an external dry-contact input used to verify flow if being used as a pump controller. If being used as a lead/lag pump controller, shall be able to alarm the BAS if flow is not detected when Pump A is enabled and start Pump B as a stand-by pump.
   5. Shall communicate with the wireless mesh network through an external wireless antenna that runs on the 802.15.4 technical standards. Antenna shall be able to communicate with Power Relay Module over three (3) 18-gauge wires up to 500 feet between device terminal inputs.
   6. Shall be able to automatically repeat the wireless mesh network to additional devices part of the BAS.
   7. Shall push all “state changes” to the BAS as to be viewable historically and in
   8. real-time from the BAS. Examples are changes in relay positions On or Off. Shall be able to be manually overridden through the BAS.
   9. Shall be configured through the BAS.

G. Zone Controllers are controllers which operate equipment which supply heating, cooling and ventilation, or a combination of these mechanical states to multiple zones.
   1. Shall communicate with the wireless mesh network through a removable wirelessantenna that runs on the 802.15.4 technical standards.

2. Remote mountable antenna shall be able to communicate to Zone Controller over three (3) 18-gauge wires up to 500 feet between devices terminal inputs.
3. Communication from the Zone Controller to all zone/space Thermostats shall be over the wireless mesh network.
4. Shall be capable of providing 24VAC outputs which can be configured to provide control of the following: multiple stages of fan, multiple stages of cooling, and multiple stages of heating.
5. Shall be capable of providing 0-10VDC outputs which can be configured to provide control of the following: variable speed fan (VFD), modulating outside air damper, modulating heating valve.
6. Shall have integrated outside air damper control logic and not require a third- party or additional controllers to provide economization and ventilation control.
7. Shall directly accept a supply duct static pressure probe. Shall have an integrated short-term and long-term learning PID loop algorithm for maintaining target supply static configurations. PID loop shall not require any type of cost for programming and is to be factory loaded into controller.
8. Shall only require dry-bulb outside, return, and supply air temperature sensors.
9. If communicating to CO^2 thermostat(s), shall be able to provide demand ventilation control of outside air damper.
10. Shall push all “state changes” to the BAS as to be viewable historically and in real-time from the BAS. Examples are changes in equipment operation (heat, cool, fan, economization, ventilation), number of stages active, the supply air temperature, the return air temperature, the outside air temperature, hot water valve position, supply duct static reading, variable speed fan setting, etc.
11. Shall be able to be manually overridden through the BAS.
12. Shall be configured through the BAS.
13. Make-up Air Controllers which operate equipment supplying ventilation to the building shall communicate with the wireless mesh network through a removable wireless antenna that runs on the 802.15.4 technical standards.
14. Remote mountable antenna shall be able to communicate to Controller over three (3) 18-gauge wires up to 500 feet between devices terminal inputs.
15. Communication from the Controller to zone/space Thermostat(s) shall be over the wireless mesh network.
16. Shall be capable of providing 24VAC outputs which can be configured to provide control of the following: multiple stages of fan, multiple stages of cooling, and multiple stages of heating.
17. Shall be capable of providing 0-10VDC outputs which can be configured to provide control of the following: modulating variable speed fan (VFD), modulating outside air damper, modulating heating, modulating cooling.
18. Shall be able to modulate a VFD to maintain a targeted building static pressure.
19. Shall be able to modulate a 0-10VDC hot water, steam, or electric SCR for heating and outside air tempering.
20. Shall be able to modulate a 0-10VDC chilled water or modulating DX for cooling and outside air tempering.
21. Shall have integrated outside air damper control logic.
22. Shall directly accept a building pressure probe. Shall have an integrated short- term and long-term learning PID loop algorithm for maintaining target building pressure. PID loop shall not require any type of cost for programming, is to be factory loaded into controller, and updatable virtually through EMS.
23. Shall only require dry-bulb outside and supply air temperature sensors.
24. If communicating to CO^2 thermostat(s), shall be able to provide demand ventilation control of outside air damper.

25. Shall push all “state changes” to the BAS as to be viewable historically and in real-time from the BAS. Examples are changes in equipment operation (heat, cool, fan, economization, ventilation), number of stages active, the supply air temperature, the return air temperature, the outside air temperature, hot water valve position, supply duct static reading, variable speed fan setting, etc.
26. Shall be scheduled On or Off through the BAS.
27. Shall be able to be manually overridden through the BAS.
28. Shall be configured through the BAS.

H. Wireless Proximity Sensors are thermostat accessories which are able to detect when a door or window is opened or closed, or be able to accept a dry-contact input from an occupancy sensor.
   1. Shall be able to communicate to a single Internet-Programmable Thermostatover wireless mesh network.
   2. Shall communicate with the wireless mesh network through an internal wireless antenna that runs on the 802.15.4 technical standards.
   3. Shall run on two AA batteries and not require any unique type of battery to operate.
   4. Shall push all “state changes” to the BAS as to be viewable historically and in real-time from the BAS. Examples are if the door is open, if the space is unoccupied, if a window is open.
   5. Shall be configured through the BAS.

I. Remote Wireless Sensors are thermostat accessories which are used to either average temperatures between the sensors location and a master thermostat or to relocate the sensing location of the master thermostat without having to run new wire.
   1. Shall be able to communicate to a single Internet-Programmable Thermostatover wireless mesh network.
   2. Shall communicate with the wireless mesh network through an internal wireless antenna that runs on the 802.15.4 technical standards.
   3. Shall run on two AA batteries and not require any unique type of battery to operate.
   4. Shall push all “state changes” to the BAS as to be viewable historically and in real-time from the BAS. Examples are changes in equipment operation (heat, cool, fan), number of stages active, the temperatures in the space, temperature set-points, etc.
   5. Shall be configured through the BAS.

J. Wireless Repeaters are devices which extend the 802.15.4 wireless mesh network across large expanses or where BAS devices are unable to repeat the wireless mesh network on their own. Examples are when bridging the wireless mesh network from one building to another.
   1. Shall communicate with the wireless mesh network through an internal wirelessantenna that runs on the 802.15.4 technical standards.
   2. Shall be able to automatically repeat the wireless mesh network to additional devices part of the BAS.
   3. Shall not require an Ethernet connection or any TCP/IP connection.
   4. Shall only require a single 120V outlet for power.

K. Configuration of Devices and System
   1. To meet the sequence of operation for each controller, the controller shall be configured through the BAS by the installing contractor. No custom programmingor downloading by use of a service tool shall be required.
   2. Stand-Alone Operation: Each piece of equipment specified shall provide stand- alone operation. BAS devices shall not require web connection or communication to the BAS to run under normal operations.

PART 3 - EXECUTION

3.01 EXAMINATION

A. The Contract Documents shall be thoroughly examined for coordination of control devices, their installation, wiring, and commissioning. Coordinate and review mechanical equipment specifications, locations, and identify any discrepancies, conflicts, or omissions that shall be reported to the Architect/Engineer for resolution before rough-in work is started.

B. The BAS manufacturer shall be available to provide assistance to BAS Contractor in order to verify that control equipment can be installed as required, and any discrepancies, conflicts, or omissions shall be reported to the Architect/Engineer for resolution before rough-in work is started.

3.02 PROTECTION

A. The BAS installing contractor shall protect all work and material from damage by their work or personnel, and shall be liable for all damage thus caused.

B. The BAS installing contractor shall be responsible for their work and equipment until final inspection, testing, and acceptance. The BAS installing contractor shall protect their work against theft or damage, and shall carefully store material and equipment received on site that is not immediately installed. The Contractor shall close all open ends of work with temporary covers or plugs during storage and construction to prevent entry of foreign objects.

C. **Installation of BAS shall be performed by an approved Contractor. Approved contractor is one whom either has installed the BAS before or has been approved by the BAS manufacturer. The Contractor shall certify all work as proper and complete. Under no circumstance shall the design, scheduling, coordination, programming, training, and warranty requirements for the project be delegated to a subcontractor unless that subcontractor meets the BAS approved Contractor requirements as stated above.**

D. Demolition. Remove controls which do not remain as part of the BAS. The owner will inform the Contractor of any equipment which is to be removed that will remain the property of the owner. All other equipment which is remove will be disposed of by the Contractor.

E. Access to Site. Unless notified otherwise, entrance to building is restricted. No one will be permitted to enter the building unless their names have been cleared with the owner or an owner-approved representative.

F. Code Compliance. All wiring shall be installed in accordance with all applicable electrical codes and will comply with equipment manufacturer’s recommendations.

G. Clean Up. During installation, contractor shall maintain a clean environment. At the completion of the work, all equipment pertinent to this contract shall be checked and thoroughly cleaned, and all other areas shall be cleaned around equipment provided under this contract.

3.03 TEST AND BALANCE

A. Testing of controls shall be performed by installing contractor. All equipment and their components being controlled shall be tested, including, but not limited too: heating enables and a proper supply air temperature from the AHU, RTU, and into the zone (if there is a zone box) is recorded, cooling enables and a proper supply air temperature from the AHU, RTU, and into the zone (if there is a zone box) is recorded, fan enables and the proper fan speed is set when specified (when using a multiple speed fan, VFD, or ECM motor), and that the outside air damper fully opens and closes when commanded. Any devices that are enabled and disabled shall properly respond to the BAS control signals.

B. All control configurations shall be set to meet specifications. All temperatures and other sensors shall be determined accurate and configured for the type of temperature being detected.

C. All mechanical systems controlled by BAS shall be properly balanced to the right CFMs to meet required codes and specifications.

3.04 WIRING, CONDUIT, AND CABLE

A. All control wires between mechanical equipment and BAS devices are to be furnished and installed by others, unless BAS contractor is responsible for this part of the installation. The BAS contractor shall not begin work on this contract until all wiring is installed to the satisfaction of the BAS contractor.

B. It is not an excuse to have not referenced the manufacturer's installation documentation or to have contacted the BAS manufacturer if wire installation is not understood and done incorrectly by the installing Contractor.

3.05 HARDWARE INSTALLATION

A. Installation Practices for Devices. All devices are to be mounted level/plumb and per the manufacturer's installation documentation.

B. It is not an excuse to have not referenced the manufacturer's installation documentation or to have contacted the BAS manufacturer if hardware installation not understood and done incorrectly by the installing Contractor.

C. Identification.
1. Identify all control wires with labeling tape or sleeves using either words, letters, or numbers that can be exactly cross-referenced with as-built drawings.
2. All field enclosures, other than controllers, shall be identified with a nameplate. The lettering shall be in white against a black or blue background.
3. Junction box covers will be marked to indicate that they are a part of the BAS.
4. All field devices (except space sensors) that are not mounted within FIP's shall be identified with name plates.
5. All field devices inside FIP's shall be labeled.

D. Control System Switch-Over. The installing contractor shall minimize control system downtime during switch-over. Sufficient installation mechanics will be on-site so that the entire switch-over can be accomplished in a reasonable time frame.

E. Location.
1. The location of sensors is as indicated in the mechanical and architectural drawings.
2. Space temperature, humidity, and CO^2 sensors will be mounted away from machinery generating heat, direct light, and/or diffuser air streams.
3. If external temperature sensors are installed, sensors will be mounted away from machinery generating heat, direct light, and/or diffuser air streams.
4. If outdoor air temperature sensors are installed, sensors are to be installed such that the effects of heat radiated from the building or sunlight is minimized.

3.06 SYSTEM CONFIGURATION

A. General. The installing contractor shall provide all labor necessary to install, initialize, start-up and troubleshoot all system hardware and configurations described in this section. This includes any requirements necessary to access the web application on third-party devices.

B. Installing contractor shall work with owner's representative to determine configuration parameters including but not limited to hours of operation, set points, system variables, naming of devices, and site naming. Naming of devices and the site shall be performed by the installing contractor. Naming convention of space thermostats shall be space served. Naming convention

of zone controllers shall be the equipment serial number. All naming shall be provided by or agreed upon with the owner.

3.07 SYSTEM COMMISSIONING AND SYSTEM STARTUP

A. Each BAS component in the system shall be tested for both hardware and software functionality. In addition, each mechanical and electrical system under control of the BAS will be tested against the appropriate sequence of operation specified herein. Documentation shall be provided to the owner that proves installation and testing has been completed and points out any mechanical issues found that are not related to the installation of the BAS. Successful completion of the system tests shall constitute the beginning of the warranty period.

B. The BAS Contractor shall provide all manpower and engineering services required to assist the HVAC Contractor and Balancing Contractor in testing, adjusting, and balancing all systems in the building. The BAS Contractor shall have a trained technician available on request during the balancing of the systems. The BAS Contractor shall coordinate all requirements to provide a complete air balance with the Balancing Contractor and shall include all labor and materials in his contract to assist with functional testing of system as it relates to BAS.

C. Upon completion of installation, submit three (3) copies of record documents. The documents shall be submitted for approval prior to final completion and include:
   1. Testing and Commissioning Reports and Checklists signed off by trained field commissioning personnel.
   2. Name, address and telephone number of Contractor personnel managing and installing equipment, along with service personnel responsible for supporting the ongoing warranty and services of the control system.
   3. Procedures for operating the BAS including logging on/off, alarm management, reading reports, trends, modification of setpoints, scheduling, and other interactive system requirements.
   4. Provide information on how to receive support from Pelican Wireless Systems and demonstrate that they are a direct supporting resource. Contact information for Technical Support from Pelican Wireless Systems is to be provided.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, SPECIAL CONDITIONS and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

1.02 SUMMARY

A. This section includes all plumbing (equipment, fixtures, pipe and fittings, specialties) inside the building(s) and outside the building(s) to the point of connection to site plumbing systems.

B. Provide complete plumbing systems including:
   1. All piping systems for conduction of natural gas as shown or specified for plumbing work.
   2. All valves, piping supports, piping penetration auxiliaries, piping protective coverings, piping, and other piping accessories as shown or specified for plumbing work.
   3. All plumbing equipment and auxiliary items as specified herein or shown on the drawings.

1.03 QUALITY ASSURANCE

A. All plumbing fixtures and equipment shall comply with California Code of Regulations, Title 24, Part 6, latest edition.

1.04 REFERENCES

A. Pipes and Tubes
   1. Steel Pipe: ASTM A53, Type S, Grade A, Schedule 40, seamless, black or galvanized, plain ends.
   2. Polyethylene Pipe: ASTM D2513 produced to APWA/ULCC standards for color coding of gas distribution systems.

B. Fittings
   1. Steel Pipe Nipples: ASTM A733, made of ASTM A53 or ASTM A106, Schedule 40, seamless, galvanized, carbon-steel pipe.
   2. Malleable-Iron Unions: ASME B16.39, Classes 150 and 300; hexagonal stock; with ball-and-socket joint; metal-to-metal bronze seating surfaces; and female threaded ends with threads complying with ASME B1.20.1.
   3. Polyethylene Plastic: ASTM D2683 and D3261, socket or butt fusion fittings.

1.05 JOINING MATERIALS

A. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

B. Heat Fusion

1.06 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer. Where possible, offset vents and pipes rising in walls, concealed above ceilings, below plates and rise through roof. Where this is not possible, install vents and pipes through plates as detailed on structural drawings.

1.07 SUBMITTALS

A. Submit a general statement of materials and methods along with manufacturer's technical data and installation instructions for all equipment, fixtures, pipe and fittings, and plumbing specialties to be installed.

B. Record Drawings: Per specification section 23 05 00 requirements.

C. Operation and Maintenance Manuals: Per specification section 23 05 00 requirements.

PART 2 - PRODUCTS

2.01 GENERAL

A. Adapters: Wrought copper male adapters shall be used wherever it is necessary to connect copper tubing to a valve or "tee" having threaded connections.

2.02 PIPE, FITTING, AND JOINING MATERIALS

A. Steel/Threaded Fittings
   1. Pipe: Black or galvanized steel per ASTM A-53 seamless, threaded ends, standard weight Schedule 40 for sizes 2" and smaller.
   2. Fittings:
      a. Black or galvanized (to match pipe) banded malleable iron, threaded, ASTM A-197, 150 lb. standard or 300 lb. extra heavy per ANSI Standard B16.3 (to match pipe schedule).
      b. Unions: AAR 300 lb. malleable iron, black or galvanized (to match pipe).
      c. Joining Materials/Methods
         1) Rectorseal or pure lead and graphite thread lubricant.
         2) Permacel, P-412, ½" wide teflon pipe joint sealant.

B. Steel/Welding Fittings
   1. Pipe: Black or galvanized steel per ASTM A-53 seamless, threaded ends, standard weight Schedule 40 for sizes 2" and smaller.
   2. Fittings: Black steel, permanently marked, seamless butt welding type, standard weight or extra strong (to match pipe schedule). Optional in lieu of tees where main is at least two pipe sizes larger than branch Bonney Forge, Threadolets for ½" to 2", weldolets for branch lines 2 ½" to 4"; fitting shall suit main size.
   3. Unions: AAR 300 lb. malleable iron, black or galvanized (to match pipe).
   4. Joining Materials/Methods
      a. Gas or electric arc welding per ASME Code for pressure piping.

C. Polyethylene plastic butt fusion welded joints
   1. Pipe: Schedule 40, plain ends.
   2. Fittings: Polyethylene fusion welded type.
   3. Joining Materials/Methods: Fusion welded, using fusion welding fittings, and the manufacturers supplied control unit.
   4. Connections: Utilize only adapters supplied by the same manufacturer of the pipe.

2.03 PIPE AND FITTING APPLICATIONS

A. Inside Building (to 5'-0" outside building line).
   1. Gas Piping: Schedule 40, black steel pipe; malleable iron screwed fittings for sizes 2" and smaller. Weld sizes 2 ½" and larger. Weld all below grade piping and protect as specified herein.
   2. Plastic pipe and fittings shall not be used inside of buildings.

B. Outside Building (from 5'-0" outside building line)
   1. Gas piping
      a. Above grade and to 30" below grade, shall be Schedule 40, black steel pipe with 150 lb. malleable iron, welded joints.
      b. Below grade pipe shall be protected with X-Tru-Coat and fittings covered with X-Tru-Coat, heat shrink, sleeves to 6” above grade. Above grade sizes 2" and smaller may be screwed joints.
      c. Underground gas piping below 30" depth and 30” after the first change in direction, shall be polyethelyene pipe with fusion welded joints.

C. Appliance Flexible Connectors for Indoor Equipment Without External Spring Isolation:
   1. Contractor may choose one of the following:
      a. Direct gas pipe connection.
      b. Appliance flexible connector:
         1) Comply with ANSI Z21.24.
         2) Polymer or hot-dipped PVC coated corrugated 304 stainless steel.
         3) Operating-Pressure Rating: 0.5 psig.
         4) End Fittings: Zinc-coated steel.
         5) Maximum Length: 30 inches.
         6) Manufacturers: Dormont, Series 30C, 31, 40C, 41, and 51, Brasscraft model ProCoat, or equal.
      c. Provide with end connections compatible with equipment and piping system.
      d. Equipment located in spaces normally accessible to building occupants, other than maintenance personnel, shall utilize direct gas pipe connection.
      e. Provide anti-microbial PVC coating for use with appliances located in kitchen areas.
   2. Flexible Gas Connector for Outdoor Equipment Without External Spring Isolation:
      a. Contractor may choose one of the following:
         1) Direct gas pipe connection.
         2) Corrugated stainless steel hose with 304 stainless steel braid covering, CSA certified. Metraflex model GASCT, Unisource Manufacturing series 400, or equal. Provide with end connections compatible with equipment and piping system.
   3. Flexible Gas Connector for Equipment with External Spring Isolation, Indoors and Outdoors:
      a. Where Drawings indicate installation of mechanical equipment on spring isolation rails spring mounted curbs, or spring hangers, provide metal flexible connectors, Metraflex Metraloop, or equal by Unisource Mfg. Co., or Flexicraft Industries, CSA certified for 4 inches of movement in all directions.
   4. Flexible Gas Connection System for Movable Gas-Fired Cooking Equipment:
      a. System shall include flexible PVC coated braided stainless steel hose, quick disconnect fitting, full port CSA certified ball valve, 2 swivel elbows, coiled steel restraining cable and mounting hardware. Assembly shall be certified per ANSI Z21.69/CSA 6.16, “Connectors for Movable Gas Appliances.” Size as required for appliance connection, 48” minimum hose length. Install per manufacturer’s instructions. Connectors shall be Dormont Safety System, T&S Safe-T-Link, or equal.
   5. Gas Piping Underground: Performance Pipe, “DriscoPlex” 6500 PE 2708 (yellow), Polypipe, Inc., “Polypipe”, or equal, polyethylene gas distribution pipe, ASTM D2513, ASTM D3261, and ASTM D2683 fittings with fusion welded joints. Provide piping labeled for natural gas in accordance with CPC.
      a. Electrically isolate underground ferrous gas piping from the rest of the gas system with listed or approved isolation fittings installed a minimum of six inches above grade.
      b. Provide Central Plastics Corp., Perfection, or equal, anodeless, single seal riser for transition from below grade polyethylene to schedule 40 steel piping above grade. Minimum horizontal length shall be 30 inches. Minimum vertical length shall be 30

inches, or greater as required. Provide fusion connection to polyethylene pipe below grade, and screwed connection to steel pipe above grade.

2.04 PIPE PROTECTION

A. Bare galvanized or black steel pipe buried in the ground shall have a corrosion protective wrap of one of the following:
   1. Polyvinyl Chloride Tape: The tape shall be of a minimum thickness of 10 mils and shall be laminated with a suitable adhesive, or shall be applied with a suitable primer adhesive. Width as recommended by the manufacturer for the pipe sizes being wrapped (4" minimum). Tape shall have continuous identification
   2. 3M X-Tru-Coat, factory-applied plastic coating with additional field-applied double-layer wrapping of Scotchrap #51, 20-mil plastic tape, Trentex No. V-10, B-20, Scotchwrap No. 50 Polyvinyl chloride tape wrap, or thermofit sleeves.
   3. Field Joint Cover: Tape coat, prime coat and one layer of Tape coat #20 heat-applied 62-mil tape.

B. Provide a sacrificial anode for the underground portion of all steel piping when required by the local authority.

2.05 VALVES

A. General
   1. Furnish two tee handle operators for each size to suit all valves which are installed below grade in access boxes and which are not fitted with integral handles; hub end valves shall be used where required.
   2. Valves on systems operating over 100 psi shall be rated for 150 lb. or higher as required.

B. Shut-off service, natural gas
   1. Sizes 2" and smaller: NibcoT-585-70-UL, full port ball valve; 400 psi gas service rating; bronze body and ball, teflon seat, quarter turn handle with stops, swing-out accessibility/removal.
   2. Sizes 2 ½" to 4": Homestead, Standard Opening, 200 psi shut-off pressure differential; semi-steel body, flanged ends, plug with lever handle.

2.06 PIPING ACCESSORIES

A. Unions shall have the same pressure rating as pipe fittings.

2.07 PIPING PENETRATION AUXILIARIES

A. Sleeves Below Slab or Grade: Metraseal model MS or equal with schedule 80 PVC sleeve. The seal shall be capable of withstanding a hydrostatic pressure of 20 psig. The seal shall be constructed of synthetic rubber with heavy-duty plastic pressure plates. All bolts and nuts shall be constructed of stainless steel.

B. Escutcheons: Polished chrome plated brass or painted metal.

PART 3 - EXECUTION

3.01 GAS PIPING

A. Gas Piping: Install generally level with as few bends as possible. Install dirt legs and shut-off valves at each piece of equipment. Support as specified and in accordance with the C.P.C.

B. Polyethylene Gas Piping: Shall be heat fusion welded in strict accordance with manufacturer's installation instruction. Bury high pressure mains (over 7" W.C.) 36" minimum and low pressure

(7" W.C. or less) 30". Place pipe on 6" sand bed on trench bottom and cover pipe with 12" sand after placement. Remaining backfill may be native soil.

C. Bury a No. 18 AWG insulated copper locating wire with all non-metallic pipe. Copper wire shall have at least 12" above grade at each end.

3.02 VALVES

A. Valves shall be full size of line in which installed. Furnish discs suitable for service intended. All valves shall be properly packed and lubricated. Unions shall be placed adjacent to each threaded or soldered valve or equipment connection 2" and smaller. Install flanges at all valves with stems vertical wherever possible. Stems shall not be placed below horizontal.

B. Install unions adjacent to each valve and at final connection to each piece of equipment.

C. All shutoff valves in gas lines shall be or ball valves, unless otherwise shown.

D. Valves shall be provided with brass identification tags indicating service controlled. Tags may be omitted on lines exposed in equipment rooms where service is obvious.

3.03 PIPING TESTING: TESTING CRITERIA

System	Medium	Pressure	Duration
Natural Gas	Air	150 psig above grade	4 hours
		65 psig below grade	4 hours

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, SPECIAL CONDITIONS and DIVISION 1 GENERAL REQUIREMENTS, apply to the work of this section.

B. Section 23 05 00, General Mechanical Requirements applies to this section.

C. Sections 23 05 29, 23 05 48, 23 05 53 and 23 07 19.

1.02 SUMMARY

A. Work Included
   1. Provide complete piping systems for conduction of heating hot water supply and return, chilled water supply and return , and other fluids for HVAC work including all other chemicals required for pipe flushing, cleaning, testing, etc., all as specified or shown on the drawings.

B. Provide all valves, strainers, piping supports, seismic braces, piping penetration auxiliaries, protective coverings, piping insulation, and other piping appurtenances as shown or specified for HVAC work.

C. Installation of sensing and control devices that mount on or insert into piping.

1.03 QUALITY ASSURANCE

A. All HVAC equipment shall comply with California Code of Regulations, Title 24, Part 6, latest edition.

B. Standards: Comply with all applicable codes or standards governing process piping, system materials, application, and installation.

C. Welding Qualifications: Welders shall be certified in accordance with American Welding Society "Standard Qualification Procedure".

1.04 REFERENCES

A. Pipes And Tubes
   1. Hard Copper Tube: ASTM B 88, Types L and M, water tube, drawn temper.
   2. Soft Copper Tube: ASTM B 88, Types K and L, water tube, annealed temper.

B. Fittings
   1. Wrought-Copper, Solder-Joint Pressure Fittings: ASME B16.22.
   2. Cast-Copper-Alloy, Solder-Joint Pressure Fittings: ASME B16.18.
   3. Bronze Flanges: ASME B16.24, Classes 150 and 300.
   4. Copper Unions: ASME B16.18, cast-copper-alloy body, hexagonal stock, with ball-and-socket joint, metal-to-metal seating surfaces, and solder-joint, threaded, or solder-joint and threaded ends. Threads complying with ASME B1.20.1.

C. Joining Materials
   1. Solder Filler Metal: ASTM B 32, alloys to suit system requirements.
   2. Brazing Filler Metals: AWS A5.8, alloys to suit system requirements.

1.05 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer.

PART 2 - PRODUCTS

2.01 PIPE MATERIALS

A. Copper/Soldered Joints
   1. Pipe: Type L, Type K or Type M hard drawn copper tubing per ASTM B-88, plain ends.
   2. Fittings: Solder type, wrought copper per ANSI Standard B16.22 or cast red bronze per ANSI Standard B16.18. Do not use T-drill.
   3. Unions: Solder type, cast red bronze.
   4. Joining Materials/Methods
      a. Canfield, Silvabrite or equal lead free solder with a non-corrosive water based flux.

2.02 REFRIGERANT SYSTEM COMPONENTS

A. Refrigerant Piping (R, RL, RS): Type L, hard copper ACR tubing with silver soldered joints and wrought copper fittings. Do not reduce sizes due to long runs.
   1. Contractor shall have the option to use manufacturer's "Line Sets" for total lengths of lines of 50'-0" from ACCU to coil. Suction lines shall be insulated as hereinbefore specified.
   2. An inverted vapor line trap shall be installed in all systems when the condensing unit is below the furnace or fan coil. The top peak of the trap must be at least one inch higher then the top of the indoor coil.
   3. Install a liquid line solenoid on all systems when the refrigerant lines are installed underground, including all refrigerant lines installed in buried pipes and when the total equivalent line length exceeds 50 feet.
   4. Install a hard start capacitor and relay on all systems, except three-phase systems, when the refrigerant lines are installed underground, including all refrigerant lines installed in buried pipes and when the total equivalent line length exceeds 50 feet. If a factory installed soft start is included with the unit, this must removed prior to installation of the hard start kit.
   5. A suction accumulator must be installed on all systems when the refrigerant lines are installed underground and when the total equivalent line length exceeds 50 feet, including all refrigerant lines installed in buried pipes. The accumulator shall be sized to receive a minimum of 70% of the total system refrigerant charge. The additional refrigerant charge beyond the 15 feet of line included in the unit charge as noted in the nameplate data. Include the additional refrigerant charge due to the larger diameter liquid line.
   6. Install a crankcase heater on all systems when the refrigerant lines are installed underground, including all refrigerant lines installed in buried pipes and when the total equivalent line length exceeds 50 feet.
   7. Install a liquid-line filter drier on all systems when the refrigerant lines are installed underground, including all refrigerant lines installed in buried pipes and when the total equivalent line length exceeds 50 feet.
   8. Install a 5 minute outdoor unit cycle protector on all units.
   9. Install a liquid line sized per manufacturer's instructions on all systems when the equivalent refrigerant line length exceeds 50 feet.
   10. The contractor shall be responsible to provide locking-type tamper resistant caps on all refrigerant access port located outdoor,s except where the refrigerant ports are located in secure locations with key access.

2.03 HANGERS AND SUPPORTS

A. Building Attachments: Powder-actuated-type, drive-pin attachments with pullout and shear capacities appropriate for supported loads and building materials, UL listing and FM approval for fire-protection systems. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping. Provide beam clamp retaining straps for all pipe supports where attached to steel beams.

B. Mechanical-Anchor Fasteners: Insert-type attachments with pullout and shear capacities appropriate for supported loads and building materials.

C. Load Distribution: Install hangers and supports so piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

D. B-Line, finish: Electro-Chromate or hot dipped galvanized.
   1. Individual: B3690, B3100 cleavis or B3110
      a. Use H-104 all thread rod.
      b. Use B3110 for pipe subject to movement.
   2. Pipe Straps: B2007-B2072 for standard pipe, B2000-B2069, copper coated for copper.
   3. For insulated pipe - B3690 pipe hangers sized to allow pipe insulation to pass continuously through the hanger.
      a. Trapeze Supporting Rods: Diameter sufficient to support the load with a safety factor of 5.
      b. Isolators: 319 CT or Trisolator.

PART 3 - EXECUTION

3.01 INSTALLATION OF REFRIGERANT PIPING

A. Install Bare Metal Pipe Isolators: Stoneman “Trisolator”, Superstrut “Cust-aStrip”, Unistrut on all non-insulated refrigerant piping.

B. Install pipe supports on the outside of the insulation for all insulated refrigerant piping.

C. The buried portion of the refrigerant lines shall be buried in gravel filled trench. The refrigerant lines shall be installed in a 4” minimum schedule 40 PVC plastic pipe. The 4” pipe shall be sealed moisture tight to prevent moisture from entering the buried refrigerant lines.
   1. The buried portions of the refrigerant lines shall slope towards the indoor unit.
   2. All the PVC joints shall be sealed with joint cement to prevent moisture leakage.
   3. There should be a minimum of joints in the buried portion of the refrigerant lines. If the buried portion is less than 20 feet, there should not be any joints in the buried portion.
   4. The refrigerant leak test shall be performed prior to final sealing of the PVC pipe.
   5. The refrigerant suction line must be insulated through the buried portion as wells as all other portions as previously specified.

3.02 PIPING HANGERS AND SUPPORTS

A. General
   1. Miscellaneous: Provide all supports, anchors, concrete pads, grouting, bedding, bracing, vibration isolation, and accessories required for pumps and other equipment.
   2. Support all piping with appropriate manufactured devices as specified use no wire or makeshift device.
   3. The engineer prior to installation shall approve all hanger material.
   4. Size hanger rods, screws, bolts, nuts, etc., according to manufacturer's recommendations. Size hangers to fit around bare pipe, isolator, or insulated pipe shield as appropriate.
   5. Use cadmium plated or galvanized hangers, attachments, rods, nuts, bolts and other accessories where exposed to weather. Hot dip galvanize all items which are not factory finished. Plating for hinged movements must be done at factory.
   6. Hanger rods with C-clamp type structural attachment shall be equipped with retaining straps.
   7. At each support on bare copper tubing or piping system, install an isolator; at each support point on insulated piping systems, install an insulated pipe shield.
   8. Burning, welding, cutting, or drilling on any structural member may only be done if approved by the structural engineer.
   9. No valve or piece of equipment shall be used to support the weight of any pipe.

10. Provide a hanger close to the point of change of direction of pipe run in either horizontal or vertical plane.
11. When hangers or supports do not come within one foot of a branch line fitting, install an additional hanger or support at the fitting.

B. Pipe Supports
   1. Horizontal Lines
      a. Suspend all horizontal pipes individually and not in contact with the structure except as specified below. Support each branch line with at least one hanger.

C. Parallel pipes may be supported on trapeze type hangers. Size trapeze hangers to support weight of piping plus a surcharge of 300 pounds. For three or more pipes use a size suitable for the load in accordance with manufacturers published load ratings. No deflection to exceed 1/180 of a span. Anchor rods securely to building structure.
   1. Hanger Spacing Schedule:

Type of Pipe	1" dia. Or under	1¼" to 2" dia
Copper Tubing	6'-0"	8'-0"
Rod Size:	$^{3}/_{8}$"	½"

3.03 TESTING OF REFRIGERANT PIPING

A. Test all piping at completion of rough-in, in accordance with the following schedule and show no loss in pressure or visible leaks after a minimum duration of 12 hours at the test pressure indicated. The contractor shall furnish testing equipment. Testing personnel shall be competent to conduct the tests, and demonstrate satisfactory completion of tests to the engineer.

System Tested	Test Pressure Psig	Test Medium
Refrigerant – Liquid	250	Nitrogen, let stand 12 hours
Refrigerant – Suction	150 and 28" vacuum	Nitrogen, let stand 12 hours

B. Before covering, concealing, or using the refrigerant piping system or parts thereof, test and prove tight; obtain certification of the inspector that this has been accomplished.

C. Valves and connected equipment or any system component with a pressure rating less than the system test pressure shall not be subjected to the test.

D. If systems are tested in sections, include connections to preceding tested sections in ensuing tests.

E. After producing the specified test pressure, disconnect the pressurizing source; do not introduce further pressure for the duration of the test period. Should any pressure loss or detectable leak occur within test period, repair piping and retest. Repeat the procedure until the system is proved tight.

F. Test all piping as noted above, with no leaks or loss in pressure. Repair or replace defective piping until tests are accomplished successfully

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, and DIVISION 1, GENERAL REQUIREMENTS, apply the work in this section.

1.02 SECTION INCLUDES

A. General: Refer to Section 23 05 00, Mechanical - General.

B. Work Included: Provide all ductwork and ductwork accessories, auxiliaries, and adjuncts for all and systems as specified or shown.

C. Work Described Elsewhere: HVAC piping, equipment, and controls are specified in other HVAC Sections.

PART 2 - PRODUCTS

2.01 DUCT WORK

A. Requirements
   1. Shop Fabricated Ductwork
      a. Fabricate ductwork as required by classification as described below or gauges, and of configuration and sizes shown on the Drawings. Note that duct sizes shown are net inside; where ducts are lined, fabricate larger than shown to accommodate lining with shown dimensions net inside lining.
      b. Fabricate ducts and fittings as shown on drawings, or if not detailed, fabricate in accordance with SMACNA.
      c. Fabricate ducts with adequate cross-bracing or reinforcing to prevent drumming; should drumming subsequently occur, provide additional reinforcement as necessary to overcome same.
      d. Construct ducts to provide smooth passage for the conducted air, laying edges exposed to the airstream in the direction of air flow.
      e. Fabricate elbows or other fittings for changing direction of duct with a centerline radius equal to 1.5 times the duct width unless shown otherwise or necessitated by space restrictions. Where square or short radius turns are shown or required, fit with air turning vanes.
      f. Fabricate diverging transitions with side slopes of 1:6; fabricate converging transitions with side slopes of 1:2. Greater slopes may be used only where space restriction prohibits specified slopes.
   2. Factory fabricated ductwork construction shall conform to applicable requirements stipulated above for shop fabricated ductwork.

B. Galvanized Steel Ductwork (GSD)
   1. Rectangular Cross Section
      a. Shop fabricated of prime grade lock seam for quality galvanized steel sheet in accordance with requirements stipulated above and fitted with auxiliaries and accessories as specified below and shown on the drawings.
   2. Low Pressure Ductwork, up to 2" static pressure and 2,500 fpm:
   3. Rectangular Duct: GSD gauge per SMACNA or C.M.C whichever is more stringent.
   4. Round Duct: As manufactured by United McGill Corp or equal. Uni-Rib, UNIRIB DUCT machine formed, spiral lock seam construction spot welded and bonded seams with an intermediate standing rib for rigidity. Slip joint construction couplings with a minimum of 2" insertion length. GSD gauge per SMACNA or C.M.C whichever is more stringent.
   5. Fittings: (except elbows) machine formed using SMACNA RL-1 seams with seal class B.

6. Plenums: Fabricate cross-brake panels and stiffen with galvanized steel angle iron members. Provide duct access doors as specified below and as shown on drawings.
7. Elbows: fittings shall have a wall thickness not less than that specified for longitudinal straight ducts as shown in Table 3-2 and 3-3, SMACNA HVAC Duct Construction Standards, Metal and Flexible, 4" - 8" two piece, die stamped with fully welded longitudinal seam; 9" - 30", segmented standing seam construction; 31" - 36", segmented construction with joint spot welded and bonded. Each segmented elbow shall have the number of segments as indicated by Table 3-1 SMACNA HVAC Duct Construction Standards, Metal and Flexible for above 1500 fpm.

C. Medium Pressure Duct, from above 2" to 6" static pressure and to 4000 fpm:
1. All ductwork shall be constructed per SMACNA guidelines or C.M.C whichever is more stringent for medium pressure ductwork.
2. Flat Oval Duct:
   a. As manufactured by United McGill Corp or equal. Uni-Seal flat oval duct and fittings, spiral lock seam or fully welded longitudinal seam, as needed, construction, and FORC reinforcing connectors.

Major Axis	up to 24"	25"- 36"	37"- 48"	49"- 60"	61" - 70"	71" & Up
GSD Gage:	24	22	22	20	20	18
Fittings Gage:	20	20	18	18	16	16

   b. b. Fittings: (except elbows) machined formed using SMACNA RL-1 seams with seal class A.
3. All ductwork shall be constructed per SMACNA guidelines or C.M.C whichever is more stringent for medium pressure ductwork.
4. Round Duct:
   a. As manufactured by United McGill Corp or equal. Uni-Seal heavy gauge round duct and fittings machine formed, spiral lock seam or fully welded, as needed, construction for rigidity.
   b. Fittings: (except elbows) machined formed using SMACNA RL-1 seams with seal class A.
5. Unless otherwise specified, standing seam joint shall be used wherever possible on all fittings. All standing seam joints shall be sealed with a UL-Classified zero flame spread and zero smoke developed cement specially formulated for bonding metal-to-metal joints. In lieu of standing seam construction, joints may be solid welded or spot welded and bonded. All welded joints shall be coated with a protective paint, inside and out, to prevent damage to the galvanized surface. Spot-welded fittings shall have all joints sealed with a UL-Classified zero flame spread and zero smoke developed cement specially formulated for bonding metal-to-metal joints.
6. Elbows: fittings shall have a wall thickness not less than that specified for longitudinal straight ducts as shown in Table 3-2 and 3-3, SMACNA HVAC Duct Construction Standards, Metal and Flexible, 4" - 8" two piece, die stamped with fully welded longitudinal seam; 9" - 30", segmented standing seam construction; 31" - 36", segmented construction with joint spot welded and bonded. Each segmented elbow shall have the number of segments as indicated by Table 3-1 SMACNA HVAC Duct Construction Standards, Metal and Flexible for above 1500 fpm.
7. Divided-flow fittings shall be constructed with a radiused entrance to all branch taps and with no excess material projecting from the body into the branch tap entrance.
8. Liner for all fittings shall be as specified above.
9. Type II Hood Exhaust Duct: Ducts for Type II hoods shall be stainless steel, minimum 0.044 inch thickness, welded seams to first vertical rise up shaft.

D. Conical Fittings:
   1. Low pressure:
      a. All conical fittings shall be constructed with a minimum 2” flare around entire perimeter and a minimum 1:2 slope unless noted otherwise.
   2. Medium pressure:
      a. All conical fittings shall be constructed with a minimum inlet equal to 1.5 times the outlet (1.5 x D) and a length equal to 0.7 times the outlet (0.7 x D) where D equals the duct diameter.
      b. All conical fittings shall be constructed per SMACNA HVAC Construction Standards Metal And Flexible, figure 2-6

E. 45 degree entry fittings:
   1. All 45 degree entry fittings shall be constructed per SMACNA HVAC Construction Standards Metal And Flexible, figure 2-6.

F. Fume Hood Exhaust Ductwork:
   1. All fume hood exhaust duct shall be Type 316 Stainless Steel, 18-gauge minimum. All joints shall be welded.

2.02 DUCTWORK ACCESS

A. Duct Access Doors:
   1. Access panels - Rectangular ducts
      a. Size to provide easy access, but not less than 18" wide.
      b. Ventfabrics "Ventlok" insulated, hinged and latched type or equal
   2. Access panels - Round ducts
      a. Size to provide easy access, but not less than 18" wide.
      b. Ductmate-Metu round insulated access door or equal

2.03 DUCTWORK ADJUNCTS

A. Intake/Exhaust Screens: Provide ½” mesh 18 gauge galvanized iron bird screens at all exterior openings in mechanical system except where provided by others.

B. Combustion Air Openings: Provide corrosion resistant ¼” screen mesh at all combustion air openings except where ducts terminate in attics.

C. Insulation: As specified in Section 23 07 00, Insulation.

D. Test Fittings: Ventlok #699.

E. Duct Penetrations:
   1. Where ducts penetrate fire separations in the building, provide fire dampers or smoke/fire dampers as specified, shown and required by code.
   2. Where ducts penetrate roof or exterior walls, provide 24 gauge galvanized sheet metal flashing and counterflashing; solder all joints and make watertight, including under all air handlers, around all duct work penetrations, and exhaust fans.

F. Sealants
   1. Design Polymerics DP1020, Ductmate PROseal high velocity duct sealant, Childers CP-146/CP-148, Fosters 32-19/32-17, or equal, UL 723, ASTM E-84
   2. Low Shrinkage, flexible, and mildew resistant conforming to NFPA 90A and 90B

G. Tapes and Adhesives:
   1. Pressureless Tapes: Hardcast, 4" wide Type DT 5400 mineral impregnated woven fiber tape with manufacturer's FTA-20 activator/adhesive (indoors) and RTA-50 activator/adhesive (outdoors), applied with brush or roller in accordance with manufacturer's directions.

H. Transverse Duct Connections:
   1. Traverse Joints: Ductmate or WDCI proprietary duct connection systems will be accepted. Ductwork constructed using these systems will refer to the manufacturers guidelines for sheet gauge, intermediate reinforcement size and spacing, and joint reinforcements. TDC/TDF/T-24 shall be constructed as a SMACNA T-24 flange.
   2. The Ductmate companion angle with an integral polymer mastic seal shall be securely fastened to the duct walls using self-drilling screws, rivets or spot welding. Fastener spacing shall be as recommended by the manufacturer for the size or duct and the pressure class. The raw duct ends shall be properly seated in the integral mastic seal. A continuous strip of closed cell gasket tape, size 1/4" x 3/4", shall be installed between the mating flanges of the companion angles at each transverse joint, and the joint shall be made up using 3/8" diameter x 1" long plated bolts and nuts. Drive-on or snap-on cleats shall be used at spacings as recommended by the manufacturer.
   3. The Ductmate system shall not be used for applications with duct gauges heavier than 16 gauge or lighter than 26 gauge.
   4. Longitudinal Seams: Pittsburgh Lock shall be used on all longitudinal seams. All longitudinal seams will be sealed with a mastic sealant. Snaplock is not acceptable.

PART 3 - EXECUTION

3.01 APPLICATIONS

A. Galvanized Steel Ductwork (GSD): Except where specified or shown otherwise, use (GSD) conforming to requirements (Part 2), or cross section configuration shown, in all locations (indoor/outdoor, above/below grade, concealed/exposed).

B. Flexible Fibrous Glass Duct (FFG): Use (FFG) only where specifically called for on the drawings, as connection between to air outlets and inlets.

C. No round-to-round saddle taps are allowed.

3.02 DUCTWORK

A. Pressure-Velocity Classification:
   1. All supply ductwork on constant volume systems (low pressure):
      a. All ductwork shall be constructed per SMACNA static pressure class of positive +2” and a velocity of 2500 FPM.
      b. Seal all joints and seams on all ducts and plenums per SMACNA seal class B. Pressure sensitive tapes are not allowed.
   2. All return ductwork (low velocity):
      a. All ductwork shall be constructed per SMACNA static pressure class of negative -2” and a velocity of 2500 FPM.
      b. Seal all joints and seams on all ducts and plenums per SMACNA seal class B. Pressure sensitive tapes are not allowed.

3. All general exhaust ductwork (low pressure):
   a. All ductwork shall be constructed per SMACNA static pressure class of negative -2" and a velocity of 2500 FPM.
   b. Seal all joints and seams on all ducts and plenums per SMACNA seal class B. Pressure sensitive tapes are not allowed.
4. All fume exhaust ductwork (medium pressure):
   a. All ductwork shall be constructed per SMACNA static pressure class of negative -4" and a velocity of 2500 FPM.

B. Broken places in galvanized coating made in forming shall be completely covered with galvanized paint.

C. All ductwork shall comply with the C.M.C and the local jurisdiction's addendum.

D. Ducts shall be reinforced in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, Latest Edition (low pressure and medium pressure, where shown on drawings). Duct shall be diagonally creased on all four sides. Seams shall be double crimped, bent and elbows shall be made with the throat radius of all bends 12" diameters of the width of the duct wherever possible and in no case shall the throat radius be less than one diameter of the branch duct. Where space does not permit the above radius or where square elbows are indicated on the drawings, they shall be equipped with turning vanes of an approved type for low velocity ducts. Medium velocity ducts shall not use turning vanes and shall not use square elbows unless shown otherwise. Use Ductmate closure systems for all round and rectangular ducts.

E. Transition pieces in the ducts shall have the sides sloped approximately one to five and no abrupt changes or offsets of any kind in the duct system will be permitted. Round to round take-offs shall be made with 45° wye fittings.

F. Ductwork Auxiliaries
   1. Flexible Connectors
      a. Install duct sections being fitted with a flexible connector with a 3" minimum gap between the ends being bridged by the flexible connector. Provide a generous fold in connector to allow for movement; staple and seal closure.
      b. Provide 26-gauge galvanized steel weather shield on top and sides of flexible duct connectors for outdoor installations. Install weather shield at same time as flexible connectors; unprotected flexible connections will be replaced with new connectors at contractor's expense if the weather shields are installed at a subsequent time.

G. Access and Inspection Panels and Doors
   1. Install panels and doors so that frames do not protrude into air stream. Mount frame against outside of lined ducts; provide 13" flanged stub for access panels on other ducts.
   2. Provide inspection panel at each splitter damper.
   3. Provide access panel at each fire damper or smoke/fire damper and elsewhere in the ductwork as required. Label as specified in Part 2 above.
   4. Wall and ceiling access panels: Furnish as required for access to ducts, damper operators, duct mounted access panels, etc.; coordinate size and location to obtain good access.

H. Duct sizes shown on lined duct shall be clear inside insulation.

I. Paint the inside of ductwork visible through grilles and registers dull black.

J. Furnish and install 1-1/2 x 1-1/2 x 3/16" closure angles around all exposed ducts through walls and ceilings. (Both sides)

K. Access doors shall be provided in ductwork for easy access to each fire damper and smoke/fire damper.

3.03 FIELD QUALITY CONTROL

A. General
   1. Perform testing and provide demonstrations as specified in other HVAC Sections.
   2. Comply with requirements of Part 3, 23 05 00.

B. Duct Cleaning
   1. Clean all ductwork in the shop prior to shipping. All ductwork shall be transported to the site in covered vans to eliminate contamination or shall be sealed prior to shipment and shall be protected from contamination at the site.
   2. After fabrication, and during and after installation, seal sections of open ductwork with plastic sheeting to prevent the intrusion of dirt and debris.
   3. After installation is complete, but before balancing and final connections are made, and with construction filters in place, blow clean all ductwork with the system fans operating at full air volume.
   4. All return air ductwork shall be kept sealed until all construction is complete. If the air conditioning system is used during construction, the return air ductwork system shall not be used. Other means of outlets shall be used, such as leaving doors or windows open.

C. Demonstrations: Before enclosing ductwork operate each fire damper and smoke/fire damper in the presence of the Owners representative to show that each damper is functional.

D. Inspections: Evidence of poor fabrication or installation, as disclosed by job site inspections, will be cause for rejection; replacement or repair of defective work shall be done at no additional cost to the Owner.

E. Ducts exposed in the conditioned space shall be free of dents and blemishes. Ducts shall be mounted tight against adjacent surfaces.

F. Duct slopes for transitions shall not be more than 1:4 unless otherwise shown. No abrupt changes or offsets of any kind in the duct system is allowed.

G. All round duct exposed within the space shall be spiral duct and fittings.

3.04 ADJUSTING AND FINISHING

A. General: Comply with requirements of Part 3, 23 05 00. Adjust fan speeds as necessary.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL SUPPLEMENTARY CONDITIONS, and DIVISION 1, GENERAL REQUIREMENTS, apply the work in this section.

1.02 SECTION INCLUDES

A. General: Refer to Section 23 05 00.

B. Work Included: Provide all ductwork and ductwork accessories, auxiliaries and adjuncts for all systems as specified or shown.

C. Work Described Elsewhere: HVAC piping, equipment, and controls are specified in other HVAC Sections.

PART 2 - PRODUCTS

2.01 DUCT WORK

A. Factory-made air ducts shall be approved for the use intended or shall conform to the requirements of C.M.C. Standard No. 6-1.
   1. Each portion of a factory-made air duct system shall be identified by the manufacturer with a label or other suitable identification indicating compliance with C.M.C. Standard No. 6-1 and its class designation. These ducts shall be listed and shall be installed in accordance with the terms of their listing.
   2. All factory-made air ducts must be Approved Class 0 or Class 1.

B. Flexible Ducts: Comply with SMACNA's "Duct Construction Standards, Metal and Flexible. Owens-Corning Fiberglass Valuflex or equal, insulated, wire helix type, 6 inch W.C. min. Product shall qualify as Class I Air Duct per UL181. Inner liner shall be black where visible through registers. All flexible ductwork must have a FHC not exceeding 25/50.

C. Flexible Ductwork - Circular Cross Section:
   1. Thermaflex M-KE or approved equal insulated flexible glass fiber duct factory fabricated as a Class 1 air duct, constructed of 2-layers of polyester film 100% bonded together, encapsulating the galvanized steel wire. Insulated with fiberglass insulation and jacketed with a reinforced vapor barrier jacket listed and labeled as a Class 1 Air Duct. Tested in accordance with U.L. Standard 181. Meets all requirements of NFP 90-A & 90-B, CMC Standards. Inner liner shall be black where visible through registers. All flexible ductwork must have a flame and smoke spread not exceeding 25/50
   2. R-Value shall be 8.0 or greater in accordance with ADC Flexible Duct Performance and Installation Standards.
   3. Joint sealant: Fiberglass Type II (glass fabric) Duct Tape with a UL 181 B-M rating and panduit strap, as detailed on drawings.

PART 3 - EXECUTION

3.01 APPLICATIONS

A. Flexible Fibrous Glass Duct (FFG): Use (FFG) only where specifically called for on the drawings, as connection between terminal boxes and air outlets.

B. All ductwork shall comply with the C.M.C and the local jurisdiction’s addendum.

C. Flexible Fibrous Glass Ducts (FFG) - install as follows:

1. In a single piece not exceeding 5 feet in length.
2. With each section carrying a UL Class I label.
3. With no sharp bends. Do not bend size 4" through 12" diameter in excess of 180° in a 5 ft. length; do not bend sizes over 12" diameter in excess of 90° in a 5 ft. length.
4. Listed flexible duct: Install flexible duct as per manufacturers instructions. With all metal-to-metal connections secured with Panduit PLT-8H clamps or stainless steel cinch clamp, apply duct sealant between the end of the duct and the collar in a 2-inch band and clamp as described above. Allow at least 48 hours before pressure testing.
5. Supported at 4 ft. centers with 24 gauge, 12" galvanized saddles.

D. Flexible Fibrous Glass Ducts (FFG) – shall not be used to replace rigid elbows or fittings per the CMC.

3.02 FIELD QUALITY CONTROL

A. General
   1. Perform testing and provide demonstrations as specified in other HVAC Sections.
   2. Comply with requirements of Part 3, Section 23 05 00.

B. Duct Penetrations:
   1. Where ducts penetrate fire separations in the building, provide fire dampers or smoke/fire dampers as specified, shown and required by code.

C. Demonstrations: Before enclosing ductwork operate each fire damper and smoke/fire damper in the presence of the Owners representative to show that each damper is functional.

D. Inspections: Evidence of poor fabrication or installation, as disclosed by job site inspections, will be cause for rejection; replacement or repair of defective work shall be done at no additional cost to the Owner.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, and DIVISION 1, GENERAL REQUIREMENTS, apply to the work in this section.

B. Section 23 05 00, General Mechanical Requirements applies to this section.

1.02 QUALITY ASSURANCE

A. All HVAC equipment shall comply with California Code of Regulations, Title-24, Part 6, latest edition.

B. Comply with UL 1/81 and UL 181A for ducts and closures.

PART 2 - PRODUCTS

2.01 DAMPERS

A. All dampers for us in low temperature air below 50° F duct shall have non-conducting composite damper shafts with shaft bearings and air seats.

B. Manual Dampers:
   1. Round Ductwork 16” and smaller (low pressure):
      a. Butterfly type, volume dampers.
      b. Provide locking mechanism shall be provided on either the quadrants or end bearings. Ventlock or equal. Damper blade shall be a minimum of 22 gauge, but not less than two gauges more than the duct gauge.
      c. All duct penetrations shall be gasketed to prevent air leakage.
      d. Provide stand-offs as required for specified insulation thickness (see section 23 07 13.
      e. Continuous 3/8” min rod shall be provided.
      f. In locations where ducts are exposed use Ventlok #688 damper regulator for low pressure applications.
   2. Round Ductwork 18” and larger (low pressure):
      a. Manual Dampers: Opposed blade type, 6” maximum blade width, Vent Products model 5303 or equal.
   3. Rectangular Ductwork 12” high and smaller (low pressure):
      a. Rectangular volume dampers shall be Air Balance #111 or equal.
   4. Rectangular Ductwork larger than 12” high (low pressure):
      a. Rectangular volume dampers shall be Air Balance #AC-2 or equal.
   5. Stainless Steel Ductwork:
      a. All materials used for dampers shall be stainless steel.

C. Smoke/Fire Dampers:
   1. General:
      a. Provide Ruskin Model FSD60 or equal with State Fire Marshal approval for all applications other than in Stainless Steel Ductwork.
      b. Provide Ruskin Model FSD36 or equal with State Fire Marshal approval for all applications in Stainless Steel Ductwork.
      c. The maximum pressure drop at design flow of the smoke fire damper shall not exceed 0.3 inches w.g.
      d. Provide a duct mounted smoke detector with in-duct probes. No duct smoke detectors shall be located inside the duct.
      e. Provide a fire alarm connection to monitor the damper. Coordinate with the fire alarm design contractor and plans.

f. Provide electrical power to the damper per the plans.

2. The combination fire smoke dampers shall meet or exceed the following specifications:
   a. The frame shall be a minimum of 16 gauge (1.52) galvanized steel formed into a structural hat channel shape with tabbed corners for reinforcement.
   b. Bearings shall be stainless steel sleeve turning in an extruded hole in the frame.
   c. The blades shall be airfoil shaped double skin construction with 14 (1.90) gauge equivalent thickness.
   d. Blade edge seals shall be silicone rubber and galvanized steel mechanically locked in blade edge, adhesive or clip fastened seals are not acceptable, and shall withstand 450° F.
   e. Jamb seals shall be stainless steel flexible metal compression type. Blade action must be opposed.
3. Each combination fire smoke damper shall be 12-hour fire rated under UL Standard 555, and shall further be classified by Underwriters Laboratories as a Leakage Rated Damper for use in smoke control systems under the latest version of UL555S, and bear a UL label attesting to same.
4. Damper manufacturer shall have tested and qualified with UL, a complete range of damper sizes covering all dampers required by this specification. Testing and UL qualifying a single damper size is not acceptable.
5. The leakage rating under UL555S shall be no higher than leakage class 1 (4 cfm/ft. at 1” w.g. and 8 cfm/ft. at 4” w.g.)
6. As part of the UL qualification, dampers shall have demonstrated a capacity to operate (to open and close) under HVAC system operating conditions, with pressures of at least 4” w.g. in the closed position and 3000 fpm air velocity in the open position.
7. In addition to the leakage ratings already specified herein, the combination fire smoke dampers and their actuators shall be qualified under UL555S to an elevated temperature of 350°F.
8. Appropriate electric actuators shall be installed by the damper manufacturer at time of damper fabrication. Damper and actuator shall be supplied as a single entity which meets all applicable UL555 and UL555S qualifications for both dampers and actuators.
9. Manufacturer shall provide factory assembled sleeve of 16” minimum length, contractor to verify requirement.
10. Factory supplied caulked sleeve shall be 20 gauge to dampers through 84” wide and 18 gauge above 84” wide.
11. Damper and actuator assembly shall be factory cycled 10 times to assure operation.
    a. Coordinate damper actuator voltages with Fire Alarm Contractor.
12. Each combination fire/smoke damper shall be equipped with a controlled 7 to 15 second heat actuated release devise.
13. The electric EFL (electric fuse link) shall close and lock the fire/smoke damper during test, smoke detection, power failure or fire conditions through the actuator closure springs.
14. To prevent duct and HVAC component damage, the damper shall at all times be connected to the actuator for controlled closure in not less than 7 seconds and no more than 15 seconds. Instantaneous damper closure is unacceptable.
15. Damper shall be automatic remote resettable after test, smoke detection or power failure conditions. After exposure to high temperature or fire, the damper must be inspected prior to reset to ensure proper operation. Release temperature shall be 165°F, 212°, 285°F.
16. Actuator: Provide Belimo FN120 or NF24 spring return damper actuator. Coordinate with fire alarm contractor for correct voltage. Actuator shall be located outside the airstream and duct.

PART 3 - EXECUTION

3.01 DAMPERS

A. Install duct accessories according to applicable portions of details of construction as shown in SMACNA standards.

B. Install volume-control dampers in lined duct with methods to avoid damage to liner and to avoid erosion of duct liner.

C. Ductwork shall comply with Chapter 6 C.M.C.

D. Where ducts penetrate fire separations in the building, provide fire dampers or smoke/fire dampers as specified, shown and required by code.

E. Balancing Dampers
   1. Provide balancing dampers (same as volume dampers specified in this section) where shown on drawings and any other locations required to achieve proper system air balance. In general, balancing dampers are required at all zone supply air ducts from supply air plenums, equipment, and in ducts to supply and return air grilles. All dampers shall be placed as shown. Minimum of seven duct diameters prior to the diffuser or register.
   2. Damper operators shall be installed in either to side or bottom of ductwork.

END OF SECTION

PART 1 - GENERAL

1.01 SEE 23 05 00

PART 2 - PRODUCTS

2.01 AIR TURNING VANES AND DEVICES

A. Ordinary type installed in elbows: Type, size, etc., as shown on drawings (see Duct Symbol Legend), fiberglass turning vanes are not acceptable. Install multiple turning vane sections with vanes 36” long or less in large elbows. Use turning vanes specifically rated for medium velocity when duct velocity exceeds 2,500 fpm.
   1. Installed at duct branches or take-offs where shown: Ward Industries VNN, VNA, Airsan Accoustiturn, or equal.

PART 3 - EXECUTION

3.01 AIR TURNING VANES AND DEVICES

A. Provide at all square elbows and elsewhere as shown and scheduled on drawings. Do not use double thickness duct turns on turns less than 12" wide. Where height of double thickness duct turns exceeds 36", provide 1" H 1" H 16 gauge channel brace at mid-height, secure to duct at both ends. Acoustical duct turns: Where height exceeds 36" provide 16 gauge channel brace at mid-height secured to duct at both ends. Fiberglass turning vanes will not be acceptable.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, and DIVISION 1, GENERAL REQUIREMENTS, apply to the work in this section.

B. Section 23 05 00, General Mechanical Requirements applies to this section

1.02 QUALITY ASSURANCE

A. All HVAC equipment shall comply with California Code of Regulations, Title 24, Part 6, latest edition.

B. Comply with UL 181 and UL 181A for ducts and closures.

PART 2 - PRODUCTS

2.01 EQUIPMENT

A. Flexible Connectors: Ventlok, flexible fabric, Duralon Flexible fabric with Metalfab connectors at connections to fans and air handling equipment.
   1. Comply with UL 181, Class 1.
   2. Minimum fabric weight 26 oz. / sq. yd. ± 2 oz., thickness 0.019".
   3. Ventfabrics Inc. Ventlon, or equal, for exterior applications, resistant to sunlight, ozone and weather.
   4. Ventfabrics Inc. Ventglass, or equal, for interior applications.
   5. Complies with Underwriters Laboratories Standard # 214 for fire retardancy, and is accepted by the National Fire Protection Association for vibration isolation connectors in duct systems as covered by Paragraph 2-1.2.3 NFPA Bulletin #90A.
   6. Bonding Agent, Ventfabrics # 655 Adhesive or equal.

PART 3 - EXECUTION

3.01 DUCTWORK AUXILIARIES

A. Flexible Connectors
   1. Install duct sections being fitted with a flexible connector with a 3" minimum gap between the ends being bridged by the flexible connector. Provide a generous fold in connector to allow for movement; staple and seal closure.
   2. Provide 26-gauge galvanized steel weather shield on top and sides of flexible duct connectors for outdoor installations. Install weather shield at same time as flexible connectors; unprotected flexible connections will be replaced with new connectors at contractor's expense if the weather shields are installed at a subsequent time.
   3. Ductwork shall be supported separately from the fan within 3 feet of the flexible connection.

END OF SECTION

PART 1 - GENERAL

1.01 – SEE 23 05 00

PART 2 - PRODUCTS

2.01 EQUIPMENT

A. Miscellaneous equipment not specified herein shall be furnished as scheduled on the drawings.

B. C.C.R. - Title 24 Energy Standards, Requirements: All insulation values shall meet current requirements of the C.C.R. Energy Standards.

2.02 DUCT WORK

A. Rectangular Duct, Flexible Blanket Liner: Flexible blanket made from strong, glass fibers bonded with a dark impregnated thermosetting resin as manufactured by Johns Manville or equal.
   1. Air stream surface shall be protected with a smooth surface coating for minimum resistance to airflow, Permacote or equal, UL 723 compliant.
   2. Flame spread not over 25, Smoke Developed not over 50.
   3. The duct liner shall be suitable for direct application and service as a thermal/acoustical liner for hot or cold round ductwork at air velocities up to 6,000 fpm.
      a. 1” thickness
         1) Liner shall have a minimum R-value of 4.2 and Conductance of 0.24 at 75oF in accordance with ASTM C518
         2) Noise: Liner shall have a minimum NRC of 0.70 when tested in accordance with ASTM C423-90 and ASTM E795
      b. 1 ½" thickness
         1) Liner shall have a minimum R-value of 6.3 and Conductance of 0.16 at 75o F in accordance with ASTM C518
         2) Noise: Liner shall have a minimum NRC of 0.85 when tested in accordance with ASTM C423-90 and ASTM E795
      c. 2” thickness
         1) Liner shall have a minimum R-value of 8.0 and Conductance of 0.13 at 75o F in accordance with ASTM C518
         2) Noise: Liner shall have a minimum NRC of .95 when tested in accordance with ASTM C423-90 and ASTM E795
      d. The duct liner shall be suitable for direct application and service as a thermal/acoustical liner for hot or cold rectangular ductwork and plenums at air velocities up to 6,000 fpm.

PART 3 - EXECUTION

3.01 DUCT LINER

A. Install volume-control dampers in lined duct with methods to avoid damage to liner and to avoid erosion of duct liner.

B. Duct Liner
   1. Applications
      a. Rectangular Supply Ducts Exposed to Weather: Flexible Blanket/Coated Liner, 2” thickness.
      b. Rectangular Ductwork Exposed in Space or Concealed Above Ceiling: Flexible Blanket/Coated Liner, 1" thickness.

c. Round Ductwork Exposed in Space or Concealed Above Ceiling: Flexible Blanket/Coated Liner, 1" thickness.
d. Round Ductwork Exposed to the Weather: Flexible Blanket/Coated Liner, 2" thickness.

2. Install duct liner in all plenums, exposed ducts and ducts for a distance of 10' on each side of all fans, where specified here and at other locations indicated on drawings.
3. On rectangular duct secure duct and plenum liner with cement stic-klips at 12" o.c. both ways to duct with Mircale adhesive, then cement the lining in place with 50% covering of Fosters #81-99 Safetee Duct-Fas adhesive. Apply a brush coat of adhesive to edges of insulation where abutted together inside ductwork. Do not leave any raw edges of liner uncoated.
4. On round spiral duct install in accordance with the current Johns Manville Spiracoustic Round Liner System Installation Guide. Apply a brush coat of adhesive to edges of insulation where abutted together inside ductwork. Do not leave any raw edges of liner uncoated.

5. Duct sizes shown on lined duct shall be clear inside insulation.

END OF SECTION

PART 1 - GENERAL

1.01 SCOPE

A. Installation of rooftop laboratory exhaust and axial flow fans. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.02 WORK INCLUDED

A. High-Plume Dilution Laboratory Exhaust System and Axial Flow Exhaust Fans.

1.03 RELATED DOCUMENTS

A. This Section includes rooftop laboratory exhaust fans and axial exhaust fans.

B. Related Sections include the following:
   1. Division 1

1.04 REFERENCES

A. AMCA Publication 99, "Standards Handbook"

B. ANSI/AMCA Standard 210-99, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating"

1.05 SUBMITTALS

A. Product Data: Include manufacturer's technical data for each model indicated, including rated capacities of selected model clearly indicated; dimensions; required clearances; shipping, installed, and operating weights; furnished specialties; accessories; and installation and startup instructions.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loadings, required clearances, components, and location and size of each field connection.

C. Commissioning Reports: Indicate results of startup and testing commissioning requirements. Submit copies of checklists.

D. Maintenance Data: Maintenance manuals specified in Division 1.

1.06 QUALITY ASSURANCE

A. Performance ratings: Conform to AMCA standard 210, 260 and 300. Fans must be tested in accordance with AMCA 210, 260 and 300 in an AMCA accredited laboratory and certified for air and sound performance.

B. Fan shall be licensed to bear the AMCA ratings seal for air performance (AMCA 210), sound performance (AMCA 300), and induced flow fan for high plume dilution blowers (AMCA 260).

C. Manufacturers that are not licensed to bear the AMCA 210 and 260 ratings seal, must provide performance witness testing (at the manufacturer's expense), per paragraph 1.4.D.

D. Classification for Spark Resistant Construction conform to AMCA 99.

E. Each fan shall be vibration tested before shipping, as an assembly, in accordance with AMCA 204-05. Each assembled fan shall be test run at the factory at the specified fan RPM and vibration signatures shall be taken on each bearing in three planes - horizontal, vertical, and axial. The maximum allowable fan vibration shall be less than 0.08 in./sec peak velocity; filter-in reading as measured at the fan RPM. This report shall be provided at no charge to the customer upon request.

F. Manufacturers that do not comply with paragraph 1.6, A must also provide, at the owner and engineer's option and manufacturer's expense, witness testing of fan discharge and entrainment airflow, performed in an AMCA accredited laboratory, in accordance with AMCA 210 and 260. This test shall verify the critical and safety related dilution performance of the high plume dilution blower, as stated by the manufacturer.

G. Laboratory exhaust system defined in this section shall have a 36 month warranty.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver exhaust fans as factory-assembled units with protective crating and covering as recommended by the manufacturer.

B. Handle exhaust fans to comply with manufacturers written rigging and installation instructions for unloading and moving to final location.

1.08 COORDINATION

A. Coordinate installation of roof curbs, equipment supports, and roof penetrations with roof construction.

1.09 WARRANTY

A. Warranty: The warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.

PART 2 - PRODUCTS

2.01 GENERAL

A. Base fan performance at standard conditions (density 0.075 Lb/ft3).

B. Each fan shall be direct driven in AMCA arrangement 2 according to drawings.

C. Fans to be equipped with 316 stainless steel lifting lugs for corrosion resistance.

D. Fasteners exposed to corrosive exhaust shall be stainless steel.

E. Curb cap shall be 316 stainless steel for corrosion resistance.

F. Fan assemblies that use flexible connectors that can fail and cause loss of laboratory containment shall not be acceptable.

G. Fan assembly shall be designed for a minimum of 125-mph wind loading, without the use of guy wires.

2.02 CORROSION RESISTANT COATING

A. All fan and system components (fan, nozzle, wind band, plenum) shall be corrosion resistant coated with LabCoat™, a two part electrostatically applied and baked, sustainable, corrosion resistant coating system; or Heresite P-413C. Standard finish color to be gray.

B. All parts shall be cleaned and chemically prepared for coating using a multi-stage wash system which includes acid pickling that removes oxide, increases surface area, and improves coating bond to the substrate.

C. The first powder coat applied over the prepared surface shall be a zinc rich epoxy primer (no less than 70% zinc) and heated to a gelatinous consistency (partial cure) at which the second powder coat of polyester resin shall be electrostatically applied and simultaneously be cured at a uniform temperature of 400°F.

D. The coating system shall not be less than a total thickness of 6 mils, is not affected by the UV component of sunlight (does not chalk), and has superior corrosion resistance to acid, alkali, and solvents. Coating system shall exceed 4000 hour ASTM B117 Salt Spray Resistance.

E. Note that 10-20 mil thick wet coating systems pollute the environment (air and water), and that these manually applied coatings are not uniform over the impeller surface and can cause fan imbalance and vibration.

2.03 FAN HOUSING AND OUTLET

A. Fan housing to be aerodynamically designed with high-efficiency inlet, engineered to reduce incoming air turbulence.

B. Fan housing shall be bifurcated, allowing all drive components, including the motor, to be serviced without contact of the contaminated airstream. Must be manufactured of welded steel and meet specification section 2.15 for corrosion resistant coating. No uncoated metal fan parts will be acceptable.

C. Fan housings that are fabricated of polypropylene or fiberglass that have lower mechanical properties than steel, have rough interior surfaces in which corrosive, hazardous compounds can collect, and / or which chalk and structurally degrade due to the UV component of the sunlight shall not be acceptable.

D. A multi-stage air induction discharge nozzle shall be supplied by the fan manufacturer, be integral to the fan body, and be designed to efficiently handle an outlet velocity of up to 7000 FPM. The multi-stage nozzle shall induce ambient air up to 270% of fan capacity. Nozzle / Wind band assemblies that are manufactured by third party vendors, or that are fabricated of plastic or resins, having mechanical properties less than steel shall not be acceptable.

E. An integral fan housing drain shall be used to drain rainwater when the fan is de-energized.

F. A bolted & gasketed access door shall be supplied for impeller inspection and service.

G. Fan assembly shall be AMCA type C spark resistant construction minimum or as noted on the schedule.

2.04 FAN IMPELLER

A. Fan impeller shall be mixed flow design with non-stall characteristics. The impeller shall be electronically balanced both statically and dynamically exceeding AMCA Standards.

B. Fan impeller shall be manufactured of welded and coated steel. Reference specification section 2.15 for corrosion resistant coating.

C. Fan impellers that are fabricated of polypropylene or fiberglass that have lower mechanical properties than steel and lower maximum tip speeds are not acceptable.

D. Vacuum Seal: Fan impeller shall include a secondary fan blade located on the impeller back plate. This secondary impeller shall create a negative pressure at the shaft opening; preventing hazardous or toxic exhaust fumes from escaping through the housing shaft opening. Mechanical shaft seals that wear out and need to be replaced or seal systems that use hoses or tubes that can leak, are not acceptable.

2.05 BYPASS AIR PLENUM

A. For constant volume systems, the fan / nozzle assembly shall be connected directly to roof curb and exhaust duct without the need of the bypass air plenum.

B. For variable volume systems, a bypass air plenum shall be provided as shown on drawings. The plenum shall be provided with bypass air damper(s) for introducing outside air at roof level upstream of the fan, complete with bypass air rain hood and bird screen.

C. The plenum shall be constructed of welded and coated steel and meet specification section 2.15 for corrosion resistant coating. Plenums that are fabricated of plastics or resins that are combustible and have mechanical properties less than steel shall not be acceptable.

D. The bypass air plenum shall be mounted on factory fabricated roof curb provided by the fan manufacturer, as shown on the project drawings (see section 2.5).

E. Fan designs that use inlet flexible connectors that can leak causing loss of lab exhaust shall not be permitted.

F. Bypass air damper(s) shall be opposed-blade design for airflow control, airfoil design, fabricated of steel for structural rigidity, and coated with a minimum of 4 mils of chemically resistant Hi-Pro Polyester resin, electrostatically applied and baked. Bypass dampers shall have stainless steel damper rods, bearings and jamb seals and the blades shall have polymer edge seals. Dampers shall be suitable for application up to 15 inches wg. Damper blade drive linkage shall be set by manufacturer and welded to eliminate linkage slippage. All damper access and service (drive actuators) shall be performed outside of the contaminated plenum interior.

G. If stated in the schedule notes, an optional integral bypass air packed acoustic attenuator fabricated of 304 stainless steel shall be provided by the fan manufacturer (if shown on the drawings). Acoustic insertion loss shall be as follows:

63	125	250	500	1K	2K	4K	8K
3	8	12	21	31	24	16	11

H. Fan isolation damper(s), shall be parallel-blade design, airfoil design, fabricated of steel for structural rigidity, and coated with a minimum of 4 mils of chemically resistant Hi-Pro Polyester resin, electrostatically applied and baked. Bypass dampers shall have stainless steel damper rods, bearings and jamb seals and the blades shall have polymer edge seals. Dampers shall be suitable for application up to 15 inches wg. Damper blade drive linkage shall be set by manufacturer and welded to eliminate linkage slippage. All damper access and service, (including removal and replacement and drive actuators) shall be performed outside of the contaminated plenum interior.

I. Isolation damper actuator(s), if scheduled, shall be factory mounted and wired to a step-down transformer in a NEMA enclosure with wiring provided to each motor disconnect for field installation by others.

J. Blower / Plenum vibration isolation shall be limited to neoprene / cork vibration pads.

2.06 BYPASS AIR PLENUM CURB

A. Exhaust system manufacturer shall supply a structural support curb for the plenum of specified height as shown on the drawings.

B. Curb shall be fabricated of a minimum of 12 gauge corrosion-resistant coated steel and structurally reinforced.

C. Curbs shall be insulated.

D. When properly anchored to the roof structure, the standard curb / plenum / blower assembly shall withstand wind loads of up to 125 mph without additional structural support.

2.07 FAN MOTOR AND DRIVE

A. Motors shall be premium efficiency, standard NEMA frame, 900, 1200, or 1800 RPM, TEFC with a 1.15 service factor, as scheduled. A factory-mounted NEMA 3R disconnect switch, mounted and wired, shall be provided for each fan. Motor maintenance shall be accomplished without fan or fan impeller removal, or requiring maintenance personnel to access the contaminated exhaust components.

B. Motor mounting shall be “C-face” and / or foot mount.

C. Drive arrangement shall be AMCA arrangement #2, utilizing a direct mount coupling connecting the motor shaft and fan impeller shaft. Belt drive arrangement #9 or #10, or direct drive arrangement #4 requiring access and handling of hazardous and contaminated fan components are not acceptable. Fan shaft shall be 316 stainless steel.

D. Fan shaft bearing shall be Air Handling Quality, ball or roller pillow block type, and sized for an L-10 life of no less than 200,000 hours.

E. All shaft bearings and non-permanently lubricated motors shall have extended lube lines with zerk fittings.

F. Motor, coupling, and bearing shall all be outside the contaminated exhaust, and be capable of replacement without disassembling fan and accessing hazardous and contaminated fan components.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The Requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, and DIVISION 1, GENERAL REQUIREMENTS, apply to the work in this section.

1.02 DESCRIPTION

A. Work Included:
   1. Provide all equipment and accessories for the packaged rooftop gas/electric air conditioning units as specified herein.
   2. Controls and Instrumentation as specified herein.

B. Starters.

C. Electrical power connections.

1.03 SCOPE

A. Installation of packaged, gas/electric, rooftop air conditioning units. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.04 RELATED DOCUMENTS

A. This Section includes rooftop heating and cooling units.

B. Related Sections include the following:
   1. Division 1
   2. Division 7 Section "Manufactured Roof Specialties" for type and style of roof curbs and equipment supports.
   3. Division 15 Section "Mechanical Vibration Controls and Seismic Restraints" for manufactured isolation bases.
   4. Division 15 Section "Control Systems Equipment" for temperature-control devices, and control wiring and control devices connected to energy recovery units.

1.05 SUBMITTALS

A. Product Data: Include manufacturer's technical data for each model indicated, including rated capacities of selected model clearly indicated; dimensions; required clearances; shipping, installed, and operating weights; furnished specialties; accessories; and installation and startup instructions.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loadings, required clearances, components, and location and size of each field connection.

C. Commissioning Reports: Indicate results of startup and testing commissioning requirements. Submit copies of checklists.

D. Maintenance Data: Maintenance manuals specified in Division 1.

E. Warranties: Special warranties specified in this Section.

1.06 QUALITY ASSURANCE

A. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Code for Mechanical Refrigeration."

B. Energy Efficiency Ratio: Equal to or greater than prescribed by ASHRAE 90.1, "Energy Efficient Design of New Buildings except Low-Rise Residential Buildings" and Title 24 California Codes.

C. Listing and Labeling: Provide electrically operated components specified in this Section that are listed and labeled.
   1. The rooftop unit(s) shall be certified in accordance with UL Standard 1995 and ANSI Standard Z21.47
   2. The rooftop unit(s) shall be safety certified by an accredited testing laboratory and the nameplate shall carry the label of the certification agency.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver rooftop units as factory-assembled units with protective crating and covering as recommended by the manufacturer.

B. Coordinate delivery of units in sufficient time to allow movement into building.

C. Handle rooftop units to comply with manufacturers written rigging and installation instructions for unloading and moving to final location.

1.08 COORDINATION

A. Coordinate installation of roof curbs, roof plenums, equipment supports, and roof penetrations with roof construction. Roof specialties are specified in Division 7 Sections.

1.09 WARRANTY

A. Heat Pump Unit, Roof-Mounted: Compressor shall have a five-year warranty.

B. Air Cooled Condensing Unit: Unit shall have 5-year limited compressor warranty.

1.10 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents.
   1. Filters: One set of 4" filters for each unit to be installed prior to air balance.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Daikin (Basis of Design, VRF & Split Systems)

2.02 SPLIT SYSTEM AC UNIT

A. General: Furnish and install split system air conditioner, with R410A refrigerant, and complete with automatic controls. Equipment shall be shipped factory assembled, wired, tested, and ready for field connections.

B. Quality Assurance:
1. Unit shall be ETL or UL listed and labeled.
2. Unit shall be manufactured in a facility registered to ISO 9001:2000.
3. Unit shall be rated in accordance with ARI standard 210.

C. Delivery, Storage and Handling: Follow manufacturer's recommendations.

D. Cooling System: The total certified cooling capacity shall not be less than scheduled. The compressor power input shall not exceed that of the unit specified.

E. Indoor Section: Wall mounted, ceiling surface mounted, or ceiling recessed mounted, as indicated on Drawings.
1. Cabinet:
   a. Wall mounted: Molded white high strength plastic.
      1) Provide wall mounted unit with factory mounting plate.
   b. Ceiling surface mounted: Molded white high strength plastic with provision for outside air duct connection.
   c. Ceiling recessed mounted: galvanized steel with provision for outside air duct connection.
2. Fans: Double inlet, forward curved, statically and dynamically balanced.
3. Fan Motor: Direct drive, permanently lubricated, with two or 4 speed operation for unit size scheduled on Drawings.
4. Air Outlet: With motorized horizontal and vertical vanes.
   a. Wall and ceiling surface mounted units: Horizontal vane shall close air outlet upon unit shut-down.
5. Evaporator Coil: Aluminum fins mechanically bonded to copper tubes. Coils shall be pressure leak tested.
6. Insulation: Interior surfaces exposed to the airstream shall be fully insulated.

F. Outdoor Section:
1. Casing: Galvanized steel plate, powder coated with acrylic or polyester.
2. Condenser Fan Grille: ABS plastic.
3. Fan and fan motor: Direct drive, totally enclosed, propeller type, permanently lubricated, horizontal discharge.
4. Compressor: Variable speed rotary type, with crankcase heater and accumulator. Compressor shall be capable of operating at 0 degrees F. Compressor mounted on vibration isolator pads.
5. Coil: Aluminum fins mechanically bonded to copper tubes. Coils shall be pressure leak tested. Provide coil with integral metal guard.

G. Controls: Hard wired, microprocessor based, wall mounted controller with LCD display shall provide the following functions, as a minimum:
1. 7-day programmable timer.
2. Test and check functions.
3. Diagnostic functions.
4. Vane position control.
5. Fan speed adjustment.

6. Temperature adjustment.
7. Automatic restart.
8. Mode selection, including cool/dry/fan.
    a. Provide lockable enclosure for wall mounted controller.

H. Safeties: Shall include the following, as a minimum:
1. Five minute compressor anti-recycle timer.
2. High pressure protection.
3. Current and temperature sensing motor overload protection.

I. Filters: Provide 1 inch thick fiberglass throwaway filters with cardboard holding frames for indoor unit. Provide sufficient filters for four complete changes for each unit.

J. Service Access: All components, wiring, and inspection areas shall be completely accessible through removable panels.

K. Refrigerant Piping:
1. Provide factory pre-charged and sealed line set piping, length to suit the location of equipment. Tubing sizes shall be in accordance with manufacturers written instructions.
2. Provide refrigeration piping in accordance with Article, Refrigerant Piping, in this Section.

L. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or equal:
1. Mitsubishi Electric Corporation.
2. Carrier Corporation.

M. Owner Training: Manufacturer shall provide one on-site 2-hour training session for Owners' maintenance personnel.

2.03 VARIABLE REFRIGERANT FLOW - SPLIT SYSTEM HEAT PUMPS – HEAT RECOVERY TYPE

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following, or equal:
1. Daikin w/BAcnet integration to Pelican Controls

B. Indoor Units
1. General:
    a. Galvanized steel casing.
    b. Ducted, ceiling-recessed, or in-room units per Drawings schedule. Available styles shall include:
        1) Concealed (ducted) units:
            a) Horizontal/Vertical air handling unit for closet or above-ceiling installation.
            b) Ceiling concealed.
            c) Ceiling concealed, with high-static option.
        2) Recessed Units:
            a) Ceiling-recessed units: One-, two-, and four-way throw configurations.
            b) Floor-standing, recessed.
        3) In-room units:
            a) Ceiling-suspended.
            b) Wall-mounted.
            c) Floor-standing.

c. Factory assembled and tested with factory wiring, piping, expansion valve, control circuit board, and fan motor. Units shall have, as a minimum, the following functions:
   1) Self-diagnostic function.
   2) Auto restart function.
   3) Auto changeover function.
   4) Emergency operation function.
   5) 3-minute time delay shall provide minimum 3 minute run time for cooling and heating.
d. Indoor unit and refrigerant pipes shall be charged with dehydrated air prior to shipment from the factory.
e. The indoor units shall be equipped with a return air thermistor.

2. Unit Cabinet:
   a. The cabinet shall be insulated with foamed polystyrene and polyethylene insulation.
3. Fan:
   a. The fan shall be direct-drive type, statically and dynamically balanced impeller with multiple high and low fan speeds. Auto fan setting shall automatically adjust fan speed.
   b. The fan motor shall be thermally protected.
   c. The fan motor shall be equipped as standard with adjustable external static pressure (ESP) settings.
   d. For single-phase fan motors sized larger than 1/12 hp and smaller than 1 hp, refer to Article, Electric Motors, in Section 23 00 50, Basic HVAC Materials and Methods.
   e. Ceiling recessed and wall-mounted units shall have motorized louvers to direct airflow in up and down directions, and manually adjusted vanes for side-to-side adjustment of airflow direction.
   f. Ceiling suspended units shall have motorized guide vanes to vary airflow direction.
   g. All units shall be provided with a condensate drain pan below the coil. Drain pans shall have primary and overflow drains.
   h. Ceiling recessed units shall have an integral condensate pump. Refer to Drawings schedule for additional condensate pump requirements.
4. Coil:
   a. Coils shall be aluminum fins bonded to internally grooved copper tubes. Fins shall have corrosion-resistant coating.
   b. The coils shall be pressure tested at the factory.
   c. Unit shall be provided with ball-type refrigerant service valves at each refrigerant piping connection.
   d. A condensate pan and drain connections shall be provided under the coil. Provide overflow cutoff switch to disable unit during overflow condition.
5. Filters:
   a. Provide indoor units manufactured to accept washable filter media with two sets for each unit.
   b. Refer to Drawings schedule, and article, Filters, in this Section for filter requirements for ducted, above-ceiling units incorporating mixing boxes.
6. Controls:
   a. Units shall have controls provided by the manufacturer to perform input functions necessary to operate the system.
   b. Operating modes shall include Auto Changeover (heat recovery systems only), Heating, Cooling, Dry, and Fan Only.
   c. Units shall be compatible with a BMS system via optional LonWorks or BACnet gateways.
   d. Units incorporating mixing boxes for economizer operation shall be furnished with economizer control system certified as meeting the requirements for Fault

Detection and Diagnostics (FDD) in the California Building Energy and Efficiency Standards.

C. Outdoor Condensing Units:
   1. General:
      a. Condensing unit shall be factory assembled and pre-wired with all necessary electronic and refrigerant controls. The refrigeration circuit of the condensing unit shall consist of scroll compressors, motors, fans, condenser coil, electronic expansion valves, solenoid valves (when required by manufacturer), 4-way valve, distribution headers, capillaries, filters, shut off valves, oil separators, service ports and refrigerant accumulator and regulator.
      b. The following safety devices shall be included as part of the condensing unit; high pressure sensor and switch, low pressure sensor, control circuit fuses, over- and under-current protection, phase failure and phase reversal protection, fusible plug or pressure relief valve, and crankcase heater..
      c. All refrigerant lines shall be individually insulated between the condensing units and indoor units. .
      d. The system will automatically restart operation after a power failure without loss of settings.
      e. The condensing units shall be modular in design and allow for side-by-side installation with minimum spacing. Provide kit for field piping between connected condensing units. Refer to Drawings schedules and diagrams for connected units.
      f. To ensure the liquid refrigerant does not flash when supplying to indoor units, the circuit shall be provided with a sub-cooling feature.
      g. Oil recovery cycle shall be automatic occurring 2 hours after start of operation, and thereafter every 8 hours of operation. Each system shall maintain continuous heating during oil return operation. Reverse cycle (cooling mode) oil return during heating operation shall not be permitted due to the potential reduction in space temperature.
      h. The condensing unit shall be capable of heating operation at 0°F dry bulb ambient temperature without additional low ambient controls or an auxiliary heat source.
         1) Provide condensing unit with low ambient kit when scheduled on Drawings. Low ambient kit components shall be furnished with NEMA 4x rated control box for outdoor installation.
   2. Unit Cabinet:
      a. The condensing unit cabinet shall be weatherproof and corrosion resistant. The unit shall be constructed from rust-proofed galvanized steel panels coated with a baked enamel or powder coat finish.
   3. Fan:
      a. The condensing unit shall consist of one or more direct-drive, vertical discharge propeller fans with blades constructed of thermoplastic polymer material.
      b. The condensing unit fan motor shall be variable-speed digitally commutating (DC) type. Fan motor dipswitch shall allow increase of external static pressure setting.
      c. The fan motor shall have inherent protection and permanently lubricated bearings and be mounted on vibration isolators.
      d. The fan motor shall be provided with a fan guard to prevent contact with moving parts.
   4. Condenser Coil:
      a. Coils shall be aluminum fins bonded to internally grooved copper tubes. Fins shall have corrosion-resistant coating.
      b. The coils shall be pressure tested at the factory.
      c. Unit shall be provided with ball-type refrigerant service valves at each refrigerant piping connection.
      d. Condensing unit cabinet shall be provided with metal coil guard.

5. Compressor:
    a. The scroll compressors shall be variable speed pulse-width inverter (PVM inverter) controlled type, hermetically sealed, which shall vary the compressor speed to follow fluctuations in total cooling and heating load, determined by the suction gas pressure as measured in the condensing unit.
        1) The inverter driven compressor motor in each condensing unit shall be the reluctance DC (digitally commutating) type.
    b. Each compressor shall be equipped with a crankcase heater, high pressure safety switch, and internal thermal overload protector.
    c. Oil separators shall be provided as part of the compressor module together with an intelligent oil management system.
    d. The compressor shall be isolated to avoid the transmission of vibration.
    e. In the event of compressor failure the remaining compressors shall continue to operate and provide heating or cooling as required at a proportionally reduced capacity.
    f. Multiple compressor operation sequencing: When multiple condenser modules are combined, operation hours of each compressor shall be balanced by means of a duty cycling function, enabling sequential starting of each module at each start/stop cycle, completion of oil return, and completion of defrost, or every 8 hours.
    g. Refrigerant shall be R410a.

D. Indoor Heat Recovery Controllers: Two- or three-pipe refrigerant control units to match outdoor condensing unit configuration. Heat recovery units shall be installed between outdoor condensing units and indoor zone-conditioning units. Indoor heat recovery unit shall operate to remove heat from zones requiring cooling, and distribute that heat to zones requiring heating. Refer to Drawings for unit locations. Refer to Drawings schedules and details for unit configuration and electrical requirements.

E. All refrigerant lines shall be individually insulated between the condensing units and indoor units.
    1. For interconnecting piping between outdoor and indoor equipment, refer to Article, Refrigeration Pipe and Fittings, in this Section.

F. System Controls:
    1. General: The controls network shall be capable of supporting remote controllers, schedule timers, system controllers, centralized controllers, an integrated web based interface, graphical user workstation, and system integration to a Building Management Systems via BACnet® and/or LonWorks®.
    2. For additional information, Refer to Section 23 09 23, Direct Digital Control System for HVAC.
    3. Programmable Local Remote Controller: The programmable local remote controller shall be capable of controlling a minimum of 16 indoor units serving a single zone, and of operation with or without a central controller. Controller shall have the following minimum functions:
        a. On/Off.
        b. Operating mode (cool, heat, auto, dry, and fan, depending on selected system type).
        c. Temperature setting.
        d. Fan speed setting.
        e. Air swing settings.
        f. Room temperature and humidity display.
        g. Occupancy sensor capable.
        h. Schedule operations.
        i. Allow/Prohibit local remote control functions.

j. Unit level error code display.
k. Test run.
l. Set temperature range limit.
m. Override of scheduled functions for indoor unit groups.
n. Lock out of On/Off, Mode, Set Temp., Hold-button, and Air Direction.

4. Centralized Controller: The controller shall support system configuration, daily/weekly scheduling, monitoring of operation status, error email notification, online maintenance tool and malfunction monitoring. The controller shall have basic operation controls which can be applied to an individual indoor unit, a group of indoor units, or all indoor units. (cool, heat, auto, dry, and fan)The central controller shall be able to enable or disable operation of local remote controllers via a PC. Controller shall have the following minimum functions:
   a. On/Off.
   b. Operating mode (cool, heat, auto, dry, and fan, depending on selected system type).
   c. Temperature setting.
   d. Fan speed setting.
   e. Air swing settings.
   f. Room temperature display.
   g. Schedule operations.
   h. Morning warm-up/cool-down.
   i. Night setback setting.
   j. Allow/Prohibit local remote control functions.
   k. Unit level error code display.
   l. External input/output.
   m. PC data back-up.
5. BACnet® and/or LonWorks® Gateway: Gateway to allow connection to Energy Management Systems shall allow changes to the following, as a minimum:
   a. On/Off.
   b. Temperature setting.
   c. Alarm.
   d. Operating mode.
   e. Fan speed setting.
   f. Allow/Prohibit local remote control functions.
   g. High/Low limit setback temperature (heat recovery systems only).
   h. Air direction/swing settings.
6. Web browser: The controls network shall allow multiple individual users to monitor and control user defined zones via a network PC web browser.

G. Owner Training: Manufacturer shall provide one on-site 8-hour training session for Owners' maintenance personnel. 8-hour training shall include instruction in use of equipment manufacturer's service tool.

END OF SECTION

PART 1 - GENERAL

1.01 SCOPE

A. Provide electrical systems as shown and specified, including wiring and connections to any electrical equipment provided and any work not specifically noted but that can be reasonably inferred or is necessary to provide a complete functional system.

B. Table of Contents, Division 26 – Electrical:

SECTION NO.	SECTION TITLE
26 05 00	Common Work Results for Electrical
26 05 19	Low-Voltage Electrical Power Conductors and Cables
26 05 26	Grounding and Bonding for Electrical Systems
26 05 29	Hangers and Supports for Electrical Systems
26 05 33.13	Raceway for Electrical Systems
26 05 33.16	Boxes for Electrical Systems
26 05 43	Underground Ducts for Electrical Systems
26 05 48	Vibration and Seismic Controls for Electrical Systems
26 05 53	Identification for Electrical Systems
26 05 73	Power System Studies
26 09 23	Lighting Control Devices
26 22 13	Low-Voltage Distribution Transformers
26 24 13	Switchboards
26 24 16	Panelboards
26 27 26	Wiring Devices
26 27 13	Electricity Metering
26 28 13	Fuses
26 28 16	Enclosed Switches and Circuit Breakers
26 31 00	Photovoltaic Power Systems
26 36 23	Automatic Transfer Switches
26 43 13	Surge Protective Devices (SPD)
26 51 00	Interior Lighting
26 56 00	Exterior Lighting

C. Work included: This section includes general administrative and procedural requirements for Division 26. The following administrative and procedural requirements are included in this section to supplement the requirements specified in Division 01 General Requirements.
1. Quality assurance.
2. Definition of terms.
3. Submittals.
4. Coordination.
5. Record documents.
6. Operation and maintenance manuals.
7. Project management and coordination service.
8. Contract modification pricing procedures.
9. Excavation.
10. Rough-in.
11. Electrical installation.
12. Cutting, patching, painting, and sealing.
13. Field quality control.
14. Cleaning.
15. Project closeout.

16. Interface/Responsibility Matrix.

D. Related Work: Consult all other Sections, determine the extent and character of related Work, and properly coordinate Work specified herein with that specified elsewhere to produce a complete and operable installation.
   1. General and supplementary conditions: Drawings and general provisions of Contract and Division 01 of the Specifications, apply to all Division 26 Sections.
   2. Earthwork: Include trenching, backfilling, boring and soil compaction as required for the installation of underground conduit, in-grade pull boxes, vaults, lighting pole foundations, etc. Refer to Division 31, Earthwork.
   3. Selective demolition: Nondestructive removal of materials and equipment for reuse or salvage as indicated. Also dismantling electrical materials and equipment made obsolete by these installations. Refer to Division 02, Selective Demolition.
   4. Concrete work: Include forming, steel bar reinforcing, cast-in- place concrete, finishing and grouting as required for underground conduit encasement, light pole foundations, pull box slabs, vaults, housekeeping pads, etc. Also includes setting of floor boxes in existing concrete slabs, saw-cutting of existing slabs and grouting of conduits in saw-cut. Refer to Division 03, Concrete.
   5. Miscellaneous metal work: Include fittings, brackets, backing, supports, rods, welding and pipe as required for support and bracing of raceways, luminaires, panelboards, distribution boards, switchboards, motor control centers, etc. Refer to Division 05, Miscellaneous Metals.
   6. Miscellaneous lumber and framing work: Include wood grounds, nailers, blocking, fasteners and anchorage for support of electrical materials and equipment. Refer to Division 06, Rough Carpentry.
   7. Moisture protection and smoke barrier penetrations: Include membrane clamps, sheet metal flashing, counter flashing, caulking and sealant as required for waterproofing of conduit penetrations and sealing penetrations in or through fire walls, floors, ceiling slabs and foundation walls. All penetrations through vapor barriers at slabs on grade shall be taped and made vapor tight. Refer to Division 07, Thermal and Moisture Protection.
   8. Access panels and doors: Required in walls, ceilings, and floors to provide access to electrical devices and equipment. Refer to Division 08, Access Doors also, Division 05, Metals.
   9. Painting: Include surface preparation, priming and finish coating as required for electrical cabinets, exposed conduit, pull and junction boxes, etc. where indicated as field painted in this Division. Refer to Division 09, Painting.
   10. Luminaire supports: Provide slack support wire for luminaires installed in acoustical tile or lay-in suspended ceilings. Refer to Division 09, Acoustical Treatment.

E. Provide all necessary electrical connections to all equipment provided by other divisions. Obtain specific power and control wiring requirements and connection points from others to perform electrical work. Contractor shall assist in testing equipment but responsibility is limited to correctly wiring and terminating electrical connections. Work furnished and installed under another Division requiring connections under this Division includes but is not limited to:
   1. Electric motors.
   2. Package mechanical equipment: fans, fan coil units, pumps, boilers, compressors, etc.
   3. Flow switches and valve monitors for sprinkler system.
   4. Elevator controllers.
   5. Pre-wired electrified partition furniture.
   6. Temperature control panel(s). (Line voltage only).
   7. Irrigation controller(s). (Line voltage only).
   8. FM-200 control panel. (Line voltage only).
   9. Kitchen equipment and appliances.

10. Laboratory equipment.
11. Electric signage.
12. Electric door locks.
13. Electric heat trace tape.
14. Door hold-open/release devices.
15. Variable frequency drive units.
16. Chiller starters.
17. Motorized roll down/sliding doors and grills.
18. Motorized dock levelers.
19. Projection screens.

F. Items furnished under this Division, but installed and connected under another Division includes but is not limited to:
1. Diesel generator day tank. (Division 22)
2. Diesel generator silencer. (Division 23)
3. Generator daytank fuel strainer, manual fuel pump, check valve and any other specified accessories. (Division 22)
4. Remote radiator for generator. (Division 22)

G. Items furnished under another Division, but installed and connected under this Division includes but is not limited to:
1. Wall mounted control stations for motorized roll down and sliding doors.
2. Electric fire sprinkler water flow bells.
3. Speed control switches for ceiling exhaust fans

1.02 RELATED SECTIONS

A. Section 01 73 29 - Cutting and Patching

B. Section 01 33 00 - Shop Drawings, Product Data and Samples

C. Section 01 77 00 – Closeout Procedures

D. Section 01 78 00 – Closeout Submittals

E. Section 03 30 00 – Cast in Place Concrete

F. Section 07 92 00 - Joint Sealants

G. Section 07 84 00 – Fire Stopping

H. Division 5 – Metals.

I. Division 6 – Rough Carpentry.

J. Division 8 – Access Doors.

K. Division 9 – Finishes.

L. Division 21 – Fire Suppression

M. Division 22 - Mechanical Plumbing

N. Division 23 – Mechanical HVAC

O. Division 27 – Communications

P. Division 28 – Electronic Safety and Security

Q. Division 31 - Earthwork

1.03 QUALITY ASSURANCE

A. Reference to Codes, Standards, Specifications and recommendations of technical societies, trade organizations and governmental agencies shall mean that latest edition of such publications adopted and published prior to submittal of the bid. Such codes or standards shall be considered a part of this Specification as though fully repeated herein.

B. When codes, standards, regulations, etc. allow Work of lesser quality or extent than is specified under this Division, nothing in said codes shall be construed or inferred authority for reducing the quality, requirements, or extent of the Contract Documents. The Contract Documents address the minimum requirements for construction.

C. Work shall be performed in accordance with all applicable requirements of the latest edition of all governing codes, rules and regulations including but not limited to the following minimum standards, whether statutory or not:
1. California Electric Code (CEC).
2. California Building Code (CBC).
3. California Fire Code (CFC).
4. California Mechanical Code (CMC).
5. California Energy Code (CEC)
6. California Plumbing Code (CPC)
7. California Green Buildings Standards Code (CGBSC)

D. Standards: Equipment and materials specified under this Division shall conform to the following standards where applicable:

ACI	American Concrete Institute
ANSI	American National Standards Institute
ASTM	American Society for Testing Materials
CBM	Certified Ballast Manufacturers
ETL	Electrical Testing Laboratories
FS	Federal Specification
IEEE	Institute of Electrical and Electronics Engineers, Inc.
IPCEA	Insulated Power Cable Engineer Association
NEMA	National Electrical Manufacturer's Association
UL	Underwriters' Laboratories

E. Independent Testing Agency qualifications:
1. Testing Agency shall be an independent testing organization that will function as an unbiased authority, professionally independent of Manufacturer, Supplier and Contractor, furnishing and installing equipment or system evaluated by Testing Agency.
2. Testing Agency shall be regularly engaged in the testing of electrical equipment, devices, installations, and systems.
3. Testing Agency shall meet Federal Occupational Safety and Health Administration (OSHA) requirements for accreditation of independent testing laboratories, Title 9, Part 1907.

4. On-site technical personnel shall be currently certified by the International Electrical Testing Association (NETA) in electrical power distribution system testing.
5. Testing Agency shall use technicians who are regularly employed by the firm for testing services.
6. Contractor shall submit proof of above Testing Agency qualifications with bid documentation upon request.

F. All base material shall be ASTM and/or ANSI standards.

G. All electrical apparatus furnished under this Section shall conform to NEMA standards and the CEC and bear the UL label where such label is applicable.

H. Certify that each welder performing Work has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone re-certification.

1.04 DEFINITIONS

A. The following list of terms as used in the Division 26 documents shall be defined as follows:
1. "Provide": Shall mean furnish, install, and connect unless otherwise indicated.
2. "Furnish": Shall mean purchase and deliver to Project site.
3. "Install": Shall mean to physically install the items in-place.
4. "Connect": Shall mean make final electrical connections for a complete operating piece of equipment.
5. "As directed": Shall be as directed by the Owner or their authorized Representative.
6. "Utility Companies": Shall mean the company providing electrical, telephone or cable television services to the Project.

1.05 DRAWINGS AND SPECIFICATIONS

A. For purposes of clearness and legibility, drawings are essentially diagrammatic and, although size and location of equipment are drawn to scale wherever possible, the Contractor shall make use of all data in all the contract documents and shall verify this information at building site.

B. Information presented on Drawings and in the Specifications is based upon latest data available during their preparation. The Drawings and Specifications are for the assistance and guidance of the Contractor and exact locations, distances, levels, etc. will be governed by the structures and the site the contractor shall accept same with this understanding.

C. The drawings indicate required size and points of termination of conduits, and suggest proper routes to conform to structure, avoid obstructions and preserve clearances. However, it is not intended that drawings indicate all necessary offsets, and it shall be the work of the Contractor to make the installation in such a manner as to conform to structure, avoid obstruction, preserve headroom and keep openings and passageways clear.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Contractor shall be responsible for delivery, storage, protection and placing of all equipment and materials.

B. Equipment stored and installed at the job site shall be protected from dust, water or other damage. Cover all equipment stored exposed to weather.

1.07 STRUCTURAL REQUIREMENTS

A. Structural members shall not be cut or modified in any manner without specific instructions from the structural engineer.

1.08 SEISMIC RESISTANCE

A. Provide systems, units, equipment, and parts to meet or exceed current applicable requirements for seismic resistance specified by codes, regulations, or agencies having jurisdiction. Include supports, anchors, braces, and other restraining devices required. Seismic restraints shall meet the local Seismic Zone requirements, SMACNA, and California Building Code (CBC), Chapter 16a, which are the responsibility of the Contractor.

B. See Section 26 05 29 Hangers and Supports.

1.09 RULES AND REGULATIONS

A. All work and materials shall be in full accordance with the latest rules and regulations of California Code of Regulations, Title 20 & Title 24 California Building Standards Code, California Electrical Code, Local City and County Code, applicable regulations of local utility companies, E.U.S.E.R.C. Standards, and General Order 95 of the Public Utilities Commission, and any other applicable laws or regulations.

B. Nothing in these drawings or specifications is to be construed to permit work not conforming to the above codes.

1.10 PERMITS AND FEES

A. Obtain all permits and pay all required fees for permits and/or utility services. Inspections required during the course of construction shall be arranged as required. On completion of the work furnish the Owner's representative with certificates of inspection.

B. Include in bid all costs for electrical service including meter, and service lines installed by a power utility company or a power utility company approved contractor.

1.11 SITE CONDITIONS

A. Assume all responsibility for damage to adjoining properties; and restore property to its original condition, should damage occur as a result of the work of this section. Contractor shall thoroughly familiarize himself with all site conditions. Should utilities not shown on the drawings be found during excavations, promptly notify the Owner's Representative for instructions as to further action. Failure to do so will make the Contractor liable for any and all damage thereto arising from his operations subsequent to discovery of such utilities not shown on plans.

1.12 SUBMITTALS

A. Submit in accordance with Section 01 33 00 Shop Drawings, Product Data and Samples.
   1. Format: Furnish submittal data in electronic format for each Specification Section with a table of contents listing materials by Section and paragraph number and electronically bookmarked.

B. General

1. A submittal schedule shall be issued by the Contractor within 15 days of award of the contract. This schedule shall allow for timely review and approval as required by the contract documents.
2. These requirements apply only to substitutions, submittals, and shop drawings.
3. The contractor shall review all submittals prior to submission to the Architect. Submittals not reviewed by the contractor will be returned to the contractor and will not be reviewed.
4. Any deviations from specified requirements shall be clearly indicated in submittals.
5. Any errors in or omissions from submittals and any consequences of these are the responsibility of the Contractor.
6. Partial or incomplete submittals may be rejected as not complying with requirements; the Contractor shall be liable for any resultant consequences.
7. Delayed submittals may be rejected as not complying with requirements. Whether accepted or rejected, delayed submittals will not be considered justification for extension of contract time or similar relief.
8. Submittals not required or permitted by the Specifications but made at the option of the Contractor, will be returned without review unless accompanied with written valid justification.
9. Submittal items improperly included with those of another category (such as a proposed substitution included with shop drawing submittal) are not valid and will be returned without review.
10. Within 35 calendar days after award of the contract, and before fabrications and installation of any material or ordering of any materials, submit for approval one copy in PDF format of complete submittal data on specified and proposed substituted equipment and materials. Submittals shall list all materials proposed identified with drawing symbols and specific data on equipment such as arrangements, performance curves, sizes, capacity, motor locations, and other pertinent data. Check all submittals for conformance to the requirements of the Construction Documents before forwarding to the Owner's Representative for each item. No consideration will be given to substitutions submitted past 35 day limit. The contractor shall be responsible for all quantities and errors and omissions of submittals. Furnish samples when requested.
11. Equipment and materials specified as part of the specifications and drawings are listed by two manufacturers names. The first named manufacturer is the basis of design. The second named manufacturer has been determined to be an equivalent in quality or utility. The second named has not been specifically determined to conform to the first named in size, layout, electrical power, voltage, or impacts to building structure. The contractor is bound by all requirements for substitutes, as described below, for all second named manufacturers and equivalent equipment or products.
12. Each reviewed submittal will be marked to indicate review and directions as stated below.
13. Acceptance of a submittal does not relieve the Contractor of responsibility for omissions from the submittal or errors in the submittal

C. The Contractor shall submit detailed Drawings of all electrical equipment rooms and closets if the proposed installation layout differs from the construction documents. Physical size of electrical equipment indicated on the Drawings shall match those of the electrical equipment that is being submitted for review, i.e.: switchboards, panelboards, transformers, control panels, etc. Minimum scale: 1/4" = 1'- 0". Revised electrical equipment layouts must be approved prior to release of order for equipment and prior to installation.

1.13 REVIEW

A. Submittals will be reviewed for general acceptability, not necessarily including all details. The engineers review is for general conformance with the design concept of the project and the information given in the contract documents. The contractor is solely responsible for confirming

and correlating all quantities and dimensions; selecting fabrication processes and techniques of construction; coordinating the work with that of other trades and performing all work in a safe and satisfactory manner. Corrections of comments made on this submittal during this review do not relieve contractor from compliance with the requirements of the contract documents or with its responsibilities listed herein.

1. Proposed substitutes will be judged not only for the acceptability of the items themselves, but also how they will be used under the conditions of the particular project.
2. Proposed substitutions will be judged also for compliance with qualifications and conditions stipulated in paragraph 1.15.

B. Each reviewed submittal will be marked to indicate review and directions as stated below.
   1. Acceptance of a substitute does not waive the specified requirements.
   2. Once a substitution is accepted, no revision or resubmittal may be made except for pressing and valid reason and after receipts of approval to do so.

1.14 REVIEW DIRECTIONS

A. The notation "No Exceptions Taken" indicates that no further submittal on the particular matter is required and that the Contractor may proceed with normally ensuing action. The notation may be applied to submittals on substitutions, shop drawings, record data, or operation and maintenance data. The submittal has only been reviewed for general conformance with the design concept of the Contract Documents. The contractor is responsible for the dimensions to be confirmed and correlated at the job site; information that pertains solely to the fabrication process or to the means and methods of construction; coordination of the work of all trades; and performing all work in a safe and satisfactory manner. This notation does not modify the contractor's duty to comply with the contract documents.

B. The notation "Make Corrections Noted" indicates that no further submittal on the particular matter is required, but the Contractor shall make all changes or corrections noted (but no others) before proceeding with normally ensuing action. The notation may be applied to submittals on substitutions or shop drawings (but usually not record data or operation and maintenance data).

C. The notation "Amend and Resubmit" indicates that the submittal is not accepted and must be revised, resubmitted, and reviewed again. In the case of submittal on substitutions and shop drawings so noted, the Contractor shall not proceed with any normally ensuing action until the resubmittal is reviewed. The notation may be applied to submittals on substitutions, shop drawings, record data, or operation and maintenance data.

D. The notation "Rejected - See Remarks" indicates that the submittal is not accepted and that resubmittal on the same subject matter is not allowed and will not be considered. The notation will be applied normally only to submittals on substitutions (usually not on shop drawings, record data, or operation and maintenance data).

E. The notation "Returned Without Review" indicates that the submittal or item has not been considered officially because it is either not proper, valid, required, or permitted by the Specifications and has no status or effect.

1.15 SHOP DRAWINGS

A. The contractor is responsible for providing all shop drawings as described below so that the design professional has the opportunity to determine if the contractor understands the contract documents. It is not the purpose of shop drawings to assure that the contractor is meeting the

requirements of the contract documents. Review and approval of a submittal neither extends nor alters any contractual obligation.

B. Accompany all substituted equipment with shop drawings showing revised equipment and/or equipment layouts in order to ascertain that substituted equipment does not adversely affect layout or work of others. Shop Drawings: The following conditions apply to shop drawings:
   1. Shop drawings are not and do not become Contract Documents.
   2. Processed shop drawing submittals and any instructions or requirements noted thereon are a part of the work, but they may not be used as a means of increasing the scope of the work.
   3. If deviations, discrepancies, or conflicts between shop drawing submittals and the Contract Documents are discovered either prior to or after the submittals are processed, the Contract Document requirements shall govern.

1.16 SUBSTITUTIONS

A. Whenever any equipment, material, or process is indicated or specified by patent of proprietary name and/or name of Manufacturer, in the Specifications and/or on the Drawings, it is understood that such specification is used to facilitate the description of the material and/or process and deemed to be followed by the words "or equal" unless noted "no substitute".

B. Substitute equipment and materials shall be equal in all respects including quality, arrangement, utility, physical size, capacity, and performance to those specified. Approval of substitute material will not relieve the contractor from complying with the requirement of the Drawings and Specifications. The contractor shall be responsible and at his own expense, for any changes caused by proposed substitutions which affect other parts of his own work or the work of other contractors.

C. The submittal of a proposed substitution shall clearly establish the following:
   1. The item can be transported into and installed in the intended space and in the manner shown.
   2. Required connections (electrical and other) can be properly made and adjoining work can be properly accomplished.
   3. The proposed substitute is similar to and of substance equal to that specified, is suited to the same use as that specified, and will perform the functions required by the design.
   4. The proposed substitute equipment will have the same minimum ratings and dimensions that accommodate the available space as the specified equipment.
   5. All performance requirements shall be at least equal to the specified product or equipment including short circuit current rating, selective coordination, noise levels, temperature ratings, bracing and insulation ratings, etc.

D. By submitting a proposed substitution, the Contractor agrees to the following:
   1. He will assume full responsibility for any and all modifications and necessary alterations arising from the use of the substitute item or material including all cost incurred by all other trades.
   2. He will assume full responsibility for any delay in the construction schedule resulting from the use of the substitution.
   3. He will prove harmless and indemnify the Owner and the Owner's design consultants from real or alleged damages that may result from the installation, use, or performance of a substitute material or product.

E. The following conditions apply to substitutions:

1. Submittals of substitutions are not and do not become part of the Contract Documents.
2. Contractor shall not order, fabricate, use, or install any substitute product or procedure unless he has received acceptance of the substitute from the Owner's Representative.
3. Should the Contractor install any substitute product in violation of the above he shall remove it and install the specified product at his own expense.
4. The Contractor shall provide a letter stating that all the above items shall apply to all substituted products and equipment.
5. Any submittal for substituted equipment or product that does not clearly show that the substituted item is equal shall be marked rejected and no further submittal shall be allowed on the substituted item. Provide in submittal format documentation that the proposed item is exactly as specified in the contract documents.

1.17 INSTALLATION

A. Manufacturer's Instructions:
1. When specifications require that installation comply with manufacturer's printed instructions, obtain and distribute copies of such instructions to parties involved in the installation.
2. Perform work in accordance with manufacturer's instructions. Do not omit any preparatory step or installation procedure unless specifically modified or exempted by specifications.
3. Handle, install, connect, clean, condition and adjust products in strict accordance with such instructions and in conformity with specified requirements.
4. Should job conditions or specified requirements conflict with manufacturer's instructions, consult with the Owner's Representative for further instructions.
5. Do not proceed with work without clear understanding.

1.18 COORDINATION

A. Discrepancies:
1. In the event of discrepancies within the Contract Documents, the Engineer shall be so notified, within sufficient time, as delineated in Division 01, prior to the Bid Opening to allow the issuance of an Addendum.
2. If, in the event that time does not permit notification or clarification of discrepancies prior to the Bid Opening, the following shall apply: The Drawings govern in matters of quantity and the Specifications govern in matters of quality. In the event of conflict within the Drawings involving quantities or within the Specifications involving quantities or within the Specifications involving quality, the greater quantity and higher quality shall apply. Such discrepancies shall be noted and clarified in the Contractor's Bid. No additional allowances will be made because of errors, ambiguities or omissions that reasonably should have been discovered during the preparation of the Bid.

B. Project conditions:
1. Examination of Project site: The Contractor shall visit the Project site and thoroughly review the locale, working conditions, conflicting utilities, and the conditions in which the Electrical Work will take place. Verify all existing conditions in the field. No allowances will be made subsequently for any costs that may be incurred because of any error or omission due to failure to examine the Project site and to notify the Engineer of any discrepancies between Contract Documents and actual Project site conditions.
2. Protection: Keep conduits, junction boxes, outlet boxes and other openings closed to prevent entry of foreign matter. Cover fixtures, equipment, devices, and apparatus and protect them against dirt, paint, water, chemical or mechanical damage, before and during construction period. Prior to final acceptance, restore to original condition any

fixture, apparatus or equipment damaged including restoration of damaged factory applied painted finishes. Protect bright finished surfaces and similar items until in service. No rust or damage will be permitted.

3. Supervision: Contractor shall personally or through an authorized and competent representative constantly supervise the Work from beginning to completion and, within reason, keep the same foreman and workmen on the Project throughout the Project duration.

C. Preparation:
   1. Drawings:
      a. Layout: General layout indicated on the Drawings shall be followed except where other Work may conflict with the Drawings.
      b. Accuracy: Drawings for the Work under this Section are essentially diagrammatic within the constraints of the symbology applied.

D. Utility company contacts:
   1. Contact for electrical service: Anthony Dias.

E. Coordinate arrangement, mounting, and support of electrical equipment:
   1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
   2. To provide for ease of disconnecting the equipment with minimum interference to other systems.
   3. To allow right of way for piping and conduit positioned at required slope.
   4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

F. Coordinate placement of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

1.19 WORKMANSHIP

A. Good workmanship shall be evidenced in the placement of all electrical materials and equipment. Equipment shall be level, plumb and true with the structure and other equipment. All materials shall be firmly secured in place and adequately supported and permanent. The requirements of the codes are minimum standards. The recommendations of the National Electrical Contractors Association Standards shall be followed except where otherwise specifically directed.

1.20 CLEANING

A. After all other work such as plastering, painting, etc., has been accomplished, lighting, panelboards, switchboards, and all other electrical equipment shall be cleaned of all dirt, grease, plaster, paint or other marks.

1.21 MISCELLANEOUS EQUIPMENT

A. Contractor shall provide conduit, conductors, disconnects, and connections for power and controls for equipment requiring electrical services. This includes materials required for temporary services and testing.

1.22 GUARANTEE

A. Guarantee all work for two years from date of acceptance, against all defects in material, equipment and workmanship including repair of damage to any part of the premises resulting from leaks or other defects in material, equipment and workmanship. Guarantee shall be on form supplied by the Owner's representative.

1.23 RECORD DRAWINGS

A. Changes including the result of RFI's or field directives shall be included in a record set provided by the Contractor in an electronic format compatible with system used to produce the original contract drawing set. Provide a copy of the marked-up field set along with the electronic file. It will not be acceptable to cut and paste the drawing changes to this set.

B. Provide Project Record Drawings as described herein:
   1. Drawings shall fully represent installed conditions including actual locations of outlets, true panelboard connections following phase balancing routines, correct conduit, and wire sizing as well as routing, revised luminaire schedule listing Manufacturers and products installed and revised panel schedules. Contractor shall record all changes in the Work during the course of construction on blue or black line prints. These prints shall be made subject of monthly review by the Owner's Representative to ascertain that they are current. If not current, monthly payments may be withheld.
   2. Record Drawings shall be the transfer of information on these prints to the construction documents via computer aided drafting (CAD)building information modeling (Revit) process. A set of Revit files of the electrical construction documents will be provided to the Contractor by the Engineer. For the BIM/clash detection process, a Revit file of the electrical construction documents will be provided to the Contractor by the Engineer, which will represent a LOD of 300 design level. The Contractor is responsible for updating the model with changes as well as taking the model to a LOD of 500 design level.
   3. Record drawing submissions shall be provided to the Engineer to review upon the completion of the following phases of Work:
      a. All underground installation.
      b. Building electrical rough-in.
      c. Final electrical installation.
   4. Include in the record drawing submission the following shop drawing submission with all updated installation information:
      a. Manufactured wiring system.
      b. Fire alarm system.
      c. Security system.
      d. Telecommunication cabling system
      e. Nurse call system.
      f. Intercom system.
      g. Television distribution system.
      h. School communication system.
      i. Public address system.
      j. Sound reinforcement system.
   5. A single set of half size prints of the Record Drawings shall be submitted for review. Upon receipt of the Engineer's review comments, corrections shall be made, and the Contractor shall provide the following:
      a. Two sets of full-size prints.
      b. Four sets of half-size prints.
      c. One set of full size reproducibles.

d. Electronic files of Drawings in PDF and CADRevit.

C. Panel schedules:
1. Typewritten panel schedules shall be provided for panelboards indicating the loads served and the correct branch circuit number. Schedules shall be prepared on forms provided by the Manufacturer and inserted in the pocket of the inner door of each panelboard. See Section 262416: Panelboards for requirements.
2. A single set of the record panel schedules shall be submitted for review. Upon receipt of the Engineer's review comments, corrections shall be made, and the Contractor shall provide the following:
   a. Fold and insert one copy of the appropriate schedule in the pocket of the inner door of each panelboard.
   b. Three binders, each containing a full set of the panel schedules. Provide index listing all schedules and dividers for separation of schedules as follows:
      1) 277/480V normal.
      2) 277/480V emergency.
      3) 277/480V legally required standby.
      4) 277/480V optional standby.
      5) 277/480V critical.
      6) 277/480V life safety.
      7) 277/480V equipment.
      8) 277/480V generator equipment.
      9) 120/208V normal.
      10) 120/208V emergency.
      11) 120/208V legally required standby.
      12) 120/208V optional standby.
      13) 120/208V critical.
      14) 120/208V life safety.
      15) 120/208V equipment.
      16) 120/208V generator equipment.

D. Field labels, markings, and warning signs: Provide in accordance and as required by:
1. General: CEC Article 110.21.
2. High-Leg System: CEC Article 110.15.
3. Arc-Flash Warning: CEC Article 110.16.
4. Identification of Disconnecting Means: CEC Article 110.22 (A).
5. Engineered Series Combination Systems: CEC Article 110.22 (B).
6. Tested Series Combination Systems: CEC Article 110.22 (C).
7. Available Fault Current: CEC Article 110.24.
8. Depth of Working Space in Existing Buildings: CEC Article 110.26 (A)(1)(c).
9. Guarding of Live Parts: CEC Article 110.27 (C).
10. Locked Rooms or Enclosures: CEC Article 110.34 (C).
11. Manholes: CEC Article 110.75 (E).

1.24 OPERATION AND MAINTENANCE MANUALS

A. Prior to Project closeout furnish to the Owner, six (6) hard back 3-ring binders containing all bulletins, operation and maintenance instructions, part lists, service telephone numbers and other pertinent information as noted in each Section all equipment furnished under Division 26. Binders shall be indexed into Division Sections and labeled for easy reference. Bulletins containing more information than the equipment concerned shall be properly stripped and assembled.

1.25 PROJECT MANAGEMENT AND COORDINATION SERVICES

A. Overview: Contractor shall provide a Project Manager/Engineer for the duration of the Project to coordinate the Division 26 Work with all other trades. Coordination services, procedures and documentation responsibility shall include, but shall not be limited to the items listed in this Section.

B. Review of Shop Drawings prepared by other Subcontractors:
   1. Obtain copies of all Shop Drawings for equipment provided by others that require electrical service connections or interface with Division 26 Work.
   2. Perform a thorough review of the Shop Drawings to confirm compliance with the service requirements contained in the Division 26 Contract Documents. Document any discrepancy or deviation as follows:
      a. Prepare memo summarizing the discrepancy.
      b. Provide a copy of the specific shop drawing, indicating via cloud, the discrepancy.
   3. Prepare and maintain a shop drawing review log indicating the following information:
      a. Shop drawing number and brief description of the system/material.
      b. Date of your review.
      c. Indication if follow-up coordination is required.

C. Request for information (RFI):
   1. Thoroughly review the Contract Documents prior to the preparation and submission of an RFI. If an RFI is submitted, attach 8 1/2" x 11" copies of all relevant documents to clarify the issue.
   2. Prepare and maintain an RFI log indicating the following information:
      a. RFI number and brief summary of the issue.
      b. Date of issuance and receipt of response.

D. Clarification confirmation memo (CCM):
   1. Either the Contractor will prepare CCM memos or the Engineer to confirm a decision clarifying the Contract Documents that does not impact cost or affect other trades.
   2. Prepare and maintain a CCM log indicating the following information:
      a. CCM number: Use CCM-C1, C2, etc. for memos issued by the Contractor and CCM-E1, E2, etc. for memos issued by the Engineer.
      b. Brief summary of issue and date issued.

1.26 CONTRACT PRICING MODIFICATION PROCEDURES

A. Submission guidelines: This Section covers the criteria for direct costs, mark-ups, and documentation requirements to be followed by the Contractor for any pricing modification to the Base Contract, where unit pricing has not already been established.
   1. Change orders: Pricing for additions or deletions to the Base Contract Scope of Work upon acceptance of bid value and receipt of authorization to proceed.
   2. Allowances: Cost allowances may be assigned for specific Scope of Work outlined within the Base Contract where design has not been fully delineated on the Contract Documents. When detailed information is available, the Contractor shall prepare and submit a price quotation for the Work. This price quotation will be compared to the allowance value and any adjustments necessary to the Base Contract value shall be made via change order.

B. Direct costs:
   1. Labor:

a. Hourly labor rates shall not exceed the prevailing wage for the County where the Work is being performed. The costs for all supervision, including general superintendents and foremen, shall be included in the mark-up defined herein. Working foremen will be considered a direct cost only if the individual is on the Project site physically installing Work under the change order.
b. Labor burden shall be based on rates currently in effect at the time the Work under the change order is being performed and shall include only fringe benefits by governing trade organizations, Federal Insurance Contribution Act, Federal and State Unemployment taxes, payroll taxes and net actual premium paid for public liability, workers' compensation, property damage and other forms of insurance required by the Owner. No other cost will be included as labor burden.
c. NECA Manual of Labor Units will be utilized as the basis for determining labor productivity rates for Electrical Work as follows:
    1) 85% of NECA column 1 (normal) for change in scope issued well in advance of Work needing to be performed, so as not to cause slow-down or Work stoppage.
    2) 100% of NECA column 1 (normal) for Work being performed with other Base Contract Work, not out of sequence and with minimal slow-down or Work stoppage.
    3) 100% of NECA column 2 (difficult) for Work performed out of sequence, requiring Work stoppage and reconstruction in areas already complete. This Work may involve the removal of ceiling tiles or the cutting and patching of walls.
d. No labor costs shall be included for the following items since the labor is already covered by the NECA labor units for conduit and construction channel:
    1) Conduit straps and clips.
    2) Construction channel accessories (nuts, washers, etc.).
    3) Screws.
    4) Conduit elbows ¾" and smaller.

2. Material:
    a. The cost of material shall be the direct cost, including sales tax and may include the cost of transportation from the Supplier to the Contractor, but charges for final delivery to the Project site will not be allowed.
    b. Electrical commodities priced based on most current Trade Service Book with a 15% discount. Non-commodities priced per invoice from Supplier.
3. Equipment rental:
    a. Payment for equipment costs will be made at the rental rates listed for such equipment as specified in the current edition, at the time of the Work, of "Labor Surcharge and Equipment Rental Rates," a Caltrans Publication. Such rental rates shall be adjusted as appropriate and will be used to compute payments for equipment; regardless of the whether the equipment is under Contractor's control through direct ownership, leasing, renting or other method of acquisition. Daily, weekly, or monthly rates shall be used, whichever is lower. Hourly rates including operator shall not be used.
    b. The actual time to be paid for equipment shall be the time the equipment is in productive operation on the Work. No payment will be made time while equipment is inoperative due to breakdown or for non-working days.
    c. Individual pieces of equipment having a replacement value of $1,000 or less shall be considered small tools or small equipment and no payment will be made since the costs of these tools and equipment are included as part of the Contractor's mark-up for overhead and profit.
    d. Payment to Contractor for use of equipment as set forth herein shall constitute full compensation to Contractor for the cost of fuel, power, oil, lubricants, supplies, small equipment, necessary attachments, repairs and maintenance of any kind,

depreciation, storage, insurance, labor (except for equipment operators) and any and all costs to Contractor for incidental use of the equipment.

4. Performance bond: Only the actual cost of insurance and bond premiums, with no mark-up for overhead and profit, will be allowed.

C. Mark-up for overhead and profit on direct costs:
   1. Costs to be included as part of mark-up:
      a. Field and home office personnel including, but not limited to, Principals, Project Managers, Superintendents, Supervisory Foremen, Estimators, Project Engineers, Detailers, Draftspersons, Schedulers and Administrative Assistants.
      b. All field and home office expenses including, but not limited to, field trailers, parking, storage sheds, office equipment and supplies, telephone service at the Project site, long-distance telephone calls, fax machines, computers and software, temporary utilities, sanitary facilities, etc.
      c. Administrative functions including, but not limited to, reviewing, coordinating, distributing, processing, posting, recording, estimating, negotiating, scheduling, schedule updating and revising, expediting, detailing, revising Shop Drawings and preparing Record Drawings.
      d. Vehicles required for the transportation of Contractor's staff and field personnel.
   2. Maximum mark-up values:
      a. For Work performed by the Contractor, the overhead mark-up shall equal a maximum of 10 percent of the direct costs, as defined herein.
      b. Mark-up for profit shall equal a maximum of 5 percent of combined direct and overhead costs.
      c. For Work performed by a Subcontractor shall equal a maximum of 5 percent mark-up for profit. Subcontractor shall follow the same guidelines above for their mark-up allowance. No consideration shall be given for more mark-ups then this two-tier arrangement whereas the mark-up could excess 20%.
      d. For Work scope changes that result in a net decrease in cost to the Contractor or a Subcontractor, the Owner shall receive a credit based on the actual net decrease in direct cost figured in the same manner as an add cost. It is understood that the mark-up value applied at bid time will not be credited back. Although, if this is a change to a previous change order, then mark-up values shall be included in credit back to Owner.
      e. There will be no mark-ups on the cost of performance bond.

D. Documentation:
   1. Project change order request submission:
      a. Provide copies of all take-off sheets showing material and labor charges in line item format.
      b. Provide recap sheet showing all direct costs and mark-ups.
      c. Provide copies of invoices for Subcontracted Work.
   2. Allowance account tracking:
      a. Contractor shall prepare and maintain a spreadsheet for each allowance account to track and monitor the requested and approved charges.
      b. Copies of these spreadsheets, along with the summary spreadsheets, shall be submitted to the Owner's Representative twice a month.

PART 2 - PRODUCTS

2.01 SHOP DRAWINGS:

A. Make all drawings to an appropriate scale, large enough to show all pertinent aspects of the item and the method of its connection into the work.

B. Make each drawing sheet in a reproducible form, CAD, Revit or PDF.

C. Grouping: Combine submittals in logical groupings; for example, submit Shop Drawings grouped by Sections of the Specifications, arranged in the specified sequence.

D. Content:
1. Shop drawings may be:
c. Drawings or diagrams prepared by the Contractor, a supplier, a manufacturer, or other.
d. Typewritten data or descriptions.
e. Manufacturer's printed brochures, descriptions, charts, instructions, or data sheets.

E. Timing: Submit all shop drawings prior to installation of any items included in submittal.

2.02 MATERIALS

A. Unless otherwise noted, all material and equipment shall be new, of the type, capacity and quality specified and free from defects. Material shall bear the label of, or be listed by, the Underwriters' Laboratories or Nationally Recognized Testing Laboratory (NRTL).

B. Materials shall be of the same brand or manufacture throughout for each class of material or equipment wherever possible.

C. Equipment shall be the product of a manufacturer who has, for a period of not less than five (5) years, been in successful manufacture of the equipment and who has a nationally distributed catalog covering ratings and specifications of said equipment.

2.03 SLEEVES FOR RACEWAYS AND CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Sleeves for Rectangular Openings: Galvanized sheet steel.
1. Minimum Metal Thickness:
a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.
b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.

2.04 SLEEVE SEALS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
1. Manufacturers:
a. Calpico, Inc.
b. Advance Products & Systems, Inc.
c. Pipeline Seal and Insulator, Inc.
d. Or, Equal.
2. Sealing Elements: EPDM or NBR interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
3. Pressure Plates: Stainless steel. Include two for each sealing element.

4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.05 GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

2.06 ACCESS DOORS

A. Unless specified otherwise by the Architect, provide access doors of the following type:
   1. Concealed hinges, prime coated with rust-inhibitive paint, style of door to suit wall, ceiling, floor or roof construction and fire rating.
      a. Milcor Type M
         1.) Architectural grade, one-piece frame, 16 gauge frame & door panel on concealed spring hinges, grey powder coated steel, Elmdor/Stonman or equal.
      b. Milcor Type UFR, fire resistive type Underwriters Laboratory Class B, 1-1/2 hour rating meets UBC, IBCO and BOCA codes for two hour rated walls self latching with key lock, Elmdor/Stonman Type FR or equal.
   2. Minimum size; 18" by 18".
   3. Wall and ceiling access doors: Furnish as required for access to fire alarm devices, devices requiring access for adjustment, battery packs, etc.; coordinate size and location to obtain access.
   4. See architectural drawings for further requirements.

2.07 MISCELLANEOUS EQUIPMENT AND MATERIALS

A. Furnish and install miscellaneous equipment and materials required for the systems described whether or not specifically shown.

PART 3 - EXECUTION

3.01 COMMON REQUIREMENTS FOR ELECTRICAL

A. All work shall be installed in a neat, workmanlike manner in accordance with ANSI/NECA 1-2015.

B. Comply with the requirements of all listed codes and standards.

C. Where any device or part of equipment is referred to in these specifications in the singular number (e.g., "the switch"), this reference shall be deemed to apply to as many such devices as are required to complete the installation as shown on the drawings.

D. During construction the contractor shall at all times maintain electrical utilities of the building without interruption. Should it be necessary to interrupt any electrical service or utility, the contractor shall secure permission in writing from the owner’s representative for such Interruption at least ten (10) business days in advance. Any interruption shall be made with minimum amount of inconvenience and any shut-down time shall have to be on a premium time basis and such time to be included in the contractor's bid. Arrange to provide and pay for temporary power source as required by project conditions.

E. The locations of switches, receptacles, lights, motors, etc. outlets shown are approximate. The contractor shall use good judgment in placing the preceding items to eliminate all interference with ducts, piping, etc. The contractor shall check all door swings so that light switches are not located behind doors. Relocate switches as required, with approval from the Design Professional. The owner's representative may direct relocation of outlets before installation, up to five (5) feet from the position indicated on the Drawings, without additional cost.

F. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity. Normal maintenance shall not require the removal of protective guards from adjacent equipment. Install equipment as close as practical to the locations shown on the Drawings.
1. Where the owner's representative determines that the Contractor has installed equipment not conveniently accessible for operations and maintenance, the equipment shall be removed and reinstalled as directed at no additional cost to the owner.
2. "Conveniently Accessible" is defined as being capable of being reached without climbing or crawling over or under obstacles such as motors, pumps, belt guards, transformers, racks, piping, ductwork, raceways or similar.

G. Owner furnished equipment: Equipment furnished by the District shall be received, stored, uncrated, protected, and installed by the Contractor with all appurtenances required to place the equipment in operation, ready for use. The Contractor shall be responsible for the equipment as if he had purchased the equipment himself and shall hold the warranty

H. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.

I. Headroom Maintenance: If mounting heights or other location criteria are not indicated, locate components and equipment to provide maximum possible headroom consistent with these requirements.
1. Adequate working space shall be provided around electrical equipment in strict compliance with the Electrical Safety Orders, California Electrical Code and/or the serving utility whichever is more stringent. In general, provide six and one-half feet of headroom and thirty-six inches minimum clear work space in front of panelboards and controls for 120/208 volt equipment, and forty two inches for 277/480 volt equipment.
   a. Note that most power utilities now require a minimum of 48-inches of clear working space in front of low voltage, 1,000 volts and less, service entrance equipment.

J. Equipment: Placement shall facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby infrastructure. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

K. Right of Way: Give to piping systems with slope requirements.

3.02 ROUGH-IN

A. Contractor shall verify lines, levels and dimensions indicated on the Drawings and shall be responsible for the accuracy of the setting out of Work and for its strict conformance with existing conditions at the Project site.

B. Verify final locations for rough ins with field measurements and with the requirements for the actual equipment to be connected.

C. Refer to equipment specification in Divisions 22 through 33 for rough-in requirements.

3.03 ELECTRICAL INSTALLATION

A. Preparation, sequencing, handling, and installation shall be in accordance with Manufacturer's written instructions and technical data particular to the product specified and/or accepted equal except as otherwise specified. Comply with the following requirements:
1. Shop Drawings prepared by Manufacturer.
2. Verify all dimensions by field measurements.
3. Arrange for chases, slots, and openings in other building components during progress of construction, to allow for electrical installations.
4. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.
5. Sequence, coordinate and integrate installations of electrical materials and equipment for efficient flow of the Work. Give attention to large equipment requiring positioning prior to closing in the building.
6. Where mounting height is not detailed or dimensioned, contact the Architect for direction prior to proceeding with rough-in.
7. Coordinate connection of electrical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies and controlling agencies. Provide required connection for each service.
8. Install systems, materials, and equipment to conform with approved submittal data, including coordination Drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the Work are indicated only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Architect.
9. Install systems, materials, and equipment level and plumb, parallel, and perpendicular to other building systems and components, where installed exposed in finished spaces.
10. Install electrical equipment to facilitate servicing, maintenance and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations.
11. Coordinate electrical systems, equipment, and materials installations with other building components.
12. Provide access panel or doors where devices or equipment are concealed behind finished surfaces. Furnish and install access doors per the requirements of Division 08.
13. Install systems, materials and equipment giving right-of-way priority to other systems that are required to maintain a specified slope.
14. Conform to the National Electrical Contractors Association "Standard of Installation" for general installation practice.

3.04 CUTTING, PATCHING, PAINTING AND SEALING

A. Structural members shall in no case be drilled, bored, or notched in such a manner that will impair their structural value. Cutting of holes, if required, shall be done with core drill and only with the approval of the Architect and Structural Engineer.

B. Protection of Installed Work: During cutting and patching operations, protect adjacent installations.

C. ***Cut, remove, and legally dispose of selected electrical equipment, components and materials as indicated, including but not limited to removal of electrical items indicated to be removed and items made obsolete by the new work.***

D. ***Protect the structure, furnishings, finishes and adjacent materials not indicated or scheduled to be removed.***

E. ***Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.***

F. ***Patch existing surfaces and building components using experienced installers and new materials matching existing materials and the original installation. For installers' qualifications refer to the materials and methods required for the surface and building components being patched.***

G. Application of joint sealers:
   1. General: Comply with joint sealer Manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.
   2. Installation of fire-stopping sealant: Install sealant, including forming, packing and other accessory materials, to fill openings around electrical services penetrating floors and walls, to provide fire-stops and fire-resistance ratings indicated for floor or wall assembly in which penetration occurs. Comply with installation requirements established by testing and inspecting agency.

3.05 SLEEVES FOR ELECTRICAL PENETRATIONS

A. Electrical penetrations occur when raceways, cables, wireways, penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.

B. Concrete Slabs and Walls: Provide sleeves for penetrations unless core-drilled holes or formed openings are used. Provide sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Fire-Rated Assemblies: Provide sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with Firestop system used are fabricated during construction of floor or wall.

E. Cut sleeves to length for mounting flush with both surfaces of walls.

F. Extend sleeves penetrating floors 2 inches above finished floor level.

G. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless indicated otherwise.

H. Seal space outside of sleeves with grout for penetrations of concrete and masonry
   1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.

I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 070690 "Joint Sealants.".

J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Provide sleeves and seal raceway and cable

penetration sleeves with firestop materials. Comply with requirements in Section 07 84 00 – Fire Stopping."

K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

L. Above ground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve and provide mechanical sleeve seals.

M. Underground, Exterior-Wall Penetrations: Provide cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve and provide mechanical sleeve seals.

3.06 FIRESTOPPING

A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical infrastructure to restore or maintain fire-resistance rating of assembly. Firestopping materials and execution requirements are specified in Section 07 84 00 – Fire Stopping.

3.07 FIELD QUALITY CONTROL

A. General testing requirements:
1. The purpose of testing is to ensure that all tested electrical equipment, both Contractor and Owner supplied, is operational and within industry and Manufacturer's tolerances and is installed in accordance with design Specifications.
2. Tests and inspections shall determine suitability for energization.
3. Perform tests in presence of the Owner's Representative and furnish test equipment, facilities and technical personnel required to perform tests.
4. Tests shall be conducted during the construction period and at completion to determine conformity with applicable codes and with these Specifications.

B. Tests: In addition to specific system test described elsewhere, tests shall include:
1. Equipment operations: Test motors for correct operation and rotation.
2. Lighting control circuits: Test lighting circuits for correct operation through their control devices.
3. Alarm and interlock systems: Produce malfunction symptoms in operating systems to test alarm and interlock systems. In addition, all specific tests described in the fire alarm system shall be performed.
4. Circuit numbering verification: Select on a random basis, various circuit breakers within the panelboards and cycle them on and off to verify compliance of the typed panel directories with actual field wiring.
5. Voltage check:
   a. At completion of job, check voltage at several points of utilization on the system that has been installed under this Contract. During test, energize all installed loads.
   b. Adjust taps on transformers to give proper voltage, which is 118 to 122volts for 120volt nominal systems and proportionately equivalent for higher voltage systems. If proper voltage cannot be obtained, inform the Owner and the serving Utility Company.
6. Test electrical service power rotation and post on a label at the utility meter enclosure. Maintain rotation throughout the distribution system.
   a. Where portable generator tap boxes are present provide a label at the tap box indicating the power rotation.

C. Test all wiring and connections for continuity and grounds before any fixtures or equipment are connected and where such tests indicate faulty insulation or other defects, they shall be located, repaired and tested again at the Contractor's expense. Electrical loads shall be balanced at the panelboards and motors shall be checked for correct rotation.

D. Contractor shall provide test power required when testing equipment before service energization and coordinate availability of test power with General Contractor after service energization. The Contractor shall provide any specialized test power as needed or specified herein.

E. Testing safety and precautions:
   1. Safety practices shall include the following requirements:
      a. Applicable State and Local safety operating procedures.
      b. OSHA.
      c. NSC.
      d. NFPA 70E.
   2. All tests shall be performed with apparatus de-energized and grounded except where otherwise specifically required ungrounded by test procedure.

F. Calibration of test equipment:
   1. Testing Agency shall have calibration program that assures test instruments are maintained within rated accuracy.
   2. Instruments shall be calibrated in accordance with the following frequency schedule:
      a. Field instruments: Analog, 6-months maximum; Digital, 12-months maximum.
      b. Laboratory instruments: 12-months.
      c. Leased specialty equipment: 12-months where accuracy is guaranteed by lessor.
   3. Dated calibration labels shall be visible on test equipment.
   4. Records, which show date and results of instruments calibrated or tested, must be kept up to date.
   5. Up-to-date instrument calibration instructions and procedures shall be maintained for test instrument.
   6. Calibration standards shall be of higher accuracy than instrument tested.
   7. Equipment used for field testing shall be more accurate than instrument being tested.

G. Coordinate with General Contractor regarding testing schedule and availability of equipment ready for testing.

H. Third party acceptance testing is required as part of this project. Contractor to provide the services of a NETA certified testing contractor to perform testing of equipment identified in the respective specification sections. Submit test reports noting acceptance, test values and a baseline for future test readings. Apparatus to be included in the testing are as follows:
   1. Switchboards
   2. Distribution panels.
   3. Panelboards
   4. Automatic transfer switches.
   5. Generator.
   6. Transformers.
   7. Feeders.

I. Notify the Owner’s Representative one week in advance of any testing.

J. Any products which fail during the tests or are ruled unsatisfactory by the Owner's Representative shall be replaced, repaired, or corrected as prescribed by the Owner's Representative at the expense of the Contractor. Tests shall be performed after repairs, replacements or corrections until satisfactory performance is demonstrated.

K. Testing Agency shall maintain written record of tests and shall assemble and certify final test report.

L. Include all test results in the maintenance manuals.

M. Notify Owner’s Representative in advance prior to project completion. At such time, arrange an operating test for approval and/or schedule for electrical apparatus testing by a third party testing company. Demonstrate equipment to be in conformance with applicable Codes and operate in accordance with Requirements of this Section of the Specifications. Provide all instruments and personnel required for test.

N. In the absence of manufacturer's torque values refer to Table 1 herein.

Table 1

U.S. Standard

Bolt Torques for Bus Connections

Heat Treated Steel – Cadmium or Zinc Plated

GRADE	SAE	SAE	SAE	SAE
	1 & 2	5	6	8
Minimum Tensile (P.S.I.)	64K	105K	133K	150K
Bolt Diameter	Torque (Foot Pounds)			
1/4	4.0	5.6	8.0	8.4
5/16	7.2	11.2	15.2	17.6
3/8	12.0	20.0	27.2	29.6
7/16	19.2	32.0	44.0	48.0
1/2	29.6	48.0	68.0	73.6
9/16	42.4	70.4	96.0	105.6
5/8	59.2	96.0	133.6	144.0
3/4	96.0	160.0	224.0	236.8
7/8	152.0	241.6	352.0	378.4
1.	225.6	372.8	528.0	571.2

3.08 SALVAGE MATERIAL AND EQUIPMENT

A. Where remodel or demolition work is to be accomplished under this Contract, all removed materials and equipment, which in the opinion of the Owner is salvable, shall remain the property of the Owner. Such salvaged materials and equipment shall be delivered to Owner on premises as directed and shall be neatly piled or stored and protected from damage.

B. All materials considered as scrap and not salvageable shall be removed from premises and disposed of by Contractor.

3.09 DEMOLITION

A. When devices are removed that are located midway in a circuit maintain continuity of the circuit and accessibility of any junction boxes.

B. When the scope of work requires the removal of electrical equipment all associated conduit, conductors, boxes, hangers, anchors, etc. shall be removed in their entirety. All openings shall be patched and sealed to match the adjacent construction and finish including the replacement of floor tiles.

C. Damaged floor and ceiling tiles shall be replaced.

3.10 CLEANING

A. Prior to energizing of electrical equipment, the Contractor shall thoroughly clean the interior of enclosures from construction debris, scrap wire, etc. using Manufacturer's approved methods and materials.

B. Upon completion of Project, prior to final acceptance, the Contractor shall thoroughly clean both the interior and exterior of all electrical equipment per Manufacturers approved methods and materials. Remove paint splatters and other spots, dirt, and debris.

C. Touch-up paint any marks, blemishes or other finish damage suffered during installation.

3.11 PROJECT CLOSEOUT

A. Training:
   1. At the time of completion, a period of not less than ***4***-hours shall be allotted by the Contractor for instruction of building operating and maintenance personnel in the use of all systems. This ***4***-hour training is in addition to any instruction time called out in the Specifications for specific systems. All personnel shall be instructed at one time, the Contractor making all necessary arrangements with Manufacturer's Representative. The equipment Manufacturer shall be requested to provide product literature and application guides for the users' reference. Costs, if any, for the above services shall be paid by the Contractor.
   2. All training sessions shall be video recorded. Confirm file type, i.e. MOV, AVI, MP4, etc. with the district. Each specification section that requires training shall include one file, and all Division 26 specifications shall be stored on a flash drive (USB3.0, 1TB min.) 3 flash drives shall be provided to the district representative with closeout documentation.

B. Special tools: Provide one of each tool type required for proper operation and maintenance of the equipment provided under this Section. All tools shall be delivered to the Owner at the Project completion.

C. Keying: Provide two keys for each lock furnished under this Section and turn over to Owner.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:
   1. Building wires and cables rated 600 V and less.
   2. Connectors, splices, and terminations rated 600 V and less.
   3. Sleeves and sleeve seals for cables.

1.03 DEFINITIONS

A. EPDM: Ethylene-propylene-diene terpolymer rubber.

B. NBR: Acrylonitrile-butadiene rubber.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Qualification Data: For testing agency.

C. Field quality-control test reports.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the International Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
   1. Testing Agency's Field Supervisor: Person currently certified by the International Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with CEC, California Electrical Code.

PART 2 - PRODUCTS

2.01 CONDUCTORS AND CABLES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Building Wire:
      a. General Cable Corporation.
      b. Senator Wire & Cable Company.
      c. Southwire Company.
      d. Cerro Wire, a Marmon/Berkshire Hathaway Company.
      e. United Wire and Cable
   2. Flexible cords and cables:
      a. Carol Cable Company
      b. Cerrowire
      c. PWC Corp
   3. Wiring connectors and terminations:
      a. 3M Company.
      b. Ideal.
      c. Blackburn-Holub.
      d. Burndy.
      e. Thomas & Betts Corp.
      f. Beau Barrier.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical..

2.02 BUILDING WIRE

A. Conductor material:
   1. Provide annealed copper for all wire, conductor, and cable, unless otherwise indicated.
   2. All building wire shall be stranded, unless otherwise indicated.
   3. Comply with NEMA WC 70. Aluminum shall not be used.
   4. Stranded Copper, #10 AWG minimum, except for control circuits which may be #14 AWG minimum. Signal and control circuits other than mechanical shall be as indicated on Drawings or as required by equipment manufacturers.
   5. Conductors in sizes up through #10 AWG shall have solid color finish as listed above. #8 AWG and larger shall be color coded by application of phase tape for minimum of 6" length on conductor. Coding shall occur at all terminations, pull boxes and splices.
   6. Color-coding shall be continuous and consistent throughout the work. Do not use different colors for switch legs, fixture taps, travelers, etc.
   7. Phasing: Terminals in panelboards, motor control centers, switchboards and other equipment shall be phased A, B, C, reading left to right or top to bottom looking into the front of the equipment.

B. Conductor Insulation: Comply with UL 83 for Types THW, THHN/THWN, THWN-2, XHHW-2, USE, and SO.
   1. All insulated wire, conductor and cable shall be 600volt rated, unless otherwise noted on the Drawings.
   2. Thermoplastic-insulated building wire.
   3. Rubber-insulated building wire.
   4. Copper feeders and branch circuits larger than #6 AWG: Type THW, XHHW or dual rated THHN/THWN.
   5. Copper feeders and branch circuits #6 AWG and smaller: Type TW, THW, XHHW or dual rated THHN/THWN.

6. Feeders and branch circuits for direct-current (DC) in wet locations: Type XHHW-2.
7. Conductors for variable frequency drives (VFD): Type XHHW-2.
8. Service Entrance: Type RHW or THWN.
9. Control Circuits: Type THW or dual rated THHN/THWN.
10. Identify system conductors as to voltage and phase connections by means of color-impregnated insulation.
11. XHHW-2 conductors shall be used for feeders from generator to service switchboard.

C. Conductor Temperature Rating: 90°C.

2.03 FLEXIBLE CORDS AND CABLES (TYPE S)

A. Provide flexible cords and cables of size, type and arrangement as indicated on the Drawings.

B. Type 'S' flexible cords and cables shall be manufactured in accordance with CEC Article 400 and composed of two or more conductors and a full size green insulated ground wire with an outer jacket of rubber or neoprene as noted.

C. Flexible cords and cables shall be fitted with wire mesh strain relief grips either as an integral component of the connector or as an independently supported unit.

D. Suspended flexible cords and cables shall incorporate safety spring(s) unless otherwise noted.

E. Fixture Whips
1. Minimum conductor size is #16 AWG.
2. Maximum length is 6 feet.

F. Cable Ties: For wire training and clamping in cabinets and enclosures use nylon cable ties.

2.04 CONNECTORS AND SPLICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AFC Cable Systems, Inc.
2. Hubbell Power Systems, Inc.
3. O-Z/Gedney; EGS Electrical Group LLC.
4. 3M; Electrical Products Division.
5. Cooper Crouse-Hinds.

B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

C. Bolted pressure connectors: Provide wide range-taking connectors with cast bronze compression bolts, designed for parallel taps, tees, crosses or end-to-end connections.

D. Electrical spring wire connectors:
1. Provide multi-part construction incorporating a non-restricted, zinc coated square cross-section steel spring enclosed in a steel sheet with an outer jacket of plastic and insulating skirt.
2. Self-striping pigtail and tap U-contact connectors shall not be used.

E. Compression type terminating lugs:
1. Provide tin-plated copper high-compression type lugs for installation with hand or hydraulically operated circumference-crimping tools and dies as stipulated by the lug Manufacturer or as indicated on Drawings. Notch or single point type crimping is NOT acceptable.
2. Two-hole, long barrel lugs shall be provided for size #4/0 and larger wire where terminated to bus bars. Use minimum of three crimps per lug, on sizes where possible.

F. Splicing and insulating tape: Provide black, ultraviolet proof, self-extinguishing, 7-mil thick vinyl general purpose electrical tape with a dielectric strength of 10,000volts suitable for temperatures from minus 18-degrees C to 105-degrees C.

G. Insulating putty:
1. Provide pads or rolls of non-corrosive, self-fusing, one-eighth inch thick rubber putty with PVC backing sheet. Scotch vinyl mastic pads and roll or equal.
2. Use putty suitable for temperatures from minus 17.8-degrees C to 37.8-degrees C with a dielectric strength of 570volts/mil minimum.

H. Insulating resin:
1. Provide two-part liquid epoxy resin with resin and catalyst in pre-measured, sealed mixing pouch. Scotchcast 4 or equal for wet or underground vaults, boxes, etc. splices or terminations.
2. Use resin with a set up time of approximately 30-minutes at 21.1-degrees C and with thermal and dielectric properties equal to the insulating properties of the cables immersed in the resin.

I. Terminal strips:
1. Provide box type terminal strips in the required quantity plus 25% spare. Install in continuous rows in terminal cabinets.
2. Use the box type terminal strips with barrier open backs and with ampere ratings as required.
3. Identify all terminals with numbering sequence being used for a system.

J. Crimp type connectors:
1. Provide insulated fork or ring crimp terminals with tinned electrolytic copper-brazed barrel with funnel wire entry and insulation support
2. Fasten crimp type connectors or terminals using a crimping tool recommended by the connector Manufacturer.
3. Provide insulated overlap splices with tinned seamless electrolytic copper barrel with funnel wire entry and insulation support.
4. Provide insulated butt splices with tinned seamless electrolytic copper barrel with center stop, funnel wire entry and insulation support.

K. Cable ties: Provide harnessing and point-to-point wire bundling with nylon cable ties. All cable ties shall be installed using tool supplied by Manufacturer of ties.

L. Wire lubricating compound:
1. UL listed for the wire insulation and conduit type and shall not harden or become adhesive.
2. Shall not be used on wire for isolated type electrical power systems.

M. Bolt termination hardware:
1. Bolts shall be plated, medium carbon steel heat-treated, quenched and tempered equal to ASTM A-325 or SAE grade 5; or silicon bronze alloy ASTM B-9954 Type B.

2. Nuts shall be heavy semi-finished hexagon, conforming to ANSI B18.2.2, threads to be unified coarse series (UNC), class 2B steel or silicon bronze alloy.
3. Flat washers shall be steel or silicon bronze, Type A plain standard wide series, confirming to ANSI B27.2. SAE or narrow series shall not be used.
4. Belleville conical spring washers shall be hardened steel, cadmium plated or silicon bronze.
5. Each bolt connecting lug(s) to a terminal or bus shall not carry current exceeding the following values:
   a. 1/4" bolt: 125amps
   b. 5/16" bolt: 175amps
   c. 3/8" bolt: 225amps
   d. 1/2" bolt: 300amps
   e. 5/8" bolt: 375amps
   f. 3/4" bolt: 450amps

2.05 LOW VOLTAGE CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

B. Classes 2 and 3 Control Cables: Stranded copper, complying with UL 83, multi-conductor cable with copper conductors not smaller than No. 18 AWG, complying with Division 26 Section Conductors and Cables.

C. Class 1 Control Cables: Stranded copper, complying with UL 83, multi-conductor cable with copper conductors not smaller than No. 18 AWG, complying with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

D. Structured Network Digital and Multiplexed Signal Cables: UTP cable with copper conductors, complying with TIA/EIA-568-B.2, Category 5e for horizontal copper cable and with Division 27 Section "Communications Horizontal Cabling."

E. RS-485 Cables:
   1. Standard Cable: CEC, Type CM.
      a. Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
      b. PVC insulation.
      c. Unshielded.
      d. PVC jacket.
      e. Flame Resistance: Comply with UL 1581.

PART 3 - EXECUTION

3.01 CONDUCTOR MATERIAL APPLICATIONS

A. Color code all branch circuits and feeders as follows:

	120/208 Volts	277/480 Volts
Phase A	Black	Brown
Phase B	Red	Orange
Phase C	Blue	Yellow
Neutral	White	Gray
Ground	Green	Green

3.02 CONDUCTOR INSULATION AND WIRING METHODS

A. Exposed & Concealed Feeders: Type THHN-THWN-2, single conductors in raceway.

B. Exposed & Concealed Branch Circuits: Type THHN-THWN-2, single conductors in raceway.

C. Code size ground wire shall be provided in all raceways, secured using approved methods to each pull box, junction box, and equipment housing.

D. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain-relief device at terminations to suit application.

E. Class 1 and Class 2 Control Circuits: Type THHN-THWN, in raceway.

F. Branch circuits and feeders in conduit exposed to direct sunlight: Type XHHW-2.

G. Motor feeders/branch circuits sourced from a variable frequency drive: Type XHHW-2 from the drive unit to the motor.

3.03 INSTALLATION OF CONDUCTORS AND CABLES

A. All wiring shall be installed in raceways.

B. Swab conduits before installing cables, and exercise care in pulling to avoid damage or disarrangement of conductors, use approved grips.

C. Conceal cables in finished walls and poles, unless otherwise indicated.

D. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

E. Use pulling means including fish tape, cable, rope, and basket-weave wire/cable grips that will not damage cables or raceway.
   1. Wire Pulling Lubricant: Minerallac "Pull-In" compound, Y- ER-EAS wire pulling lubricant, Poly-water, or other UL approved lubricant. Flax-soap is not approved.

3.04 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

C. Splices:
1. For conductors #10 and smaller, pre-insulated type connectors, 3M Scotchloks, T & B Piggys or equal, nylon self-insulated type.
2. For conductors #8 and larger use compression type connector, Burndy type YS long barrel, requiring the use of a 360 degree circumference compression type tool, then insulated with Scotchtape No. 88 or equal.
    a. Use Scotchfill or equal around large or irregular shape splices for insulation build-up and Scotchtape No. 88.
    b. Wire splicing devices shall be sized according to manufacturer's recommendations.
3. Factory insulated mechanical connectors manufactured by Polaris, ILSCO, etc., are not approved.
4. Push in style connectors, i.e. WAGO, are not approved.
5. Self-stripping pigtail and tap-U contact connectors shall not be used.

D. Splices in underground pull boxes or in other areas subject to moisture shall be provided with cast resin kits and cadweld or compression type connections, Burndy type YS long barrel. Use Scotchlok sealing packs for wire size to #10 and Scotchcast kits for larger splices as recommended by 3M Company. All splices to be prepared as hereinbefore specified before resin kits are applied. Wire splicing devices shall be sized according to manufacturer's recommendations.

3.05 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.
1. Submit test reports for approval.

B. Tests and Inspections:
1. After installing conductors and cables and before electrical circuitry has been energized, test conductors for compliance with requirements.
2. Grounding test shall be by Fall-of-Potential method by an independent testing agency.
3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
    a. Visual and Mechanical Inspection:
        1) Inspect cables for physical damage and proper connection in accordance with single line diagram.
        2) Test cable mechanical connections to manufacturer’s recommended values with a calibrated torque wrench. In absence of manufacturer’s data use Table 1.
4. Check cable color-coding with applicable engineer’s specifications and California Electrical Code standards.
    a. Electrical Tests:
        1) Perform insulation resistance test on each conductor including neutral with respect to ground and adjacent conductors before connecting to equipment. Applied potential to be 1000 volts dc for one (1) minute withstand test, per NETA ATS-2017.
        2) Perform continuity test on all power equipment branch and feeder circuit conductors. Verify proper cable connection and phasing.

3) Test all feeder splices per NETA standards and document the results in the test report. The resistance across the splice in each phase shall not exceed 50% of the lowest value obtained.

b. Test Values:
1) Minimum insulation resistance values shall be not less than fifty megohms.

C. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes grounding systems and equipment.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Qualification Data: For qualified testing agency and testing agency's field supervisor.

C. Field quality-control reports.

D. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
   1. Instructions for periodic testing and inspection of grounding features at test wells ground rings, grounding connections for separately derived systems based on NETA MTS.
      a. Tests shall determine if ground-resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if values do not.
      b. Include recommended testing intervals.

1.04 QUALITY ASSURANCE

A. Contractor to perform testing per NETA standards.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application.

C. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
   1. Ground Rods:
      a. Weaver.
      b. Erico "Cadweld" Products, Inc.
   2. Ground Wells:
      a. Christy Concrete Products, Inc.
      b. Forni Corp.
   3. Ground Bushings, Connectors, Jumpers and Bus:
      a. O-Z/Gedney.
      b. Thomas & Betts Corp.
      c. Burndy.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

2.02 CONDUCTORS

A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.

B. Bare Copper Conductors:
   1. Solid Conductors: ASTM B 3.
   2. Tinned Conductors: ASTM B 33.

C. Grounding Bus: Predrilled rectangular bars of annealed copper, 1/4 by 4 inches (6.3 by 100 mm) in cross section, with NEMA 2-hole drilling apart. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600 V. Lexan or PVC, impulse tested at 5000 V.

2.03 CONNECTORS

A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.

B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, pressure type with at least two bolts.
   1. Pipe Connectors: Clamp type, sized for pipe.

C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

D. Bus-bar Connectors: Mechanical type, cast silicon bronze, solderless compression-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.

2.04 GROUNDING ELECTRODES

A. Ground Rods: Copper-clad steel; 3/4 inch diameter by 10 feet (19 mm by 3 m).

B. Chemical-Enhanced Grounding Electrodes: Copper tube, straight or L-shaped, charged with nonhazardous electrolytic chemical salts.
   1. Termination: Factory-attached No. 4/0 AWG bare conductor at least 48 inches (1200 mm) long.
   2. Backfill Material: Electrode manufacturer's recommended material.

C. UFER Ground; Bare copper conductor 25-feet minimum length and gauge size per 12.5 percent of the service conductor size.

PART 3 - EXECUTION

3.01 APPLICATIONS

A. Conductors: Install stranded conductors unless otherwise indicated.

B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. [2/0] AWG minimum.
   1. Bury at least 30 inches below grade.

2. Duct-Bank Grounding Conductor: Bury 12 inches (300 mm) above duct bank when indicated as part of duct-bank installation.

C. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
   1. Install bus on insulated spacers 2 inches (50 mm) minimum from wall, 36 inches above finished floor unless otherwise indicated.

D. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down to specified height above floor; connect to horizontal bus.

E. Conductor Terminations and Connections:
   1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
   2. Underground Connections: Welded connectors.
   3. Connections to Ground Rods at Test Wells: Welded connectors.
   4. Connections to Structural Steel: Welded connectors.

3.02 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Comply with IEEE C2 grounding requirements.

B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches (100 mm) will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, nonshrink grout.

C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.

D. Pad-Mounted Transformers and Switches: Provide grounding per utility company requirements. Otherwise: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2/0 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 24 inches (150 mm) from the foundation.

3.03 EQUIPMENT GROUNDING

A. Install insulated equipment grounding conductors with all feeders and branch circuits.

B. Signal and Communication Equipment: In addition to grounding and bonding required by CEC, provide a separate grounding system complying with requirements in TIA/ATIS J-STD-607-A.
   1. For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.

2. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-4-by-24-inch grounding bus.
3. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

C. Metal Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.

3.04 INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Ground Rods: Drive rods until tops are 2 inches (50 mm) below finished floor or final grade unless otherwise indicated.
1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.

C. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Division 26 Section "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches (300 mm) deep, with cover.
1. Test Wells: Install at least one test well for each service unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.

D. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
3. Use exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.

E. Grounding and Bonding for Piping:
1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

F. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install bonding jumper to bond across flexible duct connections to achieve continuity.

G. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet (18 m) apart.

H. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each steel column, extending around the perimeter of area or item indicated.
1. Install tinned-copper solid conductor not less than No. 2 AWG for ground ring and for taps to building steel.
2. Bury ground ring 30-inches deep and not less than 24 inches from building's foundation.

I. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to CEC; use a minimum of 25 feet of bare copper conductor not smaller than 12.5 percent of the service conductor size (sum total per a single phase) AWG. In no case shall the conductor size be less than #4/0 AWG.
1. If concrete foundation is less than 20 feet (6 m) long, coil excess conductor within base of foundation.
2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building's grounding grid or to grounding electrode external to concrete.
3. 2-inch minimum encasement in concrete.

3.05 LABELING

A. Comply with requirements in Division 26 Section "Identification" Article for instruction signs. The label or its text shall be green.

B. Install labels at the telecommunications bonding conductor and grounding equalizer and at the grounding electrode conductor where exposed.
1. Label Text: "If this connector or cable is loose or if it must be removed for any reason, notify the Owner’s Representative."

3.06 FIELD QUALITY CONTROL

A. Contractor to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Tests and Inspections:
1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells. Make tests at ground rods before any conductors are connected.
    a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
    b. Perform tests by fall-of-potential method according to IEEE 81.

C. Grounding system will be considered defective if it does not pass tests and inspections.
1. Prepare test and inspection reports.

D. Report measured ground resistances that exceed the following values:
   1. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: 10 ohms.
   2. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: 5 ohms.
   3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 3 ohms.
   4. Power Distribution Units or Panelboards Serving Electronic Equipment: 3 ohm(s).
   5. Substations and Pad-Mounted Equipment: [5] <Insert value> ohms.
   6. Manhole Grounds: 10 ohms.

E. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Engineer promptly and include recommendations to reduce ground resistance.

26 05 29
HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:
   1. Hangers and supports for electrical equipment and systems.

B. Related Sections include the following:
   1. Division 26 Section 26 05 48 Vibration And Seismic Controls for products and installation requirements necessary for compliance with seismic criteria.

1.03 DEFINITIONS

A. EMT: Electrical metallic tubing.

B. IMC: Intermediate metal conduit.

C. RMC: Rigid metal conduit.

1.04 PERFORMANCE REQUIREMENTS

A. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

B. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project. Minimum structural safety factor shall meet the following site specific seismic design criteria:
   1. Seismic restraints are the responsibility of the contractor.

C. Design of seismic bracing shall meet requirements of CBC Chapter 16A.

1.05 SUBMITTALS

A. Product Data: For the following:
   1. Steel slotted support systems.
   2. Nonmetallic slotted support systems.
   3. Anchors.
   4. Hangers.

B. Shop Drawings: Show fabrication and installation details and include calculations for the following:
   1. Steel slotted channel systems. Include Product Data for components.
   2. Nonmetallic slotted channel systems. Include Product Data for components.
   3. Equipment supports.

1.06 QUALITY ASSURANCE

A. Comply with CEC.

PART 2 - PRODUCTS

2.01 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Cooper B-Line, Inc.; a division of Eaton.
      b. ERICO International Corporation.
      c. Thomas & Betts Corporation.
      d. Unistrut; Tyco International, Ltd.
   2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
   3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
   4. Painted Coatings: Manufacturer's standard painted coating applied in accordance with MFMA-4.
   5. Channel Dimensions: Selected for applicable load criteria.
      a. 12 Gage minimum.

B. Fittings and Accessories: Products of channel and angle manufacturer and designed for use with those items.
   1. Provide end caps on all exposed strut to conceal sharp edges.

C. Rated Strength: Selected to suit applicable load criteria.

D. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

E. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Hilti Inc.
      b. Or, Approved Equal
   2. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
   3. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.

2.02 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

PART 3 - EXECUTION

3.01 SUPPORT INSTALLATION

A. Provide end caps for all strut.

B. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

C. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
   1. To Wood: Fasten with through bolts unless noted otherwise in the electrical or structural details.
   2. To New Concrete: Bolt to concrete inserts unless noted otherwise in the electrical or structural details.
   3. To Masonry: Approved expansion anchor fasteners on solid masonry units.
   4. To Concrete: Expansion anchor fasteners unless noted otherwise in the electrical or structural details.
   5. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69.
   6. To Light Steel: Sheet metal screws.
   7. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that meet seismic-restraint strength and anchorage requirements. See mounting details in the electrical and structural drawing set.

D. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.
   1. Ferro resonant scan all concrete walls and floors prior to drilling.

E. Note: Structural details in the construction drawing set and structural specifications take precedence.

3.02 TOUCHUP: CLEAN FIELD WELDS AND ABRADED AREAS OF SHOP PAINT. PAINT PAINTING

A. Exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
   1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

B. Touchup: Comply with requirements in Division 09 painting Sections for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes raceways and fittings for electrical wiring.

1.03 DEFINITIONS

A. EMT: Electrical metallic tubing.

B. FMC: Flexible metal conduit.

C. LFMC: Liquidtight flexible metal conduit.

D. RGS: Rigid Galvanized Steel Conduit.

E. CEC: California Electrical Code.

1.04 SUBMITTALS

A. Product Data: For wireways and fittings.

B. Shop Drawings: For the following raceway components. Include plans, elevations, sections, details, and attachments to other work.
   1. Proposed motion sensor and LED dimmable driver interconnection schematic.

C. Source quality-control test reports.

1.05 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.

   1. Metal conduit:

      a. ***Allied Tube and Conduit Co.***
      b. ***Triangle PWC, Inc.***
      c. ***Western Tube and Conduit Corp.***
      d. ***Spring City Electrical Manufacturing Co.***
      e. ***Alflex Corp.***
      f. ***American Flexible Metal Conduit Co.***

g. ***Anaconda.***

2. Fittings:

h. Appleton Electric Co.
i. OZ/Gedney.
j. Thomas & Betts Corp.
k. Spring City Electrical Manufacturing Co.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

2.02 METAL CONDUIT AND TUBING

A. EMT: ANSI C80.3.
1. Shall be galvanized steel, thin wall. Maximum trade size to be used shall be 4".
2. Conduit: Shall be formed of cold rolled strip steel, electrical resistance welded continuously along the longitudinal seam and hot dip galvanized after fabrication. Conduit shall conform to ANSI C80.3 Specifications and shall meet UL requirements.
3. Set screw type couplings: Hot dip galvanized, steel, UL listed concrete tight. Use set screw type couplings with four setscrews each of conduit sizes over 2 inches. Setscrews shall be of case-hardened steel with hex-head and cup point to firmly seat in wall of conduit for positive grounding.
4. Set screw type connectors: Hot dip galvanized, steel, UL listed concrete tight with male hub and insulated plastic throat, 150-degree C temperature rated. Setscrew shall be same as for couplings.
5. Raintight couplings: Hot dip galvanized, steel; UL listed raintight and concrete tight, using gland and ring compression type construction.
6. Raintight connectors: Hot dip galvanized, steel, UL listed raintight and concrete tight, with insulated throat, using gland and ring compression type construction.

B. FMC: Zinc-coated steel.
1. Conduit: Shall be fabricated in continuous lengths from galvanized steel strip, spirally wound and formed to provide an interlocking design and conforming to UL 1.
2. Fittings: Connectors shall be of the single screw clamp variety with steel or cast malleable iron bodies and threaded male hubs with insulated throats. Exception: Pressure cast screw-in connectors shall be acceptable for luminaire connection in suspended ceilings and cut-in outlet boxes within existing furred walls.LFMC: Flexible steel conduit with PVC jacket.

C. LIQUIDTIGHT FLEXIBLE METALLIC CONDUIT (LFMC)
1. Conduit: Shall be fabricated in continuous lengths from galvanized steel strips, interlocking spirally wound, covered with extruded liquidtight jacket of polyvinyl chloride (PVC) and conforming to UL 360. Provide conduit with a continuous copper-bonding conductor wound spirally between the convolutions.
2. Fittings: Connector body and gland nut shall be of cadmium plated steel or cast malleable iron, with tapered, male, threaded hub; insulated throat and neoprene "O" ring gasket recessed into the face of the stop nut. The clamping gland shall be of molded nylon with an integral brass push-in ferrule.

D. RGS (RMC) Conduit: ANSI C80.1 and UL 6.
1. Full weight, mild steel pipe, heavy wall, threaded with threaded fittings, zinc coated on both inside and outside by a hot dipping or sherardizing process.
2. Standard threaded couplings, locknuts, bushings, and elbows: Only materials of steel or malleable iron are acceptable. Locknuts shall be bonding type with sharp edges for digging into the metal wall of an enclosure; provide two locknuts at each box or can, inside and outside.

3. Three-piece couplings: Hot dip galvanized, cast malleable iron.
4. Insulating bushings: Threaded polypropylene or thermosetting phenolic rated 150-degree C minimum.
5. Insulated grounding bushings: Threaded cast malleable iron body with insulated throat and steel "lay-in" ground lug with compression screw.
6. Insulated metallic bushings: Threaded cast malleable iron body with plastic insulated throat rated 150-degrees C.
7. All fittings and connectors shall be threaded.

E. PVC INSULATED GALVANIZED RIGID STEEL CONDUIT (PVC GRS/RMC)
1. Conduit: Full weight, threaded, hot-dip galvanized steel, conforming to ANSI C80.1 and NEMA RN-1 with nominal 20 or 40 mil thermoplastic vinyl coating, heat fused and bonded to the exterior of the conduit.
2. Fittings: Conduit couplings and connectors shall be as specified for galvanized rigid steel conduit and shall be factory PVC coated with an insulating jacket equivalent to that of the coated material.

F. INTERMEDIATE METAL CONDUIT (IMC)
1. Conduit: Hot dip galvanized steel meeting the requirements of CEC Article 345 and conforming to ANSI C80.6 and UL 1242.
2. Fittings: Conduit couplings, connector and bushing shall be as specified for galvanized rigid steel conduit. Integral retractable type IMC couplings are also acceptable.

G. PVC: PLASTIC CONDUIT [PVC (Polyvinyl Chloride), Schedule 40, Heavy Wall, UL Listed and Labeled for Direct Burial, 90 Degrees Centigrade]
1. Shall be classified for direct burial,
2. Standard PVC manufactured elbows shall be used. Where bends and offsets other than the standard fittings must be used, they shall be made with the use of standard manufactured bending equipment. Burn marks on PVC conduit will be considered cause for rejection of installation.

H. MISCELLANEOUS CONDUIT FITTINGS AND PRODUCTS
1. Watertight conduit entrance seals: Steel or cast malleable iron bodies and pressure clamps with PVC sleeve, neoprene sealing grommets and PVC coated steel pressure rings. Fittings shall be supplied with neoprene sealing rings between the body and PVC sleeve.
2. Watertight cable sealing bushings: One piece, compression molded sealing ring with PVC coated steel pressure disks, stainless steel sealing screws and zinc plated cast malleable iron locking collar.
3. Expansion fittings: Multi-piece unit comprised of a hot dip galvanized malleable iron or steel body and outside pressure bussing designed to allow a maximum of 4" conduit movement (2" in either direction). Furnish with external braid tinned copper bonding jumper. Unit shall be UL listed for wet or dry locations.
4. Expansion/deflection couplings: Multi-piece unit comprised of a neoprene sleeve with internal flexible tinned copper braid attached to bronze end couplings with stainless steel bands. Coupling shall accommodate 0.75-inch deflection, expansion or contraction in any direction and allow 30-degree angular deflections. Flexible, corrosion-resistant, watertight, moisture and heat resistant molded rubber jacket and stainless-steel jacket clamps. Unit shall comply with UL467 and UL514. Manufacturer shall be OZ/Gedney Type DX, Steel City Type EDF or equal.
5. Fire rated penetration seals:
   a. UL building materials directory classified.
   b. Conduit penetrations in fire rated separation shall be sealed with a UL classified fill, void or cavity material.

c. The fire rated sealant material shall be the product best suited for each type of penetration and may be a caulk, putty, composite sheet, or wrap/strip.

6. Standard products not herein specified:
   a. Provide listing of standard electrical conduit hardware and fittings not herein specified for approval prior to use or installation, i.e. locknuts, bushings, etc.
   b. Listing shall include Manufacturers name, part numbers and a written description of the item indicating type of material and construction.
   c. Miscellaneous components shall be equal in quality, material and construction to similar items herein specified.
      1) ***Hazardous area fittings: UL listed for the application.***

I. Joint Compound for Rigid Steel Conduit: Listed for use in cable connector assemblies, and compounded for use to lubricate and protect threaded raceway joints from weather, corrosion, and enhance their conductivity.

2.03 SURFACE RACEWAYS

A. Surface Metal Raceways: Galvanized steel with snap-on covers. Prime coating, ready for field painting.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Thomas & Betts Corporation.
      b. Walker Systems, Inc.; Wiremold Company (The).
      c. Wiremold Company (The); Electrical Sales Division.
      d. Or, Equal

PART 3 - EXECUTION

3.01 EXAMINATION

A. Contractor shall thoroughly examine Project site conditions for acceptance of conduit system installation to verify conformance with Manufacturer and Specification tolerances. Do not commence with installation until all conditions are made satisfactory.

3.02 RACEWAY APPLICATION

A. Galvanized rigid steel conduit (GRS) can be used in the following applications:
   1. For feeders and branch circuits located indoors, concealed or exposed above suspended ceilings, in damp/wet locations, in crawl spaces, in attics, chases, furred spaces, equipment rooms, loading docks or in hazardous locations in accordance with CEC and local Codes.
   2. For feeders and branch circuits concealed in concrete floors and walls when not in contact with earth.
   3. For use where conduit is subject to physical damage.
   4. For feeders and branch circuits installed exposed on the roof.

B. PVC insulated galvanized rigid steel conduit can be used in the following applications:
   1. Use 40-mil coating for feeders and branch circuits in damp or wet locations.
   2. Use 40-mil for feeders and branch circuits concealed in concrete walls or slabs in contact with earth.
   3. Use 40-mil for runs beneath floor slabs on grade.
   4. Use 40-mil for all below grade penetrations through floor slabs on grade or exterior walls.

C. Intermediate metal conduit (IMC): Can be used for the same application as galvanized rigid steel conduit as specified herein, except for hazardous locations prohibited by CEC or Local Codes.

D. Electrical metallic tubing (EMT): Can be used exposed or concealed for interior electrical feeders 4" and smaller, interior power and lighting branch circuits and low tension distribution system where run above suspended ceilings, in concrete slabs and walls not in contact with earth; in stud walls, furred spaces and crawl spaces. EMT shall not be installed exposed below 8 feet above the finish floor except within electrical, communication or signal rooms or closets (subject to physical damage).

E. Flexible metallic conduit (FMC): Can be used only in dry locations for connections from an adjacent outlet box or conduit to all motors, transformers, vibrating equipment or machinery, controllers, solenoid valves, float and flow switches or similar devices and to luminaires installed in suspended ceilings.

F. Liquidtight flexible metallic conduit (LFMC): Can be used in wet or damp locations for connections from adjacent outlet box or conduit to all motors, transformers, vibrating equipment or machinery, controllers, solenoid valves, float and flow switches or similar devices. These areas are typically food preparation and dishwashing areas, sump wells, loading docks, pump rooms, exterior areas, etc.

G. Fire-Resistive Systems: Refer to CEC Article 728. All devices utilized, mountings, and supports shall be listed as part of the fire-resistive system.

H. Minimum Raceway Size: 3/4-inch trade size.

I. Raceway Fittings: Compatible with raceways and suitable for use and location.
   1. Galvanized Rigid Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.
      a. Apply thread sealant to all joints except in permanently dry locations. Where installed below floor slab and in contact with fill material, or underground and in contact with earth or encased in concrete shall be double wrapped with Scotchwrap #50, Johns-Manville VID-10 or equal at double 1/2 lap (four net layers). Follow any specific instructions or methods shown on Drawings.
      b. Termination of conduits, wiring gutters or boxes shall be fitted with steel locknut and insulated metallic bushing or with two steel locknuts and insulating bushings. When grounding bushings are required, use insulated grounding bushing. Where conduit connections are exposed to weather or excessive moisture they shall be fitted with insulated watertight sealing hub i.e. Myers Hub.
      c. Cap underground conduit stubs.
      d. All cut ends of conduit shall be reamed to remove rough edges where conduit is threaded in the field; an electrical conduit thread cutting die with a taper shall be used.
   2. LFMC: Use malleable liquidtight insulated fittings with full-size cast steel UL locknut, threaded locking mechanism with insulated throat.
      a. In wet and corrosive locations, outside, or motor connections, shall be liquid- tight. May be used to connect recessed lighting fixtures or mechanical controls and equipment. Length shall be kept to a minimum but to allow for movement or removal of equipment. Leave slack in flex connection to maintain flexibility of conduit, minimum of 3’ of flex & one (1) 90° bend.
   3. PVC: May be used underground with sand fill evenly compacted on all sides or in concrete floor, or concrete walls, limited to structural requirements.
      a. All portions shall be concealed below grade or within concrete slab. Continuation of run above grade or floor slab shall be with rigid steel, intermediate metal grade or EMT in furred walls

b. Stubup at generator pad and portable tap box may be PVC SCH 40 terminated with bell ends.
c. Conduit entries into underground pullboxes shall be terminated with bell ends.
d. Minimum 24" cover over conduit. Refer to additional details on drawings.
e. A copper bonding conductor shall be pulled in each raceway and bonded to equipment at each end with code lugs.
f. Duct separation shall be provided using plastic conduit spacers specifically designed for the purpose. Refer to duct bank details on drawings.
g. All joints shall be solvent cemented in accordance with manufacturer's recommendations. All underground stubs shall be capped.

4. Room Wall and Ceiling Surfaces: Surface metal raceway sized to accommodate conductors for lighting control.

3.03 PREPARATION

A. Locations of conduit runs shall be planned in advance of the installation and coordinated with ductwork, plumbing, ceiling and wall construction in the same areas and shall not unnecessarily cross other conduits or pipe, nor prevent removal of ceiling tiles or panels, nor block access to mechanical or electrical equipment.

B. Where practical, install conduits in groups in parallel vertical or horizontal runs and at elevations that avoid unnecessary offsets.

C. All conduits shall be run parallel or at right angles to the centerlines of columns and beams, whether routed exposed, concealed above suspended ceiling or in concrete slabs.

D. Conduits shall not be placed closer than 12-inches to a flue, parallel hot water, steam line or other heat producing source or three inches from such lines when crossing perpendicular to the runs.

E. Communications conduits shall not be placed closer than 12 inches to power, a flue, parallel hot water, steam line or other heat producing source or three inches from such lines when crossing perpendicular to the runs.

F. Exposed conduit installation shall not encroach into the ceiling height headroom of walkways or doorways. Where possible, install horizontal raceway runs above water and below steam piping.

G. The largest trade size conduits in concrete floor and wall slabs shall not exceed 1/3 the floor or wall thickness and conduits shall be spaced a minimum of three conduit diameters apart unless otherwise noted on the Drawings. All conduits shall be installed in the center of concrete slabs or wall and shall not be placed between reinforcing steel and the bottom of floor slabs.

H. In long runs of conduit, provide sufficient pull boxes inside buildings to facilitate pulling wires and cables, with spacing not to exceed 150-feet. Support pull boxes from structure independent of conduit supports. These pull boxes are not indicated on the Drawings.

I. Provide all reasonably inferred standard conduits fitting and products required to complete conduit installation to meet the intended application whether noted, indicated, or specified in the Contract Documents or not.

J. Connect recessed luminaires to conduit runs with maximum six feet of flexible metal conduit

3.04 INSTALLATION

A. Install conduit in accordance with Manufacturer's written instructions, as indicated on Drawings and as specified herein.

B. Minimum Conduit Size: Unless otherwise noted herein or on Drawings, minimum conduit size shall be 3/4" for interior applications and 1" for exterior and underground applications.

C. Minimum Communication and Signal Conduit Size: Unless otherwise noted herein or on Drawings, minimum conduit size shall be 1" for interior applications and 2" for exterior and underground applications.

D. All conduit sizes indicated on the Drawings are sized for copper conductors with THHN/THWN insulation. If conductor type or size is changed the Contractor shall be responsible for resizing conduits upward to meet Code.

E. All communication and signal conduit sizes indicated on the Drawings are sized for 40% fill or less for category 6 or 6A cable. If cable type or size is changed the Contractor shall be responsible for resizing conduits upward to meet a maximum 40% fill.

F. In general, all conduit work shall be concealed where possible. Exceptions shall be electrical, communication and mechanical rooms, exposed ceiling areas, and parking garages.

G. Conduit connections to motors and surface cabinets shall be concealed, except for electrical, communication and mechanical rooms, or unless exposed Work is clearly called for on the Drawings.

H. Install conduits in complete runs before pulling in cables or wires.

I. Install conduit free from dented, bruises or deformations. Remove and replace any damaged conduits with new undamaged material.

J. Conduits shall be well protected and tightly covered during construction using metallic bushings and bushing "pennies" to seal open ends.

K. In making joints in rigid steel conduit, ream conduit smooth after cutting and threading. Coat all field-threaded joints with UL approved conductive type compound to ensure low resistance ground continuity through conduit and to prevent seizing and corrosion.

L. Clean any conduit in which moisture or any foreign matter has collected before pulling in conductors. Paint all field-threaded joints to prevent corrosion.

M. In all empty conduits or ducts, install a “True Tape” conduit measuring tape line to provide overall conduit length for determining length of cables/conductors for future use.

N. Conduit systems shall be mechanically and electrically continuous throughout. Install code size, insulated, copper, green-grounding conductors in all conduit runs for branch circuits and feeders. This conductor is not indicated on the Drawings. Refer to Section 260526: Grounding and Bonding.

O. Metallic conduit shall not be in contact with other dissimilar metal pipes (i.e. plumbing).

P. Make bends with standard conduit bending hand tool or machines. The use of any item not specifically designed for the bending of electrical conduit is strictly prohibited.

Q. A run of conduit between terminations at wire pulling points shall not contain more than the equivalent of four quarter bends (360-degrees, total).

R. A run of communications and signal conduit between terminations at wire pulling points shall not contain more than the equivalent of two quarter bends (180-degrees, total).

S. Emergency power raceway system: Install entirely independent of other raceway systems, except where specifically allowed by CEC Article 517.

3.05 PENETRATIONS

A. Locate penetrations and holes in advance where they are proposed in the structural sections such as footings, beams, wall, etc. Penetrations are acceptable only when the following occurs:
   1. Where indicated on the Structural Drawings.
   2. As approved by the Structural Engineer prior to construction and after submittal of Drawing showing location, size, and position of each penetration.

B. Cutting or holes:
   1. Cut holes through concrete, masonry block or brick floors and floors of structure with a diamond core drill or concrete saw. Pneumatic hammer, impact electric, hand or manual hammer type drills are not allowed, except where permitted by the Structural Engineer as required by limited working space. Obtain the approval of the Structural Engineer prior to drilling through structural sections.
   2. Provide sleeves or “can outs” for cast-in-place concrete floors and walls. Following conduit installation, seal all penetrations using non-iron bearing, chloride free, non-shrinking, dry-pack grouting compounds; or fire rated penetration-sealing materials.
   3. Cut holes for conduit penetrations through non-concrete and non-masonry walls, partitions, or floors with a hole saw. The hole shall be only as large as required to accommodate the size of the conduit.
   4. Provide single piece escutcheon plates around all exposed conduit penetrations in public places.

C. Sealing:
   1. Non-rated penetrations: Pack opening around conduits with non-flammable insulating material and seal with gypsum wallboard taping compound.
   2. Fire stop: Where conduits, wireways and other electrical raceways pass through fire rated partitions, walls, smoke partitions or floor; install a UL classified fire stop material to provide an effective barrier against the spread of fire, smoke, and gases. Completely fill and seal clearances between raceways and openings with the fire stop material.

D. Waterproofing: At floor, exterior wall, and roof conduit penetrations, completely seal clearances around the conduit and make watertight as specified in Division 07: Sealants and Caulking.
   1. Install specified watertight conduit entrance seals at all below grade wall and floor penetrations. Conduits penetrating exterior building walls and building floor slab shall be PVC coated rigid galvanized steel.
   2. For roof penetrations furnish and install roof flashing, counter flashing and pitch-pockets as specified under Roofing and Sheet Metal Sections of the Specifications.
   3. Provide membrane clamps and cable sealing fittings for any conduit that horizontally penetrates the waterproof membrane.
   4. Conduits that horizontally penetrate a waterproof membrane shall fall away from and below the penetration on the exterior side a minimum of two times the conduit diameters.

3.06 CONCEALED IN CONCRETE

A. Install conduits approximately in the center of the slab so that there will be a minimum of 3/4-inch of concrete around the conduits.

B. Installation of conduit in structural concrete that is less than three inches thick is prohibited. Topping slabs, maintenance pads and curbs are exempted.

C. Tie conduits to reinforcing rods or otherwise secure them to prevent sagging or shifting during concrete placement. Run conduit larger than 1-inch trade size, parallel with or at right angles to the main reinforcement; where at right angles to the reinforcement, the conduit shall be close to one of the supports of the slab.

D. Where nonmetallic conduit or tubing is used, raceways must be converted to PVC coated rigid steel conduit before rising above floor.

E. Make couplings and connections watertight.

F. Protect stub-ups from damage where conduits rise from floor slabs. Arrange so curved portion of bends is not visible above the finished slab.

3.07 TERMINATIONS AND JOINTS

A. Use raceway fittings that are of types compatible with the associated raceway and suitable for the use and location. For intermediate steel conduit, use threaded rigid steel conduit fittings except as otherwise indicated.

B. Raceways shall be joined using specified couplings or transition couplings where dissimilar raceway systems are joined.

C. Conduits shall be securely fastened to cabinets, boxes and gutters using two locknuts and an insulating bushing or specified insulated connectors. Where joints cannot be made tight, use bonding jumpers to provide electrical continuity of the raceway system. Where terminations are subject to vibration, use bonding bushings or wedges to assure electrical continuity. Where subject to vibration or dampness, use insulating bushings to protect conductors. Install grounding bushings or bonding jumpers on all conduits terminating at concentric or eccentric knockouts.

D. Conduit terminations exposed at weatherproof enclosures and cast outlet boxes shall be made watertight using specified connectors and hubs.

E. Stub-up connections: Extend conduits through concrete floor for connection to freestanding equipment with an adjustable top or coupling threaded inside for plugs and set flush with the finished floor. Extend conductors to equipment with rigid steel conduit; flexible metal conduit may be used 6 inches above the floor. Where equipment connections are not made under this contract, install screwdriver operated threaded flush plugs with floor.

F. Install specified cable sealing bushings on all conduits originating outside the building walls and terminating in switchgear, cabinets, or gutters inside the building. Install cable sealing bushings or raceway seal for conduit terminations in all grade level or below grade exterior pull, junction, or outlet boxes.

G. Raceway seal: Inject into wire filled raceways, a pre-formulated rigid 2 lbs. density polyurethane foam which expands a minimum 35 times its original bulk. Foam shall have the physical properties of water vapor transmission of 1.2 to 3.0 perms: water absorption less than 2% by volume, fungus and bacterial resistant. Foam shall permanent seal against water, moisture, insects, and rodents. Install raceway sealing foam at the following points:

1. Where conduits pass from warm locations to cold locations to prevent passage of water vapor (such as refrigerated spaces, constant temperature rooms, air-conditioned spaces, etc.).
2. Where conduits enter buildings from below grade.

H. Install expansion couplings where any conduit crosses a building separation or expansion joint as follows:
1. Conduits three inches and larger, shall be rigidly secured to the building structure on opposite sides of a building expansion joint and provided with expansion or deflection couplings. Install the couplings in accordance with the Manufacturer's recommendations.
2. Conduits smaller than three inches shall be rigidly secured to the building structure on opposite sides of a building expansion joint with junction boxes on both sides of the joint. Connect conduits to junction boxes with 15 inches of slack flexible conduit. Flexible conduit shall have a green copper ground-bonding jumper installed. For concrete embedded conduit, use expansion and deflection couplings as specified above for three inches and larger conduits.

I. Use short length (maximum of 6ft) of the appropriate FMC or LFMC conduit for connections to motors and other electrical equipment subject to movement, vibration, misalignment, cramped quarters, or noise transmission. Provide liquidtight flexible metal conduit for installation in exterior locations, moisture or humidity-laden atmosphere, corrosive atmosphere, water hose or spray wash-down operations and locations subject to seepage or dripping of oil, grease, or water. Provide a green ground wire with FMC or LFMC conduit.

3.08 HAZARDOUS LOCATIONS

A. Use rigid steel conduit only.

B. Install UL approved sealing fittings that prevent passage of explosive vapors in accordance with the Manufacturers written instructions. Locate fittings at suitable, approved, accessible locations and fill them with UL-listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank coverplate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points and elsewhere as indicated:
1. Where conduits enter or leave hazardous locations.
2. At luminaires, switches, receptacles and as required by the CEC.

3.09 SUPPORTS

A. Provide supports for raceways as specified in Section 260529: Electrical Hangers and Supports.

B. All raceways systems shall be secured to building structures using specified fasteners, clamps and hangers spaced according to the CEC.

C. Support single runs of conduit using one-hole pipe straps. Where run horizontally on walls in damp or wet locations, install "clamp backs" to space conduit off the surface.

D. Multiple conduit runs shall be supported using "trapeze" hangers fabricated from specified construction channel, mounted to 3/8-inch diameter, threaded steel rods secured to building structures. Fasten conduit to construction channel with standard one-hole pipe clamps or the equivalent. Provide lateral seismic bracing for hangers.

E. Individual 1/2" and 3/4" conduits installed above suspended ceilings may be attached to the ceiling's hanger wire using spring steel support clips provided that not more than two conduits are attached to any single support wire.

F. Support exposed vertical conduit runs at each floor level, independent of cabinets or switches to which they run, by means of acceptable supports.

G. Fasteners and supports in solid masonry and concrete:
   1. Use steel or malleable iron concrete inserts set in place prior to placing the concrete.
   2. After concrete installation:
   3. Steel expansion anchors not less than ¼ inch bolt size and not less than 1-1/8" embedment.
   4. Power set fasteners not less than ¼ inch diameter with depth of penetration not less than three inches.
   5. Use vibration and shock resistant anchors and fasteners for attaching to concrete ceilings.

H. Hollow masonry: Toggle bolts are permitted. Bolts supported only by masonry block are not acceptable.

I. Metal structures: Use machine screw fasteners or other devices specifically designed and approved for the application.

3.10 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly.

3.11 PROTECTION

A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes boxes for electrical wiring.

1.03 DEFINITIONS

A. CEC: California Electrical Code.

1.04 SUBMITTALS

A. Product Data: For boxes.

B. Source quality-control test reports.

1.05 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

PART 2 - PRODUCTS

2.01 BOXES, ENCLOSURES, AND CABINETS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
   1. Outlet and junction boxes:
      a. Spring City Electrical Manufacturing Co.
      b. Thomas & Betts Corp.
      c. Raco, Inc.
   2. Cast boxes:
      a. Appleton Electric Co.
      b. Crouse-Hinds.
   3. Floor boxes:
      a. Legrand.
      b. Hubbell Inc.
      c. Raceway Components, Inc.
   4. Pullboxes:
      a. Circle AW Products.
      b. Hoffman Engineering Co.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

C. Sheet Metal Outlet and Device Boxes: NEMA OS 1.
   1. Shall be of size and shape best suited for particular application, properly code sized for number of wires and conduits passing through or terminating therein, but in no case less than four inches square or octagon by 2-1/4-inch deep. Support boxes directly to structural

members, framing or blocking by means of screws, anchors, bolts or embedded in masonry or concrete.

2. Outlet boxes shall be one-piece pressed steel, sherardized or galvanized. Boxes shall be fitted with flush device covers and "Plaster Rings", or tile rings in masonry or concrete. Surface covers shall be used where exposed wiring is permissible. Lighting outlets shall be fitted with 3/8" malleable fixture stud. Boxes in damp or outdoor locations shall be malleable iron with threaded hubs, fitted with gasket and cast cover.

D. Cast-Metal Outlet and Device Boxes: NEMA FB 1, ferrous alloy Type FD, with gasketed cover.

E. Metal Floor Boxes: Sheet metal, fully adjustable, rectangular. Provide with flanges to accommodate floor finish.

F. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

G. Pull Boxes: Indoor pull boxes fabricated of code gauge steel, of size shown or as required, complete with screw covers, flush type in finished areas, surface type in unfinished areas, primed, and painted. See drawings for additional requirements.

H. Pull boxes used outdoors or in damp locations fabricated of code gauge steel with rain-tight welded seams, conduit hubs on top or sides, screw covers with neoprene or korprene gaskets. Hardware non-ferrous metal or hot-dipped galvanized. Boxes located on roof, entire boxes painted two coats of rust-inhibiting aluminum paint, Rustoleum or equal. Boxes located on building walls or free standing; finish powder paint color to match exterior building color.
1. Hoffman, NEMA 3R, A Series or equal.

I. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous-hinge cover with flush latch, unless otherwise indicated.
1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.

2.02 CABINETS:

A. NEMA 250, Type 1, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.

B. Hinged door in front cover with flush latch and concealed hinge.

C. Key latch to match panelboards.

D. Metal barriers to separate wiring of different systems and voltage.

E. Accessory feet where required for freestanding equipment.

PART 3 - EXECUTION

3.01 PREPARATION

A. Install all outlet boxes flush with building walls, ceilings, and floors except where boxes are installed in mechanical and electrical rooms, in cabinetry, above accessible ceilings or where exposed Work is called for on the Drawings.

B. Locate pull boxes and junction boxes in concealed locations above removable ceilings or exposed in electrical rooms, utility rooms or storage areas.

C. Install outlet boxes at the locations and elevations indicated on the Drawings or specified herein. Make adjustments to locations as required by structural conditions and to suit coordination requirements of other trades.

D. Locate switch outlet boxes on the latch side of doorways unless otherwise indicated.

E. Locate outlet boxes above hung ceilings having concealed suspension systems, adjacent to openings for removable recessed luminaires.

F. Do not install outlet boxes back-to-back, separate boxes by at least 6". In fire-rated walls separate boxes by at least 24" and wall stud.

G. Adjust position of outlet boxes in finished masonry walls to suit masonry course lines. Coordinate cutting of masonry walls to achieve neat openings for boxes.

3.02 INSTALLATION

A. Install boxes in accordance with Manufacturer's written instructions, as indicated on Drawings and as specified herein.

B. Locate electrical boxes as indicated on Drawings and as required for splices, taps, wire pulling, equipment connections and Code compliance.

C. Install junction or pull boxes where required to limit bends in conduit runs to not more than (3) 90 degree bends or where pulling tension achieved would exceed the maximum allowable for the cable to be installed. Note that these boxes are not indicated on the Drawings.

D. Install raised covers (plaster rings) on all outlet boxes in stud walls or in furred, suspended, or exposed concrete ceilings. Covers shall be of a depth to suit the wall or ceiling finish.

E. Leave no unused openings in any box. Install close-up plugs as required to seal openings.

F. Provide cast metal boxes with gasketed cast metal cover plates where boxes are exposed in damp or wet locations.

G. Welded outlet boxes shall only be used in concealed interior installations.

H. Provide precast concrete boxes in exterior planting areas, walkways, roads etc.

I. Provide an access panel in permanent ceiling or wall where boxes are installed and will be inaccessible.

J. For boxes mounted in exterior walls, make sure that there is insulation behind outlet boxes to prevent condensation in boxes.

K. For outlets mounted above counters, benches or backsplashes, coordinate location and mounting heights with built-in units. Adjust mounting height to agree with required location for equipment served.

L. Use conduit outlet bodies to facilitate pulling of conductors or to make changes in conduit direction only. Do not make splices in conduit outlet bodies.

M. Add additional sheet rock as necessary to maintain original fire rating of walls where boxes are installed.

N. Install galvanized steel coverplates on boxes in unfinished areas, above accessible ceilings and on surface mounted outlets.

3.03 SUPPORTS

A. Provide boxes installed in walls with brackets designed for attaching directly to the studs or mount boxes on specified box supports.

B. Mount boxes, installed in suspended ceilings of gypsum board or lath and plaster construction, to 16-gauge metal channel bars attached to main ceiling runners.

C. Support boxes independently of conduit system.

D. Support boxes, installed in suspended ceilings supporting acoustical tiles or panels, directly from the structure above wherever pendant mounted luminaires are to be installed from the box.

E. Support boxes mounted above suspended acoustical tile ceilings, directly from the structure above.

END OF SECTION

PART 1 - GENERAL

1.01 SCOPE

A. Section Includes:
   1. Conduit, ducts, and duct accessories for direct-buried and concrete-encased duct banks, and in single duct runs.
   2. Handholes and pull boxes.
   3. Manholes.

1.02 RELATED SECTIONS

A. Section 26 05 19 Low Voltage Electrical Power Conductors and Cables

B. Section 26 05 53 Identification for Electrical Systems

1.03 DEFINITION

A. RNC: Rigid nonmetallic conduit.

1.04 SUBMITTALS

A. Submit in accordance with of Section 01 3300 Shop Drawings, Product Data and Samples.

B. Product Data: For the following:
   1. Duct-bank materials, including separators and miscellaneous components.
   2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
   3. Accessories for manholes, handholes, pull boxes, and other utility structures.
   4. Warning tape.

C. Shop Drawings for Precast or Factory-Fabricated Underground Utility Structures: Include plans, elevations, sections, details, attachments to other work, and accessories, including the following:
   1. Duct entry provisions, including locations and duct sizes.
   2. Reinforcement details.
   3. Frame and cover design and manhole frame support rings.
   4. Ladder details.
   5. Grounding details.
   6. Dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
   7. Joint details.

D. Product Certificates: For concrete and steel used in precast concrete manholes, pull boxes and handholes, comply with ASTM C 858.

E. Field quality-control reports.

1.05 QUALITY ASSURANCE

A. Comply with IEEE C2 – National Electrical Safety Code.

B. Comply with the current issue of the California Electrical Code.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver ducts to Project site with ends capped. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.

B. Store precast concrete underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.

C. Lift and support precast concrete units only at designated lifting or supporting points.

1.07 COORDINATION

A. Coordinate layout and installation of ducts, manholes, handholes, and pull boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.

B. Coordinate elevations of ducts and duct-bank entrances into manholes, handholes, and pull boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by the Owner's Representative.

1.08 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Furnish cable-support stanchions, arms, insulators, and associated fasteners in quantities equal to five percent of quantity of each item installed.

PART 2 - PRODUCTS

2.01 CONDUIT

A. Rigid Steel Conduit: Galvanized. Comply with ANSI C80.1.

B. RNC: NEMA TC 2, Type EPC-40-PVC, and Type EPC-80-PVC UL 651, with matching fittings by same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B.

2.02 NONMETALLIC DUCTS AND DUCT ACCESSORIES

A. Basis-of-Design Product: Carlon or comparable product by one of the following:
   1. Cantex, Inc.
   2. Allied Tube & Conduit; Atkore International.
   3. JM Eagle; J-M Manufacturing Company, Inc..
   4. DCX-CHOL Enterprises, Inc.; ELECSYS Division.
   5. Electri-Flex Company.
   6. IPEX Inc.
   7. Lamson & Sessions; Carlon Electrical Products.
   8. Or, Equal.

B. Duct Accessories:
   1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and retained to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.

2. Warning Tape: Underground-line warning tape specified in Section 25 0553 "Identification."

2.03 PRECAST CONCRETE HANDHOLES AND PULL BOXES

A. Manufacturers: provide products by one of the following:
   1. Jensen Precast
   2. Christy Concrete Products.
   3. Oldcastle Precast Group.
   4. Oldcastle Precast Inc.; Utility Vault Division.
   5. Or, Equal.

B. Comply with ASTM C 858 for design and manufacturing processes.

C. Ferrous metal hardware shall be hot-dip galvanized in accordance with ASTM A153 (ASTM A153M) and ASTM A123 (ASTM A123M) Standard Specification for Zinc (Hot-Dip Galvanized) Coatings.

D. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or pull box.
   1. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing stainless-steel bolts.
   2. Frame and Cover: Weatherproof steel frame, with hinged steel access door assembly with tamper-resistant, captive, cover-securing stainless-steel bolts.
      a. Cover Hinges: Concealed, with hold-open ratchet assembly.
      b. Cover Handle: Recessed.
   3. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
   4. Cover Legend: Molded lettering, As indicated for each service.
   5. Configuration: Units shall be designed for flush burial and have closed bottom unless otherwise indicated.
   6. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
      a. Extension shall provide increased depth of 12 inches
      b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.

2.04 PRECAST MANHOLES

A. Manufacturers: provide products by one of the following:
   1. Jensen Precast
   2. Christy Concrete Products.
   3. Oldcastle Precast Group.
   4. Oldcastle Precast Inc.; Utility Vault Division.
   5. Or equal.

B. Comply with ASTM C 858 with structural design loading as specified in "Underground Enclosure Application" Article, and with interlocking mating sections, complete with accessories, hardware, and features.

C. Concrete Knockout Panels: 1-1/2 to 2 inches thick, for future conduit entrance and sleeve for ground rod.

D. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

2.05 UTILITY STRUCTURE ACCESSORIES

A. Manufacturers: provide products by one of the following
1. Jensen Precast
2. Bilco Company (The).
3. Campbell Foundry Company.
4. Christy Concrete Products.
5. Cretex Concrete Products West, Inc.; Riverton Division.
6. East Jordan Iron Works.
7. Hubbell Power Systems; Lenoir City Division.
8. McKinley Iron Works.
9. Neenah Foundry Company.
10. NewBasis.
11. Oldcastle Precast Group.
12. Oldcastle Precast Inc.; Utility Vault Division.
13. Osburn Associates, Inc.
14. Underground Devices, Inc.
15. Or equal

B. Ferrous metal hardware, where indicated, shall be hot-dip galvanized complying with ASTM A 153 (A 153M) and A 123 (A 123M).

C. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.
1. Frame and Cover: Weatherproof, gray cast iron complying with ASTM A 48/A 48M, Class 30B with milled cover-to-frame bearing surfaces; diameter, 29 inches.
a. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
b. Special Covers: Recess in face of cover designed to accept finish material in paved areas.
2. Cover Legend: Cast in. Retained to suit system.
a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables for systems operating at 600 V and less.
b. Legend: "SIGNAL" for communications, data, and telephone duct systems.
3. Manhole Chimney Components: Precast concrete rings with dimensions matched to those of roof opening.
a. Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C 270, Type M, except for quantities less than 2.0 cu. Ft. where packaged mix complying with ASTM C 387/C 387M, Type M, may be used.

D. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, 2-inch-diameter eye, and 1-by-4-inch bolt.

E. Working Load Embedded in 6-Inch, 4000-psi Concrete: 13,000-lbf minimum tension.

F. Pulling-In and Lifting Irons in Concrete Floors: 7/8-inch- diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.

G. Ultimate Yield Strength: 40,000-lbf shear and 60,000-lbf tension.

H. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2-inch ID by 2-3/4 inches deep, flared to 1-1/4 inches minimum at base.
   1. Tested Ultimate Pullout Strength: 12,000 lbf minimum.

I. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2-inch bolt, 5300-lbf rated pullout strength, and minimum 6800-lbf rated shear strength.

J. Cable Rack Assembly: Steel, hot-dip galvanized except insulators.
   1. Stanchions: T-section or channel; 2-1/4-inch nominal size; punched with 14 holes on 1-1/2-inch centers for cable-arm attachment.
   2. Arms: 1-1/2 inches wide, lengths ranging from 3 inches with 450-lb minimum capacity to 18 inches with 250-lb minimum capacity. Arms shall have slots along full length for cable ties and be arranged for secure mounting in horizontal position at any vertical location on stanchions.
   3. Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.

K. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F. Capable of withstanding temperature of 300 deg F without slump and adhering to clean surfaces of plastic ducts, metallic conduits, conduit coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.

2.06 SOURCE QUALITY CONTROL

A. Test and inspect precast concrete utility structures according to ASTM C 1037.

PART 3 - EXECUTION

3.01 CORROSION PROTECTION

A. Aluminum shall not be installed in contact with earth or concrete.

B. Rigid steel galvanized conduit to be wrapped with 10-Mil PVC tape.

3.02 UNDERGROUND DUCT APPLICATION

A. Ducts for Electrical Cables over 600 V: RNC, NEMA Type EPC-80, Installed per utility requirements.

B. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank unless otherwise indicated.

C. Ducts for Electrical Branch Circuits: RNC, NEMA Type EPC-40-PVC, in direct-buried duct bank unless otherwise indicated.

3.03 EARTHWORK

A. Excavation and Backfill: Comply with Division 31 Section "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restore surface features at areas disturbed by excavation and reestablish original grades unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32 Sections "Turf and Grasses" and "Plants."

D. Cut and patch existing pavement in the path of underground ducts and utility structures according to Division 01 Section "Cutting and Patching."

3.04 DUCT INSTALLATION

A. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.

B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 60 inches, horizontally and 36-inch vertically, at other locations unless otherwise indicated.

C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.

D. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.
   1. Begin change from regular spacing to end-bell spacing 10 ft. from the end bell without reducing duct line slope and without forming a trap in the line.
   2. Grout end bells into structure walls from both sides to provide watertight entrances.

E. Building Floor Penetrations: Make a transition from underground duct to rigid steel conduit at least 5 ft. outside the building wall without reducing duct line slope away from the building and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Division 26 Section "Common Work Results for Electrical."

F. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic pressure.

G. Pulling Cord: Install 100-lbf- test nylon cord in ducts, including spares.

H. Direct-Buried Duct Banks:
   1. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
   2. Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 ft. of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches between tiers.
   3. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 Section "Earth Moving" for pipes less than 6 inches in nominal diameter.
   4. Install backfill as specified in Division 31 Section "Earth Moving."

5. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4 inches over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving."
6. Install ducts with a minimum of 3 inches between ducts for like services and 3 feet between power and signal ducts.
7. Depth: Install top of duct bank at least 36 inches below finished grade unless otherwise indicated.
8. Install manufactured rigid steel galvanized conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
    a. Couple steel conduits to ducts with female adapters designed for this purpose, and encase coupling with 3 inches of concrete.
    b. For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.
9. Warning Tape: Bury warning tape approximately 12 inches above direct-buried ducts and duct banks, placing them 24 inches o.c. Align tape along the width and along the centerline of duct bank. Provide an additional plank for each 12-inch increment of duct-bank width over a nominal 18 inches.

3.05 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND PULL BOXES

A. Precast Concrete Handhole and Manhole Installation:
1. Comply with ASTM C 891 unless otherwise indicated.
2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.
3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

B. Elevations:
1. Manhole Roof: Install with rooftop at least 15 inches below finished grade.
2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch above finished grade.
3. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch above finished grade.
4. Where indicated, cast handhole cover frame integrally with handhole structure.

C. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.

D. Manhole Access: Circular opening in manhole roof; sized to match cover size.
1. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
2. Install chimney, constructed of precast concrete collars and rings to support frame and cover and to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for cast-iron frame to chimney.

E. Hardware: Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.

F. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.

G. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches for manholes and 2 inches for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.

H. Warning Sign: Install "Confined Space Hazard" warning sign on the inside surface of each manhole cover.

3.06 GROUNDING

A. Ground underground ducts and utility structures according to the CEC and Division 26 Section "Grounding and Bonding for Electrical Systems." The more stringent shall apply.

3.07 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
   1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
   2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
   3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Correct deficiencies and retest as specified above to demonstrate compliance.

C. Prepare test and inspection reports.

3.08 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of manholes, including sump. Remove foreign material.

END OF SECTION

26 05 48
VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 SCOPE

A. Section includes:
   1. Channel support systems.
   2. Anchors

1.02 RELATED SECTIONS

A. Section 26 05 33.13 Raceways for Electrical Systems

B. Section 26 05 29 Hangers and Supports for Electrical Systems

C. Section 26 22 00 Low Voltage Distribution Transformers

D. Section 26 24 13 Switchboards

1.03 DEFINITIONS

A. CBC: California Building Code.

B. ICC-ES: ICC-Evaluation Service.

1.04 PERFORMANCE REQUIREMENTS

A. Provide systems, units, equipment, and parts to meet or exceed current applicable requirements for seismic resistance specified by codes, regulations and authority having jurisdiction. Include all supports, anchors, braces and other restraining devices required.

B. Seismic bracing shall meet requirements of CBC Chapter 16A.

1.05 SUBMITTALS

A. Submit in accordance with of Section 01 33 00 Shop Drawings, Product Data and Samples.

B. Product Data: For the following:
   1. Seismic restraints and bracing systems.

PART 2 - PRODUCTS

2.01 SEISMIC-RESTRAINT DEVICES

A. Manufacturers:
   1. Cooper B-Line, Inc.; a division of Eaton.
   2. Unistrut; Atkore International.
   3. Hilti Inc.
   4. Or equal

B. General Requirements for Restraint Components: As noted in the Drawings.

2.02 FACTORY FINISHES

A. Finish: Galvanized steel

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and equipment to receive vibration isolation and seismic-control devices for compliance with requirements for tolerances and other conditions affecting performance.

B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before further placement of equipment, panels, boxes, conduits, etc.

C. Proceed only after unsatisfactory conditions have been corrected.

3.02 APPLICATIONS

A. Multiple Raceways: Secure raceways to trapeze member with bolted 2 piece clamps.

B. Torque fittings, anchors and connections per manufacturer's recommended values.

3.03 FIELD QUALITY CONTROL

A. Perform Tests and Inspections:
   1. Test at least 4 of each type and size of secured anchors and fasteners selected by Owner's Representative or IOR.
   2. Test to 90 percent of rated proof load of device.
   3. If a device fails test, modify all mountings of same type and retest until satisfactory results are achieved.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:
1. Equipment identification
2. Panelboard directories
3. Identification for power, conductors, communication, and control cable
4. Wire and cable identification
5. Buried electrical line warnings
6. Junction box identification
7. Inscribed device coverplates
8. Warning labels and signs
9. Instruction signs
10. Miscellaneous identification products

1.02 RELATED SECTIONS

A. Section 09 90-00, Painting and Coating

1.03 REFERENCE STANDARDS

A. ANSI/ASME A13.1 – Scheme for the Identification of Electrical Systems.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples: Submit samples of each color, lettering style, and other graphic representation required for each identification material or system.

C. Schedules of nameplates to be furnished indicating wording, symbols, letter size, letter style, and color coding for each system.

1.05 QUALITY ASSURANCE

A. Coordinate identification names, abbreviations, colors, and other features with requirements in the Contract Documents, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual, and with those required by codes, standards, and 29 CFR 1910.145.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer:
1. Brady/Seton
2. Stranco
3. Rowmark
4. Or equal

2.02 CONDUCTOR AND COMMUNICATION AND CONTROL-CABLE IDENTIFICATION

A. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather and chemical resistant coating and matching wraparound adhesive tape for securing ends of legend label.
   1. Marker for Tags: Machine-printed permanent, waterproof, black ink marker recommended by printer manufacturer.

B. Snap-Around labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

C. Snap around, Color Coding Bands: Slit, pretensioned, flexible, solid color-coded acrylic sleeve, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

2.03 UNDERGROUND-LINE WARNING TAPE

A. Tape:
   1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.
   2. Printing on tape shall be permanent and shall not be damaged by burial operations.
   3. Tape material and ink shall be chemically inert, and not subject to degrading when exposed to acids, alkalis, and other destructive substances commonly found in soils.

B. Color and Printing:
   1. Comply with ANSI Z535.1 through ANSI A535.5
   2. Inscriptions for Red-Colored Tapes: ELECTRIC LINE, HIGH VOLTAGE.
   3. Inscriptions for Orange-Colored Tapes: TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE. C. Tag:
   4. Pigmented polyolefin, bright-colored, compounded for direct-burial service.
   5. Thickness: 4 mils.
   6. Weight: 18.5 lb/1000 sq. ft.
   7. 3-inch Tensile According to ASTM D 882: 30 lbf, and 2500 psi.

2.04 WARNING LABELS AND SIGNS

A. Comply with CEC and 29 CFR 1910.145

B. Self-Adhesive Warning Labels: Factory printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment, unless otherwise indicated.

C. Warning label and sign shall include, but are not limited to, the following legends:
   1. Material: rigid plastic laminated impact acrylic, 2 layer, exterior grade, UV stable
   2. Thickness: 3/16 inch minimum
   3. Maximum label size: Length and width vary for required label content, but no less than 2 inches wide by 1 inch high. D. Baked-Enamel Warnings Signs:
   4. Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application.
   5. 1/4 inch grommets in corners for mounting.
   6. Nominal size, 7 inches by 10 inches E. Metal-Backed, Butyrate Warning Signs:
   7. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396 inch galvanized-steel backing; and with colors, legend, and size required for application.

8. 1/4 inch grommets in corners for mounting.
9. Nominal size, 10 inches by 14 inches

2.05 EQUIPMENT IDENTIFICATION NAMEPLATES

A. Provide plastic labels for mechanical engraving with predrilled holes for attachment hardware.
   1. Material: rigid plastic laminated impact acrylic, 2 layer, exterior grade, UV stable
   2. Thickness: 3/16 inch minimum
   3. Maximum label size: Length and width vary for required label content, but no less than 2 inches wide by 1 inch high.
   4. Background color:
      a. Normal power: Black, matte finish
      b. Emergency power: Red, matte finish
   5. Lettering: White, machine engraved, Futura font, 3/8 inch high, all caps
   6. Maximum temperature: Able to withstand up to 160 deg. F.
   7. Fasteners: Self-tapping stainless steel screws, except contact type permanent adhesive where screws cannot or should not penetrate substrate.
      a. Mounting screw type to be #8- 18 x 1 /2 drilling or tapping style, 1/4 inch hex washer head, stainless steel, or similar, appropriate for material in which sign is affixed to. A bead of silicone sealer shall be applied on back of sign and at screw locations prior to affixing sign to equipment.
      b. For signs larger than 3 inches by 3 inches, use a minimum of 4 mounting screws.

2.06 LEGEND PLATES

A. Die-stamped legend plate with mounting hole and positioning key for panel mounted operator devices, i.e. motor control pilot devices, hand-off-auto switches, reset buttons, etc.

2.07 BRASS TAGS

A. 2 inch, 19 gauge, metal tags with die-stamped legend, punched for fastener.

2.08 PANELBOARD DIRECTORIES (400 AMP, OR LESS)

A. Directories: Minimum 6 inch by 8 inch circuit directory frame and card with clear plastic covering shall be provided inside the inner panel door.

B. Circuit numbering: Starting at the top, odd numbered circuits in sequence down the left hand side and even numbered circuits down the right hand side. Multi-section panelboards shall have continuous consecutive circuit numbers.

2.09 WIRE AND TERMINAL MARKERS

A. Provide self-adhering, pre-printed, machine printable or write-on, self-laminating vinyl wrap around strips. Blank markers shall be inscribed using the printer or pen recommended by Manufacturer for this purpose.

2.10 PAINTED IDENTIFICATION MATERIALS

A. Stencils: Standard fiberboard stencils, prepared for required applications with the letter sizes generally complying with recommendations of ANSI A13.1 for piping and similar applications, but not less than3/4 inch high letters for access door signs and similar operational instructions.

B. Stencil Paint: Standard exterior type stenciling enamel; black, except as otherwise indicated; either brushing grade or pressurized spray-can form and grade.

C. Identification Paint: Standard identification enamel of colors indicated or, if not otherwise indicated for piping systems, comply with ANSI A13.1 for colors.

PART 3 - EXECUTION

3.01 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

B. Coordination: Where identification is to be applied to surfaces which require insulation, painting or other covering or finish, install identification after completion of covering and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.

3.02 ELECTRICAL EQUIPMENT IDENTIFICATION

A. General: Install engraved plastic laminate sign or plastic equipment marker on or near each major item of electrical equipment and each operational device, as specified herein if not otherwise specified for each item or device.

B. Optional sign types: Where lettering larger than 1 inch height is needed for proper identification, because of distance from normal location of required identification, stenciled signs may be provided in lieu of engraved plastic, verify with Owner’s Representative.

C. Lettering size: Minimum 1/4 inch high lettering for name of unit where viewing distances less than 24 inches, 1/2 inch high for distances up to 6 feet, and proportionately larger lettering for greater distances. Provide secondary lettering of 2/3 to 3/4 of size of the principal lettering.

D. Plasticized tags: Where equipment to be identified is concealed above acoustical ceilings or similar concealment, use plasticized tags installed within concealed space to eliminate text in exposed sign (outside concealment). In rooms other than security area, mechanical rooms, storage, etc. use thumbtacks for exposed signs with color coded for each type of equipment. Verify with Owner’s Representative.

3.03 LEGEND PLATES

A. Provide panel-mounted operators devices such as pilot lights, reset buttons, “HAND-OFF-AUTO” switches, etc.

3.04 BRASS TAGS

A. Provide tags for individual ground conductors to exposed ground bus indicating connection, i.e. “UFER”, “Cold Water Bond”, etc.

B. Provide tags for all feeder cables in underground vaults and pull boxes.

C. Provide tags for empty conduits in underground vault, pull boxes, and stubs.

3.05 PANELBOARD DIRECTORIES (400 AMP, OR LESS)

A. Provide typewritten directories arranged in numerical order denoting loads served by room number or area for each circuit.

B. Verify room numbers or area designation with Owner's Representative.

C. Mount panelboard directories in a minimum 6 inch by 8 inch metal frame under clear plastic cover inside every panelboard.

3.06 WIRE AND CABLE IDENTIFICATION

A. Provide wire markers on each conductor in panelboards, pull boxes outlet and junction boxes and at load connection. Identify with branch circuit or feeder number for power and lighting circuits and with control wire number as indicated on Manufacturer's shop drawings for control wiring.

B. Provide colored phase markers for conductors as noted in Section 26 05 19 Conductors and Cables. Apply colored, pressure sensitive plastic tape in half-lapped turns for a distance of 3 inches from terminal pointes and in boxes where splices or taps are made. Apply the last two laps of tape with no tension to prevent possible unwinding. Do not cover cable identification markings by taping.

3.07 UNDERGROUND CONDUIT MARKERS

A. During trench backfilling, for exterior underground power, signal and communications lines, install continuous underground plastic line marker, located directly above line at 6 inches to 8 inches below finished grade. Where multiple lines installed in a common trench or concrete envelope, do not exceed an overall width of 16 inches; install a single line marker.

3.08 JUNCTION BOX IDENTIFICATION

A. The cover of junction, pull, and connection boxes for both power and signal systems, located above suspended ceilings and below ceilings in non-public areas, shall be clearly marked with a permanent ink felt pen. Identify the circuits (panel designation and circuit numbers) contained in each box.

3.09 ADJUSTING AND CLEANING

A. Adjusting: Relocate any electrical identification device which has become visually blocked by Work of this Division or other Divisions.

B. Cleaning: Clean face of identification devices.

3.10 EXTRA STOCK

A. Furnish minimum of 5% extra stock of each electrical identification material required, including additional numbered valve tags (not less than 3) for each piping system, additional piping system identification markers, and additional plastic laminate engraving blanks of assorted sizes.

1. Where stenciled markers are provided, clean and retain stencils after completion of stenciling and include used stencils in extra stock, along with required stock of stenciling paints and applicators.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes computer-based, fault-current (short-circuit study) protective device evaluation study, coordination of protection devices and Arc Flash Risk Assessment. Protective devices shall be set based on results of the protective device coordination study. The final study will be generated based on the final electrical equipment submittals and the final pulled conductor lengths for all feeders.

B. Based on the findings of the final report, the electrical contractor shall adjust all required protective device settings based on the results of the protective device coordination and/or Arc Flash Risk Assessment.

C. The electrical contractor shall also install Arc Flash Risk (Incident Energy, Available Fault Current) labels on all switchboards, panelboards, disconnects, and transfer switches provided as part of the Arc Flash Risk Assessment.

1.02 SUBMITTALS

A. Submit in accordance with of Section 01 33 00 Shop Drawings, Product Data and Samples.

B. Product Data: For computer software program to be used for studies.

C. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399.

D. Qualification Data: For coordination-study specialist.

E. Other Action Submittals: The following submittals shall be made after the approval process for system protective devices has been completed. Submittals shall be in digital form.
   1. Coordination-study input data, including completed computer program input data sheets in MS Excel format, XLS.
   2. Study and Equipment Evaluation Reports shall indicate worst-case scenario conditions and associated results.
   3. Coordination-Study Report including computer generated Time-current Characteristic Curves (TCC).
   4. Arc Flash Risk Assessment Report and Incident Energy with Available Fault Current Warning / Danger Labels

1.03 QUALITY ASSURANCE

A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Software QA program shall comply with ISO 9000 with accredited certification agency such as UL. Manual calculations are not acceptable.

B. Coordination-Study Specialist Qualifications: A manufacturer or independent entity experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.

1. Professional engineer, licensed in the state where Project is located, shall be responsible for the study. All elements of the study shall be performed under the direct supervision and control of engineer.

C. At closeout two electronic copies of the computer software model shall be provided. Each copy on an independent flash drive.

PART 2 - PRODUCTS

2.01 COMPUTER SOFTWARE DEVELOPERS

A. Available Computer Software Developers: Companies offering computer software programs that may be used in the Work include, but are not limited to, the following:
1. ETAP.
2. SKM Systems Analysis, Inc.

3. Easy Power.
4. Or, Equal.

2.02 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

A. Comply with IEEE 399.

B. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.
1. Optional Features:
    a. Arcing faults.
    b. Simultaneous faults.
    c. Explicit negative sequence.
    d. Mutual coupling in zero sequence.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.
1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.02 POWER SYSTEM DATA

A. Contractor to gather and tabulate the following input data to support coordination study:
1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Actual fault contribution or impedance of utility service entrance.
3. Maximum available fault current to the system from the utility service.
4. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:
    a. Circuit-breaker and fuse-current ratings and types.
    b. Relays and associated power and current transformer ratings and ratios.
    c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
    d. Generator kilovolt amperes, size, voltage, and source impedance.
    e. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
    f. Busway ampacity and impedance.
    g. Motor horsepower and code letter designation according to NEMA MG 1.
5. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:

a. Special load considerations, including starting inrush currents and frequent starting and stopping.
b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
d. Generator thermal-damage curve.
e. Ratings, types, and settings of utility company's overcurrent protective devices.
f. Special overcurrent protective device settings or types stipulated by utility company.
g. Time-current-characteristic curves of all devices.
h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
j. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

3.03 FAULT-CURRENT STUDY

A. Calculate the maximum available short-circuit current in amperes rms symmetrical at circuit-breaker positions of the electrical power distribution system. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:
1. Switchgear and switchboard bus.
2. Motor-control center.
3. Distribution panelboard.
4. Branch circuit panelboard.

B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.

C. Calculate momentary and interrupting duties on the basis of maximum available fault current at each location:
1. Electric utility’s supply termination point
2. Incoming switchgear
3. Unit substation primary and secondary terminals
4. Low voltage switchgear
5. Motor control centers
6. Standby generators and automatic transfer switches
7. Branch circuit panelboards
8. Other significant locations throughout the system

D. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with IEEE 241 and IEEE 242.
1. Transformers:
   a. IEEE C57.96.
2. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.20.1.
3. Low-Voltage Fuses: IEEE C37.46.

E. Study Report:
1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram.

2. One-line diagram of the system being evaluated with available fault at each bus
3. Typical calculation examples.

F. Equipment Evaluation Report:
1. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
2. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

3.04 COORDINATION STUDY

A. Perform coordination study using approved computer software program. Prepare a written report using results of fault-current study. Comply with IEEE 399.
1. Calculate the maximum and minimum 1/2-cycle short circuit currents.

B. Comply with IEEE 242 recommendations for fault currents and time intervals.

C. Transformer Primary Overcurrent Protective Devices:
1. Device shall not operate in response to the following:
a. Inrush current when first energized.
b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.

D. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

E. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:
1. Tabular Format of Settings Selected for Overcurrent Protective Devices:
a. Device tag.
b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
d. Fuse-current rating and type.
e. Ground-fault relay-pickup and time-delay settings.
2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
a. Device tag.
b. Voltage and current ratio for curves.
c. Three-phase and single-phase damage points for each transformer.
d. No damage, melting, and clearing curves for fuses.
e. Cable damage curves.

f. Transformer inrush points.
g. Maximum fault-current cutoff point.

F. Completed data sheets for setting of overcurrent protective devices.

3.05 ARC FLASH RISK ASSESSMENT

A. Perform Arc Flash analysis according to the IEEE 1584 guidelines and equations presented in NFPA 70E-2015, Annex D. Analysis shall be performed in conjunction with Short Circuit analysis and Protective Device Time-Current Coordination analysis.

B. Incident Energy and Flash protection boundary shall be calculated at all locations where energized work could be performed such as switchboards, switchgear, motor control centers, panel boards, busway and tiebreakers.

C. Working distances shall be based on IEEE 1584. The calculated arc flash protection boundary shall be determined using those working distances.

D. Calculations must be performed to represent the maximum and minimum contributions of fault current magnitude for normal and emergency operating conditions The incident energy must be calculated for the following scenarios (if applicable):
1. Full contribution from utility service with full motor load
2. Arcing Current Variation Correction Factor for utility service with full motor load
3. Full contribution from utility service with no motor load
4. Arcing Current Variation Correction Factor for utility service with no motor load
5. Full contribution from standby generator with full motor load
6. Arcing Current Variation Correction Factor for standby generator with full motor load
7. Full contribution from standby generator with no motor load
8. Arcing Current Variation Correction Factor for standby generator with no motor load
9. Full contribution from utility service and parallel generators with full motor load
10. Arcing Current Variation Correction Factor for utility service and parallel generators with full motor load
11. Full contribution from utility service and parallel generators with no motor load
12. Arcing Current Variation Correction Factor for utility service and parallel generators with no motor load

E. Multiple system configurations and operating conditions shall be considered and greatest incident energy must be selected for each equipment location.
1. Provide a tabular view report of all configurations and operating conditions used
2. Provide calculation methods and assumptions including any adjustments used when considering resistance and impedance tolerances.

F. When applicable, Utility Minimum and Maximum contributions should be considered. Calculations shall also take into consideration the maximum let through fault current of the utility transformer, the parallel operation of local generators with utility source as well as any stand-by generators.

G. Include scenarios when the main source protective devices are or are not adequately isolated from the bus and may fail to operate or be capable of de-energizing the arc fault before it escalates into a line-side arc fault.

H. Arc flash computation shall include both line and load side of main breaker calculations, where necessary.

I. The Arc flash analysis shall include all 480-volt, 240-volt, and 208-volt locations.

J. Arc Flash Risk Assessment report:
1. Arc Flash reports shall compare results from the various arc flash hazard assessments and be capable of filtering the “worst case” Arc Flash analysis results coming from different scenarios in a single table report.
2. Provide a report in a tabulated format that displays the sequence of operation of protective devices during an arc fault.
3. Recommendations for arc flash energy reduction including the use of arc reduction maintenance switches, current limiting fuses, replacement of overcurrent protective devices and/or trip units, or replacement of equipment with arc resistant or preventative designs.

K. Arc Flash Warning Labels:
1. Contractor shall provide a Durable 3.5 in. x 5 in. thermal transfer type label of high adhesion polyester for each work location analyzed.
2. All labels will be based on recommended overcurrent device settings and will be provided after the results of the analysis have been presented to the Company and after any system changes, upgrades or modifications have been incorporated into the system.
3. The label shall include the following information, at a minimum:
   a. Location
   b. Nominal voltage
   c. Flash protection boundary
   d. Available Fault Current
   e. Incident energy
   f. Working distance
   g. Engineering study number, revision number and issue date

4. Arc Flash warning label sample is shown below:

5. Labels shall be machine printed, with no field markings.
6. Arc flash labels shall be provided in the following manner and all labels shall be based on recommended overcurrent device settings.

a. For each 600, 480 and applicable 208 volt panelboard, one arc flash label shall be provided for each section
b. For each motor control center, one arc flash label shall be provided for each section
c. For each low voltage switchboard, one arc flash label shall be provided for each section
d. For each switchgear, one flash label shall be provided for each section
e. For each transformer disconnect switch and motor disconnect switch, one arc flash label shall be provided
f. For medium voltage switches, one arc flash label shall be provided

7. Labels shall be installed by the engineering services division of the Company under the Startup and Acceptance Testing contract portion.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
   1. Indoor occupancy sensors.

B. Related Requirements:
   1. Division 26 Section "Wiring Devices" for wall-box dimmers, wall-switch occupancy sensors, and manual light switches.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.04 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of lighting control device to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
   1. Network addressable lighting control system:
      a. Wattstopper “DLM”.
      b. Acuity “nLight”.
      c. Douglas “Dialog”.
      d. ETC “Echo”.
      e. Eaton “Greengate Room Controller”.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

2.02 GENERAL

A. The lighting control system shall be standalone with no central control software. Lighting components shall tie together and communicate directly with each other as required for the device type.

B. Control stations, occupancy sensors, and daylight sensors shall tie into dimming and relay modules to control luminaires.

C. The control parameters shall be set within each device, either as dip switches or dials on the device itself or with handheld or computer-based commissioning tools. The parameters remain set until they are manually changed.

D. Daylight sensors shall rationalize changes to light levels when daylight is available and shall maintain a steady light level when subjected to fluctuating ambient conditions.

E. Where required in a sequence of operation an astronomical time clock function shall be integrated into the control modules or relay panels.

F. During an emergency condition (loss of normal power), the system shall not impede the emergency lighting to function properly, i.e. the control system shall control emergency lighting to turn on at full light output and lock out user controls.

G. The control system shall allow occupancy sensor, when relaying a vacant status to either turn lights off or dim lights to a preset level.

H. The control system components shall comply with the latest edition of the California Building Energy Efficiency Standards, California Building Code, Part 6 and be certified by The California Energy Commission.

2.03 LIGHTING CONTROL MODULES

A. General:
1. Lighting control modules provide an interface between the control system and luminaires. Modules take inputs from the system and convert the commands through the power and control wiring to the fixture providing “ON/OFF/DIMMING” functions.
2. Lighting control modules contain a 16amp minimum rated relay(s) for “ON/OFF” control as well as a 0-10volt dimming signal. Modules shall also have the capability of two wire phase dimming (MLV or ELV).
3. In the event of a power failure, control modules connected to luminaires shall default to the “on” state at full light output.

B. The following lighting control modules shall be available with the system, at a minimum:
1. Single zone 0-10volt control module with a relay.
2. Multi-zone 0-10volt control module with one relay per 0-10volt zone (“Room Controller”).
3. Single zone two wire dimming module (Incandescent, MLV, or ELV) with a relay.
4. Multi-zone two wire dimming module (Incandescent, MLB, or ELV with one relay per zone (“Room controller”)

C. Mounting:
1. Single zone modules shall have a ½” nipple to mount directly to a ½” knockout on a junction box.
2. Multi-zone modules shall mount stand alone or onto a 4 square junction box.

2.04 PLUG LOAD CONTROL MODULES

A. General:
1. Plug load Control modules provide an interface between the control system and controlled outlets. Modules take inputs from the system and convert the commands through the power wiring to the receptacle(s) being controlled.
2. Control modules contain a 20amp rated relay(s) for “ON/OFF” control.

B. Mounting:
   1. Modules shall have a ½" nipple to mount directly to a ½" knockout on a junction box.

2.05 CONTROL STATIONS

A. General:
   1. The controllers are configurable wall mounted devices that provide local "ON/OFF/DIMMING" control to lighting zones.
   2. Each device can be set-up and modified through the control systems software interface.

B. Dimmer switch controller:
   1. Software configurable dimmer switch that provides "ON/OFF" switching and the capability to dim.
   2. Dimming to be continuous over the full range of the driver or ballast it is controlling.

C. Dimming scene controller:
   1. Multi-button controller allowing the end user to recall zones or scenes for "ON/OFF/DIMMING" control.
   2. Scenes are made up of multiple zones, where each zone is dimmed to a specific light output.
   3. Scene configuration can be changed via control systems software.
   4. The scene controller shall also allow for a custom labeling feature that allows scene labels on the controller to be easily modified.

D. Specifics:
   1. Mounting:
      a. Controllers utilize a standard single-gang device strap configuration for ease in mounting. Where multiple controllers are ganged together, they shall allow for a single multi-gang cover plat to be used.
      b. Mounts to standard switch box or cut-in ring.
   2. Controllers shall tie to the system in one of the following ways:
      a. Hardwired low voltage, wiring and connections per manufacturer's requirements.
      b. Wireless with a 10-year minimum battery life. Mechanically triggered wireless switches shall not be allowed unless approved by The Owner.

2.06 OCCUPANCY SENSOR

A. General:
   1. Occupancy sensors shall automatically detect movement within a space, reporting the state of occupancy to the control modules for "ON/OFF/DIMMING" control of lighting zones and "ON/OFF" control of the controlled receptacle circuits within that space.
   2. All setpoints for the occupancy sensor shall be accessible on the device or through the commissioning tool.
   3. Sensors shall capable of being linked together via hard wired connections to provide a larger coverage area.
   4. Provide enough occupancy sensors as required for complete area coverage they are installed in, regardless of how many sensors are shown on the Drawings.

B. Specifics:
   1. Sensor shall have a coverage of 1,000 square feet. Manufacturer to provide additional sensors if coverage is less than 1,000 square feet.
   2. Sensors shall be infrared or dual technology or microphonic. Dual technology sensors shall be capable of disabling either infrared or ultrasonic sensing.

2.07 DAYLIGHT SENSOR

A. General:
1. Daylight sensors shall automatically measure the amount of ambient light within a space, reporting the state of occupancy to the control modules for “ON/OFF/DIMMING” control of lighting zones.
2. Setpoints for the sensors shall be adjusted directly on the device or through commissioning tool. The setpoints refer to the range at which electric lighting will dim in response to the amount of light the sensor detects.
3. Daylight sensors shall continuously monitor the ambient light level.
4. Interior daylight sensors shall operate on a “closed loop” protocol, measuring both daylight and electric light contributions.
5. Exterior daylight sensors shall operate on an “open loop” protocol, measuring only daylight contributions.

B. Specifics:
1. Sensor shall mount directly to any surface, no junction box required.
2. Integrated sensors on luminaires shall be installed at the lighting manufacturer’s factory.
3. Sensors shall tie to the system in one of the following ways:
    a. Hardwired low voltage, wiring and connections per manufacturer’s requirements.
    b. Wireless with a 10-year minimum battery life.
4. Exterior sensors shall be outdoor rated.

2.08 RELAY PANEL

A. Addressable relay panel that fully integrates with the addressable control system, consisting of individual relays, control module, power supplies, network connection interface, etc.

B. Cabinet: NEMA 1 enclosure sized to accept the quantity of relays as noted on the Drawings.

C. Control relays: Heavy-duty momentary pulsed mechanically latching contactors. Operating voltage is 24volt AC; contacts are rated at 20amp at 120 or 277volt AC. Power supply: 120/277volt AC input transformer with 24volt AC, 60Hz, 1.6amp (40 VA) Class II power supplies output.

D. Network connection: Per manufacturer.

E. Panel shall be UL924 rated. Systems which integrate a UL924 sensing module for the entire panel or system shall not require the panel to be UL924 rated.

F. Panel shall allow for barriers between voltage classes, 120volt, 277volt, normal, and emergency.

2.09 EMERGENCY BYPASS RELAYS

A. General:
1. System manufacturer shall provide emergency bypass relays as shown on the Drawings.
2. The bypass relay device shall take an uncontrolled normal sensing hot, uncontrolled emergency hot, and controlled normal circuit as inputs.
3. The device shall bypass the controlled normal hot and control signal at the loss of power from the normal sensing hot and allow the uncontrolled emergency hot to power the downstream luminaires.

4. The device shall be capable of accepting a 0-10volt control signal and breaking if the downstream fixtures are 0-10volt controlled.

B. Specifics:
1. Mounting: directly onto a junction box or integral to the luminaire.
2. UL924 rated for switched and dimmed loads.
3. Where more than six bypass relays are located in a central location provide an enclosure to mount all devices.

2.10 EMERGENCY TRANSFER DEVICE

A. General:
1. System manufacturer shall provide emergency transfer devices as shown on the Drawings.
2. The transfer devices shall take an uncontrolled normal sensing hot, uncontrolled emergency hot, and controlled normal circuit as inputs.
3. The device shall transfer be an open transition “make before break” type. The normal controlled circuit shall transfer to emergency circuit at the loss of power from the normal sensing hot and allow the uncontrolled emergency hot to power the downstream luminaires.
4. The device shall be capable of accepting a 0-10volt control signal and breaking if the downstream fixtures are 0-10volt controlled.

B. Specifics:
1. Mounting: directly onto a junction box.
2. UL1008 rated for switched and dimmed loads.
3. Where more than six transfer devices are located in a central location, provide either an enclosure or panel housing to mount all devices within.

2.11 DEVICE COMMUNICATION CABLING

A. General:
1. The device communication cabling integrates devices such as occupancy sensors, photocell sensors, control modules and control stations with each other to provide a complete standalone system.
2. The network communication cabling provides low-voltage power to all devices on the network, eliminating the need for external power supplies and power packs for devices such as occupancy sensors. Where a device requires 120volt power it shall be noted on the submittal.
3. Cabling shall be topology free.
4. Cabling shall be plenum rated.

2.12 OCCUPANCY SENSOR

A. General Requirements for Sensors: Wall- or ceiling-mounted, solid-state indoor occupancy sensors with a separate power pack.
1. Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application.
2. Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
3. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor is powered from the power pack.

4. Power Pack: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by CEC.
5. Mounting:
   a. Sensor: Suitable for mounting in any position on a standard outlet box.
   b. Relay: Externally mounted through a 1/2-inch knockout in a standard electrical enclosure.
   c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
6. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
7. Bypass Switch: Override the "on" function in case of sensor failure.

B. Dual-Technology Type: Ceiling mounted; detect occupants in coverage area using PIR and ultrasonic detection methods. The particular technology or combination of technologies that control on-off functions is selectable in the field by operating controls on unit.
1. Sensitivity Adjustment: Separate for each sensing technology.
2. Detector Sensitivity: Detect occurrences of 6-inch-minimum movement of any portion of a human body that presents a target of not less than 36 sq. in., and detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.
3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. when mounted on a 96-inch-high ceiling.

2.13 SWITCHBOX-MOUNTED OCCUPANCY SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
1. Cooper Industries, Inc.
2. Hubbell Building Automation, Inc.
3. Lithonia Lighting; Acuity Lighting Group, Inc.
4. Sensor Switch, Inc.
5. Watt Stopper.

B. General Requirements for Sensors: Automatic-wall-switch occupancy sensor, suitable for mounting in a single gang switchbox.
1. Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application, and shall comply with California Title 24.
2. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F.
3. Switch Rating: LED

C. Wall-Switch Sensor:
1. Standard Range: 180-degree field of view, field adjustable from 180 to 40 degrees; with a minimum coverage area of 2100 sq. ft.
2. Sensing Technology: Dual technology - PIR and ultrasonic.
3. Switch Type: SP, manual "on," automatic "off.
4. Voltage: Match the circuit voltage; dual-technology type.
5. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc. The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
6. Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
7. Concealed "off" time-delay selector at 30 seconds, and 5, 10, and 20 minutes.
8. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.

PART 3 - EXECUTION

3.01 SENSOR INSTALLATION

A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.

B. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.02 CONTRACTOR INSTALLATION

A. Mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.03 WIRING INSTALLATION

A. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables.

B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.

C. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.

D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.04 IDENTIFICATION

A. Identify components and power and control wiring according to Division 26 Section "Identification."
   1. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.

3.05 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections. This shall be included in the contractor bid.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
   1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Lighting control devices will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.06 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting sensors to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
   1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.

3.07 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain lighting control devices.

B. Factory authorized service representative shall conduct two initial ***4***-hour training sessions for Owner's Maintenance Personnel upon completion and acceptance of system. Provide one 4-hour follow-up training session to be scheduled by Owner within one year of the final date of the final initial training session. Instructions shall include operation, maintenance, and testing of equipment with both classroom training and hands-on instruction. The agenda for the second session will be by Owner.

C. Contractor shall provide a training video.

D. Contractor shall schedule training with a minimum of **7**-days advance notice.

END OF SECTION

PART 1 - GENERAL

1.01 SCOPE

A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1000 kVA:
   1. Distribution transformers.

1.02 RELATED SECTIONS

A. Division 03 Concrete

B. Section 26 05 19 Low Voltage Electrical Power Conductors and Cables

C. Section 26 05 26 Grounding and Bonding for Electrical Systems

D. Section 26 05 48 Vibration and Seismic Controls for Electrical Systems

E. Section 26 05 53 Identification for Electrical Systems

1.03 DEFINITIONS

A. IEEE: Institute of Electrical Electronic Engineers

B. CEC: California Electrical Code.

C. NETA: International Electrical Testing Association

D. NRTL: Nationally Recognized Testing Laboratory

E. NEMA: National Electrical Manufacturer's Association

F. UL: Underwriter's Laboratory

G. ASTM B 3: Standard Specification for Soft or Annealed Copper Wire

H. ASTM B 33: Standard Specification for Tinned Soft or Annealed Copper Wire

1.04 SUBMITTALS

A. Submit in accordance with of Section 01 33 00 Shop Drawings, Product Data and Samples.

B. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, devices and features, and performance for each type and size of transformer indicated.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Wiring Diagrams: Power, signal, and control wiring.

D. Transformer location layouts: When there is a substitution of the transformer specified the Contractor shall provide a detailed floor plan with the layout of the electrical equipment to validate that the substituted transformer dimensions can be accommodated without changes to the room size.

E. Manufacturer Seismic Qualification Certification: Submit certification that transformers, accessories, and components will withstand seismic forces defined in Section 260548 Section Vibration and Seismic Controls. Include the following:
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
   3. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   4. Detailed description of equipment anchorage devices on which the certification is based and their mounting requirements.

F. Qualification Data: For testing agency.

G. Source quality-control test reports.

H. Field quality-control test reports.

I. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

J. Warranty: See Article 1.7 Warranty

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: NETA certified for on site testing.

B. Source Limitations: Obtain each transformer type through one source from a single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."

1.06 COORDINATION

A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 032000 Concrete Reinforcing.

1.07 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace devices that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Two years from date of Notice of Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer:
   1. Schneider, Square D
   2. ABB/ General Electric.
   3. Eaton Electrical Inc.
   4. Siemens.

B. Substitutions: Under provisions of Section 26 05 00

2.02 GENERAL TRANSFORMER REQUIREMENTS

A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.
   1. Provide with Rodent screens.

B. Cores: Grain-oriented, non-aging silicon steel.

C. Coils: Continuous windings without splices except for taps.
   1. Internal Coil Connections: Brazed or pressure type.
   2. Coil Material: Copper, unless otherwise noted on the drawings.

D. Basic impulse level (BIL): 10 kV for transformers 600V and less.

E. Transformers shall have an efficiency compliant with the U.S. Department of Energy (DOE) final rule for the Distribution Transformers Energy Conservation Standard Rulemaking, 78 FR 23335 (April 18, 2013). Transformers built prior to January 1, 2016 will not be considered acceptable unless efficiency compliance documentation is submitted verifying transformer efficiency meets or exceeds the January 1, 2016 energy efficiency levels listed in DOE 78 FR 23335 (April 18, 2013).

F. Transformers shall be designed to limit inrush current to 12-times (12x) the base rated full load current or less.

G. Grounding: Ground core and coil assembly to enclosure by means of a visible flexible copper strap.

2.03 DISTRIBUTION TRANSFORMERS

A. Comply with NEMA ST 20, and list and label as complying with UL 1561.

B. Cores Construction:

1. High grade, non-aging, silicon steel, clamped with structural angles and bolted to the transformer enclosure on vibration isolating pads.
2. One leg per phase.

C. Coil Construction:
1. Continuous wound with copper wire, without splices except for taps.
2. Pressure type, primary, secondary and tap connections.
3. End fillers or tie downs for maximum strength.
4. Vacuum impregnated with non-hygroscopic, thermosetting varnish.
5. All connections shall be accessible from the front of the transformer to allow rear of transformer to be positioned within six inches of the adjacent wall.
6. Isolate core and coil from enclosure using vibration-absorbing mounts.

D. Enclosure: Ventilated switchboard type, NEMA 250, Type 3R located outdoors and Type 2 located indoors.
1. Material: Code gauge steel.
2. Manufacturers nameplate: Include transformer connection data and overload capacity based on rated allowable temperature rise.
3. Type: Provide NEMA type as indicated on Drawings or specified herein, drip-proof, self-bracing enclosure designed to prevent accidental contact with electrically energized parts unless otherwise noted.
4. Mounting: Transformers 75 kVA and less shall be suitable for wall, floor, frame, or trapeze mounting. Transformers larger than 75 kVA shall be suitable for floor mounting.
5. Finish: Clean, degrease, zinc-phosphate, prime and finish paint steel parts with a baked-on synthetic enamel, ANSI 61 (light gray).
6. Size: Dimensions and configurations shall conform to the spaces allocated on the Drawings.
7. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.
8. Provide enclosure with rodent screens for all locations.
9. Provide with drip shields when outdoors.

E. Transformer Enclosure Finish: Comply with NEMA 250.
1. Finish Color: Standard factory finish ANSI gray..

F. Taps for Transformers Smaller Than 3 kVA: None

G. Taps for Transformers 7.5 to 24 kVA: Two 5 percent taps below rated voltage.

H. Taps for Transformers 25 kVA and Larger: Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity.

I. Insulation Class:
1. 220 deg C, UL-component-recognized insulation system with a maximum of 150 deg C rise above 40 deg C ambient temperature unless listed otherwise in the drawings.
2. Case temperature shall not exceed 40-degrees centigrade rise above ambient at its warmest point.
3. Provide insulating materials that are in accordance with the latest addition of NEMA ST20 Standards for a 220-degree centigrade, UL component recognized insulation system for extended life.

J. Energy Efficiency for Transformers Rated 15 kVA and Larger:
   1. Transformers shall have energy efficiencies that meet or exceed the latest requirements of the US Department of Energy's Candidate Standard Level Three (CSL-3) efficiency, with extremely low no load losses.
   2. Transformers shall be designed to an efficiency standard higher than the latest requirements of the California Code of regulations Title 20 and Title 24 and DOE 2016.
   3. Tested according to NEMA TP 2.

K. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.
   1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
   2. Include special terminal for grounding the shield.
   3. Shield Effectiveness:
      a. Capacitance between Primary and Secondary Windings: Not to exceed 33 picofarads over a frequency range of 20 Hz to 1 MHz.
      b. Common-Mode Noise Attenuation: Minimum of minus 120 dBA at 0.5 to 1.5 kHz; minimum of minus 65 dBA at 1.5 to 100 kHz.
      c. Normal-Mode Noise Attenuation: Minimum of minus 52 dBA at 1.5 to 10 kHz.

2.04 Low-Sound-Level Requirements: Minimum of 3 dBA less than NEMA ST 20 standard sound levels when factory tested according to IEEE C57.12.91.

A. Low-Sound-Level Requirements: Maximum sound levels, when factory tested according to IEEE C57.12.91, as follows:
   1. 9 kVA and Less: 40 dBA
   2. 10 to 50 kVA: 45 dBA
   3. 51 to 150 kVA: 50 dBA
   4. 151 to 300 kVA: 55 dBA
   5. 301 to 500 kVA: 60 dBA
   6. 501 to 750 kVA: 62 dBA
   7. 751 to 1000 kVA: 64 dBA

2.05 IMPEDANCE

A. Transformer impedance shall conform to NEMA standards. Do not use low impedance type transformers unless the circuits and equipment affected by the larger short circuit currents through such transformers are increased in short circuit current ratings, as required, at no additional cost to the Owner.

B. The following impedance are used as our basis of design:
   1. Single phase transformers:
      a. Up to 15 kVA: 6.1Z
      b. 16 to 25 kVA: 5.0Z
      c. 26 to 37.5 kVA: 4.0Z
      d. 38 to 50 kVA: 3.8Z
      e. 76 to 100 kVA: 4.9Z
      f. 101 to 167 kVA: 5.4Z
      g. 168 to 333 kVA: 5.5Z

2. Three phase transformers:
   a. 15 kVA: 6.4Z
   b. 25 kVA: 5.8Z
   c. 30 kVA: 5.2Z
   d. 37.5 kVA: 5.5Z
   e. 45 kVA: 5.0Z
   f. 75 kVA: 4.7Z
   g. 112.5 kVA: 5.1Z
   h. 150 kVA: 5.3Z
   i. 225 kVA: 5.7Z
   j. 500 kVA: 5.7Z

2.06 IDENTIFICATION DEVICES

A. Nameplates: Engraved, laminated-plastic or metal nameplate for each distribution / buck-boost transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 260553 Identification.

2.07 SOURCE QUALITY CONTROL

A. Test and inspect transformers according to IEEE C57.12.91.

B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.

B. Verify that field measurements are as needed to maintain working clearances required by CEC and manufacturer's written instructions.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be located.

D. Verify that ground connections are in place and requirements in Section 26 05 26 Grounding and Bonding have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

E. Proceed with placement only after unsatisfactory conditions have been corrected.

3.02 PLACEMENT

A. Construct concrete bases and anchor floor-mounting transformers according to manufacturer's written instructions, seismic codes applicable to Project, and requirements in Section 26 05 48 Vibration and Seismic Controls.

3.03 CONNECTIONS

A. Ground equipment according to Section 26 05 26 Grounding and Bonding for Electrical Systems

B. Connect wiring according to Section 26 05 19 Conductors and Cables.
   1. Torque connections per manufacturer's listed specifications. In the absence of manufacturer's torque specifications use torque values recommended by NETA/ANSI.
   2. Provide all transformers with lugs for both primary and secondary conductor sizes for conductors indicated on Drawing. Connect lug to termination point with appropriate size bolt, nut flat and Belleville washers.
   3. Provide high-pressure compression lugs, for primary and secondary phase and neutral terminations for transformers 45 kVA and larger. Utilize only the tool and dies designed for uses in installing the lugs provided.
   4. Use flexible conduit indoors in dry locations or liquid-tight flexible conduit in damp/wet locations, two-foot minimum in length, for primary and secondary connections to transformer case. Make connections to side panels of enclosure, except for floor mounted transformers fed from directly below enclosure.

3.04 GROUNDING

A. Provide copper terminal bar for grounding and bonding the transformer in accordance with CEC Article 450.10. Bond the terminal bar to the enclosure and connect the following to the terminal bar:
   1. Primary feeder equipment grounding conductor.
   2. Secondary feeder supply side bonding conductor(s).
   3. Grounding electrode conductor.
   4. Main bond jumper to neutral (when present).

3.05 IDENTIFICATION

A. Nameplates: Engraved, laminated-plastic or metal nameplate for each transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 26 05 53 "Identification for Electrical Systems."
   1. Nameplates to include primary power source and the secondary load.

3.06 FIELD QUALITY CONTROL

A. Independent Testing Agency: Contractor shall arrange and pay for the services of an independent Testing Agency to perform all quality control electrical testing, calibration and inspection required herein. Independent Testing Agency shall meet the requirements as outlined in Section 260010: Basic Electrical Requirements. Testing Agencies objectives shall be to:
   1. Assure transformer installation conforms to specified requirements and operates within specified tolerances.
   2. Field test and inspect to ensure operation in accordance with Manufacturer's recommendations and Specifications.
   3. Prepare final test report including results, observations, failures, adjustments, and remedies.
   4. Apply label on transformer upon satisfactory completion of tests and results.
   5. Verify ratings and settings and make final adjustments.

B. .Tests and Inspections:
   1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

C. Remove and replace units that do not pass tests or inspections and retest as specified above.

D. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.07 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.08 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Service and distribution switchboards rated 600 V and less.
   2. Disconnecting and overcurrent protective devices.
   3. Identification.

1.02 RELATED SECTIONS

A. Division 3 Concrete

B. Section 26 05 19 Low Voltage Electrical Power Conductors and Cables

C. Section 26 05 26 Grounding and Bonding for Electrical Systems

D. Section 26 05 29 Hangers and Supports for Electrical Systems

E. Section 26 05 53 Identification for Electrical Systems

F. Section 26 27 13 Electricity Metering

1.03 DEFINITIONS

A. NETA: International Electrical Testing Association

B. NRTL: Nationally Recognized Testing Laboratory

C. NEMA: National Electrical Manufacturer’s Association

D. NECA: National Electrical Contractors Association

E. CEC, California Electrical Code

F. CBC: California Building Code

G. UL: Underwriters Laboratory

H. CEC: California Electrical Code

I. OSHA: Occupational Safety & Health Administration

1.04 SUBMITTALS

A. Submit in accordance with of Section 01 33 23 Shop Drawings, Product Data and Samples.

B. Product Data: For each type of switchboard, overcurrent protective device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

C. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of devices, equipment features, and ratings.
2. Detail enclosure types for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

D. Short Circuit Analysis, Breaker Coordination Study & Arc Flash Analysis
1. Submittal to include overcurrent and protective device coordination study per specification 26 05 73 Overcurrent Protective Device Coordination Study.
2. Breaker coordination to comply with HCAI PIN 70.

E. Field Quality-Control Reports:
1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

F. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals include the following:
1. Routine maintenance requirements for switchboards and components.

G. Warranty: See Article 1.8 Warranty.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.
1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

1.07 PROJECT CONDITIONS

A. Environmental Limitations:
1. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
a. Ambient Temperature: Not exceeding 122 deg F.
b. Altitude: Not exceeding 6600 feet.

B. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied unless permitted under the following conditions:

1. Notify Owner's Representative no fewer than 7 business days in advance of proposed interruption of electric service.
2. Do not proceed with interruption of electric service without Owner's Representative's written permission.
3. Comply with NFPA 70E, Electrical Safety in the Workplace.

1.08 COORDINATION

A. Coordinate layout and placement of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

1.09 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace devices that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Two years from date of Notice of Completion.

1.10 EXTRA MATERIALS

A. Provide extra materials that match products provided and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fuses for fused power-circuit devices: Equal to 10 percent of quantity required for each size and type, but no fewer than 3 of each size and type.
   2. Keys: Two spares for each type of panelboard cabinet lock.

PART 2 - PRODUCTS

2.01 MANUFACTURED UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Square D.
   2. ABB/ General Electric.
   3. Eaton.
   4. Siemens.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

C. Distribution Switchboards: Power and feeder distribution type.
   1. NEMA 250 3R enclosure with screened venting and base channels for outdoor.
      a. The enclosure shall have 2 screened vents with filters, top and bottom on each side to vent the interior section.
      b. Each door shall have 2 screened vents with filters top and bottom to vent the vestibule.
   2. NEMA 1 enclosure with base channels for indoor
   3. Switchboards to include the distribution transformer as an integrated system.

D. Doors: Secured with pad locking provisions.
   1. For doors more than 36 inches high, provide 3 point latch.
   2. Door-in door construction: Side wireway covers to be hinged.
   3. Provide 2-party hasp for the utility section.

E. Mains: As indicated in the panel schedules.

F. Provide with thermostatically controlled heat strip power at 120 volts for outdoor enclosure.
   1. Include stepdown transformer, fuses, finger safe fuse pull outs, and disconnect switch.

G. Dead front type completely metal enclosed, self-supporting structure of the universal frame type using die-formed, welded and bolted members. Formed ends sectionalized and removable with screw-on plates and NEMA 3R top covers outdoor units and NEMA 1 for indoor units, front facing side covers formed hinged with knurled knobs and concealed hinges. Finish gray, ASA70 dry powder polyester plastic electro statically applied, meeting a 3,000 hour salt spray test.
   1. 1-1/2-inch high Base Channels shall be 7 gage or thicker steel
   2. Structures shall be 12 gage or thicker
   3. Covers shall be 12 gage or thicker
   4. Top cover shall be 14 gage or thicker
   5. Switchboards shall have depth as required to house all equipment contained within it. Switchboard shall be constructed so that the back and front of all sections align. Construction of the board shall allow maintenance of incoming line terminations, device connections and all bus bolted connections.
   6. All devices shall be accessible and removable from the front unless rear access is indicated on the Drawings.
   7. Provide necessary hardware to permit locking every overcurrent protective device handle in the "OFF" position.
   8. Provide hinged access doors to all termination, meter, and relay compartments with knurled and slotted large head captive-bolts. The design shall allow access to compartments without tools and without removing any panels.
   9. Furnish cable pull sections or top cable pull boxes where indicated on the Drawings complete with cable tie down supports. Where cable pull section or pull boxes contain utility service cables, provide utility acceptable sealing means.
   10. Switchboard shall be suitable for use as service entrance equipment and be labeled in accordance with UL requirements.
   11. Utility metering compartment section shall be fabricated to meet all utility company requirements. Where separate vertical section is required for utility metering, match and align with switchboard enclosure.

H. All bussing shall be copper with silver plated connections and joints sized to limit temperature rise of 55 degrees centigrade per UL Standard 891 temperature rise requirements, braced to withstand a minimum short circuit current of 65,000 RMS symmetrical amperes or as otherwise noted. All busses shall be rated 100 percent and shall extend full length of usable space. Incoming supply lugs shall be at the top or bottom of the bus, not at the center. Flex bus is not permitted. Tapering of the horizontal or vertical bus is not permitted.
   1. Bus arrangement shall be Phase A-B-C-N left-to-right, top-to-bottom and front-to-rear as viewed from the front. Horizontal and vertical bus ampere rating shall be uniform from end-to-end.
   2. Bussing shall be full height in each section.
   3. All bussing to and from an overcurrent protective device shall be rated to the frame sizing, not the trip rating.
   4. Where "SPACE" is indicated in the switchboards, cross connectors and mounting hardware shall be installed to match the frame size ampere rating noted on the Electrical Drawings.

All "SPACES" shall be ready for installation of overcurrent protective devices at a future time.

5. Shipping splits and provisions for future bus extension shall be provided with necessary bus splices.
6. Each switchboard shall contain a full length, bottom/front located copper ground bus that is securely connected to each vertical section. Ground bus shall be sized in accordance with UL 891, Table 25.1.
7. Termination lugs: High compression circumference crimped type rated for use with aluminum/copper conductors.
8. Neutral bus shall be ***100***-percent rated unless otherwise indicated on the Drawings.
9. Main service switchboards:
    a. Removable neutral link: Provide removable bolted bus section for the purpose of disconnecting the ground circuit conductor from the premises wiring at the supply side of the service in accordance with CEC article 230-75.
    b. Main bonding jumper: Connection between the grounded circuit conductor and the equipment ground conductor at the supply side of the service. Size in accordance with CEC table 250-94 or 12-1/2% of the area of the largest phase conductor in accordance with CEC article 250-79(c).

I. Switching and overcurrent protective devices:
1. Main overcurrent protective devices(s) shall be fixedmounted molded case circuit breaker with interrupting rating and frame and trip ratings as indicated on Drawings.
2. Feeder overcurrent protective device(s) shall be fixedmounted molded case circuit breaker with frame and trip rating as indicated on Drawings.
3. Devices interrupting rating shall be fully rated to match that of switchboard for which the device is installed.
4. Series ratings of overcurrent protective devices is not acceptable unless specifically noted on the Drawings.
5. Devices shall be manually operated unless shunt trip and/or electrically operated devices are indicated on Drawings.
6. The rating shall be full symmetrical amp rating and series rated only when specifically noted in the drawings.
    a. 100A frames and larger shall be electronic adjustable trip type. All breakers shall be provided with factory padlocking provisions.
    b. All breakers shall be listed for termination of copper, copper clad, or aluminum conductors insulated at 75 degree C temperature rating or higher.
7. Circuit breakers serving motor loads utilizing variable frequency drives shall be Square D Series H Frame or larger with adjustable electronic trip units or Equal.
8. Breakers shall be electronic type common trip with one operating handle.
9. All breaker shall have an electronic trip with adjustable short time and instantaneous trip.
10. Overcurrent protective devices rated for 1200 amps and greater shall be capable of arc energy reduction in accordance with CEC 240.67 for fuses and CEC 240.87 for breakers.

J. Ground fault protection:
1. General: A solid-state, zone-interlocked, ground fault protection system shall be provided integral on the main device(s) as indicated on Drawings. It shall consist of integral phase current sensors, appropriate solid-state relaying equipment to provide the desired ground fault current sensitivity and time-current response characteristics. Provide neutral ground fault current transformer for four wire systems.
2. Device settings: Adjustable pickup current sensitivity for ground fault currents from 200 amperes to 1200 amperes shall be provided. A calibrated dial shall be provided for setting the current pickup point in the field. Time delay shall be adjustable from 0 to 60 cycles. Settings for individual relays shall be as directed by the short circuit/coordination study

specified in Section 26 05 73: Power System Studies. A locking screw shall be provided to retain both adjustments at desired setting.

3. All overcurrent devices shall be independently time coordinated irrespective of zone interlocking to allow the last downstream level of ground fault devices to be time coordinated, i.e. it shall NOT revert to the lowest time setting.

K. Surge Protective Devices:
   1. Refer to Section 264313: Surge Protective Devices.

L. Instrumentation and controls:
   1. Switchboards shall have a digital meter unit (DMU) as indicated on the Drawings. DMU shall be by the same manufacturer as the switchboard.
   2. Meter potential circuits shall be fused. Potential transformers if required for the monitoring devices shall be provided with fuses in the primary.
   3. Meter current circuits shall have shorting terminal blocks between the meter and the current transformers. Current transformers shall be ring type (one per phase) with ratio, thermal, and mechanical ratings coordinated with the application and protection.
   4. Instrument transformer accuracy per IEEE C57.13.6:
   5. Current transformers must maintain 0.3% accuracy from 5% rated current through rating factor at rated burden.
   6. Voltage transformers must maintain 0.15% accuracy from 90% to 110% of rated voltage.
   7. All internal devices (relays, transformers, etc.) shall be tagged as to rating and function with permanently fastened engraved nameplates.
   8. Control and signal circuits: Control devices, i.e.: contactors, relays, time clocks, etc. shall be mounted in a separate compartment that is fully barrier from the overcurrent protective device compartments. Control devices shall be accessible through a separate hinged cover panel.
   9. Relays: All relays shall be industrial control grade with a "ON" indicating neon light, hold down springs, minimum of 10amp rated contacts and a minimum of four form C contacts. Relays used for control power transfer shall have 20amp rated contacts. Do NOT use paralleled relays for relays with greater than 4-poles, use relays with the required number of poles. This is to prevent the situation where one relay fails, and half of the intended function is lost, which could be dangerous.

M. Conduits shall enter cabinet through neat holes and perpendicular to entrance face. Lace all conductors with Nylon Tie-Wraps. Provide laminated acrylic nameplates at all breakers.

N. Where spaces are indicated on the Drawings, all required hardware and trim shall be provided to allow future placement of breakers.

O. Provide equipment completely factory assembled, wired and tested before delivery and shall bear UL labels. Design shall meet CEC, NEMA and OSHA requirements.

P. Manufacturer shall provide equipment to meet the space provided, and shall not reduce the number of sections shown on the drawings.

Q. Switchgear enclosures that are located in exterior locations exposed to weather shall have thermostatically controlled heat strips.

R. All switchgear/electrical equipment shall be labeled with warnings to qualified personnel of the potential arc flash hazards and the appropriate personal protective equipment (PPE) required, per the latest issue of the CEC and NFPA-70E.

S. Provide a minimum of 25 percent of space for spare capacity.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Receive, inspect, handle, and store switchboards according to NECA and NEMA standards.

B. Examine switchboards before mounting. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with manufacturer's tolerances and other conditions affecting performance of the Work.

D. Proceed with placement only after unsatisfactory conditions have been corrected.

3.02 PLACEMENT

A. Place switchboards and accessories according to NECA and NEMA standards.
1. Equipment Mounting: Locate switchboards on concrete base as detailed in the drawings.
2. Maintain 48-inches clear in front of switchboards for the entire length.

B. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchboard units and components.

C. Utilize filler plates in unused spaces of panel-mounted sections.

3.03 IDENTIFICATION

A. Identify field-provided conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

C. Device Nameplates: Label each disconnecting and overcurrent protective device with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

D. Provide address label with content in compliance with the requirements listed in SMUD's installation requirements.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Acceptance Testing Preparation:
1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:
   1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

D. Switchboard will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.05 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Load Balancing: After Notice of Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.
   1. Measure as directed during period of normal system loading.
   2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed.
   3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
   4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUBMITTALS

A. Product Data: For each type of panelboard, switching and overcurrent protective device, transient voltage suppression device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: For each panelboard and related equipment.
   1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
   2. Detail enclosure types and details for types other than NEMA 250, Type 1.
   3. Detail bus configuration, current, and voltage ratings.
   4. Short-circuit current rating of panelboards and overcurrent protective devices. Fully rated panels are required.
   5. Include evidence of NRTL listing for series rating of installed devices.
   6. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
   7. Include wiring diagrams for power, signal, and control wiring.
   8. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

C. Short Circuit Analysis, Breaker Coordination Study & Arc Flash Analysis in conjunction with the requirements of specification 262413 Switchboards.
   1. Submittal to include overcurrent and protective device coordination study per specification 260573 Overcurrent Protective Device Coordination Study.
   2. Breaker coordination to comply with HCAI PIN 70.

D. Field Quality-Control Reports:
   1. Test procedures used.
   2. Test results that comply with requirements.
   3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

E. Panelboard Schedules: For installation inside panelboard covers. Submit final versions after load balancing prior to request for final inspection.

F. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
   1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
   2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.03 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.
   1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application.

E. Comply with NEMA PB 1.

F. Comply with CEC.

G. Comply with UL489 Molded-Case Circuit Breakers and Circuit Breaker Enclosures, UL50 Enclosures for Electrical Equipment, UL 67 Panelboards and UL 98 Enclosed and Dead Front Switches.

H. Panelboards shall be qualified for use in seismic areas as follows:
   1. High seismic loading as defined in IEEE Std 693-1997, with 2.0 amplification factor.
   2. CBC, Sds = 1.022, Ss = 1.532g, Ip = 1.0 in accordance with ICC-ES-AC156.
   3. Seismic compliance shall be qualified only through shake table testing. Compliance by calculation is not acceptable.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

B. Handle and prepare panelboards for installation according to NEMA PB 1.

C. Store in a clean, dry space. Maintain factory protection or cover with heavy canvas or plastic to keep out dirt, water, construction debris and traffic.

1.05 PROJECT CONDITIONS

A. Environmental Limitations:
   1. Do not deliver or install panelboards until spaces are enclosed and weather tight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
   2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
      a. Ambient Temperature: Not exceeding 23 deg F (minus 5 deg C) to plus 104 deg F (plus 40 deg C).
      b. Altitude: Not exceeding 6600 feet.

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:
   1. Ambient temperatures within limits specified.

2. Altitude not exceeding 6600 feet.

1.06 COORDINATION

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.07 FIELD MEASUREMENTS

A. Contractor shall make all necessary field measurements to verify that equipment shall fit in allocated space in full compliance with minimum required clearances specified in California Electrical Code.

1.08 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: One year from date of Substantial Completion.

1.09 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Keys: Two spares for each type of panelboard cabinet lock.
   2. Circuit Breakers Including GFCI and Ground Fault Equipment Protection (GFEP) Types: spares as noted on the panel schedules with no less than two spares for each panelboard.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS FOR PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Square D.
   2. ABB/ General Electric.
   3. Eaton.
   4. Siemens.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

C. Enclosures: Flush- and surface-mounted cabinets.
   1. Rated for environmental conditions at installed location.
      a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
      b. Outdoor: Provide NEMA Type 3R enclosure.

2. Hinged Front Cover: “Door-in-Door”, Entire front trim hinged to box and with standard door within hinged trim cover.
    a. Panelboard covers shall be door-in-door construction such that inner door exposes the overcurrent protective devices and the outer door exposes the complete panelboard interior (i.e. branch circuit conductors, lugs, neutral and ground bus, overcurrent protective devices, etc.). Outer door shall have full-length piano hinge and inner door shall have two-point hinges.
    b. Door latches shall be metallic. Plastic will be rejected.
    c. Provide combination spring catch and lock on inside edge of the inner door trims with flush fitting joint between door and trim. Locks on all panelboards shall be keyed alike. Doors 36 inches and over in height shall be provided with three-point catch and lock. Provide quarter-turn captive bolts on the outer door.
3. Finishes:
    a. Panels and Trim: Galvanized steel, factory finished immediately after cleaning and pre-treating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
    b. Back Boxes: Same finish as panels and trim.
4. Directory Card: Inside panelboard door, mounted in metal frame with transparent protective cover.

D. Incoming Mains Location: As conditions warrant.
1. Main breakers, where specified, as part of a combination main and distribution section or panel, shall be located above or below distribution bussing and be connected such that normal load side of breakers is disconnected when breaker is in open position. Backwards connections are prohibited.

E. Phase, Neutral, and Ground Buses:
1. Material: Hard-drawn copper, 98 percent conductivity. Bussing shall extend full length of usable space. Provide copper ground bus complete with lugs, not insulated from enclosure. The bussing shall be braced for a minimum of 65,000 RMS symmetrical amps unless noted otherwise in the drawings.
    a. Tapering of the horizontal or vertical bus is not permitted.
2. Copper Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
3. Bus shall be bolted copperwith taps arranged for distributed phase connections to branch circuit devices
4. Cross connectors shall be copper, drilled and tapped for bolt-on device connections, arranged for double row placement of device and designed to permit removal or addition of overcurrent protection devices without disturbing adjacent devices or removing main bus connections.
5. Neutral bus shall be 100percent rated of phase bus bars and shall have lugs for each outgoing branch circuit or feeder requiring a neutral connection unless otherwise noted.
6. Ground bus shall be full size with lugs for each outgoing branch circuit and feeder.
7. Refer to panelboard schedules on Drawings for bus rating. Bus rating shall match or be greater than main device or main lug rating.
8. Provide full sized bussing in all sections of multi-section panelboards.
9. Termination Lugs: Rated for use with aluminum/copper conductors.
10. All "SPACES" shall be ready for installation of future overcurrent protective device.

F. Conductor Connectors: Suitable for use with conductor material and sizes.
1. Material: Hard-drawn copper, 98 percent conductivity.
2. Main and Neutral Lugs: Mechanical type.
3. Ground Lugs and Bus-Configured Terminators: Mechanical type.

4. Feed-Through Lugs: Mechanical type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
5. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus when specified.

G. Overcurrent protective devices:
1. Overcurrent protective devices shall be molded case circuit breakers.
2. Main devices shall be hard bus connected to the panelboard bus bars.
3. In all cases, panelboards fed directly from a transformer shall have a main overcurrent protective device. If not indicated on the Drawings or Panelboard Schedules, provide this device sized to provide the full capacity of the transformer rating.
4. Main devices shall be vertically mounted and shall have their operating handle in the up position when energized. Main devices that are mounted in the same manner as the branch devices are NOT acceptable, i.e. main devices shall be individually mounted at the top or bottom of the phase bus bars.
5. Panelboards overcurrent protective devices layout shall conform to the layout indicated on the panelboard schedules.
6. Provide identified handle ties for single pole circuit breakers that share a neutral conductor.
7. Multiple pole circuit breakers shall have internal common trip connections. All breakers shall be bolt-on to the bus type, with a minimum symmetrical amp rating of 22,000 RMS unless noted otherwise in the drawings. All breakers shall be listed for termination of copper, insulated at 75oC temperature rating or higher. All breaker lugs shall be copper. Breakers shall be fully rated for the symmetrical amp rating listed unless specified otherwise.
    a. Panel schedules listed with Square D I-Line type HCX, etc.), supporting rectifier loads, or motor horse powers greater than 3 HP shall come equipped with F-Frame (1-3/8” width per pole minimum) breakers.

H. Surge Protective Devices:
1. Refer to Section 26 43 13: Surge Protective Devices.

I. Service Equipment Label: NRTL labeled for use as service equipment for panelboards or load centers with one or more main service disconnecting and overcurrent protective devices.

J. Miscellaneous requirements:
1. Circuit numbering: Starting at the top, indicate odd numbered circuits in sequence down the left-hand side and even numbered circuits down the right-hand side. Multi-section panelboards shall have continuous consecutive circuit numbers. Provide metal embossed circuit identification of panelboards.
2. Directories: A 6" x 8" minimum size circuit directory frame and card with clear plastic covering shall be provided inside the inner panelboard door to reflect conditions at completion of Work. Directory shall be typewritten denoting loads served by room number or area for each circuit.
3. Nameplates: Provide engraved nameplate for each panelboard. See Section 260533: Electrical Identification for requirements.

K. Refer to Panelboard Schedules for the following:
1. Mounting style; service voltage; terminal lug size, location, and quantity; bus ampacity; interrupting capacity of bus and breakers; quantity, poles and rating of overcurrent protective devices.

2.02 DISTRIBUTION PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Square D.
   2. ABB/ General Electric.
   3. Eaton.
   4. Siemens.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

C. Mains: As indicated in the panel schedules.

D. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes shall be bolt-on type.
   1. Circuit breakers serving motor loads utilizing variable frequency drives shall be Square D, HFD Frame with adjustable electronic trip units.
   2. Panel schedules listed with Square D I-Line type HCX, etc.), supporting rectifier/inverter type loads, or motor horse powers greater than 3 HP shall come equipped with H-Frame minimum (1-3/8” width per pole minimum) style breakers.
   3. Multiple pole circuit breakers shall have internal common trip connections and shall be bolt-on to the bus type, with a minimum symmetrical amp rating of 22,000 RMS unless noted otherwise in the drawings. Breakers shall be listed for termination of copper, insulated at 75oC temperature rating or higher.
   4. All breaker shall have an electronic trip with adjustable short time and instantaneous trip.
   5. Breakers shall be fully rated for the symmetrical amp rating listed unless specified otherwise.

2.03 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Basis-of-Design Product: Subject to compliance with requirements, provide products by one of the following:
   1. Square D.
   2. ABB/ General Electric.
   3. Eaton.
   4. Siemens.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

C. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.
   1. Enclosure shall be 20" wide x 5-3/4" deep, surface or flush mounted, unless specified otherwise in the panel schedule.
   2. Flush panelboards mounted adjacent to each other shall be same physical size.
   3. Where "SPACE" is indicated on panelboard schedules or Drawings, install minimum 100amp branch circuit cross connectors and mounting hardware. For future device spaces larger than 100amps, cross connectors shall match the frame size ampere rated noted.

D. Mains: As noted on panel schedules.

E. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.
   1. Circuit breakers shall not be less than 1” per pole spacing. Less than 1” will be regarded as a miniature circuit breaker and will be rejected during the submittal review process.
   2. Multiple pole circuit breakers shall have internal common trip connections and shall be bolt-on to the bus type, with a minimum symmetrical amp rating of 22,000 RMS unless

noted otherwise in the drawings. Breakers shall be listed for termination of copper, insulated at 75oC temperature rating or higher.
3. All breaker lugs shall be copper.
4. Breakers shall be fully rated for the symmetrical amp rating listed unless specified otherwise.

F. Contactors in Main Bus: NEMA ICS 2, Class A, electrically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.
1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
2. External Control-Power Source: As noted on plans.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Receive, inspect, handle, and store panelboards according to NEMA PB 1.1.

B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install panelboards and accessories according to NEMA PB 1.1.

B. Equipment Mounting:
1. For panelboards, install epoxy-coated anchor bolts that anchor into structural concrete floor.
2. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
3. Install anchor bolts to elevations required for proper attachment to panelboards.
4. Attach panelboard to the vertical finished or structural surface behind the panelboard.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

D. Mount top of trim 78 inches above finished floor unless otherwise indicated.

E. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.

F. Install overcurrent protective devices and controllers not already factory installed.
1. Set field-adjustable, circuit-breaker trip ranges.

G. Install filler plates in unused spaces.

H. Stub four 3/4-inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future.

I. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.

3.03 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Division 26 Section Identification.

B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.

C. Panelboard & Distribution Panel Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Division 26 Section Identification.
   1. Nameplates to include power source serving panel and feeder rating.

D. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Division 26 Section Identification.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Acceptance Testing Preparation:
   1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.

C. Tests and Inspections:
   1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

D. Panelboards will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken and observations after remedial action.

3.05 ADJUSTING

A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as indicated.

C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.
   1. Measure as directed during period of normal system loading.

2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.

3.06 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Work included: Labor, materials, and equipment necessary to complete the installation required for the item specified under this Division, including but not limited to:
   1. Power monitoring equipment.
   2. Web-based power monitoring communication system.
   3. Data acquisition server “Gateway.”
   4. Miscellaneous monitoring systems.

B. Related Work: Consult all other Sections, determine the extent and character of related Work, and properly coordinate Work specified herein with that specified elsewhere to produce a complete installation.

1.02 REFERENCES

A. Comply with the latest edition of the following applicable Specifications and standards except as otherwise indicated or specified:
   1. American National Standards Institute, Inc. (ANSI)/Institute of Electrical and Electronics Engineers (IEEE):
      ANSI/IEEE 802.3; Ethernet Standard.
   2. American National Standards Institute, Inc. (ANSI):
      ANSI C12.20; For Electricity Meters – 0.2 and 0.5 Accuracy Classes.
      ANSI C37.90.1; Surge Withstand Capability (SWC) Test.
   3. Federal Communications Commission (FCC) Regulations:
      FCC Part 15; Subpart B for Unintentional Radiators that Generate Radio Frequency Emissions. Class A for Digital Devices that Market use for Commercial applications.
   4. Underwriters Laboratories, Inc. (UL):
      UL 61010A-1; General Safety Requirements for Electrical Equipment intended for Laboratory Use.

1.03 SUBMITTALS

A. Submit in accordance with the requirements of 26 05 00: Common Work Results for Electrical, the following items:
   1. Data/catalog cuts for each product and component specified herein, listing all physical and electrical characteristics and ratings indicating compliance with all listed standards.
   2. Describe product operation, equipment and dimensions and indicate features of each component.
   3. Clearly mark on each data sheet the specific item(s) being submitted and the proposed application.
   4. Shop Drawings to include:
      a. Front, plan, and side view elevations with overall dimensions.
      b. Wiring diagrams showing all components and the connections between the components.
   5. Furnish structural calculations for equipment anchorage as described in Section 26 05 00: Common Work Results for Electrical.
   6. Submit Manufacturer's installation instructions.
   7. Complete bill of material listing all components.
   8. Warranty.

B. Hardware and software description shall be provided in detail for all communications hardware, software, including sensor devices and gathering data to be transmitted over the network, and master display unit. This description will include a list of all the communicating devices to be connected to the network.

C. Typical software screen displays shall be provided in printout form and/or on disk.

1.04 OPERATION AND MAINTENANCE MANUAL

A. Supply operation and maintenance manuals in accordance with the requirements of 26 05 00: Common Work Results for Electrical, to include the following:
   1. A detailed explanation of the operation of the system.
   2. Instructions for routine maintenance.
   3. Parts list and part numbers.
   4. Pictorial and schematic Electrical Drawings of wiring systems, including operating, hardware, flat screens, instrumentation, and annunciators.
   5. Telephone numbers for authorized parts and service distributors.
   6. Final testing reports.

1.05 QUALITY ASSURANCE

A. All materials, equipment and parts comprising the units specified herein shall be new, unused, and currently under production.

B. Only products and applications listed in this Section may be used on the Project unless otherwise submitted.

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery: Energy information system shall not be delivered to the Project site until protected storage space is available. Storage outdoors covered by rainproof material is not acceptable. Equipment damaged during shipment shall be replaced and returned to Manufacturer at no cost to Owner.

B. Storage: Store in a clean, dry, ventilated space free from temperature extremes. Maintain factory wrapping or provide a heavy canvas/plastic cover to protect units from dirt, water, construction debris and traffic. Provide heat where required to prevent condensation.

C. Handling: Handle in accordance with Manufacturer's written instructions. Be careful to prevent internal component damage, breakage, denting and scoring. Damaged units shall not be installed. Replace damaged units and return equipment to Manufacturer.

1.07 WARRANTY

A. Units, components and programming offered under this Section shall be covered by a 2-year parts and labor warranty for malfunctions resulting from defects in materials and workmanship. Warranty shall begin upon acceptance by the Owner.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
   1. Power monitoring equipment:
      a. Schneider/ Square D
      b. Eaton:
      c. Siemens
   2. Web-based power monitoring communication system:
      a. Schneider/ Square D
      b. Eaton
      c. Siemens
   3. Data acquisition server gateway:
      a. Obvius A8812-1 “AcquiSuite” Data Acquisition Server

B. Substitutions: Under provisions of 26 05 00: Common Work Results for Electrical.

2.02 MICORPROCESSOR-BASED POWER MONITORING EQUIPMENT

A. Integrated multi-point metering/switchboard construction:
   1. Combines switchboard design with multi-point metering (MPM) equipment to provide a complete factory installed metering switchboard consisting of distribution switchboard with overcurrent protection devices, meter module(s) and current sensors, factory installed and wired to meters.
   2. The MPM shall monitor 60 single-pole loads, 30 two pole loads or 20 three-pole loads or any combination thereof by use of current sensors.
   3. All connections to the MPM shall be through removable plugs.
   4. The MPM shall be capable of accepting input from current sensors by connecting with factory installed plug connectors.
   5. The MPM shall be capable of automatically sensing the current rating of the current sensor.
   6. The MPM shall provide a mechanism for detecting tampering with the current sensors. Tamper detection shall be accessible remotely by the headend computer.
   7. The MPM shall be available in one of three voltage ratings:
      a. 120/208volt AC
      b. 277/480volt AC
      c. 347/600volt AC
   8. The MPM shall calculate power and energy consumption in accordance with ANSI C12.20 metering specification and stored in non-volatile memory for forwarding to an intelligent system.
   9. The MPM shall store power in kW and energy in kWh for each metering point.
   10. The MPM shall store energy profile information for each metering point in non-volatile memory. The profile time-period shall be adjustable from 1 to 60-minutes. The MPM shall be able to save a minimum of 365-days of energy profile data for all 60-meter points on a 15-minutes basis.
   11. The MPM shall be suitable for mounting within a panelboard or switchboard utilizing a dedicated mounting bracket. The MPM shall have all connections oriented towards the wiring gutters of the panelboard or switchboard in which it is mounted. The MPM may also be mounted in a separate enclosure.
   12. The MPM shall have LEDs that can be easily viewed when the unit is installed to aid in the installation and operation of the device with the following functionality as a minimum:
      a. Each current input shall have an LED that shall flash in proportion to the amount of power flowing in the measures circuit.
      b. An indication LED that flashes to indicate when the MPM is functioning properly.
      c. A transmit LED that indicates when the MPM is transmitting data on the communication network.

d. A receive LED that indicates when the MPM is receiving data on the communication network.

13. The MPM shall have rotary address switches that are easily accessible and set the unit address on the communication network.
14. The local device network shall be factory interconnected utilizing two Modbus RTU ports. The communication speed at the device level shall be a minimum of 9,600-baud. Devices shall communicate at their maximum baud rate regardless of the number of devices on the network.
15. MPM shall be networkable such that a single modem can be utilized to read multiple meters.
16. Current sensors shall be provided with a toroidal winding over solid core. The winding shall be mounted over the circuit to be monitored by inserting the load conductor through a hole in the center of the current transformers. The current in the load conductor shall be made available to an electronic monitoring device through a four-conductor cable and terminated to a removable plug on the current sensor. The current sensor shall have two LEDs, one red for indicating loss of connection and one blue for verification to connected load. The current sensors shall be suitable for use with circuits rated 125amp through 400amp. Extension cables, with a length of 8 and 16-feet and factory installed connectors shall be available for installations where the standard cable is too short for proper installation. The current sensors shall have 600volt rated cable insulation and shall be UL listed with the MPM.

2.03 WEB-BASED POWER MONITORING COMMUNICATION SYSTEM

A. General: Furnish and install a complete web-based power monitoring communications system (PMCS) as detailed on the drawings and as described herein. The PMCS shall include all remote devices for metering, monitoring, control and protection, a network time server, all Ethernet communications gateways and gateway interfaces, intercommunication wiring, and ancillary equipment.

B. Web-based PMCS:
   1. The PMCS shall provide a web browser-based monitoring and management system for all communicating devices in the power system.
   2. The PMCS shall communicate to all devices over an industry standard Ethernet communication backbone. For devices that cannot communicate directly on Ethernet, a gateway complying with the requirements of this specification can be provided.
   3. The PMCS shall provide a real time, web-based system to allow the user to easily view the key operational characteristics of the system. These features of the system shall not require any custom screen development or configuration to provide the following functions:
      a. The PMCS shall provide the ability to view the current value of all operational variables available from all supported devices connected to the Ethernet network without the need for any additional system software.
      b. The PMCS shall not require specific knowledge of a device to be able to display information from that device. Instead, the software shall have the ability to query the device for its operational capabilities and automatically set up web-based pages to display the information. No custom screen development shall be required to display data from any device able to connect to the system:
         1) The software shall support the ability to automatically establish a connection to any device added to a gateway without the user doing any configuration in the software.
      c. The PMCS shall automatically build a one-line network hierarchy for all connected devices so the user can easily view them and display the corresponding data, status for those devices.
   4. The PMCS shall provide the ability trend one or more variables (volts, amps, kW, kWh, etc.) from one or more devices on a web-based trend graph. The trend viewer shall support the following features:
      a. Web accessible trending tool.
      b. Option to display all variables on a single chart.
      c. Support for Min and Max value generation and graphing.
      d. Ability to select trend date ranges from a calendar.
      e. Ability to save the selected trend data to a CSV file using the web interface
   5. The PMCS shall provide an energy graph on the home page and shall include:
      a. Ability to show either demand or usage.
      b. Ability to show the peak value for selected time periods and load factor.
      c. Compare energy usage across devices.
      d. Display peak periods for each device.
      e. Ability to display line, bar, stacked bar, and cumulative usage for each selected period.
      f. Move cursor to view energy values at any given time.
      g. Calendar based date and time selection.
   6. The PMCS shall support displaying of the waveform data collected by the power monitoring devices that can capture waveforms. The graphic format will display the data in an oscilligraphic format and in a Fourier Amplitude Spectrum graph.

7. The PMCS shall provide time stamped sequential order of events for trips, analog alarms, motor start profiles, and operator actions based on the information received from the actual devices.
8. The PMCS shall have the ability to manage alarm and event conditions detected by the devices. Alarm management shall include:
   a. Ability to acknowledge alarms via the web interface.
   b. Ability to flag priority alarms.
   c. Ability to export alarms.
   d. Ability to sort and analyze alarms by time, device, or priority.
9. The PMCS shall provide web-based navigation system to easily:
   a. Drill down" in the one-line hierarchy.
   b. Upload any .jpeg or, png file as a one-line background.
10. The PMCS shall be easy to operate and manage and shall include:
    a. Ability to have a favorite's list of devices.
    b. Ability to add and remove devices from the favorites list.
    c. Ability to see devices current status and key parameters at a glance.
    d. Ability to navigate to main software views with a single mouse click.
11. The PMCS shall be scalable such that the system can be expanded without requiring the user to reconfigure a new system.
12. The PMCS shall be sized to support the number of devices shown on the drawings, plus the capacity to accommodate 10% additional devices.
13. The PMCS shall not restrict the number of simultaneous users except based on the computing resources provided to support the system.
14. The PMCS shall allow users to be granted privileges based on their user ID and password, to perform various functions in the system. The software shall support, at a minimum 2 levels of access with one supporting Read only access and the other provide full Administration access.
15. The PMCS shall provide onboard embedded memory that is not external to the system or resident on a separate computer.

C. Web-Enabled PMCS Hardware Components:
   1. All web enabled devices in the PMCS shall provide any authorized user on the customer's network access to the critical data listed below with the user requiring only a supported Internet browser on their own computer.
      a. Meter Screen providing:
         1) Volts: L-L and L-N, and average.
         2) Frequency.
         3) Current and average phase A, B, and C, N and G.
      b. Power Screen providing:
         1) Energy.
         2) Demand.
         3) Power Factor.
      c. Quality Screen providing:
         1) Total Harmonic Distortion (THD) of volts and current.
      d. Events screen providing:
         1) Latest events.
         2) Enabled Triggers.
         3) Historical Events.
   2. The web-enabled power monitoring hardware shall support multiple protocols over Ethernet to ensure the system can easily be integrated into the PCMS software system as well as existing systems. These protocols shall include:
      a. Modbus TCP/IP.
      b. BACnet/IP.
      c. SNMP.

d. HTTP.
e. SMTP.
f. NTP.
g. File System for exporting .CSV trend files.

3. The web enabled power monitoring hardware shall provide support for configuration of all web enabled meters and gateways directly via the web pages on the device.
   a. To support the configuration of legacy devices on the device networks connected to the gateway, the gateway shall support a “pass through mode” to allow the legacy configuration software to connect from any computer on the users network to the device via the gateway.
4. All web enabled power monitoring hardware that is connected directly to Ethernet shall support the ability to synchronize their time clock using Network Time Protocol (NTP). The purpose for this support is to ensure all device clocks are accurate so that event sequences can be adequately analyzed.
   a. For devices that support clock synchronization and are on the device networks connected to the gateways, they shall support the ability to sync their clock to the clock in the gateway.
5. Ethernet Switches:
   a. A single web access point: 4 or 6-port Ethernet switch shall be provided in the equipment to allow a single access point for the user and the ability to connect more than one network device directly on the customer’s Ethernet Local Area Network (LAN).
   b. Ethernet switch shall support standard copper RJ45 connectors and/or 100BaseFX Fiber-Optic via ST connectors.

2.04 DATA ACQUISITION SERVER GATEWAY

A. General:
1. The data acquisition server allows users to connect and secure data from virtually any meter type and convert the raw meter output into usable information. This information can be integrated with almost any level of software system or database, from an enterprise software suite to a simple Excel spreadsheet.
2. The data acquisition server is scalable for energy monitoring applications, including the ability to access and configure devices through ant web browser.
3. The data acquisition server employs “plug & play” technology, and automatically detects and configures downstream Modbus devices in seconds. Data from downstream devices are time stamped and stored in non-volatile memory at user-selected intervals. The data can be stored or uploaded to a destination of user’s choice through a number of different formats. Data can also be accessed through any web browser via integrated modem or Ethernet connection.
4. Using the built-in modem or Ethernet port, data is sent via either the network or phone lines to the online server system. From the Online website, you can view past data, plot charts, and export data.
5. User cab push/pull data into energy kiosk or dashboard, custom software applications, or any web interface.

B. Equipment description:
1. The data acquisition server unit shall be a standalone, wall-mounted device powered by a 120volt AC plug-in transformer with 24volt DC output.
2. The unit shall accept up to 32 Modbus device inputs on the RS485 serial input terminals. The unit shall provide automatic recognition and configuration for Modbus power meters as well as other Modbus devices.
3. The unit shall provide user interface via standard web browser using an integrated Ethernet RJ45 jack.

4. Unit shall provide alarm setpoints for all measured values including the option for either high/low or warning/alarm.
5. Unit shall be capable of using LAN connections (static IP or DHCP), telephone modem or cell modem (GSM) for data upload.
6. Unit shall provide data in standard delimited text form (.txt). There shall be an option for retrieving data using XML. Data uploads shall be either push or pull at the option of the user, on user-selected intervals.
7. Store all recorded variables in non-volatile memory.
8. The unit shall function as a gateway device, using Modbus TCP to retrieve specific data from connected devices as required.
9. Performance characteristics:
    a. Main processor: ARM 9
    b. I/O Co-processor: ARM 7
    c. Operating system: Linux 2.6
    d. Flash ROM: 16MB NOR Flash (expandable with USB memory device)
    e. Memory: 32MB RAM
    f. LED: 8x pulse input, 4 modem activity, Modbus TX/RX, power status
    g. Console: 2x 16 LCD character, two buttons
    h. LAN: 10/100, Auto crossover detection
    i. Modem (phone): V.34bis, 33,600bps
    j. Modem (cellular): GSM/GPRS Class 10, 85kbps
    k. Protocols: Modbus/RTU. Modbus/TCP, TCP/IP, PPP, HTTP/HTML, FTP, SNMP, SMTP, XML
    l. Power supply: 24volt DC, transformer included
    m. Power requirement: 120volt AC
    n. Serial port: RS485 Modbus
    o. USB port: USB memory expansion port
    p. Interval recording: User selectable 1 to 60-minutes. Default of 15-minute interval
    q. Outputs: 2x, Dry contact 30volt DC, 150mA max
    r. The unit shall accept up to 8 inputs directly. Each input shall be capable of being configured for the following:
        1) 0-10volts: Min/Max/Ave/Instantaneous
        2) 4-20mA: Min/Max/Ave/Instantaneous
        3) Pulse: Consumption, rate.
        4) Resistance: Min/Max/Ave/Instantaneous
        5) Runtime: Runtime, status

2.05 MISCELLANEOUS MONITORING SYSTEMS

A. The meters that follow are all to be furnished under another Division of Work but require connection under this Division to the energy information system network. Coordinate the exact location of these meters with HVAC, plumbing and landscape irrigation contractors prior to commencing installation.

B. Meters provided by others shall have a Modbus TCP/IP protocol to be supported on the energy information system network. The exception being the water flow meters and the natural gas flow meters, which shall be the pulse output type meters with dry contacts. The data acquisition server can support direct connections with both the Modbus meters and the pulse output meters.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Contractor shall thoroughly examine Project site conditions for acceptance of metering equipment installation to verify conformance with Manufacturer and Specification tolerances. Do not commence with installation until all conditions are made satisfactory.

3.02 INSTALLATION

A. Install energy information system components in accordance with Manufacturer's written instructions, as indicated on the Drawings and as specified herein.

B. Tighten electrical connectors and terminals; including screws and bolts, in accordance with equipment Manufacturers published instructions.

C. Coordinate with the Mechanical Controls Contractor and integrate the energy information system into the building management system. See mechanical controls details for more information.

D. Coordinate the software installation after all hardware has been completely installed, connected, and activated.

3.03 PROGRAMMING

A. The contractor shall insure the on-site programming of the system by a manufacturer's representative, as well as to assist in the system startup. On-site services shall include:
   1. Setting all the addresses of all devices in the equipment.
   2. Verifying and troubleshooting the integrity of the data.
   3. Assisting the Owner in correcting any data line problems.
   4. Coordinating any possible warranty problems.
   5. Configure the software to match the field devices.

3.04 FIELD QUALITY CONTROL

A. Independent testing: Contractor shall arrange and pay for the services of an independent Testing Agency to perform all quality control electrical testing, calibration and inspection required herein. Testing Agencies objectives shall be to:
   1. Assure energy information system equipment installation conforms to specified requirements and operates within specified tolerances.
   2. Field test and inspect to insure operation in accordance with Manufacturer's recommendations and Specifications.
   3. Prepare final test report including results, observations, failures, adjustments, and remedies.
   4. Verify settings and make final adjustments.

B. At least three weeks prior to any testing, notify the Engineer so that arrangement can be made for witnessing test, if deemed necessary. All pretesting shall have been tested satisfactorily prior to the Engineer's witnessed test.

C. The Contractor shall supply a suitable and stable source of electrical power to each test site. The Testing Agency shall specify the specific power requirements.

D. Testing of energy information system equipment shall be done only after all devices are installed and system is energized.

E. Prefunctional testing:
   1. Provide Testing Agency with Contract Documents and Manufacturer instructions for installation and testing.
   2. Visual and mechanical inspection:
      a. Inspect for physical damage, defects alignment and fit.
      b. Verify the meters are functional by scrolling through monitoring options.
      c. Compare nameplate information and connections to Contract Documents.
      d. Check tightness of all control and power connections.
      e. Check that all covers, barriers, and doors are secure.
   3. Electrical tests:
      a. Provide a portable meter that was calibrated prior to test, on the same day as test, and with an accuracy equivalent to that of the meters being tested.
      b. Confirm values of each meter in the system by hooking up portable meter to feeder being monitored. Ensure that there is a minimum of 5% load on feeder at time of test, based on the overcurrent protection size.
      c. Calibrate meters as required based on reading from portable meter.

F. Contractor shall replace at no costs to the Owner all devices which are found defective or do not operate within factory specified tolerances.

G. Contractor shall submit the Testing Agency's final report for review prior to Project closeout and final acceptance by the Owner. Test report shall indicate test dates, devices tested, results, observation, deficiencies, and remedies. Test report shall be included in the operation and maintenance manuals.

3.05 CLEANING

A. Upon completion of Project prior to final acceptance the Contractor shall thoroughly clean energy information system equipment per Manufacturer's approved methods and materials.

3.06 TRAINING

A. Factory authorized service representative shall conduct two initial 4-hour training sessions for Owner's Maintenance Personnel upon completion and acceptance of system. Provide one 4-hour follow-up training session to be scheduled by Owner within one year of the final date of the final initial training session. Instructions shall include operation, maintenance, and testing of equipment with both classroom training and hands-on instruction. The agenda for the second session will be by Owner.

B. Contractor shall provide a training video.

C. Contractor shall schedule training with a minimum of 7-days advance notice.

END OF SECTION

PART 1- GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:
   1. Snap switches and wall-box dimmers.

B. Related Sections include the following:
   1. Division 26 Section "Low-Voltage Electrical Power Conductors and Cables" for wiring.

1.03 DEFINITIONS

A. EMI: Electromagnetic interference.

B. Pigtail: Short lead used to connect a device to a branch-circuit conductor.

C. RFI: Radio-frequency interference.

D. UTP: Unshielded twisted pair.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.
   1. Dimmer switch submittals shall include written certification of compatibility from the lighting fixture manufacturer.

B. Field quality-control test reports.

C. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing label warnings and instruction manuals that include labeling conditions.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of wiring device and associated wall plate through one source from a single manufacturer. Insofar as they are available, obtain all wiring devices and associated wall plates from a single manufacturer and one source.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with CEC.

1.06 COORDINATION

A. Receptacles for Owner-Furnished Equipment: Match plug configurations.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
   1. Switches, receptacles and coverplates:
      a. Leviton Mfg. Company Inc. (Leviton).
      b. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
      c. Pass & Seymour/Legrand (Legrand)
   2. Occupancy/vacancy sensors switches, time switches:
      a. SensorSwitch, Inc.
      b. Wattstopper
      c. Cooper Controls “Greengate”
      d. Leviton
      e. Hubbell Building Automation, Inc.
   3. Floor mounted service boxes:
      a. Legrand

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

2.02 RECEPTACLES

A. Standards:
   1. Provide general purpose 20amp, 125/250volt AC receptacles that conform to NEMA WD-1 Specifications. Specialty receptacles shall conform to NEMA WD-5 Specifications as applicable.
   2. Provide NEMA 5-20R, industrial (heavy-duty) specification grade as noted herein, 20amp, 125volt AC, 2-pole, 3-wire grounding type receptacles.
   3. Receptacles shall be the standard conventional style device.
   4. Receptacles shall be tamper-resistant to meet the requirements of CEC Article 406.12.

B. Color:
   1. Device color shall be as selected by the Architect, unless otherwise noted.
   2. Devices connected to an emergency circuit shall be red.

2.03 STRAIGHT-BLADE RECEPTACLES

A. Tamper-Resistant Single Outlet Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, and FS W-C-596.
   1. Provide self-grounding back and side wired with binding head staked terminal screw.
   2. Products: Subject to compliance with requirements, provide one of the following:
      a. Hubbell; #5361 series.
      b. Leviton; #5361 series.
      c. Pass & Seymour; #5361 series.

B. Tamper-Resistant Convenience Duplex Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, and FS W-C-596.
   1. Provide self-grounding back and side wired with binding head staked terminal screw.
   2. Products: Subject to compliance with requirements, provide one of the following:
      a. Hubbell; #5362 series.
      b. Leviton; #5362 series.
      c. Pass & Seymour; #5362 series.

C. Half Controlled Tamper-Resistant Convenience Receptacles 125 V, 20A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, and FS W-C-596.
   1. NEMA-approved and CEC, CA Title 24 compliant: Permanently marked with universal symbol for controlled receptacle and the word “CONTROLLED”.
   2. Controlled duplex receptacles shall include split circuit hot tab for one controlled outlet, and one uncontrolled.
   3. Controlled double duplex receptacle shall consist of one uncontrolled general-purpose duplex receptacle, and one controlled duplex receptacle.
   4. For half controlled receptacle with split-circuit hot tab, use:
      a. Pass & Seymour #5362CH
      b. Hubbell BR20C1
      c. Leviton 5362-1P
   5. For dual controlled receptacle, use:
      a. Pass & Seymour #5362CD
      b. Hubbell BR20C2
      c. Leviton 5362-2P.

D. USB Charger Type Tamper-Resistant Specification Grade Duplex Receptacle 125 V, 20A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, and FS W-C-596.
   1. Two 5-volt DC USB Type A charging ports; compatible with USB 2.0 and 3.0 devices, and capable of charging two devices simultaneously while using receptacles.
   2. Comply with USB battery charging spec USB BC1.2.
   3. Minimum 3.1 amps total charging capacity.
   4. Products: Subject to compliance with requirements, provide one of the following types:
      a. Pass & Seymour TR5362USB series.
      b. Hubbell USB20X2 series.
      c. Leviton #T5832 series.

2.04 GFCI RECEPTACLES

A. General Description:
   1. Straight blade, Tamper-Resistant non-feed-through type.
   2. Comply with NEMA WD 1, NEMA WD 6, UL 498, UL 943 Class A, and FS W-C-596.
      a. Provide 20amp, 125volt AC, receptacles consisting of NEMA 5-20R duplex device with integral solid state sensing and signaling circuitry capable of detecting and interrupting a maximum 5-milli-amp line-to-ground fault current in approximately 1/40th of a second.
      b. Provide visual device with trip indication, manual reset, and test mechanisms and with point of use and multi-outlet protection.
      c. Provide self-test and monitor feature with visual indicators on device face representing power status, trip condition, ground fault condition and end of life status.
      d. Provide weather resistant devices at all damp and wet locations.

B. Duplex GFCI Specification Grade Convenience Receptacles, 125 V, 20 A, double sided contact, back side wired:
   1. Building Interior Locations:
      a. Pass & Seymour #2097TR series
      b. Hubbell GFTRST20 series
      c. Leviton #S7899 series
   2. Exterior Locations: Weather Resistant Listed.
      a. Pass & Seymour #2097TRWR series
      b. Hubbell GFTWRST20 series

c. Leviton #WT899 series

2.05 TWIST-LOCKING RECEPTACLES

C. Single Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration L5-20R, and UL 498.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Cooper; CWL520R.
b. Hubbell; HBL2310.
c. Leviton; 2310.
d. Pass & Seymour; L520-R.

2.06 WALL SWITCHES

A. Comply with NEMA WD 1, UL 20, and FS W-S-896.

B. Switches, 120/277 V, 20 A:

C. Pilot-Light Switches, 20 A:
1. Products: Subject to compliance with requirements, provide one of the following:
a. Hubbell; HBL1201PL for 120 and 277 V.
b. Leviton; 1221-LH1.
c. Pass & Seymour; PS20AC1RPL for 120 V, PS20AC1RPL7 for 277 V.
2. Description: Single pole, with neon-lighted handle, illuminated when switch is "off."

D. Key-Operated Switches, 120/277 V, 20 A:
1. Products: Subject to compliance with requirements, provide one of the following:
a. Hubbell; HBL1221L.
b. Leviton; 1221-2L.
c. Pass & Seymour; PS20AC1-L.
2. Description: Single pole, with factory-supplied key in lieu of switch handle.

E. Single-Pole, Double-Throw, Momentary-Contact, Center-off Switches: 120/277 V, 20 A; for use with mechanically held lighting contactors.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Hubbell; HBL1557.
b. Leviton; 1257.
c. Pass & Seymour; 1251.

F. Key-Operated, Single-Pole, Double-Throw, Momentary-Contact, Center-off Switches: 120/277 V, 20 A; for use with mechanically held lighting contactors, with factory-supplied key in lieu of switch handle.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Hubbell; HBL1557L.
b. Leviton; 1257L.
c. Pass & Seymour; 1251L.

2.07 OCCUPANCY/VACANCY SENSOR SWITCHES

A. Occupancy sensors: automatic on, automatic off.

B. Vacancy sensors: manual on, automatic off.

C. General:
   1. Occupancy sensors shall comply with the latest edition of the California Building Energy Efficiency Standards, California Building Code, Part 6 and be certified by The California Energy Commission. All sensors shall be listed in the most current directory of Certified Occupancy Sensing Devices or be on file with the CEC.
   2. Sensors shall be dual-technology type infrared/ultrasonic or infrared/microphonic or as specified herein.
   3. Neutral connection required. Sensors that rely on ground leakage current for operation shall not be provided.
   4. All sensors shall have an adjustable time delay off setting and a sensitivity adjustment.
   5. Ceiling mounted sensors shall operate be line voltage or low voltage with separate control unit. Control unit shall contain power supply and relays for switching loads.
   6. Units shall be furnished with area coverage to suit application. No allowance shall be given for providing sensors improperly sized for the square footage of the controlled area.

D. Color: Device color shall be as selected by Architect, unless otherwise noted.

E. Wallbox mounted single level control sensors:
   1. Sensor shall provide minimum coverage of 900-square feet.
   2. Time delay adjustment from 30-seconds to 20-minutes. Set initial time-out setting at 4-minutes, unless otherwise specified. Set sensitivity adjustment at maximum.
   3. Load capacity of 0 to 1800watts at connected voltage.
   4. For use in small utility closets and similar areas where dual level switching is not indicated.

F. Wallbox mounted dual level control sensors:
   1. Sensor shall provide dual level switching capability and minimum coverage of 1000-square feet.
   2. Operation shall be manual (in two levels) “ON” and manual (in two levels) or automatic (full) “OFF”.
   3. Time delay adjustment from 30-seconds to 20-minutes. Set initial time-out setting at 20-minutes, unless otherwise specified. Set sensitivity adjustment at maximum.
   4. Load capacity of 50 to 1000watts at connected voltages.
   5. Integral photocell. Provide with ambient light control adjustment.
   6. For use in offices and similar areas where dual level switching is indicated.

G. Wallbox mounted combination sensor and dimmer:
   1. Sensor shall provide 0-10volt dimming capability for LED loads.
   2. Sensor shall provide minimum coverage of 20-feet for clear line-of-sight applications.
   3. Infrared only or dual-technology sensor.
   4. Time delay adjustment from 3-minutes to 20-minutes. Set initial time-out setting at 15-minutes, unless otherwise specified. Set sensitivity adjustment at maximum.
   5. For use in private offices and similar areas where dimming is indicated.

H. Ceiling or wall mounted single-directional sensors:
   1. Sensor shall provide minimum coverage of 900-square feet.
   2. Operation shall be automatic “ON” and automatic “OFF”. Provide with a manual override switch.
   3. Time delay adjustment from 30-seconds to 20-minutes. Set initial time-out setting at 10-minutes. Set sensitivity adjustment at maximum.
   4. Load capacity of 20amps per power or slave pack at connected voltage.
   5. Power pack, if required, consisting of Class 2, 24volt output transformer and relay in single housing, capable of powering up 2 sensors and mounted inside standard 4-inch square box.
   6. For use in small office, classroom, and similar areas.

I. Ceiling mounted omnidirectional sensors:
   1. Sensor shall provide minimum omnidirectional coverage of 1000-square feet.
   2. Operation shall be automatic “ON” and automatic “OFF”. Provide with a manual override switch.
   3. Time delay adjustment from 30-seconds to 20-minutes. Set initial time-out setting at 10-minutes. Set sensitivity adjustment at maximum.
   4. Load capacity of 20amps per power or slave pack at connected voltage.
   5. Power pack, if required, consisting of Class 2, 24volt output transformer and relay in single housing, capable of powering up to 2 sensors and mounted inside standard 4-inch square box.
   6. For use in large storage rooms and similar areas

J. Dimmer Switches:
   1. Modular, full-wave, solid-state units with integral, quiet on-off switches, with audible frequency and EMI/RFI suppression filters.
   2. Modular; compatible with dimmer driver; trim potentiometer to adjust low-end dimming; dimmer-ballast combination capable of consistent dimming with low end not greater than 10 percent of full brightness.
      a. Switches shall be 2-wire with no requirement for a neutral.
      b. Shall be certified by the lighting fixture manufacturer as compatible with the driver.
      c. Shall provide uniform dimming to a 10% or lower lighting output level without flicker.

K. Control: Continuously adjustable slider; with single-pole or three-way switching. Comply with UL 1472.

2.08 TIME SWITCHES

G. Wallbox mounted, line voltage type.

H. Shall be compatible with all LED lighting loads, electronic ballasts, motor loads, and inductive loads. Triac and other harmonic generating devices shall not be allowed.

I. Shall have no minimum load requirement and shall be capable of controlling up to 800watts.

J. Shall allow manual override of the preset time-out period.

K. Time switch shall be capable of operating as an “ON/OFF” switch.

L. Digital time switch:
   1. Shall have the option for a beep warning that shall sound every 5-seconds once the time switch countdown reaches one minute.
   2. Shall have an electroluminescent backlit Liquid Crystal Display that shows the timer’s countdown.
   3. Maximum setting of 30-minutes for server aisles and 10-minutes for closets.

M. Analog time switch:
   1. Spring wound rotary style.
   2. Maximum setting of 30-minutes for server aisles and 10-minutes for closets.

N. Astronomical time switch:
   1. Includes integral programming function for precise Time Zone, Longitude, and Latitude input/
   2. Weekly schedule format.
   3. Minimum 5 programmable schedules.

2.09 WALL SWITCHES

O. Comply with NEMA WD 1, UL 20, and FS W-S-896.

P. Switches, 120/277 V, 20 A:

Q. Pilot-Light Switches, 20 A:
1. Products: Subject to compliance with requirements, provide one of the following:
   a. Hubbell; HBL1201PL for 120 and 277 V.
   b. Leviton; 1221-LH1.
   c. Pass & Seymour; PS20AC1RPL for 120 V, PS20AC1RPL7 for 277 V.
2. Description: Single pole, with neon-lighted handle, illuminated when switch is "off."

R. Key-Operated Switches, 120/277 V, 20 A:
1. Products: Subject to compliance with requirements, provide one of the following:
   a. Hubbell; HBL1221L.
   b. Leviton; 1221-2L.
   c. Pass & Seymour; PS20AC1-L.
2. Description: Single pole, with factory-supplied key in lieu of switch handle.

S. Single-Pole, Double-Throw, Momentary-Contact, Center-off Switches: 120/277 V, 20 A; for use with mechanically held lighting contactors.
1. Products: Subject to compliance with requirements, provide one of the following:
   a. Hubbell; HBL1557.
   b. Leviton; 1257.
   c. Pass & Seymour; 1251.

T. Key-Operated, Single-Pole, Double-Throw, Momentary-Contact, Center-off Switches: 120/277 V, 20 A; for use with mechanically held lighting contactors, with factory-supplied key in lieu of switch handle.
1. Products: Subject to compliance with requirements, provide one of the following:
   a. Hubbell; HBL1557L.
   b. Leviton; 1257L.
   c. Pass & Seymour; 1251L.

2.10 FLOOR MOUNTED SERVICE BOXES

A. Multi-service recessed floor box:
1. Combination power and communication cable service floor box with flush cover and recessed compartment for access to service device(s). Box shall be for installation concrete floors.
2. Box shall be constructed of formed steel with provisions for adjustments before and after pour. Access hatch shall be steel and provided with carpet trim and insert. Make allowances for floor finishes if other than carpet. Furnish with specified receptacle(s) and accessories called for on Drawings.
3. Use Hubbell #3SFB-SS series or Walker 'Resource RFB' series.

B. Cast flush floor box:
1. Single or multi-gang floor box for flush applications in concrete floor. Box shall be cast iron with brass coverplates and carpet flange. Furnish with provisions for adjustments before and after pour. Provide with all accessories such as receptacles, compartment dividers, coverplate options, rings, etc. as indicated for application on Drawings.

2. Furnish box in either shallow or deep sizes as determined by the concrete floor depth and in ganged configurations indicated on Drawings.
3. Use Hubbell #B-2400, B-4200 and B-4300 series or Walker #880C series.

C. Poke-through floor fitting:
1. Flushstyle fire rated poke-through device for installation in a 2" or 3" cured hole through a concrete floor. Provide with finish ring, receptacle, cable access, box, etc. or any other accessories to facilitate the installation indicated on Drawings.
2. Use raceway components #RC 700 series or Walker #1500 series for flush installations.
3. Use raceway components #FIT-200 series or Walker #1600 series for monument installation.

2.11 COVER PLATES

A. General:
1. Provide all coverplates with rounded edges and corners, smooth and free of grooves, embossing or other embellishment.
2. Provide mounting screws to match the plate finish.
3. Provide gang type coverplates where two or more devices are installed at one location. Individual gangable coverplates are not acceptable.
4. Provide plates of one design, standard conventionaldesigner decora style, throughout the Project unless otherwise specified.

B. Color: Coverplate color shall be ivorywhiteblackgrayas specified by the Architect, unless otherwise noted.

C. Plastic coverplates:
1. Provide smooth, high impact, self-extinguishing thermoplastic coverplates and 0.100 inches thick with rounded edges and corners.
2. Provide openings to accommodate the devices indicated on the Drawings and in the Specifications.

D. Metal coverplates:
1. Provide smooth, type 430 stainless steel coverplates, 0.035" thick with rounded edges and corners.
2. Provide openings to accommodate the devices indicated on the Drawings and in the Specifications.
3. Provide removable plastic film to protect coverplates during installation. Remove film at time of final acceptance.

E. Weatherproof coverplates:
1. Non-public areas:
   a. Provide horizontal mounted, weatherproof in-use coverplate for one duplex or one GFCI receptacle. Provide gasketed, spring loaded, vertically self-closing covers suitable for use in damp and wet locations as described in UL 514 and CEC 406. Covers shall allow the use of the device with the cover closed.
   b. Furnish base plates, covers, hinge pins, spring, and screws of corrosion resistant type 302 stainless steel.
2. Public area receptacles:
   a. Provide horizontal mounted weatherproof in-use coverplate for one duplex or one GFCI receptacle. Provide gasketed, spring loaded, lockable, vertically self-closing covers suitable for use in damp and wet locations as described in UL 514 and CEC 406. Covers shall allow the use of the device with the cover closed.

b. Furnish base plates, covers, hinge pins, spring and screws of corrosion resistant type 302 stainless steel.
c. Provide two (2) keys for each locking type coverplate.

2.12 FINISHES

A. Color: Wiring device and matching covers, color to match existing devices in each room.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise noted.

B. Line voltage dimming at Mountain House Campus only unless noted otherwise in the plans.

C. No dimming at the Main Campus unless noted otherwise in the plans.

D. Conductors:
1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
3. The length of free conductors at outlets for devices shall meet provisions of CEC, Article 300, without pigtails.
4. Existing Conductors:
   a. Cut back and pigtail, or replace all damaged conductors.
   b. Straighten conductors that remain and remove corrosion and foreign matter.
   c. Pigtailing existing conductors is permitted provided the outlet box is large enough.

E. Device Installation:
1. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
4. Connect devices to branch circuits using pigtails that are not less than 6 inches (152 mm) in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around terminal screw.
6. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Dimmers:

1. Install dimmers within terms of their listing.
2. Install unshared neutral conductors on line and load side of dimmers according to manufacturers' device listing conditions in the written instructions.

H. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multi-gang wall plates.

3.02 IDENTIFICATION

A. Comply with Division 26 Section "Identification for Electrical Systems."
1. Receptacles: Identify panelboard and circuit number from which served. Label cover plate using clear self-adhesive labels with minimum 1/4" high black letters. Labels shall be by Brady, P-Touch, or equal.

3.03 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.
1. Test Instruments: Use instruments that comply with UL 1436.

B. Tests for convenience receptacles
1. Line Voltage: Acceptable range is 105 to 132 V.
2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is not acceptable.
3. Ground Impedance: Values of up to 2 ohms are acceptable.
4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
   a. Nuisance trip test: Verify that a current, below 4 milliamperes (mA), will not cause the GFCI to trip. A passing GFCI receptacle will not trip below 4 mA, It should trip with a reading between 4-6 mA.
   b. Safety check test: Verify that a current of between 4-6 mA will trip the GFCI. The device passes when it trips between 4-6 mA.
   c. Radio Transmitter Test: In critical applications, a typical site radio transmitter shall be keyed in proximity, 1 foot (300mm), of the GFCI device to verify that it is immune to a nuisance trip.
   d. Critical GFCI devices shall be identified on the record drawings.
5. Using the test plug, verify that the device and its outlet box are securely mounted.
6. The tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Cartridge fuses rated 600 V ac and less for use in control circuits, enclosed switches, panelboards, switchboards, enclosed controllers, and motor-control centers.

1.02 RELATED SECTIONS

A. Section 26 05 53 Identification for Electrical Systems

B. Section 26 24 13 Switchboards

C. Section 26 24 16 Panelboards

D. Section 26 28 16 Enclosed Switches & Circuit Breakers

1.03 DEFINITIONS

A. NEMA: National Electrical Manufacturer's Association

B. CEC: California Electrical Code

1.04 SUBMITTALS

A. Submit in accordance with of Section 01 33 00 Shop Drawings, Product Data and Samples.

B. Product Data: For each type of product indicated. Include construction details, material, dimensions, descriptions of individual components, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:
   1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
      a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
      b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.
   2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
   3. Current-limitation curves for fuses with current-limiting characteristics.
   4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.
   5. Coordination charts and tables and related data.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application.

C. Comply with NEMA FU 1 standards for cartridge fuses.

D. Comply with California Electrical Code 2022 Edition.

1.06 PROJECT CONDITIONS

A. Where ambient temperature to which fuses are directly exposed is less than 40 degrees Fahrenheit (5 degrees Centrigrade) or more than 100 degree Fahrenheit (38 degrees Centrigrade), apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.07 COORDINATION

A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

1.08 EXTRA MATERIALS

A. Provide extra materials that match products provided and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fuses: Equal to 10 percent of the required quantity for each size and type, but no fewer than 3 of each size and type.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers:
   1. Cooper Bussmann, Inc.
   2. Ferraz Shawmut, Inc.
   3. Or equal

2.02 CARTRIDGE FUSES

A. Characteristics: NEMA FU 1, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine fuses before placement. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with tolerances and other conditions affecting performance, such as rejection features.

C. Examine utilization equipment nameplates and product instructions. Apply fuses of sizes and with characteristics appropriate for each piece of equipment.

D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

E. Proceed with assembly only after unsatisfactory conditions have been corrected.

3.02 FUSE APPLICATIONS

A. Cartridge Fuses:
   1. Motor Branch Circuits: Class RK5, time delay.
   2. Control Circuits: Class CC, fast acting.

3.03 FUSES

A. Assemble fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

3.04 IDENTIFICATION

A. Apply labels complying with requirements for identification specified in Section 26 05 53 Identification for Electrical Systems and indicating fuse replacement information on inside door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION

PART 1 - GENERAL

1.01 SCOPE

A. Section Includes:
   1. Fusible switches
   2. Molded-case circuit breakers (MCCBs)
   3. Enclosures

1.02 RELATED SECTIONS

A. Section 26 05 19 Low Voltage Electrical Power Conductors and Cables

B. Section 26 05 48 Vibration and Seismic Controls for Electrical Systems

C. Section 26 05 53 Identification for Electrical Systems

D. Section 26 28 13 Fuses

1.03 DEFINITIONS

A. NC: Normally closed.

B. NO: Normally open.

C. DPST: Double pole, single throw.

D. NRTL: Nationally Recognized Testing Laboratory

E. NEMA KS 1: National Electrical Manufacturers Association standards for enclosed switches

F. NEMA 250: National Electrical Manufacturers Association standards for electrical enclosures

G. CEC: California Electrical Code

1.04 SUBMITTALS

A. Submit in accordance with of Section 01 33 00 Shop Drawings, Product Data and Samples.

B. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
   1. Enclosure types and details for types other than NEMA 250, Type 1.
   2. Current and voltage ratings.
   3. Short-circuit current ratings (interrupting and withstand, as appropriate).
   4. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.

C. Field quality-control reports.
   1. Test procedures used.
   2. Test results that comply with requirements.

3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

D. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified Operation and Maintenance Data, include the following:
   1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain enclosed switches overcurrent protective devices, components, and accessories, within same product category, from single source from single manufacturer.

B. Electrical Components, Devices, and accessories: Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application.

C. Comply with California Electrical Code, 2022 Edition.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
   1. Ambient Temperature: Not less than minus 22 degrees Fahrenheit and not exceeding 122 degrees Fahrenheit.
   2. Altitude: Not exceeding 6600 feet.

1.07 COORDINATION

A. Coordinate layout and placement of switches, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

1.08 EXTRA MATERIALS

A. Provide extra materials that match products provided and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fuses: Refer to Section 26 28 13 Fuses for required spares.
   2. Fuse Pullers: Two for each size and type.

PART 2 - PRODUCTS

2.01 FUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Square D.
   2. ABB/ General Electric.
   3. Eaton.
   4. Siemens.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

C. Type HD, Heavy Duty, Single Throw, for both 240 and 600 V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Accessories:
1. Equipment Ground Kit: Internally mounted and labeled for copper ground conductors.
2. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
3. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open when used in conjunction with a VFD or elevator.
4. Lugs: Mechanical type, suitable for number, size, and conductor material.

2.02 FUSES

A. General: All power fuses shall be time-delay, high interrupting (300K AIC), current limiting type, unless otherwise noted on the Drawings. All fuses shall be the product of a single Manufacturer and shall be selectively coordinated when applied in 2:1 ratio. Types of fuses shall be as follows:
1. 0 to 600amps: UL Class J, dual element, time delay type fuse with separate overload and short-circuit elements. The fuse shall hold 500% of rated current for a minimum of 10-seconds.

B. Control and instrument fuses shall be suitable for installing in blocks or fuseholders. Exact type and rating shall be as recommended by the Manufacturer of the equipment being protected.

C. Refer to specification 26 28 13 Fuses for additional product information.

2.03 MOLDED-CASE CIRCUIT BREAKERS

A. Branch and feeder circuit breakers shall be molded case, bolt on and trip indicating.

B. Where stationary molded case circuit breakers are indicated on the Drawings to be current limiting type, they shall be current limiting as defined by UL 489 and shall not employ any fusible elements.

C. Circuit breakers shall have interrupting capacity not less than that indicated on the Drawings or if not indicated, not less than 14,000 RMS symmetrical amps for 480volt systems and 10,000 RMS symmetrical amps for 208volt systems.

D. Covers shall be sealed on non-interchangeable breakers and trip unit covers shall be sealed on interchangeable trip breakers to prevent tampering. Circuit breaker ratings shall be clearly visible after installation or engraved nameplates shall be provided stating the rating. All ferrous parts shall be plated to minimize corrosion.

E. Circuit breakers shall be toggle, quick-make and quick-break operating mechanisms with trip-free feature to prevent contacts being held closed against overcurrent conditions in the circuit. Trip position of the breakers shall be clearly indicated by operating handles moving to a center position.

F. Provide identified handle ties for single pole circuit breakers that share a neutral conductor.

G. Multipole breakers shall have a single handle to open and close all contacts simultaneously in both manual operation and under automatic tripping. Interpole barriers shall be provided inside the breaker to prevent any phase-to-phase flashover. Each pole of the breaker shall have means for Arc extinguishing.

H. All terminals shall be dual rated for aluminum or copper wire.

I. Circuit breakers with frame ratings 100amps and smaller shall be ambient temperature compensated, thermal magnetic type unless otherwise noted. Breakers shall be of full size, 1" per pole type. Panels with more than one branch breaker larger than 100amps shall be installed in distribution type panels.

J. Circuit breakers with frame ratings above 100amps through 400amps shall have solid state electronic trips with true RMS reading through the 13th harmonic with 1% accuracy, interchangeable trip via front accessible current plug, adjustable instantaneous and short time be rated as indicated on Drawings at the voltage indicated.

K. Circuit breakers with frame ratings above 400amps through 2500amps shall have microprocessor-based RMS sensing trip units with the following characteristics:
1. Interchangeable current rating plug or an adjustable trip setting to match the trip rating as indicated on Drawings.
2. Adjustable long-time pick-up setting. Minimum of five settings from 50% to 100%.
3. Adjustable long-time delay setting. Minimum of three delay bands.
4. Adjustable short time pick-up setting. Minimum of five settings from 200% to 800%.
5. Adjustable short-time delay setting. Minimum of three delay bands with I2t IN and OUT curves.
6. Adjustable instantaneous pick-up setting. Minimum of five settings from 200% to 1000%. Where the instantaneous feature is omitted on the Drawings, the trip unit shall have an instantaneous override feature.
7. Zone selective interlocking (ZSI) for short-time delay and ground-fault delay trip functions, if indicated on the drawings.
8. LED status indication to show “health” of trip unit.
9. Three-phase ammeter, if indicated on the drawings.
10. Trip indication targets on overload, ground fault and short circuit, if indicated on the drawings.
11. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open when used in conjunction with a VFD or elevator.
12. Equipment Ground Kit: Internally mounted and labeled for copper ground conductors.

L. Accessories: Provide accessories as noted on the Drawings, i.e. shunt-trip, auxiliary contacts, undervoltage trip, alarm switch, etc.

M. Spaces in the boards shall be able to accept any combination of 1, 2 or 3-pole circuit breakers as indicated. Provide all necessary bus, device supports, and mounting hardware sized for frame, not trip rating.

N. Series rated breakers are not acceptable unless specifically noted on the Drawings.

O. Breaker shall be rated to operate in an ambient temperature of 40-degrees C and at 100% of their frame ampere rating on a continuous basis, if indicated on the drawings.

P. For circuit breakers rated or can be adjusted to 1200amps (or higher), provide zone selective interlocking (ZSI) with downstream protective devices, if indicated on the drawings. If ZSI is not indicated on the drawings, provide a key interlock maintenance mode switch and blue LED indicating lamp in the same section, which shall allow an operator to manually enable temporary protective device maintenance settings to reduce the arc flash energy level. Key shall be held captive when maintenance mode signal is disabled and removable when maintenance mode signal is enabled. Maintenance mode switch positions shall be labeled “Enabled” and “Disabled”. Blue indicating lamp shall be push-to-test type.

Q. Refer to the Drawings for breakers requiring ground fault protection. See Section 262413: Switchboards for requirements of ground fault protection system.

2.04 ENCLOSURES

A. Enclosed Switches: NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at applied location.
   1. Outdoor Locations: NEMA 250, Type 3R.
   2. Wash-Down Areas: NEMA 250, Type 4X.
   3. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4X.

B. Enclosure shall be lockable in the off position.

C. Provide defeater mechanism to bypass door lock out when the operating handle is in the on position.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches for compliance with tolerances and other conditions affecting performance of the Work.

B. Proceed with Work only after unsatisfactory conditions have been corrected.

3.02 ENCLOSED SWITCHES AND CIRCUIT BREAKERS

A. Provide individual wall-mounted switches with tops at uniform height unless otherwise indicated.

B. Comply with requirements specified in Section 26 05 48 Vibration and Seismic Controls for Electrical Systems.

C. Provide fuses in fusible devices.

D. Provide disconnect with auxiliary contacts and ½-inch conduit and 2#14 AWG between disconnect and any variable frequency drive.

3.03 IDENTIFICATION

A. Comply with requirements in Section 26 05 53 Identification for Electrical Systems.
   1. Identify conductors, interconnecting wiring, and components; provide warning signs.
   2. Label each enclosure with engraved nameplate.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Acceptance Testing Preparation:
   1. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site. Retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report identifying enclosed switches, circuit breakers and test results. Include notation of deficiencies detected, remedial action taken and observations after remedial action.

3.05 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Work included: Labor, materials, and equipment necessary to complete the installation required for the item specified under this Division, including but not limited to:
   1. PV Inverter(s).
   2. PV modules or panels.
   3. DC disconnect(s).
   4. Combiner and junction boxes.
   5. Remote monitoring panel.
   6. Start-up services.

B. Related Work: Consult all other Sections, determine the extent and character of related Work, and properly coordinate Work specified herein with that specified elsewhere to produce a complete installation.

1.02 REFERENCES

A. Comply with the latest edition of the following applicable Specifications and standards except as otherwise indicated or specified:
   1. Institute of Electrical and Electronic Engineers (IEEE):
      - IEEE 519; Guide for Harmonic Control and Reactive Compensation of Static Power Controllers
      - IEEE 587; Category B for Surge Withstand ability (ANSI C62.41).
      - IEEE 929; Recommended Practice for Utility Interface of Residential and Intermediate PV Systems.
   2. CEC California Electrical Code
   3. Underwriters Laboratories, Inc. (UL):
      - UL 1703; Standard for Flat-Plate Photovoltaic Modules and Panels.
      - UL 1741; Standard for Inverters, Converters and Controllers for Use in Independent Power Systems

1.03 DEFINITIONS

A. PV power system: Photovoltaic power source consisting of input and output feeders, PV inverter(s), PV modules or panels, DC disconnect(s), combiner and junction boxes and associated accessories.

1.04 SUBMITTALS

A. Submit in accordance with the requirements of Section 26 05 00: Common Work Results for Electrical, the following items:
   1. Data/catalog cuts for each product and component specified herein, listing all physical and electrical characteristics and ratings indicating compliance with all listed standards.
   2. Describe system operation, equipment and indicate features of each component.
   3. Clearly mark on each data sheet the specific item(s) being submitted and the proposed application.
   4. Shop Drawings to include:
      a. Completely dimensioned plan view (1/4-inch scale) of all PV modules or panels and associated equipment with dimensioned locations of all incoming conduits. Indicate clearance requirements and interconnection cable requirements. Include

feeder tags for all interconnections and feeder cables indicated on the equipment layout plan.

b. Complete interconnection schematic wiring diagrams indicating the wiring requirements and conductor terminal identification for the following items:
   1) PV inverter(s).
   2) DC disconnect(s).
   3) PV array.
   4) Combiner and junction boxes.

c. One line power diagram: Show all major power components and indicate the current draw on each feeder for wire sizing purposes. Two sets of discrete feeder tags shall be used by the Manufacturer to clearly label all feeders as follows:
   1) C1, C2, C3, etc.: Feeder tag denoting cable to be furnished and installed by the Contractor.
   2) M1, M2, M3, etc.: Feeder tag denoting cable to be furnished by PV system Supplier and installed by the Contractor.

5. Submit energy efficiency compliance documentation.
6. Furnish structural calculations for equipment and mounting structure anchorage as described in Section 260010: Basic Electrical Requirements. Provide weights, dimensions, and center of gravity for structural calculations.
7. Copy of complete in-factory tests run prior to shipment.
8. Submit Manufacturer's installation instructions.
9. Complete Bill of Materials listing all components; include equipment height, width, depth, and weight.
10. Warranty.

B. Dimensions and configurations of PV components shall conform to the space allocated on the Drawings. The Contractor shall submit a revised layout if the equipment furnished varies in size from that indicated on Drawings for Engineer's approval.

C. Manufacturer's qualifications: Furnish satisfactory proof of required experience specified herein for Manufacturer of each product.

D. Installer's qualifications: Furnish satisfactory proof of required experience specified herein for system installer.

E. The Manufacturer will supply the Owner copies of all readings taken during the certification process.

F. Copies of the completed and submitted rebate and incentive program documents.

1.05 OPERATION AND MAINTENANCE MANUAL

A. Supply operation and maintenance manuals in accordance with the requirements of Section 26 00 10: Basic Electrical Requirements, to include the following:
   1. A detailed explanation of the operation of the system.
   2. Instructions for routine maintenance.
   3. Pictorial parts list and part numbers.
   4. Schematic wiring diagrams.
   5. Telephone numbers for the authorized parts and service distributor.
   6. Include all service bulletins.
   7. Final testing reports.

1.06 QUALITY ASSURANCE

A. All materials, equipment and parts comprising the units specified herein shall be new, unused, and currently under production.

B. Only products and applications listed in this Section may be used on the Project unless otherwise submitted.

C. Manufacturer qualifications: Firms regularly engaged in the manufacturing of PV power systems of types and sizes required for this Project and whose products have been in satisfactory use in similar service for not less than 5-years.

D. The unit shall be factory assembled and tested by the PV power system provider or by a firm holding a contract as the authorized distributor of the equipment and shipped to the Project site by his authorized dealer having a parts facility within 100-miles of the Project. Upon request, the Contractor shall furnish to the Engineer a notarized letter of certification stating that in fact the bidder meets the requirements of this paragraph.

E. Installer's qualifications: Firms with a minimum of 5-years of successful installation experience with Projects utilizing PV power systems similar to that of this Project.

1.07 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Shipment: The equipment specified herein shall be delivered via an air-suspension van, complete and ready for installation, to the Owner's Project site. The Contractor shall be given at least two weeks notification of intent to ship and vendor shall not ship without written approval by the Engineer.

B. Preparation for shipment:
   1. Protective coatings:
      a. PV inverter and other similar self-contained or enclosed components shall be shop primed and finished. Surfaces that will be inaccessible after assembly shall be painted or otherwise protected before assembly by a method that provides protection for the life of the equipment.
      b. After final factory tests and acceptance, prior to packing, crating or shipment, all machined and/or polished and other ferrous and non-ferrous surfaces that are not to be painted shall be coated with rust preventive compounds according to the best judgment and experience of the Manufacturer.
      c. Primers for steel and iron surfaces shall be suitable for the service and operating temperatures to be encountered during the life of the equipment.
      d. All exterior parts of equipment shall receive factory paint in the Manufacturer's standard colors.
   2. Packing: All material and equipment shall be protected to ensure cleanliness during shipment, storage, and erection.
      a. All equipment shall be adequately packed to prevent damage from handling, weather, shock, vibration, and corrosion during shipment.
      b. All boxes, crates and shipments shall be identified with equipment numbers, tag numbers, mark numbers or other identification.
      c. All boards, panels, racks, and equipment shall be prepared for shipment with provisions for lifting and/or skidding. All lifting points shall be clearly marked.
      d. Each shipping unit shall be braced adequately and rigidly both internally and externally to prevent damage during transit or in the process of erection.
      e. All original shipping stops, bolts, ties, shunts, and other such hardware shall be reinstalled in all instruments and devices and vendor shall provide any other necessary protection required to prevent damage during shipment.

f. When assemblies are supplied that require disassembly for installation or are shipped disassembled, each piece of the subassembly so affected shall be uniquely identified to its assembly position.
g. Manufacturer shall identify all equipment and components with metal or heavy linen tags substantially wired to the object and bearing the appropriate designation or tag number.
h. All loose peripheral equipment shall be boxed, crated, or otherwise completely enclosed and protected during storage, handling, and shipment. Each item of equipment shall be clearly marked. All equipment shall be protected from possible rough handling or vibration during transit.

C. Delivery: PV power system components shall not be delivered to the Project site until Contractor is ready for installation and construction is complete in area. Equipment damaged during shipping shall be replaced and returned to Manufacturer at no cost to Owner.

D. Storage: Storage on Project site is not acceptable.

E. Handling: Handle in accordance with Manufacturer's written instructions. Be careful to prevent internal component damage, breakage, denting and scoring. Damaged units shall not be installed. Replace damaged units and return equipment to Manufacturer.

1.08 UTILITY INTERCONNECTION REQUIREMENTS

A. The PV power system provider shall be responsible for acquiring the utility interconnection approval permit. This includes acquiring all forms, documents, permit applications, associated fees and attending any required meetings with the utility.

B. The PV power system provider shall comply with all utility interconnection requirements. Additional requirements deemed necessary by the utility that were not included by the PV inverter Manufacturer will be provided by the PV power system provider at no cost to Owner.

C. The Engineer shall be copied on all forms, documents, applications, permits and correspondence between the PV power system provider and utility.

1.09 REBATE AND INCENTIVE PROGRAMS

A. The PV power system provider shall be responsible for acquiring, completing, and submitting information to qualify and reserve funds from rebate and incentive programs offered by state and federal programs in the Owner’s name.

B. The PV power system provider shall coordinate all inspections and perform all follow-up Work deemed necessary in order for the Owner to receive the rebate or incentive compensation.

C. The Engineer shall be copied on all forms, documents, applications, permits and associated correspondence.

1.10 WARRANTY

A. Units and components offered under this Section shall be covered by a 15-year parts and labor warranty for malfunctions resulting from defects in materials and workmanship. Warranty shall

begin upon acceptance by the Owner. The exception to this shall be the PV modules or panels which shall be covered by a 25-years parts and labor warranty.

B. The PV power system Supplier shall promptly correct any deficiencies in the materials and workmanship, which occur during the parts and labor warrantee to the satisfaction of the Engineer at no additional cost to the Owner.

C. PV modules or panels shall be warrantee to be free from defective materials and workmanship. The PV power system Supplier shall repair or replace, at their option, without charge to the Owner, any PV module or panel that fails as a result of defective workmanship or materials within 5 years from the date of Engineer's acceptance of the completed installation.

D. In addition, PV power system Supplier agrees to replace or repair at their option, on a pro-rated basis after the 5-year parts and labor warranty, any PV module or panel that fails for the full 25-years warranty period.

E. Warranty discharge limitations shall be specified and shall be consistent with these Specifications.

1.11 SYSTEM START-UP

A. Upon completion of installation, a factory trained dealer service representative shall perform initial start-up of the PV power system. Sufficient time shall be allowed to properly check the system out and perform required minor adjustments before the Engineer's witnessed test shall begin.

1.12 MAINTENANCE

A. Maintenance services:
   1. For a period of 1 year following acceptance the equipment Supplier shall have a person(s) familiar with this Project attend 4 meetings with the Owner's Representative to review system performance, operation, and any system problems. That person shall provide a written summary of the items discussed in each meeting and a schedule of when the system problems will be corrected. The report is due within 7 working days after each meeting.
   2. Provide a 2-year Manufacturer's maintenance contract of the full PV power system. The 2-year period shall begin from the date of acceptance on a total no-charge basis. During this period, Manufacturer's maintenance staff shall visit the installation not less than 2-times for routine inspection and preventive maintenance. The maintenance visits shall be scheduled at 6-month intervals and shall be coordinated with the Owner and performed at times selected by the Owner. A written report of each maintenance visit shall be submitted to the Owner within 10-days. The vendor shall submit a preventative maintenance schedule outlining in detail the following:
      a. Time and duration when services are to be performed.
      b. Work to be performed. Minimum Work per visit shall include voltage and current readings on all PV modules or panels.
      c. Shutdowns required for service.
      d. Company or Contractor support services required.
   3. Manufacturer of PV power system shall have service and maintenance personnel solely in employ of and trained by Manufacturer in the maintenance, field testing, repair, and adjustment of the type system to be provided.
      a. Service and maintenance personnel to be used for on-site testing and placing system in operation to have minimum of 2-years of experience with system to be provided.

b. Service and maintenance personnel shall be capable of responding to requests for emergency on-site service calls within 24 hours from initial call during normal working hours (8 a.m. to 5 p.m. Monday, through Friday) and within 48 hours during off hours (holidays, weekends, evenings after 5 p.m.).

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
   1. PV inverters: Refer to the latest California Energy Commission List for Approved Grid Support Inverters.
   2. PV modules or panels:
      a. LG
      b. Panasonic
      c. REC Solar
      d. Silfab
      e. SunPower

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

2.02 GENERAL

A. The PV power system shall consist of the following:
   1. PV inverter(s).
   2. Utility interconnection protection.
   3. System metering, system status indicators and system alarm annunciation circuitry.
   4. PV modules or panels.
   5. Accessories as specified herein.

B. Installation and wiring methods shall conform to the requirements set forth in the California Electric Code Article 690. Use of 90-degree C rated wiring at the 75-degree C ampacity shall be used. All correction factors for ambient temperatures shall be based on the 75-degree C ampacity rating.

C. Logic and control connections shall be routed away from any power runs.

2.03 RATINGS

A. The PV system kW rating shall be as indicated on the Drawings. Each PV system shall consist of the quantity of PV inverters and PV modules as indicated on the Drawings.

B. Available short circuit current RMS symmetrical at the input to the system is 65,000amps at 480volt AC, therefore all non-automatic breakers exposed to this current (inputs and bypass) shall be adequately rated to withstand the short circuit in the closed mode and all automatic circuit breakers exposed to this current shall be adequately rated to interrupt it. All switchgear bussing shall be braced to withstand the specified short circuit current.

2.04 PV INVERTER CHARACTERISTICS

A. The PV inverter shall be UL 1741 Listed.

B. The PV inverter shall be listed on the latest California Energy Commission List for Approved Grid Support Inverters.

C. DC Input:
   1. Voltage Range: 300 to 600volt DC.
   2. Surge withstand ability: Per IEEE 587/ANSI C62.41, category B standards.

D. AC Output:
   1. Rating: Refer to drawings.
   2. Voltage: 277/480volt AC, plus or minus 10%, 3-phase, 4-wire, plus ground.
   3. Frequency: 60 Hz., plus or minus 0.5 Hz.
   4. Surge withstand ability: Per IEEE 587/ANSI C62.41, Category B Standards.
   5. AC Line Filter: Per IEEE 519 harmonic distortion requirements for voltage and current.

E. Noise level: Noise generated by the PV inverter(s) under any condition of normal operation shall not exceed the allowable sound pressure level of 75dBa (75/150 CPS octave band) measured at five feet from the nearest surface of the cabinet using a sound level measuring device equivalent to a General Radio type 1551B. If noise generated by the PV inverter(s) exceeds this value, the Manufacturer shall install, at his own expense, additional acoustical treatment on the walls and ceiling of the PV inverter equipment room to reduce the noise level to acceptable values.

F. Environmental conditions: The PV inverter shall be capable of withstanding any combination of the following external environmental conditions without mechanical or electrical damage or degradation of operating characteristics.
   1. Operating ambient temperature: 0-degrees C to 40-degrees C.
   2. Non-operating and storage ambient temperature: -10-degrees C to 40-degrees C.
   3. Relative humidity: 5% to 95% non-condensing for all temperatures in the temperature range stated above.
   4. Altitude to 4000-feet above means sea level without derating.

2.05 INSTRUMENTATION

A. The system control panel shall be equipped with a display screen capable of displaying the following:
   1. Output AC voltage and current for all phases.
   2. Output power in AC kW and kWh (+/- 1% accuracy).
   3. Input DC voltage and current.
   4. Date and time.
   5. Mode status and alarm codes.
   6. Protective function set points.

2.06 CONTROLS

A. The following system level control functions shall be provided:
   1. Start/ Stop switch to enable or disable the PV inverter. Located on the front panel.
   2. Maximum power tracking circuitry to achieve maximum power output.
   3. Automatic start-up when sufficient DC voltage is present for a specified time.
   4. Automatic turn-off when insufficient DC voltage is present for a specified time.
   5. Lamp test/reset pushbutton.
   6. Audible alarm test/reset pushbutton.
   7. Audible alarm silence button.

2.07 PV MODULES OR PANELS

A. General:
   1. PV panels shall be UL 1703 Listed.
   2. Each panel shall have bypass diodes for shadow tolerance.
   3. Fire resistance shall be at least Class B.
   4. PV panels shall withstand winds up to 140mph without damage to the modules or roofing structure.
   5. PV panels shall be connected in arrays, such that the array does not to exceed 600volt DC under any conditions.

B. PV Panels:
   1. Installation method shall be per manufacturer's instructions or approved methods.
   2. The PV module or panel shall have a minimum efficiency rating of at least 16.5%.

2.08 DC DISCONNECT

A. Wall mounted local DC disconnect of the load break circuit breaker type with shunt trip shall be supplied.

B. This disconnect shall be 3-pole with the two outside poles used to open the leads to the PV inverter.

C. The PV inverter shall automatically be disconnected from the PV arrays by opening the DC disconnect by shunt trip operation due to interlock operation or fault isolation.

D. The disconnect shall contain the following:
   1. Circumference crimped cable termination lugs.
   2. NEMA 1 cabinet construction.
   3. Provisions for handling with a forklift from the bottom.
   4. ANSI 61 light gray paint.
   5. Hinged or removable front panels.
   6. One normally open and one normally closed contact to indicate main disconnect position.

2.09 COMBINER AND JUNCTION BOXES

A. Combiner and junction boxes used to terminate and fuse PV arrays with other PV arrays shall be UL 1741 Listed.

B. Blocking diodes shall be incorporated with each PV array circuit to prevent back feeding.

C. Each PV array circuit shall be fused.

D. Enclosures shall be wall mounted, NEMA 3R and rated for 600volt DC.

E. Enclosure shall have chassis ground.

2.10 CONSTRUCTION AND INTERWIRING

A. The PV inverter shall be constructed in NEMA Type 3R outdoor enclosure, unless otherwise noted on the drawings.

B. Parts placement: The PV inverter shall be designed to permit ready access to modules and assemblies. Parts, test points and terminals shall be placed so that they are accessible for

circuit checking, adjustment, and maintenance without the removal of any adjacent module or assembly.

2.11 SOURCE QUALITY CONTROL

A. Verification of performance:
   1. The PV inverter shall be inspected and tested in the Manufacturer's plant to demonstrate achievement of the system's power objectives and for full compliance with the requirements of the Contract Documents.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Contractor shall thoroughly examine Project site conditions for acceptance of PV power system installation to verify conformance with Manufacturer and Specification tolerances. Do not commence with installation until all conditions are made satisfactory.

3.02 INSTALLATION

A. Install PV power system in accordance with Manufacturer's written instructions, as indicated on the Drawings and as specified herein.

B. Installation, circuit requirements, disconnecting means, wiring methods, grounding and bonding, markings, signage, and interconnections shall conform to the requirements set forth in the CEC (California Electric Code - 2022) Article 690.

C. Feeders and branch circuits for direct-current (DC) systems in wet locations shall be type XHHW-2 copper conductors.

3.03 FIELD QUALITY CONTROL

A. Manufacturer's field service: Contractor shall arrange and pay for the services of a factory-authorized service representative to supervise the initial start-up, pretesting, and adjustment of the PV power system.

B. Independent testing: Contractor shall arrange and pay for the services of an independent Testing Agency to perform all quality control electrical testing, calibration and inspection required herein. Testing Agencies objectives shall be to:
   1. Assure PV power system installation conforms to specified requirements and operates within specified tolerances.
   2. Field test and inspect to ensure operation in accordance with Manufacturer's recommendations and Specifications.
   3. Prepare final test report including results, observations, failures, adjustments, and remedies.
   4. Apply label on PV power system upon satisfactory completion of tests and results.
   5. Verify ratings and settings and make final adjustments.

C. Engineer witnessed testing: Allow a period of 8-hours per PV power system for Engineer review and final check.

D. At least three weeks prior to any testing notify the Engineer so that arrangements can be made for witnessing tests, if deemed necessary. All pretesting shall have been tested satisfactorily prior to the Engineer's witnessed test.

E. The Contractor shall supply a suitable and stable source of electrical power to each test site. The Testing Agency shall specify the specific power requirements.

F. Testing of overcurrent protective devices shall be done only after all devices are installed and prior to system being energized.

G. Prefunctional testing:
   1. Provide Testing Agency with Contract Documents and Manufacturer instructions for installation and testing.
   2. Visual and mechanical inspection:
      a. Inspect for physical damage, defects alignment and fit.
      b. Perform mechanical operational tests in accordance with Manufacturer's instructions.
      c. Compare nameplate information and connections to Contract Documents.
      d. Check tightness of all control and power connections.
      e. Check that all covers, barriers, and doors are secure.
      f. Verify interlock operation.
   3. Pretesting:
      a. Upon completing system installation, align and adjust the system and perform complete pretesting to determine conformance with the requirements of the Contract Documents. Correct any deficiencies observed in the pretesting. Replace all malfunctioning or damaged items and retest until satisfactory results are achieved.
      b. Insulation resistance tests of all buses, components, and control circuits.
      c. Continuity tests of circuits.
      d. Provide Testing Agency with Contract Documents and Manufacturer's instructions for installation and testing.
   4. PV module or panel certification: Prior to the load testing of the PV modules or panels and in the presence of the Engineer, each installation shall be certified in writing by the PV module or panel Manufacturer.
      a. As part of the certification process, the module or panel open circuit voltage shall be taken for each PV module or panel and recorded.
      b. DC voltage and current readings shall be taken at the junction or combiner boxes for each PV array and recorded.
      c. Torque shall be checked on ALL bolted connections.
      d. PV modules or panels shall be completely cleaned.

H. Functional performance testing:
   1. Contractor shall provide all tools, labor, and load bank to perform the performance tests on the PV power system listed below.
   2. Test and cycle all alarm and annunciation circuits to verify proper operation.
   3. Test and verify all interlocks and shutdowns (including rapid shutdown).
   4. Furnish all meters and recording equipment required to fully document the tests and the performance of the system and prepare typewritten reports of all tests. Review and sign all test reports attesting to their accuracy as required by the Engineer.
   5. The Contractor shall provide the following equipment and services:
      a. Load bank cables.
      b. Load bank(s).
   6. The Contractor shall provide the following equipment and services:

a. Field labor to start emergency generator and provide assistance during the on-site testing.
b. Retain the services of Testing Agency for infrared scanning during load bank testing.

7. With PV power system operating with the utility at full power load (utilizing a load bank as the load) and in the presence of the Engineer perform and document the following tests:
   a. PV power system: DC input voltage, current and power
   b. PV power system and PV inverter: AC output voltage, current, power, power factor and THD with harmonic spectrum graph showing individual harmonic components.
   c. Efficiency: Calculate the PV power system efficiency and PV inverter efficiency. (Efficiency shall be defined as the AC RMS Output Power/ DC Input Power.)
   d. Remove utility source and measure response time for PV power system to shutdown.
8. The operation of the equipment installation does not constitute an acceptance of the Work by the Owner. The final acceptance is to be made after the equipment has been adjusted and has demonstrated to the Engineer's satisfaction that if fulfills the requirements of the Plans and Specifications and Supplier has furnished all required certificates in accordance with testing procedures indicated.
9. Should it be found that the equipment or any portion thereof, furnished under this Section, fails to comply with the Specifications forming part thereof, with respect or regard to the quality amount or value of materials, appliances or labor used in the Work, it shall be rejected and replaced. All Work disturbed by changes necessitated in consequence of said defects or imperfections shall be restored to the original condition.
10. Contractor shall replace at no cost to the Owner all devices which are found defective or do not operate within factory specified tolerances.

I. In the event that the system fails to function properly during the testing as a result of inadequate pretesting or preparation, the Contractor shall bear all costs incurred by the necessity for retesting including test equipment, transportation, subsistence and Engineer's hourly rate.

J. Contractor shall submit the Testing Agency's final report for review prior to Project closeout and final acceptance by the Owner. Test report shall indicate test dates, devices tested, results, observations, deficiencies, and remedies. Include a copy of the test report in the Owner's operation and maintenance manuals.

3.04 TRAINING

A. Provisions shall be made for an on-site 2-day training program, one of the days shall be concurrent with the field-testing program. The training shall include, but not be limited to, a theoretical presentation of the PV power system and a thorough explanation and training in general operating procedures including system level troubleshooting. The classes shall be for 3 to 6 students at the discretion of the Owner.

B. The Contractor shall furnish all materials, books, and other aids for each student at no charge to Owner.

C. The Contractor shall furnish a training video that includes the topics covered.

D. Contractor shall schedule training with a minimum of 7-days advance notice.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes transfer switches rated 600 V and less, including the following:
   1. Automatic transfer switches.
   2. Remote annunciation systems.
   3. Remote annunciation and control systems.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.
   1. Provide a withstand rating chart that includes required protective devices to meet the listed ratings.

B. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.

C. Qualification Data: For manufacturer and testing agency.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
   1. Features and operating sequences, manual.
   2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
   1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

C. Source Limitations: Obtain manual transfer switches as part of the engine generator package, through one source from a single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Comply with NEMA ICS 1.

F. Comply with CEC.

G. Comply with NFPA 110.

H. Comply with UL 1008 unless requirements of these Specifications are stricter.

1.05 COORDINATION

A. Coordinate the location of the transfer switch in the main electrical room when dimensions differ from plan.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products available from the Generator Vendor as part of a package:
   1. Contactor Style Transfer Switches:
      a. Schneider; ASCO Power Technologies.
      b. Kohler Power Systems; Generator Division.
      c. ABB / GE Zenith Controls.
      d. Onan/Cummins Power Generation; Industrial Business Group.

2.02 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer.

B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
   1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.

C. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.

D. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

E. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.

F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
2. Switch Action: Double throw; mechanically held in both directions.
3. Contacts: Silver composition or silver alloy for load-current switching. Conventional manual transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

G. Neutral Switching. Where four-pole switches are indicated, provide neutral pole switched simultaneously with phase poles.

H. Heater: Equip switches exposed to outdoor temperatures and humidity, and other units indicated, with an internal heater. Provide thermostat within enclosure to control heater.

I. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.

J. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. Color-coding and wire and cable tape markers are specified in Division 26 Section "Identification for Electrical Systems."
1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.

K. Enclosures: Provide switch as enclosed style for installation in the NEMA 1 enclosure.

2.03 AUTOMATIC TRANSFER SWITCHES

A. Comply with Level 1 equipment according to NFPA 110.

B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.

C. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.

D. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.

E. In-Phase Monitor: Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.

F. Automatic Transfer-Switch Features:

1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.

2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds. Settings to be adjusted in the field during startup and commissioning.
3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
4. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
5. Test Switch: Simulate normal-source failure.
6. Switch-Position Pilot Lights: Indicate source to which load is connected.
7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.
    a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
    b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."
8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
9. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.
11. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
12. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 30-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:
    a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
    b. Push-button programming control with digital display of settings.
    c. Integral battery operation of time switch when normal control power is not available.
    d. This feature is to be available and only activated in the field per the direction of the owner’s representative.

2.04 SOURCE QUALITY CONTROL

A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Identify components according to Division 26 Section "Identification for Electrical Systems”.

B. Provide a placard indicating the sequence of operation including load shedding.

C. The installation and operation shall comply with NFPA 110 for an optional standby system.

D. Space in the main electrical room is limited. If a substitution is made from the transfer switch specified it will be the Contractor's responsibility to ensure that it will fit into the allotted space. Note that with a single point of egress double the clearance is required.

3.02 CONNECTIONS

A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.

B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems".

C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".

3.03 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

B. Testing Agency: Engage a qualified independent testing and inspecting agency to perform tests and inspections and prepare test reports.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installation, including connections, and to assist in testing.
   2. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
   3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
      a. Check for electrical continuity of circuits and for short circuits.
      b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
      c. Verify that automatic and manual transfer warnings are properly placed.
      d. Perform automatic and manual transfer operation.
   5. After energizing circuits, demonstrate interlocking sequence and operational function for each switch.
      a. Verify utility power rotation and coordinate throughout the distribution system.
      b. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
      c. Simulate loss of phase-to-ground voltage for each phase of normal source.
      d. Verify time-delay settings.
      e. Verify pickup and dropout voltages by data readout or inspection of control settings.

f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

C. Coordinate tests with a generator connected and operating.
1. Contractor to furnish a portable generator, fuel, cables and personnel to connect and accomplish the test.

D. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.

E. Remove and replace malfunctioning units and retest as specified above.

F. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment as specified below. Refer to Division 01 Section "Demonstration and Training".

B. Factory authorized service representative shall conduct two initial ***4***-hour training sessions for Owner's Maintenance Personnel upon completion and acceptance of system. Provide one 4-hour follow-up training session to be scheduled by Owner within one year of the final date of the final initial training session. Instructions shall include operation, maintenance, adjusting and testing of equipment with both classroom training and hands-on instruction. The agenda for the second session will be by Owner.

C. Contractor shall provide a training video.

D. Contractor shall schedule training with a minimum of **7**-days advance notice.

E. Coordinate this training when there is a portable generator in place.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Work included: Labor, materials, and equipment necessary to complete the installation required for the item specified under this Division, including but not limited to:
   1. Surge protective devices (SPD).

B. Related Work: Consult all other Sections, determine the extent and character of related Work, and properly coordinate Work specified herein with that specified elsewhere to produce a complete installation.

1.02 REFERENCES

A. Comply with the latest edition of the following applicable Specifications and standards except as otherwise indicated or specified.
   1. American National Standards Institute, Inc. (ANSI)/Institute of Electrical and Electronics Engineers (IEEE):
      ANSI/IEEE C62.1; Standard for Surge Arresters for Alternating Current Power Circuits.
      ANSI/IEEE C62.11; Standard for Metal-Oxide Surge Arrestors for AC Power Circuits.
      ANSI/IEEE C62.41.1; Guide on the Surges Environment in Low-Voltage (1000V and Less) AC Power Circuits.
      ANSI/IEEE C62.41.2; Recommended Practices on Characterization of Surges in Low-Voltage (1000V and Less) AC Power Circuits.
      ANSI/IEEE C62.45; Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage (1000V and Less) AC Power Circuits.
   2. Underwriters Laboratory, Inc. (UL):
      UL 50; Cabinets and Boxes.
      UL 1283 Electromagnetic Interference Filters. [Type 2 only]
      UL 1449; Surge Protective Devices, 4th Edition.
   3. National Electrical Manufacturers Association (NEMA):
      NEMA PB 1.1; General Instructions for Proper Installation, Operation, and Maintenance of Panelboards Rated 600 Volts or Less.

1.03 SYSTEM DESCRIPTION

A. Provide surge protective device (SPD) equipment having the electrical characteristics, ratings, and modifications as specified herein and as shown on the drawings. To maximize performance and reliability and to obtain the lowest possible let-through voltages, the ac surge protection shall be integrated into electrical distribution equipment such as switchboards, and panelboards.

B. SPD units and all components shall be designed, manufactured, and tested in accordance with the latest applicable UL standard (ANSI/UL 1449 4th Edition).

C. SPD units shall be furnished in two Types. Type 1 and Type 2 as outlined below:
   1. Type 1: Permanently connected SPDs installed on the line or load side of main disconnect device(s), at main switchboard. This type closely relates to the devices previously referred to as secondary surge arrestors. These Type 1 SPDs should be specially suited to conduct the high energy impulses from lightning strikes.

2. Type 2: Permanently connected SPD installed on the load side of the service panel main disconnect device(s). This type most closely relates to devices that were previously classified as Transient Voltage Surge Suppression (TVSS). These Type 2 SPDs are especially suited for distribution boards and panelboard applications.

1.04 SUBMITTALS

A. Submit in accordance with the requirements of Section 26 05 00: Common Work Results for Electrical, the following items:
   1. Data/catalog cuts for each product and component specified herein, listing all physical and electrical characteristics and ratings indicating compliance with all listed standards.
   2. Describe system operation, equipment and dimensions and indicate features of each component.
   3. Clearly mark on each data sheet the specific item(s) being submitted and the proposed application.
   4. Shop Drawings: Include elevations, cabinet dimensions, complete component listing and layout within cabinet, amperage ratings and capacities, system characteristics and wiring diagrams.
   5. Submit Manufacturer's installation instructions.
   6. Complete bill of material listing all components.
   7. Warranty.

1.05 OPERATION AND MAINTENANCE MANUAL

A. Supply operation and maintenance manuals in accordance with the requirements of Section 260010: Basic Electrical Requirements, to include the following.
   1. A detailed explanation of the operation of the system.
   2. Instruments for routine maintenance.
   3. Pictorial parts list and parts number.
   4. Telephone numbers for authorized parts and service distributors.

1.06 QUALITY ASSURANCE

A. All materials, equipment and parts comprising the units specified herein shall be new, unused, and currently under production.

B. Only products and applications listed in this Section may be used on the Project unless otherwise submitted.

1.07 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery: SPD components shall not be delivered to the Project site until protected storage space is available. Storage outdoors covered by rainproof material is not acceptable. Equipment damaged during shipment shall be replaced and returned to Manufacturer at no cost to Owner.

B. Storage: Store in a clean, dry, ventilated space free from temperature extremes. Maintain factory wrapping or provide a heavy canvas/plastic cover to protect units from dirt, water, construction debris and traffic. Provide heat where required to prevent condensation.

C. Handling: Handle in accordance with the Manufacturer's written instructions. Be careful to prevent internal component damage, breakage, denting and scoring. Damaged units shall not be installed. Replace damaged units and return equipment to Manufacturer.

1.08 WARRANTY

A. Units and components offered under this Section shall be covered by a *5*-year parts and labor warranty for malfunctions resulting from defects in materials and workmanship. Warranty shall begin upon acceptance by the Owner.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
1. Schneider Electric/ Square D.
2. ABB/ General Electric.
3. Eaton.
4. Siemens.

B. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

2.02 GENERAL

A. All Specification noted herein apply to the switchboard, and panelboard units, unless otherwise noted.

B. The SPD system utilizes diversion modules to suppress and divert transient voltage and surge currents. The system is designed to provide protection for sensitive electronic devices against the effects of surges, transients, and electrical line noise.

C. Environmental requirements:
1. Operating temperature: -40-degree C to 60-degree C.
2. Relative humidity: 0% to 95%.
3. Operating altitude: 0 to 12,000-feet.
4. Audible noise: Less than 35-dB.

D. Electrical requirements:
1. Unit operating voltage: The SPD system voltage shall be as indicated on the Drawings.
2. Maximum continuous operating voltage “MCOV”: The MVOC shall not be less than 125% of the nominal system operating voltage.
3. The suppression system shall incorporate thermally protected metal-oxide varistors “MOVs” as the core surge suppression component for the service entrance and all other distribution levels. The system shall not utilize silicon avalanche diodes, selenium cells, air gaps, or other components that may crowbar the system voltage leading to system upset or create any environmental hazards.
4. Protection modes: The SPD must protect all modes of the electrical system being utilized. The required protection modes are indicated by bullets in the following table:

PROTECTION MODES TABLE

Configuration	L-N	L-G	L-L	N-G
WYE	•	•	•	•
Delta	N/A	•	•	N/A

PROTECTION MODES TABLE				
Configuration	L-N	L-G	L-L	N-G
Single Split Phase	●	●	●	●
High Leg Delta	●	●	●	●

5. Nominal discharge current (In): All SPDs applied to the distribution system shall have a 20kA In rating regardless of their SPD Type (includes Types 1 and 2) or operating voltage. SPDs having an in less than 20kA shall be rejected.
6. Voltage protection rating (VPR): The maximum ANSI/UL 1449 4th Edition VPR for the device shall not exceed the following:

VOLTAGE PROTECTION RATING TABLE				
System Voltage	**L-N**	**L-G**	**L-L**	**N-G**
120/208	700V	700V	1200V	700V
277/480	1200V	1200V	2000V	1200V
346/600	1500V	1500V	3000V	1500V

E. SPD design:
1. The SPD shall be maintenance free and shall not require any user intervention throughout its life. SPDs containing items such as replaceable modules, replaceable fuses, or replaceable batteries shall not be accepted. SPDs requiring any maintenance of any sort such as periodic tightening of connections shall not be accepted. SPDs requiring user intervention to test the unit via a diagnostic test kit or similar device shall not be accepted.
2. The surge current shall be equally distributed to all MOV components to ensure equal stressing and maximum performance. The surge suppression platform must provide equal impedance paths to each matched MOV.
3. Each unit shall include a high-performance EMI/RFI noise rejection filter. Noise attenuation for electric line noise shall be up to 50-dB from 10kHz to 100MHz using the MIL-STD-220A insertion loss test method.
4. No plug-in component modules or printed circuit boards shall be used as surge current conductors. All internal components shall be soldered, hardwired with connections utilizing low impedance conductors.
5. SPD shall provide the following integral monitoring options:
    a. Each unit shall have a green/red solid-state indicator light that reports the status of the protection on each phase:
        1) For WYE configured units, the indicator lights must report the status of all protection elements and circuitry in the L-N and L-G modes. WYE configured units shall also contain an additional green/red solid-state indicator light that reports the status of the protection elements and circuitry in the N-G mode.
        2) For delta configured units, the indicator lights must report the status of all protection elements and circuitry in the L-G and L-L modes.
        3) The absence of a green light and the presence of a red light shall indicate that damage has occurred on the respective phase or mode. All protection status indicators shall indicate the actual status of the protection on each phase or mode. If power is removed from any one phase, the indicator lights shall continue to indicate the status of the protection on all other phases and protection modes.
    b. The SPD must include Form C dry contacts (one NO and one NC) for remote annunciation of its status. Both the NO and NC contacts shall change state under any fault condition.
    c. The SPD shall contain an audible alarm that will be activated under any fault condition. There shall also be an audible alarm silence button used to silence the audible alarm after it has been activated.
    d. Surge counter:
        1) The SPD shall be equipped with an LCD display that indicates to the user how many surges have occurred at the location.
        2) The surge counter shall trigger each time a surge event with a peak current magnitude of a minimum of 50amps ± 20amps occurs.
        3) A reset pushbutton shall also be standard, allowing the surge counter to be zeroed. The reset button shall contain a mechanism to prevent accidental resetting of the counter via a single, short-duration button press. In order to prevent accidental resetting, the surge counter reset button shall be depressed for a minimum of 2-seconds in order to clear the surge count total.
        4) The ongoing surge count shall be stored in non-volatile memory. If power to the SPD is completely interrupted, the ongoing count indicated on the surge counter's display prior to the interruption shall be stored in non-volatile memory and displayed after power is restored. The surge counter's

memory shall not require a backup battery in order to achieve this functionality.

6. The unit shall contain thermally protected MOVs. These thermally protected MOVs shall have a thermal protection element packaged together with the MOV in order to achieve overcurrent protection of the MOV. The thermal protection element shall disconnect the MOV(s) from the system in a fail-safe manner should a condition occur that would cause them to enter a thermal runaway condition.
7. All the SPD's components and diagnostics shall be contained within one discrete assembly. SPDs or individual SPD modules that must be ganged together in order to achieve higher surge current ratings or other functionality shall not be accepted.
8. Safety requirements:
   a. The SPD shall minimize potential arc flash hazards by containing no user serviceable or replaceable parts and shall be maintenance free. SPDs requiring any maintenance of any sort such as periodic tightening of connections shall not be accepted. SPDs requiring user intervention to test the unit via a diagnostic test kit or similar device shall not be accepted.
   b. SPDs designed to interface with the electrical assembly via conductors shall require no user contact with the inside of the unit. Such units shall have any required conductors be factory installed.

2.03 SYSTEM APPLICATION

A. The SPD applications covered under this section include switchboards panelboard assemblies. All SPDs shall be tested and demonstrate suitability for application within ANSI/IEEE C62.41 Category C, B, and A environments.

B. The minimum surge current capacity the device is capable of withstanding shall be as shown in the following table:

MINIMUM SURGE CURRENT CAPACITY TABLE

Category	Application	Per Phase	Per Mode
C	Service Entrance Locations (Switchboards)	250kA	125kA
B	High Exposure Roof Top Locations (Switchboards and Panelboards)	160kA	80kA
A	Branch Locations (Panelboards)	120kA	60kA

C. All SPDs installed on the line side of the service entrance disconnect shall be Type 1 SPDs. All SPDs installed on the load side of the service entrance disconnect shall be Type 1 or Type 2 SPDs.

2.04 PANELBOARDS

A. The SPD application covered under this section includes lighting and outlet panelboards. The SPD units shall be tested and demonstrate suitability for application within ANSI/IEEE C62.41 Category A or B environments.

B. The SPD shall not limit the use of through-feed lugs, sub-feed lugs, and sub-feed breaker options.

C. SPDs shall be installed immediately following the load side of the main breaker. SPDs installed in main lug only panelboards shall be installed immediately following the incoming main lugs.

D. The panelboard shall be capable of re-energizing upon removal of the SPD.

E. The SPD shall be interfaced to the panelboard via a direct bus bar connection.

F. The SPD shall be included and mounted within the panelboard by the manufacturer of the panelboard.

G. The SPD shall be of the same manufacturer as the panelboard.

H. The complete panelboard including the SPD shall be UL67 listed.

2.05 SWITCHBOARDS

A. The SPD application covered under this section is for switchboard locations. Service entrance located SPDs shall be tested and demonstrate suitability for application within ANSI/IEEE C62.41 Category C environments.

B. The SPD shall be of the same manufacturer as the switchboard.

C. The SPD shall be factory installed inside the switchboard at the assembly point by the original equipment manufacturer.

D. Locate the SPD on the load side of the main disconnect device, as close as possible to the phase conductors and the ground/neutral bar.

E. The SPD shall be connected through a disconnect (30A circuit breaker). The disconnect shall be located in immediate proximity to the SPD. Connection shall be made via bus, conductors, or other connections originating in the SPD and shall be kept as short as possible.

F. The SPD shall be integral to switchboard as a factory standardized design.

G. All monitoring and diagnostic features shall be visible from the front of the equipment.

2.06 ENCLOSURES

A. All enclosed equipment shall have NEMA 1 general purpose enclosures, unless otherwise noted. Provide enclosures suitable for locations as indicated on the drawings and as described below:
   1. NEMA 1: Constructed of a polymer (units integrated within electrical assemblies), intended for indoor use to provide a degree of protection to personal access to hazardous parts and provide a degree of protection against the ingress of solid foreign objects (falling dirt).
   2. NEMA 4: Constructed of steel, intended for either indoor or outdoor use, to provide a degree of protection from the following:
      a. Against access to hazardous parts.
      b. Of equipment inside the enclosure against ingress of solid foreign objects (dirt and windblown dust).
      c. With respect to the harmful effects on the equipment due to the ingress of water (rain, sleet, snow, splashing water, and hose directed water).

2.07 SOURCE QUALITY CONTROL

A. Standard factory tests shall be performed on the equipment under this section. All tests shall be in accordance with the latest version of NEMA and UL standards.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Contractor shall thoroughly examine Project site conditions for acceptance of SPD installation to verify conformance with Manufacturer and Specification tolerances. Do not commence with installation until all conditions are made satisfactory.

3.02 INSTALLATION

A. Install SPD in accordance with Manufacturer's written instructions, as indicated on the Drawings and as specified herein.

B. As a minimum, provide SPDs on all service entrance switchboards, 120/208volt distribution switchboards and 120/208volt panelboards in compliance with CEC Article(s) 285, 620, 645, 670, 695, and 700.

C. Conductors from the power source to the SPD shall be minimum #4 AWG copper in switchboards and #8 AWG copper in panelboards (when not direct bus connected). Conductors shall be routed without sharp bends and straight and short as possible. The absolute maximum of 7'-0" long for units in switchboards and 1'-0" long for units in panelboards.

D. Conductors originating from direct bus bar connections shall be individually wrapped with electric tape in half-lapped increments for added protection of the un-protected conductors. Tie-wrap the conductors away from the bus bars without any sharp bends. All holes that the conductors pass through shall be grommets.

E. Cabinets shall be anchored and braced to withstand seismic forces as calculated per Section 26 05 00: Common Work Results for Electrical.

3.03 ATTIC STOCK

A. For every SPD installed in panelboard or switchboard, a replacement SPD shall be provided for attic stock.

3.04 FIELD QUALITY CONTROL

A. Prefunctional testing:
   1. Visual and mechanical inspection:
      a. Inspect for physical damage, defects, alignment, and fit.
      b. Compare nameplate information and connections to Contract Documents.
      c. Check tightness of all control and power connections.
      d. Prior to energization, verify source neutral is bonded to ground per CEC Articles 250.24(B), 250.28 and 250.30.

END OF SECTION

PART 1 - GENERAL

1.01 SCOPE

A. Section Includes:
1. General requirements for lighting fixtures & components.
2. Emergency lighting units.
3. Exit signs.
4. LED Luminaire
5. Lighting fixture supports.

1.02 RELATED SECTIONS

A. Section 26 05 19 Low Voltage Electrical Power Conductors and Cables

B. Section 26 05 29 Hangers and Supports for Electrical Systems

1.03 REFERENCES

A. American National Standards Institute (ANSI):
1. Underwriters Laboratories, Inc. (UL):
2. UL 66 Fixture Wire.
3. UL 924 Standard for Emergency Lighting and Power Equipment.
4. UL 1598 Luminaires.
5. UL 2108 Standard for Low Voltage Lighting Systems.

B. Illuminating Engineering Society of North America (IESNA):
1. IESNA LM-79-08 Approved Method for Electrical and Photometric Measurements of Solid-State Lighting Products.
2. IESNA LM-80-2008 Approved Method for Measuring Lumen Maintenance of LED Light Sources.

1.04 SYSTEM DESCRIPTION

A. Provide a fully functioning and operational lighting system as described herein complete with lamps, ballasts, drivers, wiring, controls and attachment to support system adhering to applicable seismic code requirements.

1.05 DEFINITIONS

A. CCT: Correlated color temperature.

B. CRI: Color-rendering index.

C. LER: Luminaire efficacy rating.

D. Lumen: Measured output of lamp and luminaire, or both.

E. Luminaire: Complete lighting fixture, including ballast housing if provided.

1.06 SUBMITTALS

A. Submit in accordance with Section 01 33 00 Shop Drawings, Product Data, and Samples

B. Product Data: For each type of lighting fixture, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:
   1. Physical description of lighting fixture including dimensions.
   2. Sway adapters, seismic restraint devices and detailed method of mounting.
   3. A sample of the hanger assembly for suspended luminaires shall be supplied to the Owner's Representative for review and approval.
   4. Emergency lighting units including battery and charger.
   5. Energy-efficiency data.
   6. Sound Performance Data: For air-handling lighting fixtures. Indicate sound power level and sound transmission class in test reports certified according to standards specified in Division 23 Section "Diffusers, Registers, and Grilles."
   7. Life, output (lumens, CCT, and CRI), and energy-efficiency data for lamps.
   8. Photometric data and adjustment factors based on laboratory tests, complying with IESNA Lighting Measurements Testing & Calculation Guides, of each lighting fixture type. The adjustment factors shall be for lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.
      a. Manufacturer Certified Data: Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.

C. Product Certificates: For each type of driver for bi-level and dimmer-controlled fixtures, from manufacturer.

D. Field quality-control reports.

E. Warranty: Sample of special warranty.

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals.

B. Warranty: See Article 1.11 Warranty.

1.08 MATERIALS MAINTENANCE SUBMITTALS

A. Provide extra materials that match products utilized and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Plastic Diffusers and Lenses: One for every 100 of each type and rating utilized. Provide at least one of each type.
   2. LED-fixture-mounted, emergency battery pack: One for every 20 emergency lighting units utilized.
   3. Drivers: One for every 100 of each type and rating utilized. Provide at least one of each type.
   4. Globes and Guards: One for every 20 of each type and rating utilized. Provide at least one of each type.

1.09 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as

defined by OSHA in 29 CFR 1910, complying with the IESNA Lighting Measurements Testing & Calculation Guides.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application.

C. Comply with CEC.

D. FM Global Compliance: Lighting fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FM Global.

1.10 COORDINATION

A. Prior to rough-in of fixtures, consult the Owner's Representative drawings for details of ceiling construction, finish, reflected ceiling plans and other applicable details and coordinate layout of lighting fixtures and suspension system. Field coordinate other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.

1.11 WARRANTY

A. Special Warranty for Lighting Fixtures: Manufacturer's standard form in which manufacturer of lighting unit agrees to repair or replace components of fixtures that fail in materials or workmanship within specified warranty period.
   1. Warranty Period for Lighting Luminaires: 2 years from date of Notice of Completion. Labor shall be included for the duration of the Warranty at no additional expense to the Owner.

B. Special Warranty for Emergency Lighting Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.
   1. Warranty Period for Emergency Lighting Unit Batteries: 5 years from date of Notice of Completion. Full warranty shall apply for first year, and prorated warranty for the remaining four years. Labor shall be included for the duration of the Warranty at no additional expense to the Owner.
   2. Warranty Period for Emergency Driver Batteries: 5 years from date of Notice of Completion. Full warranty shall apply for first year, and prorated warranty for the remaining four years. Labor shall be included for the duration of the Warranty at no additional expense to the Owner.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
   1. Luminaires, Poles, and Exit Signs: as listed in the Luminaire Schedule.
   2. Light-Emitting Diode (LED) Arrays:
      a. Cree.
      b. Nichia.
      c. Citizen.
      d. Lumileds.
      e. Samsung.
      f. Lumenetix Araya.

g. Xicato.
h. Bridgelux.
i. LEDs provided by Luminaire Manufacturer listed in the Luminaire Schedule: meeting the technical and warranty requirements of this Section.

3. LED replacement and integral-driver lamps:
   a. General Electric.
   b. Osram.
   c. Cree.
   d. Maxlite.
   e. Green Creative.
   f. Soraa.
4. LED drivers (DC output):
   a. eldoLED.
   b. Lutron.
   c. Signify Advance.
   d. Osram.
   e. Q-Tran.
   f. Universal Lighting Technologies.
   g. Drivers provided by Luminaire Manufacturer listed in the Luminaire Schedule: meeting the technical and warranty requirements of this Section.
5. Transformers for LED systems (AC output):
   a. Q-Tran.
   b. Hatch.
   c. Semper Fi.
   d. Transformers provided by Luminaire Manufacturer listed in the Luminaire Schedule: meeting the technical and warranty requirements of this Section.
6. Unit battery equipment:
   a. Philips Bodine.
   b. Myers/Iota.
   c. Unit battery equipment provided by Luminaire Manufacturers listed in the Luminaire Schedule: meeting the technical and warranty requirements of this Section.

B. Substitutions: Under provisions of Section 260010: Basic Electrical Requirements.

2.02 .GENERAL REQUIREMENTS FOR LIGHTING FIXTURES AND COMPONENTS

A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.

B. Metal Parts: Free of burrs and sharp corners and edges.

C. Sheet Metal Components: Steel unless otherwise indicated. Form and support to prevent warping and sagging.

D. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.

E. Diffusers and Globes:
1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
   a. Lens Thickness: At least 0.125 inch minimum unless otherwise indicated.
   b. UV stabilized.
2. Glass: Annealed crystal glass unless otherwise indicated.

2.03 EXIT SIGNS

A. General Requirements for Exit Signs: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.

B. Internally Lighted Signs:
   1. Lamps for AC Operation: LEDs, 50,000 hours minimum rated lamp life.
   2. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.
      a. Battery: Sealed, maintenance-free, nickel-cadmium type.
      b. Charger: Fully automatic, solid-state type with sealed transfer relay.
         1) Certified Title 20 compliant
      c. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
      d. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
      e. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
      f. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-provided infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
      g. Integral Self-Test: Factory-provided electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.
   3. Master/Remote Sign Configurations:
      a. Master Unit: Comply with requirements above for self-powered exit signs, and provide additional capacity in LED power supply for power connection to remote unit.
      b. Remote Unit: Comply with requirements above for self-powered exit signs, except omit power supply, battery, and test features. Arrange to receive full power requirements from master unit. Connect for testing concurrently with master unit as a unified system.

2.04 EMERGENCY LIGHTING UNITS

A. General Requirements for Emergency Lighting Units: Self-contained units complying with UL 924.
   1. Battery: Sealed, maintenance-free, lead-acid type.
   2. Charger: Fully automatic, solid-state type with sealed transfer relay.
      a. Certified Title 20 compliant
   3. Operation: Relay automatically turns lamp on when power-supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
   4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
   5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
   6. Wire guard in first subparagraph below is optional feature. Coordinate with Drawings.
   7. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.

8. Integral Time-Delay Relay: Holds unit on for fixed interval of 15 minutes when power is restored after an outage.
9. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-provided infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
10. Integral Self-Test: Factory-provided electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and a flashing red LED.

2.05 LED LUMINAIRE

A. Light Emitting Diodes (LED):
1. Refer to the Luminaire Schedule for size and type of LEDs required.
2. All diodes shall be of the same manufacturer and bin number.
3. Diodes shall be tested and tuned for the specified Kelvin color.
4. Color correlated temperature: 3500 unless otherwise noted in the drawings.
5. Minimum CRI (Color Rendering Index): 80
6. LED luminaire shall be free of toxic materials and be RoHS compliant.
7. Groups of three or more diodes in a single housing shall be tested for even distribution.
8. Standard lumen output shall meet or exceed the State of California Title 24 Energy Code for high efficiency luminaires.
9. LED luminaires shall have an IES formatted electronic photometrics report.
10. Diodes shall have a minimum life of 50,000 hours and maintain at least 80 percent of initial lamp lumens during this period.
11. Individual LEDs shall be connected such that a catastrophic loss or the failure of one LED will not result in the loss of the entire luminaire.
12. LED boards shall be suitable for field maintenance or service from below the ceiling with plug-in connectors. LED boards shall be upgradable.
13. Color shift over 6,000 hours shall be <0.007 change in u' v' as demonstrated in IES LM80 report.

B. Power Supply and Driver:
1. Drivers shall be integral to fixture housing.
2. Drivers shall have a ten-year expected life while operating at maximum case temperature and 90 percent non-condensing relative humidity.
3. Drivers shall be UL Recognized under the component program and shall be modular for simple field replacement. Drivers that do not meet these requirements will not be accepted.
4. Electrical characteristics: 120 – 277 Volt, UL Listed, CSA Certified, Sound Rated A+. Driver shall be >80% efficient at full load across all input voltages. Input wires shall be 18AWG solid copper minimum.
5. Dimming: Driver shall be suitable for full-range dimming. LED dimming shall be equal in range and quality to a commercial grade incandescent dimmer. The luminaire shall be capable of continuous dimming without perceivable flicker over a range of 100 percent to 10 percent (1 percent where specified) of rated lumen output with a smooth shut off function.
6. Dimming quality to be defined by dimming range, freedom from perceived flicker or visible stroboscopic flicker, smooth and continuous change in level (no visible steps in transition), natural square law response to control input, inaudible in 26db environment, and stable when input voltage conditions fluctuate over what is typically experienced in a commercial environment. Demonstration of this compliance to dimming performance will be necessary for substitutions or prior approval.
    a. Dimming shall be controlled by a 0-10V signal

b. Driver shall include ability to provide no light output when the analog control signal drops below 0.5V, or the DALI/DMX digital signal calls for light to be extinguished and shall consume 0.5 Watts or less in this standby. Control deadband between 0.5V and 0.65V shall be included to allow for voltage variation of incoming signal without causing noticeable variation in fixture to fixture output.
c. Driver shall be capable of configuring a linear or logarithmic dimming curve, allowing fine grained resolution at low light levels.
d. Driver must be capable of 20 bit dimming resolution for white light LED driver.
e. Drivers shall track evenly across multiple fixtures at all light levels, and shall have an input signal to output light level that allows smooth adjustment over the entire dimming range.

7. Flicker: Driver and luminaire electronics shall deliver illumination that is free from objectionable flicker as measured by flicker index (ANSI/IES RP-16-10). At all points within the dimming range from 100 – 0.1 percent luminaire shall have:
8. Less than 1 percent flicker index at frequencies below 120Hz.
9. Less than 12 percent flicker index at 120Hz, and shall not increase greater than 0.1 percent per Hz to a maximum of 80 percent flicker index at 800Hz.
10. Driver disconnect shall be provided where required to comply with codes.
11. The electronics/power supply enclosure shall be internal to the solid state lighting luminaire and be accessible per UL requirements.
12. The surge protection which resides within the driver shall protect the luminaire from damage and failure for transient voltages and currents as defined in ANSI/IEEE C64.41 2002 for Location Category A, where failure does not mean a momentary loss of light during the transient event.

C. Electrical:
1. Operation Voltage: The luminaire shall operate from a 50 or 60Hz +/- 3Hz AC line over a voltage ranging from 120VAC to 277VAC. The fluctuations of line voltage shall have no visible effect on the luminous output. The standard operating voltages are 120VAC, 277VAC & 347VAC.
2. Power Factor: The luminaire shall have a power factor of 90% or greater at all standard operating voltages and full luminaire output.
3. THD: Total harmonic distortion (current and voltage) induced into an AC power line by a luminaire shall not exceed 20 percent at any standard input voltage and meet ANSI C82.11 maximum allowable THD requirements at full output. THD shall at no point in the dimming curve allow imbalance current to exceed full output THD.
4. Surge Suppression: The luminaire shall include surge protection to withstand high repetition noise and other interference. Withstand up to a 1,000 Volt surge without impairment of performance as defined by ANSI C62.41 Category A.
5. Inrush Current: Meet or exceed NEMA 410 driver inrush standard of 430 Amps per 10 Amps load with a maximum of 370 Amps.
6. RF Interference: The luminaire and associated on-board circuitry must meet Class A emission limits referred in Federal Communications Commission (FCC) Title 47, Subpart B, Section 15 Non-Consumer requirements for EMI/RFI emissions.
7. Driver must support automatic adaptation, allowing for future luminaire upgrades and enhancements and deliver improved performance:
    a. Adjustment of forward LED voltage, supporting 3V through 60V.
    b. Adjustment of LED current from 200mA to 1.05A at the 100 percent control input point in increments of 1mA.
    c. Adjustment for operating hours to maintain constant lumens (within 5 percent) over the 50,000 hour design life of the system, and deliver up to 20 percent energy savings early in the life cycle.

8. Electrical connections between normal power and driver must be modular utilizing a snap fit connector. All electrical components must be easily accessible after installation and be replaceable without removing the fixture from the ceiling.
9. All electrical components shall be RoHS compliant.

D. Photometric Requirements:
1. Luminaire performance shall be tested as described herein.
   a. Luminaire performance shall be judged against the specified minimum illuminance in the specified pattern for a particular application.
   b. Luminaire lighting performance shall be adjusted (depreciated) for the minimum life expectancy.
   c. The performance shall be adjusted (depreciated) by using the LED manufacturer's data or the data from the IESNA Standard TM-21 test report, which ever one results in higher level of lumen depreciation.
   d. The luminaire may be determined to be compliant photometrically, if:
      1) The initial minimum illuminance level is achieved in 100% of the area of the specified lighting pattern.
      2) The measurements shall be calibrated to standard photopic calibrations.

E. Thermal Management:
1. The thermal management (of the heat generated by the LEDs) shall be of sufficient capacity to assure proper operation of the luminaire over the expected useful life.
2. The LED manufacturer's maximum junction temperature for the expected life shall not be exceeded at the average operating ambient.
3. The LED manufacturer's maximum junction temperature for the catastrophic failure shall not be exceeded at the maximum operating ambient.
4. The luminaire shall have an UL IC rating.
5. The driver manufacturer's maximum case temperature shall not be exceeded at the maximum operating ambient. Thermal management shall be passive by design. The use of fans or other mechanical devices shall not be allowed.

2.06 LIGHTING FIXTURE SUPPORT COMPONENTS

A. Comply with Section 260529 Hangers and Supports for channel- and angle-iron supports and nonmetallic channel and angle supports.

B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.

C. Twin-Stem Hangers: Two, 1/2-inch steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.

D. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gauge.

E. Wires for Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage.

F. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.

G. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

PART 3 - EXECUTION

3.01 PLACEMENT

A. Lighting fixtures:
   1. Set level, plumb, and square with ceilings and walls unless otherwise indicated.
   2. Provide lamps in each luminaire.

B. Temporary Lighting: If it is necessary, and approved by Owner's Representative, to use permanent luminaires for temporary lighting, provide and energize the minimum number of luminaires necessary. When construction is sufficiently complete, remove the temporary luminaires, disassemble, clean thoroughly, and provide new lamps.

C. Lay-in Ceiling Lighting Fixtures Supports: Use grid as a support element.
   1. Provide ceiling support system rods or wires, independent of the ceiling suspension devices for each fixture. Locate not more than 6 inches from lighting fixture corners.
   2. Support Clips: Fasten to lighting fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
   3. Fixtures of Sizes Less Than Ceiling Grid: Provide as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch metal channels spanning and secured to ceiling tees.
   4. Provide at least one independent support rod or wire from structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.

D. Suspended Lighting Fixture Support:
   1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
   2. Suspended luminaires shall be provided such that they are able to swing 45 degrees from vertical in all directions unobstructed.
   3. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
   4. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.
   5. Do not use grid as support for pendant luminaires. Connect support wires or rods to building structure.
   6. Connect wiring according to Section 260523 Low-Voltage Electrical Power Conductors and Cables.

3.02 IDENTIFICATION

A. Provide labels with panel and circuit numbers on concealed junction and outlet boxes. Comply with requirements for identification specified in Section 26 05 53 Identification.

3.03 FIELD QUALITY CONTROL

A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

C. LED luminaires will be considered faulty and require replacement if one or more diodes are not functioning.

3.04 STARTUP SERVICE

A. Burn-in all LED lamps that require specific aging period to operate properly, prior to occupancy by Owner.

3.05 ADJUSTING

A. Occupancy Adjustments: Within 12 months of date of Substantial Completion, provide on-site assistance in adjusting aimable luminaires to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Some of this work may be required after dark.
   1. Adjust aimable luminaires in the presence of Owner's Representative.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
1. Exterior luminaires.
2. Lamps and diodes.
3. Ballasts and LED drivers.
4. Luminaire-mounted motion sensors.
5. Poles mount accessories.

1.03 REFERENCES

A. American National Standards Institute (ANSI):
1. ANSI C78.377A Chromaticity.

B. Underwriters Laboratories, Inc. (UL):
1. UL 66 Fixture Wire.
2. UL 1598 Luminaires.
3. UL 2108 Standard for Low Voltage Lighting Systems.

C. Illuminating Engineering Society of North America (IESNA):
1. IESNA LM-79-08 Approved Method for Electrical and Photometric Measurements of Solid-State Lighting Products.
2. IESNA LM-80-2008 Approved Method for Measuring Lumen Maintenance of LED Light Sources.
3. IESNA TM-21-2011 Projecting Long Term Lumen Maintenance of LED Light Sources

1.04 SYSTEM DESCRIPTION

A. Provide and install a fully functioning and operational lighting system as described herein complete with lamps, ballasts, drivers, wiring, controls and attachment to support system adhering to applicable seismic code requirements.

1.05 DEFINITIONS

A. CCT: Correlated color temperature.

B. CRI: Color-rendering index.

C. LER: Luminaire efficacy rating.

D. Luminaire: Complete lighting fixture, including driver housing if provided.

E. Pole: Luminaire support structure, including tower used for large area illumination.

F. Standard: Same definition as "Pole" above.

1.06 SUBMITTALS

A. Product Data: For each luminaire, pole, and support component, arranged in order of lighting unit designation. Include data on features, accessories, finishes, and the following:
   1. Physical description of luminaire, including materials, dimensions, effective projected area, and verification of indicated parameters.
   2. Details of attaching luminaires and accessories.
   3. Details of installation and construction.
   4. Luminaire materials.
   5. Life, output (lumens, CCT, and CRI), and energy-efficiency data for light sources.
   6. Photometric data and adjustment factors based on laboratory tests, complying with IESNA Lighting Measurements Testing & Calculation Guides, of each lighting fixture type. The adjustment factors shall be for lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.
   7. Manufacturer Certified Data: Photometric data shall be certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
   8. Motion Sensors.
   9. LED drivers, including energy-efficiency data.
   10. Lamps, including life, output, CCT, CRI, lumens, and energy-efficiency data.
   11. LED luminaire data shall be consistent with the LED Lighting Facts program or DesignLights Consortium (DLC) guidelines.
   12. Materials, dimensions, and finishes of poles.
   13. Means of attaching luminaires to supports, and indication that attachment is suitable for components involved.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.

C. Samples: For products designated for sample submission in the Luminaire Schedule. Each Sample shall include lamps and drivers.

D. Qualification Data: For qualified agencies providing photometric data for lighting fixtures.

E. Field quality-control reports.

F. Operation and Maintenance Data: For luminaires to include in operation and maintenance manuals.

G. Warranty: Sample of special warranty.

1.07 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.

B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as

defined by OSHA in 29 CFR 1910, complying with the IESNA Lighting Measurements Testing & Calculation Guides

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC, by a qualified testing agency, and marked for intended location and application.

D. Comply with IEEE C2, "National Electrical Safety Code."

E. Comply with CEC.

1.08 DELIVERY, STORAGE, AND HANDLING

A. The Contractor will purchase and store luminaires for this project. Additional items required as part of this project will the responsibility of the Contractor for delivery, storage and handling.

1.09 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations from special warranty coverage.
   1. Warranty Period for Luminaires: Five years from date of Substantial Completion.
   2. Warranty Period for Labor related to luminaire or parts replacement inclusive of the pre-purchase items shall be one year from the date of Substantial Completion.
   3. Warranty Period for Metal Corrosion: Five years from date of Substantial Completion.
   4. Warranty Period for Color Retention: Five years from date of Substantial Completion.
   5. Warranty Period for Poles: Repair or replace lighting poles and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less than three years from date of Substantial Completion.

1.10 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Lamps: Furnish at least one of each type.
   2. LED Bar: Furnish at least one of each type.
   3. Glass and Plastic Lenses, Covers, and Other Optical Parts: Furnish at least one of each type.
   4. Drivers/Engine: Furnish at least one of each type.
   5. Guards: Furnish at least one of each type.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, product(s) indicated on Drawings.

B. Products furnished by the following Manufacturers shall be acceptable if in compliance with all features specified herein and indicated on the Drawings.
   1. Luminaires and Poles: as listed in the Luminaire Schedule.
   2. Light-Emitting Diode (LED) Arrays:

a. LEDs provided by Luminaire Manufacturer listed in the Luminaire Schedule: meeting the technical and warranty requirements of this Section.

3. LED drivers (DC output):
   a. Drivers provided by Luminaire Manufacturer listed in the Luminaire Schedule: meeting the technical and warranty requirements of this Section.
4. Transformers for LED systems (AC output):
   a. Transformers provided by Luminaire Manufacturer listed in the Luminaire Schedule: meeting the technical and warranty requirements of this Section.
5. Unit battery equipment:
   a. Unit battery equipment provided by Luminaire Manufacturers listed in the Luminaire Schedule: meeting the technical and warranty requirements of this Section.

C. Substitutions: Under provisions of Section 26 05 00: Common Work Results for Electrical.

2.02 GENERAL REQUIREMENTS FOR LUMINAIRES

A. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.
   1. LER Tests Fluorescent luminaires: Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.
   2. LER Tests HID luminaires: Where LER is specified, test according to NEMA LE 5B.
   3. LER Tests for LED luminaires: Test and measurement in accordance with IESNA LM-79; Lumen Maintenance in accordance with IESNA LM-80.

B. Lateral Light Distribution Patterns: Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.

C. Metal Parts: Free of burrs and sharp corners and edges.

D. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.

E. Exposed Hardware Material: Stainless steel.

F. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

G. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.

H. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finishing process and color of pole or support materials.

I. Factory-Applied Finish for Steel Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
   1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
   2. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.

a. Color: As selected from manufacturer's standard catalog of colors.

J. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
a. Color: As specified on drawings.

K. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps and ballasts. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.

2.03 LIGHT EMITTING DIODES (LED)

A. Refer to the Luminaire Schedule for size and type of LED lamps required.
1. All diodes shall be of the same manufacturer and bin number in adherence to current NEMA standard SSL-3.
2. Diodes shall be tested and tuned for the specified Kelvin color.
3. Color correlated temperature: 4000 unless otherwise noted in the drawings.
4. Minimum CRI (Color Rendering Index): 80
5. LED luminaire shall be free of toxic materials and be RoHS compliant.
6. Groups of three or more diodes in a single housing shall be tested for even distribution.
7. Standard lumen output shall meet or exceed the State of California Title 24 Energy Code for high efficiency luminaires.
8. LED luminaires shall have an IES formatted electronic photometrics report.
9. Diodes or Solid State LED chips shall have a minimum life of 50,000 hours and maintain at least 70% of initial lamp lumens during this period.

2.04 LED DRIVERS

A. Drivers shall be integral to fixture housing unless otherwise directed.

B. Drivers shall have a minimum life of 50,000 hours and maintain at least 70% of initial lamp lumens during that period.

C. Dimming applications, provide Dimmable Constant Current Drivers:
1. Wattage shall be as specified on the luminaire schedule and operate at 700mA unless otherwise noted on the luminaire schedule.
2. Dimmable to 30%.
3. Minimum efficiency to be 89%.
4. Ingress Protection (IP67) rated.
5. Minimum warranty of 5 years.
6. Universal voltage.

D. Non-dimming applications, provide Constant Voltage LED Drivers:
   1. Capable of 12 volt or 24 volt output.
   2. Minimum efficiency to be 93%.
   3. Ingress Protection (IP67) rated.
   4. Minimum warranty of 5 years.
   5. Universal voltage.

2.05 GENERAL REQUIREMENTS FOR POLES AND SUPPORT COMPONENTS

A. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts unless otherwise indicated.

B. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
   1. Materials: Shall not cause galvanic action at contact points.
   2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.
   3. Anchor-Bolt Template: Plywood or steel.

2.06 POLE ACCESSORIES

A. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.

PART 3 - EXECUTION

3.01 LUMINAIRE INSTALLATION

A. Install pre-purchased luminaires complete and operable. All lighting shall be operable prior to leaving the job site each day. Partial installations will not be acceptable.

B. Contractor is responsible for determining power source for each of the luminaires replaced as part of this project. Any shutdown of power shall be coordinated with the City’s representatives in advance.

C. Fasten luminaire to indicated structural supports.
   1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.

D. Adjust luminaires that require field adjustment or aiming.

3.02 CORROSION PREVENTION

A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.

B. Steel Conduits: Comply with Division 26 Section "Raceway and Boxes." In concrete foundations, wrap conduit with 0.010-inch-thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.03 GROUNDING

A. Ground metal poles and support structures according to Division 26 Section "Grounding and Bonding."

B. All luminaires shall be grounded. Where a ground bond does not exist, it shall be provided.

3.04 FIELD QUALITY CONTROL

A. Inspect each installed fixture for damage. Replace damaged fixtures and components.

B. Label new luminaires with code identified on the drawings. Methods shall match existing method used on campus.

C. Illumination Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.
   1. Verify operation of motion sensor controlled luminaires. Dimming and fade rate are initiated by the motion sensor.

D. LED luminaires will be considered faulty and require replacement if one or more diodes are not functioning.

E. Illumination Tests:
   1. Measure light intensities at night. Use photometers with calibration referenced to NIST standards. Comply with the following IESNA testing guide(s):
      a. IESNA LM-50, "Photometric Measurements of Roadway Lighting Installations."
      b. IESNA LM-52, "Photometric Measurements of Roadway Sign Installations."
      c. IESNA LM-64, "Photometric Measurements of Parking Areas."
      d. IESNA LM-72, "Directional Positioning of Photometric Data."

F. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

3.05 IDENTIFICATION

A. Provide each site pole and bollard with a unique address label composed of 2” high lettering.
   1. Mounted at 8-feet AFG on poles.
   2. Just above the base on bollards.

PROJECT DESCRIPTION

CONSTRUCTION OF A NEW OPERATIONS AND LAB BUILDING AT THE DRY CREEK WASTEWATER TREATMENT PLANT (DCWWTP) TO REPLACE THE EXISTING ADMINISTRATION, OPERATIONS AND LAB BUILDING.

THE NEW ADMINISTRATION,OPERATION AND LAB BUILDING WILL BE A SINGLE STORY, 12,480 SF BUILDING HOUSING LOBBY/RECEPTION, VISITORS AREA, ADMINISTRATIVE OFFICES, CONTROL OFFICES, WATER QUALITY LABORATORY, CONFRENCE ROOM, OPERATORS QUARTERS/LOCKERS/SHOWERS, LUNCHROOM AND RESTROOMS.

THE PROJECT WILL BE CONSTRUCTED IN (4) PHASES OF WORK:

DEMOLITION PHASE 1: DEMOLITION OF EXISTING GAZEBO STRUCTURE AND SELECTIVE DEMOLITION OF EXISTING SITE IMPROVEMENTS, UTILITIES AND LANDSCAPE AREAS IN PREPARATION OF CONSTRUCTION OF PHASE 2 NEW OPERATIONS AND LAB BUILDING.

CONSTRUCTION PHASE 1: CONSTRUCTION OF NEW OPERATIONS AND LAB BUILDING, TENANT IMPROVEMENTS AND ASSOCAITED SITEWORK AND UTILITIES.

DEMOLITION PHASE 2: DEMOLITION OF EXISTING OPERATIONS AND LAB BUILDING AND SELECTIVE DEMOLITION OF ADDITIONAL EXISTING SITE IMPROVEMENTS AND UTILITIES IN PREPARATION OF CONSTRUCTION OF PHASE 4 SITE IMPROVEMENTS, UTILITIES AND LANDSCAPE AREAS.

CONSTRUCTION PHASE 2: CONSTRUCTION OF ADDITIONAL SITE IMPROVEMENTS, ROADWAYS, UTILITIES AND LANDSCAPE AREAS.

DEFERRED APPROVALS

CONTRACTOR SHALL PROVIDE AND SUBMIT ENGINEERING CALCULATIONS, SHOP DRAWINGS AND OTHER EXHIBITS AND PAY PLAN CHECK FEES REQUIRED FOR DEFERRED SUBMITTAL WORK AND TO OBTAIN PERMITS PRIOR TO COMMENCING INSTALLATION OF THE WORK ON SITE:

A. FIRE SPRINKLER SYSTEMS
B. PRE-ENGINEERED TRUSSES

SEPARATE PERMITS

OWNER SHALL PROVIDE AND SUBMIT ENGINEERING CALCULATIONS. SHOP DRAWINGS AND OTHER EXHIBITS AND PAY PLAN CHECK FEES REQUIRED FOR SEPARATE PERMITS AND TO OBTAIN PERMITS PRIOR TO COMMENCING INSTALLATION OF THE WORK ON SITE:

A. FIRE SPRINKLERS (WET SYSTEM)
B. FIRE SPRINKLERS (DRY SYSTEM) 1
C. FIRE ALARM SYSTEM
D. BUILDING DEMOLITION PERMIT 2

CALGREEN CODE COMPLIANCE

THIS PROJECT IS SUBJECT TO THE REQUIREMENTS OF THE 2022 CALGREEN CODE (TITLE 24CCR, PART II) AS ADOPTED BY THE CITY OF ROSEVILLE WITH APPLICABLE CITY CODE AMMENDMENTS. MANDATORY MEASURES ARE LOCATED AT DRAWING SHEET G-002-004.

SIGNATURE OF THE ARCHITECT/ENGINEER | DATE | LICENSE NUMBER | EXPIRATION DATE

CHAPTER 3
GREEN BUILDING
SECTION 301 GENERAL

301.1 SCOPE. Buildings shall be designed to include the green building measures specified as mandatory in the application checklists contained in this code. Voluntary green building measures are also included in the application checklists and may be included in the design and construction of structures covered by this code, but are not required unless adopted by a city, county, or city and county as specified in Section 101.7.

301.3 NONRESIDENTIAL ADDITIONS AND ALTERATIONS. [BSC-CG] The provisions of individual sections of Chapter 5 apply to newly constructed buildings, building additions of 1,000 square feet or greater, and/or building alterations with a permit valuation of $200,000 or above (for occupancies within the authority of California Building Standards Commission). Code sections relevant to additions and alterations shall only apply to the portions of the building being added or altered within the scope of the permitted work.

A code section will be designated by a banner to indicate where the code section only applies to newly constructed buildings [N] or to additions and/or alterations [A]. When the code section applies to both, no banner will be used.

301.3.1 Nonresidential additions and alterations that cause updates to plumbing fixtures only:

Note: On and after January 1, 2014, certain commercial real property, as defined in Civil Code Section 1101.3, shall have its noncompliant plumbing fixtures replaced with appropriate water-conserving plumbing fixtures under specific circumstances. See Civil Code Section 1101.1 *et seq.* for definitions, types of commercial real property affected, effective dates, circumstances necessitating replacement of noncompliant plumbing fixtures, and duties and responsibilities for ensuring compliance.

301.3.2 Waste Diversion. The requirements of Section 5.408 shall be required for additions and alterations whenever a permit is required for work.

301.4 PUBLIC SCHOOLS AND COMMUNITY COLLEGES. (see GBSC)
301.5 HEALTH FACILITIES. (see GBSC)

SECTION 302 MIXED OCCUPANCY BUILDINGS

302.1 MIXED OCCUPANCY BUILDINGS. In mixed occupancy buildings, each portion of a building shall comply with the specific green building measures applicable to each specific occupancy.

SECTION 303 PHASED PROJECTS

303.1 PHASED PROJECTS. For shell buildings and others constructed for future tenant improvements, only those code measures relevant to the building components and systems considered to be new construction (or newly constructed) shall apply.

303.1.1 Initial Tenant improvements. The provisions of this code shall apply only to the initial tenant improvements to a project. Subsequent tenant improvements shall comply with the scoping provisions in Section 301.3 non-residential additions and alterations.

ABBREVIATION DEFINITIONS:

HCD	Department of Housing and Community Development
BSC	California Building Standards Commission
DSA-SS	Division of the State Architect, Structural Safety
OSHPD	Office of Statewide Health Planning and Development
LR	Low Rise
HR	High Rise
AA	Additions and Alterations
N	New

CHAPTER 5
NONRESIDENTIAL MANDATORY MEASURES
DIVISION 5.1 PLANNING AND DESIGN
SECTION 5.101 GENERAL

5.101.1 SCOPE
The provisions of this chapter outline planning, design and development methods that include environmentally responsible site selection, building design, building siting and development to protect, restore and enhance the environmental quality of the site and respect the integrity of adjacent properties.

SECTION 5.102 DEFINITIONS

5.102.1 DEFINITIONS
The following terms are defined in Chapter 2 *(and are included here for reference)*

CUTOFF LUMINAIRES. Luminaires whose light distribution is such that the candela per 1000 lamp lumens does not numerically exceed 25 (2.5 percent) at an angle of 90 degrees above nadir, and 100 (10 percent) at a vertical angle of 80 degrees above nadir. This applies to all lateral angles around the luminaire.

LOW-EMITTING AND FUEL EFFICIENT VEHICLES.
Eligible vehicles are limited to the following:

1. Zero emission vehicle (ZEV), enhanced advanced technology PZEV (enhanced AT ZEV) or transitional zero emission vehicles (TZEV) regulated under CCR, Title 13, Section 1962.
2. High-efficiency vehicles, regulated by U.S. EPA, bearing a fuel economy and greenhouse gas rating od 9 oe 10 as regulated under 40 CFR Section 600 Subpart D.

NEIGHBORHOOD ELECTRIC VEHICLE (NEV). A motor vehicle that meets the definition of "low-speed vehicle" either in Section 385.5 of the Vehicle Code or in 49CFR571.500 (as it existed on July 1, 2000), and is certified to zero-emission vehicle standards.

TENANT-OCCUPANTS. Building occupants who inhabit a building during its normal hours of operation as permanent occupants, such as employees, as distinguished from customers and other transient visitors.

VANPOOL VEHICLE. Eligible vehicles are limited to any motor vehicle, other than a motortruck or truck tractor, designed for carrying more than 10 but not more than 15 persons including the driver, which is maintained and used primarily for the nonprofit work-related transportation of adults for the purpose of ridesharing.

Note: Source: Vehicle Code, Division 1, Section 668

ZEV. Any vehicle certified to zero-emission standards.

SECTION 5.106 SITE DEVELOPMENT

5.106.1 STORM WATER POLLUTION PREVENTION FOR PROJECTS THAT DISTURB LESS THAN ONE ACRE OF LAND. Newly constructed projects and additions which disturb less than one acre of land, and are not part of a larger common plan of development or sale, shall prevent the pollution of storm water runoff from the construction activities through one or more of the following measures:

5.106.1.1 Local ordinance. Comply with a lawfully enacted storm water management and/or erosion control ordinance.

5.106.1.2 Best Management Practices (BMPs). Prevent the loss of soil through wind or water erosion by implementing an effective combination of erosion and sediment control and good housekeeping BMPs.

1. Soil loss BMPs that should be considered for implementation as appropriate for each project include, but are not limited to, the following:
   a. Scheduling construction activity during dry weather, when possible.
   b. Preservation of natural features, vegetation, soil, and buffers around surface waters.
   c. Drainage swales or lined ditches to control stormwater flow.
   d. Mulching or hydroseeding to stabilize disturbed soils.
   e. Erosion control to protect slopes.
   f. Protection of storm drain inlets (gravel bags or catch basin inserts).
   g. Perimeter sediment control (perimeter silt fence, fiber rolls).
   h. Sediment trap or sediment basin to retain sediment on site.
   i. Stabilized construction exits.
   j. Wind erosion control.
   k. Other soil loss BMPs acceptable to the enforcing agency.
2. Good housekeeping BMPs to manage construction equipment, materials, non-stormwater discharges and wastes that should be considered for implementation as appropriate for each project include, but are not limited to, the following:
   a. Dewatering activities.
   b. Material handling and waste management.
   c. Building materials stockpile management.
   d. Management of washout areas (concrete, paints, stucco, etc.).
   e. Control of vehicle/equipment fueling to contractor's staging area.
   f. Vehicle and equipment cleaning performed off site.
   g Spill prevention and control.
   h. Other housekeeping BMPs acceptable to the enforcing agency.

Y | N/A | RESPON. PARTY

☐ | 00

☐ | 00

00 ☐ ARCH ELEC

5.106.2 STORMWATER POLLUTION PREVENTION FOR PROJECTS THAT DISTURB ONE OR MORE ACRES OF LAND. Comply with all lawfully enacted stormwater discharge regulations for projects that (1) disturb one acre or more of land, or (2) disturb less than one acre of land but are part of a larger common plan of development sale.

Note: Projects that (1) disturb one acre or more of land, or (2) disturb less than one acre of land but are part of the larger common plan of development or sale must comply with the post-construction requirements detailed in the applicable National Pollutant Discharge Elimination System (NPDES) General permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities issued by the State Water Resources Control Board or the Lahontan Regional Water Quality Control Board (for projects in the Lake Tahoe Hydrologic Unit).

The NPDES permits require postconstruction runoff (post-project hydrology) to match the preconstruction runoff (pre-project hydrology) with the installation of postconstruction stormwater management measures. The NPDES permits emphasize runoff reduction through on-site stormwater use, interception, evapotranspiration, and infiltration through nonstructural controls, such as Low Impact Development (LID) practices, and conversation design measures. Stormwater volume that cannot be addressed using nonstructural practices is required to be captured in structural practices and be approved by the enforcing agency.

Refer to the current applicable permits on the State Water Resources Control Board website at: www.waterboards.ca.gov/constructionstormwater. Consideration to the stormwater runoff management measures should be given during the initial design process for appropriate integration into site development.

5.106.4 BICYCLE PARKING. For buildings within the authority of California Building Standards Commission as specified in Section 103, comply with Section 5.106.4.1. For buildings within the authority of the Division of the State Architect pursuant to Section 105, comply with Section 5.106.4.2

5.106.4.1 Bicycle parking. [BSC-CG] Comply with Sections 5.106.4.1.1 and 5.106.4.1.2; or meet the applicable local ordinance, whichever is stricter.

5.106.4.1.1 Short-term bicycle parking. If the new project or an addition or alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5% of new visitor motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack.
Exception: Additions or alterations which add nine or less visitor vehicular parking spaces.

5.106.4.1.2 Long-term bicycle parking. For new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5 percent of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility.

5.106.4.1.3 For additions or alterations that add 10 or more tenant-occupant vehicular parking spaces, provide secure bicycle parking for 5 percent of the tenant vehicular parking spaces being added, with a minimum of one bicycle parking facility.

5.106.4.1.4 For new shell buildings in phased projects provide secure bicycle parking for 5 percent of the anticipated tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility.

5.106.4.1.5 Acceptable bicycle parking facility for Sections 5.106.4.1.2, 5.106.4.1.3, and 5.106.4.1.4 shall be convenient from the street and shall meet one of the following:

1. Covered, lockable enclosures with permanently anchored racks for bicycles;
2. Lockable bicycle rooms with permanently anchored racks; or
3. Lockable, permanently anchored bicycle lockers.

Note: Additional information on recommended bicycle accommodations may be obtained from Sacramento Area Bicycle Advocates.

5.106.4.2 Bicycle parking. [DSA-SS] For public schools and community colleges, comply with Sections 5.106.4.2.1 and 5.106.4.2.2

5.106.4.2.1 Student bicycle parking. Provide permanently anchored bicycle racks conveniently accessed with a minimum of four two-bike capacity racks per new building.
5.106.4.2.2 Staff bicycle parking. Provide permanent, secure bicycle parking conveniently accessed with a minimum of two staff bicycle parking spaces per new building. Acceptable bicycle parking facilities shall be convenient from the street or staff parking area and shall meet one of the following:

1. Covered, lockable enclosures with permanently anchored racks for bicycles;
2. Lockable bicycle rooms with permanently anchored racks; or
3. Lockable, permanently anchored bicycle lockers.

5.106.5.3 Electric vehicle (EV) charging. [N] Construction to provide electric vehicle infrastructure and facilitate electric vehicle charging shall comply with Section 5.106.5.3.1 and shall be provided in accordance with regulations in the California Building Code and the California Electrical Code.

Exceptions:
1. On a case-by-case basis where the local enforcing agency has determined compliance with this section is not feasible based upon one of the following conditions:
   a. Where there is no local utility power supply
   b. Where the local utility is unable to supply adequate power.
   c. Where there is evidence suitable to the local enforcement agency substantiating the local utility infrastructure design requirements, directly related to the implementation of Section 5.106.5.3, may adversely impact the construction cost of the project.
2. Parking spaces accessible only by automated mechanical car parking systems are not required to comply with this code section

5.106.5.3.1 EV capable spaces.
[N] EV capable spaces shall be provided in accordance with Table 5.106.5.3.1 and the following requirements:
1. Raceways complying with the California Electrical Code and no less that 1-inch (25 mm) diameter shall be provided and shall originate at a service panel or a subpanel(s) serving the area, and shall terminate in close proximity to the proposed location of the EV capable and into a suitable listed cabinet, box,enclosure or equivalent. A common raceway may be used to serve multiple EV charging spaces.
2. A service panel or subpanel (s) shall be provided with panel space and electrical load capacity for a dedicated 208/240 volt, 40-ampere minimum branch circuit for each EV capable space, with delivery of 30-ampere minimum to an installed EVSE at each EVCS.
3. The electrical system and any on-site distribution transformers shall have sufficient capacity to supply full rated amperage at each EV capable space.
4. The service panel or subpanel circuit directory shall identify the reserved overcurrent protective devices space(s) as "EV CAPABLE". The raceway termination location shall be permanently and visibly marked as "EV CAPABLE."

Note: A parking space served by electric vehicle supply equipment or designed as a future EV charging space shall count as at least one standard automobile parking space only for the purpose of complying with any applicable minimum parking space requirements established by an enforcement agency. See vehicle Code Section 22511.2 for further details.

TABLE 5.106.5.3.1

TOTAL NUMBER OF ACTUAL PARKING SPACES	NUMBER OF REQUIRED EV CAPABLE SPACES	NUMBER OF EVCS (EV CAPABLE SPACES PROVIDED WITH EVSE)^2
0-9	0	0
10-25	2	0
26-50	8	2
51-75	13	3
76-100	17	4
101-150	25	6
151-200	35	9
201 AND OVER	20% of total[1]	25% of EV capable spaces[1]

1. Where there is insufficient electrical supply.
2. The number of required EVCS (EV capable spaces provided with EVSE) in column 3 count towards the total number of required EV capable spaces shown in column 2.

5.106.5.3.2 Electric vehicle charging stations (EVCS)
EV capable spaces shall be provided with EVSE to create EVCS in the number indicated in Table 5.106.5.3.1. The EVCS required by Table 5.106.5.3.1 may be provided with EVSE in any combination of Level 2 and Direct Current Fast Charging (DCFC), except that at least one Level 2 EVSE shall be provided.

One EV charger with multiple connectors capable of charging multiple EVs simultaneously shall be permitted if the electrical load capacity required by Section 5.106.5.3.1 for each EV capable space is accumulatively supplied to the EV charger.

The installation of each DCFC EVSE shall be permitted to reduce the minimum number of required EV capable spaces without EVSE by five and reduce proportionally the required electrical load capacity to the service panel or subpanel.

Y | N/A | RESPON. PARTY

☒ ☐ ELEC

5.106.5.3.3 Use of automatic load management systems (ALMS).
ALMS shall be permitted for EVCS. When ALMS is installed, the required electrical load capacity specified in Section 5.106.5.3.1 for each EVCS may be reduced when serviced by an EVSE controlled by an ALMS. Each EVSE controlled by an ALMS shall deliver a minimum 30 amperes to an EV when charging one vehicle and shall deliver a minimum 3.3 kW while simultaneously charging multiple EVs.

5.106.5.3.4 Accessible EVCS.
When EVSE is installed, accessible EVSC shall be provided in accordance with the *California Building Code*, Chapter 11B, Section 11B-228.3.
Note: For EVCS signs, refer to Caltrans Traffic Operations Policy Directive 13-01 (Zero Emission Vehicle Signs and Pavement Markings) or its successor(s).

5.106.5.4 Electric Vehicle (EV) charging: medium-duty and heavy-duty. [N]
Construction shall comply with section 5.106.5.4.1 to facilitate future installation of electric vehicle supply equipment (EVSE). Construction for warehouses, grocery stores and retail stores with planned off-street loading spaces shall also comply with Section 5.106.5.4.1 for future installation of medium- and heavy-duty EVSE.
Exceptions:
1. On a case-by-case basis where the local enforcing agency has determined compliance with this section is not feasible based upon one of the following conditions:
   a. Where there is no local utility power supply.
   b. Where the local utility is unable to supply adequate power.
   c. Where there is evidence suitable to the local enforcing agency substantiating that additional local utility infrastructure design requirements, directly related to the implementation of Section 5.106.5.3, may adversely impact the construction cost of the project.

When EVSE(s) is/are installed, it shall be in accordance with the *California Building Code*, the *California Electrical Code* and as follows:

5.106.5.4.1 Electric vehicle charging readiness requirements for warehouse, grocery stores and retail stores with planned off-street loading spaces.
[N] In order to avoid future demolition when adding EV charging supply and distribution equipment, spare raceway(s) and busway(s) and adequate capacity for transformers(s), service panels(s) or subpanel(s) shall be installed at the time of construction in accordance with the California Electrical Code. Construction plans and specifications shall include but are not limited to, the following:
1. The transformer, main service equipment and subpanel shall meet the minimum power requirement in Table 5.106.5.4.1 to accommodate the dedicated branch circuits for the future installation of EVSE.
2. The construction documents shall indicate on or more location(s) convenient to the planned offstreet loading space(s) reserved for medium-and heavy-duty ZEV charging cabinets and charging dispensers, and a pathway reserved for routing of conduit from the termination of the raceway(s) or busway(s) to the charging cabinet(s) and dispenser(s) as shown in Table 5.106.5.4.1
3. Raceway(s) or busway(s) originating at a main service panel or a subpanel(s) serving the area where potential future medium-and heavy-duty EVSE will be located and shall terminate in close proximity to the potential future location of the charging equipments for medium- and heavy-duty vehicles.
4. The raceway(s) or busway(s) shall be sufficient size to carry the minimum additional system load to the future location of the charging for medium- and heavy-duty ZEVs as shown in Table 5.106.5.4.1.

TABLE 5.106.5.4.1 RACEWAY CONDUIT AND PANEL POWER REQUIREMENTS FOR MEDIUM- AND HEAVY-DUTY EVSE [N]

BUILDING TYPE	BUILDING SIZE (SQ. FT.)	NUMBER OF OFF-STREET LOADING SPACES	ADDITIONAL CAPACITY REQUIRED (KVA) FOR RACEWAY & BUSWAY AND TRANSFORMER & PANEL
Grocery	10,000 to 90,000	1 or 2	200
		3 or Greater	400
	Greater than 90,000	1 or Greater	400
Retail	10,000 to 135,000	1 or 2	200
		3 or Greater	400
	Greater than 135,000	1 or Greater	400
Warehouse	20,000 to 256,000	1 or 2	200
		3 or Greater	400
	Greater than 256,000	1 or Greater	400

5.106.8 LIGHT POLLUTION REDUCTION. [N]. I Outdoor lighting systems shall be designed and installed to comply with the following:

1. The minimum requirements in the California Energy Code for Lighting Zones 0-4 as defined in Chapter 10, Section 10-114 of the California Administrative Code; and
2. Backlight (B) ratings as defined in IES TM-15-11 (shown in Table A-1 in Chapter 8);
3. Uplight and Glare ratings as defined in California Energy Code (shown in Tables 130.2-A and 130.2-B in Chapter 8) and
4. Allowable BUG ratings not exceeding those shown in Table 5.106.8, [N] or Comply with a local ordinance lawfully enacted pursuant to Section 101.7, whichever is more stringent.

Exceptions: [N]

1. Luminaires that qualify as exceptions in Sections 130.2 (b) and 140.7 of the California Energy Code.
2. Emergency lighting.
3. Building facade meeting the requirements in Table 140.7-B of the California Energy Code, Part 6.
4. Custom lighting features as allowed by the local enforcing agency, as permitted by Section 101.8 Alternate materials, designs and methods of construction.
5. Luminaires with less than 6,200 initial luminaire lumens.

TABLE 5.106.8 [N] MAXIMUM ALLOWABLE BACKLIGHT, UPLIGHT AND GLARE (BUG) RATINGS[1,2]

ALLOWABLE RATING	LIGHTING ZONE LZ0	LIGHTING ZONE LZ1	LIGHTING ZONE LZ2	LIGHTING ZONE LZ3	LIGHTING ZONE LZ4
MAXIMUM ALLOWABLE BACKLIGHT RATING [3]					
Luminaire greater than 2 mounting heights (MH) from property line	N/A	No Limit	No Limit	No Limit	No Limit
Luminaire back hemisphere is 1-2 MH from property line	N/A	B2	B3	B4	B4
Luminaire back hemisphere is 0.5-1 MH from property line	N/A	B1	B2	B3	B3
Luminaire back hemisphere is less than 0.5 MH from property line	N/A	B0	B0	B1	B2
MAXIMUM ALLOWABLE UPLIGHT RATING (U)					
For area lighting [3]	N/A	U0	U0	U0	U0
For all other outdoor lighting,including decorative luminaires	N/A	U1	U2	U3	UR

00 ☐ CIVIL

00 ☐ LANDS

5.106.5.3.5 Maximum allowable GLARE rating. (G)

MAXIMUM ALLOWABLE GLARE RATING (G)					
MAXIMUM ALLOWABLE GLARE RATING (G)	N/A	G1	G2	G3	G4
MAXIMUM ALLOWABLE GLARE RATING (G)	N/A	G0	G1	G1	G2
MAXIMUM ALLOWABLE GLARE RATING (G)	N/A	G0	G0	G1	G1
MAXIMUM ALLOWABLE GLARE RATING (G)	N/A	G0	G0	G0	G1

1. IESNA Lighting Zones 0 and 5 are not applicable; refer to Lighting Zones as defined in the *California Energy Code* and Chapter 10 of the *California Administrative Code.*

2. For property lines that abut public walkways, bikeways, plazas and parking lots, the property line may be considered to be 5 feet beyond the actual property line for purpose of determining compliance with this section. For property lines that abut public roadways and public transit corridors, the property line may be considered to be the centerline of the public roadway or public transit corridor for the purpose of determining compliance with this section.

3. General lighting luminaires in areas such as outdoor parking, sales or storage lots shall meet these reduced ratings. Decorative luminaires located in these areas shall meet *U*-value limits for "all other outdoor lighting"

5.106.8.1 Facing- Backlight
Luminaries within 2MH of a property line shall be oriented so that the nearest property line is behind the fixture, and shall comply with the backlight rating specified in Table 5.106.8 based on the lighting zone and distance to the nearest point of that property line.
Exception: Corners. If two property lines (or two segments of the same property line) have equidistant point to the luminaire, then the luminaire may be oriented so that the intersection of the two lines (the corner) is directly behind the luminaire. The luminaire shall still use the distance to the nearest points(s) on the property lines to determine the required backlight rating.

5.106.8.2 Facing-Glare.
For luminaires covered by 5.106.8.1, if a property line also exists within or extends into the front hemisphere within 2MH of the luminaire then the luminaire shall comply with the more stringent glare rating specified in Table 5.106.8 based on the lighting zone and distance to the nearest point on the nearest property line within the front hemisphere.

Note: [N]
1.See also *California Building Code*, Chapter 12, Section 1205.6 for college campus lighting requirements for parking facilities and walkways.
2.Refer to Chapter 8 (Compliance Forms, Worksheets and Reference Material) for IES TM-15-11 Table A-1, *California Energy Code* Tables 130.2-A and 130.2-B.
3. Refer to the *California Building Code* for requirements for additions and alterations.

5.106.10 GRADING AND PAVING. Construction plans shall indicate how site grading or a drainage system will manage all surface water flows to keep water from entering buildings. Examples of methods to manage surface water include, but are not limited to, the following:

1. Swales.
2. Water collection and disposal systems.
3. French drains.
4. Water retention gardens.
5. Other water measures which keep surface water away from buildings and aid in groundwater recharge.
Exception: Additions and alterations not altering the drainage path.

5.106.12 SHADE TREES [DSA-SS]. Shade Trees shall be planted to comply with Sections 5.106.12.1, 5.106.12.2, and 5.106.12.3. Percentages shown shall be measured at noon on the summer solstice. Landscape irrigation necessary to establish and maintain tree health shall comply with Section 5.304.6.

5.106.12.1 Surface parking areas. Shade tree plantings, minimum #10 container size or equal, shall be installed to provide shade over 50 percent of the parking area within 15 years.

Exceptions: Surface parking area covered by solar photovoltaic shade structures with roofing materials that comply with Table A5.106.11.2.2 in Appendix A5 shall be permitted in whole or in part in lieu of shade tree planting.

5.106.12.2 Landscape areas. Shade trees plantings, minimum #10 container size or equal shall be installed to provide shade of 20% of the landscape area within 15 years.

Exceptions: Playfields for organized sport activity are not included in the total area calculation.

5.106.12.3. Hardscape areas. Shade tree plantings, minimum #10 container size or equal shall be installed to provide shade over 20 percent of the hardscape area within 15 years.

Exceptions:
1. Walks, hardscape areas covered by solar photovoltaic shade structures or shade structures with roofing materials that comply with Table A5.106.11.2.2 in Appendix A5 shall be permitted in whole or in part in lieu of shade tree planting.
2. Designated and marked play areas of organized sport activity are not included in the total area calculation.

DIVISION 5.2 ENERGY EFFICIENCY
SECTION 5.201 GENERAL

5.201.1 Scope [BSC-CG]. ***California Energy Code [DSA-SS].*** For the purposes of mandatory energy efficiency standards in this code, the California Energy Commission will continue to adopt mandatory building standards.

DIVISION 5.3 WATER EFFICIENCY AND CONSERVATION
SECTION 5.301 GENERAL

5.301.1 Scope. The provisions of this chapter shall establish the means of conserving water use indoors, outdoors and in wastewater conveyance.

SECTION 5.302 DEFINITIONS

5.302.1 Definitions. The following terms are defined in Chapter 2 *(and are included here for reference)*

EVAPOTRANSPIRATION ADJUSTMENT FACTOR (ETAF) [DSA-SS]. An adjustment factor when applied to reference evapotranspiration that adjusts for plant factors and irrigation efficiency, which ae two major influences on the amount of water that needs to be applied to the landscape.

FOOTPRINT AREA [DSA-SS]. The total area of the furthest exterior wall of the structure projected to natural grade, not including exterior areas such as stairs, covered walkways, patios and decks.

METERING FAUCET. A self-closing faucet that dispenses a specific volume of water for each actuation cycle. The volume or cycle duration can be fixed or adjustable.

GRAYWATER. Pursuant to Health and Safety Code Section 17922.12, "graywater" means untreated wastewater that has not been contaminated by any toilet discharge, has not been affected by infectious, contaminated, or unhealthy bodily wastes, and does not present a threat from contamination by unhealthful processing, manufacturing, or operating wastes. "Graywater" includes, but is not limited to wastewater from bathtubs, showers, bathroom washbasins, clothes washing machines and laundry tubs, but does not include waste water from kitchen sinks or dishwashers.

MODEL WATER EFFICIENT LANDSCAPE ORDINANCE (MWELO). The California ordinance regulating landscape design, installation and maintenance practices that will ensure commercial, multifamily and other developer installed landscapes greater than 2500 square feet meet an irrigation water budget developed based on landscaped area and climatological parameters.

MODEL WATER EFFICIENT LANDSCAPE ORDINANCE (MWELO). [HCD] The California model ordinance (California Code of Regulations, Title 23, Division 2, Chapter 2.7), regulating landscape design, installation and maintenance practices. Local agencies are required to adopt the updated MWELO, or adopt a local ordinance at least as effective as the MWELO.

POTABLE WATER. Water that is drinkable and meets the U.S. Environmental Protection Agency (EPA) Drinking Water Standards. See definition in the California Plumbing Code, Part 5.

POTABLE WATER. [HCD] Water that is satisfactory for drinking, culinary, and domestic purposes, and meets the U.S. Environmental Protection Agency (EPA) Drinking Water Standards and the requirements of the Health Authority Having Jurisdiction.

RECYCLED WATER. Water which, as a result of treatment of waste, is suitable for a direct beneficial use or a controlled use that would not otherwise occur [Water Code Section 13050 (n)]. Simply put, recycled water is water treated to remove waste matter attaining a quality that is suitable to use the water again.

SUBMETER. [HCD 1] A secondary device beyond a meter that measures water consumption of an individual rental unit within a multiunit residential structure or mixed-use residential and commercial structure. (See Civic Code Section 1954.202 (g) and Water code Section 517 for additional details.)

WATER BUDGET. Is the estimated total landscape irrigation water use which shall not exceed the maximum applied water allowance calculated in accordance with the Department of Water Resources Model Efficient Landscape Ordinance (MWELO).

DISCLAIMER:*THIS DOCUMENT IS PROVIDED AND INTENDED TO BE USED AS A MEANS TO INDICATE AREAS OF COMPLIANCE WITH THE CALIFORNIA GREEN BUILDING STANDARDS (CALGREEN) CODE. DUE TO THE VARIABLES BETWEEN BUILDING DEPARTMENT JURISDICTIONS, THIS CHECKLIST IS TO BE USED ON AN INDIVIDUAL PROJECT BASIS AND MAY BE MODIFIED BY THE END USER TO MEET THOSE INDIVIDUAL NEEDS. THE END USER ASSUMES ALL RESPONSIBILITY ASSOCIATED WITH THE USE OF THIS DOCUMENT, INCLUDING VERIFICATION WITH THE FULL CODE.*

SECTION 5.303 INDOOR WATER USE

5.303.1 METERS. Separate submeters or metering devices shall be installed for the uses described in Sections 503.1.1 and 503.1.2.

5.303.1.1 Buildings in excess of 50,000 square feet. Separate submeters shall be installed as follows:

1. For each individual leased, rented or other tenant space within the building projected to consume more than 100 gal/day (380 L/day), including, but not limited to, spaces used for laundry or cleaners, restaurant or food service, medical or dental office, laboratory, or beauty salon or barber shop.
2. Where separate submeters for individual building tenants are unfeasible, for water supplied to the following subsystems:
   a. Makeup water for cooling towers where flow through is greater than 500 gpm (30 L/s).
   b. Makeup water for evaporative coolers greater than 6 gpm (0.04 L/s).
   c. Steam and hot water boilers with energy input more than 500,000 Btu/h (147 kW).

5.303.1.2 Excess consumption. A separate submeter or metering device shall be provided for any tenant within a new building or within an addition that is projected to consume more than 1,000 gal/day.

5.303.3 WATER CONSERVING PLUMBING FIXTURES AND FITTINGS. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the following:

5.303.3.1 Water Closets. The effective flush volume of all water closets shall not exceed 1.28 gallons per flush. Tank-type water closets shall be certified to the performance criteria of the U.S. EPA WaterSense Specification for Tank-Type toilets.

Note: The effective flush volume of dual flush toilets is defined as the composite, average flush volume of two reduced flushes and one full flush.

5.303.3.2 Urinals.
5.303.3.2.1 Wall-mounted Urinals. The effective flush volume of wall-mounted urinals shall not exceed 0.125 gallons per flush.

5.303.3.2.2 Floor-mounted Urinals. The effective flush volume of floor-mounted or other urinals shall not exceed 0.5 gallons per flush.

5.303.3.3 Showerheads. [BSC-CG]
5.303.3.3.1 Single showerhead. Showerheads shall have a maximum flow rate of not more than 1.8 gallons per minute at 80 psi. Showerheads shall be certified to the performance criteria of the U.S. EPA WaterSense Specification for Showerheads.

5.303.3.3.2 Multiple showerheads serving one shower. When a shower is served by more than one showerhead, the combined flow rate of all the showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi, or the shower shall be designed to allow only one shower outlet to be in operation at a time.
Note: A hand-held shower shall be considered a showerhead.

5.303.3.4 Faucets and fountains.

5.303.3.4.1 Nonresidential Lavatory faucets. Lavatory faucets shall have a maximum flow rate of not more than 0.5 gallons per minute at 60 psi.

5.303.3.4.2 Kitchen faucets. Kitchen faucets shall have a maximum flow rate of not more than 1.8 gallons per minute at 60 psi. Kitchen faucets may temporarily increase the flow above the maximum rate, but not to exceed 2.2 gallons per minute at 60 psi, and must default to a maximum flow rate of 1.8 gallons per minute at 60 psi.

5.303.3.4.3 Wash fountains. Wash fountains shall have a maximum flow rate of not more than1.8 gallons per minute/20 [rim space (inches) at 60 psi].

5.303.3.4.4 Metering faucets. Metering faucets shall not deliver more than 0.20 gallons per cycle.

5.303.3.4.5 Metering faucets for wash fountains. Metering faucets for wash fountains shall have a maximum flow rate of not more than 0.20 gallons per minute/20 [rim space (inches) at 60 psi].

Note: Where complying faucets are unavailable, aerators or other means may be used to achieve reduction.

5.303.3.4.6 Pre-rinse spray value
When installed, shall meet the requirements in the *California Code of Regulations*, Title 20 (Appliance Efficiency Regulations), Section 1605.1(h)(4) Table H-2, Section 1605.3 (h)(4)(A), and Section 1607 (d)(7), and shall be equipped with an integral automatic shutoff.

FOR REFERENCE ONLY: The following table and code section have been reprinted from the *California Code of Regulations*, Title 20 (Appliance Efficiency Regulations), Section 1605.1 (h)(4) and Section 1605.3 (h)(4)(A).

TABLE H-2

STANDARDS FOR COMMERCIAL PRE-RINSE SPRAY VALUES MANUFACTURED ON OR AFTER JANUARY 28, 2019

PRODUCT CLASS [spray force in ounce force (ozf)]	MAXIMUM FLOW RATE (gpm)
Product Class 1 (≤ 5.0 ozf)	1.00
Product Class 2 (> 5.0 ozf and ≤ 8.0 ozf)	1.20
Product Class 3 (> 8.0 ozf)	1.28

5.303.4 COMMERCIAL KITCHEN EQUIPMENT.

5.303.4.1 Food Waste Disposers. Disposers shall either modulate the use of water to no more than 1 gpm when the disposer is not in use (not actively grinding food waste/re-load) or shall automatically shut off after no more than 10 minutes of inactivity. Disposers shall use no more than 8 gpm of water.
Note: This code section does not affect local jurisdiction authority to prohibit or require disposer installation

5.303.5 AREAS OF ADDITION OR ALTERATION. For those occupancies within the authority of the California Building Standards Commission as specified in Section 103, the provisions of Section 5.303.3 and 5.303.4 shall apply to new fixtures in additions or areas of alteration to the building.

5.303.6 STANDARDS FOR PLUMBING FIXTURES AND FITTINGS. Plumbing fixtures and fittings shall be installed in accordance with the *California Plumbing Code*, and shall meet the applicable standards referenced in Table 1701.1 of the *California Plumbing Code* and in Chapter 6 of this code.

SECTION 5.304 OUTDOOR WATER USE

5.304.1 OUTDOOR POTABLE WATER USE IN LANDSCAPE AREAS. Nonresidential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO), whichever is more stringent.

Notes:
1. The Model Water Efficient Landscape Ordinance (MWELO) is located in the California Code of Regulations, Title 23, Chapter 2.7, Division 2.
2. MWELO and supporting documents, including a water budget calculator, are available at: https://www.water.ca.gov/.

5.304.6 OUTDOOR POTABLE WATER USE IN LANDSCAPE AREAS. For public schools and community colleges, landscape projects as described in Sections 5.304.6.1 and 5.304.6.2 shall comply with the California Department of Water Resources Model Water Efficient Landscape Ordinance (MWELO) commencing with Section 490 of Chapter 2.7, Division 2, Title 23, *California Code of Regulations*, except that the evapotranspiration adjustment factor (ETAF) shall be 0.65 with an additional water allowance for special landscape areas (SLA) of 0.35.

Exception: Any project with an aggregate landscape area of 2,500 square feet or less may comply with the prescriptive measures contained in Appendix D of the MWELO.

5.304.6.1 Newly constructed landscapes. New construction projects with an aggregate landscape area equal to or greater than 500 square feet.

5.304.6.2 Rehabilitated landscapes. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 1,200 square feet.

DIVISION 5.4 MATERIAL CONSERVATION AND RESOURCE EFFICIENCY

SECTION 5.401 GENERAL

5.401.1 SCOPE. The provisions of this chapter shall outline means of achieving material conservation and resource efficiency through protection of buildings from exterior moisture, construction waste diversion, employment of techniques to reduce pollution through recycling of materials, and building commissioning or testing and adjusting.

SECTION 5.402 DEFINITIONS

5.402.1 DEFINITIONS. The following terms are defined in Chapter 2 *(and are included here for reference)*

ADJUST. To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.

BALANCE. To proportion flows within the distribution system, including sub-mains, branches and terminals, according to design quantities.

BUILDING COMMISSIONING. A systematic quality assurance process that spans the entire design and construction process, including verifying and documenting that building systems and components are planned, designed, installed, tested, operated and maintained to meet the owner's project requirements.

ORGANIC WASTE. Food waste, green waste, landscape and pruning wste, nonhazardous wood waste, and food soiled paper waste that is mixed in with food waste.

TEST. A procedure to determine quantitative performance of a system or equipment

SECTION 5.407 WATER RESISTANCE AND MOISTURE MANAGEMENT

5.407.1 WEATHER PROTECTION. Provide a weather-resistant exterior wall and foundation envelope as required by California Building Code Section 1402.2 (Weather Protection), manufacturer's installation instructions or local ordinance, whichever is more stringent.

5.407.2 MOISTURE CONTROL. Employ moisture control measures by the following methods.

5.407.2.1 Sprinklers. Design and maintain landscape irrigation systems to prevent spray on structures.

5.407.2.2 Entries and openings. Design exterior entries and/or openings subject to foot traffic or wind-driven rain to prevent water intrusion into buildings as follows:

5.407.2.2.1 Exterior door protection. Primary exterior entries shall be covered to prevent water intrusion by using nonabsorbent floor and wall finishes within at least 2 feet around and perpendicular to such openings plus at least one of the following:

1. An installed awning at least 4 feet in depth.
2. The door is protected by a roof overhang at least 4 feet in depth.
3. The door is recessed at least 4 feet.
4. Other methods which provide equivalent protection.

5.407.2.2.2 Flashing. Install flashings integrated with a drainage plane.

SECTION 5.408 CONSTRUCTION WASTE REDUCTION, DISPOSAL AND RECYCLING

5.408.1 CONSTRUCTION WASTE MANAGEMENT. Recycle and/or salvage for reuse a minimum of 65% of the non-hazardous construction and demolition waste in accordance with Section 5.408.1.1, 5.408.1.2 or 5.408.1.3; or meet a local construction and demolition waste management ordinance, whichever is more stringent.

5.408.1.1 Construction waste management plan. Where a local jurisdiction does not have a construction and demolition waste management ordinance, submit a construction waste management plan that:

1. Identifies the construction and demolition waste materials to be diverted from disposal by efficient usage, recycling, reuse on the project or salvage for future use or sale.
2. Determines if construction and demolition waste materials will be sorted on-site (source-separated) or bulk mixed (single stream).
3. Identifies diversion facilities where construction and demolition waste material collected will be taken.
4. Specifies that the amount of construction and demolition waste materials diverted shall be calculated by weight or volume, but not by both.

5.408.1.2 Waste Management Company. Utilize a waste management company that can provide verifiable documentation that the percentage of construction and demolition waste material diverted from the landfill complies with this section.

Note: The owner or contractor shall make the determination if the construction and demolition waste material will be diverted by a waste management company.

Exceptions to Sections 5.408.1.1 and 5.408.1.2:

1. Excavated soil and land-clearing debris.
2. Alternate waste reduction methods developed by working with local agencies if diversion or recycle facilities capable of compliance with this item do not exist.
3. Demolition waste meeting local ordinance or calculated in consideration of local recycling facilities and markets.

5.408.1.3 Waste stream reduction alternative. The combined weight of new construction disposal that does not exceed two pounds per square foot of building area may be deemed to meet the 65% minimum requirement as approved by the enforcing agency.

5.408.1.4 Documentation. Documentation shall be provided to the enforcing agency which demonstrates compliance with Sections 5.408.1.1, through 5.408.1.3. The waste management plan shall be updated as necessary and shall be accessible during construction for examination by the enforcing agency.

Notes:

1. Sample forms found in "A Guide to the California Green Building Standards Code (Nonresidential)" located www.dgs.ca.gov/BSC/Resources/Page-Content/Building-Standards-Commission-Resources-List-Folder/CALGreen may be used to assist in documenting compliance with the waste management plan.
2. Mixed construction and demolition debris processors can be located at the California Department of Resources Recycling and Recovery (CalRecycle).

5.408.2 UNIVERSAL WASTE. [A] Additions and alterations to a building or tenant space that meet the scoping provisions in Section 301.3 for nonresidential additions and alterations, shall require verification that Universal Waste items such as fluorescent lamps and ballast and mercury containing thermostats as well as other California prohibited Universal Waste materials are disposed of properly and are diverted from landfills. A list of prohibited Universal Waste materials shall be included in the construction documents.

Note: Refer to the Universal Waste Rule link at: http://www.dtsc.ca.gov/universalwaste/

5.408.3 EXCAVATED SOIL AND LAND CLEARING DEBRIS. 100 percent of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled. For a phased project, such material may be stockpiled on site until the storage site is developed.

Exception: Reuse, either on or off-site, of vegetation or soil contaminated by disease or pest infestation.

Notes:

1. If contamination by disease or pest infestation is suspected, contact the County Agricultural Commissioner and follow its direction for recycling or disposal of the material.
2. For a map of know pest and/or disease quarantine zones, consult with the California Department of Food and Agriculture. (www.cdfa.ca.gov)

SECTION 5.410 BUILDING MAINTENANCE AND OPERATIONS

5.410.1 RECYCLING BY OCCUPANTS. Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of non-hazardous materials for recycling, including (at a minimum) paper, corrugated cardboard, glass, plastics, organic waste, and metals or meet a lawfully enacted local recycling ordinance, if more restrictive.

Exception: Rural jurisdictions that meet and apply for the exemption in Public Resources Code 42649.82 (a)(2)(A) et seq. shall also be exempt from the organic waste portion of this section.

5.410.1.1 Additions. All additions conducted within a 12-month period under single or multiple permits, resulting in an increase of 30% or more in floor area, shall provide recycling areas on site.

Exception: Additions within a tenant space resulting in less than a 30% increase in the tenant space floor area.

5.410.1.2 Sample ordinance. Space allocation for recycling areas shall comply with Chapter 18, Part 3, Division 30 of the *Public Resources Code*. Chapter 18 is known as the California Solid Waste Reuse and Recycling Access Act of 1991 (Act).

Note: A sample ordinance for use by local agencies may be found in Appendix A of the document at the CalRecycle's web site.

5.410.2 COMMISSIONING. [N] New buildings 10,000 square feet and over. For new buildings 10,000 square feet and over, building commissioning shall be included in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements. Commissioning shall be performed in accordance with this section by trained personnel with experience on projects of comparable size and complexity. For I-occupancies that are not regulated by OSHPD or for I-occupancies and L-occupancies that are not regulated y the California Energy Code Section 100.0 Scope, all requirements in Sections 5.410.2 through 5.410.2.6 shall apply.

Note: For energy-related systems under the scope (Section 100) of the California Energy Code, including heating, ventilation, air conditioning (HVAC) systems and controls, indoor lighting systems and controls, as well as water heating systems and controls, refer to California Energy Code Section 120.8 for commissioning requirements

Commissioning requirements shall include:

1. Owner's or Owner representative's project requirements.
2. Basis of design.
3. Commissioning measures shown in the construction documents.
4. Commissioning plan.
5. Functional performance testing.
6. Documentation and training.
7. Commissioning report.

Exceptions:

1. Unconditioned warehouses of any size.
2. Areas less than 10,000 square feet used for offices or other conditioned accessory spaces within unconditioned warehouses.
3. Tenant improvements less than 10,000 square feet as described in Section 303.1.1.
4. Open parking garages of any size, or open parking garage areas, of any size, within a structure.

Note: For the purposes of this section, unconditioned shall mean a building, area, or room which does not provide heating and or air conditioning.

Informational Notes:

1. IAS AC 476 is an accreditation criteria for organizations providing training and/or certification of commissioning personnel. AC 476 is available to the Authority Having Jurisdiction as a reference for qualifications of commissioning personnel. AC 476 des not certify individuals to conduct functional performance tests or to adjust and balance systems.
2. Functional performance testing for heating, ventilation, air conditioning systems and lighting controls must be performed in compliance with the *California Energy Code*.

5.410.2.1 Owner's or Owner Representative's Project Requirements (OPR). [N] The expectations and requirements of the building appropriate to its phase shall be documented before the design phase of the project begins. This documentation shall include the following:
1. Environmental and sustainability goals.
2. Building sustainable goals.
3. Indoor environmental quality requirements.
4. Project program, including facility functions and hours of operation, and need for after hours operation.
5. Equipment and systems expectations.
6. Building occupant and operation and maintenance (O&M) personnel expectations.

5.410.2.2 Basis of Design (BOD). [N] A written explanation of how the design of the building systems meets the OPR shall be completed at the design phase of the building project. The Basis of Design document shall cover the following systems:

1. Renewable energy systems.
2. Landscape irrigation systems.
3. Water reuse system.

5.410.2.3 Commissioning plan. [N] Prior to permit issuance a commissioning plan shall be completed to document how the project will be commissioned. The commissioning plan shall include the following:
1. General project information.
2. Commissioning goals.
3. Systems to be commissioned. Plans to test systems and components shall include:
   a. An explanation of the original design intent.
   b. Equipment and systems to be tested, including the extent of tests.
   c. Functions to be tested.
   d. Conditions under which the test shall be performed.
   e. Measurable criteria for acceptable performance.
4. Commissioning team information.
5. Commissioning process activities, schedules and responsibilities. Plans for the completion of commissioning shall be included.

5.410.2.4 Functional performance testing. [N] Functional performance tests shall demonstrate the correct installation and operation of each component, system and system-to-system interface in accordance with the approved plans and specifications. Functional performance testing reports shall contain information addressing each of the building components tested, the testing methods utilized, and include any readings and adjustments made.

5.410.2.5 Documentation and training. [N] A Systems Manual and Systems Operations Training are required, including Occupational Safety and Health Act (OSHA) requirements in *California Code of Regulations* (CCR), Title 8, Section 5142, and other related regulations.

5.410.2.5.1 Systems manual. [N] Documentation of the operational aspects of the building shall be completed within the systems manual and delivered to the building owner or representative. The systems manual shall include the following:
1. Site information, including facility description, history and current requirements.
2. Site contact information.
3. Basic operations and maintenance, including general site operating procedures, basic troubleshooting, recommended maintenance requirements, site events log.
4. Major systems.
5. Site equipment inventory and maintenance notes.
6. A copy of verifications required by the enforcing agency or this code.
7. Other resources and documentation, if applicable.

5.410.2.5.2 Systems operations training. [N] A program for training of the appropriate maintenance staff for each equipment type and/or system shall be developed and documented in the commissioning report and shall include the following:
1. System/equipment overview (what it is, what it does and with what other systems and/or equipment it interfaces).
2. Review and demonstration of servicing/preventive maintenance.
3. Review of the information in the Systems Manual.
4. Review of the record drawings on the system/equipment.

5.410.2.6 Commissioning report. [N] A report of commissioning process activities undertaken through the design and construction phases of the building project shall be completed and provided to the owner or representative.

5.410.4 TESTING AND ADJUSTING. New buildings less than 10,000 square feet. Testing and adjusting of systems shall be required for new buildings less than 10,000 square feet or new systems to serve an addition or alteration subject to Section 303.1.

5.410.4.2 (Reserved)

Note: For energy-related systems under the scope (Section 100) of the California Energy Code, including heating, ventilation, air conditioning (HVAC) systems and controls, indoor lighting system and controls, as well as water heating systems and controls, refer to California Energy Code Section 120.8 for commissioning requirements and Sections 120.5, 120.6, 130.4, and 140.9(b)3 for additional testing requirements of specific systems.

5.410.4.2 Systems. Develop a written plan of procedures for testing and adjusting systems. Systems to be included for testing and adjusting shall include at a minimum, as applicable to the project:

1. Renewable energy systems.
2. Landscape irrigation systems.
3. Water reuse systems.

5.410.4.3 Procedures. Perform testing and adjusting procedures in accordance with manufacturer's specifications and applicable standards on each system.

5.410.4.3.1 HVAC balancing. In addition to testing and adjusting, before a new space-conditioning system serving a building or space is operated for normal use, the system shall be balanced in accordance with the procedures defined by the Testing Adjusting and Balancing Bureau National Standards; the National Environmental Balancing Bureau Procedural Standards; Associated Air Balance Council National Standards or as approved by the enforcing agency.

5.410.4.4 Reporting. After completion of testing, adjusting and balancing, provide a final report of testing signed by the individual responsible for performing these services.

5.410.4.5 Operation and maintenance (O & M) manual. Provide the building owner or representative with detailed operating and maintenance instructions and copies of guaranties/warranties for each system. O & M instructions shall be consistent with OSHA requirements in CCR, Title 8, Section 5142, and other related regulations.

5.410.4.5.1 Inspections and reports. Include a copy of all inspection verifications and reports required by the enforcing agency.

DIVISION 5.5 ENVIRONMENTAL QUALITY

SECTION 5.501 GENERAL

5.501.1 SCOPE. The provisions of this chapter shall outline means of reducing the quantity of air contaminants that are odorous, irritating, and/or harmful to the comfort and well-being of a building's installers, occupants and neighbors.

SECTION 5.502 DEFINITIONS

5.502.1 DEFINITIONS. The following terms are defined in Chapter 2 *(and are included here for reference)*

ARTERIAL HIGHWAY. A general term denoting a highway primarily for through traffic usually on a continuous route.

A-WEIGHTED SOUND LEVEL (dBA). The sound pressure level in decibels as measured on a sound level meter using the internationally standardized A-weighting filter or as computed from sound spectral data to which A-weighting adjustments have been made.

1 BTU/HOUR. British thermal units per hour, also referred to as Btu. The amount of heat required to raise one pound of water one degree Fahrenheit per hour, a common measure of heat transfer rate. A ton of refrigeration is 12,000 Btu, the amount of heat required to melt a ton (2,000 pounds) of ice at 32^{0} Fahrenheit.

COMMUNITY NOISE EQUIVALENT LEVEL (CNEL). A metric similar to the day-night average sound level (Ldn), except that a 5 decibel adjustment is added to the equivalent continuous sound exposure level for evening hours (7pm to 10pm) in addition to the 10 dB nighttime adjustment used in the Ldn.

COMPOSITE WOOD PRODUCTS. Composite wood products include hardwood plywood, particleboard and medium density fiberboard. "Composite wood products" does not include hardboard, structural plywood, structural panels, structural composite lumber, oriented strand board, glued laminated timber, timber, prefabricated wood I--joists or finger--jointed lumber, all as specified in California Code of Regulations (CCR), Title 17, Section 93120.1(a).

Note: See CCR, Title 17, Section 93120.1.

DAY-NIGHT AVERAGE SOUND LEVEL (Ldn). The A-weighted equivalent continuous sound exposure level for a 24-hour period with a 10 dB adjustment added to sound levels occurring during nighttime hours (10p.m. to 7 a.m.).

DECIBEL (db). A measure on a logarithmic scale of the magnitude of a particular quantity (such as sound pressure, sound power, sound intensity) with respect to a reference quantity.

ELECTRIC VEHICLE (EV). An automotive-type vehicle for on-road use, such as passenger automobiles, buses, trucks, vans, neighborhood electric vehicles, electric motorcycles, and the like, primarily powered by an electric motor that draws current from a rechargeable storage battery, fuel cell, photovoltaic array, or other source of electric current. Plug-in hybrid electric vehicles (PHEV) are considered electric vehicles. For purposes of the *California Electrical Code*, off-road, self-propoelled electric vehicles, such as industrial trucks, hoists, lifts, transports, golf carts, airline ground support equipment, tractors, boats, and the like, are not included.

ELECTRIC VEHICLE CHARGING STATION(S) (EVCS)). One or more spaces intended for charging electric vehicles.

ELECTRIC VEHICLE SUPPLY EQUIPMENT (EVSE). The conductors, including the ungrounded, grounded, and equipment grounding conductors and the electric vehicle connectors, attachment plugs, and all other fittings, devices, power outlets, or apparatus installed specifically for the purpose of transferring energy between the premises wiring and the electric vehicle.

ENERGY EQUIVALENT (NOISE) LEVEL (Leq). The level of a steady noise which would have the same energy as the fluctuating noise level integrated over the time of period of interest.

EXPRESSWAY. An arterial highway for through traffic which may have partial control of access, but which may or may not be divided or have grade separations at intersections.

FREEWAY. A divided arterial highway with full control of access and with grade separations at intersections.

GLOBAL WARMING POTENTIAL (GWP). The radiative forcing impact of one mass-based unit of a given greenhouse gas relative to an equivalent unit of carbon dioxide over a given period of time. Carbon dioxide is the reference compound with a GWP of one.

GLOBAL WARMING POTENTIAL VALUE (GWP VALUE). A 100-year GWP value published by the Intergovernmental Panel on Climate Change (IPCC) in either its Second Assessment Report (SAR) (IPCC, 1995); or its Fourth Assessment A-3 Report (AR4) (IPCC, 2007). The SAR GWP values are found in column "SAR (100-yr)" of Table 2.14.; the AR4 GWP values are found in column "100 yr" of Table 2.14.

HIGH-GWP REFRIGERANT. A compound used as a heat transfer fluid or gas that is: (a) a chlorofluorocarbon, a hdrochlorofluorocarbon, a hydrofluorocarbon, a perfluorocarbon, or any compound or blend of compounds, with a GWP value equal to or greater than 150, or (B) any ozone depleting substance as defined in Title 40 of the Code of Federal Regulations, Part 82, sec.82.3 (as amended March 10, 2009)**.**

LONG RADIUS ELBOW. Pipe fitting installed between two lengths of pipe or tubing to allow a change of direction, with a radius 1.5 times the pipe diameter.

LOW-GWP REFRIGERANT. A compound used as a heat transfer fluid or gas that: (A) has a GWP value less than 150, and (B) is not an ozone depleting substance as defined in Title 40 of the Code of Federal Regulations, Part 82, sec.82.3 (as amended March 10, 2009).

MERV. Filter minimum efficiency reporting value, based on ASHRAE 52.2--1999.

MAXIMUM INCREMENTAL REACTIVITY (MIR). The maximum change in weight of ozone formed by adding a compound to the "Base REactive Organic Gas (ROG) Mixture" per weight of compound added, expressed to hundredths of a gram (g O^{3}/g ROC).

PRODUCT-WEIGHTED MIR (PWMIR). The sum of all weighted-MIR for all ingredients in a product subject to this article. The PWMIR is the total product reactivity expressed to hundredths of a gram of ozone formed per gram of product (excluding container and packaging).

PSIG. Pounds per square inch, guage.

REACTIVE ORGANIC COMPOUND (ROC). Any compound that has the potential, once emitted, to contribute to ozone formation in the troposphere.

SCHRADER ACCESS VALVES. Access fittings with a valve core installed.

SHORT RADIUS ELBOW. Pipe fitting installed between two lengths of pipe or tubing to allow a change of direction, with a radius 1.0 times the pipe diameter.

SUPERMARKET. For the purposes of Section 5.508.2, a supermarket is any retail food facility with 8,000 square feet or more conditioned area, and that utilizes either refrigerated display cases, or walk-in coolers or freezers connected to remote compressor units or condensing units.

VOC. A volatile organic compound broadly defined as a chemical compound based on carbon chains or rings with vapor pressures greater than 0.1 millimeters of mercury at room temperature. These compounds typically contain hydrogen and may contain oxygen, nitrogen and other elements. See CCR Title 17, Section 94508(a)

Note: Where specific regulations are cited from different agencies such as SCAQMD, ARB, etc., the VOC definition included in that specific regulation is the one that prevails for the specific measure in question.

SECTION 5.503 FIREPLACES

5.503.1 FIREPLACES. Install only a direct-vent sealed-combustion gas or sealed wood-burning fireplace, or a sealed woodstove or pellet stove, and refer to residential requirements in the California Energy Code, Title 24, Part 6, Subchapter 7, Section 150. Woodstoves, pellet stoves and fireplaces shall comply with applicable local ordinances.

5.503.1.1 Woodstoves. Woodstoves and pellet stoves shall comply with U.S. EPA New Source Performance Standards (NSPS) emission limits as applicable, and shall have a permanent label indicating they are certified to meet the emission limits.

SECTION 5.504 POLLUTANT CONTROL

5.504.1 TEMPORARY VENTILATION. The permanent HVAC system shall only be used during construction if necessary to condition the building or areas of addition or alteration within the required temperature range for material and equipment installation. If the HVAC system is used during construction, use return air filters with a Minimum Efficiency Reporting Value (MERV) of 8, based on ASHRAE 52.2-1999, or an average efficiency of 30% based on ASHRAE 52.1-1992 Replace all filters immediately prior to occupancy, or, if the building is occupied during alteration, at the conclusion of construction.

5.504.3 Covering of duct openings and protection of mechanical equipment during construction. At the time of rough installation and during storage on the construction site until final startup of the heating, cooling and ventilation equipment, all duct and other related air distribution component openings shall be covered with tape, plastic, sheetmetal or other methods acceptable to the enforcing agency to reduce the amount of dust, water and debris which may enter the system.

DISCLAIMER:THIS DOCUMENT IS PROVIDED AND INTENDED TO BE USED AS A MEANS TO INDICATE AREAS OF COMPLIANCE WITH THE CALIFORNIA GREEN BUILDING STANDARDS (CALGREEN) CODE. DUE TO THE VARIABLES BETWEEN BUILDING DEPARTMENT JURISDICTIONS, THIS CHECKLIST IS TO BE USED ON AN INDIVIDUAL PROJECT BASIS AND MAY BE MODIFIED BY THE END USER TO MEET THOSE INDIVIDUAL NEEDS. THE END USER ASSUMES ALL RESPONSIBILITY ASSOCIATED WITH THE USE OF THIS DOCUMENT, INCLUDING VERIFICATION WITH THE FULL CODE.

5.504.4 FINISH MATERIAL POLLUTANT CONTROL. Finish materials shall comply with Sections 5.504.4.1 through 5.504.4.6.

5.504.4.1 Adhesives, sealants and caulks. Adhesives, sealants, and caulks used on the project shall meet the requirements of the following standards:

1. Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168 VOC limits, as shown in Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride, methylene chloride, perchloroethylene and trichloroethylene), except for aerosol products as specified in subsection 2, below.

2. Aerosol adhesives, and smaller unit sizes of adhesives, and sealant or caulking compounds (in units of product, less packaging, which do not weigh more than one pound and do not consist of more than 16 fluid ounces) shall comply with statewide VOC standards and other requirements, including prohibitions on use of certain toxic compounds, of *California Code of Regulations*, Title 17, commencing with Section 94507.

TABLE 5.504.4.1 - ADHESIVE VOC LIMIT[1,2]

Less Water and Less Exempt Compounds in Grams per Liter

ARCHITECTURAL APPLICATIONS	CURRENT VOC LIMIT
INDOOR CARPET ADHESIVES	50
CARPET PAD ADHESIVES	50

5.504.4.3 Paints and coatings. Architectural paints and coatings shall comply with VOC limits in Table 1 of the ARB Architectural Coatings Suggested Control Measure, as shown in Table 5.504.4.3, unless more stringent local limits apply. The VOC content limit for coatings that do not meet the definitions for the specialty coatings categories listed in Table 5.504.4.3 shall be determined by classifying the coating as a Flat, Nonflat or Nonflat-High Gloss coating, based on its gloss, as defined in Subsections 4.21, 4.36 and 4.37 of the 2007 California Air Resources Board Suggested Control Measure, and the corresponding Flat, Nonflat or Nonflat-High Gloss VOC limit in Table 5.504.4.3 shall apply.

5.504.4.3.1 Aerosol Paints and coatings. Aerosol paints and coatings shall meet the PWMIR Limits for ROC in Section 94522(a)(3) and other requirements, including prohibitions on use of certain toxic compounds and ozone depleting substances, in Sections 94522(c)(2) and (d)(2) of *California Code of Regulations*, Title 17, commencing with Section 94520; and in areas under the jurisdiction of the Bay Area Air Quality Management District additionally comply with the percent VOC by weight of product limits of Regulation 8 Rule 49.

1. GRAMS OF VOC PER LITER OF COATING, INCLUDING WATER & EXEMPT COMPOUNDS

2. THE SPECIFIED LIMITS REMAIN IN EFFECT UNLESS REVISED LIMITS ARE LISTED IN SUBSEQUENT COLUMNS IN THE TABLE.

3. VALUES IN THIS TABLE ARE DERIVED FROM THOSE SPECIFIED BY THE CALIFORNIA AIR RESOURCES BOARD, ARCHITECTURAL COATINGS SUGGESTED CONTROL MEASURE, FEB. 1, 2006. MORE INFORMATION IS AVAILABLE FROM THE AIR RESOURCES BOARD.

5.504.4.3.2 Verification. Verification of compliance with this section shall be provided at the request of the enforcing agency. Documentation may include, but is not limited to, the following:

1. Manufacturer's product specification
2. Field verification of on-site product containers

5.504.4.4 Carpet Systems.
All carpet installed in the building interior shall meet the requirements of the California Department of Public Health, "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Version 1.2, January 2017 (Emission testing method for California Specifications 01350).

See California Department of Public Health's website for certification programs and testing labs.
https://www.cdph.ca.gov/Programs/CCDPHP/DEODC/EHLB/IAQ/Pages/VOC.aspx#material

5.504.4.4.1 Carpet cushion. All carpet cushion installed in the building interior shall meet the requirements of the California Department of Public Health,"Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers,"Version 1.2, January 2017 (Emission testing method for California Specifications 01350).

See California Department of Public Health's website for certification programs and testing labs.
https://www.cdph.ca.gov/Programs/CCDPHP/DEODC/EHLB/IAQ/Pages/VOC.aspx#material

5.504.4.4.2 Carpet adhesive. All carpet adhesive shall meet the requirements of Table 5.504.4.1.

5.504.4.5 Composite wood products. Hardwood plywood, particleboard and medium density fiberboard composite wood products used on the interior or exterior of the buildings shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure (ATCM) for Composite Wood (17 CCR 93120 et seq.). Those materials not exempted under the ATCM must meet the specified emission limits, as shown in Table 5.504.4.5.

5.504.4.5.3 Documentation. Verification of compliance with this section shall be provided as requested by the enforcing agency. Documentation shall include at least one of the following:

1. Product certifications and specifications.
2. Chain of custody certifications.
3. Product labeled and invoiced as meeting the Composite Wood Products regulation (see CCR, Title 17, Section 93120, et seq.).
4. Exterior grade products marked as meeting the PS-1 or PS-2 standards of the Engineered Wood Association, the Australian AS/NZS 2269 or European 636 3S standards.
5. Other methods acceptable to the enforcing agency.

TABLE 5.504.4.5 - FORMALDEHYDE LIMITS[1]

MAXIMUM FORMALDEHYDE EMISSIONS IN PARTS PER MILLION

PRODUCT	CURRENT LIMIT
HARDWOOD PLYWOOD VENEER CORE	0.05
HARDWOOD PLYWOOD COMPOSITE CORE	0.05
PARTICLE BOARD	0.09
MEDIUM DENSITY FIBERBOARD	0.11
THIN MEDIUM DENSITY FIBERBOARD[2]	0.13

1. VALUES IN THIS TABLE ARE DERIVED FROM THOSE SPECIFIED BY THE CALIFORNIA AIR RESOURCES BOARD, AIR TOXICS CONTROL MEASURE FOR COMPOSITE WOOD AS TESTED IN ACCORDANCE WITH ASTM E 1333. FOR ADDITIONAL INFORMATION, SEE CALIFORNIA CODE OF REGULATIONS, TITLE 17, SECTIONS 93120 THROUGH 93120.12.

2. THIN MEDIUM DENSITY FIBERBOARD HAS A MAXIMUM THICKNESS OF 5/16 INCHES (8 MM).

Y	N/A	RESPON. PARTY
☐	☐	

5.504.4.6 Resilient flooring systems. Where resilient flooring is installed, at least 80 percent of floor area receiving resilient flooring shall meet the requirements of the California Department of Public Health,"Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers," Version 1.2, January 2017 (Emission testing method for California Specifications 01350)

See California Department of Public Health's website for certification programs and testing labs.
https://www.cdph.ca.gov/Programs/CCDPHP/DEODC/EHLB/IAQ/Pages/VOC.aspx#material

5.504.4.6.1 Verification of compliance. Documentation shall be provided verifying that resilient flooring materials meet the pollutant emission limits.

5.504.4.7 Thermal insulation
Comply with the requirements of the California Department of Public Health, "Standard Method of the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, "Version 1.2, January 1.2, January 2017 (Emission testing method for California Specification 01350).
See California Department of Public Health's website for certification programs and testing labs.
https://www.cdph.ca.gov/Programs/CCDPHP/DEODC/EHLB/IAQ/Pages/VOC.aspx#material

5.504.4.7.1 Verification of compliance.
Documentation shall be provided verifying that thermal insulation materials meet the pollutant emission limits.

5.504.4.8 Acoustical ceiling and wall panels.
Comply with the requirements of the California Department of Public Health, "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, " Version 1.2, January 2017 (Emission testing method for California Specification 01350).
See California Department of Public Health's website for certification programs and testing labs.

5.504.4.8.1 Verification of compliance. Documentation shall be provided verifying that acoustical finish materials meet the pollutant emission limits.

5.504.5.3 Filters. In mechanically ventilated buildings, provide regularly occupied areas of the building with air filtration media for outside and return air that provides at least a Minimum Efficiency Reporting Value (MERV) of 13. MERV 13 filters shall be installed prior to occupancy, and recommendations for maintenance with filters of the same value shall be included in the operation and maintenance manual.

Exceptions: Existing mechanical equipment.

5.504.5.3.1 Labeling. Installed filters shall be clearly labeled by the manufacturer indicating the MERV rating.

☒	☐	OWNR

5.504.7 ENVIRONMENTAL TOBACCO SMOKE (ETS) CONTROL. Where outdoor areas are provided for smoking, prohibit smoking within 25 feet of building entries, outdoor air intakes and operable windows and within the building as already prohibited by other laws or regulations; or as enforced by ordinances, regulations or policies of any city, county, city and county, California Community College, campus of the California State University, or campus of the University of California, whichever are more stringent. When ordinances, regulations or policies are not in place, post signage to inform building occupants of the prohibitions.

SECTION 5.505 INDOOR MOISTURE CONTROL

5.505.1 INDOOR MOISTURE CONTROL. Buildings shall meet or exceed the provisions of California Building Code, CCR, Title 24, Part 2, Sections 1202 (Ventilation) and Chapter 14 (Exterior Walls). For additional measures, see Section 5.407.2 of this code.

☒	☐	ARCH

SECTION 5.506 INDOOR AIR QUALITY

5.506.1 OUTSIDE AIR DELIVERY. For mechanically or naturally ventilated spaces in buildings, meet the minimum requirements of Section 120.1 (Requirements For Ventilation) of the *California Energy Code*, or the applicable local code, whichever is more stringent, and Division 1, Chapter 4 of CCR, Title 8.

☒	☐	MECH

5.506.2 CARBON DIOXIDE (CO_2) MONITORING. For buildings or additions equipped with demand control ventilation, CO_2 sensors and ventilation controls shall be specified and installed in accordance with the requirements of the California Energy Code, Section 120(c)(4).

☐	☒	

5.506.3 Carbon dioxide (CO2) monitoring in classrooms.
(DSA-SS) Each public K-12 school classroom, as listed in Table 120.1-A of the *California Energy Code*, shall be equipped with a carbon dioxide monitor or sensor that meets the following requirements:

1. The monitor or sensor shall be permanently affixed in a tamper-proof manner in each classroom between 3 and 6 feet (914 mm and 1829 mm) above the floor and at least 5 feet (1524 mm) away from door and operable windows.
2. When the monitor or sensor is not integral to an Energy Management Control System (EMCS), the monitor or sensor shall display the carbon dioxide readings on the device. When the sensor is integral to an EMCS, the carbon dioxide readings shall be available to and regularly monitored by facility personnel.
3. A monitor shall provide notification though a visual indicator on the monitor when the carbon dioxide levels in the classroom have exceeded 1,100ppm. A sensor integral to an EMCS shall provide notification to facility personnel through a visual and/or audible indicator when the carbon dioxide levels in the classroom have exceeded 1,100ppm.
4. The monitor or sensor shall measure carbon dioxide levels at minimum 15- minute intervals and shall maintain a record of previous carbon dioxide measurements of not less than 30 days duration.
5. The monitor or sensor used to measure carbon dioxide levels shall have the capacity to measure carbon dioxide levels with a range of 400ppm to 2000ppm or greater.
6. The monitor or sensor shall be certified by the manufacturer to be accurate within 75ppm at 1,000ppm carbon dioxide concentration and shall be certified by the manufacturer to require calibration no more frequently than once every 5 years.

SECTION 5.507 ENVIRONMENTAL COMFORT

5.507.4 ACOUSTICAL CONTROL. Employ building assemblies and components with Sound Transmission Class (STC) values determined in accordance with ASTM E 90 and ASTM E 413, or Outdoor-Indoor Sound Transmission Class (OITC) determined in accordance with ASTM E 1332, using either the prescriptive or performance method in Section 5.507.4.1 or 5.507.4.2.

Exception: Buildings with few or no occupants or where occupants are not likely to be affected by exterior noise, as determined by the enforcement authority, such as factories, stadiums, storage, enclosed parking structures and utility buildings.

Exception: [DSA-SS] For public schools and community colleges, the requirements of this section and all subsections apply only to new construction.

5.507.4.1 Exterior noise transmission, prescriptive method. Wall and roof-ceiling assemblies exposed to the noise source making up the building or addition envelope or altered envelope shall meet a composite STC rating of at least 50 or a composite OITC rating of no less than 40, with exterior windows of a minimum STC of 40 or OITC of 30 in the following locations:

1. Within the 65 CNEL noise contour of an airport.

   Exceptions:

   1. L_{dn} or CNEL for military airports shall be determined by the facility Air Installation Compatible Land Use Zone (AICUZ) plan.
   2. L_{dn} or CNEL for other airports and heliports for which a land use plan has not been developed shall be determined by the local general plan noise element.

2. Within the 65 CNEL or L_{dn} noise contour of a freeway or expressway, railroad, industrial source or fixed-guideway source as determined by the Noise Element of the General Plan.

5.507.4.1.1. Noise exposure where noise contours are not readily available. Buildings exposed to a noise level of 65 dB L_{eq} - 1-hr during any hour of operation shall have building, addition or alteration exterior wall and roof-ceiling assemblies exposed to the noise source meeting a composite STC rating of at least 45 (or OITC 35), with exterior windows of a minimum STC of 40 (or OITC 30).

5.507.4.2 Performance Method. For buildings located as defined in Section 5.507.4.1 or 5.507.4.1.1, wall and roof-ceiling assemblies exposed to the noise source making up the building or addition envelope or altered envelope shall be constructed to provide an interior noise environment attributable to exterior sources that does not exceed an hourly equivalent noise level (L_{eq}-1Hr) of 50 dBA in occupied areas during any hour of operation.

5.507.4.2.1 Site Features. Exterior features such as sound walls or earth berms may be utilized as appropriate to the building, addition or alteration project to mitigate sound migration to the interior.

5.507.4.2.2 Documentation of Compliance. An acoustical analysis documenting complying interior sound levels shall be prepared by personnel approved by the architect or engineer of record.

5.507.4.3 Interior sound transmission. Wall and floor-ceiling assemblies separating tenant spaces and tenant spaces and public places shall have an STC of at least 40.

Note: Examples of assemblies and their various STC ratings may be found at the California Office of Noise Control: www.toolbase.org/PDF/CaseStudies/stc_icc_ratings.pdf.

SECTION 5.508 OUTDOOR AIR QUALITY

5.508.1 Ozone depletion and greenhouse gas reductions. Installations of HVAC, refrigeration and fire suppression equipment shall comply with Sections 5.508.1.1 and 5.508.1.2.

5.508.1.1 Chlorofluorocarbons (CFCs). Install HVAC, refrigeration and fire suppression equipment that do not contain CFCs.

5.508.1.2 Halons. Install HVAC, refrigeration and fire suppression equipment that do not contain Halons.

Y	N/A	RESPON. PARTY
☐	☒	

5.508.2 Supermarket refrigerant leak reduction. New commercial refrigeration systems shall comply with the provisions of this section when installed in retail food stores 8,000 square feet or more conditioned area, and that utilize either refrigerated display cases, or walk-in coolers or freezers connected to remote compressor units or condensing units. The leak reduction measures apply to refrigeration systems containing high-global-warming potential (high-GWP) refrigerants with a GWP of 150 or greater. New refrigeration systems include both new facilities and the replacement of existing refrigeration systems in existing facilities.

Exception: Refrigeration systems containing low-global warming potential (low-GWP) refrigerant with a GWP value less than 150 are not subject to this section. Low-GWP refrigerants are nonozone-depleting refrigerants that include ammonia, carbon dioxide (CO_2), and potentially other refrigerants.

5.508.2.1 Refrigerant piping. Piping compliant with the California Mechanical Code shall be installed to be accessible for leak protection and repairs. Piping runs using threaded pipe, copper tubing with an outside diameter (OD) less than 1/4 inch, flared tubing connections and short radius elbows shall not be used in refrigerant systems except as noted below.

5.508.2.1.1 Threaded pipe. Threaded connections are permitted at the compressor rack.

5.508.2.1.2 Copper pipe. Copper tubing with an OD less than 1/4 inch may be used in systems with a refrigerant charge of 5 pounds or less.

5.508.2.1.2.1 Anchorage. One-fourth-inch OD tubing shall be securely clamped to a rigid base to keep vibration levels below 8 mils.

5.508.2.1.3 Flared tubing connections. Double-flared tubing connections may be used for pressure controls, valve pilot lines and oil.

Exception: Single-flared tubing connections may be used with a multiring seal coated with industrial sealant suitable for use with refrigerants and tightened in accordance with manufacturer's recommendations.

5.508.2.1.4 Elbows. Short radius elbows are only permitted where space limitations prohibit use of long radius elbows.

5.508.2.2 Valves. Valves Valves and fittings shall comply with the *California Mechanical Code* and as follows.

5.508.2.2.1 Pressure relief valves. For vessels containing high-GWP refrigerant, a rupture disc shall be installed between the outlet of the vessel and the inlet of the pressure relief valve.

5.508.2.2.1.1 Pressure detection. A pressure gauge, pressure transducer or other device shall be installed in the space between the rupture disc and the relief valve inlet to indicate a disc rupture or discharge of the relief valve.

5.508.2.2.2 Access valves. Only Schrader access valves with a brass or steel body are permitted for use.

5.508.2.2.2.1 Valve caps. For systems with a refrigerant charge of 5 pounds or more, valve caps shall be brass or steel and not plastic.

5.508.2.2.2.2 Seal caps. If designed for it, the cap shall have a neoprene O-ring in place.

5.508.2.2.2.2.1 Chain tethers. Chain tethers to fit ovr the stem are required for valves designed to have seal caps.

Exception: Valves with seal caps that are not removed from the valve during stem operation.

5.508.2.3 Refrigerated service cases. Refrigerated service cases holding food products containing vinegar and salt shall have evaporator coils of corrosion-resistant material, such as stainless steel; or be coated to prevent corrosion from these substances.

5.508.2.3.1 Coil coating. Consideration shall be given to the heat transfer efficiency of coil coating to maximize energy efficiency.

5.508.2.4 Refrigerant receivers. Refrigerant receivers with capacities greater than 200 pounds shall be fitted with a device tha indicates the level of refrigerant in the receiver.

5.508.2.5 Pressure testing. The system shall be pressure tested during installation prior to evacuation and charging.

5.508.2.5.1 Minimum pressure. The system shall be charged with regulated dry nitrogen and appropriate tracer gas to bring system pressure up to 300 psig minimum.

5.508.2.5.2 Leaks. Check the system for leaks, repair any leaks, and retest for pressure using the same gauge.

5.508.2.5.3 Allowable pressure change. The system shall stand, unaltered, for 24 hours with no more than a +/- one pound pressure change from 300 psig, measured with the same gauge.

5.508.2.6 Evacuation. The system shall be evacuated after pressure testing and prior to charging.

5.508.2.6.1 First vacuum. Pull a system vacuum down to at least 1000 microns (+/- 50 microns), and hold for 30 minutes.

5.508.2.6.2 Second vacuum. Pull a second system vacuum to a minimum of 500 microns and hold for 30 minutes.

5.508.2.6.3 Third vacuum. Pull a third vacuum down to a minimum of 300 microns, and hold for 24 hours with a maximum drift of 100 microns over a 24-hour period.

CHAPTER 7
INSTALLER & SPECIAL INSPECTOR QUALIFICATIONS

702 QUALIFICATIONS

702.1 INSTALLER TRAINING. HVAC system installers shall be trained and certified in the proper installation of HVAC systems including ducts and equipment by a nationally or regionally recognized training or certification program. Uncertified persons may perform HVAC installations when under the direct supervision and responsibility of a person trained and certified to install HVAC systems or contractor licensed to install HVAC systems. Examples of acceptable HVAC training and certification programs include but are not limited to the following:

1. State certified apprenticeship programs.
2. Public utility training programs.
3. Training programs sponsored by trade, labor or statewide energy consulting or verification organizations.
4. Programs sponsored by manufacturing organizations.
5. Other programs acceptable to the enforcing agency.

702.2 SPECIAL INSPECTION [HCD]. When required by the enforcing agency, the owner or the responsible entity acting as the owner's agent shall employ one or more special inspectors to provide inspection or other duties necessary to substantiate compliance with this code. Special inspectors shall demonstrate competence to the satisfaction of the enforcing agency for the particular type of inspection or task to be performed. In addition to other certifications or qualifications acceptable to the enforcing agency, the following certifications or education may be considered by the enforcing agency when evaluating the qualifications of a special inspector:

1. Certification by a national or regional green building program or standard publisher.
2. Certification by a statewide energy consulting or verification organization, such as HERS raters, building performance contractors, and home energy auditors.
3. Successful completion of a third party apprentice training program in the appropriate trade.
4. Other programs acceptable to the enforcing agency.

Notes:

1. Special inspectors shall be independent entities with no financial interest in the materials or the project they are inspecting for compliance with this code.
2. HERS raters are special inspectors certified by the California Energy Commission (CEC) to rate homes in California according to the Home Energy Rating System (HERS).

[BSC-CG] When required by the enforcing agency, the owner or the responsible entity acting as the owner's agent shall employ one or more special inspectors to provide inspection or other duties necessary to substantiate compliance with this code. Special inspectors shall demonstrate competence to the satisfaction of the enforcing agency for the particular type of inspection or task to be performed. In addition, the special inspector shall have a certification from a recognized state, national or international association, as determined by the local agency. The area of certification shall be closely related to the primary job function, as determined by the local agency.

Note: Special inspectors shall be independent entities with no financial interest in the materials or the project they are inspecting for compliance with this code.

703 VERIFICATIONS

703.1 DOCUMENTATION. Documentation used to show compliance with this code shall include but is not limited to, construction documents, plans, specifications, builder or installer certification, inspection reports, or other methods acceptable to the enforcing agency which demonstrate substantial conformance. When specific documentation or special inspection is necessary to verify compliance, that method of compliance will be specified in the appropriate section or identified applicable checklist.

DISCLAIMER: *THIS DOCUMENT IS PROVIDED AND INTENDED TO BE USED AS A MEANS TO INDICATE AREAS OF COMPLIANCE WITH THE CALIFORNIA GREEN BUILDING STANDARDS (CALGREEN) CODE. DUE TO THE VARIABLES BETWEEN BUILDING DEPARTMENT JURISDICTIONS, THIS CHECKLIST IS TO BE USED ON AN INDIVIDUAL PROJECT BASIS AND MAY BE MODIFIED BY THE END USER TO MEET THOSE INDIVIDUAL NEEDS. THE END USER ASSUMES ALL RESPONSIBILITY ASSOCIATED WITH THE USE OF THIS DOCUMENT, INCLUDING VERIFICATION WITH THE FULL CODE.*

CODE SITE GENERAL NOTES

A. ALL NEW CONCRETE AND AC PAVING IN P.O.T. SHALL HAVE 2% MAX. SLOPE IN ALL DIRECTIONS U.N.O. AND SHALL HAVE FLUSH TRANSITIONS TO ALL ADJACENT NEW AND EXISTING WALK SURFACES IN P.O.T.
B. ALL LANDSCAPE EDGES ALONG ALL NEW OR EXISTING WALK SURFACES IN P.O.T. SHALL BE PER CIVIL DRAWINGS.
C. FOR GRATINGS OR STRAINERS LOCATED IN THE SURFACE OF ANY PEDESTRIAN WAY OR IN P.O.T., THE MAXIMUM GRATE OR STRAINER OPENINGS SHALL NOT EXCEED 1/2" IN THE DIRECTION OF TRAFFIC FLOW.
D. THE P.O.T. IDENTIFIED IN THESE CONSTRUCTION DOCUMENTS IS COMPLIANT WITH THE CURRENT APPLICABLE CALIFORNIA BUILDING CODE ACCESSIBILITY PROVISIONS FOR THE PATH OF TRAVEL REQUIREMENTS FOR ALTERATIONS, ADDITIONS, AND STRUCTURAL REPAIRS. AS PART OF THE DESIGN OF THIS PROJECT, THE P.O.T. WAS EXAMINED AND ANY ELEMENTS, COMPONENTS OR PORTIONS OF THE P.O.T. THAT WERE DETERMINED TO BE NON-COMPLIANT 1) HAVE BEEN IDENTIFIED AND 2) THE CORRECTIVE WORK NECESSARY TO BRING THEM INTO COMPLIANCE HAS BEEN INCLUDED WITHIN THE SCOPE OF THIS PROJECT'S WORK THROUGH DETAILS, DRAWINGS AND SPECIFICATIONS INCORPORATED INTO THESE CONSTRUCTION DOCUMENTS. ANY NON-COMPLIANT ELEMENTS, COMPONENTS, OR PORTIONS OF THE P.O.T. THAT WILL NOT BE CORRECTED BY THIS PROJECT BASED ON VALUATION THRESHOLD LIMITATIONS OR A FINDING OF UNREASONABLE HARDSHIP ARE SO INDICATED IN THESE CONSTRUCTION DOCUMENTS. DURING CONSTRUCTION, IF POT ITEMS WITHIN THE SCOPE OF THE PROJECT REPRESENTED AS CODE COMPLIANT ARE FOUND TO BE NON-CONFORMING BEYOND REASONABLE CONSTRUCTION TOLERANCES, THEY SHALL BE BROUGHT INTO COMPLIANCE WITH THE CBC AS PART OF THIS PROJECT BY MEANS OF A CONSTRUCTION CHANGE DOCUMENT.

- ■ TYPE V-B

BUILDING SPRINKLER SYSTEM:

- ☐ NS — BUILDINGS NOT EQUIPPED THROUGHOUT WITH AN AUTOMATIC SPRINKER SYSTEM
- ■ S1 — BUILDINGS A MAXIMUM OF ONE STORY ABOVE GRADE EQUIPPED WITH AN AUTOMATIC SPRINKLER SYSTEM INSTALLED IN ACCORDANCE WITH SECTION 903.3.1.1
- ☐ SM-H — BUILDINGS TWO OR MORE STORIES ABOVE GRADE EQUIPPED THROUGHOUT WITH AN AUTOMATIC SPRINKLER SYSTEM INSTALLED IN ACCORDANCE WITH SECTION 903.3.1.1 (WITHOUT HEIGHT INCREASE)
- ☐ SM+H — BUILDINGS TWO OR MORE STORIES ABOVE GRADE EQUIPPED THROUGHOUT WITH AN AUTOMATIC SPRINKLER SYSTEM INSTALLED IN ACCORDANCE WITH SECTION 903.3.1.1 (WITH HEIGHT INCREASE)
- ☐ S13R — BUILDINGS EQUIPPED THROUGHOUT WITH AN AUTOMATIC SPRINKLER SYSTEM INSTALLED IN ACCORDANCE WITH SECTION 903.3.1.2
- ☐ S13D — BUILDINGS EQUIPPED THROUGHOUT WITH AN AUTOMATIC SPRINKLER SYSTEM INSTALLED IN ACCORDANCE WITH SECTION 903.3.1.3

302 OCCUPANCY CLASSIFICATION:

STRUCTURES OR PORTIONS OF STRUCTURES SHALL BE CLASSIFIED WITH RESPECT TO OCCUPANCY IN ONE OR MORE OF THE GROUPS LISTED IN THIS SECTION. A ROOM OR SPACE THAT IS INTENDED TO BE OCCUPIED AT DIFFERENT TIMES FOR DIFFERENT PURPOSES SHALL COMPLY WITH ALL OF THE REQUIREMENTS THAT ARE APPLICABLE TO EACH OF THE PURPOSES FOR WHICH THE ROOM OR SPACE WILL BE OCCUPIED.

- ☐ GROUP A-1 ☐ GROUP A-2 ☐ GROUP A-3 ☐ GROUP A-4 ☐ GROUP A-5
- ■ GROUP B
- ☐ GROUP C
- ☐ GROUP E
- ☐ GROUP F-1 ☐ GROUP F-2
- ☐ GROUP H-1 ☐ GROUP H-2 ☐ GROUP H-3 ☐ GROUP H-4 ☐ GROUP H-5
- ☐ GROUP I-1 ☐ GROUP I-2 ☐ GROUP I-3 ☐ GROUP I-4
- ☐ GROUP L
- ☐ GROUP M
- ☐ GROUP R-1 ☐ GROUP R-2 ☐ GROUP R-2.1 ■ GROUP R-3 ☐ GROUP R-3.1
- ☐ GROUP R-4
- ☐ GROUP S-1 ☐ GROUP S-2
- ☐ GROUP U

508 MIXED USE AND OCCUPANCY:

EACH PORTION OF A BUILDING SHALL BE INDIVIDUALLY CLASSIFIED IN ACCORDANCE WITH SECTION 302.1. WHERE A BUILDING CONTAINS MORE THAN ONE OCCUPANCY GROUP, THE BUILDING OR PORTION THEREOF SHALL COMPLY WITH THE APPLICABLE PROVISIONS OF SECTION 508.2, 508.3 OR 508.4, OR A COMBINATION OF THESE SECTIONS.

THIS BUILDING CONTAINS:

- ☐ **ONE OCCUPANCY GROUP ONLY**
- ■ **508.2 ACCESSORY OCCUPANCIES**
  ACCESSORY OCCUPANCIES ARE THOSE OCCUPANCIES THAT ARE ANCILLARY TO THE MAIN OCCUPANCY OF THE BUILDING OR PORTION THEREOF.
- ☐ **508.3 NONSEPARATED OCCUPANCIES**
  NONSEPARATED OCCUPANCIES SHALL BE INDIVIDUALLY CLASSIFIED IN ACCORDANCE WITH SECTION 302.1. THE REQUIREMENTS OF THIS CODE SHALL APPLY TO EACH PORTION OF THE BUILDING BASED ON THE OCCUPANCY CLASSIFICATION OF THAT SPACE. IN ADDITION, THE MOST RESTRICTIVE PROVISIONS OF CHAPTER 9 THAT APPLY TO THE NONSEPARATED OCCUPANCIES SHALL APPLY TO THE TOTAL NONSEPARATED OCCUPANCY AREA.
- ☐ **508.4 SEPARATED OCCUPANICES**
  NONSEPARATED OCCUPANCIES SHALL BE INDIVIDUALLY CLASSIFIED IN ACCORDANCE WITH SECTION 302.1. THE REQUIREMENTS OF THIS CODE SHALL APPLY TO EACH PORTION OF THE BUILDING BASED ON THE OCCUPANCY CLASSIFICATION OF THAT SPACE. IN ADDITION, THE MOST RESTRICTIVE PROVISIONS OF CHAPTER 9 THAT APPLY TO THE NONSEPARATED OCCUPANCIES SHALL APPLY TO THE TOTAL NONSEPARATED OCCUPANCY AREA.

TABLE 508.4 *REQUIRED SEPARATION OF OCCUPANICES (HOURS)*

PRIMARY OCCUPANCY	SEPARATED OCCUPANCY	SPRINKLERED?	REQUIRED SEPARATION
GROUP B	GROUP R-3	YES	**1 HR**

- ☐ **509 INCIDENTAL USES**
- ☐ **510 SPECIAL PROVISIONS**

504 ALLOWABLE HEIGHT :

THE HEIGHT, IN FEET, AND THE NUMBER OF STORIES OF A BUILDING SHALL BE DETERMINED BASED ON THE TYPE OF CONSTRUCTION, OCCUPANCY CLASSIFICATION AND WHETHER THERE IS AN AUTOMATIC SPRINKLER SYSTEM INSTALLED THROUGHOUT THE BUILDING.

TABLE 504.3 *ALLOWABLE BUILDING HEIGHT IN FEET ABOVE GRADE PLANE*
TABLE 504.4 *ALLOWABLE NUMBER OF STORIES ABOVE GRADE PLANE*

OCCUPANCY	SPRINKLERS	CONSTRUCTION	ALLOWABLE	ACTUAL
GROUP B	S1	TYPE V-B	60'-0"	± 24'-0"
			3 STORIES	1 STORIES

506 ALLOWABLE AREA CALCULATIONS:

506.1 BUILDING AREA
THE FLOOR AREA OF A BUILDING SHALL BE DETERMINED BASED ON THE TYPE OF CONSTRUCTION, OCCUPANCY CLASSIFICATION, WHETHER THERE IS AN AUTOMATIC SPRINKLER SYSTEM INSTALLED THROUGHOUT THE BUILDING AND THE AMOUNT OF BUILDING FRONTAGE ON PUBLIC WAY OR OPEN SPACE.

506.2.1 SINGLE OCCUPANCY, ONE STORY
THE ALLOWABLE AREA OF A SINGLE-OCCUPANCY BUILDING WITH NO MORE THAN ONE STORY ABOVE GRADE PLANE SHALL BE DETERMINED IN ACCORDANCE WITH EQUATION 5-1

(EQUATION 5-1) $A_a = A_t + (NS \times I_f)$

506.2.2 MIXED-OCCUPANCY, ONE STORY
THE ALLOWABLE AREA OF A MIXED-OCCUPANCY BUILDING WITH NO MORE THAN ONE STORY ABOVE GRADE PLANE SHALL BE DETERMINED IN ACCORDANCE WITH THE APPLICABLE PROVISIONS OF SECTION 508.1 BASED ON EQUATION 5-1 FOR EACH APPLICABLE OCCUPANCY.

(EQUATION 5-1) $A_a = A_t + (NS \times I_f)$

506.2.3 SINGLE OCCUPANCY, MULTISTORY
THE ALLOWABLE AREA OF A SINGLE-OCCUPANCY BUILDING WITH MORE THAN ONE STORY ABOVE GRADE PLANE SHALL BE DETERMINED IN ACCORDANCE WITH EQUATION 5-2:

(EQUATION 5-2) $A_a = A_t + (NS \times I_f) \times S_a$

506.2.4 MIXED-OCCUPANCY MULTISTORY
EACH STORY OF A MIXED-OCCUPANCY BUILDING WITH MORE THAN ONE STORY ABOVE GRADE PLANE SHALL INDIVIDUALLY COMPLY WITH THE APPLICABLE REQUIREMENTS OF SECTION 508.1. FOR BUILDINGS WITH MORE THAN THREE STORIES ABOVE GRADE PLANE, THE TOTAL BUILDING AREA SHALL BE SUCH THAT THE AGGREGATE SUM OF THE RATIOS OF THE ACTUAL AREA OF EACH STORY DIVIDED BY THE ALLOWABLE AREA OF SUCH STORIES, DETERMINED IN ACCORDANCE WITH EQUATION 5-3 BASED ON THE APPLICABLE PROVISIONS OF SECTION 508.1, SHALL NOT EXCEED THREE. PROVIDED THE AGGREGATE SUM OF THE RATIOS FOR PORTIONS OF MIXED-OCCUPANCY, MULTISTORY BUILDINGS CONTAINING A, E, H, I, L AND R OCCUPANCIES, HIGH-RISE BUILDINGS, AND OTHER APPLICATIONS LISTED IN SECTION 1.11 REGULATED BY THE OFFICE OF THE STATE FIRE MARSHAL, INCLUDING ANY OTHER ASSOCIATED NON-SEPARATED OCCUPANCIES, SHALL NOT EXCEED TWO.

(EQUATION 5-3) $A_a = [A_t + (NS \times I_f)]$

A_a = ALLOWABLE AREA (SQUARE FEET).
A_t = TABULAR ALLOWABLE AREA FACTOR (NS, S13R OR SM VALUE, AS APPLICABLE) IN ACCORDANCE WITH TABLE 506.2.
NS = TABULAR ALLOWABLE AREA FACTOR IN ACCORDANCE WITH TABLE 506.2 FOR A NONSPRINKLERED BUILDING (REGARDLESS OF WHETHER THE BUILDING IS SPRINKLERED).
I_f = AREA FACTOR INCREASE DUE TO FRONTAGE (PERCENT) AS CALCULATED IN ACCORDANCE WITH SECTION 506.3.
$S_a < 2$ GROUP A, E, H, I, L, R, HIGH-RISE BUILDINGS AND APP. IN SECTION 1.11 PER SFM
$S_a < 3$ OTHER THAN ABOVE
$S_a < 1$ NO INDIVIDUAL STORY SHALL EXCEED (A_a)

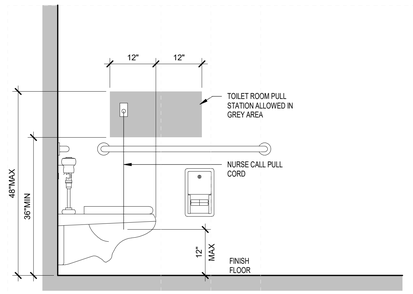
21.12.14 - 00000

TYPICAL MOUNTING HEIGHTS

1/4" = 1'-0" **11**

MANEUVERING CLEARANCES PER CBC 11B-404.2.4 & TABLE 11B-404.2.4.1

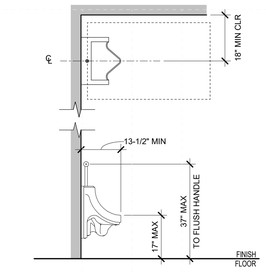


CLEAR WIDTH PER CBC 11B-404.2.3 DOOR OPENINGS SHALL PROVIDE A CLEAR WIDTH OF 32 INCHES (813 MM) MINIMUM. CLEAR OPENINGS OF DOORWAYS WITH SWINGING DOORS SHALL BE MEASURED BETWEEN THE FACE OF THE DOOR AND THE STOP, WITH THE DOOR OPEN 90 DEGREES. OPENINGS MORE THAN 24 INCHES (610 MM) DEEP SHALL PROVIDE A CLEAR OPENING OF 36 INCHES (914 MM) MINIMUM. THERE SHALL BE NO PROJECTIONS INTO THE REQUIRED CLEAR OPENING WIDTH LOWER THAN 34 INCHES (864 MM) ABOVE THE FINISH FLOOR OR GROUND. PROJECTIONS INTO THE CLEAR OPENING WIDTH BETWEEN 34 INCHES (864 MM) AND 80 INCHES (2032 MM) ABOVE THE FINISH FLOOR OR GROUND SHALL NOT EXCEED 4 INCHES (102 MM).

RECESSED DOORS PER CBC 11B-404.2.4.3 MANEUVERING CLEARANCES FOR FORWARD APPROACH SHALL BE PROVIDED WHEN ANY OBSTRUCTION WITHIN 18 INCHES (457 MM) OF THE LATCH SIDE AT AN INTERIOR DOORWAY, OR WITHIN 24 INCHES (610 MM) OF THE LATCH SIDE OF AN EXTERIOR DOORWAY. PROJECTS MORE THAN 8 INCHES (203 MM) BEYOND THE FACE OF THE DOOR, MEASURED PERPENDICULAR TO THE FACE OF THE DOOR OR GATE.

21.12.14 - 00000

CLEAR AREA AT DOORS

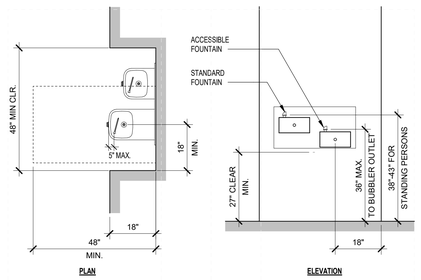


1/4" = 1'-0" **1**

21.12.14 - 00000

TOILET ROOM NURSE CALL LOCATION

3/4" = 1'-0" **22**

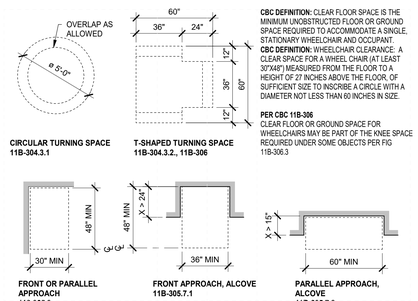


11B-605.1 GENERAL URINALS SHALL COMPLY WITH SECTION 11B-605.

21.12.14 - 00000

ACCESSIBLE URINAL

1/2" = 1'-0" **17**

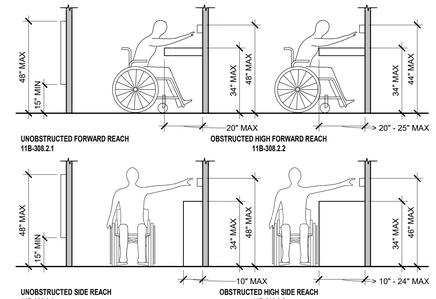


DRINKING FOUNTAIN PER CBC 11B-602

21.12.14 - 00000

DRINKING FOUNTAIN ALCOVE

RE: 2 / A-501 1/2" = 1'-0" **12**



CBC DEFINITION: CLEAR FLOOR SPACE IS THE MINIMUM UNOBSTRUCTED FLOOR OR GROUND SPACE REQUIRED TO ACCOMMODATE A SINGLE, STATIONARY WHEELCHAIR AND OCCUPANT.
CBC DEFINITION: WHEELCHAIR CLEARANCE: A CLEAR SPACE FOR A WHEEL CHAIR (AT LEAST 30"X48") MEASURED FROM THE FLOOR TO A HEIGHT OF 27 INCHES ABOVE THE FLOOR, OF SUFFICIENT SIZE TO INSCRIBE A CIRCLE WITH A DIAMETER NOT LESS THAN 60 INCHES IN SIZE.

PER CBC 11B-306
CLEAR FLOOR OR GROUND SPACE FOR WHEELCHAIRS MAY BE PART OF THE KNEE SPACE REQUIRED UNDER SOME OBJECTS PER FIG 11B-306.3

21.12.14 - 00000

TURNING SPACE, CLEAR FLOOR SPACE

1/4" = 1'-0" **7**

21.12.14 - 00000

REACH RANGE

3/8" = 1'-0" **2**

NOTE: BENCH PER CBC 11B-903

11B-903.4 BACK SUPPORT THE BENCH SHALL PROVIDE FOR BACK SUPPORT OR SHALL BE AFFIXED TO A WALL ALONG ITS LONG DIMENSION. BACK SUPPORT SHALL BE 48 INCHES (1219 MM) LONG MINIMUM AND SHALL EXTEND FROM A POINT 2 INCHES (51 MM) MAXIMUM ABOVE THE SEAT SURFACE TO A POINT 18 INCHES (457 MM) MINIMUM ABOVE THE SEAT SURFACE. BACK SUPPORT SHALL BE 21/2 INCHES (64 MM) MAXIMUM FROM THE REAR EDGE OF THE SEAT MEASURED HORIZONTALLY.

21.12.14 - 00000

ACCESSIBLE BENCH

1/2" = 1'-0" **18**

21.12.14 - 00000

AMBULATORY WATER CLOSET

3/8" = 1'-0" **13**

KNEE AND TOE CLEARANCES PER CBC 11B-306

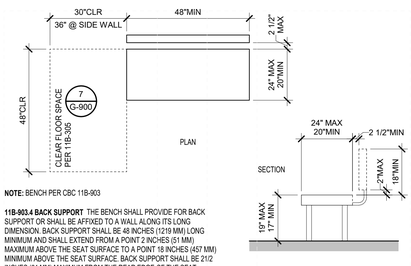
11B-306.1 GENERAL WHERE SPACE BENEATH AN ELEMENT IS INCLUDED AS PART OF CLEAR FLOOR OR GROUND SPACE OR TURNING SPACE, THE SPACE SHALL COMPLY WITH SECTION 11B-306. ADDITIONAL SPACE SHALL NOT BE PROHIBITED BENEATH AN ELEMENT BUT SHALL NOT BE CONSIDERED AS PART OF THE CLEAR FLOOR OR GROUND SPACE OR TURNING SPACE.

11B-306.2.5 WIDTH TOE CLEARANCE SHALL BE 30 INCHES (762 MM) WIDE MINIMUM.

11B-306.3.5 WIDTH KNEE CLEARANCE SHALL BE 30 INCHES (762 MM) WIDE MINIMUM.

11B-606.1 GENERAL LAVATORIES AND SINKS SHALL COMPLY WITH SECTION 11B-606.

11B-606.5 WATER SUPPLY AND DRAIN PIPES UNDER LAVATORIES AND SINKS SHALL BE INSULATED OR OTHERWISE CONFIGURED TO PROTECT AGAINST CONTACT. THERE SHALL BE NO SHARP OR ABRASIVE SURFACES UNDER LAVATORIES AND SINKS.



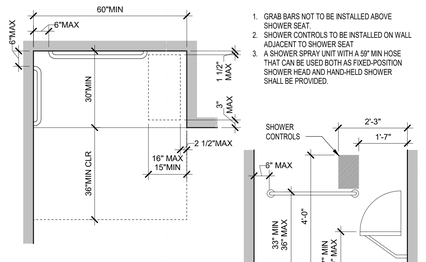
11B-606.6 ADJACENT SIDE WALL OR PARTITION LAVATORIES, WHEN LOCATED ADJACENT TO A SIDE WALL OR PARTITION, SHALL BE A MINIMUM OF 18 INCHES (457 MM) TO THE CENTERLINE OF THE FIXTURE.

11B-605.6 HAND WASHING FIXTURES, LAVATORIES AND SINKS ALL HAND WASHING FIXTURES, LAVATORIES AND SINKS SHALL COMPLY WITH SECTION 11B-606.

21.12.14 - 00000

KNEE AND TOE CLEARANCE

RE: 2 / A-501 1/2" = 1'-0" **3**



NOTE: BENCH PER CBC 11B-903

11B-903.4 BACK SUPPORT THE BENCH SHALL PROVIDE FOR BACK SUPPORT OR SHALL BE AFFIXED TO A WALL ALONG ITS LONG DIMENSION. BACK SUPPORT SHALL BE 48 INCHES (1219 MM) LONG MINIMUM AND SHALL EXTEND FROM A POINT 2 INCHES (51 MM) MAXIMUM ABOVE THE SEAT SURFACE TO A POINT 18 INCHES (457 MM) MINIMUM ABOVE THE SEAT SURFACE. BACK SUPPORT SHALL BE 21/2 INCHES (64 MM) MAXIMUM FROM THE REAR EDGE OF THE SEAT MEASURED HORIZONTALLY.

21.12.14 - 00000

ADA BENCH W/ BACK SUPPORT

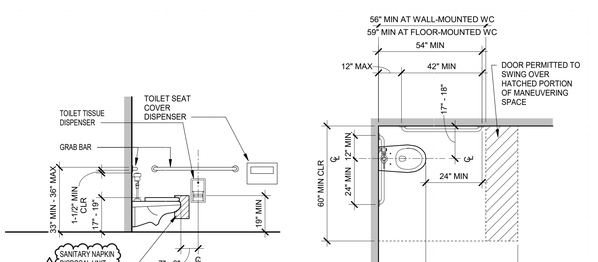
1/2" = 1'-0" **19**

1. GRAB BARS NOT TO BE INSTALLED ABOVE SHOWER SEAT.
2. SHOWER CONTROLS TO BE INSTALLED ON WALL ADJACENT TO SHOWER SEAT
3. A SHOWER SPRAY UNIT WITH A 59" MIN HOSE THAT CAN BE USED BOTH AS FIXED-POSITION SHOWER HEAD AND HAND-HELD SHOWER SHALL BE PROVIDED.

NOTE: SHOWER PER CBC 11B-608

21.12.14 - 00000

SHOWER, STANDARD ROLL-IN



1/2" = 1'-0" **14**

11B-604.1 GENERAL WATER CLOSETS AND TOILET COMPARTMENTS SHALL COMPLY WITH SECTIONS 11B-604.2 THROUGH 11B-604.8.

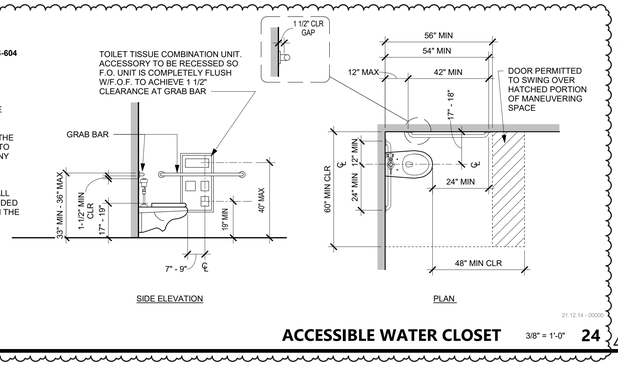
11B-603.2.3 DOOR SWING DOORS SHALL NOT SWING INTO THE CLEAR FLOOR SPACE OR CLEARANCE REQUIRED FOR ANY FIXTURE. DOORS TO ACCESSIBLE WATER CLOSET COMPARTMENTS SHALL BE PERMITTED TO ENCROACH INTO THE TURNING SPACE WITHOUT LIMITATION. OTHER THAN DOORS TO ACCESSIBLE WATER CLOSET COMPARTMENTS, A DOOR, IN ANY POSITION, SHALL BE PERMITTED TO ENCROACH INTO THE TURNING SPACE BY 12 INCHES (305 MM) MAXIMUM.

11B-604.5 GRAB BARS GRAB BARS FOR WATER CLOSETS SHALL COMPLY WITH SECTION 11B-609. GRAB BARS SHALL BE PROVIDED ON THE SIDE WALL CLOSEST TO THE WATER CLOSET AND ON THE REAR WALL

⚠ **11B-604.7.2 DISPOSAL UNITS** SANITARY NAPKIN DISPOSAL UNITS, IF PROVIDED, SHALL COMPLY WITH SECTION 11B-604.7.2. DISPOSAL UNIT SHALL BE WALL MOUNTED AND LOCATED ON THE SIDEWALL BETWEEN THE REAR WALL OF THE TOILET AND THE TOILET PAPER DISPENSER, ADJACENT TO THE TOILET PAPER TOWER DISPENSER. THE DISPOSAL UNIT SHALL BE LOCATED BELOW THE GRAB BAR WITH OPENING OF THE DISPOSAL UNIT 19 IN MIN ABOVE THE FINISH FLOOR

21.12.14 - 00000

ACCESSIBLE WATER CLOSET



RE: 2 / A-501 3/8" = 1'-0" **4**

LEGEND

NOTE: NOT ALL SYMBOLS MAY BE USED ON THESE PLANS.

PROPOSED GRADING & DRAINAGE SYMBOLS:

- 8" SD — STORM DRAIN LINE (SIZE AND FLOW SHOWN)
- STORM DRAIN MANHOLE (SDMH)
- CATCH BASIN (CB)
- DROP INLET (DI)
- AREA DRAIN (AD)
- PLANTER DRAIN (PD) OR FLOOR DRAIN (FD)
- CO — STORM DRAIN CLEANOUT
- 99.99 — ELEVATION
- FF=100.00 — FINISHED FLOOR ELEVATION
- PAD=99.33 — BUILDING PAD ELEVATION
- CONCRETE SIDEWALK
- GRADED DIRECTION FOR DRAINAGE FLOW
- SWALE
- SLOPE
- TREE TO BE REMOVED
- RETAINING WALL

PROPOSED SANITARY SEWER SYMBOLS:

- 6" SS — SANITARY SEWER LINE (SIZE AND FLOW SHOWN)
- SANITARY SEWER MANHOLE (SSMH)
- CO — SEWER CLEANOUT FLUSHER BRANCH

PROPOSED WATER SYMBOLS:

- 8" W — WATER LINE & SIZE
- 8" FS — FIRE LINE & SIZE
- 8" DW — DOMESTIC WATER LINE & SIZE
- 8" RW — RECLAIMED WATER LINE & SIZE
- 8" IRR — IRRIGATION SERVICE LINE & SIZE
- 8" NP — NON POTABLE WATER LINE & SIZE
- 8" SP — FIRE SPRINKLER SERVICE LINE & SIZE
- GATE VALVE
- M — WATER METER
- FH — FIRE HYDRANT ASSEMBLY
- FDC — FIRE DEPARTMENT CONNECTION
- DC — DETECTOR CHECK VALVE
- DDC — DOUBLE DETECTOR CHECK VALVE
- RP — REDUCED PRESSURE BACKFLOW PREVENTER
- BUTTERFLY VALVE
- 1" — AIR RELEASE VALVE + SIZE
- 1" — BLOW-OFF VALVE + SIZE
- PIV — POST INDICATOR VALVE

EN24-0353

CWJ# 500063

GENERAL NOTES:

1. ALL CONSTRUCTION AND MATERIALS SHALL CONFORM TO THESE PLANS AND THE LATEST EDITION AND AMENDMENTS OF THE CITY OF ROSEVILLE DESIGN AND CONSTRUCTION STANDARDS.
2. THE CITY OF ROSEVILLE IS A MEMBER OF THE UNDERGROUND SERVICE ALERT (U.S.A.) ONE-CALL SYSTEM. THE CONTRACTORS SHALL NOTIFY THE U.S.A. CENTER 48 HOURS IN ADVANCE OF PERFORMING ANY EXCAVATION WORK BY CALLING 1-800-227-2600.
3. THE CONTRACTOR SHALL MARK IN WHITE PAINT ALL AREAS TO BE EXCAVATED PRIOR TO CONTACTING U.S.A. ANY AREAS NOT MARKED WILL NOT BE SUBJECT TO U.S.A., AND THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE RESULTING FROM EXCAVATION.
4. THE CONTRACTOR SHALL EXPOSE AND VERIFY LOCATIONS AND ELEVATIONS OF EXISTING UNDERGROUND UTILITIES PRIOR TO CONSTRUCTION OF THE NEW IMPROVEMENTS CONNECTING TO OR IN THE VICINITY OF THE SAME.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL EXISTING MONUMENTS AND OTHER SURVEY MARKERS ON THE JOB SITE.
6. THE CONTRACTOR SHALL PLACE BOXED SURVEY MONUMENTS WITH 1-1/2" BRONZE HEAD SET IN CONCRETE (STD. DWG. ST-36) AT LOCATIONS SHOWN ON THESE PLANS.
7. A.C. SURFACE SHALL BE CUT TO A NEAT, STRAIGHT LINE PARALLEL WITH THE STREET CENTERLINE AND THE EXPOSED EDGE SHALL BE TACKED WITH EMULSION PRIOR TO PAVING. THE EXPOSED BASE MATERIAL SHALL BE GRADED, RE-COMPACTED, AND RESEALED PRIOR TO PAVING.
8. ANY EXISTING CONCRETE SURFACE TO BE REMOVED SHALL BE SAW CUT TO A NEAT, STRAIGHT LINE.
9. THE CONTRACTOR SHALL SUBMIT A TRAFFIC CONTROL PLAN THAT SHALL BE ACCEPTED BY THE ENGINEERING DIVISION OF PUBLIC WORKS BEFORE START OF WORK IN RIGHT-OF-WAY AND SHALL BE IN ACCORDANCE WITH CALIFORNIA MUTCD LATEST EDITION. AT LEAST ONE LANE IN EACH DIRECTION SHALL REMAIN OPEN TO TRAFFIC UNLESS OTHERWISE SHOWN ON THE PLANS. TRAFFIC CONTROL HOURS ARE SUBJECT TO LIMITATION BY THE CITY. TRAFFIC CONTROL WITH LANE CLOSURES THAT AFFECT TRAFFIC FLOW MAY REQUIRE NIGHT WORK. IF, AS A PART OF TRAFFIC CONTROL MEASURES, A ROADWAY CLOSURE HAS BEEN APPROVED, THE CONTRACTOR SHALL NOTIFY DEVELOPMENT SERVICES CONSTRUCTION INSPECTOR 72 HOURS IN ADVANCE OF SETTING UP THIS CLOSURE.
10. CURB RAMPS CONFORMING TO ALL ADA AND TITLE 24 REQUIREMENTS SHALL BE PLACED AT ALL NEW STANDARD CURB RETURNS (STANDARD DRAWING ST-27) AND STANDARD TYPE A-- DRIVEWAYS. WHERE EXISTING RAMPS DO NOT MEET CURRENT ADA AND TITLE 24 REQUIREMENTS, THE RAMPS SHALL BE UPGRADED IN CONFORMANCE WITH MINIMUM TITLE 24 REQUIREMENTS. WHERE EXISTING RAMPS DO NOT INCLUDE DETECTABLE WARNING PANELS (TRUNCATED DOMES), PANELS SHALL BE RETROFITTED PER THE CONSTRUCTION STANDARDS.
11. DRAIN INLETS NOT WITHIN A PAVED AREA SHALL HAVE A 12" WIDE COLLAR OF 6" THICK P.C.C. OR 2" THICK A.C.
12. PRIOR TO THE CERTIFICATE OF COMPLETION ON ALL SINGLE-FAMILY RESIDENTIAL SUBDIVISIONS, THE DEVELOPER SHALL SUBMIT A LETTER FROM THE POST OFFICE STATING THAT ITS REQUIREMENTS FOR MAILBOX CLUSTER PADS HAVE BEEN SATISFIED.
13. ALL UNDERGROUND UTILITIES WITHIN EXISTING OR PROPOSED CITY OF ROSEVILLE EASEMENTS SHALL REQUIRE A MINIMUM OF 90% COMPACTION ON THE TRENCH-BACKFILL. COMPACTION OF BACKFILL BY JETTING IS NOT PERMITTED IN CITY OF ROSEVILLE RIGHT OF WAY AND EASEMENT AREAS OR WITHIN DEDICATED RECLAIMED WATER, STORM, SEWER OR WATER EASEMENTS AND MAINS.
14. THE CONTRACTOR SHALL CONDUCT A PRE-CONSTRUCTION MEETING ONE-WEEK PRIOR TO STARTING WORK. MEMBERS OF THE CITY OF ROSEVILLE DEVELOPMENT SERVICES DEPARTMENT, ENVIRONMENTAL UTILITIES DEPARTMENT AND ALL OTHER UTILITY REPRESENTATIVES SHALL BE NOTIFIED BY THE CONTRACTOR AS TO THE DATE AND LOCATION OF THE MEETING.
15. PRIOR TO EXCAVATION OF TRENCHES 5 FEET OR DEEPER, THE CONTRACTOR SHALL SUBMIT TO THE DEVELOPMENT SERVICES DEPARTMENT OR ENVIRONMENTAL UTILITIES DEPARTMENT INSPECTOR A COPY OF THE COMPANY'S ANNUAL CALOSHA TRENCHING PERMIT AND A COPY OF THE COMPANY'S LETTER INFORMING CALOSHA OF THE TIME THE TRENCHING IS COMMENCING AND THE LOCATION OF THE WORK.
16. ALL PAINTED TRAFFIC STRIPES, ARROWS, AND PAVEMENT MARKINGS SHALL BE CONSTRUCTED WITH THERMOPLASTIC MATERIAL TO THE SPECIFICATIONS SET FORTH IN CHAPTER 3 OF THE CALIFORNIA MUTCD LATEST EDITION. NON-REFLECTIVE PAVEMENT MARKERS SHALL CONSIST OF CERAMIC MARKERS ONLY CONFORMING TO CHAPTER 3 OF THE CALIFORNIA MUTCD LATEST EDITION.
17. THE DEVELOPERS CONTRACTOR SHALL TAKE EXTREME CARE TO PROTECT EXISTING SITE AND ADJACENT IMPROVEMENTS FROM DAMAGE. THE CONTRACTOR SHALL BE RESPONSIBLE TO REPAIR OR MAKE REPLACEMENT OF ALL CRACKED AND OTHERWISE PRE-EXISTING DAMAGED PUBLIC IMPROVEMENTS ALONG THE FRONTAGE OF THE PROJECT SITE AND ANY DAMAGE RESULTING FROM CONSTRUCTION TO CURRENT CITY STANDARDS AND AT THEIR OWN EXPENSE. THE EXTENT OF THE REPAIRS SHALL BE DETERMINED BY THE DEVELOPMENT SERVICES CONSTRUCTION INSPECTOR AND SHALL BE COMPLETED PRIOR TO THE CITY ACCEPTANCE OF THE IMPROVEMENTS.
18. WHERE COMBINATIONS OF SIDEWALK OR CURB AND GUTTER ARE PLACED CONTIGUOUS TO EXISTING, ALL ADJOINING EXISTING CONCRETE VERTICAL FACES SHALL BE DOWELED. ALL ABUTTING SIDEWALK ENDS SHALL BE DOWELED MID-SECTION VERTICALLY WITH TWO DOWELS FOR FOUR THROUGH SIX-FOOT WIDE SIDEWALK AND THREE DOWELS FOR WIDER SIDEWALK. ABUTTING CURB AND GUTTER ENDS SHALL BE DOWELED TWICE, 18 INCHES APART AT GUTTER PAN MID-SECTION. DOWEL CONNECTIONS OF LONGITUDINAL RUNS OF SIDEWALK TO BACK OF CURB SHALL BE THREE FEET ON CENTER. ALL DOWELS SHALL BE 16 INCHES LONG, GRADE 60; #4 REBAR PENETRATING FOUR INCHES. THE DOWEL HOLE SHALL BE 5/8-INCH DIAMETER AT A SLIGHT HORIZONTAL ANGLE FROM PERPENDICULAR. THE PENETRATING PORTION OF THE DOWEL AND THE ENTIRE (CLEANED) VERTICAL SURFACE OF THE ADJOINING, EXISTING CONCRETE SHALL BE THOROUGHLY COATED WITH STATE STANDARD TWO-PART EPOXY.
19. WHEN SAWCUTTING WITHIN THE STREET FOR TRENCHING OR OTHER PURPOSES, CONTRACTOR SHALL GRIND 1½" OF PAVEMENT BETWEEN THE LANE LINES (FROM LANE STRIPE TO LANE STRIPE) UPON COMPLETION OF THE SAWCUTTING AND OR TRENCHING WORK. WHERE THE SAWCUTTING OCCURS BETWEEN THE CURB AND GUTTER AND NEAREST LANE STRIPE (INCLUDING BIKE LANES), THE SAME 1 ½" GRIND SHALL BE REQUIRED. CONTRACTOR TO PLACE A PETROMAT FABRIC OR APPROVED EQUAL BY THE CITY OF ROSEVILLE AND OVERLAY FROM LANE STRIPE TO LANE STRIPE, OR CURB TO LANE STRIPE AND RESTRIPE OR REPLACE ANY DELINEATORS REMOVED DURING THE GRIND.
20. ALL PUBLICLY MAINTAINED STORM DRAIN ON PRIVATE PROPERTY SHALL BE A MINIMUM OF 12 INCHES IN DIAMETER AND SHALL BE RCP CL IV, UNLESS OTHERWISE APPROVED BY THE CITY ENGINEER.
21. FOR RESIDENTIAL SUBDIVISIONS, UNLESS OTHERWISE APPROVED BY DEVELOPMENT SERVICES ENGINEERING, THE FINAL GRADING OF THE PROJECT SITE SHALL BE CONSTRUCTED TO ACCOMMODATE A MAXIMUM DRIVEWAY SLOPE OF 14% FOR EACH RESIDENTIAL LOT, AS MEASURED FROM THE BACK OF THE SIDEWALK TO THE GARAGE (20-FT SET BACK). IT WILL REMAIN THE RESPONSIBILITY OF THE BUILDERS/DEVELOPER TO DESIGN A HOUSE THAT PROVIDES SUITABLE ACCESS TO THE PARCEL.
22. THE CONTRACTOR SHALL PLACE FILTER FABRIC BETWEEN THE INITIAL BEDDING AND BACKFILL AND THE TRENCH BACKFILL FOR SANITARY SEWERS DEPTH GREATER THAN 15 FEET MEASURED TO THE PIPE INVERT.

GRADING NOTES: (SWPPP VERSION)

1. GRADING SHALL CONFORM TO APPENDIX CHAPTER 33 UBC, LATEST EDITION, AND TO THE RECOMMENDATIONS OF THE GEOTECHNICAL ENGINEERING REPORT BY ENGEO INCORPORATED, ENTITLED "THE DRY CREEK WASTEWATER TREATMENT PLANT OPERATIONS BUILDING". ENGINEERING DIV. FILE NO. 308-1029.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE IMPLEMENTED AS SPECIFIED IN THE STORMWATER POLLUTION PREVENTION PLAN (SWPPP) FOR THIS PROJECT OR AS DETERMINED BY THE CITY INSPECTOR. THE SWPPP IS CONSIDERED A DYNAMIC DOCUMENT AND WILL CHANGE AS CONDITIONS WARRANT. PERMANENT EROSION AND SEDIMENT CONTROL MEASURES WILL BE CONSTRUCTED AS SHOWN ON THE SWPPP PLAN.
3. LOTS SHALL BE GRADED WITH A CONSTANT SLOPE ALONG THE FRONTAGE OF THE RIGHT-OF-WAY, FROM BUILDING SETBACK LINE TO BACK OF SIDEWALK. ALL TEMPORARY AND PERMANENT SLOPES STEEPER THAN 4:1 ALONG THIS FRONTAGE SHALL HAVE EROSION NETTING INSTALLED.
4. ALL REAR LOT CORNER ELEVATIONS SHALL BE EQUAL TO OR GREATER THAN THE HIGHEST ADJACENT PAD GRADE UNLESS SPECIFICALLY SHOWN ON THESE PLANS AND APPROVED BY ENGINEERING DIVISION.
5. NON-POTABLE WATER SHALL BE SPRAYED ON ALL EXPOSED EARTH SURFACES DURING CLEARING GRADING, EARTH MOVING, AND OTHER SITE PREPARATION ACTIVITIES. THE EXPOSED EARTH SHALL BE WATERED THROUGHOUT THE DAY TO MINIMIZE DUST.
6. TARPAULINS OR OTHER EFFECTIVE COVERS SHALL BE USED ON ALL STOCKPILED EARTH MATERIAL AND ON HAUL TRUCKS TO MINIMIZE DUST.
7. THE CITY SHALL HAVE THE AUTHORITY TO STOP ALL GRADING OPERATIONS, IF, IN OPINION OF CITY STAFF, INADEQUATE DUST CONTROL MEASURES ARE BEING PRACTICED OR EXCESSIVE WIND CONDITIONS CONTRIBUTE TO FUGITIVE DUST EMISSIONS.
8. ADJACENT STREET FRONTAGES SHALL BE SWEPT AT LEAST ONCE A DAY TO REMOVE SILT AND OTHER DIRT WHICH IS EVIDENT FROM CONSTRUCTION ACTIVITIES. REFER TO SCHEDULES WITHIN SWPPP.
9. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CLEANING CONSTRUCTION VEHICLES LEAVING THE SITE ON A DAILY BASIS TO PREVENT DUST, SILT AND DIRT FROM BEING RELEASED OR TRACKED OFFSITE. REFER TO SWPPP FOR SPECIFIC REQUIRMENTS.
10. CONSTRUCTION SHALL STOP IF CULTURAL RESOURCES ARE SUSPECTED. IT IS POSSIBLE THAT PREVIOUS ACTIVITIES HAVE OBSCURED SURFACE EVIDENCE OF CULTURAL RESOURCES. IF SIGNS OF AN ARCHEOLOGICAL SITE, SUCH AS ANY UNUSUAL AMOUNTS OF STONE, BONE, OR SHELL, ARE UNCOVERED DURING GRADING OR OTHER CONSTRUCTION ACTIVITIES, WORK SHALL BE HALTED WITHIN 100 FEET OF THE FIND AND THE ROSEVILLE COMMUNITY DEVELOPMENT DEPARTMENT SHALL BE NOTIFIED. A QUALIFIED ARCHEOLOGIST SHALL BE CONSULTED FOR AN ON-SITE EVALUATION. THE ARCHEOLOGIST MAY REQUIRE ADDITIONAL MITIGATION.
11. SHOULD GRADING OPERATIONS UNCOVER HAZARDOUS MATERIALS, OR WHAT APPEARS TO BE HAZARDOUS MATERIALS, THE FIRE DEPARTMENT SHALL BE CONTACTED IMMEDIATELY AT (916) 774-5820. THE AREA, WHICH CONTAINS THE HAZARDOUS MATERIALS, SHALL BE MARKED OFF UNTIL AN INVESTIGATION BY A MEMBER OF THE FIRE DEPARTMENT IS CONDUCTED.
12. GRADES SHOWN OUTSIDE OF THE PUBLIC RIGHT OF WAY WITHIN THE APPROVED GRADING PLAN ARE SUBJECT TO FURTHER REVIEW AND MODIFICATION BY THE BUILDING DIVISION FOR COMPLIANCE WITH THE UNIFORM BUILDING CODE AND STATE OF CALIFORNIA TITLE 24 HANDICAP ACCESSIBILITY REQUIREMENTS.
13. THE CONTRACTOR/DEVELOPER IS EXPECTED TO COMPLY WITH THE FUGITIVE DUST CONTROL REQUIREMENTS FROM THE PLACER COUNTY AIR POLLUTION CONTROL DISTRICT: WWW.PLACER.CA.GOV/APCD
14. CONTAMINATED SOIL - DEVELOPER AGREES TO PROPERLY ADHERE TO ALL THEN CURRENT STATE AND FEDERAL REQUIREMENTS WHEN ANY EVIDENCE OF TOXIC, HAZARDOUS OR CONTAMINATED SOILS ARE ENCOUNTERED DURING ANY AND ALL EXCAVATION OR GRADING OPERATIONS, AND TO INDEMNIFY, DEFEND AND HOLD HARMLESS THE CITY OR ROSEVILLE, ITS OFFICERS, AGENTS AND EMPLOYEES, FROM ANY AND ALL LIABILITY, COSTS, CLAIMS, FEES, FINES, PENALTIES AND CLAIMS OF OR DAMAGE OF ANY TYPE WHATSOEVER. EXTRA COSTS FOR REMEDIATION AND/OR REMOVAL OF SOIL SHALL BE BOURN SOLELY BY THE DEVELOPER. THE PARTIES INTEND THAT THIS PROVISION BE BROADLY CONSTRUED.

EROSION / SEDIMENT CONTROL: (SWPPP VERSION)

1. THE STATE'S GENERAL PERMIT FOR STORMWATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY (WQD 99-080-DWQ) REQUIRES THE PREPARATION OF A STORMWATER POLLUTION PREVENTION PLAN (SWPPP) FOR SITES WITH SOIL DISTURBANCES GREATER THAN OR EQUAL TO ONE ACRE, OR FROM SITES SMALLER THAN ONE ACRE IF THE CONSTRUCTION ACTIVITY IS PART OF A LARGER PLAN OF DEVELOPMENT OR SALE THAT DISTURBS ONE ACRE OR MORE. CONSTRUCTION ACTIVITY SHALL NOT COMMENCE, NOR A PRE-CONSTRUCTION MEETING PERMITTED TO BE SCHEDULED, PRIOR TO THE SWPPP BEING ACCEPTED BY THE CITY. FOR MORE INFORMATION SEE; http://www.roseville.ca.us/eu/stormwater_management
2. THE PROJECT STORMWATER POLLUTION PREVENTION PLAN (SWPPP) IS INCORPORATED BY REFERENCE INTO THIS SET OF PLANS. THE SWPPP IS CONSIDERED A DYNAMIC DOCUMENT AND WILL CHANGE AS CONDITIONS WARRANT. PERMANENT EROSION AND SEDIMENT CONTROL MEASURES WILL BE CONSTRUCTED AS SHOWN ON THESE PLANS.
3. A COPY OF THE SWPPP SHALL BE KEPT AT THE PROJECT SITE AT ALL TIMES.
4. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE IMPLEMENTED AS SPECIFIED IN THE SWPPP AND/OR AS DIRECTED BY CITY INSPECTOR.
5. NO GRADING OR TRENCHING, EXCEPT AS REQUIRED FOR EROSION OR SEDIMENT CONTROL, SHALL OCCUR WITHIN 35 FEET FROM THE CENTERLINE OF PERENNIAL AND INTERMITTENT DRAINAGE SWALES BETWEEN OCTOBER 15 AND APRIL 15 EXCEPT AS APPROVED BY THE DEPARTMENT OF FISH AND GAME.
6. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED IN ACCORDANCE WITH THE SWPPP.
7. THE CONTRACTOR SHALL ESTABLISH A SPECIFIC SITE WITHIN THE DEVELOPMENT FOR MAINTENANCE AND STORAGE OF EQUIPMENT OR ANY OTHER ACTIVITY THAT MAY ADVERSELY CONTRIBUTE TO THE WATER QUALITY OF THE RUNOFF IN ACCORDANCE WITH THE SWPPP

WATER NOTES:

1. ALL CONSTRUCTION SHALL CONFORM TO THESE PLANS AND THE LATEST EDITION OF THE CITY OF ROSEVILLE STANDARD SPECIFICATIONS AND IMPROVEMENT STANDARDS (INCLUDING ALL APPLICABLE REVISIONS AND ADDENDUMS).
2. CITY OF ROSEVILLE STANDARD REQUIREMENTS SHALL BE ADHERED TO UNLESS SPECIFICALLY INDICATED OTHERWISE IN THE PLANS AND SPECIFICATIONS.
3. THE ENTIRE LENGTH OF ALL PROPOSED WATER PIPE SHALL BE RESTRAINED. PIPE 16 INCHES AND SMALLER SHALL BE RESTRAINED MECHANICALLY. 24 INCH DIAMETER PIPE SHALL BE RESTRAINED BY WELDING. RESTRAINT TO BE PROVIDED ON EXISTING WATER PIPES AT CONNECTION POINTS SHOWN ON THE DRAWINGS.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTION STAKING.
5. CONTRACTOR SHALL MAINTAIN ALL CONSTRUCTION VEHICLES, SOIL, STOCKPILES, EQUIPMENT, AND MATERIALS WITHIN A CORRIDOR LIMITED TO 25 FEET FROM THE PIPE CENTERLINE (50 FOOT TOTAL), EXCEPT THAT CONTRACTOR MAY USE THE ENTIRE AREA WITHIN THE RIGHT OF WAY ADJACENT TO PROPOSED CONSTRUCTION.
6. CONTRACTOR SHALL MARK ALL AREAS PROPOSED FOR EXCAVATION WITH WHITE PAINT PRIOR. TO CALLING UNDERGROUND SERVICES ALERT (USA). THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGES RESULTING FROM EXCAVATION IN AREAS NOT ADEQUATELY MARKED.
7. INSTALLATION OF PROPOSED PIPELINES AND OTHER IMPROVEMENTS SHALL BE IN ACCORDANCE WITH MANUFACTURERS' RECOMMENDATIONS AND APPLICABLE AWWA GUIDELINES, UNLESS OTHERWISE NOTED ON THE PLANS AND SPECIFICATIONS. COPIES OF MANUFACTURERS'.
8. INSTALLATION GUIDELINES SHALL BE AT THE CONSTRUCTION SITE AT ALL TIMES. TEST,DISINFECT, AND FLUSH WATER SYSTEM ONLY IN THE PRESENCE OF A WATER DIVISION REPRESENTATIVE.
9. ALL PIPELINES, APPURTENANCES, AND OTHER WATER SYSTEM COMPONENTS SHALL BE TESTED AT 150 PSI AT HIGHEST WATER MAIN ELEVATION FOR A MINIMUM OF 2 HOURS IN ACCORDANCE WITH THE SPECIFICATIONS. WATER SYSTEM SECTIONS NOT MEETING LEAKAGE REQUIREMENTS AS INDICATED IN THE SPECIFICATIONS SHALL BE REPAIRED AND RETESTED AT THE CONTRACTOR'S EXPENSES.
10. UF RATED #12 TRACING WIRE SHALL BE APPLIED TO MAINS AND SERVICE LINES. WIRE SHALL BE CONTINUOUS BETWEEN MAIN LINE VALVES, BOXES, AND FIRE HYDRANTS. TRACING WIRE THROUGH VALVE BOXES SHALL BE PLACED OUTSIDE OF THE RISER AND INSIDE THE BOX.
11. MAIN LINE FITTINGS FOR RCCP SHALL BE CUSTOM MANUFACTURED AS AN INTEGRAL COMPONENT OF THE PIPELINE. CONNECTING FITTINGS SHALL BE DUCTILE IRON Z(FLANGED) ONLY,

FIRE DEPARTMENT GENERAL NOTES:

1. AN APPROVED PROJECT SIGN SHALL BE PLACED AT VEHICLE ACCESS POINTS INTO THE PROJECT DURING CONSTRUCTION TO ASSIST EMERGENCY RESPONDERS. THE SIGN SHALL IDENTIFY THE ADDRESS, AS APPROVED BY THE CITY OF ROSEVILLE. SUCH SIGNS SHALL BE CLEARLY VISIBLE AND LEGIBLE FROM THE STREET FRONTING THE PROJECT.
2. PRIOR TO COMBUSTIBLE MATERIALS BEING BROUGHT TO THE SITE, FIRE APPARATUS ACCESS ROADS SHALL BE PROVIDED TO WITHIN 150 FEET OF ALL STRUCTURES AND COMBUSTIBLE STORAGE PILES. FIRE APPARATUS ACCESS ROADS SHALL BE FULLY PAVED AND SHALL BE DESIGNED TO SUPPORT THE IMPOSED WEIGHT OF A FIRE APPARATUS (34 TONS GVW), UNLESS PRIOR APPROVAL IS OBTAINED FROM THE FIRE DEPARTMENT FOR TEMPORARY ACCESS ROADS. ACCESS ROADS SHALL BE PROVIDED WITH A MINIMUM 20-FOOT ROADWAY WIDTH AND 13 FOOT 6 INCH VERTICAL CLEARANCE.
3. PRIOR TO COMBUSTIBLE MATERIALS BEING BROUGHT TO THE SITE, ANY REQUIRED ON-SITE FIRE HYDRANTS SHALL BE COMPLETED AND ACCEPTED BY THE ROSEVILLE FIRE DEPARTMENT.
4. CONSTRUCTION MATERIAL AND VEHICLES SHALL NOT OBSTRUCT FIRE APPARATUS ACCESS TO FIRE APPARATUS ROADS, FIRE HYDRANTS OR THE BUILDING.
5. BARRICADES SHALL BE PROVIDED TO PROTECT ANY NATURAL GAS METER, FIRE HYDRANT, FIRE DEPARTMENT CONTROL DEVICE, OR OTHER POSSIBLE PERTINENT EQUIPMENT OR DEVICES THAT MAY BE SUBJECT TO VEHICULAR DAMAGE.
6. PROVIDE AND MAINTAIN A MINIMUM 3-FOOT CLEAR SPACE AROUND FIRE PROTECTION EQUIPMENT.
7. THE BURNING OF COMBUSTIBLE CONSTRUCTION MATERIALS AND TRASH IS PROHIBITED.
8. ASPHALT AND TAR KETTLES SHALL NOT BE LOCATED WITHIN 20 FEET OF ANY COMBUSTIBLE MATERIAL, COMBUSTIBLE BUILDING SURFACE OR BUILDING OPENING. AN ATTENDANT SHALL BE WITHIN 100 FEET OF A KETTLE WHEN THE HEAT SOURCE IS OPERATING. A MINIMUM OF ONE (1) 20B:C PORTABLE FIRE EXTINGUISHER SHALL BE LOCATED WITHIN 30 FEET OF THE KETTLE, AND ON THE ROOF DURING ASPHALT COATING OPERATIONS.
9. DRYWALL AND OTHER TEMPORARY HEATING DEVICES SHALL BE OF AN APPROVED TYPE, LOCATED AWAY FROM COMBUSTIBLE MATERIALS AND ATTENDED AND MAINTAINED AT ALL TIMES. HEATING DEVICES SHALL NOT BE OPERATED AFTER NORMAL WORKING HOURS WITHOUT BEING ATTENDED TO ON AN HOURLY BASIS.
10. CUTTING AND WELDING OPERATIONS SHALL CONFORM TO THE HOT WORK PROVISIONS OF CHAPTER 35 OF THE FIRE CODE. A FIRE WATCH SHALL BE PROVIDED DURING HOT-WORK ACTIVITIES AND SHALL CONTINUE FOR A MINIMUM OF 30 MINUTES AFTER THE CONCLUSION OF THE WORK.
11. IF SITE SURVEY OR EARTH MOVING WORK RESULTS IN THE DISCOVERY OF HAZARDOUS MATERIALS IN CONTAINERS, OR WHAT APPEARS TO BE HAZARDOUS WASTES RELEASED INTO THE GROUND, THE CONTRACTOR OR APPLICANT SHALL IMMEDIATELY REPORT THE FINDING TO THE ROSEVILLE FIRE DEPARTMENT VIA PHONE AT (916) 774-5821. ALL SUSPECTED AREAS SHALL BE MARKED OFF WITH APPROVED SIGNAGE OR CAUTION TAPE UNTIL SUCH TIME THAT A REPRESENTATIVE FROM THE FIRE DEPARTMENT DETERMINES WHETHER THE RELEASE IS REPORTABLE OR NOT AND IF SITE REMEDIATION IS REQUIRED.
12. FIRE SAFETY DURING CONSTRUCTION SHALL COMPLY WITH CHAPTER 33 OF THE CALIFORNIA FIRE CODE.
13. ADEQUATE RADIO COVERAGE SHALL BE PROVIDED WITHIN BUILDINGS FOR PUBLIC SAFETY AGENCIES, AS REQUIRED BY FIRE CODE.
14. PORTABLE FIRE EXTINGUISHERS SHALL BE INSTALLED IN OCCUPANCIES AND LOCATIONS AS SET FORTH IN THE CALIFORNIA FIRE CODE AND AS REQUIRED BY THE CHIEF. PROVIDE A MINIMUM OF ONE (1) PORTABLE FIRE EXTINGUISHER WITHIN EACH TENANT SPACE. THE MAXIMUM TRAVEL DISTANCE TO THE FIRE EXTINGUISHER SHALL NOT EXCEED 75-FEET. THE MINIMUM RATING CLASSIFICATION FOR THE EXTINGUISHER SHALL BE NOT LESS THAN 2A-10B:C. THE MAXIMUM TRAVEL DISTANCE FROM ANY POINT IN A LIGHT HAZARD AREA OF CLASS A HAZARDS SHALL NOT BE MORE THAN 75 FEET FROM A CLASS 2A-10B:C. FIRE EXTINGUISHER AND ONE EXTINGUISHER SHALL BE PROVIDED FOR EACH 6,000 SQUARE FEET. THE MAXIMUM TRAVEL DISTANCE FROM ANY POINT IN AN ORDINARY HAZARD OF CLASS A HAZARDS AREA SHALL NOT BE MORE THAN 75 FEET AND ONE EXTINGUISHER SHALL BE PROVIDED FOR EACH 3,000 SQUARE FEET. THE MAXIMUM TRAVEL DISTANCE TO CLASS B EXTINGUISHERS IS EITHER 30 FEET OR 50 FEET DEPENDING UPON THE SIZE OF THE EXTINGUISHER AND THE CLASSIFICATION OF THE HAZARD. REFER TO UFC STANDARD NO. 10-1 FOR COMPLETE REQUIREMENTS. ALL PORTABLE FIRE EXTINGUISHERS SHALL HAVE A SERVICE TAG AFFIXED TO THEM SHOWING THAT THE EXTINGUISHER HAS BEEN SERVICED BY A CALIFORNIA STATE LICENSED FIRE EXTINGUISHER CONCERN. ALL FIRE EXTINGUISHERS SHALL BE ATTACHED TO A BRACKET OR WITHIN AN APPROVED CABINET. MAXIMUM DISTANCE FROM THE FLOOR SHALL NOT EXCEED 54-INCHES. SIGNAGE SHALL BE POSTED ABOVE THE EXTINGUISHER AND SHALL READ FIRE EXTINGUISHER.
15. THE REQUIRED MINIMUM FIRE FLOW FOR THE PROTECTION OF THE PROPOSED PROJECT IS 1500 GALLONS PER MINUTE WITH 20 POUNDS PER SQUARE INCH RESIDUAL WATER PRESSURE REMAINING IN THE SYSTEM. A CHANGE IN ANY OF THE CONDITIONS MAY INCREASE THE REQUIRED FIRE FLOW.
16. ALL UNDERGROUND FIRE LINE SHALL BE HYDRAULICALLY PRESSURED AT 200 PSI FOR TWO-HOURS PER THE NFPA STANDARD FOR UNDERGROUND FIRE WATER LINE. AN INSPECTION SHALL BE REQUIRED TO WITNESS THE TEST WITH A SUBSEQUENT INSPECTION AFTER THE TWO-HOUR DURATION HAS EXPIRED.
17. TEMPORARY USE OF ON-SITE GENERATORS WITH OVER 60 GALLONS OF DIESEL FUEL SHALL REQUIRE A FIRE DEPARTMENT PERMIT AND MUST MEET THE REQUIREMENTS OF THE CHAPTER 6.95 OF THE HEALTH AND SAFETY CODE. THE ROSEVILLE FIRE DEPARTMENT AND THE NATIONAL FIRE CODES. CONTACT THE FIRE DEPARTMENT AT 916-774-5800 TO INITIATE THE PERMIT APPLICATION.
18. SECTION 10.6.2 OF NFPA 24 HAS BEEN AMENDED NOT TO ALLOW MECHANICAL JOINTS UNDER BUILDINGS. SEE CHAPTER 80 OF THE CALIFORNIA FIRE CODE, PAGE 519. PROVIDE DETAIL OF THE PROPOSED RISER AND UNDERGROUND DETAIL TO THE PAD.
19. CIVIL IMPROVEMENT PLANS SHALL BE RESUBMITTED IF IT HAS BEEN DETERMINED BY THE APPLICANT THAT AN ON-SITE FIRE PUMP WILL BE REQUIRED AS THE RESULT OF SUPPLYING 100 PSI RESIDUAL PRESSURE AT THE STANDPIPE ROOF OUTLET ACCORDANCE WITH NFPA 14, STANDARD FOR THE INSTALLATION OF STANDPIPE AND HOSE SYSTEMS.
20. THE SUBMITTED PRIVATE UNDERGROUND FIRE LINE SHALL BE REVIEWED AND APPROVED BY THE ENVIRONMENTAL UTILITIES DEPARTMENT (EUD) IN CONJUNCTION WITH THE FIRE DEPARTMENT (RFD) PRIOR TO REQUESTING FOR THE REQUIRED INSPECTION FROM THE RFD. THE FIRE SPRINKLER PLANS WILL NOT BE APPROVED BY THE RFD UNTIL THE UNDERGROUND SERVICE LATERAL HAS BEEN INSPECTED AND ACCEPTED BY THE RFD.
21. ALL PROPOSED BURIED BOLTS SHALL BE COATED WITH A LISTED PRODUCT SUCH AS CHRISTY'S HD-50.
22. ACCORDING TO NFPA 13 6.3.1.1.1 THE UNDERGROUND FIRE LINE CANNOT EXTEND INTO THE BUILDING FURTHER THAN 24 INCHES.
23. AN 18 AWG MINIMUM GAUGE TRACER WIRE SHALL BE INSTALLED ALONG ALL NON-METALLIC UNDERGROUND PIPING IN ACCORDANCE WITH SECTION 604 OF THE CALIFORNIA PLUMBING CODE. NOTATIONS SHALL BE MADE ON THE RESUBMITTAL.
24. FIRE DEPARTMENT CONNECTION(S) SHALL BE WITHIN 2-FEET OF BACK OF CURB OR BACK OF WALKWAY, AND SHALL REMAIN UNOBSTRUCTED AT ALL TIMES.
25. ALL FIRE DEPARTMENT CONNECTIONS SHALL BE LABELED WITH THE APPROPRIATE ADDRESS.
26. MECHANICAL JOINTS SHALL BE INSTALLED AT AREAS NOTED PER THE EBBA THRUST RESTRAINT DESIGN PROGRAM SPECIFICATIONS.
27. CONDUITS SHALL BE INSTALL AND AVAILABLE FOR FUTURE MONITORING OF ALL FIRE PROTECTION DEVICES.
28. ALL WORK SHALL BE INSPECTED BY THE FIRE DEPARTMENT PRIOR TO INSTALLING GROUND MATERIALS.
29. TO SCHEDULE A FIRE DEPARTMENT INSPECTION FOR ANY ON-SITE WORK, FOLLOW THE DIRECTIONS USING THE CITY OF ROSEVILLE CITIZEN PORTAL AT permitsonline.roseville.ca.us. THE FOLLOWING BD NUMBER BELOW SHALL BE USED WHEN SCHEDULING A FIRE DEPARTMENT INSPECTION. A BD NUMBER WILL BE ISSUED UPON APPROVAL. ALL INQUIRING REGARDING INSPECTIONS AND PERMIT FEES SHALL BE MADE BY CALLING (916) 774-5332. BD24-4254.

FIRE DEPARTMENT HAZARDOUS MATERIALS DISCLOSURE NOTE:

1. IF SITE SURVEY OR EARTH MOVING WORK RESULTS IN THE DISCOVERY OF HAZARDOUS MATERIALS IN CONTAINERS, OR WHAT APPEARS TO BE HAZARDOUS WASTES RELEASED INTO THE GROUND, THE CONTRACTOR OR APPLICANT SHALL IMMEDIATELY REPORT THE FINDING TO THE ROSEVILLE FIRE DEPARTMENT VIA PHONE AT (916) 774-5821. ALL SUSPECTED AREAS SHALL BE MARKED OFF WITH APPROVED SIGNAGE OR CAUTION TAPE UNTIL SUCH TIME THAT A REPRESENTATIVE FROM THE FIRE DEPARTMENT DETERMINES WHETHER THE RELEASE IS REPORTABLE OR NOT AND IF SITE REMEDIATION IS REQUIRED.

REQUIRED FIRE FLOW / AVAILABLE WATER SUPPLY NOTES:

1. THE REQUIRED MINIMUM FIRE FLOW FOR THE PROTECTION OF THE PROPOSED WITH 20 POUNDS PER SQUARE INCH 4000 GALLONS PER MINUTE PROJECT IS RESIDUAL WATER PRESSURE REMAINING IN THE SYSTEM. THIS FLOW IS BASED UPON THE PREMISE THAT THE STRUCTURE WILL BE O HR RATING @ TYPE V-B CONSTRUCTION MATERIALS WITH THE INSTALLATION OF A FULL COVERAGE AUTOMATIC FIRE SPRINKLER SYSTEM, AND ARE REFLECTIVE OF THE PROPOSED SQUARE F

EN24-0353

CWJ# 500063

DEMOLITION NOTES

1. PROVIDE TEMPORARY BARRICADES AND OTHER FORMS OF PROTECTION AS REQUIRED TO PROTECT GENERAL PUBLIC FROM INJURY DUE TO DEMOLITION WORK. CBC CHAPTER 31.

2. IF HAZARDOUS MATERIALS ARE ENCOUNTERED DURING DEMOLITION OPERATION, NOTIFY BUILDING OWNER AND COORDINATE FURTHER REQUIREMENTS TO COMPLY WITH APPLICABLE REGULATIONS, LAWS & ORDINANCES CONCERNING REMOVAL, HANDLING, AND PROTECTION AGAINST EXPOSURE.

COMPLIANCE WITH CODES AND AUTHORITIES AND DOCUMENTS

1. ALL WORK SHALL COMPLY WITH THE MINIMUM STANDARDS OF THE CALIFORNIA BUILDING CODE – C.B.C., AMERICANS WITH DISABILITIES ACT – ADA AND C.B.C. SEC. 107.

2. ALL WORK SHALL COMPLY WITH THE CURRENT EDITIONS ADOPTED BY AGENCIES HAVING JURISDICTION AND SUPPLEMENTS OF THE FOLLOWING STATE REGULATIONS, CODES AND AUTHORITIES:
   A. CALIFORNIA BUILDING CODE – TITLE 8. CALIFORNIA CODE OF REGULATIONS, INDUSTRIAL RELATIONS CONSTRUCTION SAFETY ORDERS.
   B. CALIFORNIA BUILDING CODE – TITLE 24 PART 2 CALIFORNIA CODE OF REGULATIONS
   C. CALIFORNIA BUILDING CODE – TITLE 24 PART 2 CALIFORNIA CODE OF REGULATIONS, BARRIER FREE ACCESS OF THE PHYSICALLY HANDICAPPED.
   D. CALIFORNIA BUILDING CODE – TITLE 24 CALIFORNIA ADMINISTRATIVE CODE ENERGY REGULATIONS.
   E. CALIFORNIA FIRE CODE.

3. ALL WORK SHALL COMPLY WITH THE CURRENT EDITIONS OF THE FOLLOWING LOCAL REGULATIONS, CODES AND AUTHORITIES:
   A. BUILDING INSPECTION DIVISION.
   B. PLANNING AND DEVELOPMENT.
   D. FIRE DEPARTMENT/ DEPARTMENT OF TRANSPORTATION.

4. DIMENSIONS:
   A. DIMENSIONS SHALL NOT BE SCALED FROM PLANS, SECTIONS, OR DETAILS ON DRAWINGS.
   B. DIMENSIONS TO EXISTING CURBS ARE TO FACE OF CURB.
   C. ALL DIMENSIONS SHALL BE VERIFIED IN THE FIELD BEFORE PROCEEDING WITH THE WORK.

5. WHERE NO SPECIFIC DETAIL IS SHOWN, THE CONSTRUCTION SHALL BE IDENTICAL OR SIMILAR TO THAT INDICATED FOR LIKE CASES OF CONSTRUCTION ON THE PROJECT.

6. CONTRACTOR SHALL SAWCUT EXISTING CONCRETE AT CONTROL JOINT/EXPANSION JOINT WHERE EVER POSSIBLE. IF NOT POSSIBLE, CONTRACTOR SHALL COORDINATE AND REVIEW LOCATION IN FIELD WITH CITY OF ROSEVILLE PRIOR TO CUTTING.

TYPICAL NOTES

1. DIMENSIONS ARE NOT ADJUSTABLE WITHOUT APPROVAL OF CITY OF ROSEVILLE IN WRITING.

2. MAXIMUM SLOPE MEANS THE SLOPE SHALL NOT EXCEED THE SLOPE SHOWN.

3. MINIMUM SLOPE MEANS THE SLOPE SHALL NOT BE LESS THAN THE SLOPE SHOWN.

4. MATCH EXISTING MEANS THE CONSTRUCTION SHALL MATCH THE SAME OR SIMILAR EXISTING ITEM IN QUALITY, SHAPE, SIZE, COLOR TEXTURE, PATTERN, HEIGHT AND ALIGNMENT, U.N.O.

CONTRACTOR RESPONSIBILITIES

1. THE CONTRACTOR SHALL EXAMINE THE DRAWINGS AND SPECIFICATIONS AND SHALL NOTIFY THE CITY OF ROSEVILLE OF ANY DISCREPANCIES FOUND PRIOR TO PROCEEDING WITH THE WORK.

2. THE CONTRACTOR SHALL VERIFY CONDITIONS AT THE SITE AND REPORT ANY DISCREPANCIES OR EXISTING CONDITION CONFLICTS TO THE CITY OF ROSEVILLE BEFORE PROCEEDING WITH THE WORK.

3. THE CONTRACTOR SHALL NOT PROCEED WITH WORK RELATED TO ANY DISCREPANCIES OR EXISTING CONDITION CONFLICT WITHOUT RESOLUTION FROM THE CITY OF ROSEVILLE.

4. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO NOTIFY THE CITY OF ROSEVILLE OF ANY CONFLICTS HEREIN – EITHER UNAPPARENT OR OBVIOUS – PRIOR TO START OF WORK ON THAT ITEM OR BEAR THE RESPONSIBILITY OF CORRECTING SUCH WORK AS DIRECTED BY THE CITY OF ROSEVILLE AT NO ADDITIONAL COST AND WITH NO TIME EXTENSION OF THE PROJECT SCHEDULE.

5. THE CONTRACTOR SHALL CREATE A TRAFFIC SAFETY PLAN, SITE CLEAN UP/ MAINTENANCE PLAN AND PHASING PLAN FOR REVIEW WITH THE OWNER'S REPRESENTATIVE PRIOR TO PROCEEDING WITH THE WORK.

6. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR THE SAFETY OF THE PUBLIC AND EMPLOYEES USING THE FACILITY, AND THEIR VEHICLES.

7. CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVAL AND DISPOSAL OF ALL EXISTING MATERIAL, DEMOLITION WORK/ MATERIAL OR SURPLUS MATERIAL. CONTRACTOR SHALL RECYCLE ALL MATERIAL POSSIBLE AND SHALL COMPLY WITH JURISDICTIONS WASTE MANAGEMENT REQUIREMENTS.
   A. CONTRACTOR SHALL SUBMIT A WASTE MANAGEMENT PLAN BY EMAIL TO SCST@ROSEVILLE.CA.US OR BY FAX TO 916-774-5798. FOR QUESTIONS OR ASSISTANCE COMPLETING A WASTE MANAGEMENT PLAN PLEASE CALL 916-774-5780. FOR ASSISTANCE ON DRAFTING A PLAN OR QUESTIONS REGARDING THE RESOURCE GUIDE, PLEASE CONTACT: SHELLY TILLEY, REFUSE SUPERINTENDENT STILLEY@ROSEVILLE.CA.US 916-774-5785 ENVIRONMENTAL UTILITIES – SOLID WASTE DIVISION. REFERENCE CGBSC SEC. 5.408.

8. CONTRACTOR SHALL VERIFY LAYOUT IN THE FIELD WITH THE CITY OF ROSEVILLE PRIOR TO DEMOLITION WORK AND DURING FORMING PRIOR TO CONCRETE POUR. IF CONTRACTOR FINDS A DISCREPANCY OR CONFLICT WITH EXISTING CONDITIONS, HE SHALL CONTACT THE CITY OF ROSEVILLE IMMEDIATELY. THE CONTRACTOR SHALL ADJUST THE LAYOUT AS DIRECTED BY THE CITY OF ROSEVILLE TO RESOLVE THE DISCREPANCY OR EXISTING CONDITION AT NO ADDITIONAL COST TO THE CITY OF ROSEVILLE.

9. CONTRACTOR TO BID ALL CURBS AS FULL DEPTH/BARRIER CURBS AS DETAILED.

10. CONTRACTOR SHALL MAINTAIN THE SITE IN A CLEAN CONDITION AND SHALL CLEAN ALL AREAS AT COMPLETION OF THE PROJECT.

11. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT PRIOR TO ANY EXCAVATION.

12. THE CONTRACTOR SHALL VERIFY THE LOCATIONS OF ALL EXISTING UTILITIES BELOW GRADE AND RELATED SERVICE CONNECTIONS WITH THE RESPECTIVE UTILITY COMPANIES.

13. THE CONTRACTOR SHALL COORDINATE THE REMOVAL, ABANDONMENT AND/OR LOCATIONS OF EXISTING UTILITIES ABOVE OR BELOW GRADE WITH THE RESPECTIVE UTILITY COMPANIES.

14. LANDSCAPING AND IRRIGATION REPAIRS SHALL BE PERFORMED BY A QUALIFIED CONTRACTOR.

TREE PRESERVATION:

1. GRADING AROUND TREES TO BE LIMITED TO OUTSIDE THE DRIPLINE. ANY TREE WELL GRADED SHOULD BE DRAINED TO SOME OUTFALL OR SWALE.

2. THE FOLLOWING CONDITIONS SHALL APPLY TO ENSURE THE PRESERVATION OF TREES:
   A. EACH TREE OR GROUP OF TREES TO BE SAVED SHALL BE FENCED BY A CHAIN-LINK FENCE PRIOR TO ANY GRADING OR MOVEMENT OF HEAVY EQUIPMENT OR ISSUANCE OF ANY PERMITS.
   B. FENCING SHALL BE LOCATED ONE FOOT (1') OUTSIDE THE DRIPLINE OF THE TREE OR TREES.
   C. SIGNS SHALL BE POSTED ON ALL SIDES OF SAID FENCES STATING:

   WARNING:
   THIS FENCE SHALL NOT BE REMOVED
   OR RELOCATED WITHOUT WRITTEN
   AUTHORIZATION FROM THE
   PLANING DEPARTMENT

3. THE GRADING PLAN FOR THE PROJECT HAS BEEN DESIGNED FOR NO GRADING TO OCCUR WITHIN THE DRIPLINE OF ANY OAK TREE UNLESS SPECIFICALLY APPROVED BY PLANNING DEPARTMENT AND SHOWN ON THESE PLANS. NO GRADES SHALL BE MODIFIED WITHOUT THE APPROVAL OF THE CIVIL ENGINEER AND THE CITY OF ROSEVILLE.

4. NO TRENCHING SHALL OCCUR BENEATH THE DRIPLINE OF ANY OAK TREE TO BE SAVED UNLESS STATED ON THESE PLANS "TRENCHING UNDER THIS TREE IS APPROVED".

5. PARKING OF VEHICLES AND EQUIPMENT OR STORAGE OF MATERIALS UNDER THE DRIPLINE OF TREES SHALL NOT OCCUR AT ANY TIME.

DEMOLITION GENERAL NOTES

THE FOLLOWING NOTES APPLY TO SHEETS C1.1 – C1.4

1. REFER TO ARCHITECTURAL, LANDSCAPE, ELECTRICAL AND PLUMBING PLANS FOR ADDITIONAL DEMOLITION ITEMS.
2. IN THE EVENT THAT ANY UNUSUAL CONDITIONS NOT COVERED BY THE GEOTECHNICAL INVESTIGATION REPORT OR ARE ENCOUNTERED DURING GRADING OPERATIONS THE GEOTECHNICAL ENGINEER AND THE ARCHITECT SHALL BE IMMEDIATELY NOTIFIED FOR DIRECTIONS.
3. ADDITIONAL DEMOLITION INFORMATION MAY BE SHOWN ON THE GRADING, DRAINAGE, AND UTILITY PLANS, AND THOSE PLANS PREPARED BY OTHER DISCIPLINES FOR THIS PROJECT.
4. ALL DEMOLISHED ITEMS SHALL BE DISPOSED OF OFFSITE AT A SUITABLE, LEGAL, DUMP SITE OR OTHER FACILITY.
5. ALL DISPOSED OF MATERIALS SHALL BE RECYCLED IF POSSIBLE.
6. THE SCHOOL DISTRICT SHALL HAVE SALVAGE RIGHTS TO ANY DEMOLISHED ITEMS SHOWN HEREON. THE CONTRACTOR SHALL GIVE THE DISTRICT NOTICE 7 DAYS PRIOR TO THE START OF DEMOLITION. THE DISTRICT SHALL MOVE ANY RETAINED ITEMS OUT OF THE CONTRACTORS WORK AREA, UNLESS ANOTHER ARRANGEMENT IS MADE WITH THE CONTRACTOR. ANY REMAINING ITEMS BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE REMOVED FROM THE SITE. ANY ITEMS NOT SHOWN FOR REMOVAL SHALL REMAIN AND SHALL BE PROTECTED FROM DAMAGE DURING CONSTRUCTION TO A REASONABLE EXTENT.
7. EXISTING UTILITY STRUCTURES IN AREAS OF NEW PAVING SHALL BE REMOVED AND REPLACED WITH NEW BOX/COVER AT NEW GRADE UNLESS SPECIFICALLY NOTED OTHERWISE.
8. ITEMS OUTSIDE THE LIMITS OF DEMOLITION SHALL REMAIN AND BE PROTECTED FROM DAMAGE DURING CONSTRUCTION.
9. EXISTING UTILITY STRUCTURES AND PIPING NOT SHOWN ON DEMOLITION PLAN TO BE REMOVED SHALL REMAIN AND BE PROTECTED.
10. SAWCUTS AND SUBSEQUENT PATCH BACK OF CONCRETE WALKS, SHALL BE TO THE EXISTING CONCRETE JOINT BEYOND THE NEAREST LOCATION OF DEMOLITION AS SHOWN. A REASONABLE EFFORT HAS BEEN MADE TO LOCATE, SHOW AND COORDINATE WITH EXISTING JOINTS, HOWEVER IF FIELD CONDITIONS ARE OTHERWISE, IT IS UNDERSTOOD TO REMOVE AND PATCH BACK TO THE NEAREST JOINTS BEYOND DEMOLITION.
11. PRIOR TO THE START OF CONSTRUCTION, VERIFY AND POTHOLE ALL UTILITY POINTS OF CONNECTION FOR LOCATION, DEPTH, AND SIZE. IF CONFLICT IS FOUND, CONTACT THE ENGINEER IMMEDIATELY FOR DIRECTION.
12. WITHIN LANDSCAPE AREAS TO BE DEMOLISHED THERE MAY BE EXISTING IRRIGATION LINES NOT SHOWN ON THIS PLAN. CONTRACTOR SHALL REMOVE LATERAL LINES AND HEADS ENCOUNTERED. MAIN LINES AND CONTROL WIRES MAY ONLY BE REMOVED PROVIDED THAT ROUTING IS KNOWN AND REMOVAL WILL NOT DEACTIVATE AN IRRIGATION SYSTEMS INTENDED TO REMAIN. IF CONFLICT IS FOUND, CONTACT THE ENGINEER FOR DIRECTION.
13. COORDINATE REMOVAL OF LANDSCAPE ITEMS WITH LANDSCAPE PLANS.

DEMOLITION NOTES

1. WITHIN LIMITS SHOWN REMOVE ALL PAVEMENT, CURB, GUTTER, BASE MATERIAL AND LANDSCAPING. COORDINATE LIMITS OF REMOVAL WITH PLANS BY OTHERS. ADDITIONAL DEMOLITION ITEMS SHOWN ON ARCHITECTURAL, ELECTRICAL AND PLUMBING PLANS.
2. REMOVE TREE, STUMP AND ALL ROOTS.
3. REMOVE EXISTING IRRIGATION SYSTEM. CLEAR, GRUB AND REMOVE EXISTING VEGETATION.
4. REMOVE PLANTER BOX.
5. REMOVE COLUMNS AND ASSOCIATED FOOTINGS.
6. REMOVE MOWSTRIP BAND.
7. REMOVE MANHOLE.
8. REMOVE GAZEBO, COLUMNS AND ASSOCIATED FOOTINGS.
9. BLACKOUT EXISTING STRIPING.
10. REMOVE FIRE HYDRANT LINE AND VALVE. PATCH PIPE PER CITY OF ROSEVILLE STANDARDS.
11. REMOVE SEWER PIPE AFTER NEW PIPING HAS BEEN INSTALLED AND IS IN OPERATION.

GENERAL NOTE:

ADDITIONAL DEMOLITION ITEMS SHOWN ON ARCHITECTURAL, ELECTRICAL, LANDSCAPE AND PLUMBING PLANS. CONTRACTOR IS RESPONSIBLE FOR COORDINATING THE LIMITS OF REMOVAL FOR ITEMS SHOWN ON PLANS BY OTHERS AND FOR PROTECTION OF ALL ITEMS THAT ARE TO REMAIN.

DEMOLITION NOTES

1. WITHIN LIMITS SHOWN REMOVE ALL PAVEMENT, CURB, GUTTER, BASE MATERIAL AND LANDSCAPING. COORDINATE LIMITS OF REMOVAL WITH PLANS BY OTHERS. ADDITIONAL DEMOLITION ITEMS SHOWN ON ARCHITECTURAL, ELECTRICAL AND PLUMBING PLANS.
2. REMOVE TREE, STUMP AND ALL ROOTS.
3. REMOVE EXISTING IRRIGATION SYSTEM. CLEAR, GRUB AND REMOVE EXISTING VEGETATION.
4. REMOVE PLANTER BOX.
5. REMOVE COLUMNS AND ASSOCIATED FOOTINGS.
6. REMOVE MOWSTRIP BAND.
7. MANHOLE TO BE REMOVED. COORDINATE WITH ELECTRICAL PLANS.
8. REMOVE GAZEBO, COLUMNS AND ASSOCIATED FOOTINGS.
9. BLACKOUT EXISTING STRIPING.
10. TREES NOTED TO BE SAVED SHALL BE PROTECTED BY TEMPORARY FENCING PLACED AROUND BASE OF TREE.
11. REMOVE SEWER PIPE AFTER NEW PIPING HAS BEEN INSTALLED AND IS IN OPERATION.

GENERAL NOTE:

ADDITIONAL DEMOLITION ITEMS SHOWN ON ARCHITECTURAL, ELECTRICAL, LANDSCAPE AND PLUMBING PLANS. CONTRACTOR IS RESPONSIBLE FOR COORDINATING THE LIMITS OF REMOVAL FOR ITEMS SHOWN ON PLANS BY OTHERS AND FOR PROTECTION OF ALL ITEMS THAT ARE TO REMAIN.

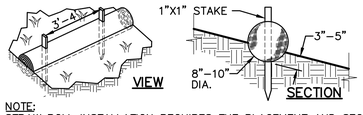
EXIST. NEW

EROSION CONTROL NOTES

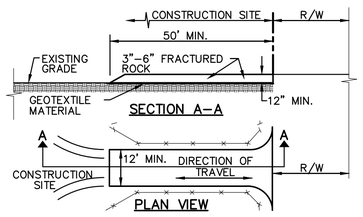
NOTE: EXACT LOCATION WILL BE COORDINATED BY CONTRACTOR AND PROJECT QSP.



1. CONTRACTOR SHALL PROVIDE STRAW WATTLE BARRIER AT ALL INLETS (NEW AND/OR EXIST.) IN AREAS OF ON-SITE WORK PER THE DETAIL PROVIDED. IN ADDITION TO WATTLE, PROVIDE FILTER BAG AT EACH INLET. STRAW WATTLES NOT REQUIRED AT INLETS IN PAVED AREAS, ONLY FILTER BAG. (1 / C6.1)
2. CONTRACTOR SHALL PROVIDE STRAW WATTLES AT PERIMETER OF SITE PER DETAIL (2 / C6.1)
3. CONTRACTOR SHALL PROVIDE STABILIZED CONSTRUCTION SITE ACCESS PER DETAIL (3 / C6.1)

NOTE: STRAW WATTLE INSTALLATION REQUIRES THE PLACEMENT AND SECURE STAKING OF THE WATTLE IN A TRENCH, 3-1/2" DEEP, DUG ON CONTOUR. RUNOFF MUST NOT BE ALLOWED TO RUN UNDER OR AROUND ROLL.

1 / C6.1 STRAW WATTLE INLET FILTER



NO SCALE

NOTE:
STRAW ROLL INSTALLATION REQUIRES THE PLACEMENT AND SECURE STAKING OF THE ROLL IN A TRENCH, 3"-5" DEEP, DUG ON CONTOUR. RUNOFF MUST NOT BE ALLOWED TO RUN UNDER OR AROUND ROLL.

2 / C6.1 STRAW ROLLS

NO SCALE

NOTES:

1. STABILIZED CONSTRUCTION SITE ACCESS SHALL BE CONSTRUCTED OF 3"-6" ANGULAR ROCK MATERIAL CONFORMING TO SECTION 26 OF STATE SPECIFICATIONS PLACED OVER GEOTEXTILE MATERIAL. ROCK SHALL BE PLACED TO A MINIMUM THICKNESS OF SIX INCHES. THE METHOD OF PLACING, SPREADING AND COMPACTING ROCK SHALL CONFORM TO SECTION 26 OF THE STATE SPECIFICATIONS.
2. LENGTH OF SITE ACCESS SHALL BE A MINIMUM LENGTH OF FIFTY FEET. WIDTH SHALL BE A MINIMUM WIDTH OF TWELVE FEET OR AS NECESSARY TO COVER ALL VEHICULAR INGRESS AND EGRESS.
3. THE SITE ACCESS SHALL BE KEPT IN GOOD CONDITION BY OCCASIONAL TOP DRESSING.

3 / C6.1 STABILIZED CONSTRUCTION SITE ACCESS

NO SCALE

MONITORING SCHEDULE

1. WITHIN 2 BUSINESS DAYS (48 HOURS) PRIOR TO EACH QUALIFYING RAIN EVENT.
2. EVERY 24 HOURS DURING A QUALIFYING RAIN EVENT.
3. WITHIN 2 BUSINESS DAYS (48 HOURS) AFTER EACH QUALIFYING RAIN EVENT RESULTING IN 0.50 INCHES OF RAIN OR MORE.
4. RECORD THE TIME, DATE AND RAIN GAUGE READING OF ALL QUALIFYING RAIN EVENTS.
5. QUARTERLY NON-STORM WATER DISCHARGE INSPECTIONS.
6. WEEKLY INSPECTIONS.

EROSION AND SEDIMENT CONTROL GENERAL NOTES

1. IF CERTAIN SOIL TYPES (E.G. COLLOIDAL SOILS) ARE DETECTED, THE CONTRACTOR SHALL IMPLEMENT ADDITIONAL TREATMENT MEASURES PRIOR TO DISCHARGE.
2. CONTRACTOR IS RESPONSIBLE FOR THE DEWATERING AND REMOVAL OF ALL TEMPORARY EROSION CONTROL DEVICES JUST PRIOR TO THE COMMENCING OF THE FINAL GRADING AND PAVING OPERATIONS.
3. CONTRACTOR SHALL BE RESPONSIBLE FOR WATERING THE SITE TO MINIMIZE DUST CREATED DURING CONSTRUCTION.
