RESOLUTION NO. 25-121

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, The City Council has, by previous Resolutions, formed the Olympus Pointe Landscaping and Lighting District (hereafter referred to as the "District") pursuant to the provisions of the *Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code of California, beginning with Section 22500* (hereafter referred to as the "Act"), that provides for the levy and collection of assessments by the County of Placer for the City of Roseville to pay for the maintenance and services of street lighting, landscaping, and all appurtenant facilities and operations related thereto; and,

WHEREAS, the City Council has retained Willdan Financial Services (hereinafter "Engineer") for the purpose of assisting with the establishment of the assessments, the annexation of territory, and to prepare and file an Engineer's Annual Levy Report (hereinafter referred to as the "Engineer's Report") with the City Clerk in accordance with the Act, and in accordance with the California Constitution, Articles XIIIC and XIIID;

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, AS FOLLOWS:

Section 1 Engineer's Report: The City Council hereby orders the Engineer to prepare and file with the City Clerk the Engineer's Report concerning the levy of assessments for the District in accordance with Chapter 3, Section 22622 of the Act.

Section 2 Proposed improvements and any substantial changes in existing improvements: The District improvements include: the maintenance and operation of and the furnishing of services, materials and/or improvements for landscape, lighting, park and hardscape areas, and other public improvements within the street right-of-way areas and all appurtenant facilities related thereto as further described in the Engineer's Report. The Engineer's Report also describes all new improvements or substantial changes in existing improvements.

RESOLUTION NO. 25-122

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, The City Council has, by previous Resolutions, formed the Olympus Pointe Landscaping and Lighting District (hereafter referred to as the "District"), and initiated proceedings for Fiscal Year 2025/2026, pursuant to the provisions of the *Landscaping and Lighting Act of 1972*, *Part 2 of Division 15 of the Streets and Highways Code of California*, *beginning with Section 22500* (hereafter referred to as the "Act") that provides for the levy and collection of assessments by the County of Placer for the City of Roseville to pay for the maintenance, operation and servicing of all improvements and facilities related thereto; and,

WHEREAS, the City Council has retained Willdan Financial Services for the purpose of assisting with the Annual Levy of the District, and to prepare and file an Engineer's Annual Levy Report (hereinafter referred to as the "Engineer's Report") with the City Clerk in accordance with the Act; and,

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, PURSUANT TO *CHAPTER 3, SECTION 22624* OF THE ACT, AS FOLLOWS:

Section 1 Intention: The City Council hereby declares that it is its intention to seek the Annual Levy of the District pursuant to the Act, over and including the land within the District boundary, and to levy and collect assessments on all such land to pay for the annual costs of the improvements.

Section 2 Proposed improvements and any substantial changes in existing improvements: The District improvements include: the maintenance and operation of and the furnishing of services, materials or improvements for landscape, lighting, park and hardscape areas including turf, ground cover, shrubs and trees, irrigation systems, drainage systems, project identification signs, special street signs, special lighting for signage, granite entryways, sculptures and sculpture park, special paving materials, and other public improvements within the street right-of-way areas and all appurtenant facilities related thereto as further described in the Engineer's Report. The Engineer's Report also describes all new improvements or substantial changes in existing improvements.

Section 3 Boundaries and Designation: The boundaries of the District are described as the boundaries previously defined in the formation documents of the original District and any annexations thereto. The District is known and designated as the:

"Olympus Pointe Landscaping and Lighting District"

Section 4 Proposed Assessment Amounts: The proposed assessments are outlined in the Engineer's Report. District Assessments are calculated in accordance with the method of apportionment established for the District and do not exceed the assessment rates and annual inflationary adjustment previously authorized by the City Council and approved by the property owners in accordance with the provisions of the California State Constitution, Article XIIID.

Section 5 Public Hearing(s): The City Council hereby declares its intention to conduct a Public Hearing annually concerning the levy of assessments for the District in accordance with *Chapter 3, Section 22626* of the Act.

Section 6 Notice: The City Clerk shall give notice of the time and place of the Public Hearing by causing this Resolution to be published once in the local newspaper not less than ten (10) days before the date of the hearing and by posting a copy of this Resolution on the official bulletin board customarily used by the City Council for the posting of notices.

Section 7 Time and Place of Public Hearing: Notice is hereby given that a Public Hearing on these matters will be held by the City Council on **Wednesday, May 21, 2025 at 6:00 p.m.**, or as soon thereafter as feasible in the regular meeting chambers located at 311 Vernon Street, Roseville, California.

RESOLUTION NO. 25-123

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, the City Council has, by previous Resolutions, ordered the preparation of an Engineer's Annual Levy Report (hereafter referred to as the "Engineer's Report") for the district known and designated as the Olympus Pointe Landscaping and Lighting District (hereafter referred to as the "District"), pursuant to the provisions of the *Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code of California*, *beginning with Section 22500* (hereinafter referred to as the "Act"); and,

WHEREAS, the City Council has retained Willdan Financial Services (hereinafter "Engineer"), for the purpose of assisting with the establishment of the assessments and to prepare and file an Engineer's Report with the City Clerk in accordance with the Act, and in accordance with the requirements of the California Constitution, Articles XIIIC and XIIID; and,

WHEREAS, there has now been presented to this City Council the Engineer's Report as required by *Chapter 1, Article 4, Section 22566* of said Act; and,

WHEREAS, this City Council has carefully examined and reviewed the Engineer's Report as presented, and is preliminarily satisfied with the District, each and all of the budget items and documents as set forth therein, and is satisfied that the assessments, on a preliminary basis, have been spread in accordance with the benefits received from the improvements, operation, maintenance and services to be performed within each Zone, as set forth in said Engineer's Report; and,

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, AS FOLLOWS:

Section 1 That the above recitals are all true and correct.

Section 2 That the Engineer's Report as presented, consists of the following:

a. A Description of Improvements
b. The Annual Budget (Costs and Expenses of Maintenance, Services, Operations and District Administration)
c. The Assessment Roll containing the Fiscal Year 2025/2026 Levy for each Assessor Parcel within the District

Section 3 The Engineer's Report is hereby approved on a preliminary basis and ordered to be filed in the Office of the City Clerk as a permanent record and to remain open to public inspection.

Section 4 That the City Clerk shall certify to the passage and adoption of this Resolution, and the minutes of this meeting shall so reflect the presentation of the Engineer's Report.

APPENDIX A – DISTRICT BOUNDARY MAP 20

APPENDIX B — FY 2025/26 ASSESSMENT ROLL 22

I. OVERVIEW

A. INTRODUCTION

The City of Roseville ("City") annually levies and collects special assessments in order to maintain the certain public improvements within the Olympus Pointe Landscaping and Lighting District ("District") within the City. The District, which was formed in 1989, is levied annual assessments pursuant to the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code (the "1972 Act").

The Engineer's Report ("Report") describes the District boundaries, any new annexations, improvements maintained by the District and the proposed assessments for the period of July 1, 2025 through June 30, 2026.

The District consists of two (2) benefit Zones ("Zones"). The improvements that benefit properties within each Zone and the costs associated with those improvements are identified and budgeted separately. Each parcel within a Zone is assessed proportionately for only those improvements and services that are a direct and special benefit to the properties within the respective Zone. The assessments are based on the historical and estimated cost to maintain the improvements that provide a direct and special benefit to properties within the District.

The word "parcel," for the purposes of this Report, refers to an individual property assigned its own Assessor's Parcel Number ("APN") by the Placer County Assessor's Office.

Following approval of the Report, the City Council will by resolution, order the improvements to be made, if any, and confirm the levy and collection of assessments herein pursuant to the 1972 Act. The assessment rates and method of apportionment described in this Report as approved or modified by the City Council define the assessments to be applied to each parcel within the District and respective Zones for Fiscal Year ("FY") 2025/26. The assessments as approved will be submitted to the Placer County Auditor/Controller to be included on the property tax roll for each parcel.

If any parcel submitted for collection is identified by the County Auditor/Controller to be an invalid parcel number for the current fiscal year, a corrected parcel number and/or new parcel numbers will be identified and resubmitted to the County Auditor/Controller. The assessment amount to be levied and collected for the resubmitted parcel or parcels shall be based on the method of apportionment and assessment rate approved by the City Council.

B. COMPLIANCE WITH CURRENT LEGISLATION

All assessments described in this Report and approved by the City Council are prepared in accordance with the 1972 Act and are in compliance with the substantive and procedural requirements of the California State Constitution Articles XIIIC and XIIID ("Article XIIIC" and "Article XIIID") and the provisions of the Proposition 218 Omnibus Implementation Act [Government Code Section 53750 and following] (the "Implementation Act"). Articles XIIIC and XIIID and the Implementation Act collectively are hereinafter referred to as "Proposition 218".

The District's Maximum Assessment Rates for all Zones and the Inflationary Adjustment Factor were previously approved and confirmed through property owner ballot proceedings and as such, comply with the provisions of Proposition 218.

Pursuant to the 1972 Act, an annual Public Hearing is conducted by the City Council to accept property owner and public comments, to review the Engineer's Annual Levy Report prior to approving the annual assessments to be levied on the County tax rolls.

C. CLARIFICATION OF ZONE DESIGNATIONS

In order to increase consistency with the City's other districts and to facilitate presentation within the Engineer's Report, the names of both Zones were redesignated, commencing with FY 2007/2008, as follows:

- The "Non-Residential/Multi-Family Residential Zone" was redesignated to "Zone A." (1)

- The "Residential Zone" was redesignated to "Zone D." (2)

(1) Prior to FY 2005/2006, this territory was known as "Zone A". In FY 2005/2006, Zone A was redesignated to the "Non-Residential/Multi-Family Residential Zone".

(2) Prior to FY 2005/2006, this territory was known as "Zones B & C". In FY 2005/2006, Zones B & C were combined and redesignated to the "Residential Zone".

D. GENERAL DESCRIPTION OF DISTRICT

The Olympus Pointe Landscaping and Lighting District is located in the City of Roseville at the southerly edge of Placer County, northeast of the intersection of Interstate 80 and Douglas Boulevard. The site is generally bounded by Interstate 80 on the west, East Roseville Parkway and Olympus Drive to the north, Douglas Boulevard to the south and Sierra College Boulevard to the east. See Appendix A for a rendering of the District boundary map.

The District consists of two zones as described below. These zones were established by the City through a District reengineering commencing with the FY 2005/2006 levy. Additional information regarding the reengineering is provided in Section III of the Report.

Zone A

Zone A includes land zoned for non-residential and multi-family residential uses. The Zone comprises the majority of the District and is primarily west and south of East Roseville Parkway, east of Interstate 80 and north of Douglas Boulevard. The territory that was originally designated as "Zone A" consisted of 581.78 assessable acres when it was redesignated as the "Non-Residential/Multi-Family Zone" commencing with the FY 2005/06 levy. It was then redesignated back to "Zone A" commencing with the FY 2007/08 levy.

Zone D

Zone D includes two single-family residential developments on the eastern side of the District. The Zone is bisected by Olympus Drive and Sierra College Boulevard on the District's eastern boundary and includes 468 developed single-family residences. Originally, each residential development was designated as separate zone (Zones B and C). The area was redesignated as the "Residential Zone" commencing with the FY 2005/2006 levy and then redesignated to the "Zone D" commencing with the FY 2007/2008 levy.

E. IMPROVEMENTS AUTHORIZED BY THE 1972 ACT

As applicable or may be applicable to a proposed District, the 1972 Act defines improvements to mean one or any combination of the following:

- The installation or planting of landscaping.
- The installation or construction of statuary, fountains, and other ornamental structures and facilities.
- The installation or construction of public lighting facilities.
- The installation or construction of any facilities which are appurtenant to any of the foregoing or which are necessary or convenient for the maintenance or

servicing thereof, including, but not limited to, grading, clearing, removal of debris, the installation or construction of curbs, gutters, walls, sidewalks, or paving, or water, irrigation, drainage, or electrical facilities.

- The maintenance or servicing, or both, of any of the foregoing.
- The acquisition of any existing improvement otherwise authorized pursuant to this section.

Incidental expenses associated with the improvements including, but not limited to:

- The cost of preparation of the report, including plans, specifications, estimates, diagram, and assessment;
- The costs of printing, advertising, and the publishing, posting, and mailing of notices;
- Compensation payable to the County for collection of assessments;
- Compensation of any engineer or attorney employed to render services;
- Any other expenses incidental to the construction, installation, or maintenance and servicing of the improvements;
- Any expenses incidental to the issuance of bonds or notes pursuant to Section 22662.5.
- Costs associated with any elections held for the approval of a new or increased assessment.

The 1972 Act defines "Maintain" or "maintenance" to mean furnishing of services and materials for the ordinary and usual maintenance, operation, and servicing of any improvement, including:

- Repair, removal, or replacement of all or any part of any improvement.
- Providing for the life, growth, health, and beauty of landscaping, including cultivation, irrigation, trimming, spraying, fertilizing, or treating for disease or injury.
- The removal of trimmings, rubbish, debris, and other solid waste.
- The cleaning, sandblasting, and painting of walls and other improvements to remove or cover graffiti.

Furthermore, the 1972 Act specifies that where the cost of improvements (other than maintenance and operations) is greater than can be conveniently raised from a single annual assessment, an assessment to be levied and collected in annual installments. In that event, the governing body may choose to do any of the following:

- Provide for the accumulation of the moneys in an improvement fund until there are sufficient moneys to pay all or part of the cost of the improvements.
- Provide for a temporary advance to the improvement fund from any available and unencumbered funds of the local agency to pay all or part of the cost of the

improvements and collect those advanced moneys from the annual installments collected through the assessments.

- Borrow an amount necessary to finance the estimated cost of the proposed improvements. The amount borrowed, including amounts for bonds issued to finance the estimated cost of the proposed improvements.

F. DESCRIPTION AND LOCATION OF IMPROVEMENTS

This District, through the levy special assessments, provides funding for the maintenance and operation of the following improvements located within the public rights-of-way and dedicated easements: project identification signs, including surrounding landscape and hardscape; special street materials; sculptures and sculpture park; special street signs; special lighting for the project identification signs and special illuminated street signs; and landscaped street medians (the "Improvements"). The specific locations of the improvements within the district are described as follows:

1. Zone A

a. Landscaped Median Islands:

- Eureka Road from Douglas Boulevard to Taylor Road Connector
- Sunrise Avenue from southern boundary of the Northeast Roseville Specific Plan (the "NERSP") to East Roseville Parkway
- East Roseville Parkway from Douglas Boulevard to Rocky Ridge Drive
- Douglas Boulevard from eastern boundary of NERSP to Rocky Ridge Drive

b. Project identification signs (granite entryways) and special paving materials:

- Eureka Road at Douglas Boulevard
- East Roseville Parkway at Douglas Boulevard
- Eureka Road at Taylor Road

c. Sculpture and Sculpture Park:

- Aris Demetrio's original sculpture located on Parcel 14
- Sculpture park (0.85 acres located on Parcel 14)

d. Special street signs:

- Eureka Road at Sunrise Avenue, Rocky Ridge Drive, Lead Hill Drive and Douglas Boulevard
- Lead Hill Drive at Rocky Ridge Drive
- Sunrise Avenue at Auto Mall entrance
- East Roseville Parkway at Taylor Road, Lead Hill Drive, Olympus Drive and Douglas Boulevard

- Olympus Drive at Sierra College Boulevard:

2. Zone D

a. Landscaped Frontage:

- Southern side of Olympus Drive from East Roseville Parkway to Sierra College Boulevard, excluding any landscaping not within or adjacent to the Zone
- Northern side of Olympus Drive from the Zone boundary (the former Zone C boundary), which is 175 feet southwest of Corniche Lane, to Sierra College Boulevard, western side of Sierra College Boulevard from Olympus Drive to the Zone boundary (the former Zone C boundary), which is approximately 600 feet.

b. Project identification signs and special paving materials:

- Sierra College Boulevard at Olympus Drive

G. DESCRIPTION OF MAINTENANCE AND SERVICES

Maintenance means the furnishing of services and materials for the ordinary and usual maintenance, operation and servicing of the Improvements and appurtenant facilities, including repair, removal or replacement of all or part of any of Improvements or appurtenant facilities; providing for the life, growth, health and beauty of the Improvements including cultivation, irrigation, trimming, mowing, spraying, fertilizing and treating for disease or injury; the removal of trimmings, rubbish, debris and other solid waste.

Servicing means the furnishing of water and electricity for the Improvements including any decorative lighting and the furnishing of electric current or energy, gas, or other illuminating agent for the special street signs.

II. METHOD OF APPORTIONMENT

A. GENERAL

The Act permits the establishment of assessment districts by public agencies for the purpose of providing certain public improvements, which include the construction, maintenance, and servicing of streetlights, traffic signals and landscaping facilities. Streets and Highways Code Section 22573 requires that maintenance assessments be levied according to benefit rather than the assessed value.

> *"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements."*

In addition, Article XIIID and the Implementation Act require that a parcel's assessment may not exceed the reasonable cost for the proportional special benefit conferred to that parcel. Article XIIID and the Implementation Act further provide that only special benefits are assessable and the City must separate the general benefits from the special benefits. They also require that publicly owned properties, which specifically benefit from the improvements, be assessed.

B. BENEFIT ANALYSIS

In conjunction with the provisions of the 1972 Act, the California Constitution Article XIIID addresses several key criteria for the levy of assessments, notably:

Article XIIID Section 2d defines District as follows:

"District means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service;"

Article XIIID Section 2i defines Special Benefit as follows:

"Special benefit" means a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit."

Article XIIID Section 4a defines proportional special benefit assessments as follows:

"An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel

shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel."

The City initiated and conducted property owner protest ballot proceedings in accordance with Article XIIID and the Implementation Act for both the Non-Residential/Multi-Family Zone (Zone A) and the Residential Zone (Zone D). Each Zone's Improvements, the associated costs and assessments had been reviewed, identified, and allocated based on special benefit pursuant to the provisions of the Constitution and Act.

All Improvements associated with these Zones have been identified as necessary, required and/or desired for the orderly development of the properties to their full potential. As such, these Improvements would be necessary and required of individual property owners for the development of such properties and the ongoing operation, servicing and maintenance of these Improvements would be the financial obligation of those properties. Therefore, the Improvements and the annual costs of ensuring the maintenance and operation of the Improvements are of direct and special benefit to the properties.

The method of apportionment (method of assessment) is based on the premise that each of the assessed parcels within these Zones receives special benefit from the Improvements maintained and financed by the assessments. Specifically, the assessments associated with the Zones are for the maintenance of the Improvements installed as part of the original development of the parcels within the Zones. The desirability and security of properties within each Zone is enhanced by the close proximity of these amenities to those properties.

The annual assessments outlined in this Report are proposed to cover the estimated costs to provide all necessary service, operation, administration, and maintenance required to keep the Zone Improvements in a healthy, vigorous, and satisfactory condition.

The special benefits associated with these improvements are specifically:

- Enhanced desirability of properties through association with the improvements.
- Improved aesthetic appeal of properties within the Zones providing a positive representation of the area.
- Enhanced adaptation of the urban environment within the natural environment from adequate green space and landscaping.
- Environmental enhancement through improved erosion resistance, and dust and debris control.

- Increased sense of pride in ownership of property within the District resulting from well-maintained improvements associated with the properties.
- Reduced criminal activity and property-related crimes (especially vandalism) against properties in the District through well-maintained surroundings and amenities including abatement of graffiti.
- Enhanced environmental quality of the parcels within the Zones by moderating temperatures, providing oxygenation, and attenuating noise.

All of the preceding special benefits allowed the property to be developed for the enjoyment of the property owners and contribute to an ongoing specific enhancement and desirability of each of the assessed parcels within the Zones.

The improvements are for the special benefit, enhancement, and use of properties within the Zones. Although the improvements include public easements, rights-of-way, streets, and other amenities available or visible to the public at large, the construction and installation of these Improvements were only necessary for the development of properties within the Zones and were not required nor necessarily desired by any properties or developments outside the Zone's boundaries. Therefore, any public access or use of the Improvements by others is incidental and there is no measurable general benefit to properties outside the Zones or to the public at large. In making this determination, it should be noted that all parkway and perimeter landscaping within the City is both funded and maintained by a special district, individual property owners or through some type of association.

C. ASSESSMENT METHODOLOGY

To establish the special benefit to the individual lots and parcels within the District an Equivalent Benefit Unit ("EBU") system is used. The EBU method of apportioning benefit is typically seen as the most appropriate and equitable assessment methodology for districts formed under the Act, as the benefit to each parcel from the Improvements are apportioned as a function of land use type, size, and development. Acreage of common area parcels shall be apportioned to the remaining assessable parcels of a subdivision and/or parcel split(s) related to the creation of the common area parcel(s).

EBU Application Table

Land Use	EBU per Unit/Acre
Single Family Residential	1.00 per Unit
Multi-Family Residential	1.00 per Acre
Non-Residential	1.00 per Acre
Exempt	0.00 per Acre

1. Definitions and Formulas Related to the Product Type EBU Method

Single-Family Residential — This land use is defined as a fully subdivided residential parcel that is part of a final tract map.

Multi-Family Residential — This land use is defined as a residential parcel anticipated to have or has more than one residential unit.

Non-Residential — Parcels that are not considered Single Family Residential, Multi- Family Residential or Exempt.

Exempt Parcels — This land use identifies properties that are not assessed and are assigned 0.0 EBU per acre. This land use classification may include, but is not limited, to lots or parcels identified as public streets and other roadways (typically not assigned an APN by the County); dedicated public easements, open space areas, greenbelts, parkways, park properties and other publicly owned properties that are part of the District Improvements. These types of parcels are considered to receive little or no benefit from the Improvements and are therefore exempted from assessment.

2. Zone Benefit Formula

The benefit formula applied to parcels within each Zone is based on the preceding Equivalent Benefit Unit (EBU) Application Table. Each parcel's EBU correlates the parcel's special benefit received as compared to all other parcels benefiting from the Improvements.

The following formula is used to calculate the EBU for each parcel (proportional benefit).

Parcel Type EBU x Units/Acres = Parcel EBU

The total number of Equivalent Benefit Units (EBUs) is the sum of all individual EBUs applied to parcels within each Zone that receive a special benefit from the Improvements. An assessment amount per EBU (Assessment Rate) for each Zone is established by taking the total costs associated with the Zone's Improvements and dividing that amount by the total number of EBUs within each Zone of all parcels benefiting from those Improvements. This Rate is then applied back to each individual parcel based on their assigned EBUs to determine the parcel's proportionate special benefit and assessment obligation from those Improvements.

Zone Budget/ Total EBU = Assessment per EBU

Assessment per EBU x Parcel EBU = Maximum Parcel Assessment Amount

D. ASSESSMENT RANGE FORMULA

The purpose of establishing an Assessment Range Formula is to provide for reasonable increases and inflationary adjustment to annual assessments rather than initiating protest ballot proceedings to approve small increases in annual costs. This District provides for an annual adjustment to the Maximum Assessment Rate in an amount equal to three percent (3%).

The Maximum Assessment Rate is adjusted annually and is calculated independent of the District's annual budget and proposed annual assessment. Any proposed annual assessment rate (less than or equal to this Maximum Assessment Rate) is not considered an increased assessment, even if the proposed assessment is greater than the assessment applied in the prior fiscal year.

Although the Maximum Assessment Rate will increase each year, the actual assessment rate may go up and down as compared to the previous year(s). The Maximum Assessment Rate adjustment is designed to allow for the adjustment of the annual assessment for inflation in order to maintain the original purchasing power of the District budget. The Maximum Assessment Rate calculated each year does not require or facilitate an increase to the annual assessment and neither does it restrict assessments to the adjusted maximum amount. If the budget and assessment for the fiscal year do not require an increase, or the increase is less than the adjusted Maximum Assessment Rate, then the required budget and assessment may be applied without additional property owner balloting. If the budget and assessments calculated requires an increase greater than the adjusted Maximum Assessment Rate, then the assessment is considered an increased assessment and would be subject to Proposition 218 balloting requirements.

E. BASE MAXIMUM ASSESSMENT RATES

The base assessment rates and the annual inflationary adjustment to each Zone are listed in the table below:

Zone	Base Year	Base Year Maximum Assessment Rate per EBU	Annual Inflationary Adjustment [1]
Zone A	FY 2005/06	$296.65	3.00%
Zone D	FY 2005/06	$99.76	3.00%

(1) The Annual Inflationary Adjustment commences with the Fiscal Year 2006/2007 assessments.

III. DISTRICT BUDGET

A. FY 2025/26 BUDGET

DESCRIPTION	ZONE A Fund 2006	ZONE D Fund 2007
DIRECT COSTS		
Contract Maintenance - Landscaping	$27,468.00	$36,432.00
Contract Maintenance - Parks	4,104.00	0.00
Repair & Maintenance - Landscaping	25,000.00	11,000.00
Repair and Maintenance - Parks	500.00	0.00
Repair and Maintenance - Lighting	1,000.00	0.00
Repair & Maintenance - Tree Work	3,592.00	5,359.00
Utilities	46,168.10	25,410.00
Utilities – Telecom	0.00	200.00
Maintenance - Parks City Staff	15,295.00	0.00
Rehab Reserve Expenditures - Non-Routine Tree Work	5,275.00	2,110.00
Rehab Reserve Project Expenditures	53,000.00	15,300.00
Total Direct Costs	**$181,402.10**	**$95,811.00**
ADMINISTRATION COSTS		
City Administration	$3,911.00	$476.00
Contract Administration - Park's Dept	13,000.00	3,000.00
County Auditor Fees	1,663.30	702.82
Consulting & Professional Services	4,966.00	605.00
Public Hearing Publishing Costs	360.00	44.00
Total Administrative Costs	**$23,900.30**	**$4,827.82**
Total Direct and Administration Costs	**$205,302.40**	**$100,638.82**
BUDGET ADJUSTMENTS		
Replenishment/(Use) of Operating Reserve	$19,302.45	($23,075.50)
Contribution for /(Use of) Rehab Reserve	(58,275.00)	(7,280.00)
Rounding Adjustment	(0.27)	0.92
Total Adjustments	**($38,972.82)**	**($30,354.58)**
BALANCE TO LEVY	**$166,329.58**	**$70,284.24**

Fund balance information of each Zone is reported in Section C on the following page. The total balance to levy for the district is $236,613.82.

B. FY 2025/26 ASSESSMENT RATES

DESCRIPTION	ZONE A Fund 2006	ZONE D Fund 2007
FY 2025/26 ASSESSMENT DATA		
Total Assessable Parcels	358	468
Total Assessable Acreage	530.8045	n/a
Total Assessable Units	186	468
Total Equivalent Benefit Units (EBUs)	**716.8045**	**468.0000**
Assessment Rates per Equivalent Benefit Unit (EBU)		
Assessment Rates to be Applied per EBU	$232.04	$150.18
Maximum Assessment Rates per EBU	$535.78	$180.18
Potential Maximum Assessment Per Zone	**$384,051.59**	**$84,323.16**

C. FY 2025/26 FUND BALANCE INFORMATION

DESCRIPTION	ZONE A Fund 2006	ZONE D Fund 2007
OPERATING RESERVE		
Beginning Operating Reserve Balance 7-1-2025 (est.)	**$70,980.60**	**$70,981.00**
add: Replenishment from FY 2025/26 Levy	19,302.45	
less: Use for FY 2025/26 Expenses		(23,075.50)
Transfer from/(to) the Rehab Reserve	418.00	
Ending Operating Reserve Balance 6-30-2026 (est.)	**$90,701.05**	**$47,905.50**
REHABILITATION RESERVE		
Beginning Rehab Reserve Balance 7-1-2025 (est.)	**$285,779.40**	**$54,353.72**
add: Collect from FY 2025/26 Levy		10,130.00
less: Use for FY 2025/26 Rehab Projects	(58,275.00)	(17,410.00)
Transfer from/(to) the Operating Reserve	(418.00)	0.00
Ending Rehab Reserve Balance 6-30-2026 (est.)	**$227,086.40**	**$47,073.72**

D. DESCRIPTION OF BUDGET ITEMS

Description of the terms used in the preceding Budget, Assessment Rates and Fund Balance tables are listed below:

BUDGET:

DIRECT COSTS

Contract Maintenance - Landscaping – Includes all regularly scheduled contract labor, materials, supplies, and equipment required to properly maintain and ensure the satisfactory condition or maintenance of all landscaping improvements,

irrigation, and related drainage systems, as well as maintenance of appurtenant facilities (the “improvements”). The costs to maintain improvements within the District’s entryway areas are not included in this amount.

Contract Maintenance - Parks - Includes all regularly scheduled contract labor, materials, supplies, and equipment required to properly maintain and ensure the satisfactory condition or maintenance of park improvements, as well as maintenance of appurtenant facilities (the “improvements”).

Repair & Maintenance – Landscaping – Projected costs for repairs and/or maintenance of landscaping improvements. This would include work and materials not covered under contract maintenance.

Repair & Maintenance – Parks - Projected costs for repairs and/or maintenance of park improvements. This would include work and materials not covered under contract maintenance such as repair of damaged amenities due to vandalism, storms, etc.

Repair & Maintenance – Lighting - This line item includes bulb replacement together and general maintenance together with repairs that are generally unforeseen.

Repair & Maintenance – Tree Work - This line item includes annual costs for tree maintenance not included in the annual contract maintenance portion of the budget. If zero, this line item may not be shown in the budget.

Utilities - The furnishing of water and electricity required for the operation and maintenance of the improvements.

Utilities Telecom – connectivity services required for the operation of certain improvements.

Rehab Reserve Expenditures - **Non-Routine Tree Work** – Expected costs to maintain trees other than costs of annual repair and maintenance. If zero, this line item may not be shown in the budget.

Rehab Reserve Project Expenditures – Expected costs for installation, replacement, or planned upgrades of District improvements for the current year that were previously funded or accumulated in the Rehabilitation Reserve. The Rehabilitation Reserve is used to accumulate funds for costs associated with the future rehabilitation or replacement of District improvements that cannot be conveniently raised from a single year’s assessment. If zero, this line item may not be shown in the budget.

ADMINISTRATION COSTS

City Administration – Estimated costs incurred by the City Finance Department and other Departments in preparing the annual budget for the Engineer's Report, together with other financial information required to determine the annual assessment. These costs would also include the preparation, posting and publishing of public notices required for City Council action relating to the District, as well as costs to perform legal review of documents.

Contract Administration – Park's Dept – Estimated Costs of Park and Recreation Department staff to coordinate and oversee the maintenance contracts and overall repair and maintenance of the District. This amount also includes the cost of the Department's estimates and analysis of certain budget items, estimated costs and useful lives of certain District Improvements.

County Auditor Fees - A fee of 1% of the total levy amount that is charged to the District by the County for placing assessments on property tax bills.

Consulting and Professional Services – Includes the costs and expenses of contracting with various professionals to provide legal, engineering and district administration services directly related to the District, including the calculation of the annual assessment amounts and the preparation of the Engineer's' Report.

Public Hearing Publishing Costs –Includes the out-of-pocket costs to publish public notices required for City Council action relating to the District.

Total Direct and Administration Costs – The total expected costs of the District.

BUDGET ADJUSTMENTS

Replenishment/(Use) of Operating Reserve – A "Replenishment" increases the levy in order to replenish the Operating Reserve. On the other hand, a "Use" of the Operating Reserve decreases the levy by drawing funds from the Operating Reserve for current year expenditures. If zero, this line item may not be shown in the budget. Further information regarding the function of the Operating Reserve is provided under "FUND BALANCE INFORMATION" in the following pages of this Section.

Contribution for / (Use of) Rehab Reserve — A "Contribution" increases the levy in order to generate funding for the Rehabilitation Reserve. This reserve allows for the accumulation of funds for possible rehabilitation projects or replacements in future years. On the other hand, a "Use of" of the Rehabilitation Reserve provides current year funding of rehabilitation projects or replacements from available funds within the Rehabilitation Reserve. If zero, this line item may not be shown in the budget. Further information regarding the function of the Rehabilitation Reserve is provided under "FUND BALANCE INFORMATION" in the following pages of this Section.

Rounding Adjustment – The necessary rounding adjustment(s) due to limitations of the County property tax system that requires even penny levy amounts to be placed on the secured tax roll.

BALANCE TO LEVY - This is the total amount to be levied and collected through assessments for the current fiscal year for each zone. The Balance to Levy represents the sum of the total District costs together with any applicable adjustments to the budget as described above.

ASSESSMENT RATES:

Total Assessable Acreage - The total acreage within each zone expected to be assessed in the current fiscal year.

Total Assessable Units - The total number of assessable single-family units within each zone expected to be assessed in the current fiscal year.

Total Equivalent Benefit Units ("EBUs") - Total assessable EBUs within the District for the current fiscal year. Each assessable parcel is assigned EBUs as shown in Section II C of this Report.

Applied Assessment Rate per Equivalent Benefit Unit (EBU) - The assessment rate per EBU to be applied to the applicable Zone for the current fiscal year.

Maximum Assessment Rate per Equivalent Benefit Unit (EBU) - The maximum assessment rate per EBU that can be applied to the applicable Zone for the current fiscal year.

Potential Maximum Assessment Per Zone – The total amount that can be assessed to all parcels within each Zone for the current fiscal year based upon the expected number of assessable units and acres.

FUND BALANCE INFORMATION:

OPERATING RESERVE

Beginning Operating Reserve Balance 7-1-2025 (est.) - The anticipated beginning balance of cash and receivables net of any unpaid prior year obligations for each Zone. These beginning balances shall be used to fund each Zone's expenditures from July 1, 2025 to December 31, 2025, as the Operating Reserve is required to compensate for the approximate six-month delay between the start of the District's fiscal year and the receipt of the collections from the County. All Rehabilitation Reserve balances, if any, are excluded from the Operating Reserve balances and shall be shown separately in the Report.

Replenish from FY 2025/26 Levy – This amount is added to the FY 2025/26 levy in order to replenish the Operating Reserve. Due to the six-month delay from the District's receipt of assessment collections, the Operating Reserve balance shall be sufficiently funded to provide for expenditures from the period of July 1, 2025 (the beginning of the Fiscal Year) through December 31, 2025. If zero, this line item may not be shown in the budget.

Use for FY 2025/26 Expenses – The amount of the Operating Reserve to be used to fund FY 2025/26 expenses. Portions of the Operating Reserve may be slated for current year expenditures in order to reduce the Ending Operating Reserve Balance to an amount no greater than the expected District costs for the period of July 1, 2025 (the beginning of the Fiscal Year) through December 31, 2025. If zero, this line item may not be shown in the budget.

Transfer from/(to) the Rehab Reserve — The amount of Operating Reserve monies to be transferred to or from the Rehabilitation Reserve. Periodically, funds held in a Rehabilitation Reserve may be needed to respond to changing maintenance needs of the improvements or other factors. Accordingly, any or all funds held in a Rehabilitation Reserve are subject to transfer into the same zone's Operating Reserve, at the discretion of the Parks and Recreation Department or equivalent, in order to provide for the maintenance and operation of the improvements. If zero, this line item may not be shown in the budget.

Ending Operating Reserve Balance 6-30-2026 (est.) - This amount represents the anticipated Operating Reserve balance/(deficit) for each Zone as of June 30, 2026. The size of each Zone's Operating Reserve is limited by Streets and Highways Code 22569 which states that an Operating Reserve shall not exceed the estimated costs of maintenance, service and incidental expenses from the first day of the fiscal year (July 1) to the date that the Agency expects to receive the first apportionment of collections from the County, which is estimated to be December 31. Therefore, each Zone may retain an Operating Reserve amounting to the District's first six-months of expenses in order to meet ongoing obligations until the first collections are received from the County. All Rehabilitation Reserve balances, if any, are excluded from the Operating Reserve balances and shall be shown separately in the Report.

REHABILITATION RESERVE

Beginning Rehab Reserve Balance 7-1-2025 (est.) — The projected balance of funds in the Rehabilitation Reserve as of July 1, 2025. Streets and Highways Code 22660 allows the District to generate and accumulate funds over several years to fund District improvements that cannot be conveniently raised from a single year's assessment.

Collect from FY 2025/26 Levy — This amount is added to the FY 2025/26 levy to accumulate funding of future year rehabilitation projects, replacements,

restorations or upgrades of District improvements. If zero, this line item may not be shown in the budget.

Use for FY 2025/26 Rehab Projects – The amount of Rehabilitation Reserve monies expected to be transferred out of the Rehabilitation Reserve to fund the costs of installation, replacement, or planned upgrades of District improvements for the current year. If zero, this line item may not be shown in the budget.

Transfer from/(to) the Operating Reserve — The amount of Rehabilitation Reserve monies to be transferred to or from the Operating Reserve. Periodically, funds held in a Rehabilitation Reserve may be needed to respond to changing maintenance needs of the improvements or other factors. Accordingly, any or all funds held in a Rehabilitation Reserve are subject to transfer into the same zone's Operating Reserve, at the discretion of the Parks and Recreation Department, in order to provide for the maintenance and operation of the improvements. If zero, this line item may not be shown in the budget.

Ending Rehab Reserve Balance 6-30-2026 (est.) - The projected balance of funds in the Rehabilitation Reserve as of June 30, 2026. These funds shall be used to provide for future year rehabilitation projects, replacements, restorations, or upgrades of District improvements which cannot be conveniently raised from a single year's assessment.

Should the District have no Rehabilitation Reserve or related activity, the Rehabilitation Reserve information may not be presented in the Report.

E. REHABILITATION RESERVE – CAPITAL IMPROVEMENT PLAN

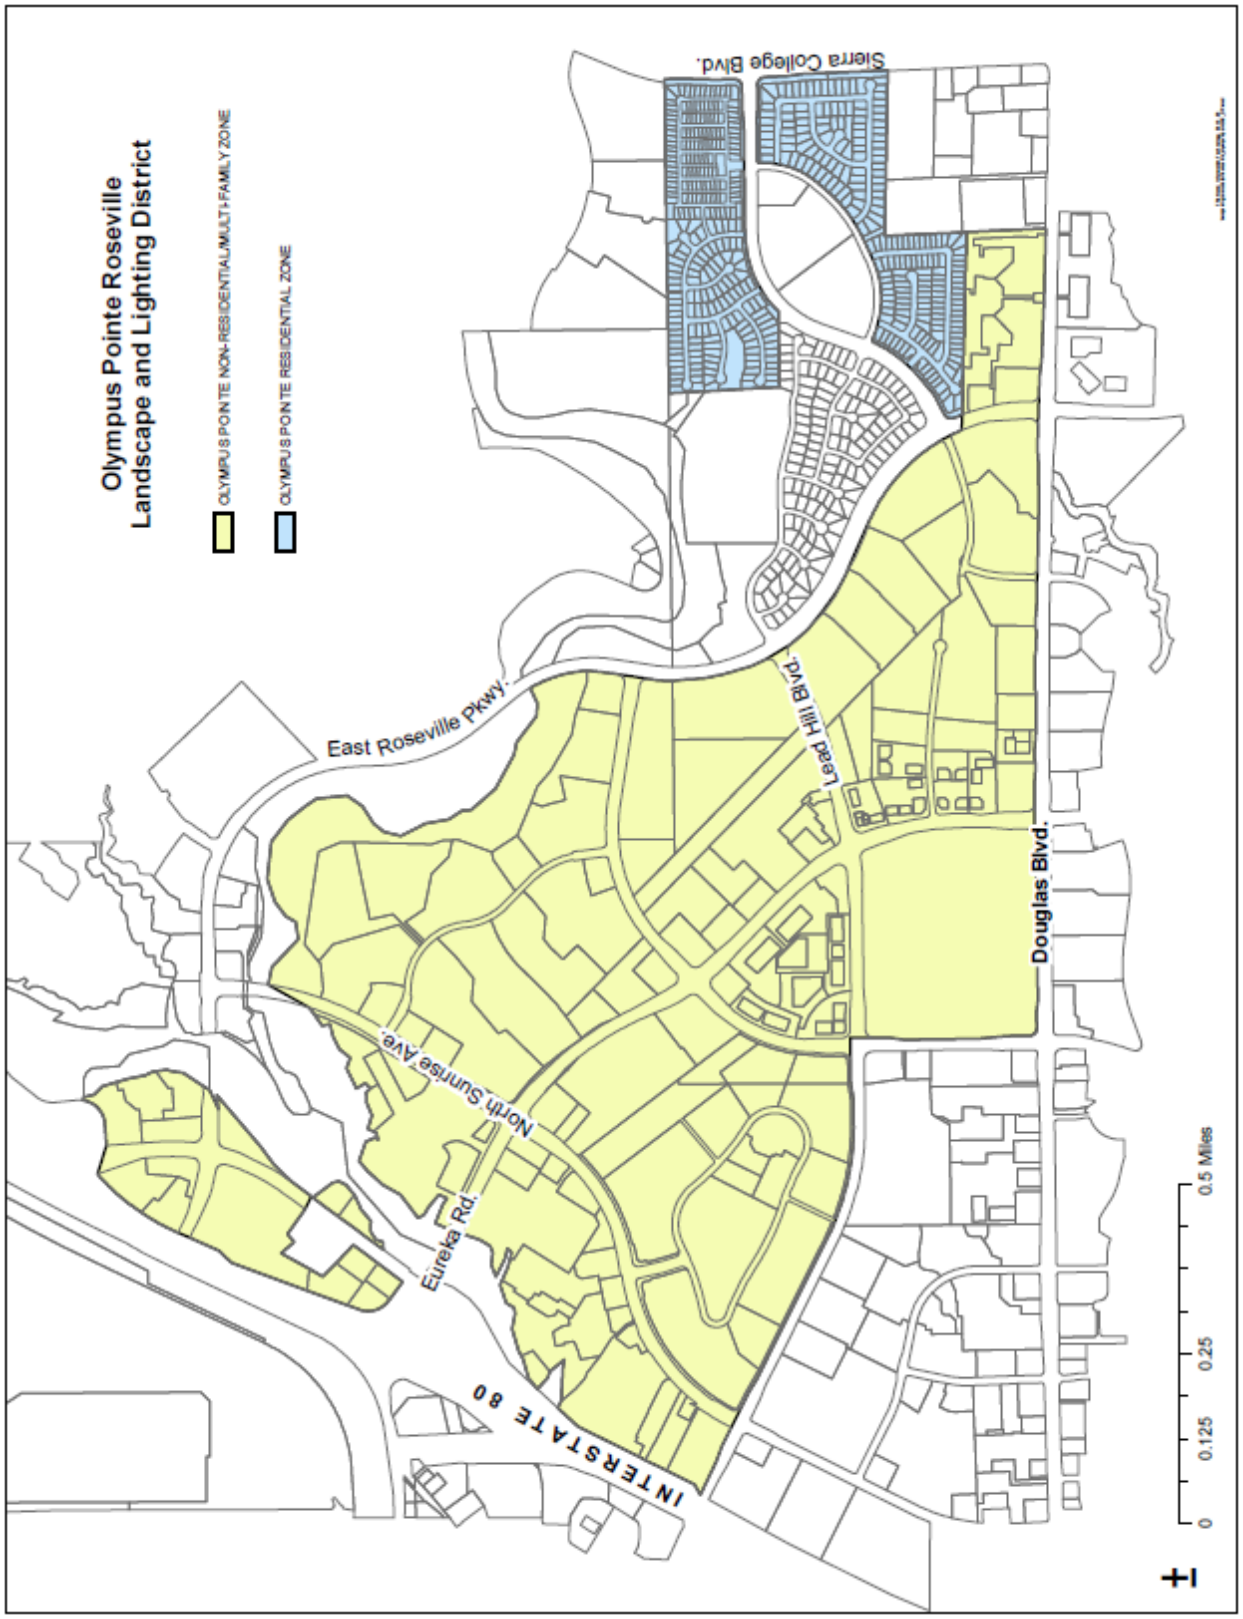
Streets and Highways Code 22660 allows the District to generate and accumulate funds over several years to fund District improvements that cannot be conveniently raised from a single year's assessment.

The Report provides a five-year Capital Improvement Plan ("CIP") which shows projected expenditures by Zone related to the rehabilitation, restoration and/or replacement of District improvements, and other allowable costs. The Current Fiscal Year CIP is shown in the preceding Budget Section A. The projected CIP costs for the remaining four years are shown in the table below.

Zone A

Description	FY 2026-27	FY 2027-28	FY 2028-29	FY 2029-30	4 Year Total
Stone wall repair and medians	$500	$5,000	$1,000	$1,000	$7,500
Rehabilitate Sculpture Park		2,000	1,550	19,000	22,550
Rehabilitate, renovate and/or replace median improvements	24,000	24,000	24,000	24,000	96,000
Non-routine tree work	5,000	5,000	5,000	5,275	20,275
Replace illuminated street signs				10,000	10,000
Replace irrigation controller(s)	10,000	10,000	10,000	17,000	47,000
Replace, repair, renovate and/or refurbish plants, landscapes & related mat'ls	1,000	2,500	261	20,000	23,761
Total Projected Expenditures	**$40,500**	**$48,500**	**$41,811**	**$96,275**	**$227,086**

Zone D



Description	FY 2026-27	FY 2027-28	FY 2028-29	FY 2029-30	4 Year Total
Rehabilitate, renovate and/or replace project entryway improvements	$3,000	$3,000	$2,074		$8,074
Non-routine tree work	4,000	4,000	4,000	2,000	14,000
Replace irrigation controller(s)	0	10,000		15,500	25,500
Total Projected Expenditures	**$7,000**	**$17,000**	**$6,074**	**$17,500**	**$47,574**

Periodically, funds held in a Rehabilitation Reserve may be needed to respond to changing maintenance needs of the improvements or other factors. Accordingly, any or all funds held in a Rehabilitation Reserve are subject to transfer into the same zone's Operating Reserve, at the discretion of the Parks and Recreation Department or equivalent, in order to provide for the maintenance and operation of the improvements.

APPENDIX A – DISTRICT BOUNDARY MAP

The boundary map for the District has previously been submitted to the Clerk of the City in the format required under the Act and is, by reference, hereby made part of this Report. These District Boundary Maps are available for inspection at the office of the City Clerk during normal business hours.

For general reference purposes, a rendering of the District's Boundaries is presented herein.

APPENDIX B — FY 2025/26 ASSESSMENT ROLL

Parcel identification, for each lot or parcel within the District, shall be the parcel as shown on the Placer County Assessor's map for the year in which this Report is prepared.

A listing of parcels to be assessed within this District, along with the proposed assessment amounts, may be submitted to the City Clerk, under a separate cover, and by reference is made part of this Report.

Non-assessable lots or parcels may include areas of public streets and other roadways (typically not assigned an APN by the County); dedicated public easements, open space areas and rights-of-way, including public greenbelts and parkways; utility rights-of-way; small parcels vacated by the County, bifurcated lots, and other property that cannot be developed, excepting common area parcels. These types of parcels are considered to receive little or no benefit from the improvements and are therefore exempt from assessment.

At the conclusion of the public hearing for the District and the proposed assessments, approval of the Report (as submitted or as modified) confirms the method of apportionment and the assessment rate to be levied against each eligible parcel and thereby constitutes the approved levy and collection of assessments for FY 2025/26. The listing of parcels and the amount of assessment to be levied shall be submitted to the County Auditor/Controller and included on the FY 2025/26 property tax roll for each parcel.

If any parcel submitted for collection is identified by the County Auditor/Controller to be an invalid parcel number for the current fiscal year, a corrected parcel number and/or new parcel numbers will be identified and resubmitted to the County Auditor/Controller. The assessment amount to be levied and collected for the resubmitted parcel or parcels shall be based on the method of apportionment and assessment rate approved in this Report. Therefore, if a single parcel has changed to multiple parcels, the assessment amount applied to each of the new parcels shall be recalculated and applied according to the approved method of apportionment and assessment rate rather than a proportionate share of the original assessment.

RESOLUTION NO. 25-124

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, FOR FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, The City Council has, by previous Resolutions, formed the Riverside Avenue Landscaping and Lighting District (hereafter referred to as the "District") pursuant to the provisions of the *Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code of California, beginning with Section 22500* (hereafter referred to as the "Act"), that provides for the levy and collection of assessments by the County of Placer for the City of Roseville to pay for the maintenance and services of street lighting, landscaping, and all appurtenant facilities and operations related thereto; and,

WHEREAS, the City Council has retained Willdan Financial Services (hereinafter "Engineer") for the purpose of assisting with the establishment of the assessments, the annexation of territory, and to prepare and file an Engineer's Annual Levy Report (hereinafter referred to as the "Engineer's Report") with the City Clerk in accordance with the Act, and in accordance with the California Constitution, Articles XIIIC and XIIID;

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, AS FOLLOWS:

Section 1 Engineer's Report: The City Council hereby orders the Engineer to prepare and file with the City Clerk the Engineer's Report concerning the levy of assessments for the District in accordance with Chapter 3, Section 22622 of the Act.

Section 2 Proposed improvements and any substantial changes in existing improvements: The District improvements include: the maintenance, operation of and the furnishing of services, materials and/or improvements for landscape, lighting, streetscape and hardscape areas, and other public improvements within the street right-of-way areas and all appurtenant facilities related thereto as further described in the Engineer's Report. The Engineer's Report also describes all new improvements or substantial changes in existing improvements.

RESOLUTION NO. 25-125

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, The City Council has, by previous Resolutions, formed the Riverside Avenue Landscaping and Lighting District (hereafter referred to as the "District"), and initiated proceedings for Fiscal Year 2025/2026, pursuant to the provisions of the *Landscaping and Lighting Act of 1972*, *Part 2 of Division 15 of the Streets and Highways Code of California*, *beginning with Section 22500* (hereafter referred to as the "Act") that provides for the levy and collection of assessments by the County of Placer for the City of Roseville to pay for the maintenance, operation and servicing of all improvements and facilities related thereto; and,

WHEREAS, the City Council has retained Willdan Financial Services for the purpose of assisting with the Annual Levy of the District, and to prepare and file a report (hereinafter referred to as the "Engineer's Report") with the City Clerk in accordance with the Act; and,

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, PURSUANT TO *CHAPTER 3, SECTION 22624* OF THE ACT, AS FOLLOWS:

Section 1 Intention: The City Council hereby declares that it is its intention to seek the Annual Levy of the District pursuant to the Act, over and including the land within the District boundary, and to levy and collect assessments on all such land to pay for the annual costs of the improvements.

Section 2 Proposed improvements and any substantial changes in existing improvements: The District improvements include: the maintenance, operation of and the furnishing of services, materials or improvements for landscape, lighting, streetscape and hardscape areas, including monuments, landmark and gateway features, bulb-outs, walls, fencing, signage, special lighting, paving, transit facilities, ground cover, shrubs, plants, trees, irrigation and drainage systems, and other public improvements within the street right-of-way areas and all appurtenant facilities related thereto as further described in the Engineer's Report. The Engineer's Report also describes all new improvements or substantial changes in existing improvements.

Section 3 Boundaries and Designation: The boundaries of the District are described as the boundaries previously defined in the formation documents of the original District. The District is known and designated as:

"Riverside Avenue Landscaping and Lighting District"

Section 4 Proposed Assessment Amounts: The proposed assessments are outlined in the Engineer's Report. District Assessments are calculated in accordance with the method of apportionment established for the District and do not exceed the assessment rates and annual inflationary adjustment previously authorized by the City Council and approved by the property owners in accordance with the provisions of the California State Constitution, Article XIIID.

Section 5 Public Hearing(s): The City Council hereby declares its intention to conduct a Public Hearing annually concerning the levy of assessments for the District in accordance with *Chapter 3, Section 22626* of the Act.

Section 6 Notice: The City Clerk shall give notice of the time and place of the Public Hearing by causing this Resolution to be published once in the local newspaper not less than ten (10) days before the date of the hearing and by posting a copy of this Resolution on the official bulletin board customarily used by the City Council for the posting of notices.

Section 7 Time and Place of Public Hearing: Notice is hereby given that a Public Hearing on these matters will be held by the City Council on **Wednesday, May 21, 2025 at 6:00 p.m.**, or as soon thereafter as feasible in the regular meeting chambers located at 311 Vernon Street, Roseville, California.

RESOLUTION NO. 25-126

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, the City Council has, by previous Resolutions, ordered the preparation of an Annual Levy Report (hereafter referred to as the "Engineer's Report") for the district known and designated as the Riverside Avenue Landscaping and Lighting District (hereafter referred to as the "District"), pursuant to the provisions of the *Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code of California*, *beginning with Section 22500* (hereinafter referred to as the "Act"); and,

WHEREAS, the City Council has retained Willdan Financial Services (hereinafter "Engineer"), for the purpose of assisting with the establishment of the assessments and to prepare and file an Engineer's Report with the City Clerk in accordance with the Act, and in accordance with the requirements of the California Constitution, Articles XIIIC and XIIID; and,

WHEREAS, there has now been presented to this City Council the Engineer's Report as required by *Chapter 1, Article 4, Section 22566* of said Act; and,

WHEREAS, this City Council has carefully examined and reviewed the Engineer's Report as presented, and is preliminarily satisfied with the District, each and all of the budget items and documents as set forth therein, and is satisfied that the assessments, on a preliminary basis, have been spread in accordance with the benefits received from the improvements, operation, maintenance and services to be performed within the District, as set forth in said Engineer's Report; and,

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, AS FOLLOWS:

Section 1 That the above recitals are all true and correct.

Section 2 That the Engineer's Report, as presented, consists of the following:

a. A Description of Improvements
b. The Annual Budget (Costs and Expenses of Maintenance, Services, Operations and District Administration)
c. The Assessment Roll containing the Fiscal Year 2025/2026 Levy for each Assessor Parcel within the District

Section 3 The Engineer's Report is hereby approved on a preliminary basis and ordered to be filed in the Office of the City Clerk as a permanent record and to remain open to public inspection.

Section 4 That the City Clerk shall certify to the passage and adoption of this Resolution, and the minutes of this meeting shall so reflect the presentation of the Engineer's Report.

APPENDIX B — FY 2025/26 ASSESSMENT ROLL 20

I. OVERVIEW

A. INTRODUCTION

The City of Roseville ("City") annually levies and collects special assessments in order to maintain the improvements within the Riverside Avenue Landscaping and Lighting District ("District"). The District was formed in January of 2007 and is levied annual assessments pursuant to *the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code* ("1972 Act").

The Engineer's Report ("Report") describes the District, any new annexations, changes to the District, and the proposed assessments for the period of July 1, 2025 through June 30, 2026. The special benefit assessments are based on historical and estimated costs to maintain the District improvements. These assessments, which provide a direct and special benefit to properties within the District, will provide funding for the operation and maintenance of District improvements.

The word "parcel," for the purposes of this Report, refers to an individual property assigned its own Assessor's Parcel Number ("APN") by the Placer County Assessor's Office. The Placer County Auditor/Controller uses Assessor's Parcel Numbers and specific Tax Code Accounts, to identify on the County's tax roll, properties assessed for special district benefit assessments.

Following approval of the Report, the City Council will, by resolution, order the improvements to be made and confirm the levy and collection of assessments herein pursuant to the 1972 Act. The assessment rates and method of apportionment described in this Report as approved or modified by the City Council define the assessments to be applied to each parcel within the District for Fiscal Year ("FY") 2025/26. The assessments as approved will be submitted to the Placer County Auditor/Controller to be included on the property tax roll for each parcel.

If any parcel submitted for collection is identified by the County Auditor/Controller to be an invalid parcel number for the Current Fiscal Year, a corrected parcel number and/or new parcel number will be identified and resubmitted to the County Auditor/Controller. The assessment amount to be levied and collected for the resubmitted parcel or parcels shall be based on the method of apportionment and assessment rate approved by the City Council.

B. COMPLIANCE WITH CURRENT LEGISLATION

The City Council, pursuant to the provisions of the "Landscaping and Lighting Act of 1972", being Division 15, Part 2 of the Streets and Highways Code of the State of California, beginning with Section 22500 (the "1972 Act"); Article XIIID of the Constitution of the State of California ("Article XIIID"); and the Proposition 218 Omnibus Implementation Act, beginning with Government Code Section 53750 (the "Implementation Act") (the 1972 Act, Article XIIID and the Implementation Act are referred to collectively as the "Assessment Law") initiated proceedings for the

formation of the District on November 15, 2006 and to levy and collect annual assessments against lots and parcels within the District for FY 2007/08. On January 17, 2007, pursuant to Assessment Law, the City conducted a Public Hearing and tabulated the returned ballots. The City determined that a majority protest did not exist and approved the District's maximum assessment rate and annual inflationary adjustment factor.

Pursuant to the 1972 Act, an annual Public Hearing is conducted by the City Council to accept property owner and public comments, to review the Engineer's Annual Levy Report prior to approving the annual assessments to be levied on the County tax rolls. The assessments described in this Report have been prepared in accordance with the 1972 Act and Assessment Law.

C. DESCRIPTION OF DISTRICT BOUNDARIES

The proposed territory within the District consists of all lots, parcels and subdivisions of land as shown on the Boundary Map titled "Boundary Map of Riverside Avenue Landscaping and Lighting District" contained within this report in Appendix A-1.

The District is bounded by Douglas Boulevard to the north, Darling Way to the south and includes parcels that front Riverside Avenue. It is centrally located between Interstate 80 and Downtown Roseville and is east of the Union Pacific Railroad.

The District currently has a mix of different types of land uses including automotive related retail and car lots, community/neighborhood retail, offices, services, and residential units.

D. IMPROVEMENTS AUTHORIZED BY THE 1972 ACT

As applicable or may be applicable to a proposed District, the 1972 Act defines improvements to mean one or any combination of the following:

- The installation or planting of landscaping.
- The installation or construction of statuary, fountains, and other ornamental structures and facilities.
- The installation or construction of public lighting facilities.
- The installation or construction of any facilities which are appurtenant to any of the foregoing, or which are necessary or convenient for the maintenance or servicing thereof, including, but not limited to, grading, clearing, removal of debris, the installation or construction of curbs, gutters, walls, sidewalks, or paving, or water, irrigation, drainage, or electrical facilities.
- The maintenance or servicing, or both, of any of the foregoing.
- The acquisition of any existing improvement otherwise authorized pursuant to this section.

Incidental expenses associated with the improvements including, but not limited to:

- The cost of preparation of the report, including plans, specifications, estimates, diagram, and assessment;
- The costs of printing, advertising, and the publishing, posting, and mailing of notices;
- Compensation payable to the County for collection of assessments;
- Compensation of any engineer or attorney employed to render services;
- Any other expenses incidental to the construction, installation, or maintenance and servicing of the improvements;
- Any expenses incidental to the issuance of bonds or notes pursuant to Section 22662.5.
- Costs associated with any elections held for the approval of a new or increased assessment.

The 1972 Act defines "Maintain" or "maintenance" to mean furnishing of services and materials for the ordinary and usual maintenance, operation, and servicing of any improvement, including:

- Repair, removal, or replacement of all or any part of any improvement.
- Providing for the life, growth, health, and beauty of landscaping, including cultivation, irrigation, trimming, spraying, fertilizing, or treating for disease or injury.
- The removal of trimmings, rubbish, debris, and other solid waste.
- The cleaning, sandblasting, and painting of walls and other improvements to remove or cover graffiti.

Furthermore, the 1972 Act specifies that where the cost of improvements (other than maintenance and operations) is greater than can be conveniently raised from a single annual assessment, an assessment to be levied and collected in annual installments. In that event, the governing body may choose to do any of the following:

- Provide for the accumulation of the moneys in an improvement fund until there are sufficient moneys to pay all or part of the cost of the improvements.
- Provide for a temporary advance to the improvement fund from any available and unencumbered funds of the local agency to pay all or part of the cost of the improvements and collect those advanced moneys from the annual installments collected through the assessments.
- Borrow an amount necessary to finance the estimated cost of the proposed improvements. The amount borrowed, including amounts for bonds issued to finance the estimated cost of the proposed improvements.

E. DESCRIPTION OF THE IMPROVEMENTS AND MAINTENANCE

The District, through the levy of special assessments, is to provide funding for ongoing maintenance, operation and servicing of landscaping and lighting improvements located within the public rights-of-ways and dedicated easements located within the District. These improvements may include, but are not limited to, all materials, equipment, utilities, labor, and appurtenant facilities related to the ongoing maintenance of the improvements. The improvements to be maintained and services are generally described as follows:

Landscaping Improvements

The general landscaping improvements in the District are to be consistent with the improvements on Vernon Street located north of the District, which intersects Riverside Avenue. As a gateway to downtown Roseville, Riverside Avenue's compatibility with Vernon Street links the downtown area and Riverside Gateway area together.

The landscaping improvements have been designed to enhance the area within the District and may include, but are not limited to ground cover, shrubs and plants, trees, irrigation and drainage systems, ornamental lighting, masonry walls or other fencing, hardscape improvements, monuments and landmarks, mid-block bulbs, bulb-outs, and associated appurtenant located within the street rights-of-way and public areas within the District. Specifically, the proposed landscape improvement areas for this District are:

- Landscaping and hardscape improvements within the public rights-of-way of the streets within the District including, but not limited to, Riverside Avenue including the corners of Riverside Avenue and Second Street, Third Street, Fourth Street, Fifth Street, Sixth Street, Darling Way, Fern Street, Cherry Street, and Bonita Street.
- Decorative banners along Riverside Avenue.
- Transit facilities include bus stop seating and decorative shelters.
- Roundabout improvements including plantings, paving, and landmark feature located at the intersection of Vernon St., Douglas Blvd., and Riverside Ave.
- A Gateway feature located at the intersection of Darling Way and Riverside Avenue.
- Various amenities associated with the landscape improvements and public areas within the District, including, but not limited to, trash receptacles, street furniture, bike racks, entry signs, sidewalks, fencing, and retaining walls.

Specifically, not included as District improvements are those improvements located on private property, improvements and facilities that are outside the boundaries of the District and/or area funded by other sources available to the City.

Public Lighting Improvements

The lighting improvements may include, but are not limited to, the cost of providing, maintaining, and servicing of lighting fixtures, poles, meters, conduits, electrical cable, and associated appurtenant facilities associated with:

- Lighting facilities within the landscaped areas and public areas including safety lights, security lights or ornamental lights installed as part of the District improvements; and
- Public street light improvements located on the streets within the District. Specifically excluded from the assessment are the street light energy costs. These costs are to be paid for by the City from other revenue sources.

Detailed maps and descriptions of the location and extent of the specific improvements to be maintained by the District are on file in the Office of Public Works and by reference are made part of this Report.

Description of Maintenance and Services

Maintenance means the furnishing of services and materials for the ordinary and usual maintenance, operation and servicing of landscaping and street lighting improvements facilities and appurtenant facilities, including repair, removal or replacement of all or part of any of the landscaping and street lighting improvements, or appurtenant facilities; providing for the life, growth, health and beauty of landscaping improvements including cultivation, irrigation, trimming, mowing, spraying, fertilizing and treating for disease or injury; the removal of trimmings, rubbish, debris and other solid waste; and the cleaning sandblasting, and painting of walls and other improvements to remove or cover graffiti.

Servicing means the furnishing of water and electricity for the irrigation of the landscape improvements or appurtenant facilities and the furnishing of electric current or energy for the operation of the landscaping improvements or appurtenant facilities. The street lighting improvements shall be maintained to provide adequate illumination; however, the City will be paying the actual energy costs of the streetlights.

II. METHOD OF APPORTIONMENT

A. GENERAL

The Implementation Act permits the establishment of assessment districts by agencies for the purpose of providing certain public improvements, which include the construction, maintenance, and servicing of landscaping improvements, streetlights, and traffic signals.

Streets and Highways Code Section 22573 requires that maintenance assessments be levied according to benefit rather than the assessed value.

> *"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements."*

In addition, Article XIIID and the Implementation Act require that a parcel's assessment may not exceed the reasonable cost for the proportional special benefit conferred to that parcel. Article XIIID and the Implementation Act further provides that only special benefits are assessable, and the City must separate the general benefits from the special benefits. They also require that publicly owned properties that specifically benefit from the improvements be assessed.

B. SPECIAL BENEFIT ANALYSIS

In conjunction with the provisions of the 1972 Act, the California Constitution Article XIIID addresses several key criteria for the levy of assessments, notably:

Article XIIID Section 2d defines District as follows:

"District means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service;"

Article XIIID Section 2i defines Special Benefit as follows:

"Special benefit" means a particular and distinct benefit over, and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit."

Article XIIID Section 4a defines proportional special benefit assessments as follows:

"An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified

parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel."

This District was formed to establish and provide for the improvements that enhance the presentation of the surrounding properties and developments. These improvements will directly benefit the parcels to be assessed within the District. The assessments and method of apportionment is based on the premise that the assessments will be used to construct and install landscape and lighting improvements within the District as well as provide for the annual maintenance of those improvements, and the assessment revenues generated by District will be used solely for such purposes.

The costs of the proposed improvements have been identified and allocated to properties within the District based on special benefit. The improvements to be provided by this District and for which properties will be assessed have been identified as an essential component and local amenity that provides a direct reflection and extension of the properties within the District which the property owners and residents have expressed a high level of support.

The method of apportionment (method of assessment) set forth in the Report is based on the premise that each assessed property receives special benefits from the landscape and lighting improvements within the District, and the assessment obligation for each parcel reflects that parcel's proportional special benefits as compared to other properties that receive special benefits.

To identify and determine the proportional special benefit to each parcel within the District, it is necessary to consider the entire scope of the improvements provided as well as the properties that benefit from those improvements. The improvements and the associated costs described in this Report, have been carefully reviewed and have been identified and allocated based on a benefit rationale and calculations that proportionally allocate the net cost of only those improvements determined to be of special benefit to properties within the District. The various public improvements and the associated costs have been identified as either "general benefit" (not assessed) or "special benefit."

Proper maintenance and operation of parkway landscaping and streetlights provides special benefit to adjacent properties by providing community character, security, safety, and vitality. In addition, these improvements will enhance the ability of property owners to attract and maintain customers as well as increase the viability of commercial development.

Landscaping Special Benefit

Landscaping and appurtenant facilities, if well maintained, provide beautification, shade, and enhancement of the desirability of the surroundings, and therefore increase property value. Specifically, they provide a sense of ownership and a common theme in the community providing aesthetic appeal and increased desirability of properties.

Landscaping provides special benefit to those developments that are directly adjacent to the public streets.

Landscaping General Benefit

The Improvements were installed to directly benefit the property owners in the District to enhance business and development opportunities. Therefore, it has been determined that there are no general benefits associated with the landscaping improvements.

Lighting Special Benefit

The operation, maintenance and servicing of lighting along local streets and arterial streets of a development provide the following special benefits:

- Improved security of lots and parcels along the perimeter of the development;
- Improved nighttime visibility for the local access of emergency vehicles; and
- Improved safety and traffic circulation to and from parcels.

Street Lights General Benefit

Similar to the landscaping improvements described above, the Improvements were installed to directly benefit the property owners in the District to enhance business and development opportunities. Therefore, it has been determined that there are no general benefits associated with lighting improvements.

C. ASSESSMENT METHODOLOGY

To establish the special benefit to the individual parcels within the District, a formula that spreads the costs of the maintenance based on the special benefit must be established. The improvements have been reviewed and a formula has been established to apportion the maintenance costs based on benefit.

The method of assessment is based on the front footage of each parcel located within the District. The parcel's Front Footage was determined based on Assessor Parcel maps or other sources. Only Front Footage on Riverside Avenue was used.

Based on the above formula, the FY 2007/08 maximum assessment rate approved on January 17, 2007 through a property owner balloting (the "Initial

Assessment Rate" or the "Base Year Maximum Assessment Rate") is $6.45 per each foot of frontage.

The following formulas were used to first calculate the District's Initial Assessment Rate and then each parcel's FY 2007/08 assessment (proportional benefit):

Step 1:

Balance to Levy ÷ Total Front Footage =
Maximum Front Footage Rate

Step 2:

Parcel Front Footage x Maximum Front Footage Rate =
Maximum Assessment

The Total Front Footage was the sum of all the Front Feet within the District. The Initial Assessment Rate per Front Foot was established by taking the total cost of improvements (Balance to Levy) and dividing that amount by the Total Front Footage within the District. The Initial Assessment Rate per Front Foot, which is also the FY 2007/08 Maximum Front Footage Rate, is then applied back to each individual parcel's Front Footage to determine the parcel's proportionate special benefit and assessment obligation (The FY 2007/08 Maximum Assessment).

D. ASSESSMENT RANGE FORMULA

The purpose of establishing an Assessment Range Formula is to provide for reasonable increases and inflationary adjustment to annual assessment rates without requiring the District to go through the requirements of Proposition 218 in order to get a small increase in assessments. This District provides for an annual adjustment to the Maximum Assessment Rate of the lesser of the percentage change in the area's Local Consumer Price Index for All Urban Consumers, which is currently the San Francisco-Oakland-Hayward Consumer Price Index for All Urban Consumers (the "CPI") or three percent (3%) (the "Escalation Percentage"). The CPI in this adjustment shall be determined through CPI data from the Bureau of Labor Statistics from December to December, beginning with the period from December 2006 to December 2007.

In applying this year's inflationary adjustment, the Escalation Percentage will increase the FY 2025/26 maximum assessment rate by 2.38% over that of the prior year.

The Assessment Range Formula shall be applied to all future assessments within the District beginning in fiscal year 2008/09. Generally, if the proposed annual assessment rate for the current fiscal year is less than or equal to the calculated Maximum Assessment Rate, then the proposed annual assessment is not considered an increased assessment. The Maximum Assessment Rate is equal to the FY 2007/08 Maximum Assessment Rate, which was approved on January 17, 2007 through a property owner balloting (the “Initial Assessment Rate” or “Base Year Assessment Rate”) and adjusted annually by the Escalation Percentage.

Beginning in the second fiscal year (Fiscal Year 2008/09) and each fiscal year thereafter, the Maximum Assessment Rate would be recalculated, and a new Maximum Assessment Rate established within the District.

The Maximum Assessment Rate is adjusted annually and is calculated independent of the District’s annual budget and proposed annual assessment. Any proposed annual assessment is not considered an increased assessment, even if the proposed assessment is greater than the assessment applied in the prior fiscal year.

Although the Maximum Assessment Rate will increase each year, the actual assessment rate may remain unchanged. The Maximum Assessment Rate adjustment is designed to establish a reasonable limit on assessments. The Maximum Assessment Rate calculated each year does not require or facilitate an increase in the annual assessment rate and neither does it restrict assessments to the adjusted maximum amount. If the budget and assessment for the fiscal year do not require an increase, or the increase is less than the adjusted Maximum Assessment Rate, then the required budget and assessment may be applied without additional property owner balloting. If the budget and assessments calculated requires an increase greater than the adjusted Maximum Assessment, then the assessment is considered an increased assessment and would be subject to balloting.

III. DISTRICT BUDGET

A. FY 2025/26 BUDGET

DESCRIPTION	AMOUNT (FUND 2023)
DIRECT COSTS	
Contract Maintenance - Landscaping	$8,652.00
Repair & Maintenance - Landscaping	9,000.00
Repair & Maintenance - Lighting	1,500.00
Repair and Maintenance - Streetscape and Signage	3,200.00
Repair and Maintenance - Tree Work	1,824.00
Utilities	11,814.00
Rehab Reserve Expenditures - Non-Routine Tree Work	4,748.00
Rehab Reserve Expenditures	25,000.00
Total Direct Costs	**$65,738.00**
ADMINISTRATION COSTS	
City Administration	$978.00
Contract Administration - Park's Dept	1,738.00
County Auditor Fees	500.49
Consulting & Professional Services	4,255.00
Public Hearing Publishing Costs	384.00
Total Administrative Costs	**$7,855.49**
Total Direct and Administration Costs	**$73,593.49**
BUDGET ADJUSTMENTS	
Replenishment/(Use) of Operating Reserve	$6,203.68
Contribution for /(Use of) Rehab Reserve	(29,748.00)
Rounding Adjustment	(0.63)
Total Adjustments	**($23,544.95)**
BALANCE TO LEVY	**$50,048.54**

Fund balance information is reported in Section C on the following page.

B. FY 2025/26 ASSESSMENT RATES

DESCRIPTION	AMOUNT (FUND 2023)
FY 2025/26 ASSESSMENT DATA	
Number of Assessable Parcels	76
Total Assessable Front Footage	4,979.76
Assessment Rates	
Applied Assessment Rate per each Foot of Frontage	10.05039
Maximum Assessment Rate per each Foot of Frontage	10.05052
Potential Maximum Assessment	**$50,049.17**

C. FY 2025/26 FUND BALANCE INFORMATION

DESCRIPTION	AMOUNT (FUND 2023)
OPERATING RESERVE	
Beginning Operating Reserve Balance 7-1-2025 (est.)	**$38,269.29**
add: Replenishment from FY 2025/26 Levy	6,203.68
less: Use for FY 2025/26 Expenses	
Transfer from/(to) the Rehab Reserve	(11,603.97)
Ending Operating Reserve Balance 6-30-2026 (est.)	**$32,869.00**
REHABILITATION RESERVE	
Beginning Rehab Reserve Balance 7-1-2025 (est.)	**$108,978.71**
add: Collect from FY 2025/26 Levy	
less: Use for FY 2025/26 Rehab Projects	(29,748.00)
Transfer from/(to) the Operating Reserve	11,603.97
Ending Rehab Reserve Balance 6-30-2026 (est.)	**$90,834.68**

D. DESCRIPTION OF BUDGET ITEMS

Description of the terms used in the preceding Budget, Assessment Rates and Fund Balance tables are listed below:

BUDGET:

DIRECT COSTS

Contract Maintenance - Landscaping - Includes all regularly scheduled contract labor, materials, supplies, and equipment required to properly maintain and ensure the satisfactory condition or maintenance of all landscaping improvements, irrigation, and related drainage systems, as well as maintenance of appurtenant facilities (the “improvements”).

Repair & Maintenance - Landscaping - This line item includes repairs that are generally unforeseen and not normally included in the annual maintenance contract costs. This may include repair of damaged amenities due to vandalism, storms, etc.

Repair & Maintenance – Lighting - This line item includes bulb replacement and repairs that are generally unforeseen. This may include repair of damaged amenities due to vandalism, storms, etc.

Repair & Maintenance - Streetscape/Signage - This line item includes repairs that are generally unforeseen and not normally included in the annual maintenance contract costs. This may include repair of damaged amenities due to vandalism, storms, etc.

Repair & Maintenance – Tree Work - This line item includes annual costs for tree maintenance not included in the annual contract maintenance portion of the budget. If zero, this line item may not be shown in the budget.

Utilities - The furnishing of water and electricity required for the operation and maintenance of the improvements.

Rehab Reserve Expenditures - Non-Routine Tree Work – Expected costs to maintain trees other than costs of annual repair and maintenance. If zero, this line item may not be shown in the budget.

Rehab Reserve Project Expenditures – Expected costs for installation, replacement, or planned upgrades of District improvements for the current year that were previously funded or accumulated in the Rehabilitation Reserve. The Rehabilitation Reserve is used to accumulate funds for costs associated with the future rehabilitation or replacement of District improvements that cannot be conveniently raised from a single year's assessment. If zero, this line item may not be shown in the budget.

ADMINISTRATION COSTS

City Administration – Estimated costs incurred by the City Finance Department and other Departments in preparing the annual budget for the Engineer's Report, together with other financial information required to determine the annual assessment. These costs would also include the preparation, posting and publishing of public notices required for City Council action relating to the District, as well as costs to perform legal review of documents.

Contract Administration – Park's Dept – Estimated Costs of Park and Recreation Department staff to coordinate and oversee the maintenance contracts and overall repair and maintenance of the District. This amount also includes the

cost of the Department's estimates and analysis of certain budget items, estimated costs and useful lives of certain District Improvements.

County Auditor Fees - A fee of 1% of the total levy amount that is charged to the District by the County for placing assessments on property tax bills.

Consulting and Professional Services – Includes the costs and expenses of contracting with various professionals to provide legal, engineering and district administration services directly related to the District, including the calculation of the annual assessment amounts and the preparation of the Engineer's' Report.

Public Hearing Publishing Costs –Includes the out of pocket costs to publish public notices required for City Council action relating to the District.

Total Direct and Administration Costs – The total expected costs of the District.

BUDGET ADJUSTMENTS

Replenishment/(Use) of Operating Reserve – A "Replenishment" increases the levy in order to replenish the Operating Reserve. On the other hand, a "Use" of the Operating Reserve decreases the levy by drawing funds from the Operating Reserve for current year expenditures. If zero, this line item may not be shown in the budget. Further information regarding the function of the Operating Reserve is provided under "FUND BALANCE INFORMATION" in the following pages of this Section.

Contribution for /(Use of) Rehab Reserve — A "Contribution" increases the levy in order to generate funding for the Rehabilitation Reserve. This reserve allows for the accumulation of funds for possible rehabilitation projects or replacements in future years. On the other hand, a "Use of" of the Rehabilitation Reserve provides current year funding of rehabilitation projects or replacements from available funds within the Rehabilitation Reserve. If zero, this line item may not be shown in the budget. Further information regarding the function of the Rehabilitation Reserve is provided under "FUND BALANCE INFORMATION" in the following pages of this Section.

Rounding Adjustment – The necessary rounding adjustment(s) due to limitations of the County property tax system that requires even penny levy amounts to be placed on the secured tax roll.

BALANCE TO LEVY - This is the total amount to be levied and collected through assessments for the current fiscal year for each zone. The Balance to Levy represents the sum of the total District costs together with any applicable adjustments to the budget as described above.

ASSESSMENT RATES:

Number of Assessable Parcels - The total number of parcels that are expected to be assessed. Non-assessable lots or parcels include government-owned land, public utility-owned property, land principally encumbered by public rights-of-way or easements, common areas, and/or parcels within the boundaries of the District currently do not benefit from the improvements and are therefore not assessed.

Total Assessable Front Footage - The total amount of assessable Front Footage within the District in accordance with the Method of Assessment Section of this Report.

Applied Assessment Rate - The assessment rate to be applied to the front footage of each non-exempt parcel within the District for the current fiscal year.

Maximum Assessment Rate - The Maximum Assessment Rate per front foot for the current fiscal year.

Potential Maximum Assessment – The total amount that can be assessed against all non-exempt District parcels for the current fiscal year based upon the expected assessable front footage within the District.

FUND BALANCE INFORMATION:

OPERATING RESERVE

Beginning Operating Reserve Balance 7-1-2025 (est.) - The anticipated beginning balance of cash and receivables net of any unpaid prior year obligations for each Zone. These beginning balances shall be used to fund each Zone's expenditures from July 1, 2025 to December 31, 2025, as the Operating Reserve is required to compensate for the approximate six-month delay between the start of the District's fiscal year and the receipt of the collections from the County. All Rehabilitation Reserve balances, if any, are excluded from the Operating Reserve balances and shall be shown separately in the Report.

Replenish from FY 2025/26 Levy – This amount is added to the FY 2025/26 levy in order to replenish the Operating Reserve. Due to the six-month delay from the District's receipt of assessment collections, the Operating Reserve balance shall be sufficiently funded to provide for expenditures from the period of July 1, 2025 (the beginning of the Fiscal Year) through December 31, 2025. If zero, this line item may not be shown in the budget.

Use for FY 2025/26 Expenses – The amount of the Operating Reserve to be used to fund FY 2025/26 expenses. Portions of the Operating Reserve may be slated for current year expenditures in order to reduce the Ending Operating Reserve Balance to an amount no greater than the expected District costs for the period of

July 1, 2025 (the beginning of the Fiscal Year) through December 31, 2025. If zero, this line item may not be shown in the budget.

Transfer from/(to) the Rehab Reserve — The amount of Operating Reserve monies to be transferred to or from the Rehabilitation Reserve. Periodically, funds held in a Rehabilitation Reserve may be needed to respond to changing maintenance needs of the improvements or other factors. Accordingly, any or all funds held in a Rehabilitation Reserve are subject to transfer into the same zone's Operating Reserve, at the discretion of the Parks and Recreation Department or equivalent, in order to provide for the maintenance and operation of the improvements. If zero, this line item may not be shown in the budget.

Ending Operating Reserve Balance 6-30-2026 (est.) - This amount represents the anticipated Operating Reserve balance/(deficit) for each Zone as of June 30, 2026. The size of each Zone's Operating Reserve is limited by Streets and Highways Code 22569 which states that an Operating Reserve shall not exceed the estimated costs of maintenance, service and incidental expenses from the first day of the fiscal year (July 1) to the date that the Agency expects to receive the first apportionment of collections from the County, which is estimated to be December 31. Therefore, each Zone may retain an Operating Reserve amounting to the District's first six-months of expenses in order to meet ongoing obligations until the first collections are received from the County. All Rehabilitation Reserve balances, if any, are excluded from the Operating Reserve balances and shall be shown separately in the Report.

REHABILITATION RESERVE

Beginning Rehab Reserve Balance 7-1-2025 (est.) — The projected balance of funds in the Rehabilitation Reserve as of July 1, 2025. Streets and Highways Code 22660 allows the District to generate and accumulate funds over several years to fund District improvements that cannot be conveniently raised from a single year's assessment.

Collect from FY 2025/26 Levy — This amount is added to the levy to accumulate funding of future year rehabilitation projects, replacements, restorations, or upgrades of District improvements. If zero, this line item may not be shown in the budget.

Use for FY 2025/26 Rehab Projects – The amount of Rehabilitation Reserve monies expected to be transferred out of the Rehabilitation Reserve to fund the costs of installation, replacement, or planned upgrades of District improvements for the current year. If zero, this line item may not be shown in the budget.

Transfer from/(to) the Operating Reserve — The amount of Rehabilitation Reserve monies to be transferred to or from the Operating Reserve. Periodically, funds held in a Rehabilitation Reserve may be needed to respond to changing maintenance needs of the improvements or other factors. Accordingly, any or all

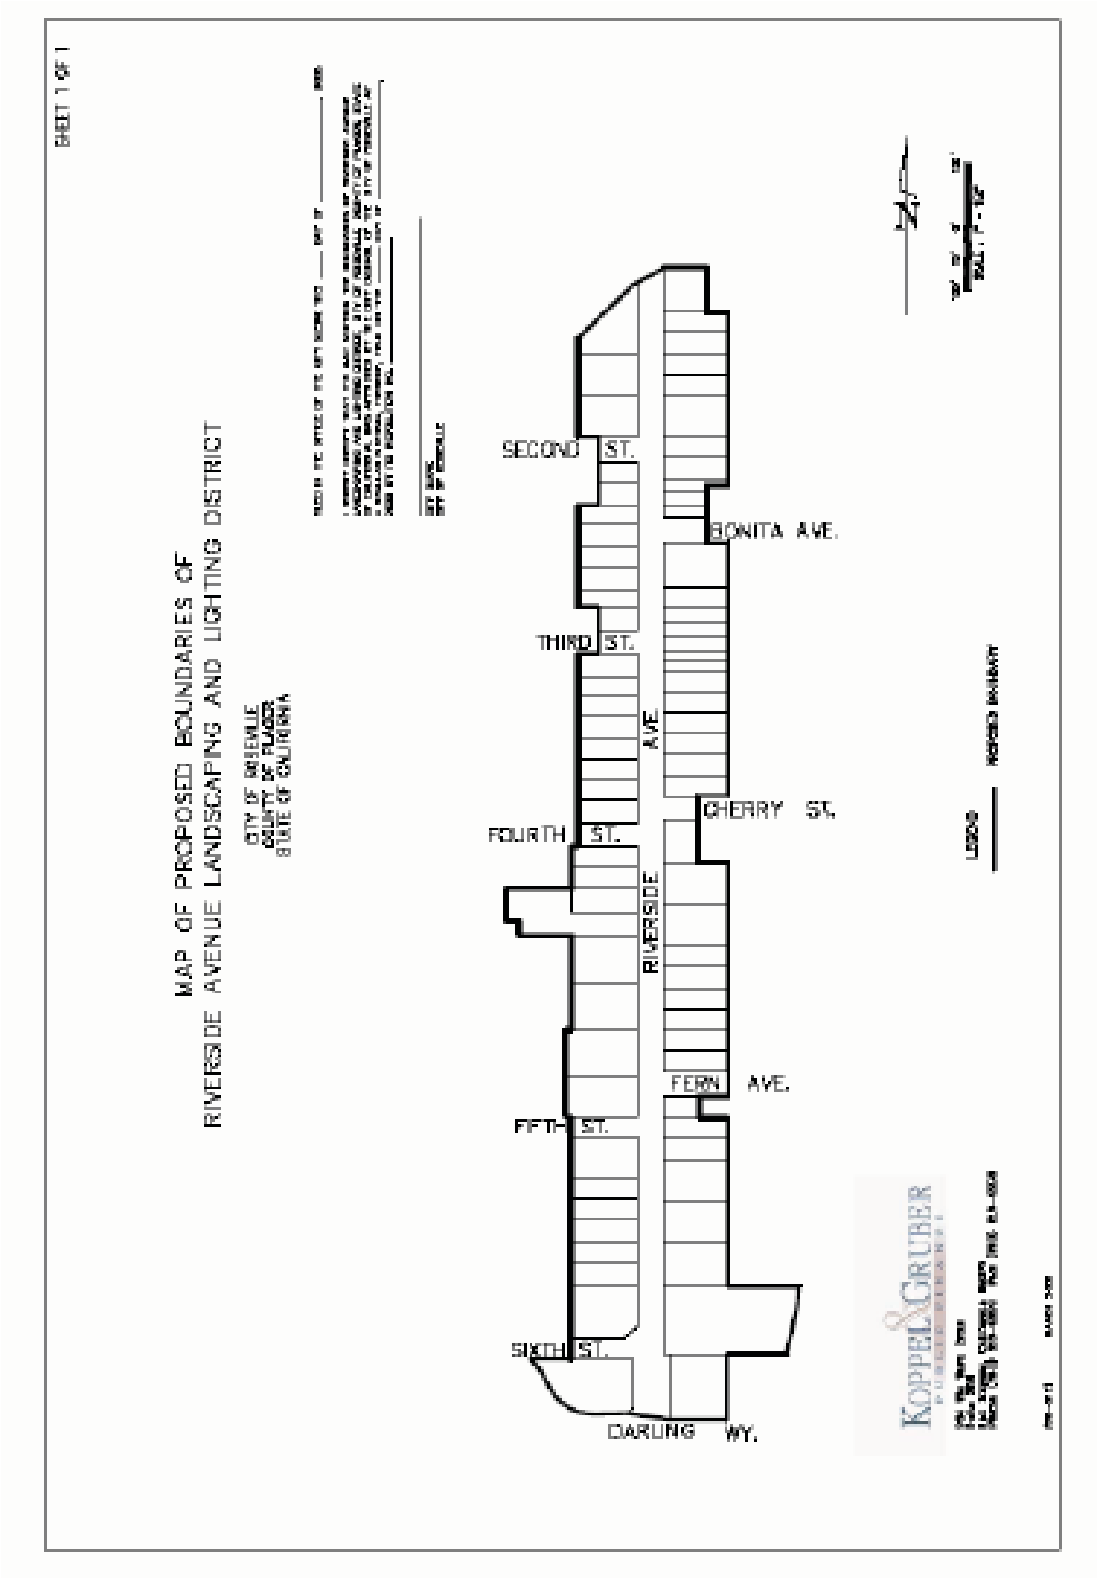
funds held in a Rehabilitation Reserve are subject to transfer into the same zone's Operating Reserve, at the discretion of the Parks and Recreation Department, in order to provide for the maintenance and operation of the improvements. If zero, this line item may not be shown in the budget.

Ending Rehab Reserve Balance 6-30-2026 (est.) - The projected balance of funds in the Rehabilitation Reserve as of June 30, 2026. These funds shall be used to provide for future year rehabilitation projects, replacements, restorations, or upgrades of District improvements which cannot be conveniently raised from a single year's assessment.

E. REHABILITATION RESERVE – CAPITAL IMPROVEMENT PLAN

Streets and Highways Code 22660 allows the District to generate and accumulate funds over several years to fund District improvements that cannot be conveniently raised from a single year's assessment.

The Report provides a five-year Capital Improvement Plan ("CIP") which shows projected expenditures related to the rehabilitation, restoration and/or replacement of District improvements, and other allowable costs. The Current Fiscal Year CIP is shown in the preceding Budget Section A. The projected CIP costs for the remaining four years are shown in the table below.



Description	FY 2026-27	FY 2027-28	FY 2028-29	FY 2029-30	4 Year Total
Improve hardscapes, monuments, landmarks, gateway features	$2,500	$2,500	$2,500	$10,000	$17,500
Non-routine tree work	2,000	2,000	2,000	2,000	8,000
Improve street furniture, trash receptacles, bike racks, bus stop shelters	3,000	4,000	3,394	5,394	15,788
Replace plants, landscaping, irrigation and/or drainage systems	6,000	6,000	6,000	8,000	26,000
Replace public street lights, lighting fixtures, poles/meters, safety, security, ornamental lights	2,500	2,500	2,500	5,000	12,500
Replace entry signs and decorative banners and hardware	2,763	2,763	2,763	2,761	11,050
Total Projected Expenditures	**$18,763**	**$19,763**	**$19,157**	**$33,155**	**$90,838**

From time to time, funds held in a Rehabilitation Reserve may be needed to respond to changing needs due to the condition of the improvements or other factors. Accordingly, any or all funds held in a Rehabilitation Reserve are subject to transfer into the District's Operating Reserve, at the discretion of the Parks and Recreation Department or equivalent, in order to provide for the maintenance and/or operation of the improvements.

APPENDIX A – DISTRICT BOUNDARY MAP

The boundary map for the District has previously been submitted to the Clerk of the City in the format required under the Act and is, by reference, hereby made part of this Report. These District Boundary Maps are available for inspection at the office of the City Clerk during normal business hours.

For general reference purposes, a summary of the District's Boundaries is presented herein.

APPENDIX B — FY 2025/26 ASSESSMENT ROLL

Parcel identification, for each lot or parcel within the District, shall be the parcel as shown on the Placer County Assessor's map for the year in which this Report is prepared.

A listing of parcels to be assessed within this District, along with the proposed assessment amounts, shall be submitted to the City Clerk, under separate cover, and by reference is made part of this Report.

Non-assessable lots or parcels may include areas of public streets and other roadways (typically not assigned an APN by the County); dedicated public easements, open space areas and rights-of-ways including public greenbelts and parkways; utility rights-of-ways; common areas; landlocked parcels, small parcels vacated by the County, bifurcated lots, and any other property that cannot be developed. These types of parcels are considered to receive little or no benefit from the improvements and are therefore exempt from assessment.

At the conclusion of the public hearing for the District and the proposed assessments, approval of the Report (as submitted or as modified) confirms the method of apportionment and the assessment rate to be levied against each eligible parcel and thereby constitutes the approved levy and collection of assessments for FY 2025/26. The listing of parcels and the amount of assessment to be levied shall be submitted to the County Auditor/Controller and included on the FY 2025/26 property tax roll for each parcel.

If any parcel submitted for collection is identified by the County Auditor/Controller to be an invalid parcel number for the Current Fiscal Year, a corrected parcel number and/or new parcel number will be identified and resubmitted to the County Auditor/Controller. The assessment amount to be levied and collected for the resubmitted parcel or parcels shall be based on the method of apportionment and assessment rate approved in this Report. Therefore, if a single parcel has changed to multiple parcels, the assessment amount applied to each of the new parcels shall be recalculated and applied according to the approved method of apportionment and assessment rate rather than a proportionate share of the original assessment.

RESOLUTION NO. 25-127

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, FOR FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, The City Council has, by previous Resolutions, formed the Vernon Street Landscaping and Lighting District (hereafter referred to as the "District") pursuant to the provisions of the *Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code of California, beginning with Section 22500* (hereafter referred to as the "Act"), that provides for the levy and collection of assessments by the County of Placer for the City of Roseville to pay for the maintenance and services of street lighting, landscaping, and all appurtenant facilities and operations related thereto; and,

WHEREAS, the City Council has retained Willdan Financial Services (hereinafter "Engineer") for the purpose of assisting with the establishment of the assessments, the annexation of territory, and to prepare and file an Engineer's Annual Levy Report (hereinafter referred to as the "Engineer's Report") with the City Clerk in accordance with the Act, and in accordance with the California Constitution, Articles XIIIC and XIIID;

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, AS FOLLOWS:

Section 1 Engineer's Report: The City Council hereby orders the Engineer to prepare and file with the City Clerk the Engineer's Report concerning the levy of assessments for the District in accordance with Chapter 3, Section 22622 of the Act.

Section 2 Proposed improvements and any substantial changes in existing improvements: The District improvements include: the maintenance and operation of and the furnishing of services, materials and/or improvements for landscape, lighting, hardscape and streetscape areas, and other public improvements within the street right-of-way areas and all appurtenant facilities related thereto as further described in the Engineer's Report. The Engineer's Report also describes all new improvements or substantial changes in existing improvements.

RESOLUTION NO. 25-128

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, The City Council has, by previous Resolutions, formed the Vernon Street Landscaping and Lighting District (hereafter referred to as the "District"), and initiated proceedings for Fiscal Year 2025/2026, pursuant to the provisions of the *Landscaping and Lighting Act of 1972*, *Part 2 of Division 15 of the Streets and Highways Code of California*, *beginning with Section 22500* (hereafter referred to as the "Act") that provides for the levy and collection of assessments by the County of Placer for the City of Roseville to pay for the maintenance, operation and servicing of all improvements and facilities related thereto; and,

WHEREAS, the City Council has retained Willdan Financial Services for the purpose of assisting with the Annual Levy of the District, and to prepare and file a report (hereinafter referred to as the "Engineer's Report") with the City Clerk in accordance with the Act; and,

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, PURSUANT TO *CHAPTER 3, SECTION 22624* OF THE ACT, AS FOLLOWS:

Section 1 Intention: The City Council hereby declares that it is its intention to seek the Annual Levy of the District pursuant to the Act, over and including the land within the District boundary, and to levy and collect assessments on all such land to pay for the annual costs of the improvements.

Section 2 Proposed improvements and any substantial changes in existing improvements: The District improvements include: the maintenance and operation of and the furnishing of services, materials or improvements for landscape, lighting, hardscape and streetscape areas within the District including, gateways, signage, street trees, sidewalks, curbs, gutters, parking stripes, pavers, planters, turf, trees, irrigation systems, drainage systems, and other public improvements within the street right-of-way areas and all appurtenant facilities related thereto as further described in the Engineer's Report. The Engineer's Report also describes all new improvements or substantial changes in existing improvements.

Section 3 Boundaries and Designation: The boundaries of the District are described as the boundaries previously defined in the formation documents of the original District. The District is known and designated as:

"Vernon Street Landscaping and Lighting District"

Section 4 Proposed Assessment Amounts: The proposed assessments are outlined in the Engineer's Report. District Assessments are calculated in accordance with the method of apportionment established for the District and do not exceed the assessment rates and annual inflationary adjustment previously authorized by the City Council and approved by the property owners in accordance with the provisions of the California State Constitution, Article XIIID.

Section 5 Public Hearing(s): The City Council hereby declares its intention to conduct a Public Hearing annually concerning the levy of assessments for the District in accordance with *Chapter 3, Section 22626* of the Act.

Section 6 Notice: The City Clerk shall give notice of the time and place of the Public Hearing by causing this Resolution to be published once in the local newspaper not less than ten (10) days before the date of the hearing and by posting a copy of this Resolution on the official bulletin board customarily used by the City Council for the posting of notices.

Section 7 Time and Place of Public Hearing: Notice is hereby given that a Public Hearing on these matters will be held by the City Council on **Wednesday, May 21, 2025 at 6:00 p.m.**, or as soon thereafter as feasible in the regular meeting chambers located at 311 Vernon Street, Roseville, California.

RESOLUTION NO. 25-129

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE, CALIFORNIA, FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026

The City Council of the City of Roseville, California (hereafter referred to as the "City Council") does resolve as follows:

WHEREAS, the City Council has, by previous Resolutions, ordered the preparation of an Annual Levy Report (hereafter referred to as the "Engineer's Report") for the district known and designated as the Vernon Street Landscaping and Lighting District (hereafter referred to as the "District"), pursuant to the provisions of the *Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code of California*, *beginning with Section 22500* (hereinafter referred to as the "Act"); and,

WHEREAS, the City Council has retained Willdan Financial Services (hereinafter "Engineer"), for the purpose of assisting with the establishment of the assessments and to prepare and file an Engineer's Report with the City Clerk in accordance with the Act, and in accordance with the requirements of the California Constitution, Articles XIIIC and XIIID; and,

WHEREAS, there has now been presented to this City Council the Engineer's Report as required by *Chapter 1, Article 4, Section 22566* of said Act; and,

WHEREAS, this City Council has carefully examined and reviewed the Engineer's Report as presented, and is preliminarily satisfied with the District, each and all of the budget items and documents as set forth therein, and is satisfied that the assessments, on a preliminary basis, have been spread in accordance with the benefits received from the improvements, operation, maintenance and services to be performed within the District, as set forth in said Engineer's Report; and,

NOW, THEREFORE, BE IT RESOLVED, DETERMINED, AND ORDERED BY THE CITY COUNCIL FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, AS FOLLOWS:

Section 1 That the above recitals are all true and correct.

Section 2 That the Engineer's Report, as presented, consists of the following:

a. A Description of Improvements
b. The Annual Budget (Costs and Expenses of Maintenance, Services, Operations and District Administration)
c. The Assessment Roll containing the Fiscal Year 2025/2026 Levy for each Assessor Parcel within the District

Section 3 The Engineer's Report is hereby approved on a preliminary basis, and ordered to be filed in the Office of the City Clerk as a permanent record and to remain open to public inspection.

Section 4 That the City Clerk shall certify to the passage and adoption of this Resolution, and the minutes of this meeting shall so reflect the presentation of the Engineer's Report.

APPENDIX B — FY 2025/26 ASSESSMENT ROLL 20

I. OVERVIEW

A. INTRODUCTION

The City of Roseville ("City") annually levies and collects special assessments in order to maintain the improvements within the Vernon Street Landscaping and Lighting District ("District"). The District was formed in January of 2001 and is levied annual assessments pursuant to *the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code* ("1972 Act").

The Engineer's Report ("Report") describes the District, any new annexations, changes to the District, and the proposed assessments for the period of July 1, 2025 through June 30, 2026. The special benefit assessments are based on historical and estimated costs to maintain the District improvements. These assessments, which provide a direct and special benefit to properties within the District, will provide funding for the operation and maintenance of District improvements.

The word "parcel," for the purposes of this Report, refers to an individual property assigned its own Assessor's Parcel Number ("APN") by the Placer County Assessor's Office. The Placer County Auditor/Controller uses Assessor's Parcel Numbers and specific Tax Code Accounts, to identify on the County's tax roll, properties assessed for special district benefit assessments.

Following approval of the Report, the City Council will by resolution, order the improvements to be made and confirm the levy and collection of assessments herein pursuant to the Act. The assessment rates and method of apportionment described in this Report as approved or modified by the City Council define the assessments to be applied to each parcel within the District for Fiscal Year ("FY") 2025/26. The assessments as approved will be submitted to the Placer County Auditor/Controller to be included on the property tax roll for each parcel.

If any parcel submitted for collection is identified by the County Auditor/Controller to be an invalid parcel number for the Current Fiscal Year, a corrected parcel number and/or new parcel number will be identified and resubmitted to the County Auditor/Controller. The assessment amount to be levied and collected for the resubmitted parcel or parcels shall be based on the method of apportionment and assessment rate approved by the City Council.

B. COMPLIANCE WITH THE CURRENT LEGISLATION

All assessments described in this Report and approved by the City Council are prepared in accordance with the 1972 Act and are in compliance with the provisions of the California Constitution Article XIIID (Proposition 218).

The District has been formed pursuant to the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the California Streets and Highways Code. Pursuant

to the Act, an annual Public Hearing is conducted by the City Council to accept property owner and public comments, to review the Engineer's Annual Levy Report prior to approving the annual assessments to be levied on the County tax rolls. The assessments described in this Report have been prepared in accordance with the Act.

Prior to FY 2001/02, the City initiated (Resolution 00-523) and conducted property owner protest ballot proceedings (Resolution 01-22) in accordance with Article XIIID of the California Constitution ("Article XIIID") for the parcels within the District. An annual rate escalator was also included in the ballot that allows for an annual inflationary increase equal to the percentage change in the Consumer Price Index of the San Francisco-Oakland-Hayward Area (the "CPI") of each succeeding year (the "Escalation Percentage"). At the conclusion of the Public Hearing held on January 17, 2001, all property owner ballots returned were tabulated to determine if majority protest existed. The result of the protest proceeding was an approval of the assessment rate and the annual inflationary increase for maintaining the improvements within the District.

Pursuant to the Act, an annual Public Hearing is conducted by the City Council to accept property owner and public comments, to review the Engineer's Annual Levy Report prior to approving the annual assessments to be levied on the County tax rolls.

C. DESCRIPTION OF DISTRICT BOUNDARIES

The District is located in downtown Roseville and includes all parcels that front along Vernon Street between Folsom Road and the Riverside/Douglas Boulevard. See Appendix A for District boundary map.

D. IMPROVEMENTS AUTHORIZED BY THE 1972 ACT

As applicable or may be applicable to a proposed District, the 1972 Act defines improvements to mean one or any combination of the following:

- The installation or planting of landscaping.
- The installation or construction of statuary, fountains, and other ornamental structures and facilities.
- The installation or construction of public lighting facilities.
- The installation or construction of any facilities which are appurtenant to any of the foregoing or which are necessary or convenient for the maintenance or servicing thereof, including, but not limited to, grading, clearing, removal of debris, the installation or construction of curbs, gutters, walls, sidewalks, or paving, or water, irrigation, drainage, or electrical facilities.
- The maintenance or servicing, or both, of any of the foregoing.
- The acquisition of any existing improvement otherwise authorized pursuant to this section.

Incidental expenses associated with the improvements including, but not limited to:

- The cost of preparation of the report, including plans, specifications, estimates, diagram, and assessment;
- The costs of printing, advertising, and the publishing, posting, and mailing of notices;
- Compensation payable to the County for collection of assessments;
- Compensation of any engineer or attorney employed to render services;
- Any other expenses incidental to the construction, installation, or maintenance and servicing of the improvements;
- Any expenses incidental to the issuance of bonds or notes pursuant to Section 22662.5.
- Costs associated with any elections held for the approval of a new or increased assessment.

The 1972 Act defines "Maintain" or "maintenance" to mean furnishing of services and materials for the ordinary and usual maintenance, operation, and servicing of any improvement, including:

- Repair, removal, or replacement of all or any part of any improvement.
- Providing for the life, growth, health, and beauty of landscaping, including cultivation, irrigation, trimming, spraying, fertilizing, or treating for disease or injury.
- The removal of trimmings, rubbish, debris, and other solid waste.
- The cleaning, sandblasting, and painting of walls and other improvements to remove or cover graffiti.

Furthermore, the 1972 Act specifies that where the cost of improvements (other than maintenance and operations) is greater than can be conveniently raised from a single annual assessment, an assessment to be levied and collected in annual installments. In that event, the governing body may choose to do any of the following:

- Provide for the accumulation of the moneys in an improvement fund until there are sufficient moneys to pay all or part of the cost of the improvements.
- Provide for a temporary advance to the improvement fund from any available and unencumbered funds of the local agency to pay all or part of the cost of the improvements and collect those advanced moneys from the annual installments collected through the assessments.
- Borrow an amount necessary to finance the estimated cost of the proposed improvements. The amount borrowed, including amounts for bonds issued to finance the estimated cost of the proposed improvements.

E. DESCRIPTION OF THE IMPROVEMENTS AND MAINTENANCE

The District ensures the continued maintenance, servicing, administration and operation of various landscape, lighting and streetscape improvements and associated appurtenances that are required to keep the improvements in a healthy, vigorous, and satisfactory condition. The assessable parcels receive benefit from the above improvements within the District.

Specific improvements include installation, maintenance and servicing of public facilities, including, but not limited to street trees, sidewalks, curbs, gutters, parking stripes, turf, brick pavers, planters, gateways, benches, bike racks, signage, trash receptacles, and lighting throughout the boundaries of the District (the "Improvements').

As applied herein, "installation" means the construction of public Improvements, including, but not limited to, land preparation, such as grading, leveling, cutting, and filling, sod, landscaping, irrigation systems, sidewalks and drainage, lights, equipment, turf, brick pavers, planters, gateways, benches, bike racks and signage.

"Maintenance" means the furnishing of services and materials for the ordinary and usual maintenance, operation and servicing of any Improvement, including repair, removal or replacement of all or any part of any Improvement; providing for the life, growth, health, and beauty of landscaping, including cultivation, irrigation, trimming, spraying, fertilizing, or treating for disease or injury; the removal of trimmings, rubbish, debris, and other solid waste, and the cleaning, sandblasting, and painting of Improvements to remove or cover graffiti.

"Servicing" means the furnishing of electric current, or energy, gas, or other illuminating agent for any public lighting facilities or for the lighting or operation of any other Improvements; or water for the irrigation of any landscaping, the operation of any fountains, or the maintenance of any other Improvements.

Plans and specification for the Improvements to be maintained are on file in the office of the Economic and Community Services Director at 311 Vernon Street, Roseville, CA 95678.

All assessable parcels identified as being within the District share in both the cost and the benefits of the improvements. The costs associated with the Improvements are equitably spread among all benefiting parcels within the District. Only parcels that receive direct benefit from the Improvements are assessed, and each parcel is assessed in proportion to the estimated benefit received. The funds collected are dispersed and used for only the services and operation provided to the District.

II. METHOD OF APPORTIONMENT

A. GENERAL

The 1972 Act permits the establishment of assessment districts by agencies for the purpose of providing certain public improvements which include the construction, maintenance and servicing of public lights, landscaping, and appurtenant facilities. The 1972 Act further requires that the cost of these improvements be levied according to benefit rather than assessed value:

> *"The net amount to be assessed upon lands within an assessment district may be apportioned by any formula or method which fairly distributes the net amount among all assessable lots or parcels in proportion to the estimated benefits to be received by each such lot or parcel from the improvements."*

The formula used for calculating assessments in the District therefore reflects the composition of the parcels, and the Improvements and services provided, to fairly apportion the costs based on estimated benefit to each parcel.

B. BENEFIT ANALYSIS

In conjunction with the provisions of the 1972 Act, the California Constitution Article XIIID addresses several key criteria for the levy of assessments, notably:

Article XIIID Section 2d defines District as follows:

"District means an area determined by an agency to contain all parcels which will receive a special benefit from a proposed public improvement or property-related service";

Article XIIID Section 2i defines Special Benefit as follows:

"Special benefit" means a particular and distinct benefit over, and above general benefits conferred on real property located in the district or to the public at large. General enhancement of property value does not constitute "special benefit."

Article XIIID Section 4a defines proportional special benefit assessments as follows:

"An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be

imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel."

This District was formed to establish and provide for the improvements that enhance the presentation of the surrounding properties and developments. These improvements will directly benefit the parcels to be assessed within the District. The assessments and method of apportionment is based on the premise that the assessments will be used to construct and install landscape and lighting improvements within the District as well as provide for the annual maintenance of those improvements, and the assessment revenues generated by District will be used solely for such purposes.

The costs of the proposed improvements have been identified and allocated to properties within the District based on special benefit. The improvements to be provided by this District and for which properties will be assessed have been identified as an essential component and local amenity that provides a direct reflection and extension of the properties within the District which the property owners and residents have expressed a high level of support.

The method of apportionment (method of assessment) set forth in the Report is based on the premise that each assessed property receives special benefits from the landscape and lighting improvements within the District, and the assessment obligation for each parcel reflects that parcel's proportional special benefits as compared to other properties that receive special benefits.

To identify and determine the proportional special benefit to each parcel within the District, it is necessary to consider the entire scope of the improvements provided as well as the properties that benefit from those improvements. The improvements and the associated costs described in this Report, have been carefully reviewed and have been identified and allocated based on a benefit rationale and calculations that proportionally allocate the net cost of only those improvements determined to be of special benefit to properties within the District. The various public improvements and the associated costs have been identified as either "general benefit" (not assessed) or "special benefit". The City initiated and conducted property owner protest ballot proceedings in accordance with Article XIIID. Each of the proposed Improvements, the associated costs and assessments were identified and allocated based on special benefit pursuant to the provisions of Article XIIID and 1972 Act. Additionally, the Improvements and the annual costs of ensuring the maintenance and operation of the Improvements are of direct and special benefit to the properties.

The City annually levies and collects special benefit assessments in order to maintain and service the District Improvements. The District provides for specific Improvements and services that include the maintenance and operation of landscaping and lighting Improvements and associated appurtenances located within the District's public rights-of-way and dedicated easements. The annual assessment is based on the historical and estimated cost to maintain the Improvements that provide a benefit to properties within these Districts. The

Improvements within the District and the costs of those Improvements are identified and budgeted separately, including all expenditures, deficits, surpluses, revenues, and reserves.

All Improvements within the District and the properties associated with those Improvements were reviewed for benefit prior to the formation of the District. Because the Improvements affront the benefited parcels, it has been determined that there is no measurable general benefit to properties outside the District or to the public at large. In making this determination it should be noted that similar improvements within California are typically maintained by individual property owners, through some type of association or a special district as allowed by State Law since the on-going maintenance of these improvements are a special benefit to the properties associated with those improvements.

The method of apportionment (method of assessment) for the District is based on the premise that each of the assessed parcels within the District receives special benefit from the Improvements maintained and financed by District assessments. The presence of these Improvements and the close proximity of the Improvements to the properties within the District enhance the desirability and security of properties within the District.

The landscape Improvements provided by the District may include landscaped parkways, perimeters, entryways, local medians, slopes, internal amenities, and appurtenant facilities. Street lighting Improvements may include all energy costs and necessary maintenance to the facilities related thereto. The annual assessments outlined in this Report are proposed to cover the estimated costs to provide all necessary service, operation, administration, and maintenance required to keep these Improvements in a healthy, vigorous, and satisfactory condition. The special benefits associated with the local landscaping Improvements are specifically:

The special benefits associated with all landscaping Improvements are specifically:

- Enhanced desirability of properties through association with the Improvements.
- Improved aesthetic appeal of properties providing a positive representation of the area and properties.
- Enhanced adaptation of the urban environment within the natural environment from adequate landscaping.
- Environmental enhancement through improved dust and debris control, and fire prevention.
- Increased sense of pride in ownership of property within the District resulting from well-maintained Improvements associated with the properties.
- Enhanced quality of life through well-maintained landscaped areas.

- Reduced criminal activity and property-related crimes (especially vandalism) against properties in the District through well-maintained surroundings and amenities including abatement of graffiti.
- Enhanced environmental quality of the parcels by moderating temperatures, providing oxygenation, and attenuating noise.

The special benefits of street lighting are the convenience, safety, and security of property, improvements, and goods. Specifically:

- Enhanced deterrence of crime and the aid to police protection.
- Increased nighttime safety on streets and roads within the Districts.
- Improved ability of pedestrians and motorists to see.
- Improved ingress and egress to property.
- Reduced vandalism and other criminal acts and damage to Improvements or property.
- Improved traffic circulation and reduced nighttime accidents and personal property loss.
- Increased promotion of business during nighttime hours in the case of commercial properties.

All of the preceding special benefits contribute to a specific enhancement and desirability of each of the assessed parcels within the District.

C. DESCRIPTION OF THE METHOD OF APPORTIONMENT

Pursuant to the 1972 Act, the costs of the District may be apportioned by any formula or method that fairly distributes the net amount to be assessed, among all assessable parcels within the District in proportion to the estimated special benefits to be received by each such parcel from the Improvements. The special benefit formula used should reflect the composition of the parcels, the Improvements and services provided to fairly proportion the costs based on estimated special benefit to each parcel within the District. All assessable parcels within the District shall receive a direct special benefit from the services and Improvements provided by the District.

Article XIIID of the California Constitution specifies that only special benefits are assessable, and that the City must separate the general benefits from the special benefits conferred on any parcel. Since the District is a downtown business area and the Improvements that affront each District parcel primarily attract and retain an increased customer base, these benefits enhance the District parcels and there is no measurable benefit to the public at large. Therefore, 100% of the Improvements are considered special benefit to the District parcels. The cost of

maintaining the Improvements is therefore identified as special benefit and has been allocated to the special assessments.

It was determined that a uniform assessment rate per foot of frontage upon Vernon Street would fairly distribute the net amount to be assessed due to the following reasons:

1. The assessments are based upon a specific property owner's special benefit received from the Improvements.
2. The special benefits should be directly related to the extent at which a property fronts the improvements, relative to other properties in the District.

The base assessment rate for the District was $4.59 per linear foot in FY 2001/02 and was determined using the formula below.

$$\textbf{\textit{Assessment Rate Per Foot}} = \frac{\textbf{\textit{Balance to Levy}}}{\textbf{\textit{Total Feet of Frontage}}}$$

The annual assessment amount for each parcel was then determined using the formula below:

Parcel Front Footage x Rate per Linear Foot = Parcel Assessment Amount

D. ANNUAL INFLATIONARY ADJUSTMENT

Commencing with FY 2002/03, the maximum assessment rate is to increase annually by the percentage change in the Consumer Price Index of the San Francisco-Oakland-Hayward ("CPI") as of January of each succeeding year (the "Escalation Percentage"). Since the Department of Labor, Bureau of Labor Statistics does not publish a CPI for January; the CPI for preceding month shall be used since this is the CPI *available* in the month of January. The District's starting CPI Index of 184.1, December of 2000, is hereby established as the base CPI (the "Base Year CPI Index").

In applying this year's CPI increase, the Escalation Percentage will increase the FY 2025/26 maximum assessment rate by 2.38% over that of the prior year.

If the proposed assessment increases over the prior fiscal year by a percentage no greater than the Escalation Percentage as defined above, then the proposed assessment is not considered an increase. This assessment range formula shall be applied to all future assessments within the District. Generally, if the proposed annual assessment rate for the Current Fiscal Year is less than or equal to the calculated maximum assessment rate, then the proposed annual assessment is not considered an increased assessment.

E. APPEALS AND INTERPRETATION

Any property owner, who believes that the assessment levied on the subject property is in error as a result of incorrect information being used to apply the foregoing method of assessment, may file a written appeal with the Finance Director of the City of Roseville or his or her designee. Any such appeal is limited to correction of an assessment during the then current Fiscal Year. Upon the filing of any such appeal, the Director of Housing and Redevelopment or his or her designee will promptly review the appeal and any information provided by the property owner. If the Director of Housing and Redevelopment or his or her designee finds that the assessment should be modified, the appropriate changes shall be made to the assessment roll. However, if any such changes are approved after the County of Placer's deadline for adjustments to the tax roll, the Director of Housing and Redevelopment or his or her designee is authorized to approve a refund of the reduction amount to the property owner. Any dispute over the decision of the Director of Housing and Redevelopment or his or her designee, shall be referred to the City Council of the City of Roseville and the decision of the City Council of the City of Roseville shall be final.

F. DETERMINATION OF FRONT FOOTAGE

The front footage of each assessable parcel is subject to revision and/or correction using measurements of front footage found on the then current Placer County Assessor's Parcel Maps or through direct measurement by City personnel. Any such correction that increases a Parcel Assessment shall not be considered an increased assessment subject to the procedural provisions of Article XIIID.

III. DISTRICT BUDGET

A. FY 2025/26 BUDGET

DESCRIPTION	AMOUNT (FUND 2019)
DIRECT COSTS	
Contract Maintenance - Landscaping	$5,172.00
Repair & Maintenance - Landscaping	8,400.00
Repair & Maintenance - Lighting	7,000.00
Repair and Maintenance - Streetscape and Signage	0.00
Repair and Maintenance - Tree Work	3,693.00
Utilities	14,689.00
Rehab Reserve Expenditures - Non-Routine Tree Work	2,110.00
Rehab Reserve Project Expenditures	0.00
Total Direct Costs	**$41,064.00**
ADMINISTRATION COSTS	
City Administration	$911.00
Contract Administration - Park's Dept	2,434.00
County Auditor Fees	465.94
Consulting & Professional Services	4,251.00
Public Hearing Publishing Costs	381.00
Total Administrative Costs	**$8,442.94**
Total Direct and Administration Costs	**$49,506.94**
BUDGET ADJUSTMENTS	
Replenishment/(Use) of Operating Reserve	($803.28)
Contribution for /(Use of) Rehab Reserve	(2,110.00)
Rounding Adjustment	(0.58)
Total Adjustments	**($2,913.86)**
BALANCE TO LEVY	**$46,593.08**

Fund balance information is reported in Section C on the following page.

B. FY 2025/26 ASSESSMENT RATES

DESCRIPTION	AMOUNT (FUND 2019)
FY 2025/26 ASSESSMENT DATA	
Number of Assessable Parcels	60
Total Assessable Front Footage	5,370.76
Assessment Rates	
Applied Assessment Rates per each Foot of Frontage	$8.6753
Maximum Assessment Rates per each Foot of Frontage	$8.6754
Potential Maximum Assessment	**$46,593.66**

C. FY 2025/26 FUND BALANCE INFORMATION

DESCRIPTION	AMOUNT (FUND 2019)
OPERATING RESERVE	
Beginning Operating Reserve Balance 7-1-2025 (est.)	**$25,751.96**
add: Replenishment from FY 2025/26 Levy	
less: Use for FY 2025/26 Expenses	(803.28)
Transfer from/(to) the Rehab Reserve	(4,416.68)
Ending Operating Reserve Balance 6-30-2026 (est.)	**$20,532.00**
REHABILITATION RESERVE	
Beginning Rehab Reserve Balance 7-1-2025 (est.)	**$1,102.04**
add: Collect from FY 2025/26 Levy	
less: Use for FY 2025/26 Rehab Projects	(2,110.00)
Transfer from/(to) the Operating Reserve	4,416.68
Ending Rehab Reserve Balance 6-30-2026 (est.)	**$3,408.72**

D. DESCRIPTION OF BUDGET ITEMS

Description of the terms used in the preceding Budget, Assessment Rates and Fund Balance tables are listed below:

BUDGET

DIRECT COSTS

Contract Maintenance - Landscaping - Includes all regularly scheduled contract labor, materials, supplies, and equipment required to properly maintain and ensure the satisfactory condition or maintenance of all landscaping corridors, street medians, entryways, irrigation, and related drainage systems as well as maintenance of appurtenant facilities (the “improvements”).

Repair & Maintenance – Landscaping - This line item includes repairs that are generally unforeseen and not normally included in the annual maintenance contract costs. This may include repair of damaged amenities due to vandalism, storms, etc. If zero, this line item may not be shown in the budget.

Repair & Maintenance – Lighting - This line item includes bulb replacement and repairs that are generally unforeseen. This may include repair of damaged amenities due to vandalism, storms, etc.

Repair & Maintenance - Streetscape/Signage - This line item includes repairs that are generally unforeseen and not normally included in the annual maintenance contract costs. This may include repair of damaged amenities due to vandalism, storms, etc.

Repair & Maintenance – Tree Work - This line item includes annual costs for tree maintenance not included in the annual contract maintenance portion of the budget. If zero, this line item may not be shown in the budget.

Utilities - The furnishing of water and electricity required for the operation and maintenance of the improvements.

Rehab Reserve Expenditures – **Non-Routine Tree Work** – Expected costs to maintain trees other than costs of annual repair and maintenance. If zero, this line item may not be shown in the budget.

Rehab Reserve Project Expenditures – Expected costs for installation, replacement, or planned upgrades of District improvements for the current year that were previously funded or accumulated in the Rehabilitation Reserve. The Rehabilitation Reserve is used to accumulate funds for costs associated with the future rehabilitation or replacement of District improvements that cannot be conveniently raised from a single year's assessment. If zero, this line item may not be shown in the budget.

ADMINISTRATION COSTS

City Administration – Estimated costs incurred by the City Finance Department and other Departments in preparing the annual budget for the Engineer's Report, together with other financial information required to determine the annual assessment. These costs would also include the preparation, posting and publishing of public notices required for City Council action relating to the District, as well as costs to perform legal review of documents.

Contract Administration – Park's Dept – Estimated Costs of Park and Recreation Department staff to coordinate and oversee the maintenance contracts and overall repair and maintenance of the District. This amount also includes the cost of the Department's estimates and analysis of certain budget items, estimated costs and useful lives of certain District Improvements.

County Auditor Fees - A fee of 1% of the total levy amount that is charged to the District by the County for placing assessments on property tax bills.

Consulting and Professional Services – Includes the costs and expenses of contracting with various professionals to provide legal, engineering and district administration services directly related to the District, including the calculation of the annual assessment amounts and the preparation of the Engineer's' Report.

Public Hearing Publishing Costs –Includes the out-of-pocket costs to publish public notices required for City Council action relating to the District.

Total Direct and Administration Costs – The total expected costs of the District.

BUDGET ADJUSTMENTS

Replenishment/(Use) of Operating Reserve – A "Replenishment" increases the levy in order to replenish the Operating Reserve. On the other hand, a "Use" of the Operating Reserve decreases the levy by drawing funds from the Operating Reserve for current year expenditures. If zero, this line item may not be shown in the budget. Further information regarding the function of the Operating Reserve is provided under "FUND BALANCE INFORMATION" in the following pages of this Section.

Contribution for / (Use of) Rehab Reserve — A "Contribution" increases the levy in order to generate funding for the Rehabilitation Reserve. This reserve allows for the accumulation of funds for possible rehabilitation projects or replacements in future years. On the other hand, a "Use of" of the Rehabilitation Reserve provides current year funding of rehabilitation projects or replacements from available funds within the Rehabilitation Reserve. If zero, this line item may not be shown in the budget. Further information regarding the function of the Rehabilitation Reserve is provided under "FUND BALANCE INFORMATION" in the following pages of this Section.

Rounding Adjustment – The necessary rounding adjustment(s) due to limitations of the County property tax system that requires even penny levy amounts to be placed on the secured tax roll.

BALANCE TO LEVY - This is the total amount to be levied and collected through assessments for the current fiscal year for each zone. The Balance to Levy represents the sum of the total District costs together with any applicable adjustments to the budget as described above.

ASSESSMENT RATES:

Number of Assessable Parcels - The total number of parcels that are expected to be assessed. Non-assessable lots or parcels include government-owned land,

public utility-owned property, land principally encumbered by public rights-of-way or easements, common areas, and/or parcels within the boundaries of the District currently do not benefit from the improvements and are therefore not assessed.

Total Assessable Front Footage - The total linear footage of that portion of each assessable parcel's boundary that is contiguous with Vernon Street.

Applied Assessment Rate per Front Foot - This amount represents the rate being applied to the front footage of each parcel for the Current Fiscal Year.

Maximum Assessment Rate per Front Foot - This amount represents the maximum rate that can be applied to the front footage of each parcel for the Current Fiscal Year.

Maximum Potential Assessment – The total amount that is expected to be assessed against all parcels within the District for the Current Fiscal Year.

FUND BALANCE INFORMATION:

OPERATING RESERVE

Beginning Operating Reserve Balance 7-1-2025 (est.) - The anticipated beginning balance of cash and receivables net of any unpaid prior year obligations for each Zone. These beginning balances shall be used to fund each Zone's expenditures from July 1, 2025 to December 31, 2025, as the Operating Reserve is required to compensate for the approximate six-month delay between the start of the District's fiscal year and the receipt of the collections from the County. All Rehabilitation Reserve balances, if any, are excluded from the Operating Reserve balances and shall be shown separately in the Report.

Replenish from FY 2025/26 Levy – This amount is added to the FY 2025/26 levy in order to replenish the Operating Reserve. Due to the six-month delay from the District's receipt of assessment collections, the Operating Reserve balance shall be sufficiently funded to provide for expenditures from the period of July 1, 2025 (the beginning of the Fiscal Year) through December 31, 2025. If zero, this line item may not be shown in the budget.

Use for FY 2025/26 Expenses – The amount of the Operating Reserve to be used to fund FY 2025/26 expenses. Portions of the Operating Reserve may be slated for current year expenditures in order to reduce the Ending Operating Reserve Balance to an amount no greater than the expected District costs for the period of July 1, 2025 (the beginning of the Fiscal Year) through December 31, 2025. If zero, this line item may not be shown in the budget.

Transfer from/(to) the Rehab Reserve — The amount of Operating Reserve monies to be transferred to or from the Rehabilitation Reserve. Periodically, funds held in a Rehabilitation Reserve may be needed to respond to changing

maintenance needs of the improvements or other factors. Accordingly, any or all funds held in a Rehabilitation Reserve are subject to transfer into the same zone's Operating Reserve, at the discretion of the Parks and Recreation Department or equivalent, in order to provide for the maintenance and operation of the improvements. If zero, this line item may not be shown in the budget.

Ending Operating Reserve Balance 6-30-2026 (est.) - This amount represents the anticipated Operating Reserve balance/(deficit) for each Zone as of June 30, 2026. The size of each Zone's Operating Reserve is limited by Streets and Highways Code 22569 which states that an Operating Reserve shall not exceed the estimated costs of maintenance, service and incidental expenses from the first day of the fiscal year (July 1) to the date that the Agency expects to receive the first apportionment of collections from the County, which is estimated to be December 31. Therefore, each Zone may retain an Operating Reserve amounting to the District's first six-months of expenses in order to meet ongoing obligations until the first collections are received from the County. All Rehabilitation Reserve balances, if any, are excluded from the Operating Reserve balances and shall be shown separately in the Report.

REHABILITATION RESERVE

Beginning Rehab Reserve Balance 7-1-2025 (est.) — The projected balance of funds in the Rehabilitation Reserve as of July 1, 2025. Streets and Highways Code 22660 allows the District to generate and accumulate funds over several years to fund District improvements that cannot be conveniently raised from a single year's assessment.

Collect from FY 2025/26 Levy — This amount is added to the levy to accumulate funding of future year rehabilitation projects, replacements, restorations, or upgrades of District improvements. If zero, this line item may not be shown in the budget.

Use for FY 2025/26 Rehab Projects – The amount of Rehabilitation Reserve monies expected to be transferred out of the Rehabilitation Reserve to fund the costs of installation, replacement, or planned upgrades of District improvements for the current year. If zero, this line item may not be shown in the budget.

Transfer from/(to) the Operating Reserve — The amount of Rehabilitation Reserve monies to be transferred to or from the Operating Reserve. Periodically, funds held in a Rehabilitation Reserve may be needed to respond to changing maintenance needs of the improvements or other factors. Accordingly, any or all funds held in a Rehabilitation Reserve are subject to transfer into the same zone's Operating Reserve, at the discretion of the Parks and Recreation Department, in order to provide for the maintenance and operation of the improvements. If zero, this line item may not be shown in the budget.

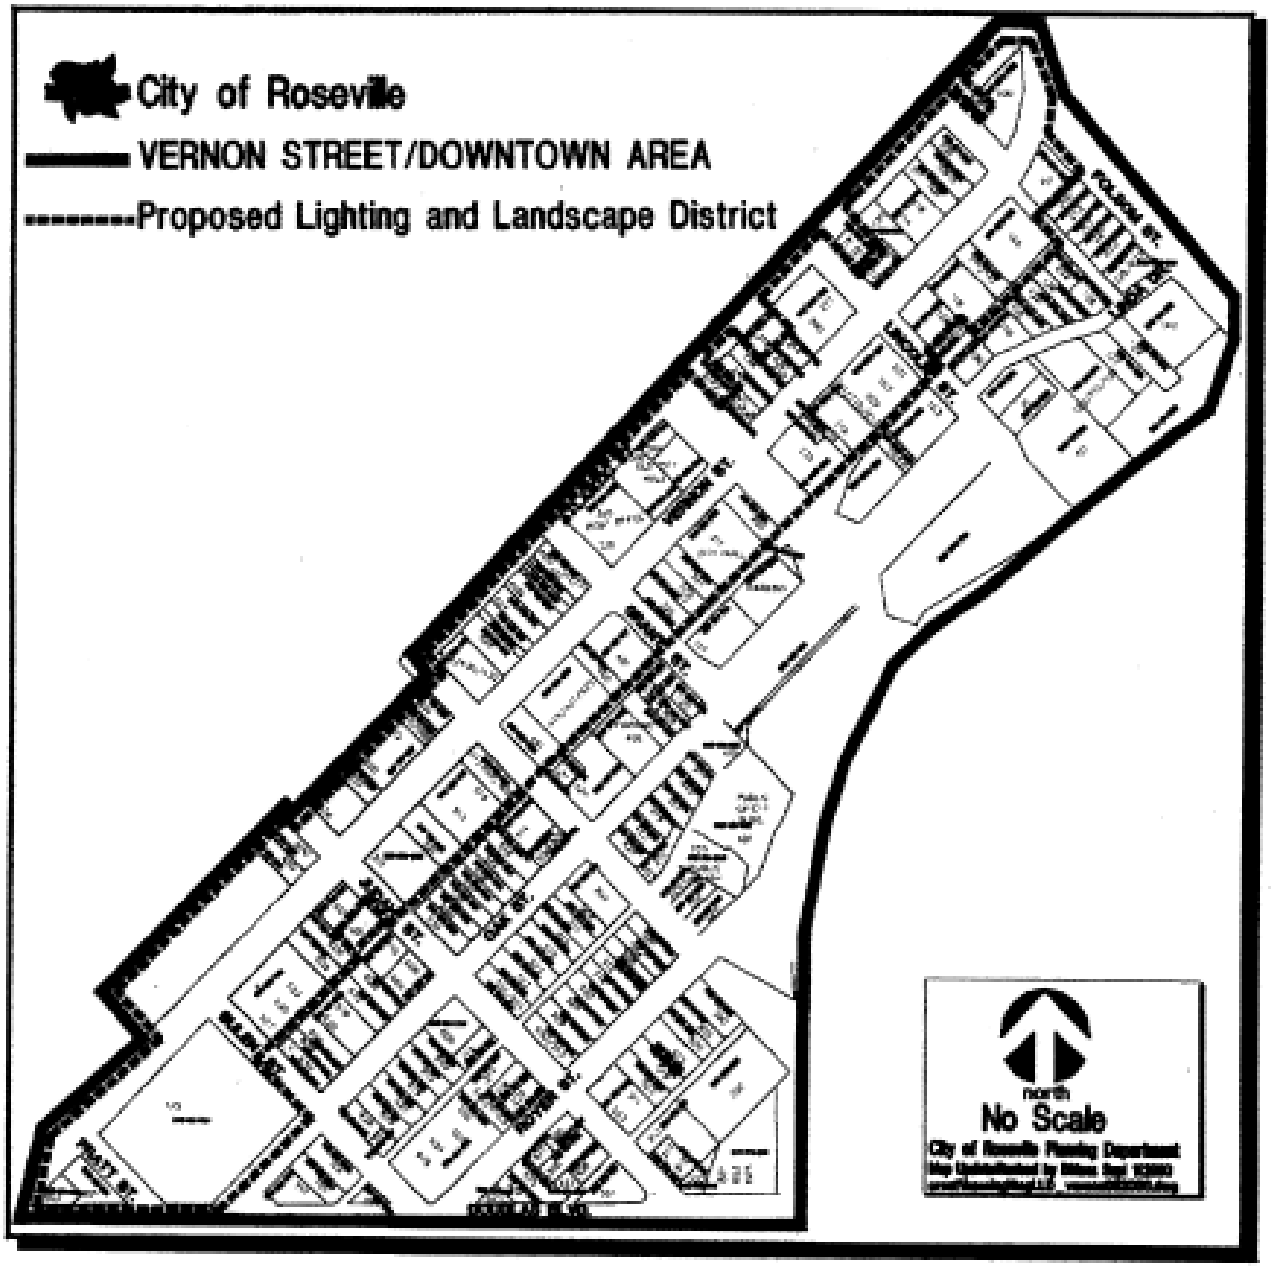
Ending Rehab Reserve Balance 6-30-2026 (est.) - The projected balance of funds in the Rehabilitation Reserve as of June 30, 2026. These funds shall be used to provide for future year rehabilitation projects, replacements, restorations, or upgrades of District improvements which cannot be conveniently raised from a single year's assessment. Should the District have no Rehabilitation Reserve balances or related activity, no Rehabilitation Reserve information shall be presented in the Report.

E. REHABILITATION RESERVE – CAPITAL IMPROVEMENT PLAN

Streets and Highways Code 22660 allows the District to generate and accumulate funds over several years to fund District improvements that cannot be conveniently raised from a single year's assessment.

The Report provides a five-year Capital Improvement Plan ("CIP") which shows projected expenditures related to the rehabilitation, restoration and/or replacement of District improvements, and other allowable costs. The Current Fiscal Year CIP is shown in the preceding Budget Section A. The projected CIP costs for the remaining four years are shown in the table below.

Description	FY 2026-27	FY 2027-28	FY 2028-29	FY 2029-30	4 Year Total
Non-routine tree work	$500	$202	$250	$250	$1,202
Replace, repair, and/or refurbish light standard			604	604	1,208
Replace, repair electrical outlets			500	500	1,000
Total Projected Expenditures	**$500**	**$202**	**$1,354**	**$1,354**	**$3,410**



From time to time, funds held in a Rehabilitation Reserve may be needed to respond to changing needs due to the condition of the improvements or other factors. Accordingly, any or all funds held in a Rehabilitation Reserve are subject to transfer into the Districts' Operating Reserve, at the discretion of the Parks and Recreation Department or equivalent, in order to provide for the maintenance and/or operation of the improvements.

APPENDIX A – DISTRICT BOUNDARY MAP

The boundary map for the District has previously been submitted to the Clerk of the City in the format required under the 1972 Act and is, by reference, hereby made part of this Report. These District Boundary Maps are available for inspection at the office of the City Clerk during normal business hours.

For general reference purposes, a summary of the District's Boundaries is presented herein.

Assessment diagram

APPENDIX B — FY 2025/26 ASSESSMENT ROLL

Parcel identification, for each lot or parcel within the District, shall be the parcel as shown on the Placer County Assessor's map for the year in which this Report is prepared.

A listing of parcels to be assessed within this District, along with the proposed assessment amounts, shall be submitted to the City Clerk, under separate cover, and by reference is made part of this Report.

Non-assessable lots or parcels may include areas of public streets and other roadways (typically not assigned an APN by the County); dedicated public easements, open space areas and rights-of-ways including public greenbelts and parkways; utility rights-of-ways; common areas; landlocked parcels, small parcels vacated by the County, bifurcated lots, and any other property that cannot be developed. These types of parcels are considered to receive little or no benefit from the improvements and are therefore exempted from assessment.

At the conclusion of the public hearing for the District and the proposed assessments, approval of the Report (as submitted or as modified) confirms the method of apportionment and the assessment rate to be levied against each eligible parcel and thereby constitutes the approved levy and collection of assessments for FY 2025/26. The listing of parcels and the amount of assessment to be levied shall be submitted to the County Auditor/Controller and included on the FY 2025/26 property tax roll for each parcel.

If any parcel submitted for collection is identified by the County Auditor/Controller to be an invalid parcel number for the Current Fiscal Year, a corrected parcel number and/or new parcel number will be identified and resubmitted to the County Auditor/Controller. The assessment amount to be levied and collected for the resubmitted parcel or parcels shall be based on the method of apportionment and assessment rate approved in this Report. Therefore, if a single parcel has changed to multiple parcels, the assessment amount applied to each of the new parcels shall be recalculated and applied according to the approved method of apportionment and assessment rate rather than a proportionate share of the original assessment.

Title:	Sales Tax Revenue Consulting Services - Professional Services Agreement Amendment
Contact:	N. Rothlisberger 916-774-5314 nrothlisberger@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.10.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution authorizing the City Manager to execute a fourth amendment to a professional services agreement with MuniServices, LLC to provide sales tax and transactions and use tax auditing, projection, recovery, and consultant services.

BACKGROUND

On April 7, 2021, the City Council authorized the City Manager to enter into a professional services agreement with MuniServices, LLC, to provide sales tax and transactions and use tax auditing, projection, recovery, and consultant services. The agreement terms included an initial two-year term and an annual not-to-exceed amount of $150,000 per year, or $300,000 over the total agreement term. MuniServices, LLC's compensation is based on a portion of quarterly revenues received by the City due to their audit and recovery services.

On June 15, 2022, the City Council authorized the City Manager to amend this agreement to increase the not-to-exceed amount to $250,000 per year because MuniServices identified a higher than anticipated amount of misallocated sales tax and transaction and use tax from their audit and recover services.

The initial two-year term of the agreement expired on April 7, 2023. The City Council authorized staff to exercise an agreement option to extend the agreement for an additional one-year period commencing on April 8, 2023, and ending on April 7, 2024. The next year, the second additional one-year extension was approved.

Staff now recommends exercising the option to extend the agreement for a final additional one-year period through April 16, 2026.

FISCAL IMPACT

This agreement is structured to only compensate MuniServices, LLC based on the amount of

additional revenues received by the City due to their audit and recovery services. The additional one-year extension will increase the total not-to-exceed amount from $1 million to $1.25 million. The additional sales and use tax revenues that the City receives for the General Fund from these services more than offsets the cost.

Adequate appropriations are available in the FY2024-25 approved budget to fund this amendment. Staff will incorporate the cost of this agreement into the proposed FY2025-26 budget.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) only applies to projects which have the potential to cause a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. (CEQA Guidelines §15061 {b)(3)).

FOURTH AMENDMENT TO

PROFESSIONAL SERVICES AGREEMENT

Tax Revenue Consulting Services

THIS FOURTH AMENDMENT TO AGREEMENT is made and entered into this ___ day of _____, 20__, by and between the City of Roseville, a municipal corporation ("CITY"), and MuniServices, LLC, a Delaware limited liability company("CONSULTANT"); and

W I T N E S S E T H:

WHEREAS, CITY and CONSULTANT previously entered into a Professional Services Agreement dated April 7, 2021 and amended on June 15, 2022, April 5, 2023, and April 3, 2024 ("Agreement") regarding tax revenue consulting services ("Project"); and

WHEREAS, CITY is exercising its option to extend the term of the Agreement for an additional one (1) year period; and

WHEREAS, CONSULTANT is willing and able to provide such additional services.

NOW, THEREFORE, the parties agree as follows:

1. Section 2 of the Agreement is amended by adding an additional paragraph to read as follows:

"CITY is exercising its option to extend the term of this Agreement for an additional (1) year commencing on April 8, 2025 and ending on April 7, 2026."

2. Section 3 of the Agreement is amended by adding an additional paragraph to read as follows:

"CITY shall pay two hundred fifty thousand dollars ($250,000), in consideration of the additional services to the Fourth Amendment to Agreement. This brings the total not to exceed contract amount to one million two hundred fifty thousand dollars ($1,250,000)."

3. The Agreement is amended by adding an additional paragraph regarding compliance with the Levine Act:

"24. The Levine Act Disclosure. The Levine Act (Govt. Code, Section 84308) requires a Party (and its agent(s), if any) to a Proceeding before the City of Roseville that involves any action or consideration related to their contract, license, permit, or other entitlement for use, to disclose any campaign contributions made to CITY elected or appointed officers totaling more than $250 within the twelve (12) months prior to the CITY decision and while a proceeding is pending, and includes certain prohibitions on contribution activity thereafter. If applicable campaign contributions have been made by CONSULTANT and/or its agent(s), CONSULTANT is responsible for compliance, including for its disclosure obligations, if any, as further described at https://www.roseville.ca.us/government/departments/city_clerk/transparency/levine_act."

4. All other provisions of the Agreement shall remain unchanged and in full force and effect.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Fourth Amendment to Agreement in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No. _____, adopted by the

Council of the City of Roseville on the ___ day of _____, 20__, and CONSULTANT has caused this Fourth Amendment to Agreement to be executed.

Title: Municipal Advisor Services - Professional Services Agreements
Contact: Jeannine Thrash 916-774-5473 jthrash@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.11.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt two resolutions authorizing the City Manager to execute professional services agreements with Fieldman, Rolapp & Associates, Inc. and PFM Financial Advisors LLC for Municipal Advisor Services.

BACKGROUND

As needed, the City requires municipal advisor services related to issuing bonds, which are highly technical and demand specialized expertise. Each bond transaction can be complex and requires a unique skill set to help the City mitigate risk, make informed decisions, and achieve the lowest overall cost of capital. As a full-service city, there is a need for a wide range of municipal advisory services across various financial functions that the City manages daily. Historically, the City has retained a single Municipal Advisor; however, it sought to broaden its perspective, particularly for situations involving utilities and special tax bonds related to Community Facilities Districts. In December 2024, the City issued a Request for Proposals (RFP) for Municipal Advisor Services and received several responses. After reviewing the proposals and interviewing the top-ranked firms, City staff recommends contracting with PFM Financial Advisors, LLC (PFM) and Fieldman, Rolapp & Associates, Inc. (Fieldman) to meet the City's diverse financial needs.

PFM has been a national leader in providing independent financial advice to local, state, and regional government clients for over 48 years. PFM serves over half of the 50 largest municipal utilities in the country and has extensive experience with Community Facilities Districts, General Fund, utility, electric, water, and sewer transactions.

Fieldman brings nearly six decades of experience and has worked with over 140 cities. Additionally, Fieldman has served as the City's consultant for continuing disclosure related to non-land secured debt compliance for over a decade, providing them with an in-depth understanding of the City's debt.

FISCAL IMPACT

The recommended professional services agreement with Fieldman, Rolapp & Associates, Inc. has a not-to-exceed amount of $500,000 through June 30, 2028. This fee covers financial advisory services related to bond issuances and is structured based on the amount and type of bonds issued. These expenses are categorized as bond issuance costs, with the total amount dependent on the number of bond issuances each year.

The recommended professional services agreement with PFM has a not-to-exceed amount of $350,000 through June 30, 2028, and consists of two components:

1. Annual Retainer – A $25,000 annual fee for general financial advisory services, split between the General Fund ($10,000) and Electric Fund ($15,000). An adequate budget is available to cover the General Fund and Electric portion for the remainder of FY2024-25.
2. Bond Issuance Costs – Fees for financial advisory services related to bond issuances, with total costs dependent on the number of bond issuances each year.

Bond issuance costs are typically contingent upon bond issuance and are paid from bond proceeds. A large portion of the work the Municipal Advisors provide will be related to public improvements within a Community Facilities District and, therefore, funded by property owners within the CFD. Any additional municipal advisory services will be budgeted based on the specific type of work provided.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) only applies to projects which have the potential to cause a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. (CEQA Guidelines §15061(b)(3)).

PROFESSIONAL SERVICES AGREEMENT

Municipal Advisor Services

THIS AGREEMENT is made and entered into this ___ day of _____, 20__, by and between the City of Roseville, a municipal corporation ("CITY"), and Fieldman, Rolapp & Associates, Inc., a California corporation ("CONSULTANT"); and

W I T N E S S E T H:

WHEREAS, CITY desires professional services consisting of municipal advisor services; and

WHEREAS, CONSULTANT has prepared a proposal dated January 16, 2025, which describes the scope of work to be performed by CONSULTANT, the budget for the work, and the schedule for performance of the work; and

WHEREAS, CONSULTANT is qualified and experienced to provide such professional services.

NOW, THEREFORE, the parties agree as follows:

1. Term. The term of this Agreement shall commence upon execution and expire on June 30, 2028. The City Manager may, in his or her discretion, elect to extend the Agreement in one (1) year increments for up to an additional two (2) years by giving CONSULTANT thirty (30) days advance written notice of each optional one (1) year renewal. Such extensions shall be memorialized by a written amendment to this Agreement.

2. Services. CONSULTANT shall perform, at the direction of CITY, the scope of services as described in EXHIBIT "A," attached hereto and incorporated herein by this reference.

3. Compensation. For its services provided hereunder, CONSULTANT shall be compensated on a time and expense basis in accordance with the budget estimate and rates (rates subject to annual inflationary increases on the annual anniversary of contract execution date) as described in EXHIBIT "B," attached hereto and incorporated herein by this reference. Total compensation shall not exceed five hundred thousand dollars ($500,000).

CONSULTANT shall submit one monthly invoice for its services. Such invoices shall be delineated by task, the person performing the services, and the hourly rate, which shall be stated in time increments of not greater than one tenth (1/10) hours. CITY shall pay invoices within thirty (30) days after receipt, if the services specified in the invoice have been satisfactorily completed.

4. Indemnification. To the fullest extent allowed by law, CONSULTANT shall defend, indemnify, and save and hold harmless CITY, its officers, agents, employees and volunteers from any claims, suits or actions of every name, kind and description brought forth, or on account of, injuries to or death of any person (including but not limited to workers and the public), or damage to property, resulting from or arising out of CONSULTANT's willful misconduct or negligent act or omission while engaged in the performance of obligations or exercise of rights created by this Agreement, except those matters arising from CITY's sole negligence or willful misconduct. The parties intend that this provision shall be broadly construed.

CONSULTANT agrees to defend and indemnify CITY if, despite the parties intent and practice, any venue, agency, or court with competent jurisdiction determines that CONSULTANT and/or any of its agents, officers, employees, volunteers, independent contractors, or subcontractors, are characterized as employee(s) of CITY.

CONSULTANT's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Agreement for the full period of time allowed by law. The defense and indemnity obligations of this Agreement are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Agreement.

5. Insurance. CONSULTANT agrees to continuously maintain, in full force and effect, the following minimum policies of insurance during the term of this Agreement.

COVERAGE	LIMITS OF LIABILITY
Workers' Compensation	Statutory
Commercial General Liability	$1,000,000 each occurrence $2,000,000 aggregate Personal Injury: $1,000,000 each occurrence $2,000,000 aggregate
Automobile Liability	$1,000,000 combined single limit
Professional Liability (errors and omissions)	$1,000,000 per claim $2,000,000 aggregate

a. Form. CONSULTANT shall submit a certificate evidencing such coverage for the period covered by this Agreement in a form satisfactory to Risk Management and the City Attorney, prior to undertaking any work hereunder. Any insurance written on a claims made basis is subject to the approval of Risk Management and the City Attorney.

b. Additional Insureds. CONSULTANT shall also provide a separate endorsement form or section of the policy showing CITY, its officers, agents, employees and volunteers as additional insureds for each type of coverage, except for Workers' Compensation and Professional Liability. Such insurance shall specifically cover the contractual liability of CONSULTANT. The additional insured coverage under the CONSULTANT's policy shall be

primary and noncontributory, as evidenced by a separate endorsement or section of the policy, and shall not seek contribution from CITY's insurance or self-insurance. In addition, the additional insured coverage shall be at least as broad as the Insurance Services Office ("ISO") CG 20 01 Endorsement. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

c. Cancellation/Modification. CONSULTANT shall provide ten (10) days written notice to CITY prior to cancellation or modification of any insurance required by this Agreement.

d. Umbrella/Excess Insurance. The limits of insurance required in this Agreement may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of CITY (if agreed to in a written contract) before CITY's own insurance shall be called upon to protect it as a named insured.

e. Subcontractors. CONSULTANT agrees to include in its contracts with all subcontractors the same requirements and provisions of this Agreement, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, CONSULTANT shall require its subcontractors to agree to be bound to CONSULTANT and CITY in the same manner and to the same extent as CONSULTANT is bound to CITY under this Agreement. Additionally, CONSULTANT shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor,

regardless of tier. A copy of CITY's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request.

f. Self-Insured Retentions. All self-insured retentions ("SIR") must be disclosed to Risk Management for approval and shall not reduce the limits of liability. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or CITY. CITY reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

g. Waiver of Subrogation. CONSULTANT hereby agrees to waive subrogation which any insurer of CONSULTANT may acquire from CONSULTANT by virtue of the payment of any loss under a Workers Compensation, Commercial General Liability or Automobile Liability policy. All Workers Compensation, Commercial General Liability and Automobile Liability policies shall be endorsed with a waiver of subrogation in favor of CITY, its officers, agents, employees and volunteers for all worked performed by CONSULTANT, its employees, agents and subcontractors.

h. Liability/Remedies. Insurance coverage in the minimum amounts set forth herein shall not be construed to relieve CONSULTANT of liability in excess of such coverage, nor shall it preclude CITY from taking such other actions as are available to it under any other provisions of this Agreement or law.

6. Records. CONSULTANT and its subcontractors shall maintain all files and records relating to the services performed hereunder during the term of this Agreement and for a period of not less than one (1) year after the date of termination or expiration. Provided, however, that in the event of litigation or settlement of claims arising from the performance of

this Agreement, CONSULTANT and its subcontractors shall maintain all files and records until such litigation, appeals or claims are resolved. Duly authorized representatives of CITY shall have right of access during normal business hours and after reasonable notice to CONSULTANT's and subcontractors' files and records relating to the services performed hereunder and may review and copy the files and records at appropriate stages during performance of the services and during the one (1) year period following termination or expiration of this Agreement. CONSULTANT shall include this provision in its contracts with all subcontractors.

7. Time is of the Essence. Time is of the essence of this Agreement.

8. Reserved.

9. Compliance with Laws. CONSULTANT shall comply with all federal, state and local laws, ordinances and policies as may be applicable to the performance of services under this Agreement.

10. Ability to Perform. CONSULTANT agrees and represents that it has the time, ability and professional expertise to perform the services required under this Agreement.

11. Public Contracts: Conflicts of Interest. CONSULTANT's duties and services under this Agreement shall not include preparing or assisting CITY with any portion of the CITY's preparation of a request for proposals, request for qualifications, or any other solicitation regarding a subsequent or additional contract with CITY. CITY shall at all times retain responsibility for public contracting, including with respect to any subsequent phase of this project. CONSULTANT's participation in the planning, discussions, or drawing of project plans or specifications shall be limited to conceptual, preliminary, or initial plans or specifications. CONSULTANT shall cooperate with CITY to ensure that all bidders for a subsequent contract

on any subsequent phase of this project have access to the same information, including all conceptual, preliminary, or initial plans or specifications prepared by CONSULTANT pursuant to this Agreement.

12. Governing Agreement. In the event of any conflict between this Agreement and its EXHIBITS, the provisions of this Agreement shall govern. In the event of any conflict between any of the EXHIBITS, the provisions of the first in order of attachment shall govern.

13. The Levine Act Disclosure. The Levine Act (Govt. Code, Section 84308) requires a Party (and its agent(s), if any) to a Proceeding before the City of Roseville that involves any action or consideration related to their contract, license, permit, or other entitlement for use, to disclose any campaign contributions made to CITY elected or appointed officers totaling more than $250 within the twelve (12) months prior to the CITY decision and while a proceeding is pending, and includes certain prohibitions on contribution activity thereafter. If applicable campaign contributions have been made by CONSULTANT and/or its agent(s), CONSULTANT is responsible for compliance, including for its disclosure obligations, if any, as further described at:

https://www.roseville.ca.us/government/departments/city_clerk/transparency/levine_act.

14. Assignment. CONSULTANT is employed to perform unique personal services. CONSULTANT shall not assign this Agreement without the prior written consent of CITY. CONSULTANT shall not employ or otherwise incur any obligation to pay other specialists or experts for services in connection with this Agreement, without prior written consent of CITY.

15. Independent Contractor. CONSULTANT, inclusive of its agents, officers, employees, volunteers, independent contractors, and subcontractors, shall act as an independent contractor, and covenants and agrees that it will conduct itself consistent with such status, that it

will neither hold itself out as, nor claim to be, an officer or employee of CITY by reason of this Agreement.

CONSULTANT and CITY agree that: (a) CONSULTANT is free from the control and direction of CITY in connection with the performance of the work; (b) CONSULTANT is providing services directly to CITY; (c) CONSULTANT has and will maintain at all relevant times a business license; (d) CONSULTANT maintains a business location that is separate from CITY; (e) CONSULTANT is customarily engaged in an independently established business of the same nature as that involved in the work performed hereunder; (f) CONSULTANT actually contracts with other businesses to provide the same or similar services and maintains a clientele without restrictions from CITY; (g) CONSULTANT advertises and holds itself out to the public as available to provide the same or similar services; (h) CONSULTANT provides its own tools, vehicles, and equipment to perform the services; (i) CONSULTANT has negotiated its own rates; (j) CONSULTANT set its own hours and location of work in accomplishing CITY's on-call needs; and (k) CONSULTANT has the right to control the manner and means of accomplishing the result desired and exercises its own expert independent judgement.

16. Representations and Warranties. CONSULTANT warrants that it has not employed or retained any company or person, other than a bona fide employee working for CONSULTANT, to solicit or secure this Agreement, and that it has not paid or agreed to pay any company or person, other than a bona fide employee, any fee, commission, percentage, brokerage fee, gift or any other consideration, contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, CITY shall have the right to terminate as void this Agreement, without liability, or, in its discretion, to deduct from the

Agreement price or consideration, or otherwise recover, the full amount of such fee, commission, percentage, brokerage fee, gift or contingent fee.

17. Successors in Interest. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

18. Copyright, Ownership and Use of Materials. All tangible material ("Material") created or delivered pursuant to this Agreement is considered a work made for hire under the Copyright Act. To the extent such Material does not qualify as a work made for hire, CONSULTANT hereby assigns to CITY all right, title, and interest, including but not limited to all copyrights, in all Material created by CONSULTANT in its performance under this Agreement. Material constitutes the scope of work outlined in Exhibit A and attached hereto, and all written and other tangible expressions, including but not limited to, drawings (including computer aided drawings), papers, documents, reports, surveys, renderings, exhibits, sketches, maps, models, prints, paintings or photographs, in any and all media or formats in which such materials have been created or are maintained. All Material furnished by CONSULTANT is, and shall remain, the property of CITY.

CONSULTANT shall execute any documents necessary to effectuate such assignment. In the event that CONSULTANT uses, employs, designates, or retains any person or entity who is not an employee of CONSULTANT, to perform any work required of it pursuant to this Agreement, CONSULTANT shall require said person or entity to execute an agreement containing the preceding paragraph.

19. Termination of Agreement. The City may terminate this Agreement without cause by giving CONSULTANT ten (10) days advance written notice from the City Manager. CONSULTANT may terminate this Agreement without cause by giving CITY thirty (30) days

advance written notice. In the event of termination through no fault of CONSULTANT, CITY shall compensate CONSULTANT for services performed as of the date of termination, upon the release to CITY of all Material hereunder, in any and all media or formats in which such materials have been created or are maintained. CITY retains the right to receive and use any Material, notwithstanding any termination or any dispute regarding the amount to be paid.

20. Attorney's Fees; Venue; Governing Law. If either party commences any legal action against the other party arising out of this Agreement or the performance hereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorney's fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

21. Modification. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

22. Severability. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

23. Notices. Any notices to parties required by this Agreement shall be delivered personally or mailed, U.S. first class postage prepaid, addressed as follows:

CITY OF ROSEVILLE	CONSULTANT
Jeannine Thrash City of Roseville 311 Vernon Street Roseville, CA 95678	Anna Sarabian Fieldman, Rolapp & Associates, Inc. 19900 MacArthur Blvd. #1100 Irvine, CA 92612

Either party may amend its address for notice by giving notice to the other party in writing.

24. Integrated Agreement. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ___ day of _____, 20__, and CONSULTANT has caused this Agreement to be executed.

SCOTT PETTINGELL
Finance Director

Integrity: Fieldman stands out for its commitment to transparency and principled advice. We don't just say yes; we say what's best. That means delivering honest, conservative recommendations, even advising when it may be wise to hold off on a project. Clear communication and transparency are at the core of our advisory process, ensuring that the City's interests are always our top priority.

Service: We pride ourselves on the hands-on, proactive approach we bring to our clients, becoming an extension of staff, working together every step of the way. Our 80/20 approach to transaction management anticipates challenges and ensures that unforeseen events do not disrupt the bond issuance process. This proactive approach allows us to deliver creative solutions and excellent service throughout every project.

TAB E: PROJECT PLAN

PLAN OF FINANCE

Our approach is designed to comprehensively address the City's Scope of Services, providing proactive and innovative solutions to meet its financial planning, debt management, and financial implementation needs. Each component of our methodology reflects our commitment to excellence, deep industry expertise, and a collaborative partnership with City staff.

FINANCIAL PLANNING

1. Survey of Financial Resources

We will thoroughly assess the City's financial resources, evaluating existing revenue streams, debt capacity, and financial obligations to ensure a clear understanding of its ability to authorize, issue, and service contemplated debt instruments.

2. Future Financing Needs Analysis

By working closely with City staff and consultants, we will project future financing needs and identify optimal funding solutions that align with the City's long-term goals and economic forecasts.

3. Recommendations for Debt Instruments

Our team will evaluate various debt structures, considering factors like issuance timing, debt service payment schedules, security provisions, and call options. These recommendations will be crafted to attract investors.

4. Market Timing and Conditions Analysis

We provide real-time market intelligence on bond market trends, economic indicators, and comparable issuances to ensure debt instruments are sold at the most favorable time and on the best terms.

5. Outstanding Debt Review

We will continually monitor the City's outstanding long-term debt obligations, identifying potential refunding opportunities to generate cost savings or improve financial flexibility.

6. Capital Improvement Project Balancing

Our advisors will assist in optimizing the mix of bonds, cash, and loans to finance ongoing Capital Improvement Projects, ensuring cost efficiency and alignment with the City's priorities

7. Development Project Advisory

We will provide ongoing advice regarding development projects, including the review of long-term contracts with external development partners to maximize the City's financial and operational benefits.

8. Enhancing Bond Ratings and Investor Visibility

Our team will develop strategies to strengthen the City's bond ratings and increase visibility with institutional investors. This includes crafting presentations and narratives that highlight the City's fiscal strengths and creditworthiness.

DEBT MANAGEMENT AND FINANCIAL IMPLEMENTATION

1. Evaluation of Financing Methods

We will assess each financing opportunity's complexity, marketability, and structure to recommend the most effective method of sale, whether competitive, negotiated, or private placement.

2. Document Preparation Coordination

Our team will draft and review notices of sale, bidding instructions, official statements, and other required documents. We ensure these materials are comprehensive, accurate, and aligned with the City's objectives.

3. Credit Rating Advisory

If obtaining or enhancing credit ratings is advisable, we will coordinate the preparation of detailed presentations to rating agencies and facilitate meetings to present the City's case.

4. Trustee and Paying Agent Selection

We will assist in identifying and negotiating agreements with Trustees and Paying Agents, ensuring optimal service and cost-effectiveness.

5. Consultant Reports and Opinions

In consultation with the City, we will arrange for independent consultant reports (such as Appraisers, Market Absorption Consultants, etc.) and opinions necessary to support the successful marketing of debt instruments.

6. Meeting Attendance and Support

Our advisors will attend City meetings, providing expert input on financing strategies and ensuring clear communication with staff throughout the process.

7.Coordination of Printing and Delivery

We will oversee the printing of offering documents and debt instruments, ensuring accurate and timely delivery to all relevant parties.

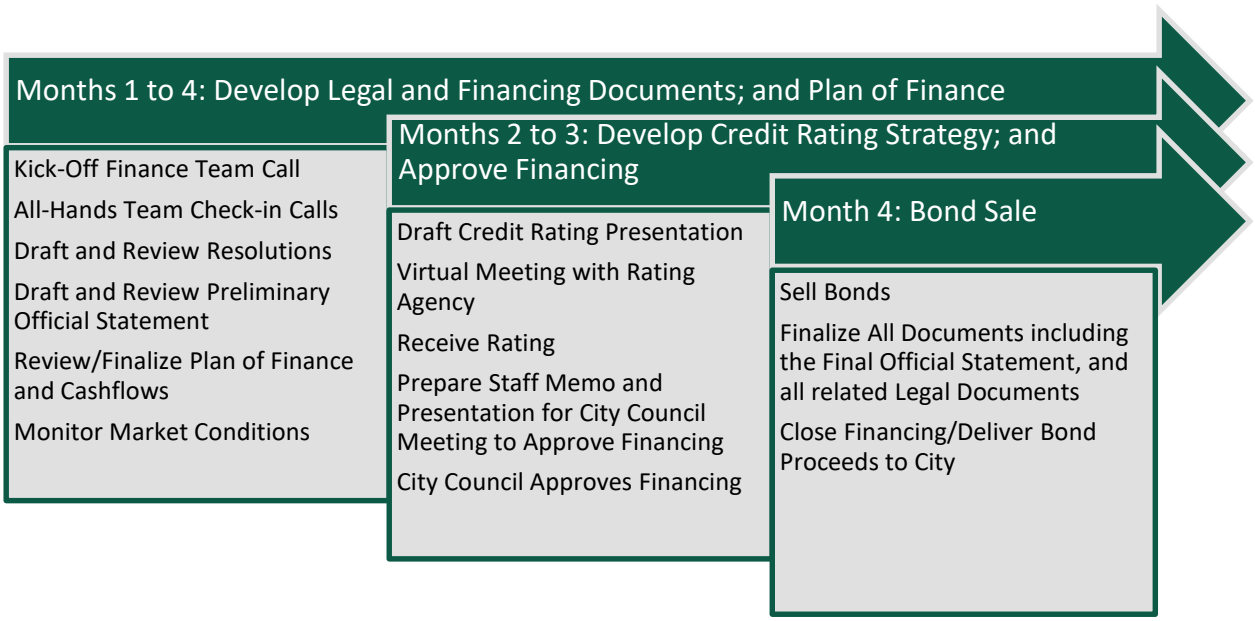
8. Liaison with Bond Counsel

Our team will collaborate with Bond Counsel to ensure all legal documents comply with applicable laws and regulations and align with the City's objectives.

9. Transaction Closing Coordination

After pricing, we will manage all closing activities, including verifying final figures, coordinating efforts among all parties, and ensuring smooth delivery of the debt instruments.

10. Document Delivery



After closing, we can ensure all parties received all necessary documentation.

11. Post-Issuance Support

We will provide a detailed schedule of annual debt service requirements and ensure that Trustees and Paying Agents have all necessary documentation. Additionally, we will assist with audits, inquiries, and legal reviews related to the transaction

PROPOSED WORK SCHEDULE

A typical financing timeline spans approximately four months from the initial kick-off conference call to the bond closing date.

We reviewed the City's recent CFD bond sales and observed that many have indicated that future parity bonds are expected to be issued only to fund deferred impact fees and the remaining authorization will be available to be utilized by the City thereafter. However, we noted the Creekview CFD phase 5 development, planned for an additional 285 single-family residential units, will be annexed into the CFD as a separate Improvement Area, with bonds issued subsequently.

As there are possible refunding opportunities expected in the near term, we believe the next likely financing will be either a new money CFD issuance or refunding. To assist with planning, we have attached sample new money and refunding CFD schedules for your reference as **Appendix F**.

STAFF AND EQUIPMENT

All work is done in-house, not by any sub-consultants or sub-contractors. Mr. Porr and Mrs. Nichols will advise solely on any utility financings and Dr. Sarabian, Ms. Redmon and Mr. Jasper will be the core team on all financings. No additional equipment, training or installation services are required.

TAB: F: COST PROPOSAL

Our goal is always to provide value in the services that we provide to our clients, far in excess of our fees. Our fee is premised on the concept that assignments, per the RFP, could involve:

1. Fixed fees and expenses for transaction services
2. Hourly fees for as-needed services
3. Continuing disclosure services

Fee for Transaction Services

Based on the Scope of Services outlined in the RFP, we propose the following tentative fees, subject to negotiation with the City.

Debt Transaction Size			CFD Bonds	Non-CFD Bonds (Excluding Utility Financings)	Utility Financings
up	to	$10,000,000	$40,000	$48,000	$48,000
$10,000,001	to	$25,000,000	$52,000	$60,000	$60,000
$25,000,001	to	$50,000,000	$60,000	$68,000	$75,000
$50,000,001	to	$100,000,000	$65,000	$75,000	$90,000
$100,000,001	to	$200,000,000	$80,000	$90,000	$125,000
Greater than $200,000,000			To be negotiated		

For transactions that include multiple series of bonds, the full transaction fee will not be charged for each additional series of bonds. For any series in excess of one a fee of not to exceed $20,000 per each additional series will be added to the transaction fee above. For any pooled refundings with multiple underlying CFDs or improvement areas, we will negotiate an additional fee to be added to the base transaction fee that will depend on the number of underlying districts and the complexity of the transaction. Typically, the all-in pooled refunding transaction fees range between $65,000 and $125,000.

Payment of fees pursuant to debt issuance shall be contingent on, and payable, at the closing of the debt issue(s) undertaken to finance the City's financings. The fees listed above shall increase each January 1st beginning January 1, 2026 by three percent (3.00%).

Expenses will be billed for separately and will cover, among other things, travel, lodging, conference calls, internet posting, subsistence, overnight courier, computer, and fax transmission charges. Advances made on behalf of the City for costs of preparing, printing or distributing disclosure materials or related matter whether by postal services or electronic means, may also be billed to the City upon prior authorization. Additionally, a surcharge of six percent (6.00%) of the compensation amount is added to verifiable out-of-pocket costs for recovery of costs such as telephone, postage, document reproduction and the like.

Fee for As-Needed Financial Advisory Services

CFD formation services and other ad-hoc financial advisory services performed will be billed at the then current hourly rates. The table below reflects the rates in effect as of the date of this RFP submission. If needed, we will be happy to negotiate a not-to-exceed amount for each project, depending on the specific scope of work at the time. Typically, CFD formation services are in the range of $35,000-$40,000, sometimes less if the formation is straightforward and completed expeditiously.

SCHEDULE OF HOURLY RATES Effective January 1, 2025	
Executive Officer	$427
Principal	$417
Executive/Senior Vice President	$406
Vice President	$346
Assistant Vice President	$319
Senior Associate	$287
Associate	$254
Analyst	$141
Administrative Assistant	$103

Hourly compensation will be billed on a monthly basis and will be due thirty (30) days from invoice date. Invoices not paid within sixty (60) days are subject to a two percent (2.00%) late fee for every month payment is late. The hourly rates listed above shall increase each January 1st beginning January 1, 2026 by three percent (3.00%).

Fee for Continuing Disclosure Consulting Services

For services on Annual Reporting and CDIAC Annual Reporting, the Consultant will be compensated $6,500 for Federal and State Filings per year. Such amount shall increase by the Annual Inflation Adjustment.

For services on Reporting of Significant Event Notices (Rating Changes) and Termination of Reporting Obligation, the Consultant will be compensated at $500 per notice.

For services on Continuing Disclosure Compliance Review, the Consultant will be compensated at $5,000 per year.

For Additional Services, the Consultant will be compensated at hourly rates.

TAB G: REQUIRED STATEMENTS/DOCUMENTS

Non-substitution for the designated members of the team without approval by City staff(Section 4.0)
We commit to the City that the designated project team will be used for this project if Fieldman is selected. Departure or reassignment of, or substitution for, any member of the designated project team shall not be made without the prior written approval of the City.

The absence of a conflict of interest (Section 9.4)
We confirm that there is not any actual, apparent, direct, indirect, or potential conflicts of interest that may exist with respect to the Firm relative to the services to be provided to the City.

Indicate your ability and agreement to fulfill the indemnification and insurance requirements contained in the sample contract (Section 9.7).
If selected, the Firm will fulfill the indemnification and insurance requirements contained in the sample contract within the time frame required.

RESOLUTION NO. 25-092

APPROVING A PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PFM FINANCIAL ADVISORS LLC, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a professional services agreement for municipal advisor services, by and between the City of Roseville and PFM Financial Advisors LLC, has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said professional services agreement is hereby approved and that the City Manager is authorized to execute it on behalf of the City of Roseville.

PASSED AND ADOPTED by the Council of the City of Roseville this ___ day of _____, 2025, by the following vote on roll call:

AYES COUNCILMEMBERS:

NOES COUNCILMEMBERS:

ABSENT COUNCILMEMBERS:

_____

PROFESSIONAL SERVICES AGREEMENT

Municipal Advisor Services

THIS AGREEMENT is made and entered into this ___ day of _____, 20__, by and between the City of Roseville, a municipal corporation ("CITY"), and PFM Financial Advisors LLC, a Delaware limited liability company ("CONSULTANT"); and

W I T N E S S E T H:

WHEREAS, CITY desires professional services consisting of municipal advisor services; and

WHEREAS, CONSULTANT has prepared a proposal dated January 16, 2025, which describes the scope of work to be performed by CONSULTANT, the budget for the work, and the schedule for performance of the work; and

WHEREAS, CONSULTANT is qualified and experienced to provide such professional services.

NOW, THEREFORE, the parties agree as follows:

1. Term. The term of this Agreement shall commence upon execution and expire on June 30, 2028. The City Manager may, in his or her discretion, elect to extend the Agreement in one (1) year increments for up to an additional two (2) years by giving CONSULTANT thirty (30) days advance written notice of each optional one (1) year renewal. Such extensions shall be memorialized by a written amendment to this Agreement.

2. Services. CONSULTANT shall perform, at the direction of CITY, the scope of services as described in EXHIBIT "A," attached hereto and incorporated herein by this reference.

3. Compensation. For its services provided hereunder, CONSULTANT shall be compensated on a time and expense basis in accordance with the budget estimate and rates (rates set forth in this Agreement are guaranteed by Consultant for a period of twelve (12) months from the date of execution of this Agreement and to be adjusted by the Consumer Price Index for Sacramento-Arden-Arcade-Roseville, CA (CPI) once the CPI information is available in the month subsequent to the anniversary date of the Agreement), as described in EXHIBIT "B," attached hereto and incorporated herein by this reference. Total compensation shall not exceed three hundred fifty thousand dollars ($350,000), which includes a fixed fee annual retainer in the amount of twenty-five thousand dollars ($25,000) per year, plus additional costs per services as described in EXHIBIT "B".

CONSULTANT shall submit one monthly invoice for its services. Such invoices shall be delineated by task, the person performing the services, and the hourly rate, which shall be stated in time increments of not greater than one tenth (1/10) hours. CITY shall pay invoices within thirty (30) days after receipt, if the services specified in the invoice have been satisfactorily completed.

4. Indemnification. To the fullest extent allowed by law, CONSULTANT shall defend, indemnify, and save and hold harmless CITY, its officers, agents, employees and volunteers from any claims, suits or actions of every name, kind and description brought forth, or on account of, injuries to or death of any person (including but not limited to workers and the public), or damage to property, resulting from or arising out of CONSULTANT's willful misconduct or negligent act or omission while engaged in the performance of obligations or exercise of rights created by this Agreement, except those matters arising from CITY's sole

negligence or willful misconduct. The parties intend that this provision shall be broadly construed.

CONSULTANT agrees to defend and indemnify CITY if, despite the parties intent and practice, any venue, agency, or court with competent jurisdiction determines that CONSULTANT and/or any of its agents, officers, employees, volunteers, independent contractors, or subcontractors, are characterized as employee(s) of CITY.

CONSULTANT's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Agreement for the full period of time allowed by law. The defense and indemnity obligations of this Agreement are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Agreement.

5. Insurance. CONSULTANT agrees to continuously maintain, in full force and effect, the following minimum policies of insurance during the term of this Agreement.

COVERAGE	LIMITS OF LIABILITY
Workers' Compensation	Statutory
Commercial General Liability	$1,000,000 each occurrence $2,000,000 aggregate Personal Injury: $1,000,000 each occurrence $2,000,000 aggregate
Automobile Liability	$1,000,000 combined single limit
Professional Liability (errors and omissions)	$1,000,000 per claim $2,000,000 aggregate

a. Form. CONSULTANT shall submit a certificate evidencing such coverage for the period covered by this Agreement in a form satisfactory to Risk Management and the City Attorney, prior to undertaking any work hereunder. Any insurance written on a

claims made basis is subject to the approval of Risk Management and the City Attorney.

b. Additional Insureds. CONSULTANT shall also provide a separate endorsement form or section of the policy showing CITY, its officers, agents, employees and volunteers as additional insureds for each type of coverage, except for Workers' Compensation and Professional Liability. Such insurance shall specifically cover the contractual liability of CONSULTANT. The additional insured coverage under the CONSULTANT's policy shall be primary and noncontributory, as evidenced by a separate endorsement or section of the policy, and shall not seek contribution from CITY's insurance or self-insurance. In addition, the additional insured coverage shall be at least as broad as the Insurance Services Office ("ISO") CG 20 01 Endorsement. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

c. Cancellation/Modification. CONSULTANT shall provide ten (10) days written notice to CITY prior to cancellation or modification of any insurance required by this Agreement.

d. Umbrella/Excess Insurance. The limits of insurance required in this Agreement may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of CITY (if agreed to in a written contract) before CITY's own insurance shall be called upon to protect it as a named insured.

e. Subcontractors. CONSULTANT agrees to include in its contracts with all subcontractors the same requirements and provisions of this Agreement, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, CONSULTANT shall require its subcontractors to agree to be bound to CONSULTANT and CITY in the same manner and to the same extent as CONSULTANT is bound to CITY under this Agreement. Additionally, CONSULTANT shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of CITY's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request.

f. Self-Insured Retentions. All self-insured retentions ("SIR") must be disclosed to Risk Management for approval and shall not reduce the limits of liability. Policies containing any SIR provision shall provide that the SIR may be satisfied by either the named insured or CITY. CITY reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

g. Waiver of Subrogation. CONSULTANT hereby agrees to waive subrogation which any insurer of CONSULTANT may acquire from CONSULTANT by virtue of the payment of any loss under a Workers Compensation, Commercial General Liability or Automobile Liability policy. All Workers Compensation, Commercial General Liability and Automobile Liability policies shall be endorsed with a waiver of subrogation in favor of CITY, its officers, agents, employees and volunteers for all worked performed by CONSULTANT, its employees, and agents.

h. Liability/Remedies. Insurance coverage in the minimum amounts set forth herein shall not be construed to relieve CONSULTANT of liability in excess of such coverage, nor shall it preclude CITY from taking such other actions as are available to it under any other provisions of this Agreement or law.

6. Records. CONSULTANT and its subcontractors shall maintain all files and records relating to the services performed hereunder during the term of this Agreement and for a period of not less than one (1) year after the date of termination or expiration. Provided, however, that in the event of litigation or settlement of claims arising from the performance of this Agreement, CONSULTANT and its subcontractors shall maintain all files and records until such litigation, appeals or claims are resolved. Duly authorized representatives of CITY shall have right of access during normal business hours and after reasonable notice to CONSULTANT's and subcontractors' files and records relating to the services performed hereunder and may review and copy the files and records at appropriate stages during performance of the services and during the one (1) year period following termination or expiration of this Agreement. CONSULTANT shall include this provision in its contracts with all subcontractors.

7. Time is of the Essence. Time is of the essence of this Agreement.

8. Reserved.

9. Compliance with Laws. CONSULTANT shall comply with all federal, state and local laws, ordinances and policies as may be applicable to the performance of services under this Agreement.

10. Ability to Perform. CONSULTANT agrees and represents that it has the time, ability and professional expertise to perform the services required under this Agreement.

11. Public Contracts: Conflicts of Interest. CONSULTANT's duties and services under this Agreement shall not include preparing or assisting CITY with any portion of the CITY's preparation of a request for proposals, request for qualifications, or any other solicitation regarding a subsequent or additional contract with CITY. CITY shall at all times retain responsibility for public contracting, including with respect to any subsequent phase of this project. CONSULTANT's participation in the planning, discussions, or drawing of project plans or specifications shall be limited to conceptual, preliminary, or initial plans or specifications. CONSULTANT shall cooperate with CITY to ensure that all bidders for a subsequent contract on any subsequent phase of this project have access to the same information, including all conceptual, preliminary, or initial plans or specifications prepared by CONSULTANT pursuant to this Agreement.

12. Governing Agreement. In the event of any conflict between this Agreement and its EXHIBITS, the provisions of this Agreement shall govern. In the event of any conflict between any of the EXHIBITS, the provisions of the first in order of attachment shall govern.

13. The Levine Act Disclosure. The Levine Act (Govt. Code, Section 84308) requires a Party (and its agent(s), if any) to a Proceeding before the City of Roseville that involves any action or consideration related to their contract, license, permit, or other entitlement for use, to disclose any campaign contributions made to CITY elected or appointed officers totaling more than $250 within the twelve (12) months prior to the CITY decision and while a proceeding is pending, and includes certain prohibitions on contribution activity thereafter. If applicable campaign contributions have been made by CONSULTANT and/or its agent(s), CONSULTANT is responsible for compliance, including for its disclosure obligations, if any, as

further described at:

https://www.roseville.ca.us/government/departments/city_clerk/transparency/levine_act.

14. Assignment. CONSULTANT is employed to perform unique personal services. CONSULTANT shall not assign this Agreement without the prior written consent of CITY. CONSULTANT shall not employ or otherwise incur any obligation to pay other specialists or experts for services in connection with this Agreement, without prior written consent of CITY.

15. Independent Contractor. CONSULTANT, inclusive of its agents, officers, employees, volunteers, independent contractors, and subcontractors, shall act as an independent contractor, and covenants and agrees that it will conduct itself consistent with such status, that it will neither hold itself out as, nor claim to be, an officer or employee of CITY by reason of this Agreement.

CONSULTANT and CITY agree that: (a) CONSULTANT is free from the control and direction of CITY in connection with the performance of the work; (b) CONSULTANT is providing services directly to CITY; (c) CONSULTANT has and will maintain at all relevant times a business license; (d) CONSULTANT maintains a business location that is separate from CITY; (e) CONSULTANT is customarily engaged in an independently established business of the same nature as that involved in the work performed hereunder; (f) CONSULTANT actually contracts with other businesses to provide the same or similar services and maintains a clientele without restrictions from CITY; (g) CONSULTANT advertises and holds itself out to the public as available to provide the same or similar services; (h) CONSULTANT provides its own tools, vehicles, and equipment to perform the services; (i) CONSULTANT has negotiated its own rates; (j) CONSULTANT set its own hours and location of work in accomplishing CITY's on-

call needs; and (k) CONSULTANT has the right to control the manner and means of accomplishing the result desired and exercises its own expert independent judgement.

16. Representations and Warranties. CONSULTANT warrants that it has not employed or retained any company or person, other than a bona fide employee working for CONSULTANT, to solicit or secure this Agreement, and that it has not paid or agreed to pay any company or person, other than a bona fide employee, any fee, commission, percentage, brokerage fee, gift or any other consideration, contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, CITY shall have the right to terminate as void this Agreement, without liability, or, in its discretion, to deduct from the Agreement price or consideration, or otherwise recover, the full amount of such fee, commission, percentage, brokerage fee, gift or contingent fee.

17. Successors in Interest. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

18. Copyright, Ownership and Use of Materials. All tangible material ("Material") created or delivered pursuant to this Agreement is considered a work made for hire under the Copyright Act. To the extent such Material does not qualify as a work made for hire, CONSULTANT hereby assigns to CITY all right, title, and interest, including but not limited to all copyrights, in all Material created by CONSULTANT in its performance under this Agreement. Material constitutes the scope of work outlined in Exhibit A and attached hereto, and all written and other tangible expressions, including but not limited to, drawings (including computer aided drawings), papers, documents, reports, surveys, renderings, exhibits, sketches, maps, models, prints, paintings or photographs, in any and all media or formats in which such

materials have been created or are maintained. All Material furnished by CONSULTANT is, and shall remain, the property of CITY.

CONSULTANT shall execute any documents necessary to effectuate such assignment. In the event that CONSULTANT uses, employs, designates, or retains any person or entity who is not an employee of CONSULTANT, to perform any work required of it pursuant to this Agreement, CONSULTANT shall require said person or entity to execute an agreement containing the preceding paragraph.

19. Termination of Agreement. The City may terminate this Agreement without cause by giving CONSULTANT ten (10) days advance written notice from the City Manager. CONSULTANT may terminate this Agreement without cause by giving CITY thirty (30) days advance written notice. In the event of termination through no fault of CONSULTANT, CITY shall compensate CONSULTANT for services performed as of the date of termination, upon the release to CITY of all Material hereunder, in any and all media or formats in which such materials have been created or are maintained. CITY retains the right to receive and use any Material, notwithstanding any termination or any dispute regarding the amount to be paid.

20. Attorney's Fees; Venue; Governing Law. If either party commences any legal action against the other party arising out of this Agreement or the performance hereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorney's fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

21. Modification. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

22. Severability. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

23. Notices. Any notices to parties required by this Agreement shall be delivered personally or mailed, U.S. first class postage prepaid, addressed as follows:

CITY OF ROSEVILLE	CONSULTANT
Jeannine Thrash City of Roseville 311 Vernon Street Roseville, CA 95678	Michael Berwanger PFM Financial Advisors LLC 222 N. Pacific Coast Hwy, 10th Floor El Segundo, CA 90245

Either party may amend its address for notice by giving notice to the other party in writing.

24. Integrated Agreement. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

25. Registered Municipal Advisor; Required Disclosures. CONSULTANT is a registered municipal advisor with the Securities and Exchange Commission (the "SEC") and the Municipal Securities Rulemaking Board (the "MSRB"), pursuant to the Securities Exchange Act of 1934 Rule 15Ba1-2. The parties agree that if CITY has designated CONSULTANT as its independent registered municipal advisor ("IRMA") for purposes of SEC Rule 15Ba1-1(d)(3)(vi) (the "IRMA exemption"), the services provided pursuant to such designation shall be the services described in Exhibit A hereto, subject to any agreed upon limitations. Verification of independence (as is required under the IRMA exemption) shall be the responsibility of such third party seeking to rely on such IRMA exemption. CONSULTANT shall have the right to review and approve in advance any representation of

CONSULTANT's role as IRMA to CITY.

MSRB Rules require that municipal advisors make written disclosures to their clients of all material conflicts of interest, certain legal or disciplinary events and certain regulatory requirements, which are provided in CONSULTANT's Disclosure Statement delivered to CITY prior to or together with this Agreement.

26. Additional Services. Upon request of CITY, an affiliate of CONSULTANT or a third party referred or otherwise introduced by CONSULTANT and/or designated by CITY may agree to additional services to be provided by such affiliate or third party under a separate writing, including separate scope and compensation, between CITY and such affiliate or third party. For the sake of clarity, any separate agreement between CITY and an affiliate of CONSULTANT or third party shall not in any way be deemed an amendment or modification of this Agreement.

27. Information to be Furnished to CONSULTANT. All information, data, reports, and records in the possession of CITY or any third party necessary for carrying out any services to be performed under this Agreement ("Data") shall be furnished to CONSULTANT. CONSULTANT may rely on the Data in connection with its provision of the services under this Agreement and the provider thereof shall remain solely responsible for the adequacy, accuracy or completeness of such Data.

[INTENTIONALLY LEFT BLANK]

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ___ day of _____, 20__, and CONSULTANT has caused this Agreement to be executed.

E. Project Plan

Provide a detailed discussion of your firm's approach to the successful implementation of this project. Include thorough discussions of methodologies you believe are essential to accomplishing this project. Include a proposed work schedule to accomplish all of the required tasks within the desired timeline. Identify the staff who would be assigned to each task, including sub-consultants and sub-contractors. List any necessary equipment, training or installation services required.

DEBT ISSUANCE SERVICES: TIMELINE AND IMPLEMENTATION

When working on a transaction, PFM takes responsibility for coordinating between members of the financing team and scheduling the events necessary to keep the project on track. By identifying and ensuring the project meets key dates and closing processes, as well as preparing for common and potential issues which must be overcome, PFM assures that the financing is initiated, implemented and closed smoothly. Our depth of experience on a wide array of transactions requiring tailored yet flexible approaches and schedules gives us the organizational capacity, proficiency and foresight to manage a deal of any size or complexity.

The bond issuance process is one which contains a number of distinct, but inter-related steps. Our goal at PFM is to lead our clients' borrowings through these steps to allow for a seamless and successful execution. Our philosophy is to ensure that the City is kept involved (to any degree which you desire), informed and educated on each step in the process to ensure you understand and are informed for the decisions to be made.

We have grouped the tasks within a transaction into six steps and included estimated timing for each:

Step 1: Developing a plan of finance

Team: Mike, Christine, Brian — Timeline: 2-4 weeks

Unless not already determined by a specific recommendation, the first step within the transaction process is development of the plan of finance. At the outset, we will work with Roseville to (i) determine the amount of borrowing necessary, and (ii) analyze debt structuring alternatives and determine the most appropriate method of sale (negotiated, competitive or private placement). PFM will convene an all-hands meeting as soon as practical after the selection process is completed and will lead a thorough and organized discussion focused on the City's specific goals and objectives for the financing and on the long-term sustainability of the City's bond program.

Step 2: Assembling of the financing team and managing the schedule

Team: Mike, Christine, Brian, Jaime, Louise, Connor — Timeline: 4-6 weeks

In our role as financial advisor, PFM has assisted our clients in selecting financial services professionals to the extent needed. These professionals may include underwriters, bond counsel, placement agents, verification consultants, trustees, printing firms, bond insurance companies and other debt issuance related providers. As the largest financial advisor in the nation, we have significant experience working with the major market participants including many of the team members Roseville has worked with in the past. With our understanding of market rates for fees, we are happy to assist as needed to negotiate fees with any existing team members or to assist the City in reevaluating its strategy. We will also create a schedule and efficiently manage the team to meet milestones.

Step 3: Preparation and review of authorizing documents and disclosure document

Team: Mike, Christine, Brian, Jaime, Louise, Connor — Timeline: 5-6 weeks

We will make sure that the financing plan is properly developed and well-defined in advance of the drafting of documents, that the authorizing resolution accurately reflects the financing plan, and that the content of the financing plan is well communicated to City staff and to City Council. PFM will assist the City and its disclosure counsel in the preparation and distribution of the preliminary and final official statements to provide the market with timely and accurate information about the City and any bond-related issues. The basic role of the financial advisor is to review and comment on the document before posting. At PFM, we play a larger role than that. Our standard practice is to help the City review and refine information for the sections of the document that address the financial operations of the City. Over time, we have been streamlining this process to make the development of preliminary official statements less burdensome on City staff.

Step 4: Development and implementation of credit and investor relations strategy

Team: Mike, Christine, Brian, Jaime, Louise, Connor — Timeline: 4-5 weeks

With PFM's national reach and our California-focused team for the City's engagement, we have a strong understanding of the rating agency methodologies which drive bond ratings as well as the issues, concerns, and points of emphasis consistent with the City's peers. We have developed specialized models to evaluate our local government clients' credit based on the most recent rating criteria published by Standard & Poor's and Moody's, enabling us to assist in assessing the likely outcome of a rating process, as well as to evaluate the potential impact of financial and policy decisions on our clients' credit ratings. PFM frequently discusses potential rating calibration changes with the rating agencies. This provides us additional insight into the evolution of their views and how current ratings may be affected.

PFM is a strong proponent of a well thought-out, comprehensive investor relations program designed to stimulate investor demand and enable an issuer to achieve lower costs of borrowing. In order to maximize the benefits of an investor relations program, outreach must encompass both institutional and retail investors, and the tools and techniques used should be targeted to the specific — and sometimes markedly different — investment decision making processes and drivers of both groups. The strongest factors impacting investor demand are (i) level of investor awareness of the sale, and (ii) understanding of the issuers' credit and bond structure. Both of these factors benefit from proactive, strategic issuer outreach, both ongoing and transaction specific. PFM would be available to assist the City and its Underwriter(s) in the preparation of investor presentations with the goal of providing relevant information needed in order to maximize investor participation in the City's financings.

Step 5: Management of the bond sale process and the establishment of interest rates

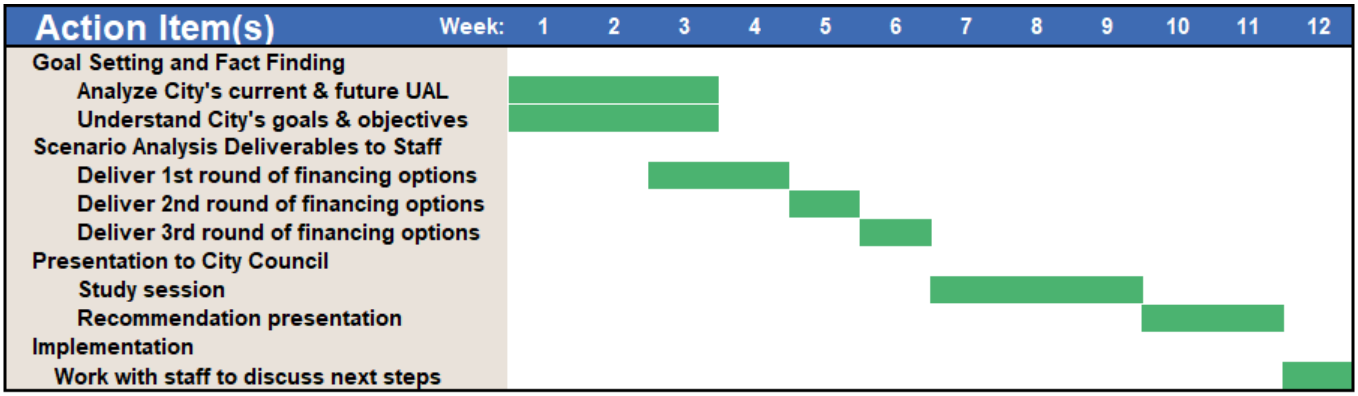
Team: Mike, Christine, Brian, Jaime, Louise, Connor, Todd — Timeline: 2 weeks

PFM's Pricing Group provides pricing resources and negotiation support for PFM's clients nationwide – continually enhancing, expanding and centralizing the firm's bond pricing expertise. The Pricing Group is in the market more than any financial advisor or underwriting firm, ***pricing on average 15-19 transactions each week.***

We use high-level quantitative analysis to develop our own price views, independent of the underwriters. We analyze historical and comparable transactions on a maturity-by-maturity basis using a variety of analytical methods including our proprietary Option Adjusted Spread model. Beyond developing an interest-rate scale, we analyze different couponing structures, bond amortizations, and call features.

We communicate early and often with the underwriting team, to specifically discuss pre-sale marketing efforts and strategies to reach target investors, offer our own separate retail and institutional coupon and re-offering yield targets, and ensure that all parties are on the same page.

During the order period, we actively monitor the sale of the debt, discuss the orders and pricing strategy with the underwriting team, and provide constant feedback to the issuer. When negotiating with underwriters, our suggested levels are based on real data and real market information to ensure that we are not "chasing" the market later. Because the PFM Pricing Group often has several transactions in the market, we are receiving up to the minute market feedback and are communicating with multiple investment banks. Therefore, the issuer is not relying solely upon its senior manager. We also know which firms are putting their capital to work, what strategies they prefer, and how to ensure they will effectively price the City's bonds.



Step 6: Assist with closing

Team: Mike, Christine, Brian, Jaime, Louise, Connor — Timeline: 2-4 weeks

We will assist with all aspects of closing including reviewing all closing documents and preparing a closing wire memorandum. We will manage the team to support a smooth pre-closing and closing process.

Sample Financing Schedule

To further illustrate the process described above, we have drafted a sample schedule below with a detailed financing schedule in **Appendix B**. Please note, the exact timing, steps, and working group participants will be customized depending on the transaction.

With PFM's experienced team, no additional training is needed to provide the scope of services.

EXHIBIT “B”

F. Cost Proposal

Provide a total cost proposal for all products and services to be delivered, and a breakdown of costs delineated by tasks as described in your project plan. Include a schedule of hourly rates for all proposed staff and the amount of time each person will be devoted to this project. Define any reimbursable expenses requested to be paid by the City and identify which fees will be based on a not-to-exceed basis. (Any MSRB fees imposed upon municipal advisors should not be passed through to the issuer.)

We greatly value the opportunity to work the City. We hope our commitment is reflected in the proposed rates below. As discussed in Section C., we have a deep bench of team members who will devote all time necessary to support the City with its projects.

Annual Retainer

$25,000 ($6,250/quarter)

Transaction-Based Fees

PFM's proposed fees for all bond or similar debt instrument related transactions are as follows:

PFM Transaction Fees (Utilities and General Fund)	
Par Amount	**Fixed Fee**
< $25 million	$45,000
$25 million - $50 million	$55,000
> $50 million	$80,000

PFM Transaction Fees (CFDs)	
Par Amount	**Fixed Fee**
< $50 million	$38,000

Credit Facility Replacement. Transaction-based fee would apply.

Complex Transactions. For complex transactions, such as POBs, gas prepayments or energy prepayments with the use of tax credit structures, PFM would negotiate a mutually agreed upon fee, which may exceed the range above based on the amount and complexity of work involved.

Structured Products. PFM Swap Advisors LLC professionals would oversee all elements of any swap transaction, and Roseville would have a separate engagement for those services. Such fee arrangements would be negotiated with Roseville and be fully transparent to all parties. Fees are usually set as 2/3 of one basis point per annum times the notional amount or invested balance outstanding over time, plus $10,000 per transaction.

Rate Adjustment: Fees will be subject to annual inflationary increases based on CPI on the annual anniversary of the contract execution.

Special Projects Fees (As-Needed)

Hourly rates to be used for special projects not covered under the fees outlined above, such as the development of a specific financial model, would continue to be billed based upon PFM's hourly rates or based upon mutually agreeable fixed fees. PFM's proposed hourly rates are presented in the table below.

PFM Hourly Rates	
Title	**Rate**
Managing Director	$400
Director	$375
Senior Managing Consultant	$350
Senior Analyst / Analyst	$325

Rate Adjustment: All hourly rates will be subject to annual inflationary increases based on CPI on the annual anniversary of the contract execution.

Reimbursable Expenses

In addition to our fees, we would expect to be reimbursed for our data fees and out-of-pocket expenses, including travel, mileage, parking, meals, etc. Appropriate expense documentation and third-party receipts would be provided upon request with each invoice. We estimate travel expenses would be approximately $1,000 with local-only travel or $5,000 with out-of-state travel.

We do not want fees to be an obstacle to PFM being retained as Roseville's financial advisor. We are willing to negotiate agreed-to fees that could better reflect the workload and complexity of particular transactions or set of transactions, and we are happy to discuss this proposal in greater detail with you and to provide any additional information.

COUNCIL COMMUNICATION

CC #: 3848
File #: 0800-02

Title:	Five Star Intertie Improvement Project – Agreements
Contact:	William Montz 916-774-5545 wlmontz@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.12.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council:
1) Adopt a resolution authorizing the City Manager to execute an Agreement with Placer County Water Agency (PCWA) for construction, operation and maintenance of the Five Star Intertie Improvements Project;
2) Adopt a resolution to approve a Construction Agreement for the Project with Sierra National Construction, Inc. in the amount of $698,640 and authorize the City Manager to execute it; and
3) Authorize the City Manager or his designee to approve and pay for contract change orders for this project that could increase the contract amount by no more than 10% ($69,864), for a not-to-exceed total contract amount of $768,504.

BACKGROUND

1. MOU: In September 2010, the City of Roseville (City) entered into an agreement with PCWA, as a Memorandum of Understanding (MOU) for Exploration into a Water Capacity Partnership. As part of the MOU, it was recognized that construction of additional water facilities for the benefit of sharing capacity, would provide redundancy and operational flexibility within each Party's water system. The Parties anticipated that any future development or implementation of the partnership would be governed by future agreements(s), and approval of any such agreements will be subject to compliance with the California Environmental Quality Act and all other applicable environmental laws or regulations.

Rehabilitation of the Five Star intertie between the City's and PCWA's water distribution systems was identified as a mutually beneficial project under the existing MOU. This MOU provides additional obligations to the Parties as it relates to this Construction Project and the subsequent maintenance obligations.

Under the proposed agreement, the City will retain and compensate the contractor and Construction Management (CM) services for the Project. Both PCWA and the City will perform their own programming for the Project, with programming equipment furnished by the contractor.

2. Construction Contract. To increase water supply resiliency and improve operational functionality, the City and PCWA desire to energize and automate the Intertie, which includes the replacement of the flow measurement instrument for automation compatibility. With improvements complete, the Intertie will be capable of remote monitoring and operation via PCWA's Supervisory Control and Data Acquisition (SCADA) system and remote monitoring through the City's SCADA system. The communication link between the Intertie and the City's SCADA system will be through a fiber pathway, whereas the communication link between the Intertie and PCWA's SCADA system will be via cellular wireless technology.

To energize the Intertie, an electric transformer, meter pedestal, and power distribution panel will be installed. Two process logic controllers (PLC) panels are required to communicate the signals from the Intertie to the City and PCWA SCADA systems.

On November 20, 2024, the plans and specifications for the project were approved by City Council and a Request for Bids for construction services was published on November 21, 2024. On January 8, 2025, five contractors submitted proposals to the City Clerk's office and a public bid opening identified Design-Build Inc. as the apparent lowest bidder. However, Design-Build Inc.'s proposal was disqualified due to unresponsiveness and Sierra National Construction Inc.'s proposal was identified and verified as the next lowest bidder.

FISCAL IMPACT

Under the proposed Agreement with PCWA, the Construction Agreement with Sierra National Construction, Inc. is $698,640, and the not-to-exceed change order authority request is for 10% ($69,864), making the total not-to-exceed contract value $768,504. Project funding is from available resources in the Water Construction Fund. The Water Construction Fund is funded by water connection fees paid for by developers.

ENVIRONMENTAL REVIEW

The proposed Agreement with PCWA is not a "project" as defined by the California Environmental Quality Act (CEQA) (CEQA Guideline Section 15378). The execution of this Agreement will not result in approval or authorization of any physical projects. Consequently, no CEQA action is required for the Agreement.

For the Construction Agreement, this project qualifies for a Class 1 Exemption as described in Section 15301 of the California Environmental Quality Act (CEQA) guidelines. The project involves modification of existing facilities to increase water distribution system operational flexibility. The improvements do not result in expansion of use. No sensitive resources are present on the project site. Therefore, the Class 1 Exemption is applicable to the proposed project.

AGREEMENT BETWEEN PLACER COUNTY WATER AGENCY AND CITY OF ROSEVILLE FOR CONSTRUCTION, OPERATION AND MAINTENANCE OF THE FIVE STAR INTERTIE IMPROVEMENTS

THIS AGREEMENT, by and between PLACER COUNTY WATER AGENCY, hereinafter called "Agency" and the CITY OF ROSEVILLE, hereinafter called “City,” (collectively referred to as “Parties” or individually as “Party”) shall be effective on the date executed by the Agency and City.

W I T N E S S E T H:

WHEREAS, the Agency and City entered into an agreement titled Contract Between the Placer County Water Agency and the City of Roseville Relating to Water Supplies and Exchanges dated September 1, 2010, and amended on May 23, 2023 (hereafter “Water Supply Contract”); and

WHEREAS, the Water Supply Contract specifies the provisions and conditions of the annual water entitlement amounts, supply reliability exchanges, emergency deliveries, and capacity sharing between the two Parties. The Water Supply Contract dictates the times and quantities of its annual water entitlements, the semiannual payment structure, and required maintenance fees; and

WHEREAS, the 2023 amendment to Water Supply Contract provides for the City’s annual entitlement of up to 30,000 acre-feet of untreated water in drier years and up to 44,000 acre-feet in most years from the Agency's Middle Fork Project (based upon an incremental "build up" schedule), with delivery of the untreated water from the Agency to the City at Folsom Reservoir; and

WHEREAS, delivery of water from Folsom Reservoir is subject to United States Bureau of Reclamation ("USBR") operations of its Central Valley Project ("CVP") and is vulnerable to drought when reservoir levels can become extraordinarily low and fall below the intake serving the City and halt delivery of water provided under the Water Supply Contract, as well as the City's CVP supply from the USBR; and

WHEREAS, the Agency and City recognize that in the aforementioned drought and low reservoir level times, there may be a need for the City to purchase water from the Agency, necessitating improvements to accomplish this; and

WHEREAS, the Agency and City jointly agreed to explore leveraging their existing water capacity by strategically sharing reasonable portions of existing capacity and exploring new water delivery options to the City through the Agency's pump stations and existing infrastructure through a Memorandum of Understanding (MOU) entered by the Parties on May 6, 2020 (hereinafter referred to as "2020 MOU"). The Parties agreed to split equally the costs of any outside services undertaken pursuant to the 2020 MOU and individually bear the cost of each Parties' respective staff time, overhead, and other internal costs among other responsibilities set forth in the 2020 MOU; and

WHEREAS, the initial explorations provided through the 2020 MOU, found that improvements to the manually operated intertie between the Parties at Five Star Boulevard would be the first mutually beneficial project to entertain; and

WHEREAS, other additional projects may be pursued as future explorations continue through the 2020 MOU; and

WHEREAS, the Five Star Boulevard Intertie connects the City's treated water to the Agency's 12-inch treated water pipelines and is estimated to convey up to 4 MGD to the City for additional reliability; and

WHEREAS, the Agency and City jointly agree that improvements to the existing Five Star Intertie located on or about 6710 Stanford Ranch Road, Roseville CA 95678 (APN: 017-123-043-000) (hereinafter referred to as "Five Star Facility",) are required to improve operational functionality, redundancy, and water supply resiliency for the benefit of the City. Therefore, the Parties are working jointly to design and install improvements at the Five Star Intertie; reference and incorporated herein by a set of plans and specifications entitled "Five Star Intertie Improvement Project" (herein referred to as "Plans") prepared by GHD Inc., at 943 Reserve Drive, Roseville, CA 95678; and that will include the installation of equipment to automate and provide remote capabilities for monitoring and operating the Five Star Intertie, as well as upgrading flow measurement equipment for compatibility; and

WHEREAS, the Agency is willing to accept ownership of the Five Star Facility in accordance with the Plans; and

WHEREAS, the Five Star Facility was designed by GHD Inc., a consultant, hired by the City on July 21, 2021 (hereinafter "Consultant"); and

WHEREAS, the City intends to engage a qualified construction contractor (hereinafter "Contractor"). The costs for the Consultant's services and the Contractor will be borne as outlined in Section 5 of this Agreement; and

WHEREAS it is the Parties' intention that by signing this Agreement, the Agency hereby, grants the Contractor permission to access the Agency's service area to install all the

work, as outlined in this Agreement and in the Plans**.**

NOW, THEREFORE, IT IS AGREED as follows:

1. Incorporation of Recitals: The foregoing recitals are hereby incorporated by reference.

2. Purpose: The purpose of this Agreement is to memorialize the Parties' agreement with respect to the design and construction of the Five Star Facility which is intended to increase water supply resiliency between the Agency and City.

3. No Transfer of Authority: Except as otherwise set forth herein, nothing in this Agreement grants the Parties any power or authority to alter any water right, contract right, or any similar right of any Party, or to direct the water-delivery practices of any Party without the prior written consent of the other Party and receipt of all required approvals.

4. Proposed Facility: The Five Star Facility to be installed modifies an existing facility with system automation, flow monitoring equipment, and associated telemetry.

5. Timing and Terms for Designing and Constructing Facilities: The Parties agree to the following conditions for the proposed installation of the Five Star Facility:

a) Design and Construction

i. The City shall be responsible for retaining and compensating the Consultant for the design portion of the work called for under this Agreement.

ii. The City shall be responsible for paying all costs incurred by PCWA for services under this Agreement, including but not limited to inspections, plans review, submittals review, and coordination.

iii. Plans for the proposed Five Star facility shall be developed by Consultant and approved by the City and the Agency (which such approval shall not be unreasonably withheld).

iv. The City shall be responsible for retaining the Contractor to perform the work called for under this Agreement and all costs under this Agreement and the City's agreement with the Contractor.

v. The Agency and City shall mutually agree on a method to coordinate construction administration, construction engineering and design, construction surveying, shop drawing review, communications and meetings, traffic control, scheduling, inspection and testing of the work that pertain to design, construction, and installation of the Agency Facilities.

vi. The City shall be responsible for retaining and paying all costs associated with managing the construction contract, including construction management, testing, and inspection services under this Agreement.

vii. The Agency shall perform all programming of their Programmable Logic Controller (PLC) and configure their switch and radio for their telemetry setup. The Contractor will furnish the PLC, switch, and radio and provide to the Agency. Costs incurred by the Agency for all programming shall be reimbursed by the City.

viii. The City shall submit to the Agency for review and approval all change orders affecting the Agency Facilities prior to the City's approval and

execution of such change orders. The City will be responsible for all other Project-related change orders, delays, and extra work incurred by the contractor. The Agency and City will jointly work to negotiate change order requests and claims by the contractor to resolve any claims directly related to the Agency Facilities in a timely manner, provided that neither the City nor the Agency shall agree to the resolution of any such change order request or claim without the other's approval. In the event agreement cannot be reached related to active ongoing work within three (3) working days of presentation of a critical request for change order or claim, the City shall have the right to direct the contractor to proceed on a force account basis.

b) Delineation of Ownership

i. PCWA shall own all facilities north of the existing MJxFL adapter, downstream of the flow meter, within the flow meter vault. As denoted on the Five Star Intertie Improvement Project Plans.

ii. The City shall own all facilities south of the existing MJxFL adapter, downstream of the flow meter, within the flow meter vault. As denoted on the Five Star Intertie Improvement Project Plans.

iii. The City shall own certain telemetry facilities and all electronic connections designated to send electronic data to the City at the Five Star Facility, whenever such facilities are installed.

iv. The Agency shall own the system automation, flow monitoring and associated telemetry (that provide data to the Agency) at the Five Star Facility, whenever such facilities are installed.

6. Termination: This Agreement may be terminated by either Party upon ninety (90) days advance written notice.

7. Time: This Agreement shall become effective upon execution by all Parties. The City and Agency commit to working together expeditiously to have the Five Star Facility installed no later than Fall 2025, barring any reasonably unforeseen circumstances outside of the control of either Party.

8. Plans: It shall be the responsibility of the Consultant to prepare plans and specifications for installing the Five Star Facility and submit them to the City and the Agency for acceptance, pursuant to Section 5 of this Agreement. All materials to be furnished and all construction shall be in accordance with the plans and specifications. The plans and specifications, when approved in writing by the City and the Agency, shall become a part of this Agreement.

9. Installation of Facilities: The Contractor will install the Five Star Facility described in the plans and specifications accepted by the City and the Agency in accordance with the provisions of this Agreement, including but not limited to Section 5, and the Improvement Standards.

10. Property and Right of Entry: The Agency agrees to allow the City, Consultant, and Contractor, access and a right of entry upon the Five Star Facility, for the limited purpose of performing the work called for under this Agreement and for ongoing access required for the

operation and maintenance of the City's telemetry facilities. Agency acknowledges it is not conveying any other property interest in the Five Star Facility, other than those delineated in this Agreement, specifically this Section 10 and Section 5 above.

The Parties agree and acknowledge that they will endeavor to have the Five Star Facility called for under this Agreement installed in existing Public Utility Easements (hereinafter "PUE") or other public rights of way (hereinafter "ROW"). If the Five Star Facility called for under this Agreement cannot be installed in existing PUE or ROW, City, at the City's sole cost and expense, shall be responsible for determining whether any private property rights need to be acquired for installation of the Five Star Facility and whether such acquisition is feasible. Should the City determine the acquisition is not feasible, then that portion of the work will not proceed. Should the City determine that the acquisition of private property rights is feasible, the City will be solely responsible for providing to the Agency any real property rights necessary for the Five Star Facility to be installed, and for the ongoing operation and maintenance thereof. Any such real property rights shall include any consent or endorsement of all lienholders, lessees, or other parties with any interest in the real property being conveyed. The City shall provide the Agency with exhibits identifying all locations requiring the acquisition of real property rights and the Agency shall provide the City with the appropriate document for the associated real property rights to be acquired by the City. The City shall provide to the Agency a copy or copies of the recorded document or documents conveying the real property rights.

11. Grade Established: No work shall be performed or installation made until street subgrades have been established to the satisfaction of the City and the Agency.

12. Environmental Permitting Services: The Agency will coordinate with the City, and provide support for these services. The City shall be responsible for serving as the lead agency, providing any environmental permitting services.

13. Acceptance: The City and Agency shall accept the complete Five Star Facility, when

a) the facilities are satisfactorily installed in accordance with the City and the Agency's approved plans and specifications;

b) all grading and paving is completed;

c) any required easements are received, accepted and recorded by the City and the Agency; and

d) two (2) copies of any recorded final map with addresses marked for each lot or parcel are provided.

Immediately upon acceptance, all rights, titles, and interest in the Five Star Facility shall be vested in the Parties as set forth in this Agreement. Within 30 days from acceptance, the Agency shall invoice the City for the costs of work performed pursuant to Section 5. The City shall make such payment in full within 30 days of receipt. The City and Agency, if mutually agreed upon in writing, may operate the Five Star Facility in advance of acceptance.

14. Long-Term Operation and Maintenance: The Water Supply Contract specifies the provisions and conditions of the annual water entitlement amounts, supply reliability exchanges, emergency deliveries, and capacity sharing between the two Parties. The Water Supply Contract dictates the times and quantities of its annual water entitlements, the semiannual payment structure, and required maintenance fees.

a) Operations

i. The City shall request written notification (at least 48 hours in advance) of needing water through the Five Star Facility. Such requests shall contain an estimated maximum daily quantity of water to be delivered and an estimated length of time that water is to be delivered.

ii. The City designated contact will be the Operations Manager and the Agency's designated contact will be the Director of Technical Services.

iii. In the event of an emergency, the City may request an immediate delivery of water. City operators shall contact and coordinate directly with the Agency's distribution operators. The Agency's distribution operators shall have the discretion to furnish up to 4 MGD to the City through the Five Star Facility. A list of emergency contacts for each Party is provided in Exhibit A attached to and made a part of this MOU.

iv. The Five Star Facility is not intended for intermittent peaking.

v. The PRV intertie is designed to be operated on a flow control mode (primary) and Pressure Control Mode (secondary).

b) Maintenance

i. Each Party is responsible for the maintenance, repairs, and capital replacements of the portion of the Five Star Facility they own. The

Parties agree that they will always maintain their portion of the Five Star Facility in good and usable condition.

ii. The City is responsible for all utility expenses at this facility, including electricity and fiber communications.

iii. The Agency is responsible for any expenses associated with telemetry facilities and all electronic connections designated to send electronic data to the Agency.

iv. The Agency will provide ongoing access required for the operation and maintenance of the City's telemetry facilities.

v. The Agency will provide ongoing access required for the operation and maintenance of the City's telemetry facilities.

15. Inspection of Books: The proper officers or agents of any Party shall have reasonably full and free access at all reasonable times to the account books and official records of the other Party, insofar as they pertain to matters and things provided for in this Agreement.

16. Indemnification:

a) The Agency and City agree that each shall mutually defend, indemnify and hold harmless the other, and their directors, officers, employees, agents and volunteers, from all claims, costs, losses, damages and expenses (including attorney's fees of any kind) arising from their respective negligence (including claims for personal injury or death, damage to property, damages due to runoff onto other properties, and loss of business), arising from the 1) design of the Five Star Facility, 2) performance of work under this Agreement, 3)

performance of construction at the Five Star Facility, 4) or challenges to the adequacy of the environmental review for such work.

b) The Agency and City also agree that the construction agreement with Contractor for the performance of work under this Agreement (and any subcontract entered into by Contractor for the performance of work called for under this Agreement) shall require that the Contractor and subcontractor defend, indemnify and save harmless the City and the Agency and their directors, officers, employees, agents and volunteers, from all claims, costs, losses, damages and expenses (including attorney's fees of any kind) arising from the Contractor's performance of the work called for under this Agreement, including claims for personal injury or death, damage to property, damages due to runoff onto other properties, and loss of business. Contractor and subcontractor's indemnity, defense and hold harmless obligations will be limited only to the extent any such damages, losses and/or injuries directly result from the negligent acts or omissions, breach of contract or willful misconduct of the Contractor or its subcontractors.

17. Insurance: The Parties agree to maintain insurance, or hereby certify that they are self-insured, at the minimum insurance limits discussed below:

a) General Liability: $1 Million per occurrence /$2 million aggregate

b) Automobile Liability: $1 Million combined single limit

c) Workers' Compensation: Statutory

d) Policies must be primary and non-contributory

The Parties further agree that the City shall require the Contractor to furnish the Agency with a certificate(s) of insurance and Additional Insured Endorsement (ISO CG 2010) or equivalent as satisfactory proof that Contractor (and any of its subcontractors) carries the minimum insurance required by this Agreement. Additionally, the City shall require the Contractor to include Placer County Water Agency as a named insured on those required insurance policies.

18. Performance and Payment Bonds: Prior to construction of any of the Five Star Facility and during all such construction, the City shall require Contractor to provide and maintain a Performance Bond and a Public Works Payment Bond each with a penal sum of one hundred percent (100%) of the estimated cost of the Five Star Facility. The Performance Bond and Public Works Payment Bond shall be in a form acceptable to the City. Contractor shall be required to maintain the Performance Bond and Payment Bond at all times during the life of this Agreement and until the completion and acceptance of the Five Star Facility by the City and the Agency and any applicable warranty/maintenance period. All bonds shall be issued by California admitted surety insurers.

19. Assignment of Agreement: The provisions of this Agreement shall apply to and bind the successors and assigns of the respective parties, but no assignment or transfer of this Agreement, or any part hereof, or interest herein, shall be valid until and unless approved by the City and the Agency. Such approval will not be unreasonably denied.

20. Notices: All notices that are required either expressly or by implication to be given by any party to the other under this Agreement shall only be signed by authorized officers of the notifying party. All notices to Parties required by this Agreement shall be hand-delivered or mailed, U.S. first class postage prepaid, to the following addresses:

City of Roseville
Environmental Utilities Director
2005 Hilltop Circle,
Roseville, CA 95747

Placer County Water Agency
Director of Technical Services
P.O. Box 6570
Auburn, CA 95604

21. Miscellaneous Terms:

a) Remedies. The use by any Party of any remedy specified for the enforcement of this Agreement is not exclusive and shall not deprive the Party using such remedy of, or limit the application of, any other remedy provided by law.

b) Choice of Law. This Agreement shall be governed by the laws of the State of California. Venue for any action to enforce the terms of this Agreement shall be in Placer County, California. The Parties each waive any federal court removal and/or jurisdictional rights they may have.

c) Severability. If one or more clauses, sentences, paragraphs or provisions of this Agreement is held by a court of competent jurisdiction to be unlawful, invalid or unenforceable, it is hereby agreed by the Parties that the remainder of the Agreement shall not be affected thereby and will continue in full force and effect, but only to the extent that the intent of the Parties can be effectuated without the provision(s) held unlawful, invalid or unenforceable. Such clauses, sentences, paragraphs or provisions shall be deemed reformed so as to be lawful, valid and enforced to the maximum extent possible.

d) Prevailing Wage. The Parties acknowledge that the construction work called for under this Agreement by Contractor requires the paying of

prevailing wages.

e) Entire Agreement. This Agreement constitutes the entire agreement between the Parties, and previous communications or agreements pertaining to the subject matter of this Agreement are hereby superseded. Any revisions may be made only by a written amendment to this Agreement, signed by all Parties to this Agreement.

f) Dispute Resolution. In recognition of the negative consequences associated with disputes both in terms of lost time and expense to all Parties, the Parties agree to attempt to settle their disputes by good-faith, non-binding mediation as a condition precedent to the institution of legal proceedings by any Party. Request for mediation shall be filed in writing with the other Parties to this Agreement. If mediation would jeopardize the substantive rights of any Party including, but not limited to, the application of any applicable statute of limitations or other timing requirement, then such Party may proceed to enforce such rights notwithstanding this mediation requirement and mediation will be required during the dispute resolution process to the extent it may be used without jeopardizing the substantive rights of any Party. The Parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in Placer County, California unless another location is mutually agreed upon.

g) Headings. The paragraph headings used in this Agreement are intended for

convenience only and shall not be used in interpreting this Agreement or in determining any of the rights or obligations of the Parties to this Agreement.

h) No Third Party Beneficiaries. The Parties understand and agree that this Agreement creates rights and obligations solely between the Parties and is not intended to benefit any other party. No provision of this Agreement shall in any way inure to the benefit of any third person so as to constitute any such third person as a third party beneficiary of this Agreement or any of its items of conditions, or otherwise give rise to any cause of action in any person not a party hereto.

i) Reasonable Cooperation; No Agency. The Parties will reasonably cooperate with each other, including the execution of all necessary documents required to perform the obligations under this Agreement, and to carry out the purpose and intent of this Agreement; provided that each Party understands and agrees that there is no agency or joint venture relationship between the Parties, and no Party is authorized to act for or on behalf of any other Party except as expressly authorized under this Agreement.

j) Construction and Interpretation. This Agreement is entered into freely and voluntarily. This Agreement has been arrived at through negotiation, and each Party has had a full and fair opportunity to revise the terms of this Agreement. Consequently, the normal rule of construction that any

ambiguities are to be resolved against the drafting party will not apply in construing or interpreting this Agreement.

k) Waiver. The waiver at any time by a Party of its rights with respect to a default or other matter arising in connection with this Agreement will not be deemed a waiver with respect to any other default or matter.

l) Allocation of Liabilities. The Parties expressly agree that the debts, liabilities and obligations of each Party shall remain the debts, liabilities and obligations of that Party and shall not be the debts, liabilities and obligations of the other Parties.

m) Attorney's Fees. In any action brought by either Party to enforce the terms of this Agreement, the prevailing Party shall be entitled to recover its reasonable attorney's fees.

n) Privileges and Immunities. All of the privileges and immunities from liability; exemptions from laws, ordinances and rules; and all pension, relief, disability, worker's compensation and other benefits that apply to the activity of officers, agents or employees of the Parties when performing their respective functions for those Parties will, to the extent permitted by law, apply to them to the same degree and extent while engaged in the performance of any of the functions and other duties under this Agreement. It is further understood and agreed by the Parties that, notwithstanding anything contained herein, the employees of each Party shall continue to be entirely and exclusively under the direction,

supervision, and control of the employing Party.

o) Counterparts. The Parties hereto agree that this Agreement may be executed and delivered in counterparts which, when taken together, shall constitute a fully executed Agreement. In addition, this Agreement may be executed via electronic pdf transmission and any such pdf signature shall be deemed to be an original signature.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement on the date written below.

RESOLUTION NO. 25-104

APPROVING AN AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND SIERRA NATIONAL CONSTRUCTION, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, an Agreement for the Five Star Intertie Improvement project, by and between the City of Roseville and Sierra National Construction, Inc., has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said Agreement is hereby approved and that the City Manager is authorized to execute it on behalf of the City of Roseville.

BE IT FURTHER RESOLVED that the City Manager or his designee is authorized to approve change orders for the project, consistent with the contract terms, provided that the net cost of all change orders shall not exceed ten percent (10%) of the contract price.

PASSED AND ADOPTED by the Council of the City of Roseville this____day of _____, 2025, by the following vote on roll call:

AYES COUNCILMEMBERS:

NOES COUNCILMEMBERS:

ABSENT COUNCILMEMBERS:

_____
MAYOR

ATTEST:

_____
City Clerk

AGREEMENT

THIS AGREEMENT, is made and entered into this _____day of _____, 20_____, by and between the City of Roseville, a municipal corporation, ("CITY"), and Sierra National Construction, Inc. , a Corporation , ("CONTRACTOR"); and

WITNESSETH:

WHEREAS, the City Council of the CITY, at a meeting held on the 20 day of November , 2024 , approved plans and specifications for the Five Star Intertie Improvement Project and directed the City Clerk to advertise for sealed proposals for doing said work and providing that bids be submitted on the 8 day of January , 2025 ; and

WHEREAS, the City Clerk, thereafter duly and regularly caused a notice to be published in the manner and for the time prescribed by law; and

WHEREAS, CONTRACTOR, pursuant to the provisions of said notice duly filed a bid with the City Clerk, a true copy of which bid is now on file in the office of the City Clerk, and is hereby referred to and by this reference made a part hereof as fully as if set forth at length herein; and

WHEREAS, all bids received pursuant to said notice were opened and examined and publicly declared at the time specified in said advertisement for bids and at a meeting of the City Council held on the _____ day of _____, 20_____, the Council found and

declared the bid of CONTRACTOR to be the lowest responsible bid and thereupon awarded a contract to CONTRACTOR to do the work referred to in the aforementioned specifications.

NOW, THEREFORE, the parties agree as follows:

1. THE WORK. CONTRACTOR agrees:

a. To do the work and furnish all the labor, materials, tools, supplies, equipment, superintendence, insurance, and bonds required for the Five Star Intertie Improvement Project in accordance with the Contract Documents (the Work).

b. To do and perform the Work contemplated hereby in a good and workmanlike manner under the direction of and to the satisfaction of the Director of Public Works of the City of Roseville.

2. PAYMENT. CITY shall pay CONTRACTOR Six hundred ninety-eight thousand and six hundred forty dollars ($698,640) for the Work to be done under this Agreement in accordance with the Contract Documents.

3. CONTRACT DOCUMENTS. The complete Agreement between the parties hereto consists of the following documents:

a. The advertisement for bids (including the notice to bidders, instructions to bidders and proposals);

b. The accepted bid;

c. Plans and specifications (including standard construction specifications, special provisions and construction details);

d. Bonds and insurance required by the specifications; and

e. This contract, including Exhibit "A" attached hereto.

All documents specified above are intended to operate so that any work called for in any one and not mentioned in the other, or vice versa, is to be executed the same as if mentioned in all said documents.

4. LIQUIDATED DAMAGES. In the event CONTRACTOR does not complete the Work within the time specified, CONTRACTOR agrees that CITY will suffer damages. Inasmuch as the actual damages which would result from such breach by CONTRACTOR under this Agreement are uncertain, and would be impractical or extremely difficult to fix, CONTRACTOR agrees that it shall pay, or CITY shall deduct from CONTRACTOR's fee, the amount of $ 1,500 per day as liquidated damages, in the event of such delay.

5. TIME OF COMPLETION. Time is of the essence of this Agreement. CONTRACTOR shall complete all Work under the Contract Documents within 181 Days of the date of this Contract. CONTRACTOR shall begin work by the date specified in the "Notice to Proceed" letter and shall diligently prosecute all of the Work under this Contract in all parts and requirements as defined in the Contract Documents.

6. SERVICE OF NOTICE. Any notice required or permitted to be given under this Agreement shall be deemed given when (a) personally delivered to the recipient identified below; (b) mailed by registered or certified mail, return receipt requested, postage pre-paid, to the address specified below; or (c) sent by facsimile, with confirmation of receipt, to the facsimile number identified below.

CITY OF ROSEVILLE	CONTRACTOR
William Montz	Kip Skidmore
Environmental Utilities	President
2005 Hilltop Circle	5433 El Camino Ave. Suite 4
Roseville, CA 95747	Carmichael, CA 95608

CITY may also act through either its architect or construction manager if CITY expressly gives notice to CONTRACTOR, in writing, that CITY's designee has authority to act for CITY in a specific capacity.

7. DISPUTES. Disputes arising from this Agreement will be determined in accordance with the Contract Documents and Public Contract Code Sections 10240-10240.13.

8. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

9. INDEPENDENT CONTRACTOR. CONTRACTOR shall act as an independent contractor, and covenants and agrees that it will conduct itself consistent with such status, that it will neither hold itself out as, nor claim to be, an officer or employee of CITY by reason of this Agreement.

10. SUCCESSORS IN INTEREST. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

11. MODIFICATION. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

12. SEVERABILITY. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

13. INTEGRATED AGREEMENT. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

14. CONTRACTORS LICENSE LAW. CONTRACTORS ARE REQUIRED BY LAW TO BE LICENSED AND REGULATED BY THE CONTRACTORS' STATE LICENSE BOARD WHICH HAS JURISDICTION TO INVESTIGATE COMPLAINTS AGAINST CONTRACTORS IF A COMPLAINT REGARDING A PATENT ACT OR OMISSION IS FILED WITHIN FOUR (4) YEARS OF THE DATE OF THE ALLEGED VIOLATION. A COMPLAINT REGARDING A LATENT ACT OR OMISISON PERTAINING TO STRUCUTRAL DEFECTS MUST BE FILED WITHIN TEN (10) YEARS OF THE DATE OF THE ALLEGED VIOLATION. ANY QUESTIONS CONCERNING A CONTRACTOR MAY BE REFERRED TO THE REGISTRAR, CONTRACTORS' STATE LICENSE BOARD, P.O. BOX 26000, SACRAMENTO, CALIFORNIA 95826.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attestation by its City Clerk under authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ____day of _____, 20_____, and CONTRACTOR has caused this Agreement to be duly executed.

Notice of Exemption

To: Placer County Clerk
Recorder's Office
2954 Richardson Drive
Auburn, CA 95603

From: City of Roseville
Development Services Dept.
311 Vernon Street
Roseville, CA 95678

Project Title: Five Star Intertie Improvements Project

Project Location: The Intertie improvements would be constructed within an existing intertie station, and within public right of way, located at the northwest corner of Five Star Boulevard and Stanford Ranch Rad at 6710 Stanford Ranch Road in the City of Roseville, Placer County, CA (APN: 017-123-043-000).

Project Description: The Roseville Environmental Utilities Department proposes construction of improvements as follows: The Five Star Intertie is a manually operated intertie between the City and the Placer County Water Agency (PCWA). To improve operational functionality, this project would entail installation of equipment to automate and provide remote capabilities via cellular wireless technology for monitoring and operation of the intertie via a Supervisory Control and Data Acquisition (SCADA) system. Since the location does not have power service, a new transformer is required, which will be tied into the existing junction box. The project will also include replacement of any flow measurement instruments for automation compatibility. The project does not include any new long-term water supply; it only allows for more efficient distribution of existing surface and ground water supplies.

Public Agency Approving Project: Roseville City Council

Agency Carrying Out Project: Roseville Environmental Utilities Department

Reason why this Project is Exempt: This project qualifies for a Class 1 Exemption as described in Section 15301 of the California Environmental Quality Act (CEQA) guidelines which states:

> "Class 1 consists of …. minor alteration of existing public …. facilities….involving negligible or no expansion of use beyond that previously existing…. examples include but are not limited to: (b) Existing facilities of both investor and publicly-owned utilities used to provide electric power, natural gas, sewerage, or other public utility services;"

The project involves modification of existing facilities to increase water distribution system operational flexibility. The improvements do not result in expansion of use. No sensitive resources are present on the project site. Therefore the Class 1 Exemption is applicable to the proposed project.

Title:	Sewer System Management Plan Recertification
Contact:	Tracie Mueller 916-746-1812 trmueller@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.13.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution to recertify the City of Roseville's Sewer System Management Plan (SSMP).

BACKGROUND

The California State Water Resources Control Board (SWRCB) issued a Statewide General Waste Discharge Requirement (WDR) Order No. 2006-0003-DWQ in May 2006. Under this WDR, all public entities that own or operate a sanitary sewer system greater than one mile in length that collects or conveys wastewater must prepare a Sewer System Management Plan (SSMP). The intent of the SSMP is to facilitate proper funding, operation and management of the sanitary sewer system to reduce sanitary sewer spills, their impacts to the State's water bodies, and to protect public health. The City's SSMP must be certified by the Roseville City Council and recertified when major updates are made to the plan.

The Roseville City Council adopted and certified the original SSMP in 2007. In October 2022, the Roseville City Council recertified the City's SSMP based on recommended changes proposed during an audit by an outside consultant.

On June 6, 2023, the SWRCB issued an updated WDR, Order No. 2022-0103-DWQ. This order replaced the old order and provided updated guidance and regulations related to owning and operating a sanitary sewer system designed to convey sewage. This updated guidance and regulation required an update to the City's SSMP. In addition, the Wastewater Collection System underwent a required periodic audit by an outside consultant using the current SSMP. Recommendations were made as to edits and additions needed for compliance with the new WDR and audit findings. These recommendations have been incorporated into an updated SSMP which includes terminology changes, changes to the City's sewer emergency response plan, naming and classification of spills for reporting purposes, as well as other minor edits and clean up items.

The certified 2022 edition SSMP, the proposed updated SSMP and associated documents, and the new updated WDR are provided for background. Proposed changes to the 2022 certified

SSMP were not provided due to the number of formatting changes made. Following is a summary of changes made in the proposed SSMP:

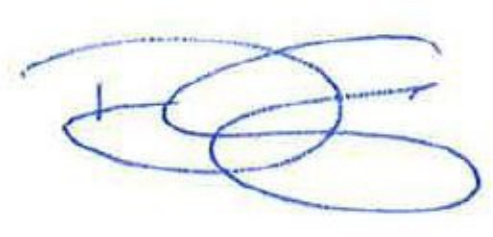
- The term SSO (Sanitary Sewer Overflow) changed to Spill throughout the document per the new updated WDR.
- A change in terminology and classification of spills on Pages 16-17 of the proposed SSMP. There are 4 categories of spills, all of which changed when compared to the previous SSMP. This is due to changes in the new updated WDR from the SWRCB.
- Attachment D of the new updated WDR is the guidance document for the requirements of the SSMP. Excerpts from this Attachment have been added and updated throughout the proposed SSMP to provide clarity on the intent of most sections for reference purposes.
- Appendix 10.6 – SSMP Performance Audit has been added to provide a required updated audit report.
- Appendix 9.3 – Spill History has been updated to provide up to date spill information.
- Appendix 6 – the Spill Emergency Response Plan has been updated per the new updated WDR.

FISCAL IMPACT

The recommended action of recertification of the City of Roseville Sewer System Management Plan does not have a direct fiscal impact. The costs for compliance for all elements of the SSMP are funded annually through the Wastewater Operations Fund budget.

ENVIRONMENTAL REVIEW

The proposed project involves an action taken by the City of Roseville to assure the maintenance, restoration, enhancement, or protection of the environment where the regulatory process involves protection of the environment. This activity is categorically exempt from CEQA as a Class 8 Exemption (State CEQA Guidelines Section 15308). The Exemption has been prepared and no further CEQA action is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal F - Invest in well-planned infrastructure and growth

Respectfully Submitted,

Tracie Mueller, Wastewater Utility Manager

Sean Bigley, Environmental Utilities Director

Dominick Casey, City Manager

City Council Resolution

RESOLUTION NO. 22-382

RECERTIFICATION OF THE CITY OF ROSEVILLE
SEWER SYSTEM MANAGEMENT PLAN

WHEREAS, in May 2006 the State Water Resources Control Board issued a state-wide General Waste Discharge Requirement (WDR) Order requiring all public entities that own or operate sanitary sewer systems greater than one mile in length that collect or convey wastewater to prepare a certified Sewer System Management Plan (SSMP); and

WHEREAS, on August 30, 2019, the City Council certified the City's SSMP; and

WHEREAS, provisions in the WDR require recertification of the SSMP every five years or if significant changes to the SSMP have been made; and

WHEREAS, the City Council has reviewed the revised Sewer System Management Plan.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that it hereby recertifies the City of Roseville Sewer System Management Plan.

PASSED AND ADOPTED by the Council of the City of Roseville this 5th day of October, 2022, by the following vote on roll call:

AYES COUNCILMEMBERS: Houdesheldt, Alvord, Roccucci, Mendonsa, Bernasconi

NOES COUNCILMEMBERS: None

ABSENT COUNCILMEMBERS: None

MAYOR

ATTEST:

City Clerk

LIST OF TERMS

Authorized Representative – The person designated, for a municipality, state, federal, or other public agency, as either a principal executive officer or ranking elected official or a duly authorized representative of that person.

Blockage – Something that partially or fully blocks the wastewater from flowing through a sewer pipeline. The blockage can be caused by debris in the sewer, grease buildup, root intrusion, or a partial or complete pipeline collapse. If not caught in time, the blockage may cause an overflow.

California Association of Sanitation Agencies (CASA) - CASA is a non-profit, statewide trade association representing public agencies that provide wastewater collection, treatment, disposal, and/or water reclamation services to about 90 percent of the sewered population in California.
Website: http://www.casaweb.org/

California Water Environment Association (CWEA) – CWEA is an association of 8,000-plus professionals in the wastewater industry. CWEA is committed to keeping California's water clean. CWEA trains and certifies wastewater professionals, disseminates technical information, and promotes sound policies to benefit society by protecting and enhancing the water environment. CWEA offers services at the state level and locally through 17 local geographical sections. In addition, through their on-line bookstore, CWEA offers technical references for sewer system operation and maintenance.
Website: http://www.cwea.org/ .

Central Valley Clean Water Association (CVCWA) – CVCWA is an association comprised of over 50 wastewater treatment and collection system agencies. CVCWA's mission is to effectively represent the interests of public wastewater agencies in the Central Valley in regulatory matters and to support the exchange of information so members can best meet their business challenges.
Website: http://www.cvcwa.org/ .

Central Valley Regional Water Quality Control Board – Also known as Regional Water Board or RWQCB. The mission of this state regulatory agency is to: preserve, enhance, and restore the quality of California's water resources, and ensure their proper allocation and efficient use for the benefit of present and future generations. Website: http://www.waterboards.ca.gov/centralvalley/ .

Dynamic Model – Computer hydraulic model simulation which solves the complete dynamic flow routing equations (St. Venant's equations) for accurate simulation of backwater, looped connections, surcharging, and pressure flow in a collection system.

Enrollee – The legal public entity that owns a sanitary sewer system, as defined by the GWDR, which has submitted a complete and approved application for coverage under the GWDR. This is also called a sewer system agency or wastewater collection system agency.

Fats, Oils and Grease (FOG) - Fats, oils, and grease that are discharged into the sanitary sewer collection system by Food Service Establishments (FSE), homes, apartments, and other sources. FOG is a major cause of blockages leading to increased maintenance and sometimes spills.

FOG Control Program – To be implemented at the Enrollee's discretion. May include public education program; plan and schedule for the disposal of FOG; legal authority to prohibit FOG related discharges; requirement to install grease removal devices; authority to inspect grease producing facilities; identification of sanitary sewer system sections subject to FOG blockages and the establishment of a cleaning schedule for each section; development and implementation of source control measures for all sources of FOG.

Geographical Information System (GIS) – A database linked with mapping, which includes various layers of information used by government officials. Examples of information found on a GIS can include a sewer map; sewer features such as pipe location, diameter, material, condition, last date cleaned or repaired. The GIS also typically contains base information such as streets and parcels.

Governing Board – This is the governing board of the sewer entity developing the SSMP. Examples would be the Board of Directors, the City Council, or the County Board of Supervisors.

GWDR – General Waste Discharge Requirements – A GWDR is an authorization to discharge waste with certain conditions, which can be issued on an individual basis or to a group of dischargers. The Statewide General WDR for Sanitary Sewer Systems was adopted by the SWCRB and will be implemented by the Regional Water Boards and SWRCB.

Infiltration – The seepage of groundwater into a sewer system, including service connections. Seepage frequently occurs through defective or cracked pipes, pipe joints, connections or manhole walls and joints.

Inflow – Water discharged into a sewer system and service connections from such sources as, but not limited to, roof leaders, cellars, yard and area drains, foundation drains, cooling water discharges, drains from springs and swampy areas, around manhole covers or through holes in the covers, cross connections from storm and combined sewer system, catch basins, storm waters, surface runoff, street wash waters or drainage. Inflow differs from infiltration in that it is a direct discharge into the sewer rather than a leak into the sewer itself.

Lateral – The portion of sewer that connects a home or business with the main line in the street. Sometimes sewer system agencies own or maintain a portion of the lateral.

> *Upper Lateral*: Portion of lateral from building to property line (or easement line), usually privately owned and maintained.
>
> *Lower Lateral*: Portion of lateral from property line (or easement line) to sewer mainline in the street or easement. This portion of the lateral is sometimes privately owned and maintained and sometimes publicly owned and maintained.

Monitoring and Reporting Program - The Monitoring and Reporting Program established in the WDR that establishes monitoring, record keeping, reporting and public notification requirements for the GWDR.

Private Lateral: That portion of the Lateral that is owned and maintained by the private property owner that it serves. Based on an individual agency's ordinance, this may just be the Upper Lateral or can include the Lower Lateral.

Preventative Maintenance (PM) – Regularly scheduled servicing of machinery, infrastructure or other equipment using appropriate tools, tests, and lubricants. This type of maintenance can prolong the useful life of equipment, infrastructure, and machinery and increase its efficiency by detecting and correcting problems before they cause a breakdown of the equipment, or failure of the infrastructure.

R-Value – Is the amount of rainfall that reaches the collection system via infiltration and inflow. This value is typically expressed as a percentage of total rainfall volume that reaches the collection system.

Regional Water Board – Is a short name for any of the nine regional boards including the San Francisco Bay Area Regional Water Quality Control Board and the Central Valley Regional Water Quality Control Board.

Rehabilitation and Replacement Plan (also referred to as a Capital Improvement Plan) – Identifies and prioritizes system deficiencies and implements short-term and long-term rehabilitation actions to address each deficiency.

Sanitary Sewer Systems – Any system of pipes, pump stations, sewer lines, or other conveyances, upstream of a wastewater treatment plant head works used to collect and convey wastewater to the publicly owned treatment facility. Temporary storage and conveyance facilities are part of the sanitary sewer system and discharges into these temporary storage facilities are not to be considered spills.

Satellite Collection System – The portion, if any, of a sanitary sewer system owned or operated by a different public agency than the agency that owns and operates the wastewater treatment facility to which the sanitary sewer system is tributary.

Sewer System Management Plan-SSMP – A series of written site-specific programs that address how a collection system owner/operator conducts their daily business as is outlined in the WDR. Each SSMP is unique for an individual discharger. The plan includes provisions to provide proper and efficient management, operation, and maintenance of sanitary sewer systems, while taking into consideration risk management and cost benefit analysis. Also, must contain a spill response plan. Certification is offered by technically qualified and experienced persons and provides a useful cost-effective means for ensuring that SSMPs are developed and implemented appropriately.

Spill – A spill is a discharge of sewage from any portion of a sanitary sewer system due to a sanitary sewer system overflow, operational failure, and/or infrastructure failure. Exfiltration of sewage is not considered to be a spill under this General Order if the exfiltrated sewage remains in the subsurface and does not reach a surface water of the State.

Spill Emergency Response Plan – Identifies measures to protect public health and the environment. A plan must include the following: notification procedure, appropriate response plan, regulatory notification procedures, employee training plan, procedures to address emergency operations, a program that ensures all reasonable steps are taken to contain and prevent discharges.

Spill Categories- **Category 1** - any volume of sewage from or caused by a sanitary sewer system regulated under this General Order that results in a discharge to:

- A surface water, including a surface water body that contains no flow or volume of water.
- A drainage conveyance system that discharges to surface waters when the sewage is not fully captured and returned to the sewer system or disposed of properly.

- Any spill volume not recovered from a drainage conveyance system is considered a discharge to surface water unless the drainage conveyance system discharges to a dedicated stormwater infiltration basin or facility

Category 2 - is a spill of 1,000 gallons or greater from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

Category 3- is a spill of equal to or greater than 50 gallons and less than 1,000 gallons from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

Category 4 - is a spill of less than 50 gallons from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

Stakeholder - A person or organization that has a vested interest in the development and outcome of the SWRCB Order No. 2022-0103-DWQ, Statewide General Waste Discharge Requirements for Sanitary Sewer Systems.

State Water Resources Control Board: Also called the State Board. This is the State agency that developed and passed the GWDR for collection systems and the agency that maintains the spill reporting web site.

Static Model – A computer hydraulic model that uses the Manning's Equation to determine hydraulic capacity of the gravity pipelines and either the Manning's or Hazen-Williams Equations to determine the hydraulic capacity of the pressure pipeline system. The capacity is compared to the peak hydraulic flow in the system to determine potential deficiencies. The static model assumes the peak hydraulic flow occurs at all locations within the collection system at the same time.

Stoppage – Something that partially or fully blocks the wastewater from flowing through a sewer pipeline. A stoppage can be caused by debris in the sewer, grease buildup, root intrusion, or a partial or full collapse of the pipeline. If not caught in time, a stoppage may cause an overflow. This is also called a blockage.

System Evaluation and Capacity Assurance Plan – A required component of an agency's SSMP and is an important part of any agency's overall Capital Improvement Plan that provides hydraulic capacity of key sanitary sewer system elements for dry weather peak flow conditions, as well as the appropriate design storm or wet weather event.

Wastewater Collection System: See Sanitary Sewer System.

EXECUTIVE SUMMARY

BACKGROUND

The City of Roseville (City) is a Council-Manager form of government in which responsibilities are vested in the City Council and City Manager. In this form of government, the City Council's role is that of a legislative policy-making body which determines not only local laws that regulate community life, but also determines public policy and gives direction to the City Manager. The City Manager administers the affairs of the city government in a business-like prudent manner.

The City's Public Utilities Commission studies and advises the City Council on all utility issues related to city-owned utilities (electric, water, sewer, and solid waste).

The City's Wastewater Utility is one of five utilities operated in the Environmental Utilities Department (EUD). The Wastewater Utility is responsible for operation and maintenance of all wastewater facilities owned by the City including the Publicly Owned Treatment Works (POTWs), the wastewater collection system, the water quality lab and the recycled water utility.

The City's Wastewater Collection (WWC) Division is a division of Environmental Utilities Department (EUD). The WWC Division is responsible for management, operation, maintenance, and capacity assurance of the City's sanitary sewer collection system, including inspecting, cleaning, repairing, and monitoring the gravity sewer lines, force mains, and lift station.

The City initiated a Sewer System Management Plan (SSMP) assessment in 2005 to evaluate how well the Wastewater Collection (WWC) Division would comply with the anticipated State Water Resources Control Board (SWRCB) Statewide General Waste Discharge Requirements (WDR) order No. 2006-0003 for Sanitary Sewer Systems. That SSMP assessment indicated that the City was positioned fairly well to comply with the SWRCB's SSMP requirements.

In March of 2007, the WWC division along with consultant assistance, began writing the SSMP and reviewing all remaining policies, procedures, and programs to comply with the SWRCB's WDR. The plan described how the City would address each element of the SSMP contained in the SWRCB's WDR to eliminate preventable Sanitary Sewer Overflows (SSOs). The WWC staff completed the development of the SSMP, which the City Council approved on 21 JAN 09.

On June 11, 2024, the City successfully completed its latest SSMP Audit, adhering to Attachment 10 of the Reissued Waste Discharge Requirement (WDR) State Water Board Order No. 2022-0103-DWQ. The results of the audit demonstrate the City's full compliance with the Reissued WDR and emphasize the effectiveness of several successful work programs that are currently being implemented. This commitment to maintaining high standards underscores the City's dedication to environmental responsibility and public health

The city continues to monitor, measure, and modify the existing SSMP as changes and program improvements are identified. The city has developed a Key Performance Indicator worksheet, which is used to monitor and measure the effectiveness of the various elements of the SSMP. Roseville's SSMP has been audited six times since being certified by the SWRCB

SEWER SYSTEM MANAGEMENT PLAN REQUIREMENTS

The City's Sanitary Sewer Management Plan (SSMP) developed in 2009 as a practical and essential resource, set a strong foundation for effective sewer management. This revised SSMP not only retains vital information from the original document but also integrates valuable insights from recent audits and best practices, ensuring the city takes its efforts to the next level. It is designed to address the specific size, scale, and complexity of the City's sanitary sewer system, fully complying with the requirements stated in the Reissued WDR, particularly in Specifications 5.2 and Attachment D.

CITY HISTORICAL SPILL PERFORMANCE

The statistical records from the City's Wastewater Collection Division (WWC) reveal that, prior to implementation of the SSMP, the City faced a moderate rate of sewer spills compared to similarly sized agencies in California. However as demonstrated in Table 1, since adopting the SSMP, the City's spill performance metrics have consistently outperformed State and Regional averages in both number and volume associated with spills. This consistent improvement highlights the City's commitment to effective wastewater management. Additionally, when spills do occur, they are swiftly addressed, ensuring that public health and the environment remain protected from any adverse effects.

Figure 1-System Spill

0 SSMP Overview

The City of Roseville (City) is required to comply with the State Water Resources Control Board Order No. 2022-0103-DWQ adopted December 6, 2022, entitled Statewide Waste Discharge Requirements General Order for Sanitary Sewer Systems (General Order).

In response to this General Order, the City has thoroughly revised its previous SSMP to align with the requirements outlined in the Statewide Waste Discharge Requirements (WDR) for Sanitary Sewer Systems. The SSMP serves as a "living document," showcasing the City's ongoing management activities, procedures, and decision-making processes for operating and maintaining the system.

The City developed an SSMP specific to the wastewater collection system operated and maintained by wastewater collection personnel in the City of Roseville. This SSMP documents the activities the city will utilize to manage, operate, and maintain its wastewater collection system. The city shall take all steps feasible to eliminate spill, but in the event an spill does occur, will take all steps necessary to contain and mitigate the negative impacts of an spill

1 Goals and Introduction

Att. D-1	The goal of the SSMP is to provide a plan and schedule to properly manage, operate, and maintain all parts of the City's sanitary sewer system, reduce and prevent spills and contain and mitigate spills that do occur. The plan must include a narrative Introduction section that discusses the following items: (1) A general description of the Enrollee's SSMP, and discuss plan implementation and updates, (2) A schedule for updating the SSMP and scheduling internal audits. The schedule must include milestones for incorporating activities addressing spill prevention, and (3) A description of the Enrollee owned assets and service area.

1.1 SSMP Goals

The City's WWC Division has established eight goals to guide the implementation, and success of Roseville's SSMP. These goals are designed to facilitate and target the management, operation, and maintenance of the sanitary sewer collection system in a manner that will sustain the infrastructure, protect public health and the environment, and achieve compliance with State Water Resources Control Board's WDR for Sanitary Sewer Systems. These goals include:

1. Properly manage, operate, and maintain all portions of the City's wastewater collection system.
2. Provide adequate capacity to convey peak wastewater flows.
3. No repeat overflows from the same location.
4. Maintain a rate of Spills/100 miles of pipe, that is lower than the state and regional average.
5. Maintain a recovery rate for Spills/100 miles of pipe, that is higher than the state and regional average.
6. Mitigate the impacts that are associated with any Spills that may occur.
7. Comply with all applicable regulatory notification and reporting requirements.
8. Maintain high design and construction standards for new and rehabilitated infrastructure.

To achieve the goals outlined in the City's SSMP, the City is committed to implementing various programs that address issues related to its wastewater system. The City takes pride in maintaining strict design and construction standards, along with a robust operations and maintenance program. This program includes chemical root control, closed circuit television (CCTV) inspections, and skilled construction crews capable of performing both simple and complex repairs to the system.

The City emphasizes proactive maintenance and inspection and is well-equipped to handle the challenges of operating its wastewater collection system while ensuring the highest standards of service delivery.

Although the City is proactive in preventing spills, it has also established an effective Spill Emergency Response Plan to respond quickly if a spill occurs. The City will take all necessary actions to contain the spill and mitigate its negative impacts. Additionally, the City utilizes Key Performance Indicators (KPIs) to evaluate the effectiveness of its spill management efforts.

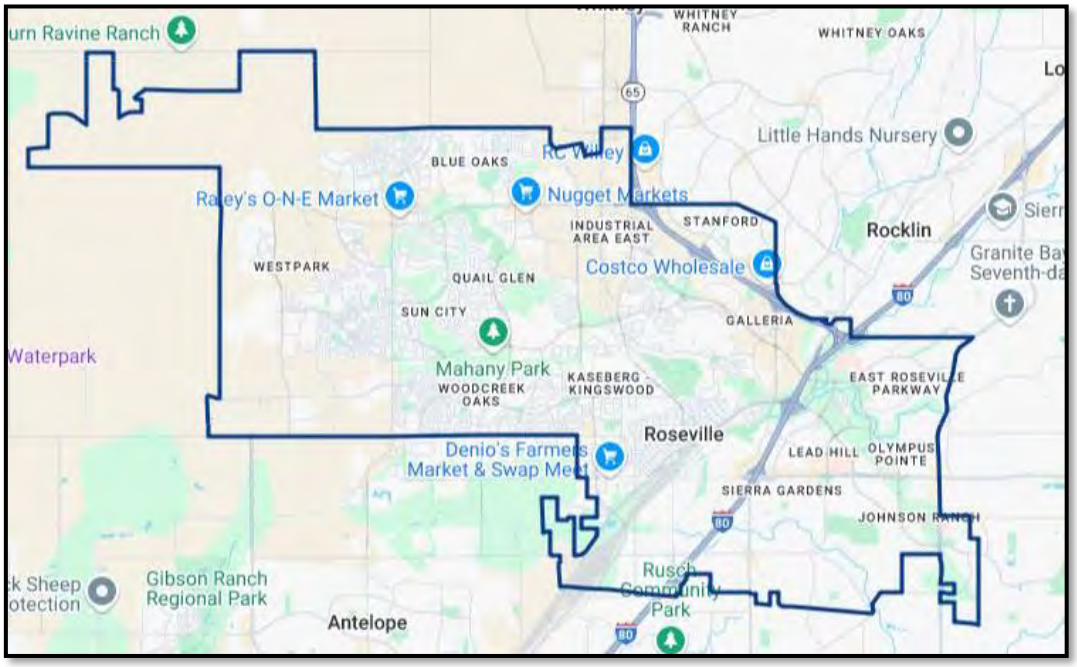
1.2 SSMP Plan Update

The City of Roseville completed a comprehensive SSMP audit conducted by Fischer Compliance on June 11, 2024. This audit confirmed that the City's long-standing SSMP has been effective in meeting the required elements through its various programs and the adoption of new technology.

Since most sewer spills originate from lower laterals, the City invested in a lateral lining trailer and set an annual KPI target for lateral lining to address issues identified during CCTV inspections. The City consistently increases its KPI goals and has achieved significant milestones in cleaning, televising, responding to service requests, and making main and lateral repairs. These efforts demonstrate its commitment to proactive infrastructure management and reducing spills from the sewer system.

Additionally, the City has utilized the look-up tool on the CIWQS website to identify the date of the next scheduled audit and the subsequent update of its SSMP, as shown in Table 1.

Table 1 – SSMP Update Schedule



Sewer System Management Plan & Subsequent Update Due Dates					
System Name	**WDID Number**	**Original Plan Required Due Date**	**Required Plan Update Due Date**	**Required Plan Update Due Date**	**Required Plan Update Due Date***
Dry Creek CS	5SSO10935	5/2/2009	5/2/2014	5/2/2019	5/2/2025

Audit Due Dates								
System Name	**WDID Number**	**Original Required Plan Audit Due Date**	**Required Plan Audit Due Date**	**Required Plan Audit Due Date**	**Required Plan Audit Due Date**	**Required Plan Audit Due Date**	**Required Plan Audit Due Date**	**End of Required 3-Year Audit Period****

1.3 Sewer System Asset Overview

Figure – 2 outlines the City of Roseville's geographical service area. The information provided in this SSMP was gathered from the City's Economic Development website located here: City of Roseville Demographics

Figure 2 – City of Roseville Service Area

The city's service area covers approximately 44.20 square miles and includes 54,622 residential connections, 1,932 commercial connections, and 600 industrial connections, as well as two regional wastewater treatment plants. The Wastewater Collection Division serves approximately 166,000 sewer customers. The wastewater collection and conveyance system is comprised of 885 miles of sewer pipe, with diameters ranging from 4 inches to 84 inches. It includes 12,538 manholes and 17 neighborhood lift stations, which together convey an average dry weather flow of about 18.5 million gallons per day (MGD). Sanitary sewage is transported from the City's eastern boundaries to the Dry Creek Wastewater Treatment Plant and from its northern and western boundaries to the Pleasant Grove Wastewater Treatment Plant.

1.4 Updated Sewer System Map

The WWC Division maintains an up-to-date electronic map of the wastewater collection system as required by Att. D-1.3 of the Re-issued Order. The City uses ESRI GIS software to map all utility-related data. The GIS map platform, referred to as Roseville GeoViewer, shows all gravity main segments with the direction of flow, manhole information, pumping facilities, pressure pipes, and valves. In addition, the GeoViewer allows users to turn on/off different layers and base maps to display the information they need.

THIS PAGE LEFT INTENTIONALLY BLANK

2 Organization

Att. D-2	The Plan must identify organizational staffing responsible and integral for implementing the local SSMP through an Organizational chart or similar document that includes, the name of the Legally Responsible official as required in section 5.1;The position, titles, telephone numbers and email addresses for management, administrative and maintenance positions responsible for implementing specific SSMP elements; Organizational lines of authority; and Chain of communication for reporting spills from receipt of complaint or other information, including the person responsible for reporting spills to the State and Regional Water Boards and other agencies as applicable.

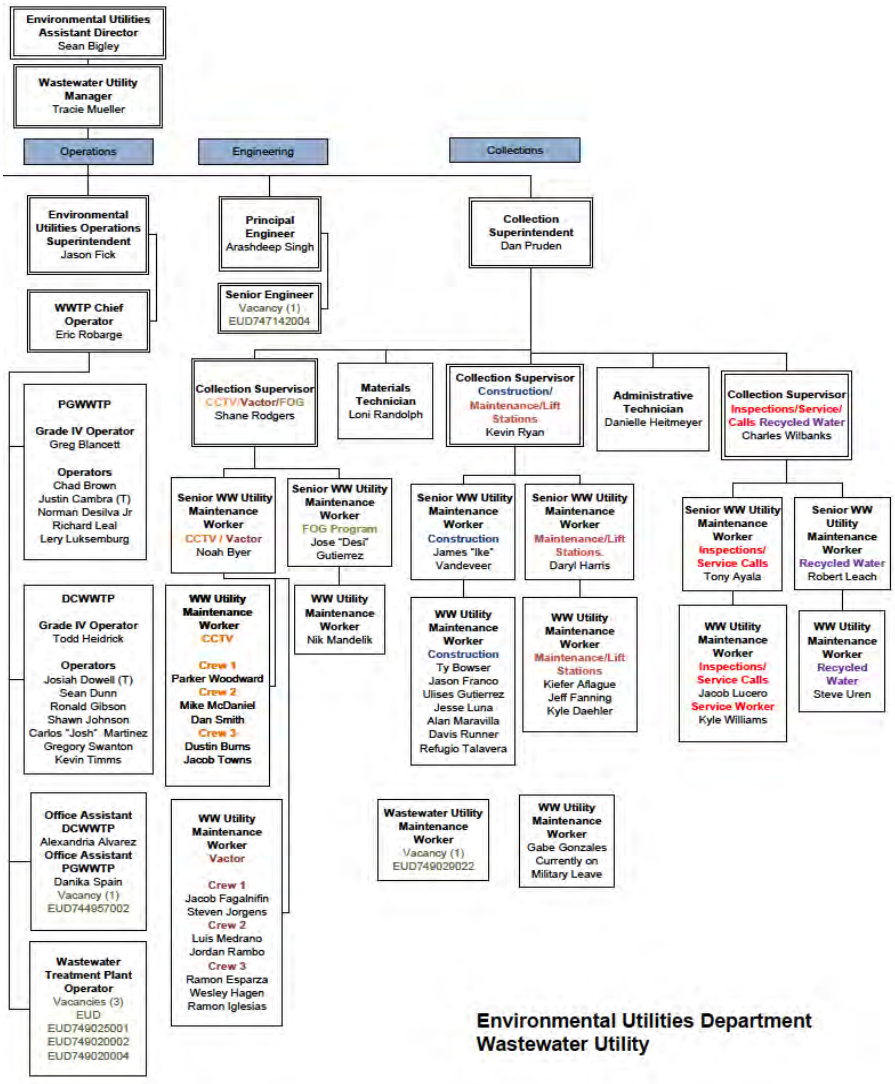
2.1 Legally Responsible Official (LRO)

The City of Roseville has identified the Wastewater Utility Manager and the Wastewater Collection Superintendent as the LRO's or authorized representatives for the wastewater collection division. Historically, the Wastewater Collection Superintendent is responsible for the certification of spill reports involving Roseville's wastewater collection system.

2.2 SSMP Responsibility Chart

The City of Roseville operates under a Council-Manager form of government, where responsibilities are shared between the City Council and the City Manager. The City Council serves as the legislative and policy-making body, establishing local laws, shaping public policy, and providing guidance to the City Manager. The City Manager oversees the administration of city operations in a professional and efficient manner, delegating authority to each Environmental Utilities (EU) management group to ensure the effective operation of their respective utilities. The following chart provides a detailed overview of position descriptions and responsibilities related to SSMP implementation.

SSMP Element	Responsible Position
I. Goals	Responsibility for the divisions goals resides with the WWC Superintendent, Mr. Dan Pruden. However, goals for the wastewater collection division are developed through collaboration between the WWC Superintendent, the WWC Supervisor and field crews. Mr. Pruden can be reached at (916)746-1891
II. Organization	The Environmental Utilities (EU) Director, Mr. Sean Bigley, recommends any updates to the City Manager for organizational structure within the Wastewater Collection Division. Mr. Bigley can be reached at (916)774-5770.



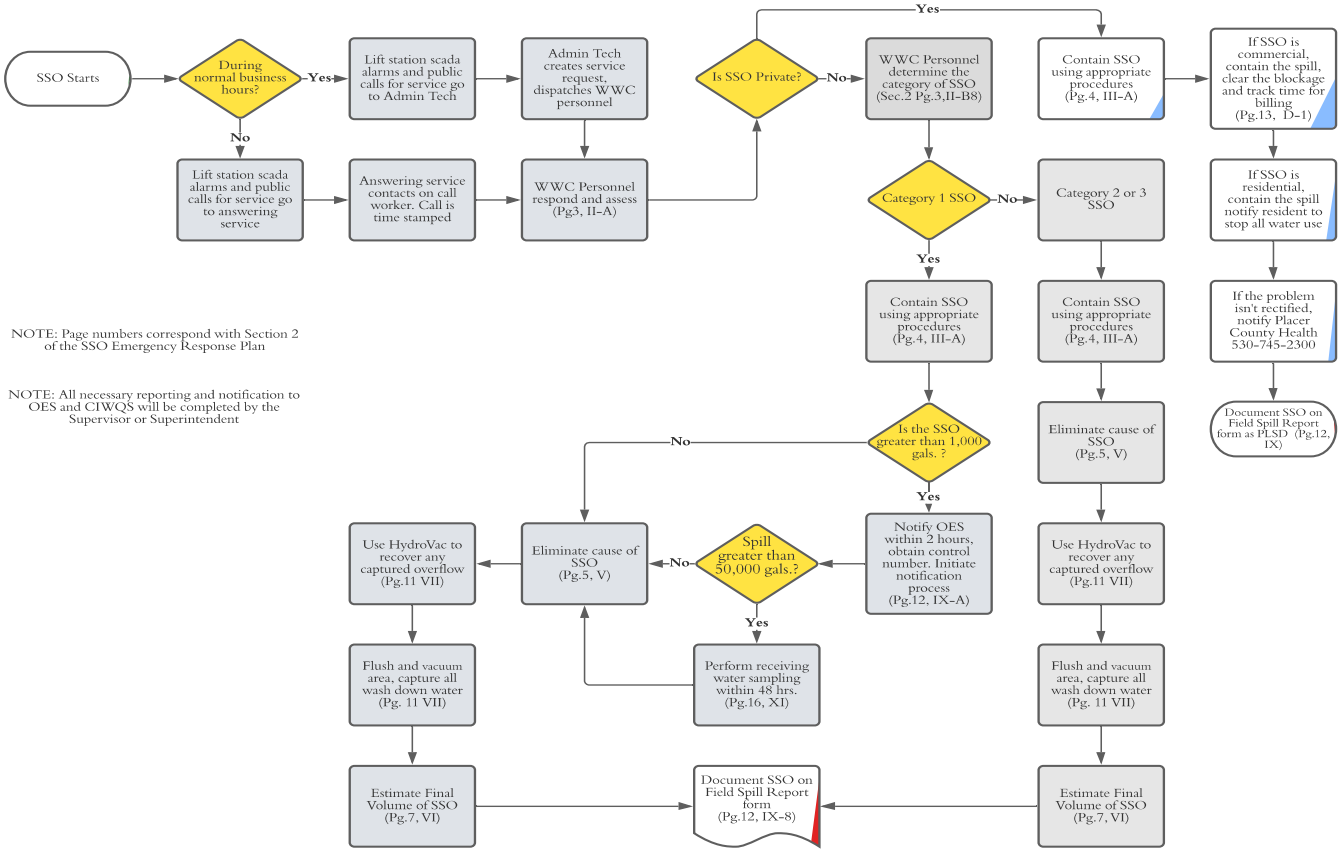
III.	Legal Authority	The City Manager, City Attorney and Roseville City Council ultimately uphold city ordinances within the Roseville Municipal Code.
IV.	Operations & Maintenance	The Wastewater Collection Superintendent has overall responsibility for the operation and maintenance of the collection system. The Asst. EU Director, (TBD), oversees, recommends, and administers the O&M budget. EU Engineering provides support through the GIS Division for up-to-date mapping of the system.
V.	Design and Construction Standards	The Development Services Division and EU Engineering collaborate to identify and maintain the design and construction standards. Development Services Division manages the inspection of all new development, CIP and infill projects to ensure all standards are met. All projects receive EU Director approval related to Utility work.
VI.	Spill Emergency Response Plan	The Wastewater Collection Superintendent and Supervisors Mr. Shane Rodgers, Mr. Kevin Ryan and Mr. Cody Wilbanks, maintain the spill emergency response plan. The plan is implemented as an annual training, where revisions to the plan may be made based on field crew feedback. Mr. Rodgers can be reached at (916)746-1894, Mr. Ryan at (916)746-1893 and Mr. Wilbanks at (916)746-1889
VII.	FOG Control Program	The Wastewater Collection Superintendent and Supervisor identify hot spots from Food Service Establishments (FSE) and maintain an effective cleaning PM schedule to eliminate spills. The FOG Control Program including permitting of FSEs, inspection of facilities and monitoring pump out records is administered by the Wastewater Collection Superintendent.
VIII.	System Evaluation and Capacity Assurance Plan	EU Engineering Principal Engineer, Mr. Arashdeep Singh, administers the SECAP program to ensure the hydraulic model is up to date, and to assure capacity for current and future development. Mr. Singh can be reached at (916)746-1854
IX.	Monitoring, Measurement and Program Modifications	The Wastewater Collection Superintendent with assistance from the Wastewater Collection Supervisors monitors the implementation and assesses the success of the overall SSMP elements. The superintendent tracks Key Performance Indicators and adjusts programs as needed.

X.	SSMP Audits	The Asst EU Director is responsible for SSMP program audits, with assistance from the Wastewater Collection Superintendent and Principal Engineer for Wastewater Division
XI.	Communication Plan	The EU Public Information Officer, Mr. Maurice Chaney, communicates with the EU Director, City Manager, City Council, nearby agencies, and the public on the City's SSMP monitoring and modifications. Mr. Chaney can be reached at (916)774-5539.

2.3 Organizational Lines of Authority

The Wastewater Collection Division is one of five utilities operated in the Environmental Utilities Department (EUD). The Environmental Utilities Department has defined its lines of authority in the attached Figure 3.

Figure 3 – EUD Wastewater Utility



2.4 Chain of Communication Reporting Chart

Office hours for the WWC Division are Monday through Friday from 0630 to 1600, except for holidays. The Administration Technician or service call worker receives all service calls during regular business hours. If received in the office, a service request is created with the caller information, the problem, and contact information. This information is transferred to the service call worker, in which they respond, access the problem, and provide a solution. An answering service, contracted by WWC Division, receives all after-hours calls to gather information and dispatch to the on-call service worker via an assigned mobile phone. The on-call service worker is available 24 hours per day and is furnished with a service van and equipment to facilitate a timely response. A response time goal is 20 minutes during business hours and 40 minutes for after-hour service calls. The van is equipped with containment devices to manage lower lateral blockages and spills, and to prevent spills from entering a storm drain inlet or channel. Should the situation require additional resources, the on-call worker would contact crew members from the call-out sheet for assistance.

Figure 4, included in the division's SERP, summarizes the chain of communication when receiving calls for service.

Figure 4 – Spill Chain of Communication

THIS PAGE LEFT INTENTIONALLY BLANK

3 Legal Authority

Att. D-3 The plan must include copies or an electronic link to the Enrollee's current sewer system use ordinances, service agreements and/or other legally binding procedures to demonstrate the Enrollee possesses the necessary legal authority to: (1).Prevent illicit discharges into its sanitary sewer system from inflow and infiltration (I&I); unauthorized stormwater; chemical dumping; unauthorized debris; roots; fats, oils, and grease; and trash, including rags and other debris that may cause blockages; (2). Collaborate with storm sewer agencies to coordinate emergency spill responses, ensure access to storm sewer systems during spill events, and prevent unintentional cross-connections of sanitary sewer infrastructure to storm sewer infrastructure; (3). Require that sewer system components and connections be properly designed and constructed; (4).Ensure access for maintenance, inspection, and/or repairs for portions of the service lateral owned and/or operated by the Enrollee; (5). Enforce any violation of its sewer ordinances, service agreements, or other legally binding procedures; and (6). Obtain easement accessibility agreements for locations requiring sewer system operations and maintenance, as applicable.

The Roseville Municipal Code (RMC) found here, Roseville Municipal Code, provides specific legal authority for the WWC division to operate and manage the wastewater collection system. The City's current legal authority is established through existing codes, regulations, ordinances, and permitting procedures that allows the City to require and enforce various measures for ensuring the proper and efficient operation, management, and maintenance of the City's wastewater collection system. Table 2 indicates the code section for the legal authority required.

Table 2 – RMC Codes for Legal Authority

Ability to prevent illicit discharges into the wastewater system	14.20.040	Definition of illicit discharge
	14.26.010	Purpose and policy of industrial wastewater
Ability to require all sewers and connections are properly designed and constructed	14.12.040	Building and sewer connection requirements
	14.14.030	FOG discharge permit required
	14.14.070	Prohibitions for FSE construction
Ensure proper access to portions of the lateral owned by the city	Charter Article X Sec 10.01	General powers respecting utilities
	14.14.290	Right of entry
Ability to limit the discharge of FOG	14.12.050	Use of public sewers
	14.14.010	Purpose
	14.14.030	FOG discharge permit required
	14.14.040	Fog discharge limitation

	14.14.070	Prohibitions
	14.14.120	Interceptor maintenance requirements
Ability to enforce all sewer ordinances	14.12.060	Sewer use- enforcement authority
	14.14.330	FOG – determination of non-compliance
	14.14.350	FOG- Permit suspension or revocation
	14.14.360	FOG- penalties and violations

3.1 Industrial Pretreatment Program

In addition to the RMC, the City of Roseville Industrial Waste Division (IWD) oversees and administers the Pretreatment Program Enforcement Response Plan (ERP). This plan outlines operational procedures intended to ensure that the Significant Industrial Users (SIUs), and the small Commercial/Industrial dischargers to the sanitary sewer system are appropriately permitted and monitored. To assure compliance by these dischargers, the IWD implements enforcement procedures specified by the U.S. Environmental Protection Agency (EPA) in accordance with 40CFR 403.5 (f) (5). The ERP specifies criteria by which IWD personnel determine the enforcement action most appropriate to the nature of the violation. The Pretreatment Enforcement Response Plan is attached to the SSMP as Appendix 3-1.

3.2 Design and Construction Standards

The City of Roseville's design and construction standards regulate and guide the design and preparation of plans and construction of the City of Roseville's sanitary sewer systems and related public improvements, and set guidelines for all private works, which involve related improvements. The City's Design and Construction standards are located on their website at: Roseville Design and Construction Standards

3.3 Sewer Access Authority

The RMC section 10.01 states the City shall possess all powers granted to cities by state law to construct, condemn, purchase, acquire, add to, maintain, and operate, either within or outside its corporate limits, including, but not by way of limitation, public utilities for supplying water, light, heat, power, gas, transportation, sewage and refuse collections, treatment and disposal services, or any of them, to the municipality and the inhabitants thereof; Each city-owned utility shall be financially self-sufficient, and shall fully compensate the city general fund for all goods, services, real property and rights to use or operate on or in city-owned real property.

3.4 Fats Oils and Grease

The City of Roseville limits the discharge of Fats, Oils and Grease from Food Service Establishments through Section 14.14 of the RMC. Section 14.14 was adopted to facilitate the maximum beneficial use of the city's sewer services and facilities while preventing blockages of the sewer lines resulting from discharges of fats, oils, and grease (FOG) into the public sewer, and to specify appropriate FOG discharge requirements for food service establishments (FSEs). Section 14.14 establishes conditions for permitting, inspection, pumping and recordkeeping, and right of entry for inspection. The City's FOG ordinance is located at FOG Ordinance

3.5 Regulation of Sewer Use – Enforcement

Sections 14.12.060 and 14.14.360 (FOG Ordinance) of the RMC prescribes the enforcement actions available to the city when violations of the code are discovered. Violation of the RMC may be charged as either an infraction or misdemeanor upon discretion of the City Attorney.

3.6 Inter-Agency and Satellite Agreements

The City of Roseville operates two Regional Wastewater Treatment Facilities where sewer from satellite systems flow into City wastewater mains. As such, the Environmental Utilities Department maintains the following agreements to address regional and satellite systems.

3.6.1 Joint Exercise of Powers Agreement South Placer Wastewater Authority

The purpose for this agreement is to provide for planning, acquisition, financing, ownership, construction, and operation of Regional Wastewater Facilities. The participants in the SPWA create a public entity which is separate from the City, the District, and the County. The SPWA services the areas the City of Roseville, Placer County and South Placer Municipal Utility District. The agreement is attached to the SSMP as Appendix 3-2.

3.6.2 South Placer Wastewater Facilities Operation and Use Agreement

The agreement known as the Joint Powers Agreement, supersedes all other previous agreements. The new agreement indicates the City of Roseville shall operate and maintain Regional Wastewater Facilities for the mutual benefit of and provide wastewater treatment services to the areas depicted on Exhibit A, areas which are within the jurisdictional boundaries of the City, District and County, so long as the District and County pay the City their proportionate shares. This agreement is attached to the SSMP as Appendix 3-3

3.6.3 Contract and Operating Agreement between SRCSD and SASD

This agreement between the City of Roseville, Sacramento Area Sewer District and Sacramento Regional County Sanitation District defines points where flows enter and exit each other's area of service and points of demarcation for City and County assets. In addition, the agreement is to meet regulatory requirements and provide a basis for SASD, SRCSD and the City of Roseville to work together to provide service to users, establish operation and maintenance responsibilities and outline rates and fees. This agreement is attached to the SSMP as Appendix 3-4

3.7 Legal Authority Documents

Refer to Appendices 3-1 through 3-4 for Legal Authority Documents:

Appendix 3-1 Pretreatment Program Enforcement Response Plan – TOC
Appendix 3-2 Joint Exercise of Powers Agreement for the South Placer Wastewater Authority
Appendix 3-3 Agreement Regarding the Operation and Use of the South Placer Regional WW Facilities
Appendix 3-4 Wastewater Service Agreement by Contract & Operating Agreement Between SASD, SRCSD and City of Roseville.

THIS PAGE LEFT INTENTIONALLY BLANK

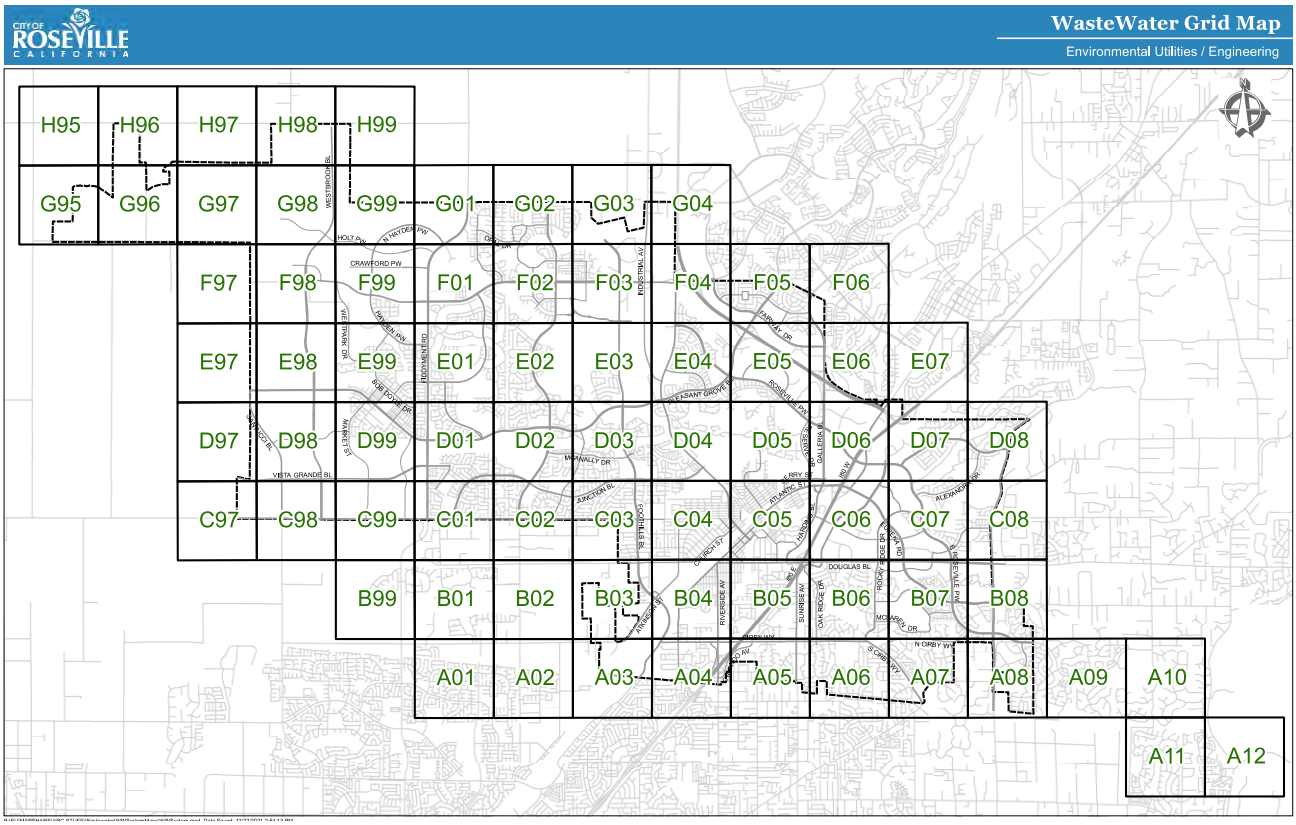
4 Operation and Maintenance

Att. D - 4	The plan must include the items listed below that are appropriate and applicable to the Enrollee's system.(1). An up to date map(s) of the sanitary sewer system, and procedures for maintaining and providing State and regional Board staff access to the maps. The maps must show gravity line segments and manholes, pumping facilities, pressure pipes and valves, and applicable stormwater conveyance facilities within the sewer system service area boundaries. (2). A scheduling system and data collection system for preventative operation and maintenance activities conducted by staff and contractors. The scheduling system must include: Inspection and maintenance activities; Higher frequency inspections and maintenance of known problem areas, including areas with tree root problems; Regular visual and closed circuit television (CCTV) inspections of manholes and sewer pipes. The data collection system must document data from system inspection and maintenance activities, including system areas/components prone to root intrusion potentially resulting in system backup and/or failure. (3). In house and external training provided on a regular basis for sanitary sewer system operations and maintenance staff and contractors. The training must cover: The requirements of this order; The enrollee's Spill Emergency Response Plan procedures and practice drills; Skilled estimation of spill volume for field operators; and Electronic CIWQS reporting procedures for staff submitting data. (4). An inventory of sewer system equipment, including the identification of critical replacement and spare parts.

The Operation and Maintenance (O&M) Program is essential to fulfill the city's duty to serve the residents and businesses of the City of Roseville. It is also the most significant part of the city's effort to eliminate the occurrence of SSOs and stay compliant with the general order.
The city's O&M program is comprised of these elements:

1. Collection System Mapping
2. Preventive Maintenance
3. Rehabilitation and Replacement
4. Staff Training and Certification
5. Equipment And Replacement Parts Inventories, Including Critical Replacement Parts

4.1 Collection System Maps and Information



The WWC Division maintains an up-to-date electronic map of the wastewater collection system as required by Section D.13(iv)(a) of the Order. The City uses ESRI GIS software to map all utility-related data. The GIS map platform, referred to as Roseville GeoViewer, shows all gravity main segments with the direction of flow, manhole information, pumping facilities, pressure pipes, and valves. In addition, the GeoViewer allows users to turn on/off different layers and base maps to display the information they need. Additional map layers available in GeoViewer include:

- Hot Spot Locations
- CIPP Lined Mainline Segments
- Food Service Establishments and Grease Removal Devices
- Waterways
- Roadways

- City Boundaries
- Stormwater System

Figure 5 shows the GIS map system, and how it incorporates each of the sewer shed basins within the City of Roseville's jurisdictional boundaries.

Figure 5 – Wastewater Grid Map

4.1.1 Map Update Policy

This policy aims to provide uniformity in identifying, verifying, documenting, and tracking the changes to the sewer mapping system. In addition, this document will describe the process in which the mapping system shall be updated.

A significant effort is placed upon maintaining a very complete, accurate, and up-to-date wastewater collection map which is an essential component for the proper operation and maintenance of a wastewater collection system. Maps are updated as new sub-divisions are accepted or when field crews repair, rehabilitate or replace components of the system that require updating the maps. A mapping update policy has been developed to address procedures that ensure mapping updates or revisions are correct and completed in GIS.

CCTV crews identify discrepancies between existing system maps and real time field data. The operator shall note the discrepancies and submit changes to the WWC Supervisor when differences are identified.
Construction and Maintenance crews identify any new infrastructure added to the system. Information required for CMMS Map Change will be directed to the WWC Supervisor. The information required for Mains, Laterals, and SMH's are:

- Mains - Grid map area, the distance between SMH's and pipe size, pipe material
- Laterals –Grid map area, C/O location, length, depth, pipe size, material, and depth.
- SMH – Grid map area, depth, barrel diameter, access cover size and material, number of and pipe size of inlets and outlets, barrel lining/coating, drops Y/N.

The Supervisor will create a work order in Maximo listing the Classification as "Map Change." Then select "Log" and "Add Row" to add a description of the asset that needs to be added/changed. In the Log section of the work order, the Supervisor will list all the details gathered from the field and attach a map if required. Do not change the status of the work order in Maximo CMMS.
The GIS group automatically receives all map change requests. Once all map changes are updated, the Supervisor will receive an email informing them of the completed work order, at which time the GIS group closes the work order.

4.2 Operation and Maintenance

The WWC Division's O&M program focuses on eliminating sewer backups and overflows, increasing the lifespan of the infrastructure, and bringing uninterrupted service to the residents of Roseville. WWC division provides service to 146,875 customers. Within the 43.05 square miles of Roseville, the City inspects and maintains 17 lift stations, approximately 578 miles of sewer mains ranging from 6- to 84- inch diameter, and 293 miles of lower laterals. **Table 3** below represents a few performance indicators the WWC division tracks and measures their performance against.

Table 3 – Operation and Maintenance Activities

	FY 17-18	FY 18-19	FY 19-20	FY 20-21	FY 21-22	FY 22-23	FY 23-24
Total Miles of Pipe Cleaned	**283.12**	**226.1**	**235.9**	**296.14**	**288.73**	**301.36**	**295.57**
Total Miles of Pipe CCTV Inspected	**64.1**	**119.9**	**94.65**	**94.65**	**50.05**	**51.59**	**53.53**
Number of SSOs Caused by Hot Spots	**0**	**0**	**0**	**0**	**0**	**1**	**1**
Miles of Pipe Rehabilitated or Repaired	**1.49**	**.5**	**.54**	**3.4**	**3.83**	**.29**	**4.43**
Total Number of Spills Main and Lateral	**25**	**31**	**32**	**51**	**32**	**30**	**27**

4.2.1 Preventative Maintenance Program

The WWC Division of the Environmental Utilities Department is responsible for the City's sewer system and implements preventative and corrective maintenance approaches to operate and maintain the system efficiently. The division's PM program involves cleaning sewers on a recurring schedule, including regular CCTV inspection to determine the efficiency of those PM activities. The GIS system divides the city into grids, enabling targeted PM scheduling for an individual grid based on history, CCTV inspection, and infrastructure's age. The WWC division schedules cleaning as often as every three months or up to ten years, with the age and condition of the pipe being key factors. The scheduled maintenance projects that are identified in Maximo are included in ***Appendix 4-1.***

Corrective maintenance projects and work orders are a concerted effort utilizing the PM and CCTV inspection programs. Information gathered during routine cleaning, repair work and inspection, generates the development of repair and replacement work orders. The following paragraphs describe the City's current operation and maintenance procedures for maintaining the wastewater collection system.

4.2.1.1 PM Cleaning Program

The WWC Division is equipped with three combination sewer cleaners to keep the sewer system operating efficiently and minimize line stoppages and calls for service. Sewer cleaning using hydraulic or mechanical methods performed on a routine basis helps remove accumulated debris in the pipe such as sand, silt, grease, roots, and rocks. Scheduled maintenance projects have been developed for each map grid based on historical data and field crew input.

4.2.1.2 Hot Spot Cleaning

In addition to scheduled maintenance, the WWC division aggressively cleans identified problem areas, known as hot spots. This list of hot spots has been compiled based on historical data, field crew observations, and CCTV condition assessments. These mainline segments tend to have more frequent backups due to sluggish flows, poor grade, and sags, The frequency of Hot Spot cleaning ranges from 1-6 months, depending on history and CCTV inspection data. The WWC division strives to reduce and eliminate these hot spot areas during CIP projects or rehabilitation projects performed by City crews. Currently, the WWC division has 276 segments identified as Hot Spots.

4.2.1.3 Electroscan Inspection

To identify and quantify locations of I&I entering the sewer system, the WWC division invested in Electroscan Technology, adding the equipment to a newer CCTV inspection truck. Using Electroscan, a probe is pulled through the mainline, and electricity is measured and used to identify any defect where the pipe may leak. This enables crews to pinpoint CCTV inspection of the pipe section before scheduling repair work to correct the deficiency. Electroscan has also proved valuable as a QA/QC tool for accepting Cured-In Place-Pipe rehabilitation projects. The city performed pre-post Electroscan inspections on sewer mains rehabilitated with CIPP technology. This pilot study proved the effectiveness of the Electroscan Technology in locating defects CCTV inspection didn't identify.

4.2.1.4 CCTV Inspection Program

The WWC Division operates three CCTV vans to inspect the wastewater collection system. CCTV operators utilize NASSCO's PACP coding format when inspecting sewer mains and laterals. All observations are coded and captured in the Granite Net Software system and are archived in a database for access. CCTV inspection crews also perform continual condition assessment inspections on existing infrastructure. For example, CCTV crews inspect mainline segments and lower laterals, looking for deficiencies to minimize problems within the collection system. In addition, sewer inspections identify unwanted connections and sources of I&I into the wastewater system. Finally, CCTV crews inspect new subdivisions or commercial projects before being accepted into the city and the time of warranty acceptance. These inspections are crucial to receiving infrastructure installed to City design and construction standards. **Figure 6** includes a sample CCTV report from GraniteNet inspection software.

4.2.1.5 Root Control Program

The WWC Division has an effective chemical root control program, using Vaporooter products to limit or eliminate root growth in the City-owned portion of the lower lateral. In addition, the WWC division has two qualified applicators licenses (QAL) that allow the division to chemically treat laterals for a more effective root control program rather than contracting out for this service. This program has dramatically reduced the division's exposure to back injuries resulting from loading and unloading a gas-powered eel from the truck each time. It also lessens the element of crush injuries and trip and fall hazards from eel rods across the ground. In addition, chemical root control has successfully reduced the maintenance time per lateral, which is evident in the reduction of lower lateral backups and overflows.

4.2.1.6 Lift Station Inspection and Maintenance

The city currently has 17 neighborhood lift stations throughout its service area. All 17 stations are equipped with a duplex or triplex pumping system, with the lead/lag pump cycled based on pumping hours. Power outages happen very infrequently. However, all new lift stations and four of the currently active seventeen lift stations are equipped with a 4-hour emergency overflow storage basin. WWC crews inspect the stations monthly, cycle pumps through a pull-down sequence, test floats for operation, and record the condition and any deficiencies at the station. In addition, all Lift Stations are equipped with a SCADA system, which the WWTP operators monitor 24 hours per day. Besides inspections, City crews perform wet-well cleaning and de-ragging of pumps every six months to eliminate pump failures and potential odor complaints.

4.2.1.7 Easement Maintenance Program

To enhance access to hard-to-reach areas while permanent easement access solutions are developed, the City has acquired a sewer easement machine, which extends the capabilities of its current hydro-vac equipment. Additionally, the City owns and operates essential equipment, including a flail mower and box scraper attachments for its skip loader, to support easement maintenance. Once fully developed, the Easement Maintenance Program will include scheduled inspections and maintenance, vegetation management, including the use of chemical weed control to ensure unobstructed access and debris removal to ensure clear paths for crews and equipment. Regular inspections will help identify issues such as encroachments, erosion, or obstructions that could impact sewer lines or manholes, while vegetation management will focus on trimming or removing trees and plants that may damage infrastructure or hinder maintenance activities.

4.2.2 Corrective Maintenance Program

WWC construction crews perform all repair work to the existing infrastructure. Work orders and projects are developed from information found during maintenance activities, inspections based on calls for service and condition assessment inspection findings. The Corrective Maintenance programs are defined below.

4.2.3 Infrastructure Repair

The WWC Division performs routine, emergency, and complex repairs, and replacements to its existing infrastructure. This work includes sewer main installation and repair, sewer manhole installation, and lateral repair and replacements. As a result, city crews have undertaken large projects, installing new mainline segments that have eliminated hot spots, replaced aging infrastructure, and upsized mains to provide additional system capacity. In addition, the WWC Construction crew has performed contractor caliber work at the City's Regional Wastewater Treatment Plant at significant cost savings for the city.

4.2.3.1 Infill Projects

Depending on their schedule and workload, the WWC division construction crew holds the first choice for any proposed connection to existing infrastructure. If city crews are busy, contractors will be allowed to perform the work under the direction of a city inspector. However, if city crews complete the work, the contractor will schedule the work through the WWC Supervisor. City crews will complete the work on a time and material basis for the contractor.

4.2.3.2 CIPP Lateral Lining

The vast majority of the city's spills have occurred in the lower lateral, caused by breaks in the VCP and root intrusion. As a result, the city invested in the trenchless technology Cured in Place Pipe (CIPP), purchasing an LMK lateral lining trailer. Lateral lining through an existing cleanout makes it possible to repair and reinstate the pipe integrity without disturbing landscape, sidewalks, roadways and with minimal disruption of service to the resident. CIPP essentially creates a pipe
within a pipe and eliminates further root intrusion and sewer overflows. During condition assessment, lower laterals are CCTV inspected, and work orders are created for those identified as viable for CIPP lining. These work orders are then prioritized based on history and the number of calls for service.

4.2.3.3 Cleanout Installation Program

The WWC Division invests many resources in preventing backups that potentially become spills. Since the City owns the lower portion of the lateral, access to the lateral through a cleanout is imperative in assessing its condition. The WWC Division has identified homes and businesses without a city cleanout and developed projects to install cleanouts at each service location. One installed, the lower lateral is inspected and if necessary, additional work orders for maintenance or repair are created. Currently, the city installs over 100 cleanouts per year on this project.

4.2.3.4 Wet Weather Protocol

The City of Roseville Wastewater Division has prepared the sewer infrastructure in off-site areas and creek crossings to withstand flooding during severe rain events. The division has identified and grouped all sewer manholes along creeks into an Off-Site Sewer Manhole Inspection project. All manholes within the project have concrete collars poured to deflect any floating debris should creek levels leave their banks. In addition, wastewater crews have secured the manholes with either bolt-down covers or drilled and bolted tabs to ensure the covers from moving. Additionally, the division has installed all creek crossings per the City standard detail SS-9, installed on 8" I-beams driven a minimum of 30' into bedrock. Ductile iron pipe crossings are then attached with ½" x 3" wide straps welded to ½" thick plate.

Due to the extensive preparation of the system, the wastewater division is confident during a significant rain event, the system will be undamaged. However, after creek levels recede, the wastewater division visually inspects all infrastructure to ensure no damage has occurred. If Wastewater crews identify any areas of concern, repairs are made quickly (Given a higher priority) to prepare for future rain and flooding events.

Before every significant rain event, the management staff identifies any areas of concern within the system and will establish a schedule for additional inspection should the need arise. In an emergency, equipment and personnel are readily available to assist the on-call service worker should the need arise.

4.2.3.5 Rehabilitation and Replacement

Over the past fifteen years, experience has shown that identifying and prioritizing areas and sewer segments for assessment and rehabilitation is complex. It requires the availability of tremendous amounts of data, expertise in applying PACP coding, and professional judgment. During this time, the WWC Division has significantly advanced its knowledge of the collection system and its sewer assessment and rehabilitation approach. The City has recognized that CCTV inspection is the best method for identifying and prioritizing problematic areas. As such, the City continuously inspects pipelines and utilizes NASSCO's PACP coding standard to develop a list of assets that need rehabilitation. When defects are identified, the City evaluates the risk of failure and assigns a priority ranking to each asset.

Prioritizing those assets relies on several factors, including:

- Severity and extent of the defects (PACP Score).
- Maintenance records and SSO occurrences.
- Hydraulic capacity needs and projection.
- The estimated remaining useful life of the infrastructure.

This detail-oriented condition assessment approach enables the division to plan and design CIP projects to rehabilitate sewer infrastructure in a planned and organized manner. The supervisor will review the maintenance history of the main, any spill history and determine if the segment should be rehabilitated or continue established preventative maintenance. The main will be added an asset group already created in Maximo CMMS if conditions warrant rehabilitation. Based on current condition, history of calls, and field crew observations, the assets are then prioritized for rehabilitation.

Once the asset group is established, the WWC Superintendent will meet with EU Engineering to review the data and create a CIP project for the upcoming fiscal year, based on priorities and estimated cost. This process ensures the projects will be completed timely, reducing the potential occurrence of an SSO.

4.3 Training and Certification

One challenge when defining a training program is an influx of new employees. Entry-level employees with no training are a potential safety liability in the wastewater field. Training for new hires is predominantly on-the-job training, with classroom and online training finishing the remaining required training. As soon as available, new employees are scheduled for Confined Space Entry, Traffic Control &Flagging, and Excavation and Trench Shoring training, the division's most significant safety liabilities.

4.3.1 New Hires

On their first day, a new employee will be issued a task booklet, which defines the necessary skills and training for their position. The new hire and Supervisor will go through the book, discuss how the employee will receive training, and receive sign-off on the tasks. The booklet covers all areas involving the wastewater collection system and is an aid in developing qualified, knowledgeable, and capable employees. When the employee becomes proficient in a task, the SR Utility Maintenance Worker or the crew leader signs and dates the book, verifying they have observed the employee satisfactorily complete the task. The training defined in the task booklet is provided through various methods, mainly on-the-job training, and begins the first day on the job. Finally, at the end of the probationary period, new hires are put through a series of activities to demonstrate their proficiency in all skills learned.

4.3.2 Training and Tracking

Safety training constitutes a significant portion of the training received each year and tracking individual completion of training can be insurmountable. The WWC Division utilizes a computer-based software, Safety Plus Web (SPW), to monitor and track each employee's level of completion. Supervisors can query individual employee training records or the entire division, to see which courses need completion. In addition, SPW provides Competency-Based Training (CBT), requiring employees to pass a test at the end of each presentation, demonstrating their understanding of the training material.

Standard Operating Procedures (SOPs) have been developed for all equipment and procedures within the division to train new employees and provide a refresher for veteran employees. These SOPs are reviewed annually during a safety meeting and revised should there be a process change. Therefore, SOP development and training is an ongoing process.

The WWC division holds weekly safety meetings where supervisors or subject matter experts present safety topics specific to the wastewater collection field. These meetings are interactive with the crews and presenters and are great learning opportunities. In addition, the training course is added to SPW, allowing employees to fulfill the training online if they are absent.

Finally, as new training requirements are developed, they are implemented into SPW to ensure all employees receive the required training throughout the year. **Table 4** lists the required training specific for the WWC division.

Table 4 – Wastewater Collection Required Training

Training Title	Frequency	Delivery
Asbestos Cement Pipe Training Initial and Refresher	Initial – 1X Refresher – Annual	Outside Trainer
Back Safety	Annual	CBT or Tailgate
Backhoe Operator Certification	Refresher – 3 Yrs.	CBT, Classroom, Hands-On
Bloodborne Pathogens Training	Annual	CBT, Classroom
Confined Space Entry-Permit Required	Annual	Outside Trainer CBT, Classroom, Hands-On
Crystalline Silica Standard	Annual	CBT, Classroom
Defensive Driving	Annual	CBT, Classroom
Dry Creek Emergency Action Plan	Annual	CBT, Classroom
Excavation, Trenching and Shoring	Initial Refresher – Annual	Outside Trainer-Initial, CBT, Classroom
Fall Protection Plan Initial and Refresher	Initial – 1X Refresher – 3 Yrs.	CBT, Classroom
Fire Extinguisher Training	Initial – 1X Refresher- Annual	CBT, Classroom
First Aid, AED and CPR Training	Initial Renewal -Annual	Outside Trainer, Classroom
Gas Detector Training	Annual	Outside Trainer, CBT, Classroom
Hazard Communication	Initial Annual Refresher	CBT, Classroom
Hearing Conservation	Annual	CBT, Classroom
Heat Illness Prevention	Annual	CBT, Classroom
Injury and Illness Prevention Plan	Annual	CBT, Classroom
Lock Out Tag Out	Initial	CBT, Classroom
Personal Protective Equipment	Initial	CBT, Classroom
Respiratory Protection Plan	Annual	CBT, Classroom
Spill Emergency Response (SERP)	Annual	CBT, Classroom
Sewer System Management Plan and CIWQS Requirements	Annual	CBT, Classroom
Traffic Control and Flagging	1X Refresher – 3 Yrs.	Outside Trainer
Underground Utility Locating	Annual	CBT, Classroom, Outside Trainer
Violence in the Workplace	Annual	CBT, Classroom

4.3.3 Certification

The CWEA Technical Certification Program provides certification in various wastewater disciplines to promote the knowledge and skills of wastewater professionals. The City requires employees to take and pass the Collection System Operator Grade I test to be eligible for promotion to the Journey Level. The test for the required CWEA certification ensures that employees who hold this certification possess the knowledge, skills, and abilities to perform the collection system operator duties skillfully. In addition, to renew the certificate, the employee must complete 12 hours of continuing education training every two years. Information on CWEA certification can be found on the CWEA Homepage

4.4 Equipment and Critical Spare Parts Inventory

The WWC division owns an assortment of maintenance equipment and vehicles equipped both for routine maintenance and emergency response. This equipment is maintained by the Vehicle Maintenance Division of Central Services. **Table 5** lists the maintenance equipment the WWC division currently owns.

Table 5 – WWC Equipment List

Qty	Equipment	Purpose
3	Mainline and Lateral CCTV Inspection Vans	Inspection
3	Combination Hydro-Jetters	PM, Emergency Response
1	Chain Flail Cutter 8″-20″ diameter cleaning	PM, Emergency Response
1	LMK Lateral Lining Trailer	Repair
2	3 Axle Dump Truck	Emergency Response, Repair
2	Caterpillar 430 Backhoe Loader	Emergency Response, Repair
1	John Deere 210 Skip Loader	PM, Emergency Response, Repair
1	Caterpillar 304 Excavator	Emergency Response, Repair
6	Ford F-550 Crew Truck w/ Service Body; Fully equipped	PM, Emergency Response, Repair
1	Emergency Response Trailer - Trailer includes 1ea. - 2″ centrifugal pump, 1 ea.- 2″ submersible pump, 20′ of suction hose and 200′ of discharge hose. Equipped with pipe plugs 4″-15″, dry sweep, air compressor, generator, spill berms and required PPE.	Emergency Response, Repair
1	8-inch Trailer mounted solids handling pump, cam lock	Emergency Response, Repair
1	6-inch Trailer mounted trash pump, cam lock fittings	Emergency Response, Repair
1	4-inch Trailer mounted trash pump, cam lock fittings	Emergency Response, Repair
60′	8-inch suction hose, cam lock fittings	Emergency Response, Repair
500′	8-inch discharge hose, cam lock fittings	Emergency Response, Repair
165′	6-inch suction hose, cam lock fittings	Emergency Response, Repair
400′	6-inch discharge hose, cam lock fittings	Emergency Response, Repair
40′	4-inch suction hose, cam lock fittings	Emergency Response, Repair
200′	4-inch discharge hose, cam lock fittings	Emergency Response, Repair
3	6′-10″ pass through air plug, cam lock fitting	Emergency Response, Repair
1	Lansas pipe plug, 24′ – 48″	Emergency Response, Repair

1	Lansas pipe plug, 26″ – 60″	Emergency Response, Repair
1	Lansas pipe plug, 42″ – 78″	Emergency Response, Repair
3	10″-16″ pass through air plug, cam lock fitting	Emergency Response, Repair
3	15″-21″ pas through air plug, cam lock fitting	Emergency Response, Repair
2	10″ pass through plug, threaded end	Emergency Response, Repair
1	10′ x 9′ aluminum shore box	Emergency Response, Repair
2	10′ x 4′ aluminum shore box	Emergency Response, Repair
2	End Shores 24″ to 42″	Emergency Response, Repair
5	22″-36″ Speed Shore 5′ length	Emergency Response, Repair
4	28″-45″ Speed Shore 7′ length	Emergency Response, Repair
6	22″-36″ Speed Shore 7′ length	Emergency Response, Repair
6	48″ x 96″ Fin-form Plywood	Emergency Response, Repair

4.5 Critical Spare Parts

Wastewater Collection is a division of the Environmental Utilities Department, which encompasses Regional Wastewater Treatment Plants, Mechanical Maintenance, Water Distribution, Technical Services Engineering, and Solid Waste Division. The WWC Division operates, inspects and maintains the lift stations within the boundaries of the City of Roseville, however, all electrical and mechanical maintenance tasks are performed by the PM Technicians from Mechanical Maintenance Division. The Materials Technician maintains the WWC Division's inventory list and re-order levels at Dry Creek WWTP. The list of critical spare parts is in **Table 6.**

Table 6 – WWC Critical Spare Parts

5 Design and Performance Provisions

Att. D-5	Updated design criteria and construction standards and specifications, for the construction, installation, repair, and rehabilitation of existing and proposed system infrastructure components, including but not limited to pipelines, pump stations, and other system appurtenances.(b) Procedures and standards for inspection and testing of newly constructed, newly installed, repaired, and rehabilitated system pipelines, pumps, and other equipment and appurtenances.

5.1 Sanitary Sewer Design Standards

The purpose of the City Design Standards is to provide direction in the application of improvements that are to be dedicated to the public and accepted by the City for maintenance or operation and to provide for joint development of those facilities to be used by and for the protection of the public. This includes certain private works and improvements to be installed within existing City rights-of-way and easements. Whereas these Standards intend to govern all new construction, City staff shall interpret and apply the Standards in a manner that achieves their intent while encouraging and enabling the redevelopment of infill and vacant parcels, especially within the City's Redevelopment Project Area. These Standards shall apply to, regulate, and guide the preparation of traffic impact studies and the design and preparation of plans for construction of streets, highways, alleys, drainage, sewerage, traffic signals, site access, water supply facilities and related public improvements, and shall set guidelines for all private works which involve drainage, grading, trees, and related improvements. The City's sewer Design Standards are located on the City's website at Sewer Design Standards

5.1.1 Sanitary Sewer Construction Standards

The purpose of the City Construction Standards is to provide minimum standards to be applied to improvements which are to be dedicated to the public and accepted by the city for maintenance or operation and certain private works, as well as improvements to be installed within existing rights-of-way and easements. This is necessary to provide for coordinated development of required facilities to be used by and for the protection of the public. These Construction Standards shall apply to, regulate, and guide construction of streets, highways, alleys, drainage, sewerage, traffic signals, site access, water supply facilities and related public improvements, and shall set guidelines for all private works which involve drainage, grading, trees and related improvements. The City's sewer Construction Standards are located on the City's website at Sewer Construction Standards

All improvements within the City rights-of-way shall be installed in accordance with the approved improvement plans and specifications, the City of Roseville Design Standards, the City of Roseville Construction Standards, and the State of California Department of Transportation Specifications.

5.1.2 Comprehensive Response to Climate Impact

In response to the State Water Board adopted Resolution 2017-0012, titled Comprehensive Response to Climate Change, the City of Roseville Wastewater Collection Division has taken the steps to reduce its carbon footprint by requiring the use of vitrified clay pipe over PVC pipe in all sewer infrastructure projects. The natural materials, minimal processing, and durability of vitrified clay pipes make them have a lower carbon footprint compared to other types of pipes. Vitrified clay pipe, made from natural and abundant materials like clay and water, emit significantly fewer greenhouse gases during production compared to PVC, which relies on fossil fuel-based materials and energy-intensive chemical processes. The production of vitrified clay pipe, on average, results in the emission of around 250 kg of CO_2 per ton. In contrast, manufacturing the same amount of PVC pipe can produce over 1,900 kg of CO_2, which is nearly 8 times higher in emissions. Thus, the City of Roseville makes an environmentally conscious decision to require vitrified clay pipe. This choice not only decreases greenhouse gas emissions but also offers many advantages, such as remarkable durability, recyclability, and minimal environmental impact when the pipe reaches the end of its lifecycle. The City of Roseville has showed its dedication to sustainable development and climate-conscious planning by requiring the use of Vitrified Clay Pipe instead of PVC.

The City has developed a project for easement mainline condition assessment to evaluate system accessibility and identify critical areas based on condition and environmental impact in case of a blockage or spill. These areas are offsite and are subject to flooding and bank erosion, therefore the city's efforts here will prevent environmental impacts from spills should they occur. The project will provide a comprehensive understanding of the system's condition, recommend improvements for access to the offsite segments, and prioritize areas for action with a ranking system from 1 to 10, guiding the City's efforts to address the most critical issues.

5.2 Sewer System Construction and Performance Testing

Section 91-12 of the City's Sanitary Sewer Construction standards defines the criteria for testing of installed sewer improvements. Sewer mains, services, manholes and appurtenances shall be tested by the following procedures.

5.2.1 Testing Of Installed Improvements

A. Sewer Mains and Services – Public and private sewer mains and services shall be air-tested per ASTM C828 by the Contractor and the Environmental Utilities Department shall provide closed circuit TV inspection, after installation of the joint trench utility crossings and subgrade elevations have been met. Additionally, pipeline segments beneath road bases to be lime- treated shall be tested before and after the lime treatment process.
B. Air Pressure Test – Sewer mains and laterals shall be pressure tested in accordance with the National Clay Pipe Institute recommended guidelines with the following amendment:

1. The minimum test time shall be 60 seconds. The section of a sewer being tested must be pressurized to 3.5 psi, and during the test time must hold 2.5 psi or greater, or the section has failed.
2. For mains installed in an area where the water table is higher than the pipe, the test pressure shall be increased 0.5 PSI per foot of water over the pipe.
3. The test gauge shall be liquid-filled, capable of testing up to 15 PSI, and graduated to 1/10 PSI.

C. TV Inspection – TV inspection of sewer mains and services shall be performed by the Environmental Utilities Department, Wastewater Division. Costs for said inspection shall be borne by the Contractor. Preliminary inspections may be performed by outside contractors but shall not be accepted by the Environmental Utilities Department as an official record.

1. The sewer system shall be completely cleaned by an approved method prior to TV inspection. The sewer system shall be rejected if any of the following conditions exist:
    a. For main lines 12 inches and smaller - standing water or sags greater than 1⁄2 inch in depth at acceptance or greater than 1 inch at warranty.
    b. For main lines exceeding 12 inches - standing water or sags greater than 3⁄4 of an inch in depth at acceptance and greater than 1 1⁄2 inches at warranty.
    c. Standing water in services.
    d. Offset joints.
    e. Joint separations greater than 1⁄2 inch wide.
    f. Damaged pipe.

D. Inspection Criteria for Coated Ductile Iron Pipe – All ductile iron sewer will have the following additional inspection requirements:

1. The condition of the barrel section of pipe as well as 360◦ at each joint shall be recorded to a DVD or portable drive. Once completed, and the inspection demonstrates the pipe meets the City's construction standards, the contractor may proceed with the backfill of the trench. The Contractor shall provide the DVD and a map of the section inspected, to the Wastewater Collection Division for review prior to the City's acceptance inspection.
2. Upon finding any deficiency in the pipe which does not meet the design and construction standards of the City of Roseville, it is strongly encouraged that the contractor makes the necessary corrections at that time. If deficiencies aren't corrected City forces at time of acceptance CCTV will identify these deficiencies and require the contractor to dig and replace the pipe sections; there will be no exceptions.
3. The observation data on the DVD provided to the City shall include the following:
    a. City wide job number.
    b. Encroachment permit number.
    c. Project name.
    d. Location (street name)
    e. Manhole numbers (based on approved plan set or city asset numbers if applicable).
    f. Direction of inspection (upstream or downstream).
    g. Date of inspection.

4. The speed of travel shall be slow enough to inspect each pipe joint, wye connection, coating integrity, and potential sags. Camera speed should travel at a rate of no more than 30 feet per minute. The camera speed shall be steady and slow enough to record features and defects.

E. Manholes – Sewer manholes shall pass a vacuum test consisting of the following criteria and procedures:

1. The test shall be performed after assembly of the manhole and installation of the pipe entering or exiting the manhole, but prior to backfilling. The Contractor shall perform the test and supply all test equipment. The Development Services Inspector shall witness the test results.
2. Lift holes shall be filled with non-shrink grout prior to testing.
3. Pipe entering and exiting the manhole shall be plugged. The plug shall be places on the flex joint outside of the manhole base. Securely brace the plugs to prevent them from being drawn into the manhole. Unused channels shall be permanently plugged with a plastic or clay stopper.
4. A vacuum of 10 inches of mercury shall be drawn to start the test. The amount of time required for the vacuum to drop to 9 inches shall be measured. The manhole will pass the test if the amount of elapsed time is greater than 60 seconds for a 48-inch manhole, 75 seconds for a 60-inch manhole, 90 seconds for a 72-inch manhole and 120 seconds for an 84-inch manhole. A liquid-filled vacuum gauge shall be used for testing. All detectable leaks shall be repaired with non- shrink grout while the vacuum is drawn. No mortar shall be applied to the inside of the manhole until the vacuum test has passed.
5. If the manhole fails the initial test, necessary repairs shall be made with a non-shrink grout while the vacuum is still being drawn. Retesting shall proceed until elapsed times are satisfactory.
6. After passing the vacuum test, all joints shall then be mortared, inside and out. Outside mortared joints shall be allowed to dry 24 hours or as approved by the Development Services Inspector before backfilling.
7. If damage to the manhole is evident any time during the construction, the Development Services Inspector may require repairs to be made on the manhole which will require a new vacuum test prior to acceptance.
8. Topside Improvements – When all water, recycled water and sewer infrastructures have passed air, vacuum, pressure, and continuity test as well as CCTV inspection the Development Services Inspector will email a notification to internal departments indicating that the project is ready for road bases and top side improvements only. This does not constitute approval for use of the infrastructure.
9. Tying Into the City System – A tie-in procedure shall be submitted and approved by the Environmental Utilities Department prior to the proposed work. The contractor shall allow for up to 7 days for review of the procedures by the Environmental Utilities Department. The sewer system shall be tied into the City system within 10 working days upon completing and passing all the testing procedures. Tie-ins shall be conducted as specified in Section 91- 2 of the Construction Standards.

5.2.2 Punchlist Process

After the sewer manholes have been raised and finished to grade, the sewer system shall have a final ball and flush in the presence of the Development Services Inspector. The system shall then have a final TV inspection to ensure the entire sewer system is intact for warranty. Final ball and flush can be done by city forces on a time and material basis at the request of the contractor. When all improvements are complete, the contractor shall provide a written request for a punch list inspection of the improvements. With the assistance and presence of the Contractor, the wastewater facilities punch list shall be generated by the Development Services Inspector and Wastewater Collection Division.

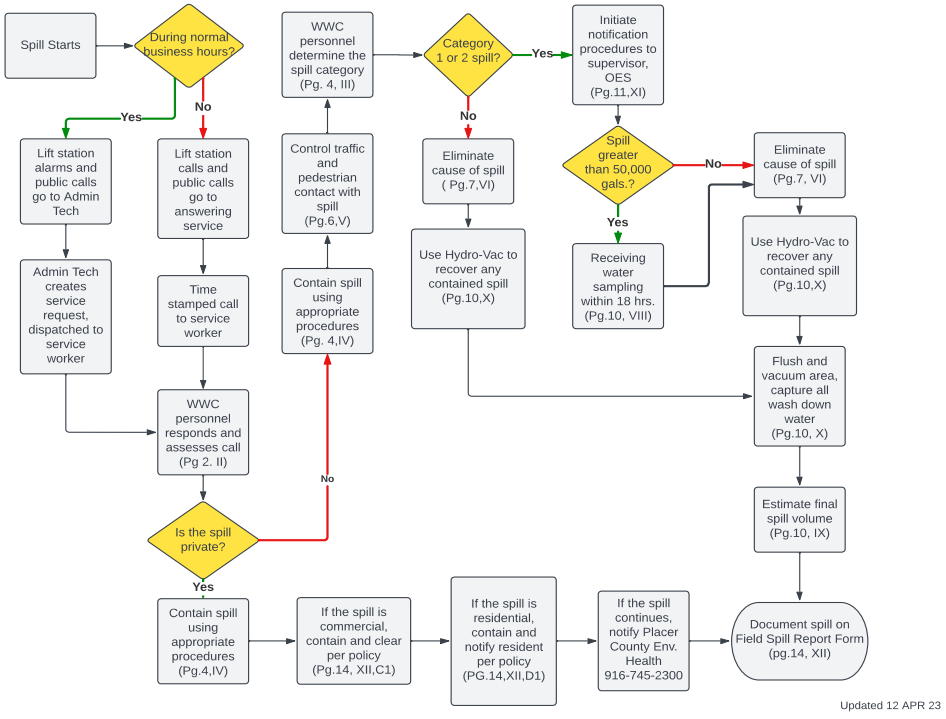
5.2.3 Repairing Installed Improvements

Sewer mains, services, manholes and appurtenances shall be repaired per these Construction Standards and by the following procedures.

A. Repairing Vitrified Clay Pipe

1. Damaged pipe shall be exposed and replaced in-kind by "bridging" the new pipe into place. Coupling devices shall not be used.
2. Sagging or misaligned pipe shall be exposed and corrected in place if possible. If the pipe is defective, then a new pipe shall be bridged in place.
3. After the correction has been completed, the excavation shall be backfilled and compacted to grade as specified. The repairs shall then be retested per section 91-12 of these Construction Standards.

THIS PAGE LEFT INTENTIONALLY BLANK



6 Spill Emergency Response Plan

Att. D-6 The Plan must include an up to date Spill Emergency Response Plan to ensure prompt detection and response to spills to reduce spill volumes and collect information for prevention of future spills. The Spill Emergency Response Plan must include procedures to: (1) Notify primary responders, appropriate local officials, and appropriate regulatory agencies of a spill in a timely manner; (2) Notify other potentially affected entities (for example, health agencies, water suppliers, etc.) of spills that potentially affect public health or reach waters of the State; (3) Comply with the notification, monitoring and reporting requirements of this General Order, State law and regulations, and applicable Regional Water Board Orders; (4) Ensure that appropriate staff and contractors implement the Spill Emergency Response Plan and are appropriately trained; (5) Address emergency system operations, traffic control and other necessary response activities; (6) Contain a spill and prevent/minimize discharge to waters of the State or any drainage conveyance system; (7) Minimize and remediate public health impacts and adverse impacts on beneficial uses of waters of the State; (8) Remove sewage from the drainage conveyance system; (9) Clean the spill area and drainage conveyance system in a manner that does not inadvertently impact beneficial uses in the receiving waters; (10) Implement technologies, practices, equipment, and interagency coordination to expedite spill containment and recovery; (11) Implement pre-planned coordination and collaboration with storm drain agencies and other utility agencies/departments prior, during, and after a spill event; (12) Conduct post-spill assessments of spill response activities; (13) Document and report spill events as required in this General Order; and (14) Annually, review and assess effectiveness of the Spill Emergency Response Plan, and update the Plan as needed.

6.1 Notification Procedures

The WWC division maintains an Overflow Emergency Response Plan that covers the wastewater system and Lift Station response and procedures. Page numbers included in the flowchart reference the Spill Emergency Response Plan, not the SSMP. **Figure 7** summarizes the response procedures. Refer to Appendix 6 for the complete *Spill Emergency Response Plan*.

Figure 7 – SERP Flowchart

The WWC division strives to operate, manage, and maintain all parts of the sanitary sewer system to prevent spills and mitigate the impacts quickly and efficiently should an spill occur. The On-Call emergency vehicle contains a three-ring binder that includes the division's spill emergency response manual, the response plan, chain of communication, and notification procedures. In addition, the truck is equipped with the necessary tools and equipment to control and contain overflows and clear lower lateral blockages. The truck is outfitted with pneumatic plugs, rubber berms, and dry sweep, all of which are effective means of containment. **Table 7** summarizes the division's notification procedures.

Table 7 – Notification Guide

If a Spill	And Affects	Notify
..that discharges in or on waters of the State or discharges to a location where it will probably be discharged to waters of the State, the enrollee shall notify the Office of Emergency Services (OES) and obtain a control number as soon as possible, but no later than 2 hours after becoming aware of the discharge; and notification can be provided without substantially impeding cleanup or emergency measures	Sacramento River A structure that requires cleanup	• WWC Supervisor- Cody Wilbanks Office 916-746-1889 Cell 916-472-1488 • WWC Supervisor- Shane Rodgers Office 916-746-1894 Cell 916-223-7711 • WWC Supervisor – Kevin Ryan Office 916-746-1895 Cell 916-223-7537 • WWC Superintendent – Dan Pruden Office 916-746-1891 Cell 916-580-5600 **The individuals above are responsible for notifying** • OES 1-800-852-7550; Obtain a control number for spill report form **Water Quality Sampling- Frank Dittrich 916-746-1882** **During normal business hours only; after hours, call** ▪ **Cal Test 707-258-4000** ▪ **California Lab Services 1-800-638-7301** ▪ **Excel Chem 916-938-0519** **Additional Numbers for Reference** ▪ **Placer County Environmental Health** 1-530-745-2300 Main Line 1-530-745-2306 After Hours Supervisor • **California Department of Fish and Wildlife** 916-445-0045 Option #2 • **Sacramento River Water Treatment Plant** 916-808-4961 916-264-5011 • **City of Roseville-Risk Management** 916-774-5420 or 916-774-5202 ○ After hours, Contact Risk Manager, Virginia Bolmsn at 916-501-2073 ○ If no answer, first responder can authorize clean-up only from the restoration companies listed in the SERP

6.2 Emergency Response Procedures

The City of Roseville developed this Spill Emergency Response. This plan ensures that all spill responses are conducted efficiently and effectively while meeting all regulatory requirements of the General Order.
The Division has provided all employees with a binder containing the SERP, estimation tables and strategies for notifying primary responders, local officials and regulatory agencies.

6.2.1 Goals of SERP

This SERP aims to ensure that all wastewater collection personnel follow the established guidelines in cleaning up and decontaminating spills within the City's collection system service area. The City's goals concerning spill response are:

A. Respond quickly to minimize the extent of the spill;
    1. The division's goal is a 20-minute response time during business hours and 40 minutes after hours.
B. Contain the spill to the extent feasible;
C. Eliminate the cause of the spill;
D. Eliminate public contact with the spill;
E. Mitigate the impact of the spill; and
F. Comply with the RWQCB Monitoring and Reporting requirements

6.2.2 Respond and Assess

Calls for service come through either the office landline or a 24-hour answering service. Calls for service to the Administrative Technician are documented in a service request in the City's CMMS. In turn, the Technician will dispatch the call with all information to the on-call service worker via cellular phone. After business hours, the City's contracted answering service is provided a script of questions used to collect information from the caller. Once gathered, they also dispatch the call information via cellular phone to the on-call service worker. After the call, the answering service time stamps the call, and an email is sent to the division management and service call address with all pertinent information regarding the call. Additionally, the wastewater treatment plant staff monitors lift station SCADA alarms. Operators notify the on-call service worker via cellular phone if they receive an alarm at any of the City's lift stations.
Assessment starts with the phone call to the customer. Upon contact with the resident, request that the resident stop all water use, then begin gathering as much relevant information as possible such as:

A. Description of problem
B. Specific location if a spill has occurred (e.g.,. manhole in the street, front or back of the property, cleanout box)
C. The approximate time the spill was noticed helps tremendously in determining the start time of the spill.

D. Any other observations from the caller (e.g., currently spilling, odor, duration of the spill, slow drains, currently spilling, water use in home)
E. If the service worker believes an active spill is occurring, they will mobilize a hydro-vac immediately to the location.
F. The wastewater crewmember arriving first at the scene is the ***First Responder***. Upon arrival, the first Responder will quickly assess the spill to determine the extent, spill category, and resources needed to address the spill. The ***First Responder*** is responsible for the following:
    1. Location of the spill by the address and cross street the spill appearance point (i.e., manhole, cleanout, lift station, etc.)
    2. Documenting the time the call was received, time of arrival, and determining the start and stop times of the spill. *The SSO Start Time Policy* in will aid in establishing the start and stop time for the spill.
    3. Determine the extent and the category of the spill;
        i. If the spill is a Category 1 or 2, notify the Superintendent or Supervisor immediately. Cal OES notification is required within 2 hours of becoming aware of the spill.
        ii. Did the spill cause a backup in a structure? – *The Flooded Structures Procedures* in Section 6.4 addresses the process
        iii. Did the spill enter into a drainage conveyance system?
        iv. If a potential for public exposure is present, control foot and auto traffic through the area
        v. Other concerns due to the spill
            a. Is the spill related to a street collapse?
            b. Is the spill related to recent construction work?
            c. Has the spill displaced a manhole cover creating a traffic hazard
    4. Requesting additional wastewater crews or personnel as needed;
    5. All field documentation, including photographs of the spill and completion of the Field Spill Report Form
G. If the spill is a Category 1, follow directions from RWQCB, Placer County Environmental Health, or the Department of Fish and Wildlife for posting warning signs around the contaminated area.

6.2.3 Spill Categories

Individual spill notification, monitoring and reporting must be in accordance with the following spill categories:

A. **Category 1** - any volume of sewage from or caused by a sanitary sewer system regulated under this General Order that results in a discharge to:
    1. A surface water, including a surface water body that contains no flow or volume of water.
        i. A drainage conveyance system that discharges to surface waters when the sewage is not fully captured and returned to the sewer system or disposed of properly.

ii. Any spill volume not recovered from a drainage conveyance system is considered a discharge to surface water unless the drainage conveyance system discharges to a dedicated stormwater infiltration basin or facility.

2. **Category 2** - is a spill of 1,000 gallons or greater from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.
3. **Category 3**- is a spill of equal to or greater than 50 gallons and less than 1,000 gallons from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.
4. **Category 4** - is a spill of less than 50 gallons from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

6.2.4 Spill Containment

Containment of a spill becomes increasingly difficult once the overflow reaches a drainage conveyance system or a waterway. The quicker the spill's source and extent can be identified, contained, or controlled significantly reduces the spill's impact. Upon arrival, survey the scene to determine the potential spill appearance point. There are times when responding to a spill, the source of the spill is potable water, a backyard drain, or a storm issue. Once confirmed that the spill is the sewer, mobilize the necessary personnel and equipment for assistance. During dry weather, the drainage conveyance system can store the spill, if plugged at a point downstream of the spill. Multiple techniques are identified to contain the spill depending on the circumstances, spill category, and material available. In no particular order, the list below includes possible containment options for field crews

Location	Options for Containment
Curb and Gutter	Create berm with rubber berm, dry sweep, dirt or sandbags: Utilize natural low spots or grade deviations
Lift Station	• Use Hydro-Vac to contain • Setup bypass pumping • Setup backup generation
Open Space	• Dig a trench to contain • Sandbag berm • Dirt berm
Creek	• Plug storm drain inlets and outlet pipes to creek
Storm Drain Conveyance System (Dry)	• Plug all affected storm drain inlets; plug outfall if necessary • Contain using the hydro-vac • Request additional hydro-vac support if necessary
Storm Drain Conveyance System (Wet Weather)	• Plug all affected storm drain inlets • Emergency bypass pumping • Turn off stormwater pump station if applicable
Backup in Structure	• Evacuate residents if needed • Pop cleanout cap off; If no city cleanout, attempt to locate • Pop private cleanout if available • Contain outside if overflow is relieved by finding/removing cleanout cap.

1. Containment with Hydro-Vac
   Determine a location downstream of the spill appearance point where the hydro-vac unit can be set up to capture all spilled water. Ensure no storm drain inlets are between the containment and spill appearance points. Continue vacuuming overflow until the blockage has been cleared, then proceed with the spill's cleanup. Wash all debris and spill evidence into the vacuum tube for removal and disposal at the DCWWTP.
2. Containment Using Berms and Mats

   Utilize dirt, dry sweep, a rubber berm, sandbags, or other obstructing material that is readily available to block drain inlets and ponds the spill to a naturally low area to contain and minimize the spill's impact. If possible, divert the spill to a downstream manhole unaffected by the blockage. Attempt containment by covering any affected storm drain inlets with rubber mats and securing them with sandbags, dirt, or other heavy objects to keep them in place.
3. Containment Using Pneumatic Plugs

   Plugging the affected drain inlet or multiple drain inlets with a pneumatic plug can be effective. For example, a pneumatic plug in the storm drain outfall would prevent the overflow from reaching the waterway. However, depending on the location within the City, drain inlets will vary in size, so utilizing plugs may not be the best option.

H. Backup in Structure

Advise the customer to keep family members and pets out of the spill areas to not track any contamination into non-affected areas. If necessary, evacuate affected people and pets.

1. During regular business hours, notify Risk Management at 916-774-5420 or 916-774-5202. After hours or if there is no answer at the above numbers, contact Risk Manager Virginia Bolmsn at 916-501-2073.
2. If Risk Manager or their staff cannot be reached, contact one of the approved restoration companies in the order below and authorize cleanup services only:
   i. Serv-Pro 916-632-2250
   ii. Restoration Management 800-400-5058
3. Before the restoration company or the Risk Manager arrives, hand the resident our camera and ask them to photograph the affected area. Do not enter the house, even if invited.
4. If the resident declines the cleaning services, request that they sign and date the Declination of Clean Up Services Form.

I. Overflow into Storm Drain Conveyance System (DCS)

1. Trace overflow in the DCS to the downstream endpoint using the Stormwater Map on the GIS. Plug all affected storm drain outfalls or block the creek and channels to contain the spill.

2. While tracing the system, if you determine that the spill is contained within a mainline section, plug the downstream end at a manhole to contain the spill. Many storm drain manholes are built with sumps in the base, and depending on the spill volume, these sumps may prevent the spill from continuing downstream. Note all the storm drain assets cleaned on the Field Spill Report Form.
3. If a stormwater pump station is near the spill and may be affected, contact Streets Division to turn off the pumps.

J. If the spill is a Category 1 spill, follow directions from RWQCB, Placer County Environmental Health, or the Department of Fish and Wildlife for posting warning signs around the containment area.

6.2.5 Traffic Control (WWC Personnel)

Traffic control may be needed immediately to protect the health and safety of the public and responding wastewater crews. Typically, immediate traffic control is necessary if there is a street collapse or significant undermining of the pavement section related to the blockage and sewer spill, if the manhole cover is ajar, or if the spill causes street flooding. In addition, temporary traffic control may be needed to allow responding crews to contain and clear the blockage and prevent sewer from being further dispersed by vehicular traffic.

K. Provide traffic control per Cal Trans Work Area Traffic Control Handbook (WATCH)

B. Control public contact with the spill by isolating the area with barricades, signs or traffic cones.

C. If necessary, use other departments (i.e. Police, Public Works) to ensure adequate traffic control. Contact Roseville Police/Fire Dispatch at 916-774-5123 to coordinate.

6.2.6 Correct Cause

The cause of the overflow may be located a considerable distance downstream of the spill in areas with flat terrain. During significant rain events, overflows can be caused by excessive I&I in the collection system. I&I can significantly increase the flow in a collection system and cause overflows from pipes that are only partially blocked. I&I can also directly affect the hydraulic capacity of mainlines and lift stations. Under these conditions, stopping the overflow may not be possible until the flows recede.

L. Locate the cause of the overflow

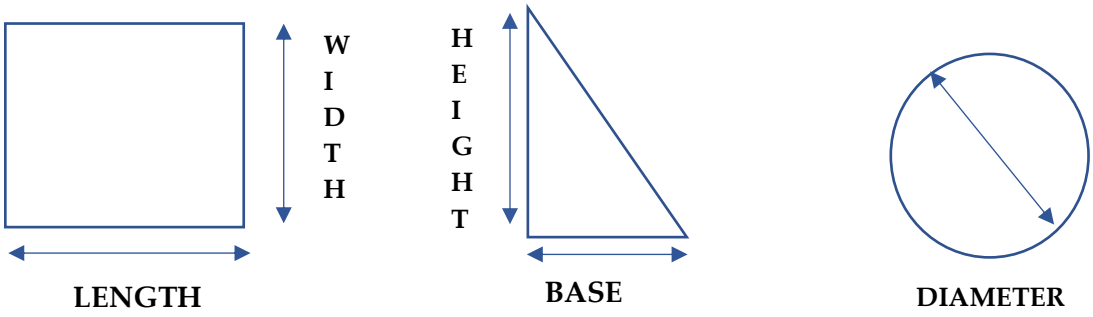
1. Sewer Main
    i. Check flow in manholes
    ii. Blockage should be between a manhole with sluggish flow or surcharging and a manhole with very little flow or completely dry
    iii. Clear the mainline blockage using a hydro-vac unit from the dry manhole. Refer to SOP WWC-002 for hydro-vac procedures. Observe the material that flows downstream after clearing the obstruction to determine the possible cause of the blockage and note it on the spill report form.
    iv. Continue to monitor manholes in the area until the surcharged manhole empties.

v. If the blockage cannot be cleared. Increase containment and request additional crews for assistance.
    a. Perform a CCTV inspection to determine the blockage
    b. Request additional hydro-vacs to contain, or initiate by-pass pumping
    c. Dig and repair the sewer main to correct pipe defect

2. Sewer Service
    i. Check flow in the city cleanout. If the riser is full of water, wait until a hydro-vac is onsite to remove or contain the water before eeling. If the cleanout is holding but not full, carefully insert the gas powered ell rod and cutting head into the service until you contact the obstruction. Inserting the eel rod quickly, can cause the service to spill. Proceed with the eeling process until the service drains, then CCTV inspect to identify the blockage details.
    ii. If the City cleanout is dry and the resident is still plugged, the stoppage is likely on the private side and is not the City's responsibility. However, it is good customer service to CCTV the service to ensure the City line is clear.
    iii. If no city cleanout exists, but the resident has a 4" private cleanout, run this private cleanout to clear the blockage. Once removed, CCTV to determine the location of the problem. Refer to Appendix D to determine if the private cleanout meets the criteria before using city equipment.
    iv. Check the upstream and downstream mains if a city or private cleanout cannot be located. If the main is running clear, notify the resident that the problem is on their side, and explain the city cleanout installation policy.
    v. If the service line ties into a dead-end run, regardless if the City cleanout is clear, clean the mainline segment with a hydro-vac.

3. Lift Station
    i. Check the alarm status inside the control panel for indication of a problem.
    ii. If no power is present:
        a. Contact Roseville Electric to verify the outage and an estimated time the power will be restored.
        b. Determine the wet well level and remaining downtime left at the station.
        c. If downtime exceeds the max allowable retention, mobilize additional wastewater crews and a hydro-vac to the station. If the power outage is extensive, request multiple hydro-vacs for assistance.
        d. Continue vacuuming the wet well until power is restored and the lift station operates in auto mode. Watch the station for an entire pump cycle before leaving.
    iii. If power is present, but the pumps aren't operating in auto, switch the controls to the hand position. If the pumps are operational in hand mode, contact the on-call EU electrician and continue running and monitoring the station in hand mode.

iv. If portable generation is required to power the station, the on-call EU Electrician must be onsite to make the connections. All control panels have an exterior plug and disconnects for portable generation connection, with each station having a specific cable. All cables are labeled and located in the EU Maintenance shop.

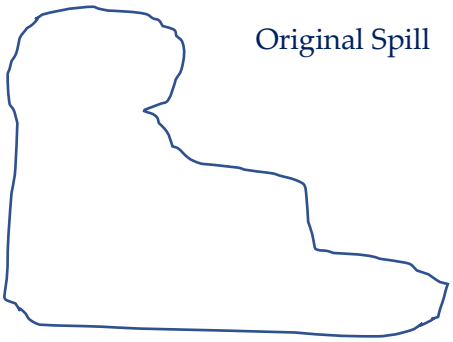


4. Force Main
   i. If the spill is from a ruptured force main, control the power using the written Energy Control Procedures (ECP), located in the door panel at the station. A qualified electrician shall perform the switching of any panel breakers.
   ii. Contain the spill from the pipe break using the containment procedures in Section IV.
   iii. Monitor and control the wet well levels using bypass pumping or hydro-vac units until the repair is completed.
   iv. If the station is equipped with dual force mains, transfer flows to the additional force main to continue normal lift station operation.

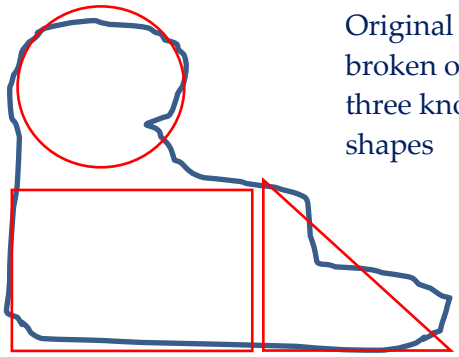
6.2.7 Final Volume Estimate (WWC Personnel)

The final overflow volume is estimated to determine if additional reporting to regulatory agencies is required and for the City of Roseville's records when reporting to CIWQS. A minimum of five (5) pictures are required for every spill response, and locations are noted on the field spill report. Place an object in the photo for contrast. The following methods are approved for determining the gallons spilled during an overflow event.

Eyeball Estimation- Estimate the overflow rate out of a clean out by estimating the time needed to fill up a known volume, such as a five-gallon bucket. Imagine the amount of water that would spill from this bucket. This method is useful on spills that occur on hard surfaces such as concrete or asphalt



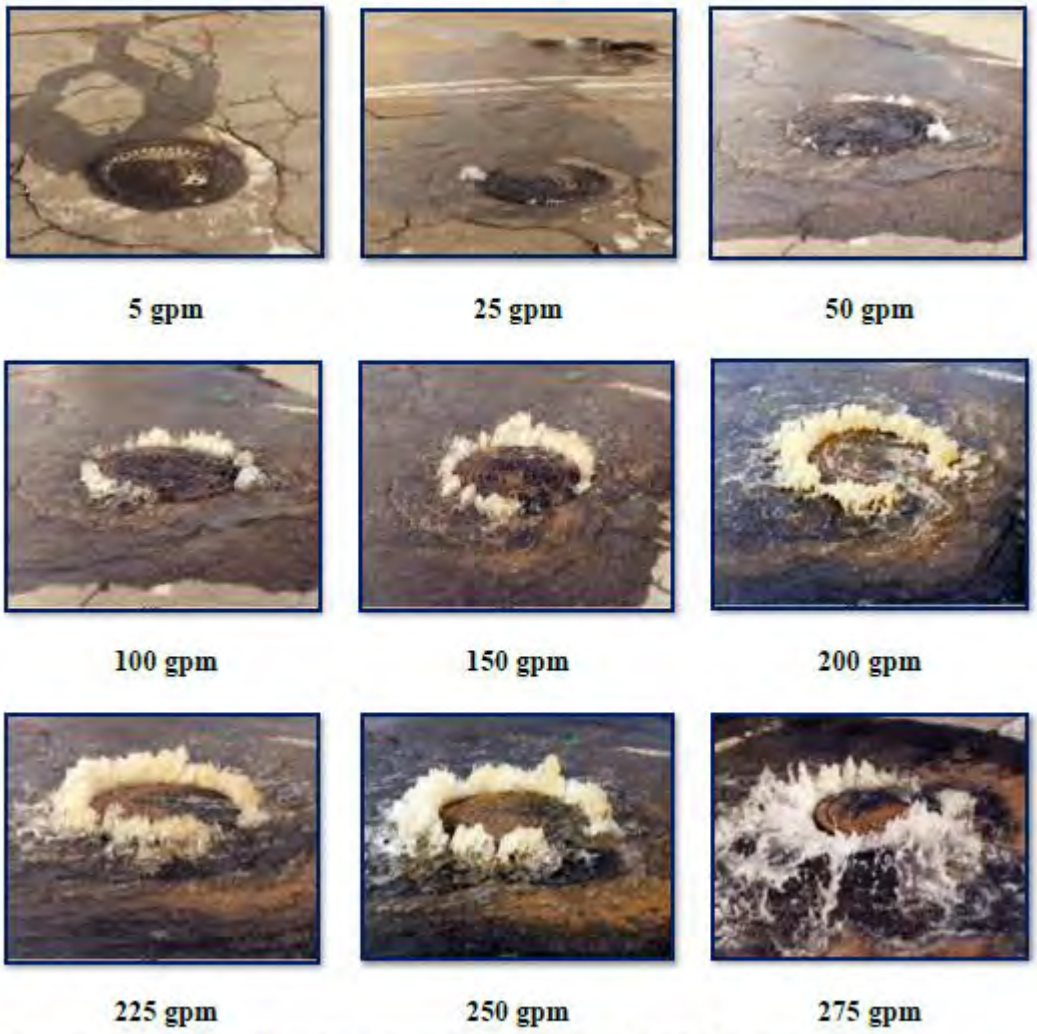
Measured Volume- The volume of most small spills that have been contained can be estimated using this method. The shape, dimensions and depth of the contained wastewater are needed. This information is used to calculate area and volume of the spills.



1. Determine the shape of the spill
2. Measure or pace off the dimensions. Measure the depth at several locations and calculate the average. Convert all dimensions to feet.
3. To calculate the area square footage, use the following:
   a. Rectangle: Length (ft.) x Width (ft.)

b. Triangle: Height (ft.) x Base (ft.) x .5
c. Circle: Diameter (ft.) x Diameter (ft.) x .785
d. Multiply the area (sq. ft.) by the depth (feet), to get the volume in cubic feet. Multiply your volume by 7.48 to convert to gallons.

Not all SSO's will conform to the shapes above. If this occurs, break the area up as much as possible into known shapes and calculate the volume in each.



Calculating large volume spills is challenging because the area and depth are difficult to measure, and chances are these spills are not fully contained. Several methods are available to determine the volume.

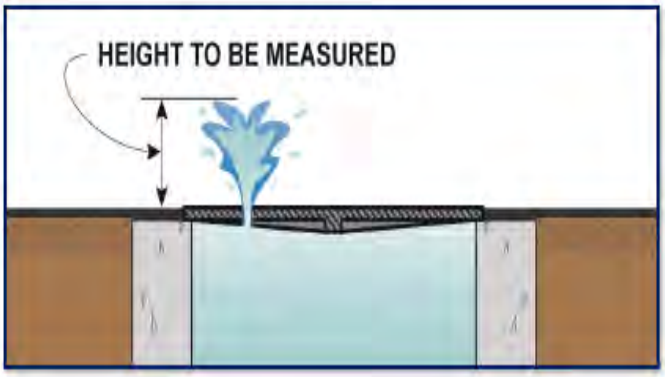
Flow Estimation Chart- The table below (Section 5 of the SSOERP binder) presents pictures with varying flowrates of sewage overflowing from a manhole. Estimate the overflow rate by comparing the overflowing manhole with the pictures shown below.

Estimating Sewer Flow Rates from Overflowing Sewer Manholes[1]

5 gpm | 25 gpm | 50 gpm

100 gpm | 150 gpm | 200 gpm

225 gpm | 250 gpm | 275 gpm



[1] Sourced from City of San Diego Metropolitan Wastewater Department "Reference Sheet for Estimating Sewer Spills from Overflowing Sewer Manholes" (April 1999).

Flow Rate and Duration- Overflow volume can be estimated by multiplying the overflow duration by the overflow rate. The overflow rate can be determined by pick hole or vent hole spill height (section 5, SSOERP binder), flow meter data, SCADA information and pump data from lift stations.

The overflow volume can be estimated with the following formula:

Volume (gal)= estimated flow rate (gpm) x duration of overflow (minutes)

The charts below represent measurement point and flow rates based off height of water column measured.

Height of Spout Above Manhole Frame, H (inches)	SSO Flow Rate, Q (gpm)	Height of Spout Above Manhole Frame, H (inches)	SSO Flow Rate, Q (gpm)
1/8	1.0	5 1/8	6.2
1/4	1.4	5 1/4	6.3
3/8	1.7	5 3/8	6.3
1/2	1.9	5 1/2	6.4
5/8	2.2	5 5/8	6.5
3/4	2.4	5 3/4	6.6
7/8	2.6	5 7/8	6.6
1	2.7	6	6.7
1 1/8	2.9	6 1/8	6.8
1 1/4	3.1	6 1/4	6.8
1 3/8	3.2	6 3/8	6.9
1 1/2	3.4	6 1/2	7.0
1 5/8	3.5	6 5/8	7.0
1 3/4	3.6	6 3/4	7.1
1 7/8	3.7	6 7/8	7.2
2	3.9	7	7.2
2 1/8	4.0	7 1/8	7.3
2 1/4	4.1	7 1/4	7.4
2 3/8	4.2	7 3/8	7.4
2 1/2	4.3	7 1/2	7.5
2 5/8	4.4	7 5/8	7.6
2 3/4	4.5	7 3/4	7.6
2 7/8	4.6	7 7/8	7.7
3	4.7	8	7.7
3 1/8	4.8	8 1/8	7.8
3 1/4	4.9	8 1/4	7.9
3 3/8	5.0	8 3/8	7.9
3 1/2	5.1	8 1/2	8.0
3 5/8	5.2	8 5/8	8.0
3 3/4	5.3	8 3/4	8.1
3 7/8	5.4	8 7/8	8.1
4	5.5	9	8.2
4 1/8	5.6	9 1/8	8.3
4 1/4	5.6	9 1/4	8.3
4 3/8	5.7	9 3/8	8.4
4 1/2	5.8	9 1/2	8.4
4 5/8	5.9	9 5/8	8.5
4 3/4	6.0	9 3/4	8.5
4 7/8	6.0	9 7/8	8.6
5	6.1	10	8.7

Unrestrained manhole cover will start to lift

Figure 1- Flow Rate Exiting MH Pick Hole

Estimated Flow EDU Chart – This method can be used for overflows from residential properties when enough information has been gathered through interviewing the resident. Be clear with your questions and explanation for the interview. Only interview residents from the household contributing to the SSO. The table below is based off our design criteria of 190 gpd and is included on the Field Spill report. It is a quick way to estimate volume from small overflows.

Figure 8 – EDU Flow Chart

Time Period	Estimated City Flow Rate Per EDU (190 gpd)				Spill	
	A	B	C	D	E	F
	Gallons Per Period	Hours Per Period	A÷B = Gallons Per Hour	C÷60 = Gallons Per Minute	Minutes Spill Was Active	D x E= Gallons Spilled Per Period
6am -Noon	75	6	12.5	.21		
Noon – 6pm	55	6	9.16	.15		
6pm - Midnight	50	6	8.33	.14		
Midnight - 6am	10	6	1.67	.03		
					Total Estimated Spill Volume	

However, if a large spill occurs with multiple homes, commercial or mixed-use involved, and there isn't sufficient information to calculate an estimate, use the City of Roseville Design Standard 9-2, Average Dry Weather Unit Flow Factors chart below. Count the units that are affecting the overflow and multiply by the flow factors on the chart below based on the land use designation.

Table 1 – Average Dry Weather Unit Flow Factors

Land Use Designation	Units	Flow Factor (gpd/unit)[1,3]
Commercial	gpd per acre	850
Heavy Industrial	gpd per acre	850
Light Industrial	gpd per acre	850
Mixed Use	gpd per acre	2,300
Public/Quasi-Public	gpd per acre	660
Schools	gpd per acre	170
Residential 1 DU	gpd per DU	190
Residential 2 DU	gpd per DU	190
Residential 3 DU	gpd per DU	190
Residential Multiple DU[2]	gpd per acre Or gpd per DU	2,040 Or 130
Open Space	gpd per acre	0
Parks> 10 Acres	gpd per acre	10
Vacant	gpd per acre	0

6.2.8 Initiate Cleanup (WWC Personnel)

Disinfection of contaminated soil or drainage ways is only performed when directed by appropriate agencies such as Placer County Environmental Health and CA Dept of Fish and Wildlife

A. Flooded building or structure

1. If building or structure is flooded due to a failure in the city's collection system, contact Risk Management or Dave Rawe after hours. Risk Management will respond and assess and notify restoration companies on contract with the city.
2. Storm Drain or Drainage Way
    i. Pump out or vacuum any ponded water present
    ii. Remove debris
    iii. Wash concrete and contain all wash water and remove
    iv. Remove contaminated soil and plants
    v. High pressure clean affected storm drains and vacuum all water
    vi. Remove all containment and finish flushing and vacuuming area
3. Street, Curb or Gutter
    i. Remove debris with Vactor
    ii. Wash pavement, curb and gutter area , and vacuum all water with Vactor
    iii. If Vactor decant pump is used, utilize decant apparatus to alleviate possibility of secondary spill and provide fall protection at open manhole.

6.2.9 Receiving Water Sampling (Industrial Waste Section)

To comply with subsection D.7(v) of the SSS WDRs, the enrollee shall develop and implement an SSO Water Quality Monitoring Program to assess impacts from SSOs to surface waters in which 50,000 gallons or greater are spilled to surface waters. The SSO Water Quality Monitoring Program, shall, at a minimum:

I. Contain protocols for water quality monitoring
II. Account for spill travel time in the surface water and scenarios where monitoring may not be possible (e.g. safety, access restrictions)
III. Require water quality analyses for ammonia and bacterial indicators to be performed by an accredited or certified laboratory.
IV. Require instruments and devices used to implement the SSO Water Quality Monitoring Program to be properly maintained and calibrated, including any records to document maintenance and calibration to ensure their continued accuracy.
V. Within 48 hours of the enrollee becoming aware of the SSO, require water quality sampling for, at a minimum, the following constituents
    a. Ammonia
    b. Appropriate Bacterial indicator(s) per the applicable Basin Plan water quality objective or Regional Board direction which may include total and fecal coliform, enterococcus, and e- coli.

6.2.10 Notification Requirements (Superintendent/Supervisor)

All overflows are required by law, to be promptly reported to regulatory agencies. The Legal Responsible Official (s) or their designee will make all notifications to regulatory agencies regarding reportable SSOs. All SSOs are tracked in the City of Roseville's CMMS.

- **A.** Prompt notification to regulatory agencies will be achieved by using the SSO Notification Guide (Tab 4)
- **B.** All information regarding the spill will be documented on the SSO Field Report Form
- **C.** Documentation and Data Tracking
    1. All SSOs are tracked with a service request module in the City of Roseville's CMMS. Completed service requests, work order requests and any overtime tags are turned into Superintendent/Supervisor for QA/QC. These are all resolved in the CMMS. Service requests for after-hours call will be generated the following business day.
    2. Follow up PM work orders are generated to CCTV inspect affected lines and recommendations from CCTV crew are reviewed by Superintendent or Supervisor. Further recommendations regarding repair, replacement, or preventative maintenance schedule adjustment are made on the System Failure Analysis Form.
    3. Field report forms are turned into Supervisor or Superintendent, who enters data into the CIWQS website. A minimum of 5 pictures is required for every SSO
- **D.** Ensure that all appropriate documentation has been completed in the CMMS.
    1. Private commercial spills, crew will provide a work order request to Supervisor documenting hours worked, equipment used and actions taken for billing purposes.
    2. Private residential spills, crew will provide a work order request to Supervisor documenting hours worked, equipment used and actions taken.

6.3 Staff and Contractor Training

To train WWC Employees on the importance of the SSOERP, Supervisors created a Powerpoint Presentation as a training resource. The interactive presentation covers the written SSOERP in a classroom setting. This setting allows employees to clarify any elements within the procedure. The annual training is followed by a competency test and classroom spill simulation. In addition, WWC employees built a spill simulator in the training yard at the DCWWTP to test employees' skills in estimating spills. If desired, supervisors can create spills from either a manhole, cleanout, or both. The water is metered and creates an accurate simulation within the confines of the WWTP.

Contractors are provided with the City's wastewater collection system policies and procedures. Per the contract, they are required to train all their employees on the City's wastewater collection system policies and procedures before performing work on the City's wastewater collection and conveyance system.

6.4 Spill Mitigation and Containment

The WWC Division has written the attached SOP for spill mitigation and containment. The plan is described throughout the SSOERP and in the Table 6-1 flowchart. Whenever a Sanitary Sewer Overflow (SSO) occurs, the highest priority is to contain the overflow and minimize the exposure to the public or the environment. This procedure will address the specific processes available to contain an SSO. Containment of an SSO becomes more difficult once the overflow reaches storm drain systems or a waterway. The quicker the source and the extent of the overflow can be identified, contained, or controlled, reduces the SSO's impact exponentially. Following the Sewer System Management Plan (SSMP) goals, quick response and containment will protect public health and safety while minimizing the environment's negative impacts.

The assessed hazards that may exist when responding to an SSO are:

- Traffic control
- Bloodborne pathogens
- Slips, trips, and falls
- Atmospheric conditions
- Pneumatic plugs
- Sprains and back injuries

Upon arrival to the location, survey the scene to determine the potential overflow location and source. There are times when called for a sewer overflow, and the source is potable water or storm drainage. Once determined, the water source is the sewer, mobilize the necessary wastewater collection personnel and equipment needed for assistance. Determine the category of the overflow, discharge points, and whether the SSO can reach Water of the State. Immediate notification to the Office of Emergency Services is required, should the overflow reach waters of the state. If the spill cannot be eliminated by controlling water flow from a residential or commercial building, more than likely, this spill is either a plugged main, structural deficiency, or an inoperable lift station. The area impacted by the spill and the potential work area shall be secured to divert vehicle traffic and pedestrians away from the area by using any combination of signs, cones, delineators, barricades, arrow boards, or caution tape. Multiple techniques are identified to contain the spill depending on the circumstances, spill category, and material available. In no order, the list below is possible containment options.

Containment Situation	Options for Containment
Curb and Gutter	• Create berm with rubber berm, dry sweep, dirt, or sandbags; Utilize natural low spots or grade deviations • Use hydro-vac to control overflow
Lift Station Failure	• Use hydro-vac to contain • Backup generator • Bypass pumping
Open Space	• Dig a trench for containment • Sandbag berm • Dirt berm
Creek	• Plug all affected storm drain inlets
Storm Drain System (Dry)	• Plug all affected storm drain inlets; plug outfall if necessary • Contain using the hydro-vac • Request additional hydro-vac support if necessary
Storm Drain System (Storm Event)	• Plug all affected storm drain inlets • Emergency bypass pumping • Turn off stormwater pump station if applicable
Building	▪ Evacuate residents if needed ▪ Pop cleanout cap off; If no city cleanout, attempt to locate ▪ Pop private cleanout if available ▪ Contain outside if overflow is relieved by locating/removing cleanout cap

Containment with Hydro-Vac

Determine a location downstream of the spill appearance point where the hydro-vac unit can be set up and capture all water, including wash down water. Ensure no storm drain inlets are between the containment point you choose and the overflow point. Continue vacuuming overflow until the blockage has been cleared. Once cleared, wash remaining spill water to the vac tube to be vacuumed up.

Containment Using Berms and Mats

Utilize dirt, rubber berm, dry sweep, or other obstructing material to block drain inlets and pond the spill to a low natural area to contain and minimize the spill's effects. If possible, divert the spill to a downstream manhole that is not affected by the blockage.

Attempt containment by covering the affected storm drain inlet with rubber mats. Secure the mat in place with sandbags, dirt, or other heavy objects to keep in place.

Containment Using Pneumatic Plugs

Plugging the affected drain inlet or multiple drain inlets with a pneumatic plug can be effective. A pneumatic plug in the storm drain outfall would prevent the overflow from reaching the waterway. However, depending on the location within the City, drain inlets will vary in size, so utilizing plugs may not be the best option.

SSOERP SSO Start Time Policy

Upon receiving call, note exact time that call received from answering service or administrative staff. This time will be used as a **base** for when the SSO started. Notify resident or business to stop using all water if possible.

A. Upon arrival, note if spill location point is or is not actively spilling. If not spilling from spill location point, but there is clear evidence of spill that requires a Vactor for cleanup effort, then document occurrence as a spill.
B. Initiate SSOERP to ensure that the SSO is contained, and the cause is corrected.
C. Photograph all affected areas, during the SSO, demonstrating containment and after cleanup. Use something in picture to gauge size of area features (i.e. tape measure, 5 gal bucket, etc) Email pictures to the Superintendent after completing necessary paperwork.
D. Provide detailed description of the SSO event, including exact times of arrival, SSO stop time, containment procedures, and names of collection personnel assisting you in the overflow.
E. The following questions should be asked of the resident or the individual reporting the potential SSO:
    1. Did you notice water coming from the cleanout at the property line or manhole in the street? If so, what was the approximate time?
    2. Were your drains running slowly at any time prior to you calling? If so, what was the approximate time?
    3. If there were neighbors outside, close to the area of the SSO, did they notice water spilling? If so, what was the approximate time?
    4. Be prepared to provide a brief summary of how you determined the start time, describing the steps you took while coming to your decision.
F. If the above questions do not produce an accurate account for the SSO start time, use the time the call was received by either the office personnel or the after-hours answering service, and subtract 15 minutes. Record this time as actual start time on the SSO Field Report Form.
G. If the evidence of the spill travels a farther distance than the logic of the 15 minutes, the field crew/responders shall try to recreate the spill the following day, using clean water.
H. In the event of an SSO from a sewer lift station, the start time will be determined using information gathered from the SCADA system.
I. SSO Stop time will be determined by either:
    1. The arrival time of the service worker if the overflow had stopped prior to their arrival.
    2. Clearing the blockage.
    3. Interview of resident or witnesses

SSOERP Flooded Structure Procedures

In the event a failure in the City's wastewater collection system causes a Sanitary Sewer Overflow in a resident's home or business, instruct them to:

1. Keep people and pets away from the affected area(s), and do not track contamination throughout non-affected areas.
2. Don't attempt to clean up the overflow. Instruct them the city has restoration companies available and will respond.
3. Turn off all central heat and air-conditioning systems and prevent flow from reaching any floor vents with towels or blankets.
4. Leave these items in the affected areas for restoration companies to cleanup.

Contact Risk Management at (916)774-5420 or (916)774-5202 during normal business hours. After hours, of if no answer, contact Virginia Bolmsn, Risk Manager at (916)501-2073. They will assess and notify restoration companies on contract with the city to respond. If the resident refuses the offered clean-up services, ask them to sign the declination letter, refusing the service.
If the resident chooses to file a claim for damages, instruct them they must fill out a Government Claim Form.

A claim form can be obtained in the following ways:

- In person at the Roseville Civic Center, City Clerks Department and Risk Management Division, 311 Vernon St., Roseville, CA .
- By mail, by contacting the Risk Management Division at (916)774-5202 or e-mailing the request to riskmanagement@roseville.ca.us
- Electronically by following this link: http://www.roseville.ca.us/hr/risk_management/how_to_file_a_claim.asp
- Completed forms must be returned by mail or in person to the City Clerk's office at the Roseville Civic Center.

SSOERP Water Quality Sampling

This water quality sampling procedure describes the process and the sampling methodology to be used in the event of a sanitary sewer overflow exceeding 50,000 gallons. The water quality sampling results will enable the division to prioritize areas of concern regarding water quality impacts. Surface water samples will be collected using a grab sample technique. Employees are required to wear new sterile powder free surgical gloves when collecting all samples.

Trigger for Sampling -Water quality sampling is required within 48 hours of initial SSO notification for Category 1 SSOs in which 50,000 gallons or greater are spilled to surface waters.

Safety and Access- Water quality sampling should only be performed if it is safe to do so, and access is not restricted or unsafe. Unsafe conditions include traffic, heavy rains, slippery or steep creek banks, visibility issues, high flowing creeks and limited access due to soil conditions or poor terrain.

Where to Sample-

1. Source of SSO - Determine the entry point (source) of the SSO into the creek, and move downstream approximately 10 feet downstream.
2. Upstream Sample – Sample at a point 100 feet upstream from the source.
3. Downstream Sample – Sample at a point 100 feet downstream from the source. Determine the water velocity present in the creek or body of water during the SSO. Dropping debris in the creek, and timing how long the debris takes to travel a known distance is a good indicator of the water velocity present. Use this information to determine the next downstream sampling point. Multiply the water velocity by the spill duration to figure the furthest point downstream to sample.

Sampling Procedure-

1. Put on required PPE (safety glasses and latex gloves)
2. ***Collect Upstream Sample*** - Move approximately 100 feet upstream of the source.
    - **a.** Label the bottle accordingly and take a picture of the location you are sampling.
    - **b.** Sample away from the bank and avoid any debris or scum layer from the surface.
    - **c.** Fill the bottle against the direction of flow, replace the cap and secure the sample to avoid contamination.
    - **d.** Use a thermometer to measure the temperature of the upstream sample location and record the results.
3. ***Collect Source Sample-*** Move approximately 10 feet downstream of the source location.
    - **a.** Label the bottle accordingly and take a picture of the location you are sampling.
    - **b.** Sample away from the bank and avoid any debris or scum layer from the surface.

c. Fill the bottle against the direction of flow, replace the cap and secure the sample to avoid contamination.
d. Use a thermometer to measure the temperature of the source sample location and record the results.

4. ***Collect Downstream Sample*** – Move approximately 100 feet downstream of the source.
   a. Label this sample "Downstream 1" and take a picture of the location you are sampling.
   b. Sample away from the bank and avoid any debris or scum layer from the surface.
   c. Fill the bottle against the direction of flow, replace the cap and secure the sample to avoid contamination.
   d. Use a thermometer to measure the temperature of the downstream sample 1, and record the results
5. ***Collect Downstream Final Sample*** – After using the velocity and distance to determine the furthest downstream sample point, move to that location.
   a. Label this sample "Downstream Final" and take a picture of the location you are sampling.
   b. Sample away from the bank and avoid any debris or scum layer from the surface.
   c. Fill the bottle against the direction of flow, replace the cap and secure the sample to avoid contamination.
   d. Use a thermometer to measure the temperature of the sample, and record the results

Required Water Quality Analyses – As detailed in section C-5 of Monitoring and Reporting Program (MRP), Order WQ- 2013-0058, a Technical Report shall be submitted in CIWQS online database with 45 calendar days. All samples will be immediately transported to the nearest certified water quality laboratory for analysis (DCWWTP or PGWWTP labs). The sample analysis, at a minimum will include the following:

1. Ammonia
2. pH
3. Electrical Conductivity
4. Bacterial indicators, such as total and fecal coliform enterococcus and e-coli, per the regional Basin Plan or as directed by SWRCB
5. Temperature

Equipment and Supplies – The following items and PPE are required for sampling:

1. Cooler with Blue Ice
2. Sterile sampling bottles
3. Powder free latex gloves
4. Safety glasses
5. Marking pen
6. Field log forms

SSOERP Sewer Call For Service

When dispatched to a home experiencing sewer problem, the following procedures should be adhered to provide the resident with the best possible customer service and quickly correct the problem causing the SSO.

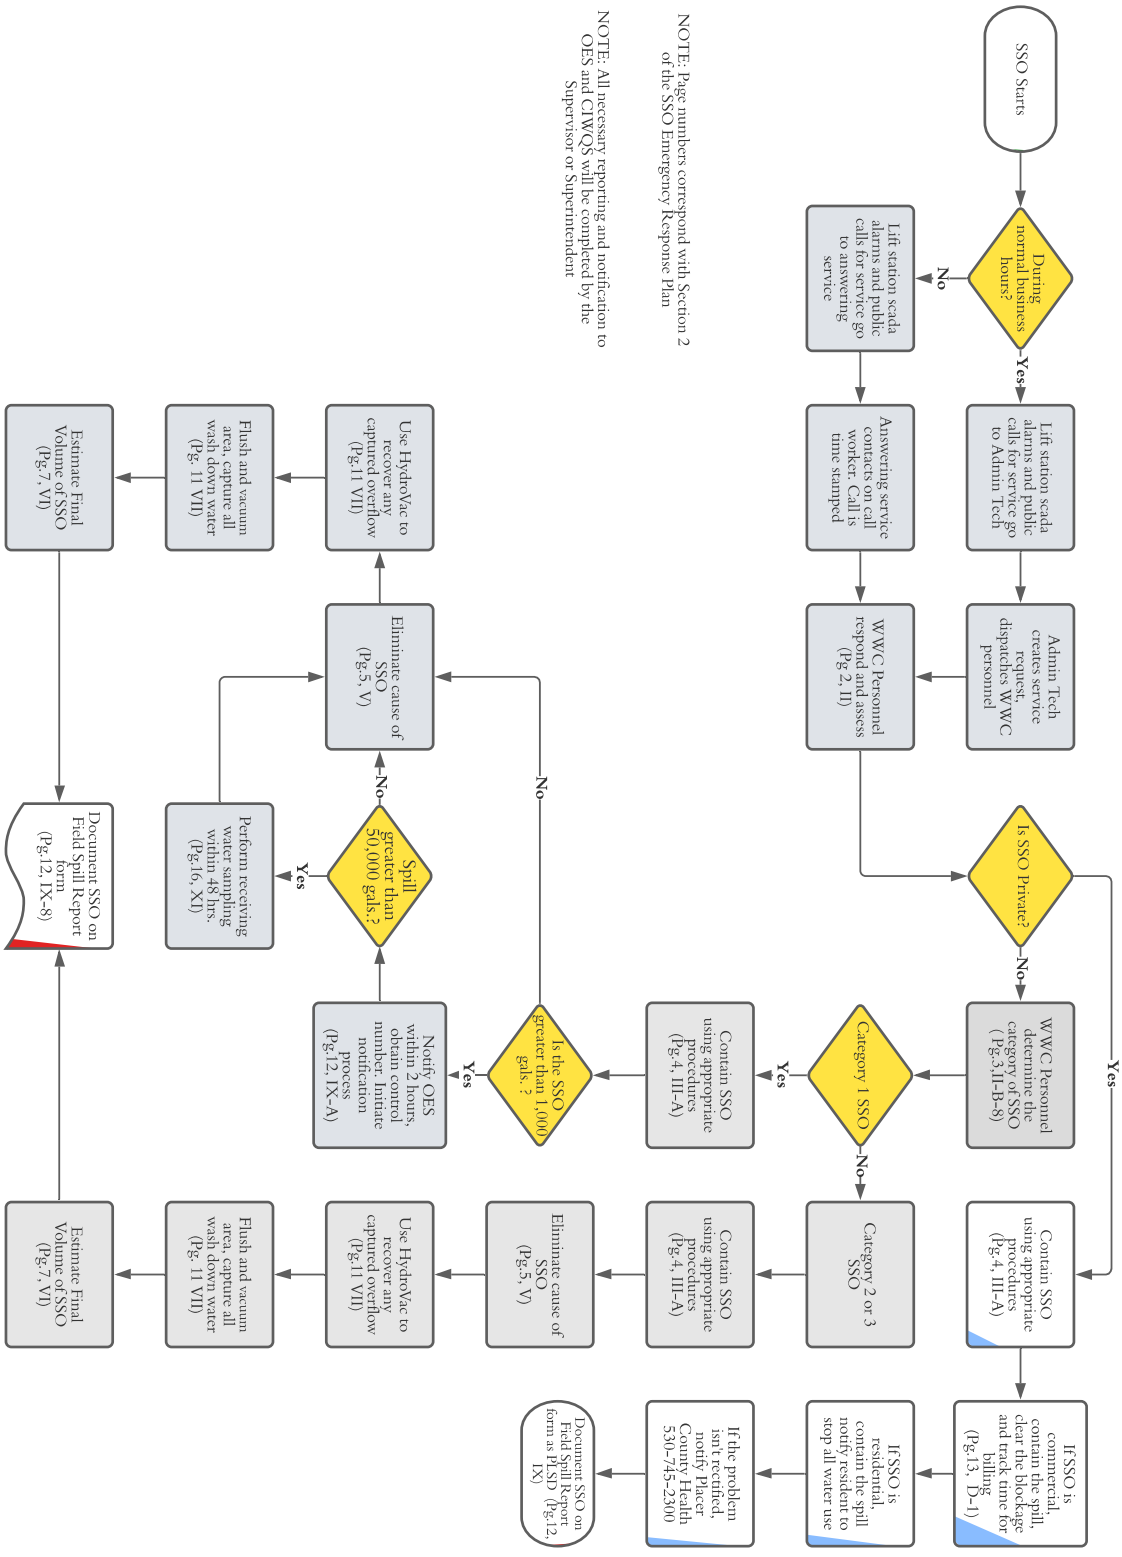
Residential

1. Contact the homeowner or resident upon arrival. Explain the process you will use to determine the problem. Resident should have already been instructed to stop all water use, so if water is still spilling from cleanout, check the nearest upstream manhole on the mainline for a blockage.
2. If no cleanout is visible, look in CMMS for cleanout location, look for an "S" marked in the curb, or other information that might indicate a cleanout.
3. If a city cleanout is found, clear the lateral blockage using the eel and a root cutting head, do not use a hand tape. CCTV to ensure line is clear, and all blockages have been removed. Record all time and pertinent information you have found on a work order, service request, or for after-hours calls, your overtime tag.
4. If no cleanout is found, locate the closest downstream manhole, and call for Vactor assistance, and run the main.
5. If the residence does not have a city cleanout, and the above procedures did not alleviate the blockage, we will use our equipment to run a "Viable" cleanout that belongs to the resident. This "viable" cleanout should be a factory fitting 4" cleanout, either a wye or combo wye, that we can easily get our equipment into and service the line. Once the line has been cleared, we will CCTV through this same cleanout, and determine where the blockage was located.
6. If the blockage was located below the location a city cleanout should be installed, we will schedule a cleanout installation during normal business hours.
7. If the blockage is located within the customer's service line, notify them that the problem is in their portion of the lateral, the location and severity of the problem. Advise the resident of the City's policy for cleanout installation, and let them know this is a one-time service, and the city will not clear future blockages from the homeowner's cleanout.
   Document all information in the CMMS under activity code- SPHCC, (Sewer Plug Homeowner City Cleared) on a service request.

Private Commercial *– When dispatched to a commercial property experiencing an SSO, start containment of the spill immediately. Notify the manager to stop using water and to call a plumber. Make sure the manager understands City staff will be containing the spill until their plumber responds, and they will be billed for staff and equipment. If after 60 minutes, the plumber doesn't show, notify Placer County Health Department. Notify your supervisor that the health department has been called and to discuss possibly clearing the main or service.*

SSOERP Sewer Lift Station Failure Response

The purpose of this procedure is to define strategies necessary to prevent an SSO from a lift station, in the event of a power or component failure within a lift station. The City of Roseville operates and maintains 17 neighborhood lift stations. Each station is equipped with SCADA, monitored 24 hours per day by wastewater treatment plant personnel. Each station has the maximum allowable downtime posted inside the door of each control panel. This identifies the retention time and the storage capacity in the collection system assets, before an SSO will occur. The lowest identified manhole is also identified to assist on call personnel in determining the remaining downtime. In the event of a lift station failure, the plant operator will notify the answering service that an alarm has been activated at a station, and the on-call service worker will respond and assess the alarm.



If no power is present in the panel, the service worker will:

1. Contact Roseville Electric at (916)774-5620, to verify they are aware of the outage.
2. Determine the level, and remaining downtime left in the station.
3. If downtime will be more than the maximum allowable retention, the on call service worker will call collection system personnel off the standby list, to get a Vactor in route. The Vactor will decant water at an identified point in the system, which won't affect the left station levels. If it appears that one Vactor won't keep up with flows, the on call service worker will call in additional personnel with Vactor to maintain levels in the station.
4. If outage appears to be a lengthy process, contact supervisor. Portable generator may be needed. In this event, an electrician will be needed.
5. Once flows are maintained, contact Supervisor to make them aware of the situation.

If Power is present in station, but pumps are not operating, the service worker will:

1. Attempt to operate the pumps in "hand" mode to eliminate the possibility of an SSO
2. If the pump operates in "hand", continue operating and monitor the levels in the wet well. Contact the On Call Electrician (916)532-0612 and continue to monitor.
3. If station will not operate in hand mode, call additional personnel in with Vactor to monitor wetwell levels. Vacuum and decant accordingly, until the problem is rectified.
4. If it appears that one Vactor won't keep up with the amount of flow into the wet well, the service worker will call in a second Vactor to maintain the levels in the station.
5. Standby and assist on call electrician, until the station is operational.

SSOERP SSO Chain of Communication

THIS PAGE LEFT INTENTIONALLY BLANK

7 Sewer Pipe Blockage Control Program

Att. D-7	The SSMP must include procedures for the evaluation of the Enrollee's service area to determine whether a sewer pipe blockage control program is needed to control fats, oils, grease, rags and debris. If the Enrollee determines that a program is not needed, the Enrollee shall provide justification in its Plan for why a program is not needed. The procedures must include, at minimum: An implementation plan and schedule for a public education and outreach program that promotes proper disposal of pipe-blocking substances; A plan and schedule for the disposal of pipe-blocking substances generated within the sanitary sewer system service area. This may include a list of acceptable disposal facilities and/or additional facilities needed to adequately dispose of substances generated within a sanitary sewer system service area; The legal authority to prohibit discharges to the system and identify measures to prevent spills and blockages; Requirements to install grease removal devices (such as traps or interceptors), design standards for the removal devices, maintenance requirements, best management practices requirements, recordkeeping and reporting requirements; Authority to inspect grease producing facilities, enforcement authorities, and whether the Enrollee has sufficient staff to inspect and enforce the fats, oils, and grease ordinance; An identification of sanitary sewer system sections subject to fats, oils, and grease blockages and establishment of a cleaning schedule for each section; and Implementation of source control measures for all sources of fats, oils, and grease reaching the sanitary sewer system for each section identified above.

The City of Roseville's Pipe Blockage Control Program focuses on public outreach, proper disposal practices, and preventive maintenance to manage and reduce blockages caused by FOG, roots, non-dispersible wipes and other pipe-blocking materials. The City uses social media, newsletters, and public events to educate residents and businesses on the correct disposal of FOG, offering free collection and disposal services for residents.

The City relies on two major components to control or eliminate the amount of these pipe blocking materials entering the wastewater system, 1) cleaning and inspection of the collection system on a prescribed maintenance schedule and 2) inspection, enforcement, and education for FSEs and controlling Fats, Oils and Grease (FOG) from entering its system.

In addition to a strong focus on eliminating FOG in its system, the City's Wastewater Collection Division implements an effective chemical root control program. Vaporooter products are used to restrict or eliminate root growth in the City-owned portion of the lower lateral. The division holds two Qualified Applicators' Licenses (QAL), enabling the City to chemically treat laterals and allowing for a more efficient root control program without outsourcing.

The City operates two wastewater treatment plants with FOG receiving stations to handle materials collected from the public. The City has legal authority within the Roseville Municipal Code (RMC) to regulate and restrict harmful discharges, mainly targeting food service establishments (FSEs), through an established FOG program to prevent sewer blockages and ensure efficient sewer system operation. The City addresses areas prone to blockages by maintaining a "Hot Spot List" of sewer mains identified through historical data, field observations, and CCTV inspections.

These areas are tracked using GIS tools, and the cleaning frequencies range from 1 to 6 months based on need. Reducing hot spots through capital improvement and rehabilitation projects is a top priority for the City.

7.1 Public Education Outreach

The City, in partnership with neighboring agencies developed the website, Live Sewer Smart. The website provides links to valuable information to educate and encourage proper ways to reduce impacts on the sewer system from FOG, roots and flushable wipes. The website is located at Live Sewer Smart. The Wastewater Collection Division actively participates in Earth Night events, Big Trucks Day Big Trucks Day, and other community activities to educate residents on proper sewer system use and promote practices that minimize the impacts of FOG and flushable wipes on the system. In addition, the City of Roseville's Utility Exploration Center (UEC) offers insight to the City's utility systems. The recently remodeled center, holds special events, hosts school programs and provides workshops to help the community learn how to live Sewer Smart. The webpage can be found at Utility Exploration Center

WWC and Industrial Waste Division personnel developed public outreach materials and handouts that are distributed to all food service facilities managers during the facility inspection. In addition, all FSEs are required by RMC Section 14.14 to apply for a FOG Discharge Permit. The permit application includes references to RMC 14.14, which provides Frequently Asked Questions, Maintenance and Pumping Requirements, and Best Management Practices (BMPs) for the managers to follow. Finally, the City's website offers links for public outreach at FSE Public Outreach

7.2 FOG Disposal Plan

Food Service Establishments and FOG generators are responsible for hiring private service providers to pump and haul FOG from their grease removal device at scheduled intervals. The requirement of the permittee is to keep all records, manifests, receipts and invoices for the cleaning and maintenance of the device, which includes final disposal location. These records shall be provided to any City of Roseville inspector or enforcement officer upon request. Although City does not endorse or recommend services provided by any one service provider, the City will provide a list of service providers that are commonly used by businesses in the area.

7.3 Legal Authority

The WWC Division of Environmental Utilities manages the FOG control program, issuance of permits and performs inspection of all FSEs within its service area. In addition, RMC Chapter 14.14 includes all legal authority necessary to prohibit discharges to the system and identify measures to prevent SSOs and blockages caused by FOG. All FSEs are required to provide wastewater that is acceptable to the city, before discharging to the public sewer. A summary of the legal authority is included in Table 8.

Table 8 – FOG Legal Authority

RMC Chapter Number	RMC Chapter Title
14.14.010 (A)	General Provisions- Purpose
14.14.030	FOG-Waste Discharge Permit Required
14.14.040	FOG-Discharge Limitation
14.14.050	Public Sewer Overflow; Nuisance abatement
14.14.070(F)	Prohibitions
14.14.190	FOG Discharge Permit Conditions
14.14.320	Harmful Discharge
14.14.360	Violation-Penalty

7.4 GRD, Design Standards, BMPs, Recordkeeping and Reporting

7.4.1 Requirement to Install GRD

Every FSE at the time of construction, remodel or change in operation is required to install and maintain an approved and adequately sized grease removal device. In addition, at the EU Directors' discretion, may require an FSE that has caused or contributed to a grease-related blockage, install a grease removal device. Depending on the type of facility, certain FSEs may require a grease interceptor, grease trap(s), or may not require a grease removal device (GRD). If during the plan review process, an FSE enrollee does not believe that their operation needs the designated GRD, they can request a variance from the ordinance. The final determination of the variance request is at the sole discretion of the EU Director.

7.4.2 Design Standards

The City Design Standard section 9-10. (G) indicates grease removal device sizing and installation shall conform to the current edition of the California Uniform Plumbing Code. Grease interceptors shall be constructed following the design approved by the director and shall have a minimum of two compartments with fittings designed for grease retention. A 24" access manhole shall be installed over each interceptor chamber. The frame and cover shall be watertight and set to finish grade, making inspection, sampling, and grease removal activities available.

In addition, the grease interceptor shall be installed at a location where it shall always be easily accessible for inspection, cleaning, and removal of accumulated grease. The minimum size of a grease interceptor for a new FSE is 1,000 gallons.

7.4.3 Best Management Practices

Every FSE shall implement BMPs in its operations to minimize the discharge of FOG to the grease control device and/or the public sewer. Detailed requirements for BMPs shall be specified in the FOG WDP and all FSEs are required, at a minimum, to comply with the permit BMPs as well as any additional BMPs established by the director. BMPs may include, but are not limited to, kitchen practices and employee training procedures that are essential in minimizing FOG discharge to the public sewer. Additional BMP practices are available on the City's website at FOG BMP's

7.4.4 Records and Reporting Requirements

The permittee shall be required to keep all manifests, receipts, and invoices of all cleaning, maintenance, grease removal of/from the grease control device, disposal carrier, and disposal site location for no less than three years. In addition, the permittee shall, upon request, make the manifests, receipts, and invoices available to the director, any inspector, or an enforcement officer. These records may include an on-site logbook of grease interceptor, grease trap or grease control device cleaning and maintenance practices, a description of BMPs being implemented, including employee training, and copies of records and manifest of waste hauling interceptor contents.

7.5 Authority to Inspect

RMC section 14.14.290 grants the Director, an inspector, or an enforcement officer access to all parts of a wastewater generating and disposal facilities for purposes of inspection and sampling during all times the FSE is open and operating. No person shall interfere, resist or refuse entrance to the Director, an inspector, or enforcement officer attempting to inspect the facility. Any violation of this chapter, or the orders, rules, regulations, and permits issued under this chapter, is unlawful and shall be an infraction or misdemeanor as determined by the city attorney

7.6 Hot Spot Identification and PM Schedule

The WWC Division's CMMS maintains all records for maintenance, inspection, and construction work orders for the collection system. Sewer mains subject to blockages from FOG or mains that require higher cleaning frequency are added to the division's Hot Spot List. These mainline segments tend to have more frequent backups due to sluggish flows, poor grades, and sags, which allow solids to settle and FOG to form. The hot spot list has been compiled based on historical data, field crew observations, and CCTV condition assessments. These mainlines are also identified in a GIS layer in the Roseville GeoViewer, so field crews can access them while performing maintenance in the field. The frequency of Hot Spot cleaning ranges from 1-6 months, depending on history and CCTV inspection data. The WWC division strives to reduce and eliminate these hot spot areas during CIP projects or rehabilitation projects performed by City crews.

Mainline segments get added to the Hot Spot list based on conditions noted during CCTV inspection and the current frequency of cleaning. Currently, 276 mainline segments are identified as Hot Spots.

7.7 FOG Source Control Measures

One of the more significant additions to the WWC FOG program was the requirement of a FOG Waste Discharge Permit (WDP). Ordinances in the RMC require that before discharging any wastewater from an FSE into the wastewater system, the enrollee must obtain a WDP. The WWC division performs facility inspections before the FSE can discharge. The terms and condition of the WDP are as follows.

- Grease interceptors/traps are required for food handling facilities unless the Environmental Utilities Director has issued a waiver or variance (RMC 14.14.130).
- An FSE with a waiver or variance that has caused or contributed to a grease-related Sanitary Sewer Overflow (SSO) will be required to install a grease removal device. In the event it is not practical or feasible to install a grease removal device, the FSE will be subjected to an Annual Grease Mitigation Fee
- Grease removal devices shall be designed, constructed, and installed following California Plumbing Code Title 24, Part 5 and the City of Roseville Design and Construction Standards.
- Grease removal devices shall be maintained by pumping the entire contents when grease and sludge have exceeded 25% of the capacity of the interceptor, including removal of entire contents each time the interceptor is pumped. The interceptor shall be pumped out at a minimum of 6-month intervals or more frequently, depending on grease load from FSE. The grease hauler shall be licensed with the California Department of Food and Agriculture.
- The permittee shall retain pumping and maintenance records for a minimum of 3 years. These records shall be submitted quarterly to the City of Roseville and shall be readily available to City personnel inspecting the facility. At a minimum, the following information is required for the reporting records:
    - Date of Service
    - Volume removed
    - Grease Hauler Permit number
    - FOG disposal destination records
- The permittee shall implement Best Management Practices (BMPs) in its operation to minimize the discharge of FOG to the sewer system under RMC 14.14.060
- The permittee shall notify the City of Roseville Wastewater Collection Division at 916-746-1890 of any of the following:
    - Sale, lease, or transfer of the operation for which the permit was issued.
    - Change of facility name
    - Changes to grease removal device or remodels, additions, or alterations to FSE greater than $20,000
    - Any SSO or blockage that would contribute to an SSO

THIS PAGE LEFT INTENTIONALLY BLANK

8 System Evaluation and Capacity Assurance Plan and Capital Improvements

Att. D - 8	The plan must include procedures and activities for: (1) Routine evaluation and assessment of system conditions; (2) Capacity assessment and design criteria; (3) Prioritization of corrective actions; and (4) A Capital Improvement Plan.

8.1 System Evaluation and Condition Assessment

Two hydraulic models were developed and used by the WWC Division (Roseville Model Project and South Placer Wastewater Authority (SPWA) Wastewater Systems Evaluation Project) to identify peak flows in each collection system component (pipe and pump station). In 2007, a hydraulic model of the City's sewer collection system was developed using the H2OMap Sewer modeling platform (2007 Model Development Project), parallel with a trunk sewer model for the combined Roseville, SPMUD, and Placer County systems. However, the City's sewer model was updated in 2017 to reflect existing and future demands within the City and upgrade the modeling platform to the fully dynamic InfoWorks ICM software. In addition, for the current Systems Evaluation Update, the City's model was updated in December 2020 to reflect existing, and future projected flows from Placer County and SPMUD.
EU Engineering staff will periodically run the hydraulic model for development, the Wastewater Principal Engineer will review and update the system evaluation and capacity assurance plan every ten years, looking for deficiencies and opportunities for improvement.

The City developed a project for easement mainline condition assessment to evaluate system accessibility and identify critical areas based on condition and environmental impact in case of a blockage or spill. The project will provide a comprehensive understanding of the system's condition, recommend improvements for access to the offsite segments, and prioritize areas for action with a ranking system from 1 to 10, guiding the City's efforts to address the most critical issues.

The City began its condition assessment of the collection system in 2006. At that time, the collection system was divided into 24 groups based on the age of the sewer main installation. The first group of pipes and manholes were inspected and included in the Rehabilitation and Replacement plan developed shortly after. To date, City crews have completed inspections in 18 of those 24 groups, which has led to the development of numerous CIPP and replacement projects.

The City inspects the wastewater collection system using three CCTV vans, with operators using NASSCO's PACP coding system to document and rank the condition of sewer mains and laterals. This inspection data is archived in the Granite Net Software system for easy access. To improve system reliability, the division has added Electroscan technology into a CCTV inspection truck, enabling the detection and measurement of infiltration and inflow (I&I) by identifying pipe leaks through electrical measurements. This technology helps prioritize targeted CCTV inspections, plan repairs, and evaluate the quality of CIPP rehabilitation projects.

8.2 Capacity Assessment and Design Criteria

The WWC Division established 10-year 24-hour peak wet weather storm design criteria for the evaluation of existing collection system components and sizing of new collection system in the Roseville Model Project and the SPWA Wastewater Systems Evaluation Project. This included the development of wastewater flow generation factors based on water use records and flow monitoring data in the City of Roseville.

The SPWA Wastewater Systems Evaluation included the identification of short and long-term Capital Improvement Projects (CIP) to meet current and future build-out flow projections for trunk sewers larger than 15 inches. Several deficiencies were identified in non-regional facilities which resulted in model-predicted overflows for one or more of the scenarios. Within the regional system, seven areas have been identified that either have deficiencies or could be impacted when upstream deficiencies are relieved. The System Evaluation and Capacity Assurance Report developed by the South Placer Wastewater Authority, in conjunction with Regional Partners Placer County and South Placer Municipal Utility District is located on the City's webpage at System Evaluation Report

8.3 Prioritization of Corrective Action

The WWC Division Condition Assessment CIP divided the collection system manholes and pipes into 24 groups. The first group of pipes and manholes was inspected starting in 2006 and was included in the Rehabilitation and Replacement plan developed shortly after. The city continuously inspects pipelines using NASSCO's PACP coding standard to develop a list of assets that need rehabilitation. When defects are identified, the city evaluates the risk of failure and assigns a priority ranking to each asset. Prioritizing those assets relies on several factors, including:

- Severity and extent of the defects (PACP Score).
- Maintenance records and SSO occurrences
- Hydraulic capacity needs and projection.
- The estimated remaining useful life of the infrastructure

The goal of the CIP is to develop annual project bundles of approximately $1.5 million. Using the priority rank of the pipe segment, the CIP prioritization includes one additional factor, street repairs. To minimize disruption to newly paved streets, those streets that the City anticipates repairing in the upcoming fiscal year are highest priority.

Condition assessments will be continually performed, and the CIP will be adjusted after each evaluation as follows:

- Emergency repairs will be done immediately and not be included in the CIP.
- Priority will be given to those assets which lie in the street to be paved such that the repair is done before street repaving
- Pipe segments will continue to be rated on the 1 to 5 scale, with 5 being the highest priority and 1s being the lowest. So, a 5 from the previous year's assessment would be prioritized over a 4 from the current assessment.

In addition to condition assessment, the WWC division schedules with Public Works to inspect wastewater infrastructure ahead of residential and arterial street paving projects. This process enables the WWC division to perform necessary system improvements before completing the overlay project. The City maintains a 5-year list of planned R&R CIP projects

8.4 Capital Improvement Plan

Proposed improvement projects have been developed, and verified using the hydraulic model, to alleviate surcharging. Each proposed project was reviewed on aerial mapping to identify potential design and constructability issues. These improvement projects were developed to sequentially decrease surcharging in downstream sewers. Capital Improvement Projects identified for the wastewater collection system in FY 2024-2025 are summarized in Table 9.

Table 9 – Capital Improvement Projects

CW Project Number	Project Name	Project Budget
400078	Sewer Collection System Cured in Place Rehabilitation	$3,967,428
500191	63-inch and 66-inch Interceptor Rehabilitation	$2,500,000
500341	Church Street Wet Weather Upgrades	$4,950,000
	Pump Station #26	$926,000
	Critical Sewer Manhole Access Study	$45,000

THIS PAGE LEFT INTENTIONALLY BLANK

9 Monitoring, Measurement and Program Modification

Att. D-9	The SSMP must include an Adaptive Management section that addresses Plan implementation effectiveness and the steps for necessary Plan improvement, including: (1) Maintaining relevant information, including audit findings, to establish and prioritize appropriate Plan activities; 2) Monitoring the implementation and measuring the effectiveness of each Plan Element; (3) Assessing the success of the preventive operation and maintenance activities; (4) Updating Plan procedures and activities, as appropriate, based on results of monitoring and performance evaluations; and (5) Identifying and illustrating spill trends, including spill frequency, locations and estimated volumes.

9.1 Metrics to Prioritize SSMP Activities

The WWC Division has developed Key Performance Indicators to assess their progress in maintenance, operations, and sanitary sewer collection system management. The entire KPI worksheet is included as Appendix 9-1. The metrics were developed to identify successes and challenges in reducing SSO frequency and impacts, improving collection system reliability, and providing capacity in the system to convey peak flows. Establishing specific KPIs for each element allows the WWC Management team to determine the degree of success of each component. Measurable performance indicators, e.g., number of SSO occurrences, length of lines cleaned, spill response times, number of capital projects completed, etc., are used. Additionally, the KPI benchmarking metrics worksheet includes the following categories of metric information:

- System Information
- Financial Information
- Sewer Maintenance
- Performance Measures

The City tracks detailed information about spills. While the number of spills has fluctuated up and down over the past four years, the average volume per spill has decreased. This metric demonstrates the City's proactive efforts to contain and control spills and mitigate them efficiently. In addition, the City consistently shows a significantly lower spill rate per 100 miles of pipe versus the State and Regional averages. These measurements indicate a successful sewer management program, employee training, emergency response, and a dedication to mitigating the effects of spills.

9.2 Monitor and Measure Element Effectiveness

The WWC Division implements all elements of this SSMP and has been effective in minimizing spills and controlling the volume of those spills when they occur. The WWC Division evaluates the performance of its wastewater collection system at least annually using the developed KPIs. The City will then initiate changes to this SSMP and the related programs based on the results of the KPI evaluation. In addition, the Review of the SSMP and its elements is an assigned annual training for all WWC employees. A summary of the tracked KPIs and the relation to the SSMP elements are in Table 10.

Table 10 – KPI Summarization

SSMP Element	Purpose	Performance Indicator
Goals	Sets Priorities for Division	Goals are listed in Chapter 1 of SSMP
Organization	Documentation of Chain of Command	Continually update Chain of Command Org. chart as changes occur
Legal Authority	Ensures Ordinances Are Upheld Protecting Integrity of the System	Roseville Municipal Code
Operations and Maintenance	Reduce & Eliminate SSOs through PM, CM and Emergency Response	▪ Manhole inspections performed ▪ Miles of sewer mains flushed per year ▪ Average cost of hydro cleaning ▪ Miles of sewer main and laterals CCTV per year ▪ Sewer cleanouts installed ▪ Sewer laterals rehabilitated ▪ Total miles rehabbed or replaced- mains and laterals
Design and Construction Standards	Ensures Infrastructure Is Designed, Installed and Tested Properly	▪ %Of new sewer main inspected vs. accepted ▪ % of new lateral inspected vs. accepted
Overflow Emergency Response	Provide Swift Response, Minimize Effects of an SSO, And to Meet Regulatory Requirements	▪ Average response time to SSO ▪ Average SSO duration mains and laterals
Pipe Blockage Control Program	Ensure Illicit Discharges of FOG Aren't Entering the Wastewater System, Reduces FOG Blockages And Overflows	▪ Public outreach events per year ▪ Gallons of FOG curbside pickup ▪ % of FSEs with grease removal device ▪ FSE FOG inspections per year ▪ Number of spills & volume spilled from hot spots ▪ Number of sewer laterals CIPP lined
System Evaluation & Capacity Assurance	Evaluate and Ensure System Capacity is Sufficient.	Hydraulic Model developed and run for new development and special projects,
Monitoring, Measurement & Program Modifications	Evaluate The Effectiveness of The SSMP and the Maintenance Activities Necessary to be Compliant	▪ Total SSOs and volume spilled (mains and laterals) ▪ % Of total volume recovered ▪ Total number of wet-weather spills ▪ Repeat spills within two years ▪ Spills per 100 miles of pipe/year ▪ Number of Category 1 spills ▪ % of spills caused by rags, roots, debris and FOG ▪ # of Lift station failures
Program Audits	Measures SSMP Effectiveness and Necessary Changes	Audits are performed on schedule, by an outside independent Engineering Firm
Communication Plan	Communication With the Public and Satellite Agencies on SSMP Performance	Regional partner meetings, City Website.

9.3 SSMP Performance Monitoring and Update Process

The WWC Division will monitor sewer performance metrics monthly and review the status of each SSMP element annually, with formal audits conducted every three years. As a "living document," the SSMP allows the Wastewater Superintendent to initiate corrective actions whenever deficiencies are identified between audits. Proposed modifications to the SSMP will primarily come from WWC Supervisors or input from field crews, while the review and approval of amendments, whether major or minor, will be the responsibility of the WWC Superintendent. The field crews and supervisors regularly communicate regarding field issues found in the field. Management uses this information to evaluate the success of the preventative maintenance programs and the frequency they are performed. This strategy fosters buy-in from the field crews as they continually check their effectiveness and identify potential areas for improvement in their performance. Open communication and feedback is essential for the City's success and meeting the SSMP goals.

9.4 Spill Trends

The KPI Benchmarking worksheet includes sixty-three data points to track preventative maintenance activities, enabling management staff to develop spill trends. Based on these trends, Supervisors will adjust the preventative maintenance programs to address trends that aren't in alignment with the SSMP goals. The KPI worksheet is populated using data from completed work orders stored in the City's CMMS, Maximo. Assigned personnel complete data entry on a semi-annual basis minimum to keep the KPI sheet updated.

9.5 Monitoring, Measurement & Modification

Refer to Appendices 9-1 and 9-2 that include the following documents:

Appendix 9-1 KPI Benchmarking Metrics Sheet
Appendix 9-3 Spill Historical Summary

THIS PAGE LEFT INTENTIONALLY BLANK

10 Program Audit and Annual Report

Att. D-10	The SSMP shall include internal audit procedures, appropriate to the size and performance of the system, for enrollees to comply with section 5.4 (SSMP Audits) of this General Order

10.1 Audit Process Summary

The City audits and updates its SSMP every three years based on the General Order. Updates may occur more frequently if the Superintendent discovers modifications or regulations changes between audits. The purpose of the audit is to evaluate the effectiveness of the SSMP, primarily through evaluating system metrics and performance measures. In addition, the audit evaluates the City's compliance with the SSMP requirements.

The City has invested in the resources of a local engineering firms and private consultants to perform the biennial audit for the last three audit cycles. The consultants administer the audit much like an RWQCB audit would be. The process starts with gathering information utilizing the Water Boards Pre-Inspection Questionnaire. This Audit Process has proven successful for the City, as significant changes have been made based on audit findings. The City will continue with this process for future audits.

10.2 SSMP Audit Documents

Refer to Appendices 10-1 through 10-6 that include the following audit forms and reports for the previous six audits:

Appendix 10-1 SSMP Internal Audit FY 10-11
Appendix 10-2 SSMP Audit FY 11/12-FY 12/13
Appendix 10-3 SSMP Audit FY 13/14-FY 14/15
Appendix 10-4 SSMP Audit FY 15/16-FY 17/18
Appendix 10-5 SSMP Audit FY 18/19-FY 20/21
Appendix 10-6 SSMP Audit FY 21/22-FY 23-24

THIS PAGE LEFT INTENTIONALLY BLANK

11 Communication Program

Att. D-11	The SSMP must include procedures for the Enrollee to communicate with the Public for: (1) spills and discharges resulting in closures of public areas; (2) The development, implementation and update of the SSMP, including opportunities for public input to SSMP implementation and updates. Owners/operators of systems in the enrollee's system, including satellite systems for system operation, maintenance and capital improvement related activities.

11.1 Purpose of the Communication Program

The purpose of the Communication Program is to describe how the City will inform, educate and engage with its stakeholders, regional partners, and the public on the development, implementation, and performance of the SSMP. Another aspect of this program is to increase public awareness of services provided by the City. Raising awareness of the significance of the sewer system and the impacts businesses and residents can make on the system is of utmost importance.

11.2 SSMP Development and Implementation

There were several opportunities for public comment during the development and implementation process at City Council meetings. In addition, the SSMP has been certified by the City Council on three occasions, 2009, 2014, and again in 2019. Since certification by the City Council, the division's SSMP has been audited on five occasions. This effort on re-writing the SSMP in its entirety will be on the City Council agenda for approval. Once approved, the document is available for download and review on the City's website at: City of Roseville Sewer

11.3 Public Outreach

The City's website is the central hub of communication for the businesses and residents of Roseville. The division's website offers many links to assist the public with any sewer issues, explain the importance of the City's wastewater collection system and summarize all the provided services. The division's motto is to "Call us First" with all sewer problems. Our emergency response service van is wrapped with the Call Us First motto. Since the City owns and maintains the lower lateral from the property line to the City main, calling us first to investigate a potential blockage may save residents from an unnecessary plumbing bill. Environmental Utilities in partnership with Roseville electric publishes a monthly print newsletter, Utility News, which goes out monthly to all customers who receive a printed bill. This newsletter includes information about all aspects of utilities and how customers can reduce impacts to infrastructure. Additionally, customers get an electronic version of similar stories sent to their emails, adding to the number of messaging opportunities the city provides.

The WWC Division is expanding the use of the website and social media to deliver proactive and deliberate messaging on WDR/SSMP requirements and program status to residential, commercial, industrial, and public stakeholders.

11.3.1 Utility Exploration Center

The Wastewater Division in partnership with the Utility Exploration Center, hosts high school students from surrounding areas at locations within the city. These events provide students with the opportunity to explore a wide range of careers within the utility industry. Stations are staffed by utility workers, specialists, and supervisors who conduct demonstrations showcasing typical and challenging field scenarios. Crews highlight the tools and equipment used in their specialties and explain how they collaborate as a team to deliver effective service to Roseville's Wastewater Utility customers.

11.3.2 Live Sewer Smart

The City belongs to a multi-jurisdictional group named Live Sewer Smart. The Live Sewer Smart website contains information for residents of Roseville and the surrounding communities to educate and encourage proper ways to reduce impacts on the sewer system. For example, the website provides residents with timely information regarding wipes in the pipes, how to properly dispose of FOG, and contact information for all agencies belonging to the program, should they have questions. In addition, there are several links to videos presenting more details that affect residential and commercial sewer systems. Live Sewer Smart can be located at: Live Sewer Smart

11.4 Tributary/Satellite Communication

The WWC Division routinely communicates with their satellite partners and often supports them with mutual aid sharing in terms of equipment and resources. The City has three formal agreements with tributary and satellite systems in place and currently working on a mutual aide agreement with the County of Placer Wastewater Division. The listed agreements below are included as appendices in Chapter 3:

- The Joint Exercise of Powers Agreement for the SPWA – Appendix 3-2
- The agreement regarding the operation of and use of the South Placer Regional Wastewater Facilities – Appendix 3-3.
- The Contract and Operating Agreement with Sacramento Area Sewer District and Sacramento Regional County Sanitation District – Appendix 3-4

Re: CITY OF ROSEVILLE ENFORCEMENT RESPONSE PLAN

Dear Richard,

As per our September 9, 2005 response to the Report of Recent Inspection, Industrial Pretreatment Program, Wastewater Treatment Plants, City of Roseville, Placer County, enclosed is the City of Roseville's revised Enforcement Response Plan (ERP).

If you have any questions, please call me at (916) 746-1876.

Sincerely,

Kim Spear
Lab/IW Manager

Notice of Violation

1. INTRODUCTION

The City of Roseville's Pretreatment Program Enforcement Response Plan (ERP) outlines operational procedures intended to ensure that the Significant Industrial Users (SIUs), and the small Commercial/Industrial dischargers to the sanitary sewer system are appropriately permitted and monitored. The Industrial Waste Division of the Environmental Utilities Department administers the ERP. To assure compliance by these dischargers, the Industrial Waste Division implements enforcement procedures specified by the U.S. Environmental Protection Agency in accordance with 40CFR 403.5 (f) (5). The ERP specifies criteria by which Industrial Waste personnel determine the enforcement action most appropriate to the nature of the violation. The Industrial Waste Division consists of the following personnel:

Industrial Waste / Laboratory Supervisor (1)
Laboratory/Industrial Waste Technician (1)
Data Management Specialist (0.2)

Dry Creek Wastewater Treatment Plant (DCWWTP) and Pleasant Grove Wastewater Treatment Plant (PGWWTP) are Regional facilities that not only service the City of Roseville but also service the South Placer Municipal Utility District and parts of the unincorporated areas of south Placer County. As a result, the City of Roseville also administers the Pretreatment Program on behalf of these Regional partners.

2. INDUSTRIAL USER INVENTORY

The development of the Industrial User Inventory (IUI) was originally developed at the time of Pretreatment Program approval in 1983. This is divided between Significant Industrial Users (SIUs) and small Commercial/Industrial Users.

A. Significant Industrial Users are defined as:

1. All categorical industrial users.

2. Any non-categorical industrial user that:

   - Discharges 25,000 gallons per day or more of process wastewater (process wastewater excludes sanitary, non-contact cooling and blowdown wastewater).

   - Contributes a process wastestream that makes up 5 percent or more of the average dry weather hydraulic or organic (BOD, TSS, etc.) capacity of the treatment plant.

   - Has a reasonable potential, in the opinion of the City or Approval Authority, to adversely affect the treatment plant (inhibition, pass-through of pollutants, sludge contamination, or endangerment of POTW and collection system workers).

B. Small Commercial/Industrial Users are non-domestic dischargers, small businesses such as auto repair, radiator repair, restaurants, dentist, etc. The list is continually updated using the following means:

1. City of Roseville Business License Department and Regional Partners forward business license applications list to the Industrial Waste Division (IW) on a monthly basis.

2. Periodic review of the City of Roseville and Regional Partners phone books.

3.Inspection of new and existing commercial areas is performed.

4. All users identified as "small Commercial/ Industrial" and most users identified as "Non Residential" inspected a minimum of one time per year to assure dry processes remain dry and to ascertain whether new processes have been added.

5. Annual inspection of commercial and industrial areas by IW inspectors for new business operations.

6. Periodic review of legal notices/ DBA's in the local newspaper.

3. COMPLIANCE MONITORING

The City personnel perform compliance monitoring for all SIU's and the small Commercial/Industrial Users. Compliance monitoring is performed as follows:

1. All SIUs are inspected at least 1 per year and sampled one (1) to four (4) times per year as required in their discharge permits. All Commercial/Industrial Users are inspected at least 1 per year and sampled as needed.
2. Samples area transported to laboratory in 4^0C ice chests along with appropriate documentation (date, time, location of sample, sampler, type of sample, i.e. grab or composite, chain of custody form, type of preservation and analyses requested.)
3. Analyses not performed by City personnel are sent out to the analytical labs with proper chain of custody and on ice.
4. Upon completion of analyses, results are entered into the IU's computer file and hard file.
5. The following compliance schedule is followed for sampling all Industrial Users:

    a) 1 week after results are received –
    - In compliance – no further action.
    - Noncompliance – a Warning Notice of Violation (WNOV) is issued

    b) 2 weeks after WOV is issued, the IU is resampled and inspected –

c) 1 week after results are received –
- In compliance – no further action
- Noncompliance – Notice of Violation (NOV) issued and letter of request for proposed compliance time schedule

d) 3 weeks after NOV and compliance schedule, IU is resampled and inspected

e) 1 week after results are received –
- In compliance – no further action
- Noncompliance – Final NOV issued and Mandatory meeting with the City of Roseville Wastewater Utility Manager, Lab/IW Supervisor and City Staff

f) Final Date of Compliance Schedule is issued and IU is resampled and inspected.

g) 1 week after report and sample results are received –
- In compliance – no further action
- Noncompliance–the Environmental Utilities Director issues Notice of Enforcement hearing to the IU, City Attorney, Wastewater Utility Manager and the Lab/IW Supervisor

h) 3 weeks – the following actions will be taken: Civil Action, Criminal Action, Impose Fines, Terminate Service

4. ENFORCEMENT RESPONSE GUIDE

Sampling, Monitoring or Reporting Violations

Noncompliance	Circumstances	Range of Response	City Personnel
Failure to sample, monitor or report (routine reports and BMR's)	Isolated or infrequent	Phone call or Notice of Violation (NOV) requiring report within 10 days.	Lab/IW Supervisor
Failures to sample, monitor, report or notify.	IU does not respond to letters, doesn't follow through on verbal or written agreement or frequent violation	NOV, follow Compliance Monitoring -Section 3	Lab/IW Supervisor, Wastewater Utility Manager
Failure to notify of effluent limit violation or slug discharge.	Isolated or infrequent. No known effects	Phone call, WNOV	Lab/IW Supervisor
Failure to notify of effluent limit violation or slug discharge.	Frequent or continue violation – Significant Non-Compliance (SNC)	NOV. Follow Compliance Monitoring (Section 3)	Lab/IW Supervisor, Wastewater Utility Manager
Failure to notify of effluent limit violation or slug discharge	Known environmental or POTW damage results – (SNC)	NOV, Notice of Enforcement, hearing issued, Civil/Criminal actions, Fined, Terminate Service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Minor sampling, monitoring, reporting deficiencies, (computational or typographical errors).	Isolated or infrequent	Phone call or WNOV. Corrections to made and forward to IW Division	Lab/IW Supervisor
Major or gross sampling, monitoring, or reporting deficiencies, (missing or falsified data)	Isolated or infrequent	NOV. Corrections forwarded to IW Division	Lab/IW Supervisor

Major or gross reporting deficiencies	Continued. Remains uncorrected 30 days or more - SNC	Notice of Enforcement, judicial action	Wastewater Utility Manager, EU Director, City Attorney

Compliance Schedules

Noncompliance	Circumstances	Range of Response	City Personnel
Reporting false information	Any instance – SNC	Request for investigation, jurisdictional action, fines, terminate service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Missed interim date	Will not cause late final date or other Interim dates	NOV	Lab/IW Spervisor
Missed interim date	Will result in other missed interim dates. Violation fro good or valid cause	NOV	Lab/IW Supervisor, Wastewater Utility Manager
Missed final date	90 days or more outstanding. Failure or refusal to comply without good or valid cause	Judicial action, fines	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Missed final date	Less than 30-day delay	NOV	Lab/IW Supervisor
Failure to install monitoring equipment	Less than 30-day delay	NOV	Lab/IW Supervisor
Failure to install monitoring equipment	30 days or more delay	Judicial action to begin monitoring, fines, terminated service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney

Effluent Limits

Noncompliance	Circumstances	Range of Response	City Personnel
Exceeding final limits (categorical, local or prohibited)	Infrequent or isolated minor violations	WNOV, Compliance Monitoring-section 3	Lab/IW Supervisor
Exceeding final limits (categorical, local or prohibited)	Infrequent or isolated significant (no harm)	NOV, Compliance Monitoring-section 3	Lab/IW Supervisor
Exceeding final limits (categorical, local or prohibited)	Frequent resulting in harm to collection system, POTW receiving waters	Notice of enforcement, judicial action, fines, terminate service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Exceeding interim limit (categorical or local)	Without known damages	NOV	Lab/IW Supervisor
Reported slug load	Isolated without known damage	Show cause, WNOV	Lab/IW Supervisor
Reporting slug load	Recurring – SNC	Notice of Enforcement, judicial action, fines, terminate service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Discharge without permit or approval	One time without known environmental impact or POTW damage	Phone call, NOV, send application for non-domestic discharge	Lab/IW Supervisor
Discharge without permit or approval	One time that results in environmental damage or continuing violation. IU unaware of requirement - SNC	Notice of Enforcement, judicial action, fines	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Discharge without permit or approval	Continuing violation with known environmental or POTW damage – SNC	Judicial action, fine, terminate service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Discharge without permit or approval	IU does not submit application with 90 days	Phone call, WNOV	Lab/IW Supervisor

Inspections and Field Investigations

Noncompliance	Circumstances	Range of Response	City Personnel
Entry denial	Entry denied, copies of records denied	NOV, judicial action, fine, terminate service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney, Police
Minor violation of analytical procedures	Any instance	WNOV	Lab/IW Supervisor
Major violation of analytical procedures	No evidence of intent	NOV	Lab/IW Supervisor
Major violation of analytical procedures	Evidence of negligence or intent - SNC	Notice of Enforcement, judicial action, fines, terminate service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Minor violation of permit condition	No evidence of negligence or intent	NOV. Immediate correction	Lab/IW Supervisor
Minor violation of permit condition	Evidence of negligence or intent – SNC	NOV, judicial action, fines, terminate service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Major violation or permit condition	Evidence of negligence or intent – intent	NOV, judicial action, fines, terminate service	Lab/IW Supervisor, Wastewater Utility Manager, EU Director, City Attorney
Failure to report additional monitoring	Inspection finds additional files	NOV	Lab/IW Supervisor

5. LEGAL AUTHORITY

Legal authority for the actions in the ERP is outlined in the City of Roseville Municipal Code Industrial Wastewater section 14.26:

Section 14.26.010 Purpose and policy.

A. This chapter sets forth uniform requirements for direct and indirect contributors into the wastewater collection and treatment system for the city and enables the city to comply with all applicable state and federal laws required by the Clean Water Act of 1977 and the General Pretreatment Regulations (40 CFR, Part 403.)

B. The objectives of this chapter are:

1. To prevent the introduction of pollutants into the municipal wastewater system which will interfere with the operation of the system or contaminate the resulting sludge;
2. To prevent the introduction of pollutants into the municipal wastewater system which will pass through the system, inadequately treated, into receiving waters or the atmosphere or otherwise be incompatible with the system;
3. To improve the opportunity to recycle and reclaim wastewaters and sludges from the system; and
4. To provide for equitable distribution of the cost of the municipal wastewater system.

C. This chapter provides for the regulation of direct and indirect contributors to the municipal wastewater system through the issuance of permits to certain nondomestic users and through enforcement of general requirements for the other users, authorizes monitoring and enforcement activities, requires user reporting, assumes that existing customers' capacity will not be preempted, and provides for the setting of fees for the equitable distribution of costs resulting from the program established in this chapter.

D. This chapter shall apply to persons in the city and to persons outside the city who are users of the city Publicly-Owned Treatment Works.

(Ord. 1718 § 1 (part), 1983.)

Section 14.26.020 Administration.

Except as otherwise provided, the Environmental Utilities Director shall administer, implement and enforce the provisions of this chapter. (Ord. 3798 § 7, 2002: Ord. 1718 § 1 (part), 1983.)

Section 14.26.030 Definitions.

Unless the context specifically indicates otherwise, the following terms and phrases, as used in this chapter, shall have the meanings designated in this section:

1. "Act" or "the act" means the Federal Water Pollution Control Act (also known as the Clean Water Act), as amended, 33 U.S.C. 1251, et seq.
2. "Approval Authority" means the Director of Region 9, United States Environmental Protection Agency.
3. "Authorized Representative of Industrial User" means an authorized representative of an Industrial User, who may be:

a. A principal or officer if the Industrial User is a corporation;
b. A general partner or proprietor if the Industrial User is a partnership or proprietorship respectively;
c. A duly authorized representative of the individuals designated above if such representative is responsible for the overall operation of the facilities from which the indirect discharge originates.

4. "Biochemical Oxygen Demand (BOD)" means the quantity of oxygen utilized in the biochemical oxidation of organic matter under standard laboratory procedure, five (5) days at twenty (20) degrees centigrade expressed in terms of weight and concentration (milligrams per liter (mg/l)).

5. "Building Drain" means that part of the lowest horizontal piping of a drainage system which receives the discharge from soil, waste and other drainage pipes inside the walls of the building and conveys it to the building sewer, beginning two (2') feet outside the inner face of the building wall.
6. "Building Sewer" means the extension from the building drain to the public sewer or other place of disposal.
7. "City" means the City of Roseville.
8. "Cleanout" means a small vertical pipe or shaft extending from the surface of the ground to the sewer provided for the purpose of permitting cleaning of the sewer in any direction.
9. "Combined Sewer" means a sewer receiving both surface runoff and sewage.
10. "Cooling Water" means the water discharged from any use such as air conditioning, cooling or refrigeration, or to which the only pollutant added is heat.
11. "Control Authority" means the "Approval Authority", or the California Regional Water Quality Control Board (the "CRWQCB").
12. "Direct Discharge" means the discharge of treated or untreated wastewater directly to the waters of the State of California.
13. "Director" means the Environmental Utilities Director or the Director's authorized representative.
14. "Environmental Protection Agency" or "EPA" means the U.S. Environmental Protection Agency. Where appropriate, the term may also be used as a designation for the Administrator or other duly authorized official of the EPA.
15. "Garbage" means solid wastes from the domestic and commercial preparation, cooking, and dispensing of food, and from the handling, storage and sale of produce.
16. "Grab Sample" means a sample which is taken from a waste stream on a one-time basis with no regard to the flow in the waste stream and without consideration of time.
17. "Grit" means the heavy suspended mineral matter present in water or wastewater such as sand, gravel, or cinders.
18. "Health Officer" means the Placer County Health Officer.
19. "Holding Tank Waste" means any waste from bolding tanks such as vessels, chemical toilets, campers, trailers, septic tanks, and vacuum-pump tank trucks.
20. "Indirect Discharge" means the discharge or the introduction of nondomestic pollutants from any source regulated under Section 307(b) or (c) of the Act (33 U.S.C. 1317), into the POTW (including Holding Tank Waste discharged into the POTW).
21. "Industrial User" means a source of Indirect Discharge which does not constitute a discharge of Pollutants under regulations issued pursuant to Section 402 of the Act, (33 U.S.C. 1342).
22. "Industrial Wastes means the liquid wastes from industrial manufacturing processes, trade, or business.
23. "Interference" means the inhibition or disruption of the POTW treatment processes or operations which contribute to a violation of any requirements of the city's NPDES Permit. The term includes prevention of sewage sludge use or disposal by the POTW in accordance with Section 405 of the Act (33 U.S.C. 1345), or any criteria, guidelines, or regulations developed pursuant to the Solid Waste Disposal Act (SWDA), the Clean Air Act, the Toxic Substances Control Act, or more stringent state criteria (including those contained in any State sludge management plan prepared pursuant to Title IV of SWDA) applicable to the method of disposal or use employed by the POTW.
24. "National Categorical Pretreatment Standard" or "Categorical Pretreatment Standard" means any regulation containing Pollutant discharge limits promulgated by the EPA in accordance with Section 307 (b) and (c) of the Act (33 U.S.C. 1317), which applies to a specific category of Industrial Users.
25. "National Prohibitive Discharge Standard" or "Prohibitive Discharge Standard" means any regulation developed under the authority of Section 307 (b) of the Act or 40 CFR, Section 403.5.
26. "Natural Outlet" means any outlet into a watercourse, pond, ditch, lake or other body of surface or groundwater.
27. "New source" means a facility from which there is, or may be, a discharge of pollutants, construction of which facility began after the publication of the proposed pretreatment standards pursuant to Section 307(c) of the Clean Water Act.
28. "National Pollution Discharge Elimination System Permit" or "NPDES permit" means a permit issued pursuant to Section 402 of the Act (33 U.S.C. 1342).
29. "Pass through" means a discharge which exits the POTW into waters of the United States in quantities which may serve to cause a violation of the POTW's NPDES Permit.
30. "Permit" means a Wastewater Contribution Permit.

31. "Person" means any individual, partnership, copartnership, firm, company, corporation, association, joint stock company, trust, estate, governmental entity or any other legal entity, or their legal representatives, agents or assigns. The masculine gender shall include the feminine and the singular shall include the plural where indicated by the context.
32. "pH" means the logarithm (base 10) of the reciprocal of the concentration of hydrogen ions expressed in grams per liter of solution.
33. "Pollution" means the manmade or man induced alteration of the chemical, physical, biological, and radiological integrity of water.
34. "Pollutant" means any dredged spoil, solid waste, incinerator residue, Sewage, Garbage, petroleum products or by products, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discharged equipment, rock, sand, cellar dirt and industrial, municipal, or agricultural waste discharged into water.
35. "Pretreatment" or "Treatment" means the reduction of the amount of Pollutants, the elimination of Pollutants, or the alteration of the nature of Pollutant properties in Wastewater to a less harmful state prior to or in lieu of discharging or otherwise introducing such Pollutants into the POTW. The reduction or alteration can be obtained by physical, chemical or biological processes, or process changes by other means, except as prohibited by 40 CFR Section 403.6 (d).
36. "Pretreatment Requirements" means any substantive or procedural requirement related to Pretreatment, other than a National Categorical Pretreatment Standard imposed on an Industrial User.
37. "Pretreatment Standard" or "National Pretreatment Standard" means any regulation containing pollutant discharge limits promulgated by the EPA in accordance with Section 307(b) and (c) of the Act, which applies to any user, including prohibited discharge and local limitations established pursuant to 40 CFR 403.5.
38. "Properly Shredded Garbage" means the wastes from the preparation, cooking, and dispensing of food that have been shredded to such a degree that all particles will be carried freely under the flow conditions normally prevailing in public sewers, with no particle greater than one-half inch (1.27 centimeters) in any dimension.
39. "Publicly-owned Treatment Works (POTW)" means a wastewater treatment plant as defined by Section 212 of the Act (33 U.S.C. 1291), which is owned in this instance by the City. This definition includes any sewers, pipes, ponds, pumps or other devices that connect to, or convey Wastewater to the wastewater treatment plant. POTW also includes any sewers, pipes, ponds, pumps or other devices that convey Wastewaters to the POTW from persons outside the corporate limits of the City who are users of the City's POTW.
40. "Public sewer" means a Sewer which is controlled by public authority.
41. "POTW Treatment Plant" or "Wastewater Treatment Plant" means that portion of the POTW designed to provide treatment to Wastewater.
42. "Rate-of-flow Controller" means an automatic device that controls the rate of flow of a fluid.
43. "Sanitary Sewer" means a sewer which carries Sewage and to which storm, surface and groundwaters are not intentionally admitted.
44. "Sewage" means a combination of the water-carried waste from residences, business buildings, institutions, and industrial establishments, together with such ground, surface, and storm waters as may be present.
45. "Sewage Treatment Plant" means any arrangement of devices and structures used for treating sewage.
46. "Sewage Works" means all facilities for collection, pumping, treating and disposing of sewage.
47. "Sewer" means a pipe or conduit for carrying Sewage.
48. "Shall" is mandatory; "may" is permissive.
49. "Significant Commercial User" means any Commercial User of the POTW, which discharges nondomestic and nonindustrial wastewater containing waste chemicals, solvents, oils, or other Pollutants capable of adversely impacting the sewer system or POTW if left unregulated.
50. "Significant Industrial User" means any Industrial User of the POTW who:
a. Discharges twenty five thousand (25,000) gallons or more of process wastewater per day; or
b. Contributes a process wastewater which makes up five (5%) percent or more of the dry weather average hydraulic or organic capacity of the POTW; or
c. Is subject to a National Categorical Pretreatment Standard; or

d. Is designated as such by the City, the CRWQCB, or the EPA on the basis that it has a reasonable potential, either alone or in combination with other users, to affect the POTW's operation adversely or to violate a pretreatment standard or requirement.

51. "Slug" means any discharge of water, Sewage, or industrial waste which, in concentration of any given constituent or in quantity of flow, exceeds for any period of duration longer than fifteen (15) minutes more than five (5) times the average twenty-four (24) hour concentration or flows during normal operation.

52. "Standard Industrial Classification (SIC)" means a classification pursuant to the Standard Industrial Classification Manual issued by the Executive Office of the President, Office of Management and Budget, 1972.

53. "State" means the State of California.

54. "Storm Drain" or "Storm Sewer" means a Sewer which carries storm and surface waters and drainage, but excludes Sewage and industrial wastes, other than unpolluted cooling water.

55. "Stormwater" means any flow occurring during or following any form of natural precipitation and resulting therefrom.

56. "Suspended Solids" means the total suspended matter that floats on the surface of, or is suspended in, water, wastewater or other liquids, and which is removable by laboratory filtering.

57. "Toxic Pollutant" means any Pollutant or combination of Pollutants listed as toxic in regulations promulgated by the EPA or identified in section 307(a) of the Act.

58. "User" means any Person who contributes, causes or permits the contribution of Wastewater into the city's POTW.

59. "Wastewater" means the liquid and water carried industrial or domestic wastes from dwellings, commercial buildings, industrial facilities, and institutions, whether treated or untreated, which is contributed into or permitted to enter the POTW.

60. "Watercourse" means a channel or depression in which a flow of water occurs, either continuously or intermittently.

61. "Waters of the State" means all streams, lakes, ponds, marshes, watercourses, waterways, wells, springs, reservoirs, aquifers, irrigation systems, drainage systems and all other bodies or accumulations of water, surface or underground, natural or artificial, public or private, which are contained within, flow through, or border upon the State of California or any portion thereof.

62. "Wastewater Contribution Permit" means that permit that must be obtained from the City before a Significant Industrial User may connect to or contribute to the POTW.

(Ord. 2707 § 1, 1993: Ord. 2360 § 2, 1990: Ord. 2280 § I, 1989: Ord. 1718 § 1 (part), 1983.)

Section 14.26.040 Abbreviations.

The following abbreviations shall have the designated meanings:

A. "BOD" means biochemical oxygen demand.
B. "CFR" means Code of Federal Regulations.
C. "COD" means chemical oxygen demand.
D. "CWA" means Clean Water act, 33 USC 1251 et seq.
E. "EPA" means Environmental Protection Agency.
F. "l" means liter.
G. "mg" means milligrams.
H. "mg/l" means milligrams per liter.
I. "NPDES" means National Pollutant Discharge Elimination System.
J. "O & M" means Operation and Maintenance.
K. "POTW" means Publicly-Owned Treatment Works.
L. "SIC" means Standard Industrial Classification.
M. "SWDA" means Solid Waste Disposal Act, 42 U.S.C. 6901, et seq.
N. "USC" means United States Code.
O. "SS" means suspended solids.

(Ord. 1718 § 1 (part), 1983.)

Section 14.26.110 General Discharge Prohibitions.

A. It is unlawful for any user to contribute or cause to be contributed, directly or indirectly, any pollutant or wastewater which will interfere with the operation of performance of the POTW. These general prohibitions apply to all such users of the POTW, whether or not the user is subject to National Categorical Pretreatment Standards or any other national, state, or local pretreatment standards or requirements.

B. It is unlawful for any user to contribute the following substances to the POTW:

1. Any liquids, solids or gases which by reason of their nature or quantity are, or may be, sufficient either alone or by interaction with other substances to cause fire or explosion or be injurious in any other way to the POTW or to the operation of the POTW. At no time shall two successive readings on an explosion hazard meter (or at any point in the system) be more than five (5%) percent nor any single reading over ten (10%) percent of the Lower Explosive Limit (LEL) of the meter. Prohibited materials include, but are not limited to, gasoline, kerosene, naphtha, benzene, toluene, xylene, ethers, alcohols, ketones, aldehydes, peroxides, chlorates, perchlorates, bromates, carbides, hydrides, sulfides, or any other wastestream with a closed cup flashpoint of less than one hundred and forty (140 °) degrees Fahrenheit or sixty (60 °) degrees Centigrade using the test methods specified in 40 CFR 261.21;
2. Solid or viscous substances which may cause obstruction to the flow in a sewer or other interference with the operation of the POTW such as, but not limited to: grease, garbage, (except properly shredded garbage), animal guts or tissues, paunch manure, bones, hair, hides, fleshings, entrails, whole blood, feathers, ashes, cinders, sand, spent lime, stone or marble dust, metal, glass, straw, shavings, grass clippings, rags, spent grains, spent hops, waste paper, wood, plastics, gas, tar, asphalt residues, residues from refining, or processing of fuel or lubricating oil, mud, or glass grinding or polishing wastes;
3. Any wastewater having a pH less than 5.0, or wastewater having any other corrosive property cable of causing damage or hazard to structures, equipment and/or personnel of the POTW;
4. Any wastewater containing toxic pollutants in sufficient quantity, either singly or by interaction with other pollutants, to injure or interfere with any wastewater treatment process, constitute a hazard to humans or animals, create a toxic effect in the receiving waters of the POTW, or to exceed the limitation set forth in a Categorical Pretreatment Standard;
5. Any noxious or malodorous liquids, gases, or solids which either singly or by interaction with other wastes are sufficient to create a public nuisance or hazard to life or are sufficient to prevent entry into the sewers for maintenance and repair;
6. Any substance which may cause the POTW's effluent or any other product of the POTW such as residues, sludges, or scums, to be unsuitable for reclamation and reuse or to interfere with the reclamation process. In no case shall a substance discharged to the POTW cause the POTW to be in noncompliance with sludge use or disposal criteria, guidelines or regulations developed under section 405 of the Act, the Clean Air Act, the Toxic Substances Control Act or state criteria applicable to the sludge management method being used;
7. Any substance which will cause the POTW to violate its NPDES permit and/or state disposal system permit or the receiving quality standards;
8. Any wastewater with objectionable color not removed in the treatment process, such as, but not limited to, dye wastes and vegetable tanning solutions;
9. Any wastewater having a temperature which will inhibit biological activity in the POTW treatment plant resulting in interference, but in no case wastewater with a temperature at the introduction into the POTW which exceeds forty (40 °) degrees centigrade or one hundred and four (104 °) degrees Fahrenheit;
10. Any pollutants, including, oxygen demanding pollutants (BOD, etc.), released at a flow rate and/or pollutant concentration which will cause interference to the POTW. In no case shall a slug load have a flow rate or contain concentration or qualities of pollutants that exceed for any time period longer than fifteen (15) minutes more than five (5) times the average twenty-four (24) hour concentration, quantities, or flow during normal operation;
11. Any wastewater containing any radioactive wastes or isotopes of such halflife or concentration as may exceed limits established by the director in compliance with applicable state or federal regulations;
12. Any wastewater which causes a hazard to human life or creates a public nuisance;
13. Any other substance with the potential to create a hazardous condition in the POTW.
14. Any trucked or hauled wastes, except at discharge points designated by the Director.

(Ord. 2707 § 2 (part), 1993: Ord. 2280 § 2, 1989: Ord. 1718 § 1 (part), 1983.)

Section 14.26.120 Federal Categorical Pretreatment Standards.

Upon the promulgation of the Federal Categorical Pretreatment Standards for a particular industrial subcategory, the Federal Standard, if more stringent than limitations imposed under this chapter for sources in that subcategory, shall immediately supersede the limitations imposed under this chapter. The National categorical standards found in 40 CFR Chapter 1, Subchapter N, Parts 405-471, are hereby incorporated into this chapter and made part hereof. The director shall notify all affected users of the applicable reporting requirements under 40 CFR, Section 403.12. (Ord. 2707 § 2 (part), 1993: Ord. 2280 § 3, 1989: Ord. 1718 § 1 (part), 1983.)

Section 14.26.130 Modification of Federal Categorical Pretreatment Standards.

Where the city's wastewater treatment system achieves consistent removal of pollutants limited by Federal Pretreatment Standards, the city may apply to the approval authority for modification for specific limits in the Federal Pretreatment Standards. "Consistent removal" shall mean reduction in the amount of a pollutant or alteration of the nature of the pollutant by the wastewater treatment system to a less toxic or harmless state in the effluent which is achieved by the system in ninety-five percent of the samples taken when measured according to the procedures set forth in Section 403.7 (c) (2) of Title 40 of the Code of Federal Regulations, Part 403 "General Pretreatment Regulations for Existing and New Sources of Pollution" promulgates pursuant to the Act. The city may then modify pollutant discharge limits in the Federal Pretreatment Standards of the requirements contained in 40 CFR, Part 403, Section 403.7 are fulfilled and prior approval from the approval authority is obtained. (Ord. 1718 § 1 (part), 1983.)

ection 14.26.140 Specific Pollutant Limitations.

A. Unless otherwise authorized under a wastewater contribution permit, no person or user shall discharge wastewater containing in excess of:

20.0 mg/l Ammonia
0.19 mg/l Arsenic
0.01 mg/l Beryllium
0.025 mg/l Cadmium
0.56 mg/l Chromium
0.25 mg/l Copper
0.13 mg/l Cyanide
32.0 mg/l Fluoride
50.0 mg/l Hydrocarbon solvents (as detected by State Water Resources Control Board (SWRCB) method M8015)
0.06 mg/l Lead
0.002 mg/l Mercury
1.3 mg/l Nickel
100.0 mg/l Oil and grease
500.0 mg/l Phenol
0.04 mg/l Silver
0.006 mg/l Selenium
2.0 mg/l TTO (Total Toxic Organics, defined as sum of all compounds detected by EPA method 624 and 625, excluding phenol)
2.4 mg/l Zinc

B. Where, in the opinion of the Director, and in conformance with the City's RWQCB approved local limits allocation program, users may discharge at levels above those specified in Section 14.26.140A if sufficient excess capacity exists at the POTW, and the discharge is covered under a wastewater contribution permit.
(Ord. 2707 § 2 (part), 1993: Ord. 2360 § 4, 1990: Ord. 2278 § 1, 1989: Ord. 1718 § 1 (part), 1983.)

Section 14.26.150 State requirements.

State requirements and limitation on discharges shall apply in any case where they are more stringent than federal requirements and limitations or those in this chapter. (Ord. 1718 § 1 (part), 1983.)

Section 14.26.160 City's right of revision.

The city reserves the right to amend this chapter in order to establish more stringent limitations or requirements on discharges to the wastewater disposal system if deemed necessary to comply with the objectives of this chapter. (Ord. 1718 § 1 (part), 1983.)

Section 14.26.170 Excessive discharge.

No user shall increase the use of process water or in any way attempt to dilute a discharge as a partial or complete substitute for adequate treatment to achieve compliance with the limitations contained in the Federal Categorical Pretreatment Standards, or in any other pollutant-specific limitation developed by the city or state. (Ord. 1718 § 1 (part), 1983.)

Section 14.26.180 Accidental discharges.

A. Each user shall provide protection from acci-dental discharge of prohibited materials or other substances regulated by this chapter. Facilities to prevent accidental discharge of prohibited materials shall be provided and maintained at the owner or user's own cost and expense. Detailed plans showing facilities and operating procedures to provide this protection shall be submitted to the city for review, and shall be approved by the city before construction of the facility. All existing users shall complete such a plan within one year of the effective date of this chapter.

No user who commences contribution to the POTW after July 1, 1983 shall be permit-ted to introduce pollutants into the system until accidental discharge procedures have been ap-proved by the city. Review and approval of such plans and operating procedures shall not relieve the industrial user from the respon-sibility to modify the user's facility as necessary to meet the requirements of this chapter.

B. In the case of an accidental discharge, it is the responsibility of the user to immediately tele-phone and notify the POTW of the incident. The notification shall include location of discharge, type of waste, concentration and volume, and corrective actions.

1. Written Notice. Within five days following an accidental discharge the user shall submit to the director a detailed written report describing the cause of the discharge and the measures to be taken by the user to prevent similar future occurrences. Such notification shall not relieve the user of any expense, loss, damage, or other liabil-ity which may be incurred as a result of damage to the POTW, fish kills, or any other damage to person or property nor shall such notification relieve the user of any fines, civil penalties, or other liability which may be imposed by this article or other applicable law.

2. Notice to Employees. A notice shall be permanently posted on the user's bulletin board or other prominent place advising employees whom to call in the event of a dangerous discharge. Employers shall insure that all employees who may cause or suffer such a dangerous discharge to occur are advised of the emergency notification procedures.

(Ord. 1718 § 1 (part), 1983.)

Section 14.26.190 Hazardous waste discharge.

Pursuant to 40 CFR 403.12(-), the user shall notify, in writing, the POTW, Cal-EPA, and EPA of any discharge into the POTW of a substance, which, if otherwise disposed of, would be a hazardous waste under 40 CFR 261. (Ord. 2707 § 5, 1993.)

Section 14.26.210 Purpose.

It is the purpose of this article to provide for the recovery of costs from users of the city's waste-water disposal system for the implementation of the program established in this chapter. (Ord. 1718 § 1 (part), 1983.)

Section 14.26.220 Charges and fees.

A. The city may adopt charges and fees by resolution which may include:
1. Fees for reimbursement of costs of setting up and operating the city's pretreatment program;
2. Fees for consistent removal by the city of pollutants otherwise subject to Federal Pretreatment Standards;
3. Other fees as the city may deem necessary to carry out the requirements contained in this chapter.
B. Costs incurred by the city as a result of required on-site sampling and analysis shall be reimbursed to the city by the user.
C. Total program costs, including administrative overhead, shall be recovered by the city via a 20 percent industrial wastewater surcharge on the monthly sewer bill for significant industrial users, and a 10 percent non-domestic waste-water surcharge on the monthly sewer bill for significant commercial users. The surcharge will be applied to a maximum of 15,000 sewer units per user per year, subject to annual evaluation by the Environmental Utilities Director.
(Ord. 2714 § 1, 1993: Ord. 2360 § 5, 1990: Ord. 2134 § 1, 1988: Ord. 1718 § 1 (part), 1983.)

Section 14.26.310 Wastewater dischargers.

It is unlawful for any significant industrial use to discharge any wastewater without a city waste-water contribution permit to any natural outlet within the City, or in any area under the jurisdiction of the City, and/or to the POTW except as authorized by the director in accordance with the provisions of this chapter. The user is required to notify the City prior to any substantial change in the discharge or the introduction of any new pollutant. The City may deny or condition new or increased discharges, or contributions of pollutants, or changes in the nature of pollutants, to the POTW by a user where such contributions do not meet applicable pretreatment standards or requirements or where such contributions would cause the POTW to violate its NPDES permit. (Ord. 2707 § 3 (part), 1993: Ord. 1718 § 1 (part), 1983.)

Section 14.26.320 Wastewater contribution permit in general.

All significant industrial users proposing to connect to or to contribute to the POTW shall obtain a wastewater contribution permit before connecting to or contributing to the POTW. All existing significant users connected to or contributing to the POTW shall obtain a wastewater contribution permit within one hundred eighty days after the effective date of this chapter. (Ord. 1718 § 1 (part), 1983.)

Section 14.26.330 Permit application.

A. Users required to obtain a wastewater contribution permit shall complete and file with the city an application in the form prescribed by the director. In support of the application the user shall submit, in units and terms appropriate for evaluation, the following information:

1. Name, address, and location (if different from the address);
2. SIC number according to the Standard Industrial Classification Manual, Bureau of the Budget, 1972, as amended;
3. Wastewater constituents and characteristics including but not limited to those mentioned in Article II of this chapter, as determined by a reliable analytical laboratory. Sampling and analysis shall be performed in accordance with procedures established by the EPA pursuant to Section 304 (g) of the Act and contained in 40 CFR, Part 136, as amended;
4. Time and duration of contribution;
5. Average daily and three minutes peak wastewater flow rates, including daily, monthly and seasonal variations if any;
6. Site plans, floor plans, mechanical and plumbing plans and details to show all sewers, sewer connections, and appurtenances by the size, location and elevation;
7. Description of activities, facilities and plant processes on the premises including all materials which are or could be discharged;
8. Where known, the nature and concentration of any pollutants in the discharge which are limited by any city, state, or federal pretreatment standards, and a statement regarding whether or not the pretreatment standards are being met on a consistent basis and if not, whether and what additional actions and/or additional pretreatment is required for the user to meet applicable pretreatment standards. New users who have not commenced discharge shall provide estimates of the nature and concentration of pollutants in the discharge;
9. If additional pretreatment or actions will be required to meet the pretreatment standards, the shortest schedule by which the user will provide such additional pretreatment or actions. The completion date in this schedule shall not be later than the compliance date established for the applicable pretreatment standard. The following conditions shall apply to this schedule:

a. The schedule shall contain increments of progress in the form of dates for the commencement and completion of major events leading to the construction and operation of additional pretreatment or actions required for the user to meet the applicable pretreatment standards (e.g., hiring an engineer, completing preliminary plans, completing final plans, executing contract for major components, commencing construction, completing construction, etc.).

b. No increment referred to in this subsection (A)(9)(a) of this section shall exceed nine months.

c. Not later than fourteen calendar days following each date in the schedule and the final date or compliance, the user shall submit a progress report to the director including, as a minimum, whether or not it complied with the increment progress to be met on such date and, if not, the date on which it expects to comply with this increment of progress, the reason for delay, and the steps being taken by the user to return the construction to the schedule established. In no event shall more than nine months elapse between such progress reports to the director;

10. Each product produced by type, amount, process or processes and rate of production;
11. Type and amount of raw materials processed (average and maximum per day);
12. Number and type of employees, and hours of operation of plant and proposed or actual hours of operation of pretreatment system;
13. Any other information as may be deemed necessary by the city to evaluate the application.

B. The city may evaluate the data furnished by the user and may require additional information. After evaluation and acceptance of the data furnished, the city may issue a wastewater contribution permit subject to terms and conditions provided in this chapter.

C. Wastewater contribution permit applications shall be accompanied by a nonrefundable fee of twenty-five dollars.

D. If a permit application is denied, the applicant may within twenty calendar days of the decision appeal the decision to the city council. An ap-peal shall be accompanied by a nonrefundable fee of seventy-five dollars.

(Ord. 2280 § 4, 1989: Ord. 2134 § 2, 1988: Ord. 1718 § 1 (part), 1983.)

Section 14.26.335 Baseline monitoring.

Within one hundred and eighty days after the effective date of a categorical pretreatment standard, or one hundred and eighty calendar days after the final administrative decision made upon a category determination submission under 40 CFR 403.6(a)(4), whichever is later, existing industrial users subject to such categorical treatment standards and currently discharging to or scheduled to discharge to the POTW shall submit to the city a baseline monitoring report which contains the information listed in paragraphs (b)(1) through (7) of 40 CFR 403.12., and Section 14.26.330(A) of this code. This report shall be signed and certified by an authorized representative of the industrial user, as required by 40 CFR 403.12(1) and 40 CFR 403.6(a)(2)(ii) respectively. (Ord. 2280 § 5, 1989.)

Section 14.26.340 Permit Modifications.

Upon promulgation of a National Categorical Pretreatment Standard, the wastewater contribution permit of users subject to such standards shall be revised as soon as possible to require compliance with such pretreatment standard within the time frame prescribed by such pretreatment standard. Where a user subject to a categorical pretreatment standard has not previously submitted an application for a wastewater contribution permit as required by Section 14.26.320, the user shall apply for a wastewater contribution permit within one hundred eighty (180) calendar days after the promulgation of the applicable National Categorical Pretreatment Standard. In addition, the user with an existing wastewater contribution permit shall submit to the director within one hundred eighty (180) calendar days after the promulgation of an applicable categorical pretreatment standard, the information required by Section 14.26.330(A)(8) and (9). (Ord. 2707 § 3 (part), 1993: Ord. 2280 § 6, 1989: Ord. 1718 § 1 (part), 1983.)

Section 14.26.350 Permit conditions.

Wastewater contribution permits shall be expressly subject to all provisions of this chapter and all other applicable regulations, user charges and fees established by the city. Wastewater contribution permits may contain the following:

A. The unit charge or schedule of user charges and fees for the wastewater to be discharged to the POTW;
B. Limits on the average and maximum wastewater constituents and characteristics;
C. Limits on average and maximum rate and time of discharge or requirements for flow regulations and equalization;
D. Requirements for installation and maintenance of inspection and sampling facilities;
E. Specifications for monitoring programs which may include sampling locations, frequency of sampling, number, types, and standards for tests and reporting schedule;
F. Compliance schedules;
G. Requirements for submission of technical reports or discharge reports pursuant to Section 14.26.380;
H. Requirements for maintaining and retaining records relating to wastewater discharge as specified by the city, and affording city access to such records;
I. Requirements that the city be notified and that the user receive city approval before any new introduction of wastewater constituents or any substantial change in the volume or character of the wastewater constituents are introduced into the POTW;
J. Notification of slug discharges;
K. Other conditions as deemed appropriate by the city to ensure compliance with this chapter.
(Ord. 2280 § 7, 1989: Ord. 1718 § 1 (part), 1983.)

Section 14.26.360 Permits duration.

Permits shall be issued for a specified time period, not to exceed five years. The user shall apply for permit reissuance a minimum of one hundred eighty days prior to the expiration of the user's existing permit. The terms and conditions of the permit may be subject to modification by the city during the term of the permit as limitations or requirements as identified in Article II are modified or other just cause exists. The user shall be informed of any proposed changes in his permit at least thirty days prior to the effective date of change. Any changes or new conditions in the permit shall include a reasonable time schedule for compliance. (Ord. 1718 § 1 (part), 1983.)

Section 14.26.370 Permit transfer.

Wastewater contribution permits are issued to a specific user for a specific operation. A wastewater discharge permit shall not be reassigned or transferred or sold to a new owner, new user, different premises, or a new or changed operation without the approval of the city. Any succeeding owner or user shall also comply with the terms and conditions of the existing permit. (Ord. 1718 § 1 (part), 1983.)

Section 14.26.380 Reporting Requirements for Permittee.

Within ninety (90) calendar days following the date for final compliance with applicable pretreatment standards or, in the case of new source, following commencement of the introduction of wastewater into the POTW, any user subject to pretreatment standards shall submit to the director a report indicating the nature and concentration of all pollutants in the discharge from the regulated process which are limited by such pretreatment standards or requirements. The report shall state whether the applicable pretreatment standards are being met on a consistent basis and, if not, what additional pretreatment or action is necessary to bring the user into compliance with the applicable pretreatment standards. This report shall be signed and certified by an authorized representative of the industrial user, as required by 40 CFR 403.12(1) and 40 CFR 403.6(a)(2)(ii) respectively. If sampling performed by a user indicates a violation, the user shall notify the POTW within twenty-four (24) hours of becoming aware of the violation. The user shall repeat the sampling and analysis and submit the results of the repeat analysis to the POTW within thirty (30) days after becoming aware of the violation. (Ord. 2707 § 3 (part), 1993: Ord. 2280 § 8, 1989: Ord. 1718 § 1 (part), 1983.)

Section 14.26.390 Periodic compliance reports.

A. Any user subject to a pretreatment standard, after compliance date of such pretreatment standard, or in the case of a new source, after commencement of the discharge into the POTW, shall submit to the director during the months of June and December, unless required more frequently in the pretreatment standard or by the director, a report indicating the nature and concentration of pollutants in the effluent which are limited by such pretreatment standards. In addition, this report shall include a record of all daily flows which during the reporting period exceeded the average daily flow reported in Section 14.26.350(B).

At the discretion of the director and in consideration of such factors as local high or low flow rates, holidays, budget cycles, etc., the director may agree to alter the months during which the above reports are to be submitted.

B. The director may impose mass limitations on users which are using dilution to meet applicable pretreatments standards, or in other cases where the imposition of mass limitations are appropriate. In such cases, the report required by subsection (A) of this section shall indicate the mass of pollutants regulated by pretreatment standards in the effluent of the user. These reports shall contain the results of sampling and analysis of the discharge, including the flow and the nature and concentration, or production and mass where requested by the director, of pollutants contained therein which are limited by the applicable pretreatment standard. The frequency of monitoring shall not be less than prescribed in the pretreatment standard. All periodic compliance reports shall be signed and certified by an authorized representative of the industrial user, as required by 40 CFR 403.12(1) and 40 CFR 403.6(a)(2)(ii) respectively.

(Ord. 2280 § 9, 1989: Ord. 1718 § 1 (part), 1983.)

Section 14.26.410 Harmful Contributions.

A. The City may suspend the wastewater treatment service or revoke a wastewater contribution permit when such suspension or revocation is necessary, in the opinion of the director, in order to stop an actual or threatened discharge which presents or may present an imminent or substantial endangerment to the health or welfare of persons, to the environment, causes interference to the POTW or causes the city to violate any condition of its NPDES permit.

B. Any person notified of a suspension of the wastewater treatment service and/or revocation of a wastewater contribution permit shall immediately stop or eliminate the contribution. In the event of a failure of the person to comply voluntarily with the suspension order, the director shall take such steps as deemed necessary including immediate severance of the sewer connection, to prevent or minimize damage to the POTW system or endangerment to any individuals. The director shall reinstate the wastewater contribution permit and/or the wastewater treatment service only upon proof of the elimination of the nonconforming discharge. A detailed written statement submitted by the user describing the causes of the harmful contribution and the measures taken to prevent any future occurrence shall be submitted to the director within fifteen (15) days of the date of occurrence.

(Ord. 2707 § 4, 1993: Ord. 1718 § 1 (part), 1983.)

Section 14.26.420 Revocation of permit.

Any user who violates the following conditions of this chapter or applicable state and federal regulations is subject to having his permit revoked:

A. Failure of a user to factually and accurately report the wastewater constituents and characteristics of his discharge;

B. Failure of the user to report significant changes in operations, or wastewater constituents and characteristics;

C. Refusal of reasonable access to the user's premises for the purpose of inspection or monitoring; or

D. Violation of conditions of the permit.

(Ord. 1718 § 1 (part), 1983.)

Section 14.26.430 Violation--Penalty.

A. Any violation of this chapter, or the orders, rules, regulations and permits issued under this chapter, is unlawful and shall be an infraction or misdemeanor as determined by the city attorney.

B. Any user in violation of this chapter, or the orders, rules, regulations and permits issued under this chapter, may be ordered by the director to cease and desist operations until the violation is cured. Continuance of operations after notice to cease and desist has been furnished to user shall be unlawful and an infraction or misdemeanor as determined by the city attorney. Each day in which any such violation shall continue shall be deemed a separate offense.

C. The violation of any of the provisions of this chapter, or the orders, rules, regulations and permits issued under this chapter, or the doing of any act prohibited or the failure or omission to do any act required by this chapter, or the orders, rules, and regulations and permits issued under this chapter, is a public nuisance and may be enjoined by the city attorney.

D. If any violation of this chapter, or the orders, rules, regulations and permits issued under this chapter, causes damage to the POTW, the director may seek to recover civil damages from the user causing such damage.

E. The director is authorized to levy against any person administrative fines of up to ten thousand dollars per day for each violation of the rules, regulations, and permits issued under this chapter. The notice shall provide information as to the reason for the administrative fine and the authority. And the notice shall also specify the person's right to appeal.

1. The director shall provide written notice of such levy to the person by certified mail, user has the right to appeal the administrative action to the Roseville Public Utilities Commission by filing an appeal with the city clerk.
2. The appeal shall be submitted within twenty days of receipt of the notice and shall be accompanied by a nonrefundable fee of seventy-five dollars.
3. The user has the right to appeal the decision of the Roseville Public Utilities Commission to the city council. The appeal shall be submitted to the city clerk within twenty days of the decision of the Roseville Public Utilities Commission and shall be accompanied by a nonrefundable fee of seventy-five dollars.
F. The remedies and provisions of this section are cumulative, and are in addition to any other remedy or provision of law.
(Ord. 2280 § 13, 1989: Ord. 2134 § 3, 1988: Ord. 1718 § 1 (part), 1983.)

Section 14.26.440 Falsifying information.

Any person who knowingly makes any false statements, representation or certification in any application, record, report, plan, or other document filed or required to be maintained pursuant to this chapter or who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required under this chapter, shall, upon conviction, be guilty of a misdemeanor. (Ord. 1718 § 1 (part), 1983.)

APPLICATION FOR NON-DOMESTIC WASTEWATER DISCHARGE

Environmental Utilities
Laboratory / Industrial Waste
1800 Booth Road
Roseville, California 95747-9708

SECTION A – GENERAL INFORMATION

1. Company: Name _____
   Address _____
   _____
   Telephone _____

2. Facility: Name _____
   Address _____
   _____
   Telephone _____

3. Person authorized to represent this firm in official dealings with the City of Roseville:
   Name _____
   Title _____
   Telephone _____

4. Alternative contact person:
   Name _____
   Title _____
   Telephone _____

5. Identify the type of business (auto repair, machine shop, painting, printing, etc.):
   _____

Note to signing official: In accordance with Title 40 of the Code of Federal Regulations Part 403 Section 403.14, information and data provided in this questionnaire which identifies the nature and frequency of discharge shall be available to the public without restriction. Requests for confidential treatment of other information shall be governed by procedures specified in 40 CFR Part 2. The information in this questionnaire will be used to issue the permit.

This is to be signed by an authorized official of your firm after adequate completion of this form and review of the information by the signing official.

I have personally examined and am familiar with the information submitted in this document and attachments. Based upon my inquiry of those individuals immediately responsible for obtaining the information reported herein, I believe that the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and/or imprisonment.

_____ _____
Signature of Official/ Title Date

SECTION A -- GENERAL INFORMATION

6. Describe the manufacturing, production, or service activities your firm conducts:

_____

_____

_____

_____

7. Standard Industrial Classification Number (s) (SIC) for your facility:

_____ _____ _____ _____ _____

8. This facility generates the following types of wastes (check all that apply):

	Average gallons/day		
☐ Domestic wastes (restrooms, etc.)	_____	☐ estimate	☐ measured
☐ Cooling water, non-contact	_____	☐ estimate	☐ measured
☐ Cooling water, contact	_____	☐ estimate	☐ measured
☐ Boiler/Tower blow down	_____	☐ estimate	☐ measured
☐ Process	_____	☐ estimate	☐ measured
☐ Equipment/ Facility Wash down	_____	☐ estimate	☐ measured
☐ Air Pollution Control Unit	_____	☐ estimate	☐ measured
☐ Stormwater runoff to sewer	_____	☐ estimate	☐ measured
☐ Other (specify) _____	_____	☐ estimate	☐ measured
Total	_____		

9. Wastes are discharged to (check all that apply):

	Average gallons/day		
☐ Sanitary sewer	_____	☐ estimate	☐ measured
☐ Storm sewer	_____	☐ estimate	☐ measured
☐ Surface water	_____	☐ estimate	☐ measured
☐ Ground waters	_____	☐ estimate	☐ measured
☐ Waste haulers	_____	☐ estimate	☐ measured
☐ Evaporation	_____	☐ estimate	☐ measured
☐ Other (specify) _____	_____	☐ estimate	☐ measured

Provide name and address of waste hauler (s):

_____

_____

10. Is a Spill Prevention Control and Countermeasure Plan prepared for facility?

☐ Yes ☐ No

SECTION B – FACILITY OPERATION CHARACTERISTICS

1. Number of employee shifts worked per 24-hour day _____
   Average number of employees per shift _____
   Starting times of shift (s) 1st _____ am/pm 2nd _____ am/pm 3rd _____ am/pm

SECTION B – FACILITY OPERATION CHARACTERISTICS

Note: The following information in this section must be completed for each product line.

2. Principal product produced: _____
3. Raw materials and process additives used:
   _____
   _____

4. Production process is: ☐Batch ☐Continuous ☐Both: _____% Batch ____% Continuous
   Average number of batches per 24-hour day: _____

5. Hours of Operation: _____am to _____pm ☐continuous

6. Is production subject to seasonal variation? ☐yes ☐no
   If yes, briefly describe the seasonal production cycle: _____
   _____

7. Are any process changes or expansions planned during the next three years? ☐yes ☐no
   If yes, attach a separate sheet to this form describing the nature of the planned changes and or expansion.

SECTION C – WASTEWATER INFORMATION

1. If your facility employs processes in any of the 34 industrial categories or business activities listed below and any of these processes generate wastewater or waste sludge, place a check mark beside the category or business activity (check all that apply):
   a. 34 Industrial Categories:

1. ☐Adhesives	18. ☐Ore Mining
2. ☐Aluminum Forming	19. ☐Organic Chemicals
3. ☐Auto/Other Laundries	20. ☐Paint & Ink
4. ☐Battery Manufacturing	21. ☐Pesticides
5. ☐Coal Mining	22. ☐Petroleum Refining
6. ☐Coil Coating	23. ☐Pharmaceuticals
7. ☐Copper Forming	24. ☐Photographic Supplies
8. ☐Electric/Electronic Components	25. ☐Plastic/Synthetic Materials
9. ☐Electroplating	26. ☐Plastics Processing
10. ☐Explosives Manufacturing	27. ☐Porcelain Enamel
11. ☐Foundries	28. ☐Printing & Publishing
12. ☐Gum & Wood Chemicals	29. ☐Pump & Paper
13. ☐Inorganic Chemicals	30. ☐Rubber
14. ☐Iron & Steel	31. ☐Soaps & Detergents
15. ☐Leather Tanning & Finishing	32. ☐Steam Electric
16. ☐Mechanical Products	33. ☐Textile Mills
17. ☐Nonferrous Metals	34. ☐Timber

   b. Other Business Activity
   ☐Dairy Products
   ☐Slaughter/Meat Packing/ Rendering
   ☐Food/Edible Products Processor
   ☐Beverage Bottler

SECTION C – WASTEWATER INFORMATION

2. Pretreatment devices or processes used for treating wastewater or sludge (check all that apply):

☐ Air Flotation	☐ Neutralization, pH correction
☐ Centrifuge	☐ Ozonation
☐ Chemical Precipitation	☐ Reverse Osmosis
☐ Chlorination	☐ Screen
☐ Cyclone	☐ Sedimentation
☐ Filtration	☐ Septic Tank
☐ Flow Equalization	☐ Solvent Separation
☐ Grease Interceptor	☐ Spill Protection
☐ Ion Exchange	☐ Sump

☐ Grease or oil separation, type _____
☐ Biological Treatment, type _____
☐ Rainwater diversion or storage _____
☐ Other chemical treatment, type _____
☐ Other physical treatment, type _____
☐ Other, type _____
☐ No pretreatment provided

3. If any wastewater analyses have been performed on the wastewater discharge (s) from your facilities, attach a copy of the most recent data to this questionnaire. Be sure to include the data of the analysis, name of laboratory performing the analysis, and location(s) from which sample(s) were taken. (Attach sketches, plans, etc. as necessary).

SECTION D – OTHER WASTES

1. Are any liquid wastes or sludges from this firm disposed of by means other than discharge to the sewer system?
☐ Yes ☐ No

If "no" skip remainder of Section D.
If "yes", complete items 2 and 3.

2. These wastes may best be described as:

	Estimated gallons or pounds per year
☐ Acids and Alkalies	_____
☐ Heavy Metal Sludges	_____
☐ Inks/Dyes	_____
☐ Oil and/or Grease	_____
☐ Organic Compounds	_____
☐ Paints	_____
☐ Pesticides	_____
☐ Plating Wastes	_____
☐ Pretreatment Sludges	_____
☐ Solvents/Thinners	_____
☐ Other Hazardous Wastes (specify) _____	_____
☐ Other Wastes (specify) _____	_____

SECTION D – OTHER WASTES

3. For the above checked wastes, does your company practice:
   - ☐ on-site storage
   - ☐ off-site storage
   - ☐ on-site disposal
   - ☐ off-site disposal

   Briefly describe the methods of storage or disposal utilized:

   _____
   _____
   _____
   _____
   _____

If you have any questions concerning this application, please contact the City of Roseville Industrial Waste Division at 774-5676.

PRIORITY POLLUTANT INFORMANTION

Mark all the chemicals that are "known or suspected to be present" or "known or suspected to be absent" in your manufacturing or service activity, or generated as a by-product:

Chemical Compound	Known Present	Suspect Present	Known Absent	Suspect Absent	Known/Suspected Concentration/day
I. METAL AND INORGANICS					
1. Antimony					
2. Arsenic					
3. Asbestos					
4. Beryllium					
5. Cadmium					
6. Chromium					
7. Copper					
8. Cyanide					
9. Lead					
10. Mercury					
11. Nickel					
12. Selenium					
13. Silver					
14. Thallium					
15. Zinc					
PHENOLS & CRESOLS					
16. Phenol (s)					
17. Phenol, 2-chloro					
18. Phenol, 2,4-dichloro					
19. Phenol, 2,4,6-trichloro					
20. Phenol, pentachloro					
21. Phenol, 2-nitro					
22. Phenol, 4-nitro					
23. Phenol, 2,4-dinitro					
24. Phenol, 2,4-dimethyl					
25. m-Cresol, p-chloro					
26. O-Cresol, 4,6-dinitro					
III. MONOCYCLIC AROMATICS (EXCLUDING PHENOLS, CRESOL, PHTHALATES)					
27. Benzene					
28. Benzene, chloro					
29. Benzene, 1,2-dichloro					
30. Benzene, 1,3-dichloro					
31. Benzene, 1,4-dichloro					

Chemical Compound	Known Present	Suspect Present	Known Absent	Suspect Absent	Known/Suspected Concentration/day
32. Benzene, 1,2,4-trichlor					
33. Benzene, hexachloro					
34. Benzene, ethyl					
35. Benzene, nitro					
36. Toluene					
37. Toluene, 2,4-dinitro					
38. Toluene, 2,6-dinitro					
IV. PCB's & RELATED COMPOUNDS					
39. PCB - 1016					
40. PCB - 1221					
41. PCB - 1232

The above Industrial User is authorized to discharge industrial wastewater to the City of Roseville's sewer system in compliance with the City of Roseville Municipal Code Chapter 14.26, any applicable provisions of Federal or State law or regulation, and in accordance with discharge point(s), effluent limitations, monitoring requirements, and other conditions set forth herein.

This permit is granted in accordance with the application filed on,_____,_ with the City of Roseville Utility Engineering Division, and in conformity with plans, specifications, and other data submitted to the City in support of the above application.

Effective Date: _____

Expiration Date: _____

_____
City of Roseville Representative

WASTEWATER PERMIT FOR NON-DOMESTIC DISCHARGE

PART I - Wastewater Discharge Limitations and Monitoring Requirements

1. The Industrial User under this permit is subject to the discharge requirements stated in the City of Roseville Municipal Code Chapter 14.26 regarding industrial wastewater and Federal Categorical Standards Section(s) _____.

a. Flow Rate _____

b. Authorized Discharge. All other waste streams are unauthorized and strictly prohibited:

c. Local limits: (see Attachment C for applicable limits).

d. Categorical Limits. See Attachment A, if applicable.

e. Compliance Schedule. See Attachment B, if applicable.

f. Effluent Monitoring Program. See Attachment C.

WASTEWATER PERMIT FOR NON-DOMESTIC DISCHARGE

PART II - Reporting Requirements

1. The Industrial User shall notify the City immediately upon any accidental or slug discharge to the sanitary sewer as outlined in the City of Roseville Municipal Code Chapter 14.26. Formal written notification discussing circumstances and mitigation shall be submitted to the City within five (5) days of the occurrence.

2. The Industrial User shall notify the City prior to the introduction of new wastewater or pollutants or any substantial change in the volume or characteristics of the wastewater being introduced into the POTW from the User's industrial processes. Formal written notification shall follow within thirty(30)days of such introduction.

3. Any upset experienced by the Industrial User of its treatment that places it in a temporary state of noncompliance with wastewater discharge limitations contained in this permit or other limitations specified in the City's Ordinance shall be reported to the City within twenty-four (24) hours of first awareness of the commencement of the upset. A detailed report shall be filed within five (5) days.

4. The Industrial User is required to submit to the City _____ reports per year____ on results of its sampling of pollutants specified in Part I of this permit. This report shall also contain the required flow measurement data. Pursuant to 1989 amendments to the federal pretreatment regulations, the City has the option of conducting required self-monitoring for the industrial user. See Effluent Monitoring Program Attachment.

5. If the Industrial User has submitted an approved Compliance Time Schedule with the City, the Industrial User shall submit a progress report to the City no later than fourteen (14) days following each date in the compliance schedule. This report must indicate whether or not the increment of progress was met on the date, the reason(s) for any delay, and what steps are being taken by the User to return to the schedule established. In no event shall more than twelve (12) months elapse between such progress reports to the City.

6. Within ninety(90)days following the final compliance date specified in Section I of this permit, the Industrial User shall submit a final compliance report. The Industrial User will be required to sample its wastewater for the pollutants specified in Section I, and report compliance. Any reasons for not complying and any steps being taken by the User to comply shall be part of the report.

7. An Annual Report will be submitted to the City, on the second Monday in January. This report will summarize violations, problems, treatment changes, and any other pertinent information from the previous calendar year.

8. Attached to this permit is a map showing the 1 locations from which samples will be taken. Protocol for these samples are stated in Section III.5.

9. All reports shall be submitted to the following address:

City of Roseville
Attn: Industrial Waste Division
1800 Booth Rd.
Roseville, CA 95747

PART III - Standard Conditions

1. The Industrial User shall comply with all the general prohibitive discharge standards in City of Roseville Municipal Code Chapter 14.26.

2. **RIGHT OF ENTRY**

The Industrial User shall, with or without prior notification by the City, allow the City or its representative to enter upon the premises of the User, at all reasonable hours, for the purposes of inspection, sampling, or records inspection. Reasonable hours in the context of inspection and sampling includes any time the Industrial User is operating any process which results in a process wastewater discharge to the City's sewage system.

3. **RECORDS RETENTION**

The Industrial User shall retain and preserve for no less than three (3) years, any records, books, documents, memoranda, reports, correspondence and any and all summaries thereof, relating to monitoring, sampling and chemical analyses made by or in behalf of the User in connection with its discharge.

All records that pertain to matters that are the subject of special orders or any other enforcement or litigation activities brought by the City shall be retained and preserved by the Industrial User until all enforcement activities have concluded, and all periods of limitation with respect to any and all appeals have expired.

4. **CONFIDENTIAL INFORMATION**

Except for data determined to be confidential under City of Roseville Municipal Code Section 14.26.390.4, all reports required by this permit shall be available for public inspection.

5. **RECORDING OF RESULTS (Chain of Custody)**

For each measurement of sample taken pursuant to the requirements of this permit, the User shall record the following information:

a) The exact place, date, and time of sampling;

b) The dates the analyses were performed;

c) The person(s) who performed the analyses;

d) The analytical techniques or methods used; and

e) The results of all required analyses.

6. **DILUTION**

No Industrial User shall increase the use of potable or process water or, in any way, attempt to dilute a discharge as a partial or complete substitute for adequate treatment to achieve compliance with the limitations contained in this permit.

7. **PROPER DISPOSAL OR PRETREATMENT SLUDGE AND SPENT CHEMICALS**

The disposal of sludge and spent chemicals generated shall be done in accordance with Section 405 of the Clean Water Act and Subtitles C and D of the Resource Conservation and Recovery Act. Industrial User shall maintain records and manifests of all disposals for a period of three (3) years.

8. **SIGNATORY REQUIREMENTS**

All reports required by this permit shall be signed by a principal executive officer of the User, or his designee.

9. **REVOCATION OF PERMIT**

The permit issued to the Industrial User by the City may be revoked when, after inspection, monitoring or analysis it is determined that the discharge of wastewater to the sanitary sewer is in violation of Federal, State, or local laws, ordinances, or regulations. Additionally, falsification or intentional misrepresentation of data or statements pertaining to the permit application or any other required reporting form, shall be cause for permit revocation.

10. **LIMITATION ON PERMIT TRANSFER**

Wastewater discharge permits are issued to a specific User or a specific operation and are not assignable to another User nor are they transferable to any other location without prior approval from the City. If the Industrial Discharger changes ownership, the new owner must apply for a new discharge permit.

11. **FALSIFYING INFORMATION OR TAMPERING WITH MONITORING EQUIPMENT**

Knowingly making any false statement on any report or other document required by this permit or knowingly rendering any monitoring device or method inaccurate may result in punishment under criminal laws of the City, as well as being subjected to civil penalties and relief.

12. **MODIFICATION OR REVISION OF THE PERMIT**

a) The terms and conditions of this permit are subject to modification by the City at any time as limitations or requirements are identified by City Staff or pursuant to City of Roseville Municipal Code Section 14.26.340.

b) This permit may also be modified to incorporate special conditions resulting from the issuance of a special order.

c) The terms and conditions may be modified as a result of EPA promulgating new federal pretreatment standards.

d) Any permit modification which result in new conditions in the permit shall include a reasonable time schedule for compliance, if necessary.

13. **DUTY TO REAPPLY**

The City shall notify a User one hundred and eighty (180) days prior to the expiration of the User's Permit. Within ninety(90)days of the notification, the User shall reapply for re-issuance of the permit on a form provided by the City.

14. **SEVERABILITY**

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

15. **PROPERTY RIGHTS**

The issuance of this permit does not convey any of its property rights in either real or personal property, or any exclusive privileges, nor does it authorize any invasion of personal rights, nor any infringement of Federal, State or Local regulations.

16. **OPERATION AND MAINTENANCE**

The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used to achieve compliance with the conditions of this permit. Proper operation and maintenance includes, but is not limited to, effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls. This provision requires the operation of back-up or auxiliary facilities only when necessary to achieve compliance with the conditions of the permit.

17. **PENALTY PROVISION**

Any violation of this permit or City of Roseville Municipal Code Chapter 14.26, may subject the permittee to revocation of this permit, civil penalties of not less than $500 per day per violation, and/or administrative penalties not to exceed $10,000 per day of violation. In addition, since both EPA and RWQCB have the authority to enforce any portion of the City's pretreatment program, any violation may subject the permittee to Federal or State civil penalties not to exceed $25,000 per day of violation or administrative penalties not to exceed $10,000 per day per violation up to $125,000 per day.

18. **BYPASS PROHIBITION**

Bypass of any portion of the pretreatment plant is prohibited, and the City may take enforcement action for bypass, unless: (1) the bypass was unavoidable to prevent loss of life, personal injury, or severe property damage, (2) there were no feasible alternatives to the bypass such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime, or (3) upon notice submitted by the permittee.

19. **BACK CHARGE FOR EXPENSES**

Any expenses relating to the Industrial User incurred by the City for operating the Industrial Pretreatment Program will be back charged to the User.

20. **SPCC SUBMITTAL**

As required by City of Roseville Municipal Code Section 14.26.180, the Industrial User is required to provide adequate spill prevention for any above-ground hazardous waste or oil tanks. A minimum being a berm surrounding the area which will hold the entire volume of the tank(s).

ATTACHMENT C

EFFLUENT MONITORING PROGRAM

The sampling frequencies listed below refer to the frequency of monitoring to be performed by the City. Effluent samples to be analyzed for pollutants specified in the local limits section shall be collected downstream from the last connection through which wastes can be admitted to the City's collection system. Samples to be analyzed for pollutants specified in the Categorical limits section shall also be collected at this point if the Combined Wastestream Formula has been applied. If the Combined Wastestream Formula has not been applied, these samples shall be taken from the undiluted effluent of the regulated process.

Time of collection of grab samples shall be recorded. Composite samples shall be flow-proportional and shall be collected over at least an 8hour period.

If the discharge is intermittent rather than continuous, samples shall be taken during the discharge. The following shall constitute the effluent monitoring program:

TO MAINTAIN COMPLIANCE WITH LOCAL STANDARDS:

Constituents	Limit	Sample Type	Frequency
Ammonia	20.0 mg/l	composite	
Arsenic	0.19 mg/l	"	
Beryllium	0.01 mg/l	"	
Cadmium	0.025 mg/l	"	
Chromium, total	0.56 mg/l	composite	
Chemical Oxygen Demand	600.0 mg/l	"	
Copper	0.25 mg/l	composite	
Cyanide, total	0.13 mg/l	grab	
Fluoride	32.0 mg/l	composite	
Lead	0.06 mg/l	"	
Mercury	0.02 mg/l	"	
Nickel	1.3 mg/l	"	
Oil and Grease	100.0 mg/l	grab	
Silver	0.04 mg/l	composite	
Suspended Solids	200.0 mg/l	"	
TTO (note 1)	2.0 mg/l	624/625	
Zinc	2.4 mg/l	"	
pH within the range of 5.5 to 12.5		grab	

EFFLUENT MONITORING PROGRAM

NOTE 1 -- Total Toxic Organics (TTO) which is the summation of all quantifiable values greater than 0.01 milligrams per liter (0.01mg/l) for the following constituents:

Acenaphthene
Acrolein
Acrylonitrile
Benzene
Benzidine
Carbon tetrachloride

Joint Exercise of Power Agreement for the South Placer Wastewater Authority

JOINT EXERCISE OF POWERS AGREEMENT
FOR THE
SOUTH PLACER WASTEWATER AUTHORITY

THIS JOINT EXERCISE OF POWERS AGREEMENT (the "Agreement") is made effective as of the 1st day of October, 2000, by and among the **CITY OF ROSEVILLE**, a charter city duly organized and existing under the laws of the State of California (the "City"), the **SOUTH PLACER MUNICIPAL UTILITY DISTRICT**, a municipal utility district duly organized and existing under the laws of the State of California (the "District"), and the **COUNTY OF PLACER**, a political subdivision duly organized and existing under the laws of the State of California (the "County")

RECITALS

A. WHEREAS, the City, the District, and the County have the common powers to acquire real property and to plan, finance, acquire, construct, own, and operate wastewater facilities; and

B. WHEREAS, the City, the District, and the County have determined that the public interest will be served by the joint exercise of these powers through this Agreement and the creation of a joint powers authority with the power to plan for, finance, acquire, construct, own and operate Regional Wastewater Facilities; and

C. WHEREAS, as soon as practicable after the date first above written, the City, the District, the County, and the Authority will enter into the Funding Agreement and the Operations Agreement (defined hereinafter), to provide for the funding and operation of the Regional Wastewater Facilities.

NOW THEREFORE, the parties hereto agree as follows:

AGREEMENT

1 Definitions. Words and phrases used in this Agreement shall have the following meanings:

Authority is defined in Section 3

Board is defined in Subsection 7 a.

City is defined in the preamble

County is defined in the preamble

District is defined in the preamble

Dry Creek Plant means the regional wastewater treatment plant owned and operated by the City for the mutual benefit of the Participants and known as the "Dry Creek Wastewater Treatment Plant "

Funding Agreement means an agreement among the Authority and the Participants relating to the funding of Regional Wastewater Facilities The Funding Agreement shall be in the form of Exhibit A, attached hereto, subject to such changes as may be (a) necessary to facilitate the issuance of bonds for the planning, design, acquisition, and construction of Regional Wastewater Facilities, or (b) otherwise agreed upon by the Participants

Law is defined in Section 2 hereof

Operations Agreement means an agreement among the Authority and the Participants relating to the operation of Regional Wastewater Facilities The Operations Agreement shall be in the form of Exhibit B, attached hereto, subject to such changes as may be (a) necessary to facilitate the issuance of bonds for the planning, design, acquisition, and construction of Regional Wastewater Facilities, or (b) otherwise agreed upon by the Participants

Participant means, individually, the City, the County, or the District Participants means, collectively, the City, the County and the District

Pleasant Grove Plant means the regional wastewater treatment plant to be owned and operated by the City for the mutual benefit of the Participants and to be known as the Pleasant Grove Wastewater Treatment Plant

Regional Connection Fees means the connection fees imposed and collected by the Participants pursuant to the applicable provisions of the Roseville Municipal Code, District ordinances, and County ordinances, for the purpose of funding expansions or modifications of, and/or improvements to, Regional Wastewater Facilities

Regional Wastewater Facilities means the Pleasant Grove Plant, the Dry Creek Plant, any other regional treatment plants constructed by the Authority or any of the Participants in the future to facilitate wastewater treatment, collection, conveyance, recycling, discharge, and disposal services collectively to all of the Participants, and all Related Regional Infrastructure

Related Regional Infrastructure means trunk sewers, interceptor lines, force mains, pump stations, reclaimed/recycled water infrastructure, and all other wastewater infrastructure, constructed in conjunction with the Pleasant Grove Plant, the Dry Creek Plant, and/or other

regional wastewater treatment plants constructed in the future, as appropriate and necessary to facilitate wastewater collection, conveyance, treatment, recycling, discharge, and disposal services collectively to all of the Participants. "Related Regional Infrastructure" shall not include trunk sewers, interceptor lines, force mains, pump stations, reclaimed/recycled water infrastructure, or any other wastewater infrastructure that (a) facilitate such services to only one or two of the Participants, or (b) are otherwise covered by other agreements providing for the apportionment of construction, operation and maintenance costs therefor, except for the agreements that are expressly superceded by the Funding Agreement and the Operations Agreement.

2. Authority and Purpose. This Agreement is made pursuant to Chapter 5 of Division 7 of Title 1 of the California Government Code (commencing with section 6500) (the "Law") relative to the joint exercise of powers common to the Participants. The purpose of this Agreement is to provide for the planning, financing, acquisition, ownership, construction, and operation of Regional Wastewater Facilities.

3. Creation of Authority and Jurisdiction. The Participants hereby create the South Placer Wastewater Authority ("Authority"), a public entity separate from the City, the District, and the County. The jurisdiction of the Authority shall be the service areas served by Regional Wastewater Facilities, as those areas may be modified from time to time.

4. Term and Termination. This Agreement shall be effective as of the date first above written. It shall remain in effect until terminated in accordance with the Law by two (2) or more of the Participants; provided, however, that this Agreement may not be terminated, and no Participant may withdraw its membership, until all bonds or other instruments of indebtedness issued by the Authority, if any, have been paid in full.

5. Powers. The Authority shall have all powers necessary or reasonably convenient to carry out the purposes stated in Section 2, including, but not limited to, the following:

a. to secure administrative office space and furnishings;

b. to make and enter into contracts;

c. to contract for, or employ, administrative, technical and support staff, and consultants and contractors of any kind;

d. to acquire and maintain insurance of all types;

e. to lease, acquire, hold, or dispose of real property by negotiation, dedication, or eminent domain;

f. to lease, acquire, operate, maintain and dispose of materials, supplies, and equipment of all types;

g. to construct and operate buildings and facilities of any kind, including, without limitation, Regional Wastewater Facilities;

h. to accept, hold, invest (pursuant to the Law, including, without limitation, section 6509 5 thereof), manage, and expend monies;

i. to levy fees and taxes, to enter into lease purchase agreements, and to issue bonds and incur other forms of indebtedness, as provided for in the Law, including, without limitation, sections 6547, 6547 1, 6547 5, and 6547 6 thereof, or any other applicable law;

j. to form a special assessment district under any legal authority that exists now or in the future, including, without limitation, the Improvement Act of 1911 (Streets & Highways Code section 5000 *et seq.*), the Municipal Improvement Act of 1913 (Streets & Highways Code section 10000 *et seq.*), the Improvement Bond act of 1915 (Streets & Highways Code section 8500 *et seq.*), or any other authority that exists now or in the future;

k. to form a special tax district under the Mello-Roos Community Facilities District Act or any other authority that may exist now or in the future;

l. to negotiate and enter into reimbursement agreements when monies to construct Regional Wastewater Facilities are available;

m. to sue and be sued; and

n. to exercise all powers incidental to the foregoing.

6. Duties. The Authority shall have the duty to do the following within the times specified or, if no time is specified, within a reasonable time:

a. to retain legal counsel for all Authority business, including litigation;

b. to evaluate the need for, and acquire and maintain if necessary, liability, errors and omissions, or other insurance;

c. to finance Regional Wastewater Facilities; and

d. to conduct an annual audit as required by the provisions of Subsection 7 d(3)

7 Administration

a Governing Board -- Membership The Authority shall be administered by a board of directors ("Board") consisting of five directors Two directors shall be appointed by the City, one director shall be appointed by the District, and two directors shall be appointed by the County One County-appointed director shall be a member of the County Board of Supervisors and must represent a supervisorial district which includes all or a portion of the City of Roseville; such County-appointed director shall be selected annually by the County Board of Supervisors, and shall be subject to confirmation by the Roseville City Council

b Meetings

(1) Regular Meetings The Board shall by resolution establish the number of regular meetings to be held each year and the date, hour and location at which such regular meetings shall be held; provided, that the Board shall meet at least once every six (6) months

(2) Special Meetings Special meetings of the Board may be called in accordance with the provisions of the Ralph M Brown Act (California Government Code section 54950 *et seq.*).

(3) Conduct of Meetings All meetings of the Board shall be held in accordance with the Ralph M Brown Act (California Government Code section 54950 *et seq.*)

(4) Minutes The Secretary of the Authority shall cause minutes of all meetings of the Board to be kept and shall, as soon as possible after each meeting, cause a copy of the minutes to be forwarded to each member of the Board, and to the City, District, and County

(5) Quorum Three (3) directors of the Board shall constitute a quorum for the transaction of business Except as provided in Section 8, actions of the Board shall require the affirmative vote of a majority of the entire Board (i e , three (3) affirmative votes)

c Procedures

(1) The Board shall elect a chair from among its membership to preside at meetings and shall select a secretary who may, but need not, be a member of the Board The Board may, from time to time, elect such other officers as the Board shall deem necessary or convenient to conduct the affairs of the Authority

(2) The Board may adopt by resolution rules of procedure, not inconsistent with the provisions of this Agreement, to govern the conduct of its meetings

(3) Members of the Board shall comply with Title 9 of the California Government Code, commencing with section 81000 (Political Reform Act of 1974).

d. Fiscal Matters.

(1) Treasurer and Auditor.

(A) Except as provided in Subsection (B), below, the treasurer and finance director of the City, respectively, are designated the treasurer and auditor of the Authority with the powers, duties, and responsibilities specified in the Law, including, without limitation, sections 6505 and 6505 5 thereof.

(B) In lieu of the designations in Subsection (A)., above, the Board may appoint one or more of its employees to either or both of the positions of treasurer or auditor as provided in the Law, including, without limitation, section 6505.6 thereof.

(2) Custodian of Property. The treasurer and auditor of the Authority shall be the public officers who have charge of, handle, and have access to, the Authority's property and shall file with the Authority an official bond in the amount set by the Board.

(3) Accounts and Reports. The Board shall establish and maintain such funds and accounts as may be required by good accounting practice. The books and records of the Authority shall be open to inspection at all reasonable times to the County, the City and the District, and their respective representatives. The accounts shall be prepared and maintained by the treasurer and auditor of the Authority. The Authority, within one hundred twenty (120) days after the close of each fiscal year, shall cause an independent audit of all financial activities for such fiscal year to be prepared by an independent certified public accountant employed by the Authority. The Authority shall promptly deliver copies of the audit report to the Participants.

(4) Budgets. The Board shall adopt a budget no later than ninety (90) days after the effective date of this Agreement and no later than June 30th of each year thereafter.

(5) Contributions. The Participants shall pay to the Authority the contributions to be specified in the Funding Agreement.

8 Voting. Notwithstanding Subsection 7 b, the following actions may only be taken as set forth below:

a. The affirmative vote of at least four (4) Board members is required to set reserves, or authorize expenditures, for future expansions of Regional Wastewater Facilities.

b The affirmative vote of at least five (5) Board members is required:

(1) to authorize the issuance and sale, refinancing, or early redemption, of bonds; or

(2) to impose fees or assessments (other than the Regional Connection Fee), levy taxes, or order the formation of an assessment or special district.

9. Exercise of Powers. The powers and duties which (a) are common to the Participants, and (b) are vested in the Authority only by virtue of this Agreement, and are not independent powers and duties which arise by virtue of the Law, shall be exercised and carried out subject only to such restrictions upon the manner of exercising such powers or carrying out such duties as are imposed upon the City of Roseville in the exercise of similar powers or in carrying out similar duties, as provided in section 6509 of the Law.

10. Fiscal Year. The fiscal year of the Authority shall be the period from July 1st of each year to and including the following June 30th.

11 Debts, Liabilities and Obligations. The debts, liabilities, and obligations of the Authority shall not constitute debts, liabilities, or obligations of the County, the City, or the District, either jointly or severally.

12. Liability of Board, Officers and Employees.

a The members of the Board, officers, and employees of the Authority shall use ordinary care and reasonable diligence in the exercise of their powers, and in the performance of their duties pursuant to this Agreement. They shall not be liable to the Participants for any mistake of judgment or other action made, taken, or omitted by them in good faith, nor for any action made, taken, or omitted by any agent, employee, or independent contractor selected with reasonable care, nor for loss incurred through the investment of the Authority's funds, or failure to invest the same.

b To the extent authorized by California law, no member of the Board, officer, or employee of the Authority shall be responsible for any action made, taken, or omitted, by any other member of the Board, officer, or employee. No member of the Board, officer, or employee of the Authority shall be required to give a bond or other security to guarantee the faithful performance of his or her duties pursuant to this Agreement, except as provided in Subsection 7.d(2).

c. The funds of the Authority shall be used to defend, indemnify, and hold harmless the Authority and any member of the Board, officer, or employee of the Authority for actions taken in good faith and within the scope of his or her authority. Nothing herein shall limit the right of the Authority to purchase insurance to provide coverage for the foregoing indemnity.

13. Liberal Construction. The provisions of this Agreement shall be liberally construed as necessary or reasonably convenient to achieve the purposes of the Authority.

14. Disposition of Property. Upon termination of this Agreement, the Authority shall convey all assets of the Authority to the City. Thereafter, the City shall use such assets of the Authority for the benefit of the City, District and County, as set forth in the Operations Agreement and the Funding Agreement.

15. Severability. Should any part, term, or provision of this Agreement be decided by the courts to be illegal or in conflict with any law of the State of California, or otherwise be rendered unenforceable or ineffectual, the validity of the remaining portions or provisions shall not be affected thereby.

16. Successors; Assignment. This Agreement shall be binding upon and shall inure to the benefit of the successors of the Participants. No Participant may assign any rights or obligations hereunder without the consent of the other Participants; provided, further, that no such assignment may be made if it would materially and adversely affect (a) the rating of bonds issued by the Authority, or (b) bondholders holding such bonds.

17. Amendments. This Agreement may be amended only by the unanimous written agreement of the Participants. So long as any bonds of the Authority are outstanding and unpaid, or funds are not otherwise set aside for the payment or redemption thereof in accordance with the terms of the bonds and the documentation relating thereto, this Agreement shall not be amended, modified or otherwise revised, changed or rescinded, if such action would (a) materially and adversely affect (1) the rating of bonds issued by the Authority, or (2) bondholders holding such bonds, or (b) limit or reduce the obligations of the Participants to make, in the aggregate, the payments under the Funding Agreement which are for the benefit of the owners of the bonds.

18. Notices. Any notices to Participants required by this Agreement shall be delivered or mailed, U.S. first class, postage prepaid, addressed as follows:

AGREEMENT REGARDING THE OPERATION AND USE OF THE SOUTH PLACER REGIONAL WASTEWATER FACILITIES

THIS AGREEMENT REGARDING THE OPERATION AND USE OF THE SOUTH PLACER REGIONAL WASTEWATER FACILITIES (the "Agreement") is made effective as of the 1st day of October, 2000, by and among the **SOUTH PLACER WASTEWATER AUTHORITY**, a joint powers agency ("Authority"), the **CITY OF ROSEVILLE**, a charter city duly organized and existing under the laws of the State of California (the "City"), the **SOUTH PLACER MUNICIPAL UTILITY DISTRICT**, a municipal utility district duly organized and existing under the laws of the State of California (the "District"), and the **COUNTY OF PLACER**, a political subdivision duly organized and existing under the laws of the State of California (the "County")

RECITALS

A. WHEREAS, effective October 1, 2000, the Participants entered into that certain "Joint Exercise of Powers Agreement for the South Placer Wastewater Authority" (the "JPA Agreement"), which JPA Agreement created the Authority; and

B WHEREAS, concurrently herewith, the Participants and the Authority entered into that certain Funding Agreement Relating to the South Placer Regional Wastewater Facilities (the "Funding Agreement"); and

C. WHEREAS, the Participants have previously entered into certain agreements referred to in the Funding Agreement as the Dry Creek Agreements, the Roseville/Placer County Agreement, the Preliminary Agreement, and the Settlement Agreement; and

D. WHEREAS, the Participants desire that this Agreement, the Funding Agreement, and the JPA Agreement, shall supersede the Dry Creek Agreements, the Roseville/Placer County Agreement, the Preliminary Agreement, and the Settlement Agreement (except for sections 5 through 13 thereof), and that the foregoing superseded agreements shall be of no further force or effect; and

E. WHEREAS, by entering into this Agreement the parties hereto desire to provide for (1) the operation and maintenance of Regional Wastewater Facilities, and (2) the ongoing funding necessary for the foregoing

AGREEMENT

NOW THEREFORE, the parties hereto agree as follows:

1. **Definitions.** Words and phrases used in this Agreement shall have the following meanings:

Average Dry Weather Flow means the average daily wastewater flow into the Regional Wastewater Facilities, measured from July 1st through September 30th of each year.

Bonds means, collectively, the Series A&B Bonds and any Parity Bonds, issued and at any time outstanding under the Indenture or any Parity Bonds Instrument, respectively.

Community Plan Area means the Dry Creek - West Placer Community Plan Area depicted on Exhibit "B," attached hereto and incorporated herein.

Discharge Permits means, collectively, the National Pollutant Discharge Elimination System Waste Discharge Requirements for the City of Roseville, issued by the Regional Water Quality Board, (a) on March 17, 2000, for the Pleasant Grove Plant (Order No. CA0084573), and (b) on June 16, 2000, for the Dry Creek Plant (Order No. CA0079502), and any amendments thereto.

Dry Creek Plant means the regional wastewater treatment plant owned and operated by the City for the mutual benefit of the Participants and known as the "Dry Creek Wastewater Treatment Plant."

Event of Default means:

(a) Default in the due and punctual payment of any amounts required to be paid hereunder by a party hereto, when and as the same shall become due and payable, and such default shall have continued for a period of ten (10) days after that party shall have been given notice in writing of such default by the Trustee, or any other party hereto; or

(b) Default by a party in the observance of any other covenants, agreements or conditions on its part in this Agreement, and such default shall have continued for a period of thirty (30) days after that party shall have been given notice in writing of such default by the Trustee, or any other party hereto; provided, however, that if any such default is not reasonably curable within such thirty (30) day period, the applicable party shall not be deemed to be in default if such party commences to cure the default within such thirty (30) day period and diligently pursues such cure to completion.

Fiscal Year means the period of time beginning on July 1st of any year and ending on June 30th of the following year, or any other twelve (12) month period agreed to in writing by all of

the Participants.

Funding Agreement is defined in Recital B

Indenture means that certain Indenture of Trust, dated as of October 1, 2000, between the Authority and the Trustee, under which the Series A&B Bonds are issued.

Inflow and Infiltration, or I&I, means direct and indirect discharges (other than normal authorized wastewater discharges) to the collection system serving Regional Wastewater Facilities. Such discharges include, without limitation, leaky joints and manholes, illegal storm drain connections, service laterals in need of repair, or wastewater lines located in the flood plain that are not watertight.

Parity Bonds means all bonds, notes or other obligations (including without limitation long-term contracts, loans, sub-leases or other legal financing arrangements) of the Authority, the proceeds of which are applied to the acquisition and construction of Regional Wastewater Facilities, payable from and secured by a pledge of and lien upon any of the Participant Net Revenues, and issued or incurred pursuant to Section 3 06 of the Indenture

Parity Bonds Instrument means the resolution, trust indenture or installment sale agreement adopted, entered into or executed and delivered by the Authority, and under which Parity Bonds are issued

Participant means, individually, the City, the County, or the District. Participants means, collectively, the City, the County and the District

Participant System or Participant's System means, as to each Participant, the facilities of such Participant (excluding Regional Wastewater Facilities, if any, owned by such Participant) for the collection, transmission and disposal of wastewater to or through the Regional Wastewater Facilities, together with necessary pipes, pumps, valves and machinery and lands, easements and rights of way therefor; and other works, properties or structures necessary or convenient for the collection, transmission and disposal of wastewater, including all additions, betterments, extensions and improvements to such facilities or any part thereof.

Pleasant Grove Plant means the regional wastewater treatment plant to be owned and operated by the City for the mutual benefit of the Participants and to be known as the "Pleasant Grove Wastewater Treatment Plant."

Proportional Volumetric Share means the proportion of total yearly wastewater volume entering the Regional Wastewater Facilities that is attributable to the City, the District or the County, as applicable. The City shall determine, using information supplied by all Participants, the total yearly wastewater volume and each Participant's Proportional Volumetric Share on a Fiscal Year basis

Regional Connection Fees means the connection fees imposed and collected by the Participants, pursuant to the applicable provisions of the Roseville Municipal Code, District ordinances, and County ordinances, for the purpose of funding expansions or modifications of, and/or improvements to, Regional Wastewater Facilities.

Regional Operation and Maintenance Costs means, for any given period, the reasonable and necessary costs (both direct and incidental) of operating and maintaining Regional Wastewater Facilities during such period, calculated on sound accounting principles, including (among other things) the reasonable expenses of management and repair and other expenses necessary to maintain and preserve Regional Wastewater Facilities in good repair and working order, and reasonable amounts for administration (including, without limitation, costs of administration of the Participants' industrial pretreatment programs by the City, but only to the extent such costs are not chargeable to significant industrial users pursuant to Roseville Municipal Code Chapter 14 26), overhead, insurance, taxes (if any), labor, materials, water, electricity, natural gas, chemicals, employee bonds, vehicles, communications equipment, improvements, replacements and rehabilitations, preventive maintenance, sludge disposal, environmental remediation, engineering services, analytical testing services, rents, right-of-way charges, recycled water operations costs, legal judgments and assessments (including, without limitation, enforcement actions of the Regional Water Quality Board), and other similar costs. Credit items, such as all salvage value of Regional Wastewater Facilities, and revenue from the sale of sludge or other products, including, without limitation, reclaimed and recycled water, shall be credited first to Regional Operation and Maintenance Costs and then to each of the Participants based on their Proportional Volumetric Share.

Regional Wastewater Facilities means the Pleasant Grove Plant, the Dry Creek Plant, any other regional treatment plants constructed by the Authority or any of the Participants in the future to facilitate wastewater collection, conveyance, treatment, recycling, discharge, and disposal services collectively to all of the Participants, and all Related Regional Infrastructure.

Related Regional Infrastructure shall mean trunk sewers, interceptor lines, force mains, pump stations, reclaimed/recycled water infrastructure, and all other wastewater infrastructure, constructed in conjunction with the Pleasant Grove Plant, the Dry Creek Plant, and/or other regional wastewater treatment plants constructed in the future, as appropriate and necessary to facilitate wastewater collection, conveyance, treatment, recycling, discharge, and disposal services collectively to all of the Participants. "Related Regional Infrastructure" shall not include trunk sewers, interceptor lines, force mains, pump stations, reclaimed/recycled water infrastructure, or any other wastewater infrastructure that (a) facilitate such services to only one or two of the Participants, or (b) are otherwise covered by other agreements providing for the apportionment of construction, operation and maintenance costs therefor, except for the agreements that are expressly superceded by this Agreement and the Funding Agreement.

Regional Water Quality Board means the California Regional Water Quality Control Board, Central Valley Region

Series A&B Bonds means the bonds of the Authority to be issued under the Indenture.

Trustee means the Trustee appointed under the Indenture, and any successor thereto. The term "Trustee" shall also mean trustee(s) under any Parity Bonds Instrument(s), as applicable.

User means any person or entity that discharges water or waste into a Participant System and/or the Regional Wastewater Facilities, and is subject to regulation under the provisions of Roseville Municipal Code Chapter 14 26 (entitled "Industrial Wastewater"), or similar ordinances enacted by the District and the County.

2. Operation and Maintenance of Regional Wastewater Facilities.

a. The City shall operate and maintain the Regional Wastewater Facilities for the mutual benefit of, and provide wastewater treatment services to, those areas depicted on Exhibit "A," attached hereto and incorporated herein, which areas are within the jurisdictional boundaries of the City, District, and County, so long as the District and County pay to the City their proportionate shares of the amounts required to be paid under this Agreement and the Funding Agreement.

b. Additional portions of the County Service Area No. 28, Zone No. 55 (Livoti Track), may be added to the areas served by Regional Wastewater Facilities upon County's compliance with all legal and administrative requirements therefor.

c. The City shall perform, and operate and maintain the Regional Wastewater Facilities in compliance with, all of the covenants of the Authority relating to the "Enterprise," set forth in Article V of the Indenture.

d. Each Participant shall have the right to (1) maintain connections between such Participant's System and the Regional Wastewater Facilities at all locations existing as of the date first above written, and (2) establish new connections to the Regional Wastewater Facilities as needed, subject to the City's prior written approval of the location of such connection, which approval shall not be unreasonably withheld.

3. Charges for Regional Operation and Maintenance Costs.

a. Each Participant's responsibility for Regional Operation and Maintenance Costs shall be based upon its Proportional Volumetric Share. The apportionment of the costs of administration of the Industrial Pretreatment Program for non-permitted Users shall be equitably allocated by future agreement among the Participants

b. During the month of June of each year, the City shall provide each Participant with an estimate of the Regional Operation and Maintenance Costs for the following Fiscal Year. Thereafter, the City shall bill the District and the County quarterly, in advance, for their respective

shares of the estimated Regional Operation and Maintenance Costs, which shares shall be in proportion to the Proportional Volumetric Share of each, as measured during the immediately preceding Fiscal Year.

c. (1) Within one hundred eighty (180) days after the close of each Fiscal Year, the City shall submit to each Participant a detailed statement of actual Regional Operation and Maintenance Costs, and the actual Proportional Volumetric Share of each Participant, for the Fiscal Year then ended. If the amount advanced for estimated Regional Operation and Maintenance Costs by any Participant is less than that Participant's share of actual Regional Operation and Maintenance Costs (based on that Participant's actual Proportional Volumetric Share), the City shall include the difference in a subsequent quarterly invoice for payment by that Participant. If the amount advanced for estimated Regional Operation and Maintenance Costs by any Participant is more than that Participant's share of actual Regional Operation and Maintenance Costs (based on that Participant's actual Proportional Volumetric Share), the City shall remit such excess amounts to that Participant, or credit that Participant's account, at the City's election.

(2) Each Participant may, at its sole cost and expense, inspect and/or audit the City's books and records concerning Regional Operation and Maintenance Costs, and the City shall cooperate reasonably with any such inspection and/or audit.

d. Each Participant shall pay Regional Operation and Maintenance Costs within sixty (60) days after receipt of City's invoice therefor. Interest shall accrue on any delinquent amounts at the rate of return paid by the Local Agency Investment Fund plus one percent (1%), commencing one hundred eighty (180) days after receipt of the City's invoice.

4. Inflow and Infiltration; Maintenance of Participant Systems.

a. Inflow and Infiltration Requirement. The maximum allowable amount of I&I on any given day for any Participant shall be 2.5 times the Average Dry Weather Flow of that Participant.

b. Participant System Evaluation. The Participants shall evaluate their respective Participant Systems periodically for I&I to determine those areas that need specific attention or repair. Participant System analysis may be accomplished by any reasonably effective method, including, without limitation, smoke testing, system flow monitoring and videotaping.

c. Long Term Participant System Rehabilitation and Maintenance. Once the Participant Systems have been evaluated, and areas needing improvement have been identified, each Participant shall develop a Participant System rehabilitation program that will lower the amount of maximum daily I&I for that Participant to below 2.5 times that Participant's Average Dry Weather Flow.

d. Construction Specifications. The Participants shall meet and develop region-wide wastewater construction specifications to ensure that all new wastewater infrastructure is constructed to stringent standards that will reduce I&I, as required herein. Pressure testing of transmission mains and vacuum testing of manholes are a minimum requirement that must be contained in the specifications of any construction contracts let by the Participants with respect to Participant Systems and/or Regional Wastewater Facilities.

5. **Backup Power and Wet Well Capacity.** Each Participant shall install and maintain adequate backup power sources, and/or wet well capacity, at all pump stations to prevent overflow during power outages and pump failures

6. **High Water Alarms.** Each Participant shall install and maintain functional high water alarm and notification systems at each pump station.

7. **Unauthorized Wastewater Discharges.** Each Participant shall report any unauthorized discharges of wastewater to the Regional Water Quality Board within one (1) business day after the discovery of such discharge

8. **Flow Monitoring Equipment.** Each Participant shall, at its sole cost, maintain flow monitoring equipment at each major connection point between such Participant's System and the Regional Wastewater Facilities. Such equipment shall be capable of measuring peak wet weather flows as well as dry weather flows, and ultimate as well as interim flows, and data therefrom shall be telemetered to the Dry Creek Plant. Flow estimates may be used for smaller connection points, provided all Participants agree on the methodology used to estimate the flow. Otherwise, the applicable Participant shall install portable flow monitoring equipment semi-annually for two one-week periods, once during the wet season (January 1st through March 31st) and once during the dry season (July 1st through September 30th).

9. **Ordinance Modification; Compliance with Discharge Permits.**

a. The Participants shall adopt all applicable provisions of ordinances, statutes, rules and regulations, established by the City, regulating the use of, and discharge of waters and wastes into, the Regional Wastewater Facilities, including all applicable provisions of Roseville Municipal Code Chapters 14.12, 14.16, 14.26, and all later applicable amendments thereto, within ninety (90) days after receipt of the City's written request therefor. The Participants shall, on or before December 1, 2000, meet and determine the applicability of provisions of the foregoing City ordinances, statutes, rules and regulations, and shall thereafter adopt the same in accordance with this Agreement. The City will notify the other Participants of any proposed changes to such ordinances, statutes, rules and regulations, and invite the other Participants to participate in the formulation and drafting of any such changes to be adopted by the City which are applicable to the use of, and discharge of waters and wastes into, the Regional Wastewater Facilities, and are to be adopted by the Participants. In addition, the Participants shall meet and evaluate existing

ordinances to (1) incorporate provisions enforcing I&I reductions, and (2) ensure uniform methods of categorizing and calculating the Regional Connection Fee

b. Each Participant shall operate and maintain its Participant System in compliance with the requirements of the Discharge Permits and other applicable laws and regulations, and shall reasonably agree to amend this Agreement from time to time as necessary to comply with the requirements of the Discharge Permits or other applicable laws and regulations Each Participant shall cooperate with, and assist, the other Participants, as reasonably necessary to comply with the Discharge Permits, including, without limitation, making its Participant System available for any studies and inspections required by the Discharge Permits.

10. Industrial Pretreatment Program. The Agreement for Industrial Waste Pretreatment Program, made by and among the Participants effective August 19, 1988, a copy of which is attached hereto as Exhibit D, is hereby incorporated into this Agreement as if set forth in full

11. Tax Exemption. No Participant shall levy any tax or assessment, or any similar charge, on any real or personal property, or interest therein, that lies within such Participant's jurisdictional boundaries and is part of the Regional Wastewater Facilities, or another Participant's System.

12. Major Dischargers. For the purpose of assuring the availability of adequate regional wastewater treatment capacity, when the Regional Wastewater Facilities have reached seventy-five percent (75%) of their treatment capacity, no Participant shall permit, or agree to permit, any commercial or industrial applicant or entity whose Average Dry Weather Flow discharge during the useful life of the applicant's project is estimated to be Four Hundred Thousand (400,000) gallons per day or greater, to connect to that Participant's System, or otherwise provide wastewater treatment service, without first obtaining the written consent of the Authority and a majority of the Participants Such consent shall not unreasonably be withheld. Permission to connect is deemed to occur at the time a Participant gives an applicant a notice of willingness to serve, or otherwise authorizes an applicant to connect to that Participant's System, whether this occurs at the issuance of a construction permit, or the collection of the Regional Connection Fee, or prior thereto. The City shall promptly provide written notification to the Authority, the District, and the County, when the Regional Wastewater Facilities have reached seventy-five percent (75%) of capacity

13. Moratorium. At such time as insufficient capacity remains in the Regional Wastewater Facilities to treat additional flows, the Authority shall impose a moratorium on additional connections, pending the expansion of treatment capacity. Any moratorium necessitated by an exhaustion of treatment capacity shall apply equally and simultaneously to all Participants

14. City/County Provisions. The following provisions bind, and inure to the benefit of, the City and the County only:

a. Linda Creek Raw Water Bypass. The City shall provide a maximum of 0.8 cfs of supplemental flow to Linda Creek to replace discharge from the abandoned County SMD #2 wastewater treatment plant, provided that the County shall reimburse the City for the cost of such water, including wheeling, metering, and maintenance costs. Supplemental flow shall consist of a raw water bypass at the City's water treatment plant on Barton Road. The City reserves the right to temporarily discontinue the raw water bypass during any period that stage three (or higher) drought restrictions are in effect pursuant to Roseville Municipal Code Chapter 14.09. The City shall bill the County quarterly for supplemental water costs, with payment due within sixty (60) days after any billing.

b. Dry Creek - West Placer Community Plan Area Wastewater Facilities.

(1) The County shall cause to be constructed within the Community Plan Area such Participant System facilities as are appropriate to provide wastewater service, and shall operate and maintain said facilities.

(2) Wastewater shall be received at the Dry Creek Plant by force main. The County's Participant System for the Community Plan Area shall connect to the Dry Creek Plant at the headworks facility located at the northeast portion of the Dry Creek Plant site. Prior to the connection of Sabre City to the Regional Wastewater Facilities, all Regional Connection Fees shall be paid for Sabre City units. Cost of any modifications to the treatment facilities shall be borne by the County. Design of these facilities will require approval by the City prior to bid of the project.

c. Reclaimed Water.

(1) The use of reclaimed water is encouraged in all areas and is subject to the availability of the reclaimed water distribution system. The County shall prepare, or cause to be prepared, the engineer's report required for areas utilizing reclaimed water. The engineer's report shall be submitted to the City concurrently with its submission to the California Department of Health Services and the Regional Water Quality Board for review and approval by the City and the Regional Water Quality Board. No reclaimed water will be supplied until said engineer's report has been so approved and a reclamation use permit has been issued by the City.

(2) The County agrees to participate in paying connection fees, if any, and monthly user or use charges for reclaimed water which may be established by the City in the future, and to install such meters as may be necessary for this purpose.

(3) The County shall adopt the City's design criteria and construction standards for reclaimed water facilities, as the same may be amended from time to time. The

County shall adopt the City's rules and regulations (operational requirements) for reclaimed water use, as the same may be amended from time to time.

(4) The County shall not sell any excess reclaimed water.

(5) Reclaimed water will not be delivered to the County on demand, but will be delivered continuously over periods of not less than twenty-four (24) hours. The County shall receive the reclaimed water on an as-used basis. Discharge of Dry Creek Plant effluent to Dry Creek is the City's sole responsibility and shall be covered under its Discharge Permits.

(6) The County shall cause a reclaimed water line to be constructed from the Dry Creek Plant along Dry Creek to Watt Avenue within the Community Plan Area. Said line shall be a twenty-four inch (24") line constructed in two phases. Phase one shall be constructed as part of Placer County Community Facilities District No. 93-1 ("CFD #93-1"), and phase two shall be constructed by future development west of Wallerga Road. The reclaimed water line shall supply reclaimed water to users initially in CFD #93-1, as shown on Exhibit "C," and, ultimately, to all users within the Community Plan Area east of Watt Avenue, as permitted and/or approved by the City and County. The City shall own, operate and maintain said line. Plans for construction shall be reviewed and approved by the City and must meet City's reclaim design specifications. Individual projects inside the Community Plan Area shall own, operate and maintain their own systems starting at their connection to the City's line. The County shall be responsible for compliance with all federal, state, and local, requirements pertaining to reclaimed water distribution and use.

(7) The County and the City shall negotiate and execute a detailed reclaimed water operations agreement covering various topics, including, without limitation, quality of water, cost, operational criteria, and rights and responsibilities prior to the provision of reclaimed water. In addition to the foregoing, the agreement shall provide that (A) the City shall perform construction inspections of all reclaimed water facilities, (B) the City shall perform quarterly operations inspections for all reclaimed water facilities, and (C) the City shall perform cross-connection testing on an annual basis. The cost of such inspections and testing shall be paid for by the County, as determined by such agreement.

(8) The Dry Creek Plant connection will provide for the delivery of chlorinated or de-chlorinated water to said reclaim line. The delivery facilities shall have the associated valves and metering equipment necessary to monitor and control the discharge.

(9) If reclaimed water users outside CFD #93-1 of the Community Plan Area connect to said line, the City shall use its best efforts to require the users to reimburse the County. The County requires a 12-inch line for reclaimed water usage in the Community Plan Area. The remaining line capacity cost shall be based on associated costs (construction costs and engineering costs) attributable to the excess capacity and distributed on a pro-rata basis.

(10) The County shall be responsible for obtaining State and/or County permits to use the reclaimed water within the Community Plan Area.

d. Sabre City Plant.

(1) The County may cause the existing Sabre City Wastewater Treatment Plant (the "Sabre City Plant") within the Community Plan Area to be connected to the County's Participant System. If the Sabre City Plant is so connected, new connections to the Sabre City wastewater system will be limited to those within the County, unless otherwise agreed to by the City. The County shall pay the Regional Connection Fee for each unit connected.

(2) The County shall obtain all permits required for removing the Sabre City Plant from service.

(3) The County shall deed to the City a site on the grounds of the Sabre City Plant for the construction and operation of de-chlorination facilities. The specific location and dimensions of said site shall be subject to the reasonable agreement of the County and the City.

15. Indemnity. Each Participant (the "Indemnitor") agrees to hold harmless, defend and indemnify the other Participants, their officers, agents and employees, from and against any and all liabilities, claims, or damages of any nature, including, without limitation, personal injury, including death, or property damage, resulting from the negligent actions or inaction of the Indemnitor, its officers, agents, or employees, under the terms of this Agreement, including, without limitation, accidental wastewater discharges.

16. Term and Termination. This Agreement shall be effective as of the date first above written and shall remain in effect (a) for the full useful life of any and all Regional Wastewater Facilities, or (b) until such time as no Bonds remain outstanding, whichever is later. The expiration or sooner termination of the JPA Agreement shall not cause this Agreement to expire or terminate.

17. Amendments. This Agreement may be amended only by the unanimous written agreement of the Participants. So long as any Bonds are outstanding and unpaid, or funds are not otherwise set aside for the payment or redemption thereof in accordance with the terms of said Bonds and the documentation relating thereto, this Agreement shall not be amended, modified or otherwise revised, changed or rescinded (1) in any manner that will have a material adverse effect on the payment of Debt Service, or (2) in any manner that would result in a reduction in the credit ratings on any and all Bonds, or (3) in any manner that would limit or reduce the obligations of the Participants to make, in the aggregate, the payments hereunder which are for the benefit of the owners of Bonds.

18. Rights of Participants and Third Parties. The Trustee, and Authority's credit enhancement provider, if any, shall have the right, as third-party beneficiaries of this Agreement,

to initiate and maintain legal proceedings to enforce this Agreement to the extent provided for in the applicable Bond Documents. Except as provided in the foregoing sentence, nothing in this Agreement, express or implied, is intended to confer any rights or remedies under, or by reason of, this Agreement on any person other than the parties hereto and their respective permitted successors and assigns. If an Event of Default occurs hereunder, the parties hereto, the Trustee, and Authority's credit enhancement provider, if any, shall have the right to take whatever action it, or they, deem(s) necessary or advisable to ensure that such defaulting party complies with the provisions hereof, including, without limitation, bringing an action in law or in equity. In any action brought by any party to enforce the terms of this Agreement, the prevailing party shall be entitled to recover its reasonable attorney's fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie.

19. **Notices.** Any notices to parties required by this Agreement shall be delivered or mailed, U.S. first class, postage prepaid, addressed as follows:

AGREEMENT FOR INDUSTRIAL WASTE PRETREATMENT PROGRAM

This Agreement is made this 19th day of August, 1988, by and between the City of Roseville, a municipal corporation ("CITY"), Placer County ("COUNTY"), and South Placer Municipal Utility District ("DISTRICT"), and

W I T N E S S E T H:

WHEREAS, the City is responsible for operation and maintenance of a Regional Wastewater Treatment Plant, and

WHEREAS, domestic and industrial waste waters from outside the jurisdiction of the City are treated in the Regional Wastewater Treatment Plant, and

WHEREAS, an Industrial Wastewater Pretreatment Program in compliance with Title 40, Code of Federal Regulations, Part 403, is required to monitor and control industrial wastewater at the point of waste generation, and

WHEREAS, the City has developed and implemented an Industrial Wastewater Program, and

WHEREAS, the County and District desire to adopt and participate in the City's Industrial Wastewater Program, and

WHEREAS, the County and District desire to delegate administration and enforcement of the Industrial Wastewater Program to the City.

ic

409

NOW, THEREFORE, the Parties agree as follows:

Article I: Industrial Waste Ordinance

The Parties agree that the City's Industrial Wastewater Ordinance, Roseville Municipal Code Chapter 14.26 (hereinafter referred to as the Ordinance), and any and all future amendments, shall apply to all generators of industrial wastewater that discharge such waste to the Roseville Regional Wastewater Treatment Plant. The County and the District shall within sixty (60) days from the date of this agreement amend their ordinances and regulations to adopt the Ordinance.

Article II. Enforcement

The Parties agree that the City of Roseville shall have enforcement authority over any and all users, as defined in the Ordinance, that discharge waste to the Roseville Regional Wastewater Treatment Plant (RWWTP) and that the County and District shall amend their ordinances and regulations to expressly grant the City such enforcement authority.

Article III: Administration

The Parties agree that the City shall administer the Industrial Wastewater Program in accordance with the Ordinance.

Article IV: Funding

The Parties agree that the City shall have the authority to collect fees, charges, and all costs of implementing and enforcing the program from users in accordance with the Ordinance.

Article V: Notification

The Parties agree that the City shall be notified of any potential industrial waste generator whose industrial waste will be discharged to the Roseville Regional Wastewater Treatment Plant as a result of new development or expansion of existing facilities, at the earliest possible time. In the case of County, such notification shall be made prior to the granting of a tentative map, parcel map, or use permit whichever is sooner. In the case of District, such notification shall be made immediately after District receives a request for service from a potential industrial waste generator or a request for expansion of existing facilities by a potential industrial waste generator.

Article VI: Hold Harmless

County and/or District shall defend, indemnify and hold harmless City, its officers, agents, and employees from liability of claims for damage of any nature, including but not limited to personal injury, including death, or property damage, which may arise from or be connected with the direct or indirect operations, inaction or action of the City or its contractors, subcontractors,

agents or employees arising out of or connected with this Agreement.

Article VII: Integration

This instrument constitutes the sole and only agreement of the parties hereto relating to the industrial waste pretreatment program and correctly sets forth the rights, duties and obligations of each to the other as of its date.

Article VIII: Attorney's Fees

If legal action by any party is brought against another for breach of this Agreement or to compel performance of this Agreement, the prevailing party shall be entitled to reasonable attorney's fees and costs.

IN WITNESS WHEREOF, the City of Roseville a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No. 88-201 adopted by the Council of the City of Roseville on the 17th day of August, 1988, and COUNTY and DISTRICT have caused this agreement to be executed.

RE: WASTEWATER SERVICE BY CONTRACT AND OPERATING AGREEMENT (CONTRACT NO. 50000099)

At the meeting of August 3, 2016 the City Council adopted a resolution authorizing the City Manager to execute the agreement referenced above. The fully executed agreement is enclosed along with a certified copy of authorizing Resolution No. 16-328.

If you have any questions, please contact Wastewater Collection Superintendent Chris Bracco at (916) 746-1892.

INTRODUCTION

This WASTEWATER SERVICE BY CONTRACT AND OPERATING AGREEMENT AMONG THE SACRAMENTO REGIONAL COUNTY SANITATION DISTRICT, THE SACRAMENTO AREA SEWER DISTRICT AND THE CITY OF ROSEVILLE is made this 3rd day of August, 2016, by and between SACRAMENTO REGIONAL COUNTY SANITATION DISTRICT, a sanitation district formed pursuant to and operating under the authority of the County Sanitation District Act commencing at Health and Safety Code Section 4700, hereinafter referred to as "Regional San," SACRAMENTO AREA SEWER DISTRICT, a sanitation district formed pursuant to, and operating under the authority of the County Sanitation District Act commencing at Health and Safety Code Section 4700, hereinafter referred to as "SASD," and CITY OF ROSEVILLE, a municipal corporation, hereinafter referred to as "CITY."

RECITALS

WHEREAS, wastewater from some sewers within the CITY, as shown in Exhibits A through F, flows into the SASD sewer system, then through the Regional San sewer system, and is then treated at Regional San's Sacramento Regional Wastewater Treatment Plant (SRWTP); and

WHEREAS, wastewater from some sewers within the SASD service area, as shown in Exhibit G, flows into the CITY sewer system and is then treated at the CITY's Dry Creek Wastewater Treatment Plant; and

WHEREAS, the intent of this Agreement is to meet regulatory requirements and to provide a basis for Regional San, SASD, and the CITY to work together to provide sewer service to users, establish operation and maintenance responsibilities, determine financial billing responsibilities, define system ownership, ensure ordinance compliance, outline rates and fees; and

WHEREAS, Section 56133 (a) of the Cortese-Knox-Hertzberg Act which establishes procedures for local government changes of organization, and Section 56133 (e) allows for contracts or agreements solely involving two or more public agencies are exempt from requiring approval from Local Agency Formation Commission approval; and

WHEREAS, the CITY collects rates and fees for services provided to the Vernon Oaks area, which resides inside the SASD and Regional San Service Areas; and

WHEREAS, the CITY collects rates and fees for services provided to customers inside the CITY's Service Area that are connected to SASD and Regional San; and

WHEREAS, this Agreement creates a service by contract between Regional San, SASD, and the CITY.

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth and acting pursuant to Section 4760 of the Health and Safety Code of the State of California and the Joint Exercise of Powers Act of said State, Regional San, SASD and the CITY agree as follows:

SECTION 1: DEFINITIONS

Within this Agreement, the following words shall have the meanings specified below.

CITY: The City of Roseville

CITY ENVIRONMENTAL UTILITIES DIRECTOR: The Director of Wastewater, Water, and Solid Waste Utilities for the City of Roseville, or successor.

COLLECTION SYSTEM OPERATIONS NOTICE (CSON) PROGRAM: A program implemented by the Regional San Wastewater Source Control Section (WSCS) to provide notification and effective communication of pertinent information for planned sewer system events such as chemical additions, large scale cleaning, construction plugs, and various routine operational, maintenance, and construction activities that may have significant impacts on downstream sewer systems and the Sacramento Regional Wastewater Treatment Plant. These "significant impacts" are further described within the CSON program.

CUSTOMER: The person, agency, or entity paying for sewer service.

DISTRICT ENGINEER: The District Engineer for Regional San and SASD.

DISTRICT SEWER SYSTEM: The facilities owned by Regional San or SASD used for collecting, conveying, pumping, treating, and disposing of wastewater and residuals.

EFFECTIVE DATE: The date that this Agreement is approved by the governing bodies of Regional San, SASD and the CITY and executed by all parties.

EQUIVALENT SINGLE-FAMILY DWELLING (ESD) or EQUIVALENT DWELLING UNIT (EDU): A parameter used to identify the sewage discharge from a single-family detached residential dwelling.

INCIDENT RESPONDER: An individual within SASD, Regional San or the CITY who is in charge of an SSO at any given time.

NPDES: National Pollutant Discharge Elimination System

O&M (M&O): Operations and Maintenance

OWNERSHIP RESPONSIBILTIES: Includes all the responsibilities of ownership without actually owning the property or facility including but not limited to operation, maintenance, replacement, repair, rate and fee collection, and Proposition 218 notification.

POINT OF DEMARCATION: The point in the sanitary sewer where ownership, operation, and maintenance transitions from one agency to another.

RATE: Monthly rate that all users of the sewer collection system must pay to use the sewer collection system.

REGIONAL SAN: Sacramento Regional County Sanitation District

REGIONAL SAN CONSOLIDATED ORDINANCE: An ordinance, adopted on March 23, 2016, and as subsequently amended, that relates to the operation and regulatory powers of Regional San.

RESPONSIBLE AGENCY: With respect to Sanitary Sewer Overflow (SSO), the agency ultimately responsible for responding, cleanup, mitigation, and reporting of the SSO.

SACRAMENTO REGIONAL WASTEWATER TREATMENT PLANT (SRWTP): Regional San's treatment facility located at 8521 Laguna Station Road, Elk Grove, CA 95758.

SANITARY SEWER or SEWER: A pipe or conduit (including pumping facilities and in-line treatment and control facilities) that receives and carries wastewater. This definition does not include Regional San treatment facilities.

SANITARY SEWER OVERFLOW (SSO): An unplanned overflow, spill, release, or discharge of untreated or partially treated wastewater from a sewer collection system, as defined in the most current WDR.

SASD: Sacramento Area Sewer District

SASD SEWER ORDINANCE: An ordinance, adopted October 25, 2013, and as subsequently amended, that relates to the operation and regulatory powers of SASD.

SEWER IMPACT FEE (FEE): Fee to pay for user's proportionate share of sewer capacity and associated costs.

SEWER SYSTEM MANAGEMENT PLAN (SSMP): Document that provides SASD, Regional San, or the City a system-wide living management plan for the operation, maintenance, expansion, repair and replacement of the sewer collection system. The intent of this document is to be the day-to-day working management plan that also meets the requirements of addressing the mandatory elements defined by the State Water Resources Control Board, Waste Discharge Requirements for sanitary sewer systems, most current edition.

SPWA: South Placer Wastewater Authority

STANDARD OPERATING PROCEDURE (SOP): The published or prescribed typical methodology for completing a task.

USER: Any person or entity that discharges waste directly or indirectly to the sewer collection system, causes, or allows such discharge.

WASTEWATER: The liquid and water-carried wastes from dwellings, commercial buildings, industrial facilities, institutions, and other sources, whether treated or untreated, which enter or are permitted to enter the sanitary sewer. This term also includes ground, surface, and storm waters comingled with liquid and water-carried wastes as may be present in the sewer system.

WASTEWATER SOURCE CONTROL SECTION (WSCS): A section within Regional San that protects the sewage collection and treatment facilities of the Sacramento region by controlling pollutant discharges to the sewer system. WSCS works to reduce the discharge of pollutants to the sewer by educating businesses and the general public on the waste reduction, management, and appropriate disposal.

WDR: Statewide General Waste Discharge Requirements for Sanitary Sewer Systems, Order No. 2006-0003-DWQ, promulgated by the State Water Resources Control Board (SWRCB), and subsequent revisions.

SECTION 2: FACILITIES

A. POINTS OF DEMARCATION

Exhibits A through F identify 6 locations where wastewater flows from the City to SASD sewers. The service area defines which agency (SASD or the CITY) is responsible for operation and maintenance of the manhole ("owner" in Table 2.1) at the point of demarcation. Table 2.1 shows the manholes that establish the point of demarcation for the sewers that flow from the City to SASD:

Table 2.1 – Points of Demarcation (By MH)

Area	Roseville MH # (SASD MH #)	Owner
1	A06-282	Roseville
2	A06-281	Roseville
3	A05-145 (216-003-007)	Roseville
4	A04-154 (204-001-002)	SASD
5	A06-245	Roseville
6	A04-155 (204-001-001)	SASD

Exhibit G identifies an area, known as Vernon Oaks, where wastewater flows from the SASD and Regional San service area into the CITY service area then to the Dry Creek Wastewater Treatment Plant. Table 2.2 identifies parcels within the SASD and Regional San service area that are customers and users of the CITY sewer system and Dry Creek Wastewater Treatment Plant.

Table 2.2 – Parcel Numbers for Vernon Oaks

209-0730-001 (#647)	209-0730-009 (#631)
209-0730-002 (#645)	209-0730-010 (#629)
209-0730-003 (#643)	209-0730-011(#627)
209-0730-004 (#641)	209-0730-012 (#625)
209-0730-005 (#639)	209-0730-013 (#623)
209-0730-006 (#637)	209-0730-014 (#621) Lateral located in City of Roseville
209-0730-007 (#635)	209-0730-015 (#619) Lateral located in City of Roseville
209-0730-008 (#633)	209-0730-016 (#615) Lateral located in City of Roseville
209-0047-012 (#7241)	

For properties listed in Table 2.2 and shown on Exhibit G, the CITY maintains the mainline and laterals for this area. The CITY is responsible for operation and maintenance, and all associated responsibilities of ownership for sewer service and the sewer pipelines that serve these parcels.

B. TRANSFER OF FACILITIES

If a facility is to be transferred by mutual agreement from one agency to the other, a transfer agreement will be prepared, including a description of the facilities and real property rights to be transferred, a description of transferred operation and maintenance responsibilities, and a clear description of financial obligations.

C. EASEMENTS AND RIGHTS OF WAY

For access to properties and the sanitary sewer system considered by this agreement, Regional San, SASD, and the CITY agree that each agency, as an agent of the other, is authorized to use each other's existing easements or rights of way as reasonably necessary to carry out provisions of this Agreement, unless precluded by law or contract. If an easement or right of way is situated in a public street or highway, the laws of the State of California will govern its joint usage in the absence of a specific agreement. All agencies agree to follow each other's SOP for notification.

D. FACILITY MODIFICATIONS

Any physical modifications to Regional San, SASD, or CITY sanitary sewer systems that could affect compliance with the current waste discharge requirements, NPDES permits, or other applicable standards; significantly change the rate of flow; or materially affect the operation of any other Regional San, SASD, or CITY sanitary sewer systems must be coordinated between all parties to this agreement.

SECTION 3: OPERATION AND MAINTENANCE

The boundaries of ownership, operation, and maintenance responsibility of sewer facilities is at the point of demarcation as described in Section 2 and shown in Exhibits A through F. Ownership, operation and maintenance responsibilities for sanitary sewer systems and service to parcels located within the Vernon Oaks area (Exhibit G) will be the responsibility of the CITY.

A. OPERATION AND MAINTENANCE ACTIVITIES

There is a potential for maintenance activities conducted by Regional San, SASD, or the CITY to cause temporary operational impacts within each other's sanitary sewer systems. Regional San, SASD, and the CITY will work together to implement measures that mitigate or minimize operational impacts.

B. ACCESS TO FACILITIES

SASD and the CITY will allow reasonable access to each other's sanitary sewer systems, subject to the operational limitations of the facility owner. The CITY will request access to SASD facilities through the SASD access permit process, as described in Section 3.4 of the SASD Ordinance. SASD will coordinate access to the CITY sanitary sewer facilities with the Environmental Utilities Collections Maintenance Division. See Section G for contact information.

C. ODOR AND CORROSION CONTROL

1. RESPONSIBILITY

Each agency is responsible for odor and corrosion control in their sewer system.

2. AGENCY COORDINATION FOR ODOR RESPONSE

SASD and the CITY will coordinate responses to odor complaints near the points of demarcation.

When an agency receives an odor complaint, it will:

1. Investigate to identify possible sources of the odor complaint within a response time consistent with their standard operating procedures.
2. If it is determined that the agency receiving the complaint is the responsible agency, it will mitigate the odor issue as necessary to remedy the issue.
3. If it is suspected that the other agency may be responsible for the odor complaint, the agency receiving the complaint will immediately contact the other agency.
4. Until SASD and the CITY agree which agency is the responsible agency, all agencies will remain engaged in finding a solution and work collaboratively to resolve any odor issues.

D. DATA ACQUISITION

Regional San, SASD, and the CITY, may request existing data and information for planning, monitoring, and/or operational purposes from each other. This data and information (excluding any privileged data or information) will be made available within a reasonable timeframe.

E. PROHIBITED DISCHARGE

SASD and the CITY will be responsible for controlling waste discharges into their system that significantly differ from each other's ordinances or that may cause harm to each other's sanitary sewer systems. More information on prohibited discharges can be found in *Section 2.4, Sewer Use, Prohibited Discharges* of the SASD Ordinance, *Chapter 14.12, Regulation of Sewer Use, Section 14.12.050 Use of Public Sewers* in the City of Roseville Municipal Code, and *Section 2.5 Sewer Use, Regulations* of the Regional San Consolidated Ordinance.

F. NOTIFICATION

SASD and the CITY shall notify each other as soon as either agency becomes aware of any serious ordinance or municipal code violation or an un-remedied violation that could cause harm or otherwise negatively affect the sanitary sewer system. Ordinance and municipal code enforcement will be coordinated between Regional San, SASD, and the CITY.

Each agency will notify the other through proper notification processes of any planned operational issues or any future operation or maintenance activities that may be detrimental to safe operations of each other's sanitary sewer system (see Section G for contact information).

The CITY will provide a minimum 48 hours notice to SASD and follow requirements of the Regional San Collection System Operations Notice (CSON) program for planned activities conducted in the CITY sanitary sewer system that could impact the District sewer system. SASD agrees to provide a minimum of 48 hours notice to the CITY and follow CITY requirements for any planned activity that could impact the CITY or SPWA infrastructure or CITY treatment plant operations.

As a condition of authorizing any temporary discharge of nondomestic wastewater to the sanitary sewer system, the Regional San, SASD, and the CITY will require the discharger to obtain approval from the Regional San Wastewater Source Control Section and the CITY's Industrial Waste Program respectively.

Notifications of any SSO's will be in accordance with Section 6 of this Agreement and all regulatory requirements.

G. CONTACT LIST

The point of contact for each agency will be the following:

Table 3.1 – Contact Numbers

SASD Dispatch	(916) 875-6730 10060 Goethe Road Sacramento, CA 95827
Regional San Plant Control Center	(916) 875-9400 or (916) 875-9406 8521 Laguna Station Road, Elk Grove, CA 95758
City of Roseville	(916) 746-1890 During normal business hours (916) 774-5750 after hours 1530-0700 1800 Booth Road Roseville, CA 95747

SECTION 4: PLANNING COORDINATION

A. CAPACITY PLANNING

Capacity demands may change depending on future development needs. Each agency will coordinate pertinent planning changes to ensure that sewer service needs are met.

B. NEW CONNECTIONS

This agreement addresses only areas identified in exhibits A through G. New connections planned within areas identified in exhibits A through G shall be coordinated between all affected agencies. New connections will be permitted only when adequate capacity is available in the receiving sanitary sewer system. Neither Regional San, SASD, nor the CITY is responsible for increasing capacity within its sewer system to accommodate flow from new connections outside its service area. Any new connections planned from areas outside those identified in exhibits A through G, or new connections that require the other agency to increase sewer capacity, will require a separate agreement or an amendment to this agreement.

C. PLANNING UPDATES

Regional San, SASD, and the CITY will coordinate with each other prior to creating or making changes to facilities that impact the connections to each other's sanitary sewer

systems. Increase in sanitary sewer system flow that affects capacity requires approval from the receiving agency.

SECTION 5: FINANCIAL CONSIDERATIONS

A. ACCOUNTING AND BILLING

Regional San, SASD, and the CITY agree to maintain records that confirm billing and transfers of billed amounts representative of the number of users being provided service and to make records available when requested.

Regional San, SASD, and the CITY will remit monthly service charge payments to each other on a semiannual basis (twice a year) as follows:

Table 5.1 – Payment Schedule

Period Covered	Payment due no later than
July 1 through December 31	February 28
January 1 through June 30	August 31

SASD and the CITY will absorb the following costs incurred providing service to customers for which collection and treatment service is provided by the other party:

1. Costs incidental to collection and transmittal of service charge payments; and
2. Costs attributable to uncollectable debts or service billings

B. RATES AND FEES

Properties located in the CITY service area, shown in Exhibits A through F, which have sewers connected to the Regional San and SASD sewer system will be subject to prescribed rates and fees for use and connection to the Regional San and SASD sewer systems. These rates and fees are governed by the Regional San and SASD ordinances and adopted by their respective Boards.

The CITY will pay 50% of SASD's and 100% of Regional San's rates for their customers using the SASD and Regional San sewer systems. The CITY will pay 100% of both SASD and Regional San's sewer impact fees for their customers that will connect to District sewer system. As applicable, Regional San or SASD will notify the CITY as required by Proposition 218, of any proposed rate or fee changes. The CITY will be responsible for notifying the CITY customers that use the District sewer system for any CITY proposed rate or fee changes.

For the Vernon Oaks area (Exhibit G), the CITY will assume all ownership responsibilities for the collection of rates and fees associated with providing sewer collection and treatment for the properties in the Regional San and SASD Service Area with sanitary sewer systems connected to and served by the CITY sanitary sewer system. The City will comply with Proposition 218 requirements for changes to these properties.

C. AUDITS

Regional San, SASD, and the CITY have the authority to audit, or appoint auditors, as necessary to examine the financial records of the other agencies to determine if rates and fees have been correctly and timely collected and appropriate amount has been remitted by the other agency in accordance with the terms of this agreement. Regional San, SASD, and the CITY will make available all requested records and will assist the auditors in their efforts.

D. REPLACEMENTS AND REPAIRS

The cost and performance of all replacement, betterments, and repairs, and any other costs for items not specifically defined in this Agreement will be the responsibility of the facility owner.

E. WASTEWATER SOURCE CONTROL PROGRAMS

Currently, Regional San and the CITY each administer separate mandated Federal Pretreatment Programs and local source control programs. Subject to applicable approval requirements of each agency, the District Engineer and the City Environmental Utilities Director may enter into agreements covering the reimbursement to the City or Regional San for the CITY's or Regional San's fair and reasonable share of their respective staff time and resources dedicated to the administration of their respective source control programs as related to this agreement.

F. OTHER COSTS

Subject to each agency's approval requirements, Regional San, SASD, or the CITY may enter into future agreements to reimburse costs for other services provided. Expenses chargeable for services provided will be fixed in nature and will provide full reimbursement for all costs, whatever the nature incurred in providing such services. The agency providing the services will be entitled to recover actual loaded rate costs.

SECTION 6: SSO COORDINATION

A. INCIDENT OWNERSHIP

When an SSO is reported, the agency receiving the notification will follow their own SSO Emergency Response Plan included in their Sewer System Management Plan (SSMP). The Responder will investigate the SSO and take all appropriate steps to respond in accordance with that agency's SSO Standard Operating Procedures (SOP). If it is determined that the other agency is the responsible party, a transfer of the incident will be made by calling the other agency's point of contact (Section 3-G). The responsible agency will assume responsibility as soon as they are contacted. Date and time of changes in Incident Responder will be communicated verbally and documented by both initial and relieving Incident Responder.

As the initial responder, both CITY and SASD agree to take all measures possible to contain and minimize a spill. As appropriate, the initial incident responder will remain onsite until responsibility can be determined and transfer of incident ownership can occur. To the extent that staff in one agency can help the other agency without jeopardizing the functioning of their own systems, these efforts will continue until, in the judgment of the Responsible Agency, the Responsible Agency has mobilized to the site with all necessary equipment and personnel to continue SSO abatement.

Once notified the Responsible Agency agrees to mobilize all necessary equipment and personnel in a timely manner.

Costs incurred by the initial Incident Responder when providing this service for the Responsible Agency will be reimbursed as outlined in Section 5.

B. SSO RESPONSIBILITY

The agency that is responsible for operation and maintenance of the sanitary sewer system is also responsible for controlling and correcting SSO's originating in that sanitary sewer system. An agency's assumption of the role of Responder, with respect to an SSO, will not alone make the agency responsible for the SSO. Responsibility will be determined based upon OWNERSHIP of the location of the blockage or failure in the pipe, not the SSO appearance point. Following response activities, Regional San, SASD, and the CITY agree to investigate and share information resulting from the incident investigation until the cause and location of the blockage or failure causing the SSO is determined.

C. SSO REPORTING

The Responsible Agency will report their SSO in accordance with the most current regulations.

SECTION 7: MUTUAL AID

A. EMERGENCY MUTUAL AID

Agencies may provide emergency mutual aid to each other. To the extent that staff in one agency can help the other agency without jeopardizing the functioning of their own systems, both agencies will share staff and resources for the benefit of the Sacramento Area and South Placer County regions. The recipient of the services will reimburse the other party pursuant to Section 5 of this Agreement.

B. RESOURCES

When one agency loans resources to another, the provider will keep records for the labor hours, equipment, and expenses incurred. Costs incurred will be reimbursed as outlined in Section 5.

SECTION 8: ADHERENCE TO REGULATIONS

A. APPLICABLE LAWS AND REGULATIONS

Regional San, SASD, and the CITY agree to operate all sanitary sewer systems in conformance with all pertinent laws and regulations.

B. SEWER ORDINANCES

1. SASD AND REGIONAL SAN ORDINANCES

SASD and Regional San's ordinances may be amended periodically, including changes that regulate the use of public sewers. The CITY code will ensure that all discharges to the public sewer system are in general compliance or do not result in a significant violation of the applicable SASD and Regional San ordinances and prohibit the discharge of any substance prohibited by the SASD and Regional San ordinances. The CITY code will also enforce the provisions in the SASD and Regional San ordinances that relate to pretreatment of industrial wastes.

2. CITY MUNICIPAL CODE

The CITY Municipal Code may be amended periodically, including changes that regulate the use of public sewers. The SASD and Regional San Ordinances will ensure that all discharges to the public sewer system are in general compliance or do not result in a significant violation of the applicable Municipal Code and prohibit the discharge of any substance prohibited by the CITY Municipal Code. The SASD

and Regional San Ordinances will also enforce the provisions in the CITY Municipal Code that relate to pretreatment of industrial wastes.

C. WASTEWATER DISCHARGE PRETREATMENT PROGRAM

The Regional San Wastewater Source Control Section will issue wastewater discharge permits under the Regional San Pretreatment Program to the CITY for users of the District sewer system within the City of Roseville. The CITY grants Regional San the authority to administer its pretreatment program to ensure users connected to the SASD and Regional San systems maintain compliance with the Regional San Pretreatment Program.

The CITY Industrial Waste Section will issue wastewater discharge permits under the CITY Pretreatment Program to Regional San for users of the CITY sanitary sewer system users in the Regional San service area. Regional San grants the CITY the authority to administer its pretreatment program to ensure that users connected to the CITY systems maintain compliance with the CITY Pretreatment Program.

SECTION 9: NOTICE

Unless indicated otherwise herein, all notices, invoices, payments, statements, or other writing authorized or required by this Agreement may be delivered personally, or sent in the United States mail, postage prepaid, or sent by electronic mail if the recipient confirms receipt, and addressed to the respective parties as follows:

To CITY:
Wastewater Utilities Manager
City of Roseville
2005 Hilltop Circle
Roseville, CA 95747

To Regional San and SASD:
District Engineer
Sanitation Districts Agency
10060 Goethe Road
Sacramento, CA 95827

SECTION 10: MUTUAL INDEMNIFICATION

The CITY shall defend, indemnify and hold harmless Regional San, its Board of Directors, officers, directors, agents, employees, volunteers, and assigns from and against all demands, claims, actions, liabilities, losses, damages, injuries to or death of persons, regulatory fines and/or penalties imposed by any local, state, or federal authority for breaches of such authority's regulations, and costs, including reasonable attorneys' fees, to the extent arising out of or resulting from the negligent or intentional acts or omissions of the CITY, it's City Council,

officers, directors, agents, employees, assigns, contractors, or volunteers in connection with this Agreement.

The CITY shall defend, indemnify and hold harmless SASD, its Board of Directors, officers, directors, agents, employees, volunteers, and assigns from and against all demands, claims, actions, liabilities, losses, damages, injuries to or death of persons, regulatory fines and/or penalties imposed by any local, state, or federal authority for breaches of such authority's regulations, and costs, including reasonable attorneys' fees, to the extent arising out of or resulting from the negligent or intentional acts or omissions of the CITY, it's City Council, officers, directors, agents, employees, assigns, contractors, or volunteers in connection with this Agreement.

SASD shall defend, indemnify, and hold harmless the CITY, its City Council, officers, directors, agents, employees, volunteers, and assigns from and against all demands, claims, actions, liabilities, losses, damages, injuries to or death of persons, regulatory fines and/or penalties imposed by any local, state, or federal authority for breaches of such authority's regulations, and costs, including reasonable attorney's fees, to the extend arising out of or resulting from the negligent or intentional acts or omissions of the SASD Board of Directors, officers, directors, agents, employees, assigns, contractors, or volunteers in connection with this Agreement.

Regional San shall defend, indemnify, and hold harmless the CITY, its City Council, officers, directors, agents, employees, volunteers, and assigns from and against all demands, claims, actions, liabilities, losses, damages, injuries to or death of persons, regulatory fines and/or penalties imposed by any local, state, or federal authority for breaches of such authority's regulations, and costs, including reasonable attorney's fees, to the extend arising out of or resulting from the negligent or intentional acts or omissions of the Regional San Board of Directors, officers, directors, agents, employees, assigns, contractors, or volunteers in connection with this Agreement.

It is the intention of Regional San, SASD and the CITY that, where comparative fault is determined to have been contributory, principles of comparative fault will be followed and to the extent permitted by law each party shall bear the proportionate cost of any damage attributable to the fault of that party, its officers, directors, agents, employees, assigns, contractors and volunteers.

This indemnity shall not be limited by the types and amounts of insurance or self-insurance maintained by the Parties.

Nothing in this Indemnity shall be construed to create any duty to, any standard of care with reference to, or any liability or obligation, contractual or otherwise, to any third party.

The provisions of this Indemnity shall survive the expiration or termination of the Agreement.

SECTION 11: INSURANCE

Each party, at its sole cost and expense shall carry insurance or shall self-insure its activities in connection with this Agreement and obtain, keep in force, and maintain insurance or equivalent programs or self-insurance for general liability, worker's compensation, property, professional liability, environmental liability, and business automobile liability adequate to cover its potential liabilities hereunder. Each party agrees to provide the other party thirty (30) days advance written notice of any cancellation, termination, or lapse of any of the insurance of self-insurance coverage. Failure to maintain insurance as required in this Agreement is a material breach of contract and may be grounds for termination of this Agreement.

SECTION 12: AMENDMENTS

Modifications or amendments affecting this Agreement shall be in writing and executed by all parties.

SECTION 13: ENTIRE AGREEMENT

This instrument constitutes the entire Agreement between Regional San, SASD, and the CITY concerning the subject matter hereof.

SECTION 14: AGREEMENT TERM

This Agreement shall become effective on the date hereof and will continue in full force and effect until terminated or amended upon mutual consent of both Regional San, SASD, and the CITY.

SECTION 15: NO AGENCY

Except as otherwise expressly provided in this Agreement, neither party, nor any of its officers, agents, or employees, volunteers or contractors, shall for any reason be considered agents, nor authorized to act as agents of the other party, with respect to the performance of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year hereinabove first written.

SACRAMENTO AREA SEWER DISTRICT and SACRAMENTO REGIONAL SANITATION DISTRICT sanitation districts formed pursuant to and operating under the authority of the County Sanitation District Act commencing at Health and Safety Code Section 4700

RESOLUTION NO. 16-328

APPROVING AN AGREEMENT BY AND BETWEEN SACRAMENTO REGIONAL COUNTY SANITATION DISTRICT, SACRAMENTO AREA SEWER DISTRICT AND THE CITY OF ROSEVILLE, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a Wastewater Services Contract and Operating Agreement, by and between Sacramento Regional County Sanitation District, Sacramento Area Sewer District and the City of Roseville, has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said agreement is hereby approved and that the City Manager is authorized to execute it on behalf of the City of Roseville; and

PASSED AND ADOPTED by the Council of the City of Roseville this 3rd day of August, 2016 by the following vote on roll call:

AYES COUNCILMEMBERS: Gore, Rohan, Herman, Roccucci

NOES COUNCILMEMBERS: None

ABSENT COUNCILMEMBERS: Garcia

Appendix D- Sewer Call For Service 22

Appendix E- Sewer Lift Station Failure Response 23

Appendix F- Spill Response Chart 24

Appendix G- Field Spill Report 25

The City of Roseville developed this Spill Emergency Response Plan (SERP) for responding to spills originating from the sanitary sewer system. This plan ensures that all spill responses are conducted efficiently and effectively while meeting all regulatory requirements of the General Order.

The division has provided all employees with a binder containing this emergency response plan, estimation tables, and strategies for notifying primary responders, local officials, and regulatory agencies.

I. Goals of SERP

This SERP aims to ensure that all wastewater collection personnel follows the established guidelines in cleaning up and decontaminating spills within the City's collection system service area. The City's goals concerning spill response are:

A. Respond quickly to minimize the extent of the spill;
   1. The division's goal is a 20-minute response time during business hours and 40 minutes after hours.
B. Contain the spill to the extent feasible;
C. Eliminate the cause of the spill;
D. Eliminate public contact with the spill;
E. Mitigate the impact of the spill; and
F. Comply with the RWQCB Monitoring and Reporting requirements

II. Respond and Assess

Calls for service come through either the office landline or a 24-hour answering service. Calls for service to the Administrative Technician are documented in a service request in the City's CMMS. In turn, the Technician will dispatch the call with all information to the on-call service worker via cellular phone. After business hours, the City's contracted answering service is provided a script of questions used to collect information from the caller. Once gathered, they also dispatch the call information via cellular phone to the on-call service worker. After the call, the answering service time stamps the call, and an email is sent to the division management and service call address with all pertinent information regarding the call. Additionally, the wastewater treatment plant staff monitors lift station SCADA alarms. Operators notify the on-call service worker via cellular phone if they receive an alarm at any of the City's lift stations.

Assessment starts with the phone call to the customer. Upon contact with the resident, request that the resident stop all water use, then begin gathering as much relevant information as possible such as:

A. Description of problem
B. Specific location if a spill has occurred (e.g.,. manhole in the street, front or back of the property, cleanout box)
C. The approximate time the spill was noticed helps tremendously in determining the start time of the spill.

D. Any other observations from the caller (e.g., currently spilling, odor, duration of the spill, slow drains, currently spilling, water use in home)

E. If the service worker believes an active spill is occurring, they will mobilize a hydro-vac immediately to the location.

A. The wastewater crewmember arriving first at the scene is the ***First Responder***. Upon arrival, the first Responder will quickly assess the spill to determine the extent, spill category, and resources needed to address the spill. The ***First Responder*** is responsible for the following:

1. Location of the spill by the address and cross street the spill appearance point (i.e., manhole, cleanout, lift station, etc.)
2. Documenting the time the call was received, time of arrival, and determining the start and stop times of the spill. Appendix A will aid in establishing the start and stop time for the spill.
3. Determine the extent and the category of the spill;
    i. If the spill is a Category 1 or 2, notify the Superintendent or Supervisor immediately. Cal OES notification is required within 2 hours of becoming aware of the spill.
    ii. Did the spill cause a backup in a structure? – Appendix B addresses the process
    iii. Did the spill enter into a drainage conveyance system?
    iv. If a potential for public exposure is present, control foot and auto traffic through the area
    v. Other concerns due to the spill
        a. Is the spill related to a street collapse?
        b. Is the spill related to recent construction work?
        c. Has the spill displaced a manhole cover creating a traffic hazard
4. Requesting additional wastewater crews or personnel as needed;
5. All field documentation, including photographs of the spill and completion of the Field Spill Report Form

F. If the spill is a Category 1, follow directions from RWQCB, Placer County Environmental Health, or the Department of Fish and Wildlife for posting warning signs around the contaminated area.

III. Spill Categories

Individual spill notification, monitoring and reporting must be in accordance with the following spill categories:

A. **Category 1** - any volume of sewage from or caused by a sanitary sewer system regulated under this General Order that results in a discharge to:

1. A surface water, including a surface water body that contains no flow or volume of water.
    i. A drainage conveyance system that discharges to surface waters when the sewage is not fully captured and returned to the sewer system or disposed of properly.
    ii. Any spill volume not recovered from a drainage conveyance system is considered a discharge to surface water unless the drainage conveyance system discharges to a dedicated stormwater infiltration basin or facility.
2. **Category 2** - is a spill of 1,000 gallons or greater from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.
3. **Category 3**- is a spill of equal to or greater than 50 gallons and less than 1,000 gallons from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.
4. **Category 4** - is a spill of less than 50 gallons from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

IV. Spill Containment

Containment of a spill becomes increasingly difficult once the overflow reaches a drainage conveyance system or a waterway. The quicker the spill's source and extent can be identified, contained, or controlled significantly reduces the spill's impact. Upon arrival, survey the scene to determine the potential spill appearance point. There are times when responding to a spill, the source of the spill is potable water, a backyard drain, or a storm issue. Once confirmed that the spill is the sewer, mobilize the necessary personnel and equipment for assistance. During dry weather, the drainage conveyance system can store the spill, if plugged at a point downstream of the spill.

A. Multiple techniques are identified to contain the spill depending on the circumstances, spill category, and material available. In no particular order, the list below includes possible containment options for field crews.

Location	Options for Containment
Curb and Gutter	Create berm with rubber berm, dry sweep, dirt or sandbags: Utilize natural low spots or grade deviations
Lift Station	• Use Hydro-Vac to contain • Setup bypass pumping • Setup backup generation
Open Space	• Dig a trench to contain • Sandbag berm • Dirt berm
Creek	• Plug storm drain inlets and outlet pipes to creek
Storm Drain Conveyance System (Dry)	• Plug all affected storm drain inlets; plug outfall if necessary • Contain using the hydro-vac • Request additional hydro-vac support if necessary
Storm Drain Conveyance System (Wet Weather)	• Plug all affected storm drain inlets • Emergency bypass pumping • Turn off stormwater pump station if applicable
Backup in Structure	▪ Evacuate residents if needed ▪ Pop cleanout cap off; If no city cleanout, attempt to locate ▪ Pop private cleanout if available • Contain outside if overflow is relieved by finding/removing cleanout cap.

1. Containment with Hydro-Vac
   Determine a location downstream of the spill appearance point where the hydro-vac unit can be set up to capture all spilled water. Ensure no storm drain inlets are between the containment and spill appearance points. Continue vacuuming overflow until the blockage has been cleared, then proceed with the spill's cleanup. Wash all debris and spill evidence into the vacuum tube for removal and disposal at the DCWWTP.
2. Containment Using Berms and Mats

   Utilize dirt, dry sweep, a rubber berm, sandbags, or other obstructing material that is readily available to block drain inlets and ponds the spill to a naturally low area to contain and minimize the spill's impact. If possible, divert the spill to a downstream manhole unaffected by the blockage. Attempt containment by covering any affected storm drain inlets with rubber mats and securing them with sandbags, dirt, or other heavy objects to keep them in place.

3. Containment Using Pneumatic Plugs

   Plugging the affected drain inlet or multiple drain inlets with a pneumatic plug can be effective. For example, a pneumatic plug in the storm drain outfall would prevent the overflow from reaching the waterway. However, depending on the location within the City, drain inlets will vary in size, so utilizing plugs may not be the best option.

B. Backup in Structure

Advise the customer to keep family members and pets out of the spill areas to not track any contamination into non-affected areas. If necessary, evacuate affected people and pets.

1. During regular business hours, notify Risk Management at 916-774-5420 or 916-774-5202. After hours or if there is no answer at the above numbers, contact Risk Manager Virginia Bolmsn at 916-501-2073.
2. If Risk Manager or their staff cannot be reached, contact one of the approved restoration companies in the order below and authorize cleanup services only:
   i. Serv-Pro 916-632-2250
   ii. Restoration Management 800-400-5058
3. Before the restoration company or the Risk Manager arrives, hand the resident our camera and ask them to photograph the affected area. Do not enter the house, even if invited.
4. If the resident declines the cleaning services, request that they sign and date the Declination of Clean Up Services Form.

C. Overflow into Storm Drain Conveyance System (DCS)

1. Trace overflow in the DCS to the downstream endpoint using the Stormwater Map on the GIS. Plug all affected storm drain outfalls or block the creek and channels to contain the spill.
2. While tracing the system, if you determine that the spill is contained within a mainline section, plug the downstream end at a manhole to contain the spill. Many storm drain manholes are built with sumps in the base, and depending on the spill volume, these sumps may prevent the spill from continuing downstream. Note all the storm drain assets cleaned on the Field Spill Report Form.
3. If a stormwater pump station is near the spill and may be affected, contact Streets Division to turn off the pumps.

D. If the SPILL is a Category 1 spill, follow directions from RWQCB, Placer County Environmental Health, or the Department of Fish and Wildlife for posting warning signs around the containment area.

V. Traffic Control

Traffic control may be needed immediately to protect the health and safety of the public and responding wastewater crews. Typically, immediate traffic control is necessary if there is a street collapse or significant undermining of the pavement section related to the blockage and sewer spill, if the manhole cover is ajar, or if the spill causes street flooding. In addition, temporary traffic control may be needed to allow responding crews to contain and clear the blockage and prevent sewer from being further dispersed by vehicular traffic.

A. Provide traffic control per Cal Trans Work Area Traffic Control Handbook (WATCH)
B. Control public contact with the spill by isolating the area with barricades, signs or traffic cones.
C. If necessary, use other departments (i.e. Police, Public Works) to ensure adequate traffic control. Contact Roseville Police/Fire Dispatch at 916-774-5123 to coordinate.

VI. Correct Cause

The cause of the overflow may be located a considerable distance downstream of the spill in areas with flat terrain. During significant rain events, overflows can be caused by excessive I&I in the collection system. I&I can significantly increase the flow in a collection system and cause overflows from pipes that are only partially blocked. I&I can also directly affect the hydraulic capacity of mainlines and lift stations. Under these conditions, stopping the overflow may not be possible until the flows recede.

A. Locate the cause of the overflow
    1. Sewer Main
        i. Check flow in manholes
        ii. Blockage should be between a manhole with sluggish flow or surcharging and a manhole with very little flow or completely dry
        iii. Clear the mainline blockage using a hydro-vac unit from the dry manhole. Refer to SOP WWC-002 for hydro-vac procedures. Observe the material that flows downstream after clearing the obstruction to determine the possible cause of the blockage and note it on the spill report form.
        iv. Continue to monitor manholes in the area until the surcharged manhole empties.
        v. If the blockage cannot be cleared. Increase containment and request additional crews for assistance.
            a. Perform a CCTV inspection to determine the blockage

b. Request additional hydro-vacs to contain, or initiate by-pass pumping
c. Dig and repair the sewer main to correct pipe defect

2. Sewer Service
    i. Check flow in the city cleanout. If the riser is full of water, wait until a hydro-vac is onsite to remove or contain the water before eeling. If the cleanout is holding but not full, carefully insert the gas powered ell rod and cutting head into the service until you contact the obstruction. Inserting the eel rod quickly, can cause the service to spill. Proceed with the eeling process until the service drains, then CCTV inspect to identify the blockage details.
    ii. If the City cleanout is dry and the resident is still plugged, the stoppage is likely on the private side and is not the City's responsibility. However, it is good customer service to CCTV the service to ensure the City line is clear.
    iii. If no city cleanout exists, but the resident has a 4" private cleanout, run this private cleanout to clear the blockage. Once removed, CCTV to determine the location of the problem. Refer to Appendix D to determine if the private cleanout meets the criteria before using city equipment.
    iv. Check the upstream and downstream mains if a city or private cleanout cannot be located. If the main is running clear, notify the resident that the problem is on their side, and explain the city cleanout installation policy.
    v. If the service line ties into a dead-end run, regardless if the City cleanout is clear, clean the mainline segment with a hydro-vac.
3. Lift Station
    i. Check the alarm status inside the control panel for indication of a problem.
    ii. If no power is present:
        a. Contact Roseville Electric to verify the outage and an estimated time the power will be restored.
        b. Determine the wet well level and remaining downtime left at the station.
        c. If downtime exceeds the max allowable retention, mobilize additional wastewater crews and a hydro-vac to the station. If the power outage is extensive, request multiple hydro-vacs for assistance.

d. Continue vacuuming the wet well until power is restored and the lift station operates in auto mode. Watch the station for an entire pump cycle before leaving.

iii. If power is present, but the pumps aren't operating in auto, switch the controls to the hand position. If the pumps are operational in hand mode, contact the on-call EU electrician and continue running and monitoring the station in hand mode.

iv. If portable generation is required to power the station, the on-call EU Electrician must be onsite to make the connections. All control panels have an exterior plug and disconnects for portable generation connection, with each station having a specific cable. All cables are labeled and located in the EU Maintenance shop.

4. Force Main

i. If the spill is from a ruptured force main, control the power using the written Energy Control Procedures (ECP), located in the door panel at the station. A qualified electrician shall perform the switching of any panel breakers.

ii. Contain the spill from the pipe break using the containment procedures in Section IV.

iii. Monitor and control the wet well levels using bypass pumping or hydro-vac units until the repair is completed.

iv. If the station is equipped with dual force mains, transfer flows to the additional force main to continue normal lift station operation.

VII. Spill-Specific Monitoring Requirements

Spill specific monitoring requires gathering and storing records using photography, GPS coordinates and other best-available tools to document a particular spill event. Additionally, first responders can use this information to estimate the approximate spill volume and spread. Therefore, the first responder shall collect the following critical spill location information:

A. Photography and GPS Coordinates for:

1. The spill appearance point
2. If multiple spill points exist, document the point closest to the spill origin.

B. Photographs for:

1. Locations where the spill entered the drainage conveyance system;
2. If applicable, the location where the spill discharged into surface waters;
3. Extent of the spill spread, and;
4. Locations documenting spill cleanup

C. Photograph all affected areas during the spill, documenting the appearance point, containment point, spread of the spill, and any post-spill cleanup. When photographing areas, ensure there is an object in the picture to aid in gauging the size of the area. The Field Spill Report Form also has a small camera indicating when a photograph is required.

VIII. Receiving Water Sampling

For sewage spills in which an estimated 50,000 gallons or greater are discharged into a surface water, the Enrollee shall conduct water quality sampling no later than 18 hours after the Enrollee's knowledge of a potential discharge to a surface water. In addition, the Enrollee shall gather information during and after the spill event to assess the spill magnitude and update its notification and estimated spill volume. The Superintendent or their designee will handle all notifications to regulatory agencies. Refer to Appendix C for sampling procedures.

IX. Final Spill Volume Estimation

The final spill volume estimation is critical for CIWQS reporting and determines whether additional reporting to regulatory agencies is required. Additionally, the Enrollee shall update its notification and reporting of estimated spill volume, including spill volume recovered, as further information is gathered during and after a spill event. Calculating large-volume spills is challenging because the area and depth are difficult to measure, and chances are these spills are not fully contained. Use SOP WWC-044 for spill volume estimation methods and guidance.

X. Initiate Cleanup

When cleaning sewer spills, all solids and materials shall be recovered and removed from the site. Disinfection of contaminated soil or drainage conveyance systems is performed only at the direction of California Fish and Wildlife or Placer County Environmental Health. Procedures for cleaning affected areas after a spill are as follows:

A. Flooded building or structure
   1. If building or structure is flooded due to a failure in the City's collection system, contact Risk Management or Virginia Balmsn after hours. Risk Management will respond, assess and notify restoration companies on contract with the City.
   2. Storm Drain Conveyance System
      i. Pump out or vacuum any ponded water present.
      ii. Remove all debris and solids using a Hydro-Vac to clean affected storm drains and vacuum all water from the drainage conveyance system.

iii. Wash all affected concrete areas with the high-pressure wand. Then, capture and remove all wash water using the vacuum on the Hydro-Vac.
iv. Remove all containment and finish flushing and vacuuming area, capturing all remaining wash water.

3. Street, Curb or Gutter and Landscape
   i. Remove all debris and solids with hydro-vac
   ii. Remove any contaminated soil and plants
   iii. Wash pavement, curb and gutter area, with the high-pressure wand, then vacuum all wash water with a hydro-vac.
   iv. If Hydro-Vac decant pump is used, utilize the decant apparatus to alleviate possibility of a secondary spill and provide fall protection at the open manhole.

XI. Notification Requirements

The General Order requires prompt reporting of all spills to regulatory agencies. As such, notification procedures are identified in the SERP and included in the SERP binder provided to you.

A. If the First Responder determines the spill to be a Category 1 or 2, the first notification begins with the LRO (s) or their designee, who are responsible for notifying all regulatory agencies regarding reportable spills.
B. In addition, when notifying regulatory agencies, site-specific spill information is required before receiving an OES Control Number. First responder information gathered on the Supplemental Sheet in the back of the Field Spill Report Form (Appendix G) will be used to notify OES and assist Data Submitters when inputting information into CIWQS.
C. Following the initial notification, the Enrollee shall provide any updates to OES regarding additional impacts to receiving waters, including increased or decreased changes to the estimated spill volume and the estimated discharge volume directly into waters of the state or indirectly to a drainage conveyance system.
D. Table 1 is the regulatory notification guide. The table, used by the field crews, provides a quick reference for notifications.
E. Table 2 provides information on the monitoring and reporting guidelines set in the General Order.

Table 1- Regulatory Notification

If a Spill	And Affects	Notify
.that discharges in or on waters of the State or discharges to a location where it will probably be discharged to waters of the State, the Enrollee shall notify the Office of Emergency Services (OES) and obtain a control number as soon as possible, but no later than 2 hours after becoming aware of the discharge; and notification can be provided without substantially impeding cleanup or emergency measures	Sacramento River A structure that requires cleanup	• WWC Supervisor- Cody Wilbanks Office 916-746-1889 Cell 916-472-1488 • WWC Supervisor- Shane Rodgers Office 916-746-1894 Cell 916-223-7711 • WWC Supervisor – Kevin Ryan Office 916-746-1895 Cell 916-223-7537 • WWC Superintendent – Dan Pruden Office 916-746-1891 Cell 916-580-5600 **<u>The individuals above are responsible for notifying</u>** • OES 1-800-852-7550; Obtain a control number for spill report form **Water Quality Sampling- Frank Dittrich 916-746-1882 - During normal business hours only; after hours, call** ▪ **Cal Test 707-258-4000** ▪ **California Lab Services 1-800-638-7301** ▪ **Excel Chem 916-938-0519** **<u>Additional Numbers for Reference</u>** ▪ **Placer County Environmental Health** 1-530-745-2300 Main Line 1-530-745-2306 After-Hours Supervisor • **California Department of Fish and Wildlife** 916-445-0045 Option #2 • **Sacramento River Water Treatment Plant** 916-808-4961 916-264-5011 • **City of Roseville-Risk Management** 916-774-5420 or 916-774-5202 o After hours, Contact Risk Manager Virginia Bolmsn at 916-501-2073 o If there is no answer, first responder can authorize cleanup only from the

		restoration companies listed in the SERP

Table 2 - Monitoring and Reporting

Spill Category	OES Notification	Monitoring	Draft Report	Certified Report
Category 1 Any volume of sewer discharging to surface water	• **Within 2 hours** of the Enrollee's knowledge of the spill of 1,000 gallons or greater discharging or threatening to discharge to surface waters. • Obtain a Control number from OES	• Conduct spill-specific monitoring. • Conduct water quality sampling **within 18 hours of knowledge of a spill 50,000 gallons** or greater to surface waters	Due within **3 business days** of knowledge or self-discovery of Category 1 spill.	• Due within **15 calendar days** of the spill end date. Upon completion, the CIWQS will issue final spill event ID number. • Submit Technical Report within 45 calendar days after the spill end date for spills greater than 50,000 gallons • Submit Amended Report within **90 calendar days** after the spill end date
Category 2 Spills of 1,000 gallons or greater that do not discharge to waters of the State	• **Within 2 hours** of the Enrollee's knowledge of the spill of 1,000 gallons or greater discharging or threatening to discharge to surface waters. • Obtain a Control number from OES	• Conduct spill-specific monitoring.	Due within **3 business days** of the Enrollee's knowledge of the spill	• Due within **15 calendar days** of the spill end date. Upon completion, the CIWQS will issue final spill event ID number. • Submit Amended reports within **90 calendar days** of the Certified Report due date
Category 3 Spills of 50 gallons to less than 1,000 gallons that don't discharge to surface waters	N/A	• Conduct spill-specific monitoring.	N/A	• Due **30 calendar days** after the end of the month in which the spills occurred. After LRO certifies the spill, CIWQS will issue a spill identification number for each spill. • Submit Amended reports within **90 calendar days** of Certified Report due date
Category 4 Spills less than 50 gallons that don't discharge to surface waters	N/A	• Conduct spill-specific monitoring.	N/A	• Within **30 calendar days** after the end of the month in which the spills occurred, certify monthly the volume spilled and the total number of spills • Upload and certify a digital report of all Category 4 spills in CIWQS by 1 FEB after the end of the calendar year of which the spills occur.

XII. Documentation and Data Tracking

All spills are tracked with a service request module in the City of Roseville's CMMS. Completed service requests, work order requests and any overtime tags are turned into Superintendent/Supervisor for QA/QC. These are all resolved in the CMMS. Service requests for after-hours call will be generated the following business day. Ensure all appropriate documentation has been completed.

A. Follow-up work orders are generated to CCTV inspect the point of failure within the sewer system. The System Failure Analysis Form includes post-spill assessments of response activities and recommendations for repair, replacement, or preventative maintenance schedule adjustments. The Superintendent or Supervisor will review the results and recommendations from the CCTV crew and implement the changes into the appropriate corrective or preventative maintenance schedules.

B. The first responder turns in the spill Field Report Form documenting all actions taken during the overflow to the Data Submitter. The Data Submitter entering the report in CIWQS writes an after-action narrative based on the data provided in the Field Spill Report Form and all information provided by the first responder. This document contains the pertinent details of the overflow, verifies all spill response activities, verifies the accuracy of the start and stop times, and all actions taken by the first responder. At least five pictures are required for every spill response, which establishes the spill appearance point, final destination, containment procedures, and cleanup response. In addition, overall effectiveness of the response activities are discussed, and any areas for improvement are identified. Before certifying the report in CIWQS, the LRO reviews the information and verifies the spill response and estimations are accurate and justified.

C. Private Commercial Spills

1. City crews will respond and contain or clear blockages, depending on the type of business and cooperation of the management staff at the business. If the business refuses to stop using water to alleviate the potential for a continued overflow, first responders can call Placer County Health Department to assist with the response from the business. The City will document all time, equipment, pictures, comments, and response activities on the Field Spill Report Form, which will be stored electronically.

D. Private Residential Spills

1. City crews will respond and contain if necessary until the resident has stopped all water use causing the spill. City crews will verify that the problem is on the private side by inspecting the city infrastructure. If no city cleanout is located, and If the resident has a private cleanout that meets

the criteria Appendix D. (5) of the SERP, the City will clear the blockage and document activities on the field spill report. If no spill occurs, the Responder will document all findings on the issued service request.

XIII. Staff and Contractor Training

A. WWC Employees train annually on the importance of the SERP. Supervisors utilize a Powerpoint Presentation and the written SERP as an interactive training resource in a classroom setting. This setting allows employees to clarify any elements within the procedure and enables management staff to gather feedback from field crews, assess the effectiveness of the current emergency response plan, and update the procedures as necessary. A written competency test follows the annual training.

B. WWC employees constructed a spill simulator to test employees' skills in estimating spill volumes. Training on spill estimation occurs annually for City wastewater crews. After completing the SERP training, Supervisors use the simulator to evaluate the employees' volume estimation skills. Supervisors can create spills from either a manhole, a cleanout, or both. The water is metered in gallons per minute, creating an accurate simulation within the confines of the WWTP.

C. The CWEA Technical Certification Program provides certification in various wastewater disciplines to promote the knowledge and skills of wastewater professionals. The City of Roseville requires employees to hold Collection System Operator certification to promote within the ranks.

D. The City of Roseville is a Regional Treatment Facility, and as such, Regional Partner meetings are held quarterly with the neighboring agencies having tributary flow through the City's collection system. A mutual aid agreement has been written between the three partners, agreeing to assist each other with equipment and manpower, depending on the extent each agency has been affected by a regional catastrophe. Partner meetings include discussions of mutual aid agreements, new and ongoing projects, and brainstorming new ideas or technologies that could benefit the agencies.

E. The City of Roseville is a full-service city, owning and operating all municipal utilities except gas. Wastewater and Streets Division management staff consistently communicate and have scheduled quarterly meetings to discuss overlay projects, trench paving, and storm drain maintenance concerns.

F. Contractors are provided with the City's wastewater collection system policies and procedures. Per the contract, they must train all their employees on the City's wastewater collection system policies and procedures before performing work on the City's wastewater collection and conveyance system.

Appendix A- Spill Start Time Policy

The Service worker shall use the time a call is received from Administrative Tech or the answering service as a **base** for when the spill started. When talking with the resident or business, instruct them to stop using all water.

A. Upon arrival, note if the spill appearance point is actively spilling. If not spilling, but there is evidence a spill occurred requiring a cleanup effort, notify additional crewmembers for additional equipment to clean up the spill.
B. If spilling, initiate the SERP to ensure the spill is contained and the cause is corrected.
C. Interview the resident or the individual reporting the spill to determine the following:
    1. Did you notice water coming from the cleanout at the property line or manhole in the street? If so, what was the approximate time?
    2. Were your drains running slowly at any time before you called? If so, what was the approximate time?
    3. Do you remember the last time you didn't see a spill occurring?
    4. If neighbors were outside, close to the area of the SPILL, did they notice water spilling? If so, what was the approximate time?
    5. Be prepared to summarize how you determined the start time, describing the steps you took while making your decision.
D. If the above questions do not produce an accurate account for the SPILL start time, use the time the call was received by either the office personnel or the after-hours answering service, and subtract 15 minutes. Record this time as the actual start time on the Spill Field Report Form. However, If the spill evidence travels farther than the logic of the 15 minutes, the field crew/responders shall try to recreate the spill the following day using clean water.
E. Any of the following will determine the stop time of the spill
    1. The arrival time of the service worker if the spill had stopped before their arrival.
    2. The clearing of the blockage and the spill stops overflowing.
    3. Interview the resident or witnesses observing the spill, provided the time concurs with the evidence.

F. Provide a detailed description of the spill event, including exact times of arrival, spill start and stop time, containment procedures, and names of collection personnel assisting you in the overflow. Detail your process for determining the start and stop time of the spill. After completing the necessary paperwork, provide the photos and field report to the Data Submitter.

G. In the event of a SPILL from a sewer lift station, the start time will be determined using information gathered from the SCADA system.

Appendix B- Flooded Structure Procedures

In the event a failure in the City's wastewater collection system causes a sewer spill in a resident's home or business instruct them to:

1. Keep people and pets away from the affected area(s), and do not track contamination throughout non-affected areas.
2. Don't attempt to clean up the overflow. Instead, instruct them the City has restoration companies available and will respond.
3. Turn off all central heat and air-conditioning systems and prevent flow from reaching any floor vents with towels or blankets.
4. Leave these items in the affected areas for restoration companies to clean up.

Contact Risk Management at 774-5420 or 774-5202 during regular business hours. After hours, if there is no answer, contact Virginia Bolmsn, Risk Manager, at 916-501-2073. They will assess and notify restoration companies on contract with the City to respond. If the resident refuses the offered cleanup services, ask them to sign the declination letter refusing the service.

If the resident chooses to file a claim for damages, inform them that they must fill out a Government Claim Form.

A claim form can be obtained in the following ways:

- In person at the Roseville Civic Center, City Clerks Department and Risk Management Division, 311 Vernon St., Roseville, CA.
- By mail, by contacting the Risk Management Division at (916) 774-5202 or by e-mailing the request to riskmanagement@roseville.ca.us
- Electronically by following this link: http://www.roseville.ca.us/hr/risk_management/how_to_file_a_claim.asp

Completed forms must be returned by mail or in-person to the City Clerk's office at the Roseville Civic Center

Appendix C- Receiving Water Quality Monitoring, Sampling and Analysis

This procedure describes the Water Quality Monitoring, Sampling and Analysis process to be used if a sanitary sewer overflow exceeds 50,000 gallons. The water quality sampling results will enable the division to prioritize areas of concern regarding water quality impacts

A. Receiving Water Monitoring

Through visual observation, spill volume-estimating, and field calculation techniques, the Enrollee shall gather and document the following information for spills discharging into receiving waters:

1. Estimated spill travel time to the receiving water
2. For spills entering a drainage system, estimated spill travel time from the point of entry to the point of discharge into receiving water
3. Spill travel time can be estimated in the following ways:
    i. NCPI Gravity Flow Hydraulics Calculator
    ii. Travel time based on design slope of 2 fps
    iii. Timed water release in the cleaned pipe over the distance traveled
4. Estimated spill volume entering the receiving water
5. Photographs of the following:
    i. Waterbody bank erosion
    ii. Floating matter
    iii. Water surface sheen (potentially from oil and grease)
    iv. Discoloration of receiving water
    v. Impact on the receiving water

B. Water Quality Sampling and Analysis

Surface water samples will be collected using a grab sample technique. Employees must wear new sterile powder-free surgical gloves when collecting all samples.

1. ***Trigger for Sampling*** -Water quality sampling is required within 18 hours of initial SPILL notification for Category 1 Spills in which 50,000 gallons or greater are spilled into surface waters.
2. ***Safety and Access***- Water quality sampling should only be performed if it is safe to do so and access is not restricted or unsafe. Unsafe conditions include traffic, heavy rains, slippery or steep creek banks, visibility issues, high-flowing creeks, and limited access due to soil conditions or poor terrain. If access restrictions or unsafe conditions prevent compliance with these monitoring requirements, the Enrollee shall provide documentation of the access restriction or safety hazards in the required report.

3. ***Where to Sample***- The Enrollee must use the best professional judgment to determine the upstream and downstream distances based on receiving water flow, accessibility to waterbody banks and size of visible plume. Collect one sample each day for the duration of the spill. In addition, the Enrollee shall collect receiving water samples from the following locations.
    i. A point in the drainage conveyance system before the flow discharges into the receiving water. Label this sample DCS-001
    ii. Point of Discharge into the receiving water where sewage initially enters the receiving water. Label this sample RSW-001
    iii. Upstream Sample – A point in the receiving water, upstream of the point of sewage discharge. Label this sample RSW-001U
    iv. Downstream Sample – A point in the receiving water, downstream of the point of discharge where the spill is fully mixed with the receiving water. Label this sample RSW-001D

Determine the water velocity present in the creek or body of water during the SPILL. Dropping debris in the creek and timing how long the debris takes to travel a known distance is a good indicator of the water velocity present. Use this information to determine the next downstream sampling point. Then, multiply the water velocity by the spill duration to determine the furthest point downstream to the sample.

C. **Sampling Procedure**

1. Put on the required PPE (safety glasses and latex gloves)
2. **Collect Drainage Conveyance System Sample** – Sample at a point in the drainage conveyance system before the flow discharges into receiving waters
    a. Label this sample DCS-001 and take a picture of the location you are sampling.
    b. Avoid any debris or scum layer from the drainage system.
    c. Fill the bottle against the direction of flow, replace the cap, and secure the sample to avoid contamination.
    d. Use a thermometer to measure the temperature of the sample and record the results
3. **Collect Upstream Sample** - Move approximately 100 feet upstream of the source.
    a. Label the bottle RSW-001U and take a picture of your sampling location.
    b. Sample away from the bank and avoid any debris or scum layer from the surface.
    c. Fill the bottle against the direction of flow, replace the cap, and secure the sample to avoid contamination.
    d. Use a thermometer to measure the temperature of the upstream sample location and record the results.

4. **Collect Point of Discharge Sample-** Move approximately 10 feet downstream of the source location.
    - **a.** Label the bottle RSW-001 and take a picture of your sampling location.
    - **b.** Sample away from the bank and avoid any debris or scum layer from the surface.
    - **c.** Fill the bottle against the direction of flow, replace the cap, and secure the sample to prevent contamination.
    - **d.** Use a thermometer to measure the temperature of the source sample location and record the results.
5. **Collect Downstream Sample –** Move approximately 100 feet downstream of the source.
    - **a.** Label this sample RSW-001D and take a picture of the location you are sampling.
    - **b.** Sample away from the bank and avoid any debris or scum layer from the surface.
    - **c.** Fill the bottle against the direction of flow, replace the cap, and secure the sample to prevent contamination.
    - **d.** Use a thermometer to measure the temperature of the downstream sample 1 and record the results

D. **Required Water Quality Analyses** – All samples will be immediately transported to the nearest certified water quality laboratory for analysis. The sample analysis, at a minimum, will include the following:

1. Ammonia
2. pH
3. Electrical Conductivity
4. Bacterial indicators, such as total and fecal coliform, enterococcus, and e-coli, per the regional Basin Plan or as directed by SWRCB
5. Temperature

The City has contracts with the following Certified Labs for Spill Response:
Cal Test 707-258-4000
California Laboratory Services 1-800-638-7301
ExcelChem. 916-938-0519

E. **Equipment and Supplies** – The following items and PPE are required for sampling:

1. Cooler with Blue Ice
2. Sterile sampling bottles
3. Powder-free latex gloves
4. Safety glasses
5. Marking pen
6. Field log forms

Appendix D- Sewer Call For Service

When dispatched to a home experiencing a sewer problem, the service worker shall follow the procedures below to provide the resident with the best possible customer service and quickly correct the problem causing the SPILL.

Residential

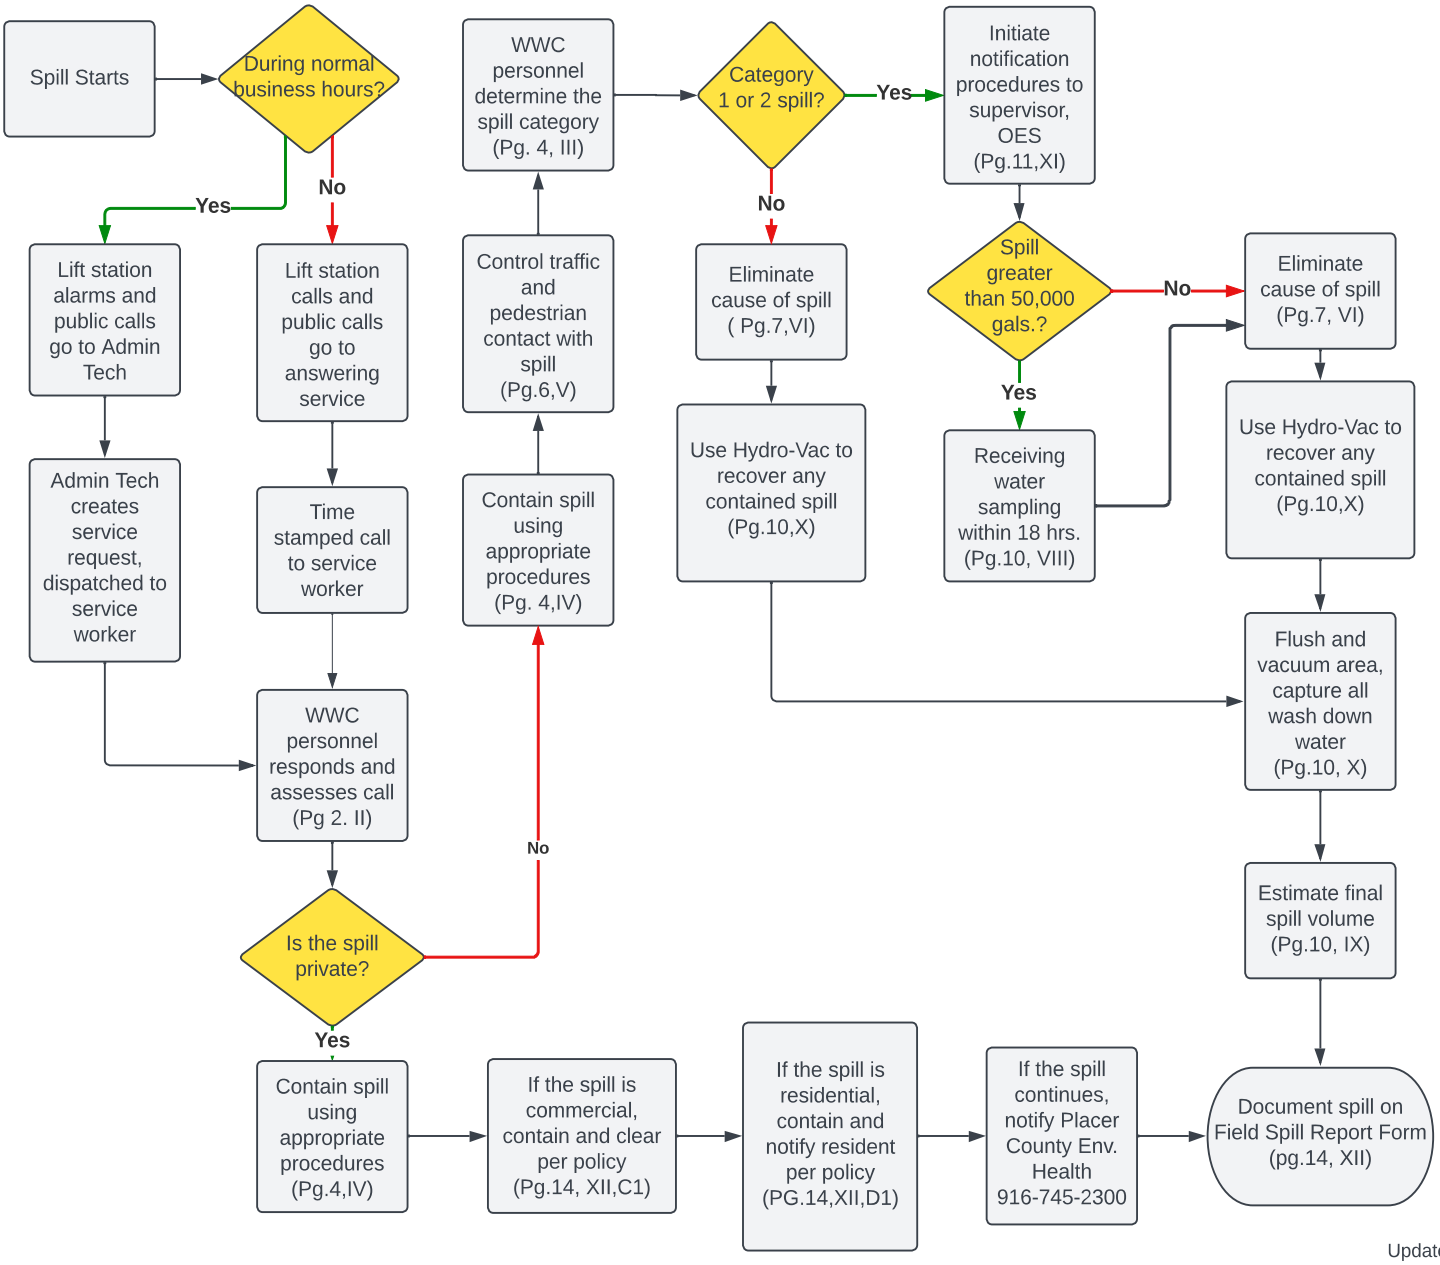
1. Upon arrival and before performing any work, contact the homeowner or resident. Explain the process you will use to determine the problem. During the initial phone call, the responder should have requested the resident to stop all water use, so if water is still spilling from cleanout, check the nearest upstream manhole on the mainline for a blockage.
2. If no cleanout is visible, look in CMMS for a cleanout location, an "S" marked on the curb, or other information that might indicate a cleanout.
3. If a city cleanout is found, clear the lateral blockage using the eel and a root-cutting head, do not use hand tape. CCTV to ensure the line is clear and all blockages have been removed. Record all time and pertinent information you have found on a work order, service request, or an overtime tag for after-hours calls.
4. If no cleanout is found, locate the closest downstream manhole, call for Hydro-Vac assistance, and run the main.
5. If the residence does not have a city cleanout, and the above procedures did not alleviate the blockage, we will use our equipment to run a "Viable" cleanout that belongs to the resident. This "viable" cleanout should be a factory-fitting 4" cleanout, either a wye or combo wye, so we can easily get our equipment into and service the line. Once the service has been cleared, CCTV through this cleanout and determine the blockage location.
6. If CCTV inspection identifies the problem below the location where a city cleanout should be located, the Supervisor will schedule a cleanout installation during regular business hours.
7. If the problem causing the blockage is located within the customer's service line, notify them that the problem is in their portion of the lateral, the location, and the severity of the problem. Advise the resident of the City's policy for cleanout installation, and let them know this is a one-time service, and the City will not clear future blockages from the homeowner's cleanout. Document all information in the CMMS under activity code- SPHCC (Sewer Plug Homeowner City Cleared) on a service request.

Private Commercial

When dispatched to a commercial property experiencing a spill, start containment immediately. Notify the manager to stop using water and to call a plumber. Ensure the manager understands that City staff will contain the spill until their plumber responds, and they will be billed for staff and equipment. If, after 60 minutes, the plumber doesn't show, notify Placer County Health Department. Notify your supervisor that the health department has been called and discuss possibly clearing the main or service.

Appendix E- Sewer Lift Station Failure Response

This procedure aims to define strategies necessary to prevent a spill from a lift station in the event of a power or component failure within a lift station. The City of Roseville operates and maintains 17 neighborhood lift stations. Each station is equipped with SCADA, monitored 24 hours per day by wastewater treatment plant personnel. In addition, each station has the maximum allowable downtime posted inside the door of each control panel. This identifies the retention time and the storage capacity in the collection system assets before a spill occurs. The potential spill point manhole is also identified to assist on-call personnel in determining the remaining downtime. In the event of a lift station failure, the plant operator will notify the answering service that an alarm has been activated at a station, and the on-call service worker will respond and assess the alarm.



If no power is present in the panel, the service worker will:

1. Contact Roseville Electric at 774-5620 to verify they know about the outage.
2. Determine the level and remaining downtime left in the station.
3. If downtime exceeds the maximum allowable retention, the on-call service worker will call collection system personnel off the standby list to get a Hydro-Vac en route. The Hydro-Vac will decant water at an identified point in the system, which won't affect the left station levels. If it appears that one Hydro-Vac won't keep up with flows, the on-call service worker will call in additional personnel with Hydro-Vac to maintain levels in the station.
4. If an outage appears to be a lengthy process, contact the supervisor. A portable generator may be needed. In this event, an electrician will be required.
5. Once flows are maintained, contact Supervisor to make them aware of the situation.

If power is present in the station, but pumps are not operating, the service worker will:

1. Attempt to run the pumps in "hand" mode to eliminate the possibility of a spill
2. If the pump operates in "hand," continue operating and monitor the levels in the wet well. Contact the On Call Electrician at 916-532-0612 and continue to monitor.
3. If the station does not operate in hand mode, call additional personnel in with Hydro-Vac to monitor wet well levels. Vacuum and decant accordingly until the problem is rectified.
4. If it appears that one Hydro-Vac won't keep up with the flow into the wet well, mobilize a second Hydro-Vac to maintain the levels in the station.
5. Stand by and assist the on-call electrician until the station is operational.

Length X Width X Depth = Volume (ft^3)

Volume (ft^3) X 7.48 = Gallons

Use the conversion chart to convert inches into feet.

If you are unable to measure the water depth, use the following measurements:

1/64" (.0013 feet) for depth of wet areas on concrete

1/32" (.0026 feet) for depth of wet areas on asphalt

Area Calculation(sq.ft.)

Rectangle = Length (ft) X Width (ft)

Triangle = Height (ft) X Base (ft) X .5

Circle = $Diameter^2$ X .785

If additional lines are needed, use the notes sheet

Notes:

Supplemental Sheet- Category 1 or 2 Spill Only

If a spill is a Category 1 or 2, at a minimum, OES requires the information below to obtain a Control Number. The Enrollee shall notify OES within 2 hours of knowledge of the spill. Notify the Supervisor as soon as the information is gathered, then continue to complete the remaining Spill Field Report Form.

Spill Category (Place X)

	Category 1	Any volume that discharges to surface water, a dry surface water body with no flow, or a storm drain system and is not fully captured
	Category 2	A spill of 1,000 gallons or greater that does not discharge to a surface water

Date Notified:_____ Time Notified:_____

Spill Location : _____ Cross Street: _____

Estimated Spill Volume (Gallons) _____ Estimated Spill Rate From System (GPM)_____

Estimated Discharge Rate to : Waters of the State _____(GPM)

Drainage Conveyance System_____(GPM)

Brief Spill Incident Narrative:

_____

_____

_____

_____

_____

Spill Cause

	Debris-Rags		Root Intrusion		Grease
	Debris-Construction		Lift Station Failure-Mechanical		Non-Dispersables
	Pipe/Structural Failure		Lift Station Failure- Electrical		Vandalism
	Natural Disaster		Rainfall Exceeded Capacity-I&I		WWC Staff Caused
	Other-(please list)				

Amount of Spill Contained (Gals.)_____ Name of Affected Surface Waters_____

Description of impact to Surface Waters:

_____

_____

_____

Required Photographs: (check box) 

[ ] Waterbody bank erosion [ ] Water Sheen (potential from grease or oil)

[ ] Floating matter [ ] Discoloration of water [ ] Impact to receiving water

Appendix 9-3

City Spill Performance Report

Appendix 1 — City Spill Performance Report

The purpose of this Appendix is to provide visual data tools to showcase the City's historic spill performance compared with other collection system agencies within the Central Valley Regional Water Board area and state from the required City Audit period 5/2/2021 to 5/2/2024).

List of Figures

Figure 1 – City Spill Dashboard during SSMP Audit Period (May 2021-May 2024) 2
Figure 2 - City Spill Dashboard (volume of spills by year during SSMP Audit Period (May 2021-May 2024) 3
Figure 3 - City Spill Net Volume compared to agencies by year during SSMP Audit Period (May 2021-May 2024) 4
Figure 4 - City Spill Volumes Recovered compared to agencies by year during SSMP Audit Period (May 2021-May 2024) 5
Figure 5 - City Spill Causes (by # of spill) during SSMP Audit Period (May 2021-May 2024)..... 6
Figure 6 - City Spill Causes (by volume of spill) during SSMP Audit Period (May 2021-May 2024) 7
Figure 3 - Spill Causes (by Where Failure Occurred, May 2021-May 2024)..... 8
Figure 7 – City Spill Counts of Where Failures Occurred during SSMP Audit Period (May 2021-May 2024) 8
Figure 8 – City Spill Benchmarks during SSMP Audit period (May 2021-May 2024) 9

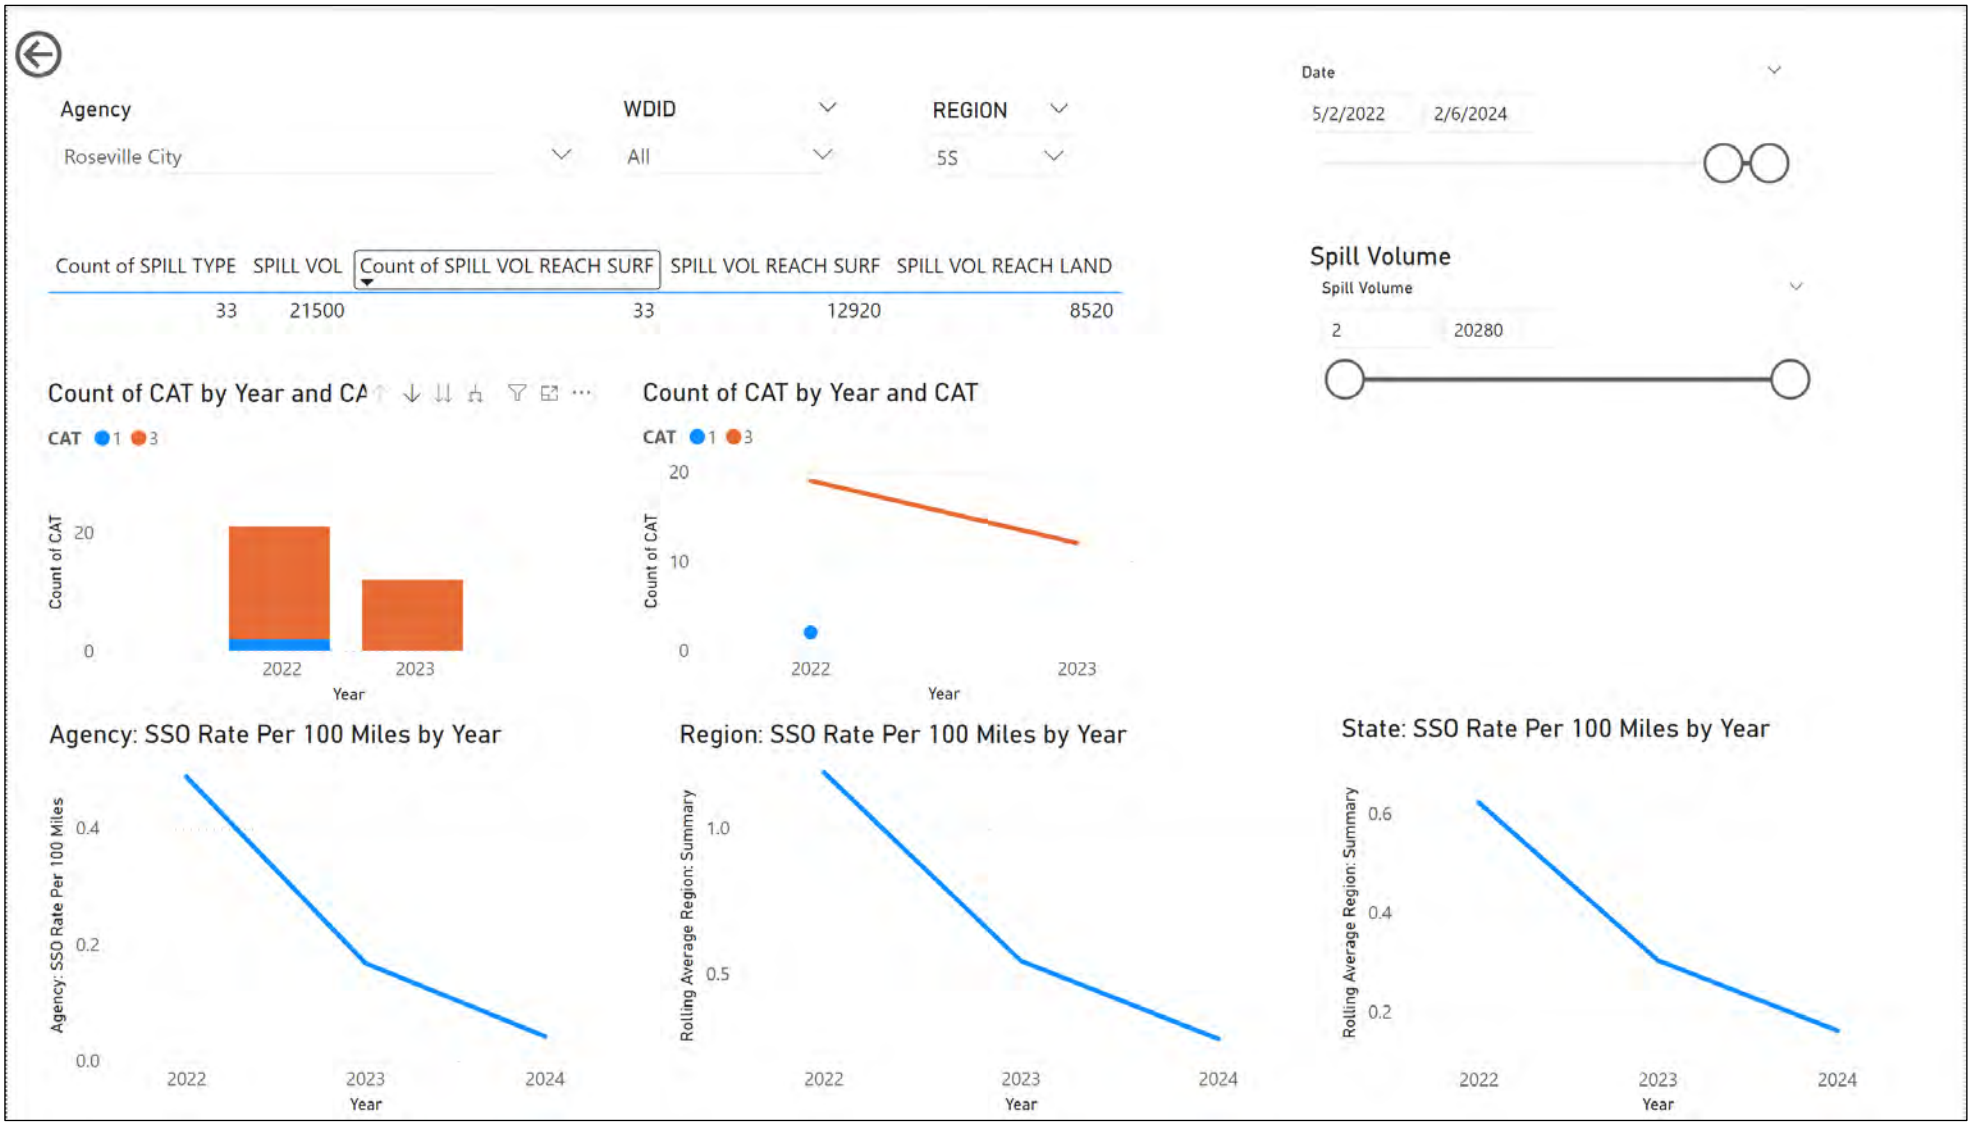

Figure 1 – City Spill Dashboard during SSMP Audit Period (May 2021-May 2024)

Observation: The City's rolling average spill rate per year during the SSMP Audit period decreased from 0.49 spills/100 miles of sewer per year to 0.04 spills/100 miles of sewer per year.

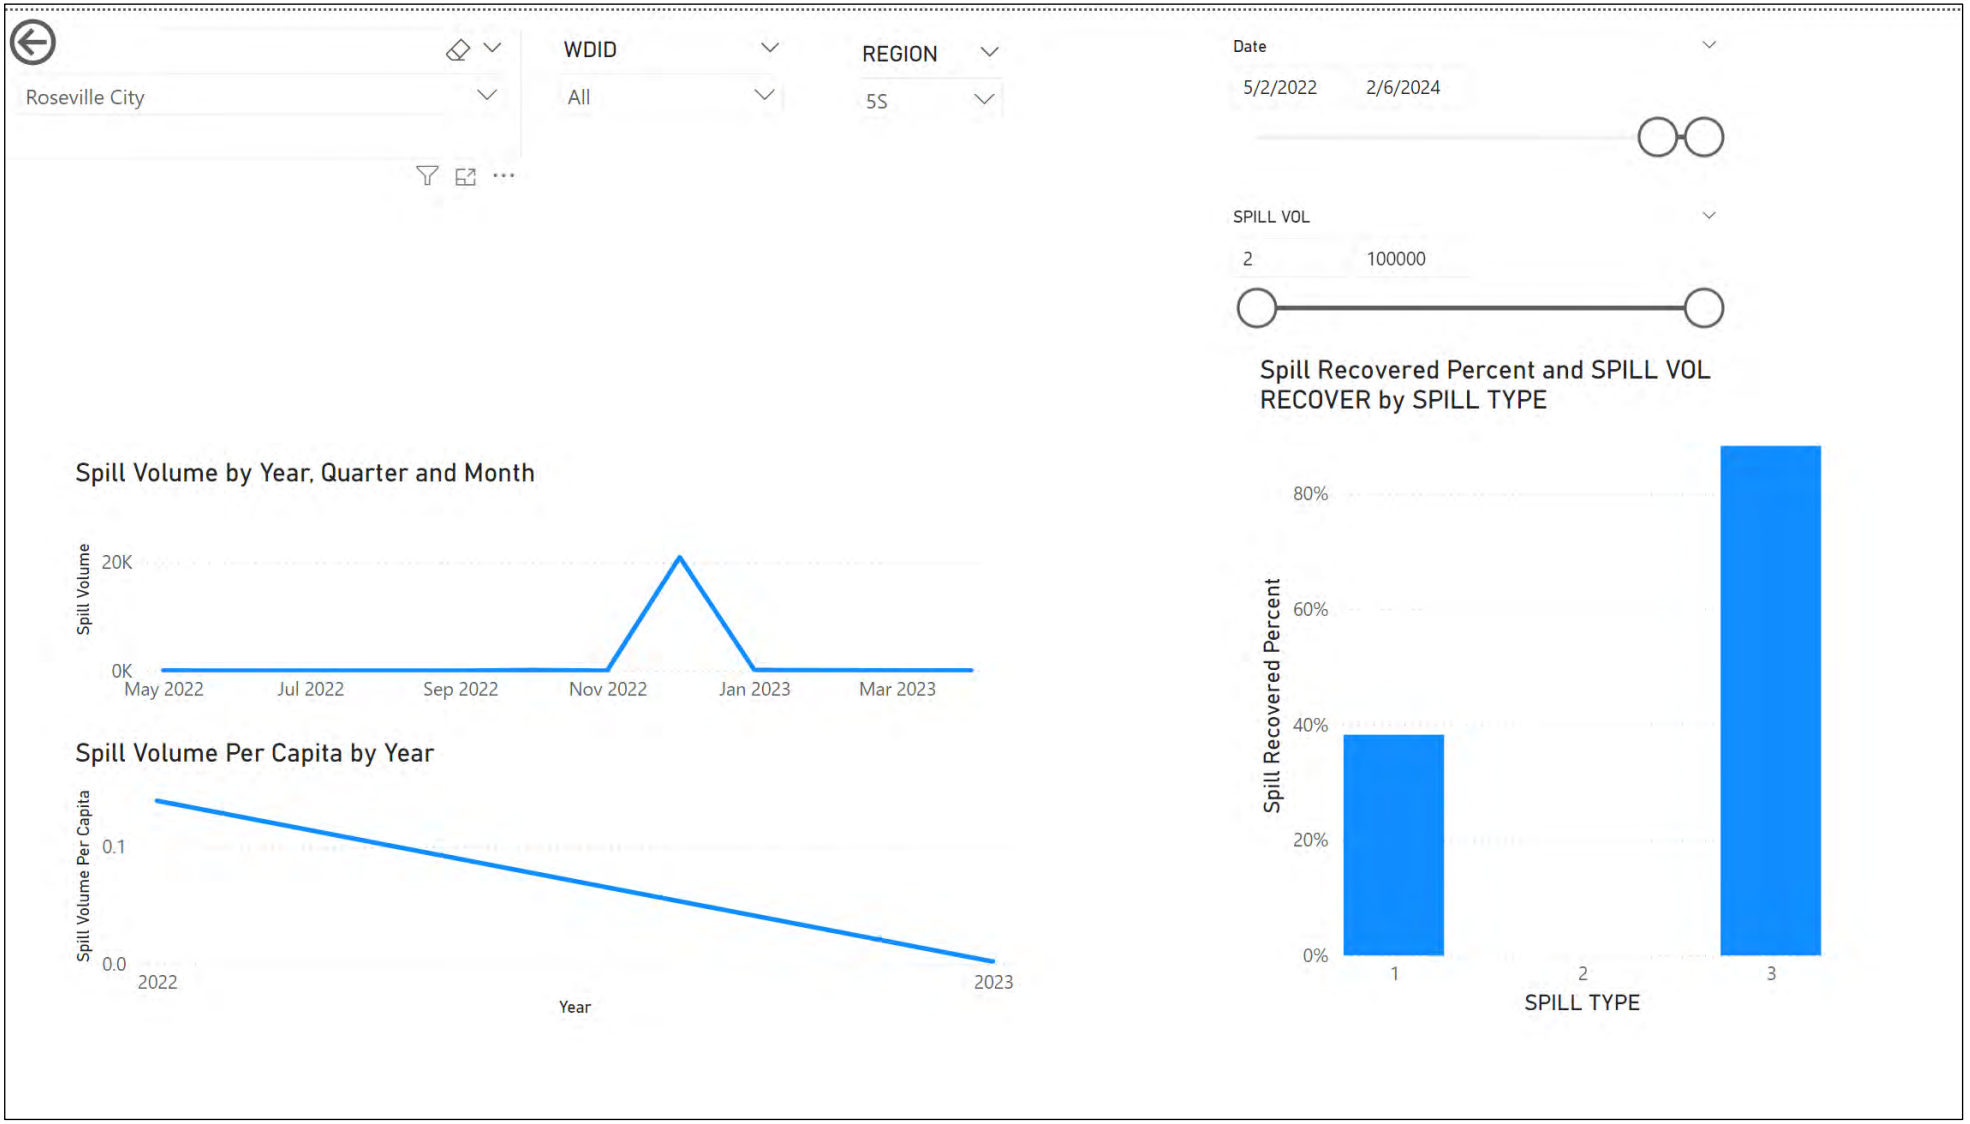

Figure 2 - City Spill Dashboard (volume of spills by year during SSMP Audit Period (May 2021-May 2024)

Observations: The City's volume of spills per capita (population) decreased during the SSMP Audit period from 0.139 gallons per capita to 0.002 gallons per capita). The City's average recovery (%) for Category 1 spills averaged 38% and 88% for Category 3 spills during the SSMP Audit period.

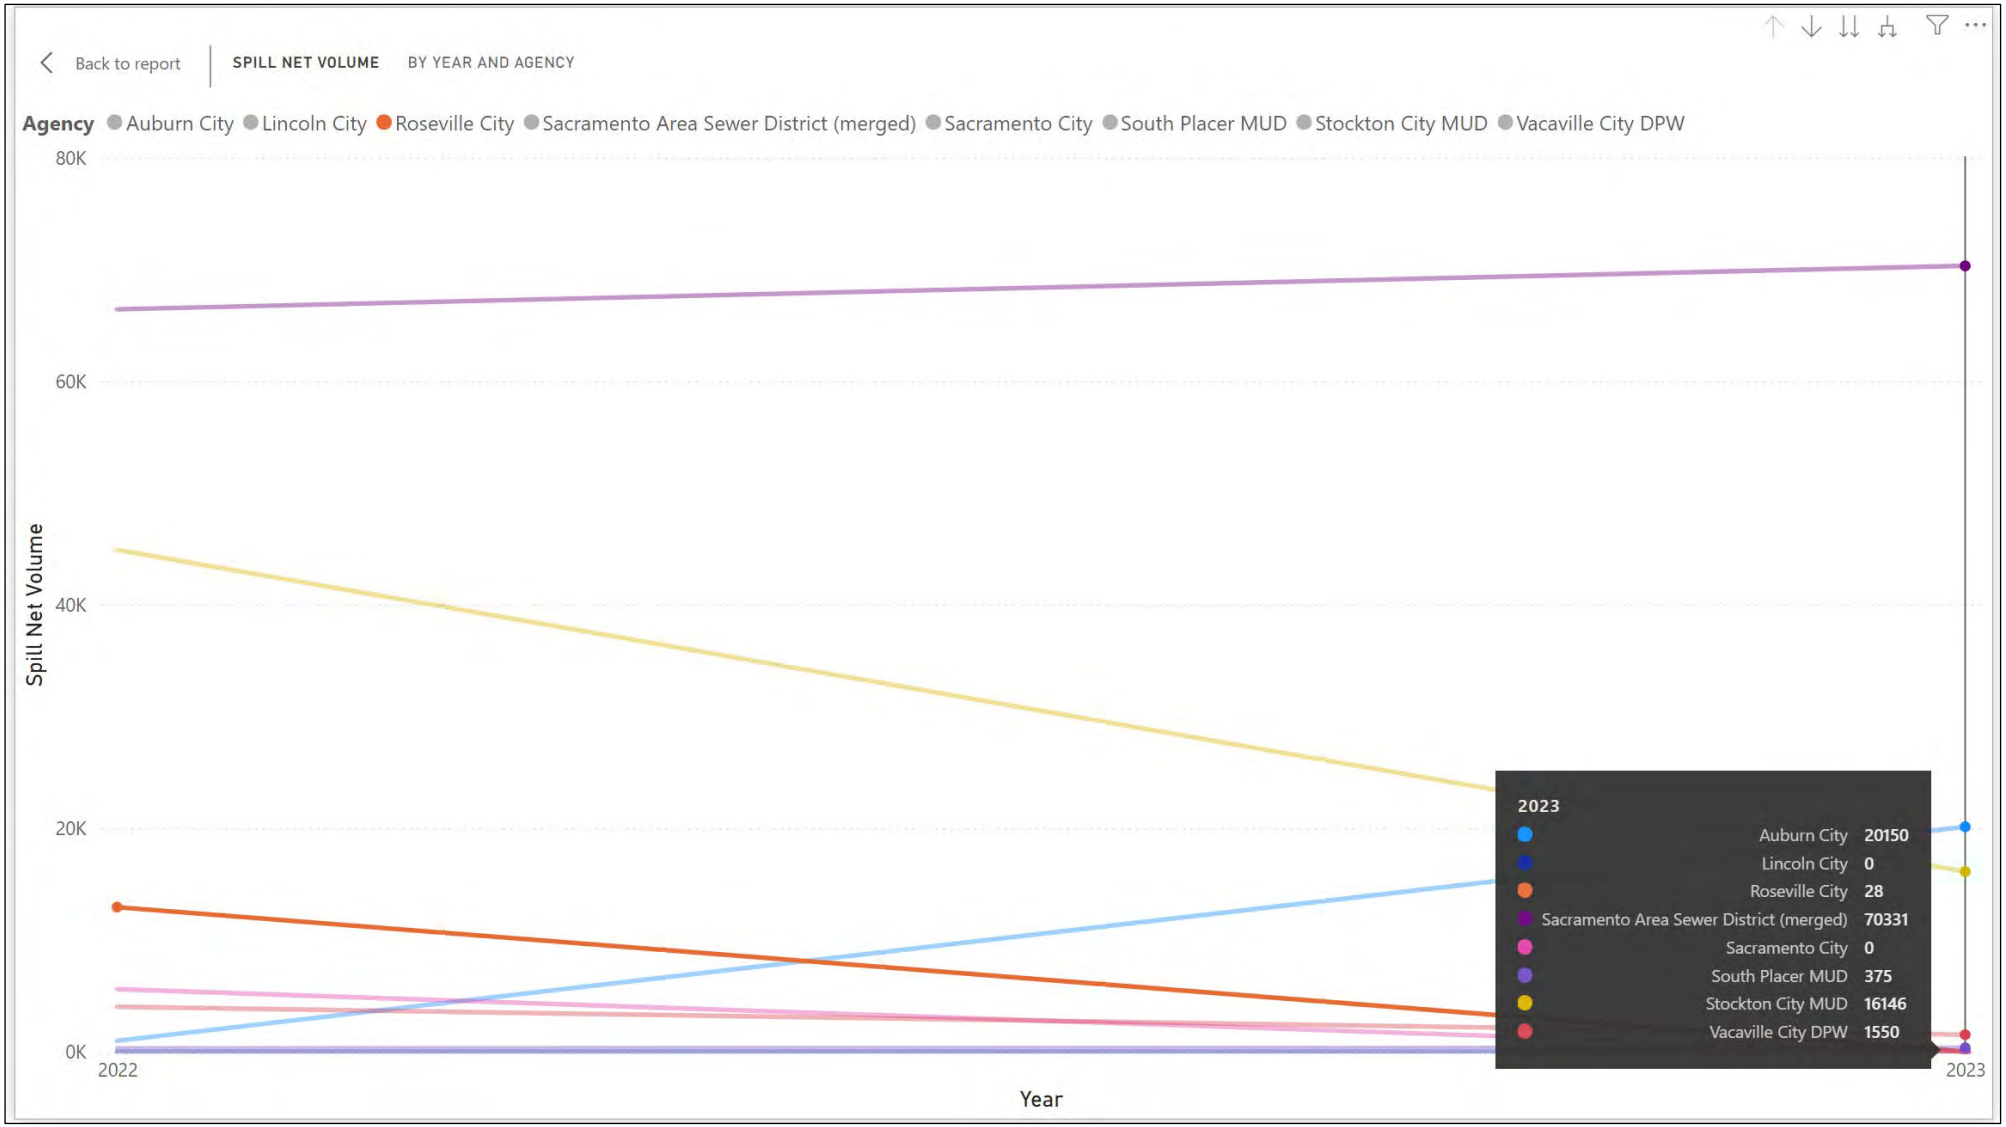

Figure 3 - City Spill Net Volume compared to agencies by year during SSMP Audit Period (May 2021-May 2024)

Observations: The City's net spill volume decreased during the SSMP Audit period from 12,960 gallons in 2022 to 28 gallons. The City's average recovery (%) for Category 1 spills averaged 38% and 88% for Category 3 spills during the SSMP Audit period.

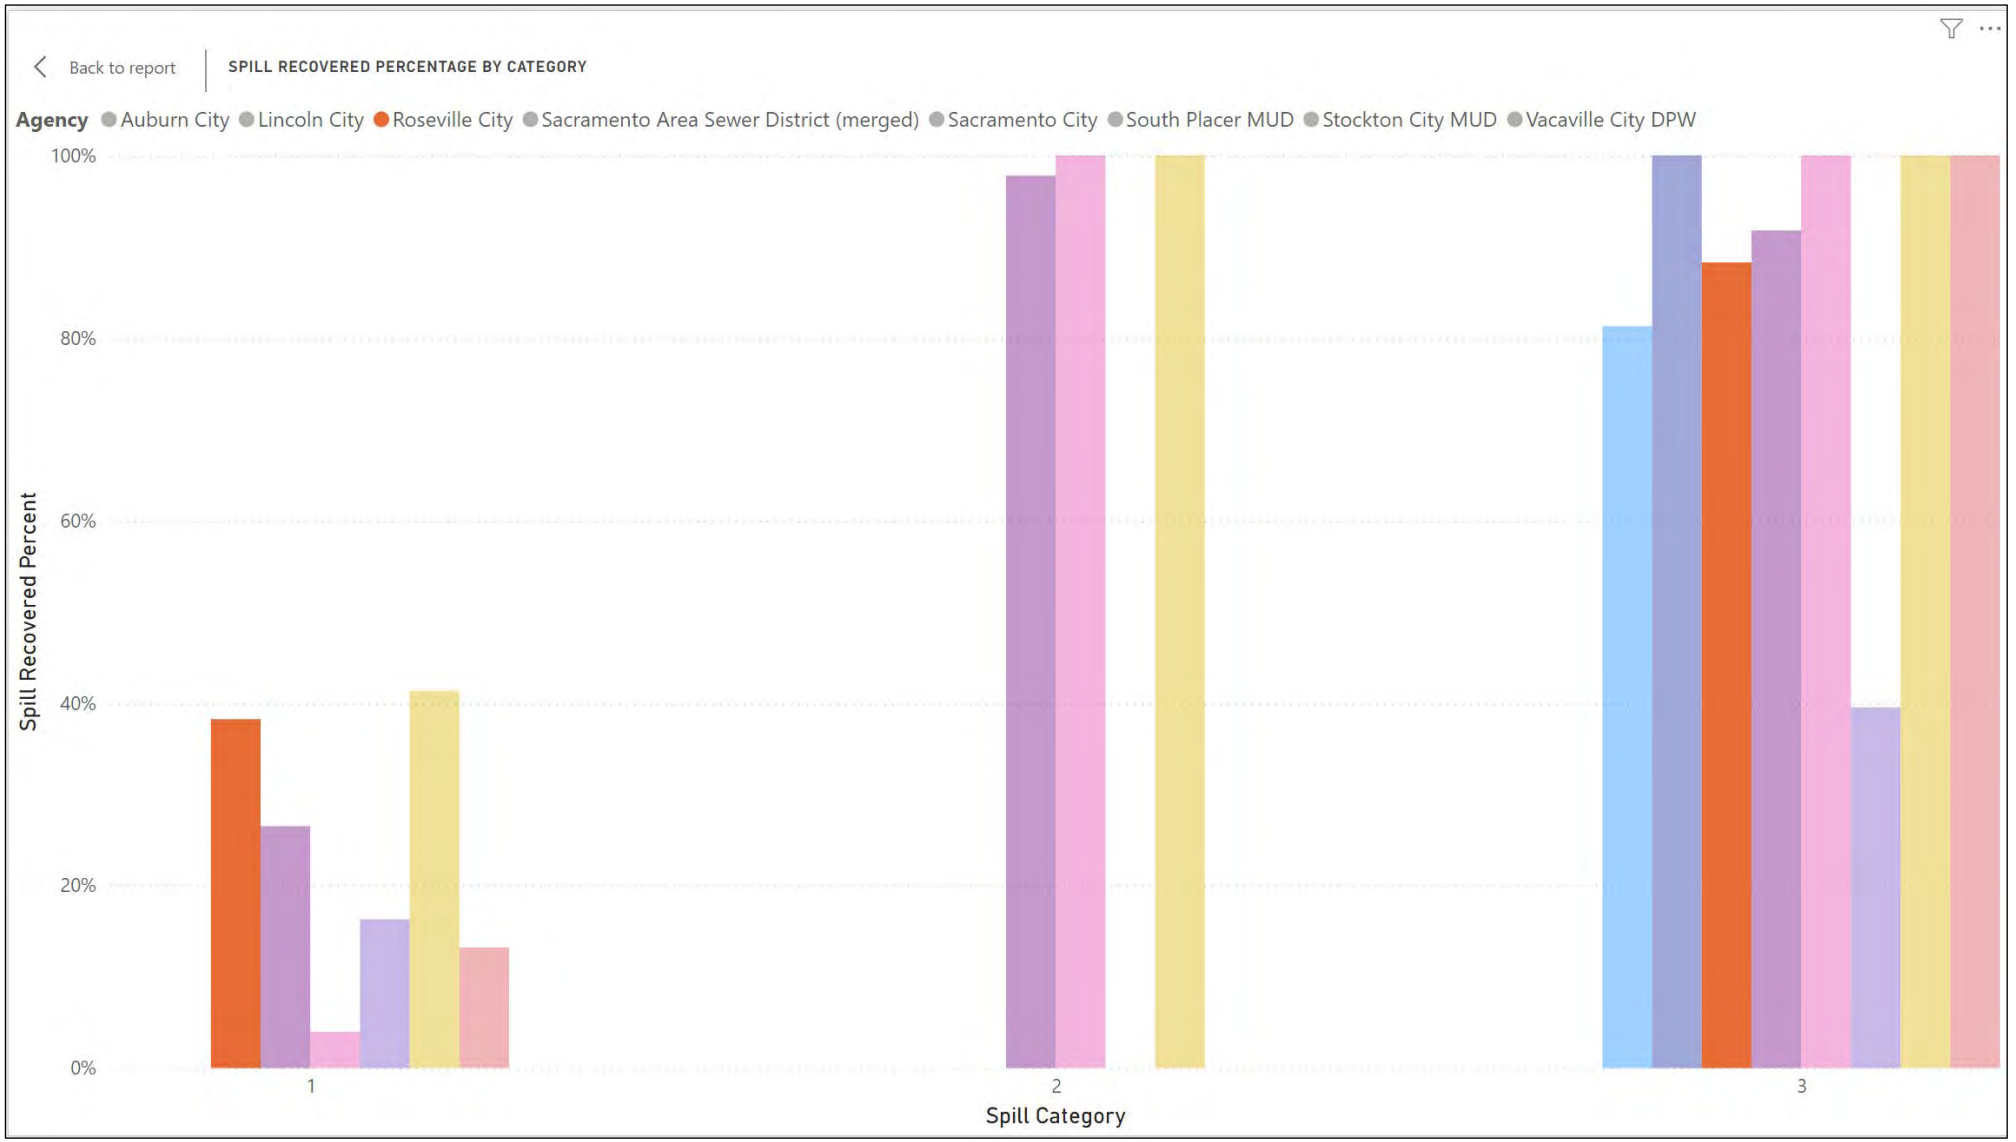

Figure 4 - City Spill Volumes Recovered compared to agencies by year during SSMP Audit Period (May 2021-May 2024)

Observations: The City's spill % of spill volume recovered for Category 1 spills (38%) and for Category 3 spills (88%) was higher than most other agencies within the region during the SSMP Audit period.

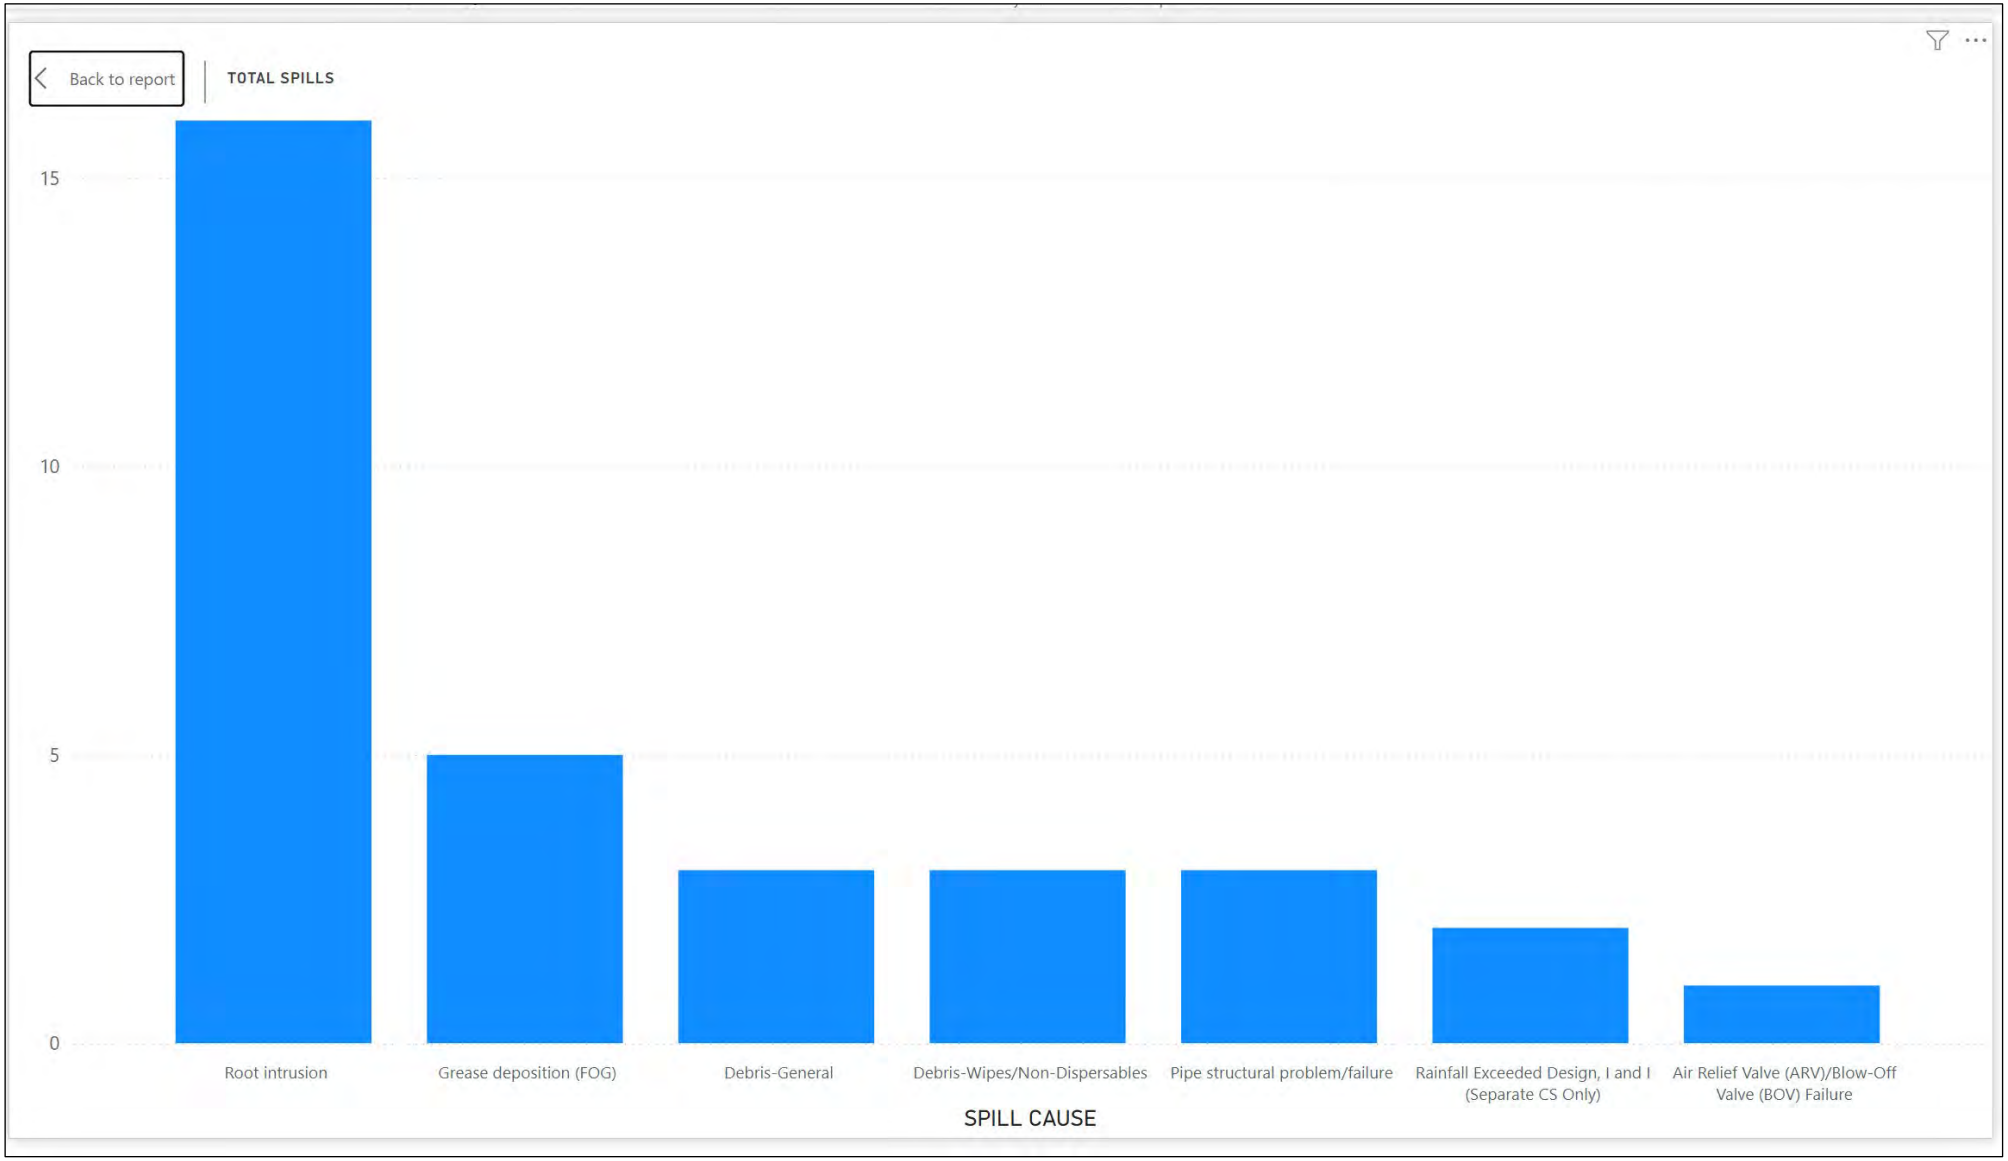

Figure 5 - City Spill Causes (by # of spill) during SSMP Audit Period (May 2021-May 2024)

Observation: The City's spill main causes (by number of spills) were root intrusion and grease during the SSMP Audit period.

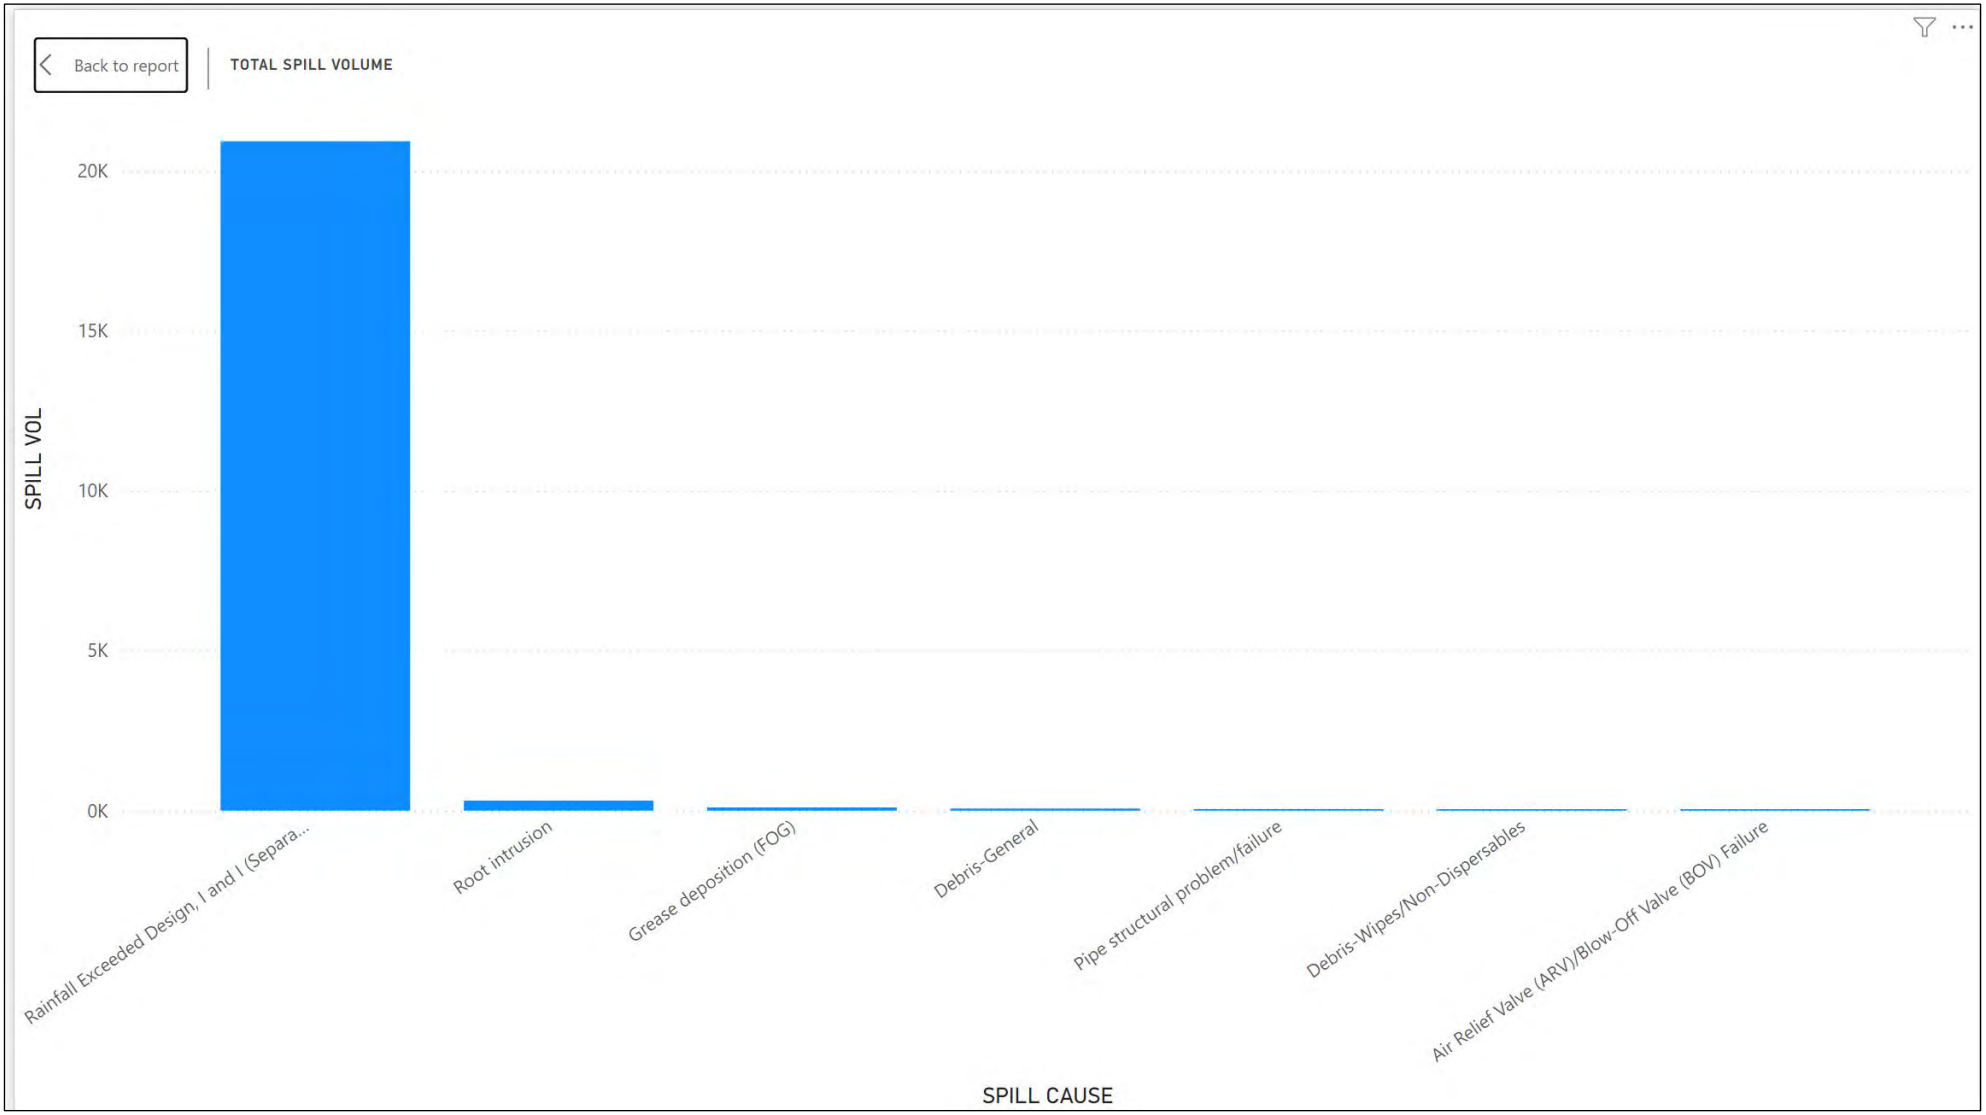

Figure 6 - City Spill Causes (by volume of spill) during SSMP Audit Period (May 2021-May 2024)

Observation: The City's spill main cause (by volume of spills) was rainfall (wet weather) during the SSMP Audit period.

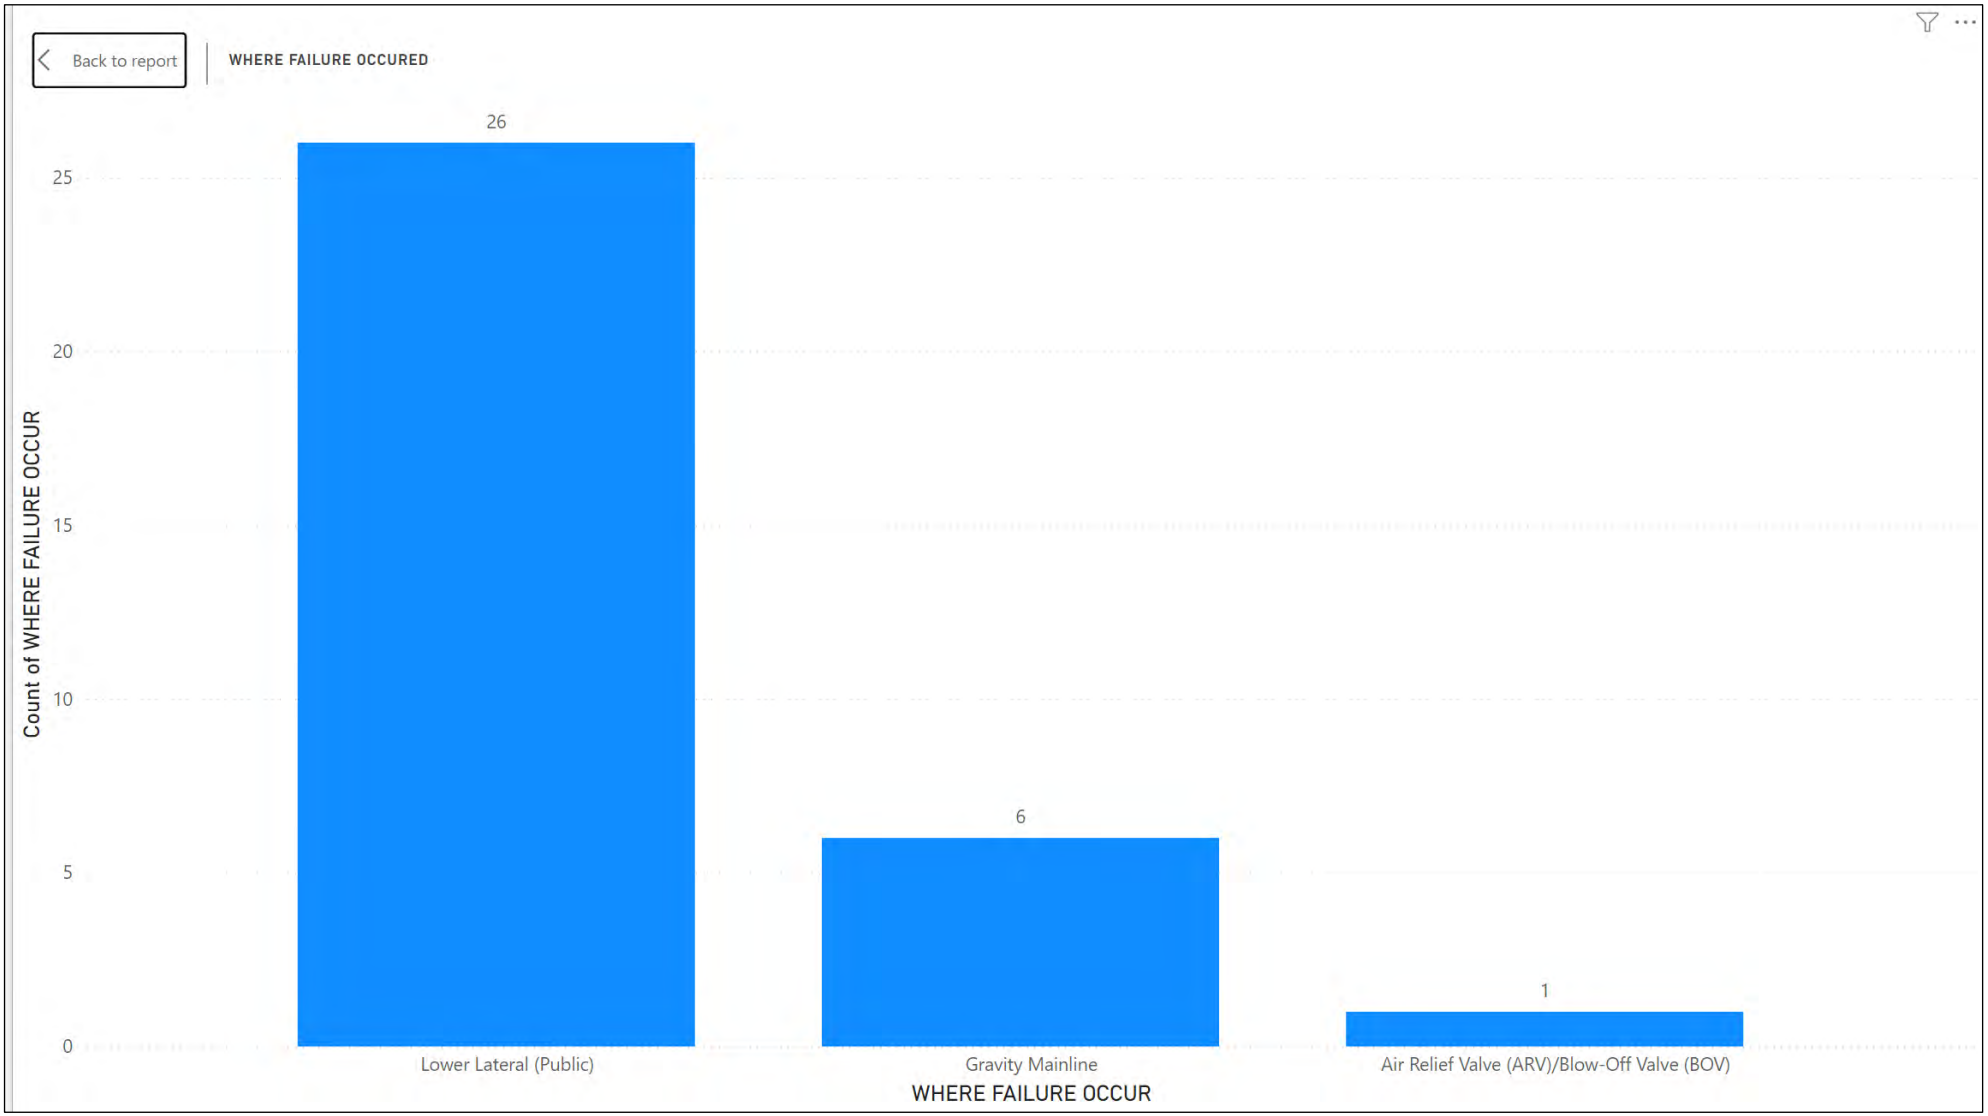

Figure 7 – City Spill Counts of Where Failures Occurred during SSMP Audit Period (May 2021-May 2024)

Observation: The City's main asset location were failures occurred was from lower sewer laterals during the SSMP Audit period.

Figure 8 – City Spill Benchmarks during SSMP Audit period (May 2021-May 2024)

Observations: The City averaged approximately 24 minutes between the agency spill notification time and operator arrival times (removing erroneous data logged for spill ID #885184 occurring on 12/31/2022). The City failed to notify Cal-OES within two hours (32 minutes late) for one spill occurring on 12/31/2022 (spill ID #885184. Erroneous data was also observed for two spills (ID #884376 and #881796). The City was fully compliant with providing draft and certified reports within the required timeframes for all Category 1 spills during the SSMP Audit.

FY 2010-2011 SSMP Program Audit (Internal)

WDR Requirement for SSMP Element 10: SSMP Program Audits

As part of the Sewer System Management Plan (SSMP), the enrollee shall conduct periodic internal audits, appropriate to the size of the system and the number of Sanitary Sewer Overflows (SSOs). At a minimum, these audits must occur every two years and a report must be prepared and kept on file. This audit shall focus on evaluating the effectiveness of the SSMP and the enrollee's compliance with the SSMP requirements identified in subsection (D.13), including identification of any deficiencies in the SSMP and steps to correct them.

Audit Tasks

The City of Roseville will complete biennial audits of the SSMP beginning in calendar year 2009. To ensure that the audit is performed objectively, this task will be assigned to individuals that are removed from the daily activities of the division. These individuals, along with the assistance from the Wastewater Collection Superintendent or Supervisor, must have a working knowledge of the collection system and the authority to carry out gathering the appropriate data to perform the audit. In addition to filling out the SSMP audit form, the following tasks, at a minimum shall be performed.

1. *Compare the records from the Computerized Maintenance and Management System (CMMS) of record, to the data reported to the California Integrated Water Quality System (CIWQS). Review performance metrics tracked by the division versus previous years to identify trends.*
2. *Review condition assessment data and rehabilitation philosophy/strategies with the Wastewater Superintendent or Supervisor and the Rehabilitation Manager.*
3. *Review records from previous internal audits, to ensure noted deficiencies have been addressed.*
4. *Review preventative maintenance schedules, response to SSOs, and mitigation of SSO causes.*
5. *Review SSO Emergency Response Plan and identify improvements if needed.*
6. *Identify accomplishments in improving the collection system.*
7. *Record all findings during the audit process on the attached SSMP Audit Form. This form will be the final audit report for the City of Roseville Wastewater Collection SSMP. This report will be kept on file along with other relevant SSMP documents on the city's internet website.*

Conclusion and Improvement Opportunities

The City of Roseville Wastewater Collection Division recognizes that the biennial audit of the SSMP and its programs are approximately 9 months late. Due to significant change within the division, and appointments of a new LRO and data submitter, the internal audit deadline was missed. The SSMP is a living document and is updated frequently. Although the online version may not contain the most recent SSMP, a revision log is available that lists all changes to the master document. The online document is updated periodically. The wastewater collection division's record for SSOs continues to be very good; reporting two spills from mainlines during fiscal year 2010/2011. Lateral overflows have increased, only slightly, but the wastewater collection division has an aggressive lateral maintenance program in place, and along with CIPP lining, looks to lower the number of overflows through these efforts. The city continually adjusts maintenance frequency to address these issues. There are several SSMP elements that need to be updated in city's SSMP. These are listed below:

1. The Executive Summary, boundary map, service area and population need to be updated and posted to the city's website.
2. Roseville goals, section 1.2 needs to be revised, as the development plan and implementation schedule in the SSMP are already completed.
3. All sections for Element 2 need to be updated on the city's website.
4. Appendix D-6 and D-7 need to be updated.
5. Element 6 Appendix F needs to be updated to include NASSCO training, and information needs to be posted to city's website.
6. Element 9.4 needs to be updated. Remove chemical root control and add lateral lining to monitor and measurement.
7. All elements need to be reviewed and posted to city's website.

City of Roseville Wastewater Collection

FY 2010-2011 SSMP Program Audit (Internal)

Name of Auditor (s)	Mark Cossairt Michael Zacharia		
Date of Audit	14 Mar 2012	Audit Period	FY 2010-2011
Collection System Overview			
Miles of Gravity Sewer Mains			522 Miles
Miles of Sewer Laterals			208 Miles
Number of Pump Stations			14
Population Served			118,788
Total Category 1 Spills	0	Total Category 2 Spills	13

Note: Information above is for FY 2010-2011

Element 1: Goals

The goal of the SSMP is to provide a plan and a schedule to properly manage, operate, and maintain all parts of the sanitary sewer system. This will help in reducing and preventing SSOs as well as mitigate any SSOs that do occur.

Audit Elements:

- *Are goals, clearly stated, obtainable and measurable?*

SSMP Requirement	Current Y or N	If no, action items required
Are the goals stated in the SSMP still relevant and accurate in complying with the Waste Discharge Requirement (WDR)	*N*	*Review and revise goals. Goal one is obsolete. The city's SSMP development plan and implementation schedule is complete*

Element 2: Organization

The WDR/SSMP organization requirement specifies that the SSMP shall identify the LRO, management, administrative and maintenance positions and their contact information. It shall also include the chain of communication for reporting SSOs

Audit Elements:

- *SSMP Org Chart*
- *Legally Responsible Official (LRO)Designated*
- *Emergency Response Plan*
- *Chain of Communication Chart*

SSMP Requirement	Current Y or N	If No, action items required
Legal Responsible Official (LRO) designated	*N*	*LRO needs to be updated on city's website*
Lines of authority designated through organization chart. Is chart current and up to date?	*N*	*Section 2.2 needs to be updated, then placed on city's website*
Names and phone numbers for key management personnel.	*N*	*Management needs to be updated on city's website and general position descriptions need updating*

Contact information for maintenance personnel and after hour's response	*N*	*Information needs to be updated on city's website*
Chain of Communication reporting chart current and numbers current?	*N*	*Section needs to be updated on city's website, along with RWQCB contacts updated*

Element 3: Legal Authority

The WDR/SSMP Legal Authority requirement specifies that each enrollee must demonstrate that it possesses the necessary legal authority to enforce their sewer use ordinances, service agreements or other legally binding procedures.

Audit Elements:

- *City of Roseville Sewer Use and FOG Ordinance*
- *Design and Construction Standards*
- *Municipal Code –Sewer Use*

SSMP Requirement	Current Y or N	If No, action items required
Prevent illicit discharges into the sanitary sewer system	*Y*	*RMC 14.12.050*
Sewers and connections properly designed , constructed and inspected	*Y*	*City has updated construction and design specifications*
Ensure access for maintenance, inspection and repairs	*Y*	
Enforce violations of sewer use and fog ordinances	*Y*	*RMC 14.14 FOG for Food Service Establishments (FSE)*
Inter-agency and satellite agency agreements in place	*Y*	

Element 4: Operations and Maintenance

The WDR/SSMP Operation and Maintenance Program requirement specifies that each SSMP must include those elements that are appropriate and applicable to enrollee's system.

Audit Elements:

- *Mapping System*
- *Work Orders and Maintenance Schedules*
- *Condition Assessment Data*
- *Equipment and Parts Inventory*
- *Employee Training Records*
- *Capital Improvement Projects*
- *Interview Maintenance Staff*

SSMP Requirement	Current Y or N	If no, action items required
Maintain current mapping system with procedures for updating	*N*	*Business process needs to be developed to ensure mapping updates are completed*
Preventative maintenance schedules are sufficient in reducing or preventing SSOs	*Y*	
Document preventative maintenance work orders using CMMS	*Y*	*Sample of preventative maintenance schedule in appendix D-2*
Condition assessment program that identifies and ranks criticality of line segments for capital improvement	*Y*	*City currently is in Phase 10 of 21 phases on condition assessment. City currently is using Pipelogix software with NASSCO rating criteria*
Provide relevant technical training to sewer system staff	*Y*	*Add NASSCO training to Element 4.5*
Does the city allocate sufficient funds for operation and maintenance as well as Capital Improvement Projects (CIPs)	*Y*	
Maintain equipment inventory and critical spare parts sufficient for emergency response	*N*	*Update needed to Appendix D-6 and D-7*

Element 5: Design and Performance Provisions

The WDR/SSMP Design and Performance Provision requirement specifies that each enrollee have design and construction standards for installation, repair, inspection and rehabilitation for all new sewers and appurtenances.

Audit Elements:

- *City of Roseville Sanitary Sewer Design and Specifications*
- *City of Roseville Sanitary Sewer Construction Standards*
- *Interview Maintenance Staff*

SSMP Requirement	Current Y or N	If no, action items required
Design and construction standards for new sanitary sewer system facilities	*Y*	*City maintains and regularly updates design and construction standards*
Design and construction standards for repair and rehabilitation of existing sanitary sewer facilities	*Y*	
Procedures for inspection and acceptance of repaired and rehabilitated and new sanitary sewer facilities	*Y*	*Procedures are contained in city construction and design standards*
Standard operating procedures for existing sanitary sewer facilities	*Y*	*SOPs are trained on annually by staff and continually updated*

Element 6: Overflow Emergency Response Plan

The WDR/SSMP Overflow Emergency Response Plan requirement specifies that each enrollee shall develop and implement an Overflow Response Plan that identifies measures to protect public health and the environment.

Audit Items:

- *Compare CMMS Records with CIWQS Database Information*
- *Review SSO Emergency Response Plan (SSOERP)*
- *Notification Procedures Current and Relevant*
- *Review Performance Metrics SSO Data*
- *Review Standard Operating Procedures for Containment*
- *Review Training Records for Sanitary Sewer Overflow Response Plan(SSOERP)*

- *Interview Maintenance Staff*

SSMP Requirement	Current Y or N	If no, action items required
Procedures established for emergency response, notification and reporting of SSOs	*N*	*Updates needed to Appendix F. Changes to SSOERP flowchart are needed for notifications. Information needs to be updated on city's website*
Procedures established for proper training of SSOERP	*Y*	*SSOERP is trained on annually and documented in LMS*
Procedures established for contractor awareness and training of SSOERP while working on city infrastructure	*Y*	*Contractors are made aware of city's SSOERP in pre-construction meetings, and updated as needed depending on projects*
Emergency response plan addresses traffic and crowd control in the event of SSO	*Y*	*Contained in Appendix F-1 SSO Emergency Response Procedures*
Procedures to prevent the discharge of sewage to waters of the state	*Y*	*Procedures are addressed in SOP for containment measures*
Program and procedures established to correct or minimize the impacts of any SSOs that occur	*Y*	*Business process has been established*
Considering performance metric data, is SSOERP effective in handling SSOs	*Y*	

Element 7: Fats, Oils and Grease (FOG) Control Program

The WDR/SSMP FOG Source Control Program requirement specifies that each enrollee shall prepare and implement a program to reduce the amount of these substances discharged into the sanitary sewer system.

Audit Elements:

- *Municipal Code 14.14 FOG Program*
- *Food Service Establishment(FSE)- FOG Permit*
- *Public Outreach- FOG Disposal*
- *Hot Spot Hydro Schedules and Locations*
- *Interview Maintenance Staff and Industrial Waste Personnel*

SSMP Requirement	Current Y or N	If no, action items required
Does FOG program include public outreach schedule to educate public on proper handling and disposal of FOG	*Y*	*WW administration budgets annually for FOG education and awareness. Will provide plan and schedule in supporting documents*
Does the FOG program identify sections of the collection system subject to FOG blockages, establish an effective PM schedule and address source control measures to minimize these blockages	*Y*	*Hot spot cleaning schedule is attached in supporting documents*
Are requirements for grease removal devices BMPs, installations, record keeping and reporting established in the city's FOG Control Program	*Y*	*RMC 14.12.050(F)addresses the requirements for grease removal devices*
Does the city have sufficient authority to implement, inspect, and enforce the FOG Control Program	*Y*	*RMC 14.14*
Has the current FOG program been effective in minimizing blockages of sewer lines from discharges of FOG to the system	*Y*	

Element 8: System Evaluation and Capacity Assurance Plan (SECAP)

The WDR/SSMP SECAP requirement specifies that each enrollee shall prepare and implement a capital improvement plan (CIP) that provides hydraulic capacity of key sanitary sewer elements for dry weather peak flow as well as the appropriate design storm or wet weather event.

Audit Elements:

- *Hydraulic Model*
- *Technical Memorandum- System Evaluation and Capacity Assurance Plan*
- *Technical Memorandum- Wet Weather Flow Projection for the Ultimate SPWA area*
- *Technical Memorandum- Trunk Sewer Hydraulic Analysis*
- *Wastewater Condition Assessment*
- *Capital Improvement Plan (CIP) - Wastewater System Condition Assessment*
- *Construction Projects List*

SSMP Requirements	Current Y or N	If no, action items required
Provide hydraulic capacity of key sanitary sewer elements for dry weather peak flow conditions as well as designed storm or wet weather event	*Y*	*Per Utility Manager, all up to date*
Does the city's Capital Improvement Plan (CIP) establish projects and a schedule of approximate completion dates for both short term and long term improvements	*Y*	*Per Utility Manager, all up to date*
Does the CIP identify sources of funding for improvements	*Y*	*Per Utility Manager, all up to date*
Procedures for the analysis, evaluation, and prioritization of hydraulic deficiencies	*Y*	*Per Utility Manager, all up to date*

Element 9: Monitoring, Measurement, and Program Modifications

The WDR/SSMP Monitoring, Measurement, and Program Modification requirement specifies that each enrollee shall establish and prioritize appropriate SSMP activities.

Audit Elements:

- *Preventative, Corrective, and Emergency Work Order History*
- *PM Schedules*
- *SSO History*
- *Benchmarking Metrics*
- *Strategic Plan Data*
- *Staff Training Records*
- *Condition Assessment Data*
- *Program Improvements*

SSMP Requirement	Current Y or N	If no, action items required
Monitor, measure and modify where appropriate, the elements of the SSMP	*Y*	*Completed through Hansen and excel spreadsheets monitoring trends*
Evaluate the success of the preventative maintenance program	*Y*	*Completed through Hansen and excel spreadsheets monitoring trends*
Update program elements based on monitoring or performance evaluations	*N*	*Update Element 9.4 to add lateral lining and maintenance programs. Remove the measure for chemical root control as the city does not use chemicals to control root growth.*
Identify and illustrate SSO trends, including frequency, location, cause and volume.	*Y*	*Completed through Hansen and excel spreadsheets monitoring trends*
Is the City able to evaluate the effectiveness of the SSMP based on relevant information	*Y*	*Completed through Hansen and excel spreadsheets monitoring trends*

Element 10: SSMP Audits

The WDR/SSMP –SSMP Program Audit requirement specifies that each enrollee shall conduct periodic internal audits based on size of system and number of SSOs.

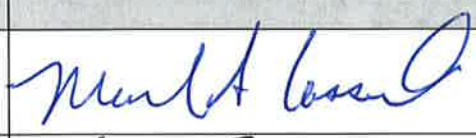
Audit Elements:

- *Previous SSMP Audits*
- *Discuss the effectiveness of this audit format and provide suggestions for improvements*

SSMP Requirement	Current Y or N	If no, action items required
Conduct periodic internal audits and record results of audit in a report	*Y*	
Record changes made and/or corrective actions taken	*Y*	

Element 11: Communication Program

The WDR/SSMP Communication Program Requirement specifies that each enrollee shall communicate with the public, on a regular basis, on the development, implementation and performance of the SSMP.



Audit Elements:

- *City of Roseville Website*
- *Public Outreach/ Customers and Other Agencies*

SSMP Requirement	Current Y or N	If no, action items required
Communicate with public on SSMP performance	*N*	*SSMP and supporting documents need to be updated on the city's website. Revisions and log kept internally , but neglected to update via the website.*
Communicate with satellite agencies	*Y*	*Regional partner meetings, SPWA, website updates*
Does the city have a mechanism to address public feedback	*Y*	*Public comments can be submitted through city website, PUC and council meetings. The wastewater division uses a customer survey card for feedback from customers directly affected by maintenance activities.*

Certification of Audit:

By signing below, we certify that the information contained in this audit report is correct to the best of our knowledge.

Name	Position	Signature	Date
Mark Cossairt	*Refuse Utility Manager (Auditor)*		3/20/12
Mike Zacharia	*Principal Engineer (Auditor)*		3-20-12
Kenneth Glotzbach	*Wastewater Utility Manager Legal Responsible Official (LRO)*		4-29-12
Chris Bracco	*Wastewater Collection Supervisor*		29MAR12

SECTION 1 Audit Objectives

This report summarizes the results of the required Sewer System Management Plan (SSMP) internal audit process for the FY 11/12 and FY 12/13 evaluation period. The purpose of the SSMP is to provide a written framework for sanitary sewer collection system management, operation, and maintenance programs executed by the City of Roseville (City) with the ultimate goal of minimizing sanitary sewer overflows (SSOs) and achieving compliance with California State Water Resources Control Board (SWRCB) Order No. 2006-0003-DWQ, the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (SSS WDR). The SSMP audit is based on a review of performance measures established to evaluate the City's success in achieving compliance with various requirements of the SSS WDRs and implementing programs as stated in the SSMP. The SSMP audit process allows the SSMP document to evolve over time through the identification of potential enhancements in the management, operation and maintenance of the sanitary sewer collection system and the implementation of changes to the SSMP to address any deficiencies.

The City of Roseville is committed to complete biennial audits of the SSMP consistent with the procedure outlined in Appendix J-1 of the SSMP. To ensure that the audits are performed objectively, the City assigns this task to individuals that are removed from the daily activities of the Wastewater Collections (WWC) division. These individuals, along with the assistance from the Wastewater Collection Superintendent and/or Supervisor, must have a working knowledge of the collection system and the ability to gather the appropriate data to perform the audit. The following tasks, at a minimum shall be performed with each audit:

1. Compare the records from the computerized maintenance management system (CMMS) of record, to the data reported to the California Integrated Water Quality System (CIWQS). Review performance metrics tracked by the WWC division versus previous years to identify trends. (see **Section 3.1**)
2. Review condition assessment data and rehabilitation philosophy/strategies with the Wastewater Superintendent and/or Supervisor and the Rehabilitation Manager. **(See Section 5.4)**
3. Review records from previous internal audits, to ensure noted deficiencies have been addressed. (**this Section**)
4. Review preventative maintenance schedules, responses to SSOs, and mitigation of SSO causes. (see **Section 3.1**)
5. Review SSO Emergency Response Plan (SSOERP) and identify improvements if needed. (see **Section 5.6**)
6. Identify accomplishments in improving the collection system.
7. Record all findings during the audit process and keep the audit on file. (see **Section 5.10**)

SECTION 2 Agency Background / System Information

The City of Roseville is located in Placer County and situated approximately 16 miles north of Sacramento. The City covers approximately 42 square miles near the base of foothills of the Sierra Mountains. The elevations in Roseville range from approximately 250 feet to 100 feet above sea level with an average slope across the City of 0.5% from east to west. Several streams flow through the City (i.e., Dry Creek, Pleasant Grove Creek, Kaseburg Creek, Linda Creek, Cirby Creek, Secret Ravine, and Miners Ravine).

The City is responsible for operation and maintenance of a growing sewer system. The current population is approximately 122,000. The population of the City of Roseville grew 48.6% between 2000 and 2010, which is more than five times the national average according the U.S. Census Bureau. The City's sewer collection system has grown in step with the rapid population growth. The City currently provides service to over 41,000 connections to the system. **Table 1** provides additional information about the City collection system and WWC division over the last two SSMP audit periods.

Table 1. Overview of System Indicators

Audit	FY 09/10 – 10/11	FY 11/12 – 12/13
Miles of Mainline	522	485.52*
Miles of laterals (lower)	208	235.3
Pump stations	13	14
Population served	118,788	122,060
WWC Staff	24	25
Annual Budget (FY1 – FY2)	$3,200,000 / $3,200,00	$3,400,000 / $3,800,00
Category 1 SSOs	2	2
Category 2 SSOs	19	75

* Previously recycled water pipelines were included in "Miles of Mainline".

The City treats the wastewater conveyed through its collection system at two regional wastewater treatment plants owned and operated by the City (i.e., the Dry Creek and Pleasant Grove WWTPs). Two satellite agencies (i.e., South Placer Municipal Utility District and Placer County) discharge wastewater into the City's collection system. A small portion of the City's collection system discharges into the Sacramento Area Sewer District system and is treated at the Sacramento Regional WWTP.

2.1 Review of Last SSMP Audit

An internal audit of the City SSMP was conducted and concluded on March 14, 2012 which reviewed the activities and performance related to the SSMP for the fiscal year 2010/2011 (FY10/11). **Table 2** summarizes the identified deficiencies and the associated action items outlined in the previous SSMP audit. The table also shows the date when the identified deficiencies have been resolved. All identified deficiencies in the previous audit were addressed quickly. The three items that have a "Yes" in the "Resolved" column were found to have been updated when reviewed as part of this audit, but no revision date was available. The remainder of the deficiencies were updated in the SSMP and referenced documents and marked with a revision/updated date.

Table 2. Summary of Findings from the Last SSMP Internal Audit

Element	Action Item	Resolved
1 – Goals	Review and revise goals. Goal 1 is obsolete since the City's SSMP development plan and implementation schedule is complete.	16 APR 2012
2 – Organization	LRO needs to be updated on City's website.	3 MAR 2012
	Section 2.2 outlining SSMP Responsibility Organization Chart needs to be updated, then placed on City's website.	16 APR 2012
	Management contact information needs to be updated on City's website and general position descriptions need updating.	Yes
	Contact information for maintenance personnel and after-hour response needs to be updated on City's website.	22 FEB 2012
	Chain of Communication reporting section needs to be updated on City's website, along with RWQCB contacts updated.	9 MAY 2012
4 – O&M	Business process needs to be developed to ensure mapping updates are completed.	28 MAR 2012
	Update needed to App D-6 (Equipment Inventory) and D-7 (Critical Parts)	Yes
6 – OERP	Updates needed to Appendix F (SSOERP Documents). Changes to SSOERP flowchart are needed for notifications. Information needs to be updated on City's website.	20 MAR 2012
8 – MMM	Update Element 9.4 to add lateral lining and maintenance programs. Remove the measure for chemical root control as the City does not use chemicals to control root growth.	16 APR 2012
11 - Communication	SSMP and supporting documents need to be updated on the City's website. Revisions and log kept internally, but neglected to update via the website.	Yes

2.2 Review of FY11/12 and FY12/13

Over the past two fiscal years it has been a priority of the City to eliminate mainline SSOs, which pose the largest risk for Category 1 SSOs due to the larger volumetric flowrate of wastewater in mainlines versus laterals. Having only six mainline SSOs (two Category 1 and four Category 2) over the two year period for an average of 0.62 SSOs/100 miles of pipeline per year is evidence of that priority. Of the six, two SSOs were caused by an unusually large storm that was reported as greater than the design capacity of a 10 year 24 hours storm. Two SSOs were caused by the accumulation of Fats, Oils, and Grease (FOG), and the last two were caused by overgrown roots.

Due to the large number of SSOs from laterals over the current audit period, plans were developed to address the issue of lateral SSOs. Records of the events listed the causes of the 71 lateral SSOs as; roots (49), debris (12), pipe failure (9), and vandalism (1). In FY11/12 the City rehabilitated 0.22 miles of laterals and 0.25 miles of laterals in FY12/13. Also, the Roseville WWC has developed and implemented an eeling program for lateral lines as a preventative maintenance activity targeted at reducing SSOs from laterals. This plan is explained below in **Section 3.2** regarding SSO reduction goals.

SECTION 3 SSO Trends

3.1 Historical SSO Data

There are a total of 77 spills that occurred in the fiscal years of 2011/2012 and 2012/2013. Information regarding the 77 SSOs is located in **Appendix 7.1** of this internal audit and includes information such as; date, location, spill type, spill volume, spill volume recovered, and a short description.

One of the City-defined tasks of the internal audit is to compare the information submitted to the state CIWQS database against the information keep in the City records regarding SSO events. **Table 3** organizes the data by source to show discrepancies, if any, between the data reported to CIWQS and the City's records.

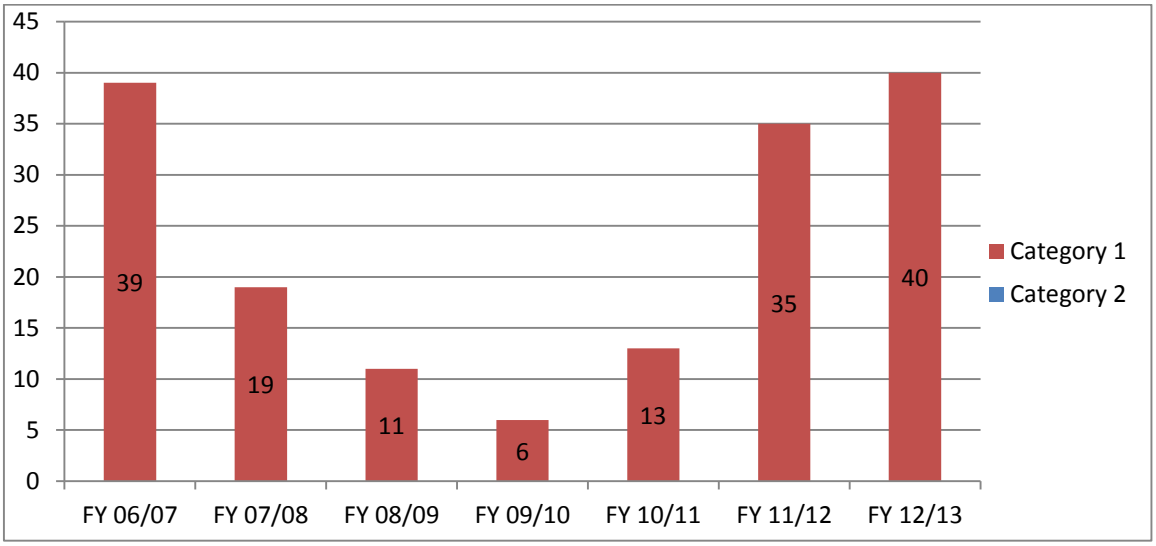
Table 3. CIWQS and City SSO Historic Data

SSO Historical Data since last SSMP Internal Audit	CIWQS Data FY 11/12 – 12/13	Internal Records FY 11/12 – 12/13
The total number of potential SSO service calls received	-	943 service calls
The total number of SSOs reported	77 SSOs	77 SSOs
The reported total volume of SSOs	2053 gallons	2053 gallons
The reported total volume of SSOs that reached waters of the state	405 gallons	405 gallons
The percent volume of SSOs recovered	80%	80%
The average SSO response time	23 minutes	21 minutes
The average SSO duration time	18 minutes	-

The WWC Superintendent verifies, on a quarterly basis, the data in CIWQS against the information gathered and maintained by the City on individual SSO Field Report Forms on a regular basis. The information presented in the column labeled "Internal Records" of **Table 3** represents the summarized information reported in the various performance measures maintained by the City.

The City strives to maintain quality data regarding historical SSOs so that trends in the occurrences and potential causes of SSOs can be investigated. The following discussion investigates the City's historical SSO data to identify potential SSO trends so that future efforts can be targeted to reduce SSOs.

Figure 1: Number of SSOs per Fiscal Year



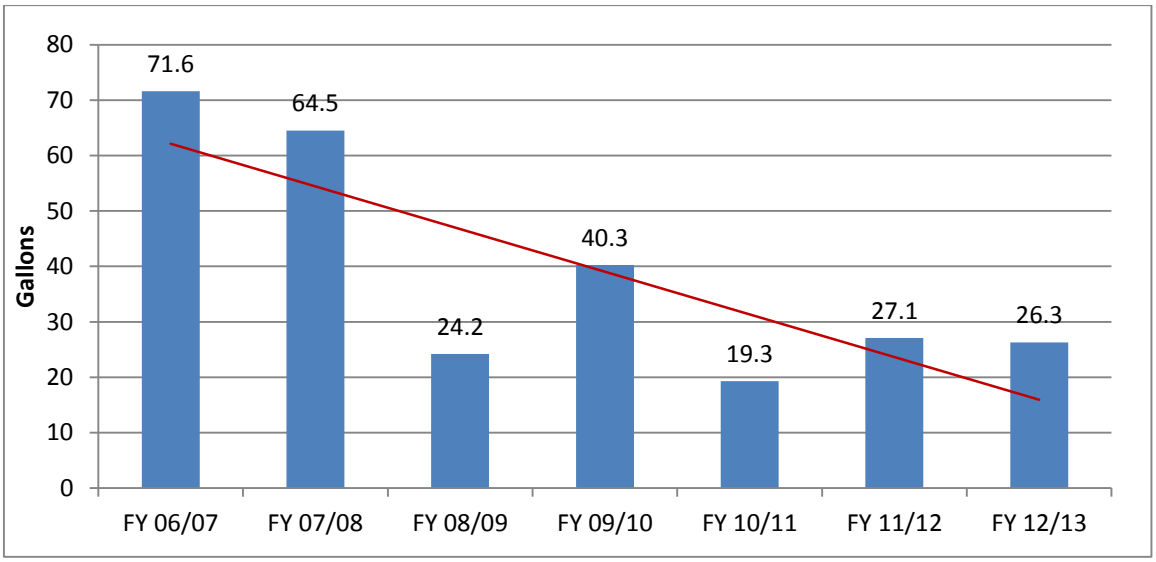


Figure 1 shows a decrease in the number of SSOs per year from FY06/07 to FY09/10 and an increase in the number of SSOs since that time. However, if we investigate the average spill volume for each SSO over the same time period, we see a downward trend (see **Figure 2**). Although the number of SSOs in FY11/12 and FY12/13 is similar to the number of SSOs seen in FY06/07, the average spill volume per SSO during FY11/12 and FY12/13 is less than half of what was recorded during FY06/07 and FY07/08.

Figure 2: Average Gallons per SSO

These trends indicate that the City has effectively targeted its efforts to limit large-volume SSOs through the preventative maintenance programs for mainline assets (e.g., hydroflushing, CCTV inspection) and the City SSO emergency response plan. However, these trends also show that the number of SSOs (specifically those from laterals) is on the rise over the period of this internal audit.

The City's SSO records were queried to identify the leading causes of SSOs. **Table 4** shows the leading causes of SSOs in the City by 1) the number of SSOs, 2) the spill volume of SSOs, and 3) the average spill volume per SSO.

Table 4. Leading Causes of SSOs in FY11/12 and FY12/13

By Number		By Volume		By Average Volume per SSO	
Cause	**Number**	**Cause**	**Gallons**	**Cause**	**Gallons**
Roots	51	Roots	1235	Capacity	200
Debris	12	Capacity	400	FOG	39
Pipe Failure	9	Debris	222	Roots	24
FOG	2	Pipe Failure	114	Debris	19
Capacity	2	FOG	77	Pipe Failure	13
Vandalism	1	Vandalism	5	Vandalism	5

Table 4 shows that root growth in pipelines is the major cause of an occurrence of a SSO, and capacity-deficient pipelines are the major cause for SSOs with large spill volumes. The actions planned as a result of this SSMP audit will target the leading causes to most effectively reduce the number and spill volume of SSOs.

3.2 SSO Reduction Performance Goals

One of the goals of the City's SSMP is "to minimize the frequency of SSOs". The City has set specific goals to monitor its performance in regards to the frequency of SSOs. **Table 5** compares the City SSO goals against the actual number of SSOs during the timeframe of the last SSMP internal audit, the timeframe of the current SSMP internal audit, and the table lists the SSO goals projected before the City's next internal SSMP audit. It should be noted that the goals for the upcoming two fiscal years reflect the change in how SSOs will be categorized and reported to the state based on the recent SSS WDR Revised Monitoring and Reporting Program (Revised MRP) (WQ 2013-0058-EXEC). Additional recommendations on tasks the City should implement to comply with the Revised MRP are described in **Section 5.9**.

Table 5. SSO Reduction Goals

	FY09/10 – 10/11		FY11/12 – 12/13		FY13/14 – 14/15
	Goal	Actual	Goal	Actual	**Goal**
Mainline SSOs	6[1]	4	6[1]	6	**6**
Lateral SSOs	38[2]	17	38[2]	71	**70**
Category 1 SSOs	0	2	0	2	**0**
Category 2 SSOs	28[3]	19	28[3]	75	**6**
Category 3 SSOs[4]	-	-	-	-	**70**
Total SSOs	**44**	**21**	**44**	**77**	**76**

[1] Based on a goal of 0.6 mainline SSOs per 100 miles of sewer main per year w/ 487 miles of mains.
[2] Based on a goal of 8.0 lateral SSOs per 100 miles of service laterals per year w/ 235 miles of laterals.
[3] Based on a goal of 2.0 Category 2 SSOs per 100 miles of sewer pipe per year w/ 722 miles of total pipe.
[4] Category 3 was added as a new spill definition by State Order No. WQ 2013-0058-EXEC in Sept. 2013.

The SSO performance goals for the period before the next internal SSMP audit are set consistent with the performance metrics set by the City (i.e., number SSOs per 100 miles of pipe per year) and the performance of municipal agencies in the state. The goal for the number of mainline SSOs is based on an aggressive performance measure of 0.6 SSOs per 100 miles of mainline per year. The performance of the City has been consistent against this goal based on the data in **Table 5**, and represents a satisfactory level of service. The goal for the number of lateral SSOs was exceeded during the period of this internal audit. This goal was adjusted to a total of 70 lateral SSOs for the next SSMP audit period. This represents a realistic goal for the City to strive for and represents a reduction in the number of lateral SSOs. This goal represents an average of approximately 15 SSOs per 100 miles of service lateral per year, which is significantly less (i.e., 42% less) than the statewide average of 26 SSOs per 100 miles of pipe for municipal agencies according to past SSO Facility Operational Reports provided by the State Board.

3.2.1 Planned Efforts to Reach Identified SSO Reduction Goals

The following section describes specific changes to be implemented based on the identified SSO trends to meet the target reduction goals in **Table 5**. The discussion of planned efforts is broken down into a number of potential categories (i.e., cleaning, tools, maintenance schedules, BMPs, staffing, funding, and training). It is recommended that these categories for potential changes be revisited with each subsequent SSMP internal program audit to examine if they may apply to future conditions. Changes in each category may not be necessary in each audit, but addresses each category provides a holistic approach to SSO reduction.

Changes to be employed to sanitary sewer system cleaning

No planned changes to current cleaning activities are anticipated to meet SSO reduction goals.

Changes to be employed to sanitary sewer system tools and/or technology

The City has implemented a standard operating procedure to utilize trenchless technology to rehabilitate service laterals that are prone to blockages. After hour service calls are tracked by the City for each sewer service lateral. Once a sewer service lateral receives six after hour service calls, it is lined to minimize root growth.

Changes to be employed to sanitary sewer system maintenance and repair schedules

The City has investigated methods to decrease the growing number of SSOs from laterals. The City reinforced the efforts of its eeling program near the end of FY12/13. More details about the eeling program are outlined in **Section 5.4**. Based on the data collected during the two months that the eeling program has been in effect, there has been marked improvement. The City of Roseville averaged approximately four lateral SSOs per month during the period of this audit. In the two months since the start of the new eeling program, there was an average of one lateral SSO per month. Although the new eeling program has only been in effect for a short time, the preliminary results indicate that it is effective in reducing the number of SSOs from laterals and should be continued. The new eeling program is one of the planned efforts to meet the SSO reduction goals set in **Table 5**.

Changes to be employed to sanitary sewer system best management practices

No planned changes to sewer system best management practices are anticipated to meet SSO reduction goals.

Changes to be employed to sanitary sewer system staffing levels

The City intends to hire one additional staff during the period of the next SSMP audit.

Changes to be employed to sanitary sewer system funding levels

No planned changes to funding levels are anticipated to meet SSO reduction goals.

Changes to be employed to sanitary sewer system training

It is anticipated that training of WWC staff to the revised OERP (see **Section 5.6**) will be required to effective meet the SSO reduction goals.

Measures to Assure No Repeat SSOs

"No repeat overflows from the same location" is one of the City's SSMP goals and one of the performance measures tracked over time. The City employs various strategies to meet the goal of no repeat SSOs from the same location. The City completes a System Failure Form for every SSO that occurs to identify any potential for a repeat blockage.

Table 6 describes the related sanitary sewer system rehabilitation and capital improvement projects, including schedules and costs, planned before the next SSMP internal program audit.

Table 6. Planned R&R and CIP Projects Planned Before Next SSMP Audit

Project	Year	Cost
Atkinson / Dry Creek Crossing	2013	$ 314,500
Shadowbrook Lift Station Rehab and Replacement	2014	$ 525,000
2012 CIPP Rehab Project	2014	$ 1,890,000
Wastewater Interceptor Inspection and Assessment	2014	$ 500,000
Sewer Line / Clean Out / Sewer Service Upgrades	2014	$ 300,000
WW – Technology Replacement	2014	$ 50,000
Sewer Manhole Upgrade	2014	$ 250,000
2013 CIPP Rehab Project	2015	$ 1,890,000
Sewer Line / Clean Out / Sewer Service Upgrades	2015	$ 300,000
WW – Technology Replacement	2015	$ 50,000
Sewer Manhole Upgrade	2015	$ 250,000

Table 7 describes the target goals for time between notification of a potential SSO and arrival on scene for containment (i.e., SSO response time) under varying conditions.

Table 7. Goals for SSO Response Time

Condition	Goal
During normal business hours	40 minutes
After business hours / holidays	40 minutes

SECTION 4 Audit Procedure

Per SSS WDR Section D.13.x, the objective of this audit is to focus on evaluating the effectiveness of the SSMP and the City's compliance with the SSMP requirements identified in the SSS WDR order. This section describes the procedure used to accomplish this objective.

4.1 Review of SSMP Compliance

An assessment of the City of Roseville's SSMP was conducted as part of the audit against the requirements outlined in the SSS WDR. The subsections of **SECTION 5** below are organized by SSMP element. Each subsection contains a table which lists the requirements of section D.13 of the SSS WDR for the respective SSMP element and indicates the level of compliance of the SSMP against that requirement. The compliance status of the City's SSMP is indicated with one of the following ratings; *1 - in compliance, 2 - not in compliance, or 3 – N/A with written justification in SSMP*. If there are deficiencies with regards to compliance, an explanation of the deficiency is given. Each deficiency will have associated SSMP enhancements which may include action items, SSMP adjustments, and/or timelines of planned completion.

4.2 Review of SSMP Effectiveness

Subsequent to the indication of the level of compliance of the SSMP in relation to the requirements of the SSS WDR, an evaluation of the effectiveness of the SSMP elements will be conducted to comply with the requirements for SSMP audits per subsection D.13.x of the SSS WDR. Where appropriate, recommendations will be made based on the results of this audit to identify tasks to improve the effectiveness of SSMP activities. Wherever possible, performance metrics will be used to measure the effectiveness of SSMP elements. Performance indicators (PIs) will be recommended for SSMP elements that do not currently have a means for quantifiably measuring performance and where it is justified.

A summary of the recommended modifications made throughout this SSMP internal program audit is included in **SECTION 6** – Audit Summary.

SECTION 5 Audit of SSMP Elements

This chapter evaluates all elements of the City's SSMP. Each section of this chapter is associated with one of the eleven elements of the SSMP required by SSS WDR D.13. Each element is evaluated for compliance and effectiveness using the procedure described above in **Sections 4.1** and **4.2**, respectively.

5.1 Goals

5.1.1 Compliance

Table 8. Compliance with SSS WDR D.13.i - Goals

SSMP Requirement	Compliance	Deficiencies
i Properly manage, operate, and maintain all portions of the City's wastewater collection system.	1	-

5.1.2 Effectiveness of SSMP Elements and Recommended Modifications

Roseville Goals (SSMP 1.2)

- Description of Current Status: The City currently has six goals identified in the SSMP.
- Level of Effectiveness: The goals the City of Roseville recorded in the SSMP have been effective in guiding the activities of the City and support the objective of the SSS WDR to protect waters of the state.
- Recommendations: No recommended modifications at this time.

5.2 Organization

5.2.1 Compliance

Table 9. Compliance with SSS WDR D.13.ii - Organization

SSMP Requirement	Compliance	Deficiencies
ii(a) Identify Legally Responsible Official (LRO)	1	-
ii(b) SSMP responsibility and organization chart	1	-
ii(c) Chain of communication for reporting SSOs	1	-

5.2.2 Effectiveness of SSMP Elements and Recommended Modifications

List Legally Responsible Official (LRO) (SSMP 2.1)

- Description of Current Status: Currently Ken Glotzbach (Utility Manager) and Chris Bracco (Wastewater Collections Superintendent) are registered in the California Integrated Water Quality System (CIWQS) as legally responsible officials as of 9 SEP 2013. This type of information is recorded in Appendix B-1 of the City SSMP, which is accessible to the public via the City website.
- Level of Effectiveness: Posting Appendix B-1 on the City website is effective in communicating the legally responsible officials and data submitters for the City to the public.

- Recommendations: Appendix B-1 needs to be updated to show Ken Glotzbach and Chris Bracco as LROs for the City. Additionally, once Dan Pruden (Wastewater Collections Supervisor) is registered as a Data Submitter in CIWQS, his information should be added to Appendix B-1 and updated on the City website.

SSMP Responsibility Organization Chart (SSMP 2.2)

- Description of Current Status: The SSMP Resposibility Organization Chart (SSMP Figure 2-1) is current in the SSMP, with descriptive definitions of each individual's responsibilities. Additionally, a narrative of "general position descriptions" are outlined in section 2.2 of the SSMP.
- Level of Effectiveness: The chart is effective in defining the work flow and responsibilities of the individual as well as departments within the City of Roseville's operations with relation to the SSMP.
- Recommendations: No recommended modifications at this time.

Chain of Communication Reporting Chart (SSMP 2.3)

- Description of Current Status: The internal notification contact chart is current and readily available to all faculty members of the waste water utility district. The City of Roseville has a 24 hour call center and a full time staff wastewater utility customer service representative. This individual's job is to respond to any service calls including but not limited too; backups, SSOs, smell complaints, etc.
- Level of Effectiveness: This has been effective as represented in customer notification to operator arrival time average is 23 minutes during business and non-business hours over the past two fiscal years. This average time is well below the target of 40 minute arrival time. There is only one instance that the operator arrival time exceeded the target 40 minutes in the past two year. This track record indicates the right people are getting the information to correct staff members make a quick decision to respond and mitigate the SSO.
- Recommendations: Figure 2.2 in SSMP section 2.3 has typographical errors. There is text missing. The figure found in SSMP Appendix F-1 (1) - *SSO Procedures Flowchart* is the same chart, but includes all of the text. WWE recommends reinserting the figure from Appendix F-1 (1) into section 2.3 of the SSMP with the corrections made.

  Appendix B-3 includes a call list of staff members who are on call during non-business hours; this is out of date, but also unnecessary. WWE recommends the City develop a SOP for the call center procedures for receiving calls and mobilizing field staff. A call list may be kept internally as deemed necessary by the City.

5.3 Legal Authority

5.3.1 Compliance

Table 10. Compliance with SSS WDR D.13.iii – Legal Authority

SSMP Requirement	Compliance	Deficiencies
iii(a) Prevent illicit discharges	1	-
iii(b) Properly designed and constructed sewers	1	-
iii(c) Ensure access to laterals owned/maintained by City	1	-
iii(d) Limit the discharge of FOG and other debris	1	-
iii(e) Enforce any violation of City ordinances	1	-

5.3.2 Effectiveness of SSMP Elements and Recommended Modifications

Industrial Pretreatment Program (SSMP 3.2)

- Description of Current Status: The Industrial Waste Section (IWS) administers the Pretreatment Program Enforcement Response Plan and implements enforcement procedures specified by the U.S. EPA in accordance with 40CFR 403.5 (f) (5). The IWD has the authority to permit and monitor significant industrial users (SIUs) and small commercial/industrial dischargers.
- Level of Effectiveness: The implementation of the Pretreatment Program Enforcement Response Plan has been effective in providing the City the authority to control and prevent illicit discharges to the collection system.
- Recommendations: No recommended modifications at this time.

Municipal Code and Design and Construction Standards (SSMP 3.3)

- Description of Current Status: The City's design and construction standards regulate the preparation of plans for construction of additions/improvements to the sewer. The Roseville Municipal Code (RMC) section 14.12.040 requires that building sewers and connection into the public sewer system conform to the requirements of the building and plumbing code or other applicable rules and regulations of the City. The RMC also requires an installation of a lateral line clean out at the point of connection with the public sewer.
- Level of Effectiveness: The City design and construction standards and the RMC section 14.12.040 have been effective in providing the City the legal authority to properly design and construct the sewers and connections.
- Recommendations: No recommended modifications at this time.

Municipal Code – Sewer Access Authority (SSMP 3.4)

- Description of Current Status: The Charter in the RMC, Article X Sec. 10.01 designates the authority to access City owned and operated facilities, either within or outside its corporate limits, for a number of activities including, but not limited to maintenance, inspection, and repair related to sewage collection.
- Level of Effectiveness: This authority gives legal access to all City-owned sewer facilities. The City has not had issues to date with lack of access to facilities based on legal authority. The current legal authority to access sewer facilities has been effective in supporting the goals of the SSMP.
- Recommendations: No recommended modifications at this time.

Municipal Code – FOG (SSMP 3.5)

- Description of Current Status: The RMC section 14.12.050 provides authority to require grease and grit interceptors when the director deems necessary for proper handling of liquid waste. Chapter 14.14 is the FOG ordinance that provides liquid discharge requirements for Food Service Establishments (FSEs). An FSE must remain in compliance with this ordinance or fees as explained in 14.14.140 can be cited.
- Level of Effectiveness: This ordinance is effective in identifying the required equipment/BMPs for FSEs as well as indicating the authority of the City to enforce the FOG requirements
- Recommendations: No recommended modifications at this time.

Municipal Code – Enforcement Authority (SSMP 3.6)

- Description of Current Status: The RMC section 14.12.060 provides authority to penalize violators of the City's code requirements. An individual may be charged with an infraction or a misdemeanor, at the discretion of the city attorney.
- Level of Effectiveness: The authority to penalize infractions that may cost the City recourses has proven effective to maintain proper use of the wastewater collection system.
- Recommendations: No recommended modifications at this time.

Inter-Agency Agreements and Satellite Systems (SSMP 3.7)

- Description of Current Status: The City of Roseville has the following agreements in effect:
  - Joint Exercise of Powers Agreement for the South Placer Wastewater Authority
  - Agreement Regarding the Operation and use of the South Placer Regional Wastewater Facilities
- Level of Effectiveness: These agreements have proven effective in laying out the legal requirements and responsibilities of the regional partners (City of Roseville, South Placer Municipal Utility District, and Placer County) with regards to planning, financing, acquisition, ownership, construction, and operation of Regional Wastewater Facilities for the treatment of the wastewater collected and conveyed through the City's collection system, and treated at the Regional Wastewater Facilities.
- Recommendations: No recommended modifications at this time.

5.4 Operation and Maintenance Program

5.4.1 Compliance

Table 11. Compliance with SSS WDR D.13.iv – O&M Program

SSMP Requirement	Compliance	Deficiencies
iv(a) Collection system maps	1	-
iv(b) Preventive O&M activities	1	-
iv(c) Rehabilitation and Replacement (R&R) plan	1	-
iv(d) Training	1	-
iv(e) Equipment and critical replacement parts	1	-

5.4.2 Effectiveness of SSMP Elements and Recommended Modifications

Roseville Collection System Maps (SSMP 4.2)

- Description of Current Status: The City maintains electronic and hard copy maps of the sanitary sewer system and storm drain system. The electronic mapping data are accessible in the City's GIS and hard copy maps are located in the various utility department offices and field crew trucks.
  Maps are updated with new sub-divisions, repairs, or rehabilitation or replacement of assets that require updating of the maps. The City Mapping Update Policy is followed in order in ensure mapping is correct and completed in GIS and made available to the required users.

- Level of Effectiveness: The City meets the requirements of section D.13.iv(a) of the SSS WDR for maintaining up-to-date mapping. However, the City currently has not identified the number and length of pipeline in the collection systems that is located in easements. Doing so will assist the City in identifying assets located in areas that are potentially difficult to access, thus increasing the risk of identifying and/or responding to SSOs from those locations.
- Recommendations:
    - Include the Mapping Update Policy document as an appendix to the SSMP and post it on the City's SSMP page of its website.

Roseville Preventive Operations & Maintenance Activities (SSMP 4.3)

- Description of Current Status: The audit identified and verified that the WWC engages in programs to complete the following routine preventative O&M programs/activities: cleaning program, CCTV inspection, visual inspection, regular maintenance, construction/repair, rehabilitation projects, customer service, and staff support.

  In response to the increased number of SSOs from laterals over the last two years, the City has reassigned one additional crew to the eeling program for service lines. Eeling is a mechanical cleaning process used to remove roots or blockages.

  The City has SOPs for both office and field workflows related to CCTV inspection work. SSMP appendices D-4 and F-4 are the same SOP for SSO Containment and Mitigation. The SSMP identifies that the City has standard operating procedures for SSO response and mitigation, backhoe operation, sewer cleaning equipment, locating and marking USAs.
- Level of Effectiveness: The City sets a number of metrics to measure the performance of the O&M activities, which are listed in SSMP section 9.4. The performance measures related to the O&M activities are listed in **Table 12**. The table also lists the targets for each performance measure and the actual performance accomplished in FY11/12 and FY12/13. The table shows that the City has met or exceeded the target level of performance in all of the measures that have a target.

Table 12. Performance Measures related to SSS WDR D.13.iv(b)

Performance Measure	Target	FY11/12	FY12/13
Total miles cleaned per year	250	277	272
Total miles of mechanical root control per year	-	9.74	11.23
Total number of sewer maintenance field staff	NA	23	23
Average high velocity cleaning per crew per day	NA	1866 LF	1852 LF
Average cost of sewer mechanical cleaning	-	$1.57 /LF	$1.36/LF

The City's recent effort to bolster its eeling program has initially shown a high level of effectiveness. As mentioned in **Section 3.2.1**, the number of SSOs from laterals has dropped from four SSOs per month on average to one SSO per month on average after the initiation of the changes to the eeling program.

The SOPs for preventative maintenance work are in their preliminary stages and could be more effective if they were finalized and documented for frequent use. The SOP WWC – 01 for SSO Containment found

in the SSMP appendices, could be used as a template for standardizing the development of the remaining SOPs.

- Recommendations:
  - Identify targets for all performance measures so that data collected can be compared to a goal to assess performance and the effectiveness of SSMP activities. A comprehensive review of benchmarks or performance measures/indicators is discussed in the recommendations of **Section 5.9**.
  - Continue the efforts of the recently revised eeling program due to the immediate impact on the frequency of SSOs from laterals. Data on the number of lateral SSOs per month should be monitored so that the impact of these efforts can be evaluated at the time of the next internal SSMP audit.
  - Develop SOPs for the regular preventative maintenance activities using SOP-WWC-01 as a template. The following is a list of suggested SOPs based on the activities currently tracked with performance measures:
    - Lift station maintenance
    - Receiving and responding to customer service request

Rehabilitation and Replacement Plan (SSMP 4.4)

- Description of Current Status: Pipelines and manholes are regularly inspected in accordance with the City's WWC Capital Improvement Plan, which began in 2006. The NASSCO rating system is used to document observations and rate defects. The length of pipeline and the number of manholes inspected each year are tracked with performance measures. The City evaluates the risk of failure for each asset based on the various data sources it maintains (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections) and assigns high risk assets to the Rehabilitation and Replacement (R&R) Plan.

  The City keeps a list of known R&R CIP projects that is developed and maintained by the Rehabilitation Manager. This list outlines the planned projects over the next five year to rehabilitate the system and includes information such as; the year of action, the project budget, the bid amount for current projects, the project status (e.g., in design, in construction, in punch list, completed), and tracking of various milestones.
- Level of Effectiveness: The City sets a number of metrics to measure the performance of the WWC activities, which are listed in SSMP section 9.4. The performance measures related to the inspection activities and R&R program are listed in **Table 13**. The table also lists the targets for each performance measure and the actual performance accomplished in FY11/12 and FY12/13. The table shows that the City has met or exceeded the target level of performance in all of the measures that have a target, with one exception. In FY11/12 the City missed its goal for total miles of CCTV inspection by 0.8 miles (2.7% of the goal). The City responded in the following fiscal year by more than doubling the targeted goal for CCTV inspection.

Table 13. Performance Measures related to SSS WDR D.13.iv(c)

Performance Measure	Target	FY11/12	FY12/13
Total miles visually inspected per year (not CCTV)	-	0.25	0.25
Independent manhole inspections per year	1054	1424	1328
Number of laterals rehabilitated using CIPP per year	50	134	50
Total miles CCTV inspected per year (main)	30	29.2	67.6
Average cost of CCTV	-	$0.48/LF	$0.56/LF

The known R&R CIP projects list has proven effective in identifying and planning the projects to be completed to address high risk areas of the system.

- Recommendations: The following recommendations are given to increase the effectiveness of this SSMP element:
    - Develop SOPs for regular inspection activities using SOP-WWC-01 as a template. The following is a list of suggested SOPs based on the activities currently tracked with performance measures:
        - Alarm testing of lift stations
    - Document the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data.

Training (SSMP 4.5)

- Description of Current Status: The WWC require all employees to be certified with CWEA, DMV, CPR, First Aid, Confined Space Policy, and Gas Detector Policy, as well be trained in equipment safety, maintain OSHA rules, and review material safety data sheets.
- Level of Effectiveness: The training program has been effective in safe, well-trained staff. Over this audit period the City has reported three on-the-job accidents; two in FY11/12 and one in FY12/13. The City strives for zero on-the-job accidents and uses the training programs to improve safety at work.
- Recommendations:
    - The SSMP internal audit from FY10/11 stated that NASSCO training for condition assessment should be added to SSMP Element 4.5. The City implements the NASSCO rating system for collecting condition assessment data and provides this training to the WWC staff. While this is not a requirement of the SSS WDR, the City needs to decide if this training will be referenced in SSMP Element 4.5.
    - Use the SOPs recommended to be developed in this section as a training tool for WWC staff. The SOPs can also be used to inform contractors working in the system of the role they play in responding to and mitigating potential SSOs.

Equipment and Critical Replacement Parts (SSMP 4.6)

- Description of Current Status: The equipment inventory is found in Appendix D of the SSMP. WWC equipment use is monitored and maintained by the following persons:
    - WWC Superintendent – Equipment
    - Materials Technician – Pipes, manholes

- Mechanical Maintenance – Lift station equipment and appurtenances

The City currently has critical parts on hand but there are limited records about those parts. Appendix D-7 of the SSMP contains a matrix of the City lift stations and the types of critical spare parts (i.e., bubbler compressor, PLC cards, pumps, fuses, level control, radio telemetry, and heater/overloads).

- Level of Effectiveness: The City has experienced one SSO related to a lift station failure since 2007. The SSO occurred in 2008 as a result of a failed bubbler line, which caused the lift station to shut down. The volume of this spill was only 10 gallons due to the quick response of City staff and all 10 gallons were recovered. However, this lift station that caused the SSO is one of the smallest in the system with regards to flow rate. Although the probability of a lift station failure may be low based on the low frequency of SSOs from lift stations in the past, the consequence of such a failure could be very high and justifies the need for up-to-date records of critical spare parts.
- Recommendations:
  - The SSMP identifies the WWC Superintendent as the person responsible for maintaining lists of the equipment and critical spare parts. The position directly responsible for tracking equipment and maintaining up-to-date equipment and critical spare parts lists is Materials Technician. The SSMP should be updated to correctly reflect the responsible party for equipment and critical spare parts.

5.5 Design and Performance Provisions

5.5.1 Compliance

Table 14. Compliance with SSS WDR D.13.v – Design and Performance Provisions

SSMP Requirement	Compliance	Deficiencies
v(a) Sanitary sewer design and construction specifications	1	-
v(b) Procedures and standards for inspecting and testing new and R&R projects	1	-

5.5.2 Effectiveness of SSMP Elements and Recommended Modifications

Sanitary Sewer Design and Specifications (SSMP 5.2)

- Description of Current Status: The City's design and construction standards are available on the City website. These designs encompass the design needs for the waste water system for the City of Roseville. These standard details are available on records in the county office as well as on the City's website. The operating procedure for testing of new constructed pipes is clear and effective in determining readiness of newly constructed pipe. City specifications are updated as needed.
- Level of Effectiveness: These design and construction standards are effective in ensuring that new or rehabilitated infrastructure is designed and constructed in a manner acceptable to the City.

- Recommendations: No recommended modifications at this time.

Sanitary Sewer System Construction and Performance Provisions (SSMP 5.3)

- Description of Current Status: Section 91-12 of the City's Sanitary Sewer Construction Standards defines the criteria for testing and cleaning of installed sewer improvements. There is a punch list that must be followed to indicate compliance with this measure to ensure proper construction.
- Level of Effectiveness: This process lessens the chance of pipe failure by verifying, through proper testing, that new construction and rehabilitation work are completed correctly.
- Recommendations: No recommended modifications at this time.

5.6 Overflow Emergency Response Plan

5.6.1 Compliance

Table 15. Compliance with SSS WDR D.13.vi - OERP

SSMP Requirement	Compliance	Deficiencies
vi(a) Proper notification procedures	1	-
vi(b) Program for appropriate SSO response	1	-
vi(c) Procedure for prompt notification to regulatory agencies	1	-
vi(d) Procedures for appropriate staff and contractor training	1	
vi(e) Procedures to address emergency operations (e.g., traffic, crowd control)	1	-
vi(f) Program to ensure containment of SSO to prevent discharge and minimize adverse impacts on the environment	1	-

The State Water Board amended the monitoring and reporting program (MRP) with revised requirements (Revised MRP WQ 2013-0058-EXEC) that took effect September 9, 2013. The revised requirements are available at the State Water Resources Control Board's Sanitary Sewer Overflow Reduction Program website (http://www.waterboards.ca.gov/water_issues/programs/sso/). The changes from these revised requirements include the type data that must be collected in the event of an SSO and the follow up reporting that is required.

- Recommendations:
  - Complete all unpopulated fields in the revised "Collection System Questionnaire" in CIWQS. Enrollees have six months from the date that the revised MRP became effective to complete the questionnaire. This means that the questionnaire must be completed by approximately March 9,

2014. If this questionnaire is not completed by that time, the system will lock the Enrollee out from all reporting capabilities.

5.6.2 Effectiveness of SSMP Elements and Recommended Modifications

Notification Procedures (SSMP 6.2)

- Description of Current Status: The notification procedures are available in the on-call service vehicles and in the main office. The procedures include an easy to read flow chart with corresponding action items including contact information for the parties that require notification during an SSO event.
- Level of Effectiveness: The measures taken to ensure proper notification have been effective in providing prompt notification to the required parties based on various SSO scenarios. This is evident in the fact that the average SSO response time is just under 24 minutes for this audit period.
- Recommendations: No recommended modifications at this time.

Response Program (SSMP 6.3)

- Description of Current Status: The response procedure are documented in Appendix F-1 Section 2 of the SSMP and are summarized in a flow chart of actions required to respond to and mitigate a SSO.
- Level of Effectiveness: The flow chart steps through a series of yes/no questions to guide SSO responders to on the sequence of actions to proper assess and mitigate a SSO. This chart is simple and effective in explaining a process in which to mitigate an SSO.
  The SSO Response Program has been effective in responding and mitigating SSOs. This is evident in the fact that the average SSO duration is under 18 minutes. The average spill volume is less than 27 gallons and the average volume of SSO recovered is just over 21 gallons. The SSO response crew recovers on average almost 80% of a SSO. These averages come from the SSO data from this audit period (i.e., last two fiscal years).
- Recommendations:
  - Figure 6.2 in SSMP section 6.3 has a typographical error. There is text missing in some of the decision boxes. The same figure is in SSMP Appendix F-1(1) without the missing text. WWE recommends reinserting the figure with the corrections made or removing the figure from the SSMP and only reference Appendix F-1(1).
  - Section 2.I.A of the City SSO Response Procedures indicates that the time a call was received notifying the City of a SSO will be used as the SSO start time on the forms reported to CIWQS. WWE recommends that the City develop a SOP for estimating the start time of SSOs to include additional methods for examining possible start times to support the SSO start time entered into CIWQS.
  - The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the

decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station.

Regulatory Notification Procedure (SSMP 6.4)

- Description of Current Status: The Superintendent and Utility Manager are the legally responsible officials (LRO) for certification of SSO reports submitted to CIWQS data base. Also the Superintendent and Supervisor are responsible for reporting SSO to RWQCB, OES and Placer Environmental Health Department as necessary.
  Level of Effectiveness: This section clearly indicates the responsibility of the LRO regarding reporting SSO events to the proper authorities. To date, the City has not encountered a situation in which notification information for a required party was not available to City staff responding to a SSO.
- Recommendations: No recommended modifications at this time.

Staff and Contractors Training (SSMP 6.5)

- Description of Current Status: Each employee is required to complete SSO response procedure training. Updates and review of SSO training are included in the weekly tailgate meeting throughout the year. Contractors are also required to implement the procedures identified in the SSO training prior to working within the collection system.
- Level of Effectiveness: The implementation of the training program has been very successful as indicated in the historical data. Response and mitigation times of SSOs are almost half of the WWC set target time of 40 minutes.
- Recommendations: No recommended modifications at this time.

Emergency Response Coordination (SSMP 6.6)

- Description of Current Status: Employees are required to complete Emergency Action plan training annually. This covers HAZ WOPER 1st responder and Roseville's Incident Command System (ICS). These procedures, processes and systems are also reviewed through the year in weekly safety tail gate meetings.
- Level of Effectiveness: Training with HAZ WOPER is an effective way to ensure safety of the staff members when dealing with hazardous waste and materials.
- Recommendations: No recommended modifications at this time.

Spill Mitigation and Containment Procedure (SSMP 6.7)

- Description of Current Status: An SSOERP is available for staff to review and following during an emergency which includes an SOP for spill mitigation and containment.
- Level of Effectiveness: The SSOERP is comprehensive with indication of proper responsibilities as well as SOPs for containment (SOP WWC-01) and spill rate estimation (Section 5 of SSOERP).
- Recommendations: No recommended modifications at this time.

5.7 FOG Control Program

5.7.1 Compliance

Table 16. Compliance with SSS WDR D.13.vii – FOG Control Program

SSMP Requirement	Compliance	Deficiencies
vii(a) Public education plan	1	-
vii(b) FOG disposal plan	1	-
vii(c) Legal authority to prohibit SSOs and blockages caused by FOG discharges	1	-
vii(d) BMPs, grease removal devices, recordkeeping, and reporting requirements	1	-
vii(e) Authority to inspect and enforce FOG ordinance	1	-
vii(f) FOG Characterization Assessment and Hot Spot Cleaning Schedule	1	-
vii(g) FOG Control Program Measures	1	-

5.7.2 Effectiveness of SSMP Elements and Recommended Modifications

Public Education Plan (SSMP 7.2)

- Description of Current Status: There is a comprehensive FOG outreach program to residents, restaurants and the plumbing community on the proper disposal of FOG that the WWC adopted in May 2006. The main objective is to educate City of Roseville residents and restaurants on the proper disposal of FOG to meet or exceed outreach standards set forth in the State General WDR Requirements.
- Level of Effectiveness: This program implements modern media communication technologies; TV advertisements, flyers, inter-active website information, and information printed on monthly statements. The Public Education Plan recommends reaching out to K-12 schools to provide public education about the issues related to proper disposal of materials to the collection system. The efforts the City has made to incorporate multi-media information and target future users of the system appear to be effective in reaching the objective of educating the public on the proper disposal of FOG and other substances.
- Recommendations:
    - List Sean Bigley as the responsible party for the FOG Public Education Plan.

FOG Disposal Plan (SSMP 7.3)

- Description of Current Status: The Lab/Industrial Waste Supervisor oversees the Industrial Waste Pretreatment Program and FOG control program. Each food service establishment (FSE) is required to obtain a FOG wastewater discharge permit (FOG WDP). There are currently 294 permitted FSEs in the City. The Lab/Industrial Waste Supervisor oversees the inspection of permitted FSEs. A FOG WDP holder is required to keep all manifests, receipts and invoices of all cleaning, maintenance, grease removal from the grease control device, disposal carrier and disposal site location for no less than three years.

The City provides information about the permitting process and permit applications on the City website (address below) as a resource for businesses within the City.
http://www.roseville.ca.us/eu/wastewater_utility/fats_oils_n_grease/businesses.asp
City residents are offered free curbside pickup of FOG services that can be scheduled with the City. This helps ensure that FOG from residential units is properly collected and disposed. Information about the FOG pickup program can be found at the link below.
http://www.roseville.ca.us/eu/wastewater_utility/fats_oils_n_grease/residential.asp

- Level of Effectiveness: The City has developed a comprehensive FOG disposal program to address the various dischargers of FOG to the collection system. This program appears effective because the City has only had two FOG-related SSOs over the audit period (less than 3% of the total spills). This indicates that amount of FOG being disposed into the collection system is manageable and the FOG disposal program is meeting its objective in limiting the amount of FOG.
- Recommendations: No recommended modifications at this time.

Record Keeping Requirements (SSMP 7.4)

- Description of Current Status: The RMC Section 14.14.260 – "Recordkeeping requirements" includes a list of items that may be required to be kept for no less than three years and made available upon request of a FOG inspector/Industrial Waste technician or City representative. The SSMP further identifies which of these recordkeeping items is mandatory for a FSE and which items may be deemed mandatory at the discretion of the City.
- Level of Effectiveness: The recordkeeping requirements and timeframes identified in the RMC have been effective in providing the City the information necessary to enforce permit requirements of FSEs.
- Recommendations: No recommended modifications at this time.

Legal Authority to Prohibit SSOs and Blockages Caused by FOG Discharges (SSMP 7.5)

- Description of Current Status: The RMC section 14.12.050 provides authority to require grease and grit interceptors when the director deems necessary for proper handling of liquid waste. Additionally, chapter 14.14 of the RMC defines the City's FOG ordinance and provides the authority to implement its FOG control program, prohibit SSOs and blockages caused by FOG, and limit the concentration of FOG as set forth in RMC section 14.26.140.
- Level of Effectiveness: These codes are effective in organizing the type of equipment required to reduce FOG discharged from FSEs, as well as indicating the authority of the City to prohibit SSOs and blockages due to FOG. The City FOG Ordinance is also effective in a practical way because if the City has reason to believe that a FSE or residence is contributing too much FOG, it can numerically test the effluent from the property against the concentrations limits set in RMC section 14.26.140 to identify if there is a violation.
- Recommendations: No recommended modifications at this time.

BMP, Grease Removal Devices, Recordkeeping, and Reporting Requirements (SSMP 7.6)

Description of Current Status: The Industrial Waste Section requires that all FSEs have best management practices (BMPs) in accordance with the City FOG ordinance. Also each FSE must have an appropriately

sized grease removal device per the Uniform Plumbing Code and they must maintain records as outlined in section 7.4 of the SSMP.

The City provides information about BMP requirements, BMP posters, and BMP information sheets on the following topics; proper grease disposal, requirements for new and remodeled FSEs, grease interceptor maintenance, grease trap maintenance, selecting a grease hauler, a list of licensed grease haulers, dumpster maintenance, and equipment cleaning on the City website (address below) as a resource for businesses within the City.

http://www.roseville.ca.us/eu/wastewater_utility/fats_oils_n_grease/businesses.asp

The City supplements the information provided on its website through onsite inspections/meetings with FSEs to reinforce the level of understanding of the FOG program and its requirements.

- Level of Effectiveness: The City's efforts to disseminate information regarding BMPs, grease removal devices and the associated record keeping and reporting requirements have been effective.
- Recommendations: No recommended modifications at this time.

Inspection and Enforcement Authority – FOG Producers (SSMP 7.7)

- Description of Current Status: All FSEs that discharge wastewater containing FOG into the sewer system are required to obtain a Fat, Oil, and Grease Water Discharge Permit (FOG WDP) from the City. FOG WDPs are expressly subject to all provisions of the ordinances and regulations regarding FOG, charges for use, and violation fees established by the City. The RMC section 14.14.290 provides City representatives right of entry to access and inspect permitted FSEs.

  The City currently has 294 FSEs subject to FOG control that are connected to its system. All 294 FSEs are permitted under the City's FOG control program. Over the past 12 months, all 294 of the FSEs received a FOG inspection. During that same time zero enforcement actions were initiated. The Industrial Waste Section plans to conduct 294 FOG inspections (i.e., every FSE again) in the next 12 months.
- Level of Effectiveness: Over the period of this audit, two SSOs (less than 3% of the total spills over the audit period) were caused by blockages in the collection system due to FOG. The total volume of wastewater that left the system as a result of these two spills was 77 gallons or less than 4% of the total volume of wastewater spilled during the audit period. As identified in **Section 3.1** above, FOG is not a significant contributor the number or volume of SSOs. If FOG were a significant contributor to SSOs, then it would be expected that the number of enforcement actions might be higher and potentially taken against FSEs contributing to the blockages. However, the low number of FOG-related SSOs correlates with the low number of FOG-related enforcement actions.

  Currently, the communication between IWS and WWC departments is limited regarding the correlation between pipelines with deposits of FOG and FSEs with poor maintenance of BMPs and grease removal devices.
- Recommendations:
  - Schedule routine meetings between WWC and IWS to share findings from preventative maintenance activities and FSE inspections to identify FSEs who are negatively impacting the collection system by discharging excessive amounts of FOG. An active FSE inspection program and communication of inspection results is key to a FOG control program.

FOG Characterization Assessment and Hot Spot Cleaning Schedule (SSMP 7.8)

- Description of Current Status: The City conducted a FOG characterization assessment of the system that established a hot spot cleaning schedule. This schedule includes quarterly, semiannually, and annually cleaning to ensure that FOG is controlled in these lines that are subject to FOG blockages. Additionally, each hot spot is CCTV inspected once each year to verify the cleaning schedule is adequate to mitigate the probability of a FOG blockage. The cleaning schedule and records of cleaning are documented in the CMMS. The City currently has 101 pipeline segments on the hot spot cleaning schedule.
- Level of Effectiveness: The City's aggressive hot spot cleaning schedule has proven effective in limiting the number of SSOs due to FOG blockages.
- Recommendations:
    - Develop a SOP describing the process of how pipelines are added to the hot spot cleaning schedule, how the cleaning frequency (i.e., quarterly, semiannually, annually) for each hot spot is initially set, and how the cleaning frequency for an individual hot spot may be adjusted over time.
    - SSMP section 7.8, paragraph three contains a typographical error. It states that "sewer line maintenance work orders are issued and completed to ensure that hot spot lines **do** have grease blockages/SSOs between cleaning schedules". The word "do" should be changed to "do not".

FOG Control Program Measures (SSMP 7.9)

- Description of Current Status: The Industrial Waste Section has instituted a FOG waste discharge permit (FOG WDP) as the method of source control for FSEs. A FSE must obtain a FOG WDP before it is able to discharge to the public sewer per the RMC section 14.14.030. The City uses the FOG WDP as a means to apply incremental and progressive discipline if permit holders are in violation of the FOG ordinance until performance measurements are met.
- Level of Effectiveness: This City's FOG source control measures have proven effective during the period of this audit with respect to the low number of FOG-related SSOs.
- Recommendations: No recommended modifications at this time.

5.8 System Evaluation and Capacity Assurance Plan

5.8.1 Compliance

Table 17. Compliance with SSS WDR D.13.viii - SECAP

SSMP Requirement	Compliance	Deficiencies
viii(a) Evaluate hydraulic deficiencies	2	The schedule is to be reviewed and updated consistent with the SSMP review and update requirements in SSS WDR D.14 (i.e., every 5 years). The schedule is 7 years old.
viii(b) Establish design criteria	1	-
viii(c) Establish short- and long-term CIP	1	-
viii(d) Develop schedule of completion dates for CIP	1	-

5.8.2 Effectiveness of SSMP Elements and Recommended Modifications

Evaluation Process – Capacity Enhancement Projects (SSMP 8.2)

- Description of Current Status: The City developed two hydraulic models (i.e., the Roseville Model Project and the South Placer Wastewater Authority (SPWA) Wastewater Systems Evaluation Project) to identify peak flows in each collection system component (i.e., pipe and pump station). The evaluation of hydraulic capacity using these two models identified potential deficiencies and recommended improvements. Additionally, the City has started the process of evaluating the hydraulic capacity of the collection system again.
- Level of Effectiveness: Appendix I-1 of the SSMP indicates that the system evaluation & capacity assurance plan will be reviewed and updated every five years. The Roseville Model Project and the SPWA Wastewater Systems Evaluation Project were both conducted in 2006 (seven years ago). According to the SSMP, the system should have been reevaluated in 2011. However, the modeling efforts conducted in 2006 have been effective in evaluating the system and planning for future capacity.
- Recommendations: Complete the recently initiated capacity assessment so that changes to the system can be updated and recent flow monitoring results can be used to update findings to reflect current conditions and revisions to planned development. The City should consider revising the planned frequency for system evaluation updates if a frequency of five years is not warranted based on system needs.

Design Criteria (SSMP 8.3)

- Description of Current Status: The City established a 10-year 24-hour peak wet weather design storm for the evaluation of existing collection system components and sizing of new collection system components. This included the development of wastewater flow generation factors based on water use records and flow monitoring data.
- Level of Effectiveness: A 10-year 24-hour peak wet weather design storm has been effective in accounting for the impact wet weather on the system and planning for system improvements. In December 2012, a

storm occurred that resulted in two Category 1 SSOs that were caused by excessive rainfall as reported to CIWQS. This was actually one SSO that had two appearance points. The appearance points were two manholes that are located next to a utility path/bike path that runs along a tributary to Linda Creek. The combined SSO volume was approximately 400 gallons, all of which flowed into the creek. Considering the relatively small SSO volume that resulted from the rainfall event, the existing design storm appears sufficient.

- Recommendations: Add documentation to internal SSO reports showing that the amount of precipitation over a 24-hour period exceeded 2.82 inches if the cause of the SSO is identified as "rainfall exceeded design". The lower bound of the 10-year 24-hour precipitation frequency estimate with a 90% confidence interval from the NOAA Atlas 14, Volume 6, Version 2 data for the Rocklin (station ID 04-7516) is 2.82 inches.

  Investigate excessive I/I observed from satellite agencies (e.g., observed peaking factors) associated with storms that caused an SSO to document the correlation between the SSO and the excessive offsite I/I.

Capacity Enhancement Measures (SSMP 8.4)

- Description of Current Status: The SPWA Wastewater Systems Evaluation includes the identification of short and long-term Capital Improvement Projects (CIP) to meet current and future build-out flow projections for trunk sewers larger than 15 inches. Two capacity deficiencies under peak wet weather scenarios were identified in the SPWA Wastewater Systems Evaluation. The Roseville Model Project did not include the identification of capacity improvement projects.
- Level of Effectiveness: The Roseville Model Project evaluated the capacity of every pipe within the City collection system. However, the project did not identify measures to address capacity deficiencies. Appendix H-1 of the SSMP states that the process of identifying projects to address capacity deficiencies will be performed by the City at a later date.
- Recommendations: No recommended modifications at this time.

Capital Improvement Program Schedule (SSMP 8.5)

- Description of Current Status: The following table lists the projects that are identified in the SPWA Wastewater Systems Evaluation that identify the City as the agency with the primary responsibility for the project. The other projects identified in the SPWA Wastewater Systems Evaluation do not list the City as the agency with primary responsibility, so they are not considered in this audit.

Table 18. Schedule of CIPs to Address Capacity Deficiencies

CIPs (from SPWA Report)	Responsible Agency	Assigned Date	Completed Date	Revised Date
Improvement Project 5 – Area D	Roseville	APR 2006	SEP 2006	NA
Improvement Project 6 – Area E	Roseville	APR 2006	NA	NA

SSMP Appendix H-1 states that the SPWA project at Area D, which consisted of installing a diversion structure to shed approximately 1.1 mgd at manhole B06-313 to the existing 33-inch trunk sewer, was

completed by the fall of 2006. Flow monitoring of Area E was completed and following the evaluation of the data, it was determined that the proposed sewer relief project is not required.
The existing CIP schedule is

- Level of Effectiveness: The schedule of capital improvement projects to address potential hydraulic deficiencies in the system has been effective in identifying the tasks needed to assure hydraulic capacity within the collection system.
- Recommendations: No recommended modifications at this time.

5.9 Monitoring, Measurement, and Program Modifications

5.9.1 Compliance

Table 19. Compliance with SSS WDR D.13.ix – MMM

SSMP Requirement	Compliance	Deficiencies
ix(a) Maintain metrics to prioritize SSMP activities	1	-
ix(b) Measure effectiveness of SSMP elements	1	-
ix(c) Assess preventative maintenance program	1	-
ix(d) Update elements based on evaluations	1	-
ix(e) Identify and illustrate SSO trends	1	-

5.9.2 Effectiveness of SSMP Elements and Recommended Modifications

Utility Metrics to Prioritize SSMP Activities (SSMP 9.2)

- Description of Current Status: The City has established four categories of metrics to monitor and measure the effectiveness of the various elements of this SSMP: System Information, Financial Information, Sewer Maintenance, and Performance Measures. In addition to these metrics, the City maintains a number of performance measures related to various SSMP activities. A summary of all of the performance measures tracked by the City is included in **Appendix 7.2** of this internal audit.
- Level of Effectiveness: Appendix I has effectively been used to identify and track the specific metrics in each of the four categories established by the City.
- Recommendations: Update Appendix I-Benchmarking Metrics on City website with information from FY11/12 and FY12/13.

Metrics to Monitor Effectiveness of SSMP (SSMP 9.3)

- Description of Current Status: SSMP Appendix I is a schedule that assigns individual staff members to one or more SSMP element and defines the frequency that each element must be monitored and updated.
- Level of Effectiveness: The City currently tracks performance using a number of metrics. However, none of these metrics are associated with specific SSMP elements. Some of these metrics have identified targets or goals, but not all. These metrics can be used to measure the effectiveness of elements, but without associating metrics with specific SSMP elements and without setting goals for each metric it is difficult to monitor the effectiveness of the SSMP.
- Recommendations:

- Update Appendix I. This appendix includes information from the initial 2007 Implementation Schedule. The initial SSMP implementation and the SWRCB compliance schedule concluded many years ago and does not need to be included in the SSMP. However, the information regarding the continual implementation of the SSMP such as the document location, responsible person, and review frequency should be included.
- Identify the metrics that correspond with specific elements of the SSMP and develop numerical goal ranges so the data currently collected and monitored by the City can be used as performance indicators (PIs) to quantitatively monitor SSMP effectiveness. The ultimate measure of SSMP effectiveness is the limiting of SSOs. However, setting goals for activities related to various SSMP elements and measuring performance against those goals, will help determine how success in those elements, relates to the overall effectiveness of limiting SSOs. Associating metrics with specific SSMP elements will allow for direct assessment of those elements and provide consistency in their evaluation in future audits. **Appendix 7.2** of this internal audit contains a list of PI and associates each one with a SSMP element, a suggested audit frequency, and a person responsible for monitoring that PI. A sample Performance Indicator Assessment Form is included in **Appendix 7.3** of this internal audit. Performance Indicator Assessment Forms can be developed for each metric and assessed periodically by the person responsible, according to the suggested audit frequency for that metric. At the time of the next internal SSMP audit, the completed Performance Indicator Assessment Forms can be used to evaluate the effectiveness of SSMP elements and included as attachments to the audit.
- Consider tracking additional metrics targeted at measuring the effectiveness of SSMP elements that do not currently have metrics associated with them. A list of potential performance measures listed by SSMP element is included in **Appendix 7.2** of this internal audit.

Metrics to Assess Preventative Maintenance Program (SSMP 9.4)

- Description of Current Status: The metrics listed in SSMP section 9.4 are measured, recorded, and analyzed to assess the effectiveness of the preventative maintenance program. **Table 20** below contains a summary of the metrics listed in SSMP section 9.4 as well as other performance metrics tracked by the City in various appendices and reports. The column labeled "Source" identifies which plan, appendix, or report tracks a particular metric.

Table 20. Summary of Current Preventative Maintenance Performance Metrics

Performance Indicator	Unit	Target	Source
Sewer main - flushed	Miles	250	A, B, C, D, E
Service laterals - cleaned	Miles	8	D
Sewer main – visually inspected (not CCTV)	Miles	-	A, B
Manholes – cleaned and inspected	Number	1054	A, D
Manholes - rehabilitated	Number	25	D
Service laterals - rehabilitated	Number	50	A, C, D, E
Service laterals – mechanically cleaned (eeled)	Miles	8	A, E
Sewer main - CCTV inspected	Miles	30	A, B, C, D, E
Service laterals - CCTV inspected	Miles	16	B, D, E
Total number of sewer maintenance field staff	Number	-	A, B
Working staff time to PM program	%	80	D
Total emergency work orders	Number	-	B
Average high velocity cleaning per crew per day	LF/day	-	A, B
Average cost of sewer mechanical cleaning	$/LF	-	A, B
Average cost of hydro cleaning	$/LF	-	B
Average cost of CCTV (main)	$/LF	-	A, B
Average cost of CCTV (lateral)	$/LF	-	B
Cleanouts - installed	Number	100	B, C, D
On-the-Job accidents	Number	0	D, E
Average response time to customer inquiry	Minutes	40	A, D, C

A = SSMP section 9.4
B = SSMP Appendix I
C = WW Collections KPIs
D = Program / Performance Reports
E = Strategic Plan Data

- Level of Effectiveness: The City tracks a number of metrics to quantitatively evaluate the performance of the activities of the preventative maintenance program. This is effective because it allows the City to monitor the performance of particular activities over time and against other metrics (e.g., staffing levels, SSO trends) to determine correlations between the data. However, not all of the metrics have an associated goal, which makes it difficult to assess whether or not that activity is meeting the intended result.
- Recommendations: Using the data collected in SSMP Appendix I as a reference, develop goals for metrics that track preventative maintenance activities and identify the person/position responsible for tracking data against those goals. See **Appendix 7.2** for a list of potential performance indicators for preventative maintenance activities with responsible parties.

SSMP Performance Monitoring and Update Process (SSMP 9.5)

- Description of Current Status: Individual staff responsibilities for each SSMP element and the frequency that each element must be monitored are defined in SSMP Appendix I. The City tracks revisions/updates to the SSMP using a SSMP Revision Log that is maintained by the LRO. The SSMP Revision Log is a

spreadsheet that chronicles revisions to the SSMP by logging the date of the revision, the SSMP element that was changed, a brief description of the change, and who made the change.

- Level of Effectiveness: The SSMP Revision Log is effective in tracking changes to the SSMP.
- Recommendations: Assign the individuals responsible for the various elements of the SSMP to complete the Performance Indicator Assessment Forms that are developed for their SSMP elements. See **Appendix 7.2** for a list of potential performance indicators with the assigned responsible parties.

SSO Trends – Frequency, Location and Volume (SSMP 9.6)

- Description of Current Status: The metrics listed in SSMP section 9.6 are measured, recorded, and analyzed to identify and illustrate SSO trends, including: frequency, location, and volume. **Table 21** below contains a summary of the metrics listed in SSMP section 9.6 as well as other performance metrics tracked by the City in various appendices and reports. The column labeled "Source" identifies which plan, appendix, or report tracks a particular metric.

Table 21. Current Performance Measures to Monitor SSO Trends

Performance Measure	Unit	Target	Source
SSOs - Total number, mains and laterals	Number	-	A, B
SSOs - Total volume, mains and laterals	Gal	-	A, B
SSOs - Total volume recovered	Gal	-	B
SSOs - Total number of wet weather	Number	-	A, B
SSOs - Total volume of wet weather	Gal	-	A, B
SSOs - % of spills caused by FOG (main)	%	-	A, B
SSOs - % of spills caused by roots (main)	%	-	A, B
SSOs - % of spills caused by Vandalism (main)	%	-	A, B
SSOs - caused by LS failures	Number	-	A, B
SSOs - caused by pipe failures	Number	-	A, B
SSOs - % of spill volume caused by FOG (lateral)	%	-	A, B
SSOs - % of spill volume caused by roots (lateral)	%	-	A, B
SSOs - % of spill volume caused by Vandalism (lateral)	%	-	A, B
Customer service requests per year	Number	-	A, B
Sewer odor complaints	Number	-	A, B
Flooding claims per year	Number	-	A, B
Cost of flooding claims per year	$	-	A, B
SSO – Repeats within two years	Number	0	B, C
SSOs - Category 1	Number	0	C, D
SSOs / 100 mi pipe / year - Category 2	Number	2.0	C
SSOs / 100 mi pipe / year - Mainline	Number	0.6	C
SSOs / 100 mi pipe / year - Lateral	Number	8.0	C

A = SSMP section 9.6
B = SSMP Appendix I
C = WW Collections KPIs
D = Program / Performance Reports

- Level of Effectiveness: Data for most of the metrics listed in **Table 21** are tracked annually in SSMP Appendix I and the Program / Performance Report. This allows the City to effectively review trends in SSOs over time.
- Recommendations: Using the data collected in SSMP Appendix I as a reference, set performance goals for the metrics used to illustrate SSO trends. See **Appendix 7.2** for a list of potential performance indicators related to SSO trends.

5.10 SSMP Program Audits

5.10.1 Compliance

Table 22. Compliance with SSS WDR D.13.x – SSMP Program Audits

SSMP Requirement	Compliance	Deficiencies
x Conduct periodic audits	1	-

5.10.2 Effectiveness of SSMP Elements and Recommended Modifications

Audit Procedures, Roles, and Responsibilities (SSMP 10.2)

- Description of Current Status: The City conducts an internal audit biennially with a primary focus on the evaluation of system metrics towards the elimination of preventable SSO and the reduction of the impact of those SSOs that do occur.
  The City developed an audit form as a template to record information produced during internal SSMP audits. This form is included in SSMP Appendix J-2.
- Level of Effectiveness: The internal audit has had success in identifying areas of improvement. The past audit identified two major enhancements and plans were put in place to improve the SSMP. This audit has specified additional recommended enhancements. The regular review of the SSMP is effective in assuring the usefulness of the planned activities.
  The Audit Form in Appendix J-2 assesses the compliance of the SSMP. However, the Audit Form does not adequately evaluate the effectiveness of the SSMP elements. SSS WDR D.13(x) requires that the internal audits evaluate both the *effectiveness* of the SSMP and the Enrollee's *compliance* with the SSMP requirements.
- Recommendations:
  - Post this SSMP internal audit to the City website.
  - Schedule the next internal SSMP audit for July - August 2015.
  - The SSMP must be recertified by the City Council before January 21, 2014. Per SSS WDR D.14, the City must have the SSMP updated and re-certified by the governing board (i.e., City Council) every five years. The City Council approved the original SSMP on January 21, 2009 which sets the date for re-certification on January 21, 2014.

- Revise Appendix J-1 to reflect recommendations for review of performance indicators (i.e., metrics associated with specific SSMP elements and the associated timelines).
- Revise Appendix J-2 (Audit Form) to provide areas in the tables for each SSMP element to conduct an assessment of both 1) the compliance against SSMP requirements and 2) the effectiveness of the SSMP element. Information gathered on the recommended Performance Indicator Assessment Forms should be included in the "Support Documents and Data" section of the Audit Form.

SSMP Program Modification/Update Process (SSMP 10.3)

- Description of Current Status: The City established a program for monitoring and reviewing sewer performance metrics on a periodic basis and the status of each element of the SSMP on a biennial basis. The City conducts internal SSMP audits every two years following the adoption of this SSMP. The Wastewater Utility Manager is assigned to initiate/direct corrective action when and if SSMP deficiencies are identified between/during periodic internal audits.
- Level of Effectiveness: The City has been prompt in responding to deficiencies/enhancements identified during regular reviews of SSMP data and during formal internal audits as documented in the City's SSMP Revision Log.
- Recommendations:
  - Document the submittal process for proposed changes to the SSMP. The process may include, the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes.

5.11 Communication Program

5.11.1 Compliance

Table 23. Compliance with SSS WDR D.13.xi – Communications Program

SSMP Requirement	Compliance	Deficiencies
xi(a) Communicate on a regular basis with the public and tributary/satellite systems regarding SSMP	1	-

5.11.2 Effectiveness of SSMP Elements and Recommended Modifications

Internal Communication – Staff, Utility Commission, and City Council (SSMP 11.2)

- Description of Current Status: The WWC uses two PowerPoint presentations for the purpose of presenting internally to the City Council and City staff, the purposes of the SSMP. The presentations are organized in a simple manner to explain an overview of the SSS WDR. These presentations support the City's WDR Awareness Program with the goal to provide staff with an overview of the SSS WDR regulation and educate the Public Utilities Commission and the City Council.

- Level of Effectiveness: This has been an effective way to ensure the City Council and WWC department have clear communications regarding the expectations place on the City with regards to complying with the regulation, the City's SSMP to limit SSOs and address the requirements of the regulation. These presentations were used during the initial implementation of the SSMP to educate City Council and staff on the new requirements being placed on the City.
- Recommendations:
    - As of September 2013 the State Water Board amended the MRP of the SSS WDR. Update or develop a new PowerPoint presentation to reflect the new reporting requirements and how it affects the City.

Stakeholder Communication – Residential, Commercial and Industrial (SSMP 11.3)

- Description of Current Status: The City communicates information about the SSMP by posting the entire SSMP (including appendices) on the City website. The contact information of the City's LROs is included on the website inviting public input or questions about the SSMP.

  The City has a created a PowerPoint presentation for the purpose of presenting in a public setting. The presentation is organized in a simple manner to provide an overview of the SSS WDR. This presentation has been presented as needed to the public in regards to informing the public about the implementation process of the SSMP to limit SSOs.

  The City also produces a series newsletters called "EU Today" that are distributed to customers and posted on the City website every two months with information about FOG and what not to flush. A crucial step to prevent SSOs is collaboration with the public.

  The City developed a marketing objective and strategy for the FOG outreach program targeted to Roseville residents and restaurants. The outreach program includes television advertisement, mail notices and direct visits to heavy FOG producing food service establishments. The City developed a budget, broken down by month, to fund the activities of the FOG outreach marketing plan.

  Additionally, the City joined with other agencies in the region (the Cities of Auburn and Lincoln and Placer County) to develop an outreach program to educate residents about the consequences of what is put into the sewers with of ultimate goal of protecting the environment. The Live Sewer Smart campaign has information available on the internet, monthly newsletters, and the campaign participates in public events.
- Level of Effectiveness:

  Posting the SSMP on the City website has been an effective way for communicating information about the SSMP to the public. The City has made significant efforts to modify/update the SSMP so that the information there is current and accessible to all who desire access.

  The PowerPoint presentation has been used in public meetings. The effectiveness of how well these presentations educate the general public about the SSMP is difficult to measure.

  The City devotes significant staff time on a regular and reoccurring basis to produce the "EU Today" newsletters. These newsletters are distributed to the City's customers on a regular basis and provide another conduit of information about the ways the customers can support the aims of the SSMP.

The FOG outreach program has multiple ways of communicating information to the public. This increases the likelihood that all members of the community will receive information about the items that may be properly disposed into the waste water conveyance system.

The LiveSewerSmart campaign has been another effective tool in communicating to the public about the ways in which they impact the potential for blockages and SSOs in the system.

- Recommendations: No recommended modifications at this time.

Tributary/Satellite Communication (11.4)

- Description of Current Status: The City has created and implemented agreements to facilitate communication with tributary/satellite agencies. The WWC routinely communicates with their satellite partners and often supports them with mutual aid sharing equipment and resources. The City has three formal agreements that include the following:
  - The Joint Exercise of Powers Agreement for the SPWA
  - The Agreement Regarding the Operation and Use of the South Placer Regional WW Facilities
  - The Funding Agreement Relating to the South Placer Regional WW Facilities
- Level of Effectiveness: Having agreements in place is great preparation for establishing a source of help during an emergency event. A quarterly meetings with the regional partners has proven effective to discuss the ongoing coordinate between the tributary/satellite systems.

  A small portion of the City discharges to the Sacramento Area Sewer District's (SASD) sewer collection system. The City identified this portion of its system that is satellite to SASD and is in the process of formalizing an agreement with SASD about the expectations between the two agencies.
- Recommendations:
  - Finalize the formal agreement with Sacramento Area Sewer District (SASD) regarding the discharge of wastewater from the City collection system into the SASD system.
  - Update SSMP section 11.4 to reference Appendix C-5 for the Joint Exercise of Powers Agreement for the SPWA and to reference SSMP Appendix C-6 for the Agreement Regarding the Operation and Use of the South Placer Regional Wastewater Facilities.
  - Update SSMP Appendix K-5 to include the Funding Agreement Relating to the South Placer Wastewater Facilities. It currently includes only the flysheet.
  - Update SSMP document to reference the appendices included on the City website (i.e., Appendix K-6 Sewer Smart Newsletter and Appendix K – FOG Pharm Outreach 2012-13 Budget).

SECTION 6 Audit Summary

This section summarizes the level of compliance of the SSMP with the SSMP requirements identified in subsection D.13 and the identified deficiencies as described in **Section 4.1**. **Table 24** is a summary of the results of that evaluation.

Table 24. Summary of SSMP Compliance Deficiencies

SSMP Requirement	Compliance	Deficiencies
viii(a) Evaluate hydraulic deficiencies	2	The schedule is to be reviewed and updated consistent with the SSMP review and update requirements in SSS WDR D.14 (i.e., every 5 years). The schedule is 7 years old.

This section also summarizes the recommended enhancements made during the process of evaluating each SSMP elements effectiveness as described in **Section 4.2**. **Table 25** is a summary of those recommendations.

Table 25. Summary of Audit Recommendations

SSMP Section	Recommendation	Timeline for Completion
2.1	Appendix B-1 needs to be updated to show Ken Glotzbach and Chris Bracco as LROs for the City. Additionally, once Dan Pruden (Wastewater Collections Supervisor) is registered as a Data Submitter in CIWQS, his information should be added to Appendix B-1 and updated on the City website.	JAN 2014
2.3	Figure 2.2 in SSMP section 2.3 has typographical errors. There is text missing. The figure found in SSMP Appendix F-1 (1) - SSO Procedures Flowchart is the same chart, but includes all of the text. WWE recommends reinserting the figure from Appendix F-1 (1) into section 2.3 of the SSMP with the corrections made.	JAN 2014
2.3	Appendix B-3 includes a call list of staff members who are on call during non-business hours; this is out of date, but also unnecessary. WWE recommends the City develop a SOP for the call center procedures for receiving calls and mobilizing field staff. A call list may be kept internally as deemed necessary by the City.	JAN 2014
4.2	Include the Mapping Update Policy document on the City SSMP website	JAN 2014
4.3	Identify targets for all performance measures so that data collected can be compared to a goal to assess performance and the effectiveness of SSMP activities. A comprehensive review of benchmarks or performance measures/indicators is discussed in the recommendations of **Section 5.9.**	JAN 2014
4.3	Continue the efforts of the recently revised eeling program due to the immediate impact on the frequency of SSOs from laterals. Data on the number of lateral SSOs per month should be monitored so that the impact of these efforts can be evaluated at the time of the next internal SSMP audit.	JAN 2014

SSMP Section	Recommendation	Timeline for Completion
4.3	Develop SOPs for the regular preventative maintenance activities using SOP-WWC-01 as a template. The following is a list of suggested SOPs based on the activities currently tracked with performance measures: ▪ Lift station maintenance ▪ Receiving and responding to customer service request	JUL 2014
4.4	Develop SOPs for regular inspection activities using SOP-WWC-01 as a template. The following is a list of suggested SOPs based on the activities currently tracked with performance measures: ▪ Alarm testing of lift stations	JUL 2014
4.4	Document the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data.	SEP 2014
4.5	The SSMP internal audit from FY10/11 stated that NASSCO training for condition assessment should be added to SSMP Element 4.5. The City implements the NASSCO rating system for collecting condition assessment data and provides this training to the WWC staff. While this is not a requirement of the SSS WDR, the City needs to decide if this training will be referenced in SSMP Element 4.5.	JAN 2014
4.5	Use the SOPs recommended to be developed in this section as a training tool for WWC staff. The SOPs can also be used to inform contractors working in the system of the role they play in responding to and mitigating potential SSOs.	JAN 2014
4.6	The SSMP identifies the WWC Superintendent as the person responsible for maintaining lists of the equipment and critical spare parts. The position directly responsible for tracking equipment and maintaining up-to-date equipment and critical spare parts lists is Materials Technician. The SSMP should be updated to correctly reflect the responsible party for equipment and critical spare parts.	JAN 2014
6	Complete all unpopulated fields in the revised "Collection System Questionnaire" in CIWQS. Enrollees have six months from the date that the revised MRP became effective to complete the questionnaire. This means that the questionnaire must be completed by approximately March 9, 2014. If this questionnaire is not completed by that time, the system will lock the Enrollee out from all reporting capabilities.	JAN 2014
6.3	Figure 6.2 in SSMP section 6.3 has a typographical error. There is text missing in some of the decision boxes. The same figure is in SSMP Appendix F-1(1) without the missing text. WWE recommends reinserting the figure with the corrections made or removing the figure from the SSMP and only reference Appendix F-1(1).	JAN 2014
6.3	Section 2.I.A of the City SSO Response Procedures indicates that the time a call was received notifying the City of a SSO will be used as the SSO start time on the forms reported to CIWQS. WWE recommends that the City develop a SOP for estimating the start time of SSOs to include additional methods for examining possible start times to support the SSO start time entered into CIWQS.	JAN 2014

SSMP Section	Recommendation	Timeline for Completion
6.3	The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station.	JAN 2014
7.2	List Sean Bigley as the responsible party for the FOG Public Education Plan.	JAN 2014
7.7	Schedule routine meetings between WWC and IWS to share findings from preventative maintenance activities and FSE inspections to identify FSEs who are negatively impacting the collection system by discharging excessive amounts of FOG.	JAN 2014
7.8	Develop a SOP describing the process of how pipelines are added to the hot spot cleaning schedule, how the cleaning frequency (i.e., quarterly, semiannually, annually) for each hot spot is initially set, and how the cleaning frequency for an individual hot spot may be adjusted over time.	JUL 2014
7.8	SSMP section 7.8, paragraph three contains a typographical error. It states that "sewer line maintenance work orders are issued and completed to ensure that hot spot lines **do** have grease blockages/SSOs between cleaning schedules". The word "do" should be changed to "do not".	JAN 2014
8.2	Reevaluate the capacity of the system so that changes to the system can be updated and recent flow monitoring results can be used to update findings to reflect current conditions and revisions to planned development. The City should consider revising the planned frequency for system evaluation updates if a frequency of five years is not warranted based on system needs.	JAN 2014
8.3	Add documentation to internal SSO reports showing that the amount of precipitation over a 24-hour period exceeded 2.82 inches if the cause of the SSO is identified as "rainfall exceeded design". The lower bound of the 10-year 24-hour precipitation frequency estimate with a 90% confidence interval from the NOAA Atlas 14, Volume 6, Version 2 data for the Rocklin (station ID 04-7516) is 2.82 inches.	JAN 2014
9.2	Update Appendix I-Benchmarking Metrics on City website with information from FY11/12 and FY12/13	JAN 2014
9.3	Update Appendix I. This appendix includes information from the initial 2007 Implementation Schedule. The initial SSMP implementation and the SWRCB compliance schedule concluded many years ago and does not need to be included in the SSMP. However, the information regarding the continual implementation of the SSMP such as the document location, responsible person, and review frequency should be included	JAN 2014
9.3	Identify the metrics that correspond with specific elements of the SSMP and develop numerical goal ranges so the data currently collected and monitored by the City can be used as performance indicators (PIs) to quantitatively monitor SSMP effectiveness.	JAN 2014

SSMP Section	Recommendation	Timeline for Completion
9.3	Consider tracking additional metrics targeted at measuring the effectiveness of SSMP elements that do not currently have metrics associated with them. A list of potential performance measures listed by SSMP element is included in **Appendix 7.2** of this internal audit.	JAN 2014
9.4	Using the data collected in SSMP Appendix I as a reference, develop goals for metrics that track preventative maintenance activities and identify the person/position responsible for tracking data against those goals. See **Appendix 7.2** for a list of potential performance indicators for preventative maintenance activities with responsible parties.	JAN 2014
9.5	Assign the individuals responsible for the various elements of the SSMP to complete the Performance Indicator Assessment Forms that are developed for their SSMP elements. See **Appendix 7.2** for a list of potential performance indicators with the assigned responsible parties.	JAN 2014
9.6	Using the data collected in SSMP Appendix I as a reference, set performance goals for the metrics used to illustrate SSO trends. See **Appendix 7.2** for a list of potential performance indicators related to SSO trends.	JAN 2014
10.2	Post this SSMP internal audit to the City website.	JAN 2014
10.2	Schedule the next internal SSMP audit for July - August 2015.	JAN 2014
10.2	The SSMP must be recertified by the City Council before January 21, 2014. Per SSS WDR D.14, the City must have the SSMP updated and re-certified by the governing board (i.e., City Council) every five years. The City Council approved the original SSMP on January 21, 2009 which sets the date for re-certification on January 21, 2014.	JAN 2014
10.2	Revise Appendix J-1 to reflect recommendations for review of performance indicators (i.e., metrics associated with specific SSMP elements and the associated timelines).	JAN 2014
10.2	Revise Appendix J-2 (Audit Form) to provide areas in the tables for each SSMP element to conduct an assessment of both 1) the compliance against SSMP requirements and 2) the effectiveness of the SSMP element. Information gathered on the recommended Performance Indicator Assessment Forms should be included in the "Support Documents and Data" section of the Audit Form.	AUG 2015
10.3	Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes.	DEC 2014
11.2	As of September 2013 the State Water Board amended the MRP of the SSS WDR. Update or develop a new PowerPoint presentation to reflect the new reporting requirements and how it affects the City.	JAN 2014
11.4	Finalize the formal agreement with Sacramento Area Sewer District (SASD) regarding the discharge of wastewater from the City collection system into the SASD system.	DEC 2014

SSMP Section	Recommendation	Timeline for Completion
11.4	Update SSMP section 11.4 to reference Appendix C-5 for the Joint Exercise of Powers Agreement for the SPWA and to reference SSMP Appendix C-6 for the Agreement Regarding the Operation and Use of the South Placer Regional Wastewater Facilities.	JAN 2014
11.4	Update SSMP Appendix K-5 to include the Funding Agreement Relating to the South Placer Wastewater Facilities. It currently includes only the flysheet.	JAN 2014
11.4	Update SSMP document to reference the appendices included on the City website (i.e., Appendix K-6 Sewer Smart Newsletter and Appendix K – FOG Pharm Outreach 2012-13 Budget).	JAN 2014

SECTION 7 Appendices

7.1 Appendix – Historical SSO Data

7.2 Appendix – Performance Indicators

7.3 Appendix – Sample Performance Indicator Assessment Form

7.1 Appendix – Historical SSO Data

Dated: FY 2012 – FY 2013

Date Of SSO	Address Of SSO	Spill Type	Spill Volume (gal)	Spill Volume Recovered (gal)	Spill Cause	Overall Description
7/20/2011	127 Elm Street A Roseville, 95678	Category 2	20	20	Root intrusion	Root intrusion caused 20 gallons of sewage to spill from Gravity sewer; City Cleanout at 127 A Elm Street to Unpaved surface; Other (specify below);Landscape Area: No surface water body affected:
8/13/2011	201 Berkeley Avenue Roseville, 95678	Category 2	50	50	Debris-Rags	Debris-Rags caused 50 gallons of sewage to spill from Gravity sewer at 201 Berkeley Ave to Other paved surface: No surface water body affected:

Legend

Green Text Indicates the goal for the respective performance measure as stated in the associated document.

"Data" Indicates that is recorded and tracked but no goal is defined in the associated document.

7.3 Appendix – Sample Performance Indicator Assessment Form

Goal:	**MRP (FY 2014 / 2015)**
Responsible Person (RP):	WWC Superintendent

Description of Performance Indicator(s) (PIs):

The State Water Board has recently concluded that the existing Monitoring and Reporting Program must be amended to remain adequate enough to advance the Sanitary Sewer Overflow Reduction Program objectives, assess compliance, and enforce the requirements of the Sanitary Sewer Systems Waste Discharge Requirements. The amended MRP will become effective on September 9, 2013 concurrent with the routine bimonthly CIWQS maintenance release. The Wastewater Collection Division is responsible for submitting, signing, and certifying all reports required by the SSS WDRs and the amended MRP order. The PIs listed below track the completion of tasks necessary for the City to remain compliant with the SSS WDRs.

PIs and Data Analysis Methods:

1. *Completion of unpopulated fields in revised "Collection System Questionnaire"*
   Discussion & Scoring Criteria: The City has three (3) months after September 9, 2013 to complete all unpopulated fields in the revised "Collection System Questionnaire" before the CIWQS locks you out from all reporting. After the questionnaire is completed, the system will default back to the annual update requirement and lock you out from all reporting only if the questionnaire is not updated at least annually.

2. *Update of OERP section in SSMP*
   Discussion & Scoring Criteria: The Overflow and Emergency Response Plan section of the City's SSMP must be updated in accordance with the amended MRP by January 21 2014, when a board review of the SSMP will take place.

PI	A+	A	A-	B+	B	B-	C+	C	C-	D	F
1	All unpopulated fields completed by December 9, 2013.			N/A			N/A			All or some of the unpopulated fields not completed by December 9, 2013.	
2	OERP section fully updated in SSMP before review.			N/A			N/A			OERP section never, or only partially, updated before review.

Figure 2: Average Gallons per SSO 13

SECTION 1 Audit Objectives

This report covers the results of the required Sewer System Management Plan (SSMP) internal audit process for the City of Roseville (City) for fiscal years 2013-2014 (FY13/14), and 2015-2015 (FY14/15). The purpose of the SSMP is to provide a written framework and process for sanitary sewer collection system (collection system) management, operation, and maintenance programs executed by the City with the ultimate goal of minimizing sanitary sewer overflows (SSOs) and sustaining compliance with the California State Water Resources Control Board (SWRCB) order No. 2006-0003-DWQ, the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (SSS WDR). The basis for the SSMP internal audit process is reviewing the performance of the collection system versus the performance measures used by the City to evaluate compliance with the various requirements of the SSS WDRs. The intention of the SSMP audit is to help the SSMP evolve over time as a "living document" that City continually adjusts after identifying potential enhancements and implementing changes to address any deficiencies to the management, operation and maintenance of the City sanitary sewer collection system.

The City is committed to completing the SSMP internal audit (Audit) on a biennial basis that is consistent with the procedure outlined in Appendix J-1 of the SSMP. The City completed its first Audit for FY 2011-2012, but subsequently contracted Water Works Engineers (WaterWorks) to conduct the FY 11/12-13/14 biennial audit. Similarly, the City contracted WaterWorks to complete the FY 13/14-14/15 biennial audit, the results of which are detailed in this document. The key objective of the Audit is to review SSMP compliance, implementation, and effectiveness. The key tasks performed in this Audit are detailed below:

1. Review records from previous internal audits, and confirm deficiencies have been addressed (See SECTION 2)
2. Analyze the City's historical SSO data and performance measures listed in the SSMP (See SECTION 3)
3. Using a standardized audit procedure detailed in SECTION 4 , identify deficiencies and provide recommendations that could improve the effectiveness of the SSMP (See SECTION 4).
4. Analyze the City's preventative maintenance (PM) program and rehabilitation and replacement (R&R) program as it relates to the operation and maintenance of the collection system (See Section 5.4)
5. Review the Sanitary Sewer Overflow Emergency Response Plan (SSEORP) for SSOs and identify improvements as needed (See Section 5.6)
6. Document all findings during the Audit and retain it on file (See SECTION 6)

SECTION 2 Agency Background / System Information

The City of Roseville is located in Placer County and is situated approximately 16 miles north of the City of Sacramento. Along Interstate 80, Roseville is located adjacent to the City of Rocklin in the north-east and the City of Citrus Heights in the south. The City covers approximately 42 square miles near the base of the foothills of the Sierra Mountains. Typical elevations are within a range of 250 to 100 feet of sea level with an average slope across the City of 0.5% from east to west. Several streams flow through the City (i.e., Dry Creek, Pleasant Grove Creek, Kaseburg Creek, Linda Creek, Cirby Creek, Secret Ravine, and Miners Ravine.).

The City is responsible for the operation and maintenance of a continually growing collection system that has grown over 5% since the last internal audit to now serve approximately 129,000 people. Table 1 below highlights key indicators about the City collection system.

Table 1. Overview of System Indicators

Audit	FY 11/12 – 12/13	FY 13/14 – 14/15
Miles of Mainline	485.52	501.11
Miles of laterals (lower)	235.3	238
Pump stations	14	15
Sewer service lateral connections	41,568	43,619
Population served	122,060	128,832
WWC Staff	25	28
Annual Budget (FY1 – FY2)	$3,400,000 / $3,800,00	$3,700,000 / $4,000,000
Category 1 SSOs	2	0
Category 2 SSOs	75	0
Category 3 SSOs	-	89

The City treats wastewater conveyed through its collection system at two regional wastewater treatment plants that are both owned and operated by the City (i.e., Dry Creek and Pleasant Grove WWTPs). Two other satellite collection systems owned and operated by other agencies (i.e., South Placer Municipal Utility District and Placer County) discharge directly into the City's collection system as well. One small portion of the City's collection system, however, discharge outside of Roseville into the Sacramento Area Sewer District (SASD) collection system and is treated at the Sacramento Regional WWTP. The City is a part of the Central Valley Region 5 (Sacramento sub-region) of the SWRCB.

2.1 Review of Last SSMP Audit

The previous biennial SSMP audit for Roseville was conducted by WaterWorks for FY 11/12-12/13 and was completed in December 2013. In the last Audit, a list of approximately 40 recommended actions to address deficiencies or improve the effectiveness of the City SSMP were listed. That list is re-inserted and adapted in Table 2 below, along with a description of the status of the task (i.e., Completed, Ongoing Updates, In/No Progress, Considered) per the latest SSMP documents on the City's website and based on information from City staff.

Table 2. Summary of Findings from the Last SSMP Internal Audit

Element	Action Item	Status
2 – Organization	Appendix B-1 needs to be updated to show Ken Glotzbach and Chris Bracco as LROs for the City. Additionally, once Dan Pruden (Wastewater Collections Supervisor) is registered as a Data Submitter in CIWQS, his information should be added to Appendix B-1 and updated on the City website.	Completed.
	Figure 2.2 in SSMP section 2.3 has typographical errors. There is text missing. The figure found in SSMP Appendix F-1 (1) - SSO Procedures Flowchart is the same chart, but includes all of the text. WWE recommends reinserting the figure from Appendix F-1 (1) into section 2.3 of the SSMP with the corrections made.	Completed
	Appendix B-3 includes a call list of staff members who are on call during non-business hours; this is out of date, but also unnecessary. WWE recommends the City develop a SOP for the call center procedures for receiving calls and mobilizing field staff. A call list may be kept internally as deemed necessary by the City.	Considered.
4 – O&M	Include the Mapping Update Policy document on the City SSMP website	No Progress
	Identify targets for all performance measures so that data collected can be compared to a goal to assess performance and the effectiveness of SSMP activities. A comprehensive review of benchmarks or performance measures/indicators is discussed in the recommendations of **Section 5.9.**	No Progress.
	Continue the efforts of the recently revised eeling program due to the immediate impact on the frequency of SSOs from laterals. Data on the number of lateral SSOs per month should be monitored so that the impact of these efforts can be evaluated at the time of the next internal SSMP audit.	Considered.
	Develop SOPs for the regular preventative maintenance activities using SOP-WWC-01 as a template. The following is a list of suggested SOPs based on the	Considered

	activities currently tracked with performance measures: ▪ Lift station maintenance ▪ Receiving and responding to customer service request	
	Develop SOPs for regular inspection activities using SOP-WWC-01 as a template. The following is a list of suggested SOPs based on the activities currently tracked with performance measures: -Alarm testing of lift stations	Considered
	Document the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data.	No Progress
	The SSMP internal audit from FY10/11 stated that NASSCO training for condition assessment should be added to SSMP Element 4.5. The City implements the NASSCO rating system for collecting condition assessment data and provides this training to the WWC staff. While this is not a requirement of the SSS WDR, the City needs to decide if this training will be referenced in SSMP Element 4.5.	Considered.
	Use the SOPs recommended to be developed in this section as a training tool for WWC staff. The SOPs can also be used to inform contractors working in the system of the role they play in responding to and mitigating potential SSOs.	Considered.
	The SSMP identifies the WWC Superintendent as the person responsible for maintaining lists of the equipment and critical spare parts. The position directly responsible for tracking equipment and maintaining up-to-date equipment and critical spare parts lists is Materials Technician. The SSMP should be updated to correctly reflect the responsible party for equipment and critical spare parts.	Completed.
6 – OERP	Complete all unpopulated fields in the revised "Collection System Questionnaire" in CIWQS. Enrollees have six months from the date that the revised MRP became effective to complete the questionnaire. This means that the questionnaire must be completed by approximately March 9, 2014. If this questionnaire is not completed by that time, the system will lock the Enrollee out from all reporting capabilities.	Completed

	Figure 6.2 in SSMP section 6.3 has a typographical error. There is text missing in some of the decision boxes. The same figure is in SSMP Appendix F-1(1) without the missing text. WWE recommends reinserting the figure with the corrections made or removing the figure from the SSMP and only reference Appendix F-1(1).	Completed.
	Section 2.I.A of the City SSO Response Procedures indicates that the time a call was received notifying the City of a SSO will be used as the SSO start time on the forms reported to CIWQS. WWE recommends that the City develop a SOP for estimating the start time of SSOs to include additional methods for examining possible start times to support the SSO start time entered into CIWQS.	Considered.
	The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station.	In Progress.
7 – FOG Control Program	List Sean Bigley as the responsible party for the FOG Public Education Plan.	Ongoing updates.
	Schedule routine meetings between WWC and IWS to share findings from preventative maintenance activities and FSE inspections to identify FSEs who are negatively impacting the collection system by discharging excessive amounts of FOG.	Considered.
	Develop a SOP describing the process of how pipelines are added to the hot spot cleaning schedule, how the cleaning frequency (i.e., quarterly, semiannually, annually) for each hot spot is initially set, and how the cleaning frequency for an individual hot spot may be adjusted over time.	In Progress
	SSMP section 7.8, paragraph three contains a typographical error. It states that "sewer line maintenance work orders are issued and completed to ensure that hot spot lines **do** have grease blockages/SSOs between cleaning schedules".	Completed

	The word "do" should be changed to "do not".	
8 – SECAP	Reevaluate the capacity of the system so that changes to the system can be updated and recent flow monitoring results can be used to update findings to reflect current conditions and revisions to planned development. The City should consider revising the planned frequency for system evaluation updates if a frequency of five years is not warranted based on system needs.	In Progress
	Add documentation to internal SSO reports showing that the amount of precipitation over a 24-hour period exceeded 2.82 inches if the cause of the SSO is identified as "rainfall exceeded design". The lower bound of the 10-year 24-hour precipitation frequency estimate with a 90% confidence interval from the NOAA Atlas 14, Volume 6, Version 2 data for the Rocklin (station ID 04-7516) is 2.82 inches.	Considered
9 – MMM	Update Appendix I-Benchmarking Metrics on City website with information from FY11/12 and FY12/13	Completed.
	Update Appendix I. This appendix includes information from the initial 2007 Implementation Schedule. The initial SSMP implementation and the SWRCB compliance schedule concluded many years ago and does not need to be included in the SSMP. However, the information regarding the continual implementation of the SSMP such as the document location, responsible person, and review frequency should be included	No Progress
	Identify the metrics that correspond with specific elements of the SSMP and develop numerical goal ranges so the data currently collected and monitored by the City can be used as performance indicators (PIs) to quantitatively monitor SSMP effectiveness.	Considered
	Consider tracking additional metrics targeted at measuring the effectiveness of SSMP elements that do not currently have metrics associated with them. A list of potential performance measures listed by SSMP element is included in **Appendix 7.2** of this internal audit.	Considered

	Using the data collected in SSMP Appendix I as a reference, develop goals for metrics that track preventative maintenance activities and identify the person/position responsible for tracking data against those goals. See **Appendix 7.2** for a list of potential performance indicators for preventative maintenance activities with responsible parties.	Considered
	Assign the individuals responsible for the various elements of the SSMP to complete the Performance Indicator Assessment Forms that are developed for their SSMP elements. See **Appendix 7.2** for a list of potential performance indicators with the assigned responsible parties.	Considered
	Using the data collected in SSMP Appendix I as a reference, set performance goals for the metrics used to illustrate SSO trends. See **Appendix 7.2** for a list of potential performance indicators related to SSO trends.	Considered
10 – SSMP Program Audits	Post this SSMP internal audit to the City website.	No Progress
	Schedule the next internal SSMP audit for July - August 2015.	Considered
	The SSMP must be recertified by the City Council before January 21, 2014. Per SSS WDR D.14, the City must have the SSMP updated and re-certified by the governing board (i.e., City Council) every five years. The City Council approved the original SSMP on January 21, 2009 which sets the date for re-certification on January 21, 2014.	Completed
	Revise Appendix J-1 to reflect recommendations for review of performance indicators (i.e., metrics associated with specific SSMP elements and the associated timelines).	No progress.

	Revise Appendix J-2 (Audit Form) to provide areas in the tables for each SSMP element to conduct an assessment of both 1) the compliance against SSMP requirements and 2) the effectiveness of the SSMP element. Information gathered on the recommended Performance Indicator Assessment Forms should be included in the "Support Documents and Data" section of the Audit Form.	No progress.
	Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes.	In progress.
11 - Communication	As of September 2013 the State Water Board amended the MRP of the SSS WDR. Update or develop a new PowerPoint presentation to reflect the new reporting requirements and how it affects the City.	Completed.
	Finalize the formal agreement with Sacramento Area Sewer District (SASD) regarding the discharge of wastewater from the City collection system into the SASD system.	Completed.
	Update SSMP section 11.4 to reference Appendix C-5 for the Joint Exercise of Powers Agreement for the SPWA and to reference SSMP Appendix C-6 for the Agreement Regarding the Operation and Use of the South Placer Regional Wastewater Facilities.	In Progress
	Update SSMP Appendix K-5 to include the Funding Agreement Relating to the South Placer Wastewater Facilities. It currently includes only the flysheet.	No Progress.
	Update SSMP document to reference the appendices included on the City website (i.e., Appendix K-6 Sewer Smart Newsletter and Appendix K – FOG Pharm Outreach 2012-13 Budget).	No progress.

2.2 Review of FY13/14 and FY14/15

The City has prioritized eliminating SSOs from the collection system and was successful preventing any Category 1 and Category 2 SSOs during the FY 13/14-14/15 audit period. A total of 10 Category 3 mainline SSOs occurred, of which 5 were caused by Grease Deposition (FOG) issues (i.e., 50% of all mainline SSOs). A total of 79 Category 3 lateral SSOs occurred, of which 63 were caused by Root intrusion (i.e., 80% of all lateral SSOs).

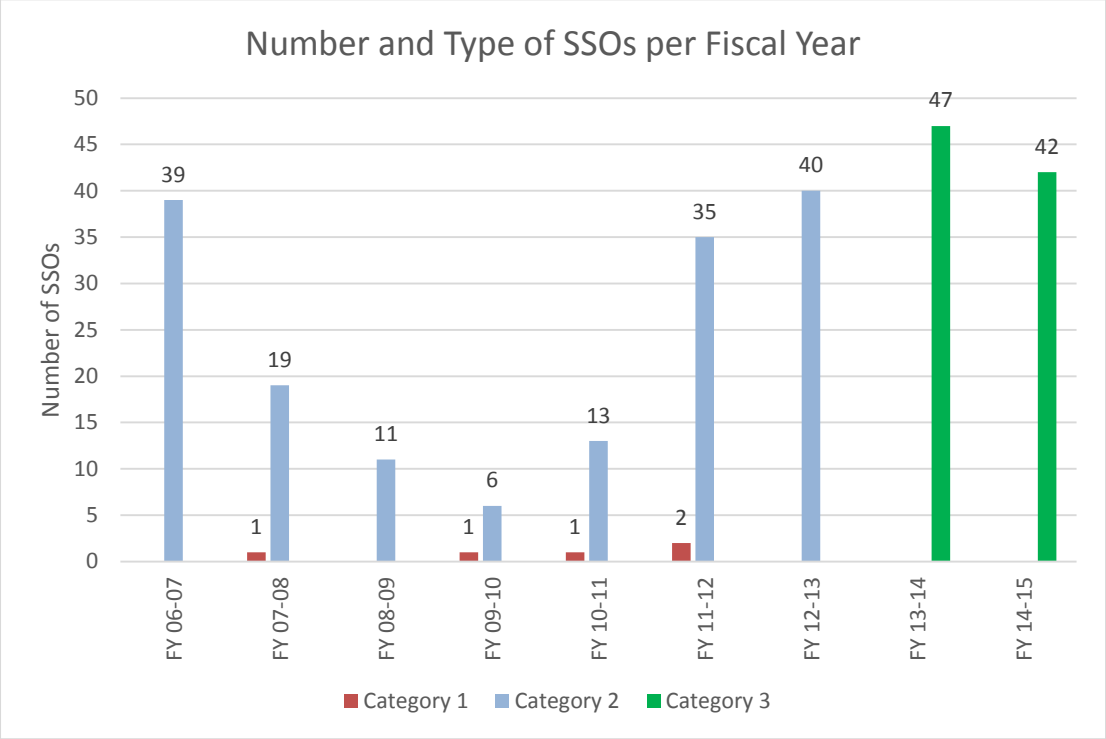
SECTION 3 SSO Trends

3.1 Historical SSO Data

A total of 89 Category 3 SSOs occurred during FY 2013/14 (47 SSOs) and FY 2014/15 (42 SSOs). Information regarding these SSOs is located in Section 7.1 and details the date, location, type, volume, volume recovered, and recovery percentage of total volume of each spill.

One of the City-defined tasks of the Audit is to compare the information submitted to the publicly available California Integrated Water Quality System (CIWQS) database with internal City records. The WWC Superintendent verifies that SSO data in CIWQS is accurate and matches the SSO Field Report Forms. Table 3 shows an organized view of key data present in the CIWQS and City internal records and shows discrepancies, if any, between them. The information presented in the "Internal Records" column represents a summarized view of various performance measures maintained by the City.

Table 3: CIWQS and City SSO Historic Data



SSO Historical Data since last SSMP Internal Audit	CIWQS Data FY 11/12 – 12/13	Internal Records FY 11/12 – 12/13	CIWQS Data FY 13/14 – 14/15	Internal Records FY 13/14 – 14/15
The total number of potential SSO service calls received	-	505 / 438 calls	-	627 / 915 calls
The total number of SSOs reported	77 SSOs	77 SSOs	47 / 42 SSOs	47 / 42 SSOs
The reported total volume of SSOs	2053 gallons	2053 gallons	2388 gallons	2385 gallons
The reported total volume of SSOs that reached waters of the state	405 gallons	405 gallons	0 gallons	0 gallons
The percent volume of SSOs recovered	80%	80%	93%	94%
The average SSO response time	23 minutes	21 minutes	18 minutes	18 minutes
The average SSO duration time	18 minutes	-	3:00 hours*	-
The average SSO mitigation time	-	-	< 6 minutes	< 5 minutes

* Seven long-duration SSOs (> 3 hours long) occurred during the audit period that increased the average SSO duration length from 42 minutes to 3 hours

The following discussion investigates the City's historical SSO data to identify potential SSO trends to provide insight into measuring the effectiveness of the City SSMP and future improvements in reducing SSOs. Figure 1 highlights the type and number of SSOs since FY 2006/07. The SWRCB defined new three SSO categories as of September 13th, 2013. A category 1 SSO is currently defined as a spill of any volume that reaches surface water. A Category 2 SSO is currently defined as a spill greater than or equal to 1,000 gallons that does not reach surface

water. A Category 3 SSO is currently defined as a spill less than 1,000 gallons that does not reach surface water. As demonstrated in Figure 1, the total number of SSOs per fiscal year has increased slightly since FY 11/12 and FY 12/13 but is limited to Category 3 SSOs.

Figure 1: Number of SSOs per Fiscal Year

To provide regional context and insight into the City's collection system performance, **Table 4** compares the City's average number of SSOs and average spill volume per SSO per 100 miles of sewer pipeline next to results from sub-region Central Valley –Sacramento (part of State Water Control Board Region 5) and California (State). This information is gathered from the SWRCB's annual compliance reports. These reports and their related data can be found online at the following link: http://www.waterboards.ca.gov/water_issues/programs/sso/docs/compliance_report_fy1112.pdf. Generally the City average SSOs/100 miles of sewer pipe is far below the average of all municipal agencies in the Central Valley Sacramento subregion, and is slightly higher than the State. The City's average spill volume/100 miles of sewer pipe is an order of magnitude smaller than the state, which highlights how effective the City's SSO preventative maintenance and response program has been.

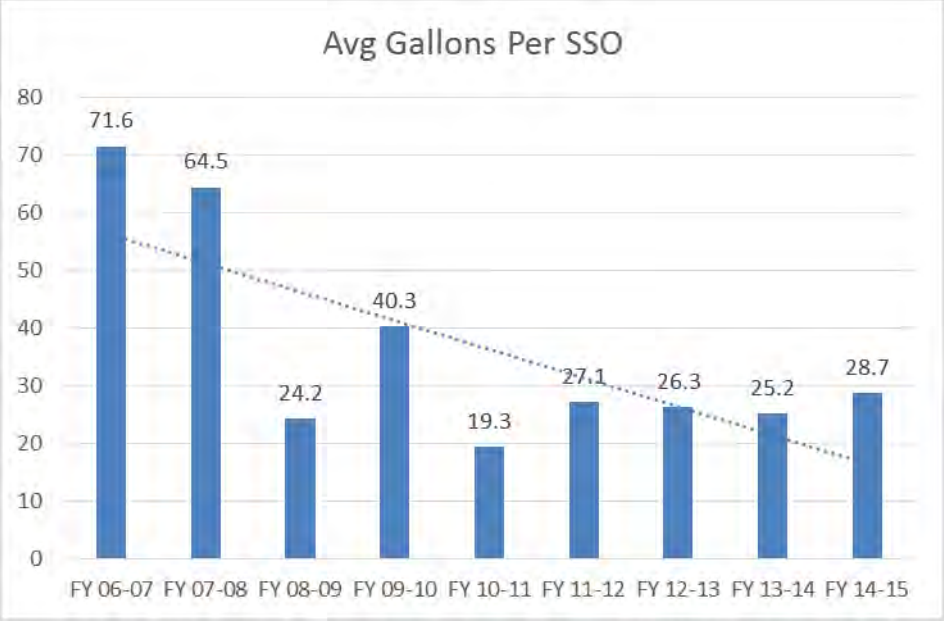


Table 4: Regional Comparison of SSO Data

Fiscal Year	Average # of SSOs per 100 miles (number)			Average Spill Volume per 100 miles (gallons)		
	City	Central Valley - Sacramento	State	City	Central Valley - Sacramento	State
2011/12	4.88	12.4	4.28	132	3,396	13,925
2012/13	5.85	12.72	4.38	154	4,371	8,194
2013/14	6.39	11.96	4.38	160	2,878	4,587
2014/15	5.71	Report not available yet		163	Report not available yet	

* Includes gravity mainline, laterals, and pressure pipes

A valuable source of analysis is also comparing average gallons spilled per SSO across fiscal years. As demonstrated in Figure 2, the overall gallons per SSO since 2007 shows a downward trend, but the more recent trend in the past 4 years shows that gallons per SSO is generally steady and holding at approximately 27 gal/SSO. Table 4: Regional Comparison of SSO Data

Figure 2: Average Gallons per SSO

Based on CIWQS records, Table 5 demonstrates the leading causes of SSOs in this audit period compared to the previous audit period. Generally SSOs from Debris and Fog have increased moderately, but SSOs caused by Roots (51 to 63) have experienced a notable increase. There have been no Capacity-caused SSOs in this audit period. The actions planned as a result of this SSMP Audit will target the leading causes to most effectively reduce the number and spill volume of SSOs.

Table 5. Leading Causes of SSOs in FY13-15 (results from FY11-13 in parenthesis)

By Number		By Volume		By Average Volume per SSO	
Cause	**Number**	**Cause**	**Gallons**	**Cause**	**Gallons**
Roots	63 (51)	Roots	1281 (1235)	FOG	149 (39)
Debris	15 (12)	FOG	743 (77)	Debris	21 (19)
Pipe Failure	6 (9)	Debris	314 (222)	Roots	20 (24)
FOG	5 (2)	Pipe Failure	50 (114)	Pipe Failure	8 (13)
Capacity	0 (2)	Capacity	0 (400)	Capacity	0 (200)
Vandalism	0 (1)	Vandalism	0 (5)	Vandalism	0 (5)

3.2 Performance Measures

The City utilizes multiple performance measures to assess the effectiveness of the SSMP in achieving proper operation and management of the sanitary sewer system to reduce and prevent SSOs. While the City may use other performance measures for evaluation purposes, the following measures are typically used:

- SSO Rate (SSOs per 100 miles of collection system piping per year)
- Number of SSOs for each cause (roots, FOG, debris, pipe failure, capacity, lift station failures, etc.)
- Median SSO volume (gallons)
- Percentage of SSOs greater than 100 gallons (%)
- Percentage of SSOs reported as Category 1 (%)
- Percentage of SSO volume recovered (%)
- Percentage of SSO volume reaching a surface water (%)

The City's CIWQS SSO record were queried to analyze each performance measure from FY 11/12 to FY 14/15 and the data is displayed in **Table 6** below. From analyzing the table, the City's SSO rate has increased slightly during this audit period compared to the last, mostly related to the increase in root-related SSOs.

Table 6: Performance Measures

Performance Measures		FY 11/12	FY 12/13	FY 13/14	FY 14/15
SSO Rate, SSOs/100 mi		4.88	5.85	6.39	5.71
SSO Cause	FOG	0	1	4	1
	Roots	18	30	32	31
	Debris	1	0	1	0
	Debris-Rags	7	2	7	2
	Pipe Failure	6	4	1	5
	Non Dispersables	0	0	1	2
	Vandalism	1	0	0	0
	Capacity	0	2	0	0
	Construction	0	0	0	1
	Unknown/Other	2	3	1	0
Median SSO Vol (gal)		27	26	25	29
% of SSOs > 100 gal		2.8	2.3	2.1	4.7
Category 1 % of Total SSOs		0	7	0	0
% of Spill Volume Recovered		99	63	94	93
% of Spill Vol Reaching Surface Water		0	37	0	0

SECTION 4 Audit Procedure

In accordance with SSS WDER Section D.13.x, the primary SSMP audit objective is to focus on evaluating the effectiveness of implementing the SSMP and the City's compliance with the SSMP requirements identified in the SSS WSDR Order. This section details the procedures used to meet this objective.

4.1 Review of SSMP Compliance

This Audit assessed the City's SSMP against the requirements outlines in the SSS WDR. The subsections of SECTION 5 listed below are organized by SSMP elements. Each subsection contains a table which lists the SSS WDR section D.13 requirements and City's level of compliance of the SSMP with that particular requirement. The compliance status of the City's SSMP is indicated with one of the following ratings: ***Yes*** *– in compliance,* ***No*** *– not in compliance, or* ***N/A*** *– not applicable with a written justification in the SSMP.* If there are any compliance deficiencies, then an explanation of the deficiency is given. Each deficiency will have a recommended SSMP enhancement, which may include action items, adjustments, and/or timelines of the planned completion.

4.2 Review of SSMP Effectiveness

Subsequent to the SSMP compliance assessment compared to SSS WDR requirements, an evaluation of the effectiveness of the SSMP elements has been conducted to comply with the requirements for SSMP audits per subsection D.13.x of the SSS WDR. The discussion review if the plan outlined for each section is being followed, and how effective the plan is at reaching the desired objectives. Recommendations will be made where

appropriate based on the results of this Audit to identify tasks to improve the effectiveness of SSMP activities. Performance metrics will be used wherever possible to measure the effectiveness of the SSMP elements.

This section will not repeat the information and plans presented in each section of the SSMP and is intended to evaluate the effectiveness of the stated plans for each SSMP element. The reader should reference the City's SSMP to obtain the information referenced by this Audit.

A summary of the recommended modifications made through this Audit is included in SECTION 6.

SECTION 5 Audit of SSMP Elements

This section evaluates all elements of the City's SSMP. Each section of this chapter is associated with one of the eleven elements of the SSMP in accordance with SS WDR section D.13 requirements. Each element is evaluated for compliance and effectiveness described above in 4.1 and 4.2 respectively.

5.1 Goals

5.1.1 Compliance

Table 7. Compliance with SSS WDR D.13.i - Goals

SSMP Requirement	Compliance	Deficiencies
i Properly manage, operate, and maintain all portions of the City's wastewater collection system.	Yes	-

5.1.2 Effectiveness of SSMP Elements and Recommended Modifications

Roseville Goals (SSMP 1.2)

- Level of Effectiveness: The City currently has six goals identified in the SSMP. The goals of the City recorded in the SSMP have been effective in guiding the City's activities to support the objective of the SSS WDR to protect the waters of the state.

- Recommendations: No recommendations at this time

5.2 Organization

5.2.1 Compliance

Table 8. Compliance with SSS WDR D.13.ii - Organization

SSMP Requirement	Compliance	Deficiencies
ii(a) Identify Legally Responsible Official (LRO)	Yes	-
ii(b) SSMP responsibility and organization chart	Yes	-
ii(c) Chain of communication for reporting SSOs	Yes	-

5.2.2 Effectiveness of SSMP Elements and Recommended Modifications

List Legally Responsible Official (LRO) (SSMP 2.1)

- Level of Effectiveness: The City has Ken Glotzbach (Utility Manager) and Chris Bracco (Wastewater Collections Superintendent) listed in CIWQS as LROs. Dan Pruden (Wastewater Collections Supervisor) is listed as a data submitter. This is recorded in Appendix B-1 of the SSMP and is publicly accessible. The

current organization of data submitters and LROs has proven effective in reporting SSOs to meet the requirements of the September 2013 amended Monitoring and Reporting Program.

- Recommendations:
  - Modify Appendix B-1: Add Wastewater Collections Supervisor Dan Pruden to Appendix B-1
  - Modify Appendix B-1: Update City Council positions and add phone numbers (Mayor Carol Garcia, Vice Mayor Susan Rohan, City Attorney Robert Schmitt). Update Commissioners and phone numbers: Chair Blandon Granger, Vice Chair John Speight. Update Liaisons and phone numbers for EU Director Richard Plecker, and Secretary Cheryl Hammond. Update Principal EU engineer and phone number for Jason Shykowski. Update Administrative Analyst and phone number for Maurice Chaney.

SSMP Responsibility Organization Chart (SSMP 2.2)

- Level of Effectiveness: The SSMP Responsibility Organization Chart (SSMP Figure 2-1) is current in the SSMP and lists a descriptive definition of each individual's responsibilities. The chart is effective in defining the work flow and responsibilities of the individuals as well as departments within the City of Roseville's operations with relation to the SSMP. The narrative of the general position description are outlined in Section 2.2 of the SSMP.

- Recommendations:
  - Modify Figure 2-1: Modify the Industrial Waste Specialist category and remove the FOG Control Program from the description due to the FOG program oversight transitioning from IWS to WWC in 2016. Add the Fog Control Program description to the Wastewater Collection Office Assistant category.
  - Modify SSMP Section 2.2: Modify the general position description and SSMP responsibilities under the Lab/Industrial Waste Supervisor, Specialist, and Technician and remove the FOG Control Program or inspection program from those descriptions.
  - Move the FOG Control Program SSMP responsibility into the WWC Superintendent category and the WWC Office Assistant category.

Chain of Communication Reporting Chart (SSMP 2.3)

- Level of Effectiveness: The internal notification contact chart is current and readily available to all wastewater utility district staff. The city of Roseville has a 24 hour call center, standardized answering script and procedures, and a full time staff wastewater utility customer service representative. The individual's job is to respond to any service calls including but not limited too: backups, SSOs, smell complaints, etc. This has been an effective and well-utilized service, as service calls have increased and the average SSO response time has decreased from 23 minutes from the previous audit period to 18 minutes which is well below the 40 minute target. Only 3 SSO response times were above 40 minutes during the audit period (1:30:00, 00:42:00, and 1:11:00) which totaled 16 gallons in spills and all occurring in the morning at around 8:30 AM, two of which occurred on weekday mornings possibly impacted by dense morning traffic.

- Recommendations:
  - Modify Figure 2-2 Flowchart: Update the WWC Divisions overflow emergency response plan chain of communication to match existing operations, whereby WWTP and LS staff and SCADA alerts should always call the 24 hour call center instead of WWC service staff. In addition, modify the Wastewater Admin cell and rename the position as Office Assistant.
  - Modify Appendix F-1 Flowchart: Follow the same recommendations written above.

5.3 Legal Authority

5.3.1 Compliance

Table 9. Compliance with SSS WDR D.13.iii – Legal Authority

SSMP Requirement	Compliance	Deficiencies
iii(a) Prevent illicit discharges	Yes	-
iii(b) Properly designed and constructed sewers	Yes	-
iii(c) Ensure access to laterals owned/maintained by City	Yes	-
iii(d) Limit the discharge of FOG and other debris	Yes	-
iii(e) Enforce any violation of City ordinances	Yes	-

5.3.2 Effectiveness of SSMP Elements and Recommended Modifications

Industrial Pretreatment Program (SSMP 3.2)

- Level of Effectiveness: The Industrial Waste Section (IWS) administers the Pretreatment Program Enforcement Response Plan and implements enforcement procedures specified by the U.S. EPA in accordance with 40CFR 403.5 (f) (5). The IWS has the authority to permit and monitor significant industrial users (SIUs) and small commercial/industrial dischargers. The implementation of the Pretreatment Program Enforcement Response Plan has been effective in providing the City the authority to control and prevent illicit discharges to the collection system.

- Recommendations: No recommended modifications at this time.

Municipal Code and Design and Construction Standards (SSMP 3.3)

- Level of Effectiveness: The City's design and construction standards regulate the preparation of plans for construction of additions/improvements to the sewer. The Roseville Municipal Code (RMC) section 14.12.040 requires that building sewer and connection into the public sewer system conform to the requirements of the building and plumbing code or other applicable rules and regulations of the City. The RMC also requires an installation of a lateral line clean out at the point of connection with the public sewer. The City design and construction standards and the RMC section 14.12.040 have been effective in providing the City the legal authority to properly design and construct the sewers and connections.

- Recommendations: No recommended modifications at this time.

Municipal Code – Sewer Access Authority (SSMP 3.4)

- Level of Effectiveness: The Charter in the RMC, Article X Sec. 10.01 designates the authority to access City owned and operated facilities, either within or outside its corporate limits, number of activities including, but not limited to maintenance, inspection, and repair related to sewage collection. The authority gives legal access to all City-owned sewer facilities. The City has not had issues to date with lack of access to facilities based on legal authority. The current legal authority to access sewer facilities has been effective in supporting the goals of the SSMP.

- Recommendations: No recommended modifications at this time.

Municipal Code – FOG (SSMP 3.5)

- Level of Effectiveness: The RMC chapter 14.14 is a robust FOG ordinance that lists regulatory requirements, fees, administrative requirements, and authority to enforce regulatory compliance. This ordinance is effective in identifying the required equipment and BMPs for FSEs as well as indicating the authority of the City to enforce the FOG requirements.

- Recommendations: No recommended modifications at this time.

Municipal Code – Enforcement Authority (SSMP 3.6)

- Level of Effectiveness: The RMC section 14.12.060 authorizes the City to penalize violators of the City's code requirements. At the discretion of the City attorney, an individual may be charged with an infraction or a misdemeanor. The authority to penalize infractions that may cost City resources has proven effective to maintain proper use of the wastewater collection system.

- Recommendations: No recommended modifications at this time.

Inter-Agency Agreements and Satellite Systems (SSMP 3.7)

- Level of Effectiveness: The City maintains a Joint Exercise of Powers Agreement for the South Placer Wastewater Authority and Agreement Regarding the Operation and use of the South Placer Regional Wastewater Facilities. In addition, the City has an Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).

- Recommendations: Update SSMP section 3.7 to include the Wastewater Service Contract and Operating Agreement between the City, SASD, and SRCSD.

5.4 Operation and Maintenance Program

5.4.1 Compliance

Table 10. Compliance with SSS WDR D.13.iv – O&M Program

SSMP Requirement	Compliance	Deficiencies
iv(a) Collection system maps	Yes	-
iv(b) Preventive O&M activities	Yes	-
iv(c) Rehabilitation and Replacement (R&R) plan	Yes	The City does have an R&R plan in place but additional improvement should be implemented (see below)
iv(d) Training	Yes	The City provides regular training but additional improvements to the training program should be implemented (see below)
iv(e) Equipment and critical replacement parts	Yes	-

5.4.2 Effectiveness of SSMP Elements and Recommended Modifications

Roseville Collection System Maps (SSMP 4.2)

- Level of Effectiveness: The city maintains electronic and hard copy maps of the sanitary sewer system and storm drain system. Updates to the electronic map system are translated to the field crew trucks via single sheet prints, if required. Full hard copy mapbooks are updated on a yearly basis. The City Mapping Update Policy is followed in order to ensure mapping is correct and completed in GIS and made available to the required users.

- Recommendations: Include the Mapping Update Policy Document as an appendix to the SSMP and post it to the City's SSMP website page.

Roseville Preventive Operations & Maintenance Activities (SSMP 4.3)

- Level of Effectiveness: WWC engages in various programs to complete routine preventative maintenance activities, which include jet cleaning, lateral eeling, chemical root control, CCTV inspections, visual inspections, and lift station maintenance.

  The City experienced a 24% increase in root-caused SSOs during the audit period but also increased total mechanical root control by 35% and implemented chemical root control in laterals with known root issues. The spike in root growth SSOs could be correlated with the City's mandatory water conservation efforts in response to California historic drought over the audit period. Homeowners and the City responded by decreasing irrigation use, in which case root systems may have intensified growth around existing laterals and connection points to main line pipes as overall soil moisture decreased.

The City outperformed targets and past performance measures as evident in Table 11. Other performance measures or benchmarks are reviewed in full in the recommendations of Section 5.9.

Table 11. Performance Measures related to SSS WDR D.13.iv(b)

Performance Measure	Target	FY11/12	FY12/13	FY13/14	FY14/15
Total miles cleaned per year	250	277	272	330	284
Total miles of mechanical root control per year	-	9.74	11.23	13.89	14.69
Total number of sewer maintenance field staff	NA	23	23	23	24
Average high velocity cleaning per crew per day	NA	1866 LF	1852 LF	2393	2922
Average cost of sewer mechanical cleaning	-	$1.57/LF	$1.36/LF	$1.23/LF	$1.20/LF

- Recommendations:
  - Update SSMP Section 4.3 Overview with updated statistics about the City's service area, number of customers, miles of main, number of services, and number of lift stations. Also update the number of WWC employees.

Rehabilitation and Replacement Plan (SSMP 4.4)

- Level of Effectiveness: The City regularly CCTV inspects pipelines using the national Association of Sewer Service Companies (NASSCO) Pipeline Assessment Certification Program (PACP) coding standard. The City evaluates the risk of failure for each asset based on the various data sources it maintains (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections) and assigns high risk assets in a ranked Rehabilitation and Replacement (R&R) Plan. If an R&R project is not completed in one year, then it is rolled over to the next. The City maintains a 5-year list of planned R&R CIP projects.

  During this audit period WWC produced the R&R list for pipeline lining and manhole rehabilitation which was then used by EU Engineering which operates the R&R program. The City is anticipating changes to this program soon, however, and WWC will produce its own manhole R&R list like before but will also operate the R&R program for it. In addition, EU Engineering will receive the condition assessment data generated by WWC for sewer pipelines and will then produce its own R&R list and continue operating the R&R program for sewer pipelines. In addition, use of the Hansen CMMS software will be discontinued and Maximo CMMS software implemented.

  In accordance with City-utilized performance measures related to inspection and R&R program activities as displayed in Table 12, the City has met or exceeded targets with one exception. In FY 14/15 the City missed its goal for total miles of laterals rehabilitated using CIPP per year. The total number of laterals rehabilitated in this audit period was less than the previous audit period, but the total sewer main miles of CCTV inspections increased. Overall the R&R plan development and implementation has been effective and ensures high-priority projects are implemented.

Table 12. Performance Measures related to SSS WDR D.13.iv(c)

Performance Measure	Target	FY11/12	FY12/13	FY13/14	FY14/15
Total miles visually inspected per year (not CCTV)	-	0.25	0.25	0.25	0.25
Number of laterals rehabilitated using CIPP per year	50	134	50	90	43
Total miles CCTV inspected per year (main)	30	29.2	67.6	53.27	65
Average cost of CCTV (main)	-	$0.48/LF	$0.56/LF	$0.35/LF	$0.41/LF

- Recommendations:
  - Document the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections, etc.), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data. This was also included during the previous audit but has not been completed.
  - Document the upcoming transition in responsibilities between WWC and EU Engineering in developing and operating the R&R plan by describing it in the SSMP. Confirm that field observations from WWC field crew are accounted for by EU Engineering when conducting risk assessment.

Training (SSMP 4.5)

- Level of Effectiveness: The WWC requires employees be certified with CWEA, DMV, CPR, First Aid, Confined Space Policy, Gas Detector Policy, as well be trained in equipment safety, maintain OSHA rules, and review material safety data sheets.

  The existing training program has been effective in supporting a well-trained staff. Over this audit period WWC has reported 2 on the job accidents in FY 13/14 and 8 in FY 14/15. WWC strives for zero-on-the-job accidents and has weekly tail-gate training meetings and monthly training sessions where WWC staff is trained in part via various SOPs.

- Recommendations:
  - Augment the ongoing training program by documenting that WWC staff have demonstrated the ability to operate a major piece of equipment (i.e., combo Vactor unit) in accordance with available SOPs to a supervisor before using it for the first time in the field and at a specified frequency (i.e., annually or if equipment is upgraded). The document would need to list a piece of equipment, the name of the journeyman, supervisor, signatures, name of SOP if used, and date.
  - Modify SSMP Section 4.5 to include training on SSOERP.

Equipment and Critical Replacement Parts (SSMP 4.6)

- Level of Effectiveness: WWC maintains a list of equipment and critical replacement parts inventory in Appendix D of the SSMP. The critical replacement parts list is 100% stocked, up to date, and is maintained by the Material Technician at Dry Creek WWTP. The equipment and critical replacement

parts inventory and upkeep is effective and ensures that a lift station critical part failure can be quickly mitigated.

- Recommendations: No recommended modifications at this time.

5.5 Design and Performance Provisions

5.5.1 Compliance

Table 13. Compliance with SSS WDR D.13.v – Design and Performance Provisions

SSMP Requirement	Compliance	Deficiencies
v(a) Sanitary sewer design and construction specifications	Yes	-
v(b) Procedures and standards for inspecting and testing new and R&R projects	Yes	-

5.5.2 Effectiveness of SSMP Elements and Recommended Modifications

Sanitary Sewer Design and Specifications (SSMP 5.2)

- Level of Effectiveness: The City's design and construction standards are available on the website and the online SSMP documentation lists their location. These designs and construction standards are effective in ensuring that new or rehabilitated infrastructure is designed and constructed in an acceptable manner.

- Recommendations: No recommended modifications at this time.

Sanitary Sewer System Construction and Performance Provisions (SSMP 5.3)

- Level of Effectiveness: The City's construction and design standards include procedures and requirements for the testing of new/rehabilitated assets and has been effective in ensuring that recently constructed assets perform as expected.

- Recommendations: No recommended modifications at this time.

5.6 Overflow Emergency Response Plan

5.6.1 Compliance

Table 14. Compliance with SSS WDR D.13.vi - OERP

SSMP Requirement	Compliance	Deficiencies
vi(a) Proper notification procedures	Yes	-
vi(b) Program for appropriate SSO response	Yes	-
vi(c) Procedure for prompt notification to regulatory agencies	Yes	-
vi(d) Procedures for appropriate staff and contractor training	Yes	
vi(e) Procedures to address emergency operations (e.g., traffic, crowd control)	Yes	-
vi(f) Program to ensure containment of SSO to prevent discharge and minimize adverse impacts on the environment	No	SSOERP does not meet certain water quality monitoring requirements of the amended MRP document

5.6.2 Effectiveness of SSMP Elements and Recommended Modifications

Notification Procedures (SSMP 6.2)

- Level of Effectiveness: The average SSO response time was 18 minutes from notification of SSO to operator arrival time for the City of Roseville. This response time is much faster than the City target response time of 40 minutes and indicates that the notification procedures employed the City are effective in facilitating a rapid response from the City's first responders.

- Recommendations: No recommended modifications at this time.

Response Program (SSMP 6.3)

- Level of Effectiveness: SSO response procedures are documented in Appendix F-1 Section 2 of the SSMP and are summarized in the flow chart in Figure 6-2 of the SSMP and Appendix F-1 SSOERP. The flow chart uses a series of yes/no questions to guide SSO responders in quickly identifying the right sequence of decisions and actions to properly assess and mitigate an SSO. This chart is simple and effective in explaining the process in which to mitigate an SSO.

  During the audit period, the average SSO volume spilled was 26 gallons, with an average 94% recovered from the total SSO volume. Similarly, the average SSO duration length was 3:00 hours long, however there were 7 long-duration SSOs (over 3 hours) that caused the average SSO duration length to increase from 42 minutes. One of these SSOs in FY 13/14 spilled from a lower lateral for 70 hours and resulted in the largest volume spilled of 570 gallons, however all of it was recovered. In all of these instances, the City was notified very late, and once notified, stopped all of the long duration SSOs in under 25 minutes.

The average City response time to SSO calls during the audit period was 18 minutes, and the average time it took to stop the SSO (SSO mitigation) once on-site was just under 5 minutes. These statistics demonstrate that the City has been effective in responding and mitigating SSOs.

- Recommendations:
  - The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station. This list should also be updated to incorporate new lift stations at Washington Blvd and 7600 Sierra College. This was also recommended during the previous audit but has not been implemented.
  - Modify SSOERP Section IV Traffic Control (WWC Personnel) to require WWC Personnel to implement traffic control in every situation where WWC personnel may be at risk of vehicular impact in accordance with MUTCD (part of Caltrans Work Area Traffic Control Handbook). It is recommended that WWC produce several standard TCPs (Traffic Control Plan) to match existing traffic conditions or type of roadway (i.e., arterial, residential, etc.).
  - Modify SSOERP Section V Correct Cause (WWC Personnel) to include a discussion of whether a root-caused SSO could be classified as a PLSD if the City defines a spill cause as the entry point of the root and whether that location is on lower (city) or upper lateral side (private). Include recommendations to provide good documentation of the decision with photographic evidence and a logical narrative.

Regulatory Notification Procedure (SSMP 6.4)

- Level of Effectiveness: The Superintendent and Utility Manager are the legally responsible officials (LRO) for certifying SSO reports submitted to CIWQs. The Superintendent and Supervisor are also responsible for reporting the SSOs to RWQCB, OES, and Placer Environmental Health Department as required. This section is effective in conveying the responsibility the LRO in reporting SSOs to the proper authorities.

- Recommendations: No recommended modifications at this time.

Staff and Contractors Training (SSMP 6.5)

- Level of Effectiveness: Each WWC employee is required to complete the SSO response procedure training updates and review of SSO training are included in the weekly tailgate meeting throughout the year. They are also trained on the various SOPs implemented within WWC. Contractors are also required to implement the procedures identified in the SSO training prior to working within the collection system. As evidenced by the fast response and mitigation times, the WWC staff's training has been effective.

- Recommendations: No recommended modifications at this time.

Emergency Response Coordination (SSMP 6.6)

- Level of Effectiveness: WWC employees are required to complete the Emergency Action plan training annually. This covers HAZ WOPER first responders and Roseville's Incident Command System (ICS). These process, procedures, and response systems are also reviewed via weekly safety tail gate meetings. These training sessions have been effective way to prepare staff to deal with hazardous waste and materials.

- Recommendations: No recommended modifications at this time.

Spill Mitigation and Containment Procedure (SSMP 6.7)

- Level of Effectiveness: Appendix F-1 of the SSMP includes an SSOERP which includes an SOP for estimating spill volumes, containment, and mitigation of spills. The new amended Monitoring and Reporting Program (MRP) requirements implemented in September 2013 require a robust water quality monitoring plan that must account for spill travel time in surface water, among several new requirements. The City's current SSOERP Appendix C Water Quality Sampling Procedures document does not meet these requirements.

- Recommendations:
    - Modify SSOERP Appendix A – Start Time Documentation Policy to include the following WWC standard field practice: If the start time cannot be set based on witnesses and if there is evidence of a spill traveling a farther distance than 15 minutes, then the field crew estimates the new start time and may try to recreate the spill (with clean water) to estimate volumes.
    - Modify SSOERP Appendix C – Water Quality Sampling Procedures to the meet the requirements of the amended MRP.
        - Account for spill travel time in the surface water and scenarios where monitoring may not be possible to safety concerns or access restrictions once an SSO has stopped. This may be estimated by dropping floatable debris, for instance, and measuring the time required to travel a certain distance.
        - Expand minimum sampling parameters to include appropriate bacterial indicators that have been specifically listed in the beneficial uses of the City's waterways or more broadly listed by the regional Basin Plan.
    - Modify SSOERP Appendix C – Water Quality Sampling Procedures to include a list of all of the required equipment that the employee would need to conduct proper sampling.

5.7 FOG Control Program

5.7.1 Compliance

Table 15. Compliance with SSS WDR D.13.vii – FOG Control Program

SSMP Requirement	Compliance	Deficiencies
vii(a) Public education plan	Yes	The City does have a public education plan but additional improvements should be implemented (see below)
vii(b) FOG disposal plan	Yes	-
vii(c) Legal authority to prohibit SSOs and blockages caused by FOG discharges	Yes	-
vii(d) BMPs, grease removal devices, recordkeeping, and reporting requirements	Yes	-
vii(e) Authority to inspect and enforce FOG ordinance	No	The City does have the authority to inspect/enforce FOG ordinance but no inspection records were produced for the Audit period.
vii(f) FOG Characterization Assessment and Hot Spot Cleaning Schedule	Yes	-
vii(g) FOG Control Program Measures	Yes	-

5.7.2 Effectiveness of SSMP Elements and Recommended Modifications

Public Education Plan (SSMP 7.2)

- Level of Effectiveness: The City has developed and operates a comprehensive FOG outreach program to residents, restaurants, and the plumbing community on the proper disposal of FOG. The main objective is to educate the City of Roseville residents and restaurants on the proper disposal of FOG to meet or exceed outreach standards set forth in the State General WDR requirements. The program has implemented TV ads, flyers, bill inserts, and websites to convey the message of educating the public on the proper disposal of FOG and other substances. This system appears to be effective in educating the public on the proper disposal of FOG and other substances.

- Recommendations: List Maurice Chaney as the responsible party for the FOG Public Education Plan.

FOG Disposal Plan (SSMP 7.3)

- Level of Effectiveness: During the audit period the Industrial Waste Section (IWS) oversaw the FOG disposal plan with permitted FSEs, however all FOG program-related responsibilities transitioned to WWC in 2016. The City currently has 319 FSEs that are required to and have obtained a FOG wastewater discharge permit (FOG WDP). The same City regulations from the audit period are in place which require

permittees to retain a minimum 3 years of documentation to prove the proper cleaning, maintenance, and removal of FOG from grease control devices and the disposal site location. The City provides information about the permitting process and permit applications on the City website (URL address below) as a resource for businesses and residences within the City.
(http://www.roseville.ca.us/eu/wastewater_utility/fats_oils_n_grease/default.asp)
The FOG record keeping requirements for FSEs appear to be effective in that only three FOG-related SSOs occurred over the audit period.

- Recommendations:
  - Modify SSMP Section 7.3 to reflect the change in responsibilities from IWS to WWC.

Record Keeping Requirements (SSMP 7.4)

- Level of Effectiveness: As discussed in the previous section, FOG control program responsibilities transitioned from IWS to WWC in 2016, but during the audit period, IWS operated the program. The City requires in RMC Section 14.14.260 that permitted FSEs retain logbooks on grease control device maintenance cycles, FOG hauling records, sampling data and sludge height monitoring in FOG control devices, BMPs, and records of private lateral SSOs and subsequent mitigation. The recordkeeping requirements and time frames identified in the RMC have enough information necessary for the City to enforce permit requirements of FSEs.

- Recommendations:
  - Modify SSMP Section 7.4 to reflect the change in responsibilities from IWS to WWC

Legal Authority to Prohibit SSOs and Blockages Caused by FOG Discharges (SSMP 7.5)

- Level of Effectiveness: The RMC Section 14.12.050 provides the City with a FOG ordinance and legal authority to require FOG interceptors when deemed necessary by the director. The ordinance prohibits FOG-related blockages and SSOs, and limits the maximum allowable concentration of FOG in FSE discharges at the current level of 100 mg/L of wastewater. This ordinance is effective in providing the City with the tools necessary to minimize FOG discharges into the sewer system.

- Recommendations: No modifications recommended at this time.

BMP, Grease Removal Devices, Recordkeeping, and Reporting Requirements (SSMP 7.6)

- Level of Effectiveness: The City requires all FSEs that discharge FOG to acquire a FOG WDP permit which includes provisions for FSEs to maintain BMPs and grease interceptors, cleaning records, and to report private FOG-related SSOs or blockages. The FOG WDP requirements are effective in providing the City with the tools to limit FOG discharges into the sewer system.

- Recommendations:
  - Modify SSMP Section 7.6 to reflect the change in responsibilities from IWS to WWC

Inspection and Enforcement Authority – FOG Producers (SSMP 7.7)

- Level of Effectiveness: All FSEs that discharge FOG are required to obtain and comply with a City FOG WDP. Under the permit, the FSE must comply with the FOG ordinance as detailed under the RMC, and the City maintains the legal authority to physically inspect the FSE and determine if it is in compliance. During the audit period, the City reported that all 319 permitted FSEs were inspected by IWS and zero enforcement actions initiated. Under oversight from WWC, the City plans on inspecting all 319 FSEs each fiscal year.

  The City possesses effective tools to regulate FOG discharges via a robust FOG ordinance which also requires an effective FSE inspection program. During this audit, the City did not provide inspection records, however, and without detailed documentation it is not possible to judge the effectiveness of the FOG inspection and enforcement authority element of the SSMP.

- Recommendations:
  - Modify SSMP Section 7.7 to reflect the change in oversight from IWS to WWC
  - Document all FSE inspections. Develop a standard FSE inspection form which lists individual elements the FOG WDP permittee is required to maintain in a logical order for the inspector to follow. At a minimum, the inspector should enter the FSE, check the grease removal device, conduct a FOG concentration sample, request and view cleaning/hauling records and associated BMPs. After filling out the inspection form to document the whole procedure, transfer the results of the inspection form into a database or spreadsheet by which WWC can track compliance of the multiple required elements under the permit. Follow up with FSEs as required and formally document the process. Attach a blank version of the inspection form as an appendix in the SSMP.

FOG Characterization Assessment and Hot Spot Cleaning Schedule (SSMP 7.8)

- Level of Effectiveness: The City has been effective in limiting FOG-related SSOs to three during the audit period by identifying and placing assets impacted by FOG as a last resort on the hot-spot, high frequency 3-month cleaning list. If the City encounters abnormal FOG levels in a pipe it will first reach out to FSEs and residents that it thinks may be contributing to it and distribute pamphlets to them to minimize FOG discharges. If that does not solve the problem, then the asset is put on the hot-spot list. Approximately 60% of the 90 hot-spot assets have FOG-related issues that as a whole require significant City resources to clean every 3 months.

- Recommendations:
  - Modify the EU Engineering GIS database to include hotspot assets and FSEs and add them as layers to the maps that WWC receives.
  - Modify SSMP Section 7.8 to describe the process of how pipelines are added to the hot spot cleaning schedule, and remove mention of annual sewer line maintenance work orders.

FOG Control Program Measures (SSMP 7.9)

- Level of Effectiveness: The City has established that all FOG-producing FSEs acquire a FOG WDP which limits discharge of FOG, requires proper O&M records, hauling record, BMPs, and other conditions. The FOG Control Program measure provides the City's with an effective tool to limit FOG discharges from FSEs.

- Recommendations:
  - Modify SSMP Section 7.9 to reflect the change in responsibilities from IWS to WWC.

5.8 System Evaluation and Capacity Assurance Plan

5.8.1 Compliance

Table 16. Compliance with SSS WDR D.13.viii - SECAP

SSMP Requirement	Compliance	Deficiencies
viii(a) Evaluate hydraulic deficiencies	Yes	
viii(b) Establish design criteria	Yes	-
viii(c) Establish short- and long-term CIP	Yes	-
viii(d) Develop schedule of completion dates for CIP	Yes	-

5.8.2 Effectiveness of SSMP Elements and Recommended Modifications

Evaluation Process – Capacity Enhancement Projects (SSMP 8.2)

- Level of Effectiveness: The City has developed two hydraulic simulation models to identify peak flows in the collection system in 2006. The City is currently developing a new hydraulic model and drafting a new System Evaluation and Capacity Assurance Plan (SECAP) that will conclude in 2017, making it 10 years since the last study. The modeling efforts conducted in 2006 have been effective in evaluating the system and planning for future growth, which is evident from no capacity-deficiency-related SSOs during this audit period.

- Recommendations: Modify Appendix I-1 of the SSMP to indicate that the system evaluation and capacity assurance plan will be reviewed and updated every 10 years.

Design Criteria (SSMP 8.3)

- Level of Effectiveness: The City established a 10-year, 24-hour peak design storm for the hydraulic wet weather loading of the existing collection system along with flow generation factors based on water use

records and flow monitoring data. Based on the lack of capacity-related SSOs during the audit period, it appears the City's capacity design criteria are effective.

- Recommendations: No recommended modifications at this time.

Capacity Enhancement Measures (SSMP 8.4)

- Level of Effectiveness: The SPWA Wastewater Systems Evaluation includes the identification of short and long-term Capital Improvement Project (CIP) to meet current and future wastewater flows. The new hydraulic model which will be introduced in 2017 will provide new capacity enhancement measures.

- Recommendations: No modifications recommended at this time.

Capital Improvement Program Schedule (SSMP 8.5)

- Level of Effectiveness: The City lists the goal of the CIP is to develop annual project bundles of approximately $1.5 million based on WWC condition assessment data and the hydraulic model CIP results and subsequent flow monitoring or studies. The CIP schedule is effective in identifying the tasks required to assure hydraulic capacity within the collection system.

- Recommendations: No modifications recommended at this time.

5.9 Monitoring, Measurement, and Program Modifications

5.9.1 Compliance

Table 17. Compliance with SSS WDR D.13.ix – MMM

SSMP Requirement	Compliance	Deficiencies
ix(a) Maintain metrics to prioritize SSMP activities	Yes	-
ix(b) Measure effectiveness of SSMP elements	Yes	The City does have performance indicators linked with SSMP elements, but additional improvements should be implemented (see below)
ix(c) Assess preventative maintenance program	Yes	-
ix(d) Update elements based on evaluations	Yes	-
ix(e) Identify and illustrate SSO trends	Yes	-

5.9.2 Effectiveness of SSMP Elements and Recommended Modifications

Utility Metrics to Prioritize SSMP Activities (SSMP 9.2)

- Level of Effectiveness: The WWC tracks four categories of utility metrics to monitor and measure the effectiveness of the various elements of this SSMP, which include system information, financial

information, sewer maintenance, and performance measures. The city also tracks various performance measures related to various SSMP elements and they are summarized in Appendix 7.2. Appendix I has effectively been used to identify and track the specific metrics each of the City's four categories.

- Recommendations: Update Appendix I on the City website with information from FY 13/14 and FY 14/15.

Metrics to Monitor Effectiveness of SSMP (SSMP 9.3)

- Level of Effectiveness: The utility metrics listed in Appendix I pertain to different overseeing departments within the City, and the coordination between these different Departments in measuring/monitoring various metrics and sharing results has been effective in ensuring the SSMP goals have been met.
- Recommendations:
    - Update Appendix I and modify it to include document location, responsible person, and review frequency. This was also recommended during the previous audit but has not been completed.
    - Identify the metrics that correspond with specific elements of the SSMP and develop numerical goal ranges so the data currently collected and monitored by the City can be used as performance indicators (PIs) to quantitatively monitor SSMP effectiveness. The ultimate measure of SSMP effectiveness is the limiting of SSOs. However, setting goals for activities related to various SSMP elements and measuring performance against those goals, will help determine how success in those elements, relates to the overall effectiveness of limiting SSOs. Associating metrics with specific SSMP elements will allow for direct assessment of those elements and provide consistency in their evaluation in future audits. **Appendix 7.2** of this internal audit contains a list of PI and associates each one with a SSMP element, a suggested audit frequency, and a person responsible for monitoring that PI. A sample Performance Indicator Assessment Form is included in **Appendix 7.3** of this internal audit. Performance Indicator Assessment Forms can be developed for each metric and assessed periodically by the person responsible, according to the suggested audit frequency for that metric. At the time of the next internal SSMP audit, the completed Performance Indicator Assessment Forms can be used to evaluate the effectiveness of SSMP elements and included as attachments to the audit. This was also recommended during the previous audit but has not been implemented.
    - Consider tracking additional metrics targeted at measuring the effectiveness of SSMP elements that do not currently have metrics associated with them. A list of potential performance measures listed by SSMP element is included in **Appendix 7.2** of this internal audit. This was also recommended during the previous audit but has not been implemented.

Metrics to Assess Preventative Maintenance Program (SSMP 9.4)

- Level of Effectiveness: The City's current utility metrics Appendix I defines the frequency and type of utility metric that is being tracked to measure SSMP effectiveness. This is effective because it allows the city to monitor performance of particular activities and compare against SSO trends to determined data

correlations. These metrics do not all have associated goals or targets, however, which makes it hard to track whether the activity is meeting the intended result.

- Recommendations: As discussed in the previous section, use data collected in SSMP Appendix I as a reference, and develop goals for metrics that track preventative maintenance activities and identify the person/position responsible for tracking data against those goals. See **Appendix 7.2** for a list of potential performance indicators for preventative maintenance activities with responsible parties. This was also recommended during the previous audit but has not been implemented

SSMP Performance Monitoring and Update Process (SSMP 9.5)

- Level of Effectiveness: Individual staff oversee various SSMP element performance indicators. The City tracks all revisions/updates with the SSMP using a revision log that is maintained by the LRO. The log is effective documenting changes to the SSMP and encourages the use of the SSMP as a living document.

- Recommendations: No modifications recommended at this time.

SSO Trends – Frequency, Location and Volume (SSMP 9.6)

- Level of Effectiveness: The City tracks a comprehensive list of metrics that are included in Appendix I and the City's Performance Reports. This allows the City to quickly identify and respond to changing trends in SSOs over time.

- Recommendations: Using the data collected in SSMP Appendix I as a reference, set performance goals for the metrics used to illustrate SSO trends. See **Appendix 7.2** for a list of potential performance indicators related to SSO trends. This was also recommended during the previous audit but has not been implemented.

Table 18. Current Performance Measures to Monitor SSO Trends

Performance Measure	Unit	Target	Source
SSOs - Total number, mains and laterals	Number	-	A, B
SSOs - Total volume, mains and laterals	Gal	-	A, B
SSOs - Total volume recovered	Gal	-	B
SSOs - Total number of wet weather	Number	-	A, B
SSOs - Total volume of wet weather	Gal	-	A, B
SSOs - % of spills caused by FOG (main)	%	-	A, B
SSOs - % of spills caused by roots (main)	%	-	A, B
SSOs - % of spills caused by Vandalism (main)	%	-	A, B
SSOs - caused by LS failures	Number	-	A, B
SSOs - caused by pipe failures	Number	-	A, B
SSOs - % of spill volume caused by FOG (lateral)	%	-	A, B
SSOs - % of spill volume caused by roots (lateral)	%	-	A, B
SSOs - % of spill volume caused by Vandalism (lateral)	%	-	A, B
Customer service requests per year	Number	-	A, B
Sewer odor complaints	Number	-	A, B
Flooding claims per year	Number	-	A, B
Cost of flooding claims per year	$	-	A, B
SSO – Repeats within two years	Number	0	B, C
SSOs - Category 1	Number	0	C, D
SSOs / 100 mi pipe / year - Category 2	Number	2.0	C
SSOs / 100 mi pipe / year - Mainline	Number	0.6	C
SSOs / 100 mi pipe / year - Lateral	Number	8.0	C

A = SSMP section 9.6
B = SSMP Appendix I
C = WW Collections KPIs
D = Program / Performance Reports

5.10 SSMP Program Audits

5.10.1 Compliance

Table 19. Compliance with SSS WDR D.13.x – SSMP Program Audits

SSMP Requirement	Compliance	Deficiencies
x Conduct periodic audits	Yes	-

5.10.2 Effectiveness of SSMP Elements and Recommended Modifications

Audit Procedures, Roles, and Responsibilities (SSMP 10.2)

- Level of Effectiveness: The City conducts an internal audit biennially to continually measure the effectiveness of the SSMP primarily through evaluating system metrics, performance measures, and reduce SSOs by improving SSMP procedures to better respond to new SSO trends. In addition the audit evaluates the City's compliance with SSMP requirements, particularly the amended MRP requirements that were formalized in September 2013. The City developed an audit form as a template to record information produced during the internal SSMP audits. This form is included in SSMP Appendix J-2. The previous audit identified many areas of improvement which the City responded and acted on. Some of these recommended improvements were excluded from this audit based on discussions with the City that eliminated the need for them. Others are considered standing, and should still be implemented by the City. Generally the internal audits implemented by the City have been effective in improving the SSMP and turning it into a living document that that is current, practical, and useful for the City.
- Recommendations:
    - Post the previous SSMP internal audit (FY 11/12 and FY 12/13) and this SSMP internal audit to the City website.
    - Post the most recent City council SSMP recertification (from 2014) the City website.
    - Schedule the next internal SSMP audit for July-August of 2017
    - Revise Appendix J-1 to reflect recommendations for review of performance indicators (i.e., metrics associated with specific SSMP elements and the associated timelines). This was also recommended during the previous audit but has not been implemented.

      Revise Appendix J-2 (audit form) to provide areas in the tables for each SSMP element to conduct an assessment of both SSMP compliance to Regional Board requirements, and effectiveness of individual SSMP elements. Remove Kim Spears and IWS from the certification of audit table. This was also recommended during the previous audit but has not been implemented.

SSMP Program Modification/Update Process (SSMP 10.3)

- Level of Effectiveness: The City developed a program for monitoring, reviewing sewer performance metrics and the effectiveness of SSMP elements on a biennial basis. Based on the results of the SSMP audits, the Wastewater Utility Manager is assigned to initiate/direct corrective actions to respond to deficiencies and enhancements identified in the audit. As determined in the City's SSMP revision log, the City has been prompt in responding to audit and continually strives to implement improvements.

- Recommendations:
    - Update the SSMP revision log and post on the website.
    - Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated

with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes. This was also recommended during the previous audit but has not been implemented.

5.11 Communication Program

5.11.1 Compliance

Table 20. Compliance with SSS WDR D.13.xi – Communications Program

SSMP Requirement	Compliance	Deficiencies
xi(a) Communicate on a regular basis with the public and tributary/satellite systems regarding SSMP	Yes	-

5.11.2 Effectiveness of SSMP Elements and Recommended Modifications

Internal Communication – Staff, Utility Commission, and City Council (SSMP 11.2)

- Level of Effectiveness: The WWC has used PowerPoint presentations as a resource to describe the purpose of the SSMP and summarize SSS WDR requirements to the City council and City staff. These presentations are attached to the SSMP website.

- Recommendations:
  - As of September 2013 the State Water board amended the MRP of the SSS WDR and the City produced a training PowerPoint to City staff, council, and stakeholders regarding the update. Attach the PowerPoint to the SSMP website.

Stakeholder Communication – Residential, Commercial and Industrial (SSMP 11.3)

- Level of Effectiveness: The City communicates regularly with the public and stakeholders via monthly newsletters entitled "EU Today" that includes items regarding sewer utilities. This newsletter is presented online and through bill inserts. A sample newsletter is included in Appendix K of the SSMP. In addition, the City specifically communicates FOG related items to the community via FOG outreach program over TV ads, flyers, direct mail, and site visits to FSEs. The WWC registered approximately 40 percent more service calls during this audit period than during the last. As the level of SSOs has only increased slightly since the previous audit period, the increase in service calls may indicate the effectiveness of City outreach programs in encouraging the public to communicate with WWC their concerns or observations about any sewer utility issues.

- Recommendations:
  - Update SSMP Appendix K-4 with FY 13-15 EU marketing Plan budget & spending

Tributary/Satellite Communication (11.4)

- Level of Effectiveness: The City routinely communicates with their satellite partners and has three formal agreements in place that include:
  - The joint exercise of power agreement for the SPWA
  - The agreement regarding the operation of and use of South Placer Regional Wastewater Facilities
  - The funding agreement relating to the South Placer Regional Wastewater Facilities
  - Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).

- Recommendations:
  - Add the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD) as attachment K-7 and modify the SSMP to mention it.
  - Modify SSMP 11.4 to include the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).

SECTION 6 Audit Summary

Table 21. Summary of SSMP Compliance Deficiencies

SSMP Requirement	Compliance	Deficiencies
vi(f) Program to ensure containment of SSO to prevent discharge and minimize adverse impacts on the environment	No	SSOERP does not meet certain water quality monitoring requirements of the amended MRP document.
vii(e) Authority to inspect and enforce FOG ordinance	No	The City does have the authority to inspect/enforce FOG ordinance but no inspection records were produced for the Audit period.

Table 22. Summary of Audit Recommendations

SSMP Section	Recommendation	Suggested Timeline for Completion
2.1	Modify Appendix B-1: Add Wastewater Collections Supervisor Dan Pruden. Update City Council positions and add phone numbers (Mayor Carol Garcia, Vice Mayor Susan Rohan, City Attorney Robert Schmitt). Update Commissioners and phone numbers: Chair Blandon Granger, Vice Chair John Speight. Update Liaisons and phone numbers for EU Director Richard Plecker, and Secretary Cheryl Hammond. Update Principal EU engineer and phone number for Jason Shykowski. Update Administrative Analyst and phone number for Maurice Chaney.	
2.2	Modify Figure 2-1: Modify the Industrial Waste Specialist category and remove the FOG Control Program from the description due to the FOG program oversight transitioning from IWS to WWC in 2016. Add the Fog Control Program description to the Wastewater Collection Office Assistant category.	
2.2	Modify SSMP Section 2.2: Modify the general position description and SSMP responsibilities under the Lab/Industrial Waste Supervisor, Specialist, and Technician and remove the FOG Control Program or inspection program from those descriptions.	
2.2	Move the FOG Control Program SSMP responsibility into the WWC Superintendent category and the WWC Office Assistant category.	
2.3	Modify Figure 2-2 Flowchart: Update the WWC Divisions overflow emergency response plan chain of communication to match existing operations, whereby WWTP and LS staff and SCADA alerts should always call the 24 hour call center instead of WWC service staff. In addition, modify the Wastewater Admin cell and rename the position as Office Assistant.	
2.3	Modify Appendix F-1 Flowchart: Follow the same recommendations written above.	
3.7	Update SSMP section 3.7 to include the Wastewater Service Contract and Operating Agreement between the City, SASD, and SRCSD.	
4.2	Include the Mapping Update Policy Document as an appendix to the SSMP and post it to the City's SSMP website page.	
4.3	Update SSMP Section 4.3 Overview with updated statistics about the City's service area, number of customers, miles of main, number of services, and number of lift stations. Also update the number of WWC employees.	
4.4	Document the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections, etc.), conducting a risk assessment to determine	

	the assets to be renewed, and developing the R&R plan with its associated data. This was also included during the previous audit but has not been completed.	
4.4	Document the upcoming transition in responsibilities between WWC and EU Engineering in developing and operating the R&R plan by describing it in the SSMP. Confirm that field observations from WWC field crew are accounted for by EU Engineering when conducting risk assessment.	
4.5	Augment the ongoing training program by documenting that WWC staff have demonstrated the ability to operate a major piece of equipment (i.e., combo Vactor unit) in accordance with available SOPs to a supervisor before using it for the first time in the field and at a specified frequency (i.e., annually or if equipment is upgraded). The document would need to list a piece of equipment, the name of the journeyman, supervisor, signatures, name of SOP if used, and date.	
4.5	Modify SSMP Section 4.5 to include training on SSOERP.	
6.3	The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station. This list should also be updated to incorporate new lift stations at Washington Blvd and 7600 Sierra College. This was also recommended during the previous audit but has not been implemented.	
6.3	Modify SSOERP Section IV Traffic Control (WWC Personnel) to require WWC Personnel to implement traffic control in every situation where WWC personnel may be at risk of vehicular impact in accordance with MUTCD (part of Caltrans Work Area Traffic Control Handbook). It is recommended that WWC produce several standard TCPs (Traffic Control Plan) to match existing traffic conditions or type of roadway (i.e., arterial, residential, etc.).	
6.3	Modify SSOERP Section V Correct Cause (WWC Personnel) to include a discussion of whether a root-caused SSO could be classified as a PLSD if the City defines a spill cause as the entry point of the root and whether that location is on lower (city) or upper lateral side (private). Include recommendations to provide good documentation of the decision with photographic evidence and a logical narrative.	
6.7	Modify SSOERP Appendix A – Start Time Documentation Policy to include the following WWC standard field practice: If the start time cannot be set based on witnesses and if there is evidence of a spill traveling a farther distance than 15 minutes, then the field crew estimates the new start time and may try to recreate the spill (with clean water) to estimate volumes.	
6.7	Modify SSOERP Appendix C – Water Quality Sampling Procedures to the meet the	

	requirements of the amended MRP. • Account for spill travel time in the surface water and scenarios where monitoring may not be possible to safety concerns or access restrictions once an SSO has stopped. This may be estimated by dropping floatable debris, for instance, and measuring the time required to travel a certain distance. • Expand minimum sampling parameters to include appropriate bacterial indicators that have been specifically listed in the beneficial uses of the City's waterways or more broadly listed by the regional Basin Plan.	
6.7	Modify SSOERP Appendix C – Water Quality Sampling Procedures to include a list of all of the required equipment that the employee would need to conduct proper sampling.	
7.3	Modify SSMP Section 7.3 to reflect the change in responsibilities from IWS to WWC.	
7.4	Modify SSMP Section 7.4 to reflect the change in responsibilities from IWS to WWC	
7.6	Modify SSMP Section 7.6 to reflect the change in responsibilities from IWS to WWC	
7.7	Modify SSMP Section 7.7 to reflect the change in oversight from IWS to WWC	
7.7	Document all FSE inspections. Develop a standard FSE inspection form which lists individual elements the FOG WDP permittee is required to maintain in a logical order for the inspector to follow. At a minimum, the inspector should enter the FSE, check the grease removal device, conduct a FOG concentration sample, request and view cleaning/hauling records and associated BMPs. After filling out the inspection form to document the whole procedure, transfer the results of the inspection form into a database or spreadsheet by which WWC can track compliance of the multiple required elements under the permit. Follow up with FSEs as required and formally document the process. Attach a blank version of the inspection form as an appendix in the SSMP.	
7.8	Modify the EU Engineering GIS database to include hotspot assets and FSEs and add them as layers to the maps that WWC receives.	
7.8	Modify SSMP Section 7.8 to describe the process of how pipelines are added to the hot spot cleaning schedule, and remove mention of annual sewer line maintenance work orders	
7.9	Modify SSMP Section 7.9 to reflect the change in responsibilities from IWS to WWC.	
8.2	Modify Appendix I-1 of the SSMP to indicate that the system evaluation and capacity assurance plan will be reviewed and updated every 10 years.	
9.2	Update Appendix I on the City website with information from FY 13/14 and FY 14/15.	
9.3	Update Appendix I and modify it to include document location, responsible person, and review frequency. This was also recommended during the previous audit but has not been	

	completed.	
9.3	Identify the metrics that correspond with specific elements of the SSMP and develop numerical goal ranges so the data currently collected and monitored by the City can be used as performance indicators (PIs) to quantitatively monitor SSMP effectiveness. The ultimate measure of SSMP effectiveness is the limiting of SSOs. However, setting goals for activities related to various SSMP elements and measuring performance against those goals, will help determine how success in those elements, relates to the overall effectiveness of limiting SSOs. Associating metrics with specific SSMP elements will allow for direct assessment of those elements and provide consistency in their evaluation in future audits. **Appendix 7.2** of this internal audit contains a list of PI and associates each one with a SSMP element, a suggested audit frequency, and a person responsible for monitoring that PI. A sample Performance Indicator Assessment Form is included in **Appendix 7.3** of this internal audit. Performance Indicator Assessment Forms can be developed for each metric and assessed periodically by the person responsible, according to the suggested audit frequency for that metric. At the time of the next internal SSMP audit, the completed Performance Indicator Assessment Forms can be used to evaluate the effectiveness of SSMP elements and included as attachments to the audit. This was also recommended during the previous audit but has not been implemented.	
9.3	Consider tracking additional metrics targeted at measuring the effectiveness of SSMP elements that do not currently have metrics associated with them. A list of potential performance measures listed by SSMP element is included in **Appendix 7.2** of this internal audit. This was also recommended during the previous audit but has not been implemented.	
9.4	As discussed in the previous section, use data collected in SSMP Appendix I as a reference, and develop goals for metrics that track preventative maintenance activities and identify the person/position responsible for tracking data against those goals. See **Appendix 7.2** for a list of potential performance indicators for preventative maintenance activities with responsible parties. This was also recommended during the previous audit but has not been implemented	
9.6	Using the data collected in SSMP Appendix I as a reference, set performance goals for the metrics used to illustrate SSO trends. See **Appendix 7.2** for a list of potential performance indicators related to SSO trends. This was also recommended during the previous audit but has not been implemented.	
10.2	Post the previous SSMP internal audit (FY 11/12 and FY 12/13) and this SSMP internal audit to the City website.	
10.2	Post the most recent City council SSMP recertification (from 2014) the City website.	
10.2	Schedule the next internal SSMP audit for July-August of 2017	

10.2	Revise Appendix J-1 to reflect recommendations for review of performance indicators (i.e., metrics associated with specific SSMP elements and the associated timelines). This was also recommended during the previous audit but has not been implemented. Revise Appendix J-2 (audit form) to provide areas in the tables for each SSMP element to conduct an assessment of both SSMP compliance to Regional Board requirements, and effectiveness of individual SSMP elements. Remove Kim Spears and IWS from the certification of audit table. This was also recommended during the previous audit but has not been implemented.	
10.3	Update the SSMP revision log and post on the website.	
10.3	Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes. This was also recommended during the previous audit but has not been implemented.	
11.2	As of September 2013 the State Water board amended the MRP of the SSS WDR and the City produced a training PowerPoint to City staff, council, and stakeholders regarding the update. Attach the PowerPoint to the SSMP website.	
11.3	Update SSMP Appendix K-4 with FY 13-15 EU marketing Plan budget & spending	
11.4	Add the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD) as attachment K-7 and modify the SSMP to mention it.	
11.4	Modify SSMP 11.4 to include the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).

Legend

Green Text	Indicates the goal for the respective performance measure as stated in the associated document.
"Data"	Indicates that is recorded and tracked but no goal is defined in the associated document.

7.3 Appendix – Sample Performance Indicator Assessment Form

Goal:	**MRP (FY 2014 / 2015)**
Responsible Person (RP):	WWC Superintendent

Description of Performance Indicator(s) (PIs):

The State Water Board has recently concluded that the existing Monitoring and Reporting Program must be amended to remain adequate enough to advance the Sanitary Sewer Overflow Reduction Program objectives, assess compliance, and enforce the requirements of the Sanitary Sewer Systems Waste Discharge Requirements. The amended MRP will become effective on September 9, 2013 concurrent with the routine bimonthly CIWQS maintenance release. The Wastewater Collection Division is responsible for submitting, signing, and certifying all reports required by the SSS WDRs and the amended MRP order. The PIs listed below track the completion of tasks necessary for the City to remain compliant with the SSS WDRs.

PIs and Data Analysis Methods:

1. *Completion of unpopulated fields in revised "Collection System Questionnaire"*
   Discussion & Scoring Criteria: The City has three (3) months after September 9, 2013 to complete all unpopulated fields in the revised "Collection System Questionnaire" before the CIWQS locks you out from all reporting. After the questionnaire is completed, the system will default back to the annual update requirement and lock you out from all reporting only if the questionnaire is not updated at least annually.

2. *Update of OERP section in SSMP*
   Discussion & Scoring Criteria: The Overflow and Emergency Response Plan section of the City's SSMP must be updated in accordance with the amended MRP by January 21 2014, when a board review of the SSMP will take place.

PI	Exceeding Goal?	Met Goal?	Below Goal?	
1	All unpopulated fields completed by December 9, 2013.	N/A	N/A	All or some of the unpopulated fields not completed by December 9, 2013.
2	OERP section fully updated in SSMP before review.	N/A	N/A	OERP section never, or only partially, updated before review.

SECTION 1 Audit Objectives

This report covers the results of the required Sewer System Management Plan (SSMP) internal audit process for the City of Roseville (City) for fiscal years 2015-2016 (FY 15/16), 2016-2017 (FY 16/17), and 2017-2018 (FY 17/18). The goal of the SSMP is to provide a written framework and plan for properly managing, operating, and maintaining all parts of the sanitary sewer system (collection system). The SSMP will help the City minimizing sanitary sewer overflows (SSOs) and complying with the California State Water Resources Control Board (SWRCB) order No. 2006-0003-DWQ, the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (SSS WDR). The SSMP audit evaluates the effectiveness of the SSMP, by reviewing the performance of the collection system against the performance measures used by the City to evaluate compliance with requirements of the SSS WDRs.

The intention of the SSMP audit is to help the SSMP evolve over time as a "living document" that City continually adjusts after identifying potential enhancements and implementing changes to address any deficiencies to the management, operation and maintenance of the City sanitary sewer collection system. Recently, the SWRCB is proposing a statewide sanitary sewer system order reissuance. The proposed reissuance, which will be built on the existing general order, is planned to be adopted in 2020, with a primary focus of reducing the statewide spill volume. This audit briefly discusses the proposed reissued order by the SWRCB and considers recommendations for future compliance.

The City is committed to completing the SSMP internal audit (Audit) on a biennial basis that is consistent with the procedure outlined in Appendix J-1 of the SSMP. The City completed its first Audit for FY 2011-2012, but subsequently contracted Water Works Engineers (WWE) to conduct the FY 11/12-12/13 and FY 13/14-14/15 biennial audits. This audit reviews results of the FY 15/16, 16/17, and 17-18, which is a three-year program. The key objective of this Audit is to review the SSMP compliance, implementation, and effectiveness. This report includes the following key tasks:

1. Review records from previous Audits and confirm deficiencies have been addressed (SECTION 2).
2. Evaluate the City's historical SSO data and performance measures listed in the SSMP (SECTION 3).
3. Using a standardized audit procedure detailed in 0 , identify deficiencies and provide recommendations that could improve the effectiveness of the SSMP and its compliance with the future reissue order.
4. Analyze the City's preventative maintenance (PM) and rehabilitation and replacement (R&R) programs as it relates to the operation and maintenance of the collection system (Section 5.4).
5. Review the Sanitary Sewer Overflow Emergency Response Plan (SSEORP) for SSOs and identify improvements as needed (Section 5.6).
6. Document all findings during the Audit and retain it on file (SECTION 6).

SECTION 2 Agency Background / System Information

The City of Roseville, in Placer County, is located approximately 16 miles north of the City of Sacramento. Along Interstate 80, Roseville is located adjacent to the City of Rocklin in the north-east and the City of Citrus Heights in the south. The City covers approximately 43 square miles near the base of the foothills of the Sierra Mountains. Typical elevations are within a range of 250 to 100 feet of sea level with an average slope across the City of 0.5% from east to west. Several streams flow through the City (i.e., Dry Creek, Pleasant Grove Creek, Kaseburg Creek, Linda Creek, Cirby Creek, Secret Ravine, and Miners Ravine.).

The City is responsible for the operation and maintenance of a continually growing collection system that has grown over 6% since the last internal audit to now serve approximately 137,000 people. **Table 1** lists key information about the City collection system over the past three Audit periods.

Table 1 – Overview of Collection System

Audit	FY 11/12 – 12/13	FY 13/14 – 14/15	FY 15/16 – 17/18*
Miles of Mainline	485.52	501.11	515.7
Miles of laterals (lower)	235.3	238	266
Pump stations	14	15	16
Sewer service lateral connections	41,568	43,619	47,638
Population served	122,060	128,832	137,213
WWC Staff	25	28	29
Annual Budget (FY1/ FY2/ FY3)	$3,400,000/ $3,800,00	$3,700,000/ $4,000,000	$5,069,000/ $5,279,0000
Category 1 SSOs	2	0	1
Category 2 SSOs	75	0	1
Category 3 SSOs	-	89	85

*Three-year audit

The City treats wastewater conveyed through its collection system at two regional wastewater treatment plants that are both owned and operated by the City (i.e., Dry Creek and Pleasant Grove WWTPs). Two other satellite collection systems owned and operated by other agencies (i.e., South Placer Municipal Utility District and Placer County) discharge directly into the City's collection system. A small portion of the City's collection system discharges outside of Roseville and into the Sacramento Area Sewer District (SASD) collection system, which is treated at the Sacramento Regional WWTP. The City is a part of the Central Valley Region 5 (Sacramento sub-region) of the SWRCB.

2.1 Review of Last SSMP Audit

The previous biennial audit for of the City SSMP was conducted by WWE for FY 13/14-14/15 and was completed in June 2016. In the last Audit, a list of approximately 47 recommended actions to address deficiencies or improve the effectiveness of the City SSMP were listed. **Table 2** summarizes identified deficiencies and associated action items, along with a description of the status of the task (i.e., Completed, Ongoing Updates, In/No Progress, Considered) outlined in the last SSMP audit. documents on the City's website and based on information from City staff.

Table 2 – Summary of Findings from the Last SSMP Internal Audit

Element	Action Item	Status
2 – Organization	Modify Appendix B-1: Add Wastewater Collections Supervisor Dan Pruden to Appendix B-1.	Completed
	Modify Appendix B-1: Update City Council positions and add phone numbers (Mayor Carol Garcia, Vice Mayor Susan Rohan, City Attorney Robert Schmitt). Update Commissioners and phone numbers: Chair Blandon Granger, Vice Chair John Speight. Update Liaisons and phone numbers for EU Director Richard Plecker, and Secretary Cheryl Hammond. Update Principal EU engineer and phone number for Jason Shykowski. Update Administrative Analyst and phone number for Maurice Chaney.	Ongoing Progress
	Modify Figure 2-1: Modify the Industrial Waste Specialist category and remove the FOG Control Program from the description due to the FOG program oversight transitioning from IWS to WWC in 2016. Add the Fog Control Program description to the Wastewater Collection Office Assistant category.	Completed
	Modify SSMP Section 2.2: Modify the general position description and SSMP responsibilities under the Lab/Industrial Waste Supervisor, Specialist, and Technician and remove the FOG Control Program or inspection program from those descriptions.	Completed
	Move the FOG Control Program SSMP responsibility into the WWC Superintendent category and the WWC Office Assistant category.	Completed
	Modify Figure 2-2 Flowchart: Update the WWC Divisions overflow emergency response plan chain of communication to match existing operations, whereby WWTP and LS staff and SCADA alerts should always call the 24-hour call center instead of WWC service staff. In addition, modify the Wastewater Admin cell and rename the position as Office Assistant.	In Progress

	Modify Appendix F-1 Flowchart: Follow the same recommendations written above.	Completed
3 – Legal Authority	Update SSMP section 3.7 to include the Wastewater Service Contract and Operating Agreement between the City, SASD, and SRCSD.	Completed
4 – O&M	Include the Mapping Update Policy Document as an appendix to the SSMP and post it to the City's SSMP website page.	Completed
	Update SSMP Section 4.3 Overview with updated statistics about the City's service area, number of customers, miles of main, number of services, and number of lift stations. Also update the number of WWC employees.	Ongoing Progress
	Document the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections, etc.), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data. This was also included during the previous audit but has not been completed.	No Progress
	Document the upcoming transition in responsibilities between WWC and EU Engineering in developing and operating the R&R plan by describing it in the SSMP. Confirm that field observations from WWC field crew are accounted for by EU Engineering when conducting risk assessment.	No Progress
	Augment the ongoing training program by documenting that WWC staff have demonstrated the ability to operate a major piece of equipment (i.e., combo Vactor unit) in accordance with available SOPs to a supervisor before using it for the first time in the field and at a specified frequency (i.e., annually or if equipment is upgraded). The document would need to list a piece of equipment, the name of the journeyman, supervisor, signatures, name of SOP if used, and date.	Completed
	Modify SSMP Section 4.5 to include training on SSOERP.	Completed
6 – OERP	The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station. This list should also be updated to incorporate new lift stations at Washington Blvd and 7600 Sierra College. This was also recommended during the previous audit but has not been implemented.	In Progress

	Modify SSOERP Section IV Traffic Control (WWC Personnel) to require WWC Personnel to implement traffic control in every situation where WWC personnel may be at risk of vehicular impact in accordance with MUTCD (part of Caltrans Work Area Traffic Control Handbook). It is recommended that WWC produce several standard TCPs (Traffic Control Plan) to match existing traffic conditions or type of roadway (i.e., arterial, residential, etc.).	Completed
	Modify SSOERP Section V Correct Cause (WWC Personnel) to include a discussion of whether a root-caused SSO could be classified as a Private Lateral Sewage Discharge (PLSD) if the City defines a spill cause as the entry point of the root and whether that location is on lower (city) or upper lateral side (private). Include recommendations to provide good documentation of the decision with photographic evidence and a logical narrative.	Completed
	Modify SSOERP Appendix A – Start Time Documentation Policy to include the following WWC standard field practice: If the start time cannot be set based on witnesses and if there is evidence of a spill traveling a farther distance than 15 minutes, then the field crew estimates the new start time and may try to recreate the spill (with clean water) to estimate volumes.	Completed
	Modify SSOERP Appendix C – Water Quality Sampling Procedures to the meet the requirements of the amended MRP. • Account for spill travel time in the surface water and scenarios where monitoring may not be possible to safety concerns or access restrictions once an SSO has stopped. This may be estimated by dropping floatable debris, for instance, and measuring the time required to travel a certain distance. • Expand minimum sampling parameters to include appropriate bacterial indicators that have been specifically listed in the beneficial uses of the City's waterways or more broadly listed by the regional Basin Plan.	No Progress
	Modify SSOERP Appendix C – Water Quality Sampling Procedures to include a list of all the required equipment that the employee would need to conduct proper sampling.	No Progress
7 – FOG Control Program	List Maurice Chaney as the responsible party for the FOG Public Education Plan.	Completed
	Modify SSMP Section 7.3 to reflect the change in responsibilities from IWS to WWC.	Completed
	Modify SSMP Section 7.4 to reflect the change in responsibilities from IWS to WWC.	Completed

	Modify SSMP Section 7.6 to reflect the change in responsibilities from IWS to WWC.	Completed
	Modify SSMP Section 7.7 to reflect the change in oversight from IWS to WWC.	Completed
	Document all FSE inspections. Develop a standard FSE inspection form which lists individual elements the FOG WDP permittee is required to maintain in a logical order for the inspector to follow. At a minimum, the inspector should enter the FSE, check the grease removal device, conduct a FOG concentration sample, request and view cleaning/hauling records and associated BMPs. After filling out the inspection form to document the whole procedure, transfer the results of the inspection form into a database or spreadsheet by which WWC can track compliance of the multiple required elements under the permit. Follow up with FSEs as required and formally document the process. Attach a blank version of the inspection form as an appendix in the SSMP.	Completed
	Modify the EU Engineering GIS database to include hotspot assets and FSEs and add them as layers to the maps that WWC receives.	Ongoing Progress
	Modify SSMP Section 7.8 to describe the process of how pipelines are added to the hot spot cleaning schedule and remove mention of annual sewer line maintenance work orders.	Completed
	Modify SSMP Section 7.9 to reflect the change in responsibilities from IWS to WWC.	Completed
8 – SECAP	Modify Appendix I-1 of the SSMP to indicate that the system evaluation and capacity assurance plan will be reviewed and updated every 10 years.	No Progress
9 – MMM	Update Appendix I on the City website with information from FY 13/14 and FY 14/15.	In Progress
	Update Appendix I and modify it to include document location, responsible person, and review frequency. This was also recommended during the previous audit but has not been completed.	In Progress
	Identify the metrics that correspond with specific elements of the SSMP and develop numerical goal ranges so the data currently collected and monitored by the City can be used as performance indicators (PIs) to quantitatively monitor SSMP effectiveness. The ultimate measure of SSMP effectiveness is the limiting of SSOs. However, setting goals for activities related to various SSMP elements and measuring performance against those goals, will help determine how success in those elements, relates to the overall effectiveness of limiting SSOs. Associating metrics with specific SSMP elements will allow for direct assessment of those elements and provide consistency in their evaluation in future audits. **Appendix 7.2** of this internal audit contains a list of PI and associates each one with a SSMP element, a suggested audit frequency, and a person responsible for monitoring that PI. A sample Performance Indicator Assessment Form is included in **Appendix 7.3** of this internal audit. Performance Indicator Assessment Forms can be developed for each metric and assessed periodically by the person responsible, according to the suggested audit frequency for that metric. At the time of	In Progress

	the next internal SSMP audit, the completed Performance Indicator Assessment Forms can be used to evaluate the effectiveness of SSMP elements and included as attachments to the audit. This was also recommended during the previous audit but has not been implemented.	
	Consider tracking additional metrics targeted at measuring the effectiveness of SSMP elements that do not currently have metrics associated with them. A list of potential performance measures listed by SSMP element is included in **Appendix 7.2** of this internal audit. This was also recommended during the previous audit but has not been implemented.	In Progress
	As discussed in the previous section, use data collected in SSMP Appendix I as a reference, and develop goals for metrics that track preventative maintenance activities and identify the person/position responsible for tracking data against those goals. See **Appendix 7.2** for a list of potential performance indicators for preventative maintenance activities with responsible parties. This was also recommended during the previous audit but has not been implemented.	In Progress
	Using the data collected in SSMP Appendix I as a reference, set performance goals for the metrics used to illustrate SSO trends. See **Appendix 7.2** for a list of potential performance indicators related to SSO trends. This was also recommended during the previous audit but has not been implemented.	Completed
10 – SSMP Program Audits	Post the previous SSMP internal audit (FY 11/12 and FY 12/13) and this SSMP internal audit to the City website.	Completed
	Post the most recent City council SSMP recertification (from 2014) the City website.	Completed
	Schedule the next internal SSMP audit for July-August of 2017.	Completed
	Revise Appendix J-1 to reflect recommendations for review of performance indicators (i.e., metrics associated with specific SSMP elements and the associated timelines). This was also recommended during the previous audit but has not been implemented.	In Progress
	Revise Appendix J-2 (audit form) to provide areas in the tables for each SSMP element to assess both SSMP compliance to Regional Board requirements, and effectiveness of individual SSMP elements. Remove Kim Spears and IWS from the certification of audit table. This was also recommended during the previous audit but has not been implemented.	In Progress
	Update the SSMP revision log and post on the website.	No Progress

	Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes. This was also recommended during the previous audit but has not been implemented.	No Progress
11 - Communication	As of September 2013, the State Water board amended the MRP of the SSS WDR and the City produced a training PowerPoint to City staff, council, and stakeholders regarding the update. Attach the PowerPoint to the SSMP website.	No Progress
	Update SSMP Appendix K-4 with FY 13-15 EU marketing Plan budget & spending.	No Progress
	Add the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD) as attachment K-7 and modify the SSMP to mention it.	No Progress
	Modify SSMP 11.4 to include the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).	No Progress

2.2 Review of FY 15/16, FY 16/17, and FY 17/18

The City has prioritized eliminating SSOs from the collection system and was successful preventing Category 1 SSOs during the FY 15/16-16/17 period. However, during the FY 17/18, one Category 1 SSO occurred, which was resulted by an equipment failure (Vacuum truck). This incident caused 342 gal of spill, of which 97% was recovered and 7 gal of it reached the state's surface waters. During this period, only one Category 2 SSOs occurred (FY 15/16), which was resulted by a pipe/structure failure. This event spilled 2020 gallons of sewage from a mainline, most of which was captured and recovered. In addition, the city experienced two Category 3 spills larger than 500 gallons, from which, one occurred on a mainline (caused by debris) and one occurred on a lower lateral, which was caused by roots. All remaining spills were less than 100 gallons, of which, four of them occurred on mainlines.

SECTION 3 SSO Trends

3.1 Historical SSO Data

A total of 85 Category 3 SSOs occurred during the audit period FY15/16 (38 SSOs), FY16/17 (23 SSOs), and FY17/18 (24 SSOs). **Appendix 7.1** of this report includes the date, location, type, volume, volume recovered, and recovery percentage of total volume of each SSO spill.

One of the City-defined tasks of the Audit is to compare the information submitted to the publicly available California Integrated Water Quality System (CIWQS) database with internal City records. The WWC Superintendent verifies that SSO data in CIWQS is accurate and matches the SSO Field Report Forms. **Table 3** shows an organized view of key data present in the CIWQS and City internal records and shows discrepancies, for the three-year audit period. As shown, Table 3 shows how accurately CIWQS data reflect the City's records, with few exceptions, details of which are listed in **Appendix 7.2**. The information presented in the "Internal Records" column represents a summarized view of various performance measures maintained by the City.

Table 3 – CIWQS and City SSO Historic Data

SSO Historical Data since last SSMP Internal Audit	CIWQS Data FY 15/16	Internal Records FY 15/16	CIWQS Data FY 16/17	Internal Records FY 16/17	CIWQS Data FY 17/18	Internal Records FY 17/18
Total number of potential SSO service calls received	-	266	-	252	-	259
Total number of SSOs reported	39	39	23	23	25	25
Total volume of SSOs [Gal]	2525	2525	1081	1081	1531	1565
Total volume of SSOs that reached waters of the state [Gal]	0	0	0	0	7	7
Volume of SSOs recovered [%]	95%	95%	91%	91%	53%	54%
Average SSO response time [h:mm]	0:25	0:25	0:18	0:18	0:15	0:20
Average SSO duration time [h:mm]*	2:59	2:56	6:22	6:22	6:49	6:49

* Including long-duration SSO events (> 3 hours long) that increased the average SSO duration.

The following section investigates the City's historical SSO data to identify potential SSO trends to provide insight into measuring the effectiveness of the City SSMP and future improvements in reducing SSOs. **Figure 1** highlights the category and number of SSOs since FY 06/07. The SWRCB defined new three SSO categories as of September 13th, 2013. A category 1 SSO is currently defined as a spill of any volume that reaches surface water. A Category 2 SSO is currently defined as a spill greater than or equal to 1,000 gallons that does not reach surface water. A Category 3 SSO is currently defined as a spill less than 1,000 gallons that does not reach surface water. **Figure 1** shows a declining trend on the total number of SSO events per year since FY 13/14 and is mostly limited to Category 3 SSOs.

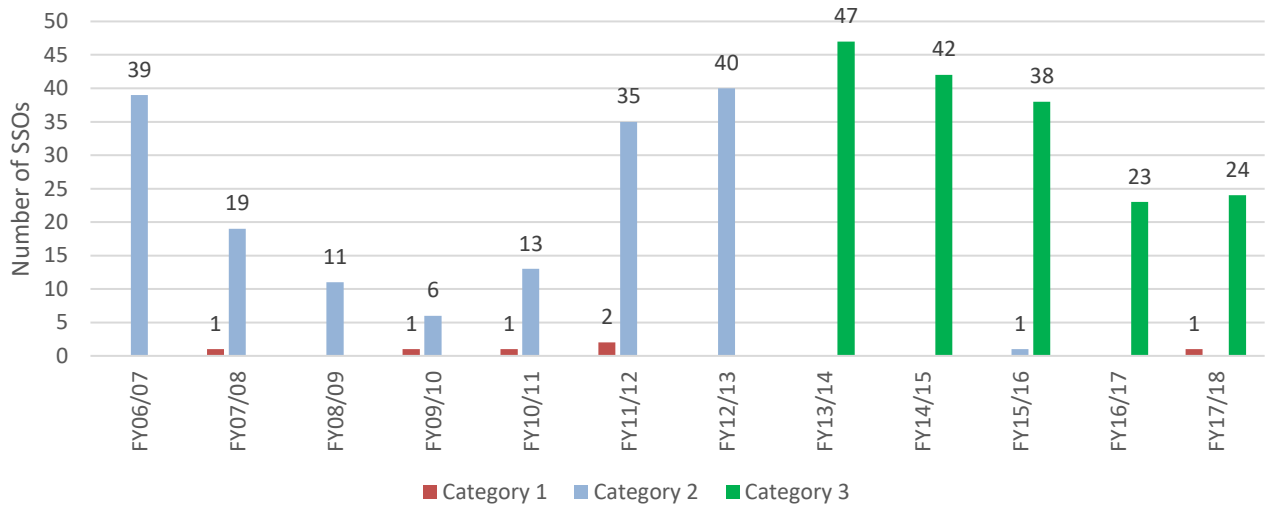

Figure 1 – Number of SSOs per Fiscal Year

With the goal of minimizing the spill volume, another valuable source of analysis is comparing average gallons spilled per SSO across fiscal years. **Figure 2** demonstrates average volume per SSO event since 2007, which equally weight out all spills and shows an annual average. Although, the number of SSO events has dropped over the years (See **Figure 1**), **Figure 2** indicates that the average spill volume per incident has been increased during this audit period. This trend was also observed by the SWRCB throughout the state. Although the number of statewide events has dropped over the years, but the spill volume has increased. Also, two wet seasons of FY 15/16 and 17/18 can also be clearly identified in **Figure 2**. In case of City of Roseville, it appeared that the high average volume was caused by the few high-volume spills occurred in FY15/16 and 17/18, majority of which was recovered. As mentioned, one of these high-volume incidents occurred by a main pipe/structure failure (FY 15/16: 2020 gallons) and the second largest spill was caused by roots in a lower lateral (FY 16/17: 760 gallons). Given the past records, **Figure 2** shows an average value of about 40 gal/SSO throughout the years. After reviewing the City's performance measures, it appears that the resulted high average volumes were most likely incidental driven and were not related to the SSMP effectiveness or the system performance. In addition, analysis of the City's SSO data showed that in about 18% of the events the City's staff did not see an active spill, in other words, these spills were ended before arrival of the staff. These incidents correspond to 5% of the total spill volume during this audit period.

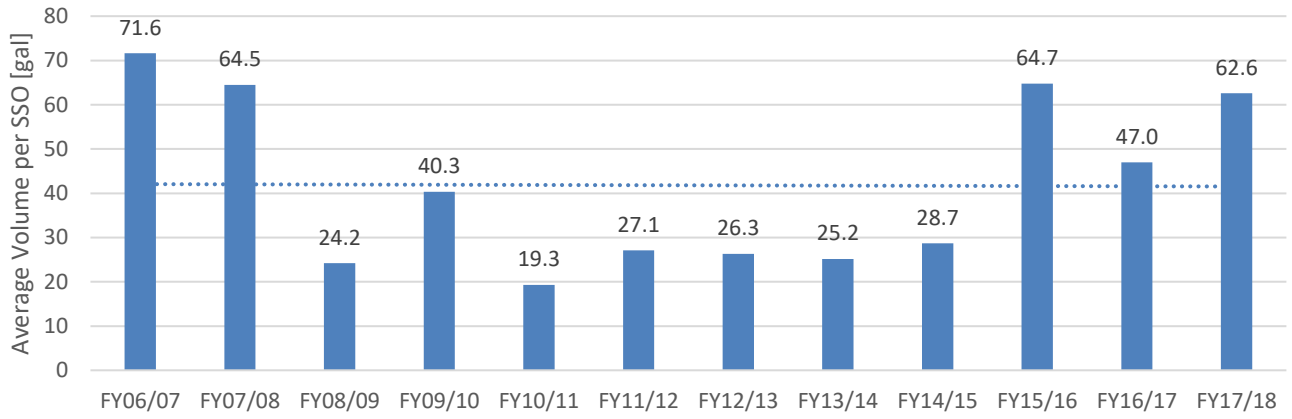

Figure 2 – Average Gallons per SSO

Here, City's average number of SSOs and average spill volume per SSO per 100 miles of sewer pipeline are compared with the results from sub-region Central Valley –Sacramento (part of State Water Control Board Region 5) and California (State), to provide regional context and insight into the City's collection system performance. **Table 4** summarizes these findings, gathered from the SWRCB's annual performance reports. These reports and their related data can be found online at the following link:

https://www.waterboards.ca.gov/water_issues/programs/sso/#prgm_docs

https://www.waterboards.ca.gov/board_info/exec_dir_rpts/

The board has not published similar data for fiscal years later than 2016. However, as shown in **Table 4**, the City average SSOs/100 miles of sewer pipe is far below the average of all municipal agencies in the Central Valley Sacramento subregion, and is slightly higher than the State. The City's average spill volume/100 miles of sewer pipe is an order of magnitude smaller than the state, which highlights how effective the City's SSO preventative maintenance and response program has been.

Table 4 – Regional Comparison of SSO Data

Fiscal Year	Average # of SSOs per 100 miles			Average Spill Volume per 100 miles [gallons]		
	City	Region 5	State	City	Region 5	State
2011/12	4.88	12.4	4.28	132	3,396	13,925
2012/13	5.85	12.72	4.38	154	4,371	8,194
2013/14	6.39	11.96	4.38	160	2,878	4,587
2014/15*	5.71	9.91	4.65	163	6,324	11,484
2015/16*	4.99	8.76	4.01	323	7,484	25,134
2016/17	2.94	Not Available		138	Not Available	
2017/18	3.20	Not Available		196	Not Available	

* These values do not include laterals in the total system size.

Table 5 demonstrates the leading causes of SSOs in this audit period compared to the previous audit period (FY 13/14-14/15). Generally, given the three-year period, number of SSOs caused by roots has decreased, but the volume has increased by 23%, which resulted in a higher average SSO volume. Also, FOG related events have decreased significantly during this period. However, SSOs caused by debris and pipe/structure failure have experienced a notable volume increase comparing to the previous audit period. Furthermore, no Capacity-caused SSOs was observed in this audit period and only one accidental truck incident caused a Category 1 event.

Table 5 – Leading Causes of SSOs in FY15-18 (results from FY13-15 in parenthesis)

By Number		By Volume		By Average Volume per SSO	
Cause	**Number**	**Cause**	**Gallons**	**Cause**	**Gallons**
Roots	62 (63)	Roots	1576 (1281)	Roots	25 (20)
FOG	2 (5)	FOG	67 (743)	FOG	34 (149)
Debris	15 (15)	Debris	908 (314)	Debris	61 (21)
Pipe Failure	7 (6)	Pipe Failure	2278 (50)	Pipe Failure	325 (8)
Capacity	0 (0)	Capacity	0 (0)	Capacity	0 (0)
Others*	1 (0)	Others*	342 (0)	Others*	342 (0)
Total	87 (89)	Total	5171 (2388)	Total	787 (198)

*Includes a vacuum truck incident for this audit (past audit includes an SSO caused by an act of vandalism).

To track the leading SSO cause, WWE summarized the average SSO volume per cause for the past three audit periods, results of which are shown in **Figure 3**. The actions planned because of this SSMP Audit will target the leading causes to most effectively reduce the number and more importantly spill volume of SSOs. As shown here, the FY15/16-17/18 period has experienced similar average volume of root caused SSOs, lower FOG related spill volumes, and slightly higher debris caused spills. However, as shown here, pipe/structure failure caused SSOs and incidental SSOs have increased during this period and since these are typically corresponded with high volume spills over small number of SSOs, these averages are significantly higher than the rest.

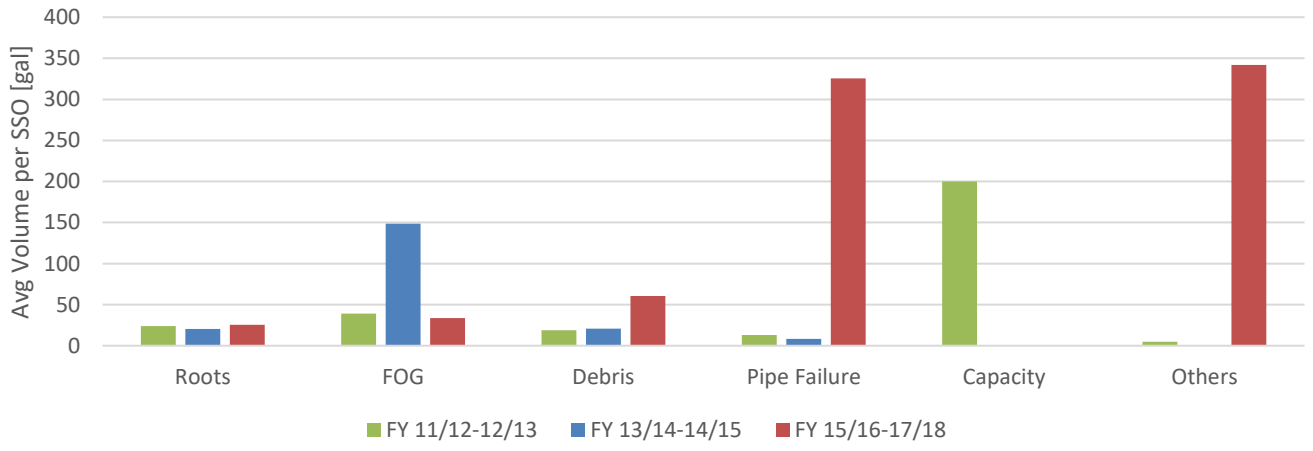

Figure 3 – Average SSO Volume per Cause

3.2 Performance Measures

To achieve proper operation and management of the sanitary sewer system and to prevent SSOs, the City utilizes multiple performance measures to assess the effectiveness of the SSMP. While the City may use other performance measures for evaluation purposes, the following measures are typically used:

- SSO Rate (SSOs per 100 miles of collection system piping per year)
- Number of SSOs for each cause (roots, FOG, debris, pipe failure, capacity, lift station failures, etc.)
- Average SSO volume (gallons)
- Percentage of SSOs greater than 100 gallons (%)
- Percentage of SSOs reported as Category 1 (%)
- Percentage of SSO volume recovered (%)
- Percentage of SSO volume reaching a surface water (%)

The City's SSO record were queried to analyze each performance measure from FY 11/12 to FY 17/18 and the data is shown in **Table 6** below. Overall, despite the decrease in the number of SSOs during this audit period, the City's SSO average has increased compared to previous years, which was due to few high-volume incidents, caused by pipe/structure failure and accidental spills.

Table 6 – Performance Measures

Performance Measures		FY 11/12	FY 12/13	FY 13/14	FY 14/15	FY 15/16	FY 16/17	FY 17/18
SSO Rate, SSOs/100 mi		4.88	5.85	6.39	5.71	4.99	2.94	3.20
SSO Cause	FOG	0	1	4	1	2	0	0
	Roots	18	30	32	31	30	20	12
	Debris*	8	2	8	2	4	2	9
	Pipe/Structure Failure	6	4	2	7	3	1	3
	Vandalism	1	0	0	0	0	0	0
	Capacity	0	2	0	0	0	0	0
	Construction	0	0	0	1	0	0	0
	Unknown/Other	2	3	1	0	0	0	1
Average SSO Vol (gal)		27	26	25	29	65	47	63
% of SSOs > 100 gal		2.8%	2.3%	2.1%	4.7%	2.6%	4.3%	8.0%
Category 1 % of Total SSOs		0%	7%	0%	0%	0%	0%	22.3%
% of Spill Volume Recovered		99%	63%	94%	93%	95%	91%	54%
% of Spill Vol Reaching Surface Water		0%	37%	0%	0%	0%	0%	0.4%

*Includes non-dispersible and rags

SECTION 4 Audit Procedure

In accordance with SSS WDER Section D.13.x, the primary SSMP audit objective is to focus on evaluating the effectiveness of implementing the SSMP and the City's compliance with the SSMP requirements identified in the SSS WSDR Order. Also, according to recent SWRCB WDR workshops, it is expected that the statewide general order reissuance, with the primary focus on reducing spill volume, emphasis on the following:

- **Requirements focused on spill volume:** Although the total number of spills has decreased over the past few years, the CIWQS data has shown that the state experienced higher volume of spills. While, this could be caused by the previous wet seasons, the proposed reissuance will likely require enrollees to demonstrate system-specific spill reduction programs.
- **Improved Data Quality**: With the goal of enhancing data accuracy, additional measures are being considered to provide higher quality spill volume data, such as maintaining certified operators and emphasizing on staff training.
- **Enhanced Order Enforceability**: To address poor performing systems and those with lack of SSMP implementation.
- **To Incentivize Order Compliance**: To recognize and acknowledge systems with good performance.
- **Effective Planning for System Resilience**: To ensure effective and adaptive planning for spill reduction.

This section details the procedures used to meet the existing order, while considering future expectations.

4.1 Review of SSMP Compliance

This Audit assessed the City's SSMP against the requirements outlines in the SSS WDR. The subsections of **SECTION 5** listed below are organized by SSMP elements. Each subsection contains a table which lists the SSS WDR section D.13 requirements and City's level of compliance of the SSMP with that requirement. The compliance status of the City's SSMP is indicated with one of the following ratings: ***Yes*** *– in compliance,* ***No*** *– not in compliance, or* ***N/A*** *– not applicable with a written justification in the SSMP.* If there are any compliance deficiencies, then an explanation of the deficiency is given. Each deficiency will have a recommended SSMP enhancement, which may include action items, adjustments, and/or timelines of the planned completion.

4.2 Review of SSMP Effectiveness

After the SSMP compliance assessment compared to SSS WDR requirements, an evaluation of the effectiveness of the SSMP elements has been conducted to comply with the requirements for SSMP audits per subsection D.13.x of the SSS WDR. The discussion review if the plan outlined for each section is being followed, and how effective the plan is at reaching the desired objectives. Recommendations will be made where appropriate based on the results of this Audit to identify tasks to improve the effectiveness of SSMP activities. Performance metrics will be used wherever possible to measure the effectiveness of the SSMP elements.

This section will not repeat the information and plans presented in each section of the SSMP and is intended to evaluate the effectiveness of the stated plans for each SSMP element. The reader should reference the City's SSMP to obtain the information referenced by this Audit.

A summary of the recommended modifications made through this Audit is included in **SECTION 6**.

SECTION 5 Audit of SSMP Elements

This section evaluates all elements of the City's SSMP. Each section of this chapter is associated with one of the eleven elements of the SSMP in accordance with SS WDR section D.13 requirements. Each element is evaluated for compliance and effectiveness described above in 4.1 and 4.2 respectively.

5.1 Goals

5.1.1 Compliance

Table 7 – Compliance with SSS WDR D.13.i - Goals

SSMP Requirement	Compliance	Deficiencies
i Properly manage, operate, and maintain all portions of the City's wastewater collection system.	Yes	-

5.1.2 Effectiveness of SSMP Elements and Recommended Modifications

Roseville Goals (SSMP 1.2)

- Level of Effectiveness: The City currently has seven goals identified in the SSMP. The goals of the City recorded in the SSMP have been effective in guiding the City's activities to support the objective of the SSS WDR to protect the waters of the state.

- Recommendations: Post Appendix A-1 – Roseville's SSMP Development Plan and Implementation Schedule on the website.

5.2 Organization

5.2.1 Compliance

Table 8 – Compliance with SSS WDR D.13.ii - Organization

SSMP Requirement	Compliance	Deficiencies
ii(a) Identify Legally Responsible Official (LRO)	Yes	-
ii(b) SSMP responsibility and organization chart	Yes	-
ii(c) Chain of communication for reporting SSOs	Yes	-

5.2.2 Effectiveness of SSMP Elements and Recommended Modifications

List Legally Responsible Official (LRO) (SSMP 2.1)

- Level of Effectiveness: The City has Ken Glotzbach (Utility Manager) and Chris Bracco (Wastewater Collections Superintendent) listed in CIWQS as LROs. Dan Pruden (Wastewater Collections Supervisor) is

listed as a data submitter. This is recorded in Appendix B-1 of the SSMP and is publicly accessible. The current organization of data submitters and LROs has proven effective in reporting SSOs to meet the requirements of the September 2013 amended Monitoring and Reporting Program.

- Recommendations:
    - Modify Appendix B-1: Update City Council positions and add phone numbers (Mayor Carol Garcia, Vice Mayor Susan Rohan, City Attorney Robert Schmitt). Update Commissioners and phone numbers: Chair Blandon Granger, Vice Chair John Speight. Update Liaisons and phone numbers for EU Director Richard Plecker, and Secretary Cheryl Hammond. Update Principal EU engineer and phone number for Jason Shykowski. Update Administrative Analyst and phone number for Maurice Chaney.
    - Post the following Appendices on the website:
        - Appendix B-1 – Personnel Responsible for SSMP Elements
        - Appendix B-2 – Personnel Responsible for SSO Reporting
        - Appendix B-3 – Personnel Responsible for Responding to SSOs Weekly Standby

SSMP Responsibility Organization Chart (SSMP 2.2)

- Level of Effectiveness: The SSMP Responsibility Organization Chart (SSMP Figure 2-1) is current in the SSMP and lists a descriptive definition of each individual's responsibilities. The chart is effective in defining the work flow and responsibilities of the individuals as well as departments within the City of Roseville's operations with relation to the SSMP. The narrative of the general position description is outlined in Section 2.2 of the SSMP.

- Recommendations: No recommendations at this time.

Chain of Communication Reporting Chart (SSMP 2.3)

- Level of Effectiveness: The internal notification contact chart is current and readily available to all wastewater utility district staff. The city of Roseville has a 24-hour call center, standardized answering script and procedures, and a full-time staff wastewater utility customer service representative. The individual's job is to respond to any service calls including but not limited to: backups, SSOs, smell complaints, etc. This has been an effective and well-utilized service, as service calls have increased and the average SSO response time has remained below the 40-minute target. Only 6 SSO response times were above 40 minutes during the audit period (1:48:00, 3:15:00, 0:45:00, 0:42:00, 0:45:00, and 0:45:00) which totaled 31 gallons in spills and the remaining 93% of the responses were under 40 min.

- Recommendations:
    - Modify Figure 2-2 Flowchart: Update the WWC Divisions overflow emergency response plan chain of communication to match existing operations, whereby WWTP and LS staff and SCADA alerts should always call the 24-hour call center instead of WWC service staff.
    - Include Figure 2-2 flowchart as Appendix F to the SSOERP (Appendix F-1) and mention in the text.

5.3 Legal Authority

5.3.1 Compliance

Table 9 – Compliance with SSS WDR D.13.iii – Legal Authority

SSMP Requirement	Compliance	Deficiencies
iii(a) Prevent illicit discharges	Yes	-
iii(b) Properly designed and constructed sewers	Yes	-
iii(c) Ensure access to laterals owned/maintained by City	Yes	-
iii(d) Limit the discharge of FOG and other debris	Yes	-
iii(e) Enforce any violation of City ordinances	Yes	-

5.3.2 Effectiveness of SSMP Elements and Recommended Modifications

Industrial Pretreatment Program (SSMP 3.2)

- Level of Effectiveness: The Industrial Waste Section (IWS) administers the Pretreatment Program Enforcement Response Plan and implements enforcement procedures specified by the U.S. EPA in accordance with 40CFR 403.5 (f) (5). The IWS has the authority to permit and monitor significant industrial users (SIUs) and small commercial/industrial dischargers. The implementation of the Pretreatment Program Enforcement Response Plan has been effective in providing the City the authority to control and prevent illicit discharges to the collection system.

- Recommendations: Post Appendix C-1 – Pretreatment Program Enforcement Response Plan on the website.

Municipal Code and Design and Construction Standards (SSMP 3.3)

- Level of Effectiveness: The City's design and construction standards regulate the preparation of plans for construction of additions/improvements to the sewer. The Roseville Municipal Code (RMC) section 14.12.040 requires that building sewer and connection into the public sewer system conform to the requirements of the building and plumbing code or other applicable rules and regulations of the City. The RMC also requires an installation of a lateral line clean out at the point of connection with the public sewer. The City design and construction standards and the RMC section 14.12.040 have been effective in providing the City the legal authority to properly design and construct the sewers and connections.

- Recommendations: Update the related links for Appendices C-3 and C-4 for sanitary sewer design and construction.

Municipal Code – Sewer Access Authority (SSMP 3.4)

- Level of Effectiveness: The Charter in the RMC, Article X Sec. 10.01 designates the authority to access City owned and operated facilities, either within or outside its corporate limits, number of activities including, but not limited to maintenance, inspection, and repair related to sewage collection. The authority gives legal access to all City-owned sewer facilities. The City has not had issues to date with lack of access to

facilities based on legal authority. The current legal authority to access sewer facilities has been effective in supporting the goals of the SSMP.

- Recommendations: No recommended modifications at this time.

Municipal Code – FOG (SSMP 3.5)

- Level of Effectiveness: The RMC chapter 14.14 is a robust FOG ordinance that lists regulatory requirements, fees, administrative requirements, and authority to enforce regulatory compliance. This ordinance is effective in identifying the required equipment and BMPs for FSEs as well as indicating the authority of the City to enforce the FOG requirements.

- Recommendations: No recommended modifications at this time.

Municipal Code – Enforcement Authority (SSMP 3.6)

- Level of Effectiveness: The RMC section 14.12.060 authorizes the City to penalize violators of the City's code requirements. At the discretion of the City attorney, an individual may be charged with an infraction or a misdemeanor. The authority to penalize infractions that may cost City resources has proven effective to maintain proper use of the wastewater collection system.

- Recommendations: No recommended modifications at this time.

Inter-Agency Agreements and Satellite Systems (SSMP 3.7)

- Level of Effectiveness: The City maintains a Joint Exercise of Powers Agreement for the South Placer Wastewater Authority and Agreement Regarding the Operation and use of the South Placer Regional Wastewater Facilities. In addition, the City has an Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).

- Recommendations: Post the following Appendices on the website:
    - Appendix C-5 – Joint Exercise of Powers Agreement for the South Placer Wastewater Authority
    - Appendix C-6 – Agreement Regarding the Operation and Use of the South Placer Regional Wastewater Facilities
    - Appendix C-7 – Wastewater Service Agreement by Contract and Operating Agreement between SASD, SRCSD and City of Roseville

5.4 Operation and Maintenance Program

5.4.1 Compliance

Table 10 – Compliance with SSS WDR D.13.iv – O&M Program

SSMP Requirement	Compliance	Deficiencies
iv(a) Collection system maps	Yes	-
iv(b) Preventive O&M activities	Yes	-
iv(c) Rehabilitation and Replacement (R&R) plan	Yes	The City does have an R&R plan in place, but additional improvement should be implemented (see below)
iv(d) Training	Yes	The City provides regular training but additional improvements to the training program should be implemented (see below)
iv(e) Equipment and critical replacement parts	Yes	-

5.4.2 Effectiveness of SSMP Elements and Recommended Modifications

Roseville Collection System Maps (SSMP 4.2)

- Level of Effectiveness: The city maintains electronic and hard copy maps of the sanitary sewer system and storm drain system. Updates to the electronic map system are translated to the field crew trucks via single sheet prints, if required. Full hard copy mapbooks are updated on a yearly basis. The City Mapping Update Policy is followed to ensure mapping is correct and completed in GIS and made available to the required users. The mapping policy document is added to the SSMP as an appendix and is posted to the City's SSMP website page.

- Recommendations: Post the following Appendices on the website:
  - Appendix D-1 – City of Roseville Sewer Map Grid System
  - Appendix D-9 – Mapping Update Policy

Roseville Preventive Operations & Maintenance Activities (SSMP 4.3)

- Level of Effectiveness: WWC engages in various programs to complete routine preventative maintenance activities, which include jet cleaning, lateral eeling, chemical root control, CCTV inspections, visual inspections, and lift station maintenance.

  According to **Table 6**, the City experienced a slight decrease in root-caused SSOs during the last years of the audit period, which explains the decrease in the total sewer lateral mechanical cleaning (eeled), as shown in **Table 11**. The City outperformed preventative maintenance targets and past performance measures as evident in **Table 11,** with the exception of mechanical root cleaning during FY 17/18, which may have been related to an equipment maintenance issue (see **Table 12**). Other performance measures or benchmarks are reviewed in full in the recommendations of **Section 5.9**.

Table 11 – Performance Measures related to SSS WDR D.13.iv(b)

Performance Measure	Target	FY13/14	FY14/15	FY15/16	FY16/17	FY17/18
Total number of sewer maintenance field staff	NA	23	24	24	24	26
Sewer main flushed per year (miles)	250	330	284	248	295	283
Sewer laterals mechanically cleaned (eeled) per year (miles)	8	13.89	14.69	14.77	7.41	1.07
Average high velocity cleaning per crew per day [LF]	1670	2393	2922	2618	3115	2998
Average cost of hydro cleaning [$/LF]	0.36	0.30	0.32	0.33	0.29	0.32
Average cost of sewer mechanical cleaning [$/LF]	1.60	1.23	1.20	0.77	0.94	1.66

- Recommendations:
  - Update SSMP Section 4.3 Overview with updated statistics about the City's service area, number of customers, miles of main, number of services, and number of lift stations. Also update the number of WWC employees.
  - Update the following Appendices and post on the website:
    - Appendix D-2 – Maintenance Cleaning Schedule: Update with Maximo CCMS example
    - Appendix D-3 – CCTV Video Report
    - Appendix D-4 – SOP

Rehabilitation and Replacement Plan (SSMP 4.4)

- Level of Effectiveness: The City regularly CCTV inspects pipelines using the national Association of Sewer Service Companies (NASSCO) Pipeline Assessment Certification Program (PACP) coding standard. The City evaluates the risk of failure for each asset based on the various data sources it maintains (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections) and assigns high risk assets in a ranked Rehabilitation and Replacement (R&R) Plan. If an R&R project is not completed in one year, then it is rolled over to the next. The City maintains a 5-year list of planned R&R CIP projects.

  The city creates an asset group in their Maximo CCMS, based on their condition assessment and PACP scores. This ongoing list is prioritized and provided to Tech Services, when CIP budget is prepared, to put a CIPPP project together. Also, while performing routine hydro work in the grids, the vactor group performs manhole inspections of each asset. Once there are enough manholes that require rehabilitation, the City produces a list with asset IDs that will be sent to Tech Services for manhole Rehabilitation CIP. In the past 6 years, the City has not discovered a substantial number of manholes to develop a manhole CIP project.

  In accordance with the City-utilized performance measures related to inspection and R&R program activities as displayed in **Table 12**, the City has met or exceeded all inspection targets during this audit program. However, total miles of mainline rehabilitated during this three-year were less than the target. SSOs caused by structural failure during the audit period are overlaid with the City's 2018 I/I study and shown in **Appendix 7.3.** As shown, most of these spills occurred in regions with older pipes, such as region 5, 15, and 17. These regions are also known for their higher I/I response and capacity issues during wet

seasons. The City has been actively performing I/I analysis and smoke testing to identify system defects in these regions, results of which are incorporated in CIP decision makings.

Table 12 – Performance Measures related to SSS WDR D.13.iv (c)

Performance Measure	Target	FY13/14	FY14/15	FY15/16	FY16/17	FY17/18
Total miles visually inspected per year (not CCTV)	0.25	0.25	0.25	0.18	0.25	0.25
Lateral CCTV inspected per year [miles]	16	14.69	26	35.71	32.51	36.14
Main CCTV inspected per year [miles]	30	53.27	65	84.32	59.71	64.1
Laterals rehabilitated per year [number]	50	90	43	60	85	89
Laterals rehabilitated or replaced per year [miles]	0.25	0.39	0.16	0.27	0.66	0.42
Mains Rehabilitated or replaced per year [miles]	5	2.65	6	0	0	1.07
Average Cost of CCTV (lateral) [$/LF]	1.34	1.46	1.11	1.15	1.04	1.00
Average cost of CCTV (main) [$/LF]	0.53	0.55	0.41	0.41	0.36	0.40

- Recommendations:
  - Describe the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections, etc.), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data. This was also included during the previous audit but has not been completed.
  - Document the upcoming transition in responsibilities between WWC and EU Engineering in developing and operating the R&R plan by describing it in the SSMP. Confirm that field observations from WWC field crew are accounted for by EU Engineering when conducting risk assessment. This was also included during the previous audit but has not been completed.
  - Post Appendix D-8 – Technical Memorandum O&M Program SSMP Audit-Rehabilitation and Replacement Plan (Element IVC) on the website.

Training (SSMP 4.5)

- Level of Effectiveness: The WWC requires employees be certified with CWEA, DMV, CPR, First Aid, Confined Space Policy, Gas Detector Policy, as well be trained in equipment safety, maintain OSHA rules, and review material safety data sheets.

  The existing training program has been effective in supporting a well-trained staff. Over this audit period WWC has reported 3 on the job accidents in FY 15/16, 3 in FY 16/17, and 4 in FY 17/18, which are less than previous audits. WWC strives for zero-on-the-job accidents and has weekly tail-gate training meetings and monthly training sessions where WWC staff is trained in part via various SOPs.

- Recommendations: Update the following links:
  - The CWEA website link
  - Appendix D-5 – CWEA Certification Handbook link

Equipment and Critical Replacement Parts (SSMP 4.6)

- Level of Effectiveness: WWC maintains a list of equipment and critical replacement parts inventory in Appendix D of the SSMP. The critical replacement parts list is 100% stocked, up to date, and is maintained by the Material Technician at Dry Creek WWTP. The equipment and critical replacement parts inventory and upkeep is effective and ensures that a lift station critical part failure can be quickly mitigated.

- Recommendations: Update and post the following Appendices on the website:
  - Appendix D-6 – Equipment Inventory List
  - Appendix D-7 – Critical Replace Parts List

5.5 Design and Performance Provisions

5.5.1 Compliance

Table 13 – Compliance with SSS WDR D.13.v – Design and Performance Provisions

SSMP Requirement	Compliance	Deficiencies
v(a) Sanitary sewer design and construction specifications	Yes	-
v(b) Procedures and standards for inspecting and testing new and R&R projects	Yes	-

5.5.2 Effectiveness of SSMP Elements and Recommended Modifications

Sanitary Sewer Design and Specifications (SSMP 5.2)

- Level of Effectiveness: The City's design and construction standards are available on the website and the online SSMP documentation lists their location. These designs and construction standards are effective in ensuring that new or rehabilitated infrastructure is designed and constructed in an acceptable manner.

- Recommendations: Update Appendix E-1 – Sanitary Sewer Design link.

Sanitary Sewer System Construction and Performance Provisions (SSMP 5.3)

- Level of Effectiveness: The City's construction and design standards include procedures and requirements for the testing of new/rehabilitated assets and has been effective in ensuring that recently constructed assets perform as expected.

- Recommendations:
  - Update Appendix E-2 – Sanitary Sewer System Construction link.
  - Post Appendix E-3 – Technical Memo, SSMP Preparedness Audit Design and Performance Provisions Element V on the website.

5.6 Overflow Emergency Response Plan

5.6.1 Compliance

Table 14 – Compliance with SSS WDR D.13.vi - OERP

SSMP Requirement	Compliance	Deficiencies
vi(a) Proper notification procedures	Yes	-
vi(b) Program for appropriate SSO response	Yes	-
vi(c) Procedure for prompt notification to regulatory agencies	Yes	-
vi(d) Procedures for appropriate staff and contractor training	Yes	
vi(e) Procedures to address emergency operations (e.g., traffic, crowd control)	Yes	-
vi(f) Program to ensure containment of SSO to prevent discharge and minimize adverse impacts on the environment	No	SSOERP does not meet certain water quality monitoring requirements of the amended MRP document

5.6.2 Effectiveness of SSMP Elements and Recommended Modifications

Notification Procedures (SSMP 6.2)

- Level of Effectiveness: The average SSO response time during the audit period was 22 minutes, with 25 minutes for FY 15/16, 18 minutes for FY 16/17, and 20 minutes for FY 17/18 (see **Table 3**). These response times are much faster than the City target response time of 40 minutes and indicates that the notification procedures employed the City are effective in facilitating a rapid response from the City's first responders.

- Recommendations: No recommended modifications at this time.

Response Program (SSMP 6.3)

- Level of Effectiveness: SSO response procedures are documented in Appendix F-1 Section 2 of the SSMP and are summarized in the flow chart in Figure 6-2 of the SSMP and Appendix F-1 SSOERP. The flow chart uses a series of yes/no questions to guide SSO responders in quickly identifying the right sequence of decisions and actions to properly assess and mitigate an SSO. This chart is simple and effective in explaining the process in which to mitigate an SSO.

  During the audit period, the average SSO volume spilled was 59 gallons, with an average 82% recovered from the total SSO volume. Similarly, the average SSO duration length was 4:57 hours long, however there were 13 long-duration SSOs (over 3 hours) that caused the average SSO duration length to increase. One of these SSOs in FY 15/16 spilled from a main for 65 hours and resulted in volume spilled of 65 gallons. In all these instances, the City was notified very late, and once notified, stopped all long duration SSOs in under 30 minutes. The average City response time to SSO calls during the audit period was 22 minutes,

and the average time it took to stop the SSO (SSO mitigation) once on-site was just under 5 minutes. These statistics demonstrate that the City has been effective in responding and mitigating SSOs.

- Recommendations:
  - The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station. This list should also be updated to incorporate new lift stations at Washington Blvd and 7600 Sierra College. This was also recommended during the previous audit but has not been implemented.
  - Modify Figure 6-2 – SSO Procedure Flow Chat, to report SSO category 1 larger than 1,000 gallons to Cal OES within 2 hours per WDR requirements (currently if > 50,000 gal).
  - Post Appendix F-1 – SSOERP on the website along with corresponding attachments.

Regulatory Notification Procedure (SSMP 6.4)

- Level of Effectiveness: The Superintendent and Utility Manager are the legally responsible officials (LRO) for certifying SSO reports submitted to CIWQs. The Superintendent and Supervisor are also responsible for reporting the SSOs to RWQCB, OES, and Placer Environmental Health Department as required. This section is effective in conveying the responsibility the LRO in reporting SSOs to the proper authorities.

- Recommendations: No recommended modifications at this time.

Staff and Contractors Training (SSMP 6.5)

- Level of Effectiveness: Each WWC employee is required to complete the SSO response procedure training updates and review of SSO training are included in the weekly tailgate meeting throughout the year. They are also trained on the various SOPs implemented within WWC. Contractors are also required to implement the procedures identified in the SSO training prior to working within the collection system. As evidenced by the fast response and mitigation times, the WWC staff's training has been effective.

- Recommendations: No recommended modifications at this time.

Emergency Response Coordination (SSMP 6.6)

- Level of Effectiveness: WWC employees are required to complete the Emergency Action plan training annually. This covers HAZ WOPER first responders and Roseville's Incident Command System (ICS). These process, procedures, and response systems are also reviewed via weekly safety tail gate meetings. These training sessions have been effective way to prepare staff to deal with hazardous waste and materials.

- Recommendations: No recommended modifications at this time.

Spill Mitigation and Containment Procedure (SSMP 6.7)

- Level of Effectiveness: Appendix F-1 of the SSMP includes an SSOERP which includes an SOP for estimating spill volumes, containment, and mitigation of spills. The new amended Monitoring and Reporting Program (MRP) requirements implemented in September 2013 require a robust water quality monitoring plan that must account for spill travel time in surface water, among several new requirements. The City's current SSOERP Appendix C Water Quality Sampling Procedures document does not meet these requirements.

- Recommendations:
    - Modify SSOERP Appendix C – Water Quality Sampling Procedures to the meet the requirements of the amended MRP.
        - Account for spill travel time in the surface water and scenarios where monitoring may not be possible to safety concerns or access restrictions once an SSO has stopped. This may be estimated by dropping floatable debris, for instance, and measuring the time required to travel a certain distance. This was also recommended during the previous audit but has not been implemented.
        - Expand minimum sampling parameters to include appropriate bacterial indicators that have been specifically listed in the beneficial uses of the City's waterways or more broadly listed by the regional Basin Plan. This was also recommended during the previous audit but has not been implemented.
    - Modify SSOERP Appendix C – Water Quality Sampling Procedures to include a list of all of the required equipment that the employee would need to conduct proper sampling. This was also recommended during the previous audit but has not been implemented.

5.7 FOG Control Program

5.7.1 Compliance

Table 15 – Compliance with SSS WDR D.13.vii – FOG Control Program

SSMP Requirement	Compliance	Deficiencies
vii(a) Public education plan	Yes	The City does have a public education plan, but additional improvements should be implemented (see below)
vii(b) FOG disposal plan	Yes	-
vii(c) Legal authority to prohibit SSOs and blockages caused by FOG discharges	Yes	-
vii(d) BMPs, grease removal devices, recordkeeping, and reporting requirements	Yes	-
vii(e) Authority to inspect and enforce FOG ordinance	Yes	
vii(f) FOG Characterization Assessment and Hot Spot Cleaning Schedule	Yes	-
vii(g) FOG Control Program Measures	Yes	-

5.7.2 Effectiveness of SSMP Elements and Recommended Modifications

Public Education Plan (SSMP 7.2)

- Level of Effectiveness: The City has developed and operates a comprehensive FOG outreach program to residents, restaurants, and the plumbing community on the proper disposal of FOG. The main objective is to educate the City of Roseville residents and restaurants on the proper disposal of FOG to meet or exceed outreach standards set forth in the State General WDR requirements. The program has implemented TV ads, flyers, bill inserts, and websites to convey the message of educating the public on the proper disposal of FOG and other substances. This system appears to be effective in educating the public on the proper disposal of FOG and other substances. Maurice Chaney is listed as responsible party for FOG publica Education Plan in Appendix B-1.

- Recommendations: No modifications recommended at this time.

FOG Disposal Plan (SSMP 7.3)

- Level of Effectiveness: During the past audit periods the Industrial Waste Section (IWS) oversaw the FOG disposal plan with permitted FSEs, however all FOG program-related responsibilities transitioned to WWC in 2016. The City currently has 319 FSEs that are required to and have obtained a FOG wastewater discharge permit (FOG WDP). The same City regulations from the audit period are in place which require permittees to retain a minimum 3 years of documentation to prove the proper cleaning, maintenance, and removal of FOG from grease control devices and the disposal site location. The City provides

information about the permitting process and permit applications on the City website (URL address below) as a resource for businesses and residences within the City.
(https://livesewersmart.com/)
The FOG record keeping requirements for FSEs appear to be effective in that only three FOG-related SSOs occurred over the audit period.

- Recommendations: No modifications recommended at this time.

Record Keeping Requirements (SSMP 7.4)

- Level of Effectiveness: As discussed in the previous section, FOG control program responsibilities transitioned from IWS to WWC in 2016, but during the audit period, IWS operated the program. The City requires in RMC Section 14.14.260 that permitted FSEs retain logbooks on grease control device maintenance cycles, FOG hauling records, sampling data and sludge height monitoring in FOG control devices, BMPs, and records of private lateral SSOs and subsequent mitigation. The recordkeeping requirements and time frames identified in the RMC have enough information necessary for the City to enforce permit requirements of FSEs.

- Recommendations: No modifications recommended at this time.

Legal Authority to Prohibit SSOs and Blockages Caused by FOG Discharges (SSMP 7.5)

- Level of Effectiveness: The RMC Section 14.12.050 provides the City with a FOG ordinance and legal authority to require FOG interceptors when deemed necessary by the director. The ordinance prohibits FOG-related blockages and SSOs and limits the maximum allowable concentration of FOG in FSE discharges at the current level of 100 mg/L of wastewater. This ordinance is effective in providing the City with the tools necessary to minimize FOG discharges into the sewer system.

- Recommendations: No modifications recommended at this time.

BMP, Grease Removal Devices, Recordkeeping, and Reporting Requirements (SSMP 7.6)

- Level of Effectiveness: The City requires all FSEs that discharge FOG to acquire a FOG WDP permit which includes provisions for FSEs to maintain BMPs and grease interceptors, cleaning records, and to report private FOG-related SSOs or blockages. The FOG WDP requirements are effective in providing the City with the tools to limit FOG discharges into the sewer system.

- Recommendations: No modifications recommended at this time.

Inspection and Enforcement Authority – FOG Producers (SSMP 7.7)

- Level of Effectiveness: All FSEs that discharge FOG are required to obtain and comply with a City FOG WDP. Under the permit, the FSE must comply with the FOG ordinance as detailed under the RMC, and the City maintains the legal authority to physically inspect the FSE and determine if it is in compliance. The City possesses effective tools to regulate FOG discharges via a robust FOG ordinance which also requires an

effective FSE inspection program. Under oversight from WWC, the City plans on inspecting at least 294 FSEs each fiscal year During this audit, the city documented 181 FSE inspections for FY 16/17 and 231 for 17/18, which shows effectiveness of the FOG inspection and enforcement authority element of the SSMP.

- Recommendations: No modifications recommended at this time.

FOG Characterization Assessment and Hot Spot Cleaning Schedule (SSMP 7.8)

- Level of Effectiveness: The City has been effective in limiting FOG-related SSOs to two during the three-year audit period by identifying and placing assets impacted by FOG as a last resort on the hot-spot, high frequency 3-month cleaning list. If the City encounters abnormal FOG levels in a pipe it will first reach out to FSEs and residents that it thinks may be contributing to it and distribute pamphlets to them to minimize FOG discharges. If that does not solve the problem, then the asset is put on the hot-spot list. Approximately 60% of the 90 hot-spot assets have FOG-related issues that require significant City resources to clean every 3 months.

- Recommendations:
    - Modify the EU Engineering GIS database to include hotspot assets and FSEs and add them as layers to the maps that WWC receives.

FOG Control Program Measures (SSMP 7.9)

- Level of Effectiveness: The City has established that all FOG-producing FSEs acquire a FOG WDP which limits discharge of FOG, requires proper O&M records, hauling record, BMPs, and other conditions. The FOG Control Program measure provides the City's with an effective tool to limit FOG discharges from FSEs.

- Recommendations: No modifications recommended at this time.

5.8 System Evaluation and Capacity Assurance Plan

5.8.1 Compliance

Table 16 – Compliance with SSS WDR D.13.viii - SECAP

SSMP Requirement	Compliance	Deficiencies
viii(a) Evaluate hydraulic deficiencies	Yes	-
viii(b) Establish design criteria	Yes	-
viii(c) Establish short- and long-term CIP	Yes	-
viii(d) Develop schedule of completion dates for CIP	Yes	-

5.8.2 Effectiveness of SSMP Elements and Recommended Modifications

Evaluation Process – Capacity Enhancement Projects (SSMP 8.2)

- Level of Effectiveness: The City has developed two hydraulic simulation models to identify peak flows in the collection system in 2006. In addition, the City developed a new hydraulic model and System Evaluation and Capacity Assurance Plan (SECAP) in 2017, which was done by Woodard and Curran. The modeling efforts conducted in 2006 and 2017 have been effective in evaluating the system and planning for future growth, which is evident from no capacity-deficiency-related SSOs during this audit period. In 2018, Water Works Engineers (WWE) conducted a follow up I/I study upon the existing 2017 model to further analyze results and identify basins and assets with high I/I response. The results of the 2018 I/I study is being actively used by the City as their I/I reduction program base.

- Recommendations: Modify Appendix I-1 of the SSMP to indicate that the system evaluation and capacity assurance plan will be reviewed and updated every 10 years. This was also recommended during the previous audit but has not been implemented.

Design Criteria (SSMP 8.3)

- Level of Effectiveness: The City established a 10-year, 24-hour peak design storm for the hydraulic wet weather loading of the existing collection system along with flow generation factors based on water use records and flow monitoring data. Based on the lack of capacity-related SSOs during the audit period, it appears the City's capacity design criteria are effective.

- Recommendations: No recommended modifications at this time.

Capacity Enhancement Measures (SSMP 8.4)

- Level of Effectiveness: The SPWA Wastewater Systems Evaluation includes the identification of short and long-term Capital Improvement Project (CIP) to meet current and future wastewater flows. The new hydraulic model introduced in 2017 provides new capacity enhancement measures.

- Recommendations: No modifications recommended at this time.

Capital Improvement Program Schedule (SSMP 8.5)

- Level of Effectiveness: The City lists the goal of the CIP is to develop annual project bundles of approximately $1.5 to $2.0 million based on WWC condition assessment data and the hydraulic model CIP results and subsequent flow monitoring or studies. The CIP schedule is effective in identifying the tasks required to assure hydraulic capacity within the collection system.

- Recommendations: No modifications recommended at this time.

5.9 Monitoring, Measurement, and Program Modifications

5.9.1 Compliance

Table 17 – Compliance with SSS WDR D.13.ix – MMM

SSMP Requirement	Compliance	Deficiencies
ix(a) Maintain metrics to prioritize SSMP activities	Yes	-
ix(b) Measure effectiveness of SSMP elements	Yes	The City does have performance indicators linked with SSMP elements, but additional improvements should be implemented (see below)
ix(c) Assess preventative maintenance program	Yes	-
ix(d) Update elements based on evaluations	Yes	-
ix(e) Identify and illustrate SSO trends	Yes	-

5.9.2 Effectiveness of SSMP Elements and Recommended Modifications

Utility Metrics to Prioritize SSMP Activities (SSMP 9.2)

- Level of Effectiveness: The WWC tracks four categories of utility metrics to monitor and measure the effectiveness of the various elements of this SSMP, which include system information, financial information, sewer maintenance, and performance measures. The city also tracks various performance measures related to various SSMP elements and they are summarized in **Appendix 7.4**. Appendix I has effectively been used to identify and track the specific metrics each of the City's four categories.

- Recommendations: No modifications recommended at this time.

Metrics to Monitor Effectiveness of SSMP (SSMP 9.3)

- Level of Effectiveness: The utility metrics listed in Appendix I-4 pertain to different overseeing departments within the City, and the coordination between these different Departments in measuring/monitoring various metrics and sharing results has been effective in ensuring the SSMP goals have been met.
- Recommendations:
    - Incorporate system and financial measures recommended in **Table 18,** from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP.
    - Update Appendix I-4 and modify it to include document location and review frequency.
    - Modify I-4 – Key Performance Indicators (KPI) FOG section, to reflect the change in responsibilities from IWS to WWC.

Metrics to Assess Preventative Maintenance Program (SSMP 9.4)

- Level of Effectiveness: The City's current utility metrics Appendix I defines the frequency and type of utility metric that is being tracked to measure SSMP effectiveness. This is effective because it allows the city to monitor performance of particular activities and compare against SSO trends to determined data

correlations. These metrics do not all have associated goals or targets, however, which makes it hard to track whether the activity is meeting the intended result.

- Recommendations: Consider addition of recommended PM measures in **Table 18,** from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.

SSMP Performance Monitoring and Update Process (SSMP 9.5)

- Level of Effectiveness: Individual staff oversee various SSMP element performance indicators. The City tracks all revisions/updates with the SSMP using a revision log that is maintained by the LRO. The log is effective documenting changes to the SSMP and encourages the use of the SSMP as a living document.

- Recommendations: No modifications recommended at this time.

SSO Trends – Frequency, Location and Volume (SSMP 9.6)

- Level of Effectiveness: The City tracks a comprehensive list of performance metrics that are included in Appendix I-4 of the SSMP and summarized in **Table 19**. This allows the City to quickly identify and respond to changing trends in SSOs over time. These metrics are monitored on a monthly, quarterly, semi-annual, and annual basis.

- Recommendations:
  - Update Appendix I-3 – SSO History (last update 2013).
  - Update SSO trends data in Appendix I-4 – KPI Benchmarking.
  - Consider addition of recommended SSO measures in **Table 18,** from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.

Table 18 –Recommended Additional Performance Indicators

Description	Performance Indicator	Unit
System Information	Total System Length	miles
	Service Area	sq. miles
	Population	people
	# maintenance Holes	MHs
	# Pump Stations PS/ Lift Station	number
	Sewer < 8 inch	miles
	8 inches < sewer < 15 inches	miles
	15 inches < sewer < 21 inches	miles
	21 inches < sewer < 42 inches	miles
	Average age of system	years
	New sewer main installation	miles
	New sewer lateral installation	miles

	WWC Staff	number
Financial Information	Total annual division budget	$
	Total annual O&M budget	$
	O&M budget of annual	%
	Lift station O&M cost	$
	Lift station O&M cost of annual	%
	Annual capital for sewer rehab	$
	Sewer monthly rate for residents	$
O&M	Certified operators	number
	O&M field staff	number
	Average high velocity cleaning per crew per day	LF
	Total visually inspected per year (not CCTV)	miles
SSO	Number of SSO calls received	number
FOG	Public education outreach budget per year	$
	Public education outreach budget of annual	%

Table 19 – Current Performance Measures to Monitor SSO Trends

Performance Measure	Unit	Target	Source
SSOs - Total number, mains and laterals	Number	-	A, B
SSOs - Total volume, mains and laterals	Gal	-	A, B
SSOs - Total volume recovered	Gal	-	B
SSOs - Total number of wet weather	Number	-	A, B
SSOs - Total volume of wet weather	Gal	-	A, B
SSOs - % of spills caused by FOG (main)	%	-	A, B
SSOs - % of spills caused by roots (main)	%	-	A, B
SSOs - % of spills caused by Vandalism (main)	%	-	A, B
SSOs - caused by LS failures	Number	-	A, B
SSOs - caused by pipe failures	Number	-	A, B
SSOs - % of spill volume caused by FOG (lateral)	%	-	A, B
SSOs - % of spill volume caused by roots (lateral)	%	-	A, B
SSOs - % of spill volume caused by Vandalism (lateral)	%	-	A, B
Customer service requests per year	Number	-	A, B
Sewer odor complaints	Number	-	A, B
Flooding claims per year	Number	-	A, B
Cost of flooding claims per year	$	-	A, B
SSO – Repeats within two years	Number	0	B, C
SSOs - Category 1	Number	0	C, D
SSOs / 100 mi pipe / year - Category 2	Number	2.0	C
SSOs / 100 mi pipe / year - Mainline	Number	0.6	C
SSOs / 100 mi pipe / year - Lateral	Number	8.0	C

D = Program / Performance Reports

5.10 SSMP Program Audits

5.10.1 Compliance

Table 20 – Compliance with SSS WDR D.13.x – SSMP Program Audits

SSMP Requirement	Compliance	Deficiencies
x Conduct periodic audits	Yes	-

5.10.2 Effectiveness of SSMP Elements and Recommended Modifications

Audit Procedures, Roles, and Responsibilities (SSMP 10.2)

- Level of Effectiveness: The City conducts an internal audit biennially to continually measure the effectiveness of the SSMP primarily through evaluating system metrics, performance measures, and reduce SSOs by improving SSMP procedures to better respond to new SSO trends. In addition, the audit evaluates the City's compliance with SSMP requirements, particularly the amended MRP requirements that were formalized in September 2013. The City developed an audit form as a template to record information produced during the internal SSMP audits. This form is included in SSMP Appendix J-2. The previous audit identified many areas of improvement which the City responded and acted on. Some of these recommended improvements were excluded from this audit based on discussions with the City that eliminated the need for them. Others are considered standing and should still be implemented by the City. Generally, the internal audits implemented by the City have been effective in improving the SSMP and turning it into a living document that that is current, practical, and useful for the City.
- Recommendations:
    - Post this SSMP internal audit to the City website.
    - Schedule the next internal SSMP audit for July-August of 2021.
    - Develop a description manual to replace Appendix J-1 and J-2 of the SSMP, to support each KPI element. This manual describes required information for KPI monitoring, including but not limited to:
        - Elements definition
        - How to fill each KPI items
        - Personnel responsible
        - Review frequency

SSMP Program Modification/Update Process (SSMP 10.3)

- Level of Effectiveness: The City developed a program for monitoring, reviewing sewer performance metrics and the effectiveness of SSMP elements on a biennial basis. Based on the results of the SSMP audits, the Wastewater Utility Manager is assigned to initiate/direct corrective actions to respond to deficiencies and enhancements identified in the audit. As determined in the City's SSMP revision log, the City has been prompt in responding to audit and continually strives to implement improvements.

- Recommendations:

- Update the SSMP change log and add it as an appendix to the SSMP, documenting all changes made to the SSMP since its last certification, indicating when an element was changed/updated and who authorized the change. An example of a change log is shown at **Appendix 7.5**. This was also recommended during the previous audit but has not been implemented.
- Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes. This was also recommended during the previous audit but has not been implemented.

5.11 Communication Program

5.11.1 Compliance

Table 21 – Compliance with SSS WDR D.13.xi – Communications Program

SSMP Requirement	Compliance	Deficiencies
xi(a) Communicate on a regular basis with the public and tributary/satellite systems regarding SSMP	Yes	-

5.11.2 Effectiveness of SSMP Elements and Recommended Modifications

Internal Communication – Staff, Utility Commission, and City Council (SSMP 11.2)

- Level of Effectiveness: The WWC has used PowerPoint presentations as a resource to describe the purpose of the SSMP and summarize SSS WDR requirements to the City council and City staff. These presentations are attached to the SSMP website.

- Recommendations:
  - As of September 2013, the State Water board amended the MRP of the SSS WDR and the City produced a training PowerPoint to City staff, council, and stakeholders regarding the update. Attach the PowerPoint to the SSMP website. This was also recommended during the previous audit but has not been implemented.
  - Post Appendices K-1 – WWC WDR awareness Program and K-2 – Sanitary sewer regulations/WDR PowerPoint presentations on the website.
  - Update Appendix K-3 – Two EU newsletters FOG/medications links.

Stakeholder Communication – Residential, Commercial and Industrial (SSMP 11.3)

- Level of Effectiveness: The City communicates regularly with the public and stakeholders via monthly newsletters entitled “EU Today” that includes items regarding sewer utilities. This newsletter is presented online and through bill inserts. A sample newsletter is included in Appendix K of the SSMP. In addition,

the City specifically communicates FOG related items to the community via FOG outreach program over TV ads, flyers, direct mail, and site visits to FSEs.

- Recommendations:
  - Update SSMP Appendix K-4 – FOG Outreach Program with marketing Plan budget & spending and post it on the website. Consider an additional metric to be used in the KPI that reflects the City's performance in terms of FOG outreach program. Few additional metrics are recommended in **Table 18**. This was also recommended during the previous audit but has not been implemented.

Tributary/Satellite Communication (11.4)

- Level of Effectiveness: The City routinely communicates with their satellite partners and has three formal agreements in place that include:
  - The joint exercise of power agreement for the SPWA
  - The agreement regarding the operation of and use of South Placer Regional Wastewater Facilities
  - The funding agreement relating to the South Placer Regional Wastewater Facilities
  - Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).

- Recommendations:
  - Add the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD) as an appendix. This was also recommended during the previous audit but has not been implemented.
  - Modify SSMP 11.4 to include the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD). This was also recommended during the previous audit but has not been implemented.
  - Post Appendix K-5 – Funding agreement related to south placer regional wastewater facilities on the website.

SECTION 6 Audit Summary

This section summarizes the level of compliance of the SSMP with the SSMP requirements identified in subsection D.13 and he identified deficiencies as described in **Section 4.1. Table 22** summarizes the result of this evaluation.

Table 22 – Summary of SSMP Compliance Deficiencies

SSMP Requirement	Compliance	Deficiencies
vi(f) Program to ensure containment of SSO to prevent discharge and minimize adverse impacts on the environment	No	SSOERP does not meet certain water quality monitoring requirements of the amended MRP document.

In addition, **Table 23** lists a summary of all recommendations for this audit.

Table 23 – Summary of Audit Recommendations

SSMP Section	Recommendation	Suggested Timeline for Completion
1.2	Post Appendix A-1 – Roseville's SSMP Development Plan and Implementation Schedule on the website.	
2.1	Modify Appendix B-1: Update City Council positions and add phone numbers (Mayor Carol Garcia, Vice Mayor Susan Rohan, City Attorney Robert Schmitt). Update Commissioners and phone numbers: Chair Blandon Granger, Vice Chair John Speight. Update Liaisons and phone numbers for EU Director Richard Plecker, and Secretary Cheryl Hammond. Update Principal EU engineer and phone number for Jason Shykowski. Update Administrative Analyst and phone number for Maurice Chaney.	
2.1	Post the following Appendices on the website: o Appendix B-1 – Personnel Responsible for SSMP Elements o Appendix B-2 – Personnel Responsible for SSO Reporting o Appendix B-3 – Personnel Responsible for Responding to SSOs Weekly Standby	
2.3	Modify Figure 2-2 Flowchart: Update the WWC Divisions overflow emergency response plan chain of communication to match existing operations, whereby WWTP and LS staff and SCADA alerts should always call the 24-hour call center instead of WWC service staff.	
2.3	Include Figure 2-2 flowchart as Appendix F to the SSOERP (Appendix F-1) and mention in the text.	
3.2	Post Appendix C-1 – Pretreatment Program Enforcement Response Plan on the website.	
3.3	Update the related links for Appendices C-3 and C-4 for sanitary sewer design and construction.	
3.7	Post the following Appendices on the website: o Appendix C-5 – Joint Exercise of Powers Agreement for the South Placer Wastewater Authority o Appendix C-6 – Agreement Regarding the Operation and Use of the South Placer Regional Wastewater Facilities o Appendix C-7 – Wastewater Service Agreement by Contract and Operating Agreement between SASD, SRCSD and City of Roseville	
4.2	Post the following Appendices on the website: o Post Appendix D-1 – City of Roseville Sewer Map Grid System on the website. o Post Appendix D-9 – Mapping Update Policy on the website.	
4.3	Update SSMP Section 4.3 Overview with updated statistics about the City's service area, number of customers, miles of main, number of services, and number of lift stations. Also update the number of WWC employees.	

4.3	Update the following Appendices and post on the website: o Appendix D-2 – Maintenance Cleaning Schedule: Update with Maximo CCMS example o Appendix D-3 – CCTV Video Report o Appendix D-4 – SOP	
4.4	Describe the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections, etc.), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data. This was also included during the previous audit but has not been completed.	
4.4	Document the upcoming transition in responsibilities between WWC and EU Engineering in developing and operating the R&R plan by describing it in the SSMP. Confirm that field observations from WWC field crew are accounted for by EU Engineering when conducting risk assessment. This was also included during the previous audit but has not been completed.	
4.4	Post Appendix D-8 – Technical Memorandum O&M Program SSMP Audit-Rehabilitation and Replacement Plan (Element IVC) on the website.	
4.5	Update the following links: o The CWEA website link. o Appendix D-5 – CWEA Certification Handbook link.	
4.6	Update and post the following Appendices on the website: o Appendix D-6 – Equipment Inventory List o Appendix D-7 – Critical Replace Parts List	
5.2	Update Appendix E-1 – Sanitary Sewer Design link.	
5.3	Update Appendix E-2 – Sanitary Sewer System Construction link.	
5.3	Post Appendix E-3 – Technical Memo, SSMP Preparedness Audit Design and Performance Provisions Element V on the website.	
6.3	The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station. This list should also be updated to incorporate new lift stations at Washington Blvd and 7600 Sierra College. This was also recommended during the previous audit but has not been implemented.	
6.3	Modify Figure 6-2 – SSO Procedure Flow Chat, to report SSO category 1 larger than 1,000 gallons to Cal OES within 2 hours per WDR requirements (currently if > 50,000 gal).	
6.3	Post Appendix F-1 – SSOERP on the website along with corresponding attachments	
6.7	Modify SSOERP Appendix C – Water Quality Sampling Procedures to the meet the requirements of the amended MRP. o Account for spill travel time in the surface water and scenarios where monitoring may not be possible to safety concerns or access restrictions once an SSO has stopped. This may be estimated by dropping floatable debris, for instance, and measuring the time required to travel a certain distance. This was also recommended during the previous audit but has not been implemented. o Expand minimum sampling parameters to include appropriate bacterial indicators that have been specifically listed in the beneficial uses of the City's waterways or more broadly listed by the regional Basin Plan. This was also recommended during the previous audit but has not been implemented.	

6.7	Modify SSOERP Appendix C – Water Quality Sampling Procedures to include a list of all of the required equipment that the employee would need to conduct proper sampling. This was also recommended during the previous audit but has not been implemented.	
7.8	Modify the EU Engineering GIS database to include hotspot assets and FSEs and add them as layers to the maps that WWC receives.	
8.2	Modify Appendix I-1 of the SSMP to indicate that the system evaluation and capacity assurance plan will be reviewed and updated every 10 years. This was also recommended during the previous audit but has not been implemented.	
9.3	Incorporate system and financial measures recommended in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP.	
9.3	Update Appendix I-4 and modify it to include document location and review frequency.	
9.3	Modify I-4 – Key Performance Indicators (KPI) FOG section, to reflect the change in responsibilities from IWS to WWC.	
9.4	Consider addition of recommended PM measures in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.	
9.6	Update Appendix I-3 – SSO History (last update 2013).	
9.6	Update SSO trends data in Appendix I-4 – KPI Benchmarking.	
9.6	Consider addition of recommended SSO measures in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.	
10.2	Post this SSMP internal audit to the City website.	
10.2	Schedule the next internal SSMP audit for July-August of 2021.	
10.2	Develop a description manual to replace Appendix J-1 and J-2 of the SSMP, to support each KPI element. This manual describes required information for KPI monitoring, including but not limited to: o Elements definition o How to fill each KPI items o Personnel responsible o Review frequency	
10.3	Update the SSMP change log and add it as an appendix to the SSMP, documenting all changes made to the SSMP since its last certification, indicating when an element was changed/updated and who authorized the change. An example of a change log is shown at Appendix 7.5. This was also recommended during the previous audit but has not been implemented.	
10.3	Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes. This was also recommended during the previous audit but has not been implemented.	
11.2	As of September 2013, the State Water board amended the MRP of the SSS WDR and the City produced a training PowerPoint to City staff, council, and stakeholders regarding the update. Attach the PowerPoint to the SSMP website. This was also recommended during the previous audit but has not been implemented.	
11.2	Post Appendices K-1 – WWC WDR awareness Program and K-2 – Sanitary sewer regulations/WDR PowerPoint presentations on the website.	
11.2	Update Appendix K-3 – Two EU newsletters FOG/medications links.	

11.3	Update SSMP Appendix K-4 – FOG Outreach Program with marketing Plan budget & spending and post it on the website. Consider an additional metric to be used in the KPI that reflects the City's performance in terms of FOG outreach program. Few additional metrics are recommended in **Table 18**. This was also recommended during the previous audit but has not been implemented.	
11.4	Add the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD) as an appendix. This was also recommended during the previous audit but has not been implemented.	
11.4	Modify SSMP 11.4 to include the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD). This was also recommended during the previous audit but has not been implemented.	
11.4	Post Appendix K-5 – Funding agreement related to south placer regional wastewater facilities on the website.	

SECTION 7 Appendices

7.1 Appendix – Historical SSO Data

7.2 Appendix – SSO Data Comparison Charts

7.3 Appendix – Structural SSO GIS Mapping

7.4 Appendix – Key Performance Indicators

7.5 Appendix – Change Log Example

7.1 Appendix – Historical SSO Data

Dated: FY 15/16, FY 16/17, and FY 17/18

SECTION 1 Audit Objectives

This report covers the results of the required Sewer System Management Plan (SSMP) internal audit process for the City of Roseville (City) for fiscal years 2018-2019 (FY 18/19), 2019-2020 (FY 19/20), and 2020-2021 (FY 20/21). The goal of the SSMP is to provide a written framework and plan for properly managing, operating, and maintaining all parts of the sanitary sewer system (collection system). The SSMP will help the City minimizing sanitary sewer overflows (SSOs) and complying with the California State Water Resources Control Board (SWRCB) order No. 2006-0003-DWQ, the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (SSS WDR). The SSMP audit evaluates the effectiveness of the SSMP, by reviewing the performance of the collection system against the performance measures used by the City to evaluate compliance with requirements of the SSS WDRs.

The intention of the SSMP audit is to help the SSMP evolve over time as a "living document" that City continually adjusts after identifying potential enhancements and implementing changes to address any deficiencies to the management, operation and maintenance of the City sanitary sewer collection system. Recently, the SWRCB is proposing a statewide sanitary sewer system order reissuance. The proposed reissuance, which will be built on the existing general order, with a primary focus of reducing the statewide spill volume. This audit briefly discusses the proposed reissued order by the SWRCB and considers recommendations for future compliance.

The City is committed to completing the SSMP internal audit (Audit) on a biennial basis that is consistent with the procedure outlined in Appendix J-1 of the SSMP. The City completed its first Audit for years 2010 and 2011, but subsequently contracted Water Works Engineers (WWE) to conduct the FY 11/12-12/13, FY 13/14-14/15, and FY15/16-17/18 audits. This audit reviews results of the FY 18/19, FY 19/20, and FY 20/21, which is a three-year program. The key objective of this Audit is to review the SSMP compliance, implementation, and effectiveness. This report includes the following key tasks:

1. Review records from previous Audits and confirm deficiencies have been addressed (SECTION 2).
2. Evaluate the City's historical SSO data and performance measures listed in the SSMP (SECTION 3).
3. Using a standardized audit procedure detailed in Section 4, identify deficiencies and provide recommendations that could improve the effectiveness of the SSMP and its compliance with the future reissue order.
4. Analyze the City's preventative maintenance (PM) and rehabilitation and replacement (R&R) programs as it relates to the operation and maintenance of the collection system (Section 5.4).
5. Review the Sanitary Sewer Overflow Emergency Response Plan (SSEORP) for SSOs and identify improvements as needed (Section 5.6).
6. Document all findings during the Audit and retain it on file (SECTION 6).

SECTION 2 Agency Background / System Information

The City of Roseville, in Placer County, is located approximately 16 miles north of the City of Sacramento. Along Interstate 80, Roseville is located adjacent to the City of Rocklin in the north-east and the City of Citrus Heights in the south. The City covers approximately 43 square miles near the base of the foothills of the Sierra Mountains. Typical elevations are within a range of 250 to 100 feet of sea level with an average slope across the City of 0.5% from east to west. Several streams flow through the City (i.e., Dry Creek, Pleasant Grove Creek, Kaseburg Creek, Linda Creek, Cirby Creek, Secret Ravine, and Miners Ravine.).

The City is responsible for the operation and maintenance of a continually growing collection system that has grown over 6% since the last internal audit to now serve approximately 147,000 people. **Table 1** lists key information about the City collection system over the past three Audit periods.

Table 1 – Overview of Collection System

Audit	FY 11/12 – 12/13	FY 13/14 – 14/15	FY 15/16 – 17/18*	FY18/19-20/21*
Miles of Mainline	485.52	501.11	515.7	578.4
Miles of laterals (lower)	235.3	238	266	293

Population served	122,060	128,832	137,213	146590
WWC Staff	25	28	29	33
Annual Budget (FY1/ FY2/ FY3)	$3,400,000/ $3,800,00	$3,700,000/ $4,000,000	$5,069,000/ $5,279,0000	$5,572,264/$5,702,649/$6,258,201
Category 1 SSOs	2	0	1	0
Category 2 SSOs	75	0	1	0
Category 3 SSOs	-	89	85	114

*Three-year audit

The City treats wastewater conveyed through its collection system at two regional wastewater treatment plants that are both owned and operated by the City (i.e., Dry Creek and Pleasant Grove WWTPs). Two other satellite collection systems owned and operated by other agencies (i.e., South Placer Municipal Utility District and Placer County) discharge directly into the City's collection system. A small portion of the City's collection system discharges outside of Roseville and into the Sacramento Area Sewer District (SASD) collection system, which is treated at the Sacramento Regional WWTP. The City is a part of the Central Valley Region 5 (Sacramento sub-region) of the SWRCB.

2.1 Review of Last SSMP Audit

The previous audit for of the City SSMP was conducted by WWE for FY 15/16-17/18 and was completed in September 2019. In the last Audit, a list of approximately 54 recommended actions to address deficiencies or improve the effectiveness of the City SSMP were listed. **Table 2** summarizes identified deficiencies and associated action items, along with a description of the status of the task (i.e., Completed, Ongoing Updates, In/No Progress, Considered) outlined in the last SSMP audit. documents on the City's website and based on information from City staff.

Table 2 – Summary of Findings from the Last SSMP Internal Audit

Element	Action Item	Status
2 – Organization	Post Appendix A-1 – Roseville's SSMP Development Plan and Implementation Schedule on the website.	In Progress
	Modify Appendix B-1: Update City Council positions and add phone numbers (Mayor Carol Garcia, Vice Mayor Susan Rohan, City Attorney Robert Schmitt). Update Commissioners and phone numbers: Chair Blandon Granger, Vice Chair John Speight. Update Liaisons and phone numbers for EU Director Richard Plecker, and Secretary Cheryl Hammond. Update Principal EU engineer and phone number for Jason Shykowski. Update Administrative Analyst and phone number for Maurice Chaney.	Ongoing Progress
	Post Appendix Appendix B-1 – Personnel Responsible for SSMP Elements on the website.	No Progress
	Post Appendix Appendix B-2 – Personnel Responsible for SSO Reporting on the website.	No Progress
	Post Appendix Appendix B-3 – Personnel Responsible for Responding to SSOs Weekly Standby on the website.	No Progress
	Modify Figure 2-2 Flowchart: Update the WWC Divisions overflow emergency response plan chain of communication to match existing operations, whereby WWTP and LS staff and SCADA alerts should always call the 24-hour call center instead of WWC service staff. This was also included during the previous audit but has not been completed.	No Progress
	Include Figure 2-2 flowchart as Appendix F to the SSOERP (Appendix F-1) and mention in the text.	No Progress
3 - Legal Authority	Post Appendix C-1 – Pretreatment Program Enforcement Response Plan on the website.	No Progress
	Update the related links for Appendices C-3 and C-4 for sanitary sewer design and construction.	No Progress
	Post Appendix C-5 – Joint Exercise of Powers Agreement for the South Placer Wastewater Authority on the website.	No Progress
	Post Appendix C-6 – Agreement Regarding the Operation and Use of the South Placer Regional Wastewater Facilities on the website.	In Progress

	Post Appendix C-7 – Wastewater Service Agreement by Contract and Operating Agreement between SASD, SRCSD and City of Roseville on the website.	No Progress
4 - O&M	Post Appendix D-1 – City of Roseville Sewer Map Grid System on the website.	No Progress
	Post Appendix D-9 – Mapping Update Policy on the website.	No Progress
	Update SSMP Section 4.3 Overview with updated statistics about the City's service area, number of customers, miles of main, number of services, and number of lift stations. Also update the number of WWC employees.	Ongoing Progress
	Update Appendix D-2 – Maintenance Cleaning Schedule: Update with Maximo CCMS example and post on the website.	No Progress
	Update Appendix D-3 –CCTV Video Report and post on the website.	No Progress
	Update Appendix D-4 –SOP and post on the website.	No Progress
	Describe the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections, etc.), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data. This was also included during the previous audit but has not been completed.	No Progress
	Document the upcoming transition in responsibilities between WWC and EU Engineering in developing and operating the R&R plan by describing it in the SSMP. Confirm that field observations from WWC field crew are accounted for by EU Engineering when conducting risk assessment. This was also included during the previous audit but has not been completed.	No Progress
	Post Appendix D-8 – Technical Memorandum O&M Program SSMP Audit-Rehabilitation and Replacement Plan (Element IVC) on the website.	No Progress
	Update the CWEA website link.	No Progress
	Update Appendix D-5 – CWEA Certification Handbook Link.	No Progress
	Update and post Appendix D-6 – Equipment Inventory List on the website.	No Progress
	Update and post Appendix D-7 – Critical Replace Parts List on the website.	No Progress
5 - DPP	Update Appendix E-1 – Sanitary Sewer Design link.	No Progress
	Update Appendix E-2 – Sanitary Sewer System Construction link.	No Progress
	Post Appendix E-3 – Technical Memo, SSMP Preparedness Audit Design and Performance Provisions Element V on the website.	No Progress
6 - OERP	The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station. This list should also be updated to incorporate new lift stations at Washington Blvd and 7600 Sierra College. This was also recommended during the previous audit but has not been implemented.	No Progress
	Modify Figure 6-2 – SSO Procedure Flow Chat, to report SSO category 1 larger than 1,000 gallons to Cal OES within 2 hours per WDR requirements (currently if > 50,000 gal).	No Progress
	Post Appendix F-1 – SSOERP on the website along with corresponding attachments	No Progress
	Modify SSOERP Appendix C – Water Quality Sampling Procedures to the meet the requirements of the amended MRP.	No Progress

	o Account for spill travel time in the surface water and scenarios where monitoring may not be possible to safety concerns or access restrictions once an SSO has stopped. This may be estimated by dropping floatable debris, for instance, and measuring the time required to travel a certain distance. This was also recommended during the previous audit but has not been implemented. Expand minimum sampling parameters to include appropriate bacterial indicators that have been specifically listed in the beneficial uses of the City's waterways or more broadly listed by the regional Basin Plan. This was also recommended during the previous audit but has not been implemented.	
	Modify SSOERP Appendix C – Water Quality Sampling Procedures to include a list of all of the required equipment that the employee would need to conduct proper sampling. This was also recommended during the previous audit but has not been implemented.	No Progress
7 – FOG Control Program	Modify the EU Engineering GIS database to include hotspot assets and FSEs and add them as layers to the maps that WWC receives.	No Progress
8 – SECAP	Modify Appendix I-1 of the SSMP to indicate that the system evaluation and capacity assurance plan will be reviewed and updated every 10 years. This was also recommended during the previous audit but has not been implemented.	No Progress
9 – MMM	Incorporate system and financial measures recommended in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP.	No Progress
	Update Appendix I-4 and modify it to include document location and review frequency.	No Progress
	Modify I-4 – Key Performance Indicators (KPI) FOG section, to reflect the change in responsibilities from IWS to WWC.	No Progress
	Consider addition of recommended PM measures in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.	No Progress
	Update Appendix I-3 – SSO History (last update 2013).	No Progress
	Update SSO trends data in Appendix I-4 – KPI Benchmarking.	In Progress
	Consider addition of recommended SSO measures in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.	No progress
10.2	Post this SSMP internal audit to the City website.	Complete
10.2	Schedule the next internal SSMP audit for July-August of 2021.	Complete
10 – SSMP Program Audits	Develop a description manual to replace Appendix J-1 and J-2 of the SSMP, to support each KPI element. This manual describes required information for KPI monitoring, including but not limited to: o Elements definition o How to fill each KPI items o Personnel responsible o Review frequency	No Progress
	Update the SSMP change log and add it as an appendix to the SSMP, documenting all changes made to the SSMP since its last certification, indicating when an element was changed/updated and who authorized the change. An example of a change log is shown at Appendix 7.5. This was also recommended during the previous audit but has not been implemented.	No Progress
	Document the submittal process for proposed changes to the SSMP. The process	No Progress

	may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes. This was also recommended during the previous audit but has not been implemented.	
11 – Communication	As of September 2013, the State Water board amended the MRP of the SSS WDR and the City produced a training PowerPoint to City staff, council, and stakeholders regarding the update. Attach the PowerPoint to the SSMP website. This was also recommended during the previous audit but has not been implemented.	No Progress
	Post Appendices K-1 – WWC WDR awareness Program and K-2 – Sanitary sewer regulations/WDR PowerPoint presentations on the website.	No Progress
	Update Appendix K-3 – Two EU newsletters FOG/medications links.	No Progress
	Update SSMP Appendix K-4 – FOG Outreach Program with marketing Plan budget & spending and post it on the website. Consider an additional metric to be used in the KPI that reflects the City's performance in terms of FOG outreach program. Few additional metrics are recommended in **Table 18**. This was also recommended during the previous audit but has not been implemented.	No Progress
	Add the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD) as an appendix. This was also recommended during the previous audit but has not been implemented.	No Progress
	Modify SSMP 11.4 to include the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD). This was also recommended during the previous audit but has not been implemented.	No Progress
	Post Appendix K-5 – Funding agreement related to south placer regional wastewater facilities on the website.	No Progress

2.2 Review of FY 18/19, FY 19/20, and FY 20/21

The City has prioritized eliminating SSOs from the collection system and was successful preventing Category 1 and Category 2 SSOs during the FY 18/19, FY 19/20 and FY 20/21. The city experienced one Category 3 spill during FY 18/19 which resulted in a 409 gallon spill, which occurred on a lower lateral, caused by roots. Two Additional Category 3 spills over 100 gallons, from which, one occurred on a lower later (caused by pipe failures) and the other occurred on a mainline, which was caused by cross connection with a conduit. All remaining spills were less than 100 gallons, of which, seven of them occurred on mainlines.

SECTION 3 SSO Trends

3.1 Historical SSO Data

A total of 114 Category 3 SSOs occurred during the audit period FY 18/19 (31 SSOs), FY 19/20 (33 SSOs), and FY 20/21 (50 SSOs). **Appendix 7.1** of this report includes the date, location, type, volume, volume recovered, and recovery percentage of total volume of each SSO spill.

One of the City-defined tasks of the Audit is to compare the information submitted to the publicly available California Integrated Water Quality System (CIWQS) database with internal City records. The WWC Superintendent verifies that SSO data in CIWQS is accurate and matches the SSO Field Report Forms. **Table 3** shows an organized view of key data present in the CIWQS and City internal records and shows discrepancies, for the three-year audit period. As shown, Table 3 shows how accurately CIWQS data reflect the City's records, with few exceptions, details of which are listed in **Appendix 7.2**. The information presented in the "Internal Records" column represents a summarized view of various performance measures maintained by the City.

Table 3 – CIWQS and City SSO Historic Data

SSO Historical Data since last SSMP Internal Audit	CIWQS Data FY 18/19	Internal Records FY 18/19	CIWQS Data FY 19/20	Internal Records FY 19/20	CIWQS Data FY 20/21	Internal Records FY 20/21
Total number of potential SSO service calls received	-	288	-	523	-	325
Total number of SSOs reported	31	31	33	33	50	50
Total volume of SSOs [Gal]	869	869	580	520	825	823.7
Total volume of SSOs that reached waters of the state [Gal]	0	0	0	0	0	0
Volume of SSOs recovered [%]	38%	38%	84%	85%	64%	64%
Average SSO response time [h:mm]	0:19	0:21	0:22	0:21	0:18	0:18
Average SSO duration time [h:mm]*	3:59	4:00	4:35	1:47**	6:13	6:12

* Including long-duration SSO events (> 3 hours long) that increased the average SSO duration.

**Missing one City Internal report with large Spill duration. Spill was entered in CIWQS.

The following section investigates the City's historical SSO data to identify potential SSO trends to provide insight into measuring the effectiveness of the City SSMP and future improvements in reducing SSOs. **Figure 1** highlights the category and number of SSOs since FY 06/07. The SWRCB defined three new SSO categories as of September 13th, 2013. A category 1 SSO is currently defined as a spill of any volume that reaches surface water. A Category 2 SSO is currently defined as a spill greater than or equal to 1,000 gallons that does not reach surface water. A Category 3 SSO is currently defined as a spill less than 1,000 gallons that does not reach surface water. **Figure 1** shows an increasing trend on the total number of SSO events per year since FY 16/17 and is limited to Category 3 SSOs only.

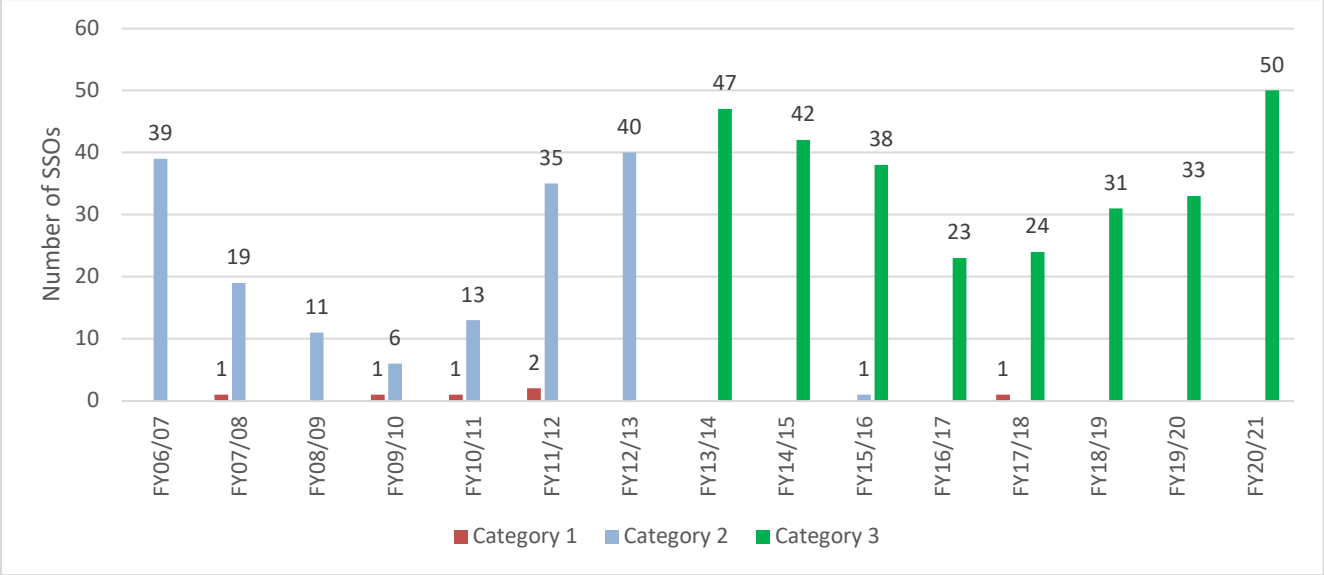

Figure 1 – Number of SSOs per Fiscal Year

With the goal of minimizing the spill volume, another valuable source of analysis is comparing average gallons spilled per SSO across fiscal years. **Figure 2** demonstrates average volume per SSO event since 2007, which equally weight out all spills and shows an annual average. Although, the number of SSO events has increased over the years (See **Figure 1**), **Figure 2** indicates that the average spill volume per incident has decreased during this audit period. It appears that the average volume was higher due to several outliners including the three high-volume spills occurring in FY18/19 (two spills) and FY 19/20 (one spill). As mentioned, during FY 18/19 one of these high-volume incidents occurred by a pipe/structure failure (105 gallons, all of which was recovered). The second spill was caused by roots in a lower lateral (409 gallons, zero gallons recovered). In FY 19/20 one large spill occurred in a mainline caused by Contractor in a mainline (154 gallons, 149 gallons recovered). Given the past records, **Figure 2** shows an average value of about 38 gal/SSO throughout the years. After reviewing the City's performance measures, it appears that the resulted high average volumes were most likely incidental driven and were not related to the SSMP effectiveness or the system performance. In addition, analysis of the City's SSO data showed that in about 21% of the events the City's staff did not see an active spill, in other words, these spills were ended before arrival of the staff. These incidents correspond to 11% of the total spill volume during this audit period.

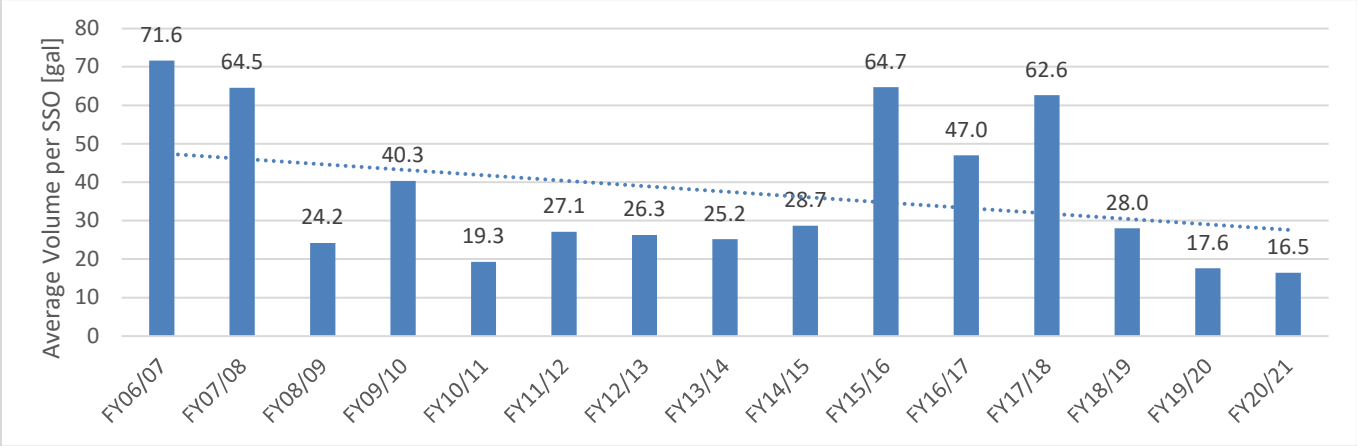

Figure 2 – Average Gallons per SSO

Here, City's average number of SSOs and average spill volume per SSO per 100 miles of sewer pipeline are compared with the results from sub-region Central Valley –Sacramento (part of State Water Control Board Region 5) and California (State), to provide regional context and insight into the City's collection system performance. **Table 4** summarizes these findings, gathered from the SWRCB's annual performance reports. These reports and their related data can be found online at the following link:

https://www.waterboards.ca.gov/water_issues/programs/sso/#prgm_docs

https://www.waterboards.ca.gov/board_info/exec_dir_rpts/

The board has not published similar data for fiscal years later than 2016. However, as shown in **Table 4**, the City average SSOs/100 miles of sewer pipe is far below the average of all municipal agencies in the Central Valley Sacramento region 5, and is lower than the State. The City's average spill volume/100 miles of sewer pipe is an order of magnitude smaller than the state, which highlights how effective the City's SSO preventative maintenance and response program has been.

Table 4 – Regional Comparison of SSO Data

Fiscal Year	Average # of SSOs per 100 miles			Average Spill Volume per 100 miles [gallons]		
	City	Region 5	State	City	Region 5	State
2011/12	4.88	12.4	4.28	132	3,396	13,925
2012/13	5.85	12.72	4.38	154	4,371	8,194
2013/14	6.39	11.96	4.38	160	2,878	4,587
2014/15*	5.71	9.91	4.65	163	6,324	11,484
2015/16*	4.99	8.76	4.01	323	7,484	25,134
2016/17	2.94	Not Available		138	Not Available	
2017/18	3.20	Not Available		196	Not Available	
2018/19	3.56	Not Available		100	Not Available	
2019/20	3.79	Not Available		67	Not Available	
2020/21	3.76	Not Available		95	Not Available	

* These values do not include laterals in the total system size.

Table 5 demonstrates the leading causes of SSOs in this audit period compared to the previous audit period (FY 15/16-17/18). Generally, given the three-year period, the number of SSOs caused by roots has increased, but the volume has decreased by 16%, which results in a lower average SSO volume. Also, FOG related events have decreased during this period. Furthermore, no Capacity-caused SSOs was observed in this audit period. However, SSOs caused by debris and pipe/structure failure have experienced a notable increase in quantity of spills. With debris spills increasing by 53%, while Pipe Failures increased by 157%.

Table 5 – Leading Causes of SSOs in FY18-21 (results from FY15-18 in parenthesis)

By Number		By Volume		By Average Volume per SSO	
Cause	**Number**	**Cause**	**Gallons**	**Cause**	**Gallons**
Roots	70 (62)	Roots	1325.5 (1576)	Roots	19 (25)
FOG	1 (2)	FOG	10 (67)	FOG	10 (34)
Debris	23 (15)	Debris	475.2 (908)	Debris	21 (61)
Pipe Failure	18 (7)	Pipe Failure	244 (2278)	Pipe Failure	14 (325)
Capacity	0 (0)	Capacity	0 (0)	Capacity	0 (0)
Others*	2 (1)	Others*	155 (342)	Others*	78 (342)
Total	114 (87)	Total	2212.7 (5171)	Total	141 (787)

*Includes one vacuum truck incident for this audit, and one contractor incident with a bored conduit.

To track the leading SSO cause, WWE summarized the average SSO volume per cause for the past four audit periods, results are shown in **Figure 3**. The actions planned because of this SSMP Audit will target the leading causes to most effectively reduce the number and more importantly spill volume of SSOs. As shown here, the FY 18/19 - FY 20/21 period has experienced similar average volume of root caused SSOs, lower FOG related spill volumes, and similar average volume for debris caused spills. However, as shown here, pipe failure and incidental SSOs volumes have decreased during this period which would typically correspond with SSOs occurring on residential lateral or small diameter pipes.

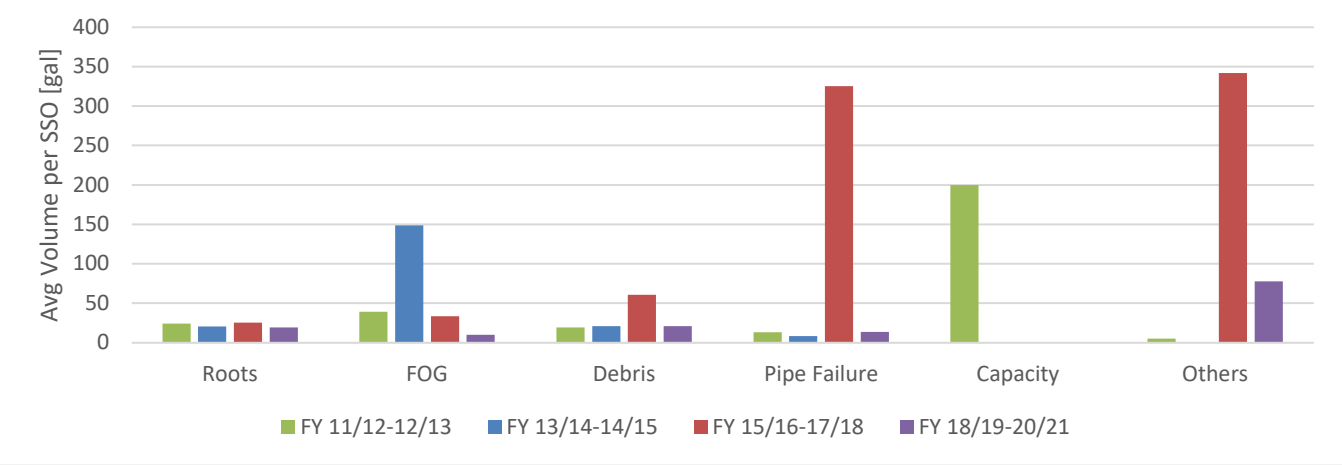

Figure 3 – Average SSO Volume per Cause

3.2 Performance Measures

To achieve proper operation and management of the sanitary sewer system and to prevent SSOs, the City utilizes multiple performance measures to assess the effectiveness of the SSMP. While the City may use other performance measures for evaluation purposes, the following measures are typically used:

- SSO Rate (SSOs per 100 miles of collection system piping per year)
- Number of SSOs for each cause (roots, FOG, debris, pipe failure, capacity, lift station failures, etc.)
- Average SSO volume (gallons)
- Percentage of SSOs greater than 100 gallons (%)
- Percentage of SSOs reported as Category 1 (%)
- Percentage of SSO volume recovered (%)
- Percentage of SSO volume reaching a surface water (%)

The City's SSO records were queried to analyze each performance measure from FY 11/12 to FY 20/21 and the data is shown in **Table 6** below. Overall, there was an increase in the number of SSOs during this audit period, however the City's SSO average has decreased compared to previous years, which was due to smaller-volume incidents, caused by roots and debris.

Table 6 – Performance Measures

Performance Measures		FY 11/12	FY 12/13	FY 13/14	FY 14/15	FY 15/16	FY 16/17	FY 17/18	FY 18/19	FY 19/20	FY 20/21
SSO Rate, SSOs/100 mi		4.88	5.85	6.39	5.71	4.99	2.94	3.20	3.56	3.79	5.74
SSO Cause	FOG	0	1	4	1	2	0	0	1	0	0
	Roots	18	30	32	31	30	20	12	20	17	33
	Debris*	8	2	8	2	4	2	9	8	12	3
	Pipe/Structure Failure	6	4	2	7	3	1	3	2	3	13
	Vandalism	1	0	0	0	0	0	0	0	0	0
	Capacity	0	2	0	0	0	0	0	0	0	0
	Construction	0	0	0	1	0	0	0	0	0	0
	Unknown/Other	2	3	1	0	0	0	1	0	1	1
TOTAL # of SSO		35	42	47	42	39	23	25	31	33	50
Average SSO Vol (gal)		27	26	25	29	65	47	63	28	18	16
% of SSOs > 100 gal		2.8%	2.3%	2.1%	4.7%	2.6%	4.3%	8.0%	6.5%	3.0%	0.0%
Category 1 % of Total SSOs		0%	7%	0%	0%	0%	0%	22.3%	0%	0%	0%
% of Spill Volume Recovered		99%	63%	94%	93%	95%	91%	54%	38%	84%	64%
% of Spill Vol Reaching Surface Water		0%	37%	0%	0%	0%	0%	0.4%	0%	0%	0%

*Includes non-dispersible and rags

SECTION 4 Audit Procedure

In accordance with SSS WDRs Section D.13, the primary SSMP audit objective is to focus on evaluating the effectiveness of implementing the SSMP and the City's compliance with the SSMP requirements identified in the SSS WDRs Order. Also, according to recent SWRCB WDR workshops, it is expected that the statewide general order reissuance, with the primary focus on reducing spill volume, emphasis on the following:

- **Requirements focused on spill volume:** Although the total number of spills has increased over the past few years, the CIWQS data has shown that the state experienced lower volume of spills. While, majority are caused by tree roots, the proposed reissuance will likely require enrollees to demonstrate system-specific spill reduction programs.
- **Improved Data Quality**: With the goal of enhancing data accuracy, additional measures are being considered to provide higher quality spill volume data, such as maintaining certified operators and emphasizing on staff training.
- **Enhanced Order Enforceability**: To address poor performing systems and those with lack of SSMP implementation.
- **To Incentivize Order Compliance**: To recognize and acknowledge systems with good performance.
- **Effective Planning for System Resilience**: To ensure effective and adaptive planning for spill reduction.

This section details the procedures used to meet the existing order, while considering future expectations.

4.1 Review of SSMP Compliance

This Audit assessed the City's SSMP against the requirements outlines in the SSS WDR. The subsections of **SECTION 5** listed below are organized by SSMP elements. Each subsection contains a table which lists the SSS WDR section D.13 requirements and City's level of compliance of the SSMP with that requirement. The compliance status of the City's SSMP is indicated with one of the following ratings: ***Yes*** *– in compliance,* ***No*** *– not in compliance, or* ***N/A*** *– not applicable with a written justification in the SSMP.* If there are any compliance deficiencies, then an explanation of the deficiency is given. Each deficiency will have a recommended SSMP enhancement, which may include action items, adjustments, and/or timelines of the planned completion.

4.2 Review of SSMP Effectiveness

After the SSMP compliance assessment compared to SSS WDR requirements, an evaluation of the effectiveness of the SSMP elements has been conducted to comply with the requirements for SSMP audits per subsection D.13 of the SSS WDR. The discussion review if the plan outlined for each section is being followed, and how effective the plan is at reaching the desired objectives. Recommendations will be made where appropriate based on the results of this Audit to identify tasks to improve the effectiveness of SSMP activities. Performance metrics will be used wherever possible to measure the effectiveness of the SSMP elements.

This section will not repeat the information and plans presented in each section of the SSMP and is intended to evaluate the effectiveness of the stated plans for each SSMP element. The reader should reference the City's SSMP to obtain the information referenced by this Audit.

A summary of the recommended modifications made through this Audit is included in **SECTION 6**.

SECTION 5 Audit of SSMP Elements

This section evaluates all elements of the City's SSMP. Each section of this chapter is associated with one of the eleven elements of the SSMP in accordance with SS WDR section D.13 requirements. Each element is evaluated for compliance and effectiveness described above in 4.1 and 4.2 respectively.

5.1 Goals

5.1.1 Compliance

Table 7 – Compliance with SSS WDR D.13.i - Goals

SSMP Requirement	Compliance	Deficiencies
i Properly manage, operate, and maintain all portions of the City's wastewater collection system.	Yes	-

5.1.2 Effectiveness of SSMP Elements and Recommended Modifications

Roseville Goals (SSMP 1.2)

- Level of Effectiveness: The City currently has seven goals identified in the SSMP. The goals of the City recorded in the SSMP have been effective in guiding the City's activities to support the objective of the SSS WDR to protect the waters of the state.

- Recommendations: Post Appendix A-1 – Roseville's SSMP Development Plan and Implementation Schedule on the website. This was also included during the previous audit but has not been completed.

5.2 Organization

5.2.1 Compliance

Table 8 – Compliance with SSS WDR D.13.ii - Organization

SSMP Requirement	Compliance	Deficiencies
ii(a) Identify Legally Responsible Official (LRO)	Yes	-
ii(b) SSMP responsibility and organization chart	Yes	-
ii(c) Chain of communication for reporting SSOs	Yes	-

5.2.2 Effectiveness of SSMP Elements and Recommended Modifications

List Legally Responsible Official (LRO) (SSMP 2.1)

- Level of Effectiveness: The City has Ken Glotzbach (EU Director) and Dan Pruden (Wastewater Collections Superintendent) listed in CIWQS as LROs. Todd Jordan (Process Engineer) is listed as a data

submitter. Appendix B-1 of the SSMP is not currently publicly accessible. The current organization of data submitters and LROs has proven effective in reporting SSOs to meet the requirements of the September 2013 amended Monitoring and Reporting Program.

- Recommendations:
  - Modify Appendix B-1: Update City Mayor, Vice Mayor, City Attorney, and City Council positions and add phone numbers (Mayor Krista Berrnasconi, Vice Mayor Bruce Houdesheldt, City Attorney Michelle Sheidenberger, Councilmember Tracy Mendonsa). Update Commissioners and phone numbers: Chair Elaine Webb, Vice Chair James knox, Commissioners: Edward Belski, John Delancy, Richard Demarchi, Einar Maisch. Update Liaisons and phone numbers for EU Director Richard Plecker, and Secretary Pam Walsh. Update Assistant EU Director Ken Glotzbach, Wastewater Collection Superintendent Dan Prudent, Waste Water Collection Supervisor positions, Principal EU engineer and phone number for Jason Shykowski. Update Administrative Analyst and phone number for Maurice Chaney.
  - Update and Post the following Appendices on the website:
    - Appendix B-1 – Personnel Responsible for SSMP Elements This was also included during the previous audit but has not been completed.
    - Appendix B-2 – Personnel Responsible for SSO Reporting This was also included during the previous audit but has not been completed.
    - Appendix B-3 – Personnel Responsible for Responding to SSOs Weekly Standby. This was also included during the previous audit but has not been completed.

SSMP Responsibility Organization Chart (SSMP 2.2)

- Level of Effectiveness: The SSMP Responsibility Organization Chart (SSMP Figure 2-1) is current in the SSMP and lists a descriptive definition of each individual's responsibilities. The chart is effective in defining the work flow and responsibilities of the individuals as well as departments within the City of Roseville's operations with relation to the SSMP. The narrative of the general position description is outlined in Section 2.2 of the SSMP.

- Recommendations: No recommendations at this time.

Chain of Communication Reporting Chart (SSMP 2.3)

- Level of Effectiveness: The internal notification contact chart is current and readily available to all wastewater utility district staff. The city of Roseville has a 24-hour call center, standardized answering script and procedures, and a full-time staff wastewater utility customer service representative. The individual's job is to respond to any service calls including but not limited to: backups, SSOs, smell complaints, etc. This has been an effective and well-utilized service, as service calls have increased and the average SSO response time has remained below the 40-minute target. Only 6 SSO response times were above 40 minutes during the audit period (0:42:00, 0:45:00, 0:46:00, 0:41:00, 0:43:00, and 1:05:00) which totaled 51 gallons in spills and the remaining 95% of the responses were under 40 min.

- Recommendations:
  - Modify Figure 2-2 Flowchart: Update the WWC Divisions overflow emergency response plan chain of communication to match existing operations, whereby WWTP and LS staff and SCADA alerts should always call the 24-hour call center instead of WWC service staff per Appendix B-3. This was also included during the previous audit but has not been completed.
  - Include Figure 2-2 flowchart as Appendix F to the SSOERP (Appendix F-1) and mention in the text. This was also included during the previous audit but has not been completed.

5.3 Legal Authority

5.3.1 Compliance

Table 9 – Compliance with SSS WDR D.13.iii – Legal Authority

SSMP Requirement	Compliance	Deficiencies
iii(a) Prevent illicit discharges	Yes	-
iii(b) Properly designed and constructed sewers	Yes	-
iii(c) Ensure access to laterals owned/maintained by City	Yes	-
iii(d) Limit the discharge of FOG and other debris	Yes	-
iii(e) Enforce any violation of City ordinances	Yes	-

5.3.2 Effectiveness of SSMP Elements and Recommended Modifications

Industrial Pretreatment Program (SSMP 3.2)

- Level of Effectiveness: The Industrial Waste Section (IWS) administers the Pretreatment Program Enforcement Response Plan and implements enforcement procedures specified by the U.S. EPA in accordance with 40CFR 403.5 (f) (5). The IWS has the authority to permit and monitor significant industrial users (SIUs) and small commercial/industrial dischargers. The implementation of the Pretreatment Program Enforcement Response Plan has been effective in providing the City the authority to control and prevent illicit discharges to the collection system.

- Recommendations: Post Appendix C-1 – Pretreatment Program Enforcement Response Plan on the website. This was also included during the previous audit but has not been completed.

Municipal Code and Design and Construction Standards (SSMP 3.3)

- Level of Effectiveness: The City's design and construction standards regulate the preparation of plans for construction of additions/improvements to the sewer. The Roseville Municipal Code (RMC) section 14.12.040 requires that building sewer and connection into the public sewer system conform to the requirements of the building and plumbing code or other applicable rules and regulations of the City. The RMC also requires an installation of a lateral line clean out at the point of connection with the public sewer. The City design and construction standards and the RMC section 14.12.040 have been effective in providing the City the legal authority to properly design and construct the sewers and connections.

- Recommendations: Post Appendices C-2, C-3, and C-4 for Municipal Code, sanitary sewer design and construction.

Municipal Code – Sewer Access Authority (SSMP 3.4)

- Level of Effectiveness: The Charter in the RMC, Article X Sec. 10.01 designates the authority to access City owned and operated facilities, either within or outside its corporate limits, number of activities including, but not limited to maintenance, inspection, and repair related to sewage collection. The authority gives legal access to all City-owned sewer facilities. The City has not had issues to date with lack of access to facilities based on legal authority. The current legal authority to access sewer facilities has been effective in supporting the goals of the SSMP.

- Recommendations: No recommended modifications at this time.

Municipal Code – FOG (SSMP 3.5)

- Level of Effectiveness: The RMC chapter 14.14 is a robust FOG ordinance that lists regulatory requirements, fees, administrative requirements, and authority to enforce regulatory compliance. This ordinance is effective in identifying the required equipment and BMPs for FSEs as well as indicating the authority of the City to enforce the FOG requirements.

- Recommendations: No recommended modifications at this time.

Municipal Code – Enforcement Authority (SSMP 3.6)

- Level of Effectiveness: The RMC section 14.12.060 authorizes the City to penalize violators of the City's code requirements. At the discretion of the City attorney, an individual may be charged with an infraction or a misdemeanor. The authority to penalize infractions that may cost City resources has proven effective to maintain proper use of the wastewater collection system.

- Recommendations: No recommended modifications at this time.

Inter-Agency Agreements and Satellite Systems (SSMP 3.7)

- Level of Effectiveness: The City maintains a Joint Exercise of Powers Agreement for the South Placer Wastewater Authority and Agreement Regarding the Operation and use of the South Placer Regional Wastewater Facilities. In addition, the City has an Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).

- Recommendations: Post the following Appendices on the website:
    - Appendix C-5 – Joint Exercise of Powers Agreement for the South Placer Wastewater Authority. This was also included during the previous audit but has not been completed.

- Appendix C-6 – Agreement Regarding the Operation and Use of the South Placer Regional Wastewater Facilities. This was also included during the previous audit but has not been completed.
- Appendix C-7 – Wastewater Service Agreement by Contract and Operating Agreement between SASD, SRCSD and City of Roseville. This was also included during the previous audit but has not been completed.

5.4 Operation and Maintenance Program

5.4.1 Compliance

Table 10 – Compliance with SSS WDR D.13.iv – O&M Program

SSMP Requirement	Compliance	Deficiencies
iv(a) Collection system maps	Yes	-
iv(b) Preventive O&M activities	Yes	-
iv(c) Rehabilitation and Replacement (R&R) plan	Yes	The City does have an R&R plan in place, but additional improvement should be implemented (see below)
iv(d) Training	Yes	The City provides regular training but additional improvements to the training program should be implemented (see below)
iv(e) Equipment and critical replacement parts	Yes	-

5.4.2 Effectiveness of SSMP Elements and Recommended Modifications

Roseville Collection System Maps (SSMP 4.2)

- Level of Effectiveness: The city maintains electronic and hard copy maps of the sanitary sewer system and storm drain system. Updates to the electronic map system are translated to the field crew trucks via single sheet prints, if required. Full hard copy mapbooks are updated on a yearly basis. The City Mapping Update Policy is followed to ensure mapping is correct and completed in GIS and made available to the required users. The mapping policy document is added to the SSMP as an appendix and is posted to the City's SSMP website page.

- Recommendations: Post the following Appendices on the website:
  - Appendix D-1 – City of Roseville Sewer Map Grid System. This was also included during the previous audit but has not been completed.
  - Appendix D-9 – Mapping Update Policy. This was also included during the previous two audits but has not been completed.

Roseville Preventive Operations & Maintenance Activities (SSMP 4.3)

- Level of Effectiveness: WWC engages in various programs to complete routine preventative maintenance activities, which include jet cleaning, lateral eeling, chemical root control, CCTV inspections, visual inspections, and lift station maintenance.

  According to **Table 6**, the City experienced an increase in root-caused SSOs during the last year of the audit period, which is explained by the decrease of total sewer lateral mechanical cleaning (eeled), as shown in **Table 11**. The City outperformed preventative maintenance targets and past performance measures as evident in **Table 11,** with the exception of Sewer main flushed per year (miles) during FY 18/19, and FY 19/20, which may have been related to an equipment maintenance issue (see **Table 12**). Other performance measures or benchmarks are reviewed in full in the recommendations of **Section 5.9**.

Table 11 – Performance Measures related to SSS WDR D.13.iv(b)

Performance Measure	Target	FY 13/14	FY 14/15	FY 15/16	FY 16/17	FY 17/18	FY 18/19	FY 19/20	FY 20/21
Total number of sewer maintenance field staff	NA	23	24	24	24	26	24	26	26
Sewer main flushed per year (miles)	250	330	284	248	295	283	226.1	235.9	296.14
Sewer laterals mechanically cleaned (eeled) per year (miles)	8	13.89	14.69	14.77	7.41	1.07	268	265	74
Average high velocity cleaning per crew per day [LF]	1670	2393	2922	2618	3115	2998	N/A	N/A	N/A
Average cost of hydro cleaning [$/LF]	0.36	0.30	0.32	0.33	0.29	0.32	0.34	0.34	0.34
Average cost of sewer mechanical cleaning [$/LF]	1.60	1.23	1.20	0.77	0.94	1.66	0.30	0.30	0.30

- Recommendations:
  - Update SSMP Section 4.3 Overview with updated statistics about the City's service area, number of customers, miles of main, number of services, and number of lift stations. Also update the number of WWC employees.
  - Update the following Appendices and post on the website:
    - Appendix D-2 – Maintenance Cleaning Schedule: Update with Maximo CCMS example. This was also included during the previous audit but has not been completed.
    - Appendix D-3 – CCTV Video Report. This was also included during the previous audit but has not been completed.

- Appendix D-4 – SOP. This was also included during the previous audit but has not been completed.

Rehabilitation and Replacement Plan (SSMP 4.4)

- Level of Effectiveness: The City regularly CCTV inspects pipelines using the national Association of Sewer Service Companies (NASSCO) Pipeline Assessment Certification Program (PACP) coding standard. The City evaluates the risk of failure for each asset based on the various data sources it maintains (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections) and assigns high risk assets in a ranked Rehabilitation and Replacement (R&R) Plan. If an R&R project is not completed in one year, then it is rolled over to the next. The City maintains a 5-year list of planned R&R CIP projects.

  The city creates an asset group in their Maximo CCMS, based on their condition assessment and PACP scores. This ongoing list is prioritized and provided to Tech Services, when CIP budget is prepared, to put a CIPPP project together. Also, while performing routine hydro work in the grids, the vactor group performs manhole inspections of each asset. Once there are enough manholes that require rehabilitation, the City produces a list with asset IDs that will be sent to Tech Services for manhole Rehabilitation CIP. In the past 9 years, the City has not discovered a substantial number of manholes to develop a manhole CIP project.

  In accordance with the City-utilized performance measures related to inspection and R&R program activities as displayed in **Table 12**, the City has met or exceeded majority of inspection targets during this audit program. However, total miles of mainline rehabilitated during this three-year were less than the target. SSOs caused by structural failure during the audit period are overlaid with the City's 2018 I/I study and shown in **Appendix 7.3.** As shown, most of these spills occurred in regions with older pipes, such as region 5, 15, and 15A. These regions are also known for their higher I/I response and capacity issues during wet seasons. The City has been actively performing I/I analysis and smoke testing to identify system defects in these regions, results of which are incorporated in CIP decision makings.

Table 12 – Performance Measures related to SSS WDR D.13.iv (c)

Performance Measure	Target	FY 13/14	FY 14/15	FY 15/16	FY 16/17	FY 17/18	FY 18/19	FY 19/20	FY 20/21
Total miles visually inspected per year (not CCTV)	0.25	0.25	0.25	0.18	0.25	0.25	0	0	0
Lateral CCTV inspected per year [miles]	16	14.69	26	35.71	32.51	36.14	29.74	22.46	27.88
Main CCTV inspected per year [miles]	30	53.27	65	84.32	59.71	64.1	119.9	94.65	38.57
Laterals rehabilitated per year [number]	50	90	43	60	85	89	74	82	110
Laterals rehabilitated or replaced per year [miles]	0.25	0.39	0.16	0.27	0.66	0.42	0.45	0.46	0.62
Mains Rehabilitated or replaced per year [miles]	5	2.65	6	0	0	1.07	0.05	0.09	3.4
Average Cost of CCTV (lateral) [$/LF]	1.34	1.46	1.11	1.15	1.04	1.00	1.24	1.29	1.28
Average cost of CCTV (main) [$/LF]	0.53	0.55	0.41	0.41	0.36	0.40	0.60	0.75	1.85

- Recommendations:
  - Describe the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections, etc.), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data. This was also included during the previous two audit but has not been completed.
  - Document the upcoming transition in responsibilities between WWC and EU Engineering in developing and operating the R&R plan by describing it in the SSMP. Confirm that field observations from WWC field crew are accounted for by EU Engineering when conducting risk assessment. This was also included during the previous two audits but has not been completed.
  - Post Appendix D-8 – Technical Memorandum O&M Program SSMP Audit-Rehabilitation and Replacement Plan (Element IVC) on the website. This was also included during the previous audit but has not been completed.

Training (SSMP 4.5)

- Level of Effectiveness: The WWC requires employees be certified with CWEA, DMV, CPR, First Aid, Confined Space Policy, Gas Detector Policy, as well be trained in equipment safety, maintain OSHA rules, and review material safety data sheets.

  The existing training program has been effective in supporting a well-trained staff. Over this audit period WWC has reported 10 on the job accidents in FY 18/19, 8 in FY 19/20, and 6 in FY 20/21, which are more than previous audits however the number of accidents has declined year over year. WWC strives for

zero-on-the-job accidents and has weekly tail-gate training meetings and monthly training sessions where WWC staff is trained in part via various SOPs.

- Recommendations: Update the following links:
  - The CWEA website link. This was also included during the previous audit but has not been completed.
  - Appendix D-5 – CWEA Certification Handbook link. This was also included during the previous audit but has not been completed.

Equipment and Critical Replacement Parts (SSMP 4.6)

- Level of Effectiveness: WWC maintains a list of equipment and critical replacement parts inventory in Appendix D of the SSMP. The critical replacement parts list is 100% stocked, up to date, and is maintained by the Material Technician at Dry Creek WWTP. The equipment and critical replacement parts inventory and upkeep is effective and ensures that a lift station critical part failure can be quickly mitigated.

- Recommendations: Update and post the following Appendices on the website:
  - Appendix D-6 – Equipment Inventory List. This was also included during the previous audit but has not been completed.
  - Appendix D-7 – Critical Replace Parts List. This was also included during the previous audit but has not been completed.

5.5 Design and Performance Provisions

5.5.1 Compliance

Table 13 – Compliance with SSS WDR D.13.v – Design and Performance Provisions

SSMP Requirement	Compliance	Deficiencies
v(a) Sanitary sewer design and construction specifications	Yes	-
v(b) Procedures and standards for inspecting and testing new and R&R projects	Yes	-

5.5.2 Effectiveness of SSMP Elements and Recommended Modifications

Sanitary Sewer Design and Specifications (SSMP 5.2)

- Level of Effectiveness: The City's design and construction standards are available on the website and the online SSMP documentation lists their location. These designs and construction standards are effective in ensuring that new or rehabilitated infrastructure is designed and constructed in an acceptable manner.

- Recommendations: Update Appendix E-1 – Sanitary Sewer Design link. This was also included during the previous audit but has not been completed.

Sanitary Sewer System Construction and Performance Provisions (SSMP 5.3)

- Level of Effectiveness: The City's construction and design standards include procedures and requirements for the testing of new/rehabilitated assets and has been effective in ensuring that recently constructed assets perform as expected.

- Recommendations:
  - Update Appendix E-2 – Sanitary Sewer System Construction link. This was also included during the previous audit but has not been completed.
  - Post Appendix E-3 – Technical Memo, SSMP Preparedness Audit Design and Performance Provisions Element V on the website. This was also included during the previous audit but has not been completed.

5.6 Overflow Emergency Response Plan

5.6.1 Compliance

Table 14 – Compliance with SSS WDR D.13.vi - OERP

SSMP Requirement	Compliance	Deficiencies
vi(a) Proper notification procedures	Yes	-
vi(b) Program for appropriate SSO response	Yes	-
vi(c) Procedure for prompt notification to regulatory agencies	Yes	-
vi(d) Procedures for appropriate staff and contractor training	Yes	
vi(e) Procedures to address emergency operations (e.g., traffic, crowd control)	Yes	-
vi(f) Program to ensure containment of SSO to prevent discharge and minimize adverse impacts on the environment	No	SSOERP does not meet certain water quality monitoring requirements of the amended MRP document

5.6.2 Effectiveness of SSMP Elements and Recommended Modifications

Notification Procedures (SSMP 6.2)

- Level of Effectiveness: The average SSO response time during the audit period was 20 minutes, with 21 minutes for FY 18/19, 21 minutes for FY 19/20, and 18 minutes for FY 20/21 (see **Table 3**). These response times are much faster than the City target response time of 40 minutes and indicates that the notification procedures employed the City are effective in facilitating a rapid response from the City's first responders.

- Recommendations: No recommended modifications at this time.

Response Program (SSMP 6.3)

- Level of Effectiveness: SSO response procedures are documented in Appendix F-1 Section 2 of the SSMP and are summarized in the flow chart in Figure 6-2 of the SSMP and Appendix F-1 SSOERP. The flow chart uses a series of yes/no questions to guide SSO responders in quickly identifying the right sequence of decisions and actions to properly assess and mitigate an SSO. This chart is simple and effective in explaining the process in which to mitigate an SSO.

  During the audit period, the average SSO volume spilled was 21 gallons, with an average 62% recovered from the total SSO volume. Similarly, the average SSO duration length was 4:55 hours long, however there were 20 long-duration SSOs (over 3 hours) that caused the average SSO duration length to increase. One of these SSOs in FY 20/21 spilled from a lateral for 94 hours and resulted in volume spilled of 1.5 gallons. In all these instances, the City was notified very late, and once notified, stopped all long duration SSOs in under 30 minutes. The average City response time to SSO calls during the audit period was 20 minutes, and the average time it took to stop the SSO (SSO mitigation) once on-site was just under 5 minutes. These statistics demonstrate that the City has been effective in responding and mitigating SSOs.

- Recommendations:
  - The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station. This list should also be updated to incorporate new lift stations at Washington Blvd and 7600 Sierra College. This was also recommended during the previous two audits but has not been implemented.
  - Modify Figure 6-2 – SSO Procedure Flow Chat, to report SSO category 1 larger than 1,000 gallons to Cal OES within 2 hours per WDR requirements (currently if > 50,000 gal). This was also recommended during the previous audit but has not been implemented.
  - Post Appendix F-1 – SSOERP on the website along with corresponding attachments. This was also recommended during the previous audit but has not been implemented.

Regulatory Notification Procedure (SSMP 6.4)

- Level of Effectiveness: The Superintendent and Utility Manager are the legally responsible officials (LRO) for certifying SSO reports submitted to CIWQs. The Superintendent and Supervisor are also responsible for reporting the SSOs to RWQCB, OES, and Placer Environmental Health Department as required. This section is effective in conveying the responsibility the LRO in reporting SSOs to the proper authorities.

- Recommendations: No recommended modifications at this time.

Staff and Contractors Training (SSMP 6.5)

- Level of Effectiveness: Each WWC employee is required to complete the SSO response procedure training updates and review of SSO training are included in the weekly tailgate meeting throughout the year. They are also trained on the various SOPs implemented within WWC. Contractors are also required to implement the procedures identified in the SSO training prior to working within the collection system. As evidenced by the fast response and mitigation times, the WWC staff's training has been effective.

- Recommendations: No recommended modifications at this time.

Emergency Response Coordination (SSMP 6.6)

- Level of Effectiveness: WWC employees are required to complete the Emergency Action plan training annually. This covers HAZ WOPER first responders and Roseville's Incident Command System (ICS). These process, procedures, and response systems are also reviewed via weekly safety tail gate meetings. These training sessions have been effective way to prepare staff to deal with hazardous waste and materials.

- Recommendations: No recommended modifications at this time.

Spill Mitigation and Containment Procedure (SSMP 6.7)

- Level of Effectiveness: Appendix F-1 of the SSMP includes an SSOERP which includes an SOP for estimating spill volumes, containment, and mitigation of spills. The new amended Monitoring and Reporting Program (MRP) requirements implemented in September 2013 require a robust water quality monitoring plan that must account for spill travel time in surface water, among several new requirements. The City's current SSOERP Appendix C Water Quality Sampling Procedures document does not meet these requirements.

- Recommendations:
    - Modify SSOERP Appendix C – Water Quality Sampling Procedures to the meet the requirements of the amended MRP.
        - Account for spill travel time in the surface water and scenarios where monitoring may not be possible to safety concerns or access restrictions once an SSO has stopped. This may be estimated by dropping floatable debris, for instance, and measuring the time required to travel a certain distance. This was also recommended during the previous audit but has not been implemented.
        - Expand minimum sampling parameters to include appropriate bacterial indicators that have been specifically listed in the beneficial uses of the City's waterways or more

broadly listed by the regional Basin Plan. This was also recommended during the previous audit but has not been implemented.

- Modify SSOERP Appendix C – Water Quality Sampling Procedures to include a list of all of the required equipment that the employee would need to conduct proper sampling. This was also recommended during the previous audit but has not been implemented.

5.7 FOG Control Program

5.7.1 Compliance

Table 15 – Compliance with SSS WDR D.13.vii – FOG Control Program

SSMP Requirement	Compliance	Deficiencies
vii(a) Public education plan	Yes	-
vii(b) FOG disposal plan	Yes	-
vii(c) Legal authority to prohibit SSOs and blockages caused by FOG discharges	Yes	-
vii(d) BMPs, grease removal devices, recordkeeping, and reporting requirements	Yes	-
vii(e) Authority to inspect and enforce FOG ordinance	Yes	
vii(f) FOG Characterization Assessment and Hot Spot Cleaning Schedule	Yes	-
vii(g) FOG Control Program Measures	Yes	-

5.7.2 Effectiveness of SSMP Elements and Recommended Modifications

Public Education Plan (SSMP 7.2)

- Level of Effectiveness: The City has developed and operates a comprehensive FOG outreach program to residents, restaurants, and the plumbing community on the proper disposal of FOG. The main objective is to educate the City of Roseville residents and restaurants on the proper disposal of FOG to meet or exceed outreach standards set forth in the State General WDR requirements. The program has implemented TV ads, flyers, bill inserts, and websites to convey the message of educating the public on the proper disposal of FOG and other substances. This system appears to be effective in educating the public on the proper disposal of FOG and other substances. Maurice Chaney is listed as responsible party for FOG public Education Plan in Appendix B-1.

- Recommendations: No modifications recommended at this time.

FOG Disposal Plan (SSMP 7.3)

- Level of Effectiveness: During the past audit periods the Industrial Waste Section (IWS) oversaw the FOG disposal plan with permitted Food Service Establishment (FSE), however all FOG program-related responsibilities transitioned to WWC in 2016. The City currently has 421 FSEs that are required to and

have obtained a FOG wastewater discharge permit (FOG WDP). The same City regulations from the audit period are in place which require permittees to retain a minimum 3 years of documentation to prove the proper cleaning, maintenance, and removal of FOG from grease control devices and the disposal site location. The City provides information about the permitting process and permit applications on the City website (URL address below) as a resource for businesses and residences within the City. (https://livesewersmart.com/)

The FOG record keeping requirements for FSEs appear to be effective in that only 1 FOG-related SSOs occurred over the audit period.

- Recommendations: No modifications recommended at this time.

Record Keeping Requirements (SSMP 7.4)

- Level of Effectiveness: As discussed in the previous section, FOG control program responsibilities transitioned from IWS to WWC in 2016, but during the audit period, IWS operated the program. The City requires in RMC Section 14.14.260 that permitted FSEs retain logbooks on grease control device maintenance cycles, FOG hauling records, sampling data and sludge height monitoring in FOG control devices, BMPs, and records of private lateral SSOs and subsequent mitigation. The recordkeeping requirements and time frames identified in the RMC have enough information necessary for the City to enforce permit requirements of FSEs.

- Recommendations: No modifications recommended at this time.

Legal Authority to Prohibit SSOs and Blockages Caused by FOG Discharges (SSMP 7.5)

- Level of Effectiveness: The RMC Section 14.12.050 provides the City with a FOG ordinance and legal authority to require FOG interceptors when deemed necessary by the director. The ordinance prohibits FOG-related blockages and SSOs and limits the maximum allowable concentration of FOG in FSE discharges at the current level of 100 mg/L of wastewater. This ordinance is effective in providing the City with the tools necessary to minimize FOG discharges into the sewer system.

- Recommendations: No modifications recommended at this time.

BMP, Grease Removal Devices, Recordkeeping, and Reporting Requirements (SSMP 7.6)

- Level of Effectiveness: The City requires all FSEs that discharge FOG to acquire a FOG WDP permit which includes provisions for FSEs to maintain BMPs and grease interceptors, cleaning records, and to report private FOG-related SSOs or blockages. The FOG WDP requirements are effective in providing the City with the tools to limit FOG discharges into the sewer system.

- Recommendations: No modifications recommended at this time.

Inspection and Enforcement Authority – FOG Producers (SSMP 7.7)

- Level of Effectiveness: All FSEs that discharge FOG are required to obtain and comply with a City FOG WDP. Under the permit, the FSE must comply with the FOG ordinance as detailed under the RMC, and the City maintains the legal authority to physically inspect the FSE and determine if it is in compliance. The City possesses effective tools to regulate FOG discharges via a robust FOG ordinance which also requires an effective FSE inspection program. Under oversight from WWC, the City plans on inspecting at least 294 FSEs each fiscal year During this audit, the city documented 0 FSE inspections for FY 18/19, 0 inspections for FY 19/20, and 221 inspections for FY 20/21. The lack of inspections could be due to equipment or due to Covid Pandemic however since only one SSO was caused by FOG, the FOG inspection and enforcement authority element of the SSMP has been effective.

- Recommendations: No modifications recommended at this time.

FOG Characterization Assessment and Hot Spot Cleaning Schedule (SSMP 7.8)

- Level of Effectiveness: The City has been effective in limiting FOG-related SSOs to one during the three-year audit period by identifying and placing assets impacted by FOG as a last resort on the hot-spot, high frequency 3-month cleaning list. If the City encounters abnormal FOG levels in a pipe it will first reach out to FSEs and residents that it thinks may be contributing to it and distribute pamphlets to them to minimize FOG discharges. If that does not solve the problem, then the asset is put on the hot-spot list. Approximately 60% of the 90 hot-spot assets have FOG-related issues that require significant City resources to clean every 3 months.

- Recommendations:
    - Modify the EU Engineering GIS database to include hotspot assets and FSEs and add them as layers to the maps that WWC receives.

FOG Control Program Measures (SSMP 7.9)

- Level of Effectiveness: The City has established that all FOG-producing FSEs acquire a FOG WDP which limits discharge of FOG, requires proper O&M records, hauling record, BMPs, and other conditions. The FOG Control Program measure provides the City's with an effective tool to limit FOG discharges from FSEs.

- Recommendations: No modifications recommended at this time.

5.8 System Evaluation and Capacity Assurance Plan

5.8.1 Compliance

Table 16 – Compliance with SSS WDR D.13.viii - SECAP

SSMP Requirement		Compliance	Deficiencies
viii(a)	Evaluate hydraulic deficiencies	Yes	-
viii(b)	Establish design criteria	Yes	-
viii(c)	Establish short- and long-term CIP	Yes	-
viii(d)	Develop schedule of completion dates for CIP	Yes	-

5.8.2 Effectiveness of SSMP Elements and Recommended Modifications

Evaluation Process – Capacity Enhancement Projects (SSMP 8.2)

- Level of Effectiveness: The City has developed two hydraulic simulation models to identify peak flows in the collection system in 2006. In addition, the City developed a new hydraulic model and System Evaluation and Capacity Assurance Plan (SECAP) in 2017, which was done by Woodard and Curran. The modeling efforts conducted in 2006 and 2017 have been effective in evaluating the system and planning for future growth, which is evident from no capacity-deficiency-related SSOs during this audit period. In 2018, Water Works Engineers (WWE) conducted a follow up I/I study upon the existing 2017 model to further analyze results and identify basins and assets with high I/I response. The results of the 2018 I/I study is being actively used by the City as their I/I reduction program base.

- Recommendations: Modify Appendix I-1 of the SSMP to indicate that the system evaluation and capacity assurance plan will be reviewed and updated every 10 years. This was also recommended during the previous two audit but has not been implemented.

Design Criteria (SSMP 8.3)

- Level of Effectiveness: The City established a 10-year, 24-hour peak design storm for the hydraulic wet weather loading of the existing collection system along with flow generation factors based on water use records and flow monitoring data. Based on the lack of capacity-related SSOs during the audit period, it appears the City's capacity design criteria are effective.

- Recommendations: No recommended modifications at this time.

Capacity Enhancement Measures (SSMP 8.4)

- Level of Effectiveness: The SPWA Wastewater Systems Evaluation includes the identification of short and long-term Capital Improvement Project (CIP) to meet current and future wastewater flows. The new hydraulic model introduced in 2017 provides new capacity enhancement measures.

- Recommendations: No modifications recommended at this time.

Capital Improvement Program Schedule (SSMP 8.5)

- Level of Effectiveness: The City lists the goal of the CIP is to develop annual project bundles of approximately $1.5 to $2.0 million based on WWC condition assessment data and the hydraulic model CIP results and subsequent flow monitoring or studies. The CIP schedule is effective in identifying the tasks required to assure hydraulic capacity within the collection system.

- Recommendations: No modifications recommended at this time.

5.9 Monitoring, Measurement, and Program Modifications

5.9.1 Compliance

Table 17 – Compliance with SSS WDR D.13.ix – MMM

SSMP Requirement	Compliance	Deficiencies
ix(a) Maintain metrics to prioritize SSMP activities	Yes	-
ix(b) Measure effectiveness of SSMP elements	Yes	The City does have performance indicators linked with SSMP elements, but additional improvements should be implemented (see below)
ix(c) Assess preventative maintenance program	Yes	-
ix(d) Update elements based on evaluations	Yes	-
ix(e) Identify and illustrate SSO trends	Yes	-

5.9.2 Effectiveness of SSMP Elements and Recommended Modifications

Utility Metrics to Prioritize SSMP Activities (SSMP 9.2)

- Level of Effectiveness: The WWC tracks four categories of utility metrics to monitor and measure the effectiveness of the various elements of this SSMP, which include system information, financial information, sewer maintenance, and performance measures. The city also tracks various performance measures related to various SSMP elements and they are summarized in **Appendix 7.4**. Appendix I has effectively been used to identify and track the specific metrics each of the City's four categories.

- Recommendations: No modifications recommended at this time.

Metrics to Monitor Effectiveness of SSMP (SSMP 9.3)

- Level of Effectiveness: The utility metrics listed in Appendix I-4 pertain to different overseeing departments within the City, and the coordination between these different Departments in measuring/monitoring various metrics and sharing results has been effective in ensuring the SSMP goals have been met.
- Recommendations:

- Incorporate system and financial measures recommended in **Table 18,** from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP.
- Update Appendix I-4 and modify it to include document location and review frequency.
- Modify I-4 – Key Performance Indicators (KPI) FOG section, to reflect the change in responsibilities from IWS to WWC.

Metrics to Assess Preventative Maintenance Program (SSMP 9.4)

- Level of Effectiveness: The City's current utility metrics Appendix I defines the frequency and type of utility metric that is being tracked to measure SSMP effectiveness. This is effective because it allows the city to monitor performance of particular activities and compare against SSO trends to determined data correlations. These metrics do not all have associated goals or targets, however, which makes it hard to track whether the activity is meeting the intended result.

- Recommendations: Consider addition of recommended PM measures in **Table 18,** from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.

SSMP Performance Monitoring and Update Process (SSMP 9.5)

- Level of Effectiveness: Individual staff oversee various SSMP element performance indicators. The City tracks all revisions/updates with the SSMP using a revision log that is maintained by the LRO. The log is effective documenting changes to the SSMP and encourages the use of the SSMP as a living document.

- Recommendations: No modifications recommended at this time.

SSO Trends – Frequency, Location and Volume (SSMP 9.6)

- Level of Effectiveness: The City tracks a comprehensive list of performance metrics that are included in Appendix I-4 of the SSMP and summarized in **Table 19**. This allows the City to quickly identify and respond to changing trends in SSOs over time. These metrics are monitored on a monthly, quarterly, semi-annual, and annual basis.

- Recommendations:
  - Update Appendix I-3 – SSO History (last update 2013).
  - Update SSO trends data in Appendix I-4 – KPI Benchmarking.
  - Consider addition of recommended SSO measures in **Table 18,** from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.

Table 18 –Recommended Additional Performance Indicators

Description	Performance Indicator	Unit
System Information	Total System Length	miles
	Service Area	sq. miles

	Population	people
	# maintenance Holes	MHs
	# Pump Stations PS/ Lift Station	number
	Sewer < 8 inch	miles
	8 inches < sewer < 15 inches	miles
	15 inches < sewer < 21 inches	miles
	21 inches < sewer < 42 inches	miles
	Average age of system	years
	New sewer main installation	miles
	New sewer lateral installation	miles
	WWC Staff	number
Financial Information	Total annual division budget	$
	Total annual O&M budget	$
	O&M budget of annual	%
	Lift station O&M cost	$
	Lift station O&M cost of annual	%
	Annual capital for sewer rehab	$
	Sewer monthly rate for residents	$
O&M	Certified operators	number
	O&M field staff	number
	Average high velocity cleaning per crew per day	LF
	Total visually inspected per year (not CCTV)	miles
SSO	Number of SSO calls received	number
FOG	Public education outreach budget per year	$
	Public education outreach budget of annual	%

Table 19 – Current Performance Measures to Monitor SSO Trends

Performance Measure	Unit	Target	Source
SSOs - Total number, mains and laterals	Number	-	A, B
SSOs - Total volume, mains and laterals	Gal	-	A, B
SSOs - Total volume recovered	Gal	-	B
SSOs - Total number of wet weather	Number	-	A, B
SSOs - Total volume of wet weather	Gal	-	A, B
SSOs - % of spills caused by FOG (main)	%	-	A, B
SSOs - % of spills caused by roots (main)	%	-	A, B
SSOs - % of spills caused by Vandalism (main)	%	-	A, B
SSOs - caused by LS failures	Number	-	A, B
SSOs - caused by pipe failures	Number	-	A, B
SSOs - % of spill volume caused by FOG (lateral)	%	-	A, B
SSOs - % of spill volume caused by roots (lateral)	%	-	A, B
SSOs - % of spill volume caused by Vandalism (lateral)	%	-	A, B
Customer service requests per year	Number	-	A, B
Sewer odor complaints	Number	-	A, B
Flooding claims per year	Number	-	A, B
Cost of flooding claims per year	$	-	A, B
SSO – Repeats within two years	Number	0	B, C
SSOs - Category 1	Number	0	C, D
SSOs / 100 mi pipe / year - Category 2	Number	2.0	C
SSOs / 100 mi pipe / year - Mainline	Number	0.6	C
SSOs / 100 mi pipe / year - Lateral	Number	8.0	C

B = SSMP Appendix I

C = WW Collections KPIs

D = Program / Performance Reports

5.10 SSMP Program Audits

5.10.1 Compliance

Table 20 – Compliance with SSS WDR D.13.x – SSMP Program Audits

SSMP Requirement	Compliance	Deficiencies
x Conduct periodic audits	Yes	-

5.10.2 Effectiveness of SSMP Elements and Recommended Modifications

Audit Procedures, Roles, and Responsibilities (SSMP 10.2)

- Level of Effectiveness: The City conducts an internal audit biennially to continually measure the effectiveness of the SSMP primarily through evaluating system metrics, performance measures, and reduce SSOs by improving SSMP procedures to better respond to new SSO trends. In addition, the audit evaluates the City's compliance with SSMP requirements, particularly the amended MRP requirements that were formalized in September 2013. The City developed an audit form as a template to record information produced during the internal SSMP audits. This form is included in SSMP Appendix J-2. The previous audit identified many areas of improvement which the City responded and acted on. Some of these recommended improvements were excluded from this audit based on discussions with the City that eliminated the need for them. Others are considered standing and should still be implemented by the City. Generally, the internal audits implemented by the City have been effective in improving the SSMP and turning it into a living document that that is current, practical, and useful for the City.
- Recommendations:
    - The SSMP must be recertified by the City Council. Last Certification was completed 4/7/2014. Per SSS WDR D.14, the City must have the SSMP updated and re-certified by the governing board (i.e. City Council) every five years.
    - Post this SSMP internal audit to the City website.
    - Schedule the next internal SSMP audit for July-August of 2023.
    - Develop a description manual to replace Appendix J-1 and J-2 of the SSMP, to support each KPI element. This manual describes required information for KPI monitoring, including but not limited to:
        - Elements definition
        - How to fill each KPI items
        - Personnel responsible
        - Review frequency

SSMP Program Modification/Update Process (SSMP 10.3)

- Level of Effectiveness: The City developed a program for monitoring, reviewing sewer performance metrics and the effectiveness of SSMP elements on a biennial basis. Based on the results of the SSMP audits, the Wastewater Utility Manager is assigned to initiate/direct corrective actions to respond to

deficiencies and enhancements identified in the audit. As determined in the City's SSMP revision log, the City has been prompt in responding to audit and continually strives to implement improvements.

- Recommendations:
  - Update the SSMP change log and add it as an appendix to the SSMP, documenting all changes made to the SSMP since its last certification, indicating when an element was changed/updated and who authorized the change. An example of a change log is shown at **Appendix 7.5**. This was also recommended during the previous audit but has not been implemented.
  - Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes. This was also recommended during the previous audit but has not been implemented.

5.11 Communication Program

5.11.1 Compliance

Table 21 – Compliance with SSS WDR D.13.xi – Communications Program

SSMP Requirement	Compliance	Deficiencies
xi(a) Communicate on a regular basis with the public and tributary/satellite systems regarding SSMP	Yes	-

5.11.2 Effectiveness of SSMP Elements and Recommended Modifications

Internal Communication – Staff, Utility Commission, and City Council (SSMP 11.2)

- Level of Effectiveness: The WWC has used PowerPoint presentations as a resource to describe the purpose of the SSMP and summarize SSS WDR requirements to the City council and City staff. These presentations are attached to the SSMP website.

- Recommendations:
  - As of September 2013, the State Water board amended the MRP of the SSS WDR and the City produced a training PowerPoint to City staff, council, and stakeholders regarding the update. Attach the PowerPoint to the SSMP website. This was also recommended during the previous audit but has not been implemented.
  - Post Appendices K-1 – WWC WDR awareness Program and K-2 – Sanitary sewer regulations/WDR PowerPoint presentations on the website.
  - Post Appendix K-3 – Two "EU Today" Newsletters Preventing Fog in Pipes and Not Flushing Medication down the Sewer.
  - Update Appendix K-3 – Two EU newsletters FOG/medications links.

Stakeholder Communication – Residential, Commercial and Industrial (SSMP 11.3)

- Level of Effectiveness: The City communicates regularly with the public and stakeholders via monthly newsletters entitled "EU Today" that includes items regarding sewer utilities. This newsletter is presented online and through bill inserts. A sample newsletter is included in Appendix K of the SSMP. In addition, the City specifically communicates FOG related items to the community via FOG outreach program over TV ads, flyers, direct mail, and site visits to FSEs.

- Recommendations:
    - Update and Post SSMP Appendix K-4 – FOG Outreach Program with marketing Plan budget & spending and post it on the website. Consider an additional metric to be used in the KPI that reflects the City's performance in terms of FOG outreach program. Few additional metrics are recommended in **Table 18**. This was also recommended during the previous audit but has not been implemented.

Tributary/Satellite Communication (11.4)

- Level of Effectiveness: The City routinely communicates with their satellite partners and has three formal agreements in place that include:
    - The joint exercise of power agreement for the SPWA
    - The agreement regarding the operation of and use of South Placer Regional Wastewater Facilities
    - The funding agreement relating to the South Placer Regional Wastewater Facilities
    - Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD).

- Recommendations:
    - Add the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD) as an appendix. This was also recommended during the previous audit but has not been implemented.
    - Modify SSMP 11.4 to include the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD). This was also recommended during the previous audit but has not been implemented.
    - Post Appendix K-5 – Funding agreement related to south placer regional wastewater facilities on the website.

SECTION 6 Audit Summary

This section summarizes the level of compliance of the SSMP with the SSMP requirements identified in subsection D.13 and he identified deficiencies as described in **Section 4.1. Table 22** summarizes the result of this evaluation.

Table 22 – Summary of SSMP Compliance Deficiencies

SSMP Requirement	Compliance	Deficiencies
vi(f) Program to ensure containment of SSO to prevent discharge and minimize adverse impacts on the environment	No	SSOERP does not meet certain water quality monitoring requirements of the amended MRP document.

In addition, **Table 23** lists a summary of all recommendations for this audit.

Table 23 – Summary of Audit Recommendations

SSMP Section	Recommendation	Suggested Timeline for Completion
1.2	Post Appendix A-1 – Roseville's SSMP Development Plan and Implementation Schedule on the website.	Jan 2022
2.1	Modify Appendix B-1: Update City Mayor, Vice Mayor, City Attorney, and City Council positions and add phone numbers (Mayor Krista Berrnasconi, Vice Mayor Bruce Houdesheldt, City Attorney Michelle Sheidenberger, Councilmember Tracy Mendonsa). Update Commissioners and phone numbers: Chair Elaine Webb, Vice Chair James knox, Commissioners: Edward Belski, John Delancy, Richard Demarchi, Einar Maisch. Update Liaisons and phone numbers for EU Director Richard Plecker, and Secretary Pam Walsh. Update Assistant EU Director Ken Glotzbach, Wastewater Collection Superintendent Dan Prudent, Waste Water Collection Supervisor positions, Principal EU engineer and phone number for Jason Shykowski. Update Administrative Analyst and phone number for Maurice Chaney.	Jan 2022
2.1	Post the following Appendices on the website: o Appendix B-1 – Personnel Responsible for SSMP Elements o Appendix B-2 – Personnel Responsible for SSO Reporting o Appendix B-3 – Personnel Responsible for Responding to SSOs Weekly Standby	Jan 2022
2.3	Modify Figure 2-2 Flowchart: Update the WWC Divisions overflow emergency response plan chain of communication to match existing operations, whereby WWTP and LS staff and SCADA alerts should always call the 24-hour call center instead of WWC service staff.	Jan 2022
2.3	Include Figure 2-2 flowchart as Appendix F to the SSOERP (Appendix F-1) and mention in the text.	Jan 2022
3.2	Post Appendix C-1 – Pretreatment Program Enforcement Response Plan on the website.	Jan 2022
3.3	Update the related links for Appendices C-2, C-3, and C-4 for sanitary sewer design and construction.	Jan 2022
3.7	Post the following Appendices on the website: o Appendix C-5 – Joint Exercise of Powers Agreement for the South Placer Wastewater Authority	Jan 2022

	o Appendix C-6 – Agreement Regarding the Operation and Use of the South Placer Regional Wastewater Facilities o Appendix C-7 – Wastewater Service Agreement by Contract and Operating Agreement between SASD, SRCSD and City of Roseville	
4.2	Post the following Appendices on the website: o Post Appendix D-1 – City of Roseville Sewer Map Grid System on the website. o Post Appendix D-9 – Mapping Update Policy on the website.	Jan 2022
4.3	Update SSMP Section 4.3 Overview with updated statistics about the City's service area, number of customers, miles of main, number of services, and number of lift stations. Also update the number of WWC employees.	Jan 2022
4.3	Update the following Appendices and post on the website: o Appendix D-2 – Maintenance Cleaning Schedule: Update with Maximo CCMS example o Appendix D-3 – CCTV Video Report o Appendix D-4 – SOP	Jan 2022
4.4	Describe the process/procedure for evaluating available data (i.e., CCTV, CMMS, GIS, capacity assessment, visual inspections, etc.), conducting a risk assessment to determine the assets to be renewed, and developing the R&R plan with its associated data. This was also included during the previous audit but has not been completed.	Jan 2022
4.4	Document the upcoming transition in responsibilities between WWC and EU Engineering in developing and operating the R&R plan by describing it in the SSMP. Confirm that field observations from WWC field crew are accounted for by EU Engineering when conducting risk assessment. This was also included during the previous audit but has not been completed.	Jan 2022
4.4	Post Appendix D-8 – Technical Memorandum O&M Program SSMP Audit-Rehabilitation and Replacement Plan (Element IVC) on the website.	Jan 2022
4.5	Update the following links: o The CWEA website link. o Appendix D-5 – CWEA Certification Handbook link.	Jan 2022
4.6	Update and post the following Appendices on the website: o Appendix D-6 – Equipment Inventory List o Appendix D-7 – Critical Replace Parts List	Jan 2022
5.2	Update Appendix E-1 – Sanitary Sewer Design link.	Jan 2022
5.3	Update Appendix E-2 – Sanitary Sewer System Construction link.	Jan 2022
5.3	Post Appendix E-3 – Technical Memo, SSMP Preparedness Audit Design and Performance Provisions Element V on the website.	Jan 2022
6.3	The WWC has developed a table of information specific to lift station response which includes all of the lift stations in the City and lists for each station; the average flow from the station, the wet well depth, the volume of the wet well, the available storage/downtime if the lift station goes down, the point at which a SSO will first occur if the lift station goes down, the assigned manhole for decanting if vacuum trucks are used to draw down the wet well, and the street location of the decant manhole. This information should be included as an Appendix in the OERP and the information for each lift station should be posted onsite at each respective lift station. This list should also be updated to incorporate new lift stations at Washington Blvd and 7600 Sierra College. This was also recommended during the previous audit but has not been implemented.	Jan 2022
6.3	Modify Figure 6-2 – SSO Procedure Flow Chat, to report SSO category 1 larger than 1,000 gallons to Cal OES within 2 hours per WDR requirements (currently if > 50,000 gal).	Jan 2022
6.3	Post Appendix F-1 – SSOERP on the website along with corresponding attachments	Jan 2022
6.7	Modify SSOERP Appendix C – Water Quality Sampling Procedures to the meet the requirements of the amended MRP.	Jan 2022

	o Account for spill travel time in the surface water and scenarios where monitoring may not be possible to safety concerns or access restrictions once an SSO has stopped. This may be estimated by dropping floatable debris, for instance, and measuring the time required to travel a certain distance. This was also recommended during the previous audit but has not been implemented. o Expand minimum sampling parameters to include appropriate bacterial indicators that have been specifically listed in the beneficial uses of the City's waterways or more broadly listed by the regional Basin Plan. This was also recommended during the previous audit but has not been implemented.	
6.7	Modify SSOERP Appendix C – Water Quality Sampling Procedures to include a list of all of the required equipment that the employee would need to conduct proper sampling. This was also recommended during the previous audit but has not been implemented.	Jan 2022
7.8	Modify the EU Engineering GIS database to include hotspot assets and FSEs and add them as layers to the maps that WWC receives.	Jan 2022
8.2	Modify Appendix I-1 of the SSMP to indicate that the system evaluation and capacity assurance plan will be reviewed and updated every 10 years. This was also recommended during the previous audit but has not been implemented.	Jan 2022
9.3	Incorporate system and financial measures recommended in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP.	Jan 2022
9.3	Update Appendix I-4 and modify it to include document location and review frequency.	Jan 2022
9.3	Modify I-4 – Key Performance Indicators (KPI) FOG section, to reflect the change in responsibilities from IWS to WWC.	Jan 2022
9.4	Consider addition of recommended PM measures in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.	Jan 2022
9.6	Update Appendix I-3 – SSO History (last update 2013).	Jan 2022
9.6	Update SSO trends data in Appendix I-4 – KPI Benchmarking.	Jan 2022
9.6	Consider addition of recommended SSO measures in Table 18, from Appendix I-2 into Appendix I-4 and discard Appendix I-2 from the SSMP. The goal is to produce a single living KPI document that can be used to evaluate the effectiveness of SSMP elements.	Jan 2022
10.2	The SSMP must be recertified by the City Council. Last Certification was completed 4/7/2014. Per SSS WDR D.14, the City must have the SSMP updated and re-certified by the governing board (i.e. City Council) every five years.	Jan 2022
10.2	Post this SSMP internal audit to the City website.	Jan 2022
10.2	Schedule the next internal SSMP audit for July-August of 2023.	Jan 2022
10.2	Develop a description manual to replace Appendix J-1 and J-2 of the SSMP, to support each KPI element. This manual describes required information for KPI monitoring, including but not limited to: o Elements definition o How to fill each KPI items o Personnel responsible o Review frequency	Jan 2022
10.3	Update the SSMP change log and add it as an appendix to the SSMP, documenting all changes made to the SSMP since its last certification, indicating when an element was changed/updated and who authorized the change. An example of a change log is shown at Appendix 7.5. This was also recommended during the previous audit but has not been implemented.	Jan 2022
10.3	Document the submittal process for proposed changes to the SSMP. The process may include the following; identify the individual who maintains the most current version of the SSMP, the steps in which suggested modifications are received (by internal staff or the public), how	Jan 2022

	suggestions are routed to the individual/position responsible for the SSMP element associated with suggested modification, the process for review, and the process for updating the SSMP on the City website and documenting changes. This was also recommended during the previous audit but has not been implemented.	
11.2	As of September 2013, the State Water board amended the MRP of the SSS WDR and the City produced a training PowerPoint to City staff, council, and stakeholders regarding the update. Attach the PowerPoint to the SSMP website. This was also recommended during the previous audit but has not been implemented.	Jan 2022
11.2	Post Appendices K-1 – WWC WDR awareness Program and K-2 – Sanitary sewer regulations/WDR PowerPoint presentations on the website.	Jan 2022
11.2	Update Appendix K-3 – Two EU newsletters FOG/medications links.	Jan 2022
11.3	Update SSMP Appendix K-4 – FOG Outreach Program with marketing Plan budget & spending and post it on the website. Consider an additional metric to be used in the KPI that reflects the City's performance in terms of FOG outreach program. Few additional metrics are recommended in **Table 18**. This was also recommended during the previous audit but has not been implemented.	Jan 2022
11.4	Add the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD) as an appendix. This was also recommended during the previous audit but has not been implemented.	Jan 2022
11.4	Modify SSMP 11.4 to include the Agreement Regarding the Operation and Use of Wastewater Services between the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD). This was also recommended during the previous audit but has not been implemented.	Jan 2022
11.4	Post Appendix K-5 – Funding agreement related to south placer regional wastewater facilities on the website.	Jan 2022

SECTION 7 Appendices

7.1 Appendix – Historical SSO Data

7.2 Appendix – SSO Data Comparison Charts

7.3 Appendix – Structural SSO GIS Mapping

7.4 Appendix – Key Performance Indicators

7.5 Appendix – Change Log Example

7.1 Appendix – Historical SSO Data

Dated: FY 18/19, FY 19/20, and FY 20/21

Appendix 7.1 – Historical SSO Data for FY 18/19 to FY 20/21

#	Event ID	Date of SSO	Address	Spill Type	Spill Volume [gal]	Spill Recovered [gal]	Spill Recovery [%]	Spill Cause	Location

Mr. Dan Pruden
Collection System Superintendent
1800 Booth Road
Roseville, CA 95747

June 11, 2024

Dear Mr. Pruden,

We are pleased to present the 2022-2024 Sewer System Management Plan (SSMP) Audit for the City of Roseville (Attachment 1).

The SSMP Audit revealed the City is in full compliance with Attachment D-10 of the Reissued WDR (State Water Board Order No. 2022-0103-DWQ). The Audit also shed light on many City successful work programs in place. When comparing the City spill performance metrics with other collection systems in the Central Valley Regional Water Board area and throughout the State, the City performs near the top.

Detailed document reviews incorporating USEPA/Water Board inspection standards, an onsite simulated compliance inspection, and interviews with management and field staff were relied on for generating final findings and best practice recommendations in the report.

We look forward to supporting the City with its ongoing training, work program/process improvements, and implementation of the SSMP Audit findings to comply with the Reissued WDR.

Sincerely,

Jim Fischer

James Fischer, P.E.
Principal, Credentialed U.S. EPA NPDES Compliance Inspector

Attachment 1 (2022-2024 Sewer System Management Plan Audit Report)

PART 1 (Executive Summary)

The City of Roseville (City) is charged with complying the State Water Resources Control Board (SWRCB) General Reissued Waste Discharge Requirements (WDR) for Sanitary Sewer Systems ("Reissued WDR", Order No. 2022-0103-DWQ). The Reissued WDR replaced the original 2006 WDR (Order No. 2006-003-DWQ and its Monitoring and Reporting Program, Order No. 2013-0058-EXEC), which became effective on June 5, 2023.

The Reissued WDR requirements are the strictest sewer regulations in the country requiring a proactive approach for operations, maintenance, and management of sanitary sewer collection system to reduce or eliminate sewer spills. Attachment D-10 of the Reissued WDR requires periodic SSMP Audits to be completed by the City at least every three years.

To comply with the SSMP Audit requirements, Fischer Compliance LLC in collaboration with City management completed a Sewer System Management Plan (SSMP) Audit covering May 2021 through May 2024.

This Audit report meets and exceeds the minimum requirements specified in the Reissued WDR (Attachment D-10 and Specifications 5.4), scaled to the size/complexity of the City's sewer system.

Regulatory Background

The Reissued WDR requires local public sewer collection system agencies, referred to as "Enrollees," to develop a Sewer System Management Plan (Sewer System Management Plan). Sewer System Management Plans must be audited (by City staff or outside consultants) at least every three (3) years and updated every five (6) years according to the Water Board's regulatory schedule.

2006 WDR: To provide a consistent, statewide regulatory approach to address sewage spills, the State Water Resources Control Board (State Water Board) adopted Statewide General Waste Discharge Requirements for Sanitary Sewer Systems, Order No. 2006-0003 (SSS WDRs), on May 2, 2006. All public agencies that own or operate a sanitary sewer system that is comprised of more than one mile of pipes or sewer lines that convey wastewater to a publicly owned treatment facility were required to apply for coverage under the Order.

2022 WDR: The 2006 WDR was rescinded and replaced with a "Reissued WDR" (Order No. 2022-0103-DWQ), adopted on December 5, 2023 which became effective on 6/5/2023. The Reissued WDR updates many aspects of the 16-year-old Order and includes a number of new requirements for Sewer System Management Plans.

SSMP Audit Procedures

A comprehensive SSMP Audit incorporating procedures developed by Fischer Compliance LLC was completed in June 2024. To complete of the SSMP Audit, the following key elements were incorporated for the SSMP assessments:

- Evaluation of pre-Inspection questionnaires
- Interviews with City collection management and field including both online and onsite conferences

- Completion of a Compliance Evaluation Inspection (CEI) incorporating standards and procedures utilized by U.S. EPA and the Water Boards to evaluate sanitary sewer system compliance (see Appendix 1)
- Review of the City's 2022 Sewer System Management Plan (SSMP)
- Review of City spill reports, system data, and other documentation
- Incorporation of guidelines and recommendations for SSMPs published by the Bay Area Clean Water Agencies (BACWA)[1].

Collection System Information

The City owns and operates sanitary sewer collection system (collection system) serving a population of approximately 151,901 and includes a total of 53,720 sanitary sewer connections. The collection system consists of approximately 590 miles of gravity sewer mains, 8 miles of pressure ("force main") sewers, and 17 individual sewage lift/pump stations.

Figure 1 below provides an overview of the City's current sanitary sewer system service area.

City SSMP/Audit Due Dates

This section provides an overview of upcoming due dates for the City to update its SSMP and complete its next SSMP Audit. Figure 4 below displays a summary of the upcoming due dates for the City (5/2/2025 for its next SSMP Update and 12/2/2024 for its next SSMP Audit) required under the Reissued WDR.

Figure 4: City of Roseville SSMP/Audit Due Dates

Sewer System Management Plan & Audit Required Due Dates

* Per Section 5.5 and Attachment E1, Section 3.11 of the General Order, Plan updates are due within six years after the required due date of the Enrollee's last Plan Update.

** Per Section 5.4 and Attachment E1, Section 3.10 of the General Order, the Audit Report is due within six months after the end of the required 3-year audit period.

City Spill Performance

This section provides an overview to showcase City spill performance information, including trends and benchmarks to allow a comparison of the City's performance against other collection system agencies within the Central Valley Regional Board area and State. Numerous data sets and visualizations were created (see Figures 5-8 below and Appendix 3, City Spill Performance Benchmark Report). As displayed in many of the visualizations, the City's spill rates and volumes discharged during the Audit period were consistently lower than most other sanitary sewer system agencies of comparable size located within the Central Valley Regional Board area. Additional visualizations, data, and observations are included in Appendix 3.

Figure 5: City of Roseville Spill Rates (# of spill per 100 miles of sewers) compared with other agencies

SSMP Audit Findings

This section provides a high-level summary of the SSMP Audit findings (see Tables 2 and 3 below). No WDR violations were noted during the Audit. However, several Areas of Concern for the WDR were observed and documented in each SSMP element analysis located in PART 2 (Detailed SSMP Audit Findings). A total of 4/11 (36%) of SSMP Attachments were noted as Areas of Concern (64% compliance rate). A total of 3/12 (25%) of SSMP Specifications were noted as Areas of Concern (75% compliance rate).

Table 2: Summary of SSMP Audit Findings (WDR Attachments, 2022-2024)

FINDINGS (ATTACHMENTS)				
Requirements		Violations?	Areas of Concern?	Findings/Recommendations
Att. D-1	Goal & Intro	No	No	✓ Improve evaluating allocation of system resources ✓ Improve prioritization of system repairs
Att. D-2	Organization	No	Yes	✓ Improve LRO and Data Submitter training ✓ Improve internal communication/training procedures
Att. D-3	Legal Authority	No	No	✓ None
Att. D-4	O/M Program	No	Yes	✓ Improve training, procedures, identification of known problem areas ✓ Improve SSMP working knowledge ✓ Improve CIWQS training on requirements. ✓ Improve easement maintenance and emergency response activities
Att. D-5	Design and Performance	No	No	✓ None

Conclusions

The SSMP Audit completed by Fischer Compliance LLC in collaboration with City management shed light on many existing successful work programs in place. When comparing the City spill data/metrics performance with other collection systems in the Central Valley Regional Water Board area and throughout the State, the City performs near the top.

Detailed Auditing procedures incorporating review of questionnaires, the City's existing 2022 SSMP, interviews and other data were relied on for generating the detailed Audit findings to document the City's SSMP compliance and implementation efforts. Several recommendations along with an implementation plan/schedule were also generated to help the City get a jump start on updating its 2022 SSMP long before its next update is due (5/2/2024).

The Audit further revealed several areas of concern providing an advantage to help prepare the City for future regulatory compliance inspections and improve the effectiveness of its SSMP, well ahead of the required compliance schedule (>5 month ahead of schedule).

The audit results also help the City reflect on additional ways to improve its existing work programs and spill reduction measures. Additional Key performance indicators (KPIs) for improved tracking and monitoring of SSMP effectiveness, improvements to the existing City collection system critical spare part identification/inventories, improved spill data collection, reporting and training are examples of recommendations presented in the Audit.

PART 2 (SSMP Audit Findings/Recommendations)

This section provides detailed information including detailed SSMP Audit findings and recommendations. The procedures employed included evaluating the City's sewer programs against each required SSMP element required in the Reissued WDR. Requirements are presented at the beginning for each element along with an analysis of City compliance and implementation.

Additional information for helping City managers measure SSMP effectiveness and provide resilience are also included for each SSMP element in this section. This information provides a strong foundation to help the City with updating its next SSMP, due by August 2, 2025. Each section ends with a checklist of common potential violations/areas and a checklist of findings including determination of compliance.

Element 1 – Goal And Introduction

1.1 Regulatory Context

"The Plan Introduction section must provide a general description of the local sewer system management program and discuss Plan implementation and updates."

1.2 SSMP Update Schedule

"The Plan Introduction section must include a schedule for the Enrollee to update the Plan, including the schedule for conducting internal audits. The schedule must include milestones for incorporation of activities addressing prevention of sewer spills."

1.3 Sewer System Asset Overview

"The City Sewer System Management Plan must have an Introduction section to provide a description of the City-owned assets and service area including but not limited to.

- Location, including county(ies).
- Service area boundary.
- Population and community served;
- System size, including total length in miles, length of gravity mainlines, length of pressurized (force) mains, and number of pump stations and siphons.
- Structures diverting stormwater to the sewer system.
- Data management systems.
- Sewer system ownership and operation responsibilities between Enrollee and private entities for upper and lower sewer laterals.
- Estimated number or percent of residential, commercial, and industrial service connections.
- Unique service boundary conditions and challenge(s).
- Reference to the Enrollee's up to-date map of its sanitary sewer system, as required in section 4.1 (Updated Map of Sanitary Sewer System) of this Attachment."

FINDINGS (Element 1: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 22+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 22+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • City management identified the need to further improve measuring effectiveness to ensure appropriate allocation of collection system resources. • The City could further improve procedures for prioritization of system repairs and maintenance to prevent spills.
EFFECTIVENESS	Pg. 22+	• The City utilizes an extensive list of customized performance metrics and Key Performance Indicators (KPIs) to track, measure, and adjust effectiveness of work programs (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: - Has the schedule for conducting audits been adhered to? - Has the schedule for updating the Sewer System Management Plan been adhered to? - Are established milestones being monitored? - Is the sewer system management program description up to date? - Have audits been performed on schedule? Measured by review of completion for audits against required timelines. - Has the Sewer System Management Plan been approved by the governing board on schedule (every six years)? Measured by review of historic local board adoption dates against required timelines. - Are established milestones being monitored? - Are the system maps up to date? - Is asset data kept in the computerized maintenance management system, GIS, etc., programs up to date? - Are updates to the maps performed in a timely manner?

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
RESILIENCE	Pg. 22+	• For added resilience, the City could incorporate the following: - Create a work order report for auditing open work orders and assets any repeat spill locations. - Implement a formal schedule to ensure all WDR compliance deadlines are logged into management calendars. Ensure cross-training for data submitters to ensure more than one staff member can collect/manage all required spill data and meet all required deadlines specified in Attachment E1.

FINDINGS (Element 1: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations?	• Potential Areas of Concern?	• City In Compliance?
✓ Failure to identify appropriate goals	• No	• No	• Yes
✓ Failure to update Sewer System Management Plan sub-elements	• No	• No	• Yes
✓ Failure to establish process to ensure public has access/input to Sewer System Management Plan	• No	• No	• Yes
✓ Failure to complete appropriate Sewer System Management Plan audit	• No	• No	• Yes
✓ Failure to measure effectiveness and progress	• No	• No	• Yes
✓ Failure to develop and implement procedures for updating sewer maps	• No	• No	• Yes
✓ Failure to provide appropriate narrative descriptions describing procedures for prioritization of system repairs and maintenance to prevent spills.	• No	• No	• Yes
✓ Failure to describe technologies and practices to reduce spills	• No	• No	• Yes

Element 2 – Organization

REQUIREMENTS[1]

"The Plan must identify organizational staffing responsible and integral for implementing the local Sewer System Management Plan through an organizational chart of other similar narrative documentation that includes:

- The name of the Legally Responsible Official as required in section 5.1 (Designation of a Legally Responsible Official) of this General Order;
- The position titles, telephone numbers, and email addresses for management, administrative, and maintenance positions responsible for implementing specific Sewer System Management Plan elements;
- Organizational lines of authority.
- Chain of communication for reporting spills from receipt of complaint or other information, including the person responsible for reporting spills to the State and Regional Water Boards and other agencies, as applicable. (For example, county health officer, county environmental health City, and State Office of Emergency Services)."

FINDINGS (Element 2: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 24+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 24+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • City management indicated that to some degree, decisions and request for the collection system operations are changed without input from the City LRO and could be further improved. • City management commented that the LRO should have final authority for all projects affecting the collection system including those proposed by developers that have historically been overridden by City Public Works staff without approval of the LRO which could be further improved. • The inspection revealed weaknesses in City internal compliant procedures which could be further improved (see Appendix 1, Table 10, finding AOC A2). However, the City adequately addressed this finding and has improved its internal communications protocols (see Post-Inspection findings, AOC A2). • The inspection identified the potential to further improve LRO and Data Submitter trainings (see Appendix 1, Table 10, finding AOC A3 and AOC B4) which should be pursued. • The inspection identified the potential to further improve coordination between line staff and electricians (see Appendix 1, Table 10, finding AOC A6). However, the City addressed this concern (see Post-Inspection findings, AOC A6).

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
EFFECTIVENESS	Pg. 24+	• The City utilizes an extensive list of customized performance metrics and Key Performance Indicators (KPIs) to track, measure, and adjust effectiveness of work programs (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: - Have there been instances when a service call for a spill was not properly routed to response personnel? - Was all spill response activity documented and forwarded to the LRO? - Have there been any changes in assigned responsibilities for implementing the Sewer System Management Plan? - Is there a process in place to ensure all contact information remains up to date? - Is there a process in place to ensure the organizational chart up to date?
RESILIENCE	Pg. 24+	• For added resilience, the City could incorporate the following: - Ensuring more than one person is capable and responsible for specific duties for Sewer System Management Plan implementation, e.g. back-up personnel. - Designation of more than one LRO to help ensure full and continuous coverage of duties. - Ensuring more than one staff member can implement and be responsible for specific Sewer System Management Plan elements. - Periodically review contact info. to ensure it is up to date.

FINDINGS (Element 2: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations?	• Potential Areas of Concern?	• City In Compliance?
✓ Failure to properly secure Legally Responsible Official with appropriate training and experience.	• No	• No	• Yes
✓ Failure to establish and update all related necessary responsible staff and lines of authority.	• No	• No	• Yes
✓ Failure to establish and update City chain of communication for reporting spills.	• No	• No	• Yes

Element 3 – Legal Authority

REQUIREMENTS[5]

"The City Sewer System Management Plan must include copies or an electronic link to the Enrollee's current sewer system use ordinances, service agreements and/or other legally binding procedures to demonstrate the Enrollee possesses the necessary legal authority."

- "Prevent illicit discharges into its sanitary sewer system from inflow and infiltration (I&I); unauthorized stormwater; chemical dumping; unauthorized debris; roots; fats, oils, and grease; and trash, including rags and other debris that may cause blockages."
- "Collaborate with storm sewer agencies to coordinate emergency spill responses, ensure access to storm sewer systems during spill events, and prevent unintentional cross connections of sanitary sewer infrastructure to storm sewer infrastructure."
- "Require that sewer system components and connections be properly designed and constructed."
- "Ensure access for maintenance, inspection, and/or repairs for portions of the service lateral owned and/or operated by the Enrollee."
- "Enforce violation(s) of ordinances, service agreements, or other legally binding procedures."
- "Obtain easement accessibility agreements for locations requiring sewer system operations and maintenance, as applicable."

[5] *See Attachment D-3 of* Reissued WDR *(page D-4)*

FINDINGS (Element 3: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 28+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 28+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
EFFECTIVENESS	Pg. 28+	• The City utilizes an extensive list of customized performance metrics and Key Performance Indicators (KPIs) to track, measure, and adjust effectiveness of work programs (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: - Are the District codes and ordinances adequate for fulfilling the Sewer System Management Plan legal requirements? - Have there been instances when the code or ordinance did not address a need or circumstance?
RESILIENCE	Pg. 28+	• For added resilience, the City could incorporate the following: - Monitor performance of ordinances, codes, and agreements for deficiencies and omissions. - Perform periodic review of ordinances, codes, and service agreements. - Stay abreast of industry trends and local ordinances that may affect operations. - Check to ensure codes and ordinances periodically reviewed.

FINDINGS (Element 3: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations?	• Potential Areas of Concern?	• City In Compliance?
✓ Failure to establish proper codes, standards, legal agreements, and procedures to ensure conformance to requirements.	• No	• No	• Yes
✓ Failure to periodically review codes, standards, legal agreements, and procedures to ensure conformance to requirements.	• No	• No	• Yes

Element 4 – Operations and Maintenance Program

4.1 Updated Map of Sewer System

REQUIREMENTS[6]

"The Plan must include the items listed below that are appropriate and applicable to the Enrollee's system.

An up-to-date map(s) of the sanitary sewer system, and procedures for maintaining and providing State and Regional Water Board staff access to the map(s). The map(s) must show gravity line segments and manholes, pumping facilities, pressure pipes and valves, and applicable stormwater conveyance facilities within the sewer system service area boundaries."

4.2 Preventive Operation and Maintenance Activities

REQUIREMENTS[1]

"A scheduling system and a data collection system for preventive operation and maintenance activities conducted by staff and contractors.

The scheduling system must include:

- inspection and maintenance activities, Higher-frequency inspections
- Maintenance of known problem areas including areas with tree root problems
- Regular visual and closed-circuit television (CCTV) inspections of manholes and sewer pipes.

The data collection system must document the data from system inspection and maintenance activities, including system areas/components prone to root-intrusion potentially resulting in system backup and/or failure."

4.3 Training

REQUIREMENTS

"In-house and external training provided on a regular basis for sanitary sewer system operations and maintenance staff and contractors.

The training must cover the requirements of this General Order; the Enrollee's Spill Emergency Response Plan procedures and practice drills, skilled estimation of spill volume for field operators, and electronic CIWQS reporting procedures for staff submitting data."

[6] *See Attachment D-4.1 of* Reissued WDR *(page D-4)*

4.4 Equipment Inventory

REQUIREMENTS[1]

- "An inventory of sewer system equipment, including the identification of critical replacement and spare parts."

FINDINGS (Element 4: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 32+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 32+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • City management commented that field staff training programs could be further improved with use of spill simulations/scenarios. • The inspection revealed operator training and procedures could be further improved for City pump stations (see Appendix 1, Table 10, , findings AOC A1 and AOC B1). • The inspection revealed the opportunity to further improve the City's existing critical spare parts/inventory (see Appendix 1, Table 10, finding AOC A8 and AOC B3). However, the City addressed this finding and is encouraged to continuously check/update its critical spare parts inventories to ensure spill response readiness (see Post-Inspection Findings, AOC A8). • The inspection revealed the opportunity to further improve the City's existing Hot Spot program for problem locations (see Appendix 1, Table 10, AOC B6). However, the City adequately addressed this finding (see Appendix 1, Post-Inspection Findings, AOC B6). • The inspection revealed the opportunity to further improve the City's existing procedures to identify and address all known problem/deficiencies (see Appendix 1, Table 10, AOC B7) which should be further improved. • The inspection revealed the opportunity to further improve the City's existing training on the SSMP and CIWQWS reporting procedures (see Appendix 1, Table 10, AOC B9) which should be further improved.

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
IMPLEMENTATION	Pg. 32+	• The inspection revealed the opportunity to further improve the City's maintenance activities covering remote areas and open spaces including easements (see Appendix 1, Table 10, AOC D1) which should be further improved). • The inspection revealed the opportunity to further improve the City's spill emergency response training program covering remote areas and open spaces including easements (see Appendix 1, Table 10, AOC D2) which should be further improved). • The inspection revealed the opportunity to further improve the City's existing easement access/maintenance program (see Appendix 1, Table 10, AOC D3). However, the City adequately addressed this concern (see Appendix 1, Post-Inspection Findings, AOC D3).
EFFECTIVENESS	Pg. 32+	• The City utilizes an extensive list of customized performance metrics and Key Performance Indicators (KPIs) to track, measure, and adjust effectiveness of work programs (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: - Were all map updates completed in a timely manner? - Are staff trained for providing map update information? - Are newly installed assets incorporated into maps? - Are the City maintenance, operations, engineering work orders periodically reviewed for completeness? - Does the City monitor "open" or "overdue" work orders? - Are inspection and maintenance activities reducing the number and volume of spills? - Is maintenance work being completed as scheduled? - Are inspections of pipes, manholes, and lift completed? - Does the City have a proactive root control program? - Has all training been completed as scheduled? - Have consistent training records been maintained? - Have staff demonstrated ability/knowledge after trainings? - Have contractors received, at a minimum, direction for 1) reporting spills, containment, securing sites? - Has the inventory list been audited as scheduled? - Have any inventory deficiencies or omissions been discovered? - Has the City experienced failures inhibiting any spill responses?

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
RESILIENCE	Pg. 32+	• For added resilience, the City could incorporate the following: - Develop an SOP for updating maps when errors are discovered. - Develop and use forms (paper or electronic) for data collection to help ensure all pertinent information is consistently collected. - Periodically evaluate inspection cycle intervals to help ensure they are optimized. - Require staff to demonstrate ability and/or knowledge for all training activities. - Monitor equipment and critical spare parts usage for and trends.

FINDINGS (Element 4: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations?	• Potential Areas of Concern?	• City In Compliance?
✓ Failure to establish process to ensure sewer maps are up to date.	• No	• No	• Yes
✓ Failure to establish and review required maintenance program activities (CCTV, inspections, etc.)	• No	• No	• Yes
✓ Failure to establish adequate training program for staff and contractors.	• No	• Yes	• Yes
✓ Failure to establish equipment inventory including identification of critical spare part.	• No	• No	• Yes

Element 5 – Design and Performance Provisions

5.1 Updated Design Criteria and Construction Standards

REQUIREMENTS[7]

"The Plan must include the following items as appropriate and applicable to the Enrollee's system".

- "Updated design criteria, and construction standards and specifications, for the construction, installation, repair, and rehabilitation of existing and proposed system infrastructure components, including but not limited to pipelines, pump stations, and other system appurtenances. If existing design criteria and construction standards are deficient to address the necessary component-specific hydraulic capacity as specified in section 8 (System Evaluation, Capacity Assurance and Capital Improvements) of this Attachment, the procedures must include component-specific evaluation of the design criteria."

5.2 Procedures and Standards

REQUIREMENTS[1]

- "Procedures, and standards for the inspection and testing of newly constructed, newly installed, repaired, and rehabilitated system pipelines, pumps, and other equipment and appurtenances."

FINDINGS (Element 5: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 45+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 45+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • The inspection revealed the opportunity to further improve design standards (see Appendix 1, Table 10, AOC 10; however, the City addressed this concern (see Post-Inspection Findings, AOC A10).

[7] *See Attachment D-5.1 of* Reissued WDR *(page D-5)*

EFFECTIVENESS	Pg. 45+	• The City utilizes an extensive list of customized performance metrics and KPIs to help assess effectiveness of this element (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: - Does the City implement its current design and construction standards, specifications, and inspection procedures? - Does the City annually review of design and construction standards, specifications, and inspection procedures to ensure conformance to requirements? - Does the City have a review process for its standards and procedures? - Were any design or installation deficiencies found during warranty inspections? - Are hydraulic model findings included in the design process? - Does the City stay abreast of industry design standards?
RESILIENCE	Pg. 45+	• For added resilience, the City could incorporate the following: - Staying abreast of industry trends and standards. - Performing warranty inspections of newly installed or repaired assets to evaluate design and installation practices. - Evaluating as-built changes for trends and areas for design and performance improvements.

FINDINGS (Element 5: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations?	• Areas of Concern?	• City In Compliance?
✓ Failure to establish, implement, and maintain appropriate sewer standards and procedures for inspections, and testing.	• No	• No	• Yes
✓ Failure to enforce instances of noncompliance.	• No	• No	• Yes

Element 6 – Spill Emergency Response Plan

REQUIREMENTS[8]

The Plan must include an up-to-date Spill Emergency Response Plan to ensure prompt detection and response to spills to reduce spill volumes and collect information for prevention of future spills. The Spill Emergency Response Plan must include procedures to meet all the following.

- *"Notify primary responders, appropriate local officials, and appropriate regulatory agencies of a* spill in a timely manner.
- *Notify other potentially affected entities (for example, health agencies, water suppliers, etc.) of spills that potentially affect public health or reach waters of the State.*
- *Comply with the notification, monitoring and reporting requirements of this General Order, State law and regulations, and applicable Regional Water Board Orders.*
- *Ensure that appropriate staff and contractors implement the Spill Emergency Response Plan and are appropriately trained.*
- *Address emergency system operations, traffic control and other necessary response activities.*
- *Contain a spill and prevent/minimize discharge to waters of the State or any drainage conveyance system.*
- *Minimize and remediate public health impacts and adverse impacts on beneficial uses of waters of the State.*
- *Remove sewage from the drainage conveyance system.*
- *Clean the spill area and drainage conveyance system in a manner that does not inadvertently impact beneficial uses in the receiving waters.*
- *Implement technologies, practices, equipment, and interCity coordination to expedite spill containment and recovery.*
- *Implement pre-planned coordination and collaboration with storm drain agencies and other utility agencies/departments prior, during, and after a spill event.*
- *Conduct post-spill Guidance of spill response activities.*
- *Document and report spill events as required in this General Order.*
- *Annually, review and assess effectiveness of the Spill Emergency Response Plan, and update the* Plan as needed."

[8] *See Attachment D-6 of* Reissued WDR *(page D-6)*

FINDINGS (Element 6: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 50+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 50+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • City management indicated the City does not perform any "pre-planned dills or training with its stormwater. • City management commented during the inspection that field data collection/documentation could be further improved. • The inspection revealed coordination with regional partners could be further improved (see Appendix 1, Table 10, finding AOC A9 and AOC B5) which should be pursued to augment City resources to the extent practical. • The inspection revealed 3 violations for failure to notify Cal-OES within 2 hours required for Category 1 Spills in 2021-2022 (see Appendix 1, Table 10, AOC A11. The City is encouraged to further refine internal notification procedures to help avoid future violations of this requirement. • The inspection revealed the opportunity to further improve contractor emergency response training (see Appendix 1, Table 10, AOC A12) which could be further improved. The inspection also revealed concerns with spill emergency response trainings including post-spill assessments (see Appendix 1, Table 10, AOC B2). However, the City adequate addressed this finding (see Appendix 1, Post-Inspection Findings, AOC B2).

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
EFFECTIVENESS	Pg. 50+	• The City utilizes an extensive list of customized performance metrics and KPIs to help assess effectiveness of this element (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: - Check to ensure the City is implementing all recommendations for spill emergency response plans incorporated in SSMP Guidance Manual (see pages 37-28) - Does the agency implement an effective Spill Emergency Response Plan? Measured by quarterly review, training/practice drills, and completion of field data collection forms for conforming with Attachment E1 requirements. -
RESILIENCE	Pg. 50+	• For added resilience, the City could incorporate the following: – Provide training on a regular basis for all spill response staff. Training should include: – Determining Spill Start Time – Determining spill volume and volume recovered. – Data Collection (forms) – Containment and clean up. – CIWQS Data Submitting – Develop a training plan for contracted services. – Periodically review post-spill assessments for trends and areas for improvement.

FINDINGS (Element 6: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations?	• Areas of Concern?	• City In Compliance?
✓ Failure to develop and implement a Spill Emergency Response Plan that meets all requirements.	• No	• No	• Yes
✓ Failure to test/evaluate emergency procedures during including deploying contracted services where necessary.	• No	• No	• Yes
✓ Failure to ensure supply of adequate critical/identified spare parts/equipment prior to spills.	• No	• No	• Yes
✓ Failure to properly notify appropriate outside agencies/officials.	• No	• No	• Yes

Element 7 – Sewer Pipe Blockage Control Program

REQUIREMENTS[9]

"The Sewer System Management Plan must include procedures for the evaluation of the Enrollee's service area to determine whether a sewer pipe blockage control program is needed to control fats, oils, grease, rags, and debris. If the Enrollee determines that a program is not needed, the Enrollee shall provide justification in its Plan for why a program is not needed. The procedures must include, at minimum:

- An implementation plan and schedule for a public education and outreach program that promotes proper disposal of pipe-blocking substances.
- A plan and schedule for the disposal of pipe-blocking substances generated within the sanitary sewer system service area. This may include a list of acceptable disposal facilities and/or additional facilities needed to adequately dispose of substances generated within a sanitary sewer system service area.
- The legal authority prohibits discharges to the system and identifies measures to prevent spills and blockages.
- Requirements to install grease removal devices (such as traps or interceptors), design standards for the removal devices, maintenance requirements, best management practices requirements, recordkeeping, and reporting requirements.
- Authority to inspect grease producing facilities, enforcement authorities, and whether the Enrollee has sufficient staff to inspect and enforce the fats, oils, and grease ordinance.
- An identification of sanitary sewer system sections subject to fats, oils, and grease blockages and establishment of a cleaning schedule for each section; and
- Implementation of source control measures for all sources of fats, oils, and grease reaching the sanitary sewer system for each section identified above."

[9] *See Attachment D-7 of* Reissued WDR *(page D-7)*

FINDINGS (Element 7: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 76+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 76+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • City management indicated the City could further improve an implementation plan and schedule for a public education and outreach program that promotes proper disposal of pipe-blocking substances. • City Management commented during the inspection that the City will soon need additional resources inspecting grease producing facilities. • The inspection revealed the opportunity to further improve the City's FOG program implementation (see Appendix 1, Table 10, finding AOC A7 and AOC B8). The City is encouraged to pursue additional FOG program improvements to continue improving existing source control measures.
EFFECTIVENESS	Pg. 76+	• The City utilizes an extensive list of customized performance metrics and KPIs to help assess effectiveness of this element (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: – Have there been any blockages/spills from any identified problem area? – Is the agency receiving feedback on public outreach efforts? – Is the debris and other sewage solids collected during cleaning activities being disposed of appropriately? – Does the agency have a plan and schedule for inspection of grease producing facilities? Was the schedule adhered to? – Have there been spills due to excessive fats, oil, or grease in the system? – Are Source Control staff included in the plan check process?

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
RESILIENCE	Pg. 76+	• For added resilience, the City could incorporate the following: – Inspect assets directly downstream of grease producing businesses to- ensure source control is effective. – Develop outreach doorhangers or flyers to perform targeted outreach when discoveries are made in the field. – Perform regular assessments of system assets to monitor performance. – Establish a QA/QA process for evaluating pipe cleaning effectiveness.

FINDINGS (Element 7: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations?	• Areas of Concern?	• City In Compliance?
✓ Failure to identify appropriate needs for pipe blockage program.	• No	• No	• Yes
✓ Failure to ensure adequate pipe blockage control enforcement authority.	• No	• No	• Yes
✓ Failure to enforce requirements for instances of noncompliance.	• No	• No	• Yes

Element 8 – System Evaluation, Capacity Assurance, Capital Improvements

REQUIREMENTS

"The Plan must include procedures and activities for

- Routine evaluation and Guidance of system conditions,
- Capacity Guidance and design criteria.
- Prioritization of corrective actions.
- Capital improvement plan."

8.1. System Evaluation and Condition Guidance

REQUIREMENTS[10]

"The Plan must include procedures to:

- Evaluate the sanitary sewer system assets utilizing the best practices and technologies available.
- Identify and justify the amount (percentage) of its system for its condition to be assessed each year.
- Prioritize the condition Guidance of system areas that:
  - Hold a high level of environmental consequences if vulnerable to collapse, failure, blockage, capacity issues, or other system deficiencies.
  - Are in or within the vicinity of surface waters, steep terrain, high groundwater elevations, and environmentally sensitive areas.
  - Are within the vicinity of a receiving water with a bacterial-related impairment on the most current Clean Water Act section 303(d) List.
- Assess the system conditions using visual observations, video surveillance and/or other comparable system inspection methods.
- Utilize observations/Audit Findings/Recommendations of system conditions that may contribute to exiting of sewage from the system which can reasonably be expected to discharge into a water of the State.
- Maintain documents and recordkeeping of system evaluation and condition Guidance inspections and activities,
- Identify system assets vulnerable to direct and indirect impacts of climate change, including but not limited to sea level rise; flooding and/or erosion due to increased storm volumes, frequency, and/or intensity; wildfires; and increased power disruptions."

[10] *See Attachment D-8.1 of* Reissued WDR *(pages D-7 and D-8)*

FINDINGS (Element 8: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 82+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • The City has identified at least 2 locations where insufficient capacity exists which is being addressed in its current capital improvement plan (CIP). • City Management commented during the inspection that it could further improve its identification/ justification of its condition assessment to be inspected each year throughout the system. • City Management commented during the inspection that the City currently does not prioritize condition assessments for areas holding high environmental consequences, are located within the vicinity of surface waters, steep terrain, high groundwater, etc., and are within the vicinity of bacterial-related impairments, including documenting situations where sewage could be reasonability expected to exit the system (exfiltration) as part of its condition assessment program. • City Management commented during the inspection that the City does not currently assess climate change impacts other than power interruptions/potential impacts from wildfires on field staff. Management also commented that the City currently does not have procedures to identify system components that are experiencing or causing spills during dry peak flow conditions. However, management has been proactive in shoring up creek banks, securing sewer crossings to piles and ensuring infrastructure is intact after severe rain events or flooding.

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
IMPLEMENTATION	Pg. 82+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • City Management commented during inspection that it is sometimes hard to find data from condition assessments, inspections, audits, ETC. which should be improved. • Management commented during the inspection that it has not identified areas vulnerable to increases in erosive forces which should be further improved. • The inspection revealed potential improvements between City Engineering and Collections/Operations Departments (see Appendix 1, Table 10, finding AOC A4) which should be further improved. • The inspection revealed potential improvements for improving condition assessments for City force main sewers (see Appendix 1, Table 10, finding AOC A5) which should be further improved.
EFFECTIVENESS	Pg. 82+	• The City utilizes an extensive list of customized performance metrics and KPIs to help assess effectiveness of this element (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: – Number of capacity-related spills or surcharge condition during the audit period? – Has the system responded to rain events as indicated by the hydraulic model? – Has there been any changes to zoning designations (residential, commercial, industrial)? – Rain event trends: Has there been changes in rain event occurrences, intensity, and duration? – Has the agency's capital improvement plan been adhered to? – Is there an annual review of the Capital Improvement Plan by all necessary individuals? – Has the City adhered to its system evaluation/condition assessment efforts? Measured by annual review and update of system inspections/evaluations procedures. – Has the City adhered to its prioritization/corrective actions for sewer repair and capacity improvement projects? Measured by annual review and agency prioritization/corrective actions procedures.

FINDINGS (Element 8: Common WDR Violations/Areas of Concern Evaluation Evaluation)

• Potential Violations	• Potential Violations?	• Areas of Concern?	• City In Compliance?
✓ Failure to develop and implement system evaluation, capacity assurance, and capital improvement programs.	• No	• No	• Yes
✓ Failure to identify sections holding high degree of environmental consequences if vulnerable to collapse, failure, blockage, capacity issues, or other system deficiencies.	• No	• No	• Yes
✓ Failure to identify sections located in or within the vicinity of surface waters, steep terrain, high groundwater elevations, and environmentally sensitive areas.	• No	• No	• Yes
✓ Failure to identify assets within the vicinity of receiving water with a bacterial-related impairment on the most current Clean Water Act section 303(d) List.	• No	• No	• Yes
✓ Failure to develop and implement capital improvement plan (CIP) for necessary sewer system repairs and improvements (short term and long-term).	• No	• No	• Yes

Element 9 – Monitoring, Measurement, Program Modifications

REQUIREMENTS[11]

"The Plan must include an Adaptive Management section that addresses Plan-implementation effectiveness and the steps for necessary Plan improvement, including:

- Maintaining relevant information, including audit findings, to establish and prioritize appropriate Plan activities.
- Monitoring the implementation and measuring the effectiveness of each Plan Element.
- Assessing the success of the preventive operation and maintenance activities.
- Updating Plan procedures and activities, as appropriate, based on results of monitoring and performance evaluations; and
- Identifying and illustrating spill trends, including spill frequency, locations, and estimated volumes."

FINDINGS (Element 9: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 86+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 86+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
EFFECTIVENESS	Pg. 86+	• The City utilizes an extensive list of customized performance metrics and KPIs to help assess effectiveness of this element (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: – Are trends being monitored and corrective action taken as necessary? – Have Key Performance Indicators been developed to measure the effectiveness of each Sewer System Management Plan element? – Has a plan and schedule been established to address audit findings/deficiencies? – Have changes been made to work programs and procedures because of monitoring efforts?

[11] *See Attachment D-9 of* Reissued WDR *(page D-9)*

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
RESILIENCE	Pg. 86+	• For added resilience, the City could incorporate the following: – Develop key performance indicators to measure effectiveness of the Sewer System Management Plan. – Perform periodic reviews of the Sewer System Management Plan to help ensure the plan is being properly implemented. – Develop and adhere to a timeline to correct deficiencies found during the audit process. – Periodically evaluate work programs to help ensure effectiveness.

FINDINGS (Element 9: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations	• Areas of Concern	• City in Compliance?
✓ Failure to collect/maintain and evaluate relevant data for monitoring, measuring, and assessing preventive maintenance program effectiveness.	• No	• No	• Yes
✓ Failure to update/modify agency Sewer System Management Plan based on results from audits and evaluation of data required for this element.	• No	• No	• Yes

Element 10 – Internal Audits

REQUIREMENTS[12]

"The Plan shall include internal audit procedures, appropriate to the size and performance of the system, for the Enrollee to comply with section 5.4 (Sewer System Management Plan Audits) of this General Order."

- Specifications 5.4 (Sewer System Management Plan Audits")

"The Enrollee shall conduct an internal audit of its Sewer System Management Plan, and implementation of its Plan, at a minimum frequency of once every three years. The audit must be conducted for the period after the end of the Enrollee's last required audit period. Within six months after the end of the required 3-year audit period, the Legally Responsible Official shall submit an audit report into the online CIWQS Sanitary Sewer System Database per the requirements in section 3.10 (Sewer System Management Plan Audit Reporting Requirements) of Attachment E1 of this General Order. Audit reports submitted to the CIWQS Sanitary Sewer System Database will be viewable only to Water Boards staff. The internal audit shall be appropriately scaled to the size of the system(s) and the number of spills. The Enrollee's sewer system operators must be involved in completing the audit. At minimum, the audit must:

- Evaluate the implementation and effectiveness of the Enrollee's Sewer System Management Plan in preventing spills.
- Evaluate the Enrollee's compliance with this General Order.
- Identify Sewer System Management Plan deficiencies in addressing ongoing spills and discharges to waters of the State; and
- Identify necessary modifications to the Sewer System Management Plan to correct deficiencies.
- The Enrollee shall submit a complete audit report that includes:
    - Audit findings and recommended corrective actions.
    - A statement that sewer system operators' input on the audit findings has been considered; and
    - A proposed schedule for the Enrollee to address the identified deficiencies."

[12] *See Attachment D-10 of* Reissued WDR *(page D-10)*

FINDINGS (Element 10: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 92+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025. • The City complies with this requirement by completing SSMP internal audits every 2 years since 2010 as required. • The City informed the consulting team that input from collection system field staff have not traditionally been incorporated into the City SSMP (only input from City Collection System Supervisors at the management level).
IMPLEMENTATION	Pg. 92+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
EFFECTIVENESS	Pg. 92+	• The City utilizes an extensive list of customized performance metrics and KPIs to help assess effectiveness of this element (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: – Have audits been performed as required? – Have the audits assessed compliance, implementation, and effectiveness? – Have deficiencies been identified? – Has a plan and schedule to rectify the deficiencies been established?
RESILIENCE	Pg. 92+	• For added resilience, the City could incorporate the following: – Periodically evaluate key performance indicators to assess effectiveness of each Sewer System Management Plan element. – Evaluate previous audit to ensure deficiencies have been rectified. – Calendar the audit due dates and complete the audit on time. – Prepare for announced/unannounced compliance inspections by regulators and by proactive with preparing required Audits by completing the State Water Board Pre-Inspection Questionnaire (see Appendix 6).

FINDINGS (Element 10: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations	• Areas of Concern	• City in Compliance?
✓ Failure to conduct routine Sewer System Management Plan audits.	• No	• No	• Yes
✓ Failure to measure Sewer System Management Plan element effectiveness (a simple checklist will not fulfill this obligation).	• No	• No	• Yes
✓ Failure to implement identified deficiencies/recommendations and commit to new enhancements via a plan/schedule (short and long-term).	• No	• No	• Yes

Element 11 – Communication Program

REQUIREMENTS[13]

"The Plan must include procedures for the Enrollee to communicate with:

- The public for spills and discharges resulting in closures of public areas, or that enter a source of drinking water, and the development, implementation, update of its Plan, including opportunities for public input to Plan implementation and updates.
- Owners/operators of systems that connect into the Enrollee's system, including satellite systems, for system operation, maintenance, and capital improvement-related activities."

FINDINGS (Element 11: Analysis)

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
COMPLIANCE	Pg. 95+	• The City SSMP complies with the basic requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
IMPLEMENTATION	Pg. 95+	• The City is implementing these requirements. The City should complete a gap analysis and incorporate all SSMP Audit findings into its next SSMP Update due by May 2, 2025.
EFFECTIVENESS	Pg. 95+	• The City utilizes an extensive list of customized performance metrics and KPIs to help assess effectiveness of this element (see Appendix 2). • The City should consider the following additional effectiveness checks for this element: – Does the agency place all Sewer System Management Plan action items on the agenda for regular counsel/board meetings? – Does the agency have signage, or other means, readily available to notify the public of environmental or public risk factors related to a sewage spill? – Does the agency regularly communicate with other systems connected to the system? – Was the public afforded the opportunity to provide input as the program was being implemented? – Does the agency perform outreach to residential customers?
Areas Assessed	SSMP Ref.	Audit Findings/Recommendations

[13] *See Attachment D-11 of* Reissued WDR *(page D-10)*

Areas Assessed	SSMP Ref.	Audit Findings/Recommendations
RESILIENCE	Pg. 95+	– Use the Sewer System Management Plan as a tool to communicate to the public how the agency is managing the system. – Maintain a consistent presence in the service area by attending community events or issuing periodic newsletters or other communications to the public. – Make it clear and easy for the public to contact the agency. •

FINDINGS (Element 11: Common WDR Violations/Areas of Concern Evaluation)

• Potential Violations	• Potential Violations	• Areas of Concern
✓ Failure to develop and implement a public communication program, especially during emergencies.	• No	• No
✓ Failure to solicit input on Sewer System Management Plan content.	• No	• No
✓ Failure to communicate with owners/operators of sewer system(s) connected to the agency's sewer system.	• No	• No

1. Introduction

On January 30 ,2024, James Fischer and Chris Bracco (Fischer Compliance LLC) conducted a Compliance Evaluation Inspection (CEI) for the City of Roseville (City) to evaluate compliance with the Statewide Sanitary Sewer Systems General Order (Order No. 2022-0103-DWQ), hereafter "Reissued WDR[1].

FACILTY INSPECTED:	INSPECTED BY: James Fischer, P.E. NPDES Compliance Inspector[2] Principal, FISCHER COMPLIANCE, LLC James Fischer Date: 1/30/2024	
SANITARY SEWER COLLECTION SYSTEM (WASTEWATER)	Waste Discharge ID (WDID): 5SSO10935 ("Dry Creek CS")	
Water Quality Order(s)	2022-0103-DWQ (Reissued WDR)	
Regional Water Boards	5S	
County	Sacramento	
Population/Area	151,901 (2023 Questionnaire)	
Miles of Sewers (gravity)	589.55 (2023 Questionnaire)	
Miles of Sewers (force mains)	7.55 (2023 Questionnaire)	
Sewer Connections (#)	53,720 (2023 Questionnaire)	
Lift/Pump Stations (#)	17 (2023 Questionnaire)	
Above pipelines (#)	22 (2023 Questionnaire)	
Air release valves (force mains, #)	3 (2023 Questionnaire)	
Sewer siphons (#)	22 (2023 Questionnaire)	
Flows (dry/wet, million gallons per day)	17.5/43 (2023 Questionnaire)	
CWEA Maintenance Certifications (#)	32 (2023 Questionnaire)	
Sewer lower later responsibility (Y/N)	Y (2023 Questionnaire)	
Final wastewater disposal	Dry Creek and Pleasant Grove WWTPs

2. Inspection Summary

The inspection incorporated both pre-inspection meetings for comprehensively assessing the City's SSMP compliance, implementation, and effectiveness with the Reissued WDR (see Tables 1-2 below). This information provides a key advantage for helping City managers proactively reflect on ways for further improving its and implementing necessary adjustments to existing programs for preparing for its required SSMP Audit due by November 2024.

A summary of the overall inspection areas assessed and scores for the City are provided in Table 1 below.

Table 1 – Inspection Summary

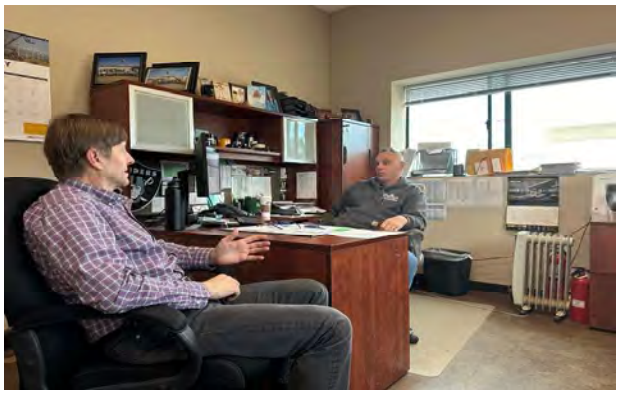
Item	Tasks	Areas Assessed	WDR Reqs.	Compliance (0-5)	Implementation (0-5)	City Points	City Score
A	**Pre-Inspection** (Superintendent) 1800 Booth Rd	Field staff training program/competency, maintenance program, SCADA monitoring/improvements, SERP implementation, capital improvement program (CIP) collaboration between engineering and collections operations, lift station operator inspection logging/data and alarms, FOG enforcement, critical spare parts, mutual assistance practices, design/construction standards, customer complaint system/tracking, Key Performance Indicators (KPIs), root controls, staff certifications, new enhancements necessary for complying with Reissued WDR	Order 2022-0103-DWQ (Spec. 5.19, Att. D-4)	4	4	8	80%
B	**Pre-Inspection** (Supervisors) 1800 Booth Rd	Field staff training program/competency, pump station training, identification/tracking of critical spare parts, SERP training and implementation, post-spill assessments, Supervisor SSMP familiarity/training/inter-coordination, SSMP responsibilities, outside agency coordination, condition assessment process and data, FOG enforcement, new enhancements necessary for complying with Reissued WDR	Order 222-0103-DWQ (Spec. 5.19, Att. D-4)	4	3	7	70%
C	**Field Inspection** (Operator Interviews) Brady Pump Station 8190 Brady Ln	Operator interviews (reviewed spill City emergency response readiness and procedures, operator training/competency, O/M activities, alarms, standard operating procedures (SOPs), and logbook; reviewed asset conditions)	Order 222-0103-DWQ (Spec. 5.19, Att. D-4)	4	3	7	70%
D	**Field Inspection** (Operator Interviews) 8800 Sierra College Blvd	Operator interviews (reviewed spill City emergency response procedures; reviewed spill response/mitigation details and future planned activities for further minimizing future spills	Order 222-0103-DWQ (Spec. 5.19, Att. D-4)	4	4	8	80%
						Avg. Compliance Score	75%

3. Inspection Procedures

The inspection incorporated the following procedures:

1. Desktop Review (review of City SSMP, previous regional board enforcement, benchmarks)
2. Pre-Inspection Meetings
3. Data Review (City answers to completed SWRCB/FCL Questionnaires, spill reports, work programs, other info.)
4. Compliance Evaluation Inspection
5. Post-Inspection Review

4. Inspection Tasks



The inspection incorporated several key tasks for evaluating the City's SSMP compliance, implementation, and effectiveness with the Reissued WDR (see Table 2 below).

Table 2 – Summary of inspection Tasks during Inspection

Task	Description	Areas Assessed	WDR Citations
A	**Pre-Inspection Conf.** (Collection System Superintendent) 1800 Booth Rd	• Field staff training program/competency, maintenance program, SCADA monitoring/improvements, SERP implementation, capital improvement program (CIP) collaboration between engineering and collections operations, lift station operator inspection logging/data and alarms, FOG enforcement, critical spare parts, mutual assistance practices, design/construction standards, customer complaint system/tracking, Key Performance Indicators (KPIs), root controls, staff certifications, new enhancements necessary for complying with Reissued WDR	• Spec. 5.19 • Att. D-4 • Att. D-6 • Att. D-8 • Att. E1 • Att. D-11 • Att. D-5 • Att. D-2 • Att. D-8 • Att. D-9
B	**Pre-Inspection Conf.** (Collection System Supervisors) 1800 Booth Rd	• Field staff training program/competency, pump station training, identification/tracking of critical spare parts, SERP training and implementation, post-spill assessments, Supervisor SSMP familiarity/training/inter-coordination, SSMP responsibilities, outside agency coordination, condition assessment process and data, FOG enforcement, new enhancements necessary for complying with Reissued WDR	• Spec. 5.19 • Att. D-4 • Att. D-6 • Att. D-2 • Att. D-11 • Att. D-8 • Att. D-7
C	**Field Inspection #1/2** (Operator Interviews) Brady Pump Station 8190 Brady Ln	• Operator interviews (reviewed spill City emergency response readiness and procedures, operator training/competency, O/M activities, alarms, standard operating procedures (SOPs), and logbook; reviewed asset conditions)	• Spec. 5.19 • Att. D-4
D	**Field Inspection #2/2** (Operator Interviews) 8800 Sierra College Blvd	• Operator interviews (reviewed spill City emergency response procedures; reviewed spill response/mitigation records, details and discussed future planned activities to minimizing any future spills at location	• Spec. 5.19 • Att. D-4 • Att. D-6 • Att. E1

5. TASK A (Pre-Inspection Conf – Superintendent)

This task included a detailed interview with the City's Collection System Superintendent, Mr. Dan Prudent who was very knowledgeable and instrumental in providing clear answers to all questions asked during the inspection. Mr. Pruden also provided a comprehensive set of documents requested previous Pre-Inspection conferences for supplementing data necessary for completing the SSMP Audit package.

TASK A (Photo A1): Pre-inspection conference with Superintendent (Mr. Dan Pruden).

A list of Best Practices (BPs) identified during the interview with the Superintendent is presented in Table 3 below.

Table 3 – TASK A (Best practices identified during inspection)

TASK B	Best Practices (BPs)	WDR Citations
Pre-Inspection (Collection System Supervisors)	• BP A1: Tenured Superintendent and Supervisors with >50 years of combined experience	• Spec. 5.7 • Spec. 5.1
	• BP A2: High quality SSMP, Audits, SERP, spill reports, maintenance equipment	• Spec. 5.2 • Spec 5.12 • Att. E1
	• BP A3: Extensive routine cleaning/inspection programs in place with demonstrated successful outcomes	• Att. D-4
	• BP A4: Extensive pump station/backup power, and spill readiness efforts securely in place	• Spec. 5.19 • Att. D

The following Areas of Concern (AOC) were identified for Task A during the inspection (see Table 6 below).

Table 4 – TASK A (Areas of Concern)

Task A	Areas of Concern (AOC)	WDR Citations
Pre-Inspection Conf. (Collection System Superintendent)	• AOC A1: Field staff training/SERP competency with pump stations	• Spec. 5.19 • Att. D-4
	• AOC A2: Communication and coordination between City dispatch operators and Collections management for ensuring all complaints are promptly assessed and addressed	• Att. D-2 • Att. E1
	• AOC A3: Legally Responsible Official (LRO) training/Data Submitter training	• Spec. 5.1
	• AOC A4: Coordination (engineering/operations)	• Att. D-8
	• AOC A5: Force mains (condition assessments/monitoring)	• Att. D-8
	• AOC A6: Pump station coordination (electricians/line staff)	• Att. D-2
	• AOC A7: FOG program (implementation/enforcement)	• Att. D-7
	• AOC A8: Maintenance of critical spare parts, inventory	• Att. D-4
	• AOC A9: Improvements (regional partners, coordination)	• Att. D-6
	• AOC A10: Improvements (design, construction standards)	• Att. D-5
	• AOC A11: Improvements (Cal-OES notifications, Cat. 1 spills)	• Att E1
	• AOC A12: Improvements (SERP training for staff, contractors)	• Att. D-6

6. TASK B (Pre-Inspection Conf – Supervisors)

This task included interviews with both collection system Supervisors for further assessing the City's SSMP compliance, implementation, and effectiveness against several key Reissued WDR requirements. This included reviewing training program, O/M programs, staffing, and other information. Mr. Rodgers and Mr. Wilbanks were very knowledgeable and provided clear answers to the majority of the questions asked during the inspection.

The Supervisors were asked questions jointly about things going well, best practices in place, and recommendations for what could further be improved. They both agreed with Mr. Pruden regarding the need to further improve the City's existing training program and are concerned about having many inexperienced staff with less than 5 years of actual practical collection system maintenance experience. The Supervisors had some uncertainty with a number of the answers to questions about the City's SSMP documentation, implementation practices of key SSMP elements, and explanation of existing work programs which could be further improved. A list of Areas of Concern (AOC) identified for Task B during the inspection are presented in Table 5 below.

Location B (Photo B1): Pre-inspection conference with Supervisors (Mr. Shane Rodgers and Mr. Cody Wilbanks).

A list of Areas of Concern (AOC) identified for Task B during the inspection are presented in Table 5 below.

Table 5 – Task B (Areas of Concern identified during inspection)

TASK B	Areas of Concern (AOC)	WDR Citations
Pre-Inspection (Collection System Supervisors)	• AOC B1: Inexperienced line staff/SSMP training/competency; pump station training	• Spec. 5.19 • Att. D-4
	• AOC B2: SERP implementation/trainings/post-spill assessments	• Att. D-6
	• AOC B3: Improvements to critical spare parts/inventory/controls	• Att. D-4
	• AOC B4: Supplemental Data Submitter CIWQS training	• Att. E1
	• AOC B5: Improvements (regional partners/ coordination)	• Att. D-6
	• AOC B6: Improvements (reducing “hot spots”)	• Att. D-4
	• AOC B7: Improvements (procedures for addressing system deficiencies)	• Att D-8
	• AOC B8: Improvements (FOG implementation/enforcement)	• Att. D-7
	• AOC B9: Training/familiarity with Reissued WDR requirements, the City’s SSMP, and CIWQS reporting procedures	• Spec. 5.19 • Att. D-4

7. TASK C (Field Inspection #1/2 – Brady Pump Station)

This task included interviewing collection system line staff to assess adequacy of the City's existing program for training line staff for operations of the City's pump stations to comply with Attachment D-6, Spill Emergency Response Plan, and Attachment D-4.3, Training (see photos C1-C6 below). This included interviews with field operations staff at the Brady station. Detailed questions about the station's equipment, inspection/maintenance procedures, emergency troubleshooting procedures, and logbook were asked. Although operators were very experienced and knowledgeable, no specific references to standard procedures were cited and many answers asked during the assessment were either incomplete or inconsistent.

Alarms/Emergency Troubleshooting: To assess emergency response and troubleshooting, operators were asked questions about the station's equipment, operations, and troubleshooting procedures for responding to alarm calls or possible emergencies at the station. No references to SSMP/standard procedures for pump stations were cited by operators.

Logbook: Inspection of the station logbook revealed only very basic entries being logged by operators without detailed information for maintenance activities or resolution of any problems encountered. Operators stated that pumps are serviced on 90-day intervals. However, inspection of the logbook entries revealed the last pump servicing was completed in July 2023.

Alarm Simulation: A high float alarm check was completed. No references to SSMP/standard procedures for pump stations for handling alarms were cited by operators (procedures for pulling float, checking motor control center (MCC) panel, calling wastewater treatment plant to inform them of the test, logging the test in logbook and into CMMS, etc.).

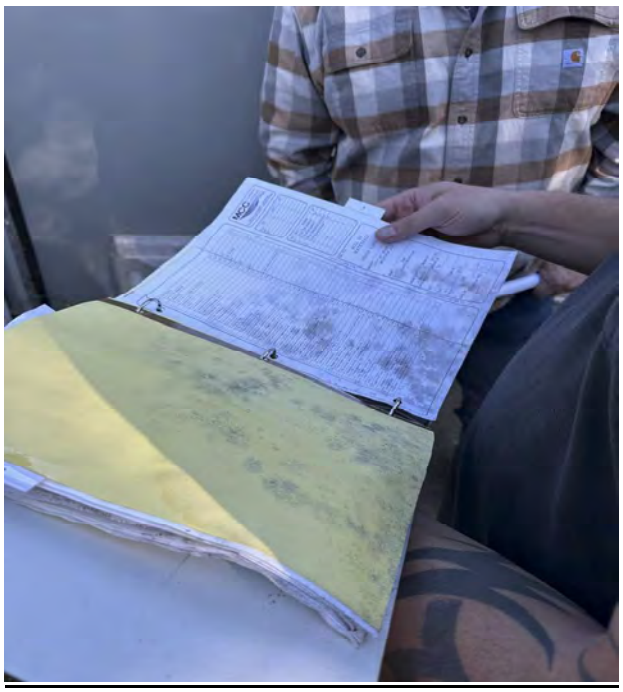
Allowable Downtime: The City completed comprehensive downtime calculations without power for all of its pump stations including the Brady station. The maximum allowable holding time specified for the Brady station is 11 hours (see Photo C3).

Bypassing: The inspection revealed the Brady station does not have a force main bypass valve installed and traditional bypassing would prove difficult due to challenges accessing the force main which flows under the adjacent creek immediately south/southwest of the station. No references to SSMP/standard procedures for pump stations for bypassing were cited by operators.

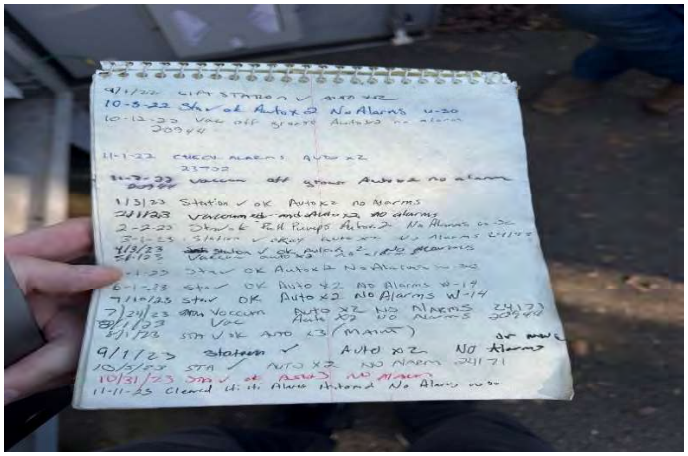
Spill Appearance Point: Operations staff were unable to quickly reference the lowest upstream spill appearance point for the station.

Task C (Photo C1): Inspection of Brady Pump Station; emergency notification signage mounted on the station fence including City contact information.

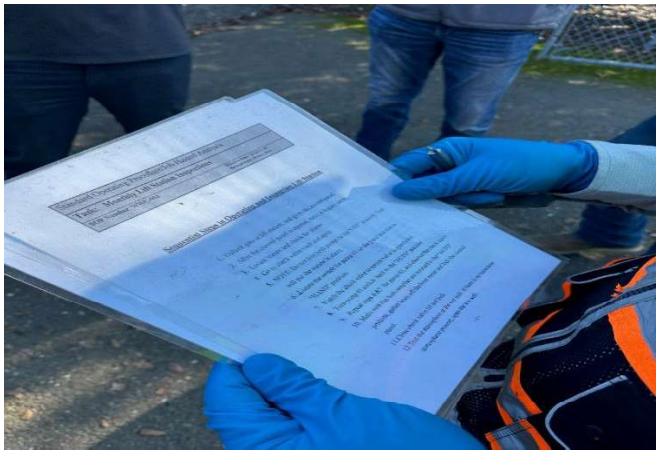
Task C (Photo C2): Interviews with City field operations staff at station.



Task C (Photo C3): Inspection of station motor control center (MCC) panel and controls.



Task C (Photo C4): Inspection of station Wetwell.



Task C (Photo C5): Inspection of station MCC panel; the City has written critical information for all of its pump stations including the Brady station for reference during routine/emergency operations; written specifications include "allowable downtime without power=11 hours, "overflow point= Wetwell", decant manhole (MH C03-216 located at 1311 Brady Lane; "high alarm" set point=96", "lag start" set point=70", "lead start set point=59", "lead/lag" stop point=27", "low alarm" set point=12", and "low float" set point at 4").

Task C (Photo C6): Inspection of 2008 original construction documentation stored in the MCC inside panel at station.

Task C (Photo C7): Inspection of station logbook; only basic entries are logged by operators.

Task C (Photo C8): Inspection of "Standard Operating Procedure/Job Hazard Analysis" form stored in the MCC inside panel; operations staff were unaware of the form; station operators were also initially unsure of lowest upstream spill appearance point for station.

A list of Areas of Concern (AOC) identified for Task C during the inspection are presented in Table 6 below.

Table 6 – Task C (Areas of Concern identified during inspection)

TASK C	Areas of Concern (AOC)	WDR Citations
Field Inspection #1/2 (Operator Interviews) Brady Pump Station 8190 Brady Ln	• AOC C1: Insufficient answers to questions related to Standard Operating Procedures (SOP) for pump stations	• Spec. 5.19 • Att. D-4
	• AOC C2: Insufficient answers to inspection questions related to Spill Emergency Response Plan (SERP) implementation procedures, station equipment, and alarm response/procedures	• Spec 5.12 • Att. D-6

8. TASK D (Field Inspection #2/2 – 8800 Sierra College Blvd)

This task included assessing the City's response to addressing a spill originating from an odor complaint submitted to the City for this location (see Spill CIWQS Spill ID #891462 (Attachment X) and photos D1-D8 below). This call originated from a public odor complaint submitted to the City for field assessment and response. The problem was ultimately discovered to be caused by tree root problems within the City's mainline sewer in this location.

Spill Summary Narrative (from Spill Technical Report submitted in CIWQS): "*On Monday, December 4, 2023, the City Wastewater Collection Division received an odor complaint from a resident at 8800 Sierra College Blvd (Slate Creek Apartment Complex). The resident indicated that despite reporting a sulfur-like odor to the property manager, the resident hadn't seen any action being taken. During the investigation of the odor complaint, the City Wastewater Collection Service Worker followed City standard operating procedures (SOPs) and discovered a sewer manhole (Asset SMH B08-032) located on a 8 inch City sewer main line discharging into a wetlands area located behind the apartment complex. The next downstream manhole (Asset ID) was discovered by the Service Worker to be fully obstructed by tree roots which the City determined after a lengthy investigation the cause of the sewer spill. Upon discovering the spill, the Service worker promptly notified a supervisor, and wastewater crews promptly implemented the City's Sewer System Management Plan (SSMP) procedures outlined in the Spill Emergency Response Plan (SERP) for containment, control and mitigation of the spill. Due to its entry into the wetlands area which flows into Strap Ravine, the spill was treated as a Category 1. Prompt notification was made to Cal-OES and a control number issued. Following containment of the spill and initiating cleanup, it became apparent that the volume of the spill exceeded 50,000 gallons, which required the need for Water Quality Monitoring and submission of a Technical Report within 45 days as required by Attachment E1 of the Reissued WDR. The City followed all required procedures outlined in its SERP for effective spill investigation, response, and cleanup, including extensive deployment of City staff and resources including Hydro-Vac units, excavators, trash pumps, and washdown water to mitigate the effects of the spill.*"

Task D (Photo D1): Inspection of former spill site (looking south/southwest); City improved former access and fully restored area immediately following the spill

Task D (Photo D2): Inspection of former spill site (looking west)

Task D (Photo D3): Inspection of manhole structure at spill appearance point (manhole asset ID #B08-028; the failure location was at manhole asset ID #B08-032.

Task D (Photo D4): Inspection of manhole structure; no significant solids or debris observed in the channel, barrel, or the bench area.

Task D (Photo D5): Inspection of Strap Creek (looking south/southeast); no evidence of spill/impacts observed

Task D (Photo D6): Inspection of Strap Creek (looking west/northwest); no evidence of spill/impacts observed

Task D (Photo D7): Close view of Strap Creek; no evidence of spill impacts observed

Task D (Photo D8): Inspection of stormwater best management practices (silt fence) installed for mitigating impacts to creek during spill cleanup/restoration; no evidence of spill/impacts observed

The following Areas of Concern (AOC) were identified for Task D of the inspection (see Table 7 below).

Table 7 – Task D (Areas of Concern identified during inspection)

TASK D	Areas of Concern (AOC)	Related WDR Citations
Field Inspection #2/2 (Operator Interviews) 8800 Sierra College Blvd	• AOC D1: Risks/threats for future spills at this location	• Prohibitions
	• AOC D2: SERP training/drills at this location	• Att. D-6
	• AOC D3: Lack of easement area access and maintenance	• Att. D-3 • Spec. 5.19

9. Findings and Recommendations

To meet/exceed the requirements of the Reissued WDR, the Agency should address all findings including potential violations and areas of concerns identified in Table 10 below prior to completion of its next required SSMP Audit.

Table 10 – Findings and Recommendations

Areas of Concern (AOC)	WDR Citations	Recommendations
• AOC A1: Field staff training/competency with SERP competency for pump stations	• Spec. 5.19 • Att. D-4	• Improve operator training program for SERP/pump stations; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC A2: Communication and coordination between City dispatch operators and Collections management for ensuring all complaints are promptly assessed and addressed	• Att. D-2 • Att. E1	• Develop/improve internal compliant procedures to ensure all incoming complaints are addressed between departments in timely manner, recorded, and staff adhere to expectations/procedures established; update SSMP and change log when implemented
• AOC A3: LRO training/Data Submitter training	• Spec. 5.1	• Improve LRO/data submitter training to achieve desired results; update SSMP and change log when implemented
• AOC A4: Coordination (engineering/operations)	• Att. D-8	• Improve coordination between engineering and operations to achieve desired results; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC A5: Force mains (condition assessments, monitoring)	• Att. D-8	• Initiate condition assessment program for force mains to achieve desired results; update SSMP and change log when implemented
• AOC A6: Pump station coordination (electricians/line staff)	• Att. D-2	• Improve training and coordination to achieve desired results; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC A7: FOG program (implementation/enforcement)	• Att. D-7	• Improve FOG program implementation to achieve desired results; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC A8: Maintenance of critical spare parts, inventory	• Att. D-4	• Improve existing inventory to achieve desired results; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC A9: Improvements (regional partners, coordination)	• Att. D-6	• Improve coordination to achieve desired results; update SSMP and change log when implemented

Areas of Concern (AOC)	WDR Citations	Recommendations
• AOC A10: Improvements (design, construction standards)	• Att. D-5	• Conduct routine period reviews of standards to address any instances where insufficient or ineffective; update SSMP and change log when implemented
• AOC A11: Improvements (Cal-OES notifications, Cat. 1 spills)	• Att E1	• Improve SERP training/drills/implementation to avoid future violations; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC A12: Improvements (SERP training for staff/contractors)	• Att. D-6	• Improve SERP training/drills/implementation with contractors; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC B1: Inexperienced line staff/SSMP training/competency; pump station training	• Spec. 5.19 • Att. D-4	• Refer to AOC A1
• AOC B2: SERP implementation, trainings, post-spill assessments	• Att. D-6	• Refer to AOC A1
• AOC B3: Improvements to critical spare parts/inventory, controls	• Att. D-4	• Refer to AOC A8
• AOC B4: Supplemental Data Submitter CIWQS training	• Att. E1	• Improve training; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC B5: Improvements (regional partners, coordination)	• Att. D-6	• Refer to AOC A9
• AOC B6: Improvements (reducing “hot spots”)	• Att. D-4	• Implement “hot spot” elimination program; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC B7: Improvements (procedures for addressing system deficiencies)	• Att D-8	• Improve narration detail for procedures in place to inspect/identify and rectify operations deficiencies discovered; update SSMP and change log when implemented
• AOC B8: Improvements (FOG implementation, enforcement)	• Att. D-7	• Refer to AOC A7
• AOC B9: Training/familiarity with the City’s SSMP and CIWQS reporting procedures	• Att. D-4 • Att. E1	• Improve Supervisor training on WDR requirements, City SSMP details, and CIWQS reporting requirements for Data Submitters to ensure competency with entering all appropriate data prior to certification of spill reports by LRO (Legally Responsible Official).

Areas of Concern (AOC)	WDR Citations	Recommendations
• AOC C1: Insufficient answers to questions related to Standard Operating Procedures (SOP) for pump stations	• Spec. 5.19 • Att. D-4	• Improve SERP training/drills/implementation to avoid future violations; ensure adherence to established procedures; update SSMP and change log when implemented
• AOC C2: Insufficient answers to inspection questions related to Spill Emergency Response Plan (SERP) implementation procedures, station equipment, and alarm response/procedures	• Spec 5.12 • Att. D-6	• Improve SERP training/drills/implementation to avoid future violations; ensure adherence to established procedures; update SSMP and change log when implemented

Areas of Concern (AOC)	WDR Citations	Recommendations
• AOC D1: Risks/threats for future spills in remote areas	• Prohibitions	• To help further reduce risks/threats/impacts from future spills at this location and at other similar assets, the City should audit and improve its existing maintenance practices for remote locations; the City should also consider utilization of monitoring technology to help further improve oversight of identified critical remote areas
• AOC D2: SERP training/drills in remote areas	• Att. D-6	• To help reduce risks/impacts with future spills, the City should consider conducting customized drills for its SERP specific for remote locations
• AOC D3: Lack of easement area access and maintenance	• Att. D-3 • Spec. 5.19	• The City should further assess access/maintenance practices for assets in this location and others throughout the system to ensure compliance with Att. D-3 requiring adequate accessibility for operations and maintenance

10. Post-Inspection Findings

The Compliance Evaluation Inspection Report (CEI) was submitted to the City on March 7, 2024. In response, the following information was received from the City providing detailed responses to all Areas of Concern (AOCs) identified during the inspection report.

Areas of Concern (AOC)	City Responses
• AOC A1: Field staff training/competency with SERP competency for pump stations	• *"All staff receive training once a year on our SOP # 003 "Lift Station Inspection specifically". They also receive additional training on lift stations once a year when we train of our SERP and SSMP (element 4). Lastly, they receive a separate training on SOP # 042 "Lift Station Overflow Structure". Our crews are taught that they have the support of management, and we can be called in any situation to help or advise."*
• AOC A2: Communication and coordination between City dispatch operators and Collections management for ensuring all complaints are promptly assessed and addressed	• *"The City of Roseville has a person that answers phones from 0630-1600 five days a week. If they are unavailable, after hours and on weekends we have an answering service that the call rolls over to. Calls received by the answering service are relayed to the Service Worker / On Call personnel. The city also customer relationship management system that the public can use to contact us as well. We are also notified of odor complaints that are submitted online that the City can quickly respond too. Are communication with regulatory agencies is handled by reporting on CIWQS, spills that are category 1 or over 1000 gallons are reported to OES as required."*
• AOC A3: LRO training/Data Submitter training	• *"LRO and data submitting training is learned on the job and by attending CWEA and Tri State training classes. Additional training is received through consultant training classes as well. All LRO's and data submitted hold at a minimum a CWEA Collection System maintenance Grade 4 or is a registered PE in California."*
• AOC A4: Coordination (engineering/operations)	• *"The City of Roseville plans capital improvements through system evaluation and condition assessment. Areas of concern are identified with CCTV, visual observations, modeling and impacts on environmental areas of concern. Projects are scheduled and planned through our Tech Services group and on projects that we bring to them we are highly involved. We are currently working with Tech Services on two areas where we have capacity issues. The projects will upsize the existing mains to allow for more capacity and relieve choke points. Projects that effect the collection system on the development side are handled by our Development Services group and Wastewater Collections is involved in these activities. The actual design we do have input on, but we are not involved so much with the day to day building of the infrastructure. If changes are made in the field, we may not know about them until much later. More oversite is needed by the wastewater Collection staff.*

Areas of Concern (AOC)	City Responses
• AOC A5: Force mains (condition assessments, monitoring)	A5: The City of Roseville is currently working on a project to complete a full condition assessment of its force mains. As of today, we have not started a full condition assessment of our force mains do to the lack of technology out there. Tech Service is working to find a technology that will work for our small diameter mains. It may come down to excavating and removing a coupon to do our evaluation.
• AOC A6: Pump station coordination (electricians/line staff)	A6: Wastewater Collection staff are only authorized to operate lift stations with the Hand Off Auto switch. All other electrical work is performed by our Electrical Technicians. These staff members are available 24/7, 365 and have full access to spare / stocked parts that may be required. They can perform electrical work, signal and control wiring, PLC and SCDA programming and troubleshooting.
• AOC A7: FOG program (implementation/enforcement)	A7: The City of Roseville has two full time FOG inspectors that perform public outreach and enforces the City's municipal code section 14.14. The city relies on two components to control FOG, 1. Cleaning and inspection 2. Enforcement and education working with our FSE's. You may also refer to element #7 of our SSMP. We are working with Code Enforcement to apply monetary penalties on an as needed basis. We have developed a program that is currently at the City Attorney's Office for review where we do the inspection, notification of violation (three times) and then hand of to Code enforce the monetary aspect of the enforcement or the closing of the business. We also have language in the code that we can sever or temporarily stop flow from an establishment.
• AOC A8: Maintenance of critical spare parts, inventory	A8: The City of Roseville has identified critical parts that are required to be on hand for the preventive maintenance and emergency maintenance that may be required. These parts are called out in our SSMP element #4 Operation and Maintenance. All electrical components are maintained in our mechanical maintenance warehouse that is controlled by the electrical technicians at the Dry Creek WWTP. All repair fittings and pipe are warehoused at the Collections building and controlled by the wastewater collections team. As material / components are used they are replaced to maintain a reasonable inventory of required parts. All warehoused material is controlled by a material technician that works in wastewater collections to allow better control of what we need to have on hand.
• AOC A9: Improvements (regional partners, coordination)	A9: More work can be performed here. There is a JPA in place but nothing specific to mutual aid and how that would work in an emergency. We do meet three times a year with our satellite agencies, and we do from time to time reach out to work on and or discuss issues of the day.

Areas of Concern (AOC)	City Responses
• AOC A10: Improvements (design, construction standards)	• *"As stated in element #5 of our SSMP, the City of Roseville maintains design and construction standards with minimum requirements for developers and contractors for installing a complete and operable wastewater collection system. The standard has language that calls out for air and vacuum testing along with CCTV for acceptance. The City of Roseville also has a punch list procedure to communicate unacceptable work to developers and contractors. According to the National Clay Pipe Institute the City of Roseville has the most stringent standard for installation and acceptance in the country."*
• AOC A11: Improvements (Cal-OES notifications, Cat. 1 spills)	• *"All category 1 and 2 spills are reported to Cal OES with in the required two hours. All information that is required to be reported is given to the Cal OES operator based on the questions that they ask, and a control number is obtained. Should information change there is an option for updating information. Water samples are taken for spills that are greater than 50,000 gallons. See element #6 of our SSMP."*
• AOC A12: Improvements (SERP training for staff/contractors)	• *"We train on the SERP annually and impromptu classes and testing are conducted through the year. We use an onsite spill simulator to train on spills from a lower lateral clean out and a sewer manhole. Spill volume and start and stop times estimation are trained on as well."* • *"We respond to calls for service within 20 minutes during business hours and within 40 minutes after hours and on weekend and holidays. We train on containing the spill, eliminating the cause, and mitigating the impacts of the spill. Notifications for category 1 and 2 spills are made as required and all spills are photographed and documented. Spills that require reporting to CIWQS are done so within the required time."*

Areas of Concern (AOC)	City Responses
• AOC B1: Inexperienced line staff/SSMP training/competency; pump station training	• B1: While the personnel question may not have answered all the question to the satisfaction of the interviewer it does not mean that they do not know that their job is to protect from dischargers to the environment. The personal questioned were from other crews and do not typically work on lift stations. They have been trained and if they had arrived at a true spill, they would have followed their training to mitigate the issue.
• AOC B2: SERP implementation, trainings, post-spill assessments	• B2: All COR WWC staff have been trained on the SERP twice in the last year. The first training was conducted by the LRO, and a second training was conducted with a consultant. One Source Utility Consulting was used for a half day training along with a spill simulator test for volume estimation, duration and volume recovered. Post spill assessments are completed by the LRO or his supervisors this is not a requirement of the operation staff.
• AOC B3: Improvements to critical spare parts/inventory, controls	• B3: The warehousing of critical spare parts is sufficient to handle any issues that we may encounter. To date we have not had a spill due to lack of spare parts. In extreme cases bypass pumping of the lift stations could be performed as well as any mains that we have in our system.
• AOC B4: Supplemental Data Submitter CIWQS training	• B4: More training may be warranted here and adding another LRO in Collections should be implemented. Seek out third party training for additional compliance training.
• AOC B5: Improvements (regional partners, coordination)	• B5: More work can be performed here. There is a JPA in place but nothing specific to mutual aid and how that would work in an emergency. We do meet three times a year with our satellite agencies.
• AOC B6: Improvements (reducing “hot spots”)	• B6: Hot Spots are removed, when possible, by way of CIPP or replacing with new pipe. We also use FOG Inspection and compliance measure to try and reduce Hot Spots. Time has taught us the FOG does stick to CIP so removal of a main does not mean in perpetuity, it can end up back on the list!
• AOC B7: Improvements (procedures for addressing system deficiencies)	• B7: Improvements are based on our Vactor operator’s observations and CCTV crews condition assessment. We also contract with outside contractors to perform condition assessment of our larger trunk mains. We recently bypassed pumped and inspected our 63” and 66” in two locations to determine the cause and possible extent of damage after blistering was seen in the 2019 Condition assessment of the same mains. As issues are found through condition assessments of collector’s work orders are created and prioritized for repair. COR has its own in house construction crew and work is performed to make all repairs.
• AOC B8: Improvements (FOG implementation, enforcement)	• B8: The City of Roseville has two full time FOG inspectors that perform public outreach and enforces the City’s municipal code section 14.14. The city relies on two components to control FOG, 1. Cleaning and inspection 2. Enforcement and education working with our FSE’s. You may also refer to element #7 of our SSMP. We work with Code enforcement to apply monetary penalties on an as needed basis.

Areas of Concern (AOC)	City Responses
• AOC B9: Training/familiarity with the City's SSMP and CIWQS reporting procedures	• B9: More hands on training is required for probationary employees and a few of our Journeymen. Personnel can sometimes get placed on a crew for years on end and the day to day knowledge may be lost when asked to fill in on another discipline. We train annually on lift station operations the SERP, WDR and SSMP as well as SOP training for mission essential equipment used for preventive and reactive maintenance.

Areas of Concern (AOC)	City Responses
• AOC C1: Insufficient answers to questions related to Standard Operating Procedures (SOP) for pump stations	• C1: While the answers may have been insufficient at the time the fact is that all employees know that if they arrive at any call for service that if they have any questions or issue, they can always call a supervisor. We can improve in this area; we have created an atmosphere where the crews rely on direction from leads and supervisors. More will be done in this space to make the crews feel they can do this all on their own.
• AOC C2: Insufficient answers to inspection questions related to Spill Emergency Response Plan (SERP) implementation procedures, station equipment, and alarm response/procedures	• C2: There has been training and testing on the SERP and on lift station operations, but this audit shows more work is needed. New testing requirements will be implemented for both the SERP and Lift Station training along with impromptu testing on all our disciplines in wastewater collections.

Areas of Concern (AOC)	City Responses
• AOC D1: Risks/threats for future spills in remote areas	• D1: The first lesson learned from this spill was the need for a more aggressive and consistent hydro cleaning schedule for easements and open spaces. We have embarked on a new program that has identified all easements and open spaces and prioritized mains that if water were to spill would have the greatest impact on the environment. Second, we have procured an easement machine to better access some of the harder to reach SMH in easements. This machine adds an additional 500' of reach to the 800' we have on our Vactor trucks.
• AOC D2: SERP training/drills in remote areas	• D2: With our annual training we will be adding an element to cover easements and how to access hard to reach manholes. We will also cover deployment of the easement machine and best practices for working in off site locations. Included in this training we will touch on spill containment and recovery of spilled water as open spaces and easement offer their own unique challenges.
• AOC D3: Lack of easement area access and maintenance	• D3: We have identified areas of concern with regards to access. We are working on removing brush and overgrowth in some areas along with installing base rock and building solid access roads in others. The City's Public Works Department has under construction right now a bike path project that Wastewater Collection worked with them on to gain access to more SMH's along creeks. There is a second project that is kicking off that Collections is involved that will give us even more access to SMH's.

END OF REPORT

Appendix 3 — City Spill Performance Report

The purpose of this Appendix is to provide visual data tools to showcase the City's historic spill performance compared with other collection system agencies within the Central Valley Regional Water Board area and state from the required City Audit period 5/2/2021 to 5/2/2024).

List of Figures

Figure 1 – City Spill Dashboard during SSMP Audit Period (May 2021-May 2024) 2
Figure 2 - City Spill Dashboard (volume of spills by year during SSMP Audit Period (May 2021-May 2024) 3
Figure 3 - City Spill Net Volume compared to agencies by year during SSMP Audit Period (May 2021-May 2024) 4
Figure 4 - City Spill Volumes Recovered compared to agencies by year during SSMP Audit Period (May 2021-May 2024) 5
Figure 5 - City Spill Causes (by # of spill) during SSMP Audit Period (May 2021-May 2024)..... 6
Figure 6 - City Spill Causes (by volume of spill) during SSMP Audit Period (May 2021-May 2024) 7
Figure 3 - Spill Causes (by Where Failure Occurred, May 2021-May 2024)..... 8
Figure 7 – City Spill Counts of Where Failures Occurred during SSMP Audit Period (May 2021-May 2024) 8
Figure 8 – City Spill Benchmarks during SSMP Audit period (May 2021-May 2024) 9

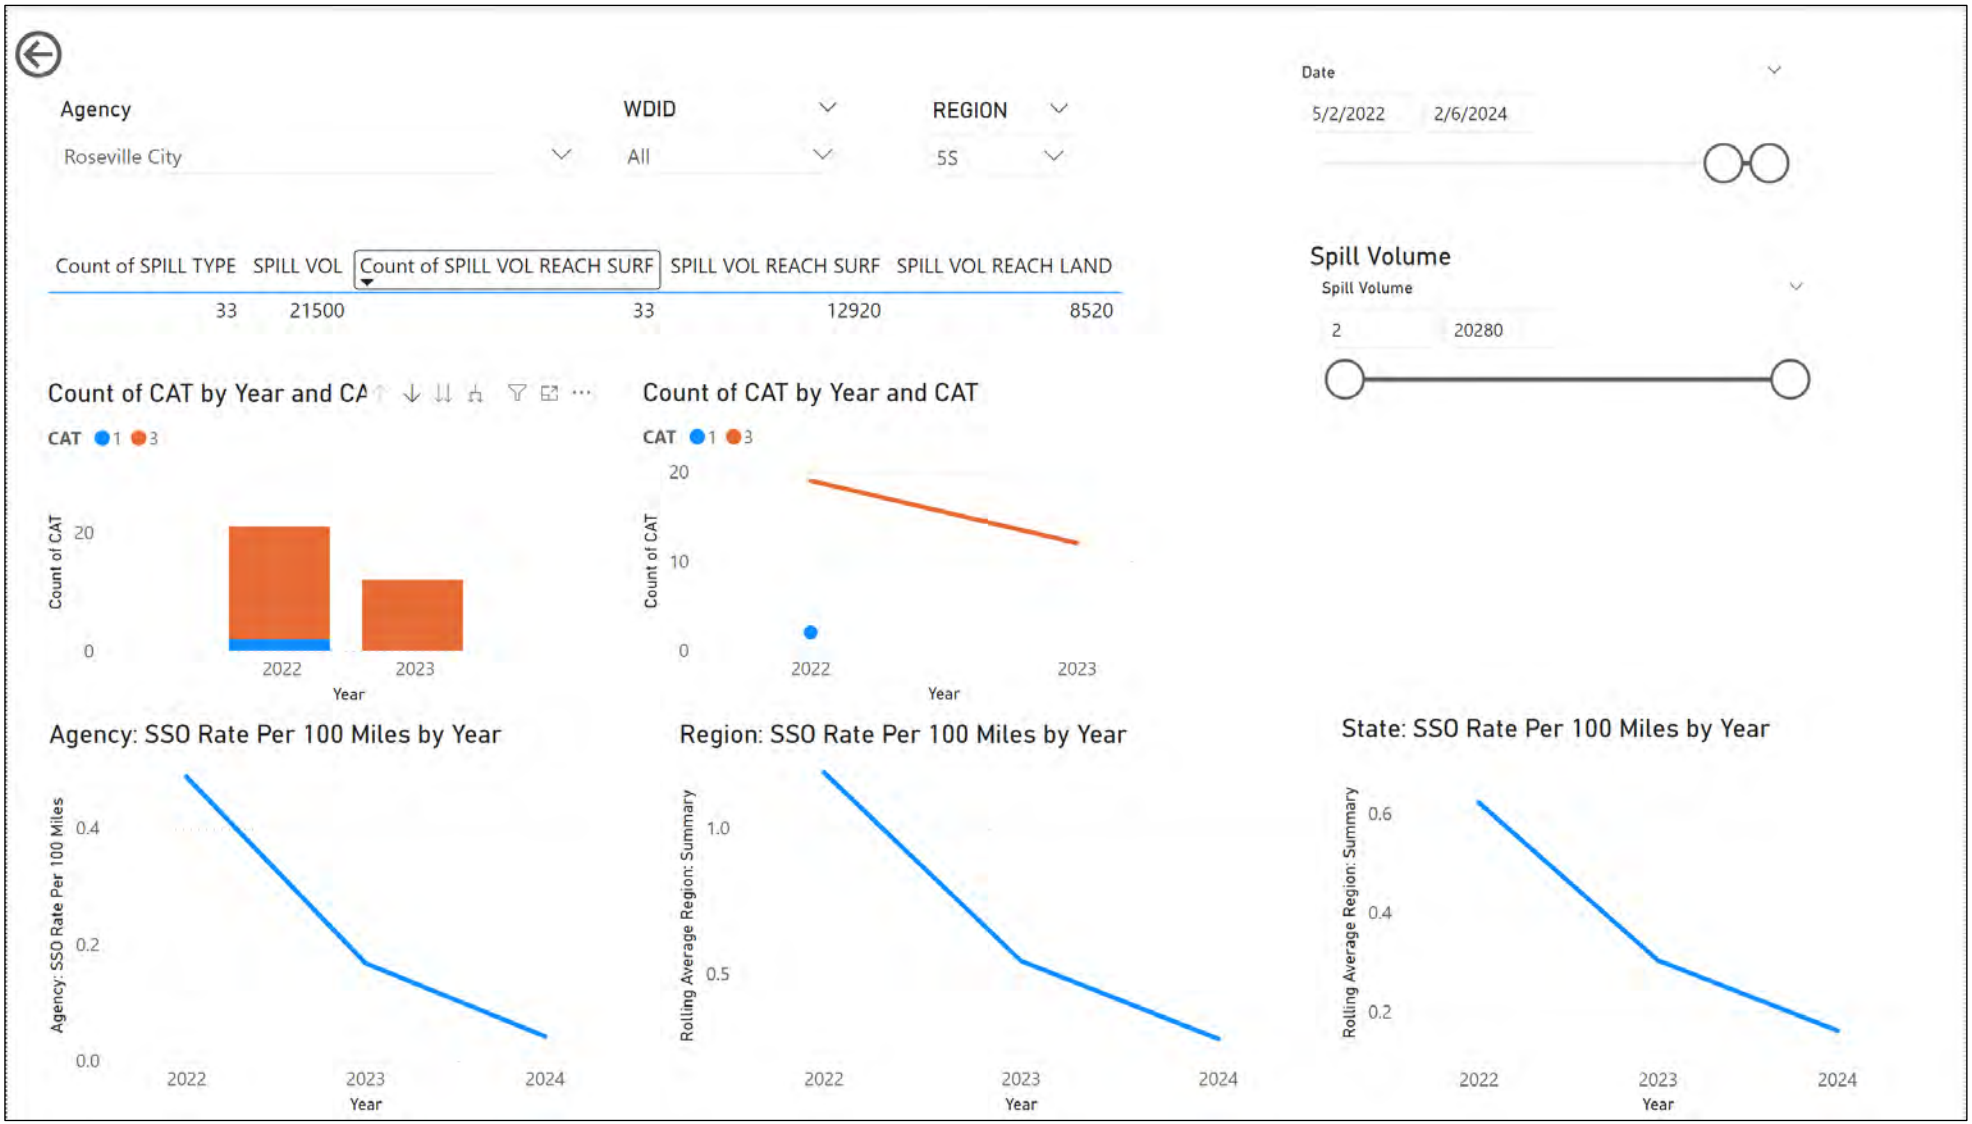

Figure 1 – City Spill Dashboard during SSMP Audit Period (May 2021-May 2024)

Observation: The City's rolling average spill rate per year during the SSMP Audit period decreased from 0.49 spills/100 miles of sewer per year to 0.04 spills/100 miles of sewer per year.

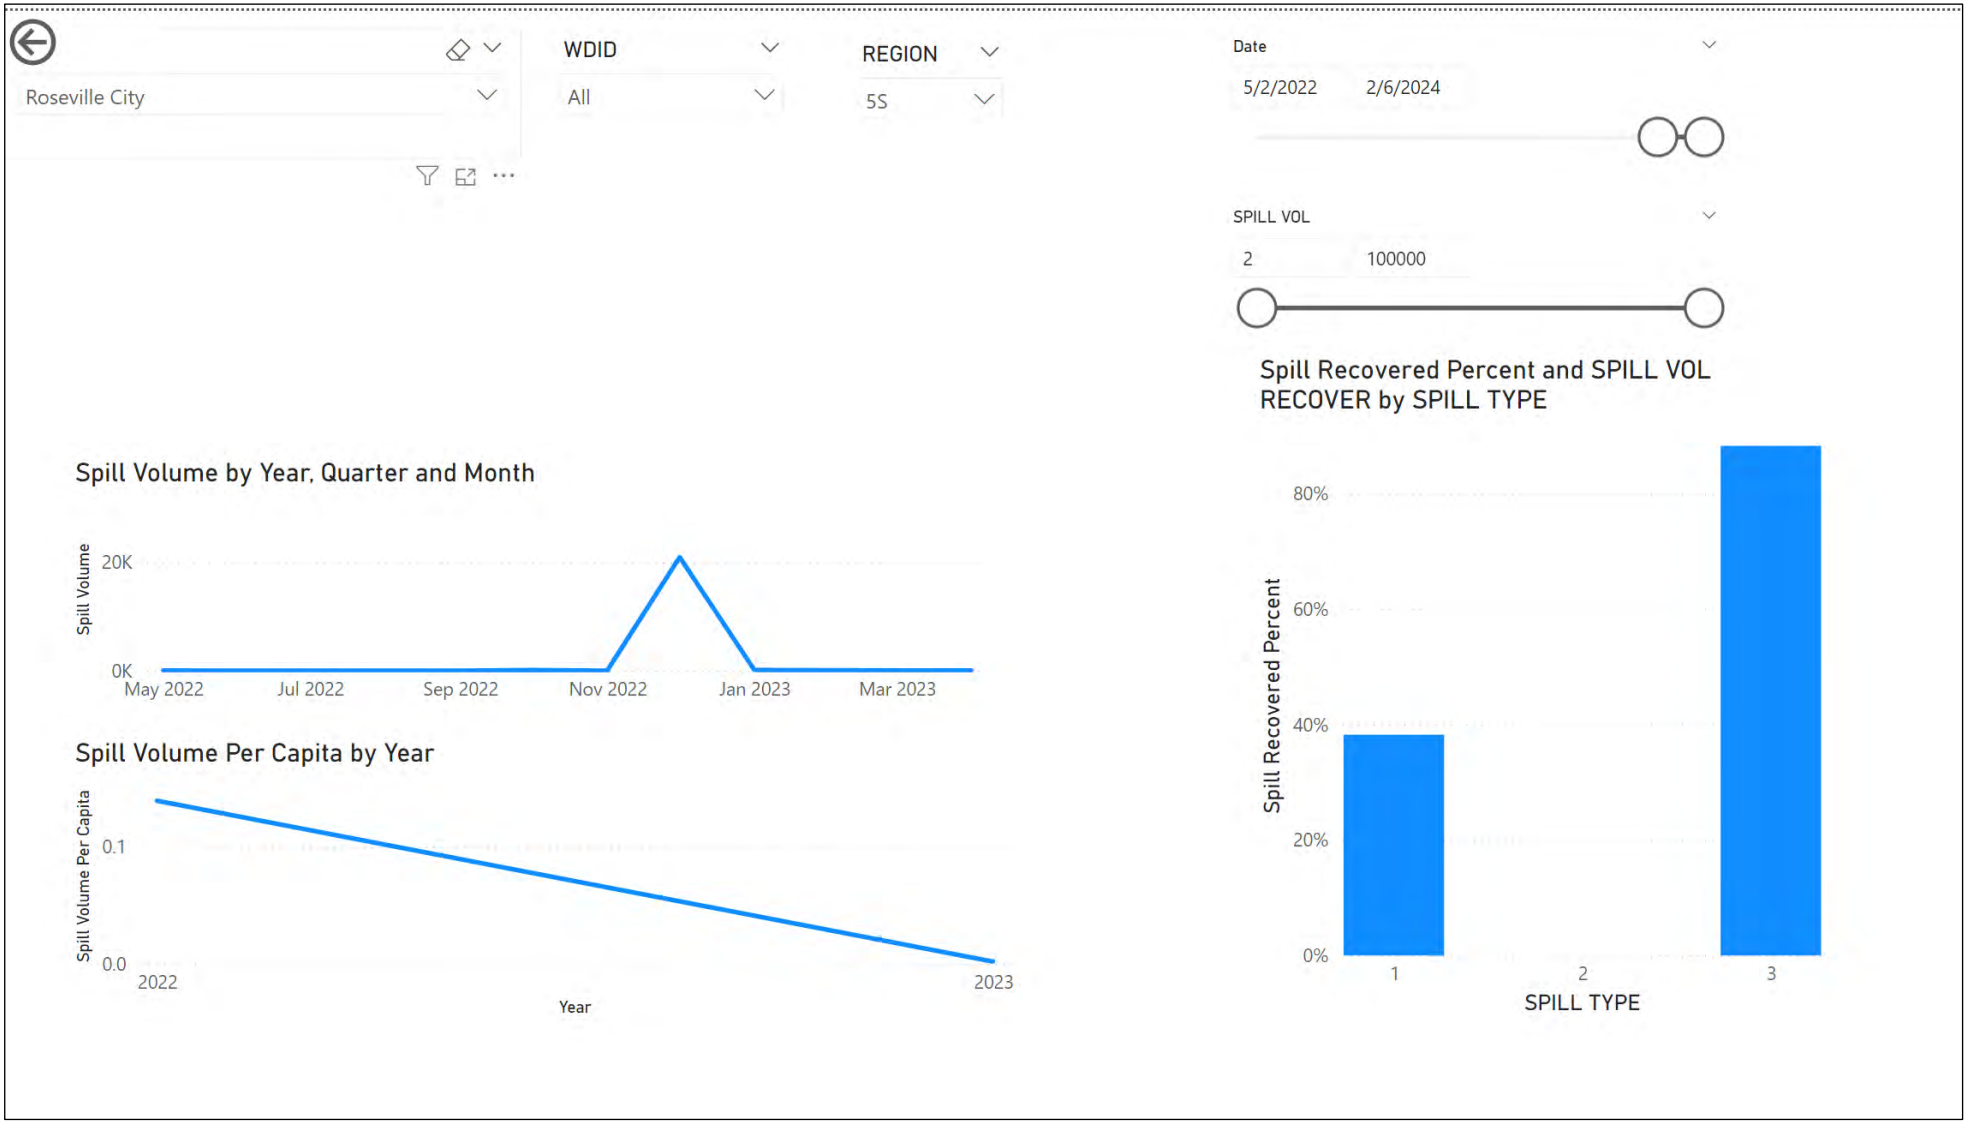

Figure 2 - City Spill Dashboard (volume of spills by year during SSMP Audit Period (May 2021-May 2024)

Observations: The City's volume of spills per capita (population) decreased during the SSMP Audit period from 0.139 gallons per capita to 0.002 gallons per capita). The City's average recovery (%) for Category 1 spills averaged 38% and 88% for Category 3 spills during the SSMP Audit period.

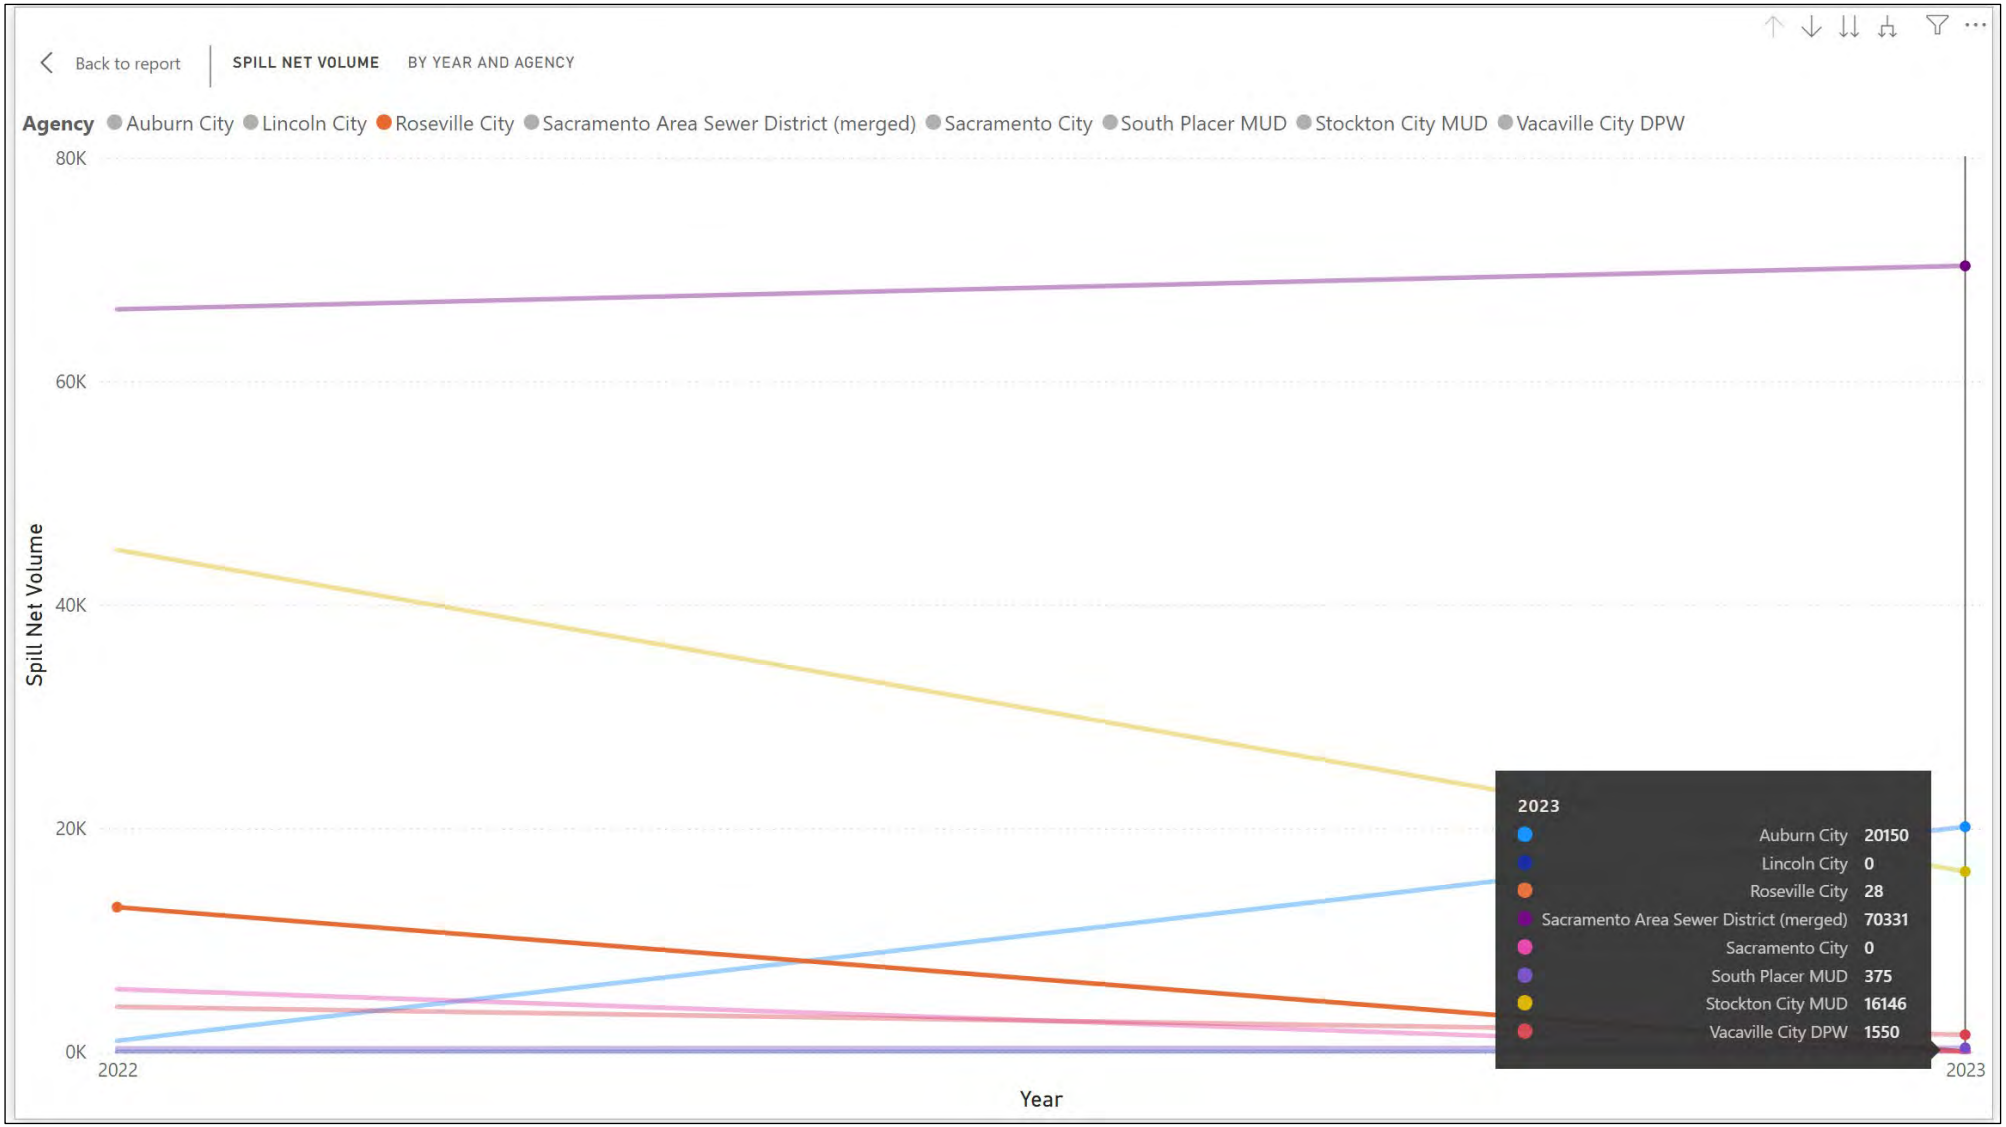

Figure 3 - City Spill Net Volume compared to agencies by year during SSMP Audit Period (May 2021-May 2024)

Observations: The City's net spill volume decreased during the SSMP Audit period from 12,960 gallons in 2022 to 28 gallons. The City's average recovery (%) for Category 1 spills averaged 38% and 88% for Category 3 spills during the SSMP Audit period.

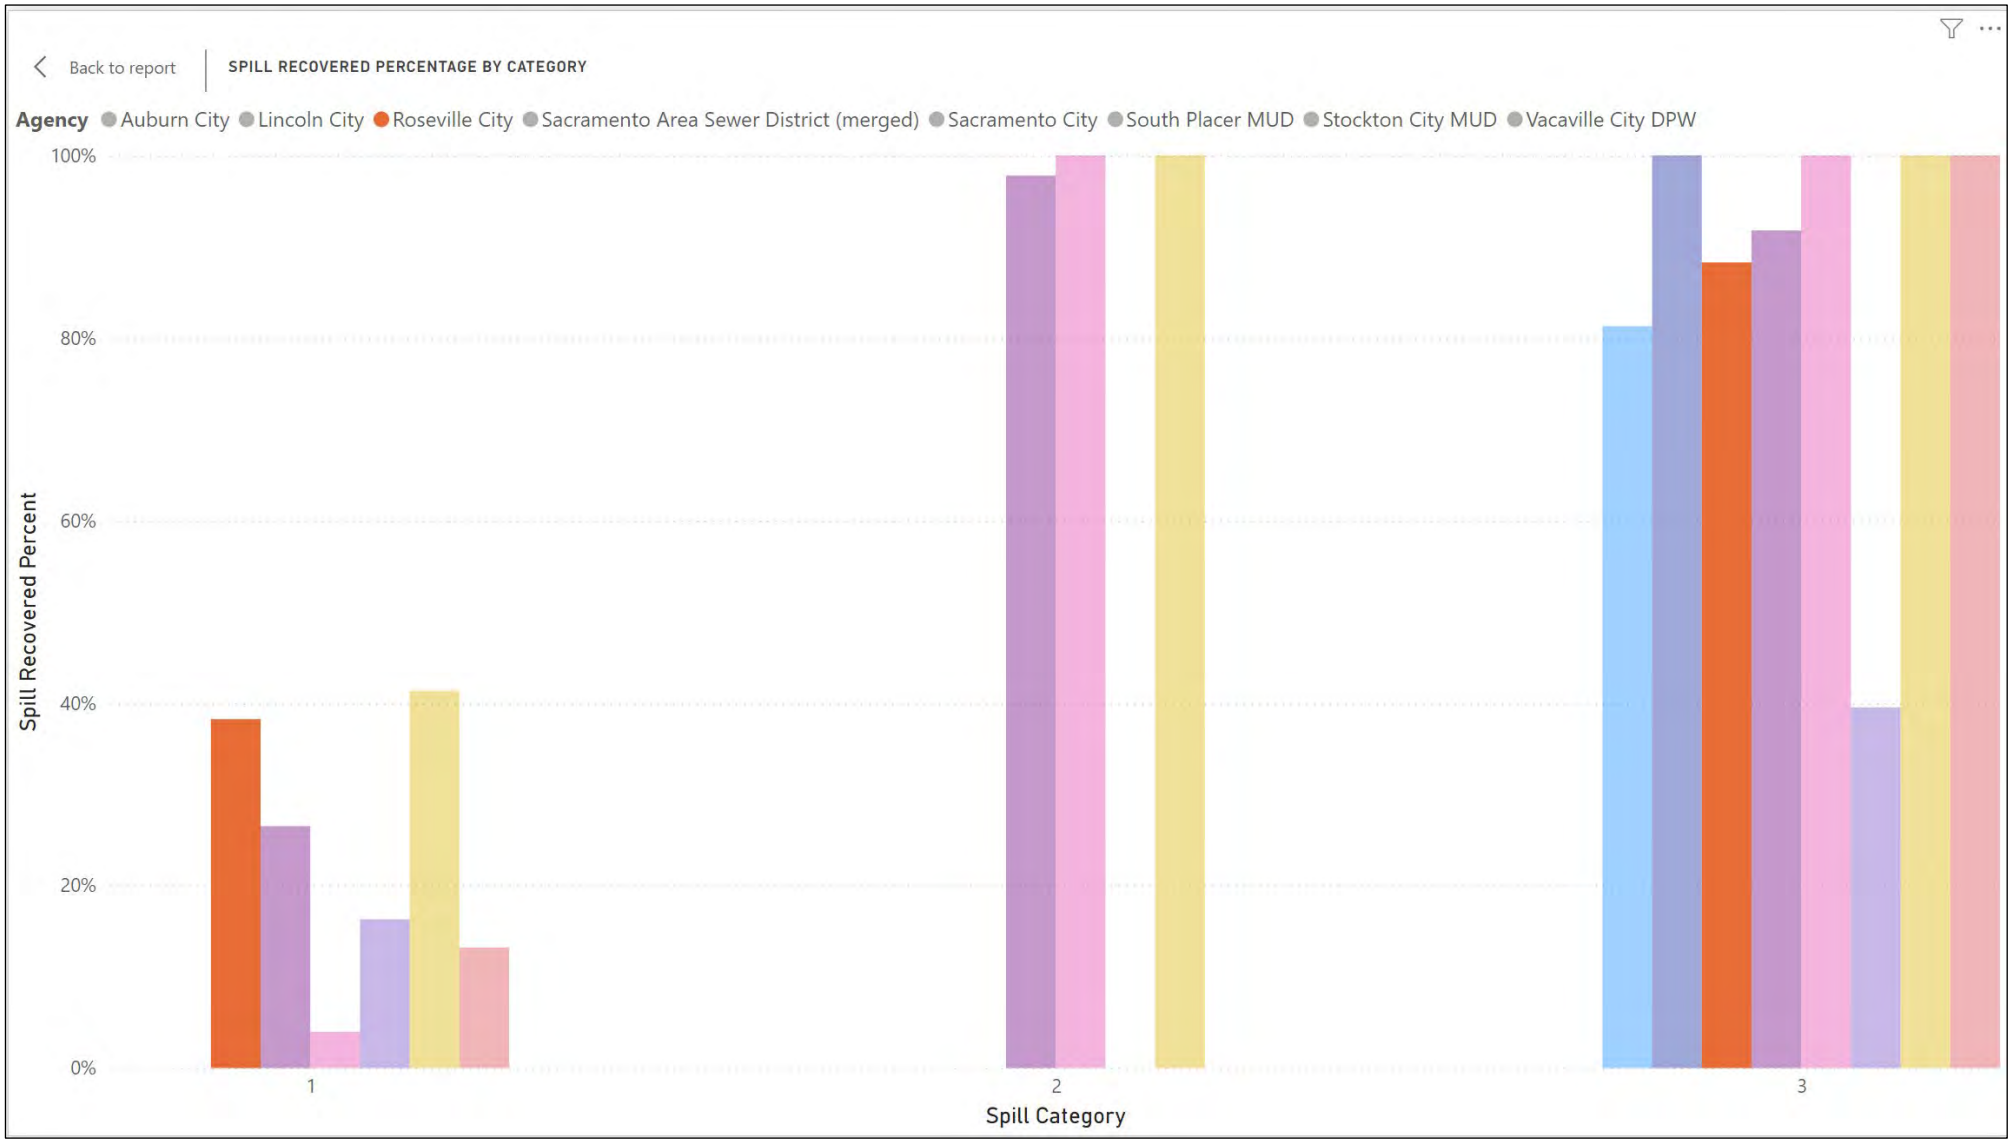

Figure 4 - City Spill Volumes Recovered compared to agencies by year during SSMP Audit Period (May 2021-May 2024)

Observations: The City's spill % of spill volume recovered for Category 1 spills (38%) and for Category 3 spills (88%) was higher than most other agencies within the region during the SSMP Audit period.

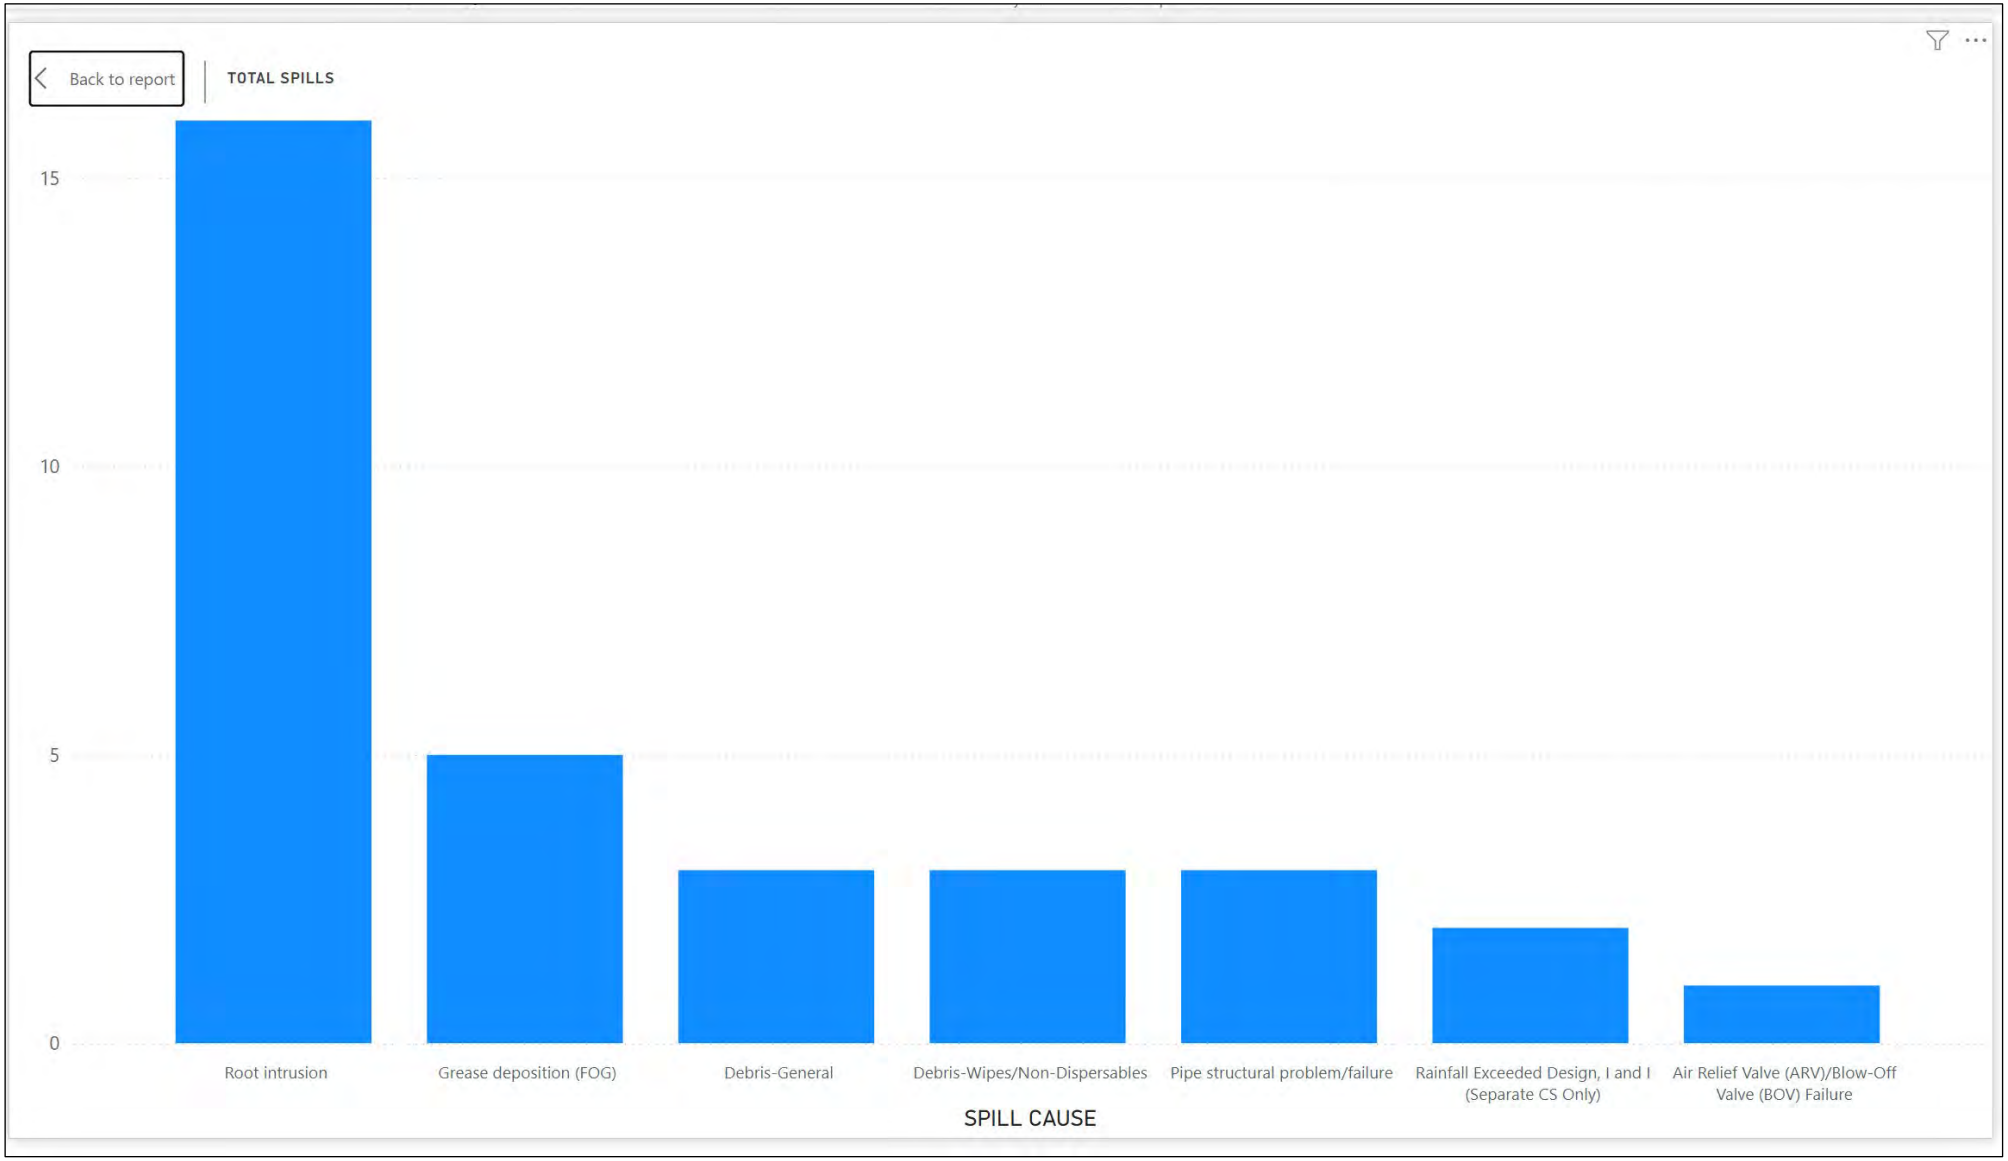

Figure 5 - City Spill Causes (by # of spill) during SSMP Audit Period (May 2021-May 2024)

Observation: The City's spill main causes (by number of spills) were root intrusion and grease during the SSMP Audit period.

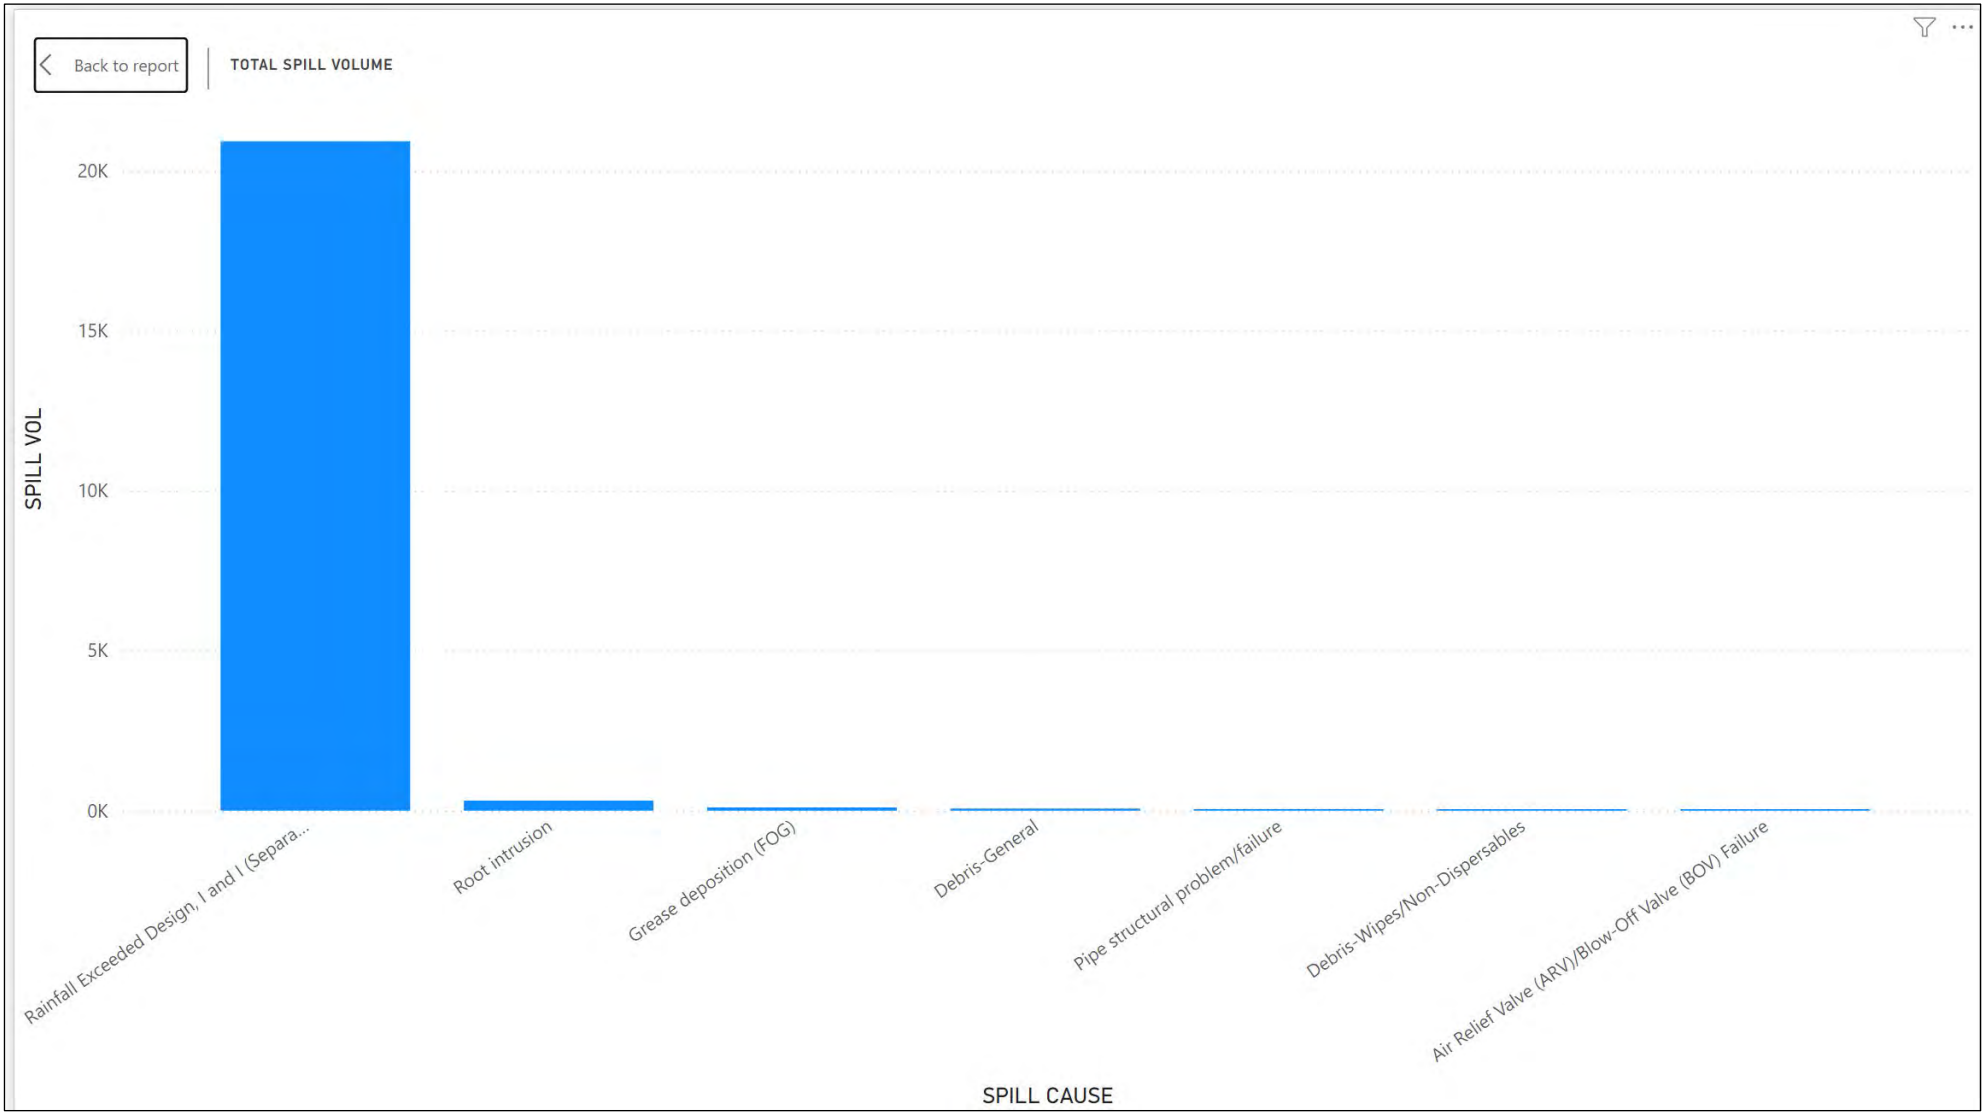

Figure 6 - City Spill Causes (by volume of spill) during SSMP Audit Period (May 2021-May 2024)

Observation: The City's spill main cause (by volume of spills) was rainfall (wet weather) during the SSMP Audit period.

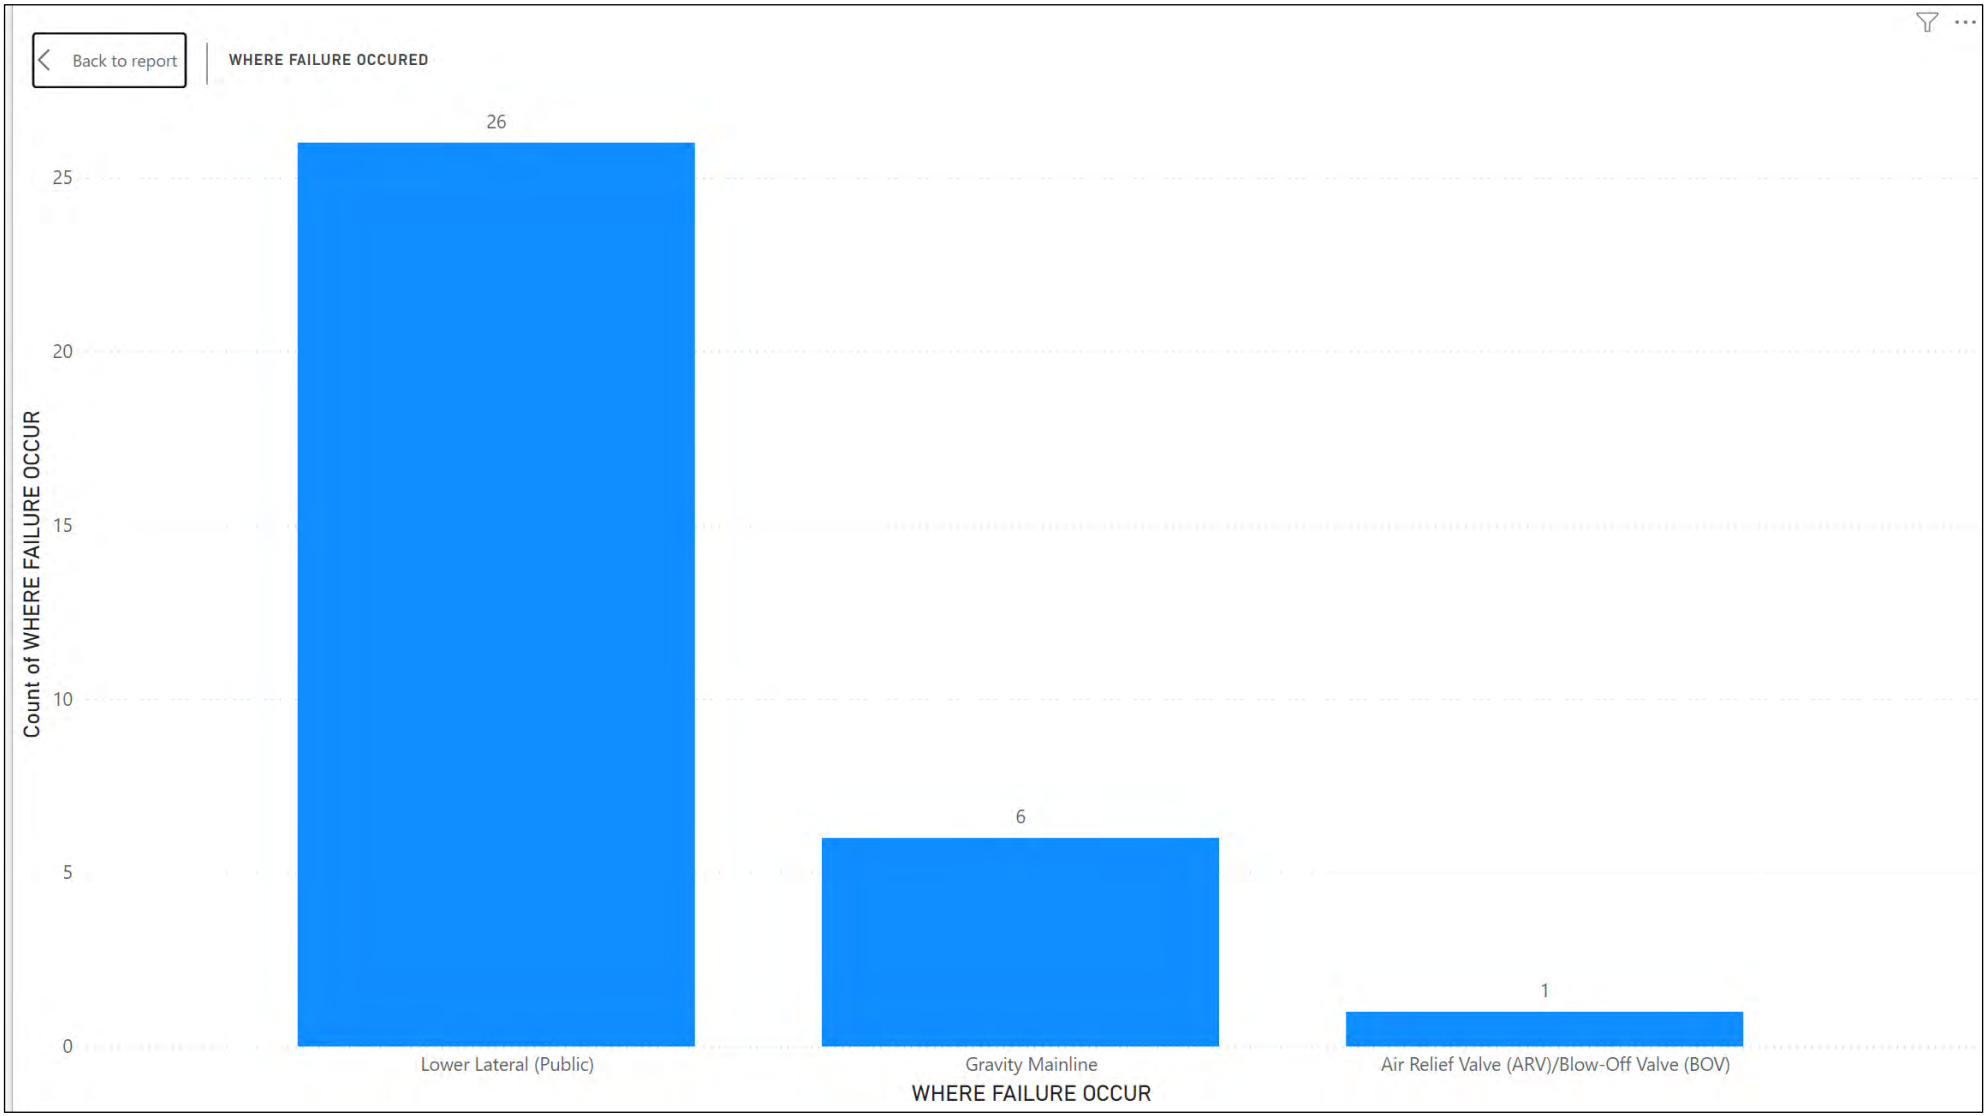

Figure 7 – City Spill Counts of Where Failures Occurred during SSMP Audit Period (May 2021-May 2024)

Observation: The City's main asset location were failures occurred was from lower sewer laterals during the SSMP Audit period.

Figure 8 – City Spill Benchmarks during SSMP Audit period (May 2021-May 2024)

Observations: The City averaged approximately 24 minutes between the agency spill notification time and operator arrival times (removing erroneous data logged for spill ID #885184 occurring on 12/31/2022). The City failed to notify Cal-OES within two hours (32 minutes late) for one spill occurring on 12/31/2022 (spill ID #885184. Erroneous data was also observed for two spills (ID #884376 and #881796). The City was fully compliant with providing draft and certified reports within the required timeframes for all Category 1 spills during the SSMP Audit.

Appendix 4 — City SSMP Audit Implementation Plan and Schedule

The purpose of this Appendix is to provide a plan/schedule to address SSMP Audit findings, recommendations, and corrective actions for utilization with updating the City's next required SSMP update (due on or before May 2, 2024).

FINDINGS (ATTACHMENTS)				
Requirements		Start Date	End Date	Findings/Recommendations
Att. D-1	Goal & Intro	Aug-Sept 2024	Aug-Sept 2024	✓ Improve evaluating allocation of system resources ✓ Improve prioritization of system repairs
Att. D-2	Organization	Aug-Sept 2024	Aug-Sept 2024	✓ Improve LRO and Data Submitter training ✓ Improve internal communication/training procedures

RESOLUTION NO. 25-097

RECERTIFICATION OF THE CITY OF ROSEVILLE
SEWER SYSTEM MANAGEMENT PLAN

WHEREAS, in May 2006 the State Water Resources Control Board issued a state-wide General Waste Discharge Requirement (WDR) Order requiring all public entities that own or operate sanitary sewer systems greater than one mile in length that collect or convey wastewater to prepare a certified Sewer System Management Plan (SSMP); and

WHEREAS, the City Council adopted and certified the original SSMP in 2007 and recertified the City's SSMP in October 2022, which incorporated recommended changes proposed during an audit by an outside consultant; and

WHEREAS, provisions in the WDR require recertification of the SSMP every five years or if significant changes to the SSMP have been made; and

WHEREAS, the City Council has reviewed the revised Sewer System Management Plan.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that it hereby recertifies the City of Roseville Sewer System Management Plan.

PASSED AND ADOPTED by the Council of the City of Roseville this ___ day of _____, 20__, by the following vote on roll call:

AYES COUNCILMEMBERS:

City Clerk

STATE WATER RESOURCES CONTROL BOARD
1001 I Street, Sacramento, California 95814
ORDER WQ 2022-0103-DWQ

STATEWIDE WASTE DISCHARGE REQUIREMENTS

GENERAL ORDER FOR SANITARY SEWER SYSTEMS

This Order was adopted by the State Water Resources Control Board on December 6, 2022.
This Order shall become effective **180 days after the Adoption Date of this General Order,** on June 5, 2023. The Enrollee shall comply with the requirements of this Order upon the Effective Date of this General Order.

This General Order does not convey any property rights of any sort or any exclusive privileges. The requirements prescribed herein do not authorize the commission of any act causing injury to persons or property, protect the Enrollee from liability under federal, state, or local laws, nor create a vested right for the Enrollee to continue the discharge of waste.

CERTIFICATION

I, Jeanine Townsend, Clerk to the Board, do hereby certify that this Order with all attachments is a full, true, and correct copy of the Order adopted by the State Water Board on December 6, 2022.

1. INTRODUCTION

This General Order regulates sanitary sewer systems designed to convey sewage. For the purpose of this Order, a sanitary sewer system includes, but is not limited to, pipes, valves, pump stations, manholes, siphons, wet wells, diversion structures and/or other pertinent infrastructure, upstream of a wastewater treatment plant headworks. A sanitary sewer system includes:

- Laterals owned and/or operated by the Enrollee;
- Satellite sewer systems; and/or
- Temporary conveyance and storage facilities, including but not limited to temporary piping, vaults, construction trenches, wet wells, impoundments, tanks and diversion structures.

Sewage is untreated or partially treated domestic, municipal, commercial and/or industrial waste (including sewage sludge), and any mixture of these wastes with inflow or infiltration of stormwater or groundwater, conveyed in a sanitary sewer system. Sewage contains high levels of suspended solids, non-digested organic waste, pathogenic bacteria, viruses, toxic pollutants, nutrients, oxygen-demanding organic compounds, oils, grease, pharmaceuticals, and other harmful pollutants.

For the purpose of this General Order, a spill is a discharge of sewage from any portion of a sanitary sewer system due to a sanitary sewer system overflow, operational failure, and/or infrastructure failure. Sewage and its associated wastewater spilled from a sanitary sewer system may threaten public health, beneficial uses of waters of the State, and the environment.

This General Order serves as statewide waste discharge requirements and supersedes the previous State Water Resources Control Board (State Water Board) Order 2006-0003-DWQ and amendments thereafter. All sections and attachments of this General Order are enforceable by the State Water Board and Regional Water Quality Control Boards (Regional Water Boards). Through this General Order, the State Water Board requires an Enrollee to:

- Comply with federal and state prohibitions of discharge of sewage to waters of the State, including federal waters of the United States;
- Comply with specifications, and notification, monitoring, reporting and recordkeeping requirements in this General Order that implement the federal Clean Water Act, the California Water Code (Water Code), water quality control plans (including Regional Water Board Basin Plans) and policies;
- Proactively operate and maintain resilient sanitary sewer systems to prevent spills;
- Eliminate discharges of sewage to waters of the State through effective implementation of a Sewer System Management Plan;
- Monitor, track, and analyze spills for ongoing system-specific performance improvements; and
- Report noncompliance with this General Order per reporting requirements.

An Enrollee is a public, private, or other non-governmental entity that has obtained approval for regulatory coverage under this General Order, including:

- A state agency, municipality, special district, or other public entity that owns and/or operates one or more sanitary sewer systems:
  - greater than one (1) mile in length (each individual sanitary sewer system);
  - one (1) mile or less in length where the State Water Board or a Regional Water Board requires regulatory coverage under this Order; or
- A federal agency, private company, or other non-governmental entity that owns and/or operates a sanitary sewer system of any size where the State Water Board or a Regional Water Board requires regulatory coverage under this Order in response to a history of spills, proximity to surface water, or other factors supporting regulatory coverage.

For the purpose of this Order, a sanitary sewer system includes only systems owned and/or operated by the Enrollee.

2. REGULATORY COVERAGE AND APPLICATION REQUIREMENTS

2.1. Requirements for Continuation of Existing Regulatory Coverage

To continue regulatory coverage from previous Order 2006-0003-DWQ under this General Order, **within the 60-days-prior-to the Effective Date of this General Order**, the Legally Responsible Official of an existing Enrollee shall electronically certify the Continuation of Existing Regulatory Coverage form in the online California Integrated Water Quality System (CIWQS) Sanitary Sewer System Database. The Legally Responsible Official will receive an automated CIWQS-issued Notice of Applicability email, confirming continuation of regulatory coverage under this General Order. All regulatory coverage under previous Order 2006-0003-DWQ will cease on the Effective Date of this Order.

An Enrollee continuing existing regulatory coverage is not required to submit a new application package or pay an application fee for enrollment under this General Order. The annual fee due date for continued regulatory coverage from previous Order 2006-0003-DWQ to this General Order remains unchanged.

A previous Enrollee of Order 2006-0003-DWQ that fails to certify the Continuation of Existing Regulatory Coverage form in the online CIWQS database by the Effective Date of this Order is considered a New Applicant, and will not have regulatory coverage for its sanitary sewer system(s) until:

- A new application package for system(s) enrollment is submitted per section 2.2 (Requirements for New Regulatory Coverage) below; and
- The new application package is approved per section 2.2.2 (Approval of Application Package (For New Applicants Only)).

2.2. Requirements for New Regulatory Coverage

No later than 60 days prior to commencing and/or assuming operation and maintenance responsibilities of a sanitary sewer system, a duly authorized representative that

maintains legal authority over the public or private sanitary sewer system is required to enroll under this General Order by submitting a complete application package as specified below and as provided in Attachment B (Application for Enrollment Form) of this General Order.

Unless required by a Regional Water Board, a public agency that owns a combined sewer system subject to the Combined Sewer Overflow Control Policy (33 U.S. Code § 1342(q)), is not required to enroll, under this Order, the portions of its sanitary sewer system(s) that collects combined sanitary wastewater and stormwater.

2.2.1. Application Package Requirements

The Application for Enrollment package for new applicants must include the following items:

- **Application for Enrollment Form**. The form in Attachment B of this General Order must be completed, signed, and certified by a Legally Responsible Official, in accordance with section 5.1 (Designation of a Legally Responsible Official) of this General Order. If an electronic Application for Enrollment form is available at the time of application, a new applicant shall submit its application form electronically; and
- **Application Fee**. A fee payable to the "State Water Resources Control Board" in accordance with the Fee Schedule in the California Code of Regulations, Title 23, section 2200, or subsequent fee regulations updates.

  The application fee for this General Order is based on the sanitary sewer system's threat to water quality and complexity designations of category 2C or 3C, which is assigned based on the population served by the system. The current Fee Schedule for sanitary sewer systems is listed under subdivision (a)(2) at the following website: Fee Schedule (https://www.waterboards.ca.gov/resources/fees/water_quality/).

2.2.2. Approval of Application Package (For New Applicants Only)

The Deputy Director of the State Water Board, Division of Water Quality (Deputy Director) will consider approval of each complete Application for Enrollment package. The Deputy Director will issue a Notice of Applicability letter which serves as approved regulatory coverage for the new Enrollee.

If the submitted application package is not complete in accordance with section 2.2.1 (Application Package Requirements) of this General Order, the Deputy Director will send a response letter to the applicant outlining the application deficiencies. The applicant will have 60 days from the date of the response letter to correct the application deficiencies and submit the identified items necessary to complete the application package to the State Water Board.

2.2.3. Electronic Reporting Account for New Enrollee

Within 30 days after the date of the Approval of Complete Application Package for System Enrollment, a duly authorized representative for the Enrollee shall obtain a CIWQS Sanitary Sewer System Database user account by clicking the "User Registration" button and following the directions on the CIWQS Login Page

(https://ciwqs.waterboards.ca.gov). If additional assistance is needed to establish an online CIWQS user account, contact State Water Board staff by email at CIWQS@waterboards.ca.gov. The online user account will provide the Enrollee secure access to the online CIWQS database for electronic reporting.

2.3. Regulatory Coverage Transfer

Regulatory coverage under this General Order is not transferable to any person or party except after an existing Enrollee submits a written request for a regulatory coverage transfer to the Deputy Director, at least 60 days in advance of any proposed system ownership transfer. The written request must include a written agreement between the existing Enrollee and the new Enrollee containing:

- Acknowledgement that the transfer of ownership is solely of an existing system with an existing waste discharge identification (WDID) number;
- The specific ownership transfer date in which the responsibility and regulatory coverage transfer between the existing Enrollee and the new Enrollee becomes effective; and
- Acknowledgement that the existing Enrollee is liable for violations occurring up to the ownership transfer date and that the new Enrollee is liable for violations occurring on and after the ownership transfer date.

The Deputy Director will consider approval of the written request. If approved, the Deputy Director will issue a Notice of Applicability letter which serves as an approved transfer of regulatory coverage to the new Enrollee.

3. FINDINGS

3.1. Legal Authorities

3.1.1. Federal and State Regulatory Authority

The objective of the Clean Water Act is to restore and maintain the chemical, physical, and biological integrity of the waters of the United States (33 U.S.C. 1251). The Water Code authorizes the State Water Board to implement the Clean Water Act in the State and to protect the quality of all waters of the State (Water Code sections 13000 and 13160).

3.1.2. Discharge of Sewage

A discharge of untreated or partially treated sewage is a discharge of waste as defined in Water Code section 13050(d) that could affect the quality of waters of the State and is subject to regulation by waste discharge requirements issued pursuant to Water Code section 13263 and Chapter 9, Division 3, Title 23 of the California Code of Regulations. A discharge of sewage may pollute and alter the quality of the waters of the State to a degree that unreasonably affects the beneficial uses of the receiving water body or facilities that serve those beneficial uses (Water Code section 13050(l)(1)).

3.1.3 Water Boards Authority to Require Technical Reports, Monitoring, and Reporting

Water Code sections 13267 and 13383 authorize the Regional Water Boards and the State Water Board to establish monitoring, inspection, entry, reporting, and recordkeeping requirements. Water Code section 13267(b), authorizes the Regional Water Boards to "require any person who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge waste within its region… or is suspected of having discharged or discharging, or who proposes to discharge, waste outside of its region that could affect the quality of water within its region shall furnish, under penalty of perjury, technical or monitoring reports which the regional board requires…In requiring those reports, the regional board shall provide the person with a written explanation with regard to the need for the reports and shall identify the evidence that supports requiring that person to provide the reports." Water Code section 13267(f) authorizes the State Water Board to require this information if it consults with the Regional Water Boards and determines that it will not duplicate the efforts of the Regional Water Boards. The State Water Board has consulted with the Regional Water Boards and made this determination.

The technical and monitoring reports required by this General Order and Attachment E (Notification, Monitoring, Reporting and Recordkeeping Requirements) are necessary to evaluate and ensure compliance with this General Order. The effort to develop required technical reports will vary depending on the system size and complexity and the needs of the specific technical report. The burden and cost of these reports are reasonable and consistent with the interest of the state in protecting water quality, which is the primary purpose of requiring the reports.

Water Code section 13383(a) authorizes the Water Boards to "establish monitoring, inspection, entry, reporting, and recordkeeping requirements… for any person who discharges, or proposes to discharge, to navigable waters, any person who introduces pollutants into a publicly owned treatment works, any person who owns or operates, or proposes to own or operate, a publicly owned treatment works or other treatment works treating domestic sewage, or any person who uses or disposes, or proposes to use or dispose, of sewage sludge." Section 13383(b) continues, "the state board or the regional boards may require any person subject to this section to establish and maintain monitoring equipment or methods, including, where appropriate, biological monitoring methods, sample effluent as prescribed, and provide other information as may be reasonably required."

Reporting of spills from privately owned sewer laterals and systems pursuant to section 5.15 (Voluntary Reporting of Spills from Privately-Owned Sewer Laterals and/or Private Sanitary Sewer Systems) of this General Order is authorized by Water Code section 13225(c) and encouraged by the State Water Board, wherein a local agency may investigate and report on any technical factors involved in water quality control provided the burden including costs of such reports bears a reasonable relationship to the need for the report and the benefits to be obtained therefrom. The burden of reporting private spills under section 5.15 (Voluntary Reporting of Spills from Privately-Owned Sewer Laterals and/or Private Sanitary Sewer Systems) is minimal and is outweighed by the benefit of providing Regional Water Boards an opportunity to respond to these spills

when an Enrollee, which in many cases has a contractual relationship with the owner of the private system, has knowledge of the spills.

3.1.4. Water Board Authority to Prescribe General Waste Discharge Requirements

Water Code section 13263(i) provides that the State Water Board may prescribe general waste discharge requirements for a category of discharges if the State Water Board finds or determines that:

- The discharges are produced by the same or similar operations;
- The discharges involve the same or similar types of waste;
- The discharges require the same or similar treatment standards; and
- The discharges are more appropriately regulated under general waste discharge requirements than individual waste discharge requirements.

Since 2006, the State Water Board has been regulating over 1,100 publicly owned sanitary sewer systems (See section 3.1.5 (Previous Statewide General Waste Discharge Requirements) of this General Order). California also has a large unknown number of unregulated privately owned sanitary sewer systems. All waste conveyed in publicly owned and privately owned sanitary sewer systems (as defined in this General Order) is comprised of untreated or partially treated domestic waste and/or industrial waste. Generally, sanitary sewer systems are designed and operated to convey waste by gravity or under pressure; system-specific design elements and system-specific operations do not change the common nature of the waste, the common threat to public health, or the common impacts on water quality. Spills of waste from a sanitary sewer system prior to reaching the ultimate downstream treatment facility are unauthorized and enforceable by the State Water Board and/or a Regional Water Board. Therefore, spills from sanitary sewer systems are more appropriately regulated under general waste discharge requirements.

As specified in Water Code sections 13263(a) and 13241, the implementation of requirements set forth in this Order is for the reasonable protection of past, present, and probable future beneficial uses of water and the prevention of nuisance. The requirements implement the water quality control plans (Basin Plans) for each Regional Water Board and take into account the environmental characteristics of sewer service areas and hydrographic units within the state. Additionally, the State Water Board has considered water quality conditions that could reasonably be achieved through the coordinated control of all factors that affect water quality, costs associated with compliance with these requirements, the need for developing housing within California, and the need to protect sources of drinking water and other water supplies.

3.1.5. Previous Statewide General Waste Discharge Requirements

On May 2, 2006, the State Water Board adopted Order 2006-0003-DWQ serving as Waste Discharge Requirements pursuant to Article 4, Chapter 4, Division 7 of the Water Code (commencing with section 13260) for inadvertent discharges to waters of the State. Order 2006-0003-DWQ prohibited discharges of untreated or partially treated sewage. Order 2006-0003-DWQ also required system-specific management, operation, and maintenance of publicly owned sewer systems greater than one mile in length.

To decrease the impacts on human health and the environment caused by sewage spills, the previous Order required enrollees to develop a rehabilitation and replacement plan that identifies system deficiencies and prioritizes short-term and long-term rehabilitation actions. The previous Order also required enrollees to:

1. Maintain information that can be used to establish and prioritize appropriate Sewer System Management Plan activities; and
2. Implement a proactive approach to reduce spills.

The previous Order required Sewer System Management Plan elements for "the proper and efficient management, operation, and maintenance of sanitary sewer systems, while taking into consideration risk management."

On July 30, 2013, the State Water Board amended General Order 2006-0003-DWQ with Order WQ 2013-0058-EXEC, Amending Monitoring and Reporting Program for Statewide General Waste Discharge Requirements for Sanitary Sewer Systems.

Many enrollees of Order 2006-0003-DWQ have already implemented proactive measures to reduce sewage spills. Other enrollees, however, still need technical assistance and funding to improve sanitary sewer system operation and maintenance for the reduction of sewage spills.

3.1.6. Existing Memorandum of Agreement with California Water Environment Association

The California Water Environment Association is a nonprofit organization dedicated to providing water industry certifications, training, and networking opportunities. The Association's Technical Certification Program provides accredited sanitary sewer system operator certification for collection system operators and maintenance workers.

On February 10, 2016, the State Water Board entered into a collaborative agreement with the Association titled *Memorandum of Agreement Between the California State Water Resources Control Board and the California Water Environment Association - Training Regarding Requirements Set Forth in Statewide General Waste Discharge Requirements for Sanitary Sewer Systems*. The Memorandum sets forth collaborative training necessary for regulated sanitary sewer system personnel to operate and maintain a well operating system and ensure full compliance with statewide sewer system regulations.

On March 15, 2018, the State Water Board and the California Water Environment Association amended the existing Memorandum of Agreement to include collaborative outreach and expand training needs associated with further updates to Water Board regulations for sanitary sewer systems. The State Water Board encourages further Agreement updates as necessary to support improved sewer system operations and the professionalism of collection system operators.

3.2. General

3.2.1. Waters of the State

Waters of the State include any surface water or groundwater, including saline waters, within the boundaries of the state as defined in Water Code section 13050(e), and are inclusive of waters of the United States.

3.2.2. Sanitary Sewer System Spill Threats to Public Health and Beneficial Uses

Sewage contains high levels of suspended solids, pathogenic organisms, toxic pollutants, nutrients, oxygen-demanding organic compounds, oil and grease and other pollutants. Sewage spills may cause a public nuisance, particularly when sewage is discharged to areas with high public exposure such as streets and surface waters used for drinking, irrigation, fishing, recreation, or other public consumption or contact uses.

More specifically, sanitary sewer spills may:

- Adversely affect aquatic life and/or threaten water quality when reaching receiving waters;
- Inadvertently release trash, including plastics;
- Impair the recreational use and aesthetic enjoyment of surface waters by polluting surface water or groundwater;
- Threaten public health through direct public exposure to bacteria, viruses, intestinal parasites, and other microorganisms that can cause serious illness such as gastroenteritis, hepatitis, cryptosporidiosis, and giardiasis;
- Negatively impact ecological receptors and biota within surface waters; and
- Cause nuisance including odors, closure of beaches and recreational areas, and property damage.

Sanitary sewer system spills may pollute receiving waters and threaten beneficial uses of surface water and groundwater. Potentially threatened beneficial uses include, but are not limited to the following (with associated acronym representations as included in statewide water quality control plans and Regional Water Boards' Basin Plans):

- Municipal and Domestic Supply (MUN)
- Water Contact Recreation (REC-1) and Non-Contact Water Recreation (REC-2)
- Cold Freshwater Habitat (COLD)
- Warm Freshwater Habitat (WARM)
- Native American Culture (CUL)
- Wildlife Habitat (WILD)
- Rare, Threatened, or Endangered Species (RARE)
- Spawning, Reproduction, and/or Early Development (SPWN)
- Wetland Habitat (WET)
- Agricultural Supply (AGR)
- Estuarine Habitat (EST)

- Commercial and Sport Fishing (COMM)
- Subsistence Fishing (SUB)
- Tribal Tradition and Culture (CUL)
- Tribal Subsistence Fishing (T-SUB)
- Aquaculture (AQUA)
- Marine Habitat (MAR)
- Preservation of Biological Habitats of Special Significance (BIOL)
- Migration of Aquatic Organisms (MIGR)
- Shellfish Harvesting (SHELL)
- Industrial Process Supply (PROC)
- Industrial Service Supply (IND)
- Hydropower Generation (POW)
- Navigation (NAV)
- Flood Peak Attenuation/Flood Water Storage (FLD)
- Water Quality Enhancement (WQE)
- Fresh Water Replenishment (FRSH)
- Groundwater Recharge (GWR)
- Inland Saline Water Habitat (SAL)

3.2.3. Proactive Sanitary Sewer System Management to Eliminate Spill Causes

Finding 3 of the previous Order, 2006-0003-DWQ, states: “Sanitary sewer systems experience periodic failures resulting in discharges that may affect waters of the state. There are many factors (including factors related to geology, design, construction methods and materials, age of the system, population growth, and system operation and maintenance), which affect the likelihood of an SSO [sanitary sewer overflow]. A proactive approach that requires Enrollees to ensure a system-wide operation, maintenance, and management plan is in place will reduce the number and frequency of SSOs within the state. This approach will in turn decrease the risk to human health and the environment caused by SSOs.”

Many spills are preventable through proactive attention on sanitary sewer system management using the best practices and technologies available to address major causes of spills, including but not limited to:

- Blockages from sources including but not limited to:
  - Fats, oils and grease;
  - Tree roots;
  - Rags, wipes and other paper, cloth and plastic products; and
  - Sediment and debris.
- Sewer system damage and exceedance of sewer system hydraulic capacity from identified system-specific environmental, and climate-change impacts, including but not limited to:

- Sea level rise impacts including flooding, coastal erosion, seawater intrusion, tidal inundation and submerged lands;
- Increased surface water flows due to higher intensity rain events;
- Flooding;
- Wildfires and wildfire induced impacts;
- Earthquake induced damage;
- Landslides; and
- Subsidence.

- Infrastructure deficiencies and failures, including but not limited to:
  - Pump station mechanical failures;
  - System age;
  - Construction material failures;
  - Manhole cover failures;
  - Structural failures; and
  - Lack of proper operation and maintenance.
- Insufficient system capacity (temporary or sustained), due to factors including but not limited to:
  - Excessive and/or increased storm or groundwater inflow/infiltration;
  - Insufficient capacity due to population increase and/or new connections from industrial, commercial and other system users; and
  - Stormwater capture projects utilizing a sanitary sewer system to convey stormwater to treatment facilities for reuse.
- Community impacts, including but not limited to:
  - Power outages;
  - Vandalism; and
  - Contractor-caused or other third party-caused damages.

3.2.4. Underground Sanitary Sewer System Leakage

Portions of some sanitary sewer systems may leak, causing underground exfiltration (exiting) of sewage from the system. Exfiltrated sewage that remains in the underground infrastructure trench and/or the soil matrix, and that does not discharge into waters of the State (surface water or groundwater) may not threaten beneficial uses.

Underground exfiltrated sewage may threaten beneficial uses if discharged to waters of the State. Exfiltrated sewage that discharges to groundwater may impact beneficial uses of groundwater and pollute groundwater supply. Additionally, if in close proximity, exfiltrated sewage may enter into a compromised underground drainage conveyance system that discharges into a water of the United States, or into groundwater that is hydrologically connected to (feeds into) a water of the United States, thus potentially causing: (1) a Clean Water Act violation, (2) threat and impact to beneficial uses, and/or (3) surface water pollution.

3.2.5. Proactive Sanitary Sewer System Management to Reduce Inflow and Infiltration

Excessive inflow (stormwater entering) and infiltration (groundwater seepage entering) to sanitary sewer systems is preventable through proactive sewer system management using the best practices and technologies available. The efficiency of the downstream wastewater treatment processes is dependent on the performance of the sanitary sewer system. When the structural integrity of a sanitary sewer system deteriorates, high volumes of inflow and infiltration can enter the sewer system. High levels of inflow and infiltration increase the hydraulic load on the downstream treatment plant, which can reduce treatment efficiency, lead to bypassing a portion of the treatment process, cause illegal discharge of partially treated effluent, or in extreme situations make biological treatment facilities inoperable (e.g., wash out the biological organisms that treat the waste).

3.3. Water Quality Control Plans, Policies and Resolutions

The nine Regional Water Boards have adopted region-specific water quality control plans (commonly referred to as Basin Plans) that designate beneficial uses, establish water quality objectives, and contain implementation programs and policies to achieve those objectives. The State Water Board has adopted statewide water quality control plans, policies and resolutions establishing statewide water quality objectives, implementation programs and initiatives.

3.3.1. State Water Board Antidegradation Policy

On October 28, 1968, the State Water Board adopted Resolution 68-16, titled Statement of Policy with Respect to Maintaining High Quality of Waters in California, which incorporates the federal antidegradation policy. Resolution 68-16 requires that existing water quality be maintained unless degradation is justified based on specific findings.

The continued prohibition of sewage discharges from sanitary sewer systems into waters of the State aligns with Resolution 68-16. A sewage discharge from sanitary sewers to waters of the State is prohibited by this Order. Therefore, this Order does not allow degradation of waters of the State. In addition, this Order: (1) further expands the existing prohibition of sewage discharges to include waters of the State, in addition to waters of the United States as provided in previous Order 2006-0003-DWQ, and (2) enhances the ability for Water Board enforcement of violations of the established prohibitions.

3.3.2. State Water Board Sources of Drinking Water Policy

On May 19,1988, the State Water Board adopted Resolution 88-63 (amended on February 1, 2006), titled Sources of Drinking Water, establishing state policy that all waters of the State, with certain exceptions, are suitable or potentially suitable for municipal or domestic supply.

3.3.3. State Water Board Cost of Compliance Resolution

On September 24, 2013, the State Water Board adopted Resolution 2013-0029, titled Directing Actions in Response to Efforts by Stakeholders on Reducing Costs of

Compliance While Maintaining Water Quality Protection. Through this resolution, the State Water Board committed to continued stakeholder engagement in identifying and implementing measures to reduce costs of compliance with regulatory orders while maintaining water quality protection and improving regulatory program outcomes.

3.3.4. State Water Board Human Right to Water Resolution

On February 16, 2016, the State Water Board adopted Resolution 2016-0010, titled Adopting the Human Right to Water as a Core Value and Directing its Implementation in Water Board Programs and Activities, addressing the human right to water as a core value and directing Water Board programs to implement requirements to support safe drinking water for all Californians.

On November 16, 2021, the State Water Board adopted Resolution 2021-0050 titled Condemning Racism, Xenophobia, Bigotry, and Racial Injustice, and Strengthening Commitment to Racial Equity, Diversity, Inclusion, Access, and Anti-racism. Among other actions, through Resolution 2021-0050, the State Water Board, in summary as corresponding to this General Order, reaffirms its commitment to its Human Right to Water resolution, upholding that every human being in California deserves safe, clean, affordable, and accessible water for human consumption, cooking, and sanitation purposes. Resolution 2021-0050 provides the State Water Board commitment to:

- Protect public health and beneficial uses of waterbodies in all communities, including communities disproportionately burdened by wastes discharge of waste to land and surface water;
- Restore impaired surface waterbodies and degraded aquifers; and
- Promote multi-benefit water quality projects.

Through Resolution 2021-0050, the State Water Board also commits to expanding implementation of its Climate Change Resolution to address the disproportionate effects of extreme hydrologic conditions and sea-level rise on Black, Indigenous, and people of color communities, prioritizing:

- The right to safe, clean, affordable, and accessible drinking water and sanitation;
- Sustainable management and protection of local groundwater resources;
- Healthy watersheds; and
- Access to surface waterbodies that support subsistence fishing.

On June 7, 2022, the State Water Board adopted a Resolution, titled Authorizing the Executive Director or Designee to Enter into One or More Multi-Year Contracts Up to a Combined Sum of $4,000,000 for a Statewide Wastewater Needs Assessment, supporting the equitable access to sanitation for all Californians and implementation of Resolutions 2016-0010 and 2021-0050.

This General Order supports the State Water Board priority in collecting a comprehensive set of data for California's wastewater systems, including sanitary sewer systems. Data reported per the requirements of this Order will be used with data from other Water Boards' programs, to further develop criteria and create a statewide risk

framework to prioritize critical funding and infrastructure investments for California's most vulnerable populations, including disadvantaged or severely disadvantaged communities with inadequate or failing sanitation systems and threatened access to healthy drinking water supplies.

3.3.5. State Water Board Open Data Resolution

On July 10, 2018, the State Water Board adopted Resolution 2018-0032, titled Adopting Principles of Open Data as a Core Value and Directing Programs and Activities to Implement Strategic Actions to Improve Data Accessibility and Associated Innovation, directing regulatory programs to assure all monitoring and reporting requirements support the State Water Boards' Open Data Initiative.

3.3.6. State Water Board Response to Climate Change

On March 7, 2017, the State Water Board adopted Resolution 2017-0012, titled Comprehensive Response to Climate Change, requiring a proactive response to climate change in all California Water Board actions, with the intent to embed climate change consideration into all programs and activities.

3.4. California Environmental Quality Act

The adoption of this Order is an action to reissue general waste discharge requirements that is exempt from the California Environmental Quality Act (Public Resources Code section 21000 et seq.) because it is an action taken by a regulatory agency to assure the protection of the environment and the regulatory process involves procedures for protection of the environment (Cal. Code Regs., Title 14, section 15308). In addition, the action to adopt this Order is exempt from CEQA pursuant to Cal. Code Regs., Title 14, section 15301, to the extent that it applies to existing sanitary sewer collection systems that constitute "existing facilities" as that term is used in sections 15301 and 15302, to the extent that it results in the repair or replacement of existing systems involving negligible or no expansion of capacity.

3.5. State Water Board Funding Assistance for Compliance with Water Board Water Quality Orders

The State Water Board, Division of Financial Assistance administers the implementation of the State Water Board financial assistance programs, per Board-adopted funding policies. Among other funding areas, the Division administers loan and grant funding for the planning and construction of wastewater and water recycling facilities per funding program-specific policies and guidelines. Applicants may apply for Clean Water State Revolving Fund low-interest loan, Small Community Wastewater grant funding assistance, and other funding available at the time of application, for some of the costs associated with complying with this General Order.

Funding applicants may obtain further information regarding current funding opportunities, and Division of Financial Assistance staff contact information at the following website: Financial Assistance Funding - Grants and Loans | California State Water Resources Control Board.
(https://www.waterboards.ca.gov/water_issues/programs/grants_loans/)

Section 13477.6 of the Water Code authorizes the Small Community Grant Fund. The Small Community Grant Fund allows the State Water Board to provide grant funding assistance to small, disadvantaged communities and small severely disadvantaged communities that may not otherwise be able to afford a loan or similar financing for projects to comply with requirements of this General Order. The State Water Board also considers loan forgiveness on a disadvantaged community-specific basis.

For disadvantaged communities' wastewater needs, the State Water Board places priority on the funding of projects that address:

- Public health;
- Violations of waste discharge requirements and National Pollutant Discharge Elimination System (NPDES) permits;
- Providing sewer system service to existing septic tank owners; and
- High priority public health and water quality concerns identified by a Regional Water Board.

3.6. Notification to Interested Parties

On January 31, 2022, the State Water Board notified interested parties and persons of its intent to reissue Sanitary Sewer Systems General Order 2006-0003-DWQ by issuing a draft General Order for a 60-day public comment period. State Water Board staff conducted extensive stakeholder outreach and encouraged public participation in the adoption process for this General Order. On March 15, 2022, the State Water Board held a public meeting to hear and consider oral public comments. The State Water Board considered all public comments prior to adopting this General Order.

THEREFORE, IT IS HEREBY ORDERED, that pursuant to Water Code sections 13263, 13267, and 13383 this General Order supersedes Order 2006-0003-DWQ, Order WQ 2013-0058-EXEC, and any amendments made to these Orders thereafter, except for enforcement purposes and to meet the provisions contained in Division 7 of the Water Code (commencing with section 13000) and regulations adopted thereunder, and the provisions of the Clean Water Act and regulations and guidelines adopted thereunder, the Enrollee shall comply with the requirements in this Order.

4. PROHIBITIONS

4.1 Discharge of Sewage from a Sanitary Sewer System

Any discharge from a sanitary sewer system that has the potential to discharge to surface waters of the State is prohibited unless it is promptly cleaned up and reported as required in this General Order.

4.2. Discharge of Sewage to Waters of the State

Any discharge from a sanitary sewer system, discharged directly or indirectly through a drainage conveyance system or other route, to waters of the State is prohibited.

4.3. Discharge of Sewage Creating a Nuisance

Any discharge from a sanitary sewer system that creates a nuisance or condition of pollution as defined in Water Code section 13050(m) is prohibited.

5. SPECIFICATIONS

5.1. Designation of a Legally Responsible Official

The Enrollee shall designate a Legally Responsible Official that has authority to ensure the enrolled sanitary sewer system(s) complies with this Order, and is authorized to serve as a duly authorized representative. The Legally Responsible Official must have responsibility over management of the Enrollee's entire sanitary sewer system, and must be authorized to make managerial decisions that govern the operation of the sanitary sewer system, including having the explicit or implicit duty of making major capital improvement recommendations to ensure long-term environmental compliance. The Legally Responsible Official must have or have direct authority over individuals that:

- Possess a recognized degree or certificate related to operations and maintenance of sanitary sewer systems, and/or
- Have professional training and experience related to the management of sanitary sewer systems, demonstrated through extensive knowledge, training and experience.

For example, a sewer system superintendent or manager, an operations manager, a public utilities manager or director, or a district engineer may be designated as a Legally Responsible Official.

The Legally Responsible Official shall complete the electronic CIWQS "User Registration" form (https://ciwqs.waterboards.ca.gov/ciwqs/newUser.jsp). A Legally Responsible Official that represents multiple enrolled systems shall complete the electronic CIWQS "User Registration" form for each system.

The Enrollee shall submit any change to its Legally Responsible Official, and/or change in contact information, to the State Water Board within 30 calendar days of the change by emailing ciwqs@waterboards.ca.gov and copying the appropriate Regional Water Board as provided in Attachment F (Regional Water Quality Control Board Contact Information) of this General Order.

5.2. Sewer System Management Plan Development and Implementation

To facilitate adequate local funding and management of its sanitary sewer system(s), the Enrollee shall develop and implement an updated Sewer System Management Plan. The scale and complexity of the Sewer System Management Plan, and specific elements of the Plan, must match the size, scale and complexity of the Enrollee's sanitary sewer system(s). The Sewer System Management Plan must address, at minimum, the required Plan elements in Attachment D (Sewer System Management Plan – Required Elements) of this General Order. To be effective, the Sewer System Management Plan must include procedures for the management, operation, and maintenance of the sanitary sewer system(s). The procedures must: (1) incorporate the

prioritization of system repairs and maintenance to proactively prevent spills, and (2) address the implementation of current standard industry practices through available equipment, technologies, and strategies.

For an existing Enrollee under Order 2006-0003-DWQ that has certified its Continuation of Existing Regulatory Coverage, per section 2.1 (Requirements for Continuation of Existing Regulatory Coverage) of this General Order:

Within six (6) months of the Adoption Date of this General Order:

- The Legally Responsible Official shall upload the Enrollee's existing Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database.

For a new Enrollee:

Within twelve (12) months of the Application for Enrollment approval date:

- The governing entity of the new Enrollee shall approve its Sewer System Management Plan; and
- The Legally Responsible Official shall certify and upload its Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database.

5.3. Certification of Sewer System Management Plan and Plan Updates

The Legally Responsible Official shall certify and upload its Sewer System Management Plan and all subsequent updates to the online CIWQS Sanitary Sewer System Database.

5.4. Sewer System Management Plan Audits

The Enrollee shall conduct an internal audit of its Sewer System Management Plan, and implementation of its Plan, at a minimum frequency of once every three years. The audit must be conducted for the period after the end of the Enrollee's last required audit period. **Within six months after the end of the required 3-year audit period**, the Legally Responsible Official shall submit an audit report into the online CIWQS Sanitary Sewer System Database per the requirements in section 3.10 (Sewer System Management Plan Audit Reporting Requirements) of Attachment E1 of this General Order.

Audit reports submitted to the CIWQS Sanitary Sewer System Database will be viewable only to Water Boards staff.

The internal audit shall be appropriately scaled to the size of the system(s) and the number of spills. The Enrollee's sewer system operators must be involved in completing the audit. At minimum, the audit must:

- Evaluate the implementation and effectiveness of the Enrollee's Sewer System Management Plan in preventing spills;
- Evaluate the Enrollee's compliance with this General Order;
- Identify Sewer System Management Plan deficiencies in addressing ongoing spills and discharges to waters of the State; and

- Identify necessary modifications to the Sewer System Management Plan to correct deficiencies.

The Enrollee shall submit a complete audit report that includes:

- Audit findings and recommended corrective actions;
- A statement that sewer system operators' input on the audit findings has been considered; and
- A proposed schedule for the Enrollee to address the identified deficiencies.

A new Enrollee of this General Order (that did not have a sanitary sewer system enrolled in the previous State Water Board Order 2006-0003-DWQ) shall conduct its first internal Sewer System Management Plan audit for the time period between the date of submittal of its certified Sewer System Management Plan and the third subsequent December 31st date. The audit report must be submitted into the online CIWQS Sanitary Sewer System Database **by July 1 of the following calendar year**.

See the following tables for clarification:

Initial Audit Period and Audit Due Date for New Enrollees

	Audit Period	Audit Due Date
New Enrollee	Certified Sewer System Management Plan Submittal Date through the third subsequent December 31st date	July 1st date after audit period
Example	*Certified Sewer System Management Plan Submittal Date of August 2, 2025* *Audit Period of August 2, 2025 through December 31, 2027*	*July 1, 2028*

Initial Audit Period for Transition from 2-Year Audit Required in Previous Order 2006-0003-DWQ to 3-Year Audit Required in this General Order

	Audit Period	Audit Due Date
An Enrollee previously regulated by Order 2006-003-DWQ	A 3-year period starting from the end of last required 2-year Audit Period	Within six months after end of 3-year Audit Period
Example	*Last required Audit Period start date of August 2, 2021;* *Audit Period of August 2, 2021 through August 1, 2024*	*February 1, 2025*

Three-Year Ongoing Audit Period

	Audit Period	Audit Due Date
Each Enrollee	A 3-year period starting from the end of last required Audit Period	Within six months after end of 3-year Audit Period

5.5. Six-Year Sewer System Management Plan Update

At a minimum, the Enrollee shall update its Sewer System Management Plan every six (6) years after the date of its last Plan Update due date. (For an Enrollee previously regulated by Order 2006-0003-DWQ, the six-year period shall commence on the due date identified in section 3.11 of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this Order. The Updated Sewer System Management Plan must include:

- Elements required in Attachment D (Sewer System Management Plan – Required Elements) of this Order;
- Summary of revisions included in the Plan update based on internal audit findings; and
- Other sewer system management-related changes.

The Enrollee's governing entity shall approve the updated Plan. The Legally Responsible Official shall upload and certify the approved updated Plan in the online CIWQS Sanitary Sewer System Database in accordance with section 3.11 (Sewer System Management Plan Reporting Requirements) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order. During the time period in between Plan updates, the Enrollee shall continuously document changes to its Sewer System Management Plan in a change log attached to the Plan.

5.6. System Resilience

The Enrollee shall include and implement system-specific procedures in its Sewer System Management Plan to proactively prioritize: (1) operation and maintenance, (2) condition assessments, and (3) repair and rehabilitation, to address ongoing system resilience, as specified in Attachment D (Sewer System Management Plan – Required Elements) of this General Order.

5.7. Allocation of Resources

The Enrollee shall:

- Establish and maintain a means to manage all necessary revenues and expenditures related to the sanitary sewer system; and
- Allocate the necessary resources to its sewer system management program for:
  - Compliance with this General Order,
  - Full implementation of its updated Sewer System Management Plan,
  - System operation, maintenance, and repair, and
  - Spill responses.

5.8. Designation of Data Submitters

The Legally Responsible Official may designate one or more individuals as a Data Submitter for reporting of spill data. The Legally Responsible Official shall authorize the designation of Data Submitter(s) through the online CIWQS database (https://ciwqs.waterboards.ca.gov) prior to the individuals establishing a CIWQS user account (https://ciwqs.waterboards.ca.gov/ciwqs/newUser.jsp) and entering spill data into the online CIWQS Sanitary Sewer System Database.

The Legally Responsible Official shall submit any change to its Data Submitter(s), and/or change in Data Submitter contact information, to the State Water Board within 30 calendar days of the change, by emailing ciwqs@waterboards.ca.gov and copying the appropriate Regional Water Board as provided in Attachment F (Regional Water Quality Control Board Contact Information) of this General Order.

5.9. Reporting Certification

The Legally Responsible Official shall electronically certify, on the Enrollee's behalf, all applications, reports, the Sewer System Management Plan(s) and corresponding updates, and other information submitted electronically into the online CIWQS Sanitary Sewer System Database, as follows:

"I certify under penalty of perjury under the laws of the State of California that the electronically submitted information was prepared under my direction or supervision. Based on my inquiry of the person(s) directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete, and complies with the Statewide Sanitary Sewer Systems General Order. I am aware that there are significant penalties for submitting false information."

Hardcopy submittals to the State Water Board must be accompanied by the above certification statement.

5.10. System Capacity

The Enrollee shall maintain the system capacity necessary to convey: (1) base flows during dry weather conditions, and (2) wet weather peak flows consistent with designated local historic storms. Design storms must take into account system-specific stormwater contributions via inflow and infiltration, and location-specific depth of groundwater and storm frequencies. The Enrollee shall implement capital improvements to provide adequate hydraulic capacity to:

- Meet or exceed the design criteria as defined in the Enrollee's System Evaluation and Capacity Assurance element of its Sewer System Management Plan; and
- Prevent system capacity-related spills, and adverse impacts to the treatment efficiency of downstream wastewater treatment facilities.

5.11. System Performance Analysis

The Enrollee shall include a running 10-year system performance analysis in its Annual Report. The analysis must include two CIWQS-generated graphs presenting the following information:

Graph 1 – Total Spill Volume per Year:

X axis: A 10-year period which includes the current calendar year and the nine previous calendar years;

Y axis: The total spill volume, per Spill Category, for each calendar year.

Graph 2 – Total Number of Spills per Year:

X axis: A 10-year period which includes the current calendar year and the nine previous calendar years;

Y axis: The total number of spills, per Spill Category, for each calendar year.

The current calendar year is the calendar year covered in the Annual Report.

The Enrollee shall generate the graphs in CIWQS, using the existing data in the online CIWQS Sanitary Sewer System Database at the following graph generation link: (https://ciwqs.waterboards.ca.gov/ciwqs/readOnly/PublicReportSSOServlet?reportAction=criteria&reportId=sso_operation_report).

5.12. Spill Emergency Response Plan and Remedial Actions

For Existing Enrollees (with regulatory coverage under Order 2006-0003-DWQ):

Within six (6) months of the Adoption Date of this General Order, the Enrollee shall update and implement its Spill Emergency Response Plan, per Attachment D, section 6 (Spill Emergency Response Plan) of this General Order.

For New Enrollees:

Within six (6) months of the Application for Enrollment approval date, the Enrollee shall develop and implement a Spill Emergency Response Plan, per Attachment D, section 6 (Spill Emergency Response Plan) of this General Order.

The Enrollee shall certify, in its Annual Report, that its Spill Emergency Response Plan is up to date.

The Spill Emergency Response Plan shall include measures to protect public health and the environment. The Enrollee shall respond to spills from its system(s) in a timely manner that minimizes water quality impacts and nuisance by:

- Immediately stopping the spill and preventing/minimizing a discharge to waters of the State;
- Intercepting sewage flows to prevent/minimize spill volume discharged into waters of the State;
- Thoroughly recovering, cleaning up and disposing of sewage and wash down water; and
- Cleaning publicly accessible areas while preventing toxic discharges to waters of the State.

5.13. Notification, Monitoring, Reporting and Recordkeeping Requirements

The Enrollee shall comply with notification, monitoring, reporting, and recordkeeping requirements in Attachment E1 of this General Order.

5.13.1. Spill Categories

Individual spill notification, monitoring and reporting must be in accordance with the following spill categories:

- **Category 1 Spill**

  A Category 1 spill is a spill of any volume of sewage from or caused by a sanitary sewer system regulated under this General Order that results in a discharge to:

  - A surface water, including a surface water body that contains no flow or volume of water; or
  - A drainage conveyance system that discharges to surface waters when the sewage is not fully captured and returned to the sanitary sewer system or disposed of properly.

    Any spill volume not recovered from a drainage conveyance system is considered a discharge to surface water, unless the drainage conveyance system discharges to a dedicated stormwater infiltration basin or facility.

A spill from an Enrollee-owned and/or operated lateral that discharges to a surface water is a Category 1 spill; the Enrollee shall report all Category 1 spills per section 3.1 of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

- **Category 2 Spill**

  A Category 2 spill is a spill of 1,000 gallons or greater, from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

  A spill of 1,000 gallons or greater that spills out of a lateral and is caused by a failure or blockage in the sanitary sewer system, is a Category 2 spill.

- **Category 3 Spill**

  A Category 3 spill is a spill of equal to or greater than 50 gallons and less than 1,000 gallons, from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

  A spill of equal to or greater than 50 gallons and less than 1,000 gallons, that spills out of a lateral and is caused by a failure or blockage in the sanitary sewer system is a Category 3 spill.

- **Category 4 Spill**

  A Category 4 spill is a spill of less than 50 gallons, from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

  A spill of less than 50 gallons that spills out of a lateral and is caused by a failure or blockage in the sanitary sewer system is a Category 4 spill.

5.13.2. Annual Report

The Enrollee shall submit an Annual Report (previously termed as Collection System Questionnaire in Order 2006-0003-DWQ) as specified in section 3.9 (Annual Report) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

For new Enrollees: Within 30 days of obtaining a CIWQS account, a new Enrollee shall submit its initial Annual Report, as specified in section 3.9 (Annual Report) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

5.14. Electronic Sanitary Sewer System Service Area Boundary Map

For continuing enrollees, starting on July 1, 2025, and no later than December 31, 2025:

For new enrollees – no earlier than July 1, 2025, or within 12 months of the Application for Enrollment approval date, whichever date is later:

The Legally Responsible Official shall submit, to the State Water Board, geospatial data detailing the locations of the Enrollee's sanitary sewer system service area boundary, per the required content and specifications in section 3.8 (Electronic Sanitary Sewer System Service Area Boundary Map) of Attachment E1 of this General Order, for each system identified by a WDID number.

An Enrollee of a disadvantaged community that may need assistance developing an electronic map to comply with this requirement, may contact State Water Board staff for assistance at SanitarySewer@waterboards.ca.gov.

5.15. Voluntary Reporting of Spills from Privately-Owned Sewer Laterals and/or Private Sanitary Sewer Systems

Within 24 hours of becoming aware of a spill (as described below) from a private sewer lateral or private sanitary sewer system that is not owned/operated by the Enrollee, the Enrollee is encouraged to report the following observations to the online CIWQS Sanitary Sewer System Database at the following link: https://ciwqs.waterboards.ca.gov:

- A spill equal or greater than 1,000 gallons that discharges (or has a potential to discharge) to a water of the State, or a drainage conveyance system that discharges to waters of the State; **or**
- Any volume of sewage that discharges (or has a potential to discharge) to surface waters.

In the CIWQS module, the Enrollee is encouraged to identify:

- Time of observation;
- Description of general spill location (for example, street name and cross street names);
- Estimated volume of spill;
- If known, general description of spill destination (for example, flowing into drainage channel, flowing directly into a creek, etc.); and
- If known, name of private system owner/operator.

The CIWQS database will make the name and contact information of the entity voluntarily reporting a private spill, accessible to State and Regional Water Board staff only. The CIWQS database will only make information regarding the actual spill, accessible to the public.

5.16. Voluntary Notification of Spills from Privately-Owned Laterals and/or Systems to the California Office of Emergency Services

Upon observing or acquiring knowledge of any of the following from a private sewer lateral or private sanitary sewer system that is not owned/operated by the Enrollee, the Enrollee is encouraged to notify the California Office of Emergency Services (as provided by Health and Safety Code section 5410 et. seq. and Water Code section 13271), or inform the responsible party that State law requires such notification to the Office of Emergency Services by any person that causes or allows a sewage discharge to waters of the State:

- A spill equal to 1,000 gallons or more that discharges (or has a potential to discharge) to waters of the State, or a drainage conveyance system that discharges to waters of the State; or
- A spill of any volume to surface waters.

5.17. Unintended Failure to Report

If an Enrollee becomes aware that they unintentionally failed to submit relevant facts in any report required in this General Order, the Enrollee shall promptly notify Regional Water Board and State Water Board staff. Regional Water Board contact information is included in Attachment F of this Order. State Water Board staff shall be contacted by email at SanitarySewer@waterboards.ca.gov for assistance in formally amending the corresponding report(s) in the online CIWQS Sanitary Sewer System Database.

5.18. Duty to Report to Water Boards

In accordance with Water Code section 13267 and/or section 13383, upon request by the State Water Board Executive Director (or designee) or a Regional Water Board Executive Officer (or designee), the Enrollee shall provide the requested information which the State or Regional Water Board deems necessary to determine compliance with this General Order.

5.19. Operation and Maintenance

To prevent discharges to the environment, the Enrollee shall maintain in good working order, and operate as designed, any facility or treatment and control system designed to contain sewage and convey it to a treatment plant.

6. PROVISIONS

6.1. Enforcement Provisions

The following enforcement provisions are based on existing federal and state regulations, laws and policies, including the federal Clean Water Act, the state Water Code and the State Water Board Enforcement Policy.

6.1.1. Enforceability of Clean Water Act and Water Code Violations

Noncompliance with requirements of this General Order or discharging sewage without enrolling in this General Order constitutes a violation of the Water Code and a potential

violation of the Clean Water Act and is grounds for an enforcement action by the State Water Board or the applicable Regional Water Board. Failure to comply with the notification, monitoring, inspection, entry, reporting, and recordkeeping requirements may subject the Enrollee to administrative civil liabilities of up to $10,000 a day per violation pursuant to Water Code section 13385; up to $1,000 a day per violation pursuant to Water Code section 13268; or referral to the Attorney General for judicial civil enforcement. Discharging waste not in compliance with the requirements of this General Order or the Clean Water Act may subject the Enrollee to administrative civil liabilities up to $10,000 a day per violation and additional liability up to $10 per gallon of discharge not cleaned up after the first 1,000 gallons of discharge; up to $5,000 a day per violation pursuant to Water Code section 13350 or up to $20 per gallon of waste discharged; or referral to the Attorney General for judicial civil enforcement.

6.1.2. Monetary Penalties

The Water Code provides the State and Regional Water Boards the authority to pursue formal enforcement actions, including imposing administrative liability and civil monetary penalties, for non-compliance with the requirements of this General Order and violations of the Clean Water Act.

6.1.3. Falsifying or Failure to Report

The Water Code provides that any person failing or refusing to furnish technical or monitoring program reports, as required under this General Order, or falsifying any information provided in the technical or monitoring reports is subject to administrative liability and civil monetary penalties. Any person who knowingly fails or refuses to furnish technical or monitoring program reports or falsifies any information provided in reports required by this General Order is subject to criminal penalties.

6.1.4. Severability of General Order

The provisions of this General Order are severable; if any provision of this Order, or the application of any provision of this Order to any circumstance, is held invalid, the application of such provision to other circumstances and the remainder of this Order shall not be affected thereby.

6.1.5. Indirect Discharges

In the event that a spill enters into a drainage conveyance system, the Enrollee shall take all feasible steps to prevent discharge of sewage into waters of the State by blocking or redirecting the flow in the drainage conveyance system, removing the sewage from the drainage conveyance system, and cleaning the system in a manner that does not inadvertently impact beneficial uses of the receiving water body.

6.1.6. Water Boards' Considerations for Discretionary Enforcement

Consistent with the State Water Board Enforcement Policy, when considering Water Code section 13327 factors, the State Water Board or a Regional Water Board may consider the Enrollee's efforts to contain, control, clean up, and mitigate spills. In assessing the factors, the State Water Board or the applicable Regional Water Board will consider:

- The Enrollee's compliance with this General Order with a focus on compliance with reporting requirements;
- The Enrollee's provision of adequate funding to implement the requirements of this General Order;
- The Enrollee's compliance with providing a complete and updated Sewer System Management Plan;
- The Enrollee's compliance with implementing its Sewer System Management Plan;
- The overall effectiveness of the Enrollee's Sewer System Management Plan with respect to:
    - System management, operation, and maintenance,
    - Adequate treatment facilities, sanitary sewer system facilities, and/or components with an appropriate design capacity, to reasonably prevent spills (e.g. adequately enlarging treatment or collection facilities to accommodate growth, infiltration and inflow, etc.),
    - Preventive maintenance (including cleaning, root grinding, and fats, oils, and grease control) and source control measures,
    - Implementation of backup equipment,
    - Inflow and infiltration prevention and control,
    - Appropriate sanitary sewer system capacity to prevent spills, and
    - The Enrollee's responsiveness to stop and mitigate the impact of the discharge;
- The Enrollee's compliance with identifying the cause of the spill;
- The Enrollee's use of available information and observations to accurately estimate the spill volume and identify the affected or potentially affected receiving waters;
- The Enrollee's thoroughness of cleaning up sewage in drainage conveyance systems after the spill(s);
- The Enrollee's use of water quality and biological monitoring and assessment to determine the short-term and long-term impacts to beneficial uses and the environment;
- The Enrollee's follow up actions to improve system performance;
- The Enrollee's implementation of feasible alternatives to prevent spills, such as:
    - Use of temporary storage or waste retention,
    - Reduction of system inflow and infiltration,
    - Collection and hauling of waste to a treatment facility,
    - Prevention of and/ or containment of spills due to a design storm event identified in the Enrollee's Sewer System Management Plan,

- Implementation of available equipment, technologies, strategies, and recommended industry practices for maintaining and managing sewer systems to prevent spills, and contain and eliminate discharges to waters of the State; and

- The spill duration and factors beyond the reasonable control of the Enrollee causing the event.

6.1.7. Enforcement Discretion Based on Reporting Compliance

Consistent with the State Water Board Enforcement Policy, the State Water Board or a Regional Water Board may consider the Enrollee's efforts to comply with spill reporting requirements when determining compliance with Water Code section 13267 and section 13383. When assessing Water Code section 13227 factors, the State Water Board or the applicable Regional Water Board will consider:

- The Enrollee's diligence to comply with all reporting requirements in this General Order;
- The use of best available information for the Enrollee's reporting of spill start date and start time in which the release of sewage from the sanitary sewer system initiated;
- The Enrollee's reporting of spill end date, and end time to be the date and time in which the release of sewage from the sanitary sewer system was stopped;
- The Enrollee's diligence to accurately estimate and report spill volumes;
- The Enrollee's subsequent verification and/or updates to initial Draft Spill Reports in accordance with this General Order; and
- The Enrollee's timely certification of required spill reports.

Consistent with Water Code section 13267 and section 13383, the State Water Board or a Regional Water Board may require an Enrollee to report the results of a condition assessment of a specified portion of the Enrollee's sanitary sewer system.

6.2. Other Regional Water Board Orders

It is the intent of the State Water Board that sanitary sewer systems be regulated in a manner consistent with federal and state regulations. This Order will not be interpreted or applied:

- In a manner inconsistent with the federal Clean Water Act;
- To authorize a spill or discharge that is illegal under either the Clean Water Act, the Water Code, and/or an applicable Basin Plan prohibition or water quality standard;
- To prohibit a Regional Water Board from issuing an individual National Pollutant Discharge Elimination System (NPDES) permit or individual waste discharge requirements superseding an Enrollee's regulatory coverage under this General Order for a sanitary sewer system authorized under the Clean Water Act or Water Code;

- To supersede any more specific or more stringent waste discharge requirements or enforcement orders issued by a Regional Water Board; or
- To supersede any more specific or more stringent state or federal requirements in existing regulation, an administrative/judicial order, or Consent Decree.

6.3. Sewer System Management Plan Availability

The Enrollee's updated Sewer System Management Plan must be maintained for public inspection at the Enrollee's offices and facilities and must be available to the public through CIWQS and/or on the Enrollee's website, in accordance with section 3.8 (Sewer System Management Plan Reporting Requirements) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

6.4. Entry and Inspection

6.4.1. Entry and Availability of Information

The Enrollee shall allow State and Regional Water Board staff, upon presentation of credentials and other documents as may be required by law, to:

- Enter upon the Enrollee's premises where a regulated facility or activity is located or conducted, or where records are kept under the requirements of this General Order;
- Have access to and reproduce any records required to be maintained by this General Order;
- Inspect any facility and/or equipment (including monitoring and control equipment), practices, or operations required in this General Order; and
- Sample or monitor substances or parameters for assuring compliance with this General Order, or as otherwise authorized by the Water Code.

6.4.2. Pre-Inspection Questionnaire

The Enrollee shall provide pre-inspection information to State and Regional Water Board staff through the completion of a Pre-Inspection Questionnaire provided by Water Board staff.

ATTACHMENT A - DEFINITIONS

Annual Report

An Annual Report (previously termed as Collection System Questionnaire in Order 2006-0003-DWQ) is a mandatory report in which the Enrollee provides a calendar-year update of its efforts to prevent spills.

Basin Plan

A Basin Plan is a water quality control plan specific to a Regional Water Quality Control Board (Regional Water Board), that serves as regulations to: (1) define and designate beneficial uses of surface and groundwaters, (2) establish water quality objectives for protection of beneficial uses, and (3) provide implementation measures.

Beneficial Uses

The term “Beneficial Uses” is a Water Code term, defined as the uses of the waters of the State that may be protected against water quality degradation. Examples of beneficial uses include but are not limited to, municipal, domestic, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves.

California Integrated Water Quality System (CIWQS)

CIWQS is the statewide database that provides for mandatory electronic reporting as required in State and Regional Water Board-issued waste discharge requirements.

Data Submitter

A Data Submitter is an individual designated and authorized by the Enrollee’s Legally Responsible Official to enter spill data into the online CIWQS Sanitary Sewer System Database. A Data Submitter does not have the authority of a Legally Responsible Official to certify reporting entered into the online CIWQS Sanitary Sewer System Database.

Disadvantaged Community

A disadvantaged community is a community with a median household income of less than eighty percent (80%) of the statewide annual median household income.

For the purpose of this General Order, there is no differentiation between a small and large disadvantaged community.

Drainage Conveyance System

A drainage conveyance system is a publicly- or privately-owned separate storm sewer system, including but not limited to drainage canals, channels, pipelines, pump stations, detention basins, infiltration basins/facilities, or other facilities constructed to transport stormwater and non-stormwater flows.

Enrollee

An Enrollee is a public, private, or other non-governmental entity that has obtained approval for regulatory coverage under this General Order, including:

- A state agency, municipality, special district, or other public entity that owns and/or operates one or more sanitary sewer systems:
  - greater than one (1) mile in length (each individual sanitary sewer system);
  - one mile or less in length where the State Water Resources Control Board or a Regional Water Quality Control Board requires regulatory coverage under this Order, or
- A federal agency, private company, or other non-governmental entity that owns and/or operates a sanitary sewer system of any size where the State Water Resources Control Board or a Regional Water Quality Control Board requires regulatory coverage under this Order in response to a history of spills, proximity to surface water, or other factors supporting regulatory coverage.

Environmentally Sensitive Area

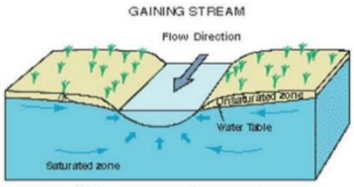
An environmentally sensitive area is a designated agricultural and/or wildlife area identified to need special natural landscape protection due to its wildlife or historical value.

Exfiltration

Exfiltration is the underground exiting of sewage from a sanitary sewer system through cracks, offset or separated joints, or failed infrastructure due to corrosion or other factors.

Flood Control Channel

A flood control channel is a channel used to convey stormwater and non-stormwater flows through and from areas for flood management purposes.



Governing Entity

A governing entity includes but is not limited to the following:

- A publicly elected governing board, council, or commission of a municipal agency;
- A Department or Division director of a federal or state agency that is not governed by a board;
- A governing board or commission of an organization or association; and
- A private system owner/manager that is not governed by a board.

Hydrologically Connected

Two waterbodies are hydrologically connected when one waterbody flows, or has the potential to flow, into the other waterbody. For the purpose of this General Order, groundwater is hydrologically connected to a surface water when the groundwater feeds into the surface water. (The surface waterbody in this example is termed a gaining stream as it gains flow from surrounding groundwater.)

Lateral (including Lower and Upper Lateral)

A lateral is an underground segment of smaller diameter pipe that transports sewage from a customer's building or property (residential, commercial, or industrial) to the Enrollee's main sewer line in a street or easement. Upper and lower lateral boundary definitions are subject to local jurisdictional codes and ordinances, or private system ownership.

A lower lateral is the portion of the lateral located between the sanitary sewer system main, and either the property line, sewer clean out, curb line, established utility easement boundary, or other jurisdictional locations.

An upper lateral is the portion of the lateral from the property line, sewer clean out, curb line, established utility easement boundary, or other jurisdictional locations, to the building or property.

Legally Responsible Official

A Legally Responsible Official is an official representative, designated by the Enrollee, with authority to sign and certify submitted information and documents required by this General Order.

Nuisance

For the purpose of this General Order, a nuisance, as defined in Water Code section 13050(m), is anything that meets all of the following requirements:

- Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property;
- Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; and
- Occurs during, or as a result of, the treatment or disposal of wastes.

Private Sewer Lateral

A private sewer lateral is the privately-owned lateral that transports sewage from private property(ies) into a sanitary sewer system.

Private Sanitary Sewer System

A private sanitary sewer system is a sanitary sewer system of any size that is owned and/or operated by a private individual, company, corporation, or organization. A private sanitary sewer system may or may not connect into a publicly owned sanitary sewer system.

Potential to Discharge, Potential Discharge

Potential to Discharge, or Potential Discharge, means any exiting of sewage from a sanitary sewer system which can reasonably be expected to discharge into a water of the State based on the size of the sewage spill, proximity to a drainage conveyance system, and the nature of the surrounding environment.

Receiving Water

A receiving water is a water of the State that receives a discharge of waste.

Resilience

Resilience is the ability to recover from or adjust to adversity or change, and grow from disruptions. Resilience can be built through planning, preparing for, mitigating, and adapting to changing conditions.

Sanitary Sewer System

A sanitary sewer system is a system that is designed to convey sewage, including but not limited to, pipes, manholes, pump stations, siphons, wet wells, diversion structures and/or other pertinent infrastructure, upstream of a wastewater treatment plant headworks, including:

- Laterals owned and/or operated by the Enrollee;
- Satellite sewer systems; and/or
- Temporary conveyance and storage facilities, including but not limited to temporary piping, vaults, construction trenches, wet wells, impoundments, tanks and diversion structures.

For purpose of this Order, sanitary sewer systems include only systems owned and/or operated by the Enrollee.

Satellite Sewer System

A satellite sewer system is a portion of a sanitary sewer system owned or operated by a different owner than the owner of the downstream wastewater treatment facility ultimately treating the sewage.

Sewer System Management Plan

A sewer system management plan is a living document an Enrollee develops and implements to effectively manage its sanitary sewer system(s) in accordance with this General Order.

Sewage

Sewage, and its associated wastewater, is untreated or partially treated domestic, municipal, commercial and/or industrial waste (including sewage sludge), and any mixture of these wastes with inflow or infiltration of stormwater or groundwater, conveyed in a sanitary sewer system.

Spill

A spill is a discharge of sewage from any portion of a sanitary sewer system due to a sanitary sewer system overflow, operational failure, and/or infrastructure failure. Exfiltration of sewage is not considered to be a spill under this General Order if the exfiltrated sewage remains in the subsurface and does not reach a surface water of the State.

Training

Training is in-house or external education and guidance needed that provides the knowledge, skills, and abilities to comply with this General Order.

Wash Down Water

Wash down water is water used to clean a spill area.

Waste

Waste, as defined in Water Code section 13050(d), includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal.

Waste Discharge Identification Number (WDID)

A waste discharge identification number (WDID) identifies each individual sanitary sewer system enrolled under this General Order. A WDID number is assigned to each enrolled system upon an Enrollee's approved regulatory coverage.

Waters of the State

Waters of the State are surface waters or groundwater within boundaries of the state as defined in Water Code section 13050(e), in which the State and Regional Water Boards have authority to protect beneficial uses. Waters of the State include, but are not limited to, groundwater aquifers, surface waters, saline waters, natural washes and pools, wetlands, sloughs, and estuaries, regardless of flow or whether water exists during dry conditions. Waters of the State include waters of the United States.

Waters of the United States

Waters of the United States are surface waters or waterbodies that are subject to federal jurisdiction in accordance with the Clean Water Act.

Water Quality Objective

A water quality objective is the limit or maximum amount of pollutant, waste constituent or characteristic, or parameter level established in statewide water quality control plans and Regional Water Boards' Basin Plans, for the reasonable protection of beneficial uses of surface waters and groundwater and the prevention of nuisance.

ATTACHMENT B – APPLICATION FOR ENROLLMENT

1. Enrollment Status: (Mark only one item)

☐ New Enrollee

☐ New Enrollee with previous regulatory coverage under Order 2006-0003-DWQ
(that failed to certify continuation of coverage in CIWQS per Order 2022-XXXX-DWQ)
Existing WDID Number: _____

2. Applicant Information:

Legally Responsible Official Submitting Application

First and Last Name: _____

Title: _____

Phone: _____

Email: _____

System Owner/Operator Name: _____

Mailing Address:_____

City, State, Zip:_____

County:_____

Sanitary Sewer System Name: _____

Regional Water Quality Control Board(s): _____

Signature and Date: _____

3. Applicant Type (Check one):

☐ City ☐ County ☐ State ☐ Federal ☐ Special District

☐ Government Combination ☐ Private ☐ Other Non-governmental Entity

4. Wastewater Treatment Plant Receiving Sanitary Sewer System Waste:

Wastewater Treatment Plant Permittee:_____

WDID No.: _____

5. Billing Information

Billing Address: _____

City, State, Zip: _____

Billing Contact Person and Title: _____

Phone and Email Address: _____

6. Application Fee:

The application fee, as required by Water Code section 13260, is based on the daily population served by the sanitary sewer system. See updated Fee Schedule. (https://www.waterboards.ca.gov/resources/fees/water_quality/)

Check one of the following and enter fee amount:

☐ Population Served < 50,000 – Total Fee submitted: $ _____

☐ Population Served ≥ 50,000 – Total Fee submitted: $ _____

Make the fee payment payable to the State Water Resources Control Board and mail the complete application package to:

State Water Resources Control Board, Accounting Office
P. O. Box 1888
Sacramento, CA 95812-1888

Attention: Statewide Sanitary Sewer System Program

7. Application Submittal Certification

I certify under penalty of perjury under the laws of the State of California that to the best of my knowledge and belief, the information in the submitted application package is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.

Print Name: _____

Title: _____

Signature: _____Date: _____

ATTACHMENT C - NOTICE OF TERMINATION

1. Enrollee Information

Enrollee Name: _____

WDID No:_____

Legally Responsible Official Requesting Termination of Coverage: _____

First and Last Name: _____

Title: _____

Phone: _____

Email: _____

Mailing Address: _____

City, State, Zip: _____

County: _____

Sanitary Sewer System Name(s) or Unique Identifier(s): _____

Regional Water Quality Control Board(s): _____

Signature and Date:_____

2. Basis of Termination

Explanation of termination, including subsequent regulatory coverage and subsequent owner/operator of enrolled sanitary sewer system, as applicable:

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

3. Regulatory Coverage Termination Certification

I certify under penalty of perjury under the laws of the State of California that to the best of my knowledge: 1) the sanitary sewer system I officially represent is not required to be regulated under the Statewide Waste Discharge Requirements for Sanitary Sewer Systems Order 2022-XXXX-DWQ, and 2) the information submitted in this Notice of Termination is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment. Additionally, I understand that the submittal of this Notice of Termination does not release sanitary sewer system agencies from liability for any violations of the Clean Water Act.

Print Name: _____

Title: _____

Signature: _____Date: _____

For State Water Board Use Only

☐ Approved for Termination ☐ Denied and Returned to Enrollee

Deputy Director of Water Quality Signature: _____

Date: _____Notice of Termination Effective Date: _____

ATTACHMENT D – SEWER SYSTEM MANAGEMENT PLAN – REQUIRED ELEMENTS

9. Monitoring, Measurement and Program Modifications D-9
10. Internal Audits D-10
11. Communication Program D-10

ATTACHMENT D – SEWER SYSTEM MANAGEMENT PLAN – REQUIRED ELEMENTS

A Sewer System Management Plan (Plan) is a living planning document that documents ongoing local sewer system management program activities, procedures, and decision-making – at the scale necessary to address the size and complexity of the subject sanitary sewer system(s). This Plan may incorporate other programs and other plans by reference, to address short-term and long-term system resilience through:

- Proactive planning and decision-making;
- Local government ordinances;
- Updated operations and maintenance activities and procedures;
- Implementation of capital improvements;
- Sufficient local budget to support staff resources, contractors, equipment, and training; and
- Updated training of staff and contractors.

The Enrollee's development, update, and implementation of a Sewer System Management Plan addressing the requirements of this Attachment is an enforceable component of this General Order. As specified in Provision 6.1 (Enforcement Provisions) of this General Order, consistent with the Water Code and the State Water Board Enforcement Policy, the State Water Board or a Regional Water Board may consider the Enrollee's efforts in implementing an effective Sewer System Management Plan to prevent, contain, control, and mitigate spills when considering Water Code section 13327 factors to determine necessary enforcement of this General Order.

This Attachment includes the following required elements that the Enrollee shall address in its Plan and subsequent updates. The Enrollee shall identify any requirement in this Attachment that is not applicable to the Enrollee's sewer system and shall explain in its Plan why the requirement is not applicable.

1. SEWER SYSTEM MANAGEMENT PLAN GOAL AND INTRODUCTION

The goal of the Sewer System Management Plan (Plan) is to provide a plan and schedule to: (1) properly manage, operate, and maintain all parts of the Enrollee's sanitary sewer system(s), (2) reduce and prevent spills, and (3) contain and mitigate spills that do occur.

The Plan must include a narrative Introduction section that discusses the following items:

1.1. Regulatory Context

The Plan Introduction section must provide a general description of the local sewer system management program and discuss Plan implementation and updates.

1.2. Sewer System Management Plan Update Schedule

The Plan Introduction section must include a schedule for the Enrollee to update the Plan, including the schedule for conducting internal audits. The schedule must include milestones for incorporation of activities addressing prevention of sewer spills.

1.3. Sewer System Asset Overview

The Plan Introduction section must provide a description of the Enrollee-owned assets and service area, including but not limited to:

- Location, including county(ies);
- Service area boundary;
- Population and community served;
- System size, including total length in miles, length of gravity mainlines, length of pressurized (force) mains, and number of pump stations and siphons;
- Structures diverting stormwater to the sewer system;
- Data management systems;
- Sewer system ownership and operation responsibilities between Enrollee and private entities for upper and lower sewer laterals;
- Estimated number or percent of residential, commercial, and industrial service connections; and
- Unique service boundary conditions and challenge(s).

Additionally, the Plan Introduction section must provide reference to the Enrollee's up-to-date map of its sanitary sewer system, as required in section 4.1 (Updated Map of Sanitary Sewer System) of this Attachment.

2. ORGANIZATION

The Plan must identify organizational staffing responsible and integral for implementing the local Sewer System Management Plan through an organization chart or similar narrative documentation that includes:

- The name of the Legally Responsible Official as required in section 5.1 (Designation of a Legally Responsible Official) of this General Order;
- The position titles, telephone numbers, and email addresses for management, administrative, and maintenance positions responsible for implementing specific Sewer System Management Plan elements;
- Organizational lines of authority; and
- Chain of communication for reporting spills from receipt of complaint or other information, including the person responsible for reporting spills to the State and Regional Water Boards and other agencies, as applicable. (For example, county

health officer, county environmental health agency, and State Office of Emergency Services.)

3. LEGAL AUTHORITY

The Plan must include copies or an electronic link to the Enrollee's current sewer system use ordinances, service agreements and/or other legally binding procedures to demonstrate the Enrollee possesses the necessary legal authority to:

- Prevent illicit discharges into its sanitary sewer system from inflow and infiltration (I&I); unauthorized stormwater; chemical dumping; unauthorized debris; roots; fats, oils, and grease; and trash, including rags and other debris that may cause blockages;
- Collaborate with storm sewer agencies to coordinate emergency spill responses, ensure access to storm sewer systems during spill events, and prevent unintentional cross connections of sanitary sewer infrastructure to storm sewer infrastructure;
- Require that sewer system components and connections be properly designed and constructed;
- Ensure access for maintenance, inspection, and/or repairs for portions of the service lateral owned and/or operated by the Enrollee;
- Enforce any violation of its sewer ordinances, service agreements, or other legally binding procedures; and
- Obtain easement accessibility agreements for locations requiring sewer system operations and maintenance, as applicable.

4. OPERATION AND MAINTENANCE PROGRAM

The Plan must include the items listed below that are appropriate and applicable to the Enrollee's system.

4.1. Updated Map of Sanitary Sewer System

An up-to-date map(s) of the sanitary sewer system, and procedures for maintaining and providing State and Regional Water Board staff access to the map(s). The map(s) must show gravity line segments and manholes, pumping facilities, pressure pipes and valves, and applicable stormwater conveyance facilities within the sewer system service area boundaries.

4.2. Preventive Operation and Maintenance Activities

A scheduling system and a data collection system for preventive operation and maintenance activities conducted by staff and contractors.

The scheduling system must include:

- Inspection and maintenance activities;

- Higher-frequency inspections and maintenance of known problem areas, including areas with tree root problems;
- Regular visual and closed-circuit television (CCTV) inspections of manholes and sewer pipes.

The data collection system must document data from system inspection and maintenance activities, including system areas/components prone to root-intrusion potentially resulting in system backup and/or failure.

4.3. Training

In-house and external training provided on a regular basis for sanitary sewer system operations and maintenance staff and contractors. The training must cover:

- The requirements of this General Order;
- The Enrollee's Spill Emergency Response Plan procedures and practice drills;
- Skilled estimation of spill volume for field operators; and
- Electronic CIWQS reporting procedures for staff submitting data.

4.4. Equipment Inventory

An inventory of sewer system equipment, including the identification of critical replacement and spare parts.

5. DESIGN AND PERFORMANCE PROVISIONS

The Plan must include the following items as appropriate and applicable to the Enrollee's system:

5.1. Updated Design Criteria and Construction Standards and Specifications

Updated design criteria, and construction standards and specifications, for the construction, installation, repair, and rehabilitation of existing and proposed system infrastructure components, including but not limited to pipelines, pump stations, and other system appurtenances. If existing design criteria and construction standards are deficient to address the necessary component-specific hydraulic capacity as specified in section 8 (System Evaluation, Capacity Assurance and Capital Improvements) of this Attachment, the procedures must include component-specific evaluation of the design criteria.

5.2. Procedures and Standards

Procedures, and standards for the inspection and testing of newly constructed, newly installed, repaired, and rehabilitated system pipelines, pumps, and other equipment and appurtenances.

6. SPILL EMERGENCY RESPONSE PLAN

The Plan must include an up to date Spill Emergency Response Plan to ensure prompt detection and response to spills to reduce spill volumes and collect information for prevention of future spills. The Spill Emergency Response Plan must include procedures to:

- Notify primary responders, appropriate local officials, and appropriate regulatory agencies of a spill in a timely manner;
- Notify other potentially affected entities (for example, health agencies, water suppliers, etc.) of spills that potentially affect public health or reach waters of the State;
- Comply with the notification, monitoring and reporting requirements of this General Order, State law and regulations, and applicable Regional Water Board Orders;
- Ensure that appropriate staff and contractors implement the Spill Emergency Response Plan and are appropriately trained;
- Address emergency system operations, traffic control and other necessary response activities;
- Contain a spill and prevent/minimize discharge to waters of the State or any drainage conveyance system;
- Minimize and remediate public health impacts and adverse impacts on beneficial uses of waters of the State;
- Remove sewage from the drainage conveyance system;
- Clean the spill area and drainage conveyance system in a manner that does not inadvertently impact beneficial uses in the receiving waters;
- Implement technologies, practices, equipment, and interagency coordination to expedite spill containment and recovery;
- Implement pre-planned coordination and collaboration with storm drain agencies and other utility agencies/departments prior, during, and after a spill event;
- Conduct post-spill assessments of spill response activities;
- Document and report spill events as required in this General Order; and
- Annually, review and assess effectiveness of the Spill Emergency Response Plan, and update the Plan as needed.

7. SEWER PIPE BLOCKAGE CONTROL PROGRAM

The Sewer System Management Plan must include procedures for the evaluation of the Enrollee's service area to determine whether a sewer pipe blockage control program is needed to control fats, oils, grease, rags and debris. If the Enrollee determines that a program is not needed, the Enrollee shall provide justification in its Plan for why a program is not needed.

The procedures must include, at minimum:

- An implementation plan and schedule for a public education and outreach program that promotes proper disposal of pipe-blocking substances;
- A plan and schedule for the disposal of pipe-blocking substances generated within the sanitary sewer system service area. This may include a list of acceptable disposal facilities and/or additional facilities needed to adequately dispose of substances generated within a sanitary sewer system service area;
- The legal authority to prohibit discharges to the system and identify measures to prevent spills and blockages;
- Requirements to install grease removal devices (such as traps or interceptors), design standards for the removal devices, maintenance requirements, best management practices requirements, recordkeeping and reporting requirements;
- Authority to inspect grease producing facilities, enforcement authorities, and whether the Enrollee has sufficient staff to inspect and enforce the fats, oils, and grease ordinance;
- An identification of sanitary sewer system sections subject to fats, oils, and grease blockages and establishment of a cleaning schedule for each section; and
- Implementation of source control measures for all sources of fats, oils, and grease reaching the sanitary sewer system for each section identified above.

8. SYSTEM EVALUATION, CAPACITY ASSURANCE AND CAPITAL IMPROVEMENTS

The Plan must include procedures and activities for:

- Routine evaluation and assessment of system conditions;
- Capacity assessment and design criteria;
- Prioritization of corrective actions; and
- A capital improvement plan.

8.1 System Evaluation and Condition Assessment

The Plan must include procedures to:

- Evaluate the sanitary sewer system assets utilizing the best practices and technologies available;

- Identify and justify the amount (percentage) of its system for its condition to be assessed each year;
- Prioritize the condition assessment of system areas that:
    - Hold a high level of environmental consequences if vulnerable to collapse, failure, blockage, capacity issues, or other system deficiencies;
    - Are located in or within the vicinity of surface waters, steep terrain, high groundwater elevations, and environmentally sensitive areas;
    - Are within the vicinity of a receiving water with a bacterial-related impairment on the most current Clean Water Act section 303(d) List;
- Assess the system conditions using visual observations, video surveillance and/or other comparable system inspection methods;
- Utilize observations/evidence of system conditions that may contribute to exiting of sewage from the system which can reasonably be expected to discharge into a water of the State;
- Maintain documents and recordkeeping of system evaluation and condition assessment inspections and activities; and
- Identify system assets vulnerable to direct and indirect impacts of climate change, including but not limited to: sea level rise; flooding and/or erosion due to increased storm volumes, frequency, and/or intensity; wildfires; and increased power disruptions.

8.2. Capacity Assessment and Design Criteria

The Plan must include procedures to identify system components that are experiencing or contributing to spills caused by hydraulic deficiency and/or limited capacity, including procedures to identify the appropriate hydraulic capacity of key system elements for:

- Dry-weather peak flow conditions that cause or contributes to spill events;
- The appropriate design storm(s) or wet weather events that causes or contributes to spill events;
- The capacity of key system components; and
- Identify the major sources that contribute to the peak flows associated with sewer spills.

The capacity assessment must consider:

- Data from existing system condition assessments, system inspections, system audits, spill history, and other available information;
- Capacity of flood-prone systems subject to increased infiltration and inflow, under normal local and regional storm conditions;

- Capacity of systems subject to increased infiltration and inflow due to larger and/or higher-intensity storm events as a result of climate change;
- Increases of erosive forces in canyons and streams near underground and above-ground system components due to larger and/or higher-intensity storm events;
- Capacity of major system elements to accommodate dry weather peak flow conditions, and updated design storm and wet weather events; and
- Necessary redundancy in pumping and storage capacities.

8.3. Prioritization of Corrective Action

The findings of the condition assessments and capacity assessments must be used to prioritize corrective actions. Prioritization must consider the severity of the consequences of potential spills.

8.4. Capital Improvement Plan

The capital improvement plan must include the following items:

- Project schedules including completion dates for all portions of the capital improvement program;
- Internal and external project funding sources for each project; and
- Joint coordination between operation and maintenance staff, and engineering staff/consultants during planning, design, and construction of capital improvement projects; and Interagency coordination with other impacted utility agencies.

9. MONITORING, MEASUREMENT AND PROGRAM MODIFICATIONS

The Plan must include an Adaptive Management section that addresses Plan-implementation effectiveness and the steps for necessary Plan improvement, including:

- Maintaining relevant information, including audit findings, to establish and prioritize appropriate Plan activities;
- Monitoring the implementation and measuring the effectiveness of each Plan Element;
- Assessing the success of the preventive operation and maintenance activities;
- Updating Plan procedures and activities, as appropriate, based on results of monitoring and performance evaluations; and
- Identifying and illustrating spill trends, including spill frequency, locations and estimated volumes.

10. INTERNAL AUDITS

The Plan shall include internal audit procedures, appropriate to the size and performance of the system, for the Enrollee to comply with section 5.4 (Sewer System Management Plan Audits) of this General Order.

11. COMMUNICATION PROGRAM

The Plan must include procedures for the Enrollee to communicate with:

- The public for:
  - Spills and discharges resulting in closures of public areas, or that enter a source of drinking water, and
  - The development, implementation, and update of its Plan, including opportunities for public input to Plan implementation and updates.
- Owners/operators of systems that connect into the Enrollee's system, including satellite systems, for:
  - System operation, maintenance, and capital improvement-related activities.

ATTACHMENT E1 – NOTIFICATION, MONITORING, REPORTING AND RECORDKEEPING REQUIREMENTS

Table of Contents

1. Notification Requirements E1-3
   - 1.1. Notification of Spills of 1,000 Gallons or Greater to the California Office of Emergency Services E1-3
   - 1.2. Spill Notification Information E1-4
   - 1.3. Notification of Spill Report Updates E1-4
2. Spill-Specific Monitoring Requirements E1-5
   - 2.1 Spill Location and Spread E1-5
   - 2.2 Spill Volume Estimation E1-5
   - 2.3. Receiving Water Monitoring E1-5
   - 2.4. Safety and Access Exceptions E1-8
3. Reporting Requirements E1-8
   - 3.1. Reporting Requirements for Individual Category 1 Spill Reporting E1-8
   - 3.2. Reporting Requirements for Individual Category 2 Spill Reporting E1-12
   - 3.3. Monthly Certified Spill Reporting for Category 3 Spills E1-14
   - 3.4. Monthly Certified Spill Reporting for Category 4 Spills E1-16
   - 3.5. Amended Certified Spill Reports for Category 3 Spills E1-16
   - 3.6. Annual Certified Spill Reporting of Category 4 and/or Lateral Spills E1-16
   - 3.7. Monthly Certification of “No-Spills” or “Category 4 Spills” and/or “Non-Category 1 Lateral Spills” E1-16
   - 3.8. Electronic Sanitary Sewer System Service Area Boundary Map E1-17
   - 3.9. Annual Report (Previously termed as Collection System Questionnaire in General Order 2006-0003-DWQ) E1-17
   - 3.10. Sewer System Management Plan Audit Reporting Requirements E1-19
   - 3.11. Sewer System Management Plan Reporting Requirements E1-19
4. Recordkeeping Requirements E1-20
   - 4.1. Recordkeeping Time Period E1-20
   - 4.2. Availability of Documents E1-20
   - 4.3. Spill Reports E1-20
   - 4.4. Recordkeeping of Category 4 Spills and Non-Category 1 Lateral Spills E1-21
   - 4.5. Sewer System Telemetry Records E1-22
   - 4.6. Sewer System Management Plan Implementation Records E1-22
   - 4.7. Audit Records E1-23

4.8. Equipment Records.....E1-23
4.9. Work Orders.....E1-23

ATTACHMENT E1– NOTIFICATION, MONITORING, REPORTING AND RECORDKEEPING REQUIREMENTS

The Notification Requirements (section 1), Spill-specific Monitoring Requirements (section 2), Reporting Requirements (section 3) and Recordkeeping Requirements (section 4) in this Attachment are pursuant to Water Code section 13267 and section 13383, and are an enforceable component of this General Order. For the purpose of this General Order, the term:

- Notification means the notifying of appropriate parties of a spill event or other activity.
- Spill-specific Monitoring means the gathering of information and data for a specific spill event to be reported or kept as records.
- Reporting means the reporting of information and data into the online California Integrated Water Quality System (CIWQS) Sanitary Sewer System Database.
- Recordkeeping means the maintaining of information and data in an official records storage system.

Failure to comply with the notification, monitoring, reporting and recordkeeping requirements in this General Order may subject the Enrollee to civil liabilities of up to $10,000 a day per violation pursuant to Water Code section 13385; up to $1,000 a day per violation pursuant to Water Code section 13268; or referral to the Attorney General for judicial civil enforcement.

Water Code section 13193 et seq. requires the Regional Water Quality Control Boards (Regional Water Boards) and the State Water Resources Control Board (State Water Board) to collect sanitary sewer spill information for each spill event and make this information available to the public. Sanitary sewer spill information for each spill event includes but is not limited to: Enrollee contact information for each spill event, spill cause, estimated spill volume and factors used for estimation, location, date, time, duration, amount discharged to waters of the State, response and corrective action(s) taken.

1. NOTIFICATION REQUIREMENTS

1.1. Notification of Spills of 1,000 Gallons or Greater to the California Office of Emergency Services

Per Water Code section 13271, for a spill that discharges in or on any waters of the State, or discharges or is deposited where it is, or probably will be, discharged in or on any waters of the State, the Enrollee shall notify the California Office of Emergency Services and obtain a California Office of Emergency Services Control Number as soon as possible **but no later than two (2) hours** after:

- The Enrollee has knowledge of the spill; and
- Notification can be provided without substantially impeding cleanup or other emergency measures.

The notification requirements in this section apply to individual spills of 1,000 gallons or greater, from an Enrollee-owned and/or operated laterals, to a water of the State.

1.2. Spill Notification Information

The Enrollee shall provide the following spill information to the California Office of Emergency Services before receiving a Control Number, as applicable:

- Name and phone number of the person notifying the California Office of Emergency Services;
- Estimated spill volume (gallons);
- Estimated spill rate from the system (gallons per minute);
- Estimated discharge rate (gallons per minute) directly into waters of the State or indirectly into a drainage conveyance system;
- Spill incident description:
  - Brief narrative of the spill event, and
  - Spill incident location (address, city, and zip code) and closest cross streets and/or landmarks;
- Name and phone number of contact person on-scene;
- Date and time the Enrollee was informed of the spill event;
- Name of sanitary sewer system causing the spill;
- Spill cause or suspected cause (if known);
- Amount of spill contained;
- Name of receiving water body receiving or potentially receiving discharge; and
- Description of water body impact and/ or potential impact to beneficial uses.

1.3. Notification of Spill Report Updates

Following the initial notification to the California Office of Emergency Services and until such time that the Enrollee certifies the spill report in the online CIWQS Sanitary Sewer System Database, the Enrollee shall provide updates to the California Office of Emergency Services regarding substantial changes to:

- Estimated spill volume (increase or decrease in gallons initially estimated);
- Estimated discharge volume discharged directly into waters of the State or indirectly into a drainage conveyance system (increase or decrease in gallons initially estimated); and
- Additional impact(s) to the receiving water(s) and beneficial uses.

2. SPILL-SPECIFIC MONITORING REQUIREMENTS

2.1 Spill Location and Spread

The Enrollee shall visually assess the spill location(s) and spread using photography, global positioning system (GPS), and other best available tools. The Enrollee shall document the critical spill locations, including:

- Photography and GPS coordinates for:
  - The system location where spill originated.

    For multiple appearance points of a single spill event, the points closest to the spill origin.
- Photography for:
  - Drainage conveyance system entry locations,
  - The location(s) of discharge into surface waters, as applicable,
  - Extent of spill spread, and
  - The location(s) of clean up.

2.2 Spill Volume Estimation

To assess the approximate spill magnitude and spread, the Enrollee shall estimate the total spill volume using updated volume estimation techniques, calculations, and documentation for electronic reporting. The Enrollee shall update its notification and reporting of estimated spill volume (which includes spill volume recovered) as further information is gathered during and after a spill event.

2.3. Receiving Water Monitoring

2.3.1. Receiving Water Visual Observations

Through visual observations and use of best available spill volume-estimating techniques and field calculation techniques, the Enrollee shall gather and document the following information for spills discharging to surface waters:

- Estimated spill travel time to the receiving water;
- For spills entering a drainage conveyance system, estimated spill travel time from the point of entry into the drainage conveyance system to the point of discharge into the receiving water;
- Estimated spill volume entering the receiving water; and
- Photography of:
  - Waterbody bank erosion,
  - Floating matter,
  - Water surface sheen (potentially from oil and grease),

- Discoloration of receiving water, and
- Impact to the receiving water.

2.3.2. Receiving Water – Water Quality Sampling and Analysis

For sewage spills in which an estimated 50,000 gallons or greater are discharged into a surface water, the Enrollee shall conduct the following water quality sampling no later than **18 hours** after the Enrollee's knowledge of a potential discharge to a surface water:

- Collect one water sample, each day of the duration of the spill, at:
  - The DCS-001 location as described in section 2.3.4 (Receiving Water Sampling Locations) of this Attachment, if sewage discharges to a surface water via a drainage conveyance system; and/or
  - Each of the three receiving water sampling locations in section 2.3.4 (Receiving Water Sampling Locations) of this Attachment;

    If the receiving water has no flow during the duration of the spill, the Enrollee must report "No Sampling Due To No Flow" for its receiving water sampling locations.

The Enrollee shall analyze the collected receiving water samples for the following constituents per section 2.3.3 (Water Quality Analysis Specifications) of this Attachment:

- Ammonia, and
- Appropriate bacterial indicator(s) per the applicable Basin Plan water quality objectives, including one or more of the following, unless directed otherwise by the Regional Water Board:
  - Total Coliform Bacteria
  - Fecal Coliform Bacteria
  - *E-coli*
  - Enterococcus

  Dependent on the receiving water(s), sampling of bacterial indicators shall be sufficient to determine post-spill (after the spill) compliance with the water quality objectives and bacterial standards of the California Ocean Plan or the California Inland Surface Water Enclosed Bays, and Estuaries Plan, including the frequency and/or number of post-spill receiving water samples as may be specified in the applicable plans.

The Enrollee shall collect and analyze additional samples as required by the applicable Regional Water Board Executive Officer or designee.

2.3.3. Water Quality Analysis Specifications

Spill monitoring must be representative of the monitored activity (40 Code of Federal Regulations section 122.41(j)(1)).

Sufficiently Sensitive Methods

Sample analysis must be conducted according to sufficiently sensitive test methods approved under 40 Code of Federal Regulations Part 136 for the sample analysis of pollutants. For the purposes of this General Order, a method is sufficiently sensitive when the minimum level of the analytical method approved under 40 Code of Federal Regulations Part 136 is at or below the receiving water pollutant criteria.

Environmental Laboratory Accreditation Program-Accredited Laboratories

The analysis of water quality samples required per this General Order must be performed by a laboratory that has accreditation pursuant to Article 3 (commencing with section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code. (Water Code section 13176(a).) The State Water Board accredits laboratories through its Environmental Laboratory Accreditation Program (ELAP).

2.3.4. Receiving Water Sampling Locations

The Enrollee shall collect receiving water samples at the following locations.

Sampling of Flow in Drainage Conveyance System (DCS) Prior to Discharge

Sampling Location	Sampling Location Description
DCS-001	A point in a drainage conveyance system before the drainage conveyance system flow discharges into a receiving water.

Receiving Surface Water Sampling (RSW)[1]

Sampling Location	Sampling Location Description
RSW-001 Point of Discharge	A point in the receiving water where sewage initially enters the receiving water.
RSW-001U: Upstream of Point of Discharge	A point in the receiving water, upstream of the point of sewage discharge, to capture ambient conditions absent of sewage discharge impacts.

Sampling Location	Sampling Location Description
RSW-001D: Downstream of Point of Discharge	A point in the receiving water, downstream of the point of sewage discharge, where the spill material is fully mixed with the receiving water.

[1] The Enrollee must use its best professional judgment to determine the upstream and downstream distances based on receiving water flow, accessibility to upstream/downstream waterbody banks, and size of visible sewage plume.

2.4. Safety and Access Exceptions

If the Enrollee encounters access restrictions or unsafe conditions that prevents its compliance with spill response requirements or monitoring requirements in this General Order, the Enrollee shall provide documentation of access restrictions and/or safety hazards in the corresponding required report.

3. REPORTING REQUIREMENTS

All reporting required in this General Order must be submitted electronically to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov), unless specified otherwise in this General Order. Electronic reporting may solely be conducted by a Legally Responsible Official or Data Submitter(s) previously designated by the Legally Responsible Official, as required in section 5.8 (Designation of Data Submitters) of this General Order.

The Enrollee shall report any information that is protected by the Homeland Security Act, by email to SanitarySewer@waterboards.ca.gov, with a brief explanation of the protection provided by the Homeland Security Act for the subject report to be protected from unauthorized disclosure and/or public access, and for official Water Board regulatory purposes only.

3.1. Reporting Requirements for Individual Category 1 Spill Reporting

3.1.1. Draft Spill Report for Category 1 Spills

Within three (3) business days of the Enrollee's knowledge of a Category 1 spill, the Enrollee shall submit a Draft Spill Report to the online CIWQS Sanitary Sewer System Database.

The Draft Spill Report must, at minimum, include the following items:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;

5. Estimated spill start date and time;
6. Date and time the Enrollee notified the California Office of Emergency Services, and the assigned control number;
7. Description, photographs, and GPS coordinates of the system location where the spill originated;
    - If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
8. Estimated total spill volume exiting the system;
9. Description and photographs of the extent of the spill and spill boundaries;
10. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry location(s);
    - Estimated spill volume fully recovered from the drainage conveyance system;
    - Estimated spill volume remaining within the drainage conveyance system;
11. Description and photographs of all discharge point(s) into the surface water;
12. Estimated spill volume that discharged to surface waters; and
13. Estimated total spill volume recovered.

3.1.2. Certified Spill Report for Category 1 Spills

Within 15 calendar days of the spill end date, the Enrollee shall submit a Certified Spill Report for Category 1 spills, to the online CIWQS Sanitary Sewer System Database. Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number.

The Certified Spill Report must, at minimum, include the following mandatory information in addition to all information in the Draft Spill Report per section 3.1.1 (Draft Spill Report for Category 1 Spills) above:

1. Description of the spill event destination(s), including GPS coordinates if available, that represent the full spread and reach of the spill;
2. Spill end date and time;
3. Description of how the spill volume estimations were calculated, including at a minimum:
    - The methodology, assumptions and type of data relied upon, such as supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology(ies), assumptions and type of data relied upon for estimations of the spill start time and the spill end time;

4. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
5. System failure location (for example, main, lateral, pump station, etc.);
6. Description of the pipe material, and estimated age of the pipe material, at the failure location;
7. Description of the impact of the spill;
8. Whether or not the spill was associated with a storm event;
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of spill corrective action, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of major milestones for those steps;
11. Spill response completion date;
12. Detailed narrative of investigation and investigation findings of cause of spill;
13. Reasons for an ongoing investigation (as applicable) and the expected date of completion;
14. Name and type of receiving water body(s);
15. Description of the water body(s), including but not limited to:
    - Observed impacts on aquatic life,
    - Public closure, restricted public access, temporary restricted use, and/or posted health warnings due to spill,
    - Responsible entity for closing/restricting use of water body, and
    - Number of days closed/restricted as a result of the spill.
16. Whether or not the spill was located within 1,000 feet of a municipal surface water intake; and
17. If water quality samples were collected, identify sample locations and the parameters the water quality samples were analyzed for. If no samples were taken, Not Applicable shall be selected.

3.1.3. Spill Technical Report for Individual Category 1 Spill in which 50,000 Gallons or Greater Discharged into a Surface Water

For any spill in which 50,000 gallons or greater discharged into a surface water, **within 45 calendar days** of the spill end date, the Enrollee shall submit a Spill Technical Report to the online CIWQS Sanitary Sewer System Database. The Spill Technical Report, at minimum, must include the following information:

1. Spill causes and circumstances, including at minimum:
    - Complete and detailed explanation of how and when the spill was discovered;

- Photographs illustrating the spill origin, the extent and reach of the spill, drainage conveyance system entrance and exit, receiving water, and post-cleanup site conditions;
- Diagram showing the spill failure point, appearance point(s), the spill flow path, and ultimate destinations;
- Detailed description of the methodology employed, and available data used to calculate the discharge volume and, if applicable, the recovered spill volume;
- Detailed description of the spill cause(s);
- Description of the pipe material, and estimated age of the pipe material, at the failure location;
- Description of the impact of the spill;
- Copy of original field crew records used to document the spill; and
- Historical maintenance records for the failure location.

2. Enrollee's response to the spill:
   - Chronological narrative description of all actions taken by the Enrollee to terminate the spill;
   - Explanation of how the Sewer System Management Plan Spill Emergency Response Plan was implemented to respond to and mitigate the spill; and
   - Final corrective action(s) completed and a schedule for planned corrective actions, including:
     - Local regulatory enforcement action taken against an illicit discharge in response to this spill, as applicable,
     - Identifiable system modifications, and operation and maintenance program modifications needed to prevent repeated spill occurrences, and
     - Necessary modifications to the Emergency Spill Response Plan to incorporate lessons learned in responding to and mitigating the spill.
3. Water Quality Monitoring, including at minimum:
   - Description of all water quality sampling activities conducted;
   - List of pollutant and parameters monitored, sampled and analyzed; as required in section 2.3 (Receiving Water Monitoring) of this Attachment;
   - Laboratory results, including laboratory reports;
   - Detailed location map illustrating all water quality sampling points; and
   - Other regulatory agencies receiving sample results (if applicable).
4. Evaluation of spill impact(s), including a description of short-term and long-term impact(s) to beneficial uses of the surface water.

3.1.4. Amended Certified Spill Reports for Individual Category 1 Spills

The Enrollee shall update or add additional information to a Certified Spill Report within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After **90 calendar days**, the Enrollee shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the Amended Spill Report due date.

3.2. Reporting Requirements for Individual Category 2 Spill Reporting

3.2.1. Draft Spill Report for Category 2 Spills

Within three (3) business days of the Enrollee's knowledge of a Category 2 spill, the Enrollee shall submit a Draft Spill Report to the online CIWQS Sanitary Sewer System Database.

The Draft Spill Report must, at minimum, include the following items:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;
5. Estimated spill start date and time;
6. Date and time the Enrollee notified the California Office of Emergency Services, and the assigned control number;
7. Description, photographs, and GPS coordinates of the system location where the spill originated;

   If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
8. Estimated total spill volume exiting the system;
9. Description and photographs of the extent of the spill and spill boundaries;
10. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry location(s);
    - Estimated spill volume fully recovered from the drainage conveyance system;
    - Estimated spill volume remaining within the drainage conveyance system;

- Estimated spill volume discharged to a groundwater infiltration basin or facility, if applicable; and

11. Estimated total spill volume recovered.

3.2.2. Certified Spill Report for Category 2 Spills

Within 15 calendar days of the spill end date, the Enrollee shall submit a Certified Spill Report for the Category 2 spill, to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov). Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number.

The Certified Spill Report must, at minimum, include the following mandatory information in addition to all information in the Draft Spill Report per section 3.2.1 (Draft Spill Report for Category 2 Spills) above:

1. Description of the spill event destination(s), including GPS coordinates if available, that represent the full spread and reach of the spill;
2. Spill end date and time;
3. Description of how the spill volume estimations were calculated, including at a minimum:
   - The methodology, assumptions and type of data relied upon, such as supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
   - The methodology(ies), assumptions and type of data relied upon for estimations of the spill start time and the spill end time;
4. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
5. System failure location (for example, main, pump station, etc.);
6. Description of the pipe/infrastructure material, and estimated age of the pipe material, at the failure location;
7. Description of the impact of the spill;
8. Whether or not the spill was associated with a storm event;
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of spill corrective action, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of major milestones for those steps;
11. Spill response completion date;
12. Detailed narrative of investigation and investigation findings of cause of spill;
13. Reasons for an ongoing investigation (as applicable) and the expected date of completion; and

14. Whether or not the spill was located within 1,000 feet of a municipal surface water intake.

3.2.3. Amended Certified Spill Reports for Individual Category 2 Spills

The Enrollee shall update or add additional information to a Certified Spill Report within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After **90 calendar days**, the Enrollee shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the Amended Spill Report due date.

3.3. Monthly Certified Spill Reporting for Category 3 Spills

The Enrollee shall report and certify all Category 3 spills to the online CIWQS Sanitary Sewer System Database within 30 calendar days after the end of the month in which the spills occurred. (For example, all Category 3 spills occurring in the month of February shall be reported and certified by March 30th). After the Legally Responsible Official certifies the spills, the online CIWQS Sanitary Sewer System Database will issue a spill event identification number for each spill.

The monthly reporting of all Category 3 spills must include the following items for each spill:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;
5. Estimated spill start date and time;
6. Description, photographs, and GPS coordinates where the spill originated:
    - If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
7. Estimated total spill volume exiting the system;
8. Description and photographs of the extent of the spill and spill boundaries;
9. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry locations(s);
    - Estimated spill volume fully recovered from the drainage conveyance system; and

- Estimated spill volume discharged to a groundwater infiltration basis or facility, if applicable.

10. Estimated total spill volume recovered;
11. Description of the spill event destination(s), including GPS coordinates, if available, that represent the full spread and reaches of the spill;
12. Spill end date and time;
13. Description of how the spill volume estimations were calculated, including, at minimum:
    - The methodology and type of data relied upon, including supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology and type of data relied upon to estimate the spill start time, on-going spill rate at time of arrival (if applicable), and the spill end time;
14. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
15. System failure location (for example, main, pump station, etc.);
16. Description of the pipe/infrastructure material, and estimated age of the pipe/infrastructure material, at the failure location;
17. Description of the impact of the spill;
18. Whether or not the spill was associated with a storm event;
19. Description of spill response activities including description of immediate spill containment and cleanup efforts;
20. Description of spill corrective actions, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of the major milestones for those steps; including, at minimum:
    - Local regulatory enforcement action taken against an illicit discharge in response to this spill, as applicable, and
    - Identifiable system modifications, and operation and maintenance program modifications needed to prevent repeated spill occurrences at the same spill event location, including:
      - Adjusted schedule/method of preventive maintenance,
      - Planned rehabilitation or replacement of sanitary sewer asset,
      - Inspected, repaired asset(s), or replaced defective asset(s),
      - Capital improvements,
      - Documentation verifying immediately implemented system modifications and operating/maintenance modifications,
      - Description of spill response activities,

- Spill response completion date, and
- Ongoing investigation efforts, and expected completion date of investigation to determine the full cause of spill;

21. Detailed narrative of investigation and investigation findings of cause of spill.

3.4. Monthly Certified Spill Reporting for Category 4 Spills

The Enrollee shall report and certify the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, within 30 calendar days after the end of the month in which the spills occurred.

3.5. Amended Certified Spill Reports for Category 3 Spills

Within 90 calendar days of the certified Spill Report due date, the Enrollee may update or add additional information to a certified Spill Report by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After 90 calendar days, the Legally Responsible Official shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a certified Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the 90-day timeframe for amending the certified Spill Report, as provided above.

3.6. Annual Certified Spill Reporting of Category 4 and/or Lateral Spills

For all Category 4 spills and spills from its owned and/or operated laterals that are caused by a failure or blockage in the lateral and that do not discharge to a surface water, the Enrollee shall:

- Maintain records per section 4.4. of this Attachment;

  The Enrollee shall provide records upon request by State Water Board or Regional Water Board staff.

- Annually upload and certify a report, in an appropriate digital format, of all recordkeeping of spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occurred.

A spill from an Enrollee-owned and/or operated lateral that discharges to a surface water is a Category 1 spill; the Enrollee shall report all Category 1 spills per section 3.1 of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

3.7. Monthly Certification of "No-Spills" or "Category 4 Spills" and/or "Non-Category 1 Lateral Spills"

If either (1) no spills occur during a calendar month or (2) only Category 4, and/or Enrollee-owned and/or operated lateral spills (that do not discharge to a surface water) occur during a calendar month, the Enrollee shall certify, within 30 calendar days after

the end of each calendar month, either a “No-Spill” certification statement, or a “Category 4 Spills” and/or “Non-Category 1 Lateral Spills” certification statement, in the online CIWQS Sanitary Sewer System Database, certifying that there were either no spills, or Category 4 and/or Non-Category 1 Lateral Spills that will be reported annually (per section 3.6 of this Attachment) for the designated month.

If a spill starts in one calendar month and ends in a subsequent calendar month, and the Enrollee has no further spills of any category, in the subsequent calendar month, the Enrollee shall certify “no-spills” for the subsequent calendar month.

If the Enrollee has no spills from its systems during a calendar month, but the Enrollee voluntarily reported a spill from a private lateral or a private system, the Enrollee shall certify “no-spills” for that calendar month.

If the Enrollees has spills from its owned and/or operated laterals during a calendar month, the Enrollee shall not certify “no spills” for that calendar month.

3.8. Electronic Sanitary Sewer System Service Area Boundary Map

The Legally Responsible Official shall submit, to the State Water Board, an up-to-date electronic spatial map of its sewer system service area boundaries. The map must be in accordance with section 5.14 (Electronic Sanitary Sewer System Service Area Boundary Map) of this General Order and the specification provided on the statewide Sanitary Sewer Systems program website. The map must include the location of wastewater treatment facility(ies) that treats the sewer system waste, if in the same sewer service boundary.

By the Effective Date of this General Order, specifications for the electronic sanitary sewer service area boundary map format will be provided on the statewide Sanitary Sewer Systems Order program website.

3.9. Annual Report (Previously termed as Collection System Questionnaire in General Order 2006-0003-DWQ)

A new Enrollee shall complete and submit its first certified Annual Report into the online CIWQS Sanitary Sewer System Database, **within 30 days of obtaining a CIWQS account**; Subsequent Annual Reports are due by April 1 of each year.

All enrollees shall update their previous year’s Annual Report, **by April 1 of each year after the Effective Date of this General Order,** for each calendar year (January 1 through December 31)**.**

The Annual Report must be entered directly into the online CIWQS Sanitary Sewer System Database. The Enrollee’s Legally Responsible Official shall certify the Annual Report as instructed in CIWQS;

The Annual Report must address, and update as applicable, the following items:

- Population served;

- Updated sewer system service area boundary map, if service area boundary has changed from original map submitted per section 5.14 (Electronic Sanitary Sewer System Service Area Boundary Map) of this General Order;
- Number of system operation and maintenance staff:
  - Entry level (less than two years of experience),
  - Journey level (greater than two years of experience),
  - Supervisory level, and
  - Managerial level;
- Number of operation and maintenance staff certified as a certified collection system operator by the California Water Environmental Association (CWEA), with:
  - Corresponding number of certified collection system operator grade levels (Grade I, II, III, IV, and V);
- System information:
  - Miles of system gravity and force mains,
  - Number of upper and lower service laterals connected to system,
  - Estimated number of upper and lower laterals owned and/or operated by the Enrollee,
  - Portion of laterals that is Enrollee's responsibility,
  - Average age the major components of system infrastructure,
  - Number and age of pump stations, and
  - Estimated total miles of the system pipeline not accessible for maintenance;
- Name and location of the treatment plant(s) receiving sanitary sewer system's waste;
- Name of satellite sewer system tributaries;
- Number of system's gravity sewer above or underground crossings of water bodies throughout system;
- Number of force main (pressurized pipe) above or underground crossings of water bodies throughout system;
- Number of siphons used to convey waste throughout the sewer system;
- Miles of sewer system cleaned;
- Miles of sewer system video inspected, or comparable (i.e., video closed-circuit television or alternative inspection methods);
- System Performance Evaluation as specified in section 5.11 (System Performance Analysis) of this General Order;
- Major spill causes (for example, root intrusion, grease deposition);

- System infrastructure failure points (for example, main, pump station, lateral, etc.);
- Ongoing spill investigations; and
- Actions taken to address system deficiencies.

3.10. Sewer System Management Plan Audit Reporting Requirements

The Enrollee shall submit its Sewer System Management Plan Audit and other pertinent audit information, in accordance with section 5.4 (Sewer System Management Plan Audits) of this General Order, to the online CIWQS Sanitary Sewer System Database **by six (6) months after the end of the 3-year audit period**.

If a Sewer System Management Plan Audit is not conducted as required: the Enrollee shall:

- Update the online CIWQS Sanitary Sewer System Database and select the justification for not conducting the Audit; and
- Notify its corresponding Regional Water Board (see Attachment F (Regional Water Quality Control Board Contact Information)) of the justification for the lapsed requirements.

The Enrollee's reporting of a justification for not conducting a timely Audit does not justify non-compliance with this General Order. The Enrollee shall:

- Submit the late Audit as required in this General Order; and
- Comply with subsequent Audit requirements and due dates corresponding with the original audit cycle.

3.11. Sewer System Management Plan Reporting Requirements

For an Existing Enrollee previously regulated by Order 2006-0003-DWQ: **Within every six (6) years after the required due date of its last Plan Update**, the Legally Responsible Official shall upload and certify a local governing entity-approved Sewer System Management Plan Update to the online CIWQS Sanitary Sewer System Database. If the electronic document format or size capacity prevents the electronic upload of the Plan, the Legally Responsible Official shall report an electronic link to its updated Sewer System Management Plan posted on its own website.

Order 2006-0003-DWQ required each enrollee to develop its initial Sewer System Management Plan per the following schedule, with required Plan updates at a frequency of 5-years thereafter:

Systems serving populations: Greater than 100,000: May 2, 2009

Between 100,000 and 10,000: August 2, 2009

Between 10,000 and 2,500: May 2, 2010

Less than 2,500: August 2, 2010

This Order carries forth the previously-required Plan Update schedule per Order 2006-0003-DWQ. Per the six-year Plan Update frequency required in this Order, the Enrollee shall upload and certify its first Plan Update, to the online CIWQS Sanitary Sewer System Database by the following due dates, with subsequent Plan Updates at the frequency of six years thereafter:

Systems serving populations: Greater than 100,000: May 2, 2025

Between 100,000 and 10,000: August 2, 2025

Between 10,000 and 2,500: May 2, 2026

Less than 2,500: August 2, 2026

For a New Enrollee: **Within twelve (12) months of its Application for Enrollment Approval date**, the Legally Responsible Official of a new Enrollee shall upload and certify a local governing entity-approved Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database. If electronic document format or size capacity prevents the electronic upload of the Plan, the Legally Responsible Official shall report an electronic link to its Sewer System Management Plan posted on its own website. The due date for subsequent 6-year Plan updates, is six (6) years from the submittal due date of the new Enrollee's first Sewer System Management Plan.

4. RECORDKEEPING REQUIREMENTS

The Enrollee shall maintain records to document compliance with the provisions of this General Order, and previous General Order 2006-0003-DWQ as applicable, for each sanitary sewer system owned, including any required records generated by an Enrollee's contractor(s).

4.1. Recordkeeping Time Period

The Enrollee shall maintain records of documents required in this Attachment, including records collected for compliance with this General Order, and records collected in accordance with previous General Order 2006-0003-DWQ, for five (5) years.

4.2. Availability of Documents

The Enrollee shall make the records required in this General Order readily available, either electronic or hard copies, for review by Water Board staff during onsite inspections or through an information request.

4.3. Spill Reports

The Enrollee shall maintain records for each of the following spill-related events and activities:

- Spill event complaint, including but not limited to records documenting how the Enrollee responded to notifications of spills. Each complaint record must, at a minimum, include the following information:
    - Date, time, and method of notification,

- Date and time the complainant first noticed the spill, if available,
- Narrative description of the complaint, including any information the caller provided regarding whether the spill has reached surface waters or a drainage conveyance system, if available,
- Complainant's contact information, if available, and
- Final resolution of the complaint;

- Records documenting the steps and/or remedial action(s) undertaken by the Enrollee, using all available information, to comply with this General Order, and previous General Order 2006-0003-DWQ as applicable;
- Records documenting how estimate(s) of volume(s) and, if applicable, volume(s) of spill recovered were calculated;
- All California Office of Emergency Services notification records, as applicable; and
- Records, in accordance with the Monitoring Requirements in this Attachment.

4.4. Recordkeeping of Category 4 Spills and Non-Category 1 Lateral Spills

An Enrollee must maintain the following records for each individual Category 4 spill and for each individual non-Category 1 Enrollee-owned and/or operated lateral spill, and report in accordance to section 3.6 (Annual Certified Spill Reporting of Category 4 and/or Lateral Spills) of this Attachment.

Recordkeeping of Individual Category 4 Spill Information:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Description and GPS coordinates for the system location where the spill originated;
4. Did the spill reach a drainage conveyance system? If Yes:
   - Description of drainage conveyance system location,
   - Estimated spill volume fully recovered within the drainage conveyance system, and
   - Estimated spill volume remaining within the drainage conveyance system;
5. Estimated total spill volume exiting the sanitary sewer system;
6. Spill date and start time;
7. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
8. System failure location (for example, main, pump station, etc.);
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of how the volume estimation was calculated, including, at minimum:

- The methodology and type of data relied upon, including supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
- The methodology and type of data relied upon to estimate the spill start time, on-going spill rate at time of arrival (if applicable), and the spill end time;

11. Description of implemented system modifications and operating/maintenance modifications.

Recordkeeping of Individual Lateral Spill Information:

1. Date and time the Enrollee was notified of, or self-discovered, the spill;
2. Location of individual spill;
3. Estimated individual spill volume;
4. Spill cause(s) (for example, root intrusion, grease deposition, etc.); and
5. Description of how the volume estimations were calculated.

Total Annual Spill Information:

1. Estimated total annual spill volume;
2. Description of spill corrective actions, including at minimum:
   - Local regulatory enforcement action taken against the sewer lateral owner in response to a spill, as applicable, and
   - System operation, maintenance and program modifications implemented to prevent repeated spill occurrences at the same spill location.

4.5. Sewer System Telemetry Records

The Enrollee shall maintain the following sewer system telemetry records if used to document compliance with this General Order, and previous General Order 2006-0003-DWQ as applicable, including spill volume estimates:

- Supervisory control and data acquisition (SCADA) system(s);
- Alarm system(s);
- Flow monitoring device(s) or other instrument(s) used to estimate sewage flow rates, and/or volumes;
- Computerized maintenance management system records; and
- Asset management-related records.

4.6. Sewer System Management Plan Implementation Records

The Enrollee shall maintain records documenting the Enrollee's implementation of its Sewer System Management Plan, including documents supporting its Sewer System Management Plan audits, corrections, modifications, and updates to the Sewer System Management Plan.

4.7. Audit Records

The Enrollee shall maintain, at minimum, the following records pertaining to its Sewer System Management Plan audits, and other internal audits:

- Completed audit documents and findings;
- Name and contact information of staff and/or consultants that conducted or involved in the audit; and
- Follow-up actions based on audit findings.

4.8. Equipment Records

The Enrollee shall maintain a log of all owned and leased sewer system cleaning, operational, maintenance, construction, and rehabilitation equipment.

4.9. Work Orders

The Enrollee shall maintain record of work orders for operations and maintenance projects.

ATTACHMENT E2 – SUMMARY OF NOTIFICATION, MONITORING AND REPORTING REQUIREMENTS

This Attachment provides a summary of notification, monitoring and reporting requirements, by spill category, and for Enrollee-owned and/or operated laterals as required in Attachment E1 of this General Order, for quick reference purposes only.

Table E2-1

Spill Category 1: Spills to Surface Waters

Spill Requirement	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 1 spill of 1,000 gallons or greater, discharging or threatening to discharge to surface waters: Notify the California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	• Conduct spill-specific monitoring; • Conduct water quality sampling of the receiving water within **18 hours** of initial knowledge of spill of 50,000 gallons or greater to surface waters.	(Section 2 of Attachment E1)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; • Submit Technical Report **within 45 calendar days** after the spill end date for a Category 1 spill in which **50,000 gallons or greater** discharged to surface waters; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.1 of Attachment E1)

Table E2-2
Spill Category 2: **Spills of 1,000 Gallons or Greater That Do Not Discharge to Surface Waters**

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 2 spill of 1,000 gallons or greater, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.2 of Attachment E1)

Table E2-3
Spill Category 3: Spills of Equal or Greater than 50 Gallons and Less than 1,000 Gallons That Does Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• Submit monthly Certified Spill Report to the online CIWQS Sanitary Sewer System Database within **30 calendars days** after the end of the month in which the spills occur; and • Submit Amended Spill Reports **within 90 calendar days** after the Certified Spill Report due date.	(Section 3.3 and 3.5 of Attachment E1)

Table E2-4
Spill Category 4: Spills Less Than 50 Gallons That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• If, during any calendar month, Category 4 spills occur, certify monthly, the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills into the online CIWQS Sanitary Sewer System Database, within 30 days after the end of the calendar month in which the spills occurred. • Upload and certify a report, in an acceptable digital format, of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur.	(Section 3.4, 3.6, 3.7 and 4.4 of Attachment E1)

Table E2-5
Enrollee Owned and/or Operated Lateral Spills That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a spill of 1,000 gallons or greater, from an enrollee-owned and/or operated lateral, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number. Not applicable to a spill of less than 1,000 gallons.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	Conduct visual monitoring.	(Section 2 of Attachment E1)
Reporting	• Upload and certify a report, in an acceptable digital format, of all lateral spills (that do not discharge to a surface water) to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur. • Report a lateral spill of any volume that discharges to a surface water as a Category 1 spill.	(Sections 3.6, 3.7 and 4.4 of Attachment E1)

ATTACHMENT F – REGIONAL WATER QUALITY CONTROL BOARD CONTACT INFORMATION

This Attachment provides a map, list of counties, and contact information to assist the Enrollee in identifying the corresponding Regional Water Quality Control Board office, for all Regional Water Board notification requirements in this General Order.

Region 1 -- North Coast Regional Water Quality Control Board:
Del Norte, Glenn, Humboldt, Lake, Marin, Mendocino, Modoc, Siskiyou, Sonoma, and Trinity counties.

RB1SpillReporting@waterboards.ca.gov or (707) 576-2220

Region 2 -- San Francisco Bay Regional Water Quality Control Board:
Alameda, Contra Costa, San Francisco, Santa Clara (Northern most part of Morgan Hill), San Mateo, Marin, Sonoma, Napa, Solano counties.

RB2SpillReports@waterboards.ca.gov or (510) 622-2369

Region 3 -- Central Coast Regional Water Quality Control Board:
Santa Clara (most of Morgan Hill), San Mateo (Southern portion), Santa Cruz, San Benito, Monterey, Kern (small portions), San Luis Obispo, Santa Barbara, Ventura (Northern portion) counties.

CentralCoast@waterboards.ca.gov or (805) 549-3147

Region 4 -- Los Angeles Regional Water Quality Control Board:
Los Angeles, Ventura counties (small portions of Kern and Santa Barbara counties).

rb4-ssswdr@waterboards.ca.gov or (213) 576-6600

Region 5 -- Central Valley Regional Water Quality Control Board:

Rancho Cordova (Sacramento) Office: Colusa, Lake, Sutter, Yuba, Sierra, Nevada, Placer, Yolo, Napa, (North East), Solano (West), Sacramento, El Dorado, Amador, Calaveras, San Joaquin, Contra Costa (East), Stanislaus, Tuolumne counties.

RB5sSpillReporting@waterboards.ca.gov or (916) 464-3291

Fresno Office: Fresno, Kern, Kings, Madera, Mariposa, Merced, and Tulare counties, and small portions of San Benito and San Luis Obispo counties.

RB5fSpillReporting@waterboards.ca.gov or (559) 445-5116

Redding Office: Butte, Glen, Lassen, Modoc, Plumas, Shasta, Siskiyou, and Tehama counties.

RB5rSpillReporting@waterboards.ca.gov or (530) 224-4845

Region 6 -- Lahontan Regional Water Quality Control Board:

Lake Tahoe Office: Alpine, Modoc (East), Lassen (East side and Eagle Lake), Sierra, Nevada, Placer, El Dorado counties.

RB6sSpillReporting@waterboards.ca.gov or (530) 542-5400

Victorville Office: Mono, Inyo, Kern (East), San Bernardino, Los Angeles (North East corner) counties.

RB6vSpillReporting@waterboards.ca.gov or (760) 241-6583

Region 7 -- Colorado River Basin Regional Water Quality Control Board:

Imperial county and portions of San Bernardino, Riverside, San Diego counties.

RB7SpillReporting@waterboards.ca.gov or (760) 346-7491

Region 8 -- Santa Ana Regional Water Quality Control Board:

Orange, Riverside, San Bernardino counties.

RB8SpillReporting@waterboards.ca.gov or (951) 782-4130

Region 9 -- San Diego Regional Water Quality Control Board:

San Diego county and portions of Orange and Riverside counties.

RB9Spill_Report@waterboards.ca.gov or (619) 516-1990

City Council Resolution

RESOLUTION NO. 14-05

RECERTIFICATION OF THE CITY OF ROSEVILLE
SEWER SYSTEM MANAGEMENT PLAN

WHEREAS, in May 2006 the State Water Resources Control Board issued a state-wide General Waste Discharge Requirement (WDR) Order requiring all public entitles that own or operate sanitary sewer systems greater than one mile in length that collect or convey wastewater to prepare a certified Sewer System Management Plan (SSMP); and

WHEREAS, on January 21, 2009, the City Council certified the City's SSMP; and

WHEREAS, provisions in the WDR require recertification of the SSMP every five years or if significant changes to the SSMP have been made; and

WHEREAS, the City Council has reviewed the revised Sewer System Management Plan;

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that it hereby recertifies the City of Roseville Sewer System Management Plan.

PASSED AND ADOPTED by the Council of the City of Roseville this 8th day of January, 2014, by the following vote on roll call:

AYES COUNCILMEMBERS: Roccucci, Herman, Garcia, Rohan

NOES COUNCILMEMBERS: None

ABSENT COUNCILMEMBERS: Gore

Susan Rohan
MAYOR

ATTEST:

Sonia Orozco
City Clerk

SPWA	South Placer Wastewater Authority
SSMP	Sewer System Management Plan
SSO	Sanitary Sewer Overflow
SWRCB	State Water Resources Control Board
UPC	Uniform Plumbing Code
USA	Underground Service Alert
WDP	Waste Discharge Permit
WW	Wastewater
WWC	Wastewater Collection
WWTP	Wastewater Treatment Plant

LIST OF TERMS

Authorized Representative – The person designated, for a municipality, state, federal, or other public agency, as either a principal executive officer or ranking elected official or a duly authorized representative of that person.

Blockage – Something that partially or fully blocks the wastewater from flowing through a sewer pipeline. The blockage can be caused by debris in the sewer, grease buildup, root intrusion, or a partial or complete pipeline collapse. If not caught in time, the blockage may cause an overflow.

California Association of Sanitation Agencies (CASA) - CASA is a non-profit, statewide trade association representing public agencies that provide wastewater collection, treatment, disposal, and/or water reclamation services to about 90 percent of the sewered population in California.
Website: http://www.casaweb.org/

California Water Environment Association (CWEA) – CWEA is an association of 8,000-plus professionals in the wastewater industry. CWEA is committed to keeping California's water clean. CWEA trains and certifies wastewater professionals, disseminates technical information, and promotes sound policies to benefit society by protecting and enhancing the water environment. CWEA offers services at the state level and locally through 17 local geographical sections. In addition, through their on-line bookstore, CWEA offers technical references for sewer system operation and maintenance.
Website: http://www.cwea.org/ .

Central Valley Clean Water Association (CVCWA) – CVCWA is an association comprised of over 50 wastewater treatment and collection system agencies. CVCWA's mission is to effectively represent the interests of public wastewater agencies in the Central Valley in regulatory matters and to support the exchange of information so members can best meet their business challenges.
Website: http://www.cvcwa.org/ .

Central Valley Regional Water Quality Control Board – Also known as Regional Water Board or RWQCB. The mission of this state regulatory agency is to: preserve, enhance, and restore the quality of California's water resources, and ensure their proper allocation and efficient use for the benefit of present and future generations. Website: http://www.waterboards.ca.gov/centralvalley/ .

Dynamic Model – Computer hydraulic model simulation which solves the complete dynamic flow routing equations (St. Venant's equations) for accurate simulation of backwater, looped connections, surcharging, and pressure flow in a collection system.

Enrollee – The legal public entity that owns a sanitary sewer system, as defined by the GWDR, which has submitted a complete and approved application for coverage under the GWDR. This is also called a sewer system agency or wastewater collection system agency.

Fats, Oils and Grease (FOG) - Fats, oils, and grease that are discharged into the sanitary sewer collection system by Food Service Establishments (FSE), homes, apartments, and other sources. FOG is a major cause of blockages leading to increased maintenance and sometimes SSOs.

FOG Control Program – To be implemented at the Enrollee's discretion. May include public education program; plan and schedule for the disposal of FOG; legal authority to prohibit FOG related discharges; requirement to install grease removal devices; authority to inspect grease producing facilities; identification of sanitary sewer system sections subject to FOG blockages and the establishment of a cleaning schedule for each section; development and implementation of source control measures for all sources of FOG.

Geographical Information System (GIS) – A database linked with mapping, which includes various layers of information used by government officials. Examples of information found on a GIS can include a sewer map; sewer features such as pipe location, diameter, material, condition, last date cleaned or repaired. The GIS also typically contains base information such as streets and parcels.

Governing Board – This is the governing board of the sewer entity developing the SSMP. Examples would be the Board of Directors, the City Council, or the County Board of Supervisors.

GWDR – General Waste Discharge Requirements – A GWDR is an authorization to discharge waste with certain conditions, which can be issued on an individual basis or to a group of dischargers. The Statewide General WDR for Sanitary Sewer Systems was adopted by the SWCRB and will be implemented by the Regional Water Boards and SWRCB.

Infiltration – The seepage of groundwater into a sewer system, including service connections. Seepage frequently occurs through defective or cracked pipes, pipe joints, connections or manhole walls and joints.

Inflow – Water discharged into a sewer system and service connections from such sources as, but not limited to, roof leaders, cellars, yard and area drains, foundation drains, cooling water discharges, drains from springs and swampy areas, around manhole covers or through holes in the covers, cross connections from storm and combined sewer system, catch basins, storm waters, surface runoff, street wash waters or drainage. Inflow differs from infiltration in that it is a direct discharge into the sewer rather than a leak into the sewer itself.

Lateral – The portion of sewer that connects a home or business with the main line in the street. Sometimes sewer system agencies own or maintain a portion of the lateral.

Upper Lateral: Portion of lateral from building to property line (or easement line), usually privately owned and maintained.

Lower Lateral: Portion of lateral from property line (or easement line) to sewer mainline in the street or easement. This portion of the lateral is sometimes privately owned and maintained and sometimes publicly owned and maintained.

Monitoring and Reporting Program - The Monitoring and Reporting Program established in the WDR that establishes monitoring, record keeping, reporting and public notification requirements for the GWDR.

Overflow Emergency Response Plan – Identifies measures to protect public health and the environment. A plan must include the following: notification procedure, appropriate response plan, regulatory notification procedures, employee training plan, procedures to address emergency operations, a program that ensures all reasonable steps are taken to contain and prevent discharges.

Private Lateral: That portion of the Lateral that is owned and maintained by the private property owner that it serves. Based on an individual agency's ordinance, this may just be the Upper Lateral or can include the Lower Lateral.

Preventative Maintenance (PM) – Regularly scheduled servicing of machinery, infrastructure or other equipment using appropriate tools, tests, and lubricants. This type of maintenance can prolong the useful life of equipment, infrastructure, and machinery and increase its efficiency by detecting and correcting problems before they cause a breakdown of the equipment, or failure of the infrastructure.

R-Value – Is the amount of rainfall that reaches the collection system via infiltration and inflow. This value is typically expressed as a percentage of total rainfall volume that reaches the collection system.

Regional Water Board – Is a short name for any of the nine regional boards including the San Francisco Bay Area Regional Water Quality Control Board and the Central Valley Regional Water Quality Control Board.

Rehabilitation and Replacement Plan (also referred to as a Capital Improvement Plan) – Identifies and prioritizes system deficiencies and implements short-term and long-term rehabilitation actions to address each deficiency.

Sanitary Sewer Overflow (SSO) – The Statewide GWDR defines an SSO as any overflow, spill, release, discharge, or diversion of untreated or partially treated wastewater from a sanitary sewer system, including overflows or releases that reach waters of the United States, overflows or releases that *do not* reach water of the United States, and backups into buildings and/or private property caused by conditions within the publicly owned portion of the sewer system.

Sanitary Sewer Overflow Categories

Category 1 – Discharges of untreated or partially treated wastewater of any volume resulting from an enrollee's sanitary sewer system failure or flow condition that:

- Reach surface water and/or reach a drainage channel tributary to surface water
- Reach a Municipal Separate Storm Sewer System (MS4) and are not fully captured and returned to the sanitary sewer system or not otherwise captured and disposed of properly. Any volume of wastewater not recovered from the MS4 is considered to have reached surface water unless the storm drain system discharges to a dedicated storm water or groundwater infiltration basin.

Category 2 – Discharges of untreated or partially treated wastewater of 1,000 gallons or greater resulting from an enrollee's sanitary sewer system failure or flow condition that do not reach surface water, a drainage channel, or a MS4 unless the entire SSO discharged to the storm drain system is fully recovered and disposed of properly.

Category 3- All other discharges of untreated or partially treated wastewater resulting from an enrollee's sanitary sewer system failure or flow condition

Private Lateral Sewage Discharges – Discharges of untreated or partially treated wastewater resulting from blockages or other problems within a privately owned sewer lateral connected to the enrollee's sanitary sewer system or from other private sewer assets. PLSDs that the enrollee becomes aware of may be voluntarily reported to the CIWQS Online SSO Database.

Sanitary Sewer Systems – Any system of pipes, pump stations, sewer lines, or other conveyances, upstream of a wastewater treatment plant head works used to collect and convey wastewater to the publicly owned treatment facility. Temporary storage and conveyance facilities are part of the sanitary sewer system and discharges into these temporary storage facilities are not to be considered SSOs.

Satellite Collection System – The portion, if any, of a sanitary sewer system owned or operated by a different public agency than the agency that owns and operates the wastewater treatment facility to which the sanitary sewer system is tributary.

Sewer System Management Plan-SSMP – A series of written site-specific programs that address how a collection system owner/operator conducts their daily business as is outlined in the WDR. Each SSMP is unique for an individual discharger. The plan includes provisions to provide proper and efficient management, operation, and maintenance of sanitary sewer systems, while taking into consideration risk management and cost benefit analysis. Also, must contain a spill response plan. Certification is offered by technically qualified and experienced persons and provides a useful cost-effective means for ensuring that SSMPs are developed and implemented appropriately.

Stakeholder - A person or organization that has a vested interest in the development and outcome of the SWRCB Order No. 2006-0003 Statewide General Waste Discharge Requirements for Sanitary Sewer Systems.

State Water Resources Control Board: Also called the State Board. This is the State agency that developed and passed the GWDR for collection systems and the agency that maintains the SSO reporting web site.

Static Model – A computer hydraulic model that uses the Manning's Equation to determine hydraulic capacity of the gravity pipelines and either the Manning's or Hazen-Williams Equations to determine the hydraulic capacity of the pressure pipeline system. The capacity is compared to the peak hydraulic flow in the system to determine potential deficiencies. The static model assumes the peak hydraulic flow occurs at all locations within the collection system at the same time.

Stoppage – Something that partially or fully blocks the wastewater from flowing through a sewer pipeline. A stoppage can be caused by debris in the sewer, grease buildup, root intrusion, or a partial or full collapse of the pipeline. If not caught in time, a stoppage may cause an overflow. This is also called a blockage.

System Evaluation and Capacity Assurance Plan – A required component of an agency's SSMP and is an important part of any agency's overall Capital Improvement Plan that provides hydraulic capacity of key sanitary sewer system elements for dry weather peak flow conditions, as well as the appropriate design storm or wet weather event.

Wastewater Collection System: See Sanitary Sewer System.

EXECUTIVE SUMMARY

The City of Roseville (City) is a Council-Manager form of government in which responsibilities are vested in the City Council and City Manager. In this form of government, the City Council's role is that of a legislative policy-making body which determines not only local laws that regulate community life, but also determines public policy and gives direction to the City Manager. The City Manager administers the affairs of the city government in a business-like prudent manner.

The City's Public Utilities Commission studies and advises the City Council on all utility issues related to city-owned utilities (electric, water, sewer, and solid waste).

The City's Wastewater Utility is one of five utilities operated in the Environmental Utilities Department (EUD). The Wastewater Utility is responsible for operation and maintenance of all wastewater facilities owned by the City including the Publicly Owned Treatment Works (POTWs), the wastewater collection system, the water quality lab and the recycled water utility.

The City's Wastewater Collection (WWC) Division is a division of Environmental Utilities Department (EUD). The WWC Division is responsible for management, operation, maintenance, and capacity assurance of the City's sanitary sewer collection system, including inspecting, cleaning, repairing, and monitoring the gravity sewer lines, force mains, and lift station.

The City initiated a Sewer System Management Plan (SSMP) assessment in 2005 to evaluate how well the Wastewater Collection (WWC) Division would comply with the anticipated State Water Resources Control Board (SWRCB) Statewide General Waste Discharge Requirements (WDR) order No. 2006-0003 for Sanitary Sewer Systems. That SSMP assessment indicated that the City was positioned fairly well to comply with the SWRCB's SSMP requirements.
In March of 2007, the WWC division along with consultant assistance, began writing the SSMP and reviewing all remaining policies, procedures, and programs to comply with the SWRCB's WDR. The plan described how the City would address each element of the SSMP contained in the SWRCB's WDR to eliminate preventable Sanitary Sewer Overflows (SSOs). The WWC staff completed the development of the SSMP, which the City Council approved on 21 JAN 09.

The city continues to monitor, measure, and modify the existing SSMP as changes and program improvements are identified. The city has developed a Key Performance Indicator worksheet, which is used to monitor and measure the effectiveness of the various elements of the SSMP. Roseville's SSMP has been audited five times since being certified by the SWRCB.

SERVICE AREA AND RELEVANT STATISTICS

Figure-1 illustrates the boundary of Roseville's geographical service area. Statistics provided in this SSMP are from August 2021 and are gathered from the City's Economic Development website, https://www.roseville.ca.us/government/departments/economic_development/demographics.

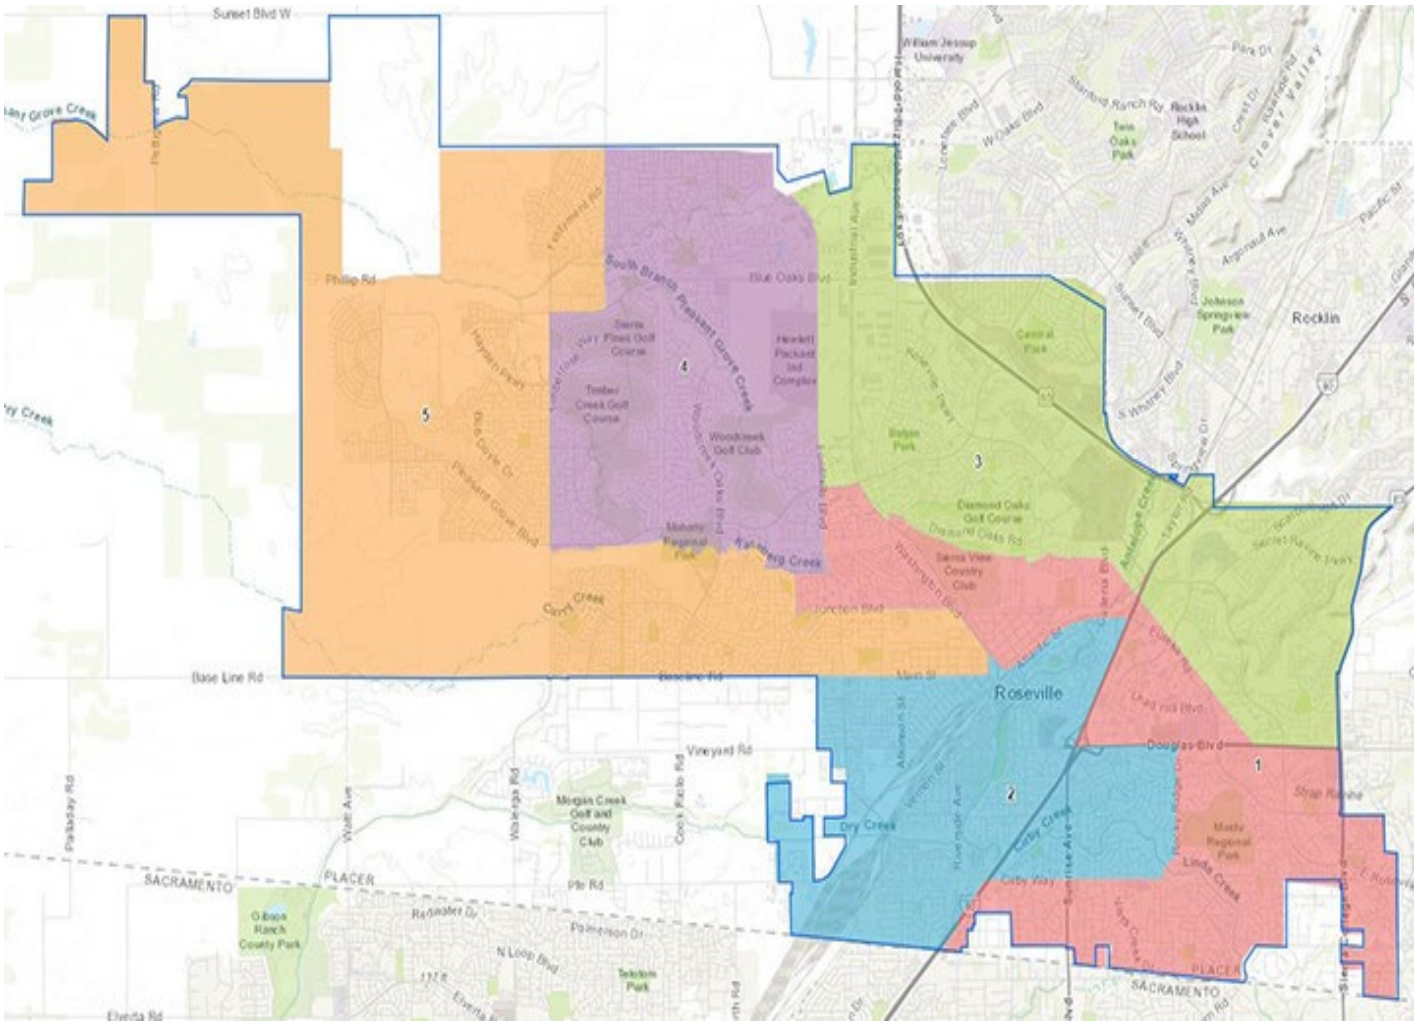

Figure 1 Roseville Service Area

The City service area is approximately 44.20 square miles, has approximately 48,734 residential, 1,932 commercial and 600 industrial sewer connections and 2 Regional Wastewater Treatment Plants.

The WWC Division provides service to approximately 146,875 sewer customers. The wastewater collection and conveyance system consist of 871 miles sewer pipe ranging from 4"to 84" in diameter, 12,538 manholes, and 17 neighborhood lift stations that convey an average dry weather flow of approximately 18.5 MGD. Sanitary sewerage is conveyed from the City's East boundaries

to the Dry Creek Wastewater Treatment Plant and from its North and West boundaries to the Pleasant Grove Wastewater treatment plant.

WWC Division statistical records indicate that prior to the creation of this SSMP it has had a moderate Sanitary Sewer Overflow (SSO) rate in comparison to other communities in California of similar size and complexity. In the years prior to adoption of the SSMP, the WWC Division had experienced approximately 168 SSOs releasing approximately 15,203 gallons of sewage from the sanitary sewer collection and conveyance system. Since adoption of the SSMP in 2007, the city has experienced a combined 431 SSOs releasing approximately 15,435 gallons of sewage from the sanitary sewer system. Of that total, 11,219 gallons or 82%, have been captured and returned to the sanitary sewer system. The majority of these SSO have occurred from blockages in service laterals. Since the adoption of the SSMP, the average volume spilled per SSO has been less than 36 gallons/event. All SSOs have been mitigated in a timely manner and have not negatively affected public health or the environment.

The purpose of this SSMP is to describe the activities the WWC Division uses to manage the City's' wastewater collection system to further eliminate preventable SSOs, minimize those SSOs that do occur and protect both public health and the environment.

0 SSMP Overview

The City of Roseville is required to comply with the State Water Resources Control Board Order No. 2006-0003-DWQ adopted May 2, 2006, entitled Statewide General Waste Discharge Requirements for Sanitary Sewer Systems.

The purpose of the Order is to prevent Sanitary Sewer Overflows (SSO) or sewer spills by establishing a statewide Monitoring and Reporting Program (MRP) and requiring each local or regional sewer agency to create and implement their own Sewer System Management Plan (SSMP) based on the mandatory requirements of the Order. The MRP requires each local or regional sewer agency to appoint a legally responsible official and establish a monitoring and reporting organization to monitor and report all SSOs in accordance with the requirements of the MRP and to have the LRO certify the SSO report using the California Integrated Water Quality System (CIWQS) website in the timeframe required by the Order.

The City of Roseville developed a Sewer System Management Plan specific to the wastewater collection system operated and maintained by wastewater collection personnel in the City of Roseville. This SSMP documents the activities the city will utilize to manage, operate, and maintain its wastewater collection system. The city shall take all steps feasible to eliminate SSOs, but in the event an SSO does occur, will take all steps necessary to contain and mitigate the negative impacts of an SSO.

The city's SSMP is organized comparable to paragraph D. 13 of the general order. The SSMP includes eleven elements, and each of these elements forms a corresponding chapter in the SSMP. The eleven elements are listed below.

1. Goals- *The goal is to prevent and/or reduce SSOs and mitigate the effect of any SSOs that do occur. The goal requires a plan and schedule to properly manage, operate, and maintain all parts of the sanitary sewer collection system.*
2. Organization- *The SSMP must identify the Legally Responsible Official or authorized representative as described in the Order. It must list and identify the organization positions responsible for operating and maintaining the sanitary sewer collection system including names and telephone numbers for management, administrative and maintenance positions, and the chain of communication for reporting SSOs*
3. Legal Authority- *Each enrollee must demonstrate through ordinances, agreements, or other legally binding procedures that they possess the legal authority to meet the requirements of the general order.*
4. Operation and Maintenance Program- *The SSMP must include those items that are appropriate and applicable to the enrollee's system, including an up to date mapping system, ability to describe the O&M activities performed on the system, have a plan to develop a rehabilitation and replacement plan, and to provide training on a regular basis for collection system personnel.*

5. Design and Performance Provisions- *The SSMP must demonstrate that the sewer agency has and appropriately uses design and construction standards and specifications for the installation of new sewer systems, rehabilitation and repair of existing sewer systems and has procedures and standards for inspecting and testing the installation of new sewers, pumps, etc. and for rehabilitation and repair projects.*
6. Overflow Emergency Response Plan- *Each Enrollee shall develop and implement an overflow emergency response plan that identifies measures to protect public health and the environment.*
7. Fog Control Program- *Each Enrollee shall evaluate its sewer system and determine if a Fats, Oils and Grease control program is needed. The FOG control plan, if needed, must meet all the requirements of the Order.*
8. System Evaluation and Capacity Assurance Plan- *The Enrollee shall prepare and implement a capital improvement plan (CIP) that provides hydraulic capacity of key sanitary sewer system elements for dry weather peak flow conditions, as well as the appropriate design for storm or wet weather events*
9. Monitoring, Measurement and Program Modifications- *The enrollee shall maintain relevant information to establish and prioritize SSMP activities, monitor the implementation and measure the effectiveness of the SSMP activities, and provide assessment of the performance and/or modification of the SSMP activities as required by the Order.*
10. SSMP Program Audits - *The Enrollee shall conduct periodic internal audits, appropriate to the size of the system and the number of SSOs. At a minimum, these audits must occur every two years and a report must be prepared and kept on file. This audit shall focus on evaluating the effectiveness of the SSMP*
11. Communication Program- *The Enrollee shall communicate on a regular basis with the public on the development, implementation, and performance of its SSMP. The communication system shall provide the public the opportunity to provide input to the Enrollee as the program is developed and implemented. The program shall also include a communication plan with tributary and satellite systems to the enrollee's sanitary sewer system*

1 Goals

D.13. (i) The goal of the SSMP is to provide a plan and schedule to properly manage, operate, and maintain all parts of the sanitary sewer system. This will help reduce and prevent SSOs, as well as mitigate any SSOs that do occur.

1.1 Roseville's Goals

The City's WWC Division has established eight goals to guide the implementation, and success of Roseville's SSMP. These goals are designed to facilitate and target the management, operation, and maintenance of the sanitary sewer collection system in a manner that will sustain the infrastructure, protect public health and the environment, and achieve compliance with State Water Resources Control Board's General Waste Discharge Requirement (GWDR) for Sanitary Sewer Systems. These goals include:

1. Properly manage, operate, and maintain all portions of the City's wastewater collection system.
2. Provide adequate capacity to convey peak wastewater flows.
3. No repeat overflows from the same location.
4. Maintain a rate of SSO/100 miles of pipe, that is lower than the state and regional average.
5. Maintain a recovery rate for SSO/100 miles of pipe, that is higher than the state and regional average.
6. Mitigate the impacts that are associated with all SSOs that may occur.
7. Comply with all applicable regulatory notification and reporting requirements.
8. Maintain high design and construction standards for new and rehabilitated infrastructure.

1.2 Element Objectives

The WWC Division provides a safe, effective, and efficient wastewater collection and conveyance system through preventative maintenance, engineering, and customer services. The Division also provides twenty-four-hour emergency services to respond to system failures, minimize sanitary sewer overflows, comply with regulatory mandates, and ensure public health and safety.

The City allocates adequate resources for the operation, maintenance, and repair of its sanitary sewer system, by establishing a proper rate structure, accounting mechanisms, and auditing procedures to ensure an adequate measure of revenues and expenditures.

In addition, the City has stringent design and construction standards for new or rehabilitated infrastructure, with an inspection program that ensures city standards are adhered to.

THIS PAGE LEFT INTENTIONALLY BLANK

SSMP ELEMENT 2

2 Organization

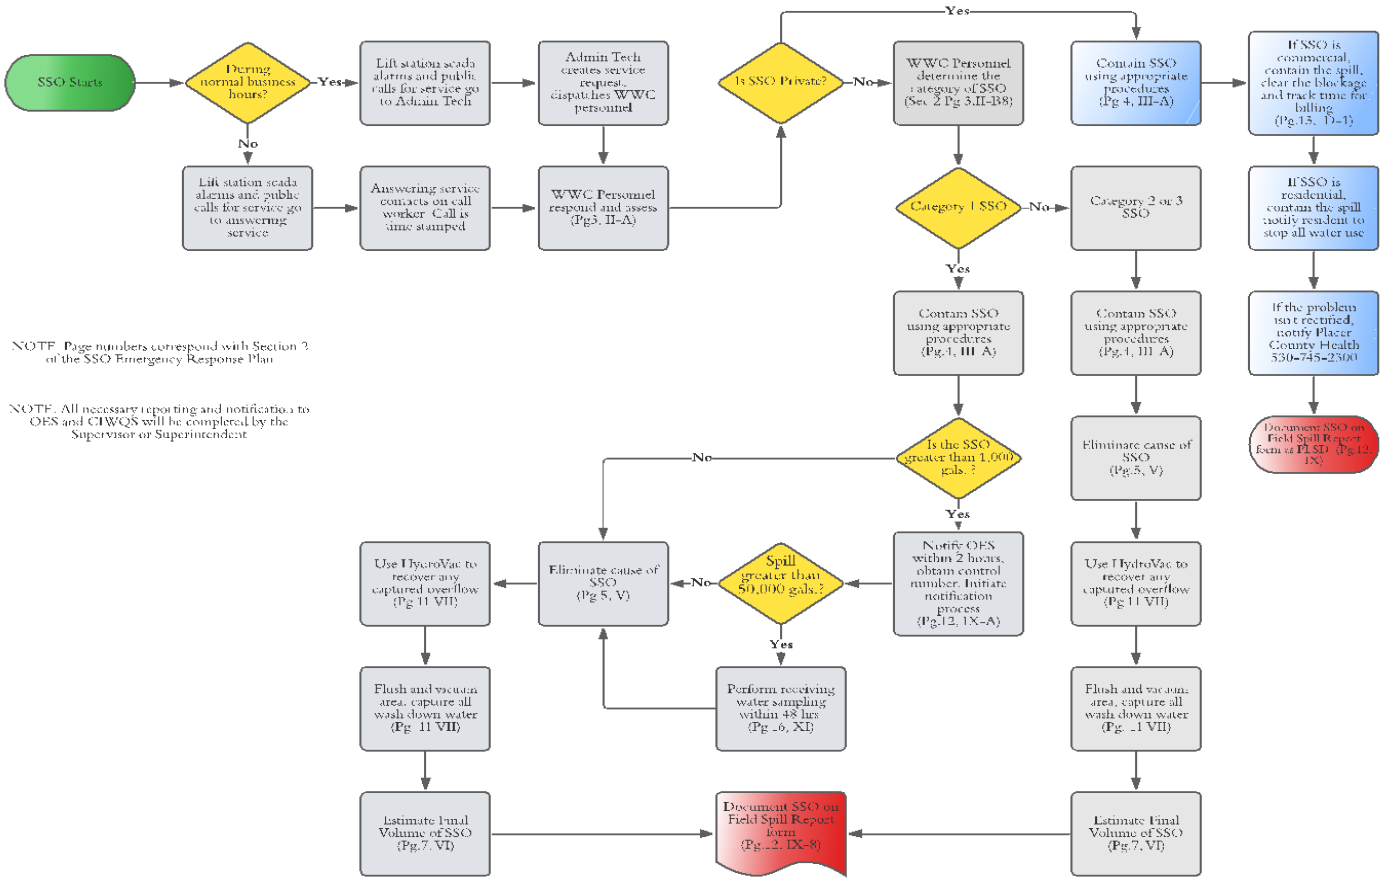
D.13. (ii) The SSMP must identify the Legally Responsible Official or authorized representative as described in the Order. It must list and identify the organization positions responsible for operating and maintaining the sanitary sewer collection system including names and telephone numbers for management, administrative and maintenance positions, and the chain of communication for reporting SSOs.

2.1 Legally Responsible Official (LRO)

The City of Roseville has identified the Wastewater Collection Superintendent, and the Wastewater Process Engineer as the LRO or authorized representatives for the wastewater collection division. Historically, the Wastewater Collection Superintendent is responsible for the certification of SSO reports involving Roseville's wastewater collection system.

2.2 SSMP Responsibility Chart

The City of Roseville is a Council-Manager form of government in which responsibilities are vested in the City Council and City Manager. In this form of government, the City Council's role is that of a legislative policy-making body, which determines local laws that regulate community life and determines public policy and gives direction to the City Manager. The City Manager administers the affairs of the city government in a business-like and prudent manner. In addition, the position descriptions for SSMP responsibility are included in the following chart:



SSMP Element		Responsible Position
I.	Goals	Responsibility for the divisions goals resides with the WWC Superintendent. However, goals for the wastewater collection division are developed through collaboration between the WWC Superintendent, the WWC Supervisor and field crews.
II.	Organization	The Environmental Utilities (EU) Director recommends any updates to the City Manager for organizational structure within the Wastewater Collection Division
III.	Legal Authority	The City Manager, City Attorney and Roseville City Council ultimately uphold city ordinances within the Roseville Municipal Code.
IV.	Operations & Maintenance	The Wastewater Collection Superintendent has overall responsibility for the operation and maintenance of the collection system. The Asst. EU Director oversees, recommends,

		and administers the O&M budget. EU Engineering provides support through the GIS Division for up-to-date mapping of the system
V.	Design and Construction Standards	The Development Services Division and EU Engineering collaborate to identify and maintain the design and construction standards. Development Services Division manages the inspection of all new development, CIP and infill projects to ensure all standards are met. All projects receive EU Director approval related to Utility work.
VI.	Overflow Emergency Response Plan	The Wastewater Collection Superintendent and Supervisors maintain the SSO emergency response plan. The plan is implemented as an annual training, where revisions to the plan may be made based on field crew feedback.
VII.	FOG Control Program	The Wastewater Collection Superintendent and Supervisor identify hot spots from Food Service Establishments (FSE) and maintain an effective cleaning PM schedule to eliminate SSOs. The FOG Control Program including permitting of FSEs, inspection of facilities and monitoring pump out records is administered by the Wastewater Collection Superintendent.
VIII.	System Evaluation and Capacity Assurance Plan	EU Engineering Principal Engineer administers the SECAP program to ensure the hydraulic model is up to date, and to assure capacity for current and future development
IX.	Monitoring, Measurement and Program Modifications	The Wastewater Collection Superintendent with assistance from the Wastewater Collection Supervisors monitors the implementation and assesses the success of the overall SSMP elements. The superintendent tracks Key Performance Indicators and adjusts programs as needed.
X.	SSMP Audits	The Asst EU Director is responsible for SSMP program audits, with assistance from the Wastewater Collection Superintendent and Principal Engineer for Wastewater Division
XI.	Communication Plan	The EU Public Information Officer communicates with the EU Director, City Manager, City Council, nearby agencies, and the public on the City's SSMP monitoring and modifications

2.3 Chain of Communication Reporting Chart

Office hours for the WWC Division are Monday through Friday from 0630 to 1600, except for holidays. Either the Administration Technician or service call worker receives all service calls during regular business hours. If received in the office, a service request is created with the caller information, the problem, and contact information. This information is transferred to the service call worker, in which they respond, access the problem, and provide a solution. An answering service, contracted by WWC Division, receives all after-hours calls to gather information and dispatch to the on-call service worker via an assigned mobile phone. The on-call service worker is available 24 hours per day and is furnished with a service van and equipment to facilitate a timely response. A response time goal is 20 minutes during business hours and 40 minutes for after-hour service calls. The van is equipped with containment devices to manage lower lateral blockages and spills, and to prevent SSOs from entering a storm drain inlet or channel. Should the situation require additional resources, the on-call worker would contact crew members from the call-out sheet for assistance. ***Table 2-1***, included in the division's SSOERP, summarizes the chain of communication when receiving calls for service.

Table 2-1 SSO Chain of Communication

THIS PAGE LEFT INTENTIONALLY BLANK

SSMP ELEMENT 3

3 Legal Authority

D.13(iii) Each Enrollee must demonstrate, through sanitary sewer system use ordinances, service agreements, or other legally binding procedures, that it possesses the necessary legal authority to(1) prevent illicit discharges into its sanitary sewer system, (2)require that all sewers and connections are properly designed and constructed, (3)to ensure proper access to portions of the lateral owned by the agency,(4) to limit the discharge of FOG, and(5) to enforce any violation of its sewer ordinances.

The Roseville Municipal Code (RMC), https://qcode.us/codes/roseville/. provides specific legal authority for the WWC division to operate and manage the wastewater collection system. The City's current legal authority is established through existing codes, regulations, ordinances, and permitting procedures that allows the City to require and enforce various measures for ensuring the proper and efficient operation, management, and maintenance of the City's wastewater collection system. Table 3-1 indicates the code section for the legal authority required.

Table 3-1 RMC Codes for Legal Authority

Legal Authority	RMC Number	Description
Ability to prevent illicit discharges into the wastewater system	14.20.040	Definition of illicit discharge
	14.26.010	Purpose and policy of industrial wastewater
Ability to require all sewers and connections are properly designed and constructed	14.12.040	Building and sewer connection requirements
	14.14.030	FOG discharge permit required
	14.14.070	Prohibitions for FSE construction
Ensure proper access to portions of the lateral owned by the city	Charter Article X Sec 10.01	General powers respecting utilities
	14.14.290	Right of entry
Ability to limit the discharge of FOG	14.12.050	Use of public sewers
	14.14.010	Purpose
	14.14.030	FOG discharge permit required
	14.14.040	Fog discharge limitation
	14.14.070	Prohibitions
	14.14.120	Interceptor maintenance requirements
Ability to enforce all sewer ordinances	14.12.060	Sewer use- enforcement authority
	14.14.330	FOG – determination of non-compliance
	14.14.350	FOG- Permit suspension or revocation
	14.14.360	FOG- penalties and violations

3.1 Industrial Pretreatment Program

In addition to the RMC, the City of Roseville Industrial Waste Division (IWD) oversees and administers the Pretreatment Program Enforcement Response Plan (ERP). This plan outlines operational procedures intended to ensure that the Significant Industrial Users (SIUs), and the small Commercial/Industrial dischargers to the sanitary sewer system are appropriately permitted and monitored. To assure compliance by these dischargers, the IWD implements enforcement procedures specified by the U.S. Environmental Protection Agency (EPA) in accordance with 40CFR 403.5 (f) (5). The ERP specifies criteria by which IWD personnel determine the enforcement action most appropriate to the nature of the violation. The Pretreatment Enforcement Response Plan is attached to the SSMP as Appendix 3-1.

3.2 Design and Construction Standards

The City of Roseville's design and construction standards regulate and guide the design and preparation of plans and construction of the City of Roseville's sanitary sewer systems and related public improvements, and set guidelines for all private works, which involve related improvements. Design and construction standards are located at

https://www.roseville.ca.us/cms/One.aspx?portalId+7964922&pageId=8754129

3.3 Sewer Access Authority

The RMC section 10.01 states the City shall possess all powers granted to cities by state law to construct, condemn, purchase, acquire, add to, maintain, and operate, either within or outside its corporate limits, including, but not by way of limitation, public utilities for supplying water, light, heat, power, gas, transportation, sewage and refuse collections, treatment and disposal services, or any of them, to the municipality and the inhabitants thereof; Each city-owned utility shall be financially self-sufficient, and shall fully compensate the city general fund for all goods, services, real property and rights to use or operate on or in city-owned real property.

3.4 Fats Oils and Grease

The City of Roseville limits the discharge of Fats, Oils and Grease from Food Service Establishments through Section 14.14 of the RMC. Section 14.14 was adopted to facilitate the maximum beneficial use of the city's sewer services and facilities while preventing blockages of the sewer lines resulting from discharges of fats, oils, and grease (FOG) into the public sewer, and to specify appropriate FOG discharge requirements for food service establishments (FSEs). Section 14.14 establishes conditions for permitting, inspection, pumping and recordkeeping, and right of entry for inspection.

3.5 Regulation of Sewer Use-Enforcement

Sections 14.12.060 and 14.14.360 (FOG Ordinance) of the RMC prescribes the enforcement actions available to the city when violations of the code are discovered. Violation of the RMC may be charged as either an infraction or misdemeanor upon discretion of the City Attorney.

3.6 Inter-Agency and Satellite Agreements

The City of Roseville operates two Regional Wastewater Treatment Facilities where sewer from satellite systems flow into City wastewater mains. As such, the Environmental Utilities Department maintains the following agreements to address regional and satellite systems.

3.6.1 Joint Exercise of Powers Agreement South Placer Wastewater Authority

The purpose for this agreement is to provide for planning, acquisition, financing, ownership, construction, and operation of Regional Wastewater Facilities. The participants in the SPWA create a public entity which is separate from the City, the District, and the County. The SPWA services the areas the City of Roseville, Placer County and South Placer Municipal Utility District. The agreement is attached to the SSMP as Appendix 3-2.

3.6.2 South Placer Wastewater Facilities Operation and Use Agreement

The agreement known as the Joint Powers Agreement, supersedes all other previous agreements. The new agreement indicates the City of Roseville shall operate and maintain Regional Wastewater Facilities for the mutual benefit of and provide wastewater treatment services to the areas depicted on Exhibit A, areas which are within the jurisdictional boundaries of the City, District and County, so long as the District and County pay the City their proportionate shares. This agreement is attached to the SSMP as Appendix 3-3

3.6.3 Contract and Operating Agreement between SRCSD and SASD

This agreement between the City of Roseville, Sacramento Area Sewer District and Sacramento Regional County Sanitation District defines points where flows enter and exit each other's area of service and points of demarcation for City and County assets. In addition the agreement is to meet regulatory requirements and provide a basis for SASD, SRCSD and the City of Roseville to work together to provide service to users, establish operation and maintenance responsibilities and outline rates and fees. This agreement is attached to the SSMP as Appendix 3-4

3.7 Appendix 3- Legal Authority Documents

3-1 Pretreatment Program Enforcement Response Plan – TOC

3-2 Joint Exercise of Powers Agreement for the South Placer Wastewater Authority

3-3 Agreement Regarding the Operation and Use of the South Placer Regional WW Facilities

3-4 Wastewater Service Agreement by Contract & Operating Agreement Between SASD, SRCSD and City of Roseville.

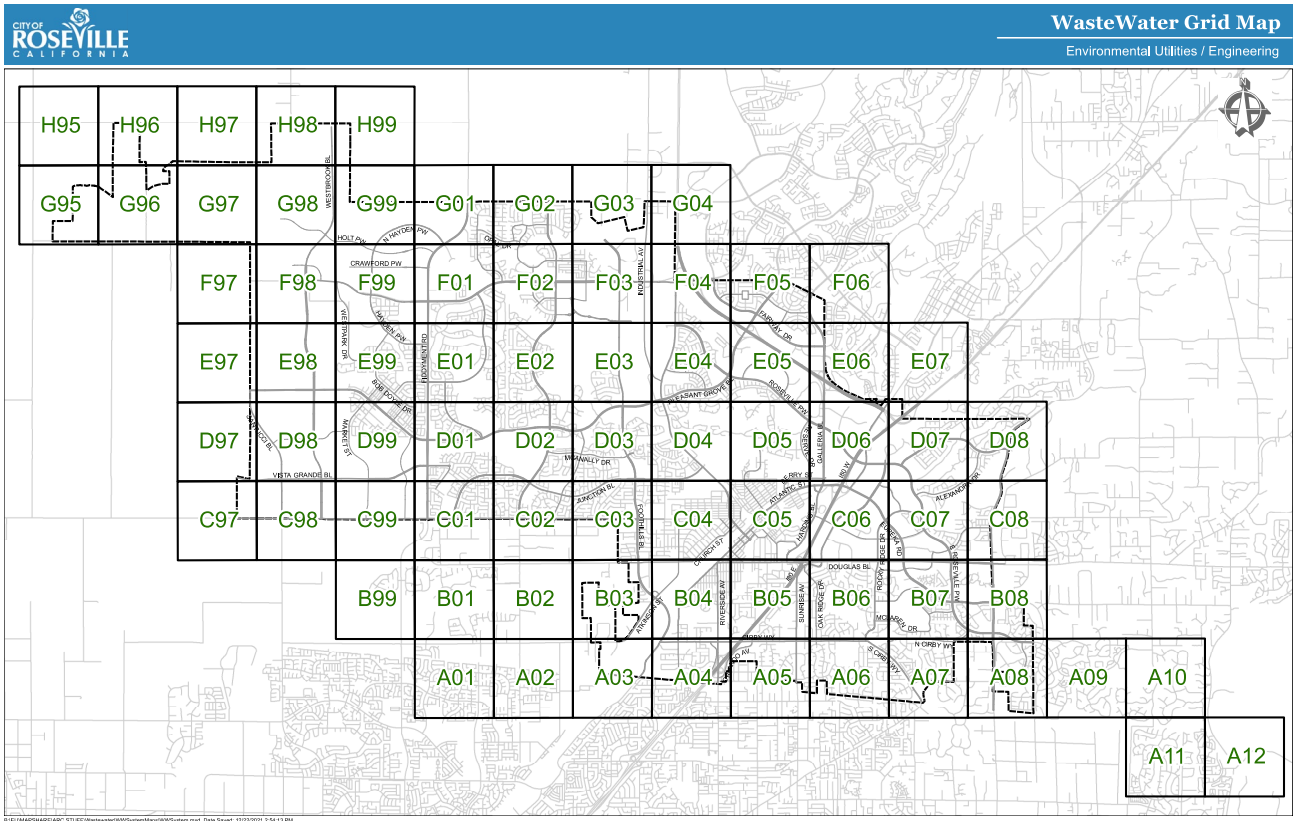
4 Operation and Maintenance

D.13.(iv) The SSMP must include those elements listed below that are appropriate and applicable to the enrollee's system. This chapter describes the city's activities regarding mapping systems of the sanitary sewer system, operation and preventative maintenance activities, rehabilitation and replacement program, training program, and equipment and critical part inventories.

The Operation and Maintenance (O&M) Program is essential to fulfill the city's duty to serve the residents and businesses of the City of Roseville. It is also the most significant part of the city's effort to eliminate the occurrence of SSOs and stay compliant with the general order.
The city's O&M program is comprised of these elements:

1. Collection System Mapping
2. Preventive Maintenance
3. Rehabilitation and Replacement
4. Staff Training and Certification
5. Equipment And Replacement Parts Inventories, Including Critical Replacement Parts



4.1 Collection System Maps and Information

The WWC Division maintains an up-to-date electronic map of the wastewater collection system as required by Section D.13(iv)(a) of the Order. The City uses ESRI GIS software to map all utility-related data. The GIS map platform, referred to as Roseville GeoViewer, shows all gravity main segments with the direction of flow, manhole information, pumping facilities, pressure pipes, and valves. In addition, the GeoViewer allows users to turn on/off different layers and base maps to display the information they need. Additional map layers available in GeoViewer include:

- Hot Spot Locations
- CIPP Lined Mainline Segments
- Food Service Establishments and Grease Removal Devices
- Waterways
- Roadways
- City Boundaries
- Stormwater System

Table 4-1 shows the GIS map system, and how it incorporates each of the sewer shed basins within the City of Roseville's jurisdictional boundaries.

Table 4-1 Wastewater Grid Map

4.1.1 Map Update Policy

This policy aims to provide uniformity in identifying, verifying, documenting, and tracking the changes to the sewer mapping system. In addition, this document will describe the process in which the mapping system shall be updated.

A significant effort is placed upon maintaining a very complete, accurate, and up-to-date wastewater collection map which is an essential component for the proper operation and maintenance of a wastewater collection system. Maps are updated as new sub-divisions are accepted or when field crews repair, rehabilitate or replace components of the system that require updating the maps. A mapping update policy has been developed to address procedures that ensure mapping updates or revisions are correct and completed in GIS.

CCTV crews identify discrepancies between existing system maps and real time field data. The operator shall note the discrepancies and submit changes to the WWC Supervisor when differences are identified.

Construction and Maintenance crews identify any new infrastructure added to the system. Information required for CMMS Map Change will be directed to the WWC Supervisor. The information required for Mains, Laterals, and SMH's are:

- Mains - Grid map area, the distance between SMH's and pipe size, pipe material
- Laterals –Grid map area, C/O location, length, depth, pipe size, material, and depth.

- SMH – Grid map area, depth, barrel diameter, access cover size and material, number of and pipe size of inlets and outlets, barrel lining/coating, drops Y/N.

The Supervisor will create a work order in Maximo listing the Classification as "Map Change." Then select "Log" and "Add Row" to add a description of the asset that needs to be added/changed. In the Log section of the work order, the Supervisor will list all the details gathered from the field and attach a map if required. Do not change the status of the work order in Maximo CMMS.

The GIS group automatically receives all map change requests. Once all map changes are updated, the Supervisor will receive an email informing them of the completed work order, at which time the GIS group closes the work order.

4.2 Operation and Maintenance

The WWC Division's O&M program focuses on eliminating sewer backups and overflows, increasing the lifespan of the infrastructure, and bringing uninterrupted service to the residents of Roseville. WWC division provides service to 146,875 customers. Within the 43.05 square miles of Roseville, the City inspects and maintains 17 lift stations, approximately 578 miles of sewer mains ranging from 6- to 84- inch diameter, and 293 miles of lower laterals. **Table 4-2** below represents a few performance indicators the WWC division tracks and measures their performance against.

Table 4-2. Operation and Maintenance Activities

	FY 17-18	FY 18-19	FY 19-20	FY 20-21	FY 21-22
Total Miles of Pipe Cleaned	283.12	226.1	235.9	296.14	
Total Miles of Pipe CCTV Inspected	100.24	149.64	117.11	66.45	
Number of SSOs Caused by Hot Spots	0	0	0	0	
Miles of Pipe Rehabilitated or Replaced	1.49	.5	.54	3.4	
Total Number of SSOs Main and Lateral	25	31	32	51	

4.2.1 Preventative Maintenance Program

The WWC Division of the Environmental Utilities Department is responsible for the City's sewer system and implements preventative and corrective maintenance approaches to operate and maintain the system efficiently. The division's PM program involves cleaning sewers on a recurring schedule, including regular CCTV inspection to determine the efficiency of those PM activities. The GIS system divides the city into grids, enabling targeted PM scheduling for an individual grid based on history, CCTV inspection, and infrastructure's age. The WWC division schedules cleaning as often as every three months or up to ten years, with the age and condition of the pipe being key factors. The scheduled maintenance projects that are identified in Maximo are attached as ***Appendix 4-1.***

Corrective maintenance projects and work orders are a concerted effort utilizing the PM and CCTV inspection programs. Information gathered during routine cleaning, repair work and inspection, generates the development of repair and replacement work orders. The following paragraphs describe the City's current operation and maintenance procedures for maintaining the wastewater collection system.

4.2.1.1 PM Cleaning Program

The WWC Division is equipped with three combination sewer cleaners to keep the sewer system operating efficiently and minimize line stoppages and calls for service. Sewer cleaning using hydraulic or mechanical methods performed on a routine basis helps remove accumulated debris in the pipe such as sand, silt, grease, roots, and rocks. Scheduled maintenance projects have been developed for each map grid based on historical data and field crew input.

4.2.1.2 Hot Spot Cleaning

In addition to scheduled maintenance, the WWC division aggressively cleans identified problem areas, known as hot spots. This list of hot spots has been compiled based on historical data, field crew observations, and CCTV condition assessments. These mainline segments tend to have more frequent backups due to sluggish flows, poor grade, and sags, The frequency of Hot Spot cleaning ranges from 1-6 months, depending on history and CCTV inspection data. The WWC division strives to reduce and eliminate these hot spot areas during CIP projects or rehabilitation projects performed by City crews. Currently, the WWC division has 276 segments identified as Hot Spots.

4.2.1.3 Electroscan Inspection

To identify and quantify locations of I&I entering the sewer system, the WWC division invested in Electroscan Technology, adding the equipment to a newer CCTV inspection truck. Using Electroscan, a probe is pulled through the mainline, and electricity is measured and used to identify any defect where the pipe may leak. This enables crews to pinpoint CCTV inspection of the pipe section before scheduling repair work to correct the deficiency. Electroscan has also proved valuable as a QA/QC tool for accepting Cured-In Place-Pipe rehabilitation projects. The city performed pre-post Electroscan inspections on sewer mains rehabilitated with CIPP technology. This pilot study proved the effectiveness of the Electroscan Technology in locating defects CCTV inspection didn't identify.

4.2.1.4 CCTV Inspection Program

The WWC Division operates three CCTV vans to inspect the wastewater collection system. CCTV operators utilize NASSCO's PACP coding format when inspecting sewer mains and laterals. All observations are coded and captured in the Granite Net Software system and are archived in a database for access. CCTV inspection crews also perform continual condition assessment inspections on existing infrastructure. For example, CCTV crews inspect mainline segments and lower laterals, looking for deficiencies to minimize problems within the collection system. In addition, sewer inspections identify unwanted connections and sources of I&I into the wastewater system. Finally, CCTV crews inspect new subdivisions or commercial projects before being accepted into the city and the time of warranty acceptance. These inspections are crucial to receiving infrastructure installed to City design and construction standards. **Table 4-3** includes a sample CCTV report from GraniteNet inspection software.

4.2.1.5 Root Control Program

The WWC Division has an effective chemical root control program, using Vaporooter products to limit or eliminate root growth in the City-owned portion of the lower lateral. In addition, the WWC division has two qualified applicators licenses (QAL) that allow the division to chemically treat laterals for a more effective root control program rather than contracting out for this service. This program has dramatically reduced the division's exposure to back injuries resulting from loading and unloading a gas-powered eel from the truck each time. It also lessens the element of crush injuries and trip and fall hazards from eel rods across the ground. In addition, chemical root control has successfully reduced the maintenance time per lateral, which is evident in the reduction of lower lateral backups and overflows.

4.2.1.6 Lift Station Inspection and Maintenance

The city currently has 17 neighborhood lift stations throughout its service area. All 17 stations are equipped with a duplex or triplex pumping system, with the lead/lag pump cycled based on pumping hours. Power outages happen very infrequently. However, all new lift stations and four of the currently active seventeen lift stations are equipped with a 4-hour emergency overflow storage basin. WWC crews inspect the stations monthly, cycle pumps through a pull-down sequence, test floats for operation, and record the condition and any deficiencies at the station. In addition, all Lift Stations are equipped with a SCADA system, which the WWTP operators monitor 24 hours per day. Besides inspections, City crews perform wet-well cleaning and de-ragging of pumps every six months to eliminate pump failures and potential odor complaints.

4.2.2 Corrective Maintenance Program

WWC construction crews perform all repair work to the existing infrastructure. Work orders and projects are developed from information found during maintenance activities, inspections based on calls for service and condition assessment inspection findings. The Corrective Maintenance programs are defined below.

4.2.3 Infrastructure Repair

The WWC Division performs routine, emergency, and complex repairs, and replacements to its existing infrastructure. This work includes sewer main installation and repair, sewer manhole installation, and lateral repair and replacements. As a result, city crews have undertaken large projects, installing new mainline segments that have eliminated hot spots, replaced aging infrastructure, and upsized mains to provide additional system capacity. In addition, the WWC Construction crew has performed contractor caliber work at the City's Regional Wastewater Treatment Plant at significant cost savings for the city.

4.2.3.1 Infill Projects

Depending on their schedule and workload, the WWC division construction crew holds the first choice for any proposed connection to existing infrastructure. If city crews are busy, contractors will be allowed to perform the work under the direction of a city inspector. However, if city crews complete the work, the contractor will schedule the work through the WWC Supervisor. City crews will complete the work on a time and material basis for the contractor.

4.2.3.2 CIPP Lateral Lining

The vast majority of the city's SSOs have occurred in the lower lateral, caused by breaks in the VCP and root intrusion. As a result, the city invested in the trenchless technology Cured in Place Pipe (CIPP), purchasing an LMK lateral lining trailer. Lateral lining through an existing cleanout makes it possible to repair and reinstate the pipe integrity without disturbing landscape, sidewalks, roadways and with minimal disruption of service to the resident. CIPP essentially creates a pipe within a pipe and eliminates further root intrusion and sewer overflows. During condition assessment, lower laterals are CCTV inspected, and work orders are created for those identified as viable for CIPP lining. These work orders are then prioritized based on history and the number of calls for service.

4.2.3.3 Cleanout Installation Program

The WWC Division invests many resources in preventing backups that potentially become SSOs. Since the City owns the lower portion of the lateral, access to the lateral through a cleanout is imperative in assessing its condition. The WWC division has identified the homes and businesses throughout the city with no cleanouts and created projects to install one at every service location. One installed, the lower lateral is inspected and if necessary, additional work orders for maintenance or repair are created. Currently, the city installs over 100 cleanouts per year on this project.

4.3 Rehabilitation and Replacement

The City began its condition assessment of the collection system in 2006. At that time, the collection system was divided into 24 groups based on the age of the sewer main installation. The first group of pipes and manholes were inspected and included in the Rehabilitation and Replacement plan developed shortly after. To date, City crews have completed inspections in 14 of those 24 groups, which has led to the development of numerous CIPP and replacement projects.

Over the past fifteen years, experience has shown that identifying and prioritizing areas and sewer segments for assessment and rehabilitation is complex. It requires the availability of tremendous amounts of data, expertise in applying PACP coding, and professional judgment. During this time, the WWC Division has significantly advanced its knowledge of the collection system and its sewer assessment and rehabilitation approach. The City has recognized that CCTV inspection is the best method for identifying and prioritizing problematic areas. As such, the City continuously inspects pipelines and utilizes NASSCO's PACP coding standard to develop a list of assets that need rehabilitation. When defects are identified, the City evaluates the risk of failure and assigns a priority ranking to each asset.

Prioritizing those assets relies on several factors, including:

- Severity and extent of the defects (PACP Score).
- Maintenance records and SSO occurrences
- Hydraulic capacity needs and projection.
- The estimated remaining useful life of the infrastructure

This detail-oriented condition assessment approach enables the division to plan and design CIP projects to rehabilitate sewer infrastructure in a planned and organized manner. The supervisor will review the maintenance history of the main, any SSO history and determine if the segment should be rehabilitated or continue established preventative maintenance. The main will be added an asset group already created in Maximo CMMS if conditions warrant rehabilitation. Based on current condition, history of calls, and field crew observations, the assets
are then prioritized for rehabilitation.
Once the asset group is established, the WWC Superintendent will meet with EU Engineering to review the data and create a CIP project for the upcoming fiscal year, based on priorities and estimated cost. This process ensures the projects will be completed timely, reducing the potential occurrence of an SSO.
In addition to condition assessment, the WWC division schedules with Public Works to inspect wastewater infrastructure ahead of residential and arterial street paving projects. This process enables the WWC division to perform necessary system improvements before completing the overlay project. The City maintains a 5-year list of planned R&R CIP projects

4.4 Training and Certification

One challenge when defining a training program is an influx of new employees. Entry-level employees with no training are a potential safety liability in the wastewater field. Training for new hires is predominantly on-the-job training, with classroom and online training finishing the remaining required training. As soon as available, new employees are scheduled for Confined Space Entry, Traffic Control &Flagging, and Excavation and Trench Shoring training, the division's most significant safety liabilities.

4.4.1 New Hires

On their first day, a new employee will be issued a task booklet, which defines the necessary skills and training for their position. The new hire and Supervisor will go through the book, discuss how the employee will receive training, and receive sign-off on the tasks. The booklet covers all areas involving the wastewater collection system and is an aid in developing qualified, knowledgeable, and capable employees. When the employee becomes proficient in a task, the SR Utility Maintenance Worker or the crew leader signs and dates the book, verifying they have observed the employee satisfactorily complete the task. The training defined in the task booklet is provided through various methods, mainly on-the-job training, and begins the first day on the job. Finally, at the end of the probationary period, new hires are put through a series of activities to demonstrate their proficiency in all skills learned.

4.4.2 Training and Tracking

Safety training constitutes a significant portion of the training received each year and tracking individual completion of training can be insurmountable. The WWC Division utilizes a computer-based software program, Safety Plus Web (SPW), to monitor and track each employee's level of completion. Supervisors can query individual employee training records, or the entire division, to see which courses need completion. In addition, SPW provides Competency-Based Training (CBT), requiring the employee to take and pass a test at the end of the presentation, demonstrating their understanding of the training material. In addition, Standard Operating Procedures (SOPs) have been developed for all equipment and procedures within the division to train new employees and provide a refresher for veteran employees. These SOPs are reviewed annually during a safety meeting and revised should there be a process change. Therefore, SOP development and training is an ongoing process.

The WWC division holds weekly safety meetings where supervisors or subject matter experts present safety topics specific to the wastewater collection field. These meetings are interactive with the crews and presenters and are great learning opportunities. In addition, the training course is added to SPW, so employees can fulfill the training online if they are absent. Finally, as new training requirements are developed, they are implemented into SPW to ensure all employees receive the required training throughout the year. **Table 4-4** lists the required training specific for the WWC division.

Table 4-4 Wastewater Collection Required Training

Training Title	Frequency	Delivery
Asbestos Cement Pipe Training Initial and Refresher	Initial- 1X Refresher-Annual	Outside Trainer
Back Safety	Annual	CBT or Tailgate
Backhoe Operator Certification	Refresher-3 Yrs.	CBT, Classroom, Hands-On

Underground Utility Locating	Annual	CBT, Classroom, Outside Trainer
Violence in the Workplace	Annual	CBT, Classroom

4.4.3 Certification

The CWEA Technical Certification Program provides certification in various wastewater disciplines to promote the knowledge and skills of wastewater professionals. The City requires employees to take and pass the Collection System Operator Grade I test to be eligible for promotion to the Journey Level. The test for the required CWEA certification ensures that employees who hold this certification possess the knowledge, skills, and abilities to perform the collection system operator duties skillfully. In addition, to renew the certificate, the employee must complete 12 hours of continuing education training every two years.
Information on CWEA certification can be found at http://www.cwea.org/

4.5 Equipment and Critical Spare Parts Inventory

The WWC division owns an assortment of maintenance equipment and vehicles equipped both for routine maintenance and emergency response. This equipment is maintained by the Vehicle Maintenance Division of Central Services. **Table 4-5** lists the maintenance equipment the WWC division currently owns.

Table 4-5 WWC Equipment List

Qty	Equipment	Purpose
3	Mainline and Lateral CCTV Inspection Vans	Inspection
3	Combination Hydro-Jetters	PM, Emergency Response
1	Chain Flail Cutter 8″-20″ diameter cleaning	PM, Emergency Response
1	LMK Lateral Lining Trailer	Repair
2	3 Axle Dump Truck	Emergency Response, Repair
2	Caterpillar 430 Backhoe Loader	Emergency Response, Repair
1	John Deere 210 Skip Loader	PM, Emergency Response, Repair

1	Caterpillar 304 Excavator	Emergency Response, Repair
6	Ford F-550 Crew Truck w/ Service Body; Fully equipped	Emergency Response, PM, Repair
1	6-inch Trailer mounted trash pump, cam lock fittings	Emergency Response, Repair
1	4-inch Trailer mounted trash pump, cam lock fittings	Emergency Response, Repair
165′	6-inch suction hose, cam lock fittings	Emergency Response, Repair
400′	6-inch discharge hose, cam lock fittings	Emergency Response, Repair
40′	4-inch suction hose, cam lock fittings	Emergency Response, Repair
3	6′-10″ pass through air plug, cam lock fitting	Emergency Response, Repair
3	10″-16″ pass through air plug, cam lock fitting	Emergency Response, Repair
3	15″-21″ pas through air plug, cam lock fitting	Emergency Response, Repair
2	10″ pass through plug, threaded end	Emergency Response, Repair
1	10′ x 9′ aluminum shore box	Emergency Response, Repair
2	10′ x 4′ aluminum shore box	Emergency Response, Repair
2	End Shores 24″ to 42″	Emergency Response, Repair
5	22″-36″ Speed Shore 5′ length	Emergency Response, Repair
4	28″-45″ Speed Shore 7′ length	Emergency Response, Repair
6	22″-36″ Speed Shore 7′ length	Emergency Response, Repair
6	48″ x 96″ Fin-form Plywood	Emergency Response, Repair

4.6 Critical Spare Parts

Wastewater Collection is a division of the Environmental Utilities Department, which encompasses Regional Wastewater Treatment Plants, Mechanical Maintenance, Water Distribution, Technical Services Engineering, and Solid Waste Division. The WWC Division operates, inspects, and maintains the lift stations within the boundaries of the City of Roseville, however, all electrical and mechanical maintenance tasks are performed by the PM Technicians from Mechanical Maintenance Division. The Materials Technician maintains the WWC Division's inventory list and re-order levels at Dry Creek WWTP. The list of critical spare parts is in **Table 4-6**.

4.7 Appendix 4- Operation and Maintenance Program Documents

Appendix 4 includes the following documents:

4-1 Maximo PM Scheduled Maintenance

4-2 Tech Memo O&M Program SSMP Audit- Rehabilitation and Replacement Plan

THIS PAGE LEFT INTENTIONALLY BLANK

5 Design and Performance Provisions

D.13.(v) Design and construction standards and specifications for the installation of new sanitary sewer systems, pump stations and other appurtenances; and for the rehabilitation and repair of existing sanitary sewer systems; and (b) Procedures and standards for inspecting and testing the installation of new sewers, pumps, and other appurtenances and for rehabilitation and repair projects.

5.1 Sanitary Sewer Design Standards

The purpose of the City Design Standards is to provide direction in the application of improvements that are to be dedicated to the public and accepted by the City for maintenance or operation and to provide for joint development of those facilities to be used by and for the protection of the public. This includes certain private works and improvements to be installed within existing City rights-of-way and easements. Whereas these Standards intend to govern all new construction, City staff shall interpret and apply the Standards in a manner that achieves their intent while encouraging and enabling the redevelopment of infill and vacant parcels, especially within the City's Redevelopment Project Area. These Standards shall apply to, regulate, and guide the preparation of traffic impact studies and the design and preparation of plans for construction of streets, highways, alleys, drainage, sewerage, traffic signals, site access, water supply facilities and related public improvements, and shall set guidelines for all private works which involve drainage, grading, trees, and related improvements. The City's sewer Design Standards are located on the City's website at https://p1cdn4static.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Development Services/Engineering/Design and Construction Standards/2020 DS Sections/DS - SECTION 9 - Jan.2020.pdf.

5.2 Sanitary Sewer Construction Standards

The purpose of the City Construction Standards is to provide minimum standards to be applied to improvements which are to be dedicated to the public and accepted by the city for maintenance or operation and certain private works, as well as improvements to be installed within existing rights-of-way and easements. This is necessary to provide for coordinated development of required facilities to be used by and for the protection of the public. These Construction Standards shall apply to, regulate, and guide construction of streets, highways, alleys, drainage, sewerage, traffic signals, site access, water supply facilities and related public improvements, and shall set guidelines for all private works which involve drainage, grading, trees and related improvements. The City's sewer Construction Standards are located on the City's website at https://p1cdn4static.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Development Services/Engineering/Design and Construction Standards/2020 CS Sections/CS - SECTION 91 - Jan.2020.pdf

All improvements within the City rights-of-way shall be installed in accordance with the approved improvement plans and specifications, the City of Roseville Design Standards, the City of Roseville Construction Standards, and the State of California Department of Transportation Standard Specifications.

5.3 Sewer System Construction and Performance Testing

Section 91-12 of the City's Sanitary Sewer Construction standards defines the criteria for testing of installed sewer improvements. Sewer mains, services, manholes and appurtenances shall be tested by the following procedures.

5.3.1 Testing Of Installed Improvements

A. Sewer Mains and Services – Public and private sewer mains and services shall be air-tested per ASTM C828 by the Contractor and the Environmental Utilities Department shall provide closed circuit TV inspection, after installation of the joint trench utility crossings and subgrade elevations have been met. Additionally, pipeline segments beneath road bases to be lime- treated shall be tested before and after the lime treatment process.
B. Air Pressure Test – Sewer mains and laterals shall be pressure tested in accordance with the National Clay Pipe Institute recommended guidelines with the following amendment:

1. The minimum test time shall be 60 seconds. The section of a sewer being tested must be pressurized to 3.5 psi, and during the test time must hold 2.5 psi or greater, or the section has failed.
2. For mains installed in an area where the water table is higher than the pipe, the test pressure shall be increased 0.5 PSI per foot of water over the pipe.
3. The test gauge shall be liquid-filled, capable of testing up to 15 PSI, and graduated to 1/10 PSI.

C. TV Inspection – TV inspection of sewer mains and services shall be performed by the Environmental Utilities Department, Wastewater Division. Costs for said inspection shall be borne by the Contractor. Preliminary inspections may be performed by outside contractors but shall not be accepted by the Environmental Utilities Department as an official record.

1. The sewer system shall be completely cleaned by an approved method prior to TV inspection. The sewer system shall be rejected if any of the following conditions exist:
    a. For main lines 12 inches and smaller - standing water or sags greater than 1⁄2 inch in depth at acceptance or greater than 1 inch at warranty.
    b. For main lines exceeding 12 inches - standing water or sags greater than 3⁄4 of an inch in depth at acceptance and greater than 1 1⁄2 inches at warranty.
    c. Standing water in services.
    d. Offset joints.
    e. Joint separations greater than 1⁄2 inch wide.
    f. Damaged pipe.

D. Inspection Criteria for Coated Ductile Iron Pipe – All ductile iron sewer will have the following additional inspection requirements:

1. The condition of the barrel section of pipe as well as 360◦ at each joint shall be recorded to a DVD or portable drive. Once completed, and the inspection demonstrates the pipe meets the City's construction standards, the contractor may proceed with the backfill of the trench. The Contractor shall provide the DVD and a map of the section inspected, to the Wastewater Collection Division for review prior to the City's acceptance inspection.
2. Upon finding any deficiency in the pipe which does not meet the design and construction standards of the City of Roseville, it is strongly encouraged that the contractor makes the necessary corrections at that time. If deficiencies aren't corrected City forces at time of acceptance CCTV will identify these deficiencies and require the contractor to dig and replace the pipe sections; there will be no exceptions.
3. The observation data on the DVD provided to the City shall include the following:
    a. City wide job number.
    b. Encroachment permit number.
    c. Project name.
    d. Location (street name)
    e. Manhole numbers (based on approved plan set or city asset numbers if applicable).
    f. Direction of inspection (upstream or downstream).
    g. Date of inspection.
4. The speed of travel shall be slow enough to inspect each pipe joint, wye connection, coating integrity, and potential sags. Camera speed should travel at a rate of no more than 30 feet per minute. The camera speed shall be steady and slow enough to record features and defects.

E. Manholes – Sewer manholes shall pass a vacuum test consisting of the following criteria and procedures:

1. The test shall be performed after assembly of the manhole and installation of the pipe entering or exiting the manhole, but prior to backfilling. The Contractor shall perform the test and supply all test equipment. The Development Services Inspector shall witness the test results.
2. Lift holes shall be filled with non-shrink grout prior to testing.
3. Pipe entering and exiting the manhole shall be plugged. The plug shall be places on the flex joint outside of the manhole base. Securely brace the plugs to prevent them from being drawn into the manhole. Unused channels shall be permanently plugged with a plastic or clay stopper.
4. A vacuum of 10 inches of mercury shall be drawn to start the test. The amount of time required for the vacuum to drop to 9 inches shall be measured. The manhole will pass the test if the amount of elapsed time is greater than 60 seconds for a 48-inch manhole, 75 seconds for a 60-inch manhole, 90 seconds for a 72-inch manhole and 120 seconds for an 84-inch manhole. A liquid-filled vacuum gauge shall be used for testing. All detectable leaks shall be repaired with non- shrink grout while the vacuum is drawn. No mortar shall be applied to the inside of the manhole until the vacuum test has passed.
5. If the manhole fails the initial test, necessary repairs shall be made with a non-shrink grout while the vacuum is still being drawn. Retesting shall proceed until elapsed times are satisfactory.

6. After passing the vacuum test, all joints shall then be mortared, inside and out. Outside mortared joints shall be allowed to dry 24 hours or as approved by the Development Services Inspector before backfilling.
7. If damage to the manhole is evident any time during the construction, the Development Services Inspector may require repairs to be made on the manhole which will require a new vacuum test prior to acceptance.
8. Topside Improvements – When all water, recycled water and sewer infrastructures have passed air, vacuum, pressure, and continuity test as well as CCTV inspection the Development Services Inspector will email a notification to internal departments indicating that the project is ready for road bases and top side improvements only. This does not constitute approval for use of the infrastructure.
9. Tying Into the City System – A tie-in procedure shall be submitted and approved by the Environmental Utilities Department prior to the proposed work. The contractor shall allow for up to 7 days for review of the procedures by the Environmental Utilities Department. The sewer system shall be tied into the City system within 10 working days upon completing and passing all the testing procedures. Tie-ins shall be conducted as specified in Section 91- 2 of the Construction Standards.

5.3.2 Punchlist Process

After the sewer manholes have been raised and finished to grade, the sewer system shall have a final ball and flush in the presence of the Development Services Inspector. The system shall then have a final TV inspection to ensure the entire sewer system is intact for warranty. Final ball and flush can be done by city forces on a time and material basis at the request of the contractor. When all improvements are complete, the contractor shall provide a written request for a punch list inspection of the improvements. With the assistance and presence of the Contractor, the wastewater facilities punch list shall be generated by the Development Services Inspector and Wastewater Collection Division.

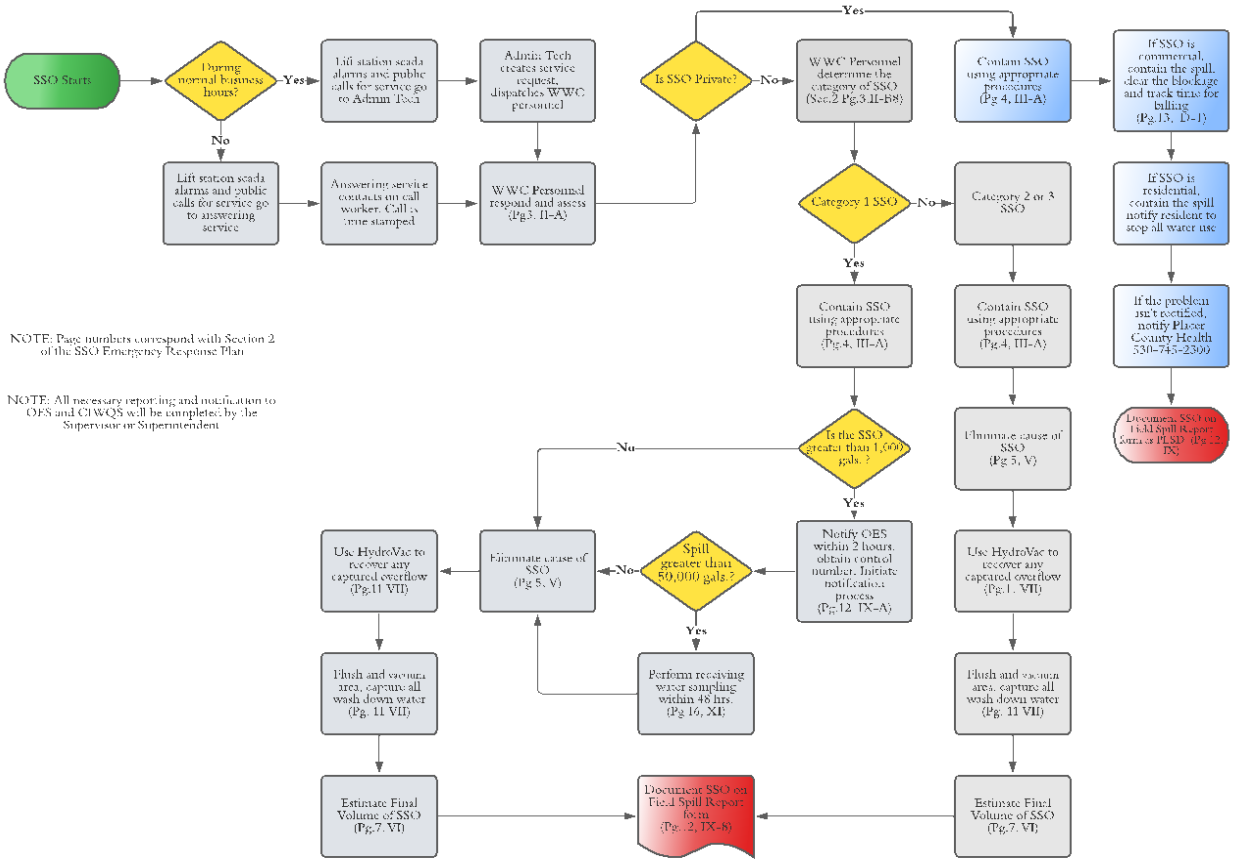
5.3.3 Repairing Installed Improvements

Sewer mains, services, manholes and appurtenances shall be repaired per these Construction Standards and by the following procedures.

A. Repairing Vitrified Clay Pipe

1. Damaged pipe shall be exposed and replaced in-kind by "bridging" the new pipe into place. Coupling devices shall not be used.
2. Sagging or misaligned pipe shall be exposed and corrected in place if possible. If the pipe is defective, then a new pipe shall be bridged in place.
3. After the correction has been completed, the excavation shall be backfilled and compacted to grade as specified. The repairs shall then be retested per section 91-12 of these Construction Standards.

THIS PAGE LEFT INTENTIONALLY BLANK



6 Overflow Emergency Response

D.13. (viii) The enrollee shall develop and implement an overflow emergency response plan that identifies measures to protect public health and the environment. The plan must include (a) proper notification procedures so primary responders and regulatory agencies are informed in a timely manner, (b) a program that ensures an appropriate response to all overflows, (c)procedures to ensure prompt notification to regulatory agencies or other potentially affected entities of all SSOs that potentially affect waters of the State. All SSOs shall be reported in accordance with the MRP and WDR requirements, (d)procedures to ensure appropriate staff and contractor training on the ERP,(e)procedures to address emergency operations, such as traffic and crowd control,(f) a program to ensure all reasonable steps were taken to contain and prevent discharge of sewer to waters of the United States, and to minimize and correct any adverse impact on the environment from the SSO.

6.1 Notification Procedures

The WWC division maintains an Overflow Emergency Response Plan that covers the wastewater system and Lift Station response and procedures. **Table 6-1** summarizes the response procedures.

Table 6-1 SSOERP Flowchart

The WWC division strives to operate, manage, and maintain all parts of the sanitary sewer system to prevent SSOs and mitigate the impacts quickly and efficiently should an SSO occur. The On-Call emergency vehicle contains a three-ring binder that includes the division's SSO emergency response manual, the response plan, chain of communication, and notification procedures. In addition, the truck is equipped with the necessary tools and equipment to control and contain overflows and clear lower lateral blockages. The truck is outfitted with pneumatic plugs, rubber berms, and dry sweep, all of which are effective means of containment. **Table 6-2** summarizes the division's notification procedures.

Table 6-2 Notification Guide

If SSO	And Affects	Notify
Discharges 1,000 gallons or greater to surface water or spilled in a location where it will probably be discharged to a surface water, shall, as soon as possible, but no later than two (2) hours after becoming aware of the discharge		• WWC Supervisor- Shane Rodgers Office -916-746-1894 Cell -916-223-7711 • WWC Supervisor – Kevin Ryan Office – 916-746-1895 Cell- 916-223-7537 • WWC Superintendent – Dan Pruden Office – 916-746-1891 Cell- 916-580-5600 **<u>The individuals above are responsible for notifying:</u>** • OES 1-800-852-7550 **Obtain control number, complete field spill report form** **<u>Additional Numbers for Reference</u>** • **Placer County Environmental Health** 1-530-745-2300 Main Line 1-530-745-2306 After Hours Supervisor • **California Department of Fish and Wildlife** 916-445-0045 Option #2
	Sacramento River Enters structure, requires cleanup	• **Sacramento River Water Treatment Plant** 916-808-4961 916-264-5011 • **City of Roseville- Risk Management** 916-774-5420 or 916-774-5202 After hours- Dave Rawe 209-613-9448 If no answer, authority is for cleanup only from Restoration Companies listed in SSOERP

6.2 Emergency Response Procedures

City of Roseville Wastewater Collection has developed the following procedures for responding to Sanitary Sewer Overflows (SSOs). The purpose of these procedures is to ensure that all SSO responses are conducted efficiently and effectively, meeting all regulatory requirements of the general order.

6.2.1 Goals of SSOERP

The purpose of this SSOERP is to ensure that the City of Roseville Wastewater Collection personnel follow established guidelines in cleaning up and decontaminating SSO's which have occurred within the City's collection system service area. The goals with respect to responding to SSO's are:

- ***A.*** *Respond quickly to minimize the extent of the SSO;*
- ***B.*** *Eliminate the cause of the SSO;*
- ***C.*** *Contain the spilled wastewater to the extent feasible.*
- ***D.*** *Eliminate public contact with the SSO;*
- ***E.*** *Mitigate the impact of the SSO; and*
- ***F.*** *Meet the RWQCB Monitoring and Reporting requirements*

6.2.2 Investigate and Assess Problem (WWC Personnel)

Assessment starts with the phone call from the customer. Advise customer to stop all use of water in the home or business. Obtain as much information from customer as possible. Relevant information includes:

- Description of problem
- Specific location (e.g. manhole in street, front or back of property, cleanout box)
- Time the possible SSO was noticed
- Any other observations from the caller (e.g. odor, duration of spill, currently spilling)
    - If you believe an active spill is occurring, mobilize a hydro-vac prior to arriving to access the call.

The City staff person that arrives first to the scene, is considered the ***First Responder***. Upon responding, city staff member performs a quick assessment of the overflow to determine the extent of the overflow.

The ***First Responder*** is responsible for the following:

- Requesting additional wastewater crews or other personnel as needed
- Notification of Superintendent/Supervisor in the event of Category 1 or 2 SSOs

- All field documentation including pictures of the SSO and final field spill report.
- Protection of the health and safety of the public by preventing contact with the SSO

The first responder shall:

A. Locate SSO by address, cross street and point of overflow (i.e. manhole, cleanout, pump station, broken pipe). Note time call was received, as well as time of arrival. See Appendix A for documenting start time of SSO.

B. Determine the current magnitude of the SSO

1. Flooded Structure? - *See Appendix B*
2. Storm water inlet or drainage way
3. Potential for public exposure
4. Related problems
    i. Is overflow related to a street collapse?
    ii. Is overflow related to construction work?
    iii. Is overflow causing a traffic hazard such as displaced manhole cover or street flooding?
5. Provide initial estimate of overflow rate using pictures and tables (see tab 6 for spill estimation)
6. If SSO is a category 1 or 2 spill, notify WWC Supervisor or Superintendent as soon as possible, then refer to Sec. II and start containment
7. If SSO is category 3 spill, refer to Sec II, and start containment
8. Spill categories are defined below:
    *i. Category 1 – spill is defined as **any amount** of wastewater resulting from a failure or flow condition that **reaches surface water** or a drainage tributary to surface water.*
    *ii. Category 2 –defined as discharges of wastewater of 1,000 gallons or greater, resulting from a failure or flow condition that **do not reach** surface water or a drainage channel or storm system unless the entire SSO discharged has been fully captured and disposed of properly*
    iii. Category 3 – spill is defined as all other discharges of wastewater resulting from a failure or flow condition in the enrollee's system.

NOTE: Superintendent or his designee will handle all notification to regulatory agencies regarding the reportable SSO.

C. *If SSO reaches surface water or drainage channel tributary to surface water, and is 50,000 gallons or greater, sample receiving water to obtain baseline data. Refer to Appendix C for sampling information.*

6.2.3 Contain SSO (WWC Personnel)

The overflow must be contained. Containment becomes more difficult if the overflow reaches the storm drain system or drainage way, since the overflow can rapidly contaminate receiving waters, such as creeks, streams, rivers, and other water bodies. During dry weather, the storm drain system can be used to store the overflow, if it can be plugged downstream of the overflow point.

A. Options for containing overflow

1. Containment berm at catch basin or drain inlet
2. Rubber mats and sandbags at catch basin or drain inlet
3. Sandbags in gutter
4. Dig trench in ground
5. Dry sweep
6. Vactor

B. Overflow in building

1. If necessary, evacuate affected people
2. Advise customer to keep family members and pets out of contaminated areas, and not to track contamination throughout non-affected areas.
3. Notify Risk Management at 774-5420 or 774-5202 during business hours. After hours, of if no answer, contact Dave Rawe at 209-613-9448.
4. If adjuster or Risk Management can't be reached, contact one of the approved restoration companies starting with:
    i. Restoration Management Co. 800-400-5058
    ii. Serv-Pro 916-632-2250
5. ***If Restoration Company arrives before the adjuster, authorize only emergency cleaning services only. Hand resident our camera and request them take pictures of affected area. Do not enter house***.

6. If property owner declines cleaning services, request they sign and date the Declination of Clean Up Services Form.

C. Overflow into storm drain/drainage ditch

1. Trace overflow in storm drainage system to downstream end point.
2. Plug all affected storm drain outfalls or block the creek and channels to contain spill.
3. Turn off storm water pump station if available
4. Hydro mains and vacuum all water from storm drain basin and system.

D.If SSO is a Category 1 spill, post warning signs around containment area and follow directions from RWQCB Staff (Region 5) or Fish and Wildlife Staff.

E. Example equipment for containing overflows.

1. Overflow onto ground or into building structure.
   i. Containment berm
   ii. Sand bags
   iii. Plastic sheets
   iv. Dry sweep
   v. Vactor
2. Overflow into a storm drain/drainage way
   i. Pneumatic plugs
   ii. Bypass pump
   iii. Vactor
   iv. Sandbags
3. Overflow at lift station
   i. Vactor
   ii. Bypass pump
   iii. Emergency generator
4. Warning signs to post around contaminated area.
5. Begin preliminary notifications – Refer to SSO notification guide

6.2.4 Traffic Control (WWC Personnel)

Traffic control may be needed immediately to protect the health and safety of the public and/or maintenance staff. Typically, immediate traffic control is needed if

there is a street collapse or significant depression in the pavement that is related to the sewer, if the manhole cover is ajar, or if the overflow causes flooding of the street. Traffic control may be needed to prevent wastewater from being further dispersed and to protect the maintenance crew while containing the overflow and removing the blockage.

A. Provide traffic control per Cal Trans Work Area Traffic Control Handbook (WATCH)

B. If necessary, use other departments (i.e. Police/Fire, Public Works) to ensure proper traffic control.

C. Control public contact with the SSO by isolating the area with barricades, signs or traffic cones.

6.2.5 Correct Cause (WWC Personnel)

The cause of the overflow may be located a considerable distance downstream of the SSO in areas with flat terrain. During large storms, overflows can be caused by excessive I&I in the collection system. I&I can greatly increase the flow in a collection system and cause overflows from pipes that are only partially blocked. I&I can also directly affect the hydraulic capacity of mainlines and lift stations. Under these conditions, it may not be possible to stop the overflow, until the flows recede.

A. Locate cause of overflow

1. Sewer main
    i. Check flow in manholes
    ii. Blockage should be between a manhole with sluggish flow or surcharging and a manhole with very little flow or is dry.
2. Sewer service
    i. Check flow in city cleanout. If cleanout is dry, and resident is still plugged, stoppage is located on private property, and is not the city's responsibility.
    ii. If no city cleanout exists, but the resident has a 4" private cleanout, run this private cleanout to clear the blockage. Once cleared, CCTV to determine the location of problem (***Refer to Appendix D, Sec 6***)
    iii. If no city or private cleanout can be located, check mains, both upstream and downstream. If the main is running clear, notify

the resident the problem is on their side, and explain city cleanout policy

iv. If service line is on a dead end run, regardless if the cleanout is clear, clean the mainline segment with Vactor.

3. Lift Station
    i. Check alarm status inside control panel for indication of problem.
    ii. If power is present, but pumps aren't operating, switch control to hand.
    iii. If pumps operate in hand, refer to Lift Station Failure Procedure (Tab 10).
    iv. If no power is present, contact Roseville Electric, determine remaining level in station, and contact Collection Personnel for assistance. Refer to Lift Station Failure Procedure (Tab 10)

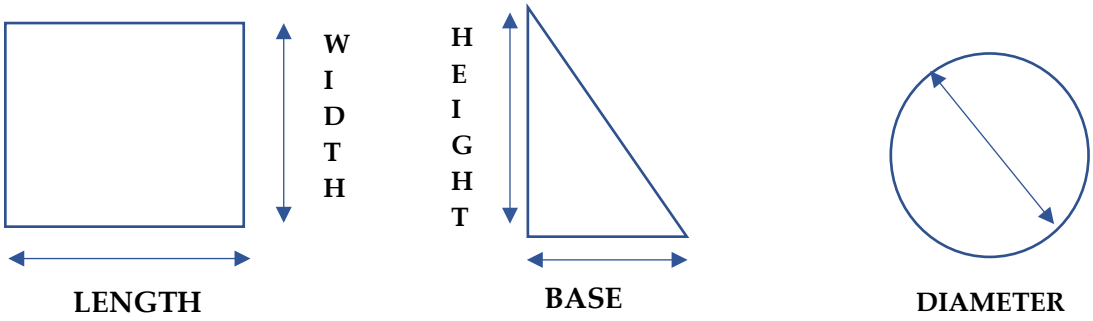
B. Clear Blockage

1. Sewer Main
    i. Clear mainline blockage using Vactor from dry manhole.
    ii. Determine possible cause of blockage and note on Field Spill Report Form.
    iii. Refer to SOP WWC-002 For Vactor
2. Service Line
    i. Clear blockage using Gas powered EEL or Model C Electric Eel. Refer to SOPs WWC-007 and 020
    ii. Call additional personnel is assistance is needed.
3. If blockage cannot be cleared
    i. Increase containment and initiate bypass pumping
    ii. Perform CCTV inspection to determine potential problem
    iii. Dig and repair sewer line at blockage location

C. Lift Station

1. If no power is present :
    i. Contact Roseville Electric to verify outage and time estimation of power being restored.
    ii. Determine the wet well level and remaining downtime left at the station.

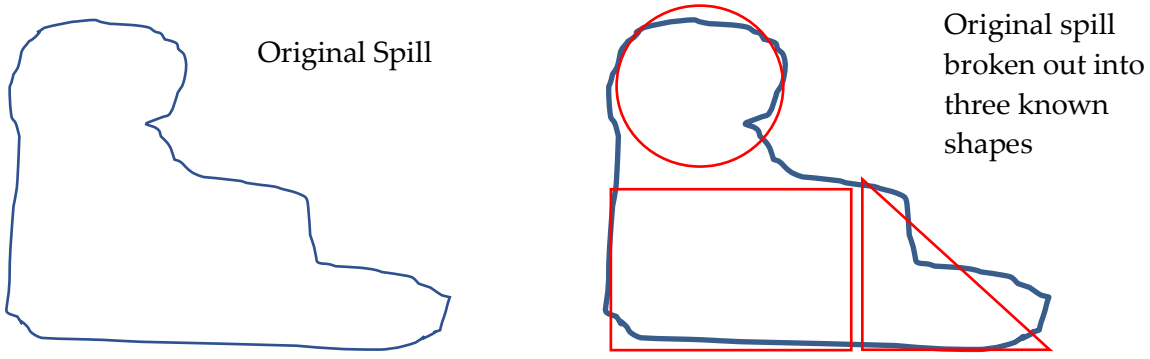
iii. If downtime exceeds the max allowable retention, contact collection system personnel, and request Vactor support.
iv. If power outage is extensive, contact additional personnel for 2nd Vactor support.
v. Continue vacuuming wet well until power is restored, and lift station is running in auto.



2. If power is present, but pumps aren't operating:
    i. Attempt to operate pumps in "hand" position. If pumps do operate in "hand", contact on call electrician, and continue to operate and monitor levels in the wet well.
3. If SSO is caused from force main failure, all power to lift station panel will be controlled using identified energy control procedures (ECP). Wet well levels will continue to be monitored using Vactors or by-pass pumping, until repairs can be made to force main.
4. If portable generation is needed at lift station, on call electrician needs to be present for the connection. All panels have external plugs and disconnects for portable generation connection. Each lift station location has a specific pre-made cable for generator connection.

6.2.6 Final Volume Estimate (WWC Personnel)

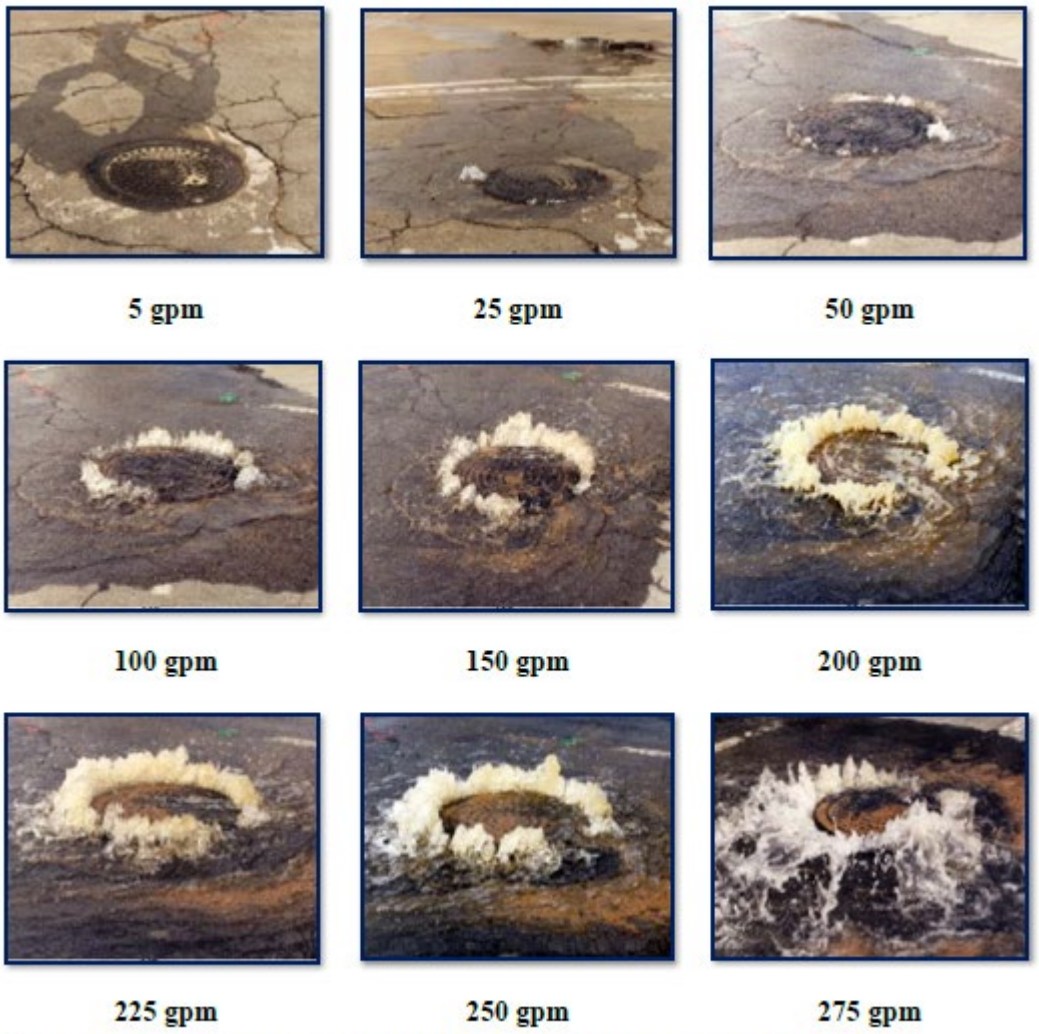
The final overflow volume is estimated to determine if additional reporting to regulatory agencies is required and for the City of Roseville's records when reporting to CIWQS. A minimum of five (5) pictures are required for every spill response, and locations are noted on the field spill report. Place an object in the photo for contrast. The following methods are approved for determining the gallons spilled during an overflow event.



Eyeball Estimation- Estimate the overflow rate out of a clean out by estimating the time needed to fill up a known volume, such as a five-gallon bucket. Imagine the amount of water that would spill from this bucket. This method is useful on spills that occur on hard surfaces such as concrete or asphalt

Measured Volume- The volume of most small spills that have been contained can be estimated using this method. The shape, dimensions and depth of the contained wastewater are needed. This information is used to calculate area and volume of the spills.

1. Determine the shape of the spill
2. Measure or pace off the dimensions. Measure the depth at several locations and calculate the average. Convert all dimensions to feet.
3. To calculate the area square footage, use the following:
    a. Rectangle: Length (ft.) x Width (ft.)
    b. Triangle: Height (ft.) x Base (ft.) x .5
    c. Circle: Diameter (ft.) x Diameter (ft.) x .785
    d. Multiply the area (sq. ft.) by the depth (feet), to get the volume in cubic feet. Multiply your volume by 7.48 to convert to gallons.

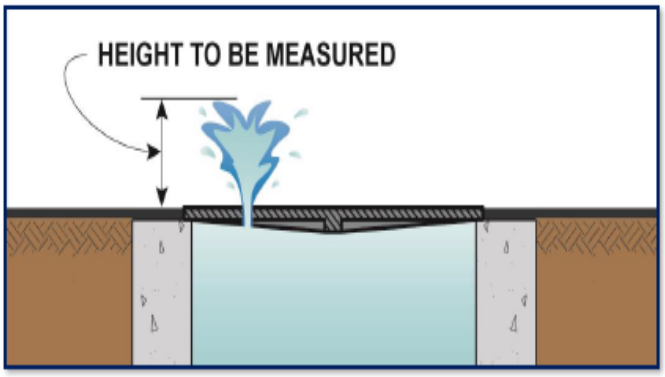


Not all SSO's will conform to the shapes above. If this occurs, break the area up as much as possible into known shapes and calculate the volume in each.

Calculating large volume spills is challenging because the area and depth are difficult to measure, and chances are these spills are not fully contained. Several methods are available to determine the volume.

Flow Estimation Chart- The table below (Section 5 of the SSOERP binder) presents pictures with varying flowrates of sewage overflowing from a manhole. Estimate the overflow rate by comparing the overflowing manhole with the pictures shown below.

Estimating Sewer Flow Rates from Overflowing Sewer Manholes[1]



[1] Sourced from City of San Diego Metropolitan Wastewater Department "Reference Sheet for Estimating Sewer Spills from Overflowing Sewer Manholes" (April 1999).

Flow Rate and Duration- Overflow volume can be estimated by multiplying the overflow duration by the overflow rate. The overflow rate can be determined by pick hole or vent hole spill height (section 5, SSOERP binder), flow meter data, SCADA information and pump data from lift stations.

The overflow volume can be estimated with the following formula:

Volume (gal)= estimated flow rate (gpm) x duration of overflow (minutes)

The charts below represent measurement point and flow rates based off height of water column measured

Height of Spout Above Manhole Frame, H (inches)	SSO Flow Rate, Q (gpm)	Height of Spout Above Manhole Frame, H (inches)	SSO Flow Rate, Q (gpm)
1/8	1.0	5 1/8	6.2
1/4	1.4	5 1/4	6.3
3/8	1.7	5 3/8	6.3
1/2	1.9	5 1/2	6.4
5/8	2.2	5 5/8	6.5
3/4	2.4	5 3/4	6.6
7/8	2.6	5 7/8	6.6
1	2.7	6	6.7
1 1/8	2.9	6 1/8	6.8
1 1/4	3.1	6 1/4	6.8
1 3/8	3.2	6 3/8	6.9
1 1/2	3.4	6 1/2	7.0
1 5/8	3.5	6 5/8	7.0
1 3/4	3.6	6 3/4	7.1
1 7/8	3.7	6 7/8	7.2
2	3.9	7	7.2
2 1/8	4.0	7 1/8	7.3
2 1/4	4.1	7 1/4	7.4
2 3/8	4.2	7 3/8	7.4
2 1/2	4.3	7 1/2	7.5
2 5/8	4.4	7 5/8	7.6
2 3/4	4.5	7 3/4	7.6
2 7/8	4.6	7 7/8	7.7
3	4.7	8	7.7
3 1/8	4.8	8 1/8	7.8
3 1/4	4.9	8 1/4	7.9
3 3/8	5.0	8 3/8	7.9
3 1/2	5.1	8 1/2	8.0
3 5/8	5.2	8 5/8	8.0
3 3/4	5.3	8 3/4	8.1
3 7/8	5.4	8 7/8	8.1
4	5.5	9	8.2
4 1/8	5.6	9 1/8	8.3
4 1/4	5.6	9 1/4	8.3
4 3/8	5.7	9 3/8	8.4
4 1/2	5.8	9 1/2	8.4
4 5/8	5.9	9 5/8	8.5
4 3/4	6.0	9 3/4	8.5
4 7/8	6.0	9 7/8	8.6
5	6.1	10	8.7

Unrestrained manhole cover will start to lift

Figure 3- Flow Rate Exiting MH Pick Hole

Estimated Flow EDU Chart- This method can be used for overflows from residential properties when enough information has been gathered through interviewing the resident. Be clear with your questions and explanation for the interview. Only interview residents from the household contributing to the SSO. The table below is based off our design criteria of 190 gpd. and is included on the Field Spill report. It is a quick way to estimate volume from small overflows.

Figure 4- EDU Flow Chart

Time Period	Estimated City Flow Rate Per EDU (190 gpd)				Spill	
	A	B	C	D	E	F
	Gallons Per Period	Hours Per Period	A÷B = Gallons Per Hour	C÷60 = Gallons Per Minute	Minutes Spill Was Active	D x E= Gallons Spilled Per Period
6am -Noon	75	6	12.5	.21		
Noon – 6pm	55	6	9.16	.15		
6pm - Midnight	50	6	8.33	.14		
Midnight - 6am	10	6	1.67	.03		
					Total Estimated Spill Volume	

However, if a large spill occurs with multiple homes, commercial or mixed-use involved, and there isn't sufficient information to calculate an estimate, use the City of Roseville Design Standard 9-2, Average Dry Weather Unit Flow Factors chart below. Count the units that are affecting the overflow and multiply by the flow factors on the chart below based on the land use designation

Table 1 – Average Dry Weather Unit Flow Factors

Land Use Designation	Units	Flow Factor (gpd/unit)[1,3]
Commercial	gpd per acre	850
Heavy Industrial	gpd per acre	850
Light Industrial	gpd per acre	850
Mixed Use	gpd per acre	2,300
Public/Quasi-Public	gpd per acre	660
Schools	gpd per acre	170
Residential 1 DU	gpd per DU	190
Residential 2 DU	gpd per DU	190
Residential 3 DU	gpd per DU	190
Residential Multiple DU[2]	gpd per acre Or gpd per DU	2,040 Or 130
Open Space	gpd per acre	0
Parks> 10 Acres	gpd per acre	10
Vacant	gpd per acre	0

6.2.7 Initiate Cleanup (WWC Personnel)

Disinfection of contaminated soil or drainage ways is only performed when directed by appropriate agencies such as Placer County Environmental Health and CA Dept of Fish and Wildlife

A. Flooded building or structure

1. If building or structure is flooded due to a failure in the city's collection system, contact Risk Management or Dave Rawe after hours. Risk Management will respond and assess and notify restoration companies on contract with the city.
2. Storm Drain or Drainage Way
    i. Pump out or vacuum any ponded water present
    ii. Remove debris
    iii. Wash concrete and contain all wash water and remove
    iv. Remove contaminated soil and plants
    v. High pressure clean affected storm drains and vacuum all water
    vi. Remove all containment and finish flushing and vacuuming area
3. Street, Curb or Gutter
    i. Remove debris with Vactor
    ii. Wash pavement, curb and gutter area , and vacuum all water with Vactor
    iii. If Vactor decant pump is used, utilize decant apparatus to alleviate possibility of secondary spill and provide fall protection at open manhole.

6.2.8 Receiving Water Sampling (Industrial Waste Section)

To comply with subsection D.7(v) of the SSS WDRs, the enrollee shall develop and implement an SSO Water Quality Monitoring Program to assess impacts from SSOs to surface waters in which 50,000 gallons or greater are spilled to surface waters. The SSO Water Quality Monitoring Program, shall, at a minimum:

I. Contain protocols for water quality monitoring
II. Account for spill travel time in the surface water and scenarios where monitoring may not be possible (e.g. safety, access restrictions)
III. Require water quality analyses for ammonia and bacterial indicators to be performed by an accredited or certified laboratory.
IV. Require instruments and devices used to implement the SSO Water Quality Monitoring Program to be properly maintained and calibrated, including any records to document maintenance and calibration to ensure their continued accuracy.
V. Within 48 hours of the enrollee becoming aware of the SSO, require water quality sampling for, at a minimum, the following constituents
    a. Ammonia
    b. Appropriate Bacterial indicator(s) per the applicable Basin Plan water quality objective or Regional Board direction which may include total and fecal coliform, enterococcus, and e- coli.

6.2.9 Notification Requirements (Superintendent/Supervisor)

All overflows are required by law, to be promptly reported to regulatory agencies. The Legal Responsible Official (s) or their designee will make all notifications to regulatory agencies regarding reportable SSOs. All SSOs are tracked in the City of Roseville's CMMS.

- **A.** Prompt notification to regulatory agencies will be achieved by using the SSO Notification Guide (Tab 4)
- **B.** All information regarding the spill will be documented on the SSO Field Report Form
- **C.** Documentation and Data Tracking
    1. All SSOs are tracked with a service request module in the City of Roseville's CMMS. Completed service requests, work order requests and any overtime tags are turned into Superintendent/Supervisor for QA/QC. These are all resolved in the CMMS. Service requests for after-hours call will be generated the following business day.
    2. Follow up PM work orders are generated to CCTV inspect affected lines and recommendations from CCTV crew are reviewed by Superintendent or Supervisor. Further recommendations regarding repair, replacement, or preventative maintenance schedule adjustment are made on the System Failure Analysis Form.
    3. Field report forms are turned into Supervisor or Superintendent, who enters data into the CIWQS website. A minimum of 5 pictures is required for every SSO
- **D.** Ensure that all appropriate documentation has been completed in the CMMS.
    1. Private commercial spills, crew will provide a work order request to Supervisor documenting hours worked, equipment used and actions taken for billing purposes.
    2. Private residential spills, crew will provide a work order request to Supervisor documenting hours worked, equipment used and actions taken.

6.3 Staff and Contractor Training

To train WWC Employees on the importance of the SSOERP, Supervisors created a Powerpoint Presentation as a training resource. The interactive presentation covers the written SSOERP in a classroom setting. This setting allows employees to clarify any elements within the procedure. The annual training is followed by a competency test and classroom spill simulation. In addition, WWC employees built a spill simulator in the training yard at the DCWWTP to test employees' skills in estimating spills. If desired, supervisors can create spills from either a manhole, cleanout, or both. The water is metered and creates an accurate simulation within the confines of the WWTP.

Contractors are provided with the City's wastewater collection system policies and procedures. Per the contract, they are required to train all their employees on the City's wastewater collection system policies and procedures before performing work on the City's wastewater collection and conveyance system.

6.4 Spill Mitigation and Containment

The WWC Division has written the attached SOP for spill mitigation and containment. The plan is described throughout the SSOERP and in the Table 6-1 flowchart. Whenever a Sanitary Sewer Overflow (SSO) occurs, the highest priority is to contain the overflow and minimize the exposure to the public or the environment. This procedure will address the specific processes available to contain an SSO. Containment of an SSO becomes more difficult once the overflow reaches storm drain systems or a waterway. The quicker the source and the extent of the overflow can be identified, contained, or controlled, reduces the SSO's impact exponentially. Following the Sewer System Management Plan (SSMP) goals, quick response and containment will protect public health and safety while minimizing the environment's negative impacts.

The assessed hazards that may exist when responding to an SSO are:

- Traffic control
- Bloodborne pathogens
- Slips, trips, and falls
- Atmospheric conditions
- Pneumatic plugs
- Sprains and back injuries

Upon arrival to the location, survey the scene to determine the potential overflow location and source. There are times when called for a sewer overflow, and the source is potable water or storm drainage. Once determined, the water source is the sewer, mobilize the necessary wastewater collection personnel and equipment needed for assistance. Determine the category of the overflow, discharge points, and whether the SSO can reach Water of the State. Immediate notification to the Office of Emergency Services is required, should the overflow reach waters of the state. If the spill cannot be eliminated by controlling water flow from a residential or commercial building, more than likely, this spill is either a plugged main, structural deficiency, or an inoperable lift station. The area impacted by the spill and the potential work area shall be secured to divert vehicle traffic and pedestrians away from the area by using any combination of signs, cones, delineators, barricades, arrow boards, or caution tape. Multiple techniques are identified to contain the spill depending on the circumstances, spill category, and material available. In no order, the list below is possible containment options.

Containment Situation	Options for Containment
Curb and Gutter	• Create berm with rubber berm, dry sweep, dirt, or sandbags; Utilize natural low spots or grade deviations • Use hydro-vac to control overflow

Lift Station Failure	• Use hydro-vac to contain • Backup generator • Bypass pumping
Open Space	• Dig a trench for containment • Sandbag berm • Dirt berm
Creek	• Plug all affected storm drain inlets
Storm Drain System (Dry)	• Plug all affected storm drain inlets; plug outfall if necessary • Contain using the hydro-vac • Request additional hydro-vac support if necessary
Storm Drain System (Storm Event)	• Plug all affected storm drain inlets • Emergency bypass pumping • Turn off stormwater pump station if applicable
Building	▪ Evacuate residents if needed ▪ Pop cleanout cap off; If no city cleanout, attempt to locate ▪ Pop private cleanout if available ▪ Contain outside if overflow is relieved by locating/removing cleanout cap

Containment with Hydro-Vac

Determine a location downstream of the spill appearance point where the hydro-vac unit can be set up and capture all water, including wash down water. Ensure no storm drain inlets are between the containment point you choose and the overflow point. Continue vacuuming overflow until the blockage has been cleared. Once cleared, wash remaining spill water to the vac tube to be vacuumed up.

Containment Using Berms and Mats

Utilize dirt, rubber berm, dry sweep, or other obstructing material to block drain inlets and pond the spill to a low natural area to contain and minimize the spill's effects. If possible, divert the spill to a downstream manhole that is not affected by the blockage.

Attempt containment by covering the affected storm drain inlet with rubber mats. Secure the mat in place with sandbags, dirt, or other heavy objects to keep in place.

Containment Using Pneumatic Plugs

Plugging the affected drain inlet or multiple drain inlets with a pneumatic plug can be effective. A pneumatic plug in the storm drain outfall would prevent the overflow from reaching the waterway. However, depending on the location within the City, drain inlets will vary in size, so utilizing plugs may not be the best option.

SSOERP- Appendix A- SSO Start Time Policy

Upon receiving call, note exact time that call received from answering service or administrative staff. This time will be used as a **base** for when the SSO started. Notify resident or business to stop using all water if possible.

A. Upon arrival, note if spill location point is or is not actively spilling. If not spilling from spill location point, but there is clear evidence of spill that requires a Vactor for cleanup effort, then document occurrence as a spill.
B. Initiate SSOERP to ensure that the SSO is contained, and the cause is corrected.
C. Photograph all affected areas, during the SSO, demonstrating containment and after cleanup. Use something in picture to gauge size of area features (i.e. tape measure, 5 gal bucket, etc) Email pictures to the Superintendent after completing necessary paperwork.
D. Provide detailed description of the SSO event, including exact times of arrival, SSO stop time, containment procedures, and names of collection personnel assisting you in the overflow.
E. The following questions should be asked of the resident or the individual reporting the potential SSO:
    1. Did you notice water coming from the cleanout at the property line or manhole in the street? If so, what was the approximate time?
    2. Were your drains running slowly at any time prior to you calling? If so, what was the approximate time?
    3. If there were neighbors outside, close to the area of the SSO, did they notice water spilling? If so, what was the approximate time?
    4. Be prepared to provide a brief summary of how you determined the start time, describing the steps you took while coming to your decision.
F. If the above questions do not produce an accurate account for the SSO start time, use the time the call was received by either the office personnel or the after-hours answering service, and subtract 15 minutes. Record this time as actual start time on the SSO Field Report Form.
G. If the evidence of the spill travels a farther distance than the logic of the 15 minutes, the field crew/responders shall try to recreate the spill the following day, using clean water.
H. In the event of an SSO from a sewer lift station, the start time will be determined using information gathered from the SCADA system.
I. SSO Stop time will be determined by either:
    1. The arrival time of the service worker if the overflow had stopped prior to their arrival.
    2. Clearing the blockage.
    3. Interview of resident or witnesses

SSOERP Appendix B- Flooded Structure Procedures

In the event a failure in the City's wastewater collection system causes a Sanitary Sewer Overflow in a resident's home or business, instruct them to:

1. Keep people and pets away from the affected area(s), and do not track contamination throughout non-affected areas.
2. Don't attempt to clean up the overflow. Instruct them the city has restoration companies available and will respond.
3. Turn off all central heat and air-conditioning systems and prevent flow from reaching any floor vents with towels or blankets.
4. Leave these items in the affected areas for restoration companies to cleanup.

Contact Risk Management at 774-5420 or 774-5202 during normal business hours. After hours, of if no answer, contact Dave Rawe, Risk Manager at 209-613-9448. They will assess and notify restoration companies on contract with the city to respond. If the resident refuses the offered clean-up services, ask them to sign the declination letter, refusing the service.
If the resident chooses to file a claim for damages, instruct them they must fill out a Government Claim Form.

A claim form can be obtained in the following ways:

- In person at the Roseville Civic Center, City Clerks Department and Risk Management Division, 311 Vernon St., Roseville, CA .
- By mail, by contacting the Risk Management Division at (916) 774-5202 or e-mailing the request to riskmanagement@roseville.ca.us
- Electronically by following this link: http://www.roseville.ca.us/hr/risk_management/how_to_file_a_claim.asp
- Completed forms must be returned by mail or in person to the City Clerk's office at the Roseville Civic Center.

SSOERP Appendix C- Water Quality Sampling

This water quality sampling procedure describes the process and the sampling methodology to be used in the event of a sanitary sewer overflow exceeding 50,000 gallons. The water quality sampling results will enable the division to prioritize areas of concern regarding water quality impacts. Surface water samples will be collected using a grab sample technique. Employees are required to wear new sterile powder free surgical gloves when collecting all samples.

Trigger for Sampling -Water quality sampling is required within 48 hours of initial SSO notification for Category 1 SSOs in which 50,000 gallons or greater are spilled to surface waters.

Safety and Access- Water quality sampling should only be performed if it is safe to do so, and access is not restricted or unsafe. Unsafe conditions include traffic, heavy rains, slippery or steep creek banks, visibility issues, high flowing creeks and limited access due to soil conditions or poor terrain.

Where to Sample-

1. Source of SSO - Determine the entry point (source) of the SSO into the creek, and move downstream approximately 10 feet downstream.
2. Upstream Sample – Sample at a point 100 feet upstream from the source.
3. Downstream Sample – Sample at a point 100 feet downstream from the source. Determine the water velocity present in the creek or body of water during the SSO. Dropping debris in the creek, and timing how long the debris takes to travel a known distance is a good indicator of the water velocity present. Use this information to determine the next downstream sampling point. Multiply the water velocity by the spill duration to figure the furthest point downstream to sample.

Sampling Procedure-

1. Put on required PPE (safety glasses and latex gloves)
2. ***Collect Upstream Sample*** - Move approximately 100 feet upstream of the source.
    - **a.** Label the bottle accordingly and take a picture of the location you are sampling.
    - **b.** Sample away from the bank and avoid any debris or scum layer from the surface.
    - **c.** Fill the bottle against the direction of flow, replace the cap and secure the sample to avoid contamination.

d. Use a thermometer to measure the temperature of the upstream sample location and record the results.

3. ***Collect Source Sample-*** Move approximately 10 feet downstream of the source location.
    a. Label the bottle accordingly and take a picture of the location you are sampling.
    b. Sample away from the bank and avoid any debris or scum layer from the surface.
    c. Fill the bottle against the direction of flow, replace the cap and secure the sample to avoid contamination.
    d. Use a thermometer to measure the temperature of the source sample location and record the results.
4. ***Collect Downstream Sample –*** Move approximately 100 feet downstream of the source.
    a. Label this sample "Downstream 1" and take a picture of the location you are sampling.
    b. Sample away from the bank and avoid any debris or scum layer from the surface.
    c. Fill the bottle against the direction of flow, replace the cap and secure the sample to avoid contamination.
    d. Use a thermometer to measure the temperature of the downstream sample 1, and record the results
5. ***Collect Downstream Final Sample*** - After using the velocity and distance to determine the furthest downstream sample point, move to that location.
    a. Label this sample "Downstream Final" and take a picture of the location you are sampling.
    b. Sample away from the bank and avoid any debris or scum layer from the surface.
    c. Fill the bottle against the direction of flow, replace the cap and secure the sample to avoid contamination.
    d. Use a thermometer to measure the temperature of the sample, and record the results

Required Water Quality Analyses – As detailed in section C-5 of Monitoring and Reporting Program (MRP), Order WQ- 2013-0058, a Technical Report shall be submitted in CIWQS online database with 45 calendar days. All samples will be immediately transported to the nearest certified water quality laboratory for analysis (DCWWTP or PGWWTP labs). The sample analysis, at a minimum will include the following:

1. Ammonia
2. pH
3. Electrical Conductivity

4. Bacterial indicators, such as total and fecal coliform enterococcus and e-coli, per the regional Basin Plan or as directed by SWRCB
5. Temperature

Equipment and Supplies – The following items and PPE are required for sampling:

1. Cooler with Blue Ice
2. Sterile sampling bottles
3. Powder free latex gloves
4. Safety glasses
5. Marking pen
6. Field log forms

SSOERP -Appendix D- Sewer Call For Service

When dispatched to a home experiencing sewer problem, the following procedures should be adhered to provide the resident with the best possible customer service and quickly correct the problem causing the SSO.

Residential

1. Contact the homeowner or resident upon arrival. Explain the process you will use to determine the problem. Resident should have already been instructed to stop all water use, so if water is still spilling from cleanout, check the nearest upstream manhole on the mainline for a blockage.
2. If no cleanout is visible, look in CMMS for cleanout location, look for an "S" marked in the curb, or other information that might indicate a cleanout.
3. If a city cleanout is found, clear the lateral blockage using the eel and a root cutting head, do not use a hand tape. CCTV to ensure line is clear, and all blockages have been removed. Record all time and pertinent information you have found on a work order, service request, or for after-hours calls, your overtime tag.
4. If no cleanout is found, locate the closest downstream manhole, and call for Vactor assistance, and run the main.
5. If the residence does not have a city cleanout, and the above procedures did not alleviate the blockage, we will use our equipment to run a "Viable" cleanout that belongs to the resident. This "viable" cleanout should be a factory fitting 4" cleanout, either a wye or combo wye, that we can easily get our equipment into and service the line. Once the line has been cleared, we will CCTV through this same cleanout, and determine where the blockage was located.
6. If the blockage was located below the location a city cleanout should be installed, we will schedule a cleanout installation during normal business hours.
7. If the blockage is located within the customer's service line, notify them that the problem is in their portion of the lateral, the location and severity of the problem. Advise the resident of the City's policy for cleanout installation, and let them know this is a one-time service, and the city will not clear future blockages from the homeowner's cleanout.

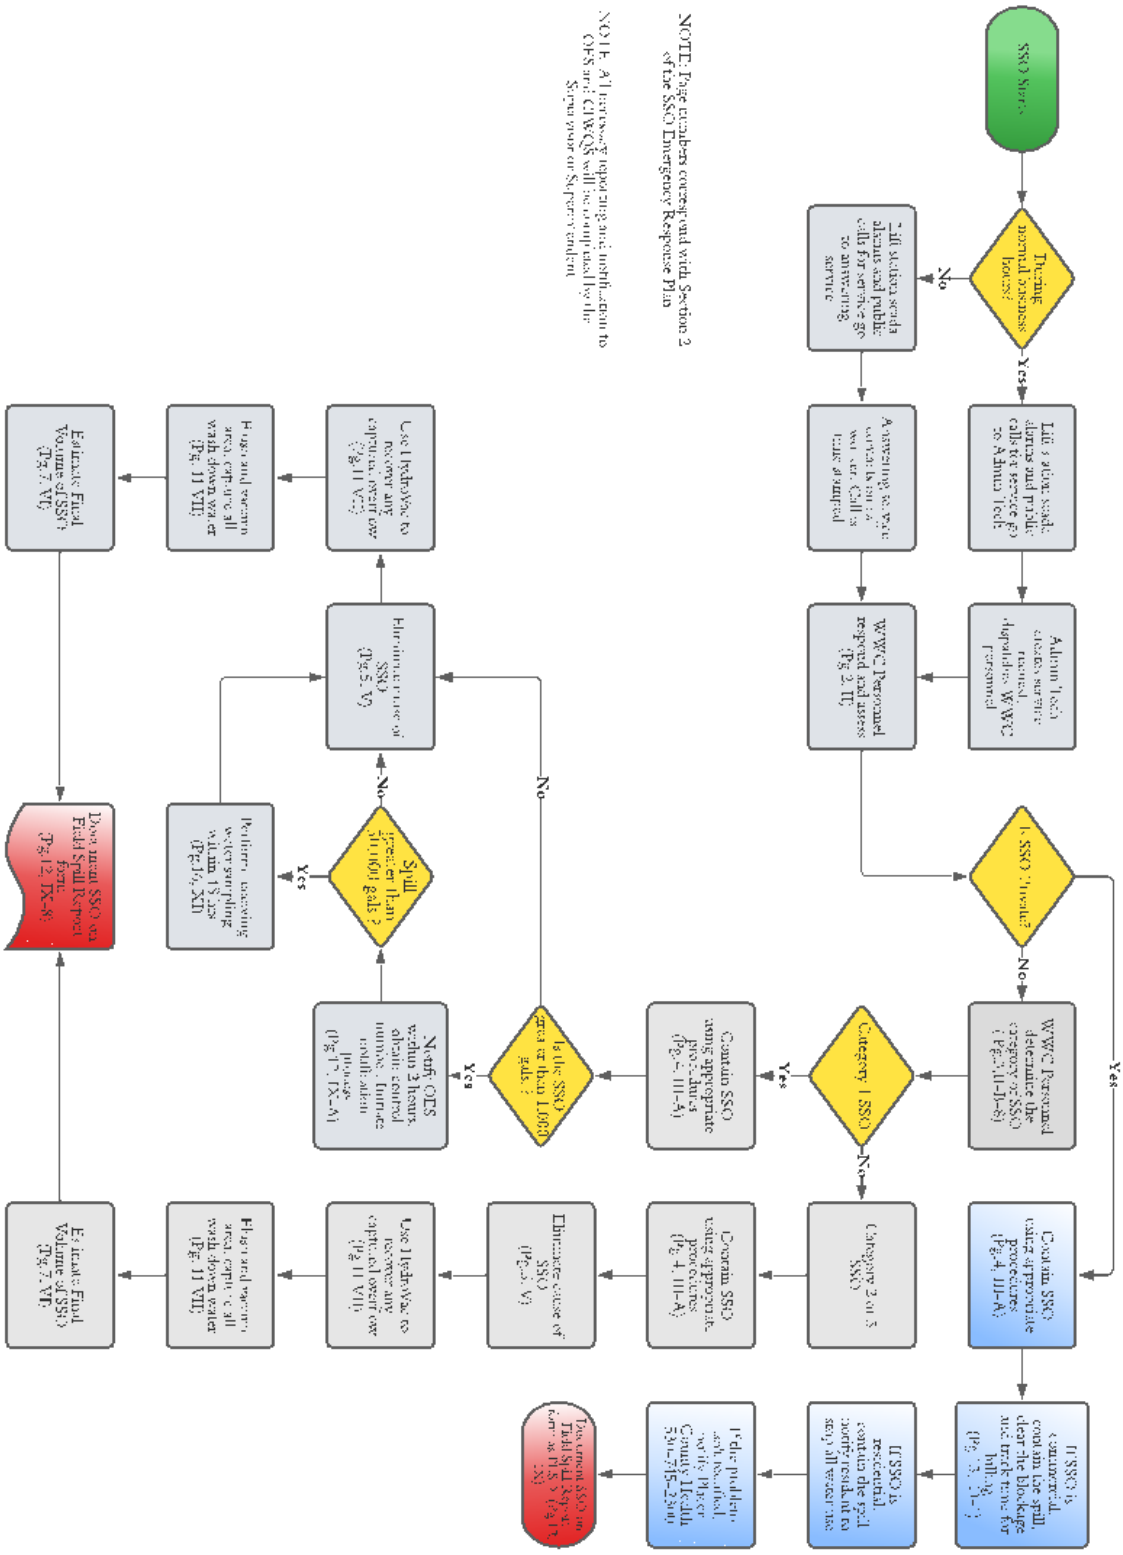
   Document all information in the CMMS under activity code- SPHCC, (Sewer Plug Homeowner City Cleared) on a service request.

Private Commercial

When dispatched to a commercial property experiencing an SSO, start containment of the spill immediately. Notify the manager to stop using water and to call a plumber. Make sure the manager understands City staff will be containing the spill until their plumber responds, and they will be billed for staff and equipment. If after 60 minutes, the plumber doesn't show, notify Placer County Health Department. Notify your supervisor that the health department has been called and to discuss possibly clearing the main or service.

SSOERP Appendix E- Sewer Lift Station Failure Response

The purpose of this procedure is to define strategies necessary to prevent an SSO from a lift station, in the event of a power or component failure within a lift station. The City of Roseville operates and maintains 17 neighborhood lift stations. Each station is equipped with SCADA, monitored 24 hours per day by wastewater treatment plant personnel. Each station has the maximum allowable downtime posted inside the door of each control panel. This identifies the retention time and the storage capacity in the collection system assets, before an SSO will occur. The lowest identified manhole is also identified to assist on call personnel in determining the remaining downtime. In the event of a lift station failure, the plant operator will notify the answering service that an alarm has been activated at a station, and the on-call service worker will respond and assess the alarm.



If no power is present in the panel, the service worker will:

1. Contact Roseville Electric at 774-5620, to verify they are aware of the outage.
2. Determine the level, and remaining downtime left in the station.
3. If downtime will be more than the maximum allowable retention, the on call service worker will call collection system personnel off the standby list, to get a Vactor in route. The Vactor will decant water at an identified point in the system, which won't affect the left station levels. If it appears that one Vactor won't keep up with flows, the on call service worker will call in additional personnel with Vactor to maintain levels in the station.
4. If outage appears to be a lengthy process, contact supervisor. Portable generator may be needed. In this event, an electrician will be needed.
5. Once flows are maintained, contact Supervisor to make them aware of the situation.

If Power is present in station, but pumps are not operating, the service worker will:

1. Attempt to operate the pumps in "hand" mode to eliminate the possibility of an SSO
2. If the pump operates in "hand", continue operating and monitor the levels in the wet well. Contact the On Call Electrician @916-532-0612 and continue to monitor.
3. If station will not operate in hand mode, call additional personnel in with Vactor to monitor wetwell levels. Vacuum and decant accordingly, until the problem is rectified.
4. If it appears that one Vactor won't keep up with the amount of flow into the wet well, the service worker will call in a second Vactor to maintain the levels in the station.
5. Standby and assist on call electrician, until the station is operational.

SSOERP Appendix F- SSO Chain of Communication

THIS PAGE LEFT INTENTIONALLY BLANK

7 FOG Control Program

D.13 (vii) Each enrollee shall evaluate its service area to determine whether a FOG control program is needed. If FOG is found to be a problem, the enrollee must prepare and implement a FOG source control program to reduce the amount of FOG discharged into the sanitary sewer system. The plan shall include (a) public education outreach that promotes disposal of FOG, (b) a plan for disposal of FOG generated within the sanitary sewer system, (c) the legal authority to prohibit discharges to the system and measures to prevent SSOs and blockages from FOG, (d) requirements to install GRD, design standards, maintenance and BMP requirements, and records and reporting requirements, (e) authority to inspect grease producing facilities, enforcement authorities and sufficient staff to inspect and enforce FOG ordinance,(f) identification of sewer sections subject to FOG blockages and pm schedules for each section,(g) develop and implement source control measures for all sources of FOG for each section identified in (f) above.

This chapter describes the City of Roseville's Fats Oils and Grease program, developed as Roseville Municipal Code Section 14.14, in 2008. The ordinance's purpose is to provide the maximum beneficial use of the City's sewer services and facilities while preventing blockages of caused by discharges of FOG into the sewer, specifically from food service establishments (FSEs).
The City relies on two major components to control or eliminate the amount of FOG entering the wastewater system, 1) cleaning and inspection of the collection system on a prescribed maintenance schedule and 2) inspection, enforcement, and education for FSEs. FOG ordinance can be found at: http://qcode.us/codes/roseville/view.php?topic=14-14_14&frames=on

7.1 Public Education Outreach

WWC and Industrial Waste Division personnel developed public outreach materials and handouts that are distributed to all food service facilities managers during the facility inspection. In addition, all FSEs are required by RMC Section 14.14 to apply for a FOG Discharge Permit. The permit application includes references to RMC 14.14, which provides Frequently Asked Questions, Maintenance and Pumping Requirements, and Best Management Practices (BMPs) for the managers to follow. Finally, the City's website below offers links for available public outreach: https://roseville.ca.us/government/departments/environmental_utilities/at_your_service/sewer/sewer_business_customers

7.2 FOG Disposal Plan

Food Service Establishments and FOG generators are responsible for hiring private service providers to pump and haul FOG from their grease removal device at scheduled intervals. The requirement of the permittee is to keep all records, manifests, receipts and invoices for the cleaning

and maintenance of the device, which includes final disposal location. These records shall be provided to any City of Roseville inspector or enforcement officer upon request. Although City does not endorse or recommend services provided by any one service provider, the City will provide a list of service providers that are commonly used by businesses in the area.

7.3 Legal Authority

The WWC Division of Environmental Utilities manages the FOG control program, issuance of permits and performs inspection of all FSEs within its service area. In addition, RMC Chapter 14.14 includes all legal authority necessary to prohibit discharges to the system and identify measures to prevent SSOs and blockages caused by FOG. All FSEs are required to provide wastewater that is acceptable to the city, before discharging to the public sewer. A summary of the legal authority is included in Table 7-1.

Table 7-1 FOG Legal Authority

RMC Chapter Number	RMC Chapter Title
14.14.010 (A)	General Provisions- Purpose
14.14.030	FOG-Waste Discharge Permit Required
14.14.040	FOG-Discharge Limitation
14.14.050	Public Sewer Overflow; Nuisance abatement
14.14.070(F)	Prohibitions
14.14.190	FOG Discharge Permit Conditions
14.14.320	Harmful Discharge
14.14.360	Violation-Penalty

7.4 GRD, Design Standards, BMPs, Recordkeeping and Reporting

7.4.1 Requirement to Install GRD

Every FSE at the time of construction, remodel or change in operation is required to install and maintain an approved and adequately sized grease removal device. In addition, at the EU Directors' discretion, may require an FSE that has caused or contributed to a grease-related blockage, install a grease removal device. Depending on the type of facility, certain FSEs may require a grease interceptor, grease trap(s), or may not require a grease removal device (GRD). If during the plan review process, an FSE enrollee does not believe that their operation needs the designated GRD, they can request a variance from the ordinance. The final determination of the variance request is at the sole discretion of the EU Director.

7.4.2 Design Standards

The City Design Standard section 9-10. (G) indicates grease removal device sizing and installation shall conform to the current edition of the California Uniform Plumbing Code. Grease interceptors shall be constructed following the design approved by the director and shall have a minimum of two compartments with fittings designed for grease retention. A 24" access manhole shall be installed over each interceptor chamber. The frame and cover shall be watertight and set to finish grade, making inspection, sampling, and grease removal activities available. In addition, the grease interceptor shall be installed at a location where it shall always be easily accessible for inspection, cleaning, and removal of accumulated grease. The minimum size of a grease interceptor for a new FSE is 1,000 gallons.

7.4.3 Best Management Practices

Every FSE shall implement BMPs in its operations to minimize the discharge of FOG to the grease control device and/or the public sewer. Detailed requirements for BMPs shall be specified in the FOG WDP and all FSEs are required, at a minimum, to comply with the permit BMPs as well as any additional BMPs established by the director. BMPs may include, but are not limited to, kitchen practices and employee training procedures that are essential in minimizing FOG discharge to the public sewer. Additional BMP practices are available on the City's website.
https://roseville.ca.us/government/departments/environmental_utilities/at_your_service/sewer/sewer_business_customers

7.4.4 Records and Reporting Requirements

The permittee shall be required to keep all manifests, receipts, and invoices of all cleaning, maintenance, grease removal of/from the grease control device, disposal carrier, and disposal site location for no less than three years. In addition, the permittee shall, upon request, make the manifests, receipts, and invoices available to the director, any inspector, or an enforcement officer. These records may include an on-site logbook of grease interceptor, grease trap or grease control device cleaning and maintenance practices, a description of BMPs being implemented, including employee training, and copies of records and manifest of waste hauling interceptor contents.

7.5 Authority to Inspect

RMC section 14.14.290 grants the Director, an inspector, or an enforcement officer access to all parts of a wastewater generating and disposal facilities for purposes of inspection and sampling during all times the FSE is open and operating. No person shall interfere, resist or refuse entrance to the Director, an inspector, or enforcement officer attempting to inspect the facility. Any violation of this chapter, or the orders, rules, regulations, and permits issued under this chapter, is unlawful and shall be an infraction or misdemeanor as determined by the city attorney

7.6 Hot Spot Identification and PM Schedule

The WWC Division's CMMS maintains all records for maintenance, inspection, and construction work orders for the collection system. Sewer mains subject to blockages from FOG or mains that require higher cleaning frequency are added to the division's Hot Spot List. These mainline segments tend to have more frequent backups due to sluggish flows, poor grades, and sags, which allow solids to settle and FOG to form. The hot spot list has been compiled based on historical data, field crew observations, and CCTV condition assessments. These mainlines are also identified in a GIS layer in the Roseville GeoViewer, so field crews can access them while performing maintenance in the field. The frequency of Hot Spot cleaning ranges from 1-6 months, depending on history and CCTV inspection data. The WWC division strives to reduce and eliminate these hot spot areas during CIP projects or rehabilitation projects performed by City crews. Mainline segments get added to the Hot Spot list based on conditions noted during CCTV inspection and the current frequency of cleaning. Currently, the WWC division has scheduled maintenance projects with 276 mainline segments identified as Hot Spots.

7.7 FOG Source Control Measures

One of the more significant additions to the WWC FOG program was the requirement of a FOG Waste Discharge Permit (WDP). Ordinances in the RMC require that before discharging any wastewater from an FSE into the wastewater system, the enrollee must obtain a WDP. The WWC division performs facility inspections before the FSE can discharge. The terms and condition of the WDP are as follows.

- Grease interceptors/traps are required for food handling facilities unless the Environmental Utilities Director has issued a waiver or variance (RMC 14.14.130).
- An FSE with a waiver or variance that has caused or contributed to a grease-related Sanitary Sewer Overflow (SSO) will be required to install a grease removal device. In the event it is not practical or feasible to install a grease removal device, the FSE will be subjected to an Annual Grease Mitigation Fee
- Grease removal devices shall be designed, constructed, and installed following California Plumbing Code Title 24, Part 5 and the City of Roseville Design and Construction Standards.
- Grease removal devices shall be maintained by pumping the entire contents when grease and sludge have exceeded 25% of the capacity of the interceptor, including removal of entire contents each time the interceptor is pumped. The interceptor shall be pumped out at a minimum of 6-month intervals or more frequently, depending on grease load from FSE. The grease hauler shall be licensed with the California Department of Food and Agriculture.
- The permittee shall retain pumping and maintenance records for a minimum of 3 years. These records shall be submitted quarterly to the City of Roseville and shall be readily available to City personnel inspecting the facility. At a minimum, the following information is required for the reporting records:
    - Date of Service
    - Volume removed

- Grease Hauler Permit number
- FOG disposal destination records

Repeated failure to submit reports on time could result in revocation of the FOG discharge permit.

- The permittee shall implement Best Management Practices (BMPs) in its operation to minimize the discharge of FOG to the sewer system under RMC 14.14.060
- The permittee shall notify the City of Roseville Wastewater Collection Division at 916-746-1890 of any of the following:
  - Sale, lease, or transfer of the operation for which the permit was issued.
  - Change of facility name
  - Changes to grease removal device or remodels, additions, or alterations to FSE greater than $20,000
  - Any SSO or blockage that would contribute to an SSO

7.7.1 FOG Characterization Data Form

The WWC Division identified all the commercial and industrial FOG dischargers within their jurisdictional boundaries during the SSMP preparedness review/audit and listed them in the data collection form. The breakdown of FSEs is summarized in **Table 7-1.**

Table 7-1 FOG Characterization Data

Group	Description	Total
Bakeries	Bakery – Bread/Other	17
Catering	Catering	1
Grocery	Grocery	21
Hotels	Hotels	8
Meat Market	Meat Market	1
Restaurants	Eating – Fast Food	136
	Eating – Sit Down Dining	122
Restaurants Total		**258**
Elder Care Facilities		**12**
Schools		**27**
Hospitals		**3**
Churches		**2**
Bars		**13**
Café		**33**
Deli		**38**
Ice Cream		**15**
Juice Bars		**7**
Movie Theaters		**3**
Grand Total		**465**

THIS PAGE LEFT INTENTIONALLY BLANK

8 System Evaluation and Capacity Assurance Plan

D.13 (viii). The enrollee shall prepare and implement a capital improvement plan (CIP) that provides hydraulic capacity of key sanitary sewer system elements for dry weather peak flows, as well as the appropriate design for storm or wet weather events. The plan must include (a) evaluation of those portions of the sewer system that are experiencing or contributing to SSO discharge caused by hydraulic deficiency, (b) establish appropriate design criteria to undertake the evaluation, (c) The steps needed to establish a short- and long-term CIP to address identified hydraulic deficiencies, including prioritization, alternatives analysis, and schedules. The CIP may include increases in pipe size, inflow, and infiltration (I/I) reduction programs, increases and redundancy in pumping capacity, and storage facilities. The CIP shall include an implementation schedule and funding source, (d) The Enrollee shall develop a schedule of completion dates for all portions of the capital improvement program developed in (a) - (c) above. This schedule shall be reviewed and updated consistent with the SSMP review and update requirements as described in Section D. 14.

8.1 Capacity Evaluation Process

Two hydraulic models were developed and used by the WWC Division (Roseville Model Project and South Placer Wastewater Authority (SPWA) Wastewater Systems Evaluation Project) to identify peak flows in each collection system component (pipe and pump station). In 2007, a hydraulic model of the City's sewer collection system was developed using the H2OMap Sewer modeling platform (2007 Model Development Project), parallel with a trunk sewer model for the combined Roseville, SPMUD, and Placer County systems. However, the City's sewer model was updated in 2017 to reflect existing and future demands within the City and upgrade the modeling platform to the fully dynamic InfoWorks ICM software. In addition, for the current Systems Evaluation Update, the City's model was updated in December 2020 to reflect existing, and future projected flows from Placer County and SPMUD. The report is located at:
https://p1cdn4static.civiclive.com/UserFiles/Servers/Server_7964838/File/Government/Departments/Environmental Utilities/SPWA/Systems Evaluation Report Dec2020 Final_web.pdf
While EU Engineering staff will periodically run the hydraulic model for development, the Principal Engineer and Process Engineer will review and update the system evaluation and capacity assurance plan every ten years, looking for deficiencies and opportunities for improvement.

8.2 Design Criteria

The WWC Division established 10-year 24-hour peak wet weather storm design criteria for the evaluation of existing collection system components and sizing of new collection system in the Roseville Model Project and the SPWA Wastewater Systems Evaluation Project. This included the development of wastewater flow generation factors based on water use records and flow monitoring data in the City of Roseville.

8.3 Capacity Enhancement Measures

The SPWA Wastewater Systems Evaluation included the identification of short and long-term Capital Improvement Projects (CIP) to meet current and future build-out flow projections for trunk sewers larger than 15 inches. Several deficiencies were identified in non-regional facilities which resulted in model-predicted overflows for one or more of the scenarios. Within the regional system, seven areas have been identified that either have deficiencies or could be impacted when upstream deficiencies are relieved.

Proposed improvement projects have been developed, and verified using the hydraulic model, to alleviate surcharging. The projects are summarized in **Table 8-1**. Each proposed project was reviewed on aerial mapping to identify potential design and constructability issues. These improvement projects were developed to sequentially decrease surcharging in downstream sewers.

Table 8-1 Proposed Capacity Improvement Projects

Project	Location	Existing Sizes	Improved Sizes	Description	Estimated Capital Improvement Cost
1	PS 26	.043 mgd firm capacity	1.6 mgd PWWF at Buildout	Increased capacity of PS26 and sewers on Sierra College Blvd. directly downstream of PS26 to relieve Old Auburn Trunk Sewer	$1,606,000
	Sierra College Blvd (Area G)	500 ft of 8-inch 1,900 ft of 10-inch	500 ft of 10-inch (upsize from 8-inch) 900 ft of 12-inch (upsize from 10-inch) 1,000ft of 15-inch (upsize from 10-inch)		
2	Eureka Rd and E. Rsvl. Pkwy	800 ft of 8-inch 1,400 ft of 10-inch	2,200 ft of 15-inch (upsize from 8 or 10-inch) 1,200 ft of new 15-inch	Redirect flows from PS 26 and Sierra College Blvd. down Eureka Rd to relieve Area E	$1,831,000
3	PS 25 (pumps)	2.02 mgd firm capacity	2.6 mgd PWWF at Buildout	Increased Firm capacity of PS 25 to meet Buildout PWWF	$758,000
	PS 25 diversion structure	N/A	New diversion structure and related piping	New weir structure or adjustments to existing structure at PS25	

8.4 Capital Improvement Plan Schedule

The WWC Division Condition Assessment CIP divided the collection system manholes and pipes into 24 groups. The first group of pipes and manholes was inspected starting in 2006 and was included in the Rehabilitation and Replacement plan developed shortly after. The city continuously inspects pipelines using NASSCO's PACP coding standard to develop a list of assets that need rehabilitation. When defects are identified, the city evaluates the risk of failure and assigns a priority ranking to each asset. Prioritizing those assets relies on several factors, including:

- Severity and extent of the defects (PACP Score).
- Maintenance records and SSO occurrences
- Hydraulic capacity needs and projection.
- The estimated remaining useful life of the infrastructure

The goal of the CIP is to develop annual project bundles of approximately $1.5 million. Using the priority rank of the pipe segment, the CIP prioritization includes one additional factor, street repairs. To minimize disruption to newly paved streets, those streets that the City anticipates repairing in the upcoming fiscal year are highest priority.

Condition assessments will be continually performed, and the CIP will be adjusted after each evaluation as follows:

- Emergency repairs will be done immediately and not be included in the CIP.
- Priority will be given to those assets which lie in the street to be paved such that the repair is done before street repaving
- Pipe segments will continue to be rated on the 1 to 5 scale, with 5 being the highest priority and 1s being the lowest. So, a 5 from the previous year's assessment would be prioritized over a 4 from the current assessment.

8.5 Appendix 8 – System Evaluation and Capacity Assurance Documents

Appendix 8 includes the following documents:

8-1 SPWA Regional Wastewater Systems Evaluation Report

THIS PAGE LEFT INTENTIONALLY BLANK

9 Monitoring, Measurement and Program Modification

D.13. (ix) The Enrollee shall (a) Maintain relevant information that can be used to establish and prioritize appropriate SSMP activities, (b) Monitor the implementation and, where appropriate, measure the effectiveness of each element of the SSMP, (c) Assess the success of the preventative maintenance program, (d) Update program elements, as appropriate, based on monitoring or performance evaluations, (e) Identify and illustrate SSO trends, including frequency, location, and volume.

9.1 Metrics to Prioritize SSMP Activities

The WWC Division has developed Key Performance Indicators to assess their progress in maintenance, operations, and sanitary sewer collection system management. The entire KPI worksheet is attached as Appendix 9-1. The metrics were developed to identify successes and challenges in reducing SSO frequency and impacts, improving collection system reliability, and providing capacity in the system to convey peak flows. Establishing specific KPIs for each element allows the WWC Management team to determine the degree of success of each component. Measurable performance indicators, e.g., number of SSO occurrences, length of lines cleaned, spill response times, number of capital projects completed, etc., are used. Additionally, the KPI benchmarking metrics worksheet includes the following categories of metric information:

- System Information
- Financial Information
- Sewer Maintenance
- Performance Measures

The City tracks detailed information about SSOs. While the number of SSOs has fluctuated up and down over the past four years, the average volume per SSO has decreased. This metric demonstrates the City's proactive efforts to contain and control SSOs and mitigate them efficiently. In addition, the City consistently shows a significantly lower SSO rate per 100 miles of pipe versus the State and Regional averages. These measurements indicate a successful sewer management program, employee training, emergency response, and a dedication to mitigating the effects of SSOs. **Table 9-1** summarizes a few datapoints of the City's SSO data and benchmarking. **Table 9-2** is a 10-year comparison of SSO rates for the City of Roseville, State of California and Region 5.

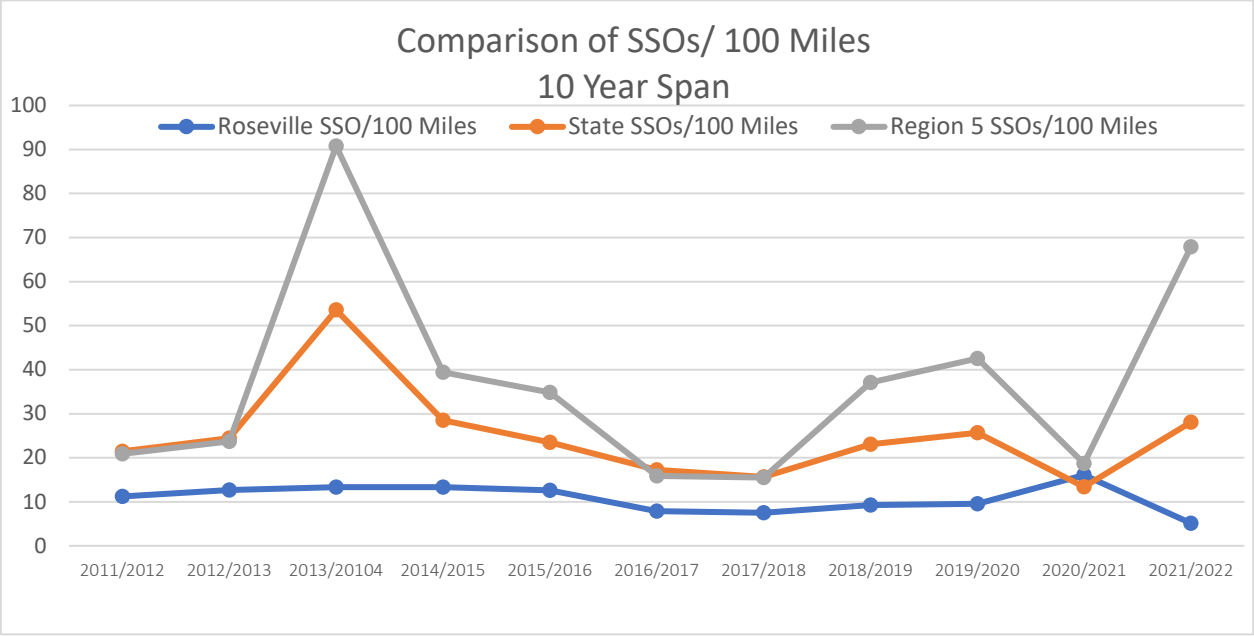


Table 9-1 Historical Summary of Sanitary Sewer Overflows

Year	*Roseville Total SSOs*	*Roseville SSOs Rate/100 Miles*	State SSOs Rate/100 Miles	Region 5 SSOs Rate/100 Miles	*Roseville Total Spill Volume, Gallons*	*Roseville Net Volume * Spill/1000 Capita*	State Net Volume* Spill/1000 Capita	Region 5 Net Volume* Spill/1000 Capita
2011/12	***35***	***11.25***	21.46	20.87	***948***	***.03***	1.89	4.53

Table 9-2, 10 Year SSO Comparison

9.2 Monitor and Measure Element Effectiveness

The WWC Division implements all elements of this SSMP and has been effective in minimizing SSOs and controlling the volume of those SSOs when they occur. The WWC Division evaluates the performance of its wastewater collection system at least annually using the developed KPIs. The City will then initiate changes to this SSMP and the related programs based on the results of the KPI evaluation. In addition, the Review of the SSMP and its elements is an assigned annual training for all WWC employees. A summary of the tracked KPIs and the relation to the SSMP elements are in Table 9-3.

Table 9-3 KPI Summarization

SSMP Element	Purpose	Performance Indicator
Goals	Sets Priorities for Division	Goals are listed in Chapter 1 of SSMP
Organization	Documentation of Chain of Command	Continually update Chain of Command Org. chart as changes occur
Legal Authority	Ensures Ordinances Are Upheld Protecting Integrity of the System	Roseville Municipal Code
Operations and Maintenance	Reduce & Eliminate SSOs through PM, CM and Emergency Response	▪ Manhole inspections performed ▪ Miles of sewer mains flushed per year ▪ Average cost of hydro cleaning ▪ Miles of sewer main and laterals CCTV per year ▪ Sewer cleanouts installed ▪ Sewer laterals rehabilitated ▪ Total miles rehabbed or replaced- mains and laterals
Design and Construction Standards	Ensures Infrastructure Is Designed, Installed and Tested Properly	▪ %Of new sewer main inspected vs. accepted ▪ % of new lateral inspected vs. accepted
Overflow Emergency Response	Provide Swift Response, Minimize Effects of an SSO, And to Meet Regulatory Requirements	▪ Average response time to SSO ▪ Average SSO duration mains and laterals
Fats, Oils and Grease	Ensure Illicit Discharges of FOG Aren't Entering the Wastewater System, Reduces FOG Blockages And Overflows	▪ Public outreach events per year ▪ Gallons of FOG curbside pickup ▪ % of FSEs with grease removal device ▪ FSE FOG inspections per year ▪ Number of SSOs & volume spilled from hot spots
System Evaluation & Capacity Assurance	Evaluate and Ensure System Capacity is Sufficient.	Hydraulic Model developed and run for new development and special projects,
Monitoring, Measurement & Program Modifications	Evaluate The Effectiveness of The SSMP and the Maintenance Activities Necessary to be Compliant	▪ Total SSOs and volume spilled (mains and laterals) ▪ % Of total volume recovered ▪ Total number of wet-weather SSOs ▪ Repeat SSOs within two years ▪ SSOs per 100 miles of pipe/year ▪ Number of Category 1 SSOs

		▪ % of SSOs caused by rags, roots, debris and FOG ▪ # of Lift station failures
Program Audits	Measures SSMP Effectiveness and Necessary Changes	Audits are performed on schedule, by an outside independent Engineering Firm
Communication Plan	Communication With the Public and Satellite Agencies on SSMP Performance	Regional partner meetings, City Website.

9.3 SSMP Performance Monitoring and Update Process

The field crews and supervisors regularly communicate regarding issues found in the field. Management uses this information to evaluate the success of the preventative maintenance program and the frequency it is performed. This strategy ensures field crews have buy-in. They continually check their effectiveness and identify potential areas for improvement in their performance. Their suggestions are essential for the City's success and meeting the SSMP goals.

9.4 SSO Trends

The KPI Benchmarking worksheet includes sixty-three data points to track preventative maintenance activities, enabling management staff to develop SSO trends. Based on these trends, Supervisors will adjust the preventative maintenance programs to address trends that aren't in alignment with the SSMP goals. The KPI worksheet is populated using data from completed work orders stored in the City's CMMS, Maximo. Assigned personnel complete data entry on a semi-annual basis minimum to keep the KPI sheet updated. Table 9-4 summarizes a few points of SSO benchmarking data for the last five years.

Table 9-4 SSO Statistics 2016-2021

9.5 Appendix 9- Monitoring, Measurement & Modification

Appendix 9 includes the following documents:

9-1 KPI Benchmarking Metrics Sheet

9-2 SSO Historical Summary

THIS PAGE LEFT INTENTIONALLY BLANK

10 Program Audit and Annual Report

D.13. (x) As part of the SSMP, the Enrollee shall conduct periodic internal audits, appropriate to the size of the system and the number of SSOs. At a minimum, these audits must occur every two years and a report must be prepared and kept on file. This audit shall focus on evaluating the effectiveness of the SSMP and the Enrollee's compliance with the SSMP requirements identified in this subsection (D.13.), including identification of any deficiencies in the SSMP and steps to correct them.

10.1 Audit Process Summary

The City audits and updates its SSMP on a biennial basis. Updates may occur more frequently if the Superintendent discovers modifications or regulations changes between audits. The purpose of the audit is to evaluate the effectiveness of the SSMP, primarily through evaluating system metrics and performance measures. In addition, the audit evaluates the City's compliance with the SSMP requirements, particularly the amended MRP requirements that were formalized in September 2013.

The City has invested in the resources of a local engineering firm to perform the biennial audit for the last three audit cycles. WaterWorks Engineers administers the audit much like an RWQCB audit would be. The process starts with gathering information utilizing the Water Boards Pre-Inspection Questionnaire. This Audit Process has proven successful for the City, as significant changes have been made based on audit findings. The City will continue with this process for future audits.

10.2 SSMP Program Modifications

The WWC Division will monitor and review sewer performance metrics monthly and the status of each element of the SSMP on an annual basis. Formal SSMP audits will be performed every two years following the adoption of this SSMP. The SSMP is considered a "Living Document," therefore the Wastewater Superintendent or Process Engineer (LROs) will initiate or direct corrective actions when SSMP deficiencies are identified between audits.

The primary responsibility for proposing and initiating modifications to the SSMP will be that of the WWC Supervisors or from input from WWC field crews. Review and approval of any amendment to the SSMP, including whether it is a major or minor change, will be the responsibility of the WWC Superintendent.

10.3 Appendix 10 - SSMP Audit Documents

Appendix 10 includes the following audit forms and reports for the previous five audits.

10-1 SSMP Internal Audit FY 10-11
10-2 SSMP Audit FY 11/12-FY 12/13
10-3 SSMP Audit FY 13/14-FY 14/15
10-4 SSMP Audit FY 15/16-FY 17/18
10-5 SSMP Audit FY 18/19-FY 20/21

THIS PAGE LEFT INTENTIONALLY BLANK

11 Communication Program

D.13. (xi) The Enrollee shall communicate on a regular basis with the public on the development, implementation, and performance of its SSMP. The communication system shall provide the public the opportunity to provide input to the Enrollee as the program is developed and implemented. The Enrollee shall also create a plan of communication with systems that are tributary and/or satellite to the Enrollee's sanitary sewer system.

11.1 Purpose of the Communication Program

The purpose of the Communication Program is to describe how the City will inform, educate and engage with its stakeholders, regional partners, and the public on the development, implementation, and performance of the SSMP. Another aspect of this program is to increase public awareness of services provided by the City. Raising awareness of the significance of the sewer system and the impacts businesses and residents can make on the system is of utmost importance.

11.2 SSMP Development and Implementation

There were several opportunities for public comment during the development and implementation process at City Council meetings. In addition, the SSMP has been certified by the City Council on three occasions, 2009, 2014, and again in 2019. Since certification by the City Council, the division's SSMP has been audited on five occasions. This effort on re-writing the SSMP in its entirety will be on the City Council agenda for approval. Once approved, the document is available for download and review on the City's website at: https://www.roseville.ca.us/sewer

11.3 Public Outreach

The City's website is the central hub of communication for the businesses and residents of Roseville. The division's website offers many links to assist the public with any sewer issues, explain the importance of the City's wastewater collection system and summarize all the provided services. The division's motto is to "Call us First" with all sewer problems. Our emergency response service van is wrapped with the Call Us First motto. Since the City owns and maintains the lower lateral from the property line to the City main, calling us first to investigate a potential blockage may save residents from an unnecessary plumbing bill. Environmental Utilities in partnership with Roseville electric publishes a monthly print newsletter, Utility News, which goes out monthly to all customers who receive a printed bill. This newsletter includes information about all aspects of utilities and how customers can reduce impacts to infrastructure. Additionally, customers get an electronic version of similar stories sent to their emails, adding to the number of messaging opportunities the city provides. The WWC Division is expanding the use of the website

and social media to deliver proactive and deliberate messaging on WDR/SSMP requirements and program status to residential, commercial, industrial, and public stakeholders.

11.3.1 Live Sewer Smart

The City belongs to a multi-jurisdictional group named Live Sewer Smart. The Live Sewer Smart website contains information for residents of Roseville and the surrounding communities to educate and encourage proper ways to reduce impacts on the sewer system. For example, the website provides residents with timely information regarding wipes in the pipes, how to properly dispose of FOG, and contact information for all agencies belonging to the program, should they have questions. In addition, there are several links to videos presenting more details that affect residential and commercial sewer systems. Live Sewer Smart can be located at: https://livesewersmart.com/

11.4 Tributary/Satellite Communication

The WWC Division routinely communicates with their satellite partners and often supports them with mutual aid sharing in terms of equipment and resources. The City has three formal agreements with tributary and satellite systems in place and currently working on a mutual aide agreement with the County of Placer Wastewater Division. The listed agreements below are included as appendices in Chapter 3:

- The Joint Exercise of Powers Agreement for the SPWA – Appendix 3-2
- The agreement regarding the operation of and use of the South Placer Regional Wastewater Facilities – Appendix 3-3.
- The Contract and Operating Agreement with Sacramento Area Sewer District and Sacramento Regional County Sanitation District – Appendix 3-4

Project Title: Sewer System Management Plan Recertification

Project Location(s): City of Roseville, CA (Citywide)

Project Description: The California State Water Resources Control Board (SWRCB) issued a Statewide General Waste Discharge Requirement (WDR), Order No. 2006-0003-DWQ in May 2006. Under the WDR, all public entities that own or operate sanitary sewer systems greater than one mile in length that collect or convey wastewater must prepare a certified SSMP. The intent of the SSMP is to facilitate proper funding, operation and management of the sanitary sewer system in order to reduce sanitary sewer overflows, their impacts to the State's water bodies, and to protect public health.

Provisions in the WDR require periodic audits. Recertification of the SSMP must occur every five years or if significant changes have been made to the SSMP. The Roseville City Council adopted and certified the original SSMP in 2007, and the last recertification occurred in October 2022.

On June 6, 2023, the SWRCB issued an updated WDR, Order No. 2022-0103-DWQ. This order replaced the old order and provided updated guidance and regulations related to owning and operating a sanitary sewer system designed to convey sewage. This updated guidance and regulation impacted the City's SSMP. The City underwent a required periodic audit of the current SSMP by an outside consultant, which resulted in recommendations for changes that have been incorporated into the updated SSMP. The changes included terminology changes, changes to the City's sewer emergency response plan, naming and classification of spills for reporting purposes, as well as other minor edits and clean up items.

Public Agency Approving Project: Roseville City Council

Agency/Individual Carrying Out Project: City of Roseville Environmental Utilities Department

Reason why this Project is Exempt: The recertification of the SSMP qualifies for a Class 8 Categorical Exemptions as described in Section 15308 of the California Environmental Quality Act (CEQA) guidelines which states:

> "Class 8 consists of….actions taken by agencies to assure the maintenance, restoration, enhancement, or protection of the environment where the regulatory process involves procedures for protection of the environment.

The project involves the recertification of the SSMP based on a periodic audit of existing sewer facilities and updating the plan based on the new Statewide General WDR issued by SWRCB. No expansion of treatment capacity is proposed; and no environmental resources will be disturbed. Consequently, the Class 8 Categorical Exemption applies.

Lead Agency Contact Person: Tracie Mueller, Roseville Environmental Utilities Department (746-1812).

COUNCIL COMMUNICATION

CC #: 3842
File #: 1002-04

Title: Solid Waste Recycling Site Lot 15 - Grant Deed
Contact: David Samuelson 916-746-1708 dsamuelson@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.14.

RECOMMENDATION TO COUNCIL

It is recommended that the City Council take the following action:

1. Adopt the attached resolution accepting the Grant Deed of Lot 15 for the purpose of a Solid Waste Recycling Site as shown on the Final Map of Sierra Vista - Federico Large Lot Subdivision, Subdivision No. PL 15-0192, recorded on February 16, 2018, in Book EE of Maps, Page 6, in the Office of the County Recorder of Placer County, as described in attached Exhibit A and depicted on Exhibit B.

2. Authorize the City Manager to execute any and all other documents as may be necessary to effect the recordation and enforcement of this acceptance.

3. Authorize the City Clerk or her designee to record the Resolution of Acceptance at the Recorder's Office of Placer County.

BACKGROUND

The Sierra Vista Specific Plan (SVSP) was adopted by the City in May 2010. As part of the development agreement, the City negotiated for a parcel to be dedicated to the City for a solid waste recycling site.

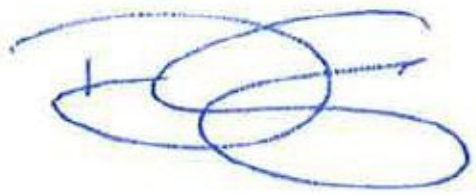
Since most of the residential homes in the SVSP are constructed, or are under construction, staff has determined that it would benefit the City to take ownership of the Sierra Vista Solid Waste Recycling property thereby providing residents within Sierra Vista a nearby location to dispose of their recyclable materials. Therefore, staff recommends that the City accept the Grant Deed of lot 15, the future site of the SVSP Solid Waste Recycling Site.

FISCAL IMPACT

There is no fiscal impact to the City's General Fund associated with this approval.

ENVIRONMENTAL REVIEW

Use of the property as a recycling center was considered in the Sierra Vista Specific Plan EIR (certified May 5, 2010, SCH No. 2008032115), and identified as Parcel FD-62 in the in the Sierra Vista Specific Plan. As discussed in the Specific Plan EIR, the EIR provides environmental analyses of community infrastructure and facilities, including the recycling center, to the extent applicable. Transfer of the property is consistent with the Sierra Vista Specific Plan EIR. Because the project is consistent with the Sierra Vista Specific Plan EIR and Specific Plan, no new effects would be expected to occur as the result of transfer of the property to City ownership, and all applicable mitigation measures from the Sierra Vista Specific Plan EIR will be implemented during the design and construction of the future recycling center. Because the proposed project meets the requirements identified in Section 15183 of the State CEQA Guidelines, no additional CEQA review is required at this time.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal E - Deliver exceptional city services
Goal F – Invest in well-planned infrastructure and growth

Respectfully Submitted,

David Samuelson, Senior Engineer

Sean Bigley, Environmental Utilities Director

_____
Dominick Casey, City Manager

Resolution 25-098

Grant Deed

Vicinity Map

RESOLUTION NO. 25-098

ACCEPTING A GRANT DEED AND AUTHORIZING THE CITY MANAGER TO EXECUTE THE DEED AND ANY OTHER DOCUMENTS REQUIRED TO EFFECTUATE THE RECORDATION AND ENFORCEMENT OF THIS ACCEPTANCE

WHEREAS, the Sierra Vista Specific Plan (SVSP) was adopted by the City in May 2010, and as part of the development agreement, the City negotiated for a parcel to be dedicated to the City for a solid waste recycling site; and

WHEREAS, since most of the residential homes in the SVSP are constructed, or are under construction, Staff has determined that it would benefit the City to take ownership of the Sierra Vista Solid Waste Recycling property thereby providing residents within Sierra Vista a nearby location to dispose of their recyclable materials; and

WHEREAS, staff recommends that the City accept the Grant Deed of lot 15 as shown on the Final Map of Sierra Vista – Federico Large Lot Subdivision, Subdivision No. PL 15-0192, recorded on February 16, 2018, in Book EE of Maps, Page 6, in the Office of the County Recorder of Placer County, as described in Exhibit A and depicted on Exhibit B of the Grant Deed.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Roseville that the Grant Deed for lot 15 as shown on the Final Map of Sierra Vista – Federico Large Lot Subdivision, Subdivision No. PL 15-0192, recorded on February 16, 2018, in Book EE of Maps, Page 6, in the Office of the County Recorder of Placer County, is hereby accepted.

BE IT FURTHER RESOLVED that the City Manager is authorized to execute the Grant Deed and any other documents required to effectuate the recordation and enforcement of this acceptance.

BE IT FURTHER RESOLVED that the City Clerk is hereby directed to record the Grant Deed at the Placer County Recorder's Office.

COUNCIL COMMUNICATION

CC #: 3835
File #: 0704-01

Title:	On-Call Qualified Stormwater Pollution Prevention Plan Developer and Qualified Stormwater Pollution Prevention Plan Practitioner Services – Professional Services Agreement Amendment
Contact:	Heather Buck 916-774-5254 hcbuck@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.15.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution to approve the Second Amendment to the Professional Services Agreement for Qualified Stormwater Pollution Prevention Plan Developer and Qualified Stormwater Pollution Prevention Plan Practitioner (QSP/QSD) Services with HydroCompliance, authorize the City Manager to execute it on behalf of the City of Roseville, and increase the annual authorization for the final optional renewal from $75,000 to $150,000.

BACKGROUND

The Parks, Recreation & Libraries Department is projecting construction of many capital improvement projects, including new and major rehabilitation projects. QSP/QSD services are required for these projects.

In February 2023, the City issued a Request for Qualifications/Proposals seeking experienced professional firms to submit to the Parks, Recreation & Libraries Department (PRL) for on-call professional services. A contract was awarded to HydroCompliance that included a one-year base term with the option of two additional one-year extensions.

The recommended amendment is an increase in the annual authorization from $75,000 to $150,000 for the first extension of the contract with HydroCompliance which ends June 30, 2025. Additionally, staff is requesting an increase to the annual authorization from $75,000 to $150,000 for the final optional renewal with HydroCompliance. The reason for the increase in authorization is because PRL has several projects anticipated to begin construction this spring prior to the final optional year renewal.

Consistent with the original approval of this contract, the Council authorized the City Manager to approve the one-year extensions based on approved budgets. This amendment to increase the spending authority amount does not impact the contract extension approval process.

FISCAL IMPACT

Funding for services shall be provided through capital improvement projects as approved during the fiscal year budgets, an approved professional services budget, or developer reimbursements. Project specific quotes will be obtained prior to the start of any work. The base year contract was not to exceed $75,000. With the increase in authorization for the first optional year extension and the final optional year extension of $150,000 per year, the updated total contract will be not to exceed $375,000.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Approval of the professional services agreement meets the above criteria and is not subject to CEQA. No additional environmental review is required.

Resolution 25-093

HydroCompliance Second Amendment

RESOLUTION NO. 25-093

APPROVING A SECOND AMENDMENT TO ON-CALL PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND HYDROCOMPLIANCE, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a second amendment to on-call professional services agreement to provide on-call qualified stormwater pollution prevention plan developer and qualified stormwater pollution prevention plan practitioner services, by and between the City of Roseville and HydroCompliance, has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said second amendment to on-call agreement is hereby approved and the City Manager is authorized to execute it on behalf of the City of Roseville.

PASSED AND ADOPTED by the Council of the City of Roseville this ___ day of _____, 20__, by the following vote on roll call:

SECOND AMENDMENT TO

ON-CALL PROFESSIONAL SERVICES AGREEMENT

On-Call Qualified SWPP Developer and Qualified SWPPP Practitioner Services

THIS SECOND AMENDMENT TO AGREEMENT is made and entered into this ___ day of _____, 20__, by and between the City of Roseville, a municipal corporation ("CITY"), and HydroCompliance, a California corporation ("CONSULTANT"); and

W I T N E S S E T H:

WHEREAS, CITY and CONSULTANT previously entered into an On-Call Professional Services Agreement dated June 7, 2023 and amended May 15, 2024 ("Agreement") regarding on-call qualified stormwater pollution prevention plan developer (QSD) and qualified stormwater pollution prevention plan practitioner (QSP) services ("Project"); and

WHEREAS, CITY wishes to increase the total compensation to the first optional renewal year of the Agreement, with a term ending June 30, 2025, in order to compensate CONSULTANT for additional services associated with the Project.

NOW, THEREFORE, the parties agree as follows:

1. CONSULTANT shall provide additional services in consideration of this Second Amendment to Agreement.

2. Section 2 of the Agreement is amended by adding an additional paragraph to read as follows:

"CITY shall pay seventy-five thousand dollars ($75,000), in consideration of the additional services to the Second Amendment to Agreement."

3. Exhibit "B" to the Agreement is hereby replaced with Exhibit "B" to this Second Amendment to Agreement, attached hereto and incorporated herein by reference, which reflects updated rates for the term of the Second Amendment to Agreement.

4. The Agreement is further amended by adding an additional paragraph regarding compliance with the Levine Act:

"25. The Levine Act Disclosure. The Levine Act (Govt. Code, Section 84308) requires a Party (and its agent(s), if any) to a Proceeding before the City of Roseville that involves any action or consideration related to their contract, license, permit, or other entitlement for use, to disclose any campaign contributions made to CITY elected or appointed officers totaling more than $250 within the twelve (12) months prior to the CITY decision and while a proceeding is pending, and includes certain prohibitions on contribution activity thereafter. If applicable campaign contributions have been made by CONSULTANT and/or its agent(s), CONSULTANT is responsible for compliance, including for its disclosure obligations, if any, as further described at https://www.roseville.ca.us/government/departments/city_clerk/transparency/levine_act."

5. All other provisions of the Agreement shall remain unchanged and in full force and effect.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this _____ Amendment to Agreement in duplicate by its City Manager

and attested to by its City Clerk under the authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ___ day of _____, 20__, and CONSULTANT has caused this Second Amendment to Agreement to be executed.

COUNCIL COMMUNICATION

CC #: 3837
File #: 0800-02

Title:	Pleasant Grove Wastewater Treatment Plant Influent Pump Station Rehabilitation Project – Notice of Completion
Contact:	Jeremy Snyder 916-413-9236 jsnyder@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.16.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council accept the Pleasant Grove Wastewater Treatment Plant Influent Pump Station Rehabilitation Project as complete and authorize the Director of Environmental Utilities to execute the Notice of Completion.

BACKGROUND

The Pleasant Grove Wastewater Treatment Plant (PGWWTP) Influent Pump Station Rehabilitation Project was initiated to replace end-of-life electrical equipment and pumps. The variable frequency drives (VFDs) that were replaced were no longer supported and spare parts are unavailable. The original equipment manufacturer that would have provided service and/or spare parts, no longer exists. The pumps were requiring more significant, and costly, repairs and had become less reliable.

On August 16, 2023, City Council approved and awarded a Design-Build agreement to Syblon Reid for the Project in the amount of $3,812,200. Due to scope changes, initiated by wastewater plant operations to add bypass piping and valves at the Influent Pump Station for operational flexibility in times of extreme wet weather, a budget adjustment was approved by City Council on June 19, 2024. The budget adjustment increased the agreement by $359,000 making the total contract amount $4,171,200. In addition, $366,000 was added to the project budget and approved by the City Council authorizing the Environmental Utilities Director or his designee to approve and pay for contract change orders for the project that could increase the contract amount by no more than 8.75%, up to $4,537,200.

Syblon Reid received Notice to Proceed on August 22, 2023. The City's Environmental Utilities Department completed final inspection of the Project on November 15, 2024, and found the work to be completed in accordance with the Contract Documents. Therefore, the Project is now ready for final acceptance and approval of the Notice of Completion.

FISCAL IMPACT

A Design-Build Engineering/Construction Contract was awarded to Syblon Reid in the amount of $3,812,200. City Council also approved a budget adjustment in the amount of $359,000 for new contract amount of $4,171,200. City Council also approved an allowance to pay contract change orders of up to 8.75% of the value of the contract ($366,000). There was a total of two (2) negotiated change orders during construction for a total cost of $32,830.17. The final contract value is $4,204,030.17.

ENVIRONMENTAL REVIEW

Implementation of the PGWWTP Influent Pump Station Rehabilitation Project was previously evaluated in the original Council Communication for the Design-Build Agreement and it was determined to involve minor alterations of an existing facility. This activity was deemed categorically exempt from the California Environmental Quality Act (CEQA), as a Class 1 Exemption (State CEQA Guidelines Section 15301) and as a Class 2 Exemption (State CEQA Guidelines Section 15302). The Exemption was prepared and no further CEQA action is required for the approval of this Notice of Completion.

2954 Richardson Drive
Auburn, CA 95603

From: City of Roseville
Development Services Dept.
311 Vernon Street
Roseville, CA 95678

Project Title: Pleasant Grove Wastewater Treatment Plant Influent Pump Station Rehabilitation – New Design-Build Contract and Request for Budget Adjustment

Project Location(s): 5051 Westpark Drive, Roseville, CA 95747. Assessor's Parcel Number 017-101-025-000.

Project Description: The Environmental Utilities Department (EU) seeks to execute a design-build agreement to provide Variable Frequency Drives (VFD's) and submersible influent pump replacements, testing, communications/networking, programming and SCADA integration, and engineering for Pleasant Grove Wastewater Treatment Plant influent pump station rehabilitation. The project was initiated to replace end-of-life electrical equipment and pumps. The existing VFD's are no longer supported and spare parts are unavailable. The original equipment manufacturer does not exist on this capacity presently. The pumps are needing to be rebuilt more often, have become less reliable, and the rebuild costs, due to the age of the equipment, has increased significantly. The project would increase reliability of the pumps while reducing operating costs, and it would not result in an expansion of use.

Public Agency Approving Project: Roseville City Council

Agency/Individual Carrying Out Project: City of Roseville Environmental Utilities Department

Reason why this Project is Exempt: The project qualifies for a Class 1 and Class 2 Categorical Exemption as described in Section 15301 and Section 15302 of the California Environmental Quality Act (CEQA) guidelines which states:

> "Class 1 (Existing Facilities) consists of … minor alteration of existing public or private structures, facilities, mechanical equipment, or topographical features, involving negligible or no expansion of use; and
> "Class 2 consists of the…replacement or reconstruction of existing…facilities…including...replacement or reconstruction of existing utility systems involving negligible or no expansion of capacity."

The project consists of replacing the VFDs and submersible influent pumps, testing, communications/networking, programming and SCADA integration, and engineering Pleasant Grove Wastewater Treatment Plant. The project would not result in expansion of use. Consequently, the Class 1 and Class 2 Categorical Exemptions apply.

File #: 0800-03

Title: Assembly Bill 2227 Energy Efficiency Targets
Contact: Rachel Marmorstein 916-774-5613 rmarmorstein@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.17.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution approving Roseville Electric Utility's energy efficiency targets for the next 10-year period as required by California Assembly Bill (AB) 2227 and authorize staff to submit these energy efficiency targets to the California Energy Commission pursuant to California Public Utilities Code section 9505(c).

BACKGROUND

Since 2006, AB 2021 and AB 2227 have required publicly owned utilities, including Roseville Electric Utility, to identify all potentially achievable, cost effective, reliable, and feasible energy efficiency savings opportunities and establish 10-year targets for energy efficiency every four years. To comply with AB 2021 and AB 2227, Roseville Electric Utility, along with other members of the California Municipal Utilities Association, worked together to develop energy efficiency targets for the publicly owned utilities in California and report these targeted savings numbers to the California Energy Commission.

As required by California legislation, Roseville Electric Utility funds various voluntary customer energy efficiency programs, demand side management programs, research, development and demonstration projects, along with programs for low-income customers. These programs are an important element in helping customers reduce their electricity costs and are key to helping the utility achieve its energy efficiency targets and related regulatory requirements.

ANNUAL ENERGY EFFICIENCY GOALS 2026-2035

The recommended 10 year targets for 2026-2035 for Roseville Electric Utility are shown in the following table:

Year	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035
Energy (MWh)	12,743	11,897	12,128	11,978	12,001	12,428	12,764	13,191	13,592	13,876

The average energy efficiency savings projected over the next 10-year period are 12,660 megawatt hours annually. This is an approximate 28% increase over the previously approved targets developed in 2021.

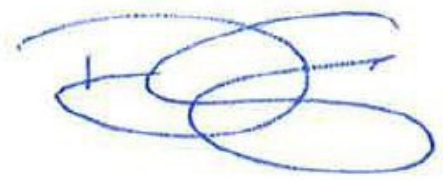
Roseville Electric Utility's average program performance for the past four years was 16,713 megawatt hours, exceeding the previous average target of 9,879 megawatt hours. The results were primarily driven by the expansion of the residential home energy reports behavior program, commercial LED lighting and commercial custom programs, as well as residential electrification programs for both retrofit and new home construction.

FISCAL IMPACT

There is no financial impact from the approval of the 10-year energy efficiency targets.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Approval of the AB 2227 energy efficiency targets meets the above criteria and is not subject to CEQA. No additional environmental review is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Title: 201 Pacific Street, Second Floor - Lease Agreement
Contact: Robert Cline 916-746-1172 racline@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.18.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution authorizing the City Manager to execute a three (3) year Lease Agreement with Ten Twenty 3D for the second floor of 201 Pacific Street.

BACKGROUND

The Roseville Train Station, owned by the City of Roseville (City), is located within the Downtown Roseville Specific Plan (DTSP) at 201 Pacific Street, in Historic Old Town. The two-story building was constructed in 1995 with a ground floor lobby space, public restroom, office and storage space. The second floor is approximately 803 square feet and includes three rooms accessed by an interior stairwell and elevator. Over the years, the space has been leased to various entities including a design firm, probation office, a training center, and a 3D printing shop.

On August 2, 2023, City Council approved a Lease Agreement (Agreement) between the City and Fathom Cellars LLC, dba YESTR Toys. Due to unforeseen circumstances, on September 9, 2024, Fathom Cellars LLC submitted a written request to the City for the Agreement to be assigned to Ten Twenty-Three LLC, dba Ten Twenty 3D. Ten Twenty 3D is a local small business that operates a 3D printing operation, consistent to the use of Fathom Cellar LLC. The terms of the Agreement allowed for the City Manager to provide written consent for the assignment of the lease under Section 14.1, Consent for Assignment and Subleases. On September 30, 2024, the City Manager approved an assignment of the Agreement to Ten Twenty 3D to be effective October 1, 2024.

The lease assignment is temporary and upon approval of the assignment, Ten Twenty 3D agreed to enter into a Lease Agreement with the City. The proposed Agreement sets forth the terms and conditions under which Ten Twenty 3D will occupy the second floor of the Train Station. The Lease Agreement contains provisions that include the following:

- Term - The initial lease term shall be for three (3) years with an option to extend for an additional three (3) years.
- Rent - Rent is payable monthly at an initial rate of $0.75 per square foot ($602 total monthly rent), with an annual increase of $0.05 per square foot, with year three rent at $0.85 ($683

total monthly rent). The rent is comparable to commercial rents in similar facilities around the area.

- Deposit - Ten Twenty 3D paid its deposit equating to two months' rent ($1,512) at the time the Agreement was assigned.
- Utilities - Tenant shall pay for electric and gas service to the second floor and any optional services such as internet and cable. Landlord shall pay for water, sewer, and refuse.
- Responsibility and liability for property -
    - Landlord is responsible for maintenance, repair and rehabilitation of the building, including heating, ventilation and air conditioning systems, exterior shell roof, exterior lighting, landscaping, parking lot, refuse service, and building alarm system.
    - Tenant is responsible for all tenant furnishings, equipment and specified utilities for the leased space. The City shall not be liable for any loss, damage, destruction or theft of any exhibits, furnishings or other personal property owned or lent to tenant. Tenant shall be liable for any damage to the building or premises resulting from the acts or omissions of tenant, its authorized representatives, sublessees or any of their invitees.
- Lease buy-out option and termination - Tenant shall give City a 60-day notice if requesting a lease buy-out option. In the event that tenant terminates this Lease prior to the end of the term, tenant (a) agrees to forfeit its security deposit and (b) shall make a payment to landlord equivalent to two (2) months of rent commensurate to the rental rate at year five (5). This agreement may be terminated without cause at any time upon giving 60 days advance written notice.
- Common Areas - Tenant shall have access to common areas including the shared restrooms and lobby on the first floor, stairwell, and elevator.
- Parking - Tenant and customers shall have access to public parking areas adjacent to the train station and at the Park-n-Ride lot at Pacific and Church Street and shall follow all posted parking limits.

Ten Twenty 3D has occupied the second floor of the train station since October 1, 2024, and has remained in good standing with the City. Approval of the proposed Lease Agreement will formalize the agreement and terms of understanding set forth in the lease assignment.

FISCAL IMPACT

Execution of the Lease Agreement would result in a positive fiscal impact of $7,224 in rent revenue for the General Fund in the first year, $7,704 in year two, and $8,196 in year three. In addition to annual rent, the tenant will pay property tax on the leased space.

ENVIRONMENTAL REVIEW

The proposed project involves the leasing of an existing facility. This activity is categorically exempt from CEQA as a Class 1 Exemption (State CEQA Guidelines Section 15301). The Exemption has been prepared and no further CEQA action is required.

CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

LEASE AGREEMENT
Location: 201 Pacific Street, Suite 200

THIS LEASE AGREEMENT ("Agreement" or "Lease") is made and entered into this _____day of_____, 2025 ("Commencement Date"), by and between the City of Roseville, a municipal corporation ("LANDLORD"), and Ten Twenty-Three LLC, dba Ten Twenty 3D, California limited liability company ("TENANT"). LANDLORD and TENANT may be referred to herein collectively as the "Parties," or each individually as a "Party."

RECITALS

WHEREAS, LANDLORD owns a building known as the Roseville Intermodal/Railroad Station, located at 201 Pacific Street, Roseville, California (APN 012-120-002) (the "Building"); and

WHEREAS, the Parties desire that TENANT lease from LANDLORD approximately 803 square feet on the second floor of the Building, commonly referred to as 201 Pacific Street, Suite 200 (the "Premises"); and

WHEREAS, the Parties intend to enter into a lease agreement for the Premises pursuant to the terms and conditions stated herein.

NOW, THEREFORE, the Parties agree as follows:

ARTICLE I: LEASE OF PREMISES

1.1. Lease. LANDLORD hereby grants to TENANT the exclusive right to utilize the Premises, subject to the terms and conditions of this Lease. In addition to TENANT's rights to use and occupy the Premises as hereinafter specified, TENANT shall have non-exclusive rights to any utility raceways or conduits of the Building contained within the Premises, and shall have limited rights to the interior building common areas or exterior walls of the Building.

1.2. Term. The initial term of this Lease shall be thirty-six (36) months and shall commence upon the Commencement Date and terminate at the end of thirty-six (36) months (the "Term"). Upon mutual agreement of the Parties and as long as TENANT is not in default or breach of any of the terms of this Lease, TENANT has the option to extend the initial term of this Lease for an additional period of up to thirty-six (36) months. To exercise this optional term, at least six (6) months prior to the end of the initial thirty-six (36) month Term, TENANT shall notify LANDLORD in writing of its desire to extend the term of this Lease for an additional period of up to thirty-six (36) months. In the event this optional extension of the term is exercised, TENANT agrees that an annual rental rate escalation of $.05/SF shall apply for each year beyond the initial Term of thirty-six (36) months.

1.3 Lease Buy-out. LANDLORD agrees to provide TENANT with an option to terminate its lease before the end of the Term, contingent upon TENANT providing a sixty (60) day written notice to LANDLORD. In the event that TENANT terminates this Lease prior to the end of the Term, TENANT (a) agrees to forfeit its security deposit noted below in Section 2.2 and (b) shall make a payment to LANDLORD in the amount of two (2) months of the current rental rate outlined in Section 2.1.

1.4 First Right of Refusal – First Floor Space. In the event that the first floor of the Building becomes available for lease during the Term of this Lease, TENANT shall have a one-time First Right of Refusal to lease such space. Upon receipt of notice to TENANT by LANDLORD that the space is available for lease, which notice shall also set forth the current market rate for such space, TENANT shall have three (3) business days to respond in writing to LANDLORD if TENANT desires to lease the additional space at that current market rate. If LANDLORD does not receive such written notice from TENANT of TENANT's acceptance to lease the entirety of the offered space at the current market rate, the First Right of Refusal will

thereafter become null and void. This First Right of Refusal shall be subordinate to any previously granted rights to others to lease the space as described herein.

ARTICLE II: RENT, SECURITY DEPOSIT, TENANT IMPROVEMENTS

2.1. Rent. TENANT shall pay rent based on the following schedule ("Rent Schedule") based upon an estimated 803 square feet, which square footage represents the second floor of the Building:

Months	Rent Amount Per Square Foot	Monthly Rent
1-12	$0.75	$602
13-24	$0.80	$642
25-36	$0.85	$683

The rent shall be payable monthly, in advance and on the first day of each calendar month thereafter to LANDLORD, at the following address: 311 Vernon Street, Roseville, CA 95678 Attn: Finance. If the Commencement Date is on a date other than the first of the month, rent shall be prorated for the number of days remaining in the month. If any rent payment is not received by CITY on or before the tenth (10th) day of the month, it shall be deemed delinquent. Delinquent amounts shall be subject to a monthly late charge at the rate of five percent (5%) of the total delinquent amount, and without limitation to LANDLORD's other rights and remedies under this Lease. Monthly rent shall be increased on the first day of the calendar month as specified in the Rent Schedule throughout the Term.

2.2. Security Deposit. LANDLORD acknowledges that TENANT has already paid to LANDLORD a security deposit in the total amount of $1,512. The security deposit shall be held by LANDLORD as security for the faithful performance by TENANT of all the terms, covenants, and conditions of this Lease to be kept and performed by TENANT during the term hereof. If TENANT defaults with respect to any provision of this Lease, including, but not limited to the provisions relating to the payment of rent, LANDLORD may (but shall not be required to) use, apply or retain all or any part of this security deposit for the payment of any rent or any other sum in default, or for the payment of any amount which LANDLORD may spend or become obligated to spend by reason of TENANT's default, or to compensate LANDLORD for any other loss or damage which LANDLORD may suffer by reason of TENANT's default. If any portion of said deposit is used or applied, TENANT shall, within five (5) calendar days after written demand therefore, deposit cash with LANDLORD in an amount sufficient to restore the security deposit to its original amount and TENANT's failure to do so shall be a default under this Lease.

LANDLORD shall not be required to keep this security deposit separate from its general funds, and TENANT shall not be entitled to interest on such deposit. If TENANT shall fully and faithfully perform every provision of this Lease to be performed by it, the security deposit or any balance thereof shall be returned to TENANT (or, at LANDLORD's option, to the last assignee of TENANT's interest hereunder) within thirty (30) calendar days following the expiration of the Lease term.

ARTICLE III: OBLIGATIONS OF PARTIES

3.1. Landlord's Obligations. LANDLORD agrees to provide TENANT the following and makes the following disclosures to TENANT:

a. LANDLORD warrants that to the best of its knowledge the improvements on the Premises comply with the applicable building codes, laws, covenants, or restrictions of record, regulations, and ordinances ("Applicable Requirements") that were in effect at the time that each improvement, or portion thereof, was constructed. LANDLORD agrees to be responsible for continuing to ensure compliance with Applicable Requirements and for remediating any health hazards in the Building, except for those conditions caused (directly or indirectly) as a result of TENANT's activities, or failure to act where TENANT had a duty to act, in which case TENANT shall be responsible for all costs associated with compliance or remediation. The Premises will be delivered in an "As Is" condition. Any warranty provided in this section does not apply to the use to which TENANT will put in the Premises, modifications which may be required by the Americans with Disabilities Act ("ADA") or any similar laws as a result of TENANT's use made or to be made by TENANT. TENANT is responsible for determining whether or not Applicable Requirements, and especially the zoning are appropriate for TENANT's intended use.

b. Nonexclusive use of available public surface lots, provided such use relates to uses approved under Article VII. TENANT shall not be granted reserved, dedicated, or exclusive rights to said public parking owned or controlled by LANDLORD.

c. LANDLORD agrees to be responsible for ensuring compliance with the ADA within the Common Areas (as defined in Article VII) of the Building.

d. LANDLORD shall be responsible for maintenance, repair and rehabilitation of the Building, including heating, ventilation and air conditioning systems, exterior shell roof, exterior lighting, landscaping, parking lot, refuse service, and building alarm system.

3.2. Tenant's Obligations. TENANT's obligations are as follows:

a. TENANT shall, at its own expense, maintain in good condition any portions of the Premises which are its responsibility to maintain under this Lease.

b. TENANT shall be liable for any damage to the Building or Premises resulting from the acts or omissions of TENANT, its authorized representatives, sublessees or any of their invitees. Any damage to LANDLORD's Building or Premises caused by TENANT, its employees, invitees, and/or agents shall be promptly repaired at the sole cost and expense of TENANT. If TENANT fails to begin to make any such required repairs to the Building or Premises within sixty (60) calendar days upon notice by LANDLORD, LANDLORD may, at its option, cause such repairs to be made and demand reimbursement from TENANT, which TENANT shall pay within thirty (30) calendar days of the statement. Any maintenance or repair work to the Building or Premises shall first be coordinated with LANDLORD prior to commencement and shall be permitted only upon written approval of LANDLORD. Maintenance

of unexposed HVAC, electrical, plumbing, and sewage systems which requires entry into bearing or exterior walls, or remodeling of the Premises which requires entry into or moving of bearing walls, shall be at TENANT's sole expense and only after receipt of LANDLORD's written consent.

c. TENANT shall be responsible for ensuring compliance with the ADA within the Premises.

d. TENANT acknowledges that the Building may contain another tenant on the first floor and that such tenant is entitled to peaceably and quietly enjoy their leased premises. Accordingly, TENANT shall not engage in any activities which may impair the other Building tenant's rights to peaceably and quietly enjoy their leased premises.

ARTICLE IV: ALTERATIONS

4.1. Alterations. TENANT shall not make any alterations or modifications to the Building or Premises without LANDLORD's written consent, which consent shall not be unreasonably withheld or delayed. Any such approved alterations made shall remain on and be surrendered with the Premises on expiration or termination of the Lease. LANDLORD shall have the right to require TENANT to remove any and all alterations that TENANT has made to the Premises other than those made with LANDLORD's written consent.

4.2. Commencement of Approved Alterations. If TENANT makes any alterations to the Premises as provided in this Article, such alterations shall not be commenced until five (5) calendar days after LANDLORD has received notice from TENANT stating the date the installation of the alterations is to commence so that LANDLORD can post and record an appropriate notice of non-responsibility.

ARTICLE V: MECHANICS' LIENS

5.1. Mechanics' Liens. TENANT shall keep the Premises free and clear of all mechanics' liens (including stop payment notices) resulting from construction done by TENANT or any person or entity authorized by TENANT.

5.2. Right to Contest. TENANT shall have the right to contest the correctness or the validity of any such lien if, immediately on demand by LANDLORD, TENANT procures and records a lien release bond issued by a corporation authorized to issue surety bonds in California in an amount equal to one and one-half times the amount of the claim of lien. The bond shall meet the requirements of Civil Code § 8424 and shall provide for the payment of any sum that the claimant may recover on the claim (together with costs of suit, if it recovers in the action).

ARTICLE VI: RELOCATION ASSISTANCE

6.1. Waiver of Relocation Assistance. TENANT hereby acknowledges that TENANT is not entitled to, and hereby waives, any relocation assistance under Government Code Section 7260, *et seq.*, 25 Cal Code Regs Section 6000, *et seq.*, 42 USC Section 4601, *et seq.*, and 49 CFR pt 24, upon expiration or termination of the Term of this Lease, including any optional extensions thereof.

ARTICLE VII: USE OF PREMISES AND COMMON AREAS

7.1. Use of Premises. TENANT shall use the Premises for the purpose of a 3D printing shop and office and other commonly associated activities and events that are customarily associated with this use.

7.2. Common Areas. TENANT shall have the right of access and egress to the Premises through the portions of the exterior Common Areas.

a. As used in this Lease, "Common Areas" shall mean all areas around the Building which are not leased or held for the exclusive use of TENANT or other tenants, including, but not limited to, parking areas, driveways, sidewalks, loading areas, access roads, corridors,

restrooms and lobby area on the first floor of the Building, stairwell, elevator, landscaping and planted areas, additional parking facilities in the Common Areas, and includes any increases or decreases to Common Area land and/or facilities. Such activities and changes to the Common Areas are permitted if they do not materially affect TENANT's use of the Premises.

b. TENANT shall have the nonexclusive right (in common with other tenants and all others to whom LANDLORD has granted or may grant such rights) to use the Common Areas for the purposes intended, subject to such reasonable rules and regulations as Landlord may establish from time to time, such rules and regulations to be provided to TENANT by commencement of the Lease, provided the same do not materially restrict or interfere with TENANT's permitted use and such rules and regulations are uniformly applied to all tenants. TENANT shall abide by such rules and regulations and shall use its commercially reasonable efforts to cause others who use the Common Areas with TENANT's express or implied permission to abide by LANDLORD's rules and regulations.

c. TENANT shall pay any and all charges associated with maintenance of the Common Areas.

7.3. Security Regulations. TENANT shall comply with all applicable LANDLORD security regulations regarding access to the Premises.

7.4. Installation within Common Areas. TENANT may not install any equipment or fixtures on the Premises or within Common Areas without the prior written consent of

LANDLORD. Any approved installation of equipment or fixtures must be removed within thirty (30) calendar days after the expiration or termination of this Lease.

7.5. Reserved.

7.6. Waste. TENANT shall not use the Premises or Common Areas in any manner that will constitute waste, nuisance, or unreasonable annoyance to the public or owners or occupants of adjacent properties.

7.7. Damage to Property. TENANT shall not do anything on the Premises and Common Areas that will cause material damage to such property. TENANT shall be liable for material damage pursuant to Section 3.2(b).

7.8. Signage. TENANT may, at its sole expense, cause to be installed wall and/or window signage, and a section of pylon signage, at LANDLORD's sole discretion. All signage, including window signs, shall be subject to review and approval by LANDLORD, and shall comply with the applicable provisions of the City of Roseville Municipal Code, as may be amended from time to time. Upon expiration/termination of the Lease, such signage shall be removed and the Building returned to original condition, excepting ordinary wear and tear.

ARTICLE VIII: LANDLORD'S ENTRY ON PREMISES

8.1. Right of Entry. LANDLORD and its authorized representatives shall have the right to enter the Premises and Common Areas at all reasonable times, and following reasonable notice to the TENANT, for any of the following purposes:

a. To determine whether the Premises is in good condition and whether TENANT is complying with its obligations under this Lease;

b. To do any necessary maintenance and to make any restoration or repair to the Premises that LANDLORD has the right or obligation to perform;

c. To serve, post, or keep posted any notices required or allowed under the provisions of this Lease.

8.2. No Liability. LANDLORD shall not be liable in any manner for any inconvenience, disturbance, loss of business, nuisance, or other damage arising out of LANDLORD's entry on the Premises as provided in this Article, except damage resulting from the acts or omissions of its authorized representatives.

8.3. No Rent Abatement. TENANT shall not be entitled to an abatement or reduction of rent if CITY exercises any rights reserved in this Article. TENANT may request rent abatement from LANDLORD in the event the Premises are inaccessible and/or unusable by TENANT for a period of time exceeding ten (10) calendar days in one month due to unforeseen or critical improvements that are required at the Premises.

ARTICLE IX: TAXES, ASSESSMENTS AND UTILITIES

9.1. Payment of Real Property Taxes. TENANT shall pay all real property taxes attributable to the Premises and business operations including, but not limited to, possessory interest tax, business personal property tax, assessments, general or special taxes levied and assessed against the Premises, that may become payable during the Term. TENANT understands that its interest created by this Lease may be subject to a possessory interest tax pursuant to California Revenue and Taxation Code Sections 107 and 107.6 that impose an ad valorem property tax on possessory interests created in tax exempt property. TENANT understands that any such tax payment shall not reduce any sum due LANDLORD hereunder, and that any such tax shall be the sole liability and responsibility of TENANT. Any taxes due shall be in amounts determined by taxing agencies and will be billed directly to TENANT.

9.2. Payment for Utilities. TENANT shall be responsible for the payment of the following utilities associated with the Premises: electricity, gas, telephone, internet connection and/or cable/satellite television service. Such charges will be billed directly to TENANT.

9.3. Interruption in Utility Services. LANDLORD shall not be liable to TENANT for any losses or damages of any kind or character that result from outages, interruptions or fluctuations in utility services provided to TENANT.

ARTICLE X: INDEMNIFICATION

10.1. Indemnification. LANDLORD shall not be liable to TENANT for any damage to third persons, TENANT or TENANT's property from any cause. TENANT waives all claims against LANDLORD for damage to persons or property arising for any reason, except that LANDLORD shall be liable to TENANT for damage to TENANT resulting from the intentional acts or active negligence of LANDLORD or its authorized representatives.

To the fullest extent allowed by law, TENANT shall defend, indemnify, and save and hold harmless LANDLORD, its officers, agents, employees and volunteers from any claims, suits or actions of every name, kind and description brought forth, or on account of, injuries to or death of any person (including but not limited to workers and the public), or damage to property, resulting from or arising out of TENANT's, including but not limited to, its contractors, agents, staff, and invitees, willful misconduct or negligent act or omission while engaged in the performance of obligations or exercise of rights created by this Lease, except those matters arising from LANDLORD's active negligence or intentional misconduct. The parties intend that this provision shall be broadly construed.

TENANT's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Lease for the full period of time allowed by law. The defense and

indemnity obligations of this Lease are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Lease.

ARTICLE XI: INSURANCE

11.1. Tenant's Insurance Requirements. TENANT at its cost shall maintain the following insurance policies: (a) commercial general liability insurance with limits of One Million Dollars ($1,000,000) per occurrence and Two Million Dollars ($2,000,000) aggregate, with such endorsements as LANDLORD may reasonably require. All general liability insurance shall insure performance by TENANT of the indemnity provisions of Article X; (b) Workers' Compensation with statutory limits.

11.2. Additional Insureds. TENANT shall also provide a separate endorsement form or section of the policy showing LANDLORD, its officers, agents, employees and volunteers as additional insureds for each type of coverage, except for Workers' Compensation. Such insurance shall specifically cover the contractual liability of TENANT. The additional insured coverage under TENANT's policy shall be primary and noncontributory, as evidenced by a separate endorsement or section of the policy, and shall not seek contribution from TENANT's insurance or self-insurance. In addition, the additional insured coverage shall be at least as broad as the Insurance Services Office ("ISO") CG 20 01 Endorsement. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (a) the minimum coverage and limits specified in this Lease; or (b) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

11.3. Annual Review. On an annual basis, LANDLORD shall have the right to review all insurance coverage required by this Lease. If, in the opinion of LANDLORD's Risk Manager the amount of general liability, property damage and any other applicable insurance coverage at

that time is not adequate, TENANT shall increase the insurance coverage as reasonably required by LANDLORD's Risk Manager.

11.4. Personal Property. TENANT, at its cost, shall maintain on all its personal property, TENANT's improvements installed or constructed by TENANT, and alterations made by TENANT, in, on, or about the Premises, a policy of standard fire and extended coverage insurance, to the extent of at least one hundred percent (100%) of the actual cash value of such property. The proceeds from any such policy shall be used by TENANT for the replacement of personal property and the restoration of TENANT installed or constructed improvements or alterations.

11.5. Additional Requirements. All the insurance required under this Lease shall:

a. Be issued as a primary policy.

b. Contain an endorsement requiring ten (10) calendar days' written notice from the insurance company to LANDLORD before cancellation or change in the coverage, scope, or amount of any policy.

c. Be evidenced by a certificate of insurance in a form consistent with the requirements of this Article.

d. The limits of insurance required in this Lease may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of LANDLORD (if agreed to in a written contract) before LANDLORD's own insurance shall be called upon to protect it as a named insured.

e. TENANT agrees to include in its contracts with all contractors the same requirements and provisions of this Lease, including the indemnity and insurance requirements, to the extent they apply to the scope of the contractor's work. Furthermore, TENANT shall require its contractors to agree to be bound to TENANT and LANDLORD in the same manner and to the same extent as TENANT is bound to LANDLORD under this Lease. Additionally, TENANT shall obligate its contractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of LANDLORD's indemnity and insurance provisions will be furnished to the contractor upon request. The term "contractor" additionally includes subcontractors of any tier.

f. All self-insured retentions ("SIR") must be disclosed to the City of Roseville's Risk Manager for approval and shall not reduce the limits of liability. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or LANDLORD. LANDLORD reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

g. Insurance coverage in the minimum amounts set forth herein shall not be construed to relieve TENANT of liability in excess of such coverage, nor shall it preclude LANDLORD from taking such other actions as are available to it under any other provisions of this Lease or law.

11.6. Landlord's Insurance Requirements. LANDLORD shall maintain a policy of insurance covering the replacement cost of the Building and Premises during the term of the Lease. During the Lease Term, LANDLORD shall maintain a policy of contractual liability coverage and commercial general liability insurance (sometimes known as broad form comprehensive general

liability insurance) insuring LANDLORD against liability for bodily injury, property damage and personal injury arising out of LANDLORD's ownership, operation, use or occupancy of the Building.

ARTICLE XII: HAZARDOUS MATERIALS

12.1. Handling of Hazardous Materials. TENANT agrees that any and all handling, transportation, storage, treatment, disposal, or use of hazardous materials by TENANT in or about the Premises shall strictly comply with all applicable local, state and federal environmental laws and regulations. TENANT will not use or allow the use of the Premises in a manner that may cause hazardous materials to be released or to become present on, under, or about the Premises or other properties in the vicinity of the Premises. If the presence of hazardous materials on the Premises caused or permitted by TENANT results in the contamination or deterioration of the Premises or any water or soil beneath the Premises, TENANT shall promptly take all action necessary to investigate and remedy that contamination. However, unless an emergency situation exists that requires immediate action, LANDLORD's written approval of these actions shall first be obtained, and such approval will not be unreasonably withheld.

12.2. Environmental Indemnification. TENANT shall defend, indemnify, and save and hold harmless LANDLORD, its officers, agents, employees and volunteers and each of their respective successors and assigns (individually and collectively) from all claims, judgments, causes of action, damages, penalties, fines, taxes, costs, liabilities, loses, and expense arising (directly or indirectly) as a result of or in connection with TENANT's breach of any prohibition or provisions of this Lease, or the presence of any hazardous materials that migrate from the Premises to other properties, as a result (directly or indirectly) of TENANT's activities, or failure to act where TENANT had a duty to act, on or in connection with the Premises.

This obligation by TENANT to defend, indemnify, and save and hold harmless LANDLORD includes, without limitation, costs and expenses incurred for or in connection with any investigation, clean up, remediation, monitoring, removal, restoration, or closure work required because of any hazardous materials present on, under or about the Premises; the costs and expenses or restoring, replacing, or acquiring the equivalent of damaged natural resources if required under any local, state or federal environmental law or regulation; all foreseeable consequential damages; all reasonable damages for the loss or restriction on use of rentable or usable space of any amenity of the premises; all reasonable sums paid in settlement of claims; reasonable attorney's fees; litigation, arbitration, and administrative proceeding costs; and reasonable expert, consultant, and laboratory fees. Neither the written consent of LANDLORD to the presence of hazardous materials on or under the Premises, nor the strict compliance by TENANT of all environmental laws and regulations, will excuse TENANT from the indemnification obligation. This indemnity will survive the expiration or termination of this Lease.

12.3. Hazardous Materials Defined. As used in this Article, the term "hazardous materials" means any chemical, substance, material, controlled substance, object, condition, waste, living organism, or combination that is or may be hazardous to human health or to the safety of the environment due to its radioactivity, ignitability, corrosivity, reactivity, explosivity, toxicity, carcinogenicity, mutagenicity, phytotoxicity, infectiousness, or other harmful or potentially harmful properties or effects, including, without limitation, petroleum and petroleum products, asbestos, radon, polychlorinated biphenyls (PCBs) and all of those chemicals, substances, materials, controlled substances, objects, conditions, wastes, living organisms, or combinations that are now or become in the future listed, defined, or regulated in any manner by any local, state or federal environmental law or regulation based upon, directly or indirectly, their properties or effects.

ARTICLE XIII: CONDEMNATION

13.1. Termination due to Condemnation. If the Premises is taken in entirety by condemnation by LANDLORD, this Lease shall terminate as of the date of taking.

13.2. Condemnation of Portion of Premises. If a portion of the Premises is taken by condemnation by LANDLORD, this Lease shall remain in effect, except that TENANT may elect to terminate this Lease if twenty-five (25 %) percent or more of the total square feet in the Premises is taken. Furthermore, the amount of rent shall be reduced by the loss of the portion of the Premises resulting from condemnation.

ARTICLE XIV: ASSIGNMENT OR SUBLEASE

14.1. Consent for Assignments and Subleases. TENANT shall not assign or encumber its interest in this Lease or in the Premises, or sublease all or any part of the Premises without LANDLORD'S prior written consent, which consent shall not be unreasonably withheld or delayed. Any assignment, encumbrance, or sublease without LANDLORD's written consent shall be voidable and, at LANDLORD's election, shall constitute an event of default of this Lease. No consent to any assignment, encumbrance, or sublease shall constitute a further waiver of any provision of this Lease. Notwithstanding the provisions of the above, TENANT may assign this Lease or sublet the Premises or any portion thereof, without LANDLORD's consent, to any entity which controls, is controlled by or is under common control with TENANT, or to any entity resulting from a merger or consolidation with TENANT, or to any person or entity which acquires all the assets of TENANT's business as a going concern, provided that: (a) the assignee or sublessee assumes, in full, the obligations of TENANT under this Lease; (b) TENANT remains fully liable under this Lease; and (c) TENANT gives written notice to LANDLORD of such assignment or sublease.

14.2. No Assignments by Operation of Law. No interest of TENANT in this Lease shall be assignable by operation of law (including, without limitation, the transfer of this Lease by testacy or intestacy). Each of the following acts shall be considered an assignment unauthorized by LANDLORD:

a. If TENANT is or becomes bankrupt or insolvent, makes or attempts to make an assignment for the benefit of creditors, or institutes a proceeding under the Bankruptcy Act in which TENANT is the bankrupt party;

b. If a writ of attachment or execution is levied on this Lease;

c. If, in any proceeding or action to which TENANT is a party, a receiver is appointed with authority to take possession of the Premises.

14.3. Unauthorized Assignments. An unauthorized assignment shall constitute a default by TENANT and LANDLORD shall have the right to elect to terminate this Lease, in which case this Lease shall not be treated as an asset of TENANT.

ARTICLE XV: WAIVER

15.1. No General Waivers. No delay or omission in the exercise of any right or remedy of LANDLORD on any default by TENANT shall impair such a right or remedy or be construed as a waiver.

15.2. Acceptance of Delinquent Rent not Waiver. The receipt and acceptance by LANDLORD of delinquent rent shall not constitute a waiver of any other default; it shall constitute only a waiver of timely payment for the particular rent payment involved.

15.3. No Acceptance of Surrender of Premises. No act or conduct of LANDLORD, including, without limitation, the acceptance, of the keys to the Premises, shall constitute an acceptance of the surrender of the Premises by TENANT before the expiration of the term. Only a notice from LANDLORD to TENANT shall constitute acceptance of the surrender of the Premises

and accomplish a termination of the Lease, subject to damages for breach of contract.

15.4. Consent not Waiver. LANDLORD's consent to or approval of any act by TENANT requiring LANDLORD's consent or approval shall not be deemed to waive or render unnecessary LANDLORD's consent to or approval of any subsequent act by TENANT.

15.5. Waiver in Writing. Any waiver by LANDLORD of any default must be in writing and shall not be a waiver of any other default concerning the same or any other provision of the Lease.

ARTICLE XVI: RECORDATION

16.1. Recordation of Lease. This Lease or Memorandum of Lease, subject to the discretion of the City Clerk and City Attorney, shall be recorded against the Premises. A form Memorandum of Lease is set forth in Exhibit A, attached hereto and incorporated herein.

ARTICLE XVII: SURRENDER OF PREMISES; HOLDING OVER

17.1. Surrender at Termination. On expiration or not later than ten (10) calendar days after termination of the Term, TENANT shall return the Premises to its original condition, normal wear and tear excepted, and surrender to LANDLORD the Premises and all TENANT's improvements and alterations in good condition, except for ordinary wear and tear and except for alterations that TENANT has the right to remove or is obligated to remove under the provisions of this Lease. TENANT shall remove all its personal property within the above stated time. TENANT shall perform all restoration made necessary by the removal of any alterations or TENANT's personal property within the time periods stated in this paragraph.

All movable partitions, business and trade fixtures, machinery and equipment, communications equipment and office equipment located in the Building and acquired by or for the account of TENANT, without expense to LANDLORD, which can be removed without structural damage to the Building, and all furniture, furnishings and other articles of movable personal property owned by

TENANT and located in the Premises (collectively "TENANT's Property") shall be and shall remain the property of TENANT and may be removed by TENANT at any time during the Term; provided that if any of TENANT's Property is removed, TENANT shall promptly repair any damage to the Premises or to the Building resulting from such removal.

17.2. Disposition of Personal Property. LANDLORD can elect to retain or dispose of in any manner any alterations or TENANT's personal property that TENANT does not remove from the Premises upon expiration or termination of the Term as allowed or required by this Lease by giving at least ten (10) calendar days' notice to TENANT. Title to any such alterations or TENANT's personal property that LANDLORD elects to retain or dispose of upon expiration of the ten (10) calendar day period shall be deemed vested in LANDLORD. TENANT waives all claims against LANDLORD for any damage to TENANT resulting from LANDLORD's retention or disposition of any such alterations or TENANT's personal property. TENANT shall be liable to LANDLORD for LANDLORD's costs for storing, removing, and disposing of any alterations or TENANT's personal property.

17.3. Hold Harmless. If TENANT fails to surrender the Premises to LANDLORD on expiration or termination of the term as required by this Article, TENANT shall hold LANDLORD harmless from all damages resulting from TENANT's failure to surrender the Premises, including, without limitation, claims made by a succeeding TENANT resulting from TENANT's failure to surrender the Premises.

17.4. Holdover Rights. TENANT shall have the right to holdover for up to three (3) months after expiration of termination of the Initial Term or an Extension. Such holdover shall be upon the same terms and conditions as this Lease except that rent shall be one-hundred and twenty-five percent (125%) of the last month's rental amount at the end of the Term or Extension. In order to exercise this right, TENANT shall give LANDLORD four (4) months prior written notice

of its exercise of this right.

ARTICLE XVIII: NOTICE

18.1. Notice. Any consent, approval, or communication that either party desires or is required to give the other party shall be in writing and may be delivered personally or by deposit in the U.S. mail, first class postage prepaid, addressed as follows:

LANDLORD	TENANT
City of Roseville City Manager 311 Vernon Street Roseville, CA 95678	Ten Twenty-Three LLC Attn: Tyler Devine 201 Pacific Street Roseville, CA 95678

With a copy to:

City of Roseville
City Attorney
311 Vernon Street
Roseville, CA 95678

18.2. Change of Address. Either party may change its address by giving notice of the change of address to the other party. Notice shall be deemed received forty-eight (48) hours after the time of mailing, if mailed as provided in this section.

ARTICLE XIX: TERMINATION

19.1. Material Default. Any of the following events shall constitute a material default (or event of default) and breach of this Lease by TENANT:

a. Abandonment or vacation of the Premises or any substantial portion thereof (failure to occupy and operate the Premises for ten (10) consecutive calendar days without LANDLORD's consent shall be deemed an abandonment and vacation). The making by TENANT of any general assignment or general arrangement for the benefit of creditors; or the filing by or against TENANT of a petition to have TENANT adjudged a bankrupt or a petition or reorganization or arrangement under any law relating to bankruptcy (unless, in the case of a petition filed against TENANT, the same is dismissed within thirty (30) calendar days); or the

appointment of a trustee or a receiver to take possession of substantially all of TENANT's assets located at the Premises or of TENANT's interest in this Lease, where possession is not restored to TENANT within thirty (30) calendar days; or the attachment, execution or other judicial seizure of substantially all of TENANT's interest in this Lease, where such seizure is not discharged in thirty (30) calendar days.

b. If TENANT has not complied in good faith with the terms and conditions of this Lease, LANDLORD may declare a default of this Lease. LANDLORD shall give TENANT a written notice of the default, after which TENANT shall cure the default within thirty (30) calendar days. If TENANT does not cure the default within thirty (30) calendar days, LANDLORD may terminate this Lease immediately.

c. If TENANT fails to pay rent, and/or any other amount due and payable hereunder upon the date when such payment is due, such failure continuing for a period of ten (10) business days following written notice from LANDLORD specifying the alleged default ("Payment Cure Period"), LANDLORD may terminate the Lease. In the event that LANDLORD does not receive payment during the Payment Cure Period, this Lease shall, at the option of LANDLORD, immediately terminate.

d. If TENANT violates any applicable law, rule, statute, ordinance, order, or regulation applicable to TENANT's use of the Premises and does not cure such violation within thirty (30) calendar days of the date of the notice from the LANDLORD to TENANT, LANDLORD may immediately terminate this Lease.

19.2. Landlord's Rights and Remedies. In addition to the remedies identified herein, upon the occurrence of a default (or event of default) by TENANT to perform or observe any material obligation of this Lease (after the expiration of all applicable notice and cure periods), LANDLORD shall be entitled to the following rights and remedies in addition to all other available rights and remedies:

a. Subject to expiration of all applicable notices and cure periods, LANDLORD shall have the right to terminate this Lease, and at any time thereafter recover possession of the Premises and expel therefrom TENANT and repossess the Premises without prejudice to any other available remedies by reason of TENANT's default.

b. This Lease shall continue in effect for so long as LANDLORD does not terminate TENANT's right to possession, and LANDLORD may enforce all of its rights and remedies under this Lease, including without limitation the right to recover the rent as it becomes due without terminating this Lease.

c. Notwithstanding anything to the contrary, in the event that TENANT cannot reasonably cure the default within the cure period, but TENANT has commenced to cure the default within the cure period, then LANDLORD shall have no right to terminate the Lease, so long as the default is eventually cured within a reasonable period of time.

19.3. Landlord's Default. If LANDLORD fails to perform any covenant, condition or agreement contained in this Lease within thirty (30) calendar days after receipt of written notice from TENANT specifying such default, or if such default cannot reasonably be cured within thirty (30) calendar days and LANDLORD fails to commence to cure within that thirty (30) calendar day period, then LANDLORD shall be liable to TENANT for any actual damages sustained by TENANT as a result of LANDLORD's breach. If, after notice to LANDLORD of default, LANDLORD (or any first mortgagee or first deed of trust beneficiary of LANDLORD) fails to cure the default as provided herein, then TENANT shall have the right to cure that default at LANDLORD's expense. TENANT, at TENANT's election, shall have the right to withhold, reduce or offset any amount against any payments of rent or any other charges due and payable under this Lease.

19.4 Termination for Convenience. LANDLORD may terminate this Lease for convenience provided that sixty (60) days advance written notice of such termination is provided to

TENANT.

ARTICLE XX: MISCELLANEOUS PROVISIONS

20.1. No Partnership or Joint Venture. LANDLORD shall not become or be deemed a partner or a joint venture with TENANT by reason of any provisions of this Lease.

20.2. Access to Records. Duly authorized representatives of LANDLORD shall have right of access during normal business hours to TENANT's files and records relating to the use of the Premises, and may review the files and records at appropriate stages during TENANT's use of the Premises.

20.3. Modifications. This Lease and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the Parties.

20.4. Compliance with Laws. TENANT will comply with all federal, state and local laws, ordinances and policies as may be applicable to TENANT's use of the Premises under this Lease.

20.5. Attorneys' Fees; Venue; Governing Law. If either Party commences any legal action against the other party arising out of this Lease or the performance hereof, the prevailing Party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorneys' fees. Any action arising out of this Lease shall be brought in Placer County, California, regardless of where else venue may lie. This Lease shall be governed by and construed in accordance with the laws of the State of California.

20.6. Force Majeure. If the performance under this Lease is prevented, restricted or interfered with by reason of lightning, earthquake or other act of God, embargoes, government ordinances or requirements, civil or military authorities, power outages or brownouts, or mechanical, electronic or communications failures, or other causes beyond the reasonable control

of the Party whose performance is affected (excluding financial condition, labor shortage, negligence or willful misconduct), then the Party affected, upon giving prompt notice to the other Party, shall be excused from such performance on a day-for-day basis and the other party will similarly be excused from related performance; provided that the Party so affected shall use reasonable efforts to avoid or remove such causes of non-performance and both Parties shall proceed to perform their obligations with dispatch whenever such causes or removed or cease.

20.7. Integration. This is an integrated Lease, and contains all of the terms, considerations, understanding and promises of the Parties. It shall be read as a whole.

20.8. Severability. If any of the provisions contained in this Lease are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Lease as a whole.

20.9. Quiet Enjoyment. TENANT, upon paying the rent and performing all of its obligations under this Lease, shall peaceably and quietly enjoy the Premises, subject to the terms of this Lease and to any mortgage, lease, or other agreement to which this Lease may be subordinate; provided, however, that TENANT acknowledges that the Premises is in the direct vicinity of the Union Pacific Railroad railyard, and therefore the Premises is subject to frequent noise, vibration, smoke and dust associated with railyard activity.

20.10. Governing Agreement. In the event of any conflict between this Lease and its exhibits, the provisions of this Lease shall govern.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation has authorized the execution of this Lease in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No._____, adopted by the Council of the City of Roseville on the ___ day of_____, 2025, and TENANT has caused this Lease to be executed.

MEMORANDUM OF LEASE

This Memorandum of Lease is made and entered into this_____day of _____ 2025, by and between City of Roseville, a municipal corporation ("LANDLORD"), and Ten Twenty-Three LLC, dba Ten Twenty 3D a California limited liability company (hereinafter "TENANT"), who agree as follows:

1. LANDLORD leases to TENANT and TENANT leases from LANDLORD space within a building on real property located in the City of Roseville, County of Placer, State of California, Assessor's Parcel Number 012-120-002, as more particularly shown in **Exhibit A** attached hereto and incorporated by reference herein (the "Leased Premises").

2. This Memorandum of Lease is made upon all the terms and conditions of that certain unrecorded Lease Agreement relating to the leased premises between LANDLORD and TENANT dated_____, 2025 ("Lease Agreement") on file with the City Clerk, and all of said terms and conditions are incorporated by reference herein.

3. The term of the Lease Agreement shall continue for a period of thirty-six (36) months, unless extended or earlier terminated according to the terms of the Lease Agreement.

[SIGNATURE BLOCKS APPEAR ON FOLLOWING PAGE]

IN WITNESS WHEREOF, upon the day and year first hereinabove written, the respective Parties hereto have executed this Memorandum of Lease, personally or by officers or agents thereunto duly authorized.

Project Title: 201 Pacific Street – Lease Agreement

Project Location(s): 201 Pacific Street (APN 012-120-002-000), Roseville, CA

Project Description: The project is a 3-year lease agreement for the approximately 1,000-square foot vacant second floor space of the Roseville Train Station located at 201 Pacific Street.

Public Agency Approving Project: Roseville City Council

Agency/Individual Carrying Out Project: City of Roseville City Manager's Office/Economic Development

Reason why this Project is Exempt: This project qualifies for a Class 1 Exemption as described in Section 15301 of the California Environmental Quality Act (CEQA) guidelines which states:

> "Class 1 consists of the… leasing of public or private structures,…facilities… involving negligible or no expansion of existing or former use… Examples include but are not limited to: (a) Interior or exterior alterations involving such things as interior partitions, plumbing, and electrical conveyances.

The project involves the leasing of an existing public structure or facility, which will have the same purpose and capacity as the existing facilities. Therefore, the Class 1 Exemption is applicable to the proposed project.

Title:	Pleasant Grove Boulevard Widening Project – Pacific Gas & Electric Agreement
Contact:	Nicolas Bumb 916-746-1313 nfbumb@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.19.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution approving an agreement with Pacific Gas & Electric (PG&E) in the amount of $84,440.76 and authorize the City Manager to execute the agreement and all related forms on behalf of the City.

BACKGROUND

Pleasant Grove Boulevard is a multi-lane arterial roadway providing a connection from West Roseville to Highway 65 and Rocklin. The number of lanes on the roadway vary from four to six lanes. This Pleasant Grove Boulevard Widening Project is widening the segment between Foothills Boulevard and Woodcreek Oaks Boulevard from four to six lanes. The project is currently in construction.

During design, several underground utilities were identified to be in the project area, including a gas main owned and maintained by PG&E. A portion of the Pleasant Grove Boulevard widening was expected to occur over a portion of the existing gas line. The gas line depth was verified in several locations, and relocation was deemed not necessary based on that verification.

During construction, it was discovered that a portion of the gas line unexpectedly crests, causing it to be too shallow across a distance of approximately 100 feet. Due to the gas main's shallow depth and location of adjacent utilities, relocation by lowering is the only viable solution.

The location of the gas main within an existing easement makes relocation of the main an obligation of the City's project. Upon execution of the subject agreement, PG&E will relocate the gas line and the City will reimburse their costs using available project budget.

The project is expected to be complete in June 2025.

FISCAL IMPACT

The gas main relocation is anticipated to cost $84,440.76 and be paid for by existing project budget. The project is fully funded by the Traffic Mitigation Fee fund (TMF) and there is adequate funding in the project to complete the work. No General Fund resources will be used to complete the project.

ENVIRONMENTAL REVIEW

Project level CEQA compliance for the Pleasant Grove Boulevard Widening Project was accomplished with the preparation of the Subsequent Initial Study/Mitigated Negative Declaration for the Pleasant Grove Widening Project (IS/MND-PG) (Adopted: August 16, 2023) (SCH No. 2019080418). Because the project is consistent with the project evaluated in the IS/MND-PG, no new effects would be expected to occur and all applicable mitigation measures from the IS/MND-PG will be implemented. As such, no additional CEQA action is required at this time.

March 13, 2025

City of Roseville, A GOVERNMENT AGENCY (Applicant) has requested PACIFIC GAS AND ELECTRIC COMPANY, a California corporation (PG&E), to perform the tariff schedule related work as located and described in paragragh 3 herein. PG&E agrees to perform the requested work and furnish all necessary labor, equipment, materials and related facilities required therefore, subject to the following conditions:

1. Whenever part or all of the requested work is to be furnished or performed upon property other than that of Applicant, Applicant shall first procure from such owners all necessary rights-of-way and/or permits in a form satisfactory to PG&E and without cost to it.

2. Applicant shall indemnify and hold harmless PG&E, its officers, agents and employees, against all loss, damage, expense and liability resulting from injury to or death of any person, including but not limited to, employees of PG&E, Applicant or any third party, or for the loss, destruction or damage to property, including, but not limited to property of PG&E, Applicant or any third party, arising out of or in any way connected with the performance of this agreement, however caused, except to the extent caused by the active negligence or willful misconduct of PG&E, its officers, agents and employees. Applicant will, on PG&E's request, defend any suit asserting a claim covered by this indemnity. Applicant will pay all costs that may be incurred by PG&E in enforcing this indemnity, including reasonable attorneys' fees.

3. The location and requested work are described as follows: (Describe in detail the materials and facilities to be furnished and/or work to be performed by PG&E. If more space is required, use other side and attach any necessary drawings as Exhibits A, B, C, etc):

Title:	International Brotherhood of Electrical Workers, Local 1245 - 2025 Labor Market Wage Adjustments and Staffing Update
Contact:	Macy Dippert 916-774-5215 mdippert@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.20.

RECOMMENDATION TO COUNCIL

It is recommended that City Council take the following actions:

1. Adopt an ordinance to approve the updated International Brotherhood of Electrical Workers, Local 1245 (IBEW) A & B (Appendix J) salary schedules to reflect labor market adjustments effective May 3, 2025.
2. Adopt a resolution authorizing the City Manager to execute the side letter agreement with IBEW Local 1245 pertaining to the Labor Market Adjustments.
3. Motion to approve the attached city-wide allocation schedule, effective May 3, 2025.

BACKGROUND

IBEW Labor Market Adjustments

The City's goal has been to ensure it is competitive in the marketplace on recruitment and retention among comparable agencies while remaining fiscally responsible. As a service organization, labor is the City's most significant expense, and the City has taken steps to control costs in this area. Since the Great Recession, the City has implemented policies to slow payroll growth, reduce retirement benefits, set total compensation (salaries and benefits packages) at the 55th percentile in the labor market (except for the Electric Department positions), and control pension costs by transferring the responsibility to employees to fund 100 percent of the employee's share of pension costs. Maintaining the quality of services along with the integrity of the City's more than $4 billion worth of infrastructure requires balancing our ability to attract and retain a high-performing workforce while living within our means. Ultimately, the City's compensation philosophy seeks to compare its total compensation with jurisdictions that are similar in size, services, and geographical location to remain competitive and retain our talented City employees who have produced high service levels affirmed by the community.

The current Memorandum of Understanding (MOU) with IBEW, which expires on April 30, 2026, has provisions for a labor market study in January 2025. Based on these agreed-upon terms, the

City engaged an independent classification and compensation consultant to conduct a comprehensive total compensation study using comparator jurisdictions. The MOU provisions required the same salary, benefit elements, and methodology that was used in the 2022 Total Compensation Study, with resulting labor market adjustments implemented the first full pay period in May 2025.

Staff conducted the meet and confer process with IBEW regarding the accuracy of the market total compensation data. During the discussions, one agency authorized an agreement in March 2025. In order to remain competitive in this very challenging electric labor market, staff recommends that Council authorize the City Manager to execute the side letter agreement with IBEW Local 1245 to capture the wage update from March 2025 for one agency as a non-precedent setting one-time deviation based on the unique circumstances and economic conditions currently present and the facts specific to this 2025 labor market adjustment.

Labor market adjustments were identified where the classification benchmark total compensation is behind the labor market 55th percentile for Environmental Utilities and Public Works department classifications and behind the labor market 75th percentile for Electric department classifications. The percentage identified in the table below represents the percentage added to the classification salary range in the attached updated salary schedules. The average percent increase for IBEW is 4.55%.

The salary schedule updates for IBEW include the following labor market adjustments:

Class Title	A Salary Schedule % Change	B Salary Schedule % Change
Electric Apprentice Line Technician	4.07%	4.07%
Electric Apprentice Metering System Technician	4.30%	4.30%
Electric Apprentice Substation Technician	3.29%	3.29%
Electric Drafting Technician I	6.23%	6.23%
Electric Drafting Technician II	6.23%	6.23%
Electric Engineering Technician I	3.33%	3.33%
Electric Engineering Technician II	3.33%	3.33%
Electric Line General Foreperson	4.07%	4.07%
Electric Line Technician	4.07%	4.07%
Electric Line Troubleshooter	4.07%	4.07%
Electric Materials Technician I	4.07%	4.07%
Electric Materials Technician II	4.07%	4.07%
Electric Metering System Technician	4.30%	4.30%
Electric Operations Safety Technician	4.07%	4.07%
Electric Pre-Apprentice	4.07%	4.07%

Staffing Update in Public Works Department Fleet Services

The Fleet Services Division in Public Works is requesting an additional Fleet Services Supervisor position (PWD622565002), since there are eighteen (18) employees reporting to one (1) supervisor, and to ensure management coverage at the Corporation Yard to support the mechanic team.

FISCAL IMPACT

The estimated total cost of the recommended wage adjustments and the staffing change will cost $248,852 for the remainder of FY2024-25 and $1,548,062 annually ongoing. The following table provides a summary of costs by fund.

Fund	Annual Ongoing Cost	Cost For Remainder of FY24-25
Fleet Services Fund	$177,312	$27,279
Electric	$872,087	$140,967
Water Operations	$162,999	$26,348
Wastewater Operations	$335,664	$54,258
Total	**$1,548,062**	**$248,852**

All four (4) of the funds impacted by the recommended wage adjustments have sufficient funds to cover the cost for the remainder of FY2024-25. The ongoing cost was planned and will be incorporated into the FY2025-26 budget.

Public Works

From	To	Current Salary & Benefits	Proposed Salary & Benefits	Annual Impact *	Impact for remaining FY 2024-25
	Fleet Services Supervisor	$0	$177,312	$177,312	$27,279
			Total	**$177,312**	**$27,645**

*This amount includes the estimated annual pension cost of $12,403.10.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment or is otherwise not

considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. The proposed wage adjustments and allocation schedule update meet the above criteria and are not subject to CEQA. No additional environmental review is required.

ORDINANCE NO. 6932

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE AMENDING ORDINANCE 6872, THE SALARY ORDINANCE FOR PERSONNEL REPRESENTED BY THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 1245, AS AMENDED BY APPENDIX "J" TO BE EFFECTIVE MAY 3, 2025, AS AN URGENCY MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. Title and Purpose.

Ordinance 6872, the Salary Ordinance for employees represented by the International Brotherhood of Electrical Workers, Local 1245, is hereby amended as shown on Appendix "J" for salary schedules A & B attached hereto, reflecting labor market adjustments.

SECTION 2. Salary Plan Effective Date.

This Ordinance shall be effective May 3, 2025 as an urgency measure.

SECTION 3. Urgency Ordinance.

This ordinance is hereby declared to be an urgency measure, immediately necessary for the public peace, health and safety and shall take effect May 3, 2025. A statement of urgency is as follows:

It is necessary to amend the Salary Ordinance to comply with recently approved changes for the orderly and necessary continuance of operations of the City.

SECTION 4. Posting.

The City Clerk is hereby authorized and directed to post a true copy of the foregoing ordinance in each of three (3) conspicuous locations in the City and she shall immediately after such posting enter in the Ordinance Book under the record of the ordinance a certificate under her hand stating the time and place of said publication by posting.

RESOLUTION NO. 25-130

APPROVING A SIDE LETTER TO THE MEMORANDUM OF UNDERSTANDING FOR EMPLOYEES REPRESENTED BY THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 1245, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a side letter to the Memorandum of Understanding for Employees Represented by the International Brotherhood of Electrical Workers, Local 1245, related to labor market adjustments, has been reviewed by the City Council;

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said Side Letter Agreement to the Master Memorandum of Understanding is approved and that the City Manager is authorized to execute it on behalf of the City of Roseville; and administer, interpret, and apply its terms, intent, and spirit, and execute any other documents necessary to effectuate the purposes hereof as determined necessary by the City Manager.

PASSED AND ADOPTED by the City Council of the City of Roseville this _____ day of _____, 2025, by the following vote on roll call:

AYES COUNCIL MEMBER:

NOES COUNCIL MEMBER:

ABSENT COUNCIL MEMBER:

_____
Mayor

City Clerk

SIDE LETTER AGREEMENT
BETWEEN THE
CITY OF ROSEVILLE
AND
INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS,
LOCAL 1245

The City of Roseville (hereinafter referred to as "City") and International Brotherhood of Electrical Workers, Local 1245 (hereinafter referred to as "IBEW Local 1245") entered into a Memorandum of Understanding ("MOU") with a term May 1, 2022, to April 30, 2026. The City and IBEW Local 1245 are collectively referred to herein as the "Parties."

The intent of this Side Letter Agreement ("Agreement" or "SLA") is to address in writing topics discussed during the 2025 review of the labor market data. Ultimately, the Parties are interested in maintaining competitive compensation in the relevant labor market. During the discussion with IBEW Local 1245, it was identified that the applicable labor group in Palo Alto had reached an agreement approved by their City Council in March 2025. The Parties hereby agree that as part of this 2025 total compensation study implementation, the City will include the most current Palo Alto total compensation data for the applicable Electric benchmarks that became effective in March 2025, as a non-precedent setting one-time deviation based on the unique circumstances and economic conditions currently present and the facts specific to this 2025 labor market adjustment, and with a focus on remaining competitive.

The specific terms in this Agreement are intended to supersede any previous agreements, whether oral or written, regarding the matters contained in this Agreement.

Except as provided herein, all wages, hours, and other terms and conditions of employment presently in the City's MOU, including as modified by effective Side Letter Agreements, with IBEW 1245 remain in full force and effect.

The parties have satisfied their obligations to meet and confer in good faith in accordance with the Meyers-Milias-Brown Act (MMBA).

Title:	West Zone Reclaimed Water Tanks Rehabilitation Project – Budget Adjustment
Contact:	Inderpreet Chaggar 916-774-5553 ikchaggar@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.21.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt an ordinance to approve a budget adjustment of $75,609 from available resources in the Wastewater Rehabilitation Fund to fully fund this project.

BACKGROUND

In 2023, the City's Environmental Utilities Department (EU) retained engineering design professionals to complete a condition assessment of the West Zone Reclaimed Water Tanks 1 and 2. Water Works Engineers (WWE) and V&A Consulting Engineers completed the condition assessment. Tanks 1 and 2 were constructed in 2006 and are welded steel tanks. The condition assessment found that structural components of the tanks, including the center support column and the roof rafters, are significantly corroded and require structural rehabilitation and/or replacement. The interior coating has also failed. In 2023, EU retained WWE to complete the rehabilitation design (construction plans and specifications) for Tanks 1 and 2.

On April 3, 2024, City Council authorized staff to advertise rehabilitation plans and specifications for the reclaimed water tanks. On August 7, 2024, the City awarded the construction contract to Euro Style Management for a not-to-exceed amount of $1,379,304.

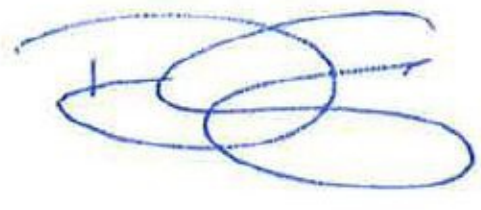
As construction has progressed and nears completion, additional components inside the tanks have been identified that require either replacement or rehabilitation. These items include adding roof vents to help increase the ventilation in the tanks, replacing the cathodic protection system that protects the steel and the coating from corrosion damage, and other items that will assist in extending the remaining useful life of the tanks. Some of these additional scope items will be provided by the current contractor, Euro Style Management, and the associated cost will be covered with the contingency for potential change orders. Additional unforeseen rehabilitation items at the Reclaimed Water Tank site will be provided by other vendors and City staff, therefore additional funding is needed to cover the remaining cost.

FISCAL IMPACT

This budget adjustment is comprised of capital outlay for $40,000 and internal secondary labor for $35,609 for a total request of $75,609. The current budget for this project is $1,379,304. The new total project budget will be $1,454,913 from available resources in the Wastewater Rehabilitation Fund.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Approval of a budget adjustment meets the above criteria and is not subject to CEQA. No additional environmental review is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal C - Maintain a safe and healthy community
Goal F - Invest in well-planned infrastructure and growth

Ordinance 6931

ORDINANCE NO. 6931

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2024-25 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. The City of Roseville Annual Budget, Fiscal Year 2024-25, is hereby amended as listed on the attached budget adjustment for the West Zone Recycled Water Tanks Rehabilitation project.

SECTION 2. This ordinance is hereby declared to be an appropriation measure, immediately effective pursuant to the provisions of Section 5.03 of the Charter.

SECTION 3. The City Clerk is hereby authorized and directed to post a true copy of the foregoing ordinance in each of three (3) conspicuous locations in the City and she shall immediately after such posting enter in the ordinance book, under the record of the ordinance, a certificate under her hand stating the time and place of such publication by posting.

Justification for Budget Adjustment:

The West Zone Recycled Water Tank Rehabilitation (# 500344) project was established to design and perform the rehabilitation of the two West Zone recycled water tanks. As construction has progressed and nears completion, additional components inside the tanks have been identified that require either replacement or rehabilitation including adding roof vents to help increase ventilation, replacing the cathodic protection system that protects the steel and the coating from corrosion damage, and other equipment that will extend the useful life of the tanks ($40,000). Along with secondary labor of $35,609, the requested budget adjustment is for $75,609. This will bring the project's total lifetime budget to $1,454,913. There are adequate resources in the Wastewater Rehabilitation Fund (6230).

COUNCIL COMMUNICATION

CC #: 3829
File #: 0210 & 0201-01

Title:	Community Facilities Districts and Lighting and Landscape District - Budget Adjustment
Contact:	Eric Dexter 916-746-1769 edexter@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.22.

RECOMMENDATION TO COUNCIL

Staff recommends the City Council adopt an ordinance to approve a budget adjustment totaling $47,000 for the repair of soundwall damage due to vehicle accidents in Creekview Community Facilities District (CFD) No. 2 (Public Services) and Infill Lighting and Landscape District (LLD), Zone C, and to increase the sinking fund budget for a landscape project in the Longmeadow CFD No 2. (Services District).

BACKGROUND

Repair of soundwalls and landscape improvements are needed in two CFDs and one LLD. This request consists of the following projects that were not included in the adopted FY2024-25 budget:

- $2,000 for soundwall repairs in the Infill LLD, Zone C;
- $17,000 for soundwall repairs in the Creekview CFD No. 2 (Public Services); and
- $28,000 for a landscape project, as bids were higher than planned in the Longmeadow CFD No. 2 (Services District).

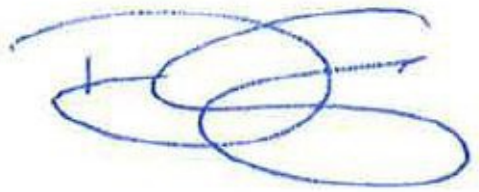
FISCAL IMPACT

There are sufficient fund balances in the districts to support the recommended budget adjustments. This work will be funded through the respective CFDs and LLD. There is no impact on the General Fund.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not

considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Approval of a budget adjustment meets the above criteria and is not subject to CEQA. No additional environmental review is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal A - Remain fiscally responsible in a changing world
Goal C - Maintain a safe and healthy community
Goal E - Deliver exceptional city services
Goal F - Invest in well-planned infrastructure and growth

2121	3601	00000	000000	(17,000)	Decrease Creekview CFD 2 SD Fund Balance
2114	3601	00000	000000	(28,000)	Decrease Longmeadow CFD 2 SD Fund Balance
	3601	00000	000000		
	3601	00000	000000		
	3601	00000	000000		
FUND BALANCE TOTAL				(47,000)	

Justification for Budget Adjustment:

The Parks, Recreation & Libraries department is requesting a budget adjustment of $47,000 to increase the repairs and maintenance budget to repair soundwall damage due to accidents in the Infill Zone C Lighting and Landscape District (LLD) and the Creekview Community Facilities Disrict (CFD) and to increase sinking fund budget for a landscape project in the Longmeadow Community Facilities Disrict (CFD). Funding is available in the Infill Zone C LLD fund (2017), the Creekview CFD fund (2121) and the Longmeadow CFD fund (2114). There is no impact on the General Fund.

COUNCIL COMMUNICATION

CC #: 3850
File #: 0704-01 & 0201-01

Title: Vehicle Purchase – Budget Adjustment
Contact: Rob Nakamura 916-774-5135 rnakamura@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.23.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt an ordinance to approve a budget adjustment for the purchase of two (2) motorized utility carts, one (1) trailer-mounted pressure washer, one (1) electric golf cart and one (1) electric utility cart to support the maintenance and the operations of the soccer complex.

BACKGROUND

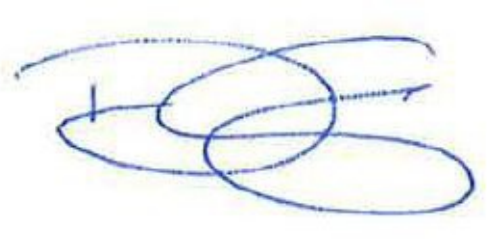
The Parks, Recreation & Libraries Department requests a budget adjustment of $158,000 to cover the costs of four utility vehicles and a ride-on pressure washer to support maintenance and operations for the ten (10) soccer fields, a universally accessible playground, restroom buildings, concession/tournament buildings, parking lots and streetscapes at the 51-acre soccer complex facility scheduled to open in late 2025. Vehicles are needed to perform the maintenance and field prep necessary to meet the demands of hosting games, tournaments, and user agreements.

FISCAL IMPACT

Funding is available from the Soccer Complex project budget using the Citywide Park - West Roseville Specific Plan Fund.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. The Budget Adjustment meets the above criteria and is not subject to CEQA. No additional environmental review is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal C - Maintain a safe and healthy community
Goal D - Enhance economic vitality
Goal E - Deliver exceptional city services
Goal F - Invest in well-planned infrastructure and growth

Justification for Budget Adjustment:

The Parks, Recreation & Libraries Department (PRL) requests a budget adjustment of $158,000 to purchase four new utility carts and a ride-on pressure washer for the Soccer Complex. Vehicles are needed for landscaping, maintenance, and to support the daily operations of ten soccer fields, a playground, concessions, and restrooms at the Soccer Complex. Funding is available from the Soccer Complex Project (400068) budget in the West Roseville Specific Plan City Wide Park fund (3304). Rent and replacement costs for these vehicles will be absorbed into PRL's FY2026 operating budget after the vehicles are received.

Proclamation

PUBLIC SERVICE RECOGNITION WEEK
MAY 4-10, 2025

In honor of the millions of public employees at federal, state, county, and city levels:

WHEREAS, Americans are served every day by public servants at the federal, state, county, and city levels, and these unsung heroes do the work that keeps our nation functioning; and

WHEREAS, public employees take oaths to perform their jobs; and

WHEREAS, many public servants, including police officers, firefighters, military personnel, border patrol officers, embassy employees, and health care professionals, risk their lives each day in service to the people of the United States and around the world; and

WHEREAS, public servants include: utility workers, inspectors, engineers, teachers, scientists, social workers, safety inspectors, dispatchers, laborers, parks, recreation and library workers, computer technicians, and countless other occupations, and day in and day out they provide the diverse services demanded by the American people of their government with efficiency and integrity; and

WHEREAS, without these public servants at every level, continuity would be impossible in a democracy that regularly changes its leaders and elected officials.

NOW, THEREFORE, I, KRISTA BERNASOCNI, MAYOR OF THE CITY OF ROSEVILLE, CALIFORNIA, do hereby proclaim **May 4-10, 2025, as PUBLIC SERVICE RECOGNITION WEEK** and encourage all citizens to recognize the accomplishments and contributions of government employees at all levels.

Title:	Local Sales Tax Citizens' Oversight Committee - Report to the City Council
Contact:	Scott Pettingell 916-746-1306 spettingell@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 8.1.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council receive an informational report and presentation from the Local Sales Tax Citizens' Oversight Committee on the fiscal year 2023-24 revenue and expenditures of the Measure B sales and use tax.

BACKGROUND

The Local Sales Tax Citizens' Oversight Committee (Committee) was created when Roseville voters passed Measure B in the November 6, 2018, election. The Committee is charged with the annual review and report to the City Council on the revenue and expenditures of the Measure B sales and use tax.

As part of the EngageRoseville effort that led to Measure B, the City asked the community about its priorities for city services to help guide the City in developing future budgets.

Those priorities, along with Council priorities, were reflected in the FY2023-24 budget as follows:

Maintained essential services
- Cost of doing business increases
- Specialized police and fire services
- Fire engine company
- Recreation and library programs
- Street maintenance levels
- Job-creation and business-recruitment initiatives
- One additional dispatcher
- Unsheltered camp cleanup
- Library, parks and events stabilization
- Maintenance at citywide parks
- Crabb Park
- Central Park
- Pistachio Park
- Street paving

Restored services that had been reduced prior to Measure B

- Library hours
- 4th of July fireworks
- Fire training and investigations
- Goat grazing for thatch management in open space
- Park maintenance standards
- Industry training and development

Examples of Services Added

- Fully staff the new police beat in West Roseville
- Increase Animal Control staffing to enhance community safety
- Increase police traffic officer staffing for improved traffic control
- Allocate resources for staff and equipment to implement a body-worn camera (BWC) program
- Establish a Real-Time Crime Center (RTCC) to enhance crime monitoring and response
- Provide maintenance support for the growing park system
- Increase staffing for tree trimming to enhance customer response and safety
- Expand programs and operating hours at Maidu Museum & Historic Site
- Extend library hours at Riley Library for increased community access
- Expanded graffiti abatement program
- Increase investment in facility rehabilitation, equipment replacement, and street maintenance
- Support increased initiatives addressing homelessness in the community

Fiscal Health Investments

- Fully fund economic stabilization reserve fund at 15% of General Fund operations budget
- Pay down CalPERS pension obligation
- Pay down retiree health liability

The Committee met on February 26, 2025, and received a presentation on the City's year-end report from staff.

The presentation was a summary of the information provided to the Committee, including the following documents:

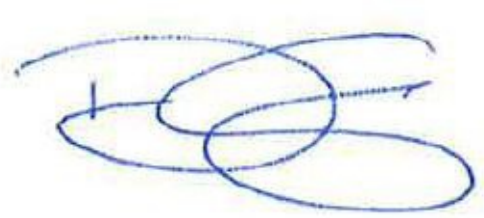
- FY2023-24 Measure B Scorecard
- FY2023-24 Annual Comprehensive Financial Report.
- FY2023-24 Fourth Quarter Report
- General Ledger Detail
- General Fund Reserves Policy
- FY2023-24 Annual Budget
- FY2023-24 Year-end Report and Budget Adjustment Council Communication
- Roseville Citizens' Oversight Committee Memo April 10, 2024

The Committee met again on March 26, 2025, to finalize its annual review and report to the City Council on the revenue and expenditures of the Measure B sales and use tax.

FISCAL IMPACT

There is no fiscal impact related to receiving this report.

ENVIRONMENTAL REVIEW



The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. The report to the City Council from the Local Sales Tax Citizens' Oversight Committee meets the above criteria and is not subject to CEQA. No additional environmental review is required.

CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal A - Remain fiscally responsible in a changing world

Respectfully Submitted,

Scott Pettingell, Finance Director

_____

Dominick Casey, City Manager

ATTACHMENTS:

Description

LSTOC Report

Memorandum

To: Roseville City Council

From: Local Sales Tax Citizens' Oversight Committee

Date: March 20, 2025

Subject: Citizens' Oversight Committee update for April 16, 2025 Roseville City Council Meeting

History of Measure B

- Measure B is a half-cent local sales and use tax to protect Roseville's essential services and was approved by voters in the November 6, 2018 election, with the expected annual revenue of $16 to $19 million.
- On April 1, 2019, the sales and use tax rate in Roseville increased from 7.25% to 7.75%.

Role of the Citizen Oversight Committee

- The Citizens' Oversight Committee (Committee) was proposed as an independent citizen oversight on the Measure B funds.
- The Committee was created when Measure B passed in the November 6, 2018 election.
- The Committee is charged with the annual review and report to the City Council on the revenue and expenditures of the Measure B sales and use tax.

Current Members	Term End
Bob Bettencourt	6/30/2027
Jordan Bunnell	6/30/2027
Stephanie Hill	6/30/2025
Kathryn Kitchell	6/30/2027
John Speight	6/30/2025

Measure B is a General Tax and the monies collected are appropriated to the General Fund where revenues are not allocated and tracked for a specific purpose. The Measure B ballot information stated that "the City may use the funds for any municipal purpose, including but not limited to essential services such as neighborhood police patrols, fire protection, 9-1-1 emergency response; crime suppression/investigation; street and pothole repair; libraries, parks and recreation; and job creation and economic improvement programs." It is not possible for the Committee to determine the exact programs/services supported by Measure B revenues.

Review of Committee Meetings

The February 26, 2025 meeting consisted of the following:

- Appointment of Chair and Vice Chair
- Review of the Brown Act by Joe Mandell, Senior Deputy City Attorney
- Presentation by Dennis Kauffman, Assistant City Manager/Chief Financial Officer, and Scott Pettingell, Finance Director. The presentation was a summary of information provided to the Committee as exhibits:

    - Committee Overview
    - Year-end Report: Discussion of Fiscal Year July 1, 2023 to June 30, 2024 General Fund revenues and expenditures:
        - FY 23-24 Fourth Quarter Report
        - General Ledger Detail
        - General Fund Reserves Policy
        - FY 23-24 Annual Budget
    - Measure B Scorecard

- Recommendation by City staff that the Committee designate one or two Committee members to prepare the Committee's report to the City Council.

The Measure B Scorecard (Scorecard) was originally prepared by staff, in conjunction with a consultant, as an additional resource for the Committee in its review of compliance of the use of Measure B Funds with the original purpose for Measure B as stated in the ballot.

Citizens' Oversight Committee Report of the Funds from FY 23-24

- Measure B revenue in FY 23 -24 was $29.9M, $169K more than budgeted. Actual Measure B revenues exceeded budget primarily due to the conservative approach in budgeting for major tax revenues to compensate for impacts of the COVID-19 pandemic and general economic recovery.
- The Committee notes that because Measure B revenue is a general tax commingled with other General Fund revenue and pooled for General Fund expenditures, it is not possible to trace specific expenditures back to Measure B revenue.
- The General Fund concluded FY 23-24 with a $15.9M surplus ($3.2M additional revenues, $12.6M in expenditure savings).
- General Fund expenditures are $12.6M less than budgeted. A significant portion of the reduction ($4.6M) is attributed to the deferral of a discretionary payment to CalPERS. Operational budget savings were mainly in Public Works ($1.83M), Parks, Recreation and Libraries ($1.54.M), and Fire ($1.28M). The reduction in General Fund department operating expenditures is primarily attributed to vacant positions.
- The Police and Fire Departments spent virtually all of their budgets (100% and 97%, respectively).
- The Scorecard (attached) provided the Committee with additional information in determining the level of services in comparison to the base year (FY18-19 when Measure B was adopted). The Scorecard indicates that budgeted expenditures, staffing levels, and

Economic Stabilization, Emergency, and Capital Reserve balances for FY 23-24 were comparable to or increased from those in the base year

- The Scorecard indicates staffing for the Police Department decreased by 1 from FY 2022-23 to FY 2023-24. This was a temporary result caused by the timing of the budget process and the filling of a reclassified position through an internal promotional recruitment.
- An evaluation component the Committee considers of significant value is the National Community Survey, a bi-annual City-wide effort which gathers information from the community on satisfaction with City services. The survey provides feedback from the community on how the City's dollars are being used. The results of the latest survey indicate community members are pleased with the City government:
    - "Residents gave outstanding and above-average marks to almost every aspect of government performance in Roseville."
    - "About 77% of residents rated the value of services for the taxes paid to the City and the overall direction of Roseville as excellent or good."
- The Committee concludes that, based on the data provided by City staff and our analysis as described above, police, fire, public works and parks, recreation and library services were all maintained as evidenced by an increase in expenditures, and community satisfaction with the City. The Committee also concludes FY 23-24 Measure B funds were used for their intended purpose.

Citizens' Oversight Committee Report of the Surplus Funds from FY 22-23

The Council Priorities Workshop and determination of the use of the $13.9M surplus from FY 22-23 was not known by the Committee at the time of Committee report preparation for that year. Included in this year's Scorecard (see page 12) is the spending plan approved by City Council for the FY 22-23 surplus. The Committee finds these items in compliance with the intended use of Measure B revenues.

CC: Dennis Kauffman, Assistant City Manager/Chief Financial Officer
Phoebe Schueler, Recording Secretary

National Community Survey 2023 Results

Measure B Scorecard

Fiscal Year 2023-24

Measure B is a half-cent local sales and use general purpose tax passed by voters during the November 6, 2018, election to protect Roseville's essential services.

The primary function of Measure B is to maintain essential services. Prior to the passage of Measure B, the City of Roseville faced significant reductions in services, under-funding of long-term obligations, and growing expenses. Revenue generated by Measure B allows the City of Roseville to provide for the continuity of services by restoring and maintaining priority service levels and building and maintaining an Economic Stabilization Reserve Fund as a safeguard for the future.

Roseville's Measure B scorecard uses a green, yellow, red scoring method to present how Measure B funds have impacted services.

- Green indicates restored or enhanced level of resources.
- Yellow indicates maintained level of resources.
- Red indicates diminished level of resources.

Below is a dashboard snapshot of ratings for Fiscal Year 2023-24 (FY 2023-24) or the fiscal year that started on July 1, 2023, and ended on June 30, 2024; additional details follow.

Category	Rating
Fiscal Investment Snapshot	
Police	
Fire	
Parks, Recreation and Libraries	
Public Works	
Development Services	
All other General Fund departments and transfers	
Investment in Reserves	

In summary, during FY 2023-24 measure B revenues continued to allow the City to maintain current service levels, restore services, and strategically invest in high-priority areas while still achieving a balanced budget.

Measure B Priorities

Measure B was passed by voters with the commitment to maintain service levels, invest in high-priority service areas, and build and maintain the City's economic stabilization reserve fund. Measure B sales tax revenue has helped stabilize General Fund services, protect Roseville's quality of life, and increase reserves to weather future economic downturns.

Measure B-related investments continued into Fiscal Year 2023-24

Maintained essential services

- Cost of doing business increases
- Specialized police and fire services
- Fire engine company
- Recreation and library programs
- Street maintenance levels
- Job-creation and business-recruitment initiatives
- One additional dispatcher
- Unsheltered camp cleanup
- Library, parks and events stabilization
- Maintenance at citywide parks
    - Crabb Park
    - Central Park
    - Pistachio Park
- Street paving

Restored services that had been reduced prior to Measure B

- Library hours
- 4th of July fireworks
- Fire training and investigations
- Goat grazing for thatch management in open space
- Park maintenance standards
- Industry training and development

Examples of Services Added

- Fully staff the new police beat in West Roseville
- Increase Animal Control staffing to enhance community safety
- Increase police traffic officer staffing for improved traffic control
- Allocate resources for staff and equipment to implement a body-worn camera (BWC) program
- Establish a Real-Time Crime Center (RTCC) to enhance crime monitoring and response
- Provide maintenance support for the growing park system
- Increase staffing for tree trimming to enhance customer response and safety
- Expand programs and operating hours at Maidu Museum & Historic Site
- Extend library hours at Riley Library for increased community access
- Expanded graffiti abatement program
- Increase investment in facility rehabilitation, equipment replacement, and street maintenance
- Support increased initiatives addressing homelessness in the community

Fiscal Health Investments

- Fully fund economic stabilization reserve fund at 15% of General Fund operations budget
- Pay down CalPERS pension obligation
- Pay down retiree health liability

General Fund Department Data

A primary objective of Measure B is to ensure the continuity of services for residents. This is demonstrated by the level of investment in General Fund operating departments. The City seeks to keep pace with growth while maintaining a high level of service and meeting the needs of the community. This scorecard uses a green, yellow, red scoring method to present how Measure B funds have impacted services.

- Green indicates restored or enhanced level of resources.
- Yellow indicates maintained level of resources.
- Red indicates diminished level of resources.

Notable Changes

Police

The Police Department's FY2023-24 budget totaled $58.8 million and provided funding to support 223 position allocations. The department budget increased over the prior fiscal year primarily due to increased labor costs and materials, supplies and services. In addition, the budget included funding to increase position allocations by two positions, moves one Department Public Information Officer allocation to the Public Affairs & Communications Department, and eliminates one Police Officer allocation because grant funding is no longer available.

The reduction in the number of positions within the police department, compared to the FY2022-23 adopted budget, is due to the reclassification of a Police Records Clerk position to a Senior Police Records Clerk position in a prior fiscal year. To accommodate this reclassification, the City temporarily increased the number of authorized Senior Police Records Clerk positions. Once the position was filled, the vacated Police Records Clerk position was eliminated during FY2022-23. This adjustment is administrative in nature and does not reflect a change in service levels.

The Police Department FY2023-24 budget included the following highlights:

Police Social Services Supervisor

As the Roseville Police Department's Social Services Unit continues to work with the City's unsheltered population, additional interns were added to the Social Services Unit. The interns work for the Police Department, earning hours for college classes and degree and certificate credits. These interns are supervised by an additional Police Social Services Supervisor position, which requires a license with the appropriate college degree. Additionally, the Police Social Services Supervisor collaborates with other professional staff members and regional partners to work together to obtain services for the unsheltered community in Roseville. Funding for this position was included in the budget, but the position allocation was recommended to City Council at a later date because a classification study was required.

Police Lieutenant/Department Public Information Officer

An additional Police Lieutenant was included in the budget to backfill a Department Public Information Officer that was moved to the Public Affairs & Communications Department. The Lieutenant serves as the Department's primary Public Information Officer, focusing on social media communication with the community, and oversees the Community Services Coordinator.

Community Services Officer I/II

A Community Services Officer position was added to the department Real Time Crime Center (RTCC) to expand operational hours. The RTCC is an initiative of the Police Department where it leverages technology resources in real time to assist in responding to calls for service. The RTCC is currently a one-person operation with limited technology resources, and yet it has been responsible for numerous assists in making arrests. It has become a go-to-resource for Patrol during the limited hours of operation.

Outreach Specialist

Two part-time Outreach Specialist positions were added to the department's Social Services Unit. The Outreach Specialist positions are critical to the Social Services Unit operations to offer services and therapeutic interventions according to their education and training to fulfill the vision of the Roseville Police Department. Services include de-

escalation, mental health crisis-based counseling, referral services, homeless outreach, services related to aging, threat assessment, community outreach, and family welfare. The Outreach Specialist pays particular focus to chronic offenders and non-criminal calls for services assisting individuals using solution-focused practice, thus, deflecting individuals away from the criminal justice system.

Police Property and Evidence Clerk

A part-time Police Property and Evidence Clerk was added to manage the increased workload from the department's Lenslock project. In addition to the body-worn cameras, the Roseville Police Department was approved to purchase in-car cameras for all patrol vehicles. The in-car cameras help on traffic stops and during pursuits. The Property and Evidence Clerk position reviews, processes, redacts, and releases camera footage for the department.

System Maintenance and Support for Priority Dispatch System Priority Dispatch

Priority Dispatch is the automated version of Emergency Medical Dispatch. This software system guides the Dispatcher through the pre-arrival medical assistance steps, providing more timely and accurate responses for citizens and responding Fire and Police resources. Funding for system maintenance and support was included in the budget to keep the automated Priority Dispatch emergency medical dispatch system updated and operational while providing access to portal training classes and logs.

CSI Cameras

The Roseville Police Department's CSI Unit uses specialized cameras and lenses to process scenes and capture evidence to be used in investigating crimes, testifying in court, and prosecuting criminals. CSI staff use the same type of camera for ease of training and consistency in crime scene documentation. The department purchased new cameras and specialized lenses for the CSI unit, as the current cameras were approaching the end of life.

Cell Phone Forensic Software

Advancements in cell phone technology have made it more difficult to extract information from cellular devices. Evidence stored on a cellular device is often crucial to investigations and criminal prosecution. The Police Department requires various tools to extract electronic data. Funding was included in the budget to purchase software that will provide a more robust extraction option and can bypass passcode locks, a capability not offered by any of the department's current tools.

In-Car Camera Solution

As part two of what started as the department's Body-Worn Camera (BWC) project in 2021, the budget included funding to implement an in-car camera solution. This purchase allows the department's patrol vehicles to be equipped with a front facing, windshield-mounted camera, a mobile video recorder, and a passenger camera.

Rifle/Sound Suppressors for SWAT Team

The rifles assigned to the Roseville Police Department's SWAT team had exceeded their expected lifespan and needed to be replaced. The department was authorized to purchase 17 new upper rifle platforms and 17 sound suppressors to outfit the SWAT team's current rifles. The new rifle platforms are expected to last approximately five years. The sound suppressors are also expected to last five years and will greatly reduce potential hearing loss associated with repetitive gunfire.

Police Vehicle Radios

The Police Department is the largest vehicle user in the City and has to replace vehicles continuously. During this replacement process, vehicle radios are removed and reinstalled into the new replacement vehicle. This is done by taking a vehicle out of service first; doing this strains services due to the lack of vehicles in the fleet. Purchasing two APX8500 vehicle radios allowed the department to keep up to two vehicles in service until two new replacements are built, keeping response times and service levels high.

Training

The Police Department's training budget was increased by $46,800. This increase in funding allows department personnel to develop their expertise through training and attendance at specialized conferences, meetings, and events. This increase includes $10,000 for California National Emergency Number Association training. Through research, planning, and education, this training will help Dispatchers foster a reliable and continuously improved emergency telephone number network. $6,500 is included in the budget for the POST Sherman Block Supervisory Leadership Institute Course. This course will stimulate personal growth, leadership, and ethical decision-making with frontline supervisors within our Dispatch Unit. $5,300 was included in the budget for Red Dot Sights (RDS) Instructor Course Training. As the department is transitioning from iron sights to a red dot sight-equipped duty pistol, the RDS instructor course will assist with this transition providing Police Officers with operational knowledge of the RDS optic. $10,000 was included for two staff members to attend the annual Capitol-to-Capitol Program. This event is meant to secure funding and resources for high-priority projects and raise local concerns to officials at the national level. Lastly, $15,000 was included in the budget to increase the Police Department's Defensive Tactics training budget. This training will provide the department's defensive tactics instructors with the knowledge and skills necessary to train and lead their peers to raise the standard of training concerning defensive tactics and use of force situations.

Fire

The Fire Department's FY2023-24 budget totaled $45.2 million and supported 130 position allocations. This increase is mostly due to staffing the new Fire Station 8.

Fire Captain

The budget included funding for a new Fire Captain position (non-shift). This position supports the Fire Training Division and provide additional logistical support to the department.

Staffing Engine 8

The budget included funding for nine full-time equivalent positions (three Fire Captains, three Fire Engineers and three Firefighter Paramedics) to staff a new apparatus, Engine 8. This includes both salary and benefits, academy costs and start-up items like personal protective equipment. These resources provide much needed resources to District 8 and further support the City.

Parks, Recreation and Library

The Parks, Recreation & Libraries Department's FY2023-24 budget totaled $35 million and supported 144.25 position allocations, including seven new positions. A Cultural Arts Supervisor position was funded in the PRL budget, but the allocation came to the City Council at a later date once the new classification was established. Much of the funding for these positions was the result of the reallocation of temporary staff funding. Recruitment and retention of part-time staff has become increasingly difficult, and the use of these funds towards full-time positions greatly increase the

department's efficiency and effectiveness. The PRL Department budget increase is primarily due to increased labor and materials, services, and supply costs associated with maintaining current service levels and additional funding to support the new positions and programs highlighted below.

PRL worked towards accreditation through the National Recreation and Park Association's (NRPA) Commission for Accreditation of Park and Recreation Agencies (CAPRA). This accreditation provides quality assurance and quality improvement of accredited park and recreation agencies throughout the United States by providing agencies with a management system of best practices. CAPRA is the only national accreditation of park and recreation agencies and is a valuable measure of an agency's overall quality of operation, management, and service to the community. Achieving CAPRA accreditation is the best way to demonstrate that the department provides the community with the highest level of service.

The PRL Department has developed a comprehensive strategic plan, accompanied by an action plan, to establish clear and attainable goals, objectives, and implementation strategies to guide the department for the next 10 years. In alignment with the plan, funding was included to develop a Marketing & Communications Plan and increase the library book budget.

As mentioned above, PRL is continually challenged with recruiting and retaining quality staff to conduct its many programs/events and to ensure its parks/facilities are adequately maintained. Ongoing efforts have been made to realign department staffing resources to find the right balance of full-time and part-time employees as well as contractor resources to deliver programs and services effectively and efficiently. These efforts continued in FY2023-24.

A Parks Manager was added to the largest division in the PRL Department. The safety of Roseville's parks is priority one, and their cleanliness and appearance is seen by residents on a daily basis. Portering is a core function of the maintenance of City parks for safety, cleanliness and general conditions. On a daily basis, porter staff ensure restrooms are cleaned, trash is emptied, inspect the entire park for safety issues, address vandalism/graffiti, and ensure playgrounds and sports courts are safe. The budget included the conversion of temporary salaries to support three full-time Parks Maintenance Workers to more effectively complete this core function.

Three additional natural resource workers helped maintain the additional open space acres and additional trail miles acquired by the City each year, as well as advance our efforts to control encroachment, invasive species, and homeless encampments.

PRL funding is complex, consisting of the General Fund, an enterprise fund, various special revenue and capital projects funds, including 38 CFDs/LLDs. The work to manage park development financial activity is significant. A Management Analyst was added to ensure PRL's prudent management and monitoring of expenses and revenues.

Public outreach during PRL's strategic master planning process indicated a desire from the community to expand cultural offerings. A Cultural Arts Supervisor will provide leadership at Maidu Museum & Historic Site, a valuable City asset. Additionally, this supervisor can advance efforts at the Fiddyment House property and increase the presence of public art in Roseville, adding uniqueness to our community, sharing our history, and creating a stronger sense of place. There are funds in this budget for a downtown art project, Music in the Park, and other public art that will be managed by this supervisor.

There is an investment in park amenities, vandalism and graffiti abatement to ensure safety and equity in aging facilities, including replacement of amenities such as benches, picnic tables, drinking fountains, shade structures, sports court fixtures, and restroom fixtures. Annual condition assessment and inventory tracking will assist in determining priorities each year. Additional funding was added to support new General Fund parks.

Public Works

The Public Works Department's FY2023-24 budget totaled $10.5 million. The General Fund component of Public Works' budget increased by 2 percent (from $10.3 million last year to $10.5 million this year). The Public Works FY2023-24 budget included the following adjustments:

Prioritizing Graffiti Removal

The FY2023-24 budget included $100,000 in General Fund resources for Street Maintenance to assist with allowing staff to identify and remove graffiti throughout the City's roadways quickly. To meet the community's desire for graffiti removal, staff will hire multiple on-call contractors to respond to and remove graffiti on any City assets along the City's roadways with a target period of 24 hours. This will reduce the impact of graffiti on our existing staff and their workload and allow the City to send one crew to a graffiti location and remove all markings on assets operated by various departments rather than having each asset owner send out their own crews.

Staff to Address Increasing Engineering Workload

Over the past 10 years, traffic engineering staff had decreased by 50 percent while workloads have steadily increased. The Intelligent Transportation System (ITS) Masterplan and the Institute of Transportation Engineers recommend a staff of six, as compared to four, to run a city the size of Roseville with a similar level of ITS implementation. Staff are currently unable to retime traffic signals every three years, or review and update coordination plans every three years. City goals for completing 80 percent of traffic studies within three months and 100 percent within six months are down to zero percent in three months and 71 percent in six months. An additional full-time Engineer in the Traffic Engineering Section of the Engineering Division was included in the Public Works FY2023-24 budget to meet these demands

Staffing for Street Maintenance

A new Service Worker was included in the FY2023-24 budget to assist with street maintenance. The Service Worker position was created over 20 years ago as a standalone solution to daytime calls for immediate service, inspection, cleanup tasks in the right of way (including graffiti and illegal dumping), and incident response (including potholes and emergency response assistance) all to deliver exceptional City services. Since the creation of the position, the City population has grown by 2/3 (60,000 people), the road lane miles have doubled (250 lane miles), and the area of the City has increased by 1/3 (13 square miles).

Development Services

The Development Services FY2023-24 General Fund budget totaled $11.9 million. The DSD budget included the conversion of a limited-term Development Technician to a regular position. This position assists in the Permit Center with customer service, permit coordination, website maintenance, and records requests

All Other General Fund Departments

This category includes the City Council, City Manager, Public Affairs & Communications, City Attorney, Human Resources, City Clerk, Finance and Economic Development Departments. Department budgets were adjusted for increased labor costs and materials, services, and supplies.

The Public Affairs & Communications (PAC) Department's FY2023-24 budget included the transfer of one department public information officer position from Police to PAC to support Organizational, Culture & Leadership efforts, Police communications training, and legislative advocacy. It also includes two new positions to the city: one to support Police community relations and communications outreach and the other to support video broadcast of City Council meetings and digital and video outreach for culture and recruitment branding.

The Finance Department's FY2023-24 budget included an increase to an existing Accounts Payable position from 0.625 Full Time Equivalent (FTE) position to 1.0 FTE position to handle growing workload, offset by a decrease in temporary staffing funding. The budget also allocated $60,000 in one-time funding for a citywide equipment inventory and replacement plan, and a Senior Accountant position for monitoring internal controls and assisting with internal audits, including $50,000 for two annual internal audits. An additional 1.0 FTE Analyst position was added to Payroll to address increased workload, and a new Purchasing Supervisor position was included to support the Purchasing Division. Finally, $20,000 was allocated for a consultant to help implement recommendations from a recent procurement assessment, focusing on policy development and training consolidation.

The Human Resources FY2023-24 budget includes the addition of a new 1.0 FTE Human Resources Analyst position to support the Electric and Environmental Utilities Departments with employee performance consultation, succession planning, and managing complex leave issues, with the cost offset by funding from those departments. Other key highlights include funding for a consultant to develop a citywide Succession Planning Program, a recruitment branding initiative to enhance the City's reputation as an employer of choice, and a project to scan and digitize personnel files for improved access and management.

Other Expenditures/Transfers

The other expenditures category represents expenditures that do not align directly with any department and benefit the entire organization. This category also includes transfers between funds.

The 20% decrease in this spending category is primarily due to a one-time transfer of $10 million in General Funds to the General Fund Capital Reserve that was budgeted for in FY2022-23, but not continued into FY2023-24.

Below is a summary of the significant items included in this category in the FY2023-24 budget:

- Pay down of CalPERS obligations by an Additional Discretionary Payment ($4.6 million)
- Leave payoffs for General Fund employees that retire during FY2023-24 ($750,000)
- Retiree medical benefits ($5.9 million)
- Annexation tax-sharing agreement payments to Placer County ($11.6 million)
- Contingency budgets for the General Fund ($2.9 million of which $1.37 million was estimated for negotiated labor increases during the year)
- Fees charged by the State and County for the collection and disbursement of sales and property taxes ($1.2 million)

General Fund transfers between funds:

- $1.3 million to General Fund Emergency Reserve Fund
- $2.1 million to General Fund Stabilization Reserve Fund
- $4.6 million to General Fund Pension Reserve Trust Fund

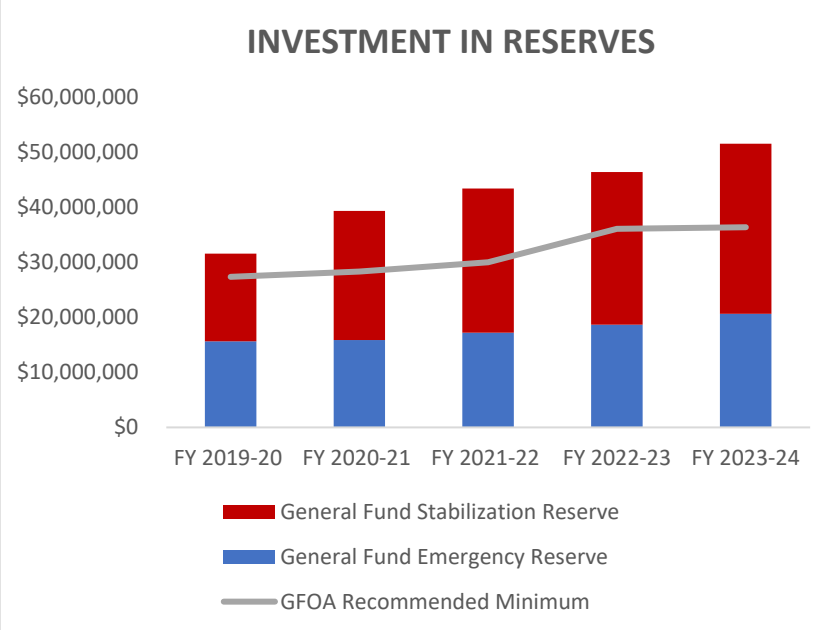
FY2023-24 Year End Results

General Fund revenues for FY2023-24 ended the year in line with expectations outlined in the third quarter report. While Measure B sales tax continued to grow, albeit at a slower pace than the years following the pandemic, Bradley Burns sales tax revenues declined in FY2023-24, resulting in a sales tax shortfall of approximately $2.4 million. This decline is attributed to a shift in consumer spending towards more service-related purchases, which are not taxable. Additionally, the ongoing effects of inflation and higher interest rates affected spending, contributing to a slight decrease in sales tax revenues compared to the previous fiscal year. On the positive side, the rise in property values and new construction led to property tax collections exceeding budget estimates through the end of the fiscal year. Development activity in the City continued with an upward trend during FY2023-24, resulting in higher-than-expected building permit, plan check, and engineering and inspection fee revenues. Despite the sales tax shortfall, year-end results show that higher-than-expected revenues in other categories offset the shortfall, leading to an overall revenue surplus of $3.26 million or approximately 1% above estimates.

Expenditure savings, including labor, materials, services, and supplies, totaled $12.6 million in the General Fund. This amount includes a $4.6 million additional discretionary payment (ADP) to CalPERS that was deferred as a precautionary measure due to the forecasted sales tax shortfall. Excluding the ADP, expenditure savings totaled approximately $8 million, representing about 4% of the operating expenditure budget. The combined surplus for FY2023-24 amounted to $15.86 million, as presented below:

General Fund FY2023-24 Year-End Results (Operating and Non-Operating)	Variance from Budget ($)
Sales and Use Tax - Bradley Burns	$ (2,565,000)
Sales and Use Tax - Measure B	169,000
Property Tax	2,231,000
Other Revenues	3,425,000
Revenue surplus	**3,260,000**
Expenditure savings	**12,600,000**
Total General Fund Year-End Surplus	**$ 15,860,000**

On February 5, 2025, the City Council appropriated the year-end surplus for the following purposes:

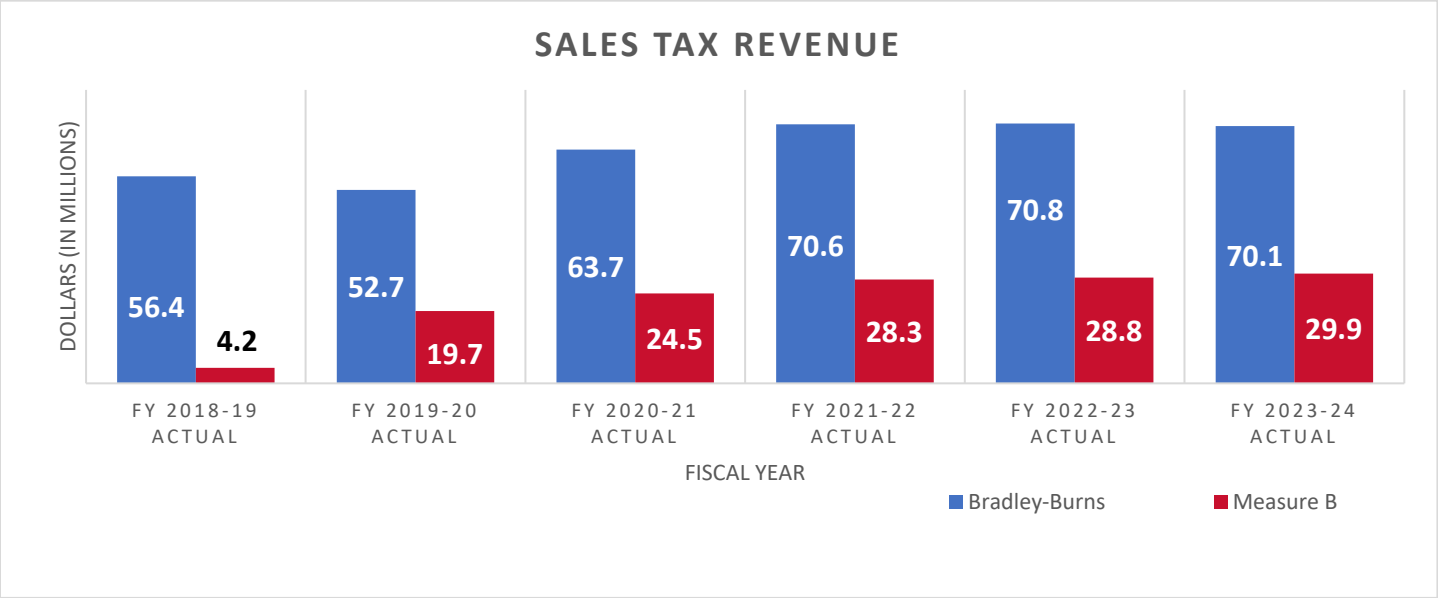


1. **Parks, Recreation, and Libraries Department (PRL) Projects: $4,030,000**
    - $3,150,000 to increase the budget for The Courts at Gibson Park Frontage project ($150,000) and establish the new West Side Maintenance Yard project ($3,000,000). The West Side Maintenance Yard project will build a satellite corporation yard on the western side of the City, including storage for equipment and materials, a shop, office space for Operations staff, and other support features to improve efficiency and service to residents.
    - $630,000 for the Youth Development Fund to increase the budgets for six existing projects: Adventure Club Flooring and Painting ($208,000), Adventure Club Interior Cabinets and Counters ($80,000), Adventure Club Exterior Paint and Siding ($140,000), Adventure Club HVAC Replacement ($85,000),

Adventure Club Ramps ($15,000), and Adventure Club Roof Repair and Replacement ($50,000), as well as to establish one new project: Adventure Club Programmable Locks ($52,000).
    - $250,000 for the Parks, Recreation and Library Capital Projects Fund to establish the Vernon Street Town Square Spray Ground Upgrades project and fund the design phase.
2. **Police Department Projects: $930,000**
    - Establishment of two new Police Department projects: (1) Police Body-Worn Camera Replacement ($480,000) and (2) Police Equipment Replacement ($450,000). City Council approved the appropriation of $930,000 from the FY2023-24 year-end General Fund surplus to the General Fund Equipment Replacement Fund for the replacement/purchase of body-worn cameras, rifle-rated ballistic vests, rifle optics, ballistic shields, unmanned aerial system drones, and a drug detection testing system.
3. **Fleet Replacement Fund Balance Augmentation: $1,531,000**
    - To address a shortfall in General Fund vehicle replacement funding for FY2025-26, City Council approved a transfer of $1,531,000 to the Fleet Replacement Fund. The shortfall by department is as follows: Police - $457,291, Fire - $691,268, PRL - $140,497, Public Works - $226,943, and Development Services - $15,001.
4. **Payment to CalPERS and Transfers to Other Funds: $9,369,000**
    - City Council approved the appropriation of $9,369,000 from the FY2023-24 General Fund year-end surplus for the following one-time expenditures: (1) make the $4,577,924 additional discretionary payment (ADP) to CalPERS, which was deferred in FY2023-24 due to concerns about reduced sales tax revenues. The City will continue to defer this payment in FY2024-25, as sales tax estimates continue to come in below projections, (2) transfer $1,500,000 to the General Fund Capital Reserve Fund for future capital projects, (3) transfer $1,750,000 to the Strategic Improvement Fund for future strategic investments, and (4) transfer $1,541,076 to the Pension Reserve Trust Fund to address long-term liabilities and their increasing costs.

Investment in Reserves

Through June 30, 2024, the Economic Stabilization Reserve, funded by Measure B, has grown to $30.9 million. These funds strengthen the City's financial position and will help maintain essential services during a future economic downturn.



The Government Finance Officers Association (GFOA) recommends a minimum 17% reserve. As of June 30, 2024, the City of Roseville's total reserves (Economic Stabilization + Emergency) are approximately $51.5 million, meeting the Council-adopted policy target of 25% of operating expenditures.

Sales Tax Revenue

Measure B Sales and Use Tax (Red) revenues closed the year at $29.9 million, exceeding the budget by 1% ($0.2 million). Measure B revenues increased by approximately $1.1 million compared to the prior year. While Measure B sales tax continued to grow, the pace has slowed over the past two years. This slowdown is attributed to a shift in consumer

spending toward more service-related purchases, which are not taxable. Additionally, the ongoing effects of inflation and higher interest rates impacted spending, contributing to a slight decrease in sales tax revenues compared to the previous fiscal year.

FY2022-23 General Fund Year-End Surplus

The City had not determined the spending plan for the FY2022-23 General Fund year-end surplus at the time of preparing the Measure B scorecard last year. The following table outlines the spending plan approved by the City Council for this surplus.

General Fund Year-End Surplus Spending Plan	
Crimson Ridge Park	$ 450,000
Adventure Club Facility Improvements	809,000
Flood Control Pumps	500,000
IT/Fire - Very High Frequency Radio Replacement	827,500
Public Safety Regional Computer Aided Dispatch (CAD) to CAD Project	257,500
General Liability Program Assessment	1,400,000
Corridor Streetscape Landscaping	4,000,000
Transfer to Strategic Improvement Fund	2,500,000
Transfer to Pension Reserve Trust Fund	2,910,000
Increase in Litigation Reserve Fund	100,000
Fire Academy	200,000
Human Resources Personnel File Digitization	115,000
Citywide Succession Planning	40,000
Parking Garage Improvements (e.g., speed bumps)	150,000
Total	**$ 14,259,000**

National Community Survey

Roseville residents highlight City's overall quality of life in national survey

Ninety-seven percent of Roseville respondents to the National Community Survey rate Roseville as a good or excellent place to live, with 93% citing satisfaction with their overall quality of life. A similar percentage would recommend living in Roseville (92%) and most (82%) plan to remain in Roseville for the next five years.

The overall quality of Roseville's utilities infrastructure was the top-ranked among all communities surveyed at 90%. Roseville enjoyed high overall rankings in areas including:

- Image or reputation (89%)
- Customer service by Roseville employees (89%)
- Quality of parks and recreation opportunities (87%)
- Feeling of safety (86%)
- Economic health (84%)
- Design of residential and commercial areas (82%)
- Health and wellness opportunities (81%)
- Quality of natural environment (81%)

"These results reflect the accolades Roseville continues to receive as one of the best, safest, and healthiest communities in the entire country," said Roseville Mayor Krista Bernasconi. "As our city grows, we will remain focused on creating an environment that delivers a high quality of life for those who call Roseville home, and also for those that work here or visit for our shopping, dining, and other amenities."

"I know how hard City of Roseville employees work to provide a high quality of life for those who live, work, or visit Roseville," said Roseville City Manager Dominick Casey. "It is gratifying to see so many of our residents see and benefit

from the exceptional service our employees strive to deliver."

Utilities, economic health receive high marks

All of the City's utilities received good or excellent ratings for satisfaction, including garbage collection (90%), drinking water (89%), sewer services (92%), storm water management (88%), and power (89%). All of these services ranked in the top 15 out of hundreds of communities surveyed.

Economic health also factored into Roseville's high ratings, with 84% citing Roseville's economic health as good or excellent. This includes 83% noting Roseville as a good or excellent place to work. Roseville also ranked in the top 10 communities overall for its quality of business and service establishments (90%), variety (89%), and shopping opportunities (90%).

Residents generally feel safe in Roseville; emphasize its importance

Ratings for safety and safety-related services were generally positive, which is critical as safety was considered an essential or very important focus area for the city in the coming two years by roughly 9 in 10 residents. Ninety-six percent of residents reported feeling very or somewhat safe in their neighborhood during the day and 89% said the same for Roseville's downtown/commercial area during the day. About 8 in 10 also reported similar feelings of safety from property crime (81%), violent crime (87%), and fire, flood, or other natural disasters (88%).

Safety services also garnered high rankings – excellent or good – across key areas including police services (87%), crime prevention (84%), animal control (83%), emergency medical services (91%), fire services (90%), and fire prevention and education (85%).

Other City services and amenities also receive high marks

The City's parks and recreation ratings were high across the board, including for availability of paths and walking trails (82%), fitness opportunities (84%), City parks (85%), recreation programs or classes (83%), recreation centers or facilities (80%), and public library services (85%). Roseville's cleanliness was rated excellent or good by 84% of respondents. Its K-12 education (82%) was also highly ranked by residents and 93% cited it as a good or excellent place to raise children.

Community members support initiatives for addressing homelessness

In a series of questions unique to Roseville's survey, residents were asked about housing and homelessness. Residents were asked to rate how much of a problem they think homelessness is in Roseville. While just one-quarter reported that homelessness was a major or moderate problem in their neighborhood, about 6 in 10 similarly rated homelessness a problem in the city overall and 83% think it is very important or essential to address the challenges of people experiencing homelessness in Roseville. Approximately three-quarters backed providing supportive housing for those individuals, provided there was adequate state and federal funding. Most residents reported that it was important for the City of Roseville to focus on creating affordable housing opportunities (64%), providing access to social services (70%), and partnering with Placer County Social Services, non-profits, and healthcare providers (72%) to help address homelessness.

About the National Community Survey

Roseville participated in the National Community Survey in order to benchmark and track satisfaction levels and priorities over time. The results will help inform the City's strategic planning, budget and shed light about perceptions about city and community services. This is the second time Roseville has participated in this survey, after initial participation in 2021.

In October and November of 2023, 3,000 invitations to take part in the survey were mailed at random to Roseville residents. During this window, a link to an online open participation survey was also publicized by the City of Roseville. The survey results are based on a representative sample of 373 Roseville residents.

The survey provides a level of confidence of 95% and a margin of error of plus or minus 5%.

The survey asked residents for their opinion on the “livability” of Roseville in 10 core service areas:

- Economy
- Utilities
- Safety
- Natural Environment
- Parks and Recreation
- Health and Wellness
- Education, Arts, and Culture
- Mobility
- Community Design
- Inclusivity and Engagement

COUNCIL COMMUNICATION

CC #: 3838
File #: 0800-03 & 0201-01

Title: Roseville Electric Department - Budget Update
Contact: Joanna Cucchi 916-746 1609 jcucchi@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 8.2.

RECOMMENDATION TO COUNCIL

Staff recommends the City Council receive an update from Roseville Electric on its budget development.

BACKGROUND

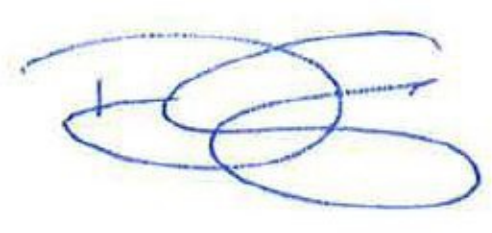
This presentation is to provide an update to Council from Roseville Electric.

FISCAL IMPACT

This is an informational presentation that has no fiscal impact.

ENVIRONMENTAL REVIEW

Not applicable.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal A - Remain fiscally responsible in a changing world

Title:	Environmental Utilities Department - Budget Update
Contact:	Devin Whittington 916-774-5543 dwhittington@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 8.3.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council receive a budget update from the Environmental Utilities Department.

BACKGROUND

This presentation is to provide a budget update from the Environmental Utilities Department.

FISCAL IMPACT

This is an informational presentation and has no fiscal impact.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. A budget update on the Environmental Utilities Department meets the above criteria and is not subject to CEQA. No additional environmental review is required.

Item #: 9.1.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution adopting the Schedule of Maintenance Costs and Charges for Community Facilities Districts effective July 1, 2025, through June 30, 2026.

BACKGROUND

From time to time, the City authorizes the formation of a Community Facilities District (CFD) under the Mello-Roos Community Facilities Act of 1982, as amended, (Act) to finance the maintenance and operation of certain services authorized under the Act.

Though not all used by every CFD, nor to the same level of service, the following broad categories of ongoing maintenance services are provided by the City to CFDs throughout the community:

- Park maintenance
- Preserve and open space maintenance
- Streetscape and bike trail maintenance
- Stormwater management

To support a more streamlined process for negotiating CFD conditions, improved cost recovery, and equity between districts, on March 20, 2019, the City adopted Resolution No. 19-79, Adopting a Schedule of Maintenance Costs and Charges for Community Facility Districts. The schedule was most recently updated, effective July 1, 2024, to incorporate annual inflationary adjustments to the various maintenance costs and charges identified in the schedule based on the change in the all-urban Consumer Price Index (CPI) for the San Francisco-Oakland-Hayward area from October to October of the immediately preceding year.

The City Council establishes the Schedule of Maintenance Costs and Charges for CFDs via Resolution. This item and staff's recommendations are intended to be considered upon completing a public hearing. The public hearing provides all interested parties with an opportunity to comment or request clarification regarding the proposed Schedule of Maintenance Costs and

Charges for CFDs.

DISCUSSION

Staff has recently completed an updated evaluation of the costs of providing many of the commonly required maintenance and operations services and activities provided within a CFD and recommends adopting the updated schedule of maintenance costs and charges for community facilities districts, effective July 1, 2025. Adoption of the uniform schedule of costs and charges does not preclude the City from recovering other CFD related service and maintenance costs, authorized by the Act, that are identified and established as part of the process of forming each CFD.

Implementation of this schedule of costs and charges is subject to the formation of new districts to which the schedule would apply but will not affect previously established districts or districts that have initiated proceedings, as of the date of adoption of the resolution, to form a CFD to finance services authorized by the Act.

In the absence of a uniform schedule of costs and charges for maintenance services provided to CFDs, the individual interests representing each entity in the planning stages are inadvertently given the opportunity to negotiate applied costs. This overly burdens City resources, subjects CFDs to divergent charges from one another, and potentially compromises the City's intended recovery of the full cost of service, in line with its policies and practices for other services of individual cause or benefit.

No new services are proposed. Instead, the schedule has been updated to reflect the City's cost of providing maintenance-related services for CFDs.

The requested update aligns with the City's published "Goals and Policies Concerning Use of the Mello-Roos Community Facilities Act of 1982" (effective April 3, 2024). The goals and policies state, "The purpose of the services/maintenance District is to fund the ongoing costs of parks and open space, public landscaping... and maintenance not funded by other sources; and/or to pay for any unfunded ongoing City maintenance or service costs associated with a development project in the City, all in accordance with the Mello-Roos Act and the formation documents for each particular District."

The Schedule of Maintenance Costs and Charges for CFDs is reviewed annually. Periodically, a full cost analysis is performed. In years between studies, staff recommends the City Council authorize the Finance Director to make adjustments to the schedule of costs and charges based on the CPI change for the San Francisco-Oakland-Hayward area from October to October of the immediately preceding year. If the CPI does not change or goes down, no change shall be made to the schedule for that year unless an adjustment is made to targeted cost recovery levels or cost study findings indicate that an adjustment is appropriate. This is the City's current practice and no change to this practice is recommended.

FISCAL IMPACT

Implementation of this schedule of costs and charges is subject to the formation of new districts to which the schedule would apply; therefore, no fiscal impact is estimated at this time. However, the proposed Schedule of Maintenance Costs and Charges for Maintenance CFDs targets full cost recovery in a fair and reasonable manner for all future maintenance CFDs once implemented.

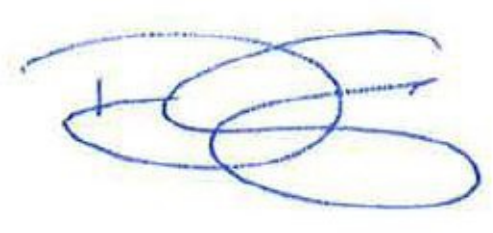
The current fees are sufficient to recover approximately 90-98% of the City's service district maintenance costs, depending on the service provided. The adjusted fees are intended to recover 100% of the maintenance costs.

Fiscal impact will depend on the number of future districts formed and the array of maintenance activities required for each district. For illustrative purposes, for every ten (10) acres of parks/streetscape to be maintained for a new service district, adjusted fees would recover an additional $1,369 per acre, per year. Alternatively, this could be expressed as additional revenue of $13,683 per 10 acres per year to offset the costs of parks/streetscape maintenance. Without recovery of these costs from the service districts, maintenance costs will need to be reduced (i.e., service level reduction) or funded from other City revenue sources, typically the City's General Fund.

It is important to note that while establishing a universal schedule of costs and charges might provide a fiscal impact in the form of additional revenue, the revenue is not intended to fund new services. Instead, the revenue is intended to offset the costs of providing existing services that are recoverable from the schedule. Consequently, while charges may rise annually typically labor costs and contract service provider costs (the primary drivers of service costs) also rise annually. Recalibration of the schedule of costs and charges simply provides an offset of existing expenditures/needs rather than a source of funding for expanded service levels.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Adoption of the resolution and schedule of maintenance costs and charges meet the above criteria and are not subject to CEQA. No additional environmental review is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal A - Remain fiscally responsible in a changing world
Goal E - Deliver exceptional city services

Respectfully Submitted,

Jeannine Thrash, Management Analyst

Scott Pettingell, Finance Director

Description

Resolution 25-087

Maintenance Fee Book

Notice of Public Hearing

RESOLUTION NO. 25-087

ADOPTING A SCHEDULE OF MAINTENANCE COSTS AND CHARGES FOR COMMUNITY FACILITIES DISTRICTS

WHEREAS, from time to time the City authorizes the formation of a Community Facilities District (CFD) under the Mello-Roos Community Facilities Act of 1982 (Act) to be used to finance maintenance and operation of certain services authorized under the Act; and

WHEREAS, the City can uniformly identify the costs of providing many of the commonly required maintenance and operations services and activities provided within a CFD; and

WHEREAS, in an effort to support a more streamlined process for negotiating CFD conditions, improved cost recovery, and equity between districts, on March 20, 2019 the City adopted Resolution No. 19-79, Adopting a Schedule of Maintenance Costs and Charges for Community Facilities Districts; and

WHEREAS, the schedule was most recently updated effective July 1, 2024 to incorporate annual inflationary adjustments to the various maintenance costs and charges identified in the schedule based on the change in the all-urban Consumer Price Index (CPI) for the San Francisco-Oakland-Hayward area from October to October of the immediately preceding year; and

WHEREAS, staff has recently completed an updated evaluation of the costs of providing many of the commonly required maintenance and operations services and activities provided within a CFD; and

WHEREAS, staff recommends adopting the updated schedule of maintenance costs and charges for community facilities districts, effective July 1, 2025, attached hereto as Exhibit “A;” and

WHEREAS, adoption of the uniform schedule of costs for certain services and activities does not preclude the City from recovering other CFD related service and maintenance costs, authorized by the Act, that are identified and established as part of the process of forming each CFD; and

WHEREAS, implementation of this schedule of costs and charges is subject to formation of new districts to which the schedule would apply, but will not affect previously established districts or districts that have initiated proceedings, as of the date of adoption of the resolution, to form a CFD to finance services authorized by the Act; and

WHEREAS, staff further recommends authorizing the Finance Director to make automatic annual inflationary adjustments for the various maintenance costs and charges identified in the schedule based on all-urban Consumer Price Index (CPI) for the San Francisco-Oakland-Hayward area; and

WHEREAS, inflationary adjustments will be based on the CPI change from October to October of the immediately preceding year; and

WHEREAS, if the CPI does not change or goes down, no change shall be made to the schedule for that year unless an adjustment is made to targeted cost recovery levels or cost study findings indicate that an adjustment is appropriate; and

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said schedule of maintenance costs and charges for community facilities districts, effective July 1, 2025 is hereby adopted.

BE IT FURTHER RESOLVED, the Finance Director has authority to make automatic annual inflationary adjustments for the various costs and charges identified in the schedule based on the yearly change in the all-urban Consumer Price Index (CPI) for the San Francisco-Oakland-Hayward area.

PASSED AND ADOPTED by the Council of the City of Roseville this___day of _____, 20_, by the following vote on roll call:

ANNUAL MAINTENANCE COSTS FOR MAINTENANCE CFDS

Dear Mr. Pettingell:

ClearSource Financial Consulting submits the following report to the City of Roseville describing the findings of our assistance to the City in developing an updated schedule of annual maintenance costs for services provided to Community Facilities Districts (CFDs) throughout the community.

Please refer to the Executive Summary for the key findings that will support your process in seeking approval from the City Council on this topic, while the balance of the report and its appendices provide the necessary documentation for the implementation of those outcomes.

Thank you for the opportunity to once again serve the City on cost of service and cost recovery topics. We are happy to continue discussion on this CFD maintenance cost and fee schedule as the need arises or consult with you on additional topics.

Sincerely,

TERRY MADSEN, PRESIDENT | CLEARSOURCE FINANCIAL CONSULTING

PHONE NUMBER: 831.288.0608
EMAIL ADDRESS: TMADSEN@CLEARSOURCEFINANCIAL.COM

PROJECT

The City of Roseville maintains a schedule identifying annual maintenance costs for services provided to Community Facilities Districts (CFDs) throughout the community. The purpose of this schedule is to provide a **uniform set of costs** to adequately and proportionately recover the cost of operations, maintenance, and administration of services within maintenance CFDs in a transparent, efficient, and consistently applied manner.

The uniform schedule of costs supports a more streamlined process for negotiating CFD conditions, improved cost recovery, and equity between districts. The schedule of costs is intended to minimize negotiation of cost recovery on district by district basis. Prior to establishment of this uniform schedule for services provided to CFDs, costs were heavily negotiated as new CFDs were developed, yielding divergent outcomes inconsistent with preferred practices and policies of the City at large.

FINDINGS

During the course of study, information was generated in detail and is discussed substantively throughout this report and appendices. However, outcomes of particular interest to City leadership and policymakers are highlighted below:

1 | A COMPREHENSIVE ARRAY OF SERVICES ARE PROVIDED BY THE CITY WHICH ARE OF BENEFIT TO DISTRICTS

Though not all used by every CFD, nor to the same level of service, the following broad categories of ongoing maintenance services are provided by the City to CFDs throughout the community:

- Park maintenance
- Preserve and open space maintenance
- Streetscape maintenance
- Stormwater management

2 | HISTORICAL PRACTICES RESULTED IN DIVERGENT UNIT COSTS AMONG DISTRICTS FOR LIKE SERVICES

Despite similarities in the source and provision of maintenance services in special financing districts, historically the City's CFDs have been subject to divergent charges (or unit cost bases) for the City to recover the costs it incurs to serve. Without further explanation, this yields the appearance, if not the actual effect, of disparate cost recovery to the City and treatment of individual districts.

3 | HISTORICAL PRACTICES CREATED EXCESSIVE NEGOTIATION OVER COST RECOVERY FOR NEW DISTRICTS

In absence of a uniform schedule of costs for services provided to CFDs, the individual interests representing each entity – particularly those in the planning stages – are inadvertently given opportunity to negotiate applied costs. This overly burdens City resources and further exacerbates the divergent outcomes cited above.

Furthermore, negotiation of applied costs risks a level of cost recovery less than adopted City policy, which targets full cost recovery for services of individual use or benefit, except where indicated by other established policy.

4 | CITY DATA MANAGEMENT ENABLES MORE CONSISTENT UNIT COST DERIVATION

The City of Roseville deploys ample means for tracking workload and cost data in the services related to, if not directly provided, to these districts. In a data-driven organization, justifying, maintaining, and applying formal uniform schedules of cost recovery is reasonably enabled. Use of such data in valuable ways, such as cost recovery and workload management, also increases the quality of these data management practices over time.

5 | UNIFORM SCHEDULE OF COSTS RESULTS IN A MORE EFFICIENT, PREDICTABLE, AND FAIR COST RECOVERY SYSTEM

In an effort to correct existing inefficiencies in cost recovery practices related to maintenance CFDs, a **Schedule of Maintenance Costs and Charges** applicable to all future CFDs was established in March 2019. The schedule has been annually updated by the City since 2019.

Refer to **Appendix I** to view the service array, costs of service, and proposed maintenance charges for CFDs.

FINANCIAL IMPACTS

At this time, no financial impacts associated with implementation are estimated. Overall, it can be stated that this Schedule of Costs is intended to **target full cost recovery in a fair and reasonable manner for all future maintenance CFDs** once implemented.

ACTION

This report and the proposed Schedule of Costs and Charges for Maintenance CFDs is presented to City leadership and the City Council for review, scheduling of public hearing, and consideration of approval.

SCOPE OF STUDY

The City of Roseville completed a project to develop a schedule identifying annual maintenance costs for services provided to maintenance Community Facilities Districts (CFDs) throughout the community. ClearSource Financial Consulting, as an incumbent provider of other user/regulatory fee and cost recovery consulting for the City, assisted the City with this effort. Key outcomes expected of the uniform schedule of maintenance costs for CFDs include the following:

- A comprehensive array of maintenance services provided by the City to maintenance CFDs throughout the community.
- Consistent unit costs applied for like services.
- Reduction of negotiation over unit costs of services and cost recovery from individual districts.
- Congruence of CFD cost recovery with broader City policy on recovery of costs for services of individual use or benefit.
- A uniform schedule of costs and consistently applied cost recovery.

APPLICATION OF STUDY OUTCOMES

The outcome of this project – a uniform schedule of costs as a cost recovery system for maintenance CFDs citywide – is intended for application for all new CFDs planned and formed by the City.

Values expressed in this report are appropriate for Fiscal Year 2025-2026. Future use will require inflationary adjustments, comparable to City practices for other user and regulatory fees, and periodic analysis of underlying costs of service, in order to ensure costs and charges are appropriately quantified and structured.

CONSIDERATIONS FOR IMPLEMENTATION

If the City decides to adopt or otherwise utilize outcomes generated through this study, it should:

- Update Systems for Fees, Charges and Cost Recovery Outcomes – Ensure that City staff begin using updated annual cost and charge information for maintenance CFDs, once the Schedule of Maintenance Costs and Charges becomes effective. This will include efforts in two areas:
    - Administration: Applying unit costs of service in the schedule to the individual attributes of each district, to the degree feasible.
    - Workload Management: Preparing the array of attributes and statistics by district that related to the services provides, such as various measurements of different maintained areas.
- Actively Encourage and Monitor the Use of Data Tracking Systems that Support Cost of Service-Based Charges – In order to portray accurate and eligible costs of service, the City should be diligent about tracking time to tasks and recording statistics describing scale of tasks. This will ensure costs and charges continue to be developed following actual activity levels as intended.
- Periodically Review and Adjust Charge Methodologies – To ensure continued cost recovery targeted, costs and charges should be updated annually, following industry cost inflation metrics. Periodically, the City should perform a comprehensive study of costs and charges.

SCHEDULE OF MAINTENANCE COSTS AND CHARGES FOR MAINTENANCE CFDS

PURPOSE

The purpose of a schedule of maintenance cost and charges for maintenance CFDs is to provide a uniform set of costs and charges to adequately and proportionately recover the cost of maintenance services within CFDs in a transparent, efficient, and consistently applied manner.

Once implemented, the schedule of costs and charges is intended to be applicable to all future maintenance CFDs: When applied to the individual attributes of each district, charges are intended to recover the annual costs of service for the maintenance service provided.

SERVICES PROVIDED

This schedule of maintenance costs and charges identifies uniform cost recovery for various direct services provided to maintenance CFDs throughout the community. It is important to note that not all maintenance CFDs demand each service, or even the same level of service. Actual application of costs and charges will be based on the services necessitated by the formation documents of each individual district.

A description of each direct service listed in the schedule of costs and charges is as follows:

Preserve and Open Space Maintenance – The City maintains open space/preserves within maintenance CFDs. Activities include, but are not limited to:

- General Biological Inspection
- Vernal Pool Grasslands
- Upland Grassland Monitoring
- Understory Grassland Monitoring
- Oak Species Composition and Recruitment
- Residual Dry Matter Monitoring
- Ground Nesting Bird Survey
- California Department of Fish and Wildlife Routine Maintenance Agreement
- General Maintenance Inspection (three levels of service)
- Tree Assessment for Health and Vigor
- Tree Assessment in Target Safety Zone
- Winter and Spring Corridor Assessment (three levels of service)
- General Routine Maintenance (three levels of service)
- General Non-Routine Maintenance (three levels of service)
- Public Interaction (three levels of service
- Vegetation Abatement
- Creek Corridor Routine Maintenance (three levels of service)
- Creek Corridor Non-Routine Maintenance (three levels of service)

Park Maintenance – The City maintains recreational parks and facilities within maintenance CFDs. Activities include:

- Maintenance of Basic Neighborhood Park up to Five Acres
- Maintenance of Neighborhood/School Park up to 12 Acres +/-, including the following typical amenities. These features may vary due to size and funding.
    - Organized sports fields
    - Hard sports courts
    - Two game courts
    - One standard, two-room restroom
    - One specialty park feature
    - Maintained turf
    - Large group shaded picnic area, six tables or more
    - Off-street parking lot, 15 stalls or more
    - Dog Park
    - Asphalt trail

Streetscape Maintenance – The City maintains space and facilities as part of the streetscape within maintenance CFDs. Activities include:

- Landscape Corridor / Paseo / Median Maintenance
- Leaf Pickup
- Street Sweeping
- Bike Trail Maintenance
- Masonry Wall Maintenance and Repair and Graffiti Removal

Stormwater Management – Maintenance CFDs participate in the City's stormwater management program, including maintaining water quality structural controls such as drainage swales constructed between storm drain facilities and receiving waters.

- Future Consideration – In subsequent updates of the schedule of maintenance costs and charges for maintenance CFDs, the City should continue to review the array of services listed in the schedule to ensure it is a complete inventory of all activities occurring to serve these districts and portrayed at an adequate level of detail for effective, proportional application.

COST OF SERVICE BASIS FOR FEES

Refer to the next section and the appendices of this report for a comprehensive list of data sources used as the cost of service justification for costs and charges presented. In summary, the following types of information were used to determine the basis for values in the schedule:

- Adopted City budget and actual performance, reflecting revenues, expenditures, organizational structure, and accounting structures, such as types of expenses recorded and fund configuration
- Workload management databases utilized by operational departments which track statistics such as:
    - Staff time to tasks and/or projects and programs
    - Work order activity, such as time and materials needed for individual tasks
- Specialized studies that analyze aspects of the costs of services, such as:
    - Unit cost analysis of maintenance activities
    - Fully burdened hourly rates, labor multipliers, and other outcomes related to user and regulatory fees
    - Indirect cost allocation plan
    - Annual Comprehensive Financial Report
- Hearing reports and other formal documentation associated with existing maintenance CFDs
- Future Consideration – To support subsequent updates of the schedule of costs and charges for maintenance CFDs, the City should actively monitor workload management databases, particularly staff time-tracking, to ensure all personnel are recording time as completely as possible at a level of detail that can support cost recovery practices linked to a “cost of service” basis. Active use and periodic monitoring ensure more accurate databases compiled over time.

CHARGE METHODS

Refer to Costs and charges are based on certain attributes of each maintenance CFD, which would indicate amount of service provided and create proportionality in outcomes between districts. Charge methods reflected in the schedule are as follows:

- Amenity Size – This reflects measurements of maintained areas related to the services provided. This includes acres, square feet, miles, and lineal feet of different types of space and facilities maintained.
- Service Base – This would describe the population served. For example, each residential unit may be used as an applicable service base.
- Service Cost – This method uses other costs as a metric, such as a percentage of other direct costs of service or total expenditures recorded to the district.
- Actual Cost – This method creates a pass-through: actual costs billed, such as metered utilities to the physical location (e.g., electricity, water) or specialized, contracted services necessitated.
- Frequency – A frequency for each fee amount is indicated in the fee schedule, such as yearly.

COST RECOVERY POLICY

The City maintains published Goals and Policies Concerning the Use of Mello-Roos Community Facilities Act of 1982. An outlined purpose of the services/maintenance district is to fund the ongoing costs of parks and open space, public landscaping, police and fire protection services and library services and maintenance not funded by other sources; and to pay for any unfunded ongoing City maintenance or service costs associated with the development project.

The policies and goals described in that document provide a structure that among other objectives, seeks:

- Fairness to current and future property owners
- Protection of the City's financial position
- Reimbursement to the City of incurred expenses

It is expected that a schedule of maintenance costs and charges for CFDs will enable consistency of cost recovery in line with City policies such as these, whereas negotiation-based practices not only create an inefficient process overly burdensome to City resources, but also, divergent outcomes between districts utilizing similar services and the actual recovery level of costs incurred.

Fairly allocating costs to the services provided creates value and predictability for customers and reimburses the City for expenses utilized by a single party, as compared to the public at large. Fees in general ensure equity; those who benefit the most should pay the most, and pricing ensures that users pay appropriate fees.

COST AND CHARGE AMOUNTS

The annual cost and charge amounts proposed for the maintenance services described in this report are listed in the Schedule of Maintenance Costs and Charges for Maintenance CFDs attached as Appendix I. Values shown reflect applicability in Fiscal Year 2025-2026.

To ensure continued cost recovery targeted, costs and charges should be updated annually, following industry cost inflation metrics. Periodically, the City should perform a comprehensive study of costs and charges.

COST OF SERVICE BASIS FOR FEES

This project served as a means for accumulating individual cost of service analysis and information developed by the City across its organization that can support a uniform schedule of maintenance costs and charges for special financing districts. The following section describes the documentation associated with each service category and/or activity in the schedule. The Appendix II series shows each data source.

The City's Parks, Recreation & Libraries Department analyzed annual parks maintenance time to service basic and full-service neighborhood parks. This maintenance time was used to inform the final acreage-based maintenance costs reflected in the schedule of costs and charges.

The City recently developed a study of preserve and open space maintenance costs at the activity level. The report is titled Preserve and Open Space – Summary of Estimated Cost Analysis. Unit costs derived in this report are reflected in the schedule of costs and charges. The original schedule developed has been updated to reflect regional cost inflation over-time.

The City tracks labor and materials to street sweeping and leaf removal activities. This reporting information was used to develop the time and labor cost estimates detailed in Appendix B.

REGIONAL COST INFLATION INFORMATION

Regional cost inflation for the San Francisco-Oakland-Hayward area is used to inform interim year updates to various costs. Regional cost information is provided in Appendix B.

EXPENDITURE DETAILS

Detailed accounting of park maintenance, open space maintenance, service district, street sweeping, street drainage, and bike trail maintenance expenditures are included in Appendix B.

City of Roseville
Calculation of Annual Per Acre Maintenance Costs for Landscape Maintenance (Parks, Paseos, Medians, etc.)

Landscape Corridors, Paseos, Medians

Description	Annual Hours	Unit	Note
All Maintenance	108	per acre	[a]

Neighborhood Park: Basic, 3 to 5 Acres

Description	Annual Hours	Unit	Note
All Maintenance	120	per acre	[a]

Neighborhood/School Park, up to 12 Acres +/- *

Description	Annual Hours	Est. Acres	Annual Hours Per Acre	Unit	Note
(1) full sized basketball court	4	12	0.33	per acre	[b]
(2) Tennis courts/Pickleball	4	12	0.33	per acre	[b]
(1) Youth (unlit) baseball field	24	12	2.00	per acre	[b]
(1) Youth (unlit) softball field	24	12	2.00	per acre	[b]
Regulation sized soccer (2)	32	12	2.67	per acre	[b]
(1) Standard (2 room) restroom	80	12	6.67	per acre	[b]
(1) non-recirculating water feature (mists)	2	12	0.17	per acre	[b]
Large group shaded picnic area (6 tables +)	32	12	2.67	per acre	[b]
Off-street parking lot (+15)/stall	32	12	2.67	per acre	[b]
Asphalt trail/mile	2	12	0.17	per acre	[b]
Dog Park	48	12	4.00	per acre	[c]
Turf Maintenance	108	1	108.00	per acre	[a];[d]
Total			131.67	per acre	

Notes:
[a] Includes weekly mowing, edging, and trimming; periodic fertilization, aerification, chemical application, irrigation system check, spot system check, and as-needed repairs.
[b] Non-turf analysis assumes 12-acre park to provide a conservative estimate. Assumes economy of scale for turf maintenance of larger areas.
[c] Daily inspection, trash removal; periodic - infrastructure repair, weed abatement, surface material maintenance, irrigation repair.
[d] Assumes economy of scale for turf maintenance of larger park areas.
* This list is an example of typical school/park amenities. Actual amenities will vary.

NOTICE OF PUBLIC HEARING

Notice is hereby given that on **April 16, 2025** at 6 pm, or as soon thereafter as the matter may be heard, the **City Council** of the City of Roseville will hold a Public Hearing at **the City Council Chambers located at 311 Vernon Street, Roseville, CA** to consider adoption of a schedule of maintenance costs and charges for community facilities districts.

If adopted, the schedule of costs and charges will apply for formation of new Community Facilities Districts or annexation into an existing one, but will not affect previously established districts or districts that have initiated proceedings, as of the date of adoption of the resolution, to form a Community Facilities District to finance services.

If adopted, the schedule of costs and charges will be effective upon adoption through June 30, 2026.

For further information contact the City's Assistant City Manager/Chief Financial Officer, Dennis Kauffman at (916) 774-5200. Written communications may be directed to: City Council, 311 Vernon Street, Roseville, CA 95678.

If you challenge the decision in court, you may be limited to raising only those issues you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Clerk at, or prior to the Public Hearing.

ROSEVILLE CITY COUNCIL
Carmen Avalos, City Clerk

Title:	Compliance with Assembly Bill 2561/Government Code Section 3502.3 regarding Vacancies and Recruitment and Retention Efforts
Contact:	Macy Dippert 916-774-5215 mdippert@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 9.2.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council receive a presentation, for information purposes only, during a public hearing at which time the City will report on workforce vacancies and recruitment and retention efforts. The City's recognized employee organizations will be provided an opportunity to make a presentation on these subjects.

BACKGROUND

AB 2561 was introduced to address the issue of job vacancies in local government, which adversely affects the delivery of public services and employee workload. Among other requirements, the bill mandates that public agencies conduct a public hearing to present the status of vacancies and recruitment and retention efforts, before the agency's governing body at least once per fiscal year, prior to the adoption of the next fiscal year's budget and identify any necessary changes to policies, procedures, and recruitment activities that may lead to obstacles in the hiring process. The bill was enacted into law and is codified as Government Code section 3502.3, effective January 1, 2025.

In compliance with the new legal obligations, the City is required to do the following:

1. Public Hearing – Report on Vacancies: For the calendar year 2024, the City's annual average percentage of vacancies (i.e., regular, full-time equivalent) is 7%. The table below shows a breakdown of the percentage of vacancies at the end of each month:

2024	Jan	Feb	Mar	Apr	May	June
# of Vacancies Beginning of the Month	106	105	100	97	91	89

# of Separations	6	5	6	6	14	11
# of New Hires	8	6	7	7	5	7
# of Promotions	6	5	15	4	4	9
# of Budgeted FTEs	1366.85	1366.85	1366.85	1366.85	1365.85	1367.85
% of Vacancies	8%	8%	7%	7%	7%	7%

2024	July	Aug	Sep	Oct	Nov	Dec
# of Vacancies Beginning of the Month	111	84.5	84.5	88.5	93.5	96.5
# of Separations	4	4	5	11	10	14
# of New Hires	5	8	14	5	3	8
# of Promotions	6	5	3	7	22	10
# of Budgeted FTEs	1388.10	1387.10	1388.10	1388.10	1388.10	1390.10
% of Vacancies	8%	6%	6%	6%	7%	7%

2 . Employee Organization Participation: Allow the recognized employee organization for each bargaining unit at the City to make presentations during the public hearing concerning vacancies and recruitment and retention efforts. The Human Resources Department notified the five (5) represented bargaining units at the City of the opportunity to present. (Gov. Code § 3502.3(b).)

3. Additional Reporting for High Vacancy Rates: If vacancies within a single bargaining unit meet or exceed 20% of authorized full-time positions in that bargaining unit, upon request of the recognized employee organization for that bargaining unit, the City must provide additional information during the public hearing, including the following: (1) the total number of vacancies within the bargaining unit; (2) the number of applicants; (3) the average number of days to fill positions; and (4) opportunities to improve compensation and working conditions for employees in the bargaining unit. (Gov. Code § 3502.3(c).)

For the calendar year 2024, within the City's bargaining units with recognized employee organizations, the annual average vacancy rates were all under the 20% threshold, as summarized below:

2024 Annual Average Vacancy Rate	
Represented Bargaining Unit	**Percentage**
International Brotherhood of Electrical Workers, Local 1245 (IBEW)	6%

International Union of Operating Engineers Stationary Engineers, Local 39	8%
Roseville Fire Firefighters (RFF)	0%
Roseville Police Association (RPA)	10%
Roseville Police Officers Association (ROPA)	6%
Unrepresented Employee Group	**Percentage**
Confidential	4%
Management	8%

FISCAL IMPACT

There is no direct fiscal impact associated with conducting the public hearing required under Government Code section 3502.3.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. The public hearing and reporting on vacancy rates and recruitment and retention efforts meets the above criteria and is not subject to CEQA. No additional environmental review is required.

Title: 2025 Weed Abatement - Public Hearing
Contact: Michael Bradley 916-774-5806 mbradley@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 9.3.

RECOMMENDATION TO COUNCIL

To initiate the 2025 Weed Abatement Program, staff recommends that the City Council adopt a resolution overruling all objections to the proposed abatement of all weeds, rubbish, dirt and/or rank growth, as well as ordering the Fire Chief to abate, or cause to be abated, the subject nuisances within the City of Roseville in accordance with the law.

BACKGROUND

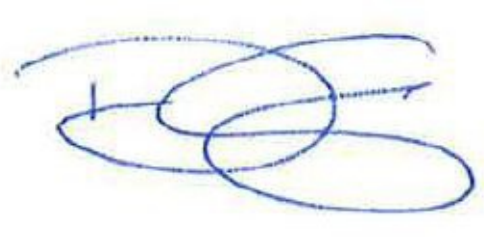
On March 5, 2025, the City Council approved Resolution No. 25-054 declaring all weeds, rubbish, dirt and/or rank growths a public nuisance. It also set the date, time and place for the required public hearing. The attached resolution is the second and final step necessary to initiate the 2025 Weed Abatement Program.

FISCAL IMPACT

Owners of private parcels that are abated by the City are responsible for the costs associated with providing abatement services. A bill is sent to each property owner detailing the abatement costs, as well as an administrative fee. If the property owner fails to pay the bill, the City places a lien on the subject property and the monies owed are reimbursed through the property tax collection process.

ENVIRONMENTAL REVIEW

The Weed Abatement Program involves minor alteration in the condition of the land, water, and or vegetation which will not remove healthy, mature scenic trees. This activity is categorically exempt from CEQA as a Class 4 Exemption (State CEQA Guidelines Section 15304). The Exemption has been prepared and no further CEQA action is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal C - Maintain a safe and healthy community.

RESOLUTION NO. 25-086

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE ORDERING THE DESTRUCTION OR REMOVAL OF ALL WEEDS, DIRT, RUBBISH, AND/OR RANK GROWTHS WITHIN THE CITY OF ROSEVILLE AND OVERRULING ANY AND ALL OBJECTIONS THERETO

WHEREAS, on March 5, 2025, the City Council of the City of Roseville adopted Resolution No. 25-054 declaring all weeds, dirt, rubbish and/or rank growths within the City of Roseville to be a public nuisance and setting a time and place for hearing any objections to the proposed destruction or removal of such weeds, dirt, rubbish and/or rank growths; and

WHEREAS, said public hearing was held on April 16, 2025, at which time all property owners having objections to the proposed abatement of the nuisance were given an opportunity to be heard;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Roseville as follows:

1. Any and all objections to the proposed abatement of the nuisance in Resolution No. 25-054 adopted March 5, 2025, are hereby overruled.

2. The Fire Chief is hereby ordered to abate, or cause to be abated, the nuisance by having all weeds, dirt, rubbish and/or rank growths within the City of Roseville removed in accordance with the law.

Weed Abatement 2025

Michael Bradley Fire Marshal & **Colleen Rhoades** Natural Resource Specialist PRL

CITY OF ROSEVILLE CALIFORNIA

- **Each year the Fire department in partnership with the Park, Recreation and Library department performs annual weed abatement in an effort to manage the annual growth of weeds to reduce the risk of wildfire in the City.**

Weed Abatement 2025

- Annually the Fire department identifies vacant undeveloped parcels and notify the property owners to abate the weeds on their property.
- The Fire department and Parks & Natural Resources division of PRL prioritize and plan the abatement process throughout the city.
- The goal this year is to have all weeds abated by July 1st.
- We take into account rainfall and make every attempt to time the abatement with the dying of seasonal grasses.
- The priority is the 30 foot fire breaks on City owned and private vacant parcels.

Weed Abatement 2025

- Parks, Recreation, and Libraries utilize city staff, contractors, and our four-legged friends—the goats—to manage vegetation and thatch. The goats usually begin in May and continue through October. They can be followed through the “Goat Tracker” on the City website.

NOTICE TO ABATE FIRE HAZARD

This letter is intended for parcels that are undeveloped.

If the property has been developed or sold, please disregard the following and complete the information on the following page(s) and return it to the Roseville Fire Department, 316 Vernon Street, Suite 480, Roseville, CA 95678.

This letter is to notify you that a fire hazard may exist on the undeveloped parcel(s) listed on the following page(s). The law requires that all cut or uncut weeds, grass, vines, vegetation, or other combustible materials be removed when determined to be a fire hazard. Roseville Fire Code (RFC) 304.1.3; H&S Code, Division 12, Part 5.

*If applicable, all necessary work shall be completed no later than **July 1, 2025**. If the property owner does not comply with this notice, the required firebreaks will be made by the City of Roseville. All costs incurred by the City, including a $**356.00** per parcel administration fee, shall be billed directly to the property owner.*

WEED ABATEMENT GUIDELINES

A clear firebreak of a minimum 30-foot width shall be created and maintained in all areas designated by the City of Roseville. Clear firebreaks shall be provided around all combustible buildings, fences, vehicles, structures, or storage on this parcel or on adjacent properties. We ask that you adhere to the following abatement requirements:

1. *The preferred method of weed abatement shall be accomplished by discing and completed so that all weeds, grass, other vegetation or organic material which can be expected to burn are completely removed or turned under so there is insufficient fuel to sustain or allow the spread of fire.*
    - *Discing does not negate the requirement for weed removal up to the structure.*
2. *Where discing is not practical, mowing is permitted where the material is mulched and the remaining weeds do not exceed two inches in height.*
3. *Spark arrestors shall be installed on all outdoor equipment with internal combustion engines.*
4. *Parcels that are one acre or less shall be completely abated.*

Prior to abating weeds, seasonal rains should be considered. Late rains will produce late growing weeds. Weeds once mowed, may require additional mowing. The weed abatement program's intent is to reduce the fire hazard during fire season.

PUBLIC NOTICE

Public Notice is hereby given that a public hearing will be held before the City Council of the City of Roseville for the purpose of considering the following:

WEED ABATEMENT HEARING

On March 5, 2025 pursuant to the provisions of Chapter 9.20 of the Roseville Municipal Code, the City Council of the City of Roseville adopted Resolution No.25-XXX declaring that all weeds as defined in Section 9.20.010 (C) (1) of said chapter and all dirt, rubbish and/or rank growth, as defined in Section 9.20.010 (C) (2,3,4) of said chapter, of any kind on private property, or in any street or alley abutting any property, constitute a public nuisance which must be abated by the destruction or removal thereof.

All property owners, lessees or occupants of buildings, grounds or lots shall, without delay, destroy or remove all such weeds, dirt, rubbish and/or rank growths from their property and half of the abutting street and alley, if any, between the lot lines, as extended, or such weeds, dirt, rubbish and/or rank growths will be destroyed or removed and such nuisance abated by the city authorities, in which case the cost of destruction or removal will be assessed upon the lots and lands from or on which, or abutting the streets and alleys from or on which, such nuisance was abated, and such costs will constitute a lien upon the lots or parcels until paid and will be collected on the next tax roll upon which municipal taxes are collected.

All property owners having objections to the proposed abatement of the nuisances are hereby notified to attend a meeting of the Council of the City of Roseville to be held on April 16, 2025 at 6:00 o'clock p.m., or as soon thereafter as may be heard, in the Civic Center Council Chambers, 311 Vernon Street, Roseville, CA, where and when all objections will be heard and given due consideration.

FIRE CHIEF OF THE CITY OF ROSEVILLE
RYAN HARRIGAN

ROSEVILLE CITY COUNCIL
CARMEN AVALOS, CITY CLERK

DATED: March 5, 2025

PUBLISH: FRIDAY, April 4, 2025

Notice of Exemption

To: Placer County Clerk
Recorder's Office
3091 County Center Dr.
Auburn, CA 95603

From: City of Roseville
Community Development Dept.
311 Vernon Street
Roseville, CA 95678

Project Title: 2024 Weed Abatement Project
(Resolution Declaring Weeds and Rubbish a Public Nuisance)

Project Location(s): City-wide throughout Roseville

Project Description: The City of Roseville Fire Department proposes to notify property owners of vacant parcels, within the City, that a potential fire hazard exists on these parcels. If corrective action is not taken by the property owner the City's Fire Department will proceed with weed abatement activities including, mechanical mowing, trimming, and other methods of weed removal.

Public Agency Approving Project: Roseville City Council

Agency/Individual Carrying Out Project: City of Roseville Fire Department

Reason why this Project is Exempt: This project is applicable to Class 4 Categorical Exemption as described in Section 15304 (i) of the California Environmental Quality Act (CEQA) guidelines which states:

> "Class 4 consists of…minor public...alterations in the conditions of land which do not involve removal of healthy, mature, scenic trees…including but not limited to…fuel management activities…"

Lead Agency Contact Person: Michael Bradley, Fire Marshal, Fire Department (916-774-5806) 311 Vernon Street, Roseville, CA 95678.

Signature: _____ Date: 3/12/2024

Jessica Lynch, Environmental Coordinator
City of Roseville
