A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Standards:
   1. Electronic Industries Alliance (EIA):
      a. 310-E - Cabinets, Racks, Panels, and Associated Equipment.
   2. Institute of Electrical and Electronics Engineers (IEEE):
      a. 802.1X - Standard for Local and Metropolitan Area Networks—Port-Based Network Access Control.
      b. 802.3 - Standard for Ethernet.
      c. 802.11b - Standard for Information Technology - Telecommunications and information exchange between systems - Local and Metropolitan networks - Specific requirements - Part 11: Wireless LAN Medium Access Control (MAC) and Physical Layer (PHY) specifications: Higher Speed Physical Layer (PHY) Extension in the 2.4 GHz band.
   3. National Electrical Manufacturers Association (NEMA):
      a. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).
   4. National Fire Protection Association (NFPA):
      a. 70 - National Electrical Code (NEC).
   5. Telecommunications Industry Association (TIA):
      a. 569 - Telecommunications Pathways and Spaces.
      b. 607 - Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises.
   6. Underwriters Laboratories, Inc. (UL).

1.03 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Include information on all network equipment.
   2. Manufacturer's operation and installation instructions.

C. Shop Drawings:
   1. Complete set of drawings, including, but not limited to:
      a. System block diagram showing relationship and connections between devices provided under this Contract, including connections to any existing equipment.
      b. Include manufacturer and model information, and address settings.
      c. Network riser diagram.
      d. Network port diagram, which physically locates all ports within the facility, and identifies their patch panel and switch port.
      e. Construction drawings for equipment cabinets, including dimensions, identification of components, preparation and finish data, and nameplates.
      f. Electrical connection diagrams.
      g. Complete grounding requirements.
   2. Furnish data sheets for each component together with a technical product brochure or bulletin:
      a. Manufacturer's model number.
      b. Project equipment tag.
   3. Complete and detailed bills of materials broken up by each cabinet. Each bill of material item will include the following:
      a. Quantity.
      b. Description.
      c. Manufacturer.
      d. Part numbers.

D. Delegated Design Submittals:
   1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria.
      a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.

E. Calculations:
   1. Cooling calculations, including, but not limited to:
      a. Highest expected ambient temperature for the enclosure's location.
      b. Internal heat load.
      c. Exposure to direct sunlight.
      d. Dimensions of the enclosure in inches.
      e. Maximum allowable temperature inside the enclosure, based on the lowest operating temperature limit of the installed components.

F. Test reports:
   1. As specified in Section 16125 - Fiber Optic Cable and Appurtenances and Section 17950 - Commissioning for Instrumentation and Controls.

2. Signed test results as described in this Section.
3. Test results shall include:
    a. Narrative describing the test procedures followed.
    b. Block diagram of test set up.
    c. Manufacturer's information on test equipment used.
    d. Detailed test results.
    e. A narrative summarizing the results of the testing and identifying any further action required.

G. Operating manuals:
1. Complete installation, operation, calibration, and testing manuals as specified in Section 01756 - Commissioning.

H. Record drawings:
1. As specified in Section 17950 - Commissioning for Instrumentation and Controls.
2. Electrical connection diagrams shall be revised to reflect any changes made in the field and submitted as record drawings.

1.05 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Vendor shall manufacture using low VOC-based materials to provide superior indoor air quality demonstrated by Greenguard certification.

2.02 MANUFACTURERS

A. As listed below in the individual component paragraphs.

2.03 MANUFACTURED UNITS

A. Ethernet switches:
1. Managed Process Floor Ethernet switches:
    a. Manufacturers: One of the following, no equal:
        1) Aruba:
            a) 12 Port Switch, Model: R8N89A.

2) Mounting:
a) Shelf.

B. Patch panels:
1. Fiber optic patch panels:
a. General:
1) Optical fiber cables shall be provided with strain relief and terminated at a fiber patch panel. Final connections between the patch panel and the fiber optic network equipment shall be made via factory tested fiber optic patch cords.
2) Fiber cable strands shall be terminated at the patch panels; no loose fiber strands are allowed.
3) Provide space for excess fiber and provide strain relief for the fiber cable.
4) Fiber cables shall be installed such that the outer sheath of the cable is carried into the interconnect enclosure or patch panels before breaking out buffer tubes.
5) Fiber connectors: LC.
b. DIN-rail mounted:
1) Manufacturers: One of the following or equal:
a) Corning.
b) DINSpace, SNAP Cu. *(This was selected for Westbrook and Solaire.)*
c) Hirschmann, MIPP.
2) Properties:
a) Use for the termination of a single cable inside of cabinets, in small enclosures or as indicated on the plans.
b) DIN-rail mounted fiber patch panels shall be provided as a complete unit, including the housing, connector panels, splice trays, and fiber connectors.

2.04 ACCESSORIES

A. Provide duplex patch cords to connect the interface cards provided with the associated patch panels.

B. Provide dust covers or plugs for unused ports.

C. Furnish accessories as specified in Section 17730 - Control Systems: PCS Computer Equipment.

PART 3 EXECUTION

3.01 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide installation and configuration for the new and existing managed Ethernet switches. Provide configuration of the Ethernet switch network for a complete,

functioning plant control system as indicated on the Drawings and as specified in this Section:

1. Refer to Network Connection diagram for all new network connections.
2. Provide configuration for the managed Ethernet switch listed in 2.03.
3. The Process floor managed Ethernet switches for the process control network shall be configured and programmed for rapid fail over protection.

C. All Work shall be performed in a neat and workmanlike manner.
   1. Ground enclosure and equipment in accordance with TIA-607.
      a. Individually bond all network equipment chassis to rack's grounding busbar. Do not daisy-chain bonding conductors.
      b. Size the bonding conductor per network equipment manufacturer's recommendation, or #10 AWG, whichever is larger.

D. All Cables and terminations shall be labeled with cable designations as specified in Section 16075 - Identification for Electrical Systems.

E. Each data port shall be individually labeled with its patch panel/switch port ID:
   1. Labeling must be printed - No handwritten labels will be allowed.

F. At the completion of the wiring installation, provide the following documentation:
   1. A plan-view of the premise(s) showing the jack numbering scheme.
   2. A printed certification report for the entire wiring installation showing compliance with all TIA specifications for data cable.
   3. Reports such as those generated by Fluke DSP cable certification equipment meet this requirement.

G. Managed Ethernet switches:
   1. Configure switches to prevent broadcast storms.
   2. All Installations shall employ IGMP snooping to limit multicast messaging.

3.02 ADJUSTING

A. Perform all firmware installations, configuration, and other set up, as required, to place the network into proper operation.

3.03 CLEANING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.04 DEMONSTRATION AND TRAINING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. After completion of the cable system tests and before placing the system in operation, power up all devices installed on the LAN and verify communication between the devices.

C. Verify that all equipment is operable on the network simultaneously. Confirm that all network device communications settings are properly configured.

END OF SECTION

SECTION 17903

SCHEDULES: I/O LIST

PART 1 GENERAL

1.01 SUMMARY

A. The I/O list is not a take-off list. Additional information is as indicated on the Drawings and specified in the Contract Documents. Where any discrepancies between this list and the P&ID drawings arise, the P&ID shall govern.

B. Abbreviations used in the I/O list are indicated on the Drawings.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 I/O LIST

A. As specified in Attachment A - I/O list.

END OF SECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Testing requirements that apply to process control and instrumentation systems for the entire Project.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.
   1.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Complete End-to-End Testing (CEET) - Signals are tested from the field device through the PLC program, the network, and all the way to the operator's HMI graphic screens.
   2. Loop validation tests - Signals are tested from the field device to the PLC.
   3. Permanent link: Fixed portion of cabling installed between an equipment outlet and its immediate distributor or between 2 distributors.
   4. Platform testing: Testing of the PLC and SCADA/HMI at the manufacturer's or programmer's shop to demonstrate the program's functionality based upon specified and designed control requirements.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. General:
   1. Reference additional detailed test Submittal scheduling and prerequisite requirements as specified in the sequencing article of Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

C. Overall test plan:
   1. Develop the PCIS system test Submittals in consultation and cooperation with applicable Subcontractors.
   2. Develop and submit an overall testing plan for the PCIS. Overall test plan to be reviewed and approved by the Engineer before detailed test plans, procedures, and forms will be reviewed.
   3. Describe the test phases as they apply specifically to this Project and each process system.
   4. Provide a preliminary testing schedule to show the sequence of tests and commissioning as they apply to each process system and each PLC.
   5. Provide a description of factory tests. Describe what equipment will be included, what testing equipment will be used, and the simulator that will be used.
   6. Provide examples of proposed forms and checklists.

D. Test procedures:
   1. Develop and submit detailed test procedures to show that the integrated SCADA system hardware and software is fully operational and in compliance with the requirements specified in the Contract Documents.
   2. Provide a statement of test objectives for each test.
   3. Prepare specific procedures for each process system.
   4. Describe sequentially the steps to be followed in verifying the correct operation of each process system, including features described in the loop descriptions, control strategies, and shown in the P&IDs. Implied or generic test procedures are not acceptable.
   5. Specify who will perform the tests, specifically what testing equipment will be used (including serial numbers and NIST-traceable calibration), and how the testing equipment will be used.
   6. Describe the expected role of the Engineer, as well as any requirements for assistance from the Owner's staff.
   7. Provide the forms and checklists to be used.

E. Test forms:
   1. Submit completed calibration forms, test forms, and checklists.
      a. Test forms shall include the detailed test procedures or shall include clear references to separate pages containing the complete test procedure applicable to each form. If references to procedures are used, the complete procedure shall be included with each test binder.
      b. Every page of each test form shall include Project name, date, time, name of person conducting the test, signature of person conducting the test, and for witnessed tests, place for signature of person (Engineer and Owner) witnessing the test.
      c. Sample test forms at the end of this Section show the minimum required content:
         1) Sample test forms have not been customized for this Project.
         2) Develop and submit test forms customized for the Project and meeting the specified test and Submittal requirements.

F. FAT procedure additional minimal requirements:
   1. Prepare and submit a FAT procedure which includes:
      a. Control system testing block diagram.
      b. Estimated test duration.
      c. Details on the simulator construction, components, and operation.

G. Testing binders:
   1. Sub-system to be tested: Provide and submit a test binder containing test procedures and individual forms for the test. References to other documents for test procedures and requirements are not acceptable.
   2. Fill out in advance, headings and all other information known before the test.
   3. Include applicable test plan information, as well as a list of test prerequisites, test personnel, and equipment.
   4. Include or list reference material and provide separately at the time of the test.
   5. Record test results and verify that all test requirements and conditions have been met.

H. Furnish Commissioning Submittals listed below, as specified in this Section, and Section 01756 - Commissioning:
   1. Manufacturer's representative qualifications.
   2. Owner Training.

I. Test reports:
   1. At the conclusion of each test, submit a complete test report, including test results and certifications.
   2. Include completed test binders, forms, and checklists.
   3. Submission, review, and acceptance of each test report is required before the start of the sub-system.

1.05 QUALITY ASSURANCE

A. Test personnel:
   1. Furnish qualified technical personnel to perform calibration, testing, and verification. Test personnel are required to be familiar with this Project and the equipment, software, and systems before being assigned to the test program.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 INSTALLATION

A. Installation supervision:
   1. Provide as specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

B. Testing and training phase:
   1. Source Testing:
      a. Manufacturer services: Provide as specified in the table below.

Section Number	Section Title	Source Testing (Witnessed or Non-Witnessed)
17710 - Control Systems - Panels, Enclosures, and Panel Components	Control Systems - Panels, Enclosures, and Panel Components	Witnessed
17950 - Commissioning for Instrumentation and Controls	Commissioning for Instrumentation and Controls	Witnessed

      b. Prerequisite requirements:
         1) Engineer approval of the hardware and equipment Source Testing Submittal is required before proceeding to preliminary FAT.

c. Control System FAT testing:
    1) Perform tests to show that the integrated system hardware and software is fully operational and in compliance with the requirements specified in the Contract Documents.
        a) The Contractor is responsible for scheduling the Control System FAT.
            (1) Invites for the FAT shall be sent out 30 days prior to the FAT. The invites shall include but not limited too: the Owner, Engineer, ICSC, Programmer, and equipment vendors.
        b) The Contractor is responsible to lead coordination efforts with the programmer and other equipment vendors.
        c) The Contractor shall coordinate efforts to have all the necessary equipment and tools in one place for an in-person FAT.
        d) The Contractor is responsible for determining the location of the FAT; the FAT shall not be at the construction site.
        e) The Contractor is responsible to develop the FAT procedure and forms for record; this can be done with help from Carollo Programming Services.
        f) The Contractor and Carollo Programming Services shall conduct and lead the FAT together.
        g) Any disagreement regarding the FAT procedure and execution of the FAT procedure will be resolved by the Engineer and Owner.
        h) A pre-FAT is not required, however all equipment must be complete, configured, wired up together as a system (including network cabling) and ready for testing 1 day prior to the day FAT starts. The FAT procedure and forms submittal must be approval and all comments resolved 1 full week prior to FAT.
    2) The FAT is to include the completely built Facility Control Panel including all it's components, the MCC and other motor starters and VFDs that interface with the Facility Control Panel, any and all local control panels that interface with motor starters or VFDs, the PLC program, and a workstation that has a copy of the Owners SCADA system on it with the modified configuration, alarming, reporting, and display graphics for the project.
    3) For any fault tolerant networks such as ring topology networks, disconnect each segment of the network individually to demonstrate proper failover and alarming at the HMI.
    4) Testing simulation:
        a) Inputs and outputs shall be simulated and proper control and system operation shall be validated.
        b) Whenever supplied equipment is available, such as devices internal to the control panel, test input and output signals using the equipment. Simulation is not acceptable.
        c) FAT shall make use of simulators that contain switches, pilot lights, variable analog signal generators, and analog signal level

displays, which shall be connected to the I/O points within the HMI/SCADA system:

(1) Use of jumper wires, terminal block mounted pilot lights, and loose meters to act as or supply the functionality of a simulator shall not be allowed.

(2) Simulator may consist of a PLC, operating under an HMI/SCADA software package, or other approved software that has its I/O points wired to the PLC's I/O points.

(3) Software operating on a PC may then act as the switches, pilot lights, variable analog signal generators, and analog signal level displays.

5) Additional source tests are specified in other sections of the instrumentation and control Specifications.

6) Panel inspections:

a) Engineer will inspect each control panel for completeness, workmanship, fit and finish, and compliance with the Contract Documents and the accepted Shop Drawings:

(1) Inspection to include, as a minimum: Layout, mounting, wire and data cable routing, wire tags, power supply, components and wiring, I/O components layout (including terminals, wiring and relays), device layout on doors and front panels, and proper ventilation operation.

b) Inspection forms:

(1) Provide panel inspection forms as part of the FAT procedures Submittal.

(2) A sample FAT control panel form has been provided at the end of this Section.

7) I/O test:

a) Engineer will verify that I/O is properly wired to field terminals and is properly mapped into the PLC and the rest of the SCADA system, including operator interface devices.

b) Test methodology:

(1) Discrete inputs:

(a) Apply appropriate input from simulator at panel terminal, observe input card indicator, observe data value at each indicated data address, and observe data received at field wiring terminals or operator interface screen.

(2) Discrete outputs:

(a) Issue commands from operator interface screen or PLC, verify output card indicator light, and measure response at field wiring terminals or multimeter.

(3) Analog inputs:

(a) Apply appropriate analog input signal at panel terminals on simulator, observe data value at each indicated data address, and observe data properly received at field wiring terminals or operator interface screen.

(b) Check each point at 0 percent, 50 percent, and 100 percent of scale.

(4) Analog outputs:
(a) Enter scaled values in the output buffer file, observe the output data file value, and measure appropriate response at field wiring terminals or multimeter.
(b) Check each point at 0 percent, 50 percent, and 100 percent of scale.

c) Test forms to include, but not be limited to, the following data:
(1) PLC and panel number.
(2) I/O type.
(3) I/O tag name.
(4) Rack/slot/number of I/O point.
(5) Check-off for correct response for each I/O point.
(6) Comments field.
(7) Initials of individual performing test.
(8) Date test was performed.
(9) Witness signature lines.

d) Test forms:
(1) For each test, list the specification page and paragraph of the function demonstrated, and provide a description of the function.
(2) List the specific tests and steps to be conducted.
(3) For each function, list all of the different sub-functions or ways the function can be used, and provide a test check-off for each:
(a) Include signature and date lines.

8) Engineer approval of the FAT Communication Testing activities is required before proceeding to FAT Platform Testing.

d. FAT Platform Testing - Control logic test:
1) Verify the PLC, HMI, and SCADA, provides monitoring and control functionality based upon specified and designed control requirements.
2) Testing requirements:
a) Demonstrate each function described in the Control Strategies.
b) Demonstrate in detail how each function operates under a variety of operating scenarios:
(1) Test to verify the application of each general control strategy function to each specific control strategy or loop description.
c) Demonstrate the proper operation of the programming and configuration for each control strategy or loop description:
(1) Test each strategy or loop description on a sentence by sentence and function by function basis.
(2) Loops with similar or identical logic must each be tested individually.
(3) Test the boundaries of each numeric operator input by entering values outside of the allowable range.
d) Demonstrate the proper operation of digital communication links and networks.
(1) Verify each digital communication I/O point.
e) Failure testing: Demonstrate how the system responds to and recovers from abnormal conditions, including, but not limited to, equipment failure, operator error, communications subsystem error, communications failures, simulated/forced software

lockups, power failure (both utility power and power to HMI and/or SCADA hardware), process equipment failure, and high system loading conditions.

3) Test forms:
   a) Submit completed test forms for each loop, including, but not limited to, the fully revised and approved control strategy.
   b) Identify the cause and effect as each I/O point is toggled through the simulator:
      (1) Identify and track proper and/or improper operation of the loop.
   c) Note any deficiencies or operational changes on the forms for correction and documentation:
      (1) Include signature and date lines.
4) Engineer approval of the FAT Submittal is required prior to shipment of system components.

2. Owner Training:
   a. Perform Owner Training as specified in Section 01756 - Commissioning.

Course Title	Minimum Course Length (Hours per Session)	Personnel (Estimated Number of Students)	Minimum Number of Sessions
System Overview	0	0	0
Operator Training - Basic	0	0	0
Operator Training - Advanced	0	0	0
PLC Hardware	0	0	0
PLC Software	0	0	0
LOI Hardware and Software	0	0	0
Network Equipment	0	0	0
Follow-Up Training	0	0	0

3. Installation testing:
   a. Calibration:
      1) Performed by the Contractor and ICSC.
      2) Calibrate and adjust instruments, devices, valves, and systems, in accordance with the component manufacturer's instructions and as specified in these Contract Documents.
      3) Replace either individually or within a system, defective elements that cannot achieve proper calibration or accuracy.
         a) Discrete devices:
            (1) Calibrate and adjust devices for reliable operation and to avoid nuisance tripping.
         b) Ultrasonic and radar level devices:
            (1) Provide echo transmission and signal quality on level transmitters, including guided and unguided units.
               (a) Submit printout of the actual transmission and parameters.
            (2) Adjust mounting as required to obtain accurate readings.

(3) Post mounting: Provide any additional calibration required by the manufacturer.

c) Analog transmitters:
(1) Components having adjustable features are to be set accurately for the specific conditions and applications of this installation.
(2) Test and verify that components and/or systems are within the specified limits of accuracy.
(3) Calibration points:
(a) Calibrate each analog instrument at 0 percent, 25 percent, 50 percent, 75 percent, and 100 percent of span, using test instruments with accuracies traceable to NIST.
(4) Field verify calibration of instruments, including units that have been factory-calibrated to determine whether any of the calibrations are in need of adjustment.

d) Analyzer:
(1) Calibrate and test each analyzer system as a workable system after installation. Follow the testing procedures directed by the manufacturers' technical representatives.
(2) Submit completed instrument calibration sheets for every field instrument and analyzer.
(3) Calibration tags:
(a) Attach a calibration and testing tag to each instrument, piece of equipment, or system.
(b) Sign the tag when calibration is complete.

e) Industrial networking test equipment:
(1) Submit calibration documentation.

b. Loop check:
1) Performed by the Contractor.
2) Cabling installed, terminated, and labeled.
3) Perform continuity check of wiring to each field device through intermediate devices to field terminals in the cabinet.
4) Complete loop check form for each device.
5) Submit loop check test results before proceeding to the next step.

c. Loop validation tests:
1) Performed by the Contractor, ICSC, and the manufacturer's representative, working together, and witnessed by the Owner or Owner's representative.
2) Perform tests on the signal from each field device through intermediate devices to the I/O module on the PLC.
a) PLC may or may not be connected to the network.
3) Engineer approval of the loop validation test Submittal is required before proceeding to CEET.

d. Copper Ethernet cable acceptance testing:
1) Testing procedures and field-test instruments shall comply with applicable requirements of:
a) TIA-1152 - Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling.
b) TIA-568.0-E - Generic Telecommunications Cabling for Customer Premises.

c) TIA-568.1-E - Commercial Building Telecommunications Infrastructure Standard.
d) TIA-568.2-D - Balanced Twisted-Pair Telecommunications Cabling and Components Standard.
e) Copper Ethernet cable installation testing as specified in Section 16950 - Field Electrical Acceptance Tests.

2) Testing shall be performed by trained technicians who have successfully completed an appropriate training program and have obtained a certificate as proof thereof shall execute the tests. These certificates may have been issued by any of the following organizations or an equivalent organization:
   a) Manufacturer of the connectors or cable.
   b) Manufacturer of the test equipment used for the field certification.
   c) Training organizations (e.g., BICSI).
3) Submit the following information before testing begins:
   a) Manufacturer's catalog sheets, specifications, and the most recent calibration report for the test equipment.
   b) Certificate of testing technician's training.
   c) A schedule of balanced twisted-pair copper links to be tested, including:
      (1) Cable identification as it appears on the cable records.
      (2) Cable identification as it appears on the individual test reports.
      (3) Cable identification as specified in Section 16075 - Identification for Electrical Systems.
   d) Sample test reports.
   e) Installed cabling Permanent Links shall be field-tested and pass the test requirements and analysis as described below:
      (1) Any Permanent Link that fails these requirements shall be diagnosed and corrected.
      (2) Any corrective action that must take place shall be documented and followed with a new test to prove that the corrected Permanent Link meets performance requirements.
      (3) Final and passing result of the tests for Permanent Links shall be provided in the test results documentation in accordance with the testing requirements.
   f) Acceptance of the test results shall be given in writing after the Project is fully completed and tested in accordance with the Contract Documents and to the satisfaction of the Engineer.
4) Cable field-test instruments:
   a) Field-test instrument shall be within the calibration period recommended by the manufacturer, typically 12 months.
   b) Certification tester requirements:
      (1) Level III in accordance with TIA-1152.
      (2) Independent verification of accuracy.
      (3) Must be capable of storing more than 10,000 results for all required measurements.
      (4) Manufacturers: The following or equal:
         (a) Fluke Cable Analyzer Industrial Ethernet Kit, DSX2-5-IE-K1.

c) Permanent Link adapters:
   (1) Use the manufacturer's adapter for connecting to tested equipment.
      (a) Patch cables shall not be used for testing.
   (2) RJ45 plug must meet the requirements for NEXT, FEXT, and return loss in accordance with TIA-568.2-D Annex C.
d) Measurement capabilities:
   (1) Wire map.
   (2) Length.
   (3) Propagation delay.
   (4) Delay skew.
   (5) DC loop resistance.
   (6) DC resistance unbalance.
   (7) Insertion loss.
   (8) NEXT (near-end crosstalk).
   (9) PS NEXT (power sum near-end crosstalk).
   (10) ACR-N (attenuation to crosstalk ratio near-end).
   (11) PS ACR-N (power sum attenuation to crosstalk ratio near-end).
   (12) ACR-F (attenuation to crosstalk ratio far-end).
   (13) PS ACR-F (power sum attenuation to crosstalk ratio far-end).
   (14) Return loss.
   (15) TCL (transverse conversion loss).
   (16) ELTCTL (equal level transverse conversion transfer loss).
   (17) Time domain reflectometer.
   (18) Time domain crosstalk analyzer.

5) Testing requirements:
   a) Field-test instruments shall have the latest software and firmware installed.
   b) Permanent Link test results, including the individual frequency measurements from the tester shall be recorded in the test instrument upon completion of each test for subsequent uploading to a PC in which the administrative documentation (reports) may be generated.
   c) Testing shall be performed on each cabling segment from connector to connector:
      (1) Sampling is not acceptable.
   d) Installer shall build a reference link:
      (1) Components shall be anchored so it is not possible to disturb them.
      (2) Technician is to conduct a Permanent Link test each day, for each type of category cable used, to ensure no degradation of the tester or its Permanent Link adapters.
   e) Unless noted otherwise tests shall use the following frequency resolution:
      (1) 1 to 31.25 MHz: 150 kHz.
      (2) 31.25 to 100 MHz: 250 kHz.
      (3) 100 to 250 MHz: 500 kHz.

f) Wire map measurement:
   (1) Wire map test is intended to verify pin-to-pin termination at each end and check for installation connectivity errors. For each of the 8 conductors in the cabling, the wire map indicates:
      (a) Continuity to the remote end.
      (b) Shorts between any 2 or more conductors.
      (c) Reversed pairs.
      (d) Split pairs.
      (e) Transposed pairs.
      (f) Distance to open on shield.
      (g) Any other miss-wiring.
      (h) Correct connectivity of telecommunications outlets/connectors is defined in TIA-568.2-D:
         - 2 color schemes are permitted.
         - User shall define which scheme is to be used.
         - Field tester shall document which color scheme was used.

g) Length measurement:
   (1) Record the length of each cable. Use the physical length of the link calculated using the pair with the shortest electrical delay for reporting and to determine pass/fail.
   (2) Pass or fail criteria is based on the maximum length allowed for the Permanent Link as specified in TIA-568.2-D plus the nominal velocity of propagation (NVP) uncertainty of 10 percent. For a Permanent Link, the length measurement can be 325 feet before a fail is reported.

h) Propagation delay measurement:
   (1) Is the time it takes for a signal to reach the end of the link.
   (2) Measurement shall be made at 10 MHz in accordance with TIA-1152.
   (3) Propagation delay of each balanced twisted pair shall be recorded.
   (4) Is not to exceed 498 ns in accordance with TIA-568.2-D Section 6.4.21.

i) Delay skew measurement:
   (1) Is the difference in propagation delay at 10 MHz between the shortest delay and the delays of the other wire pairs.
   (2) Delay skew of each balanced twisted pair shall be recorded.
   (3) Is not to exceed 44 ns in accordance with TIA-568.2-D Section 6.4.22.

j) DC resistance:
   (1) Often reported as resistance, is the loop resistance of both conductors in the pair.
   (2) Is not specified in TIA-1152 but shall be recorded for all 4 pairs.

k) DC resistance unbalance:
   (1) Often reported as resistance unbalance, is the difference in resistance of the 2 wires within the pair.
   (2) Is not specified in TIA-1152 for a Permanent Link but shall be recorded for all 4 pairs.

l) Insertion loss:
   (1) Is the loss of signal strength over the cabling (in dB).
   (2) Worst case shall be reported for all 4 pairs in one direction only.
   (3) Reported margins found to be within the accuracy of the field tester shall be marked with an asterisk.
   (4) Is not to exceed the Category 6 Permanent Link limits in accordance with TIA-568.2-D Section 6.4.10.

m) NEXT (near-end crosstalk):
   (1) Is the difference in amplitude (in dB) between a transmitted signal and the crosstalk received on other wire pairs at the same end of the cabling.
   (2) Shall be measured in both directions (12 pair to pair possible combinations).
   (3) Both worst case and worst margins shall be reported.
   (4) Is not to exceed the Category 6 Permanent Link limits in accordance with TIA-568.2-D Section 6.4.11.
   (5) Reported margins found to be within the accuracy of the field tester shall be marked with an asterisk (*).
   (6) Time domain crosstalk data shall be stored for any marginal or failing NEXT results.

n) PS NEXT (power sum near-end crosstalk):
   (1) Is the difference (in dB) between the test signal and the crosstalk from the other pairs received at the same end of the cabling.
   (2) Shall be measured in both directions (8 pair possible combinations).
   (3) Both worst case and worst margins shall be reported.
   (4) Is not to exceed the Category 6 Permanent Link limits in accordance with TIA-568.2-D Section 6.4.12.
   (5) Reported margins found to be within the accuracy of the field tester shall be marked with an asterisk (*).
   (6) Time domain crosstalk data shall be stored for any marginal or failing PS NEXT results.

o) ACR-N (attenuation crosstalk ratio near-end):
   (1) Is a calculation of NEXT minus insertion loss of the disturbed pair in dB.
   (2) Shall be calculated in both directions.
   (3) Is not specified in TIA-1152 but shall be recorded for all 12 possible combinations.

p) PS ACR-N (power sum attenuation crosstalk ratio near-end):
   (1) Is a calculation of PS NEXT minus insertion loss of the disturbed pair in dB.
   (2) Shall be calculated in both directions.
   (3) Is not specified in TIA-1152 but shall be recorded for all 8 possible combinations.

q) ACR-F (attenuation crosstalk ratio far-end):
   (1) Is a calculation of FEXT minus insertion loss of the disturbed pair in dB.
   (2) Shall be measured in both directions (24 pair to pair possible combinations).

(3) Both worst case and worst margins shall be reported.
(4) Is not to exceed the Category 6 Permanent Link limits in accordance with TIA-568.2-D Section 6.4.14.
(5) Reported margins found to be within the accuracy of the field tester shall be marked with an asterisk (*).

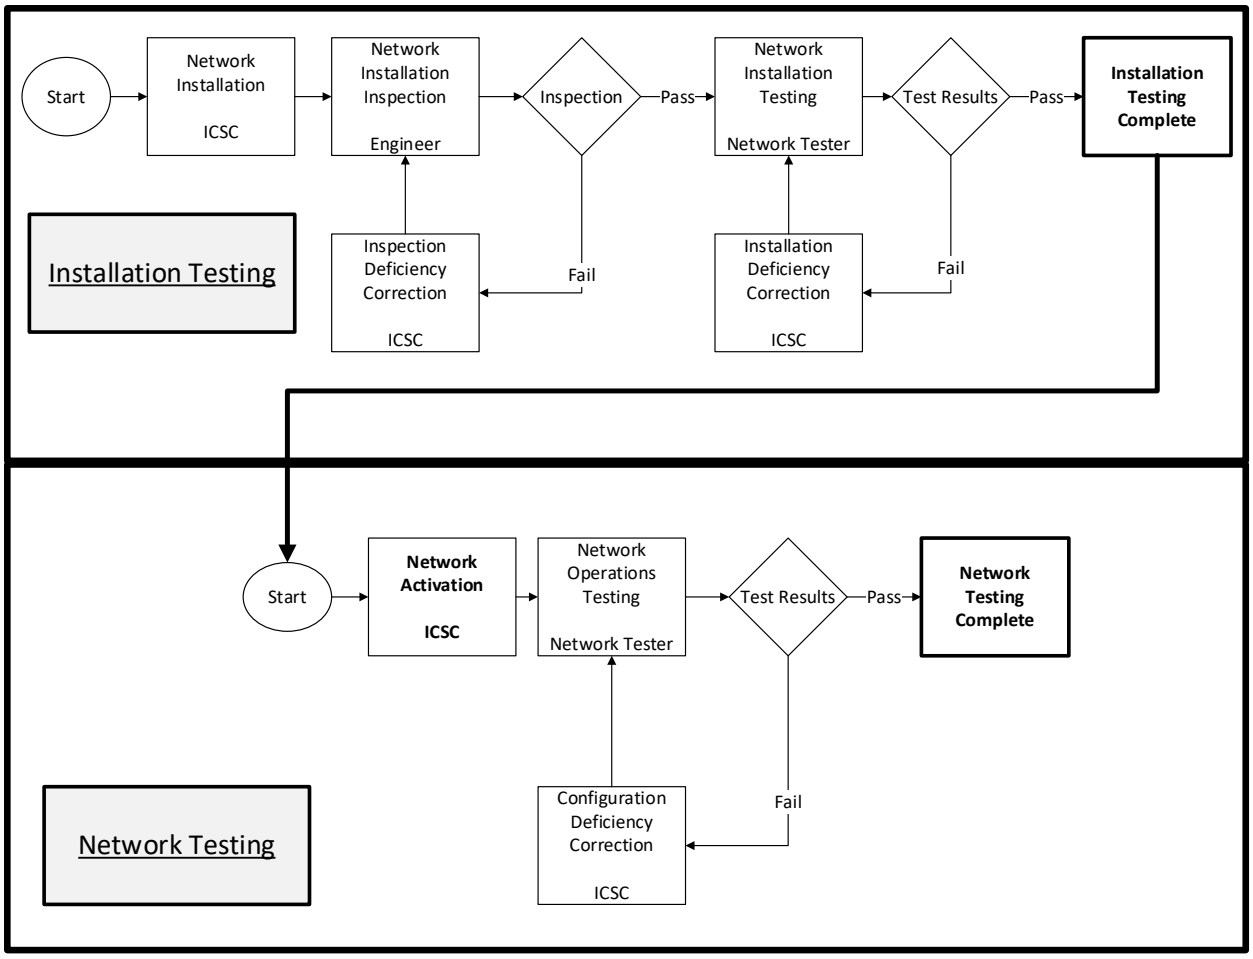
r) PS ACR-F (power sum attenuation crosstalk ratio far-end):
(1) Is a calculation of PS FEXT minus insertion loss of the disturbed pair in dB.
(2) Shall be measured in both directions (8 pair possible combinations).
(3) Both worst case and worst margins shall be reported.
(4) Is not to exceed the Category 6 Permanent Link limits in accordance with TIA-568.2-D Section 6.4.16.
(5) Reported margins found to be within the accuracy of the field tester shall be marked with an asterisk (*).

s) Return loss:
(1) Is the difference (in dB) between the power of a transmitted signal and the power of the signals reflected back.
(2) Shall be measured in both directions (8 pair possible combinations).
(3) Both worst case and worst margins shall be reported.
(4) Shall be ignored at all frequencies where the insertion loss is less than 3 dB for that pair.
(5) Is not to exceed the Category 6 Permanent Link limits in accordance with TIA-568.2-D Section 6.4.9.
(6) Reported margins found to be within the accuracy of the field tester shall be marked with an asterisk (*).
(7) Time domain reflectometer data shall be stored for any marginal or failing return loss results.

t) TCL (transverse conversion loss):
(1) Is the ratio (in dB) between a differential mode signal inject at the near-end and the common-mode signal measured at the near-end on the same wire pair.
(2) Shall be measured in both directions.
(3) Is not specified in TIA-1152 for a Permanent Link but shall be recorded for all 8 possible combinations.

u) ELTCTL (equal level transverse conversion transfer loss):
(1) Is the ratio (in dB) between a differential mode signal inject at the near-end and the common-mode signal measured at the far end on the same wire pair minus the insertion loss of that pair.
(2) Shall be measured in both directions.
(3) Is not specified in TIA-1152 for a Permanent Link but shall be recorded for all 8 possible combinations.

6) Test results documentation:
a) Detailed test results documentation data is to be provided in an electronic database for each tested balance twisted pair and shall contain the following information:
(1) Overall pass/fail evaluation of the link-under-test.
(2) Date and time the test results were saved in the memory of the tester.



(3) Identification of the customer site as specified by the end user.
(4) Name of the test limit selected to execute the stored test results.
(5) Name of the personnel performing the test.
(6) Version of the test software and the version of the test limit database held within the test instrument.
(7) Manufacturer, model, and serial number of the field-test instrument.
(8) Adapters used.
(9) Factory calibration date.
(10) Wire map.
(11) Propagation delay values, for all 4 pairs.
(12) Delay skew values, for all 4 pairs.
(13) DC resistance values, for all 4 pairs.
(14) DC resistance unbalance, values for all 4 pairs.
(15) Insertion loss, worst case values for all 4 pairs.
(16) NEXT, worst case margin and worst case values, both directions.
(17) PS NEXT, worst case margin and worst case values, both directions.
(18) ACR-F, worst case margin and worst case values, both directions.
(19) PS ACR-F, worst case margin and worst case values, both directions.
(20) Return loss, worst case margin and worst case values, both directions.
(21) TCL, worst case values both directions.
(22) ELTCTL, worst case values, both directions.
(23) Time domain crosstalk data if the link is marginal or fails.
(24) Time domain reflectometer data if the link is marginal or fails.

b) Maintain a set of “red-line” throughout during construction:
(1) Drawings shall be available for review at any time as requested by the Owner or Engineer.
(2) Provide record copy drawings at the end of the Project.
(a) Shall be in CAD format and include notations reflecting the as-built conditions of any additions to or variation from the drawings provided, such as, but not limited to, cable paths and termination point.
(3) As-built drawings shall include, but are not limited to, block diagrams, frame and cable labeling, cable termination points, equipment room layouts and frame installation details.
(4) As-builts shall include field changes made up to construction completion:
(a) Field directed changes to pull schedule.
(b) Horizontal cable routing changes.

7) Associated detail drawings. Engineer approval of the copper Ethernet cable acceptance-testing Submittal is required before proceeding to CEET.

e. Industrial network testing:
    1) General test requirements:
        a) Contractor will hire a network tester who is a Certified Profibus Installer for testing for the proper installation and operation of the Profibus network.
        b) Provide necessary components and labor required to address changes required to bring the network into compliance.
        c) Personnel shall be available at the time of network inspection and testing to address network deficiencies.
        d) Before commencing any network inspection or testing activities:
            (1) Verify that network segments and nodes are in their final installed condition:
                (a) Network node devices installed.
                (b) Field devices physically disconnected from the network.
            (2) Process and process equipment is not dependent on operation of the network.
            (3) Inspect network components and deficiencies addressed.
            (4) Manufacturer's data and specifications for installed network components, available on site for use by the network testing firm.
            (5) A complete set of Contract Documents included addenda and change orders are available on site for use by the network testing firm.
        e) Network operation may be interrupted for inspection and testing.
        f) Figure 1, Network Test Sequence and Responsibilities, defines the general test sequence.

Figure 1. Network Test Sequence and Responsibilities

2) Test equipment:
   a) Use the following:
      (1) Network line analyzer: ProfiTrace v1.6 or equivalent.
      (2) Oscilloscope: Fluke Scopemeter Series 190 or equivalent.
      (3) Digital VOM: Fluke 87 Multimeter or equivalent.
      (4) Network bus monitor, ProfiTrace v1.6 or equivalent.
3) Network installation testing:
   a) Performed by the Contractor/ICSC, network tester, and the Owner's representative working together.
   b) This activity focuses on the physical media and its installation.
   c) Conduct a physical inspection to establish the network configuration as indicated on the Drawings:
      (1) Validate the node type and quantity.
      (2) Identify improper installation and damaged components.
   d) Validate integrity of cables and connectors via a physical media test to confirm the signal propagation capabilities of the network media using visual and mechanical inspection:
      (1) Compare network devices nameplate data with Drawings and Specifications.
      (2) Confirm network components are PTO compliant.
      (3) Verify labeling of trunk cables.

(4) Confirm permissible cable length.
(5) Confirm correct cable type.
(6) Verify the presence/absence of stub lines.
(7) Verify network terminators are in place.
(8) Verify power supply source and connections for active terminations.
(9) Verify total network node count.
(10) Verify power supply specifications, including quantity, ratings, locations, and configuration. Verify power supply source of supply location, conductor size, and rating.
(11) Inspect accessible network cabling for adherence to specified installation practices:
(a) Cable installed in conduit or protective raceway.
(b) Cable proximity to high voltage wiring.
(c) Exposure to extreme temperatures, shock, vibration, chemicals, or moisture.
(d) Bend radius.
(12) Inspect cable and conductor terminations for adherence to specified installation practices.
(13) Check accessible components for evidence of physical damage.
(14) Check grounding techniques, including ground conductor sizes and termination points.
(15) Eliminate signal reflections.

e) Electrical tests:
(1) Measure total network resistance.
(2) Cable length and configuration evaluation:
(a) Confirm the network cable topology (length and configuration) does not exceed data rate limitations.
(b) Confirm total stub length (if required by design) does not exceed data rate limitations.
(c) Calculate spare trunk length for the specified data rate.
(3) Line analysis for the following conditions:
(a) Short circuit between signal lines A and B.
(b) Short circuit between signal lines A and B and the cable shield.
(c) Shield continuity.
(d) Cross-wired signals lines.
(e) Terminator installed in wrong position.
(f) Poor transmission or reception levels.
(g) Non-permissible stub line.
(4) Examine the data traffic between the controller and each agent device.
(5) Verify baud rate meets specified requirements.
(6) Confirm signal level meets specified requirements.
(7) Verify network cycle time meets specified requirements.
(8) Generate agent device list.
(9) Verify and record scanner diagnostic data, including node status and error codes.
(10) Monitor and capture network waveform.

(11) Measure and record power supply voltage at active terminations.

f) Submit corrective measures recommendations based on the results of the inspections and testing.

g) Engineer approval of the network installation validation and testing Submittal is required before proceeding to network operations validation and testing.

4) Network operations testing:

a) Performed by the Contractor/ICSC, network tester, and the Owner's representative ,and programmer working together.

b) General requirements:

(1) Network performance is monitored and measured using non-intrusive test equipment and procedures in accordance with the referenced standards:

(a) Profibus networks.

(2) Modifications required as a result of network operations validation and shall be in accordance with the applicable standards from Profibus organization, North America, PTO.

c) Online evaluation:

(1) Confirm specified agent devices appear on the live list.

(2) Evaluate data traffic between controller and each agent to confirm proper agent configuration and performance.

(3) Inspect waveform capture for evidence of excessive noise.

(4) Evaluate and report any failed or questionable network tests.

(5) Evaluate and report network error codes and related symptoms.

d) Network operations validation and testing report:

(1) Prepare a report that documents the results of the qualification and testing activities, including, but not limited to, the following:

(a) Document the installed condition of the network and provide baseline values for future network maintenance and testing activities.

(b) Executive summary for each network, including the following:

- Inspection and test results for each network.
- Calculated network parameters.
- Recommendations.
- Description of test procedures and required test equipment.
- Network agency specifications.

(c) Manufacturer's specifications and guidelines:

- Include applicable manufacturer's specifications and guidelines.
- May supersede the specifications of the applicable governing body for the associated network but at a minimum must meet the governing body's requirements.

e) Submit final report of the industrial network testing to the Engineer upon successful completion of the testing.

5) Engineer approval of the industrial network testing Submittals is required before proceeding to CEET.

f. Complete End-to-End Testing (CEET):
   1) Performed by the Contractor, ICSC, and the manufacturer's representative ,and Carollo programmer working together, with assistance from the Owner or the inspection staff, as needed:
      a) Participants need to be dedicated full-time to CEET.
      b) ICSC will provide staff to verify input signals at, and create output signals from, an HMI or engineering workstation.
      c) Contractor and ICSC will be responsible for creating field signals and verifying proper operation of final control elements.
   2) Prerequisites:
      a) CEET cannot begin until the successful completion of the preceding tests:
         (1) Calibration.
         (2) Loop check.
         (3) Loop validation tests.
         (4) Copper Ethernet cable acceptance testing.
         (5) Industrial network testing.
   3) Testing description:
      a) This testing is to ensure I/O signals operate to the intent of the design from the field device to the HMI and all other auxiliary controls and indicators in the PCS.
      b) Connect PLC to the network to test signals from the field device through the PLC program, the network, and to the operator's HMI graphic screens. Outputs will be energized for a duration long enough to verify proper operation of the final control element.
      c) SCADA screens:
         (1) Test and record operator commands and signal readouts to each operator device where there is more than one operator interface point.
         (2) For each signal, perform separate tests for SCADA computer screens, local operator interface (LOI) screens, and local control panels.
         (3) Retest any loop following any necessary corrections.
   4) Check control loops under simulated operating conditions by causing a range of input signals at the primary control elements and observing appropriate responses of the respective control and monitoring elements, final control elements, and the graphic displays associated with the HMI/SCADA system:
      a) Use actual process inputs wherever available.
      b) Issue commands from the HMI/SCADA system and verify proper responses of field devices:
         (1) Test SCADA system inputs from field device to SCADA system operator workstations:
            (a) Track responses through trend charts in the HMI/SCADA system.
         (2) Test SCADA system outputs from SCADA operator workstations to field devices and equipment.

5) Discrete device testing:
    a) Exercise each field device providing a discrete input to the HMI/SCADA system in the field and observe the proper operation shall be observed at the operator workstation:
        (1) Test limit switches, set limits mechanically, and observe proper operation at the operator workstation.
        (2) Exercise starters, relay contacts, switch contacts, and observe proper operation.
        (3) Calibrate and test instruments supplying discrete inputs and observe proper operation.
    b) Test each device accepting a discrete output signal from the HMI/SCADA. Perform the appropriate operator action at the SCADA operator stations (including LOIs, if present) and confirm the proper operation of the field device:
        (1) Stroke valves through outputs from the HMI/SCADA system and confirm proper directional operation. Confirm travel limits and any feedback signals to the HMI/SCADA system.
        (2) Exercise motors starters from the HMI/SCADA system and verify proper operation through direct field observation.
        (3) Exercise solenoids and other field devices from the HMI/SCADA system and verify proper operation through direct field observation.
6) Analog device testing:
    a) Apply continuously variable up and down analog inputs to verify the proper operation and setting of discrete devices (signal trips, etc.).
    b) Apply provisional settings on controllers and alarm setpoints.
7) Analog input:
    a) Exercise each field device monitoring the analog signal, through the HMI/SCADA system:
        (1) Apply simulated sensor inputs corresponding to 0 percent, 25 percent, 50 percent, 75 percent, and 100 percent of span for networks that incorporate analog elements and monitor the resulting outputs to verify compliance to accuracy tolerance requirements.
8) Analog output:
    a) Exercise each field device requiring an analog command signal, through the HMI/SCADA system:
        (1) Vary the output from the PLC HMI/SCADA system and measure the end device position, speed, etc., to confirm the proper operation of the device for the supplied analog signal.
        (2) Manually set the output from the HMI/SCADA screen at 0 percent, 25 percent, 50 percent, 75 percent, and 100 percent and measure the response at the final device and at any intermediate devices.
9) Submit completed test forms:
    a) Discrete instrument input devices:
        (1) Switch setting, contact action, and dead band.

(2) Valve position switches:
(a) Response in the PLC as the valve is stroked from the PLC.
(b) Field observed actual valve position, and valve indicator position as the valve is stroked from the PLC.
(3) Operator interface switches (control stations and other pilot devices) and associated response.
(4) Starter and drive auxiliary device contact response.
(5) Response of all other discrete inputs to the PLC.
(6) Test equipment used and associated serial numbers.

b) Discrete output devices:
(1) Observed response of field device to the discrete output from the PLC.
(2) Observe the proper operation of Open, Close, Start, Stop, On, Off, etc.
(3) Test equipment used and associated serial numbers.

c) Analog input devices:
(1) Calibration range.
(2) Calibration data: Input, output, and error at each test value.
(3) Analog input associated PLC register address.
(4) Value in PLC register at each test point.
(5) Value displayed at each operator interface station (local operator interface displays and SCADA workstations).
(6) Test equipment used and associated serial numbers.

d) Analog output devices:
(1) Calibration range.
(2) Test value at each test point.
(3) Analog output associated PLC register address.
(4) Control variable value at field device at each test point.
(5) Physical device response at each test point:
(a) Response to be actual valve position, or motor speed, etc.
(6) Test equipment used and associated serial numbers.

10) Failure testing:
a) Demonstrate how the system reacts and recovers from abnormal conditions, including, but not limited to:
(1) Equipment failure.
(2) Communications sub-system error.
(3) Power failure.
(4) Process equipment failure.
(5) High system loading conditions.

11) Engineer approval of the CEET Submittals is required before proceeding to Functional Testing.

4. Functional Testing:
a. General:
1) Testing to demonstrate proper operation of systems with process equipment operating over full operating ranges under conditions as closely resembling actual operating conditions as possible.
2) Performed by the Contractor, ICSC, and the manufacturer's representative ,and programmer working together, with assistance from the Owner or the inspection staff, as needed.

3) Additional tests are specified in other instrumentation and control Sections.
4) Follow approved detailed test procedures and check lists for Functional test activities.

b. Control logic operational validation:
1) The purpose of control logic validation is to field test the operation of the complete control system, including all parts of the HMI/SCADA system, control panels (including vendor control panels), control circuits, control stations, monitored/controlled equipment, and final control elements.
2) Demonstrate control functionality shown on the P&IDs, control schematics, and other drawings, and specified in the loop descriptions, control strategies, electrical Specifications, and mechanical equipment Specifications.
3) Test in detail on a function-by-function and sentence-by-sentence basis.
4) Thoroughly test hardware and software functions, including hardwired and software control circuit interlocks and alarms.
5) Test final control elements, controlled equipment, control panels, and ancillary equipment under startup, shut down, and steady-state operating conditions to verify logic and control is achieved.
6) Control logic validation tests to include, but not be limited to, a repeat of control logic tests from the FAT, modified and expanded to include field instruments, control panels, circuits, and equipment.
7) Functional certification:
a) Including test forms with test data entered, submitted to the Engineer with a clear and unequivocal statement that Functional test requirements have been satisfied.

C. Process Start-up Phase:
1. Process Start-up:
a. ICSC and Programmer shall be on site to support process Start-up activities and provide functional changes as required.
2. Process operation period:
a. ICSC and Programmer shall be available to support process operational period and provide functional changes as required:

3.03 SCHEDULES

A. Example test forms:
1. Attached at the end of this Section. They may be used as a starting point for the development of project-specific test forms for this Project.
2. Not intended to be complete or comprehensive. Edit and supplement the forms to meet the requirements for testing and test forms specified in this Section and other Contract Documents.

END OF SECTION

ATTACHMENT A - FACTORY ACCEPTANCE TEST - CONTROL PANELS

	FACTORY ACCEPTANCE TEST - CONTROL PANELS	

1. GENERAL INSPECTION

A. Structural Inspection

- ☐ Verify lifting lugs installed.
- ☐ Verity enclosure has lock and lock is functional.
- ☐ Confirm that seismic bracing components are provided in accordance with manufacturer's installation instructions.

B. Exterior Inspection

- ☐ Cabinet exterior is clean, scratch, and dent free.
- ☐ Inspect externally for corrosion and damage.
- ☐ Verify enclosure door opens and closes easily.
- ☐ Verify enclosure has a 3-point latch.
- ☐ Verify enclosure has a flange mounted disconnect (where voltages greater than 120 VAC enter the cabinet).
- ☐ Verify enclosure has the appropriate NEMA rating (1, 1G, 12, 3R, 4, 4X, etc.).
- ☐ Verify enclosure is the appropriate size (not grossly larger than design, and will still fit in the plant).

Nameplates

- ☐ Cabinet has identification nameplate.
- ☐ All door labels are straight, spelled correctly, and match the tagging defined in the Contract.
- ☐ Cabinet has a nameplate that includes the following:
  - ☐ Power source(s).
  - ☐ Integrator's logo.
  - ☐ Circuit ID(s).
  - ☐ Short Circuit KAIC ratings.
- ☐ If labels are screwed to door, silicone was utilized to cover screw holes. (Labels screwed to the door of a NEMA 4/4X panel technically violates the NEMA rating.)

Door Devices

- ☐ All devices penetrating the outside of panel have gaskets, silicone or both.
- ☐ All door devices are installed (HMIs, Pilot Devices, etc.).
- ☐ Door mounted equipment is mounted straight and square.
- ☐ All exterior or door mounted equipment present and accounted for, installed and securely fastened.
- ☐ NEMA classification has not been violated due to penetrations.
- ☐ Door mounted equipment has the same NEMA rating as the panel.
- ☐ All door mounted equipment installed at the correct height.
- ☐ All door mounted equipment installed in the correct positions and order (layout of door mounted equipment is grouped properly and in a logical manner).
- ☐ Doors with multiple penetrations have adequate bracing (if needed).
- ☐ Visually check condition of indicators, controllers, and annunciators.
- ☐ Check that pilot lights illuminate correctly.
- ☐ Check the Push-To-Test function.
- ☐ Ensure correct pilot light color.

Peripheral Devices

- ☐ Horn/Beacon is installed (where required).
- ☐ Silence and Reset pushbutton.

PROJECT NAME:		TEST DATE:	
FACILITY NAME:		TESTED BY:	
PROCESS AREA:		COMPANY:	
NETWORK ID:		PAGE:	
WITNESSED BY:		SIGNATURE:	

	FACTORY ACCEPTANCE TEST - CONTROL PANELS	

1. GENERAL INSPECTION (continued)

C. Interior Inspection

- ☐ Cabinet is cleaned of marks and dirt.
- ☐ Inspect internally for corrosion and damage.
- ☐ Back panel is clean of marks and dirt.
- ☐ Interior of panel vacuumed and shall be free of all debris.
- ☐ Check that the panel roof is clean and clear of foreign materials.
- ☐ Bottom of panel has been cut out (where bottom entry is required), with angle iron welded around the bottom perimeter. Re-painting has been performed.
- ☐ If internal light door limit switch is provided, ensure the light automatically turns “on” when the doors are open.
- ☐ Check that a document pocket has been provided.
- ☐ Intrusion alarms (where required).

Interior Labeling

- ☐ All panel mounted equipment has identification labeling, by using either a Brothers or Phenolic type tags.
- ☐ Verify that door mounted components are mounted square and symmetrical.
- ☐ Verify that nameplates are straight, legible, and spelled correctly.
- ☐ All terminal blocks are identified/labeled with permanent labels, including tight end blocks and caps.
- ☐ All wiring shrink labeled and or phased correctly to the specifications.
- ☐ All wire labels shrunk completely rotated and aligned alike for easy identification.
- ☐ All fuses and circuit breakers are labeled with ID and current rating.
- ☐ System Integrator’s label or labels installed on door.
- ☐ Panel manufacturer model/serial number tag is present.
- ☐ All required safety/warning tags installed and straight.
- ☐ Correct UL (typically UL 508) or cUL tag installed and registered and all other associated tags installed and straight. (The UL tag might not be installed in the panel at the factory test. If the panel is modified due to changes during the factory test or a punch list generated from the factory test, the UL labeling would need to be re-applied. Some UL shops do not apply the UL label until the panel is released to be shipped.)

Wireways

- ☐ Plastic wire way covers installed properly.
- ☐ Plastic wireways have no sharp edges.
- ☐ No wire ties inside the wireways.
- ☐ No sharp edges on wire ties.
- ☐ Separation: White duct is used for DC voltages; Gray duct is used for AC voltages.
- ☐ Ensure wiring duct is not over-full, includes provision for 20% more wiring and the cover may easily be installed. Panduit recommends 50% duct fill, but 40% is a better practice.

FACILITY NAME:	_____	TESTED BY:	_____
PROCESS AREA:	_____	COMPANY:	_____
NETWORK ID:	_____	PAGE:	_____
WITNESSED BY:	_____ SIGNATURE:		_____

	FACTORY ACCEPTANCE TEST - CONTROL PANELS	

1. GENERAL INSPECTION (continued)

C. Interior Inspection (continued)

Wiring

- ☐ Visually check terminals and condition of internal wirings.
- ☐ Verify that the control panel has been assembled and wired as designed.
- ☐ Verify that all components are operational and perform the functions intended.
- ☐ Verify that all components are sized appropriately for the application.
- ☐ Verify that equipment control circuits function as intended.
- ☐ Back of door wiring is labeled and neatly formed.
- ☐ Back panel to door wiring has sufficient bending radius with spiral wrap.
- ☐ Wire connection has been verified wired to correct points within the panel.
- ☐ Individual wires have been given a pull test to verify a good terminal connection.
- ☐ Wire and cable minimum bending radius have not been violated.
- ☐ All equipment installed straight and square to back panel.
- ☐ Wire colors are correct:
  - ☐ Black and White > AC hot and neutral, respectively.
  - ☐ Red > AC control signals.
  - ☐ Blue > DC power and control (Blue w/White stripe for DC ground).
  - ☐ Yellow > Foreign voltages (those still present when panel power is disconnected).
  - ☐ Green > AC equipment ground.
  - ☐ Black > TSP (+).
  - ☐ White > TSP(-).
- ☐ Analog wiring shields are continuous (connected by a dedicated terminal block for such shields).
- ☐ Analog shield wires are grounded within the panel, where not otherwise grounded at the transmitter itself.
- ☐ Discrete inputs are separately fused or protected by a circuit breaker on a “per loop” basis.
- ☐ Intrinsic Safety Wiring.
  - ☐ Ensure wiring associated with intrinsic safety circuits or intrinsic safety barriers is kept away from all other wiring by UL minimum distances or by a physical (grounded metal) barrier preventing non-intrinsically safe wiring from coming in contact with intrinsically safe circuits or wiring.
- ☐ Verify all spare terminals are installed according to the percentage listed in the specifications.

Grounding

- ☐ Equipped with “Blackburn” or other grounding type lug.
- ☐ Lug is securely fastened to the panel structure.
- ☐ Verify grounding bar is installed.
- ☐ Verify isolated ground bar is installed.

FACILITY NAME:	_____	TESTED BY:	_____
PROCESS AREA:	_____	COMPANY:	_____
NETWORK ID:	_____	PAGE:	_____
WITNESSED BY:	_____	SIGNATURE:	_____

	FACTORY ACCEPTANCE TEST - CONTROL PANELS	

2. POWER TEST

A. AC Power

- ☐ AC power is routed correctly within the panel and is isolated from DC and network wiring.
- ☐ All fuses are installed and sized properly.
- ☐ All breakers are installed and sized properly.
- ☐ 24 VDC Power Supplies are functional.
- ☐ 24 VDC Power fail contacts are functional.
- ☐ 24 VDC power supplies are redundant and have diode modules enabling the hot swap-over between supplies.
  - ☐ 24 VDC supplies are equipped with dry contact failure alarms, wired as PLC inputs to signal failure of any DC power supply. Such alarm inputs to the PLC have been tested as being functional.
- ☐ Dedicated receptacle is wired to receive a dedicated AC supply.
- ☐ Verify continuity for all DC commons, ground and AC neutrals.
- ☐ Verify that the CP temporary input power is connected correctly and is the correct voltage.
- ☐ Close the CP main circuit breaker(s).
- ☐ Verify that voltages at subsequent circuit breakers are correct.
- ☐ Close circuit breakers.
- ☐ Verify that power feeding interruptible and uninterruptible power supplies is correct.
- ☐ Turn on power supplies if they are not already on.
- ☐ Verify that voltages at distribution terminals are correct.
- ☐ Energize any remaining hardware such as the PLC.

B. Uninterruptible Power Supply (UPS)

- ☐ Mounted appropriately within the cabinet, on a dedicated shelf, or rear of a swing-out sub panel.
- ☐ Is equipped with maintenance bypass switch (or at least plug/receptacle means for bypassing the unit).
- ☐ Test all UPS alarms (on inverter, failure, battery failure etc.).
- ☐ Turn off the AC power supply and verify that the UPS will be switched on to supply the designated vital loads in the control panel.

3. CONTROLS & AUXILIARY DEVICES TEST

- ☐ Verify all interposing and auxiliary relays are functioning.
- ☐ Verify panel lights are functioning.

Ventilation and Heating

- ☐ If ventilation fans are fitted, check the fans operate correctly any associated air filters are clean and not blocked.
- ☐ Verify components are installed in the correct orientation for proper air flow.

4. HARDWIRED INTERLOCK AND SAFETY TEST

- ☐ Verify that hardwired interlocks through the control panel as shown on schematic drawings are functioning. For example, outlet high pressure switch interlock to a pump.
- ☐ Verify that all hardwired safety devices through the control panel is functioning. For example, the pull cord emergency stops of conveyors.

PROJECT NAME:	_____	TEST DATE:	_____
FACILITY NAME:	_____	TESTED BY:	_____
PROCESS AREA:	_____	COMPANY:	_____
NETWORK ID:	_____	PAGE:	_____
WITNESSED BY:	_____ SIGNATURE:		_____

5. PLC TEST

A. Components

☐ PLC interior High Temperature alarm is installed, wired to the PLC, and is shown to be functional.

☐ Relays have transient suppression across their coils. This is particularly important for DC coil relays, where diodes in reverse polarity are often used.

☐ TVSS is installed across the main incoming 120 VAC.

PLC and PLC Rack

☐ Verify all cards are securely seated.

☐ Ensure clearance around PLC rack has been met, such that convective heat transfer is not impeded by devices erroneously mounted in the “no encroachment” area. Confirm with manufacturer clearance recommendations.

B. PLC I/O Test

☐ Furnish **I/O test forms** and test all the listed input and output points as follows:

☐ Discrete Inputs: Simulate a field contact closure by “shorting” across the appropriate terminal blocks. Observe the transition between a logical “0” and “1” in the PLC software.

☐ Discrete Outputs: Force the output bit to toggle between logical “0” and logical “1” using the PLC software. Measure contact resistance at the wired terminal blocks using a digital meter selected for the “ohms” setting.

☐ Analog Inputs: Connect a signal generator to the appropriate terminal blocks. Tailor the connection depending on whether a 2-wire or 4-wire simulation is required. Modulate the 4-20mA signal. Observe the associated PLC internal memory register to transition between 0-65535 or if scaled in engineering units, between 0 and the maximum scaled engineering unit. The latter method is preferred.

☐ Analog Outputs: Force the output register to a value between 0-65535 or 0-100%, if the scaling block can be manipulated. Observe the measured 4-20mA value increment and decrement using a digital ammeter.

C. Redundant Controllers (where required) Test

☐ Remove Communication cable from primary PLC to verify switching to backup PLC.

☐ Remove Communication cable from backup PLC to verify switching back to primary PLC.

☐ Remove Power cable from primary PLC to verify switching to backup PLC.

☐ Remove Power cable from backup PLC to verify switching back to primary PLC.

D. PLC Control Logic Verification

☐ The PLC control strategy is verified by following the Control Logic Verification Form based on the specifications. Each control strategy will be verified by simulating the process and checking the state or value of PLC outputs. The results of equipment status and alarms and process instrument values and trends shall also be verified on the Plant SCADA graphic screens stored in a temporary SCADA computer. Since all PLC input and output wiring has been verified and some field devices are not available during Factory Acceptance Testing, certain inputs will be simulated either by means of additional hardware and/or software as described below.

☐

☐

☐ DI states are either simulated by hardwired switches or forced inputs using a programming terminal.

☐ For example, when starters and drives are not provided as part of the Contract, jumpers may be installed from the output call relays to the running confirmation inputs to simulate the running state of the motors.

PROJECT NAME:	_____	TEST DATE:	_____

PROCESS AREA:	_____	COMPANY:	_____
NETWORK ID:	_____	PAGE:	_____
WITNESSED BY:	_____	SIGNATURE:	_____

5. PLC TEST (continued)

D. PLC Control Logic Verification (continued)

Typical Fault Logic

- ☐ If the fault input is high and the disable (if applicable) for the fault is not high and the common disable (if applicable) is not high begin timing. If any of these conditions changes, stop timing and reset the timer. If the timer reaches its preset, activate the alarm output. If the fault alarm is a shutdown alarm stop the associated motor and latch the alarm so that it remains present even if the condition clears.
- ☐ The fault condition must return to normal and the alarm must be reset for a latched alarm to clear.

Typical Fail to Start Logic

- ☐ If the motor is called to run (call output high) and no running feedback is received (running input is low) and the fail to start and common alarm disables (if applicable) are not high start timing. If any of these conditions changes, stop timing and reset the timer. If the timer reaches its preset, activate the alarm output, stop calling the motor and latch the alarm.

6. HMI OR OIT TEST

HMI/OIT Functionality

- ☐ Communication with PLC.
- ☐ Screen Layouts.
- ☐ Screen Navigation.
- ☐ Set Point Entry.
- ☐ Animation.
- ☐ Color Correctness (Green=Run, Red=Off, Amber=Alarm, or the agreed upon convention).
- ☐ Alarms.
- ☐ Acknowledge and Reset.
- ☐ Security/Access Levels/Passwords.

7. NETWORK COMMUNICATION TEST

A. Network Components

- ☐ Fiber optic cabling terminates in a patch panel.
- ☐ Media converters are installed and functional.
- ☐ Terminating resistors have been installed for trunk/tap topologies or where required.
- ☐ Wire and cable bending limitations have not been violated.

B. Networking Functions

- ☐ Verify data transfer via the network to different PLCs as shown on the Network Block Diagrams.
- ☐ Verify network traffic rate and error margin is acceptable.

8. FAT DOCUMENTATION AND RECORD

Panel Documentation

- ☐ As-built panel drawings showing actual panel construction and devices arrangement and c/w Bill of Material.
- ☐ Panel schematic and interconnection drawings.
- ☐ P&ID drawings and schematic drawings for the process area controlled by the panel that is to be tested.
- ☐ I/O list test forms of the process area to be tested.
- ☐ FAT procedure of the process area to be tested.
- ☐ Test record forms of the process area to be tested. Forms shall include area for signature of responsible test personnel.
- ☐ Hard copy of the PLC application program of the process area to be tested.
- ☐ Hard copy of the HMI/OIT graphic screens of the process area to be tested.

9. FAT TOOLS AND SOFTWARE

- ☐ Simulation software if required.
- ☐ Digital volt meter Fluke 87.
- ☐ Process meter Fluke 787.
- ☐ Laptop computer with PLC application program.
- ☐ Temporary SCADA computer with HMI software and applicable graphic screens.
- ☐ Jumper wires.

RESOLUTION NO. 25-099

APPROVING A DESIGN-ASSIST CONSTRUCTION AGREEMENT, BY AND BETWEEN AUBURN CONSTRUCTORS, LLC, AND THE CITY OF ROSEVILLE, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a Design-Assist Construction Agreement for the Aquifer Storage and Recovery Wells 13 (Campus Oaks) and 19 (Misty Wood) Project, by and between Auburn Constructors, LLC, and the City of Roseville, has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said agreement is hereby approved.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is authorized to approve change orders for the project, consistent with the contract terms, provided that the net cost of all change orders shall not exceed ten percent (10%) of the contract price.

PASSED AND ADOPTED by the Council of the City of Roseville this ___ day of _____, 2025, by the following vote on roll call:

DESIGN-ASSIST CONSTRUCTION AGREEMENT
AQUIFER STORAGE AND RECOVERY WELLS
13 (CAMPUS OAKS) AND 19 (MISTY WOOD)

This Design-Assist Construction Agreement ("Agreement") is made and entered into on this _____day of _____ , 20____, by and between the CITY of Roseville, a municipal corporation ("CITY"), Auburn Constructors, LLC (CSLB License #1043407), a California limited liability company (hereinafter referred to as "CONTRACTOR").

RECITALS

WHEREAS, the CITY issued a Request for Letter Proposal for the design-assist construction of two (2) aquifer storage and recovery wells, known as the "Aquifer Storage and Recovery Wells 13 (Campus Oaks) and 19 (Misty Wood) Project" (hereinafter "Project"); and

WHEREAS, CONTRACTOR has submitted a Proposal to CITY, dated February 5, 2025, attached hereto and made a part hereof as Exhibit B – Contractor's Proposal, and CITY desires for CONTRACTOR to provide the design assist and construction services as set forth in this Agreement; and

WHEREAS, CONTRACTOR is ready, willing and able to perform the aforementioned services required in accordance with the terms and conditions of this Agreement; and

NOW, THEREFORE, CITY and CONTRACTOR agree as follows:

ARTICLE 1 - DEFINITIONS OF LANGUAGE USED, WORDS AND TERMS

Where used in the Contract Documents, the following words and terms shall have the meanings indicated. The meanings shall be applicable to the singular, plural, masculine and feminine of the words and terms.

The Contract Documents include the terms "as allowed," "as approved," "as ordered", "as directed" or terms of like effect to authorize an exercise of professional judgment by the CITY, Construction Manager or Engineer. The adjectives/terms "reasonable," "suitable," "acceptable," "proper," "satisfactory," and "of like effect" are used to describe an action or determination of the CITY, Construction Manager or Engineer as to the Work. It is intended that such exercise of professional judgment, action or determination will be solely to evaluate, in general, the Work for compliance with the requirements of and information in the Contract Documents and conformance with the design concept of the completed Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term is not intended to and shall not be effective to assign to CITY, Construction Manager or Engineer any duty or authority to supervise or direct the performance of the Work or any duty or authority contrary to the other provisions of the Contract Documents.

Specification Section Paragraphs entitled "Section Includes" summarize briefly what is generally included in the section. Requirements of Specifications are not limited by "Section Includes" paragraphs.

Specifications and Drawings have been partially streamlined by intentionally omitting words and phrases, such as "the Contractor shall," "in conformity therewith," "shall be" following "as indicated," "a," "an," "the" and "all." The phrases "by CITY's Representative", "by Engineer", and "by Construction Manager" modify words such as "accepted," "directed," "selected," "inspected," "permitted," "submit",

"report", and "satisfactory" when they are unmodified. Words "Contractor shall" are implied when direction is stated.

Colons (:) are used to introduce a list of particulars, an amplification, or an illustrative quotation. When used after designation of product, colons are used in place of words "shall be."

Whether the term or phrase is capitalized or in all capitals (for example, Contractor or CONTRACTOR) in the Contract Documents shall be deemed to be the same for purposes of the Definitions of Language Used, Words and Terms.

1.1. **"Agreement" or "Contract"** means this Design-Assist Construction Agreement, its exhibits, and all amendments and/or modifications hereto executed by the parties. The defined terms "Contract" and "Agreement" may be used throughout interchangeably and should be considered as one in the same defined term.

1.2. **"Allowance" or "Construction Allowance"** is an amount of money set aside under the Contract for a special purpose identified and defined in the Contract Documents. Voluntary Allowance items are described by Contractor in Exhibit C – Guaranteed Maximum Price, Fee, and Cost of Work and are included in the total GMP.

1.3. **"Applicable Laws"** means all laws, codes, ordinances, rules and regulations of **governmental** authorities having jurisdiction over the Site and/or the Work.

1.4. **"Application for Payment"** means the document prepared by CONTRACTOR and **submitted** to CITY showing CONTRACTOR's entitlement to progress payments, the requirements of which are more fully described in Article 8 hereof.

1.5. **"Architect/Engineer"** means a licensed professional(s) (and/or entity(ies)) retained by CITY, who provides architectural, design and/or engineering services as may be required by the Work. The Architect/Engineer shall be registered in the State of California and the architect and/or engineer of record for the Work pursuant to their design responsibilities. The Architect/Engineer may be substituted or replaced at the discretion of CITY.

1.6. **"Asbestos"** is any material that contains more than one percent asbestos and is friable or is releasing asbestos fibers into the air above current action levels established by the United States Occupational Safety and Health Administration.

1.7. **"Authorized Representatives"** means the Design-Assist Team and those individuals appointed by CITY and CONTRACTOR from time to time in accordance with the provisions of Article 4.2.1.

1.8. **"Beneficial Occupancy" or "Beneficial Occupation"** is a term that can be used to describe a distinct portion of the Work, that in the CITY's Representative's opinion, is capable of being used for its intended purpose, even though it may have some minor deficiencies, including outstanding punch list items to complete.

1.9. **"Business Day"** means any day when the office of the CITY Clerk of the CITY of Roseville is open for business.

1.10. **"Certificate of Substantial Completion"** means a certificate prepared by CONTRACTOR in accordance with Article 8.13 and forwarded to CITY.

1.11. **"Certificate of Final Completion"** means a certificate prepared by CONTRACTOR and forwarded to CITY stating that the Project is finally complete and that CONTRACTOR is entitled to Final Payment in accordance with Article 8.14 hereof.

1.12. **"Change Directive", "Change Order", or "Construction Change Directive (CCD)"** is a written order prepared by the Construction Manager and signed by the CITY, directing a change

in the Work and stating a proposed basis for adjustment, if any, in the Contract GMP amount or Contract Time.

1.13. **"Change Proposal"** means a proposal for a Change Order submitted by CONTRACTOR to CITY, either at the request of CITY, or at CONTRACTOR's own initiative.

1.14. **"City"** refers to the City of Roseville, the governing body of which is termed the "City Council".

1.15. **"City's Representative"** is the person(s) designated by the Director of the CITY's Environmental Utilities Department who has been duly authorized to exercise control and supervision of the Work. A CITY's Representative generally will be either a professional engineer or architect, depending on the nature of the Work, but is not required to be a professional engineer or architect. The CITY may change the individual(s) acting as the CITY's Representative(s), or delegate one or more specific functions to one or more specific CITY's Representative at any time without notice and without liability to Contractor. Each CITY's Representative is the beneficiary of all Contractor obligations to CITY, including without limitation, all releases and indemnities

1.16. **"Claim".** A demand or assertion by the Contractor seeking an adjustment of the GMP or Contract Times, or both, or other relief with respect to the terms of the Contract. A demand for money or services by a third party is not a Claim.

1.17. **"Construction Documents"** means the plans and specifications prepared by the Design Assist Team for the Project, approved by CITY, and incorporated into this Agreement by reference after such approval, to be used to construct the Project. The Construction Documents shall set forth in detail all items necessary to complete the construction of the Project in accordance with the Contract Documents (subject to their completion following commencement of the Construction Phase). All amendments and modifications to the Plans and Specifications must be approved by CITY prior to incorporation into this Agreement. CONTRACTOR's attention is hereby directed to the confidentiality requirements of Article 2.12.

1.18. **"Construction Consultant".** The CITY may retain a Construction Consultant(s) as it deems necessary to assist/advise the CITY staff and/or other CITY consultants during the progress of the Work. Any Construction Consultant retained by CITY for this Project will not have any formal contract administration responsibilities. The Construction Consultant(s) is the beneficiary of all Contractor obligations to CITY, including without limitation, all releases and indemnities.

1.19. **"Construction Manager"** is the person designated, in writing, by the CITY to act as its representative at the Site and to perform administrative functions relating to this Agreement. The Construction Manager shall also furnish inspection services as provided by the contract between the Construction Manager and the CITY. All contact between the Contractor and the CITY shall be through the Construction Manager; unless otherwise specified or directed. Only the CITY may modify the Agreement. The CITY may assign all or part of the CITY's Representative's duties, rights and responsibilities to the Construction Manager. The Construction Manager is the beneficiary of all Contractor obligations to CITY, including without limitation, all releases and indemnities.

1.20. **"Construction Phase"** means the period beginning with the issuance of the Construction Notice to Proceed (NTP) and ending on the date of Final Completion of the Project.

1.21. **"Construction Work"** means that portion of the Work consisting of the provision of labor, materials, equipment and services in connection with the construction of the Project as set forth in the Contract Documents.

1.22. **"Contingency Costs"** means those items of Cost of the Work attributable to a contingency for

which CITY is responsible and which are payable by CITY to CONTRACTOR pursuant to a Change Order as provided in Article 9.7-CHANGE ORDERS ON ACCOUNT OF CONTINGENCIES.

1.23. **"Contract"** means this Design-Assist Construction Agreement, its exhibits, and all amendments and/or modifications hereto executed by the parties. The defined terms "Contract" and "Agreement" may be used throughout interchangeably and should be considered as one in the same defined term.

1.24. **"Contract Documents"** means 1) this document (Agreement) and its Exhibits,2) the Technical Specifications, and 3) Project Drawings, all of which form the entire integrated agreement between CITY and CONTRACTOR. In the event of a conflict between any of these documents, this Agreement controls, followed by its Exhibits.

1.25. **"Contract Time"** The number of days or the dates stated in the Agreement to: (i) achieve Milestones, (ii) achieve Substantial Completion; and (iii) complete the Work so that it is ready for final payment as evidenced by Construction Manager's written recommendation of final payment. See Exhibit H - COMPLETION TIMES AND LIQUIDATED DAMAGES.

1.26. **"Contractor"** means the individual or entity identified in the preamble to this Agreement.

1.27. **"Contractor's Plant and Equipment"** means the equipment, material, supplies and all other items, except labor, brought onto the Site by the Contractor to carry out the Work, but not to be incorporated in the Work.

1.28. **"Contractor Event of Default"** shall have the meaning set forth in Article 14.1 hereof.

1.29. **"Cost of the Work"** consists of those items of Work, which are paid for by CITY to CONTRACTOR, and consist of those categories of costs set forth as allowable on Exhibit C.

1.30. "**County**" refers to Placer County where the Site is located.

1.31. **"CPM"** means a critical path method schedule in the form of precedents, networks and time sequences.

1.32. **"Day" or "Days"** means calendar days, including legal holidays, Saturdays and Sundays, unless specifically noted otherwise. The day shall be 24 hours measured from midnight to the next midnight.

1.33. "**Defective Work**" refers to Work that does not meet the requirements of the Contract Documents and has been identified to the Contractor by the Construction Manager in writing because the Work:

a. Does not meet the requirements of or conform to the Contract Documents; or

b. Does not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Contract Documents; or

c. Has been damaged prior to Construction Manager's or Engineer's recommendation of final payment (unless responsibility for the protection thereof has been assumed by CITY as of the Substantial Completion date in accordance with the Contract Documents).

Punch list or other minor corrective items of work that are not in compliance with the Contract Documents do not meet to the definition of "Defective Work" as used in these Contract Documents. For work to be deemed "Defective Work," the Construction Manager must have notified the Contractor in writing of a defective item of the Work.

1.34. **"Design-Assist Team"** includes the following: Architect/Engineer; CONTRACTOR; and/or

others as coordinated by CONTRACTOR and CITY.

1.35. **"Design Development Documents"** means the drawings, specifications and other documents prepared by the Design-Assist Team for CITY's review and approval prior to the preparation of the Construction Documents. The Design Development Documents shall illustrate the scale and relationship of Project components, outline the nature and structural exterior and three dimensional scale of the Project and shall fix and describe in detail the configuration and character of the Project concerning all items of the Project necessary for the complete and final preparation of the Construction Documents in accordance with the requirements of the Contract Documents, including architectural and electrical systems, materials and such other elements as may be appropriate. CONTRACTOR's attention is hereby directed to the confidentiality requirements of Article 2.12.

1.36. **"Design Materials"** means any and all documents, shop drawings, electronic information, data, plans, drawings, sketches, illustrations, specifications, descriptions, models and other information developed, prepared, furnished, delivered or required to be delivered by CONTRACTOR to CITY under the Contract Documents or developed or prepared by CONTRACTOR specifically to discharge its duties under the Contract Documents. CONTRACTOR's attention is hereby directed to the confidentiality requirements of Article 2.12.

1.37. **"Design-Assist Work"** means that portion of the Work consisting of the design-assist services required to be provided in connection with the Architect/Engineer's design of the Project as set forth in the Contract Documents, which shall be performed consistent with the standards of care set forth herein.

1.38. "**Direct**" is an action of the CITY or Construction Manager by which the Contractor is ordered to perform or refrain from performing work under the Agreement.

1.39. "**Drawings**", also referred to as "**Plans**" are that part of the Contract Documents consisting of the graphical and technical requirements of the Agreement as included on the plan, profile, section and detail sheets, included in a response to Request for Information or any revisions issued by Engineer. Drawings, or reproductions thereof, show the location, character, dimensions and details of the Work to be done. Shop drawings and other Contractor submittals are not Drawings as so defined.

1.40. "**Engineer**". The engineer, architect or specialty design consultant designated by the CITY to have design control over the Work or a specified portion of the Work, acting either directly or through duly authorized representatives. Such representatives shall act within the scope of the particular duties delegated to them. The Engineer may also furnish inspection services as provided by the Agreement. The Engineer may also be referred to as the "CITY's Representative" if the definition is used in an Engineer role and capacity. The CITY may assign all or part of the CITY's Representative's duties, rights and responsibilities to the Engineer. The Engineer is the beneficiary of all Contractor obligations to CITY, including without limitation, all releases and indemnities.

1.41. **"Equipment"** (Construction) is all machinery and equipment, together with the necessary supplies for upkeep and maintenance, including tools and apparatus necessary for the proper construction and acceptable completion of the Work contemplated. Equipment (Installation) is all material or articles used in equipping a facility or apparatus required to fulfill a functional design.

1.42. **"Execution"** means field or site performance, workmanship, installation, erection, application, field fabrication, quality control, and protection of installed products on the Site.

1.43. **"Excusable Delay"** shall have the meaning set forth in Article 7.3.3.

1.44. **"Extra Work"** is new or unforeseen work, or added work of a different character or function; or that involves revisions of the details of the Work on which Contractor based its GMP. If the extra work increases the Contractor's Cost of the Work and/or time to perform the Work, and is approved by the CITY via a written Change Order, the GMP and/or Contract Times shall be adjusted as provided in the Contract Documents. Extra Work shall not include Work which is shown, detailed or specified in the Contract Documents or which constitutes "Incidental Work" as defined within the Contract Documents definition below.

1.45. **"Fee"**, if applicable, means the fee payable to CONTRACTOR pursuant to this Agreement and as part of the GMP, if shown on Exhibit C – GUARANTEED MAXIMUM PRICE, COST OF WORK AND FEE attached hereto.

1.46. **"Field Directive"** is a change in the scope of the Agreement that does not cause an increase in the Cost of the Work, nor an adjustment to the GMP or the Contract Time(s), unless the Construction Manager determines the Field Directive warrants a Change Order.

1.47. **"Field Order"** is a written instruction given to the Contractor by Construction Manager authorizing work that is a change to the scope of Work to be performed on a time and material basis or a lump sum cost agreed to between CITY and the Contractor and documented in a Change Order.

1.48. **"Final Acceptance"** is the formal approval by CITY in accepting a portion of the Contractor's work as completed.

1.49. **"Final Completion"** means the date when the work is 100% complete in accordance with the terms and conditions of the Contract Documents, including completion of all Punch list items as certified by the Construction Manager.

1.50. **"Force Majeure"** includes industry wide or nationwide labor dispute (excluding labor shortage), fire, unusual delay in transportation or delivery, unavoidable casualty, flood (assuming CONTRACTOR has taken reasonable precautions), earthquake, epidemic, civil disturbance, war, freight embargo, riot, sabotage (by persons other than CONTRACTOR or Subcontractors), material shortage or any other similar act or condition, in each case only to the extent the event in question is beyond the reasonable control of and without the fault or negligence of CONTRACTOR. It is expressly agreed that the following matters shall not constitute Force Majeure:

a. Lack of or inability to use funds for any reason;

b. Any occurrence which results from the wrongful act, or wrongful omission, of the affected party, or the failure by the affected party to act in a prudent and proper manner and in accordance with good and accepted industry practices;

c. Any failure by the affected party to reach agreement with any third party necessary to enable the affected party to perform its obligations under this Agreement;

d. An event or circumstance, where the event or circumstance, or its effects on the affected party, or the resulting inability of the affected party to perform its obligations could have been prevented, overcome or remedied by the exercise by the affected party of the standard of care and diligence consistent with that of a reasonable and prudent person;

e. Breakdown of Contractor's Equipment;

f. Strike or industrial action of Contractor's employees or those of subcontractors; or

g. Adverse weather conditions including, without limitation, wet weather, unless the

weather is unusually severe for the Site.

1.51. **"Governmental Approvals"** means those CITY approvals necessary for the completion of the Project, including, but not limited to, modification of existing zoning, vacation of certain streets and/or alleys, and modifications to or variances from applicable building or zoning regulations.

1.52. **"Guaranteed Maximum Price"** or **"GMP"** means the amount set forth on Exhibit C-GUARANTEED MAXIMUM PRICE, FEE, AND COST OF WORK hereto, which may be increased or decreased in accordance with the provisions of the Contract Documents.

1.53. **"Hazardous Materials"** means those items identified on Exhibit E-HAZARDOUS MATERIALS hereto.

1.54. **"Holidays"** are the legal holidays as designated by the CITY including: New Year's Day, Martin Luther King Jr. Day, President's Day, Memorial Day, Independence Day, Labor Day, Columbus Day, Veteran's Day, Thanksgiving Day, the day after Thanksgiving and Christmas Day.

1.55. **Incidental Work.** Incidental work includes reasonably implied parts of the not shown on Drawings nor described in Specifications, but which is necessary or normally or customarily required as a part of the Work shown on the Drawings or described in the Specifications to provide a complete installation which is fully connected and tied into the existing facilities and processes and is fully functional and operational. Incidental work shall be treated as if fully described in Specifications and shown on Drawings, and expense thereof shall be included in the GMP. Incidental work shall be performed by Contractor and included in the Cost of the Work without an increase in the GMP.

1.56. **"Indemnified Parties"** includes, but is not limited to, CITY, its agents, officers, employees, and volunteers.

1.57. **"Inspector"** shall mean the person(s), firm(s), or agency(ies) employed by the CITY to perform inspection during construction of the Work, under the direction of the Construction Manager. It shall also mean any representative of the CITY who will perform inspections of the Work for code compliance and quality assurance reporting in addition to those inspections performed by the CITY's Representative and/or the Engineer. Said inspector may be the Construction Manager or may be another representative of the CITY.

1.58. **"Liquidated Damages"** means the damages payable by CONTRACTOR to CITY in the event CONTRACTOR does not achieve project Milestones Final Completion of the Project by the date required on the Schedule, as adjusted, as more fully described in Article 7.5 and Exhibit H-COMPLETION TIMES AND LIQUIDATED DAMAGES hereof.

1.59. **"Modification"** means an amendment to this Agreement executed by the parties after the date hereof.

1.60. **"Non-Excusable Delay"** shall have the meaning set forth in Article 7.3.2.

1.61. **"Notice of Completion"** is the formal action taken by the CITY in determining that the Contractor's Work has been completed, or as delegated pursuant to a CITY Council resolution, accepting the Work as fully completed. The written notice is signed by the CITY and filed with the County Recorder.

1.62. **"Notice to Proceed"** (NTP) is the written notice given by the CITY to the Contractor fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform the Work under the Contract Documents.

1.63. **"Or Equal"** means any product, equipment, material, thing, service, mean/method or service which is proposed by the Contractor for use in the Work, which is equal to or better than, and is

as suitable as the product, equipment, material, thing, service, mean/method or service specified in the Contract Documents as to function, performance, reliability, quality, schedule and general configuration. Any "or equal" substitutions must be approved by the CITY.

1.64. **"Owner"** refers to the CITY, or authorized representative as approved by the CITY.

1.65. **"Party"** shall mean CITY or CONTRACTOR individually, and **"Parties"** shall mean CITY and CONTRACTOR collectively.

1.66. **"Payment and Performance Bonds"** means the payment bond and performance bond issued by an admitted Surety covering the faithful performance and completion of the Construction Work, including payment for all materials and labor furnished or supplied in connection with the Construction Work, by CONTRACTOR. Such bonds shall be in the form described in Exhibit G-BOND FORMS.

1.67. **"Plans".** See "Drawings".

1.68. **"Project"** means the design and construction of the project described in the Recitals, together with all on-site infrastructure, site improvements and appurtenances to be designed, constructed and installed in connection therewith, as more fully set forth and described in the Contract Documents and as required thereby or reasonably inferred therefrom.

1.69. **"Project Manager"** means the person assigned by the Director of the CITY's administering department to monitor the Project and Work.

1.70. **"Proposal"** is the offer of a Proposer to perform the Work pursuant to completed prescribed Bid Proposal requirements and forms, properly executed and guaranteed, and timely submitted.

1.71. **"Punch List"** means those minor items of Work to be completed after Substantial Completion and prior to Final Completion, which do not prevent the Project from being used for the purpose for which it is intended and which will not prevent beneficial occupancy or use.

1.72. **"Reference Specifications"** are those standards, rules, method of tests or analysis, codes, and specifications of other agencies, engineering societies, or industrial associations referred to in the Contract Documents.

1.73. **"Request for Information"** also referred to as "Request for Clarification". A Request for Information (RFI) is issued by the Contractor to the Construction Manager requesting additional information necessary to clarify or amplify an item in the Contract Documents that the Contractor believes is not clearly shown or called for in the Drawings or Specifications or other portions of the Contract Documents, or to address problems which have arisen under field conditions. A RFI is not to be used for request for materials/equipment substitutions or value engineering/cost reduction incentive proposals.

1.74. **"Request for Quotation"** is a request for a proposed cost made to the Contractor by the CITY to add, delete or change the Work. A Request for Quote (RFQ) shall not be deemed to be a direction to proceed with any addition, deletion or change to the Work.

1.75. **"Retention"** means the amount withheld from progress payments from CITY to CONTRACTOR from time to time, as more fully described in Article 8.6-RETENTION, ESCROW AGREEMENT, FINAL PAYMENTS hereof.

1.76. **"Samples"** refers to physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and which establish the standards by which such portion of the Work will be judged.

1.77. **"Schedule"** means the schedule pursuant to the Proposal and/or other Contract Documents to which CONTRACTOR has agreed to complete the Work. The Schedule shall be adjusted

pursuant to the provisions of the Contract Documents. In the event the Schedule is not contained within the Proposal, then CONTRACTOR shall provide to CITY, within fifteen (15) days of issuance of a Notice To Proceed by CITY, with a complete milestone schedule identifying, among other things, critical paths (if any) and total calendar days until Substantial and Final Completion. In the event the Schedule is contained in the Proposal, the start of the Schedule shall be adjusted by the CONTRACTOR to reflect the date of the Notice To Proceed.

1.78. **"Scheduled Date of Substantial Completion"** means the date CONTRACTOR has agreed to achieve Substantial Completion of the Project in accordance with the Schedule, as adjusted.

1.79. **"Scope Change Costs"** means those items of Cost of the Work attributable to changes in scope of the Work and payable by CITY to CONTRACTOR pursuant to a Change Order, as provided in Article 9-CHANGES IN THE WORK.

1.80. **"Separate Contractors"** means those individuals or entities (including, but not limited to, concessionaires) who have entered into arrangements with CITY for the provision of labor, materials or other services in connection with the Project.

1.81. **"Shop Drawings (Submittals)"** are drawings, diagrams, illustrations, schedules, performance charts, instructions, brochures, and other data which are prepared by the Contractor or any subcontractor, manufacturer, supplier, or distributor and which illustrate some portion of the Work.

1.82. **"Site"** is the real property on which the Project will be located.

1.83. **"Specifications"** are that part of the Contract Documents consisting of written descriptions of the technical features of materials, equipment, construction systems, standards, and workmanship.

1.84. **"Specify"** refers to information described, shown, noted or presented in any manner in any part of the Agreement.

1.85. **"State"** is the State of California.

1.86. **"State of California Specifications"** are the State of California Department of Transportation Standard Specifications in effect as documented in the Specifications and/or Drawings. Also referred to as State Standard Specifications and Caltrans Standard Specifications.

1.87. **"Subcontract"** means an agreement between CONTRACTOR and another person or entity engaged to perform a portion of the Work.

1.88. **"Subcontractor"** means an individual or entity who has entered into an agreement with CONTRACTOR or another Subcontractor for the provision of labor, materials or other services required to be performed by CONTRACTOR under the Contract Documents.

1.89. **"Subcontractor-KEY".** Key subcontractors are defined as a subcontractor who will perform greater than or equal to twenty-five percent (25%) of the GMP.

1.90. **"Subcontractor-MAJOR".** Major subcontractors are defined as a subcontractor who will perform greater than five percent (5%) of the GMP.

1.91. **"Subcontractor-LISTED"**. Listed subcontractors are defined as a subcontractor who will perform greater than one half percent (>0.5%) of the GMP.

1.92. **"Submittals"** are the information which is specified for submission to the Construction Manager in accordance with the Contract Documents.

1.93. **"Substantial Completion"** means the stage in the progress of the Work when the Work or a designated portion thereof is sufficiently complete in accordance with the Contract Documents

so that CITY may use the Project for its intended purpose. Determination of Substantial Completion is solely at the discretion of the CITY. Substantial Completion does not mean complete in accordance with the Agreement nor shall Substantial Completion of all or any part of the Project entitle the Contractor to Final Completion under the Agreement.

1.94. **"Surety"** means one or more issuers of the Payment and Performance Bonds, each of which shall be admitted and licensed to do business in the State of California.

1.95. **"Surveyor"** means a land surveyor licensed in the State of California.

1.96. **"Trade Names".** Where a certain product is called by its Trade Name, it is intended as a guide for type and quality.

1.97. **"Typical Details"** are details of standard structures, devices or instructions referred to on the Plans and Specifications by title or number and developed by the Engineer.

1.98. **"Underground Facilities"** means all underground pipelines, including but not limited to, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or attachments, and any encasements containing such facilities, including those that convey electrical, gases, steam, liquid petroleum products, telephone or other communications, cable television, water, wastewater, storm water, other liquids or chemicals, or traffic or other control systems.

1.99. **"Unit Price Work"** is work to be paid for on the basis of unit prices.

1.100. **"Utility"** is a public or private fixed works for, including but not limited to, the transportation of fluids, gasses, power, signals, or communications.

1.101. **"Work"** or **"Scope of Work"** means the Project, inclusive of all labor, materials and services required to be performed or provided by CONTRACTOR officers, employees, agents, Subcontractors or Suppliers pursuant to the provisions of this Agreement and its Exhibits.

1.102. **"Work Day".** A working day is defined as any day, except Saturdays, Sundays and CITY's Legal Holidays. Any work scheduled by the Contractor on non-working days (Saturdays, Sundays, and CITY Legal Holidays) shall be verified with the CITY at least 72 hours in advance. Depending on the circumstances, the CITY may request Contractor compensation for inspection work, at an hourly rate, for any work performed on non-working days and for overtime.

ARTICLE 2 - SCOPE OF WORK / PROJECT REQUIREMENTS

2.1 Scope of Work Summary

The CITY, in conjunction with its Engineer and other consultants, developed the Design-Assist and Construction Contract Documents for the Aquifer Storage and Recovery 13 (Campus Oaks) and 19 (Misty Wood) Project. The work includes but is not limited to, Construction of two (2) Aquifer Storage and Recovery well facilities including; new concrete masonry unit (CMU) block Well building, well pump, piping, valving, and equipment, chemical feed systems, mechanical systems including down-hole flow control valve, electrical switchgear, instrumentation and controls, Contractor Design Assist Responsibilities, and all other structural, mechanical, civil, and ancillary systems in support of the Project, including asset management, startup and testing to provide a complete integrated and operational system in all respects.

Based on the 60% Design Level Drawings and Partial Draft Technical Specifications provided to the contractor, and in accordance with the Contract Documents, the Contractor is a Design-Assist Team

member with responsibility to complete the following design assist activities. Coordination with other members of the Design-Assist Team will be required; the City, Engineer, Construction Manager and possibly other personnel that have regulatory or funding authority.

A. Conduct a constructability review of the 60% Design Level Drawings and Partial Draft Technical Specifications, and submit comments and identified mitigation solutions to the City.

B. Identify cost savings and added value alternative design/construction solutions and submit to the City for evaluation.

C. Develop detailed cost estimates for identified alternatives when requested by City for the City's evaluation.

D. Identify construction sequencing and the impacts of the identified alternatives on the sequencing.

E. Develop a detailed schedule and the impacts of the identified alternatives on the schedule.

F. Participate in a cooperative partnership relationship with City, Engineer, and Construction Manager to develop a comprehensive construction plan to address project risk and minimize existing facility disruptions.

G. Participate in up to eight (8) Final Design Coordination Meetings lasting up to four (4) hours each to present and work collaboratively to allow for issuance of the Project Drawings and Specifications for construction.

Note that the Engineer is the entity professionally responsible for the design of the Project. City acknowledges that Contractor is a general contractor and not an architect or engineer. Except with respect to any subcontractors of Contractor providing architectural or engineering services for the Project as design-build work, the Contractor's review of or input for any design documents, or Contractor's recommendation for any design concepts, is made solely in Contractor's capacity as a licensed contractor and not as a licensed design professional. Contractor is not responsible for any errors in the Engineer's design or failure of the design to comply with applicable laws, codes, rules and regulations, or lawful orders of public authorities. However, if Contractor observes any such nonconformity or errors it shall promptly notify City's Representative and the Engineer.

2.2 Performance of Work

CONTRACTOR shall perform the Work in accordance with this Agreement. CONTRACTOR covenants and agrees that it shall be responsible for performing and completing, and for causing all Subcontractors to perform and complete, the Work in accordance with the Contract Documents, standard professional and trade practices, Local Ordinances, and Applicable Laws. CONTRACTOR covenants that the Work and the materials provided thereunder shall be appropriate for the purposes stated in the Request for Proposal and Proposal. Although it is the responsibility of CONTRACTOR to conform the Work to Applicable Laws at all times, to the extent there is a change in one or more Applicable Laws after the date of execution of this Contract, and such change has the effect of increasing the cost or time of performance of the Work, such change may be the subject of a Change Order under the provisions of Article 9- CHANGES IN THE WORK hereof.

2.3 Standards of Performance

The Work shall be performed by CONTRACTOR in accordance with the professional standards applicable to projects, buildings or work of complexity, quality and scope comparable to the Work and the Project. CONTRACTOR may make such additions or substitutions to personnel and responsibilities

as it deems necessary or appropriate in order to carry out its responsibilities hereunder, provided such personnel shall be suitably qualified. Nothing in this Agreement shall be construed to create any contractual liability with CITY toward any Subcontractor.

2.4 Execution, Correlation and Intent

2.4.1 Execution of Agreement.

Execution of this Agreement by CONTRACTOR is a representation that CONTRACTOR has visited the Site, become familiar with the local conditions under which the Work is to be performed and correlated personal observations with requirements of the Contract Documents.

2.4.2 Intent of Contract Documents.

The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by CONTRACTOR. The Contract Documents are complementary and what is required by one shall be as binding as if required by all; performance by CONTRACTOR shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the intended results. Any work, materials or equipment that may reasonably be inferred from the requirements of the Contract will be furnished and performed whether or not specifically called for. When words or phrases that have a well-known technical or construction industry or trade meaning are used to describe Work, materials or equipment, such words or phrases shall be interpreted in accordance with that meaning

2.4.3 Organization of Material.

Organization of the Design Materials into divisions, sections and articles, and arrangement of drawings does not necessarily control CONTRACTOR in dividing the Construction Work among Subcontractors or in establishing the extent of Construction Work performed by any trade.

2.4.4 Resolving Conflicts

In resolving conflicts resulting from errors or discrepancies in any of the Contract Documents, the order of precedence shall be as follows:

A. Permits from other agencies specifically required for the performance of the Work as may be required by law,

B. Supplemental Agreements and Change Orders, the one dated later having the precedence over another dated earlier,

C. Agreement,

D. General Requirements (Division 1),

E. Technical Specifications (Division 2 and all other Divisions following),

F. Contract Drawings,

G. City of Roseville's most current version of Construction Standards and Design Standards and Amendments to the Current Version,

H. Other Referenced Standard Specifications, and

I. Other Referenced Standard Plans.

With reference to the Drawings, the order of precedence is as follows:

A. Addenda/Change Order drawings govern over any other drawings,

B. Enumerated dimensions govern over scaled dimensions,

C. Detail drawings govern over general drawings, and

D. Contract Drawings govern over standard drawings/plans.

The provisions of the Contract Documents shall take precedence over any Laws or Regulations applicable to the performance of the work unless such an interpretation of the provisions of the Contract Documents would result in a violation of such Law or Regulation.

2.4.5 Meaning of Words

Unless otherwise stated in this Agreement, words which have well-known technical or construction industry meanings are used in accordance with such recognized meanings.

2.5 Contractor Services and Facilities

2.5.1 General.

CONTRACTOR shall provide everything required for the orderly progress and proper execution and completion of the Work and the Project in accordance with the requirements of the Contract Documents, whether temporary or permanent and whether or not incorporated or to be incorporated into the Work, including, but not limited to, services, labor, materials, equipment, furnishings, tools, construction equipment and machinery, utilities, transportation and other facilities and services.

2.5.2 Supervision

CONTRACTOR shall supervise and direct the Work in accordance with its best skill and attention. CONTRACTOR shall be solely responsible for and have control over construction means, methods, techniques, sequences and procedures. CONTRACTOR shall be responsible to CITY for the acts and omissions of, and whenever this Contract refers to the negligence, fault or omission of CONTRACTOR, such term shall include the negligence, fault or omission of, CONTRACTOR's employees, Subcontractors and their agents and employees, and other persons performing portions of the Work under an agreement with CONTRACTOR. CONTRACTOR shall not be relieved of obligations to perform the Work in accordance with the Contract Documents by tests, inspections or approvals required or performed by persons other than CONTRACTOR.

2.5.3 Coordination

CONTRACTOR shall coordinate construction requirements with Governmental agencies, utilities, and all other parties either involved in infrastructure improvements or otherwise affected by the design and construction requirements.

2.5.4 Design-Assist Development Coordination

CONTRACTOR understands and agrees that all Design Development Documents and time schedules prepared by Architect/Engineer must be coordinated with CONTRACTOR and CITY. CONTRACTOR shall participate and provide recommendations in the development of the drawings and other documents to fix and describe the size and character of the Project in its entirety as to structural, and electrical systems, materials and other essentials in CONTRACTOR's capacity as a general contractor and not as a design professional, focusing on constructability and cost implications of the evolving design.

2.5.5 Construction Documents Coordination. [reserved]

2.5.6 Cooperation

CONTRACTOR shall cooperate with the Architect/Engineer, and CITY's financial, design and construction consultants and all other designated representatives during the design and construction of the Project.

2.5.7 Management

CONTRACTOR shall implement suitable management systems and work plans for the Project relative to Project safety, quality assurance and managing and controlling the Work.

2.5.8 Reports

CONTRACTOR shall prepare and submit to CITY monthly progress reports on the Work accomplished during the previous monthly period, which reports shall be prepared in a manner and in a format reasonably acceptable to CITY. Such reports shall be furnished at the time of submission of each monthly Application for Payment. As part of such report, CONTRACTOR shall provide an updated Schedule, including CPM, if any, illustrating the progress that has been made, by reference to the initial CPM, and specifying whether the Work is on schedule or behind schedule and actions being taken to correct Schedule slippage. The monthly report shall also set forth CONTRACTOR's projected progress for the forthcoming month.

2.6 Labor and Materials; Liens (Stop Payment Notice Claims); Indemnity

Unless otherwise provided in the Contract Documents, CONTRACTOR shall provide and pay for labor, materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for the proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work. CONTRACTOR shall enforce strict discipline and good order among CONTRACTOR's employees, subcontractors, and other persons carrying out the Work. CONTRACTOR shall not permit employment of unfit persons or persons not skilled in tasks assigned to them.

CONTRACTOR shall not permit any Subcontractor, materialman, or laborer to place liens on the Project covering any portion of the Work for which CITY has made payment to CONTRACTOR. If any liens (e.g., stop payment notice claims) are imposed, CITY may withhold payment in the amount of 125% of the claim until such time an unconditional release is provided in a form satisfactory to CITY. CONTRACTOR shall indemnify, defend, and hold harmless CITY regarding any claim or lien that proceeds to, or is the subject of litigation. CITY may withhold payment(s) pending compliance with this provision.

2.7 Local Conditions; Environmental Site Conditions

2.7.1 Local Conditions

CONTRACTOR represents that it has taken steps reasonably necessary to ascertain the nature and location of the Work, and that it has investigated and satisfied itself as to the general and local conditions which are applicable to the Work such as (a) conditions bearing on transportation, disposal, handling and storage of materials; (b) the availability of labor, water, power and roads; (c) normal weather conditions; (d) observable physical conditions at the Site; (e) the surface conditions of the ground; and (f) the character of equipment and facilities needed prior to and during the performance of the Work. To the

extent CONTRACTOR encounters subsurface or concealed conditions which differ materially from that actually known by CONTRACTOR on the date of this Agreement or from those ordinarily found to exist and generally recognized as inherent in the activities of the character provided in the Contract Documents; then CONTRACTOR shall give notice to CITY promptly before conditions are disturbed and in no event later than two (2) Days after the first observance of the conditions if a Change Order is contemplated by CONTRACTOR due to such condition. Such materially different conditions may entitle CONTRACTOR to an equitable adjustment in the GMP and/or Schedule pursuant to the Change Order provisions of this Agreement.

2.7.2 Hazardous Materials

The Parties' agreement as to the handling of Hazardous Materials discovered at the Site (and not brought there by CONTRACTOR or any Subcontractor) is set forth in Exhibit E-HAZARDOUS MATERIALS hereto, and the only duties and responsibilities of CONTRACTOR in connection therewith are as therein specified, notwithstanding any other provision of this Agreement.

2.8 Legal Requirements

CONTRACTOR shall comply with all Applicable Laws, and shall give applicable **notices** pertaining thereto.

2.8.1 Governmental Approvals

CONTRACTOR shall comply with Applicable Laws, and shall give applicable notices pertaining thereto. Except with respect to Governmental Approvals, CONTRACTOR shall prepare and file all documents required to obtain the necessary approvals of governmental authorities having jurisdiction over the Work and/or the Project and shall secure and pay for permits and governmental fees, licenses and inspections necessary for the proper execution of the Work and completion of the Project. Notwithstanding the foregoing, CITY has informed CONTRACTOR that fees in connection with building permits, street use permits, and similar permits relating to construction will be waived and are not to be included in the GMP. If and to the extent charges for such permits are imposed in the future, such charges shall be paid by CITY, or shall be the subject of a Change Order to the Contract in accordance with the Change Order provisions of this Agreement.

2.8.2 Permits, Fees and Notices

Unless otherwise provided in the Contract Documents, and subject to the provisions of Article 2.8-Legal Requirements hereof, CONTRACTOR shall secure all permits, governmental fees, licenses and inspections necessary for the proper execution and completion of the Work. To the extent there is a change in the type or cost of any of such permits, fees, licenses or inspection occurring after execution of this Agreement, there shall be an equitable adjustment in the GMP and Schedule on account of such change in accordance with the Change Order provisions. CONTRACTOR shall comply with and give notices required by Applicable Laws.

2.8.3 Patents, Trademarks, Copyrights

CONTRACTOR shall pay, as a Cost of the Work, all-applicable royalties and license fees on any matters arising in connection with the Work. CONTRACTOR shall defend all suits or claims for infringement of patent, trademark, and copyrights against the Indemnified Parties, and shall save the Indemnified Parties harmless from loss on account thereof for any and all matters arising in connection with the Work or the Project (such costs to be paid as Cost of the Work), except with respect to any particular design process or the product of a particular manufacturer or manufacturers specified and required by CITY, other than

pursuant to the recommendation or suggestion of CONTRACTOR or a subcontractor; provided however, if CONTRACTOR has reason to believe that the design, process or product so specified is an infringement of a patent, CONTRACTOR shall be responsible for any loss resulting unless CONTRACTOR has provided CITY with prompt written notice of CONTRACTOR's belief, and CITY has nevertheless elected to go forward with such design, process or product so specified.

2.9 Warranty

CONTRACTOR warrants to CITY that any and all materials, equipment and furnishings incorporated in the Work will be of good quality and new unless otherwise required or permitted by the Contract Documents, that the Construction Work will be free from defects not inherent in the quality required or permitted, and that the Construction Work will conform with the requirements of the Contract Documents. Construction Work not conforming to these requirements, including substitutions not properly approved and authorized, may be considered defective by CITY at its sole discretion.

CONTRACTOR shall warranty the Construction Work for a period of one-year commencing upon recording of the notice of completion. If within this one-year warranty period any of the Work is found to be defective or not in accordance with the requirements of the Contract Documents, CONTRACTOR shall correct it promptly after receipt of written notice from CITY to do so. CITY shall give such notice promptly after discovery of the condition. CONTRACTOR shall bear the cost of correction. CONTRACTOR's attention is directed to Article 11.13-Payment, Performance, and Warranty Bonds and Exhibit G-BOND FORMS regarding Warranty Bond requirements.

2.10 Use of Site.

2.10.1 Beneficial Use

CITY shall be permitted beneficial use of the Work.

2.10.2 Access by CITY

CONTRACTOR shall afford CITY and its authorized designees access to the Project Site at all times, subject to reasonable prior notice for access outside of normal business hours.

2.10.3 Rubbish; Debris; Cleanup

During the performance of all on-site Work, CONTRACTOR shall at all times, as a Cost of the Work, keep the Site and adjacent streets, properties and sidewalks free from waste materials, debris and/or rubbish, and shall employ adequate dust control measures. If accumulation of such materials, debris, rubbish or dust constitutes a nuisance or safety hazard or is otherwise objectionable in the reasonable opinion of CITY, CONTRACTOR shall promptly remove them. Upon Substantial Completion of the Work, or any portion or component thereof, CONTRACTOR shall remove from the Site, or applicable portion thereof, all tools, construction equipment, machinery, surplus materials, waste materials and rubbish and shall leave the Site in a "broom clean" condition. If CONTRACTOR fails to clean up as provided in the Contract Documents, CITY may do so and the cost thereof shall be charged to CONTRACTOR as a Cost of the Work.

2.10.4 Noise and Night Work

CONTRACTOR shall comply with CITY's noise ordinance.

2.11 Taxes

CONTRACTOR shall pay, as Cost of the Work, all existing and future applicable federal, state and local sales, consumer, use and similar taxes, whether direct or indirect, relating to, or incurred in connection with, the performance of the Work (excluding taxes based on CONTRACTOR's income). In the event CONTRACTOR is obligated to pay any new or increased taxes or duties adopted after the date hereof, the amount of such new or increased taxes shall increase the GMP pursuant to the Change Order provisions of this Contract. In the event CONTRACTOR receives the benefit of a tax exemption or tax reduction taking effect after the date hereof, the amount of such exemption or reduction shall decrease the GMP pursuant to the Change Order provisions of this Contract

2.12 Ownership of Documents and Materials, and Confidentiality

CITY shall have unlimited rights to copy and use in connection with the Project all Design Materials, including the right to use same on the Project at no additional cost to CITY, regardless of degree of completion, provided that said services performed have been fully paid for as required by the terms of this Agreement. CONTRACTOR and its Subcontractors shall keep all design documents confidential, and shall not disclose such documents except as may be required in performance of the Work or pursuant to legal process.

2.13 Value Engineering

CONTRACTOR shall suggest to CITY value engineering to reduce the cost of the Project, which CITY may accept at its sole discretion.

2.13.1 Acceptance of Value Suggestions

To the extent that CONTRACTOR provides value engineering suggestions or comments with respect to the Project's design, CITY acknowledges that such services are advisory only and not professional design services. CITY shall refer all such suggestions and comments to the Architect/Engineer for review and evaluation prior to CITY's acceptance thereof. CITY shall cause the Architect/Engineer to revise the Project's design documents to reflect all value engineering suggestions and comments accepted by CITY without delay or disruption to the timely and orderly progress of the Work, including revisions needed to address the impact of an agreed value engineering solution on other portions of the Work. The GMP and Contract Time shall be adjusted by Change Order promptly after CONTRACTOR's review and pricing of the change to the Work reflected in the revised design documents.

2.13.2 Subcontractors Bids

CONTRACTOR shall make recommendations to the Architect/Engineer regarding the appropriate quality of materials, equipment, component systems and types of construction for the most reasonable prices for inclusion in the Construction Documents, and CONTRACTOR shall also recommend to the Architect/Engineer and CITY reasonable adjustments in the scope of the Project so that the total cost bid by the bidding Subcontractors will not exceed the estimate.

2.14 Design Development Documents and Construction Documents.

2.14.1 General

The Design-Assist Team understands that all construction documents, working drawings and specifications must be coordinated with, submitted to, and approved by, CITY prior to construction. CONTRACTOR shall allow CITY a minimum of fourteen (14) days for review of Submittals and corrections made thereto. CONTRACTOR shall work with the Design-Assist Team to prepare, for the approval of CITY, working drawings and specifications setting forth in detail the requirements for the

construction of the Project in its entirety CITY's review of the Design Development Documents and the Construction Documents shall not relieve CONTRACTOR from its responsibilities under this Agreement, or be deemed to be an approval or waiver by CITY of any deviation from, or of CONTRACTOR's failure to comply with, any provision or requirement of the Contract Documents, unless such deviation or failure has been identified as such in writing in the document submitted for approval by CONTRACTOR and approved by CITY. CONTRACTOR shall comply with all CITY construction standards as deemed applicable by the CITY. CONTRACTOR shall provide CITY with a complete, accurate, full size, and current set of as built drawings in a hard copy acceptable to City prior to Final Completion.

The Architect/Engineer is the entity professionally responsible for the design of the Project. CITY acknowledges that CONTRACTOR is a general contractor and not an architect or engineer. Except with respect to any subcontractors of CONTRACTOR providing architectural or engineering services for the Project as design-build work, CONTRACTOR's review of or input for any design documents, or CONTRACTOR's recommendation for any design concepts, is made solely in CONTRACTOR's capacity as a licensed contractor and not as a licensed design professional. CONTRACTOR is not responsible for any errors in the design or failure of the design to comply with applicable laws, codes, rules and regulations, or lawful orders of public authorities. However, if CONTRACTOR observes any such nonconformity or errors it shall promptly notify CITY and the Architect/Engineer.

2.14.2 Reliance on Approvals

CONTRACTOR shall be entitled to rely on the approvals of CITY with respect to the Design Materials. If CITY revokes, modifies or otherwise changes in a material way its approval of a given system after such system has been designed and approved, or modifies the original Scope of Work in a material manner requiring modification to one or more systems which have been designed and approved, CONTRACTOR shall be entitled to a Change Order in accordance with the provisions of Article 9-CHANGES IN THE WORK hereof. No Change Order shall be issued to the extent such modification is due to the fault or neglect of CONTRACTOR.

2.14.3 Review of Contract Documents and Field Conditions

CONTRACTOR shall take field measurements and verify field conditions and shall carefully compare such field conditions and other information known to CONTRACTOR with the Contract Documents before commencing activities. CONTRACTOR shall perform the Work in accordance with the Contract Documents and submittals approved in accordance with the procedures set forth in this Agreement.

2.15 Shop Drawings, Product Data, Samples and Other Submittals.

2.15.1 Documents and Samples at the Site

From and after commencement of the Construction Work, CONTRACTOR shall maintain at the site one (1) record copy of the Construction Documents, and any and all amendments thereto, in good order and marked to record changes and selections made during the Construction Phase. In addition, CONTRACTOR shall maintain at the site approved shop drawings, product data, samples and similar required submittals. These shall be provided to CITY upon completion of the Work.

2.15.2 Shop Drawings

Shop Drawings are drawings, diagrams, schedules and other data specially prepared for the Work by CONTRACTOR, a Subcontractor, manufacturer, supplier or distributor to illustrate some portion of the Work.

2.15.3 Product Data

Product Data includes illustrations, standard schedules, performance charts, instructions, brochures, diagrams and other information furnished by CONTRACTOR to illustrate materials or equipment for some portion of the Work.

2.15.4 Samples

Samples are physical examples, which illustrate materials, equipment or workmanship and establish standards by which the Work will be judged.

2.15.5 Submittals are not Contract Documents.

Shop Drawings, Product Data, Samples and similar submittals are not Contract Documents. The purpose of their submittal is to demonstrate for those portions of the Work for which submittals are required the way CONTRACTOR proposes to conform the construction to the Construction Documents.

2.15.6 Submission of items listed in Article 2.15.5

Requirements and procedures for submittal of shop drawings, product and equipment data are covered in technical specification section 01322 and 01330.

2.15.7 Responsibility

CONTRACTOR shall not be relieved of responsibility for the deviations from requirements of the Contract Documents by CITY's approval of Shop Drawings, Product Data, Samples or similar submittals unless CONTRACTOR has specifically informed CITY of such deviation at the time of the submittal and CITY has given written approval to the specific deviation. CONTRACTOR shall not be relieved of responsibility for errors or omissions in Shop Drawings, Product Data, Samples or similar submittals by CITY's approval thereof.

2.16 Tests and Inspections

2.16.1 Initial Tests and Inspections

Tests, inspections and approvals of portions of the Construction Work shall be made as required by the Contract Documents, Applicable Laws or normal construction practices and/or as directed by CITY. Unless otherwise provided, CONTRACTOR shall make arrangements for such tests, inspections and approvals with an independent testing laboratory or entity acceptable to CITY, or with the appropriate public authority. The costs of such tests, inspections and approvals shall be a cost paid by CONTRACTOR. CONTRACTOR shall give CITY timely notice of when and where tests and inspections are to be made so that CITY may observe such procedures. All costs of tests, inspections or approvals imposed upon CONTRACTOR by changes in Applicable Laws occurring after execution of this Agreement shall be an increase to the GMP in accordance with the Change Order provisions herein.

2.16.2 Additional Tests and Inspections

If CITY, or any other public authority having jurisdiction, determines that portions of the Construction Work require additional testing, inspection or approval beyond that required by Article subsection 2.16.1 above, CITY will instruct CONTRACTOR to make arrangements for such additional testing, inspection or approval by an entity acceptable to CITY, and CONTRACTOR shall give timely notice to CITY of when and where tests and inspections are to be made so CITY may observe such procedures. If such additional tests and/or inspections reveal failure of the portions of the Work to comply with the

requirements of the Contract Documents, the costs of such tests and required correction shall be paid as a Cost of the Work, subject to the limitations set forth in Article 2.19-CORRECTION OF WORK hereof. If the additional tests and/or inspections show that the portions of the Work comply with the requirements of the Contract Documents, the costs thereof shall be an increase to the GMP in accordance with the Change Order provisions of this Agreement.

2.16.3 Required Certificates

Required certificates of testing, inspection or approval shall, unless otherwise required by the Contract Documents, be secured by CONTRACTOR and promptly delivered to CITY.

2.16.4 Timing of Testing

Tests or inspections conducted pursuant to the Contract Documents shall be made promptly to avoid unreasonable delay in the Work.

2.17 Cutting and Patching

2.17.1 Cutting and Patching of the Work

CONTRACTOR shall be responsible for cutting, fitting, or patching required to complete the Work or to make its parts fit together properly.

2.17.2 Damage to Work of CITY or Separate Contractors

CONTRACTOR shall not damage or endanger a portion of the completed Work, fully or partially completed construction of CITY, or work or construction by Separate Contractor(s) by cutting, patching or otherwise altering such construction or work, or by excavation. CONTRACTOR shall not cut or otherwise alter such construction by CITY or a Separate Contractor except with written consent of CITY and of such Separate Contractor, such consent not to be unreasonably withheld.

2.18 Uncovering of Construction Work.

2.18.1 Uncovering

If a portion of the Construction Work is covered contrary to CITY's written request to observe such work prior to it being covered or contrary to requirements of the Contract Documents, it must, if directed in writing by CITY, be uncovered for CITY's observation and be replaced without change in the Schedule or GMP. The costs of such uncovering and replacement shall be Cost of the Work, subject to the limitation set forth in Article 2.19-CORRECTION OF WORK hereof.

2.18.2 Covering of Work Requested to be Observed

If a portion of the Construction Work has been covered, which CITY has not specifically requested to observe prior to being covered, CITY may request to see such Construction Work and it shall be uncovered by CONTRACTOR. If such Construction Work is in accordance with the Contract Documents, costs of uncovering and replacement shall, by appropriate Change Order, be charged to CITY and shall increase the GMP. An appropriate time extension shall also be given. If such Construction Work is not in accordance with the Contract Documents, CONTRACTOR shall pay such costs as Cost of the Work, unless such condition was caused by CITY or a Separate Contractor in which event CITY shall be responsible for payment of such costs by appropriate Change Order, and an appropriate time extension shall also be given.

2.19 Correction of Work

2.19.1 Work Rejected by CITY

CONTRACTOR shall promptly correct Construction Work rejected by CITY or failing to conform to the requirements of the Contract Documents, whether observed before or after Substantial Completion and whether or not fabricated, installed or completed. CONTRACTOR shall bear the costs of correcting such rejected Construction Work, as a Cost of the Work, including additional testing and inspection and compensation for services and expenses of CITY made necessary thereby.

2.19.2 Removal of Work

CONTRACTOR shall remove from the Site portions of the Construction Work, which are not in accordance with the requirements of the Contract Documents and are neither corrected by CONTRACTOR nor accepted by CITY. The costs incurred in removing such Work shall be a Cost of the Work, subject to the limitation set forth in Article 2.19-CORRECTION OF WORK hereof.

2.19.3 Failure to Correct Nonconforming Work

If CONTRACTOR fails to correct nonconforming Construction Work within a reasonable time, CITY may correct it in accordance with the terms of this Agreement. If CONTRACTOR does not proceed with correction of such nonconforming Construction Work within a reasonable time fixed by written notice from CITY, CITY may remove it and store the salvageable materials or equipment at CONTRACTOR's expense. If CONTRACTOR does not pay costs of such removal and storage within ten (10) Days after written notice, CITY may, upon ten (10) additional Days written notice, sell such materials and equipment at auction or at private sale and shall account for the proceeds thereof, after deducting costs and damages that should have been borne by CONTRACTOR, including compensation for services and expenses made necessary thereby. If such proceeds of sale do not cover costs which CONTRACTOR should have borne, CONTRACTOR shall pay such excess to CITY. If such proceeds are in excess of the costs which CONTRACTOR should have borne, such excess shall be paid by CITY to CONTRACTOR. If such costs arise during the performance of the Work, such costs shall be charged against the Cost of the Work. If such costs arise after Substantial Completion, such costs shall be payable as provided in Article 8.1-GUARANTEED MAXIMUM PRICE.

2.19.4 Damaged or Destroyed Work

CONTRACTOR shall bear the cost of correcting destroyed or damaged construction, whether completed or partially completed, of CITY or Separate Contractors caused by CONTRACTOR's correction or removal of Construction Work which is not in accordance with the requirements of the Contract Documents. If such costs arise during the performance of the Work, such costs shall be charged against the Cost of the Work. If such costs arise after Substantial Completion, such costs shall be payable as provided in Article 8.1-GUARANTEED MAXIMUM PRICE.

2.19.5 No Limitation

Nothing contained in this Article 2.19-CORRECTION OF WORK shall be construed to establish a period of limitation with respect to other obligations which CONTRACTOR might have under the Contract Documents.

2.19.6 Acceptance of Nonconforming Work

If CITY prefers to accept Work, which is not in accordance with the requirements of the Contract Documents, CITY may do so instead of requiring its removal and correction, in which case the GMP will be reduced as appropriate and equitable. Such adjustment shall be effected whether or not final payment has been made.

2.20 Contractor Registration

No contractor or subcontractor may work on a public works project unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. During the performance of this Contract, CONTRACTOR and its subcontractors shall have a continuing legal obligation to maintain current registration with the Department of Industrial Relations. CONTRACTOR is hereby notified that this Project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

ARTICLE 3 - CONTRACT ADMINISTRATION

3.1 Administration of the Contract

The CITY's Representative and the Construction Manager will provide administration of the Agreement as hereinafter described. If the status of any of the above parties should change, the CITY will provide written notice to the Contractor of such change.

3.2 CITY's Representative

3.2.1 General

The CITY's Representative has the authority to act on behalf of the CITY on change orders, field orders, progress payments, Contract Decisions, acceptability of the Contractor's work, and early possession.

3.2.2 Change Orders

The CITY's Representative has the authority to accept or reject change orders and cost proposals submitted by the Contractor or as recommended by the Construction Manager.

3.2.3 Progress Payments

CITY's Representative has the authority to accept or reject requests for progress payments which have been submitted by the Contractor and recommended by the Construction Manager.

3.2.4 Contract Decisions

Should CONTRACTOR disagree with the Construction Manager's decision with respect to the Agreement, the CONTRACTOR may appeal to the CITY's Representative in accordance with the provisions of the Agreement.

3.2.5 Acceptability of Work

The CITY's Representative has the authority to make the final determination of the acceptability of the Work.

3.3 Construction Manager

3.3.1 General

The Construction Manager is a representative of the CITY employed to act as advisor and consultant to the CITY in construction matters related to the Agreement. The term Construction Manager may include more than one individual to perform contract administration and construction observation. Hereinafter, the term Construction Manager includes any and all representatives working under the direction of the Construction Manager.

All instructions to the Contractor and all communications from the Contractor to the CITY or the CITY's Representative shall be forwarded through the Construction Manager. The Construction Manager will have authority to act on behalf of the CITY only to the extent provided in the Contract Documents. The CITY has delegated its authority to the Construction Manager to make initial decisions regarding questions which may arise as to the quality or acceptability of materials furnished and work performed, and as to the manner of performance and rate of progress of the Work. The Construction Manager shall make initial decisions with respect to the Contractor's fulfillment of the Agreement and the Contractor's entitlement to compensation. The Contractor shall look initially to the Construction Manager in matters relating to the Agreement.

The Construction Manager's authority to act under Article 3-CONTRACT ADMINISTRATION, herein, and any decision made by it in good faith either to exercise or not to exercise such authority, shall not be interpreted or construed as control of or responsibility for any of the Work performed under this Agreement.

3.3.2 On-Site Representative

The Construction Manager will observe the progress, quality, and quantity of the Work to determine, in general, if the Work is proceeding in accordance with the provisions of the Contract Documents. The Construction Manager shall not be responsible for the superintendence of the construction site conditions; construction means, methods, appliances techniques, sequences, or procedures; operation of equipment; Contractor's personnel; or for safety practices or unsafe practices, precautions, and programs in connection with the Work.

In accordance with the provisions of these Contract Documents, the Construction Manager will make decisions relative to all matters of interpretation or execution of the Contract Documents.

3.3.3 Observation and Inspections of Construction

The Construction Manager shall observe the construction and shall have the authority to reject work and materials which do not conform to the Contract Documents, and to require special inspection or testing. Observation and inspection by the Construction Manager or an inspector is not an authorization to revoke, alter, or waive any requirements of the Specifications. Observation and inspection is the authorization to call the attention of the Contractor to any failure of the Work, materials or workmanship to conform to the Contract Documents. The Construction Manager shall have this authority including the ability to reject materials or, in any emergency, suspend the Work. The Contractor may appeal any such issue which it disagrees with to the Construction Manager for decision. If the decision of the Construction Manager is not satisfactory to the Contractor, the Contractor may appeal such decision to the CITY's Representative.

3.3.4 Acceptability of the Work

The Construction Manager has the authority to make a recommendation as to the acceptability of the Work.

3.3.5 Change Orders

The Construction Manager has the authority to initiate change orders; to reject change orders proposed by the Contractor; to negotiate and recommend acceptance of change orders to the CITY; or to order minor changes in the Work that result in no cost to the CITY.

3.3.6 Construction Schedule

The Construction Manager has the authority to review and recommend acceptance of the progress schedule submitted by the Contractor at the start of the Work and subsequent significant revisions for conformance to the specified sequence of Work and logic.

3.3.7 Progress Payments

The Construction Manager has the authority to recommend acceptance or rejection of requests for progress payments which have been submitted by the Contractor.

3.3.8 Final Payment

The Construction Manager, with the assistance of the CITY's Representative and the Engineer, will conduct inspections to determine the date of Final Completion of the Work, and the Construction Manager will receive and forward to the CITY, for the CITY's review, written warranties and related documents required by the Agreement and assembled by the Contractor.

3.3.9 Contract Interpretation by the Construction Manager

Notwithstanding any omission from the Specifications or the Drawings it shall be the duty of the Contractor to call the Construction Manager's attention to apparent errors or omissions upon discovery by the Contractor and request instructions in writing before proceeding with the Work. The Contractor shall not unreasonably take advantage of any errors or omissions found by Contractor. If the Contractor discovers any errors or omissions that it believes affect the time or cost of performing the Work, it shall be entitled to request a Change Order. Contractor shall promptly notify the Construction Manager in writing of any design, materials, or specified method that the Contractor identifies as defective or insufficient, provided, however, that in doing so Contractor will be acting in its capacity as a contractor and not an architect or engineer, and that this section does not affect CITY's responsibility with regard to the Contract Documents. The Construction Manager may, by appropriate written instructions, correct errors and supply omitted information, which instructions shall be as binding upon the Contractor as though contained in the original Specifications or Drawings when incorporated into Change Orders. Such instructions shall be incorporated into the Agreement in accordance with the Change Order provisions of the Agreement.

Any discrepancies discovered by the Contractor between the Contract Documents and Site conditions or any inconsistencies or ambiguities in the Contract Documents shall be promptly reported, in writing, to the Construction Manager. Questions regarding the meaning and intent of the Contract Documents shall be referred in writing by the Contractor to the Construction Manager with a Request for Information (RFI).

Work done by the Contractor after its discovery of such errors, omissions, discrepancies, inconsistencies or ambiguities without such notice and prior to response from the Construction Manager shall be done at the Contractor's risk and shall not be reimbursed as a Cost of the Work, nor be a basis for an increase in the GMP.

3.4 Engineer

3.4.1 General

The Engineer will have the authority to act on behalf of the CITY only to the extent provided in the Contract Documents. The Engineer shall not be responsible or have authority for the superintendence of construction site conditions; construction means, methods, appliances techniques, sequences, or procedures; operation of equipment; Contractor's personnel; or for safety practices or unsafe practices; precautions and programs in connection with the Work; or for any failure of the Contractor to comply with laws, regulations, rules, ordinances, codes, or orders applicable to the Contractor furnishing and performing the Work.

3.4.2 Interpretations

The Engineer has the authority to be the initial interpreter of the technical requirements of the Contract Documents. Either party to the Agreement may make written request to the Construction Manager for interpretations necessary for the proper execution or progress of the Work. The Construction Manager shall refer such written requests to the Engineer, who will render such interpretations. Where the Contractor has requested an interpretation from the Construction Manager, or been notified by the Construction Manager that such interpretation has been requested by the CITY, any work done before receipt of such interpretations, if not in accordance with same, shall be removed and replaced or adjusted as directed by the Construction Manager without additional expense to CITY and shall not be reimbursed as a Cost of the Work, or be a basis for an increase in the GMP.

3.4.3 Acceptability of the Work

The Engineer has the authority to make a recommendation as to the acceptability of the Work. The Engineer has the authority to recommend acceptance regarding the remediation or retention of Defective Work.

3.4.4 Submittal

The Engineer shall receive, through the Construction Manager, shop drawings, product data and samples for review.

The Engineer has the authority to review and take other appropriate action upon the Contractor's submittal such as shop drawings, product data and samples, but only for conformance with the design concept of the Work and the information given in the Contract Documents.

ARTICLE 4 - CITY'S RIGHTS AND RESPONSIBILITIES

4.1 General

CITY, acting through the CITY's Representative or the Construction Manager, shall have the authority to act as the sole judge of the Work and materials with respect to both quantity, quality function, performance and reliability as set forth in the Agreement except as delegated to the Construction Manager in these Contract Documents.

4.2 Information and Services Required of CITY

4.2.1 CITY Designation of Authorized Representative

Both Parties shall designate, from time to time, one or more representatives authorized to act on their behalf with respect to the Project, together with the scope of his/her respective authority.

CONTRACTOR shall not be entitled to rely on directions from anyone outside the scope of that person's authority as set forth in written delegations pursuant to this Agreement. Directions and decisions made by Authorized Representative(s) of CITY shall be subject to any further approval(s) required by any provisions of CITY's Charter or the Roseville Municipal Code.

4.2.2 Communication

During the term of this Contract, CITY shall communicate with Subcontractors, suppliers and others performing any part of the Work only through CONTRACTOR's Authorized Representative.

4.2.3 CITY'S instruction to CONTRACTOR

Wherever CITY is identified in the contract documents in reference to providing the CONTRACTOR with instruction, the "CITY" reference could mean, Construction Manager, Engineer, or Representative acting on behalf of the CITY as delegated in that instance.

4.3 Activities on Site by CITY or Separate Contractors

4.3.1 Observation and Inspection

In addition to the Construction Manager's designated representative, the CITY may provide one or more inspectors to the Construction Manager to observe the Work and with the same authority as provided for in Article 3.3.3, Observation and Inspections of Construction.

Separate and independent from the observations and inspections above, the Work may be inspected by Building Officials, Fire Officials, Roseville Electric and/or Pacific Gas and Electric for code compliance. Such inspectors shall have the authority provided to them by their jurisdiction. Any design deficiencies or additional work required by these code inspections not required by the Contract Documents may be incorporated into the Work in accordance with the Change Order provisions of the Agreement

4.3.2 CITY'S Right to Award Separate Contracts

CITY reserves the right to perform work or operations related to the Project with the CITY'S own forces, and to award separate contracts to Separate Contractors in connection with the Project or other work on the Site. If the Contractor claims that delay, damage, or additional cost is involved because of such action by the CITY, the Contractor shall make such claim as provided elsewhere in the Contract Documents. When separate agreements are awarded for different portions of the Project or other work on the Site, the term "Contractor" in the Contract Documents in each case shall mean the contractor who executes each separate Agreement.

4.3.3 Integration of the Work with Separate Contractors

Following the request of CITY, CONTRACTOR shall prepare a plan in order to integrate the work performed by Separate Contractors with the performance of the Work, and shall submit such plan to CITY for approval. The plan shall be fair and reasonable for CONTRACTOR and the Separate Contractors, and CONTRACTOR shall work with the Separate Contractors to reach agreement on such plan. CONTRACTOR shall arrange the performance of the Work so that the Work and the work of the Separate Contractors are, to the extent applicable, properly integrated, jointed in an acceptable manner, and performed in the proper sequence so that any disruption or damage to the Work or to any work of Separate Contractors is avoided.

4.3.4 Coordination

CONTRACTOR shall provide for the coordination of the activities of CONTRACTOR and its Subcontractors with the activities of the Separate Contractors. CONTRACTOR shall participate with all Separate Contractors and CITY in reviewing and coordinating the schedules of the Separate Contractors with the Schedule. CONTRACTOR shall make any revisions to the Schedule deemed necessary to properly incorporate the work of the Separate Contractors with the Work. To the extent (a) the date of Substantial Completion is extended by such Schedule revision; (b) CONTRACTOR is required to perform its Work materially out of sequence, and in a manner which is not as efficient or cost effective as originally planned; or (c) the Scope of Work is increased, an equitable adjustment in the GMP and the Schedule shall be made in accordance with the Change Order provisions of this Agreement.

4.3.5 Use of Site

CONTRACTOR shall afford CITY and all Separate Contractors reasonable opportunity for storage of materials and equipment and performance of their work. CONTRACTOR shall also connect and coordinate its Work and operations with CITY and all Separate Contractors' operations as required by the Contract Documents. CITY shall direct the Separate Contractors to cooperate with CONTRACTOR and to avoid actions or omissions, which could interfere with or delay the activities of CONTRACTOR.

4.3.6 Deficiency in Work of Contractors

If part of CONTRACTOR's Work depends upon proper execution or results upon construction or operations by CITY or a Separate Contractor, CONTRACTOR shall, prior to proceeding with that portion of the Work, promptly report to the Separate Contractor and CITY apparent discrepancies or defects in such other construction that would render it unsuitable for proper execution and results by CONTRACTOR. CONTRACTOR and the Separate Contractor shall use good faith efforts to resolve any such discrepancies or defects or any disagreements relating thereto. Failure of CONTRACTOR to report such discrepancies or defects shall constitute acceptance by CONTRACTOR of the work of Separate Contractors as fit and proper to receive CONTRACTOR's Work (except as to those defects or discrepancies that are not apparent).

4.4 Claims Involving Separate Contractors

In the event that CONTRACTOR unnecessarily and unreasonably delays the work of Separate Contractors by not cooperating with them as required hereby, or by not affording them reasonable opportunity to perform their work as stated herein, CONTRACTOR shall, in such event, pay, as Cost of the Work, all reasonable direct incremental costs and expenses incurred by such Separate Contractors due to any such delays. If any Separate Contractor shall assert a claim or bring an action against CITY alleging damage due to the fault or neglect of CONTRACTOR, CITY shall immediately notify CONTRACTOR, who shall defend such claim. If it is determined that CONTRACTOR was at fault, CONTRACTOR shall pay all costs of defense, including attorney's fees, as well as any resulting judgment or settlement, as a Cost of the Work.

4.5 Assignment of Separate Contracts

If CITY determines that it wishes to assign to CONTRACTOR one or more contracts between CITY and a Separate Contractor, it shall give CONTRACTOR written notice of such desire, including in such notice a copy of such contract for CONTRACTOR's review and approval. The Separate Contractor shall be fully qualified to perform the work under the to-be-assigned contract, shall possess the financial capability to perform its obligations under such to-be-assigned contract, and shall provide one hundred percent (100%) payment and performance bonds covering such work from sureties meeting the standards

set forth in Article 11-Insurance and Bonds; Indemnification hereof. Such contract shall contain provisions similar to those contained in CONTRACTOR's agreements with its Subcontractors with respect to liability, indemnification, retention, payment, labor, warranty, and other material items. Upon CONTRACTOR's approval of the assignment of such contract, which approval shall not be unreasonably withheld, delayed or conditioned, such Separate Contractor shall cease to be a Separate Contractor and shall thereafter be deemed to be a Subcontractor of CONTRACTOR, and the GMP shall be increased by Change Order in the amount of (a) such assigned contract, and (b) the additional Fee pursuant to the provisions of Article 9.6-Change Orders on Account of Scope Change.

4.6 CITY's Right to Stop the Work

If CONTRACTOR persistently fails to correct Work which is not in accordance with the requirements of the Contract Documents and this Agreement or persistently fails to carry out the Work in accordance with the Contract Documents, CITY, by written order signed by CITY, may deliver a notice to CONTRACTOR setting forth that such a persistent and material failure is occurring and has occurred, and demanding that CONTRACTOR commence a cure of such persistent and material failure within twenty (20) Days and diligently pursue such cure thereafter. In the event that the cure is not commenced and pursued diligently, CITY may, by written notice to CONTRACTOR, order CONTRACTOR to stop the Work, or any portion thereof, until the use for such order has been eliminated; provided, however, that the right of CITY to stop the Work shall not give rise to a duty on the part of CITY to exercise this right for the benefit of CONTRACTOR or any other person or entity and shall not give rise to any liability of CITY to CONTRACTOR resulting from any delay (except to the extent that such order is found to be improper).

If CONTRACTOR fails to correct an unsafe condition as specified in Article 12-SAFETY: PROTECTION OF PERSONS AND PROPERTY, the CITY shall have the right to notify the Contractor through the Construction Manager that an unsafe condition may exist and must be corrected or the Work in question can be stopped immediately. CITY's has a right to stop the work, until the condition is corrected to the satisfaction of the CITY.

4.7 CITY's Right to Carry Out the Work

If CONTRACTOR defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within a seven (7) Day period after receipt of written notice from CITY to commence and diligently continue correction of such default or neglect with diligence and promptness, CITY may, after such seven (7) Day period, give CONTRACTOR a second written notice to correct such deficiencies within such second seven (7) Day period. If CONTRACTOR within such second seven (7) Day period after receipt of such second notice fails to commence and diligently continue to correct any deficiencies, CITY, without prejudice to other remedies CITY may have, may correct such deficiencies. In such case an appropriate Change Order shall be issued deducting from payments then or thereafter due to CONTRACTOR the cost of correcting such deficiencies, including Compensation for additional services and expenses made necessary by such default, neglect or failure. If payments then or thereafter due to CONTRACTOR are insufficient to cover such amounts, CONTRACTOR shall pay the difference to CITY.

The CITY also reserves the right to perform and suspend any portion of the Work due to an emergency threatening the safety of the Work, public, CITY, and any property or equipment. No deductive Change Order shall be issued for an emergency not caused by Contractor.

4.8 Non-Responsibility of the CITY

CITY shall not be held responsible for the care or protection of any material or parts of the Work prior to the Final Acceptance, except as expressly provided in the Contract Documents.

ARTICLE 5 - CONTRACTOR RIGHTS AND RESPONSIBILITIES

5.1 Status of Contractor and Subcontractors

5.1.1 Contractor

It is stipulated and agreed that the Contractor shall be an independent contractor in the performance of this Agreement and shall have complete charge of persons engaged in performance of the Work. The Contractor shall perform the Work in accordance with its own means, methods, and appliances subject to compliance with the requirements of the Agreement.

5.1.2 Subcontractors

If any part of the Work to be done under this Agreement is subcontracted, the subcontract shall be in writing and shall provide that all Work to be performed thereunder shall be performed in accordance with the terms of the Contract Documents. The subcontracting of any or all of the Work to be done will in no way relieve the Contractor of any part of its responsibility under the Agreement. Subcontractors will not be recognized as having a direct relationship with the CITY. The persons engaged in the Work, including employees of subcontractors and suppliers, will be considered employees of the Contractor and their work shall be subject to the provisions of the Agreement. References in the Contract Documents to actions required of subcontractors, manufacturers, suppliers, or any person other than the Contractor, the CITY or the Construction Manager shall be interpreted as requiring that the Contractor shall require such subcontractor, manufacturer, supplier or person to perform the specified action.

The Contractor shall only employ subcontractors that are properly licensed in accordance with State law and are registered with the California Department of Industrial Relations (DIR).

Prior to commencement of any work by a subcontractor, the Contractor shall submit to the Construction Manager:

A. Verification that the subcontractor is properly licensed for the work it will perform.

B. Upon CITY'S request, copies of subcontract agreements.

C. Copies of subcontractor's insurance certificates and endorsements.

5.2 Contractor's Representative

The Contractor shall provide in writing, a request to the CITY to delegate authority to an individual to serve in the capacity of authorized representative and shall wait to receive written confirmation from the CITY, before the authorized representative can start work. The authorized representative shall be qualified for the duties required and have complete authority to represent and to act for the Contractor. Said authorized representative has the authority to act in matters relating to the Agreement, and shall be personally present at the Site at all times while work is actually in progress on the Agreement. During periods when the Work is suspended, arrangements acceptable to the Construction Manager shall be made for any emergency work that may be required. The Contractor's authorized representative shall be fluent and proficient in the English language in order to understand, receive, and carry out oral and written communications or instructions relating to all job functions and responsibilities. All

communications to and from the Contractor's authorized representative shall be binding as if given to or by the Contractor.

Contractor shall provide its authorized representative's contact information which shall include the representative's name, office street address, office telephone number, mobile phone number, home phone number, email address and the office mailing address if different from the street address.

The Contractor's authorized representative shall give its personal attention to and shall supervise the Work to the end that it shall at all reasonable times be prosecuted faithfully; and when the authorized representative is not personally present on the Work, the representative shall at all reasonable times be represented by a competent designated alternate, superintendent or foreman (approved in writing by the CITY, to act in this capacity) who shall receive and obey all instructions or orders given under this Agreement, and who shall have full authority to supply materials, tools, and labor without delay, and who shall be the legally appointed representative of the Contractor. The Contractor shall be liable for the faithful observation of any instructions delivered to the Contractor or to its authorized representative.

5.3 Supervision and Superintendence

CONTRACTOR shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. Contractor shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction. Contractor shall not be responsible for the negligence of Owner or Engineer in the design or specification of a specific means, method, technique, sequence, or procedure of construction which is shown or indicated in and expressly required by the Contract Documents.

At all times during the progress of the Work, Contractor shall assign a competent resident Superintendent who shall not be replaced without written notice to Owner and Engineer except under extraordinary circumstances.

5.4 Documents and Samples at the Site.

CONTRACTOR shall maintain at the site for CITY one record copy of the drawings, specifications, addenda, Change Order and other Modifications, in good order and marked currently to record changes and selections made during construction, and in addition approved Shop Drawings, Product Data, Samples and similar required submittals. CONTRACTOR shall also prepare one reproducible set of as-built drawings. These shall be provided to CITY upon completion of the Work.

5.5 Use and Protection of CITY'S Site and Adjacent Property

5.5.1 Designated Areas

With the approval of the Construction Manager, the Contractor may use designated portions of the CITY'S Site for storage of construction equipment, materials and field offices provided the Contractor does not interfere with CITY'S operations. The Contractor will not be allowed to unreasonably encumber the Site or adjacent areas with its materials and/or equipment. The CITY will not accept any responsibility for damage to or loss of the Contractor's equipment or materials stored on any Project related site caused by vandalism, nature, or otherwise, suffered by the Contractor, including its suppliers and subcontractors. Protection of all construction equipment, stores, and supplies shall be the sole responsibility of the Contractor. Where additional work space is desired by the Contractor or where the CITY cannot provide the space to the Contractor, it shall be the Contractor's sole responsibility and expense to obtain such a space for its use.

5.5.2 Contractor's Site Access

All workers or representatives of the Contractor, subcontractors or suppliers are admitted to the Site only for the proper execution of the Work and have no tenancy without the express written permission of the CITY. Furthermore, no persons may occupy property owned by the CITY outside the limit of the Work, as indicated on the Drawings, without the express written permission of the CITY.

5.5.3 Provisions for Handling Emergencies

It is possible that emergencies may arise during the progress of the Work, which may require special treatment or make advisable extra shifts of labor forces to continue the Work for twenty-four (24) hours per day. These emergencies may be caused by damage or possible damage to nearby existing structures or property by reason of the work under construction, or by storm, accidents, or leakage. The Contractor shall be prepared in case of such emergencies to make all necessary repairs and shall promptly execute such work when required; such emergency work will be reimbursed as a Cost of the Work and the GMP increased accordingly to the extent the incidence of the emergency was outside Contractor's reasonable control.

Upon start of the Work, Contractor shall provide means for immediate emergency notification of Contractor's designated representative and designated emergency alternates.

5.5.1 Debris, Trash, and Construction Wastes

The Contractor shall keep the Site reasonably free from debris, trash and construction wastes to permit Contractor to perform construction services efficiently, safely and without interfering with the use of and enjoyment of adjacent land areas, and as further stipulated in the Contract Documents. At the end of each worked day, Contractor shall collect and dispose of all litter or enclose it in a secured onsite refuse bin. When the Work is Substantially Complete, or a portion of the Work has been completed, Contractor shall remove all debris, trash, construction wastes, materials, equipment, machinery and tools arising from the Work or applicable portions thereof to permit CITY to occupy the Project or a portion of the Project for its intended use. Contractor shall provide a finished cleaning of all areas acceptable to the CITY before releasing any area to the CITY for occupancy.

5.6 Compliance with Laws

The CITY is a municipal corporation in the State of California and is subject to the applicable provisions of law relating to public contracts as a Charter CITY. It is agreed that all provisions of law applicable to public contracts are a part of these Contract Documents to the same extent as though set forth herein and will be complied with by Contractor.

The Contractor shall at all times observe and comply with all existing laws, ordinances, regulations, orders and decrees; and shall protect, indemnify, and defend the CITY, the Construction Manager, the Engineer, the Funding Agencies and all of their officers, officials, employees, agents, volunteers, and servants against any claim or liability arising from or based upon the violation of any such law, ordinance, regulation, order, or decree, whether by the Contractor itself, employees, or its subcontractors.

The Contractor, shall at its own cost and expense, observe and keep itself and its subcontractors fully informed of all existing and future legislated State and Federal Laws and CITY and County ordinances and regulations which in any manner affect those engaged or employed in the Work, or the materials and equipment used in the Work, or which in any way affect the conduct of the Work, and all such orders and decrees of bodies or tribunals having any jurisdiction or authority over the same.

If any discrepancy or inconsistency is discovered in the Drawings, Specifications, or in any other part of this Agreement, in relation to any law, ordinance, regulation, order or decree, the Contractor shall immediately report the same to the Construction Manager in writing.

Attention is directed to the following specific regulations and requirements that are hereby included in the Contract Documents. This list of regulations is not warranted to be complete and the burden of ascertaining legal requirements that must be satisfied shall rest solely with the Contractor.

5.6.1 Prevailing Wages

For purposes of this Agreement, CONTRACTOR and its Subcontractors shall comply with all applicable prevailing wage laws, e.g., but not limited to, California Labor Code Sections 1770 et seq. In accordance with said Section 1775, CONTRACTOR shall forfeit as a penalty to the CITY Two Hundred Dollars ($200) for each calendar Day or portion thereof for each worker paid less than the prevailing rates for such work or craft in which such worker is employed for any work done on-Site under the Agreement by CONTRACTOR or by any Subcontractor in violation of the provisions of the Labor Code and in particular, Labor Code Sections 1770 to 1780, inclusive. In addition to said penalty and pursuant to said Section 1775, the difference between such stipulated prevailing wage rates and the amount paid to each worker for each calendar Day or portion thereof for which each worker was paid less than the stipulated prevailing wage shall be paid to each worker by CONTRACTOR or the applicable Subcontractor.

Pursuant to the provisions of California Labor Code Sections 1773, the Department has identified the source, stated below, of the General Prevailing Rate of Wages applicable to the work to be done, for straight time, overtime, and holiday work. The holiday wage rate listed shall be applicable to all holidays recognized in the collective bargaining agreement of the particular craft, classification or type of worker concerned. These wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm, which is a part of this Agreement.

Pursuant to Labor Code Section 1773.2, General Prevailing Wage Rates set forth above, which forms a part of this Agreement, shall be posted by CONTRACTOR at a prominent place at the Site. Prevailing wage rates to be posted at the Site will be furnished by the Department. The possibility of wage increases is one of the elements to be considered by CONTRACTOR in determining its Proposal, and will not under any circumstances be considered as the basis of a claim against CITY or the Agreement.

5.6.2 DIR Registration

California Labor Code section 1725.5 requires the Contractor and all lower-tier subcontractors performing public works services to be currently registered with the California DIR, as specified in California Labor Code section 1725.5. California Labor Code section 1771.1 provides that a contractor or subcontractor shall not be qualified to bid on, be listed in a bid proposal (subject to the requirements of Section 4104 of the California Public Contract Code), or engage in the performance of any contract for public work, unless currently registered and qualified to perform public work pursuant to California Labor Code section 1725.5. The Contractor shall list the Contractor's current DIR registration number, and the current DIR registration number of all subcontractors, as part of its Bid Proposal.

Further information can be found on DIR's website at http://www.dir.ca.gov/Public-Works/Contractors.html. The above summary is provided solely for informational purposes, and does not in any way affect the Contractor's and subcontractors' obligation to comply in all respects with all other applicable laws and regulations. The Contractor shall disseminate these provisions to every lower-tier subcontractor.

5.6.3 Apprentices on Public Work Projects

The Contractor and any subcontractor or subconsultant shall comply with California Labor Code section 1777.5 et seq., and implementing regulations set forth in Title 8 of the California Code of Regulations, governing the employment of apprentices. Contractor and any subcontractor or subconsultant performing Public Work will be subject to penalties for apprenticeship violations in accordance with Labor Code section 1777.7. Please refer to the link below for guidance in meeting your obligation to satisfy the apprentice requirements for this Project:
https://www.dir.ca.gov/das/DASApprenticesOnPublicWorksSummaryOfRequirements.htm.

5.6.1 Receipt of Workers' Wages, Fee for Registering or Placing Persons in Public Works

The Contractor and any subcontractor or subconsultant shall comply with California Labor Code sections 1778 and 1779 of the California Labor Code, which read as follows:

Section 1778. "Every person, who individually or as a representative of an awarding or public body or officer, or as a contractor or subcontractor doing public work, or agent or officer thereof, who takes, receives or conspires with another to take or receive, for his own use or the use of any other person any portion of the wages of any workman or working subcontractor, in connection with services rendered upon any public work is guilty of a felony."

Section 1779. "Any person or agent or officer thereof who charges, collects, or attempts to charge or collect, directly or indirectly, a fee or valuable consideration for registering any person for public work, or for giving information as to where such employment may be procured, or for placing, assisting in placing, or attempting to place, any person in public work, whether the person is to work directly for the State, or any political subdivision or for a contractor or subcontractor doing public work is guilty of a misdemeanor."

5.6.2 Travel and Subsistence Payments

Each worker needed to execute the Work must be paid travel and subsistence payments as defined in the applicable collective bargaining agreements filed in accordance with Section 1773.1 of the California Labor Code.

5.6.3 Workday

In accordance with the provisions of Division 2, Part 7, Chapter 1, Article 3 of the Labor Code, State of California, and in particular Sections 1810 to 1815 inclusive, thereof, eight (8) hours labor shall constitute a days' work and no laborer, worker, or mechanic in the employ of said Contractor, or any subcontractor doing or contracting to do any part of the Work contemplated by this Agreement, shall be required or permitted to work more than eight (8) hours in any one calendar day, and forty (40) hours in any one calendar week unless compensated at not less than time and a half as set forth in California Labor Code Section 1815. However, if the prevailing wage determination requires a higher rate of pay for overtime than is required under said Section 1815, then the overtime rate must be paid, as specified in California Code of Regulation Title 8, Group 3, Section 16200(a)(3)(F). The Contractor and each subcontractor shall also keep an accurate record showing the names and actual hours worked of all workers employed by them in connection with the work contemplated by this Agreement, which record shall be open at all reasonable hours for the inspection of the CITY or its officers or agents and by the Division of Labor Standards Enforcement of the Department of Industrial Relations, their deputies or agents; and it is hereby further agreed that said Contractor shall forfeit as a penalty to the CITY, the sum of the greater of (i) Twenty-Five and No/100 Dollars ($25.00) or (ii) the maximum penalty allowable by statute for each laborer, worker or mechanic employed in the execution of this Agreement by the Contractor or by any

subcontractor for each calendar day during which such laborer, worker or mechanic is required or permitted to labor more than eight (8) hours in any one calendar day and forty (40) hours in one calendar week in violation of these provisions.

5.6.4 Labor Discrimination

The Contractor and any subcontractor or subconsultant shall comply with California Labor Code Section 1735, which reads as follows:

Section 1735. "No discrimination shall be made in the employment of persons upon public works because of the race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, marital status, or sex of such persons, except as provided in Section 12940 of the Government Code, and every contractor for public works violating this Section is subject to all the penalties imposed for violation of this chapter."

Contractor agrees that it shall not discriminate against any person on account of their sex, race, color, religious creed, ancestry, national origin, disability, medical condition, marital status, age, gender, military or veteran status, genetic information, or sexual orientation in violation of the Fair Employment and Housing Act or the Unruh Civil Rights Act. Upon a final determination by a court of competent jurisdiction that the Grantee has violated either of these Acts, the CITY may, at its option, (1) withhold payments to Contractor under this Agreement until Contractor complies; or (2) suspend or terminate this Agreement. Contractor shall include the provisions of this paragraph in every subcontract, including procurement of materials and lease of equipment, unless specifically exempted by the CITY.

5.6.5 Asbestos Related Work

All work involving asbestos containing material must be performed in accordance with California Labor Code, Sections 6501.5 through 6510, inclusive, and California Administrative Code, Title 8, Section 5208 and all other pertinent laws, rules, regulations, codes, ordinances, decrees and orders.

5.6.6 Compliance with Environmental Laws

During construction, the Contractor shall comply with all pertinent requirements of Federal, State, and local environmental laws and regulations, including, but not limited to, the Federal Clean Air Act, State and local air pollution and noise ordinances, construction site erosion control regulations.

5.6.7 Public Records Act

5.6.7.1 Ownership and Disclosure

Except as otherwise provided herein, all records, documents, drawings, plans, specifications, and all other information relating to the conduct of CITY'S business, including information submitted by the Contractor ("Records"), shall become the exclusive property of CITY and shall be deemed public records. Said Records are subject to the provisions of the California Public Records Act (Government Code § 6250 et seq.). The CITY'S use and disclosure of its records are governed by this Act. The CITY will use its best efforts to inform the Contractor of any request for any financial records or documents marked "Trade Secret," "Confidential" or "Proprietary" provided by the Contractor to CITY. The CITY will not advise as to the nature or content of documents entitled to protection from disclosure under the California Public Records Act.

5.6.7.2 Litigation Related to Disclosure

In the event of litigation concerning the disclosure of any Records, CITY'S sole involvement will be as a stakeholder, retaining the Records until otherwise ordered by a court. The submitting party, at its sole

expense and risk, shall be fully responsible for any and all fees for prosecuting or defending any action concerning the Records and shall indemnify and hold CITY harmless from all costs and expenses including attorney's fees in connection with any such action.

5.7 Certified Electricians

Workers performing work for an electrical contractor installing, constructing, or maintaining any electrical system covered by the National Electrical Code shall be certified as a General Electrician per California Labor Code Section 3099.

5.8 Contractor's Safety Responsibility

The Contractor shall be solely and completely responsible for conditions of the jobsite, including safety of all persons and property during performance of the Work. This requirement shall apply continuously and not be limited to normal working hours. Safety provisions shall conform to U.S. Department of Labor (OSHA), the California Occupational Safety and Health Act (Cal OSHA), and all other applicable Federal, State, County, and local laws, ordinances, codes, including but not limited to the requirements set forth in Article 12 – SAFETY: PROTECTION OF PERSONS AND PROPERTY, and any regulations that may be detailed in other parts of these Contract Documents. In the event of conflicting requirements, the most stringent requirement as it pertains to the Contractor's safety responsibility, shall be followed by the Contractor. Refer to Article 12 - SAFETY: PROTECTION OF PERSONS AND PROPERTY

5.9 Nonstandard Working Hours

The Contractor may be required to prosecute the Work at night or outside of the normal working hours defined in Section 01140-1.04 C Hours of Work and Overtime. At the sole reasonable direction of CITY, such work may be required due to project or operational constraints as defined in Section 01140 or if emergencies arise as provided for in Article 5.5.3-Provisions for Handling Emergencies. When required, ordered, or permitted to work at night, the Contractor shall provide sufficient and satisfactory lighting and other facilities therefore. Except as provided in 5.5.3-Provisions for Handling Emergencies, for work outside of the normal working hours, the Contractor shall receive no extra payment, but compensation shall be considered as having been included in the GMP stipulated for the Work, except for authorized work performed outside of the Agreement.

5.10 Cooperation with Other Contractors

This paragraph shall serve as notice to the Contractor that the CITY may allow other contracts for other work at or near the Site of this Work. The Contractor shall afford other Contractors reasonable opportunity for the delivery and storage of their materials and the execution of their work, and shall properly connect and coordinate its work with theirs.

Should construction be under way by other forces or by other Contractors within or adjacent to the limits of the work or in the vicinity of the work to be done under this Agreement, the Contractor shall so conduct its operations as to interfere to the least possible extent with the work of such other forces or Contractors.

Any difference or conflicts which may arise between the Contractor and any other forces or Contractors, creating delays or hindrance to each other, shall be adjusted as determined by the Construction Manager.

ARTICLE 6 - SUBCONTRACTORS

6.1 Incorporation of Contract Documents

CONTRACTOR may enter into Subcontracts with various Subcontractors for portions of the Work. The Subcontracts shall require each Subcontractor, to the extent of the Work to be performed by such Subcontractor, to assume towards CONTRACTOR all the obligations and responsibilities which CONTRACTOR assumes towards CITY. All Subcontracts shall incorporate the terms of this Agreement and the Contract Documents to the extent applicable to the Work to be performed by the Subcontractor.

6.2 Approval of Subcontractors

Those portions of the Construction Work that the CONTRACTOR does not intend to perform with CONTRACTOR's own personnel shall be performed under Subcontracts. A proposed list of Subcontractors shall be submitted to CITY for approval. Proposed Subcontractors will be deemed accepted unless CITY objects in writing within five (5) days after submission by CONTRACTOR.

ARTICLE 7 - TIME AND PROGRESS OF THE WORK

7.1 Commencement of Work

Within five (5) calendar days after execution of the Agreement, written Notice to Proceed will be issued by the City to Contractor. Notwithstanding other provisions of the Agreement, the Contractor shall not be obligated to perform the Work, and the City shall not be obligated to accept or pay for such Work performed by the Contractor, prior to City's issuance of the Notice to Proceed. The Contractor shall provide the required Agreement bonds and evidences of insurance prior to the City's execution of this Agreement and prior to commencement of any Work.

The Contractor shall commence execution of the Work within five (5) days after the date established in the Notice to Proceed for the commencement of Contract Time.

The Contractor shall give the Construction Manager written notice not less than five (5) working days in advance of the actual date on which the Work is to begin on the Site (excluding Preconstruction Services performed under the Agreement) will be started. The Contractor shall be entirely responsible for any delay in the Work which may be caused by its failure to give such notice.

7.2 Contract Time

All time limits for Substantial Completion, and Final Completion as stated in the Contract Documents are of the essence of the Agreement. The counting of Working or Calendar Days shall begin five (5) Calendar Days from the date of the Notice to Proceed. The Contractor shall prosecute the Work so that the various portions of the Work shall be complete and ready for use within the times specified in Exhibit H-COMPLETION TIMES AND LIQUIDATED DAMAGES. It is expressly understood and agreed by and between the Contractor and the City that the Contract Time(s) for Contract Milestones, Substantial Completion of the Work and for Final Completion are reasonable times taking into consideration the average climatic and economic conditions and other factors prevailing in the locality and the nature of the Work known as of the date this Agreement is entered into.

7.3 Delays

7.3.1 Notice of Delays

When the Contractor foresees a delay in the prosecution of the Work and, in any event, promptly upon the occurrence of a delay to its Work, the Contractor shall notify the Construction Manager in writing of the occurrence of delay, providing the estimated extent of the delay and its cause. The Contractor shall take immediate steps to prevent or mitigate, if possible, the occurrence or continuance of the delay.

The Contractor agrees that no claim shall be made for any occurrence of delay that is not the subject of a written notice and that is not submitted to the attention of the Construction Manager within ten (10) calendar days of its occurrence. The City may accept a delay with more than ten (10) calendar days of notice if the City finds that the Contract was acting in good faith and the City was not prejudiced by the Contractor's failure to timely provide the required notice.

7.3.2 Non-Excusable Delays

Non-excusable delays in the prosecution of the Work are delays which were caused by the Contractor, or by its subcontractors and suppliers, at any tier level, or delays which could have been avoided by the exercise of care, prudence, and diligence on the part of the Contractor or its subcontractors or suppliers, at any tier level. The Contractor shall receive no compensation or time extension for such delay. The determination of Non-Excusable Delays shall be made solely by the Construction Manager. In the event that the Contractor is not in agreement with the Construction Manager's decision, the Contractor may appeal the decision by submitting to the City (for consideration), evidence that supports the Contractor's claim for an Excusable Delay consideration.

7.3.3 Excusable Delays

Excusable Delays in the prosecution or completion of the Work are delays which are not caused by or within the control of Contractor and which could not have been avoided by the exercise of care, prudence, foresight, and diligence on the part of the Contractor or its subcontractors or suppliers, at any tier level. In addition, before a delay will be deemed an "Excusable Delay," the delay must prevent the Contractor from proceeding with at least seventy-five (75%) percent of the normal labor and equipment force for at least five (5) hours per day toward completion of the current critical activity item(s) on the latest approved progress schedule submitted by Contractor in accordance with the Contract Documents. The Contractor shall receive no compensation for such delay unless such delay also qualifies as a Compensable Delay, as described below. The following are examples of Excusable Delays:

A. Site Availability; Failure or inability of CITY to make available any or all of the Site in accordance with the requirements of the Schedule.

B. Regulatory and Governmental Authority; Failure or inability of CITY or CONTRACTOR to obtain necessary zoning changes, variances, code changes, permits or approvals from any governmental authority, or failure to obtain any street or alley vacations required for the performance of the Work, except to the extent due to the fault or neglect of CONTRACTOR.

C. Separate Contractor's Acts or Omissions; Delays resulting solely from the acts or omissions of Separate Contractors; provided however, only to the extent Separate Contractors perform their work improperly and not in accordance with any applicable critical path schedule.

D. Force Majeure; Delays resulting from Force Majeure.

E. Differing Site Conditions; Differing, unusual or concealed site conditions that could not reasonably have been anticipated by CONTRACTOR in preparing the Schedule.

F. Hazardous Materials; Delays resulting from the existence or discovery of Hazardous

Materials on the Site not brought to the site by CONTRACTOR or any Subcontractor.

G. Applicable Laws; Delays resulting from changes in Applicable Laws occurring after the date of execution of this Agreement.

H. CITY Acts or Omissions; Delays occurring solely due to the acts or omissions of CITY and those within the control of CITY, including, but not limited to, Separate Contractors.

I. Abnormal Delays; Delays caused by fire, unusual storms, floods, tidal waves, earthquakes, strikes, labor disputes, freight embargoes, and shortages of materials shall be considered as Excusable Delays insofar as they prevent the Contractor from proceeding with at least seventy-five (75%) percent of the normal labor and equipment force for at least five (5) hours per day toward completion of the current critical activity item(s) on the latest favorably reviewed progress schedule.

J. Weather Delays; Delays caused by inclement weather conditions defined in 8 CCR 2940.3 or the conditions resulting from inclement weather shall be considered as "Excusable Delays" if they prevent the Contractor from proceeding with at least seventy-five (75%) percent of the normal labor and equipment force listed in the published schedule as being engaged in the current critical activity item for a period of at least five (5) hours per day toward completion of such operation or operations, and the crew is dismissed as a result thereof.

K. Material Shortages; Upon the Contractor's submission of satisfactory proof to the Construction Manager, shortages of material may be considered an "Excusable Delay" upon the satisfaction of the conditions set forth herein. The Contractor must demonstrate that the Contractor has made every effort to obtain such materials from all known sources within reasonable reach of the proposed Work. Only the physical shortage of material, caused by unusual and unforeseeable circumstances, will be considered as eligible for an "Excusable Delay," and no consideration will be given to any claim that the material could not be obtained at a reasonable, practical, or economical cost or price, unless it is shown to the satisfaction of the Construction Manager that such material could have been obtained only at exorbitant prices entirely out of line with current rates, taking into account the quantities involved and usual practices in obtaining such quantities. A time extension for shortage of material will not be considered for material ordered or delivered late or whose availability is affected by virtue of the Contractor's or its subcontractor's or supplier's mishandling of the procurement for such material. The above provisions apply equally to equipment to be installed in the Work. Nothing herein is intended to affect the Contractor also needing to demonstrate that the delay must prevent the Contractor from proceeding with at least seventy-five (75%) percent of the normal labor and equipment force for at least five (5) hours per day toward completion of the current critical activity item(s) on the latest favorably reviewed progress schedule.

7.3.4 Compensable Delays

Compensable Delays in the prosecution or completion of the Work are delays which meet each of the following three elements: (1) delays which result from causes beyond the control of the Contractor and which could not have been avoided by the reasonable exercise of care, prudence, and diligence on the part of the Contractor or its subcontractors or suppliers, at any tier level; (2) delays that prevent the Contractor from proceeding with at least seventy-five (75%) percent of the normal labor and equipment force for at least five (5) hours per day toward completion of the current critical activity item(s) on the latest approved progress schedule; and (3) delays that are caused by one of the following three causes:

A. CITY Acts or Omissions; Delays due to the actions and/or inactions of the City,

Construction Manager, Engineer or any of their agents or employees.

B. Differing Site Conditions; Delays due to differing site conditions as defined in Article 7.3.3.E-DIFFERING SITE CONDITIONS.

C. Separate Contractor's Acts or Omissions; Delays due to other contractors employed by the City who interfere with the Contractor's prosecution of the Work as defined above.

7.3.5 Concurrent Delays

Concurrent delays are those delay periods when the prosecution of the Work is delayed during the same period of time due to causes from a combination of the delays defined in Article 7.3.2-NON-EXCUSABLE DELAYS, Article 7.3.3-EXCUSABLE DELAYS, or Article 7.3.4-COMPENSABLE DELAYS. During such concurrent delay periods, time extensions will be granted in accordance with Article 7.4-TIME EXTENSIONS; however, the Contractor will be granted a non-compensable time extension, and the City shall not assess its actual costs as defined in Article 7.4.1-NON-EXCUSABLE DELAYS, nor will the City assess Liquidated Damages.

7.4 Time Extensions

7.4.1 Non-Excusable Delays

The Contractor shall receive no compensation or time extension for Non-Excusable Delays.

7.4.2 Excusable or Compensable Delays

If the Contractor is delayed in the performance of its Work as defined in Article 7.3.3-EXCUSABLE DELAYS, or Article 7.3.4-COMPENSABLE DELAYS, then the Contract Time(s) will be extended by the City for such time that, the Contractor shows, and the City agrees (which agreement will not be unreasonably withheld), the Project's critical path completion dates will be delayed, provided that the Contractor strictly fulfills the following:

A. The Contractor shall have provided written notification, in accordance with Article 7.3.1-NOTICE OF DELAYS;

B. The Contractor shall have submitted in writing a request for an extension of time to the Construction Manager stating at a minimum the cause of the delay and the estimated number of days being requested. The Contractor's request for a time extension shall be submitted within fifteen (15) days of the Contractor furnishing its written notice pursuant to Article 7.3.1-NOTICE OF DELAYS. In the case of an Excusable Delay or Compensable Delay that allegedly is impacting the Contractor's operations for a period longer than fifteen (15) days, the Contractor shall update its request for a time extension, including updating its time impact analysis, every thirty (30) days until the delay is no longer allegedly impacting the Contractor's operations.

C. If the Contractor maintains that the delay at issue is a Compensable Delay, the Contractor shall submit an estimate of the additional compensation for Field Overhead and Indirect Home Office Overhead (per Article 7.4.4-FIELD OVERHEAD AND INDIRECT HOME OFFICE OVERHEAD FOR COMPENSABLE DELAYS that it is seeking in regard to the alleged delay. This estimate shall be included with the Contractor's request for time extension that is described in paragraph B, above. In the case of a Compensable Delay that allegedly is impacting the Contractor's operations for a period longer than fifteen (15) days, the Contractor shall update its estimate of additional compensation every thirty (30) days until the delay is no longer allegedly impacting the Contractor's operations.

D. If requested by the Construction Manager, the Contractor shall provide sufficient information to the Construction Manager to assess the cause or effect of the alleged delay (as well as additional compensation in the case of Compensable Delay), or to determine if other concurrent delays affected the Work. Such additional information shall be furnished within fifteen (15) days of the Construction Manager's request for additional information.

E. Time extensions due to Excusable or Compensable Delays will be granted only if such delays involve controlling critical path operations which would prevent completion of the whole Work within the specified Contract Time(s), as described in the above conditions for determination of "Excusable Delay" or "Compensable Delay."

Construction Manager will, in writing, approve or reject the Contractor's request for a time extension within fifteen (15) days of the latter of (i) the Construction Manager's receipt of the Contractor's complete request for a time extension; or (ii) the Construction Manager's receipt of the additional information referenced in paragraph C, above. If Construction Manager does not provide a written response within such fifteen (15) day time period, the Contractor's request shall be deemed denied by the City.

If the Construction Manager determines that the Contractor is entitled to a time extension, during such approved extension of time, neither extra compensation for engineering, inspection and administration nor damages for delay will be charged to the Contractor.

7.4.3 Weather Delays

For Weather Delays, the Contractor will be granted a non-compensable time extension for weather caused delays, pursuant to Article 7.3.3.J-WEATHER DELAYS, over and above an allowance as provided for in Exhibit H-Completion Times and Liquidated Damages. No time extensions for weather delays will be granted until the total number of weather days exceeds this allowance.

Should the Contractor fail to complete the Work within the time specified in the Agreement, as extended in accordance with this clause if appropriate, the Contractor shall pay to the City liquidated damages in accordance with Article 7.5-Liquidated Damages.

7.4.4 Field Overhead and Indirect Home Office Overhead for Compensable Delays

The Contractor shall be compensated for field overhead and indirect home office overhead expenses due to Compensable Delays for periods of time when the Work is delayed as defined in Article 7.3.4-COMPENSABLE DELAYS. However, no payment shall be made for compensable delays which occur during a concurrent delay as defined in Article 7.3.5-CONCURRENT DELAYS. As a condition precedent to payment for field overhead and indirect home office overhead, the Contractor must fulfill all conditions as provided in Article 7.4.2-EXCUSABLE OR COMPENSABLE DELAYS. Compensation will be calculated in accordance with 7.4.4.1 and 7.4.4.2 below. No additional markup for overhead or profit shall be provided for such field overhead and indirect home office overhead expenses.

Payment to the Contractor for indirect overhead expenses will be made only if the extended Contract Time period granted for the compensable delay(s) is required to complete the Work following the depletion of the original Contract Time period and any time extensions granted other than compensable time extensions. Payment for field overhead and indirect home office overhead shall be calculated as follows:

7.4.4.1 Field Overhead

For those allowable delay periods as described in Article 7.4.4-FIELD OVERHEAD AND INDIRECT HOME OFFICE OVERHEAD FOR COMPENSABLE DELAYS, the Contractor shall be reimbursed for its field overhead based on:

A. Actual invoice costs for on-site field offices and temporary utilities as described in Section 01500, TEMPORARY FACILITIES AND UTILITIES.

B. Actual labor costs as shown in Exhibit C, GUARANTEED MAXIMUM PRICE, COST OF WORK AND FEE, for field office staff.

C. Fair rental values acceptable to the Construction Manager as described in Article 9.6-Cost Determination, for construction equipment idled due to the delay.

D. Actual Errors and Omissions insurance costs attributable to delay periods.

7.4.4.2 Indirect Home Office Overhead

For those delay periods as described in the introduction of Article 7.4.4-FIELD OVERHEAD AND INDIRECT HOME OFFICE OVERHEAD FOR COMPENSABLE DELAYS, the Contractor shall be reimbursed for its indirect home office overhead based on the following formula:

[Guaranteed Maximum Price ($) divided by the Contract Time Period (Calendar Days)] x 0.03 = Daily Indirect Home Office Overhead ($/Calendar Day)

As it is impractical to determine the actual home office overhead, such reimbursement shall encompass full payment for any and all indirect home office overhead expenses for such periods of time for the Contractor and all subcontractors. Distribution of the markup amount among the Contractor and all subcontractors and suppliers is the responsibility of the Contractor.

7.5 Liquidated Damages

City and the Contractor recognize that time is of the essence of this Agreement and that the City will suffer financial loss if the Work is not completed within the times specified in Exhibit H-COMPLETION TIMES AND LIQUIDATED DAMAGES, plus any extensions thereof allowed in accordance with Article 7.4-TIME EXTENSIONS. It is hereby understood and agreed that it is and will be difficult and/or impossible to ascertain and determine the actual damage which the City will sustain in the event of and by reason of the Contractor's failure to fully perform the Work or to fully perform all of its Agreement obligations that have accrued by the times for completion as specified in Exhibit H-COMPLETION TIMES AND LIQUIDATED DAMAGES.

It is, therefore, agreed in accordance with California Government Code Section 53069.85 that the Contractor will forfeit and pay to the City liquidated damages in the amount set forth in Exhibit H, COMPLETION TIMES AND LIQUIDATED DAMAGES, per day for each and every calendar day that expires after the times for completion specified for each construction milestone except as otherwise provided by extension of time pursuant to Article 7.4-TIME EXTENSIONS. It is further understood and agreed in accordance with California Government Code Section 53069.85 that the liquidated damages sum specified in this provision is not manifestly unreasonable under the circumstances existing at the time this Agreement was made, and that the City may deduct liquidated damages sums in accordance with this provision from any payments due or that may become due the Contractor.

Liquidated damages will continue to accrue at the stated rate until the completion of any defined completion milestone(s) and Final Completion of Work, all as set forth in Exhibit H, COMPLETION TIMES AND LIQUIDATED DAMAGES. Accrued liquidated damages may be deducted by the City from amounts due or that become due to the Contractor for performance of the Work. Liquidated

damages may not be waived or reduced by the City unless expressly waived or reduced in writing by the City.

ARTICLE 8 - PAYMENT AND COMPLETION

8.1 Guaranteed Maximum Price ("GMP") and GMP Shared Savings

CITY shall pay for CONTRACTOR's performance under this Agreement the Cost of the Work and Fee (as described in Exhibit C-GUARANTEED MAXIMUM PRICE, FEE, AND COST OF WORK hereto); provided, however, that the sum of the Cost of the Work and the Fee shall not exceed the GMP, as adjusted by Change Order/Directive in accordance with the Contract Documents. CONTRACTOR bears the risk of its increased costs due to market price increases (including escalating costs for materials).

8.2 Shared Savings

CONTRACTOR shall be compensated for actual work completed based on the Cost of Work and Fee up to the amount of the GMP. If CONTRACTOR's actual total Cost of the Work and Fee is less than the GMP, upon Final Completion, the CONTRACTOR shall be entitled to receive a negotiated percentage of the GMP Savings as described in Exhibit C-GUARANTEED MAXIMUM PRICE, FEE, AND COST OF WORK hereto. "GMP" Savings shall mean the positive difference, if any, when the actual Total Cost of the Work and Fee is subtracted from the GMP; provided, however, that unused Allowance monies, if any, shall not be subject to shared savings.

8.3 Schedule of Values

Contractor will be required to submit a complete schedule of values upon selection of proposal to facilitate contract negotiation within ten (10) days of notice. Schedule of values should set forth the various portions of the Work, and the portions of the GMP allocated to each portion.

8.4 Applications for Payment

CONTRACTOR shall deliver to CITY not more than once each month an Application for Payment covering the Cost of Work and Fee applicable to the Work performed during the immediately preceding month. With each Application for Payment CONTRACTOR shall submit such evidence as may be necessary to demonstrate costs incurred on account of Cost of the Work during such month and the percentage of completion of each category of Work. CITY may reject requests for payment, or portions thereof, for Work, or portions thereof, not performed or completed.

8.5 Amount of Progress Payments

CITY shall pay CONTRACTOR the actual Cost of the Work and Fee, if any, through the period covered by the Application for Payment, less Retention as set forth in Article 8.6 below, provided that the aggregate payment amount before retention will not exceed the percentage of completion of the Work multiplied by the GMP (excluding items of the GMP not subject to retention). CITY may additionally withhold from progress payments such amounts pursuant to stop payment notice claims as required by law and CITY administrative regulation 4.01.

8.6 Retention, Escrow Agreement, Final Payment

Five percent (5%) Retention shall be withheld from each progress payment until the expiration of thirty-five (35) days following the recordation of the notice of completion; provided however, CITY shall

continue to retain such amount as required by law and/or CITY administrative regulation 4.01. CONTRACTOR may elect to establish an escrow account for securities in-lieu of the five percent (5%) Retention in a form of escrow agreement compliant with law and subject to approval by the CITY Attorney (form of escrow agreement is attached as Exhibit F–IN LIEU OF SECURITIES ESCROW AGREEMENT. Release of Retention monies shall constitute the Final Payment.

8.7 Early Release of Subcontractor Retention. [reserved]

8.8 Payment for On-Site and Off-Site Stored Materials.

8.8.1 Payment for Materials:

8.8.1.1 Payment may be made for those materials delivered to the site but not incorporated in the work to the extent that the materials are included in the Construction Schedule as cost-loaded material delivery activities.

8.8.1.2 Payment for materials delivered will not be made before the respective shop drawings, installation instructions and O&M manuals have been submitted, reviewed, and accepted in accordance with Section 01330, Submittal Procedures.

8.8.1.3 To receive payment for materials delivered to the site, but not incorporated in the work, it shall be necessary for the CONTRACTOR to submit to the ENGINEER, at least 7 days prior to the end of said month, a list of such materials.

8.8.1.4 At their sole discretion, the ENGINEER will approve items for which payment as for On-Site and Off-Site Stored Materials is to be made.

8.8.1.5 The list of materials and invoices shall be clearly identified by referencing the associated activity on the cost loaded schedule.

8.8.1.6 Payment for materials delivered to the site or a bonded warehouse will be made in an amount equal to the respective suppliers' invoices(s) for the actual net cost for the item(s) delivered plus delivery charges in accordance with payment terms of the Agreement.

8.8.1.7 The CONTRACTOR's actual net cost for the materials must be supported by invoices of suppliers.

8.8.2 Proper storage and protection of materials shall be provided by the CONTRACTOR. Final payment shall be made only for materials actually incorporated in the work and, upon acceptance of the work, all materials remaining for which advance payments had been made shall revert to the CONTRACTOR, unless otherwise agreed, and payments made for these items shall be deducted from the final payment for the work.

8.9 Title to Construction Work

CONTRACTOR warrants that title to all Construction Work covered by an Application for Payment shall pass to CITY no later than the time of payment. CONTRACTOR further warrants that upon submittal of an Application for Payment, all Construction Work for which Applications for Payment have been previously issued and payments received from CITY shall, to the best of CONTRACTOR's knowledge, information and belief, be free and clear of liens, claims, security interests or encumbrances in favor of CONTRACTOR, Subcontractors, material suppliers, or other persons or entities making a claim by reason of having provided labor, materials or equipment relating to the Construction Work.

8.10 Withholding of Payment

CITY may withhold payment on account of an Application for Payment if required or authorized by any Applicable Law, or to the extent necessary to protect CITY from loss because of:

A. defective Work not remedied;

B. third party claims filed or reasonable evidence indicating probable filing of such claims;

C. failure of CONTRACTOR to make payments of undisputed amounts to Subcontractors for labor, materials or equipment;

D. damage to CITY or to a Separate Contractor caused by the fault or neglect of CONTRACTOR to the extent not reimbursed by insurance; or

E. reasonable evidence that the Work will not be Substantially Completed within the Contract Time due to Inexcusable Delay, and that the unpaid balance of the GMP would not be adequate to cover liquidated damages for the anticipated Inexcusable Delay.

8.11 Failure of Payment; Interest

In accordance with Public Contract Code §20104.50, CITY shall pay CONTRACTOR interest on any progress payment, which is made by CITY more than thirty (30) days after CITY receives an undisputed and properly submitted written payment request. Said interest shall be equal to the rate set forth in Code of Civil Procedure §685.010(a), and shall begin to accrue upon the expiration of said thirty (30) day period. Any written request for a progress payment which CITY determines to be disputed, improper or not suitable for payment for any reason shall be returned to CONTRACTOR within seven (7) days after receipt by CITY, along with a written statement of the reason or reasons why such request is disputed, improper or not suitable for payment.

8.12 Occupancy by CITY Prior to Acceptance

CITY reserves the right to Beneficial Occupancy and without charge by CONTRACTOR. In those areas of the Work which are completed, CITY may store materials, equipment, and supplies, and may perform partial operation.

8.13 Substantial Completion

When CONTRACTOR considers the entire Work complete and ready for its intended use, CONTRACTOR shall certify in writing to CITY that the entire Work is substantially complete provide CITY with a Certificate of Substantial Completion. Within a reasonable time thereafter, CITY and CONTRACTOR shall make an inspection of the Work to determine the status of completion. If CITY does not consider the Work substantially complete, CITY will notify CONTRACTOR in writing giving reasons therefor. If CITY considers the Work substantially complete, CITY will accept a corresponding partial Certificate of Substantial Completion. There shall be attached to the Certificate a Punch List of items to be completed or corrected before Final Acceptance and Final Payment.

8.14 Final Completion

When the Work is fully completed, CONTRACTOR shall provide CITY with a Certificate of Final Completion and shall request final inspection in writing. Additionally, CONTRACTOR shall provide legally effective releases or waivers satisfactory to CITY of all lien rights arising out of or liens filed in connection with the Work. Within ten (10) calendar days of receipt of such completed request form, CITY shall make final inspection. If following final inspection, CITY determines that the Work (including all Punch List items) has been fully completed, CITY will process a Notice of Completion. If

CITY determines that the Work is not complete after receipt of certification from CONTRACTOR, CONTRACTOR shall be notified in writing of deficiencies. After the deficiencies have been corrected, the procedure for final inspection as set forth above shall again be initiated by CONTRACTOR. In the event CITY determines the Work is fully completed, CITY shall initiate process of attaining a notice of completion.

8.15 Waiver of Claims at Final Payment

Acceptance of final payment by CONTRACTOR shall constitute a waiver of all claims by CONTRACTOR, except those previously made in writing and identified as unsettled at the time of final payment.

8.16 Construction Allowance Items

CONTRACTOR must have prior written authorization from CITY to begin work on allowance item scope. Upon approval of an invoice for work covered by an allowance item, the CITY shall pay for CONTRACTOR's performance under this Agreement the actual Cost of the Work and Fee (as described in Exhibit D - CONSTRUCTION ALLOWANCE ITEMS AND AMOUNTS hereto). When the approved invoices for the actual Cost of the Work is more or less than the amount of an allowance item, the Contract GMP will be adjusted by Change Order; provided, however, that the sum of the actual total cost of each allowance item shall not exceed the approved Allowance Amount of each, as adjusted by Change Order/Directive in accordance with the Contract Documents.

8.17 Contingency [reserved]

8.18 Audits and Access to Records.

The Contractor must maintain all books, records, documents, and other evidence directly pertinent to the performance of the Work in accordance with generally accepted accounting principles and practices. The Contractor must also maintain all financial information and data used by the Contractor in the preparation or support of any cost submission, including the Contractor's estimate, any Change Order, Dispute, Claim, Pay Application, or other request for equitable adjustment. City and its representatives will have access upon five (5) business days advanced written notice, during normal business hours, to all Contractor's books, summary reports, records, accounts, estimates, documents, detailed financial information, certified payroll records, AIS records and all other information and documentation relevant to the Work for the purposes of inspection, audit, and copying. The Contractor will, at no cost to City, provide reasonable facilities for such access, and inspection purposes. The City will arrange for and pay all costs of copying.

The Contractor agrees to include and make the requirements of this article, applicable to all subcontractors listed in their DESIGNATION OF SUBCONTRACTORS list.

Audits conducted pursuant to this article, will be in accordance with general accepted auditing standards and established procedures and guidelines of the reviewing or audit agency.

The Contractor agrees to provide requested information and reports resulting from access to records to City, subject to execution of an appropriate confidentiality order if requested.

Records must be maintained and made available during the performance of the Work and for four (4) years after Final Payment, and until final settlement of all Disputes or Claims, whichever occurs later.

The right of access provisions of this article, applies to all financial records pertaining to the Agreement:

A. To the extent the records pertain directly to Agreement performance;

B. To the extent required for verification of the costs incurred where such costs are the basis for billings pursuant to the Agreement including Change Orders;

C. To the extent there is credible evidence that Contractor has violated the federal False Claims Act and the California False Claims Act or that fraud, gross abuse, or corrupt practices may be involved; and

D. If the Agreement is terminated for default or convenience.

Access to records is not limited to the required retention periods. City's Authorized Representative or designee must be granted access to records at any reasonable time for as long as the records are required to be maintained.

In the event that City's audit determines that Contractor has billed for any costs that are ineligible for reimbursement or for any reason should not have been paid, or the Contractor's fee has been improperly applied or calculated, Contractor shall promptly refund all improper payments following receipt of City's written notice and explanation of the alleged overpayments or improper fee and shall be responsible to pay City for the City's reasonable costs to perform the audit unless the Contractor establishes that the overpayment or improper fee was the result of an unintentional, inadvertent clerical error.

ARTICLE 9 - CHANGES IN THE WORK

9.1 Contract Held Valid.

Any change in the Scope of Work or deviation from the Contract Documents including, without limitation, Extra Work or Omitted Work, shall not invalidate the original Contract, and shall be performed under the terms of the Contract Documents. The difference in cost of the work affected by such change will be added to or deducted from the Guaranteed Maximum Price (GMP), as the case may be.

9.2 Execution of Changes

A. Only the Contractor or the City may initiate changes in scope of Work or deviation from Contract Documents.

B. Changes in the Work may be accomplished after execution of the Contract where they are documented by an executed Field Directive, Field Order, or Change Order in accordance with applicable provisions of the Contract Documents.

C. Changes in the Work shall be performed under applicable provisions of the Contract Documents. If unit prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are so changed in a proposed Change Order or Change Directive that application of such unit prices to quantities of Work proposed will cause substantial inequity to CITY or CONTRACTOR, the applicable unit prices for such change order/directive shall be equitably adjusted. No GMP adjustment on account of a Change Order shall include CONTRACTOR's or Subcontractor's profit, Fee, home office overhead or a formula allocation of indirect costs unless otherwise specifically allowed hereunder.

D. The prices agreed upon and any agreed upon adjustment in Contract Time shall be incorporated in the written order issued by the City, which shall be written so as to show acceptance on the part of the Contractor as evidenced by its signature. By signature of the Change Order, the Contractor acknowledges that the adjustments to the GMP and Contract

Time contained in the Change Order are in full satisfaction and accord and so waives any right to claim any further cost and time impacts at any time during and after completion of the Contract for the changes encompassed by the Change Order.

9.3 Definitions

9.3.1 Incidental Work

Incidental work includes reasonably implied parts of the work not shown on Drawings nor described in Specifications, but which is necessary or normally or customarily required as a part of the Work shown on the Drawings or described in the Specifications to provide a complete installation which is fully connected and tied into the existing facilities and processes and is fully functional and operational. Incidental work shall be treated as if fully described in Specifications and shown on Drawings, and expense thereof shall be included in the Guaranteed Maximum Price (GMP). Incidental work shall be performed by Contractor and included in the Cost of the Work without an increase in the GMP.

9.3.2 Extra Work

New or unforeseen work, or added work of a different character or function; or that involves revisions of the details of the Work on which Contractor based its GMP. If the extra work increases the Contractor's Cost of the Work and/or time to perform the Work, and is approved by the City via a written Change Order, the GMP and/or Contract Times shall be adjusted as provided in the Contract Documents. Extra Work shall not include Work which is shown, detailed or specified in the Contract Documents or which constitutes "Incidental Work" as defined within the Contract Documents definition above.

9.4 Change Directives

Changes in the Work may be directed by a Construction Change Directive prepared and signed by the OWNER'S REPRESENTATIVE. A Construction Change Directive signed by the CONTRACTOR indicates agreement of the CONTRACTOR with the actions specified in the Directive, including the inclusion or absence of an adjustment in Contract Amount or Contract Time or the method for determining them. The following procedures shall apply with respect to Change Directives.

A. Upon receipt of a Change Directive signed by CITY, CONTRACTOR shall promptly proceed with the change in the Work involved and advise CITY of CONTRACTOR's agreement or disagreement with the method, if any, provided in the Change Directive for determining the proposed adjustment in the GMP or the Schedule. If CONTRACTOR receives a written communication signed by CITY which CONTRACTOR believes is a Change Directive but is not so identified, it shall not proceed with the change in the Work until it receives from CITY a written confirmation that such communication is in fact a Change Directive.

B. A Change Directive signed by CONTRACTOR indicates the agreement of CONTRACTOR with the contents thereof, and shall convert the Change Directive to a Change Order.

C. If CONTRACTOR does not respond promptly or disagrees with the method for adjustment in the GMP or Schedule, the method and adjustment shall be determined as provided in these contract documents. In such case, CONTRACTOR shall keep and present, in such form as CITY may request, an itemized accounting, together with appropriate supporting data.

D. Pending final determination of cost to CITY, amounts not in dispute shall be included in Applications for Payment. The amount of credit to be allowed by CONTRACTOR to CITY for a deletion or change which results in a net decrease in the GMP shall be actual net cost. When

both additions and credits covering related Work or substitutions are involved in a change, the allowance for Fee shall be figured on the basis of net increase, if any, with respect to that change.

E. If CITY and CONTRACTOR do not agree with the adjustment in the Schedule or the GMP, such disagreement shall be submitted for dispute resolution in accordance with the provisions of this Contract.

9.5 Contract Modification Procedures

9.5.1 Request for Proposal (RFP)

A. The City may issue a Request for Proposal (RFP) to the Contractor in connection with the City considering an addition to, or deletion from, or other change in the Work. RFPs shall not be deemed to be directions to proceed with any addition, deletion or change to the Work.

B. Whenever the Contractor is required to prepare a cost proposal in response to an RFP, and whenever Contractor is entitled to submit a cost proposal and elects to do so, Contractor shall prepare and submit to City for consideration a cost proposal using a form provided by the CM or the Contractor may submit another form if deemed acceptable to the Construction Manager. All cost proposals must contain a complete breakdown of costs of credits, deducts, and extras; and itemize materials, labor, equipment, special services, taxes, and markups. All Subcontractor Work shall be so indicated. Individual entries on the Cost Proposal form shall follow the cost items defined in Cost Determination in this Section. The Contractor shall provide all required cost information requested by an RFP within fourteen (14) days after receiving the RFP.

C. Upon receipt of the Contractor's cost proposal, which shall include a detailed itemized breakdown as prescribed in this Section, the Construction Manager will act promptly thereon. If Construction Manager takes no exception to the cost proposal, Construction Manager will prepare Change Order for City and Contractor signatures, provided that City has elected to proceed with the changed Work. If a cost proposal is not acceptable to the Construction Manager, the Construction Manager will indicate to Contractor the unacceptable items in the proposal. Except as otherwise provided in this Section, Contractor shall have seven (7) days in which to respond to Construction Manager with a revised cost proposal.

D. If the parties do not agree on the price or time adjustment in response to an RFP, City may issue a unilateral change order pursuant to the Agreement, Article 9.5.3-FIELD ORDER-FORCE ACCOUNT WORK. Contractor shall perform the changed Work, notwithstanding any claims or disagreements of any nature, with the understanding that it preserves all rights to pursue adjustments to the GMP and/or Contract Time in connection with the change.

E. When the necessity to proceed with a change does not allow the Construction Manager sufficient time to conduct a proper check of the Contractor's cost proposal (or revised cost proposal), Construction Manager may order Contractor to proceed with the change, with the understanding that parties will negotiate in good faith to determine the value of the change at the earliest practical date. In this event, the value of change, with corresponding equitable adjustment to the GMP, shall not be more than any increase or less than any decrease proposed by the Contractor's cost proposal.

9.5.2 Field Directive/Supplemental Instruction Resulting from RFI's, Submittals or other instructions from the Engineer and/or City

A. The Contractor may be issued a Field Directive or Supplemental Instructions resulting from an RFI, Submittal or other instructions from the Engineer and/or City.

B. If the Contractor is satisfied with Field Directive or Supplemental Instruction and does not request change in the GMP or Contract Time, then the Field Directive or Supplemental Instruction shall be executed by the Contractor without a Change Order.

C. If the Contractor believes the Field Directive/Supplemental Instruction results in additional Cost of the Work or a change in the GMP or Contract Time, then Contractor must notify the Construction Manager within ten (10) days following receipt of Field Directive/Supplemental Instruction and before proceeding with this work. If the Construction Manager considers Contractor's notice to be justified, the instructions of the Field Directive/Supplemental Instructions will be revised or a proposed Change Order will be issued for the City's consideration. The Contractor shall have no claim for additional compensation or extension of the schedule because of any such additional instructions unless the Contractor provides the Construction Manager written notice thereof within the time frame specified above, unless the City is not Prejudiced by Contractor's untimely notice In addition, the Contractor shall within fifteen (15) days from the date of the Contractor furnishing written notice provide a detailed justification and analysis as well as estimated pricing and Time Impact Analysis to support any request for time extension. Should the work at issue impact Contractor's operations for a period longer than fifteen (15) days, Contractor shall update its request for additional compensation and/or additional time, every thirty (30) days until the disputed work is no longer allegedly impacting Contractor's operations. In addition, Contractor shall comply with the requirements of the Agreement concerning Records of Disputed Work and Submission of Disputed Work Costs, respectively.

D. Should the Contractor proceed with the work affected before receipt of a response from the Construction Manager, any portion of the work which is not done in accordance with the City's interpretation, clarifications, instructions, or decisions is at Contractor's risk.

E. If the Contractor and Construction Manager still do not agree on the Field Directive's impact to the GMP or Contract Time, then Contractor may appeal to the Engineer for decision. If the Engineer concurs with the Construction Manager's position, the Contractor will be directed again in writing to make the changes covered in the Field Directive/Supplemental Instructions and Contractor shall do so notwithstanding any claims or disagreements of any nature. Contractor may file a Notice of Potential Claim and Claim in accordance with the Agreement.

9.5.3 Field Order- Force Account Work

A. If either the amount of work or payment for a Change Order cannot be determined or agreed upon beforehand, the City may direct by issuing a unilateral Change Order or Field Order that the work be done on a force account basis. The term "force account" shall be understood to mean that payment for the work will be made based on an accounting of the Contractor's Cost of the Work as described in the Agreement, Exhibit C-Guaranteed Maximum Price, Cost of Work and Fee, and Article 9.6-Cost Determination.

B. Prior to the commencement of force account work, the Contractor shall notify the Construction Manager of its intent to begin work. The Contractor shall maintain accurate cost records, separate from the cost categories for the balance of the Work, which depict all

costs incurred for the authorized force account work. Upon request by the Construction Manager or City, these cost records must be made available for review as provided in the Agreement.

C. All subcontractors that expend labor, equipment and materials on force account work shall record those costs daily by using a form provided by or approved by the Construction Manager. The subcontractor reports, if found to be correct, shall be signed by the subcontractor, Contractor and Construction Manager, or inspector, and a copy of which shall be furnished to the Construction Manager no later than the working day following the subcontractor's performance of said work. The Daily Extra Work Report sheet shall thereafter be considered the true record of force account work provided by the subcontractor. If the Construction Manager, or inspector, does not agree with the labor, equipment and/or materials listed on the subcontractor's daily force account report, the Construction Manager, or inspector, shall sign-off on the items on which they are in agreement. The Construction Manager shall then review the items of disagreement and will advise the Contractor, in writing, of its determination. If the Contractor disagrees with this determination, it shall have the right to file a claim notice per the Agreement.

D. The Contractor shall maintain its records in such a manner as to provide a clear distinction between the direct costs of subcontractor work paid for on a force account basis and the costs of other operations.

E. To receive partial payments and final payment for force account work, the Contractor shall submit, in a manner approved by the Construction Manager, detailed and complete documented verification of the Contractor's and any of its subcontractor's Costs of the Work involved in the force account pursuant to the pertinent unilateral Change Order or Field Order. Such costs shall be submitted within thirty (30) days after said work has been performed. No payments will be made for work billed and submitted to the Construction Manager after the thirty (30) day period has expired, unless City is not prejudiced by Contractor's untimely billing and submittal of costs.

9.5.4 Construction Change Directive (CCD)

A. CCD is a written order prepared by the Construction Manager and signed by the City, directing a change in the Work and stating a proposed basis for adjustment, if any, in the Contract Price or Contract Time.

B. If at any time the City believes in good faith that a timely Change Order will not be agreed upon using the foregoing procedures, the City may issue a CCD with its recommended cost and/or time adjustment. Upon receipt of CCD, Contractor shall promptly proceed with the change of Work involved and concurrently respond to City's CCD within ten (10) calendar days.

C. Contractor's response must be any one of following:

1. Return CCD signed, thereby accepting City's response, time, and cost.
2. Submit a (revised if applicable) Cost Proposal with supporting documentation (if applicable, reference original Cost Proposal number followed by letter A, B, etc. for each revision), if City so requests.
3. Give notice of intent to submit a Claim as described in the Agreement.

D. If the CCD provides for an adjustment to the Contract Sum, the adjustment shall be based on one of the following methods:

1. Mutual acceptance of a lump sum properly itemized and supported by sufficient

substantiating data to permit evaluation.

2. Unit prices stated in the Contract Documents or subsequently agreed upon.
3. Cost to be determined in a manner agreed by the City and Contractor.
4. Cost to be determined pursuant to Article 9.6-Cost Determination.

E. A CCD signed by Contractor indicates the agreement of Contractor therewith, including adjustment in Contract Sum and Contract Time or the method for determining them. Such agreement shall be effective immediately and shall be recorded as a Change Order.

F. If Contractor does not respond promptly or disagrees with the method for adjustment in the Contract Sum, the method and the adjustment shall be determined by Construction Manager on the basis of reasonable expenditures and savings of those performing the Work attributable to the change including, in case of an increase in the Contract Sum, an allowance for overhead and profit in accordance with Articles 9.6.3 and 9.6.4-Allowable Markups. If the parties still do not agree on the price for a CCD, Contractor may file a Claim in accordance with the Agreement. Contractor shall keep and present, in such form as Construction Manager may prescribe, an itemized accounting together with appropriate supporting data. Unless otherwise provided in the Contract Documents, costs for the purposes of this paragraph shall be limited to those provided in Article 9.6-Cost Determination.

G. Pending final determination of cost to the City, amounts not in dispute may be included in Applications for Payment.

9.5.5 Documentation for All Changes

A. Upon request of the Construction Manager, the Contractor shall provide the following information to support the request for change in cost or time:

1. Copy of original quotations, purchase order or invoices to verify costs included in original pricing.
2. Copy of all quotations, purchase order or actual invoices to support new costs submitted.
3. Copy of all insurance and bond costs resulting from change.
4. Copy of all quantity takeoff sheets for materials, labor and equipment.
5. Certified payroll records.
6. A list of equipment with manufacturer's name and model number and the alphanumeric designation used in the Equipment Rental Rates prepared by the California Department of Transportation, unless the equipment is included in the Agreement, Exhibit C-Guaranteed Maximum Price, Cost of Work and Fee.
7. Invoices for all non-owned rental equipment.
8. Other information, as reasonably required, to document the labor, equipment and materials used.

B. Correlation of Other Items:

1. Contractor shall revise Application for Payment forms to record each authorized Change Order or CCD as a separate line item and adjust the GMP on the next monthly progress billing.

2. Contractor shall revise the Progress Schedules prior to the next monthly pay period to reflect the effects of all authorized Change Orders or CCDs.

3. Contractor shall enter changes in Project Record Documents prior to the next monthly pay period and provide a copy to the Engineer with progress billing.

9.6 Cost Determination

With respect to Change Orders which increase or decrease the Scope of Work described in Exhibit B-Contractor's Technical Proposal, are not due to the errors or omissions of CONTRACTOR and are not attributable to Excusable Delays or the contingencies set forth in Article 9.7 below, the GMP shall be increased (or decreased) by the following "Scope Change Costs":

9.6.1 Contractor's Direct Cost Categories

The Contractor's allowed direct costs are found in the Agreement, Exhibit C-Guaranteed Maximum Price, Cost of Work and Fees.

9.6.2 Subcontractor's Direct Cost Categories

The categories described below are defined to be direct costs for subcontractors at all tier levels.

No other type of costs will be allowable as a direct cost. Direct costs shall not include any labor costs or indirect costs pertaining to the subcontractor's managers or superintendents, their office and engineering staffs, the cost of their offices, facilities, vehicles, or anyone not directly employed on such work, nor small tools (as defined in item C-Subcontractor's Construction Equipment Rental Cost of this Article 9.6.2) nor supplies. All such items are considered indirect costs which form a part of the Contractor's and subcontractors' overhead expenses.

A. Subcontractor's Direct Field Labor

1. The cost of labor for workers (including forepersons when authorized by the Construction Manager) used in actual and direct performance of the work by the subcontractor will be the sum of the following:

    a. The actual wages paid plus any employer payments to, or on behalf of workers for fringe benefits including health and welfare, pension, vacation and similar purposes.

    b. All payments imposed by State and Federal Laws including, but not limited to, workers' compensation insurance, and social security payments. The rates used for workers' compensation insurance shall be actual rates paid by the subcontractor for each specific craft and broken down by wage rate if applicable to that craft.

    c. General Liability insurance burden, if applied to subcontractor's payroll. By formal submittal, the subcontractor shall provide adequate backup information to Construction Manager to verify this burden rate is indicative of the actual rates paid by the Contractor as a percent of labor.

2. Except as otherwise may be agreed to in writing by the Construction Manager, the actual wages and benefits paid for manual classifications of subcontractor's on- site workers will not, in the aggregate, be less than the current applicable wage for each classification as established by the State of California Department of Industrial

Relations.

3. Specifically prohibited from the subcontractor's labor costs are other payroll burden factors such as small tools (as defined in item C below), bonuses of any kind and safety incentives.

4. Subcontractor shall include the actual travel and/or subsistence costs, if any, as a separate line item under the labor cost category. Except as otherwise may be agreed to in writing by the Construction Manager, the actual travel and/or subsistence costs will not be less than established in the State of California Department of Industrial Relations.

B. Subcontractor's Materials

1. The cost of all materials, including all factory testing, freight and delivery costs of materials, accepted by the City and used in performing the work will be the cost to the subcontractor from the supplier thereof. All discounts for early payment shall accrue to the subcontractor unless the City's payment to subcontractor is paid to subcontractor before discount payment is due in which case discount savings will be fully credited to City on next progress billing. All rebates and all returns from the sale of surplus materials shall be credited to the Cost of the Work.

2. At the request of the Construction Manager, the subcontractor will obtain more than one quote for materials to be used to complete change order or force account work. Copies of all quotes shall be shown to the Construction Manager.

3. For materials used in construction of the Project which may have additional uses on other projects for the subcontractor's benefit, such as dimensional lumber, beams and plywood to form concrete or temporary diversion pipes, the subcontractor shall submit a material unit cost to cover use of these types of materials for the approval of the City prior to delivery to the Work Site. This unit cost shall take into account the use of such materials on other past and future projects.

C. Subcontractor's Construction Equipment Rental Cost

1. The cost of construction machinery and equipment for changes shall be based on fair rental cost or equivalent rental cost of owned equipment. Such costs will be allowed for only those days or hours during which the equipment is in actual use. Payment shall be based on actual rental and transportation invoices but shall not exceed the rental rates listed for such equipment in the State of California Department of Transportation publication entitled "Labor Surcharge and Equipment Rental Rates" which is in effect on the date upon which the work is performed. City-operated equipment rates shall not exceed the rates in the aforesaid Rental Rate publication plus the labor costs as provided in this section.

2. The aforesaid rental rates shall be deemed to include the cost of fuel, power, oil, lubrication, supplies, small tools, necessary attachments, repairs and maintenance of all kinds, depreciation, storage, insurance, labor except for construction equipment operators and any and all costs to the subcontractor incidental to the use of such construction equipment. All equipment must be in good working condition and suitable for the purpose for which it is to be used, as judged solely by the Construction Manager. Rental time will not be allowed while equipment is inoperative due to breakdowns.

3. Compensation for idle time of equipment through delays caused by the City will be made consistent with Section 8-1.09, Right of Way Delays, of the Caltrans Standard Specifications.

4. Small Tools. Individual pieces of equipment or tools having a replacement value of

$500 or less, whether or not consumed by use, are considered to be small tools and no rental payment will be made unless it can be demonstrated that the particular item is needed and purchased by the subcontractor solely for the completion of the Change Order work.

5. The rental time to be paid for equipment used to complete change order and force account work will be the time the equipment is in operation on the change order or force account work being performed or an approved outside rental rate from an equipment rental company provided such rental rate was approved by the Construction Manager prior to the equipment's transportation to the project for use in the change order or force account work.

6. For equipment not already on the project site to complete other portions of the Work, loading and transporting costs will be allowed for equipment approved by the Construction Manager to complete change order or force account work. The cost of transporting equipment in low bed trailers shall not exceed the hourly rates charged by established haulers in the area. The cost of transporting equipment shall not exceed the applicable minimum established rates of the California Department of Transportation.

D. Special Services used by Subcontractor

When the Construction Manager and the Contractor, by agreement, determine that special service or item of extra Work cannot be performed by forces of a subcontractor, service or extra Work item may be performed by a specialist. These types of services will be paid based on current market rates, subject to Construction Manager approval, which approval will not unreasonably be withheld.

9.6.3 Allowable Mark-Ups - Contractor

The Contractor's allowed mark-ups are found in Exhibit C Guaranteed Maximum Price, Cost of Work and Fees.

9.6.4 Allowable Mark-Ups – Contractor's Subcontractor(s)

The subcontractors shall be entitled to compensation for indirect field and home office overhead costs, and profit for Change Order work. This compensation shall be in the form of markup percentages applied to the direct cost of the Change Order increase or decrease of work, as further described below. The maximum markup which will be allowed for the subcontractor's combined overhead and profit will be:

A. For work by its own organization, the subcontractor may add up to the following percentages:

- Direct Field Labor: 15 percent
- Materials: 10 percent
- Equipment (owned or rented): 10 percent
- Special Services: 5 percent

B. For all such work done by subtier-subcontractors, such sub-subcontractors may add the same percentages as the subcontractor as listed in (9.6.4.A) above to its actual net increase in costs for combined overhead and profit. The subcontractor may then add up to five percent (5%) of the sub-subcontractor's total for its combined overhead and profit. No additional mark-ups will be allowed for further tier-ed subcontracts below a sub-subcontractor.

C. When both additional and deleted work are involved in any one change order, the combined overhead and profit shall be calculated on the basis of the net change, whether an increase or

decrease. For Change Order work which results in a net decrease in cost a minimum of five percent (5%) markup shall be added by the subcontractor to the sum of the direct labor, materials and equipment as a deduction for overhead, profit, and reduction in bond and insurance. The subcontractor shall not be entitled to nor claim for anticipated profits on work that has been omitted.

D. To the total of the subcontractor's actual costs and fees allowed herein under, not more than two percent (2%) shall be added for additional bonds, if bonds were required by the Contractor. The compensable percentage for the subcontractor's bonds shall be based on the subcontractor's actual bond costs, as substantiated through documentation formally submitted to the Construction Manager.

E. The added fixed fees shall be considered to be full compensation, covering the cost of general supervision, overhead, profit, small tools, incidentals and any other general expenses. The above fixed fees represent the maximum limits which will be allowed, and they include, but are not limited, to the subcontractors' indirect field and home office expenses and all other costs for cost proposal preparation, schedule analysis and preparation, operation and maintenance manual documentation, and record documents and change order administration.

9.6.5 Materials On Order at Time of Change Order

If acceptable material is ordered by the subcontractor for the deleted work prior to the date of notification of such deletion by the Construction Manager, and if orders for such material cannot be canceled, the subcontractor will be paid at the actual cost. In such case, the material paid for shall become the property of the City and City will pay for the actual cost of any further handling. If the material is returnable to the vendor, and if the Construction Manager so directs, the material shall be returned and the subcontractor will be paid for the actual costs of charges made by the vendor for returning the material. The actual cost of handling returned material will be paid for by the City.

9.6.6 Disallowed Costs in Change Order and Force Account Work

Disallowed subcontractor costs in Change Orders include, but are not limited to:

A. Interest cost of any type other than those mandated by statute;

B. Change Order preparation and review costs;

C. Meetings related to Change Orders;

D. Schedule preparation costs;

E. Submittal preparation costs;

F. Accounting and Invoicing costs related to Change Orders;

G. Developing and/or updating as-built drawings.

9.7 Change Orders on Account of Contingencies

With respect to Change Orders which are attributable to the following contingencies, the GMP shall be adjusted (increased or decreased) by the following **"Contingency Costs,"** consisting of the following:

9.7.1 Taxes

With respect to new, increases, or decreases in taxes arising after the date of this Agreement (other than taxes assessed based on the income of CONTRACTOR), the Change Order shall consist of the incremental amount of such new, increased or decreased taxes only.

9.7.2 Permit Fees

With respect to increases or decreases in fees for permits or other governmental certificates or instruments arising after the date of this Agreement, the Change Order shall consist of the incremental amount of such increases or decreases. To the extent this Agreement states that a permit or certificate is not required and CONTRACTOR is later required to procure such permit or certificate, all out-of-pocket costs reasonably associated therewith shall be included in the Change Order

9.8 Change Orders on Account of Excusable Delays

9.8.1 Construction Delay Costs

With respect to Change Orders, which are attributable to Excusable Delays, and subject to the exceptions set forth in Article 9.8.2 below, the GMP shall be increased by the following "Delay Costs":

A. Increased allowable labor costs resulting from wage increases paid due to the delay;

B. Premiums for overtime and extra shifts incurred in accelerating the Work, but only if acceleration is required in advance by CITY;

C. Additional general conditions costs which would not have been incurred but for the delay (itemized, and not based on a formula allocation);

D. Demobilization and remobilization costs; and

E. Additional items of Cost of the Work attributable to the Excusable Delay and which would not have been incurred but for the Excusable Delay.

9.8.2 Exceptions

With respect to the Excusable Delays described in Article 7.4.2, the following exceptions to the cost provisions of Article 9.8.1 above shall apply:

A. Failure or inability of CITY to make available any or all of the Site in accordance with the requirements of the Schedule is not a compensable delay if such Excusable Delay occurs prior to the commencement of the Construction Work.

B. Failure or inability of CITY or CONTRACTOR to obtain necessary zoning changes, variances, code changes, permits or approvals from any governmental authority; is not a compensable delay if such Excusable Delay occurs prior to the commencement of the Construction Work.

C. Changes in Applicable Laws. Additional compensation shall only be paid if the change in Applicable Law is not a change in law of general application (e.g., CAL/OSHA), but is a change in law specifically affecting the Project.

9.9 Change Orders on Account of Differing Site Conditions

If CONTRACTOR encounters conditions described in Article 7.3.3-Excusable Delays, in addition to the increase in the GMP on account of delay costs incurred by CONTRACTOR (as described in Section 9.8.1), the GMP shall also be increased by the additional Cost of the Work attributable to such conditions which would not have been incurred but for such conditions.

9.10 Cost Pricing Data and Access To Records

A. All cost and pricing data submitted by the Contractor with respect to any change, prospective or executed, or any claim for extra compensation shall be a true, complete, accurate and current representation of actual cost and pricing of the work. The Construction Manager may require a formal certification as to cost and pricing data submitted by the Contractor.

B. The Construction Manager shall have access to the records of Contractor and Subcontractors as provided in Article 8.18-Audits and Access to Records.

9.11 Time Extensions on Account of Change Orders.

CONTRACTOR shall be entitled to a time extension in connection with any Change Order to the extent its time of performance is extended due to such Change Order. CONTRACTOR shall present to CITY a CPM analysis showing how the Change Order affects the critical path of the Work.

9.12 Force Majeure

There shall be no additional compensation to CONTRACTOR on account of Force Majeure.

ARTICLE 10 - CORRECTION OF WORK

10.1 Correction of Work Prior to Completion

Prior to the date of Final Completion, CONTRACTOR shall correct Work which (a) CITY reasonably rejects as being defective or nonconforming to the requirements of the Contract Documents in a written notice delivered to CONTRACTOR or (b) CONTRACTOR recognizes is defective or nonconforming to the Contract Documents. If other portions of the Work are adversely affected by or are damaged by such defective Work, CONTRACTOR shall also correct, repair or replace such affected or damaged Work, as well as any other property of CITY or others damaged by such defective or nonconforming Work. Prior to the date of Final Completion, the cost of correcting any damaged or defective work shall be paid as a Cost of the Work.

10.2 Correction of Work After Completion

For defects identified by CITY and for which CITY has notified CONTRACTOR within a period of twelve (12) months after the date of Final Completion, or within such longer period as may be provided by special warranties contained in the Contract Documents, CONTRACTOR shall re-execute, correct, repair or replace all Work found to be defective or nonconforming to the Contract Documents (whether arising from a construction defect, error, omission or deficiency). If other portions of the Work are adversely affected by or damaged by such defective Work, CONTRACTOR shall also correct, repair or replace such affected or damaged Work, as well as any other property of CITY or others damaged by such defective or nonconforming Work.

10.3 Acceptance of Nonconforming Work

If CITY prefers to accept Work, which is not in accordance with the requirements of the Contract Documents, CITY may do so instead of requiring its removal and correction, in which case the GMP will be reduced as appropriate and equitable. Such adjustment shall be effected whether or not final payment has been made.

10.4 No Effect on Limitations

Nothing contained in this Article shall be construed to establish a period of limitation with respect to other obligations, which CONTRACTOR may have under the Contract Documents.

ARTICLE 11 - INSURANCE AND BONDS; INDEMNIFICATION

11.1 Insurance to be provided by CONTRACTOR

CONTRACTOR shall, at all times, maintain in full force and effect at a minimum the insurance required by this section; and CONTRACTOR shall not allow any subcontractor to commence Work until similar insurance required of the subcontractor has been obtained and filed.

11.2 Evidence of Coverage

CONTRACTOR shall, at all times, maintain in full force and effect at a minimum the insurance required by this section; and CONTRACTOR shall not allow any subcontractor to commence Work until similar insurance required of the subcontractor has been obtained and filed. An original Certificate of Insurance, and copies of all required endorsements, all in a form approved by the Risk Manager, evidencing all required coverage or policies shall be filed after the award of the bid and prior to approval of the Contract by the City Council. CONTRACTOR shall provide ten (10) Days prior written notice to CITY of any reduction of coverage limits or cancellation of the coverage or policies shall be given to the City of Roseville as Certificate holder.

11.3 Qualifying Insurers

With the exception of the State Compensation Insurance Fund, all required insurance policies shall be issued by companies licensed to do business in the State of California and who hold a current policy holders alphabetic and financial size category rating of not less than AVII according to the most recent issue of Best's Insurance Reports.

11.4 Summary of Insurance Requirements

Commercial General Liability, automobile liability, and worker's compensation insurance shall be maintained as shown in the table below.

Table 1: Summary of Insurance Required

Coverage	Limits
Commercial General Liability Minor Construction Projects (Projects under $1,000,000)	$2,000,000 each occurrence $4,000,000 aggregate Personal Injury: $2,000,000 each occurrence $4,000,000 aggregate
Commercial General Liability Major Construction Projects (Projects over $1,000,000)	$5,000,000 each occurrence $10,000,000 aggregate Personal Injury: $5,000,000 each occurrence $10,000,000 aggregate
Comprehensive Automobile Liability For bodily injury (including death) and property damage which provides	Total limits of not less than One Million Dollars ($1,000,000) combined single limits per accident, applicable to all owned, non-owned, and hired vehicles
Statutory Workers' Compensation and Employer's Liability Insurance	Limits of not less than One Million Dollars ($1,000,000) per occurrence.
Builder's Risk/Course of Construction Insurance	All Risk" type of builder's Risk Insurance of the type covering one hundred percent (100%) of the value of the Work performed under this Contract
Contractor's Pollution Liability Insurance	Combined Single Limit for each occurrence: $2,000,000 General Aggregate: $2,000,000
Professional Liability Submittals prepared by licensed California Engineer	Limit per claim of at least $2,000,000, and a $4,000,000 in the aggregate for errors and omissions.

11.5 Commercial General Liability.

11.5.1 Coverage or Endorsements

The Commercial General Liability policy shall include coverage or endorsements for:

A. Completed operations.

B. Losses related to independent contractors, products and equipment.

C. Explosion, collapse and underground hazards.

11.5.2 Copies to be Provided

The Commercial General Liability Insurance shall include the following, copies of which shall be provided:

A. Inclusion of the CITY of Roseville, and its officers, agents, employees and volunteers, as additional insured (except for workers' compensation as respects services or operations under the Contract. The additional insured endorsement for the general liability policy shall be at least as broad as the Insurance Services Office ("ISO") CG 20 38 04 13 or an equivalent, blanket endorsement or section of the policy. Endorsements must include coverage for on-going and completed operations. Endorsements shall cover the CITY of Roseville, its officers, agents, employees, and volunteers.

B. Cross liability and severability of interest clauses providing that the insurance applies separately to each insured except with respect to the limits of liability.

C. Stipulation that the insurance is primary and noncontributory, as evidenced by a separate endorsement (CG 20 01 04 13 or an equivalent) or section of the policy, and that neither CITY nor its insurers will be called upon to contribute to a loss.

D. Such insurance shall specifically cover the contractual liability of the CONTRACTOR.

E. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

F. Waiver of subrogation endorsement.

G. CONTRACTOR shall furnish a certificate for the period covered.

11.5.3 Claims Made Coverage – Special Notice

SPECIAL NOTICE - CLAIMS MADE COVERAGE:

Liability insurance coverage may not be written on a "claims made" basis. The Certificate of Insurance must clearly provide that the coverage is on an "occurrence" basis.

11.6 Comprehensive Automobile Liability

Comprehensive Automobile Liability for bodily injury (including death) and property damage which provides total limits of not less than One Million Dollars ($1,000,000) combined single limits per accident, applicable to all owned, non-owned, and hired vehicles.

11.7 Statutory Workers' Compensation and Employer's Liability Insurance

Statutory Workers' Compensation and Employer's Liability Insurance, including a waiver of subrogation endorsement and a Broad Form "All-States" Endorsement for all employees engaged in services or operations under the Contract. The employer's liability insurance shall provide limits of not less than One Million Dollars ($1,000,000) per occurrence. Both the worker's compensation and employer's liability policies shall contain the Insurer's waiver of subrogation in favor of CITY, its officers, agents, employees, and volunteers.

11.8 Builder's Risk/Course of Construction Insurance

CONTRACTOR shall be responsible for all loss, damage or destruction whatsoever to the Work called for by this Contract until the approval of a Notice of Completion. CONTRACTOR shall secure "All Risk" type of builder's Risk Insurance of the type covering one hundred percent (100%) of the value of the Work performed under this Contract (the value is presumed to be the Contract amount unless otherwise stated in Supplemental Conditions) and all materials, equipment, or other items to be

incorporated therein while the same are located at the construction site, a bonded warehouse, or its place of manufacture. At any time, the policy shall cover the value of the Work completed. The policy shall cover hazards including the losses due to fire, explosion, hail, rain, lightning, flood (separate insurance as needed), vandalism, malicious mischief, wind, collapse, aircraft, and smoke.

The policies providing such insurance shall name CITY as a loss payee as its respective interests may appear, and certified copies of such policies shall be filed with CITY. The maximum deductible allowable under the Builder's All Risk policy shall be five percent (5%) of the Contract amount.

Builder's Risk Insurance is not required for coverage of losses in excess of five percent (5%) of the Contract amount for damages resulting from earthquake in excess of a magnitude of 3.5 on the Richter scale, or tidal waves. Coverage in the amount of five percent (5%) of the Contract amount for such losses is required.

11.9 Contractor's Pollution Liability Insurance

Contractor's Pollution Liability Insurance. The Contractor shall obtain Pollution Liability Insurance. This insurance shall be written in comprehensive form either as a separate policy or as an endorsement to Contractor's general liability coverage and shall cover liability for bodily injury, property damage, and environmental damage resulting from pollution and related cleanup costs incurred, all arising out of any Work to be performed under the Agreement, including liability for and defense of lawsuits and regulatory actions. Coverage shall be provided for both Work performed on Site, as well as during the transport of hazardous materials. Coverage shall apply to sudden as well as gradual pollution conditions, including without limitation conditions resulting from the escape or release of smoke, vapors, fumes, acids, alkalis, toxic chemicals, liquids, or gases, natural gas, waste materials, or other irritants, contaminants, or pollutants, including asbestos. The liability limits shall be not less than:

- Combined Single Limit for each occurrence: $2,000,000.
- General Aggregate: $2,000,000.

If the coverage required is written on a claims-made coverage form:

- The retroactive date must be shown, and this date must be before the award date of the Agreement.
- Insurance must be maintained, and evidence of insurance must be provided for at least five (5) years after final payment.
- If coverage is canceled or non-renewed, and not replaced with another claims-made policy form with a retroactive date prior to the Agreement award date, the Contractor must purchase extended reporting period coverage for a minimum of five (5) years after Final Payment.
- A copy of the claims reporting requirements must be submitted to the City for review.

11.10 Professional Liability Insurance

All submittals required of the Contractor which are to be prepared by a licensed California engineer shall be prepared only by a licensed engineer who is covered by a professional liability insurance policy issued by a California-admitted carrier or a carrier authorized to do business in California with a Best's rating of A-: VII or better, with an limit per claim of at least $2,000,000, and a $4,000,000 in the aggregate for errors and omissions. Such insurance shall be maintained in effect by said engineer at all times while performing Work on the Project and for at least three (3) years after Final Completion of the Project.

Contractor shall submit an insurance certificate for such engineer prior to beginning Work for approval by the City.

11.11 Other Insurance Provisions.

A. The requirements of the Contract Conditions as to types and limits of insurance coverage to be maintained by CONTRACTOR, and any approval of insurance by CITY, are not intended to, and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by CONTRACTOR pursuant to the Contract, including, but not limited to, the provisions concerning indemnification, nor preclude CITY from taking any other action available to it under any other provision of the Contract or law.

B. CITY acknowledges that some insurance requirements contained in the Contract Conditions may be fulfilled by self-insurance on the part of CONTRACTOR. However, this shall not in any way limit liabilities assumed by CONTRACTOR under the Contract. Any self-insurance must be approved in writing by CITY, in its sole discretion and shall not reduce the limits of liability. Any deductibles or self-insured retentions ("SIR") must be declared on the certificate of insurance and approved by CITY in writing. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or CITY. CITY reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

C. CONTRACTOR agrees to include in its contracts with all subcontractors the same requirements and provisions of this Contract, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, CONTRACTOR shall require its subcontractors to agree to be bound to CONTRACTOR and CITY in the same manner and to the same extent as CONTRACTOR is bound to CITY under this Contract. Additionally, CONTRACTOR shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of CITY'S indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request. Alternatively, CONTRACTOR may insure subcontractor(s) under its own policy.

D. CITY, its officers, agents, employees and volunteers are to be covered as insureds with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of CONTRACTOR; and with respect to liability arising out of work or operations performed by or on behalf of CONTRACTOR including materials, parts or equipment furnished in connection with such work or operations. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under California Insurance Code Section 11580.04. In addition, the insurance policy may not contain language which prohibits additional insureds or other insurers from satisfying the self-insured retention or deductible.

E. The limits of insurance required in this Contract may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of CITY (if agreed to in a written contract) before the CITY'S own insurance shall be called upon to protect it as a named insured.

F. In the event CONTRACTOR retains the Architect/Engineer, CONTRACTOR shall require its Architect/Engineer to provide professional liability (errors and omissions) insurance (certificate and additional insured endorsement) in the amount of $2,000,000.

G. CITY RESERVES THE RIGHT TO WITHHOLD ANY PROGRESS PAYMENTS TO CONTRACTOR IN THE EVENT OF NONCOMPLIANCE WITH ANY INSURANCE REQUIREMENTS.

11.12 Payment, Performance and Warranty Bonds

CONTRACTOR shall furnish and deliver to CITY Performance, Labor & Materials, and Warranty Bonds issued by a surety prior to, and as a condition precedent to, commencement of the Construction Work on the Site; provided, however, the Warranty Bond shall be waived if such bond is not required pursuant to CITY'S request for proposals for the Project. The Labor & Materials and Performance Bonds shall be in a penal sum equal to one hundred percent (100%) of the GMP, and the Warranty Bond shall be in the penal sum equal to ten percent (10%) of the GMP. All bonds shall be in the form as set forth in Exhibit G hereto. All premiums for the Performance, Labor & Materials, and Warranty Bonds shall be a Cost of the Work. CITY shall have the right to withhold any payment(s) under this Agreement until CONTRACTOR has fully complied with this sub-section.

Table 2: Summary of Bonding Requirements

Bond Type	Requirement
Performance	100% of the Total Contract Price
Labor and Materials	100% of the Total Contract Price
Warranty	One year following the date of Final Completion Penal sum equal to ten percent (10%) of the GMP

11.13 Indemnification

To the fullest extent allowed by law, CONTRACTOR shall defend, indemnify, and hold harmless, CITY, its officers, employees, agents, and volunteers, and each and every one of them, from and against all actions, damages, claims, losses, expenses or other liabilities of every type and description, including reasonable attorney fees, to which they may be subjected or put, by reason of, or resulting from, the performance of the Work, whether upon or off the Work, including the loss of use thereof, that is caused in whole or in part by willful or reckless misconduct and/or any negligent or wrongful act or omission of CONTRACTOR, any Subcontractor, and anyone directly or indirectly employed by any of them or anyone for whose acts any of them may be liable, whether or not it is caused in part by a party indemnified hereunder, except for such claims arising from the sole or active negligence of CITY. The parties intend that this provision shall be broadly construed.

CONTRACTOR's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Agreement for the full period of time allowed by law. The defense and indemnity obligations of this Agreement are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Agreement.

ARTICLE 12 - SAFETY: PROTECTION OF PERSONS AND PROPERTY

12.1 Contractor's Responsibility for Site Safety

It is the intent of the parties that CITY is not an exposing, creating, controlling, or correcting employer under California Labor Code Section 6400. In accordance with generally accepted fabrication and

construction practices and all applicable Laws and Standards and Codes, CONTRACTOR shall have the authority and be solely and completely responsible for the safety of all property utilized and all persons performing under this Agreement. Moreover, the CONTRACTOR shall be the controlling employer and has the authority and responsibility to enforce safety for all fabrication, construction work, and Work performed under this Agreement.

The services of CITY'S contract administrator, if any, in conducting a review of CONTRACTOR's performance under this Agreement is not intended to include a review of the adequacy of CONTRACTOR's work methods, equipment or safety measures. If CITY and/or its contract administrator observes a safety violation related to the CONTRACTOR's performance under this Agreement, then CITY and/or its contract administrator will report the violation to the CONTRACTOR who is then responsible for assuring the violation is abated.

A. CONTRACTOR shall be responsible for initiating, maintaining and providing supervision of safety precautions and programs in connection with the Work, and shall also comply with any and all insurance carrier-mandated safety requirements and programs.

B. CONTRACTOR is hereby informed that work on this Project could be hazardous. CONTRACTOR shall carefully instruct all personnel performing under this Agreement in potentially hazardous work areas as to potential dangers and shall provide such necessary safety equipment and instructions as are necessary to prevent injury to personnel and damage to property.

C. All Equipment, Work and materials provided under this Agreement shall be in strict accordance with all applicable Laws and Standards and Codes, and attention is drawn to the requirements of CAL/OSHA.

D. CONTRACTOR shall perform under this Agreement so as not to expose personnel to, or to discharge into the atmosphere from any materials brought to the Site by CONTRACTOR, smoke, dust, asbestos, toxic chemicals or other air contaminants in violation of applicable Laws and Standards and Codes.

E. The Contractor shall indemnify, defend and hold CITY and Construction Manager, Engineer, Funding Agencies and their respective officers, officials, employees, agents and volunteers or other authorized representatives harmless to the full extent permitted by law concerning liability related to the Contractor's safety obligations in accordance with Article 11.14-Indemnification.

F. If death or serious injuries or serious damages occur, the accident shall be reported immediately by telephone or messenger to both the Construction Manager and the CITY. In addition, the Contractor shall furnish the Construction Manager with a copy of the Employer's Report of Injury immediately following any incident requiring the filing of said report during the prosecution of the Work under this Agreement. The Contractor shall also furnish the Construction Manager with a copy of the Employer's Report of Injury involving any subcontractors on this Project. The Contractor shall make all reports as are, or may be, required by any authority having jurisdiction, and permit all safety inspections of the Work being performed under this Agreement.

G. If a claim is made by anyone against the Contractor or any subcontractor on account of any accident, the Contractor shall promptly report the facts in writing to the Construction Manager, giving full details of the claim.

12.2 Safety Program

The Contractor shall establish, implement, and maintain a written injury prevention program as required by Labor Code Section 6401.7. Before beginning the Work, the Contractor shall file with the Construction Manager a written Contractor Safety Program that provides for the implementation of all of the Contractor's safety responsibilities in connection with the Work at the Site and the coordination of that program and its associated procedures and precautions with safety programs, precautions and procedures of each of its subcontractors and other Contractors performing work at the Site. The Contractor shall be solely responsible for initiating, maintaining, monitoring, coordinating, and supervising all safety programs, precautions, and procedures in connection with the Work and for coordinating its programs, precautions, and procedures of the other contractors and subcontractors performing the Work at the Site. The Safety Program should contain all the necessary elements for the Contractor to administer its program on the Site

The Contractor's compliance with requirements for safety and/or the Construction Manager's acceptance for filing of the Contractor's Safety Program shall not relieve or decrease the liability of the Contractor for safety. The Construction Manager's review of the Contractor's Safety Program is only to determine if the above listed elements are included in the program. The Contractor's completion of review of the Safety Program does not confirm adequacy of the Program to protect workers. The Contractor is solely responsible to determine adequacy of the program to protect workers per the applicable Labor Code Section.

12.3 Safety Supervisor

The Contractor shall appoint an employee as safety supervisor who is qualified and authorized to supervise and enforce compliance with the Safety Program. The Contractor shall notify the Construction Manager in writing prior to the commencement of work of the name of the person who will act as the Contractor's safety supervisor and furnish the safety supervisor's resume to the Construction Manager.

The Contractor will, through and with its Safety Supervisor, ensure that all of its employees and its subcontractors of any tier, fully comply with the Project Safety Policies. The Safety Supervisor shall be a full-time employee of the Contractor whose responsibility shall be for supervising compliance with applicable safety requirements on the Site and for developing and implementing safety training classes for all job personnel. The CITY shall have the authority to require removal of the Contractor's Safety Supervisor if the representative is judged to be improperly or inadequately performing the duties; however, this authority shall not in any way affect the Contractor's sole responsibility for performing this work safely, nor shall it impose any obligation upon the CITY to ensure the Contractor performs its work safely.

12.4 Applicable Laws

The Contractor shall comply with all applicable laws and regulations of any public body having jurisdiction for the safety of persons or property or to protect them from damage, injury or loss and shall erect and maintain all necessary safeguards for such safety and protection.

12.5 Safety Notices

In connection with the performance of the Work, CONTRACTOR shall provide notices and comply with all Applicable Laws bearing on the safety of persons and property and their protection from damage, injury or loss. The Contractor shall notify owners of adjacent property and of underground facilities and utility districts when prosecution of the Work may affect them and shall cooperate with them in the protection, removal, relocation, and replacement of their property.

12.6 Reasonable Precautions

CONTRACTOR shall take all precautions and implement all safety measures and requirements imposed by any Applicable Law. Without limiting the generality of the foregoing, CONTRACTOR shall take necessary precautions for the safety of, and shall provide necessary protection to prevent damage, injury or loss to:

A. Employees on the Work and other persons who may be affected thereby;

B. The Work and materials and equipment to be incorporated therein, whether in storage on or off the Site under care, custody or control of CONTRACTOR; and

C. Other property at the Site or adjacent thereto, such as trees, shrubs, lawns, walks, pavements, roadways, structures and utilities not designated for removal, relocation or replacement in the course of the Construction Work.

12.7 Specific Precautions

12.7.1 Confined Spaces

The Project requires work in confined spaces and requires compliance with CAL/OSHA and Federal OSHA requirements. Confined spaces for the purposes of this article shall be as defined by the Division of Industrial Safety. Work within confined spaces of this Project is subject to the definitions and applicable provisions of Section 5156 et seq., Title 8, Division 1, Chapter 4, Subchapter 7, Group 16, Article 108 of California Code of Regulations, and Title 29 Part 1926 of the Code of Federal Regulations.

In addition, the CITY classifies the following existing facilities as confined space: the interior of pipelines, vaults, manholes, reservoirs and any other such structure or space which is similarly surrounded by confining surfaces as to permit the accumulation of dangerous gases or vapors. The confined spaces are "permit" confined spaces as defined by OSHA and CAL/OSHA and therefore entry is allowed only through compliance with a confined space entry permit program by the Contractor that meets the requirements of 8 C.C.R. Section 5157. While the above-mentioned locations have been identified as permit confined spaces, other permit confined spaces may exist. It shall be the responsibility of the Contractor to identify and classify these confined spaces.

It is anticipated that the Contractor may encounter hazardous conditions within these permit confined spaces which include, but are not limited to the following:

A. Exposure to hydrogen sulfide, methane, carbon dioxide and other gases and vapors commonly found in municipal sewers which could have or has the potential of having Immediate Danger to Life or Health Conditions (IDLH).

B. Exposure to atmosphere containing insufficient oxygen to support human life.

C. Exposure to combustible, flammable and/or explosive atmosphere.

D. Exposure to sewage which may contain bacteriological, chemical and other constituents harmful to humans.

E. Work in conditions where engulfment or entrapment may occur.

F. Work in environments which may be slippery and/or have uneven work surfaces.

G. Work in structures where workers may trip, slip and/or fall several feet.

H. Exposure to an oxygen enriched environment.

12.7.2 Excavation Safety

A. Section 6705. In accordance with the provisions of Section 6705 of the Labor Code, the Contractor shall submit, in advance of excavation of any trench or trenches five feet or more in depth, a detailed plan showing the design of shoring, bracing, sloping, or other provisions to be made for worker protection from the hazard of caving ground during the excavation of such trench or trenches. If such plans vary from the shoring system standards set forth in the Construction Safety Orders of the Division of Industrial Safety in Title 8, Subchapter 4, Article 6, California Code of Regulations, the plans shall be prepared and signed by a registered civil or structural engineer employed by the Contractor, and all costs therefore shall be included in the price named in the Agreement for completion of the Work as set forth in the Contract Documents. Nothing in this article shall be deemed to allow the use of a shoring, bracing, sloping, or other protective system less effective than that required by the Construction Safety Orders. Nothing in this article shall be construed to impose a tort liability on the CITY, the Engineer, the Construction Manager, nor any of their officers, officials, employees, agents, consultants or volunteers. The CITY'S review of the Contractor's excavation plan is only for general conformance to the Construction Safety Orders.

   Prior to commencing any excavation, the Contractor shall designate in writing to the Construction Manager the "competent person(s)" with the authority and responsibilities designated in the Construction Safety Orders.

B. Section 6707. Pursuant to the provisions of California Labor Code Section 6707, each Proposal submitted in response to this RFBP shall contain, as a separate cost item, adequate sheeting, shoring, and bracing, or equivalent method, for the protection of life or limb in trenches and open excavation, exceeding five (5) feet, which shall conform to applicable safety orders. By entering an amount for this cost item below, the Proposer warrants that its action does not convey tort liability to the City, the Engineer, the Construction Manager, the Funding Agencies and their respective officers, employees, agents, and subconsultants.

12.7.1 Equipment Safety Provisions

The completed Work shall include the specified permanent safety devices, such as machinery guards and similar safety items, required by the State and Federal (OSHA) industrial authorities and applicable local and national codes. Further, any features of the Work, including CITY-selected equipment, subject to such safety regulations shall be fabricated, furnished, and installed in compliance with these requirements. All equipment furnished shall be grounded and provided guards and protection as required by safety codes. Where vapor-tight or explosion-proof electrical installation is required by safety codes, this shall be provided. Contractors and manufacturers of equipment shall be held responsible for compliance with the requirements included herein. The Contractor shall notify all equipment suppliers and subcontractors of the provisions of this paragraph.

12.7.1 Use of Explosives

Use of explosives is prohibited, unless approved in advance in writing by CITY. CITY may impose reasonable conditions on the use of explosives.

12.7.1 Loading Capacity

The Contractor shall determine safe loading capacities and shall not overload any structure, building, pipe or other existing facility beyond its safe capacity during construction. In addition to any requirements imposed by law, the Contractor shall shore up, brace, underpin and protect as may be necessary all foundations and other parts of all existing structures, facilities and improvements on the Site or adjacent to the Site which are in any way affected by the Contractor's excavations or other operations connected with the Work. Prior to commencing any work which in any way affects adjoining or adjacent land or buildings thereon, or public utilities, the Contractor shall notify the Construction Manager to discuss responsibilities for properly notifying the owners/occupants of adjacent land and the protective measures taken by the Contractor. Upon request of the Construction Manager, the Contractor shall meet with the recipient of any notice or attend local public meetings as proper public outreach on local impacts caused by completion of the Work should be communicated to any parties that may be affected prior to commencing any work.

12.8 Safety Violations

Should the Contractor fail to correct an unsafe condition, the CITY shall have the right to notify the Contractor through the Construction Manager that an unsafe condition may exist and must be corrected or the Work in question can be stopped in accordance with Article 4.6, CITY's Right to Stop the Work, until the condition is corrected to the satisfaction of the CITY. No extension of time or additional compensation will be granted as a result of any stop order so issued. The notification and suspension of such Work or the failure to provide such notification and suspension by the CITY shall not relieve the Contractor of its sole responsibility and liability for safety and the correction of any unsafe conditions.

The CITY shall have the authority to require the removal from the Project of any worker and the foreman and/or superintendent in responsible charge of the work where safety violations occur. The CITY also delegates such authority to the Construction Manager as well.

12.9 Public Safety and Convenience

The Contractor shall conduct its work so as to ensure the least possible obstruction to traffic and inconvenience to the general public and the residents in the vicinity of the Work and to ensure the protection of persons and property. No road or street shall be closed to the public except with the permission of the Construction Manager and the written approval by the proper governmental authority. Fire hydrants on or adjacent to the Work shall be accessible to firefighting equipment. Temporary provisions shall be made by the Contractor to ensure the use of sidewalks, private and public driveways and proper functioning of gutters, sewer inlets, drainage ditches and culverts, irrigation ditches and natural water courses.

12.10 Emergencies

In an emergency affecting the safety of persons or property, CONTRACTOR shall act, at CONTRACTOR's discretion, to prevent threatened damage, injury or loss. Additional costs or extensions of time caused by CONTRACTOR on account of an emergency not caused by the fault or neglect of CONTRACTOR shall be determined as provided in Article 9.8-Change Orders on Account of Excusable Delay.

12.11 Safeguards

CONTRACTOR shall erect and maintain, as required by existing conditions and performance of the Work, reasonable safeguards for safety and protection, including posting danger signs and other warnings

against hazards, promulgating safety regulations and notifying CITY and users of adjacent sites and utilities, and shall comply fully with the requirements of CAL/OSHA.

12.12 Security

CONTRACTOR shall take any and all precautions that may be reasonably necessary to render all portions of the Work, the Site and any adjacent areas affected by the Work secure in all material respects, to decrease the likelihood of accidents, and to avoid vandalism and other contingencies which are liable to delay the Work or give rise to claims or liabilities. CONTRACTOR shall furnish and install all necessary facilities to provide safe means of access to all points where Work is being performed. CONTRACTOR shall take all precautions and measures as may be reasonably necessary to secure the Project at all hours, including evenings, holidays and non-work hours. Such precautions may include provision of security guards.

12.13 Damage to Property at the Site

CONTRACTOR shall be responsible for any and all damage or loss to property at the Site, except to the extent caused by the acts or omissions of CITY or its representatives, agents or employees. The costs and expenses incurred by CONTRACTOR under this Article shall be paid as a Cost of the Work to the extent that such costs and expenses are in excess of or are not covered by required insurance, and to the extent of any deductibles. If such damage or loss is caused by CONTRACTOR, payment of such costs as Cost of the Work shall be limited by the provisions of Article 2.19.4 hereof.

12.14 Damage to Property of Others

A. CONTRACTOR shall avoid damage, as a result of CONTRACTOR's operations, to existing sidewalks, curbs, streets, alleys, pavements, utilities, adjacent property, the work of Separate Contractors and the property of CITY. CONTRACTOR shall repair any such damage caused by the operations of CONTRACTOR, which costs shall be paid as a Cost of the Work to the extent that such costs and expenses are in excess of or are not covered by required insurance, and to the extent of any deductible.

B. Failure of CONTRACTOR to Repair Damage. If CONTRACTOR fails to commence the repair of damage to property as set forth in this Article, and/or diligently pursue such repair, then CITY, after ten (10) Days prior written notice to CONTRACTOR (provided CONTRACTOR has not commenced such repair during such ten (10) Day period), may elect to repair such damages with its own forces and to deduct from payments due or to become due to CONTRACTOR amounts paid or incurred by CITY is correcting such damage.

12.15 Remedy of Damage

CONTRACTOR shall promptly remedy damage and loss to property referred to in Article 12.14-Damage to Property of Others (items B and C) caused in whole or in part by CONTRACTOR, or anyone employed by or in control of CONTRACTOR, or any Subcontractor. All costs incurred by CONTRACTOR in connection with its obligations under this Section shall be cost of the Work, but shall not increase the GMP.

ARTICLE 13 - DISPUTES

13.1 Disputes between CITY and CONTRACTOR

In the event of any dispute arising between CITY and CONTRACTOR regarding any part of the Contract or the Contract Documents, or the Parties' obligations or performance thereunder, and subject to any claims presentation requirements set forth in the Contract Documents, either Party may institute the dispute resolution procedures set forth herein. The Parties shall continue performance of their respective obligation hereunder notwithstanding the existence of a dispute.

13.2 Dispute Resolution Procedures

CONTRACTOR must submit all claims as defined in and in accordance with the claim resolution process set forth in Section 9204 of the Public Contract Code. Each such claim must be sent to CITY by registered mail or certified mail with return receipt requested and must contain reasonable documentation to support the claim. All claims must be received prior to acceptance of the Work and will be handled in accordance with the procedures set forth in Section 9204 of the Public Contract Code.

ARTICLE 14 - EVENTS OF DEFAULT AND REMEDIES; TERMINATION

14.1 CONTRACTOR Events of Default

The following shall be considered "CONTRACTOR Events of Default":

A. If CONTRACTOR fails or neglects to carry out the Work in accordance with the provisions of the Contract Documents, and fails, after seven (7) Days' notice from CITY, to commence a cure to correct such failure or neglect and thereafter diligently pursue such cure to completion;

B. If CONTRACTOR materially breaches this Agreement and fails, after seven (7) Days' notice from CITY, to commence a cure to correct such breach and thereafter diligently pursue such cure to completion (such breach to include, but not be limited to, failure to make payment to Subcontractors for materials or labor in accordance with the respective agreements between CONTRACTOR and the Subcontractors or violation of Applicable Laws);

C. If a custodian, trustee or receiver is appointed for CONTRACTOR, or if CONTRACTOR becomes insolvent or bankrupt, is generally not paying its debts as they become due or makes an assignment for the benefit of creditors, or CONTRACTOR causes or suffers an order for relief to be entered with respect to it under applicable bankruptcy law or applies for or consents to the appointment of a custodian, trustee or receiver for CONTRACTOR, or bankruptcy, reorganization, arrangement or insolvency proceedings, or other proceedings for relief under any bankruptcy or similar law or laws for the relief of debtors, are instituted by or against CONTRACTOR, and in any of the foregoing cases such action is not discharged or terminated within sixty (60) Days of its institution.

14.2 Remedies of CITY upon a CONTRACTOR Event of Default.

14.2.1 Termination of Contract

Upon the occurrence of a CONTRACTOR Event of Default, CITY shall have the right to terminate this Contract upon an additional seven (7) Days written notice to CONTRACTOR, provided that CONTRACTOR has not commenced a cure within such seven (7) Day period.

14.2.2 Without prejudice to any other rights or remedies of CITY, CITY may:

A. Take possession of the Site and of all materials, equipment, tools and construction equipment thereon owned by CONTRACTOR;

B. Accept assignment of Subcontracts; and

C. Finish the work by whatever reasonable method CITY may deem expedient.

D. When CITY terminates the Contract as aforesaid, CONTRACTOR shall not be entitled to receive further payment until the Work is finished. If the unpaid balance of the GMP exceeds costs incurred in finishing the Work, such excess shall be paid to CONTRACTOR, up to the amount due CONTRACTOR for work performed prior to termination. If such costs exceed the unpaid balance of the GMP, CONTRACTOR shall pay the difference to CITY.

14.3 Recourse to Payment and Performance Bonds

Upon the occurrence of a CONTRACTOR Event of Default and termination of this Contract by CITY, CITY may call upon the Surety to perform its/their obligations under the Payment and Performance Bonds, if applicable.

14.4 Remedies not Exclusive

Except as otherwise provided in this Agreement, no remedy hereunder is intended to be exclusive of any other remedy, but each and every such remedy shall be cumulative and shall be in addition to any other available legal or equitable remedy, existing now or hereafter. No delay or omission to exercise any right or power accruing shall impair any such right or power nor shall it be construed to be a waiver of any Event of Default or acquiescence therein, and every such right and power may be exercised from time to time as often as may be deemed expedient.

14.5 Termination or Suspension for Convenience.

14.5.1 Termination for Convenience.

CITY may, without cause, terminate this Contract, or any portion of Work to be performed hereunder at any time by a notice in writing from CITY to CONTRACTOR for CITY'S convenience. In such case, CITY shall pay to CONTRACTOR all funds due CONTRACTOR for work performed up to the date of termination, plus all demobilization and close-out costs, including, but not limited to, any amounts payable to Subcontractors for early termination, plus reasonable overhead and profit on Work performed. All funds due hereunder, including unpaid Retention, shall be released within thirty (30) Days of termination of the Contract for convenience, subject to any withholding required or authorized by any Applicable Law. In no event shall such amounts owed to CONTRACTOR exceed the GMP.

14.5.2 Suspension for Convenience

CITY may, without cause, order CONTRACTOR in writing to suspend, delay or interrupt the Work in whole or in part for such period of time as CITY may determine. An adjustment shall be made for

increases in the cost of performance of the Work, including Fee on the increased cost of performance, caused by the suspension, delay or interruption, in accordance with the Change Order provisions of this Contract. No adjustment shall be made to the extent (1) the performance is, was or would have been so suspended, delayed or interrupted by another cause for which CONTRACTOR is responsible or (2) that an equitable adjustment to the GMP and/or Schedule is made or denied under another provision of this Contract. Adjustments made in the cost of performance may have a mutually agreed fixed or percentage Fee.

ARTICLE 15 - MISCELLANEOUS PROVISIONS

15.1 Governing Law

This Contract shall be construed with and governed by the laws of the State of California.

15.2 Successors and Assigns

CITY and CONTRACTOR respectively bind themselves, their partners, shareholders, successors, assigns and legal representatives to the other Party hereto and to shareholders, successors, assigns and legal representatives of such other Party in respect to covenants, agreements and obligations contained in the Contract Documents. Neither Party shall assign the Contract without the prior written consent of the other.

15.3 Notice

Any notices to Parties required by this Agreement shall be delivered or mailed, U.S. first class, postage prepaid, addressed as follows:

If to CITY:	If to CONTRACTOR:
City of Roseville Attn: City Clerk 311 Vernon Street Roseville, CA 95678	Auburn Constructors, LLC Attn: John West, President 730 West Stadium Lane Sacramento, CA 95834-1130 (916) 924-0344

Address for Notice may be changed by Notice to the other Party.

15.4 Modifications

No Modifications or Change Orders shall be valid unless in writing and signed by CITY and CONTRACTOR.

15.5 Interpretation

Any and all headings of this Agreement are for convenience of reference only and do not modify, define or limit the provisions thereof. Words of any gender shall be deemed and construed to include correlative

words of the other gender. Words importing the singular number shall include the plural number and vice versa, unless the context shall otherwise be deemed to include all supplements and/or amendments to any such exhibits or documents entered into in accordance with the terms hereof and thereof. All references to any person or entity shall be deemed to include any person or entity succeeding to the rights, duties and obligations of such person or entity in accordance with the terms of this Agreement. Where reference is made in this Agreement to another Contract Document, the reference refers to that provision as amended or supplemented by the other provisions of the Contract Documents. In the event of any conflict between or among the Contract Documents, the provisions of this Agreement shall govern.

15.6 Severability

If any provision of this Agreement is held to be inoperative or unenforceable as applied in any particular case because it conflicts with any other provision hereof or any constitution, statute, ordinance, rule of law or public policy, or for any other reason, such holding shall not have the effect of rendering the provision in question inoperative or unenforceable in any other case, or of rendering any other provision herein contained inoperative or unenforceable to any extent whatever. The invalidity of any one or more phrases, sentences, clauses or sections contained in this Agreement shall not affect the remaining portions of this Agreement or any part hereof, and they shall otherwise remain in full force and effect.

15.7 Whole Agreement

This Agreement, the Exhibits hereto and the Contract Documents, specifications and Drawings shall constitute the entire agreement between the Parties, and no inducements, considerations, promises or other references shall be implied in this Agreement that are not expressly addressed herein

15.8 Accounting Records

CONTRACTOR shall keep full and detailed accounts and exercise such controls as may be necessary for proper financial management under this Agreement; the accounting and control systems shall be reasonably satisfactory to CITY. CITY and CITY'S accountants shall be afforded access to CONTRACTOR's records, books, correspondence, instructions, drawings, receipts, Subcontracts, vouchers, memoranda and other data relating to this Agreement, and CONTRACTOR shall preserve these for a period of three (3) years after final payment, or for such longer period as may be required by law.

15.9 No Waiver

Neither the inspection by CITY or its agents, nor any order or certificate for payment of money, nor payment for, nor acceptance of the whole or any part of the work by CITY, nor any extensions of time, nor any position taken by CITY or its agents shall operate as a waiver of any provision of this Agreement or of any power herein reserved to CITY or any right to damages herein provided, nor shall any waiver of any breach of this Agreement be held to be a waiver of any other or subsequent breach.

15.10 CONTRACTOR Shall Assume Risks

Until the Final Completion or acceptance by CITY of all Work under this Contract, the Work shall be under CONTRACTOR's responsible care and charge. CONTRACTOR shall rebuild, repair, restore and make good all injuries, damages, corrections, and repairs occasioned or rendered necessary by accidental causes of any nature, to all or any portions of the Work, except as otherwise stipulated.

15.11 General Liability of CONTRACTOR

Except as otherwise herein expressly stipulated, CONTRACTOR shall perform all the work and furnish all the labor, materials, tools power and light, and appliances, necessary or proper for performing and completing the Work herein required in the manner within the time herein specified. The mention of any specific duty or liability of CONTRACTOR shall not be construed as a limitation or restriction of any general liability or duty of CONTRACTOR and, any reference to any specific duty or liability shall be construed to be the purpose of explanation.

15.12 Attorney's Fees and Venue

If either Party commences any legal action against the other Party arising out of this Agreement or the performance thereof, the prevailing Party shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorney's fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. To the extent permitted by applicable law, each Party waives any defense that it may have based on lack of *in personam* jurisdiction or *forum nonconveniens*.

15.13 Third Party Beneficiaries

There are no third party beneficiaries to this Agreement.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ___ day of _____, 20___, and CONTRACTOR has caused this Agreement to be executed.

LIST OF EXHIBITS

Exhibit A	Contractor's Statement of Pre-Qualification [Not Used]
Exhibit B	Contractor's Technical Proposal
Exhibit C	Guaranteed Maximum Price, Cost of Work, and Fee
Exhibit D	Construction Allowance Items and Amounts
Exhibit E	Hazardous Materials
Exhibit F	In Lieu of Securities Escrow Agreement
Exhibit G	Bond Forms; Performance, Labor & Materials, and Warranty Bonds
	Note: Warranty Bond requirement may be waived at the option of CITY.
Exhibit H	Completion Times and Liquidated Damages

EXHIBIT A - CONTRACTOR'S STATEMENTS OF PRE-QUALIFICATION (SOPQ)

[NOT USED].

END OF EXHIBIT A

EXHIBIT B - CONTRACTOR'S TECHNICAL PROPOSAL

EXHIBIT C - GUARANTEED MAXIMUM PRICE, COST OF WORK, AND FEE

A. **GUARANTEED MAXIMUM PRICE**: The Guaranteed Maximum Price as of the date of execution of this Agreement is thirteen million eight hundred and eighty-three thousand three hundred dollars ($13,883,300.00), U.S. Currency.

B. **FEE AND CONTINGENCY:** The Fee and Contingency amounts, if any, are as detailed in the CONTRACTOR'S Proposal in Attachment Form 8-GUARANTEED MAXIMUM PRICE, COST OF WORK, and FEE.

C. **COST OF THE WORK:**

Cost of the Work. The term "Cost of the Work" shall mean costs incurred by CONTRACTOR in the performance of the Work, that do not exceed the GMP. The following are categories of cost and expense to be paid by CITY to CONTRACTOR as Cost of the Work:

1. Construction Costs.

1.1. Labor Costs.

1.1.1. Wages of construction workers directly employed by CONTRACTOR to perform the construction of the Work at the Site or, with CITY'S agreement, at off-site workshops.

1.1.2. Wages or salaries of CONTRACTOR's supervisory and administrative personnel when stationed at the Site and wages, salaries and other costs of project management, pre-construction services, form design, foundation engineering, manpower planning, purchasing, estimating and data processing, whether performed at the Site or in CONTRACTOR's offices, including, but not limited to services rendered during the Design Phase of the Project.

1.1.3. Wages and salaries of CONTRACTOR's supervisory or administrative personnel engaged at factories, workshops or on the road, in expediting the production or transportation of materials or equipment required for the Work, but only for that portion of their time required for the Work.

1.1.4. Costs paid or incurred by CONTRACTOR for taxes, insurance, contributions, assessments and benefits required by law or collective bargaining agreements and, for personnel not covered by such agreements, customary benefits such as sick leave, medical and health benefits, holidays, vacations and pensions, provided such costs are based on wages and salaries included in subsections 1.1.1 through 1.1.3 above.

1.2. **Subcontract Costs**. Amounts due Subcontractors in accordance with the requirements of the Subcontracts.

1.3. **Costs of Materials and Equipment Incorporated in the Completed Construction**. Costs, including transportation, of materials and equipment incorporated or to be incorporated in the completed construction.

1.4. **Costs of other Materials and Equipment, Temporary Facilities, and Related Items**.

1.4.1. Costs, including transportation, installation, maintenance, dismantling

and removal of materials, supplies, temporary facilities, machinery, equipment and hand tools not customarily owned by the construction workers, which are provided by CONTRACTOR at the Site and fully consumed in the performance of the Work; and cost, less salvage value, on such items if not fully consumed, whether sold to others or retained by CONTRACTOR. Costs for items previously used by CONTRACTOR shall mean fair market value.

1.4.2. Rental charges for temporary facilities, machinery, equipment and hand tools not customarily owned by the construction workers, which are provided by CONTRACTOR at the Site, whether rented from CONTRACTOR or others, and costs of transportation, installation, minor repairs and replacements, dismantling and removal thereof. Rental charges for equipment owned by CONTRACTOR shall be at then prevailing rates.

1.4.3. Costs of removal of debris from the Site and its proper disposal.

1.4.4. Costs of facsimiles, telegrams and long distance telephone calls, postage and delivery charges (whether originating at the Site or at the offices of CONTRACTOR or CONTRACTOR), telephone service at the Site and reasonable petty cash expenses of the Site office.

1.5. Premiums; Taxes; Fees; Royalties.

1.5.1. That portion directly attributable to this Agreement of premiums for insurance and the Payment and Performance Bonds.

1.5.2. Sales, use, gross receipts or similar taxes imposed by a governmental authority, which are related to the Work and for which CONTRACTOR is liable.

1.5.3. Fees and assessments for any permits, licenses and inspections required by the Contract Documents.

1.5.4. Fees of testing laboratories for tests required by the Contract Documents or government authorities.

1.5.5. Royalties and license fees paid for the use of a particular design, process or product required by the Contract Documents. The costs of defending suits or claims for infringement of patent rights arising from such requirement by the Contract Documents; payments made in accordance with legal judgments against CONTRACTOR or CONTRACTOR resulting from such suits or claims and payments of settlements in connection therewith.

1.5.6. Deposits lost for cause other than CONTRACTOR's negligence.

1.6. **Emergencies**. Costs incurred in taking action to prevent threatened damage, injury or loss in case of emergency affecting the safety of persons and property, as provided in Article 12.10-EMERGENCIES of this Agreement.

1.7. **Other Costs.** Other costs incurred in the performance of the Work, if and to the extent approved in writing by CITY, which approval shall not be unreasonably withheld.

2. Items not Included in Cost of the Work.

2.1. Salaries and other compensation of CONTRACTOR's personnel stationed at CONTRACTOR's principal office or offices other than the Site, except as specifically provided in subsection 1 above.

2.2. Expenses of CONTRACTOR's principal office and offices, other than the Site office.

2.3. Overhead and general expenses, except as may be included in subsection 1 above.

2.4. The capital expenses of CONTRACTOR, including interest on capital employed for the Work.

2.5. Costs that would cause the GMP to be exceeded.

END OF EXHIBIT C

EXHIBIT D - CONSTRUCTION ALLOWANCE ITEMS AND AMOUNTS

A. The following cost allowances and allowance amounts are included in the GMP as part of the Agreement:

Table D-1: Allowance Descriptions

Item#	Allowance Description	Allowance Amount
1	CMU Wall at Misty Wood Residential Property Line	$155,000
2	State of California Licensed Tree Contractor (C61/D49), ISA Certified Arborist or Certified Tree Worker for Cutting Roots, Trimming Trees at Misty Wood Well Site as required by the Approved Tree Permit	$20,000
3	Temporary CM/Inspector Office Trailer Mobilize/Demobilize: Permit, furnish, anchor, connect and install mobile office trailer for City's Construction Manager and Inspection team use within the Contractor's permitted work/laydown area.	$8,000
4	Temporary CM/Inspector Office Trailer Rental: Contractor Rental of Office Trailer (Item 3, above) to City, including grid power (air conditioning, lights and plugs). Allowance item based on assumed 18-month rental duration.	$18,000
5	Misty Wood Well – Traffic Control Allowance	$50,000
6	Construction Yard Rental (18-month duration)	$54,000
	Total of Allowances:	$305,000

B. DUTIES OF CONTRACTOR

1. Plan allowance Work collaboratively with the Construction Manager and CITY's Representative to control allowance costs and avoid impacts to the Progress Schedule.

2. Advise Construction Manager at least fifteen (15) days in advance of the need to purchase materials to avoid impacts to Progress Schedule.

3. Obtain competitive proposals from material suppliers, including:

3.1. Quantity.

3.2. Complete description of product and services provided under allowance.

3.3. Unit cost.

3.4. Total amount of purchase.

3.5. Taxes and delivery charges.

4. On notification of selection, enter into purchase agreement with designated supplier.

5. Arrange for delivery and unloading.

6. Install products in accordance with Contract Documents.

7. Maintain accurate cost records, separate from the cost categories for the balance of the Work, which depict the total cost incurred for each allowance item.

8. Monitor each allowance item total costs to date and immediately report to the Construction Manager should the total cost to date reach 80% of the total allowance amount of any allowance item amount shown in above table. Should the total cost of any allowance item reach 80% of the total allowance amount budgeted, the Contractor shall quantify and forecast the cost to complete the remaining known allowance item tasks and submit this forecasted quantity and completion cost to the Construction Manager.

C. DUTIES OF CONSTRUCTION MANAGER

1. Consult with Contractor and CITY in consideration of equipment or material and suppliers.

2. Provide Contractor with all required product, technical or design related information as it pertains to the allowance items.

3. Make equipment, supplier or system selection and request proposal from Contractor for these items covered by each allowance.

4. Notify Contractor of final equipment, supplier or system selection to allow Contractor to begin submittal and procurement.

5. Review cost to date information submitted by the Contractor and prepare Change Orders as required for CITY approval.

D. ADJUSTMENT OF COSTS

1. The Contractor shall not exceed the allowance amounts shown in above table without the written approval of the CITY. Should the Contractor exceed the allowance amounts without the written approval of the CITY, the Contractor will be responsible for all costs greater than the allowance amounts shown in above table.

2. Contractor will be paid the actual total cost of each allowance item as a Cost of the Work. When actual total cost is more or less than amount of allowance, the GMP will be adjusted by Change Order.

END OF EXHIBIT D

EXHIBIT E - HAZARDOUS MATERIALS

A. Certain Definitions.

1. "Hazardous Materials means any substance:

1.1. The presence of which requires investigation or remediation under federal, state or local law, statute, regulation, ordinance, order, action, policy or common law;

1.2. Which is or becomes defined as a "hazardous waste," "hazardous substance," pollutant or contaminant under any federal, state or local law, statute, regulation, rule or ordinance or amendments thereto, including, without limitation, the Comprehensive Environmental Response, Compensation and Liability Act, 42 USC §§9601 et seq. ("CERCLA"), as amended, or the Resource, Conservation and Recovery Act, as amended, 42 USC §§6901 et seq. ("RCRA");

1.3. Shall include the meaning provided in Section 100 of the Solid Waste Disposal Act (42 USC Section 6903 and/or Section 25117 of the California Health and Safety Code) as amended from time to time, or any other hazardous material, hazardous waste, hazardous substance, pollutant, and/or contaminant with requirements under federal, State of California, or local law, statute, regulation, rule, ordinance, order, action, policy or common law;

1.4. Which is petroleum, including crude oil or any fraction thereof not otherwise designated as a "hazardous substance" under CERCLA, including without limitation gasoline, diesel fuel or other petroleum hydrocarbons;

1.5. Which is toxic, explosive, corrosive, flammable, infectious, radioactive, carcinogenic, mutagenic, or otherwise hazardous and is or becomes regulated by any governmental authority or instrumentality;

1.6. The presence of which on the Site causes or threatens to cause a nuisance upon the Site or to the adjacent properties or poses or threatens to pose a hazard to the health or safety of persons on or about the Site; or

1.7. The presence of which on adjacent properties could constitute a trespass by CONTRACTOR or CITY.

2. **"Underground Storage Tank"** shall have the definition assigned to that term by RCRA §9001, 42 USC §6991, and also shall include:

2.1. Any tank of 1,100 gallons or less capacity used for storing motor fuel;

2.2. Any tank used for storing heating oil for consumption on the premises where stored;

2.3. Any septic tank; and any pipes connected to items A.2.1-A.2.3.

3. **"Environmental Requirements"** means all Applicable Laws, statutes, regulations, rules, ordinances, codes, licenses, permits, orders and similar items of all federal, state or local governmental agencies or other instrumentalities and all applicable judicial, administrative and regulatory decrees, judgments and orders relating to the protection of human health or the environment, including, without limitation:

3.1. All requirements, including but not limited to, those pertaining to reporting,

licensing, permitting, investigation and remediation of emissions, discharges, releases or threatened releases of Hazardous Materials into the air, surface water, ground water or land, or relating to the manufacture, processing, distribution, use, treatment, storage, disposal, transport or handling of Hazardous Materials; and

3.2. All requirements pertaining to the protection of the health and safety of employees or the public.

4. **"Environmental Damages"** means all claims, judgments, damages, losses, penalties, fines, liabilities, encumbrances, liens, costs and expenses of investigation and defense of any claim, including, without limitation, attorney's fees, which are incurred at any time as a result of the existence of Hazardous Materials upon, about or beneath the Site or migrating or threatening to migrate to or from the Site, and including, without limitation:

4.1. Damages for personal injury, or injury to property or to natural resources occurring upon or off the Site;

4.2. Fees incurred for the services of attorneys, consultants, CONTRACTOR, experts, laboratories and all other costs incurred in connection with the investigation or remediation of such Hazardous Materials or violation of Environmental Requirements; and

4.3. Liability to any third party or governmental agency or political subdivision to indemnify such party, agency or political subdivision for costs expended in connection with the items listed in subparagraph A.4.2.

5. **"Environmental Conditions"** means collectively, Hazardous Materials and Underground Storage Tanks existing on the Site and not brought there by CONTRACTOR or any Subcontractor.

B. Investigation of Site.

1. Upon written notice from CITY, CONTRACTOR shall prepare for approval and execution by CITY, one or more contracts ("Environmental Contracts") with suitably qualified consultants and/or engineers ("Environmental Engineers"), for purposes of performing an investigation and analysis of the Site prior to demolition and excavation activities, to determine the presence of any Environmental Conditions on, in or under the Site. The Environmental Contracts shall provide for a commercially reasonable scope of investigation approved by CITY, and may provide for conducting the investigation and testing in phases acceptable to CITY. The Environmental Contracts shall also provide that the Environmental Engineers shall begin their tests and inspections at the Site as soon as CITY is able to arrange access to the Site, or any portions thereof, for such purposes. The Environmental Contracts shall provide that CONTRACTOR, acting as agent of CITY, shall coordinate the activities of the Environmental Engineers.

2. The Environmental Contracts shall provide that the Environmental Engineers shall prepare such reports, feasibility studies and remedial plans ("Environmental Assessments") as may be reasonably necessary in order to identify and explain the quantity, scope and nature of the Environmental Conditions found to exist at the Site. The Environmental Assessments shall contain a detailed analysis of the Environmental Conditions discovered, and the actions ("Remedial Actions") required for the response, removal, cleanup or remediation of such Environmental Conditions (i) which are required by Environmental Requirements, or (ii) which are reasonably necessary to

mitigate Environmental Damages.

3. The Environmental Contracts shall provide that the Environmental Engineers shall promptly provide CITY and CONTRACTOR with a copy of each Environmental Assessment, together with any other reports and test results generated pursuant to the Environmental Contracts. CONTRACTOR shall, promptly after receipt of the foregoing matters from the Environmental Engineers, prepare and submit to CITY a written report setting forth CONTRACTOR's understanding of whether and to what extent any recommended Remedial Actions may result in an amendment to the Schedule and the progress of the Work.

4. The Environmental Contracts shall provide that it shall be the responsibility of the Environmental Engineers to give any necessary notice to the appropriate regulatory agency or agencies of the presence of any Environmental Conditions; to pursue all necessary negotiations with such agencies concerning preparation and approval of a plan for clean-up to the extent required; and to obtain all necessary permits to perform any Remedial Actions.

C. Remedial Actions.

1. If so instructed by CITY, based upon the results of the Environmental Assessments, CONTRACTOR shall, as agent for CITY, obtain bids from remediation contractors ("Remediation Contractors) suitably qualified and approved by CITY, to perform the Remedial Actions selected by CITY and shall submit such bids to CITY, together with CONTRACTOR's recommendation of the Remediation Contractor(s) to be retained. If CITY elects to go forward with all or any portion of the Remedial Actions covered by the bids submitted, CITY will so advise CONTRACTOR in a written notice on or before the date which is sixty (60) Days after receipt of the foregoing matters from CONTRACTOR. Promptly after receipt of such notice, CONTRACTOR shall prepare for CITY's execution remediation contracts ("Remediation Contracts") with the Remediation Contractors identified in such notice.

2. CONTRACTOR, as agent for CITY, shall be responsible for coordinating the work and services performed by the Remediation Contractors, and coordinating such remediation work with the Work.

3. If in the course of performance of the Work, CONTRACTOR encounters on the Site any Hazardous Materials not previously disclosed and remediated by the Environmental Engineers or the Remediation Contractors, CONTRACTOR shall immediately suspend the Work in the area affected and promptly thereafter report the condition to CITY.

D. Payments: Liability of CONTRACTOR.

1. All payments due under the Environmental Contracts and the Remediation Contracts shall be made by CITY directly to the Environmental Engineers and the Remediation Contractors. Such payments will be based on requisitions, which requisitions shall be approved by CONTRACTOR prior to submission to CITY.

2. All payments due under the Environmental Contracts, the Remediation Contracts and for Environmental Damages, shall not be a part of the GMP, and shall be the sole responsibility of CITY, except as expressly provided otherwise in Section 5 hereof.

3. It is understood and agreed that with respect to any Environmental Conditions existing on the Site, CONTRACTOR is not, and shall not be deemed to be, a generator, arranger, operator, treater, storer, transporter or disposer of, or otherwise responsible for, any such Environmental Conditions. It is understood and agreed that CONTRACTOR shall

have no right to direct the means or methods of performance of any Environmental Engineer or Remediation Contractor.

4. CITY shall indemnify, defend and hold harmless CONTRACTOR, from and against any Environmental Damages asserted against or sustained by CONTRACTOR as a result of CONTRACTOR being deemed or determined to be a generator, arranger, operator, treater, storer, transporter or disposer of, or otherwise responsible for, any such Environmental Conditions.

E. Environmental Responsibilities of CONTRACTOR.

1. CITY acknowledges and agrees that CONTRACTOR shall not commence or continue any demolition or construction activities on any portion of the Site on or in which Remedial Actions are to be performed until such Remedial Actions are to the point where construction activities will not interfere with such Remedial Actions, as evidenced by appropriate certification by the applicable Environmental Engineer and/or Remediation CONTRACTOR and any required approval of any applicable government agency. CONTRACTOR agrees to use good faith diligent efforts to adjust and reschedule its activities at the Site so as to minimize, to the extent reasonably practical, the adverse effect on the progress of the Work resulting from any Remedial Actions.

2. CONTRACTOR shall not bring Hazardous Materials to the Site, and shall not include Hazardous Materials in any construction materials, unless permitted by Environmental Requirements. CONTRACTOR shall comply, and shall cause all Subcontractors to comply, with all Environmental Requirements regarding the generation, handling, storage, treatment and disposal of Hazardous Materials.

3. CONTRACTOR shall indemnify, defend and hold harmless the Indemnified Parties from and against any Environmental Damages asserted against or sustained by such parties as a result of any Environmental Conditions caused or created by CONTRACTOR or any Subcontractor, or of any violation by CONTRACTOR or the Subcontractors, of any Environmental Requirement arising out of the performance of the Work.

END OF EXHIBIT E-HAZARDOUS MATERIALS

EXHIBIT F - IN LIEU OF SECURITIES ESCROW AGREEMENT

(Form of agreement follows this page)

(Use is optional by CONTRACTOR)

ESCROW AGREEMENT FOR SECURITY DEPOSITS IN LIEU OF RETENTION

(Project: _____)

THIS ESCROW AGREEMENT is made and entered into on this ____ day of _____, 20__ by and between the:

CITY of Roseville, whose address is:
311 Vernon Street
Roseville, CA 95678

(hereinafter called "CITY"); and

_____, whose address is:

_____

_____

(hereinafter called "CONTRACTOR"); and

_____, whose address is:

_____

_____

(hereinafter called "ESCROW AGENT").

For the consideration hereinafter set forth, CITY, CONTRACTOR, and ESCROW AGENT agree as follows:

1. Pursuant to Section 22300 of the Public Contract Code of the State of California, CONTRACTOR has the option to deposit securities, subject to prior approval of CITY, with ESCROW AGENT, as a substitute for retention earnings required to be withheld by CITY pursuant to the contract for public works entered into between the CITY and CONTRACTOR for the Project in the amount of _____ _____ dollars ($_____) dated _____, (hereinafter referred to as the "Contract"). Alternatively, on written request of CONTRACTOR, CITY shall make payments of the retention earnings directly to the ESCROW AGENT.

When CONTRACTOR deposits the securities as a substitute for Contract earnings, the ESCROW AGENT shall notify CITY within ten (10) days of the deposit. The market value of the securities at the

time of the substitution shall be at least equal to the cash amount then required to be withheld as retention under the terms of the Contract between CITY and CONTRACTOR. Securities shall be held in the name of ESCROW AGENT, and shall designate CONTRACTOR as the beneficial owner, and shall be limited to those types of acceptable securities as described in Public Contract Code Section 22300.

2. CITY shall make progress payments to CONTRACTOR for those funds which otherwise would be withheld from progress payments pursuant to the Contract provisions, provided that ESCROW AGENT holds securities in the form and amount specified above.

3. When CITY makes payment of retentions earned directly to ESCROW AGENT, ESCROW AGENT shall hold them for the benefit of CONTRACTOR until the time that the escrow created under this Agreement is terminated. CONTRACTOR may direct the investment of the payments into securities. All terms and conditions of this Agreement and the rights and responsibilities of the parties shall be equally applicable and binding when CITY pays ESCROW AGENT directly.

4. CONTRACTOR shall be responsible for paying all fees for the expenses incurred by ESCROW AGENT in administering the Escrow Account and all expenses of CITY. These expenses and payment terms shall be determined by CITY, CONTRACTOR, and ESCROW AGENT.

5. The interest earned on the securities or the money market accounts held in escrow and all interest earning on that interest shall be for the sole account of CONTRACTOR and shall be subject to withdrawal by CONTRACTOR at any time and from time to time without notice to CITY.

6. CONTRACTOR shall have the right to withdraw all or any part of the principal in the Escrow Account only by written notice to ESCROW AGENT accompanied by written authorization from CITY to ESCROW AGENT that CITY consents to the withdrawal of the amount sought to be withdrawn by CONTRACTOR.

7. CITY shall have a right to draw upon the securities in the event of default by CONTRACTOR. Upon seven (7) days' written notice to ESCROW AGENT from CITY of the default, ESCROW AGENT shall immediately convert the securities to cash and shall distribute the cash as instructed by CITY.

8. Only upon receipt of written notification from CITY certifying that the Contract is final and complete, and that CONTRACTOR has complied with all requirements and procedures applicable to the Contract, ESCROW AGENT shall release to CONTRACTOR all securities and interest on deposit less escrow fees and charges of the Escrow Account. The escrow shall be closed immediately upon disbursement of all moneys and securities on deposit and payments of fees and charges.

9. ESCROW AGENT shall rely on the written notifications from CITY and CONTRACTOR pursuant to Sections (5) to (8), inclusive, of this Agreement and CONTRACTOR shall hold ESCROW AGENT harmless from ESCROW AGENT's release and disbursement of the securities and interest as set forth above.

10. The parties hereto mutually agree that this Agreement is substantially similar to the form under Public Contracts Code Section 22300.

11. The names of the persons who are authorized to give written notice or to receive written notice on behalf of CITY and on behalf of CONTRACTOR in connection with the foregoing, and exemplars of their respective signatures are as follows:

EXHIBIT G - BOND FORMS

There are three (3) bond forms that constitute Exhibit G following this index sheet.

1. Performance Bond
2. Labor and Material Bond
3. Warranty Bond

Bond No._____

Premium $_____

PERFORMANCE BOND

This Performance Bond ("Performance Bond"), dated _____, 20___, is in the penal sum of _____ _____ Dollars ($_____), which is an amount not less than one hundred percent (100%) of the Total Contract Price, and is entered into by and between the undersigned _____ ("Principal" or "Contractor") and the undersigned _____

("Surety") to ensure the Principal's faithful performance of the Design Assist Construction Agreement for the _____ project ("Design Assist Contract"). This Performance Bond consists of this page and the following Performance Bond Terms and Conditions, Paragraphs 1 through 12. Any singular reference to the Principal, the Surety, the CITY of Roseville, California ("CITY") or other party shall be considered plural where applicable.

BOND TERMS AND CONDITIONS

1. The Principal and the Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the CITY for the complete and proper performance of the Design Assist Contract, which is incorporated herein by reference.

2. If the Principal completely and properly performs all of its obligations under the Design Assist Contract, the Surety and the Principal shall have no further obligation under this Performance Bond, except to participate in conferences as provided in Paragraph 3.1 below.

3. If there is no CITY Default, the Surety's obligation under this Performance Bond shall arise after:

   3.1 The CITY has notified the Contractor and the Surety at their respective addresses described in Paragraph 10 below, that the CITY is considering declaring a Contractor Default and has requested and attempted to arrange a conference with the Contractor and the Surety to be held not later than fifteen (15) days after receipt of such notice to discuss methods of performing the Design Assist Contract. If the CITY, the Contractor and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Design Assist Agreement, but such a mutual agreement shall not waive the CITY's right, if any, subsequently to declare a Contractor Default; and

   3.2 The CITY has declared a Contractor Default and formally terminated the Contractor's right to complete the Design Assist Contract. Such Contractor Default shall not be declared earlier than twenty (20) days after the Contractor and the Surety have received notice as provided in Paragraph 3.1 above.

   3.3 The CITY has agreed to pay the Balance of the Total Contract Price to:

      3.3.1 The Surety in accordance with the terms of this Performance Bond and the Design Assist Contract; or

      3.3.2 To a contractor selected to perform the Design Assist Contract in accordance with the terms of this Performance Bond and the Design Assist Contract.

4. When the CITY has satisfied the conditions of Paragraph 3 above, the Surety shall promptly (within thirty (30) days) and at the Surety's expense elect to take one of the following actions:

4.1 Arrange for the Contractor, with the CITY's consent, such consent to be in the CITY's sole discretion, to perform and complete the Design Assist Contract. If the

4.2 CITY withholds its consent, the Surety must elect an option described in Paragraphs 4.2, 4.3 or 4.4, below; or

4.3 Undertake to perform and complete the Design Assist Contract itself, through its agents or through independent contractors; or

4.4 Obtain proposals from qualified contractors acceptable to the CITY for a contract for performance and completion of the Design Assist Contract, and, upon determination by the CITY of the best value for the CITY, arrange for a contract to be prepared for execution by the CITY and the contractor selected, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Design Assist Contract; and, if the Surety's obligations defined in Paragraph 6 below exceed the Balance of the Total Contract Price, then the Surety shall pay to the CITY the amount of such excess; or

4.5 Waive its right to perform and complete the Design Assist Contract, arrange for completion, or obtain a new contractor and with reasonable promptness under the circumstances, and, after investigation and consultation with the CITY, determine in good faith the amount for which it may then be liable to the CITY under Paragraph 6, below, for the performance and completion of the Design Assist Contract and, as soon as practicable after the amount is determined, tender payment therefor to the CITY with full explanation of the payment's calculation. If the CITY accepts the Surety's tender under this Paragraph 4.4, the CITY may still hold Surety liable for future damages then unknown or unliquidated resulting from the Seller Default. If the CITY disputes the amount of Surety's tender under this Paragraph 4.4, the CITY may exercise all remedies available to it at law to enforce the Surety's liability under Paragraph 6, below.

5. If the Surety does not proceed as provided in Paragraph 4, above, then the Surety shall be deemed to be in default on this Performance Bond ten (10) calendar days after receipt of an additional written notice from CITY to the Surety demanding that the Surety perform its obligations under this Performance Bond. At all times the CITY shall be entitled to enforce any remedy available to the CITY at law or under the Design Assist Contract including, without limitation, and by way of example only, rights to perform work, protect work, mitigate damages, or coordinate work with other consultants or contractors at Surety's sole expense.

6. The Surety's monetary obligation under this Performance Bond is limited by the amount of this Performance Bond. Subject to these limits, the Surety's obligations under this Bond are commensurate with the obligations of the Seller under the Design Assist Contract. The Surety's obligations shall include, but are not limited to:

6.1 The responsibilities of the Seller under the Design Assist Contract for completion of the Design Assist Contract and correction of defective work;

6.2 The responsibilities of the Seller under the Design Assist Contract to pay liquidated damages, and damages for which no liquidated damages are specified in the Design Assist Contract, including but not limited to, all valid and proper back charges, offsets, payments, indemnities, defense costs or other damages; and

6.3 Additional legal, design professional and delay costs resulting from the Seller Default or resulting from the actions or failure to act of the Surety under Paragraph 4, above.

Bond No._____

Premium $_____

7. The Surety shall not be liable to the CITY or others for the obligations of the Contractor that are unrelated to the Design Assist Contract, and the Balance of the Total Contract Price shall not be reduced or set off on account of any such unrelated obligations. No right of action shall accrue on this Performance Bond to any person or entity other than the CITY or its heirs, executors, administrators, or successors.

8. The Surety hereby waives notice of any change, alteration or addition to the Design Assist Contract or to related subcontracts, purchase orders and other obligations, including but not limited to changes of time. The Surety consents to all terms of the Design Assist Contract, including provisions on changes to the Contract Documents. No extension of time, Change Order, alteration, Modification, deletion, or addition to the Contract Documents, or of the work required thereunder, shall release or exonerate Surety on this Performance Bond or in any way affect the obligations of Surety on this Performance Bond.

9. Any proceeding, legal or equitable, under this Performance Bond shall be instituted in any court of competent jurisdiction in Placer County, California within two (2) years after the Contractor Default or within two (2) years after the Contractor ceased working or within two (2) years after the Surety refuses or fails to perform its obligations under this Performance Bond, whichever occurs first. If the provisions of this Paragraph 9 are void or prohibited by law, the minimum period of limitation available to sureties as a defense in Placer County shall be applicable.

10. Notice to the Surety, the CITY or the Principal shall be mailed or delivered to the address shown on the signature page.

11. Any provision in this Performance Bond conflicting with any statutory or regulatory requirement shall be deemed deleted herefrom and provisions conforming to such statutory requirement shall be deemed incorporated herein. The intent is that this Performance Bond shall be construed as a statutory bond and not as a common law bond.

12. Definitions.

    12.1 Balance of the Total Contract Price: The total amount payable by the CITY to the Contractor pursuant to the terms of the Design Assist Contract after all proper adjustments have been made under the Design Assist Contract, including, for example, deductions for progress payments made, deductions for liquidated damages owed, and increases/decreases for approved modifications to the Design Assist Contract.

    12.2 Design Assist Contract: The documents between the CITY and the Principal identified as the Contract Documents in that certain first above-mentioned Design Assist Construction Agreement, including all changes, Addenda and modifications thereto.

    12.3 Contractor Default: Material failure of the Contractor, which has neither been remedied nor waived, to perform or otherwise to comply with the terms of the Design Assist Contract.

    12.4 CITY Default: Material failure of the CITY, which has neither been remedied nor waived, to pay the Contractor progress payments due under the Design Assist Contract or to perform other material terms of the Design Assist Contract, provided such failure is the cause of the asserted Contractor Default and is sufficient to justify Contractor termination of the Design Assist Contract.

IN WITNESS WHEREOF, the undersigned obligated parties have executed this instrument.

LABOR AND MATERIAL BOND

This Labor and Material Bond ("Labor and Material Bond") dated _____, 20____, is in the penal sum of _____ _____Dollars ($_____), which is an amount not less than one hundred percent (100%) of the Total Contract Price, and is entered into by and between the undersigned _____ ("Principal" or "Contractor") and the undersigned _____ ("Surety") to ensure the Principal's payment of claimants pursuant to the Design Assist Construction Agreement for the _____ project ("Design Assist Contract"). This Labor and Material Bond consists of this page and the following Labor and Material Bond Terms and Conditions, Paragraphs 1 through 15. Any singular reference to the Principal, the Surety, the CITY of Roseville, California ("CITY") or other party shall be considered plural where applicable.

BOND TERMS AND CONDITIONS

1. The Principal and the Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the CITY and to Claimants, to pay for labor, materials, Equipment furnished and Services provided in the performance of the Design Assist Contract, which is incorporated herein by reference.

2. With respect to the CITY, this obligation shall become null and void if and when the Principal:

   2.1 Promptly and fully makes payment, directly or indirectly, for all sums due Claimants, and

   2.2 Fully defends, indemnifies and holds harmless the CITY from all claims, demands, liens or suits by any person or entity who furnished labor, materials or equipment for use in the performance of the Design Assist Contact, provided the CITY has promptly notified the Principal and the Surety (at the address described in Paragraph 10 below) of any claims, demands, liens or suits and has tendered defense of such claims, demands, liens or suits to the Principal and the Surety, and provided there is no CITY Default. Otherwise, this Labor and Material Bond shall be, and remain, in full force and effect.

3. With respect to Claimants, this obligation shall become null and void if and when the Principal promptly and fully makes payment, directly or indirectly through its Subcontractors, for all sums due Claimants; otherwise, this Labor and Material Bond shall be, and remain, in full force and effect.

4. The Surety shall have no obligation to Claimants under this Labor and Material Bond until:

   4.1 Claimants who are employed by or have a direct contract with the Contractor have given notice to the Surety (at the address described in Paragraph 12) and sent a copy, or notice thereof, to the CITY, stating that a claim is being made under this Labor and Material Bond and, with substantial accuracy, the amount of the claim.

   4.2 Claimants who do not have a direct contract with the Contractor:

      4.2.1 Have furnished written notice to the Contractor and sent a copy, or notice thereof, to the CITY, within ninety (90) days after having last performed labor or last furnished materials or equipment included in the claim stating, with

substantial accuracy, the amount of the claim and the name of the party to whom the materials were furnished or supplied or for whom the labor was done or performed; and

4.2.2 Have either received a rejection in whole or in part from the Contractor, or have not received within thirty (30) days of furnishing the above notice any communication from the Contractor by which the Contractor has indicated the claim will be paid directly or indirectly; and

4.2.3 Not having been paid within the above thirty (30) days, have sent a written notice to the Surety (at the address described in Paragraph 12) and sent a copy, or notice thereof, to the CITY, stating that a claim is being made under this Labor and Material Bond and enclosing a copy of the previous written notice furnished to the Contractor.

5. If a notice required by Paragraph 4 above is given by the CITY to the Contractor or to the Surety, that is sufficient compliance.

6. When the Claimant has satisfied the conditions of Paragraph 4, the Surety shall promptly and at the Surety's expense take the following actions:

6.1 Send an answer to the Claimant, with a copy to the CITY, within forty-five (45) days after receipt of the claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed.

6.2 Pay or arrange for payment of any undisputed amounts.

7. The Surety's total obligation shall not exceed the amount of this Labor and Material Bond, and the amount of this Labor and Material Bond shall be credited for any payments made in good faith by the Surety under this Labor and Material Bond.

8. Amounts due the Contractor under the Design Assist Contract shall be applied to satisfy claims, if any, under this Labor and Material Bond.

9. The Surety shall not be liable to the CITY, Claimants or others for obligations of the Contractor that are unrelated to the Design Assist Contract. The CITY shall not be liable for payment of any costs, expenses, or attorney's fees of any Claimant under this Labor and Material Bond, and shall have no obligations to make payments to, give notices on behalf of, or otherwise have obligations to Claimants under this Labor and Material Bond.

10. The Surety hereby waives notice of any change, alteration or addition to the Design Assist Contract or to related subcontracts, purchase orders and other obligations, including but not limited to changes of time. The Surety consents to all terms of the Design Assist Contract, including provisions on changes to the Contract Documents. No extension of time, Change Order, alteration, modification, deletion, or addition to the Contract Documents, or of the work required thereunder, shall release or exonerate Surety on this Labor and Material Bond or in any way affect the obligations of Surety on this Labor and Material Bond.

11. Any proceeding, legal or equitable, under this Labor and Material Bond shall be instituted in any court of competent jurisdiction in Placer County, California within one (1) year from the date on which (i) the Claimant gave the notice required by Paragraph 4.1 or Paragraph 4.3.3, or (ii) the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Design Assist Contract, whichever of (i) or (ii) first occurs. If the provisions of this Paragraph 11 are void or prohibited by law, the minimum period of limitation available to sureties as a defense in Placer County shall be applicable.

Bond No._____

Premium $_____

12. Notice to the Surety, the CITY or the Principal shall be mailed or delivered to the address shown on the signature page below. Actual receipt of notice by the Surety, the CITY or the Principal, however accomplished, shall be sufficient compliance as of the date received at the address shown on the signature page below.

13. Any provision in this Labor and Material Bond conflicting with any statutory or regulatory requirement shall be deemed deleted herefrom and provisions conforming to such statutory requirement shall be deemed incorporated herein.
The intent is that this Labor and Material Bond shall be construed as a statutory bond and not as a common law bond.

14. Upon request by any person or entity appearing to be a potential beneficiary of this Labor and Material Bond, the Principal shall promptly furnish a copy of this Labor and Material Bond or shall permit a copy to be made.

15. DEFINITIONS

15.1 CLAIMANT: An individual or entity having a direct contract with the Contractor or with a subcontractor (of any tier) of the Contractor to furnish labor, materials or equipment for use in the performance of the Design Assist Contract. The intent of this Labor and Material Bond shall be to include without limitation in the terms "labor, materials or equipment" that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental equipment used in the Design Assist Contract, architectural and engineering services used or reasonably required for performance of the work of the Contractor and the Contractor's subcontractors, and all other items for which a mechanic's lien or stop payment notice might be asserted.

DESIGN ASSIST CONTRACT: The documents between the CITY and the Contractor identified as the Contract Documents in that certain first above-mentioned Design Assist Contract, including all changes, Addenda and modifications thereto.

15.2 CITY DEFAULT: Material failure of the CITY, which has neither been remedied nor waived, to pay the Contractor as required by the Design Assist Contract, provided such failure is the cause of the failure of Principal to pay the Claimants and is sufficient to justify Contractor termination of the Design Assist Contract.

IN WITNESS WHEREOF, the undersigned obligated parties have executed this security instrument.

WARRANTY BOND

This Warranty Bond ("Warranty Bond"), dated _____, 20___, is in the penal sum of _____ for the Design-Assist Construction Agreement for the _____ project, and is entered into by and between the undersigned _____ ("Principal" or "Contractor") and the undersigned _____ ("Surety") to guaranty that all Equipment and Services provided by Seller under the above-mentioned Design Assist Contract will fulfill the requirements of Principal's warranties and guarantees included in the Contract Documents. This Warranty Bond consists of this page and the following Warranty Bond Terms and Conditions, Paragraphs 1 through 7. Any singular reference to the Principal, the Surety, the CITY of Roseville, California ("CITY") or other party shall be considered plural where applicable.

BOND TERMS AND CONDITIONS

1. The Principal and the Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the CITY for a period of one (1) year following the date of Final Acceptance, or such longer period specified in the Contract Documents, its unconditional warranty of the quality and adequacy of all of the work including, without limitation, all equipment and work provided by Contractor and its subcontractors and subvendors of all tiers in connection with the Design Assist Contract.

2. Neither final payment nor use or occupancy of the Equipment or Services performed by the Contractor shall constitute an acceptance of such Equipment or Services not done in accordance with this Warranty Bond or relieve Contractor of liability in respect to any express guarantees, warranties or responsibilities for faulty materials or workmanship, ordinary wear and tear excepted. If within one (1) year after the date of Final Acceptance, or such longer period of time as may be prescribed the terms of the Contract Documents, any Equipment or Services is found to be defective, Contractor and Surety shall promptly, without cost to CITY and in accordance with CITY's written instructions, correct such defective Equipment or Services. Contractor and Surety shall remove any defective Equipment rejected by CITY and replace it with Equipment that is not defective. If Contractor or Surety fails to promptly comply with the terms of such instructions, or in an emergency where delay would cause serious risk of loss or damage, CITY may have the defective Equipment or Services corrected or removed and replaced. Contractor and Surety shall pay for all claims, costs, losses and damages caused by or resulting from such removal and replacement. Where Contractor and Surety fail to correct defective Equipment or Services, or defects are discovered outside the correction period, CITY shall have all rights and remedies granted by law.

3. As part of the obligation secured hereby and in addition to the face amount specified therefor, there shall be included costs and reasonable expenses and fees, including reasonable attorney's fees, incurred by CITY.

Bond No._____

Premium $_____

4. The Surety hereby waives notice of any change, alteration or addition to the Design Assist Contract or to related subcontracts, purchase orders and other obligations, including but not limited to changes of time. The Surety consents to all terms of the Design Assist Contract, including provisions on changes to the Contract Documents. No extension of time, Change Order, alteration, Modification, deletion, or addition to the Contract Documents, or of the work required thereunder, shall release or exonerate Surety on this Warranty Bond or in any way affect the obligations of Surety on this Warranty Bond.

5. If the Surety does not proceed as provided in Paragraph 2 above, then the Surety shall be deemed to be in default on this Warranty Bond ten (10) calendar days after receipt of an additional written notice from CITY to the Surety demanding that the Surety perform its obligations under this Warranty Bond. At all times the CITY shall be entitled to enforce any remedy available to the CITY at law or under the Design Assist Contract including, without limitation, and by way of example only, rights to perform work as Surety's expense, protect work, mitigate damages, or coordinate work with other consultants or contractors.

6. All abbreviations and definitions of terms used in this Warranty Bond shall have the meanings set forth in the Contract Documents, including, without means of limitation, the Design Assist Contract.

7. The foregoing Warranty Bond is in addition to any other guarantees and warranties of Contractor contained in the Contract Documents, and not in lieu of, any and all other liability imposed on Contractor under the Contract Documents and at law with respect to Contractor's duties, obligations, and performance under the Contract Documents. In the event of any conflict or inconsistency between the terms of this Warranty Bond and any guaranty, warranty or obligation of the Seller under the Contract Documents or at law, such inconsistency or conflict shall be resolved in favor of the higher level of obligation of the Contractor and Surety.

IN WITNESS WHEREOF, the undersigned obligated parties have executed this instrument.

EXHIBIT H - COMPLETION TIMES AND LIQUIDATED DAMAGES

Aquifer Storage and Recovery Wells 13 (Campus Oaks) and 19 (Misty Wood) Project

A. Project Milestones

Following are scope descriptions for substantial completion of project milestones.

1. **Milestone 1:** Order all parts identified by the Contractor and Engineer in the initial project as having a lead time that has the reasonable potential to effect the critical path schedule and for which there is sufficient information to order within the timeframe provided for Milestone 2.
2. **Milestone 2:** Complete all work below ground and hardscape, fencing, piping, tracer wires, conduits, foundations, grating, the facility CMU walls, encroachments to the public street, discharge points to swales or creeks, rip rap, geotextiles and their permanent coverings, sidewalks and sidewalk restoration, cleanouts, pull boxes, hand holes, grounding rings and rods, etc. such that no further below-ground work is required.
3. **Milestone 3**: Substantial Completion of both Wells 13 and 19 in accordance with Article 8.13 and City has accepted a partial Certificate of substantial completion and punch list. Determination of Substantial Completion is solely at the discretion of the CITY.
4. **Milestone 4**: Final Completion in accordance with Article 8.14 and City has initiated the process of attaining a Notice of Completion. Determination of Final Completion is solely at the discretion of the CITY.

B. Times Allowed for Completion

In accordance with the provisions of Article 7-TIME AND PROGRESS OF WORK, the following table summarizes the scope of work milestones and the contracted completion time. Each milestone shall be completed within the number of consecutive calendar days from the date established in the Notice to Proceed for the commencement of Contract Time.

Table H-1: Times Allowed for Completion of Each Project Milestone

Contractual Completion Event	**Completion Time (Calendar Days)**
Milestone 1 – Long Lead time Parts Ordered	120
Milestone 2 – Below-Ground Work Complete and Paved	251
Milestone 3 – Substantial Completion	483
Milestone 4 – Final Completion	528

C. Damages for Delays

In accordance with the provisions of Article 7-TIME AND PROGRESS OF WORK for the period of time that any portion of the Work remains unfinished after the time fixed in above Table H-1: Times Allowed for Completion of Each Project Milestone, as modified by extensions of time granted by the Owner, it is understood and agreed by the Contractor and the Owner that the Contractor shall pay the Owner the liquidated damages listed below.

Table H-2: Daily Liquidated Damages for Non-Completion of Each Project Milestone

Contractual Completion Event	**Daily Liquidated Damages**
Milestone 1 – Long Leadtime Parts Ordered	---
Milestone 2 – Below-Ground Work Complete and Paved	$1,000
Milestone 3 – Substantial Completion	$1,000
Milestone 4 – Final Completion	$1,000

D. Weather Days

In accordance with the provisions of Article 7-TIME AND PROGRESS OF WORK, an allowance of working days of weather or other caused Excusable Delays noted in the table below are included in the time allowed for completion between physical demobilization and demobilization. This allowance represents a reasonable assessment of anticipated lost working days based on historical weather patterns. These weather days shall be included in the Contractor's schedule as specified in Technical Specifications Section 01321-SCHEDULES AND REPORTS.

FUND BALANCE TOTAL				(2,950,000)	

Justification for Budget Adjustment:

The Campus Oaks and Misty Wood ASR well project (#500315) was established for the construction of two ASR wells capable of both water recharge and groundwater extraction. The project is funded by the Water Construction Fund (6120) and a grant from the State's Natural Resources Agency and Department of Water Resources. City participation in the grant agreement was approved by Council on September 20, 2023. The grant is administered by the Regional Water Authority (RWA) as part of a larger American River Terms for Ecosystem Support and Infrastructure Assistance Needs (ARTESIAN) Project.

The ARTESIAN grant provides this project with $8,010,000 to be utilized by December 31, 2025. This project will utilize grant money first for both construction and construction management until those funds are expended, then will utilize funds available in the Water Construction Fund.

An additional $2,950,000 is requested to fully fund the project ($246,000 for staff labor and $2,704,000 for construction management inspection services, utility connections, landscaping, and other costs). This request will bring the total project budget to $19,575,865. There are adequate resources available in the Water Construction Fund.

COUNCIL COMMUNICATION

CC #: 3836
File #: 0800-02

Title:	Dry Creek Wastewater Treatment Plant Operations and Laboratory Building Project - Approval of Construction Plans and Specifications and Authorize Staff to Call for Bids
Contact:	Inderpreet Chaggar 916-938-1595 ikchaggar@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.6.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council approve the construction plans and specifications for the Dry Creek Wastewater Treatment Plant Operations and Laboratory Building project and authorize staff to call for bids.

BACKGROUND

In 2021, the City's Environmental Utility Department (EUD) published a Request for Proposals (RFP 08-079) seeking professional architectural consulting firms to submit proposals for professional design and consulting services for the Pleasant Grove Wastewater Treatment Plant (PGWWTP) Maintenance Facilities Assessment and Dry Creek Wastewater Treatment Plant (DCWWTP) Operations and Laboratory Building Design.

The existing operations building at DCWWTP is aging and a larger building is required to accommodate staff growth and increased lab space needs based on required regulatory compliance. The City entered into a design agreement with Williams + Paddon Architects Planners, Inc. (W+P) on October 6, 2021. On August 30, 2022, W+P merged with 19six Architects, Inc. and design efforts for the DCWWTP task have been completed by 19six. The new Operations and Laboratory Building at DCWWTP is proposed to be a 10,000-square foot building that will house the operations and laboratory staff at DCWWTP.

The new building will replace the existing administration and laboratory building at DCWWTP and will include office space, training and conference rooms, laboratory area, and mechanical and electrical room. Construction of the new building will take place in phases, including partial construction of the new building, demolition of the existing building, and completed construction of the new building.

FISCAL IMPACT

The estimated construction cost for this Project $16,884,014. The Project will be funded from available resources in the Wastewater Regional Rehabilitation Fund for the rehabilitation portion of the project and from the capital improvement project budget approved by the South Placer Wastewater Agency for the building expansion. The current available budget of this project is $600,000 in the Wastewater Rehabilitation Fund and $12,299,523 in the SPWA Fund. A budget adjustment is anticipated for the construction phase of the project.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) only applies to projects which have the potential to cause a significant effect on the environment. The project authorizes the next step in a project that was already approved by the City Council in 2021. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. (CEQA Guidelines §15061(b)(3)).

CITY OF ROSEVILLE

DEPARTMENT OF ENVIRONMENTAL UTILITIES

DRY CREEK WASTEWATER TREATMENT PLANT OPERATIONS AND LABORATORY BUILDING PROJECT

NOTICE TO CONTRACTORS

NOTICE IS HEREBY GIVEN THAT sealed Proposals will be received at the Office of the City Clerk, 311 Vernon Street, Roseville, California, until Friday May 16, 2025, at 3:00 p.m. Late Proposals will be rejected. No exceptions.

The Proposals will be publicly opened and read by the City Clerk or designee of the City of Roseville at 3:05 p.m. on Friday May 16, 2025, at the Office of the City Clerk located at 311 Vernon Street, Roseville California for the following project: Dry Creek Wastewater Treatment Plant Operations and Laboratory Building Project.

An optional pre-bid meeting will be held at 1800 Booth Road Roseville, CA 95747 at 11am on Wednesday April 30, 2025.

A Project Manual, including all Contract Documents and the Proposal forms for bidding this project, may be obtained on-line from the City of Roseville's website at www.roseville.ca.us/business/procurement_services/bids_rfps or directly at www.publicpurchase.com. All communications relative to this project shall be conducted through Public Purchase.

Bids shall be submitted on the City's Proposal Forms included in the Project Manual, plainly endorsed with the Bidder's name together with signed acknowledgement of any and all addenda. Proposal Forms shall be securely sealed in a suitable envelope marked with the name and address of the Bidder, and marked in capital letters on the front and back of the envelope as

follows:

RFP # 08-156
Dry Creek Wastewater Treatment Plant Operations
and Laboratory Building Project

(Name of Bidder)
(Address of Bidder)

Whether mailed or personally delivered, all bids shall be addressed to the City of Roseville, Office of the City Clerk, 311 Vernon Street, Roseville, California, 95678.

Each bid must be accompanied by a Bid Guaranty in the form of a Certificate of Deposit, Certified or Cashier's Check, Bidder's Bond or Irrevocable Standby Letter of Credit in an amount equal to at least ten percent (10%) of the Bidder's Grand Total Price. The Bid Guaranty will be retained by the City and applied to any and all damages sustained by the City in the event that the successful Bidder fails or refuses to enter into the Contract awarded to it and to furnish all required bonds and Certificates of Insurance. The City intends to award the Contract to the lowest responsible Bidder based on the Grand Total Bid Price for all components of the Project. To the extent allowed by law, the City reserves the right to reject any and all bids and/or to waive any irregularities or informalities in any bid or in the bidding procedure. The City specifically reserves the right to not award the Contract after the opening of bids.

Any bid may be withdrawn at any time prior to the time fixed in the public notice for the deadline submission of bids only by written request for the withdrawal of the bid filed with the City Clerk. The request shall be executed by the Bidder or his or her duly authorized representative. The withdrawal of a bid does not prejudice the right of the Bidder to file a new bid by the submission deadline. Whether or not bids are opened exactly at the time fixed in the

public notice for opening bids, a bid will not be received after the deadline submission of bids nor may any bid be withdrawn after the time fixed in the public notice for deadline for submission of bids. Immediately following the deadline for submission of bids all bids shall become the property of the City of Roseville and the City is under no obligation to return bids.

Bids will be examined and reported to the City Council within sixty (60) business days after the bid opening. Except as permitted by applicable law, no Bidder may withdraw its bid for a period of sixty (60) business days after the date of bid opening. Each Bidder will be notified of any award of the Contract by the City.

The City will affirmatively ensure non-discrimination on the basis of one or more of the following: race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, genetic information, marital status, sex, age, sexual orientation, or military and veteran status in the award and administration of contracts that it awards.

Pursuant to Public Contract Code Section 22300, the successful Bidder may submit certain securities in lieu of the City withholding retention of payments during the Project.

The City has determined that the Contractor shall possess a valid Class A Contractor's license at the time that the bid is submitted, as well as any other license classification as may be required by the laws of the California for the performance of the work specified in the Contract Documents. Said license shall be maintained during the Contract period. Failure to possess the specified license shall render the bid nonresponsive and will act as a bar to the award of the Contract to any Bidder not possessing such a license at the time of bid submittal. The Contractor shall provide certification of the license, its number and the expiration date on the proposal form.

The work is to be done in Placer County. Pursuant to California Labor Code Section 1773, the City has ascertained the General Prevailing Rate of Wages in the County in which the

work is to be done to be as determined by the Director of Industrial Relations of the State of California. The Contractor is hereby made aware that information regarding prevailing wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm. The Contractor is required to post a copy of the applicable wage rates at the job site. Attention is directed to Section 5 "Legal Relations and Responsibility" of the General Conditions.

Pursuant to Labor Code Section 1771.1(b), notice is hereby given that a contractor or subcontractor shall not be qualified to bid on, be listed in a bid proposal, subject to the requirements of Section 4104 of the Public Contract Code, or engage in the performance of any contract for public work, as defined in Labor Code Sections 1720, et seq., unless currently registered and qualified to perform public work pursuant to Labor Code Section 1725.5 or exempt from registration requirements pursuant to Labor Code Section 1725.5(f). It is not a violation of Labor Code Section 1771.1 for an unregistered contractor to submit a bid that is authorized by Section 7029.1 of the Business and Professions Code or by Section 10164 or 20103.5 of the Public Contract Code, provided the contractor is registered to perform work pursuant to Labor Code Section 1725.5 at the time the contract is awarded or is exempt from registration requirements pursuant to Labor Code Section 1725.5(f). The Contractor is hereby notified that this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

Vehicles with a GVWR greater than 8,500 lbs. and light – duty package delivery vehicles operated in California may be subject to the California Air Resources Board Advanced Clean Fleets regulations. Such vehicles may therefore be subject to requirements to reduce emissions and air pollutants. For more information, please visit the CARB Advanced Clean Fleets webpage

at https://ww2.arb.ca.gov/our-work/programs/advanced-clean-fleets. In addition, certain off-road diesel vehicles may be subject to the CARB In-Use Off-Road Diesel-Fueled Fleets Regulation. For more information, please visit the CARB In-Use Off-Road Diesel-Fueled Fleets Regulation webpage at https://ww2.arb.ca.gov/our-work/programs/use-road-diesel-fueledfleets-regulation.

All questions prior to the deadline for bid submissions must be submitted via the Public Purchase website at https://www.publicpurchase.com. The deadline for submissions of questions and clarifications regarding the Contract Documents is ten (10) calendar days before the deadline for bid submissions. Only Addenda issued by the City are binding.

INSTRUCTIONS TO BIDDERS

SECTION 1. GENERAL

1-1.01 **GENERAL.** These Instructions to Bidders form a part of the Contract Documents. Capitalized terms are defined in the General Conditions Section 1.

1-1.02 **EXAMINATION OF PLANS, CONTRACT DOCUMENTS AND SITE OF THE WORK.** The Bidder shall examine carefully the site of the Work and all the Contract Documents, including these Instructions to Bidders, and shall inform itself of the conditions relating to the execution of the Work. Failure to do so will not relieve the successful Bidder of its obligation to enter into an Agreement and complete the Work in strict accordance with the Contract Documents. Conditions relating to the execution of the Work include the requirements of federal, state, and local laws, statutes and ordinances relative to the execution of Work, including, but not limited to, applicable regulations concerning prevailing wage rates, non-discrimination in the employment of labor, protection of the public, employee health and safety, and environmental protection.

The submission of a bid shall be conclusive evidence that the Bidder has investigated and is satisfied as to the conditions to be encountered, as to the character, quality, and scope of Work to be performed, the quantities of materials to be furnished, and as to the requirements of all the Contract Documents.

1-1.03 **EXISTING INFORMATION.** Where the Department has made investigations of site conditions, including subsurface conditions in areas where Work is to be performed under the Contract, such investigations are made only for the purpose of study and design. City does not represent that such conditions as found in these investigations or inferences or conclusions drawn as a result of these investigations will represent actual site

conditions and hereby disclaims any liability as a result of Contractor's or Bidder's reliance on such investigations. City will presume that all Bidders have conducted their own site investigations, and reviewed all available supplemental materials.. Where such investigations have been made, Bidders or Contractors may, upon written request, inspect the records of the Department as to such investigations subject to the conditions set forth in these Instructions to Bidders. Such inspection of records, if they exist, have been uploaded to the Public Purchase website for this RFP as "supplemental materials". The supplemental materials are not a part of the Contract Documents and are shown solely for the convenience of the Bidder or Contractor. The City assumes no responsibility whatsoever with respect to the sufficiency or accuracy of the investigations made, the records thereof, or of the interpretations set forth therein or made by the City in its use thereof. The City makes no warranty or guarantee, either express or implied, that the conditions indicated by such investigations or records are representative of those existing throughout such areas, or any part thereof, or that unforeseen developments may not occur, or that materials other than, or in proportions different from those indicated, may not be encountered.

No information derived from such inspection of records of investigations or compilation thereof made by the City, the Department or from the Engineer, or his or her assistants, will in any way relieve the Bidder or Contractor from properly examining the site and making such additional investigations as it may elect, or from properly fulfilling the terms of the Contract.

SECTION 2: BID REQUIREMENTS

2-1.01 **PROPOSAL FORMS.** The Department will furnish to each Bidder standard Proposal Forms (included in this document under section PROP), which, when filled out and executed may be submitted as the bid. Proposals shall include all pages in the Project Manual with page numbers marked "PROP" plus the Addendum acknowledgment form (front sheet) from all Addenda received by the Bidder. Proposals shall be removed from the Project Manual. The full Project Manual shall not be submitted with the proposal. Bids not presented on forms so furnished will be disregarded.

The Proposal and one (1) copy thereof shall be submitted as directed in the "Notice to Contractors" under sealed cover plainly marked as a Proposal, and identifying the project to which the Proposal relates and the date of the bid opening therefor. Proposals which are not properly marked may be disregarded.

All blank spaces in the Proposal must be completed, as required, in ink. All price information shall be shown, clearly legible, in figures where required.

The Bidder shall sign the Proposal in the blank space provided therefor. If the Bidder is the sole owner, the Proposal shall be signed by the owner. If the Bidder is a corporation, the legal name of the corporation and its State of incorporation shall be set forth and the Proposal shall be signed by at least two officers authorized to sign contracts on behalf of the corporation. If the Bidder is a partnership, the true name of the firm shall be set forth, the names and addresses of all partners shall be given and the Proposal shall be signed by a partner in the firm authorized to sign contracts on behalf of the partnership. If the Bidder is a joint venture, the Proposal shall be signed on behalf of each participating company by officers or other individuals who have the full and proper authorization to do so. If the Proposal is signed by an agent of the

Bidder other than an officer of a corporation or a member of a partnership, a notarized Power of Attorney must be on file with the City prior to opening of bids or must be submitted with the Proposal. If requested by the City, the Bidder shall promptly submit evidence satisfactory to the City of the authority of the person signing the Proposal.

2-1.02 **SUBMISSION OF BIDS.** Bids must be submitted at the prescribed time and location specified in the Notice to Contractors. Any submission received after the prescribed time shall be rejected, regardless of whether or not bids are opened exactly at the prescribed time.

Any unauthorized conditions or qualifications entered on, or changes made to, the Proposal may render it invalid and may cause its rejection.

No telegraphic, telephonic, or facsimile or other electronically transmitted bids will be considered.

2-1.03 **REQUIRED LISTING OF PROPOSED SUBCONTRACTORS.** Each Proposal shall list the name, address and Contractor license number of each Subcontractor to whom the Bidder proposes to subcontract portions of the Work in an amount in excess of one-half of one percent (0.5%) of its total bid, in accordance with Section 4100 to 4114, inclusive, of the Public Contract Code for the State of California. The Bidder shall list the Subcontractor's license number and the portion of the Work that will be done by each Subcontractor. If the Bidder fails to specify a Subcontractor for any portion of the Work, the Bidder agrees to perform that portion of the Work itself, and represents that it is qualified to perform that portion of the Work itself. The Bidder's attention is invited to other provisions of the Public Contract Code related to the imposition of penalties for a failure to observe its provisions by using unauthorized Subcontractors or by making unauthorized substitutions.

2-1.04 **CONTRACTOR'S LICENSING LAWS.** Attention is directed to the provisions of Business and Professions Code Chapter 9 of Division 3 concerning the licensing of Contractors.

All Bidders at the time of bid submittal shall be licensed as Contractors in accordance with the laws of this State. Any Bidder or Contractor not so licensed is subject to the penalties imposed by such laws. The form of Contractor's license required is stated in the Notice to Contractors, provided that the City makes no representation as to whether the State may require other or additional licenses. It is the Bidder's and Contractor's responsibility to obtain the correct Contractor's licenses. Bidders shall be skilled and regularly engaged in the general class or type of Work called for under this Contract.

All Bidders and Contractors, including Subcontractors, shall have a current City business license before undertaking any Work.

2-1.05 **NONCOLLUSION DECLARATION.** By submitting a bid, the Bidder represents and warrants that such bid is genuine and not a sham or collusive or made in the interest or on the behalf of any person therein named, and that the Bidder has not, directly or indirectly, included or solicited any other Bidder to put in a sham bid, or any other person, firm, or corporation to refrain from bidding, and that the Bidder has not in any manner sought collusion to secure the Bidder an advantage over any other Bidder.

Bidders shall submit a properly completed and executed "Noncollusion Declaration" in the form required by Public Contract Code Section 7106 and provided with the Proposal (PROP-11).

2-1.06 **DISQUALIFICATION, REMOVAL OR OTHER PREVENTION OF BIDDING.** A bid may be rejected on the basis of a Bidder, any officer of such Bidder, or any

employee of such Bidder who has a proprietary interest in such Bidder, having been disqualified, removed, or otherwise prevented from bidding on, or completing a federal, state, or local project because of a violation of law or a safety regulation.

2-1.07 **PROPOSAL GUARANTY.** All bids shall be accompanied by one of the following forms of Bidder's security: Cash, a cashier's check, a certified check, or a Bidder's bond executed by an admitted California surety insurer, made payable to the City of Roseville, or any other form of security deemed acceptable by the City Attorney. The security shall be in an amount equal to at least ten percent (10%) of the amount bid. A bid will not be considered unless one of the form of Bidder's security is enclosed with it.

A Bidder's bond shall conform to the City's bond form in the Proposal and shall be properly filled out and executed.

2-1.08 **SCHEDULE OF BID PRICES.** Bidders are directed to submit unit and lump sum prices for all Work set forth in the Contract Documents on the Proposal Form entitled "Schedule of Bid Prices."

Unit prices and lump sum prices, as indicated, must be entered in the appropriate spaces provided in the Schedule of Bid Prices. If applicable, unit prices shall be multiplied by the quantities shown, and the total shall be inserted in the Amount column. In the event of any error or discrepancy between the unit price and the calculated amount, the unit prices shall govern. The City may correct any mathematical errors apparent on the face of the bid.

The amounts shown in the Amount column must be added together in arriving at the Grand Total Bid Price.

Amounts for Allowance bid items must be entered in the exact amount in the Amount column.

The prices included within the Schedule of Bid Prices shall include all costs for labor, materials, tools, equipment, services, Subcontractors, suppliers, taxes, insurance, shipment, delivery, overhead, profit, and all other costs necessary to perform the Work in accordance with the Contract Documents.

The Grand Total Bid Price shall be indicated in the Summary table form included with the Schedule of Bid Prices. The Grand Total Bid Price shall be the sum of the amounts bid for each of the designated portions of the Work, as more specifically described on the Schedule of Bid Prices form itself.

Full compensation for complying with the Contract Documents, including requirements of the Standard Specifications, the General Conditions, Supplemental Conditions, and all warranties, shall be considered included in the bid items and no additional compensation shall be allowed therefor.

Full compensation for completion of all work as shown on the plans, as specified in the Specifications, and as directed by the City, shall be considered included in the bid items and no additional compensation shall be allowed.

Bidders are strongly discouraged from submitting unbalanced bids. As used herein, the term "unbalanced bid" is defined as any bid that does not include a reasonable proportionate allocation of indirect costs and profit of each bid item indicated in the Schedule of Bid Prices. The City reserves the right to reject any unbalanced bid if the City determines that there is a reasonable doubt that an acceptance of the bid will not result in the lowest ultimate cost to the City with regard to the work or a disproportionate distribution of contract funds.

The City reserves the right to delete any bid item in its entirety and/or significantly reduce the quantity of Work under a bid item. The City makes no representation that any Work

under a bid item will be performed during the course of the Project or that the Work will be performed at the quantities included in the Schedule of Bid Prices. As provided in the General Conditions, for any deleted Work, Contractor shall not be entitled to payment of the indirect costs and profit included for said bid item. All bid items shall be considered distinct and severable from the remaining bid items, and each Bidder acts at its peril if its bid is unbalanced.

The City shall compare bids on the basis of the Grand Total Bid Price, which includes the base bid and any alternates designated on the Schedule of Bid Prices. Alternates may or may not be awarded, or may be awarded in any combination, at the City's discretion.

2-1.09 **WITHDRAWAL OF PROPOSALS.** Any bid may be withdrawn at any time prior to the time fixed in the Notice to Contractors for the opening of bids, provided that a request in writing, executed by the Bidder or its duly authorized representative, for the withdrawal of such bid is filed with the City Clerk. Facsimile and electronic mail requests are not acceptable. The withdrawal of a bid shall not prejudice the right of a Bidder to file a new bid. The withdrawal of any bid after the time fixed in the Notice to Contractors for the opening of bids will not be permitted.

2-1.10 **ADDENDUM.** Proposals shall include all costs and account for all Addenda issued prior to opening of bids. The Bidder is responsible for verifying that all issued Addenda have been received. An Addendum acknowledgment form for each Addendum shall be included as part of the Proposal submittal.

2-1.11 **PUBLIC OPENING OF PROPOSALS.** Proposals will be publicly opened and read at the time and place indicated in the Notice to Contractors. Bidders or their authorized agents are invited to be present.

2-1.12 **TRENCHING AND EXCAVATION WORK.** In accordance with the

provisions of California Labor Code Section 6707, if the Work involves construction of a pipeline, sewer, sewage disposal system, boring or jacking pits, or similar trenches or open excavations, which are five feet (5') or deeper, each bid submitted shall contain, as a bid item, adequate sheeting, shoring, and bracing, or equivalent method, for the protection of life or limb, which shall conform to all applicable safety orders.

SECTION 3: EVALUATION OF BIDS

3-1.01 **BID EVALUATION PROCESS.** Bids will be evaluated to determine the apparent low Bidder. The apparent low Bidder will be determined on the basis of the Grand Total Bid Price, as shown in the Schedule of Bid Prices. If additive or deductive alternates are used in the Schedule of Bid Prices, the apparent low Bidder will be the Bidder with the lowest total of the bid prices for base contract items plus the alternates designated by the City as those that will be used for determining the lowest bid price. However, the City reserves the right to (1) not award any alternates or (2) award any combination of alternates.

In case of discrepancy between the total of the base contract items and any specified alternates and the stated Grand Total Bid Price, the total of the base contract items plus specified alternates shall prevail. Any mathematical errors that appear on the face of the bid will be corrected by the City and the City will use the mathematically corrected addition. For example, if the mathematical total of Bidder's base contract items plus specified alternates equals $1,000,000, but the Bidder has written $1,250,000 as the Grand Total Bid Price, the City will consider $1,000,000 to be the Bidder's Grand Total Bid Price for purposes of comparison to other Bidders and actual bid award. The City reserves its rights to reject or accept bids based on discrepancies between the stated Grand Total Bid Price and the actual mathematical total of the

base contract bid items, plus specified alternates.

3-1.02 **REJECTION OF IRREGULAR PROPOSALS.** Proposals may be rejected in the City's sole discretion if they show any alterations of form, additions not called for, conditional bids, incomplete bids, erasures, or irregularities of any kind. However, the City reserves the right to waive any minor irregularities and informalities in any bid or in the bid procedure for any reason.

3-1.03 **COMPETITIVE BIDDING.** If more than one proposal is offered by any individual, firm, partnership, corporation, association, or any combination thereof, under the same or different names, all such proposals may be rejected. A party who has quoted prices on materials or Work to a Bidder is not thereby disqualified from quoting prices to other Bidders, or from submitting a bid directly for the materials or Work.

All Bidders are put on notice that any collusive agreement to control or affect the awarding of this Contract is in violation of the competitive bidding requirements of the City Charter, State Contract Act and the Business and Professions Code and may render void any Contract let under such circumstances.

3-1.04 **RELIEF OF BIDDERS.** If the Bidder claims a mistake was made in its bid, the Bidder shall give the Department written notice within five (5) Days after the opening of the bids of the alleged mistake, specifying in the notice in detail how the mistake occurred. No relief from a claimed mistaken bid shall be granted unless such mistake clearly appears on the face of the bid submitted to the City. Claimed mistakes on backup worksheets, spreadsheets, computerized bidding programs, or any other similar calculative bidding mistake which is not apparent on the face of the bid shall not under any circumstance be considered as a basis for relief. The burden of proving the occurrence of a mistake entitling a Bidder to relief from its bid

rests entirely on the Bidder. Relief from bids shall be in the City's sole discretion.

SECTION 4: AWARD AND EXECUTION OF CONTRACT

4-1.01 **AWARD OF CONTRACT.** The City reserves the right to reject any and all proposals and to award (or not award) any combination of bid items at its option. Any such award will be to the lowest responsible Bidder whose proposal complies with the requirements prescribed for the bid items awarded. Such award, if made, will be made within sixty (60) business days after the opening of the proposals. If the lowest responsible Bidder refuses or fails to execute the Contract, or provide an acceptable Performance Bond, Payment Bond, and insurance certificate(s), the City may award the Contract to the second lowest responsible Bidder. Such award, if made, will be made within eighty-two (82) business days after the opening of proposals. If the second lowest responsible Bidder refuses or fails to execute the Contract, or provide an acceptable Performance Bond, Payment Bond, and insurance certificate(s), the City may award the Contract to the third lowest responsible Bidder. Such award, if made, will be made within one hundred four (104) business days after the opening of the proposals. The above time periods within which the award of Contract may be made are subject to extension for such further period as may be agreed upon in writing between the City and the Bidder concerned.

4-1.02 **RETURN OF BIDDER'S SECURITIES.** Within ten (10) Days after the award of the Contract, the City Clerk will return all Bidders' securities, other than Bidders' bonds, accompanying the proposals that are not to be further considered in making the award. Retained Bidders' securities will be held until the Contract has been fully executed, after which all Bidders' securities, except Bidders' bonds and any Bidders' securities that have been forfeited,

will be returned.

4-1.03 **CONTRACT BONDS.** The successful Bidder shall furnish two (2) bonds in the form contained in the section entitled Insurance Broker Information Packet and Bonds. One (1) bond shall secure the payment of the claims of laborers, mechanics or materialmen employed on the Work under the Contract, and the other bond shall guarantee the faithful performance of the Contract.

Each of the two (2) bonds shall be in a sum equal to one hundred percent (100%) of the Contract Price. If the Contract Price increases by the issuance of Change Orders, the penal amounts of the bonds required shall increase accordingly. Sureties on each of said bonds shall be satisfactory to the City.

All alterations, extensions of time, extra and additional Work, and other changes authorized by the Standard Specifications, the General Conditions, the Supplemental Conditions or any part of the Contract may be made without securing the consent of the surety or sureties on the Contract bonds.

Furthermore, the successful Bidder shall furnish a certificate from the County Clerk as required by California Civil Code of Procedure Section 995.660(a)(3).

4-1.04 **INSURANCE.** At the time of the execution of the Contract, the Contractor shall, at its own expense, procure, and at all times during the prosecution of the Work maintain in full force and effect Worker's Compensation Insurance, and Liability Insurance as specified in the General Conditions. The Contractor shall provide a Certificate of Insurance in the form contained in the section entitled Insurance Broker Information Packet.

4-1.05 **EXECUTION OF CONTRACT.** The Contract shall be signed by the successful Bidder and returned, together with all the required Contract bonds and insurance

certificates, within fifteen (15) Days after the Contract has been awarded, or as otherwise directed, in writing, by the City.

If the Bidder is an individual, the Contract shall be executed personally by the Bidder. If the Bidder is a partnership, it is desirable that the Contract be executed by all of the partners, but it may be executed by one of them. If the Bidder is a corporation, it must be executed by two officers of the corporation consisting of (1) the chairman of the board, president or vice president; and (2) the secretary, assistant secretary, chief financial officer, treasurer or assistant treasurer, or by a person authorized by the corporation to execute written contracts on its behalf, and the corporate seal affixed thereto. In the alternative, a person other than an officer may sign the Contract, provided evidence satisfactory to the City is provided indicating the individual's authority to bind the corporation. If the corporate seal is not affixed to the Contract, or if it is executed by a person other than officers, or only by one officer, there must be attached to the Contract a certified copy of a resolution of the corporation authorizing such officer or person to execute written contracts for and on behalf of the corporation. If the Bidder is a joint venture, the Contract must be executed on behalf of each participating firm by officers or other individuals who have the full and proper authorization to do so.

4-1.06 **FAILURE TO EXECUTE CONTRACT.** Failure of the lowest responsible Bidder, the second lowest responsible Bidder, or the third lowest responsible Bidder to execute the Contract and file acceptable bonds and insurance as provided within fifteen (15) Days after the Contract has been awarded, or as otherwise directed, in writing, by the City, shall be just cause for annulment of the award and forfeiture of the Bidder's security. The successful Bidder may file with the City Clerk a written notice, signed by the Bidder or Bidder's authorized representative, specifying that the Bidder will refuse to execute the Contract if presented to

Bidder. The filing of such notice shall have the same force and effect as the failure of the Bidder to execute the Contract and furnish acceptable bonds within the time prescribed.

SECTION 5: BID PROTEST PROCEDURES

5-1.01 **POLICY/PROCEDURES.** It is the policy of the City to consider fully and adjudicate promptly protests filed by prospective Bidders relating to the City's bidding procedure or award of the Contract. Protests shall be filed and processed in accordance with Section 4.12.150 of the Roseville Municipal Code. A Bidder's failure to follow the bid protest procedures may result in rejection of the protest by the City.

PROPOSAL

PROPOSAL TO THE DEPARTMENT OF ENVIRONMENTAL UTILITIES

for

Dry Creek Wastewater Treatment Plant Operations and Laboratory Building Project

Name of Bidder _____ Business Phone _____

Business Address _____

Place of Business _____

Contractor's License No. _____

License Expiration Date_____

License Classification Type _____

DIR Registration No. _____

Type of business organization: _____

*If a Corporation, incorporated under the laws of the State of: _____

City of Roseville Business License No._____

The undersigned Bidder herewith submits this Proposal and binds itself on award by the City of Roseville under this bid to execute a Contract in accordance with its bid and the Contract Documents.

The Notice to Contractors, Instructions to Bidders, Form of Agreement, Specifications, General Conditions, Supplemental Conditions, Contract Drawings, and Addenda, if any, are made part of this bid and all provisions thereof are hereby accepted, and all representations and warranties are required thereby are hereby affirmed.

The work to be done is described in the Bidding Documents entitled Dry Creek Wastewater Treatment Plant Operations and Laboratory Building Project, City of Roseville, California.

This offer shall be irrevocable for a period of sixty (60) Days after the date on which bids are opened.

The undersigned Bidder understands that any clarification made to the above or any new and different conditions or information submitted on or with its Proposal, other than that requested, may render the bid non-responsive.

The undersigned, as Bidder, declares that the only persons or parties interested in this Proposal as principals are those named herein; that this Proposal is made without collusion with any other person, firm, or corporation; that the Bidder has carefully examined the location of the proposed Work, the attached Form of Agreement, and the plans, Specifications, and other Contract Documents; and agrees if this Proposal is accepted, that it will contract with the City of Roseville, in the form of a copy of the Agreement contained in the Project Manual, to provide all necessary machinery, tools, apparatus and other means of construction, and to do all the work and furnish all the materials specified in the Contract Documents, in the manner and time therein prescribed, and according to the requirements of the Director, as therein set forth, and that the Bidder will take in full payment therefore prices indicated in the Schedule of Bid Items, including all work modified by addendum numbers _____. (IF NONE, STATE

NONE).

Bids are required for all Bid Items. The amount of the Bid for comparison purposes will be the total of all items awarded.

The Bidder shall set forth for each item of work, in clearly legible figures, an item ("unit") price and a total for the item in the respective spaces provided for this purpose in the Schedule of Bid Items.

The prices included within the Schedule of Bid Items include all costs for labor, materials, tools, equipment, services, Subcontractors, suppliers, taxes, insurance, shipment, delivery, overhead, profit, and for all other costs necessary to perform the Work in accordance with the Contract Documents.

Accompanying this Proposal is _____.

(Notice: Insert the words "Cash $_____," "Cashier's Check," "Certified Check," or "Bidder's Bond," as the case may be, in an amount equal to at least ten percent (10%) of the total of the Bid.)

NONCOLLUSION DECLARATION

TO BE EXECUTED BY BIDDER AND SUBMITTED WITH BID

The undersigned declares:

I am the _____ of _____, the party making the foregoing bid.

The bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation. The bid is genuine and not collusive or sham. The Bidder has not directly or indirectly induced or solicited any other Bidder to put in a false or sham bid. The Bidder has not directly or indirectly colluded, conspired, connived, or agreed with any Bidder or anyone else to put in a sham bid, or to refrain from bidding. The Bidder has not in any manner, directly or indirectly, sought by agreement, communication, or conference with anyone to fix the bid price of the Bidder or any other Bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other Bidder. All statements contained in the bid are true. The Bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, to any corporation, partnership, company, association, organization, bid depository, or to any member or agent thereof, to effectuate a collusive or sham bid, and has not paid, and will not pay, any person or entity for such purpose.

Any person executing this declaration on behalf of a Bidder that is a corporation, partnership, joint venture, limited liability company, limited liability partnership, or any other entity, hereby represents that he or she has full power to execute, and does execute, this declaration on behalf of the Bidder.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this declaration is executed on _____ [date], at _____ [city], _____ [state].

END OF PROPOSAL

AGREEMENT

THIS AGREEMENT, is made and entered into this _____ day of _____, 20_____, by and between the City of Roseville, a municipal corporation, ("CITY"), and _____, a _____, ("CONTRACTOR"); and

W I T N E S E T H:

WHEREAS, the City Council of the CITY, at a meeting held on the ____day of _____, 20_____, approved plans and specifications for the

_____

and directed the City Clerk to advertise for sealed proposals for doing said work and providing that bids be submitted on the _____ day of _____, 20_____; and

WHEREAS, the City Clerk, thereafter duly and regularly caused a notice to be published in the manner and for the time prescribed by law; and

WHEREAS, CONTRACTOR, pursuant to the provisions of said notice duly filed a bid with the City Clerk, a true copy of which bid is now on file in the office of the City Clerk, and is hereby referred to and by this reference made a part hereof as fully as if set forth at length herein; and

WHEREAS, all bids received pursuant to said notice were opened and examined and publicly declared at the time specified in said advertisement for bids and at a meeting of the City Council held on the _____ day of _____, 20_____, the Council found and declared the bid of CONTRACTOR to be the lowest responsible bid and thereupon awarded a

contract to CONTRACTOR to do the work referred to in the aforementioned specifications.

NOW, THEREFORE, the parties agree as follows:

1. THE WORK. CONTRACTOR agrees:

a. To do the work and furnish all the labor, materials, tools, supplies, equipment, superintendence, insurance, and bonds required for the _____

_____

in accordance with the Contract Documents (the Work).

b. To do and perform the Work contemplated hereby in a good and workmanlike manner under the direction of and to the satisfaction of the Director of Public Works of the City of Roseville.

2. PAYMENT. CITY shall pay CONTRACTOR _____

_____ dollars ($_____) for the Work to be done under this Agreement in accordance with the Contract Documents.

3. CONTRACT DOCUMENTS. The complete Agreement between the parties hereto consists of the following documents:

a. The advertisement for bids (including the notice to bidders, instructions to bidders and proposals);

b. The accepted bid;

c. Plans and specifications (including general conditions, supplemental conditions, special provisions and construction details);

d. Bonds and insurance required by the Insurance Broker Information Packet section of this document; and

e. This contract.

All documents specified above are intended to operate so that any work called for in any one and not mentioned in the other, or vice versa, is to be executed the same as if mentioned in all said documents.

4. LIQUIDATED DAMAGES. In the event CONTRACTOR does not complete the Work within the time specified, CONTRACTOR agrees that CITY will suffer damages. Inasmuch as the actual damages which would result from such breach by CONTRACTOR under this Agreement are uncertain, and would be impractical or extremely difficult to fix, CONTRACTOR agrees that it shall pay, or CITY shall deduct from CONTRACTOR's fee, the amount of $1,500.00 per day as liquidated damages, in the event of such delay.

5. TIME OF COMPLETION. Time is of the essence of this Agreement. CONTRACTOR shall complete all Work under the Contract Documents within 181 Days of the date of this Contract. CONTRACTOR shall begin work by the date specified in the "Notice to Proceed" letter and shall diligently prosecute all of the Work under this Contract in all parts and requirements as defined in the Contract Documents.

6. SERVICE OF NOTICE. Any notice required or permitted to be given under this Agreement shall be deemed given when (a) personally delivered to the recipient identified below; (b) mailed by registered or certified mail, return receipt requested, postage pre-paid, to the address specified below; or (c) sent by facsimile, with confirmation of receipt, to the facsimile number identified below.

CITY OF ROSEVILLE	CONTRACTOR
_____	_____
_____	_____
_____	_____
_____	_____

CITY may also act through either its architect or construction manager if CITY expressly gives notice to CONTRACTOR, in writing, that CITY's designee has authority to act for CITY in a specific capacity.

7. DISPUTES. Disputes arising from this Agreement will be determined in accordance with the Contract Documents and Public Contract Code Sections 10240-10240.13.

8. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

9. INDEPENDENT CONTRACTOR. CONTRACTOR shall act as an independent contractor, and covenants and agrees that it will conduct itself consistent with such status, that it will neither hold itself out as, nor claim to be, an officer or employee of CITY by reason of this Agreement.

10. SUCCESSORS IN INTEREST. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

11. MODIFICATION. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

12. SEVERABILITY. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

13. INTEGRATED AGREEMENT. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

14. CONTRACTORS LICENSE LAW. CONTRACTORS ARE REQUIRED BY LAW TO BE LICENSED AND REGULATED BY THE CONTRACTORS' STATE LICENSE

BOARD WHICH HAS JURISDICTION TO INVESTIGATE COMPLAINTS AGAINST CONTRACTORS IF A COMPLAINT REGARDING A PATENT ACT OR OMISSION IS FILED WITHIN FOUR (4) YEARS OF THE DATE OF THE ALLEGED VIOLATION. A COMPLAINT REGARDING A LATENT ACT OR OMISSION PERTAINING TO STRUCTURAL DEFECTS MUST BE FILED WITHIN TEN (10) YEARS OF THE DATE OF THE ALLEGED VIOLATION. ANY QUESTIONS CONCERNING A CONTRACTOR MAY BE REFERRED TO THE REGISTRAR, CONTRACTORS' STATE LICENSE BOARD, P.O. BOX 26000, SACRAMENTO, CALIFORNIA 95826.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attestation by its City Clerk under authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ____day of _____, 20_____, and CONTRACTOR has caused this Agreement to be duly executed.

INSURANCE BROKER INFORMATION PACKET

Dry Creek Wastewater Treatment Plant Operations and Laboratory Building Project

TABLE OF CONTENTS for INSURANCE BROKER INFORMATION PACKET

	Page
Notice to Contractor	INS 1
Notice to Insurance Broker	INS 2
Insurance Requirements	INS 4
Public Works Faithful Performance Bond	INS 11
Public Works Payment Bond	INS 16

NOTICE TO CONTRACTOR

For your convenience, this package contains the Requirements for Insurance and Bonds for this project, including the necessary City forms. You are required to return these forms in addition to the executed Contract within fifteen (15) calendar days after the award of the Bid, unless otherwise directed by City in writing. (See the Instructions to Bidders.)

Please insert the dollar amount of your accepted Bid into the blank on page INS-1 and present this entire package to your insurance broker if you are awarded the Bid.

NOTICE TO INSURANCE BROKER

Your client has been awarded a bid by the City Council of the City of Roseville to perform a public works project known as the Dry Creek Wastewater Treatment Plant Operations and Laboratory Building Project.

The Contract Amount is $_____

The Contract Conditions for this project require your client ("the Contractor") to return certain evidence of insurance and bonds to the City Attorney of the City within fifteen (15) days after the Bid award, unless otherwise directed by the City in writing, or else the Bid award may be terminated and awarded to another company.

This package contains the information you will need as an insurance broker to provide the appropriate insurance and bonds to the City. The insurance coverages the Contractor needs are specified in the section entitled "Insurance Requirements." Please note that, in addition to the insurance certificate itself, copies of several endorsements must be actually furnished.

Please refer to the Supplemental Conditions for modifications of the General Conditions, if any, and the requirements of this insurance packet.

Please use the standard City of Roseville Bond Forms provided in this package.

The Bonds required must each be in the penal amount of: $_____.

Bonds must be sent to the following staff person:

Inderpreet K Chaggar
2005 Hilltop Circle
Roseville, CA 95747

Insurance documents must be provided using ONLY ONE of the following methods:

a. By email to roseville@ebix.com
b. Or By fax to (770) 335-5727
c. Or mail the documents to

City of Roseville
Insurance Compliance
P.O. Box 100085-R1
Duluth, GA 30096

If sent by email or fax, please **DO NOT** also send the insurance certificate(s) by mail.

When forwarding the documents, please refer to the project name so that the documents can be matched with the Contract for which they are submitted.

Thank you.

INSURANCE REQUIREMENTS

The following sections are quoted from the General Conditions:

5-1.23 **INSURANCE COVERAGE.**

A. Evidence of Maintenance Required. The Contractor shall, at its expense, procure and at all times maintain in full force and effect at a minimum the insurance required by this section on all of its operations; and the Contractor shall not allow any Subcontractor to commence work until similar insurance required of the Subcontractor has been obtained and filed. An original Certificate of Insurance, and copies of all required endorsements, all in a form approved by the Risk Manager, evidencing all required coverage or policies shall be filed after the award of the bid and prior to approval of the Contract by the City Council. Contractor shall provide ten (10) days prior written notice to the City of any reduction of coverage limits or cancellation of the coverage or policies shall be given to the City of Roseville as Certificate holder.

B. Qualifying Insurers. With the exception of the State Compensation Insurance Fund, all required insurance policies shall be issued by companies acceptable to the City and licensed to do business in the State of California and who hold a current policy holders alphabetic and financial size category rating of not less than AVII according to the most recent issue of Best's Insurance Reports.

C. Insurance Required.

1. **Commercial General Liability (CGL):** Insurance Services Office Form CG 00 01 covering CGL on an "occurrence" basis, including products and completed operations with limits of no less than Two Million Dollars ($2,000,000) per occurrence for bodily injury,

personal injury and property damage for projects under One Million Dollars ($1,000,000) and limits of no less than Five Million Dollars ($5,000,000) per occurrence for bodily injury, personal injury and property damage for projects over One Million Dollars ($1,000,000). If a general aggregate limit applies, either the aggregate limit shall apply separately to this project or the general aggregate limit shall be twice the required occurrence limit.

The Commercial General Liability insurance shall include the following, copies of which shall be provided:

a. Inclusion of the City of Roseville, and its officers, agents, employees, and volunteers, as additional insureds (except for workers' compensation) as respects services or operations under the Contract. The additional insured endorsement for the general liability policy shall be at least as broad as the ISO CG 2010 10 01 combined with ISO CGL Endorsement CG 2037 10 01. Any other endorsement must be approved in writing by the City. Endorsements must include coverage for on-going and completed operations, which coverage shall be maintained for four (4) years following completion of the Project. Endorsements shall cover the City of Roseville, its officers, agents, employees, and volunteers.

b. The insurance shall provide coverage for claims by one insured against another insured and the policies shall not contain any cross-suits exclusions, cross-liability exclusions, or insured versus insured exclusions. The policies shall not contain any classification exclusions purporting to deny coverage for any work to be performed by Contractor or any of its Subcontractors.

c. Stipulation that the insurance is primary and noncontributory, as evidenced by a separate endorsement (CG 20 01 04 13 or an equivalent) or section of the policy, and that neither the City nor its insurers will be called upon to contribute to a loss.

d. Such insurance shall specifically cover the contractual liability of the Contractor.

e. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

f. Waiver of subrogation endorsement.

g. The Contractor shall furnish a certificate for the period covered.

2. **Automobile Liability:** Insurance Services Office Form Number CA 0001 covering Code 1 (any auto), or if Contractor has no owned autos, Code 8 (hired) and Code 9 (non-owned), with limits of no less than One Million Dollars ($1,000,000) per accident for bodily injury and property damage.

3. **Workers' Compensation:** In accordance with the provisions of the California Labor Code, Contractor is required to be insured against liability for Workers' Compensation or to undertake self-insurance. Statutory Workers' Compensation and Employers' Liability of at least One Million Dollars ($1,000,000) shall cover all Contractors staff while performing any work incidental to the performance or this Agreement.

4. **Professional Liability:** Professional Liability (Errors and Omission) Insurance appropriate to Contractor's profession, with a limit of liability not less than One Million Dollars ($1,000,000) per occurrence or claim and Two Million Dollars ($2,000,000) aggregate to cover all design and engineering services rendered by Contractor pursuant to the Agreement. Coverage must commence from the first day that Contractor or any of its

Subcontractors provided any design or engineering services in connection with the Project.

5. **Builder's Risk/Course of Construction Insurance Is __X__ OR Is Not ____ Required by Risk Management:** The Contractor shall be responsible for all loss, damage or destruction whatsoever to the work called for by this Contract until the approval of a Notice of Completion or acceptance of the Work if no Notice of Completion is to be recorded.

The Contractor shall secure "All Risk" type of Builder's Risk Insurance of the type covering one hundred percent (100%) of the value of the work performed under this Contract (the value is presumed to be the Contract amount unless otherwise stated in Supplemental Conditions) and all materials, equipment, or other items to be incorporated therein while the same are located at the construction site, a bonded warehouse, or its place of manufacture. At any time, the policy shall cover the value of the work completed. The policy shall cover hazards including the losses due to fire, explosion, hail, rain, lightning, flood (separate insurance as needed), vandalism, malicious mischief, wind, collapse, aircraft, and smoke.

The policies providing such insurance shall name the City as a loss payee as its respective interests may appear, and certified copies of such policies shall be filed with the City. The maximum deductible allowable under the Builder's All Risk policy shall be five percent (5%) of the Contract amount.

Builder's Risk Insurance is not required for coverage of losses in excess of five percent (5%) of the Contract amount for damages resulting from earthquake in excess of a magnitude of 3.5 on the Richter scale, or tidal waves. Coverage in the amount of five percent (5%) of the Contract amount for such losses is required.

6. **Pollution Coverage:** Contractor shall procure pollution liability coverage or other insurance covering claims for bodily injury or property damage arising out of the

abatement, removal, storage, transportation, or other exposure to hazardous materials or pollutants, in limits not less than Two Million Dollars ($2,000,000). Contractor shall add the City and all parties required to be indemnified by Contractor as additional insured on all pollution liability policies.

7. **Higher Coverage Limits:** If Contractor maintains higher coverage limits than the amounts shown above, then the City requires and shall be entitled to coverage for the higher coverage limits maintained by Contractor. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

8. **Claims Made Coverage:** Liability insurance coverage may not be written on a "claims made" or modified occurrence basis. The Certificate of Insurance must clearly provide that the coverage is on an "occurrence" basis.

5-1.24 **OTHER INSURANCE PROVISIONS.**

A. The requirements of the Standard Specifications as to types and limits of insurance coverage to be maintained by the Contractor, and any approval of insurance by the City, are not intended to, and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Contractor pursuant to the Contract, including, but not limited to, the provisions concerning indemnification, nor preclude the City from taking any other action available to it under any other provision of the Contract or law.

B. The City acknowledges that some insurance requirements contained in these Standard Specifications may be fulfilled by self-insurance on the part of the Contractor. However, this shall not in any way limit liabilities assumed by Contractor under the Contract. Any self-insurance must be approved in writing by the City, in its sole discretion and shall not reduce the limits of liability. Any deductibles or self-insured retentions ("SIR") must be

declared on the certificate of insurance and approved by City in writing. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or City. City reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

C. The Contractor agrees to include in its contracts with all subcontractors the same requirements and provisions of this Contract, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, the Contractor shall require its subcontractors to agree to be bound to the Contractor and the City in the same manner and to the same extent as the Contractor is bound to the City under this Contract. Additionally, the Contractor shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of the City's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request. Alternatively, the Contractor may insure subcontractor(s) under its own policy.

D. The City, its officers, agents, employees, and volunteers are to be covered as insureds with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the Contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under California Insurance Code Section 11580.04.

E. The limits of insurance required in this Contract may be satisfied by a

combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of the City (if agreed to in a written contract) before the City's own insurance shall be called upon to protect it as a named insured.

F. The insurance procured by Contractor shall be subject to the approval of the City, but any acceptance of insurance certificates by the City shall in no way limit or relieve Contractor of its duties and responsibilities under the Agreement.

G. Contractor shall be responsible for all premiums, deductibles, and self-insured retention applicable to the insurance it is required to procure under the Contract. All deductibles or self-insured retentions over five hundred thousand dollars ($500,000) must be approved by the City, in writing. Contractor shall be responsible for all deductibles, self-insured retention payments, and/or increased premiums incurred if the City's policies of insurance are forced to cover damages or respond to claims for which Contractor or its Subcontractors were obligated to provide insurance under the Contract.

H. Failure of the City to enforce in a timely manner any of the requirements of these insurance provisions shall not act as a waiver to enforcement of any of these provisions at a later date.

I. Contractor's indemnity obligations shall not be limited by these insurance provisions and shall survive the expiration of the Contract and the insurance provisions of the Contract shall likewise not be limited by the indemnity provisions of the Contract.

J. THE CITY RESERVES THE RIGHT TO WITHHOLD ANY PROGRESS PAYMENTS TO THE CONTRACTOR IN THE EVENT OF NONCOMPLIANCE WITH ANY INSURANCE REQUIREMENTS.

Bond No. _____

Premium $_____

PUBLIC WORKS

FAITHFUL PERFORMANCE BOND

(Project: _____)

WHEREAS, the City of Roseville ("CITY") has awarded a bid and contract to _____ as contractor ("PRINCIPAL") for the public work described as _____ _____ (the "WORK"). The contract ("AGREEMENT"), for the public work described above, and all of its terms and conditions are incorporated by reference and made a part hereof; and

WHEREAS, the PRINCIPAL is required to furnish a bond in connection with the AGREEMENT guaranteeing its faithful performance; and

NOW, THEREFORE, we the undersigned PRINCIPAL and _____ _____, a _____, admitted and duly authorized to transact business under the laws of the State of California, as SURETY ("SURETY"), are held and firmly bound unto the CITY or its successors and assigns in the sum of _____ dollars ($_____) (which amount is not less than 100% of the

AGREEMENT price) to be paid to the CITY or its successors and assigns; and for which payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors or assigns jointly and severally, firmly by these presents.

The condition of this obligation is such that if the PRINCIPAL, or its heirs, executors, administrators, successors or assigns, shall abide by, and in all respects promptly and faithfully perform the covenants, conditions and provisions in said AGREEMENT and any alteration thereof made as therein provided, notice of which alterations to Surety being hereby waived, on its part to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless CITY, its officers, agents, employees, volunteers as therein stipulated, then this obligation shall be null and void; otherwise, this obligation shall be and remain in full force and effect.

As condition precedent to the satisfactory completion of the contract, the obligation of the PRINCIPAL and SURETY under this Bond shall remain in effect for a period of one (1) year after the completion and acceptance of the WORK. During that time, if the PRINCIPAL, its heirs, executors, administrators, successors or assigns fails to make full, complete and satisfactory repair and replacement or totally protect the CITY from any loss or damage made evident during that year which results from or is caused by either defective materials or faulty workmanship in the prosecution of the WORK, then the obligation shall remain in full force and effect. However, anything in this paragraph to the contrary notwithstanding, the obligation of the SURETY shall

continue so long as any obligation of the PRINCIPAL remains.

No prepayment or delay in payments, and no change, extension, addition or alteration of any provision of the AGREEMENT or in the specifications agreed to between the PRINCIPAL and the CITY, or any forbearance on the part of the CITY shall operate to relieve the SURETY. The SURETY hereby waives the provisions of Section 2819 of the California Civil Code. The SURETY waives all rights of subrogation against the CITY or any person employed by the CITY. If the contract price increases by the issuance of change orders, the amount specified in this bond shall increase by the same amount.

Whenever PRINCIPAL shall be and declared by CITY to be in default under the AGREEMENT, SURETY shall promptly remedy the default, or shall promptly do one of the follow at CITY's election:

1. Undertake through its agents or independent contractors, reasonably acceptable to CITY, to complete the AGREEMENT in accordance with its terms and conditions and to pay and perform all obligations of PRINCIPAL under the AGREEMENT, including without limitation, all obligations with respect to warranties, guarantees, and the payment of liquidated damages.

2. Reimburse CITY for all costs CITY incurs in completing the AGREEMENT, and in correcting, repairing or replacing defects in materials or workmanship

and/or materials and workmanship which do not conform to the specifications in the AGREEMENT.

SURETY's obligations hereunder are independent of the obligations of any other surety for the performance of the AGREEMENT, and suit may be brought against SURETY and such other sureties, jointly and severally, or against any one or more of them, or against less than all of them without impairing CITY's rights against the others.

No right of action shall accrue on this bond to or for the use of any person or corporation other than CITY or its successors or assigns.

As part of the obligation secured hereby and in addition to the face amount specified therefore, there shall be included costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by CITY in successfully enforcing such obligation, all to be taxed as costs and included in any judgment rendered.

[SIGNATURES NEXT PAGE]

PUBLIC WORKS

LABOR AND MATERIALS PAYMENT BOND

(Project: _____)

WHEREAS, the City of Roseville ("CITY"), has awarded a bid and contract to _____ as contractor ("PRINCIPAL"), for the public work described as _____ _____ (the "WORK"). The contract ("AGREEMENT"), for the public work described above, and all of its terms and conditions are incorporated by reference and made a part hereof; and

WHEREAS, the PRINCIPAL is required to furnish a bond in connection with the AGREEMENT guaranteeing payment of persons who provide labor and material; and

NOW, THEREFORE, we the undersigned PRINCIPAL and _____ _____, a _____, admitted and duly authorized to transact business under the laws of the State of California, as SURETY ("SURETY"), are held and firmly bound unto the CITY or its successors and assigns in the sum of _____ dollars ($_____) (which amount is not less than 100% of the AGREEMENT price) to be paid to the CITY or its successors and assigns; and for which

payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors or assigns jointly and severally, firmly by these presents.

The condition of the obligation is such that if the PRINCIPAL, its subcontractors, heirs, executors, administrators, successors or assigns fails to pay any of the persons named in Section 8004 or 9100 of the Civil Code of the State of California, or the amounts due under the Unemployment Insurance Code of the State of California, or any amounts required to be deducted, withheld and paid over to the Employment Development Department from the wages of employees of the PRINCIPAL and its subcontractors pursuant to Section 13020 of the Unemployment Insurance Code, with respect to work or labor performed by any such claimant, that the SURETY will pay for the same, in an amount not exceeding the sum specified in this bond, and also, in case suit is brought upon the bond, shall pay reasonable attorneys' fees, to be fixed by the Court.

This bond shall inure to the benefit of any and all persons, companies, and corporations entitled to file a Stop Payment Notice pursuant to the provisions of Section 9350 et seq. of the Civil Code of the State of California, so as to give a right of action to them or their assigns in any suit brought upon this bond.

No prepayment or delay in payments, and no change, extension, addition or alteration of any provision of the AGREEMENT or in the specifications agreed to between the PRINCIPAL and the CITY, or any forbearance on the part of the CITY shall

operate to relieve the SURETY. The SURETY hereby waives the provisions of Section 2819 of the California Civil Code. The SURETY waives all rights of subrogation against the CITY or any person employed by the CITY. If the contract price increases by the issuance of change orders, the amount specified in this bond shall increase by the same amount.

As part of the obligation secured hereby and in addition to the face amount specified therefore, there shall be included costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by CITY in successfully enforcing such obligation, all to be taxed as costs and included in any judgment rendered.

SECTION 1

DEFINITIONS AND TERMS

1-1.01 **GENERAL.** When the following abbreviations and terms or pronouns in place of them appear in the Contract Documents, the intent and meaning shall be interpreted as provided in this Section 1.

1-1.02 **ACCEPTANCE.** Formal Acceptance by resolution by the Roseville City Council of the Contract when completed in all respects in accordance with the Contract Documents and any modifications previously approved.

1-1.03 **ADDENDUM.** Written interpretation or revision to any of the Contract Documents issued by the City before the bid opening.

1-1.04 **AS-BUILT DOCUMENTS, AS-BUILT DRAWINGS AND RECORD DOCUMENTS.** As-Built Documents, As-Built Drawings and Record Documents are all contract documents modified to reflect changes during the construction phase. Specifically, As-Built Documents/Drawings are a revised set of drawings submitted by the Contractor upon Final Completion of a project. They reflect changes made in the Specifications and Working Drawings during the construction process, and show the exact dimensions, geometry, and location of all elements of the work completed under the Contract. Record Documents, on the other hand, are compiled by the Engineer or Architect based on the As-Built Documents/Drawings submitted by the Contractor. They reflect the Engineer or Architect's concurring review of what changes were denoted, why they were made and where they occurred and create a record set of drawings.

1-1.05 **ASSESSMENT.** A cost imposed on the Contractor for non-compliance

with certain contractual requirements.

1-1.06 **BENEFICIAL OCCUPANCY.** The taking possession of a portion of the Work by the City for its use and/or occupancy on other than a temporary or emergency basis.

1-1.07 **BID GUARANTY.** The cashier's, certified check, irrevocable standby letter of credit, deposit of securities, or Bidder's Bond, accompanying the bid submitted by the Bidder, as a guaranty that the Bidder will enter into an agreement with the City for the performance of the Work, if the Agreement is awarded to Bidder, and the Bidder will submit the required Contract Bonds and Certificate of Insurance. Also referred to as the Bidder's Security.

1-1.08 **BIDDER.** Individual, firm, partnership, limited liability company, corporation, joint venture, or any combination thereof, submitting a Proposal for the Work, acting directly, or through a duly authorized representative.

1-1.09 **BIDDING DOCUMENTS.** Includes the Notice to Bidders, Bidding Requirements, Contract Conditions, Drawings, and Addenda.

1-1.10 **CHANGE ORDER.** Any written order to the Contractor directing an addition, deletion, or modification of the Work, or an adjustment in the Contract Price or Contract Time provided in the Contract Documents and issued after the Agreement has been signed.

1-1.11 **CITY.** The City of Roseville.

1-1.12 **CITY ATTORNEY.** The City Attorney of the City.

1-1.13 **CITY CLERK.** The City Clerk of the City.

1-1.14 **CLAIM.** A separate demand by Contractor sent by registered mail or certified mail with return receipt requested, for one or more of the following: (a) a time extension, including, without limitation, for relief for damages or penalties for delay assessed by

the City; (b) payment by the City of money or damages arising from work done by, or on behalf of, Contractor pursuant to the Contract Documents and payment for which is not otherwise expressly provided or to which Contractor is not otherwise entitled; and (c) payment of an amount that is disputed by the City.

1-1.15 **CONSTRUCTION SCHEDULE.** A list or graphic display of construction activities required for completing the Work, in a format required by the Contract Documents. The duration, start and finish date, and sequence of significant activities, critical path, float and milestones must be indicated in the Construction Schedule.

1-1.16 **CONTRACT OR AGREEMENT.** The written agreement relating to the Work to be performed, the labor, materials, and equipment to be furnished, and the payment to be made therefor. The Agreement/Contract is part of and incorporates all of the Contract Documents.

1-1.17 **CONTRACT CONDITIONS.** Includes the General Conditions, Supplemental Conditions, and Specifications.

1-1.18 **CONTRACT DOCUMENTS.** Includes those documents that form the basis of the Contract, including but not limited to, Bidding Documents, the Bid or Proposal, Contract Bonds, the Contract, all required insurance certificates or endorsements, all bonds, all required certifications or statements, Change Orders, any Contract Amendment, any City Standard which is incorporated by reference and these City of Roseville General Conditions for Buildings and Grounds.

1-1.19 **CONTRACT DRAWINGS.** The official drawings including plans, elevations, sections, detail drawings, diagrams, plated, General Notes, information and schedules thereon, or exact reproductions thereof, showing the location, character, dimension, and details

of the Work. The Contract Drawings include any drawings or plates bound within the Supplemental Conditions.

1-1.20 **CONTRACT PRICE.** The total compensation to be paid to the Contractor in accordance with the terms of the Agreement.

1-1.21 **CONTRACT TIME.** The number of Days, or portion thereof, allowed for completion of the Work, including all authorized time extensions. The effective date for commencement of the Work specified in the Notice to Proceed shall define the beginning of the Contract Time.

1-1.22 **CONTRACTOR.** Individual, firm, partnership, limited liability company, corporation, joint venture, or any combination thereof, who has entered into the Agreement with City.

1-1.23 **DAY OR DAYS.** Unless otherwise designated, Day or Days as used in the Contract Documents will be understood to mean calendar Day or Days.

1-1.24 **DEPARTMENT.** The Department for Contract Administration, as identified in the Supplemental Conditions.

1-1.25 **DIRECT COSTS.** Those cost items (including labor, materials, equipment and any subcontractor's work) that are used in the actual performance of, and are specifically and uniquely attributable to the Work or changed Work. Direct Costs do not include Overhead. Direct Costs only include the following:

A. Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by City and Contractor. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include salaries and

wages plus the cost of fringe benefits which shall include social security contributions, unemployment, excise and payroll taxes, workers' compensation, health and retirement benefits, sick leave, vacation and holiday pay applicable thereto. Such employees may include superintendents and foremen at the site. The expenses of performing work after regular working hours, on Saturday, Sunday or legal holidays shall be included in the above only to the extent authorized by City in writing.

B. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and suppliers' field services required in connection therewith. All trade discounts, rebates and refunds and all returns from sale of surplus materials and equipment shall accrue to City, and Contractor shall make provisions so that they may be obtained.

C. Payments made by Contractor to the subcontractors for work performed by subcontractors. If required by City, Contractor shall obtain competitive bids from subcontractors acceptable to Contractor and shall deliver such bids to City who will then determine which bids will be accepted. If a subcontract provides that the subcontractor is to be paid on the basis of cost of the work plus a fee, the subcontractor's cost of the work shall be determined in the same manner as Contractor's cost of the work. All subcontracts shall be subject to the other provisions of the Contract Documents insofar as applicable.

D. Costs of special consultants (including engineers, architects, testing laboratories, surveyors, and accountants) employed for services specifically, and only, related to the Work.

E. Supplemental costs including the following:

1. The proportion of necessary transportation, travel and subsistence

expenses of Contractor's employees incurred in discharge of duties connected with the Work.

2. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office and temporary facilities at the site and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value of such items used but not consumed which remain the property of Contractor.

3. Rentals of all construction equipment and machinery and the parts thereof whether rented from Contractor or others in accordance with rental agreements approved by City, and the costs of transportation, loading, unloading, installation, dismantling and removal thereof, all in accordance with terms of said rental agreements. The rental of any such equipment, machinery or parts shall cease when the use thereof is no longer necessary for the Work.

4. Sales, consumer, use or similar taxes related to the Work, and for which Contractor is liable, imposed by laws and regulations.

5. The cost of utilities (including the meter and all associated installation costs), fuel and sanitary facilities at the site.

6. Cost of premiums for additional bonds and insurance required because of changes in the Work.

1-1-26 **DIRECTOR.** Director of the Department for Contract Administration or his or her designee.

1-1.27 **EMERGENCY.** Any sudden generally unforeseen occurrence (such as a fire, flood, storm, earthquake, civil disorder, or other natural and/or man-made disaster) that has the potential to adversely affect the safety of life, the Work, and/or adjacent property; to interrupt contracts essential to the performance of the Work; and/or to cause catastrophic failure of City

equipment and/or facilities.

1-1.28 **ENGINEER OR ARCHITECT.** Professional Engineer or Architect designated for a particular project responsible for signing and sealing the permit drawings, interpretation of the drawings where ambiguities exist, review of requests for information, design Change requests and Shop Drawings, resolution of errors and omissions, and finalization of Record Documents.

1-1.29 **FINAL COMPLETION.** When the project has been completed according to the terms and conditions set forth in the Contract Documents. Final Completion is not the same as Acceptance.

1-1.30 **FORCE ACCOUNT.** Payment by force account shall mean payment on the basis of the Contractor's time and materials.

1-1.31 **GENERAL NOTES.** The written instructions, provisions, conditions or other requirements appearing on the Contract Drawings and so identified thereon, which pertain to the performance of the Work.

1-1.32 **INSTALLATION, INSTALL.** Completely assembling, erecting, and/or connecting materials, parts, components, supplies, and related equipment specified or required for the completion of the Work.

1-1.33 **LABORATORY.** Established professional laboratories authorized by the City to test materials and Work involved in the Contract.

1-1.34 **LEGAL HOLIDAYS.** Those days designated as Federal holidays or declared by the City, or otherwise specified in the Contract Documents.

1-1.35 **LIQUIDATED DAMAGES.** The amount prescribed in the Contract Documents to be paid to the City or to be deducted from any payments due or to become due the

Contractor for each day's delay in completing the whole or any specified portion of the Work beyond the time allowed in the Supplemental Conditions.

1-1.36 **NOTICE OF COMPLETION.** A legal notice filed by the City with the Placer County Recorder's Office stating that construction has been completed and accepted by the City.

1-1.37 **NOTICE TO PROCEED.** A written notice given by the City to the Contractor fixing the date on which the Contract Time will commence to run.

1-1.38 **NOTICE OF TERMINATION.** Written notice from the City to the Contractor and/or its Surety terminating the Agreement, or a portion thereof, either for convenience of the City or for default due to the Contractor's failure to perform its contractual obligations.

1-1.39 **OVERHEAD.** Business or administrative expenses (including but not limited to office expenses, administrative staff, rent, insurance, utilities) not chargeable to a particular part of the Work. The term "Overhead" shall include all of the following:

A. Payroll costs and other compensation of Contractor's officers, executives, principals (of partnerships and sole proprietorships), general managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks, and other personnel employed by Contractor whether at the Work Site or in Contractor's principal or a branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications, all of which are to be considered administrative costs covered by the Contractor's fee.

B. Expenses of Contractor's principal and branch offices other than Contractor's office at the site.

C. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.

D. Cost of premiums for all bonds and for all insurance whether or not Contractor is required by the Contract Documents to purchase and maintain the same, except as provided in section 1-1.25.

E. Other overhead or general expense costs of any kind.

1-1.40 **PREMISES.** Shall mean the area within construction easements, easements, rights of entry and City owned property which surrounds the Work Site, limited by the property lines thereof. In some cases Premises may coincide with the Work Site.

1-1.41 **PROFESSIONAL ENGINEER.** An engineer licensed by the Board of Registration for Professional Engineers, State of California.

1-1.42 **PROJECT MANUAL.** A book containing all Contract Documents.

1-1.43 **PROPOSAL FORMS.** The approved forms upon which the City requires that each Bidder submit its bid with regard to the Agreement.

1-1.44 **REQUEST FOR INFORMATION (RFI).** A document issued by the Contractor requesting information concerning the Contract Documents.

1-1.45 **SAFETY.** Includes the practice of identifying potential hazards, assessing their risk, taking corrective action where possible, including and providing control measures such as engineering design, written procedures, and the personal protective equipment for workers in order to eliminate or reduce the risk for exposure in the workplace.

1-1.46 **SCHEDULE OF VALUES.** The breakdown of the Contract Price that will serve as the basis for Contractor's Applications of Payment. Any lump sum bid item

included within the Contract Price will be apportioned among values relating to specific components of the Work covered by said lump sum.

1-1.47 **SHOP DRAWINGS.** Drawings, plans, diagrams, schedules, and other data specifically prepared and submitted to the City by the Contractor, showing in detail: (a) the proposed fabrication and assembly of a special component of the Work; and (b) the Installation (form, fit and attachment details) of a special component of the Work. Shop Drawings shall be deemed to include Working Drawings, Product Data, literature, and applicable performance and test data.

1-1.48 **SPECIFICATIONS.** The technical Specifications for the Work prepared by the Director or an Engineer or Architect describing in detail the nature of the Work, its components, any performance standards, and how the Work is to be constructed.

1-1.49 **SUBCONTRACTOR.** Any individual, firm, partnership, limited liability company, corporation, joint venture, or combination thereof, other than employees of the Contractor, engaged by the Contractor to furnish services, labor, equipment and materials for a portion of the Work.

1-1.50 **SUBMITTALS.** Those documents required to be submitted by the Contractor for review by the City in accordance with the Contract Documents.

1-1.51 **SUPPLEMENTAL CONDITIONS.** The Supplemental Conditions are specific clauses modifying or supplementing these General Conditions.

1-1.52 **SUPPLIER.** Any individual, firm, partnership, limited liability company, corporation, joint venture, or combination thereof, other than employees of the Contractor, that supplies a tangible product as a portion of the Work, with services usually limited to delivery and/or required testing, and with manufacturing, fabrication, or production facilities located off

the Work Site.

1-1.53 **WORK.** The furnishing of all labor, and the furnishing and Installing of all materials, articles, supplies and equipment as specified, designated, or required by the Contract Documents.

1-1.54 **WORK SITE.** All or portion of the Premises that the Work is limited to as shown on the Contract Drawings or designated by the Director. Public streets are not included unless Work is being done within the street right-of-way.

1-1.55 **WORKING DRAWINGS.** Original drawings prepared by the Contractor and/or its Subcontractors or Suppliers, of any tier, illustrating Work required for construction that will not become an integral part of the completed Work. This includes, but is not limited to, drawings for temporary structures such as decking, bulkheads, excavation supports, utility support, groundwater control, forming, falsework, access roads, staging areas, staging plans, and diversion plans. A Working Drawing is one type of a Shop Drawing.

SECTION 2

CONTROL AND SCOPE OF THE WORK

2-1.01 **AUTHORITY OF DIRECTOR.** The Contract shall be performed in a manner satisfactory to the Director who shall decide all questions which may arise as to the quality or acceptability of materials furnished and Work performed and as to the manner of performance and rate of progress of the Work; all questions which may arise as to the interpretation of the Contract Documents; all questions as to the acceptable fulfillment of the Contract on the part of the Contractor; and all questions as to compensation. The Director shall have authority to enforce and make effective such decisions and orders in the event the Contractor fails to promptly carry out the same.

2-1.02 **INTENT OF CONTRACT DOCUMENTS.** The Contract Documents are complementary, and what is called for by one shall be as binding as if called for by all. The intent of the Contract Documents is to describe the details for the construction and completion of the Work. Where the Contract Documents describe portions of the Work in general terms, but not in complete detail, it is understood that only the best general practice shall be followed and that only materials and workmanship of the best quality are to be used. Any Work, materials, or equipment that are customarily provided, or that are reasonably inferable from the Contract Documents as being required to produce the intended result, shall be supplied, whether or not specifically called for. When words, which have a well-known technical or trade meaning are used to describe work, materials, or equipment, such words shall be interpreted in accordance with that meaning. Unless otherwise specified, the Contractor shall furnish all labor, materials, tools, equipment, and incidentals, and do all the Work involved in executing the Contract in a

satisfactory and workmanlike manner.

Reference to standard specifications, manuals or codes of any technical society, organization or association, or to the laws or regulations of any governmental authority, whether such reference be specific or by implication, shall mean the latest standard specification, manual, code, laws, or regulations in effect on the first published date of the Notice to Contractors, except as may be otherwise specifically stated. However, no provision of any referenced standard specification, manual or code (whether or not specifically incorporated by reference in the Contract Documents) shall be effective to change the duties and responsibilities of City or Contractor, or any of their consultants, agents, or employees from those set forth in the Contract Documents, nor shall it be effective to assign to City, or City's designated representative, any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility contrary to other provisions of the Contract Documents.

The Contract Documents are divided into parts, divisions, sections and articles for convenience, organization and reference. Generally, there has been no attempt to divide the Specifications sections into work performed by the various building trades, work by separate Subcontractors, or work required for separate facilities in the project.

2-1.03 **EXAMINATION AND VERIFICATION OF CONTRACT DOCUMENTS.** The Contractor shall thoroughly examine and become familiar with all of the various parts of the Contract Documents and shall determine the nature and location of the Work, the general and local conditions (including applicable laws) and all other matters which can in any way affect the cost, progress or performance of the Work under this Agreement. Failure to make an examination necessary for this determination shall not release the Contractor from the obligations of the Agreement. No oral agreement or conversation with any officer, or employee

of the City, or with the City's designated representative either before or after the execution of the Agreement, shall affect or modify any of the terms or obligations contained in the Contract Documents.

2-1.04 **CONTRACT DRAWINGS.** The Contract Drawings consist of general drawings and show such plans, elevations, sections, details and schedules as are necessary to give a graphic and pictorial description of the contemplated construction. All authorized alterations affecting the requirements and information given on the Contract Drawings shall be in writing.

2-1.05 **COORDINATION AND INTERPRETATION OF CONTRACT DOCUMENTS.** All Contract Documents are essential parts of the Contract, and a requirement occurring in one is as binding as though occurring in all. They are intended to be complementary, and to describe and provide for a complete Work.

In the event of inconsistencies between requirements contained in different components of the Contract Documents, the precedence of the Contract Documents shall be as follows to resolve conflicts:

1. Change Orders
2. The Contract (including Addenda)
3. The Supplemental Conditions
4. Specifications
5. Contract Drawings
6. The General Conditions

Should it appear that the Work to be done or any of the matters relative thereto are not sufficiently detailed or explained in the Contract Documents, the Contractor shall submit a

Request for Information ("RFI") to the Director for such further explanations as may be necessary and shall conform to the written explanation given as if part of the Contract Documents. The decisions of the Director shall be final.

Contractor shall anticipate that it will be necessary to prepare and submit RFIs regarding the Contract Documents. The City will respond to each RFI by no later than fourteen (14) Days after receipt of the RFI, unless the RFI is of significant complexity. Furthermore, in the event that there are numerous RFIs pending, Contractor shall cooperate with the City in establishing a priority for responding to the RFIs, and potentially some RFIs may be responded to beyond the fourteen (14) Day period.

Each RFI prepared by Contractor shall be full and complete. Contractor shall prepare RFIs so as to not cause any delay to the progress of the Work and to not cause any impact to Contractor's labor productivity in the field. Contractor shall not assert any Claims for delay or interference against the City if Contractor fails to timely submit any RFI to the City, after consideration of the response period allowed for by the City.

The response to an RFI shall not, by itself, constitute a writing that authorizes Contractor to perform any Work that causes an adjustment to either the Contract Price or the Contract Time. If Contractor believes that any response to any RFI should constitute a compensable change, Contractor shall provide a Notice of Potential Claim as provided in Section 7-1.03, below. Contractor's failure to provide the required written notice shall constitute a waiver of the Contractor's right to seek a compensable change based on the RFI response.

The Contractor shall examine all Contract Documents; shall verify all figures in the Contract Documents before laying out the Work; shall promptly notify the City of all errors, inconsistencies, and/or omissions that it discovers; and, in instances where such non-

conformities are discovered, shall obtain specific instructions in writing from the City before proceeding with the Work. Contractor's performance of any Work affected by such non-conformities prior to the City's decision shall be at the Contractor's risk. Any Work that is customarily provided or that is reasonably inferable shall not relieve the Contractor from performing such work at no additional expense and/or delay, and such Work shall be performed as if fully set forth in the Contract Documents.

2-1.06 **INDEPENDENT CONTRACTOR STATUS.** The Contractor shall independently perform all Work required by the Contract Documents and shall not be considered as an agent or employee of the City, nor shall the Contractor's Subcontractors or employees be considered as subagents of the City.

The Contractor and Contractor's Subcontractors shall be licensed in accordance with the laws of the State of California and as more particularly described in the bidding documents or elsewhere in the Contract Documents.

2-1.07 **ORDER OF WORK.** When required by the Contract Documents, the Contractor shall follow the sequence of operations set forth therein. Full compensation for conforming to such requirements will be considered as included in the prices paid for the various Contract items of work, and no additional compensation will be allowed therefor.

2-1.08 **SUBMITTALS.** It shall be the Contractor's responsibility to timely submit, so as to cause no delay in the Work, all Shop Drawings, descriptive data, manuals, instructions, affidavits, samples for the various trades as required by the Supplemental Conditions and Specifications, and offers of alternatives, if any. Such Submittals shall be checked and coordinated by the Contractor with the Work of other trades involved before they are submitted to the Director for examination.

The Contractor shall deliver at least one (1) electronic copy of the Submittals to the Director, and one (1) hard copy if requested. Work requiring the submittal of working drawings, descriptive data or samples shall not begin prior to approval of said Submittal by the Director.

The time allowed for review of each Submittal will be as indicated in the Supplemental Conditions. Review time will start upon receipt of the Submittal by the Director and will end upon the Director's mailing of the Submittals to the Contractor. Defective, incomplete or partial Submittals will be returned to the Contractor unreviewed.

Submittals shall be made by a letter of transmittal that shall contain a list of all matter submitted and identification of all variations from the Contract Documents contained in the Submittal. The letter and all items accompanying the same shall be fully identified as to project name and location, Contractor's name, district, county, and Contract number, with ample cross-references to the Contract Documents, to facilitate identification of items and their location in the Work.

All Shop Drawings and supporting data, catalogs, schedules, shall be submitted as the instruments of the Contractor, who shall be responsible for their accuracy and completeness. These Submittals may be prepared by the Contractor, Subcontractors, or Suppliers, but the Contractor shall ascertain that Submittals meet all of the requirements of the Contract Documents, while conforming to structural, space, and access conditions at the point of Installation. The Contractor shall check all Submittals before submitting them to the Director.

2-1.08A **SHOP DRAWINGS.** The Contractor shall submit an electronic copy (searchable PDF) of all Shop Drawings required by the Supplemental Conditions or Specifications, and one (1) hard copy, if requested by the Director. Shop Drawings shall also be provided separately in AutoCAD format using the latest version of AutoCAD. An electronic

copy will be returned to the Contractor either approved for use, as demonstrated by a stamp, or returned for correction and resubmittal. Materials, colors and/or samples will not be returned to the Contractor. Shop Drawings include any drawing, which requires execution by a draftsman as distinguished from printed matter. The size of Shop Drawings shall not exceed twenty-four inches (24") by thirty-six inches (36").

2-1.08B **DESCRIPTIVE DATA.** The Contractor shall submit an electronic copy (searchable PDF) of each set of manufacturer's brochures or other data required by the Supplemental Conditions or Specifications, and one (1) hard copy, if requested by the Director. The City will examine such Submittals and return either an electronic copy or a hard copy approved for use or returned for correction and resubmittal.

2-1.08C **SAMPLES.** The Contractor shall submit samples of articles, materials or equipment as required by the Supplemental Conditions or Specifications. The Work shall be in accordance with the approved samples. Samples shall be removed from City property when directed or may be incorporated in the Work if approved by the Director. Samples not removed by the Contractor will become the property of the City or, at the City's option, will be removed or disposed of by the City at the Contractor's expense.

2-1.08D **MANUALS, INSTRUCTIONS AND AFFIDAVIT.**

A. Manuals and Instructions. Where operation and maintenance manuals are required by the Supplemental Conditions, the Contractor shall submit two (2) sets of manuals, suitably bound, along with two (2) electronic copies in an approved format, to the Director within forty-five (45) Days after favorable review of the equipment or facilities. If operation and maintenance manuals are approved to be provided in PDF format, text shall be provided in searchable PDF format, making proper use of PDF for headings and heading levels,

paragraphs, tables, and lists. Submitted operation and maintenance manuals shall be a collected, organized, and indexed set of bookmarked PDF documents comprising each operation and maintenance manual that corresponds to a hardcopy binder. All manuals shall be marked to indicate the specific equipment furnished for this project and shall include at a minimum:

1. Equipment summary form
2. Cover/Title page
3. Table of contents
4. Operating procedures including start-up, shutdown, normal operation, all operating modes, emergency shutdown, and safety precautions
5. Lubrication instructions (if required)
6. Preventative maintenance procedures
7. Troubleshooting and corrective maintenance procedures
8. Reinstallation instructions
9. Overhaul instructions (if applicable)
10. Parts identification list with exploded view and associated cross references
11. Recommended spare parts list
12. Operator safety requirements
13. Electrical and control system wiring drawings, including panel wiring control (ladder) diagrams, logic diagrams, loop diagrams, and interconnection diagrams
14. Panel layout and assembly drawings

15. Mechanical drawings

16. Printouts of all software programs and configuration files

17. Factory and field test procedures and results

Operation and maintenance manuals for complex equipment shall also include:

18. Alternate specified operating modes

19. Emergency shutdown instructions

20. Normal shutdown instructions

21. Long term shutdown instructions

Operation and maintenance manuals for systems comprised of separate pieces of equipment shall include a system explanation of items 4, 7, 18, 19, 20, and 21 as well as the instructions for the separate pieces of equipment.

B. Affidavits. Where required in the Supplemental Conditions or Specifications, manufacturers of equipment shall provide field service as a part of this project. Equipment shall not be considered ready for full time operation until after the authorized factory-trained and qualified manufacturer's representative for the specific equipment has checked and adjusted the equipment and certified by written affidavit that the equipment has been properly Installed, tested, adjusted, lubricated, and calibrated, and is ready for full time operation. Acceptable affidavits shall be submitted prior to completion of the Work. Affidavits shall contain the following specific wording:

"The (Name of Equipment) has been properly installed, tested, adjusted, lubricated, and calibrated, and is ready for full time operation. The installation has been inspected and has been found to be in conformance with our (the manufacturer's) standards and requirements."

No amplification, dilution, or modification of this specific wording will be permitted.

2-1.08E **ALTERNATIVES.** For convenience in designation in the Contract Documents, certain materials, articles, or equipment may be designated by a brand or a trade name or the name of the manufacturer together with catalog designation or other identifying information, hereinafter referred to generically as "designated by brand name." Except in those instances where the product is designated to match others in use in a particular improvement, either completed or in the course of completion, an alternative material, article, or equipment which is of equal quality and of the required characteristics for the purpose intended may be proposed for use provided the Contractor complies with the following requirements:

A. The Contractor shall submit its proposal for an alternative in writing. Such request shall be made in ample time to permit review and approval without delaying the Work. The Contractor shall not be entitled to an adjustment of the Contract Time or an increase in the Contract Price based on any Contractor-proposed substitution.

B. No such proposal will be considered unless accompanied by complete information and descriptive data, necessary to determine the equality of the offered materials. The Contractor shall satisfy the Director as to the comparative quality, suitability, or performance of the offered material, articles, or equipment. In the event that the Director rejects the use of such alternative materials, articles, or equipment, then one of the particular products designated by brand name shall be furnished.

C. The burden of proof as to the quality and suitability of alternatives shall be upon the Contractor and it shall furnish all information necessary as required by the Director. The Director shall be the sole judge as to the quality and suitability of alternative articles or materials and such decisions shall be final. Where use of an alternative material

involves redesign of, or changes to, other parts of the Work, the cost and time required to effect such redesign or changes will be considered in evaluating the suitability of the alternative material. Cost of redesign by the City will be borne by the Contractor.

D. Whenever classification, rating or other certification by a body such as Underwriters Laboratories (UL) or the National Electrical Manufacturers Association (NEMA) is a part of the specification for any material, Contractor's request for use of alternative articles or materials shall be accompanied by reports from the listed or equivalent independent testing Laboratory indicating compliance with the Contract Documents. The cost of all testing required to prove equality of the material proposed shall be borne by the Contractor. Approval of an alternative shall be only for the characteristics or use named in such approval, and shall not be used to change or modify any requirement of the Contract Documents.

E. At its election, the City reserves the right to consider any Contractor proposed substitution as a Cost Reduction Proposal under Section 3-1.07 of these General Conditions in the event that there is a significant savings resulting from the substitution.

The Director will examine, with reasonable promptness, such Submittals, and return of Submittals to the Contractor shall not relieve the Contractor from responsibility for deviations and alternatives from the Contract Documents, nor shall it relieve the Contractor from responsibility for errors in the Submittals. A failure by the Contractor to identify in its letter of transmittal material deviations from the Contract Documents shall void the Submittal and any action taken thereon by the Director. When specifically requested by the Director, the Contractor shall resubmit such Shop Drawings, descriptive data and samples as may be required.

If any mechanical, electrical, structural, or other changes are required for the proper Installation and fit of alternative materials, articles, or equipment, or because of deviations from

the Contract, such changes shall not be made without the approval of the Director and shall be made without additional cost to the City.

2-1.09 **DISPOSAL OF MATERIAL OUTSIDE THE WORK SITE.** Unless otherwise stated elsewhere in the Contract Documents, the Contractor shall, at its own cost and expense, make its own arrangements for disposing of materials outside the Work Site.

Except when material is to be disposed of at a landfill or recycling center, when any material is to be disposed of outside the Work Site, the Contractor shall first obtain written permission from the City to dispose of the material at the intended location. The City's approval will be contingent upon the Contractor obtaining a written permit from the property owner on whose property the disposal is to be made. Prior to the disposal of any material at the intended location, the Contractor shall submit such permit or a certified copy thereof to the City, together with a written release from the property owner absolving the City from any and all responsibility related to the disposal of material on said property.

Disposal of Hazardous Materials must be done in accordance with all laws and regulations. Copies of all required regulatory documentation including copies of final manifests shall be supplied to the City.

2-1.10 **ACCESS TO THE WORK.** The Contractor shall satisfy itself that the jurisdictions through which its operations and haul routes pass will permit such operations with respect to the type of vehicle, laden weights, frequency and dimensions of loads, hours of operation and required traffic control. All necessary permits, licenses or bonds shall be obtained and paid for by the Contractor.

2-1.11 **TEMPORARY UTILITIES.** The Contractor shall make its own arrangements with utility companies for any temporary services it may require in performance of

the Work and shall pay all costs of these services directly to these utility organizations.

2-1.12 **UTILITY FACILITIES.** The Contractor shall protect from damage those utility facilities that are to remain in place, be Installed, relocated or otherwise arranged.

The Contractor's attention is directed to the possible existence of facilities not shown, and of facilities in a location different from that, which is indicated. The Contractor shall take steps to ascertain the exact location of all facilities prior to doing any Work, which may damage such facilities or interfere with their service. Where the location of a facility is indicated or inferred from the presence of visible facilities such as buildings, meters, and junction boxes, the Contractor shall make such excavations and explorations as are necessary to ascertain the correct location. Unless provided for elsewhere in the Contract Documents, the cost of such excavations and explorations will be considered as a part of the cost of other items of Work and no additional payment will be made. Such excavations and exploratory Work shall not entitle the Contractor to an extension of time.

If the Contractor discovers underground facilities not indicated or inferred from the Contract Documents, the Contractor shall immediately give the Director written notification of the existence of those facilities. The Contractor shall determine the exact location of the underground facilities and the cost of the work will be paid for in accordance with the Contract Documents. The underground facilities shall be protected from damage as directed by the Director and the cost of that work will be paid for as extra work. The Contractor shall, if directed by the Director, repair any damage, which may occur to the underground facilities. The cost of that repair work, not due to the failure of the Contractor to exercise reasonable care, will be paid for as extra work. Damage due to the Contractor's failure to exercise reasonable care shall be repaired at the Contractor's cost and expense.

Where it is determined by the City that the rearrangement of an underground facility, the existence of which is not shown on the Contract Drawings, is essential in order to accommodate the Work, the City will provide for the rearrangement of such facility by other forces or, when so ordered by Change Order, such rearrangement shall be performed by the Contractor and will be paid for as provided under a Change Order.

The Contractor shall be responsible for the maintenance of all utility facilities placed by the Contractor in temporary locations, and all utilities within the construction area not required to be relocated but which are required to be shored or supported during the construction period. The cost of such maintenance shall be borne by the Contractor, and no other compensation shall be due the Contractor for this Work.

The cost of providing and maintaining all necessary or required temporary structures, of making any necessary repairs, replacements, or similar operations, or furnishing indemnity or other bonds, if required, and all costs required by this Section shall be paid by the Contractor and shall be included in the prices bid in the schedule for other items of work.

2-1.13 **PRESERVATION AND CLEANING.** The Contractor shall clean up the Work at frequent intervals and at other times when directed by the Director. While finish Work is being accomplished, floors, Work areas and finished areas shall be kept clean, free of dust, construction debris and trash. Upon completion of the Work, the Contractor shall remove from the Premises its construction equipment and any waste materials not previously disposed of, leaving the Premises thoroughly clean and ready for final inspection.

2-1.14 **LIMITATIONS ON WORK SITE AND PREMISES.** The Contractor shall limit its construction operations to the Work Site unless otherwise shown on the Contract Drawings or specified. The Contractor shall perform no operation of any nature over or on the

Premises except such operations as are authorized by the Contract Documents or as authorized by the Director.

2-1.15 **DUST CONTROL.** During the performance of all Work under this Contract, the Contractor shall assume all responsibility for dust control and shall furnish all labor, equipment, and means required to carry out proper and efficient measures wherever and whenever dust control is necessary to prevent the operations from producing dust damage and nuisance to persons and property. Any claims resulting from dust damage or nuisance shall be borne solely by the Contractor. The Contractor shall comply with all applicable Air Quality Act requirements.

2-1.16 **SANITATION.** The Contractor shall provide sanitary facilities for all persons working on the Work.

2-1.17 **NIGHT WORK AND NORMAL WORKING HOURS.** Normal working hours at the construction site shall be between the hours of 7:00 a.m. and 7:00 p.m. Monday through Friday. Legal holidays are excluded. Certain utility connections and street operations are anticipated to require night Work by the Contractor during low usage periods. The Contractor may also be required to prosecute the Work at night if, at any time, the Director shall deem it necessary for the progress of the Work, or if emergencies arise. The Contractor shall promptly comply with any such requirements made in writing by the Director. The Contractor will also be permitted to Work at night if Contractor satisfies the Director of the need therefor, in order to maintain the required progress or protect the Work from the elements. Certain activities are required to be performed at night for nominal progress of the Work and/or are specified to be performed at night by other portions of the Supplemental Conditions. When required, ordered, or permitted to Work at night, the Contractor shall provide sufficient and

satisfactory lighting and other facilities therefor. The Contractor shall receive no extra payment for night Work, if specified or if required to be performed during the normal progress of the Work, but compensation shall be considered as having been included in the price stipulated for the Work.

If Contractor performs work during weekends, holidays or any non-normal work hours, Contractor shall pay for required City Inspectors.

2-1.18 **LINES AND GRADES.** Unless otherwise provided in the Supplemental Conditions, the Contractor shall lay out all Work, including structures and pipelines, and shall be responsible for any errors resulting therefrom. In all questions arising as to proper location of lines and grades, the Director's decision will be final.

As part of the bid price for the construction of the improvements, the Contractor shall provide and be responsible for the layout of all Work on this project. The Contractor shall provide all necessary surveys, field staking, and positioning for the construction of all components at the proper alignment, elevations, grades, and positions, as indicated on the Contract Drawings and as required for the proper operation and function. The Contractor shall stake its Work area limits. Contractor shall perform all construction staking using a land surveyor licensed in the State of California. Contractor shall provide a staking plan prior to commencement of Work for the City's review and maintain monuments, stakes, and marks, and shall update the plan as necessary. Director, or Director's designated representative, may verify the field condition. Errors or inconsistencies in the Contract Documents discovered by the Contractor shall be reported to the Director within twenty-four (24) hours and prior to constructive forms or related improvements. Any work Installed with this requirement shall be subject to removal and replacement at the Contractor's expense.

The Contractor's lay-out shall be based on existing structures, property lines, survey control, and bench marks established by the City. All structures and pipeline connections shall be Installed based on actual elevation of existing structures to which connections are made.

The Contractor shall supply such labor as required, at no extra charge, to aid and assist the Director in checking location and grades of the Work as set by the Contractor if the Director desires to perform this checking. This shall include moving materials and equipment located between monuments and the construction Work.

2-1.19 **ARCHEOLOGICAL DISCOVERIES.** Upon discovery of prehistoric or historic artifacts, or other indicators or examples of cultural resources discovered during the course of site preparation, grading, excavation, construction or other development activities, all operations within fifty feet (50') of the find shall cease until such time as the City provides the services of a qualified archeologist to evaluate the finds and recommend appropriate action.

Prehistoric materials can include flaked stone tools (e.g., projectile points, knives and choppers) or tool making debris of obsidian, chert, quartzite and other materials, culturally darkened soil (i.e., midden, which often contains heat affected rock, ash and charcoal, shellfish remains, and cultural materials), and stone milling equipment such as mortars, pestles and hand stones. Historic material may include wood, stone, concrete or adobe footings, walls and other structural remains; debris filled wells or privies; and deposits of wood, metal, glass, ceramics and other refuse.

2-1.20 **PRESERVATION OF MONUMENTS.** Any monuments or bench marks disturbed by construction operations shall be repaired per the City's standard and promptly re-established by a registered land surveyor or civil engineer. A plat for each monument shall be furnished to the Director after the plat has been recorded with the Placer

County Recorder's Office at no additional cost to the City. The recorded plat shall serve as a record of the re-establishment of said existing survey points.

2-1.21 **CONFORMITY WITH CONTRACT DOCUMENTS.** Work and materials shall conform to the lines, grades, cross sections, dimensions and material requirements, including tolerances, required by the Contract Documents. Although measurement, sampling and testing may be considered evidence as to such conformity, the City shall be the sole judge as to whether the Work or materials deviate from the Contract Documents. At its option, the City may elect to accept deviations from the Contract Documents with appropriate backcharge Assessments against the Contractor, and, if such an election is made, the City will provide written notice to the Contractor of such acceptance.

2-1.22 **FINAL CLEANUP.** Prior to final Acceptance of the Work, the Contractor shall thoroughly clean the Premises, remove all temporary structures built by or for the Contractor, and remove all equipment and surplus construction material and debris from the area. The entire project, before Acceptance by the City, shall be left in a neat and clean condition. All Work areas and temporary construction areas shall be returned to essentially the same conditions existing before the commencing of project construction.

2-1.23 **AS-BUILT DOCUMENTS AND DRAWINGS.** The Contractor shall maintain one set of the full size prints furnished by the City and mark thereon in color any deviations from plan dimensions, elevations, or orientations. Also, the Contractor shall locate on said prints, all underground facilities, such as piping, conduits and tanks by accurate field measurement from structure walls, corners, etc. The Contractor shall submit the prints and an electronic CD (searchable PDF or source file format such as AutoCAD) in good condition to the Director upon completion of the job as a condition of Acceptance of the project. Marked prints

shall be updated at least once each week and shall be available to the Director for review as to currency prior to developing partial payment estimates. After the completion of testing, but prior to Acceptance, the Contractor shall submit As-Built electrical drawings in color and an electronic CD showing all components and their wiring, and as specified in the Supplemental Conditions.

2-1.24 **SUPERINTENDENCE.** The Contractor shall supervise and direct the Work, which shall be performed in accordance with the requirements of the Contract Documents. The Contractor shall be solely responsible for implementation of all construction means, methods, techniques, sequences, and procedures and for coordination of all portions of the Work under the Agreement. The Contractor shall be solely responsible for the safety of its employees, Subcontractors of any tier, Suppliers, visitors to the Contractor, and other third parties associated with the Contractor.

The Contractor shall designate in writing before starting Work, an authorized representative who shall have the authority to represent and act for the Contractor.

When the Contractor is comprised of two (2) or more persons, firms, partnerships, or corporations functioning on a joint venture basis, said Contractor shall designate in writing before starting Work, the name of one authorized representative who shall have the authority to represent and act for the Contractor. Instances of misconduct, contract non-compliance, unsatisfactory performance, or incompetence by these personnel shall be grounds for the City to direct Contractor to dismiss them from the Project. Contractor shall immediately comply with the City's request for dismissal, at no cost to the City, and shall designate a replacement, which shall be subject to approval by the City.

Said authorized representative shall be present at the site of the Work at all times while Work is actually in progress on the Contract. When Work is not in progress and during periods

when Work is suspended, arrangements acceptable to the Director shall be made for any Emergency Work that may be required.

Whenever the Contractor or its authorized representative is not present on any particular part of the Work where it may be desired to give direction, orders will be given by the Director, which shall be received and obeyed by the superintendent or foremen who may have charge of the particular Work in reference to which the orders are given.

Any order given by the Director, not otherwise required by the Supplemental Conditions to be in writing, will on request of the Contractor, be given or confirmed by the Director in writing.

2-1.25 **CHARACTER OF WORKER.** If any Subcontractor or person employed by the Contractor shall appear to the Director to be incompetent or to act in a disorderly or improper manner, he or she shall be removed immediately on the requisition of the Director, and such person shall not again be employed on the Work.

2-1.26 **INSPECTION.** The Contractor shall at all times permit the Director to inspect the Work or any part thereof. The Contractor shall maintain proper facilities and provide safe access for such inspection by the Director to all parts of the Work, and to the shops where the Work is in preparation. Work shall not be covered up until authorized by the Director and the Contractor shall be solely responsible for notifying the Director where and when such Work is in readiness for inspection and testing. Should any such Work be covered without authorization, it shall, if so ordered, be uncovered at the Contractor's expense.

Unless otherwise designated as normal working hours, whenever the Contractor intends to perform Work on Saturday, Sunday, or a Legal Holiday, the Contractor shall give notice to the Director of such intention forty-eight (48) hours prior to performing such Work, or such longer

period as may be specified so that the Director may make necessary arrangements.

The observation and/or approval of the workmanship or materials by the City shall not relieve the Contractor of any obligations to fulfill the requirements of the Contract Documents. Workmanship and materials not meeting such requirements shall be corrected and unsuitable Work or material may be rejected, notwithstanding that such Work or materials have been previously observed and/or approved by the City, or payment therefor has been included in a progress estimate.

The City may order re-examination of questioned Work at any time before final Acceptance. If so ordered, the Contractor shall uncover the Work. If such work is found to be in accordance with the Contract Documents, the City will pay for the cost of uncovering, removing, recovering and replacing the parts removed; but if such Work so exposed or examined is not in accordance with the Contract Documents, the uncovering, removal, recovering and replacement shall be at the Contractor's expense. Work that has been covered prior to observation by the City does not qualify as re-examined work; the City may order such work uncovered for observation without payment of any costs.

2-1.27 **REMOVAL OF REJECTED AND UNAUTHORIZED WORK.** All Work which has been rejected shall be remedied, or removed and replaced by the Contractor in a manner acceptable to the Director and no compensation will be allowed the Contractor for such removal, replacement, or remedial Work.

Any Work done beyond the lines shown on the Contract Drawings or established by the Director, or any Work done without written authority will be considered as unauthorized Work and will not be paid for. Upon order of the Director, unauthorized Work shall be remedied, removed, or replaced at the Contractor's expense.

Upon failure of the Contractor to comply promptly with any order of the Director made under this section, the Director may cause rejected or unauthorized Work to be remedied, removed, or replaced, and the costs thereof will be deducted from any moneys due or to become due the Contractor.

SECTION 3

CHANGES IN THE WORK

3-1.01 **CHANGES.** The Director, without invalidating this Agreement and without notice to Contractor's surety, may order changes in the Work, consisting of additions or deletions, or other revisions. The Contract Price and the Contract Time shall be adjusted accordingly. All such changes in the Work, including in the Contract Price and the Contract Time, shall be authorized only by Contract Change Order, signed by the Director.

If Contractor claims that performance of any work entitles it to additional compensation or to an extension of time for performance of the Work, Contractor shall provide written notice to the City of any such claim prior to undertaking such work. Contractor shall provide written notice of any anticipated impacts to the Contract Price or Contract Time within three (3) Days of discovering such impact, by submitting a Notice of Potential Claim described in Section 7-1.03 below, or notice of delay as described in Section 6-1.09 below. If the Director refuses to issue a Change Order for such work, Contractor shall perform that work if directed or obligated to do so and shall submit a complete and specific Claim for additional compensation and/or extension of time for performance within fifteen (15) Days after such work is performed, as described in Section 7-1.03 below. Failure to provide written notice of claims prior to undertaking such work, failure to provide a timely Notice of Potential Claim, or failure to submit timely a complete and specific Claim for additional compensation and/or extension of the time for performance, shall be deemed a waiver and abandonment of any such Claim. No Claim, dispute or controversy shall interfere with the progress or performance of the Work and the Contractor shall proceed with the Work as directed by the Director. Failure to so proceed shall amount to a

default under this Agreement.

3-1.02 **PROPOSED CHANGE ORDERS.** The Contractor will be notified in writing of a proposed Change Order describing the intended change. Within fifteen (15) Days after receipt of a written request, the Contractor shall submit its proposed price to be added or deducted from the Contract Price due to the change and its estimate of the extent of the adjustment in the Contract Time, if any. The Contractor's proposed price to be added to or deducted from the Contract Price shall be supported by a detailed estimate of cost prepared by the Contractor, vendor or Supplier. The Contractor's proposed price submittal shall be accompanied by a statement of the time necessary for the changed Work, together with a description of how this time will be incorporated into the current Construction Schedule. The Contractor shall upon request by the Director permit inspection of its original Contract estimate, subcontract agreements or purchase orders relating to the change.

If agreement is reached on the adjustment in compensation as provided in Section 3-1.05, "Contract Price Adjustment," of these General Conditions, the Contractor shall proceed with the Work as changed at the agreed price.

If the Contractor and the Director fail to agree as to the adjustment in compensation for the performance of the changed Work, the Contractor, upon written order from the Director, shall proceed immediately with the changed Work and the Contract Price shall be adjusted in accordance with Section 3-1.06, "Force Account Payment," of these General Conditions.

If the Contractor fails to submit its cost estimate within such fifteen (15) Day period, the Contractor shall commence the Work as changed immediately upon receipt of written order of the Director, and the Contract Price will be adjusted in accordance with the Director's cost estimate for the changed Work.

3-1.03 **EMERGENCY AND INDETERMINATE TYPE CHANGE ORDERS.** Changes in the Work made necessary by an Emergency, as determined by the Director, or changes of a kind where the extent of the Work cannot be determined until completed, may be authorized by the Director in writing. The Change Order shall state that it is issued pursuant to this Section 3-1.03. Upon receipt of an authorized Change Order or other written order of the Director, the Contractor shall proceed with the ordered Work and the Director will maintain a daily job record containing a detailed summary of all labor, materials and equipment required for the changed Work.

Within fifteen (15) Days after receiving a written request, the Contractor shall submit a detailed estimate of cost for the change and any requested change in Contract Time in the same manner as required for proposed Change Orders in Section 3-1.02 of these General Conditions.

3-1.04 **EXECUTED CHANGE ORDER.** A Contract Change Order signed by both the Director and the Contractor is an "executed Contract Change Order." By signing the Contract Change Order, the Contractor agrees that the specified compensation constitutes full compensation for the changed Work, including payment for interruption, disruption, acceleration, extended Overhead, delay or any other "impact" claim or "ripple effect" claim. The Contractor specifically understands and agrees that its execution of the Contract Change Order shall constitute a waiver of any right for the Contractor to claim any additional compensation with respect to the subject matter of the Contract Change Order.

3-1.05 **CONTRACT PRICE ADJUSTMENT.** If a Contract Change Order provides for an adjustment to the Contract Price, the amount of such adjustment shall be determined by one of the following methods, or a combination thereof, as determined by the City and in its sole discretion:

A. Lump sum. The Contractor and the City may agree on a lump sum amount for the Change Order. At the City's request, the Contractor will provide pricing for the work. Maximum markups for Contract Change Orders paid for using lump sum pricing shall be paid for in the same manner and in the same amounts as markups for Force Account work, as described in Section 3-1.06 below.

B. Unit Prices. The unit prices set forth in the Contractor's Schedule of Bid Prices will be utilized where they are applicable and acceptable to the City. The Contractor's unit prices shall remain firm and shall not be subject to adjustment unless and until the actual quantity of work is increased or decreased by Contract Change Order in an amount greater than twenty-five percent (25%) from the estimated quantity indicated for such item. No markups will be given for Contract Change Orders paid for using unit prices.

Unit prices for new items included in the Contract Change Order but not included in the original bid shall be as mutually agreed upon or, in the absence of agreement, as determined by the City in the same manner as if the work were to be paid for on a Force Account basis, as described in Section 3-1.06 below.

C. Force Account. Where the City and the Contractor are unable to agree on lump sum pricing and if the City does not elect to utilize the unit prices in Contractor's bid, or such unit prices are not applicable, the changed work will be performed and tracked by the Contractor as Force Account work, as described in Section 3-1.06 below. The City will pay for such work, including markups, properly attributable to the change in accordance with those Force Account provisions.

D. Eliminated Items. The City reserves the right to delete any bid item of Work in its entirety. The City makes no representation that any work under a bid item of Work

will be performed, and all work may be subject to a Contract Change Order that deletes such work. Bid items are distinct and severable from the other bid items, and the Contractor shall not be entitled to any anticipated profit, unabsorbed Overhead, or other indirect expense attributable to the deleted item, except as provided immediately below with regard to Force Account mark-ups on the direct and verifiable costs incurred prior to the City's order that deletes the work.

Should any bid item of Work be eliminated in its entirety and not accounted for as described immediately above and, in the absence of an executed Contract Change Order covering such elimination, payment will be made to the Contractor for actual direct and verifiable costs incurred in connection with such eliminated bid item if incurred prior to the date of notification in writing by the City of such elimination. If acceptable material is ordered by the Contractor for the eliminated item prior to the date of notification of such elimination by the City, and if orders for such material cannot be canceled, it will be paid for at the actual direct and verifiable cost to the Contractor. Actual direct costs shall include documented vendor shipping fees, Supplier restocking fees, if applicable, and Contractor handling costs directly related to the eliminated item(s). In such case, the material paid for shall become the property of the City and the actual cost of any further handling will be paid for by the City. If the material is returnable to the vendor and if the City so directs, the material shall be returned and the Contractor will be paid for the actual direct cost of charges made by the vendor for returning the material. The actual direct cost of handling returned materials will also be paid for by the City. The actual direct and verifiable costs to be paid by the City as provided herein will be computed in the same manner as if the work were to be paid for on a Force Account basis, including the application of Force Account mark-ups to said costs.

3-1.06 **FORCE ACCOUNT PAYMENT.** When Work performed pursuant to a

Change Order is to be paid for on a Force Account basis, the Contractor's labor, materials and equipment used in the performance of such Work shall be subject to the approval of the City, and the compensation will be determined as set forth below in this section.

3-1.06A **LABOR.** The Contractor will be paid an amount based on the actual cost for the workers (including foremen when authorized by the Director) used in the actual and direct performance of the Work. All labor costs associated with Overhead, whether field or home office, are specifically excluded herein, as those labor costs are covered by the below mark-ups. The cost of labor, whether the employer is the Contractor, Subcontractor or other forces, shall include employer payments; assessment of benefits required by lawful labor union collective bargaining agreements; compensation insurance payments; contributions made to the State pursuant to the Unemployment Insurance Code; and for taxes paid to the Federal Government pursuant to the Social Security Act of August 14, 1935, as amended. No labor cost will be recognized at a rate in excess of the wages prevailing in the locality at the time the Work is performed, nor will the use of a labor classification, which would increase the cost, be permitted unless the Contractor establishes to the complete satisfaction of the Director the necessity for payment at a higher rate.

3-1.06B **MATERIALS.** Only materials furnished by the Contractor and necessarily used in the performance of the Work will be paid for. Such cost of materials may include the costs of procurement, transportation and delivery if necessarily incurred. If a cash or trade discount by the actual supplier is available to the Contractor, it shall be credited to the City. If materials are procured by the purchaser by any method which is not a direct purchase from and a direct billing by the actual supplier to such purchaser, the cost of such materials shall be deemed to be the price paid to the actual supplier plus the actual costs, if any, incurred in the

handling of such materials. If the materials are obtained from a supply or source owned wholly or in part by the purchaser, the cost of such materials shall not exceed the price paid by the purchaser for similar materials furnished from said source on Bid items or the current wholesale price for such materials delivered to the job site, less any discounts as provided herein, whichever is lower. If, in the opinion of the Director, the cost of materials is excessive, or if the Contractor fails to furnish satisfactory evidence of the cost to it from the actual supplier within sixty (60) Days after the date of delivery of the materials or within fifteen (15) Days after Acceptance of the Agreement, whichever occurs first, the cost of the materials shall be deemed to be the lowest current wholesale price at which similar materials are available in the quantities required, less any discounts provided herein. The Department reserves the right to furnish such materials required by the Change Order as it deems advisable, and the Contractor shall have no claim for cost or markups on material furnished by the Department.

3-1.06C **EQUIPMENT.** The Contractor will be paid an amount based on the actual cost for the use of equipment directly required and approved by the Director in the performance of the changed Work. No payment will be made for time while equipment is inoperative due to breakdowns or on Days when no Work is performed. In addition, the rental time shall include the time required to move the equipment to the Work from the nearest available source of such equipment, and to return it to the source. If such equipment is not moved by its own power, then loading and transportation costs will be paid. Moving time, loading and transportation costs will only be paid if the equipment is used exclusively on the changed Work during the time between move in and move out. Individual pieces of equipment having a replacement value of One Thousand Dollars ($1000) or less shall be considered to be tools or small equipment, and no payment will be made therefore. For equipment owned,

furnished, or rented by the Contractor, no cost therefore shall be recognized in excess of the equipment rental rates published by Caltrans at the following website address: http://www.dot.ca.gov/hq/construc/equipmnt.html. Equipment located at a Work Site and utilized on non-Force Account work shall not eligible for standby payment, and shall be charged on a Force Account basis only when solely performing pre-approved Force Account work tasks.

3-1.06D **MARKUPS.** When a Change Order increases the cost of the Work, the Contractor may add the following maximum markups to its actual costs of labor, materials, or equipment rental:

15 percent for labor;

10 percent for materials; and

5 percent for equipment rental.

The above markups include full compensation, covering the costs of all supervision, bonds, profit, Overhead, and other general expenses not specifically designated as a direct cost in Sections 3-1.06A through 3-1.06C above. The total payment (i.e., direct cost plus applicable markups) shall be deemed to be the actual cost of such work and shall constitute full compensation therefor. The Contractor specifically understands and agrees that such payment shall include any Contractor costs for interruption, disruption, and acceleration, extended Overhead, Change Order management, delay or other "impact" claim or "ripple effect" claim.

When work paid for on a Force Account basis is performed by forces other than the Contractor's own forces, the maximum allowable mark-ups for the Subcontractors' costs shall be fifteen percent (15%) for the cost of labor, ten percent (10%) for the cost of materials, and five percent (5%) for the cost of rented equipment. In these situations where the work is being performed by Subcontractors, the Contractor will only be entitled to an additional five percent

(5%) mark-up and will not be entitled to receive the additional mark-ups specified in this section.

When a Change Order decreases the cost of the Work, the reduction in cost shall include a five percent (5%) markup on the estimated cost for furnishing the labor, materials and equipment, which would have been used on such Work, had the Change Order not been issued.

When a Change Order involves both added Work and deleted Work, the markup or markups to be used shall be as follows:

The actual costs of labor, materials, and equipment rental for added and deleted Work shall be calculated separately without adding markups. If the difference between the calculated costs for labor results in an increased cost, a markup of fifteen percent (15%) shall be applied to the increased cost. If the difference between the calculated costs of materials or equipment rental results in an increased cost, a markup of ten percent (10%) and five percent (5%) respectively, shall be applied to the increased costs of materials or equipment rental, as the case may be. If the difference between the calculated costs for labor, materials or equipment rental results in a decreased cost, a markup of five percent (5%) shall be applied to the decreased costs of labor, materials or equipment rental, as the case may be.

Contractor shall not add mark-ups on work performed and billed by City staff nor add mark-ups to successive iterations of proposed Change Order cost proposals returned to Contractor by the City due to incomplete or inaccurate information being originally submitted by the Contractor. If the Contract Price increases by the issuance of Change Orders, the penal amounts of the bonds required shall increase accordingly.

3-1.06E **RECORDS.** The Contractor shall maintain its records in such a manner as to provide a clear distinction between the direct costs of extra work paid for on a Force Account basis and the costs of other operations.

From the above records, the Contractor shall furnish the City completed daily extra work reports, on forms acceptable to the City, for each Day's extra work to be paid for on a Force Account basis. The daily extra work reports shall itemize the materials used, and shall cover the direct cost of labor and the charges for equipment rental, whether furnished by the Contractor, Subcontractor, or other forces. The daily extra work reports shall provide names and identifications and classifications of workers, the hourly rate of pay and hours worked, and also the size, type, and identification number of equipment, and hours operated. Daily extra work and Force Account reports (actual or claimed) shall be signed by both the City's and the Contractor's representatives within twenty-four (24) hours of the performance of the work.

Valid copies of vendor's invoices shall substantiate material charges. Such invoices shall be submitted with the daily extra work reports, or if not available, they shall be submitted with subsequent daily extra work reports. Should said vendor's invoices not be submitted within sixty (60) Days after the date of delivery of the material or within fifteen (15) Days after the Acceptance of the Agreement, whichever occurs first, the City reserves the right to establish the cost of such materials at the lowest current wholesale prices at which said materials were available in the quantities, less any discounts.

The City will compare its records with the completed daily extra work reports furnished by the Contractor and make any necessary adjustments. When these daily extra work reports are agreed upon and signed by both parties, said reports shall become the basis of payment for the work performed, but shall not preclude subsequent adjustment based on a later audit by the City.

The Contractor's cost records pertaining to Work paid for on a Force Account basis shall be open to inspection or audit by representatives of the City during the life of the Agreement and for a period of not less than three (3) years after the date of Agreement completion and the

Contractor shall retain such records for that period. Where payment for materials or labor is based on the cost thereof to forces other than the Contractor, the Contractor shall make every reasonable effort to insure that the cost records of such other forces will be open to inspection and audit by representatives of the City on the same terms and conditions as the cost records of the Contractor. If an audit is to be commenced more than sixty (60) Days after the date of Acceptance of the Agreement, the Contractor will be given fifteen (15) Days' notice of the time when such audit is to begin.

3-1.07 **COST REDUCTION PROPOSALS.** The City encourages the Contractor to submit Cost Reduction Proposals whenever the Contractor identifies areas and/or instances in which there can be savings to the Work. Contractor may submit to the City, in writing, proposals for modifying the plans, Specifications or other requirements of the Agreement for the sole purpose of reducing the total cost of construction, including the time for completion of the Work. The City may consider such Cost Reduction Proposals and, if accepted, the Agreement will be equitably adjusted. The City has no obligation to consider or accept Cost Reduction Proposals.

SECTION 4

CONTROL OF MATERIALS

4-1.01 **MATERIALS.** The Contractor shall furnish all materials required to complete the Work, except materials that are designated in the Supplemental Conditions to be furnished by the City and materials furnished by the City in accordance with Section 3, "Changes in the Work," of these General Conditions.

Unless otherwise specified in the Supplemental Conditions, materials furnished by the Contractor for incorporation into the Work shall be new. When the quality or kind of materials, articles, or equipment is not particularly indicated, then the quality or kind thereof shall be similar to those that are indicated.

Articles or materials to be incorporated in the Work shall be stored in such a manner as to insure the preservation of their quality and fitness for the Work, and to facilitate inspection.

All materials which do not conform to the requirements of the Contract Documents as determined by the Director, will be rejected whether in place or not. Rejected material shall be removed immediately from the site of the Work, unless otherwise permitted by the Director. No rejected material, the defects of which have been subsequently corrected, shall be used in the Work, unless approval in writing has been given by the Director. Upon failure of the Contractor to comply promptly with any order of the Director made under these provisions, the Director shall have the authority to cause the removal and replacement of rejected material and to deduct the cost thereof from any moneys due or to become due the Contractor.

Manufacturer's warranties, guaranties, instruction sheets and parts lists, which are furnished with certain materials incorporated in the Work, shall be delivered to the Director

before Acceptance of the Contract.

Unless otherwise designated in the Supplemental Conditions or Specifications, materials furnished by the City will be delivered to the job site. Materials furnished by the City that are designated in the Supplemental Conditions as available at locations other than the job site shall be hauled to the site of the Work by the Contractor at its expense, including any necessary loading and unloading that may be involved.

The Contractor will be held responsible for all materials furnished to it, and shall pay all demurrage and storage charges. City-furnished materials lost or damaged from any cause whatsoever shall be replaced by the Contractor. The Contractor will be liable to the Department for the cost of replacing City-furnished material and such costs may be deducted from any moneys due or to become due the Contractor.

4-1.02 **PRODUCT AND REFERENCE STANDARDS.** When descriptive catalog designations, including manufacturer's name, product brand name, or model number are referred to in the Contract Documents, such designations shall be considered as being those found in industry publications in effect on the day the Notice to Contractors for the Work is dated, except as may be otherwise stated.

When standards or test designations of the Federal Government, trade societies, or trade associations are referred to in the Contract Documents by specific date of issue, these shall be considered as part of the Contract. When such references do not bear a date of issue, the edition in effect on the day the Notice to Contractors for the Work is dated shall be considered as part of the Contract.

4-1.03 **SAMPLING AND TESTING OF MATERIALS.** Unless otherwise specified, all tests shall be performed in accordance with the methods used by the State

Department of Transportation (Caltrans) and shall be made by the Director or his or her designated representative.

The State Department of Transportation has developed test methods for testing the quality of materials and Work. These test methods are identified by a California Test followed by the serial number. Copies of individual tests are available at the State Department of Transportation Laboratory, Sacramento, California, and will be furnished to interested persons upon request.

Whenever a reference is made in the Supplemental Conditions to a California Test by number, it shall mean the California test in effect on the day the Notice to Contractors for the Work is dated.

Whenever the Supplemental Conditions provide an option between two (2) or more test methods, the Director will determine the test method to be used.

Whenever a Supplemental Condition, manual, or test designation provides for test reports (such as certified mill test reports) from the manufacturer, copies of such reports, identified as to the lot of material, shall be furnished to the Director. The manufacturer's test reports shall supplement the inspection, sampling and testing provisions of this Section 4-1.03 and shall not constitute a waiver of the City's right to inspect. When material which cannot be identified with specific test reports is proposed for use, the Director may at his or her discretion, select random samples from the lot for testing. Testing specimens from the random samples, including those required for retest, shall be prepared in accordance with the referenced Supplemental Conditions and furnished by the Contractor at its expense. The number of such samples and test specimens shall be entirely at the discretion of the Director.

When requested by the Director, the Contractor shall furnish, without charge, samples of

all material entering into the Work, and no material shall be used prior to approval by the Director, except as provided in Section 4-1.04, "Certificates of Compliance," of these General Conditions.

A. Inspection and Access for Testing. The Contractor shall provide safe access for the Director and his or her inspectors to adequately inspect the quality of Work and conformance with the General and Supplemental Conditions. The Contractor shall provide adequate lighting, ventilation, ladders and other protective facilities as may be necessary for the safe performance of inspections.

The Contractor shall submit samples or specimens of such materials to be furnished or used in the Work as the Director may require. The Contractor shall furnish the Director all necessary labor and facilities for such things as excavation in the compacted fill to depths required to take samples.

Inspections, tests, or favorable review by the Director or others shall not relieve the Contractor from its obligations to perform the Work in accordance with the requirements of the Contract Documents.

Work covered without the favorable review or consent of the Director shall, if required by the Director, be uncovered for examination at the Contractor's expense.

If the Engineer, Architect, or Director considers it necessary or advisable that covered Work be inspected or tested by others, the Contractor, at the Director's request, will uncover, expose or otherwise make available for observation, inspection or testing as the Director may require, that portion of the Work in question, furnishing all necessary labor, materials, tools, and equipment. If it is found that such Work is defective, the Contractor will bear all the expenses of such uncovering, exposure, observation, inspection and testing and of

satisfactory reconstruction. If, however, such Work is not found to be defective and the Work was not covered without favorable review of the Director, the Contractor will be allowed an increase in the Contract Price or an extension of the Contract Time, or both, to cover its costs directly attributable to such uncovering, exposure, observation, inspection, testing, and reconstruction and an appropriate Change Order shall be issued.

Whenever the Contractor varies the period during which Work is carried on each Day, the Contractor shall give due notice to the Director so that proper inspection may be provided. Any Work done in the absence of the Director may be subject to rejection. Proper facilities for safe access for inspection to all parts of the Work shall at all times be maintained for the necessary use of the Director and other agents of the City. Authorized representatives and agents of the Director shall be permitted access to inspect all Work and materials wherever it is required for preparation of progress reports, and the Contractor shall provide proper facilities for such access and inspection.

It is the Contractor's responsibility to supervise the Work and complete the project in accordance with the Contract Documents. In the course of managing that effort, the Contractor shall generate its own punch lists as deemed necessary. The Director may prepare punch lists for the Director's own use in communicating with the Contractor; however, the Director shall be under no obligation to prepare punch lists for the Contractor. In general, the Director will prepare punch lists only after the Contractor has given the Director written notice that the subject Work is completed and tested in accordance with the Contract Documents and is ready for operation and/or use and/or occupancy. Failure of the Director to include an item in a punch list shall not relieve the Contractor of its duty to satisfactorily complete all Work required by the Contract Documents.

Upon Final Completion of the construction Work and request by the Contractor, the Director will conduct a final inspection as a basis for recommending to the City that the Work be accepted.

B. Field and Materials Testing. Where the Supplemental Conditions require Work to be specially field tested or approved, it shall be tested only in the presence of the Director after timely notice of its readiness for inspection and test, and the Work after testing shall be covered up only upon the consent thereto of the Director.

The results of any tests made are for the information of the Director. Regardless of any test results, the Contractor is solely responsible for the quality of workmanship and materials and for compliance with the requirements of the Contract Drawings and Supplemental Conditions.

Except as specifically required under the Supplemental Conditions, all tests by the Director of materials furnished by the Contractor will be done in accordance with commonly recognized standards of national organizations. The Contractor shall furnish such samples of all materials as required by the Director without charge. No material shall be used unless it has been favorably reviewed by the Director.

Where such inspection and testing are to be conducted by an independent Laboratory or agency, the sample or samples of materials to be tested shall be selected by such Laboratory or agency, or the Director, and not by the Contractor.

C. Costs of Testing.

1. Initial Services: The City shall furnish and pay for all initial testing services required by the Contract Documents. When initial tests indicate non-compliance with the Contract Documents, the cost of initial tests associated with that non-compliance will be

deducted by the City from the balance owed the Contractor. The Contractor shall furnish samples of materials for testing as may be required by the Director. Such samples shall be furnished without cost to the City.

2. Retesting: When initial tests indicate non-compliance with the Contract Documents, all subsequent retesting occasioned by the non-compliance shall be performed by the same testing Laboratory and the cost thereof will be deducted by the City from the balance owed the Contractor. Contractor shall be billed for each additional test.

3. Contractor Convenience Testing: Inspection or testing performed exclusively for the Contractor's convenience shall be the sole responsibility of the Contractor.

4. Additional Tests and Inspections: When in the opinion of the Director additional tests or inspections are required because of the manner in which the Contractor executes its Work, such tests and inspections shall be paid for by the City, but will be deducted from the Contract Price. Examples of such tests and inspections are tests of materials substituted for previously accepted materials or substituted for specified materials, retests made necessary by failure of material to comply with the requirements of the Specifications, load tests made necessary because of portions of the structure not fully meeting Specifications or plan requirements, etc.

4-1.04 **CERTIFICATES OF COMPLIANCE.** A Certificate of Compliance shall be furnished prior to the use of any materials for which the Supplemental Conditions require that such a Certificate be furnished. In addition, the Director may permit the use of certain materials or assemblies prior to sampling and testing if accompanied by a Certificate of Compliance. The Certificate shall be signed by the manufacturer of the material or the manufacturer of assembled materials and shall state that the materials involved comply in all

respects with the requirements of the Supplemental Conditions. A Certificate of Compliance shall be furnished with each lot of such materials delivered to the Work and the lot so certified shall be clearly identified in the Certificate.

All materials used on the basis of a Certificate of Compliance may be sampled and tested at any time. The fact that material is used on the basis of a Certificate of Compliance shall not relieve the Contractor of responsibility for incorporating material in the Work which conforms to the requirements of the Contract Documents and any such material not conforming to such requirements will be subject to rejection whether in place or not.

The Department reserves the right to refuse to permit the use of material on the basis of a Certificate of Compliance.

The form of the Certificate of Compliance and its disposition shall be as directed by the Director.

SECTION 5

LEGAL RELATIONS AND RESPONSIBILITY

5-1.01 **LAWS TO BE OBSERVED.** The Contractor shall keep informed of and observe, and comply with and cause all of its agents and employees to observe and comply with, all prevailing Federal and State laws, and rules and regulations made pursuant to said Federal and State laws, and county and municipal ordinances, and regulations, which in any way affect the conduct of the Contract. If any conflict arises between provisions of the Contract and any such law above referred to, the Contractor shall notify the Director at once in writing. To the fullest extent allowed by law, the Contractor shall defend, indemnify, and save and hold harmless the City or any of its officers, agents, employees, and volunteers against any claim or liability arising from or based on the violation of any such law, rule, or regulation, whether by itself or its agents or employees.

5-1.02 **HOURS OF LABOR.** Eight (8) hours labor constitutes a legal Day's work. The Contractor or Subcontractor shall, as a penalty to City, forfeit Twenty-five Dollars ($25) for each worker employed in the execution of the contract by the respective Contractor or Subcontractor for each calendar day during which such worker is required or permitted to work more than eight (8) hours in any one (1) calendar day and forty (40) hours in any one (1) calendar week in violation of the provisions of the Labor Code, and in particular, Section 1810 to Section 1815, thereof, inclusive, except that Work performed by employees of Contractors in excess of eight (8) hours per day, and forty (40) hours during any one (1) week, shall be permitted upon public work upon compensation for all hours worked in excess of eight (8) hours per day at not less than one and one-half (1-1/2) times the basic rate of pay, as provided in said

Section 1815. In addition, Contractor and/or its Subcontractors may be required to pay double the basic rate of pay for all hours worked in excess of twelve (12) hours in any workday and under other circumstances. (See California Code of Regulations, Title 8, Sections 16100(c)(6) and (16200(a)(3)(F) and applicable Department of Industrial Relations prevailing wage determinations.)

5-1.03 **NONDISCRIMINATION.**

A. Attention is directed to Labor Code Section 1735, which reads as follows:

"A contractor shall not discriminate in the employment of persons upon public works on any basis listed in subdivision (a) of Section 12940 of the Government Code, as those bases are defined in Sections 12926 and 12926.1 of the Government Code, except as otherwise provided in Section 12940 of the Government Code. Every Contractor for public works who violates this section is subject to all the penalties imposed for a violation of this chapter."

B. During the performance of this Contract, Contractor and its Subcontractors shall not unlawfully discriminate against any employee or applicant for employment because of race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, genetic information, marital status, sex, gender, gender identity, gender expression, age, sexual orientation, or military and veteran status. The Contractor and Subcontractors shall insure that the evaluation and treatment of their employees and applicants for employment are free of such discrimination. The Contractor and Subcontractors shall comply with the provisions of the California Fair Employment and Housing Act (Government Code §12900, et seq.) and the applicable regulations promulgated thereunder (California Code of Regulations, Title 2, §7285.0 et seq.) and other applicable State and Federal regulations and City

policies pertaining to nondiscrimination and affirmative action which are incorporated into this Agreement by reference and made a part hereof as if set forth in full. The Contractor and its Subcontractors shall give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement.

C. Contractor shall include the nondiscrimination and compliance provisions of this clause in all subcontracts to perform Work under the agreement.

5-1.04 **PREVAILING WAGE.** The Contractor and any Subcontractor shall comply with Labor Code Sections 1770 et seq. In accordance with said Section 1775 the Contractor and any Subcontractor under the Contractor shall, as a penalty, forfeit to the state or City not more than $200 for each calendar day or portion thereof, for each worker paid less than the prevailing rate as determined by the Director of Industrial Relations for the work or craft in which such worker is employed for under the Contract by the Contractor or by any Subcontractor under the Contractor.

The amount of the penalty shall be determined by the Labor Commissioner based on consideration of both of the following: (a) whether the failure to pay the correct rate of per diem wages was a good-faith mistake and, if so, whether the error was promptly and voluntarily corrected when brought to the attention of the Contractor or Subcontractor; and (b) whether the Contractor or Subcontractor has a prior record of failing to meet its prevailing wage obligations.

The penalty may not be less than forty dollars ($40) for each calendar day, or portion thereof, for each worker paid less than the prevailing wage rate, unless the failure of the Contractor or Subcontractor to pay the correct rate of per diem wages was a good faith mistake and, if so, the error was promptly and voluntarily corrected when brought to the attention of the Contractor or Subcontractor.

The penalty may not be less than eighty dollars ($80) for each calendar day, or portion thereof, for each worker paid less than the prevailing wage rate, if the Contractor or Subcontractor has been assessed penalties within the previous three (3) years for failing to meet its prevailing wage obligations on a separate contract, unless those penalties were subsequently withdrawn or overturned.

The penalty may not be less than one hundred twenty dollars ($120) for each calendar day, or portion thereof, for each worker paid less than the prevailing wage rate, if the Labor Commissioner determines that the violation was willful, as defined in subdivision (c) of Section 1777.1 of the Labor Code.

If the amount due under this section is collected from the Contractor or Subcontractor, any outstanding wage claim under Chapter 1 (commencing with Section 1720) of Part 7 of Division 2 of the Labor Code against the Contractor or Subcontractor shall be satisfied before applying that amount to the penalty imposed on that Contractor or Subcontractor pursuant to this section.

The determination of the Labor Commissioner as to the amount of the penalty shall be reviewable only for an abuse of discretion.

In addition to said penalty, the difference between such stipulated prevailing wage rates and the amount paid to each worker for each calendar day or portion thereof for which each worker was paid less than the stipulated prevailing wage shall be paid to each worker by the Contractor or Subcontractor.

If a worker employed by a Subcontractor on a public works project is not paid the general prevailing per diem wages by the Subcontractor, the Contractor is not liable for any penalties described above unless the Contractor had knowledge of that failure of the Subcontractor to pay

the specified prevailing rate of wages to those workers or unless the Contractor fails to comply with all of the following requirements:

1. The contract executed between the Contractor and the Subcontractor for the performance of work on the public works project shall include a copy of the provisions of Sections 1771, 1776, 177.5, 1813, and 1815 of the Labor Code.
2. The Contractor shall monitor the payment of the specified general prevailing rate of per diem wages by the Subcontractor to the employees, by periodic review of the certified payroll records of the Subcontractor.
3. Upon become aware of the Subcontractor's failure to pay its workers the specified prevailing rate of wages, the Contractor shall diligently take corrective action to halt or rectify the failure, including, but not limited to, retaining sufficient funds due the Subcontractor for work performed on the public works project.
4. Prior to making final payment to the Subcontractor for work performed on the public works project, the Contractor shall obtain an affidavit signed under penalty of perjury from the Subcontractor that the Subcontractor has paid the specified general prevailing rate of per diem wages to its employees on the public works project and any amount due pursuant to 1813 of the Labor Code.

Pursuant to Section 1775 of the Labor Code, the Division of Labor Standards Enforcement shall notify the Contractor on a public works project within fifteen (15) Days of the receipt by the Division of Labor Standards Enforcement of a complaint of the failure of a Subcontractor on that public works project to pay workers the general prevailing rate per diem wages.

Pursuant to the provisions of California Labor Code Section 1773, the City has obtained

the general prevailing rate of wages applicable to the categories of workers the City anticipates will be utilized for this project for straight time, overtime, Saturday, Sunday, and holiday Work. The holiday wage rate listed shall be applicable to all holidays recognized in the collective bargaining agreement of the particular craft, classification or type of worker concerned or, if no collective bargaining applies, those holidays identified in Government Code Section 6700. These wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm, which is incorporated herein as a part of this Contract.

Pursuant to Labor Code Section 1773.2, the general prevailing wage rates set forth above, which forms a part of this Contract, shall be posted by the Contractor at a prominent place at the site of the Work.

Pursuant to Labor Code Section 1773.6 and California Code of Regulations Section 16204, Title 8, changes in general prevailing wage determinations shall apply to the project only if issued by the Director of Industrial Relations prior to the City's bid issuance date.

The City will not recognize any claim for additional compensation because of the payment by the Contractor of any wage rate in excess of the prevailing wage rate set forth in the Contract. The possibility of wage increases is one of the elements to be considered by the Contractor in determining its Bid, and will not under any circumstances be considered as the basis of a claim against the City or Contract.

When both California and Federal prevailing wage rates apply, the Contractor and any Subcontractors shall pay their workers the higher of the two rates. The Contractor and any Subcontractors shall insert this clause in any lower tier contract.

5-1.05 **REGISTRATION REQUIRED AS QUALIFICATION TO BID.**

Pursuant to Labor Code Section 1771.1(b), notice is hereby given that a Contractor or Subcontractor shall not be qualified to bid on, be listed in a bid proposal, subject to the requirements of Section 4104 of the Public Contract Code, or engage in the performance of any contractor for public work, as defined in Labor Code Sections 1720, et seq., unless currently registered and qualified to perform public work pursuant to Labor Code Section 1725.5. It is not a violation of Labor Code Section 1771.1 for an unregistered contractor to submit a bid that is authorized by Section 7029.1 of the Business and Professions Code or by Section 10164 or 20103.5 of the Public Contract Code, provided the contractor is registered to perform public work pursuant to Section 1725.5.

5-1.06 **PAYROLL RECORDS.** The Contractor's attention is directed to the following provisions of Labor Code Section 1776. The Contractor shall be responsible for the compliance with these provisions by its Subcontractors.

A. The Contractor and each Subcontractor shall keep accurate and current payroll records, showing the name, address, social security number, work classification, straight time and overtime hours worked each day and week, and the actual per diem wages paid to each journeyman, apprentice, worker, or other employee employed by it in connection with the public work. Each payroll record shall contain or be verified by a written declaration that is made under penalty of perjury, stating both of the following:

1. The information contained in the payroll record is true and correct.

2. The employer has complied with the requirements of Section 1771, 1811, and 1815 for any work performed by his or her employees on the public works project.

B. The payroll records enumerated under subdivision (A) shall be available for inspection at all reasonable hours at the principal office of the Contractor on the following

basis:

1. A certified copy of an employee's payroll record shall be made available for inspection or furnished to such employee or his or her authorized representative on request.

2. A certified copy of all payroll records enumerated in subdivision (A) shall be made available for inspection or furnished upon request to a representative of the City, the Division of Labor Standards Enforcement, and the Division of Apprenticeship Standards of the Department of Industrial Relations. The City reserves the right to withhold any progress payments to the Contractor in the event of noncompliance with the subsection.

3. A certified copy of all payroll records enumerated in subdivision (A) shall be made available upon request by the public for inspection or for copies thereof. However, a request by the public shall be made through either the City, the Division of Apprenticeship Standards, or the Division of Labor Standards Enforcement. The public shall not be given access to such records at the principal office of the Contractor.

C. The certified payroll records shall be on forms provided by the Division of Labor Standards Enforcement or shall contain the same information as the forms provided by the Division.

D. Each Contractor shall file a certified copy of the records enumerated in subdivision (A) with the entity that requested the records within ten (10) Days after receipt of a written request.

E. Any copy of the records made available for inspection as copies and furnished upon request to the public or any public agency by the City, the Division of Apprenticeship Standards or the Division of Labor Standards Enforcement shall be marked or

obliterated to prevent disclosure of an individual's name, address and social security number. The name and address of the Contractor awarded the Contract or Subcontractor performing the Contract shall not be marked or obliterated. Any copy of records made available for inspection by, or furnished to, a joint labor-management committee established pursuant to the federal Labor Management Cooperation Act of 1978 (Section 175a of Title 29 of the United States Code) shall be marked or obliterated only to prevent the disclosure of an individual's name and social security number. A joint labor-management committee may maintain an action in a court of competent jurisdiction against an employer who fails to comply with Section 1774. The court may award restitution to an employee for unpaid wages and may award the joint labor-management committee reasonable attorneys' fees and costs incurred in maintaining the action. An action under this subdivision may not be based on the employer's misclassification of the craft of a worker on its certified payroll records. Nothing in this subdivision limits any other available remedies for a violation of this section.

F. The Contractor shall inform the City of the location of the records enumerated under subdivision (A), including the street address, city and county, and shall, within five (5) business days, provide a notice of a change of location and address.

G. The Contractor shall have ten (10) Days in which to comply subsequent to receipt of written notice requesting the records enumerated in subdivision (A). In the event that the Contractor or Subcontractor fails to comply within the ten (10) Day period, the Contractor shall, as a penalty to the State or City, forfeit twenty-five ($25) Dollars for each calendar day, or portion thereof, for each worker, until strict compliance is effectuated. Upon the request of the Division of Apprenticeship Standards or the Division of Labor Standards Enforcement, these penalties shall be withheld from any progress payment or final payment then due. A contractor

is not subject to a penalty assessment pursuant to this section due to the failure of a Subcontractor to comply with this section.

5-1.07 **SAFETY REQUIREMENTS.** It is the intent of the parties that the City is not an exposing, creating, controlling, or correcting employer under California Labor Code Section 6400. In accordance with generally accepted construction practices and State law, the Contractor shall have the authority and be solely and completely responsible for conditions on the Work Site, including safety of all persons and property during performance of the Work. Moreover, the Contractor shall be the controlling employer and has the authority and responsibility to enforce Work Site safety. The Contractor shall be responsible for conducting daily safety inspections and assuring all hazards and violations are abated. The Contractor is responsible for assuring that all Subcontractors adhere to the minimum Cal/OSHA safety requirements and that each Subcontractor has an effective Cal/OSHA IIPP (Illness and Injury Prevention Program) in place that specifically addresses all potential exposures, such as, but not limited to, fall protection, confined space, and trenching/shoring. These requirements shall apply continuously and not be limited to normal working hours. The Contractor shall be responsible for any delay costs or damages in the event the progress of Work is slowed or stopped due to a safety violation.

The Contractor shall designate a safety officer and have in place a health and safety plan in accordance with the laws of State of California and conduct safety meetings and document them in accordance with the law. The Contractor shall have the safety record available for inspection during working hours and shall submit job site safety meeting reports with each Application for Payment.

Prior to Contractor commencing construction project work on City property, Contractor

shall make available copies of its Health and Safety Plan (HASP) that meets or exceeds applicable Cal/OSHA regulations. The Contractor's HASP shall also meet or exceed the requirements of any applicable City-wide or departmental specific Injury and Illness Prevention Programs (IIPP) and other HASP programs, procedures, and plans. Potentially applicable HASP programs, procedures, and plans include, but are not limited to, the following:

1. Bloodborne Pathogens Exposure Control Plan;
2. Confined Space Entry Procedure;
3. Electrical Safety Program (Lockout/Tagout);
4. Emergency Action Plans (Site Specific);
5. Fire Prevention Plans (Site Specific);
6. Hazardous Waste Operations Emergency Response Plan (or Equivalent);
7. Hazard Communication Program (SDS's and Right-to-Know training);
8. Heat Illness & Prevention Plan;
9. Hearing Conservation Program;
10. Hot Work/Welding Procedure;
11. Job Hazard Analyses/Standard Operating Procedures;
12. Traffic Control & Flagging;
13. Excavation/Dig Safe Procedure;
14. Fall Protection Plan;
15. Personal Protective Equipment Plan;
16. Respirable Crystalline Silica Exposure Control Plan;
17. Respirator Program;
18. Soils Management Plan (for contaminated soils); and

19. Transite (Asbestos) Pipe Work Procedure.

Additionally, Contractor shall be responsible for complying with all City-wide and departmental specific safety requirements as identified in the Supplemental Conditions or presented at a pre-construction meeting.

Contractor shall inform City in advance of the quantity of chemical(s) to be used for the project and the total quantity of chemical(s) that will be brought onto City property. In addition, Contractor shall provide City with one copy of the Safety Data Sheet (SDS) for each chemical expected to be used to complete the project and for each chemical brought to the Work Site, regardless of whether such chemicals are ultimately used for the project.

The services of the Director in conducting construction review of the Contractor's performance is not intended to include review of the adequacy of the Contractor's Work methods, equipment, bracing or scaffolding, or safety measures, in, on, or near the construction site. If a City employee observes a safety violation, the City employee will report the violation to the Contractor who is then responsible for assuring the violation is abated.

The Contractor is hereby informed that Work on this project could be hazardous. The Contractor shall carefully instruct all personnel working in potentially hazardous Work areas as to potential dangers and shall provide such necessary safety equipment and instructions as are necessary to prevent injury to personnel and damage to property. Special care shall be exercised relative to Work underground.

All Work and materials shall be in strict accordance with all applicable State, City, County, and Federal Rules, Regulations, and Codes, and attention is drawn to the requirements of Cal/OSHA. The Contractor shall be solely responsible for compliance with all City, County and State blasting requirements and for any damages caused by its operations.

To ensure compliance with California Labor Code Section 6705, the Contractor shall submit to the City, at least five (5) Days in advance of excavation of any trench five feet (5') or more in depth, Working Drawings to the Director showing the design of shoring, bracing, sloping and other provisions to be made for worker protection from the hazard of caving ground during the excavation of such trench or trenches. If such Working Drawings vary from the shoring system standards established by the Cal/OSHA Construction Safety Orders of the Division of Industrial Safety, the plan shall be prepared and signed by a registered civil or structural engineer in the State of California. This in no way relieves the Contractor from the requirement of maintaining safety in all operations performed by the Contractor or the Contractor's Subcontractors and nothing in this section shall be deemed to allow the use of a shoring, sloping or protective system less effective than that required by the Cal/OSHA Construction Safety Orders of the Division of Industrial Safety Contractor's Working Drawings shall be subject to approval insofar as the details affect the character of the finished Work and for compliance with design requirements applicable to the construction when specified or called for, but details of the design will be left to Contractor who shall be responsible for the successful construction of the Work. The City shall approve Working Drawings before any Work involving such drawings is performed. Approval and/or acceptance by the City or its designated agent only constitutes acknowledgment of the submission and does not constitute review or approval of the designs, design assumptions or criteria, completeness of submissions, applicability to areas of intended use, nor implementation of the plans, which are solely the responsibility of the Contractor and its registered engineer.

The Contractor shall perform its Work as not to expose personnel to, or to discharge into the atmosphere from any source whatever, smoke, dust, asbestos, toxic chemicals or other air

contaminants in violation of the laws, rules, and regulations of the governmental entities having jurisdiction and shall bear full and exclusive responsibility for any release of hazardous or non-hazardous chemicals or substances during the course of the Work. The Contractor shall immediately report any such release to the City. The Contractor shall be solely responsible for all claims and expenses associated with the response to, removal and remediation of the release, including, without limitation, payment of any fines or penalties levied against the City by any agency as a result of such release and shall defend, indemnify, and save and hold harmless the City, its officers, agents, employees, and volunteers from any claims arising from such release. For purposes of this section only, the term "claims" shall include:

1. All notices, orders, directives, administrative or judicial proceedings, fines, penalties, fees, or charges imposed by any governmental agency with jurisdiction; and

2. Any claim, cause of action, or administrative or judicial proceeding brought against the City, its officers, agents, employees, and volunteers for any loss, cost (including reasonable attorneys' fees), damage or liability, sustained or suffered by any person or entity, including the City.

If the performance of the Work creates any hazardous wastes, those wastes shall be properly disposed of according to federal, state, and local laws, at the expense of the Contractor. The Contractor shall dispose of the wastes under its own EPA Generator Number. In no event shall the City be identified as the generator. The Contractor shall notify the City of any such hazardous wastes and the City reserves the right to a copy of the results of any tests conducted on the wastes, and, at its cost, to perform additional tests or examine those wastes, prior to disposition. The Contractor shall defend, indemnify, and save and hold harmless the City, its

officers, agents, employees, and volunteers from any claims arising from the disposal of the hazardous wastes, regardless of the absence of negligence or other malfeasance by the Contractor. Disposal of all Hazardous Materials must be done in accordance with all laws and regulations. Copies of required regulatory documentation including copies of final manifests shall be supplied to the City.

Contractors or Subcontractors removing one hundred or more square feet (100') of asbestos must be "Certified" in accordance with State law. All Work involving exposure to asbestos and all other hazardous materials shall be performed with protection of personnel in compliance with all applicable regulations and safety requirements including, but not limited to, California Code of Regulations Section 1529, Title 8.

Nothing in these General Conditions is to be construed to permit Work not conforming to governing codes. When Contract Documents differ from governing codes, the Contractor shall furnish and Install the higher standards called for without extra charge.

5-1.08 **SUBSURFACE EXCAVATIONS, NOTIFICATION.** The Contractor shall contact the regional notification center, "Underground Service Alert," and schedule its Work to allow ample time for the center to notify its members and, if necessary, for any member to field locate and mark its facilities. Without limiting the foregoing, the Contractor's attention is directed to Government Code Sections 4216 to 4216.9, and in particular Section 4216.2.

5-1.09 **PUBLIC SAFETY.** The Contractor shall assume all responsibility for public safety during the performance of its Work, and all costs arising therefrom shall be included in the Contract Price. Whenever the Contractor's operations create a condition hazardous to traffic or to the public, it shall furnish, erect and maintain, at its expense, such fences, barricades, lights, signs, and other devices and take such other protective measures as are

necessary to prevent accidents or damage or injury to the public. The Contractor shall establish the pedestrian detours with comparable lighting to the original pedestrian areas. The Contractor shall arrange for such flaggers as are necessary to give adequate warning to traffic or to the public of any dangerous conditions affecting traffic. For Work in a public right-of-way, the Contractor shall comply with the rules and regulations of the State, County, or local agency that owns the right-of-way.

The Contractor shall promptly and fully comply with and carry out, and shall without separate charge therefor to the City, all safety and first aid requirements prescribed by all applicable Federal, State, and local laws and regulations, rules, and orders. The Work shall be done in a safe manner; and the Contractor shall safeguard the safety and health of its employees, Subcontractors, and the people of local communities. The Contractor shall also be reasonable for ensuring that its Subcontractors comply with the provisions of this section.

Upon the failure of the Contractor to comply with any of the requirements of this section, the City shall have the authority, but not the duty, to stop the Work until such failure is remedied. The Contractor shall not be entitled to an adjustment of the Contract Time or an increase in the Contract Price due to any such suspensions.

When required by the Contract Documents, the Contractor shall construct, maintain, and remove detours for use of public traffic, without additional cost to the City, unless separate payment is specified in the Special Provisions.

The failure or refusal of the Contractor to construct and maintain detours at the proper time shall be sufficient cause for closing down the work until such detours are in satisfactory condition for use by public traffic.

Due care shall be exercised to avoid injury to existing improvements or facilities, utility

facilities, adjacent property and trees, shrubs, and other plants that are not to be removed.

Trees, shrubs and other plants that are not to be removed, and pole lines, fences, signs, survey markers and monuments, buildings and structures, conduits, pipe lines, sewer and waterlines, highway facilities, and any other improvements or facilities, under or above ground, that are within or adjacent to the work limit line shall be protected from injury or damage, and the Contractor shall provide and Install suitable safeguards to protect such objects from injury or damage. If such objects are injured or damaged by reason of the Contractor's operations, they shall be replaced or restored at the Contractor's expense. The facilities shall be replaced or restored to a condition as good as when the Contractor entered upon the Work Site, or as good as required by the Contract Documents if any such objects are part of the Work. The City may make or cause to be made such temporary repairs as are necessary to restore to service any damaged facility. The cost of such repairs shall be borne by the Contractor, and the costs may be deducted from any monies due or to become due to the Contractor under the Agreement.

The fact that any underground facilities is not shown on the Contract Drawings shall not relieve the Contractor of its responsibility pursuant to "Utility Facilities" in Section 2-1.12 elsewhere in the Contract Documents. It shall be the Contractor's responsibility, pursuant thereto, to ascertain the location of such underground improvements or facilities, which may be subject to damage by reason of its operations.

Full compensation for furnishing all labor, materials, tools, equipment and incidentals, and for doing all the Work involved in protecting or repairing property as specified in this section, shall be considered as included in the prices paid for the various Contract items of work and no additional compensation will be allowed therefor.

5-1.10 **EMERGENCIES.** In an Emergency affecting the safety of life, the

Work, or adjoining property, the Contractor, without special instructions or authorization from the City, shall act at its discretion to prevent such threatened loss or injury. In such an Emergency, the Contractor may perform such additional work as is reasonably required. Any compensation claimed by the Contractor on account of Work performed to an Emergency shall be determined in accordance with the provisions relating to Force Account payment contained elsewhere in the Contract Documents.

5-1.11 **APPRENTICES.** Attention is directed to Labor Code Sections 1777.5, 1777.6 and 1777.7 and Title 8, California Code of Regulations Section 200 et seq. In accordance with Section 1777.5, the Contractor shall secure the necessary certificates and shall contribute to the apprenticeship fund or funds, a provided therein. The Contractor shall require each Subcontractor who will perform work or labor or render service to the Contractor in or about the construction of the work to fully comply with Sections 1777.5 and 1777.6 of the Labor Code. To insure compliance and complete understanding of the law regarding apprentices, and specifically the required ratio thereunder, each Contractor or Subcontractor should, where some questions exist, contact the Division of Apprenticeship Standards, , or one of its branch offices prior to commencement of Work on the public works Contract. Responsibility for compliance with this section lies with the prime Contractor.

It is State and City policy to encourage the employment and training of apprentices on public works Contracts as may be permitted under local apprenticeship standards.

5-1.12 **FAIR LABOR STANDARDS ACT.** Attention is invited to the fact that the City has been advised by the Wage and Hour Division, U.S. Department of Labor, that Contractors engaged in construction Work are required to meet the provisions of the Fair Labor Standards Act of 1958 and as amended (52 Stat. 1060).

5-1.13 **WORKERS' COMPENSATION.** Pursuant to the requirements of Labor Code Section 1860, the Contractor will be required to secure the payment of workers' compensation to its employees in accordance with the provisions of Labor Code Section 3700.

Prior to the commencement of Work, the Contractor shall sign and file with the Director a certification in the following form:

> "I am aware of the provisions of Labor Code Section 3700 which require every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the Work of this Contract."

5-1.14 **AIR POLLUTION CONTROL AND ASBESTOS.** The Contractor shall comply with all air pollution control rules, regulations, ordinances and statutes which apply to any Work performed pursuant to the Contract, including any air pollution control rules, regulations, ordinances and statues, specified in Government Code Section 11017.

In the absence of any applicable air pollution control rules, regulations, ordinances or statutes governing solvents, all solvents, including but not limited to the solvent portions of paints, thinners, curing compounds, and liquid asphalt used on the project shall comply with the applicable material requirements of the applicable Air Quality Management District. All containers of solvent, paint, thinner, curing compound, or liquid asphalt shall be labeled to indicate that the contents fully comply with said requirements.

Unless otherwise provided in the Supplemental Conditions, material to be disposed of shall not be burned, either inside or outside the Premises.

The Contractor shall also comply with all rules, regulations, statutes and ordinances

regarding asbestos removal and disposal, including but not limited to, 42 U.S.C. Sections 7401, 7412 and 7601, 40 C.F.R. Part 61, Subpart M, and California Code of Regulations Section 1529, Title 8.

If the Contractor discovers that a building to be demolished or renovated contains asbestos containing material, the Contractor shall immediately cease Work and notify the City.

5-1.15 **USE OF PESTICIDES.** The Contractor shall comply with all local, state and federal rules and regulations of the Department of Food and Agriculture, the Department of Health, the Department of Industrial Relations and all other agencies which govern the use of pesticides required in the performance of the Work.

Pesticides shall include but shall not be limited to herbicides, insecticides, fungicides, rodenticides, germicides, nematocides, bactericides, inhibitors, fumigants, defoliants, desiccants, soil sterilants, and repellents.

Any substance or mixture of substances intended for preventing, repelling, mitigating, or destroying weed, insects, diseases, rodents, or nematodes and any substance or mixture of substances intended for use as a plant regulator, defoliant or desiccant shall be considered as pesticide.

5-1.16 **SOUND AND LIGHT CONTROL REQUIREMENTS.** The Contractor shall comply with all local sound control, light control, and noise level rules, regulations and ordinances which apply to any Work performed pursuant to the Contract. Work shall not begin before 7 a.m. nor occur after 7 p.m., unless otherwise permitted by the City.

Each internal combustion engine, used for any purpose on the Work or related to the Work, shall be equipped with a muffler, in good working order, of a type recommended by the manufacturer. No internal combustion engine shall be operated on the project without said

muffler.

5-1.17 **WEIGHT LIMITATIONS.** Unless expressly permitted elsewhere in the Contract Documents, the Contractor shall not operate construction equipment or vehicles of any kind which, laden or unladen, exceed the maximum weight limits set forth in Division 15 of the Vehicle Code over completed or existing base, surfacing, pavement or structures.

5-1.18 **ENVIRONMENTAL CLEARANCES; MITIGATION MONITORING PROGRAMS; AND REGULATORY AGENCY PERMIT REQUIREMENTS.** The Department will obtain all environmental clearances and other authorizations necessary for this project as set forth in the Contract Documents. The Contractor shall comply with the provisions, including giving notices during construction when required, of said authorizations. In the event the obtaining of said authorizations delays completion of all or any portion of the Work, an extension of time determined pursuant to the provisions in Section 6-1.08, "Liquidated Damages," of these General Conditions will be granted.

Contractor shall comply with: (1) all mitigation identified in the mitigation monitoring program (attached to and adopted as a component of the mitigated negative declaration or Environmental Impact Report) to mitigate impacts to protected natural resources; and (2) all related permit requirements issued by the regulatory agencies authorizing the project. Contractor shall defend, indemnify, and save and hold harmless the City, its officers, agents, employees, and volunteers from any fines, claims, suits, actions or regulatory sanctions of every name, kind and description brought forth, or on account of, damage to protected natural resources from or arising out of Contractor's negligence or willful misconduct in the performance of this Agreement.

5-1.19 **PERMITS AND LICENSES.** The Contractor acknowledges and agrees that, prior to the submission of its bid for the Work, it fully familiarized itself with the

requirements of all applicable federal, state, county and municipal laws, codes, rules, and regulations, as well as the conditions of any required licenses and permits.

The Contractor shall procure all permits and licenses, including any applicable building permits (except those procured or to be procured by the City which are listed elsewhere in the Contract Documents), in coordination with the Director, pay all charges and fees, and give all notices necessary and incident to the due and lawful prosecution of the Work. Contractor shall be responsible for applying, paying all fees, and coordination for obtaining all permits for completion of the Work. All permits and licenses shall be obtained in sufficient time to prevent delays to the Work. Contractor will apply to the City for reimbursement for such permits costs. Accordingly, Contractor should not include the anticipated costs for permits in its bid, as the necessary permit costs will be reimbursed by the City.

The California Environmental Quality Act (Public Resources Code, Section 21000 to 21177) may be applicable to permits, licenses and other authorizations which the Contractor must obtain from State or local agencies in connection with performing the Work. The Contractor shall comply with the provisions of that Act in obtaining such permits, licenses and other authorizations, and all permits, licenses and other authorizations shall be obtained in sufficient time to prevent delays to the Work.

The Contractor shall maintain the applicable Contractor's license as identified in the Notice to Contractors and City business license for the duration of the Work.

5-1.20 **WATER POLLUTION.** The Contractor shall comply with all water pollution control rules, regulations, ordinances and statutes which apply to any Work performed pursuant to the Contract, including any water pollution control rules, regulations, and statutes, specified by the most current State of California NPDES General Permit for Stormwater

Discharges Associated with Construction Activity.

The Contractor shall take all necessary precaution to protect streams, vernal pools, ponds, reservoirs, and lakes from pollution with fuels, oils, bitumen, calcium chloride, and other harmful materials as consistent with the law. Also, the Contractor shall conduct and schedule operations so as to avoid discharging pollutants, such as but not limited to: sediment and silt to the storm drain system. The storm drain system consists of all facilities that are designed to convey stormwater to the Waters of the State as defined in the California Water Code. The storm drain system includes, but is not limited to, all streets, gutters, drain inlets, roadside ditches, streams, vernal pools, ponds, and lakes. Care shall be exercised to preserve roadside vegetation beyond the limits of construction.

5-1.21 **PROTECTION AND USE OF PROPERTY.** The Contractor shall be responsible for and provide and maintain all proper temporary walkways, covered walkways, barriers, roads, guards, railings, lights, warning signs, and take precaution at all times to avoid injury or damage to any person or any property, and upon completion of the Work, or at other times as directed, restore Premises and adjacent property to a proper condition. In the event of such injury or damage, Contractor shall report such injury and damage to City within forty-eight (48) hours of occurrence.

The Contractor shall protect adjoining property and nearby buildings, including City buildings, City roads, and public streets or roads, from dust, dirt, debris, or the nuisance arising out of the Contractor's operations or storage practices, and, if ordered by the Director, the Contractor shall provide and Install suitable safeguards, approved by the Director, to protect such objects from damage. If such objects are damaged by reason of the Contractor's operations, they shall be replaced or restored at the Contractor's expense.

If the Contractor damages any buildings, roads, utilities, or other property which belong to the City, or any Department or agency thereof, then the Director, at his or her option, may retain from the money due under the Contract an amount sufficient to insure repair of the damage.

The Director may make or cause to be made such temporary repairs as are necessary to restore to service any such damaged facility. The cost of such repairs shall be borne by the Contractor and may be deducted from any moneys due or to become due the Contractor under the Contract.

5-1.22 **RESPONSIBILITY FOR DAMAGE AND INDEMNIFICATION.**

The City of Roseville, its officers, agents, employees, and volunteers, including but not limited to the Director and his or her designee, shall not be answerable or accountable in any manner: for any loss or damage that may happen to the Work or any part thereof; for any loss or damage to any of the materials or other things used or employed in performing the Work; for injury to or death of any person, either workers or the public; or for damage to property from any cause which might have been prevented by the Contractor, its workers, or anyone employed by the Contractor or the Contractor's Subcontractors.

The Contractor shall be responsible for any liability imposed by law and for injuries to, or death of, any person including, but not limited to, workers and the public, or damage to property resulting from defects or obstructions, or from any cause whatsoever during the progress of the Work or at any time before its completion and final Acceptance.

To the fullest extent allowed by law, the Contractor shall defend (through counsel acceptable to the City), indemnify, and save and hold harmless the City, and its respective officers, agents, Subcontractors, employees, and volunteers, and the successors and assigns of

any of them, (hereinafter referred to as "Indemnitees") from and against all claims, demands, liability, suits, actions, costs or expenses for any and all loss or damage, including but not limited to, personal injury, property damage, or economic loss, arising out of or resulting from allegations of (1) Contractor's use of the City's property or any activities or Work performed hereunder by the Contractor; (2) the Contractor's performance of the Work under the Agreement; or (3) the Contractor's breach of any provision of the Agreement. The duty of the Contractor to indemnify and save harmless includes the duties to defend as set forth in Civil Code Section 2778. The only exception to these provisions is that the Contractor's obligations under this section will not apply to the extent that the claims, demands, liability, suits, actions, costs or expenses are caused by Indemnitees' active negligence, willful misconduct, criminal acts, or for defects in design furnished by the Indemnitees, misconduct, criminal acts, or for defects in design furnished by the Indemnitees.

The Contractor waives any and all rights to any type of express or implied indemnity against the City, its officers, agents, employees, or volunteers.

The Contractor's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Contract for the full period of time allowed by law. The defense and indemnity obligations of this Contract are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Contract. The parties intend that the defense and indemnity obligations in this Contract shall be broadly construed.

Any person, firm or corporation that Contractor authorizes to Work on the City's property including Subcontractors, shall be deemed to be an agent of the Contractor for purposes herein, shall be subject to all the applicable terms herein, and shall be within the scope of the Contractor's indemnity obligation described herein.

In addition to any remedy authorized by law, so much of the money due the Contractor under and by virtue of the Contract as shall be considered necessary by the Department may be retained by the City until disposition has been made of such suits or claims for damages.

The retention of money due the Contractor shall be subject to the following:

A. The City will give the Contractor thirty (30) Days' notice of its intention to retain funds from any partial payment which may become due to the Contractor prior to Acceptance of the Contract. Retention of funds from any payment made after Acceptance of the Contract may be made without such prior notice to the Contractor.

B. No retention of additional amounts out of partial payments will be made if the amount to be retained does not exceed the amount being withheld from partial payments pursuant to Section 7-1.07, "Progress Payments," of these General Conditions.

C. If the City has retained funds and it is subsequently determined that the City is not entitled to be indemnified and saved harmless by the Contractor in connection with matter for which such retention was made, the Department shall be liable for interest on the amount retained at the legal rate of interest for the period of such retention.

5-1.23 **INSURANCE COVERAGE.**

A. Evidence of Maintenance Required. The Contractor shall, at its expense, procure and at all times maintain in full force and effect at a minimum the insurance required by this section on all of its operations; and the Contractor shall not allow any Subcontractor to commence work until similar insurance required of the Subcontractor has been obtained and filed. An original Certificate of Insurance, and copies of all required endorsements, all in a form approved by the Risk Manager, evidencing all required coverage or policies shall be filed after the award of the bid and prior to approval of the Contract by the City Council. Contractor shall

provide ten (10) days prior written notice to the City of any reduction of coverage limits or cancellation of the coverage or policies shall be given to the City of Roseville as Certificate holder.

B. Qualifying Insurers. With the exception of the State Compensation Insurance Fund, all required insurance policies shall be issued by companies acceptable to the City and licensed to do business in the State of California and who hold a current policy holders alphabetic and financial size category rating of not less than AVII according to the most recent issue of Best's Insurance Reports.

C. Insurance Required.

1. Commercial General Liability (CGL): Insurance Services Office Form CG 00 01 covering CGL on an "occurrence" basis, including products and completed operations with limits of no less than Two Million Dollars ($2,000,000) per occurrence for bodily injury, personal injury and property damage for projects under One Million Dollars ($1,000,000) and limits of no less than Five Million Dollars ($5,000,000) per occurrence for bodily injury, personal injury and property damage for projects over One Million Dollars ($1,000,000). If a general aggregate limit applies, either the aggregate limit shall apply separately to this project or the general aggregate limit shall be twice the required occurrence limit.

The Commercial General Liability insurance shall include the following, copies of which shall be provided:

a. Inclusion of the City of Roseville, and its officers, agents, employees, and volunteers, as additional insureds (except for workers' compensation) as respects services or operations under the Contract. The additional insured endorsement for the general liability policy shall be at least as broad as the ISO CG 2010 10 01 combined with ISO CGL

Endorsement CG 2037 10 01. Any other endorsement must be approved in writing by the City. Endorsements must include coverage for on-going and completed operations, which coverage shall be maintained for four (4) years following completion of the Project. Endorsements shall cover the City of Roseville, its officers, agents, employees, and volunteers.

b. The insurance shall provide coverage for claims by one insured against another insured and the policies shall not contain any cross-suits exclusions, cross-liability exclusions, or insured versus insured exclusions. The policies shall not contain any classification exclusions purporting to deny coverage for any work to be performed by Contractor or any of its Subcontractors.

c. Stipulation that the insurance is primary and noncontributory, as evidenced by a separate endorsement (CG 20 01 04 13 or an equivalent) or section of the policy, and that neither the City nor its insurers will be called upon to contribute to a loss.

d. Such insurance shall specifically cover the contractual liability of the Contractor.

e. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

f. Waiver of subrogation endorsement.

g. The Contractor shall furnish a certificate for the period covered.

2. Automobile Liability: Insurance Services Office Form Number CA 0001 covering Code 1 (any auto), or if Contractor has no owned autos, Code 8 (hired) and Code 9

(non-owned), with limits of no less than One Million Dollars ($1,000,000) per accident for bodily injury and property damage.

3. Workers' Compensation: In accordance with the provisions of the California Labor Code, Contractor is required to be insured against liability for Workers' Compensation or to undertake self-insurance. Statutory Workers' Compensation and Employers' Liability of at least One Million Dollars ($1,000,000) shall cover all Contractors staff while performing any work incidental to the performance or this Agreement.

4. Professional Liability: Professional Liability (Errors and Omission) Insurance appropriate to Contractor's profession, with a limit of liability not less than One Million Dollars ($1,000,000) per occurrence or claim and Two Million Dollars ($2,000,000) aggregate to cover all design and engineering services rendered by Contractor pursuant to the Agreement. Coverage must commence from the first day that Contractor or any of its Subcontractors provided any design or engineering services in connection with the Project.

5. Builder's Risk/Course of Construction Insurance (If Required by Risk Management): The Contractor shall be responsible for all loss, damage or destruction whatsoever to the work called for by this Contract until the approval of a Notice of Completion or acceptance of the Work if no Notice of Completion is to be recorded.

The Contractor shall secure "All Risk" type of builder's Risk Insurance of the type covering one hundred percent (100%) of the value of the work performed under this Contract (the value is presumed to be the Contract amount unless otherwise stated in Supplemental Conditions) and all materials, equipment, or other items to be incorporated therein while the same are located at the construction site, a bonded warehouse, or its place of manufacture. At any time, the policy shall cover the value of the work completed. The policy shall cover hazards

including the losses due to fire, explosion, hail, rain, lightning, flood (separate insurance as needed), vandalism, malicious mischief, wind, collapse, aircraft, and smoke.

The policies providing such insurance shall name the City as a loss payee as its respective interests may appear, and certified copies of such policies shall be filed with the City. The maximum deductible allowable under the Builder's All Risk policy shall be five percent (5%) of the Contract amount.

Builder's Risk Insurance is not required for coverage of losses in excess of five percent (5%) of the Contract amount for damages resulting from earthquake in excess of a magnitude of 3.5 on the Richter scale, or tidal waves. Coverage in the amount of five percent (5%) of the Contract amount for such losses is required.

6. Pollution Coverage: Contractor shall procure pollution liability coverage or other insurance covering claims for bodily injury or property damage arising out of the abatement, removal, storage, transportation, or other exposure to hazardous materials or pollutants, in limits not less than Two Million Dollars ($2,000,000). Contractor shall add the City and all parties required to be indemnified by Contractor as additional insured on all pollution liability policies.

7. Higher Coverage Limits: If Contractor maintains higher coverage limits than the amounts shown above, then the City requires and shall be entitled to coverage for the higher coverage limits maintained by Contractor. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

8. Claims Made Coverage: Liability insurance coverage may not be written on a “claims made” or modified occurrence basis. The Certificate of Insurance must clearly provide that the coverage is on an “occurrence” basis.

5-1.24 **OTHER INSURANCE PROVISIONS.**

A. The requirements of the Standard Specifications as to types and limits of insurance coverage to be maintained by the Contractor, and any approval of insurance by the City, are not intended to, and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Contractor pursuant to the Contract, including, but not limited to, the provisions concerning indemnification, nor preclude the City from taking any other action available to it under any other provision of the Contract or law.

B. The City acknowledges that some insurance requirements contained in these Standard Specifications may be fulfilled by self-insurance on the part of the Contractor. However, this shall not in any way limit liabilities assumed by Contractor under the Contract. Any self-insurance must be approved in writing by the City, in its sole discretion and shall not reduce the limits of liability. Any deductibles or self-insured retentions ("SIR") must be declared on the certificate of insurance and approved by City in writing. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or City. City reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

C. The Contractor agrees to include in its contracts with all subcontractors the same requirements and provisions of this Contract, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, the Contractor shall require its subcontractors to agree to be bound to the Contractor and the City in the same manner and to the same extent as the Contractor is bound to the City under this Contract. Additionally, the Contractor shall obligate its subcontractors to comply with these

same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of the City's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request. Alternatively, the Contractor may insure subcontractor(s) under its own policy.

D. The City, its officers, agents, employees, and volunteers are to be covered as insureds with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the Contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under California Insurance Code Section 11580.04.

E. The limits of insurance required in this Contract may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of the City (if agreed to in a written contract) before the City's own insurance shall be called upon to protect it as a named insured.

F. The insurance procured by Contractor shall be subject to the approval of the City, but any acceptance of insurance certificates by the City shall in no way limit or relieve Contractor of its duties and responsibilities under the Agreement.

G. Contractor shall be responsible for all premiums, deductibles, and self-insured retention applicable to the insurance it is required to procure under the Contract. All deductibles or self-insured retentions over five hundred thousand dollars ($500,000) must be approved by the City, in writing. Contractor shall be responsible for all deductibles, self-insured

retention payments, and/or increased premiums incurred if the City's policies of insurance are forced to cover damages or respond to claims for which Contractor or its Subcontractors were obligated to provide insurance under the Contract.

H. Failure of the City to enforce in a timely manner any of the requirements of these insurance provisions shall not act as a waiver to enforcement of any of these provisions at a later date.

I. Contractor's indemnity obligations shall not be limited by these insurance provisions and shall survive the expiration of the Contract and the insurance provisions of the Contract shall likewise not be limited by the indemnity provisions of the Contract.

J. THE CITY RESERVES THE RIGHT TO WITHHOLD ANY PROGRESS PAYMENTS TO THE CONTRACTOR IN THE EVENT OF NONCOMPLIANCE WITH ANY INSURANCE REQUIREMENTS.

5-1.25 **THIRD PARTY BENEFICIARY.** No provisions in the Contract Documents shall in any way inure to the benefit any third party (including the public at large or any member thereof) so as to constitute such person a third party beneficiary of the Contract, or of any term or condition or other provision of the Contract or otherwise give rise to any cause of action in any person not a party to the Agreement, except as expressly provided elsewhere in the Contract Documents.

5-1.26 **COORDINATION AND ACCESS.** The Contractor acknowledges that the City may award, or has already awarded, other construction contracts for additional work or may perform additional work with its own forces and that such work may affect the Work under this Agreement. Additionally, the Contractor acknowledges that the State and other public and private agencies may be granted a right-of-entry by the City for the purpose of constructing

facilities within and adjacent to the Work Site. It is the obligation of the Contractor to coordinate its Work with the work of others working within or adjacent to the City's property.

During performance of its Work, the Contractor shall not have exclusive access to or use of the work areas. The City may also require that certain facilities and areas be used concurrently by the Contractor and by other contractors working in the area. When two (2) or more contractors are employed on related or adjacent City work, each shall conduct its operations in such a manner as not to cause any unnecessary delay or hindrance to the other. Each contractor shall be responsible to the other for all damage to any work, to persons or property caused to the other by its operations, and for loss caused the other due to any unnecessary delays or failure to finish the work within the time specified for completion.

If any party of the Contractor's Work depends on the work of any other contractor and/or the City for proper execution and/or results, the Contractor shall promptly notify the City of any discrepancies and/or defects in said other work that would render its work unsuitable for proper execution and/or results prior to proceeding with the Contractor's own Work. If it becomes necessary, the City will resolve coordination and access problems.

The Contractor and its representative in charge of the Work shall familiarize themselves with the City's property and Work Site, and adjacent surroundings in the vicinity of said Wok, and any private or public operations on adjoining properties.

5-1.27 **OCCUPANCY BY THE DEPARTMENT PRIOR TO ACCEPTANCE.** The City may at any time notify the Contractor in writing that it intends to take Beneficial Occupancy of any portion of the Work even though the Work may not be substantially complete. Unless the reason for the City's taking Beneficial Occupancy is that the Contractor has not completed the Work (or portions thereof) in accordance with the Contract

Time, the City's Beneficial Occupancy shall relieve the Contractor from its responsibility for maintenance, loss or damage to that portion of the Work for which the City has taken Beneficial Occupancy other than that resulting from the Contractor's act or omission, negligence, willful misconduct or breach of warranty.

Should the Work (or portion thereof) not be completed in accordance with the Construction Schedule within the Contract Time (as adjusted under the terms of the Contract Documents), the City shall have the right, but not the obligation, to take Beneficial Occupancy of the Work. In such event, the Contractor shall not be entitled to any additional compensation on account of said occupancy by the City, nor shall the Contractor be relieved of any of its responsibilities under the Contract Documents, including, without limitation, Contractor's obligation to complete the Work in accordance with the Construction Schedule.

Beneficial Occupancy shall not be deemed an Acceptance by the City either of the Work or of any portion thereof, nor will it relieve the Contractor of full responsibility for correcting defective Work or materials found at any time before the formal written Acceptance of the entire Contract by the Director or during the full warranty period after such Acceptance, as provided in Section 7-1.12, "Warranty," of these General Conditions.

The City's Beneficial Occupancy shall not relieve the Contractor of its responsibility to maintain all insurance and bonds required under the Contract Documents until the entire project is accepted by the City.

5-1.28 **RIGHT TO OPERATE UNSATISFACTORY FACILITIES AND EQUIPMENT.** If, after Installation, the operation or use of the facilities or equipment to be furnished under this Contract proves to be unsatisfactory to the Director, the City shall have the right to operate and use such facilities or equipment until they can, without damage to the City,

be taken out of service for correction or replacement. Such period of use of the defective facilities or equipment, pending correction or replacement, shall in no way decrease the warranty period required for the acceptable corrected or replaced facilities or equipment.

5-1.29 **CONTRACTOR'S RESPONSIBILITY FOR THE WORK.** Except as otherwise provided herein, the Contractor shall have the charge and care of the Work and shall bear the risk of injury or damage to any part of the Work by the action of the elements or from any other cause whether arising from the execution or from the nonexecution of the Work until the Acceptance of the Contract by the Director. The Contractor shall rebuild, repair, restore, and make good all injuries or damages to any portion of the Work occasioned by any cause before its completion and Acceptance, and shall bear the expense thereof. In case of suspension of Work from any cause whatever, the Contractor shall be responsible for the Work and it shall also be responsible for all materials, and shall properly store them if necessary, and shall provide suitable drainage and erect temporary structures where necessary.

The Contractor will be relieved of responsibility for any injury or damage to the Work caused by the following:

A. An earthquake in excess of a magnitude of 3.5 on the Richter Scale or a tidal wave, when the effect of such has been proclaimed a disaster or state of emergency by the Governor of the State of California or by the President of the United States, or was of such magnitude at the site of the Work as to have been sufficient to have caused a proclamation of disaster or state of emergency, had it occurred in a populated area.

B. Occupancy and use by the Department or the public prior to the completion of the entire project.

C. Acts of the Federal Government or the public enemy.

5-1.30 **RESPONSIBILITY FOR UTILITIES.** The Contractor shall be responsible at its own cost for any and all Work, expense or special precautions caused or required by the existence or proximity of utilities encountered in performing the Work, including without limitation, repair of any or all damage and all hand or exploratory excavation required. The Contractor is cautioned that such utilities may include communication cables or electrical cables which may be high voltage, and when working or excavating in the vicinity of such cables, or the ducts enclosing such cables, the Contractor shall undertake at its own cost any special precautions required. Suitable warning signs, barricades, and safety devices shall be erected as necessary or required.

However, if during the course of the Work the Contractor encounters utility Installations which are not shown or indicated in the Contract Documents or which are found in a location substantially different from that shown, and such utilities are not reasonably apparent from visual examination, then the Contractor shall promptly notify the Director in writing. Where necessary for the Work of the Contract, the Director shall issue a written order to the Contractor to make such adjustments, rearrangement, repair, removal, alteration, or special handling of such utility, including repair of the damaged utility. The Contractor shall perform the Work described in such written order, and compensation therefor will be made in accordance with Section 3 of these General Conditions relating to changes in the Work. Except for the items of cost specified in said Section 3, the Contractor shall receive no compensation for any other cost, damage, delay, interference, or hindrance to him or her due to the presence of such utility. If the Contractor fails to give the notice specified above and thereafter acts without instructions for the Director, then the Contractor shall be liable for any or subsequent to discovery thereof, and the Contractor shall repair and make good such damage at its own cost.

The precise location of underground facilities can only be determined by careful probing or hand digging in compliance with Article 6 of the Cal/OSHA Construction Safety Orders which states in part:

> "Prior to opening an excavation, effort shall be made to determine whether underground installations, i.e., sewer, water, fuel, electric lines, etc., will be encountered, and if so, where such underground installations are located. When the excavation approaches the approximate location of such an installation, the exact location shall be determined by careful probing or hand digging, and, when it is uncovered, adequate protection shall be provided for the existing installation."

The location of known existing utilities and pipelines are shown on the Contract Drawings in their approximate locations. Some of the locations include multiple conduits. The Contractor shall exercise care in avoiding damage to those facilities which are to remain in service subsequent to the construction of the particular new facility involved and the Contractor will be held responsible for any repairs if damaged. The Contractor shall also exercise care in maintaining those pipes and facilities required for continuing operation of the existing facilities until such time as they can be abandoned. There is no guarantee that all utilities or obstructions are shown on the Contract Drawings or that the locations indicated are accurate.

The Contractor shall exercise extreme caution in working in the area adjacent to the existing pipelines and utility services. It is essential that all the existing facilities be maintained in service. Construction of the connections between the existing facilities and the new facilities shall be at times and during periods acceptable to the City. The Contractor shall advise the Director in writing of its proposed Construction Schedule for these connections at least forty-eight (48) hours in advance.

The Contractor shall uncover all piping and conduits, to a point one foot (1') below the pipe, where crossings, interferences, or connections are shown on the Contract Drawings, prior to trenching or excavating for any pipe or structures, to determine actual elevations. New pipelines shall be laid to such grade as to clear all existing facilities which are to remain in service. If the Contractor does not expose all required utilities, it shall not be entitled to additional compensation for Work necessary to avoid interferences nor for repair to damaged utilities. Excavations around underground electrical ducts and conduits shall be performed using extreme caution to prevent injury or damage to workers and to the electrical ducts or conduits.

5-1.31 **PROPERTY RIGHTS IN MATERIALS.** Nothing in the Contract shall be construed as vesting in the Contractor any right of property in the materials used after they have been attached or affixed to the Work or soil or after partial payment has been made as provided in Section 7-1.07, "Progress Payments," of these General Conditions for material delivered on the ground or stored subject to or under the control of the City and unused. All such material shall become the property of the City upon being so attached or affixed or upon payment for materials delivered on the ground or stored subject to or under the control of the City and unused, as provided in said Section 7-1.07.

5-1.32 **COURT ORDERED DELAY.** If, pursuant to court order, the Department temporarily suspends performance of all or any portion of the Work, an extension of time determined pursuant to the provisions in Section 6-1.08, "Liquidated Damages," of these General Conditions will be granted.

5-1.33 **NO PERSONAL LIABILITY.** Neither the Director, nor any other officer or authorized employee of the City, shall be personally responsible for any liability arising under or by virtue of the Contract.

5-1.34 **RIGHTS IN LAND AND IMPROVEMENTS.** The Contractor shall make no arrangements with any person or entity to permit occupancy or use of any land, structure or building within the limits of the Work, for any purpose whatsoever, either with or without compensation, in conflict with any agreement between the City and any third party owner, former owner, or tenant of such land, structure or buildings. The Contractor shall not occupy City-owned property outside the limit of the Work shown on the Contract Drawings unless it obtains prior approval.

5-1.35 **ANTITRUST CLAIMS.** The Contractor's attention is directed to the following provision of Public Contract Code Section 7103.5(b), which is applicable to the Contractor and its Subcontractors:

> " In entering into a public works contract or a subcontract to supply goods, services, or materials pursuant to a public works contract, the contractor or subcontractor offers and agrees to assign to the awarding body all rights, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 U.S.C. Sec. 15) or under the Cartwright Act (Chapter 2 [commencing with Section 16700] of Part 2 of Division 7 of the Business and Professions Code), arising from purchases of goods, services, or materials pursuant to the public works contract or the subcontract. This assignment shall be made and become effective at the time the awarding body tenders final payment to the contractor, without further acknowledgement by the parties."

5-1.36 **RIGHTS TO DRAWINGS, TECHNICAL DATA PATENTS.** Shop

Drawings and Working Drawings submitted to the City by the Contractor, Subcontractor or any lower tier Subcontractor pursuant to the Agreement, are the property of the City and the City may use, and disclose in any manner and for any purpose, Shop Drawings and Working Drawings delivered under the Contract.

Technical Data including manuals or instructional materials, computer or microprocessor software which are delivered or submitted to the City by the Contractor, Subcontractor, or any lower tier Subcontract pursuant to the Contract are the property of the City, and the City may use or disclose same in any manner and for any purpose.

The Contractor shall assume all costs arising from the use of patented materials, equipment, devices, or processes used on or incorporated in the Work, and shall defend, indemnify and save and hold harmless the City, and its duly authorized representatives, from all suits at law, or in equity, and actions of every nature for, or on account of the use of any patented materials, equipment, devices or processes. In case some materials, equipment, devices or processes are held to constitute an infringement and their use enjoined, the Contractor, at its expense, shall:

1. Secure for the City the right to continue using said materials, equipment, devices or processes by suspension of the injunction or by procuring a license or licenses; or
2. Replace such materials, equipment, devices, processes; or
3. Modify them so that they become non-infringing or remove the enjoined materials, equipment, devices or processes and refund the sums paid therefor without prejudice to any other rights of the City.

5-1.37 **PAYMENT OF TAXES.** Contractor shall pay all taxes and duties applicable to and assessable against any Work, equipment, materials, services, processes, and

operations incidental to or involved in the Agreement, including but not limited to, retail sales and use, transportation, export, import, business, and special taxes. The Contractor is responsible for ascertaining and acquainting itself with such taxes and making all necessary arrangements to pay them. The Contractor will maintain records that are auditable records, and these records shall be subject to the City's review to verify that Contractor's tax payments are current at all times.

The Contract Price paid for the Work shall include full compensation for all taxes which the Contractor is required to pay, whether imposed by Federal, State or local government, including, without being limited to, Federal excise tax. No tax exemption certificate nor any document designed to exempt the Contractor from payment of any tax will be furnished to the Contractor by the Department, as to any tax on labor, services, materials, transportation, or any other items furnished pursuant to the Contract.

The Contractor shall withhold and pay any and all sales and use taxes, withholding taxes, whether Federal, State, or local, Social Security taxes, State Unemployment Insurance charges and all other taxes which are now or hereafter may be required to be paid or withheld under any laws.

5-1.38 **GRATUITIES AND CONFLICT OF INTEREST.** The Contractor shall not offer or provide gratuities in the form of gifts, entertainment, loans, meals, rewards, and/or services to representatives of the City, including but not limited to, officers, employees, agents, Engineering Service Consultants, Consulting Engineers and Architects, Inspectors and/or Testing Agencies retained by the City. If it is found that the Contractor has violated this provision, the Contract may be subject to termination for default as defined elsewhere in these General Conditions.

During the term of the Contract and until the final payment has been made to the Contractor, the Contractor shall not employ or compensate in any manner whatsoever, the City's officers, employees and authorized representatives, agents, and any Engineering Service Consultants, Consulting Engineers and Architects, Inspectors, and/or Testing Agencies retained by the City. Any exception to the employment or compensation to any of the above named parties must be made in writing by the City. If the Contractor offers or provides employment or compensation to those named above during the term of the Contract, the Contract may be subject to termination for default.

5-1.39 **COOPERATION.** Should construction be under way by City forces or other forces or by other Contractors within or adjacent to the limits of the Work or should Work of any other nature be under way by such forces within or adjacent to said limits, the Contractor shall cooperate with all such forces to the end that any delay, interference or hindrance to their Work will be avoided. The right is reserved to perform other or additional Work at or near the site at any time, by the use of such forces.

5-1.40 **DIGGING TRENCHES OR OTHER EXCAVATIONS.** In the event any work involves digging trenches or other excavations that extend deeper than four feet (4') below the surface, City and Contractor shall comply with the following:

A. The Contractor shall promptly, and before the following conditions are disturbed, notify City in writing of any:

1. Material that the Contractor believes may be material that is hazardous waste, as defined in Section 25117 of the Health and Safety Code, that is required to be removed to a Class I, Class II, or Class III disposal site in accordance with provisions of existing law.

2. Subsurface or latent physical conditions at the site differing from those made available to Contractor for inspection as provided in the project proposal.

3. Unknown physical conditions at the site of any unusual nature, different materially from those ordinarily encountered and generally recognized as inherent in Work of the character provided for in the Contract.

B. The City shall promptly investigate the conditions, and if it finds that the conditions do materially so differ, or do involve hazardous waste, and cause a decrease or increase in the Contractor's cost of, or the time required for, performance of any part of the Work shall issue a Change Order under the procedures described in the Contract.

C. In the event that a dispute arises between the City and the Contractor whether the conditions materially differ, or involve hazardous waste, or cause a decrease or increase in the Contractor's cost of, or time required for, performance of any part of the Work, the Contractor shall not be excused from any scheduled completion date provided for by the Contract, but shall proceed with all work to be performed under the Contract. The Contractor shall retain any and all rights provided either by contract or by law which pertain to the resolution of disputes and protests between the contracting parties. However, no claim of the Contractor under this clause shall be allowed unless the Contractor has given the notice required by this Section. No claim by the Contractor for an equitable adjustment hereunder shall be allowed if asserted after final payment under this Contract.

5-1.41 **CONTRACTOR REGISTRATION.** No contractor or subcontractor may work on a public works project unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. During the performance of this Contract, the Contractor and its subcontractors shall have a continuing legal obligation to maintain current

registration with the Department of Industrial Relations. The Contractor is hereby notified that this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

5-1.42 **CITY OF ROSEVILLE ENCROACHMENT PERMITS AND RIGHTS-OF-WAY.** The Contractor need not obtain a separate encroachment permit from the City prior to construction within street rights-of-way or other City rights-of-way. Execution of the Contract by the City shall be deemed an encroachment permit for work required by the Contract within rights-of-way. All work shall conform to the rules and regulations of encroachment permits and shall be subject to the inspection and approval of the Director and City Engineer.

To the extent indicated in the Contract Drawings, the City will provide the rights-of-way over private lands or the site to enable the Contractor to perform its work. The Contractor shall be solely responsible for securing any additional rights-of-way desired by the Contractor. The City will not be a party to nor assume any liability for any separate agreements reached between the Contractor and any third parties with respect to these additional rights-of-way. The Contractor shall procure evidence that agreements are in place with said third parties before the Contractor uses those areas covered by the agreements. Any damage to such private lands caused by the Contractor's operations shall be the sole responsibility of the Contractor.

5-1.43 **CALIFORNIA AIR RESOURCES BOARD REGULATIONS.** The Contractor shall comply with any applicable regulations of the California Air Resources Board ("CARB") set forth below.

A. In-Use Off-Road Diesel-Fueled Fleets. If the Contractor will use vehicles subject to Cal. Code Regs., tit. 13, §§ 2449 et seq. for the project, it shall submit a valid Certificate of

Reported Compliance to the City as provided in § 2449(n).

B. Advanced Clean Fleets. Pursuant to Cal. Code Regs., tit. 13, § 2013(i)(1), the Contractor shall submit to the City either a signed statement stating that it is not subject to the High Priority and Federal Fleets regulation of title 13, CCR section 2015 through 2015.6, or a document evidencing that it is listed on the CARB Advanced Clean Fleets webpage as a compliant fleet.

SECTION 6

PROSECUTION AND PROGRESS

6-1.01 **SUBLETTING AND SUBCONTRACTING.** The Contractor shall be responsible for all Work performed under the Contract. The Contractor shall give its personal attention to the fulfillment of the Contract and shall keep the Work under its control. Nothing in the Contract Documents shall create any contractual relationship between the City and any Subcontractor. The Contractor is fully responsible to the City for the acts and omissions of its Subcontractors of any tier. When any Subcontractor fails to prosecute a portion of the Work in a manner satisfactory to the Director, that Subcontractor shall not again be employed on the Work. Although the sections of the Contract may be arranged according to various trades, or general grouping of the Work, the Contractor is not obligated to sublet the Work in such manner. The Director will not arbitrate disputes among Subcontractors or between Contractor and one or more Subcontractors concerning responsibility for performing any part of the Work.

The on-site production of materials produced by other than the Contractor's own forces shall be considered as subcontracted. The erection, establishment or reopening of on-site plants for production of materials and the operation thereof in the production of materials for use on the Work shall conform to the requirements relating to labor set forth in the Contract Documents.

The Contractor shall also be responsible for coordinating the Work performed by Subcontractors and Suppliers.

The Contractor shall not substitute any person as Subcontractor in place of a Subcontractor listed on its bid proposal without the written approval of the Director. Substitutions must be in accordance with the provisions of the "Subletting and Subcontracting

Fair Practices Act" beginning with Public Contract Code Section 4100. Violations of this Act by the Contractor may subject it to penalties which may include cancellation of Contract, Assessment of ten percent (10%) of the Subcontractor's bid, and disciplinary action by the Contractors State License Board.

The Contractor shall pay any Subcontractors approved by the City for work that has been satisfactorily performed no later than seven (7) Days from the date of Contractor's receipt of progress payments by the City. Within seven (7) Days after receipt from the City of funds attributable to work performed by a Subcontractor, Contractor shall release any retainage payments withheld to the Subcontractor. In the event Contractor does not make progress payments or release retention to Subcontractors in accordance with the time period specified herein, Contractor may be subject to prompt payment penalties per statute.

6-1.02 **ASSIGNMENT.** The performance of this Contract may not be assigned, except upon the written consent of the City Council of the City of Roseville. Consent will not be given to any proposed assignment which would relieve the original Contractor or its surety of their responsibilities under the Contract nor will the City consent to any assignment of a part of the Work under the Contract.

The Contractor may assign moneys due or to become due to it under the Contract and such assignment will be recognized by the City, if given proper notice thereof, to the extent permitted by law, but any assignment of moneys shall be subject to all proper set-offs in favor of the City and to all deductions provided for in the Contract and particularly all money withheld, whether assigned or not, shall be subject to being used by the City for the completion of the Work in the event that the Contractor should be in default therein.

6-1.03 **BEGINNING OF WORK.** After the execution of the Contract by both

parties, the City will issue the Notice to Proceed upon its determination that it is appropriate for the Contract Time to commence.

The Contractor shall begin Work within fifteen (15) Days after receiving the Notice to Proceed from the Director, subject to the requirements stated elsewhere in the Contract Documents regarding, among other things, the submittal of Baseline Schedule, and shall diligently prosecute the same to completion within the time limit provided in the Supplemental Conditions. Contractor shall also achieve any and all Contract milestones as described elsewhere in the Contract Documents.

The Contractor shall notify the Director, in writing, of its intent to begin Work at least seventy-two (72) hours before Work is begun. The notice shall be delivered to the Director and shall specify the date the Contractor intends to start. If the project has more than one (1) location of Work, a separate notice shall be given for each location.

The Contractor is not authorized to perform any Work until it has received a Notice to Proceed from the City. Should the Contractor begin Work in advance of receiving notice that the Contract has been approved as above provided, any Work performed by it in advance of the said date of approval shall be considered as having been done by the Contractor at its own risk and as a volunteer unless said Contract is so approved thereafter.

6-1.04 **PROGRESS SCHEDULE.**

A. Preliminary Progress Schedule. The Contractor shall submit to the Director, within twenty (20) Days after date of the Notice to Proceed, a Preliminary Progress Schedule covering the Contractor's activities over the first three (3) months of operation in detail and the remainder of the project in summary. The Preliminary Progress Schedule shall schedule the project within the Contract Time for completion of the Work, and shall be subject to

favorable review by the Director.

B. CPM Schedule. The Contractor shall submit an acceptable Critical Path Method (CPM) Schedule to the Director within thirty (30) Days after the receipt of the Notice to Proceed. Subsequent revisions to said schedule shall be submitted as set forth hereinafter. The requirement for the CPM schedule is included to allow for adequate planning and execution of the Work, to determine the critical nature of delays, and to assist the Director in appraising the reasonableness of the proposed schedule and evaluating progress of the Work. The CPM schedule submitted under this Section shall utilize a CPM format, either the precedence or arrow diagramming method. The definitions of CPM terms and functions shall be as provided in the Associated General Contractors of America book *CPM in Construction, A Manual for General Contractors*, or a favorably reviewed alternative publication or reference. No progress payment will be made prior to submission and acceptance of the CPM Schedule.

1. The CPM schedule system shall consist of diagrams and accompanying mathematical analyses. The diagrams shall show elements of the project in detail and an entire project summary. Diagrams shall show the order and interdependence of activities and sequence in which the Work is to be accomplished as planned by the Contractor. The basic concept of a network analysis diagram shall be followed to show how the start of a given activity is dependent on the completion of preceding activities and its completion restricts the start of following activities. Detailed network activities shall include, in addition to construction activities, the submittal and favorable review of samples of material and Shop Drawings, the procurement of critical materials and equipment, fabrication of special material and equipment, and their Installation and testing. All activities of the City and the Director that affect progress and required Contract dates for completion of all or parts of the Work shall be shown. The

selection and number of activities shall be subject to favorable review by the Director. Summary networks shall be time scaled. Durations shall be in Days and shall not exceed fifteen (15) Days, except for submittal and delivery items. Where the duration of continuous Work exceeds fifteen (15) Days, Work items in the Construction Schedule shall be subdivided by location, approximate stationing or other sub-element of the Work.

The graphic network diagram shall include for each activity, the description, activity number, the estimated duration in Days, and all activity relationship lines. The network diagram shall be drawn for the early start of activities. All significant Submittals shall be scheduled along with manual Submittals and training on all large or critical pieces of equipment. If the precedence technique is utilized, the schedule project shall include a calendar in Work Days, a network report sorted by early start and a logic table report sorted by preceding Work item. If the arrow technique is utilized, the schedule report shall include a calendar in Work Days, a network report sorted by early start, a network report sorted by I-J numbers, and a network sorted by slack time and I-J numbers.

2. The critical path shall be shown on all reports and on the graphic network diagram. The activities which constitute the critical path shall be identified.

3. The mathematical analysis of the network diagram shall include a tabulation of each activity. The following information shall be furnished as a minimum for each activity:

(a) preceding and following event numbers

(b) activity description and number

(c) estimated duration of activities

(d) earliest start date (by calendar date)

(e) earliest finish date (by calendar date)

(f) actual start date (by calendar date)

(g) actual finish date (by calendar date)

(h) latest start date (by calendar date)

(i) latest finish date (by calendar date)

(j) slack or float

(k) percentage of activity completed

4. The program shall be capable of accepting revised completion dates as modified by approved time adjustments and recomputations of all tabulation dates and float accordingly.

5. Submission and review of the system shall be as follows:

(a) The complete network analysis system, consisting of the detailed network mathematical analysis and network diagrams, shall be submitted within thirty (30) Days after receipt of the Notice to Proceed.

(b) The Contractor shall participate in a review and evaluation of the proposed network diagrams and analysis by the Director. Any revisions necessary as a result of this review shall be resubmitted for review by the Director within ten (10) Days. When completed, the favorably reviewed schedule shall then be the schedule to be used by the Contractor for planning, organizing and directing the Work and for reporting progress. If the Contractor thereafter desires to make significant changes in its method of operating and scheduling, the Contractor shall notify the Director in writing stating the reasons for the change.

(c) The Contractor shall submit at monthly intervals a report of the actual construction progress. Each monthly report shall cover a period of approximately thirty

(30) Days ending around the 20th of each month. The monthly reports shall be submitted within ten (10) Days of the end of the reporting period.

(1) If the project is proceeding on schedule, the monthly update report may consist of a marked-up copy of the graphical network diagram. This submittal shall clearly indicate the status of any minor shifts in sequence or schedule and the estimated completion date or percent complete of all activities currently in progress. The Contract completion date shall also be indicated. The Contractor shall submit a narrative report relating to status of construction, the schedule, and factors which may affect the remainder of the schedule. The report shall show the activities or portions of activities completed during the reporting period. The report shall state the percentage of the Work actually completed and scheduled as of the report date and the progress along the critical path in terms of Days ahead or behind the allowable dates.

(2) If, in the opinion of the Director, the project is behind schedule, the monthly report shall include a revised network diagram and/or mathematical analysis showing the Contractor's proposed revised schedule. An analysis of the effect that the delay has on progress along other paths shall also be included in the report. The Contractor shall also submit a narrative report with each updated analysis which shall include but not to be limited to a description of current and anticipated problem areas, delaying factors and their impact, and an explanation of corrective actions taken or proposed.

(3) Periodic report shall be submitted in sufficient copies to cover Contractor needs plus five (5) copies and an available electronic copy to be retained by the Director.

6. To the extent that the favorably reviewed initial Construction Schedule, or revisions thereto, indicate anything not jointly agreed upon, it shall be deemed to be not favorably reviewed by the Director. Any omission of Work from the detailed schedule, otherwise required for Contract compliance, will not excuse the Contractor from completing such Work within any applicable completion date. The CPM schedule shall be generated by computer methods.

C. Schedule Review. Once each month, on a date mutually agreed upon, but no later than seven (7) business days after the monthly schedule progress report date, a Work Site meeting will be held to review the Construction Schedule and job progress. The Contractor shall also attend weekly meetings scheduled by the Director to review the progress of the Work in the preceding week and in the subsequent week, coordinate the Work with public agencies or other Contractors as required, and allow the Director to plan his or her activities for testing, inspection, etc.

D. Schedule Revisions. The conditions under which the Director will require revisions of the Construction Schedule include the following:

1. When delay in completion of any Work item or sequence of Work items results in an estimated extension of project completion by either twenty (20) business days or by ten percent (10%) of the remaining duration of time to complete the Contract, whichever is less.

2. When delays in Submittals or deliveries make replanning or rescheduling of the Work necessary.

3. When the schedule does not represent actual prosecution and progress of the Work.

4. When any change to the sequence of activities, the completion date for major portions of the Work, or when changes occur which affect the critical path.

5. When Contract Amendments or a Change Order necessitates schedule revision, the Contractor shall submit a schedule analysis of all Change Order Work with its proposal.

E. Cash Flow Projection. A cash flow projection shall be submitted with the Construction Schedule. This cash flow projection shall be revised and resubmitted when revisions of the Construction Schedule will result in changes to the projected cash flow.

F. Schedules showing project completion dates earlier than specified in the Supplemental Conditions will be rejected unless justification can be provided for early completion.

6-1.05 **SCHEDULE OF VALUES.** Prior to preparation of the first estimate for a progress payment, the Contractor shall submit for favorable review by the Director a detailed Schedule of Values or cost breakdown of the Work under each bid item awarded. The breakdown will then become the basis for partial payment determination. Elements of Work shall be grouped by structure, pipeline, system, etc. Within each grouping, Work should be itemized by readily measurable quantities of Work complete in place. For example, concrete should be in units of cubic yards including form Work and reinforcing steel. Move-on costs, bond and insurance costs, and Overhead costs shall not be considered an item of cost for this purpose but shall be prorated over items of Work. In the event the Schedule of Values is not favorable reviewed by the Director, another Schedule of Values shall be submitted that is mutually acceptable to the Contractor and the Director.

6-1.06 **CITY'S RIGHT TO STOP WORK.** The Director shall have the

authority to order the Contractor, in writing, to suspend the Work wholly or in part, for such period as the Director may deem necessary due to the failure on the part of the Contractor to correct Work that is not in accordance with the requirements of the Contract Documents or if Contractor persistently fails to carry out Work in accordance with the Contract Documents.

The Contractor shall immediately comply with the written order of the Director to suspend the Work wholly or in part. The suspended Work shall be resumed when conditions are favorable and methods are corrected, as ordered or approved in writing by the Director.

Any stoppage of work under this section shall be at the Contractor's sole expense, and the Contractor shall have no claim against the City based on the Contractor's failure to perform the Work in accordance with the Contract Documents.

In addition to the City's right to stop Work, the City may order the Contractor to submit to the City at no additional cost to the City, additional information concerning Contractor's planned Work if the Contractor fails to promptly correct Work that is not in accordance with the requirements of the Contract Documents or persistently fails to carry out Work in accordance with the Contract Documents. The additional information ordered by the City may include, but is not limited to, preparation of Submittals or Working Drawings not otherwise required to be submitted under the Contract Documents.

In the event the City discovers that the Contractor has created an unsafe condition the City may arrange for other work forces to remedy the condition. Such remedial work shall be at the sole discretion of the City. If this action is required, the City may unilaterally terminate Work under the Contract, and will pay only for the quantities of Work actually performed, less the cost of the City's remedial Work. In the event that Work is not halted, the Contractor must take immediate steps to correct the situation. There will be no extra payment for Work required

to correct unsafe conditions.

The right of the City to suspend the Work shall not give rise to a duty on the part of the City to exercise this right for the benefit of the Contractor or any other person or entity. This right shall be in addition to and not in restriction or derogation of the City's other rights under the Contract Documents.

In the event of a suspension of Work under any of the conditions set forth in this Section 6-1.06, such suspension of Work shall not relieve the Contractor of its legal responsibilities as set forth in these General Conditions.

6-1.07 **TIME OF COMPLETION.** The Contractor shall complete the entire Work, including Installation, repairs, startup, troubleshooting, painting, and touchup, training, submittal or record drawings, and manuals, cleanup, demobilization, and all other Work within the number of Days set forth in the Supplemental Conditions. The time for completion includes an allowance for working time lost due to normal inclement weather.

Extensions of time may be allowed for unusual inclement weather under the provisions hereinafter described. Unusual inclement weather is weather which adversely affects "controlling" operations or the critical path of construction and which meets one of the following criteria:

A. For the particular calendar month in question, the number of individual Days with rainfall exceeding 0.10 inches exceeds the average number of such Days for that month over the immediately preceding five (5) years of record by at least three (3) Days.

B. For the particular calendar month in question, the total cumulative rainfall for that month exceeds the average cumulative rainfall for that month over the immediately preceding five (5) years of record by at least two inches (2").

Rainfall shall be measured at a publicly operated, maintained, and reported station in reasonable proximity to the construction site. A claim for delay shall indicate the period of rainfall which is claimed as "unusual," the specific dates during which the unusual rainfall and subsequent wet soil conditions prevented Work, and the specific critical path tasks adversely affected by such unusual weather. A claim for delay due to unusual inclement weather shall be filed within ten (10) Days of the apparent end of the unusual inclement rainfall period, whether or not the monthly totals are available at that time. The burden of proof that weather meets the criteria for unusual weather shall be solely the responsibility of the Contractor.

It is the responsibility of the Contractor to order materials required for the Work properly and promptly on a Notice to Proceed. If evidence presented demonstrates that, in spite of the Contractor's efforts, government-established priorities controls delay material deliveries, suitable extension of time will be made.

If performance of extra Work ordered by the City or failure of the City to provide the necessary site for Installation affects construction tasks which are "controlling" or which are on the "critical path" of the Construction Schedule, suitable extensions of time will be made.

The Contractor shall not be entitled to a time extension for delays in activities on non-critical paths of the favorably reviewed schedule unless the duration of the excusable delay exceeds the total float of the activities being delayed. If the duration of an excusable delay does exceed the total float of the activities affected by the delay, the Contractor shall be entitled to an extension equal to the difference.

C. Determination that a day is a non-working day by reason of inclement weather or conditions resulting immediately therefrom, shall be made by the Director.

6-1.08 **LIQUIDATED DAMAGES.** It is agreed by the parties to the Contract

that in case all the Work called for under the Contract in all parts and requirements is not completed within the number of Days as set forth in the Supplemental Conditions, damage will be sustained by the City and that it is and will be impracticable and extremely difficult to ascertain and determine the actual damage which the City will sustain in the event of and by reason of such delay; and it is therefore agreed that the Contractor will pay to the City, the monetary amount indicated in the Supplemental Conditions in dollars (U.S.) per day for each and every calendar day of delay in completing the Work in excess of the number of Days prescribed and the number of additional calendar days, if any, authorized by Contract Change Order; and the Contractor agrees to pay said Liquidated Damages herein provided for, and further agrees that the City may deduct the amount thereof from any moneys due or that may become due the Contractor under the Contract.

It is further agreed that in case the Work is not finished and completed in all parts and requirements within the number of Days specified, the City shall have the right to increase the number of Days or not, as it may deem best to serve the interest of the City, and if it decides to increase the said number of Days, it shall further have the right to charge to the Contractor, its heirs, assigns or sureties and to deduct from the final payment for the Work all of any part, as it may deem proper, of the actual cost of engineering, inspection, superintendence, and other Overhead expenses which are directly chargeable to the Contract, and which accrue during the period of such extension, except that cost of preparation of final statement shall not be included in such charges.

6-1.09 **DELAYS AND EXTENSIONS TO THE WORK.** The Contractor must complete all Work within the time specified in the Agreement. The Contractor will be granted an extension of time and will not be assessed with liquidated damages or the cost of engineering

and inspection for any delay in substantially completing the Work (or parts thereof) beyond the time set forth in the Agreement, provided that such delay was caused by unforeseeable causes beyond the control and without the fault or negligence of the Contractor. Examples of such causes include acts of public enemy, fire, floods, abnormal weather (as described below), earthquakes, epidemics, quarantine restrictions, strikes, labor disputes and freight embargoes, fire, changes made pursuant to the provisions of "Changes in the Work" under Section 3 of these General Conditions or acts or neglect of the City not contemplated by the Contract Documents. In all cases, any extension of time is conditioned on the following:

1. That the cause is not due to the fault or negligence of the Contractor, and the Contractor has taken reasonable precautions to prevent and minimize the effects thereof; and

2. That the Contractor notifies the Director in writing within three (3) Days from the beginning of such delay specifying the nature of the delay and the measures that have been or will be taken to prevent or minimize the delay. Failure to submit written notice within this time period shall constitute an absolute waiver of any claim for a time extension.

No extension of time will be granted for a delay caused by a shortage of materials, unless the Contractor furnishes to the City documentary proof that it has diligently made every effort to obtain such materials from all known sources within reasonable reach of the work and further proof, as acceptable to the Director, that the inability to obtain such materials when originally planned did in fact cause a delay in Final Completion of the entire Work which could not be compensated for by revising the sequence of the Contractor's operations. Only the physical shortage of material will be considered as a cause for extension of time, and no consideration

will be given to any claim that material could not be obtained at a reasonable, practical or economical cost or price, unless it is shown to the satisfaction of the City that such material could have been obtained only at exorbitant prices entirely out of line with current rates, taking into account the quantities involved and the usual practices in obtaining such quantities.

No extension of time will be granted for a delay caused by Contractor's staff turnovers, understaffing or insufficient quantity of qualified staff able to perform the necessary work.

The term "shortage of materials," as used in this section, shall apply only to materials, articles, parts or equipment which are standard items and shall not apply to materials, parts, articles or equipment which are processed, made, constructed, fabricated or manufactured to meet the specific requirements of the Contract Documents.

No extensions of time will be granted for delays that have no measureable impact on the completion of the Work (or parts thereof) under the Contract Documents. When extensions of time are granted, they will be limited to the period equivalent to the actual number of Days lost on the critical path or controlling operations of the Construction Schedule, taking into account the extent to which that delay could be decreased by reasonable mitigation measures by the Contractor. All requests for extensions of time must be supported with a critical path analysis showing the critical path and impacts to it. Contractor's failure to submit this analysis will be sufficient cause for denial of any request for a time extension.

Within a reasonable period of time after the Contractor submits the notice and information required by this section, the City will determine whether an extension of time is justified and, if so, the number of days for the extension.

Abnormal weather may be a valid basis for a time extension under the Agreement. "Abnormal Weather" occurs when the number of days of rain above 0.5 inches in a 24 hour

period exceeds the average for such rainfall in a particular month as determined by the National Weather Service. The Contractor will only be entitled to, at most, a time extension for the number of days of rain exceeding the average for that month in the locale where the Work is to be performed. If delays are caused by the Contractor or those for whom the Contractor is responsible, the Contractor will only be entitled to, at most, a time extension for the number of rain days exceeding the average for the month when the Work should have been performed.

In addition, before a time extension may be granted for abnormal weather, the Contractor must establish that the rain either significantly impacted at least sixty percent (60%) of the planned work of the controlling operations for a particular day or prohibited at least five (5) hours of work on the controlling operations planned for that day. Contractor shall employ reasonably methods to mitigate the impact of abnormal weather (i.e., dewatering, protection of site, etc.) The occurrence of rain during non-work hours or having minimal impact to work on the controlling operation shall not constitute a day of abnormal weather.

In the event that the project experiences favorable weather for a particular month (e.g., the number of actual rain days in a month less than that indicated above for allowable rain days per months), the additional float resulting from such favorable weather shall accrue to the project.

Any Contractor claim for damages or additional compensation based on delay shall be limited to only those circumstances where the Contractor has fulfilled each of the following three (3) requirements:

1. Contractor has established its entitlement to a time extension pursuant to the provisions described above regarding delay and extensions to the Work.
2. The delay was caused solely by the City's issuance of changes made pursuant to the

provisions of "Changes in the Work" under Section 3 of these General Conditions or by acts or neglect of the City.

3. The delay was unreasonable under the circumstances and not within the contemplation of the parties.

It is expressly understood and agreed that delays caused by the City will be non-compensable when there are concurrent delays caused by the Contractor. Also, the Contractor shall have no entitlement to additional compensation for any delay where there have been concurrent delays caused by non-compensable delays, including, but not limited to, fire, floods, earthquakes, epidemics, quarantine restrictions, strikes, labor disputes, and freight embargoes.

Contractor's damages and/or additional compensation for delays will consist solely of the extended costs of maintaining the Contractor's Work Site presence. The Contractor will not be entitled to any extended home office overhead.

Compensation for idle time of equipment will be determined in the same manner as determinations are made for equipment used in the performance of extra work paid for on a Force Account basis with the following exceptions:

1. The time for which compensation will be paid will be the actual normal working hours during which such delay conditions exists, but in no case will exceed eight (8) hours in any one day.
2. The days for which compensation will be paid will be each calendar day of the work week (defined elsewhere in the Contract Documents) and Legal Holidays, during the existence of such delay, except that when rental of the equipment is paid for under the provisions in Section 3-1.06C, "Force Account Payment – Equipment," of these General Conditions, no payment will be made for delays in accordance with the

provisions of this section.

Actual loss shall be understood to include no items of expense other than idle time of personnel, cost of extra moving of equipment, and cost of longer hauls. Compensation for idle time of equipment will be determined as provided in this section and compensation for idle time of personnel will be determined pursuant to Section 3-1.06A, "Force Account Payment – Labor," of these General Conditions. No markup will be added in either case for Overhead and profit. The cost of extra moving of equipment and the cost of longer hauls will be paid for as extra work as provided pursuant to "Changes to the Work" elsewhere in the Contract Documents.

6-1.10 **TERMINATION.**

6-1.10A **TERMINATION OF AGREEMENT – CONVENIENCE OF CITY.** The Department reserves the right to terminate the Contract at any time and for any reason if the Director determines that to do so would be in the best interest of the City. Any termination which is not based on the circumstances set forth in Section 6.1-10B below shall be effected by delivery to the Contractor of a Notice of Termination specifying the extent to which performance of Work under the Contract is terminated, and the date upon which such termination becomes effective.

Upon the Contractor's receipt of a written Notice of Termination for convenience, the Contractor shall cease Work as to those portions of the project so terminated and shall undertake the steps outlined in Section 6-1.10B below.

1. Acceptance of the Contract as hereinafter specified shall not relieve the Contractor of responsibility for damage to materials except as follows:

   a. The Contractor's responsibility for damage to materials for which partial payment has been made as provided in Section 7-1.07, "Progress

Payments," of these General Conditions and for materials furnished by the City for use in the Work and unused shall terminate when the Director certifies that such materials have been stored in the manner and at the locations he or she has directed.

b. The Contractor's responsibility for damage to materials purchased by the City subsequent to the issuance of the notice that the Contract is to be terminated shall terminate when title and delivery of such materials has been taken by the City.

c. When the Director determines that the Contractor has completed the Work under the Contract directed to be completed prior to termination and such other Work as may have been ordered to secure the project for termination, the Contractor will recommend that the City formally accept the Work, and immediately upon and after such Acceptance by the City, the Contractor will not be required to perform any further Work thereon and shall be relieved of its contractual responsibilities for injury to persons or damage to property which occurs after the formal Acceptance of the project by the City.

2. The total compensation to be paid to the Contractor shall be determined by the Director on the basis of the following:

a. The reasonable cost to the Contractor, without profit, for all Work performed under the Contract, including mobilization, demobilization and Work done to secure the project for termination. Reasonable cost will include a reasonable allowance for project Overhead and general

administrative Overhead not to exceed a total of seven percent (7%) of Direct Costs of such Work.

b. A reasonable allowance for profit on the cost of the Work performed as determined under subsection (a), provided the Contractor establishes to the satisfaction of the Director that it is reasonably probable that it would have made a profit had the Contract be completed and provided further, that the profit allowed shall in no event exceed four percent (4%) of said cost.

c. The reasonable cost to the Contractor of handling material returned to the vendor, delivered to the Department or otherwise disposed of as directed by the Director.

d. A reasonable allowance for the Contractor's administrative costs in determining the amount payable due to termination of the Contract.

All records of the Contractor and the Contractor's Subcontractors, necessary to determine compensation in accordance with this Section, shall be open to inspection or audit by representatives of the Department at all times after issuance of the notice that the Contract is to be terminated and for a period of three (3) years, and such records shall be retained for that period.

After Acceptance of the Work by the Director, the Director may make payments on the basis of interim estimates pending issuance of the Final Statement, when in his or her opinion the amount thus paid, together with all amounts previously paid or allowed, will not result in total compensation in excess of that to which the Contractor will be entitled. All payments, including payment upon the Final Statement, shall be subject to deduction for prior payments and amounts, if any, to be kept or retained under the provisions of the Contract.

In the event that the City terminates this Contract under Section 6-1.10B below and it is determined for any reason that there was not sufficient cause to do so, the City's termination automatically will convert to a termination for convenience under this section and the terms and conditions outlined in this section automatically will be applied to effectuate the Contract termination. Thus, damages to which a Contractor may be entitled as a result of an improper default termination will be limited to the amounts provided for in this section.

The provisions of this section shall be included in all subcontracts.

6-1.10B **TERMINATION OF AGREEMENT - FOR CAUSE.** An "Event of Default" as referred to in this section shall occur if the Contractor:

1. Fails to maintain progress of the Work in accordance with the requirements of the Contract Documents; or
2. Fails to prosecute the Work or any of its components in accordance with the Contract Documents; or
3. Persistently or repeatedly fails or refuses to supply sufficient properly skilled workers or proper material to permit the performance of the Work in accordance with the Contract Documents; or
4. Fails to make prompt payment to Subcontractors or Suppliers in accordance with the respective agreements between the Contractor and the Subcontractor and Contractor and Supplier; or
5. Fails to comply with applicable laws, ordinances or rules, regulations or orders of a public authority having jurisdiction over the Work; or
6. Abandons, assigns or sublets the Contract without approval of the City; or
7. Becomes bankrupt or is subject to appointment of a receiver on behalf of the

Contractor; or

8. Otherwise is guilty of a substantial breach of a provision of the Contract Documents.

Upon the City's reasonable belief that there has been an Event of Default by the Contractor, the City may elect to give the Contractor written notice thereof. The Contractor thereafter shall cure the default as soon as possible and in no event after ten (10) Days from the Contractor's receipt of the City's written notice.

If the Contractor does not timely cure its default, the City may, without waiver of any of its other rights and remedies, elect to terminate the Contract, or portion thereof.

Upon the City's election to terminate the Contract, or portion thereof, the City shall have the right to complete the Work, or portion involved, by whatever means and methods it deems expedient, including the hiring of others on such terms as the City deems advisable. The City shall have the right to take possession of the Contractor's materials, plant, tools, equipment and property of any kind provided by or on behalf of the Contractor for the purpose of the Work, or a portion of them, without being responsible to the Contractor for wear and tear. The Contractor shall have no rights in such property during its use by the City. The City shall not be required to obtain the lowest prices for completing the Work or a portion of it but shall make such expenditures as, in the City's sole judgment, best accomplish such completion.

The expense of completing such Work or portion thereof, together with a reasonable charge for engineering, managerial and administrative services, as certified by the City, shall be charged to the Contractor, and the expense so charged shall be deducted by the City out of such monies as may be due or may at any time thereafter become due to the Contractor. In case such expense is more than the sum which otherwise would have been payable to the Contractor under the Agreement, then the Contractor or its surety or sureties shall promptly pay the amount of

such excess so due. When the City terminates the Contract under this section, the Contractor shall not be entitled to receive any further payments until the Work is completed and there has been a final settlement of costs of completing the Work covered by such notice of default.

The City will issue to the Contractor a written notice specifying that the Contract, or portion thereof, is terminated. Upon receipt of said written notice and, except as otherwise directed in writing by the City, the Contractor shall:

1. Stop all Work under the Contract; or if partial termination, stop Work relating to the terminated portion of the Agreement;
2. Perform Work the City deems necessary to secure the Work Site for termination including measures to leave the Work Site in a safe condition;
3. Remove equipment from the site of Work, as specified by the City;
4. Take such action as is reasonably necessary to protect materials from damage;
5. Notify all Subcontractors and Suppliers that the Contract or portion thereof is being terminated and that their contracts or orders are not to be further performed unless otherwise authorized in writing by the City;
6. Provide the City with an inventory list of all materials previously produced, purchased or ordered from Suppliers for use in the Work and not yet used in the Work, including its storage location, and such other information as the City may request;
7. Dispose of materials not used in the Work as directed by the Director. It shall be the Contractor's responsibility to provide the City (a) with good title to all materials purchased by the City hereunder, including materials for which partial payment has been made by the City and (b) with bills of sale or other documents of title for such

materials;

8. Subject to the prior written approval of the City, settle all outstanding liabilities and all claims arising out of Subcontractors or orders for materials terminated hereunder. To the extent directed by the City, the Contractor shall assign to the City all rights, title and interests of the Contractor under subcontracts or orders for materials terminated hereunder. The City shall be at liberty to negotiate with and engage any Subcontractors who had contracted with the Contractor for the Work;
9. Furnish the City with the documentation required to be furnished by the Contractor under the provisions of the Contract Documents, including, on projects as to which Federal funds are involved, all documentation required under the Federal requirements included in the Agreement; and
10. Take such other actions as the City may direct.

If only a portion of the Work has been terminated, the Contractor shall perform the remainder of the Work in conformity with the Contract Documents and in such a manner as not to interfere with the City or others in their performance and completion of the portion of the Work which was terminated.

The City may recover from the Contractor the amount of any loss or damage, including consequential damages, suffered or incurred as a result of the Contractor's default.

SECTION 7

ACCEPTANCE AND PAYMENT

7-1.01 **ACCEPTANCE.** When the Contractor believes that the entire Work is fully and finally completed, including the satisfactory completion of inspections, tests, and documentation specified in the Contract Documents and completion of all punch list and clean-up items, the Contractor shall submit to the City a written request for final Acceptance within fifteen (15) Days thereafter, specifying that the Work is fully and finally completed and the date on which it was completed. Within thirty (30) Days after receipt of the request for final Acceptance, the City will inspect the Work and will either:

1. Reject the request for final Acceptance, specifying the defective and/or uncompleted portions of the Work; or
2. Notify the Contractor that the Work will be accepted by Resolution of the City Council of the City of Roseville, and a Notice of Completion will be caused to be recorded by the City Clerk; or
3. Notify the Contractor that the Work has been accepted by the City but no Notice of Completion will be recorded.

If the City rejects the request for final Acceptance, the Contractor shall promptly remedy the defective and/or uncompleted portions of the Work. Thereafter, the Contractor shall again submit a written request for final Acceptance of the Work, specifying a new date based on the date the defective and/or uncompleted portions of the Work were corrected. Thereafter, the foregoing procedure shall apply successively until the City has verified that the Work is fully and finally completed and accepted the Work by Resolution of the City Council or by written

notification from the Director. Immediately upon such Acceptance, the Contractor shall be relieved of the duty of maintaining the Work as a whole.

All warranties commence upon final Acceptance of the Work. The City's final Acceptance of the Work shall not be construed as an acceptance by the City of any latent defects discovered with regard to the Contractor's work. Furthermore, Contractor's obligations under Section 5-1.22 "Responsibility for Damage and Indemnification" shall still remain applicable after the City's grant of final Acceptance of the Work.

Prior to final Acceptance, the Contractor shall submit to the City the Record Documents and Operation and Maintenance Manuals as specified in the Contract Documents.

7-1.02 **SCOPE OF PAYMENT.** The Contractor shall accept the compensation provided in the Contract as full payment for furnishing all labor, materials, tools, equipment, and incidentals necessary to the completed Work and for performing all Work contemplated and embraced under the Contract; also for loss or damage arising from the nature of the Work, or from the action of the elements, or from any unforeseen difficulties which may be encountered during the prosecution of the Work until the Acceptance by the Director and for all risks of every description connected with the prosecution of the Work, also for all expenses incurred in consequence of the suspension or discontinuance of the Work as provided in the Contract; and for completing the Work according to the Contract. Neither the payment of any estimate nor of any retained percentage shall relieve the Contractor of any obligation to make good any defective Work or material.

No compensation will be made in any case for loss of anticipated profits.

7-1.03 **NOTICE OF POTENTIAL CLAIM.** The Contractor shall not be entitled to the payment of any additional compensation for any act or failure to act by the City,

including failure or refusal to issue a Change Order, or for the happening of any event, thing, occurrence or other cause unless the Contractor has given the City due written Notice of Potential Claim as hereinafter specified, provided, however, that compliance with this Section 7-1.03 shall not be a prerequisite as to matters within the scope of the notice provisions in Section 6-1.07, "Time of Completion," or the notice provisions in Section 6-1.08, "Liquidated Damages," of these General Conditions, nor to any claim which is based on differences in measurement or errors of computation as to correct quantities.

The written Notice of Potential Claim shall set forth the reasons for which the Contractor believes additional compensation will or may be due, the nature of the costs involved, and, insofar as possible, the amount of the potential claim. The said Notice as above required must have been given to the Director prior to the time that the Contractor shall have performed the Work giving rise to the potential claim for additional compensation, if based on an act or failure to act by the Director, or in all other cases within seven (7) Days after the happening of the event, thing, occurrence or other cause giving rise to the potential claim.

If the Notice of Potential Claim does not include complete information about the claim or the parties do not execute a Contract Change Order in connection with the Notice of Potential Claim, Contractor shall submit complete information about its claim for additional compensation and/or extension of time for performance within fifteen (15) Days after such work is performed. Failure to provide written notice of claim prior to undertaking such work or failure to timely submit a complete and specific information about the claim for additional compensation and/or extension of the time for performance shall be deemed a waiver and abandonment of such claim.

If there is a dispute over any claim, the Contractor shall continue to Work during the dispute resolution process in a diligent and timely manner as directed by the City, and shall be

governed by all applicable provision of the Agreement.

The Contractor shall maintain cost records of all Work that is the basis of any dispute. On a daily basis, Contractor shall submit to City completed daily forms, the format of which will be acceptable to the City, with respect to the Contractor's costs of performing the disputed work. These daily forms shall itemize all of Contractor's costs in performing the disputed work, including, but not limited to, all costs relating to materials, labor and equipment with respect to the disputed work. These daily forms shall provide names or identification and classification of affected workers, the hourly rate of pay and hours worked, and also the size, type, and identification number of equipment and hours operated. Said daily work forms shall be duly signed and verified by the Contractor or its authorized representative. The City's receipt of the Contractors' daily forms shall not constitute an approval of the Contractor's claim. Contractor's failure to submit the daily forms on a daily basis shall constitute a waiver of the Contractor's right to claim any additional compensation for the disputed work.

Each Contractor claim shall include full and complete information concerning the Claim. Contractor shall provide a clear, concise recital of the basis, upon which the claim is asserted, including a designation of the provisions of the Contract Documents upon which the claim is based. Contractor shall also include a statement as to the amount of time and/or compensation sought pursuant to the claim; if Contractor's claim arises from an ongoing occurrence, Contractor shall so state in its claim, including a description of the specific Work activities affected by the claim. All costs, expenses or damages and extensions of time claimed shall be described in reasonable detail under the circumstances together with complete supporting documentation.

The City will review any timely Notice of Potential Claim and supporting information

submitted by Contractor. In conducting this review, the City shall have the right to require the Contractor to submit such additional or supporting documents, data and other information as the City may require.

If an agreement can be reached which resolves the Contractor's claim, the parties will execute a Contract Change Order to document the resolution of the claim. If the parties cannot reach agreement with respect to the Contractor's claim, the Contractor shall still be obligated to comply with the claim identification provisions identified in these General Conditions, including but not limited to Section 7-1.04.

It is the intention of this Section 7-1.03 that differences between the parties arising under and by virtue of the Contract be brought to the attention of the Director at the earliest possible time in order that such matters may be settled, if possible, or other appropriate action promptly taken. The Contractor hereby agrees that it shall have no right to additional compensation for any Claim that may be based on any such act, failure to act, event, thing or occurrence for which no timely written Notice of Potential Claim as herein required was filed.

7-1.04 **CLAIMS.** Contractor must submit all Claims, for which it has previously submitted a Notice of Potential Claim, prior to Acceptance of the Work. Each such Claim must be sent to the City by registered mail or certified mail with return receipt requested and must contain reasonable documentation to support the Claim.

Upon receipt of a Claim, the City shall conduct a reasonable review of the Claim and, within a period not to exceed forty-five (45) Days, or such further time as mutually agreed upon or necessary pursuant to Public Contract Code Section 9204, the City shall provide the Contractor a written statement identifying what portion of the Claim is disputed and what portion is undisputed. If the City does not respond to a Claim from the Contractor within the time

specified herein, such Claim shall be deemed rejected in its entirety.

Any payment due on an undisputed portion of the Claim shall be processed and made within sixty (60) Days after the City issues its written statement.

If the Contractor disputes the City's written response, or if the City does not respond within the time specified herein, the Contractor may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the City shall schedule a meet and confer conference within thirty (30) Days for settlement of the dispute.

Within ten (10) business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the City shall provide the Contractor a written statement identifying the portion of the Claim that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the Claim shall be processed and made within sixty (60) Days after the City issues its written statement. Any disputed portion of the Claim, as identified by the Contractor in writing, shall be submitted to nonbinding mediation, with the City and the Contractor sharing the associated costs equally. The City and the Contractor shall mutually agree to a mediator within ten (10) business days after the disputed portion of the Claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the Claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the Claim remaining in dispute shall be resolved in accordance with Section 7-1.05 below.

7-1.05 **DISPUTE RESOLUTION PROCEDURE.** All Claims not resolved

pursuant to Section 7-1.04, shall be resolved pursuant to Public Contract Code Section 10240, et seq.

7-1.06 **STOP PAYMENT NOTICES.** The City, by and through the Department or other appropriate office or officers, may at its option and at any time retain out of any amounts due the Contractor, sums sufficient to cover claims, filed pursuant to Civil Code Section 9350, et seq., including an amount to provide for the reasonable cost of any litigation thereunder.

7-1.07 **PROGRESS PAYMENTS.** Within fifteen (15) Days after the effective date in the Notice to Proceed, but in any event prior to Contractor's first Application for Payment, the Contractor shall submit to the City a detailed Schedule of Values.

Upon its approval, the Schedule of Values will form a basis for determining the compensation payable to the Contractor based on its actual progress of Work with respect to each Lump Sum bid item. The City, prior to any progress payment being made, must approve the Schedule of Values.

At the Director's discretion the approved Schedule of Values may be used as the basis for calculating the adjustment in compensation for a lump sum bid item due to changes ordered by the Director. When an ordered change increases or decreases the quantities shown in an approved Schedule of Values, at the Director's discretion, the adjustment in compensation may be determined in the same manner specified for increases and decreases in the quantity of a bid item of work in accordance with Section 3-1.05(B), "Contract Price Adjustment," of these General Conditions.

The Contractor once in each month shall submit an Application for Payment, for approval by the Director. Contractor's Applications shall be based on the Schedule of Values submitted to the City. These applications shall be supported by: (1) documentation requested by the City to

substantiate the payment request; (2) statutory releases from Contractor and all Subcontractors and suppliers pursuant to Civil Code Sections 8132 and 8138; and (3) certified payroll records for the period for which payment is requested. Specifically, the Contractor will submit conditional waivers upon progress payment executed by all contractors and suppliers that will be receiving sums sought in the instant payment request and also submit unconditional waivers upon progress payment executed by all contractors and suppliers that have been paid to the date of the payment request. The Contractor shall certify that the Work for which payment is requested has been accomplished. When requested by the City, the Contractor shall submit receipts, invoices and other documentation that the City requires to be furnished for purpose of evaluating the application.

The City will pay the Contractor within thirty (30) Days after its receipt of an undisputed and properly submitted Application for Payment, after deducting all previous payments, retention, and other sums as described in the Contract Documents. Within seven (7) Days of its receipt of the Contractor's Application for Payment, the City will determine whether it complies with the provisions of the Contract Documents. As appropriate, the City will return the application to the Contractor accompanied by a document prepared by the City setting forth the reasons for the rejection. Thereafter, the Contractor shall correct and resubmit the Application for Payment. Progress payments may be withheld for Work that is not performed in accordance with the Contract Documents.

The City may deduct the following from each progress payment:

1. An amount equal to one hundred and twenty-five percent (125%) of the amount claimed under any stop payment notice or other lien filed against the Contractor, which includes an amount to provide for the reasonable cost of any litigation

thereunder.

2. Any Liquidated Damages or Assessments that have accrued as of the date of the Application for Payment.
3. Any sums expended by the City in performing any of the Contractor's obligations under the Agreement that the Contractor has failed to perform.
4. Any other sums that the City is entitled to recover from the Contractor under the terms of the Contract including damages to the City's property.
5. The failure of the City to deduct any of the above identified sums from a progress payment shall not constitute a waiver of the City's right to such sums.

No such estimate or payment shall be construed to be an acceptance of any defective Work or improper materials.

Under no circumstances will the City make payment to unlicensed Contractors. As a condition of payment, the Contractor is required to maintain the applicable Contractor's license as identified in the Notice to Contractors for the duration of the Work.

7-1.08 **PAYMENT FOR MATERIALS AND EQUIPMENT ON HAND.**

Partial payments may be made to the extent of seventy-five percent (75%) of the cost of materials and equipment plus delivery to be incorporated in the Work, provided that such materials and equipment meet the requirements of the Contract Documents and are delivered to acceptable sites on the plant site or at other sites in the vicinity that are acceptable to the City and only with the prior written approval by the City. Such delivered costs of stored or stockpiled materials and equipment may be included in the next progress payment after the following conditions are met:

A. Equipment and materials will only be eligible if given conditional or final

Acceptance by the Director and are in apparent compliance with favorably reviewed Submittals.

B. Only equipment or materials which have received favorable review of Shop Drawings will qualify.

C. The material or equipment has been stored or stockpiled adequately protected against damage in a manner acceptable to the Director at an approved site.

D. The Contractor has furnished the Director with acceptable evidence of the quantity and the quality of such stored or stockpiled materials or equipment with identification of where they will be incorporated into the project with Specification reference.

E. The Contractor has furnished the Director with satisfactory evidence that the material or equipment and transportation costs have been paid.

F. The Contractor has furnished the City legal title (free of liens or encumbrances of any kind) and lien releases to the material or equipment so stored or stockpiled.

G. The Contractor has furnished the City evidence that the material or equipment so stored or stockpiled is insured against loss by damage to or disappearance of such materials at any time prior to use in the Work.

It is understood and agreed that the transfer of title and the City payment for such stored or stockpiled materials or equipment shall in no way relieve the Contractor of its responsibility for furnishing and placing such materials or equipment in accordance with the requirements of the Contract Documents.

In no case will the amount of progress payments for materials or equipment on hand exceed the Contract Price for such materials or equipment or the Contract Price for the Contract item in which the material is intended to be used.

No partial payment will be made for stored or stockpiled living or perishable plant

materials.

The Contractor shall bear all costs associated with the progress payment of stored or stockpiled materials or equipment in accordance with the provisions of this Section.

7-1.09 **RETENTION ON PROGRESS PAYMENTS.** From each progress payment estimate, five percent (5%) will be deducted and held in retention by the City. The remainder, less any deductions described in Section 7-1.07, "Progress Payments," of these General Conditions, will be paid to the Contractor as progress payments.

Pursuant to Public Contract Code Section 22300, the successful Bidder may submit Securities in lieu of retention payments by the City. Upon the Contractor's request, the City will make payment of funds withheld from progress payments, pursuant to the requirements of California Public Contract Code Section 22300, if the Contractor deposits in escrow with the City or with a bank acceptable to the City, securities eligible for investment under California Government Code Section 16430, bank or savings and loan certificates of deposit, interest bearing demand deposit accounts, standby letters of credit, or any other security mutually agreed to by the Contractor and the City, upon the following conditions:

1. The Contractor shall bear the expenses of the City and the escrow agent in connection with the escrow deposit made.

2. Securities or certificates of deposit to be placed in escrow shall be of a value at least equivalent to the amounts of retention to be paid to the Contractor pursuant to this section.

3. Contractor shall enter into an escrow agreement satisfactory to the City, which agreement shall be substantially similar to the form provided in California Public Contract Code section 22300.

4. The Contractor shall obtain the written consent of the surety to such agreement.

7-1.10 **FINAL PAYMENT.** Final payment will be made only after Contractor has achieved Final Completion of the Work pursuant to the provisions of Section 7-1.01, "Acceptance," of these General Conditions. Before final payment can be made, the Contractor shall have furnished the City with the following:

1. All Record Documents, catalogues, instruction sheets and information as required by the Contract Documents.

2. Conditional Waivers and Releases Upon Final Payment executed by Contractor and all Subcontractors and Suppliers, as provided by Civil Code Section 8136. Unconditional Waivers and Releases Upon Final Payment, as provided in Civil Code Section 8138, executed by Contractor and all Subcontractors and Suppliers, must be provided for all Subcontractors and Suppliers that have been paid in full.

Within thirty (30) Days of the date of the City's Acceptance of the Work, the Contractor shall prepare and submit a Final Invoice, showing the proposed total amount due the Contractor, segregated by Bid item quantities, Change Order Work, and other basis for payments; deductions made or to be made for prior payment; and amounts previously retained. Prior invoices and payments shall be subject to correction in the proposed Invoice for Final Payment. Payments to the Contractor will be made only for actual quantities of the Contract items of work constructed in accordance with the Contract Documents.

The City will review the Contractor's proposed Final Invoice and necessary changes or corrections will be forwarded to the Contractor. Within ten (10) Days thereafter, the Contractor

shall submit a revised proposed Final Invoice incorporating changes or corrections made by the City together with any new claims resulting therefrom. Upon approval by the City, the corrected proposed Final Invoice will become the approval Final Invoice.

If agreements are reached on all questions regarding the Final Invoice, the City will pay the entire sum found due on the approved application. However, the City will withhold sums sufficient to pay all unsettled claims for which stop payment notices have been filed pursuant to Section 9350, et seq. of the California Civil Code, together with the reasonable cost of any litigation thereunder.

Final payment will be made within thirty (30) Days after receipt of an approved Final Invoice and other required Submittals referenced above or within sixty (60) Days after Acceptance of the work by the City, whichever is later, provided, however, that if an approved Final Invoice has not been submitted within sixty (60) Days after Acceptance of the Work by the City, the City may elect to make payment of sums not in dispute without prejudice to the right of either the City or the Contractor in connection with such disputed sums. Notwithstanding the foregoing, if a Notice of Completion is recorded, final payment shall not be made prior to the expiration of the thirty-five (35) calendar day lien period. The start of this lien period is the date the Placer County Recorder's Office records the Notice of Completion.

The City may withhold from the Final Payment an amount not to exceed one hundred fifty percent (150%) of any amount in dispute between the City and the Contractor.

The making of Final Payment shall not operate to release the Contractor or its sureties from obligations arising under the Contract, the Contract bonds and warranties as herein provided. Specifically, the making of final payment shall not constitute a waiver and release of claims by the City arising from:

1. Unsettled or future liens;

2. Failure of the Work to comply with the requirements of the Contract Documents;

3. The terms of any warranties required by or contained in the Contract Documents;

4. The right to any insurance proceeds or the right to make any insurance or bond claims;

5. Any claims with respect to Contractor's obligations of indemnity with respect to claims asserted by third parties; or

6. Any latent deficiencies with the Work or Contractor's fraud.

7-1.11 **CLERICAL ERRORS.** Notwithstanding the provisions of Section 7-1.10, "Final Payment," of these General Conditions, for a period of three (3) years after Acceptance of the Work, all estimates and payments made pursuant to said Section 7-1.10, are subject to correction for clerical errors in the calculations involved in the determination of quantities and payments. The Contractor and the City agree to pay to the other any sum due under the provisions of this Section 7-1.11, provided, however, if the total sum to be paid is less than $100, no such payment shall be made.

7-1.12 **WARRANTY.** Notwithstanding inspections and Acceptance by the City of Work furnished under the Contract Documents, the Contractor hereby unconditionally guarantees that all materials and equipment furnished will be of good quality and new, that the Work will be free from defects in workmanship and materials and that the Work will conform to the requirements of the Contract Documents. Work not conforming to these requirements, including substitutions not properly approved and authorized, may be considered defective.

This warranty by the Contractor is in addition to any warranties or guarantees required elsewhere in the Contract Documents. This warranty shall be in effect notwithstanding any disclaimers, or limiting or conditional terms contained in such separate warranties furnished by manufacturers or suppliers.

The Contractor hereby agrees to repair or replace any and all Work, together with any other adjacent Work which may be displaced in so doing, that may prove to be not in accordance with the requirements of the Contract or that may be defective in its workmanship or material during the greater of a period of one (1) year after Acceptance of the Work by the City or the period specified in the Special Conditions, without any expense whatsoever to the City, ordinary wear and tear and unusual abuse or neglect excepted.

The Contractor further agrees, that within ten (10) Days after being notified in writing by the Department of any Work not in accordance with the requirements of the Contract Documents or of any defects in the Work, the Contractor will commence and prosecute with due diligence all Work necessary to fulfill the terms of this warranty, and to complete such Work within a reasonable period of time. In the event Contractor fails to comply, it does hereby authorize the Department to proceed to have such Work done at the Contractor's expense and the Contractor will honor and pay the cost and charges therefore upon demand. The Department shall be entitled to all costs and expenses, including reasonable attorneys' fees, necessarily incurred upon the Contractor's refusal to honor and pay the above costs and charges.

All warranties set forth in the Contract Documents shall be deemed cumulative and not alternative or exclusive. Nothing contained in this section shall be construed to establish a period of limitation with respect to any other obligation, which Contractor has under the Contract Documents or under any separate warranty or guaranty required thereby. The establishment of a

specific warranty period relates only to the specific obligation of Contractor to correct defective Work, and it has no relationship to the time within which its obligation to comply with the Contract Documents or applicable provision of law may be sought to be enforced, nor to the time within which proceedings may be commenced to establish Contractor's liability with respect to its obligations other than specifically to correct the Work. Without limiting the foregoing, it is understood and agreed that Contractor shall remain responsible for latent defects with its work, regardless of the expiration of any warranty period set forth in the Contract Documents.

7-1.13 **WARRANTY OF TITLE.** No material, supplies, or equipment for the Work under this Contract shall be purchased subject to any chattel mortgage, security agreement, or under a conditional sale or other agreement by which an interest therein or any part thereof is retained by the seller or supplier. The Contractor warrants good title to all material, supplies, and equipment Installed or incorporated in the Work and agrees upon completion of all Work to deliver the Premises, together with all improvements and appurtenances constructed or placed thereon by it, to the City free from any claim, liens, security interest, or charges, and further agrees that neither the Contractor nor any person, firm, or corporation furnishing any materials or labor for any Work covered by this Contract shall have any right to a lien upon the Premises or any improvement or appurtenances thereon. Provided, that this shall not preclude the Contractor from Installing metering devices and other equipment of utility companies, the title of which is commonly retained by the utility company. In the event of the Installation of any such metering device or equipment, the Contractor shall advise the City as to the legal owner thereof. Nothing contained in this paragraph, however, shall defeat or impair the right of such persons furnishing materials or labor under any bond given by the Contractor for their protection or any rights under any law permitting such persons to look to funds due the Contractor in the hands of the City.

The provisions of this paragraph shall be inserted in all subcontracts and material Contracts, and notice of its provisions shall be given to all persons furnishing materials for the Work when no formal Contract is entered into for such materials.

[END OF GENERAL CONDITIONS]

TEXT OF AB 626

Assembly Bill No. 626

CHAPTER 810

An act to add and repeal Section 9204 of the Public Contract Code, relating to public contracts.

[Approved by Governor September 29, 2016. Filed with Secretary of State September 29, 2016.]

LEGISLATIVE COUNSEL'S DIGEST

AB 626, Chiu. Public contracts: claim resolution.

Existing law prescribes various requirements regarding the formation, content, and enforcement of state and local public contracts. Existing law applicable to state public contracts generally requires that the resolution of claims related to those contracts be subject to arbitration. Existing law applicable to local agency contracts prescribes a process for the resolution of claims related to those contracts of $375,000 or less.

This bill would establish, for contracts entered into on or after January 1, 2017, a claim resolution process applicable to any claim by a contractor in connection with a public works project. The bill would define a claim as a separate demand by the contractor for one or more of the following: a time extension for relief from damages or penalties for delay, payment of money or damages arising from work done pursuant to the contract for a public work, or payment of an amount disputed by the public entity, as specified.

This bill would require a public entity, defined to exclude certain state entities, upon receipt

of a claim sent by registered or certified mail, to review it and, within 45 days, provide a written statement identifying the disputed and undisputed portions of the claim. The bill would authorize the 45-day period to be extended by mutual agreement. The bill would require any payment due on an undisputed portion of the claim to be processed within 60 days, as specified. The bill would require that the claim be deemed rejected in its entirety if the public entity fails to issue the written statement.

This bill would authorize, if the claimant disputes the public entity's written response or if the public entity fails to respond to a claim within the time prescribed, the claimant to demand to meet and confer for settlement of the issues in dispute. The bill would require any disputed portion of the claim that remains in dispute after the meet and confer conference to be subject to nonbinding mediation, as specified. The bill would provide that unpaid claim amounts accrue interest at 7% per annum. The bill would prescribe a procedure by which a subcontractor or lower tier contractor may make a claim through the contractor.

This bill would require the text of these provisions, or a summary, to be set forth in the plans or specifications for any public work which may give rise to a claim. The bill would specify that a waiver of these rights is void and contrary to public policy, except as specified. The bill would also specify that it does not impose liability on a public entity that makes loans or grants available through a competitive application process, for the failure of an awardee to meet its contractual obligations.

By increasing the duties of local agencies and officials, this bill would impose a state-mandated local program.

This bill would, on January 1, 2020, repeal the provision establishing the claim resolution

process.

This bill would specify that these provisions constitute a matter of statewide concern.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that, if the Commission on State Mandates determines that the bill contains costs mandated by the state, reimbursement for those costs shall be made pursuant to these statutory provisions.

The people of the State of California do enact as follows:

SECTION 1. Section 9204 is added to the Public Contract Code, to read:

9204. (a) The Legislature finds and declares that it is in the best interests of the state and its citizens to ensure that all construction business performed on a public works project in the state that is complete and not in dispute is paid in full and in a timely manner.

(b) Notwithstanding any other law, including, but not limited to, Article 7.1 (commencing with Section 10240) of Chapter 1 of Part 2, Chapter 10 (commencing with Section 19100) of Part 2, and Article 1.5 (commencing with Section 20104) of Chapter 1 of Part 3, this section shall apply to any claim by a contractor in connection with a public works project.

(c) For purposes of this section:

(1) ”Claim” means a separate demand by a contractor sent by registered mail or certified mail with return receipt requested, for one or more of the following:

(A) A time extension, including, without limitation, for relief from damages or penalties for

delay assessed by a public entity under a contract for a public works project.

(B) Payment by the public entity of money or damages arising from work done by, or on behalf of, the contractor pursuant to the contract for a public works project and payment for which is not otherwise expressly provided or to which the claimant is not otherwise entitled.

(C) Payment of an amount that is disputed by the public entity.

(2) "Contractor" means any type of contractor within the meaning of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code who has entered into a direct contract with a public entity for a public works project.

(3) (A) "Public entity" means, without limitation, except as provided in subparagraph (B), a state agency, department, office, division, bureau, board, or commission, the California State University, the University of California, a city, including a charter city, county, including a charter county, city and county, including a charter city and county, district, special district, public authority, political subdivision, public corporation, or nonprofit transit corporation wholly owned by a public agency and formed to carry out the purposes of the public agency.

(B) "Public entity" shall not include the following:

(i) The Department of Water Resources as to any project under the jurisdiction of that department.

(ii) The Department of Transportation as to any project under the jurisdiction of that department.

(iii) The Department of Parks and Recreation as to any project under the jurisdiction of that department.

(iv) The Department of Corrections and Rehabilitation with respect to any project under its jurisdiction pursuant to Chapter 11 (commencing with Section 7000) of Title 7 of Part 3 of the

Penal Code.

(v) The Military Department as to any project under the jurisdiction of that department.

(vi) The Department of General Services as to all other projects.

(vii) The High-Speed Rail Authority.

(4) ”Public works project” means the erection, construction, alteration, repair, or improvement of any public structure, building, road, or other public improvement of any kind.

(5) ”Subcontractor” means any type of contractor within the meaning of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code who either is in direct contract with a contractor or is a lower tier subcontractor.

(d) (1) (A) Upon receipt of a claim pursuant to this section, the public entity to which the claim applies shall conduct a reasonable review of the claim and, within a period not to exceed 45 days, shall provide the claimant a written statement identifying what portion of the claim is disputed and what portion is undisputed. Upon receipt of a claim, a public entity and a contractor may, by mutual agreement, extend the time period provided in this subdivision.

(B) The claimant shall furnish reasonable documentation to support the claim.

(C) If the public entity needs approval from its governing body to provide the claimant a written statement identifying the disputed portion and the undisputed portion of the claim, and the governing body does not meet within the 45 days or within the mutually agreed to extension of time following receipt of a claim sent by registered mail or certified mail, return receipt requested, the public entity shall have up to three days following the next duly publicly noticed meeting of the governing body after the 45-day period, or extension, expires to provide the claimant a written statement identifying the disputed portion and the undisputed portion.

(D) Any payment due on an undisputed portion of the claim shall be processed and made

within 60 days after the public entity issues its written statement. If the public entity fails to issue a written statement, paragraph (3) shall apply.

(2) (A) If the claimant disputes the public entity's written response, or if the public entity fails to respond to a claim issued pursuant to this section within the time prescribed, the claimant may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the public entity shall schedule a meet and confer conference within 30 days for settlement of the dispute.

(B) Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the public entity shall provide the claimant a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. Any disputed portion of the claim, as identified by the contractor in writing, shall be submitted to nonbinding mediation, with the public entity and the claimant sharing the associated costs equally. The public entity and claimant shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the claim remaining in dispute shall be subject to applicable procedures outside this section.

(C) For purposes of this section, mediation includes any nonbinding process, including, but

not limited to, neutral evaluation or a dispute review board, in which an independent third party or board assists the parties in dispute resolution through negotiation or by issuance of an evaluation. Any mediation utilized shall conform to the timeframes in this section.

(D) Unless otherwise agreed to by the public entity and the contractor in writing, the mediation conducted pursuant to this section shall excuse any further obligation under Section 20104.4 to mediate after litigation has been commenced.

(E) This section does not preclude a public entity from requiring arbitration of disputes under private arbitration or the Public Works Contract Arbitration Program, if mediation under this section does not resolve the parties' dispute.

(3) Failure by the public entity to respond to a claim from a contractor within the time periods described in this subdivision or to otherwise meet the time requirements of this section shall result in the claim being deemed rejected in its entirety. A claim that is denied by reason of the public entity's failure to have responded to a claim, or its failure to otherwise meet the time requirements of this section, shall not constitute an adverse finding with regard to the merits of the claim or the responsibility or qualifications of the claimant.

(4) Amounts not paid in a timely manner as required by this section shall bear interest at 7 percent per annum.

(5) If a subcontractor or a lower tier subcontractor lacks legal standing to assert a claim against a public entity because privity of contract does not exist, the contractor may present to the public entity a claim on behalf of a subcontractor or lower tier subcontractor. A subcontractor may request in writing, either on his or her own behalf or on behalf of a lower tier subcontractor, that the contractor present a claim for work which was performed by the subcontractor or by a lower tier subcontractor on behalf of the subcontractor. The subcontractor requesting that the

claim be presented to the public entity shall furnish reasonable documentation to support the claim. Within 45 days of receipt of this written request, the contractor shall notify the subcontractor in writing as to whether the contractor presented the claim to the public entity and, if the original contractor did not present the claim, provide the subcontractor with a statement of the reasons for not having done so.

(e) The text of this section or a summary of it shall be set forth in the plans or specifications for any public works project that may give rise to a claim under this section.

(f) A waiver of the rights granted by this section is void and contrary to public policy, provided, however, that (1) upon receipt of a claim, the parties may mutually agree to waive, in writing, mediation and proceed directly to the commencement of a civil action or binding arbitration, as applicable; and (2) a public entity may prescribe reasonable change order, claim, and dispute resolution procedures and requirements in addition to the provisions of this section, so long as the contractual provisions do not conflict with or otherwise impair the timeframes and procedures set forth in this section.

(g) This section applies to contracts entered into on or after January 1, 2017.

(h) Nothing in this section shall impose liability upon a public entity that makes loans or grants available through a competitive application process, for the failure of an awardee to meet its contractual obligations.

(i) This section shall remain in effect only until January 1, 2020, and as of that date is repealed, unless a later enacted statute, that is enacted before January 1, 2020, deletes or extends that date.

SECTION 2.

The Legislature finds and declares that it is of statewide concern to require a charter city, charter county, or charter city and county to follow a prescribed claims resolution process to ensure there are uniform and equitable procurement practices.

SECTION 3.

If the Commission on State Mandates determines that this act contains costs mandated by the state, reimbursement to local agencies and school districts for those costs shall be made pursuant to Part 7 (commencing with Section 17500) of Division 4 of Title 2 of the Government Code.

2. Numbering in these Supplemental Conditions conforms to that in the General Conditions. The existence of a section in these Supplemental Conditions means that the corresponding section in the General Conditions is modified in some respect. Unless otherwise specified, the modified General Condition is deleted entirely and the provisions of these Supplemental Conditions are substituted.

SECTION 1. DEFINITIONS AND TERMS

1-1.24 **DEPARTMENT.** Section 1-1.24 of the General Conditions is amended to include the following:

The Department for Contract Administration is the Environmental Utilities Department of the City of Roseville.

SECTION 2. CONTROL AND SCOPE OF THE WORK

2-1.08 **SUBMITTALS.** Section 2-1.08 of the General Conditions is amended to include the following:

The time allowed for review of each submittal is (10) ten Days after receipt of the submittal by the Director.

SECTION 3. CHANGES IN THE WORK

There are no amendments to the General Conditions.

SECTION 4. CONTROL OF MATERIALS

There are no amendments to the General Conditions.

SECTION 5. LEGAL RELATIONS AND RESPONSIBILITY

5-1.14 **AIR POLLUTION CONTROL AND ASBESTOS.** Section 5-1.14 of the General Conditions is amended to include the following:

To the best of the City's knowledge, asbestos is__ present in the vicinity of the Project. Additional information shall be made available to Contractor upon request.

SECTION 6. PROSECUTION AND PROGRESS

6-1.04 **PROGRESS SCHEDULE.** Section 6-1.04F of the General Conditions is amended to include the following:

Progress schedules showing project completion dates more than _30_ Days earlier than specified in Section 6-1.07 shall be rejected.

6-1.07 **TIME OF COMPLETION.** Section 6-1.07 of the General Conditions is amended to include the following:

The Contractor shall begin Work within _21_ business days after receiving a Notice to Proceed and shall diligently prosecute the Work to completion. The Work shall be completed within _260_ business days of the Notice to Proceed.

If landscaping plants require an establishment period, that period will be _60_ calendar days. Start of the establishment should be as outlined in the Specifications.

6-1.08 **LIQUIDATED DAMAGES.** Section 6-1.08 of the General Conditions is amended to include the following:

The amount of Liquidated Damages is the sum of $1,500.00___ per Day.

SECTION 7: ACCEPTANCE AND PAYMENT

Section 7-1.02 of the General Conditions is amended to include the following:

Unless special payment is specifically provided in the Measurement and Payment Section, all incidental work and expense in connection with the Completion of Work Under the Contract will be considered a subsidiary obligation of the Contractor and all such costs shall be included in the appropriate items in the Schedule of Bid Items in connection with which costs are incurred.

	SP
Section 1: Governor's Executive Order N-6-22 (EO)	1

SECTION 1. GOVERNOR NEWSOM EXECUTIVE ORDER N-6-22 (EO)

April, 2022

RE: Contractor and Grantee Compliance with Economic Sanctions Imposed in Response to Russia's Actions in Ukraine

Dear Vendor:

On March 4, 2022, Governor Gavin Newsom issued Executive Order N-6-22 (EO) regarding sanctions in response to Russian aggression in Ukraine. The EO is located at https://www.gov.ca.gov/wp-content/uploads/2022/03/3.4.22-Russia-Ukraine-Executive-Order.pdf.

The EO directs all agencies and departments that are subject to the Governor's authority to take certain immediate steps, including notifying all contractors and grantees of their obligations to comply with existing economic sanctions imposed by the U.S. government in response to Russia's actions in Ukraine, as well as any sanctions imposed under state law.

This correspondence serves as a notice under the EO that as a contractor or grantee, compliance with the economic sanctions imposed in response to Russia's actions in Ukraine is required, including with respect to, but not limited to, the federal executive orders identified in the EO and the sanctions identified on the U.S. Department of the Treasury website (https://home.treasury.gov/policy-issues/financial-sanctions/sanctions-programs-and-country-information/ukraine-russia-related-sanctions). Failure to comply may result in the termination of contracts or grants, as applicable.

Please note that for any agreements or grants valued at $5 million or more you must report to the City of Roseville your compliance with economic sanctions including steps you have taken in response to Russia's actions in Ukraine, including, but not limited to, desisting from making new investments in, or engaging in financial transactions with, Russian entities, not transferring technology to Russia or Russian entities, and directly providing support to the government and people of Ukraine.

Sincerely,

DocuSigned by:

Roseville, California

GEOTECHNICAL EXPLORATION

Dear Mr. Weigel:

ENGEO prepared this geotechnical report for City of Roseville as outlined in our agreement dated March 29, 2023. We characterized the subsurface conditions at the site to provide the enclosed geotechnical recommendations for design.

From a geotechnical engineering viewpoint, the proposed project may be designed as planned, provided the geotechnical recommendations in this report are properly incorporated into the design plans and specifications. The primary geotechnical considerations for site development include the presence of undocumented fill. Please let us know when working drawings are nearing completion so that we can coordinate review of the plans and specifications.

If you have any questions or comments regarding this report, please call and we will be glad to discuss them with you.

Sincerely,

ENGEO Incorporated

Allison Hauger

Mark Gilbert, GE

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE

ENGEO prepared this geotechnical report for design of The Dry Creek Wastewater Treatment Plant Operations Building in Roseville, California. As outlined in our agreement dated March 29, 2023, you authorized ENGEO to conduct the following scope of services.

- Service plan development
- Subsurface field exploration
- Soil laboratory testing
- Data analysis and conclusions
- Report preparation

For our use, we received the following.

1. Nineteen Six Architects. 2023. Plans for Dry Creek Wastewater Treatment Plant, City of Roseville, 1800 Booth Road, Roseville, California. March 15, 2023.

2. Warren Consulting Engineers, Inc. (WCE). 2022. Utility Survey for Dry Creek Wastewater Treatment Plant at 1800 Booth Road, City of Roseville, Placer County, California. November 5, 2023.

This report was prepared for the exclusive use of our client and their consultants for design of this project. If any changes are made in the character, design or layout of the development, we must be contacted to review the conclusions and recommendations contained in this report to evaluate whether modifications are recommended. This document may not be reproduced in whole or in part by any means whatsoever, nor may it be quoted or excerpted without our express written consent.

1.2 PROJECT LOCATION

The proposed operations building will be constructed at the Dry Creek Wastewater Treatment Plant (WWTP), which is located at 1800 Booth Road in Roseville, California, as shown on the Vicinity Map, Figure 1. The Site Plan, Figure 2 shows site boundaries, proposed building and pavement areas, and our exploratory locations.

The proposed operations building will be located on the central-eastern side of the WWTP campus, west of Booth Road and north of an existing operations building within a landscaped area. The proposed operations building is bordered by Booth Road to the east and south, existing buildings to the south and west, and open space to the north.

1.3 PROJECT DESCRIPTION

Based on our discussion with you and review of the 2023 Nineteen Six Architects plans, we understand the project will include the construction of a roughly 12,000-square-foot single-story building supported on shallow foundations with a concrete slab-on-grade floor, parking stalls, sidewalks, picnic tables, shade structures, landscape areas, and demolition of the existing operations building, pavement, flatwork, water fountain, gazebo, and landscaping. No plans or

geotechnical information for the existing operations building to the south of the proposed building footprint were available for reference.

Structural loads and grading have yet to be determined; however, we assume that structural loads will be representative of this type of construction and that only minor grading will be required.

2.0 FINDINGS

2.1 SITE BACKGROUND

We reviewed historical topographic aerial photographs available at www.historicaerials.com and Google Earth Imagery. The Dry Creek WWTP appeared to be under cultivation for orchard trees from 1947 until 1984, when the original operations building and tanks associated with WWTP are visible at the project site. A few remaining orchard trees are shown occupying the majority of the proposed building footprint in 1998.

In 2002, the existing landscaping area and remaining orchard trees are visible in the north of the project site. In 2007, manholes are visible to the west of the existing orchard area and east of the existing operations building. Based on our conversations with you, we understand the manholes are associated with an existing underground duct bank and abandoned sludge line. We approximate the location of the existing underground duct bank and abandoned sludge line on the Site Plan. In 2009, the maintenance building to the west of the project site is visible. No other significant changes are visible from 2010 to 2020.

2.2 PREVIOUS EXPLORATIONS

Anderson Geotechnical Consultants (AGC) prepared the geotechnical report for the City of Roseville Wastewater Treatment Plant Expansion in February 1990, and performed geotechnical testing and observation services during construction of the plant expansion. ENGEO acquired the assets of AGC in 2002. Additionally, ENGEO prepared the following reports at the Dry Creek WWTP site.

- Dry Creek WWTP Cooling Towers, located approximately 1,000 feet to the west of the proposed operations building site, included drilling of six borings to depths of approximately 21½ to 26½ feet (ENGEO, 2003).
- Dry Creek WWTP Maintenance Facility Building, located just northwest of the project site, included the drilling of three borings to depths of approximately 15 to 20 feet (ENGEO, 2006).
- Dry Creek Shop Building Expansion, located approximately 250 feet northeast of the site (ENGEO, 2008), included drilling of two borings to depths of approximately 16½ feet.
- Dry Creek Wastewater Treatment Facility Warehouse, located approximately 500 feet to the north of the project site, included the excavation of two test pits to depths of 6 to 10 feet (ENGEO, 2022).

2.3 FIELD EXPLORATION

Our field exploration included drilling three borings at the locations shown on the Site Plan, Figure 2. We performed our field exploration on April 14, 2023. The location and elevations of our explorations are approximate and were estimated using the 2022 topographic map (WCE, 2022)

and Google Earth Pro; they should be considered accurate only to the degree implied by the method used.

An ENGEO representative observed the drilling and logged the subsurface conditions at each location. We retained a truck-mounted Diedrich D-70 Turbo drill rig and crew to advance the borings using 4 inch-diameter solid-flight auger methods. The borings were advanced to depths ranging from 16½ to 26½ feet below existing grade. We permitted and backfilled the borings in accordance with the requirements of City of Roseville.

We retrieved soil samples at various intervals in the boring using standard penetration tests. The standard penetration resistance blow counts were obtained by dropping a 140-pound hammer through a 30-inch free fall. The 2-inch-O.D. split-spoon sampler was driven 18 inches and the number of blows was recorded for each 6 inches of penetration. In addition, the 3-inch-O.D. split-spoon Modified California Sampler was also driven into the soil with the 140-pound hammer previously described. Unless otherwise indicated, the blows per foot recorded on the boring log represent the accumulated number of blows to drive the last 1 foot of penetration; the blow counts have not been converted using any correction factors.

The logs depict subsurface conditions at the exploration locations during the exploration; however, subsurface conditions may vary with time. The exploration logs are included in Appendix A.

2.4 GEOLOGY

The site is located in the Great Valley Geomorphic Province. The Great Valley is an elongate, northwest-trending structural trough bound by the Coast Ranges on the west and the Sierra Nevada on the east. The Great Valley has been and is presently being filled with sediments primarily derived from the Sierra Nevada.

As shown on Figure 3, the site is mapped as Pleistocene Turlock Lake Formation (Gutierrez, 2011). The Turlock Lake Formation, estimated to be over 700,000 years old, represents eroded alluvial fans derived primarily from the plutonic rocks of the Sierra Nevada to the east and consists of deeply weathered gravel, sand, silt, and clay. This is consistent with the sand, silt, and clay encountered in our borings. California Geological Survey Map 48 indicates the approximate average shear-wave velocity on the site in the upper 100 feet, Vs30, is 387 meters per second (1,270 feet per second) (Wills, 2015).

2.5 SEISMICITY

As shown on Figure 4, Regional Faulting and Seismicity, the site is not located within a currently designated Alquist-Priolo Earthquake Fault Zone and no known surface expression of active faults is believed to exist within the site. Fault rupture through the site; therefore, is not anticipated. An active fault is defined by the California Geologic Survey as one that has had surface displacement within Holocene time (the last 11,700 years) (CGS, 2018).

Although fault rupture is not anticipated, an earthquake in the region could generate strong ground shaking at the site. Numerous small earthquakes occur every year in the Northern California region, and larger earthquakes have been recorded and can be expected to occur in the future. The Uniform California Earthquake Rupture Forecast (UCERF3) estimates the 30-year probability for a magnitude 6.7 or greater earthquake in Northern California Region at approximately 95 percent (Field et al., 2015).

To determine nearby active faults that are capable of generating strong seismic ground shaking at the site, we utilized the USGS Unified Hazard Tool* and deaggregated the hazard at the peak ground acceleration (PGA) for 2,475-year return period, and Site Class D. The resulting faults are listed in Table 2.5-1, below.

TABLE 2.5-1: Active Faults Capable of Producing Significant Ground Shaking at the Site (Latitude: 38.7374 Longitude: -121.3173)

2.6 SURFACE CONDITIONS

According to the topographic data provided by WCE (2022), site grades within the proposed operations building footprint range from approximately Elevation 135 feet in the southeast to Elevation 136½ feet in the west (Datum: City of Roseville). At the time of our field exploration, the area for the proposed building was situated adjacent to existing buildings, sidewalks, and paved parking areas within the Dry Creek Wastewater Treatment Plant. The proposed building footprint site was a landscaped area with existing pavement, flatwork, water fountain, and gazebo.

We observed the following site features during our field exploration.

- Gazebo structure with concrete entry pad in the center of the proposed building area.
- Paved walking path with wooden pergola structure in the center of the proposed building area.
- The northern half of the site consisted of mulch-covered landscaping area with mature orchard trees and citrus trees, and water fountain feature.
- The southern half of the site consisted of the existing operations building and associated parking areas, walking paths, and landscaping.
- Irrigation equipment.
- Manholes in the southeast and west.
- Lighting features on the eastern, southern, and western sides of the site.

Please refer to the Site Plan, Figure 2, for more information on site features.

PHOTO 2.6-2: View from Southeast Looking at the Existing Operations Building, Gazebo Structure, Pergola, and Landscaping

2.7 SUBSURFACE CONDITIONS

We observed fill in Borings 2-B2 and 2-B3 to depths of approximately 2 feet and 3 feet, respectively. The fill consisted of loose silty sand and clayey sand. Laboratory testing of the clayey sand fill resulted in an expansion index of 13. Borings 2-B2 and 2-B3 were performed in an area that was historically used for orchard tree cultivation, identified in the 1947 to 1984 aerial photographs.

No fill was encountered in Boring 2-B1. Laboratory testing of the near-surface native silty sand in Boring B-2 resulted in an expansion index of 0. Below the silty and clayey sand, the borings generally encountered native clayey sand, silty sand, sandy lean clay, and silt with varying sand content to depths of approximately 9 to 13½ feet. Laboratory testing of the silt resulted with a plasticity index of 16. Below the clay, silt, and sand, the borings encountered medium dense poorly graded sand to the terminal depth explored of 26½ feet.

The previous nearby ENGEO borings and test pits generally encountered similar subsurface conditions. We did not encounter any noticeably weak or compressible soil in our exploratory borings.

Consult the Site Plan and boring logs for specific subsurface conditions at each location. We include our exploration logs in Appendix A. The logs contain the soil type, color, consistency, and visual classification in general accordance with the Unified Soil Classification System. The logs graphically depict the subsurface conditions encountered at the time of the exploration.

2.8 GROUNDWATER CONDITIONS

We did not observe static or perched groundwater in our explorations. Additionally, we did not encounter groundwater in our previous nearby borings (ENGEO, 2003-2022).

We reviewed the Department of Water Resources Online Water Data Library for depth to water in the vicinity of the site. The website identified three wells within 1 mile of the site. Well Number 387430N1213121W001 is mapped approximately 1/3 mile northwest of the site and has recorded groundwater measurements since 1948. The most recent measurement recorded was 143.2 feet below ground surface or approximately Elevation 5.64 feet in March 2012 (Datum: NAVG 88).

We also reviewed the Sustainable Groundwater Management Act (SGMA) Data Viewer (https://sgma.water.ca.gov/webgis/?appid=SGMADataViewer#gwlevels), a website maintained by the State of California Department of Water Resources, for local groundwater data. The data viewer plotted groundwater contours that indicated groundwater depths in the vicinity generally between depths of 100 to 130 feet from 2017 to 2022, with groundwater flow generally to the northwest.

Fluctuations in the level of groundwater may occur due to variations in rainfall, irrigation practice, and other factors not evident at the time measurements were made.

2.9 LABORATORY TESTING

We performed laboratory tests on selected soil samples to evaluate their engineering properties. For this project, we performed moisture content, dry density, unconfined compression, plasticity index, expansion index, sieve analysis, resistance value, and soil corrosion potential testing. Moisture contents and dry densities are recorded on the boring logs in Appendix A; other laboratory data is included in Appendix B.

3.0 CONCLUSIONS

From a geotechnical engineering viewpoint, in our opinion, the site is suitable for the proposed development, provided the geotechnical recommendations in this report are properly incorporated into the design plans and specifications.

The primary geotechnical concerns that could affect design of the proposed operations building is existing fill. We summarize our conclusions below.

3.1 EXISTING FILL

We encountered existing fill in Borings 2-B1 and 2-B3 to depths of up to 3 feet. We anticipate there may be undocumented fill associated with the existing operations building, gazebo, and pergola structures, flatwork, landscaping, and buried irrigation system. We consider this undocumented fill to be non-engineered. We recommend that the non-engineered fill be removed completely, as described in Section 5.1.2. Excavated material may be used as engineered fill provided it meets the requirements of Section 5.4.

3.2 SEISMIC HAZARDS

Potential seismic hazards resulting from a nearby moderate to major earthquake can generally be classified as primary and secondary. The primary effect is ground rupture, also called surface faulting. Common secondary seismic hazards include ground shaking, liquefaction, and ground lurching. The following sections present a discussion of these hazards as they apply to the site. Based on topographic and lithologic data, the risk of regional subsidence or uplift, soil liquefaction,

lateral spreading, landslides, tsunamis, flooding or seiches is considered low to negligible at the site.

3.2.1 Ground Rupture

Since there are no known active faults crossing the property and the site is not located within an Earthquake Fault Special Study Zone, it is our opinion that ground rupture is unlikely at the subject property.

3.2.2 Ground Shaking

An earthquake of moderate to high magnitude generated within Northern California region could cause considerable ground shaking at the site, similar to that which has occurred in the past. To mitigate the shaking effects, structures should be designed using sound engineering judgment and the latest California Building Code (CBC) requirements, as a minimum. Seismic design provisions of current building codes generally prescribe minimum lateral forces, applied statically to the structure, combined with the gravity forces of dead and live loads. The code-prescribed lateral forces are generally considered to be substantially smaller than the comparable forces that would be associated with a major earthquake. Therefore, structures should be able to: (1) resist minor earthquakes without damage, (2) resist moderate earthquakes without structural damage but with some nonstructural damage, and (3) resist major earthquakes without collapse but with some structural as well as nonstructural damage. Conformance to the current building code recommendations does not constitute any kind of guarantee that significant structural damage would not occur in the event of a maximum magnitude earthquake; however, it is reasonable to expect that a well-designed and well-constructed structure will not collapse or cause loss of life in a major earthquake (SEAOC, 1996).

3.2.3 Liquefaction

Soil liquefaction results from loss of strength during cyclic loading, such as imposed by earthquakes. Soil most susceptible to liquefaction is clean, loose, saturated, uniformly graded, fine-grained sand of Holocene age. The Pleistocene aged sand encountered in our borings was generally medium dense. In addition, groundwater was not encountered to the terminal depth of our borings and is likely over 100 feet below the ground surface, as described in Section 2.8. For these reasons and based upon engineering judgment, it is our opinion that the potential for liquefaction at the site is low during seismic shaking.

3.2.4 Ground Lurching

Ground lurching is a result of the rolling motion imparted to the ground surface during energy released by an earthquake. Such rolling motion can cause ground cracks to form in weaker soil. The potential for the formation of these cracks is considered greater at contacts between deep alluvium and bedrock. Such an occurrence is possible at the site as in other locations in the Northern California region, but based on the site location, it is our opinion that the offset is expected to be minor. We provide recommendations for foundation and pavement design in this report that are intended to reduce the potential for adverse impacts from lurch cracking.

3.2.5 Flooding

Based on site grades and distance from water sources, flooding is not expected at the subject site; however, the civil engineer should review pertinent information relating to possible flood levels for the subject site based on final pad elevations and provide appropriate design measures for development of the project, if recommended.

3.3 SOIL CORROSION POTENTIAL

As part of this study, we obtained a representative soil sample and submitted to a qualified analytical lab for determination of pH, resistivity, sulfate, and chloride. The results are included in Appendix B and summarized in the table below.

TABLE 3.3-1: Corrosivity Test Results

SAMPLE LOCATION	DEPTH	PH	RESISTIVITY (OHMS-CM)	CHLORIDE (MG/KG)	SULFATE (MG/KG)
2-B1	3½	6.9	2,400	22.4	27.8

The 2022 CBC references the 2019 American Concrete Institute Manual, ACI 318-19, Section 19.3.1 for concrete durability requirements. ACI Table 19.3.1.1 provides the following exposure categories and classes, and Table 19.3.2.1 provides requirements for concrete in contact with soil based upon the exposure class.

TABLE 3.3-2: ACI Table 19.3.1.1: Exposure Categories and Classes

CATEGORY	CLASS	CONDITION	
Freezing and thawing (F)	F0	Concrete not exposed to freezing-and-thawing cycles	
	F1	Concrete exposed to freezing-and-thawing cycles with limited exposure to water	
	F2	Concrete exposed to freezing-and-thawing cycles with frequent exposure to water	
	F3	Concrete exposed to freezing-and-thawing cycles with frequent exposure to water and exposure to deicing chemicals	
		WATER-SOLUBLE SULFATE (SO_4^{2-}) IN SOIL, % BY MASS[1]	DISSOLVED SULFATE (SO_4^{2-}) IN WATER MG/KG (PPM)[2]
Sulfate (S)	S0	$SO_4^{2-} < 0.10$	$SO_4^{2-} < 150$
	S1	$0.10 \leq SO_4^{2-} < 0.20$	$150 \leq SO_4^{2-} \leq 1{,}500$ or seawater
	S2	$0.20 \leq SO_4^{2-} \leq 2.00$	$1{,}500 \leq SO_4^{2-} \leq 10{,}000$
	S3	$SO_4^{2-} > 2.00$	$SO_4^{2-} > 10{,}000$
		CONDITION	
In contact with water (W)	W0	Concrete dry in service	
	W1	Concrete in contact with water where low permeability is not required	
	W2	Concrete in contact with water where low permeability is required	
Corrosion protection of reinforcement (C)	C0	Concrete dry or protected from moisture	
	C1	Concrete exposed to moisture but not to an external source of chlorides	
	C2	Concrete exposed to moisture and an external source of chlorides from deicing chemicals, salt, brackish water, seawater, or spray from these sources	

[1] Percent sulfate by mass in soil determined by ASTM C1580
[2] Concentration of dissolved sulfates in water in ppm determined by ASTM D516 or ASTM D4130

Considering a 'Not Applicable' sulfate exposure, there is no requirement for cement type or water-cement ratio; however, a minimum concrete compressive strength of 2,500 psi is specified by the building code. For this sulfate range, we recommend Type II cement and a concrete mix design for foundations and building slabs-on-grade that incorporates a maximum water-cement ratio of 0.50. It should be noted; however, that the structural engineering design requirements for concrete may result in more stringent concrete specifications.

Based on the resistivity measurements, the soil is considered highly corrosive to buried metal piping (Roberge, 2006). Values tested for chloride do not pose a significant impact to metals or concrete.

If desired to investigate this further, we recommend a corrosion consultant be retained to evaluate if specific corrosion recommendations are advised for the project.

3.4 2022 CBC SEISMIC DESIGN PARAMETERS

The 2022 CBC utilizes seismic design criteria established in the ASCE/SEI Standard "Minimum Design Loads and Associated Criteria for Buildings and Other Structures," (ASCE 7-16). Based on the subsurface conditions encountered, we characterized the site as Site Class D.

ASCE 7-16 requires a site-specific ground-motion hazard analysis for Site Class D sites with a mapped S_1 value greater than or equal to 0.2. However, Section 11.4.8 of ASCE 7-16 and Supplement No. 3 provide an exception to this requirement. A site-specific ground-motion hazard analysis is not required where the value of the parameter S_{M1} determined by Equation 11.4-2 and shown in Table 1 is increased by 50 percent for developing the mapped Risk-Targeted Maximum Considered Earthquake (MCE_R) spectral response, calculating S_{D1}, and evaluating C_s in accordance with Chapter 12 of ASCE 7-16.

In Table 3.4-1 below, we provide the CBC seismic parameters based on the United States Geological Survey's (USGS') Seismic Design Maps for your use. When using this table, considerations should be given to exceptions in Section 11.4.8 of ASCE 7-16, as described in this letter.

TABLE 3.4-1: 2022 CBC Seismic Design Parameters, Latitude: 38.7374 Longitude: -121.3173

PARAMETER	VALUE
Site Class	D
Mapped MCE_R Spectral Response Acceleration at Short Periods, S_S (g)	0.45
Mapped MCE_R Spectral Response Acceleration at 1-second Period, S_1 (g)	0.22
Site Coefficient, F_a	1.44
Site Coefficient, F_v	2.15
MCE_R Spectral Response Acceleration at Short Periods, S_{MS} (g)	0.65
MCE_R Spectral Response Acceleration at 1-second Period, S_{M1} (g)	0.48
Design Spectral Response Acceleration at Short Periods, S_{DS} (g)	0.43
Design Spectral Response Acceleration at 1-second Period, S_{D1} (g)	0.32
Mapped MCE Geometric Mean (MCE_G) Peak Ground Acceleration, PGA (g)	0.19

PARAMETER	VALUE
Site Coefficient, F_{PGA}	1.42
MCE_G Peak Ground Acceleration adjusted for Site Class effects, PGA_M (g)	0.27
Long period transition-period, T_L (sec)	12

*The parameters above should only be used for calculation of T_s, determination of Seismic Design Category, and, when taking the exceptions under Items 1 and 2 of ASCE 7-16 Section 11.4.8. (Supplement Number 3).

We recommend that we collaborate with the structural engineer of record to further evaluate the effects of taking the exception on the structural design and identify the need for performing a site-specific ground-motion hazard analysis. We can prepare a proposal for a site-specific ground-motion hazard analysis, if requested.

4.0 CONSTRUCTION MONITORING

Our experience and that of our profession clearly indicate that the risk of costly design, construction, and maintenance problems can be significantly lowered by retaining the design geotechnical engineering firm to:

1. Review the final grading and foundation plans and specifications prior to construction to evaluate whether our recommendations have been implemented, and to provide additional or modified recommendations, as needed. This also allows us to check if any changes have occurred in the nature, design or location of the proposed improvements and provides the opportunity to prepare a written response with updated recommendations.
2. Perform construction monitoring to check the validity of the assumptions we made to prepare this report. Earthwork operations should be performed under the observation of our representative to check that the site is properly prepared, the selected fill materials are satisfactory, and that placement and compaction of the fill has been performed in accordance with our recommendations and the project specifications. Sufficient notification to us prior to earthwork is important.

If we are not retained to perform the services described above, then we are not responsible for any party's interpretation of our report (and subsequent addenda, letters, and verbal discussions).

5.0 EARTHWORK RECOMMENDATIONS

As used in this report, relative compaction refers to the in-place dry unit weight of soil expressed as a percentage of the maximum dry unit weight of the same soil, as determined by the ASTM D1557 laboratory compaction test procedure, latest edition. Compacted soil is not acceptable if it is unstable; it should exhibit only minimal flexing or pumping, as observed by an ENGEO representative. The term "moisture condition" refers to adjusting the moisture content of the soil by either drying if too wet or adding water if too dry.

We define "structural areas" as any area sensitive to settlement of compacted soil. These areas include, but are not limited to building pads, sidewalks, pavement areas, and retaining walls.

5.1 EXISTING FILL REMOVAL

Remove existing fill to competent native soil, as evaluated by ENGEO. We assume the approximate lateral extent of existing fill is within the entire footprint of the proposed building within the landscaped and orchard area and recommend that the fill be removed to at least 5 feet laterally beyond the proposed building footprint. The lateral extent and depth of fill are expected to vary. Consult the exploration logs in Appendix A for fill depths at specific locations. Excavated material may be used as engineered fill provided it meets the requirements of Section 5.4.

5.2 GENERAL SITE CLEARING

The proposed building area and new pavement areas should be cleared of surface and subsurface deleterious materials, including existing slabs and footings, buried utility and irrigation lines, pavements, debris, and designated trees, shrubs, and associated roots. The actual depth of tree root removal should be determined by our representative in the field. Clean and backfill excavations extending below the planned finished site grades with suitable material compacted to the recommendations presented in Section 5.6. ENGEO should be retained to observe and test backfilling.

5.3 OVER-OPTIMUM SOIL MOISTURE CONDITIONS

The contractor should anticipate encountering excessively over-optimum (wet) soil moisture conditions during winter or spring grading, or during or following periods of rain. Wet soil can make proper compaction difficult or impossible. Wet soil conditions can be mitigated by:

1. Frequent spreading and mixing during warm dry weather,
2. Mixing with drier materials,
3. Mixing with a lime, lime-flyash, or cement product, or
4. Stabilizing with aggregate or geotextile stabilization fabric, or both.

Options 3 and 4 should be evaluated by ENGEO prior to implementation.

5.4 ACCEPTABLE FILL

On-site soil is suitable as fill material provided it is processed to remove concentrations of organic material, debris, and particles greater than 8 inches in maximum dimension. Imported fill materials should meet the above requirements and have a plasticity index less than 12. Allow ENGEO to sample and test proposed imported fill materials at least 5 days prior to delivery to the site.

5.5 REUSE OF ON-SITE RECYCLED MATERIALS

If desired to reuse asphaltic or Portland Cement concrete as engineered fill, we recommend that it be ground up and thoroughly mixed with on-site or import soil. In general, recycled asphalt or concrete should be ground down to less than 4 inches in greatest dimension, with no more than 25 percent larger than 2½ inches. Recycled material should be thoroughly mixed with a sufficient amount of soil, such that there is no more than 40 percent by weight of recycled material in the final mix.

We recommend that fill containing recycled asphalt and concrete be placed near the bottom of the proposed basement fill and/or spread out evenly across the site. Recycled fill should not be used within 2 feet of finished grade in building or roadway areas.

5.6 FILL COMPACTION

5.6.1 Grading in Structural Areas

Perform subgrade compaction prior to fill placement, following cutting operations, and in areas left at grade as follows.

1. Scarify to a depth of at least 8 inches.
2. Moisture condition soil to at least 1 percentage point above the optimum moisture content.
3. Compact the subgrade to at least 90 percent relative compaction. Compact the upper 6 inches of finish pavement subgrade to at least 95 percent relative compaction prior to aggregate base placement.

After the subgrade soil has been compacted, place and compact acceptable fill as follows.

1. Spread fill in loose lifts that do not exceed 8 inches.
2. Moisture condition lifts to at least 1 percentage point above the optimum moisture content.
3. Compact fill to a minimum of 90 percent relative compaction; Compact the upper 6 inches of fill in pavement areas to 95 percent relative compaction prior to aggregate base placement.

Compact the pavement Caltrans Class 2 Aggregate Base section to at least 95 percent relative compaction (ASTM D1557). Moisture condition aggregate base to or slightly above the optimum moisture content prior to compaction.

5.6.2 Underground Utility Backfill

The contractor is responsible for conducting trenching and shoring in accordance with Cal/OSHA requirements. Project consultants involved in utility design should specify pipe bedding materials.

Place and compact trench backfill in structural areas as follows.

1. Trench backfill should have a maximum particle size of 6 inches.
2. Moisture condition trench backfill at least 1 percentage point above the optimum moisture content. Moisture condition backfill outside the trench.
3. Place fill in loose lifts not exceeding 12 inches.
4. Compact fill to a minimum of 90 percent relative compaction (ASTM D1557).

Where fill or subgrade materials contain more than 30 percent rock retained on a ¾-inch sieve, a performance specification should be used to evaluate compaction. For this condition, we recommend a maximum loose lift thickness of 12 inches. Moisture condition rocky fill such that the moisture content of the matrix soil (minus ¾-inch material) is at or slightly above the optimum moisture content evaluated by visual/manual methods. Compact each lift of rocky fill with at least six passes and eight passes of a Caterpillar 235 or larger excavator with a sheepsfoot wheel attachment for 90 percent and 95 percent relative compaction, respectively. We can develop other performance standards for different compaction equipment.

Where utility trenches cross perimeter building foundations, backfill with native clay soil for pipe bedding and backfill for a distance of 2 feet on each side of the foundation. This will help prevent the normally granular bedding materials from acting as a conduit for water to enter beneath the building. As an alternative, a sand cement slurry (minimum 28-day compressive strength of 500 psi) may be used in place of native clay soil.

Jetting of backfill is not an acceptable means of compaction. We may allow thicker loose lift thicknesses based on acceptable density test results, where increased effort is applied to rocky fill, or for the first lift of fill over pipe bedding.

5.6.3 Landscape Fill

Process, place and compact fill in accordance with Sections 5.6.1 and 5.6.2, except compact to at least 85 percent relative compaction (ASTM D1557).

5.7 SITE DRAINAGE

The project civil engineer is responsible for designing surface drainage improvements. With regard to geotechnical engineering issues, we recommend that finish grades be sloped away from buildings and pavements to the maximum extent practical. The latest California Building Code Section 1804.4 specifies minimum slopes of 5 percent away from foundations. We recommend the following.

1. Discharge roof downspouts into closed conduits and direct away from foundations to appropriate drainage devices.
2. Do not allow water to pond near foundations, pavements, or exterior flatwork.

6.0 FOUNDATION RECOMMENDATIONS

We developed structural improvement recommendations using data obtained from our field exploration, laboratory test results, and engineering analysis.

6.1 CONVENTIONAL FOOTINGS WITH SLAB-ON-GRADE

The proposed operations building can be supported on continuous or isolated spread footings bearing in competent native soil or compacted fill.

6.1.1 Footing Dimensions and Allowable Bearing Capacity

The proposed operations building and shade structures can be supported on continuous or isolated spread footings bearing in competent native soil or compacted fill. We recommend the following minimum footing dimensions in Table 6.1.1-1.

TABLE 6.1.1-1: Minimum Footing Dimensions

FOOTING TYPE	*MINIMUM DEPTH (inches)	MINIMUM WIDTH (inches)
Continuous	18	12
Isolated	18	18

* below lowest adjacent pad grade

Minimum footing depths shown above are taken from lowest adjacent pad grade. The cold joint between the exterior footing and slab-on-grade should be located at least 4 inches above adjacent exterior grade.

Footings recommended above may be designed for a maximum allowable bearing pressure of 3,000 pounds per square foot (psf) for dead-plus-live loads. This bearing capacity may be increased by one-third for the short-term effects of wind or seismic loading.

The maximum allowable bearing pressure is a net value; the weight of the footing may be neglected for design purposes. Footings located adjacent to utility trenches should have their bearing surfaces below an imaginary 1:1 (horizontal:vertical) plane projected upward from the bottom edge of the trench to the footing.

6.2 WATERSTOP

If a two-pour system is used for footings and slab, the cold joint between the exterior footing and slab-on-grade should be located at least 4 inches above adjacent finish exterior grade. If this is not done, then we recommend the addition of a waterstop between the two pours to reduce moisture penetration through the cold joint and migration under the slab. Use of a monolithic pour would eliminate the need for the waterstop.

6.3 REINFORCEMENT

The structural engineer should design footing reinforcement to support the intended structural loads without excessive settlement. Reinforce continuous footings with top and bottom steel to provide structural continuity and to permit spanning of local irregularities. At a minimum, design continuous footings to structurally span a clear distance of 5 feet.

6.4 FOUNDATION LATERAL RESISTANCE

Lateral loads may be resisted by friction along the base and by passive pressure along the sides of foundations. The passive pressure is based on an equivalent fluid pressure in pounds per cubic foot (pcf). We recommend the following allowable values for design.

- Passive Lateral Pressure: 300 pcf
- Coefficient of Friction: 0.35

The above allowable values include a factor of safety of 1.5. Increase the above values by one-third for the short-term effects of wind or seismic loading. Passive lateral pressure should not be used for footings on or above slopes.

6.5 SETTLEMENT

Provided our report recommendations are followed and given the proposed construction (Section 1.3), we estimate total and differential foundation settlements to be less than approximately 1 and ¾ inches, respectively.

7.0 SLABS-ON-GRADE

7.1 INTERIOR CONCRETE FLOOR SLABS

7.1.1 Minimum Design Section

We recommend the following minimum design.

1. Provide a minimum concrete thickness of 6 inches.
2. Place minimum steel reinforcing of No. 3 rebar on 18-inch centers each way within the middle third of the slab to help control the width of shrinkage cracking that inherently occurs as concrete cures.

The structural engineer should provide final design thickness and additional reinforcement for any structural loads, including traffic or rack loads.

7.1.2 Slab Moisture Vapor Reduction

When buildings are constructed with concrete slab-on-grade, water vapor from beneath the slab will migrate through the slab and into the building. This water vapor can be reduced but not stopped. Vapor transmission can negatively affect floor coverings and lead to increased moisture within a building. When water vapor migrating through the slab would be undesirable, we recommend the following to reduce, but not stop, water vapor transmission upward through the slab-on-grade.

1. Construct a moisture retarder system directly beneath the slab on-grade that consists of the following.
   a. Vapor retarder membrane sealed at all seams and pipe penetrations and connected to all footings. Vapor retarders shall conform to Class A vapor retarder in accordance with ASTM E 1745, latest edition, “Standard Specification for Plastic Water Vapor Retarders used in Contact with Soil or Granular Fill under Concrete Slabs.” The vapor retarder should be **underlain by:**
   b. 4 inches of clean crushed rock. Crushed rock should have 100 percent passing the ¾-inch sieve and less than 5 percent passing the No. 4 Sieve.
2. Use a concrete water-cement ratio for slabs-on-grade of no more than 0.50.
3. Provide inspection and testing during concrete placement to check that the proper concrete and water cement ratio are used.
4. Moist cure slabs for a minimum of 3 days or use other equivalent curing specified by the structural engineer.

The structural engineer should be consulted as to the use of a layer of clean sand or pea gravel (less than 5 percent passing the U.S. Standard No. 200 Sieve) placed on top of the vapor retarder membrane to assist in concrete curing.

7.2 EXTERIOR FLATWORK

Exterior flatwork includes items such as concrete sidewalks, steps, and outdoor courtyards exposed to foot traffic only. Provide a minimum concrete flatwork thickness of 4 inches. Construct control and construction joints in accordance with current Portland Cement Association Guidelines.

7.3 TRENCH BACKFILL

Backfill and compact all trenches below building slabs-on-grade and to 5 feet laterally beyond any edge in accordance with 5.7.2.

8.0 RETAINING WALLS

8.1 LATERAL SOIL PRESSURES

Design proposed retaining walls to resist lateral earth pressures from adjoining natural materials and/or backfill and from any surcharge loads. Provided that adequate drainage is included as recommended below, design walls restrained from movement at the top to resist an equivalent fluid pressure of 60 pounds per cubic foot (pcf). In addition, design restrained walls to resist an additional uniform pressure equivalent to one-half of any surcharge loads applied at the surface.

Design unrestrained retaining walls with adequate drainage to resist an equivalent fluid pressure of 40 pcf plus one-third of any surcharge loads.

The above lateral earth pressures assume level backfill conditions and sufficient drainage behind the walls to prevent any build-up of hydrostatic pressures from surface water infiltration and/or a rise in the groundwater level. If adequate drainage is not provided, we recommend that an additional equivalent fluid pressure of 40 pcf be added to the values recommended above for both restrained and unrestrained walls. Damp-proofing of the walls should be included in areas where wall moisture would be problematic.

Construct a drainage system, as recommended below, to reduce hydrostatic forces behind the retaining wall.

8.2 RETAINING WALL DRAINAGE

Construct either graded rock drains or geosynthetic drainage composites behind the retaining walls to reduce hydrostatic lateral forces. For rock drain construction, we recommend two types of rock drain alternatives.

1. A minimum 12-inch-thick layer of Class 2 Permeable Filter Material (Caltrans Specification 68-2.02F) placed directly behind the wall, or
2. A minimum 12-inch-thick layer of washed, crushed rock with 100 percent passing the ¾-inch sieve and less than 5 percent passing the No. 4 sieve. Envelop rock in a minimum 6-ounce, nonwoven geotextile filter fabric.

For both types of rock drains:

1. Place the rock drain directly behind the walls of the structure.
2. Extend rock drains from the wall base to within 12 inches of the top of the wall.
3. Place a minimum of 4-inch-diameter perforated pipe (glued joints and end caps) at the base of the wall, inside the rock drain and fabric, with perforations placed down.
4. Place pipe at a gradient at least 1 percent to direct water away from the wall by gravity to a drainage facility.

ENGEO should review and approve geosynthetic composite drainage systems prior to use.

8.3 BACKFILL

Backfill behind retaining walls should be placed and compacted in accordance with Section 5.6. Use light compaction equipment within 5 feet of the wall face. If heavy compaction equipment is used, the walls should be temporarily braced to avoid excessive wall movement.

8.4 FOUNDATIONS

Retaining walls may be supported on continuous footings designed in accordance with recommendations presented in Section 6.1.

9.0 PAVEMENT DESIGN

9.1 FLEXIBLE PAVEMENTS

We obtained a representative bulk sample of the surface soil from the site and performed an R-value test to provide data for pavement design. The results of the test are included in Appendix B and indicate an R-value of 20, which we judged to be appropriate for design. Using estimated traffic indexes for various pavement loading requirements, we developed the following recommended pavement sections using Chapter 633 of the 2020 Caltrans Highway Design Manual (including the asphalt factor of safety), presented in the table below.

TABLE 9.1-1: Recommended Asphalt Concrete Pavement Sections

TRAFFIC INDEX	SECTION	
	ASPHALT CONCRETE (inches)	CLASS 2 AGGREGATE BASE (inches)
5	3	8
6	3½	10
7	4	12

The civil engineer should determine the appropriate traffic indexes based on the estimated traffic loads and frequencies.

9.2 RIGID PAVEMENTS

Use concrete pavement sections to resist heavy loads and turning forces in areas such as fire lanes or trash enclosures. Final design of rigid pavement sections and accompanying reinforcement should be performed based on estimated traffic loads and frequencies. We recommend the following minimum design sections for rigid pavements.

- Use a minimum section of 6 inches of Portland Cement concrete over 6 inches of Caltrans Class 2 Aggregate Base.
- Concrete pavement should have a minimum 28-day compressive strength of 3,500 psi.
- Provide minimum control joint spacing in accordance with Portland Cement Association guidelines.

9.3 SUBGRADE AND AGGREGATE BASE COMPACTION

Compact finish subgrade and aggregate base in accordance with Section 5.6. Aggregate Base should meet the requirements for ¾-inch maximum Class 2 AB in accordance with Section 26-1.02B of the latest Caltrans Standard Specifications.

10.0 LIMITATIONS AND UNIFORMITY OF CONDITIONS

This report presents geotechnical recommendations for design of the improvements discussed in Section 1.3 for the Dry Creek Wastewater Treatment Plan Operations Building project. If changes occur in the nature or design of the project, we should be allowed to review this report and provide additional recommendations, if any. It is the responsibility of the owner to transmit the information and recommendations of this report to the appropriate organizations or people involved in design of the project, including but not limited to developers, owners, buyers, architects, engineers, and designers. The conclusions and recommendations contained in this report are solely professional opinions and are valid for a period of no more than 2 years from the date of report issuance.

We strived to perform our professional services in accordance with generally accepted principles and practices currently employed in the area; there is no warranty, express or implied. There are risks of earth movement and property damages inherent in building on or with earth materials. We are unable to eliminate all risks; therefore, we are unable to guarantee or warrant the results of our services.

This report is based upon field and other conditions discovered at the time of report preparation. We developed this report with limited subsurface exploration data. We assumed that our subsurface exploration data are representative of the actual subsurface conditions across the site. Considering possible underground variability of soil and groundwater, additional costs may be required to complete the project. We recommend that the owner establish a contingency fund to cover such costs. If unexpected conditions are encountered, ENGEO must be notified immediately to review these conditions and provide additional and/or modified recommendations, as necessary.

Our services did not include excavation sloping or shoring, soil volume change factors, flood potential, or a geohazard exploration. In addition, our geotechnical exploration did not include work to determine the existence of possible hazardous materials. If any hazardous materials are encountered during construction, the proper regulatory officials must be notified immediately.

This document must not be subject to unauthorized reuse, that is, reusing without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time.

Actual field or other conditions will necessitate clarifications, adjustments, modifications or other changes to ENGEO's documents. Therefore, ENGEO must be engaged to prepare the necessary clarifications, adjustments, modifications or other changes before construction activities commence or further activity proceeds. If ENGEO's scope of services does not include on-site construction observation, or if other persons or entities are retained to provide such services, ENGEO cannot be held responsible for any or all claims arising from or resulting from the performance of such services by other persons or entities, and from any or all claims arising from or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

We determined the lines designating the interface between layers on the exploration logs using visual observations. The transition between the materials may be abrupt or gradual. The exploration logs contain information concerning samples recovered, indications of the presence of various materials such as clay, sand, silt, rock, existing fill, etc., and observations of groundwater encountered. The field logs also contain our interpretation of the subsurface conditions between sample locations. Therefore, the logs contain both factual and interpretative information. Our recommendations are based on the contents of the final logs, which represent our interpretation of the field logs.

BORING LOG KEY
EXPLORATION LOGS

KEY TO BORING LOGS

MAJOR TYPES			DESCRIPTION
COARSE-GRAINED SOILS MORE THAN HALF OF MAT'L LARGER THAN #200 SIEVE	GRAVELS MORE THAN HALF COARSE FRACTION IS LARGER THAN NO. 4 SIEVE SIZE	CLEAN GRAVELS WITH LESS THAN 5% FINES	GW - Well graded gravels or gravel-sand mixtures GP - Poorly graded gravels or gravel-sand mixtures
		GRAVELS WITH OVER 12 % FINES	GM - Silty gravels, gravel-sand and silt mixtures GC - Clayey gravels, gravel-sand and clay mixtures
	SANDS MORE THAN HALF COARSE FRACTION IS SMALLER THAN NO. 4 SIEVE SIZE	CLEAN SANDS WITH LESS THAN 5% FINES	SW - Well graded sands, or gravelly sand mixtures SP - Poorly graded sands or gravelly sand mixtures
		SANDS WITH OVER 12 % FINES	SM - Silty sand, sand-silt mixtures SC - Clayey sand, sand-clay mixtures
FINE-GRAINED SOILS MORE THAN HALF OF MAT'L SMALLER THAN #200 SIEVE	SILTS AND CLAYS LIQUID LIMIT 50 % OR LESS		ML - Inorganic silt with low to medium plasticity CL - Inorganic clay with low to medium plasticity OL - Low plasticity organic silts and clays
	SILTS AND CLAYS LIQUID LIMIT GREATER THAN 50 %		MH - Elastic silt with high plasticity CH - Fat clay with high plasticity OH - Highly plastic organic silts and clays
	HIGHLY ORGANIC SOILS		PT - Peat and other highly organic soils

For fine-grained soils with 15 to 29% retained on the #200 sieve, the words "with sand" or "with gravel" (whichever is predominant) are added to the group name.

For fine-grained soil with >30% retained on the #200 sieve, the words "sandy" or "gravelly" (whichever is predominant) are added to the group name.

GRAIN SIZES

U.S. STANDARD SERIES SIEVE SIZE					CLEAR SQUARE SIEVE OPENINGS			
200	40	10	4	3/4 "	3"	12"		
SILTS AND CLAYS	SAND			GRAVEL			COBBLES	BOULDERS
	FINE	MEDIUM	COARSE	FINE	COARSE			

RELATIVE DENSITY

SANDS AND GRAVELS	BLOWS/FOOT (S.P.T.)
VERY LOOSE	0-4
LOOSE	4-10
MEDIUM DENSE	10-30
DENSE	30-50
VERY DENSE	OVER 50

CONSISTENCY

SILTS AND CLAYS	STRENGTH*
VERY SOFT	0-1/4
SOFT	1/4-1/2
MEDIUM STIFF	1/2-1
STIFF	1-2
VERY STIFF	2-4
HARD	OVER 4

SECTION 01 11 00 – SUMMARY OF WORK

PART 1 - **GENERAL**

1.1 WORK COVERED BY CONTRACT DOCUMENTS

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. The work of this contract includes but is not limited to the following:

1. Provide and furnish all labor, material, equipment, transportation, and any additional Professional Engineering Services necessary for installation, on-site construction along with on-site utilities and improvements for:

a. **Site improvements**
b. **Operations and Lab Building**

C. Construction of one building square footages as listed:

1. **12,500+/- sf**
   a. Wood framed walls and roof
   b. Slab on grade, steel vertical structure
   c. Metal siding and CMU exterior walls.
   d. Standing seam metal roof (sloped roofs) and single ply roofing (mechanical well)

D. Construction of On-Site improvements consisting of; but not limited to the following:

1. General earthwork, grading and on-site utilities.
2. A.C. paving and concrete drives, curbs, gutters, ramps and walks as indicated.
3. Concrete block, plaster finished trash enclosures
4. Landscaping and irrigation.

E. Construction Phasing

1. **Demolition Phase 1:**
   a. Demolition of existing Gazebo structure and selective demolition of existing site improvements, utilities and landscape areas in preparation for Construction Phase 2 New Operations and Lab building.
      1. Existing Operations and Lab Building contains SCADA network and Operations Center – all (E) building functions to remain fully operational.
      2. Note: fiber connection is temporarily transferred to Shop building, the connection will be re-routed to MDF room in (N) building.
      3. Existing Operations and Lab Building Lobby access:
         a. Lobby and exterior access shall remain accessible during construction, until demolition existing Operations and Lab Building.
      4. New Operations and Lab Building lobby and exterior access to the lobby to be accessible prior decommissioning of existing Operations and Lab Building.
   b. Site Demolition
      1. Refer to civil and architectural plans for extents and verify in field.

2. Verify in field all utilities, including communication vaults; identify all required utility shut-offs and transfers required to maintain existing buildings and infrastructure fully operational. Scheduling of utility shut-offs and turnovers shall be coordinated and approved by the Owner 72 hours prior to execution.

c. Protection:
   1. In addition to standard site protection procedures, coordinate requirements with the Owner for debris impact on evaporation bed basin.
d. Staging:
   1. An additional staging/laydown area outside of project boundaries is anticipated to be available on site to the North of the project.

2. **Construction Phase 1:**
   a. Construction of New Operations and Lab Building, tenant improvements and associated sitework and utilities.
   b. Functionality of the existing Operations and Lab Building including access to the lobby shall be preserved until the Certificate of Occupancy is issued.
   c. Southern side shade awning – Contractor shall determine appropriate phase for installation of the southern awning.
   d. The following shall be completed prior to Owner's acceptance and Notice of Substantial Completion is issued:
      1. Complete Lab/Operations building shall be ready for occupancy by staff and equipment being relocated from existing Operations and Lab Building.
         a. All building entries shall be accessible.
      2. Certification of Lab operations by Owner's Vendor
         a. Laboratory systems and equipment to be fully completed and operational
            1. Contractors schedule to accommodate up to 4 months for laboratory to be certified by ELAP (lab certification body)
            2. Contractor shall provide 30-day prior notice to Owner of Laboratory readiness to be certified.
      3. SCADA Network and Operations, MDF
         a. To be fully completed and operational prior to demolition of (E) building.

3. **Demolition Phase 2:**
   a. Demolition of Existing Operations and Lab Building and selective demolition of existing site improvements and utilities in preparation of construction for Phase 2 Construction Site Improvements.
      1. New Operations and Lab Building access:
         a. Building shall remain accessible during construction.
   b. Site Demolition
      1. Refer to civil and architectural plans for extents and verify in field.
      2. Verify in field all utilities, including communication vaults; identify all required utility shut-offs and transfers required to maintain existing buildings and infrastructure fully operational. Scheduling of utility shut-offs and turnovers shall be coordinated and approved by the Owner 72 hours prior to execution.

   c. Protection:

1. In addition to standard site protection procedures, coordinate requirements with the Owner for debris impact on evaporation bed basin.

d. Staging:
1. An additional staging/laydown area outside of project boundaries is anticipated to be available on site to the North of the project.

4. **Construction Phase 2:**
a. Construction of site improvements, roadways, utilities and landscape areas.

F. Provide and furnish all labor, material and equipment necessary for site improvements, utilities along with all other alternate bid items approved and accepted for construction by the Owner.

G. Refer to these specifications and the Construction Drawings for detailed description of the work required.

1. All directives and/or changes that affect this project shall come from the Owner to the Architect prior to being included into the project.

H. Related work:

1. Documents affecting work of this Section and Divisions 2 through 49 of Specifications also include, but are not necessarily limited to, General Conditions, and Division 1 of these Specifications.
2. Notices, Instructions, Bid Forms, Agreements and other titled documents are listed in Division 0.

I. Project Contractors:

1. All work shall be performed by California Licensed Contractors.

a. The General Contractor shall coordinate all construction work and control the project and subcontractors, in accord with Contract Documents.

2. General Contractor's work shall also include but not be limited to the following, except as specifically noted, provide and pay for:

a. Water, heat, telephones, and utilities required for construction.
b. Other facilities and services necessary for proper execution and completion of the work.
c. Secure and pay for, as necessary for the proper execution and completion of work, and as applicable at the time of receipts of bills.
d. Give required notices.

3. Construction shall comply with codes, ordinances, rules, regulations, orders and other legal requirements of public authorities, which govern the performance of the work. Copies shall be retained at all times at the project site by the Construction Superintendent, refer to Section 01 41 00 – Regulatory Requirements and Section 01 42 00 – References.
4. Promptly submit written notice of any observed variances of Contract Documents from legal requirements for Architect's review and interpretation.
5. Enforce strict discipline and good order among employees. Do not employ unfit persons or persons not skilled in assigned task on the work.

J. Sustainability

1. This project is subject to the California Green Building Standards Code
    a. Refer to Division 1 and project specification sections for related requirements.

1.2 CONTRACT METHOD

A. Construct Work under a lump sum Contract or as defined in the proposal, addenda, and including alternates accepted by the Owner.

1.3 GENERAL CONTRACTOR USE OF PREMISES

A. Confine Operations at project site to areas permitted by:
    1. Law
    2. Ordinances
    3. Permits
    4. Contract Documents
    5. Agencies having jurisdiction

B. Do not unreasonably encumber site with materials or equipment.

C. Do not load structure with weight that will endanger it.

D. General Contractor shall assume full responsibility for protection and safekeeping of products stored on premises.

E. Obtain and pay for use of any additional storage or work areas needed for operations.

END OF SECTION 01 11 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 01 25 00 SUBSTITUTION & DEVIATION PROCUDRES

PART 1 **- GENERAL**

1.1 WORK INCLUDED

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. Perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Ensure that specified products are furnished and installed in accordance with design intent by following procedures established herein for Substitution and Deviation requests for review by the Architect and their Engineers and consultants.

C. The following forms are included within the scope of this specification section, and shall be used as needed and/or required:

1. During Bidding Phase:

a. Substitution Request Form

1) Electronic File form will be supplied by Architect.
2) For all product substitutions, the General Contractor shall complete all sections of the form and provide for Architect's review within the time frame allowed prior to bid date.
3) All related or supporting work that would be required to change must be identified in the Substitution Request.

a) Design and construction work and costs associated with a Substitution Request shall be included in the proposed substitution.
b) Design and construction work and costs associated with a proposed Substitution which are not identified at time of Architect's acceptance of proposed substitution, but which are subsequently found to be required, shall be provided by the General Contractor at no additional cost to the Owner.

2. During Construction Phase:

a. Deviation Request Form

1) Electronic File will be supplied by Architect.
2) For all proposed deviations, the General Contractor shall complete all sections of the form and provide at the time of submittal Architect's review and consideration.
3) All related or supporting work that would be required to change must be identified in the Deviation Request.

a) Design and construction work and costs associated with a Substitution Request shall be included in the proposed deviation.
b) Design and construction work and costs associated with a proposed Deviation which are not identified at time of Architect's acceptance of proposed deviation, but which are subsequently found to be required, shall be provided by the General Contractor at no additional cost to the Owner.

1.2 QUALITY ASSURANCE

A. During Bidding:

1. Coordination of Substitution Requests:

a. General:

1) Prior to each Substitution Request, the General Contractor shall carefully review and coordinate all aspects of each item being proposed.
2) General Contractor shall verify that each item of the Substitution Request conform in all respects with the specified requirements.
3) General Contractor's signature is required on each Substitution Request, which shall certify that required coordination of all items has been performed.
4) It shall be the General Contractor's responsibility to ensure there is no conflict with other items and to notify the Architect in any case where the General Contractor's Substitution Request may concern work by another Contractor or the Architect. The General Contractor is solely responsible for coordination of Substitution Requests among all related crafts performing the Work.
5) The review of the General Contractor's Substitution Requests shall not relieve the General Contractor of responsibility for any error or of any obligation for accuracy of dimensions and details, for agreement with and conformity to the Contract, or responsibility to fulfill the Contract as prescribed. Nor shall such review be considered as approval of any deviation or conflict unless the Architect has been expressly advised of the same as set forth immediately above, and the Architect has expressly approved such deviation or conflict.
6) Proposed Substitutions shall not reduce the Sustainability Criteria requirements for project as identified in Division 1.

B. During Construction:

1. Coordination of Deviations:

a. General Contractor shall submit a request for Deviations when they deem it necessary to provide a complete submittal, and /or when minor changes are felt needed.

1) Deviations shall be minor in scope and shall not change manufacturers or assemblies.
2) Proposed Substitutions shall not reduce the Sustainability Criteria requirements for project as identified in Division 1.

PART 2 **- PRODUCTS**

2.1 SUBSTITUTIONS

A. General:

1. Use during Bidding.
2. Refer to specific Specification Sections for items not allowing a substitution.

B. Architect's and Owner's review and acceptance required during bidding phase.

1. Contract is based solely on materials, equipment and construction industry standards listed or described in the bid documents (including addenda), and does not contemplate any substitutions.
2. Refer to required Substitution Request Form in this Section.

C. "Or equal" and/or “Equivalent”

1. Where this phrase occurs in the Contract Documents, it refers to a PRODUCT which is equivalent to the specified product in terms of chemical composition, color, finish, configuration, and performance standards, etc.; do not assume that the materials, equipment, or methods will be approved as equal/equivalent unless the item has been specifically so reviewed and approved for this Work.

    a. Any product by a Manufacturer listed as an “Acceptable Manufacturer” is not necessarily considered an “Or Equal” or “Equivalent”. All proposed products which are not the specified product are subject to the equivalency criteria as noted above.

2. The decision of the Architect and Owner shall be final.

D. In making a request for substitution, the General Contractor shall provide the following in accordance with the Substitution Request Form and Bidding requirements set forth in this Section.

1. They have personally investigated proposed product or method, and determined that it is equal or superior in all respects to that specified, including size, chemical composition, color, finish, configuration, performance standards, functionality, compatibility with other assemblies and systems, etc.
2. They will provide the same warranty for the proposed substitution as for product or method specified.
3. They will coordinate installation of accepted substitution into work, making such changes as may be required for the work and all associated/supporting trades’ work to be complete in all respects at no additional cost to the Owner.

    a. They shall waive all claims for additional costs related to the substitution which consequently or subsequently become apparent.

4. Cost data is complete and includes all related costs under their Contract.
5. Shall submit detail itemized cost statement showing labor, material installation, overhead and profit for each substitution being requested.

E. Substitutions will not be considered if:

1. Acceptance of substitution shall require substantial revision of Contract Documents by the Architect, Owner and/or their Consultants.

2.2 DEVIATIONS

A. General:

1. Use during Construction.
2. Refer to Specific Specification Sections for items not allowing a deviation.

B. Architect's and Owner’s review and acceptance required during construction phase.

1. Contract is based solely on materials, equipment and construction industry standards listed or described in the bid documents (including addenda), and review of proposed deviations shall be done with understanding that this is done to accommodate unforeseen conditions.
2. Refer to required Deviation Request Form included herein.

C. "Or equal" and/or “Equivalent”

1. Where this phrase occurs in the Contract Documents, it refers to a PRODUCT which is equivalent to the specified product in terms of chemical composition, color, finish, configuration, and performance standards, etc.; do not assume that the materials, equipment, or methods will be approved as equal/equivalent unless the item has been specifically so reviewed and approved for this Work.

    a. Any product by a Manufacturer listed as an “Acceptable Manufacturer” is not necessarily considered an “Or Equal” or “Equivalent”; all proposed products which are not the specified product are subject to the equivalency criteria as noted above.

2. The decision of the Architect and Owner shall be final.

D. In making a request for deviation, the General Contractor shall provide the following in accordance with the Deviation Request Form.

1. They have personally investigated proposed product or method, and determined that it is equal or superior in all respects to that specified, including size, chemical composition, color, finish, configuration, performance standards, functionality, compatibility with other assemblies and systems, etc.
2. They will provide the same warranty for the proposed deviation as for product or method specified.
3. They will coordinate installation of accepted deviation into work, making such changes as may be required for work and all associated/supporting trades’ work to be complete in all respects at no additional cost to the Owner.
4. They shall waive all claims for additional costs related to the deviation, which consequently or subsequently become apparent.
5. Cost data is complete and includes all related costs under their Contract.
6. Shall submit detail itemized cost statement showing labor, material installation, overhead and profit for each substitution.

E. Deviations will not be considered if:

1. They are indicated or implied on Shop Drawings or Project Data submittals without formal request submitted in accordance with this Section.
2. Acceptance of deviation shall require substantial revision of Contract Documents by the Architect, Owner and/or their Consultants.
3. The cost of additional submittal services for Architectural review or redesign is not compensated for by the Owner**.**

PART 3 - **EXECUTION**

END OF SECTION 01 25 00

SUBSTITUTION REQUEST FORM

TO: **19six Architects**

PROJECT: **Dry Creek Wastewater Treatment Plant Operations and Lab Building**

SPECIFIED ITEM: _____

Section No.: _____
Paragraph No.: _____
Description: _____

Proposed Substitution: _____

Reason for Substitution:

I. Information on changes to Drawings and/or Specifications which proposed Substitution will require: provide written response below or attach responses if additional space is required.

1. Will changes to the building design, including engineering & detailing be caused by this Substitution?

2. What effect does Substitution have on other trades?

3. What are the differences between proposed Substitution & specified item?

4. What are differences in product cost and delivery time?

5. What is manufacturers written warranties / guarantees of proposed Substitution?

II. Attach data which includes: product description, specifications, drawings, photographs, performance and test data required for evaluation of request; with applicable portions of data clearly identified.

III. Attach data which includes a description of changes to Contract Documents that proposed Substitution will require for its proper installation.

The undersigned certifies that the following paragraphs, unless modified by attachments, are correct:

1. The proposed Substitution does not affect dimensions shown on drawings.
2. The undersigned will pay for changes to the building design, including engineering design, detailing, and construction costs caused by the requested Substitution.
3. The proposed Substitution will have no adverse effect on other trades, the construction schedule, or specified warranty requirements.
4. Maintenance and service parts will be readily available for the proposed Substitution.
5. Finishes will not be altered

The undersigned further states that the function, appearance, and quality of the proposed Substitution are equivalent or superior to the specified item.

Section 01 26 00 - CONTRACT MODIFICATION PROCEDURES

PART 1 **- GENERAL**

1.1 REQUIREMENTS INCLUDED

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Promptly implement change order procedures as required specified for review by the Architect.

1. Provide full written data required to evaluate changes.
2. Maintain detailed records of work done on time-and-material/force account basis.
3. Provide full documentation to Architect on request.

C. Designate in writing, names of authorized members of General Contractor's organization who are authorized to accept changes in Work, and who are responsible for informing others in General Contractor's employ of authorization of changes in Work.

D. Owner will designate person who is authorized to execute Change Orders.

1.2 RELATED REQUIREMENTS

A. Conditions of the Contract:

1. Methods of determining cost or credit to Owner resulting from changes in Work made on time-and-material/force account basis.
2. General Contractor's claims for additional costs.

1.3 DEFINITIONS

A. Proposal Request: See General Conditions & attached document.

B. Change Order: Written order to General Contractor, signed by Owner and Architect, amending Contract Documents as described.

1. Authorizes General Contractor to proceed with change altering Contract Sum, Contract Time or both.

1.4 CLARIFICATION documents for use by General Contractor and Architect;

A. CLARIFICATON: Architect's Supplemental Instructions

1. Clarification form is attached and part of this Section.

a. Architect shall, at their discretion, provide supplemental instructions during the course of construction which can assist the General Contractor in their work, such instructions shall be in writing and/or graphical representation (supplemental drawings) and accompanied by the Clarification form.
b. Clarifications are intended to not increase or decrease the project costs, if the General Contractor determines that the project cost will change, then written notification will be required to be issued and approved by the Owner and Architect prior to implementation of the Clarification.

c. Such change request shall be issued as a Proposed Change Order by the General Contractor for review and approval.

B. RFI: Contractors Request for Information/Interpretation

1. An RFI is a written request prepared by General Contractor asking the Architect to provide additional information they deem necessary to clarify an item which the General Contractor and/or their subcontractor feels is not clearly shown or called for in the Drawings or Specifications, or to address issues which have arisen due to field conditions.

2. The RFI shall reference all the applicable Contract Documents, including specification section, detail, page numbers, drawing numbers, and sheet numbers, etc. and shall be numbered sequentially.

a. The RFI shall include suggestions and/or interpretations of the issue raised by the RFI if possible.
b. An RFI cannot modify the Contract Sum and/or the Contract time.

3. The Architect and their consultants will respond to an RFI in reasonable promptness directly correlated to the complexity of the RFI.

1.5 COST REQUEST BULLETIN – CRB

A. Document: CRB

1. Whether referred to as Cost Request Bulletin, Proposal Request or Request For Proposal, they shall be interchangeable.

B. Owner, via Architect, may initiate changes by submitting a Cost Request Bulletin to the General Contractor. Request will include:

1. Detailed description of Change, Products, and location of change in Project.
2. Supplementary or revised Drawings and Specifications.
3. Projected time span for making change, and specific statement as to whether overtime work is, or is not, authorized.
4. Specific period of time during which requested price would be considered valid.
5. Such request is for information only, and is not an instruction to execute changes, nor to stop Work in progress.

C. Contractor may initiate changes by submitting written Proposal to Owner, via Architect containing:

1. Description of proposed changes.

a. Related contract drawing, detail, etc.
b. Related specification section and item

2. Statement of reason for requested changes.
3. Statement of effect on Contract Sum and Contract Time.
4. Statement of effect on work of separate contractors.
5. Documentation supporting any proposed change in Contract Sum or Contract Time, as appropriate.

a. Itemize list of material unit costs, taxes, profit, etc.

1.6 CONSTRUCTION CHANGE DIRECTIVE - CCD

A. In lieu of Cost Request Bulletin, the Architect may issue a Construction Change Authorization for General Contractor to proceed with a change for subsequent inclusion in a Change Order.

B. Authorization will describe changes in Work, both additions and deletions, with attachments of revised Contract Documents to define details of change, and will designate method of determining any change in Contract Sum and any change in Contract Time.

C. Owner and Architect will sign and date Construction Change Directive as authorization for General Contractor to proceed with changes after General Contractor has provided acceptable cost evaluation.

1.7 DOCUMENTATION OF PROPOSALS AND CLAIMS

A. Support each quotation for a lump-sum proposal and for each unit price which has not previously been established with sufficient substantiating data to allow Owner and Architect to evaluate quotation.

B. On request provide additional data to support time and cost computations. Submit data in itemized format, with breakdowns conforming to standard industry categories of work, and including the following:

1. Labor required.
2. Equipment required.
3. Products required.
    a. Recommended source of purchase and unit cost.
    b. Quantities required.
4. Taxes, insurance and bonds.
5. Credit for work deleted from Contract, similarly documented.
6. Overhead and profit.
7. Justification for any change in Contract Time.

C. Support each claim for additional costs, and for work done on time-and-material/force account basis, with documentation as required for lump-sum proposal, plus additional information:

1. Name of Owner's authorized agent who ordered the work, and date of order.
2. Dates and times work was performed, and by whom.
3. Time record, summary of hours worked, and hourly rates paid.
4. Receipts and invoices for:
    a. Equipment used, listing dates and times of use.
    b. Products used, listing of quantities.
    c. Subcontracts.

D. Document requests for product substitutions shall be completed as specified in Division 1 for substitution, deviation and/or submittal procedures.

1. Substitution of any structural materials will require a Change Order form be processed.

1.8 CHANGE ORDERS - CO

A. Preparation/General:

1. General Contractor will prepare Change Orders for review by Owner and Architect.
2. Change Order form, see herein attached form CO.
3. Change Order will describe changes in Work, both additions and deletions, with attachments of revised Contract Documents to define details of change.
4. Change Order will provide accounting of adjustment in Contract Sum and in Contract Time.

B. Lump-Sum/Fixed Price Change Order

1. Content of Change Orders will be based on, either:

   a. Owner's Cost Request Bulletin and General Contractor's responsive Proposal as mutually agreed between Owner and General Contractor.
   b. General Contractor's Proposal for change, as approved by Owner.

2. Owner and the Architect will sign and date Change Order as authorization for General Contractor to proceed with changes after General Contractor has provided acceptable cost evaluation.
3. General Contractor will sign and date Change Order to indicate agreement with terms therein.

C. Unit Price Change Order

1. Content of Change Orders will be based on, either:

   a. Definition of scope of required changes.
   b. General Contractor's Proposal for change, as approved by Owner, and Architect.
   c. Continuous survey and monitoring by Owner's Representative of all work.

2. Amounts of unit prices to be:

   a. Any stated in Bid Form or Agreement.
   b. Those mutually agreed upon between Owner and General Contractor.

3. When quantities of each item affected by Change Order can be determined prior to start of work:

   a. Owner and the Architect will sign and date Change Order as authorization for General Contractor to proceed with Changes.
   b. General Contractor will sign and date Change Order to indicate agreement with terms therein.

4. When quantities of items cannot be determined prior to start of work; and with pre-approval by the Owner and the Architect.

   a. Owner will issue through the Architect a Construction Change Directive directing General Contractor to proceed with change on basis of unit prices, and will cite applicable unit prices.
   b. General Contractor shall provide continuous on-site monitoring of all work and keeping records of all labor, materials and time required for completion.
   c. At completion of change, Owner and Architect shall review cost of such work based on unit prices and quantities used.
   d. General Contractor shall submit documentation to establish number of units of each item as well as any claim for change in Contract Time.

e. Owner and the Architect shall sign and date Change Order to establish change in Contract Sum and in Contract Time upon approval of General Contractor's breakdown of costs and time frame.
f. General Contractor shall sign and date Change Order to indicate agreement with terms therein.

1.9 CORRELATION WITH CONTRACTOR SUBMITTALS

A. Periodically revised Schedule of Values and Request for Payment forms to record each change as a separate item of Work, and to record adjusted Contract Sum.

B. Periodically revise Construction Schedule to reflect each change in Contract Time.

1. Revise schedules to show changes for other items of work affected by changes.

C. Upon completion of work under Change Order, enter pertinent changes in Record Documents.

SECTION 01 29 73 – SCHEDULE OF VALUES

PART 1 **- GENERAL**

1.1 DESCRIPTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. Submit a schedule of values to the Owner and Architect within 14 days after receiving written Notice to Proceed.

C. Upon request by Owner or Architect, support values given with data substantiating their correctness.

D. Use schedule of values only as basis for General Contractor's application for payment.

E. Revise schedule of values at such time as trade contracts are finalized and/or at the time a Change Order is approved.

1.2 FORM OF SUBMITTAL

A. Submit typed schedule on AIA Form G703 – Most current adopted edition.

1. Format: Table of Contents of this Project Manual, with modifications as approved; identify each line item with number and title of major specification sections.
2. Include a separate line item amount for General Contractor overhead and profit.
3. Revise schedule to list change orders for each Application for Payment.

B. Use table of contents for this Specification as basis for format for listing costs of work specified in Divisions 2 thru 49.

1.3 PREPARING SCHEDULE OF VALUES

A. Make the sum of the costs listed on the original or revised schedule of values, equal to the total contract sum.

B. Separately itemize all approved Change Orders to adjust contract sum.

C. Do not include General Contractor mark-up of line items or trades with the individual line items or trades.

1. Include that mark-up as part of separate line item by itself.

END OF SECTION 01 29 73

THIS PAGE IS INTENTIONALLY BLANK

SECTION 01 29 76 – PROGRESS PAYMENT PROCEDURES

PART 1 **– GENERAL**

1.1 GENERAL

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

1.2 UNIT PRICES

A. Unless otherwise specified, all unit prices quoted in the Bid Form for additions to or deductions from the Work are the installed costs of products, including overhead and profit, taxes, and other costs, so that they are the complete price to the Owner. These unit prices shall not apply to Work which the General Contractor may elect to do or not to do, for the sake of their own convenience, nor shall they apply to Work required to be performed in order to correct errors committed by the General Contractor.

B. All unit prices shall be valid and in force during the life of the Contract and shall be reconciled with the Contract Sum, in accordance with the GENERAL CONDITIONS, before filing of the Notice of Completion.

1.3 APPLICATIONS FOR PAYMENTS

A. General: Submit notarized Applications for Payment to the Architect in accordance with the schedule established by the GENERAL CONDITIONS and the Agreement between the Owner and General Contractor.

B. Release of Liens: General Contractor shall submit with each Application for Payment a *conditional lien* release warranting that title to all Work, labor, materials and equipment covered by the invoice is free and clear of all liens, claims, security interests or encumbrances. With each subsequent Application for Payment, General Contractor shall submit notarized *unconditional lien releases* for the previous invoice.

C. Format and Data Required: Submit itemized applications typed on AIA Document G702-Most current adopted edition, "Application and Certificate for Payment", and Continuation Sheet G703-Most current adopted edition. *Substitutions of this form will not be accepted.*

1. Line items and dollar values shall be from the schedule of values accepted by the Architect; refer to Division 1 schedule of values requirements.
2. Include names, categories of Work, and amounts for Sub-contractors.
3. Overhead and profit shall be a line item each month for the General Contractor and Subcontractor on their G703 sheets.

D. Preparation of Application for Each Progress Payment: *Substitutions of This Form will not be accepted.*

1. Application Form (AIA Document G702- most current adopted edition, confirm with Architect):
    a. Fill in required information, including that for Change Orders executed prior to the date submittal of application.
    b. Fill in summary of dollar values to agree with the respective totals indicated on the Continuation Sheets.
    c. Execute certification with the notarized signature of a person authorized to bind the contracting firm in such matters.
2. Continuation Sheets (AIA Document G703- most current edition, confirm with Architect):
    a. Fill in total list of scheduled component items of Work, with item number and the schedule dollar value for each item.
    b. Fill in the dollar value in each column for each scheduled line item when Work has been performed or products stored as approved. Round off values to nearest dollar, unless otherwise specified for the schedule of values.
    c. At the end of the Continuation Sheets list each Change Order executed prior to the date of submission. List by Change Order number, description, and breakdown of costs as for an original component item of Work.

E. Substantiating Data for Progress Payments:
1. When substantiating data are required, submit suitable information as specified in Division 1 progress payment procedure requirements with a cover letter identifying:
    a. Project.
    b. Application number and date.
    c. Detailed list of enclosures.
2. Submit one copy of data and cover letter for each copy of application.

F. Preparation of Application for Final Payment:
1. Fill in application form as specified for progress payments.
2. Use Continuation Sheets for presenting the final statement of accounting.
3. Full unconditional lien releases.

G. Submittal Procedure:
1. Submit Applications for Payment for review by Owner's On-Site Representative and certification by the Architect at the times stipulated in the Agreement.
2. Number: Six copies of each application with original wet signature on each.

1.4 CHANGE ORDERS

A. List all Approved Change Orders on AIA Document G702 – most current edition, confirm with Architect (in space provided).

B. Backup data submitted with Applications for Payment may be used as basis for approving or rejecting costs submitted in Change Orders.

SECTION 01 31 13 – PROJECT COORDINATION

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Coordination of all aspects of construction, including, but not limited to;

    a. Construction
    b. Testing
    c. Inspections
    d. Mockups

2. Coordination of all aspects of demolition

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC), www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission .

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission.

E. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

    a. All occupancy types.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Comply with requirements of each specification section.
4. Comply with requirements of drawings.

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Site mock-up: refer to "Mock-Up" heading of each specification section.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Coordinate that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation, testing, mockups, inspections, etc. as required to comply with Contract requirements.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Refer to each specification section.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Construction
2. Demolition

B. Related Sections include, but are not limited to the following:

1. All specification sections

1.11 OPERATION AND MAINTENANCE DATA

A. Coordinate that all documentation is submitted as part of project closeout.

B. Coordinate that commissioning is done and documented to illustrate compliance with design criteria.

C. Comply with Division 1 closeout submittal procedure requirements.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with all trades and commissioning personal, etc.

B. Schedule required testing, inspections, mockup fabrication, etc.

C. General Contractor shall coordinate slab vapor emission and PH testing of concrete floors and ensure that concrete treatment within criteria of finish flooring is complete prior to the installation of finish flooring as herein specified.

1.13 GENERAL SYSTEM DESCRIPTION

A. Duties of the General Contractor:

1. General Contractor shall maintain approved construction drawings, specifications, addendums, change orders and other documents supplied by Architect on site at all times.
2. Coordinate the work of all Subcontractors.
3. Establish on-site lines of authority and communication.

a. Schedule and conduct construction progress meetings at intervals agreed upon in Bidding Documents, but not to exceed monthly.

1) Invited attendees shall include;

a) Owner
b) Architect
c) Subcontractors when needed to address specific issues.

2) General Contractor shall keep minutes of all construction progress meetings and submit to Owner and Architect within 72 hours for review and comment by Architect and Owner.

a) Meeting minutes shall be finalized prior to next meeting.

3) Refer to Section 01 31 19 Project Meetings

b. Submit construction schedule and schedule updates for review by the Architect and Owner at meetings and other times as directed by Division 1 – General Requirements.

4. Construction Schedules:

a. Submit construction schedule and required updates at intervals required by the Owner.
b. Prepare detailed schedule of operations of all subcontractors/trades.

1) Provide list of subcontracts that state company name, address, phone number and specifications section of work.

c. Monitor construction schedules as work progresses:

1) Identify potential variances between scheduled probable completion dates. Submit schedule updates to Architect, once each month with each Application for Payment.
2) Recommend to Owner adjustments in schedule to meet required completion date, and submit schedule updates to Architect.

d. Observe work to monitor compliance with schedule.

1) Verify that labor and equipment are adequate for the work and the schedule.

2) Verify that product deliveries are adequate to maintain schedule.
3) Report noncompliance to Owner, with recommendation for remedy.

e. Comply with requirements of Division 1 – General Requirements.

5. Temporary Facilities:

a. Allocate space as available for each Subcontractor within construction area.
b. Monitor use of temporary utilities.
c. Verify that adequate services are provided to comply with requirements for work and climatic conditions.
d. Verify proper maintenance and operation of temporary facilities.
e. Administer traffic controls where construction operations infringe upon the normal flow of traffic about the site.
f. Refer to Division 1 for temporary facilities and controls requirements.
g. Comply with requirements of Division 1 – General Requirements.

6. Cost Control:

a. Monitor and record actual costs, and estimates for completed work.
b. Incorporate approved changes as they occur.
c. Maintain cost accounting records for authorized work.
d. Develop and implement procedure for review and processing of applications for progress and final payments: Submit Applications for Payment to Architect for certification to Owner for payment.
e. Comply with requirements of Division 1 – General Requirements.

7. Changes:

a. Recommend necessary or desirable changes to Owner and Architect.
b. Review Subcontractor's requests for changes and for substitutions; submit recommendation to Owner and Architect.
c. Process change orders to Subcontractors.
d. Comply with requirements of Division 1 – General Requirements.

8. Permits and Fees: Verify that Subcontractors have obtained required permits for inspections and for temporary facilities.
9. Interpretations of Contract Documents:

a. Consult with Architect to obtain interpretations.
b. Assist in resolution of questions which may arise.
c. Transmit written interpretations to concerned parties.

10. Administer processing of shop drawings, product data and samples.
11. Maintain reports and records at site:

a. Daily log of progress of work, available to Architect and Owner.
b. Records

1) Contracts
2) Purchases
3) Materials and equipment records.

4) Applicable handbooks, codes and standards.

c. Obtain information from Subcontractors, and maintain record documents.
d. At completion of project, deliver all necessary records to Owner.
e. Assemble documentation for handling of claims and disputes.
f. Comply with requirements of Division 1 – General Requirements.

12. Verify that specified cleaning is done during progress of the work and at completion of project.
13. Start-up:
    a. Direct and checkout of utilities, operational systems and equipment.
    b. Assist in the initial start-up and testing.
    c. Record dates of start of operation of systems and equipment.
    d. Coordinate with Division 1 as to approved time to start warranty period for equipment put into service.
        1) Provide to Owner written notice of proposed beginning of warranty period for equipment put into service for review and subsequent approval.
14. Substantial Completion:
    a. Coordinate with Division 1 regarding approved process.
15. Final Completion:
    a. Coordinate with Division 1 regarding approved process.

END OF SECTION 01 31 13

THIS PAGE IS INTENTIONALLY BLANK

SECTION 01 31 19 – PROJECT MEETINGS

PART 1 **- GENERAL**

1.1 REQUIREMENTS INCLUDED

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. General Contractor shall schedule and administer pre-construction meeting, periodic progress meetings, and specially called meetings throughout progress of the work, and will:

1. Prepare & distribute agenda to all participants 48 hours prior to scheduled meeting.
2. Distribute written notice of each meeting four days in advance of meeting date.
3. Make physical arrangements for meetings.
4. Preside at meetings.
5. Record the minutes; include significant proceedings and decisions.
6. Reproduce and distribute copies of minutes within two working days after each meeting and distribute to:

a. Participants in the meeting.
b. Parties affected by decisions made at meeting.
c. Owner
d. Architect

C. Representatives of General Contractor, subcontractors and suppliers attending meetings shall be qualified and authorized to act on behalf of entity each represents.

D. Project Architect and/or representative of Architect may/shall attend meetings called by Owner to ascertain that Work is expedited consistent with Contract Documents and construction schedules.

1.2 PRE-CONSTRUCTION MEETINGS

A. Timing: Within 14 days after date of Notice to Proceed.

B. Location: Central site, convenient for all parties, approved by Owner.

C. Attendance:

1. Owner representatives.
2. Project Architect and/or representatives and their professional consultants, at Architect's option.
3. General Contractor's Superintendent, Project Manager and Foreman.
4. Major Subcontractors.
5. Major suppliers.
6. Others as appropriate.

D. Suggested Agenda:

1. Use of Premises:

a. Site access
b. Site security

c. Utility hook-up point of connections (POC's)
d. Site specific safety issues
e. Vehicular and pedestrian traffic
f. Emergency vehicle access (ambulance and fire)
g. Material delivery, staging/lay-down area(s)
h. Noise, dust control and SWPPP requirements
i. Other jurisdictional agency requirements
j. Hours of work
k. Project signage

2. Distribution of Project Directory including names, email addresses and phone numbers of all project participants.
3. Distribution of list of major subcontractors and suppliers.
4. Project Construction Schedule:

   a. Timing of submission of Construction Schedule updates.
   b. 3-week look-a-head schedule.

5. Scheduling of subsequent Owner/Architect/General Contractor meetings.
6. Review of all forms of "change" documentation:

   a. Architect's Supplemental Instructions (ASI)
   b. Architect's Request for Clarification (ARC).
   c. Request for Information (RFI).
   d. Change Order (CO).
   e. Construction Change Directive (CCD).
   f. Proposal Request (PR).
   g. Etc.

7. Review of all form templates included in Specifications:

   a. Submittal Cover Sheet.

8. Pay Application:

   a. Level of detail expected in the Schedule of Values to be included with each Pay Application.
   b. Timing for submission of "pencil draft" of Pay Application for preliminary review by Project Inspector, Owner Representative and Architect.

9. Project Coordination

   a. Critical work sequencing.
   b. Major equipment deliveries and priorities.
   c. Designation of responsible personnel.

10. Use of Newforma construction administration software:

    a. Document routing protocols.
    b. Submittal and RFI processes.
    c. Information exchange website.

11. Distribution of Contract Documents.

12. Procedures for maintaining Record Documents.

E. A separate pre-construction meeting shall be held for roofing and other items as identified in Divisions 2 through 49 sections.

1.3 PROGRESS MEETINGS AND SPECIALLY CALLED MEETINGS

A. General Contractor shall schedule regular periodic meetings, as required.

B. Owner or Architect may/shall hold specially called meetings as required by progress of work.

C. Location of meetings: Project field office of General Contractor; except as otherwise required.

D. Special technical meetings: Meetings will be held prior to beginning work under various technical specifications:

1. Called by Owner and/or Architect at their option.

E. Attendance:

1. General Contractor's project representative and job superintendent.
2. Project Architect, and their professional consultant as needed, at their option.
3. Subcontractors as appropriate to agenda.
4. Suppliers as appropriate to agenda.
5. Others.

F. Suggested Agenda:

1. Review and approval of minutes of previous meeting.
2. Review of work progress since previous meeting.
3. Field observations, problems, conflicts.
4. Problems which impede Construction Schedule.
5. Review of off-site fabrication, delivery schedules.
6. Corrective measures and procedures to regain projected schedule.
7. Revisions to Construction Schedule.
8. Progress, schedule, during succeeding work period.
9. Coordination of schedules.
10. Review submittal schedules; expedite as required.
11. Maintenance of quality standards.
12. Pending changes and substitutions.
13. Review proposed changes for:

    a. Effect on Construction Schedule and on completion date.
    b. Effect on other contracts of Project.

14. Other business.

1.4 FINAL CLOSEOUT MEETING

A. Refer to Division 1 for protection and cleaning requirements.

PART 2 **- PRODUCTS**

Not Used

PART 3 **- EXECUTION**
Not Used

END OF SECTION 01 31 19

SECTION 01 32 16 – CONSTRUCTION PROGRESS SCHEDULE

PART 1 **- GENERAL**

1.1 DESCRIPTION:

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. Within fifteen (15) days after award of the Contract, submit to the Architect estimated construction progress schedule for the Work, with sub schedules of related activities essential to its progress. Submit revised progress schedules periodically, and with monthly Applications for Payment.

1.2 FORMAT

A. Bar Chart or CPM Schedule: Prepare Progress Schedule as a horizontal bar chart with separate bar for each major portion of Work or operation, identifying first work-day of each week or as a network analysis system using the critical path method, as outlined in The Associated General Contractors of America (AGC) publication "The Use of CPM in Construction - A Manual for General Contractors".

B. Sequence, Scale and Size: Provide listing in the chronological order of the start of each item of Work. Prepare at a scale to provide space for notations and revisions. Make sheet size appropriate to the size of the project, in multiples of 8-1/2 x 11 inches.

1.3 CONTENT:

A. General: Show complete sequence of construction by activity, with dates for beginning and completion of each element of construction. Coordinate content with Schedule of Values specified in Division 1.

B. Phases: Identify work of separate stages and other logically grouped activities. Provide sub-schedules for each stage of Work as required in Division 1 summary of work. Provide sub-schedules to define critical portions of the entire Schedule.

C. Items of Work: Identify each item by specification Section number. Show accumulated percentage of completion of each item, and total percentage of Work completed, as of the first day of each month.

D. Required Submittals**:** Provide separate schedule of submittal dates for shop drawings, product data, and samples, and dates reviewed submittals will be required from Architect/Engineer. Indicate decision date for selection of finishes or products.

1.4 REVISIONS TO SCHEDULES:

A. Indicate progress of each activity to date of submittal, and projected completion date of each activity. Identify activities modified since previous submittal, major changes in scope, and other identifiable changes. Provide narrative report to define problem areas, anticipated delays, and impact on Schedule. Report corrective action taken, or proposed, and its effect.

PART 2 **- PRODUCTS**
Not Used

PART 3 - **EXECUTION**

3.1 Submittals: After review, resubmit required revised data within ten (10) days. Submit revised Progress Schedules with each Application for Payment. Provide the number of opaque reproductions which General Contractor requires, plus two (2) copies which will be retained by the Architect and Owner.

3.2 Distribution**:** Distribute copies of reviewed Schedules to project site file, Subcontractors, suppliers, and other concerned parties. Instruct recipients to promptly report, in writing, problems anticipated by projections indicated in Schedules.

END OF SECTION 01 32 16

SECTION 01 33 00 – SUBMITTAL PROCEDURES

PART 1 **- GENERAL**

1.1 WORK INCLUDED

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. Perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Ensure that specified products are furnished and installed in accordance with design intent by following procedures established herein for advance submittal of design data for its review by the Architect and their Engineers and consultants.

a. Refer to Division 1 for sustainability, commissioning, and O&M Manual submittal requirements.

C. The following forms are included within the scope of this specification section, and shall be used as needed and/or required:

1. Construction:

a. Submittal Cover Sheet

1) General Contractor shall fill in and provide with all submittals including proper numbering and subsequent numbering.

1.2 QUALITY ASSURANCE

A. Construction

1. Coordination of submittals:

a. General Contractor shall:

1) Prior to each submittal, carefully review and coordinate all aspects of each item being submitted.
2) Verify that each item of the submittal conform in all respects with the specified requirements.
3) Place their stamp and signature on each submittal, which shall certify that required coordination of all items has been performed and that the submittal is complete.
4) Make no changes to any submittal after it has been reviewed and the equipment or materials shall not deviate in any way except with written approval by the Architect. Fabrication or other work performed in advance of approval shall be done entirely at the General Contractor's risk.
5) Make it their responsibility to ensure there is no conflict with other submittals and to notify the Architect in any case where the General Contractor's submittal may concern work by another General Contractor or the Architect.

a) The General Contractor is solely responsible for coordination of submittals among all related crafts performing the Work.

b) The General Contractor shall verify that their Sub-Contractors' submittals are complete in every way and meet the requirements of the Contract.

b. The review of the General Contractor's submittals shall not relieve the General Contractor of responsibility for any error or of any obligation for accuracy of dimensions and details, for agreement with and conformity to the Contract, or responsibility to fulfill the Contract as prescribed. Nor shall such review be considered as approval of any deviation or conflict unless the Architect has been expressly advised of the same as set forth immediately above, and the Architect has expressly approved such deviation or conflict.

c. Minimum requirements for submittals are contained in these Specifications. Additional and/or project-specific requirements may be contained in the Contract. The General Contractor is responsible for identifying and providing all required submittals.

1.3 INFORMATION PROVIDED BY DESIGN TEAM

A. PDF format finish drawing files of site, floor and/or roof plans will be provided to General Contractor by Architect using the following process:

1. Written request for specific plans shall be submitted to Architect
2. Upon receipt of request, Architect will issue Electronic File Waiver to General Contractor to be signed and returned.
3. Upon receipt of signed Waiver, Architect will issue requested files via email or our FTP Site (Newforma Information Exchange) to General Contractor who will distribute as needed to their Subcontractors.

B. CAD base files may be provided to General Contractor by Architect using the following process:

1. Written request for specific plans shall be submitted to Architect.

a. CAD files which will be made available upon request: Floor Plans, Roof Plans, Ceiling Plans, and Exterior Building Elevations.
b. Details / Detail sheets will not be made available.

2. Upon receipt of request, Architect will issue Electronic File Waiver to General Contractor to be signed and returned.
3. Upon receipt of signed Waiver, Architect will issue requested files via email or our FTP Site
4. (Newforma Information Exchange) to General Contractor who will distribute as needed to sub-contractors. Sub-contractors shall sign and return waiver to General Contractor prior to being issued the CAD files. Copies of the sub-contractor signed waivers shall be forwarded to Architect for their records.

PART 2 **- PRODUCTS**

2.1 SUBMITTALS / SHOP DRAWINGS

A. Construction:

1. General

a. Shop drawings shall be submitted with sufficient turn-around time to allow adequate time for review and re-submittal and re-review as needed.

1) The General Contractor is solely responsible for monitoring the timing of submittals as related to the Construction Schedule, and delivery to the Architect for review.
2) Reviewed submittals will be returned to the General Contractor via email or Newforma Information Exchange.
    a) One hard copy of reviewed full size shop drawings (as needed) will be returned via overnight courier or other physical delivery method.
3) No work shall proceed without prior review of shop drawings.
    a) Copies of all reviewed shop drawings shall be maintained on file at the job site at all times.
4) No materials or equipment associated with shop drawings requiring review shall be delivered to the job site or installed without Architect's and their Engineer's review.
5) Delay in work caused by late submittals, proceeding with work using un-reviewed shop drawings, or from the necessity of resubmittal shall not affect the contract terms of payment or time.

b. Format
    1) Distribution:
        a) All electronic submittals shall be submitted to the Architect by email or thru project management program/website, as directed by the Architect.
            i. If required otherwise by Owner, submittals could also be required to be submitted via email or another process to Owner.
    2) Electronic:
        a) All submittals – drawings and other content shall be submitted to Architect in PDF format.
            i. One PDF file, which shall include the submittal cover sheet and all submittal pages, shall be provided per Submittal.
            ii. One submittal shall be provided per specification section.
                1 Separate submittals for individual components/items within a specification section will not be accepted.
            iii. If required otherwise by Owner submittals could also be required to be submitted via email or another process to Owner.
    3) Hard copies (Structural Steel, Storefront/Window Wall, or other large-format shop drawings only):
        a. Printed drawings shall be provided when requested by the Architect.
            1. Quantity: Two
        b. Drawing sizes shall be full size for all plans and detail sheets, 30 x 42 unless approved otherwise by Architect.
c. Material samples:
    1) Samples shall be submitted via overnight courier or other physical delivery method.

2) Number of samples submitted shall be: 4 minimum

a) (4) Four samples includes one for Architect, one for Owner, one for General Contractor and one for subcontractor**.**

i. General Contractor shall provide additional samples if they need ones for others not herein listed.

b) Physical samples are required to be provided for any product review which includes color selection or review; color selection/review will not be made from digital files.

B. Submittal package:

1. General:

a. Each page in submittal and all samples shall bear the Submittal Number, in the format herein indicated.
b. A Stamp and signature shall appear on each submittal issued by General Contractor to signify they have provided an initial review to insure submittal is in compliance with contract documents and specifications, change orders, RFI's, etc. and acceptable for distribution. Submittals which do not conform to this procedure will be returned un-reviewed.
c. Unless otherwise noted within individual specification sections, all portions or items required for the submittal of a section shall be submitted simultaneously in one submittal package under one submittal number. Submittals which do not conform to this procedure will be returned to General Contractor un-reviewed.
d. Certain products which work as assemblies or which need to be coordinated, but which are specified under separate specification sections, will be required to be submitted concurrently; refer to the individual specification sections for additional information as to where this condition will apply. Submittals which do not conform to this procedure will be returned to General Contractor un-reviewed.

2. The following items shall be required in all submittal packages:

a. Cover Sheet Transmittal Form

1) As herein supplied or containing the same information and provided by General Contractor.

b. Deviation Request Form if applicable

1) This shall include marked up copy of original Specification section with all areas, items, etc. that deviate from what is being submitted.

3. When identified within a specification section, the following items, as defined below, shall be included in the submittal package:

a. Manufacturer Product & Technical Data

1) Manufacturer's data sheets containing product description, physical properties, performance characteristics, VOC Compliance (for items subject to VOC restrictions to meet CalGreen and LEED requirements), and testing compliance references.

2) Product Data sheets should be annotated with the specific specification section and line item for which the product is being proposed.

b. Manufacturer MSDS Sheets

1) Manufacturer's current Material Safety Data Sheet,

c. Manufacturer Installation Instructions

1) Document including manufacturer's recommended preparation, installation and protection procedures.

d. Manufacturer and/or Contractor Warranty

1) Preliminary copy of manufacturer's or installer's additional warranty showing compliance with warranty requirements within a specification section.

e. Installer / Applicator Qualifications and References

1) List of Projects meeting criteria indicated in specifications, along with contact names, phone numbers and email addresses for use by Architect and Owner.

f. Manufacturer Approved/Trained/Certified Installer/Applicator

1) Copy of certificate, or letter from manufacturer showing compliance with criteria indicated in specifications.

g. Manufacturer Certifications

1) A certificate of compliance from recognized independent testing laboratory, regarding material requirements specified.

h. Manufacturer Test Reports

1) Test reports complying with specific requirements identified in each applicable Specification Section.

i. Weld Procedures

1) Document showing all weld types, materials and procedures applicable to the project.

j. Mix Designs

1) All concrete mix designs proposed for use on the project, stamped by a licensed Civil Engineer, for review and approval; include test data used to establish proportions.

k. Shop Drawings

1) Shop drawings shall include, but not be limited to:

a) Dimensioned and noted plans, elevations, sections and details as required to show all proposed construction; highlight those items which deviate from drawings and those which are added or deleted items.
b) Other items as noted in each specific Specification Section.

l. Engineering Calculations

1) When required by specification section, provide engineering calculations, stamped and signed by a Civil Engineer licensed in the State of California.

m. Panel Lifting Drawings

1) When required by specification section, provide engineered panel lift drawings and details, stamped and signed by a Civil Engineer licensed in the State of California.

n. Isometric Drawing

1) 3-dimensional drawing of structural system.

o. Samples and Mockups

1) Three (3) minimum physical samples of specified products which illustrate materials, color, patterns, equipment, workmanship, etc. and which establish standards by which product(s) and/or work will be judged.

a) Sizes shall be of sufficient size to clearly illustrate functional characteristics of product and material and shall confirm to the list below unless otherwise noted within a specific Specification Section:

i.	Flat or Sheet Products:	Minimum 12"x12" square, maximum 24"x24"
ii.	Linear Products:	Minimum 12", maximum 24" long
iii.	Bulk Products:	Minimum one pint, maximum one gallon
iv.	Tile:	Full set to represent each color / color range
v.	Carpet:	Size to show complete pattern

b) Quantity shall be sufficient to clearly illustrate the full range of finish, color, texture and pattern of the specified product.

i. When an exact finish, color, pattern, or texture is not indicated in the Contract Documents, the submittal shall include the manufacturer's choice of colors for Architect's review and selection.

2) When required by specifications, erect a mockup at Project site at location acceptable to Owner and Architect.

a) Mock up shall be either a "Product" mock-up or an "Assembly" mock-up, refer to individual specification sections for specific requirements.
b) Construct the mockup complete, including work of all trades required in finished work.
c) Architect and Owner shall decide if mockup will be part of finish work.

i. Items and assemblies which will be covered up by finish materials shall be separate and not part of finished building.

p. Other:

1) As noted and defined within individual Specification Sections.

C. The following items shall be required to be submitted as part of Project Closeout; refer to Division 1 project close-out requirements for additional information.

1. Operation & Maintenance Manuals
2. Warranties
3. Extra Material / Spare Parts
4. Training Requirements

D. Deferred Submittals

1. The deferred submittals as indicated in contract documents and/or required by agencies shall be submitted to the appropriate agency by the General Contractor.
2. General Contractor shall provide complete coordination with all agencies.
3. The deferred submittals submitted to the agencies shall be approved by the Agencies Having Jurisdiction prior to purchase, fabrication and construction of said product/material.

E. Requirements for Different manufacturer and/or different Subcontractor.

1. The General Contractor shall provide re-submittal if product and/or Subcontractor is requested to be changed at General Contractor's discretion.
2. Re-submittal initiated by the General Contractor shall not be acceptable unless authorized by the Architect, and such authorization shall include agreement by the General Contractor to pay Architect for their time to review new submittal.
3. Fee for this review shall be $350.00 per hour and payable upon Architect's completion of this review.)

F. Requirements For Commissioning

1. Normal Submittals

a. The Commissioning Agent will review normal General Contractor submittals applicable to systems being commissioned for compliance with commissioning needs concurrently with A/E reviews.

2. Data for Commissioning

a. The Commissioning Agent will identify all specific information needed about each piece of commissioned equipment or system.
b. The General Contractor will include this information along with their normal submittals or include the required information with additional Commissioning submittals.
c. The information requested will typically include detailed manufacturer installation and start-up, operating, troubleshooting and maintenance procedures, full details of any required tests, fan and pump curves, full factory testing reports, and full warranty information, including all responsibilities of the Owner to keep the warranty in force clearly identified. In addition, the installation and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted for review by the Commissioning Agent.
d. The Commissioning Agent may also request further documentation necessary for the commissioning process, refer to Division 1 for commissioning requirements.
e. The General Contractor may be required to provide this data prior to normal submittals.

PART 3 **- EXECUTION**

3.1 SUBMITTAL SUBMISSION REQUIREMENTS

A. Within 10 business days following the Notice to Proceed, the General Contractor shall submit a Schedule of Submittals showing the anticipated order and number of submittals and the anticipated dates the submittals will be provided for Architect's review.

B. Submittals shall be submitted to Architect after Notice to Proceed and at the earliest possible time to allow the most time possible for the Architect's review, processing, routing and any subsequent resubmittals needed.

1. Standard turn-around for most submittals shall be 10 business working days, excluding weekends and holidays.

a. Submittals for items such as Structural Steel, Storefront, Window Wall and Flashing may take considerably longer than 10 business working days.
b. If a significant number of submittals are provided by General Contractor to Architect at one time, discussions between General Contractor and Architect will determine submittal review priorities as standard 10 business working day turn-around times may not apply.

C. Submittal Routing

1. The time necessary for physical routing via: mail, delivery service, etc. including the day(s) sent and the day(s) received shall not be included in the review time by the Architect and/or their Consultants.

D. All submittals shall be accompanied by letter of transmittal addressed to Architect and include a Submittal Cover Sheet.

1. Cover sheet shall include Architect's project number, Project name, General Contractor's company name, subcontractor's company name and submittal number formatted as specified below.
2. Cover sheet shall include index of items submitted, properly identified with Architectural Document Drawing Numbers, etc.

E. Submittal Numbering

1. Indicate Submittal section, number and revision number, in that order.
2. Numbering examples

a. First submittal for a given section:

1) First Submittal

Section	Number	Revision
03 30 00	01	00

2) Second Submittal

Section	Number	Revision
03 30 00	01	01

3) Third Submittal and not requiring a resubmittal

Section	Number	Revision
03 30 00	01	02

Note: The submittal number must stay the same for all subsequent resubmittals of a submittal package. The only number that changes is the Revision number.

b. When allowed by the Architect, a subsequent submittal for same section number but different item would look like this:

1) First initial Submittal

Section	Number	Revision

03 30 00	02	00

2) Second Submittal

Section	Number	Revision
03 30 00	02	01

3) Third Submittal and not requiring a resubmittal

Section	Number	Revision
03 30 00	02	02

F. Architect shall review submittals for conformance with design concepts of project and review by Architect covers only such conformance.

1. Effort will be made by Architect to discover any errors, but responsibility for accuracy and correctness of all submittals shall be the General Contractor's.

G. Review of submittals will be general and shall not relieve General Contractor from responsibility for proper fitting and construction of Work, nor from furnishing materials and work required by Contract, which may not be indicated on submittals when reviewed.

H. No portion of Work requiring submittals shall be commenced until Architect has reviewed submittal.

1. All such portions of Work shall be in accordance with reviewed submittals.

3.2 SEQUENCE OF SUBMITTALS

A. FIRST SUBMITTAL

1. The General Contractor shall provide first submittal package review by Architect and their Consultants.

a. Unless otherwise noted within individual specification sections, all portions or items required for the submittal of a section shall be submitted simultaneously in one submittal package under one submittal number. Submittals which do not conform to this procedure will be returned un-reviewed.
b. Certain products which work as assemblies or which need to be coordinated, but which are specified under separate specification sections, will be required to be submitted concurrently; refer to the individual specification sections for additional information as to where this condition will apply. Submittals which do not conform to this procedure will be returned to un-reviewed.

B. FIRST RESUBMITTAL (Second overall submittal)

1. The General Contractor shall submit a modified submittal based upon comments derived from "First Submittal."

a. Resubmittals shall address all comments from the Architect, and their Consultants. Resubmittals shall consist of only those portions of the original submittal that have been returned and marked "REVISE AND RESUBMIT" or "REJECTED" and for which the resubmittal is required.
b. Resubmittal of Shop Drawings necessitated by required corrections shall not be a cause for extension of time. The General Contractor shall direct specific attention in writing or

on resubmitted Shop Drawings, Product Data or Samples, to revisions other than the corrections requested on previous submittals.

c. Revised submittal shall maintain same products and manufacturers from "First Submittal" unless requested otherwise by Architect.
d. The first resubmittal review by Architect shall be deemed to be the last. If subsequent submission is required for this specific item, it is due to General Contractor's failure to provide an accurate resubmittal. In this case, the Architect shall consider review of the second resubmittal as an additional service.

    1) The General Contractor is responsible for the Architect's review costs for each resubmittal in excess of the first resubmittal. These costs will be back charged to the General Contractor by the Owner.

C. SECOND RESUBMITTAL (Third overall submittal)

1. The General Contractor shall provide this "Second Resubmittal" only if requested by Architect and/or Architect's consultant.
2. If this "Second Resubmittal" is initiated by the General Contractor, it shall not be acceptable unless authorized by the Architect, and such authorization shall include agreement by the General Contractor to pay Architect for their time to review resubmittal.

    a. A retainer of $750.00 shall be paid prior to Architect's review.
    b. A fee for this review shall be at $250.00 per hour and payable upon Architect's completion of this review.)

END OF SECTION 01 33 00

SECTION 01 41 00 – REGULATORY REQUIREMENTS

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. This section and related attachments are for general use and specific use as herein indicated, as herein specified and as necessary to complete the work required by project conditions, including but not limited to:

1. References to:

a. Building Codes and Regulations.

1) All construction shall be in accordance with:

a) All applicable codes & all local regulations & local agencies having jurisdiction.
b) The Americans with Disabilities Act.
c) State and Federal Regulations and Agencies having jurisdiction.

C. The General Contractor shall obtain and maintain at the project site a copy of the referenced codes as deemed necessary to complete the work.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

1. Part 1 – California Administrative Code - (CAC)
2. Part 2 - Volume 1 & 2 - California Building Code – (CBC)
3. Part 3 – California Electrical Code – (CEC)
4. Part 4 – California Mechanical Code – (CMC)
5. Part 5 – California Plumbing Code – (CPC)
6. Part 6 – California Energy Code –(CEC)
7. Part 7 – (No longer published, refer to Title 8)
8. Part 8 – California Historical Building Code
9. Part 9 – California Fire Code (CFC)
10. Part 11 – California Green Building Standards Code
11. Part 12 – California Referenced Standards Code

B. Current California Code of Regulations (CCR), Office of Administrative Law www.oal.ca.gov/CCR.htm

1. Title 8, CCR, Industrial Regulations, Subchapter 6. Elevator Safety Orders
2. Title 19 CCR, Public Safety

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. NFPA: Including, but not limited to the following; editions as listed, unless jurisdiction recognizes another edition:

1. 2022 NFPA 10 Standard for Portable Fire Extinguishers
2. 2022 NFPA 12 Standard on Carbon Dioxide Extinguishing Systems
3. 2022 NFPA 12A Standard on Halon 1301 Fire Extinguishing Systems
4. 2022 NFPA 13 Installation of Sprinkler Systems
5. 2020 NFPA 13E Recommended Practice for Fire Department Operations in Properties Protected by Sprinkler and Standpipe Systems
6. 2024 NFPA 14 Installation of Standpipe, Private Hydrant and Hose Systems
7. 2022 NFPA 15 Standard for Water Spray Fixed Systems for Fire Protection
8. 2024 NFPA 17 Dry Chemical Extinguishing Systems
9. 2024 NFPA 17A to a UL 300 for Class I Hood Fire Suppression System. (Wet Chemical Extinguishing Systems)
10. 2021 NFPA 18 Standard on Wetting Agents
11. 2022 NFPA 18A Standard on Additives for Fire Control and Vapor Mitigation
12. 2022 NFPA 20 Installation of Stationary Pumps for Fire Protection
13. 2023 NFPA 22 Water Tanks for Private Fire Protection
14. 2022 NFPA 24 Installation of Private Fire Service Mains and Their Appurtenances
15. 2023 NFPA 25 Inspection, Testing, Maintenance of Water-Based Fire Protection Systems
16. 2024 NFPA 30 Combustible and Flammable Liquids Code
17. 2024 NFPA 30A Code for Motor Fuel Dispensing Facilities and Repair Garages
18. 2022 NFPA 72 National Fire Alarm Code
19. 2024 NFPA 75 Standard for the Protection of Information Technology Equipment
20. 2024 NFPA 76 Standard for the Fire Protection of Telecommunications Facilities
21. 2022 NFPA 80 Standard for Fire Doors and Other Opening Protectives
22. 2022 NFPA 80A Recommended Practice for Protection of Buildings from Exterior Fire Exposures
23. 2023 NFPA 85 Boiler and Combustion Systems Hazards Code
24. 2023 NFPA 86 Standard for Ovens and Furnaces
25. 2024 NFPA 90A Standard for the Installation of Air-Conditioning and Ventilating Systems
26. 2024 NFPA 90B Standard for the Installation of Warm Air Heating and Air-Conditioning Systems
27. 2024 NFPA 101 Life Safety Code
28. 2022 NFPA 110 Standard for Emergency and Standby Power Systems
29. 2022 NFPA 2001 Clean Agent Fire Extinguishing Systems

1.3 DATES OF CODES

A. Except where a specific date of issue is mentioned herein, references to specifications issued by the above named and other organizations shall mean the edition current on the date of the issuance of project permit.

1.4 MISCELLANEOUS REQUIREMENTS

A. OSHA Requirements

1. General Contractor must comply with all standards and requirements of the occupational safety and health administration.

a. Notify Owner immediately of items not complying.

1.4 DATES OF STANDARDS

A. Except where a specific date of issue is mentioned herein, references to specifications issued by the above named and other organizations shall mean the edition current on the date of the issuance of project permit.

1.5 DEFINITIONS

A. The following are used in specifications and documents in addition to Division 1 as herein defined:

1. Accepted Equal or Accepted Equivalent:

    a. Reviewed and accepted by the Architect as being equal in quality, utility and appearance and within the Design Intent of the documents, but shall not in any way change or delete the original intent of the documents.

2. Approved:

    a. As accepted by the Architect, (shop drawings & Submittals shall be reviewed for design intent but shall not be approved.

        1. Does not include review for items changed but not specifically noted by Contractor.

3. Approved Equal / Approved Equivalent:

    a. As accepted by the Architect, (shop drawings & Submittals shall be reviewed for design intent but shall not be approved.

        1. Does not include review for items changed but not specifically noted by Contractor.

4. As Required:

    a. As required by referenced standards, existing project conditions, Contract Documents or regulatory requirements.

5. Directed:

    a. As instructed by the Architect and/or Owner in writing.

6. Documents:

    a. Includes:

        1. Drawings
        2. Project Manual/Specifications
        3. Owner/Contractor Contract
        4. Addendums
        5. Supplemental Documents in accordance with project manual / specifications.

7. Drawings:

    a. Drawn representation of the scope of work.

8. Furnish (materials):

    a. To supply and deliver to the project site in new condition ready for installation and in operable and new condition.

9. Geotechnical Engineer

    a. A Civil or Geotechnical Engineer licensed in the State of California, who is retained and paid by the Owner to perform services as specified in the Contract Documents.

10. Indicated:

    a. As shown, noted on the drawings and/or specifications or scheduled in the drawings.

11. Install (service or labor):
    a. Anchor, fabricate, connect and/or fasten in place and adjust for use and/or place or apply in proper position & location and/or establish in place for use or service.
    b. To place in final position, complete, anchored, connected, and in operable condition with respect to required codes and/or governing agency requirements.
12. Project Manual:
    a. Is the volume which includes the; Bidding Requirements, Contract Forms, Conditions of the Contract and the Specifications.
13. Provide:
    a. To furnish, install and fabricate complete.
14. Shall:
    a. To be construed as 'mandatory'.
15. Site:
    a. Area to be occupied by the Project.
    b. Any portion directly outside exterior face of exterior walls.
16. Similar:
    a. Shall be interpreted in its general sense and not as necessarily meaning identical, and all details shall be worked out in relationship to their location and to their connection with other parts of the work.
17. Owner:
    a. The Owner of the project, or their authorized agent / on-site representative.
18. Testing Agency:
    a. An organization other than the Testing Laboratory retained and paid by the Contractor to perform tests and reports on whether or not designated items of Work comply with the requirements of the Contract Documents.
19. Testing Laboratory:
    a. An independent commercial testing organization, retained and paid by the Owner to perform tests and report on Work as specified in the Contract Documents, and as otherwise required.
        1. General Contractor shall pay for Testing when they have not provided the appropriate time prior to testing being required to be done.

1.6 ABBREVIATIONS

A. The following is a reference list including basic abbreviations included in Project manual and/or drawings including, but not limited to;
    1. Refer also to drawings and individual specifications for additional abbreviations.

1.7 MISCELLANEOUS REQUIREMENTS

A. Prior Use or Occupancy

1. Refer to Division 1 for closeout submittal procedures.

B. Lines &Levels

1. Before starting work, locate all general reference points.
    a. Take such steps as are necessary to prevent their dislocations or destruction.
    b. If disturbed or destroyed, replace as directed.
    c. Employ competent surveyor to lay out work; be responsible for its accuracy.

C. As-Built – Record Drawings

1. Scope of contractors responsibilities, refer to, but not limited to:
    a. Individual specification sections.
    b. Division 1 – General Requirements
    c. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    d. Refer to Division 1 for closeout submittal procedures.

D. Workmanship

1. Refer to individual specification sections
2. Refer to Division 1 general requirements
3. Refer to Division 1 for quality control requirements.
4. All work involved in this project shall reflect the best possible workmanship.
    a. Any work which is not of the best workmanship shall be corrected or redone as is required for approval by the Architect, at no additional cost to the Owner.
5. No trade should apply any finishes or materials to any surfaces until they feel that the surfaces are ready to receive the finish or material and produce the best possible workmanship.
    a. Any trade who does apply the finish or materials to surfaces that are not ready shall remove and correct their work as well as prepare the existing surfaces involved at no additional cost to the Owner.

E. Vendor and Sub-Contractors

1. General Contractor shall provide Architect with a complete list of subcontractors and principal vendors including addresses and telephone numbers. List each under heading of subcontractor category and/or vendor type.
2. The General Contractor is responsible for determination and coordination of union and/or non-union project affiliation.
    a. General Contractor shall prepare and adhere to the Contract Construction Schedule based on required Contract time of completion. In the event of termination by parties hereto, all work performed and materials furnished shall be fairly allocated and apportioned in accordance with good construction practices.

F. Termination by Owner
    1. Refer to but not limited to; General Conditions.

G. Warranties:
    1. Refer to individual specification sections.
    2. Refer to Division 1 for closeout submittal procedures.

H. Maintenance Manuals:
    1. Refer to individual specification sections.
    2. Refer to Division 1 for closeout submittal procedures.

I. Other items not herein listed;
    1. Refer to but not limited to:
        a. Refer to Division 1 for closeout submittal procedures.

PART 2 **- PRODUCTS**
Not used

PART 3 **- EXECUTION**
Not used

END OF SECTION 01 42 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 01 45 00 – QUALITY CONTROL

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with all trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Control quality of installation of materials & systems.
2. Control quality of construction.
3. Control quality of site demolition.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission.

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission.

E. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction:

a. All occupancy types.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.
5. Comply with requirements of specific Specification Section and/or Drawings.

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

1. Coordinate with each specific Specification Section.

B. Refer to Division 1 for sustainability requirements.

C. Mock-ups:

1. Shall be reviewed and approved in field by Architect.

1.5 QUALITY ASSURANCE

A. Refer as herein indicated and as indicated in each specific Specification Section.

B. Hazardous materials:

1. It is illegal to manufacture, sell or use products containing asbestos in the United States.

a. These specifications rely on the product manufacturers and distributors to insure that the products they manufacture and/or distribute comply with all statutes and regulations governing their products.
b. It is understood that there has not been any testing or inspection done to confirm any hazardous materials of the specified products to confirm compliance with these statutes and regulations by the Architect.
c. Therefore, these specifications are done not knowingly including any specified products or materials which contain asbestos and/or any other hazardous material.
d. Any materials suspected of containing hazardous materials shall be brought to the attention of Owner.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Refer as indicated in each specific Specification Section.

B. Field-verify that all components, substrates, backing, mock-ups, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times during testing.

1.9 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Project construction.
2. Project site demolition.
3. Testing & inspection by others.

B. Related Sections include, but are not limited to the following:

1. Division 1.
2. All Drawings and Specification Sections.

1.10 SEQUENCING AND SCHEDULING

A. General Contractor shall schedule all testing & inspections and coordinate attendance by Architect, Owner, and others.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. General Contractor shall coordinate slab vapor emission and PH testing of concrete floors and ensure that concrete treatment within criteria of finish flooring is complete prior to the installation of finish flooring as herein specified; refer to Section 07 28 00 – Concrete Slab Vapor Emission and Alkalinity Control Treatment.

1.11 TESTING AND INSPECTIONS

A. Testing required by Testing Agent / Testing Agency shall be done in accordance with Division 1 Testing Laboratory service requirements and as indicated in the Contract Documents.

B. Testing required by General Contractor shall be done in accordance with this Section and each specific Specification Section requiring field testing and/or inspection.

C. Geotechnical Engineer:

1. Services of a Geotechnical Engineer are required for Work specified in various individual Specification Sections and/or as indicated in drawings and Division 1 Testing Laboratory service requirements.

1.12 GENERAL SYSTEM DESCRIPTION

A. Observation and Supervision:

1. The Architect and Owner or their appointed representatives will review the Work for design intent at appropriate stages, and the Contractor shall provide facilities and access to the Work at all times as required to facilitate this review.

a. Owner:

1) The Owner shall have access to the Work wherever it is in preparation or progress for ascertaining that work is in accordance with the Contract Documents. The General Contractor shall provide facilities, hard hats, and access and shall provide assistance for sampling or measuring materials.
2) The Owner will notify the Architect and Engineers of Record, and call to the General Contractor's attention all observed failure of work and/or material not conforming to Contract Documents.

b. General Contractor:

1) Shall comply with all requirements of the Contract Documents (Drawings, Specifications, Owner's General Conditions and Owner–General Contractor Contract). He shall supervise and direct the Work and maintain a competent superintendent on the job who is authorized to act in all matters pertaining to the Work. The General Contractor's superintendent shall also inspect all materials as they arrive for compliance with the Contract Documents. He shall reject defective work or materials immediately upon performance or delivery.

B. Testing Laboratory services:

1. Refer to Division 1 for Testing Laboratory service requirements.

C. Field testing not done under Division 1:

1. By General Contractor as required per Drawings and or Specifications.

D. Inspections:

1. Done by product and/or system manufacturer's approved representative for products/systems requiring Inspections.

E. Observations:

1. Done by product and/or system manufacturer's approved representative for products/systems requiring observations for general compliance.

F. Mock-ups:

1. Reviewed for acceptance by Architect and Owner as indicated in specific Specification Sections.

G. Mock-ups

1. Reviewed for acceptance by Architect and Owner as indicated in specific Specification Sections.

1.13 MAINTENANCE

A. Refer to each specific Specification Section for which products and/or assemblies will require follow-up maintenance and/or adjustment after project is complete and has been occupied for a given period of time.

PART 2 **– PRODUCTS**
Not Used

PART 3 **- EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with General Contractor to rectify.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. General Contractor shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 TESTING, INSPECTIONS AND OBSERVATIONS

A. General

1. Product manufacturer inspections and observations shall be done by authorized representative & observed by General Contractor.
2. The General Contractor shall be responsible for scheduling all required tests and inspections.
    a. Notify the Owner and Architect 48 hours in advance of scheduled performance of any work requiring testing or inspection.
3. The General Contractor shall provide access to Work to be tested, facilitate inspections, observations, tests and furnish incidental labor and facilities.
4. The General Contractor shall orchestrate inspections of work performed, and construction of mock-ups with Architect and Owner.
5. Re-Inspection & Testing
    a. The General Contractor shall pay for:
        1) Tests of materials, inspections, and certifications required by Specifications.
        2) Testing, adjusting, and balancing of equipment and systems required by Specifications.
        3) Re-tests or re-inspections, if required, and tests or inspections required to established Contractor error or missing test data required by Specifications.
        4) Uncovering of work in accordance with Division 1 cutting and patching requirements.
        5) Additional tests directed by the Architect or Owner which establish that materials and installation do not comply with the Contract Document.
6. Testing & Inspection Reports and Certifications
    a. A copy of each General Contractor provided testing, inspection, observation report or certification shall be provided to each of the following:
        1) Owner
        2) Architect
        3) General Contractor

B. General Contractor testing shall be done in accordance with individual Specification Sections and manufacturer's requirements.

3.4 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. General Contractor shall keep the work areas in a clean and safe condition so their testing and inspection services do not interfere with the work of others.

C. General Contractor shall protect work and materials of others testing and protect the installed work and materials of other trades.

D. Perform testing in accordance with listed requirements, industry standards and also as indicated in drawings and other specification sections.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no cost to the Owner.

F. After completion of work in this section, remove all equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

END OF SECTION 01 45 00

SECTION 01 45 29 – TESTING LABORATORY SERVICES

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION:

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. Coordinate the work of this Section with General Contractor.

C. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Field inspections.
2. Field testing.
3. Laboratory testing.

D. Owner will employ and pay for services of an independent testing laboratory to perform specified testing unless otherwise specified to be performed and/or paid for by others.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction:

a. All occupancy types.

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society For Testing and Materials (ASTM), www.astm.org

1. ASTM – E329 Standards of Recommended Practice for Inspection and Testing Agencies for Concrete and Steel as used in Construction.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Comply with Building Code.
2. Job site inspections shall be done as herein specified.
3. Testing shall be done as herein specified.
4. Comply with requirements of specific Specification Section and/or Drawings.

1.4 SUBMITTALS

A. Testing Agent / Agency shall submit schedule list of all testing to Owner, Architect and General Contractor.

1.5 QUALITY ASSURANCE

A. Refer to Section 01 45 00 - Quality Control.

B. Testing Agent/Agency shall have been in business for five (5) years providing inspection services for projects of similar size and complexity.

C. Laboratory is not authorized to release, revoke, alter or enlarge on requirements of Contract Documents, or to perform any duties of General Contractor and/or Subcontractors.

1.6 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

1.7 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Construction by others.
2. Site demolition by others.
3. Testing by General Contractor.
4. Inspections by product/system manufacturers.

B. Related Sections include, but are not limited to the following:

1. Section 01 81 13 – Project Sustainability Requirements
2. Section 01 45 00 – Quality Control
3. Section 01 74 19 – Construction Waste Management and Disposal/Recycling

C. Related Documents include, but are not limited to the following:

1. Section 00 72 00 – General Conditions

1.8 SEQUENCING AND SCHEDULING

A. Schedule testing with General Contractor.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. General Contractor's Responsibilities

1. Refer to Section 01 45 00 Quality Control.

1.9 TESTING AGENT

A. Company: TBD

1. Address: TBD
2. Address: TBD
3. Website: TBD
4. Phone number: TBD

B. The Owner reserves the right to change testing laboratories if the need arises.

1.10 GENERAL SYSTEM DESCRIPTION

A. Testing and inspection performed by Testing Agent/Agency shall include, but not be limited to:

1. Refer to drawings and specifications.
2. Refer to Agency approved Special Testing and Inspections form.

3. Refer to Geotechnical Report
4. Roofing; refer to specification Section 07 54 00.

PART 2 **- PRODUCTS:**
Not Used

PART 3 **- EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which testing and inspection is to be performed.
2. Identify conditions detrimental to proper or timely completion of testing and/or inspection and coordinate with General Contractor to rectify.

3.2 COORDINATION

A. Refer to Section 01 31 13 – Project Coordination.

B. General Contractor shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades is ready for testing and/or inspection.

3.3 TESTING

A. General

1. Testing required by General Contractor shall be done in accordance with Section 01 45 00 - Quality Control and specific sections requiring field testing and/or inspection.
2. Testing Agent/Agency tests shall be in conformance with requirements of the Contract Documents.

    a. Refer to project Structural Tests as indicated in Contract Documents and approved Agency Special Inspections and Testing form.

3. Testing and inspection in connection with earthwork shall be under the direction of the Owner's consulting Geotechnical Engineer, referred to hereinafter as the "Geotechnical Engineer".
4. Testing and inspection of construction materials and workmanship shall be done by a qualified laboratory, referred to hereinafter as the "Testing Laboratory".

    a. The Testing Laboratory shall be under direction of a Civil Engineer registered in the State of California to oversee the work / items being tested and shall conform to, but not be limited to the requirements of ASTM E329, and shall be employed by the Owner.

B. Laboratory Duties:

1. General: Comply with ASTM E329 "Standards of Recommended Practice for Inspection and Testing Agencies for Concrete and Steel as Used in Construction". Cooperate with Architect, Engineer and Contractor; provide qualified personnel after due notice. Perform specified inspections, sampling and testing of materials and methods of construction. Verify compliance with specified standards. Ascertain compliance of specified materials with

requirements of Contract Documents. Promptly inform Architect and Engineer of observed irregularities or deficiencies of work or products.

2. Reports and Additional Testing:

    a. Submit one (1) pdf copies of each report each to the Owner, Architect and General Contractor.

C. Testing Laboratory:

1. Services of a Testing Agent / Agency are required for Work specified in various individual Specification sections and/or as indicated in drawings.
2. General Contractor's Responsibilities:

    a. Cooperate with Testing Laboratory personnel.
    b. Furnish copies of product test reports as specified.
    c. Furnish incidental labor and facilities:

        1) To provide access to Work to be tested.
        2) To obtain and handle samples at the Project site or at the source of the product to be tested.
        3) To facilitate inspections and tests.
        4) For storage and curing of test samples.

    d. Notify the Owner's Representative sufficiently in advance of operations to allow 48 hours minimum for Testing Laboratory assignment of personnel and scheduling of tests.
    e. If tests or inspections cannot be performed after such notice, reimburse the Owner for the Testing Laboratory personnel and travel expenses incurred.

D. Geotechnical Engineer:

1. Services of a Geotechnical Engineer are required for Work specified in various individual specification sections and/or as indicated in drawings.

3.4 PROTECTION AND CLEAN UP

A. Refer to Section 01 74 00 – Protection and Cleaning.

B. Testing agent/Agency shall keep the work areas in a clean and safe condition, so their testing and inspection services do not interfere with the work of others.

C. Testing agent/Agency shall protect work and materials of others testing and protect the installed work and materials of other trades.

D. Perform testing in accordance with listed requirements, industry standards and also as indicated in drawings and other specification sections.

E. In the event of damage, immediately notify the Owner.

F. After completion of testing and/or inspection remove all equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

END OF SECTION 01 45 29

SECTION 01 50 00 – TEMPORARY FACILITIES AND CONTROLS

PART 1 **- GENERAL**

1.1 WORK INCLUDED

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 General Requirements apply to the work of this Section.

B. The General Contractor is responsible for all costs associated with temporary utilities during construction.

C. Temporary facilities and controls required for this Work include, but are not necessarily limited to:

1. Temporary utilities including, but not limited to;

    a. Gas
    b. Water
    c. Electricity
    d. Telephone

2. Field office.
3. Sanitary facilities.
4. Fencing of construction area.
5. Protective fencing for existing vegetation
6. Parking of vehicles.
7. Egress plan.

1.2 RELATED WORK

A. Utility hookups: pertinent Specification Sections.

PART 2 **- PRODUCTS**

2.1 TEMPORARY UTILITIES

A. General: Furnish water, gas and electricity required during construction and extend temporary service lines to construction areas for use of all Subcontractors.

B. Temporary water:

1. General Contractor may connect a temporary line to the existing water service lines at the site.
2. The General Contractor shall be responsible to verify all existing conditions associated with a water connection.
3. Connections to existing water service lines shall be coordinated with and accepted by the Project Inspector.
4. Water used in construction must comply with Section 16 of the Standard Construction Specifications.

5. Provide ample supply of potable water for all purposes of construction at point convenient to Project. Pipe water from source of supply to all points where water will be required.
6. Provide sufficient hose to carry water to every required part of construction and allow use of water facilities to Subcontractors engaged on Work.

C. Temporary electricity:

1. The General Contractor shall arrange for and shall install power service from electrical service provider service lines, or shall provide a portable generator.
2. Electric service: Construct all temporary electric facilities and maintain in accordance with Division of Industrial Safety "Electrical Safety Orders" (ESO), Public Utilities Commission "Rules of Overhead Line Construction" (G.O. 95), and CAL-OSHA. Materials, devices and equipment used for these facilities shall be in good and safe condition but need not be new.

D. Temporary heating: Provide heat, ventilation, fuel and services as required to protect all work and materials and to keep humidity down to extent required to prevent corrosion of any metal and to prevent dampness or mildew which is potentially damaging to materials and finishes. In addition, provide heat and ventilation prior to and during following work operations:

1. Where applicable: At all times during placing, setting and curing of concrete, provide sufficient heat and protection to insure heating of spaces involved to not less than 50ºF.
2. From beginning of application of drywall and during setting and curing period, provide sufficient heat to produce temperature in spaces involved of not less than 55ºF.
3. For period of 7 days previous to placing of interior finish materials and throughout application of finish painting and laying of resilient flooring materials, provide sufficient heat to product temperature of not less than 60ºF.
4. After finishing trades are complete and until final acceptance of Work, provide temperature of not less than 60ºF.

E. Telephone:

1. Maintain telephone in field office for use by Architect and Owner as well as General Contractor.
2. Provide and pay for telephone installation and service for field office. Maintain service for duration of operations under this Contract. Provide gongs, horns or remote control devices so that telephones may be heard throughout construction site.
3. General Contractor shall not have access to phones on site and therefore, shall arrange for their own pager or portable phone if needed for on-site communication.

F. Fax Machine:

1. Maintain fax machine in field office for use by Architect and Owner as well as General Contractor.
2. Provide and pay for fax machine telephone service installation and service for field office. Maintain service for duration of operations under this Contract. Provide gongs, horns or remote control devices so that telephones may be heard throughout construction site.

2.2 FIELD OFFICE

A. General Contractor shall provide at least one temporary field office for use by himself, their Subcontractors, and the Architect.

2.3 SANITARY FACILITIES

A. The General Contractor will provide proper, adequate, sanitary toilet facilities for use of all workers employed on Project, in accordance with State and Local health departments.

2.4 TEMPORARY CONSTRUCTION, EQUIPMENT AND PROTECTION

A. Provide, maintain and remove upon completion of Work, all temporary rigging, trench plates, scaffolding, hoisting equipment, rubbish chutes, ladders, barricades, lights and all other protective structures or devices necessary for safety of workers and public property as required to complete all Work.

B. Walkways and barricades: Provide pedestrian walkway protection and wood barricades conforming to Jurisdiction standards and requirements.

C. Temporary fencing: Provide chain link fencing enclosures around unfenced areas of the site as required to protect pedestrians until project is complete.

D. Protection: Protect all workers and equipment from power lines and maintain safe distances and protective devices as required by Industrial Safety Commission and CAL-OSHA.

E. Temporary construction and equipment: All temporary construction and equipment shall conform to all regulations, ordinances, laws and other requirements of State and other authorities having jurisdiction, including insurance companies, with regards to safety precautions, operation and fire hazard.

F. Pumping: Provide and maintain pumping facilities, including power for keeping site, excavations and structures free of accumulations of water at all times, whether from underground seepage, rainfall, drainage or broken lines. Pond discharge to get rid of sediment prior to discharge into storm drain.

G. Damage or theft: Protect work and materials to be used on Project from damage or loss due to elements, theft, vandalism, malicious mischief, or other causes. General Contractor shall be held responsible for such damages or loss which he shall remedy at their expense.

H. Provide fencing to maintain means of egress in and out of building and site.

2.5 PARKING OF VEHICLES

A. General Contractor shall be responsible for job site vehicle parking of their Subcontractor's vehicles.

PART 3 **- EXECUTION**

3.1 MAINTENANCE AND REMOVAL

A. Maintain all temporary facilities and controls as long as needed for safe and proper completion of Work; remove all such temporary facilities and controls as rapidly as progress of Work will permit.

END OF SECTION 01 50 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 01 58 13 – TEMPORARY PROJECT SIGNAGE

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the job site for placement of temporary signage.

D. Wood framing, including posts, sheathing.

E. Finishing, including painting of substrate and letters and numerals for signage.

F. Framing hardware.

G. Concrete Footings with integral gravel base.

H. Disposal of sign assembly after Owner occupation of building.

1.2 QUALITY ASSURANCE

A. Lumber and plywood source quality control: Provide materials graded under one of the following:

1. Rules 17, Standard Grading Rules for West Coast Lumber, current edition - WCLIB.
2. Standard Grading Rules for Western Lumber, current edition - WWPA.
3. Plywood Specification and Grade Guide of American Plywood Association, current edition - APA.

B. Grade mark each piece of lumber. Marking must be done by recognized agency. Lumber Manufacturer's Association Certificates may be accepted in lieu of such grade and trademarks.

C. Plywood sheathing: Each panel shall be legibly identified as to type, grade and species by APA grade, comply with PS-1 (ANSI A199.1).

1.3 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. List of materials: Submit list of materials proposed to be used including posts, sheathing & hardware.

C. Submit: Shop drawings of sign & anchorage. Sign layout shall indicate character sizes, style & spacing, type.

1.4 PRODUCT HANDLING

A. Comply with pertinent provisions of Division 1 product delivery, storage and handling requirements.

B. Provide, ship to project site, and install.

PART 2 **- PRODUCTS**

2.1 FRAMING LUMBER

A. Lumber: Coast Region Douglas Fir (DF), unless otherwise noted. Lumber designated DF South by WWPA not acceptable. All lumber new with no re-use.

1. Grades not less than following:

a. Posts: No. 1, Pressure treated Douglas fir - free of heart center.
b. Plywood: Group II Exterior APA 303 Siding EXT, Smooth Face.

B. All wood other then plywood shall be pressure treated, per building code, Chapter 23 and shall bear an AWPB stamp for P.T.D.F.

1. Wood posts set into ground.

a. Treat all cut ends of P.T.D.F. with approved preservative.

2.1 ROUGH HARDWARE

A. FASTENERS: Galvanized for exterior use, in accordance with ASTM A153. Select fasteners for the fastening of the plywood substrate sign to the support posts.

1. Standard bolts and nuts: Carriage head type, ASTM A307, Grade A.
2. Plain washers: Round, general assembly grade carbon steel, FS FF-W-92.
3. Lock washers: Helical spring type carbon steel, FS FF-W-84.

2.2 SIGNAGE DESIGN

A. General

1. Size of sign panel: 4'-0" x ¾" thick x 8'-0" long
2. Supporting Posts: 4" x 4" x 10'-0"

B. Sign design:

1. General:

a. Refer to Drawings detail.

2. Characters:

a. Style: Helvetica
b. Type: Capitals
c. Border: Install characters, logos, etc. such that an equal clear border of 2" occurs around perimeter.
d. Character height::

1) Project Name: 4" tall x two lines & spaced to span sign width
2) Project Address: 3" tall x full width of sign less perimeter clearance
3) Owner, Architect & General Contractor name: 2" tall
4) Owner, Architect & General Contractor address: 1-1/2" tall

e. Line spacing:

1) 1" between name & address, type.
2) Equally spaced between Project name/address & Owner name/address, etc.

3. Color:

a. Background: TBD
b. Characters: Jet Black
c. Paint Type: Alkyd Enamel
d. Finish: High Gloss

PART 3 **– EXECUTION**

3.1 INSTALLATION

A. General:

1. Install posts straight, true, level, plumb, and place 4'-0" into 12" diameter x 3'-8" deep concrete footing. - extend 4" of post into clean gravel at base of footing.
2. Fasten sign panel to posts with (3) carriage bolts each post & spaced evenly from bottom of sign to top.
3. Install sign assembly such that top of posts are located 2" below top of sign panel & 2" measured from side of sign panel.

B. Bracing:

1. Provide temporary bracing sufficient to keep structure stable, plumb, and in line until completed.

END OF SECTION 01 58 13

THIS PAGE IS INTENTIONALLY BLANK

SECTION 01 66 00 PRODUCT DELIVERY, STORAGE AND HANDELING REQUIREMENTS

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Transport, deliver, handle and store materials and equipment at the site in a manner to prevent the intrusion of foreign matter or moisture, and to prevent damages. In all cases comply with:

1. Material and equipment manufacturer's instructions regarding temperature limitations.
2. Other environmental conditions, which are required to maintain the original quality of the materials and equipment.
3. Minimize packaging materials to maximum extent possible while still ensuring protection of materials during delivery, storage, and handling.

D. Packaging:

1. Provide packaged material in manufacturer's original containers with seals unbroken and labels intact until incorporating into the work.
2. Deliver materials in recyclable or in reusable packaging such as cardboard, wood, paper, or reusable blankets, which will be reclaimed by supplier or manufacturer for recycling.
    a. Reusable Blankets: Deliver and store materials in reusable blankets and mats reclaimed by manufacturers or suppliers for reuse where program exists or where program can be developed for such re-use.
    b. Pallets: Where pallets are used, suppliers shall be responsible to ensure pallets are removed from site for re-use or for recycling.
    c. Corrugated Cardboard and Paper: Where paper products are used, recycle as part of construction waste management recycling program, or return to material's manufacturer for use by manufacturer or supplier.
    d. Sealants, Paint, Primers, Adhesives, and Coating Containers: Return to supplier or manufacturer for re-use where such program is available.
3. Unacceptable Packaging Materials: Polyurethane, polyisocyanate, polystyrene, polyethylene, and similar plastic materials such as "foam" plastics and "shrink-fit" plastics.
4. Wrapped or bundled material shall bear the name of the manufacturer and the product.

E. Remove all damaged or otherwise unsuitable material and equipment promptly from the site.

F. Storing:

1. Delineate locations for lay down, recycling, and disposal areas; using paved areas for staging activities. Construction staging and materials storage will be at areas agreed with by Owner.
2. Locate storage piles, stacks or bins so as to avoid being disturbed and barricade to protect from damage of any kind.
3. Store all materials and equipment:

a. In accordance with manufacturer's instructions.
b. Above grade.
c. Properly protected from weather and construction activities.

G. Protection:

1. Protect all finished surfaces, including jambs and soffits of all openings used as passageways or through which materials and equipment are handled.
2. Protect all finished floor surfaces in traffic areas before moving any material and equipment over these finished surfaces.

H. Maintain clean and unmarred all finished surfaces to the date of acceptance. Repair of damage shall be made to the satisfaction of the Architect and Owner.

I. Consult individual specification sections for additional specific product handling and protection requirements.

J. Safeguards:

1. During construction General Contractor shall provide safeguards in accordance with, but not limited to CBC Chapter 33.

1.2 RELATED SECTIONS

A. Refer to Division 1 for construction waste management and disposal/recycling requirements.

B. Refer to Division 1 for sustainability requirements

PART 2 **- PRODUCTS**
Not Used

PART 3 **- EXECUTION**
Not Used

END OF SECTION 01 66 00

SECTION 01 71 23 – FIELD ENGINEERING

PART 1 - **GENERAL**

1.1 DESCRIPTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Provide and pay for field engineering services required for Project.

1. Survey Work required in execution of Project.
2. Land Surveyor, Civil, or other professional engineering services specified, or required to execute Contractor's construction methods.

C. Provide field staking of site improvements; identify existing survey reference points and property line corner stakes indicated on Drawings, as required.

D. Locate and be aware of all existing on-site utility lines and improvements.

E. Comply with all conditions of the Contract.

1.2 QUALIFICATIONS OF SURVEYOR OR ENGINEER

A. Qualified state registered professional engineer or registered land surveyor, acceptable to General Contractor, Owner and Architect.

B. A registered professional engineer of discipline required for specific service on Project, licensed in State of California.

1.3 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit name, address and California license of surveyor and professional engineer for Architect's and Owner's review.

C. At substantial completion of project, submit for review by the Owner and Architect, Certificate documentation to verify accuracy of field engineering work.

1. Submit certificate signed by registered engineer or surveyor certifying that elevations and locations of improvements are in conformance, or non-conformance, with Contract Documents.

a. If Contractor should fail to meet technical or design requirements embodied in this document and on the applicable plans, they shall make necessary readjustments until all work is deemed satisfactory as determined by the Architect and Owner.
b. No deviation from the specifications shall be made except upon written approval of the Architect and Owner.

PART 2 - **PRODUCTS**
Not Used

PART 3 - **EXECUTION**

3.1 SURVEY REFERENCE POINTS

A. Existing basic horizontal and vertical survey reference points for Project are those designated on Drawings.

B. Locate and protect survey reference points prior to staking site work, and preserve all permanent reference points during construction.

1. Make no changes or reallocations without prior written notice to Owner or Architect for review and interpretation.
2. Report to Owner when any reference point is lost or destroyed, or requires relocation because of necessary changes in grades or locations.
3. Require surveyor to replace Project survey reference points which may be lost or destroyed. Establish replacements based on original survey control.

3.2 PROJECT SURVEY REQUIREMENTS

A. Establish and safeguard minimum of two permanent benchmarks on project site, referenced to data established by survey reference points. Record locations, with horizontal and vertical data, on Project Record Documents.

B. Establish and maintain lines and levels, locate and layout, by instrumentation and similar appropriate means, but not limited to, the following:

1. Site improvements:

a. Stakes for grading, fill and topsoil placement.
b. Utility slopes and invert elevations.

2. Batter boards for structures.
3. Building foundation, column locations and floor levels, as required for specific conditions.
4. Controlling lines and levels required for mechanical and electrical trades.

C. From time to time or at Owner's request, verify layouts by same methods.

D. Preserve and protect all on-site underground utilities lines and existing on-site improvements in the area of construction.

3.3 RECORDS

A. Maintain complete, accurate log of all control and survey work as it progresses.

B. On completion of foundations and major site improvements, prepare certified survey showing all dimensions, locations, angles, and elevations of construction.

C. Incorporate all revisions, new work, etc. into record drawings.

END OF SECTION 01 71 23

SECTION 01 73 29 – CUTTING AND PATCHING

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Verify applicable dimensions, clearances and heights at the jobsite.

C. Demolition:

1. Coordinate the work of this Section with related trades.

    a. Refer to Section 02 41 13 – Selective Site Demolition & Protection

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Execute cutting, fitting or patching of work, require to:

    a. Make parts fit properly.
    b. Make flatwork, paving, etc. fit properly.
    c. Uncover work to provide for installation of ill-timed work.
    d. Remove and replace work not conforming to requirements of Contract Documents.
    e. Remove and replace defective work.
    f. Remove samples of installed work as specified for testing.
    g. Do not endanger any work by cutting or altering work or any part of it.
    h. Cut existing flatwork, paving, etc. to fit properly with new work.

2. In addition to Contract requirements, upon written instructions of Architect:

    a. Uncover work to provide for Architect's and/or Inspector's observation of covered work.
    b. Remove samples of installed materials for testing, when required.

3. The Contractor with structural responsibility within their scope of work shall solely execute structural cutting and patching required for this project.
4. Cutting:

    a. Minor cutting will be performed by both the General and Trade Subcontractors where required for the execution of their work. Locations of all trade cutting (core boring, etc.) shall be reviewed and approved by the General Contractor, Owner and Inspector where required.

5. Patching:

    a. Minor patching will be performed by both the General and Trade Subcontractors where required for the execution of their work. Locations of all trade cutting (core boring, etc.) shall be reviewed and approved by the General Contractor, Owner and Inspector where required.

T. US Environmental Protection Agency, www.epa.gov

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit Manufacturer's data and shop drawings.

1. Prior to cutting which affects structural safety, submit written notice to Architect and Structural Engineer requesting consent to proceed with cutting.
2. Prior to cutting which affects Aesthetics, submit written notice to Architect requesting consent to proceed with cutting.

C. Submit 48-hour advance written notice to Architect and Owner. and designating time work will be uncovered.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer/ Fabricator shall have been in business for five (5) years providing/installing/finishing projects of similar size and complexity.

C. Patching of openings that are cut in any fire rated walls or membranes shall be sealed tightly using approved materials only.

1. Verify that fire rating envelopes are maintained or inspections provided prior to concealing work.
2. Cutting and patching, if required by Agencies to verify adequacy of protection after concealment, shall be performed at no additional cost or time extension to the Owner.

D. Stipulations:

1. Should conditions of work or schedule indicate change of materials or methods, submit written recommendation to Architect and Owner. including:
2. Conditions indicating change.
3. Recommendations for alternative materials or methods.
4. SUBMITTALS as required for substitutions.
5. Quotations of charges or credits.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial one (1) year written warranty signed by General Contractor agreeing to repair and/or replace work (patching) which has failed as a result of defects in materials or workmanship.

1. Upon notification of Owner within the warranty period, such defects shall be repaired and replaced at no cost to the Owner.

1.10 RELATED WORK/SECTIONS

A. Related Sections include, but are not limited to the following:

1. Refer to Division 1 for sustainability requirements.
2. Refer to Division 1 for construction waste management and disposal/recycling requirements.
3. Divisions 2 through 49.

B. Related Documents include, but are not limited to the following:

1. Refer to Division 1 for General Conditions.

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout.

1. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with General Contractor.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. Each Subcontractor shall make the field measurements necessary for their work and be responsible for its accuracy.

1. Should any structural difficulties prevent a Subcontractor or tradesman from installing their material properly, the General Contractor shall be promptly notified so that the Architect may be consulted as to how best to resolve the difficulty.
2. Cutting into the walls and floors, if necessary, shall be carefully and neatly performed and then be repaired in an approved manner.
3. The Architect and Structural Engineer shall be consulted in all cases where cutting into a structural portion of the building is either desirable or necessary so that satisfactory reinforcement or other work may be provided or installed.

D. Patching of all exposed architectural finishes shall be performed under the supervision of the General Contractor, but executed by the affected finish trade Subcontractor.

1. Cutting and patching of existing architectural finishes shall be minimized to the extent possible through careful routing and placement of new work.
2. The Architect shall have the authority to reject substandard or unacceptable patching.

E. General Contractor shall coordinate slab vapor emission and PH testing of concrete floors which have been sawn cut to remove portions of slab and ensure that concrete treatment within criteria of finish flooring is complete prior to the installation of finish flooring as herein specified.

1.13 VAPOR EMISSION AND ALKALINITY CONTROL COMPLIANCE

A. Refer to Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment

1.14 GENERAL SYSTEM DESCRIPTION

A. Refer to drawings typically for scope of cutting and patching.

B. Cut and patch as require to complete scope of work.

1. Concrete slab on grade:

a. Refer to drawings and details.
b. Saw cut floor to remove extent of slab, but not damage existing vapor barrier.

1) Replace /patch damaged vapor Barrier.

a) Refer to Concrete Notes on structural drawings.

c. Sawn cut extent/widths shall be done as indicated and at a minimum to provide room to allow room to drill and install dowels into existing slab prior to install of new concrete.
d. Sawn cut extents of concrete/masonry shall be done to an extent necessary to remove piping, conduit, etc.
e. If water or moisture is discovered at sub base notify Architect immediately.
f. Schedule:

1) Construction:

a) Drill holes and install rebar dowels.

i. Refer to structural drawings for typical criteria.

a. Minimum standards, unless noted otherwise:

1. Length" 12"
2. Spacing: 12"
3. Size:

a. 4" thick slab: 1/2" diameter
b. 5" thick slab: 5/8" diameter
c. 6" thick slab: 3/4" diameter

b) Install waterstop bar at side of sawn cut concrete face, typical.

i. Refer to Section 03 15 13 – Hydrophilic Waterstops and Specialty Waterproofing

c) Vapor Barrier:

i. Replace and repair any damaged vapor barrier membrane including taping new to existing.
ii. Refer to Concrete Notes on structural drawings and Section 03 30 00 – Cast-In-Place Concrete.

d) Place new concrete

i. Refer to Concrete Notes on structural drawings and Section 03 30 00 – Cast-In-Place Concrete.

2) Demolition:

a) Schedule:

i. Remove concrete only.

a. Refer to Section 02 41 19 – Selective Building Demolition & Protection
b. Refer to drawings.

2. Exterior Concrete Paving:

a. Refer to drawings and details.
b. Saw cut concrete to remove extent of paving, but not damage existing sub base.
c. Sawn cut extent/widths shall be done as indicated and at a minimum to provide room to drill and install dowels into existing slab prior and reinforcing at new extent to place new concrete.
d. Sawn cut extents of concrete/masonry shall be done to an extent necessary to remove piping, conduit, etc.
e. If water or moisture is discovered at sub base notify Civil Engineer, Owner and Architect immediately.
f. Schedule:

1. Construction:

a. Drill holes and install rebar dowels.

1. Refer to structural drawings for typical criteria.

a. Minimum standards, unless noted otherwise:

1. Length" 12"
2. Spacing: 12"
3. Size:

a. 4" thick slab: 1/2" diameter
b. 5" thick slab: 5/8" diameter
c. 6" thick slab: 3/4" diameter
d. 7" thick slab: 7/8" diameter
e. 8" thick slab: 1" diameter

b. Install reinforcing:.

1. Refer to civil and structural drawings

c. Place new concrete and finish

1. Refer to drawings
2. Refer to Section 32 13 13 – Concrete Paving

2. Demolition:

a. Schedule:

1. Remove concrete, drill and install dowels, reinforcing and place new concrete and finish as indicated in drawings.

a. Refer to civil and structural drawings
b. Refer to Section 02 41 13 – Selective Site Demolition & Protection

3. Exterior Concrete Flatwork:

    a. Refer to drawings and details.
    b. Saw cut concrete to remove extent of flatwork, but not damage existing sub base.
    c. Sawn cut extent/widths shall be done as indicated and at a minimum to provide room to drill and install dowels into existing flatwork prior and reinforcing at new extent to place new concrete.
    d. Sawn cut extents of concrete/masonry shall be done to an extent necessary to remove piping, conduit, etc.
    e. If water or moisture is discovered at sub base notify Civil Engineer, Owner and Architect immediately.
    f. If water or moisture is discovered at sub base notify Civil Engineer, Owner and Architect immediately.
    g. Schedule:

        1. Construction:

            a. Drill holes and install rebar dowels.

                1. Refer to structural drawings for typical criteria.

                    a. Minimum standards, unless noted otherwise:
                        1. Length" 12"
                        2. Spacing: 12"
                        3. Size:
                            a. 4" thick slab: 1/2" diameter
                            b. 5" thick slab: 5/8" diameter
                            c. 6" thick slab: 3/4" diameter

            b. Install reinforcing:.

                1. Refer to Civil Drawings and structural drawings

            c. Place new concrete

                1. Refer to Section 32 13 13 – Concrete Paving

        2. Demolition:

            a. Schedule:

                1. Remove concrete, drill and install dowels, reinforcing and place new concrete and finish as indicated in drawings.

                    a. Refer to civil and structural drawings
                    b. Refer to Section 02 41 13 – Selective Site Demolition & Protection
                    c. Refer to Section 32 13 13 – Concrete Paving

4. Exterior Asphalt Paving:

    a. Refer to drawings and details.
    b. Saw cut asphalt to remove extent of paving, but not damage existing sub base.
    c. Sawn cut extent/widths shall be done to allow room to drill and install dowels into existing slab prior to install of new concrete.

d. Sawn cut extents of concrete/masonry shall be done to an extent necessary to remove piping, conduit, etc.
e. Schedule:
    1. Construction:
        a. Refer to Civil and Architectural drawings.
        b. Place new asphalt
            1. Refer to Section 32 12 16 – Asphalt Paving
            2. Refer to Civil drawings.
    2. Demolition:
        a. Schedule:
            1. Remove asphalt and place new asphalt and finish as indicated in drawings.
                a. Refer to Civil and Structural drawings
                b. Refer to Section 02 41 13 – Selective Site Demolition & Protection
                c. Refer to Section 32 12 16 – Asphalt Paving

PART 2 - **PRODUCTS**

2.1 MATERIALS

A. Materials for replacement of work removed: comply with specifications for type of work to be done.

2.2 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the General Contractor subject to the approval of the Architect Owner.

PART 3 **- EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:
    1. Examine areas and conditions under which work is to be performed.
    2. Identify conditions detrimental to proper or timely completion of work and coordinate with General Contractor to rectify.
B. Surface:
    1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.
C. Inspect existing conditions of work, including elements subject to movement or damage during cutting and patching.
D. After uncovering work, inspect conditions affecting installation of new products.

3.2 COORDINATION

A. Refer to Section 01 31 13 – Project Coordination.

B. General Contractor shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Provide shoring, bracing and support as required to maintain structural integrity of work.

C. Provide protection for other portions of work.

D. Provide protection from elements.

E. Each Subcontractor shall make the field measurements necessary for their work and be responsible for its accuracy.

1. Should any structural difficulties prevent a Subcontractor or tradesman from installing their material properly, the General Contractor shall be promptly notified so that the Architect may be consulted how best to resolve the difficulty.
2. Cutting into the walls and floors, if necessary, shall be carefully and neatly performed and then be repaired in an approved manner.
3. The Architect and Structural Engineer shall be consulted in all cases where cutting into a structural portion of the building is either desirable or necessary so that satisfactory reinforcement or other work may be provided/installed.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

a. Proceed and provide cutting and patching as herein specified and as indicated in drawings.

B. Performance:

A. Execute fitting and adjustment of products to permit finished installation to comply with specified tolerances and finishes.

B. Perform cutting and demolition by methods which will prevent damage to other work, and will provide proper surfaces to receive installation of repairs and new work.

C. Patching of openings that are cut in any fire rated walls or membranes shall be sealed tightly using approved materials only.

a. Verify that fire rating envelopes are maintained or inspections provided prior to concealing work. Cutting and patching, if required by Agencies to verify adequacy of protection after concealment, shall be performed at no additional cost or time extension to the Owner.

3.5 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so their rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

E. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

F. In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no cost to the Owner.

G. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the Architect after he receives the General Contractor's Notice of "Certificate of Substantial Completion".

END OF SECTION 01 73 29

SECTION 01 74 00 – PROTECTION AND CLEANING

PART 1 **- GENERAL**

1.1 REQUIREMENTS INCLUDED

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Execute protection and cleaning daily, during progress of Work, and at completion of Work, as required by General Conditions and specifications.
2. Building: Keep areas of work in building free from accumulated debris, rubbish and waste materials as work progresses.
3. Site: Keep areas of work within site free from accumulated debris, rubbish and waste materials as work progresses.
4. Protect work and materials of each Section prior to and during installation, and protect the installed work and materials of other trades.
5. In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no cost to the Owner.
6. After completion of work in this Section, remove all equipment, tools, cleaning supplies, etc. from site.
7. Provide product information, instruction manuals & warrantees.

D. Coordinate protection and cleaning with each specific specification section.

E. Coordinate protection and cleaning with demolition work.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission.

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission.

E. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction:

a. All occupancy types.

F. National Demolition Association, www.demolitionassociation.com

1.3 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. General Contractor shall have been in business for Five (5) years providing/installing/finishing similar size projects and complexity.

1.4 DISPOSAL REQUIREMENTS

A. Conduct cleaning and disposal operations to comply with codes, ordinances, regulations, and anti-pollution laws.

B. Disposal operations shall be in compliance with General Contractor's Construction Waste Management plan as approved by the Owner.

1. Refer to Division 1 for construction waste management and disposal/recycling requirements.

1.5 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. All construction.

B. Related Sections include, but are not limited to the following:

1. Refer to Division 1 for sustainability requirements.
2. Refer to Division 1 for construction waste management and disposal/recycling requirements.
3. Division 2-49.

PART 2 **- PRODUCTS**

2.1 MATERIALS

A. Cleaning and Maintenance Products:

1. Provide data on manufacturers' recommended maintenance, cleaning, refinishing and disposal procedures for materials and products.

a. Where chemical products are recommended for these procedures, provide documentation to indicate that no component present in the cleaning product at more than 1% of the total mass of the cleaning product is a carcinogen or reproductive toxicant as defined in the lists in this specification section.
b. For purposes of reporting, identification of product VOC contents shall not be limited to those regulated under Clean Air Act (CAA) but shall also include compounds exempted from the CAA definition and listing of VOCs.
c. California EPA and local air district definitions of VOCs based on CAA are not sufficient as they exempt compounds based on non-reactivity for outdoor air pollution control but still important for indoor air quality.
d. Avoid cleaning products containing alpha-pinene, d-limonene or other unsaturated carbon double bond alkenes due to chemical reactions with ozone to form aldehydes, acidic aerosols, and ultra-fine particulate matter in indoor air.

1. The State of California Department of General Services has published specifications for Environmentally Preferable Janitorial Chemicals and a list of cleaning/maintenance products meeting these specifications. Both are available on the internet at:

a. http://www.ciwmb.ca.gov/greenbuilding/Specs/Janitorial.doc
b. http://www.resd.dgs.ca.gov/BPM/lists.htm

B. These procedures are for final General Contractor cleaning of the project prior to substantial completion and for provided materials and products as required by the specific specification sections.

C. Use only those cleaning materials and methods recommended by manufacturer of surface material to be cleaned and which will not damage surfaces.

D. Use cleaning materials only on surfaces recommended by cleaning material manufacturer.

2.2 CHEMICALS OF CONCERN

A. Chemicals of Concern include but are not limited to those chemicals listed below as toxic air contaminants, carcinogens, teratogens, reproductive toxins, and chemicals with established Chronic Reference Exposure Levels (REL):

B. Carcinogens: Chemicals listed as probable or known human carcinogens in the latest published edition of the following two lists:

1. California Environmental Protection Agency, Air Resources Board (ARB), list of Toxic Air Contaminants (California Air Toxics).http://www.arb.ca.gov/toxics/summary/summary.htm.
2. California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA), Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65). http://www.oehha.ca.gov/prop65/prop65_list/Newlist.html.

C. Reproductive Toxicants: Chemicals known to cause reproductive toxicity including birth defects or other reproductive harm in the latest published edition of the following list: California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA), Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65). http://www.oehha.ca.gov/prop65/prop65_list/Newlist.htm.
Chemicals with established Chronic Reference Exposure Levels (REL): Chronic RELs have been developed for 65 hazardous airborne substances as of January 2001. A chronic REL is an airborne concentration level that would pose no significant health risk to individuals indefinitely exposed to that level. RELs are based solely on health considerations, and are developed from the best available data in the scientific literature. The California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA) establishes and publishes RELs.

D. Chronic Reference Exposure Levels for organic chemicals with possible indoor sources, based on the California OEHHA list.

1. Do not use any of the chemicals listed in the list.
2. The most recent list may be found at: http://www.oehha.org/air/chronic_rels/allChrels.html

PART 3 **– EXECUTION**

3.1 DURING CONSTRUCTION & DEMOLITION

A. Construction work, cleaning and protection refer also to the following section and the most restrictive shall govern:

1. Refer to Division 1 for construction waste management and disposal/recycling requirements.

B. Demolition work, cleaning and protection refer also to the following sections and the most restrictive shall govern;

1. Refer to Division 1 for construction waste management and disposal/recycling requirements.
2. Section 02 41 13 – Selective Site Demolition & Protection.
3. Section 02 41 19 – Selective Building Demolition & Protection.

C. Execute periodic cleaning to keep Work, site and adjacent properties free from accumulations of waste materials, rubbish and windblown debris, resulting from construction operations.

D. Provide on-site containers for collection, disposal and/or recycling of waste materials, debris and rubbish in compliance with General Contractor's Construction Waste Management Plan as approved by Owner.

1. Refer to Division 1 for construction waste management and disposal/recycling requirements.

E. Protect material and work as recommended by manufacturer, drawings and as specified.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.
2. Remove masking tape immediately after tooling joints, leaving finished work in neat and clean condition.
3. Clean all surfaces, materials, etc. free of dust and dirt.
4. Clean up and leave premise broom clean and vacuum cleaned; clean adjoining work spotted or otherwise defaced by work of this Section.

F. Moisture Protection:

1. Moisture Stains:

a. Materials with evidence of moisture damage, including stains, are not acceptable, including both stored and installed materials;

1. Immediately remove from site and properly dispose.
2. Take special care to prevent accumulation of moisture on installed material and within packaging during delivery, storage, and handling to prevent development of molds and mildew on packaging and on products.

b. Immediately remove from site and properly dispose of materials showing signs of mold and signs of mildew, including materials with moisture stains.
c. Replace moldy materials with new, undamaged materials.
d. Mitigate and remove all mold and mildew discovered.

2. Ducts:

a. Seal ducts during transportation, delivery, and construction to prevent accumulation of construction dust and construction debris inside ducts.

3. Protect interior materials from water intrusion or penetration; where interior products not intended for wet applications are exposed to moisture, immediately remove from site and dispose of properly.
4. Protect installed products using methods that do not support growth of molds and mildews.

a. Immediately remove from site materials with mold and materials with mildew.

G. Dust Protection:

1. Clean interior spaces prior to start of finish painting and continue cleaning on as-needed basis until painting is finished.
2. Schedule operations so that dust and other contaminants resulting from cleaning process will not fall on wet or newly coated surfaces.

3.2 FINAL CLEANING

A. Employ skilled workers for final cleaning.

B. Comply with specific requirements as indicated in each specification section.

C. Comply with applicable regulatory requirements during the conduct of cleaning, disposal and recycling operations and in compliance with General Contractor's Construction Waste Management Plan as approved by Architect and Owner.

D. Use cleaning materials which will not create hazards to health or property or cause damage to products or Work.

1. Refer to Table 1, Part 2 as herein specified for disallowed chemicals.

E. Use cleaning materials and methods recommended by the manufacturers of the products to be cleaned and as described in Part 2 of this specification section.

1. Most restrictive shall govern.

F. Cleaning:

1. Using cleaning and maintenance products as described in Part 2 of this Section and as specifically required per each applicable specification section, including, but not limited to;

a. General:

1. Remove dust, dirt, grease, stains, fingerprints, labels, spilled and spattered, and other foreign materials from interior and exterior surfaces exposed to view.
2. Polish transparent and glossy surfaces to a clear shine.
3. Vacuum dust and dirt from all surfaces.

b. Flatwork and Paving:

1. Clean hard surface flatwork and paving.
2. Power wash all exposed flatwork and paving.

a. Stained and/or polished finish floors shall be cleaned and polished in accordance with related specification section for floor finish.

3. Demolition – unless otherwise noted, all flatwork and paving shall be demolished as indicated in drawings and/or specified.

a. Refer to Section 02 41 13 – Selective Site Demolition & Protection

c. Flooring:

1. Clean hard surface finish flooring, such as, but not limited to; tile, stone, VCT, linoleum, cork, hardwood, etc., in accordance with manufacturer's cleaning, polishing and maintenance recommendations.

2. Broom, vacuum and wet mop all exposed concrete floors.
    a. Stained and/or polished finish floors shall be cleaned and polished in accordance with related specification section for floor finish.
3. Vacuum carpeted and soft surfaces with high efficiency particulate arrestor (HEPA) vacuum.
    a. Final cleaning shall be “Vacuum Clean”.

d. Walls:
1. Clean surface of finish wall materials in accordance with manufacturer’s cleaning and maintenance recommendations.
2. Remove all fingerprints, scuff marks, etc. from painted gypsum board.
    a. Repaint all area’s that cannot be cleaned to like new appearance.
3. Demolition – unless otherwise noted, all walls shall be demolished as indicated in drawings and/or specified.
    a. Refer to Section 02 41 19 – Selective Building Demolition & Protection

e. Ceilings:
1. Clean surface of finish wall materials in accordance with manufacturer’s cleaning and maintenance recommendations.
2. Remove all fingerprints, scuff marks, etc. from painted gypsum board.
    a. Repaint all area’s that cannot be cleaned to like new appearance.
3. Demolition – unless otherwise noted, all ceilings shall be demolished as indicated in drawings and/or specified.
    a. Refer to Section 02 41 19 – Selective Building Demolition & Protection

f. Exterior Wall Glazing:
1. Wash and shine glazing and mirrors to be free of streaks.

g. Interior Wall Glazing:
1. Wash and shine glazing and mirrors to be free of streaks.

h. Electrical Fixtures:
1. Clean surface of finish lighting fixtures to be free of dust, finger prints etc. to a new appearance.
2. Clean out debris, bugs, etc. which have accumulated inside fixture lens.
3. Vacuum and wipe insides of electrical and low voltage panels, racks and cabinetwork.

i. Fixtures:
1. Clean equipment and fixtures to sanitary condition.
2. Demolition – unless otherwise noted, all fixtures shall be removed and disposed of as indicated in drawings and/or specified.
    a. Refer to Section 02 41 19 – Selective Building Demolition & Protection
    b. Refer to Section 02 41 13 – Selective Site Demolition & Protection

j. HVAC and ventilation system and components:

1. If ducts were not sealed during construction, and contain dust or dirt, clean ducts using HEPA vacuum immediately prior to Substantial Completion and prior to using ducts to circulate air.
2. Replace all air filters installed at air handling units and ducts before and during construction.
3. Oil film on sheet metal shall be removed before shipment to site.
    a. However, ducts shall be inspected to confirm that no oil film is present.
        1. Remove oil using cleaning and maintenance products as described in Part 2 of this Section.
4. Demolition – unless otherwise noted, all ductwork, brackets, etc. shall be removed and disposed of as indicated in drawings and/or specified.
    a. Refer to Section 02 41 19 – Selective Building Demolition & Protection
5. Demolition – Ductwork: unless otherwise noted, all ductwork, brackets, etc. shall be removed and disposed of as indicated in drawings and/or specified.
    a. Refer to Section 02 41 19 – Selective Building Demolition & Protection
6. Demolition –HVAC units: refer to drawings for scope of removal of units.
    a. Refer to Section 02 41 19 – Selective Building Demolition & Protection

2. Recycled materials:
    a. Remove and properly recycle materials removed during construction work, refer also to;
        1. Refer to Division 1 for construction waste management and disposal/recycling requirements and as described in General Contractor's Construction Waste Management Plan as approved by the Owner.
    b. Demolition - Remove and properly recycle materials removed during demolition work, refer also to;
        1. Waste management program, refer to;
            a. Refer to Division 1 for construction waste management and disposal/recycling requirements and as described in General Contractor's Construction Waste Management Plan as approved by the Owner.
3. Demolished materials:
    a. Remove and properly dispose of all demolished materials during demolition work, refer also to;
        1. Section 02 41 13 – Selective Site Demolition & Protection
        2. Section 02 41 19 – Selective Building Demolition & Protection
        3. Refer to Division 1 for construction waste management and disposal/recycling requirements and as described in General Contractor's Construction Waste Management Plan as approved by the Architect and Owner.
4. Waste materials:

a. Remove and properly dispose and recycle all waste materials during construction work, refer also to;

1. Refer to Division 1 for construction waste management and disposal/recycling requirements and as described in General Contractor's Construction Waste Management Plan as approved by the Owner.

b. Demolition - Remove and properly dispose and recycle all materials during demolition work, refer also to;

1. Refer to Division 1 for construction waste management and disposal/recycling requirements and as described in General Contractor's Construction Waste Management Plan as approved by the Owner.
2. Section 02 41 13 – Selective Site Demolition & Protection
3. Section 02 41 19 – Selective Building Demolition & Protection

5. Exterior:

a. Clean site and roof areas of sticks, rubbish, and other debris.
b. Broom and power wash all flatwork and paving.
c. Clean all finish paving materials such as brick, interlocking pavers, etc. in accordance with the specific manufacture.
d. Broom-clean exterior paving.
e. Rake clean ground surfaces.
f. Coordinate cleaning, protection and maintenance with all Division 2 sections.

G. Prior to final inspection or Owner occupancy, General Contractor shall conduct inspection of sight-exposed interior and exterior surfaces, and all work areas, to verify that entire Work is clean.

END OF SECTION 01 74 00

SECTION 01 74 19 – CONSTRUCTION WASTE MGMT. AND DIPOSAL-RECYCLING

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Construction Waste Management Plan

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

C. Title 24, Chapter 11 – California Green Building Standards Code:

1. Non-residential new construction:

a. All occupancy types.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Comply with "Construction Waster Management Plan".

B. Construction Monitoring/Observations by others:

Item	**Name of Test**	**Performance Results**	**By Whom**
As indicated in Waste Management Plan	Const. Waste Management	Comply	As herein indicated and in Waste Management Plan document

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for five (5) years providing/installing/finishing projects of similar size and complexity.

C. Regulatory Requirements: Comply with all applicable federal, state, and local ordinance and regulation requirements for recycling and waste management.

D. Disposal Sites, Recyclers, and Waste Management Processors: Use only facilities properly permitted by State and Local authorities.

E. Construction Waste Management Plan

1. The General Contractor shall prepare a Construction Waste Management Plan and submit to the Owner and Architect for review within 21 days after the date of the Notice to Proceed.
2. The Construction Waste Management Plan shall identify the means and methods by which the Contractor will achieve the project's recycling goals.
3. Make any revisions to the Construction Waste Management Plan per Architect's review comments. Submit the revised plan to the Owner and Architect for final approval.

F. Implementation of Construction Waste Management Plan:

1. Designate an on-site party responsible for instructing workers and implementing the Construction Waste Management Plan.
2. Distribute copies of the Construction Waste Management Plan to the job site foreman, superintendent, and each subcontractor.
3. Include Waste Management and recycling in worker orientation.
4. Provide instruction on appropriate separation, handling, recycling and salvaging methods to be used by all parties at the appropriate stages of the work at the site.
5. Prominently display Construction Waste Management Plan. If on-site separation is used, clearly mark all containers and areas on site dedicated to each type of recyclable material.
6. Include waste management and recycling discussion in pre-fabrication meetings with subcontractors and fabricators.
7. Also include discussion of waste management and recycling in regular job meetings and job safety meetings conducted during the course of work at the site.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Salvage Materials: Provide protective handling and storage as required for all items identified for salvage and reuse by the Owner.

C. Recyclable Waste: Remove all recyclable materials, as identified in the Waste Management Plan, from the work location to approved containers daily. Failure to remove waste materials will be considered cause for withholding payment.

D. Provide containers as required to comply with Construction Waste Management Plan and to prevent contamination of materials, including protection from rain and snow as applicable.

E. Replace loaded containers with empty ones as demand requires.

F. Handling: Deposit all materials in the containers in a clean (no mud, adhesives, solvents, petroleum contamination), debris-free condition. Do not deposit contaminated materials into the containers until such time as such materials have been cleaned.

G. If contamination chemically combines with the material so that it cannot be cleaned, do not deposit into the containers.

1.7 JOB CONDITIONS

A. Environmental Requirements: Transport waste materials from the Work Area to the recycle containers and carefully deposit in the containers in a manner to minimize noise and dust. Close container covers immediately after materials are deposited. Do not place recyclable waste materials on the ground adjacent to a container.

B. Existing Conditions: Coordinate with "Instructions to Bidders" and Supplementary Conditions".

1.8 PROTECTION

A. Protect finish surfaces at all times from work under this section.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Demolition.

B. Related Sections include, but are not limited to the following:

1. Refer to Division 1 for sustainability requirements.
2. Refer to Division 1 for quality control requirements.
3. Refer to Division 1 for closeout submittal procedures.
4. Refer to Division 1 for protection and cleaning requirements.
5. Section 02 41 13 – Selective Site Demolition & Protection.
6. Section 02 41 19 – Selective Building Demolition & Protection.

1.11 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with General Contractor.

1.12 DEFINITIONS

A. Waste Materials: Construction materials that are excess to the contract requirements and which cannot be effectively used in the Work.

B. Salvaged (or Reused) Materials:

1. Construction materials recovered from existing buildings or construction sites and reused in other buildings or new building.
2. Common salvaged materials include structural beams and posts, flooring, doors, cabinetry, brick and decorative items.

C. Recyclable Waste: Waste materials that are existing on-site or are generated during the construction process that can be recycled/remanufactured into another material.

D. Categories of Salvageable or Recyclable waste include the following, but are not limited to;

1. General:

a. Cardboard:

1) Clean, corrugated cardboard such as used for packaging, etc.

b. Chemical Waste:

1) Includes petroleum products, bituminous materials, salts, acids, alkalis, herbicides, pesticides, organic chemicals and inorganic chemicals.

c. Co-Mingled:

1) Several types of construction waste that are combined in a single container.
2) Co-mingling of recycling waste must be approved by the identified recycling facility.

d. Hazardous Waste:

1) Any substance whose handling and/or disposal is regulated as hazardous waste by local, state or federal authorities.

e. Paper Goods:

1) Office paper: Includes any paper, such as manufacturer instructions, specification sheets, files, correspondence, packaging, stiffeners, etc.
2) Newsprint: Shredded or whole newspaper goods.

f. Plastic:

1) Beverage containers, packaging materials (such as polystyrene "peanuts" and expanded polystyrene), containers (other than those used for hazardous materials), vinyl products, etc.

g. Sanitary Wastes:

1) Garbage: Refuse and scraps resulting from preparation, cooking, distribution or consumption of food.
2) Sewage: Domestic sanitary sewage.

h. Source Separated:

1) Materials that are separated on-site by Category.

i. Other:

1) Any additional materials identified on-site to be valued for salvage, reuse, or recycling by the Contractor and Owner.

2. Site:

a. Asphalt, Concrete, rock, brick

1) Concrete, brick, rock, broken up asphalt pavement, clay, and other inert (non-organic) materials.

b. Fill - Inert:

1) A permitted facility that accepts inert waste such as asphalt and concrete exclusively.

c. Landfill – Class III and soil:

1) A landfill that accepts non-hazardous waste such as household, commercial, and industrial waste, including construction, remodeling, repair and demolition operations.

d. Land Clearing Debris:

1) Solid Waste Generated from land clearing operations, such as stumps, woody debris, limbs and brush, clean soil, etc.
2) Does not include rock, concrete or chemically treated landscape timbers.

e. Vegetation - Existing:

1) Includes sod, shrubs, plants, and trees that will be disturbed or removed during construction.

3. Building:

a. Concrete & Masonry

1) Concrete, clay, and other inert (non-organic) materials.

b. Carpet and padding:

1) Face fiber, backing, padding and carpet cushion scrap.

c. Fabric:

1) Uncontaminated fabric scraps.

d. Glass:

1) Includes glass beverage containers, glazing and recyclable glass building materials.

e. Gypsum Wallboard:

1) Excess drywall construction materials including cuttings, other scrap and excess materials.

f. Insulation:

1) Rigid foam, batt and loose fill insulation materials.

g. Metals:

1) Metal Ferrous and Non-ferrous including;

a. Iron
b. Steel
c. Copper
d. Brass
e. Aluminum

2) Note: Includes beverage containers, packaging materials (such as metal banding) fencing, reinforcing bar, wiring, plumbing, etc.

h. Paints:

1) Unused portions of paints, primers and coatings applied on site.

i. Rubber:

1) Uncontaminated rubber scraps, including but not limited to recycled-content rubber flooring, rubber edging, tires that are no longer serviceable, etc.

j. Wood – clean & untreated:

1) Dimensional lumber
2) Wood edging
3) Wood shipping pallets
4) Wood misc. components/materials

k. Wood – clean & engineered products:

1) Plywood
2) Oriented strand board
3) Masonite
4) Particleboard
5) Manufactured trusses and beams
6) Glue-laminated timbers.
7) Rough sawn lumber/timber

4. Exclusions:

a. As herein listed

1.13 GENERAL SYSTEM DESCRIPTION

A. The Construction Waste Management goal for this project is:

1. Minimum of percentage of total Project waste shall be diverted from landfill.

B. The Contractor shall develop a Waste Management Plan as defined in this Section and submit for review by the Owner and Architect.

C. Contractor shall implement procedures to minimize the creation of construction and demolition waste on the job site. As many of the waste materials as economically feasible shall be reused, salvaged or recycled. Waste disposal in landfills shall be minimized.

D. The Contractor shall provide and submit documentation throughout construction that waste management, recycling and re-use of recyclable and re-useable materials are being maximized.

PART 2 **- PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Products are acceptable to use as intended for waste management work.

2.2 MATERIALS

A. As necessary by contractor to complete their work and used for the purpose of demolition, etc. as herein specified and additionally as indicated in contract documents.

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for complete and proper demolition activities, as selected by the General Contractor subject to the approval of the Architect.

2.4 CONSTRUCTION WASTE MANAGEMENT PLAN

A. References for Additional Information:

1. California State Agency Buy Recycled Campaign, The Department of General Services and the California Integrated Waste Management Board www.ciwmb.ca.gov/buyrecycled/stateagency
2. Refer to Division 1 for sustainability requirements.

B. Construction Waste Management Plan:

1. Contractor shall develop a construction waste management plan indicating proposed methods for collection, segregation, and removal of all construction wastes and debris produced by the work of this Contract.
2. Those waste materials produced during the course of this Contract that can be recycled cost-effectively, shall be.
3. The Waste Management Plan shall include, at a minimum, the following:

    a. Provide an analysis of jobsite waste to be generated, including types and quantities.
    b. Provide strategies for salvage, reuse, or recycling for a minimum of all materials listed below. Include additional waste materials that are deemed cost-effective to salvage, re-use or recycle. See "Definitions" above for material categories.
    c. Provide documentation to justify decision not to recycle any items listed below.
    d. Contractor may choose on-site separation or co-mingled with off-site separation.

        1. Method chosen shall be documented.

    e. Show compliance with applicable State and Local ordinances and regulations.
    f. Identify and document construction waste haulers and recyclers which will handle the designated material.
    g. Include participation in and procedures for recycling/re-use program.
    h. Include participation in and procedures for rebate programs.
    i. Identify materials that are not recyclable or otherwise conservable that must be disposed of in a landfill or other means acceptable under governing State and Local regulations.
    j. Indicate any instances where compliance with requirements of this Section does not appear to be possible and request resolution from Owner.

4. Contractor shall submit Construction Waste Management Plan for review and approval as part of Submittal process.
5. Review of Contractor's Waste Management Plan shall not relieve Contractor of responsibility for control of pollutants and other environmental protection measures.

C. Waste Materials: The following materials shall be salvaged and/or recycled according to this specification and the other specific product specifications.

1. Strategies for salvage and recycling shall be identified in the Waste Management Plan as required.

2. Salvage Materials: Identify materials existing on site that are candidates for salvage and re-use, either on this Project or through sale or donation to local organizations.
3. Recyclable Materials: Materials including, but not limited to the following shall be considered for salvage or recycling.

    a. Schedule: Applies to all waste materials produced during the course of this Contract, as listed in drawings and as specified in other sections to include, but not be limited to:

        1) General:

            a. Cardboard
            b. Paper Goods
            c. Chemical Waste
            d. Co-Mingled materials
            e. Hazardous Waste
            f. Plastic
            g. Sanitary Wastes
            h. Source Separated Materials
            i. Other material valued for salvage, reuse and/or recycling

        2) Site:

            a. Sand
            b. Asphalt
            c. Concrete
            d. Masonry
            e. Brick
            f. Rock
            g. Rebar
            h. Fill - Inert:
            i. Landfill – Class III and soil
            j. Land Clearing Debris
            k. Vegetation - Existing

        3) Building:

            a. Concrete
            b. Precast concrete
            c. Masonry
            d. Brick
            e. Rebar
            f. Glass
            g. Gypsum board
            h. Insulation
            i. Metal
            j’ Paint
            k. Rubber
            l. Wood – clean and untreated
            m. Wood – clean & engineered products

        4) Exclusions:

a. Pressure treated or creosote treated wood
b. Non-Recyclable Waste:

1. All waste materials that cannot be recycled, due to contamination, lack of recycling facilities or salvage options or high-cost.

D. Delivery Receipts: Maintain copies of all delivery receipts for waste materials sent to permitted waste materials processors or recyclers that indicate the location and name of firm accepting recyclable waste materials, types of materials, net weights of each type, which materials have been recycled, and date of delivery.

E. Maintain working copy of Construction Waste Management Plan at site for review by Owner, Architect and all Trades involved in Project.

F. Participation in Recycling/Re-Use and/or Rebate Programs: Rebates, Tax Credits, and other savings obtained for recycled or re-used materials shall accrue to the General Contractor.

PART 3 **- EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with General Contractor to rectify.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

1. General Contractor shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work in accordance with Waste Management Plan.

3.4 INSTALLATION/IMPLEMENTATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Waste Management

1. General: Implement waste management procedures in accordance with Construction Waste Management Plan as approved by Owner**.** Maintain procedure throughout the life of this Contract.
2. On-Site Source Separation (when this method is used by the General Contractor). Separate, store, protect, and handle at the project site all identified recyclable and salvageable waste products to prevent contamination of materials and maximize recycling and salvage of

materials. Clearly label all recycling containers and list acceptable and unacceptable materials.

3. Collection: Arrange for timely pickups from the site or deliveries to approved recycling facilities of designated waste materials to keep construction site clear and prevent contamination of recyclable materials. Maintain records accessible to the Owner for verification of construction waste materials recycling.
4. Delivery Receipts: Keep and maintain records of all deliveries to recycling facilities and all pickups of waste materials at the site by others as specified above.
5. Salvage and Re-use: Identify salvage and re-use options for all materials that are deemed to be re-usable, but will not be re-used on this Project.
6. Non-Recyclable Waste: Collect and segregate non-recyclable waste for delivery to a permitted landfill site.
7. Hazardous Waste: Control and dispose of hazardous waste in accordance with local, state, and federal regulations.

3.5 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so their rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no cost to the Owner.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Refer to Division 1 for closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the Architect after he receives the General Contractor's NOTICE of "Certificate of Substantial Completion".

END OF SECTION 01 74 19

SECTION 01 78 00 – CLOSEOUT SUBMITALS

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. General Contractor shall furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. As-Built Documents: (Record of As-Built conditions during construction)

a. Keeping and recording of progress As-Built Drawings and Specifications during construction.

1) Includes record keeping for site demolition work

b. Distribution of Draft As-Built Drawings and Specifications at project closeout for review by Architect and Owner.
c. Distribution to Architect and Owner of final As-Built drawings and Specifications once contractor has addressed all comments by Owner and Design team.

2. O & M Manuals:

a. Compilation of O&M Manuals in hard copy format and distribution to the Owner and Architect as a Submittal for review and comment.
b. Application of Architect and Owner revisions and re-submittal for final review.
c. Upon reviewed approval, issuance of finalized O&M manuals in the following formats:

1) One (1) PDF File
2) One (1) hard copy set

3. Project Closeout

a. Punch Lists / Corrective Construction:

1) Initiate project closeout by providing a comprehensive list of all items to be completed and corrected.

b. Testing, Inspections and adjusting:

1) Perform all tests and inspections in accordance with plans and specifications.

c. California Energy Code Compliance:

1) Observe all testing, document and complete all forms for compliance.

d. Commissioning and Balancing:

1) Check all mechanical equipment, electrical lighting, etc. for compliance with design, codes and standards.

e. Operation, Maintenance and System Demonstration:

1) Train Owner personnel in operation and maintenance of all equipment, mechanical equipment, hardware, etc.

f. Green Building Standards, California:

1) Document that all required, specified and indicated California Green Building Standards have been addressed.
2) All documentation shall be included in O&M manual.

g. Warrantees / Guarantees / Bonds:

1) Before final payment, furnish to the Owner, through the Architect, all written warranties of work and equipment installed under the contract.
2) Obtain specified bonds.

h. Insurance

1) Notify the Owner of any changes in insurance coverage requirements.

i. CALGreen Documentation:

1) Provide documentation as covered in Division 1 sustainability requirements and in individual sections.

j. Certificate of Occupancy:

1) Obtain this and similar releases that permit the Owner's full and unrestricted use.

k. Extra Stock & Spare parts
l. Final Cleaning
m. Keying and Keying Schedule
n. Certificates, Affidavits and Records
o. Agency related submittals

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission

E. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction:

a. All occupancy types.

1.3 PARTIAL OCCUPANCY

A. The Owner has the right to use or occupy the building or any part thereof, or to use equipment installed under the contract, prior to final acceptance.

B. Substantially completed portions of Work shall be designated and authorized with Certificate of Substantial Completion (AIA Document G704) for Owner's occupancy prior to completion of entire Work.

1. Refer to document herein attached.
2. Owner shall use or occupy the building site following issuance of Certificate of Substantial Completion (AIA Document G704).

C. Owner will occupy designated areas for purpose of installing Owner-furnished items.

D. Contractor shall allow:

1. Access for Owner personnel.
2. Owner use of parking facilities.

E. Upon occupancy the following shall be provided by General Contractor unless otherwise approved and contracted to be provided by Owner;

1. Maintenance
2. Security
3. Insurance

1.4 AS-BUILT DRAWINGS / DOCUMENTS

A. As-Built Drawings / Documents

1. General:

a. Show materials, size and depth from surface of said installations, as well as line followed
b. In addition the General Contractor shall keep accurate record of all dimensioned items including such things as walls, ceilings, etc., where installed items differ in location from where dimensioned on the Drawings.
c. Do not permanently conceal any work until required information has been recorded.
d. Ensure entries are complete and accurate.

1) All information entered on As Built documents during course of project shall be neat, legible and emphasized by drawing "clouds" around changed items. Format of changed items on drawings shall be acceptable to Architect.
2) Actual information must be entered in documents, just a note as to the ASI, RFI number, etc. is not acceptable.
3) All symbols and designations used in preparing As Built documents shall match those used in Contract Drawings and Specifications.

e. Keep record information current (within 7 days) with construction progress.
f. Label each document "Progress As-Built Documents" in large, neat, printed letters and store separate from those used for construction.
g. Architect and their consultants will not release electronic files to any parties unless agreed upon in writing.

1) Architect shall issue waiver release of liability form for signatures prior to release of any electronic files agreed upon.

2. Documentation:

a. As-Built Conditions: Maintain on the construction site, one hard copy set of the following to record as-built conditions, (which record actual revisions to the work to generate final As-Built documents), including, but not limited to;

1) Drawings
2) Specifications / Project Manual
3) Addenda
4) Requests for Information (RFIs)
5) Architects Supplemental Instructions (ASIs)
6) Construction Change Directives (CCDs)
7) Change orders (CO) and other modifications to the contract
8) Reviewed shop drawings, product data & samples
9) Manufacturer's instruction for assembly, installation, operation and maintenance.
10) Storm Water Pollution Prevention Plan
11) Mock ups

b. Underground Work: At the time of installation General Contractor shall record, to scale where possible or by figured dimensions, installed locations of all underground or concealed work, including but not limited to:

1) Plumbing
2) Electrical
3) HVAC
4) Low voltage
5) Controls
6) Fire alarm

c. Site demolition: During demolition, record conditions of found items and/or items discovered to differ from design understanding documentation, including but not limited to:

1) Utilities & termination points
2) Line voltage cabling and conduits
3) Low voltage cabling and conduits
4) Abandoned utilities, man holes, etc.

3. Standards

a. Drawings:

1) Legibly mark and record the following kinds of actual construction (as-built) information including, but not limited to:

a) Changes made by Change Orders, CCD's, RFI's, ASI's, verbal confirmations and other modifications described in these Specifications, General Conditions, Addenda, and Owner accepted non-conforming work during the construction period.
b) Locations of Work buried under and outside the building, such as plumbing, gas, sewer and electrical lines and conduits.
c) Locations of significant Work concealed inside the building whose general locations have been changed from those shown on the Contract Documents.

d) Locations of items, not necessarily concealed, which have been changed with the Owner's prior acceptance, from the location shown on the Contract Documents.

i. Locate main runs of piping, conduit, ductwork, and similar items by dimensions.
ii. Locate other items either by dimensions or in relation to spaces within the building.
iii. Note any changes to grades and or elevation changes.
iv. Furnish additional drawings as necessary for clarification of relocated work by General Contractor.
v. Record deviations from the sizes, locations, and other features of installation shown in the Contract Documents.

a. Establish locations of underground Work by dimension to column lines or walls, locating turns, and by referenced centerline and invert elevations and rates of fall.

vi. Indicate field changes in dimensions and detail.

e) Exact dimensioned location of all utilities underground within the construction limit lines inside and outside the building.
f) Depth of various elements of the foundation in relation to the ground level.
g) Locate and dimension all work including stubs for future connections, with reference to permanent landmarks or buildings and indicate depth below finish grade.

b. Project Manual / Specifications:

1) Note all manufacturers, model numbers, quantities, etc. which have been changed and/or added.
2) Legibly mark and record at each product section a description of the actual products installed, including the following:

a) Manufacturer's name, product model & number, finish & color
b) Product substitutions or alternates utilized.
c) Changes made by addenda and modifications.

4. Preliminary As-Built Documents – Review/Preliminary

a. At time of acceptance of the Work and prior to final payment, formalize the Progress As-Built Documents (drawings and specifications) kept during the course of construction to prepare and issue a "Preliminary As-Built Documents" package consisting of drawings, specifications, and other items necessary in PDF format.

1) PDF file(s) shall be supplied to Owner and Architect on a CD / DVD or uploaded to the Williams + Paddon FTP site (Newforma Information Exchange).

5. Final As-Built Documents – Final Submission

a. After incorporating Owner, Architect and Project Consultants review comments and prior to final payment, formalize the Documents (drawings and specifications) to prepare a "Final As-Built Documents" package consisting of drawings, specifications, and other items necessary in PDF format.

1) PDF file(s) shall be supplied to Owner and Architect on a DVD or uploaded to the 19six Architects FTP site (Newforma Information Exchange).

b. Additionally, General Contractor will deliver one (1) hard copy of the Final As-Built Documents to the Owner.
c. Sign and date package of "Final As-Built Documents" and submit them to the Owner and Architect at time of final acceptance of the Work.
d. Contract shall not be deemed to be completed, nor shall final payment become due until the above requirements have been complied with.

1.5 O & M (Operation and Maintenance) MANUALS

A. General:

1. All items with moving parts shall be included in the O & M Manuals.
2. All electrical and low voltage items/devices shall be included in the O & M Manuals.
3. All HVAC components shall be included.
4. All controls shall be included.
5. All specific specification sections which require O & M Manuals shall be included.
6. Cleaning recommendations shall be included for the following:

a. Finish flooring
b. Glass and glazing
c. Plastics
d. Laminates
e. Wall finishes, including, but not limited to;

1) Wall covering
2) Ceramic tile, stone and porcelain tile
3) Pre-finished materials

f. Ceiling finishes
g. Finish hardware
h. HVAC filters - replaced

B. Manuals shall include for each specific item, product, assembly, etc:

1. Record data, maintenance and operating instructions.

C. O&M Manuals shall be submitted to the Architect in hard copy format for review and comment as part of the Submittal review / Closeout process.

1. General Contractor shall submit initial O&M manual(s) for review and comment.
2. Owner, Architect and design team shall review manual(s) and return with comments for inclusion into final O&M manual(s).
3. General Contractor shall incorporate any required changes and re-submit for final review by Architect.
4. Upon approval, General Contractor will issue final O&M manuals as follows:

a. Owner:

1) One hard copy set
2) One DVD with the entire manual in PDF format.

b. Architect:

1) One DVD with the entire manual in PDF format.

D. Format:

1. PDF Document

a. General:

1) Compile all of the required data into one PDF file.
2) DF file shall include, but not be limited to:

a) Cover Sheet

i. Title: "Operation and Maintenance Manual"
ii. Project name
iii. Date
iv. General Contractor name and contact information

a. Company
b. Project manager
c. Superintendent
d. Engineer

b) Table of Contents

i. List each specification section in numerical order and embed links to each section of the PDF file.

c) Data

i. Cover Sheet for each specification section and miscellaneous scope of work not part of a specific section

a. Use and fill in herein attached Cover Page (document 01700o&m)

ii. Operation:

a. Complete instructions regarding operation of equipment.
b. Prepare and include additional data as required for the instruction of the Owner's operating and maintenance personnel.

iii. Maintenance:

a. Complete instructions regarding maintenance of equipment, materials, etc.

iv. Parts:

a. Complete nomenclature of replaceable parts, materials, paints, etc., their part and product numbers and name, website, email and address of nearest source of parts/materials.

v. Extra material:

a. Complete list of material verified and signed by Owner.

vi. Warranty:

a. Copy of each guarantee/warranty and service contract issued for equipment, materials, work, etc.
b. It is allowed to have these come in later if their availability is affected by commissioning etc.

vii. Extraneous Data:

a. When manufacturer's catalog pages are included, clearly indicate the items included in this installation and delete or otherwise clearly indicate data which is not applicable to this installation.

viii. Training:

a. Description of training of personnel.

1. General Contractor to provide documentation indicating who was trained, who conducted the training and what the subject/equipment was. Refer also to applicable specification sections.

2. Hard copy manuals:

a. Compile all the data for each specification section into multiple volumes

1) 6" x D type, three-ring binders, in durable plastic sized for 8-1/2" x 11" with exterior slide in sleeves for cover sheets for each binder.

b. Binders shall include, but not be limited to;

1) Cover Sheet on front of each binder

a) Title: "Operation and Maintenance Manual"
b) Project name
c) Date
d) General Contractor name and contact information

i. Company
ii. Project manager
iii. Superintendent
iv. Engineer

a) Volume indicated on bottom of each cover

i. One, two, three, etc. as required to include all specifications.

2) Table of Contents page in front of each Binder

a) List each specification section in numerical order.

3) Divider tabs for each division

a) Mechanical, electrical and low voltage shall be provided in separate binders

4) Data

a) Cover Sheet for each specification section and miscellaneous scope of work not part of a specific section

i. Use and fill in herein attached Cover Page

b) Operation:

i. Complete instructions regarding operation of equipment.
ii. Prepare and include additional data as required for the instruction of the Owner's operating and maintenance personnel.

c) Maintenance:

i. Complete instructions regarding maintenance of equipment, materials, etc.

d) Parts:

i. Complete nomenclature of replaceable parts, materials, paints, etc., their part and product numbers and name, website, email and address of nearest source of parts/materials.

e) Extra Material:

i. Complete list of material verified and signed by Owner

5) Warranty:

a) Copy of each guarantee/warranty and service contract issued for equipment, materials, work, etc.
b) It is allowed to have these come in later if their availability is affected by commissioning etc.
c) Extraneous Data:

i. Where contents of manuals include manufacturer's catalog pages, clearly indicate the items included in this installation and delete or otherwise clearly indicate data which is not applicable to this installation.

d) Training:

i. Description of training of personnel.

1.6 PROJECT CLOSEOUT

A. General

1. Project closeout shall be initiated by the General Contractor.

a. Project must be ready for Beneficial Occupancy by the Owner**.**

2. Project Closeout procedures shall comply with this section, all other specification sections, General Conditions, Division 1 and the Owner / General Contractor contract.

B. General Contractor shall provide and/or coordinate the following:

1. Punch Lists / Corrective Construction:

a. Restoration of damaged and defective work

1) Restore or replace, as specified or determined by the Architect, material and finishes damaged during construction activities at no additional expense to the Owner.

a) This period of time shall continue until Owner has taken complete occupancy unless agreed upon otherwise.

2) Restoration shall be equal to the original Work, and finishes shall match the appearance of existing adjacent Work.

a) Owner and Architect shall review for acceptance and/or rejection of remedial work.

b. Remedial work

1) Remedial Work necessary owing to faulty workmanship or materials shall add no additional expense and/or time extension to contract with Owner.
2) Work shall be coordinated with the Owner and performed at such time and in such manner to cause minimal interruption and inconvenience to the Owner's operations.

2. Testing, Inspections and Adjusting:

a. Conduct operational tests as required to demonstrate that all systems, controls, devices, window walls, roofs, etc. have been completed and are in compliance with all requirements.
b. Furnish a written record of test results using recording type instruments where applicable and as directed, and label everything with appropriate specification section numbers.

1) These shall be included in O&M manual

c. Submit required certificates of inspection.
d. Adjust all equipment, operating devices etc. to function in accordance with their design and required operation.

1) Adjust as directed and required per commissioning.

e. All documentation shall be included in O&M manual.

3. California Energy Code Compliance:

a. Observe all testing, document and complete all forms for compliance.
b. Refer to applicable drawings and specifications and as herein specified.
c. All documentation shall be included in O&M manual.

4. Commissioning and Balancing:

a. Check all mechanical equipment, electrical lighting, etc. for compliance with design, codes and standards.
b. Refer to applicable drawings and specifications and as herein specified.

5. Operation, Maintenance and System Demonstration:

a. Systems demonstration

1) Prior to Final Inspection, furnish qualified personnel for on-the-job instruction and demonstrate operation of each system to Owner's Maintenance Staff.

a) Instruct personnel in operation, adjustment, and maintenance of equipment and systems, using operation and maintenance data as basis of instruction.
b) All training documentation shall be included in O&M manual.

2) Refer to each specification section for additional information.
3) Refer also to Division 1.

6. Warranties / Guarantees / Bonds:

a. General:

1) Manufacturer's, Contractor's and Installer's warranties notwithstanding, warrant the entire Work against defects in materials and workmanship for periods as indicated in specifications at a minimum from the date Certificate of Substantial Completion (AIA Document G704) is issued and extended as indicated in each specification section and/or as specifically noted in Division One.
    a) Guaranty/Warranty periods shall be increased in accordance with specific Specification Sections.
    b) Include this information in the O & M Manual.
2) Guarantee/warrant or bond Work as required in the individual Specification Sections.
3) Warranties between the General Contractor and manufacturers, and the General Contractor and suppliers, shall not affect guarantees/warranties between the General Contractor and the Owner.
4) Review guarantees/warranties and bonds to verify compliance with Contract Documents.
5) Compile specified bonds.
6) Compile specified guarantees/warranties using forms included in this section
    a) "General Contractor Warranty/Guarantee" (See attached 01 78 00WG form)
    b) "Sub-Contractor Guarantee" (See attached 01 78 00GSC form)
7) Co-execute as required.
8) Submit to the Architect and Owner for review.
    a) Owner and Architect will review & issue all relative comments for General Contractor to address.
    b) General Contractor will deliver guarantees/warranties and bonds to the Owner after incorporation of any Architect and Owner comments and acceptance of the Work.
    c) These warrantees and bonds shall be included in O&M manuals.

7. Insurance:
    a. Notify the Owner of any changes in insurance coverage requirements.
        1) Especially noteworthy is the transfer from the General Contractor's builder's risk policy to the Owner's comprehensive general liability policy.
    b. Provide all certificates.
8. CALGreen documentation:
    a. Provide documentation as covered in Division 1 sustainability requirements and in individual sections.
9. Certificate of Occupancy:
    a. Obtain this and similar releases that permit the Owner's full and unrestricted use.
    b. In some jurisdictions, the Owner must obtain a certificate of occupancy or occupancy permit, as required by a building code or zoning ordinance, before occupying the project. Apply for and show compliance with all construction requirements and inspections needed to obtain the certificate of occupancy.
    c. A copy of the Certificate of Occupancy shall be included in O&M manual.

10. Extra Stock and Spare parts:
    a. Deliver replacement and maintenance stock of material as specified as part of each portion of work and product.
    b. Deliver spare parts.
    c. Itemize all materials and have Owner validate and sign indicating receipt of said materials.
11. Final Cleaning:
    a. Refer to all specification sections and to Division 1 protection and cleaning
    b. Basic cleaning:
        1) General: (Interior and Exterior)
            a) Upon completion of the work, remove all waste materials, debris, rubbish, tools, construction equipment and machinery and surplus material from and about the project.
            b) Dispose of in a manner specified also in individual specification sections.
            c) Leave Project clean and ready for occupancy
            d) Thoroughly clean construction debris from all areas.
            e) Use only cleaning materials recommended by manufacturer of the material and/or surface to be cleaned.
                i. Ensure cleaning materials meet VOC and other associated criteria.
                ii. Confine cleaning to area's only requiring the specific cleaning to protect adjacent surfaces and materials.
        2) Interior:
            a) Replace all air filters in equipment.
    c. Cleaning:
        1) General:
            a) Perform a final complete professional cleaning service, using experienced and/or professional cleaners, for all features and trades, except as otherwise set forth in the specifications under the work of the specific trade as follows;
                i. Interior:

a.	Plumbing fixtures:	Washed, cleaned and labels removed
b.	Electrical equipment:	Cleaned and labels removed
c.	Electrical Fixtures:	Cleaned and labels removed
d.	Equipment:	Visible surfaces cleaned
e.	Hardware:	Cleaned and polished
f.	Finishes surfaces:	Cleaned and spots, blemishes and foreign material removed.
g.	Finish Metals:	Cleaned and polished
h.	Cabinets/Millwork:	Dusted and cleaned, including interior of cabinets/ drawers.
i.	Carpeting:	Vacuumed and spots removed
j.	Resilient flooring and base:	Broomed, spots removed, washed, waxed and polished.

1. Refer to material manufacturer's recommend practices

k. Rubber flooring and base: Broomed, spots removed, washed, waxed and polished.

1. Refer to material manufacturer's recommend practices

l. Paved surfaces: Broom, vacuum and wash
m. Concrete exposed: Broom, vacuum and wash
n. Typical: Dust everything prior to additional cleaning methods.
o. Windows/glazing: Washed and cleaned without dust and water spots

ii. Exterior: (Building)

a. Plumbing fixtures: Washed, cleaned and labels removed.
b. Electrical equipment: Cleaned and labels removed.
c. Equipment: Visible surfaces cleaned.
d. Hardware: Cleaned and polished.
e. Finishes surfaces: Cleaned and spots, blemishes and foreign material removed.
f. Finish Metals: Cleaned and polished.
g. Structural steel exposed: Washed and cleaned without water spots.
h. Architectural steel exposed: Washed and cleaned without water spots.
i. Paved surfaces: Power washed.
j. Concrete exposed: Broom, vacuum and wash.
k. Windows/glazing: Washed and cleaned without dust and water spots.
l. Roof: Remove and debris and wash.

ii. Exterior: (Site)

a. Plumbing fixtures: Washed, cleaned and labels removed.
b. Electrical equipment: Cleaned and labels removed.
c. Equipment: Visible surfaces cleaned.
d. Finishes surfaces: Cleaned and spots, blemishes and foreign material removed.
e. Finish Metals: Cleaned and polished.
f. Structural steel exposed: Washed and cleaned without water spots.
g. Architectural steel exposed: Washed and cleaned without water spots
h. Paved surfaces : Remove debris, broom and power wash.
i. Concrete exposed: Remove debris, broom and power wash..
j. Planters: Remove debris.
k. Lawn: Remove debris.

d. Owner's Right to Clean-up:

1) Should the Contractor fail to perform the Basic clean-up and specified detail clean-up, the Owner may do so and charge the associated costs thereof to the Contractor in accordance with the General Conditions.

12. Keying

a. Complete the keying schedule, delivering it to the Owner with properly tagged master, sub-master, and room and special keys. Make final changes to lock cylinders and plan for shifting the responsibility for security to the Owner.
b. Keying Schedule shall be included in O&M manual.
c. Refer also to Section 08 71 00 – Door Hardware.

13. Certificates, Affidavits and Records

a. Upon completion of the Work, the Contractor shall submit the following to the Architect and Owner:

1) Weigh-master's affidavit for concrete as set forth in Division 1 quality control and Division 2 and 49 specification sections.
2) Record of concrete placement pours.
3) Certifications specifically indicated in individual specification sections and/or Division 1.
4) Certificates of inspection for:

a) Elevators
b) Mechanical and Plumbing work
c) Electrical work

b. This documentation shall be included in O&M manual.

14. Agency related submittals

a. In addition to Submittals required by each specification section, also provide submittals as required by governing agencies, authorities and utilities and submit a final accounting of all these submittals.

1.7 SUBSTANTIAL COMPLETION:

A. The Architect's issuance of the punch list(s) and Certificate of Substantial Completion (AIA Document G704) establishes the date of Substantial Completion.

1. The date of Substantial Completion is the stage in the progress of the work when the work or designated portion thereof is sufficiently complete in accordance with the contract documents that the Owner can occupy or utilize the work for its intended use and Owner approves this date for issuance of certificate.

a. The General Contractor, when satisfied that the project is substantially complete according to the contract, shall prepare a punch list (comprehensive list of items to be completed and corrected) and submit it to the Architect and Owner along with the Contractor's Certificate of Substantial Completion.

1) Upon receipt of the General Contractor's editable (Excel format) Punch List and General Contractor's Certificate of Substantial Completion, the Architect and Owner's Representative will observe the work to determine if it is substantially compete and

generate a punch list or punch lists, to be used in addition to General Contractor's punch list.

a) General Contractor's may combine the two punch lists at Architect's discretion.

2) The General Contractor shall correct items, (whether or not they are on the punch list), that the Architect and Owner find not in accordance with the contract documents.

b. If the Architect and Owner determine that the Contractor's Certificate of Substantial Completion and punch list have been issued prematurely, a "to do" list will be issued to the General Contractor, and an additional "final" observation and punch list issuance by the Architect will be required.

1) This is an unanticipated service on the Architect's part, and will be charged to the General Contractor as an additional service.

c. When the Architect and Owner feel that the work is substantially complete in accordance with design intent and construction documents, the Architect will issue the Certificate of Substantial Completion (AIA Document G704) along with the Architect's punch list.

1) The "Substantial Completion Agreement" indicates the time allowed for completion or correction of the items, the date on which the Owner will occupy the work or designated portion thereof, and a description of the responsibilities for maintenance, heat, utilities, and insurance.

1.8 FINAL COMPLETION

A. After the General Contractor's and Architect's punch list items are corrected and all other contract requirements have been satisfied as determined by the General Contractor, the General Contractor shall submit a request for the Architect's and Owner's final observation of the work and a final application for payment using "Contractor's Certificate of Final Completion" form.

1. The final application for payment shall be prepared in accordance with The General Conditions provided the Architect has received the following assurances:

a. An affidavit that all payrolls, bills for materials and equipment, and other indebtedness connected with the work for which the Owner might in any way be responsible, have been paid or otherwise satisfied.

1) Contractor's Affidavit of Payment of Debts and Claims shall be used for this purpose.

b. Consent of surety, if any, to final payment. If there is a surety company involved in the project, the General Contractor shall submit documents in accordance with the General Conditions, Consent of Surety, signed by an authorized official of the surety company.

B. The General Conditions and contract associated documents require the General Contractor to list specifically under "exceptions" any indebtedness or known claims that have arisen in connection with the construction contract and have not been paid or otherwise satisfied. The General Contractor must furnish a lien bond or indemnity bond to protect the Owner with respect to each exception.

C. Final payment nor any of the remaining retained percentage shall become due until the General Contractor, submits to the Architect "other data establishing payment or satisfaction of all

obligations, such as receipts, and releases and waivers of liens arising out of the contract to the extent and in such form as may be designated by the Owner."

D. General Contractor shall file the "Notice of Completion" to the governing agency's Clerk.

1.9 FINAL PAYMENT

A. After the General Contractor submits the final application for payment supported by the documents and data required under the General Conditions, the Architect with the Owner's assistance shall make a final check to ascertain the following:

1. The work called for by the contract has been completed.
2. The Owner's interests have been protected with respect to the filing of liens as required by the general conditions and by the mechanics lien laws of the jurisdiction involved.
3. The accounts between the Owner and the General Contractor have been adjusted, including original contract sum, additions and deductions as included in change orders and unit prices, cash allowances, deduction for uncorrected work, and any adjustments for liquidated damages.
4. Written warranties and guarantees (such as those for roofing), as well as all certificates of inspection (such as for mechanical. Plumbing and/ or electrical work), have been delivered to the Architect or Owner as required.
5. Other conditions of the Contract have been met.
6. Once the Architect and Owner are satisfied that everything is in order, the Architect will issue the final certificate for payment.

1.10 CALIFORNIA ENERGY CODE COMPLIANCE

A. Comply with California Energy Code Standards.

B. Comply with California Energy Code Acceptance requirements including but not limited to;

1. The installing contractor shall act as the Acceptance Agent who shall be responsible for documenting the inspection and testing results of the acceptance requirement procedures on the Acceptance Test forms.
2. The installing contractor shall be responsible for:

a. Reviewing the plans and specifications and assure they conform with the acceptance requirements.

1) This shall be done prior to the signing of the "Certificate of Compliance"

b. Performing a construction inspection prior to testing, including all necessary instrumentation, measurement and monitoring.

1) Purchasing equipment with calibration certificates reduces the amount of required site calibration and may keep overall costs down.
2) The purpose of the construction inspection is to assure that the equipment that is installed is capable of complying with the requirements of the Standards.
3) Construction inspection also assures that the equipment is installed correctly and is calibrated.

c. Undertaking all required acceptance requirement procedures.

1) They shall be responsible for identifying all performance deficiencies, ensuring that they are corrected and again implementing the acceptance requirement procedures until all specified systems and equipment are performing in accordance with the Standards.

d. Correcting all performance deficiencies and again implementing the acceptance requirement procedures until all specified systems and equipment are performing in accordance with the standards.
e. Documenting the results of the acceptance requirement procedures including paper and electronic copies of all measurement and monitoring systems.
f. Performing data analysis, calculation of performance indices and cross-checking results with the standards.
g. Issuing a Certificate of Acceptance.

1) Building departments shall not release a final Certificate of Occupancy until a Certificate of Acceptance is submitted.

a) Certificate of Acceptance must demonstrate that the specified systems and equipment have been shown to be performing in accordance with the Standards.
b) The General Contractor, Engineer of Record, or Owner shall record their State of California Contractor's License number or their State of California Professional Registration License Number on each Certificate of Acceptance that they issue.

3. Observation of all testing
4. Documentation of all forms per California Energy Code and as noted on drawings.

1.11 CALIFORNIA GREEN BUILDING STANDARDS CODE COMPLIANCE

A. Comply with California Green Building Standards Code. (CAL Green)

B. Comply with Commissioning requirements.

PART 2 **- PRODUCTS**

Not used

PART 3 **- EXECUTION**

3.1 PERFORMANCE

A. All work shall be done in compliance with drawings, specifications, codes and authorities having jurisdictions.

SECTION 01 79 00 – DEMONSTRATION AND TRAINING

PART 1 **- GENERAL**

1.1 REQUIREMENTS INCLUDED

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Section includes: Provide equipment and systems demonstration and instruction in accordance with Contract Documents

1. Videotape seminars and system demonstrations.

1.2 RELATED SECTIONS

A. Refer to Division 1 for sustainability requirements

B. Refer to Division 1 for project coordination requirements

C. Refer to Division 1 for closeout submittal procedures

D. Refer to Division 1 for Commissioning requirements

E. Divisions 21 through 28

1.3 DESCRIPTION

A. Seminar Agenda and Outline:

1. Prepare a seminar agenda and outline in consultation and cooperation with Owner. Include following:

a. Equipment and systems which will be included in seminars.
b. Name of companies and representatives presenting at seminars.
c. Outline of each seminar's content.
d. Time and date allocated to each system and item of equipment.

2. Submit a preliminary seminar agenda and outline for review and comment by Owner.

a. Revise and resubmit Agenda and outline until all seminar requirements have been satisfied and seminar dates and presenters have been finalized.

3. Submit a final seminar agenda and outline no later than eight weeks before date of Acceptance of Work.

B. Seminar organization:

1. General Contractor's presentation leaders shall chair seminars.

a. Coordinate qualification of training personnel, seminar contents and presentations with Owner.

2. Coordinate individual presentations and ensure manufacturer's representatives scheduled to be at training seminars are present.

3. Arrange for presentation leaders familiar with design operation, maintenance and troubleshooting of equipment and systems.
    a. Where a single person is not familiar with all aspects of equipment or system, arrange for specialists familiar with each aspect.
4. Coordinate proposed seminar dates with Owner and select mutually agreeable dates.
5. Videotaping: arrange for videotaping of training seminars and system demonstrations, including seminar and demonstration questions and answers.

C. Seminar Content:

1. Commissioning Agent will explain design philosophy of primary systems.
2. Include following information in presentations dealing with specific systems:
    a. An overview of how system is intended to operate.
    b. Describe design parameters, constrains and operational requirements.
    c. Describe system operation strategies.
    d. Provide information to help in identifying and troubleshooting problems.
3. Include following information in presentations dealing with equipment.
    a. Explanation of how equipment of how equipment operates.
    b. Recommended preventative and routine maintenance.

D. System Demonstration:

1. Demonstrate operation of equipment and systems when specified in individual technical sections. Include following in demonstration.
    a. Start-Up and shut down.
    b. Operation.
    c. Scheduled and preventative maintenance.
    d. Troubleshooting.
2. Demonstration may be conducted at time of original starting with Owner's prior approval.

E. Seminar and Demonstration Questions:

1. Be prepared to answer questions raised by Owner's personnel at demonstrations and seminars.
2. If unable to satisfactorily answer question immediately, provide written response within three days.

F. Use manufacturer's operation and maintenance data as basis of instruction.

1.4 CONTRACTOR START-UP REPORT FORMS

A. Videotapes: Submit two copies of each videotape; include label on each tape and on each container identifying Project and Seminar content.

SECTION 01 81 13 – PROJECT SUSTAINABILITY REQUIREMENTS

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to as herein specified.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Code of Regulations, Title 24, Part 6.

C. Title 24, Chapter 11 – California Green Building Standards Code.

1. Non-residential new construction:

a. All occupancy types.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Title 24, Chapter 11 – California Green Building Standards Code.

B. Standards:

1. Refer to Drawings and as herein specified.
2. General Contractor shall be responsible for full implementation of Construction BMP's, testing and monitoring in the project Storm Water Prevention Plan (SWPPP)

a. Plan Number: WDID [Fill in number]
b. Note: Including required reporting to the States Web site

1. https://smarts.waterboards.ca.gov/.

C. Construction Testing:

1. Refer to Drawings and as herein specified.

1.4 SUMMARY

A. This section lists requirements and procedures for compliance with certain Green Building Standards as set forth in the California Code of Regulations, Title 24 Part 11.

1.5 MEETINGS

A. Refer to Division 1 project meeting requirements.

1.6 RELATED WORK/SECTIONS

A. Related Sections include, but are not limited to:

1. Division 1
2. Division 1 substitution, deviation and/or submittal procedures
3. Division 1 Construction Waste Management and Disposal-Recycling requirements.

B. Divisions 2 through 49 Sections for sustainability requirements specific to the Work of each of those Sections.

C. The General Contractor shall refer to Division 1 commissioning requirements.

1.7 GENERAL REQUIREMENTS

A. The General Contractor shall designate an on-site field staff person to act as the General Contractor's Sustainability Project Coordinator for the duration of the project.

1. The General Contractor's Sustainability Project Coordinator shall have the following qualifications:

a. Experience on at least 2 prior projects for:

1) Preparation and implementation of Construction Waste Management Plan
2) Building Commissioning

2. The General Contractor's Sustainability Project Coordinator shall facilitate the implementation and documentation of all sustainability requirements assigned to the General Contractor, including coordination with sub-contractors on preparation of related construction submittals.

B. The General Contractor shall prepare a Construction Waste Management Plan and submit to the Owner and Architect within 30 days after the date of the Notice to Proceed and prior to the start of any work on site indicating how the following requirements will be met:

1. Refer to Division 1 for construction waste management and disposal/recycling requirements
2. Diversion of required percentage of construction and demolition debris from disposal in landfills and incinerators in compliance with the requirements of reference standards and as herein indicated.

a. Recycled amount:

1) 50%
2) Note that diversion may include donation of materials to charitable organizations and salvage of materials on site.

b. Identify the materials to be diverted from disposal: provide an analysis of jobsite waste to be generated, including types and quantities.

1) Identify a specific area on the construction site for collection of recyclable materials.
2) Identify how and where these materials will be sorted.

3) Identify how these materials are to be diverted: provide strategies for salvage, reuse or recycling.
4) Identify where these materials will be diverted: include a list of recycling facilities to which indicated recyclable materials will be distributed for disposal.
5) Identify methodology for maintaining records of recycling efforts throughout construction process.
6) Identify construction haulers and recyclers to handle the designated materials.

c. Identify materials that are not recyclable or otherwise conservable that must be disposed of in a landfill or other means acceptable under governing State and Local regulations.
d. Indicate any instances where compliance with requirements of this section does not appear to be possible and request resolution from Owner and Architect.
e. Include participation in and procedures for recycling/re-use programs.

1) Participation in Re-Use Programs: Rebates, Tax Credits, and other savings obtained for recycled or re-used materials shall accrue to the General Contractor.

f. Include participation in and procedures for rebate programs.

1) Participation in Re-Use Programs: Rebates, Tax Credits, and other savings obtained for recycled or re-used materials shall accrue to the General Contractor.

3. Show Compliance with applicable State and Local ordinances and regulations.
4. The Construction Waste Management Plan shall be subject to review and approval by Owner and Architect.
5. Review of General Contractor's Waste Management Plan shall not relieve General Contractor of responsibility for control of pollutants and other environmental protection measures.

C. The General Contractor shall submit sustainability related documentation as part of construction submittals for:

1. Items defined within Division 1 sustainability requirements
2. All materials specified in Divisions 2 through 49

1.8 CALIFORNIA GREEN BUILDING STANDARDS CODE REQUIREMENTS

A. General:

1. The General Contractor is responsible for maintaining all records relating to the California Green Building Standards Code sections noted herein.
2. Verification of compliance with the California Green Building Standards Code sections noted herein shall be provided by the General Contractor to the enforcing agency upon request.

B. California Building Standards Related Mandatory Measures Requirements:

1. Storm Water Soil Loss prevention Plan (Cal Green 5.106.1)
2. Construction Waste Reduction, Disposal & Recycling (CalGreen 5.408)

a. Requirements:

1) Prepare and implement the Construction Waste Management Plan as identified under Section 1.08 General Requirements. Update the waste management plan as may be required during construction.

2) General Contractor shall recycle and/or salvage for reuse a minimum of 50% of the non-hazardous construction and demolition debris, or meet a local construction and demolition waste management ordinance, whichever is more stringent.

a. General Contractor shall maintain waste haul tickets or other such records identifying the diversion rate achieved by the project.
b. Material diversion rate shall be calculated by weight or volume, but not by both in the same project.
c. Material diversion calculations shall exclude excavated soil and land-clearing debris.

3) General Contractor shall reuse or recycle 100% of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing. For a phased project, such material may be stockpiled on site until the storage site is developed
4) General Contractor shall provide final summary of construction waste diversion to Owner and Building Official at the end of the project.

3. Commissioning (CalGreen 5.410.2)

a. Requirements:

1) Refer to Division 1 Commissioning requirements.

4. Duct Protection (CalGreen 5.504.3)

a. Requirements:

1) At the time of rough installation, during storage on the construction site and until final startup of the heating and cooling equipment, all duct and other related air distribution component openings shall be covered with tape, plastic, sheet metal or other methods acceptable to the enforcing agency to reduce the amount of dust or debris which may collect in the system.

5. Finish Material Pollutant Control – Adhesives, Sealants and Caulks (CalGreen 5.504.4.1)

a. Requirements:

1) Adhesives, sealants and caulks used on the project shall meet the requirements of the following standards:

a. Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168 VOC limits as shown in CalGreen Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene, dichloride, methylene chloride, perchloroethylene and trichloroethylene), except for aerosol products as specified below.
b. Aerosol adhesives, and smaller unit sizes of adhesives, and sealant or caulking compounds (in units of product, less packaging, which do not weight more than one pound, and do not consist of more than 16 fluid ounces) shall comply with statewide VOC standards and other requirements, including prohibitions on use of certain toxic compounds, of California Code of Regulations, Title 17, commencing with Section 94507.

6. Finish Material Pollutant Control – Paints and Coatings (CalGreen 5.504.4.3)
    1) Requirements:
        a. Architectural paints and coatings shall comply with VOC limits in Table 1 of the ARB Architectural Coatings Suggested Control Measure, as shown in CalGreen Table 5.504.4.3, unless more stringent local limits apply. The VOC content limit for coatings that do not meet the definitions for the specialty coatings categories listed in CalGreen Table 5.504.4.3 shall be determined by classifying the coating as a Flat, Non-flat, or Non-flat-High Gloss coating, based on its gloss, as defined in Subsections 4.21, 4.36 and 4.37 or the 2007 California Air Resources Board Suggested Control Measure and the corresponding Flat, Non-flat or Non-flat-High Gloss VOC limit in CalGreen Table 5.504.4.3 shall apply.
        b. Aerosol paints and coating shall meet the PWMIR Limits for ROC in Section 94522(a)(3) and other requirements including prohibitions on use of certain toxic compounds and ozone depleting substances, in Sections 94522 (c)(2) and (d)(2) of California Code of Regulations, Title 17, commencing with Section 94520; and in areas under the jurisdiction of the Bay Area Air Quality Management District additionally comply with the percent VOC by weight of product limits of Regulation 8 Rule 49.
7. Finish Material Pollutant Control – Carpet Systems (CalGreen 5.504.4.4)
    a. Requirements:
        1) All carpet installed in the building interior shall meet the testing and product requirements of one of the following:
            a. Carpet and Rug Institute's Green Label Plus Program
            b. California Department of Public Health Standard Practice for the testing of VOC's (Specification 01350)
            c. NFS/ANSI 140 at the Gold Level
            d. Scientific Certifications Systems Sustainable Choice
        2) All carpet cushion installed in the building interior shall meet the requirements of the Carpet and Rug Institute Green Label program.
        3) All carpet adhesive shall meet the requirements of Table 5.504.4.1.
8. Finish Material Pollutant Control – Composite Wood Products (CalGreen 5.504.4.5)
    a. Requirements:
        1) Hardwood plywood, particleboard and medium density fiberboard composite wood products used on the interior or exterior of the building shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure for Composite Wood (17CCR 93120 et. seq.), by or before the dates specified in those sections as shown in CalGreen Table 5.504.4.5.
9. Finish Material Pollutant Control – Resilient Flooring Systems (CalGreen 5.504.4.6)
    a. Requirements:

1) For 50% of floor area receiving resilient flooring, install resilient flooring complying with the VOC-emission limits defined in the 2009 Collaborative for High Performance Schools (CHPS) criteria and listed on its Low-emitting Materials List (or product registry) or certified under the Resilient Floor Covering Institute (RFCI) FloorScore program.

10. Filters (CalGreen 5.504.5.3)

a. Requirements:

1) In mechanically ventilated buildings, provide regularly occupied areas of the building with air filtration media for outside and return air prior to occupancy that provides at least a Minimum Efficiency Reporting Value (MERV) of 8.

PART 1 - **PRODUCTS**
NOT USED

PART 2 - **EXECUTION**

3.1 FIELD EXECTUTION OF SUSTAINABILITY REQUIRMENTS

A. The General Contractor is responsible for ensuring proper field execution of all sustainability requirements, communication with Subcontractor's of all requirements and submission of all documentation in a timely manner.

B. Refer also to Part 1 of this Specification Section.

3.2 CONSTRUCTION VENTILATION AND PRECONDITIONING

A. General Contractor shall execute the Owner/Architect approved Construction IAQ Management Plan.

B. Temporary Construction Ventilation: General Contractor shall maintain sufficient temporary ventilation of areas where materials are being used that emit VOC's, and maintain ventilation continuously during installation, and until emissions as described below dissipate after installation. If continuous ventilation is not possible via the building's HVAC system(s) then ventilation shall be supplied via open windows and temporary fans, sufficient to provide no less than three air changes per hour.

1. General Contractor shall ensure that:

a. Where odorous and/or high VOC emitting products are applied on-site, apply prior to installation of porous and fibrous materials. Where this is not possible, protect porous materials with polyethylene vapor retarders.
b. The period after installation shall be sufficient to dissipate odors and elevated concentrations of VOCs. Where no specific period is stated in these Specifications, a time period of 72 hours shall be used.
c. All areas shall be vented directly to outside. Areas shall not be vented to other enclosed areas.

C. During dust producing activities (e.g. drywall installation and finishing) ventilation system shall be off, and openings in supply and return HVAC system shall be protected from dust infiltration. Provide temporary ventilation as required.

D. Preconditioning: Prior to installation, General Contractor shall allow products which have odors and VOC emissions to off-gas in dry, well-ventilated space outside of building for 14 calendar days, in order to allow for reasonable dissipation of odors and emissions.

3.3 PROTECTION

A. Protect stored on-site and installed absorptive materials from moisture damage. Where absorptive materials not intended for wet applications are exposed to moisture, immediately remove from site and dispose of properly.

B. Protect installed materials using methods that do not support growth of molds and mildews.

C. Immediately remove from site and properly dispose of materials showing signs of mold and signs of mildew, including materials with moisture stains.

END OF SECTION 01 81 13

THIS PAGE IS INTENTIONALLY BLANK

SECTION 01 91 13 – GENERAL COMMISSIONING REQUIREMENTS

PART 1 **- GENERAL**

1.1 REQUIREMENTS INCLUDED

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. The requirements of this section include building commissioning requirements.

D. Coordinate with Mechanical and Electrical Requirements.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission.

C. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission.

D. Title 24, Chapter 11 – California Green Building Standards Code.

1. Non-residential new construction:

a. All occupancy types.

1.3 RELATED SECTIONS

A. Division 1 sustainability requirements.

B. Division 1 demonstration and training requirements.

C. Divisions 22 through 28.

1.4 DESCRIPTION

A. Following Definitions apply to all Contract Documents:

1. Contractor Start-Up: Sub-Phase of Contractor's work ending with Acceptance of Work, during which the Contractor performs a pre-planned program of activities including starting, testing, inspecting, adjusting, balancing and correcting Contract Deficiencies, and other similar activities.

a. During this period, the Commissioning Agent or their representative shall be on site to observe, inspect and identify deficiencies in system operation.

2. Completion of Start-Up: When entire work, including Contractor Start-up and Fine Tuning, except those items arising from warranty provisions of Contract Documents, has been performed to requirements of Contract Documents and is so declared, in writing, by Commissioning Agent.
3. Fine Tuning: Sub-phase of Contractor's work, commencing after occupancy and ending twelve months later, during which Commissioning Agent identifies Contract deficiencies

arising under normal operating conditions, after user occupancy, and Contractor corrects such Contract deficiencies.

a. Fine Tuning is a period of time after occupancy of facility by Owner/User during which systems are optimized under "live" operating conditions and any outstanding construction or design deficiencies are corrected.
b. For purposes of these documents, "Fine Tuning" shall extend from date of actual Owner/User occupancy of building to a date twelve months after date of actual Owner/User occupancy.

4. Acceptance of Work: When pre-requisites to Acceptance of Work required by Contract Documents are fulfilled and Work is ready for use or is being used for purpose intended and state of work is so declared, in writing by Owner.

B. Commissioning Schedule

1. Provide schedules for Contractor Start-Up work.
2. Incorporate into overall construction schedule.
3. Contractor's activities, which will be performed as specified under Fine Tuning, shall be completed within 12 months from date of occupancy by Owner/User.

PART 2 **- EXECUTION**

2.1 CONTRACTOR START-UP REPORT FORMS

A. Prepare and submit one copy of report forms to be used in preparation of system reports for following:

1. Each System specified in Division 22 through 28.

B. Each system report shall include following:

1. Project Name
2. Name of system.
3. Index of report's content.
4. List of equipment in system.
5. Adjacent to list of equipment, columns to indicated status of equipment operation, to date and to sign off equipment start-up.
6. Space to record equipment and operational problems which cannot be corrected within Contractor's Start-Up program, and which may delay Acceptance of Work.
7. Manufacturer's equipment start-up reports.
8. Systems' testing, balancing, and adjusting reports.
9. Equipment report forms, which shall include:

a. Project name.
b. Name of equipment.
c. Starting and testing procedures to be performed.
d. Observations and test results to be recorded.

C. Submittals:

1. Submit draft report forms for Commissioning Agent's review and comment prior to final submission. Coordinate draft submissions with Commissioning Agent.

2. Submit final report forms, acceptable to Commissioning Agent as scheduled in specifications, including but not limited to;

    a. Divisions 22 through 28

2.2 PRE-FACILITY START-UP MEETINGS

A. Pre-Facility Start-Up meetings shall be held from start of Work until Contractor Start-Up schedules and Contractor Start-Up report forms have been approved by Commissioning Agent.

B. Purpose: to monitor development of Contractor Start-Up schedule and Contractor Start-Up forms.

C. Frequency: As directed by Commissioning Agent until Contractor Start-Up schedule and Contractor Start-Up report forms are approved by Commissioning Agent.

D. Location: Contractor's site office or other on-site location agreed to between Commissioning Agent and Contractor.

E. Attendees:

1. Contractor's Representatives: Contractor's site superintendent, mechanical and electrical subcontractors, and when so requested by Commissioning Agent, Sub-subcontractors, suppliers and other parties involved in Work. Contractor's representatives shall be qualified and authorized to act on behalf of party each represents.
2. Commissioning Agent's representatives.

F. Agenda:

1. Review of progress of Contractor Start-Up schedule preparation.
2. Review of progress of Contractor Start-Up report form preparation.
3. Identification of problems impeding progress.
4. Other business.

G. Minutes:

1. Contractor shall record minutes and distribute copies to all attendees within seven (7) working days after meeting.

2.3 FACILITY START-UP PROGRESS MEETINGS

A. Facility start-up progress meetings shall be held during Contractor Start-Up.

B. Purpose: To monitor Contractor Start-Up progress and to identify problems and action required for their resolution; to expedite Contractor Start-Up.

C. Frequency: Every two (2) weeks or as directed by Commissioning Agent.

D. Location: Same as Pre-Facility Start-Up meetings.

E. Attendees: Same as Pre-Facility Start-Up meetings.

F. Agenda:

1. Review of Contractor Start-Up progress.
2. Identification of problems impeding progress towards achievement of Contractor Start-Up milestones.
3. Review of outstanding business.
4. Review of Change Orders and Requests for Proposals.

5. Other business.
6. Minutes: Same as Pre-Facility Start-Up meetings.

2.4 FACILITY START-UP

A. Contractor Responsibilities: During Facility Start-Up (not necessarily in order listed):

1. Start Equipment and systems as specified in Divisions 22 through 28.
2. Test, adjust and balance equipment and systems as specified in Divisions 22 through 28.
3. Demonstrate equipment and systems as specified in Divisions 22 through 28
4. Complete and submit Contractor Start-Up reports including:

   a. Contractor's system and equipment start-up reports.
   b. Testing, adjusting and balancing reports.
   c. Manufacturer's equipment start-up reports.

5. Review Contract Documents and inspect Work to ensure completeness of Work and compliance with requirements of Contract Documents.
6. Correct Contract deficiencies identified as a result of foregoing and as may be identified by Owner.
7. Execute Change Orders issued by Owner.
8. Perform other work and activities required for fulfillment of prerequisites to Acceptance of Work.

B. Commissioning Agent Responsibilities during Facility start-up:

1. Carry out the pre-interim inspections as necessary.
2. Witness manufacturers' equipment start-up.
3. Verify starting, testing, adjusting and balancing by Contractor.
4. Review and approve Contractor Start-Up reports.
5. Cooperate in systems and equipment demonstration and instruction.

C. Owner Responsibilities:

1. Initiate Chang Orders as required.
2. Verify correction of Contract deficiencies by Contractor.
3. Verify execution of Change Orders by Contractor.

D. Ongoing Cycle of Facility Start-Up Includes:

1. Commissioning Agent's inspections.
2. Documentation of results.
3. Diagnosis of problems.
4. Correction of Contract deficiencies and execution of Change Orders as required.
5. Verification of results.

2.5 FINE TUNING

A. Fine Tuning will commence upon Acceptance of Work.

B. Contractor Responsibilities During Fine Tuning:

1. Correct Contract Deficiencies previously outstanding and those identified during Fine Tuning.
2. Execute Change Orders issued by Owner.

3. Where Contractor start-up has been properly implemented construction and design deficiencies left to be resolved during this period should be relatively minor.
    a. Ensure expedient correction of minor problems, which are identified during initial occupancy.
    b. Attend regular weekly meetings with Building Manager and Building Engineer to review any operational problems.
    c. Make necessary environmental measurements and survey users to quickly identify problems and establish necessary trade inputs for resolution.
    d. Monitor and manage prompt correction of Contract deficiencies identified during initial user occupancy.
    e. Find and eliminate deficiencies in systems and equipment performance.
    f. Complete work on all fine tuning issues within first 12 months from the date of completion.

C. Commissioning Agent Responsibilities during Fine tuning:
1. Carry out a series of systems and equipment operating tests under conditions simulating, to extent possible, full and partial operating loads.
2. Record Test results.
3. Diagnose Problems.
4. Repeat tests as required following correction of Contract deficiencies and execution of Change Orders by Contractor and verify results.

D. Ongoing Cycle of Fine Tuning Includes:
1. Performance testing.
2. Documentation of results.
3. Diagnosis of problems.
4. Correction of Contract deficiencies and execution of Change Orders as required.
5. Verification of results.

2.6 CONTRACT ACCEPTANCE PROCESS

A. Process for Owner's Acceptance of Work:
1. Acceptance of Work:
    a. Fulfillment of prerequisites to Acceptance.
    b. Inspection for Acceptance.
    c. Issuance of Letter of Acceptance.
2. Completion of Fine Tuning:
    a. Fulfillment of prerequisites to Completion of Fine Tuning.
    b. Inspection for Completion of Fine Tuning.
    c. Issuance of Letter of Completion of Fine Tuning.

2.7 PARTIAL ACCEPTANCE OF WORK

A. When partial utilization of Work is required and Acceptance of Work is a condition of such partial utilization, applicable requirements specified in this Section shall apply to parts of Work to be utilized.

2.8 PREREQUISITES TO ACCEPTANCE

A. Following to be completed prior to requesting Owner's inspection for Acceptance.

B. Perform Contractor Start-Up Activities.

1. Obtain and submit evidence of compliance with regulatory requirements as specified, including following:

a. Occupancy permits.
b. Inspection/operating certificates.

2. Remove from Project site temporary facilities as specified, along with construction tools, equipment, mock-ups and similar items.
3. Complete starting of systems and equipment as specified.
4. Complete testing, adjusting and balancing of systems and equipment as specified.
5. Complete equipment and systems demonstration and instruction as specified.
6. Complete final cleaning as specified.
7. Submit Project Record Documents as specified.
8. Submit operation and maintenance materials as specified.
9. Provide spare parts and maintenance materials as specified.
10. Submit product warranties and certificates of assurance as specified.
11. Make final changeover of locks and transmit keys to Owner as specified.
12. Ensure Work is ready for use for purpose intended.
13. Review Contract Documents and inspect Work to confirm that prerequisites to Acceptance of Work have been fulfilled and that Work is ready for inspection for Acceptance.

2.9 INSPECTION FOR ACCEPTANCE

A. Submit written request to Owner for inspection for Acceptance of Work, certifying prerequisites specified have been fulfilled and indicating known exceptions in list of items to be completed, corrected or submitted.

B. Owner will, within a reasonable time after receipt of Contractor's request, proceed with inspection, or advise Contractor prerequisites are not adequately fulfilled.

C. Results of Owner's inspection for Acceptance will form initial Contract deficiency list.

2.10 ACCEPTANCE OF WORK

A. Following inspection, Owner will:

1. Issue a Letter of Acceptance stating effective date of Acceptance of Work, with a copy of Contract Deficiency list attached thereto, or
2. Advise Contractor that prerequisites to Acceptance are not fulfilled and repeat inspection for Acceptance as necessary.

B. Upon Issuance of Letter of Acceptance, Owner will assume responsibility for care, custody and control of Work, including responsibility for:

1. Facility operation, including all systems and equipment.
2. Maintenance.
3. Security.
4. Property insurance.
5. Utility costs.

2.11 PREREQUISITES TO COMPLETION OF START-UP FINE TUNING

A. Prerequisites to Completion of Fine Tuning Work are:

1. Prior to Acceptance of Work.
2. Completion of Fine Tuning activities by Commissioning Agent and Contractor as specified.
3. Contract deficiencies identified during Fine Tuning testing and previously identified but outstanding Contract deficiencies shall have been corrected by Contractor or addressed adequately by Contractor so a course of action can be established by Commissioning Agent.
4. Ensure entire work, except items arising from warranty provisions of Contract Documents, has been performed to requirements of Contract Documents.

2.12 INSPECTION FOR COMPLETION OF START-UP FINE TUNING

A. Submit written request to Owner for inspection, including copy of Owner's most recent Contract Deficiency list, certifying each Contract deficiency has been corrected or otherwise resolved in a manner agreed to between Owner and Contractor.

1. List known exceptions, if any, in request.

B. Owner will within a reasonable time after receipt of Contractor's request:

1. Proceed with inspections, or
2. Advise Contractor prerequisites are not adequately fulfilled.

C. Following inspection**,** Owner will:

1. Issue a Letter, stating effective date of completion of start-up Fine Tuning.
2. Advise Contractor of Contract deficiencies to be corrected prior to issuance of Letter completion of start-up Fine Tuning.

PART 3 **- EXECUTION**
Not used

END OF SECTION 01 91 13

THIS PAGE IS INTENTIONALLY BLANK

SECTION 02 41 13 – SELECTIVE DEMOLITION AND PROTECTION

PART 1 **- GENERAL**

1.1 WORK INCLUDED THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable extents of work and dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. General:

    a. Pay all disposal fees
    b. Coordinate all recycling procedures and documentation
    c. Obtain all permits
    d. Coordinate and get approval for demolition of all existing utilities with **Owner** and appropriate utility company/governmental jurisdiction.

2. Scope:

    a. Demolition:
    b. Removal and Disposal:
    c. Removal and Storage for Owner use:
    d. Removal and Storage for Future Installation:
    e. Record Drawings / As-built information:
    f. Protect and maintain existing vegetation designated to be saved.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission.

C. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission.

D. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction:

    a. All occupancy types.

E. American National Standards Institute (ANSI), www.ansi.org

F. American Society For Testing and Materials (ASTM), www.astm.org

G. Industrial Accident Commission of the State of California

H. National Demolition Association, www.demolitionassociation.com

I. Occupational Safety and Health Administration (OSHA), United States Department of Labor, www.osha.gov

1. OSHA – Regulations Standards – 29 (CFR) as approved by State of California
2. OSHA – Regulations Standards – 29 (CFR), Section 1926 Occupational Safety and Health Standards for Construction as approved by State of California

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Comply with manufacturer's standards.
2. Comply with Building Code.

B. Sustainability:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

C. Refer to Division 1 for construction waste management and disposal/recycling requirements.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit a written list of all items to be submitted as indicated below and organized in a spread sheet;

1. Demolition items/material
2. Removed and disposed of items/materials
3. Removed and stored items by **Contractor** and supplied at later date to **Owner**.
4. Removed and stored items to be installed at a later date by **Contractor** as directed by **Owner.**
5. Acknowledgment of AS-Demolished Record Drawings to include markup of drawings and pdf files named specific to each drawing sheet for all final record keeping.
6. Protection and maintenance plan for existing vegetation.

E. Submit As-built site drawings indicating the capped off locations for all utilities.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. **Contractor** shall have been in business for five (5) years providing demolition services for projects of similar size and complexity.

C. **Contractor** shall be a member of the National Demolition Association in good standing.

D. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field-verify that all work by others is installed correctly prior to proceeding with demolition work under this specification and drawings.

B. Retain and have all applicable permits obtained prior to commencing with work.

C. Hazardous materials:

1. Any known or presumed hazardous material discovered shall be brought to the **Owner's** attention immediately.
2. It is the **Contractor's** responsibility to comply with the pertinent sections, as they apply to this project, of the "Construction Safety Orders" issued by the State of California lasts edition and all OSHA requirements.
3. The **Architect,** Structural Engineer and **Owner** do not accept any responsibility for the **Contractor's** failure to comply with agency having jurisdiction, building code and/or State of California requirements.
4. The **Contractor** shall be responsible for adequate design and construction of all formwork, bracing and shoring required.

D. Safety Precautions:

1. Perform demolition work in such a manner as to prevent damage to existing facilities to remain or to be salvaged and to prevent injury to public and workmen engaged on site under this or other contracts.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

D. Protect and maintain existing vegetation as herein specified and/or indicated in contract documents.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

1.10 RELATED WORK / SECTIONS

A. The following is related work including, but not limited to the following;

1. New Site Work
2. Coordination with Utility Companies
3. Coordination with Agencies
4. Acquisition of permits
5. Coordination with **Owner**
6. Surveying

E. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 01 25 00 – Substitution and Deviation Procedures
3. Section 01 33 00 – Submittal Procedures
4. Section 01 50 00 – Temporary Facilities and Controls
5. Section 01 73 29 – Cutting and Patching
6. Section 01 74 00 – Protection and Cleaning
7. Section 01 74 19 – Construction Waste Management and Disposal/Recycling
8. Section 01 78 00 – Closeout Submittals
9. Section 01 81 13 – Project Sustainability Requirements
10. Section 31 00 01 – Site Work General Requirements
11. Section 31 11 00 – Clearing and Grubbing
12. Section 31 22 00 – Grading
13. Section 31 23 00 – Trenching and Backfill
14. Section 31 25 00 – Erosion and Sedimentation Control
15. Section 32 12 16 – Asphalt Paving
16. Section 32 13 13 – Concrete Paving

1.11 OPERATION AND MAINTENANCE DATA

A. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. General:

1. Schedule work and sequence with **General Contractor**.

a. Schedule required investigation, shutoff of utilities, etc., prior to commencing with demolition, etc.
b. Coordinate work with **Owner's** representative including, but not limited to:

1. Divisions 2 - 33

B. Existing Utilities:

1. Coordinate work of disconnecting & capping existing utilities including, but not limited to;

a. Gas
a. Domestic water
b. Fire service water
c. Sewer
d. Electrical
e. Cable TV
f. Low voltage cabling,
g. Etc.

C. Existing Vegetation:

1. Coordinate work of protecting and watering (maintaining) existing vegetation to remain with the following, but not limited to;

a. Site work, including but not limited to;

1) AC Paving
2) Concrete curbs
3) Flatwork
4) Vehicular paving
5) Ramps
6) Underground utilities

b. Excavation for underground devices, piping, etc.
c. Erosion control
d. Landscape documents
e. Civil documents

D. Notices:

1. **General Contractor** shall make the following notices to **Owner** in addition to Specifications and Division 1 including, but not limited to;

a. 72 hours prior to interruption of utilities.
b. 48 hours prior to demolishing and/or removing items/materials not specific all noted in drawings and/or specifications.

PART 2 **– PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Products are acceptable to use as intended for demolition work.

B. Refer to Division 1 for substitution, deviation and/or submittal procedures

2.2 MATERIALS

A. As necessary by **Contractor** to complete their work and used for the purpose of demolition, etc. as herein specified and additionally as indicated in contract documents.

2.3 COORDINATION

A. Refer to Division 1 for project coordination requirements.

2.4 OTHER MATERIALS

A. Provide other materials, not specifically described but required for complete and proper demolition activities, as selected by the **General Contractor** subject to the approval of the **Architect** and **Owner**.

PART 3 **- EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which demolition work is to be performed.

2. Identify conditions detrimental to proper or timely completion of demolition work and coordinate with **General Contractor** to rectify.

B. Hazardous materials:

1. Any known or presumed hazardous material discovered shall be brought to the **Owner's** attention immediately.

3.2 COORDINATION

A. **General Contractor** shall coordinate demolition work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

B. Protect all existing installations from damage.

C. Coordinate scope of work with, but not limited to; civil documents and landscape documents.

D. Take measures to prevent damage to existing items indicated to remain during the course of work under this specification.

E. All dimensions given to existing structure are approximate. Verify by field measurements the dimensions of the existing structure. Where actual conditions deviate from details shown on the drawings, notify the Structural Engineer for instructions before proceeding with work.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with required demolition practices.

3.4 DEMOLITION, DISPOSAL, REMOVAL, STORAGE, PROTECTION AND RECORD DRAWINGS

A. General:

1. Perform work in accordance with accepted demolition practices, as herein specified and in compliance with contract documents.
2. Pay all disposal fees
3. Coordinate all recycling procedures and documentation
4. Coordinate and get approval for demolition of all existing utilities with **Owner** and appropriate utility company/governmental jurisdiction.
5. Codes, regulations, agencies and jurisdictions:

a. Obtain all permits
b. Demolition work shall comply with;

1) Local ordinances having jurisdiction.
2) Appropriate utility company/governmental jurisdiction.
3) Safety Codes of State of California.
4) Rules and regulations of Industrial Accident Commission of State of California.

6. Perform demolition work in such manner as to prevent damage to existing facilities to remain or to be salvaged, and to prevent injury to students, public and workmen engaged on site under this or other contracts.

a. Roofs and walls, or other building elements, shall be demolished in such manner that materials or units thereof shall fall within foundation lines of building being removed.
b. Demolition debris shall not be allowed to accumulate on site.

c. Hazardous work shall not be left standing or hanging overnight or weekends, but shall be knocked or pulled down at end of each day to avoid damage or injury to persons or existing facilities due to toppling or falling of such hazardous elements.

7. Wherever cutting and removal of portions of existing work is indicated, such work shall be sawn in manner that will produce neat and straight lines, parallel to adjacent surfaces or plumb for vertical surfaces.

   a. Grind smooth resulting edges of concrete slabs or walks.
   b. Neatly remove existing finish materials back to clean straight line or nearest support patches or repairs.
   c. Execute cutting and demolition by methods which will prevent damage to other work, and which will provide proper surfaces to receive installation of repairs and new work.

8. Any conflicting items not specifically shown (such as underground pipes, conduits, etc.) shall be brought to the attention of the Structural Engineer prior to further demolition.

B. Demolition:

1. General:

   a. Demolished items are to become the property of the **General Contractor** and removed from premises at **Contractor's** expense (typical, U.N.O.).

2. Remove and dispose of all items indicated in documents, including but not limited to;

   a. Concrete:

      1) Flatwork
      2) Curbs and gutters
      3) Vehicular paving

   b. Electrical;

      1) Wiring
      2) Conduit
      3) Light Fixtures

   c. Utilities

      1) Piping
      2) Abandon Piping

   d. Vegetation

      1) Trees
      2) Shrubs
      3) Ground Cover
      4) Lawn
      5) Etc.

   e. Miscellaneous

      1) Signage (Excluding existing Operations and Lab Building identification signage which is to be removed and stored for re-use at new Operations and Lab Building)
      2) Items indicated in documents
      3) Any other items required to facilitate new construction

4) Existing Pavement Marking:
5) Remove rubber deposits, existing markings and other coatings adhering to pavement with scrapers, wire brushing, sandblasting, approved chemicals or mechanical abrasion.

a. Where oil or grease exist, scrub affected areas with several applications of trisodium phosphate solution or other approved detergent or degreaser, and rinse thoroughly after each application.

1) After cleaning, seal oil-soaked areas with cut shellac to prevent bleeding through new paint.
2) Paint new markings and striping in accordance with and under Section 32 17 23 – Pavement Markings.

C. Removal and Disposal

1. All materials resulting from demolition work, except those items specifically listed or shown to be retained by **Owner** or reinstalled, shall become property of **General Contractor** and shall be removed from premises.
2. HAUL ROUTES:

a. Establish haul routes in advance and post flagmen to assure safety of visitors, public and workers.
b. Keep streets and parking areas free of mud, rubbish, debris, etc.

1. **General Contractor** will assume responsibility for any damage resulting from hauling operations and hold **Owner** free and clear of any liability in connection therewith.

3. Appropriate utility company/governmental jurisdiction.

a. Coordinate with utility companies for and removed items that might be the property of said utility company.

D. Removal and Storage for **Owner** use:

1. Items to be retained for **Owner** shall be safely stored until said time the **Owner** requires delivery of items.

E. Removal and Storage for future Installation:

1. Items to be retained for **Owner** shall be safely stored until said time the **Owner** requires the items be installed.

F. As-Built Drawings:

1. **General Contractor** shall carefully document, photograph and provide hard copy of As-Built Drawings and Specifications of all removed items, capped off utilities and terminated utilities, conduits, etc. for as-built conditions after demolition is complete.
2. Keep record drawings in accordance with Section 01 78 00 – Closeout Submittals.

G. Protection and Maintenance of Existing Vegetation:

1. Prior to any construction or grading activities, contractor shall install vegetation & tree protection fencing, which will consist of four-foot tall plastic mesh fencing installed on six-foot poles spaced a maximum of 20 feet apart.

a. The poles shall be installed with two feet of length below ground and four feet above ground.

2. The fencing shall encompass an area 150% of the drip line of the tree or as appropriate where curbs, walks or drive ways are installed within drip lines.
    a. In those cases, install fencing no more than 18" off back of curb or walk, and in no cases shall be less than 85% of the drip line of the tree being protected as approved by Landscape Architect.
    b. Tree protection fencing shall be installed and inspected by staff from the **Owner** prior to issuance of a permit.
3. Watering of Existing Trees
    a. Irrigation shall be applied to all existing vegetation & trees as required to maintain good health.
        1. **General Contractor** will be responsible for the health of the vegetation & trees and all materials and facilities to provide adequate water. **General Contractor** shall contact the **Owner** to determine a watering schedule and any specific care required.
        2. **General Contractor** will be liable for the replacement of like vegetation & trees in the event of death due to neglect or lack of protection by the **General Contractor**. In the event that any of the vegetation and trees begin to suffer, contact the Landscape Architect and **Owner** immediately.

3.5 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator
    1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
    2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Protection and maintenance of Existing Vegetation.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so their rubbish, waste, and debris do not interfere with the work of others and are removed from project.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 02 41 13

SECTION 03 00 51- CONCRETE CLEANING

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable extents of work and dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Field cleaning of surfaces of concrete by use of concrete cleaning compounds as herein scheduled.

a. New concrete surfaces

1) Exterior
2) Interior

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Concrete Institute (ACI), www.aci-int.org

E. International Concrete Repair Institute (ICRI), www.icri.org

F. Refer to standards herein listed with specific products/materials.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

1. Products shall comply with all Federal, State, and local environmental regulations.
2. Handling and disposal of products shall be done in compliance with all Federal, State, and local environmental regulations including testing, handling, treatment, containment, collection, transport, disposal, and discharge of hazardous wastes and cleaning effluents

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing**:

1. Cleaning Products for use on new concrete substrates shall be tested prior to start of final concrete cleaning work.

    a. Before full-scale application, review manufacturer's product data sheets to determine the suitability of each product for the specific surfaces. Apply each concrete cleaner to test surface to determine dilution rates, dwell times, number of applications, compatibility, effectiveness, application procedures, effects of pressure rinsing, and desired results.
    b. Apply concrete cleaners to test sections in accordance with manufacturer's written instructions. Allow time frame as directed by Manufacturer and when panels are thoroughly dry before evaluating final appearance and results. Do not begin full-scale application until test panels are inspected and approved by the **Architect**.
    c. Test Panel shall be 4' x 4' minimum; location and quantity of test panels shall be determined by the **Architect**.
    d. Test all cleaning effluents generated by the concrete cleaning of the test panels to determine any hazardous characteristics.
    e. Retain and protect test panels approved by the **Architect** in undisturbed condition during the work of this section, to be used as a standard for judging the concrete cleaning work

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Technical information and cleaning agent label analysis with application instructions for each material proposed for use.

    a. List each material and cross-reference to specific cleaning material for finish system and application.

        1) Identify by manufacturer's catalog number and general classification.

2. MSDS for each product
3. Submit description for application procedures of concrete cleaners.

4. Submit description for testing, handling, treatment, containment, collection, transport, disposal, and discharge of hazardous wastes and cleaning effluents.
    a. Describe any hazardous materials to be cleaned from substrates.
    b. Submit applicable local environmental regulations.
5. Submit qualifications of applicator.
    a. Certification stating applicator is experienced in the application of the specified products.
6. Submit description for protecting surrounding areas, landscaping, building occupants, pedestrians, vehicles, and non-concrete surfaces during the work from contact with concrete cleaners, residues, rinse water, fumes, wastes, and cleaning effluents.
7. Provide written description of proposed final actions to clean site and to remove materials used.
8. Submit description for surface preparation of substrates to be completed before application of concrete cleaners.
9. Schedule:
    a. Provide a written schedule indicating locations, substrates, and work sequence of concrete restoration cleaning and paint stripping, if not indicated on the drawings.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer/ Applicator shall have been in business for five (5) years providing/installing/finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for five (5) years providing/installing/finishing projects of similar size and complexity.

D. Pre-Application Meeting: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.
    1. Agenda for meeting shall include, but not be limited to;
        a. Review surfaces to be cleaned, environmental regulations, test panel procedures, protection of surrounding areas and non-concrete surfaces, surface preparation, application, field quality control, final cleaning, and coordination with other work.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Comply with Division 1 product delivery, storage and handling requirements.

B. Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

C. Store containers upright in a cool, dry, well ventilated place, out of the sun.
    1. Store away from all other chemicals and potential sources of contamination.
    2. Keep lights, fire, sparks, and heat away from containers.
    3. Do not drop containers or slide across sharp objects.

4. Keep containers tightly closed when not in use.
5. Store and handle materials in accordance with manufacturer's written instructions.

1.7 JOB CONDITIONS

A. Do not clean concrete surfaces when temperatures are below freezing or will be overnight, to avoid harm to concrete.

1. Clean concrete surfaces only when air and concrete surface temperatures are 40°F and above.

a. Confirm with manufacturers written specifications

2. Allow adequate time for concrete to thaw if freezing conditions exist before application.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect surrounding areas, landscaping, building occupants, pedestrians, vehicles, and non-concrete surfaces during the work from contact with concrete cleaners, residues, rinse water, fumes, wastes, and cleaning effluents in accordance with manufacturer's written instructions.

D. Avoid wind drifting of spray of cleaning products, residues, and rinse water.

E. Protect open joints.

F. Clean interior concrete surfaces before installation of interior finishes, doors, hardware, metal fixtures, and all other interior non-concrete materials.

G. Clean site of all unused cleaning products, residues, rinse water, wastes, and cleaning effluents in accordance with environmental regulations.

H. Remove and dispose of all materials used to protect surrounding areas and non-concrete surfaces, following completion of the work of this section.

I. Repair, restore, or replace to the satisfaction of the **Architec**t and/or **Owner**, all materials, landscaping, and non-concrete surfaces damaged by exposure to the cleaning process.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish one (1) year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Topical Applied Treatments

2. Site paving and flatwork
3. Slab on grade concrete
4. Cast in place concrete

B. Related Sections include, but are not limited to, the following:

1. Division 1
2. Section 02 41 19 – Selective Building Demolition & Protection
3. Section 32 13 13 – Concrete Paving
4. Section 03 30 00 – Cast in Place Concrete
5. Section 07 19 00 – Water Repellant Coatings
6. Section 07 92 00 – Sealants and Caulking
7. Section 09 90 00 – Paintings & Coatings

1.11 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. ProSoCo, Inc., www.prosoco.com
2. Professional Products of Kansas, Inc. www.watersealant.com
3. US MIX Products Co. / US SPEC (303) 778-7227
4. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. Water:

a. Clean, potable, and free of oils, acids, alkalis, salts, and organic matter. Use to rinse concrete surfaces and dilute concentrated cleaners.

B. Products:

1. Cleaner and Degreaser

a. Mfgr: ProSoCo
b. Product Line: Consolideck®
c. Product: Cleaner / Degreaser

1) Low hazard / low toxicity, non-flammable and water soluble. Contains readily biodegradable ingredients. Does not contain chlorinated, fluorinated, aromatic or hydrocarbon solvents; does not contain phosphates.
2) For removal of widespread oil & grease films, adhesive tape residues, rubber tire marks and scuffs, fuel & oil residues, paint and sealer residues and or daily maintenance cleaning.
3) Can etch concrete. Not for use in removing embedded oil and/or grease stains.

d. Prepare, Dilute, Mix and Apply in compliance with manufacturer's written instructions.

2. Light Duty Concrete Cleaner

a. Mfgr: ProSoCo
b. Product Line: Sure Klean®
c. Product: Light Duty Concrete Cleaner

1) General purpose, non-etching acidic cleaner. Does not contain muriatic acid.
2) For removal of common construction stains and atmospheric dirt, mortar smears, mud, efflorescence stains, localized rust and other metallic staining.
3) Acidic contents may damage polished masonry, some non-masonry and acid-sensitive surfaces. May remove some surface-applied accent colors. Not for use on treated low-E glass, acrylic and polycarbonate sheet glazing, and glazing with surface applied reflective, metallic or other synthetic coatings and films.

d. Prepare, Dilute, Mix and Apply in compliance with manufacturer's written instructions.

3. Heavy Duty Concrete Cleaner

a. Mfgr: ProSoCo
b. Product Line: Sure Klean®
c. Product: Light Duty Concrete Cleaner

1) Concentrated general-purpose acidic cleaner. Does not contain muriatic acid. May etch concrete. Designed for use with pressure water rinsing.
2) For removal of concrete splashes, excess mortar, retarders, heavy efflorescence, embedded stains, rust and surface soiling.
3) Do not use on polished surfaces. Not for use on treated low-E glass, acrylic and polycarbonate sheet glazing, and glazing with surface applied reflective, metallic or other synthetic coatings and films.

d. Prepare, Dilute, Mix and Apply in compliance with manufacturer's written instructions.
e. Limitations:

1) Do not use on concrete which will be left exposed, unless approved by **Architect**.

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.
3. Verify by examination that concrete surfaces are acceptable to receive the specified concrete cleaners. Notify the **Architect** if surfaces are not acceptable to receive the specified products.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Coordinate application of sealants and caulking with cleaning process.

C. Verify with substrate manufacturer the allowable & required surface preparation of each substrate prior to cleaning.

D. Apply all specified sealants and caulking and allow to cure before cleaning process begins.

E. Verify with substrate manufacturer the allowable & required surface preparation of each substrate prior to cleaning.

3.4 TESTING

A. General:

1. Perform tests witnessed by **Owner** and **Architect**.
    a. Refer to procedures specified in Part 1.

3.5 INSTALLATION

A. General:
    1. Dilute cleaners in accordance with manufacturers written instructions for each type of contaminant.
    2. Apply concrete cleaners to substrates in accordance with manufacturer's written instructions, environmental regulations, and application procedures determined from test panel results approved by the **Architect**.
    3. Consult manufacturer's written instructions for information on application equipment to be used and precautions to be taken with the specified products.

B. Schedule:
    1. Exterior concrete
        a. Flatwork
        b. Vehicular paving
        c. Exterior concrete pads
        d. Concrete walls
    2. Interior concrete vertical and horizontal
        a. Cast in Place Concrete
            1) Floors

C. Products:
    1. Cleaner / Degreaser:
        a. Interior and Exterior Surfaces:
            1) Dilute Cleaner/Degreaser in accordance with Manufacturer’s instructions for each intended use.
            2) Remove loose debris and heavy buildups.
            3) Apply diluted cleaning solution liberally. If spraying, do not atomize.
            4) Let solution dwell 1-3 minutes.
            5) Reapply and scrub vigorously.
            6) Water rinse thoroughly to remove all residues.
    2. Light Duty Concrete Cleaner:
        a. Interior and Exterior Surfaces:
            1) Dilute Cleaner/Degreaser in accordance with Manufacturer’s instructions for each intended use.
            2) Always prewet surface with fresh water. When cleaning vertical surfaces, keep lower areas wet to avoid streaks.

3) Apply diluted cleaning solution directly to surface with recommended masonry brush or low-pressure spray.
4) Let cleaner stay on the surface for 3-5 minutes or until stains are gone.
5) Reapply cleaner and rinse thoroughly with fresh water to get all residues off the surface.

3. Heavy Duty Concrete Cleaner:

a. Interior and Exterior Surfaces:

1) Dilute Cleaner/Degreaser in accordance with Manufacturer's instructions for each intended use.
2) Working from bottom to top, prewet surface with fresh water. On vertical surfaces, keep lower areas wet to avoid streaks.
3) Apply diluted cleaning solution to surface with recommended masonry brush or low-pressure spray.
4) Let the cleaner stay on the surface 2-3 minutes or until stains are gone.
5) Reapply cleaner and scrub or scrape surface using wood blocks or other nonmetallic scraping devices.
6) Working from bottom top, rinse thoroughly with fresh water to get all residue off the surface.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Inspect the concrete cleaning work with the **General Contractor**, **Architect**, applicator, and product representative, and compare with test panel results approved by the **Architect**. Determine if the substrates are suitably clean.

D. Manufacturer's Field Services: Provide the services of a manufacturer's authorized field representative to verify specified products are used, and protection, surface preparation, and application of concrete cleaners are in accordance with the manufacturer's written instructions and the test panel results approved by the **Owner**.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so their rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

G. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives **the General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 03 00 51

SECTION 03 00 61 – CONCRETE FLOOR LEVELING, PATCHING AND GROUTING

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Apply 100% cementitious Concrete Floor Leveling products to level and to correct unsatisfactory conditions at concrete floors:

a. New concrete floors treated in accordance with Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment.
b. New concrete not treated or not required to be treated per Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. Published specifications, standards tests and recommended methods of trades, industry or governmental organizations apply to work of this section.

E. American Concrete Institute (ACI), www.aci-int.org

F. American Society For Testing and Materials (ASTM), www.astm.org

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings, including data sheets, MSDS sheets and manufacturer installation instructions for each product to be used on the project.

E. Provide Certification of compatibility of proposed floor leveling, patching and/or grouting compound(s) with applied Concrete Vapor Emission and Alkalinity Control Treatment(s).

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing/installing/ finishing similar size projects and complexity.

1. Provide at least one person, present at all times during execution of this portion of the work, who is thoroughly familiar with the type of materials being installed and the best methods for their installation. They shall direct all work performed under this Section.

C. Manufacturer shall have been in business for **five (5**) years providing/installing/finishing similar size projects and complexity.

D. Coordinate installation of these products with work performed per Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK / SECTIONS

A. The following is related work including, but not limited to the following;

1. Floor Substrate
2. Remedial Floor Vapor and Alkalinity Control Treatment
3. Finish Flooring
4. All notes on the structural drawings are included in this specification.

B. The following are related sections including, but not limited to the following:

1. Division 1
2. Section 03 00 51 – Concrete Cleaning
3. Section 03 30 00 – Cast in Place Concrete
4. Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment.

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. **General Contractor** shall coordinate the testing of concrete floors per Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment and ensure that concrete treatment within the area of finish flooring is complete and floor vapor emission rate, PH and relative humidity tests show the slab is in compliance with each flooring manufacturer's requirements prior to the installation of finish flooring.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturer/fabricator/installer shall meet the requirements as herein specified and also as indicated in the drawings.

1. Refer to documents and as herein specified.
2. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturer's specifications/recommendations.

2.2 MATERIALS

A. Leveling Compound:

1. Application:

a. Horizontal Floor slab repair and leveling
b. Areas requiring leveling as approved by **Architect** and not deemed defective.
c. Installed after floor has been tested and treated for Vapor Emissions and Alkalinity per Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment.

2. Manufacturer & Product:

a. L & M Const. Chemicals, Inc., www.lmcc.com

1) Underlayment: LEVELEX
2) Primer: Levelex Primer

b. U.S. Spec, www.usspec.com

1) Underlayment: SLU – Self-Leveling Underlayment
2) Primer: Self-leveling underlayment primer.

3. Material: Self leveling, Polymer Reinforced blend of Portland cements, polymers, aggregates and proprietary admixtures, contains no gypsum.
4. Properties:

a.	Compressive Strength:	4,500 psi in 28 days	ASTM C109
b.	Minimum Bond Strength:	400 psi	ASTM C234
c.	Minimum Flexural Strength:	12,500 psi in 28 days	ASTM C348
d.	Flam Spread:	0	ASTM C119
e.	Fuel Contributed:	0	ASTM C119
f.	Smoke Density:	0	ASTM C119

5. Limitations:

a. Refer to manufacturer's product data sheets, specifications and installation instructions.

6. Installation: Install per manufacturer's recommendations

B. Resurface Coating - Horizontal:

1. Application:

a. Resurface/repair coating to be applied over interior and exterior exposed concrete surfaces.

b. Installed after floor has been tested and treated for Vapor Emissions and Alkalinity per Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment.

2. Up to 1/2" maximum thickness:

   a. Application:

      1) Feathered edge at non-treated floors
      2) 1/4" min. at floors treated per Section 07 28 00 – Concrete Slab Vapor Emission Control Treatment

   b. Manufacturer/Product:

      1) US MIX Products Co., Thinpatch
      2) L & M Const. Chemicals, Durathin

   c. Material:

      1) Polymer Modified Repair Mortar

   d. Properties:

      1) Compressive Strength: Comply with ASTM C109
      2) Rate of Set: Comply with ASTM C266
      3) Bond Strength: Comply with ASTM C882
      4) Flexural Strength: Comply with ASTM C78

   e. Substrates:

      1) Concrete flatwork
      2) Concrete stairs and ramps
      3) Exposed horizontal face of concrete site walls
      4) Exposed horizontal face of concrete curbs
      5) Concrete vehicular paving

   f. Limitations:

      1) Refer to manufacturer's product data sheets, specifications and installation instructions.
      2) Do not use for building slabs; refer to Leveling Compound heading
      3) Do not use on seatwalls; these conditions shall be replaced if deemed defective by **Architect**.

3. Up to 3" deep patch:

   a. Application:

      1) Resurface/repair coating to be applied over interior and exterior exposed concrete surfaces.
      2) Add pea gravel per manufacturer's recommendation's for thick applications

   b. Manufacturer/Product:

      1) US MIX Products Co., V/O Patch
      2) BASF, Master Builders, Emaco R 350 CI

3) Dayton Superior, Conspec, SPECIAL PATCH

c. Substrates:

1) Concrete flatwork
2) Concrete stairs and ramps
3) Exposed horizontal face of concrete site walls
4) Exposed horizontal face of concrete curbs
5) Concrete vehicular paving

d. Limitations:

1) Refer to manufacturer's product data sheets, specifications and installation instructions.
2) Do not use for building slabs; refer to Leveling Compound heading
3) Do not use on seatwalls; these conditions shall be replaced if deemed defective by **Architect**.

e. Installation: Install per manufacturer's recommendations

C. Patching And Resurface Coating – Vertical Surface

1. Application:

a. Resurface/repair coating to be applied over interior and exterior exposed concrete surfaces.

2. Manufacturer & Product:

a. Patching/resurfacing and crack/spalling filler: US SPEC, VTU Resurfacer
b. Resurfacer/sealer: US SPEC, Permasil

3. Properties:

a. Compressive Strength: Comply with ASTM C109
b. Rate of Set: Comply with ASTM C266
c. Bond Strength: Comply with ASTM C882
d. Flexural Strength: Comply with ASTM C78

4. Substrates:

a. Seatwalls – vertical and horizontal surfaces

1) Coordinate with sandblasting

b. Concrete light pole bases
c. Exposed face of concrete foundation walls
d. Exposed face of concrete retaining walls

D. Non-Shrink Grout: (Non-metallic, no chlorides, no aluminum powder)

1. Application: Typical all conditions including but not limited to;

a. Anchor bolts, reinforcing dowels and rods
b. Grouting of structural and non-structural building members
c. Machinery bases
d. Coordinate with structural drawings

2. Manufacturer & Product:

    a. US SPEC, Premium Grout
    b. L & M Construction Chemicals, Inc., Crystex Grout
    c. BASF, Master Builders Masterflow 713 or 928

3. Material: A high flow, High strength, pre-packaged compound consisting of non-metallic aggregates, cement, water reducing and plasticizing agents.
4. Properties:

a.	Compressive Strength:	13,400 psi in 28 days	ASTM C109
b.	Material:	Comply with ASTM C1107	

5. Installation: Install per manufacturer's recommendations

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 INSTALLATION

A. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Inspect floor surfaces within project limits with **Owner**, **Architect** & **Structural Engineer** to determine unacceptable conditions, and before commencing demolition construction to repair unsatisfactory conditions in the concrete substrate.

C. Apply concrete floor patching and leveling materials at unsatisfactory locations in accordance with manufacturer's application instructions. Finish and cure to meet product requirements and to produce a uniform substrate to receive all new work and final floor finishes.

3.5 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer / Applicator.

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.

B. The Applicator shall be responsible for the proper application of the materials.

C. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

G. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 03 00 61

03 10 00
CONCRETE FORMING AND ACCESSORIES
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Formwork for cast-in-place concrete, with shoring, bracing and anchorage.
B. Openings for other work.
C. Form accessories.
D. Form stripping.

1.03 RELATED REQUIREMENTS

A. Section 03 20 00 - Concrete Reinforcing.
B. Section 03 30 00 - Cast-in-Place Concrete.
C. Section 05 12 00 - Structural Steel Framing.

1.04 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
   1. ACI 117 - Specification for Tolerances for Concrete Construction and Materials.
   2. ACI 301 - Specifications for Concrete Construction.
   3. ACI 303R - Guide to Cast-In-Place Architectural Concrete Practice.
   4. ACI 318 - Building Code Requirements for Structural Concrete.
   5. ACI 347R - Guide to Formwork for Concrete.

1.05 SUBMITTALS

A. See Division 01 - Administrative Requirements for submittal procedures.
B. Product Data: Provide data and installation requirements for the following:
   1. Tie rods and spreaders.
   2. Formwork for exposed concrete.
   3. Form coatings and release agents.

1.06 QUALITY ASSURANCE

A. Perform work of this section in accordance with all requirements of ACI 347R and ACI 318 Chapter 26.
B. Delegated Designer Qualifications: Design formwork under direct supervision of a Professional Engineer experienced in design of concrete formwork and licensed in the State in which the Project is located.
C. Concrete formwork shall be designed and constructed to safely support fluid concrete and superimposed construction loads without excessive deflection or concrete leakage. Provide bracing to maintain accurate alignment and to resist all anticipated lateral loads. Forms shall conform with drawings as to shape, line, and dimension. Design, engineering, and construction of forms shall be the Contractor's responsibility. Formwork for exposed concrete shall be constructed to tolerances indicated in ACI 303R.
D. Cooperate and coordinate with other trades who furnish and/or install piping, conduit, reglets, anchors, inserts, sleeves, hangers, etc., as their work requires, including provisions for recesses and chases.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver prefabricated forms and installation instructions in manufacturer's packaging.
B. Store prefabricated forms off ground in ventilated and protected manner to prevent deterioration from moisture.
C. Protect plastic foam products from damage and exposure to sunlight.

PART 2 - PRODUCTS

2.01 FORMWORK - GENERAL

A. Provide concrete forms, accessories, shoring, and bracing as required to accomplish cast-in-place concrete work.
B. Design and construct concrete that complies with design with respect to shape, lines, and dimensions.
C. Chamfer outside corners of beams, joists, columns, and walls, unless otherwise noted.
D. Comply with applicable state and local codes with respect to design, fabrication, erection, and removal of formwork.
E. Comply with relevant portions of ACI 347R, ACI 301, and ACI 318.
F. Use the following form types:
    1. Concrete not exposed to view: APA Plyform, steel, or clean and sound 1x8 sawn lumber.
    2. Smooth Concrete exposed to view: APA Plyform or steel
    3. Fiber Forms: Tubular column type spirally constructed of laminated plies of fiber
    4. Elevated Floor/Roof Slabs: At discretion of the Contractor.
    5. Extruded Polystyrene Foam: board or shaped as required.
    6. Form types for concrete exposed to view shall be submitted to and reviewed by the Architect.

2.02 WOOD FORM MATERIALS

A. Plywood: 5/8-inch minimum APA Plyform.
B. Lumber: Douglas-Fir species; Standard grade; with grade stamp clearly visible.

2.03 FIBER FORMS

A. Manufacturers:
    1. Sonoco Products Company, Sonotube.
    2. Burke Company, Burke Smoothtube.
    3. Substitutions: See Division 01 - Product Requirements.
B. Material shall be of round, spirally wound laminated fiber using a non-water sensitive adhesive and surface wax impregnated for moisture protection, surface treated with release agent, non-reusable, of sizes indicated. Forms shall give a smooth and seamless appearance to the cast concrete. Provide reveals as shown on the Drawings.

2.04 EXTRUDED POLYSTYRENE FOAM FORMWORK

A. Manufacturers: Comply with ASTM C578 type IV
    1. Dow Chemical Corp., Styrofoam.
    2. UC Industries, Foamular.
    3. Substitutions: See Division 01 - Product Requirements.

2.05 FORMWORK ACCESSORIES

A. Form Ties:
    1. Concrete exposed to view: Snap ties allowing full 1-inch back break.
    2. Concrete not exposed to view: Snap ties or wire.
    3. Verify special spacing requirements with architectural drawings at exposed concrete.
B. Form Clamps:
    1. Assembly to have cone washers allowing full 1-inch back break; 3/8" center rod.
C. Spreaders: metal (no wood)
D. Form Release Agent: Capable of releasing forms from hardened concrete without staining or discoloring concrete or forming bugholes and other surface defects, compatible with concrete and form materials, and not requiring removal for satisfactory bonding of coatings to be applied.
    1. Do not use materials containing diesel oil or petroleum-based compounds. Form coating containing mineral oils or other non-drying materials will not be permitted for any concrete work.
    2. Composition: Colorless, reactive, water-based compound.
    3. Products:
        a. Kaufman Products Inc., FormKote Emulsion.
        b. Nox-Crete Inc., BIO-NOX.

c. SpecChem, LLC, Bio Strip WB (water-based).
d. W. R. Meadows, Inc., Duogard II (water-based).
e. Substitutions: See Division 01 - Product Requirements.

E. Dowel Sleeves: Plastic sleeve and nailable plastic base for smooth, round, steel load-transfer dowels.
1. Manufacturers:
a. BoMetals, Inc.
b. Substitutions: See Division 01 - Product Requirements.

F. Filler Strips for Chamfered Corners: Rigid plastic or wood type; 3/4 x 3/4 inch size unless noted otherwise on the Drawings.

G. Joint tape: Plastic film tape 3 inches wide.
1. Manufacturers:
a. 3M Company, No. 471 plastic film tape.

H. Expansion Joint Filler (preformed): 1/2" thick
1. Manufacturers:
a. W.R. Meadows, Inc., Sealtight Fiber Expansion Joint.

I. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.

J. Embedded Anchor Shapes, Plates, Angles and Bars: As specified in Section 05 12 00.

K. Waterstops:
1. Configuration: As indicated on the Drawings.
2. Size: As indicated on the Drawings.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions and elevations agree with drawings.

3.02 EARTH FORMS

A. Earth forms are not permitted, except as specifically indicated on approved drawings and as indicated below.
1. Concrete footings may be poured directly against cut earth where excavations are deemed stable by a representative of the geotechnical engineer.
2. See Structural drawings for requirements for placing concrete footings directly against earth without forms.

B. Hand trim sides and bottom of earth forms. Remove loose soil prior to placing concrete.

3.03 ERECTION - FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads. Ensure forms are tied, clamped, and braced to prevent spreading, shifting, or settling.

C. Install permanent insulated foam panel formwork per manufacturer's recommendations.

D. Arrange and assemble formwork to permit dismantling and stripping. Do not damage concrete during stripping. Permit removal of remaining principal shores.

E. Align joints and make water-tight. Keep form joints to a minimum.

F. Obtain approval before framing openings in structural members that are not indicated on drawings.

G. Install void forms in accordance with manufacturer's recommendations. Protect forms from moisture or crushing.

H. Coordinate this section with other sections of work that require attachment of components to formwork.

I. If formwork is placed after reinforcement, resulting in insufficient concrete cover over reinforcement, request instructions from Architect before proceeding.

3.04 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's recommendations.
B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.
C. Do not apply form release agent where concrete surfaces will receive special finishes or applied coverings that are affected by agent. Soak inside surfaces of untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

3.05 INSERTS, EMBEDDED PARTS, AND OPENINGS

A. Provide formed openings where required for items to be embedded in passing through concrete work.
B. Locate and set in place items that will be cast directly into concrete. All such items shall be secured into position before the concrete is placed.
C. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.
    1. The Contractor shall ensure that sleeves have been installed and other provisions have been made for the installation of mechanical, electrical and other equipment.
    2. Coordinate with all trades to ensure proper placement of all items in forms and to provide proper blockouts wherever required.
D. Position recessed anchor slots for brick veneer masonry anchors to spacing and intervals as required for the specified product.
E. Install accessories in accordance with manufacturer's instructions so they are straight, level, and plumb. Ensure items are not disturbed during concrete placement.
F. Install waterstops in accordance with manufacturer's instructions, so they are continuous without displacing reinforcement. Heat seal joints so they are water-tight.
G. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.
H. Close temporary openings with tight fitting panels flush with inside face of forms and neatly fitted so joints will not be apparent in exposed concrete surfaces.

3.06 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.
B. Clean and protect permanent foam panel formwork per manufacturer's recommendations.
C. Clean formed cavities of debris prior to placing concrete.
    1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.
    2. No wooden ties or blocking shall be left in concrete except where indicated for attachment of other work.

3.07 FORMWORK TOLERANCES

A. Construct formwork to maintain tolerances required by ACI 117, unless otherwise indicated.
B. Construct permanent insulated foam panel formwork to maintain tolerances required by ACI 301.
C. Construct and align formwork for elevator hoistway in accordance with ASME A17.1.
D. Camber slabs and beams in accordance with ACI 301.

3.08 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 01 - Quality Requirements.
B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.
    1. Notify the Architect at least 48 hours in advance of the beginning of pouring operations and at the completion of formwork and location of all construction joints. An inspection of forms and joints will be made for approval of finished work and general layout only. The foregoing inspection shall in no way relieve the Contractor of responsibility of design and safety of formwork, bulkheads and shoring.

a. Concrete work out of alignment, level or plumb will be cause for rejection of the whole work affected and, if so rejected, such work shall be removed and replaced, as directed by Architect, with no additional cost to the Owner.

C. Thoroughly clean and patch all holes in formwork and re-coat as required before reusing. Forms not suited to obtain concrete surfaces and tolerances in conformity with Contract requirements will be rejected by Architect.
   1. Reuse of forming materials shall be limited only as required to produce the finishes as specified, free from blemishes and other defects unless covered by other building materials in which case blemish free concrete is not required.

3.09 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.
   1. Concrete must be allowed to cure long enough to avoid damage during form removal. Contractor or his representative in charge of concrete construction shall be present during removal of forms and shores, and shall be personally responsible for safety of this operation at all times and under all conditions.
   2. As a minimum, formwork and shoring shall remain in place for the following periods:
      a. Concrete on grade: 24 hours
      b. Walls and Columns: 3 days
      c. Formwork may be removed and reshores installed before the times indicated above, provided the concrete has cured sufficiently to avoid damage when formwork is removed. Shores must be immediately replaced with reshores in a sequence designed to avoid inducing stress in the concrete member.

B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

C. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

D. Surfaces to be painted shall be smooth and free of substances such as dirt, wax, excessive laitance, grease or materials that would prevent proper bonding of finishes.
   1. Removal of foregoing contaminants and complete removal of parting and curing compounds affecting proper paint bond, shall be responsibility of this Section of Work. Sandblast cleaning shall not be employed without specific approval of Structural Engineer.

E. Upon completion of this Work, clean up and remove from Site all equipment and debris resulting from this work.

END OF SECTION

03 20 00
CONCRETE REINFORCEMENT
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

1.02 SECTION INCLUDES

A. Reinforcing steel for cast-in-place concrete and/or concrete unit masonry.
B. Supports and accessories for steel reinforcement.

1.03 RELATED REQUIREMENTS

A. Section 03 10 00 - Concrete Forming and Accessories.
B. Section 03 30 00 - Cast-in-Place Concrete.
C. Section 04 22 00 – Concrete Masonry Units.

1.04 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
    1. ACI 117 – Specification for Tolerances for Concrete Construction and Materials
    2. ACI 301 - Specifications for Concrete Construction.
    3. ACI 315R - Guide to Presenting Reinforcing Steel Design Details.
    4. ACI 318 - Building Code Requirements for Structural Concrete.
    5. ACI SP-66 - ACI Detailing Manual.
    6. ASTM A82 - Cold Drawn Wire for Concrete Reinforcement.
    7. ASTM A184 - Standard Specification for Welded Deformed Steel Bar Mats for Concrete Reinforcement.
    8. ASTM A615 - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
    9. ASTM A704 - Standard Specification for Welded Steel Plain Bar or Rod Mats for Concrete Reinforcement.
    10. ASTM A706 - Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement.
    11. ASTM A767 - Standard Specification for Zinc-Coated (Galvanized) Steel Bars for Concrete Reinforcement.
    12. ASTM A775 - Standard Specification for Epoxy-Coated Steel Reinforcing Bars.
    13. ASTM A884 - Standard Specification for Epoxy-Coated Steel Wire and Welded Wire Reinforcement.
    14. ASTM A1035 - Standard Specification for Deformed and Plain, Low-Carbon, Chromium, Steel Bars for Concrete Reinforcement.
    15. ASTM A1064 - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.
    16. ASTM D3963 - Standard Specification for Fabrication and Jobsite Handling of Epoxy-Coated Steel Reinforcing Bars.
    17. AWS B2.1 - Specification for Welding Procedure and Performance Qualification.
    18. AWS D1.4 - Structural Welding Code - Steel Reinforcing Bars.
    19. CRSI (DA4) - Manual of Standard Practice.
    20. CRSI (P1) - Placing Reinforcing Bars.
    21. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures.

1.05 SUBMITTALS

A. See Division 01 - Administrative Requirements, for submittal procedures.
B. Shop Drawings: Prepare in accordance ACI 315 and ACI SP-66. Indicate bending diagrams, assembly diagrams, splicing and laps of bars and shapes, dimensions and details of bar reinforcing and assemblies.

1. Prepare shop drawings under seal of a Professional Structural Engineer experienced in design of work of this type and licensed in the State in which the Project is located.
2. Correctness of all reinforcing requirements and work is the responsibility of Contractor.
    a. Identify such shop drawings with reference thereon to sheet and detail numbers from Contract Drawings.
    b. Direct copies of the contract documents are not acceptable as a submission from the Contractor.
    c. Do not use scaled dimensions from Contract Drawings in determining the lengths of reinforcing bars.
    d. No reinforcing steel shall be fabricated without approved shop drawings.
    e. Any deviations from the contract documents must be clearly indicated as a deviation on the shop drawings.
    f. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement. Include any welding to be done.
    g. Shop drawings shall make it clear where each bar is located. Beams, grade beams and walls shall be shown in elevation. On elevations show locations of sleeves and penetrations.
    h. Check architectural, structural, mechanical, and electrical and other contract documents for anchor bolt schedules and locations, anchors, inserts, conduits, sleeves, and any other items which are required to be cast in concrete, and make necessary provisions as required so that reinforcing steel will not interfere with the placement of such embedded items.
    i. Show all areas of congestion. Identify where reinforcing steel will interfere with the placement of embedded items such as anchor bolts, anchors, inserts, conduits, sleeves and any other items which are required to be cast in concrete.

C. Manufacturer's Certificate: Certify that reinforcing steel and accessories supplied for this project meet or exceed specified requirements.
    1. Reinforcing Bars
    2. Welded Wire Fabric
    3. Welding Electrodes
D. Product Data:
    1. Manufacturer's specifications and installation instructions for splice devices.
    2. Bar Supports.
E. Certificates of Compliance with specified standards:
    1. Reinforcing bars.
    2. Welded Wire Fabric.
    3. Welding electrodes.
F. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1 and dated no more than 12 months before start of scheduled welding work.
G. Reports: Submit certified copies of mill test report of reinforcement material chemical and physical analysis.
    1. Tensile and bend tests shall be performed by the mill in accordance with ASTM A615 or A706, as applicable to reinforcing type.
H. Samples: Only as required by Architect.

1.06 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI 301.
    1. Maintain one copy of each document on project site.
B. Tests and Inspections:
    1. Provide Architect and Special Inspection Agency with access to fabrication plant to facilitate inspection of reinforcement. Provide notification of commencement and duration of shop fabrication in sufficient time to allow inspection.
    2. A testing program is required prior to start of construction. Testing program to be done in compliance with the CBC requirements and in collaboration with Testing Laboratory, Design team, contractor, owner and submitted for review by the agency in charge of building

enforcement. Requirements below are minimum requirements; additional requirements may be required in final testing program.

3. All reinforcing steel whose properties are not identifiable by mill test reports shall be tested in accordance with ASTM A615. One Series of tests for each missing report to be borne by the Contractor.
4. When inspections are indicated for reinforcement placement on the Structural drawings, a special inspector shall be employed to inspect reinforcing placement per CBC Chapter 17.
5. When tests are indicated for reinforcing steel on the structural drawings, the reinforcing steel used shall be tested in accordance with ASTM A615. One tensile and one bend test for each 2-1/2 tons of steel or fraction thereof, shall be made.
6. Inspect shop and field welding in accordance with AWS D1.4, including checking materials, equipment, procedure and welder qualification as well as the welds. Inspector will use non-destructive testing or any other non-destructive aid to visual inspection that Inspector deems necessary to assure the adequacy of the weld.
7. Tests and inspection shall be performed by Owners testing agency except when needed to justify rejected work, in which case the cost of retests and reinspection shall be paid by the Owner and back-charged to the Contractor.

C. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.4 and no more than 12 months before start of scheduled welding work.
D. Product Delivery, Storage and Handling
   1. Deliver reinforcement to project site in bundles marked with metal tags indicating bar size and length.
   2. Handle and store materials to prevent contamination.
      a. Store reinforcement in a manner that will prevent excessive rusting or coating with grease, oil, dirt, and other objectionable materials. Storage shall be in separate piles or racks so as to avoid confusion or loss of identification after bundles are broken.
   3. Deliver and store welding electrodes in accordance with AWS D1.4.

PART 2 - PRODUCTS

2.01 REINFORCEMENT

A. Reinforcing Steel: ASTM A615, Grade 60 (60,000 psi) for all bars unless otherwise indicated.
   1. Plain billet-steel bars.
   2. Unfinished.
B. Reinforcing Steel: ASTM A706, deformed low-alloy steel bars for bars to be welded.
   1. Unfinished.
C. Reinforcing Steel: Dual grade ASTM A615/A706, Grade 60 (60,000 psi) may be used in lieu of A615 or A706, Grade 60 (60,000 psi).
   1. Unfinished.
D. Reinforcing Steel: ASTM A706, Grade 60 (60,000 psi) for bars used in special seismic systems as indicated in drawings.
   1. Unfinished.
   2. ASTM A615 Grade 60 bars meeting the following requirements of ACI 318 may be used in lieu of A706 Grade 60 in special seismic systems.
      a. Actual yield strength based on mill tests does not exceed more than 78,000 psi.
      b. Ratio of the actual tensile strength to the actual yield strength is at least 1.25.
      c. Minimum fracture elongation in 8 in. shall be at least 14% for bar sizes #3 through #6, at least 12% for bar sizes #7 through #11, and at least 10% for bar sizes #14 and #18.
E. Minimum uniform elongation shall be at least 9% for bar sizes #3 through #10, and at least 6% for bar sizes #11 through #18.Reinforcing Steel: Plain or deformed bars; ASTM A1035, Grade 100 (100,000 psi), Type CL.
F. Stirrup and Tie Steel: ASTM A615 grade 60 for all bars, unfinished.
G. Steel Dowels: Same grade as bars to which dowels are connected.
H. Steel Welded Wire Reinforcement (WWR): Plain type; ASTM A1064. Spacing and size of wire as indicated in drawings.
I. Reinforcement Accessories:

1. Tie Wire: FS-QQ-W-461, annealed, minimum 16-gauge, 0.0508 inch.
2. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.
   a. Wire supports: CRSI class 2.
   b. Do not use wood, brick, or other objectionable materials.
   c. Do not use galvanized supports.
   d. Supports placed against ground: Pre-cast concrete blocks not less than 4 inches square with embedded wire.
3. Provide stainless steel components for placement within 1-1/2 inches of weathering surfaces.

J. Welding Electrodes: AWS D1.4, low hydrogen, E70XX series.

2.02 REINFORCING BAR SPLICING:

A. Coupler Systems: Mechanical devices for splicing reinforcing bars; capable of developing full steel reinforcing design strength in tension and compression. Comply with ACI 318 Chapter 25.
   1. Manufacturers:
      a. Headed Reinforcement Corporation (HRC): hrc-usa.com.
      b. nVent Lenton: nvent.com
      c. Dayton Superior Corporation: www.daytonsuperior.com.
      d. Splice Sleeve North America, Inc; NMB Splice Sleeve System: www.splicesleeve.com.
      e. Substitutions: See Division 01 - Product Requirements.

B. Form Savers: Mechanical devices for connecting dowels and reinforcing bars at construction joints; capable of developing full steel reinforcing design strength in tension and compression.
   1. Manufacturers:
      a. nVent Lenton: nvent.com
      b. Substitutions: See Division 01 - Product Requirements.

C. Taper Tie Hole Plug: Mechanical device for plugging tie holes; anchors optional flush or recessed grout.
   1. Manufacturers:
      a. Dayton Superior Corporation: www.daytonsuperior.com.
      b. Substitutions: See Division 01 - Product Requirements.

D. Grout: Cementitious, non-metallic, non-shrink grout for use with manufacturer's grout sleeve reinforcing bar coupler system.
   1. Manufacturers:
      a. Dayton Superior Corporation: www.daytonsuperior.com.
      b. Substitutions: See Division 01 - Product Requirements.

2.03 FABRICATION

A. Fabricate concrete reinforcing in accordance with CRSI (DA4) - Manual of Standard Practice and to meet requirements of Drawings.

B. Fabricate reinforcement in accordance with the requirements of ACI 315R where specific details are not shown or where Drawings and Specifications are not more demanding.

C. Steel reinforcement shall not be bent or straightened in a manner that will injure the material. Bars with kinks or bends not shown on the Drawings shall not be used. Heating of bars for bending will not be permitted.

D. Reinforcing shall not be field bent or straightened without structural engineer’s review.

E. Provide offsets in rebar (1:6 maximum) where required to maintain clearances.

F. Fusion welding of preassembled cages shall be permitted only under the following conditions:
   1. Fusion welding of holding wires to ties, stirrups, and hoops in beams, columns, and grade beams to preassemble reinforcing cages is permissible. The holding wire area shall not exceed 5% of the beam, column, or grade beam cross sectional longitudinal steel area. Fusion welding is not allowed to longitudinal reinforcing steel in any beam, column, or grade beam.
   2. Fusion welding of holding wires to the ends of the reinforcing steel placed in mats (spread footings, slab reinforcement, etc.) is permitted provided the fusion weld occurs within 6 bar diameters of the free end of the bar (e.g. no allowed at the end of coupled, T-headed, or weld splice bars).

3. Fusion welding of holding wires shall not occur on a bent portion of a reinforcing bar. Bars may not be bent where a fusion weld occurs.
4. Holding wires shall conform to ASTM A496.
5. All reinforcing steel to be welded shall comply with ASTM A706.
6. Submit complete structural plans indicating which members will use fusion welding process for assembly. Provide complete structural details indicating the size of stirrups and holding wires and welding requirements. Submit a complete shop welding program which includes the following:
    a. Type of the specific fusion welding machine
7. Periodic inspection protocol of the in-plant welding. This information shall be submitted to the Structural Engineer (SEOR) and the Owner's Testing Agency for approval. Fusion welding and fabrication is not permitted until approved by the SEOR.

PART 3 - EXECUTION

3.01 PLACEMENT

A. Place, support and secure reinforcement against displacement. Do not deviate from required position. All reinforcement shall be accurately set in place, lapped, spliced, spaced rigidly and securely held in place and tied with specified wire at all splices and crossing points. All wire tie ends shall point away from the form. Carefully locate all dowel steel to align with wall and column steel.
    1. Bars shall be in long lengths with laps and splices as shown. Offset laps in adjacent bars. Place steel with clearances and cover as shown. Bar laps shall be as indicated on the Drawings. Tie all laps and intersections with the specified wire.
    2. For horizontal reinforcement, maintain clear space between parallel bars not less than 1 times nominal reinforcement diameter, but in no case shall clear space be less than 4/3 times maximum size concrete aggregate.
    3. For vertical reinforcement, maintain clear space between parallel bars not less than 1-1/2 times nominal reinforcement diameter, but in no case shall clear space be less than 4/3 times maximum size concrete aggregate.
    4. Reinforcing dowels for slabs shall be placed as detailed. Sleeves may be used if reviewed by the Structural Engineer before installation. Install dowel through all construction and expansion joints for all slabs on grade.
B. Bar Supports: Support and securely fasten bars with chairs, spacers and ties to prevent displacement by construction loads or placement of concrete beyond the tolerances specified. Conform to CRSI as a minimum standard.
C. Steel Adjustment:
    1. Move within ACI 117 specified allowable tolerances to avoid interference with other reinforcing steel, conduits, or embedded items.
    2. Do not move bars beyond allowable without concurrence of Structural Engineer.
    3. Do not heat, bend, or cut bars without concurrence of Structural Engineer.
    4. Reinforcement shall not be bent after being embedded in hardened concrete.
D. Splices:
    1. Splice reinforcing as shown.
    2. Lap Splices: Tie securely with wire to prevent displacement of splices during placement of concrete.
    3. Splice Devices: Install in accordance with manufacturer's written instructions. Obtain Structural Engineer's review before using.
    4. Do not splice bars except at locations shown without concurrence of Structural Engineer.
        a. Where splices in addition to those indicated are required, indicate location on shop drawings clearly and highlight "for Engineer's approval".
E. Do not displace or damage vapor barrier.
F. Accommodate placement of formed openings.
G. Refer to Structural Drawings for concrete cover requirements over reinforcement.
H. Concrete shown without reinforcing shall be reinforced as similar parts shown with reinforcing except where concrete is specifically noted to be unreinforced.

I. Examine surfaces and conditions receiving or affecting the work. Do not proceed until unsuitable conditions have been corrected.
J. Welding:
   1. Welding is not permitted unless specifically detailed on Drawings or approved by Engineer.
   2. Employ shielding metal-arc method and meet requirements of AWS D1.4.
   3. Welding is not permitted on bars where the carbon equivalent is unknown or is determined to exceed 0.55.
   4. Welding shall not be done within two bar diameters of any bent portion of a bar which has been bent cold.
   5. Welding of crossing bars is not permitted.
K. Welded Wire Fabric: Install in long lengths, lapping 24 inches at end splices and one mesh at side splices. Offset laps in adjacent widths. Place fabric in approximately the middle of the slab thickness unless shown otherwise on the Drawings by dimension. Wire tie lap joints at 12-inch centers. Use concrete blocks to support mesh in proper position.
L. Reinforcement shall be free of mud, oil or other materials that may reduce bond at the time concrete is placed. Reinforcement with tightly adhered rust or mill scale will be accepted without cleaning provided that rusting has not reduced dimensions and weights below applicable standards. Remove loose rust.
M. Protection against rust:
   1. Where there is danger of rust staining adjacent surfaces, wrap reinforcement with impervious tape or otherwise prevent rust staining.
   2. Remove protective materials and clean reinforcement as required before proceeding with concrete placement.
N. Refer to notes on Drawings for additional reinforcement requirements.
O. Refer to Mechanical and Electrical Drawings for formed concrete requiring reinforcing steel. All such steel shall be included under the work of this Section.

3.02 FIELD QUALITY CONTROL

A. An independent testing agency, as specified in Division 01 - Quality Requirements, will inspect installed reinforcement for compliance with contract documents before concrete placement.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

1.02 SECTION INCLUDES

A. Cast-in-place concrete building elements.
B. Concrete for composite floor construction.
C. Elevated concrete slabs.
D. Slabs on grade.
E. Concrete foundations.
F. Grouting of steel base plates.
G. Joint devices associated with concrete work.
H. Concrete curing.

1.03 RELATED REQUIREMENTS

A. Section 03 10 00 - Concrete Forming and Accessories.
B. Section 03 20 00 - Concrete Reinforcing.
C. Section 04 22 00 – Concrete Unit Masonry
D. Section 05 12 00 – Structural Steel
E. Section 05 30 00 – Metal Decking
F. Section 05 50 00 – Metal Fabrications

1.04 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
    1. ACI 117 - Specification for Tolerances for Concrete Construction and Materials.
    2. ACI 211.1 – Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete.
    3. ACI 211.2 – Standard Practice for Selecting Proportions for Structural Lightweight Concrete.
    4. ACI 301 - Specifications for Concrete Construction.
    5. ACI 302.1R - Guide to Concrete Floor and Slab Construction.
    6. ACI 304R - Guide for Measuring, Mixing, Transporting, and Placing Concrete.
    7. ACI 305R – Guide to Hot Weather Concreting.
    8. ACI 306R – Guide to Cold Weather Concreting.
    9. ACI 308R - Guide to External Curing of Concrete.
    10. ACI 318 - Building Code Requirements for Structural Concrete.
    11. ACI 360R – Guide to Design of Slabs-On-Ground.
    12. ASTM C31 – Standard Practice for Making and Curing Concrete Test Specimens in the Field.
    13. ASTM C33 - Standard Specification for Concrete Aggregates.
    14. ASTM C39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
    15. ASTM C42 – Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.
    16. ASTM C94 - Standard Specification for Ready-Mixed Concrete.
    17. ASTM C109 – Standard Test Method for Compressive Strength of Hydraulic Cement Mortars.
    18. ASTM C143 – Standard Test Method for Slump of Hydraulic Cement Concrete.
    19. ASTM C150 - Standard Specification for Portland Cement.
    20. ASTM C172 – Standard Practice for Sampling Freshly Mixed Concrete by the Volumetric Method.
    21. ASTM C192 – Standard Practice for Making and Curing Concrete Test Specimens in the Laboratory.
    22. ASTM C260 - Standard Specification for Air-Entraining Admixtures for Concrete.
    23. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.

24. ASTM C330 - Standard Specification for Lightweight Aggregates for Structural Concrete.
25. ASTM C494 - Standard Specification for Chemical Admixtures for Concrete.
26. ASTM C567 – Standard Test Method for Determining Density of Structural Lightweight Concrete.
27. ASTM C618 – Standard Specification for Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Portland Cement Concrete.
28. ASTM C685 – Standard Specification for Volumetric Batching and Continuous Mixing.
29. ASTM C989 – Standard Specification for Slag Cement for Use in Concrete and Mortars.
30. ASTM C1116 - Standard Specification for Fiber-Reinforced Concrete.
31. ASTM C1157 – Standard Performance Specification for Hydraulic-Cement.
32. ASTM C1582 - Standard Specification for Admixtures to Inhibit Chloride-Induced Corrosion of Reinforcing Steel in Concrete.
33. ASTM E1155 - Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers.

1.05 SUBMITTALS

A. See Division 01 - Administrative Requirements for submittal procedures.
B. General:
   1. Review of submittals is of a general nature only, and the responsibility for conformance with intent of drawings shall remain with the Contractor. Review does not imply or state that the fabricator has correctly interpreted the construction documents.
   2. All submissions shall be in accordance with the submission schedule developed and agreed between the Architect and Contractor at the commencement of the project. Submission shall include dates of order and delivery of materials to the shop and the site.
   3. Shop drawing schedule shall allow adequate time for reviews. Reinforcing steel shall not be fabricated or placed before the shop drawings have been reviewed by the Architect and returned.
C. Concrete Design Mixtures: Each concrete mix design to be used on the project shall be reviewed and approved by the Testing Agency prior to concrete being delivered to site. Owner's Testing Agency shall review all mix designs prior to submittal. Submit proposed mix designs for each class of concrete listed on drawings. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
   1. For each concrete mixture, the following information shall be included: where the mix is to be used, all materials and admixtures including their source and proportions in the mix; Water content, water-to-cement ratio, slump, and aggregate grading; whether the mixture is appropriate for pumping; and total chloride content.
   2. Indicate compressive strength and method used to determine strength. The compressive strength of the concrete shall be proportioned per ACI. Include all calculations and tests required by ACI 318 Chapter 5. Laboratory test data must be submitted along with calculations that show with each mix design meets the strength requirement. Mix design number must match the mix design number shown on the test data. Include all test results or past history back up data specific as part of the submittal. Test results within the past two years shall be used to indicate performance in accordance with past history.
   3. Indicate amounts of mixing water to be withheld for later addition at Project site.
D. Transit-mix delivery slips.
   1. Keep record at the Site showing time and place of each pour of concrete, together with transit mix delivery slip certifying contents of the pour per ASTM C94. Include the time water was added to dry mix.
   2. Make the record available for inspection at the Site and to the Architect for his review upon request.
   3. Upon completion of this portion of the Work, deliver the record and the delivery slips to the Architect.
E. Reinforcement: Comply with submittal requirements in Section 03 20 00.
F. Welding certificates and welding procedures for all reinforcement welding. Comply with submittal requirements in Section 05 12 00.
G. Layout drawings for construction, control, and expansion joints.

H. Certificates of Compliance from manufacturer or supplier:
   1. Material Test Reports:
      a. Cement Certificates per CBC Chapter 17.
         1) Cement without a certificate shall not be used.
      b. Aggregates: Material test reports for the following, from a qualified testing agency, indicating compliance with requirements:
         1) Light weight aggregate (per ASTM C330).
         2) Normal weight aggregate (per ASTM C33). Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity. Include evaluation of reactivity.
   2. Product Test Reports and Certificates: Include ICC-ES or IAPMO reports where available. Provide for each of the following, signed by manufacturers.:
      a. Cementitious materials, per ASTM C150, ASTM C595, ASTM C618, ASTM C989, and/or ASTM C1240, as applicable.
      b. Admixtures. Where more than one admixture is used, include certification that admixtures are compatible. Per ASTM C494 for each type used; include chloride ion content.
      c. Fiber reinforcement.
      d. Curing compounds. Also include data on method of removal in the event of incompatibility with floor covering adhesives.
      e. Floor and slab treatments.
      f. Non-shrink grout, per ASTM C1107 Grade B.
      g. Bonding agents.
      h. Vapor retarders.
      i. Semirigid joint filler and joint-filler strips
      j. Waterstops.
      k. Post-installed concrete anchors.
      l. Repair materials.
I. Hardeners and sealers: Provide manufacturer's data.
J. Grout samples for sacked surface textures and colors upon Architect's request only.
K. Field quality-control test and inspection reports.
L. Sustainable Design Submittals:
   1. If any fly ash, ground granulated blast furnace slag, silica fume, rice hull ash, or other waste material is used in mix designs to replace cement, submit a letter indicating the total volume of concrete cast in place, mix design(s) used showing the quantity of cement replaced, reports showing successful cylinder testing, and temperature on day of pour if cold weather mix is used.
   2. Submit environmental assessment report for concrete mix. Compare concrete mix submitted with a conventional or reference concrete mixture that meets the specified performance requirements. Include:
      a. Energy consumption.
      b. Emissions.
      c. Potential toxicity.
      d. Potential risk.
      e. Raw material consumption.
      f. Land use.
      g. Third-party validation of comparison methodology.
   3. MSDS or product data showing VOC content data for concrete curing compounds, admixtures and form release agents used in concrete poured interior to the waterproofing membrane. Demonstrate compliance with California Air Resources Board (CARB), Architectural Coatings Suggested Control Measure 2008 and VOC emissions data in compliance with the California Department of Public Health Standard Method v1.1–2010, data must show exposure scenario, and range of VOC's after 14 days.
   4. MSDS or product data showing VOC content data for sealants used interior to the waterproofing membrane. Demonstrate compliance with the South Coast Air Quality Management District (SCAQMD) Rule 1168 AND VOC emissions data in compliance with the California Department of Public Health Standard Method v1.1–2010, data must show exposure scenario, and range of VOC's after 14 days.

M. Project Record Documents: Accurately record actual locations of embedded utilities and components that will be concealed from view upon completion of concrete work.

1.06 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI 301 and ACI 318 and applicable standards listed in the Reference Standards section.
   1. Maintain one copy of ACI 301 and ACI 318 on site.
B. Follow recommendations of ACI 305R when concreting during hot weather.
C. Follow recommendations of ACI 306R when concreting during cold weather.
D. For slabs required to include moisture vapor reducing admixture (MVRA), do not proceed with placement unless manufacturer's representative is present for every day of placement except when waived by owner.
E. For slabs indicated to receive membrane-forming, moisture emission-reducing, curing and sealing compound, do not proceed with application unless manufacturer's representative is present for every day of placement except when waived by owner.
F. Installer Qualifications:
   1. Concrete: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.
   2. Reinforcing Steel: Installation shall be done only by an installation firm normally engaged in this business. All work shall be performed by qualified mechanics working under an experienced supervisor.
G. Manufacturer Qualifications:
   1. Concrete: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94 requirements for production facilities and equipment.
      a. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."
   2. Steel Reinforcing: A firm regularly engaged in the manufacture of steel bar and welded wire fabric reinforcing.
H. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C1077 and ASTM E329 for testing indicated, as documented according to ASTM E548.
   1. Personnel conducting field tests shall be qualified as ACI Concrete FieldTesting Technician, Grade 1, according to ACI CP-01 or an equivalent certification program.
   2. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.
   3. Shop and field testing and inspection of steelwork shall be performed by an inspector currently certified as an AWS Certified Welding Inspector.
I. Testing Agency: Shall be selected and paid for by the Owner, unless otherwise specified; re-testing paid for by the Contractor.
J. Contractor’s Quality Control Plan: Quality Control includes the functions performed by the Contractor to ensure that the material and workmanship of concrete construction meets the project specifications and applicable standards. The Contractor shall submit a Quality Control Plan that addresses all inspection issues, including testing and inspection per ACI. The verification testing and inspection carried out by the Testing Agency does not relieve the contractor of the responsibility for conducting their own quality control/inspection program to ensure the requirements of the Contract Documents have been met. The Contractor’s Quality Control Plan will be reviewed by the Testing Agency.
K. Quality Control Inspector Qualifications: Along with Quality Control Plan, Contractor shall submit written qualifications for all inspectors to be assigned Quality Control functions for concrete work.
L. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from one source, and obtain admixtures through one source from a single manufacturer.
M. Mechanical Bar Couplers shall have a current ICC-ES or IAPMO Evaluation Report that indicates compliance with requirements of these specifications.

N. Steel Reinforcing Allowable Tolerances (ACI 117):
   1. Fabrication:
      a. Sheared length: 1 inch.
      b. Depth of truss bars: Plus or minus ½-inch.
      c. Ties: Plus or minus ½-inch.
      d. All other bends: Plus or minus 1 inch.
   2. Placement:
      a. Concrete cover to form surfaces: Plus or minus ¼-inch.
      b. Minimum spacing between bars: Plus or minus ¼-inch.
      c. Crosswise of members: Spaced evenly within 2 inches of stated separation.
      d. Lengthwise of members: Plus or minus 2 inches.
   3. Maximum bar movement to avoid interference with other reinforcing steel, conduits, or embedded items: 2 bar diameters.

O. Unidentifiable Reinforcing Steel: Tested by testing agency; paid for by Contractor:
   1. Test reinforcing delivered to site which cannot be properly identified by heat number and mill mark for compliance with ASTM A615 as follows:
      a. No. 8 Bar and Smaller: One tensile test and one bend test of each size per 7-1/2 tons, or portion thereof.
      b. No. 9 Bar and Larger: One tensile test of each size per 10 tons, or portion thereof.

P. Welding: Qualify procedures and personnel according to AWS D1.4, "Structural Welding Code--Reinforcing Steel."
   1. Welders whose work fails to pass inspection shall be requalified before performing further welding.
   2. Firm specializing in furnishing and installing reinforcement shall have a minimum of 5 years experience on projects with requirements similar to this project and shall have sufficient production capacity.
   3. All welding shall be performed by operators who are qualified for the types of welds used. Each operator shall have been qualified within the preceding one year as prescribed by AWS.
   4. Require welders to retake the qualification test if, as determined by the Architect, there is a reasonable doubt as to the proficiency of the welder. If the welder does not requalify, they shall not perform any welding on the project.

Q. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to test concrete mixtures. When mixes are proportioned by trial batch method, engage a Laboratory conforming to ASTM E329 and under direction of a Professional Engineer licensed in the State in which the Project is located.

R. Mockups: As required by the Owner and Architect, cast concrete slab-on-grade and formed-surface panels to demonstrate typical joints, surface finish, texture, tolerances, and standard of workmanship. Mock-up shall be constructed using the same mixes, materials, products, procedures and methods as will be used for the permanent construction.
   1. Build panel(s) a minimum of 32 sq. ft. (4 ft. x 8 ft. panel) for slab-on-grade and formed surface in the location(s) indicated or, if not indicated, as directed by the Architect. Maintain sample panel exposed to view for duration of concrete work.
   2. Obtain Architect’s acceptance of visual qualities.
   3. Approved panels may become part of the completed Work if undisturbed at time of Completion.

S. Formwork:
   1. Concrete formwork shall be designed and constructed to safely support fluid concrete and superimposed construction loads without excessive deflection or concrete leakage. Provide bracing to maintain accurate alignment and to resist all anticipated lateral loads. Forms shall conform with drawings as to shape, line, and dimension. Design, engineering and construction of forms shall be Contractor's responsibility. Formwork for exposed concrete shall be constructed to tolerances indicated in ACI 303R.
   2. Cooperate and coordinate with other trades who furnish and/or install piping, conduit, reglets, anchors, inserts, sleeves, hangers, etc., as their work requires; including provisions for recesses and chases.

T. Prefabrication and Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
   a. Contractor's superintendent.
   b. Independent testing agency responsible for concrete design mixtures.
   c. Ready-mix concrete manufacturer.
   d. Concrete subcontractor.
2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-fillers, forms and form removal limitations, shoring and reshoring procedures, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection.

U. Tests and Inspections:
1. Provide special inspections and testing as described in the “Statement of Structural Special Inspections and Testing” within the structural drawings, and/or TIO form, and as required by this section.
2. A testing program is required prior to start of construction. Testing program to be done in Compliance with the CBC requirements and in collaboration with Testing Laboratory, Design team, contractor, owner and submitted for review by the agency in charge of building enforcement. Requirements below are minimum requirements; additional requirements may be required in final testing program.
3. The following tests shall be made by a recognized testing laboratory selected by the Owner and approved by the governing agency. All tests shall be in accordance with the previously mentioned standards and ACI 318 Section 26.12. A complete record of all tests and inspections shall be kept per CBC Section 1704.5.
   a. Compressive Strength: Make and cure in accordance with ASTM C-31. Test in accordance with ASTM C-39 and ACI 318 Section 26.12. Standard cure testing shall be utilized. Supplementary field cure testing shall occur where required by SEOR and/or AHJ.
      1) A record shall be made of time and of locations of concrete from which samples were taken.
      2) A minimum of five identical cylinders shall be taken from each pour of 150 cubic yards or 5000 square feet or part thereof, being placed each day per ACI 318 Section 26.12.2. One cylinder shall be tested at age 7 days, and a minimum of three at age 28 days unless otherwise specified. Preserve a minimum of one remaining cylinder for future use.
   b. Drying Shrinkage: (applies only to lightweight concrete only unless noted otherwise)
      1) A record shall be made of time cylinders and of locations of concrete from which samples were taken.
      2) Three identical 4" x 4" x 11" specimens shall be made from same concrete as used in structure. Percent of shrinkage shall be reported at 21 days after 7 day moist curing period. Average results of 3 specimens shall be used as the accepted value. The value for laboratory cast specimens shall not exceed .075%. If field test specimens are used in lieu of laboratory specimens, a tolerance of +33% may be used.
      3) Test specimens in accordance with ASTM C157.
   c. Concrete consistency (slump) shall be tested in accordance with ASTM C143.
4. Provide full time inspection per CBC Section 1705.3 during the taking of test specimens and during the placing of all concrete and embedded steel.
5. See Section 03 20 00 for reinforcing steel tests and inspections.
6. Provide concrete batch plant inspections per ASTM C685.

1.07 DELIVERY, STORAGE AND HANDLING

A. Steel Reinforcement:
1. Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement where occur.

2. Deliver reinforcing to Site properly bundled and tagged. Use tags that indicate bar size, lengths and marks corresponding to markings shown on shop drawings. Segregate so as to maintain identification after bundles are broken.
3. Store reinforcement in a manner that will prevent excessive rusting or fouling with/ grease, oil, dirt, and other bond weakening materials.
4. Do not use damaged, reworked, or deteriorated material.

B. Deliver and store welding electrodes in accordance with AWS D1.4.
C. Formwork: Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use.
D. Concrete Materials:
1. Protect cement from moisture and rotate stock to ensure fresh materials.
2. Protect aggregates as necessary to maintain saturated condition when batched.
3. Storage methods should comply with ACI 301 4.1.4.

E. Contractor to coordinate with owner and/or testing laboratory to provide facilities for job curing of test cylinders and transporting to Testing Laboratory.
F. Comply with all local building and fire codes for fire safety during construction.

PART 2 - PRODUCTS

2.01 CONCRETE MIXES

A. Concrete mixes shall be as stated in the Structural Documents with strength, maximum aggregate size, maximum water to cement ratio, and use as documented.
1. Cement content as required by mix design (ACI 318 Section 26.4.3).
2. Admixtures: Water Reducing
3. Weight
a. Normal Weight Concrete (NWC): 150 lbs. per cubic foot maximum
4. Air Entrainment
a. As required for UL rating (4%-7% for LWC)
b. As required for Durability Requirements per ACI 318 Chapter 19
c. As required in Construction Documents

2.02 FORMWORK

A. Comply with requirements of Section 03 10 00.

2.03 REINFORCEMENT MATERIALS

A. Comply with requirements of Section 03 20 00.

2.04 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
1. Portland Cement: ASTM C150, Type II, II/V, Type V, or ASTM C595 Type 1L. One brand of cement shall be used throughout to maintain uniform color for all exposed concrete.
2. Supplement Portland Cement with the following Supplementary Cementitious Materials (SCM):
a. Fly Ash Pozzolan: ASTM C618, F as required.
b. Blast-Furnace Slag: ASTM C989-10
c. Silica Fume: ASTM C1240, proportioned in accordance with ACI 211.1.
3. The SCM producer shall have a minimum of 5 years' experience in the production of acceptable SCM and shall practice an effective quality control program to guard against contamination of the SCM.
4. Cementitious material used shall have at least 2 years of use with proposed aggregates without detrimental reaction.
5. Alkali content shall not exceed 0.6% when tested in accordance with ASTM C114.
6. The temperature of cement delivered to the plant shall not exceed 150 degrees F.

B. Normal-Weight Aggregates: ASTM C33, fine and coarse aggregate, graded. Provide aggregates from a single source with documented service record data of at least 10 years' satisfactory service in

similar applications and service conditions using similar aggregates and cementitious materials. Aggregate shall be crushed granite or Perkins type.

1. Select coarse-aggregate size from three options in subparagraph below; add gradation requirements if preferred. Aggregate size limits relate to spacing of steel reinforcement, depth of slab, or thickness of concrete member.
2. Coarse Aggregate:
   a. Aggregate shall contain no thin or elongated pieces. Any piece having a major dimension more than 2-1/2 times the average thickness shall be considered thin or elongated.
   b. If shrinkage-controlled concrete, Coarse Aggregate shall be crushed limestone, granite, or accepted equal.
   c. The maximum size used in a particular location shall be consistent with the form and dimensions of the section being placed, with the location and spacing of the reinforcing steel and with the method of vibration. The aggregate sizes shall be such as will produce dense, uniform concrete, free of rock pockets, honeycombs, or other irregularities.
   d. Combined aggregate gradation for slabs and other designated concrete shall be 8% to 18% for large top size aggregates (1-1/2-inch) or 8% - 22% for smaller top size aggregates (1-inch or 3/4-inch) retained on each sieve below the top size and above the No. 100.
3. Fine Aggregate: Uniformly graded, clean sand, free from excessive fines, organic materials or other deleterious materials. Free of materials with deleterious reactivity to alkali in cement.

C. Lightweight Aggregate: ASTM C330, to be specified between 1-inch and 3/8-inch nominal maximum aggregate size.
   1. Lightweight cellular and granular inorganic materials, free from oil, organic matter, or other deleterious substances.
   2. Uniformly graded from 1/4-inch to maximum size. The combined grading shall be such that the percentage of weight of the combined aggregates shall fall within the limits established by ASTM C330.
   3. Dry weight of lightweight concrete shall be as specified above. Comply with ASTM C567 for oven dry density testing if specifically required by code or jurisdiction. Contractor to verify density of concrete meets the requirements of the UL rating.
   4. Lightweight Aggregates Rotary Kiln Produced: Expanded shale slate, clay or slag aggregate, the maximum size used in a particular location shall be consistent with the form and dimensions of the section being placed, with the location and spacing of the reinforcing steel and with the method of vibration. The aggregate sizes shall be such as will produce dense, uniform concrete, free of rock pockets, honeycombs, or other irregularities.

D. Recycled (Reclaimed) Aggregates:
   1. Use only in below grade work where covered in its final condition. Do not use in integrally colored concrete.
   2. Maximum 20% of total aggregates by weight.
   3. Use one source for each required type throughout the project.
   4. Testing per latest edition of Greenbook Standard Specifications for Public Works Construction.

E. Water: Clean and free from injurious amounts of oil, acids, alkali, organic matter and other deleterious substances; suitable for domestic consumption.

2.05 ADMIXTURES

A. General: Where more than one is used, admixtures shall be compatible. Use of admixtures shall be consistent throughout Work.
   1. Use of alternate admixtures may only be used with the written acceptance of the Architect. See Substitutions Division 01 – Product Requirements.
   2. Admixtures to be in accordance with ACI 318 Section 26.4.1.4.
   3. Prohibited Admixtures: Admixtures containing more than 0.05 percent chloride ions, fluorides, sulphites, thiocyanates, and/or nitrates are not permitted. Do not use admixtures that will negatively impact the visual finish of concrete exposed to view. Calcium chloride is not permitted.
   4. Limit VOC content per IEQc2.

B. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other admixtures.
   1. Available Products:
      a. Grace Construction Materials; Darex AEA or Daravair.
      b. Master Builders, Inc.; MB-VR or Micro Air.
      c. Euclid Chemical Company (The); Air Mix.

C. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
   1. Water-Reducing (Plasticizing) Admixture: ASTM C494, Type A for use in cool weather. Available Products:
      a. Grace Construction Products, W. R. Grace & Co.; "WRDA with Hycol".
      b. Master Builders, Inc.; "Pozzolith 220N".
      c. Euclid Chemical Company (The); “WR-75, WR-91 or Eucon MR”.
   2. Retarding Admixture: ASTM C494, Type B.
   3. Water-Reducing and Retarding Admixture: ASTM C494, Type D for use in hot weather. Available Products:
      a. Sika Corporation; “Sikament 30”.
      b. Euclid Chemical Company (The); “Eucon Retarder-75”.
   4. Mid-Range, Water-Reducers ASTM C494. Available Products:
      a. Master Builders “Polyheed.”
   5. Plasticizing and Retarding Admixture: ASTM C1017, Type II.
   6. Non-Chloride, Non-Corrosive Accelerating Admixture: ASTM C494, Type C or E. Manufacturer must have long-term non-corrosive test data from an independent testing laboratory (of at least a year’s duration) using an acceptable accelerated corrosion test method. Available Products:
      a. Euclid Chemical Company (The); “Accelguard 80, 90, or NCA”.
   7. Shrinkage Reducing Admixture: ASTM C494, Type S.
      a. Euclid Chemical Company; Eucon SRA Floor; Eucon SRA-XT.
      b. GCP Applied Technologies; Eclipse Floor 200; Eclipse 4500.
   8. Waterproofing Admixture: Admixture formulated to reduce permeability to liquid water, with no adverse effect on concrete properties.
      a. Admixture Composition: Crystalline, functioning by growth of crystals in capillary pores.
      b. Admixture Composition: Hydrophobic polymer waterproofing and corrosion inhibitor, functioning by closing concrete pores and chemical bonding.
      c. Permeability of Cured Concrete: No measurable leakage when tested in accordance with COE CRD-C 48 at 200 psi (1.38 MPa); provide test reports.
      d. Potable Water Contact Approval: National Science Foundation (NSF) certification for use on structures holding potable water, based on testing in accordance with NSF 61 and NSF 372.
      e. Available Products:
         1) Euclid Chemical Company; Eucon Vandex AM-10.
         2) W. R. Meadows, Inc; ADI-CON CW Plus.
         3) Xypex Chemical Corporation; XYPEX Admix C-500.

D. Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete and complying with ASTM C494, Type C.
   1. Available Products:
      a. Euclid Chemical Company (The); Eucon CIA.
      b. Grace Construction Products, W. R. Grace & Co.; DCI.
      c. Master Builders, Inc.; Rheocrete CNI.
      d. Sika Corporation; Sika CNI.

E. Color Pigment: ASTM C979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.
   1. Color: As selected by Architect from manufacturer's full range.
   2. Concentration: Base dosage rates on weight of Portland cement, fly ash, silica fume, and other cementitious materials but not aggregate or sand.

2.06 ACCESSORY MATERIALS

A. Underslab Vapor Retarder:
   1. Sheet Material: ASTM E 1745, Class A, not less than 15 mils thickness. Suitable for installation in contact with soil or granular fill under concrete slabs. Single-ply polyethylene is prohibited. Include manufacturer's recommended adhesive or pressure-sensitive tape. Plastic Vapor Retarder shall have a water-vapor transmission rate (WVTR) no greater than .008 perms (grain/h xft2 in x Hg) when tested in accordance with ASTM E96. Include manufacturer's recommended tape with water vapor transmission rate no greater than 0.3 perms when tested in accordance with ASTM E96. Tape shall be: a minimum of 6-mils thick, a minimum of 3 ¾ inches wide, manufactured from high density polyethylene, and have pressure sensitive adhesive. Include manufacturer's recommended vapor resistant mastic.
      a. Sheet Products:
         1) Alumiseal Corporation; Zero Perm Vapor Barrier.
         2) Henry Company (Fortifiber); Moistop Ultra 15.
         3) Raven Industries Inc.; Vapor Block 15.
         4) Reef Industries, Inc.; Griffolyn Type-65G or 105.
         5) W.R. Meadows, Inc.; PERMINATOR Class A - 15 mils.
         6) STEGO Industries LLC; Stego Wrap Vapor Barrier.
         7) Substitutions: See Section 01 60 00 - Product Requirements.
      b. Accessory Products: Vapor retarder manufacturer's recommended tape, adhesive, mastic, prefabricated boots, etc., for sealing seams and penetrations.
         1) Vapor Retarder Tape:
            (a) Water Vapor Transmission Rate: ASTM E 96, 0.3 perms or lower
            (b) Minimum 6-mils thick
            (c) Minimum 3 3/4 inches wide
            (d) Manufactured from High Density Polyethylene
            (e) Pressure Sensitive Adhesive

B. Non-Shrink Cementitious Grout: Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents. Acceptance by Architect required before using.
   1. Grout: Comply with ASTM C1107.
   2. Height Change, Plastic State; when tested in accordance with ASTM C827:
      a. Maximum: Plus 4 percent.
      b. Minimum: Plus 1 percent.
   3. When placed at a flowable consistency there shall be at least 95% bearing under an 18 inches x 36 inches base plate.
   4. Minimum Compressive Strength at 48 Hours: 3,000 pounds per square inch.
   5. Minimum Compressive Strength at 28 Days, ASTM C109: 7,000 pounds per square inch
   6. Flowable Products:
      a. Euclid Chemical Company; Hi-Flow Grout.
      b. W. R. Meadows, Inc; 588-10K; 1428 HP.
      c. BASF Construction Products; Masterflow 713 or 928.
      d. SIKA Corporation; Sika Grout 328.

e. SpecChem; SC Precision Grout
f. Metallic grout equivalent to Master Builders "Embeco" may be used only where covered by earth, concrete, or masonry.
g. Substitutions: See Division 01 - Product Requirements.

7. Low-Slump, Dry Pack Products:
   a. Dry Pack products may only be used where approved by Architect or otherwise indicated in Drawings.
      1) Euclid Chemical Company; DRY PACK GROUT.
      2) Five Star Products, Inc; Five Star Grout.
      3) L&M Construction Chemicals, Inc, a subsidiary of Laticrete International, Inc; Duragrout.
      4) SpecChem, LLC; SC Multipurpose Grout.
      5) W. R. Meadows, Inc; PAC-IT.
      6) Substitutions: See Division 01 - Product Requirements.

C. Non-Shrink Epoxy Grout: For anchor reinforcing steel or threaded rods in concrete. Moisture-insensitive, two-part; consisting of epoxy resin, non-metallic aggregate, and activator.
   1. Composition: High solids content material exhibiting positive expansion when tested in accordance with ASTM C827.
      a. Maximum Height Change: Plus 4 percent.
      b. Minimum Height Change: Plus 1 percent.
   2. Minimum Compressive Strength at 7 days, ASTM C579: 12,000 pounds per square inch (82.7 MPa).
   3. Products:
      a. BASF Construction Products; Masterflow MP
      b. Sika Corporation; Sikadur 32 Hi-Mod
      c. Euclid Chemical Company; Epoxy 452 or E3G.
      d. Five Star Products, Inc; Five Star DP Epoxy Grout.
      e. SpecChem, LLC; SpecPoxy Grout.
      f. Substitutions: See Division 01 - Product Requirements.

D. Floor Leveling and Fill Materials
   1. Epoxy Concrete Mortar (where areas to fill are less than ¼-inch thick): Floor leveling, non-shrink trowel applied epoxy concrete mortar.
   2. Concrete Mortar (where areas to fill are greater than ¼-inch thick): Floor leveling, patching and repair, non-shrink trowel applied concrete mortar.
   3. Cementitious Floor Leveling Material: Shall be self-leveling or trowelable with a minimum 28 day compressive strength of 3000 psi in accordance with ASTM C-109.
      a. The Quikrete Companies; Quikrete No. 1249.
      b. Ardex; V-1200.
      c. Mapei; "UltraFlex".
      d. Substitutions: See Division 01 - Product Requirements.

2.07 BONDING AND JOINTING PRODUCTS

A. Latex Bonding Agent: Non-redispersable acrylic latex, complying with ASTM C1059, Type II acrylic emulsion or styrene butadiene.
   a. Euclid Chemical Company; AKKRO-7T; Wuco-Weld.
   b. W. R. Meadows, Inc; ACRY-LOK.
   c. Sonneborn; Sonobond.
   d. Larsen Products; Weld-Crete.
   e. Substitutions: See Division 01 - Product Requirements.

B. Epoxy Bonding System:
   1. Complying with ASTM C881 and of Type required for specific application. Two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:
      a. Types I and II, non-load bearing or IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.
         1) CTS Cement Manufacturing Corporation; Fast Anchoring and Repair Adhesive.
         2) Euclid Chemical Company; DURAL FAST SET LV.

3) Mapei Corporation; Planibond AE, Planibond 3C.
4) Substitutions: See Division 01 - Product Requirements.

C. Waterproofing Admixture Slurry: Slurry coat of Portland cement, sand, and crystalline waterproofing additive, mixed with water in proportions recommended by manufacturer to achieve waterproofing at cold joints in concrete.
   1. Products:
      a. W. R. Meadows, Inc; ADI-CON CW Plus.
      b. Xypex Chemical Corporation; XYPEX Concentrate.
      c. Substitutions: See Division 01 - Product Requirements.

D. Waterstops:
   1. Rubber, complying with COE CRD-C 513.
   2. PVC, complying with COE CRD-C 572.
   3. Bentonite and butyl rubber, complying with NSF 61 and NSF 372.
   4. Synthetic rubber; swells to 1000 percent of original size in clean water.
   5. Configuration: As indicated on drawings.
   6. Size: As indicated on drawings.
   7. Products:
      a. Penetron; Penebar SW-55.
      b. CETCO, a division of Minerals Technologies Inc; WATERSTOP RX.
      c. Kryton International, Inc; Krytonite Swelling Waterstop.
      d. Substitutions: See Division 01 - Product Requirements.

E. Reglets: Formed steel sheet, galvanized, not less than 26 gauge, with temporary filler to prevent concrete intrusion during placement.

F. Slab Expansion and Isolation Joint Filler: Preformed non-extruded resilient filler.
   1. Material:
      a. ASTM D1751, cellulose fiber.
      b. ASTM D1752, sponge rubber (Type I).
      c. ASTM D8139, semi-rigid, closed-cell polypropylene foam.
   2. Products:
      a. Burke; Fiber Expansion Joint.
      b. W.R. Meadows; Fibrated Expansion Joint Filler with Snap-Cap; Deck-O-Foam Joint Filler with pre-scored top strip.
      c. Nomaco, Inc; Nomaflex Expansion Joint Filler with Void Cap Option.
      d. Substitutions: See Division 01 - Product Requirements.

G. Slab Contraction Joint Device: Preformed linear strip intended for pressing into wet concrete to provide straight route for shrinkage cracking.

H. Slab Construction Joint Devices: Combination keyed joint form and screed, galvanized steel, with rectangular or round knockout holes for conduit or rebar to pass through joint form at 6 inches on center; ribbed steel stakes for setting.
   1. Provide removable plastic cap strip that forms wedge-shaped joint for sealant installation.
   2. Height: To suit slab thickness.

2.08 CURING MATERIALS

A. Evaporation Reducer: Liquid thin-film-forming compound that reduces rapid moisture loss caused by high temperature, low humidity, and high winds; intended for application immediately after concrete placement.
   a. Products:
      1) Euclid Chemical Company ; EUCOBAR.
      2) Kaufman Products Inc; VaporAid.
      3) W. R. Meadows, Inc ; Evapre or Evapre-RTU.
      4) Substitutions: See Division 01 - Product Requirements.

B. Curing Compound, Naturally Dissipating: Clear, water-based, liquid membrane-forming compound; complying with ASTM C309:
   1. Type 1, Class A and B, and AASHTO Specification M-148;
   2. Type 1, Class A and B requirements, and State of California Air Resources Board VOC Regulations.

3. Sodium Silicate compounds are prohibited.
4. Certified by curing compound manufacturer to not interfere with bonding of floor covering.
5. Product dissipates within 4 to 6 weeks.
6. Products:
    a. Euclid Chemical Company; COLOR-CRETE CURE AND SEAL VOC.
    b. W. R. Meadows, Inc; 1100-Clear.
    c. Substitutions: See Division 01 - Product Requirements.

C. Curing Agent, Water-Cure Equivalent Type: Clear, water-based, non-film-forming, liquid-water cure replacement agent.
1. Compressive Strength of Treated Concrete: Equal to or greater than strength after 14-day water cure when tested according to ASTM C39.
2. Conform with State of California Air Resources Board VOC Regulations.

D. Resin Curing Compound: Solvent-based liquid, white pigmented, membrane-forming.
1. For use on exterior slabs. When slab will be painted, sealed, topped, or receive other applied finish, completely remove curing compound after curing is complete and before finish coatings are applied.
2. Comply with ASTM C309, Type 2, Classes A and B.
3. Conform with State of California Air Resources Board VOC Regulations.
4. VOC Content: Less than 200 g/L.
5. Solids Content: 20 percent, minimum.
6. Products:
    a. Euclid Chemical Company; KUREZ DR-VOX; KUREZ DR-100.
    b. Kaufman Products Inc; Thinfilm 450 Resin Base.
    c. Substitutions: See Division 01 - Product Requirements.

E. Curing and Sealing Compound, Moisture Emission-Reducing, Membrane-Forming: Clear, liquid sealer for application to newly-placed concrete; capable of providing adequate bond for flooring adhesives, initially and over the long term; with sufficient moisture vapor impermeability to prevent deterioration of flooring adhesives due to moisture emission.
1. Use this product to cure and seal all slabs to receive adhesively applied flooring or roofing.
2. Comply with ASTM C309 and ASTM C1315 Type I Class A.
3. Conform with State of California Air Resources Board VOC Regulations.
4. VOC Content: Less than 100 g/L.
5. Solids Content: 25 percent, minimum.
6. Sodium silicate compounds prohibited.
7. Products:
    a. Euclid Chemical Company; Diamond-Clear VOX
    b. Floor Seal Technology, Inc; VaporSeal 309 System.
    c. Spec Chem; Cure & Seal WB.
    d. ShawContract; Moisture Shield
    e. Substitutions: See Division 01 - Product Requirements.

F. Curing and Sealing Compound, Moisture Emission-Reducing, Penetrating: Clear, water-based, non-film-forming curing agent; capable of providing adequate bond for flooring adhesives, initially and over the long term; with sufficient moisture vapor impermeability to prevent deterioration of flooring adhesives due to moisture emission, moisture vapor emission, and alkalinity.
1. Use this product to cure and seal all slabs to receive adhesively applied flooring or roofing.
2. Compressive Strength of Treated Concrete: Equal to or greater than strength after 28-day water cure when tested according to ASTM C39.
3. Chloride Ion Resistance of Treated Concrete: Equal to or greater than strength after 28-day water cure when tested according to ASTM C1202.
4. Comply with ASTM C309 and ASTM C1315 Type I Class A.
5. Conform with State of California Air Resources Board VOC Regulations.
6. Products:
    a. W.R. Meadows; Pentreat 244.
    b. Substitutions: See Division 01 - Product Requirements.

G. Curing and Densifying Compound, Membrane-Forming: Lithium polysilicate-based, clear, liquid densifier for application to newly-placed concrete.

1. Comply with ASTM C309.
2. Conform with State of California Air Resources Board VOC Regulations.
3. Solids Content: 25 percent, minimum.
4. Products:
   a. BASF; Sonosil.
   b. Euclid Chemical Company; Eucosil.
   c. Substitutions: See Division 01 - Product Requirements.

H. Moisture-Retaining Sheet/Cover: ASTM C171.
1. Provide in a thickness of 42 mils; standard weight of 53 lbs./1000 ft2; tensile strength (machine direction) of 36 lbs./in.; and puncture resistance of 70 lbs.
   a. Fiber reinforced asphaltic vapor barrier building paper, regular.
   b. Polyethylene film, white opaque.
   c. White-burlap-polyethylene sheet.

I. Absorptive Cover: AASHTO M182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

J. Water: Potable, not detrimental to concrete.

2.09 FLOOR AND SLAB TREATMENTS

A. Abrasive Aggregate for non-slip finish: Fused aluminum oxide grits, graded 12/30. Use factory graded rustproof and non-glazing material that is unaffected by freezing, moisture and cleaning materials.

B. Concrete Hardener/Sealer: Clear, water soluble, sprayable in-organic silicate-based hardener/sealer or acrylic co-polymer resin. Shall conform to State of California Air Resources Board VOC Regulations.

C. Concrete Sealer: Conforming to ASTM C-309, Type I, Class B requirements, and conforming to State of California Air Resources Board VOC Regulations.

D. Sealer for Colored Concrete: Clear, penetrating, water-based, low-luster sealer recommended by the pigment manufacturer. It shall be compatible with colored concrete components and will not adversely affect concrete color or slip resistance.

2.10 POST-INSTALLED CONCRETE ANCHORS

A. Expansion Anchors:
1. As indicated on Drawings.

B. Adhesive Anchors:
1. As indicated on Drawings.

C. Screw Anchors:
1. As indicated on Drawings.

D. Grouted Dowels / Grouted Anchors: High strength non-shrink grout to anchor reinforcing steel or threaded rods in concrete.
1. Master Builders; Masterflow 928.
2. Sika Corporation; Sika Grout 212.
3. Substitutions: See Division 01 - Product Requirements.

2.11 REPAIR MATERIALS

A. High Strength Flowing Repair Mortar: For forming and pouring structural members, or large horizontal repairs, provide the flowable one-part, high strength microsilica modified repair mortar with 3/8” aggregate. The product shall achieve 9000 psi @ 28-days at a 9-inch slump.

B. Concrete Patching Mortar:
1. Horizontal repairs, ASTM C1059, Type II. Available Products:
   a. Euclid Chemical Co.; Euco Thin Coat, Concrete Coat.
   b. Sika Chemical Corp.; Sikatop 121 or 122.
   c. Substitutions: See Section 01 60 00 - Product Requirements.
2. Vertical or Overhead repairs, ASTM C1059, Type II. Available Products:
   a. Euclid Chemical Co.; Verticoat.
   b. Sika Chemical Corp.; Sikatop 123.
   c. Master Builders; Emaco R300, 310 or R350.

d. Substitutions: See Division 01 - Product Requirements.

C. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.
1. Cement Binder: ASTM C150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.
4. Compressive Strength: Not less than specified strength at 28 days when tested according to ASTM C109.
5. Bond Strength: Not less than specified strength at 28 days when tested according to ASTM C1042.
6. Available Products:
   a. Euclid Chemical Co.; Flo-Top.
   b. Master Builders; UnderLayment 110.
   c. Substitutions: See Division 01 - Product Requirements.

D. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.
1. Cement Binder: ASTM C150, Portland cement or hydraulic or blended hydraulic cement as defined in ASTM C219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than specified strength at 28 days when tested according to ASTM C109.
5. Product shall exhibit the following properties: Chaplin Abrasion Test – 0.0079-inches maximum at 28 days.
6. Available Products:
   a. Euclid Chemical Co.; Thin Top SL.
   b. Master Builders; Topping 112.
   c. Substitutions: See Division 01 - Product Requirements.

2.12 CONCRETE MIX DESIGN

A. General:
1. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.
   a. Procurement of concrete mix design is responsibility of Contractor.
   b. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.
   c. Contractor shall notify the Testing Laboratory and Architect of intent to use concrete pumps to place concrete so that mix designs can be modified accordingly.
2. Supplementary Cementitious Materials (SCM): Fly ash shall not exceed 25% of the total cementitious material, unless otherwise indicated by Architect and Structural Engineer. Where slag is used to replace cement, slag shall not exceed 25% of the total cementitious material by mass. Ternary systems where more than one supplementary cementitious material is used are prohibited without consent of SEOR.
3. Limit water-soluble, chloride-ion content in hardened concrete to specified percent by weight of cement.
4. Admixtures: Use admixtures according to manufacturer's written instructions.
   a. Use admixtures in concrete, as required, for placement and workability.
   b. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

c. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a water-cementitious materials ratio below 0.50.
d. Use corrosion-inhibiting admixture in concrete mixtures where required.

5. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

B. Mixtures:
1. Initial mix design shall be prepared for all concrete in accordance with ACI 318 Section 26.4.3. Mix proportions shall be determined in accordance with ACI 318 Section 26.4.3 or 26.4.4. In the event that additional mix designs are required due to depletion of aggregate sources, aggregate not conforming to Specifications or at request of Contractor, these mixes shall be prepared as above.
2. Definition of Mix Properties to be specified for each mix:
a. Concrete density, either normal or light weight concrete.
b. Concrete strength (f'c) as the minimum compressive strength at a specified number of days, tested in accordance with ASTM C39.
c. Aggregate size as the largest of the coarse aggregate.
d. Slump limit. Slump shall be measured at the point of delivery in accordance with ASTM C143 prior to the addition of superplasticizer (if used). Slump tolerance shall meet the requirements of ACI 117 and shall be 4 inch plus or minus 1 inch for general concrete placement. Mixes employing the specified mid-range water reducer shall provide a measured slump not to exceed 7 inch ±1 inch after dosing, 2 inch ±1 inch before dosing. Use water reducing admixtures as required to provide a workable consistency for pump mixers. Water shall not be added at the jobsite without written review by the structural engineer.
e. Air entrainment: Provide 6% air entrainment typical for exterior concrete exposed to freeze-thaw cycles. Provide required air entrainment to meet the exposure categories listed in the concrete general notes per ACI 318, Chapter 19.
f. Air content by volume and may be plus or minus 1.5 percent at point of delivery.
g. Water/cement ratio is a maximum and specified by weight.
h. SCM cement replacement ratio as a %.
i. Drying shrinkage limit (where required) as a percentage change in length after 21 days of drying when tested as per ASTM C157 with 4 inches x 4 inches x 11 inches specimen moist cured 7 days prior to drying.
j. Fiber reinforcement (where used) specified as weight/volume of concrete.

2.13 MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94 or ASTM C685 and ASTM C 1116 (fiber reinforced concrete when applicable), and furnish batch ticket information.
1. The batching plant shall be equipped with an electric metering device capable of determining moisture content of sand.
2. Begin the mixing operation within thirty minutes after the cement has been intermingled with the aggregates.
3. After mix water has been added, concrete shall be mixed not less than 1-1/2 minutes nor more than 1-1/2 hours. Concrete shall be rejected if not deposited within the time specified.

B. Project-Site Mixing: Use only if method of storing material, mixing of material and type of mixing equipment is approved by Architect. Approval of site mixing does not relieve Contractor of any other requirements of Specifications. Measure, batch, and mix concrete materials and concrete according to ASTM C 94. Mix concrete materials in appropriate drum-type batch machine mixer.
1. For mixer capacity of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For mixer capacity larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd.

3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

C. Lightweight Concrete: Mix lightweight concrete in accordance with the directions of the approved lightweight aggregate manufacturer.

D. Admixtures:
   1. Air entrained and chemical admixtures shall be charged into mixer as a solution and shall be dispensed by an automatic dispenser or similar metering device. Powdered admixtures shall be weighed or measured by volume as recommended by manufacturer. Accuracy of measurement of any admixture shall be within plus or minus 3%.
   2. Two or more admixtures may be used in same concrete, provided such admixtures are added separately during batching sequence, and provided further that admixtures used in that combination retain full efficiency and have no deleterious effect on concrete or on properties of each other.
   3. All admixtures are to be approved by Structural Engineer prior to commencing this work.

E. Re-tempering:
   1. Concrete shall be mixed only in quantities for immediate use. Concrete which has set shall be discarded, not re-tempered.
   2. Indiscriminate addition of water to increase slump is prohibited.
   3. When concrete arrives at project with slump below that suitable for placing, water may be added only if neither maximum permissible water-cement ratio nor maximum slump is exceeded. Water shall be incorporated by additional mixing equal to at least half of total mixing time required. Any addition of water above that permitted by limitation of water-cement ratio shall be accompanied by a quantity of cement sufficient to maintain proper water-cement ratio. Such additions shall only be used if approved by Architect. In any event, with or without addition of cement, not more than 2 gallons of water per cubic yard of concrete, over that specified in design mix, shall be added.

F. Cold Weather Batching:
   1. When average of the highest and lowest air temperature falls below 40 degrees F for more than three consecutive days, provide adequate equipment for heating concrete materials. No frozen materials or materials containing ice shall be used. When placed in forms, concrete placed in these temperatures shall have a minimum temperature based on dimensions of concrete sections placed per ACI 301.

G. Hot Weather Batching:
   1. Concrete deposited in hot weather shall have a placing temperature below 95 degrees F per ACI 301. If necessary, ingredients shall be cooled to accomplish this.

H. Do not use shrinkage-reducing admixture (SRA) in same concrete batch with a moisture vapor reduction admixture (MVRA) or porosity inhibiting admixture (PIA).

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify lines, levels, and dimensions before proceeding with work of this section.

3.02 PREPARATION

A. Prior to Work specified in this Section, carefully inspect the installed Work of other trades and verify that such Work is complete to the point where this installation may properly commence.

B. Formwork: Comply with requirements of Section 03 10 00.

C. Reinforcement: Comply with requirements of Section 03 20 00.

D. Coordinate placement of embedded items with erection of concrete formwork and placement of form accessories.

E. Notify the Architect at least 48 hours in advance of the beginning of pouring operations and at the completion of formwork and location of all construction joints. An inspection of forms and joints will be made for approval of finished work and general layout only. The foregoing inspection shall in no way relieve the Contractor of responsibility of design and safety or formwork, bulkheads and shorings.

F. Ensure Excavations are sufficient to permit placement, inspection, and removal of forms. The entire place of deposit shall have been cleaned of wood chips, sawdust, dirt, debris, hardened concrete and other foreign matter. No wooden ties or blocking shall be left in the concrete except where indicated for attachment of other work.
G. Concrete surfaces to which fresh concrete is to be bonded shall be brush cleaned to remove all dust and foreign matter and to expose the aggregate, and then coated with the bonding adhesive herein specified.
H. Prior to placing concrete for any slabs on grade, the moisture content of the subgrade below the slabs shall be adjusted to at least optimum moisture.
I. Verify geotechnical engineer has approved all foundation excavations.
J. No concrete shall be placed until formwork and reinforcement has been approved by Architect. Clean forms of all debris and remove standing water. Thoroughly clean reinforcement and all handling equipment for mixing and transporting concrete. Concrete shall not be placed against reinforcing steel that is hot to the touch.
K. Coordinate:
    1. Obtain necessary information for coordination of formwork with items to be embedded in concrete.
    2. Coordinate size and location of openings in concrete. Obtain Architect’s approval for openings not shown on Structural Drawings.
L. Discrepancies:
    1. Notify the Architect of any discrepancies or inconsistencies.
    2. Do not proceed with installation in areas of discrepancy until such discrepancies have been fully resolved.
M. Where new concrete is to be bonded to previously placed concrete, prepare existing surface by cleaning and applying bonding agent in according to bonding agent manufacturer's instructions.
    1. Use epoxy bonding system for bonding to damp surfaces, for structural load-bearing applications, and where curing under humid conditions is required.
    2. Use latex bonding agent only for non-load-bearing applications.
N. Where new concrete with integral waterproofing is to be bonded to previously placed concrete, prepare surfaces to be treated in accordance with waterproofing manufacturer's instructions. Saturate cold joint surface with clean water, and remove excess water before application of coat of waterproofing admixture slurry. Apply slurry coat uniformly with semi-stiff bristle brush at rate recommended by waterproofing manufacturer.
O. Concrete Slabs on Grade:
    1. Bases below exterior and interior slabs on grade shall be accurately leveled and compacted prior to placing of concrete.
    2. Unless otherwise indicated, interior slabs on grade shall be poured over a minimum of four (4 inch) inches of compacted crushed rock, over a vapor retarder. Install vapor retarder under interior slabs on grade. Comply with ASTM E1643. Lap joints minimum 6 inches. Seal joints, seams and penetrations watertight with manufacturer's recommended products and follow manufacturer's written instructions. Repair damaged vapor retarder before covering.
    3. Protect slab on grade subbase from moisture prior to placing concrete. Avoid wetting rock layer to allow adequate concrete curing and avoid future vapor transmission. If the subbase has been wet excessively, verify that water has been eliminated prior to placement of concrete.

3.03 EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded. Ensure that embedded items are placed and held, during placing of concrete, to tolerances consistent with other items that will be attached to them.
    1. Install anchor rods, accurately located, to elevations required and complying with tolerances in AISC's "Code of Standard Practice for Steel Buildings and Bridges."
    2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.

3. Install dovetail anchor slots in concrete structures as indicated.
4. Install concrete accessories in accordance with manufacturer's recommendations: straight, level, and plumb.

B. Provide pipe sleeves when pipes pass through concrete. Fill voids in sleeves, inserts and anchor slots with readily removable material to prevent entry of concrete into voids. The Contractor shall also see that sleeves have been installed and other provisions have been made for the installation of mechanical, electrical and other equipment.
C. No conduit shall be cast in concrete unless specifically indicated on the Structural Drawings.
D. Coring of concrete after placement is not permitted without prior approval by the Engineer of Record.

3.04 MISCELLANEOUS CONCRETE ITEMS

A. Filling In: Fill in holes and openings left in concrete structures, unless otherwise indicated, after work of other trades is in place. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.
B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.
D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel-finish concrete surfaces.
E. Post-Installed Concrete Anchors
   1. Install in accordance with the manufacturer's recommendations and ICC-ES (or IAPMO) reports.
   2. Use washers on all bolts.
   3. Use care to avoid cutting or damaging reinforcing bars.
   4. When exposed to view in the final structure, bolts shall be of a length that will extend entirely through but not more than 1/4-inch beyond the nuts unless otherwise shown on the Drawings.

3.05 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.
B. Existing Concrete to New Concrete Joints
   1. Chip keys and roughen existing concrete surfaces where new concrete abuts. Roughen surface by bush-hammering, chipping or sandblasting to remove surface mortar and expose clean aggregate.
   2. Drill and install dowels using epoxy grout in accordance with manufacturer's printed recommendations.
   3. Prime surface with 10-mil layer of epoxy adhesive using a stiff brush. Place concrete while the epoxy adhesive is still tacky. Re-prime if necessary.
C. Construction Joints: Install only as indicated and noted on Drawings. Joints not indicated on Drawings shall be so located, when approved, as to least impair strength of structure, and shall conform to typical details. Construction joints shall have level tops, vertical sides. Horizontal construction joints shall be thoroughly cleaned and roughened by removing entire surface film and exposing clean aggregate solidly embedded in mortar matrix. Joints between concrete and masonry shall be considered construction joints. Vertical construction joints need not be roughened unless noted otherwise. See Drawings for doweling and required keys. Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
   1. Place joints perpendicular to main reinforcement unless otherwise indicated. Continue reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
   2. In walls, do not space construction joints more than 60 feet apart in horizontal direction and maximum 20 feet apart in vertical direction unless otherwise shown. In framed slabs and beams, and on metal deck slabs, do not space construction joints more than 120 feet apart. Place

construction joints perpendicular to main reinforcement except as otherwise shown. Continue reinforcement across construction joints except as otherwise shown.

3. Form keyed joints at indicated locations. Embed keys at least 1-1/2 inches into concrete.
4. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
6. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
7. Roughen surface at all construction joints where key is not used and under baseplates. Roughen concrete surface while concrete is still green where possible. Do not leave laitance, loosened particles of aggregate or damaged concrete at surface. Forms and reinforcing shall be cleaned of drippings. Dampen contact surfaces of construction joints, leaving them free of standing water, before placing fresh concrete. Roughen construction joints by any of following methods:
    a. By sand-blasting joint.
    b. By thoroughly washing joint, using a high-pressure hose, after concrete has taken initial set. Washing shall be done not less than 2 hours nor more than 4 hours after concrete has been poured, depending upon setting time.
    c. By chipping and wire brushing.
8. All decisions pertaining to adequacy of construction joint surfaces and to compliance with requirements pertaining to construction joints shall be reviewed with the Structural Engineer.
9. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
10. Before placing regular concrete mix, horizontal construction joint surfaces shall be covered with a layer of mortar composed of cement and fine aggregate of same proportions as that used in prescribed mix, but omitting coarse aggregate.

D. Control Jointing in Slabs-on-Grade: Joints shall be in locations indicated on Drawings, or as directed by Architect. Form weakened-plane control joints, sectioning concrete into areas as indicated. Construct control joints as follows:
    1. Construct interior slab control joints as follows:
        a. By use of construction joints laid out in checkerboard pattern; pour and allow alternate slabs to set; fill out balance of checkerboard pattern with second pour.
        b. By use of dummy groove joints at least 1/4 depth of slab, and at least 1/8 inch wide. These joints may be sawcut as soon as wet concrete can support the weight of the equipment and operator. Delaying saw-cutting past this point will make jointing ineffective. Use power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
    2. Slab reinforcing need not be terminated at control joints.
    3. Construction and expansion joints shall be counted as control joints.

E. Isolation/Expansion Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
    1. Unless otherwise indicated, use 3/8 inch thick expansion joint filler.
    2. Joints in interior slabs on grade shall be only in locations indicated.
    3. Edges of concrete at joints shall be edger finished to approximately 3/8 inch radius.
    4. Interrupt reinforcing at all expansion joints.
    5. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface, unless otherwise indicated.
    6. Terminate full-width joint-filler strips not less than 1/2 inch or more than 1 inch below finished concrete surface where joint sealants, specified in Division 07 are indicated.
    7. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

F. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

G. Joint Filling:
   1. Prepare, clean, and install joint filler according to manufacturer's written instructions.
      a. Defer joint filling until concrete has aged at least a specified length of month(s). Do not fill joints until construction traffic has permanently ceased.
   2. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.
   3. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.06 PLACING CONCRETE

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed. Ensure that all foreign material has been removed from surfaces, including reinforcement and embedded items, against which concrete will be placed.
B. Contractor shall notify the Testing Laboratory and Architect of intent to use concrete pumps to place concrete. Mix designs shall be modified accordingly as required.
C. The addition of water to the mix after leaving the plant is permitted only when the added water would not cause the mix design water/cement ratio to be exceeded. The addition of water at the site is contingent upon full time inspection of the process by the owners testing laboratory and the acceptance of the Inspector. Comply with ACI 301, section 4.3.2.1.
D. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.
E. Method: Convey concrete as rapidly and directly as practicable to preserve quality and to prevent segregation. Deposit concrete in forms as nearly as practicable at its final position in a manner which will ensure that required quality is obtained. Chutes shall slope not less than 4 inches and not more than 6 inches per foot of horizontal run.
   1. Do not deposit concrete that has initially set. Retempering of concrete, which has partially set, is not permitted.
   2. Maximum time for discharge of concrete shall be per ASTM C94.
F. Sequence: Pour all walls and columns full height to designated construction joints. Pour all beams, and horizontal structures to designated construction joints. Construction joints to be made in walls only where indicated on the Drawings.
G. Placement: Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete. Deposit concrete to avoid segregation.
   1. Once placing is started, carry it on as a continuous operation until placement of the panel or section is complete. Construction joints to be made only where indicated on the Drawings or on approved shop drawings. Prevent the formation of cold joints at other locations.
   2. Deposit concrete in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness. Deposit concrete in a manner to avoid inclined construction joints.
   3. Particular care shall be used when starting a concrete pour to maintain the continuity of appearance. Use all means necessary to avoid blemishes, imperfections, or changes in the finish.
   4. Maintain reinforcement in position on chairs during concrete placement.
   5. Deposit concrete into forms in horizontal layers not exceeding 24 inches in thickness around building, proceeding along forms at a uniform rate and consolidating into previous pour. In no case shall concrete be poured into an accumulation of water ahead of pour, nor shall concrete be flowed along forms to its final place of deposit. Fresh concrete shall not be permitted to fall from a height greater than 6 feet without use of adjustable length pipes or, in narrow walls, of adjustable flexible hose sleeves. Concrete shall be scheduled so that placing is a continuous operation for the completion of each section between predetermined construction joints. If any concreting operation, once planned, cannot be carried on in a continuous operation, concreting shall stop at temporary bulkheads, located where resulting construction joints will least impair the strength of the structure. Location of construction joints shall be as shown on the drawings or

as approved by Structural Engineer. The rate of rise in walls shall not be less than 2 feet per hour.

H. Consolidation: Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners. Concrete shall be thoroughly compacted and worked to all points with solid continuous contact to forms and reinforcement to eliminate air pockets and honeycombing.
   1. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301. Use and type of vibrator shall conform to ACI 309, Guide for Consolidation of Concrete.
   2. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. Place vibrating element directly in concrete and not attached to either inside or outside of forms or to reinforcing steel.
   3. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate. Do not over-vibrate concrete.

I. Initial Finishing:
   1. Screed slab surfaces with a straightedge and strike off to correct elevations.
   2. Where floor drains or floor slopes are indicated, slope slabs uniformly to provide even fall for drainage.
   3. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

J. Concrete Slabs on Grade:
   1. Exterior and interior concrete slabs on grade shall be poured as required under this Section. Base shall be accurately leveled and compacted prior to placing of concrete.
   2. Typically, interior slabs on grade shall be poured over a minimum of four (4 inch) inches of clean crushed rock, unless otherwise indicated, over a vapor retarder. Base section shall meet the requirements within the Geotechnical Engineering report.
   3. Protect slab on grade subbase from moisture prior to placing concrete. Avoid wetting rock layer to allow adequate concrete curing and avoid future vapor transmission. If the subbase has been wet excessively, verify that water has been eliminated prior to placement of concrete.
   4. Screed slab surfaces with a straightedge and strike off to correct elevations.

K. Concrete Over Metal Deck:
   1. At floor slabs, increase fill thickness as required to compensate for deflection of beams and deck at no additional cost to Owner. Obtain specified fill thickness at high points of the deck. Finish floor to specified tolerances for floor flatness, including at concrete over metal deck floors. Refer to 05 30 00 Metal Decking Specification.
   2. At roof, maintain specified thickness of concrete uniformly over deck. Slab need not conform to flatness and levelness tolerances

L. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Concrete placed in these temperatures shall have a minimum temperature based on dimensions of concrete sections placed as shown in ACI 301. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
   1. When concrete is expected to be placed at air temperatures of less than 40 deg F, contractor shall review with Architect all special procedures that will be used including mix design modifications and methods of protection. This review shall occur prior to the expected extreme temperatures.
   2. Provide sufficient protection material and equipment on the Project site in advance of the time when the mean daily temperatures are expected to drop below 40 degrees F.
   3. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301. In addition, take precautions including, but not limited to:
      a. Use non-chloride, non-corrosive accelerating admixture in accordance with previously accepted submittals.

b. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
c. Do not use calcium chloride, salt, or other materials containing antifreeze agents unless otherwise specified and approved in mixture designs.

M. Hot-Weather Placement: Comply with ACI 301 and ACI 305.1 and as follows:
1. When concrete is expected to be placed at air temperatures of greater than 75 deg F, contractor shall review with Architect all special procedures that will be used including mix design modifications and methods of protection. This review shall occur prior to the expected extreme temperatures.
2. Provide sufficient protection material and equipment on the Project site in advance of the time when the mean daily temperatures are expected to rise above 75 degrees F.
3. When air temperature exceeds 75 deg F, take special precautions to prevent slump loss, rapid setting, and plastic shrinkage; including but not limited to:
a. Maintain concrete temperature below 95 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
b. Keep aggregate piles continuously moist by sprinkling with water. Temperature of Concrete: The temperature of the concrete mix at the time it is being placed in the forms shall not exceed 95 degrees F per ACI 301. The method employed to provide this temperature shall in no way alter or endanger the design mix or the design strength required.
c. Use set retarding admixture in accordance with previously accepted submittals.
d. Convey, deposit, finish and commence curing of concrete as rapidly as practicable.

N. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

O. Minimize evaporation from concrete in place by providing shade and windbreaks. Maintain such protection in place for 14 days minimum.

3.07 FINISHING FORMED SURFACES

A. Rough-Formed Finish: Surfaces shall be reasonably true to line and plane with no specified requirements for selected facing materials. Tie holes and defects shall be patched and fins exceeding 1/4 inch in height shall be rubbed down with wooden blocks. Fins and other rough spots at surfaces to receive membrane waterproofing shall be completely removed and the surfaces rubbed smooth. Otherwise, remove fins and other projections exceeding a specified height agreed with Architect. Rough finish shall be used for the following areas:
1. Below grade and unexposed surfaces.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

C. Smooth Plywood Form Finish: Finish shall be true to line and plane. Tie holes and defects shall have been patched and ground with surface fins removed. Arrangement of plywood sheets shall be orderly, symmetrical, as large as practical and free of torn grain or worn edges. Surface concrete shall be treated with 1 part muriatic acid, in three parts water solution, followed immediately by a thorough rinsing with clear water. Surfaces which are glazed, have efflorescence, or traces of form oil, curing compounds or parting compounds shall be cleaned or treated to match other formed surfaces, except as otherwise indicated or specified.
1. Smooth Plywood Form Finish shall be used for the following areas:
a. All surfaces above grade unless otherwise specified.
b. At Contractor's option, may also be used in lieu of rough form finish.

D. Smooth Plastic Liner Finish: Surface shall be smooth, concrete free of honeycombing, air pockets larger than 1/8 inch in diameter, and fins.
1. This finish shall be used only where indicated on the Drawings.

E. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where indicated:
1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.

2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix one part portland cement to one and one-half parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.
3. Cork-Floated Finish: Wet concrete surfaces and apply a stiff grout. Mix one part portland cement and one part fine sand with a 1:1 mixture of bonding agent and water. Add white portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Compress grout into voids by grinding surface. In a swirling motion, finish surface with a cork float.

F. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.

G. Sacked Surfaces: Exposed surfaces that are unacceptable in appearance to the Architect shall be sacked.
1. Prepare concrete surfaces in accordance with the referenced standards. Remove any form release materials by stoning by hand, power grinding or other method approved by the Architect.
2. Prepare concrete surfaces to receive sack finishing with a light sand blasting.
3. For best results, grout application and rubbing should be performed when areas to be treated are shaded and during cool, damp weather. When work is to be performed in hot and dry weather, a fog spray should be available for continuous use.
4. Prepare grout samples for matching of concrete surfaces for approval by the Architect. These shall be made in the following proportions of gray cement to white cement to sand: 1:1:2, 1:2:3, and 2:1:3, etc. until the correct matching color is obtained on the test areas. Sand should be fine enough to pass the Number 30 sieve. Mixes should be made to a good workable consistency in a clean container and the mix with the best color chosen, or modified if needed.
5. Provide sufficient qualities of sand and cement from the same source for the complete work at the job site.
6. Mixing Application:
    a. Mixing of grout on the job should be timed for it to be used up within 1 to 1-1/2 hours.
    b. Let the grout stand 20 to 30 minutes after mixing, and then remixed before applying.
    c. Soak the concrete surface thoroughly with water at least 15 minutes before applying grout and again just before application so that the surface is adequately wet during the operation.
    d. Apply grout with plasterer's trowel or sponge rubber float in sweeping strokes from the bottom up. Brush or spray gun applications may be used when approved by the Architect.
    e. Work in freshly applied grout vigorously with a sponge rubber float, then let sit until some of its plasticity is gone but not until it loses its damp appearance. At this point it shall be rubbed with clean, dry burlap to remove the excess grout, leaving no visible film on the surface but filling all air holes.
    f. Keep the surface wet for a day after grouting and sack rubbing are completed.
7. Alternate methods of application and materials shall be subject to the approval of the Architect.

H. Schedule of Concrete Finish Types shall be coordinated with the Architect and indicated on Drawings.

3.08 FINISHING FLOORS AND SLABS (FLATWORK)

A. Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Unless otherwise indicated or specified, flatwork shall have an integral monolithic finish.

C. Integral Monolithic Finish: Apply as soon as freshly poured concrete slabs will bear weight of workers. Pour slabs full thickness to finish floor elevations indicated. At proper time, tamp surface repeatedly with a wire mesh or grid tamper in a manner to force aggregate down below surface and to bring sufficient mortar to surface to provide for a smooth coating of cement mortar over entire surface. Allow surface mortar to partially set, then float with wooden floats and finish with one of following, as required.

1. Broom Finish: Steel trowel surface to a smooth dense surface free of lines, tool marks, cat faces and other imperfections. After troweling, and before final set, give surface a broom finish, brushing in direction noted on Drawings, or as directed. Broom finish shall be used typically on exterior flatwork except as otherwise indicated or specified and shall be "medium" texture as approved by Architect.
2. Smooth Steel Trowel Finish: Apply 2 steel trowelings to obtain hard, smooth surface. All lips, irregularities, uneven levels, etc. shall be worked out before last troweling. All interior flatwork shall have a smooth steel trowel finish unless specified otherwise.

D. Slip-Resistive Finish: Before final floating, apply slip-resistive finish. Apply according to manufacturer's written instructions.
E. Dry-Shake Floor Hardener Finish: After initial floating, apply dry-shake floor hardener to surfaces according to manufacturer's written instructions.

3.09 FLOOR FLATNESS AND LEVELNESS TOLERANCES

A. For tolerances not indicated, refer to ACI 117.
B. Slabs on grade – Comply with FF Floor Flatness & FL Floor Levelness as specified by Architect or Structural Engineer, or at a minimum shall be sufficiently even to contact a 10' long straightedge with a tolerance of 1/8 inch.
C. Concrete over metal deck – Refer to Section 05 30 00 for minimum requirements.
D. Elevated slabs – Comply with Architectural or Structural Engineer requirements.
E. Comply with flatness and levelness tolerances per ASTM E 1155 for randomly trafficked floor surfaces. Measure FF Floor Flatness and FL Floor Levelness within 48 hours after slab installation; report both composite overall values and local values for each measured section.
F. Slabs supporting modular office partitions, adhered flooring systems, or compact storage shelving must also comply with the manufacturer’s tolerance requirements.
G. Slabs scheduled to receive wood flooring must also comply with tolerances required for installation of wood flooring.
H. Finished surfaces of exterior integral finished flatwork shall not vary more than 1/4 inch from a 10' long straightedge, except at grade changes.
I. Fill or grind completed slabs as necessary to achieve specified finish tolerances. Fill shall be with a self-leveling cementitious product capable of being tapered to a feathered edge.
    1. Repair any slab section measuring below either the minimum local F-number or the minimum local L-number.

3.10 SHORES AND RESHORES

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.
    1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.
    2. As a minimum, shoring shall remain in place for the following periods:
        a. Walls and Columns: 2 days
B. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.
C. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.11 CONCRETE SURFACE REPAIRS

A. Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval. Repair and replacement work will be done at Contractor’s expense.
B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.
C. Slabs on Grade: After entire slab is finished, shrinkage cracks that may appear shall be patched as follows:
    1. Where slab is not exposed or where appearance is not important, cracks larger than 1/32 inch wide shall be filled with cement grout and struck off level with surface.

2. Where slab is exposed and appearance is important, unsightly cracks shall be repaired in a manner satisfactory in appearance to Architect. If this cannot be accomplished, concrete shall be considered defective.

D. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
   1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension in solid concrete, but not less than 1 inch in depth. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
   2. Honeycombed areas shall be removed down to sound concrete, coated with a bonding grout or approved compound and patched using a low shrinkage high bond mortar. Patched areas shall be cured by being kept damp for at least 5 days.
   3. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
   4. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

E. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
   1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
   2. After concrete has cured at least 14 days, correct high areas by grinding.
   3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
   4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
   5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
   6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
   7. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

F. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

G. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.12 CURING AND PROTECTION

A. Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 305.1 for hot-weather protection during curing. Concrete shall be maintained at not less than 50 degrees F nor more than 100 degrees F for a period of 72 hours after being deposited.

B. Protection: Contractor shall be responsible for protection of finished concrete against injury by rain, cold, vibration, animal tracks, marking by visitors, vandalism, etc.

C. Provide additional curing agents or compounds, not necessarily listed herein, but as recommended and or required for use with shake type hardeners or other special coatings and coverings by their manufacturers for a complete and proper installation.

D. Where supplementary cementitious materials are used, extra precautions shall be taken to prevent premature drying.

E. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

F. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period. Forms heated by sun shall be kept moist during curing period.

G. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

H. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven (7) days with the following materials:
    a. Water.
    b. Continuous water-fog spray.
    c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.
2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven (7) days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
    a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
    b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
    c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.
3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.
    a. After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project.
4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.
5. Interior slabs to receive adhesive-applied or resilient flooring: Cure only with moisture retaining cover. Do not cure with curing compound.

6. Interior slabs to receive thin set of tile: Cure only with moisture retaining cover. Do not cure with curing compound.

I. Flatwork: Flatwork to be exposed, stained, or painted shall have curing process submitted and approved by the architect prior to construction.
   1. Initial Curing Process:
      a. Mist Spraying: As soon as troweling of concrete surfaces is completed, exposed concrete shall be sprayed continuously with a special atomizer spray nozzle, capable of producing a fine mist. Spraying shall be done without any dripping of water from nozzle. Amount of spraying shall be such as to maintain surface of concrete moist without any water accumulating on surface. Maintain spraying for a minimum of 12 hours, or until such time as hereinafter described curing process is applied. Mist spraying will not normally be required when the ambient air temperature is below 90 degrees F.
   2. Final Curing Process:
      a. Water Curing: Concrete shall be kept wet by mechanical sprinklers or by any other approved method which will keep surfaces continuously wet.
      b. Saturated Burlap Curing: Finished surfaces shall be covered with a minimum of two layers of heavy burlap which shall be kept saturated during the curing period.
      c. Curing Compounds: Membrane curing compounds of chlorinated rubber or resin type conforming to ASTM C309 may be used only if specifically approved by Architect. Use of membrane curing compound will not be permitted on surfaces to be painted, or to receive ceramic tile, membrane water-proofing or hardeners and sealers. Membrane curing compound may be used in areas to receive resilient floor tile, provided it is wax-free, compatible with adhesive used and approved by adhesive manufacturer. Agitate curing compounds thoroughly by mechanical means continuously during use and spray or brush uniformly in accordance with manufacturer's recommendations. Apply immediately following final finishing operation. All curing compounds shall conform to State of California Air Resources Board VOC Regulations.
      d. Waterproof paper conforming to ASTM C 171, or opaque polyethylene film, may be used. Concrete shall be covered immediately following final finishing operation. Anchor paper or film securely and seal all edges in such a manner as to prevent moisture escaping from concrete.

J. Refer to Drawings for areas of concrete slab not to receive curing compounds or hardening compounds. Where concrete floors are to receive heavy duty coatings, waterproof coatings and the like, verify with coating installer the type of finish required for specified coating.

3.13 SURFACE HARDENER AND SEALER

A. Seal all interior exposed flatwork with clear sealer, except surfaces receiving ceramic tile, quarry tile, poured flooring or other special finishes specified, or as scheduled on the Drawings.
   1. Apply sealer in 2 or 3 coats, in accordance with manufacturer's directions, using the maximum quantity recommended.
      a. Concrete floors must be thoroughly cured for a minimum of 30 days and completely dry before treatment.
      b. Surfaces to be treated must be clean, free of membrane curing compounds, dust, oil, grease and other foreign matter.
      c. Upon completion, concrete surfaces shall be clean and without discoloration or traces of excess hardener left on the surface.

B. Apply sprayable hardener/sealer at locations as scheduled or as indicated on the Drawings. Apply in accordance with the manufacturer's favorably reviewed application instructions and recommendations.

3.14 GROUTING

A. Prepare and place grout materials at locations as indicated on the Drawings in accordance with the manufacturer's recommendations and installation instructions.

B. Pack grout materials solidly between bearing surfaces and bases or plates as indicated and to ensure no voids.

3.15 DEFECTIVE CONCRETE

A. Defective concrete shall mean any of the following:
   1. Concrete not meeting 100 percent of the specified 28 day compressive strength.
   2. Concrete exhibiting rock pockets, voids, spalls, streaks, cracks, honeycombing, that has any sawdust, wood, or debris embedded in it, or is otherwise defective, and in the Architect's judgment these defects impair the proper strength or appearance of the work
   3. Exposed reinforcing to extent that strength, durability, or appearance is adversely affected.
   4. Concrete significantly out of place, line, or level.
   5. Concrete not containing the required embedded items.
   6. Any concrete work not in accordance with the Specification and Drawings.

B. Upon determination that concrete strength is defective:
   1. Should cylinder tests fall below minimum strength specified, concrete mix for remainder of work shall be adjusted to produce required strength. Core samples shall be taken and tested from cast-in-place concrete where cylinders and samples indicate inferior concrete with less than minimum specified strength.
      a. Cores of hardened concrete shall be taken and tested in accordance with ASTM C 42 and C 39. Number and location of such cores shall be subject to the approval of Architect.
      b. Cost of core sampling and testing will be paid for by the Contractor.
      c. “85 percent” reduction in ACI 318 Section 26.12.4 will not justify low cylinder tests.

C. Upon determining that concrete surface is defective, Contractor may restore concrete to acceptable condition by cutting, chipping, pointing, patching, grinding, if this can be done without significantly altering strength of structure. Permission to patch defective areas will not be considered a waiver of the right to require removal if patching does not, in the opinion of the Architect, satisfactorily restore quality and appearance.

D. If core tests indicate that concrete is below the strength specified, or if patching does not restore concrete to specified quality and appearance, the concrete shall be deemed defective, and shall be removed and replaced without additional cost to the Owner.

E. No repair work shall begin until procedure has been reviewed by the Architect and Structural Engineer.

3.16 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Inspections:
   1. Steel reinforcement placement.
   2. Steel reinforcement welding.
   3. Headed bolts and studs.
   4. Post-installed concrete anchors, per ICC-ES or IAPMO recommendations.
   5. Verification of use of required design mixture.
   6. Concrete placement, including conveying and depositing.
   7. Curing procedures and maintenance of curing temperature.
   8. Verification of concrete strength before removal of shores and forms from beams and slabs.

C. Concrete Tests: Provide special inspections and testing as described in the “Statement of Structural Special Inspections and Testing” within the structural drawings and as required by this section.
   1. A testing program is required prior to start of construction. Testing program to be done in Compliance with the CBC requirements and in collaboration with Testing Laboratory, Design team, contractor, owner and submitted for review by the agency in charge of building enforcement. Requirements below are minimum requirements; additional requirements may be required in final testing program.
   2. The following tests shall be made by a recognized testing laboratory selected by the Owner and approved by the governing agency. All tests shall be in accordance with the previously mentioned standards and ACI 318 Section 26.12. A complete record of all tests and inspections shall be kept per CBC Section 1903.1.
      a. Compressive Strength: Make and cure in accordance with ASTM C31. Test in accordance with ASTM C39 and ACI 318 Section 26.12.

1) A record shall be made of time and of locations of concrete from which samples were taken.
2) Four identical cylinders shall be taken from each pour of 150 cubic yards or 5000 square feet or part thereof, being placed each day per ACI 318 Section 26.12.2. One cylinder shall be tested at age 7 days, and two at age 28 days unless otherwise specified. Preserve remaining cylinder for future use.

b. Drying Shrinkage: (applies to lightweight concrete only unless noted otherwise).
1) A record shall be made of time cylinders and of locations of concrete from which samples were taken.
2) Three identical 4" x 4" x 11" specimens shall be made from same concrete as used in structure. Percent of shrinkage shall be reported at 21 days after 7 day moist curing period. Average results of 3 specimens shall be used as the accepted value. The value for laboratory cast specimens shall not exceed .075%. If field test specimens are used in lieu of laboratory specimens, a tolerance of +33% may be used.
3) Test specimens in accordance with ASTM C157.

c. Concrete consistency (slump) shall be tested in accordance with ASTM C143. Perform one slump test for each set of test cylinders taken.

3. Provide full time inspection per CBC Section 1704.3 during the taking of test specimens and during the placing of all concrete and embedded steel.

D. Reinforcing Steel
1. Notify the testing agency and the Architect at least 48 hours before concrete is to be poured or reinforcing is covered up.
2. Before any concrete is poured on any particular portion of the building, the reinforcing steel and form dimensions will be inspected by the Testing Agency. Any errors or discrepancies shall be corrected before concrete is placed.
3. A testing program is required prior to start of construction. Testing program to be done in compliance with the CBC requirements and in collaboration with Testing Laboratory, Design team, contractor, owner and submitted for review by the agency in charge of building enforcement. Requirements below are minimum requirements; additional requirements may be required in final testing program.
4. All reinforcing steel whose properties are not identifiable by mill test reports shall be tested in accordance with ASTM A615. One Series of tests for each missing report shall be made and costs shall be borne by the Contractor.
5. When tests are indicated for reinforcing steel on the structural drawings, the reinforcing steel used shall be tested in accordance with ASTM A615. One tensile and one bend test for each 2-1/2 tons of steel or fraction thereof, shall be made.
6. In addition to other required inspections, the following are subject to Special Inspection as per the CBC:
a. Placement of Reinforcing Steel
b. Welding of Reinforcing Steel
7. A special inspector from the Testing Agency shall be present during all field bending of reinforcement.
8. Installation of deformed bar anchors to be tested in accordance with Section 7.1 of AWS D1.1.
9. Welding of Reinforcement: There shall be continuous inspection during all welding of reinforcement. All butt welds to be inspected using radiographic testing. At the Owners option recognized non-destructive tests such as resistance, Magnetic Particle Examination, and Liquid Penetrant Inspection may be used to inspect the welds. Inspect shop and field welding in accordance with AWS D1.4, including checking materials, equipment, procedure and welder qualification as well as the welds. Inspector will use non-destructive testing or any other aid to visual inspection that he deem necessary to assure the adequacy of the weld.
10. Comply with ICC-ES or IAPMO approvals with respect to special inspection required during installation.
11. Testing and inspection of mechanical splices and reinforcing couplers to conform to manufacturer's recommendations and ICC-ES or IAPMO approval.

E. Survey and Adjustment: Continuously observe formwork operations, record such observations on a daily basis, and submit reports of the results. Instrument check forms before and during concrete

placement to assure no movement has taken place. Make appropriate corrections to reposition displaced forms.

1. Measure floor and slab flatness and levelness as specified in “Floor Flatness and Levelness Tolerances” Section.
2. Certify, by written report submitted on a weekly basis, for each level and story that the elevations, finish lines and building lines of the hardened concrete are within tolerances, as substantiated by transit survey; also that all embeds and inserts have been installed within tolerance.

F. Slab Testing: Cooperate with manufacturer of specified moisture vapor reducing admixture (MVRA) to allow access for sampling and testing concrete for compliance with warranty requirements.

G. Permeability Test: Test concrete with waterproofing admixture according to COE CRD-C 48.

3.17 ADJUSTING AND CLEANING

A. Remove all debris, excess materials, tools and equipment resulting from or used in this operation at completion of this work.

B. Surfaces to be painted shall be smooth and free of substances such as dirt, wax, excessive laitance, grease or materials that would prevent proper bonding of finishes.

1. Removal of foregoing contaminants, and complete removal of parting and curing compounds affecting proper paint bond, shall be responsibility of this Section of Work. Sandblast cleaning shall not be employed without specific approval of Structural Engineer.

END OF SECTION

SECTION 03 35 43 – POLISHED AND DYED CONCRETE

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Grinding and polishing of interior concrete slabs/floors to aggregate exposure as herein specified
2. Joint filler
3. Joint edge spall repair
4. Crack repair
5. Surface defect repair including pop-outs, chips, spalls and pitting
6. Apply sealer and hardener, and polishing to specified sheen level and aggregate exposure

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

F. American Concrete Institute (ACI), www.aci-int.org

1. ACI302.1R Guide for Concrete Floor and Slab Construction.

G. American Society For Testing and Materials (ASTM), www.astm.org

1. Refer to Section 03 30 00 – Cast in Place Concrete for additional ASTM reference standards
2. ASTM C309 - Liquid Membrane-Forming Compounds for Curing Concrete
3. ASTM C494 - Standard Specification for Chemical Admixtures for Concrete

4. ASTM C1028 - Standard Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method

H. Definitions:

1. Floor Slab Joints: Joints deliberately created in regular, grid pattern intervals during construction.
    a. Construction Joints and Closure Strip Joints: Formed joints between adjacent slab panels, where panels are separate concrete pours.
    b. Shrinkage Joints (also called control or contraction joints): Saw-cuts installed after slab troweling to control slab breaks caused by concrete shrinkage, and keep cracks in straight lines under the saw-cuts.
2. Cracks in Floor Slab: Random, uncontrolled breaks in the floor slab.
    a. Shrinkage Cracks: Cracks that are the result of overall concrete shrinking beyond the capacity of the construction joints to contain.
    b. Slab Curl Cracks: Caused by concrete shrinking faster at the slab top than the bottom, with resulting curl at pour edges, breaking may be from wheeled vehicle impact.
3. Slab Spalls: Locations where slab surface has delaminated, chipped or broken off, exposing aggregate in the mix.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Concrete substrate	Floor levelness	• Refer to Section 03 30 00 – Cast in Place Concrete • Concrete must have an average Floor Flatness rating of at least 50, with a minimum of 35. • Concrete must have an average Floor Levelness rating of at least 50, with a minimum of 35.	Polishing system mfgr.
Polished floor assembly		• Concrete must be cured a minimum of 28 days or as directed by the manufacturer before application of polishing can begin. • Application of polishing shall take place 10 days prior to installation of equipment and substantial completion, thus providing a	

		complete, uninhibited concrete slab for application. • Finish concrete area shall be closed to traffic during finish floor application and after application for the time as recommended by the manufacturer.	
	Slip Resistance Coefficient of Friction: Level	0.6 min level to 5%	ASTM C 1028
	Slip Resistance Coefficient of Friction: sloped	0.8 min > than 5%	ASTM C 1028

Grinding	Aggregate exposure	• **Light Grind** ▪ Grind into concrete "cream" only to remove +/- 1/32nd inch. • **Medium Grind – Some Sand Exposed** ▪ Grind into the concrete to remove +/- 1/16th to 1/8th inch ▪ Exposed some small aggregate • **Heavy Grind – Some Aggregate Exposed** ▪ Grind into the concrete to remove +/- 1/8th to 1/4th inch ▪ Exposes some large aggregate in compliance with approved mockup	Mfgr.
	Type	Planetary type (Terrazzo type grinders not allowed)	Mfgr.
Polished floor Sheen/ shine	Sheen/shine	• Class I Low Reflectivity x Grit 400 • Class 2 Medium Reflectivity x Grit 800 • Class 3 High Reflectivity x Grit 1500	Mfgr
	Edges	• Match floor	N/A
Dyed finish	Type	Solvent Based	Provided by same mfgr. grinding and polishing floor
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing**:

Item	**Name of Test**	**Performance Results**	**Testing Std.**

Polished concrete	Slip Resistance Coefficient of Friction	0.6 min (from dead level to 5%)	ASTM C 1028
Polished concrete	Slip Resistance Coefficient of Friction	0.8 min (greater than 5%)	ASTM C 1028
Water Vapor Emissions per mfgr's recommendations and acceptance of existing substrate			

E. **Construction Testing / Inspection by others**:

Item	**Name of Test**	**Performance Results**	**By Whom**
Polishing of concrete	Installation compliance	Comply with written instructions	Polishing mfgr. representative
Sheen/shine	Compliance of Mockup	Meet visual inspection	**Architect**

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturer's product data.
   1. Concrete finish manufacturers' product data sheets, specifications, MSDS, and test data sheets.
      a. Include data for all products to be used to achieve polished concrete system as herein described.
      b. Include descriptive data, curing time, and application requirements
   2. Concrete finish manufacturers' recommended installation procedures, which when approved by the **Architect** will become the basis for accepting or rejecting actual installation procedures used on the work.

E. Submit Shop Drawings
   1. Coordinate joint layout pattern with Slab Joints per Section 03 30 00 – Cast in Place Concrete. One Joint layout submittal covering the joint requirements herein, shown on the architectural and structural drawings will be acceptable.

F. Submit samples.
   1. Three (3) of each color and finish specified.

G. Mock-Up Field Sample:
   1. Erect at location approved by **Architect**.
   2. Building slab mock up:
      a. One mock-up shall be provided for each color and sheen level combination specified.
         1) Size: 8'-0" x 8'-0"

b. Polished Concrete slab/floor mock-up may not be part of final construction.

1) Concrete slab mock-up shall be constructed from same concrete pour(s) as building slab, and be cured, protected and prepared to receive Polished Concrete Finish in exact manner of building slab.
2) Mock-up shall comprise of all components and finishes as specified and indicated in Drawings and shall include expansion and construction joints, saw cuts, edges at walls, hardeners, sealers, joint fill, sealants, chamfers, etc. and finish as specified and detailed.
3) Concrete Slab Mock-Up shall be removed upon completion and acceptance of final building slab with Polished Concrete Finish installation.
4) Notify **Architect** seven days in advance of dates and times when mock-ups will be constructed.
5) Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

3. **Architect** will review and accept mock-up, when it is determined that it represents the design intent before construction begins.

a. Obtain from the **Architect** approval of mock-ups before starting construction.
b. If the **Architect** determines that mock-ups do not meet requirements, demolish and remove them from the site and cast new mock-ups until mock-ups are approved.
c. After completion of the contract, demolish and remove mock-up.

H. Certification:

1. Provide certified test reports, prepared by an independent testing laboratory, confirming compliance with specified performance criteria.
2. Provide a letter of acknowledgement from both the equipment and chemical manufacturer stating that the installer is a trained applicator and is familiar with proper procedures and installation requirements recommended by the manufacturer.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **ten (10)** years providing / installing / finishing projects of similar size and complexity.

1. Use a certified installer and adequate number of skilled workmen who are thoroughly trained and experienced in the necessary craft.
2. The special concrete finish manufacturer shall certify applicator.

a. Contact manufacturer for list of Certified Applicators.

C. Manufacturer shall have been in business for **ten (10)** years providing / installing / finishing similar size projects and complexity.

1. Provide letter of certification from concrete finish manufacturer stating that installer is certified applicator of special concrete finishes, and is familiar with proper procedures and installation requirements required by the manufacturer.

D. Stipulations:

1. Concrete Design:

a. Coordinate with Concrete Mix Designs specified in Section 03 30 00 – Cast-In-Place Concrete.
b. Aggregate selected must be tested to ensure it will accept polish.
c. Calcium chloride accelerators should not be utilized if acid stains are to be applied to the concrete floor.

2. Concrete shall be cleaned and all bond breaker material shall be removed.
3. Floor slab shall be placed and prepared as herein specified.
4. Installer/finisher shall be trained by system manufacturer and certified by same.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Curing of concrete
b. Manufacturer's recommendations

1) Protection of Concrete prior to finishing
2) Polishing of Concrete
3) Protection of Concrete after finishing (prior to substantial completion)
4) Mock-Ups

2. **General Contractor** shall request meeting 5 days in advance of construction. Recommended attendees shall include **General Contractor**, Testing Agency, Ready-Mix Concrete manufacturer, Cast in Place concrete subcontractor, Concrete Finish (concrete polishing) Subcontractor.

F. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and provide in writing a letter stating that polishing was done properly.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver materials in original containers, with seals unbroken, bearing manufacturer labels indicating brand name and directions for storage.

C. Store in compliance with Manufacturer instructions.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, etc. by others are installed correctly to proceed with installation/application of products as herein specified.

B. Environmental Limitations:

1. Comply with manufacturer's written instructions for substrate temperature and moisture content, ambient temperature and humidity, ventilation and other conditions affecting topping performance and as herein specified.

C. Close areas to traffic during floor application and after application, for time period recommended in writing by manufacturer.

D. Removal of contamination of the slab by soil, foot prints, drag marks, welding marks, hydraulic fluids, or any other outside contaminant shall be performed under this specification.

1. Refer to Section 03 00 51 – Concrete Cleaning.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1. All hydraulic powered equipment must be diapered to avoid staining of the concrete.
2. No trade will park vehicles on the inside slab. If necessary to complete their scope of work, drop cloths will be placed under vehicles at all times.
3. No pipe cutting machine will be used on the inside floor slab.
4. Steel will not be placed on interior slab to avoid rust staining.
5. All equipment must be equipped with non-marking tires.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. The following is related work including, but not limited to the following;

1. Concrete floor mix design
2. Concrete floor curing
3. Floor recessed items
4. Floor joints

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 03 30 00 – Cast in Place Concrete
3. Section 07 92 00 – Sealants and Caulking

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of polished concrete surface.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product and equipment type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings and all components shall be supplied from single source:

1. Concrete Dye System

a. L.M. Scofield, www.scofield.com
b. RetroPlate System, www.retroplatesystem.com
c. Ameripolish

2. Concrete Stain System

a. L.M. Scofield, www.scofield.com
b. Prosoco, www.prosoco.com

C. Reviewed Equivalent by **Architect**.

1. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
2. Refer to Division 1 for substitution, deviation and/or submittal procedures.
3. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

D. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

E. Refer to drawings, details, and other related specification section whether listed or not.

F. Details shall set basic requirements for size and configuration of systems.

2.2 GENERAL SYSTEM DESCRIPTION

A. Step 1: Place Concrete Slab / Floor Deck:

B. Step 2: Grind Concrete

C. Step 4: Hone and Polishing Concrete

2.3 MATERIALS

A. Concrete Slab/Floor:

1. Refer to Section 03 30 00 – Cast in Place Concrete

a. Concrete Slab

2. Joint Filler/Saw Cut Filler

a. Product as recommended by Concrete polishing manufacturer and subcontractor

3. Crack & Spall Repair:

a. Product as recommended by Concrete polishing manufacturer and subcontractor

B. Floor Protection:

1. Manufacturer: L.M. Scofield Company
2. Product:

a. Floor Protection Material: Proguard Duracover
b. Seaming Tape: Proguard Heavy Duty Seaming Tape

1) Do not apply the heavy duty seaming tape to bare or finished floors or wall surfaces at any time. It will permanently damage the floor.

3. Install products per manufacturer's published installation procedures.

C. Polished Concrete System:

1. Manufacturer: L.M. Scofield Company, www.scofield.com
2. Products:

a. Lithium Densifier: Formula One Lithium Densifier

1) High performing hardening and dust proofing compound.
2) Chemically reactive
3) Permanent bond to concrete
4) Formulated to be used in conjunction with integrally colored and uncolored concrete.

b. Final Finish: Formula One Guard-W

1) Water-borne acrylic penetrating material
2) Protects of polished concrete from normal staining
3) Enhances Gloss

D. Concrete Grind/Polishing:

1. Planetary grinding equipment must be capable of providing a multiple step process starting with course metal bond diamonds and ending with fine resin bond diamonds.

2.4 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect.**

B. Polishing Equipment

1. Floor grinding machines, dust extraction system, grinding heads, grinding pads for edges, hand grinders, etc. as required and approved by installation manufacturer.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Installer and **General Contractor** shall examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

a. Verify that base slab meet finish and surface profile requirements in Division 3 Section "Cast-In-Place Concrete," and Project Conditions above.
b. Do not proceed until unsatisfactory conditions are corrected.

3. Visually examine the floor joints and cracks in the slab observing the following:

a. Where semi-rigid joint filler is most appropriate material.
b. Where spall and crack repair mortar is most appropriate.
c. Notify the **Architect** where other defective areas are observed and not indicated for repair work, but where repair is appropriate.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 PROTECTION

A. The General Contractor is responsible for using Temporary Floor Protection throughout project construction to safeguard the surface quality of concrete slabs to receive polished finish before and after the application of these decorative finishes. The concrete slab must be treated as a finished floor at all times during construction.

1. Temporary Floor Protection will be removed only while finish work to the concrete is being performed and will be replaced after the final finish has cured sufficiently.

B. All concrete floors that will not be covered by other materials

3.3 COORDINATION

1. Refer to Division 1 for project coordination requirements.

2. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.4 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Installer shall examine and approve concrete substrate for conditions affecting performance of finish.

1. **General Contractor** shall correct conditions that are found to be out of compliance with the requirements of this section.
2. Repairs are not acceptable unless specifically approved on a case-by-case basis by the **Architect**.

C. Verify that base slab meets finish and "floor levelness" surface profile requirements and correct.

D. Provide floor clean of materials and debris.

E. Protect adjacent surfaces as required to prevent damage by the concrete polishing procedure.

F. Setup grinding machine, dust extraction system, tooling, and generator.

G. Ensure floor is cured to accept polishing application.

3.5 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
2. Sequence:
    a. Place Concrete Slab
        1) Refer to Section 03 30 00 – Cast in Place Concrete
    b. Grind to desired depth:
        1) Grind concrete floor with metal bond diamonds removing construction debris until the specified Grade is obtained. The first cut must be performed with a metal bond diamond.
            a) Medium Grind @ Grade Level Floors
    c. Joint & crack repair
        1) General:
            a) Install in accordance with manufacturer's recommendations.
            b) Fill construction joints and cracks with filler products as specified in accordance with manufacturer's instructions colored to match (or contrast) with concrete color as specified by **Architect.**
        2) Shrinkage and construction joint repairs

a) Joints where overall width of joint and edge spall is 1/2" or less.

i. Where narrow joint conditions exist with little to no edge spalling, clean both joint sidewalls to full original depth utilizing a diamond blade equipped dust free saw.
ii. Where minor edge raveling or spalling exists, prepare joint by making 3/4" minimum depth (1 3/4" preferred) vertical saw cuts at spall edges, then remove material to provide a channel to accept repair material.
iii. Where necessary, clean dry silica sand can be placed at the bottom of the joint (1/4" maximum layer) to seal off any opening and prevent excessive filler seepage or run through.
iv. Following Manufacturer's mixing and installation instructions fill the joint and monitor top to assure fill remains crowned.
v. After product has cured, cut smooth and flush with the finish floor surface or may be polished smooth with the floor using the specified polishing process.

b) Joints where overall width of joint and edge spall is more than 1/2"

i. Prepare joint by making straight, vertical saw cuts at spall edges, then remove delaminated material and deteriorated concrete surface material.
ii. Where necessary, clean dry silica sand can be placed at the bottom of the joint (1/4" maximum layer) to seal off any opening and prevent excessive filler seepage or run through.
iii. Blend repair mortar per manufacturer's requirements. Fill area with the repair mortar. Trowel top of repair mortar to be flush with concrete surfaces on both sides.
iv. After repair mortar has cured, use a flexible grinding wheel to grind top and edges to be flush and smooth with concrete floor on both sides.
v. If spalled repair area is over a control joint create a relief cut through the center of the repair mortar by re-cutting the joint. The relief cut should extend down through the structural mortar repair following the original saw cut in the slab.
vi. Re-fill the relief cut with control joint sealer in accordance with Manufacturer's installation instructions.
vii. After product has cured, cut smooth and flush with the finish floor surface or may be polished smooth with the floor using the specified polishing process.

3) Slab and Crack repair:

a) Random cracks not subject to movement, which are specifically identified to be repaired:

i. Utilizing dust-free cleanout and crack chasing saws cut along the crack to a depth of approximately 3/4" (1/2" minimum) creating a straight, clean vertical edge. Ensure that this defining cut has removed all previously adhered fillers, and any loose or weak concrete from the crack edge.
ii. Follow manufacturer's mixing and installation instructions and fill the crack with repair material.

iii. After repair material has cured, polish smooth with the floor using the specified polishing process.

4) Surface defect repair, including pop-outs, chips, spalls, and pitting:

a) Clean defect section with angle grinder equipped with wheel to remove all dirt/laitance. Wheel should be run over defects in multiple directions to insure proper cleaning.
b) Vacuum prepared pitting sections.
c) Dispense low viscosity Crack or Spall Repair material generously in and around pitted areas. Sand Filler, Grit size from 12 to 60, may be added to mixed components and then placed into area to be repaired. See Manufacturer's comprehensive installation guidelines for more information regarding use.
d) Immediately trowel repair material flush with slab surface. If material sticks to the trowel clean with denatured alcohol.
e) After repair material is fully cured, surface may be ground smooth or polished using the specified polishing process.

d. Hone and Polish Concrete

1) Finish Honing and Polishing the floor to the desired Class.
2) Class I Low Reflectivity x Grit 400
3) After the polishing process has been completed, apply protection guard material according to the products current technical bulletin. Allow to cure for 2-4 hours.
4) Using a high-speed burnishing machine and diamond impregnated pads, burnish the surface to the desired gloss level.
a) The exact number of grinding and polishing steps required will be determined by the flatness achieved by the concrete finisher, along with the desired look that is specified.
5) Finish to within 1/2" of vertical surfaces where practical.
6) Achieve waterproofing, hardening, dust-proofing, and abrasion resistance of the surface without changing the natural appearance of the concrete, except for the sheen.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

   1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

   2. Remove spatter from adjoining surfaces, as necessary.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. **General Contractor** shall protect polished floor until project is turned over to **Owner**.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 03 35 43

04 05 16
MASONRY GROUTING
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Grout for masonry.

1.03 RELATED REQUIREMENTS

A. Section 04 05 13 – Masonry Mortaring.
B. Section 04 22 00 – Concrete Unit Masonry

1.04 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
   1. ASTM C5 - Standard Specification for Quicklime for Structural Purposes.
   2. ASTM C94 - Standard Specification for Ready-Mixed Concrete.
   3. ASTM C150 - Standard Specification for Portland Cement.
   4. ASTM C404 - Standard Specification for Aggregates for Masonry Grout.
   5. ASTM C476 - Standard Specification for Grout for Masonry.
   6. ASTM C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry.
   7. ASTM C979 - Standard Specification for Pigments for Integrally Colored Concrete.
   8. ASTM C1019 - Standard Test Method for Sampling and Testing Grout for Masonry.
   9. ASTM C1072 - Standard Test Methods for Measurement of Masonry Flexural Bond Strength.
   10. ASTM C1314 - Standard Test Method for Compressive Strength of Masonry Prisms.
   11. ASTM E518 - Standard Test Methods for Flexural Bond Strength of Masonry.
   12. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
B. Product Data:
   1. Include mix design.
   2. Include required environmental conditions and admixture limitations.
C. Reports: Submit reports on grout indicating compliance of component grout materials to requirements of ASTM C476 and test and evaluation reports to requirements of ASTM C1019.
D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements. Submit documentation on all materials including but not limited to:
   1. Aggregates.
   2. Cement.
   3. Admixtures.
E. Manufacturer's Installation Instructions: Submit packaged dry mortar manufacturer's installation instructions.

1.06 QUALITY ASSURANCE

A. Comply with provisions of TMS 402/602, except where exceeded by requirements of Contract Documents.
   1. Maintain one copy of each on the Project site.

1.07 PRECONSTRUCTION TESTING

A. A testing program is required prior to start of construction. Testing program to be done in Compliance with the current building design code requirements and in collaboration with Testing Laboratory, Design team, contractor, owner and submitted for review by the agency in charge of

building enforcement. Requirements below are minimum requirements; additional requirements may be required in final testing program.

B. Testing will be conducted by an independent test agency, in accordance with provisions of Section 01 40 00 - Quality Requirements.
C. Sample panel construction: For masonry governed by Level 2 or 3 Quality Assurance, construct sample panels of masonry walls per TMS 602. The specifier has the option of permitting a segment of the masonry construction to serve as a sample panel or requiring a separate stand-alone panel.
D. Grout Mixes: Test grout batches in accordance with ASTM C1019 procedures.
   1. Test results will be used to establish optimum grout proportions and establish quality control values for construction testing.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Maintain packaged materials clean, dry, and protected against dampness, freezing, and foreign matter.

1.09 FIELD CONDITIONS

A. Cold Weather Construction to be in accordance with TMS 602.
B. Hot Weather Construction to be in accordance with TMS 602.

PART 2 - PRODUCTS

2.01 GROUT APPLICATIONS

A. At Contractor's option, grout may be field-mixed from packaged dry materials, made from factory premixed dry materials with addition of water only, or ready-mixed.
B. Grout Mix Designs:
   1. Provide premixed type in accordance with ASTM C476.
   2. Grout shall have a 28-day compressive strength of 2000 psi or f'm as indicated in the Drawings, whichever is greater. Grout shall conform to TMS 602.
   3. Fine Grout or Coarse Grout: The contractor is to determine the proper application of Fine Grout or Coarse Grout based on the grout pour height used and the clear grout space width for multi-wythe construction or clear grout space dimensions for hollow units in accordance with TMS 402 Table 3.2.1.
   4. Add grout admixture in accordance with the manufacturer's recommendations. Calcium Chloride cannot be used in grout mixes.

2.02 MATERIALS

A. Packaged Dry Material for Grout for Masonry: Premixed cementitious materials and dried aggregates; capable of producing grout of the specified strength in accordance with ASTM C476 with the addition of water only.
   1. Type: Fine or Coarse.
B. Portland Cement: ASTM C150, Type I or II, low alkali; natural gray.
C. Quicklime: ASTM C5, non-hydraulic type.
D. Grout Aggregate: ASTM C404.
E. Water: Clean and potable.
F. Water-Reducing Admixture: expanding, retarding, and water-reducing.
   1. Product: Sika Grout Aid.
G. Bonding Agent: Latex type.
H. Integral Water-Repellent and Efflorescence-Control Admixture: Polymeric liquid admixture added to grout at the time of manufacture.
   1. Use only in combination with masonry units produced with integral water-repellent admixture.
   2. Product: Master Builders MasterPel 240MA.
I. Bond Beam Mesh: Barrier to stop grout when filling block wall cells
   1. Manufacturers:
      a. Grout Stop: www.wirebond.com/products/grout-stop
      b. Mortar/Grout Screen: www.h-b.com
      c. Mortar Mesh: www.bontool.com/mortar-mesh-100-x-4-81-118

2.03 GROUT MIXING

A. Mix grout in accordance with ASTM C476.
B. Thoroughly mix grout ingredients in quantities needed for immediate use in accordance with ASTM C476 for fine and coarse grout.
C. Add admixtures in accordance with manufacturer's instructions; mix uniformly.
D. Do not use anti-freeze compounds to lower the freezing point of grout.

PART 3 - EXECUTION

3.01 PREPARATION

A. Apply bonding agent to existing concrete surfaces.
B. Plug clean-out holes for grouted masonry with brick masonry units. Brace masonry to resist wet grout pressure.

3.02 INSTALLATION

A. Install grout to requirements of section(s) in which masonry is specified.
B. Work grout into masonry cores and cavities to eliminate voids.
C. Do not install grout in lifts greater than 16 inches without reconsolidating.
D. Do not displace reinforcement while placing grout.

3.03 GROUTING

A. General Requirements:
   1. All cells shall be grouted solid as indicated on the Drawings.
   2. Use of grout lifts above or below 4’-0” or 5’-4” for 10 inch nominal or wider hollow unit masonry at Contractor's option.
   3. Use grout pump, hopper or bucket to place grout.
   4. Place grout in final position within 1 1/2 hours after introduction of mixing water.
   5. Stop grout approximately 1½ inches below top of last course; except at top course bring grout to top of wall. Do not form grout keys within beams.
B. Grout pours less than 4’-0” or 5’-4” for 10 inch nominal or wider hollow unit masonry:
   1. Do not lay units higher than 4’-0" before grouting or 5’-4” for 10 inch nominal or wider hollow unit masonry.
   2. If mortar has been allowed to set prior to grouting, remove all fins protruding more than ½ inch into grout space.
   3. Conform to requirements of CBC Section 2104.2.4.1.
   4. Consolidate each lift with mechanical vibration twice per Article 3.5 E of TMS 602. Once while placing grout and once more after initial absorption of water but before set.
C. Grout pours greater than 4’-0” or 5’-4” for 10 inch nominal or wider hollow unit masonry:
   1. Conform to requirements of TMS 602 CBC Section 2104.2.4.2.
   2. Layup walls, subject to maximum height limitations of Table 6 under Article 3.5 of TMS 602.
   3. Provide clean out holes at the bottom of every pour in cells containing vertical reinforcement. Construct clean out courses with open bottom bond beam units inverted to permit cleaning of all cells by flushing. Cleanouts shall be not less than 3x4 inch openings cut from one face shell. Do not plug clean out holes until masonry work, reinforcement, and final cleaning of the grout spaces have been completed and inspected.
   4. Clean mortar droppings from the bottom of the grout space and from reinforcing steel. Remove mortar fins protruding more than ½ inch into the grout space by dislodging the projections with a rod or stick as the work progresses or by washing the grout space at least twice a day during erection using a high-pressure stream of water.

3.04 FIELD QUALITY CONTROL

A. An independent testing agency will perform field tests, in accordance with provisions of Section 01 40 00 - Quality Requirements.
B. Test and evaluate grout in accordance with ASTM C1019 procedures.
   1. Test with same frequency as specified for masonry units.

3.05 DEFECTIVE GROUT

A. Should the strength of grout fall below that specified, remainder of Work shall be adjusted to reach required strength. Work in place representing inferior grout and indicating a strength less than the minimum specified shall be tested by taking and testing core samples. Number and location of cores shall be determined by Structural Engineer.
B. Should compression tests of cores fail to meet required strength, masonry shall be deemed to be defective and shall be removed and replaced at no cost to Owner.
C. Costs relative to taking and testing of core samples shall be paid by Owner and will be deducted from Contract Amount. Cost of patching core holes shall be borne by Contractor.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Concrete block.
B. Reinforcement.
C. Bolts and Post-Installed Anchors.
D. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 03 10 00 - Concrete Forming and Accessories.
B. Section 03 20 00 - Concrete Reinforcing.
C. Section 03 30 00 - Cast-in-Place Concrete.
D. Section 04 05 13 - Masonry Mortaring.
E. Section 04 05 16 – Masonry Grouting.
F. Section 05 50 00 - Metal Fabrications.

1.03 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
   1. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
   2. ASTM A480 - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip.
   3. ASTM A580 - Standard Specification for Stainless Steel Wire.
   4. ASTM A615 - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
   5. ASTM A641 - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.
   6. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   7. ASTM A706 - Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement.
   8. ASTM A951 - Standard Specification for Steel Wire for Masonry Joint Reinforcement.
   9. ASTM A1064 - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.
   10. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units.
   11. ASTM C140 - Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units.
   12. ASTM C150 - Standard Specification for Portland Cement.
   13. ASTM C979 - Standard Specification for Pigments for Integrally Colored Concrete.
   14. ASTM C1314 - Standard Test Method for Compressive Strength of Masonry Prisms.
   15. ASTM E154 - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover.
   16. ASTM E514 - Standard Test Method for Water Penetration and Leakage Through Masonry.
   17. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting one week before starting work of this section; require attendance by all relevant installers.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.
B. Product Data: Provide data for masonry units, fabricated wire reinforcement, and masonry accessories.
C. Shop Drawings: Indicate pertinent dimensions, materials, anchorage, size and type of fasteners.
D. Samples: Submit four samples of decorative block units to illustrate color, texture, and extremes of color range.

E. Manufacturer's Certificate: Certify that masonry units meet or exceed specified requirements.
F. Test Reports: Concrete masonry manufacturer's test reports for units with integral water repellent admixture where utilized.
G. Manufacturer's Qualification Statement.
H. Installer's Qualification Statement.
I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 01 60 00 - Product Requirements, for additional provisions.

1.06 QUALITY ASSURANCE

A. Comply with provisions of TMS 402/602, except where exceeded by requirements of Contract Documents.
   1. Maintain one copy of each on the Project site.
B. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section with a minimum of three years of documented experience.
C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.07 MOCK-UPS

A. Sample panel construction: For masonry governed by Level 2 or 3 Quality Assurance, construct sample panels of masonry walls per TMS 602. The specifier has the option of permitting a segment of the masonry construction to serve as a sample panel or requiring a separate stand-alone panel.
B. Locate where directed.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.
B. Store masonry units off the ground in a dry location, covered and protected from absorbing moisture.
C. Store masonry accessories, including metal items, in such a way as to prevent corrosion or accumulation of dirt and oil.

PART 2 - PRODUCTS

2.01 CONCRETE MASONRY UNITS

A. Concrete Block: Comply with referenced standards and as follows:
   1. Size: 8" wide by 8" high x 16" long unless as otherwise indicated on the Drawings.
   2. Special Shapes: Provide bond beam units, open end units, lintel units and other special units as indicated. Use open end units at cells containing vertical reinforcement wherever possible.
   3. Load-Bearing Units: ASTM C90.
      a. Weight: As indicated in the Drawings.
      b. Hollow block, as indicated in the Drawings.
      c. Exposed Faces: Manufacturer's standard color and texture where indicated in the Drawings.
      d. Exposed Faces: Special color and texture where indicated in the Drawings.
   4. Pre-Faced Units: ASTM C90, hollow block, with smooth resinous facing complying with ASTM C744.
      a. Colors and styles: As indicated on the Drawings.
         1) Substitutions: See Section 01 60 00 - Product Requirements.
   5. Units with Integral Water Repellent: Concrete block units as specified in this section with polymeric liquid admixture added to concrete masonry units at the time of manufacture.
      a. Performance of Units with Integral Water Repellent:
         1) Water Permeance: When tested per ASTM E514 and for a minimum of 72 hours.
            (a) No water visible on back of wall above flashing at the end of 24 hours.
            (b) No flow of water from flashing equal to or greater than 0.032 gallons per hour at the end of 24 hours.
            (c) No more than 25 percent of wall area above flashing visibly damp at end of test.
         2) Flexural Bond Strength: ASTM C1072; minimum 10 percent increase.
         3) Compressive Strength: ASTM C1314; maximum 5 percent decrease.

b. Use only in combination with mortar that also has integral water repellent admixture.
c. Use water repellent admixtures for masonry units and mortar by a single manufacturer.

2.02 REINFORCEMENT

A. Reinforcing Steel: Type as specified in Section 03 20 00; size as indicated on the Drawings.

2.03 BOLTS AND POST-INSTALLED ANCHORS

A. Anchor Bolts:
   1. As indicated on the Drawings.
B. Expansion Anchors:
   1. As indicated on the Drawings.
C. Adhesive Anchors:
   1. As indicated on the Drawings.
D. Screw Anchors:
   1. As indicated on the Drawings.
E. Anchor Finish:
   1. Interior Exposure: All anchors, nuts and washers for use in interior environments free of potential moisture shall be manufactured from carbon steel and zinc coated.
   2. Exterior or Exposed Use: All anchors, nuts, and washers for use in exposed or potentially wet environments, or for attached of exterior cladding materials shall be galvanized or stainless steel. Galvanized anchors, nuts and washers shall conform to ASTM A153. Stainless steel anchors shall be manufactured from 300 series stainless steel. and nuts and washers from 300 series or Type 18-8 stainless steel.

2.04 ACCESSORIES

A. Non-Metallic Expansion Joint Strips: Premolded, flexible cellular neoprene rubber filler strips complying with ASTM D1056, Grade RE 41E1, capable of compression up to 35% of width and thickness indicated.
B. Premolded Control Joint Strips: Material as indicated below, designed to fit standard sash block and maintain lateral stability in masonry wall; size and configuration as indicated.
   1. Premolded PVC Control Joint Strips. Strips shall be polyvinyl chloride complying with ASTM D 2287, Type PVC 654-4 with a durometer hardness or 90.
   2. Manufacturers:
      a. Blok-Lok Limited: www.blok-lok.com.
      b. Hohmann & Barnard, Inc: www.h-b.com.
      c. WIRE-BOND: www.wirebond.com.
      d. Substitutions: See Section 01 60 00 - Product Requirements.
C. Joint Filler: Closed cell polyvinyl chloride; oversized 50 percent to joint width; self expanding; in maximum lengths available.
   1. Manufacturers:
      a. Hohmann & Barnard, Inc: www.h-b.com.
      b. WIRE-BOND: www.wirebond.com.
      c. Substitutions: See Section 01 60 00 - Product Requirements.
D. Drainage Fabric: Polyester or polypropylene mesh bonded to a water and vapor-permeable fabric.
   1. Manufacturers:
      a. Advanced Building Products, Inc; Mortairvent: www.advancedbuildingproducts.com.
      b. Mortar Net Solutions; DriPlane: www.mortarnet.com.
      c. York Manufacturing, Inc; Weep Armor Weep Vent Protection: www.yorkmfg.com.
      d. Substitutions: See Section 01 60 00 - Product Requirements.
E. Cleaning Solution: Non-acidic, not harmful to masonry work or adjacent materials.

2.05 JOINTS

A. All joints to be tooled per Architectural Requirements.

2.06 SEALER

A. Contractor shall provide and install minimum two coats, BASF MasterProtect H107 masonry sealer, or equal, at all CMU walls. BASF MasterProtect H107 product, or equal, shall meet all state vapor requirements. Sealer shall be clear and non-gloss product.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas to receive masonry and verify following:
   1. That foundation surface is level to permit bed joint with range of 1/4 inch minimum to 3/4 inch maximum for partially grouted or 1-1/4 inch maximum for fully grouted.
   2. That edge is true to line to permit projection of masonry to less than 1/4 inch.
   3. That projecting dowels are free from loose scale, dirt, concrete, or other bond inhibiting substances and properly spaced and located.
   4. Do not begin work before unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean concrete surfaces to receive masonry. Remove laitance or other foreign material lodged in surfaces by sandblasting or other means as required. Joints between concrete and masonry shall be considered construction joints. See Concrete specifications.
B. Ensure masonry units are clean and free from dust, dirt, or other foreign materials before laying. Do not use damaged masonry units, damaged components of structure, or damaged packaged materials.
C. Establish lines, levels, and coursing. Protect from disturbances.
D. Provide temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent bracing.
E. Direct and coordinate placement of metal anchors supplied for installation under other sections.

3.03 COLD AND HOT WEATHER REQUIREMENTS

A. Cold Weather Construction to be in accordance with TMS 602.
B. Hot Weather Construction to be in accordance with TMS 602.

3.04 COURSING

A. Place masonry to lines and levels indicated to the specified tolerances.
B. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.
C. Preserve the vertical continuity of cells in concrete unit masonry per Article 3.3E of TMS 602.
D. Concrete Masonry Units:
   1. Bond: Running, unless otherwise indicated on the Drawings.
   2. Coursing: One unit and one mortar joint to equal 8 inches, unless otherwise indicated on the Drawings.
   3. Mortar Joints: Concave.

3.05 PLACING AND BONDING

A. Do not install cracked, broken or chipped masonry units.
B. Lay only dry concrete masonry units. Do not wet concrete masonry prior to laying up units unless written permission is obtained from the Engineer.
C. Lay hollow masonry units with face shell bedding on head and bed joints.
   1. Block Cap: Lay with full mortar coverage on horizontal and vertical joints.
   2. Install grout cap where and as indicated.
D. Fully bond intersections and external and internal corners.
E. Buttering corners of joints or excessive furrowing of mortar joints is not permitted.
F. Remove excess mortar and mortar smears as work progresses.
G. Remove excess mortar with water repellent admixture promptly. Do not use acids, sandblasting or high pressure cleaning methods.
H. Interlock intersections and external corners, except for units laid in stack bond.

I. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment must be made, remove mortar and replace.
J. Perform job site cutting of masonry units with proper tools to provide straight, clean, unchipped edges. Prevent broken masonry unit corners or edges. Install cut units with cut surfaces and, where possible, cut edges concealed.
K. Cut mortar joints flush where wall tile is scheduled or resilient base is scheduled.
L. Isolate masonry partitions from vertical structural framing members with a control joint as indicated.
M. Step back unfinished work for joining with new work. Do not use toothing.
N. Provide cleanouts as indicated in "grouting" below.
O. Matching Existing Masonry Work: Match coursing, bonding, color and texture of new masonry work with existing work wherever possible.

3.06 JOINTS

A. Horizontal and vertical joints at masonry units shall be 3/8 inch wide and as follows:
   1. Point joint tight in unpurged masonry below ground.
   2. All end joints shall be fully filled with mortar and joints squeezed in bed joints shall be held back approximately ½ inch from cell to provide positive bond with grout.
   3. Joints shall be struck flush at all areas to receive plaster, stucco and any other finish material other than paint.

3.07 REINFORCEMENT

A. Place reinforcement in accordance with TMS 602.
B. Reinforcing steel shall not be bent or straightened in a manner that will damage the material. Bars with kinks or bends not shown on the plans shall not be used. Heating of bars for bending is not permitted.
   1. Bars shall conform accurately to the sizes, shapes, lines and dimensions shown on drawings and with hooks and beds made as detailed. Bars shall be placed as indicated on the Drawings.
   2. At the time grout is place around it, reinforcing steel shall be clean of mill scale or other coatings that will destroy or reduce bond.
C. Foundation dowels that interfere with unit webs are permitted to be bent to a maximum of 1 inch horizontally for every 6 in of vertical height.
D. Reinforcing steel shall be secured to all foundation dowels and held in place at spacing not to exceed 192 bar diameters.

3.08 GROUTING

A. General Requirements:
   1. Refer to 04 05 16 Masonry Grouting.

3.09 CONTROL AND EXPANSION JOINTS

A. See the Drawings for type and location of expansion and/or control joints.
B. Where control joints are not indicated on the drawings the Contractor shall submit a proposed control joint layout for Architect and Engineer approval. General guidelines for control joint locations are as follows:
   1. At major changes in wall height.
   2. At changes in wall thicknesses.
   3. At corresponding control joints in foundations, floors, or roof construction.
   4. Near wall intersections.
   5. At column centerlines.
C. Maximum Spacing: Maximum control joint spacing in concrete masonry construction shall be such that the ratio of wall length to height shall not exceed 1.5 with a maximum spacing of 25 feet.
D. Form expansion joint as detailed on drawings.

3.10 BOND BEAMS

A. Bond beams shall be located where shown and detailed on the drawings, and shall be reinforced as indicated and as herein after specified.

3.11 BUILT-IN WORK

A. Miscellaneous Embedded Items: All items indicated to be embedded in masonry shall be carefully located and anchored to prevent movement during grouting operations. Solidly grout spaces around built-in items. Consult other trades in advance and make provisions for installation of their work to avoid cutting and patching. Install chases minimum of one full masonry unit length for jambs
B. As work progresses, install built-in metal door frames and glazed frames and other items to be built into the work and furnished under other sections.
C. Install built-in items plumb, level, and true to line.
D. Bed anchors of metal door and glazed frames in adjacent mortar joints. Fill frame voids solid with grout.
E. Do not build into masonry construction organic materials that are subject to deterioration.

3.12 TOLERANCES

A. Install masonry within the site tolerances found in TMS 402/602.
B. Maximum Variation from Alignment of Columns: 1/4 inch.
C. Maximum Variation from Unit to Adjacent Unit: 1/16 inch.
D. Maximum Variation from Plane of Wall: 1/4 inch in 10 ft and 1/2 inch in 20 ft or more.
E. Maximum Variation from Plumb: 1/4 inch per story non-cumulative; 1/2 inch in two stories or more.
F. Maximum Variation from Level Coursing: 1/8 inch in 3 ft and 1/4 inch in 10 ft; 1/2 inch in 30 ft.
G. Maximum Variation of Mortar Joint Thickness: Head joint, minus 1/4 inch, plus 3/8 inch.
H. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch.

3.13 CUTTING AND FITTING

A. Cut and fit for chases. Coordinate with other sections of work to provide correct size, shape, and location.
B. Obtain approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.14 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 40 00 - Quality Requirements.
B. Concrete Masonry Unit Tests: Test each variety of concrete unit masonry in accordance with ASTM C140 for compliance with requirements of this specification.
C. Mortar Tests: Test each type of mortar in accordance with ASTM C780, testing with same frequency as masonry samples.

3.15 REPAIR, POINTING, AND CLEANING

A. Remove and replace masonry units which are loose, chipped, broken, stained or otherwise damage, or if units do not match adjoining units.
B. Pointing: During the tooling of joints, enlarge any voids or holes and completely fill with mortar.
C. Dry brush masonry surface after mortar has set, at each day's work and after final pointing.
D. Remove excess mortar and mortar droppings.
E. Replace defective mortar. Match adjacent work.
F. Clean soiled surfaces with cleaning solution.
G. Use non-metallic tools in cleaning operations.
H. Upon completion of masonry installation, repair all holes. Defective joints shall be cut out and rejointed. Exposed masonry surfaces shall be cleaned free of mortar, green stain and efflorescence.

3.16 PROTECTION

A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

3.17 DEFECTIVE MASONRY

A. Materials or workmanship not conforming to appearance or strength specified, will be deemed defective and shall be removed and replaced at no cost to Owner.

B. Defective mortar or grout, as defined under Section 04 05 13 and Section 04 05 16 shall constitute defective masonry.

END OF SECTION

SECTION 04 22 00 – CONCRETE UNIT MASONRY

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Load bearing concrete unit masonry (U) with Integral Water Repellent Additive
2. Mortar with Integral Water Repellent Additive
3. Grout
4. Mortar
5. Reinforcement
6. All required accessories

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

2. NA TEK Bulletin #8-3A - Control and Removal of Efflorescence.
3. NA TEK Bulletin #10-1 - Design of Concrete Masonry for Crack Control.
4. NA TEK Bulletin #19-4 - Flashing - Concrete Masonry.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code, Building Official.
3. Job site inspections shall be done as herein specified and as listed in drawings.
    a. A special inspector shall be employed per CBC 1705.4 to inspect the placement of all units, placement of all reinforcing steel, during all grouting operations and during taking of all test specimens.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	Name of Test	Performance	Testing Standard
CMU	Compressive Strength at 28 days and Design	1900 psi, min. and comply with design criteria	ASTM C50, ASTM C90, ASTM C140 & ASTM C1093 CBC Chapter 17 & 21, including but not limited to sections;

			2101, 2102, 2103, 2104, 2105, 2105.2, 2105.3, 2105.4, 2106 & 2107
	Weight	Normal Medium Light	ASTM C90 CBC chapter 17
	Documentation	Comply	ASTM E548
	Installation	Install concrete unit masonry when temperature in area surrounding work is 40°F or above. • Maintain temperature of work above 40°F for at least 48 hours after installation. Grout shall not be placed when air temperatures fall below 20°F.	
Grout	Compressive Strength	2000 psi, min.	ASTM C 476, ASTM C 1586 & ASTM C 1019 CBC Chapter 17 & 21
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing / Inspection by others**:

Item	Name of Test	Performance Results	By Whom
CMU	Compressive Strength	1900 psi, min. Units will be tested for compressive strength on both the net and gross.	Special Inspector
Grout	Compressive Strength ASTM C 476	2000 psi, min. Three sample units will be tested during construction for each 5,000 square feet of wall area and at a minimum one for a fraction of 5,000 square feet. Test also three sample prism units prior to construction.	Special Inspector
	Linear Shrinkage ASTM C 426	Pass	Special Inspector

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Masonry
2. Mortar
3. Grout
4. Additives
5. Copies of manufacturer's product information and information and installation instructions for each item and accessory.
6. Control joint materials. Provide samples and catalogue data.
7. Water repellant additive for:

    a. Masonry
    b. Mortar

8. Texture options
9. Color Options

E. Submit samples.

1. Masonry, qty. 3 each type, color, etc
2. Mortar color samples
3. Masonry color samples

F. Site mock-up, refer to "Mock-Up" heading.

G. Certification:

1. Certificate of compliance: Submit certificate of compliance from recognized independent testing laboratory, regarding material requirements specified herein.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor /Installer / Fabricator shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to:

a. Review of specifications, materials lists, drawings, and material application requirements.
b. Masonry patterns, colors, etc.
c. Verification that all parties understand the meaning and intent of the contract documents.

2. **General Contractor** shall request meeting 5 days in advance of construction.

F. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and certify all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

G. Miscellaneous Criteria:

1. Measurements: Use suitably calibrated devices to accurately measure materials.

a. Shovel measurements will not be permitted.
b. One 94-pound sack of cement will be considered to be one cu. ft. if full sack batches are made. Allow for bulking of sand and aggregate.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Comply with Division 1 product delivery, storage and handling requirements.

B. Packing and Shipping

1. Transport and handle masonry units in such a manner as to prevent chipping and breakage.
2. Mortar, sand & cement admixtures shall be delivered to the job site in manufacturer's original containers with seals unbroken and labeled with manufacturer's batch number.

C. Storage and Protection

1. Store masonry units off the ground in a dry location, covered and protected from absorbing moisture
2. Locate storage piles, pallets, stacks or bins to avoid or protect material from heavy or unnecessary traffic.
3. Store packaged materials in original, unopened containers in compliance with manufacturer's printed instructions.
4. Do not store water repellent in areas where temperature will fall below 20° F.

D. Scaffolding, runways and ladders required for work under this Section shall be provided by masonry contractor, and shall be heavy trades type substantially built and in compliance with State labor laws, safety codes and other regulatory agencies as applicable to this project.

E. Package Materials to be delivered and stored in original packages until ready for use. Store cement, admixtures and aggregates in a manner, which prevents deterioration or contamination.

F. Do not use materials, which is caked, lumpy, partially set or otherwise deteriorated.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **five (5)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner.**

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Waterproofing
2. Wall plumbing and electrical
3. Roof framing / construction
4. Footings and foundations
5. Veneer finishes

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 02 41 13 – Selective Site Demolition & Protection
3. Section 03 30 00 – Cast in Place Concrete
4. Section 03 20 00 – Concrete Reinforcing
5. Section 05 12 00 – Structural Steel Framing
6. Section 07 19 00 –Water Repellent Coatings
7. Section 07 92 00 – Sealants and Caulking

C. Related Documents include, but are not limited to the following:

1. Refer to Division 1 for Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

1.13 TESTING AGENT

A. Refer to Division 1 for testing laboratory service requirements.

1.14 GENERAL SYSTEM DESCRIPTION

A. Installation of U, reinforcing, Mortar and grout walls

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings.

1. Masonry
   a. Basalite (www.basalite.com)
   b. ORCO Block Company (www.orco.com)
2. Water Repellent Admixture:
   a. ACM Chemistries, Inc., www.acmchem.com
   b. BASF, www.master-builders-solutions.basf.us
3. Lime Substitute
   a. GIBCO www.gibco-usa.com
4. Masonry Reinforcement and Anchors:
   a. Hohmann & Barnard, www.h-b.com
5. Metal Lath:
   a. Amico, http://www.amico-lath.com/lath/self_furring_metal_lath.htm
6. Reviewed Equivalent by **Architect**.
   a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
   b. Refer to Division 1 for substitution, deviation and/or submittal procedures.

c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Concrete Masonry Units:

1. General:

a. Weight: Normal, Light, Medium [Specifier, select and coordinate with Structural Engineer]

b. Type: Load bearing,

1) CBC Section 2103

c. Maximum lineal shrinkage: .065% from saturated to oven dry condition.
d. Manufacturer: Basalite
e. Moisture controlled units. Yes

2. Schedule:

a. Size:

1) Standard Unit:

a) 8" x 8" x 16" nominal (w x h x length)

2) Solid Veneer Unit:

a) 2" x 8" x 16" nominal (w x h x length)

b. Shapes:

1) Provide required shapes such as corner, end units, radius, bases, bond beams, lintels, etc.
2) Provide units open one or both ends, as required. Use open end units at cells containing vertical reinforcement wherever possible.

c. Block Product Finish: Provide the following types of concrete masonry units

1) Standard Unit: Ground Face
2) Solid Veneer: Ground Face

d. Color: Block colors shall be as follows or selected from manufacturer's standard colors.

1) 490 (Basalite)

B. Mortar and Grout:

1. General:
   a. Type: S
      1) 28-day compressive strength of not less than 1800 psi.
      2) Conform to CBC Section 2103.8, & ASTM C270
   b. Cement:
      1) Cement shall be Portland cement conforming to ASTM C150, Type I or II
   c. Aggregates:
      1) Aggregates for mortar conform to: ASTM C144
      2) Aggregates for grout conform to: ASTM C404
   d. Lime substitute:
      1) Mfgr: Gibco Industries
      2) Product: MRF
      3) Compliance: ICC Report No. 3213, ASTM C207, Type S, ANSI A 42.2 and ANSI A42.3 Type C
   e. Integral Water Repellent admixture:
      1) Mfgr: BASF
      2) Product: MasterPel 240MA
   f. Water: Clean and free from deleterious substances.
   g. Sand: Comply with the "Standard Specifications for Aggregate for Masonry Mortar", ASTM C144, except provide natural sand graded from coarse to fine within the following limits:
2. Pea Gravel: Graded with 100% passing the 3/8" sieve and not more than 5% passing the No. 8 Sieve.

C. Mortar (In joints)
1. Mix Design:
   a. Component: — Proportions of parts
      1) Portland Cement: 1 bag
      2) Lime Substitute: 3 ounces
      3) Sand (Aggregate): 3 – 3-1/2 cubic feet
         a) ASTM C144
         b) Natural or manufactured sand
         c) Fresh water washed and free of deleterious materials.
         d) Locally available sand.
         e) Do not use frozen aggregate.
      4) Water: Per mfgr. recommendations
         a) Clean potable water

5) Admixtures: Per mfgr. recommendations

2. General:
   a. Mortar shall be Type S having a 28 day compressive strength of not less than 1800 psi.
      1) Conform to CBC Section 2103.8, & ASTM C270
   b. Mortar shall be made with admixtures that are proportioned, added and mixed in strict accordance with manufacturer's directions.
3. Color: To be selected by **Architect**.

D. Grout – cell fill
1. Grout shall have a 28-day compressive strength as herein listed. Proportion by volume, and with sufficient water to produce consistency for pouring without segregation so that grout will flow into masonry joints.
   a. Grout shall conform to CBC Section 2103.12 & Table 2103.12 & ASTM C 476.
   b. Sufficient water shall be added to make a workable mix that will flow into joints of the masonry without separation or segregation. When grout is to be placed in masonry units with typical rates of absorption the slump of the grout should be approximately 8 to 10 inches depending on temperature and humidity conditions.
2. Fine Grout: (1) one part Portland cement, to which may be added not more than 1/10 part lime putty, and 2-1/4 to 3 times the sum of the volumes of the cementitious materials with sand.
   a. Fine grout shall be used for all grout spaces less than 3" wide.
3. Coarse Grout: (1) one part Portland cement, to which may be added not more than 1/10 part lime putty, 2-1/4 to 3 times the sum of the volumes of the cementitious materials with sand 1-2 times the sum of the volumes of the cementitious materials with 3/8" max. diameter pea gravel.
   a. Coarse grout shall be used in grout spaces 3" wide or more
4. Add "Sika Grout Aid" admixture to grout at the rate of 1 pound per 100 pounds cementitious material.

2.3 OTHER MATERIALS

A. Reinforcing Bars, Tie Wire & Spacers:
1. Refer to Section 03 21 00 – Concrete Reinforcing

B. Anchor Bolts: All anchor bolts cast in masonry shall be headed bolts with cut threads conforming to ASTM A307 or ASTM A36 or ASTM A572.50 as indicated on drawings.

C. Expansion Anchors:
1. General:
   a. All expansion bolts installed in masonry shall be Kwikbolt 3 sleeve expansion bolts as manufactured by Hilti.

1) See Structural Drawings for;

a) Installation requirements and tension testing requirements as applicable.
b) Special head requirements as needed.

2) Substitution of other brands or anchors shall proceed only after written approval from the Structural Engineer and the Building Official has been obtained.

D. CMU veneer wall ties:

1. Mfgr: Hohmann & Barnard
2. Type:

a. Adjustable Veneer Anchor

1) Product: HB-213

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.
3. That foundation surface is level to permit bed joint with range of 1/4 to 3/4 inch.
4. That edge is true to line to permit projection of masonry to less than 1/4-inch.
5. That projecting dowels are free from loose scale, dirt, concrete, or other bond-inhibiting substances and properly located.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

C. Cooperate with other trades for embedded items, furnished under those Sections and herein installed.

D. Supervise setting of dowels for masonry furnished and installed under Section 03 20 00 –Concrete Reinforcing.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Clean concrete surfaces to receive masonry.

1. Remove latence or other foreign material lodged in surfaces by sandblasting or other means as required.

C. Ensure masonry units are clean and free from dust, dirt, or other foreign materials before laying.

D. Establish lines, levels, and coursing and protect from disturbances.

E. Provide temporary bracing during erection of masonry work. Maintain in place until masonry has set to provide permanent bracing.

3.4 MOCK-UP

A. Erect at location approved by **Architect**.

1. Mock-up shall be part of final construction once approved by **Architect**.
2. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings

B. Mock-up

1. One panel shall be constructed to simulate the condition of concrete masonry walls. The panel shall be 8 feet long by 4 feet high and shall show the proposed color, texture, bond, pattern, mortar joints and workmanship for concrete masonry. Mock-up panel shall be constructed on "pallets" so it may be relocated as directed.

2. Upon approval by the **Architect**, the sample panels shall become the standard of comparison for concrete masonry construction. After concrete masonry construction has been completed, remove sample panels and dispose of debris off the site.

3.5 INSTALLATION

A. Mixing Mortar and Grout:

1. Measure ingredients of mortar and grout according to specified portions for batch and mix in mechanically-operated batch mixer. Use of continuous mortar mixer will not be permitted. Mixer shall intermingle all ingredients by cutting, slicing and rubbing of mass within itself. Drum must be completely emptied before succeeding batch of materials is placed therein.
2. Grout shall be stirred or worked at frequent intervals to prevent separation of materials. High-lift grout must be plant-mixed.
3. Consistency of mortar shall be adjusted to satisfaction of mason, but only as much water shall be added as is compatible with convenience in using mortar. Mortar and grout shall not be used after cement has begun its final set, and in no case shall it be used more than 1 hour after original mixing or retemper mortar.
4. No partial sack batches are permitted.

B. Coursing:

1. Erect masonry in accordance with CBC Chapter 21 including, but not limited to Section 2104.1.2.

2. Place masonry to lines and levels indicated to the following tolerances:

a. Variation from Unit to Adjacent Unit: 1/32-inch max.
b. Variation from Plane of Wall: 1/4-inch in 10 feet.
c. Variation from Plumb: 1/4-inch.

d. Variation from Level Coursing: 1/8-inch in 3 feet; 1/4-inch in 10 feet; ½-" max.
e. Variation of Joint Thickness: 1/8-inch in 3 feet.

3. Bond: Unless noted otherwise in Drawings, lay concrete masonry units in stacked bond with vertical joints aligned.

4. Maintain masonry courses to uniform width.

   a. Make vertical and horizontal joints equal and of uniform thickness.

5. Preserve the vertical continuity of cells in concrete unit masonry.

   a. The minimum clear horizontal dimensions of vertical cores shall be 3 x 3 inches for 8-inch wide block.

C. Placing and Bonding:

1. Do not install cracked, broken or chipped masonry units.
2. Lay only dry concrete masonry units.
3. Lay masonry in full bed of mortar, properly jointed with other work. Buttering corners of joints, and deep or excessive furrowing of mortar joints are not permitted.

   a. Block Cap: Lay with full mortar coverage on horizontal and vertical joints.
   b. Install grout cap where required and as indicated.

4. Fully bond intersections and external and internal corners.
5. Do not shift or tap masonry units after mortar has taken initial set. Where adjustment must be made, remove mortar and replace.
6. Remove excess mortar.
7. Perform job-site cutting with proper tools to provide straight un-chipped edges. Take care to prevent breaking masonry unit corners or edges.
8. Step back unfinished work for joining with new work.

   a. Do not use toothing.

9. Provide cleanouts as indicated in "grouting" below.

D. Joints:

1. Exposed vertical and horizontal joints shall be solidly filled as the work progresses. After interior and exterior joints are thumb print firm, they shall be tooled to a tight, smooth surface that is well bonded to unit at edges with an approved tool.

   a. Tool joints behind room base, switches, and outlet plates to produce a smooth dense joint flush with the face of adjacent masonry units, where occurring on the job.
   b. Cut joints flush on concealed interior surfaces and surfaces to be plastered.

2. Horizontal and vertical joints at masonry units shall be 3/8-inch wide and as follows: (½" for slump block)

   a. Point joint tight in un-purged masonry below ground.
   b. All end joints shall be fully filled with mortar and joints squeezed in bed joints shall be held back approximately 1/2-inch from cell to provide positive bond with grout.

c. Joints shall be struck flush at all areas to receive plaster finish.

3. Joints shall be 3/8″ wide.
4. Joint Type:

   a. Concave

5. Control joints:

   a. Shall be continuous through the mortar and masonry, at locations indicated on the drawings and at a maximum of 24′-0″.

      1) Linear Shrinkage testing shall be done, refer to PERFORMANCE, TESTING AND INSPECTION″ heading as herein specified.

3.6 MASONRY REINFORCEMENT

A. Place reinforcement in accordance with ACI 315, to a tolerance of +/- ½-inch from specified location.

B. Reinforcing steel shall not be bent or straightened in a manner that will injure the material. Bars with kinks or bends not shown on the plans shall not be used. Heating of bars for bending will not be permitted.

1. Bars shall conform accurately to the sizes, shapes, lines and dimensions shown on drawings and with hooks and beds made as detailed. Bars shall be placed as indicated on the drawings and centered on grout space.
2. At the time grout is place around it, reinforcing steel shall be clean of mill scale or other coatings that will destroy or reduce bond.
3. All vertical reinforcing steel shall be installed in one piece, full height of wall, and braced throughout its height in a manner that will retain the steel in proper position and provide the proper clearance.

C. Reinforcing steel shall be secured to all foundation dowels and held in place at spacing not to exceed 192 bar diameters.

3.7 EMBEDMENT AND ANCHORAGE

A. Coordinate masonry work with work of other trades. Items furnished by others and embedded under this Section include sleeves for pipes through walls, bolts, toggles, anchors, metal brackets, and frames.

B. Bolts embedded in masonry shall be grouted in place with not less than 1 inch of grout between bolt and masonry. Accurately set bolts with templates.

3.8 GROUTING

A. General Requirements:

1. All cells shall be grouted solid.
2. Use low lift or high lift grouting at **General Contractor's** option.
3. Use grout pump, hopper or bucket to place grout.
4. Place grout in final position within 1-1/2 hours after introduction of mixing water.

5. Place grout and rod with a 3/4-inch flexible cable vibrator sufficiently to cause it to flow into all voids between the cells and around the reinforcing steel. Slushing with mortar will not be permitted.
6. Stop grout approximately 1½ inches below top of last course; except at top course bring grout to top of wall.

B. Low Lift Grouting:

1. Do not lay units higher than 48 inches before grouting.
2. If mortar has been allowed to set prior to grouting, remove all fins protruding more than ½-inch into grout space.
3. Conform to requirements of CBC Chapter 21, Section 2104.1.2.7
4. Consolidate each lift twice. Once while placing grout and once more after initial absorption of water but before set.

C. High Lift Grouting:

1. Conform to requirements of CBC Chapter 21, Section 2104.1.2.
2. Provide clean out holes at the bottom of every pour in cells containing vertical reinforcement. Construct clean out courses with open-bottom bond beam units inverted to permit cleaning of all cells by flushing. Cleanouts shall be not less than 3x4-inch openings cut from one face shell. Do not plug clean out holes until masonry work, reinforcement, and final cleaning of the grout spaces have been completed and inspected.
3. Clean mortar droppings from the bottom of the grout space and from reinforcing steel. Remove mortar fins protruding more than ½-inch into the grout space by dislodging the projections with a rod or stick as the work progresses or by washing the grout space at least twice a day during erection using a high pressure stream of water.
4. Do not place grout in hollow unit masonry until mortar joints have set for at least 72 hours and clean out plugs have cured 48 hours.
5. Place grout in lifts not to exceed 4 feet in height, with a waiting period between lifts, dependent on weather and absorption rate of the masonry, in order to place the succeeding lift after the preceding lift becomes plastic but prior to initial set. The first lift shall be consolidated using mechanical vibrators. After the required waiting period, place the second lift and consolidate with the vibrator, reconsolidating the lift below to a depth of 12 to 18 inches. Repeat the waiting, placing and consolidating process until the top of the grout pour is reached. Reconsolidate the top lift after the required waiting period. The high-lift grouting of any section of wall between lateral flow barriers shall be completed to the top of a pour in one working day unless a new series of clean out holes is established and the resulting horizontal construction joint cleaned.

3.9 CONTROL JOINTS

A. See drawings for type and location of joints.

1. 24’-0” o.c. unless approved otherwise by **Architect** and **Structural Engineer**.

3.10 BOND BEAMS

A. Bond beams shall be located where shown and detailed on the drawings, and shall be reinforced as indicated and as herein after specified.

3.11 BUILT-IN WORK

A. Miscellaneous Embedded Items: All items indicated to be embedded in masonry shall be carefully located and anchored to prevent movement during grouting operations. Avoid cutting and patching.

1. Install all anchor bolts and anchors furnished under other sections for wood nailers, ledgers, etc.

3.12 CUTTING AND FITTING

A. Obtain approval prior to cutting or fitting any area not indicated or where appearance or strength of masonry work may be impaired.

3.13 CURING

A. Top of grout pour should be kept damp to prevent too rapid drying during hot or drying weather and drying winds.

B. Give special attention to proper curing of mortar joints.

3.14 REPAIR, POINTING AND CLEANING

A. Remove and replace masonry units which are loose, chipped, broken, stained or otherwise damage, or if units do not match adjoining units.

B. Pointing: During the tooling of joints, enlarge any voids or holes and completely fill with mortar.

C. Dry brush masonry surface after mortar has set, at each day's work and after final pointing.

D. Leave work and surrounding surface clean and free of mortar spots and droppings.

E. Cleaning:

1. Upon completion of masonry installation, repair all holes.
2. Defective joints shall be cut out and rejointed.
3. Exposed masonry surfaces shall be cleaned free of mortar, green stain and efflorescence.

a. Refer to Section – 04 01 20 – Masonry, Stone and Tile Cleaning.

3.15 FINISHING

A. Exposed Surface:

1. Exterior: **General Contractor** shall provide and install clear water repellent coating. Refer to Section 07 19 00.

3.16 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Monitor work to insure installation and assembly are in accordance with applicable standards.

D. Coordinate with attachment and installation of CMU veneer, refer to this section for CMU veneer work, drawings and structural details.

3.17 TESTING

A. Refer to Division 1 for testing laboratory service requirements.

3.18 DEFECTIVE MASONRY, GROUT AND MORTAR

A. Materials or workmanship not conforming to appearance or strength specified, will be deemed defective and shall be removed and replaced at no cost to **Owner**.

B. Defective mortar and grout shall be determined by engineer when mortar and grout are not in compliance with design and/or installation requirements as herein specified.

3.19 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 04 22 00

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Structural steel framing members.
B. Structural steel support members, plates, and bracing angles.
C. Bolts, washers, and other steel accessories.
D. Base plates, shear stud connectors and expansion joint plates.
E. Grouting under base plates.
F. Prime coat painting and touch up.
G. Templates for cast-in-place anchor bolts.

1.03 RELATED REQUIREMENTS

A. Section 05 50 00 - Metal Fabrications.
B. Division 07 - Applied Fire Protection: Fireproof protection to framing and metal deck systems.
C. Division 09 - “Paintings and Coatings” for surface-preparation and priming requirements.

1.04 DEFINITIONS

A. Structural Steel: Elements of structural-steel frame, as classified by American Institute of Steel Construction (AISC) 303, "Code of Standard Practice for Steel Buildings and Bridges."
B. Heavy Sections: Rolled and built-up sections as follows and subjected to special notch toughness, fabrication, welding and inspection requirements as defined in this specification:
   1. Shapes included in ASTM A6 with flanges thicker than 2 inches.
   2. Welded built-up members with plates thicker than 2 inches.
   3. Column base plates thicker than 2 inches.
   4. All ASTM A6 shapes with flange thickness greater than 1-1/2 inches that are part of the Seismic Force Resisting System.
   5. Welded built-up members with plates thicker than 1-1/2 inches if part of the Seismic ForceResisting System.
C. Seismic Force Resisting System (SFRS): These elements are those which resist seismic loads and include braced frames, moment frames and collector elements and are indicated on the drawings.
D. Protected Zone: Areas of critical members in the Seismic Force Resisting System that are expected to behave inelastically during a seismic event. Refer to the Structural Drawings for designation of the Protected Zones. Within the Protected Zones, the following shall apply:
   1. Discontinuities created by fabrication or erection operations such as tack welds, erection aids, air-arc gouging and thermal cutting shall be repaired as required by the Structural Engineer.
   2. No welded shear studs and decking attachments (excluding decking arc spot welds) shall be placed on beam flanges.
   3. No welded, bolted, screwed, or shot-in attachments for edge angles, exterior facades, partitions, duct work, piping and other construction.
E. Demand Critical Welds (DCW): Welds in the Seismic Force Resisting System which invoke special welding and inspection requirements in this specification. Welds shall be considered DCW on this project as defined for each SFRS indicated in AISC 341 and as otherwise indicated on the Drawings as DCW.

1.05 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed Governing Building Code or material standard. If no specific edition is adopted, use the latest edition.
   1. AISC 360 - Specification for Structural Steel Buildings
   2. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges.
   3. AISC 341 - Seismic Provisions for Structural Steel Buildings.

4. AISC 358 - Prequalified Connections for Special and Intermediate Steel Moment Frames for Seismic Applications.
5. ASTM A36 - Standard Specification for Carbon Structural Steel.
6. ASTM A53 - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
7. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
8. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
9. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60,000 PSI Tensile Strength.
10. ASTM A449 - Standard Specification for Hex Cap Screws, Bolts and Studs, Steel, Heat Treated, 120/105/90 ksi Minimum Tensile Strength, General Use.
11. ASTM A500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
12. ASTM A501 - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.
13. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nut.
14. ASTM A572 - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.
15. ASTM A913 - Standard Specification for High-Strength Low-Alloy Steel Shapes of Structural Quality, Produced by Quenching and Self-Tempering Process
16. ASTM A992 - Standard Specification for Structural Steel Shapes.
17. ASTM A1085 - Standard Specification for Cold-Formed Welded Carbon Steel Hollow Structural Sections (HSS)
18. ASTM C1107 - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).
19. ASTM E94 - Standard Guide for Radiographic Examination Using Industrial Radiographic Film.
20. ASTM E164 - Standard Practice for Contact Ultrasonic Testing of Weldments.
21. ASTM E165 - Standard Practice for Liquid Penetrant Testing for General Industry.
22. ASTM E709 - Standard Guide for Magnetic Particle Testing.
23. ASTM F436 - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions.
24. ASTM F959 - Standard Specification for Compressible-Washer-Type Direct Tension Indicators for Use with Structural Fasteners.
25. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength.
26. AWS D1.1 - Structural Welding Code.
27. AWS D1.8 - Structural Welding Code – Seismic Supplement.
28. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections.
29. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.
30. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).
31. SSPC-SP 1 - Solvent Cleaning.
32. SSPC-SP 2 - Hand Tool Cleaning.
33. SSPC-SP 3 - Power Tool Cleaning.
34. SSPC-SP 6 - Commercial Blast Cleaning.
35. UL (FRD) - Fire Resistance Directory Current Edition.

1.06 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
B. Shop Drawings:
   1. Direct copies (including electronic versions) of SEOR plans and details are not allowed. Using SEOR plans as a background for the development of the submittal plans is acceptable.
   2. Submit shop drawings to Architect for review and obtain Architect's acceptance prior to start of fabrication. Where shop drawings are resubmitted, the Contractor shall cloud and identify all changes made due to additions, deletions, and corrections to the shop drawing. Shop drawings resubmitted without each change being clouded and identified will be returned for resubmission.

3. Shop drawings shall include complete details and schedules for fabrication and assembly of structural steel members, procedures, and diagrams.
4. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed by others.
5. Include layout, member size, and weights, materials used, and beam marks as well as orientation and relation of members to appropriate grid lines and setting elevations for column bases. Reference shop drawings to specific location and detail number on the Structural Drawings.
6. Include details of cuts, connections, splices, camber, holes, openings, doubler plates, stiffeners and other pertinent data, including bolt hole sizes, connection materials, and welded joint designations.
7. Include embedment drawings.
8. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
9. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pre-tensioned and slip-critical high-strength bolted connections.
10. Indicate surface preparation and finishes.
11. Submit plans of all levels locating the edge of slab at perimeter and at interior openings at locations where bent plate closure occurs.
12. Identify members and connections of the Seismic-Force-Resisting System (SFRS).
13. Indicate locations and dimensions of protected zones.
14. Identify welds that are part of the SFRS.
15. Identify Demand Critical Welds.
16. Shop drawings shall include connection details drawn to scale for members of the Seismic Force-Resisting System.
17. Dimensions required to locate structural steel for manufactured items such as mechanical equipment, electrical equipment, dock levelers, etc., shall be coordinated and provided by the General Contractor. General Contractor shall also coordinate and provide dimensions to locate structural steel for window washing supports such as davits, tie-backs, etc.
18. Connections required but not specifically referenced.

C. Erection Procedures:
   1. Submit procedures, methods, sequences of erection, temporary shoring and guying, and equipment proposed for erecting structural steel. Erection procedures are submitted for record only and therefore will not be returned to the Contractor.

D. Bearing Assemblies:
   1. Submit shop drawings and technical specifications for the slide bearing assemblies used in the project.

E. Jacking and Tensioning Procedures:
   1. Submit procedures, methods, sequences of jacking and tensioning, instrumentation and monitoring devices if implemented within the project.

F. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1, "Structural Welding Code - Steel," AWS D1.8, “Structural Welding Code – Seismic Supplement,” and AISC 341 for each welded joint whether prequalified or qualified by testing, including items listed below. All submitted Procedures shall be reviewed by the Testing Agency prior to use on the project. The Procedures will be submitted to the Engineer for review after review by the testing agency is complete.
   1. The WPSs and PQRs shall include all essential variables and parameters required by AWS D1.1 and AWS D1.8.
   2. Where backgouging is required provide back gouging criteria (e.g. smoothness, grinding, gouge shape, inspection by the welder, etc.) per AISC 341, AWS D1.1, and AWS D1.8.
   3. Explicitly note which WPSs will be used for welding of members and connections of the SFRS and Demand Critical Welds.
   4. For multi-pass welds define sequence and layering of passes.

5. Welding Procedure Qualification Record (WPQR) Tests: For WPSs that are not pre-qualified per AWS D1.1, submit the supporting WPQR tests results conducted in accordance with AWS D1.1 along with the corresponding WPS.
6. When the required effective throat thickness of flare groove welds is larger than allowed by Table J2.2 of AISC “Steel Construction Manual”, submit data establishing by qualification the consistent production of such larger effective throat thickness. Qualification of effective throat thickness shall be as required by the AISC specification.
7. For non-prequalified, complete butt or grove welds of the SFRS, include CVN weld test records.
8. In addition to the WPS submit fabrication and erection procedures where needed to control shrinkage, fabrication tolerances, or to insure proper inspections.
9. Include CVN tests, requirements and procedures in compliance with AWS D1.1, AWS D1.8 and the requirements of the contract documents. Test temperature shall be specified herein. Where specified CVN properties in the contract documents exceed the minimum requirements in AWS D1.1 / AWS D1.8, CVN tests shall be performed to the properties in the contract documents.
10. All welds for the SFRS are according to AWS D1.8 as a minimum.
11. WPS and WPQR's shall include specific reference to the manufacturers make and model of weld material. Provide manufacturer's data sheet for all weld material indicating recommended welding parameters and variables.

G. Weld Shrinkage and Distortion Procedures: Submit weld shrinkage and distortion procedures for all welded connections where distortion due to weld shrinkage may cause damage to the steel material. The welding sequence and procedures are to minimize the effect of weld shrinkage, residual stresses, and to maintain erection tolerances. These procedures shall be reviewed by Testing Agency, and then used by Testing Agency to verify conformance. As a minimum, procedures shall be submitted for the following connections:
   1. Welding of continuity plates and doubler plates into the WF columns.
   2. Field welding beam-to-column connection (include beam flange welds, rib welds, connection plate bolting and weld).
   3. Welding columns to base plates.

H. Fastener Installation Procedures: Submit written procedures for the pre-installation testing, installation snugging, pre-tensioning, and post-installation inspection of fasteners. The procedures shall meet all requirements of the Research Council on Structural Connections (RCSC) "Specification for Structural Joints Using ASTM A325 or A490 Bolts" and the Contract Documents. Provide installation procedure and inspection for direct tension indicator washers detailed in supplemental specifications provided by the manufacturer for approval.

I. Manufacturer's Mill Certificate: Certify that products meet or exceed specified requirements.

J. Mill test reports for structural steel, including chemical and physical properties, regardless of thickness or use. Reports shall comply with ASTM A6 and be submitted to the Owner’s Quality Assurance Agency.
   1. Submit a mill report for each heat of steel used, and certified fastener reports for all fasteners, including nuts, washers and direct tension indicators prior to the start of fabrication. For unsatisfactory mill test report, retest steel.
   2. Include Charpy test results for heavy sections and for materials where Charpy values are specified. Testing required per AISC 360 section A3.1c and AISC 341 section A3.3 and as specified herein.
   3. Mill test reports shall include ladle analysis and tensile elongation.
   4. Mill reports shall be traceable to individual pieces of steel used.
   5. In addition to other requirements mill reports shall address the following elements: copper, columbium, chromium, nickel, molybdenum, silicone, and vanadium.
   6. Provide mill reports for all welding consumables used on this project.

K. Fabricator Test Reports: Comply with ASTM A1011.

L. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1 and dated no more than 12 months before start of scheduled welding work. Submit to welding special inspector for approval. Submit final copies to Architect for review.

M. General Contractor Verification of Compliance for Materials: General Contractor’s review and acceptance shall be included with each submittal stating that the Contractor has reviewed the submitted manufacturer’s test reports and certifications, and that the materials being furnished for

the project are in conformance with the applicable standards and project documents. The review shall be submitted along with the manufacturer's test reports and certifications for structural steel, fasteners, welding filler metals, and shear studs.

N. Product Test Reports and Certifications: Submit manufacturer's test reports and certifications as listed below. Test Reports and Certifications are submitted for record only and therefore will not be returned to the Contractor. A copy of the test reports and certifications shall be sent to the owners Quality Assurance Agency. The Contractor Certificate of Compliance letter shall accompany the Manufacturer's Certifications.
   1. Bolts, nuts, and washers including mechanical properties and chemical analysis. Certifications for high strength bolts shall conform to certification requirements contained in ASTM A325, A490, F1852, F2280.
   2. Direct-tension indicators.
   3. Tension-control, high-strength bolt-nut-washer assemblies.
   4. Shear stud connectors. Shear studs, as supplied, shall meet the requirements of AWS D1.1, Sections 7.2 and 7.3.
   5. Shop primers.
   6. Nonshrink grout.
   7. Welding electrodes, fluxes and shielded gas products. Certifications shall satisfy the applicable AWS A5 and project requirements.
   8. Spray-on fireproofing. Submit certificate issued by paint manufacturer ensuring compatibility between the primer and the spray-on fireproofing.
O. Submit fabricators identification mark system to Testing Agency prior to fabrication.
P. Fabricator's Qualification Statement.
Q. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
R. As-Built Drawings: At the end of the work included in this Section submit a complete set of reproducible drawings incorporating all changes, additions and deletions to the Construction Drawings due to revisions, change orders, field conditions, or any other reason.

1.07 QUALITY ASSURANCE

A. Comply with the referenced ASTM standards for materials.
B. Verification of accuracy:
   1. Engage and pay for a registered Professional Engineer or licensed Land Surveyor to check the alignment, plumbness, elevation, and overall accuracy of the erected framing at appropriate stages during construction and at completion of erection. Prior to erection, a survey shall be made of the as-built locations of all anchor rods and other embedded items associated with the attachment of structural steel. The party providing the survey shall submit written verification that the entire installation is in accordance with the contract documents and meets the allowable erection tolerances as set forth in the AISC "Code of Standard Practice for Steel Buildings and Bridges".
   2. Columns shall be verified at each lift. Column shim details and procedures shall be submitted for review.
C. Tests and Inspections: Provide special inspections and testing as described in the "Statement of Structural Special Inspections and Testing" within the structural drawings and as required by this section.
   1. Unless waived in writing by the Architect and the Authority Having Jurisdiction, all materials, work, methods and equipment shall be subject to inspection at the mill, fabricating plant and at the building site. Material or workmanship not complying fully with the Contract Documents will not be accepted. The Contractor shall give the Testing Laboratory reasonable notice when ready for inspection and shall supply samples and test pieces and all facilities for inspection without extra charge.
D. Testing Agency: Shop and field testing and inspection of steelwork specified in this document or requested by the Owner will be performed by an independent agency engaged by the Owner.
   1. The Testing Agency shall be furnished with the following:
      a. One complete set of fabrication and erection drawings.
      b. Material bills, cutting lists, order sheets and mill test reports.

c. Information regarding time, place of rolling and shipment of materials to shop.
d. If requested, representative sample pieces for testing.
e. Full and ample means and assistance for testing materials.
f. Access and facilities, including scaffolding, temporary work platforms, etc., for testing and inspection at all places where materials or components are stored, fabricated or erected in the mill, shop or field.
g. Complete set of welding procedures.
h. Welder qualifications.
i. AISC fabricator certification documents, QA/QC manual and most recent AISC audit, unless waived by the SEOR.
j. Reports for all Contractor tests and inspections.

2. In addition to the work specified elsewhere in the Contract Documents, the Testing Agency shall review the following for compliance with project specifications:
   a. Fastener Installation Procedures.
   b. WPSs and WPQRs.
   c. Manufacturer's Test Reports and Certifications.
   d. Welder qualification.

E. Comply with applicable provisions of the governing building code, reference standards, specifications, and documents, except where more stringent requirements are shown or specified.
F. Structural steel members designated as architecturally-exposed structural steel (AESS) to also comply with Section 05 12 13.
G. All work shall be performed by qualified operators experienced in their field of work and as otherwise required by these specifications.
H. Fabricator Qualifications: Unless waived by the SEOR, a qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD, unless waived by SEOR.
I. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category ACSE.
J. Shop-Painting Applicators: A qualified applicator with a minimum of 12 months prior experience working with the fabricator.
K. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1 for each process, position and joint configuration. Each operator shall have been qualified as prescribed by AWS and shall be approved by the Testing Agency. Qualification performed more than six months prior to the start of the welding by the welder is acceptable, provided written documentation is submitted showing that the welder has continued to use the applicable welding process on an ongoing basis since the test was conducted, with no lapse in service exceeding six months.
   1. Welder Certificates shall be submitted to Testing Agency prior to welding.
   2. Welders shall be checked by welding inspector. Those not doing satisfactory work may be removed, and may be required to pass qualification tests again. All qualification testing shall be at the Contractor's expense.
   3. Require welders to retake the qualification test if, as determined by the Architect or Testing Agency, there is a reasonable doubt as to the proficiency of the welder. If the welder does not requalify, he shall not perform any welding on the project.
   4. In addition to AWS D1.1 requirements on welder Qualification, qualify welders making welds with restricted access (such as welding the bottom flanges of girders to column flanges through cope or access holes in the girder webs) by using a mock-up assembly identical to the actual conditions of producing weldments in the field, using the approved WPS.
   5. Welder qualification shall include passing the bend test.
   6. Welders and welding operators performing work on Demand Critical Welds, beam bottom flange to column welds, or welds that must be made by welding through a beam access hole shall pass the supplemental welder qualification testing, as required by AWS D1.8.
      a. Supplemental Qualification test shall be in accordance with AWS D1.8. The qualification test specimens shall be made with the same electrodes, processes and welding procedures that will be used on this project and also using the highest weld deposition rate allowed by the WPS.

b. Documentation showing that a welder has passed a similar qualification test within the last 36 months will be acceptable if in the opinion of the Testing Agency the test meets the criteria.
c. Testing Agency will perform and/or witness the tests on the qualification test specimen.
d. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

L. Contractor's Quality Control Plan: Quality Control includes the functions performed by the Contractor to ensure that the material and workmanship of structural steel construction meets the project specifications and applicable standards. The Contractor shall submit a Quality Control Plan that addresses all inspection issues, including fabrication/erection testing and inspection per AWS D1.1, AWS D1.8 and AISC 341 Chapter J. The verification testing and inspection carried out by the Testing Agency does not relieve the contractor of the responsibility for conducting their own quality control/inspection program to ensure the requirements of the Contract Documents have been met. The Contractor's Quality Control Plan will be reviewed by the Testing Agency.

M. Protected Zone: The Contractor's Quality Control Plan shall include procedures that will be followed to ensure the Protected Zone is clearly identified on the required elements of the Seismic Load Resisting System and all necessary subcontractors are made aware of the requirements of this section.

N. Quality Control Inspector Qualifications: Along with Quality Control Plan, Contractor shall submit written qualifications for all inspectors to be assigned Quality Control functions for structural steel work, including general inspection, bolting inspection, welding inspection, and non-destructive testing. Qualifications for welding inspectors shall show evidence of ability to monitor all WPS variables, check weld sizes, and visually detect weld defects.

O. Prefabrication and Preinstallation Conference: Prior to performing fabrication or erection work, there shall be a pre-fabrication and pre-erection meeting to review welding procedures, bolting procedures, and inspection requirements for all welding and bolting operations. The meeting shall include the following individuals: Owner's Representative, Testing Agency, Special Inspector, Steel Fabricator and Erector personnel supervising the shop, field and Quality Control work.

P. Paint:
1. Single Source Responsibility: Provide primers and other undercoat paint produced by same manufacturer as finish coats. Use thinners approved by paint manufacturer, and use within recommend limits.
2. Coordination of Work: Review other Sections in which prime paints are to be provided to ensure compatibility of coatings system for various substrates. Upon request, furnish information or characteristics of finish materials to be used.
3. Requirements of Regulatory Agencies: Comply with applicable rules and regulations of governing agencies for air quality control.

Q. Maintain one copy of each document on site.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification.
B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.
C. Requirements for storage and handling of electrodes shall be per AWS D1.1 and AWS D1.8. Additional requirements include:
1. Long term storage of weld consumables shall be indoors, where moisture or dew does not collect, and in undamaged manufacturer's shipping bags, boxes, and containers.
2. Open Flux Cored Arc Welding (FCAW) electrodes shall be completely covered during hours of non-use (i.e., weekends, nights of nonuse, days of nonuse, etc.). Where rain or dew could be expected to collect (i.e., open floors of erection site, open shop bays, etc.), electrodes shall also be covered.
3. Electrode Storage and Exposure Limits for Demand Critical Welds: The exposure time limit for electrodes shall be in conformance with AWS D1.8 Section 6.4.

1.09 COORDINATION

A. Surveys: Contractor shall conduct field surveys and field verification as required to incorporate existing conditions from previous works, such as foundations and existing buildings, to the work before shop drawings are produced.
B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, templates, instructions, and directions for installation.
C. Notify the Owner's Representative in sufficient time prior to shop or field fabrication or erection to permit testing and inspection without delaying work.
D. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure that shop primers and topcoats are compatible with one another.

PART 2 - PRODUCTS

2.01 MATERIALS

A. All hot rolled steel shapes, plates, and bars shall be new steel conforming to ASTM A6, unless otherwise noted in the Drawings. Structural steel shall be as follows:
   1. Wide Flange and WT Shapes: ASTM A992.
   2. M- and S- Shapes: ASTM A36.
   3. C- and MC- Shapes: ASTM A992.
   4. L- Shapes: ASTM A572 Grade 50.
   5. Round HSS: ASTM A500 Grade C (Fy = 46 ksi).
   6. Rectangular HSS: ASTM A500 Grade C (Fy = 50 ksi).
   7. Pipe: ASTM A53, Grade B (Fy = 35 ksi).
   8. Base Plates up to 4" thick: ASTM A572 Grade 50.
   9. All other Plate Material: ASTM A572 Grade 50.
   10. Built-Up Columns: ASTM A572 Grade 50.
   11. Plate Girders: ASTM A572, Grade 50.
   12. Connection Material:
      a. Column Continuity Plates and Doubler Plates: ASTM A572 Grade 50.
      b. Brace Frame Gusset Plates: ASTM A572 Grade 50.
B. Heavy sections as defined in this specification: ASTM A36 and/or ASTM A572 Grade 50 with supplementary requirements S5 Charpy V-Notch Impact Test and ASTM A6 with supplementary requirements S91 Fine Austenitic Grain Size. For location of Charpy V-Notch test, see ASTM A6 Supplementary Requirement S30. Charpy V-Notch test shall be per ASTM A673, frequency P and shall meet a minimum average value of 20 ft-lbs absorbed energy at 70 degrees Fahrenheit.
C. Steel using complete joint penetration groove welds that fuse through the thickness of the flange or web that is part of the SFRS shall have a minimum Charpy V-notch impact testing value of 20 ft-lbs at 70 degrees Fahrenheit.
D. Heavy Sections in the Seismic Force-Resisting System shall be supplied with Charpy V-notch (CVN) testing in accordance with AISC 341 requirements.
E. Welding Materials
   1. Welding Material: Filler metal requirements shall conform to AWS D1.1, and AISC "Specification for Structural Steel Buildings". Filler metal used in welds designated as part of the SFRS or as Demand-Critical shall comply with AWS D1.8. Minimum classified tensile strength of 70 ksi (E70). Use low hydrogen electrodes as defined by AWS D1.1, unless noted otherwise. For all CJP welds used on Heavy Structural Sections that are not part of the Seismic Load Resisting System the filler metal shall have a Charpy V-Notch (CVN) toughness of at least 20 ft-lb at 70 degrees Fahrenheit.
   2. Welding Materials for Seismic Force Resisting System:
      a. All filler metal used in the Seismic Load Resisting System shall have a Charpy V-Notch (CVN) toughness not less than of 20 ft-lb at 0 degrees Fahrenheit, using AWS A5 classification test methods.
      b. Filler metal for welds defined as Demand Critical Welds (DCW) shall have a Charpy V-Notch (CVN) toughness of 20 ft-lb at minus 20 degrees Fahrenheit as determined by the

appropriate AWS classification test method and 40 ft-lb at 20 degrees above the lowest anticipated service temperature of the structure as determined by AISC 341 and AWS D1.8.

c. Refer to AISC 341 and AWS D1.8 for additional filler metal requirements.

F. Bolts, Connectors, and Anchors

1. High-Strength Bolts, Nuts, and Washers: ASTM A325, Type 1, heavy-hex steel structural bolts unless noted otherwise; ASTM A563, Grade C heavy-hex carbon-steel nuts or equal per ASTM A325-10 Section 3.2; and ASTM F436, Type 1, hardened carbon-steel washers; all with plain finish. ASTM F1852 Twist-Off Type Torque Control Bolts are a suitable alternative to ASTM A325 bolts.
2. High-Strength Bolts, Nuts, and Washers: ASTM A490, Type 1, heavy-hex steel structural bolts, where noted on drawings; ASTM A563, Grade DH, heavy-hex carbon-steel nuts or equal per ASTM A490-10 Section 3.2; and ASTM F436, Type 1, hardened carbon-steel washers with plain finish. ASTM F2280 Twist-Off Type Torque Control Bolts are a suitable alternative to ASTM A490 bolts.
3. Zinc-Coated High-Strength Bolts, Nuts, and Washers: ASTM A325, Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH heavy-hex carbon-steel nuts; and ASTM F436, Type 1, hardened carbon-steel washers.
   a. Finish: Hot-dip zinc coating.
   b. Zinc-Coated ASTM F1852 Twist-Off Type Torque Control Bolts are a suitable alternative to ASTM A325 bolts.
4. Unfinished Bolts and Nuts (Machine Bolts) and Threaded Rods: ASTM A307, Grade A, low carbon steel bolts and nuts; ASTM F436, Type 1, hardened carbon-steel washers.
5. Shear Studs: ASTM A108, Grades 1015 or 1020, headed-stud type, cold-finished carbon steel; AWS D1.1, Type B and conform to requirements of AWS D1.1 Section 7.
   a. Tensile strength, 60,000 psi.
   b. Elongation in 2 inches, 20 percent
   c. Reduction of area, 50 percent.
6. Unheaded Anchor Rods: ASTM F1554 Grade 36, Grade 55 (weldable per S1 Supplementary Requirements), or Grade 105, where noted on drawings.
   a. Configuration: Straight
   b. Nuts: ASTM A563 heavy-hex carbon steel.
   c. Plate Washers: ASTM A572 Grade 50 carbon steel.
   d. Washers: ASTM F436, Type 1, hardened carbon steel.
   e. Finish: Plain or Hot-dip zinc coating, ASTM A153, Class C.
7. Headed Anchor Rods: ASTM F1554 Grade 36, ASTM F1554 Grade 55, weldable where notes on drawings, or ASTM F1554 Grade 105.
   a. Nuts: ASTM A563 heavy-hex carbon steel.
   b. Plate Washers: ASTM A572 Grade 50 carbon steel.
   c. Washers: ASTM F436, Type 1, hardened carbon steel.
   d. Finish: Plain or Hot-dip zinc coating, ASTM A153, Class C.
8. Threaded Rods: ASTM A36 or A572, Grade 50.
   a. Nuts: ASTM A563 heavy-hex carbon steel.
   b. Plate Washers: ASTM A572 Grade 50 carbon steel.
   c. Washers: ASTM F436, Type 1, hardened carbon steel.
   d. Finish: Plain or Hot-dip zinc coating, ASTM A153, Class C.
9. Williams 150 KSI All-Thread-Bars.
   a. Nuts: ASTM A29 or A576 hex.
   b. Plate Washers: ASTM A572 Grade 50 carbon steel.
   c. Washers: ASTM F436, Type 1, hardened carbon steel.
   d. Finish: Plain or Hot-dip zinc coating, ASTM A153, Class C.
   e. Williams 150 ksi All-Thread-Bar is not to be subjected to the heat of a torch, welding or used as a ground.
10. Tie Rods: ASTM A36 or A572, Grade 50.
    a. Nuts: ASTM A563 heavy-hex carbon steel.
    b. Washers: ASTM F436, Type 1, hardened carbon steel.
    c. Finish: Plain or Hot-dip zinc coating, ASTM A153, Class C

11. Clevises and Turnbuckles: Made from cold-finished carbon steel bars, ASTM A108, Grade 1035. Dimensions and minimum capacities to conform to the values listed in AISC "Steel Construction Manual".
12. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A108, Grade 1030.
13. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A108, Grade 1018. Minimum proof load of sleeve nuts shall be such that when loaded axially the sleeve nut shall be stronger than the ultimate capacity of the connected parts.
14. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint.
    a. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following manufacturers:
        1) Amscot Structural Products Corp.
        2) Fluorocarbon Company Limited.
        3) R.J. Watson Bridge & Structural Engineered Systems.
        4) Seismic Energy Products, L.P.
    b. Mating Surfaces: to be specified.
    c. Coefficient of Friction: to be specified.
    d. Design Load: to be specified.
    e. Total Movement Capability: to be specified.

G. Primer
1. Comply with Division 09.
2. Primers and paints shall meet all federal and state environmental and air quality requirements.
3. Primer Paint shall comply with all applicable SSPC requirements and shall be compatible with finish paints and spray-on fireproofing specified elsewhere.
4. Galvanizing Repair Paint: MPI#18, MPI#19, or SSPC-Paint 20 per ASTM A780.
5. Primer:
    a. Typical Interior Primer: SSPC-Paint 25, Type II or SSPC-Paint 23. Primer shall comply with the requirements called out in the "Green Seal Standard for Anti-Corrosive Paints" (GC-03).
    b. Typical Exterior Primer: SSPC-Paint 20, Type II, Organic.

H. Grout
1. Grout shall have a minimum 6,000 psi compressive strength in 3 days and 10,000 psi compressive strength at 28 days.
2. Metallic, Shrinkage-Resistant Grout: ASTM C1107, factory-packaged, metallic aggregate grout, mixed with water to consistency suitable for application and a 30-minute working time.
3. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.02 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303 and AISC 360.
1. Camber structural-steel members where indicated. Fabricate beams and girders with natural camber upward, unless noted otherwise on the drawings.
2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel according to ASTM A6 and maintain markings until structural steel has been shop erected.
4. Mark and match-mark materials for field assembly. Members shall be fabricated for delivery in a sequence that will expedite erection and minimize field handling of structural steel.
5. Splice members only where indicated on Structural Drawings or where accepted by the Structural Engineer.
6. All hollow members exposed to weather shall be sealed with continuous welds, incorporating structural welds where shown or required, or provide weep holes where water may accumulate.
7. Grind burrs, sharp arises and ragged edges that would prevent solid seating of the connected parts.

8. AISC Group 4 and 5 shapes and built up members shall meet the requirements for joints in AISC Sections J1.5, J1.6, J2.7 and M2.2.
9. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Holes and attachments to structural steel in areas designated as the Protected Zone are not allowed except as explicitly shown or noted on structural drawings.

C. Tolerances: Except as noted as follows, maintain fabrication tolerances of structural steel within the tolerances specified on the drawings and AISC's "Code of Standard Practice for Steel Buildings and Bridges."

D. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible. An unguided torch may be used provided the cut is within 1/8 inch of the required line.
1. Plane thermally cut edges to comply with requirements in AWS D1.1.

E. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.
1. Use standard holes unless otherwise indicated on the Drawings. Holes shall be drilled or punched at right angles to the surface of the metal. Making or enlarging holes by burning is prohibited.
2. Flame cut holes for fasteners are not acceptable.
3. Holes in column baseplates shall be within the limits of Table 14.2 of AISC “Steel Construction Manual”.

F. Bending Steel Plate:
1. Bend plates perpendicular to the rolling direction.
2. Grind flame cut plate edges transverse to the bend line.
3. Grind out nicks in plate edges transverse to the bend line.
4. Round sharp corners on plate edges transverse to the bend line.
5. Bent plate deck edge closure may be excluded from Items 1-4 above.

G. Heat Straightening: Will be permissible by the use of properly controlled heat, skilled personnel, proper equipment and in accordance with documents prepared by the fabricator and accepted. Reject materials that contain kinks or sharp angles. Material straightened prior to fabrication shall be rejected where it shows signs of distress or defects.

H. Planing and Milling:
1. Bearing surfaces of columns and base plates shall be finished and constructed in accordance with AISC 360 Section M2.6, M2.8 and M4.4.
2. Bearing surfaces of column end cuts shall meet a surface roughness of 500 micro inches or better.

I. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 1, "Solvent Cleaning” or SSPC-SP 2, "Hand Tool Cleaning or SSPC-SP 3, "Power Tool Cleaning."

J. End-Welded Studs:
1. Automatic end-welded studs: Automatically end-weld in accordance with the manufacturer's recommendations in such a manner as to provide complete fusion between the end of the stud and the plates. There shall be no porosity or evidence of lack of fusion between the welded end of the stud and the plate. The stud shall decrease in length during welding approximately 1/8 inch for 5/8 inch, and 3/16 inch for 3/4 inch diameter. Stud sizes indicated on drawings represent the finish stud height.
2. Fillet-end welded studs: Studs may be welded using prequalified FCAW, GMAW, or SMAW processes provided the requirements of the AWS D1.1 Chapter 7 Section 7.5.5 are met as well as any other pertinent requirements of D1.1.

K. Bolt Holes and Holes for Other Work: Provide holes required for securing other work to structural steel and for other work to pass through steel framing members.
1. Provide holes, slots and openings together with necessary reinforcing as shown on the Drawings required for securing work of other trades to the work specified here. Where openings are shown on the Drawings no change shall be permitted without prior approval. Openings shall be done in the shop.
2. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.
4. Unless noted otherwise, make holes 1/16 inches larger than the nominal bolt diameter.

L. The Contractor shall cooperate fully with requests form inspection and testing personnel for access to the connections and joints to be inspected and tested. This includes beam and column turning in shop, weld backing removal when nondestructive examination indicates rejectable conditions, and access to platforms or scaffolding as required to perform the work safely.
M. Any technique not covered by this section shall be submitted to the SEOR for approval.

2.03 FINISH

A. Prepare structural component surfaces in accordance with SSPC-SP 3.
B. Shop prime structural steel members. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete, or high strength bolted, and where enclosed within the building finish and thereby protected from exterior exposure.
C. Galvanize structural steel members to comply with ASTM A123. Provide minimum 1.7 oz/sq ft galvanized coating.

2.04 SOURCE QUALITY CONTROL

A. Testing Agency: Testing Agency to perform shop tests and inspections as defined by AWS, AISC and these specifications. Testing Agency shall summarize their finding in inspection and testing reports. Reports shall identify any findings that are not in compliance with requirements of the project specifications.
    1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.
B. See Part 1 of this specification for additional testing and inspection requirements. As a minimum the inspector will make all tests and inspections as required by the Special Inspection provisions of the governing building code. Testing Agency will make all the tests and inspections indicated in the Contract Documents.
C. Contractor shall correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.
    1. Owner’s Representative reserves right, at any time before final acceptance, to reject material not complying with requirements.
    2. Any tests that may be necessary to reconfirm any noncompliance of original work, and as may be necessary to show compliance of corrected work, shall be at Contractor's expense.
D. Each person installing connections shall be assigned an identifying symbol or mark and all shop and field connections shall be so identified so that the Inspector can refer back to the person making the connection.
E. Bolted Connections: Shop-bolted connections will be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A325 or A490 Bolts."
    1. High Strength Bolted Connections: Furnish certified test reports for each lot of bolts in accordance with Section 9 of ASTM A325 and A490. Install bolts under the supervision of a qualified inspector in accordance with Section 9, Research Council "Specifications for Structural Joints using ASTM A325 or A490 Bolts". High strength bolts specified as Snug-Tight (ST) need not be inspected for bolt tension. For high strength bolts specified as Slip-Critical (SC), verify that 10% or a minimum of 2 bolts per connection are tensioned in accordance with the RCSC Specification.
    2. If high strength bolting inspection is indicated on the structural drawings or required by the applicable referenced standards, the testing laboratory shall provide inspection in accordance with AISC 360 Section N.
    3. High Strength Bolted Connections in the Seismic Force Resisting System will, in addition, comply with the required inspection in AISC 341 Section J.
    4. Tension Calibrator: A tension measuring device shall be required at all job sites where bolts in slip-critical joints are being installed and tightened. The tension measuring device shall be used to confirm: (1) the suitability to satisfy the requirements of AISC for the complete fastener assembly, including lubrication if required to be used in the work, (2) calibration of wrenches, if applicable, and (3) the understanding and proper use by the bolting crew of the method to be used. The frequency of confirmation testing, the number of tests to be performed and the test procedure shall be as specified in 1.d. below, as applicable. The accuracy of the tension

measuring device shall be confirmed through calibration by an approved testing agency at least annually.

5. Direct Tension Indicators: Observe all Direct Tension Indicators to see if proper tightness was achieved.
6. Joint Assembly and Tightening of Shear/Bearing Connections: Bolts in connections not within the slip-critical category shall be installed in properly aligned holes, but need only be tightened to the snug tight condition. The snug tight condition is defined as the tightness that exists when all plies in a joint are in firm contact. This may be attained by a few impacts of an impact wrench or the full effort of a man using an ordinary spud wrench. If a slotted hole occurs in an outer ply, a flat hardened washer or common plate washer shall be installed over the slot.
7. Joint Assembly and Tightening of Connections Requiring Full Pre-tensioning. Slip-critical connections shall be installed in properly aligned holes and tightened by one of the following methods.
    a. Turn-of-nut Tightening: When turn-of-nut tightening is used, hardened washers are not required except as specified in the AISC. A representative sample of not less than three bolts and nuts of each diameter, length and grade to be used in the work shall be checked at the start of work in a device capable of indicating bolt tension. The test shall demonstrate that the method of estimating the snug-tight condition and controlling turns from snug tight to be used by the bolting crews develops a tension not less than five percent greater than the tension required for slip-critical connections.
    b. Installation of Alternate Design Bolts: A representative sample of not less than three bolts of each diameter, length and grade shall be checked at the job site in a device capable of indicating bolt tension. The test assembly shall include flat hardened washers, if required in the actual connection, arranged as in the actual connections to be tensioned. The calibration test shall demonstrate that each bolt develops a tension not less than five percent greater than the tension required by AISC. Manufacturer's installation procedure shall be followed for installation of bolts in the calibration device and in all connections. When alternate design features of the fasteners involve an irreversible mechanism such as yield or twist-off of an element, bolts shall be installed in all holes of the connection and initially brought to a snug tight condition. All fasteners shall then be tightened, progressing systematically from the most rigid part of the connection to the free edges in a manner that will minimize relaxation of previously tightened fasteners prior to final twist-off or yielding of the control or indicator element of the individual fasteners. In some cases, proper tensioning of the bolts may require more than a single cycle of systematic tightening.
8. Mark bolts that have been completely tightened with an identifying symbol.
9. Standard Bolted Connections: Testing Agency shall inspect the installation of A307 bolts to verify that 10% of all bolts or a minimum of 2 bolts per connection are installed properly and tightened to a Snug-Tight (ST) condition.

F. Welded Connections:
1. Testing Agency shall be present during welding operations as necessary to perform required testing and inspections.
2. Welding equipment: Welding equipment to be used in each case shall be acceptable to welding inspector. Use equipment with suitable devices to regulate speed, and manually adjust operating amperage and voltage. The amperage capacity shall be sufficient to overcome line drop, and to give adequate welding heat.
3. Welded Joint Details as Part of the SFRS:
    a. Weld in accordance with AWS D1.8.
    b. Weld Backing: The use of weld backing shall be in accordance with AWS D1.1. Weld backing shall be removed where required by the Contract Documents or for the WPS by AWS D1.1.
        1) Connections of the SFRS in which backing is not removed: backing shall be attached to the member or plate that does not have its surface prepared for the groove weld. Attachment shall be by either a 5/16” fillet or 3/16” groove weld along the complete bar length on the side of the bar opposite the groove weld.
        2) Beam-Column Connection Joints Requiring Removal of Weld Backing: Conform with AWS D1.8. Perform MT on the fillet weld and the immediately adjacent area.

4. Visual Inspection of Welding: Testing Agency shall visually inspect shop and field welding of structural steel in accordance with the governing building code and AWS D1.1. Visual inspection of welds shall include but not be limited to the following:
   a. Verify: Welding Procedure Specification (WPS) sheet has been provided and has been reviewed with each welder making the weld, welder qualification and identification, fit-up meets tolerances of WPS and mark joint prior to welding, welding consumables are per the Contract Documents and the WPS, amperage and voltage at the arc with hand-held meters, meters on welding equipment are functioning and accurate.
   b. Observe preheat and interpass temperatures, weld pass sequence and size of weld bead.
   c. Multi-pass shop and field welds shall be inspected as required per the governing building code, AWS D1.1, AWS D1.8, AISC 360 Table N5.4 and AISC 341 Table J6.
   d. Visually inspect welds of heavy structural sections, or plates of 1-1/2 inch minimum thickness, as follows:
      1) Columns – visually inspect first two (2) production columns 48 or more hours after completion of welding. If columns successfully pass inspection, no additional 48 hour delayed visual inspections are required.
      2) Plate Girders – visually inspect all plate girders 48 or more hours after completion of welding for presence of cracks.
   e. Visually inspect areas where backing bars and welds tabs are removed for conformance with the surface roughness criteria of the specifications.
   f. Verify that the effective throat thickness of flare groove welds is consistently obtained when flush to bar or section. This verification shall be based on test sections where necessary.
5. Nondestructive Testing Requirements: Testing Agency shall perform non-destructive testing of shop and field welding in accordance with the project specifications, governing building code, and AWS D1.1. Extent of non-destructive testing shall be as follows:
   a. Complete Joint Penetration (CJP) welds: UT 100% CJP welds greater than 5/16-inch. MT 25% all DCW CJP welds. MT 100% of all DCW CJP weld ends.
   b. Partial Joint Penetration (PJP) welds: UT 100% of PJP welds greater than 5/16-inch. UT 100% PJP in column splices.
   c. Column Web Material at Continuity Plate: MT the WF column webs 3-inches above and below the weld terminations at the first 50 continuity plates and doubler plates installed. Test shall be conducted when weld has cooled to ambient temperature. If no web cracks are found, then no more testing required. This test shall also be conducted for all locations where the Contractor has welded into the “no weld” zone shown on the Drawings for continuity plates.
   d. Access holes at splices in Heavy Structural Sections – MT or PT 100%.
6. Special non-destructive testing for welds in the Seismic Force Resisting System shall have additional testing per AISC Seismic Provisions, AWS D1.8 and the governing building code, and as follows:
   a. Backing Bars Removed - MT 20% of the locations where the backing bars and weld tabs are removed after the roughness criterion is attained.
   b. Reinforcing Fillet Weld placed where backup bars are removed - MT 100% of the welds.
   c. Access holes and copes in SMRF beams – MT or PT 100%.
   d. Heavy Structural Section flanges and/or plate thicker than 1-1/2 inches where subject to through-thickness weld shrinkage strains (including column flanges and base plates) – UT flange or plate material for lamellar discontinuities 3” to each side of CJP weld prior to CJP weld (this includes base plates). If rejectable defects are found then beam shall not be welded to the flange or plate at this location. This test should be conducted in the shop. In addition, UT material after weld for discontinuities behind and adjacent to such welds. The test procedure and acceptance criteria shall be per ASTM A898 Level I or ASTM A435.
   e. Fillet Welds: Fillet welds of gusset plates to beams, columns and base plates - MT 10% of the following fillet welds and reduce to 5% if no significant cracks are found in the first 50 tested: a) gusset plate fillet welds to beam and columns; b) base plate fillet welds.
7. All full penetration groove welds will be subject to ultrasonic testing, as per AWS D1.1, Clause 6 "Inspection, Part "F", Ultrasonic Testing (UT) of Groove Welds. All defective welds shall be repaired and retested with ultrasonic equipment at the Contractor's expense.

8. Box columns and built-up members shall have ultrasonic testing before and after welding.
9. Column Flanges: An area extending 6 inches above and below point where girder flanges are attached will be inspected. Column flange edges will be inspected visually and entire area ultrasonically for lamination, plate discontinuities, and non-metallic inclusions.
10. When ultrasonic indications arising from the weld root can be interpreted as either a weld defect or the backing strip itself, the Engineer will be notified. The Engineer may require the removal of backing strip. The backing strip will be removed at the expense of the Contractor, and if no root defect is visible the weld will be retested. If no defect is indicated on this retest, and no significant amount of base and weld metal have been removed, no further repair of welding is necessary. If a defect is indicated, it will be repaired and retested at Contractor's expense.
11. The ultrasonic instrumentation will be calibrated by the technician to evaluate the quality of the welds in accordance with AWS D1.1.
12. Other methods of inspection, for example, X-Ray, gamma ray, magnetic particle, or dye penetrant, may be used on welds if felt necessary by the inspection laboratory, and with the approval of the Engineer.
13. Base metal thicker than 1-1/2 inches, when subjected to through thickness weld shrinkage strains, shall be ultrasonically inspected for discontinuities directly behind such weld before and after joint completion.
14. At the discretion of the owner's testing agency, except for Demand Critical Welds as per AISC 341 Section J6.2g, the ultrasonic testing frequency may be reduced but may not be less than the following:
    a. Initially, all welds requiring ultrasonic testing will be tested at the rate of 100 percent in order to establish the qualifications of each individual welder. If the reject rate is demonstrated to be less than 5 percent of the welds tested for each welder, then the frequency of testing for that welder may be reduced to 25 percent. If the reject rate increases to 5 percent or more, 100 percent testing will be re-established until the rate is reduced to less than 5 percent. The percentage of rejects will be calculated for each welder independently.
    b. A sampling of a least 40 completed welds will be made for such reduction evaluation. Reject rate is defined as the number of welds containing rejectable defects divided by the number of welds completed. For evaluating the reject rate of continuous welds over 3 ft in length where the effective throat is 1” or less, each 12 inch increment or fraction thereof shall be considered as one weld. For evaluating the reject rate of continuous welds over 3 ft in length where the effective throat is greater than 1”, each 6 inch of length or fraction thereof shall be considered one weld.

G. In addition to visual inspection, shop-welded shear studs will be tested and inspected according to requirements in AWS D1.1 and the governing building code for stud welding and as follows:
    1. The type and capacity of the welding equipment shall be in accordance with the manufacturer's recommendations and shall be checked and approved.
    2. At the beginning of each day's work, a minimum of 2 test stud welds shall be made, with the equipment to be used, to metal which is the same as the actual work piece. The test studs shall be subjected to a 90-degree bend test by striking them with a heavy hammer. After the above test, the weld section shall not exhibit any tearing or cracking.
    3. Bend tests will be performed if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
    4. Tests will be conducted on additional shear studs if weld fracture occurs on shear studs already tested, according to requirements in AWS D1.1.
H. Inspection Records
    1. The inspector will maintain a daily record of the work that has been inspected and its disposition. One copy of each report will be submitted to the Owner on a weekly basis. Test reports will be made on the form suggested in the AWS D1.1 “Structural Welding Code”.
    2. Make systematic record of all shop welds, including:
        a. Date of inspection.
        b. Location and type of weld.
        c. Identification marks of welders.
        d. List of defective welds.
        e. Manner of correction of defects.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify, with steel Erector present, locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
   1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Discrepancies: In the event of discrepancy, immediately notify the Owner's Representative in writing. Do not proceed with construction in the region of the discrepancy until all such discrepancies have been resolved.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.
   1. The Contract Drawings indicate the completed structure. The Contractor is fully responsible for all temporary measures necessary for erection, except where specific sequences and requirements are specified on the Drawings.
   2. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

B. Furnish templates for exact locations of items to be embedded in concrete and any setting instructions required for installation.

3.03 CONNECTIONS

A. General Bolting:
   1. Product containers must be marked with lot numbers and traceability information so that correspondence with mill reports can be established. Manufacturer's symbol and grade markings shall appear on all bolts, nuts, through-hardened washers and direct tension indicators.
   2. Bolts shall be of a length that will extend to a point at least flush with the surface of the nuts, though not more than a length equal to the height of the nut, beyond the nuts unless otherwise noted.
   3. Bolts shall be installed with threads excluded from the shear plane.
   4. Washers shall be used on all bolts. Use beveled washers where bolts bear on sloping surface.

B. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A325 or A490 Bolts" for type of bolt and type of joint specified. Contact surfaces of bolted parts shall as a minimum comply with the Class A requirements.
   1. Joint Type shall be as noted on drawings.
   2. Direct tension indicator (load indicating washers or "Tension-Set" bolts) method shall be used at slip-critical connections. "Turn-of-Nut" methods are not an acceptable alternative.
   3. When connection has bolts and welds, fully tighten bolts prior to welding with the exception that in moment connections the flange welds shall be completed prior to final tightening of high strength bolts.
   4. When already tensioned bolts have had their tension relaxed, replace the bolt and tension indicator and re-tighten.

C. Weld Connections: Comply with AWS D1.1 and AWS D1.8 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work. Quality of materials and design and fabrication of all welded connections shall conform to AISC "Specifications for the Design, Fabrication and Erection of Structural Steel for Building," "AWS Code for Welding in Building Construction," and requirements of this section.
   1. Location and type of all welds shall be as shown. Make no other welded splices, except those shown on drawings, without prior approval of the Structural Engineer.
   2. Automatic Welding: Use electrode wire and flux for automatic and semi-automatic welding acceptable to Structural Engineer. All methods, sequences, qualification and procedures, including preheating, and post heating if necessary, shall be detailed in writing and submitted to the Structural Engineer for review.

3. Preparation of surface: Surfaces to be welded shall be free of loose scale, slag, rust, grease, paint, and any other foreign material.
4. Shop welds shall be inspected in the shop before the work is painted or shipped.
5. Control cooling process after weld is completed by either step down post heat or thermal blankets as determined by procedures and prequalification.
6. Weld sizes where shown shall be assumed to be effective weld sizes.
7. All groove or butt welds shall be full penetration unless noted otherwise on the Drawings.
8. Where structural steel members are to remain exposed in the finished work, welds exposed to view shall be uniformly made and ground smooth.
9. Remove runoff tabs and grind surfaces smooth where the tabs would interfere with architectural finishes.
10. Weld tabs shall be in accordance with AWS D1.1. In addition, weld tabs shall extend beyond the edge of the joint a distance not less than 1-inch except at access holes in beam/girder webs and at continuity plate clips. Weld tabs shall be oriented parallel to the joint preparation and to the weld direction. Weld dams are not allowed.
11. Remove weld tabs and backup plates and grind surfaces smooth as required for inspection or testing. Where tabs or backup bars interfere with architectural treatment or are exposed to view in the final structure, remove and grind smooth.
12. Splices of members in tension, all members of moment frames and all members of braced frames that are made from heavy steel sections shall be made in conformance with Section J1.5 of AISC 360.
13. Weld variables shall be consistent with the recommendations of the electrode manufacturer.
14. Do not weld into column flange-to-web intersection as defined the AISC “k” and “k1” distances except for the doubler plate to column welds. Continuity plate welds shall stay clear of this area as noted on the drawings.
15. Sequence the work as necessary to accommodate testing.
16. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.
17. Welding Procedures:
    a. Weld only in accordance with the Welding Procedure Specifications. WPS shall be readily available to all welders, inspectors, and supervisors during the production process.
    b. Consider toughness and notch sensitivity of steel in formation of the welding procedures to prevent brittle and premature fracture during fabrication and erection. Toughness requirements are to match those of the parent metal.
    c. Weld in a manner to minimize accumulation and concentration of through-thickness strains due to weld shrinkage. Sequence welds in a manner to reduce residual stresses (caused by welding) to a minimum value. Welding procedures shall incorporate measures necessary to eliminate cracking.
    d. Do not mix different electrodes in the same weld joint unless the interactions have been shown not to cause problems.
    e. Stringer passes only, no weaving or wash passes. Manipulation of the electrode for vertical welds (oscillation) shall be kept to a maximum movement of 4 to 5 electrode diameters.
    f. Welding shall not begin until joint elements are bolted or tacked in intimate contact and adjusted to dimensions shown in the Drawings, with proper allowance for any weld shrinkage.
    g. All tack welds shall be of the same quality as final welds. Tack welds within Demand Critical welds at Seismic Force Resisting System members shall be per AWS D1.8; all other tack welds shall be per AWS D1.1.
18. Additional Welding Requirements:
    a. Weld Access Holes shall be in accordance with AISC Specification J1.6 and AWS D1.1 except as otherwise noted in the Construction Documents. The access hole shall be ground smooth to a surface roughness not to exceed 500 micro-inches, and shall be free of notches and gouges. For this purpose, a notch of gouge is any depression deeper than the overall surface roughness.
    b. Limit oscillation of FCAW electrodes to 3d, for d >= 3/32 inches, and to 5d, for d < 3/32 inch (d = wire diameter).

c. Pay increased attention to uniform and adequate preheat.
d. Maximum interpass temperature not to exceed 550 degrees F when notch toughness properties are specified.
e. Complete individual weld layers prior to applying portions of subsequent layers. Ends of interrupted passes to be staggered. Minimize starts and stops within body of the weld.
f. Where required by specifications and/or contract drawings, remove backing bars and apply reinforcing fillet weld per note J of figure 3.4 of AWS D1.1 and AWS D1.8 section 6.7 and 6.8. Remove backing bar with air carbon arc cutting, grinding, chipping or thermal cutting. The process shall be controlled to minimize gouging and removal of base metal except for material immediately adjacent to the weld. After removal of backing the root shall be backwelded with a reinforcing fillet weld with a minimum leg of 5/16-inch.
g. At continuity plate to column welds, the backing bars do not need to be removed.
h. At Demand Critical Welds: Cut off weld tabs 1/8-inch (1/4-inch at continuity plates) from the edge and grind to a surface roughness of 500 micro-inches or better.
i. Where bottom cover plates are acting as back-up plates, welds in the vicinity of the web cope area shall be carefully checked by ultrasonic inspection. Any indication of weld discontinuities shall be cause to remove suspect portions of welds by cut-outs. The cut-out areas shall be ground smooth to sound bright metal for visual inspection. If visual inspection is inconclusive or questionable, verify by magnetic particle testing. If weld defects, slag inclusions, etc. are present, remove them by air arcing and clean up by grinding. Repair welds and add a reinforcing fillet weld at least 1/4 of the bottom flange thickness but need not be greater than 5/16 inch. If there are no defects, clean up by grinding and reinforce with fillet weld. Ultrasonic testing (UT) inspection shall be conducted from both sides of the flange to ensure sound welds.
j. Flame cut surfaces at weld access holes within heavy sections shall be ground per AISC 360 Section M2.2.

D. Refer to the Structural Drawings for additional requirements.

3.04 SHOP PRIMING

A. Shop prime all steel surfaces exposed to weather or not completely concealed by interior finishes unless noted otherwise and excepting the following:
1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded and areas within 4 inches on each side of field welds.
3. Top surfaces of beams to receive metal deck.
4. Surfaces to be high-strength bolted except surfaces painted with Type B Primer. Areas with high-strength bolts exposed to the weather shall receive a primer coat compatible with slip-critical type connections.
5. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
6. Galvanized surfaces.
7. Machined surfaces.
8. Welded shear studs.
9. Where enclosed within the building finish and thereby protected from exterior exposure.

B. Steel members not otherwise painted shall be painted when subjected to condensation from piping, are in shower or steam rooms, are exposed to chemical fumes or are exposed to other conditions of potentially aggressive corrosion

C. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the applicable SSPC specification requirements for each primer. As a minimum, all surfaces shall be prepared according to the following specifications and standards:
1. SSPC-SP1 “Solvent Cleaning”
2. SSPC-SP 2, "Hand Tool Cleaning"
3. SSPC-SP3, “Power Tool Cleaning”
4. Where jobsite exposure is expected to exceed 6 months, SSPC-SP6 Commercial Blast Cleaning is required.

D. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness as recommended by manufacturer. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
   1. Material: Type A Tnemec Company, Inc., Series V10; Sherwin Williams Steel Spec Universal; Metal Case 94-231 Series or approved equal.
   2. Number of Coats: One.
   3. Volume Solids: 56.0 +/- 2.0% minimum.
   4. Generic Description: Modified Alkyd.
   5. Stripe paint corners, crevices, bolts, welds, and sharp edges.
   6. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

E. Unless noted otherwise in subsection G, use the following Type B shop painting systems on all exterior steelwork and interior steelwork subjected to wet conditions or fumes (see subsection G for additional requirements)
   1. Surface Preparation: SSPC-SP6 Commercial Blast Cleaning
   2. Application: Follow coating manufacturer's printed directions.
   3. Material: Type B Tnemec 90-97 Tneme-Zinc primer or approved equal
   4. Number of Coats: One
   5. Dry Film Thickness: 2.5 to 3.5 mils
   6. Volume Solids: 63% +/- 2%
   7. Generic Description: Zinc-Rich Urethane

F. Unless noted otherwise in subsection G, use the following finish painting systems on all exterior steelwork and interior steel work subjected to wet conditions or fumes (see subsection G for additional requirements):
   1. Application: Follow coating manufacturer’s printed directions. Apply over Type B primer system above.
   2. Material: Tnemec Series 750 UVX paint or approved equal
   3. Number of Coats: One
   4. Dry Film Thickness: 2.5 to 5 mils
   5. Volume Solids: 72% +/- 2%
   6. Generic Description: Polyfunctional Hybrid Polyurethane

G. All exterior steelwork and all interior steelwork subjected to wet conditions or fumes, including all welds, bolts, washers and other connection components, shall be primed and painted or hot-dip galvanized, as specified by the Architectural finish specifications. In the absence of Architectural finish specifications, all exterior steelwork and all interior steelwork subjected to wet conditions and fumes, including all welds, bolts, washers and other connection components, shall be hot-dip galvanized, conforming to the requirements set forth in ASTM A123 and ASTM A153.

H. All steel exposed to weather in the final structure shall be galvanized or painted.

I. Use special care if steel is fabricated, cleaned, and painted in damp weather to remove moisture from mill scale cracks.

J. Clean contact surfaces of high strength bolts of all burrs and material which might prevent solid seating of the parts. Steel to receive bolts shall be primer painted except beneath the contact area of slip-critical bolts.

3.05 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A123 and to bolts, nuts, and washers according to ASTM A153. Galvanize all items noted on Drawings to be galvanized and fasteners that connect galvanized components, except that ASTM A490 bolts shall not be hot-dip galvanized. Where ASTM A490 bolts connect galvanized components, use A490 Type 3 bolts.
   1. Fill vent and drain holes that will be exposed in the finished Work unless they will function as weep holes, by plugging with engine freeze/core plugs installed per manufacturer’s recommendations.
   2. Galvanize lintels and shelf angles attached to structural-steel frame and located in exterior walls.

3. Roughen faying surfaces of slip-critical high-strength bolted connections to achieve Class C surface accordance with the RCSC Specifications.

3.06 ERECTION

A. Structural steel erection: Comply with AISC "Specification for the Design, Fabrication and Erection of Structural Steel for Building", latest edition.
B. Erection Sequence: Erect steel in accordance with special erection sequences where special erection sequences are indicated on the contract documents.
C. Mark each member with erection identification corresponding to mark shown on erection drawings. Carefully plan erection of structural steel so that no cutting and removal of material will be necessary. Do not torch burn in the field, unless specifically permitted by Engineer.
D. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360. Check plumbness after erection of each tier.
E. Dimensions shown on drawings are based on an assumed design temperature of 70 degree Fahrenheit. Fabrication and erection procedures shall take into account the ambient temperature range at the time of the respective operations.
F. Care shall be taken to protect work already installed from damages resulting from structural steel erection.
G. Base Bearing and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates. Remove any templates used for the setting of anchor bolts.
    1. Set plates for structural members on wedges, shims, or setting nuts as required.
    2. Weld plate washers to top of baseplate at locations that are specified per the structural design details.
    3. Snug-tighten or Pretension anchor rods after supported members have been positioned and plumbed. If used, do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
    4. Grout solid under plates with a flowable non-shrink grout per Section 03 30 00 prior to placement of concrete fill over metal deck at any floor level. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
H. Maintain erection tolerances of structural steel within AISC 303.
I. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
    1. Level and plumb individual members of structure.
    2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.
    3. Shimming or other adjustments not indicated on drawings shall be approved by the Engineer prior to installation. Column shimming shall be ¼ inch.
J. All welds shall be full and clean, and conform to AISC and AWS specifications.
K. Splice members only where indicated.
L. Do not use thermal cutting during erection unless approved by SEOR. Finish thermally cut sections within smoothness limits in AWS D1.1.
M. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts. Where a hole is required to be enlarged by more than 3/32-inch ream to and use next larger bolt size.
N. Shear Studs: Prepare steel surfaces as recommended by manufacturer of shear studs. Use automatic end welding of headed-stud shear studs according to AWS D1.1 and manufacturer's written instructions.
O. Temporary Shoring and Bracing:
    1. The Contract Drawings indicate the completed structure. The Contractor is fully responsible for all temporary measures necessary for erection, except where specific sequences and requirements are specified on the Drawings. See the Drawings for erection sequence notes and minimum requirements.

2. Contractor is responsible for identifying need for temporary construction and for the design, installation and use of all temporary bracing and supports necessary to stabilize the framing until complete.
3. Provide temporary works as necessary to erect the structure and achieve proper alignment as erection proceeds. In addition, provide temporary bracing and shoring to brace the incomplete structure against loads such as wind and seismic forces comparable in intensity to the design loads for the completed structure.
4. Make all necessary provisions for temporary bracing and for completion of erection where structural members are temporarily left out for erection at a later time.

P. Temporary Flooring:
1. Provide planking and scaffolding necessary in connection with erection of structural steel, support of erection machinery, and construction materials. Temporary floors and use of steel shall be as required by applicable regulatory requirements.
2. If steel decking is used as a working platform, it shall be temporarily tack-welded to supports to extent necessary for such use in accordance with applicable regulatory requirements. The concentrated loading from welding machines and other heavy machinery required for steel erection shall be distributed by planking or other approved means. Metal decking that becomes damaged as the result of being used as a working platform shall be replaced at no additional cost to the Owner.

Q. Hoisting and Bracing:
1. Provide all hoisting and erecting equipment and power.
2. Provide and maintain any and all safety railings, etc., required for the erection of steel framing and metal decking or as directed by the General Contractor.
3. Brace the erected frame in a manner which will assure safety and proper alignment to receive the metal decking in accordance with Contractor's approved erection procedure.
4. Erect building frame true and level. Erect columns in a manner to allow for movement due to welding shrinkage and thermal expansion and contraction of framing. Check plumbness after erection of each level. Maintain structural stability of frame during erection. Provide temporary bracing where necessary to maintain frame stability and to support required loads, including equipment and its operation.

R. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

S. Shop Drawings for temporary works located within the building envelope shall be submitted to the Engineer of Record for review and approval. Temporary works Shop Drawings shall show fabrication of structural-steel components, including details of layout and connections, fabrication of all members, and element and erection plans, and erection sequence. Shop Drawings shall identify temporary works members to remain in the permanent structure. Review of Shop Drawings by the Engineer of Record is of a general nature only.

3.07 FIELD CONNECTIONS

A. Field connection requirements shall be as a minimum equal to those specified in Part 2 of this document.

B. Erection bolts for welded connection shall be tightened securely and left in place, unless noted otherwise.

C. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A325 or A490 Bolts" for type of bolt and type of joint specified.

D. Weld Connections: Comply with AWS D1.1 and AWS D1.8 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or weld tabs where required by specifications or contract drawings, back gouge, and grind steel smooth.
3. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

4. Weld in manner to prevent warping or distortion of finished product. Use jigs which will not restrain piece from moving during welding or cooling after welding. Sequence weld passes at a joint to prevent excessive heat build-up or cause shrinkage cracks to form.
5. Auxiliary Member Connections and Temporary Welds shall be per AWS provided that preheating may be omitted on ASTM A36 steel for single pass fillet welds with low hydrogen electrodes under the following conditions: Air temperature is 60 degrees Fahrenheit or over, steel is dry, and welds to structural base material are more than 1" away from corners or ends of plates.
6. Preheat and post-heat procedures for welded joints shall be utilized to prevent rapid cooling of welds, particularly in cold weather. Procedures are Contractor's responsibility.

E. Shear Studs: The shear studs shall be automatically end welded in accordance with AWS D1.1 and the manufacturer's recommendations in such a manner as to provide complete fusion between the end of the stud and the plate.
1. There should be no porosity or evidence of lack of fusion between the welded end of the stud and the plate.
2. Shear studs through metal deck shall be welded through the deck within 1 day of laying the deck.

F. Bearing Pads: Install bearing pads in accordance with manufacturer's recommendations.

3.08 FIELD QUALITY CONTROL

A. Field quality control shall, as a minimum, conform to the requirements specified under Source Quality Control in Part 2.

B. Erection Tolerances: Unless otherwise noted, level and plumb individual members of the structure as per AISC 303 Section 7.13 'Erection Tolerances'. Make level and plumb based on the mean operating temperature of the structure, allowing for the difference in temperature at time of erection and the mean temperature of the structure when completed and in service. Base measurements relating to tolerances on the theoretical centerline of the columns.
1. Columns: Gaps exceeding 1/8 inch between milled ends not permitted. Shim acceptable gaps with non-tapered mild steel shim stock.
2. In order to provide a true, flat plane for the exterior elevations, install perimeter steel deck edge closure such that the vertical face does not vary from its intended alignment more than +/- 3/4" at any location.
3. All columns and beams shall adhere to Section M2.7 of the referenced "Specification for Structural Steel for Buildings" which states that completed members shall be free of twists, bends, and open joints. Take special care that column base plates are parallel and perpendicular to faces of columns and that bolt holes are accurately placed.

C. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
1. Verify structural-steel materials and inspect steel frame joint details.
2. Verify weld materials and inspect welds.
3. Verify connection materials and inspect high-strength bolted connections.

D. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

E. Bolted Connections: Bolted connections will be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A325 or A490 Bolts."
1. The Inspector shall observe all Direct Tension Indicators to see if proper tightness is achieved.

F. Welded Connections: Field welds will be visually inspected according to AWS D1.1, the governing building code, and Part 2 of this document, by the Testing Agency.

G. Defective Work:
1. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents. Work deemed defective will be removed from the site at the Contractor's expense.
2. Any special tests not specifically covered by this specification that are proposed by the Contractor as a result of failure to comply with this Section shall be at the Contractor's expense. The Contractor shall be responsible for any consequential costs or delays.
3. The results of those tests will be accepted, at the discretion of the Architect, as proof of adequate materials or workmanship.

3.09 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A780.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
   1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Touchup Painting: Cleaning and touchup painting are specified in Division 09 painting Sections.

D. Repair of Openings: For all members exposed to view in the final structure, close all lifting holes, access openings, etc. in such a manner that no visual evidence of the opening remains.

END OF SECTION

05 40 00
COLD-FORMED METAL FRAMING
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Formed steel stud interior wall and exterior wall framing.
B. Formed steel joist and purlin framing and bridging.

1.03 RELATED REQUIREMENTS

A. Section 03 30 00 – Cast In Place Concrete.
B. Section 05 12 00 – Structural Steel Framing.

1.04 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
   1. AISI S100 - North American Specification for the Design of Cold-Formed Steel Structural Members.
   2. AISI S202 – Code of Standard Practice for Cold-Formed Steel Framing.
   3. AISI S220 - North American Standard for Cold-Formed Steel Nonstructural Framing.
   4. AISI S240 - North American Standard for Cold-Formed Steel Structural Framing.
   5. AISI S400 - North American Standard for Seismic Design of Cold-Formed Steel Structural Systems.
   6. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
   7. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   8. ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable.
   9. ASTM A1011 - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
   10. ASTM C955 - Standard Specification for Cold-Formed Steel Structural Framing.
   11. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.
   12. AWS B2.1 - Specification for Welding Procedure and Performance Qualification.
   13. AWS D1.1 - Structural Welding Code - Steel.
   14. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer.
   15. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic).

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with work of other sections that is to be installed in or adjacent to the metal framing system, including but not limited to structural anchors, cladding anchors, utilities, insulation, and firestopping.

1.06 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.
B. Product Data: Provide data on standard framing members; describe materials and finish, product criteria, limitations, and accessories.
C. Product Data: Provide manufacturer's data on factory-made framing connectors, showing compliance with requirements.
D. Shop Drawings: Indicate component details, framed openings, bearing, anchorage, loading, welds, and type and location of fasteners, and accessories or items required of related work.

1. Provide elevations of each building surface showing layout, spacing, sizes, thicknesses, and types of cold-formed metal framing; fabrication; and fastening and anchorage details, including mechanical fasteners. Show reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
2. Provide details of all conditions whether shown on the Contract Documents or not. Where engineering of specific conditions is not shown in the Contract Documents, submit details of similar character of those shown using sound engineering practice and preferred means and methods. Details shall be reviewed by the Structural Engineer of Record who will provide comments to the Contractor as necessary.

E. Manufacturer's Installation Instructions: Indicate special procedures, and conditions requiring special attention.
F. Manufacturer's Qualification Statement.
G. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1 and dated no more than 12 months before the start of scheduled welding work.
H. SSMA Manufacturer Qualification: Submit documentation of manufacturer association membership.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, and with minimum three years of documented experience.
B. Manufacturer Qualifications:
   1. Member of Steel Stud Manufacturers Association (SSMA): www.ssma.com.
   2. Member of Steel Framing Industry Association (SFIA): sfia.memberclicks.net.
C. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1 and AWS D1.3 and dated no more than 12 months before start of scheduled welding work.
D. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience.
E. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Protect metal framing units from rusting and damage.
B. Deliver to Project site in manufacturer's unopened containers or bundles, identified with name, brand, type and grade.
C. Store off ground in a dry ventilated space or protect with suitable waterproof covering.

1.09 PROJECT CONDITIONS

A. Prior to Pre-installation Conference, review areas of potential interference and conflicts, and coordinate layout and support provisions for interfacing work.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Metal Framing:
   1. CEMCO: www.cemcosteel.com.
   2. ClarkDietrich: www.clarkdietrich.com.
   3. SCAFCO Corporation: www.scafco.com.
   4. Substitutions: See Section 01 60 00 - Product Requirements.
B. Framing Connectors and Accessories:
   1. ClarkDietrich: www.clarkdietrich.com.
   2. Simpson Strong-Tie: www.strongtie.com.
   3. Substitutions: See Section 01 60 00 - Product Requirements.

C. Provide primary and secondary framing members, bridging, bracing, plates, gussets, clips, fittings, reinforcement, and fastenings as required to provide a complete framing system.

1. Able to tolerate movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.
2. Able to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

D. Shop fabricate framing system to the greatest extent possible.
E. Deliver to project site in largest practical sections.
F. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.02 FRAMING MATERIALS

A. Studs and Track: ASTM C955; studs formed to channel, C- or Sigma-shaped with punched web; U-shaped track in matching nominal width and compatible height.
   1. Gauge and Depth: As indicated on Drawings and as required to meet specified performance levels.
   2. Galvanized in accordance with ASTM A653, G60 coating.
   3. Products:
      a. Comply with ICC ES 3064P or ICC ES 4205.
         1) CEMCO: www.cemcosteel.com
         2) SCAFCO Corporation: www.scafco.com
         3) Substitutions: See Section 01 60 00 - Product Requirements.
B. Jamb Studs: Engineered, C-shaped with wide flanges, designed to replace conventional built-up, multiple stud framing at openings.
   1. Products:
      a. SCAFCO Corporation; Kwik-Jamb Studs: www.scafco.com
      b. Substitutions: See Section 01 60 00 - Product Requirements.
C. Header: Engineered one-member or two-member assembly, with wide flanges, designed to replace conventional box or nested header framing at openings.
   1. Jamb Mounting Clips: Manufacturer's standard.
   2. Cripple Stud Clips: Manufacturer's standard.
   3. Products:
      a. SCAFCO Corporation; HD Header: http://www.scafco.com.
      b. CEMCO; ProX Header: www.cemcosteel.com
      c. Substitutions: See Section 01 60 00 - Product Requirements.
D. Joists and Purlins: Fabricated from ASTM A653 steel sheet, with G60 hot dipped galvanized coating.
   1. Base Metal: As indicated on Drawings and as required to meet specified performance levels within maximum depths indicated.
   2. Gauge and Depth: As required to indicated on Drawings and as required to meet specified performance levels.
   3. Products:
      a. CEMCO: www.cemcosteel.com
      b. SCAFCO Corporation: www.scafco.com
      c. Substitutions: See Section 01 60 00 - Product Requirements.
E. Framing Connectors: Factory-made, formed steel sheet.
   1. Material: ASTM A653 SS Grade 33 and 40 (minimum), with G90 hot dipped galvanized coating for base metal thickness less than 10 gauge, 0.1345 inch (3.42 mm), and factory punched holes and slots.
   2. Structural Performance: Maintain load and movement capacity required by applicable code, when evaluated in accordance with AISI S100 and AISI S400 as required.
   3. Movement Connections: Provide mechanical anchorage devices that accommodate movement using slotted holes, shouldered screws or screws and anti-friction or stepped bushings, while maintaining structural performance of framing. Provide movement connections where indicated on drawings.

a. Where continuous studs bypass elevated floor slab, connect stud to slab in manner allowing vertical and horizontal movement of slab without affecting studs; allow for minimum movement of 1/2 inch.
b. Where top of stud wall terminates below structural floor or roof, connect studs to structure in manner allowing vertical and horizontal movement of slab without affecting studs; allow for minimum movement of 1/2 inch.
c. Products:
1) ClarkDietrich; Drift FastClip Slide Clip D-FCSC: www.clarkdietrich.com
2) ClarkDietrich; FastClip Slide Clip FCSC: www.clarkdietrich.com
3) Simpson Strong-Tie; SCB Side-Clip Connector: www.strongtie.com

4. Fixed Connections: Provide non-movement connections for tie-down to foundation, floor-to-floor tie-down, roof-to-wall tie-down, joist hangers, gusset plates, and stiffeners.
a. Products:
1) Simpson Strong-Tie: www.strongtie.com
2) Substitutions: See Section 01 60 00 - Product Requirements.
5. Wall Stud Bridging Connections: Provide mechanical load-transferring devices that accommodate wind load torsion and weak axis buckling induced by axial compression loads. Provide bridging connections where indicated on the drawings.
6. Products:
a. ClarkDietrich; Spazzer 5400 Bridging Bar: www.clarkdietrich.com
b. ClarkDietrich; FastBridge Clip: www.clarkdietrich.com
c. Simpson Strong-Tie; SUBH Bridging Connector: www.strongtie.com
d. Substitutions: See Section 01 60 00 - Product Requirements.

2.03 FASTENERS

A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Screws shall comply w/ ASTM C1513. Exterior applications shall be Type 316 Stainless Steel or Hot Dip Galvanized per ASTM A153, Class C.
1. Products:
a. Grabber Construction Products Inc. per ESR 1271: www.grabberpro.com
b. Primesouce Building Products per ESR 1408: www.primesourcebp.com
c. ITW Commercial Construction North America; ITW CCNA-Buildex Teks Select Series per ESR 1976 or 3223: www.ITWBuildex.com
d. Hilti per ESR 2196: www.hilti.com
e. Brighton Best International Inc. per ESR 3231: www.brightonbest.com
f. Elco Construction Products per ESR 3294: anchors.dewalt.com
g. Simpson Strong-Tie Company per ESR 3006: www.strongtie.com
h. Substitutions: See Section 01 60 00 - Product Requirements.

B. Anchorage Devices: As indicated on the Drawings.
C. Welding: Comply with AWS D1.1.

2.04 ACCESSORIES

A. Bracing, Furring, Bridging: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components unless otherwise noted.
B. Plates, Gussets, Clips: Formed Sheet Steel, thickness determined for conditions encountered; finish to match framing components unless otherwise noted.
C. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.
D. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20 Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.
B. Verify field measurements and adjust installation as required.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.
B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.
C. Install load bearing shims or grout between the underside of wall bottom track or rim track and the top of foundation wall or slab at stud locations to ensure a uniform bearing surface on supporting concrete or masonry construction.

3.03 INSTALLATION OF FRAMING, GENERAL

A. Install components in accordance with manufacturers' instructions and AISI S200 - Code of Standard Practice for Cold-Formed Steel Framing.
B. Install cold-formed metal framing and accessories plumb, level, square, and true to line, and with connections securely fastened.
C. Install framing members at 16-inches on center unless otherwise shown. Framing at sink and toilet carriers may be installed at 24 inches on center where the span rating for the attached sheathing can accommodate the increased spacing.
D. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members. Install load-bearing studs full length in one piece. Splicing of studs is not permitted.
E. Align floor and ceiling tracks; locate to wall layout. Coordinate installation of sealant with floor and ceiling tracks.
F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
G. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.
H. Install insulation, specified in Division 07 Section "Thermal Insulation" in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.
I. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.
J. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable non-cumulative tolerance variation of 1/8 inch in 8 feet (1:768) and as follows:
    1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
K. Touch-up field welds and damaged galvanized surfaces with primer.

3.04 WALL FRAMING INSTALLATION

A. Install movement joints at corners and intersections to allow for differential movement of wall planes.
B. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends, and at spacings as indicated.
    1. Fasten bottom track to concrete floor slab with power actuated fasteners or expansion anchors sized and spaced as shown on Drawings or as required by structural performance.
    2. Fasten top compensation channel to structure as indicated on the Drawings.
C. Squarely seat studs against top and bottom tracks with gap not exceeding of 1/8 inch between the end of wall framing member and the web of track. Fasten both flanges of studs to top and bottom tracks. Space studs as indicated.
D. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar configurations.

E. Align load bearing studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.
F. Align floor and roof framing over load bearing studs. Where framing cannot be aligned, continuously reinforce track to transfer loads or as shown in approved engineering shop drawings.
G. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as required.
H. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates as shown in approved engineered shop drawings.
    1. Frame wall openings with jamb studs per the schedule(s) on the Drawings at each jamb of frame. Fasten jamb members together to uniformly distribute loads as shown in approved engineered shop drawings.
    2. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs as shown in the drawings.
I. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
    1. If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.
    2. Provide backing plate support for each point of fastening of every unit to be anchored. Coordinate requirements and locations with work of related sections.
J. Install horizontal bridging in stud system, spaced at (vertical distance) not more than four feet on center and as indicated; fasten at each stud intersection. Horizontal bridging may be omitted at interior wall framing where gypsum board sheathing is required on both sides for the full height of the wall.
    1. Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of 2 screws into each flange of the clip angle for framing members up to 6 inches deep.
K. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system as shown in the drawings.
L. Install strap bracing and blocking at unsheathed sides of walls as indicated on the Drawings.

3.05 INSTALLATION OF JOISTS AND PURLINS

A. Install framing components in accordance with manufacturer's instructions.
B. Make provisions for erection stresses. Provide temporary alignment and bracing.
C. Place joists with spacing as indicated on the Drawings; not more than 2 inches from abutting walls, and connect joists to supports using fastener method.
D. Set floor and ceiling joists parallel and level, with lateral bracing and bridging.
E. Locate joist end bearing directly over load-bearing studs or provide load distributing member to top of stud track.
F. Provide web stiffeners at reaction points as required by the Drawings.
G. Touch-up field welds and damaged galvanized surfaces with primer.

3.06 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports in accordance with Division 01.
B. Field and shop welds will be subject to testing and inspecting.
C. Testing agency will report test results promptly and in writing to Contractor and Architect.
D. Remove and replace work where test results indicate that it does not comply with specified requirements.
E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.07 REPAIRS AND PROTECTION

A. Painting Repairs: Use compatible primer for prime coated surfaces.
B. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to manufacturer's written instructions.
C. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensures that cold-formed metal framing is without damage or deterioration at time of Completion.

END OF SECTION

SECTION 05 50 00 – METAL FABRICATIONS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the job site.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Shop fabricated metal items and miscellaneous metal work, refer to as herein scheduled.
2. Painting finish

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society for Testing and Materials (ASTM)

1. ASTM A36 - Specifications for Structural Steel
2. ASTM A53 - Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless
3. ASTM A120 – Welded Steel Pipes, Galvanized Threaded and Coupled
4. ASTM A123 – Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
5. ASTM A153 – Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware
6. ASTM A307 – Standard specification for carbon steel bolts and studs, 60 ksi tensile strength
7. ASTM A500 - Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
8. ASTM A513 - Specification for Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing
9. ASTM A569 - Specification for Steel, Carbon (0.15 Maximum, Percent), Hot-Rolled Sheet and Strip Commercial Quality
10. ASTM A615 - Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement
11. ASTM A653 – Hot Dip Galvanized Coils & Sheets - quality norms
12. ASTM A780 - Specification for Repair of Damaged and Uncoated Areas of Hot-Dipped Galvanized Coatings

13. ASTM E303 - Method of Measuring Surface Frictional Properties Using the British Pendulum Tester

E. American Institute of Steel Construction (AISC)

1. AISC - ASD Manual of Steel Construction
2. AISC - Manual of Steel Construction

F. American Welding Society (AWS)

1. AWS - D1.1 Structural Welding Code - Steel
2. AWS - D1.3 Structural Welding Code - Sheet Steel
3. Welding Procedure and Performance Qualification

G. National Ornamental and Miscellaneous Metals Association (NOMMA)

1. NOMMA - Guideline 1 - Joint Finishes

1.3 PERFORMANCE, TESTING AND INSPECTION

A. General:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. Sustainability:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Submit complete shop drawings indicating profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories for all fabricated items included hereunder. Include erection drawings, elevations and details where applicable. Indicate welded connections using standard AWS welding symbols. Indicate net weld lengths.
2. Descriptive data: Submit complete data for manufactured items.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

D. Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Coordination with associated construction

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver all parts ready for erection; store in close proximity to final locations.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish one (1) year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to, the following:

1. Floor Construction
2. Wall Construction
3. Ceiling Construction
4. Roof Construction
5. Asphalt Concrete
6. Cast-in-Place Concrete
7. Concrete Paving and Flatwork

B. Related Sections include, but are not limited to, the following:

1. Division 1
2. Section 02 41 13 – Selective Site Demolition & Protection

3. Refer to structural drawing notes for Cast in Place Concrete
4. Refer to structural drawing notes for Structural Steel Framing
5. Section 07 62 00 – Sheet Metal Flashing & Trim
6. Section 09 90 00 – Paintings and Coatings

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding operation of any operable equipment or assemblies.
2. Complete instructions regarding maintenance of the equipment, materials, and finishes, etc.
3. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturer and fabricator shall be one of the following and as herein listed and in Drawings:

1. Refer to documents and as herein specified.

2. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. Steel sections: ASTM A36, unless otherwise noted on drawings.
2. Galvanizing: Hot-dip process ASTM A123 typical and ASTM A153 for threaded fasteners performed after fabrication into largest practical section. Weight of coating not less than 2 oz. per sq. ft. of surface. Where

damaged, repair surface with one coat of hot process galvanizing repair compound, "Galvalloy", "Galvweldalloy", or approved equal.

3. Hot-dipped, zinc-coating on assembled steel products: ASTM A653, galvanized in accordance with G90 coating designation.
4. Steel pipe: ASTM A53 or ASTM A120, size per drawings, hydrostatic tests not required; or standard ASTM A36 steel pipe, size per drawings.
5. Steel bolts, nuts, and washers: ASTM A307
6. Welding materials: AWS D1.1, type required for materials being welded
7. Primer: Comply with Section 09 90 00 – Paintings & Coatings
8. Painted finish: Comply with Section 09 90 00 – Paintings & Coatings

B. Schedule:

1. General:

   a. The following Schedule lists principal items only; refer to drawings for items not specifically scheduled herein.

      1) Provide, design, provide shop drawings and install items listed in Schedule and shown on Construction Drawings with anchorage and attachments necessary for installation.
      2) Provide Steel support angles and channels not included in other section.
      3) Provide Steel angle edge protection not included in other section.
      4) Provide corner, ledge and shelf angles, channels and plates not attached to structural steel; complete with anchorage for embedment in concrete where required. Hot dip galvanized items embedded in concrete or masonry.

2. Bollards - Traffic Barriers:

   a. Extra Strong galvanized steel pipe, typical; size and height as noted on drawings.
   b. Fill traffic barriers with 3000 psi concrete with domed finished top.
   c. Prime & paint steel - custom finished color to match **Architect's** sample after fabrication; refer to Section 09 90 00 – Paintings & Coatings.
   d. Provide sleeves for setting where shown on drawings - prime & paint steel to match pipe bollard.

3. Posts for Site Signage:

   a. Aluminum 6061-T6 alloy square structural tubing by Julius Blum & Co. or equal; clear brushed satin finish.
   b. Fully welded assembly.
   c. Stainless Steel fasteners, typical.

4. Steel Support Frame – Counters:

   a. Support frame with wall brackets & counter top angle supports at each end of counter and spaced equally in between (not to exceed 3'-0" o.c.)
   b. Welded construction and wall stud brackets with pre-drilled holes for fasteners.
   c. Field verify all dimensions prior to fabrication.
   d. Assembly shall be primed & painted a custom color as directed by **Architect**; refer to Section 09 90 00 – Paintings & Coatings.

5. Tube Steel Canopy Assembly:

   a. Columns and horizontal support members with attachment to foundations, attachment to building with flashing and weathertight seal at penetrations through building skin and generally providing overhead rain protection.
   b. For assembly components not specified herein, refer to architectural and structural drawings and Section 05 12 00 – Structural Steel Framing.

      1. Perimeter Framing: Refer to drawings
      2. Intermediate Framing: Refer to drawings
      3. Framing at Wall: Refer to drawings
      4. Diagonal Braces: Refer to drawings
      5. Miscellaneous plates, bolts, etc.: Refer to drawings
      6. Metal Roofing: Match building metal roofing

   c. All welds shall be continuous and ground smooth unless otherwise noted.
   d. Provide flashing to building per Specification Section 07 62 00 – Sheet Metal Flashing and Trim.
   e. Assembly shall be primed & painted a custom color as directed by **Architect**; refer to Section 09 90 00 – Paintings & Coatings.

6. Escutcheons:

   a. Application: Pipe penetrations thru ceiling panels
   b. Mfgr: Plumbing Supply Co., www.plumbingsupply.com
   c. Product: Heavy Gauge Escutcheons with Springs
   d. Type: Two piece with springs
   e. Material: Chrome plated
   f. Size: To accommodate pipe diameter
   g. Model: To accommodate pipe diameter

7. Boots – Pipe penetrations:

   a. Application: Pipe penetrations thru walls and ceiling
   b. Mfgr: PIPETITE, www.pipetite.us, www.csdiesigns.com, 800.654-5635
   c. Description: White silicone boot & 316 stainless steel ring with predrilled holes
   d. Features:

      1) Self-sealing
      2) 500° temperature rating
      3) Hygienic white silicon boot
      4) Boots accommodates movement

   e. Model: PIPETITE Standard
   f. Size: To accommodate pipe diameters from 3/16" – 7" pipe diameter
   g. Model: To accommodate pipe diameter

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions.

1. Prior to all work of this Section, carefully inspect and verify that the installed work of all other trades is complete to the point where this work may properly commence.
2. Examine areas and conditions under which work is to be performed.
3. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Obtain **Architect's** approval prior to site cutting or making adjustments not scheduled.

B. Clean and strip primed steel items to bare metal where site welding is scheduled.

C. Make provision for erection loads with temporary bracing. Keep work in alignment.

D. Supply items required to be cast into concrete or embedded in masonry with setting templates, for installation under appropriate Sections.

3.4 FABRICATION

A. General:

1. Verify dimensions on site prior to shop fabrication.
2. Fabricate items with joints tightly fitted and secured.
3. Fit and shop assemble in largest practical sections, for delivery to site.
4. Grind exposed welds flush and smooth with adjacent finished surface. Ease exposed edges to small uniform radius.
5. Exposed mechanical fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of structure, except where specifically noted otherwise.
6. Make exposed joints butt tight, flush, and hairline.
7. Supply components required for anchorage of metal fabrications. Fabricate anchorage and related components of same material and finish as metal fabrication, except where specifically noted otherwise.
8. All exterior assemblies & members shall be fabricated watertight.
9. All steel tube and pipe connections shall be continuously welded water tight and ground smooth.
10. All aluminum tube and pipe connections shall be continuously welded watertight and ground smooth.

B. Install items plumb and level, accurately fitted, free from distortion or defects.

C. Field Welding:

1. Perform field welding in accordance with AWS D1.1.
2. Where field welding is applied to existing flexural members involving application of significant amounts of heat to member, provide temporary shoring to prevent deflections.

D. Finishing

1. Clean surfaces of rust, scale, grease, and foreign matter.
2. Touch-up field welds, scratched or damaged surfaces with primer, except repair exposed galvanized work with hot process field galvanizing, in accordance with manufacturer's published directions.
3. Prepare, prime and paint in accordance with Sections 09 90 00 – Paintings and Coatings unless product comes pre-finished from manufacturer.
    a. Do not prime surfaces in direct contact bond with concrete or where field welding is required, these areas will be primed and field painted after completion of work.
    b. All exposed fabrications shall be primed and finish painted.
    c. All semi-exposed fabrications shall be primed at a minimum.

3.5 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer’s recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor’s** NOTICE of “Certificate of Substantial Completion”.

END SECTION 05 50 00

SECTION 05 51 33 – METAL LADDERS - PREFABRICATED

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the job site.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified and as necessary to complete the work to fabricate, finish and install pre-fabricated access ladders;

1. Access ladder and attachment.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission

E. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction:

a. All occupancy types.

F. American National Standards Institute (ANSI)

1. ANSI A 14.3

G. Occupational Safety and Health Administration (OSHA)

1. Type 1 Industrial Metal Ladders

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Sustainability**:

1. Refer to Section 01 81 13 – Sustainable Design Requirements.
2. Refer to Part 2 herein.

1.4 SUBMITTALS

A. Refer to Section 01 25 00 – Substitutions and Deviation Procedures.

B. Refer to Section 01 81 13 – Project Sustainability Requirements for sustainability related submittal requirements.

C. Shop drawings: Submit complete shop drawings indicating profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories for all fabricated items included hereunder. Include erection drawings, elevations and details where applicable. Indicate welded connections using standard AWS welding symbols. Indicate net weld lengths.

D. Descriptive data: Submit complete data for manufactured items.

1.5 QUALITY ASSURANCE

A. Refer to Section 01 45 00 - Quality Control.

B. **Contractor** /Installer/Fabricator shall have been in business for **five (5)** years. providing/installing/finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Section 01 66 00 - Product Delivery, Storage and Handling Requirements.

B. Deliver all parts ready for erection; store in close proximity to final locations.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

1.8 PRODUCT DESCRIPTION

A. The systems are aluminum assembly ladders, designed to be permanently attached top, middle & bottom.

1.9 GUARANTEE / WARRANTY

A. Refer to Section 01 78 00 – Closeout Submittals for as-built drawings and record documents.

B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK / SECTIONS

A. Related work includes, but is not limited to the following:

1. Wall construction
2. Roof construction
3. Floor construction

B. Related Sections include, but are not limited to the following:

1. Section 01 74 19 – Construction Waste Management and Disposal-Recycling
2. Section 01 81 13 – Project Sustainability Requirements
3. Section 05 50 00 - Miscellaneous Metal Fabrications
4. Section 07 72 33 - Roof Hatches, Safety Railings and Curbs
5. Section 09 22 16 – Non-Structural Metal Framing

PART 2 – **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable Manufacturer shall be one of the following and as herein listed and in drawings:

1. O'KEEFE Inc., www.okeeffes.com, (888) 653-3333
2. ALACO Ladder Company, www.alacoladder.com (909) 591 – 7561
3. PRECISION Stair Corp., www.precisionladders.com (800) 225 - 7814
4. Reviewed Equivalent by Architect**.**

a. Substitutions and Deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to specifications Section 01300 – Submittals, Substitutions and Deviations
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturer's specifications and recommendations and as required in accordance with OSHA standards.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Fixed Access Ladder – Interior

1. Manufacturer: O'Keefe, Inc.

2. Product Model: 500, with safety post extension
3. Type: Access to roof access hatch
4. Angle: Vertical, 90°
5. Extent: To underside of roof at roof hatch
6. Height: ±14′-0″ (field verify)
7. Construction:
    a. Material: Aluminum Alloy 6063-T6
    b. Rungs: 1-1/4″ sq. x 18-3/8″ extruded serrated aluminum
    c. Mounting brackets:
        1. Floor: (2) 4″ x 1-3/8″ x 3/16″ aluminum angles
        2. Wall: (2) 5-1/2″ x 4-3/4″ x 9″ wide x 3/16″ thick aluminum wall brackets
    d. Channel Side Rails: 3″ x 1″ x 1/8″ thick aluminum channel
        1. Extension: Verify in field to fit below hatch
    e. Finish: Mill Finish Aluminum

PART 3 – **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Section 01 31 13 – Project Coordination

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Obtain **Architect's** approval prior to site cutting or making adjustments not scheduled.

C. Make provision for erection loads with temporary bracing. Keep work in alignment.

D. Supply items required to be cast into concrete or embedded in masonry with setting templates, for installation under appropriate Sections.

3.4 FABRICATION

A. Verify dimensions on site prior to shop fabrication.

B. Fabricate items with joints tightly fitted and secured.

C. Fit and shop assemble in largest practical sections, for delivery to site.

D. Grind exposed welds flush and smooth with adjacent finished surface.

1. All edges shall be smooth to small uniform radius.

E. Exposed mechanical fastenings:

1. Flush countersunk screws or bolts; unobtrusively located; consistent with design of structure, except where specifically noted otherwise.

F. Make exposed joints butt tight, flush, and hairline.

G. Supply components required for anchorage of metal fabrications.

1. Fabricate anchorage and related components of same material and finish as metal fabrication, except where specifically noted otherwise.

3.5 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects & in strict accordance with mfg.'s recommendations.

3.6 FIELD QUALITY CONTROL

A. Monitor work to insure installation and assembly are in accordance with applicable standards.

3.7 PROTECTION AND CLEAN UP

A. Refer to Section 01 74 00 - Protection and Cleaning.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner.**

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Section 01 78 00 – Closeout Procedures.

H. Provide record drawings in accordance with Section 01 78 00 – Closeout Procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** Notice of "Certificate of Substantial Completion".

END SECTION 05 51 33

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Structural dimension lumber framing.
B. Exposed timber structural framing.
C. Nonstructural dimension lumber framing.
D. Rough opening framing for doors, windows, and roof openings.
E. Sheathing.
F. Preservative treated wood materials.
G. Fire retardant treated wood materials.
H. Miscellaneous framing and sheathing.
I. Communications and electrical room mounting boards.
J. Concealed wood blocking, nailers, and supports.
K. Drilling, saw cuts, knock-outs and framing for ventilation.
L. Wood sheathing backing at tile walls.
M. Miscellaneous wood nailers, furring, and grounds.
N. Steel hardware and attachment brackets

1.03 RELATED REQUIREMENTS

A. Section 01 61 16 - Volatile Organic Compound (VOC) Content Restrictions.
B. Section 03 30 00 - Cast-in-Place Concrete: Setting anchors in concrete.
C. Section 05 12 00 - Structural Steel Framing: Prefabricated beams and columns for support of wood framing.
D. Section 05 50 00 - Metal Fabrications: Miscellaneous steel connectors and support angles for wood framing.
E. Section 06 17 00 – Shop-Fabricated Structural Wood
F. Section 06 17 33 - Wood I-Joists.
G. Section 06 17 53 - Shop-Fabricated Wood Trusses.
H. Section 06 18 00 - Glued-Laminated Construction.

1.04 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
    1. ASTM A36 - Standard Specification for Carbon Structural Steel.
    2. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
    3. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
    4. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts.
    5. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
    6. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.AWPA - Wood Preservative: American Wood-Preservers’ Association:
        a. U1, Use Category System: User Specification for Treated Wood.
        b. M4, Standard for the Care of Preservative-Treated Wood Products.
    7. AWS B2.1 - Specification for Welding Procedure and Performance Qualification.
    8. AWS D1.1 - Structural Welding Code - Steel.
    9. ICC (CBC) –California Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
    10. ICC (IECC) - International Energy Conservation Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

11. NDS – National Design Specification for Wood Construction
12. SDPWS - Special Design Provisions for Wind & Seismic
13. PS 1 - Structural Plywood.
14. PS 2 - Performance Standard for Wood Structural Panels.
15. PS 20 - American Softwood Lumber Standard.
16. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber.
17. WCLIB - Standard Grading Rules for West Coast Lumber No. 17.
18. WWPA - Western Lumber Grading Rules.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.
B. Certification:
   1. Preservative Treated Wood: Certification for waterborne preservative and that moisture content was reduced to 19 percent maximum, after treatment.
C. Shop-fabricated structural wood: Submit manufacturer's published structural data including span tables, marked to indicate which sizes and grades are being used; if shop-fabricated structural wood is being substituted for dimension lumber or timbers, submit grading agency structural tables marked for comparison.
D. Manufacturer's Certificate: Certify that wood products supplied for rough carpentry meet or exceed specified requirements.
E. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.
F. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1 and dated no more than 12 months before start of scheduled welding work.[PS1]

1.06 QUALITY ASSURANCE

A. General:
   1. Coordinate the work of all trades to ensure proper placement of all materials, anchors, etc., as well as providing for openings and anchors for the installation of surface mounted materials and equipment.
   2. Qualifications for Workers: Provide sufficient skilled workers and supervisors who shall be present at all times during execution of this portion of the work and who shall be thoroughly familiar with the type of construction involved and the materials and techniques specified.
   3. Rejection: In the acceptance or rejection of rough carpentry, no allowance will be made for lack of skill on the part of the workers.
B. Tests and Inspections:
   1. A testing program is required prior to start of construction. Testing program to be done in Compliance with the CBC requirements and in collaboration with Testing Laboratory, Design team, contractor, owner and submitted for review by the agency in charge of building enforcement. Requirements below are minimum requirements; additional requirements may be required in final testing program.
C. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1 and no more than 12 months before start of scheduled welding work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. General: Cover wood products to protect against moisture. Support stacked products to prevent deformation and to allow air circulation.
B. Protection:
   1. After delivery, store all materials off the ground, covered, and in such a manner as to ensure proper ventilation and drainage and to protect against damage and the weather. Maintain wood at the maximum moisture levels indicated in Materials Section.
   2. Keep all material clearly identified with all grade marks legible; keep all damaged material clearly identified as damaged, and separately store to prevent its inadvertent use. Do not allow installation of damaged or otherwise non-complying material.
   3. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, and installation.

4. Use all means necessary to protect the installed work and materials of all other trades.
5. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no additional cost to the Owner.

1.08 WARRANTY

A. See Section 01 78 00 - Closeout Submittals for additional warranty requirements.
B. Correct defective work within a two-year period commencing on Date of Substantial Completion.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Dimension Lumber:
   1. Meet requirements of following minimum grades. All grades shall be per WCLIB Grading Rules No. 17 or WWPA Western Lumber Grading Rules. Species Combination shall be Douglas Fir – Larch. Douglas Fir – Larch (North) and Douglas Fir (South) are not permitted without approval from the structural engineer.
   2. Furnish S4S unless otherwise noted.

2.02 SOURCE QUALITY CONTROL

A. Grade Mark each piece of lumber. Marking must be done by recognized agency.
   1. Douglas Fir shall bear WCLIB or WWPA grade stamp.
   2. Pressure treated Douglas Fir shall bear AWPA Quality mark.
B. Wood Sheathing: Each panel shall be legibly identified as to type, grade and species by APA grade. If plies are spliced, the slope of the scarf shall not be steeper than 1:8. White pockets will not be permitted in face plies.

2.03 DIMENSION LUMBER FOR CONCEALED APPLICATIONS

A. Grading Agency: Western Wood Products Association; WWPA or West Coast Lumber Inspection Bureau; WCLIB.
B. Sizes: Size to conform to rules of governing standard. Sizes shown are nominal unless otherwise noted.
C. Materials:
   1. Dimensional Lumber and Timbers:
      a. Maximum Moisture Content at Initial Use: As indicated on the Drawings
      b. Species: As indicated on the Drawings.
      c. Grade: As indicated on the Drawings.
D. Maximum Moisture Content “at Initial Use” shall be that point at which nails, screws, bolts, split rings, shear plates or other fasteners or the holes for said fasteners are placed in the wood.
E. All dimension lumber is assumed to be enclosed in the dry building envelope in the final service condition, unless noted otherwise, and free to dry to moisture content less than 19%.
F. All studs, plates, joists, rafters and beams 3x and thicker shall be free of heart center in accordance with the specified grading standards.

2.04 DIMENSION LUMBER FOR EXPOSED EXTERIOR APPLICATIONS

A. Submit manufacturer's certificate that products meet or exceed specified requirements, in lieu of grade stamping.
B. Sizes: Size to conform to rules of governing standard. Sizes shown are nominal unless otherwise noted.
C. Materials:
   1. Dimensional Lumber and Timbers:
      a. Maximum Moisture Content at Initial Use: As indicated on the Drawings.
      b. Species: As indicated on the Drawings.
      c. Grade: As indicated on the Drawings.
D. All studs, plates, joists, rafters and beams 3x and thicker shall be free of heart center in accordance with the specified grading standards.

2.05 SHOP-FABRICATED STRUCTURAL WOOD

A. At Contractor's option, shop-fabricated structural wood may be substituted for concealed dimension lumber and timbers.
B. Shop-fabricated structural wood: Factory fabricated beams, headers, and columns, of sizes and types indicated on drawings; structural capacity as published by manufacturer.
   1. Columns: Use laminated veneer lumber, laminated strand lumber, or parallel strand lumber with manufacturer's published modulus of elasticity, E: 1,800,000 psi, minimum.
   2. Beams: Use laminated veneer lumber, laminated strand lumber, or parallel strand lumber with manufacturer's published modulus of elasticity, E: 1,800,000 psi, minimum.
   3. Headers Not Longer Than 48 inches: Use laminated veneer lumber, laminated strand lumber, or parallel strand lumber.
   4. Products:
      a. Boise Cascade Company: www.bc.com.
      b. RedBuilt LLC: www.redbuilt.com.
      c. Weyerhaeuser Company: www.weyerhaeuser.com.
      d. Substitutions: See Section 01 60 00 - Product Requirements.

2.06 WOOD SHEATHING

A. Floor Sheathing : PS 1 or PS 2 APA rated sheathing.
   1. Thickness and Type: As indicated on Drawings.
   2. Glue: Exterior
   3. Edges: Tongue and groove.
B. Roof Sheathing : PS 1 or PS 2, APA rated sheathing.
   1. Thickness and Type: As indicated on Drawings.
   2. Glue: Exterior
   3. Edges: Square.
C. Wall Sheathing : PS 1 or PS 2, APA rated sheathing.
   1. Thickness and Type: As indicated on Drawings.
   2. Glue: Exterior
   3. Edges: Square.
D. Communications and Electrical Room Mounting Boards: PS 1 A-D plywood, or medium density fiberboard; 3/4 inch thick; flame spread index of 25 or less, smoke developed index of 450 or less, when tested in accordance with ASTM E84.
E. Other Applications:
   1. Where indicated on the Architectural Drawings as interior wall backing behind tile and in all toilet rooms behind sheet rock, to be C-C APA rated sheathing with exterior glue. Thickness shall be 5/8-inch at all locations.
   2. Flooring: C-C APA Performance rated tongue and groove with exterior glue. Thickness type and grade shall be as indicated on the Drawings.
   3. Plywood Concealed From View But Located Within Exterior Enclosure: PS 1, C-C Plugged or better, Exterior grade.
   4. Plywood Exposed to View But Not Exposed to Weather: PS 1, A-D, or better.
   5. Other Locations: PS 1, C-D Plugged or better.

2.07 ACCESSORIES

A. Rough Hardware Fastenings and Connections: All types including bolts, lag screws, nails, spikes, screws, washers and other rough hardware, of kinds that may be purchased and that require no further fabrication, shall be furnished and installed for all finish and rough carpentry and shall conform to NDS Standards and dimensions. All hardware exposed to weather shall be hot-dipped galvanized per ASTM A153 Standards. All nails used into pressure treated lumber shall be hot-dipped galvanized per ASTM A153 or stainless steel.
   1. Common wire nails or spikes shall be used unless noted otherwise on the Drawings. Box nails and sinker nails are not permitted. Vinyl coating is permitted on nails when not exposed to weather. Nails and staples shall conform to the requirements of the CBC.
   2. Bolts: Bolt material shall conform to ASTM A307, Grade A. Bolt dimensions shall conform to ANSI/ASME B18.2.1 with hex head of sizes indicated.

3. Lag Screws: Lag screws shall conform to ASTM 307, Grade A. All lag screws shall have hex heads where exposed.
4. Washers: Standard flat washers shall conform to ANSI B18.22.1, Type A, Wide Pattern. Steel plate washers shall be Simpson BP or BPS or equivalent. Malleable iron washers shall be standard malleable iron washers.
5. Power-Actuated Fasteners: Tempered steel pins with special corrosive resistant plating or coating. Pins shall have guide washers to accurately control penetration. Fastening shall be accomplished by low-velocity piston-driven power activated tool. Pins and tool shall be as manufactured by Hilti Fastening Systems or equivalent. See Drawings for size, type and embedment.
6. Expansion Anchors: See Section 03 30 00 for anchors to concrete and Section 04 20 00 for anchors to masonry.
7. Adhesive Anchors: See Section 03 30 00 for anchors to concrete and Section 04 20 00 for anchors to masonry.
8. Fabricated Metal Timber Framing Connectors: Connectors shall be punched for nailing and bolting. Nails and nailing shall conform to the manufacturer's instructions with a nail provided for each punched hole. All connectors must have specific ICC approval. Types as noted on Drawings are Simpson Strong-Tie. Hardware suppliers other than Simpson shall submit a comparative material list itemizing product designation, load rating and supported member size for review by the enforcement agency and the Structural Engineer.
    a. For contact with preservative treated wood in exposed locations, provide minimum G185 galvanizing complying with ASTM A653.
9. Steel Connections and Brackets: ASTM A36 weldable quality, galvanize per ASTM A123 or ASTM A666, Type 304 stainless steel where indicated on the Drawings.
    a. Fabricate steel hardware and connections with joints neatly fitted, welded, and ground smooth
    b. Welding: Perform welding in accordance with AWS D1.1.
10. Anchor Bolts: ASTM F3125, Type 1 heavy hex high strength bolts and ASTM A563 nuts; hot-dip galvanized to meet requirements of ASTM A153, matching washers.

B. Building Paper: Fed. Spec. UU-B-790a, Type I, Grade B (15 lb. min. unless noted elsewhere).
C. Subfloor Adhesives: Gap-filling construction adhesive for bonding wood structural panels to wood-based floor system framing; complying with ASTM D3498.
D. General Purpose Construction Adhesives: Comply with ASTM C557.
E. Radiant Barrier: Aluminum radiant barrier; designed for factory laminating to roof sheathing.
    1. Products:
        a. Louisiana-Pacific Corporation; TechShield: www.lpcorp.com/#sle.
        b. Substitutions: See Section 01 60 00 - Product Requirements.

2.08 FACTORY WOOD TREATMENT

A. Treated Lumber and Plywood: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.
    1. Fire-Retardant Treated Wood: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.
    2. Preservative-Treated Wood: Provide lumber and plywood marked or stamped by an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards.
B. Fire Retardant Treatment:
    1. Exterior Type: AWPA U1, Category UCFB, Commodity Specification H, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 when tested in accordance with ASTM E84, with no evidence of significant combustion when test is extended for an additional 20 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898.
        a. Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
        b. Treat exterior rough carpentry items.

c. Treat exposed exterior rough carpentry items, including stairways, balconies, and covered walkways
d. Do not use treated wood in direct contact with the ground.

2. Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 when tested in accordance with ASTM E84, with no evidence of significant combustion when test is extended for an additional 20 minutes.
   a. Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
   b. Interior rough carpentry items are to be fire retardant treated.
   c. Treat rough carpentry items as indicated.
   d. Do not use treated wood in applications exposed to weather or where the wood may become wet.

C. Preservative Treatment:
1. All wood in contact with concrete or masonry shall be preservative treated.
2. Preservative Pressure Treatment of Lumber Above Grade: AWPA U1, Use Category UC3B, Commodity Specification A using waterborne preservative.
   a. Kiln dry lumber after treatment to maximum moisture content of 19 percent.
3. Preservative Pressure Treatment of Plywood Above Grade: AWPA U1, Use Category UC2 and UC3B, Commodity Specification F using waterborne preservative.
   a. Kiln dry plywood after treatment to maximum moisture content of 19 percent.
4. Preservative Pressure Treatment of Lumber in Contact with Soil: AWPA U1, Use Category UC4A, Commodity Specification A using waterborne preservative.
   a. Preservative for Field Application to Cut Surfaces: As recommended by manufacturer of factory treatment chemicals for brush-application in the field.
   b. Restrictions: Do not use lumber or plywood treated with chromated copper arsenate (CCA) in exposed exterior applications subject to leaching.

PART 3 - EXECUTION

3.01 PREPARATION

A. Inspection:
1. Prior to all work of this Section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly proceed.
2. Verify that rough carpentry may be performed in strict accordance with the original design and all pertinent codes and regulations.

B. Discrepancies: In the event of discrepancy, immediately notify Architect. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

C. Coordinate installation of rough carpentry members specified in other sections.

3.02 INSTALLATION - GENERAL

A. Protect all work in progress and all work installed, as well as the work of all other trades. Any work damaged as a result of the work under this section shall be corrected to its original condition or replaced if directed by the Architect at no increase in cost to the Owner.

B. Ventilation: Contractor shall include all labor and materials necessary to provide ventilation requirements of roof overhangs, eaves, attics, and all other components of the building required by codes to be ventilated. Work shall include removing knock-outs in wood I-joists for cross ventilation, drilling of blocking, wood sheathing, and other wooden components of the structure necessary to comply with requirements of the CBC for ventilation of buildings.

C. Select material sizes to minimize waste.

D. Reuse scrap to the greatest extent possible; clearly separate scrap for use on site as accessory components, including: shims, bracing, and blocking.

E. General: All rough carpentry shall produce joints true, tight, and well nailed with all members assembled in accordance with the Drawings and with all pertinent codes and regulations.

F. Selection of Lumber Pieces: Carefully select all members. Select individual pieces so that knots and obvious defects will not interfere with placing bolts or proper nailing or making proper connections. Cut out and discard all defects which will render a piece unable to serve its intended function.
G. Lumber may be rejected by the Architect, whether or not it has been installed, for excessive warp, twist, bow, crook, mildew, fungus, or mold, as well as for improper cutting and fitting.
H. Shimming: do not shim any framing component.
I. Care shall be taken that notching and boring of members is in strict conformance with the Drawings and that there are no over-cuts.
J. Where treated wood is used on interior, provide temporary ventilation during and immediately after installation sufficient to remove indoor air contaminants.

3.03 INSTALLATION - FRAMING AND ROUGH CARPENTY

A. Set structural members level, plumb, and true to line. Discard pieces with defects that would lower required strength or result in unacceptable appearance of exposed members.
B. Make provisions for temporary construction loads, and provide temporary bracing sufficient to maintain structure in true alignment and safe condition until completion of erection and installation of permanent bracing.
C. Sills: Shall be in long lengths of sizes shown, fastened with anchor bolts as indicated, a minimum of two anchor bolts per piece. Place steel plate washers (but not standard flat or malleable iron washers) under nuts bearing on wood. Set sills level and true.
D. Studs, Posts and Columns: Shall be full length. Corners shall be as detailed. Partitions or walls containing plumbing, heating or other piping shall be so formed as to give proper clearance for materials. Cut members as required to provide full bearing at ends. Connect to structure as indicated.
E. Plates: Shall be full length of wall segment or 12-foot minimum and spliced as shown.
F. Joists and Beams: Shall be full span length and spliced over bearings unless shown otherwise. Install with crown side up. Beams or headers indicated to be built up of two or more joists shall be fabricated on the job using full length members. For two piece 2x members, stitch nail pieces together with 16d common nails spaced not over 12 inches c.c. and staggered. Clinch nails protruding through members. For three or more piece members, stitch bolt pieces together with ½" bolts spaced not over 12 inches c.c. and staggered.
    1. Provide double joists and headers at all openings through roof unless otherwise shown on Drawings.
    2. Provide typical headers at all openings through walls where one or more studs are required to be cut. For penetration through walls narrower than stud spacing, provide solid blocking on all sides for fastening finish materials.

3.04 INSTALLATION - BLOCKING, NAILERS, AND SUPPORTS

A. Blocking: Blocking shall be same thickness and width of studs or joists unless shown otherwise. Blocking shall not be spaced over 8'-0" c.c. Install fire blocking in accordance with CBC. Horizontal fire blocking in walls shall be placed at floor lines and ceiling lines unless noted otherwise. Install blocking at all sheathing joints where noted on the Drawings. Install wall width full height solid blocking at floor joists beneath all posts in walls. Blocking shall be installed around all wall, floor and roof penetrations.
B. Provide the following specific nonstructural framing and blocking:
    1. Cabinets and shelf supports.
    2. Wall brackets.
    3. Handrails.
    4. Grab bars.
    5. Towel and bath accessories.
    6. Wall-mounted door stops.
    7. Chalkboards and marker boards.
    8. Wall paneling and trim.
    9. Joints of rigid wall coverings that occur between studs.

3.05 INSTALLATION - SHEATHING

A. Wood Sheathing: Install to pattern indicated and provide blocking at joints where noted on the Drawings. Center all joints over bearing supports. Nail to framing as indicated. Install wood sheathing with face plies perpendicular to joists unless indicated otherwise. Wall wood sheathing shall continue uninterrupted by ceilings or soffit from floor to floor or floor to roof unless specifically detailed on the Structural Drawings.

3.06 INSTALLATION - FASTENERS

A. Nailing: Except as otherwise indicated on Drawings or specified, all nailing shall be as required by CBC Table 2304.10.2 - Fastening Schedule.
   1. Nails or Spikes shall be common wire unless noted otherwise. Penetration of nails or spikes shall be one-half the length of the nail or spike into the piece receiving the point. However, to connect pieces 2" in thickness, 16d nails shall be used unless noted otherwise.
      a. Bore holes for nails wherever necessary to prevent splitting.
      b. Use finish or casing for finish work.
      c. Use of machine nailing is subject to a satisfactory installation of nails. Minimum edge distances shall be maintained. Nails installed through sheathing with nail guns shall not penetrate into the outer plies deeper than hand nailing. Submittal of guns and nails is required.
      d. All nailing into Pressure-Treated lumber shall utilize hot-dipped zinc coated galvanized nails or stainless steel nails per CBC.

B. Bolts and Lag Screws: Bolts shall be sizes indicated on Drawings. Holes for bolts shall be 1/16-inch larger than the bolt diameter. Malleable, Steel plate or standard flat washers shall be used where heads or nuts would otherwise bear directly on wood surfaces. Malleable or plate washers shall be used on all anchor bolts. Cut washers are not permitted. Lag screws shall be screwed (not driven) into place. For the shank, holes shall be bored the same depth and diameter as shank. For threaded portion, holes shall be pre-drilled to 50% of the shank diameter, except as follows:
   1. 7/8” Diameter Lag Screw: Pre-Drill 1/2” diameter hole.
   2. 1” Diameter Lag Screw: Pre-Drill 5/8” diameter hole.
   3. Soap Lag screws prior to installation.
   4. Tighten all bolts and screws before closing in.

C. Framing Devices: Install according to the manufacturer’s instructions unless otherwise noted.

3.07 INSTALLATION, MISCELLANEOUS

A. Install all items under other sections specified to be furnished and installed in other sections which relate to the rough carpentry work.

B. Miscellaneous Carpentry Work not included under other sections but, indicated or required yet not specified elsewhere shall be furnished and installed hereunder, including appropriate fastening devices. Contractor shall provide miscellaneous carpentry work for all sections and divisions of work identified.

C. Wood Furring, Stripping: Install as shown or required to provide nailing materials or passage of pipes, conduits, etc., not otherwise accommodated including ceiling stripping for gypsum drywall construction.

D. Bridging: Space not over 8'-0" c.c. for spans over 16'-0". Joists 8 inches or less in depth shall not require bridging unless specifically indicated.

E. Solid Wood Backing: Solid wood backing shall be provided for all wall and ceiling finishes and for supporting of mounted items for all trades, including but not limited to metal toilet partitions, toilet room accessories, frames, cabinets, casework, mirrors, trim, applied wall finishes, athletic equipment, food service equipment, piping, conduit, ducts, etc. Contractor shall coordinate placement of backing and supports with Subcontractor supplying mounted items.

F. Building Paper: Install in all locations indicated except where included in other sections of the specifications.

G. Cant Strips and Crickets: Shape to sizes shown. Rigidly fasten to construction. Form neat mitered corners.

H. Wood Sheathing Backing: All toilet rooms, restrooms, single or joint occupancy shall have all walls backed with 5/8-inch thick wood sheathing with no surface voids. Install sheathing between the

framing members and wallboard. The same wood sheathing shall also be provided and installed at all tile locations. At tile locations wood sheathing shall be installed between the framing members and the resin-cement backing board.

I. Wood Curbs for Equipment: Construct all wood curbs for roof mounted equipment as detailed. Provide all miscellaneous blocking, bracing, supports, and other wood items as shown or required to complete the work.

J. Plywood Backing for Electrical, telephone, and similar types of wall mounted equipment shall be provided hereunder where required. Plywood shall be 3/4-inch thick exterior A-C plywood with 'A' face exposed.

K. Fire/Draft Stops: Construct fire and drafts stops in furred attic spaces where indicated or required by CBC code. Unless otherwise indicated on Drawings construct of not less than 5/8-inch Type 'X' gypsum wallboard or ½" wood sheathing, adequately supported by 2x4's at 24 inches c.c., braced diagonally to the roof structure. Draft stop and installation work shall conform to code requirements.

L. Shoring and Bracing: Shore or brace for temporary support of all work as required during the construction period except any shoring and bracing specified and included under other sections of these specifications.

Temporary Enclosures: Provide and maintain all barricades and enclosures required to protect the work in progress.

M. Protect all work in progress and all work installed, as well as the work of all other trades. Any work damaged as a result of the work under this section shall be corrected to its original condition or replaced if directed by the Architect at no increase in cost to the Owner.

N. Ventilation: Contractor shall include all labor and materials necessary to provide ventilation requirements of roof overhangs, eaves, attics, and all other components of the building required by codes to be ventilated. Work shall include removing knock-outs in wood I-joists for cross ventilation, drilling of blocking, wood sheathing, and other wooden components of the structure necessary to comply with requirements of the CBC for ventilation of buildings.

3.08 SITE APPLIED WOOD TREATMENT

A. Apply preservative treatment compatible with factory applied treatment at site-sawn cuts, complying with manufacturer's instructions.

B. Allow preservative to dry prior to erecting members.

3.09 TOLERANCES

A. Framing Members: 1/4 inch from true position, maximum.

B. Surface Flatness of Floor: 1/8 inch in 10 feet maximum, and 1/4 inch in 30 feet maximum.

C. Variation from Plane, Other than Floors: 1/4 inch in 10 feet maximum, and 1/4 inch in 30 feet maximum.

3.10 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements for additional requirements.

3.11 CLEANING

A. Waste Disposal: See Section 01 74 19 - Construction Waste Management and Disposal.
   1. Comply with applicable regulations.
   2. Do not burn scrap on project site.
   3. Do not burn scraps that have been pressure treated.
   4. Do not send materials treated with pentachlorophenol, CCA, or ACA to co-generation facilities or "waste-to-energy" facilities.

B. Do not leave wood, shavings, sawdust, etc. on the ground or buried in fill.

C. Prevent sawdust and wood shavings from entering the storm drainage system.

3.12 SCHEDULES

A. Lower Level Floor Joists: MSR Lumber.

B. Upper Level Floor and Ceiling Joists, Rafters: Spruce-Pine-Fir, No. 2 Grade.

C. Exposed Beams: Western Cedar, Select Structural Grade.

06 17 00
SHOP-FABRICATED STRUCTURAL WOOD
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Shop-fabricated structural wood (SFSW).
B. All blocking, bridging, etc., for the installation of members.
C. Clips, angles, straps, hangers, etc., incidental to installation of members.
D. Nails, bolts, washers and other fasteners used for erecting and securing members.

1.03 RELATED REQUIREMENTS

A. Section 01 61 16 - Volatile Organic Compound (VOC) Content Restrictions.
B. Section 06 10 00 – Rough Carpentry.
C. Section 06 17 13 – Wood I-Joists.
D. Section 06 17 53 – Shop-Fabricated Wood Trusses.
E. Section 06 18 00 – Glued-Laminated Construction

1.04 REFERENCE STANDARDS

A. AITC 117 - Standard Specifications for Structural Glued Laminated Timber of Softwood Species.
B. AITC A190.1 - American National Standard for Wood Products - Structural Glued Laminated Timber.
C. ASTM D2559 - Standard Specification for Adhesives for Bonded Structural Wood Products for Use Under Exterior Exposure Conditions.
D. ASTM D2898 - Standard Practice for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing.
E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
F. AWPA U1 - Use Category System: User Specification for Treated Wood.
G. AWS B2.1 - Specification for Welding Procedure and Performance Qualification.
H. AWS D1.1 - Structural Welding Code - Steel.
I. FM (AG) - FM Approval Guide Current Edition.
J. NDS – National Design Specification for Wood Construction
K. SDPWS - Special Design Provisions for Wind & Seismic
L. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber.
M. UL (DIR) - Online Certifications Directory Current Edition.
N. UL (FRD) - Fire Resistance Directory Current Edition.
O. WCLIB - Standard Grading Rules for West Coast Lumber No. 17.
P. WWPA - Western Lumber Grading Rules.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
B. Product Data: Provide technical data on wood preservative materials, application technique and resultant performance information.
C. Shop Drawings: Indicate framing system, sizes and spacing of members, loads and cambers, bearing and anchor details, bridging and bracing, and framed openings.
    1. Show large scale details of connections, connectors and other accessories.
    2. Indicate species and laminating combination, adhesive type, and other variables in required work.
D. Manufacturer's Qualification Statement.

1.06 QUALITY ASSURANCE

A. Manufacturing facility shall be approved by an independent inspection agency approved by the International Accreditation Service, Inc. (IAS).
B. Each Shop-fabricated structural wood member shall be stamped with an identifying mark. Mark shall include all pertinent data, such as grade and species of lumber, plant number, independent inspection agency, logo, ICC ES report number and other such information as may be required.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver undamaged products to site in manufacturer's protective wrappings with legends intact. Store on site secure from weather, soil and physical damage.
B. Transport, handle and store in strict accordance with the manufacturer's recommendations. Use padded, non-marring slings.
C. Architectural Appearance Grade members shall be shipped, handled and stored with complete weather and damage protection wrapping. Maintain wrappings in place until immediately prior to deck installation.
D. Industrial Appearance Shop-fabricated structural wood members shall be wrapped in a water resistant covering during transit. Contractor shall be responsible for protection during hauling and unloading at job site.
E. If members must be stored prior to erection, they shall be stored in a vertical position off the ground, covered and protected from weather.
F. Protect members to AITC requirements for not wrapped.
G. Leave individual wrapping in place until finishing occurs.
H. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

PART 2 - PRODUCTS

2.01 SHOP-FABRICATED STRUCTURAL WOOD (SFSW)

A. SFSW members shall be of the types and sizes indicated on Drawings and as specified here. Shop-fabricated structural wood shall have specific ICC approval, and shall meet all specified structural design properties. Proposed SFSW members may be used only if equivalent, in the Architect's opinion, to the SFSW specified.

2.02 MATERIALS

A. Lumber:
   1. Laminated Veneer Lumber (LVL): LVL shall be manufactured in accordance with the manufacturer’s ICC-ES Report and have properties equal to or greater than as specified on the Drawings. Lumber species, thickness, etc. shall be such that the nailing capacity is equal to or better than that specified.
   2. Parallel Strand Lumber (PSL): PSL shall be manufactured in accordance with the manufacturer’s ICC-ES Report and have properties equal to or greater than as specified on the Drawings. Lumber species, thickness, etc. shall be such that the nailing capacity is equal to or better than that specified.
   3. Laminated Strand Lumber (LSL): LSL shall be manufactured in accordance with the manufacturer’s ICC-ES Report and have properties equal to or greater than as specified on the Drawings. Lumber species, thickness, etc. shall be such that the nailing capacity is equal to or better than that specified.
   4. Various SFSW products shall only be used where specifically indicated on the Drawings. No substitutions shall be made without written approval.
B. Adhesive:
   1. According to manufacturers ICC ES Report.
C. Types:
   1. Sizes, properties and additional information as shown on the Drawings.
D. Laminating Adhesive: Tested for wet/exterior service in accordance with ASTM D2559.

2.03 FABRICATION

A. Fabrication shall be in compliance with manufacturer’s ICC ES Report.
   1. Fabrication shall be in accordance with best practices with adequate plant equipment and under supervision of properly qualified personnel.
   2. Moisture content of components at time of gluing shall comply with the manufacturer’s ICC ES Report.
B. Boring of holes in members shall be in strict conformance with the Drawings. Notching is prohibited except where specifically detailed.

C. Verify dimensions and site conditions prior to fabrication.
D. Cut and fit members accurately to length to achieve tight joint fit.
E. Field cuts and holes in preservative treated members shall be preservative treated and sealed.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Prior to installation of the work of this Section, carefully inspect and verify that the installed work of all other trades is complete to the point where this installation may properly commence.
B. Verify that specified items may be installed in accordance with the approved design.
C. In the event of a discrepancy, immediately notify Architect. Do not proceed in discrepant areas until discrepancies have been fully resolved.

3.02 PREPARATION

A. Coordinate placement of bearing items.

3.03 PROTECTION

A. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.
B. In the event of damage, make all repairs and replacements necessary to the approval of the Architect at no additional cost to the Owner.

3.04 HANDLING

A. Use equipment and methods that avoid damages that may impair strength of SFSW members. Sharp instruments and unprotected wire rope, chain slings and the like shall not be permitted.

3.05 ERECTION

A. Shop-fabricated structural wood members are to be erected and installed in accordance with the Drawings and manufacturer's recommendations.
B. Set structural members level and plumb, in correct positions or sloped where indicated.
C. Provide temporary bracing and anchorage to hold members in place until permanently secured.
D. Fit members together accurately without trimming, cutting, splicing, or other unauthorized modification.
E. Swab and seal the interior wood surfaces of field drilled holes in members with primer.

3.06 TOLERANCES

A. Framing Members: 1/2 inch maximum from true position.

3.07 CLEANUP

A. Keep premises free from accumulated waste materials, rubbish and debris resulting from this work. Upon completion, remove tools, appliances, surplus materials, waste materials, rubbish, debris and accessory items used in or resulting from said Work, and legally dispose of off the site.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Wood I-joists for roof and floor framing.
B. Bridging, bracing, and anchorage.
C. Framing for openings.
D. Preservative treatment of wood.

1.03 RELATED REQUIREMENTS

A. Section 05 12 00 – Structural Steel Framing
B. Section 01 61 16 - Volatile Organic Compound (VOC) Content Restrictions.
C. Section 06 10 00 - Rough Carpentry
D. Section 06 17 00 – Shop-Fabricated Structural Wood
E. Section 06 17 36 – Metal-Web Wood Joists
F. Section 06 17 53 – Shop-Fabricated Wood Trusses
G. Section 06 18 00 – Glued-Laminated Construction

1.04 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
    1. ASTM D2559 - Standard Specification for Adhesives for Bonded Structural Wood Products for Use Under Exterior Exposure Conditions.
    2. ASTM D5055 - Standard Specification for Establishing and Monitoring Structural Capacities of Prefabricated Wood I-Joists.
    3. AWPA U1 - Use Category System: User Specification for Treated Wood.
    4. PS 1 - Structural Plywood.
    5. PS 2 - Performance Standard for Wood Structural Panels.

1.05 DESIGN REQUIREMENTS

A. As indicated on the Drawings.

1.06 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
B. Product Data: Manufacturer's literature describing materials, dimensions, allowable spans and spacings, bearing and anchor details, bridging and bracing requirements, and installation instructions; identify independent inspection agency.
C. Shop Drawings: Where indicated on Drawings, show erection plans, sizes, types, and location of wood I-joists. Drawings shall also indicate sizes and location of blocking, hangers, etc., with sufficient detailing to ensure correct installation.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum five years of documented experience.
B. Manufacturing facility shall be approved by an independent inspection agency approved by the International Accreditation Service, Inc. (IAS).
C. All joists shall bear a stamp indicating the plant number, independent inspection agency, logo and ICC ES Report number.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in manufacturer's original packaging with manufacturer's name and product identification intact and legible.
B. Protect products from damage due to weather and breakage.
C. Protect joists from warping or other distortion by stacking in upright position, braced to resist movement, with air circulation under coverings and around stacks.
D. Handle individual joists in the upright position.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Wood I-Joists:
   1. Boise Cascade Company: www.bc.com/#sle.
   2. RedBuilt LLC; Redbuilt I-Joist: www.redbuilt.com//#sle.
   3. Weyerhaeuser Company: www.weyerhaeuser.com/#sle.
   4. Substitutions: See Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Wood I-Joists: Solid lumber top and bottom flanges and oriented strand board (OSB) webs bonded together with structural adhesive, with published span rating to meet project requirements.
   1. Span Rating: Established and monitored in accordance with ASTM D5055 by independent inspection agency.
   2. Oriented Strand Board: Comply with PS 2.
   3. Plywood: Comply with PS 1.
   4. Adhesive: Tested for wet/exterior service in accordance with ASTM D2559 and as indicated in the manufacturer's ICC ES Report.
   5. Depth: As indicated on Drawings.
   6. Fabrication Tolerances: Shall be in compliance with manufacturer's ICC ES Report.
   7. Marking: Mark each piece with depth, joist spacing, and allowable span for joist spacing.
   8. Provide bearing stiffeners if required by span rating or joist hanger manufacturer.
B. Joist Hangers: As indicated on the Drawings.
C. Joist Bridging: Type, size and spacing recommended by joist manufacturer or as indicated on the Drawings.
D. Wood Blocking, Plates, and Miscellaneous Framing: As specified in Section 06 10 00 or 06 17 00.
E. Fasteners: Electrogalvanized steel, type to suit application.
F. Bearing Plates: Electrogalvanized steel, unfinished.

2.03 WOOD TREATMENT

A. Factory-Treated Lumber and Plywood: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.
B. Surface-Applied Wood Preservative: As specified in Section 06 10 00.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that supports and openings are ready to receive joists.
B. Verify that field measurements are as indicated on the Drawings.
C. Verify that items are installed in accordance with the approved Drawings.
D. In the event of discrepancy, immediately notify Architect. Do not proceed in discrepant areas until discrepancies have been fully resolved.

3.02 PREPARATION

A. Coordinate placement of bearing items.

3.03 PROTECTION AND HANDLING

A. Protect work and materials of this Section during installation, and protect the installed work and materials of other trades.
B. Use equipment and methods that avoid damages that may impair strength of wood I-joists. Sharp instruments and unprotected wire rope, chain slings and the like shall not be permitted.

3.04 ERECTION

A. Install joists in accordance with the Drawings and manufacturer's instructions.
B. Set structural members level and plumb, in correct position.
C. Make provisions for erection loads and for sufficient temporary bracing to maintain structure plumb and in true alignment until completion of erection and installation of permanent bracing.
D. Do not field cut or alter structural members without approval of Architect.
E. Install permanent bridging and bracing.
F. Install headers and supports to frame openings required.
G. Frame openings between joists with lumber in accordance with Section 06 10 00.
H. Coordinate installation of sheathing/decking with work of this section.

3.05 SITE APPLIED WOOD TREATMENT

A. Apply preservative treatment in accordance with manufacturer's instructions.
B. Brush apply one coat of preservative treatment on wood in contact with cementitious materials and roofing and related metal flashings. Treat site-sawn cuts.
C. Allow preservative to dry prior to erecting members.

3.06 TOLERANCES

A. Framing Members: 1/2 inch maximum, from true position.

3.07 CLEANUP

A. Keep premises free from accumulated waste materials, rubbish and debris resulting from this Work. Upon completion, remove tools, appliances, surplus materials, waste materials, rubbish, debris and accessory items used in or resulting from said Work, and legally dispose of off the site.

END OF SECTION

06 17 53
SHOP-FABRICATED WOOD TRUSSES
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Shop-fabricated wood trusses.
B. Truss bridging.
C. Fire-retardant treatment of wood.
D. Preservative treatment of wood.

1.03 SCOPE

A. Furnish all material, equipment and labor necessary for the prefabrication, delivery and temporary setting of the wood trusses on plate line as shown on the drawings. It shall also include all the miscellaneous parts, including bridging, temporary and permanent bracing, and all related items of hardware.

1.04 RELATED REQUIREMENTS

A. Section 01 61 16 - Volatile Organic Compound (VOC) Content Restrictions.
B. Section 06 10 00 - Rough Carpentry.
C. Section 06 17 00 – Shop-Fabricated Structural Wood
D. Section 06 18 00 – Glued-Laminated Construction.

1.05 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
    1. ANSI/TPI 1 - National Design Standard for Metal-Plate-Connected Wood Truss Construction.
    2. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
    3. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
    4. ASTM D2898 - Standard Practice for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing.
    5. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
    6. AWPA U1 - Use Category System: User Specification for Treated Wood.
    7. NDS – National Design Specification for Wood Construction
    8. SDPWS - Special Design Provisions for Wind & Seismic
    9. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber.
    10. SBCA (BCSI) - Building Component Safety Information: Guide to Good Practice for Handling, Installing, Restraining & Bracing of Metal Plate Connected Wood Trusses.
    11. TPI DSB-89 - Recommended Design Specification for Temporary Bracing of Metal Plate Connected Wood Trusses.
    12. WCLIB - Standard Grading Rules for West Coast Lumber No. 17.
    13. WWPA - Western Lumber Grading Rules.

1.06 DESIGN REQUIREMENTS

A. As indicated on the Drawings.

1.07 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
B. Product Data: Manufacturer's data sheets on plate connectors, bearing plates, bridging and bracing requirements, and metal bracing components.

C. Shop Drawings: Submit shop drawings prior to fabrication or erection. Show truss configurations, sizes, spacing, size and type of plate connectors, cambers, framed openings, bearing and anchor details, and bridging and bracing.
   1. Include identification of engineering software used for design.
   2. Provide shop drawings stamped or sealed by design engineer.
   3. Structural calculations proving capacity to carry the loads shown on the drawings. Calculations shall be signed by a Professional Engineer registered in the State in which the Project is located
D. Designer's Qualification Statement.
E. Fabricator's Qualification Statement.

1.08 QUALITY ASSURANCE

A. Designer Qualifications: Perform design by or under direct supervision of a Professional Engineer experienced in design of this Work and licensed in the State in which the Project is located.
B. Fabricator Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.
C. All trusses shall be marked with the manufacturers name and truss type keyed to the erection plans.
D. All connector plates shall be marked with the manufacturer's name.
E. All trusses shall bear TPI Quality Control marks.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Handle trusses in accordance with SBCA (BCSI).
B. Store trusses in vertical position resting on bearing ends.
C. Time delivery and erection of trusses to avoid extended on-site storage and to avoid delaying work of other trades whose work must follow erection of trusses.
D. Fire-Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

PART 2 - PRODUCTS

2.01 TRUSSES

A. Wood Trusses: Design and fabricate trusses in accordance with ANSI/TPI 1 and to achieve specified design requirements indicated.
   1. Design and fabricate temporary bracing in accordance with TPI DSB-89.
   2. Structural Design:
      a. Comply with applicable code for structural loading criteria.
      b. Design shall account for all loads indicated and all mechanical units in conformance with the referenced codes.
      c. Design and construction of connections shall be in accordance with published approvals by ICC. Heel joint design shall consider the effects of eccentric loading.
      d. Truss layout shall be as shown on the Structural Drawings. Do not deviate without obtaining written approval from the Structural Engineer prior to preparing shop drawings.
      e. Design Trusses in accordance with the design loads and criteria as indicated on the Drawings.
   3. Fire Retardance: Comply with applicable codes.
   4. Decay Resistance: Factory preservative-treated wood.

2.02 MATERIALS

A. Lumber:
   1. Species and Grade: Douglas Fir, WWPA Grade No. 2 and better.
   2. Moisture Content: The moisture content of all lumber shall not exceed 19% nor be less than 7% at the time of fabrication.
B. Steel Connectors: Hot-dipped galvanized steel sheet, ASTM A653 Structural Steel (SS) Grade 33, with G90 coating; die stamped with integral teeth; thickness shall be 20 gauge minimum.
   1. ASTM A666, Type 304 stainless steel sheet may be used in lieu of Hot-dipped galvanized steel sheet.
C. Truss Bridging: Type, size and spacing recommended by truss manufacturer.

2.03 ACCESSORIES

A. Wood Blocking, Bridging, Plates, and Miscellaneous Framing: As specified in Section 06 10 00.
B. Fasteners: Electrogalvanized steel, type to suit application.
C. Bearing Plates: Electrogalvanized steel.

2.04 WOOD TREATMENT

A. Treated Lumber and Plywood: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.
B. Fire-Retardant Treatment, Exterior Type: AWPA U1, Use Category UCFB, Commodity Specification H, chemically treated and pressure impregnated, maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 20 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898; kiln dried after treatment to maximum moisture content of 19 percent for lumber and 15 percent for plywood.
    1. Marking: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.
C. Fire-Retardant Treatment, Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated, maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 20 minutes; kiln dried after treatment to maximum moisture content of 19 percent for lumber and 15 percent for plywood.
    1. Marking: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.
D. Preservative Pressure Treatment of Lumber: AWPA U1, Use Category UC3B, Commodity Specification A using waterborne preservative to 0.25 lb/cu ft retention.
    1. Kiln dry after treatment to maximum moisture content of 19 percent.
    2. Marking: Mark each piece with stamp of an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards.
E. Preservative Pressure Treatment of Plywood: AWPA U1, Use Category UC3B using waterborne preservative to 0.25 lb/cu ft retention.
    1. Kiln dry plywood after treatment to maximum moisture content of 19 percent.
    2. Marking: Mark each piece with stamp of an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards.
F. Surface-Applied Wood Preservative: As specified in Section 06 10 00.

2.05 FABRICATION

A. All items specified to be fabricated hereunder shall be accurately cut or fitted, and rigidly fastened to produce quality trusses in accordance with designs and criteria contained in these specifications and the Structural Drawings.
B. Cut truss members to accurate lengths, angles and sizes to produce close fitting joints with proper wood-to-wood bearing in assembled units.
C. Fabricate metal connector plates to proper size, configuration, thickness and anchorage details required for types of joint designs indicated.
D. Assemble truss members in design configuration indicated using jigs or other means to ensure uniformity and accuracy of assembly with close fitting joints. Position members to produce design camber as required.
E. Truss designer shall oversize connector plates for chord members to account for wood defects like knots, knotholes and greatly distorted grains. Maximum allowable defect size per member shall be 2 square inches. No defects allowed under plates for web members.
F. Built up girder trusses shall be laminated. Laminating requirements shall be according to the Structural Drawings.
G. Gable end trusses shall be 2x verticals at 16" cc typical unless noted otherwise.
H. All hardware required for connecting trusses (Truss to bearing wall or beam, Jack to Hip, Hip to Girder, or Girder to Girder, etc.) shall be designed, detailed and provided by truss fabricator.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated on the Drawings.
B. Verify that supports and openings are ready to receive trusses.
C. In the event of discrepancy, immediately notify Architect. Do not proceed in discrepant areas until discrepancies have been fully resolved.

3.02 PREPARATION

A. Coordinate placement of bearing items.

3.03 PROTECTION

A. Protect work and materials of this Section during installation, and protect the installed work and materials of other trades.
B. In the event of damage, make all repairs and replacement necessary to the approval of the Architect at no additional cost to the Owner.

3.04 ERECTION

A. Hoist units in place by means of proper lifting equipment suited to sizes and types of trusses required, applied at proper lift points as recommended by Fabricator, exercising care not to damage truss members or joints by out-of-place bending or other causes.
B. Install trusses in accordance with manufacturer's instructions, SBCA (BCSI); maintain a copy of applicable documents on site until installation is complete.
C. Erect trusses with planes of truss webs vertical (plumb) and parallel to each other, locate accurately at design spacings indicated.
D. Make provisions for erection loads, and for sufficient temporary bracing to maintain structure plumb, and in true alignment until completion of erection and installation of permanent bracing.
E. Do not field-cut, alter structural members, or remove trusses without approval of the Architect and the Structural Engineer of Record.
F. Install permanent bracing, end pieces, blocking and related components to enable trusses to maintain design spacing, withstand live and dead loads including lateral loads, and to comply with other indicated requirements.
G. Anchor trusses securely at all bearing points to comply with methods and details indicated.
H. Install headers and supports to frame openings required.
I. Frame openings between trusses with lumber in accordance with Section 06 10 00.
J. Coordinate placement of decking with work of this section.
K. After erection, touch-up primed surfaces with primer consistent with shop coat.

3.05 SITE-APPLIED WOOD TREATMENT

A. Treat all site-sawn cuts of pressure-treated wood using same type of treatment (i.e. preservative or fire-retardant).
B. Apply preservative treatment to non-pressure-treated wood wherever it will come into contact with cementitious materials, roofing, asphaltic materials, or metals.
C. Apply fire-retardant treatment to all exposed surfaces after erection where required.
D. Apply treatment in accordance with manufacturer's instructions.
E. Allow field-applied treatment to dry prior to erecting members.

3.06 TOLERANCES

A. Framing Members: 1/2 inch maximum, from true position.

3.07 CLEANUP

A. A. Keep premises free from accumulated waste materials, rubbish and debris resulting from this work. Upon completion, remove tools, appliances, surplus materials, waste materials, rubbish, debris and accessory items used in or resulting from said Work, and legally dispose of off the site.

END OF SECTION

06 18 00
GLUED-LAMINATED CONSTRUCTION
Dry Creek WWTP Operations and Lab Building
210015.01

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Glue laminated wood beams and purlins.
B. Preservative treatment of wood.
C. Fire retardant treatment of wood.

1.03 RELATED REQUIREMENTS

A. Section 01 61 16 - Volatile Organic Compound (VOC) Content Restrictions.
B. Section 06 10 00 – Rough Carpentry.
C. Section 06 17 00 – Shop-Fabricated Structural Wood
D. Section 06 17 13 – Wood I-Joists.
E. Section 06 17 53 – Shop-Fabricated Wood Trusses.

1.04 REFERENCE STANDARDS

A. Utilize the edition of the listed document as identified in the “Design Criteria Notes” in the structural drawings. If not listed in the “Design Criteria Notes”, use the edition adopted or referenced by the listed governing building code or material standard. If no specific edition is adopted, use the latest edition.
    1. AITC 117 - Standard Specifications for Structural Glued Laminated Timber of Softwood Species.
    2. AITC A190.1 - American National Standard for Wood Products - Structural Glued Laminated Timber.
    3. ASTM D2559 - Standard Specification for Adhesives for Bonded Structural Wood Products for Use Under Exterior Exposure Conditions.
    4. ASTM D2898 - Standard Practice for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing.
    5. ASTM D3737 - Standard Practice for Establishing Allowable Properties for Structural Glued Laminated Timber (Glulam).
    6. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
    7. AWPA U1 - Use Category System: User Specification for Treated Wood.
    8. FM (AG) - FM Approval Guide Current Edition.
    9. NDS – National Design Specification for Wood Construction
    10. SDPWS - Special Design Provisions for Wind & Seismic
    11. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber.
    12. UL (DIR) - Online Certifications Directory Current Edition.
    13. UL (FRD) - Fire Resistance Directory Current Edition.
    14. WCLIB - Standard Grading Rules for West Coast Lumber No. 17.
    15. WWPA - Western Lumber Grading Rules.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
B. Product Data: Provide technical data on wood preservative materials, application technique and resultant performance information.
C. Shop Drawings: Indicate framing system, sizes and spacing of members, loads and cambers, bearing and anchor details, bridging and bracing, and framed openings.
    1. Show large scale details of connections, connectors and other accessories.
    2. Indicate species and laminating combination, adhesive type, and other variables in required work.
D. Manufacturer's Qualification Statement.

1.06 QUALITY ASSURANCE

A. Manufacturer/Fabricator Qualifications: Company specializing in manufacture of glue laminated structural units with three years of documented experience and certified by AITC in accordance with AITC A190.1.
B. Each structural glued-laminated member shall be stamped with an identifying mark. Mark shall include all pertinent data, such as grade and species of lumber, type of glue, extremes of moisture content and other such information as may be required.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver undamaged products to site in manufacturer's protective wrappings with legends intact. Store on site secure from weather, soil and physical damage.
B. Transport, handle and store in strict accordance with the manufacturer's recommendations. Use padded, non-marring slings.
C. Architectural Appearance Grade members shall be shipped, handled and stored with complete weather and damage protection wrapping. Maintain wrappings in place until immediately prior to deck installation.
D. Industrial Appearance Grade glued laminated timber members shall be wrapped in a water resistant covering during transit. Contractor shall be responsible for protection during hauling and unloading at job site.
E. Protect members to AITC requirements for not wrapped.
F. Leave individual wrapping in place until finishing occurs.
G. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

PART 2 - PRODUCTS

2.01 GLUED-LAMINATED UNITS

A. Glued-Laminated Units: Fabricate in accordance with AITC 117 Industrial grade.
   1. Verify dimensions and site conditions prior to fabrication.
   2. Cut and fit members accurately to length to achieve tight joint fit.
   3. Fabricate member with camber built in.
   4. Do not splice or join members in locations other than those indicated without permission from the Architect and Structural Engineer of Record.
   5. After end trimming, seal with penetrating sealer in accordance with AITC requirements.

2.02 MATERIALS

A. Lumber:
   1. Lumber used for laminating structural members shall be well manufactured and shall conform to requirements of WCLIB Standard Grading and Dressing Rules No. 17, or WWPA - Western Lumber Grading Rules. Such lumber shall be inspected, identified by individual piece, and certified as meeting requirements of said standard specifications by an approved lumber grading agency. It is assumed that each lamination is graded on basis of requirement for nominal size of individual lamination. When lumber is resawn, it shall be regraded on basis of new size.
B. Type: Glued Laminated Timber Protected from Weather
   1. Species: Douglas Fir or Western Larch
   2. Stress Grade: AITC Combination 24F-V4 for simple beams, 24F-V8 for cantilever or continuous beams.
   3. Extreme fiber bending - Fb = 2400 psi
   4. Adhesives: Wet use
   5. Appearance Grade: AITC Industrial for concealed uses, Architectural appearance at exposed uses.
   6. Preservative Treatment: Portions of beams exposed to weather shall be preservative treated.
   7. Laminations: Provide outer tension laminations or proof load testing as required by ANSI/AITC A190.1.
   8. Sealing: Shop seal all surfaces with 2 coats of clear penetrating sealer.
C. Type: Glued Laminated Timber Exposed to Weather

1. Species: Alaskan Yellow Cedar
2. Stress Grade: AITC Combination 20F-V12 for simple beams, 20F-V13 for cantilever or continuous beams.
3. Extreme fiber bending - Fb = 2000 psi
4. Adhesives: Wet use
5. Appearance Grade: Architectural
6. Laminations: Provide outer tension laminations or proof load testing as required by ANSI/AITC A190.1.
7. Sealing: Shop seal all surfaces with 2 coats of clear penetrating sealer.

D. Laminating Adhesive: Tested for wet/exterior service in accordance with ASTM D2559.

2.03 WOOD TREATMENT

A. Factory-Treated Lumber: Comply with requirements of AWPA U1 - Use Category System for pressure impregnated wood treatments determined by use categories, expected service conditions, and specific applications.

B. Fire Retardant Treatment:
   1. Exterior Type: AWPA U1 Use Category UCFB, Commodity Specification H, chemically treated and pressure impregnated; maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 30 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898.
      a. Kiln dry wood after treatment to a maximum moisture content of 19 percent prior to lamination.
   2. Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated; maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 20 minutes.
      a. Kiln dry wood after treatment to a maximum moisture content of 19 percent prior to lamination.
      b. Do not use treated wood in applications exposed to weather or where the wood may become wet.
   3. Marking: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.
   4. Products:
      a. Blaze FRT Chemicals by Viance, Inc. (ESR-2645)
      b. Pyro-Guard FRT by Hoover Treated Wood Products, inc. (ESR-1791)
      c. b. Substitutions: See Section 01 60 00 - Product Requirements.

C. Preservative Pressure Treatment:
   1. Preservative Pressure Treatment of Glued-Laminated Structural Units: AWPA U1, Use Category UC3B, Commodity Specification F using waterborne preservative to 0.25 lb/cu ft retention.
      a. Kiln dry lumber after treatment and before lamination to maximum moisture content of 19 percent.
   2. Marking: Marked each piece with stamp of an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards.

D. Surface-Applied Wood Preservative: As specified in Section 06 10 00.

E. Shop treat wood materials in accordance with manufacturer's instructions.

2.04 FABRICATION

A. Fabricate glue laminated structural members in accordance with AITC Industrial grade.

B. Laminations shall be machine finished to a smooth surface, but not sanded, and to a uniform thickness with a maximum allowable variation of 1/64 inch. Warp, twist, or other characteristics which will prevent intimate contact of adjacent glued faces or interfere with uniform bending to a required curvature when under clamping pressure shall not be permitted. Surfaces to be glued shall be clean and free from oil, dust and other foreign material which would be detrimental to satisfactory gluing.

C. Moisture content of lumber at time of gluing shall be not less than 7 percent nor more than 12 percent.
D. Slips, misses, and wane are not permitted.
E. Boring of holes in members shall be in strict conformance with the Drawings. Notching is prohibited except where specifically detailed.
F. Verify dimensions and site conditions prior to fabrication.
G. Cut and fit members accurately to length to achieve tight joint fit.
H. Fabricate member with camber built in.
I. Do not splice or join members in locations other than those indicated without permission.
J. After end trimming, seal with penetrating sealer in accordance with AITC requirements.
K. Field cuts and holes in preservative treated members shall be preservative treated and sealed.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Prior to installation of the work of this Section, carefully inspect and verify that the installed work of all other trades is complete to the point where this installation may properly commence.
B. Verify that specified items may be installed in accordance with the approved design.
C. In the event of a discrepancy, immediately notify Architect. Do not proceed in discrepant areas until discrepancies have been fully resolved.

3.02 PREPARATION

A. Coordinate placement of bearing items.

3.03 PROTECTION

A. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.
B. In the event of damage, make all repairs and replacements necessary to the approval of the Architect at no additional cost to the Owner.

3.04 ERECTION

A. Glued Laminated members are to be erected and installed in accordance with the Drawings and manufacturer's recommendations.
B. Lift members using protective straps to prevent visible damage.
C. Set structural members level and plumb, in correct positions or sloped where indicated.
D. Provide temporary bracing and anchorage to hold members in place until permanently secured.
E. Fit members together accurately without trimming, cutting, splicing, or other unauthorized modification.
F. Swab and seal the interior wood surfaces of field drilled holes in members with primer.

3.05 TOLERANCES

A. Framing Members: 1/2 inch maximum from true position.

3.06 CLEANUP

A. Keep premises free from accumulated waste materials, rubbish and debris resulting from this work. Upon completion, remove tools, appliances, surplus materials, waste materials, rubbish, debris and accessory items used in or resulting from said Work, and legally dispose of off the site.

END OF SECTION

SECTION 06 20 00 – FINISH CARPENTRY

PART 1 - **GENERAL**

1.01 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.
B. Coordinate the work of this Section with related trades.
C. Verify applicable dimensions at the jobsite.
D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:
    1. Finish and/or set required standard for all wood and plastic finishes not associated with other sections.
    2. Install casework and trim not associated with other sections.
    3. Provide such other incidental finished carpentry and materials required to complete the work.
    4. Furnish, install & finish:
        1. Interior
            1. Particle board
            2. Plastic Laminate Clad Architectural Cabinets; refer to Section 06 41 16

1.02 **REFERENCE STANDARDS**

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.
B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code
    1. Non-residential new construction
        a. All occupancy types
C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.
D. American National Standards Institute (ANSI), www.ansi.org
    1. ANSI A209.1 – 1999
    2. ANSI A208.2 - 2002
E. Forest Stewardship Council (FSC)
F. Underwriters Laboratory (UL)
    1. As herein listed
G. Woodwork Institute Manual of Millwork (W.I.), www.woodworkinstitute.com, and shall include the following:
    1. All references herein to Certification, bulletins, detailing, details, standards, etc are to the "Woodwork Institute" Manual of Millwork.
    2. Certified Compliance Program

1.03 **PERFORMANCE, TESTING AND INSPECTION**

A. **General:**
    1. Comply with manufacturer's standards.
    2. Comply with Building Code.
    3. Job site inspections shall be done as herein specified and as listed in drawings.

1.04 **SUBMITTALS**

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.
B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.
C. Refer to Division 1 for sustainability requirements
D. Submit Manufacturers data and shop drawings.
    1. Submit list of materials proposed to be used, including, but not limited to:
        a. Wood
        b. Wood finish material
        c. Fasteners
        d. Sealants
        e. Adhesives

1.05 **QUALITY ASSURANCE**

A. Refer to Division 1 for quality control requirements.
B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years. Providing / installing / finishing projects of similar size and complexity.
C. Manufacturer shall have been in business for **five (5)** years providing/installi**n**g/finishing projects of similar size and complexity.
D. Lead Time**s:**
    1. **General Contractor** shall coordinate with supplier to verify product lead times during bids and at award of contract, and account for such lead times in their costs and schedules.
    2. **General Contractor** shall provide an itemized list of materials which might have or are confirmed to have a lead time problem and what the anticipated lead time is.
    3. **General Contractor** shall certify in writing that all materials have acceptable lead times as they relate to availability for sub contractor and **General Contractor** to meet construction schedule and sequence of construction.
E. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid
F. Stipulations:
    1. All work shall be in compliance with W.I. standards and certified per W.I. guidelines.

1.06 **PRODUCT DELIVERY, STORAGE AND HANDLING**

A. Refer to Division 1 for product delivery, storage and handling requirements.
B. Do not deliver millwork to job until building is in proper condition and arrangements have been made to properly handle, store and protect such work.

1.07 **JOB CONDITIONS**

A. Field-verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.08 **PROTECTION**

A. Protect finish surfaces at all times from surfaces and material adjacent to them.
B. Finish work defaced with other materials on surface shall be replaced.
C. Protect work under this section from damage by other trades.

1.09 **GUARANTEE / WARRANTY**

A. Refer to Division 1 for closeout submittal procedures.
B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.
   1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 **RELATED WORK / SECTIONS**

A. Related work includes, but is not limited to the following:
   1. Electrical Wiring, Conduit and Accessories
   2. Low Voltage Wiring, Conduit and Accessories
B. Related Sections include, but are not limited to the following:
   1. Division 1
   2. Section 06 10 00 – Rough Carpentry
   3. Section 06 41 16 – Plastic Laminate Clad Architectural Cabinets
   4. Section 06 64 13 – Fiberglass Reinforced Plastic Wall Panels (FRP)
   5. Section 08 14 00 – Wood Doors

1.11 **OPERATION AND MAINTENANCE DATA**

A. Submit as part of project closeout:
   1. Complete instructions regarding maintenance of the materials, finishes, etc.
   2. Refer to Division 1 for closeout submittal procedures.

1.12 **SEQUENCING AND SCHEDULING**

A. Schedule work and sequence with **General Contractor**.
B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.
B. Acceptable manufacturers fabricator shall be one of the following and as herein listed and in Drawings:
   1. Refer to documents and as herein specified
   2. Reviewed Equivalent by **Architect**.
      1. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
      2. Refer to Division 1 for substitution, deviation and/or submittal procedures.
      3. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.
C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.
D. Refer to drawings, details, and other related specification section whether listed or not.
E. Details shall set basic requirements for size and configuration of systems.

2.02 MATERIALS

A. Accessories:
1. Fasteners:
1. Bolts, Nuts & Washers: Machine bolts, unless noted otherwise, for attaching or anchoring wood items.
2. Draw bolts
3. Finish nails
4. Screws
1. Including, but not limited to;
a. Wood secured into metal stud framing (20 gauge or heavier)
1. Type: Square Top head wood screws
2. Size: #7 x 2-1/4" or size to penetrate metal framing by 3/8" minimum.
5. Nail hole filler
1. Stainable at stained finish
2. Paintable at painted finish

B. Schedule
1. INTERIOR
1. General
1. Material Grades: WI Custom Grade complying with "Manual of Millwork" of the Wood Institute, unless otherwise noted.
2. Lumber and plywood shall be kiln-dried to equilibrium moisture content suitable for fabrication in shop and suitable for use intended.
a. Back prime all fabrications at locations that are concealed from view.
3. Size and profiles shown in drawings and herein specified shall be installed.
4. Back Prime all casework which is concealed from view.
5. Install with adhesive type as recommended by manufacturer for locations and materials shown.
6. Install with fasteners type and size to ensure tight, secure assembly and concealed fasteners.
7. Species:
a. As indicated on drawings & herein scheduled
b. Plastic laminate:
1. Mfgrs:
a. Nevamar www.nevamar.com
b. Wilsonart www.wilsonart.com
c. Formica www.formica.com
d. Refer to drawings
2. Standard: LD-3 by NEMA.
c. M.D.O.:
1. Factory lacquer primed for field finishing.

2. Materials:
1. Particleboard
a. General:

1. Stamped, suitable to receive plastic laminate finish, wood veneer or paint as noted. Comply with ANSI A208.1, Table 1, Grade 1-M-3 with the following additional requirements:

b. Specifications:
   1. Modulus of Elasticity: 4,000,000 psi, min
   2. Internal Bond: 80 psi, min
   3. Screw Holding: Face; 250 lbs. & Edge; 225 lbs., min

c. Product(s):
   1. Mfgr: Arauco
   2. Schedule:
      a. Duraflake VESTA NAF — No added urea-formaldehyde resin
      b. Duraflake Fire Rated — UL approved, Class A/Class 1 fire rated particleboard
      c. Duraflake Moisture Resistant ULEF — Moisture resistant particle board

2. MDF Board
   a. General:
      1. Stamped, suitable to receive plastic laminate finish, wood veneer or paint as noted. Comply with ANSI A208.1, Table 1, Grade 1-M-3 with the following additional requirements:
   b. Specifications:
      1. Modulus of Elasticity: 4,000,000 psi, min
      2. Internal Bond: 80 psi, min
      3. Screw Holding: Face; 250 lbs. & Edge; 225 lbs., min
   c. Product(s):
      1. Mfgr: Arauco
      2. Schedule:
         a. Trupan NAF — No added urea-formaldehyde resin
         b. Trupan Fire Rated ULEF — No added urea-formaldehyde resin and fire-rated - UL approved, Class A
         c. Trupan Plus MDF — No added urea-formaldehyde resin

3. Melamine
   a. General
      1. Stamped, suitable to receive plastic laminate finish, wood veneer or paint as noted. Comply with ANSI A208.1, Table 1, Grade 1-M-3 with the following additional requirements:
   b. Specifications:
      1. Modulus of Elasticity: 4,000,000 psi, min
      2. Internal Bond: 80 psi, min
      3. Screw Holding: Face; 250 lbs. & Edge; 225 lbs., min
   c. Product:
      1. Mfgr: Flakeboard
      2. Schedule:
         a. WRM — Wear resistant melamine

4. Miscellaneous Trim & Moldings

a. Size: As indicated on Drawings and to match like conditions.
b. Material: Match like conditions, unless noted otherwise.

2. EXTERIOR
    1. General
        1. Material Grades: APA Grade
        2. Lumber and plywood shall be kiln-dried to equilibrium moisture content suitable for fabrication in shop and suitable for use intended.
        3. Size and profiles shown in drawings and herein specified]
        4. Install with adhesive type as recommended by manufacturer for locations and materials shown.
        5. Install with fasteners type and size to ensure tight, secure assembly and concealed fasteners.
        6. Species:
            a. As indicated on drawings & herein scheduled, including but not limited to:
            b. Clear Fir
            c. M.D.F. with factory lacquer primed finish, type.

    2. **Schedule:**
        1. Veneer Plywood Laminate: Refer to other specification sections as indicated on Drawings.

C. Milling
    1. Mill to dimensions and profiles shown. Except where exact length can be determined, material shall be provided long for cutting and fitting in field.

2.03 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - EXECUTION

3.01 INSPECTION/EXAMINATION

B. Verification of Conditions:
    1. Examine areas and conditions under which work is to be performed.
    2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

3.02 COORDINATION

A. Refer to Division 1 for project coordination requirements.
B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.03 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.04 FABRICATION

A. Preparation:
   1. Verify measurements at job site.
   2. Verify details and dimensions of equipment and fixtures integral with finish carpentry for proper fit and accurate alignment.
   3. Coordinate details with other work supporting, adjoining, or fastening to finish carpentry items.
B. General:
   1. Fabricate finish carpentry in accordance with W.I. Premium and Custom Grade and as indicated.
   2. Shop-fabricate and assemble work in complete units insofar as dimensions permit shipment and installation.
   3. Conceal nailing typical and set nail heads for putty in exposed portions.
   4. Thoroughly sand wood surfaces.
      1. Take care that cross sanding is removed by final sanding in direction of grain; ease "knife-edge" corners by sanding.
      2. Wood surfaces shall be free from dust, glue, stains, and other foreign matter and in proper condition to receive finish.
   5. Perform corrective measures necessitated by nonconformance with WI Standards.
      1. The **Architect's** opinion will govern discrepancies.
   6. End joints shall be cut at 45 degree angle and fit tight (square butt joints not allowed).
   7. Back prime all concealed wood in accordance with WI recommendations.

3.05 INSTALLATION

A. General:
   1. Do not install casework or millwork until wet operations are completed and concrete, work has thoroughly dried out, and millwork has been primed or sealed under "Painting Work". Reseal cut edges, surfaces and ends in approved manner.
   2. Trim members: Install level, plumb and true, with members neatly and accurately scribed in place. Install standing trim in single lengths, running trim in as long lengths as practical for species specified.
      1. Butt joints beveled at 45 degree angle.
      2. Exterior angles coped.
      3. Miter all outside and inside corners unless indicated otherwise.
   3. Nailing: Install at concealed conditions, typical at locations that are not concealed; set nails (countersink) and fill with matching filler prior to final finishing.
   4. Workmanship: Exposed surfaces of finish carpentry shall be free from nailheads, tool marks, torn grain, cross sanding, or any workmanship defects that cannot be concealed by specified painter's finish.
   5. Scribe to wall all finish materials including but not limited to:
      1. Moldings
      2. Window trim
      3. Door trim
B. Casework and Counter Tops
   1. General:
      1. Install casework and counter tops securely, plumb, level, true and straight with no distortions. Shim as required using concealed shims.

2. Where casework and counter tops abuts other finished work, scribe and cut for accurate fit. Before making cutouts, drill pilot holes at corners.
3. Install finish hardware in accordance with its manufacturer printed instructions.

2. Counters shall be one piece 3/4 inch thick particle board with plastic laminate overlay with 4 inch high top mount splash and self edge front, unless otherwise indicated. Shall comply with Premium Grade construction, refer to WI Manual of Millwork.
3. Repair damaged or defective work as directed. Adjust and lubricate hardware for proper operation.
4. Clean exposed interior and exterior surfaces. Touch-up finish as required and remove and refinish damaged or soiled areas of finish.
5. Back prime all wood that will be concealed and or against the wall surface.

C. Wood doors: Refer to Section 08 14 00 – Wood Doors
D. Building Specialties
1. Install all items in accordance with the drawing details and manufacturer's printed instructions.

3.06 FIELD QUALITY CONTROL

A. Monitor work to insure installation and assembly are in accordance with applicable standards.

3.07 ADJUSTING

A. Test operation of equipment and adjust as needed to produce fully functioning units that comply with requirements.

3.08 PROTECTION AND CLEAN UP

B. Refer to Division 1 for protection and cleaning requirements.
C. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.
D. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.
1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

E. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
F. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.
G. After completion of work in this section, remove all erection equipment and implements of service, and debris.
1. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.
I. Provide record drawings in accordance with Division 1 closeout submittal procedures.
J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 06 20 00

SECTION 06 41 16 – PLASTIC LAMINATE CLAD ARCHTECTURAL CASEWORK

PART 1 **- GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Wood casework with specified veneer
2. Hardware
3. Structural supports incorporated into casework
    a. Coordinate with Section 05 50 00 – Metal Fabrications
4. Solid surface counters
5. Accessories:
    a. As herein specified and/or listed in drawings
    b. Shelving standards
    c. Shelving standard brackets

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

2. NEMA LD3-3.13 for Chemical Resistance
3. NEMA LD3.7 for Chemical Resistance

I. Scientific Equipment & Furniture Association (SEFA)

1. SEFA #3 – Recommendations for Work Surfaces

J. Woodwork Institute, (WI), www.woodworkinstitute.com

1. All references herein to Certification, bulletins, detailing, details, standards, etc., are to the Woodwork Institute (WI), North American Architectural Woodwork Standards 4.0 manual,.

a. Certified Compliance Program

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Millwork (casework)	Moisture Content	Wood and Composite Materials shall be kiln-dried to equilibrium moisture content suitable for fabrication in shop and suitable for use intended	Woodwork Institute (WI), Architectural Woodwork Standards (AWS)
	Compliance Program	Pay fees, coordinate with WI and comply with requirements of the WI Quality Control program **CERTIFIED COMPLIANCE PROGRAM:** - Review and certification of Shop drawings prior to issuance to **Architect** by WI. - Issuance of WI Certified Compliance Certificate by WI - Certified Compliance stamp on cover of shop Drawings by WI - Inspection(s) of installed casework/millwork at project site by WI	WI, Architectural Woodwork Standards & Quality Assurance Program

	Style	Style 1 – Flush Overlay	
	Type	A	
	Grade	Premium	
Laminate Plastic	Manufacturing	- Horizontal surfaces: Countertops and splashes - use 1/16" thick (0.0625"). - Vertical surfaces and edge banding: (0.035"). - Backer and liner: (0.020").	LD-3 by NEMA
	Type	HGS (H-5) Grade (high pressure laminate)	NEMA
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Testing**:

Item	**Name of Test**	**Performance Results**	**Testing Std.**
Hardware	Operation – During construction	All hardware operates properly without binding.	WI, Architectural Woodwork Standards
Hardware	Operation – 6 – 7 months after Substantial Completion	All hardware operates properly without binding.	WI, Architectural Woodwork Standards

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturers data and shop drawings.

1. Submit shop drawings for the work of this Section in compliance with Manual of Millwork.
    a. The shop drawings shall bear the Certified Compliance Label.

E. Submit samples.

1. Casework Materials
    a. Each type of substrate board
        1) 8-1/2” x 11”
    b. Each type of laminate plastic
    c. Hardware
    d. Accessories

F. Site mock-up, refer to “Mock-Up” heading.

1. Provide full-size mockup of all reveal and panel conditions (not part of final construction).

G. Certification:

1. Woodwork Institute Certified compliance label on first page of shop drawings after WI review.
2. Woodwork Institute compliance program written review letters.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Stipulations:

1. Lumber moisture content not to exceed levels as herein specified.
    a. Woodwork Institute compliance program.
2. Grades of materials shall not be less than those herein specified and as indicated in drawings.
    a. Better grade shall govern.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.
Agenda for meeting shall include, but not be limited to;

1. Woodwork Institute compliance program and parameters.
    a. Certified Compliance Program (CCP) as herein specified.
        1) The **Owner** reserves the right to request an inspection by a representative of the Woodwork Institute at any time during the work of this Section to verify that all work of this Section has been performed in accordance with the referenced standards at any time during the work of this Section.
2. Scheduling of installation.
3. **General Contractor** shall request meeting 5 days in advance of construction.

F. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

G. Miscellaneous criteria:

1. Field-measure (at project site) all casework locations prior to drafting shop drawings.
    a. Report discrepancies between Architectural drawings and field dimensions on shop drawing submitted for review.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Do not deliver casework to job until building is in proper condition and arrangements have been made to properly handle, store and protect such work.

C. Comply with Recommended Care and Storage of Architectural Woodwork Standards (AWS).

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK / SECTIONS

A. The following is related work including, but not limited to the following;

1. Finish Flooring and Base
2. Plumbing and Accessories
3. Wall Finish
4. Wall backing

B. Related sections include, but are not limited to the following:

1. Division 1
2. Section 06 61 16 – Solid Polymer Fabrications
3. Section 09 91 00 – Painting & Coatings

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplemental Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, hardware, etc.

2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required inspection under Woodwork Institute requirements.

1.13 GENERAL SYSTEM DESCRIPTION

A. Casework/Millwork fabrication with laminate plastic veneer and installation

PART 2 **- PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as listed herein and in Drawings:

1. Casework/Millwork

a. In compliance with drawings, specifications and WI-Woodwork Institute Standards.

2. Hardware:

a. Operating hardware, standards, brackets, specialty, etc.:

1) Accuride International, Inc., www.accuride.com
2) Sugatsune, LAMP, www.sugatsune.com
3) Knape & Vogt Manufacturing Co., www.knapeandvogt.com
4) Hafele, www.hafele.com/us
5) CompX National, www.compx.com
6) Fulterer USA, Inc., wwww.fultererusa.com
7) Hettich America, L.P., www.hettichamerica.com
8) Olympus Lock, Inc., www.olympus-lock.com
9) Precision Works Products
10) Pride Industrial, LLC., www.prideindustrial.com
11) RPC-Terry Hinge and Hardware Co., www.terryhinge.com
12) STAND Off Systems, www.standoffsystems.com
13) As herein specified and/or listed
14) In accordance with WI standards

b. Pulls

1) Hafele, www.hafele.com/us
2) As herein specified and/or listed

3. Wood:

a. As herein specified and/or listed
b. In accordance with WI standards

4. Laminate Plastic:

c. Abet Laminati, www.abetlaminati.com
d. Arborite, www.arborite.com
e. Formica, www.formica.com
f. Nevamar, www.nevamar.com
g. Pionite, www.pionite.com
h. Wilsonart Contract, www.wilsonartcontract.com
i. As herein specified and/or listed
j. In accordance with WI standards

5. Solid Surface:

a. As herein specified and/or listed
b. Refer to drawings
c. Refer to Section 06 61 16 – Solid Polymer Fabrications

6. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. Schedule:

a. Substrates for Laminate Veneer – Typical except adjustable shelving:

1) Option 1:

a) Mfgr: Roseburg Forest products, www.roseburg.com
b) Product: Sky Blend
c) Material: Stamped, suitable to receive, laminate veneer.
d) Certified:

i. FSC Forest Stewardship Council
ii. NAUF No added Urea Formaldehyde
iii. ECC Eco-Certified Composite Panel
iv. CAR Air Toxic Control Measure

e) Compliance: California 93120 Phase 2 Formaldehyde Emission Limits
f) Size: 49" x 97"
g) Thicknesses: 1/2" – 1-1/8"
h) Density: 47-50 PCF

i) MOE: 290,100
j) Internal Bond: 58psi
k) Standards: ANSI A208.1, M-3
l) Flame Spread: Class C or Class III
m) Recycled content: 100% recycled and/or recovered content

2) Option 2:

a) Mfgr: Flakeboard, www.flakeboard.com
b) Product: Duraflake® MR
c) Material: Stamped, suitable to receive, laminate veneer.
d) Certified:

i. FSC Forest Stewardship Council
ii. NAUF No added Urea Formaldehyde
iii. ECC Eco-Certified Composite Panel
iv. CAR Air Toxic Control Measure

e) Compliance: California 93120 Phase 2 Formaldehyde Emission Limits
f) Thickness: 3/8" – 1-1/8"
g) Density: 45-48 PCF
h) MOE: 400,000
i) Internal Bond: 80psi
j) Standards: ANSI A208.1, M-3
k) Recycled content: 100% recycled and/or recovered content

b. Adjustable Shelving Substrates for Laminate Veneer:

1) Mfgr: Roseburg Forest products
2) Product: Sky Ply FSC Veneer Core Panel
3) Panel: HyBrid
4) Core: Plywood, SkyPly
5) Veneer: Hardwood veneer over particle board core
6) Certified:

a) FSC Forest Stewardship Council
b) NAUF No added Urea Formaldehyde

7) Size:

a) 48" x 96"
b) 48" x 120"

8) Thicknesses: 1/4" – 1"

2. Adhesives: Type as recommended by manufacturer for locations and materials.
3. Plastic Laminate: Refer to Drawings, and comply with the requirements of LD-3 by NEMA

B. Casework/Millwork:

1. General:

a. Type:

1) Style 'A', Frameless construction and associated supplements

b. Grade: Premium
c. Substrate:

1) Material: As herein specified and in accordance with WI Standards
2) Thickness: 3/4" minimum, unless specified and/or indicated otherwise in specifications and/or drawings

d. Veneer: As herein scheduled and noted in drawings

1) Color/pattern of Laminate Plastic, refer to drawings.

2. Finish Schedule: (Refer also to documents)

a. Exterior: (exposed)

1) Cabinet: Laminate Plastic
2) Doors: Laminate Plastic
3) Drawers:(front & edges) Laminate Plastic
4) Shelves: Laminate Plastic

b. Interior:

1) Cabinet: Laminate Plastic
2) Doors: Laminate Plastic
3) Drawers: Laminate Plastic
4) Shelves cabinets: Laminate Plastic

3. Countertop:

a. Top:

1) Solid Polymer – refer to Section 06 61 16

b. Splash:

1) Solid Polymer – refer to Section 06 61 16

c. Nosing:

1) Solid Polymer – refer to Section 06 61 16

4. Doors:

a. Shall be constructed in accordance with specified Grade and in accordance with WI standards.

1) Flush-face panels with total perimeter thick applied square edge band trim to match face material.

5. Drawers:

a. Shall be constructed in accordance with specified Grade and in accordance with WI standards.

1) Flush-face panels with total perimeter thick applied square edge band trim to match face material.

6. Adjustable Cabinet Shelves:

a. Application: Wall hung type not part of a cabinet

1) Type: Adjustable

a) Standards and brackets

2) Shelves:

a) Grade: Premium
b) Veneer: As herein scheduled
c) Matching: N/A, Whole piece
d) Core: WI standards approved for specified grade

i. Thickness: 1"
ii. Construction: Veneer on all sides and full edge banding.
iii. Material: Plywood

3) Pilaster Standards: As herein specified
4) Brackets: As herein specified

F. Paint:

1. Paint backside of all casework cabinets which back up against;

a. Exterior walls
b. Masonry walls

2. Use VOC compliant paint
3. Refer to Section 09 91 00 - Painting

2.3 MATERIALS – CASESWORK and HARDWARE

A. Hardware shall be furnished and installed as required to provide a complete casework installation.

B. Hardware shall be unless specified otherwise.

1. Mfgr's standard color as herein specified

C. Hardware Schedule:

1. Hinges:

a. Casement swing hinge

1) Mfgr: Blum (Salice, Grass and Hafele acceptable alternates)
2) Type: Concealed Adjustable x 120 degree opening x self closing
3) Product: CLIP Top series
4) Mount: recessed, INSERTA
5) Application/Model: (adjust type for specific application-Including, but not limited to;)

a) Full overlay: B71T559 (Type "A")

6) Fastening: Screw-in & Knock-in

7) Accessories: Wing baseplates

b. Concealed Hinges

1) Mfgr: SUGATSUNE www.sugatsune.com , LAMP
2) Model: Load Capacity: Door/panel thickness:

a) HES3D-190 154 lbs. 1-7/16″
b) HES3D-160 99 lbs. 1-3/8″
c) HES3D-V135 88 lbs 1-3/16″

3) Type: Concealed x three way adjustable

2. Bumpers:

a. Door Bumpers:

1) Felt type in accordance with Woodwork Institute standards.
2) Color: Black or gray

3. Door & Drawer Pulls:

a. Mfgr: Hafele
b. Type: Stainless Steel Handles
c. Finish: Matte
d. Schedule:

Designation	Length (overall)	Model No:
Pull 1	146mm / 5.75″	117.05.600
Pull 2	178mm / 7″	117.05.610
Pull 3	242mm / 9.53″	117.05.620
Pull 4	274mm / 10.78″	117.05.630
Pull 5	370mm / 14.56	117.05.640
Pull 6	530mm / 20.86″	117.05.650
Pull 7	722mm / 28.4″	117.05.660
Pull 8	946mm / 37.2″	117.05.670
Pull 9	1202mm / 47.3″	117.05.680
Pull 10	1456mm / 57.32″	117.05.690

4. Magnetic Touch Latches:

a. Application: Typical, UNO
b. Mfgr: Sugatsune, LAMP
c. Model: ML120
d. Color: BLK (Black)
e. Mount: Surface

5. Non-Magnetic Touch Catches:

a. Application: Use where indicated
b. Mfgr: Sugatsune, LAMP
c. Model: LSMC37
d. Color: BLK (Black)
e. Mount: Surface

6. Drawer Slides:

a. Mfgr: KNAPE & VOGT (Accuride, Grass and Blum are acceptable alternates if they match type, capacity and function)

b. Type: Full extension and +1.5" extension, ball bearing captured slides
c. Application:
    1) Drawer
        a) Application: 4" tall or less up to 23" wide drawer
            i. Model: KV 8250 / 75lbs.
            ii. Capacity: 75 pounds per pair
            iii. Mounting: Under

7. Drawer & Cabinet Door Locks:
    a. Mfgr: Sugatsune, LAMP
    b. System: Million Locks
    c. Model: 6830-30MK
    d. Mounting: Mortised
    e. Application: Install type for door and/or drawer condition.
    f. Finish:
        1) Stainless Steel x polished
    g. Accessories:
        1) Removable core
        2) Separate lock body and lock cores
        3) Key same & differently per **Owner's** instructions
        4) Grand Master key for all locks
        5) Master for each group of locked cabinets/drawers.
    h. Application:
        1) Provide locks on all drawers and doors regardless of location.
8. Adjustable Casework/Cabinet Shelving:
    a. Pilaster Standards:
        1) Mfgr: Knape & Vogt
        2) Type:
            a) Recessed
            b) Horizontal slot for support clips
        3) Material: Aluminum
        4) Color:
            a) To be selected by **Architect** from the following during shop drawing review:
                i. Mill finish aluminum
                ii. Brass look
                iii. Brown
                iv. Walnut
        5) Model: No. 255
        6) Fasteners: Countersunk screws

7) Schedule for standards:

a) Full height of cabinet at shelves
b) Recessed into wall of casework
c) Dado cut into cabinet wall
d) Set standards at 4" from front and from back of cabinet.

b. Support Clips::

1) Mfgr: Knape & Vogt
2) Type: Boxed with cushion pad
3) Model: No256R
4) Material: Aluminum or steel based on color
5) Color: To match Pilaster standards

2.4 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

B. Items not specifically identified as to "Type" shall be constructed as indicated on the drawings and specifications to meet or exceed herein specified Grade construction standards.

1. Surface finish: As selected by **Architect**.
2. Back priming paint, refer to Section 09 91 00 - Painting.

PART 3 **– EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Take all necessary measurements in the field to ensure proper dimensions for cabinets and countertops.

3.4 FABRICATION

A. General

1. Fabricate in accordance with WI Architectural Woodwork Standards and specified Grade.
2. Fabricate in accordance with drawings.
3. Make cutouts required for equipment and accessories mounted in or on casework items.
4. Fabricate filler panels for all gaps that occur at face of casework, i.e. gap at sides of "Below Counter Dishwashers" and similar conditions.
5. Back prime woodwork on all surfaces which will be concealed.
    a. Prime with one coat of wood primer.
    b. Schedule delivery to allow time for application and drying of back prime coat before installation of the woodwork for those items that have not been back primed in the shop.
6. Shop fabricate items and deliver to job in largest unit sections as possible.
    a. Where field joining is required, accurately fit and align in shop and make all provisions for rigid and permanent joining in field.
    b. Allow sufficient material to permit accurate scribing to adjacent walls and related work.

B. Drawers:

1. All drawers shall operate on metal slides.
2. Provide security panels over locked drawers and doors except where fixed top serves same purpose.

C. Doors:

1. Provide security panels over locked drawers and doors except where fixed top serves same purpose.

D. Hardware:

1. Install hardware at shop, prior to delivery.
    a. Remove hardware for finish application and reinstall after finishing.

E. Casework Shelves:

1. Make all shelves adjustable, unless otherwise indicated.
2. Install adjustable shelves on metal hardware recessed flush.

F. Adjustable wall shelves

1. Install thru wall finish into solid blocking
2. Make all shelves adjustable, unless otherwise indicated.
3. Install adjustable shelves on metal hardware.

3.5 INSTALLATION

A. General:

1. Install Casework/Millwork and counter tops securely, plumb, level, true and straight with no distortions.
    a. Shim as required using concealed shims.
2. Where casework and counter tops abuts other finished work, scribe and cut for accurate fit.
    a. Before making cutouts, drill pilot holes at corners.
3. Install finish hardware in accordance with manufacturer's printed instructions.
4. Repair damaged or defective work as directed.
    a. Adjust and lubricate hardware for proper operation.
5. Clean exposed interior and exterior surfaces.
    a. Touch-up finish as required and remove and refinish damaged or soiled areas of finish.
6. Back prime all wood that will be concealed and or against an exterior wall surface and/or a masonry or concrete wall surface.
7. Repair damaged or defective work as directed. Adjust and lubricate hardware for proper operation.
8. Clean exposed interior and exterior surfaces. Touch-up finish as required and remove and refinish damaged or soiled areas of finish.

B. Blocking, Backing, Bracing and fasteners:

1. Ensure that in-wall blocking is properly located before wall finish is installed. Set casework in place, scribe plumb, square and level, and secure to structure in position indicated with required fastenings, clip angles, bases, anchors, nailing, blocking, shimming and other fittings.
2. Minimum horizontal anchorage along top and bottom edges of wall mounted and top edge of floor mounted casework shall be #12 x length to suit (minimum 2-1/2" teks), wood or sheet metal screws (plated) at 12" o.c. and 3" from each end into solid backing or metal backing plate. Minimum three (3) fasteners each along top and bottom edges.
    a. At masonry or concrete walls secure with 1/4" diameter x length to suit (minimum 1-1/8" penetration) wedge anchors.
3. Furnish miscellaneous metal support and bracing required for installation.
    a. Deliver these items to trades responsible for adjacent work and designate exact location for their installation.

C. Casework/Millwork:

1. Provide closures and fillers, and scribe strips required to provide a neat and finished installation. All such exposed items shall match casework.
2. Install casework and counter tops securely, plumb, level, true and straight with no distortions. Shim as required using concealed shims.
3. Where casework and counter tops abuts other finished work, scribe and cut for accurate fit. Before making cutouts, drill pilot holes at corners.

D. Furnish miscellaneous metal support and bracing required for installation.

1. Deliver these items to trades responsible for adjacent work and designate exact location for their installation.
2. Install finish hardware in accordance with its manufacturer printed instructions.

E. Hardware and accessories:

1. Install in accordance with WI standards and manufacturer's recommendations.

F. Adjusting:

1. Adjust doors, drawers, and other moving parts to operate freely without binding or sticking.
    a. Adjacent items shall be level, vertical lines plumb and aligned with clearances uniform.

3.6 ADJUSTING

A. Prior to final inspection and acceptance by the **Architect**, completely check each installed item and adjust for proper operation.

1. Adjust doors, drawers, and other moving parts to operate freely without binding or sticking.
    a. Adjacent items shall be level, vertical lines plumb and aligned with clearances uniform.

3.7 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives **the General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 06 41 16

THIS PAGE IS INTENTIONALLY BLANK

SECTION 06 61 00 – SOLID POLYMER FABRICATIONS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified and as necessary to complete the work.

1. The work covered by this Section shall include all material, labor, equipment and services necessary for the complete installation of Solid Polymer fabrications, as indicated on the Drawings and herein specified:

a. Solid Polymer Counters
b. Counter Splashes

2. Furnish and install miscellaneous items as indicated, including but not necessarily limited to the following major items:

a. Counters, sinks in sizes as listed, support angles, closures, necessary items required to complete the work as detailed.
b. Anchors, attachment and fasteners for work in this section.
c. Cut holes and openings in the polymer counters in accordance with the requirements specified in this Section and as required for faucets, soap dispensers, etc.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Plywood Association (APA), The Engineered Wood Association, www.apawood.org American Society for Testing and Materials (ASTM):

1. ASTM C501 - Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abrader
2. ASTM D256 - Impact Resistance of Plastics and Electrical Insulating Materials.
3. ASTM D570 - Water Absorption of Plastics
4. ASTM D638 - Tensile Properties of Plastics

5. ASTM D696 - Coefficient of Linear Thermal Expansion of Plastics
6. ASTM D2583 - Indentation Hardness of Rigid Plastics by Means of a Barcol Compressor
7. ASTM E84 - Surface Burning Characteristics of Building Materials

E. National Electrical Manufacturers Associations (NEMA):

1. LD.3-3.9: Test method to confirm no lasting effect after exposure to 29 common reagents.

F. National Sanitation Foundation (NSF)

1. Tested and approved.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Solid Polymer	Stain & Chemical Resistance	No lasting effect when exposed to 29 reagents	NEMA LD3-3.9
	Construction	Comply	ANSI Z124, Type 6 and Fed. Spec. WW-P-541/GEN
	Thickness	3/4"	Mfgr.
	Width x length	52" x 118"	Mfgr
	Flame Spread	25 or less	ASTM E84 & UL 723
	Stain & Chemical Resistance	No lasting effect when exposed to 29 reagents	NEMA LD3-3.9
Backing	Type	APA, A-A G-1 W Exposure 1-APA PS1-83 000	APA
Refer to drawings and as herein specified			

C. **Sustainability**:

1. General:

a. Refer to Division 1 sustainability requirements.
b. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Indicate dimensions, component sizes, fabrication details, attachment provisions and coordination requirements with adjacent work.
2. Indicate product description, fabrication information and compliance with specified performance requirements.

E. Manufacturer's data:

1. Submit manufacturer's detailed technical data for materials, fabrication and installation. Include catalog cuts of hardware, anchors, fastenings, and accessories.
2. Submit manufacturer's care and maintenance data, including repair and cleaning instructions and include in project close-out documents.

F. Samples: Submit complete range of color samples 12" x 12" for selection by **Architect**.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Fabricator/Installer Qualifications: Fabrication and Installation of Solid Polymer shall be by a firm that is authorized by manufacturer to fabricate and install material, and that can demonstrate successful experience in installing finish carpentry items similar in type and quality to those required for this Project.

C. Fabricator/installer shall be subject to approval by **Architect**.

1. Fabricator/installer must have adequate physical facilities and sufficient production capacity to produce, transport, deliver, and install the required units without causing delay in the work.

D. Allowable Tolerance:

1. Variation in component size: plus or minus 1/8".
2. Location of openings: plus or minus 1/8" from indicated location.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver and store products suitable wrapped or packaged to protect against damage. Do not remove protective coverings until time of installation.

1. Protect finish and edges in accordance with manufacturer's recommendations.
2. Store material in accordance with manufacturer's recommendations.

C. Handle materials to prevent damage to finished surfaces. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

1.7 JOB CONDITIONS

A. Obtain and comply with manufacturer's advice for optimum temperature and humidity conditions for material during its storage and installation.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Wall framing / backing
2. Wall sheathing and finish
3. Plumbing
4. Casework/millwork

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 06 41 16 – Plastic Laminate Clad Architectural Cabinets

1.10 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.11 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **initial one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **ten (10)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as listed herein and in Drawings:

1. Hi-Macs, as manufactured by LX Hausys, www.lxhausys.com
2. Dupont, www.dupont.com
3. Formica, www.formica.com
4. Silestone, www.silestone.com
5. Avonite, Foundations, www.avonite.com
6. Corian, as manufactured by Du Pont. www.corian.com
7. Wilsonart, Gilbraltar Series www.wilsonart.com
8. Staron by Samsung/Cheil Industries www.staron.com
9. Reviewed Equivalent by **Architect**.

    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. All solid polymer fabrications shall conform to standards as herein listed.

    a. Solid polymer fabrications shall be cast, not coated, laminated or of composite construction.
    b. Homogeneous blended Acrylic & Fillers
    c. Homogeneous blended Acrylic/Polyester & Fillers

2. Slab: Solid polymer counter fabrications shall conform to, but not limited to:

    a. Dimensions and thickness's as herein specified and as indicated in the Drawings, to within tolerances specified herein.
    b. Counter Edge Nosing:

        1) As detailed

    c. All seams not indicated on the Drawings shall be unexposed and adhesively joined.
    d. Provide backsplashes at sides and backs of all counters that back up to walls.

        1) All splashes shall be 4" high, unless noted and/or indicated otherwise.
        2) All splashes shall have half rounded top-edges, and shall be radiused down to counter front edge, unless noted/indicated otherwise)
        3) Splashes shall be butt edge at the counters connection.

B. Slab: Counter and splash:

1. Schedule:
    a. Item 1: (SS-1)
        1) Mfgr: Silestone
            a) Same as countertop manufacturer
        2) Product: Square Edge
        3) Color: White Storm 14
    b. Item 2: (SS-2)
        1) Mfgr: Hi-Macs
            a) Same as countertop manufacturer
        2) Product: Strato
        3) Color: Z003 Strato Wind

2.3 MATERIALS - ACCESSORY PRODUCTS

A. Joint Adhesive: Manufacturer's standard two-part adhesive kit to create inconspicuous, non-porous joints.

B. Panel Adhesive: Manufacturer's standard neoprene-based panel adhesive meeting ANSI A136.1-1967 and UL(R) listed.

C. Sealant:

1. For conditions exposed to moisture; Manufacturer's standard mildew-resistant, FDA/UL(R) recognized silicone sealant in colors matching components.
2. For conditions not exposed to moisture; Manufacturer's standard silicone sealant in colors matching components.

2.4 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 FABRICATION

A. General:

1. Material shall be fabricated and installed by an authorized installer by the solid polymer manufacturer.
2. Factory-fabricate components to greatest extent practicable of sizes and shapes indicated, in accordance with approved shop drawings.
3. Ease top and front edges and corners.
4. Material shall be fabricated to field measurements.
    a. Seams shall be located where shown on approved shop drawings.
    b. Provide seam blocks under all seams in accordance with manufacturer's recommendations.
5. Form joints between components using manufacturer's standard joint adhesive; without conspicuous joints.
6. Cut and finish component edges with clean, sharp returns. Route radii and contours to template. Repair or reject defective and inaccurate work.

B. Countertops and splashes:

1. Shall be thickness as indicated, one piece wherever possible, and with flush joints sealed with joint adhesive where required.
2. Use sheets in consecutive order as numbered by manufacturer, whenever possible.
3. Shop fabricate in largest sections possible for transporting and building access.
4. Exposed edge details shall be as detailed in Drawings.
5. Backsplash height shall be according to detail provided.
    a. Coves:
        1) Provide shop fabricated, integrally molded 3/8" radius between top and splash straight coves at back and ends where against walls or other vertical surfaces.

3.5 MOCK-UP

A. Erect at location approved by **Architect**.

1. Mock-up shall not be part of final construction once approved by **Architect**.

2. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.

B. Mock-up

1. Size: 12" square minimum with nose and splash

3.6 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.
2. Install components plumb and level, scribed to adjacent finishes, in accordance with approved shop drawings and product data.
3. Form field joints using manufacturer's recommended adhesive, with joints inconspicuous in finished work.
4. Provide backsplashes and side splashes as indicated on the drawings.
5. Keep components and hands clean during installation. Remove adhesives, sealants and other stains. Keep clean until Date of Substantial Completion. Replace stained components.
6. Make plumbing connections to sinks in accordance with Division 15, Mechanical.
7. Protect surfaces from damage until Date of Substantial Completion. Repair work or replace damaged work that cannot be repaired to **Architect's** satisfaction.
8. Adhere under-mount sinks/bowls to counter tops using manufacturer's recommended adhesive and mounting hardware.

3.7 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Monitor work to insure installation and assembly are in accordance with applicable standards.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

E. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

F. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

G. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 06 61 00

THIS PAGE IS INTENTIONALLY BLANK

SECTION 06 64 13 – FRP WALL PANELS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified and as necessary to complete the work, including, but not limited to:

1. Fabrication and installation of custom sized and shaped configurations including but not limited to:

a. Fiberglass Reinforced Wall Panel system (FRP)

1. Trim and associated accessories
2. Adhesive
3. Sealants for "Fiberglass Reinforced Plastic" (FRP)
4. Fasteners

b. Base Molding – Per Finish Schedule

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American National Standards Institute (ANSI)

1. ANSI/AHA A135.5 - Prefinished Hardboard Paneling; most current edition.

E. American Society For Testing and Materials (ASTM)

1. ASTM D256 - Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics; 1997
2. ASTM D523 - Standard Test Method for Specular Gloss; 1989 (Reapproved 1994).
3. ASTM D570 - Standard Test Method for Water Absorption of Plastics; 1998.
4. ASTM D638 - Standard Test Method for Tensile Properties of Plastics; 1997.
5. ASTM D696 - Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30°C and 30°C with a Vitreous Silica Dilatometer; 1998
6. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced and

Reinforced Plastics and Electrical Insulating Materials; 1997

7. ASTM D792 - Standard Test Methods for Density and Specific Gravity (Relative Density) of Plastics by Displacement; 1998
8. ASTM D968 - Standard Test Methods for Abrasion Resistance of Organic Coatings by Falling Abrasive; 1993
9. ASTM D1037 - Standard Test Methods for Evaluating Properties of Wood-Base Fiber and Particle Panel Materials; 1996a
10. ASTM D1308 - Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes; 1987 (Reapproved 1998).
11. ASTM D2197 - Standard Test Methods for Adhesion of Organic Coatings by Scrape Adhesion; 1998
12. ASTM D2486 - Standard Test Method for Scrub Resistance of Wall Paints; 1996.
13. ASTM D2583 - Standard Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor; 1995.
14. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 1998
15. ASTM numbers as herein listed.

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Fiberglass Reinforced Panel	Sanitary	As herein noted	As herein noted
		Comply	USDA/FSIS
	Fire rating	As herein noted	ASTM – E84
	Sizes: W x H x Thk	48" x 96" x 3/32" 48" x 120" x 3/32"	Mfgr.
Surface Properties	Abrasion	Complies	ASTM D968-81 ASTM D2197-91 ASTM D3002
	Cleanability/Stain Resistance		NEMA LD 3-2000 sec 3.4
			NEMA LD 3-2000 Sec 3.5
Adhesive	VOC compliant	2.6 g/l max	MSDS #3989
Refer to drawings and as herein specified			

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturers data and shop drawings.

1. Data: Submit manufacturer's descriptive data and detailed shop drawings for systems, including finish systems.

a. Include copy of I.C.B.O. report.

2. Drawings shall show installation layout including location of all joints and accessories.

E. Samples:

1. Submit colors and textures as herein specified and as listed in drawings.
2. Submit 12"W x 12"H (minimum) sample of panel in color(s) and texture(s) indicated; utilize tools and techniques proposed for installation.
3. Submit samples of trim and accessories

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for Five (5) years providing / installing / finishing similar size projects and complexity.

C. Manufacturer shall have been in business for Five (5) years providing/installing/finishing similar size projects and complexity.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

D. Building shall be fully enclosed and temperature at 70 degrees with code compliant ventilation.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1. Panels shall be allowed to acclimate to room temperature of 70 degrees for a minimum of 48 hours prior to installation.

B. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results.

1. Do not install products under environmental conditions outside manufacturer's absolute limits.

C. Ensure wall has Level 3 finish per Section 09 29 00 prior to commencing installation.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Floor finish
2. Wall construction and finish

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 09 22 16 – Non-Structural Metal Framing
3. Section 09 29 00 – Gypsum Board & Sheathing Substrates

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplemental Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 MANUFACTURER

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as listed herein and in Drawings:

1. Koroseal, www.koroseal.com

2. Marlite 330.343-6621, www.marlite.com
3. Kemlite by Crane Composites, www.kemlite.com
4. Reviewed Equivalent by **Architect**.

    a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
    b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
    c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Schedule:

1. Panels:

    a. Mfgr: Koroseal
    b. Material: Acrylic Modified Vinyl Plastic
    c. Sizes: Use longest size to minimize butt joints
    d. Model(s):

        1. Standard:

            a. Fire rating:

                1. Class I/A: Pebbled texture

                    a. Flame spread: < 25
                    b. Smoke developed: < 450

            b. Sanitary: USDA/FSIS approved, ASTM D3273-94 and 95
            c. Color: Simply White (TE)
            d. Finish: As noted

2. Trim:

    a. Mfgr: Koroseal
    b. Lengths: 8'-0" a 10'-0' – use lengths to minimize joints
    c. Schedule:

        1. Extruded PVC Trim

            a. Components:

                1. M 083 Inside Corner
                2. M 085 Outside Corner
                3. M 087 Division
                4. M 370 Edge

            b. Finish / Color:

1. Simply White

5. Sealants:

   a. Mfgr:
   b. Application: Install in accordance with manufacturer's recommendations.
   c. Schedule:

      1. Clear Silicone

6. Adhesives:

   a. Mfgr: Koroguard
   b. Product: Water resistant, non-flammable adhesive
   c. Model: XT2000+ Mastic

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION /EXAMINATION

A. Verification of Conditions:

   1. Examine areas and conditions under which work is to be performed.
   2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Examine surfaces to receive panels for:

   1. Substrates contrary to recommendations of system manufacturer.
   2. Miss aligned substrate that will adversely affect execution and quality of work.
   3. Deviation tolerance for installed substrate shall not exceed for both vertical and horizontal 1/8 inch in 20'-0". Tolerance deviation shall not be collective.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Take panels out of cartons and allow to acclimatize to room conditions for at least 48 hours prior to installation.

C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

D. Clean surfaces thoroughly prior to installation.

E. Protect existing surfaces from damage due to installation.

3.4 FABRICATION

A. Verify dimensions on site prior to shop fabrication.

B. Fabricate panels to size and shape required for tightly fitted joints or as required by manufacturer.

C. Ease all exposed edges to small uniform radius.

D. No exposed mechanical fastening shall be permitted other than trim moldings.

E. Supply all accessories required for installation.

3.5 INSTALLATION

A. Perform work in accordance with manufacturer’s recommendations, as herein specified and in accordance with drawings.

B. Install panels in accordance with manufacturer's instruction and these specifications, and reviewed shop drawings.

1. Refer to installation instructions for Marlite Brand FRP panels and fire rated panels

C. Use the adhesives recommended by the panel manufacturer unless prohibited by local regulations; obtain manufacturer's approval of alternative adhesives.

D. Install continuous bead of silicone sealant in each joint and trim groove and between trim and adjacent construction, maintaining 1/8 inch (3 mm) expansion space.

1. Panels shall be installed to accommodate 1/8″ of movement.

E. All panels shall be installed to a horizontal and vertical tolerance of 1/8 inch in 20 ft.

1. Tolerance deviation shall not be collective.
2. Seal total perimeter and at all joints with manufacturer's approved materials as detailed and shown on shop drawings.
3. Avoid contamination of panel faces with adhesives, solvents, or cleaners; clean as necessary and replace if not possible to repair to original condition.
4. Protect installed products until completion of project.
5. Touch-up, repair or replace damaged products after Substantial Completion.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 06 64 13

SECTION 07 13 26 COLD APPLIED SELF-ADHERING MEMBRANE

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable extents, dimensions, clearances and other associated materials at the jobsite.

D. Furnish materials and perform labor per each specific scope of work required to execute this work as indicated on the drawings, as specified herein, and as indicated in each specification section referred to herein and as necessary to complete the work required by project conditions, including, but not limited to:

1. Cold Applied Self Adhering Membrane (CASAM) flexible flashing for above grade conditions.
2. Coordinate with Water Resistant Barrier
    a. Refer to Section 07 26 00 – Water Resistant Barrier (WRB)

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction
    a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society for Testing and Materials (ASTM), www.astm.org

1. ASTM C920 - Specifications for Elastomeric Joint Sealants
2. ASTM D412 - Test Methods for Rubber Properties in Tension
3. ASTM D570 - Test Methods for Water Absorption of Plastics
4. ASTM D903 - Test Methods for Peel or Stripping Strength of Adhesive Bonds
5. ASTM D1004 - Test Method for Initial Tear Resistance of Plastic Film and Sheeting
6. ASTM D1876 - Test Methods for Peel Resistance of Adhesives (T-Peel Test)
7. ASTM D1938 - Test Method for Tear Propagation Resistance of Plastic Film and Sheeting
8. ASTM D1970 - Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
9. ASTM D3767 - Practice for Rubber-Measurement of Dimensions
10. ASTM D4263 - Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method
11. ASTM D4541 - Test Method for Pull-off Strength of Coatings Using Portable Adhesion Testers
12. ASTM D5034 - Test Method for Breaking Strength and Elongation of Textile Fabrics

13. ASTM E96 - Test Methods for Water Vapor Transmission of Materials
14. ASTM E154 - Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover
15. ASTM E1186 - Practice for Air Leakage Site Detection in Building Envelopes and Air Retarder Systems
16. ASTM E2178 - Standard Test Method for Air Permeance of Building Materials
17. ASTM E2357 - Standard Test Method for Determining Air Leakage of Air Barrier Assemblies
18. ICC AC 38 - Water Resistance: AC 38; Acceptance Criteria for Water-Resistive Barrier

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Detail Membrane	Water Vapor Transmission	2.9 ng/m2sPa (0.05 perms) max.	ASTM E96 Method B
	Air Permeance	0.0006 L/(s.m2) (0.00012 cfm/ft2) max.	ASTM D412 at 75Pa (0.3 in. water) pressure difference
	Puncture Resistance	178 N (40 lbs.) min.	ASTM E154
	Lap Adhesion at -4°C (25°F)	880 N/m (5.0 lbs./in.) of width	ASTM D1876
	Low Temperature Flexibility	Unaffected to -43°C (-45°F)	ASTM D1970
	Tensile Strength	min. 2.7 MPa (400 psi)	ASTM D412, Die C Modified
	Elongation, Ultimate Failure of Rubberized Asphalt	min. 200%	ASTM D412, Die C
Wall Flashing	Water Vapor Transmission	2.9 ng/m2sPa (0.05 perms) max.	ASTM E96 Method B
	Water Absorption	max. 0.1% by weight	ASTM D570
	Puncture Resistance	356 N (80 lbs.) min	ASTM E154
	Tear Resistance Initiation	min. 58 N (13.0 lbs.) M.D.	ASTM D1004
	Tear Resistance Propagation	min. 40 N (9.0 lbs.) M.D.	ASTM D1938
	Lap Adhesion at -4°C (25°F)	880 N/m (5.0 lbs./in.) of width	ASTM D1876
	Low Temperature Flexibility	Unaffected to -43°C (-45°F)	ASTM D1970
	Tensile Strength	min. 5.5 MPa (800 psi)	ASTM D412, Die C Modified
	Elongation, Ultimate Failure of Rubberized Asphalt	min. 200%	ASTM D412, Die C
Refer to drawings and as herein specified			

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Monitoring by others:**

Item	Name of Test	Performance Results	By Whom
Assembly	Installation	Installation is in accordance with manufacturer's standards & warranty criteria	Product Manufacture's Representative

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Specification Cut sheets for each product
2. Installation instructions for each product
3. Surface preparation instructions for each product

E. Submit samples.

1. 12" x 12" for each membrane and flexible flashing product/material

F. Mock Up:

1. Erect at location approved by **Architect**.

a. Mock-up shall be part of final construction once approved by **Architect**.
b. Mock-up of wall, corners & horizontal conditions shall comprise of all underlayment, flexible flashing, internal metal flashing components as specified and indicated in Drawings.

2. Size:

a. Wall Membrane: 3'-0" long, 3'-0" square, minimum.
b. One door opening
c. One window opening
d. One of any other detail condition

G. Certification:

1. Provide manufacturer's certification that materials meet specified requirements.

a. Certification List: Shall be reviewed by **Owner** at the time of delivery.

1. Item not certified by supplier shall not be unloaded.
2. Check list for accuracy.
3. Substitutions at the time of delivery are not permitted and shall not be unloaded, but shall be taken off site; Refer to Division 1 for substitution, deviation and/or submittal procedures.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer shall have been in business for **five (5)** years installing/finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **five (5)** years manufacturing underlayment and flexible flashings and the production and sales of self-adhesive sheet membrane waterproofing.

D. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Review of submittals.
b. Review of surface preparation, minimum curing period and installation procedures.
c. Review of special details and flashings.
d. Sequence of construction, responsibilities and schedule for subsequent operations.
e. Review of mock-up requirements.
f. Review of inspection, testing, protection and repair procedures.

E. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during membrane waterproofing work to review installation procedures.

1. Manufacturer's representative shall review and certify all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

F. Miscellaneous criteria:

1. Monitor work to insure installation and assembly are in accordance with applicable standards.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. The membrane and accessory products must be handled properly.

1. Read all product labels and Material Safety Data Sheets (MSDS) for proper handling and disposal.
2. Deliver all materials in manufacturer's unopened packages and store all materials under cover.
3. Do not double stack palletized material.

C. Deliver materials and products in labeled packages. Store and handle in strict compliance with manufacturer's instructions, recommendations, and material safety data sheets. Protect from damage from sunlight, weather excessive temperatures and construction operations. Remove damaged material from the site and dispose of in accordance with applicable regulations.

1. Do not double-stack pallets of membrane on the job site. Provide cover on top and all sides, allowing for adequate ventilation.
2. Protect primer and mastic form moisture and potential sources of ignition.

D. Sequence deliveries to avoid delays, but minimize on-site storage.

E. Proceed with installation only when substrate construction and preparation work is complete and in condition to receive sheet membrane waterproofing.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, substrates, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Perform work only when existing and forecasted weather conditions are within the limits established by the manufacturer of the materials and products used.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's **five (5)** year warranty that air barrier and accessories are free of defects at time of delivery and are manufactured to meet manufacturer's published physical properties and material specifications.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Wall, sill, parapet and soffit sheathings
2. Wall openings
3. Roof assembly
4. Roof openings
5. Exterior wall finish
6. Metal flashing
7. Gutters and drainage systems
8. Substrate

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 02 41 19 – Selective Building Demolition & Protection
3. Section 04 22 00 – Concrete Unit Masonry
4. Section 06 10 00 – Rough Carpentry
5. Section 07 26 00 – Water Resistant Barrier (WRB)
6. Section 07 41 13 – Metal Roof Panels
7. Section 07 46 19 – Metal Siding and Soffit Assembly
8. Section 07 62 00 – Sheet Metal Flashing and Trim

9. Section 07 92 00 – Sealants and Caulking
10. Section 08 11 13 – Steel Doors & Frames
11. Section 08 41 00 – Entrances, Window Wall, Storefront System and Curtain Walls
12. Section 08 51 13 – Aluminum Windows
13. Section 09 29 00 – Gypsum Board & Sheathing Substrates

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. Coordinate with the installation of other waterproof sheet membranes as an integral part of this scope.

D. Coordinate with installation of sheet metal flashing by others.

1.13 GENERAL SYSTEM DESCRIPTION

A. Flexible flashing in accordance with manufacturer's installation instructions and as detailed.

B. Flashing at wall openings:

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturers shall be the following:

1. GRACE Construction Products, www.gcpat.com/en/solutions
2. Henry, us.henry.com
3. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Flexible Flashing:

1. General:

    a. Widths: As required to meet design criteria and as needed to build up multiple strips with 3" overlap to meet overall width criteria.

2. Mfgr: Grace Construction Products

    a. Application: Through-wall flashing detailing

        1. Product: Perm-A-Barrier Wall Flashing
        2. Type: Heavy Duty, fully adhered membrane
        3. Available widths: 12", 18", 24", 36"
        4. Description: 32 mil (0.8 mm) of self-adhesive rubberized asphalt integrally bonded to 8 mil (0.2 mm) of cross-laminated, high-density polyethylene film to provide a min. 40 mil (1.0 mm) thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed.

    b. Application: Detail Flashing

        1. Product: Perm-A-Barrier Detail Membrane
        2. Type: Heavy Duty, fully adhered membrane
        3. Available widths: 6", 9", 12"
        4. Primer: 36 mil (0.9mm) of self-adhesive rubberized asphalt integrally bonded to 4 mil (0.1 mm) of cross-laminated, high-density polyethylene film to provide a min. 40 mil (1.0 mm) thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed

B. Primers:

1. Product: Perm-A- Barrier WB Primer (or as recommended by CASAM mfgr.)
2. Type: Water-based primer which imparts an aggressive, high tack finish on the treated substrate.

    a. Flash Point: No flash to boiling point
    b. Solvent Type: Water
    c. VOC Content: Not to exceed 10 g/L
    d. Application Temperature: -4°C (25°F) and above
    e. Freezing point (as packaged): -7°C (21°F)

C. Penetrations & Termination Sealant

1. Liquid Membrane for Details and Terminations:

    a. Bituthene Liquid Membrane manufactured by GCP Applied Technologies; a two-part, elastomeric, trowel grade material designed for use with self-adhered membranes and tapes. 10 g/L max. VOC content.

2. Substrate Patching Membrane:

    a. Bituthene Liquid Membrane manufactured by GCP Applied Technologies; a two- part, elastomeric, trowel grade material designed for use with self-adhered membranes and tapes. 10 g/L max. VOC content.

3. Joint Sealant:

    a. Refer to sealant manufacturer's recommendations and Section 07 92 00 – Sealants and Caulking

2.3 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

    a. All surfaces must be sound, dry, clean and free of oil, grease, dirt, excess mortar or other contaminants detrimental to the adhesion of the membranes. Fill voids, gaps and spalled areas in substrate to provide an even plane.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

C. Coordinate work with Water Resistant Barriers (WRB) addressed under other specifications.

3.3 PREPARATION

A. Prepare area if work in accordance with manufacturer's recommendations.

B. Refer to manufacturer's literature for requirements for preparation of substrates.

1. Surfaces shall be structurally sound and free of voids, spalled areas, loose aggregate and sharp protrusions. Repair deck and/or wall area's before installing the membrane; use repair materials and methods which are acceptable to manufacturer.

    a. Remove dust, dirt, loose nails, loose stone, old roofing materials and debris.
    b. Remove contaminates such as grease, oil, wax from exposed surfaces.
    c. Remove protrusions, fill voids, and repair damaged, or unsupported areas.

2. Prime substrates as recommended by manufacturer for each membrane & flexible flashing type.

C. Masonry Substrates: Apply membrane over concrete block and brick with smooth trowel-cut mortar joints or parge coat.

1. Confirm with manufacturer for primer requirements.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified, and in accordance with drawings and details.
    a. Flexible flashing membranes shall be fully adhered, typical.
    b. Install additional layers of CASAM as detailed.
2. Install in coordination with water resistant barrier, and wall and roof material manufacture's recommendations.
3. Prime substrates, typically in accordance with membrane manufacturer's recommendations.
4. Apply membrane only in fair weather when the air, substrates, and membrane are at temperatures in accordance with those specified in membrane manufacturer's product data and installation instructions.
5. Install membrane on vertical and horizontal substrates in accordance with manufacturer's recommendations.
6. Consistent with good roofing and wall assembly practice, install the roof and wall membranes/flashing membrane such that all laps shed water.
    a. Always work from the low point to the high point of the roof wall.

B. Flexible Flashing:

1. Windows:
    a. Install in accordance with manufacturer's written installation instructions.
    b. Install additional layers of CASAM as detailed to tie in other flashing and sheet metal flashing.
    c. Coordinate with wall finish specifications.
    d. Coordinate with window type, flanged or not flanged and door types, flanged and not flanged.
2. Dissimilar Material:
    a. Install strip of membrane over the top of water resistant barrier and substrate at all edge conditions where wall material such as, but not limited to plaster adjoins a dissimilar material.
    b. Allow for 3" width of adhesion of cold applied self adhering waterproof membrane to substrate sheathing, unless required otherwise by manufacturer.
    c. Install in continuous strips as is physically capable.
    d. Install in shiplap fashion typically.

C. Primers, Sealants, and Termination Accessories

1. Per manufacturer's written instructions.

3.5 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Do not leave flexible flashings permanently exposed to sunlight longer then 90% of the maximum allowable time frame as specified by the membrane manufacturer for each product.

D. Do not install Waterproof membrane underlayments directly under roof coverings especially sensitive to corrosion, such as zinc, without providing proper ventilation.

E. Repair holes, fish mouths, tears, and damage to membrane with a patch of membrane with a patch of membrane extending (6") in all directions.

1. If fasteners are removed leaving holes in the waterproof membrane underlayment, and easing the membrane must be patched.

F. Do not install fasteners through the membrane over unsupported membrane areas of the Substrate.

G. Do not install low temperature membranes under metal roofing.

3.6 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 07 26 00

SECTION 07 19 00 – WATER REPELLANT COATINGS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable extents of work at the jobsite and coordinate with **General Contractor.**

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Field application of clear water repellant/anti-graffiti coating applied in two coats to protect above-grade, vertical and horizontal surfaces of exterior and interior surfaces of all exposed, and semi-exposed surfaces.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. Title 24, California Code of Regulations, California Building Standards Commission

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. CBC Energy Code, California Code of Regulations, Title 24, Part 6, California Building Standards Commission

E. Title 24, Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

F. American Society For Testing and Materials (ASTM)

G. American Association of State Highway and Transportation Officials (AASHTO)

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	Name of Test	Performance	Testing Std.
Water Sealant	Effects of accelerated weathering on Silicone Rubber	After 4000 hours, no signs of weathering (Accelerated weathering is equivalent of 30 years actual weathering in field)	ASTM 793-75
	Effects of hydrostatic pressure on Water Sealant	Withstand up to 2.8 atmospheres of hydrostatic pressure before compromise	ASTM D751-95
	Surface frictional properties of concrete treated with Water Sealant	No significant change in the frictional properties of concrete	ASTM E-303
	Permeability of Water Sealant	Permeance between 10 and 14 perms	
		Comply	21 CFR 177.2600
Masonry	Water penetration and leakage through masonry surfaces treated with Water Sealant	Allow no water penetration through masonry	ASTM E-514
Concrete	Permeability of concrete sealed with Water Sealant	Retain 41% of original water vapor transmission capability	ASTM E-96
Concrete Refer to drawings and as herein specified	Cured compressive strength of freshly poured concrete treated with Water Sealant	13.7% increase in compressive strength over untreated concrete after a 28 day curing cycle	
	Changes in gas permeability and water transmission of concrete treated with Water Sealant	"Breathe" or pass water vapor through the sealant (91.7% less than that of untreated concrete)	N/A
	Changes in gas permeability and water transmission of concrete treated with Water Sealant	Chloride Ion content 15 times less than untreated concrete	
			AASHTO T-259

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

E. Submit: Manufacturer's data: Including Manufacturer's technical information including product label analysis with application instructions for each material proposed for use.

1. List each material and cross-reference to specific finish system and application. Identify by manufacturer's catalog number and general classification.

F. Samples:

1. Install mock up test panels for each substrate, refer to Heading 1.07.
2. Provide listing of material and application for each finish sample.

G. Product Data: Submit manufacturer's product data sheets on all products to be used for the work.

1. Submit description for protection of surrounding areas and non-masonry surfaces, surface preparation, application, and final cleaning.

H. Applicator Qualifications: Submit qualifications of applicator.

1. Certification stating applicator is experienced in the application of the specified products and has done this work for a minimum of (3) years.
2. List of recently completed concrete cleaning products used and substrates, applicable local environmental regulations, and application procedures.

I. Environmental Regulations: Submit description for testing, handling, treatment, containment collection, transport, disposal, and discharge of hazardous wastes and cleaning effluents. Describe any hazardous materials to be cleaned from substrates. Submit applicable local environmental regulations.

J. Protection: Submit description for protecting surrounding areas, landscaping, building occupants, pedestrians, vehicles, and non-concrete and non-masonry surfaces during the work from contact with concrete cleaners, residues, rinse water, fumes, wastes, cleaning effluents and Water Repellents.

K. Surface Preparation: Submit description for surface preparation of substrates to be completed before application of water repellents.

L. Application: Submit description for application procedures of water repellents.

M. Applicator Qualifications: Submit qualifications of applicator

1. Certification stating applicator is experienced in the application of the specified products.
2. List of recently completed water repellent projects, including project name and location, names of **Owner** and **Architect**, and description of products used substrates, applicable local environmental regulations, and application procedures.

N. Environmental Regulations: Submit applicable local environmental regulations

O. VOC Certification: Submit certification that water repellents furnished comply with regulations controlling use of volatile organic compounds (VOC).

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Applicator shall meet or exceed the following Qualifications:

1. Experienced in the application of the specified products for a period of not less than (3) years.
2. Employs persons trained for the application of the specified products with a minimum of (2) years experience with work per this specification.

C. Pre-Application Meeting: Convene a pre-application meeting (2) weeks before the start of application of water repellents. Require attendance of parties directly affecting work of this section, including the **General Contractor**, **Architect**, applicator, and product manufacturers' representative. Review environmental regulations, test panel procedures, protection of surrounding areas and non-masonry surfaces, surface preparation, application, field qualify control, final cleaning, and coordination with other work. *

D. Water repellant/anti-graffiti coating will not significantly alter the appearance or vapor transmission of treated surfaces.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver materials to site in manufacturer's original, tightly sealed, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

C. Verify that the product matches that of the original sample applied on the test panel.

D. Store containers upright in a cool, dry, well ventilated place, out of the sun.

1. Store away from all other chemicals and potential sources of contamination.
2. Keep lights, fire, sparks, and heat away from containers.
3. Do not drop containers or slide across sharp objects.
4. Keep containers tightly closed when not in use.
5. Store and handle materials in accordance with manufacturer's written instructions.

E. Use product within (8) hours of opening container.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

B. Surface Preparation: **General Contractor** or Applicator shall be responsible for providing a clean, dry substrate free from oil, dirt, grease, efflorescence or any other coating, which may inhibit penetration and adhesion of water repellent. This requirement applies to new construction, renovation or remedial projects. Substrate must be completely dry prior to applying product.

C. Environmental Requirements:

1. Temperature: Product may be applied at any temperature providing that there is no frozen moisture present in the substrate. When applied at temperatures below 40ºF the product may cure at a slower rate. Optimal temperatures should be above 40ºF (5ºC) or below 95ºF (35ºC).
2. Do not apply material if the substrate is wet or contains frozen moisture.
    a. Allow substrate to dry for a minimum of 48 hours after rain or 96 hours after power washing.
3. Do not apply material during inclement weather or if precipitation is expected within 12

hours.

4. Do not use spray methods of application under windy conditions.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

D. Special precautions shall be taken to avoid fumes from entering the building being treated. Ventilation systems and fresh air intakes shall be turned off and covered.

E. Protect shrubs, metal, glass, vehicles, and other building hardware from overspray.

1.9 ENVIRONMENTAL REGULATIONS

A. Comply with applicable federal, state, and local environmental regulations & contact product manufacturer for additional information.

1.10 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **five (5)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner.**

1.11 RELATED WORK/SECTIONS

A. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 02 41 13 – Selective Site Demolition & Protection
3. Section 04 22 00 – Concrete Unit Masonry

B. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.12 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.13 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as listed herein and in Drawings:

1. Professional Products of Kansas, Inc., 4456 S. Clifton, Wichita, KS 67216, (800) 676-7346, (316) 522-9300, Fax (316) 522-9346, www.watersealant.com
2. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

1. Products must be penetrating, permanent waterproofing treatment using a silicone rubber base and not contain any paraffin waxes, urethanes or polysiloxanes.
2. Silane and siloxane based products will not be considered because of their lack of elongation (400%), allowing for thermal expansion and contraction.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 WATER REPELLANT / ANTI-GRAFFITI COATING

A. General:

1. Refer to Professional® product data sheets & contact a Professional® representative to confirm the appropriate types and applications to be used prior to issuance of submittals.
2. Characteristics:

a. Material: Penetrating silicone rubber water repellant / anti-graffiti coating.
b. Coating can alter color, install on test panels to determine color change for review and approvals.
c. Will not form a surface film or gloss.
d. Inorganic, it is not affected by UV rays, salts, acid rain, etc.
e. Breathable, it allows moisture vapor to escape while preventing liquid penetration.
f. Flexible, it bridges hairline cracks and allows for building movement.

3. Submit to **Architect** the proposed material for final acceptance prior to purchasing and commencing with installation.
4. Application procedure and coverage rates must be in conformance with effectiveness of

testing samples submitted, recommendation of application rates suggested, approved manufacturers standards and as a minimum, that specified herein.

B. Products/Schedule:

1. First Coat @ all Vertical and Horizontal surfaces:

a. Professional® Water Sealant Super Strength

1. Composition:

a.	Form:	Liquid
b.	Color:	Clear
c.	Active Substance:	RTV Silicone Rubber
d.	Percent Active Material:	15%
e.	Flash Point:	105º

2. Second Coat @ Vertical Surfaces:

a. Professional® Water Sealant Super Strength

1. Composition:

a.	Form:	Liquid
b.	Color:	Clear
c.	Active Substance:	RTV Silicone Rubber
d.	Percent Active Material:	15%
e.	Flash Point:	105º

2. Application: Concrete Masonry Units, including veneer

2.3 CURED PROPERTIES

A. Sealant must penetrate the surface of the material to which it is applied to be effective. The solvent portion evaporates. The active ingredients react to form silicone rubber, which remains below the surface and prevents water from penetrating while permitting water vapor transmission. The silicone rubber retains its characteristic 400% elongation, which allows for bridging of hairline cracks, expansion and contraction, building movement and extremes of temperature.

B. Sealant is unaffected by ultraviolet light, ozone, water, deicers and acids. It allows moisture vapor to escape while preventing liquid penetration. It cures to a clear, flat finish, which is extremely durable.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verify by examination the following:

1. That surfaces are acceptable to receive the specified water repellant / anti-graffiti coatings.
2. The required joint sealants have been installed.
3. New masonry, mortar and concrete have cured a minimum of 28 days.
4. Surface to be treated is clean, dry, and contains no frozen moisture.

5. Environmental conditions are appropriate for application.

B. Notify the **Architect** if surfaces are not acceptable to receive the specified products.

C. Comply with State & local agencies having jurisdiction, that conditions are acceptable to receive the water repellant / anti-graffiti coatings.

3.2 COORDINATION

A. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

B. Apply water repellant / anti-graffiti coatings after installation of windows, doors, sealant, etc.

1. Install when possible prior to installation of items which overlap onto substrate including, but not limited to flashing.

3.3 PREPARATION

A. Refer to Division 1 for project coordination requirements.

B. Clean all dirt, dust, oil, grease, mold, mildew, efflorescence, or any other coating or material from surfaces that interfere with penetration, performance, adhesion, or aesthetics of water repellents.

1. Use appropriate cleaners approved by the water repellents manufacturer where necessary. Rinse thoroughly, using pressure water spray to remove cleaner residues.
2. Allow surfaces to dry completely before application of water repellents.

C. Repair, patch, and fill all cracks, voids, defects, and damaged area in surface as approved by the **Architect**. Allow repair materials to cure completely before application of water repellents.

D. Apply specified sealants and caulking and allow to cure completely before application of water repellents.

E. Seal all open joints.

F. Allow new masonry and concrete construction and repointed surfaces to cure for minimum of 28 days before application of water repellents.

3.4 MOCK UP - TEST PANELS

A. Before full-scale application, review manufacturer's product data sheets to determine the suitability of each product for the specific surfaces.

B. Apply water repellant/anti-graffiti coating to test panels (mock-ups) to determine appropriate strength, number of applications, coverage rates, compatibility, effectiveness, surface preparation, application procedures, and desired results.

C. Apply water repellant/anti-graffiti coating to test panels (mock-ups) in accordance with manufacturer's written instructions.

1. Allow 120 hours (5 days) or until test panels are thoroughly dry before applying graffiti paint.

a. Allow graffiti paint to dry for 24 hours prior to removing with cleaner.

1) Professional Phase II Cleaner

b. Repeat cycles of cleanings and document until all graffiti paint is removed.

2. Do not begin full-scale application until test panels are inspected and approved by the **Architect**.

D. Test Panel Requirements:

1. Size: Minimum 4 feet by 4 feet each.
2. Locations: Adjacent to job trailer.
3. Number: As required to completely test each water repellent with each type of substrate to be protected.

E. Retain and protect test panels approved by the **Architect** in undisturbed condition during the work of this section, to be used as standard for judging the water repellent work.

3.5 SCHEDULE

A. Provide a schedule indicating building locations, substrates, water repellents to be used and sequence of water repellent work.

3.6 INSTALLATION

A. Apply water repellant/anti-graffiti coating to substrates in accordance with manufacturer's written instructions, environmental regulations, and application procedures determined from test panel results approved by the **Architect**.

1. Graffiti protection requires a two-coat application.

B. Apply to clean, dry cured, and properly prepared surfaces approved by the **Architect**.

C. Consult manufacturer's written instructions for information on application equipment to be used and precautions to be taken with the specified products.

D. Do not dilute or alter water repellents, unless otherwise specified.

E. Do not apply to below-grade surfaces.

F. Do not apply to asphalt, or polystyrene, which may be affected by the solvent carrier.

G. Do not apply to painted surfaces.

H. Do not apply to compensate for structural or material defects in substrates.

I. Avoid overspray, wind drift, and splash of water repellant/anti-graffiti coating.

J. Apply material as shipped by the manufacturer and do not dilute.

K. Apply material using a high-volume, low pressure, pump-up sprayer (between 40-50 psi), with solvent resistant fittings, foam roller, or brush of natural bristle or foam.

1. Vertical Applications: Apply in a flood coat, from top to bottom, being sure to obtain a 4 to 6 inch rundown of product from the point where the spray makes contact with the surface. Work all the way down the building covering the rundown as you go. Avoid excessive overlapping.

3.7 FIELD QUALITY CONTROL

A. Inspections: Inspect the water repellant/anti-graffiti coating work with the **General Contractor**, **Architect**, applicator, and Professional Products of Kansas representative after a test area in an

inconspicuous location has been applied, and compare with test panel results approved by the **Architect**. Determine if the substrates are suitably protected by the water repellant/anti-graffiti coating.

B. Manufacturer's Field Services: Provide the services of a manufacturer's authorized field representative to verify specified products are used, and protection, surface preparation and application of water repellant/anti-graffiti coating are in accordance with the manufacturer's written instructions and the test panel results approved by the Architect.

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Protect surrounding areas, landscaping building occupants, pedestrians, vehicles, and non-masonry surfaces during the work from contact with water repellents, masonry or concrete cleaners if used, residues, rinse water, fumes, wastes, and effluents in accordance with manufacturer's written instructions.

C. Divert and protect pedestrian and auto traffic.

D. Comply with State & local agencies having jurisdiction, requirements for protecting the surrounding areas and all non-masonry surfaces during the water repellant/anti-graffiti coating.

E. Special precautions shall be taken to prohibit fumes from entering the building being treated. Ventilation systems and fresh air intakes shall be turned off and covered.

F. Clean site of all unused water repellant/anti-graffiti coating, residues, rinse water, wastes, and effluents in accordance with environmental regulations.

G. Remove and dispose of all materials used to protect surrounding areas and non-masonry surfaces, following completion of the work of this section.

H. Repair, restore, or replace to the satisfaction of the **Architect**, all materials, landscaping, and non-masonry surfaces damaged by exposure to water repellents.

I. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

J. Provide record drawings in accordance with Division 1 closeout submittal procedures.

K. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 07 19 00

SECTION 07 21 00 – BUILDING INSULATION

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Thermal, Rigid and Acoustical insulation at, but not limited to: exterior & interior walls, soffit framing, and ceilings, and as indicated on the documents & as specified herein.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society for Testing Materials (ASTM)

1.	ASTM E84	Surface Burning Characteristics of Building Materials
2.	ASTM E96	Water Vapor Transmissions of Materials
3.	ASTM E136	Behavior of Materials in a Vertical Tube Furnace at 750°C
4.	ASTM C423	Sound Absorption and the Sound Absorption Coefficient by the Reverberation Room Method
5.	ASTM C553	Specification for Mineral Fiber Blanket and Felt Insulations
6.	ASTM C612	Specification for Mineral Fiber Block and Board Thermal Insulation
7.	ASTM C665	Specification for Mineral Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.

B. **Standards**:

1. Insulation Manufacturer test data shall be in compliance with ASTM C1289 US Test method to determine LTTR (Long Term Thermal Resistance) R-Values.

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturer's data and MSDS sheets for each product intended for use.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Stipulations:

1. Comply with insulation requirements as herein specified and as indicated in drawings.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include extent of insulation for all insulation types specified for project.
2. General **Contractor** shall request meeting 5 days in advance of construction.

F. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

G. Miscellaneous criteria:

1. Insulation shall be placed and secured in place as herein specified, indicated in drawings and in compliance with manufactures instructions, most restrictive shall apply.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Protect insulation from physical damage and from becoming wet, soiled, or covered with ice or snow. Comply with manufacturer's recommendations for handling, storage and protection during installation.

C. Label insulation packages to include material name, production date and/or product code.

D. Deliver insulation to site in original, unbroken and unopened containers. Store material off ground in dry, protected areas.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Wall Construction
2. Ceiling and Soffit Construction
3. Attics and Cavities
4. Roof Construction

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 05 40 00 – Cold-Formed Metal Framing
3. Section 07 84 00 – Fire Stopping
4. Section 09 22 16 – Non-Structural Metal Framing
5. Section 09 29 00 – Gypsum Board & Sheathing Substrates

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 DEFINITIONS

A. "Friction Fit" implies that insulation is installed full height fully within the wall cavity and in complete contact with all surfaces within the cavity.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Thermal and Acoustical Insulation:

a. Owens Corning, www.owenscorning.com
b. KNAUF Insulation, www.knaufinsulation.us/
c. Certain Teed, www.certainteed.com
d. Dow Building Solutions, www.building.dow.com/en-us/

2. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require Architect's approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

2.2 MATERIALS – BUILDING ENVELOPE

A. Thermal Batt Insulation

1. General:

a. Provide at all exterior walls, furring walls at inside face of exterior walls, roofs, ceilings, soffits, and inside header assemblies, to provide complete and continuous building thermal envelope.

2. Concealed Conditions:

a. Manufacturer: Owens Corning

b. Type: Unfaced fiberglass batt insulation

1) Meets ASTM C665 Type I, Class A

2) Meets ASTM C1338 Mold/mildew resistant
3) Meets ASTM E136 Non-Combustible

c. Product: EcoTouch® Pink® Fiberglas™ Insulation with PureFiber® Technology

1) Exception: Refer to Fire Rated Assembly details and notes for specific insulation requirements for insulation to be used at each rated assembly.

d. Installation: Friction Fit to fill cavity
e. Application: Fully enclosed and concealed within wall, ceiling, soffit or header cavities
f. R-Value, ASTM C518:

1) Wood stud framing:

a) 2x6 walls: R-21 5-1/2" thick
b) 2x8 walls: R-22 6-3/4" thick

2) Wood roof framing:

a) Roof trusses: R-21 5-1/2" (where indicated on drawings)
b) Roof trusses: R-38 12" (where indicated on drawings)

g. Surface Burning Characteristics, ASTM E84:

1) Flame Spread: 10
2) Smoke Developed: 10

h. Do not install on top of or within 3" of recessed light fixtures unless the fixtures are approved for such use.

B. Rigid Foam Continuous Insulation (CI)

1. General:

a. Provide at all exterior walls behind exterior wall finish as part of exterior wall assembly, exterior rainscreen assembly, and/or as part of cavity wall assembly.

2. Product:

a. Manufacturer: Owens Corning
b. Type: Rigid Extruded Polystyrene Insulation

1) Meets ASTM C578 Type IV
2) Meets ASTM E119 Fire Resistance Rated Wall Assemblies; refer to manufacturer website for details.
3) UL Classified:

c. Product: Foamular CW25 Extruded Polystyrene Insulation

1) Board Size: 16" x 96"
2) Edge Profile: Square
3) Thickness / R Value: 2" (R-10)

a) R-Value, ASTM C518

4) Compressive Strength, ASTM D 1621: 25 psi minimum
5) Flexural Strength, ASTM C203: 50 psi minimum
6) Water Absorption, ASTM C272: 0.10% maximum by volume
7) Water Vapor Permeance, ASTM E96: 1.10 perm, maximum
8) Dimensional Stability, ASTM D2126: 2.0% maximum linear change
9) Flame Spread, ASTM E84: 5
10) Smoke Developed, ASTM E84: 45-175 (actual number dependent on thickness)

d. Application:

1) Installed over Water Resistant Barrier (WRB) and behind exterior wall finish as part of exterior wall assembly.

e. Installation: Install using corrosion resistant, self-drilling wafer head screws. Screws shall have a length to penetrate the wall framing with 3 fastener threads minimum

C. Roof Rigid Foam Insulation

1. Specified as part of roofing assembly; refer to Roofing Specifications:

a. Section 07 41 13 – Metal Roof Panels

2.3 MATERIALS – INTERIOR

A. Acoustic Insulation:

1. General:

a. Provide acoustic batt insulation at all interior walls, framed ceilings, framed soffits, and inside header assemblies, unless otherwise noted.

2. Concealed Conditions

a. Manufacturer: Owens Corning
b. Type: Unfaced Fiberglass Acoustic Batt Insulation

1) Meets ASTM C665 Type I, Class A
2) Meets ASTM E136 Non-Combustible

c. Product: Sound Attenuation Batt Insulation
d. Installation: Friction Fit to fill cavity
e. Application: Fully enclosed and concealed within wall, ceiling, soffit or header cavities
f. Surface Burning Characteristics, ASTM E84:

1) FlameSpread: 10
2) Smoke Developed: 10

g. Do not install on top of or within 3" of recessed light fixtures unless the fixtures are approved for such use.

2.4 OTHER MATERIAL

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the **General Contractor** subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Remove, or protect against, projections in construction framing which may damage or prevent proper installation of insulation.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

C. Coordinate installation of insulation that needs to be installed prior to the erection of wall and/or ceiling framing.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer’s recommendations.

3.4 INSTALLATION

A. General:

1. Install the work of this Section in strict accordance with the original design, requirements of governmental agencies having jurisdiction, and the manufacturer's recommended installation procedures as submitted to and reviewed by the **Architect**, anchoring all components as indicated into position.
2. Install thermal insulation with snug fit at sides and firmly butted ends with no open space existing at perimeter or in between.
3. ANCHOR AND INSTALL LOCATIONS AS REQUIRED BY CONSTRUCTION TYPE & IN ACCORDANCE WITH MFGR'S RECOMMENDATIONS:

a. For additional installation methods & details of installation, refer to manufacturer’s standard details & specifications.
b. Install insulation product such that insulation fits full width between framing members.
c. At enclosed roof / ceiling structures install in compliance with CBC
d. Provide insulation with extended nailing flanges where framing members are shallower than insulation.

4. Where wall framing width differs, install sufficient insulation thickness (or combination of multiple layers) to entirely fill cavity and header by width and height.
5. Install insulation full cavity fill inside all metal stud headers and jambs.
6. For additional installation information, refer to Part 2 schedule of materials as herein specified.

3.5 FIELD QUALITY CONTROL

A. Monitor work to insure installation and assembly are in accordance with applicable standards.

3.6 PROTECTION AND CLEAN UP

B. Refer to Division 1 for protection and cleaning requirements.

C. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

D. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

E. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

F. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

G. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

H. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

I. Provide record drawings in accordance with Division 1 closeout submittal procedures.

J. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's NOTICE** of "Certificate of Substantial Completion".

END OF SECTION 07 21 00

SECTION 07 26 00 – WATER RESISTANT BARRIER

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions, clearances and heights at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Water Resistant (air/vapor) barrier assembly
    a. Base Layer
    b. Top Layer
2. Accessories
3. Coordinate with Flexible Flashing
    a. Refer to Section 07 13 26 – Cold Applied Self Adhering Waterproof Membrane

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction
    a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society For Testing and Materials (ASTM), www.astm.org

1. ASTM C920 Standard Specification for Elastomeric Joint Sealants
2. ASTM D779 Water Vapor Resistance
3. ASTM D828 Tensile Strength
4. ASTM D903 Standard Test Method for Peel or Stripping Strength Testing of Adhesive Bonds
5. ASTM D1004 Tear Strength
6. ASTM D1938 Standard Test method for Tear Propagation Resistance
7. ASTM D3786 Bursting Strength
8. ASTM D5034 Dry Tensile Strength
9. ASTM D5736 Thickness
10. ASTM E84 Flame Spread and Smoke Developed
11. ASTM E96(A) Water Vapor Transmission Rate (perm rating)

12. ASTM E283 Rate of Air Leakage Through Exterior Windows, Curtain Walls and Doors
13. ASTM E1677 Air Porosity (seconds)
14. ASTM E2178 Air Permeance
15. ASTM E2357 Standard Test Method for Determining Air Leakage Rate of Air Barrier Assemblies

E. National Fire Protection Association

1. NFPA 285 Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components

F. International Code Council

1. ICC-AC38 Acceptance Criteria for Water-Resistive Barriers

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.

B. **Standards**:

Item	**Name of Test**	**Performance**	**Testing Std.**
Water Resistant Membrane (air/vapor)	Basis Weight	3.12 oz/yd^2 or 21.66 lb/msf	TAPPI T410
	Thickness	14.5 mil	ASTM D5736
	Bursting Strength	66 psi	ASTM D3786
	Air Porosity	>4000 sec	TAPPI 460
	Air Permeance of Building Materials	.0047 L/s/m^2	ASTM E2178
	Air Retarder Material or System for Low Rise Framed Building Walls	.01 cfm/ft^2 @ 75 Pa	ASTM E1677 (ASTM E283)
	WVTR (AC38)	91.24 f/m^2/24 hrs	ASTM E96 (A)
	Water Vapor Permeance (AC38)	13 Perm	ASTM E96 (A)
	Water Resistance (Hydrostatic Pressure Resistance)	959 cm	AATCC 127-2003
	Water Resistance (AC38 3.3.2)	Pass	ASTM D-779 (Boat Test)
	Tear Strength (Trapezoidal Tear)	MD – 13.1 lbs CD – 17.0 lbs	ASTM D1117 (ASTM D5733)
	Tensile Strength (AC38 3.3.1)	MD – 30 lbs CD – 30 lbs/in	ASTM D828
	Dry Tensile Strength (AC38 3.3.1)	MD – 59 lbs CD – 56 lbs	ASTM D5034
	Flame Spread	0 Class A	ASTM E84
	Smoke Developed	70 Class A	ASTM E84
	Pliability (AC38)	Pass	AC-38
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. Construction Monitoring/Observations by others:

Item	Name of Test	Performance Results	By Whom
Assembly	Wall opening installation compliance	Comply with installation requirements of mfgr. and drawings	Product representative

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturer's data and shop drawings.

1. Membrane
2. Tape
3. Product info. / data sheets

E. Submit samples

1. Membrane
2. Tape

F. Mock Up

1. Erect at location approved by Architect.
    a. Mock-up shall be part of final construction once approved by Architect.
    b. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.
2. Mock-ups
    a. Wall surface, wall corners, door opening, and window opening
    b. Create as part of overall Wall Assembly and Flexible Flashing mockups.
        1. Mock-up of wall, corners & horizontal conditions shall comprise of all underlayment, flexible flashing, internal metal flashing components as specified and indicated in Drawings.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Water Resistant Barrier (Section 07 26 00) and Cold Applied Self-Adhering Membrane (CASAM) specified herein shall be provided through a single source and from a single manufacturer.

C. Contractor /Installer/Fabricator shall have been in business for **five (5)** years providing / installing / finishing projects of similar size and complexity.

D. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

E. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation membrane installation work to review installation procedures.

1. Manufacturer's representative shall review and certify all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the Architect by the manufacturer's representative.

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Review of submittals.
b. Review of surface preparation, minimum curing period and installation procedures.
c. Review of special details and flashings.
d. Sequence of construction, responsibilities and schedule for subsequent operations.
e. Review of mock-up requirements.
f. Review of inspection, testing, protection and repair procedures.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. After delivery, be responsible for storage, protection and placing of all items to be installed under this Section. Repair or replace damaged work, as directed by **Architect**. All work must be clean and free of soil, grease, dirt, finger or tool marks after installation.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. by others are installed correctly to proceed with installation of products as herein specified.

1.8 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's **five (5)** year warranty that water resistant barrier and accessories are free of defects at time of delivery and are manufactured to meet manufacturer's published physical properties and material specifications.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.9 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Wall framing
2. Wall sheathing
3. Windows
4. Doors

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 06 10 00 – Rough Carpentry
3. Section 07 13 26 – Cold Applied Self-Adhering Membrane – CASAM
4. Section 07 21 00 – Building Insulation
5. Section 07 41 13 – Metal Roof Panels
6. Section 07 46 19 – Metal Siding and Soffit Assembly
7. Section 07 54 00 – Thermoplastic Membrane Roofing
8. Section 07 62 00 – Sheet Metal Flashing and Trim
9. Section 07 92 00 – Sealants and Caulking

1.10 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.11 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Grace Construction Products, www.gcpat.com/en/solutions
2. Henry, us.henry.com
3. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 WATER RESISTANT MEMBRANE

A. Provide membrane wrap (wall wrap, window, door opening & header wrap) in accordance with manufacturer's specifications:

1. Coordinate the installation of material with other window and door waterproof membrane installation.

B. Membrane:

1. **Type:** **Water Resistant Membrane – Base Layer**

a. Mfgr.: Grace Construction Products
b. Product: Perm-A-Barrier VPS 30
c. Description: Primerless, self-adhering vapor permeable air and water barrier membrane consisting of a breathable carrier film with a specially designed adhesive.
d. Accessories:

1. Perm-A-Barrier NPS detail membrane
2. Perm-A-Barrier Aluminum Flashing
3. Perm-A-Barrier Detail Membrane

a. Refer to Section 07 13 26 – Cold Applied Self-Adhering Membrane (CASAM)

4. Perm-A-Barrier Wall Flashing

a. Refer to Section 07 13 26 – Cold Applied Self-Adhering Membrane (CASAM)

5. Perm-A-Barrier S100 Sealant
6. Bituthene Mastic
7. Bituthene Liquid Membrane
8. Sealants

a. Refer to Section 07 92 00 – Sealants and Caulking

C. Penetrations & Termination Sealant:

1. Liquid Membrane for Details and Terminations:

a. Bituthene Liquid Membrane manufactured by GCP Applied Technologies; a two-part, elastomeric, trowel grade material designed for use with self-adhered membranes and tapes. 10 g/L max. VOC content.

2. Substrate Patching Membrane:

a. Bituthene Liquid Membrane manufactured by GCP Applied Technologies; a two- part, elastomeric, trowel grade material designed for use with self-adhered membranes and tapes. 10 g/L max. VOC content.

3. Joint Sealant:

    a. Refer to sealant manufacturer's recommendations and Section 07 92 00 – Sealants and Caulking

2.3 AIR/VAPOR MEMBRANE

A. Provide membrane wrap (wall wrap, window, door opening & header wrap) in accordance with manufacturer's specifications:

1. Coordinate the installation of material with other window and door waterproof membrane installation.

B. Product:

1. **Type:** **Reinforced Air/Vapor Membrane**

    a. Model: Commercial wrap, Header wrap & Accessories
    b. Mfgr.: Tyvek
    c. Accessories:

        1. Tape:

            a. Tyvek Housewrap Tape
            b. 3M 8086 Cont. Sheathing Tape
            c. Venture Tape #1585 CW
            d. Clipper Tape, mfg. = Cantech Industries

        2. Attachment to substrates:

            a. Window & door flanges substrate:

                1. Latex or polyurethane based sealants or building wrap manufacturer's approved tape

            b. Masonry substrate:

                1. Adhesives or caulking with latex or polyurethane base

            c. Wood or insulated sheathing board:

                1. Nails with large heads or nails with plastic washer heads

    d. Installation:

        1. Install using manufacturer's Energy saving system
        2. Apply paper with horizontal overlaps & tape
        3. Install per mfg.'s standard details

2. Options:

    a. Griffolyn: Type: 65
    b. Raven Industries: FORTRESS WRAP

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 INSTALLATION

A. General:

1. Install all vapor membrane membranes straight, true, and firmly anchored in place.
2. Install in accordance with manufacturer's recommendations, at locations indicated on Construction Documents

B. Water Resistant Barrier (WRB) Membrane

1. Prime substrate to receive air barrier membrane as required per manufacturers written instructions
2. Precut pieces of WRB into easily handled lengths.
3. Remove release linear and position membrane carefully before placing against the surface.
4. Install two separate water-resistant barrier layers over entire substrate sheathing and overlap seams.
    a. Lap horizontal joints 4 inches min.; vertical joints 6 inches min.
    b. Building paper around corners at least 24 inches before making lap.
    c. All vertical joints shall be made only over vertical framing member.
5. Install the water-resistant barrier layers in shiplap fashion.
6. Install self-adhering cold applied self-adhering waterproof membrane strips at all openings in conjunction with the water resistant barrier and fit together in shiplap fashion.
7. Install over Cold applied self-adhering waterproof membrane and flexible flashing tight, smooth and without breaks behind trim accessories.
8. Coordinate with details for conditions that require cold applied self-adhering waterproof membrane and flexible flashing to be installed over water resistant barrier.
9. Coordinate with details for conditions that require cold applied self-adhering waterproof membrane and flexible flashing to be installed over control joints, expansion joints, casing beads and/or drip molds, etc.

10. Coordinate the installation of WRB with roof installer to ensure continuity of membrane with roof air barrier.
11. At end of each working day seal top edge of WRB to substrate with termination sealant.
12. Do not expose WRB to sunlight for more than 150 days prior to enclosure.
    Inspect installation prior to enclosing and repair punctures, damaged areas and inadequately lapped seams with a patch of the membrane sized to extend 6 in. in all directions from the perimeter of the affected area.

3.5 COMMISSIONING

A. Provide factory-certified field service engineer to a site visit to ensure proper system installation and operation under following parameters:

   1. Mock ups of window and door openings

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

   1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
   2. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

   1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** Notice of "Certificate of Substantial Completion".

END OF SECTION 07 26 00

SECTION 07 28 00 – CONCRETE SLAB VAPOR EMISSION AND ALKALINITY CONTROL TREATMENT

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the Owner's General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable extents of work at the jobsite as dictated by areas of concrete tested to exceed acceptable vapor emission levels and alkalinity levels.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Porous or non-porous slab testing to determine and verify substrate conditions and values for:

    a. Vapor emission
    b. Humidity
    c. Ph

2. Provide remedial liquid applied reduction slab treatment to concrete to bring vapor emissions, relative humidity and alkalinity levels within herein listed levels for slab areas tested to be defective.

    a. Two component epoxy (refer to levels reduced to and product), solvent free, water-reduced, concrete moisture vapor, alkalinity moisture and Alkalinity salt suppression barrier for prepared substrates for the application of applied flooring to meet listed criteria.
    b. Two coats minimum unless listed to be three per specific manufacturers.

        1. Single coat systems are not acceptable

    c. Provide unit cost for remedial slab treatment in accordance with Section 01 22 00 – Unit Prices.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

    a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Concrete Institute (ACI), www.aci-int.org

1. ACI 302 The Guide for Concrete Floor and Slab Construction

E. American Society for Testing and Materials (ASTM), www.astm.org

1. ASTM C33 Standard Specification for Concrete Aggregates
2. ASTM D1308 Chemical Resistant to Alkali
3. ASTM D4541 Pull-off Adhesion Strength of Coatings Using Portable Tester
4. ASTM E96 Water Vapor Transmission of Materials
5. ASTM F710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring
6. ASTM F 1869, Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
7. ASTM F 2170, Standard Test Method for Determining Relative Humidity in Concrete Slabs Using *in-situ* Probes"

F. Ceramic Tile Institute (TCA), www.ctioa.org

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Concrete preparation	Shot Blasting	#4 profile (CSP)	ICRI
Properties of concrete after treatment	Water Vapor Transmission (WRT)	3.0 lbs max. (tested up to 20lbs)	ASTM E96
	Water Vapor Permeance (WVP)	8.1 Grams/Pa-s-m^2 x 10-8 max	ASTM E96
	Chemical resistant	Tolerant to14pH alkali exposure, 30 day resistance	ASTM D1308 ASTM F710
	VOC levels	50g / liter	EPA, SCAQMD Method 24
	Relative Humidity	Tolerant to 100% RH exposure	ASTM F2170
	Concrete adhesion	(10% of compressive concrete design strength as herein listed) psi min.	ASTM D4541 & D7234
Adhesion to concrete	Cohesive pull off adhesion	359 psi or 100% substrate failure	ASTM D4541 ASTM D7234
Interior room conditions –	Temperature during treatment	45-90 degrees for a 24 hour period before and after	ASTM F1869

during topical treatment application	Cured time	24 hours at 70 degrees F, min. unless more restrictive by specific product mfgr.	
	Humidity	Less than 60%RH	
Refer to drawings and as herein specified			

C. **Construction Testing by Others:**

Item	**Name of Test**	**Performance Results**	**Testing Std.**
Concrete Floor Slab substrate	Calcium chloride vapor emissions	Not to exceed 3.0lbs	ASTM F1869
	Concrete pH levels	Not to exceed 9.0pH	
	Relative humidity of concrete substrate	Not to exceed 75%RH	ASTM F2170
Adhesion of topical treatment	Cohesive adhesion	Pass at 100% concrete failure	ASTM D4541 & D7234

Test entire floor areas.

- All concrete floors shall be tested in accordance with listed standards and as herein specified.
- Testing shall be done per manufacturer's recommendations.
- Testing shall be done by an independent testing lab hired by General Contractor
- Install and test in compliance with herein listed ASTM standards
  - Three (3) test kits are required in areas up to 1,000 square feet to be evenly spaced throughout the initial 1000 sq. ft. area.
  - One (1) additional test kit for each additional 1,000 square feet thereafter shall be used.
- Levels exceeding the values herein listed shall require remedial floor treatment to bring PH, relative humidity and Vapor emissions levels within allowing levels.

Provide testing report to the Architect and Owner including, but not limited to the following:

- Provide written Test Report for the slab area tested, report shall include Slab Vapor Emission, relative humidity, pH and Adhesion results.
- All testing locations shall be indicated on a full size floor plan drawing for all floors and listed in numerical order.
- All testing results shall be written in permanent black marker on the concrete floor slab at all locations in numerical order to match full size drawing markup.
- Written documentation of interior temperature and humidity for each location during testing.
- Name and model of all testing equipment used.
- Name(s) of personnel performing each test.
- Digital pictures of prepared test site and installed equipment at each test kit location.
- Tested results labeled to coincide with full size plans.
  Test results will not be accepted if testing is done when the mechanical HVAC system is not running at required values and environment is not at required temperature and relative humidity levels.

D. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Warranty/Guarantee

    a. Manufacturers letter authorizing project warranty period

2. Provide current ASTM laboratory testing third party reports for all listed and applicable ASTM standards

    a. Third party testing information and drawings with testing results as herein specified

3. Field Acceptance: Written acceptance of onsite conditions for specified system installation

4. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

5. Treatment:

    a. System: Descriptive literature / product data and installation details.
    b. Safety information: Current material data safety sheets
    c. Submit method for cleaning and bead blasting surface of concrete for treatment.
    d. Standard product data sheets and testing reports as it will appear when issued upon completion of work, demonstrating compliance with this section.
    e. Provide a letter from manufacturer's full time installation supervisor accepting and warranting installer's workmanship and that criteria of this section has been met.

E. Submit samples.

1. Not applicable

F. Certification:

1. Manufacturer's Product Liability Insurance Certificate

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer:

1. Manufacturer's trained personal shall have a minimum of five (5) years installation experience of the specific herein listed concrete emission and pH control treatments.

    a. Provide list of 5 projects of similar size and complexity that have been completed for a period of four (4) years and performing to required standards.
    b. Provide project references consisting of Owner, installer, General Contractor, contact information, vapor emission levels encountered and date completed.

2. Performance Guarantee: Refer to GUARANTEE / WARRANY heading.
3. Install and test per manufacturer's written instructions and in strict accordance with listed and applicable ASTM standards.

C. Manufacturer:

1. Shall have a minimum of five (5) years producing vapor emission and pH control systems.
2. Provide full time on site technical supervision during all installations.
3. Provide warranty as herein listed.
4. Provide performance references of five (5) successful projects that are a minimum of two (2) years of age.

D. Material with lead times in question or confirmed to be in conflict with meeting the schedule and sequence of construction must be documented at time of bid.

E. Stipulations:

1. Testing Contractor:

a. Testing shall be performed by an independent testing agencies that is not associated with the slab installer or any of the flooring installers and/or flooring manufacturers & in accordance with ASTM standards.
b. Retesting done after all applications until specified levels is achieved.

2. Products:

a. Shall be directly compatible with products to be installed on top of it including;

1. Flooring adhesives
2. Thin sets
3. Mortar beds
4. Cement overlayments for floor surface smoothing.

3. Regulatory requirements: Materials and equipment used for this project shall comply with the current applicable regulations of the California Air Resources Board (CARB) and the Environmental Protection Agency (EPA).
4. Treatment shall be placed over exposed cast-in-Place concrete, not over any floor leveling products.
5. Treatment shall not be placed over any gypsum materials.
6. Contractor shall determine if floor slab is a Porous slab or non-porous slab.
7. Product used shall be able per their specifications accommodate the tested vapor admission rate, otherwise an alternate product as herein specified shall be used.

F. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. How testing is done
b. Where testing shall be done
c. What area's do and do not require testing
d. Schedule of work
e. Review of the testing methods.

f. Documentation of testing
g. Treatment manufacturer's observations and acceptance of site and treatment.

2. General Contractor shall request meeting 35 days in advance of scheduled finish flooring installation.

G. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during testing and treatment to review procedures.

1. Manufacturer shall review and accept all testing prior to product installation.
2. Manufacturer's representative shall review and observe all phases of construction to accept the site and complete work meets specification requirements for warranted installation.

H. Miscellaneous criteria:

1. Test results will not be accepted if testing is done when the mechanical HVAC system is not running at required values and environment is not at required temperature and relative humidity levels.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Store materials in a dry, cool location.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1. Field-verify that concrete slabs have cured sufficiently for testing and for treatments.

B. Building Enclosure and Environment Limitations:

1. Building to be conditioned as described within ASTM standards.
2. Space must be fully enclosed with permanent HVAC in operation.

C. Surface conditions:

1. Do not apply system when water is accumulated on the surface of concrete.
2. Do not install over any gypsum materials.
3. Self-leveling material shall be 100% cement based and have a compressive value of 4,100 psi as approved by Remedial Treatment manufacturer and installed on top of treatment at a nominal 1/4" thickness.

a. Refer to Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious

D. Room conditions:

1. Do not apply system when room temperature is less than 50 degrees F and humidity exceeds 55% RH.

a. Provide continuous air movement in room during treatment.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial one (1) year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of Owner within the warranty period, such defects shall be repaired and replaced at no cost to the Owner.

C. Furnish manufacturer's additional warrantees as indicated below agreeing to repair and/or replace remedial treatment work and the applied finish flooring material which has failed as a result of defects in materials or workmanship of remedial treatment.

1. Manufacturer's Installation Warranty:

a. Manufacturer to provide a standard installation warranty covering installer's installation workmanship and treatment of concrete slab to maintain the values as herein listed for both the Vapor Emissions and the alkalinity levels for a period of **Ten (10)** years starting from the date of Substantial Completion.

1. In the event of treatment failure by concrete cohesive failure, concrete originated vapor emission, in concrete relative humidity and alkalinity (pH), manufacturer and installer shall provide materials and installation labor for replacement of remedial treatment and then the destroyed flooring system at no charge to the **Owner**.
2. The warranty will cover re-testing and new treatment of the floor slab to bring levels back into those herein listed.

b. Warrants covering manufacturing defects
c. Does not exclude concrete cohesive failure unless surface is plagued by an (ASR) Alkali-Silica Reaction and/or Alkali-Aggregate Reaction (AAR) issue.

2. Manufacturer's Product Liability Insurance Certificate:

a. Manufacturer shall provide evidence of a product liability insurance policy. Insurer shall have no less than an "A" rating from one of the four major rating services. A certificate of insurance shall be delivered to the Owner and shall name the Owner, Architect and General Contractor as co-insured.
b. Warrants covering manufacturing defects
c. Does not exclude concrete cohesive failure unless surface is plagued by an (ASR) Alkali-Silica Reaction and/or Alkali-Aggregate Reaction (AAR) issue.

D. Warranty exclusions shall be limited to:

1. Topical flooding over finish flooring that destroys adhesion of finish flooring to substrate.
2. Treatment damage from flooring demolition or removal.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Concrete floor slab curing
2. Floor leveling treatment
3. Finish flooring

B. Related sections include, but are not limited to the following:

1. Division 1
2. Section 03 30 00 – Cast-in-Place Concrete
3. Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious
4. Division 9 Finish Flooring Sections

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the treatment, materials, finish, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with General Contractor.

B. Schedule required testing and remedial treatment with curing of concrete and installation of finish flooring.

1. Schedule testing far enough in advance of flooring installation to provide ample time to install remedial treatment of slab, test, and re-treat as required.

1.13 TESTING AGENT

A. Refer to Division 1 for Testing Laboratory service requirements

B. Independent testing lab to test vapor emission and alkalinity levels before and after treatment and continually until acceptable levels are met.

1. Refer to Testing under Part 3 of this specification

1.14 GENERAL SYSTEM DESCRIPTION

A. Test concrete slabs as herein specified.

B. Slab treatment:

1. Shot blast
2. Vacuum and pre-dampen surface
3. Treatment installation
4. Primers
5. Cement topcoat
6. Cementitious floor leveling by others as required.

a. Refer to Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious

C. Retest slabs to determine if more treatment is required.

D. Retreat and test until specified values are met.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturer shall be one of the following and as herein listed and in Drawings:

1. Treatment:

a. Synthetics, Intl. www.syntheticsintl.com
b. MaiPei, www.maipei.com/us-en
c. Koster, www.kosterusa.com/us_en

2. Testing equipment:

a. American Moisture Test, www.americanmoisturetest.com

3. Reviewed Equivalent by Architect.

a. Substitutions and deviations shall require Architect's approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS - TESTING

A. Concrete Testing:

1. Application: Test concrete slabs, typically at all conditions
2. Products:

a. Concrete Moisture Vapor Test Kit:

1) Product:

a) Mfgr: American Moisture Test, Inc., www.americanmoisturetest.com
b) Product: AMT Dome Test
c) Method: Anhydrous Calcium Chloride
d) Limitations: Typical
e) Notes: Conduct test on the slab in the environment that closely matches that of which the finish-flooring environment will be in.

b. AlkalinityTest Kits (pH)

1) Application: Test concrete slab typical at all conditions and in conjunction with Vapor Emission tests.
2) Product:

a) Mfgr: American Moisture Test, Inc., www.americanmoisturetest.com
b) Product: Factory pre-calibrated probes, RH probe accuracy of 2%-3%
c) Notes: Factory pre-calibrated probes, RH probe accuracy of 2%-3%

c. Relative Humidity Emission Test Kits:

1) Application: Test concrete slab typically at all conditions
2) Product:

a) Mfgr: American Moisture Test, Inc., www.americanmoisturetest.com
b) Product: RH test
c) Method: In-Situ Relative Humidity
d) Limitations: Typical

2.3 MATERIALS – REMEDIAL TREATMENT

A. Moisture and Alkalinity Treatment Schedule, materials and components:

1. General:

a. Application: Typical all conditions when slab does not meet vapor emission, relative humidity, and/or alkalinity levels, and as directed by Architect, no exception taken.

2. Remedial Treatment Schedule:

a. Synthetics International:

1) Schedule:

a) Slab tests up to 20 lbs or less and up to 100% relative humidity:

i. Mfgr: Synthetics International
ii. Product: Synthetic 30 – factory mixed

a. Restricts 30 lbs of vapor per ASTM F1869
b. Controls 14pH alkalinity per ASTM F710
c. Tolerant to 100% RH per ASTM F2170

iii. Components: Two & water reducible epoxy
iv. Coats: Two, min.
v. Slab Preparation: Shotblast per manufacturer's recommendations
vi. Performance: As herein specified
vii. Standards: As herein specified
viii. Recoat time: Per manufacturer's standards
ix. Foot traffic time: Per manufacturer's standards

b. Alternate 1:

1) Slab tests at 20 lbs or less and up to100% relative humidity:

a) Mfgr: Koster

b) Product: VAP I® 2000 Zero VOC
c) Components: Two-component, epoxy resin
d) Coats: One, min.
e) Slab Preparation: Shotblast per manufacturer's recommendations
f) Performance: As herein specified
g) Standards: As herein specified
h) Recoat time: Per manufacturers standards
i) Foot traffic time: Per manufacturer's standards

c. Alternate 2:

1) Slab tests at 20 lbs or less and up to 100% relative humidity:

a) Mfgr: MaiPei
b) Product: Planiseal EMB
c) Components: T wo-component, epoxy
d) Slab Preparation: Shotblast per manufacturer's recommendations
e) Application Thickness: One coat, min., 18 mil. Min.
f) Performance: As herein specified
g) Standards: As herein specified
h) Recoat time: Per manufacturer standards
i) Foot traffic time: Per manufacturer standards

3. Remedial treatment surfacing:

a. Application: Install over remedial treatment per treatment manufacturer's recommendations

1) Cement Top coat:

a) Refer to Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious

4. Remedial treatment primers and floor leveling materials:

a. Application: Install primers and/or cementitious floor leveling materials over remedial vapor emission and alkalinity control treatment per treatment manufacturer's recommendations

1) Refer to Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious

2.4 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the General Contractor subject to the approval of the Architect.

B. Leveling cement in accordance with treatment manufacturer's requirements and Section 03 00 61 – Concrete Floor Leveling, Patching and Grouting – Cementitious

1. Coordinate with finish flooring materials for compatibility with surface finish of treatment.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with General Contractor to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

C. Treatment shall be installed in all areas not meeting herein specified criteria.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. General Contractor shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with material treatment criteria.

B. Prior to installation, mask or otherwise protect all walls, equipment and other items from the effects of shot blasting and application.

C. Diamond Grind, Shot blast, sand or scarify concrete surface to insure bonding of remedial treatment to concrete in accordance with manufacturer's written instructions.

1. Shot blast surfaces using #390 to #420 shot to insure remedial treatment penetration into concrete.
2. Diamond grind near wall base, edges and columns.

D. Sweep, broom and vacuum all surfaces to control dust and possible treatment contamination.

E. Treat all cracks, control joints as required for a warranted assembly.

F. Clean and fill all divots, chips voids and other surface irregularities with Portland based cementitious fill only after remedial treatment application is complete.

1. Gypsum based materials are not acceptable under any circumstances.

3.4 INSTALLATION

A. General:

1. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

B. Prepare concrete surface and apply treatment system in accordance with manufacturer's instructions for a warranted system.

1. Maintain air movement and ventilation during process by using box and floor fans in accordance with floor treatment manufacturer.

C. Provide remedial treatment system as a final finishing surface in all areas except:

1. Ceramic, quarry and Porcelain tile flooring
2. As indicated in documents

D. Treatment:

1. Treat all floors which exceed the specified limits of either Vapor emissions and/or Alkalinity.
2. Install product over CIP concrete and into all cracks and joints.
3. Install per manufacturer's written instructions and in strict accordance with indicated and required ASTM standards.

    a. Provide written documentation of interior temperature and humidity during testing
    b. Provide digital pictures of prepared test site and installed equipment
    c. Provide name of testing equipment
    d. Provide name(s) of personnel performing tests
    e. Provide topical treatment manufacturers acceptance letter for testing and treatment to meet warranty and insurance criteria.

4. Retreat all areas that fail testing until said testing shows compliance with specified levels.

3.5 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator General Contractor and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.

1. The Applicator shall be responsible for the proper application of the materials.

B. Pre-flooring Installation:

1. Conduct testing of on the slab prior to finish flooring installation and after mechanical HVAC system is operating so the environment closely matches that of which the finish-flooring environment will be in.
2. Testing shall be performed in accordance with listed and applicable ASTM standards.

E. After Slab Treatment – Compliance Testing:

1. After remedial treatment is done, test floor in the same locations as initial test to ensure that levels are attained for maximum Vapor Emissions, pH and adhesion.
2. Retreat all areas that fail and retest until levels are met.
3. Retest and retreat until levels are achieved.

3.6 CONCRETE TESTING (Typical)

A. Testing:

1. Initial:

    a. Install and test all concrete slabs / all levels:

1) 1st:
    a) Porous slab or non-porous concrete
2) 2nd.
    a) Vapor Emission
    b) Humidity
    c) Ph

b. Install and test per manufacturer's written instructions and in strict accordance with listed ASTM standards.
    1) Provide written Test Report for the slab area tested.
    2) Testing shall be done per manufacturer's recommendations and coordinated with this Section.
        a) A shop drawing shall be submitted identifying the locations for all the test kits, values and numerically listed.
            i. This drawing shall be used for Compliance testing after remedial treatment is complete.
        b) Floor slab shall be marked in permanent black marker for tested values and numerically noted to match full size drawing with testing locations documented.
    3) Interior temperature and humidity during testing
    4) Digital pictures of prepared test site and installed equipment
    5) Name of testing equipment
    6) Personnel performing tests.

2. Schedule:
    a. 1st: Testing
        1) Testing contractor shall coordinate with General Contractor and each flooring contractor to make determination if floor is considered a Porous or Non-Porous concrete slab.
    b. 2nd Testing:
        1) Moisture vapor:
            a) Testing will be performed using prepackaged calcium chloride dome test kits according to following test schedule.
                i. Use minimum of 3 kits for area up to 1,000 square feet.
                    a. Use additional test kit for each additional 1,000 square feet or portion thereof.
                ii. Place tests a minimum of 5 feet from exterior walls and away from UV light.
                iii. Mark each test location and number on the concrete surface using a marker and submit each test location on a reduced floor plan.
                iv. Calculate test results and expressed in pounds of moisture vapor emitted per 24 hours in 1,000 square foot area.

b) pH:

i. Digital Alkalinity-pH testing:

a. Directly within moisture dome area, apply a 1 inch x 1 inch amount of water and allow to soak into surface for 60 seconds.
b. Expose flat tip meter to water and allow to calculate pH level for 10 seconds.
c. Document pH reading.

c) Humidity:

i. In-Situ Relative Humidity testing:

a. When installing moisture vapor tests, prepare each relative humidity test location adjacent to the calcium chloride test locations.
b. Using a 5/8 inch drill bit, drill into concrete to the required depth.
c. Vacuum and blow out debris.
d. Install manufacturer provided plastic sleeves and air tight cap.
e. After 72 hours of acclimation, expose RH probe and allow to acclimate for 30 minutes.
f. Document the RH readings, temperature and required data for review.

c. Submit all test results, locations and flooring tolerance to Owner and Architect.

3.7 CONCRETE TREATMENT (Typical**)**

A. Treatment:

a. Proceed with vapor reduction system in areas exceeding the following:

1) Maximum level shall not exceed: 3.0 pounds/ 9.0pH/ 75% RH

2. Treat all floors which exceed the specified limits in Vapor and pH.

a. At a minimum the entire room within the wall boundaries where a Vapor emissions test and/or a pH test exceeds the maximum levels shall be treated

3. Install per manufacturer's written instructions and in strict accordance with ASTM standards.

a. Provide written documentation of all testing and conditions.

1) Interior temperature and humidity during testing
2) Digital pictures of prepared test site and installed equipment
3) Name of testing equipment
4) Personnel performing tests

3.8 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no cost to the Owner.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the Architect after he receives the General Contractor's NOTICE of "Certificate of Substantial Completion".

END OF SECTION 07 28 00

SECTION 07 41 13 – METAL ROOF PANELS

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Metal Roofing System, roof penetration boots and flashings, downspouts, copings, gutters, and flashing:

a. Provide a preformed, full length, standing seam prefinished Exterior Metal Roofing System of panels, preformed flashing, custom flashing, complete and weather-tight as specified and as indicated in the details and drawing documents.

1. Flat panels

b. Trim, clips, support angles, splines, stiffeners, fasteners and other devices required for secure anchorage of panel system, flashings, etc. to building roof deck, structure, parapets, etc.
c. Accessory clips for securing items to standing seem roof – standing seams.
d. System design and installation shall incorporate continuous support cleats for rake and ridge flashing and support clats to secure roofing panels, and other devices required for secure anchorage of roofing system and accommodating expansion and contraction of the material

1. Fasteners shall be compatible with all materials they come in contact with.

e. Provide System, which provides for waterproof infiltration and air infiltration resistance comprised of a manufacturer's standard components.
f. Provide engineering calculations.
g. Provide System comprised of complete fully sealed joints and seams with interlocking flashing assemblies for all joints indicated and where required by roofing panel manufacturer.
h. Panel system must be mechanically fastened and be designed to allow thermal expansion / contraction to eliminate imposing inordinate stress to the panels.
i. System shall be designed as 'silent' in that panels can move without snapping and / or popping during expansion and / or contraction.
Installation of Metal Roofing assembly and flashing.

2. Work of this Section includes, but is not limited to materials, flashing, copings, gutters, downspouts and incidentals necessary to provide fastening of Roofing panels to substrate **and accessories for attachment/separation of roofing panels to dissimilar material and gasketing** as shown and/or indicated on the Drawings.

3. Work shall also include fabrication and installation of all other sheet metal coping work.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. Aluminum Association (AA), www.aluminum.org

E. Architectural Aluminum Manufacturers Association (AAMA):

1. AAMA 501.2 Field Check of Metal Curtain Walls for Water Leakage.

F. American Society for Testing and Materials

1. ASTM A-653 / A-653M. Standard Specification for Steel Sheets, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

a. Minimum yield 40,000psi

2. ASTM A 924/A-792: Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process

a. Minimum yield 40,000psi
b. Coating Class AZ50Zincalume, 55% zinc-aluminum coating

3. ASTM A792/A792M Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy Coated by the Hot Dip Process.
4. ASTM B209 Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
5. ASTM D 828: Standard Test Method for Tensile Properties of Paper and Paperboard Using Constant-Rate-of-Elongation Apparatus

a. Machine Direction (Slip Sheet)
b. Cross machine direction (Slip Sheet)

6. ASTM D 1735: Method for Water Fog Testing of Organic Coatings.
7. ASTM D2247 Standard Practice for Testing Water Resistance of Coatings in 100% Relative Humidity.
8. ASTM E-1592: Standard Test Method for Structural Performance of Sheet Metal Roof and Siding systems by Uniform Static Air Pressure Difference

a. Wind uplift

9. ASTM E-1646-95 Standard Test Method for Water Penetration of Exterior Windows, Curtain Walls and Doors by Uniform Static Air Pressure Difference.

a. Water Penetration

10. ASTM E-1680-95 Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls and Doors Under Specified Pressure Differences Across the Specimen.

M. CAN/ULC

1. CAN/ULC S770 LTTR, Long-term thermal resistance values

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General**:

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Assembly	Uplift	Rated up to 90 mph	CBC UL 580
Panels	Finish	Weathering-No checking, blistering or adhesion loss when tested for 2000 hours in accordance with	ASTM G23-69
	Finish	Chalking-Will not chalk greater than #8 rating when tested for 2000 hours	ASTM D659
	Finish	Fading-Color change will not exceed 5 NBS units when tested for 2000 hours.	ASTM D2244
	Finish	Humidity-Shall be less than 5% of #8 blister when tested for 2000 hours in 100% humidity at 100° F.	ASTM D2247

	Finish	Salt spray-No more than 3/16" creep or tape off from scribe and less than 5% of #8 blister when tested for 1000 hours in 5% salt fog at 95°F	ASTM B117
	Formability-	No rupture or removal of coating when subjected to 180° bend around a 1/8" mandrel and Scotch 610 tape test	ASTM D1737
	Finish	Hardness-Will be F-2H pencil hardness when tested	ASTM D3363
	Finish	Abrasion Resistance-Coating system shall withstand a minimum of 80 liters of falling sand before appearance of base metal per	ASTM D968
	Finish thickness	Coating Thickness: (Ceramic Pigments only) Painted: Exterior surface:0.2 mil corrosion resistant primer and 0.8mil mil finish coating = dry film thickness of 1.0 mil (baked on system) Interior surface: 0.15 mil corrosion resistant primer and 0.35 mil off-white backer = dry film thickness of 1.0 mil (baked on system)	
Finish	Color and fading	No cracking, peeling, blistering or loss of adhesion. Color change, after removal of surface deposits such as dirt or chalk, maximum 5 NBS units.	ASTM G90
	Humidity resistance	No blistering, peeling or loss of adhesion after 1000 hours	ASTM D2247
Assembly	Panel deflection	Maximum deflection panel system L/180 over total panel span	
	Air Infiltration	Air Infiltration: maximum 0.06 cfm kg/m (0.33m^3/hr kg/m) of seam at static pressure of 6.24 psf (3 kPa) when tested per	ASTM E1680.
	Water Penetration	No uncontrolled water penetration through joints	AAMA 501.2
	Water Penetration	No uncontrolled water penetration through the joints at a static pressure of 6.24 psf (3.0 kPa).	ASTM E1646
	Panel tolerances	• No panel shall be constructed with any bow allowance in panel face or edges. • All panel systems shall be back supported as required to meet deflection standards specified herein. • All panel systems shall be constructed and installed to prevent "oil canning". • Face of panels shall not vary in plane to any adjacent panel.	Project requirement

		• Allowable lateral tolerances: 1/8 inch in 10 feet for plumb, level, warp and bow. TOLERANCES VARIATION SHALL NOT BE COLLECTIVE**.**	
Roof	Slope	• 2:12 minimum	Mfgr
Refer to drawings and as herein specified			

C. **Sustainability:**
   1. Refer to Division 1 sustainability requirements.
   2. Refer to product criteria identified herein.

D. **Construction Monitoring/Observations by others:**

Item	**Name of Test**	**Performance Results**	**By Whom**
Roofing assembly Installation	Warranty compliance certification	Substrate shall be inspected and approved/certified. Sheet membrane assembly shall be inspected and approved/certified. Final roof installation shall be inspected and approved/certified.	Manufacturer's representative

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements.

D. Submit Manufacturers data and shop drawings.

   1. Submit detailed shop drawing that explicitly shows, indicates and demonstrates all general connection types including but not limited to corresponding details that match plan document details indicating:

      a. Indicate layout of panels and panel sizes, including custom-fabricated panels if indicated; indicate each item of trim and accessories.
      b. Indicate in detailed drawings profile and gauge of interior and exterior sheets, and locations and types of fasteners; indicate locations, gas, shapes and methods of attachment of panels, trim and accessory items.
      c. Indicate products/materials required for construction activities of this section not supplied by manufacturer of products of this section.
      d. Submit signed Structural calculations confirming uplift requirements.
      e. Product literature including but not limited to:

         1. Roofing Panels
         2. Flashing
         3. Waterproof Membrane
         4. Fasteners
         5. Roof penetration boots and flashing
         6. Accessory attachment clips
         7. Flexible flashing, CASAM

8. Copings
9. Gutters
10. Downspouts
11. Insulation

f. Detail and location of, but not limited to:

1. Manner of forming
2. Joining
3. Securing of metal panels and cleats to structural deck
4. Waterproof connections
5. Interlocking roof panel to flashing joints
6. Interlocking roof panel to gutter joints
7. Interlocking joints at transition conditions
8. Expansion/contraction joints necessary to accommodate thermal movement.
9. Design calculations determining maximum thermal expansion used for assembly design.
10. Details for separation of roofing material from dissimilar materials.
11. Flashing and continuous cleats
12. Roof penetration boots and flashing
13. Copings

E. Samples: Submit samples of the following:

1. Roofing Panel Assembly: Two samples each of

a. Two – 12" long roofing panel sections in specified color
b. Gutter assembly X 6" long
c. Downspout X 12" long
d. Copings section x 6" long
e. Stainless steel cleats
f. Stainless steel fasteners
g. Flashing
h. Gasketing
i. Sealant
j. Waterproof Membrane underlayment, CASAM
k. Cold applied self-adhering, cross laminated polyethylene film coated on one side with a layer of butyl rubber adhesive membrane.
l. Roof penetration boots and flashing

2. Site mock up, refer to "Field Samples / Mock Up" heading.

F. Submit Affidavit certifying: Parts and Material meet requirements specified.

1. Submit independent test reports for the performance of the specified system including:

a. Air.
b. Water.
c. Structural.

G. Quality Assurance Submittals: Submit the following:

1. Contractor Certificates: **General Contractor's** certification that:

a. Manufacturer of products of this section meets specified qualifications.
b. Installer of products of this section meets specified qualifications.

2. Manufacturer Certificates: Product certificates signed by manufacturer certifying materials comply with specified performance characteristics and physical requirements.
3. Manufacturer's Instructions: Manufacturer's installation instructions.
4. Manufacturer's Field Reports: Manufacturer's field reports.

H. Closeout Submittals: Submit the following:

1. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals, Maintenance Data and Operation Data Sections. Include methods for maintaining installed products and precautions against cleaning materials and methods detrimental to finishes and performance.
2. Warranty: Warranty documents specified herein.
3. Record Documents: Project record documents for installed materials in accordance with Division Closeout Submittals (Project Record Documents) Section.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing similar size projects and complexity.

1. Fabricator / Installer shall be acceptable to installed Roofing Panel Manufacturer.
2. Panel manufacturer shall have single source capability to and will perform all engineering, panel fabrication, fastening and assembly.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

D. Industry Standards: Except as otherwise shown or specified, comply with applicable recommendations and details of building code, manufacturer's specifications and conform to dimensions and profiles shown.

E. Obtain field measurements prior to completion of shop drawings and prior to manufacturing and installation.

F. Design and install a free and noiseless lateral thermal movement system using components and parts, for an ambient temperature range of 20ºF to 180ºF.

G. Buckling, opening of joints, undue stress on fasteners and/or cleats, failure of solder joints, sealants or any other detrimental effects due to the thermal movement of component parts will not be permitted.

H. Fabrication and erection procedures shall take into account the ambient temperature range at the time of the respective operations. Provide additional clearance as required accommodating erection tolerance.

I. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Substrate inspection and certification
b. Water proof membrane inspection and certification
c. Flashing inspection and certification
d. Mock up

2. **General Contractor** shall request meeting 5 days in advance of construction.

J. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the manufacturer on-site periodically during installation membrane waterproofing work to review installation procedures.

1. Manufacturer's representative shall review and certify all phases of construction to verify the complete work meets specification requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact. Identify fabricated components with UL 90 label where appropriate.

C. Packing, Shipping, Handling and Unloading:

1. Bundle roofing panels in waterproof wrapping paper.
2. Package trim and accessories in waterproof wrapping paper.

D. Storage and Protection: Store materials protected from exposure to harmful conditions. Store material in dry, above-ground location.

1. Stack prefinished material to prevent twisting, bending, abrasion, scratching and denting. Elevate one end of each skid to allow for moisture runoff.
2. Store products of this section in manufacturer's unopened packaging until installation of products.
3. Maintain dry, heated storage area for products of this section until installation of products.

1.7 JOB CONDITIONS

A. Field Measurements: Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements, fabrication schedule with construction progress to avoid construction delays.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **20 year** unlimited penal sum material failure and finish failure warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.
2. Emergency repairs will be made within 24 hours of notice of leakage or defect by the **Owner**. As soon as weather permits, affected areas will be permanently restored to standards of quality; workmanship, durability and appearance called for in the original Contract Documents. Emergency and permanent repairs will be made without any charge to the **Owner** for labor and materials. The value of this Agreement is not limited to a specific maximum sum. **Owner** maintenance will not be required as a condition to continuation of this Agreement in force for two (2) years.

D. Furnish manufacturer's **20 year** water-tightness and weather-tightness warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Emergency repairs will be made within 24 hours of notice of leakage or defect by the **Owner**. As soon as weather permits, affected areas will be permanently restored to standards of quality, workmanship, durability and appearance called for in the original Contract Documents. Emergency and permanent repairs will be made without any charge to the **Owner** for labor and materials. The value of this Agreement is not limited to a specific maximum sum.

1.10 RELATED SECTIONS

A. Related work includes, but is not limited to the following:

1. Structural Substrate
2. Flashing by Others
3. Roofing by Others
4. Roof Penetrations

B. Related Sections include but are not limited to:

1. Division 1
2. Section 06 10 00 – Rough Carpentry
3. Section 07 21 00 – Building Insulation
4. Section 07 13 26 – Cold Applied Self-Adhering Waterproof Membrane (CASAM)
5. Section 07 92 00 – Sealants & Caulking
6. Section 07 62 00 – Flashing & Sheet Metal

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

1.13 GENERAL SYSTEM DESCRIPTION

A. Assembly

1. Wood Deck assembly: (Rigid insulation installed over roof deck)

a. First: Plywood sheathing over framing, by others.
b. Second: Vapor barrier (WRB) installed over entire substrate.
c. Third: Rigid insulation.
d. Fourth: Preformed metal roofing system installed last and secure to structural deck.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturers shall be one of the following and as listed herein and in Drawings:

1. Roofing Panels, flashing and accessories:

a. Metal Sales, www.metalsales.us.com
b. Berridge, www.berridge.com 800.231-8127, 800.669-0009
c. AEP SPAN, Division of ASC Profiles, Inc. www.aep-span.com
d. Merchant & Sons, Inc., www.ziprib.com
e. IMSA Building Products (BHP), Fontana, CA (800) 726-2727
f. McELROY METAL, www.mcelroymetal.com, Paula Grider, (310) 977-3665
g. UNA-CLAD by Firestone, www.UNACLAD.com
h. Custom-Bilt Metals, www.custombiltmetals.com 800.826-7813

2. Rigid Insulation:

a. R MAX, www.rmax.com
b. Atlas Roofing Corporation, www.atlasroofing.com
c. GAF www.gaf.com

3. Self-adhering Waterproof Membrane:

a. WR Grace www.grace.com

1) Refer to Section 07 26 00 – Water Resistant Barrier (WRB)

4. Underlayment:

a. WR Grace

b. Tamko

5. Sheathing:
   a. Georgia Pacific (GP), www.gp.com
6. Accessory Attachment Clips:
   a. S-5, www.S-5.com, 888.825-3432
7. Reviewed Equivalent by **Architect**.
   a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
   b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
   c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Panel Assembly

1. Panel:
   a. Material: Steel
   b. Mfgr: Metal Sales
   c. Panel:
      1) Flat: 1.5" Mini-Batten
   d. Size:
      1) Thickness:
         a) 24 gauge
      2) Rib Height: 1-1/2"
      3) Coverage width:
         a) Flat: 18"
      4) Length of Panel: Full length without joints
   e. Type:
      1) Standing Seam
   f. Panel surface: Striated
   g. Seaming: Machine seamed in field
   h. Finish:
      1) Product: Fluoropolymer finish – Kynar 500 or Hylar 5000

a) Ceramic Pigments only

2) Finish: Factory
3) Base Material: Galvalume
4) Color Preweathered galvalume – Metallic

i. Miscellaneous Materials:

1) Provide materials and types of fasteners, protective coatings, separators, sealants and accessory items as recommended by roofing manufacturer and fabricator for roofing work, except as otherwise indicated.
2) Provide accessories and/or miscellaneous items as and where necessary to complete Work required.
3) Provide anchors, bolts, and other fastenings and materials necessary to construction and secure Work into place.

a) Fasteners: Non-corrosive/concealed fasteners recommended by panel manufacturer.
b) Provide gaskets, backer-rod and sealant required for joint installation.
c) Panel finish maintenance requirements and paint touch-up material shall be furnished to the **Architect** for review and acceptance.

j. Underlayment Membrane:

1) Material: Cold-applied self-adhering, rubberized asphalt/polyethylene

a) Refer to Section 07 26 00 – Water Resistant Barrier

k. Flexible Flashing:

1) Refer to Section 07 26 00 – Water Resistant Barrier

l. Tape Sealant:

1) For hooked-type expansion joints, which must be free to move, provide non-setting, non-hardening, non-migrating, heavy bodied polyisobutylene mastic sealant.

m. Sheet

1) Butyl Type

n. Roofing Panel Accessories:

1) Except as indicated as work of another specification Section, provide roofing manufacturers components required for complete roof system, including but not limited to; trim, copings, fascias, ridge closures, clips, cleats, seam covers, flashings, gutters, roof penetration boots, roof penetration flashing, downspouts, copings, louvers, battens, sealants, gaskets and closure strips.

o. Bituminous Coating:

1) Cold applied asphalt mastic, SSPC paint 12, compounded for 15-mil dry film thickness per coat, except as otherwise indicated. Provide inert-type noncorrosive compound, nominally free of sulfur components and other deleterious impurities.
2) Ensure that coating does not come in contact with PVC roofing membranes, install mfr.'s approved isolation slip-sheet between materials.

p. Weatherseals: Provide at end conditions with Sanoprene or EPDM weatherseals.

1) Other internal seals shall be silicone, meeting ASTM 1543A.

q. Fasteners:

1) Nails: Galvanized, 0.109" min. x 7/8" long barbed with large head.
2) Screws & Bolts: Install type as recommended by Roofing mfgr.
3) Clips: UL 90 rated 18 gauge "Zincalumne" steel, 40ksi yield strength, 3-1/2" long triple fastener type.
4) Solder: ASTM Specification B-32, 50% tin & 50% lead.
5) Flux: Muriatic acid neutralized with zinc or approved brand of soldering flux.
6) Rivets: 1/8" - 3/16" diameter, with solid mandrels and washers.
7) Fasteners:

a) Provide fasteners, of size, length and quantity as required to resist negative pull-off and meet structural requirements and to penetrate rigid insulation layers into metal deck.
b) Provide fastener types that resist Galvanic Corrosion action and are approved by Roofing Panel manufacturer.

r. Flashing, Copings and Gutters

1) Material: Match roofing material
2) Gauge: Comply with SMACNA guideline
3) Size:

a) Thickness: Conform to SMACNA guidelines
b) Width: As detailed and in conformance with SMACNA guidelines

4) Length: Lengths with expansion joints in compliance with SMACNA guidelines without joints
5) Joint type: Conform with SMACNA guidelines.
6) Refer to Section 07600 for additional information and requirements.

B. Shop Fabricated Units

1. General Metal Fabrication:

a. Provide a preformed and prefinished factory rolled Exterior Metal roofing System of flat panels complete, weather-tight and sealed to withstand insect intrusion as specified and as indicated in the details and drawing documents.

1) Site roll-forming is not acceptable unless approved by **Architect**.

b. Shop-fabricate work to greatest extent possible. Comply with details shown in Drawings and with and roofing panel manufacturer's details and recommendations other recognized industry practices.
c. Fabricate for waterproof and weather-resistant performance with expansion provisions for running work, sufficient to permanently prevent leakage, damage, or deterioration of the work.
d. Form work to fit substrate.
e. Comply with material manufacturer's instructions and recommendations for forming material.

f. Form work without excessive oil-canning, buckling, and tool marks, true to line and levels indicated, with exposed edges folded back to form hems and folded hems fully soldered to provide watertight assembly.

2. Seams:

a. Fabricate nonmoving seams in sheet with flat-lock seams and per manufacturer's approved details.
b. Rivet joints for additional strength per manufacturers approved details.

3. Expansion/Contraction Provisions:

a. Where lapped or bayonet-type expansion provisions in work cannot be used, or would not be sufficiently water/weatherproof, form expansion joints of intermeshing hooked flanges, not less than 1: deep, filled with polyisobutylene mastic sealant. (concealed within joints)

4. Sealant Joints:

a. Where movable, non-expansion-type joints are indicated or required for proper performance of work, form metal to provide for proper installation of elastomeric sealant, in compliance with roofing manufacturer's standards.
b. Refer to Section 07 92 00 for additional information and requirements.

5. Separations:

a. Provide for separation of roof panels from non-compatible metal or corrosive substrate by coating concealed surfaces at locations of contact, with bituminous coating or other permanent separation as recommended by manufacturer/fabricator.

2.3 OTHER MATERIALS

A. Schedule:

1. Standing Seam Mounting Clips:

a. Mfgr: S-5
b. Series: S-5 Series:
c.

Products:	Roof type / Assembly type:	Duty:	Install:	Material:
1) S-5-E	Metal roofing x Dbl.- folded seam	heavy	Horz.	Aluminum
a) Application(s):				
2) S-5-E Mini	Metal roofing x Dbl.- folded seam	light	Horz.	Aluminum
a) Application(s):				
3) S-5-U	Metal roofing x Vert. or 90deg. seams	heavy	Vert. & Horz.	Aluminum
a) Application(s):				
4) S-5-U Mini	Metal roofing x Vert. or 90deg. seams	light	Horz.	Aluminum

a) Application(s):

5) S-5-PV Kit Solar panel mounting assembly Horz. Aluminum

a) Application(s):

b) Use attachment clips required for the specific standing seam roof

d. Installation: In accordance with mfgr's recommendations.

PART 3 - **EXECUTION**

3.1 INSPECTION /EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.
2. Verify substrate conditions, which have been previously installed under other sections, are acceptable for product installation in accordance with manufacturer's instructions.

a. Verification of Conditions:

1. Panel support systems are ready for construction activities of this section and within specified tolerances.
2. Rough-in utilities are in correct locations.

3. Installer's Examination:

a. Have installer of this section examine conditions under which construction activities of this section are to be performed, then submit written notification if such conditions are unacceptable.
b. Transmit 2 (two) copies of installer's report to **Architect** within 24 hours of receipt.
c. Delay construction activities of this section until unacceptable conditions have been corrected.
d. Beginning construction activities of this section indicates installer's acceptance of conditions.

C. Verify that specified items may be installed in accordance with the approved design.

D. In the event of discrepancy, immediately notify the **Architect**.

1. **DO NOT PROCEED UNTIL UNSATISFACTORY CONDITIONS ARE CORRECTED.**

E. Reinforce ends with end clips, steel hangers, steel angle clips, steel stud section, or as otherwise recommended manufacturer.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

C. Coordinate roofing with rain drainage work, copings, gutters, downspouts and flashing, trim and construction of decks, parapets, walls and other adjoining work to provide a permanently leak proof, secure and noncorrosive installation.

3.3 PREPARATION

A. Clean surfaces to receive roofing. Substrate to be smooth and free of defects. Drive all projecting nails, screws and other fasteners flush with substrate.

B. Dissimilar Metals: Prevent galvanic action of dissimilar metals.

3.4 MOCK-UP

A. Erect at location approved by **Architect**.

1. Mock-up shall be part of final construction once approved by **Architect**.
2. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.

B. Schedule

1. Before proceeding with final purchase of materials and fabrication of roofing and flashing components, prepare a mock-up of work. Incorporate materials and methods of fabrication and installation identical with project requirements. Install mock-up at roof area location directed by **Architect**. Retain accepted mock-up as quality standard for acceptance of completed roofing and flashing. When accepted, mock-up shall be incorporated as part of roofing work.

    a. Include eave, ridge, valley, gable and hip conditions.
    b. Mock-Up Size:

        1. Three (3) full length panels at a rake, ridge and valley.
        2. Maintenance: Maintain mock-up during construction for workmanship comparison.

3.5 INSTALLATION

A. General:

1. Installed Roofing panels, flashing, roof penetration boots and flashing, separation sheets, waterproof membrane, frames and accessories in accordance with Drawings, reviewed Shop Drawings and manufacturer's data/specifications, and as herein specified.

    a. Construction in accordance with SMACNA recommendations.

2. Compliance: Comply with manufacturer’s product data, recommendations and installation instructions for substrate verification, preparation requirements and installation.

    a. Strippable Film: Remove manufacturer’s protective film, if any, from surfaces of roofing panels.

3. The Metal Panel Roofing System shall be fastened so that panels are secure, and able to accommodate movement (free floating joints) from thermal and seismic expansion/contraction without buckling or causing undue stress on panel fasteners, or failure of internal seals.

4. Panel joints shall have manufacturers standard joint system and be fastened with cleats allowing for movement of panels.
5. The joinery shall be mechanically fastened and flashing transitions shall be interlocking type allowing for expansion and providing positive shedding of water and allowing for panel movement and sustain the weatherability specified.
6. The Metal Roofing System shall be Snap-on panel type secured into structural deck with cleats fastened such that panels are secure and able to accommodate expansion/contraction movement from thermal and seismic expansion/contraction without buckling or causing undue stress on panel fasteners, flashing joints and failure of internal seals.
    a. Panels shall be full length without any end joints.
    b. Provide supports, design, inspection & installation as needed to mitigate "oil canning".
7. Insect infiltration resistant.

B. Manufacturer's Recommendations:
    1. Except as otherwise shown or specified, comply with recommendations and instructions of manufacturer of metal roofing being fabricated and installed.

C. Separate dissimilar metals by applying rubberized asphalt underlayment to each metal surface.

D. Erect panels plumb and true.
    1. Permit No offset from True Alignment of adjacent Roofing panels installed butting and/or in line.
    2. Panel to Roofing panel joints shall not vary greater than 1/16 inch from the required joints size indicated on the reviewed shop drawings over its total length. Tolerance variation shall not be collective.

E. Rigid Insulation Substrate Assembly
    1. Install multiple layers of rigid insulation in accordance with manufacturer’s recommendations.
    2. Install tapered insulation in accordance with manufacturer’s recommendations.

F. Underlayment Schedule:
    1. First:
        a. Install Waterproof Membrane Underlayment over substrate sheathing and wrap over edge of roof down face and up the face of walls.
        b. Extend membrane up walls and around all edges in ship-lap fashion and maintain membrane is concealed from sun light.
    2. Second:
        a. Provide slip sheet separation between PVC products and Underlayment. Use non-asphaltic type adhesive for temporary anchorage, where possible, to minimize use of mechanical fasteners under roofing.
            1) Lap all joints 6" minimum.
        b. Slip Sheet shall provide complete separation between roofing material, Underlayment and Waterproofing Membrane and all other dissimilar materials.

G. Specialty Waterproof Membrane
    1. Install self-adhering material at all areas indicated.

2. Install at all valley, ridges and edges.

H. Form and fabricate the following, but not limited to and other components of roofing to profiles, patterns and drainage arrangements shown and as required for permanently leakproof construction:

1. Sheets
2. Seams
3. Strips
4. Valleys
5. Edge treatment
6. Integral flashings
7. Copings
8. Roof penetration boots and flashing
9. Gutters
10. Downspouts

I. Provide for thermal expansion and contraction of the work and as indicated. Seal joints as shown and as required for leak proof construction. Shop-fabricate materials to greatest extent possible.

J. Anchor Roofing panels securely in place in accordance with manufacturers' reviewed shop drawings and manufacturers specifications.

1. Install any required concealed support cleats required for a complete and adequate Roofing panel attachment.
2. All panels shall be attached with concealed fasteners and cleats conforming to panel manufacturer's instruction for installation of concealed fasteners.

K. Sealant-Type Joints:

1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1" into sealant.
2. When ambient temperature is moderate at time of installation, 40º to 70ºF, set joint members for 50% movement either way. Adjust setting proportionately for installation at higher temperature. Do-not install sealant-type joints at temperatures below 40ºF.
3. Comply with requirements of Division 7 Sealant Specification for handling and installation of sealants

L. Fabricate and install work with lines and corners of exposed units true and accurate. Form exposed faces flat and free of buckles, excessive waves, and avoidable tool marks considering temper and reflectivity of metal. Provide uniform, neat seams with minimum exposure of solder, welds and sealant. Except as otherwise shown, fold back sheet metal to form a hem on concealed side of exposed edges.

M. Conceal fasteners and expansion provisions in exposed work, and locate so as to minimize possible leakage. Cover and seal fasteners and anchors as required for a tight installation.

1. At exposed metal decking locations including, but not limited to:

a. Acoustical decking
b. Exterior roof overhangs

2. Install fasteners such that they only penetrate the top flute of the deck and do not penetrate through the exposed face of pan deck.

N. Protect Roofing panel surfaces in contact with cementitious materials and other dissimilar materials with bituminous paint and/or non-metallic shims in accordance with manufacturers specifications.

O. "Pinning"

1. The panels must be "pinned" at the top of the panel at three locations to resist "drag" load caused by the weight of the panel, live loads and snow loads.
2. Appendix "C" shall be used to coordinate fastener types and resistance to drag loads.

P. Accessory Attachment Clips:

1. Install complete in accordance with manufacturer's recommendations.
2. Coordinate with drawings for what is being attached with the clips.

Q. Rake and ridge flashing cleats:

1. Cleats shall be continuous and have a 2" overlap at joints
2. Underlayment shall continue over the face of the cleats to the extend of the vertical face of cleat.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.

    a. The Applicator shall be responsible for the proper application of the materials.

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Inspections

1. Site Tests (Post-Installation Testing): **Owner** reserves right to perform post-installation testing of installed metal panel installation.
2. Manufacturer's Field Services: **General Contractor** shall provide manufacturer's field service consisting of product use recommendations and periodic site visit for inspection of product installation in accordance with manufacturer's instructions.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

   1. Leave entire area in a neat, clean, acceptable condition.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor's** NOTICE of "Certificate of Substantial Completion".

END OF SECTION 07 41 13

SECTION 07 46 19 – METAL SIDING AND SOFFIT ASSEMBLY

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Metal Siding System and Flashing

    a. Copings
    b. Gutters
    c. Downspouts

2. Metal Soffit System and Flashing.

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC), www.bsc.ca.gov current edition at time of permit issuance.

M. Underwriters Laboratory (UL), www.ul.com

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Wall Panel Assembly	Wind loading resistance	Pass -(Based on "f") by 1.33	Building Code / UL
Soffit Panel assembly	Wind loading resistance	Pass - (Based on "f") by 1.33	Building Code / UL
Assembly	Air Infiltration	Not to exceed 0.06 cfm/sq. ft. air leakage under static pressure of 6.24 psf	ASTM E 1680 ASTM E 283
	Water Penetration	No uncontrolled water penetration through the joints at a static pressure of 6.24 psf	ASTM E 1646 ASTM E 331
	Water Penetration	No uncontrolled water penetration through Joints	AAMA 501.2
	Deflection	L/180 of total span	-
	Tolerances	1/8" in 10 feet for plumb, level, warp and bow. Tolerances variation shall not be collective.	-
Panel Finish	Coating Thickness	1.0 mil (+/- 0.2 mil)	ASTM A 653
	Hardness	F minimum using Damascus # 6610	NCCA 11-12
	Impact	Gardner Variable Impact Tester with ½" mandrel: Coating shall withstand direct and reverse impact of 1.5 in-pounds per mil substrate thickness. Coating shall adhere tightly to metal when subjected to #600 Scotch Tape pick-off test. Slight micro-cracking permissible. No star cracking shall occur.	NCCA 11-6
	Adhesion	Coating shall not pick off when subjected to an 11" x 11" x 1/16" grid with reverse impact of 1.5 inch-pound per mil substratethickness and taped with #600 Scotch Tape. (Perform at room temp. and at 32°)	NCCA 11-16

	Humidity Resistance	No formation of blisters when subjected to condensing water flog at 100° F for 3000 hours.	ASTM D 2247
	Salt Spray Resistance	Expose single coat system to 3000 hours, using 5% NaCl solution. Corrosion creepage from scribe line: 1/16".	ASTM B 117
	Outdoor Weather Exposure	Five year exposure at 45° angle, facing south, Florida Exposure. No checking, crazing, adhesion loss.	ASTM A141
		Maximum chalk rating of 8.	ASTM D 659
		Maximum color change of 5 delta E units	ASTM D 2244
	Accelerated Weather Exposure	1000 hours in Atlas Type D.M.S. Weatherometer, using cycle of 102 minutes light and 18 minutes diminished light and demineralized water.	ASTM D 822
		No checking, crazing, adhesion loss.	-
	Chemical Resistance	24-hour immersion in mineral spirits, 0.5% Tide solution, 2.0% trisodium phosphate and 2.0% Ivory Soap solution. (Allow 24 hour recovery period before evaluation.) No loss of adhesion or gloss and no color change.	-
	Coating Thickness	1.0 mil (± 0.2 mil)	ASTM A653
Weatherseals	Material	Comply	ASTM A 1543
Refer to drawings and as herein specified			

C. **Sustainability:**
   1. Refer to Division 1 sustainability requirements.
   2. Refer to product criteria identified herein.

D. **Construction Testing:**

Item	Name of Test	Performance Results	Testing Std.
Wall panel assembly	Hose stream test	Hose stream test a 10'x10' minimum area prior to installation of wall insulation and gypsum board to insure no water leakage.	Per mfgr. stds.
Soffit panel assembly	Hose stream test	Hose stream test a 10'x10' minimum area prior to installation of wall insulation and gypsum board to insure no water leakage.	Per mfgr. stds.

E. **Construction Monitoring by others:**

Item	Name of Test	Performance Results	By Whom
Metal material	Const. Waste Management	Comply	Refer to Division 1 for construction waste management and disposal/recycling requirements

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Submit detailed shop drawing that explicitly shows, indicates and demonstrates all general connection types including but not limited to corresponding details that match plan document details indicating:

a. Indicate layout of panels and panel sizes, including custom-fabricated panels if indicated; indicate each item of trim and accessories.
b. Indicate in detailed drawings profile and gauge of interior and exterior sheets, and locations and types of fasteners; indicate locations, gas, shapes and methods of attachment of panels, trim and accessory items.
c. Indicate products/materials required for construction activities of this section not supplied by manufacturer of products of this section.
d. Thickness and dimension of parts
e. Fastening and anchoring methods
f. Indicate thickness and dimension of parts.
g. That explicitly shows, indicated and/or demonstrates all general connection types including but not limited to corresponding details that match plan document details for review and acceptance by the Architect.
h. Detail and location of:

1) Manner of forming
2) Joining
3) Gaskets
4) Thermal movement joints
5) Securing of copper to substrate
6) Waterproof connections
7) Interlocking siding panel to flashing joints
8) Interlocking siding panel to gutter joints
9) Interlocking joints at transition conditions
10) Expansion/contraction joints necessary to accommodate thermal movement.
11) Design calculations determining maximum thermal expansion used for assembly design.
12) Details for separation of metal material from dissimilar materials.
13) Flashing

E. Site mock up, refer to "Field Samples / Mock Up" heading.

F. Submit samples including the following:

1. Siding Panel and accessories, underlayments, fasteners, etc.

a. Panel: 12" long x 4 pieces

2. Soffit Panel and accessories, underlayments, fasteners, etc.
    a. Panel: 12" long x 4 pieces

G. Field Measurements: Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements, fabrication schedule with construction progress to avoid construction delays.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing / installing / finishing similar size projects and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing similar size projects and complexity.

1. Fabricator / Installer shall be acceptable to preformed metal panel manufacturer.
2. Panel manufacturer shall have single source capability to and will perform all engineering, panel fabrication, welding, fastening and assembly.

D. Field measurements should be taken prior to completion of shop manufacturing and finishing.

E. Comply with manufacturer's product data, recommendations and installation instructions for substrate verification, preparation requirements and installation.

1. Strippable Film: Remove manufacturer's protective film, if any, from surfaces of roofing panels.

F. Assembly:

1. Provide for free and noiseless vertical and horizontal thermal movement of component parts, for an ambient temperature range of 20ºF to 180ºF.
    a. Buckling, opening of joints, glass breakage, undue stress on fasteners, failure of sealants or any other detrimental effects due to the thermal movement of component parts will not be permitted.
    b. Fabrication and erection procedures shall take into account the ambient temperature range at the time of the respective operations.
    c. Provide additional clearance as required to accommodate erection tolerance, slab and beam deflection and long term creep of structural frame.
    d. Structural superimposed dead loads and live load deflections are expected to be as follows:
    e. Dead load including 25 lbs./sf curtain wall weight + 1/2".
2. No panel shall be constructed with any bow allowance in panel face or edges.
3. All panel systems shall be back supported as required to meet deflection standards specified herein.
    a. All panel systems shall be constructed and installed to mitigate "oil canning".
4. Face of panels shall not vary in plane to any adjacent panel.
5. Panel lines, breaks, and angles shall be sharp, true and surfaces free from warp or buckle.

6. The Metal Panel System shall be fastened so that panels are secure, and able to accommodate movement (free floating joints) from thermal and seismic expansion/contraction without buckling or causing undue stress on panel fasteners, or failure of internal seals.
7. Panel joints shall have manufacturer's standard joint system.
8. The jointery shall allow for panel movement and sustain the weatherability specified.
9. Panel system joints shall be of steel with specified finish.

G. Insect infiltration resistant

1. Provide system panels complete, weathertight and sealed to withstand insect intrusion.

H. Pre-installation Meetings:

1. **General Contractor** and metal panel installer shall conduct pre-installation meeting to verify project requirements, substrate conditions, manufacturer's installation instructions and manufacturer's warranty requirements.
2. Comply with Division 1 meeting requirements.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

1. Identify fabricated components with UL 90 label where appropriate.
2. Bundle roofing panels in waterproof wrapping paper.
3. Package trim and accessories in waterproof wrapping paper.

C. Store materials in dry, above-ground location protected from exposure to harmful conditions.

1. Stack prefinished material to prevent twisting, bending, abrasion, scratching and denting. Elevate one end of each skid to allow for moisture runoff.
2. Store products of this section in manufacturer's unopened packaging until installation of products.
3. Maintain dry, heated storage area for products of this section until installation of products.

1.7 JOB CONDITIONS

A. Field-verify that all components, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **twenty (20)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

D. Furnish manufacturer's additional **twenty (20)** year water-tightness warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.
2. Emergency repairs will be made within 24 hours of notice of leakage or defect by the **Owner**. As soon as weather permits, affected areas will be permanently restored to standards of quality; workmanship, durability and appearance called for in the original Contract Documents. Emergency and permanent repairs will be made without any charge to the **Owner** for labor and materials. The value of this Agreement is not limited to a specific maximum sum.

E. Furnish manufacturer's additional **twenty (20)** year unlimited Penal Sum warrantee for material failure and finish failure which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Substrate assembly
2. Framing
3. Flashing by others

B. Related Sections include but are not limited to:

1. Division 1
2. Section 05 12 00 – Structural Steel Framing
3. Section 05 21 19 – Open Web Steel Joist Framing
4. Section 05 41 00 – Cold Formed Metal Framing
5. Section 06 10 00 – Rough Carpentry / Plywood Sheathing
6. Section 06 17 33 – Wood I-Joist
7. Section 07 21 00 – Building Insulation
8. Section 07 13 26 – Cold Applied Self-Adhering Waterproof Membrane (CASAM)
9. Section 07 62 00 – Sheet Metal Flashing & Trim
10. Section 07 92 00 – Sealants & Caulking
11. Section 08 11 13 – Steel Doors & Frames
12. Section 08 41 00 – Entrances, Window Wall, Storefront System & Curtain Wall

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer.

B. Acceptable manufacturers shall be one of the following:

1. Panels, flashing and Accessories:

a. Metal Sales, www.metalsales.us.com
b. Merchant & Sons, Inc., www.ziprib.com
c. IMSA BUILDING PRODUCTS Steel Building Products, USA Inc. (800) 726 – 2727
d. Berridge www.berridge.com
e. McElroy Metal, www.mcelroymetal.com , Paula Grider, (310) 977-3665

2. Waterproof Membrane Underlayment and Flexible Flashing:

a. Refer to Section 07 13 26 – Cold Applied Self-Adhering Waterproof Membrane (CASAM)

3. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. System:

1. Wall Panel assembly:
a. Schedule:

1) Mfgr.: Metal Sales

2) Panel Type: Concealed fastened
3) Model: EM15-1224
4) Finish: As herein specified
5) Dimensions:
    a) Width: 12″
    b) Gauge: 24 ga.
    c) Overall depth: 1-1/2″
6) Fasteners:
    a) Provide TYPE 304 stainless steel fasteners, of size and quantity as required to resist negative pull-off and meet structural requirements.
7) Weatherseals:
    a. Provide aluminum extrusion to accommodate insertion of formed Sanoprene or EPDM weatherseals, to include top and bottom of walls/panels, doors and louver frame conditions and locations indicated on manufacturer's standard details.
8) Other internal seals shall be silicone, meeting ASTM 1543A.
9) Accessories:
10) Flashing, mounting clips, corner pieces, closures, and trim shall be of same material, color, finish and thickness as main panels.

2. Soffit Panel assembly:
    a. Schedule:
        1) Mfgr.: Metal Sales
        2) Panel Type: Concealed fastened
        3) Model: Soffit panel – V-Groove
        4) Finish: As herein specified
        5) Dimensions:
            a) Width: 12″
            b) Gauge: 24 ga.
            c) Overall depth: 1″
        6) Fasteners:
            a) Provide TYPE 304 stainless steel fasteners, of size and quantity as required to resist negative pull-off and meet structural requirements.
        7) Weatherseals:
            a) Provide aluminum extrusion to accommodate insertion of formed Sanoprene or EPDM weatherseals, to include top and bottom of walls/panels, doors and louver frame conditions and locations indicated on manufacturer's standard details.
        8) Internal seals shall be silicone, meeting ASTM 1543A.
        9) Accessories:
        10) Flashing, mounting clips, corner pieces, closures, and trim shall be of same material, color, finish and thickness as main panels.

B. System Finish

1. Coated **KYNAR 500** based polyvinylidene fluoride (PVDF) resin, Coated Zincalume with clear acrylic (Zincalume Plus and ceramic pigments)

    a. Color: As indicated on drawing A-301 Exterior Elevations
    b. Coating Thickness: 1.0 mil (+/- 0.2 mil) in conformance with ASTM A653

2.3 OTHER MATERIALS

A. Accessories and miscellaneous items

1. Provide accessories and/or miscellaneous items as necessary and where necessary to complete Work required.
2. Provide anchors, toggles bolts, and other fastenings and materials necessary to construction and secure Work into place.

    a. Fasteners: Non-corrosive/concealed fasteners recommended by panel manufacturer.
    b. Provide gaskets, backer-rod and sealant required for joint installation.
    c. Panel finish maintenance requirements and paint touch-up material shall be furnished to the **Architect** for review and acceptance.
    d. Copings, gutters and downspouts.

        1. Match siding panel material and finish.

B. Waterproof Membrane and Underlayment

1. Material

    a. Refer to and coordinate with Specification Section 07301.

2. Cold-applied self-adhering, rubberized asphalt/polyethylene
3. Installation / Coordination:

    a. Ensure that membrane does not come in contact with PVC roofing membranes and/or roofing materials, install manufacturer's approved isolation slip-sheet between dissimilar materials.

C. Metal Fabrication

1. Accurately form panels system to required size and profiles. Shop-fit and assemble, whenever practical.

    a. Site assembled units shall be constructed meeting all requirements of factory assembled units and/or panels.
    b. Construction joints shall meet requirements of panel system manufacturer's requirements.
    c. All joints shall occur exactly and only as indicated on the drawings as reviewed on the shop drawings.
    d. Apply all internal seals per seals and panel manufacturer's recommendations.
    e. Panel stiffeners shall be structurally bonded to the panel.
    f. Panels shall have only "sharp 90 degree" angle edges at flat panels and sharp edges at "rolled" curved panels as required by details, drawings and to meet requirements as indicated on drawings.
    g. Flashing which is compatible with all materials it comes in contact with.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Identify conditions detrimental to proper or timely completion of work and coordinate with
3. Verify that panel support systems are ready for construction activities of this section and within specified tolerances.
4. Verify that rough-in utilities are in correct locations.

B. Surface:

1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

C. Installer's Examination:

1. Have installer of this work examine conditions under which construction activities of this section are to be performed, then submit written notification if such conditions are unacceptable.
2. Transmit 2 (two) copies of installer's report to **Architect** within 24 hours of receipt.
3. Delay construction activities of this section until unacceptable conditions have been corrected.
4. Beginning construction activities of this section indicates installer's acceptance of conditions.

D. Verify that specified items may be installed in accordance with the reviewed design.

E. In the event of discrepancy, immediately notify the **Architect**.

1. Do not process until unsatisfactory conditions are corrected.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

C. Coordinate metal panels with rain drainage work, flashing, trim and construction of decks, parapets, walls and other adjoining work to provide a permanently leakproof, secure and noncorrosive installation.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

B. Clean surfaces to receive materials.

C. Substrate to be smooth and free of defects.

1. Drive all projecting nails, screws and other fasteners flush with substrate and below intect waterproof membranes.

D. Dissimilar Metals: Prevent galvanic action of dissimilar metals.

3.4 MOCK-UP

A. Erect at location approved by **Architect**.

1. Mock-up shall not be part of final construction once approved by **Architect**.
2. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.

B. Mock-up

1. Size: **[Fill in]**

3.5 INSTALLATION

A. General:

1. Installed panels systems, flashing, frames and accessories in accordance with reviewed Shop Drawings and manufacturer's data, and as herein specified.
2. Installed metal panels, flashing, roof penetration boots and flashing, separation sheets, waterproof membrane, frames and accessories in accordance with Drawings, reviewed Shop Drawings and manufacturer's data/specifications, and as herein specified.
    a. Construction in accordance with SMACNA recommendations, as herein indicated, and per Drawings.
3. Erect panels plumb, level, and true.
    a. **Permit no offset from True Alignment** of adjacent panels installed butting and/or in line.
    b. Panel to panel joints shall not vary greater than 1/16 inch from the required joints size indicated on the reviewed shop drawings over its total length. Tolerance variation shall not be collective.
4. Anchor panels securely in place in accordance with manufacturers' reviewed shop drawings.
    a. Install any required support clips and continuous subgirts required for a complete and adequate panel attachment.
    b. All panels shall be attached with concealed fasteners conforming to panel manufacturer's instruction for installation of concealed fasteners.
5. Protect panel systems surfaces in contact with cementitious materials and other dissimilar materials with bituminous paint and/or non-metallic shims.
    a. Separate dissimilar metals by applying rubberized asphalt underlayment to each metal surface.
6. Erect panels plumb and true.
    a. Permit No offset from True Alignment of adjacent Roofing panels installed butting and/or in line.
    b. Panel to Roofing panel joints shall not vary greater than 1/16 inch from the required joints size indicated on the reviewed shop drawings over its total length. Tolerance variation shall not be collective.

7. Provide for thermal expansion and contraction of the work and as indicated. Seal joints as shown and as required for leakproof construction. Shop-fabricate materials to greatest extent possible.

B. Manufacturer's Recommendations:

1. Except as otherwise shown or specified, comply with recommendations and instructions of manufacturer of metal roofing being fabricated and installed.

C. Underlayment / Waterproof Membrane

1. First: Install Underlayment over substrate sheathing and wrap over edge of roof down face and up the face of walls.

a. Extend membrane up walls and around all edges in ship-lap fashion and maintain membrane is concealed from sun light.

2. Second:

b. Provide slip sheet separation between PVC products and Underlayment.

1) Use non-asphaltic type adhesive for temporary anchorage, where possible, to minimize use of mechanical fasteners under roofing.
2) Lap all joints 6" minimum.

c. Slip Sheet shall provide complete separation between PVC roofing material, Underlayment and Waterproofing Membrane and all other dissimilar materials.

D. Form and fabricate the following, but not limited to and other components of roofing to profiles, patterns and drainage arrangements shown and as required for permanently leakproof construction:

1. Sheets / Panels
2. Seams
3. Strips
4. Edge treatment
5. Integral flashings
6. Penetration boots and flashing
7. Outside and inside corners
8. Copings (coordinate with Section 07 62 00 – Sheet Metal Flashing & Trim)
9. Gutters
10. Downspouts

E. Anchor panels securely in place in accordance with manufacturers' reviewed shop drawings and manufacturers specifications.

1. Install any required concealed support cleats required for a complete and adequate Roofing panel attachment.
2. All panels shall be attached with concealed fasteners and cleats conforming to panel manufacturer's instruction for installation of concealed fasteners.

F. Sealant-Type Joints:

1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1" into sealant.

2. When ambient temperature is moderate at time of installation, 40º to 70ºF, set joint members for 50% movement either way. Adjust setting proportionately for installation at higher temperature.

    a. Do-not install sealant-type joints at temperatures below 40ºF.

3. Comply with requirements of Division 7 Sealant Specification for handling and installation of sealants

G. Fabricate and install work with lines and corners of exposed units true and accurate. Form exposed faces flat and free of buckles, excessive waves, and avoidable tool marks considering temper and reflectivity of metal. Provide uniform, neat seams with minimum exposure of solder, welds and sealant. Except as otherwise shown, fold back sheet metal to form a hem on concealed side of exposed edges.

H. Conceal fasteners and expansion provisions in exposed work, and locate so as to minimize possible leakage. Cover and seal fasteners and anchors as required for a tight installation.

3.6 FIELD QUALITY CONTROL

A. Site Tests (Post-Installation Testing): **Owner** reserves right to perform post-installation testing of installed metal panel installation.

B. Manufacturer's Field Services: **General Contractor** shall provide manufacturer's field service consisting of product use recommendations and periodic site visit for inspection of product installation in accordance with manufacturer's instructions.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Keep areas of work free from debris as work progresses.

1. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

E. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.

F. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

G. Provide record drawings in accordance with Division 1 closeout submittal procedures.

H. Close out, on-site, inspection will be at the discretion of the **Architect** after he received the **General Contractor's** NOTICE **-** Certificate of Substantial Completion.

END OF SECTION 07 46 19

SECTION 07 54 00 – THERMOPLASTIC POLYOLEFIN (TPO) MEMBRANE ROOFING

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Complete thermoplastic (TPO) single ply roof system

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. American Society For Testing and Materials (ASTM)

1. Membrane:

a. ASTM C1371 Standard Test Method for Determination of Emittance of Materials Near Room Temperature Using Portable Emissometers
b. ASTM C1549 Standard Test Method for Determination of Solar Reflectance Near Ambient Temperature Using a Portable Solar Reflectometer
c. ASTM D471 Standard Test Method for Rubber Property – Effect of Liquids
d. ASTM D573 Standard Test Method for Rubber—Deterioration in an Air Oven
e. ASTM D751 Standard Test Methods for Coated Fabrics
f. ASTM D1079 Standard Terminology Relating to Roofing and Waterproofing
g. ASTM D1149 Standard Test Methods for Rubber Deterioration—Cracking in an Ozone Controlled Environment
h. ASTM D1204 Standard Test Method for Linear Dimensional Changes of Nonrigid Thermoplastic Sheeting or Film at Elevated Temperature
i. ASTM D2137 Standard Test Methods for Rubber Property—Brittleness Point of Flexible Polymers and Coated Fabrics
j. ASTM D6878 Standard Specification for Thermoplastic Polyolefin Based Sheet Roofing
k. ASTM E96 Standard Test Methods for Water Vapor Transmission of Materials
l. ASTM E903 Standard Test Method for Solar Absorptance, Reflectance, and

Transmission of Materials Using Integrating Spheres

m. ASTM G155 Standard Practice for Operating Xenon Arc Light Apparatus for Exposure of Non-Metallic Materials

2. Rigid Insulation (Polyiso):

a. ASTM C209 Standard Test Methods for Cellulosic Fiber Insulating Board
b. ASTM C1289 Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
c. ASTM D1621 Standard Test Method for Compressive Properties of Rigid Cellular Plastics
d. ASTM D2126 Standard Test Method for Response of Rigid Cellular Plastics to Thermal and Humid Aging
e. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
f. ASTM E96 Standard Test Methods for Water Vapor Transmission of Materials

a. Uplift:

1) UL 1897 - Uplift Tests for Roof Covering Systems:

a) Intended to provide uplift resistance data for the evaluation of the attachment of roof covering systems to roof decks by using differential air pressures.

2) UL 580 - Tests for Uplift Resistance of Roof Assemblies

b. Rated conditions:

1) Polyisocyanurate Insulation:

a) UL Standard 1256 Classification
b) UL Standard 790 Classification (ASTM E108)
c) UL Standard 263 Classification (ASTM E119)

I. ENERGY STAR

J. Cool Roof Rating Council (CRRC)

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Roof System	Uplift	90lbs.	CBC 1504.1, 1504.3, 1609 UL 580 or UL 1897 ICC-ES ESR-1597 (GAF)
	Assembly	Comply	CBC 1507.13 ICC-ES/ESR-1597 (GAF)
	Fire Classification	General Comply	CBC 1505.1 & ASTM E108 or UL 790
		UL Class C	CBC 1505.4
	Slopes	1/4" per foot minimum main roof slope; • Refer to drawings for more restrictive slopes at main roof, crickets and valleys	CBC 1507.13.1
	Roof Classification	System 3	ICC-ES ESR-1597, Table 1
	Attachment of Membrane for Wind Classification	System 1a	ICC-ES ESR-1597, Table 2
Roof Membrane **(60 mil Smooth TPO)**	Material	Comply	CBC 1507.13.1, ASTM D4434, D6754 & D6878
	Nominal Thickness	60 mil membrane –(0.060")	ASTM D751: 0.039" min
	Breaking Strength	305 lbf/ x 290 lbf	ASTM D751 Grab Method: 220 lbf/in. min.
	Factory Seam Strength	135 lbf (membrane failure)	ASTM D751: 66 lbf, min
	Elongation at Break	30%	ASTM D751: 15% min
	Heat Aging	100%	ASTM D573: 90% retention of breaking strength and elongation at break, min

	Tear Strength	75 lbf x 130 lbf	ASTM D751 8" x 8" sample: 55 lbf, min
	Puncture Resistance	380 lbs or greater	FTM 101C Method 2031: Not Established
	Cold Brittleness	-40degrees C	ASTM D2137: -40 degrees C, min
	Permeance	0.08 perms	ASTM E96: Not Established
	Dimensional Change	0.4%	ASTM D1204 @ 158 F, 6 hrs.: ± 1%, min.
	Water Absorption	0.7%	ASTM D471 @ 158F, 1 week: ± 3.0% (top coating only), min
	Hydrostatic Resistance	430 psi or greater	ASTM D751 Method D: Not Established
	Ozone Resistance	No visible deterioration @ 7 x magnification	ASTM D1149: No visible deterioration @ 7x magnification
	SRI (Solar Reflectance Index) Initial / Aged	94/81 83 Aged Title 24	N/A
	Reflectivity (white)	0.76 / 0.68 81.9% Reflectance	ASTM C1549: N/A ASTM E903: N/A
	Emissivity (white)	0.90 / 0.83 0.94	ASTM C1371: N/A ASTM E403: N/A
	Weather Resistance	>25,000 KJ//(m^2-nm) at 340 nm	ASTM G155 / D6878: 10,080 KJ/(m^2-nm) at 340 nm
	Heat Aging	60 weeks	ASTM D573: 240 degrees F for 32 weeks
	Thickness Above Scrim	22.1 mil (nominal)	ASTM D7635: Min. 30% of Total Thickness
Rigid Insulation (Polyiso)	Material	Comply	UL 1256
	Water Absorption, % by Volume – 2 hours (under 1" water)	1.5 max	ASTM C209
	Dimensional Stability Change, 7 days @ 158°F, 97% RH - Length + Width	<2%	ASTM D2126
	Compressive Strength	25 psi nominal (Type II, Class 1, Grade 3)	ASTM C1289 ASTM D1621
	Tensile Strength	≥500	ASTM C209

	Moisture Vapor Transmission	<1.5 perm	ASTM E96
	Flame Spread Index	<75	ASTM E84
	Service Temperature	-100 to 200 degrees F	
	Metal deck (gauge)	22 gauge, min. & yield strength of 33 or 80 ksi.	
	Concrete (Compressive Strength)	2500 psf, min.	
Fasteners	-	Roofing mfgr's approved types, spacing's, etc. for roof substrate	ICC-ES ESR-1597 (GAF) Table 2 and Table 3

C. **Sustainability:**

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submittals:

1. Product / Technical Data:

a. Submit the following for each product being proposed as part of the roof assembly including, but not limited to, primers, adhesives, fasteners, accessories, boots, flashing, rigid insulation and/or cover boards, sheathing, membrane, walkway pads, etc.

1) Manufacturer Product & Technical Data Sheets
2) Manufacturer MSDS Sheets
3) Manufacturer Installation Instructions
4) Manufacturer and/or Contractor Warranty

2. Certifications, Test Reports, and other information:

a. Installer / Applicator Qualifications and References
b. Manufacturer Approved/Trained/Certified Installer/Applicator
c. Manufacturer Certifications
d. Manufacturer Test Reports

1) Uplift approvals for specific assembly
2) Fire Classification for specific assembly

3. Shop Drawings:

a. Shop drawings shall include, but not be limited to:

1) Dimensioned roof plans showing membrane layout and fastening, cross section(s) showing each roof assembly condition, rigid insulation and/or cricket layout and fastening, walkway layout, and details.

4. Samples:

a. Provide samples, as noted in Section 01 33 00 – Submittal Procedures, for the following:

1) Roof Membrane
2) Walkway Membrane
3) TPO Coated flashing

5. Mockups:

a. When required by specifications, erect a mockup at Project site at location acceptable to **Owner** and **Architect**.

1) Mock up shall be either a "Product" mock-up or an "Assembly" mock-up, refer to individual specification sections for specific requirements.
2) Construct the mockup complete, including work of all trades required in finished work.
3) **Architect** and **Owner** shall decide if mockup will be part of finish work.

a) Items and assemblies which will be covered up by finish materials shall be separate and not part of finished building.

E. Closeout Submittals:

1. Refer to Section 01 33 00 – Submittal Procedures.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor / Installer / Fabricator shall have been in business for **five (5)** years providing/finishing similar size projects and complexity.

1. Installer shall be classified as a ***Master*** or ***Master Select*** contractor as defined and certified by GAF.

C. Manufacturer shall have been in business for **ten (10)** years providing/installing/finishing similar size projects and complexity.

1. Manufacturer shall provide a roofing system that meets or exceeds all criteria listed in this section.

D. General Criteria:

1. All components listed in this section shall be provided by a single manufacturer or approved by the primary roofing manufacturer. All materials shall be physically and chemically compatible when installed in accordance with manufacturer's current application requirements.

2. Contractor shall provide an installed roofing membrane and base flashing system that does not permit the passage of water, and will withstand the design pressures calculated in accordance with the most current revision of ASCE 7.
3. More restrictive requirements as herein specified and/or as indicated in architectural drawings shall govern provided the roof manufacturer allows per their standard details and/or warranty criteria.
4. Roof manufacturer's field reports shall be copied to **Architect** with 5 working days of site visit.

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to:

   a. Substrate preparation
   b. Inspections by roofing manufacturer representative during construction, including punchlist completion and project closeout procedures.
   c. Schedule
   d. Special detailing

2. **General Contractor** shall request meeting 5 days in advance of construction.

F. Manufacturer's Representative: Make arrangements necessary to have a representative employee of the roofing manufacturer on-site periodically during installation work to review installation procedures and during project closeout.

1. Manufacturer's representative shall review and certify in writing all phases of construction to verify the complete work meets specification requirements and warranty/guarantee requirements.
2. Written certification of all phases of construction shall be sent to the **Architect** by the manufacturer's representative.
3. Warranty compliance certification with Inspections report(s).

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

B. Do not expose materials to moisture in any form before, during, or after delivery to the site. Reject delivery of materials that show evidence of contact with moisture.

C. Discard rolled goods, which have been contaminated, creased or otherwise, damaged and replace with same materials at no additional cost to **Owner**.

D. Delivery:

1. Deliver materials in original unopened manufacturer's containers and within their specified temperature range, with labels intact and legible. Deliver materials in sufficient quantity to allow continuity of work, each day.

E. Handling:

1. Handle rolled goods so as to prevent damage to material. Select and operate material handling equipment so as not to damage existing construction or applied roofing.

F. Storage:

1. Use "breathable" type covers such as canvas tarpaulins to allow venting and protection from weather and moisture. Cover and protect materials at the end of each work day. Do not remove any protective tarpaulins until immediately before the material will be installed.

1.7 JOB CONDITIONS

A. Field verify that all components, backing, substrate, etc. by others are installed correctly to proceed with installation of products as herein specified.

B. Environmental Requirements:

1. Proceed with roofing only when existing and forecasted weather conditions permit.

a. Allow sufficient time for moisture from previous precipitation, rain, fog, or dew to evaporate before proceeding with roofing work. Forced drying methods may be used as permitted by the roofing manufacturer.

2. Ambient temperatures must be within Manufacturer's stated temperature ranges when applying hot asphalt or water based adhesives.
3. Do not allow roofing membrane or other appurtenant materials to come in contact with any materials that might be harmful or degrading to roofing products.

1.8 PROTECTION

A. Protect work under this section at all times from work on surfaces and materials adjacent to them.

B. Protect work under this section from damage by other trades; work under this section damaged or defaced by adjacent work shall be replaced at no additional cost to the **Owner**.

C. Adjacent work damaged or defaced by work performed under this section shall be repaired or replaced at no additional cost to the **Owner**.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial **one (1)** year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's **20 Year Diamond Pledge NDL Guarantee** agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.
2. All costs/premiums for this guarantee shall be fully paid by the **General Contractor**.

D. Furnish manufacturer's additional **EverGuard TPO Puncture Resistance Limited Warranty** to the original building owner that EverGuard TPO roof membrane will provide puncture and tear resistance when installed and maintained in accordance with GAF's requirements. **[Specifier: only applies to fully adhered systems with 60 or 80 mil membranes and system must include a ½" minimum hard cover board]**

E. Furnish manufacturer's additional **EverGuard TPO Reflectivity Limited Warranty** to the original building owner that EverGuard TPO white roof membrane will meet or exceed the initial and "aged" ENERGY STAR reflectivity requirements for the low slope roofing membranes (65% initial, 50% aged) when installed and maintained in accordance with GAF's requirements. The aged reflectivity shall meet or exceed these requirements when measured after cleaning the membrane in accordance with GAF recommendations.

1.10 RELATED WORK/SECTIONS

A. The following is related work including, but not limited to the following:

1. Roof structure
2. Roof substrate
3. Roof penetrations
4. Roof curbs
5. Roof drains and plumbing
6. Flashing by others
7. Parapet wall construction
8. Wall and parapet openings, including but not limited to doors, windows, and louvers.

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 03 30 00 – Cast in Place Concrete
3. Section 06 10 00 – Rough Carpentry
4. Section 06 17 13 – Laminated Veneer Lumber
5. Section 06 17 23 – Parallel Strand Lumber
6. Section 06 17 53 – Shop Fabricated Wood Trusses
7. Section 06 18 13 – Glue Laminated Construction
8. Section 07 13 26 – Cold Applied Self-Adhering Membrane (CASAM)
9. Section 07 21 00 – Building Insulation
10. Section 07 41 13 – Metal Roofing Panels
11. Section 07 62 00 – Sheet Metal Flashing & Trim
12. Section 07 72 00 – Attic, Soffit and Roof Vents
13. Section 07 72 33 – Roof Hatches & Safety Railings
14. Section 08 62 00 – Unit Skylights
15. Section 07 92 00 – Sealants and Caulking
16. Section 07 95 13 – Expansion Control
17. Section 09 24 00 – Portland Cement Plastering
18. Section 09 29 00 – Gypsum Board and Sheathing Substrates

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.

a. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

1.13 EXTRA MATERIAL

A. Submit as part of project closeout:

1. Provide extra Roofing Membrane and Walkway Membrane material for each product type and color as installed product.

a. 20 linear feet of Roofing Membrane

2. Furnish written documentation that extra materials supplied have been inspected and reconfirmed to be the same as those used in the Work.
3. Furnish in factory packaged and labeled cartons and identify cartons with project name and address.
4. Deliver materials to project premises just prior to substantial completion and store at location directed by the **Owner**.

1.14 GENERAL SYSTEM DESCRIPTION

A. System Schedule:

1. Fully Adhered

a. Class C (as required by CBC Section 1505, Table 1505.1)

1) Plywood Deck

a) Batt Insulation

2. **Single Ply (Thermoplastic) roofing system – FULLY adhered**

a. **System:**

1) **FA-1: Insulated New**

b. Schedule – Thermal Insulation below roof deck and Rigid Insulation Crickets:

1) Wood Decking Substrate:

a) Prime substrate as recommended by roofing mfgr.
b) Single ply Membrane Assembly
c) Assembly:

i. Exposed wood deck:

a. Single ply Membrane over
b. Gypsum sheathing over
c. Wood deck

ii. Rigid Insulation:

a. Single ply membrane over
b. Tapered rigid insulation crickets over
c. Wood deck

PART 2 - **MATERIALS**

2.1 ACCEPTABLE MANUFACTURERS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as herein listed and in Drawings:

1. Entire system, including membrane, cover board, slip sheet, insulation, accessories, etc. unless otherwise noted:

a. GAF, www.gaf.com
b. Johns Manville, www.johnsmanville.com
c. Carlisle, www.carlisle-syntec.com
d. Sarnafil, www.sarnafilus.com

2. Extruded Polystyrene Insulation

a. Owens Corning, www.owenscorning.com/insulation/commercial

3. Flashing:

a. Fry Reglet, www.fryreglet.com
b. As approved by roofing manufacturer.

4. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. Roof deck substrate (provided by others):

1. Plywood

B. Roof Board (Deck)

1. Mfgr: Georgia Pacific
2. Product: Dens Deck Prime
   a. Surface material: Fiberglass Mat with Non-Asphaltic Coating
   b. Applications:
      1) Over plywood to protect membrane
   c. Thickness:
      1) Over plywood: 1/4"
   d. Installation: Method as specified herein and in accordance with roofing and sheathing manufacturer's recommendations.

C. Roof Board (Roof Curbs and/or Roof Parapets):

1. Mfgr: Georgia Pacific
   a. Product: Dens Deck Prime
   b. **Surface material:** **Fiberglass Mat with** Non-Asphaltic Coating
   c. Thickness:
      1) 1/4"
   d. Installation: Fully adhere membrane to parapet wall and vertical face of roof curb with adhesive and fasteners in accordance with roofing manufacturer's specifications.

D. Rigid Insulation: **[Specifier include when applicable]**

1. Tapered Insulation Board:
   a. Polyisocyanurate (Polyiso) Insulation:
      1) Mfgr: GAF
      2) Product: EnergyGuard Polyiso Insulation
      3) Board Size: 4'x'4' and 4'x8'
      4) Capacity: 25 psi min
      5) Application:
         a) Attachment:
            i. Fully adhered with adhesive –as required by roof mfgr. for system
         b) Joints: Stagger joints between each layer

E. Roofing Membrane:

1. Smooth Membrane:
   a. Mfgr: GAF

1) Product: Everguard TPO 60 mil Membrane

b. Material: Thermoplastic Polyolefin
c. Color:

1) Roof membrane:

a) White

2) Membrane coated flashing:

a) Refer to Flashing heading

F. Walkway Pads - Membrane:

1. Schedule:

a. Mfgr: Same as roof membrane
b. Product: Walkway pad
c. Texture: Embossed
d. Thickness: 125 mil
e. Color: Grey
f. Roll Size: 34.5" wide x 50' long

1) Cut to size

g. Application: Heat welded in accordance with manufacturer installation instructions.

G. Membrane coated sheet metal flashing:

1. Schedule:

a. Mfgr: Same as membrane
b. Product: Membrane coated sheet metal
c. Material:

1) Sheet metal: 25gauge
2) Membrane: 40mil min.

a) Provided heavier flashing assembly when recommended by manufacturer.

d. Color:

1) White

H. Sheet Metal Flashing (non-membrane coated):

1. Refer to Section 07 62 00 – Sheet Metal Flashing and Trim

I. Slip Sheet – separation roll goods:

1. Separate Sheet

a. Manufacturer: GAF
b. Product: Versashield Solo

c. Material: Fiberglass Coated Mat
d. Fire Resistant: Yes
e. Application:

1) Use when required for Fire Rated Assembly
2) Use when required to meet required Roof Classification
3) Use between single ply membrane and all products containing asphalt and/or asphalt type products to provide separation)

J. Vapor Retarder

1. Separate Sheet

a. Manufacturer: GAF
b. Product: SA Vapor Retarder
c. Material: SBS modified bitumen
d. Installation: Self Adhered
e. Accessories: GAF SA Primer

2.3 OTHER MATERIALS

A. Provide other materials, typically manufactured and supplied by room membrane manufacturer, approved for use for assemblies by roofing manufacturer and/or required for system warranty, subject to the approval of the **Architect**, including but not limited to:

1. Flashing accessories:

a. Preformed Vent Boots with stainless steel clamping bands
b. Preformed corners for reinforcement of inside and outside corners
c. Fluted corners
d. Corner curb wrap
e. Square tube wrap
f. Joint cover patches

2. Installation components

a. Pourable sealer pocket
b. Scupper
c. Vent

3. Rolled accessories

a. Cover tape
b. UN 55 detailing membrane
c. RTA strip
d. Dual HW 5’-0” wide flashing

4. Primers:

a. Roofing mfgr’s recommended product

5. Adhesives, Sealants and Solvents:

a. Roofing mfgr's recommended VOC compliant products:

1) Solvents: Solvent Welding solution
2) Seam Sealant: Sealant- liquid, Sealing compound
3) Lap Sealant: Sealant- liquid, Sealing compound
4) Caulk: Polyurethane – single component, non-sag, elastomeric.
5) Temporary Sealant: Polyurethane foam for temporary conditions
6) Bonding Adhesive: Membrane adhesive (use to bond flashing to vertical substrates of wood, metal and concrete.)
7) Roofing asphalt: ASTM-D 312, Type III or Type IV
8) Membrane Cleaner: Roofing manufacturers approved
9) Penetration Pan Filler: 2-Part Pourable Sealer – polyurethane sealant.
10) Water Cut-Off Mastic. Roofing manufacturers approved

6. Termination Bars

a. 3/32" thick extruded Aluminum bar (use to terminate edge of Membrane at indicated conditions and required conditions)

7. Wood Nailers and Cant Strips:

a. #2 or better Douglas fir pressure treated using "Wolmanization" or equal process for fire and decay prevention.

1) Creosote, asphaltic processes, or pentachloric are not permissible

8. Fasteners:

a. General:

1) Membrane fasteners and plates as required by manufacturer's ICC-ES report and other requirements.

B. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the Contractor, subject to the approval of the **Architect**.

PART 3 - **EXECUTION**

3.1 INSPECTION / EXAMINATION

A. Verification of Conditions:

1. Examine areas and conditions under which work is to be performed.
2. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.
3. Confirm quality and condition of roof decking by visual inspection, and by fastener pullout testing.

a. Secure all loose decking.
b. Remove and replace all deteriorated decking.

4. Examine and Verify that all roof openings or penetrations through the roof are solidly set, and that all flashings are tapered.
5. Confirm that height of equipment supports will allow the installation of full-height flashings.
6. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify. Do not proceed until unsatisfactory conditions have been corrected.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.

B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.

C. Coordinate application of the roofing system with other trades in such a manner that the complete installation is weathertight and in accordance with manufacturer's recommendations.

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations and specifications for specific substrate(s).

B. Clean substrate of debris and deleterious material.

C. Remove standing water and let dry in accordance with manufacturer's recommendations.

D. Prime roof substrate as recommended by roofing manufacturer.

E. Roof Penetrations

1. Perform work in accordance with manufacturer's recommendations, as herein specified, and in accordance with the drawings.
2. Flashing, whether sheet metal or membrane, shall be provided at all roof penetrations in accordance with manufacturer's recommendations and as indicated on drawings, and shall provide a complete, waterproof installation.

3.4 FABRICATION

A. Fabricate all components in according to with manufacturer's recommendations.

B. Membrane clad metal flashing shall be fabricated to standard and custom shapes and sizes.

3.5 INSTALLATION

A. General:

1. Install pressure-treated wood nailers to the deck at perimeter edge conditions, expansion joints, and at all locations where coated metal flashing flanges will be installed.

a. Wood nailers shall be firmly secured to the deck, or to existing sound wood blocking from which all existing roofing materials have been removed. Nailers shall be secured a minimum of 2 ft. on center, to withstand an applied load of 250 lbs./lin. Ft. applied in any direction.

B. Roof Board

1. General:

a. Roof Board shall be provided when herein required, when indicated in drawings, and/or when required to meet fire rated roof assembly or Roof Classifications per Code..

2. Installation:

a. Butt roof boards together with a 1/4" maximum space between adjoining boards. Fit roof boards around penetrations and perimeter with a 1/4" maximum space between board and penetration.
b. Install roof board in pieces a minimum of 2' x 2' in size.
c. Roof boards that are wet, warped or buckled shall not be installed and must be discarded. Roof board that become wet or damaged after installation must be removed and replaced
d. Roof boards that are broken, cracked, or crushed shall not be installed unless the damaged area is first removed and discarded.
e. Install no more roof board than can be properly covered by the end of each day with roofing membrane.

3. Securement

a. Install roof board to the deck. Use appropriate type and length of approved fastener for structural deck type. Install required number of fasteners in accordance with the Insulation Attachment Table.
b. Install fasteners such that the fastener plate is pulled slightly below the roof board surface.

C. Vapor Retarder Installation:

1. General

a. Insulation must be installed over the air/vapor barrier sheet and mechanically attached to the deck.

2. Application:

a. Fully adhered:

1) Apply compatible adhesive to the structural deck or gypsum board at the rate of ½ gallon per 100 square feet, applied in approximate ½" wide ribbons.
2) Install air/vapor barrier sheet into the adhesive applied to the deck or fire barrier board so that wrinkles and buckles are not formed Broom air/vapor barrier sheet to ensure full embedment into the adhesive.
3) Overlap air/vapor barrier sheet a minimum of 6" for side and end laps. Adhere laps together with compatible adhesive.
4) Seal perimeter and penetration areas with foam sealant.

D. Rigid Insulation – Fully Adhered assembly

1. General

a. Install in accordance with roofing manufacturer's recommendations.

b. Prime substrate as recommended by roofing mfgr.
c. Tapered insulation shall be used for all crickets.

2. Placement

a. Butt insulation boards together with a ¼" maximum space between adjoining boards. Fit insulation boards around penetrations and perimeter with a ¼" maximum space between board and penetration.
b. Install insulation boards in pieces a minimum of 2' x 2' in size.
c. Insulation boards installed in multiple layers shall have the joints between boards staggered a minimum of 6" between layers.
d. Insulation shall be tapered to provide a sump area a minimum of 36" x 36" at all drains.
e. Insulation boards that are wet, warped or buckled shall not be installed and must be discarded. Insulation boards that become wet or damaged after installation must be removed and replaced.
f. Insulation boards that are broken, cracked, or crushed shall not be installed unless the damaged area is first removed and discarded.
g. Do not install more insulation than can be properly covered by the end of each day with roofing membrane.

3. Adhered Securement - Adhesive

a. Installation:

1) Prime substrate as recommended by roofing manufacturer.
2) Use appropriate adhesive for substrate surface and apply as specified by manufacturer's installation instructions.
3) Fully adhere insulation boards to substrate with urethane adhesive as specified in roofing manufacturer's installation instructions.

a) A greater quantity of urethane adhesive may be required based upon the substrate surface condition.

4) Alternatively, ribbon adhere insulation boards with urethane adhesive with continuous beads of adhesive. The width and spacing of adhesive beads/ribbons shall comply with roofing manufacturer's installation instructions.
5) Place insulation boards into urethane adhesive immediately following adhesive application, and press into place.

E. Membrane Installation – Fully adhered

1. Placement

a. Start the application of membrane plies at the low point of the roof at the drains, so that the flow of water is over or parallel to, but never against, the laps.
b. Place roof membrane so that wrinkles and buckles are not formed.

1) Any wrinkles or buckles must be removed from the sheet prior to permanent securement.

2) Roof membrane shall be fully adhered immediately after it is rolled out, followed by welding to adjacent sheets.

c. Full-width rolls shall be installed in the field and perimeter regions of the roof.
d. Overlap roof membrane a minimum of 3" for side laps, and for end laps of fully adhered systems that utilize smooth backed reinforced membrane unless otherwise noted in the roofing manufacturer's installation instructions.
e. All exposed sheet corners shall be rounded a minimum of 1".
f. Membrane laps shall be heat-welded together.

1) All welds shall be continuous, without voids or partial welds.
2) Welds shall be free of burns and scorch marks.

g. Weld width shall be a minimum 1-1/2" in width for automatic machine welding.

1) Weld width shall be a minimum 2" in width for hand welding.

h. All cut edges of reinforced membrane must be sealed with roofing manufacturers Cut Edge Sealant.

i. See "Membrane Surface Preparation" for membrane cleaning requirements.

2. Securement

a. Roof membrane must be mechanically secured at the perimeter, at the base of internal walls and curbs, and at all penetrations.

1) Membrane may be heat welded to coated metal flanges.
2) Alternatively, membrane may be secured to the roof deck within 6" of the base of walls and curbs with roofing manufacturers Membrane Fasteners and Plates at a 12" on center maximum spacing.
3) Alternatively, membrane may be extended vertically 3" up walls and curbs and secured to the wall/curb substrate within 2" of the plane of the roof with roofing manufacturers Membrane Fasteners and inverted Termination Bar at a 12" on center maximum spacing.

b. Roofing membrane must be secured to the roof deck with screws and plates at all penetrations unless the insulation substrate is fully adhered in place.
c. Mechanically attach membrane with screws and plates to the roof deck at locations of deck angle changes in excess of 5 angle degrees (1" in 12") in accordance with manufacturer's requirements.
d. Fasteners must be installed to achieve the proper embedment depth.

1) Install fasteners vertical to the deck, or horizontal to the wall/curb without lean or tilt.

e. Install fasteners so that the plate is drawn down tightly to the membrane surface.

1) Properly installed fasteners will not allow the plate/termination bar to move (underdriving), but will not cause wrinkling of the membrane (overdriving).

3. Cold Bonding Adhesive-Smooth Reinforced Membrane

a. Prime substrate as recommended by roofing mfgr.

b. Use appropriate bonding adhesive for substrate surface, applied with a solvent-resistant roller, brush or squeegee.
c. Fully adhere membrane sheets with bonding adhesive at the rates required by roof membrane manufacturer.
    1) Apply bonding adhesive to both the underside of the membrane and the substrate surface.
    2) A greater quantity of bonding adhesive may be required based upon the substrate surface condition.
d. Prevent seam contamination by keeping the adhesive application a few inches back from the seam area.
e. Adhere approximately one half of the membrane sheet at a time.
    1) One half of the sheet's length shall be folded back in turn to allow for adhesive application.
f. Lay membrane into adhesive once the bonding adhesive is tacky to the touch.
g. Broom membrane to ensure complete bonding between adhesive and membrane.

F. Flashing Installation
1. General
a. Flash all the following, but not limited to;
    1) Perimeters
    2) Roof edges and fastened
    3) Penetrations such as;
        a) Pipes
        b) Conduits
        c) Vent
        d) roof hatch
        e) Skylights
        f) Penetration conditions with coated metal, membrane flashing, and flashing accessories as appropriate to the site condition.
    4) Curbs
    5) Roof drains and overflows
    6) Scuppers
    7) Expansion joints
    8) Reglets
        a) At wall flashings or the like, membrane coated metal flashing shall be fixed and covered by a suitable reglet, or other approved method, as shown on roofing manufacturer's approved detail drawings.
            i. Refer to drawing Sheet Detail for acceptable reglet configuration, no substitutions.

b. All coated metal and membrane flashing corners shall be reinforced with preformed corners or unreinforced membrane.
c. Heat weld all flashing membranes, accessories, and coated metal together to achieve a minimum 2" wide (hand welder) weld.
d. All cut edges of reinforced membrane must be sealed with Roofing manufacturers TPO Cut Edge Sealant.
e. See "Membrane Surface Preparation" for membrane cleaning requirements. (Material Installation Section)

2. Coated Metal Flashings

a. Coated metal shall be formed in accordance with construction details and SMACNA guidelines.
b. Coated metal sections used for roof edging, base flashing, and coping shall be butted together with a ¼" gap to allow for expansion and contraction.

1) Heat weld a 6" wide reinforced membrane flashing strip to both sides of the joint, with approximately 1" on either side of the joint left unwelded to allow for expansion and contraction. 2" wide aluminum tape can be installed over the joint as a bond-breaker, to prevent welding in this area.

c. Coated metal used for sealant pans and scupper inserts, and corners of roof edging, base flashing and coping shall be overlapped or provided with separate metal pieces to create a continuous flange condition, and pop-riveted securely.

1) Heat weld a 6" side reinforced membrane flashing strip over all seams that will not be sealed during subsequent flashing installation.

d. Provide a ½" hem for all exposed metal edges to provide corrosion protection and edge reinforcement for improved durability.
e. In addition, provide a ½" hem for all metal flange edges whenever possible to prevent wearing of the roofing and flashing membranes at the flange edge.
f. Coated metal flashings are nailed to treat wood nailers or otherwise mechanically attached to the roof deck, or to the wall or curb substrate, in accordance with construction detail requirements.

3. Reinforced Membrane Flashings

a. The thickness of the flashing membrane shall be the same at the thickness of the roofing membrane.
b. Membrane flashing may either be installed dry, or fully adhered to the substrate surface.
c. Apply bonding adhesive to both the substrate surface and the underside of the flashing membrane, at the rate of 120 sq. ft./gal. per surface for solvent-based bonding adhesives, and at the rate of 200 sq. ft./gal. per surface for water-borne bonging adhesive.

1) The bonding adhesive must be allowed to dry until tacky to the touch before flashing membrane application.

d. Apply the adhesive only when the outside temperature is above 40° F. Recommended minimum application temperature is 50° F to allow easier adhesive application.

e. The membrane flashing shall be carefully positioned prior to application to avoid wrinkles and buckles.

4. Unreinforced Membrane Flashings

   a. Unreinforced membrane is used as a field-fabricated penetration/reinforcement flashing only where preformed corners and pipe boots cannot be properly installed.
   b. Penetration flashings constructed of unreinforced membrane is typically installed in two sections, a vertical piece that extends up the penetration, and a horizontal piece that extends onto the roofing membrane.

      1) The two pieces are overlapped and heat-welded together.

   c. The unreinforced membrane flashing shall be adhered to the penetration surface.

      1) Apply bonding adhesive to both the penetration surface and the underside of the flashing membrane, at the rate of 120 sq. ft./gal. per surface for solvent-based bonding adhesives, and at the rate of 200 sq. ft./gal. per surface for water-borne bonding adhesive.
      2) The bonding adhesive must be allowed to dry until tacky to the touch before flashing membrane application.

5. Roof Edging

   a. Rood edge flashing is applicable for both gravel stop/drip edge conditions and exterior edges of parapet walls.
   b. Flash roof edges with coated metal flanged edging nailed 4″ on center to pressure-treated wood nailers, and heat weld roof membrane to metal flanges.
   c. Coated metal roof edging must be provided with a continuous hook strip to secure the lower fascia edge if the fascia width is 4″ or greater.

      1) The continuous hook strip must be secured to the building a minimum of 12″ on center.

   d. Alternatively, flash roof edges with a 2-piece snap-on fascia system, adhering roof membrane to metal cant with bonding adhesive and face nailing the membrane 8″ on center prior to installing the snap-on fascia.
   e. Flash roof edge scuppers with a scupper insert of coated metal that is mechanically attached to the roof edge and integrated as part of the metal edging.

6. Parapet and Building Walls

   a. Flash walls with membrane flashing adhered to the wall substrate with bonding adhesive and with coated metal flashing nailed 4″ on center to pressure-treated wood nailers.
   b. Secure membrane flashing at the top edge with a termination bar.

      1) Water cut-off mastic shall be applied between the wall surface and membrane flashing underneath all exposed termination bars.
      2) Exposed termination bars shall be mechanically fastened 8″ on center; termination bars that are counter flashed shall be fastened 12″ on center.
      3) Membrane shall continue under parapet coping, typical, u.n.o.

c. Roof membrane must be mechanically attached along the base of walls that are flashed with membrane flashing with screws and plates/termination bar with a 12″ on center maximum spacing.

d. All coated metal wall flashings and dry applied membrane flashings must be provided with separate metal counter flashings, or metal copings.

e. Metal counter flashings are optional with fully adhered membrane wall flashings.

1) Exposed termination bars must be sealed with caulking.

f. Flash wall scuppers with a scupper insert of coated metal that is mechanically attached to the wall and integrated as part of the wall flashing.

7. Round and Square Tube Penetrations

a. Flash penetrations with preformed vent boots provided that the penetrations are accessible from the top.

1) Otherwise, field-fabricate flashing with two-piece field fabricated flashings of unreinforced membrane.

b. All flashings require the installation of a stainless steel draw band around the top of the flashing.

1) Seal the top edge of the draw band with caulking.

c. Roof membrane must be mechanically attached at the base of each penetration with screws and plates a minimum of 12″ on center, with a minimum of three fasteners per penetration.

8. Irregularly-Shaped Penetrations

a. Flash irregularly shaped penetrations with flanged sealant pans of coated metal, secured to the deck through the roof membrane with screws 6″ on center, a minimum of two per side.

b. Strip in metal flanges with 8″ wide membrane flashing strips heat welded to both the roof membrane and the metal flanges.

c. Fill sealant pans with 2-part pourable sealant.

1) Alternatively, fill sealant pans with non-shrink quick-set grout, and top off sealant pans with a 2″ minimum thickness of 2-part pourable sealant.

9. Curbs and Ducts

a. Flash curbs and ducts with membrane flashing adhered to the curb substrate with bonding adhesive, or with coated metal flashing nailed 4″ on center to pressure-treated wood nailers.

b. Secure membrane flashing at the top edge with a termination bar.

1) Water cut-off mastic shall be applied between the curb/duct surface and membrane flashing underneath all exposed termination bars.

2) Exposed termination bars shall be mechanically fastened 8″ on center; termination bars that are counter flashed shall be fastened 12″ on center.

c. Roof membrane must be mechanically attached along the base of walls that are flashed with membrane flashing with screws and plates/termination bar with a 12″ on center maximum spacing.
d. All coated metal curb flashings and dry applied membrane flashings must be provided with separate metal counter flashings, metal copings, or flashed with equipment flanges.
e. Metal counter flashings are optional with fully adhered membrane curb and duct flashings.
f. Exposed termination bars must be sealed with caulking.

10. Expansion Joints

    a. Install prefabricated expansion joint covers at all flat type and raised cant/curb type expansion joint conditions.

        1) All metal nailing strips must either be nailed to pressure-treated wood nailers, cants or curbs, or secured to walls with screws or expansion anchors appropriate to substrate type.
        2) Weld membrane flaps to roofing/flashing membrane.

    b. Roof membrane must be mechanically attached along the base of raised cant/curb expansion joints with screws and plates a minimum of 12″ on center.
    c. Expansion joint bellows must be twice the width of the expansion joint opening to allow for proper expansion/contraction.

11. Roof Drains

    a. Roof drains must be fitted with compression clamping rings and strainer baskets.

        1) Both original-type cast iron and aluminum drains are acceptable.

            a) Retrofit-type cast aluminum and molded plastic drains are acceptable only when approved by **Architect**.

    b. Roof drains must be provided with a min. 36″ x 36″ sumped area or larger as indicated in drawings at all drains..

        1) Slope of tapered insulation within the sumped area shall not exceed 4″ in 12″.

    c. Extend the roofing membrane over the drain opening.

        1) Locate the drain and cut a hole in the roofing membrane directly over the drain opening.
        2) Provide a ½″ of membrane flap extending past the drain flange into the drain opening.
        3) Punch holes through the roofing membrane at drain bolt locations.

    d. For cast iron and aluminum drains, the roofing membrane must be set in a full bed of water cut-off mastic on the drain flange prior to securement with the compression clamping ring.

        1) Typical mastic application rate is one 10.5 oz. cartridge per drain.

    e. For fleece-backed roof membrane applications, the fleece-backed membrane is cut just short of the drain flange.

1) A separate smooth reinforced membrane drain flashing sheet is heat welded to the roofing membrane and the drain flange, and secured as above.

f. For compatible drain inserts, the drain insert is installed on top of the roofing membrane and secured to the roof deck.

1) A separate reinforced membrane drain flashing sheet is heat welded to both the roofing membrane and the drain flange.

g. Lap seams shall not be located within the sump area.

1) Where lap seams will be located within the sump area, a separate roof membrane drain flashing a minimum of 12" larger than the sump area must be installed.
2) The membrane flashing shall be heat welded to the roof membrane.

h. Tighten the drain compression clamping ring in place.

G. Traffic Protection – Walkway pads:

1. Install walkway pads/rolls at all roof access locations and other designated locations including roof-mounted equipment work locations and areas of repeated rooftop traffic.

a. Access walkway pads shall all continue from roof hatch and/or access points.

2. Walkway pads must be spaced apart to allow for drainage between the pads.

3. Fully adhere walkway pads/rolls to the roof membrane with solvent-based bonding adhesive, applied at the rate of 1 gal. per 100 sq.ft. to both the walkway and roof membrane surfaces.

a. Press walkway in position once adhesive is tacky to the touch.

4. Heat-weld walkway pads/rolls to the roof membrane surface.

a. A minimum 2" wide x continuous heat welded seam around the entire pad.
b. Set walkway pads 3" apart.

H. Temporary Closures – Water Cut-off:

1. The roofing installation must be made watertight at the end of each day's activity to prevent water infiltration into the completed roofing system installation.
2. Complete all flashings and terminations as the roofing installation progresses.
3. At the edge of the completed roofing system installation, extend the roofing membrane a minimum of 6" beyond the edge. Seal the roofing membrane to the surrounding deck or substrate surface with hot asphalt or foam sealant.
4. Remove all temporary night seal materials prior to continuing with the roof installation.

3.6 FIELD QUALITY CONTROL

A. Product manufacturer shall provide field service support as requested by the Installer/Applicator

1. **General Contractor** and the product manufacturer shall make periodic on-site inspections to ensure that the materials are being installed in strict accordance with manufacturer's specifications.
2. The Applicator shall be responsible for the proper application of the materials.

3. Manufacturer's representative shall visit site at the following times, but not limited to;

    a. Substrate preparation and approval
    b. Membrane installation
    c. Warranty Punchlist
    d. Warranty punchlist follow-up to confirm compliance with Punchlist

B. The Applicator shall certify in writing the quality of work performed relative to the substrate system, details, installation procedures and workmanship is in accordance with project specifications and manufacturer's instructions.

C. Roofing contractor shall Inspect completed roof sections on a daily basis.

D. Immediately correct all defects, irregularities, and deficiencies identified during inspections.

E. Remedial work shall be performed with materials and in a manner consistent with the balance of the roofing installation so as to minimize the number of repair patches.

F. Excessive patchwork will require replacement of the entire affected membrane section, from lap to lap.

3.7 PROTECTION AND CLEAN UP

A. Refer to Division 1 for protection and cleaning requirements.

B. Subcontractor will keep the work areas in a clean and safe condition so his rubbish, waste, and debris do not interfere with the work of others.

C. Protect work and materials of this Section prior to and during installation, and protect the installed work and materials of other trades.

1. Clean adjacent surfaces free of caulking or sealant with mechanical action or solvent as necessary, avoiding damage to other materials.

D. Perform work in accordance with manufacturer's recommendations, as herein specified and in accordance with drawings.

E. In the event of damage, immediately make all repairs and replacements necessary to the approval of the **Architect** and at no cost to the **Owner**.

F. After completion of work in this section, remove all erection equipment and implements of service, and debris.

1. Leave entire area in a neat, clean, acceptable condition.
2. Remove all containers, debris and other material from roof area.
3. Pick up all loose fasteners.
4. Insure the water-tightness of all roof items and detail work for proper inspection.
5. Protect all roof surfaces from damage or contamination by other trades.
6. Remove bonding adhesive, bituminous markings and other contaminants from finished surfaces. In areas where finished surfaces are soiled by asphalt or any other source of soiling caused by work of this or other sections, consult manufacturer of surfaces for cleaning advice and conform to those instructions.

G. Provide Guarantee/Warranties and Bonds as required in this specification section and as listed in Division 1 closeout submittal procedures.

H. Provide record drawings in accordance with Division 1 closeout submittal procedures.

I. Close out, on-site inspection will be at the discretion of the **Architect** after he receives the **General Contractor NOTICE** of "Certificate of Substantial Completion".

3.8 MAINTENANCE

A. Upon completion of the roofing system, provisions should be made to establish a semi-yearly inspection and maintenance program in accordance with guarantee requirements.

B. Repair cuts, punctures and other membrane damage by cleaning membrane with Roofing manufacturers cleaner, followed by heat welding a membrane repair patch of sufficient size to extend a minimum of 2" beyond the damaged area.

C. Any damage to adhered membrane areas or at locations of mechanical attachment shall be repaired so that the repaired area remains fully adhered or mechanically attached.

END OF SECTION 07 54 00

THIS PAGE IS INTENTIONALLLY BLANK

SECTION 07 62 00 – SHEET METAL FLASHING AND TRIM

PART 1 - **GENERAL**

1.1 PRINCIPAL WORK IN THIS SECTION

A. The requirements of the **Owner's** General and Supplementary Conditions, and Division 0 and Division 1 general requirements apply to the work of this Section.

B. Coordinate the work of this Section with related trades.

C. Verify applicable dimensions at the jobsite.

D. Furnish materials and perform labor required to execute this work as indicated on the drawings, as specified herein and as necessary to complete the work required by project conditions, including but not limited to:

1. Flashing
2. Transition flashing
3. Copings
4. Perimeter edge flashing
5. Gutters and Downspout assemblies

1.2 REFERENCE STANDARDS

A. 2022 California Code of Regulations (CCR), Title 24, California Building Standards Commission (CBSC) www.bsc.ca.gov current edition at time of permit issuance.

B. (CCR) Title 24, (CBSC) Chapter 11 – California Green Building Standards Code

1. Non-residential new construction

a. All occupancy types

C. ATBCB ADAAG - Americans with Disabilities Act Accessibility Guidelines, current version.

D. Aluminum Association (AA), www.aluminum.org

E. American Architectural Manufacturers Association (AAMA), www.aamanet.org

F. American Society For Testing and Materials (ASTM), www.astm.org

G. American National Standards Institute (ANSI), www.ansi.orgAmerican Welding Society (AWS), www.aws.org

H. American Society of Mechanical Engineers (ASME) www.asme.org

I. American Welding Society (AWS), www.aws.orgNational Coil Coating Association, www.**coil**coating.org

J. National Coil Coating Association, www.**coil**coating.org

K. Sealant, Waterproofing and Restoration Institute (SWRI), www.swrionline.org

L. Sheet Metal and Air Conditioning Contractors, Association (SMACNA), www.smacna.org

1. Architectural Sheet Metal Manual

1.3 PERFORMANCE, TESTING AND INSPECTION

A. **General:**

1. Comply with manufacturer's standards.
2. Comply with Building Code.
3. Job site inspections shall be done as herein specified and as listed in drawings.
4. Testing shall be done as herein specified and as listed in drawings.

B. **Standards:**

Item	**Name of Test**	**Performance**	**Testing Std.**
Flashing - premanufacturerd	Installation	Comply	Specific manufacturers recommendations
Flashing – custom shapes	Installation	Comply	SMACNA and as detailed, comply with most restrictive
Refer to drawings and as herein specified			

C. **Sustainability**:

1. Refer to Division 1 sustainability requirements.
2. Refer to product criteria identified herein.

D. **Construction Monitoring/Observations by others**:

Item	**Name of Test**	**Performance Results**	**By Whom**
Pre-manufactured Copings	Installation compliance	Comply	Manufacturer's representative
Flashing	Waste and recycling	Comply	Refer to Division 1 for construction waste management and disposal/recycling requirements

1.4 SUBMITTALS AND MOCK-UPS

A. Refer to Division 1 for substitution, deviation and/or submittal procedures.

B. Submit O&M (Operation and Maintenance) manuals in accordance with Division 1 requirements and as herein specified.

C. Refer to Division 1 for sustainability requirements

D. Submit Manufacturer's data and shop drawings.

1. Data:

a. Manufacturers data for each specific pre-manufactured flashing components
b. Fasteners
c. Sealants

d. Adhesives

2. Shop Drawings;

a. Provide detailing with all dimensions and field verified dimensions and indicate on all these the applicable detail number from contract documents.

1) Illustrating the following, but not limited to:

a) Layout, joining, profiles, expansion joints and anchorage of fabricated work
b) Layout, joining, profiles, expansion joints and anchorage of pre-manufactured components, copings, etc.
c) Boot flashing
d) Counter-flashings, trim/fascia units
e) Wall to coping transition boot flashing assemblies
f) Gutters, downspouts, and expansion joint systems with related calculations indicating required gutter design.

b. All details shall be a minimum of 3" = 1'-0" scale
c. All plan layouts shall be at 1" = 1'-0" scale
d. Details shall be at numbered and referenced to match Architectural details.

E. Submit samples.

1. Soldered boot flashing to illustrate welding

F. Site mock-up, refer to "Mock-Up" heading.

1.5 QUALITY ASSURANCE

A. Refer to Division 1 for quality control requirements.

B. Contractor /Installer/Fabricator shall have been in business for **five (5)** years minimum providing/installing/finishing projects of similar size and complexity.

C. Manufacturer shall have been in business for **five (5)** years providing/installing/finishing projects of similar size and complexity.

D. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

1. Agenda for meeting shall include, but not be limited to;

a. Copings
b. Roof flashing and counter flashing
c. Boot flashings, i.e. wall to roof, wall to coping, etc.

E. Manufacturer's Representative: Make arrangements necessary to have a trained employee of the pre-manufactured copings, etc. on-site periodically during installation work to review installation procedures.

1. Manufacturer's representative shall review and provide written review that work meets specification requirements.
2. Written reviews shall be sent to the **Architect** by the manufacturer's representative.

F. Miscellaneous criteria:

1. All work shall conform to the recommended practices of the most current adopted edition of the Architectural Sheet Metal Manual by SMACNA (Sheet Metal and Air Conditioning Contractors National Association, Inc) and details whichever is most restrictive.
2. Oil – Canning in excess of that allowed by SMACNA is not acceptable, and all conditions shall be replaced and/or repaired prior to completion & review for acceptance.
3. All flashing conditions in direct contact with roofing material shall have homogeneous soldered seams, typical.
4. Fabricator shall be qualified fabricator whose work is in compliance with SMACNA guidelines and specifications as herein specified and in Drawings

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Refer to Division 1 for product delivery, storage and handling requirements.

1.7 JOB CONDITIONS

A. Field-verify that all components, substrates, backing, etc. provided by others are installed correctly before proceeding with installation of products as herein specified.

1.8 PROTECTION

A. Protect finish surfaces at all times from surfaces and material adjacent to them.

B. Finish work defaced with other materials on surface shall be replaced.

C. Protect work under this section from damage by other trades.

1.9 GUARANTEE / WARRANTY

A. Refer to Division 1 for closeout submittal procedures.

B. Furnish initial one (1) year written warranty signed by manufacturer and installer agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

C. Furnish manufacturer's additional **[five] (5)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

D. Furnish installing contractors additional **[five] (5)** year warranty agreeing to repair and/or replace work which has failed as a result of defects in materials or workmanship.

1. Upon notification of **Owner** within the warranty period, such defects shall be repaired and replaced at no cost to the **Owner**.

1.10 RELATED WORK/SECTIONS

A. Related work includes, but is not limited to the following:

1. Roofing
2. Walls
3. Openings

B. Related Sections include, but are not limited to the following:

1. Division 1
2. Section 02 41 19 – Selective Building Demolition & Protection
3. Section 04 22 00 – Concrete Unit Masonry
4. Section 05 50 00 – Metal Fabrications
5. Section 06 10 00 – Rough Carpentry
6. Section 06 17 13 – Laminated Veneer Lumber
7. Section 06 17 23 – Parallel Strand Lumber
8. Section 06 18 13 – Glue Laminated Construction
9. Section 07 13 26 – Cold Applied Self-Adhering Waterproof Membrane
10. Section 07 26 00 – Water Resistant Barrier
11. Section 07 41 13 – Metal Roof Panels
12. Section 07 46 19 – Metal Siding & Soffit Assembly
13. Section 07 53 00tpo – TPO Membrane Roofing
14. Section 07 92 00 – Sealants and Caulking
15. Section 08 11 13 – Steel Doors & Frames
16. Section 08 41 00 – Entrances, Window Wall, Storefront System & Curtain Wall
17. Section 09 29 00 – Gypsum Board & Sheathing Substrates
18. Section 09 90 00 – Paintings & Coatings

C. Related Documents include, but are not limited to the following:

1. Division 1 Supplementary Conditions

1.11 OPERATION AND MAINTENANCE DATA

A. Submit as part of project closeout:

1. Complete instructions regarding maintenance of the materials, finishes, etc.
2. Refer to Division 1 for closeout submittal procedures.

1.12 SEQUENCING AND SCHEDULING

A. Schedule work and sequence with **General Contractor**.

B. Schedule required testing, prior to the installation of materials, components, etc.

C. Schedule work and sequence with other trades affected or affecting work under this specification.

PART 2 - **PRODUCTS**

2.1 ACCEPTABLE MANUFACTURERS/FABRICATORS

A. Single source responsibility, specified items shall be from one manufacturer for each product type.

B. Acceptable manufacturers shall be one of the following and as listed herein and in Drawings:

1. Pre-manufactured copings, flashings, etc:

a. Fry Reglet, www.fryreglet.com
b. SBC Industries, Roof flashings, www.sbcflashings.com
c. Metal-Era, www.metalera.com
d. Lane-Aire Manufacturing Corp., www.lane-aire.com

2. Flashing

a. Refer to documents and as herein specified.

3. Fasteners::

a. Steeler, Inc., www.steeler.com

4. Reviewed Equivalent by **Architect**.

a. Substitutions and deviations shall require **Architect's** approval and shall be given in letterform.
b. Refer to Division 1 for substitution, deviation and/or submittal procedures.
c. Proposed alternate products must be equal in terms of chemical composition, color, finish, configuration, performance standards, etc.

C. All products and materials indicated shall be installed according to current listed specification requirements and manufacturers specifications/recommendations.

D. Refer to drawings, details, and other related specification section whether listed or not.

E. Details shall set basic requirements for size and configuration of systems.

2.2 MATERIALS

A. General:

1. Zinc-Coated Steel: Commercial quality with 0.20% copper, ASTM A 525 except ASTM A 527 for lock forming, G90 hot-dip galvanized, mill phosphatized where indicated for painting; 0.0239" thick (24 gage) except as otherwise indicated.
2. Metal Accessories:

a. Provide sheet metal clips, straps, anchoring devices and similar accessory units as required for installation of work, matching or compatible with material being installed non-corrosive, size and gage required for performance.
b. Solder: ASTM B32, Class A1
c. Flux: Muriatic acid. Asphaltic primer: ASTM D41

3. General Accessories:

    a. Plastic cement: Asphaltic, FS SS-C-153, Type I
    b. Sealant: Refer to Section 07 92 00

4. Flashing Reglets:

    a. Comply with flashing requirements: Gauge as required by SMACNA.
    b. Flashing:

        1) Galvanized Steel: 22 gauge min. and as required by SMACNA

            a) 16ga at gutter straps

    c. Waterproof membrane and flexible flashing – roll goods:

        1) Material: Cold-applied self-adhering high density, cross laminated polyethylene film coated on one side with a layer of butyl rubber adhesive sheet membrane

    d. Refer to Section 07 13 26 – Cold Applied Self-Adhering Membrane (CASAM)
    e. Isolation membrane / Slip Sheet:

        1) Material: 4lb. Rosin paper
        2) Manufacturer: Atlas
        3) Product: FR-50

    f. Gutters, Straps, Brackets, etc.:

        1) Comply with SMACNA guidelines
        2) Shop fabricate all items where a gauge is required that is not available pre-manufactured.

B. Schedule:

1. Flashing

    a. General:

        1) Flashing typically shall be designed and installed as herein specified, and indicated on Drawings unless noted and/or specified otherwise.
        2) Flashing shall typically be provided under this specification section, unless noted and/or specified otherwise.
        3) Flashing shall be repaired prior to finishing.
        4) Flashing shall be prepared to be painted.

    b. <u>Metal Siding and Soffit Assembly – Section 07 46 19:</u>

        1) Flashing material, color and finish shall match metal siding.

            a) Provide and install under “Metal Siding and Soffit Assembly” section.
            b) Fabricate in accordance with this specification and “Metal Siding and Soffit Assembly” section.
            c) Install in accordance with this specification section and “Metal Siding and Soffit Assembly” section.

c. Entrances, Window Walls, Storefront Systems & Curtain Wall Systems – Section 08 41 00:

1) Flashing's shall be aluminum break shapes to match mullion material, finish and color.

a) Provide and install under "Entrances, Window Walls, Storefront Systems & Curtain Wall Systems" section.
b) Fabricate in accordance with this specification and "Entrances, Window Walls, Storefront Systems & Curtain Wall Systems" section.
c) Install in accordance with this specification section and "Entrances, Window Walls, Storefront Systems & Curtain Wall Systems" section.

d. Single Ply Roofing – Section 07 54 00:

1) Flashing shall be provided by and installed by single ply roofing manufacturer in accordance with roofing specification section.

e. As indicated in documents and in details.

1) Refer to drawings
2) Reglet & skirt flashing to cover single ply surface applied at walls

a) Mfgr: Fry Reglet
b) Model: SM

i. Refer to Schedule as herein specified for other models for different conditions

c) Components – two part

i. Reglet
ii. Skirt flashing
iii. Prefabricated inside & outside corners
iv. fasteners

d) Finish: Painted

i. Factory applied Kynar 500/Hylar 500 finish
ii. Color: TBD

e) Material: Galvanized Steel

2. Copings:

a. General:

1) Copings typically shall be designed and installed as herein specified, and indicated on Drawings unless noted and/or specified otherwise.
2) Copings shall typically be provided under this specification section, unless noted and/or specified otherwise.

b. Metal Siding and Soffit Assembly – Section 07 46 19:

1) Coping material, color and finish shall match metal siding.

a) Provide and install under "Metal Siding and Soffit Assembly" section.

b) Fabricate in accordance with this specification and "Metal Siding and Soffit Assembly" section.
c) Install in accordance with this specification section and "Metal Siding and Soffit Assembly" section.

c. Metal Roofing Panels – Section 07 46 19:

1) Coping material and finish shall match metal siding.

a) Provide and install under "Metal Roof Panels" section.
b) Fabricate in accordance with this specification and "Metal Roof Panels" section.
c) Install in accordance with this specification and "Metal Roof Panels" section.

d. Entrances, Window Walls, Storefront Systems & Curtain Wall Systems – Section 08 41 00:

1) Copings shall be aluminum break shapes to match mullion material, finish and color.
a) Provide and install under "Entrances, Window Walls, Storefront Systems & Curtain Wall Systems" section.
b) Fabricate in accordance with this specification and "Entrances, Window Walls, Storefront Systems & Curtain Wall Systems" section.
c) Install in accordance with this specification section and "Entrances, Window Walls, Storefront Systems & Curtain Wall Systems" section.

e. Single Ply Roofing – Section 07 54 00:

1) Flashing shall be provided by and installed by single ply roofing manufacturer in accordance with roofing specification section.

f. As indicated in documents and in details.

3. Wall penetration flashing, window & door flashing & counterflashing

a. General:

1) Flashing typically shall be designed and installed as herein specified, and indicated on Drawings unless noted and/or specified otherwise.
2) Flashing shall typically be provided under this specification section, unless noted and/or specified otherwise.
3) Flexible cold applied waterproof membrane and flexible flashing, refer to Section 07 13 26 - Cold Applied Self-Adhering Membrane (CASAM)

b. Metal Siding and Soffit Assembly – Section 07 46 19:

1) Flashing material, color and finish shall match metal siding.

a) Provide and install under "Metal Siding and Soffit Assembly" section.
b) Fabricate in accordance with this specification and "Metal Siding and Soffit Assembly" section.
c) Install in accordance with this specification section and "Metal Siding and Soffit Assembly" section.

c. Entrances, Window Wall, Storefront System & Curtain Wall – Section 08 41 00:

1) Flashings shall be aluminum break shapes to match mullion material, finish and color.
    a) Provide and install under "Aluminum Entrance, Window Wall and Window wall Systems" section.
    b) Fabricate in accordance with this specification and "Aluminum Entrance, Window Wall and Window Wall Systems" section.
    c) Install in accordance with this specification section and "Aluminum Entrance, Window Wall and Window wall Systems" section.

d. Single Ply Roofing – Section 07 54 00:
    1) Flashing shall be provided by and installed by single ply roofing manufacturer in accordance with roofing specification section.

e. As indicated in documents and in details.

4. Wall and Parapet: roofing to wall transition - Flashing & Counterflashing
    a. General:
        1) Flashing typically shall be designed and installed as herein specified, and indicated on Drawings unless noted and/or specified otherwise.
        2) Flashing shall typically be provided under this specification section, unless noted and/or specified otherwise.
    b. Metal Siding & Soffit Assembly – Section 07 46 19:
        1) Flashing material and finish shall match metal siding.
            a) Provide and install under "Metal Siding & Soffit Assembly" section.
            b) Fabricate in accordance with this specification and "Metal Siding & Soffit Assembly" section.
            c) Install in accordance with this specification and "Metal Siding & Soffit Assembly" section.
    c. Single Ply Roofing – Section 07 54 00
        1) Flashing shall be provided by and installed by single ply roofing manufacturer in accordance with roofing specification section.
    d. As indicated in documents and in details.
5. Gutters and downspouts:
    a. General:
        1) Gutters and Downspouts typically shall be designed and installed as herein specified, and indicated on Drawings unless noted and/or specified otherwise.
            a) Shop fabricate for required gauge where pre-fabricated items are not available.
            b) Shop fabricate for items requiring the use of matching material and/or finishes to match other materials.

b. Metal Siding & Soffit Assembly – Section 07 46 19:

1) Gutters and downspout material, finish and color shall match metal siding.

a) Provide and install under "Metal Siding & Soffit Assembly" section.
b) Fabricate in accordance with this specification section and "Metal Siding & Soffit Assembly" section.
c) Install in accordance with this specification and "Metal Siding & Soffit Assembly" section.

6. Waterproof Membrane

a. Shall be provided and installed by who is responsible for the specific components; Gutters and Downspouts, Copings, etc.
b. **General Contractor** will need to coordinate products and application of membranes.

7. Fasteners/Soldering

a. General:

1) Fasteners typically shall be installed as herein specified, and indicated on Drawings unless noted and/or specified otherwise.
2) Fasteners shall typically be provided under this specification section, unless noted and/or specified otherwise.
3) Fasteners shall be compatible with all material they penetrate and/or come in contact with.

b. Fasteners shall be provided by and installed under the scope of work as herein listed.
c. Solder where indicated and when required by assembly.

2.3 SCHEDULE

A. General:

1. Flashing type shall be compatible with metals that it is in contact with and installed to eliminate galvanic corrosion.
2. Flashing shall match finish of adjacent metal, U.N.O.
3. Coordinate material, finish and color with wall, roof and parapet conditions.
4. Dissimilar materials shall be isolated from each other.

B. Material Types:

1.	Flashing, U.N.O.	Galvanized steel
2.	Typical, U.N.O.:	Galvanized steel
3.	Single Ply TPO:	TPO coated flashing and galvanized steel
4.	Metal Roof Panels:	Preformed metal roofing material
5.	Metal Siding & Soffit Assembly:	Preformed metal siding material

6. Specific conditions not included in a specific associated Specification Section: as noted
7. Gutters and Downspouts
8. Material:

a. Galvanized Steel: Typical unless herein scheduled otherwise and/or required by roofing and/or siding manufacturer.

9. Material Gauge / thickness:
    a. Comply with SMACNA requirements.
10. Coping
11. Galvanized Steel: Typical unless herein scheduled otherwise and/or required by roofing and/or siding manufacturer
12. Aluminum: Aluminum
13. Aluminum Windows: Aluminum

C. Fasteners:
1. Install type as approved by product manufacturer whose material is being fastened through and material type that is compatible with flashing and other materials which fastener comes in contact with.
2. Exposed conditions, fasteners shall include neoprene washers, typical.
3. Solder in accordance with materials requirements.

D. Gutters:
1. Gutter Profile
    a. Assemblies: SMACNA Manual, guidelines and drawings.
        1) Rectangular:
            a) Refer to drawings
2. Expansion Joints;
    a. Assembly: SMACNA Manual, Chapter 1 and associated information
        1) Lap joint type: Refer to drawings
            a) Allowances for gutter expansion: refer to SMACNA Table 1-7 and other associated information.
    b. Material: Match gutter, material and finish & per SMACNA guidelines unless noted to be heavier gauge in Drawings.
3. Gutter Brackets and Straps
    a. Material:
        1) Same material as gutter
    b. Gauge and Size: Refer to SMACNA guidelines and Table 1-8 recommended sizes.
        1) Gutter brackets or straps.

E. Downspouts
1. Assembly: Refer to SMACNA guidelines

a. Downspout

1) Shape:

a) Plain rectangular

2) Size:

a) Size: 2”x3”

b. Hanger

1) Rectangular downspout: Figure 1-35D

c. Connection to Gutter

1) Orientation: Figure 1-33B
2) Connection: Detail 1, Figure 1-33
3) Fastening: Rivet and solder
4) Accessories:

a) Downspout sleeve: Figure 1-24C
b) Splash diverter at inside/outside corners x 4” tall: Figure 1-24A

2. Materials: Match gutter, material, and finish & per SMACNA guidelines
3. Gauge/ounce:

a. Match gutter

F. Coping

1. Materials: As herein scheduled
2. Gauge/ounce:

a. 20 gauge steel minimum and in accordance with SMACNA Guidelines, coordinate with siding and/or roofing section.

1) Use heavier gauge if required by SMACNA guidelines.

3. Conditions:

a. Joints, typically: Joint “J12” per SMACNA Table 3-1 Coping Design
b. Corner: “C1” per SMACNA Table 3-1 Coping Design
c. Edge Style: “E1” per SMACNA Table 3-1 Coping Design
d. Cavity wall Intersection: Figure 3-8, Detail Figure 3-8D
e. Expansion Joint: Per SMACNA standards

4. Profile:

a. Figure 3-4a Formed Metal Copings, SMACNA Manual – similar, refer to Drawings.
b. Specialty conditions, per SMACNA & refer to Drawings.

G. Wall to roof Transition Flashing:

1. Type: Two piece assembly:
    a. Reglet
    b. Skirt flashing with prefabricated inside and outside corners
2. Material:
    a. Galvanized steel, 24ga.
3. Finish:
    a. Galvanized steel, 24ga: Painted
        1) Refer to Section 09 90 00 for paint type

PART 3 - **EXECUTION**

3.1 INSPECTION/EXAMINATION

A. Verification of Conditions:
    1. Examine areas and conditions under which work is to be performed.
    2. Identify conditions detrimental to proper or timely completion of work and coordinate with **General Contractor** to rectify.
B. Surface:
    1. Examine and verify that receiving conditions of substrate have no defects or errors, which would result in poor or potentially defective application or cause latent defects in workmanship.

3.2 COORDINATION

A. Refer to Division 1 for project coordination requirements.
B. **General Contractor** shall coordinate work as herein specified, in accordance with drawings and as required to complete scope of work with all related trades.
C. Coordinate application of all flexible waterproof membrane flashings
    1. Refer to Section 07 13 26 – Cold Applied Self-Adhering Waterproof Membrane

3.3 PREPARATION

A. Prepare work, substrates, etc. in accordance with manufacturer's recommendations.

3.4 FABRICATION

A. General:
    1. Fabricate in compliance with SMACA guidelines and contract documents
        a. Most restrictive shall govern
B. Assemblies:

1. Flashings and counter flashings:
    a. Install wherever detailed and as necessary to make building watertight. Lap joints at least 6 inches and fill with sealant. Coordinate installation with other trades involved. Attach with material compatible screws, neoprene washers and cap with bead of sealant.
2. Caps and closures:
    a. Provide miscellaneous caps and closures; profiles and gauges as shown on Drawings.
3. Expansion joints:
    a. Per SMACNA Standards.
    b. Locate per SMACNA standards & details. (Coordinate with joints indicated on documents.)
4. Gutters and downspouts:
    a. All joints at gutters & downspouts shall be secured by means of continuous soldering, unless at expansion joint condition.
5. All flashing and counterflashing at inside & outside corners shall be continuously soldered for watertight assembly.
    a. At pre-manufactured assemblies such as Transition Flashing, the specifiedtwp piece 'Springlok' - reglet and snap in skirt flashing,shall be installed with manufacturers pre-manufactured inside and outside corners.
6. Roof drains, overflow drains and rainwater piping
    a. When concealed within the construction of the building; shall be tested in conformity with the provisions of the applicable building code . for testing drain, waste and vent system.
7. Lead flashing
    a. Shall be coated with a bituminous coating prior to direct contact with uncured concrete or mortar.
8. All connections to lead shall be soldered.
    a. Soldering:
        1) Use appropriate flux and solder
        2) Neutralize flux after soldering
9. Waterproof flexible flashings and membranes
    a. Cold-applied self-adhering waterproof membrane shall be installed in accordance with manufacturer's instructions.
    b. Install membrane in shiplap fashion such that membrane overlaps substrate barrier material.
    c. Insure that Waterproof Membrane is compatible with other materials it comes in contact with and notify **Architect** of any compatibility problems.

d. Insulate, separate sheet metal work and install approved fasteners that will be in contact with dissimilar metals or other material that would produce electrolytic action.

3.5 MOCK-UP

A. Erect at location approved by **Architect**.

1. Mock-up shall not be part of final construction once approved by **Architect**.

a. When approved by **Architect** some mock-ups can be part of final construction

2. Mock-up shall comprise of all components and finishes as specified and indicated in Drawings.

B. Assembly:
