    h. Driving lane dividers: White.

2.02 TRAFFIC SIGNS

A. Manufacturers: One of the following or equal:
    1. Seton Name Plate Co.
    2. Emedco.

B. Material, shapes, and graphics: Post mounted baked enamel on steel sheet, reflectorized to show the same shape and color both day and night, with mounting holes, in accordance with the Uniform Traffic Control Devices manual. Fasten sign to post with stainless steel bolts.

PART 3 EXECUTION

3.01 PREPARATION

A. Remove dirt, oil, grease, and other materials which may affect paint adhesion.

B. Apply masonry conditioner on weathered or sandblasted surfaces, brick, or stucco.

3.02 APPLICATION

A. Apply paint at package consistency whenever possible. Thin paint as little as possible.

B. Apply paint with specifically designed and manufactured equipment for pavement marking. Provide:
    1. Uniform straight edges without overspray.
    2. 4 inch wide lines, unless indicated otherwise.
    3. Hatching in handicap parking areas.

C. Provide striping between parking stalls as indicated on the Drawings:
    1. Identify parking spaces with text as indicated on the Drawings:
        a. Compact spaces: COMPACT.
        b. Carpool spaces: CARPOOL.
        c. Motorcycle spaces: MOTORCYCLE.

d. Visitor spaces: VISITOR.
e. Clean Air Vehicle spaces: CLEAN AIR VEHICLE.
    1) Lettering shall be at least 8 inches high.

D. Apply paint to obtain thickness recommended by paint manufacturer.

E. Paint traffic control markings, including striping, directional arrows, cross walks and lettering, and handicap striping and symbols as indicated on the Drawings and in accordance with local governing agency's standards. Use stencils for arrows, lettering, and symbols.

F. Apply 700 square inch international handicap symbol on pavement surface where indicated on the Drawings:
    1. On asphalt surfaces, paint blue symbol on white square.
    2. On concrete surfaces, paint white symbol on blue square.

G. Install traffic signs where indicated on the Drawings. Set post in concrete to depth to resist sign damage from wind speed of 100 miles per hour.

END OF SECTION

SECTION 02772

CONCRETE CURBS, GUTTERS, AND SIDEWALKS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Concrete curbs, gutters, sidewalks, driveways, access ramps, and alley intersections.

1.02 SUBMITTALS

A. Product data: Submit data completely describing products.

B. Samples: Submit samples when requested.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Performance requirements: Construct various types of concrete curb, gutter, sidewalk, driveways and alley intersections to dimensions and details indicated on the Drawings.

2.02 MATERIALS

A. Concrete: Class A, as specified in Section 03300 - Cast-In-Place Concrete.

B. Curb finishing mortar: 1 part Portland cement to 2 parts sand.

C. Form release material: Light oil or other releasing agent of type which does not discolor concrete or interfere with the application of finishing mortar to curb tops and faces.

D. Joint materials:
   1. Expansion: As specified in Section 03150 - Concrete Accessories.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions:
   1. Verify field conditions, including subgrade condition and interferences, before beginning construction.

3.02 PREPARATION

A. Surface preparation:
   1. Subgrade:
      a. Construct and compact true to grades and lines indicated on the Drawings and requirements as specified Section 02050 - Soils and Aggregates for Earthwork.
      b. Remove soft or unsuitable material to depth of not less than 6 inches below subgrade elevation and replace with satisfactory material.
   2. Forms and subgrade: Water immediately in advance of placing concrete.

3.03 INSTALLATION

A. Special techniques:
   1. Contractor's option:
      a. Construct concrete curbs and gutters by conventional use of forms, or by means of curb and gutter machine when acceptable to the Engineer.
      b. When use of machines designed specifically for work of this Section are accepted by the Engineer, results must be equal to or better than those produced by use of forms.
      c. Applicable requirements of construction that apply to use of forms also apply to use of machines.
      d. Discontinue use of machines when results are not satisfactory to the Engineer.

B. Forms:
   1. Carefully set to line and grade and securely stake in position forms conforming to dimensions of items to be constructed.
   2. Thoroughly clean prior to each use and coat with form releasing material.

C. Expansion and weakened-plane joints:
   1. Expansion joints:
      a. Construct vertically, and at right angles to centerline of street and match joints in adjacent pavement or sidewalks.
      b. Constructed at radius points, driveways, alley entrances, and at adjoining structures.
      c. Fill joints with expansion joint filler material.
   2. Weakened-plane joints:
      a. Construct as indicated on the Drawings.
      b. Match joint locations and details in adjacent curbs, gutters, and sidewalks.

D. Concrete:
   1. Placing:
      a. Thoroughly spade concrete away from forms so that no rock pockets exist next to forms and so that no coarse aggregate will show when forms are removed.
   2. Compacting:
      a. Compact by mechanical vibrators accepted by the Engineer.
      b. Continue tamping or vibrating until mortar flushes to surface and coarse aggregate is below concrete surface.

3. Form removal:
    a. Front form faces: Do not remove before concrete has taken initial set and has sufficient strength to carry its own weight.
    b. Gutter and rear forms: Do not remove until concrete has hardened sufficiently to prevent damage to edges. Take special care to prevent damage.
4. Finishing and curing: Comply with requirements as specified in Section 03366 - Concrete Finishes, except as modified here:
    a. As soon as curb face forms are stripped, apply finishing mortar to the top and face of curb and trowel to a smooth, even finish. Finish with fine haired broom in direction of work.
    b. Where curb is installed without integral gutter, extend finish 2 inches below grade.
    c. Edge concrete at expansion joints to 1/4-inch radius.
    d. Flow lines of gutters shall be troweled smooth 4 inches out from curb face for integral curb and gutter and 4 inches on both sides of flowline for gutters without curbs.
    e. Sidewalks and ramps: Broom finish.

E. Backfilling:
1. Unless otherwise specified, backfill behind curbs, gutters, or sidewalks with soil native to area and to lines and grades indicated on the Drawings.

3.04 FIELD QUALITY CONTROL

A. Tests:
1. Curbs and gutters:
    a. Test face, top, back, and flow line with 10 foot straightedge or curve template longitudinally along surface.
    b. Correct deviations in excess of 1/4 inch.
2. Gutters:
    a. Frequency of testing: When required by the Engineer, where gutters have slope of 0.8 foot per 100 feet or less, or where unusual or special conditions cast doubt on capability of gutters to drain.
    b. Test method: Establish flow in length of gutter to be tested by supplying water from hydrant, tank truck, or other source.
    c. Required results:
        1) 1 hour after supply of water is shut off, inspect gutter for evidence of ponding or improper shape.
        2) In event water is found ponded in gutter to depth greater than 1/2 inch, or on adjacent asphalt pavement, correct defect or defects in manner acceptable to the Engineer without additional cost to the Contract.

3.05 ADJUSTING

A. Repair portions of concrete damaged while stripping forms or, when damage is severe, replace such work at no additional cost to the Contract. Evidence of repairs shall not be noticeable in the finished product.

B. Remove and replace sections of work deficient in depth or not conforming to requirements indicated on the Drawings and specified in the Specifications at no

additional cost to the Contract. Removal and replacement shall be the complete section between 2 joints.

END OF SECTION

SECTION 02820

FENCES AND GATES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fence, framework, fabric, and accessories.
   2. Excavation for post bases and concrete foundation for posts.
   3. Manual gates and related hardware.
   4. Gate operators.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. A121 - Standard Specification for Metallic-Coated Carbon Steel Barbed Wire.
   2. A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   3. A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
   4. A385 - Standard Practice for Providing High-Quality Zinc Coatings (Hot-Dip).
   5. A392 - Standard Specification for Zinc-Coated Steel Chain-Link Fence Fabric.
   6. A702 - Standard Specification for Steel Fence Posts and Assemblies, Hot-Wrought.
   7. F626 - Standard Specification for Fence Fittings.
   8. F668 - Standard Specification for Polyvinyl Chloride (PVC) and Other Organic Polymer-Coated Steel Chain-Link Fence Fabric.
   9. F1043 - Standard Specification for Strength and Protective Coatings on Steel Industrial Chain Link Fence Framework.
   10. F1184 - Standard Specification for Industrial and Commercial Horizontal Slide Gates.
   11. F2200 - Standard Specification for Automated Vehicular Gate Construction.

B. State of California Department of Transportation (Caltrans).

C. Underwriters Laboratories, Inc. (UL):
   1. 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems.

1.03 SUBMITTALS

A. Product data: Submit data completely describing products.

B. Shop drawings:
   1. Remote and automatic gates: Submit drawings showing connection details indicating methods and means of mounting, attaching, and installing fence, operators and locks to gates, including wiring diagrams.

C. Quality control submittals:
   1. Certificates of compliance: Provide certification that materials conform to referenced specifications.
   2. Qualifications: Provide installer's references and list of local references.
   3. Manufacturer's instructions: Provide for gate operator equipment.

D. Contract closeout submittals:
   1. Operation and maintenance manuals: Provide for electrical and mechanical equipment.

1.04 QUALITY ASSURANCE

A. Pre-installation conference: Participate in conference, if required.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Storage and handling: Unload, store, and protect materials such that they are not damaged.

1.06 PROJECT CONDITIONS

A. Field measurements:
   1. Verify actual field distances so that CMU column and post spacing can be made uniform.
   2. Verify and coordinate gate opening and column distances for driveway.

1.07 SEQUENCING AND SCHEDULING

A. Fences and gates: May be constructed at any time after earthwork, pipe work, and structures to which fence is related has been completed, but prior to erosion control application.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Design requirements:
   1. Gates shall be designed and constructed to withstand wind loads per the requirements of Section 01850 - Design Criteria.

B. Performance requirements:
   1. Gate operator controls:
      a. In addition to standard controls furnished with gate operators, make provisions for and provide terminal connection points for controls indicated on the Drawings and clearly indicated such connection points on operator control terminal board.
      b. Operational sequence: Provide sequence as specified in Section 17100 - Control Strategies and 17101A - Specific Control Strategies.

2.02 SPECIAL GATES AND ACCESSORIES

A. Ornamental iron rolling gates:
   1. One of the following or equal:
      a. Capitol Steel Products.
   2. Material: Black iron, galvanized.
   3. Pickets:
      a. 3/4 inch by 3/4 inch tubing.
      b. Clear space between tubing for gate and section(s) of fence covered when the gate is in the open position shall be no greater than 2-1/4 inches in accordance with UL 325 and ASTM F2200.
   4. Rail frames: 1-1/2 inch by 1-1/2 inches tubing.

B. Tracking channel: Provide each channel with stop permanently attached at rear of channel:
   1. Roller guide: Steel guide capable of being cast into roadway.
   2. Posts for gate and track support: 3 inches by 3 inches tubing.
   3. Roller wheels:
      a. Front: Minimum wheel diameter 4 inch with maximum 1.5 inch opening between bottom of gate and top of track.
      b. Rear: Same as front wheel.

C. Coatings:
   1. Galvanized repair paint: 2 component, moisture-cured, zinc-rich urethane primer, minimum solids by volume of 83 percent plus or minus 2 percent.
      a. Manufacturers: One of the following or equal:
         1) Tnemec, 90-97.
         2) Devoe: Catha-Coat 313.

2.03 MANUFACTURED UNITS

A. Rolling gates:
   1. Provide controls for each gate motor operator such that operator can be controlled by either of 2 manually operated switches located where indicated on the Drawings:
      a. Also provide control for motor operator such that gate can be controlled by either of 2 key-operated switch stations.
      b. Provide gooseneck-mounting stands for switch station and key such stations alike.
   2. Provide 1 push-button switch station located inside gate.

B. Outside gate operator stands for plant entry gates.

2.04 EQUIPMENT

A. Rolling gates:
   1. Gate operator equipment:
      a. Manufacturers: One of the following or equal:
         1) DKS Doorking, Series 9200.
      b. Select operator based on final weight of the gate and manufacturer recommendations.

c. Provide a minimum factor of safety of 1.5 in sizing gate operator power.
d. Entry card reader and keypad station:
    1) Provide a single card reader and keypad that is pedestal-mounted by the exterior of the gate according to City standards.
    2) Knox model 3502 keyed entry:
        a) Include stay-open feature for emergency services.
        b) Install on same pedestal as the card reader.
    3) Located as indicated on the Drawings.
e. Exit push button:
    1) Provide an exit push button mounted on the gate operator equipment.
    2) Locate to avoid tampering, as indicated on the Drawings.
f. Provide gooseneck-mounting stands for the card reader and keypad station.
g. Provide a sliding type electric operator unit built into a compact enclosure mounted on heavy steel base.
    1) Provide weatherproof enclosure.
    2) Electric operator and all ancillary equipment (including sensors) must be hardwired. Battery-powered systems are unacceptable.
h. Peripheral and accessory equipment:
    1) Safety/Exit loops.
    2) Safety loops on both exterior and interior of gate.
    3) Single safety/exit loop on the interior of the gate.
    4) Install according to manufacturer's recommendations.
    5) Install loops prior to paving.
i. Electric operator unit:
    1) In accordance with UL 325. At a minimum, provide entrapment protection device type A (inherent entrapment protection system) and B1 (non-contact sensor).
    2) Provide unit consisting of right angle gear head instantly reversing motor and magnetic brake, safety disc clutch, chain driven geared type automatic limit switch, magnetic reversing starter with overload protection, open and close adjustable limit switches, and emergency release for operation during power failure.
    3) Provide unit that is prewired and ready to be connected to power and control sources.
    4) Provide operators capable of operating on nominal 480-volt, 3 phase, 60 hertz power supply. Battery-powered systems are unacceptable.
    5) Size motor to be capable of moving the weight of the gate. Provide a minimum factor of safety of 1.5 in sizing operator power.
j. Gear head motor:
    1) Provide locking mechanical drive disconnect inside facility to allow gate to be manually opened.
    2) Provide motor that is built as 1 unit with 1 stage of reduction.
    3) Provide reduction stage consisting of carefully machine cut carburized worm and SAE 65 bronze worm gear.
    4) Bearings: Provide anti-friction bearings complying with following:
        a) On motor shaft: Highest quality ball bearings.
        b) On slow speed shafts: Tapered roller bearings.

5) Gears and bearings: Operate in bath of oil:
   a) Prevent leakage of oil by providing double type oil seals around motor shaft and countershaft.
   b) Provide magnetic drum type brake with its easily adjustable feature built onto jackshaft for positive gate control.

k. Automatic limit switch:
   1) Provide automatic limit switch designed to stop gates in fully open or closed positions that is precision built gear type driven by chain drive from jackshaft of operator.
   2) Provide limit switch chain drive so located that any safety friction disc clutch slippage or manual operation of gate shall not cause mistiming of operator mechanism.

l. Operation:
   1) Move gate by use of highest quality roller chain and heavy brackets attached to gates.
   2) Provide simple releasing feature that is designed to operate in case of power failure.
   3) Provide chain that is driven from dependable safety friction disc clutch on gear head motor's countershaft.
   4) Provide safety clutch designed to protect personnel and equipment in case gate comes to contact with obstruction.
   5) Operating speed:
      a) Provide operators having operating speed of not less than 60 feet per minute nor more than 90 feet per minute.
   6) In addition to standard controls furnished with gate operators, make provisions for and provide terminal connection points for controls indicated on the Drawings and clearly indicated such connection points on operator control terminal board.
   7) Operational sequence: Provide sequence as specified in Section 17100 - Control Strategies and 17101A - Specific Control Strategies.

B. Pedestrian Gate:
   1. Magnetic door sensor with a card reader-operated lock, as indicated on the Drawings.

C. Post mounted gate locks: Provide locks that:
   1. Are electrically operated, post mounted type, and capable of positively locking gates to latch post.
   2. Include manual key lock for disconnect in event of power failure.
   3. Are designed to operate on 120 volts alternating current and that are suitable for outdoor use.
   4. Manufacturers: The following or equal:
      a. Stanley Vemco, Number 420-141 for slide gate.

2.05 FABRICATION

A. Shop finishing:
   1. Galvanizing: For items not fabricated of galvanized materials hot-dip galvanize products after fabrication in accordance with following as applicable:
      a. ASTM A123.

b. ASTM A153.
c. ASTM A385.

2. Mark galvanized products with name of galvanize, applicable ASTM designation, and weight of zinc coating.
3. Galvanize fabricated items complete, or in largest practicable sections.
4. Provide galvanizing at rate of 2.0 ounces per square foot, minimum.
5. Hardware:
   a. Padlocks: Cadmium plated.
   b. Chain: Galvanized.

B. Finish schedule:
   1. Ferrous metal:
      a. Typical: Clean, then hot-dip galvanize in accordance with galvanizing standards.

C. Field finish touch-up painting:
   1. Galvanized repair paint: Apply paint having minimum dry film thickness of 2.0 to 3.5 mils.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions: Verify field conditions prior to construction.

3.02 PREPARATION

A. Surface preparation:
   1. Before locating fence posts grade ground to permit grade of fence to remain constant over any local elevations or depressions in ground line.

3.03 INSTALLATION

A. Rolling gates:
   1. Provide gates that are motor operated where indicated on the Drawings:
      a. Motor operator controls:
         1) Install manually operated switches where indicated on the Drawings.
         2) Install switch station stands where indicated on the Drawings.

3.04 FIELD QUALITY CONTROL

A. Manufacturer's field service:
   1. Manufacturer shall check and test powered gates and accessories before acceptance.
   2. Test gate operator through 10 full cycles and adjust operation without binding, scraping, or uneven motion.
   3. Test limit switches for proper “at rest” gate position.

3.05 ADJUSTING

A. Adjust gate travel, stops, and operator position to meet field conditions.

3.06 CLEANING

A. Clean up surplus dirt, concrete, and other waste material and dress grade up upon completion of the work.

3.07 PROTECTION

A. Protect installed gates against damage and, if damaged, repair prior to final acceptance.

END OF SECTION

SECTION 03055

ADHESIVE-BONDED REINFORCING BARS AND ALL THREAD RODS IN CONCRETE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Bonding reinforcing bars and all thread rods in concrete using adhesives.

1.02 REFERENCES

A. American Concrete Institute (ACI).
   1. 355.4 - Qualification of Post-Installed Adhesive Anchors in Concrete and Commentary.

B. American National Standards Institute (ANSI):
   1. Standard B212.15 - Carbide Tipped Masonry Drills and Blanks for Carbide Tipped Masonry Drills.

C. ASTM international (ASTM):
   1. C881 - Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.

D. Concrete Reinforcing Steel Institute (CRSI).

E. ICC Evaluation Service, Inc. (ICC-ES):
   1. AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements.

F. NSF International (NSF):
   1. 61 - Drinking Water System Components - Health Effects.

G. Society for Protective Coatings (SSPC):
   1. SP-1 - Solvent Cleaning.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Evaluation Service Report (ESR): Report prepared by ICC-ES, or other testing agency acceptable to Engineer and to the Building Official, that documents testing and review of a product to confirm that it complies with the requirements of designated ICC-ES Acceptance Criteria, and to document its acceptance for use under the building code specified in Section 01410 - Regulatory Requirements.

1.04 SUBMITTALS

A. Product data: Technical data for adhesives, including:
   1. Manufacturer's printed installation instructions (MPII).
   2. Independent laboratory test results indicating allowable loads in tension and shear for concrete of the types included in this Work, with load modification factors for temperature, spacing, edge distance, and other installation variables.
   3. Handling and storage instructions.
   4. Evidence of current listing under NSF-61 for use in contact with potable water.

B. Quality control Submittals:
   1. Special inspection: Detailed step-by-step instructions for the special inspection procedures required by the building code specified in Section 01410 - Regulatory Requirements.
   2. For each adhesive to be used, Evaluation Report confirming that the product complies with the requirements of AC308 for both un-cracked and cracked concrete and for use in Seismic Design Categories A through F.
   3. Installer qualifications:
      a. Submit evidence of successful completion of adhesive manufacturer's installation training program.
      b. Submit evidence of current certification for installation of inclined and overhead anchors under sustained tension loading.

C. Inspection and testing reports:
   1. Inspections: Field quality control: Reports of inspections and tests.
      a. Inspections: Field quality assurance: Reports of special inspections and tests.

1.05 QUALITY ASSURANCE

A. Qualifications:
   1. Installation requirements:
      a. Have available at the site, and install anchors in accordance with, the adhesive manufacturer's printed installation instructions.
   2. Installer qualifications:
      a. Demonstrating successful completion of adhesive manufacturer's on-site training program for installation of adhesive-bonded anchors.
      b. Holding current certification for installation of adhesive-bonded anchors by a qualified organization acceptable to the Engineer and to the Building Official.
         1) Organizations/certification programs deemed to be qualified are:
            a) ACI-CRSI Adhesive Anchor Installer Certification Program.
            b) Adhesive anchor manufacturer's certification program, subject to acceptance by the Engineer and the Building Official.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store and protect products as follows, unless more restrictive requirements are recommended by the manufacturer:
   1. Store adhesives and adhesive components on pallets or shelving in a covered-storage area protected from weather.

2. Control temperature to maintain storage within manufacturer's recommended temperature range.
    a. If products have been stored at temperatures outside manufacturer's recommended range, test by methods acceptable to the Engineer to confirm acceptability before installing in the Work.
3. Dispose of products that have passed their expiration date.

1.07 PROJECT CONDITIONS

A. As specified in Section 01850 - Design Criteria.

B. Seismic Design Category (SDC) for structures: As specified in Section 01850 - Design Criteria.

PART 2 PRODUCTS

2.01 GENERAL

A. Like items of materials: Use end products of one manufacturer in order to achieve structural compatibility and singular responsibility.

B. Adhesives shall have a current Evaluation Report documenting testing and compliance with the requirements of ACI 355.4 and ICC-ES AC308 for use with un-cracked concrete and with cracked concrete in the Seismic Design Category specified.

C. Bond reinforcing bars and all thread rods in concrete using epoxy adhesive unless other adhesives specified are specifically indicated on the Drawings or approved in writing by the Engineer.

D. For locations where adhesive will be in direct contact with potable water in the finished work, provide documentation of testing and listing under NSF-61. Testing shall be by a nationally recognized agency acceptable to the Engineer.

2.02 EPOXY ADHESIVE

A. Materials:
1. Meeting the physical requirements of ASTM C881, Type IV, Grade 3, Class B or C depending on site conditions.
2. 2-component, 100 percent solids, insensitive to moisture.
3. Cure temperature, pot life, and workability: Compatible with intended use and environmental conditions.

B. Packaging:
1. Disposable, self-contained cartridge system furnished in side-by-side cartridges designed to fit into a manually or pneumatically operated caulking

gun, and with resin and hardener components isolated until mixing through manufacturer's static mixing nozzle.
    a. Nozzle designed to dispense components in the proper ratio and to thoroughly blend the components for injection from the nozzle directly into prepared hole.
    b. Provide nozzle extensions as required to allow full-depth insertion and filing from the bottom of the hole.
2. Container markings: Include manufacturer's name, product name, batch number, mix ratio by volume, product expiration date, ANSI hazard classification, and appropriate ANSI handling precautions.

C. Manufacturers: One of the following or equal:
1. Hilti, Inc., HIT-RE 500-V3.
2. Simpson Strong-Tie Co., Inc., SET-XP.

2.03 ACRYLIC AND HYBRID ADHESIVE

A. Materials:
1. 2-component, high-solids, acrylic-based or hybrid acrylic and epoxy-based adhesive.
2. Approved by the manufacturer for installation at substrate temperatures of 0 degrees Fahrenheit and above.

B. Packaging:
1. Disposable, self-contained cartridge system furnished in side-by-side cartridges designed to fit into a manually or pneumatically operated caulking gun, and with resin and hardener components isolated until mixing through manufacturer's static mixing nozzle. Nozzle designed to dispense components in the proper ratio and to thoroughly blend the components for injection from the nozzle directly into prepared hole.
2. Container markings: Include manufacturer's name, product name, batch number, mix ratio by volume, product expiration date, ANSI hazard classification, and appropriate ANSI handling precautions.

C. Manufacturers: One of the following or equal:
1. Hilti, Inc., HIT-HY-200.
2. Simpson Strong-Tie Co., Inc., AT-XP.

2.04 ALL THREAD RODS

A. Materials: As specified in Section 05120 - Structural Steel Framing for rods, nuts, and washers.

2.05 REINFORCING BARS

A. As specified in Section 03200 - Concrete Reinforcing.

PART 3 EXECUTION

3.01 GENERAL

A. Execution of this work is restricted to installers who have personally completed the adhesive manufacturer's on-site training for the products to be installed, and who are personally certified through a qualified certification program described under Quality Assurance and accepted by the Engineer and the Building Official.
   1. Do not install holes or adhesive until training is complete.

B. Perform work in strict compliance with the accepted MPII and the following instructions. Where the accepted MPII and the instructions conflict, the MPII shall prevail.

C. Install reinforcing bars and all thread rods to embedment depth, and at spacing and locations indicated on the Drawings.
   1. If embedment depth is not indicated, contact the Engineer for requirements.
   2. Do not install adhesive-bonded all thread rods or reinforcing bars in upwardly inclined or overhead applications unless accepted in advance by the Engineer.

3.02 PREPARATION

A. Do not begin installation of adhesive bonded anchors until:
   1. Concrete has achieved an age of at least 21 days after placement.
   2. On-site training in installation of adhesive bonded anchors by manufacturer's technical representative is complete. Do not drill holes in concrete or install adhesive and embeds in holes.

B. Review manufacturer's printed installation instructions (MPII) and "Conditions of Use" stipulated in the Evaluation Report before beginning work.
   1. Bring to the attention of the adhesive manufacturer's technical representative any discrepancies between these documents and resolve before proceeding with installation.

C. Install adhesive bonded anchors in full compliance with manufacturer's printed installation instructions using personnel who have successfully completed manufacturer's on-site training for products to be used and who hold certifications specified in this Section.

D. Confirm that adhesive and substrate receiving adhesive are within manufacturer's recommended range for temperature and moisture conditions and will remain so during the curing time for the product.

3.03 HOLE SIZING AND INSTALLATION

A. Drilling holes:
   1. Determine location of reinforcing bars or other obstructions with a nondestructive indicator device, and mark locations with construction crayon on the surface of the concrete.
   2. Do not damage or cut existing reinforcing bars, electrical conduits, or other items embedded in the existing concrete without prior acceptance by the Engineer.

B. Hole drilling equipment:
   1. Electric or pneumatic rotary impact type with medium or light impact.
      a. Installation of anchors in cored holes is not permitted.
      b. Set drill to “rotation only” mode, or to “rotation plus hammer” mode in accordance with the manufacturer’s installation instructions and the requirements of the Evaluation Report.
      c. Where edge distances are less than 2 inches and “rotation plus hammer” mode is permitted, use lighter impact equipment to prevent micro-cracking and concrete spalling during the drilling process.
   2. Drill bits: Carbide-tipped in accordance with ANSI B212-15 unless otherwise recommended by the manufacturer or required as a “condition of use” in the Evaluation Report.
      a. Hollow drill bits with flushing air systems are preferred. Air supplied to hollow drill bits shall be free of oil, water, or other contaminants that will reduce bond.

C. Hole diameter: As recommended in the manufacturer’s installation instructions and the Evaluation Report.

D. Hole depth: As recommended in the manufacturer’s installation instructions to provide minimum effective embedment indicated on the Drawings.

E. Obstructions in drill path:
   1. If an existing reinforcing bar or other obstruction is hit while drilling a hole, unless otherwise accepted by the Engineer, stop drilling. Prepare and fill the hole with dry-pack mortar. Relocate the hole to miss the obstruction and drill another hole to the required depth.
      a. Obtain Engineer’s acceptance of distance between abandoned and relocated holes before proceeding with the relocation.
      b. Allow dry-pack mortar to cure to a strength equal to that of the surrounding concrete before resuming drilling in the area.
      c. Epoxy grout may be substituted for dry-pack mortar when accepted by the Engineer.
   2. Avoid drilling an excessive number of holes in an area of a structural member, which would excessively weaken the member and endanger the stability of the structure.
   3. When existing reinforcing steel is encountered during drilling and when specifically accepted by the Engineer, enlarge the hole by 1/8 inch, core

through the existing reinforcing steel at the larger diameter, and resume drilling at original hole diameter using pneumatic rotary impact drill.

4. Bent bar reinforcing bars: Where edge distances are critical and interference with existing reinforcing steel is likely, if acceptable to the Engineer, drill hole at 10-degree (or less) angle from axis of reinforcing bar or all thread rod being installed.

F. Cleaning holes:
   1. Insert air nozzle to bottom of hole and blow out loose dust.
      a. Use compressed air that is free of oil, water, or other contaminants that will reduce bond.
      b. Provide minimum air pressure of 90 pounds per square inch for not less than 4 seconds.
   2. Using a stiff bristle brush with diameter that provides contact around the full perimeter of the hole, vigorously brush hole to dislodge compacted drilling dust.
      a. Insert brush to the bottom of the hole and withdraw using a simultaneous twisting motion.
      b. Repeat at least 4 times.
   3. Repeat the preceding steps as required to remove drilling dust or other material that will reduce bond, and in the number of cycles required by the MPII and the Evaluation Report.
   4. Leave prepared holes clean and dry.
   5. Protect prepared and cleaned holes from contamination and moisture until adhesive is installed.
   6. Re-clean and dry previously prepared holes if, in the opinion of the Engineer, the hole has become contaminated after initial cleaning.

3.04 INSTALLATION OF ADHESIVE AND INSERTS

A. Clean and prepare inserts reinforcing bars and all thread rods:
   1. Prepare embedded length of reinforcing bars and all thread rods by cleaning to bare metal. Inserts shall be free of oil, grease, paint, dirt, mill scale, rust, or other coatings that will reduce bond.
   2. Solvent clean prepared reinforcing bars and all thread rods over the embedment length in accordance with SSPC SP-1. Provide an oil and grease free surface for bonding of adhesive to steel.

B. Fill holes with adhesive:
   1. Starting at the bottom of the hole, fill hole with adhesive inserting the reinforcing bar or all thread rod.
   2. Fill hole as nozzle is withdrawn without creating air voids.
   3. Unless otherwise indicated on the Drawings, fill hole with sufficient adhesive so that excess adhesive is extruded out of the hole when the reinforcing bar or all thread rod is inserted.
   4. Where necessary, seal hole at surface of concrete to prevent loss of adhesive during curing.

C. Installing reinforcing bars and all thread rods.
   1. Unless otherwise indicated on the Drawings, install bars and rods perpendicular to the concrete surface.

2. Insert reinforcing bars and all thread rods into adhesive in accordance with manufacturer's recommended procedures.
3. Confirm that insert has reached the designated embedment in the concrete, and that adhesive completely surrounds the embedded portion.
4. Securely brace bars and all thread rods in place to prevent displacement while the adhesive cures. Bars and rods displaced during curing will be considered damaged and replacement will be required.
5. Clean excess adhesive from the mouth of the hole.

D. Curing and loading.
1. Provide and maintain curing conditions recommended by the adhesive manufacturer for the period required to fully cure the adhesive at the temperature of the concrete.
2. Do not disturb or load bonded embeds until manufacturer's recommended cure time, based on temperature of the concrete, has elapsed.

3.05 POST-INSTALLATION ACTIVITIES

A. Do not bend bars or all thread rods after bonding to the concrete, unless accepted in advance by the Engineer.

B. Attachments to all thread rods:
1. After assemblies to be connected are placed, install nuts and washers for threaded rods as indicated on the Drawings.
2. Draw nuts down tight, using practices specified for "snug tight" installation of bolts in steel to steel connections.

3.06 FIELD QUALITY CONTROL

A. Provide field quality control over the Work of this Section as specified in Section 01450 - Quality Control.

B. Do not allow work described in this Section to be performed by individuals who do not hold the specified certifications and who have not completed the specified job site training.

C. Manufacturer's services:
1. Before beginning installation, furnish adhesive manufacturer's technical representative to conduct on-site training in proper storage and handling of adhesive, drilling and cleaning of holes, and preparation and installation of reinforcing bars and all thread rods.
a. Provide notice of scheduled training to the Engineer and to special inspector(s) not less than 10 working days before training occurs. Engineer and special inspector may attend training sessions.
2. Submit record, signed by the manufacturer's technical representative, listing Contractor's personnel who completed the training. Only qualified personnel who have completed manufacturer's on-site training shall perform installations.

D. Field inspections and testing:
   1. Hole drilling and preparation.
   2. Results: Submit records of inspections and testing to the Engineer by electronic copies within 24 hours after completion.

3.07 FIELD QUALITY ASSURANCE

A. Provide field quality assurance over the Work of this Section as specified in Section 01450 - Quality Control.

B. Special inspections, special tests, and structural observation:
   1. Provide as specified in Section 01455 - Regulatory Quality Assurance.
   2. Frequency of inspections:
      a. Unless otherwise indicated on the Drawings or in this Section, provide periodic special inspection as required by the Evaluation Report for the product installed.
      b. Provide continuous inspection for the initial installation of each type and size of adhesive bonded reinforcing bar and all thread rod. Subsequent installations of the same anchor may be installed with periodic inspection as defined in subsequent paragraphs.
      c. Provide continuous inspection of drilling, cleaning and bonding activities for bars and rods installed in horizontal and upwardly inclined positions.
   3. Preparation:
      a. Review Drawings and Specifications for the Work to be observed.
      b. Review adhesive manufacturer's MPII and recommended installation procedures.
      c. Review Evaluation Report "Conditions of Use" and "Special Inspection" requirements.
   4. Inspection: Periodic:
      a. Initial inspection. Provide an initial inspection for each combination of concrete and reinforcing bar strength or concrete strength and all thread rod material being installed. During initial inspection, observe the following for compliance with the installation requirements.
         1) Concrete: Class (minimum specified compressive strength) and thickness.
         2) Environment: Temperature conditions at work area, and moisture conditions of concrete and drilled hole.
         3) Holes: Locations, spacing, and edge distances; verification of drill bit compliance with requirements; cleaning equipment and procedures; cleanliness of hole. Before adhesive is placed, confirm that depth and preparation of holes conforms to the requirements of the Contract Documents, the MPII, and the "Conditions of Use" listed in the Evaluation Report.
         4) Adhesive: Product manufacturer and name; lot number and expiration date; temperature of product at installation; installation procedure. Note initial set times observed during installation.
         5) Reinforcing bars and all thread rods: Material diameter and length; steel grade and/or strength; cleaning and preparation; cleanliness at insertion; minimum effective embedment provided.

b. Subsequent inspections: Subsequent installations of the same reinforcing bars or all thread rods may be performed without the presence of the special inspector, provided that:
    1) There is no change in personnel performing the installation, the general strength and characteristics of the concrete receiving the inserts, or the reinforcing bars and all thread rods being used.
    2) For ongoing installations, the special inspector visits the site at least once per day during each day of installation to observe the work for compliance with material requirements and installation procedures.

5. Inspection: Continuous.
    a. Make observations as described under “Inspection - Periodic, Initial Inspection” during drilling, cleaning, and bonding activities for all bars and rods installed.
6. Records of inspections:
    a. Provide a written record of each inspection using forms acceptable to the Engineer and to the Building Official.
    b. Submit electronic copies of inspection reports to the Engineer within 24 hours after completion of inspection.

END OF SECTION

SECTION 03071

EPOXIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Epoxy.
   2. Epoxy gel.
   3. Epoxy bonding agent.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C881 - Standard Specification for Epoxy-Resin-Base Systems for Concrete.
   2. C882 - Standard Test Method for Bond Strength of Epoxy-Resin Systems Used with Concrete by Slant Shear.
   3. D638 - Standard Test Method for Tensile Properties of Plastics.
   4. D695 - Standard Test Method for Compressive Properties of Rigid Plastics.

B. NSF International (NSF):
   1. 61 - Drinking Water System Components - Health Effects.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: Submit manufacturer's data completely describing epoxy materials:
   1. Submit evidence of conformance to ASTM C881. Include manufacturer's designations of Type, Grade, Class, and Color.
   2. Submit documentation that materials meet or exceed the specified strength and performance characteristics. Indicate test methods and test results.
   3. Submit documentation confirming listing under NSF 61.

C. Quality control Submittals:
   1. Manufacturer's installation instructions.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Performance requirements:
   1. Provide epoxy materials that are new.
   2. Store and use products within limitations in accordance with the manufacturer.
   3. Perform and conduct Work of this Section in a neat, orderly manner.

2.02 MATERIALS

A. General:
   1. Moisture tolerant, water-insensitive, two-component epoxy resin adhesive material containing 100 percent solids, and meeting or exceeding the performance properties specified when tested in accordance with the standards specified.
   2. Listed under NSF 61 for use in direct contact with potable water.

B. Epoxy: Low viscosity product in accordance with ASTM C881; Types I, II, and IV; Grade 1; Class C , except as modified in this Section.
   1. Manufacturers: One of the following, or equal:
      a. Dayton Superior, Unitex Pro-Poxy 100.
      b. Master Builders Solutions/Sika, MasterInject 1380.
      c. Sika Corporation, Sikadur 35 Hi-Mod LV.
   2. Required properties:

Table 1. Material Properties - Epoxy

Property	Test Method	Required Results ("neat")
Tensile Strength (7-day)	ASTM D638	7,000 pounds per square inch, minimum.
Compressive Yield Strength (7-day)	ASTM D695	10,000 pounds per square inch, minimum.
Bond Strength (harded concrete to harded concrete after 2-day cure)	ASTM C882	1,000 pounds per square inch, minimum. Concrete failure before failure of epoxy.
Viscosity (mixed)		250 to 550 centipoise

Notes:

(1) Testing results are for materials installed and cured at a temperature between 72 and 78 degrees Fahrenheit for 7 days, unless otherwise noted.

C. Epoxy gel: Non-sagging product in accordance with ASTM C881, Types I and IV, Grade 3, Class C.
   1. Manufacturers: One of the following, or equal:
      a. Dayton Superior, Sure Anchor J50.
      b. Master Builders Solutions/Sika, MasterEmaco ADH 327.
      c. Sika Corp., Sikadur 31, Hi-Mod Gel.
   2. Required properties:

Table 2. Material Properties - Epoxy Gel

Property	Test Method	Required Results ("neat")
Tensile Strength (7-day)	ASTM D638	2,000 pounds per square inch, minimum.
Compressive Yield Strength (7-day)	ASTM D695	8,000 pounds per square inch, minimum.
Bond Strength (14-day)	ASTM C882	1,500 pounds per square inch, minimum.

Notes:

(1) Testing results are for materials installed and cured at a temperature between 72 and 78 degrees Fahrenheit for 7 days, unless otherwise noted.

D. Epoxy bonding agent: Non-sagging product in accordance with ASTM C881, Type II, Grade 2, Class C.
   1. Manufacturers: One of the following, or equal:
      a. Dayton Superior, Sure Bond J58.
      b. Master Builders Solutions/Sika, MasterEmaco ADH 326.
      c. Sika Chemical Corp., Sikadur 32 Hi-Mod LPL.
   2. Required properties:

Table 3. Material Properties - Epoxy Bonding Agent

Property	Test Method	Required Results
Tensile Strength (7-day)	ASTM D638	3,300 pounds per square inch, minimum.
Compressive Yield Strength (7-day)	ASTM D695	8,300 pounds per square inch, minimum.
Bond Strength (14-days)	ASTM C882	1,800 pounds per square inch, minimum. Concrete failure before failure of epoxy bonding agent.
Pot Life	-	Minimum 90 minutes at 73 degrees Fahrenheit.

Notes:

(1) Testing results are for materials installed and cured at a temperature between 72 and 78 degrees Fahrenheit for 7 days, unless otherwise noted.

   3. If increased contact time is required for concrete placement, epoxy resin/Portland cement bonding agent, as specified in Section 03072 - Epoxy Resin/Portland Cement Bonding Agent, may be used instead of epoxy bonding agent.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install and cure epoxy materials in accordance with the manufacturer's installation instructions.

B. Epoxy:
   1. Apply in accordance with the manufacturer's installation instructions.

C. Epoxy gel:
   1. Apply in accordance with the manufacturer's installation instructions.
   2. Use for vertical or overhead work, or where high viscosity epoxy is required.
   3. Epoxy gel used for vertical or overhead work may be used for horizontal work.

D. Epoxy bonding agent:
   1. Apply in accordance with the manufacturer's installation instructions.
   2. Will not be required for filling form tie holes or for normal finishing and patching of similar sized small defects.

END OF SECTION

SECTION 03072

EPOXY RESIN/PORTLAND CEMENT BONDING AGENT

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Epoxy resin/portland cement bonding agent.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C109 - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. Cube Specimens).
   2. C348 - Standard Test Method for Flexural Strength of Hydraulic-Cement Mortars.
   3. C496 - Standard Test Method for Splitting Tensile Strength of Cylindrical Concrete Specimens.
   4. C882 - Standard Test Method for Bond Strength of Epoxy-Resin Systems Used With Concrete By Slant Shear.

B. Federal Highway Administration (FHWA):
   1. FHWA-RD-86-193 - Highway Concrete Pavement Technology Development and Testing Volume V: Field Evaluation of SHRP C9206 Test Sites (Bridge Deck Overlays).

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Sika Corp., Sika Armatec 110.

B. Substitutions: The use of other than the specified product will be considered, providing the Contractor requests its use in writing to the Engineer. This request shall be accompanied by:
   1. A certificate of compliance from an approved independent testing laboratory that the proposed substitute product meets or exceeds specified performance criteria, tested in accordance with the specified test standards.
   2. Documented proof that the proposed substitute product has a 1-year proven record of performance of bonding portland cement mortar/concrete to hardened portland cement mortar/concrete, confirmed by actual field tests and 5 successful installations that the Engineer can investigate.

2.02 MATERIALS

A. Epoxy resin/portland cement adhesive:
   1. Component "A" shall be an epoxy resin/water emulsion containing suitable viscosity control agents. It shall not contain butyl glycidyl ether.

2. Component "B" shall be primarily a water solution of a polyamine.
3. Component "C" shall be a blend of selected portland cements and sands.
4. The material shall not contain asbestos.

2.03 DESIGN AND PERFORMANCE CRITERIA

A. Properties of the mixed epoxy resin/portland cement adhesive:
   1. Pot life: 75 to 105 minutes.
   2. Contact time: 24 hours.
   3. Color: Dark gray.

B. Properties of the cured epoxy resin/portland cement adhesive:
   1. Compressive strength in accordance with ASTM C109:
      a. 3 day: 4,500 pounds per square-inch minimum.
      b. 7 days: 6,500 pounds per square-inch minimum.
      c. 28 days: 8,500 pounds per square-inch minimum.
   2. Splitting tensile strength in accordance with ASTM C496:
      a. 28 days: 600 pounds per square-inch minimum.
   3. Flexural strength:
      a. 1,100 pounds per square-inch minimum in accordance with ASTM C348.
   4. Bond strength in accordance with ASTM C882 modified at 14 days:
      a. 0 hours open time: 2,800 pounds per square-inch minimum.
      b. 24 hours open time: 2,600 pounds per square-inch minimum.
   5. The epoxy resin/portland cement adhesive shall not produce a vapor barrier.
   6. Material must be proven to prevent corrosion of reinforcing steel when tested under the procedures as set forth by the FHWA Program Report Number FHWA-RD-86-193. Proof shall be in the form of an independent testing laboratory corrosion report showing prevention of corrosion of the reinforcing steel.

PART 3 EXECUTION

3.01 INSTALLATION

A. Mixing the epoxy resin: Shake contents of Component "A" and Component "B." Empty all of both components into a clean, dry mixing pail. Mix thoroughly for 30 seconds with a jiffy paddle on a low-speed with 400 to 600 revolutions per minute drill. Slowly add the entire contents of Component "C" while continuing to mix for a minimum of 3 minutes and until uniform with no lumps. Mix only the quantity that can be applied within its pot life.

B. Placement procedure:
   1. Apply to prepared surface with stiff-bristle brush, broom, or "hopper-type" spray equipment:
      a. For hand applications: Place fresh plastic concrete/mortar while the bonding bridge adhesive is wet or dry, up to 24 hours.
      b. For machine applications: Allow the bonding bridge adhesive to dry for 12 hours minimum.

C. Adhere to all limitations and cautions for the epoxy resin/portland cement adhesive in the manufacturer's current printed literature.

3.02 CLEANING

A. Leave finished work and work area in a neat, clean condition without evidence of spillovers onto adjacent areas.

END OF SECTION

SECTION 03102

CONCRETE FORMWORK

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Concrete formwork.

1.02 REFERENCES

A. American Concrete Institute (ACI):
   1. 117 - Specifications for Tolerances for Concrete Construction and Materials and Commentary.

B. NSF International (NSF):
   1. 61 - Drinking Water System Components - Health Effects.

C. Underwriters Laboratories (UL).

1.03 SUBMITTALS

A. Information on proposed forming system:
   1. Submit in such detail as the Engineer may require to assure themselves that intent of the Specifications can be complied with by use of proposed system.
   2. Alternate combinations of plywood thickness and stud spacing may be submitted.

B. Form release agent: NSF 61 certification prepared by NSF, Underwriters Laboratories (UL) or other similar nationally recognized testing laboratory acceptable to the Engineer.

1.04 QUALITY ASSURANCE

A. Qualifications of formwork manufacturers: Use only forming systems by manufacturers having a minimum of 5 years of experience, except as otherwise specified, or accepted in writing by the Engineer.

B. Regulatory requirements: Install Work of this Section in accordance with local, state, and federal regulations.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Design requirements:
   1. Concrete forms, falsework, and shoring in accordance with local, state, and federal regulations.
   2. Forms and ties to withstand concrete pressures without bulging, spreading, or lifting of forms.

B. Performance requirements:
   1. Construct forms so that finished concrete conforms to shapes, lines, grades, and dimensions indicated on the Drawings.
   2. It is intended that surface of concrete after stripping presents smooth, hard, and dense finish that requires minimum amount of finishing.
   3. Provide sufficient number of forms so that the Work may be performed rapidly and present uniform appearance in form patterns and finish.
   4. Use forms that are clean and free from dirt, concrete, and other debris.
      a. Coat with form release agent if required, prior to use or reuse.

2.02 MANUFACTURED UNITS

A. Forms: Built-up plywood:
   1. May be substituted for prefabricated forming system subject to following minimum requirements:
      a. Size and material:
         1) Use full size 4-foot by 8-foot plywood sheets, except where smaller pieces are able to cover entire area.
         2) Sheet construction: 5-ply plywood sheets, 3/4-inch nominal, made with 100 percent waterproof adhesive, and having finish surface that is coated or overlaid with surface which is impervious to water and alkaline calcium and sodium hydroxide of cement.
      b. Wales: Minimum 2-inch by 4-inch lumber.
      c. Studding and wales: Contain no loose knots and be free of warps, cups, and bows.

B. Forms: Steel or steel-framed:
   1. Steel forms:
      a. Rigidly constructed and capable of being braced for minimum deflection of finish surface.
      b. Capable of providing finish surfaces that are flat without bows, cups, or dents.
   2. Steel-framed plywood forms:
      a. Provide forms that are rigidly constructed and capable of being braced.
      b. Plywood paneling: 5-ply, 5/8-inch nominal or 3/4-inch nominal, made with 100 percent waterproof adhesive, and having finish surface that is coated or overlaid with surface which is impervious to water and alkaline calcium and sodium hydroxide of cement.

C. Form release agent.
   1. Effective, non-staining, bond-breaking coating compatible with form surfaces and concrete mixes used.
   2. Certified for conformance to NSF 61 and leaving no taste or odor on the concrete surface.

D. Form ties:
   1. General:
      a. Provide form ties for forming system selected that are manufactured by a recognized manufacturer of concrete forming equipment.
      b. Do not use wire ties or wood spreaders of any form.
      c. Provide ties of type that accurately tie, lock, and spread forms.
      d. Provide form ties of such design that when forms are removed, they locate no metal or other material within 1-1/2 inches of the surface of the concrete.
      e. Do not allow holes in forms for ties to allow leakage during placement of concrete.
   2. Cone-snap ties:
      a. Shall form a cone shaped depression in the concrete with minimum diameter of 1 inch at the surface of the concrete and minimum depth of 1-1/2 inches.
      b. Provide neoprene waterseal washer that is located near the center of the concrete.
   3. Taper ties:
      a. Neoprene plugs for taper tie holes: Size so that after they are driven, plugs are located in center third of wall thickness.

E. Incidentals:
   1. External angles:
      a. Where not otherwise indicated on the Drawings, provide with 3/4-inch bevel, formed by utilizing true dimensioned wood or solid plastic chamfer strip on walkways, slabs, walls, beams, columns, and openings.
      b. Provide 1/4-inch bevel formed by utilizing true dimensioned wood or solid plastic chamfer strip on walkways, walls, and slabs at expansion, and construction joints.
   2. Keyways: Steel, plastic, or lumber treated with form release agent.

PART 3 EXECUTION

3.01 EXAMINATION

A. Site verification of conditions:
   1. Do not place concrete until forms have been checked for alignment, level, and strength, and mechanical and electrical inserts or other embedded items for correct location.

3.02 INSTALLATION

A. Forms: Built-up plywood:
   1. Studding:
      a. Spaced at 16 inches or 24 inches on center.
      b. Closer spacing may be required depending upon strength requirements of the forms, in order to prevent any bulging surfaces on faces of finished concrete work.
      c. Install studs perpendicular to grain of exterior plys of plywood sheets.
   2. Wales: Double lumber material with minimum size as specified in this Section.
   3. Number of form reuses: Depends upon durability of surface coating or overlay used, and ability to maintain forms in condition such that they are capable of producing flat, smooth, hard, dense finish on concrete when stripped.

B. Forms: Steel or steel-framed:
   1. Steel forms:
      a. Adequately brace forms for minimum deflection of finish surface.
   2. Steel-framed plywood forms:
      a. Rigidly construct and brace with joints fitting closely and smoothly.
      b. Number of form reuses: Depends upon durability of surface coating or overlay used.
   3. Built-up plywood forms: As specified in this Section, may be used in conjunction with steel forms or steel-framed plywood forms for special forming conditions such as corbels and forming around items which will project through forms.

C. Form bracing and alignment:
   1. Line and grade: Limit deviations to tolerances which will permit proper installation of structural embedded items or mechanical and electrical equipment and piping.
   2. Formwork:
      a. Securely brace, support, tie down, or otherwise hold in place to prevent movement.
      b. Make adequate provisions for uplift pressure, lateral pressure on forms, and deflection of forms.
   3. When second lift is placed on hardened concrete: Take special precautions in formwork at top of old lift and bottom of new lift to prevent:
      a. Spreading and vertical or horizontal displacement of forms.
      b. Grout “bleeding” on finish concrete surfaces.
   4. Pipe stubs, anchor bolts, and other embedded items: Set in forms where required.
   5. Cracks, openings, or offsets at joints in formwork: Close those that are 1/16 inch or larger by tightening forms or by filling with acceptable crack filler.

D. Forms: Incidentals:
   1. Keyways: Construct as indicated on the Drawings.
   2. Reentrant angles: May be left square.
   3. Level strips: Install at top of wall concrete placements to maintain true line at horizontal construction joints.
   4. Inserts:
      a. Encase pipes, anchor bolts, steps, reglets, castings, and other inserts, as indicated on the Drawings or as required, in concrete.

5. Pipe and conduit penetrations:
    a. Install pipe and conduit in structures as indicated on the Drawings and seal with materials as specified in Section 07900 - Joint Sealants.

E. Form release agent:
    1. Apply in accordance with the manufacturer's instructions.

F. Form ties:
    1. Cone-snap ties: Tie forms together at not more than 2-foot centers vertically and horizontally.

3.03 FORM REMOVAL

A. General:
    1. Keep forms in place, as specified in the following paragraphs, to provide curing and to protect concrete surfaces and edges from damage.
    2. Immediately after forms are removed, carefully examine concrete surfaces, and repair any irregularities in surfaces and finishes as specified.

B. Form removal:
    1. Do not remove forms from concrete which has been placed when outside ambient air temperature is below 50 degrees Fahrenheit until the following conditions are satisfied:
        a. Concrete has sufficient strength to allow form removal without damage to surfaces.
        b. At least 48 hours have elapsed since the end of concrete placement.
        c. Provisions are in place to maintain moisture for curing concrete, and temperature at or above the required minimum curing temperature specified.
    2. Vertical forms:
        a. Retain in place for a minimum of 24 hours after concrete is placed.
        b. If concrete has sufficient strength and hardness to resist surface or other damage after 24 hours, forms may be removed.
    3. Other forms supporting concrete, and shoring: Retain in place as follows:
        a. Formed sides of footings: 24 hours minimum.
        b. Formed vertical sides of beams, girders, and similar members: 48 hours minimum.
        c. Forms below slabs, beams, and girders: Until concrete strength reaches specified strength f'c or until shoring is installed.
            1) Shoring for slabs, beams, and girders: Shore until concrete strength reaches minimum specified 28-day compressive strength.

3.04 SURFACE REPAIRS AND FINISHING

A. Immediately after forms are removed, carefully examine concrete surfaces, and repair any irregularities in surfaces and finishes as specified in Section 03300 - Cast-in-Place Concrete.

B. Form ties: Fill tie holes as follows:
    1. Remove form ties from surfaces.
    2. Roughen cone shaped tie holes by heavy sandblasting before repair.

3. Dry pack cone shaped tie holes with dry-pack mortar as specified in Section 03600 - Grouting.
4. Taper ties:
    a. After forms and taper ties are removed from wall, plug tie holes with neoprene plug as follows:
        1) Heavy sandblast and then clean tie holes.
        2) After cleaning, drive neoprene plug into each of taper tie holes with steel rod. Final location of neoprene plug shall be in center third of wall thickness. Bond neoprene plug to concrete with epoxy.
        3) Locate steel rod in cylindrical recess and against middle of plug during driving.
            a) At no time are plugs to be driven on flat area outside cylindrical recess.
    b. Dry-pack of taper tie holes:
        1) After installing plugs in tie holes, coat tie hole surface with epoxy bonding agent and fill with dry-pack mortar as specified in Section 03600 - Grouting.
            a) Place dry-pack mortar in holes in layers with thickness not exceeding tie hole diameter and heavily compact each layer.
            b) Dry-pack the outside of the hole no sooner than 7 days after the inside of the hole has been dry packed.
            c) Wall surfaces in area of dry-packed tie holes: On the water side of water containing structures and the outside of below grade walls:
                (1) Cover with minimum of 10 mils of epoxy gel.
                (2) Provide epoxy gel coating on wall surfaces that extend minimum of 2 inches past dry-pack mortar filled tie holes.
                (3) Provide finish surfaces that are free from sand streaks or other voids.

3.05 TOLERANCES:

A. Finished concrete shall conform to shapes, lines, grades, and dimensions indicated on the Drawings.

B. Construct Work within the tolerances in accordance with ACI 117, except as modified in the following paragraphs or as indicated on the Drawings.
1. General:
    a. At certain locations in the Work, tolerances required for equipment placement and operation may be more restrictive than the general tolerance requirements of this Section.
    b. Confirm equipment manufacturers' required tolerances for location and operation of equipment that will be installed, and construct concrete to satisfy those requirements.
2. Slabs:
    a. Slope: Uniformly sloped to drain when slope is indicated on the Drawings.
    b. Slabs indicated to be level: Have maximum vertical deviation of 1/8 inch in 10-foot horizontal length without any apparent changes in grade.
3. Circular tank walls:
    a. Contractor may deviate from finish line indicated on the Drawings by use of forms with chord lengths not to exceed 2 feet.

4. Inserts and embedments:
    a. Set to tolerances required for proper installation and operation of equipment or systems to which insert pertains.
    b. Maximum tolerances: As follows:

Item	Tolerance
Sleeves and inserts	Plus 1/8 inch; minus 1/8 inch.
Anchor bolts:	
Projected ends	Plus 1/4 inch; minus 0.0 inch.
Axial alignment	Not more than 2 degrees off the axis indicated on the Drawings.
Setting location	Plus 1/16 inch; minus 1/16 inch.
All embedments	Minimum 1 inch clearance from reinforcing steel.

    c. Securing embedded items in formwork by wiring or welding to reinforcement is not permitted.

C. Remove and replace Work that does not conform to required tolerances. Procedures and products employed in and resulting from such re-work shall be acceptable to the Engineer.

END OF SECTION

SECTION 03150

CONCRETE ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Waterstops.
   2. Joint fillers.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. D570 - Standard Test Method for Water Absorption of Plastics.
   2. D624 - Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers.
   3. D638 - Standard Test Method for Tensile Properties of Plastics.
   4. D746 - Standard Test Method for Brittleness Temperature of Plastics and Elastomers by Impact.
   5. D747 - Standard Test Method for Apparent Bending Modulus of Plastics by Means of a Cantilever Beam.
   6. D792 - Standard Test Methods for Density and Specific Gravity (Relative Density) of Plastics by Displacement.
   7. D1751 - Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).
   8. D1752 - Standard Specification for Preformed Sponge Rubber Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction.
   9. D2240 - Standard Test Method for Rubber Property - Durometer Hardness.

B. American National Standards Institute (ANSI):
   1. A135.4 - Basic Hardboard.

C. U.S. Army Corps of Engineers (USACE):
   1. CRD-C-572, Specification for Polyvinyl Chloride Waterstop.

1.03 SUBMITTALS

A. Product data:
   1. Polyvinyl chloride waterstops: Complete physical characteristics.
   2. Preformed expansion joint material: Sufficient information on each type of material for review to determine conformance of material to requirements specified.

B. Samples:
   1. Polyvinyl chloride waterstop.

C. Laboratory test reports: Indicating that average properties of polyvinyl chloride waterstops material and finish conform to requirements specified in this Section.

D. Quality control submittals:
   1. Certificates of Compliance:
      a. Written certificates that polyvinyl chloride waterstops supplied on this Project meet or exceed physical property in accordance with USACE CRD-C-572 and the requirements of this Section.
   2. Manufacturer's instructions: For materials specified in this Section that are specified to be installed with such instructions.

1.04 QUALITY ASSURANCE

A. Mock-ups:
   1. Welding demonstration:
      a. Demonstrate ability to weld acceptable joints in polyvinyl chloride waterstops before installing waterstop in forms.

B. Field joints:
   1. Polyvinyl chloride waterstops field joints: Free of misalignment, bubbles, inadequate bond, porosity, cracks, offsets, and other defects which would reduce the potential resistance of material to water pressure at any point. Replace defective joints. Remove faulty material from site and disposed of by Contractor at its own expense.

C. Inspections:
   1. Quality of welded joints will be subject to acceptance of Engineer.
   2. Polyvinyl chloride waterstop: Following defects represent partial list that will be grounds for rejection:
      a. Offsets at joints greater than 1/16 inch or 15 percent of the material thickness, at any point, whichever is less.
      b. Exterior crack at joint due to incomplete bond, which is deeper than 1/16 inch or 15 percent of material thickness, at any point, whichever is less.
      c. Any combination of offset or crack that will result in net reduction in cross section of waterstop in excess of 1/16 inch or 15 percent of material thickness, at any point, whichever is less.
      d. Misalignment of joint that will result in misalignment of waterstop in excess of 1/2 inch in 10 feet.
      e. Porosity in welded joint as evidenced by visual inspection.
      f. Bubbles or inadequate bonding.

PART 2 PRODUCTS

2.01 JOINT FILLERS

A. General:
   1. Use specific type in applications as indicated on the Drawings.
   2. Do not use scrap or recycled materials to manufacture joint fillers.

B. Hardboard:
   1. 1/8-inch minimum thickness.
   2. In accordance with ANSI A135.4 Class 2.

C. Preformed expansion joint materials:
   1. Bituminous fiber expansion joint material:
      a. Properties:
         1) Thickness: To match joint width indicated on the Drawings.
         2) Asphalt-impregnated fiber in accordance with ASTM D1751.
      b. Manufacturers: One of the following or equal:
         1) Durajoint.
         2) W.R. Meadows, SealTight Fibre Expansion Joint.
   2. Synthetic sponge rubber expansion joint material:
      a. Properties:
         1) Thickness: As recommended for width indicated on the Drawings.
         2) Material in accordance with ASTM D1752, Type I.
      b. Manufacturers: One of the following or equal:
         1) Williams Products Inc., Everlastic 1300.
         2) W.R. Meadows, SealTight Sponge Rubber.

2.02 WATERSTOPS

A. Waterstops - polyvinyl chloride (PVC):
   1. Manufactured from prime virgin polyvinyl chloride plastic compound containing the plasticizers, resins, stabilizers, and other materials necessary to meet the requirements as specified in this Section.
   2. Manufacturers: One of the following or equal:
      a. Vinylex Corp.
      b. Sika Corp., Greenstreak PVC Waterstop.
   3. Type: Ribbed waterstop:
      a. Construction joints: 6-inch wide ribbed type.
      b. Expansion joint for wall penetrations for concrete encased electrical duct banks: 6-inch ribbed type with hollow center bulb.
      c. Expansion joints: 9-inch wide ribbed type with hollow center bulb.
      d. Dumbbell-type waterstop will not be allowed unless otherwise specified or indicated on the Drawings.
      e. No scrap or reclaimed material shall be used.
   4. Properties as indicated in the following table:

Physical Characteristics	Test Method	Required Results
Specific Gravity	ASTM D792	Not less than 1.3.
Hardness	ASTM D2240	70 to 90 Type A15 Shore durometer.
Tensile Strength	ASTM D638	Not less than 2,000 pounds per square inch.
Ultimate Elongation	ASTM D638	Not less than 300 percent.

Physical Characteristics	Test Method	Required Results
Alkali Extraction	CRD-C-572	Change in weight after 7 days: Between minus 0.1 percent and plus 0.25 percent. Change in hardness after 7 days: Not more than plus 5 points.
Low Temperature Brittle Point	ASTM D746	No sign of cracking or chipping at -35 degrees Fahrenheit.
Water Absorption	ASTM D570	Not more than 0.15 percent after 24 hours.
Accelerated Extraction Test	CRD-C-572	Tensile strength: Not less than 1,600 pounds per square inch. Elongation: Not less than 280 percent.
Stiffness in Flexure	ASTM D747	Not less than 600 pounds per square inch.
Tear Resistance	ASTM D624	Not less than 225 pounds per inch.
Thickness	-	3/8 inch.
Center Bulb		
6-inch Waterstops	-	7/8 inch or 1-inch nominal outside diameter.
9-inch Waterstops	-	For expansion joints 1 inch and narrower: 1-inch nominal outside diameter. For expansion joints wider than 1 inch: 2-inch nominal outside diameter.
Allowable Tolerances		
Width	-	Plus or minus 3/16 inch.
Thickness	-	Plus or minus 1/32 inch.

PART 3 EXECUTION

3.01 INSTALLATION

A. Waterstops:
   1. General:
      a. Store waterstops so as to permit free circulation of air around waterstop material and prevent direct exposure to sunlight.
      b. Install waterstops in concrete joints where indicated on the Drawings.
      c. Carry waterstops in walls into lower slabs and join to waterstops in slabs with appropriate types of fittings.
      d. In waterbearing structures: Provide all joints with waterstops, whether indicated on the Drawings or not.
      e. Provide waterstops that are continuous.
      f. Set waterstops accurately to position and line as indicated on the Drawings.

g. Hold and securely fix edges in position at intervals of not more than 24 inches so that they do not move during placing of concrete.
h. Position the waterstop so that symmetrical halves of waterstop are equally divided between concrete pours. Center axis of waterstop shall be coincident with centerline of the joint.
i. Do not drive nails, screws, or other fasteners through waterstops in vicinity of construction joints.
j. Use wires at not more than 24 inches on centers near outer edge of waterstop to tie waterstops into position.
k. Special clips may be used in lieu of wires, at Contractor's option.
l. Terminate waterstops 3 inches from top of finish surfaces of walls and slabs unless otherwise specified or indicated on the Drawings.
m. When any waterstop is installed in concrete on one side of joint, while the other half or portion of the waterstop remains exposed to the atmosphere for more than 2 days, take suitable precautions to shade and protect exposed waterstop from direct rays of sunlight during entire exposure and until exposed portion is embedded in concrete.
n. When placing concrete at waterstops in slabs, lift edge of waterstop while placing concrete below the waterstop. Manually force waterstop against and into concrete, and then cover waterstop with fresh concrete.

2. Polyvinyl chloride waterstop:
   a. Install waterstops so that joints are watertight.
   b. Weld joints such as unions, crosses, ells, and tees, with thermostatically controlled equipment recommended by waterstop manufacturer:
      1) Do not damage material by heat sealing.
      2) Make joints by overlapping, then simultaneously cut ends of sections to be spliced so they will form smooth even joint. Heat cut ends with splicing tool until the plastic melts. Press 2 ends together until plastic cools.
      3) Maintain continuity of waterstop ribs and tubular center axis.
      4) The splices shall have tensile strength of not less than 60 percent of unspliced materials tensile strength.
   c. Butt joints of ends of 2 identical waterstop sections may be made while material is in forms.
   d. Manufacturer shall factory prefabricate joints for crosses and tees.
   e. Split-type waterstops will not be permitted except where specifically indicated on the Drawings.

B. Joints:
   1. Construct construction and expansion joints as indicated on the Drawings.
   2. Preformed expansion joint material: Fasten expansion joint strips to concrete, masonry, or forms with adhesive. No nailing will be permitted, nor shall expansion joint strips be placed without fastening.

C. Hardboard:
   1. When indicated on the Drawings, face surface of joint filler with hardboard.

2. Other facing materials may be used provided they furnish equivalent protection and material is acceptable to Engineer.
3. Hold hardboards in place with nails, waterproof adhesive, or other means acceptable to Engineer.

END OF SECTION

SECTION 03200

CONCRETE REINFORCING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Reinforcing bars.
      a. Carbon steel.
   2. Thread bars.
   3. Bar supports.
   4. Tie wires.
   5. Welded wire fabric.

1.02 REFERENCES

A. American Concrete Institute (ACI):
   1. 318 - Building Code Requirements for Structural Concrete and Commentary.
   2. SP-66 - ACI Detailing Manual.

B. American Iron and Steel Institute (AISI).

C. American Welding Society (AWS):
   1. D1.4 - Structural Welding Code - Reinforcing Steel.

D. ASTM International (ASTM):
   1. A493 - Standard Specification for Stainless Steel Wire and Wire Rods for Cold Heading and Cold Forging.
   2. A615 - Standard Specification for Deformed and Plain Carbon Steel Bars for Concrete Reinforcement.
   3. A706 - Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.
   4. A1064 - Standard Specification of Carbon-Steel wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.

E. Concrete Reinforcing Steel Institute (CRSI):
   1. Manual of Standard Practice.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Architectural concrete: Concrete surfaces that will be exposed to view in the finished work.
      a. Additionally, for purposes of this Section, includes:
         1) Concrete surfaces that are designated to receive paints or coatings.

2) Exposed concrete in open basins, channels, and similar liquid containing structures: Surfaces shall be considered exposed to view if located above a line 2 feet below the normal operating water surface elevation in that structure.

2. Bars: Reinforcement or reinforcing bars as specified in this Section.
3. Evaluation Report: Report prepared by ICC-ES, or by other testing agency acceptable to the Engineer and to the Building Official, that documents testing and review of a product to confirm that it complies with the requirements of designated ICC-ES Acceptance Criteria, and its acceptance for use under the Building Code specified in Section 01410 - Regulatory Requirements.
4. Give away bars: Reinforcing bars that are not required by the Contract Documents but are installed by the Contractor to provide support for the required reinforcing bars.
5. Wire supports: Metal reinforcing supports constructed of steel wire as specified. Includes individual high chairs, continuous high chairs, bolsters and other similar configurations and shapes.

1.04 SUBMITTALS

A. General:
   1. Submit in accordance with Section 01330 - Submittal Procedures.
   2. Changes to reinforcement in Contract Documents:
      a. Indicate in a separate letter submitted with Shop Drawings any changes to reinforcement indicated on the Drawings or specified.
      b. Such changes will not be acceptable unless the Engineer has accepted them in writing.

B. Product data:
   1. Bar supports:
      a. Wire bar supports:
         1) Schedule of support materials to be provided and locations of use.
      b. Precast concrete bar supports (“dobies”):
         1) Manufacturer's data indicating compression strength of concrete and confirming dimensions and thickness(es). height(s) to be provided for each location where used.

C. Shop Drawings:
   1. Reinforcement Shop Drawings:
      a. Submit Drawings showing bending and placement of reinforcement required by the Contract Documents.
      b. Provide CAD generated Shop Drawings.
      c. Clearly indicate structures or portions of structures covered by each Submittal.
         1) Submit reinforcement Shop Drawings for each structure as a complete package. Submittals addressing only a portion of a structure will be rejected and returned without review, unless such presentation is accepted by the Engineer in advance.
      d. Shop Drawings shall conform to the recommendations of the CRSI Manual of Standard Practice and be in accordance with ACI SP-66.
      e. Use the same bar identification marks on bending detail Drawings, placement Drawings, and shipping tags.

f. Submittals consisting solely of reinforcing bar schedules, without accompanying placement Drawings, will not be accepted unless accepted under prior written agreement with the Engineer.

2. Reinforcement placement Drawings:
   a. Clearly show placement of each bar listed in the bill of materials, including additional reinforcement at corners and openings, and other reinforcement required by details in the Contract Documents.
   b. Clearly identify locations of reinforcement with coatings (e.g., galvanized or epoxy) and with yield strength other than ASTM A615, Grade 60.
   c. Show anchor bolt locations based on anchor bolt templates for approved equipment.
   d. Show splice locations.
3. Reinforcement fabrication Drawings:
   a. If bend types or nomenclature differs from that recommended in the CRSI Manual of Standard Practice, provide details showing bend types and dimensional designations.
   b. Clearly identify reinforcement with coatings and with yield strength other than ASTM A615, Grade 60.

D. Samples (when requested by the Engineer):
1. Bar supports/wire reinforcement supports: Samples of each type of chair and bolster proposed for use. Submit with letter stating where each type will be used.
2. Precast concrete bar supports: Samples of each type of precast support proposed for use. Submit with letter stating where each will be used.

E. Test reports:
1. Certified copy of mill test for each steel used. Show physical properties and chemical analysis.
   a. Mill test reports may be submitted as record documents at the time the reinforcement from that heat of steel is shipped to the site.
   b. In such cases, submit certificates under the Shop Drawing Submittal number with the letter “R” (for record date) appended to the end (e.g., if the reinforcement was submitted as 03200-002-1, deliver the associated mill certificate as Submittal 03200-002-1R).

F. Special procedures:
1. Welding procedures in accordance with AWS D1.4 for reinforcement to be field welded.
   a. Procedures qualification record.

G. Qualifications statements:
1. Welder qualifications.

H. Closeout documents:
1. Field quality control and inspection reports.
2. Field quality assurance special inspection and testing reports.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Packing and shipping:
1. Deliver bars bundled and tagged with identifying tags.

B. Acceptance at site:
   1. Reinforcing bars: Deliver reinforcing bars lacking grade identification marks with letter containing manufacturer's guarantee of grade.

1.06 SEQUENCING AND SCHEDULING

A. Bar supports:
   1. Do not place concrete until samples and product data for bar supports have been accepted by the Engineer.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Drawings contain notes describing the size and spacing of reinforcement and its placement, details of reinforcement at wall corners and intersections, and details of extra reinforcement around openings in concrete, and other related information.

2.02 MATERIALS

A. Reinforcing bars:
   1. Provide reinforcement of the grades and quality specified, fabricated from new stock, free from excessive rust or scale, and free from unintended bends or other defects affecting its usefulness.
   2. ASTM A615 Grade 60 deformed bars, including the following requirements:
      a. Actual yield strength based on mil tests of reinforcement provided shall not exceed the minimum yield strength specified in this Section by more than 18,000 pounds per square inch.
      b. Ratio of actual ultimate tensile strength to actual tensile yield strength shall not be less than 1.25.
   3. Reinforcing bars designated or required to be welded:
      a. Low-alloy, ASTM A706 Grade 60, deformed bars.
      b. ASTM A615 Grade 60 deformed bars may be used in lieu of ASTM A706 Grade 60 if the following requirements are satisfied:
         1) Welding procedures in accordance with AWS D1.4 are submitted to the Engineer.
         2) The specific location for proposed substitution is acceptable to the Engineer.

B. Bar supports:
   1. Wire supports:
      a. All stainless steel bar supports:
         1) Conforming to CRSI Manual of Standard Practice recommendations for types and details, but custom fabricated entirely from stainless steel wire in accordance with ASTM A493, AISI Type 316.
      b. Stainless steel protected bar supports:
         1) Conforming to CRSI Manual of Standard Practice Class 2, Type B, and consisting of bright basic wire support fabricated from cold-drawn carbon steel wire with stainless steel ends attached at the bottom of each leg.

2) Stainless steel wire ends shall be in accordance with ASTM A493, AISI Type 316 and shall extend at least 3/4 inch inward from the formed surface of the concrete.

c. Bright basic wire bar supports.
1) Conforming to CRSI Manual if Standard Practice, Class 3.

2. Plastic supports:
a. Manufacturers: The following or equal:
1) Aztec Concrete Accessories.

3. Deformed steel reinforcing bar supports:
a. Fabricated of materials and to CRSI details recommended for typical reinforcement embedded in concrete and bent to dimensions required to provide specified clearances and concrete cover.

4. Precast concrete bar supports (“dobies”):
a. Pre-manufactured, precast concrete blocks with cast-in annealed steel wires, 16-gauge or heavier.
b. Compression strength of concrete: Equal to or exceeding the compression strength of the surrounding concrete.
c. Block dimensions:
1) Height to provide specified concrete cover.
2) Footprint not less than 3 inches by 3 inches, and adequate to support the weight of the reinforcement and maintain specified concrete cover without settling into the underlying surface.

C. Tie wires:
1. General use: Black annealed steel wire, 16-gauge or heavier.

D. Welded wire fabric reinforcement:
1. Material:
a. Carbon steel in accordance with ASTM A1064.
b. Provide welded wire reinforcement in flat sheet form. Rolled wire fabric is not permitted.

2. Fabric may be used in place of reinforcing bars if accepted by the Engineer:
a. Provide welded wire fabric having cross-sectional area per linear foot not less than the cross-sectional area per linear foot of reinforcing bars indicated on the Drawings.

2.03 FABRICATION

A. Shop fabrication and assembly:
1. Cut and bend bars in accordance with provisions of ACI 318 and the CRSI Manual of Standard Practice.
2. Bend bars cold. Use bending collars to develop the recommended bend radius.
3. Provide bars free from defects and kinks and from bends not indicated on the Drawings.
4. Circumferential and radiused reinforcement: Roll to the radius required for its location in the structure before installation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions:
   1. Reinforcing bars and welded wire reinforcement:
      a. Verify that reinforcement is new stock, free from rust scale, loose mill scale, excessive rust, dirt, oil, and other coatings that will adversely affect bonding capacity when placed in the Work.
   2. Welded wire fabric:
      a. Verify that sheets are not curled or kinked before or after installation.

3.02 PREPARATION

A. Surface preparation:
   1. Reinforcing bars - uncoated:
      a. Clean reinforcement of concrete, dirt, oil, and other coatings that will adversely affect bond before embedding bars in subsequent concrete placements.
      b. Thin coating of red rust resulting from short exposure will not be considered objectionable. Thoroughly clean bars having rust scale, loose mill scale, or thick rust coat.
      c. Partially embedded reinforcement: Remove concrete or other deleterious coatings from dowels and other projecting bars by wire brushing or sandblasting before bars are embedded in subsequent concrete placements.

3.03 INSTALLATION

A. Reinforcing bars: General:
   1. Field-cutting of reinforcing bars is not permitted.

Table 1. Reinforcement Placing Tolerances

Member	Tolerance on Reinforcement Location(1)	Tolerance on Minimum Concrete Cover(1,2)
Slabs, beams, walls and columns except as noted below:		
10 inches thick and less	± 3/8 inch	- 3/8 inch
More than 10 inches thick	± 1/2 inch	- 1/2 inch
Formed soffits	As noted above	- 1/4 inch
Longitudinal location of bends and ends of reinforcement:		
Conditions not listed below	± 2 inches	- 1/2 inch
At discontinuous ends of brackets and corbels	± 1/2 inch	- 1/4 inch
At discontinuous ends of other members	± 1 inch	- 1/2 inch

Notes:
(1) ± indicates “plus or minus;” - indicates “minus;” + indicates “plus.”
(2) Tolerance on cover is limited as noted but decrease in cover shall not exceed one third of the minimum cover indicated on the Drawings.

2. Field-bending of reinforcing bars, including straightening and rebending, is not permitted.

B. Placing reinforcing bars:
   1. Accurately place bars to meet position and cover requirements indicated on the Drawings and specified. Secure bars in position.
   2. Tolerances for placement and minimum concrete cover: As listed in Table 1.
   3. Spacing between bars:
      a. Minimum clear spacing between bars in a layer:
         1) As indicated on the Drawings, but not less than the larger of 1.5 times the bar diameter or 1-1/2 inches.
      b. Minimum clear spacing between bars in 2 or more parallel layers:
         1) Place bars in upper layers directly above bars in lower layers.
         2) Minimum spacing between layers: As indicated on the Drawings, but not less than the larger of 1.5 times the bar diameter or 1-1/2 inches.
      c. Limits on minimum clear spacing between bars also applies to the clear spacing between a lap splice and the adjacent bars and/or lap splices.
   4. Lap splices for bars:
      a. Lap splice locations and lap splice lengths: As indicated on the Drawings. Where lap lengths are not indicated, provide in accordance with ACI 318.
      b. Unless otherwise specifically indicated on the Drawings (and noted as “non-contact lap splice”), install bars at lap splices in contact with each other and fasten together with tie wire.
      c. Where bars are to be lap spliced at concrete joints, ensure that bars project from the first concrete placement a length equal to or greater than minimum lap splice length indicated on the Drawings.
      d. Stagger lap splices where indicated on the Drawings.
      e. Where lap splice lengths are not indicated on the Drawings, provide lap splice lengths in accordance with ACI 318.

C. Reinforcing supports:
   1. Provide supports of sufficient numbers, sizes, and locations to maintain concrete cover, to prevent sagging and shifting, and to support loads during construction without displacement and without gouging or indentation into forming surfaces.
      a. Quantities and locations of supports shall not be less than those indicated in ACI SP-66 and the CRSI Manual of Standard Practice.
   2. Do not use brick, concrete masonry units, concrete spalls, rocks, wood, or similar materials for supporting reinforcement.
   3. Do not use “give away bars” that have less cover than that required by the Contract Documents. Do not adjust the location of reinforcement required by the Contract Documents to provide cover for give away bars.
   4. Provide bar supports of height required to maintain the clear concrete cover indicated on the Drawings.
   5. Provide bar supports at formed vertical faces to maintain the clear concrete cover indicated on the Drawings.
   6. Schedule of reinforcement support materials: Provide bar supports as indicated in Table 2.

Table 2. Reinforcement Support Materials		
Case	**Location**	**Material**
a.	Concrete placed over earth and concrete seal slabs (“mud mats”)	Precast concrete bar supports
b.	Concrete placed against forms and exposed to water or wastewater process liquids (whether or not such concrete received additional linings or coatings)	All stainless steel bar supports.
c.	Concrete placed against forms and exposed to earth, weather, frequent washdown, or groundwater in the finished work	All stainless steel bar supports.
d.	Concrete placed against forms and exposed to interior equipment/piping areas in the finished work	All stainless steel bar supports.
e.	Between mats of reinforcement, and fully embedded within a concrete member	Bright basic wire bars supports, or deformed steel reinforcing bars.

D. Tying of reinforcing:
   1. Fasten reinforcement securely in place with wire ties.
   2. Tie reinforcement at spacings sufficient to prevent shifting.
      a. Provide at least 3 ties in each bar length. (Does not apply to dowel lap splices or to bars shorter than 4 feet, unless necessary for rigidity).
   3. Tie slab bars at every intersection around perimeter of slab.
   4. Tie wall bars and slab bar intersections other than around perimeter at not less than every fourth intersection, but at not more than the spacing indicated in Table 3:

Table 3. Maximum Spacing of Tie Wires for Reinforcement		
Bar Size	**Slab Bar Spacing (inches)**	**Wall Bar Spacing (inches)**
Bars Number 5 and Smaller	60	48
Bars Number 6 through Number 9	96	60
Bars Number 10 and Number 11	120	96

   5. After tying:
      a. Bend ends of wires inward towards the center of the concrete section. Minimum concrete cover for tie wires shall be the same as cover requirements for reinforcement.
      b. Remove tie wire clippings from inside forms before placing concrete.

E. Welded wire fabric reinforcement:
   1. Install only where indicated on the Drawings or accepted in advance by the Engineer.
   2. Install necessary tie wires, spacing chairs, and supports to keep welded wire fabric at its designated position in the concrete section while concrete is being placed.
   3. Straighten welded wire fabric to make sheets flat in the Work.

4. Do not allow wire fabric to drape between supports unless such a configuration is specifically indicated on the Drawings.
    a. If fabric is displaced during placement of concrete, make provisions to restore it to the designated location using methods acceptable to the Engineer.
5. Bend welded wire fabric as indicated on the Drawings or required to fit Work.
6. Lap splice welded wire fabric as indicated on the Drawings.
    a. If lap splice length is not indicated, splice in accordance with ACI 318, but not less than 1 1/2 courses of fabric or 8 inches minimum. Tie laps at ends and at not more than 12 inches on center.

F. Welding reinforcing bars:
1. Weld only where indicated on the Drawings or where acceptance is received from the Engineer prior to welding.
2. Perform welding in accordance with AWS D1.4 and welding procedures accepted by the Engineer.
    a. Conform to requirements for minimum preheat and interpass temperatures.
3. Submit:
    a. Welding procedures specification.
    b. Procedures qualification record.
    c. Welder qualification test record.
4. Do not tack weld reinforcing bars except where specifically indicated on the Drawings.

3.04 FIELD QUALITY CONTROL

A. Provide quality control for the Work of this Section as specified in Section 01450 - Quality Control.

B. Field inspections and testing:
1. Submit records of inspections and testing to the Engineer in electronic format within 24 hours after completion.

3.05 FIELD QUALITY ASSURANCE

A. Provide quality assurance as specified in Section 01450 - Quality Control.

B. Special inspections and tests:
1. Provide as specified in Section 01455 - Regulatory Quality Assurance.
2. Frequency of inspections:
    a. Unless otherwise indicated on the Drawings or in this Section, provide periodic special inspection as required by the Building Code specified in Section 01410 - Regulatory Requirements.
3. Preparation:
    a. Review Drawings and Specification for the Work to be observed.
    b. Review approved Submittals and Shop Drawings.
4. Inspections: Special inspection shall include, but is not limited to, the following items:
    a. Reinforcement: General:
        1) Type (material) and location of reinforcement supports.
        2) Bar material/steel grade and bar size.

3) Location, placement, and spacing of bars.
4) Clear concrete cover over reinforcement.
5) Lap splice: Location and lap length. Bars within tolerances for contact (unless non-contact splice is indicated on the Drawings).
6) Bar hooks and development lengths embedded within concrete sections as indicated on the Drawings.
7) Reinforcement tired in position and tie wire legs turned inward toward the center of the concrete section.

b. Reinforcement: Welding:
1) Inspector qualification and inspections shall be in accordance with the requirements of AWS D1.4.
2) Provide periodic inspection for:
a) Weldability of reinforcement other than ASTM A706.
b) Single pass fillet welds with thickness less than or equal to 5/16 inch.
3) Provide continuous inspection for:
a) Other welds.
b) Welds at mechanical reinforcing bar couplers and end anchors.
4) In addition to visual inspection, Owner may inspect reinforcing bar welds by other methods, including radiographic inspection.

5. Records of inspections:
a. Provide a written record of each inspection using forms acceptable to the Engineer and to the Building Official.
b. Submit electronic copies of inspection reports to the Engineer within 24 hours after completion of inspections.

3.06 NON-CONFORMING WORK

A. Before placing concrete, adjust or remove and re-install reinforcement to conform to the requirements of the Contract Documents.

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Cast-in-place concrete.

B. The requirements of this Section require advance planning for preparation and testing of trial batches. Review the mix design and testing requirements carefully, and schedule preparations and testing with sufficient time to complete tests, to obtain the Engineer's review of mixes and testing results, and to complete revisions and re-testing if required.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Alkali: The sum of sodium oxide and potassium oxide calculated as sodium oxide.
   2. Alkali load: Amount of alkalies contributed by the Portland cement in a concrete mixture, expressed in pounds per cubic yard (lb/yd^3) and calculated by multiplying the Portland cement content of the concrete in lb/yd^3 by the alkali content of the Portland cement, or the Portland cement portion of a blended cement, divided by 100.
   3. Architectural concrete: Concrete surfaces that will be exposed to view in the finished work.
      a. For purposes of this Section, includes only those surfaces that receive paint or coatings.
      b. Exposed concrete surfaces in open basins, channels, and similar liquid containing structures: Surfaces will be considered exposed to view if located above the water line as defined in Section 03366 - Concrete Finishes.
      c. Exterior concrete surfaces with portions above and below grade: Surface will be considered exposed to view of located above the grade line as defined in Section 03366 - Concrete Finishes.
   4. Average daily temperature: Calculated by summing hourly measurements of air temperature in the shade at the face of the concrete and dividing that sum by 24. In calculating the sum of the temperatures recorded, any measurement less than 50 degrees Fahrenheit shall be recorded as 0 degrees Fahrenheit and included in the sum.
   5. Cementitious materials: Portland cement and supplementary cementitious materials.
   6. Class of concrete: Refers to a mix with characteristics, proportions, and constituents (including a specific combination of admixtures) as specified in this Section.
      a. Any change in the source or characteristics of constituent materials, in the proportions of materials, or in the admixtures included in a mix shall be considered as creating a new and separate class of concrete.
      b. Any mix to be placed by pumping shall be considered as creating a new and separate class of concrete.
   7. Cold weather: Includes one or more of the following conditions:
      a. Current air temperature is 45 degrees Fahrenheit and falling.
      b. Air temperature during the first 24 hours after placement is expected to fall into the range of 45 degrees Fahrenheit to 40 degrees Fahrenheit.
      c. A period when, for more than 3 consecutive days, the following conditions exist:
         1) The average daily air temperature drops below 40 degrees Fahrenheit.

2) The air temperature is not greater than 50 degrees Fahrenheit for more than one-half of any consecutive 24-hour period.

8. Cold weather concreting: Operations for placing, finishing, curing, and protecting concrete during cold weather.
9. Green concrete: Concrete that has not yet achieved 100 percent of the minimum specified compressive strength, f'c, for that mix.
10. Hairline crack: Crack with a crack width of less than 4 thousandths of an inch (0.004 inches).
11. Hot weather: Any combination of ambient temperature, concrete temperature, relative humidity, wind speed, and solar radiation intensity that creates conditions that will evaporate water from a free concrete surface at a rate equal to or greater than 0.2 pounds per square foot per hour as determined by the Menzel Formula and nomograph published in ACI PRC-305 and in this Section, Attachment A - Menzel Formula and Nomograph.
12. Hot weather concreting: Operations for placing, finishing, curing, and protecting concrete during hot weather.
13. Paste content: The total concrete volume minus the volume of aggregate, expressed as a percentage of total volume. Paste volume includes volume of cementitious materials, water, air, admixtures materials, and any fibers.
14. Supplemental cementitious material: Inorganic material such as fly ash, natural pozzolans, silica fume, or slag cement that reacts pozzolanically or hydraulically.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Concrete mix designs.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. General:
   1. Data for concrete mixes and mix constituents supplied to the Work shall be coordinated through a single supplier.
   2. A maximum of 2 mix designs will be reviewed by the Engineer for each class of concrete required.
      a. Review of additional mix designs shall be at the expense of the Contractor.

C. Product data:
   1. Submit data completely describing products and demonstrating compliance with the requirements of this Section.
   2. Data for all products in the mix for each class of concrete shall be submitted concurrently with that mix design.
   3. Where products conforming to NSF 61 are required, submit evidence of testing and listing under NSF 61 for use in direct contact with potable water. Testing and listing shall be by a nationally recognized agency acceptable to the Engineer.
   4. Admixtures:

a. For each admixture included in concrete mixes, submit manufacturer's product data demonstrating compliance with standards specified.
b. If air entraining admixture requires test method other than ASTM C173 to accurately determine air content, make special note of requirements in Submittal.

5. Curing compound: Submit complete data on proposed compound.

D. Delegated Design Submittals:
1. Concrete mix designs:
a. Submit full details, including mix design calculations and plots, for concrete mixes proposed for use for each class of concrete.
b. Include mix design calculations of proportions by both weight and volume.
c. Determine and include the alkali load of the proposed mix.
d. Include information on correction of batching for varying moisture contents of fine aggregate.
e. Submit source quality test records with mix design Submittal.
f. Provide calculations demonstrating that the mixes proposed provide the required average compression strength of concrete (f'cr) based on source quality test records.
g. For each Class A mix design submitted, plot the mix design Attachment B - Coarseness Factor Chart and submit.
h. For each Class A mix design submitted, plot the combined aggregate gradation on the chart Attachment C - Combined Aggregate Gradation Chart and submit.

E. Concrete mixes - Trial batches:
1. Drying shrinkage test results.
a. Submit results of testing.
2. Compression strength test results.
a. Submit results of testing. Provide data for each cylinder tested.
b. Submit data indicating trial batch mix designator, slump, and specimen number for each test cylinder.
c. Submit test specimens from compression strength tests for trial batches.
1) Using indelible marker, clearly label each cylinder with concrete class, trail batch number, and specimen number.
3. If there is any change in suppliers or in quality of concrete mix constituents, submit new test data.

F. Test reports:
1. Dated not more than 24 months prior to the date of Submittal.
2. Aggregate:
a. Submit certified copies of commercial laboratory tests proposed for use in concrete.
b. Sieve analyses:
1) During construction, submit sieve analyses of coarse, fine, and combined aggregates used any time there is a change in supplier, or a significant change in the character and/or grading of materials, and when requested by the Engineer.
c. Aggregates - coarse:
1) Physical properties:
a) Sieve analysis.

b) Percentage of particles having flat and/or elongated characteristics.
c) Abrasion loss.
d) Soundness.

2) Deleterious substances:
a) Clay lumps and friable particles content.
b) Materials finer than No. 200 sieve (percentage).
c) Shale and chert content.
d) Coal and lignite content.

3) Alkali reactivity.

4) Deleterious substances:
a) Clay lumps and friable particles content.
b) Chert and shale content.
c) Coal and lignite content.
d) Materials finer than No. 200 sieve.

5) Alkali reactivity.

d. Aggregates - Fine:
1) Physical properties:
a) Sieve analysis and fineness modulus.
b) Soundness.

2) Deleterious substances:
a) Clay lumps and friable particles (percentage).
b) Materials finer than No. 200 sieve (percentage).
c) Coal and lignite (percentage).
d) Shale and chert.
e) Organic impurities (“Color” as determined by ASTM C40).

3) Alkali reactivity.

e. Aggregates - Combined:
1) Test combined gradation for the following sieve sizes: 1.5 inches, 1 inch, 3/4 inch, 1/2 inch, 3/8 inch, No. 4, No. 8, No. 16, No. 30, No. 100, No. 200.
2) Bulk density in accordance with ASTM C29.
3) Void content in accordance with ASTM C29.
4) Submit at:
a) Initial mixture design Submittal.
b) Intervals of not more than 4 weeks.
c) Any time there is a change in character or grading of constituent materials.
d) When requested by the Engineer.

3. Cement:
a. Mill tests, including alkali content measured as equivalent alkalies, for each shipment of cement included in the Work.
1) During construction, submit mill certificates for cement being used at intervals of not more than 90 days, any time there is a change in supplier or a significant change in the character of the materials, and when requested by the Engineer.

4. Supplemental cementitious material:
a. Fly ash: Identify source and provide testing results to demonstrate compliance with requirements of ASTM C618 and this Section.

1) Include the Supplier's report certifying the total alkali content of the material, expressed as equivalent percentage of sodium oxide (Na_2Oe).

b. Slag cement: Identify source and provide testing results to demonstrate compliance with requirements of ASTM C989 and this Section.

c. Silica fume: Identify source and provide testing results to demonstrate compliance with requirements of ASTM C1240 and this Section.

G. Certificates:

1. Current NRMCA certification for all plants and trucks that will be used to supply concrete.

H. Source Quality Control Submittals:

1. Truck batch tickets for each load of concrete delivered to the site, whether accepted or rejected.
2. Concrete supplier's quality control plan. Include the following elements, at a minimum:
   a. Names and qualifications of key quality control personnel:
      1) Quality control manager.
      2) Testing and inspection personnel.
   b. Names and qualifications of testing laboratories:
      1) Each laboratory shall hold current accreditation from the AASHTO Accreditation Program, or other accreditation program acceptable to the Engineer, for each test performed.
   c. Example forms for: Inspection reports, certificates of compliance, and test results.
   d. Quality control procedures: Method and frequency of performing each procedure, including inspections and materials testing. At a minimum, the plan shall include:
      1) Daily testing of aggregate gradation.
      2) Monthly testing of cement quality.
      3) Monthly testing of fly ash quality.
   e. Procedures to control quality characteristics, including standard procedures to address properties outside the specified operating limits, and example reports to document non-conformances and corrective actions taken. Include procedure for notifying the Contractor and Engineer of non-conformances.
   f. Procedures for verifying that:
      1) Materials are properly stored during concrete batching operations.
      2) Batch plants have the ability to maintain concrete consistency during periods of extreme heat and of low temperatures.
      3) Admixtures are dispensed in the correct dosages within the accuracy requirements specified.
      4) Delivery trucks have a valid NRMCA certification card.
   g. Procedures for verifying that weighmaster certificate for each load of concrete shows:
      1) Cement and supplementary materials are from sources designated in the approved Submittals.
      2) Concrete as-batched complies with the constituent weights designated in the approved Submittals.
      3) Corrections for aggregate moisture are being correctly applied.

4) Any mix water withheld from the batch.

h. Procedures for visually inspecting concrete during discharge.

I. Field Quality Control Submittals:
1. Contractor's notifications of readiness for concrete placement.
2. Contractor's reports of field quality control testing.
a. Include with each report the concrete batch ticket number and identification numbers for associated cylinders used for compressive strength testing.
b. Testing results for slump, temperature, unit weight, and air entrainment.
c. Testing results for compressive strength at 7 and 28 days, and for any compressive strength tests after 28 days.
d. Note on batch ticket the amount of water that was withheld and the maximum amount that can be added on site as "Max add water." Record on the batch ticket the volume of water actually added at site.
e. Note on the batch ticket the concrete mix classification as defined in Table 3 of this Section.

J. Special procedure Submittals:
1. Sequence of concrete placing:
a. Submit proposed sequence of placing concrete showing proposed beginning and ending of individual placements. Submittal shall include plans sections and details to address all pours.
2. Cold weather concreting plan.
3. Hot weather concreting plan.
4. Repair of defective concrete: Submit mix design for repair materials to be used.

1.06 QUALITY ASSURANCE

A. Pre-installation meetings:
1. Schedule and conduct pre-installation meeting at least 10 days prior to batching and placing of concrete.
a. Provide additional meetings if necessary, to discuss specific concrete Submittals, mixes, or placing and curing conditions.
b. Notify the Engineer of location and time of each conference.
2. Required attendees:
a. Contractor, including Contractor's superintendent and key personnel.
b. Concrete supplier.
c. Technical representative(s) of supplier(s) of concrete admixtures.
d. Subcontractor(s) providing pumping, placing, finishing, and curing.
e. Subcontractor(s) providing embedded items (structural embedded plates, electrical conduit).
f. Sampling and testing personnel.
g. Engineer.
h. On-site inspectors representing the Engineer.
i. Other persons deemed by the Engineer and the Contractor to be critical to the quality and efficiency of the Work.
3. Agenda:
a. Review of requirements of Drawings and Specifications.
b. Project and product safety requirements.
c. Discussion of points of interface and coordination between various trades or products to be used in the Work.

d. Contractor's schedule for cast-in-place concrete work.
e. Mix designs, mix tests, and Submittals.
f. Admixture types, dosing, performance, requirements for monitoring, and limits on dosing or re-dosing at the site.
g. Placement and consolidation methods, techniques, and equipment and the effects of those methods on form pressures.
h. Slump and limits on placing time or conditions to maintain placeability.
    1) Field adjustment of slump and air content.
i. Procedures for finishing, curing, and retention of moisture during these operations.
j. Procedures and protection for hot and cold weather conditions.
k. Requirements and coordination for inspections.
    1) Responsibility for test specimen curing and storage.
    2) Distribution of test reports.
l. Other Specification requirements requiring coordination between parties to the Work.

4. Prepare and submit minutes of the pre-installation meeting as specified in Section 01312 - Project Meetings.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Packing and shipping:
1. Deliver, store, and handle concrete materials in a manner that prevents damage and inclusion of foreign substances.
2. Deliver and store packaged materials in original containers until ready for use.
3. Deliver aggregate to mixing site and handle in such manner that variations in moisture content will not interfere with steady production of concrete of specified degree of uniformity and slump.
4. For Class M concrete:
    a. Store coarse and fine aggregate in covered area. Shade aggregates to prevent heating by direct sunlight.
    b. Store cementitious materials in covered, shaded silos to prevent heating by direct sunlight.

B. Acceptance at site:
1. Reject material containers or materials showing evidence of water or other damage.
2. Concrete mixes: Do not accept or incorporate into the Work concrete mixes that do not comply with the specified requirements for water content, slump, temperature, and air content.

1.08 PROJECT CONDITIONS

A. Cold weather concreting: During periods of cold weather as defined in this Section, implement cold weather concreting procedures in this Section.

B. Hot weather concreting: During periods of hot weather as defined in this Section, implement hot weather concreting procedures in this Section.

1.09 SEQUENCING AND SCHEDULING

A. Schedule placing of concrete in a manner that completes all placing operations from one construction, contraction, or expansion joint to another construction, contraction, or expansion joint.

B. Joints at each end of the placement shall be as indicated on the Drawings, or as identified and accepted in advance by the Engineer.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide concrete with a homogeneous mixture, that, when hardened, will have required strength, watertightness, and durability.

B. Provide a workable, low-shrinkage concrete mix that maximizes aggregate content and minimizes paste content.

C. Performance requirements:
   1. General:
      a. Except as otherwise specified, provide concrete composed of Portland cement, supplemental cementitious materials, aggregate, admixtures and water, proportioned and mixed to produce a plastic, workable mixture in accordance with requirements of this Section, and suitable to specific conditions of placement.
      b. Proportion aggregates to produce a gradation of aggregate that combines fine and coarse aggregate in well-graded proportions that maximizes the aggregate content and minimizes the paste content of the mix. Gradation should maximize long-term durability and strength of the concrete mixture.
      c. Durability requirements will be deemed to be satisfied when:
         1) Mixture is proportioned with a well-graded combined aggregate.
         2) Specified water-cement ratio is satisfied.
         3) Concrete contains the specified range of air content.
         4) Maximum specified paste content is satisfied.
      d. Proportion materials in a manner that will secure the lowest cement content, water-cementious materials ratio, and paste volume that is consistent with good workability that provides a plastic and cohesive mixture, and that provides a slump that is within the specified range.
      e. Construction and expansion joints have been positioned in structures as indicated on the Drawings, and curing methods have been specified, for purpose of to reduce the number and size of cracks, resulting from normal expansion and contraction expected from the concrete mixes specified.
      f. Remove and replace, or repair as specified in this Section, non-conforming work and surfaces with cracks, voids and honeycombs, or surface wetness.
   2. Workmanship and methods: Provide concrete work, including detailing of reinforcing, conforming with best standard practices and as set forth in ACI CODE-318, and ACI CODE-350.

2.02 MATERIALS - GENERAL

A. Water and ice:
   1. Water for concrete mixes, for washing aggregate, and for curing concrete: Clean and free from oil and deleterious amounts of alkali, acid, organic matter, or other substances from a municipal potable water source.
   2. Water from non-potable sources shall comply with the limits of ACI CODE-350, Table 3.4.3.5. Water from non-potable sources shall comply with the optional chemical limits of ASTM C1602.
   3. Do not use water from concrete production operations, or combined water from concrete production operations as defined in ASTM C1602.

2.03 MATERIALS - CONCRETE MIX CONSTITUENTS

A. Water and ice:
   1. As specified in the preceding paragraphs.

B. Cementitious materials:
   1. Portland cement:
      a. In accordance with ASTM C150.
         1) Type II.
      b. Single source: To provide uniformity of appearance, for each structure use only one source, type, and brand of Portland cement for walls and slabs that will be exposed in the finished work.
         1) Confirm adequate supply of cement over duration of project before making trial batches or beginning concrete placements.
      c. Cement for finishing: Provide cement from the same source and of the same type as concrete to be finished or repaired.
      d. In accordance with NSF 61.

C. Supplementary cementitious materials:
   1. Fly ash:
      a. Class C or Class F fly ash in accordance with the requirements of ASTM C618, except as modified in this Section.
         1) Class C may be used in concrete made with Type II Portland cement.
         2) Class F required if used in concrete mixes containing aggregates classified as potentially reactive based on ASTM C1293 or ASTM C1260.
            a) CaO content: Less than 18 percent.
      b. Loss on ignition: Not exceeding 3 percent.
      c. In accordance with NSF 61.
      d. Replace Portland cement at ratio of 1.0 pound fly ash for each pound of cement, up to minimum and maximum replacement as specified in “Requirements for Mix Proportioning.”
   2. Slag cement:
      a. Grade 80, 100, or 120 in accordance with ASTM C989, except as modified below:
         1) Fineness: Amount retained on a No. 325 sieve: 20 percent maximum.
         2) Total alkalies Na2O + 0.658 K2O:
            a) Minimum: 0.60 percent.

b) Maximum: 0.90 percent.
b. In accordance with NSF 61.

3. Silica fume:
   a. Provide silica fume in accordance with ASTM C1240, except as modified below:
      1) Moisture content: 3 percent maximum.
      2) Loss on ignition: 6 percent maximum.
      3) Reactivity with cement alkalies: 80 percent minimum.
      4) Sulfate resistance: Maximum 0.10 percent expansion at 6 months.
   b. In accordance with NSF 61.

D. Admixtures:
   1. General:
      a. Do not include admixtures, other than those specified, unless written acceptance has been obtained from the Engineer during Submittal of mix designs.
      b. Compatible with concrete constituents and with other admixtures.
         1) All admixtures in a given mix shall be products of the same manufacturer to ensure compatibility.
         2) Manufacturers: One of the following or equal.
            a) Euclid Chemical.
            b) GCP Applied Technologies (formerly W.R. Grace).
            c) Master Builders Solutions/Sika.
            d) Sika Corp.
      c. Tested and listed under NSF 61 for use in direct contact with potable water.
      d. Do not use admixtures containing chlorides, calculated as chloride ion, in excess of 0.5 percent by weight of cement.
      e. Use in accordance with manufacturer's recommendations. Add each admixture to concrete mix separately.
      f. Admixtures used shall be the same products used in concrete trial batches, or the same products used in concrete represented by submitted field test records.
   2. Air entraining admixture (AEA):
      a. In accordance with ASTM C260 and dosed to provide entrained air percentages specified in this Section.
      b. Provides entrained air as bubbles, evenly dispersed at the time of placement and during curing.
   3. Water reducing admixture (WRA):
      a. May be used at the Contractor's option.
      b. Conforming to ASTM C494, Type A (water-reducing).
         1) ASTM C494, Type D (water-reducing and retarding) may be used during periods of hot weather with prior acceptance by the Engineer.
      c. Not containing air-entraining agents.
      d. Liquid form before adding to the concrete mix.
   4. High-range water reducing admixtures ("super-plasticizers") (HRWR):
      a. Not permitted without acceptance by the Engineer.
   5. Shrinkage reducing admixture (SRA):
      a. May be used at the Contractor's option.
         1) Provide shrinkage reducing admixture in sufficient dosage so as to produce shrinkage within the limits specified.

b. Not containing expansive agents.
c. In accordance with ASTM C494, Type S (specific performance).
d. One of the following or equal:
1) Euclid Chemical: Eucon SRA Series.
2) GCP Applied Technologies: Eclipse Series.
3) Master Builders Solutions/Sika: SRA Series.

6. Set-controlling admixtures:
a. Shall not be used without prior acceptance from the Engineer.

E. Coloring admixtures:
1. Conduit encasement coloring agent:
a. Red color concrete used for encasement of electrical ducts, conduits, and similar type items.
b. Manufacturers: One of the following or equal:
1) Davis Co., #100 Utility Red.
2) Euclid Chemical Co., Increte Division, “Colorcrete Brick Red”.
3) I. Reiss Co., Inc., equivalent product.
c. Conduit encasement concrete: Mix into each cubic yard of concrete 10 pounds of coloring agent.

F. Aggregate:
1. General:
a. Provide concrete aggregates that are sound, graded as specified, and free of deleterious material in excess of allowable amounts specified.
b. Provide aggregates to produce in place concrete with unit weight as follows:
1) Normal weight concrete: Not less than 140 pounds per cubic foot.
c. Do not use aggregate made from recycled materials such as crushed and screened hydraulic-cement concrete, brick, and other construction materials.
d. Do not use aggregate recycled from fresh concrete returned to the batching facility.
e. In accordance with NSF 61.
2. Alkali-silica reactivity:
a. Provide aggregate classified as aggregate-reactivity class of R0 in accordance with ASTM C1778 with expansion not greater than 0.10 percent at 14 days when tested in accordance with ASTM C1260, and not greater than 0.04 percent at 1 year when tested in accordance with ASTM C1293.
3. Fine aggregate:
a. Material graded such that 95 to 100 percent of material passes the No. 4 (4.75 mm) sieve, when sampled in accordance with ASTM D75 and D3665, and tested in accordance with ASTM C136.
b. Provide fine aggregate consisting of clean, natural sand, or sand prepared from crushed stone or crushed gravel.
c. In accordance with ASTM C33 requirements for grading, deleterious substances, soundness, and alkali reactivity, except as modified in the following paragraphs:
1) Grading: For sieve sizes listed in ASTM C33 for fine aggregate, not more than 45 percent passing any sieve and retained on the next consecutive sieve.

2) Deleterious substances: Not in excess of the percentages by weight specified in Table 1 of this Section.

Table 1: Fine Aggregate, Limits on Deleterious Substances		
Item	**Test Method**	**Percent (maximum)**
Materials finer than No. 200 sieve(2)	ASTM C117	3.00(2)
Clay lumps and friable particles	ASTM C142	1.00
Lightweight particles (SG < 2.40)	ASTM C123	1.00
• Chert or shale(1)	ASTM C295	1.00(1)
Coal and lignite	ASTM C123	0.50

Notes:

(1) ASTM C123 tests for particles in the sample having a specific gravity less than 2.40. ASTM C295 is used to identify which of those lightweight particles are chert, shale, or coal and lignite. If testing under ASTM C123 indicates a combined percentage of lightweight particles (sum of shale, chert, coal and lignite) not greater than 1.00, testing under ASTM C295 will not be required.

(2) For manufactured sand, if material finer than the No. 200 sieve consists of crusher dust and the aggregate is essentially free of clay or shale, maximum percentage may be increased to 5.0 percent.

3) Organic impurities: Free of injurious amounts of organic matter and producing a supernatant liquid with color not darker than “standard color” when tested in accordance with ASTM C40.

4) Soundness: In accordance with requirements of ASTM C33 when tested in accordance with ASTM C88 using sodium sulfite solution.

4. Coarse aggregate:
   a. Materials graded such that not more than 10 percent of material passes the 3/8-inch sieve, when sampled in accordance with ASTM D75 and D3665 and tested in accordance with ASTM C136.
   b. Consisting of gravel, crushed gravel, crushed stone, or a combination of these materials having clean, hard, durable particles free from calcareous coatings, organic matter, or other deleterious substances.
   c. Conforming to the requirements of ASTM C33, Class 4S for physical properties, deleterious substances, and alkali reactivity, except as modified in the following paragraphs:
      1) Grading:
         a) Size number as specified in ASTM C33, and as indicated in Table 3 of this Section, except as otherwise specified or accepted by the Engineer.
         b) Weights of flat or elongated particles (particles having a length greater than 3 times average width or thickness) not exceeding 15 percent when tested in accordance with ASTM D4791.
      2) Deleterious substances: Not in excess of the percentages by weight specified in Table 2 of this Section and having total of all deleterious substances exceeding 2 percent.

Table 2: Coarse Aggregate, Limits on Impurities		
Item	**Test Method**	**Percent (maximum)**
Clay lumps and friable particles	ASTM C142	0.50
Lightweight particles (SG < 2.40)	ASTM C123	1.25
• Chert or shale(1)	ASTM C295	1.00(1)
Materials finer than No. 200 sieve	ASTM C117	0.50(2)
Coal and lignite	ASTM C123	0.25

Notes:

(1) ASTM C123 tests for particles in the sample having a specific gravity less than 2.40. ASTM C295 is used to identify which of those lightweight particles are chert, shale, or coal and lignite. If testing under ASTM C123 indicates a combined percentage (sum of shale, chert, coal and lignite) not greater than 1.25, testing under ASTM C295 will not be required.

(2) When material finer than No. 200 sieve consists of crusher dust, maximum percentage may be increased to 1.00 percent. When mix design complies with provisions of ASTM C33, Table 4, footnote C, the maximum percentage may be increased in accordance with the equation in footnote C, up to a maximum of 1.5 percent.

3) Abrasion loss: Loss not greater than 45 percent after 500 revolutions when tested in accordance with ASTM C131.
4) Soundness: Loss not greater than 10 percent when tested in accordance with ASTM C88 using sodium sulfate solution.

2.04 MATERIALS FOR PLACING, CURING AND FINISHING

A. General:
   1. Materials shall be compatible with concrete and with other materials.
   2. Materials for placing, curing and finishing concrete that will be in contact with potable water:
      a. Non-toxic and shall not impart taste or odor to the water.
      b. Listed under NSF 61 for use in contact with potable water.

B. Cement grout:
   1. Use: For spreading over surface of construction and cold joints in concrete before placing additional concrete above those joints.
   2. As specified in Section 03600 - Grouting.

C. Concrete sealer:
   1. As specified in Section 03366 - Concrete Finishes.
   2. Not for use in water-containment structures.

D. Evaporation retardant:
   1. Tested and listed under NSF 61 for use direct contact with potable water.
   2. Use: For mitigating surface moisture evaporation from freshly placed concrete during rapid drying conditions. Placed after screeding.
   3. Waterborne, monomolecular, spray-applied compound, with fugitive dye to indicate coverage.
   4. Manufacturers: One of the following or equal:
      a. Euclid Chemical Co., Eucobar.
      b. Master Builders Solutions/Sika, MasterKure ER 50.

E. Nonslip abrasive:
   1. Aluminum oxide abrasive size 8/16, having structure of hard aggregate that is, homogenous, nonglazing, rustproof, and unaffected by freezing, moisture, or cleaning compounds.
   2. Manufacturers: One of the following or equal:
      a. Abrasive Materials, Inc.
      b. Exolon Co.
      c. “Non-Slip Aggregate”, Euclid Chemical Co.

F. Plastic membrane for curing:
   1. Polyethylene film: In accordance with ASTM C171.
   2. Properties:
      a. Color: White.
      b. Thickness: Nominal thickness of polyethylene film shall not be less than 0.0040 inches when measured in accordance with ASTM D2103. Thickness of polyethylene film at any point shall not be less than 0.0030 inches.
      c. Loss of moisture: Not exceeding 0.055 grams per square centimeter of surface when tested in accordance with ASTM C156.

G. Sprayed membrane curing compound:
   1. Tested and listed under NSF 61 for use direct contact with potable water.
   2. Combination curing and sealing products (“cure and seal”) will not be permitted.
   3. Properties:
      a. Clear type with fugitive dye conforming with ASTM C309, Type 1D and containing no wax, paraffin, or oils.
      b. For concrete placed or cured during hot weather, curing compound shall be as specified, except that:
         1) It shall include a white, reflective fugitive dye.
         2) Moisture loss during a 72-hour period shall not exceed 9 pounds per cubic yard when tested in accordance with ASTM C156.

H. Surface-applied sealing system:
   1. Tested and listed under NSF 61 for use direct contact with potable water.
   2. Manufacturers: One of the following or equal:
      a. Euclid Chemical Co., Vandex Super.
      b. Kryton International, Inc., Krystol T1.
      c. Xypex Chemical Corp., Xypex Concentrate.
   3. Where surface-applied sealing system is placed over concrete containing permeability reducing admixture for concrete exposed to hydrostatic conditions (PRAH), provide products of same manufacturer providing the admixture.

2.05 EQUIPMENT

A. General:
   1. Provide adequate equipment and facilities for accurate measurement and control of materials and for readily changing proportions of material into mixers.

B. Batching equipment, or batch plant.
   1. Capable of controlling delivery of all material to mixer within 1 percent by weight of individual material.

C. Mixing equipment:
   1. Mixers may be of stationary plant, paver, or truck mixer type, as appropriate to the Work.
   2. Capable of combining aggregates, water, and cementitious materials, and admixtures within specified time into a thoroughly mixed and uniform mass, and of discharging the mixture without segregation.
      a. Maintain concrete mixing equipment in good working order, and operate at loads, speeds, and timing recommended by manufacturer or as specified.
      b. Proportion cementitious materials and aggregate by weight.
   3. If bulk cementitious materials are used, weigh them on separate visible scale which will accurately register scale load at any stage of weighing operation from zero to full capacity.
   4. Prevent cementitious materials from coming into contact with aggregate or with water until materials are in mixer ready for complete mixing with all mixing water.
   5. Procedure of mixing cementitious materials with sand or with sand and coarse aggregate for delivery to the Project Site, for final mixing and addition of mixing water will not be permitted.
   6. Retempering of concrete will not be permitted.
   7. Discharge entire batch before recharging.
   8. Volume of mixed material per batch: Not to exceed manufacturer's rated capacity of mixer.
   9. Equip each mixer with device for accurately measuring and indicating quantity of water entering concrete, and operating mechanism such that leakage will not occur when valves are closed.
   10. Equip each mixer with device for automatically measuring, indicating, and controlling time required for mixing:
      a. Interlock device to prevent discharge of concrete from mixer before expiration of mixing period.
   11. Transit-mixed concrete:
      a. Mix and deliver in accordance with ASTM C94.
      b. Total elapsed time between addition of water at batch plant and discharging completed mix.
      c. Not to exceed 90 minutes.
      d. Elapsed time at Project Site shall not exceed 30 minutes.
      e. Under conditions contributing to quick setting, total elapsed time permitted may be reduced by the Engineer.
      f. Equip each truck mixer with device interlocked to prevent discharge of concrete from drum before required number of turns and furnish device that is capable of counting number of revolutions of drum.
   12. Continuously revolve drum after it is once started until it has completely discharged its batch:
      a. Do not add water until drum has started revolving.
      b. Right is reserved to increase required minimum number of revolutions or to decrease designated maximum number of revolutions allowed, if necessary, to obtain satisfactory mixing. Contractor will not be entitled to additional compensation because of such increase or decrease.

D. Other types of mixers: For other types of mixers, mixing shall be as follows:
   1. Mix concrete until there is uniform distribution of materials, and discharge mixer completely before recharging.
   2. Neither speed nor volume loading of mixer shall exceed manufacturer's recommendations.
   3. Continue mixing for minimum of 1-1/2 minutes after all materials are in drum, and for batches larger than 1 cubic yard increase minimum mixing time 15 seconds for each additional cubic yard or fraction thereof.

2.06 CONCRETE MIXES

A. General:
   1. Develop and provide mix designs for each concrete class listed in Table 3 of this Section.
   2. Select and proportion mixes and document properties using one of the 2 methods that follow. Procedures and requirements for use of each alternative are specified in subsequent paragraphs of this Section.
      a. Field experience method.
      b. Trial batch method.
   3. Organize and submit mix designs with data on all constituent materials and products for that mix for the Engineer's review.
   4. Do not place concrete until the mix design for that concrete class has been accepted by the Engineer.
   5. After acceptance, do not modify accepted mixes or provide new mixes without the Engineer's prior review and acceptance of the proposed alternative.
      a. Exception: At all times, adjust batching of water to compensate for free moisture content of the fine aggregate used.
      b. For any change to approved mixes, the Engineer may require new trial batching and testing program as specified in this Section before acceptance and use.
      c. For any change to approved mixes, make modifications within limits set forth in this Section.
      d. If there is change in source or quality of any constituent of the concrete class or mix, the revised mix will be considered a new class of concrete and shall require full re-submittal of all data describing mix constituents, design, and testing.
   6. Material sampling, mix designs, trial batch preparation and testing, modifications to mix designs, and any re-testing required to satisfy the requirements of this Section or to obtain satisfactory performance shall be at the Contractor's expense and shall not be considered cause for delay.

B. Measurements of materials:
   1. Measure materials by weighing, except as otherwise specified or where other methods are specifically authorized in writing by the Engineer.
   2. Furnish apparatus for weighing aggregates and cementitious materials that is suitably designed and constructed for this purpose.
   3. Accuracy of weighing devices: Furnish devices that have capability of providing successive quantities of individual material that can be measured to within 1 percent of desired amount of that material.
   4. Measuring or weighing devices: Subject to review by the Engineer. Shall bear valid seal of the Sealer of Weights and Measures having jurisdiction.

5. Weighing cementitious materials:
    a. Weigh cementitious materials separately.
    b. Cement in unbroken standard packages (sacks): Need not be weighed.
    c. Weigh bulk cementitious materials and fractional packages.
6. Measure mixing water by volume or by weight.

C. Requirements for mix proportioning:
1. Develop and provide mixes that:
    a. Can be readily worked into corners and angles of forms and around reinforcement, without excessive vibration, and without permitting materials to segregate or free water to collect on surface.
    b. Prevent unnecessary or haphazard changes in the consistency of the concrete supplied.
2. Constituent materials:
    a. Provide concrete mixes composed of Portland cement, blended aggregates, admixtures and water.
        1) Admixtures required for each concrete class are indicated in Table 3 of this Section. Admixtures not specifically required by that table for a specific concrete class are optional and may be included at the discretion of the Contractor based on the Contractor's planned means and methods of construction.
    b. In no case shall returned fresh concrete or its constituents be incorporated into concrete batched for the Work.
3. Minimum specified compressive strength:
    a. Minimum specified compressive strength is designated at 28 days, unless otherwise indicated in Table 3 of this Section.
    b. For locations where the placed concrete is adequately protected and is not subjected to loads for an extended period during construction, the Contractor may request that the period for achieving the minimum specified compressive strength be extended to 56 days. If accepted by the Engineer, provide mixes that achieve at least 75 percent of their minimum specified compressive strength after 28 days.
4. Proportions and consistency:
    a. Ratio of water to cementitious materials, and cementitious materials content:
        1) Conform to maximum and minimum cementitious material content requirements specified in Table 3 of this Section.
        2) Cementitious materials content: Consisting of Portland cement as indicated in Table 3 of this Section, plus supplemental cementitious materials if aggregate testing indicates potentially reactive aggregates:
            a) Fly ash content:
                (1) Minimum: 15 percent of the total weight of cementitious materials.
                (2) Maximum: 25 percent of the total weight of cementitious materials.
            b) Slag cement content:
                (1) Minimum: 20 percent of the total weight of cementitious materials.
                (2) Maximum: 30 percent of the total weight of cementitious materials.

c) Silica fume content:
(1) Minimum: 4 percent of the total weight of cementitious materials.
(2) Maximum: 10 percent of the total weight of cementitious materials.

b. Aggregate size and content:
1) Blend aggregates to produce an optimized gradation that combines well-graded coarse, intermediate, and fine aggregates in proportions that maximize the aggregate content of the mix, and that minimize the cement paste content of the mix.
a) Percentage of individual fractions of the combined aggregate gradation retained on individual sieve sizes: Within the range shown in Attachment C - Combined Aggregate Gradation Chart ("Tarantula Curve").
b) Sum of the percentages of individual fractions retained on the No. 8, No. 16, and No. 30 sieves: Greater than 20 percent.
c) Sum of the percentages of individual fractions retained on the No. 30, No. 50, No. 100, and No. 200 sieves: Within the range of 25 percent to 40 percent.

c. Determine bulk density and void content of the combined gradation of aggregates in accordance with ASTM C29. Results for combined aggregates shall not be the summation of results of testing of the individual gradations.
1) Sample the combined aggregate from a flowing aggregate stream or conveyor in accordance with ASTM D75. Take care to ensure that the sample is representative of the proportions of the combined aggregate of the proposed mix.
2) Reduce sample of combined aggregate to test sample size in accordance with ASTM C702, Method A - mechanical splitter or Method B - quartering.
3) Perform bulk density test of combined aggregate in accordance with ASTM C29, Procedure A - rodding.
4) Determine void content of the combined aggregate in accordance with ASTM C29, Procedure A - rodding. Specific gravity of the combined aggregate shall be determined in accordance with ASTM C136.

d. Paste content: Limited to the following:
1) Class A mixes without air entrainment: Maximum 28 percent measured by volume.
2) Class A mixes with air entrainment: Maximum 28 percent measured by volume plus the target air content.
3) Paste content shall be limited to 175 percent of the void content of the combined aggregate gradation determined by ASTM C29.

e. Total water content:
1) Not exceeding the water to cementitious material ratio specified in Table 3 of this Section.

f. Coarseness/workability (Shilstone Method):
1) Proportion mixes to fall into the "Optimal" zone (Zone II) when plotted on the Coarseness Factor Chart ("Coarseness Factor" versus "Workability Factor") included as Attachment B - Coarseness Factor

Chart to this Section. Provide plot for each Class A mix to be used in the Work.

2) Coarseness factor (CF) for each mix shall be calculated as the percent of the combined aggregate gradation retained on the 3/8-inch sieve, divided by the percent of the combined aggregate gradation retained on the No. 8 sieve, multiplied by 100, or:

$$CF = \frac{(\%\text{ retained on 3/8 in sieve})}{(\%\text{ retained on No. 8 sieve})} \times 100$$

3) Workability factor (WF) for each mix shall be the percent of the combined aggregate gradation retained on the No. 8 sieve, adjusted for cement content in the mix.
   a) Determine volume of total cementitious material in the mix.
   b) For each 94 pounds of cement content above 564 pounds per cubic yard, increase workability factor by 2.5 units.
   c) For each 94 pounds of cement below 564 pounds per cubic yard, decrease workability factor by 2.5 units.
   d) Proportion adjustment factor by linear interpolation for each fraction of 94 pounds above or below the 564 pound basis.
   e) Example:
      650 pounds per cubic yard = 564 pounds + 86 pounds.
      Adjustment = (86 lb / 94 lb) x 2.5 = + 2.28.

D. Concrete classes for use in the Work:
   1. Provide concrete classes listed in Table 3 of this Section.
   2. Provide normal weight concrete, having minimum weight of 140 pounds per cubic foot, unless otherwise noted.
   3. Pumped concrete:
      a. Provide pumped concrete that complies with all requirements of this Section.
      b. Mixes placed by pumping shall be considered a sub-class of each concrete class listed in Table 3 of this Section. Prepare and submit a separate mix design for each mix to be placed by pumping.
   4. Class PM concrete: In addition to the requirements of Table 3 of this Section, conform to the following:
      a. Minimum 28 day flexural strength: 650 psi when tested in accordance with ASTM C293.
      b. Cementitious materials content: 75 percent Portland cement plus 25 percent Class F fly ash (by weight).
      c. Aggregate:
         1) Minimum 55 percent coarse aggregate conforming to ASTM C33 size number 357 or size number 467.
         2) Substitute ASTM C33 size number 57, or size number 67 if mechanical paving equipment is not used.

Table 3: Concrete Classes									
Concrete Class[1]	**Minimum Specified Compressive Strength at 28 days, f'c [2] (pounds per square inch)**	**Ratio of water to cementitious materials[3] (minimum - maximum).**	**Cementitious Materials Content (pounds per cubic yard of concrete by weight)[4]**	**Cement Type**	**Maximum Chloride Content (percent by weight of cement)**	**Maximum Size of Coarse Aggregate (ASTM C33)**	**Air Entrainment (percent), (n/a: not applicable)**	**Admixtures required[4,5,6]**	**Slump Range (inches)**
A	4,000	0.40 to 0.42	535 to 575	ASTM C150, Type II(MH)	0.30	#57	6±1.5	AEA WRA	2 to 4
A-NA	4,000	0.40 to 0.45	535 to 575	ASTM C150, Type II(MH)	0.30	#57	n/a	WRA	2 to 4
C	2,500	0.62 max.	423 min.	ASTM C150, Type II(MH)	No limit	#57	6±1.5	AEA WRA	3 to 6
CE	3,000	0.62 max.	423 min.	ASTM C150, Type II(MH)	No limit	#8	5±1.5	AEA WRA	3 to 6
PM	5,000	0.40	535 to 575	ASTM C150, Type II(MH)	0.15	#57	5±1.5	AEA WRA	3 to 6

Notes:

(1) Sub classes within major concrete classes are designated as follows:
NA: Without air entrainment.

(2) At locations where concrete will not be subjected to load from other elements of the structure or from the Contractor's placing and/or backfilling operations, maximum time period for achievement of specified compressive strength may be extended to 56 days when accepted by the Engineer.

(3) W/C Ratio = Ratio of water to cementitious materials by weight. Include weight of admixtures in the water content of the mix when the quantity of the admixtures exceeds 10 ounces per 100 pounds of cement.

(4) Admixtures are designated as follows:
AEA: Air entraining admixture.
HRWR: High-range water-reducing admixture.
PRAH: Permeability-reducing admixture for concrete exposed to hydrostatic conditions.
SFR: Synthetic fiber reinforcement.
SRA: Shrinkage-reducing admixture.
WRA: Water-reducing admixture.

E. Install concrete classes in accordance with the following requirements, unless otherwise indicated on the Drawings.
   1. Class A concrete: Structural concrete.
      a. Use at all locations unless other Classes are specified or indicated on the Drawings.
   2. Class A-NA concrete: Structural concrete without air entrainment.
      a. May be used in lieu of Class A at indoor slabs (not subject to freezing and thawing) where inclusion of an air-entraining admixture makes it difficult to achieve the specified concrete finish.

3. Class C concrete: Miscellaneous concrete fill and encasement.
    a. May be used for fill for unauthorized excavation, for thrust blocks and ground anchors for piping, for bedding of pipe, and where indicated on the Drawings.
4. Class CE concrete: Use for electrical conduit encasements.
5. Class PM concrete: Use for concrete pavement, cart paths, curbs, gutters, and sidewalks.

F. Concrete mix design documented by field experience:
    1. Mix design:
        a. Prepare preliminary mix design for each concrete class. Submit mix design with product and testing data for materials to be used in the mix for the Engineer's review.
    2. Historical records for similar mix.
        a. Determinations of similarity of materials and proportions between historical and proposed mixes shall be by the Engineer, and that shall be final.
        b. Historical record - Materials:
            1) Submit with each mix design the following data for a previously-supplied concrete mix similar to that proposed for this Work.
            2) Records demonstrating that the previously supplied mix included similar materials and proportions as those of the proposed mix.
                a) Documentation that the same concrete supplier will provide both mixes.
                b) Documentation that the materials used was from the same suppliers and had essentially the same properties, demonstrated by test data, as those proposed.
                c) Documentation that proportions of materials in the record mix are essentially the same as those proposed and that the specified compressive strength of the record mix is within 1,000 pounds per square inch of that required by this Section.
                d) Concrete supplier's statement describing any changes made to production of the record mix during the time period reported.
                e) Concrete supplier's statement that preparation and quality control procedures for the record mix were essentially the same as those to be employed for this Work.
        c. Historical record - Testing:
            1) Submit with each record mix, corresponding test data for slump, compressive strength (with relationships for rate of strength gain between testing ages), and drying shrinkage.
            2) Only records satisfying the following requirements will be accepted.
                a) All tests were conducted within a period of 1 year preceding the date of the Submittal.
                b) All tests were conducted over a period including not less than 45 days.
                c) Record of compressive strength testing includes at least 30 tests for slump and 28-day compressive strength.
                d) Record of compressive strength tests is consecutive. In other words, it includes all tests conducted on the subject mix within the 1-year time period described above (not just selected tests during that period).

e) Submit concrete supplier's sworn statement confirming that all tests for the record mix have been reported.
f) Tests for drying shrinkage are described in subsequent paragraphs of this Section for "concrete mix design documented by trial batch preparation and testing".
g) Provide supplementary testing if requested by the Engineer.

d. For mixes determined to be similar and to have an acceptable test history, acceptance criteria shall be as follows:
1) Acceptance criteria:
a) Slump: All tests within limits specified for record mix.
b) Compressive strength: Average compression strength for tests, as determined by ACI CODE-350 not less than minimum required average strength.
c) Drying shrinkage: Within limits stated in subsequent paragraphs of this Section for "concrete mix design documented by trial batch preparation and testing".

G. Concrete mix design documented by trial batch preparation and testing:
1. Mix design and trial batches:
a. Prepare preliminary mix design for each concrete class. Submit mix design with product and testing data for each combination of materials and proportions to be used for the Engineer's review.
1) Determine water content of the mix based on curves showing the relation between water-cementitious materials ratio and the 7- and 28-day compressive strength of the concrete.
2) Determine each curve using 4 or more points, each representing the average compressive strength value of at least 3 specimens tested at each age.
b. After materials and proposed mix designs have been accepted by the Engineer, have trial batches for each concrete mix design prepared by the Contractor's testing laboratory.
1) Prepare trial batches using the cementitious materials, aggregates, and admixtures proposed to be used for the Work.
2) Provide batches of sufficient quantity to determine slump, workability, consistency, and finishing characteristics, and to provide sufficient specimens for testing.
c. For each trial batch, make and test specimens to determine and report slump, compressive strength (with relationships for rate of strength gain between testing ages), and drying shrinkage.
1) If trial batches do not produce concrete conforming to the specified requirements for slump, strength, workability, consistency, drying shrinkage, restrained shrinkage, and finishing, change mix proportions and, if necessary, sources of materials.
2) Make additional trial batches and perform additional tests until a batch that conforms to requirements of this Section is produced.
2. Testing - Slump:
a. Determine slump in accordance with ASTM C143.
b. Acceptance criterion: Slump within range specified.
3. Testing - Compressive strength:
a. Prepare 4-inch diameter by 8-inch long cylinders in accordance with ASTM C31 for tests specified in this Section.

b. Determine average compressive strength:
    1) Test at least 12 cylinders from each trial batch for compressive strength in accordance with ASTM C39.
    2) Test 4 cylinders at 7 days, another 4 at 28 days, and another 4 at 56 days.
    3) Calculate average compression strength for 7 day tests, for 28 day tests, and for 56 day tests.
    4) Calculate ratios for:
        a) Average 7 day strength to average 28 day strength.
        b) Average 28 day strength to average 56 day strength.
c. Determine the required average compressive strength for each mix, f'cr, as described in the following paragraphs:
    1) Calculate required average compressive strength (f'cr) based on the minimum specified 28-day compressive strength, f'c, plus a standard deviation determined from the test history available for that mix.
    2) Determine f'cr as specified in ACI CODE-350, except as modified in the following paragraphs:
        a) Where 15 or more 28-day compressive strength tests are available, calculate standard deviation as described in the preceding paragraphs for "concrete mix design documented by field experience". Add this standard deviation to the specified minimum compressive strength to determine the required average compressive strength (f'cr) for the mix.
        b) Where fewer than 15 compressive strength tests at 28 days are available, determine minimum required compressive strength, (f'cr) from Table 4 of this Section.

Table 4: Required Average Compressive Strength, Fewer than 15 Tests Available

Minimum Specified Compressive Strength, f'c (pounds per square inch)	Required Average Compressive Strength, f'cr (pounds per square inch)
Less than 3,000	f'c + 1,000
3,000 to 5,000	f'c + 1,200
Over 5,000	f'c + 1,400

d. Acceptance criterion: Average compressive strength of the 4 cylinders tested at 28 days, or of the 4 cylinders tested at 56 days when permitted by the Engineer, shall equal or exceed the required average compression strength, f'cr for that concrete mix design.

4. Testing - Chloride content:
    a. Submit test results showing that the concrete mix contains water-soluble chloride ion content contributed from the constituents including water, aggregates, cementitious materials, and admixtures is less than the limit specified in Table 3 of this Section. Test shall be performed in accordance with ASTM C1218 at age between 28 and 42 days.
5. Testing - Drying shrinkage - Prism specimens:
    a. Class A (including A, A-NA, A-SP, and A-NA-SP) and Class PM: From trial batch for each mix, prepare 10 drying shrinkage specimens in accordance with ASTM C157 Divide specimens into 2 groups of

5 specimens each: 1 group including shrinkage-reducing admixture, and 1 group without shrinkage-reducing admixture.

b. Prepare, cure, and test both groups in accordance with ASTM C157, except as modified in the following paragraphs.
    1) Remove drying shrinkage specimens from molds at age of 23 hours, plus or minus 1 hour, after trial batching.
        a) Immediately place them in lime-saturated water maintained at 73 degrees Fahrenheit, plus or minus 3 degrees, for at least 30 minutes.
        b) Remove specimens from the water and wipe with a damp cloth.
        c) Measure to nearest 0.0001 inch to determine original length.
        d) Record measurements and re-submerge specimens in lime-saturated water at 73 degrees Fahrenheit, plus or minus 3 degrees, for moist curing.
    2) Maintain submerged curing conditions at 73 degrees Fahrenheit, plus or minus 3 degrees, for 7 days. 7 days after batching, remove specimens from water and repeat measuring procedures.
    3) Immediately store specimens in a humidity controlled room maintained at 73 degrees Fahrenheit, plus or minus 3 degrees, and at 50 percent relative humidity plus or minus 4 percent for remainder of the test.
    4) At periods of 14, 21, 28, and 56 days after batching, remove specimens from curing room and repeat measurements.
c. Drying shrinkage test report:
    1) Report measurements of all specimens at 1, 7, 14, 21, 28, and 56 days after batching.
    2) Using measured length at 7 days as base length for drying shrinkage, calculate the following for each measuring period:
        a) Drying shrinkage of each specimen. Determine as difference between the 7-day base length and measured length for each period.
        b) Average of these differences. If drying shrinkage of any specimen departs from the average of the measurements for each period by more than 0.0004 inch, disregard results obtained from that specimen.
        c) Percentage of drying shrinkage from batching to date of measurement.
d. Drying shrinkage acceptance criteria:
    1) Average shrinkage of trial batch concrete specimen group at 28 days after batching, when measured and cured as indicated, shall not exceed 0.035 percent.
e. Mixes accepted by the Engineer:
    1) Retain drying shrinkage test specimens. Bag in re-sealable plastic bags and submit to the Engineer.
    2) Indicate trial batch identifier, specimen number, and date of final measurements on each specimen bag.

2.07 SOURCE QUALITY CONTROL

A. Sample and test materials in accordance with the following requirements:
   1. Sampling, testing, and reporting frequency:
      a. In preparation for mix design submittals and trial batch tests.
      b. Whenever there is a change in source of the material, or a significant change in the characteristics or quality of materials from the same source.
      c. For each 10,000 cubic yards of concrete mix produced.
      d. At intervals not exceeding 90 calendar days, unless otherwise specified in the following paragraphs.
   2. Supplemental cementitious materials.
      a. Sample and test fly ash in accordance with ASTM C311.
      b. Sample and test slag cement in accordance with ASTM C989.
      c. Sample and test silica fume in accordance with ASTM C1240.
   3. Aggregate:
      a. Sample combined aggregate in accordance with ASTM D75 and D3665, and test for gradation in accordance with ASTM C136.
      b. At least once every 30 days, and when requested by the Engineer.
      c. Submit test results.
   4. Cementitious materials:
      a. Sample and test cementitious materials and provide mill certificates demonstrating compliance with ASTM C150 and additional requirements of this Section.
         1) Determine alkali content by method set forth in ASTM C114.
      b. At least once every 90 days, and when requested by the Engineer.
      c. Submit test results.

B. Batch materials in accordance with the following requirements:
   1. Concrete batch weights: Control and adjust so as to secure maximum yield, and at all times maintain proportions of concrete mix within specified limits.
   2. Aggregates:
      a. Obtain aggregate from a source capable of providing uniform quality, moisture content, and grading during any single day's operation.
      b. Furnish satisfactory means at batching plant for checking moisture content of fine aggregate for each batch.
   3. Admixtures:
      a. Batch solutions using mechanical batcher capable of accurate measurement.
      b. Air entraining admixture: Add to batch in portion of the mixing water, unless otherwise recommended by the admixture manufacturer.

PART 3 EXECUTION

3.01 PREPARATION

A. Prepare and submit mix designs for each concrete class indicated in Table 3 of this Section.

B. Submit proposed sequence of concrete placements. After acceptance, adhere to proposed sequence of placing concrete, except when specific changes are requested by the Contractor and accepted by the Engineer.
   1. Use construction methods and sequence work to allow concrete placement to reach adequate strength and to be constructed with required support to prevent overstress of the concrete structure during construction.

C. Make provisions for monitoring weather conditions:
   1. Install an outdoor weather station capable of measuring and recording ambient temperature, wind speed, and humidity. Furnish instruments accurate to within 2 degrees Fahrenheit, 5 percent relative humidity, and 1 mile per hour wind speed.
   2. Monitor the weather forecast beginning at least 48 hours prior to any concrete placement and make provisions for cold weather concreting or hot weather concreting if those conditions exist or are forecast to exist during the period of placement, finishing, and curing.
      a. Record temperature, relative humidity, and wind speeds for each placement beginning at least 24 hours before scheduled delivery of concrete.

D. Place no concrete without the Engineer's prior acceptance of conditions.

E. Notify the Engineer in writing that preparations are complete and ready for placement of concrete. Such notification shall indicate readiness - not just intention - to place concrete for the designated portion of the Work.
   1. Submit notification to the Engineer on forms provided by or acceptable to the Engineer and bearing the signature of the Contractor's superintendent.
      a. Sample form is included at the end of this Section, see Attachment B - Coarseness Factor Chart.
   2. Submittal of notification will be the Contractor's certification that preparations are complete and in accordance with the Contract Drawings and Specifications.
   3. Provide notification for the Engineer to make final observations at the locations of concrete placements not less than 24 hours before commencing placement of concrete.

3.02 CONCRETE JOINTS

A. Locations of joints are indicated on the Drawings.
   1. In order to preserve strength and watertightness of structures, make no other joints, except as authorized by the Engineer.
   2. Construct joints where indicated, and as indicated on the Drawings.
   3. Where joint locations are not indicated on the Drawings, submit the Contractor's proposed locations for the Engineer's review and acceptance. Provide construction joints in slabs and walls at intervals not greater than 35 feet.

B. Time between placements of adjacent concrete separated by joints.
   1. Provide not less than 3 days (72 hours) between placement of adjacent sections for the following:
      a. Slabs.
      b. Walls.

2. Provide not less than 7 days (168 hours) between placement of the lower and upper pours for the following:
    a. Walls over slabs.
    b. Slabs over walls.
    c. Slabs keyed into the sides of walls.

C. Edges of joints:
    1. Provide joints have edges detailed as indicated on the Drawings.
    2. Protect wall and slab surfaces at edges from concrete splatter. Thoroughly clean adjacent surfaces after completion of each placement.

D. Joint construction:
    1. Preparation of forms:
        a. Provide cleanout holes at base of each wall and column for inspection and cleaning.
        b. Wash forms and adjacent joint surfaces of sawdust, chips, and other debris after forms are built, and immediately before concrete or grout placement.
        c. Should formwork confine sawdust, chips, or other loose matter in such manner that it is impossible to remove them by flushing with water, use a vacuum cleaner for their removal and then flush cleaned surfaces with water.
    2. Before placing concrete against previously placed concrete, thoroughly clean the prior placement of laitance, grease, oil, mud, dirt, curing compounds, mortar droppings, or other objectionable matter by means of pressure washing.
    3. Provide and install waterstops, expansion joint material, and other similar materials as indicated on the Drawings and as specified.
        a. Take special care to ensure that waterstops are secured in proper position.
        b. Take special care to ensure that concrete is well consolidated around and against waterstops during placement.
    4. Horizontal joints:
        a. As initial placement over cold joints, thoroughly spread bed of cement grout as specified in Section 03600 - Grouting.
            1) Thickness: Not less than 1/2 inch or more than 1 inch.
        b. For wall placements above planned cold joints, placement of cement grout will not be required for locations where the wall mix includes high-range water-reducing admixture (“superplasticizers”), and the Contractor can demonstrate dense concrete joints without voids or honeycomb after the forms are removed.

3.03 MEASURING AND BATCHING MATERIALS

A. Measurements of materials:
    1. Proportion and measure cementitious materials and aggregates by weight.
        a. Weigh cementitious materials separately.
        b. If bulk cementitious materials are used, weigh them on separate visible scale that will accurately register scale load at any stage of weighing operation from zero to full capacity.
        c. Cement in unbroken standard packages (sacks) need not be weighed.
    2. Mixing water: Measure by volume or by weight.
    3. Other mix constituents: Measure by weight, except as otherwise specified or accepted by the Engineer.

4. Weighing and measuring devices:
    a. Use equipment designed and constructed specifically for that purpose.
    b. Furnish devices capable of weighing successive quantities of individual material measured to within 1 percent of desired weight of that material.
    c. Bearing valid seal of the department of weights and measures for the authority having jurisdiction over the Work.
5. Measurements and measuring devices:
    a. Subject to review by the Engineer.

B. Batching:
1. Admixtures shall be added at the concrete batch plant.
2. Addition of admixtures in the field is permitted only with prior acceptance by the Engineer, and only when the following conditions are satisfied:
    a. Dosage and mixing is personally overseen by concrete supplier's trained technologist.
    b. Adequate mixing is provided after addition.
    c. Maximum time to placement of concrete remains 90 minutes after water added to mix - not 90 minutes after any field additions/adjustments.
    d. Slump at discharge after additions/modifications conforms to the requirements of Table 3 of this Section.

3.04 MIXING AND TRANSPORTING

A. Machine mixing:
1. Prevent cementitious materials from coming into contact with aggregate or with water until materials are in mixer and ready for complete mixing with all mixing water.
2. Procedure of mixing cementitious materials with sand, or with sand and coarse aggregate, for delivery to the Project Site for final mixing and addition of mixing water is not permitted.
3. Remixing of concrete that has started to take its initial set ("retempering")is not permitted.
4. Discharge entire batch before recharging.
5. Volume of mixed material per batch: Not exceeding manufacturer's rated capacity of mixer.

B. Transit-mixed concrete:
1. Mix and deliver in accordance with ASTM C94, except as modified in this Section.
2. Total elapsed time between addition of water at batch plant and discharging completed mix:
    a. Not to exceed 90 minutes or 300 revolutions of the mixing drum.
    b. Under conditions contributing to rapid setting, total elapsed time permitted may be reduced by the Engineer.
3. Temperature - minimum and maximum allowable during mixing and transporting:
    a. Minimum: 50 degrees Fahrenheit.
    b. Maximum: 90 degrees Fahrenheit.

4. Continuously revolve drum after it is started until it has completely discharged its batch.
    a. Do not add water until drum has started revolving.
    b. Engineer reserves the right to increase required minimum number of revolutions or to decrease designated maximum number of revolutions allowed, if necessary, to obtain satisfactory mixing. Contractor will not be entitled to additional compensation because of such increase or decrease.

C. Concrete delivery:
1. Furnish to the Engineer a delivery ticket for each batch of ready mixed concrete within 24 hours after delivery. Include the following information on each ticket:
    a. Time of day concrete was batched, and time of day that discharge from the truck is complete.
    b. Printed record of the individual weight of each of the following constituents in the batch: Fine aggregate, coarse aggregate, cement, pozzolan, and water.
    c. Concrete class as defined in Table 3 of this Section.
    d. Type, brand, and quantity of each admixture in the batch.
    e. Total volume of water allowed in the mix, volume of mixing water added at the batch plant, volume of mixing water withheld from the mix during batching, and total volume of any water added to the mix after leaving the batch plant.
        1) In no case shall volume of mixing water withheld result in a water/cementitious materials ratio less than the minimum values specified in Table 3 of this Section.
    f. Number of revolutions of transit truck at arrival on site, and total number of revolutions when discharge is complete.
    g. Volume of concrete delivered in the batch.
    h. Numerical sequence of the batch delivered for that placement.
2. Additional water may only be added to the mix when the following conditions are fully satisfied:
    a. Batch ticket showing total volume of water already added and maximum volume of water that may be added is available for the Engineer's observation before any additional water is added.
    b. Total volume of water in the mix after the addition will be less than the maximum allowable volume of water indicated on the ticket.
    c. Full concrete load is still within the truck's mixing drum, and truck has not begun to discharge the load. Under no conditions shall water be added in the field to a partial truckload of concrete.
    d. Volume of water added, and time of addition are clearly marked for record on the batch ticket delivered to the Engineer.
3. Addition of admixtures in the field is permitted only with prior approval by the Engineer, and when the following conditions are satisfied:
    a. Dosage and mixing is personally overseen by the concrete supplier's trained technologist and the admixtures supplier's representative.
    b. Adequate mixing time is provided after addition of admixtures.
    c. Maximum time to placement of concrete remains 90 minutes after water is added to the mix - not 90 minutes after any field additions/adjustments.
    d. Slump at discharge after additions/modifications conforms to the requirements of Table 3 of this Section.

D. Conveying concrete:
   1. Convey concrete from mixer to location of final deposit by methods that prevent separation or loss of materials.
   2. Use equipment for chutes, pumps, and conveying of concrete of such size and design as to ensure practically continuous flow of concrete, from delivery to the point of placement, without separation of materials.
   3. Design and use chutes and devices for conveying and depositing concrete that direct concrete vertically downward when discharged from chute or conveying device.
   4. Keep equipment for conveying concrete thoroughly clean by washing and scraping upon completion of any day's placement.

3.05 PLACING AND CONSOLIDATING

A. Preparation:
   1. Obtain the Engineer's acceptance of completed preparations before placing concrete.
      a. Notify the Engineer in writing that all preparations are complete and ready for placement of concrete. Such indication shall indicate readiness, not just intention, to place concrete for the designated portion of the Work.
      b. Submit completed Attachment D - Contractor's Concrete Placement Checklist Form.
   2. Confirm completeness of the following before notification of readiness is given to the Engineer:
      a. Place forms, reinforcement, screeds, anchors, ties, and inserts in final position.
      b. Reinforcement is secure and properly fastened in its correct position.
      c. Loose form ties at construction joints have been retightened.
      d. Dowels, bucks, sleeves, hangers, pipes, conduits, anchor bolts, and any other fixtures required to be embedded in concrete have been placed and adequately anchored.
      e. Forms have been cleaned of debris and form release agents are applied as specified.
   3. Preparation for placement of footings and slabs on grade:
      a. Do not place concrete on ground or compacted fill until subgrade is in moist condition acceptable to the Engineer.
      b. If necessary, sprinkle subgrade with water not less than 6 or more than 20 hours in advance of placing concrete.
      c. If subgrade surface becomes dry prior to actual placing of concrete, sprinkle again, without forming pools of water.
      d. Do not place concrete if subgrade is muddy or soft.
   4. Keep sufficient protective coverings on hand at all times for protection of concrete during and after placement.
      a. Protect concrete placed before rain to prevent water from coming in contact with such concrete.
      b. Protect concrete placed before winds to prevent excessive drying or embedment of debris in the finished surfaces.

B. Concrete placement:
   1. Do not place concrete:
      a. With slump outside the limits specified in Table 3 of this Section.

b. In which initial set has occurred, or that has been retempered.
c. During rainstorms or high velocity winds.

2. Deposit concrete at or near its final position to avoid segregation caused by rehandling or flowing.
   a. Do not deposit concrete in large quantities in one place, and then work material along forms with vibrator or by other methods.
3. Do not drop concrete freely into place from height greater than 5 feet. Use tremies for placing concrete where drop is over 5 feet.
4. Place concrete on slopes starting from bottom of slope and working upward.
5. Place concrete in horizontal lifts not exceeding 24 inches in depth and bring up evenly in all parts of forms.
6. After concrete placement begins, continue in a continuous operation without significant interruption until the end of the placement. Plan and implement precautions to prevent any delay, between layers or adjacent volumes, from exceeding 20 minutes.
7. If concrete is to be placed over previously placed concrete and more than 20 minutes has elapsed, spread layer of cement grout over surface before placing additional concrete. Provide grout layer thickness of not less than 1/2 inch or more than 1 inch.
8. Placement of concrete for slabs, beams, or walkways:
   a. If cast monolithically over walls or columns, do not commence until concrete in walls or columns has been allowed to set and shrink.
   b. Allow set time of not less than 1 hour for shrinkage.
      1) During waiting time, keep top surface of concrete moist, but not wet.
      2) Do not permit water to pond or stand on the surface.
      3) Do not coat surface with evaporation retarders or curing agents.
   c. Start placement above wall or column with layer of cement grout as described in the preceding paragraph.

C. Consolidating concrete:
1. Consolidate concrete with aid of acceptable mechanical vibrators.
2. Thoroughly consolidate concrete around reinforcement, pipes, or other shapes built into the Work.
3. Provide sufficiently intense vibration to cause concrete to flow and settle readily into place and to visibly affect concrete over radius of at least 18 inches.
4. Vibrators:
   a. Keep sufficient vibrators on hand at all times to vibrate concrete as placed.
   b. In addition to vibrators in actual use while concrete is being placed, have on hand a minimum of 1 spare vibrator in operable condition.
   c. Do not place concrete until it has been confirmed that all vibrating equipment, including spares, are in operable condition.
5. Place concrete solidly against forms and concrete surfaces, leaving no voids or honeycomb.
6. Make concrete solid, compact, and smooth. If for any reason surfaces or interiors have voids or are in any way defective, repair such concrete in manner acceptable to the Engineer.
7. Do not over-vibrate so as to produce segregation.

3.06 FINISHING CONCRETE

A. Provide concrete finishes in accordance with Section 03366 - Concrete Finishes, unless otherwise indicated on the Drawings.

B. Liquid evaporation retardant:
   1. Under conditions that result in rapid evaporation of moisture from the surface of the concrete, coat the surface of the concrete with a liquid evaporation retardant immediately after screeding.
   2. Conditions that result in rapid evaporation of moisture are defined as any combination of ambient temperature, concrete temperature, relative humidity, wind speed, and solar radiation intensity that creates conditions that will evaporate water from a free concrete surface at a rate equal to or greater than 0.1 pounds per square foot per hour as determined by the Menzel Formula and nomograph published in ACI PRC-305 and included as Attachment A - Menzel Formula and Nomograph to this Section.
   3. Apply evaporation retardant again after each finishing operation as necessary to prevent drying shrinkage cracks.
   4. Do not work evaporation retardant into the surface of the concrete.
   5. Do not use evaporation retardant as finishing aid (to rehydrate surface a creamy state for finishing).

C. Concrete sealer:
   1. Floors and slabs to receive concrete sealer: See Room Finish Schedule on the Drawings, and Section 03366 - Concrete Finishes.

3.07 CURING

A. Cure concrete by methods specified in this Section.

B. Cure period: Keep concrete continuously moist and at an average daily temperature of at least 50 degrees Fahrenheit for a minimum of 7 days after placement.
   1. If hourly temperatures at any surface of a concrete placement drop below 50 degrees Fahrenheit during the curing period, count the period below 50 degrees Fahrenheit as zero degrees, and extend the curing time to compensate.

C. Schedule of curing methods:
   1. Cure the following concrete surfaces using water curing, or plastic membrane curing.
      a. Floor surfaces of water containment structures.
      b. Surfaces where additional concrete will be placed over or against the surface, including concrete joints.
      c. Surfaces where grout or other toppings will be placed over the surface.
      d. Slabs scheduled to receive concrete sealer, or other bonded or adhered architectural finishes.
      e. Formed surfaces scheduled to receive coatings, paint, adhered masonry, cementitious materials, or other similar finishes, and where formwork is removed within the specified cure period after concrete placement.
      f. Horizontal concrete surfaces at tops of walls.

2. Cure the following concrete surfaces by water curing, plastic membrane curing, or sprayed curing membrane. Selection of methods shall be at the Contractor's option.
    a. Surfaces not listed in the preceding paragraph.

D. Water curing:
    1. Keep surfaces of concrete constantly and visibly wet, day and night, for not less than the specified cure period.
        a. Each day forms remain in place will be counted as 1 day of water curing.
        b. Do not loosen form ties during period when concrete is cured by leaving forms in place. No further curing credit will be allowed for forms remaining in place after contact has been broken between concrete surface and forms.
    2. Begin water curing as soon as concrete attains initial set.
    3. Maintain a wet surface by ponding, continuous sprinkling, covering with saturated burlap, or otherwise saturating the surface by means acceptable to the Engineer.
        a. Flood top of walls with water at least 3 times per day and keep surfaces moist at all times during the curing period.
        b. Provide plastic sheet material over surfaces if required to maintain a wet surface during arid or windy conditions. See plastic membrane curing requirements for additional details.
    4. Use water having a temperature within 20 degrees Fahrenheit of the temperature of concrete, and not lower than the minimum temperature allowed for the concrete surface during curing.

E. Plastic membrane curing:
    1. Install plastic membrane as soon as concrete is finished and can support limited pedestrian traffic without damage.
    2. Cover entire surface of finished concrete with membrane.
    3. Anchor membrane to prevent uplift from wind or air trapped below the sheet.
    4. Fully seal joints and edges to provide full seal around perimeter.
    5. Keep concrete under plastic membrane moist, regularly monitoring surfaces and adding supplemental moisture if necessary. Add water as specified for water curing.

F. Sprayed membrane curing compound:
    1. Apply curing compound to concrete surface after repairing and patching, and within 1 hour after forms are removed.
        a. If more than 1 hour elapses after removal of forms, do not use membrane curing compound. Instead, provide water curing for not less than the specified cure period.
        b. Do not remove sprayed membrane curing compound from concrete before the end of the specified cure period.
        c. When application of curing compound at concrete joints is accepted by the Engineer, take care to apply curing compound to all surfaces along full profile of joints.
    2. Apply curing compound by mechanical, power operated sprayer with mechanical agitator that will uniformly mix all pigment and compound.
        a. Apply curing compound in at least 2 coats.

b. Apply each coat in direction turned 90 degrees from application direction of the preceding coat.
c. Apply curing compound in sufficient quantity so that concrete has uniform appearance and its natural color is effectively and completely concealed immediately after spraying.
d. Continue to coat and recoat surfaces until specified coverage is achieved and until coating film remains on concrete surfaces.

3. Thickness and coverage of curing compound:
   a. Provide curing compound having film thickness that can be scraped from surfaces at any and all points after drying for at least 24 hours.
   b. Contractor is cautioned that method of applying curing compound specified in this Section may require more curing compound than normally suggested by manufacturer of curing compound and is more than is customary in the trade. Apply amounts specified in this Section, regardless of manufacturer's recommendations or customary practice.
4. If the Contractor desires to use a curing compound other than specified product, coat sample areas of concrete wall with proposed curing compound, and also coat similar adjacent area with the specified compound in the manner specified, for comparison:
   a. If proposed sample is not equal or better, in the opinion of the Engineer, the proposed substitution will not be allowed.
5. Removal of curing compound.
   a. After curing period is complete, remove curing compound placed on surfaces that will receive additional concrete, including all concrete joint surfaces, by heavy sandblasting or by other means acceptable to the Engineer. Complete removal and cleanup prior to placing any new concrete against the surface.
   b. Where additional finishes will be applied over concrete surfaces, unless otherwise recommended by the manufacturer of the finish to be applied, remove curing compound by sandblasting. Provide blasting as necessary to fully remove curing compound.
6. Prior to final acceptance of the Work, remove, by sandblasting or by other method acceptable to the Engineer, any curing compound on surfaces exposed to process water or exposed to view, so that only natural color of finished concrete is visible and uniform over the entire surface.

3.08 PROTECTION

A. General:
   1. Keep forms in place, as specified in Section 03102 - Concrete Formwork, to provide curing and to protect concrete surfaces and edges from damage.
   2. Immediately after forms are removed, carefully examine concrete surfaces, and repair any irregularities in surfaces and finishes as specified.

B. Loading of concrete members:
   1. Placement of loads on or against green concrete is not permitted.
   2. Do not place soil against walls, or fill over the top of concrete until conditions designated in the following paragraphs are satisfied:
      a. Walls have been cast to their full height in the structure and have achieved their minimum specified 28-day compressive strength.

b. Connecting slabs and beams that brace the walls are in place, are complete, and (in the case of concrete) have achieved their minimum specified 28-day compressive strength.

3.09 HOT WEATHER CONCRETING

A. Implement hot weather concrete procedures during periods of hot weather as defined in this Section.
   1. Comply with the recommendations of ACI PRC-305 and this Section.

B. If placements during hot weather are expected, and when requested by the Engineer, prepare a hot weather concreting plan.
   1. Maintain at least 1 copy on site.
   2. Provide plan for review if requested by the Engineer.
      a. Include procedures for batching, delivery, placement, curing, protection, and monitoring and recording the temperature of the concrete and the surrounding environment.
      b. Describe procedures to be implemented in the event of abrupt changes in weather conditions, or in the event of equipment failure.
      c. Review hot weather concreting plan during pre-construction meeting. Make provisions to address any concerns expressed by the Engineer before beginning concrete placements.

C. Preparation:
   1. Do not place concrete against forms, reinforcement, or embedments with a surface temperature greater than 120 degrees Fahrenheit.
      a. If necessary, to maintain maximum concrete temperature during placing, cool forms and reinforcement to temperature below 90 degrees Fahrenheit using water or shades.
      b. Do not allow water to puddle in forms or placement areas.
   2. Moisten forms or subgrade to maintain a saturated surface without standing water or soft spots.
   3. Provide windbreaks, shades, fog spray, sprinkling, wet cover, or other means required to protect concrete from premature loss of moisture and rapid temperature gain.

D. Batching and delivery:
   1. Retarding admixtures will not be permitted.
   2. Temperature of concrete delivered for placement shall not exceed 90 degrees Fahrenheit.
      a. Maintain uniform temperature in the mix below this level during batching, delivery, placing, and consolidation.
      b. Temperature of mix, even if below the maximum allowable temperature specified, shall be maintained at a level to avoid loss of slump, flash setting, or cold joints in placements.
   3. If necessary:
      a. Mix water may be chilled or replaced with ice to maintain mix temperature. Where mix water is replaced with ice, provide replacement at a 1-to-1 ratio by weight.
      b. Shade transit mixed concrete trucks, or cool mixing outside of container with water to control temperature of concrete.

E. Placing and finishing:
   1. Place and finish concrete promptly. Place so that vertical lift lines will not be visible in exposed concrete surfaces.
   2. Provide plastic sheeting, fog nozzles, shades, or other means to reduce concrete temperature and protect from moisture loss.

F. Protection and curing:
   1. Furnish and locate maximum/minimum temperature recording thermometers in sufficient numbers to confirm concrete temperatures over full area and edges of concrete.
   2. Flatwork: Protect and cure using water curing methods as specified in this Section.
      a. Water curing:
         1) Keep concrete continuously wet and make provisions for runoff.
         2) For sprinkling or soaker hoses, maintain temperature of water as close as possible to the temperature of the concrete to minimize effects of thermal shock.
   3. Formed surfaces: Protect and cure using forms left in place or membrane curing methods as specified in this Section.
      a. Cover forms and keep continuously moist for at least 24 hours after placement.
      b. Loosen forms as soon as this can be accomplished without damaging the concrete.
      c. Maintain continuously moist surfaces by fogging or spraying with water, or by application of curing compound as specified.

3.10 FIELD QUALITY CONTROL BY CONTRACTOR

A. Provide quality control over the Work of this Section as required by Section 01450 - Quality Control.

B. Field tests:
   1. During progress of construction, provide testing to determine whether the concrete, as being produced, complies with requirements specified.
   2. Sampling and testing shall be performed by the Contractor’s testing laboratory. See Section 01455 - Regulatory Quality Assurance - Special Tests and Inspections for requirements.
      a. Cooperate in testing by allowing free access to the Work for testing laboratory to sample and test materials.
      b. Provide full access for the Engineer to observe concrete sampling and testing at any time.
      c. Contractor is responsible for providing care of and curing conditions for test specimens in accordance with ASTM C31 until specimens are collected by testing laboratory.
      d. Provide 4 firmly braced, insulated, heated, closed wooden curing boxes, each sized to hold 10 specimens. Include cold weather temperature and hot weather temperature control thermostat for initial curing and storage from time of fabrication through shipment to the Owner’s testing laboratory.
   3. Testing shall include:
      a. Sampling of concrete in accordance with ASTM C172.

b. Temperature of concrete at delivery in accordance with the requirements of ASTM C1064 and as specified in this Section.
c. Slump of concrete using slump cone in accordance with requirements of ASTM C143. Test slump at the following intervals:
    1) At the beginning of each placement.
    2) As often as necessary to keep slump within the specified range, but not less than every 6th truck.
    3) When requested to do so by the Engineer.
    4) Observe concrete during slump test for signs of segregation.
        a) Observe concrete to see if mortar or moisture flows from slumped concrete.
        b) Reject concrete if mortar or moisture flows out of mix.
d. Unit weight of concrete in accordance with ASTM C138.
e. Air entrainment in accordance with ASTM C173. Test air content at the following intervals:
    1) At beginning of each placement.
    2) As often as necessary to keep entrained air within specified range, but not less than every 6th truck.
    3) When requested to do so by the Engineer.
    4) Test air entrainment in concrete in accordance with ASTM C173. If air entraining admixtures used for the Work require alternate testing procedures, advise the independent testing laboratory well in advance of the dates of testing, and confirm that appropriate equipment and personnel are provided for the test.
    5) Make air test at point of delivery (discharge from mixer). For pumped concrete, make air tests at point of delivery and at point where expelled after pumping for placement.
f. Compressive strength in accordance with ASTM C39. Required number of cylinders is as follows:
    1) Not less than 6 cylinder specimens, 4 inches in diameter by 8 inches long, will be tested for each 150 cubic yards of each class of concrete, with minimum of 6 specimens for each class of concrete placed; not less than 6 specimens for each half day's placement; and not less than 2 sets of 6 specimens for each structure.
    2) 1 cylinder will be broken at 7 days, 1 at 14 days, and 3 at 28 days. 6th cylinder may be used to evaluate strength after 28 days if requested by the Engineer.
    3) Retain and store "6th cylinders" (tested and untested) at testing laboratory until 56 days. Break "6th cylinder" when directed by the Engineer.
g. Provide full access for the Engineer to observe concrete sampling and testing at any time.

C. Test completed liquid containment structures for watertightness.

3.11 FIELD QUALITY CONTROL BY OWNER

A. As specified in Section 01450 - Quality Control.

B. Special tests and inspections: As specified in Section 01455 - Regulatory Quality Assurance.

C. Field inspections:
   1. Observe construction for conformance to the Contract Documents and the accepted submittals.
   2. Records of inspections:
      a. Provide a record of each inspection.
      b. Submit copies to the Contractor upon request.

D. Field tests:
   1. Engineer may request, at any time, additional testing to confirm materials being delivered and placed conform to the requirements of the Contract Documents.
      a. If such additional testing shows that the material do not conform to the specified requirements, the Contractor shall pay the cost of these tests.
      b. If such additional testing shows that the materials do conform to the specified requirements, the Owner will pay the cost of these tests.

3.12 NON-CONFORMING WORK

A. Remove and replace or repair non-conforming and defective work.
   1. Provide repairs having strength equal to or greater than specified concrete for areas involved.
   2. Provide replacement or repair of non-conforming work by means acceptable to the Engineer and at no additional cost to the Owner.
   3. Project schedule will not be extended based on work to address non-conforming concrete.

B. Concrete not conforming to the specified requirements for properties of plastic concrete: Remove from the site and replace with conforming materials at no additional cost to the Owner.
   1. Temperature: Do not use concrete having a temperature above or below the limits specified in this Section.
   2. Slump: Do not place concrete that does not conform to requirements for slump.
   3. Air entrainment: Do not use concrete that does not conform to requirements for percentage of entrained air.

C. Concrete not conforming to the specified requirements for compressive strength:
   1. Concrete is expected to reach a compressive strength equal to or greater than the minimum specified compressive strength f'c in Table 3 of this Section.
   2. Strength of concrete will be considered acceptable if the following conditions are satisfied.
      a. Averages of all sets of 3 consecutive strength test results is greater than or equal to the specified compressive strength f'c.
      b. No individual strength test (average of 3 cylinders) falls below the strength specified in Table 6 of this Section.
      c. Where relationships between 7-day and 28-day compressive strength, or between 28-day and 56-day compressive strength, have been provided as part of the mix design submittals:
         1) 7-day strength may be considered as an indication of 28-day strength provided effects of temperature and humidity between 7 days and 28 days are taken into account.

2) 28-day strength may be considered as indication of 56-day strength provided effects of temperature and humidity between 28 days and 56 days are taken into account.

Table 6: Strength Compliance Requirements	
Minimum Specified Compressive Strength, f'c (pounds per square inch)	**Lower Bound of an Individual Compressive Strength Test (pounds per square inch)**
Less than 5,000	f'c - 500
Over 5,000	f'c - (0.10 x f'c)

3. Non-compliant strength tests.
   a. Mark non-compliant strength test reports to highlight the non-complying results, and immediately forward copies to all parties on the test report distribution list.
   b. Initial treatment may consist of additional curing of affected portion(s) followed by not less than 3 cores at each affected area, taken in accordance with ASTM C42 and ACI CODE-318. Obtain the Engineer's acceptance of proposed coring locations before proceeding with that work.
   c. Submit report of compressive strength testing for the Engineer's review.
   d. If requested by the Engineer, provide additional cores, and obtain petrographic testing in accordance with ASTM C856. Submit results for the Engineer's review.
   e. If additional curing does not bring the average strength of 3 cores taken in affected area to at least specified compressive strength f'c, designate such concrete in affected area will be considered defective.
   f. Engineer may require the Contractor to strengthen defective concrete by means of additional concrete, additional reinforcing steel, or replacement of defective concrete, all at the Contractor's expense.

D. Concrete sections or surfaces with honeycombing and voids:
   1. Provide repairs having surface appearance and finish consistent with that of the surrounding work and acceptable to the Engineer.
   2. Do not patch, repair, or cover defective Work without prior inspection by the Engineer.
   3. Preparation of concrete for repair:
      a. Make no repair until the Engineer has accepted methods for preparing surfaces and for making and curing repairs.
      b. Chip out and key-in imperfections in the Work to make them ready for repair.
      c. Coat bonding surfaces and edges of repair area with one of the following bonding agents as accepted by the Engineer.
         1) Epoxy bonding agent as specified in Section 03071 - Epoxies.
         2) Epoxy resin/Portland cement bonding agent as specified in Section 03072 - Epoxy Resin/Portland Cement Bonding Agent.
   4. Methods of repair:
      a. Dry pack mortar method:
         1) Use for holes having depth nearly equal to or greater than least surface dimension of hole, for cone-bolt holes, and for narrow slots cut for repair.

2) Smooth holes: Clean and roughen by heavy sandblasting before repair.
3) Install dry-pack mortar as specified in Section 03600 - Grouting.

b. Cement mortar method:
1) Use for holes too wide to dry pack and too shallow for concrete replacement; and for comparatively shallow depressions, large or small, that extend no deeper than nearest surface reinforcement.
2) Install cement mortar as specified in Section 03600 - Grouting.

c. Concrete replacement:
1) Use when holes extend entirely through the concrete section or when holes are more than 1 square foot in area and extend halfway or more through the section.
2) Form, place, consolidate, and cure concrete of same mix as the surrounding work.

E. Leaking construction joints and cracks in concrete walls and slabs:
1. Repair cracks that develop in walls or slabs, and repair cracks that show any signs of leakage until all leakage is stopped.
2. Pressure inject visible cracks in the following areas, other than hairline cracks and crazing, with repair products and methods acceptable to the Engineer.
a. Floors and walls of water bearing structures.
b. Walls and overhead slabs of passageways and occupied spaces where the opposite face of the member is exposed to weather or may be washed down and where the opposite face does not receive a separate waterproofing membrane.
c. Other items not specified to receive separate waterproofing membrane including slabs over water channels, wet wells, reservoirs, and other similar surfaces.
3. Continue pressure injection of cracks as specified until structure is watertight and remains watertight for not less than 1 year after date of Substantial Completion or date of final repair, whichever occurs later in time.

F. Leaking expansion joints in concrete walls or slabs that include waterstops:
1. Repair any signs of leakage until all leakage is stopped.
2. Pressure inject visible leaks with hydrophilic polyurethane foam resin.
3. Continue pressure injection along joints lines as specified until structure is watertight and remains watertight for not less than 1 year after date of Substantial Completion or date of final repair, whichever occurs later in time.

G. Walls and slabs at overhead channels that leak or sweat because of porosity or cracks too small for successful pressure injection with epoxy.
1. Seal on water or weather side by coating using surface-applied sealing system as specified in this Section.
2. Apply as recommended by manufacturer published instructions. Where concrete continues to sweat or leak, apply additional coats of surface-applied sealing system until the sweating or leaks stop.
3. Continue application of surface-applied sealing system until structure is watertight and remains watertight for not less than 1 year after date of Substantial Completion, or date of final repair, whichever occurs later in time.

END OF SECTION

ATTACHMENT A - MENZEL FORMULA AND NOMOGRAPH

MENZEL FORMULA AND NOMOGRAPH

Source: ACI PRC-305

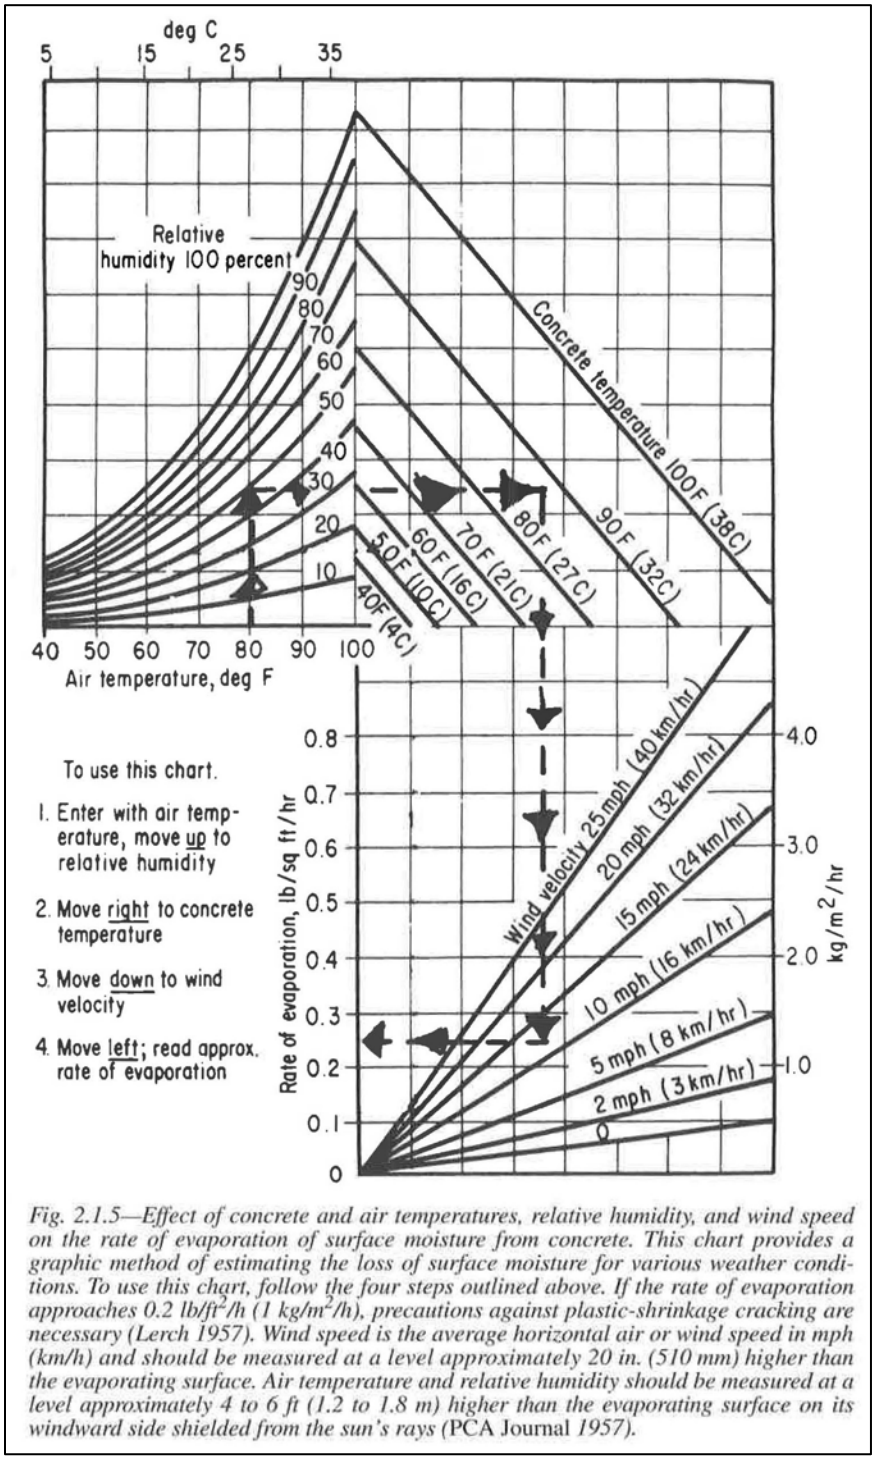

*Fig. 2.1.5—Effect of concrete and air temperatures, relative humidity, and wind speed on the rate of evaporation of surface moisture from concrete. This chart provides a graphic method of estimating the loss of surface moisture for various weather conditions. To use this chart, follow the four steps outlined above. If the rate of evaporation approaches 0.2 lb/ft^2/h (1 kg/m^2/h), precautions against plastic-shrinkage cracking are necessary (Lerch 1957). Wind speed is the average horizontal air or wind speed in mph (km/h) and should be measured at a level approximately 20 in. (510 mm) higher than the evaporating surface. Air temperature and relative humidity should be measured at a level approximately 4 to 6 ft (1.2 to 1.8 m) higher than the evaporating surface on its windward side shielded from the sun's rays (*PCA Journal *1957).*

SECTION 03366

CONCRETE FINISHES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Concrete finishes.

1.02 REFERENCES

A. American Concrete Institute (ACI):
   1. 117-10 - Specification for Tolerances for Concrete Construction and Materials and Commentary.

B. International Concrete Repair institute (ICRI):
   1. Guideline No. 301.2: Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, and Polymer Overlays.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Architectural concrete:
      a. Concrete surfaces that will be exposed to view in the finished work.
         1) For purposes of this Section, includes exposed concrete surfaces that are designated to receive paint or coatings.
         2) Exposed concrete in open basins, channels, and similar liquid-containing structures: Surfaces will be considered exposed to view if located above the water line as defined in this Section.
   2. Grade line: A reference line that separates surfaces considered to be above grade from those considered to be below grade. Located 12 inches below finished grades at the perimeter of the structure.
   3. Water line: A reference line that separates surfaces considered to be above the water level (and visible in the finished work) from those considered to be below the water level (and not visible in the finished work). For each water-bearing cell of a structure, defined as a line located 2 feet below the normal operating water level in that cell.

1.04 QUALITY ASSURANCE

A. Qualifications:
   1. Finishing personnel:
      a. Use qualified flatwork finishers.
      b. Finishing supervisor must have at least 5 years of experience finishing concrete.

B. Mockups:
    1. Construct mockup panels showing finishing of formed surfaces for review by the Engineer.
        a. Construct mockup panels demonstrating concrete finishes for vertical surfaces:
            1) Construct mockup panels for F4 and F5 finishes and tie-hole repairs for review by the Engineer.
    2. Construct mockup slabs showing finishing of unformed surfaces for review by the Engineer.
        a. Construct mockup slabs demonstrating concrete finishes for horizontal surfaces:
            1) Construct mockup slabs for S1, S2, S4, and S5 finishes.
    3. Include the following elements in mockup panels and slabs.
        a. Concrete joints:
            1) Horizontal and vertical joints of the types included in the Work.
        b. Concrete repairs:
            1) Repairs using materials and procedures proposed for the Work.
    4. Construct mockup panels and slabs at beginning of project for review by the Engineer.
    5. Panels and portions thereof accepted by the Engineer will serve as the standard of quality and workmanship for the Work.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Packing and shipping:
    1. Deliver and store packaged materials in original containers until ready for use.

PART 2 PRODUCTS

2.01 MATERIALS

A. Materials for mortar:
    1. As specified in Section 03300 - Cast-in-Place Concrete, unless otherwise noted.
    2. Where finished surfaces will be visible in the finished work, use same cement used for concrete batches in that area. Add white cement if required to obtain color match between base concrete and finishing mortars.

2.02 MIXES

A. Cement mortar:
    1. As specified in Section 03600 - Grouting.

B. Dry-pack mortar:
    1. As specified in Section 03600 - Grouting.

C. Mortar mix for F4 finish (“F4 Mortar”):
    1. Consisting of 1 part cement and 1-1/2 parts of fine sand passing Number 100 screen. Mix with enough water and emulsified bonding agent to have consistency of thick cream.

D. Mortar mix for F5 finish ("F5 Mortar"):
   1. Consisting of 1 part cement to 1-1/2 parts of sand passing Number 16 screen.

2.03 EVAPORATION RETARDANT

A. As specified in Section 03300 - Cast-in-Place Concrete.

2.04 NON-SLIP ABRASIVE

A. Type: Aluminum oxide abrasive of size 8/16, having structure of hard aggregate. Homogeneous, non-glazing, rust-proof, and unaffected by freezing, moisture, and cleaning compounds.

B. Manufacturers: One of the following, or equal:
   1. Abrasive Materials Incorporated, Hillsdale MI.
   2. Exolon Company, Tonawanda NY.

2.05 CONCRETE SEALERS

A. Floor sealer and dust-proofer:
   1. Non-membrane forming, breathable, non-yellowing, penetrating sealer designed to densify and seal a cured concrete surface.
   2. Low odor, VOC content of 0 grams per liter, and stable when exposed to ultraviolet radiation from sunlight.
   3. Manufacturers: One of the following, or equal:
      a. Dayton Superior: Day-Chem Sure Hard Densifier (J-17).
      b. Euclid Chemical Company: Euco Diamond Hard.
      c. L&M Construction Chemicals: Seal Hard.
      d. W.R. Meadows: Liqui-Hard.

PART 3 EXECUTION

3.01 CONCRETE FINISHING - FORMED SURFACES

A. Scope:
   1. Finish formed surfaces with one of the finishes specified in the following paragraphs and as indicated in the Schedule of Concrete Finishes in this Section.
   2. Formed surfaces are those surfaces that the plastic concrete is placed against a temporary containment surface that will be removed after the concrete sets and takes its final form.

B. General:
   1. Provide setting and curing time from casting of concrete to removal of forms as specified in Section 03300 - Cast-in-Place Concrete.
   2. Provide curing after removal of forms as specified in Section 03300 - Cast-in-Place Concrete.
   3. Materials and mixes for finishes.
      a. Cement: Add white cement to mortars and grouts used for finishing if required to match color of repairs to surrounding surfaces.

4. Grinding:
    a. Grinding of architectural concrete is not permitted, unless demonstrated on the sample panel and accepted in advance by the Engineer.
    b. Where grinding of concrete surfaces is permitted:
        1) Perform grinding using an iron-free wheel, such as an aluminum oxide wheel, to avoid entrapment of particles that produce rust stains.
        2) At locations where plastic-protected reinforcing bar supports are used, limit grinding to a maximum depth of 1/16 inch.

C. F1 finish: “Rough Form Finish”:
1. Repair defective work.
2. Remove fins and other projections larger than 1 inch.
3. Fill tie holes using dry-pack mortar.
4. After removal of any curing compounds, fill depressions larger than 1 1/2-inch wide or 1/2-inch deep using dry-pack mortar.
5. Leave surface with texture imparted by forms.
6. Surface irregularity: Not exceeding a 1-inch gap when measured over the length of a 5-foot straightedge.

D. F2 finish: “Form Finish”:
1. Repair defective work.
2. Remove fins and other projections larger than 1/4 inch.
3. Fill tie holes using dry-pack mortar.
4. Fill depressions.
    a. Fill after removal of any curing compounds.
    b. Fill depressions larger than 3/4 inch in width or 1/2 inch in depth using cement mortar.
    c. Fill larger voids and depressions, use dry-pack mortar.
5. Leave surfaces with texture imparted by forms.
6. Surface irregularity: Not exceeding a 1/4-inch gap when measured over the length of a 5-foot straightedge.

E. F3 finish: “Smooth Form Finish”:
1. Repair defective work.
2. Repair rough or irregular surface finishes resulting from failure of form release agent or other form conditions and provide a smooth, uniform surface appearance.
3. Remove fins: Grind offsets, projections, and rough spots larger than 1/8 inch.
4. Fill tie holes using dry pack mortar.
5. Fill depressions:
    a. Fill after removal of any curing compounds.
    b. Fill depressions 1/2 inch and larger in depth or 3/4 inch in width using cement mortar.
    c. For larger depressions, fill using dry pack mortar.
6. Top coat tie holes and filled depressions with cement mortar to provide uniform appearance.
7. Leave surfaces with texture that is generally smooth and uniform in appearance.
8. Surface irregularity: Not exceeding a 1/8 inch gap when measured over the length of a 5-foot straightedge.

F. F4 finish: “Rubbed Finish”:
   1. As specified for F3 finish, except prepare surfaces and fill depressions 1/16 inch or larger in depth or width as follows.
   2. Fill depressions.
      a. “Brush-off” sandblast surfaces to expose all depressions and voids near the surface of the concrete.
      b. Thoroughly wet surfaces and begin filling depressions while surfaces are still damp.
      c. Use clean burlap, sponge rubber floats, or trowels to rub plastic F4 mortar over the entire surface to be finished. Fill pits, holes, and depressions.
      d. Wipe surfaces clean. Do not leave any mortar on the surface, except that within the depressions.
      e. Cure: Moist cure surfaces.

G. F5 finish: “Stoned Finish”:
   1. As specified for F3 finish, except add stoned finish as follows.
   2. Fill depressions:
      a. Wet surfaces thoroughly with brush.
      b. Rub wetted surfaces with a hard wood float dipped in water containing 2 pounds of Portland cement per gallon of water.
      c. Rub surfaces until form marks and projections are removed.
      d. Using a brush, spread plastic grindings from the rubbing operation uniformly over the surface. Work the material in to fill pits and small voids.
      e. Cure: Moist cure brushed surfaces for at least 72 hours.
   3. Finish surfaces:
      a. After curing, obtain final finish by rubbing with a No. 50 grit carborundum stone.
      b. Continue rubbing until entire surface has a smooth texture and is uniform in color.
      c. Cure: Continue curing for remainder of specified time.
   4. Note: If surfaces have become too hard to finish as specified in the preceding paragraphs, the following alternative procedure may be used:
      a. Sandblast and wash related surfaces exposed to view, whether finished or not.
      b. While surfaces are still damp, rub surface with mortar mix for F5 finish.
      c. Finish by rubbing mortared surface with No. 60 grit carborundum stone. Add F5 mortar until surface is evenly filled without excess mortar. Continue stoning until surface is hard.
      d. Moist cure surface for 72 hours.
      e. After curing, make surface smooth in texture and uniform in color by rubbing with a No. 50 or No. 60 grit carborundum stone.
      f. Continue curing until 7-day curing period is complete.

3.02 CONCRETE FINISHING - UNFORMED SURFACES

A. Scope:
   1. Finish unformed surfaces with one of the finishes specified in the following paragraphs and as indicated in the Schedule of Concrete Finishes in this Section.
   2. Unformed surfaces are those surfaces that are not cast against a temporary containment and the specified finish is achieved by tooling.

B. General:
    1. Concrete placement:
        a. Place concrete at a rate that allows spreading, straight-edging, and initial floating before bleed water appears.
            1) Consider characteristics of concrete mixes used, including potential for accelerating or retarding effects of admixtures, fly ash, and temperatures, on plans for and scheduling of placement and finishing.
        b. Place, consolidate, strike-off, and screed concrete level to bring surfaces to required planes and lines. Eliminate high and low spots.
        c. Strike tops of walls and similar surfaces smooth and finish as specified to a texture consistent with that of adjacent formed surfaces.
        d. After screeding, apply evaporation retardant to concrete surface if weather conditions will result in rapid evaporation of moisture from the surface of the concrete. Do not work evaporation retardant into the surface of the concrete.
    2. Floating and re-straightening:
        a. Float concrete to compact and consolidate the surface.
        b. Initial floating:
            1) Provide initial floating immediately after screeding.
            2) Perform by hand using a wide bull float, darby, or highway straightedge.
            3) Complete before excess moisture or bleed water is present on the surface.
        c. Wait for concrete to stiffen and for the bleed water to stop rising and dissipate before proceeding with edging, hand-tooled jointing, and second floating.
        d. After initial floating, apply evaporation retardant to concrete surface if weather conditions will result in rapid evaporation of moisture from the surface of the concrete. Do not work evaporation retardant into the surface of the concrete.
        e. Second floating:
            1) Do not commence until bleed water has dissipated and concrete has stiffened enough to support weight of finishers and finishing equipment.
            2) May be by hand, or, if accepted by the Engineer, may be done using a bladed power float equipped with float shoes, or a power disk float.
            3) Float surfaces to a true, even plane, with no coarse aggregate visible.
            4) Evaporation retardant may not be applied after second floating.
        f. Flatness:
            1) Specified tolerances for flatness may require re-straightening of the surface between first and second floating operations and before steel troweling. Re-straighten concrete as required.
            2) Modify power equipment with alternate float shoes or other equipment if required to achieve specified flatness.
    3. Troweling: Where finishes require troweling, conform to the following requirements:
        a. After surface moisture from floating has disappeared, steel trowel to a smooth, hard, dense concrete surface.
        b. Provide at least 2 trowelings.
            1) Avoid excessive troweling.
            2) Use smaller trowels for successive troweling.

3) Make each successive troweling perpendicular to the previous pass.
c. Do not add dry cement or additional water to the surface during troweling.
d. In lieu of hand steel troweling, a power machine for finishing concrete may be used if accepted by the Engineer.
1) Do not use power machine if concrete has not attained the set necessary to permit finishing without introduction of high and low spots into the concrete surface.
2) Use equipment in full compliance with the manufacturer's recommendations.
3) Use smaller blades or higher pressure for each successive troweling.
4) Hand trowel areas of the concrete not accessible to power equipment.
5) Tolerances for flatness specified may require re-straightening of the surface during finishing. Modify power equipment with alternate shoes or other equipment if required to achieve these requirements.
e. Finishing with a fresno trowel or finishing to a "fresno finish" is not allowed.
4. Finishing tolerances:
a. Slabs sloped to drain: Finish surfaces to adequately drain toward designated points or lines, regardless of tolerances specified.

C. S1 finish: "Scratch Finish":
1. Place, consolidate, and screed concrete level.
2. Provide initial floating of concrete.
3. Provide surface conforming to the "Conventional" floor flatness tolerance requirements of ACI 117 using the manual straightedge method (maximum 1/2-inch gap in 10 feet at 90 percent of locations; maximum 3/4-inch gap at any location), unless otherwise indicated.
4. Before final set, roughen the surface with rakes.
a. For sloped surfaces, rake grooves in the direction of drainage.
b. Provide roughness equivalent to CSP 6 surface as designated by ICRI Guideline 310.2.
5. Pressure wash surface to remove laitance before placing grout or toppings.

D. S2 finish: "Floated Finish":
1. Place, consolidate, and screed concrete to required elevations and slopes.
2. Provide initial and second floatings of concrete. Float to a uniform texture.
3. Provide surface conforming to the "Flat" floor flatness tolerance requirements of ACI 117 using the manual straightedge method (maximum 1/4-inch gap in 10 feet at 90 percent of locations; maximum 3/8-inch gap at any location), unless otherwise indicated.
4. Remove laitance and leave surface clean.

E. S3 finish: "Steel Trowel Finish":
1. Place, consolidate, and screed concrete to required elevations and slopes.
2. Provide S2 Floated Finish.
3. Provide 2 trowelings:
4. Provide finish conforming to the "Flat" floor flatness tolerance requirements of ACI 117 (maximum 1/4-inch gap in 10 feet), unless otherwise indicated.

F. S4 finish: "Steel Trowel Finish - Free of Trowel Marks":
1. Finish as specified for S3 Steel Trowel Finish, except that final troweling shall remove all trowel marks from the slab surface.

G. S5 finish: “Broomed Finish”:
   1. Finish as specified for S2 Floated Finish, except modify as follows.
   2. Finish surface by drawing a fine-hair broom lightly across the freshly floated surface.
      a. Provide resulting roughness for a non-skid surface. Finishing and roughness is subject to review and acceptance by the Engineer.
      b. Direction of brooming:
         1) General:
            a) In same direction of and parallel to expansion joints.
            b) Perpendicular to primary direction of traffic.
         2) For sloped slabs, parallel to the direction of drainage.
         3) For round roof slabs, in the radial direction.

H. S6 finish: “Non-Slip Abrasive Finish”:
   1. Place, consolidate, and screed concrete to required elevations and slopes.
   2. Provide initial floating of surface.
   3. Prepare and apply abrasive as recommended by the manufacturer.
      a. Apply using a shake screen or other accepted method to ensure even coverage without segregation of the abrasive.
      b. Install abrasive at a rate of 25 pounds for each 100 square feet of surface area.
   4. After concrete has hardened enough to support the weight of a person, and unless otherwise indicated by the abrasive manufacturer, apply approximately 2/3 of the abrasive material required for coverage.
   5. Finish as specified for S2 Floated Finish, except that re-floating is not required.
   6. Apply remaining abrasive material at right angles to the first application and in locations necessary to provide the minimum specified thickness.
   7. Immediately after the second application, re-float the surface to embed abrasive.
   8. Finish as specified for S2 Steel Trowel Finish. Trowel abrasive into the surface, properly exposing material to produce a non-slip finish.

I. Concrete sealer:
   1. See Room Finish Schedule Drawings for locations of floors and slabs receiving concrete sealer finish.
   2. Apply sealer in accordance with manufacturer’s instructions.

3.03 FIELD QUALITY CONTROL

A. Provide field quality control for the Work of this Section as specified in Section 01450 - Quality Control.

B. Field quality control by Contractor:
   1. Field inspections and testing:
      a. Submit records of inspections and testing to Engineer within 24 hours after completion.
   2. Manufacturer's services.
      a. Non-slip abrasive finish. Before beginning installation, conduct pre-installation meeting with manufacturer's technical representative to review product use and installation requirements.

C. Field quality control by Owner:
    1. Special inspections, special tests, and structural observation:
        a. Not required.
    2. Field inspections:
        a. Observe construction for conformance to the Contract Documents and the accepted Submittals.
        b. Provide record of each inspection. Submit copies to Engineer upon request.

3.04 NON-CONFORMING WORK

A. Unsatisfactory finishes that have hardened will require removal, grinding, topping, or other correction acceptable to the Engineer.

B. Re-work or refinish unsatisfactory finishes at no additional cost to the Owner.

C. See Section 03300 - Cast-In-Place Concrete for requirements.

3.05 SCHEDULE OF CONCRETE FINISHES

A. Formed surfaces: See Table 03366-A.

B. Unformed surfaces: See Table 03366-B.

Table 03366-A: Concrete Finishes - Formed Surfaces					
	Elements	**Location**	**Surface Exposure**	**Finish**	**Notes**
EXTERIOR SURFACES	Walls Columns Slab edges	Wet structure:	Above grade or water line:		
			- Exposed to view	F4	
			- Covered	F2	1a
			Below grade or water line:		
			- No coating	F1	
			- Bituminous coating	F2	
			- Waterproofing	F3	
		Dry structure:	Above grade line:		
			- Exposed to view	F4	
			- Covered	F2	1a
			Below grade line:		
			- No coating	F1	
			- Bituminous coating	F2	
			- Waterproofing	F3	
INTERIOR SURFACES	Walls Columns Slab edges	Wet structure:	Open basin:		
			- Above water line	F4	
			- Below water line	F3	
			Covered basin		
			- Above water line	F3	
			- Below water line	F3	
		Dry structure:	Exposed to view	F4	
			Covered	F2	1b
	Overhead slabs and beams	Wet structure:	Open basin	F3	1c, 1d
			Covered basin	F2	1d
		Dry structure:	Exposed	F3	1c, 1d
			Covered by ceiling	F1	1d

Notes:

(1a) Coverings include additional surfaces applied over the concrete, such as veneer, stucco, plaster, etc.

(1b) Coverings include additional surfaces applied over the concrete, such as veneer, stucco, plaster, furring strips with drywall, etc.

(1c) Applies to overhead surfaces visible from normal pedestrian travel routes.

(1d) At overhead slabs and beams, patch tie holes on sides of members.

Table 03366-B: Concrete Finishes - Unformed Surfaces					
	Element	**Location**	**Exposure**	**Finish**	**Notes**
EXTERIOR SURFACES	Footings	Extensions	Exposed	S3	
			Covered by soil	S2	
	Slabs and beams - exposed	Walking or possible walking paths	Tops of treatment structures	S5	2a, 2b, 2g
			Stairs & landings	S5	
		Roofs	Exposed	S5	
			Covered by roofing	S2	
	Slabs and beams - submerged	Unless otherwise noted	All	S3	2g
	Walls, Corbels	Top of wall or corbel	All	S3	One troweling
	Sidewalks	All		S5	
	Equipment Slabs	All		S5	
INTERIOR SURFACES	Floor slabs, includes flat and sloping surfaces	Wet structure	Exposed		
			- Basins & channels	S3	
			Covered		
			- To receive basin bottom grout	S1	2e
			- To receive concrete fill	S1	2f
		Dry structure	Exposed		
			- Pipe galleries	S4	2c
			- Stairs & landings	S4	2d
			- Shops & garages	S4	
			- Equipment rooms	S4	
			Covered		
			- Tile on mortar bed	S2	
			- Resilient flooring	S3	
			- Carpet	S3	

Notes:
(2a) Includes slabs covering tanks, basins, channels and similar structures.
(2b) Includes tops of walls or beams that serve as walkways.
(2c) In galleries with slabs subject to wetting, provide broom finish (S5) where indicated on the Drawings.
(2f) Finish for concrete fill: See Floor slab, wet structure, exposed basins and channels.
(2g) Slabs include flat and sloping surfaces.

C. Finish concrete surfaces in accordance with Finish Schedule indicated on the Drawings.

END OF SECTION

SECTION 03600

GROUTING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Cement grout.
   2. Cement mortar.
   3. Dry-pack mortar.
   4. Epoxy grout.
   5. Grout.
   6. Non-shrink epoxy grout.
   7. Non-shrink grout.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C109 - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (using 2-inch cube specimens).
   2. C230 - Standard Specification for Flow Table for Use in Tests of Hydraulic Cement.
   3. C531 - Standard Test Method for Liner Shrinkage and Coefficient of Thermal Expansion of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.
   4. C579 - Standard Test Method for Compressive Strength of Chemical-Resistant Mortars, Grouts, and Monolithic Surfacings and Polymer Concretes.
   5. C939 - Standard Test Method for Flow of Grout for Preplaced-Aggregate Concrete (Flow Cone Method).
   6. C942 - Standard Test Method for Compressive Strength of Grouts for Preplaced-Aggregate Concrete in the Laboratory.
   7. C1107 - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-shrink).
   8. C1181 - Standard Test Methods for Compressive Creep of Chemical-Resistant Polymer Machinery Grouts.

B. International Concrete Repair Institute (ICRI):
   1. 310.2R - Selecting and specifying Concrete Surface Preparations for Sealers, Coatings, Polymer Overlays, and Concrete Repair.

1.03 SUBMITTALS

A. Cement grout:
   1. Mix design.
   2. Material Submittals.

B. Cement mortar:
   1. Mix design.
   2. Material Submittals.

C. Non-shrink epoxy grout:
   1. Manufacturer's literature.

D. Non-shrink grout:
   1. Manufacturer's literature.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to jobsite in their original, unopened packages or containers, clearly labeled with manufacturer's product identification and printed instructions.

B. Store materials in cool dry place and in accordance with manufacturer's recommendations.

C. Handle materials in accordance with the manufacturer's instructions.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Non-shrink epoxy grout:
   1. Manufacturers: One of the following, or equal:
      a. Five Star Products, Inc., Five Star DP Epoxy Grout.
      b. L&M Construction Chemicals, Inc., EPOGROUT.
      c. Master Builder Solutions/Sika, MasterFlow 648.
   2. Non-shrink epoxy grout shall be 100 percent solid, premeasured, prepackaged system containing 2-component thermosetting epoxy resin and inert aggregate.
   3. Maintain flowable consistency for at least 45 minutes at 70 degrees Fahrenheit.
   4. Shrinkage or expansion: Less than 0.0006 inches per inch when tested in accordance with ASTM C531.
   5. Minimum compressive strength: 10,000 pounds per square inch at 24 hours and 14,000 pounds per square inch at 7 days when tested in accordance with ASTM C579, Method B.
   6. Compressive creep: Not exceed 0.0037 inches/per inch when tested under 400 pounds per square inch constant load at 140 degrees Fahrenheit in accordance with ASTM C1181.
   7. Coefficient of thermal expansion: Not exceed 0.000018 inches per inch per degree Fahrenheit when tested in accordance with ASTM C531, Method B.

B. Non-shrink grout:
   1. Manufacturers: One of the following, or equal:
      a. Five Star Products, Inc., Five Star Grout.
      b. L&M Construction Chemicals, Inc., CRYSTEX.
      c. Master Builder Solutions/Sika, MasterFlow 928.
   2. In accordance with ASTM C1107.
   3. Preportioned and prepackaged cement-based mixture.

4. Contain no metallic particles such as aluminum powder and no metallic aggregate such as iron filings.
5. Require only addition of potable water.
6. Water for pre-soaking, mixing, and curing: Potable water.
7. Free from emergence of mixing water from within or presence of water on its surface.
8. Remain at minimum flowable consistency for at least 45 minutes after mixing at 45 degrees Fahrenheit to 90 degrees Fahrenheit when tested in accordance with ASTM C230.
    a. If at fluid consistency, verify consistency in accordance with ASTM C939.
9. Dimensional stability (height change):
    a. In accordance with ASTM C1107, volume-adjusting Grade B or C at 45 degrees Fahrenheit to 90 degrees Fahrenheit.
    b. Have 90 percent or greater bearing area under bases.
10. Have minimum compressive strengths at 45 degrees Fahrenheit to 90 degrees Fahrenheit in accordance with ASTM C1107 for various periods from time of placement, including 5,000 pounds per square inch at 28 days when tested in accordance with ASTM C109 as modified by ASTM C1107.

2.02 MIXES

A. Cement grout:
    1. Use same sand-to-cementitious materials ratio for cement grout mix that is used for concrete mix.
    2. Use same materials for cement grout that are used for concrete.
    3. Use water-to-cementitious materials ratio that is no more than that specified for concrete.
    4. For spreading over surfaces of construction or cold joints.

B. Cement mortar:
    1. Use same sand-to-cementitious materials ratio for cement mortar mix that is used for concrete mix.
    2. Use same materials for cement mortar that are used for concrete.
    3. Use water-to-cementitious materials ratio that is no more than that specified for concrete being repaired.
    4. At exposed concrete surfaces not to be painted or submerged in water: Use sufficient white cement to make color of finished patch match that of surrounding concrete.

C. Dry-pack mortar:
    1. Proportions by weight: 1 part Portland cement to 2 parts concrete sand.
        a. Portland cement: As specified in Section 03300 - Cast-in-Place Concrete.
        b. Concrete sand: As specified in Section 03300 - Cast-in-Place Concrete.

D. Epoxy grout:
    1. Consist of mixture of epoxy or epoxy gel and sand.
        a. Epoxy: As specified in Section 03071 - Epoxies.
        b. Epoxy gel: As specified in Section 03071 - Epoxies.
        c. Sand: Clean, bagged, graded, and kiln-dried silica sand.

2. Proportioning:
    a. For horizontal work: Consist of mixture of 1 part epoxy with not more than 2 parts sand.
    b. For vertical or overhead work: Consist of 1 part epoxy gel with not more than 2 parts sand.

E. Grout:
    1. Mix in proportions by weight: 1 part Portland cement to 4 parts concrete sand.
        a. Portland cement: As specified in Section 03300 - Cast-in-Place Concrete.
        b. Concrete sand: As specified in Section 03300 - Cast-in-Place Concrete.

F. Non-shrink epoxy grout:
    1. Mix in accordance with manufacturer's installation instructions.

G. Non-shrink grout:
    1. Mix in accordance with manufacturer's installation instructions such that resulting mix has flowable consistency and is suitable for placing by pouring.

PART 3 EXECUTION

3.01 EXAMINATION

A. Inspect concrete surfaces to receive grout or mortar and verify that they are free of ice, frost, dirt, grease, oil, curing compounds, paints, impregnations, and loose material or foreign matter likely to reduce bond or performance of grout or mortar.

3.02 PREPARATION

A. Surface preparation for grouting other baseplates:
    1. Remove grease, oil, dirt, dust, curing compounds, laitance, and other deleterious materials that may affect bond to concrete and bottoms of baseplates.
    2. Roughen concrete surfaces in contact with grout to ICRI CSP-6 surface profile or rougher.
        a. Remove loose or broken concrete.
    3. Metal surfaces in contact with grout: Grit blast to white metal surface.

3.03 INSTALLATION

A. Mixing:
    1. Cement grout:
        a. Use mortar mixer with moving paddles.
        b. Pre-wet mixer and empty out excess water before beginning mixing.
    2. Cement mortar:
        a. Use mortar mixer with moving paddles.
        b. Pre-wet mixer and empty out excess water before beginning mixing.
    3. Dry-patch mortar:
        a. Use only enough water so that resulting mortar will crumble to touch after being formed into ball by hand.

4. Non-shrink epoxy grout:
    a. Keep temperature of non-shrink epoxy grout from exceeding manufacturer's recommendations.
5. Non-shrink grout:
    a. May be drypacked, flowed, or pumped into place. Do not overwork grout.
    b. Do not retemper by adding more water after grout stiffens.

B. Placement:
1. Cement grout:
    a. Exercise care in placing cement grout because it is required to furnish structural strength, impermeable water seal, or both.
    b. Do not use cement grout that has not been placed within 30 minutes after mixing.
2. Cement mortar:
    a. Use mortar mixer with moving paddles.
    b. Pre-wet mixer and empty out excess water before beginning mixing.
3. Epoxy grouts:
    a. Wet surfaces with epoxy for horizontal work or epoxy gel for vertical or overhead work prior to placing epoxy grout.
4. Non-shrink epoxy grout:
    a. Mix in complete units. Do not vary ratio of components or add solvent to change consistency of mix.
    b. Pour hardener into resin and mix for at least 1 minute and until mixture is uniform in color. Pour epoxy into mortar mixer wheelbarrow and add aggregate. Mix until aggregate is uniformly wetted. Over mixing will cause air entrapment in mix.
5. Non-shrink grout:
    a. Add non-shrink cement grout to premeasured amount of water that does not exceed the manufacturer's maximum recommended water content.
    b. Mix in accordance with manufacturer's instructions to uniform consistency.

C. Curing:
1. Cement based grouts and mortars:
    a. Keep continuously wet for minimum of 7 days. Use wet burlap, soaker hose, sun shading, ponding, and in extreme conditions, combination of methods.
    b. Maintain above 40 degrees Fahrenheit until it has attained compressive strength of 3,000 pounds per square inch, or above 70 degrees Fahrenheit for minimum of 24 hours to avoid damage from subsequent freezing.
2. Epoxy based grouts:
    a. Cure grouts in accordance with manufacturers' recommendations.
        1) Do not water cure epoxy grouts.
    b. Do not allow any surface in contact with epoxy grout to fall below 50 degrees Fahrenheit for minimum of 48 hours after placement.

D. Grouting equipment bases, baseplates, soleplates, and skids: As specified in Section 15050 - Common Work Results for Mechanical Equipment.

E. Grouting other baseplates:
1. General:
    a. Use non-shrink grout as specified in this Section.

b. Baseplate grouting shall take place from 1 side of baseplate to other in continuous flow of grout to avoid trapping air in grout.
c. Maintain hydrostatic head pressure by keeping level of grout in headbox above bottom of baseplate. Fill headbox to maximum level and work grout down.
d. Vibrate, rod, or chain non-shrink grout to facilitate grout flow, consolidate grout, and remove trapped air.

2. Forms and headboxes:
a. Build forms using material with adequate strength to withstand placement of grouts.
b. Use forms that are rigid and liquidtight. Caulk cracks and joints with elastomeric sealant.
c. Line forms with polyethylene for easy grout release. Coating forms with 2 coats of heavy-duty paste wax is also acceptable.
d. Headbox shall be 4 to 6 inches higher than baseplate and shall be located on 1 side of baseplate.
e. After grout sets, remove forms and trim back grout at 45 degree angle from bottom edges of baseplate.

3.04 FIELD QUALITY CONTROL

A. Non-shrink epoxy grout:
1. Test for 24-hour compressive strength in accordance with ASTM C579, Method B.

B. Non-shrink grout:
1. Test for 24-hour compressive strength in accordance with ASTM C942.

END OF SECTION

SECTION 04055

ADHESIVE BONDING REINFORCING BARS AND ALL THREAD RODS IN MASONRY

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Bonding reinforcing bars and all thread rods in masonry using injectable, 2-component adhesive.

1.02 REFERENCES

A. American National Standards Institute (ANSI):
   1. B212.15 - Cutting Tools - Carbide-Tipped Masonry Drills and Blanks for Carbide-Tipped Masonry Drills.

B. ICC Evaluation Service, Inc. (ICC-ES):
   1. AC58 - Acceptance Criteria for Adhesive Anchors in Masonry Elements.

C. Society for Protective Coatings (SSPC):
   1. Surface Preparation Standards (SP).
      a. SP-1 - Solvent Cleaning.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Evaluation Report: Prepared by ICC-ES, or by other testing agency acceptable to the Engineer and to the Authority Having Jurisdiction, that documents testing and review of the adhesive product to confirm that it conforms to the requirements of ICC-ES AC58.

1.04 SUBMITTALS

A. Product data: Furnish technical data for adhesives, including:
   1. Independent testing laboratory results indicating allowable loads in tension and shear for masonry walls of the types included in the Work, with load modification factors for temperature, spacing, edge distance, and other installation variables.
   2. Handling and storage instructions.
   3. Installation instructions.

B. Quality Control Submittals:
   1. Special inspection: Detailed instructions for special inspection to comply with the building code specified in Section 01410 - Regulatory Requirements and as required by the Evaluation Report for each product.
   2. Evaluation Report confirming that the product complies with the requirements of ICC-ES AC58.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store and protect as follows, unless the manufacturer has more stringent requirements:
   1. Store adhesive components on pallets or shelving in a covered-storage area protected from weather.
   2. Control temperature to maintain storage within the manufacturer's recommended temperature range.
      a. If products are stored at temperatures outside the manufacturer's recommended range, test components prior to use by methods acceptable to the Engineer to determine if the products still meet specified requirements.
   3. Dispose of products that have passed their expiration date.

1.06 PROJECT CONDITIONS

A. As specified in Section 01850 - Design Criteria.

B. Seismic design category (SDC) for structures: As specified in Section 01850 - Design Criteria.

PART 2 PRODUCTS

2.01 GENERAL

A. Like items of materials: Use end products of one manufacturer to achieve structural compatibility and single-source responsibility.

2.02 ADHESIVE FOR SELF-CONTAINED CARTRIDGE SYSTEM

A. Shall have a current Evaluation Report demonstrating compliance with the requirements of ICC-ES AC58.

B. Materials:
   1. 2-component structural adhesive, insensitive to moisture, and gray in color.
   2. Cure temperature, pot life, and workability: Compatible with intended use and environmental conditions.

C. Packaging:
   1. Furnished in disposable, side-by-side cartridges with resin and hardener components isolated until mixing through manufacturer's static mixing nozzle.
      a. Nozzle designed to thoroughly blend the components, in the proper mixing ratio, for injection from the nozzle directly into prepared hole.
      b. Provide nozzle extensions as required to allow full-depth insertion and filling from the bottom of the hole.
   2. Container markings: Include manufacturer's name, product name, batch number, mix ratio by volume, product expiration date, ANSI hazard classification, and appropriate ANSI handling precautions.

D. For installation in solid masonry and solid-grouted masonry (concrete or brick):
   1. Manufacturers: One of the following or equal:
      a. Hilti, Inc., HY-270 Adhesive Anchor System.
      b. Simpson Strong-Tie Co., Inc., ET-HP Anchoring Adhesive.
      c. USP Structural Connectors, CIA-GEL 7000 Masonry Epoxy Adhesive.

E. For installation in un-grouted and partially-grouted masonry (concrete or brick) and in masonry containing voids or holes (concrete or brick):
   1. Manufacturers: The following or equal:
      a. Hilti, Inc., HY-270 Adhesive Anchor System.
         1) Provide manufacturer's plastic mesh sleeve for bonding reinforcing bar(s) or all thread rod(s) of the size and embedment indicated on the Drawings.

2.03 ALL THREAD RODS

A. Materials: As specified in Section 05120 - Structural Steel Framing.

2.04 REINFORCING BARS

A. As specified in Section 04090 - Masonry Accessories.

PART 3 EXECUTION

3.01 GENERAL

A. Unless otherwise required for "Conditions of Use" in the Evaluation Report submitted, prepare and install holes, adhesive, and inserts (all thread rods or reinforcing bars) in accordance with the manufacturer's recommendations and this Section.
   1. In the event of conflicts, the more restrictive provisions shall govern.

B. Do not install adhesive-bonded all thread rods or reinforcing bars in upwardly inclined and overhead applications.

3.02 PREPARATION

A. Prior to completing the manufacturer's on-site training specified in this Section, do not:
   1. Drill holes for reinforcing bars or all thread rods.
   2. Mix or install adhesive in holes.

B. Review the manufacturer's installation instructions and "Conditions of Use" stipulated in the Evaluation Report before beginning Work.

C. Confirm that adhesive and substrate receiving adhesive are within the manufacturer's recommended temperature range and will remain so during the cure time for the product.

3.03 HOLE LAYOUT AND INSTALLATION

A. Drilling holes:
   1. Determine location of reinforcing bars or other obstructions with a non-destructive indicator device. Mark locations with on the surface of the masonry using removable construction crayon, or other method acceptable to the Engineer.
   2. Do not damage or cut existing reinforcing bars, electrical conduits, or other items embedded in the masonry without prior acceptance by the Engineer.

B. Hole drilling equipment:
   1. Electric or pneumatic rotary impact type.
      a. Set drill to “rotation only” mode, or to “rotation plus hammer” mode in accordance with the manufacturer’s installation instructions and the requirements of the Evaluation Report.
   2. Where edge distances are less than 2 inches and “rotation plus hammer” mode is permitted, use lighter impact equipment to prevent micro-cracking and spalling from drilling.
   3. Drill bits: Carbide-tipped in accordance with ANSI B212-15.
   4. Hollow drill bits with flushing air systems are preferred. Air supplied to hollow drill bits shall be free of oil, water, or other contaminants that will reduce bond.

C. Hole diameter: As recommend in the manufacturer’s installation instructions and the Evaluation Report.

D. Hole depth: As recommended by the manufacturer’s installation instructions to provide minimum effective embedment indicated on the Drawings.

E. Obstructions in drill path:
   1. If an existing reinforcing bar or other obstruction is hit while drilling hole, stop drilling and fill the hole with dry-pack mortar. Relocate the hole to miss the obstruction and drill to the required depth.
      a. Allow dry-pack mortar to cure to strength equal to that of the surrounding masonry before resuming drilling in that area.
      b. Epoxy grout may be substituted for dry-pack mortar when acceptable to the Engineer.
   2. Avoid drilling an excessive number of adjacent holes that would weaken the structural member and endanger the stability of the structure. Obtain the Engineer’s acceptance of distance between abandoned and relocated holes.
   3. When existing reinforcing steel is encountered during drilling and when acceptable to the Engineer, enlarge the hole by 1/8 inch, core through the existing reinforcing steel at the larger diameter, and resume drilling at original hole diameter.
   4. Bent bar reinforcing bars: Where edge distances are critical and interference with existing reinforcing steel is likely, and if acceptable to the Engineer, drill hole at 10 degree angle (or less) from axis of reinforcing bar or all thread rod being installed.

F. Cleaning holes:
   1. Insert air nozzle to bottom of hole and blow out loose dust.
      a. Use compressed air that is free of oil, water, or other contaminants.

b. Provide minimum air pressure of 90 pounds per square inch for not less than 4 seconds.

2. Using a stiff bristle brush of diameter that provides contact around the full perimeter of the hole, vigorously brush the hole to dislodge compacted drilling dust.
   a. Insert brush to the bottom of the hole and withdraw using a simultaneous twisting motion.
   b. Repeat at least 4 times.
3. Repeat the preceding steps as required to remove drilling dust or other material that will reduce bond, and as required by the manufacturer and the Evaluation Report.
4. Leave prepared hole clean and dry.

3.04 INSTALLATION OF ADHESIVE AND INSERTS

A. Clean and prepare inserts:
   1. Prepare embedded length of reinforcing bars and all thread rods by cleaning to bare metal. Inserts shall be free of oil, grease, paint, dirt, mill scale, rust, or other coatings that will reduce bond.
   2. Solvent-clean prepared reinforcing bars and all thread rods over their embedment length in accordance with SSPC SP-1. Provide an oil and grease-free surface for bonding of adhesive to steel.

B. Fill holes with adhesive:
   1. Solid or solid-grouted masonry:
      a. Only when dry. Do no fill with adhesive when the hole is filled with water or damp except with written authorization by the Engineer.
      b. Starting at the bottom of the hole: Before inserting the reinforcing bar or all thread rod.
      c. Without creating air voids as nozzle is withdrawn.
      d. Fill with sufficient adhesive so that excess is extruded out of the hole when the reinforcing bar or all thread rod is inserted into the hole.
      e. Where metal or plastic screens are required for use in masonry (units with hollow cells or holes, and multi-wythe brick walls), fill screen with adhesive and insert into hole in accordance with the manufacturer's recommendations.
   2. Masonry with holes or un-grouted cells:
      a. Provide manufacturer's mesh screen tubes (steel or plastic mesh), fill with adhesive, and install in compliance with the manufacturer's instructions.

C. Install reinforcing bars and all thread rods:
   1. Install to depth, spacing, and locations as indicated on the Drawings.
   2. Insert into hole in accordance with the manufacturer's recommended procedures. Confirm that insert has reached the designated embedment in the hole and that adhesive completely surrounds the embedded portion.
   3. Clean excess adhesive from the mouth of the hole.

D. Curing and loading:
   1. Provide curing conditions recommended by the adhesive manufacturer for the period required to fully cure the adhesive at the actual temperature of the masonry.
   2. Do not disturb or load anchors until the manufacturer's recommended cure time has elapsed.

3.05 FIELD QUALITY CONTROL

A. As specified in Section 01450 - Quality Control.

B. Manufacturers' services:
   1. Before beginning installation, furnish adhesive manufacturer's representative to conduct on-site training in proper storage and handling of adhesive, drilling and cleaning of holes, and preparation and installation of reinforcing bars and all thread rods.
      a. Provide notice of training to the Engineer and special inspector not less than 10 working days before training occurs. Engineer and special inspector may attend training sessions.
   2. Submit record, signed by the Engineer, listing the Contractor's personnel who completed the training. Only qualified personnel who have completed the manufacturer's on-site training shall perform installations.
   3. Do not install holes or adhesive until training is complete.

3.06 FIELD QUALITY ASSURANCE

A. Engineer will provide on-site inspection and field quality assurance.

B. Special inspection:
   1. As specified in Section 01455 - Regulatory Quality Assurance.
   2. Unless otherwise indicated on the Drawings or in this Section, provide periodic special inspection as required by the "Conditions of Use" in the Evaluation Report for the product installed.
      a. Provide continuous inspection of placement of adhesive and insertion of reinforcing bars and all thread rods into adhesive.
   3. Provide a written record of each inspection using form acceptable to the Engineer and the Authority Having Jurisdiction.
   4. Preparation:
      a. Review Drawings and Specifications for the Work being observed.
      b. Review the adhesive manufacturer's recommended installation and evaluation report's special inspection procedures.
   5. Provide an initial inspection by for each combination of masonry type and reinforcing bar or all thread rod being installed.
      a. During initial inspection, observe the following for compliance with installation requirements. Furnish report of inspection that includes the following items:
         1) Masonry construction: Type and thickness; whether fully or partially grouted; locations and types of voids and holes in units.
         2) Environment: Temperature and moisture conditions of masonry base material and work area.

3) Holes: Locations, spacing, edge distances; verification of drill bit compliance with ANSI B212.15; cleaning equipment and procedures; cleanliness of hole.
    a) Before placing adhesive, confirm that depth and preparation of holes conforms to requirements of the Contract Documents, installation recommendations of the manufacturer, and "Conditions of Use" specified in the Evaluation Report.
4) Adhesive: Product manufacturer and name; lot number and expiration date; temperature of product at installation; installation procedures. Note initial set times observed during installation.
5) Embedded reinforcing bars and all thread rods: Material diameter and length; steel grade and/or strength; cleaning and preparation; cleanliness at insertion; minimum effective embedment.

6. Subsequent installations of the same reinforcing bars or threaded rods in the same masonry may be performed without the presence of the special inspector, provided that:
    a. There is no change in the personnel performing the installation, the type or details of the masonry receiving the insert, the adhesive or the reinforcing bars and all thread rods being used. Changes in any of these items shall require a new initial inspection.
    b. For ongoing installations over a period of time, the special inspector visits the Site at least once per day during each day of installation to observe the Work for compliance with material requirements and installation procedures.

C. Special testing:
1. Proof test reinforcing bars and all thread rods before installing production work:
    a. Owner's independent testing firm will proof test all thread rods in tension after curing:
        1) Test locations will be at the laboratory's discretion, unless otherwise directed by the Engineer, subject to the following minimum requirements:
            a) For each reinforcing bar type and anchor, perform a minimum of 5 proof tests.
            b) Proof test each reinforcing bar type and anchor to 133 percent of its design value.
    b. Tests shall be tension tests using test loads indicated in Table A.
    c. Report results of proof testing to the Engineer within 5 days after testing.
        1) Should any reinforcing bar or all thread rod fail to meet these criteria, notify the Engineer immediately. Test additional reinforcing as directed by the Engineer.
2. Production testing for reinforcing bars and all thread rods:
    a. Owner's independent testing firm will provide quality control testing program for reinforcing bars and anchors bonded into masonry using adhesive.
    b. Test locations and frequency will be at the laboratory's discretion, unless otherwise directed by the Engineer, subject to the following minimum requirements:
        1) Perform at least the minimum percentage of quality control tests specified in Table A for each reinforcing bar type.

2) Test a minimum of 5 reinforcing bars for each reinforcing bar type and anchor.
3) Perform tests at different locations and conditions to obtain a representative sample for each reinforcing bar type.

Table A - Testing Schedule							
	Insert			Testing			Notes
Group	Size	Spacing	Embed Depth	Load (kips)	Frequency (% of installations)	No. of proof tests	Reference Section or Detail on the Drawings, and other comments

c. Tests shall be tension tests:
   1) Test loads in Table A may be modified by the Engineer based on the results of proof test load tests.
   2) Maintain quality control test load for a minimum of 5 minutes.
d. There shall be no loosening or movement of the reinforcing bar out of the hole and no cracking or spalling of the masonry in which the reinforcing bar is set.
e. For reinforcing bar failing to meet these criteria, increase quantity of quality control testing of similar reinforcing bars by 100 percent. If other failures occur during additional testing, test all similar reinforcing bars.

3. Contractor shall be responsible for the following:
   a. Replacement of failed reinforcing bars, as directed by the Engineer at no additional cost.
   b. Payment for increased quality control testing and reinforcing bar replacement caused by reinforcing bar failure.
   c. Repair of the surface of the masonry, by means acceptable to the Engineer at no additional cost, if damage results from failed load test.

END OF SECTION

SECTION 04090

MASONRY ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Reinforcing bars.
   2. Wall tie screws.

1.02 REFERENCES

A. American Welding Society (AWS):
   1. D1.4 - Structural Welding Code - Reinforcing Steel.

B. ASTM International (ASTM):
   1. A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
   2. A615 - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
   3. A641 - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.
   4. A951 - Standard Specification for Masonry Joint Reinforcement.
   5. A1064 - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.
   6. C549 - Standard Specification for Perlite Loose Fill Insulation.
   7. D2000 - Standard Classification System for Rubber Products in Automotive Applications.
   8. D2287 - Standard Specification for Nonrigid Vinyl Chloride Polymer and Copolymer Molding and Extrusion Compounds.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures and the Agreement and Contract RFP in Volumes 1 and 2.

B. Reinforcing bars:
   1. Changes to reinforcing steel Contract Drawing requirements:
      a. Indicate in separate letter submitted with Shop Drawings any changes of requirements indicated on the Drawings for reinforcing steel.
      b. Such changes will not be acceptable unless the Engineer has accepted such changes in writing.
      c. Reinforcement detail drawings:
         1) Review of reinforcement Shop Drawings by the Engineer will be limited to general compliance with the Contract Documents.
      d. Welding procedures.

C. Product data.

1.04 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

B. Packing and shipping:
   1. Deliver bars bundled and tagged with identifying tags.

PART 2 PRODUCTS

2.01 GENERAL

A. Drawings contain notes concerning amount of reinforcement and placing, details of reinforcement at wall corners and intersections, and details of extra reinforcement around openings in masonry.

2.02 MANUFACTURED UNITS

A. Anchor bolts:
   1. Cast-in/built-in steel anchors: As specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.
      a. Includes anchor bolts, anchor rods, deformed bar anchors, and welded studs.
   2. Post-installed steel anchors: As specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.
      a. Includes concrete anchors for concrete masonry, and screw anchors for concrete masonry.

B. Reinforcing bars:
   1. Deformed bars in accordance with ASTM A615, Grade 60.
   2. Provide reinforcing steel that is of quality specified, free from excessive rust or scale or any defects affecting its usefulness.

C. Sheet metal ties: Minimum 22 gauge corrosion resistant corrugated sheet metal, minimum 7/8-inch wide by 7-inches long, pre-punched for wire ties to wire joint reinforcement.

D. Wall tie screws.

2.03 FABRICATION

A. Reinforcing bars:
   1. Cut and bend bars in accordance with the building code specified in Section 01410 - Regulatory Requirements.
   2. Bend bars cold.
   3. Provide bars free from defects, kinks and from bends not indicated on the Drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Reinforcing bars:
   1. Verify that bars are new stock free from rust scale, loose mill scale, excessive rust, dirt, oil, and other coatings which adversely affect bonding capacity when placed in the Work.

3.02 PREPARATION

A. Reinforcing bars:
   1. Thoroughly clean any bars that have rust scale, loose mill scale, or thick rust coat.
      a. Thin coating of red rust resulting from short exposure will not be considered objectionable.
   2. Remove concrete or other deleterious coatings from dowels and other projecting bars by wire brushing or sandblasting before bars are embedded in subsequent masonry placement.

3.03 INSTALLATION

A. Reinforcing bars:
   1. No field bending of bars will be allowed.
   2. Welding:
      a. Weld reinforcing bars where indicated on the Drawings or acceptable to the Engineer.
      b. Perform welding in accordance with AWS D1.4.
      c. Do not tack weld reinforcing bars.

B. Placing reinforcing bars:
   1. Accurately place bars and adequately secure them in position.
   2. Overlap bars at splices as indicated on the Drawings or specified.
   3. If not indicated on the Drawings, lap splice bars in masonry in accordance with the building code specified in Section 01410 - Regulatory Requirements.

END OF SECTION

SECTION 04100

MORTAR AND MASONRY GROUT

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Mortar and grout for masonry construction.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C144 - Standard Specification for Aggregate for Masonry Mortar.
   2. C150 - Standard Specification for Portland Cement.
   3. C207 - Standard Specification for Hydrated Lime for Masonry Purposes.
   4. C270 - Standard Specification for Mortar for Unit Masonry.
   5. C404 - Standard Specification for Aggregates for Masonry Grout.
   6. C476 - Standard Specification for Grout for Masonry.
   7. C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry.
   8. C1019 - Standard Test Method for Sampling and Testing Grout.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Alkali: Sum of sodium oxide and potassium oxide calculated as sodium oxide.

1.04 SUBMITTALS

A. Product data.

B. Shop Drawings.

C. Mortar color samples.

D. Design mixes for mortar and grout.

E. Test reports:
   1. Mortar Strength Test Results.
   2. Grout Strength Test Results.

1.05 QUALITY ASSURANCE

A. Materials for mortar and grout: Do not change source of materials which will affect the appearance of finished work after the work has started unless acceptable to the Engineer.

1.06 PROJECT CONDITIONS

A. Environmental requirements:
   1. Cold weather requirements:
      a. Cold weather construction: In accordance with the building code as specified in Section 01410 - Regulatory Requirements.
      b. Provide adequate equipment for heating mortar and grout materials when air temperature is below 40 degrees Fahrenheit.
         1) Temperatures of separate materials, including water, shall not exceed 140 degrees Fahrenheit when placed in mixer.
         2) Maintain mortar temperature on boards above freezing.
   2. Hot weather requirements:
      a. Wet mortar board before loading and cover mortar to retard drying when not being used.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Compressive strength:
   1. Mortar: Minimum 1,800 pounds per square inch at 28 days.
   2. Grout: Minimum 2,000 pounds per square inch at 28 days.

B. Mortar color:
   1. As selected by Owner.

2.02 MATERIALS

A. Portland cement:
   1. Type II, low alkali, containing maximum 0.6 percent total alkali in accordance with ASTM C150.

B. Hydrated lime:
   1. Type S in accordance with ASTM C207.

C. Aggregate for mortar:
   1. Fine aggregate: Sand in accordance with ASTM C144.

D. Aggregate for grout:
   1. Fine aggregate: Size Number 2 in accordance with ASTM C404.
   2. Coarse aggregate: Size Number 8 in accordance with ASTM C404.

E. Admixtures:
   1. Mortar color admixture:
      a. Containing maximum 15 percent lime proof, inorganic compounds, unless recommended otherwise by manufacturer.
      b. Maximum 3 percent carbon black by weight of cement.
      c. Factory blend for full color saturation of mortar joint.
      d. Packaging for unitized jobsite mixing at ratio of 1 unit of color per sack of Portland cement.

2. Grout admixture:
    a. Manufacturers: The following or equal:
        1) Sika Corp., Sika Grout Aid, Type II.
3. Mortar water repellent admixture:
    a. Manufacturers: One of the following, or equal:
        1) Master Builder Solutions/Sika, MasterPel 240MA.
        2) Sika Corp., Sikaproof A.
        3) W.R. Grace, Dry Block Mortar.
4. Other admixtures:
    a. Prohibited, unless accepted by the Engineer.

F. Water: Clean, clear, potable, free of oil, soluble salts, chemicals, and other deleterious substances.

G. Other materials:
    1. Prohibited, unless acceptable to the Engineer.

2.03 MIXES

A. Mortar mix:
    1. Portland cement-lime mortar.
    2. Mortar mix proportions by volume: As indicated in the following table:

Mortar Type	Parts by Volume of Portland Cement	Parts by Volume of Hydrated Lime	Aggregate Measured in a Damp Loose Condition
S	1	Greater than 1/4 to 1/2	Not less than 2-1/4 and not more than 3 times the sum of the separate volumes of cementitious materials
N	1	Greater than 1/2 to 1-1/4	Not less than 2-1/4 and not more than 3 times the sum of the separate volumes of cementitious materials

    3. Mortar mixing:
        a. Mix on jobsite in accordance with ASTM C270.
        b. Mix in mechanical mixer and only in quantities needed for immediate use.
        c. Mix for minimum 3 minutes, and maximum of 5 minutes after materials have been added to mixer.
    4. Measurement by volume: Measurement of constituents shall be accomplished by the use of a container of known capacity.
    5. Water shall be mixed with the dry ingredients in sufficient amount to provide a workable mixture which will adhere to the vertical surfaces of masonry units.
        a. Use no mortar which has been standing for more than 1 hour after being mixed.
    6. Whenever 90 minutes has elapsed since last batch was mixed, completely empty mixer drum of materials and wash down before placing next batch of materials.

B. Grout mix:
1. Grout mix proportions by volume: As indicated in the following table:

Type of Grout	Parts by Volume of Portland Cement	Parts by Volume of Hydrated Lime	Aggregate Measured in a Damp Loose Condition	
			Fine Aggregate	Coarse Aggregate
Fine grout	1	0-1/10	2-1/4 to 3 times the sum of the volumes of the cementitious materials	-
Coarse grout	1	0-1/10	2-1/4 to 3 times the sum of the volumes of the cementitious materials	1 to 2 times the sum of the volumes of the cementitious materials

2. Grout mixing:
   a. Mix on jobsite or in a transit mix in accordance with ASTM C476.
   b. Slump: 8 to 11 inches, unless otherwise accepted by the Engineer.
   c. Use within 90 minutes after addition of mixing water.
   d. Mix for minimum of 5 minutes after ingredients are added and until uniform mix is attained. Grout shall have sufficient water added to produce pouring consistency without segregation.
3. Use coarse grout for hollow cell masonry units with minimum 4-inch cell dimensions in both horizontal directions.
   a. Calculate cell dimension for this criterion by subtracting diameter(s) of any horizontal reinforcement crossing the cell from clear cell dimensions of the masonry unit.
4. Use coarse grout for collar joints horizontal dimension of 2 inches or more.

PART 3 EXECUTION

3.01 FIELD QUALITY CONTROL

A. Testing of grout and mortar:
1. During progress of construction, the Owner will have tests made to determine whether the grout and mortar, as being produced, complies with Specifications.
2. Compressive strength test for grout: In accordance with ASTM C1019.
3. Owner's Representative will make and deliver test specimens to the laboratory and testing expense will be borne by the Owner.
4. Required number of tests:
   a. At least 2 test specimens of grout and mortar will be made per week.
5. Do not use grout and mortar that does not meet specification.
   a. Remove such mortar and grout from Project site.
6. Make provisions for and furnish grout and mortar for test specimens and provide manual assistance to the Engineer in preparing test specimens.
7. Assume responsibility for care of and providing proper curing conditions for test specimens.

3.02 ADJUSTING

A. Repair of defective masonry:
   1. Remove and replace or repair defective work.
   2. Do not patch, repair, or cover defective work without inspection by the Engineer.
   3. Provide repairs having strength equal to or greater than specified strength for areas involved.

END OF SECTION

SECTION 04220

CONCRETE UNIT MASONRY

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Concrete masonry units and accessories.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C90 - Standard Specification for Loadbearing Concrete Masonry Units.
   2. C140 - Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units.
   3. C426 - Standard Test Method for Linear Drying Shrinkage of Concrete Masonry Units.

B. The Masonry Society (TMS):
   1. 602 - Specification for Masonry Structures.

1.03 TERMINOLOGY

A. The words and terms listed below, are not defined terms that require initial capital letters, but, when used in this Section have the indicated meaning.
   1. Grout lift height: The height of grout placed in a single continuous operation within the grout pour height.
   2. Grout pour height: Entire height of the masonry to be grouted prior to the construction of additional masonry.
   3. Mortar smears: Mortar paste smeared across the permanent masonry construction during construction and absorbed into the masonry pores.
   4. Mortar splash: Mortar dropped splashed onto the permanent masonry construction at the base of the wall or off the scaffolding.
   5. Mortar stains: Mortar paste left after mortar tags are removed.
   6. Mortar tag: Excess mortar between masonry units worked out of the joints during tooling or striking.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Submit manufacturer’s product data for split face block.
   2. Submit manufacturer’s product data for proposed cleaning agent.

C. Shop Drawings:
   1. Include elevations of each wall indicating type and layout of units, including type of mortar joints, bond pattern, reinforcing steel, connecting dowels, joint reinforcement, grouted cells, and control joints.

D. Samples: Include samples of stretcher units in sufficient quantity to illustrate color range.

E. Test reports:
   1. Compressive strength.
   2. Linear shrinkage.
   3. Moisture content as a percentage of total absorption.
   4. Total absorption.
   5. Unit weight.

F. Manufacturer's instructions:
   1. Submit printed or written recommendations from the masonry unit manufacturer of the cleaning procedures and cleaning agents appropriate for each type of masonry unit included in the Work.

G. Quality assurance Submittals:
   1. If requested by the Engineer, submit a record of the installer's evidence of qualifications.
   2. If requested by the Engineer, submit a record of the masonry cleaner's evidence of qualifications.

1.05 QUALITY ASSURANCE

A. Qualifications:
   1. Installer:
      a. Mason shall hold an appropriate contractor's license in the state where the Work will be constructed.
      b. Mason shall have not less than 5 years' experience and completed a minimum of 20 projects, at least 5 of which included the type of masonry units specified for this Work.
   2. Masonry cleaner qualifications:
      a. Shall have not less than 5 years' experience and completed a minimum of 20 projects, and at least 5 of which included the type of masonry units specified for this Work.

B. Mockup:
   1. A minimum 2 weeks to starting construction of masonry, construct minimum 4 foot inches by 4 foot inches square mockup.
      a. Mockup shall be constructed by the mason who will be performing the Work.
   2. Intended for use as the project standard of workmanship, construction, quality, appearance, and material selection.
   3. Use accepted materials containing each different kind and color of concrete masonry units to illustrate wall design.
   4. Constructed by the mason who will be performing the Work.

5. Cleaned with the exact equipment, products, and methods submitted and cleaned by the individual who will perform the Work.
6. When accepted, mockup will be standard of comparison for remainder of masonry work.
    a. May be accepted by the Engineer with exceptions that will not be accepted in the final construction.
        1) In such cases, those areas of the mockup not accepted will be clearly identified by the Engineer.
7. When not accepted by the Engineer, construct another mockup.
8. Upon completion of the Project, dispose of mockups in legal manner at offsite location.

C. Pre-installation conference: Conduct as specified in Section 01312 - Project Meetings.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Transport and handle concrete masonry units as required to prevent discoloration, chipping, and breakage.

B. Store masonry units off the ground in a dry location, covered and protected from absorbing moisture.
1. Locate storage piles, stacks, and bins to protect materials from heavy traffic.
2. If masonry units are delivered in shrink-wrapped packaging and condensation develops, remove shrink-wrap packaging.

C. Remove masonry units that are chipped, cracked, and otherwise defective from jobsite upon discovery.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Cold weather requirements:
1. Provide adequate equipment for constructing and protecting masonry when air temperature is:
    a. Below 40 degrees Fahrenheit as follows:
        1) Remove frozen snow and ice from surfaces to receive masonry.
        2) Do not use masonry units having visible snow or ice on the surface or containing frozen moisture.
        3) Do not lay masonry units that have a temperature of 20 degrees Fahrenheit or below.
    b. 32 degrees Fahrenheit to 40 degrees Fahrenheit:
        1) As required above and as follows:
            a) Heat aggregates and/or mix water to provide mortar between 40 degrees Fahrenheit and 120 degrees Fahrenheit.
            b) Heat aggregates and/or mix water to provide grout between 32 degrees Fahrenheit and 120 degrees Fahrenheit.
            c) Do not heat any constituents above 140 degrees Fahrenheit.
            d) Protect newly constructed masonry work by covering surfaces with a weatherproof covering for 48 hours after completion.

c. 25 degrees Fahrenheit to 32 degrees Fahrenheit:
    1) As required above and as follows:
        a) Furnish mortar at point of use above 32 degrees Fahrenheit until immediately prior to incorporation into the Work.
        b) Heat aggregates and/or mix water to provide grout between 70 degrees Fahrenheit and 120 degrees Fahrenheit until immediately prior to incorporation into the Work.
        c) Protect newly constructed masonry work by covering surfaces with a weatherproof covering for 48 hours after completion.
d. 20 degrees Fahrenheit to 25 degrees Fahrenheit:
    1) As required above and as follows:
        a) Heat masonry units and adjoining completed Work to a minimum temperature of 40 degrees Fahrenheit.
        b) Use enclosures or wind breaks when wind speeds exceed 15 mph.
        c) Heat masonry to a minimum of 40 degrees Fahrenheit and maintain prior to grouting.
        d) Protect newly constructed masonry work by covering surfaces with weatherproof, insulating concrete blankets for 48 hours after completion.
e. Below 20 degrees Fahrenheit:
    1) As required above and as follows:
        a) Provide an auxiliary heated enclosure that maintains the ambient air temperature above 32 degrees Fahrenheit.
            (1) Heat shall not vent combustion products into the enclosure.
            (2) Maintain specified temperature for a minimum 48 hours after completion of masonry work.

B. Hot weather requirements:
    1. Provide adequate equipment for constructing and protecting masonry as follows:
        a. When the air temperature exceeds 90 degrees Fahrenheit with a wind speed greater than 8 mph, or when the air temperature exceeds 100 degrees Fahrenheit:
            1) Maintain sand for mortar and grout in damp, loose piles. Shade material stockpiles and mixing equipment from direct sunlight.
            2) Provide mortar and grout below 120 degrees Fahrenheit.
            3) Flush mixer and mortar containers with cool water before use.
            4) Wet mortarboard before loading and cover mortar to retard drying when not being used.
            5) Do not spread mortar beds more than 48 inches ahead of placing masonry units.
            6) Place masonry units within 1 minute of spreading mortar.
            7) Use mortar within 1 hour of initial mixing.
            8) Protect masonry from drying by frequently fogging or sprinkling so walls will always be visibly damp for minimum 3 days.

b. When the air temperature exceeds 105 degrees Fahrenheit with a wind speed greater than 8 mph, or when the air temperature exceeds 115 degrees Fahrenheit:
    1) As required above and as follows:
        a) Use water less than 70 degrees Fahrenheit to batch mortar and grout. Ice is permitted to precool the mix water but must be fully melted before adding to other constituents.

1.08 SEQUENCING AND SCHEDULING

A. Order concrete masonry units well before start of installation to ensure adequate time for manufacturing and minimum 28 days for curing and drying before start of installation. Protect from weather after curing period to avoid moisture increase.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Hollow load bearing concrete masonry units:
    1. Density classification: Normal weight in accordance with ASTM C90, with minimum net area compressive strength as follows:
        a. Average of 3 units: 2,000 pounds per square inch.
        b. Any individual unit: 1,800 pounds per square inch.
    2. Surface texture: Precision (smooth face) and split face.
    3. Color: Integral.
    4. Typical size: 8-inches wide by 8-inches high by 16-inches long, unless otherwise indicated on the Drawings, or other sizes as needed to minimize cutting.
    5. Special sizes and shapes: As required for window and door openings, bond beams, piers, lintels, control joints, and other special applications to minimize cutting.

B. Anchor bolts: As specified in Section 05120 - Structural Steel Framing.

C. Steel reinforcement: As specified in Section 04090 - Masonry Accessories.

PART 3 EXECUTION

3.01 PREPARATION

A. Protection:
    1. Protect adjacent construction with appropriate means from mortar droppings and other effects of laying of concrete masonry units.

B. Surface preparation:
    1. Thoroughly clean foundations of laitance, grease, oil, mud, dirt, mortar droppings, and other matter that will reduce bond.

2. Examine foundation to confirm it is constructed within tolerance for masonry Work. Confirm dowels are installed in correct locations and with proper projection for the required lap splice before beginning laying masonry units.
3. Place sand, straw, sawdust or other similar material on the floor around the base of walls to protect floors and walls.

3.02 INSTALLATION

A. General:
   1. Standard level of quality: Furnish conventional quality work having no more than 5 percent of the units in the completed Work exhibiting one or more of the following defects:
      a. Chips larger than 1 inch in any direction.
      b. Cracks wider than 0.02 inch and longer than 25 percent of the nominal height of the unit.
      c. Completed Work shall not show chips, cracks, or other imperfections when viewed from a distance of 20 feet under diffused lighting.

B. Temporary forms and shores:
   1. Where required, construct forms to the shapes indicated on the Drawings:
      a. Construct forms sufficiently rigid to prevent deflection which may result in cracking or other damage to supported masonry and sufficiently tight to prevent leakage of mortar and grout.
      b. Do not remove supporting forms or shores until the supported masonry has acquired sufficient strength to support safely its weight and any construction loads to which it may be subjected.
         1) Wait at least 24 hours after grouting masonry columns or walls before applying uniform loads.
   2. Wait at least 72 hours before applying concentrated loads.

C. Laying of masonry units - General:
   1. Lay concrete masonry units dry. Units having wet surfaces over 50 percent or more of its surface area may not be placed. Wet surfaces are distinguished from damp surfaces as those which do not darken when additional water is applied.
   2. Lay units in uniform and true courses, level, plumb, and without projections or offset of adjacent units.
   3. Lay units to preserve unobstructed vertical continuity of cells to be filled with grout or insulation.
   4. When possible, use full units of the proper size in lieu of cut units. Cut units as required to form chases, openings, for anchorage, and for other appurtenances.
      a. Cut and fit units with power-driven carborundum or diamond disc blade saw.
   5. Align vertical cells to be filled with grout to maintain clear, unobstructed continuous vertical cell measuring not less than 2.5 inches by 3 inches.
   6. Lay concrete masonry units in running bond pattern, unless otherwise indicated on the Drawings.
   7. Where practical, protect completed Work from mortar splash by placing thin plastic sheeting around the base of walls.

D. Mortar joints:
   1. Make joints straight, clean, smooth, and uniform in thickness. Bond shall be plumb throughout.
   2. Make vertical and horizontal joints 3/8-inch thick.
   3. Place mortar with full coverage of joints at webs of all cells and face shells.
      a. Ensure full mortar coverage of joints on webs of cells that will be grouted solid, and face shells.
   4. Butter vertical head joints for thickness equal to face shell thickness of units, and shove joints tightly together so that mortar bonds to both masonry units.
   5. Solidly fill joints from face of units to inside face of cells.
   6. Where fresh masonry joins totally or partially set masonry, clean and roughen set masonry before laying new units.
   7. Lay units to avoid formation of cracks when units are placed.
   8. Keep cells of units as free of mortar as possible as masonry wall height increases.
   9. When positions of units shift after mortar has stiffened, bond is broken, or cracks are formed, relay units in new mortar.
   10. Tool exposed joints, slightly concave. Strike concealed joints flush.

E. Wire joint reinforcement:
   1. Lap splice longitudinal wire joint reinforcement minimum 40 wire diameters, but not less than 6 inches.
   2. Place longitudinal wires in approximate centers of mortar beds with minimum 5/8-inch mortar cover on exposed faces.
   3. Provide intersecting masonry walls with prefabricated wire joint reinforcement tees.
   4. Rake intersecting joints 1/2 inch and caulk joints.
   5. Remove mortar, mortar droppings, debris, and other obstructions and materials from inside of cell walls.

F. Bond beams:
   1. Starting courses at bottom of walls shall be bond beams.
   2. Place horizontal reinforcement and solidly grout bond beam units in place.
   3. Provide wire mesh at openings in bottom of bond beams to support grout where walls are not grouted solid.

G. Masonry control joints:
   1. Provide in masonry walls at locations indicated on the Drawings.
   2. Make full height and continuous in appearance.
   3. Run bond beams and bond beam reinforcing bars continuously through control joints.
   4. Insert control joint filler in joints as wall is constructed.
   5. Apply sealant as specified in Section 07900 - Joint Sealants.

H. Openings and lintels:
   1. Place horizontal reinforcement in fully grouted bond beam units.
   2. Use lintel block units where underside of lintel will be exposed.
   3. Provide minimum of 8-inch bearing at each end of lintel.
   4. Embed reinforcing bars minimum 24 inches or 48-bar diameters, whichever is longer, into wall past edges of openings or as indicated on the Drawings:
      a. At corners, provide 90-degree bend with equivalent total embedment.

I. Embedments:
   1. Steel door frames:
      a. Anchor and fully grout jambs and head of steel doorframes connected to concrete unit masonry.
      b. Fill frames with grout as each 2 feet of concrete unit masonry is laid.
   2. Bearing plates:
      a. Provide minimum of 12 inches of grouted concrete unit masonry below steel bearing plates and beams bearing on masonry walls.
   3. Anchor bolts:
      a. Hold in place with template during grouting to ensure precise alignment.
      b. Do not cut or ream members being anchored or use other means to accommodate misaligned anchor bolts in roof deck support angles.
   4. Enclosures:
      a. Where concrete masonry units enclose conduit, pipes, stacks, ducts, and similar items, construct chases, cavities, and similar spaces as required, whether or not such spaces are indicated on the Drawings.
      b. Point openings around flush mounted electrical outlet boxes with mortar, including flush joints above boxes.
      c. Do not cover enclosures until inspected and when appropriate, tested.
   5. Conduits and electrical boxes:
      a. See Drawings for details of conduit installation in masonry.
   6. Other embedded items:
      a. Build in wall plugs, accessories, flashings, pipe sleeves, and other items required to be built-in as the masonry work progresses.
   7. Miscellaneous:
      a. Build in required items, such as anchors, flashings, sleeves, frames, structural steel, lintels, anchor bolts, and metal fabrications, as required for complete installation.

J. Daily cleaning:
   1. Remove mortar tags and smears daily with a non-metallic tool.
      a. Removed after they initially set but shall not be permitted to remain more than 24 hours.
   2. Turn scaffold planks over at the end of the workday to avoid mortar splashes from wet weather.
      a. Cover tops of walls at the end of the workday and other work stoppages to prevent entry of water into the partially completed masonry.
   3. Seal cleanouts after inspection and before grouting.

K. Grouting and reinforcement:
   1. Where horizontal and vertical bars are spliced, the lap splice length shall be in accordance with TMS 602 and as indicated on the Drawings.
   2. Hold vertical reinforcing bars in position at top and bottom and at intervals not exceeding 200-bar diameters.
      a. Use steel wire bar positioners to position bars.
      b. Tie reinforcing bars to dowels with wire ties.
   3. Obtain acceptance of reinforcement placement before grouting.
      a. Grouting:
         1) Grout pour height shall be limited to a maximum of 5.33 feet, unless the Contractor submits sufficient evidence to the Engineer for review

and acceptance that the requirements of TMS 602 as it relates to grout pour height can be met.
2) Grout lift height shall be limited to a maximum of 5.33 feet, unless the Contractor submits sufficient evidence to the Engineer for review and acceptance that the requirements of TMS 602 as it relates to grout lift height can be met.
3) Slushing with mortar will not be permitted.
4) Allow hollow unit masonry to cure at least 24 hours prior to grouting.
5) Each lift shall be allowed to set for 10 minutes after initial consolidation of grout before successive lift is placed.
6) Full height of each section of wall shall be grouted in 1 day.

4. Placement:
   a. Use a hand bucket, concrete hopper, or grout pump.
   b. Do not pump grout through aluminum tubes.
   c. Operate pumps to produce a continuous stream of grout without air pockets.
   d. Upon completion of each day's pumping, eject grout from pipeline without contamination or segregation of the grout. Remove from Site and dispose. Do not incorporate into masonry work.
   e. Place grout so as to completely fill the grout spaces without segregation of the aggregates.
   f. Remove grout spills immediately by hand washing with a bucket and brush.
   g. Fill spaces and cells solidly with grout.
   h. Grout in cells shall have full contact with surface of concrete footings.
   i. Time constraints:
      1) When grouting stops for 1 hour or longer, form horizontal construction joints by stopping grout placement 1-1/2 inches below top of uppermost unit containing grout.
      2) Place grout in final position within 1-1/2 hours after mixing. Place grout so as to completely fill the grout spaces without segregation of the aggregates.
   j. Consolidation:
      1) Do not insert vibrators into lower grout placements that are in a semi-solidified state.
      2) After placement, consolidate grout using mechanical immersion vibrators designed for consolidating grout.
      3) Maintain at least 1 spare vibrator at the Site at all times.
      4) Apply vibrators at uniformly spaced points not further apart than the visible effectiveness of the machine.
      5) Limit duration of vibration to time necessary to produce satisfactory consolidation without causing segregation.

3.03 TOLERANCES

A. Masonry tolerances: Lay masonry plumb, true to line, and with courses level. Keep bond pattern plumb throughout. Lay masonry within the following tolerances:
   1. Maximum variation from the plumb in the lines and surfaces of columns, walls, and in the flutes and surfaces of fluted or split faced blocks:
      a. In adjacent masonry units: 1/8 inch.
      b. In 10 feet: 1/4 inch.

c. In any story or 20 feet maximum: 3/8 inch.
d. In 40 feet or more: 1/2 inch.

2. Maximum variations from the level or grades indicated on the Drawings for exposed lintels, sills, parapets, horizontal grooves, and other conspicuous lines:
   a. In any bay or 10-feet maximum: 1/4 inch.
   b. In 40 feet or more: 1/2 inch.
3. Maximum variations of the linear building lines from established position in plan and related portion of columns, walls, and partitions:
   a. In any bay or 20-feet maximum: 1/2 inch.
   b. In 40 feet or more: 3/4 inch.
4. Maximum variation of top surface of bearing walls from level:
   a. In any bay or 20-feet maximum: 1/4 inch.
   b. In 40 feet or more: 1/2 inch.
5. Maximum variation in cross sectional dimensions of columns and in thickness of walls:
   a. Minus: 1/4 inch.
   b. Plus: 1/2 inch.
6. Mortar bed joint thickness between masonry courses:
   a. Plus or minus: 1/8 inch.

3.04 FINAL CLEANING

A. General:
1. Patch exposed concrete masonry units at completion of the Work and in such manner that patching will be indistinguishable from similar surroundings and adjoining construction.
2. Final cleaning shall be performed within 7 to 14 days after construction of masonry work.
3. Protect adjacent materials and equipment that may be damaged by cleaning.
4. Pre-wet masonry before applying cleaning agent but do not saturate masonry.
5. Remove mortar stains, smears, and splash, efflorescence, and grout stains on exposed surfaces with the submitted cleaning agent as directed by the masonry unit manufacturer's recommendations.
6. Do not use muriatic acid as cleaning agent.
7. Cleaning agents shall be applied when the masonry surface and air temperatures are at least 50 degrees Fahrenheit.
   a. Dilute cleaning agents in accordance with the manufacturer's recommendations.
   b. Do not allow cleaning agents to dry on the masonry.
8. Clean wall from the top to the bottom, without overlapping areas being cleaned for consistency.
9. If pressure cleaning equipment is used, the following limitations shall be observed:
   a. Apply cleaning agent to pre-wetted wall with low pressure (less than 50 pounds per square inch).
   b. Use a 25-degree to 50-degree flared-tip nozzle (not a pointed tip).
   c. Maintain a consistent distance from the spray nozzle to the masonry surface no closer than 12 inches.
      1) Masonry cleaner shall use a combination of pressure, nozzle, and distance from tip to masonry that does not damage the masonry surface.

10. Rinse cleaning agents off the wall with potable water.
11. Dispose of debris, refuse, and surplus material offsite legally.

3.05 FIELD QUALITY CONTROL

A. Site tests:
   1. Owner will have tests performed by an independent laboratory.
   2. Have minimum 3 concrete masonry units of each type proposed for Project tested in accordance with ASTM C90, C140, and C426 to verify conformance to Specifications.
   3. Tests shall include compressive strength, linear shrinkage, moisture content as percent of total absorption, total absorption, and unit weight.

B. Special inspection:
   1. As specified in Section 01455 - Regulatory Quality Assurance.
   2. Owner will employ a qualified masonry special inspector for continuous special inspection of the masonry work.
      a. Acceptance by a state or municipality having a program of examining and certifying masonry inspectors will be considered adequate qualifications.
      b. Masonry inspector shall be at the Site during masonry construction and perform the following duties:
         1) Review Drawings and Specifications and meet with the Contractor to discuss requirements before Work commences.
         2) Before masonry work commences, the Contractor and the Contractor's Quality Control Representative shall attend meeting with the Engineer to review the requirements for surveillance and quality control of the masonry work.
         3) Check brand and type of cement, lime (if used), and source of sand.
         4) Verify that foundation is clean, rough, and ready to receive units.
         5) Check reinforcing steel dowels for correct location, straightness, proper alignment, spacing, size, and length.
         6) Observe field proportioning of mortar. Visually check aggregate to determine uniformity of grading, cleanliness, and moisture.
         7) Verify that joints are full of mortar and kept tight during Work.
            a) Inspect grout cells to verify that fins will not interfere with grouting.
            b) Verify that masons keep grout cells clean of mortar droppings and inspect to determine compliance.
         8) Continuously observe placing of grout.
         9) Perform or supervise performance of required sampling and testing.
   3. Keep complete record of inspections. Report daily to the Building Official, Contractor's Quality Control Representative, Engineer, and Owner the progress of the masonry inspection.

3.06 PROTECTION

A. Provide temporary protection for exposed masonry corners subject to damage.

B. Bracing:
   1. Unless wall is adequately supported by permanent supporting elements so wall will not overturn or collapse, adequately brace masonry walls over 8 feet in height to prevent overturning and to prevent collapse.
   2. Keep bracing in place until permanent supporting elements of structure are in place.

C. Limited access zone:
   1. Establish prior to start of masonry wall construction.
   2. Zone shall be immediately adjacent to wall and equal to height of wall to be constructed plus 4 feet by entire length of wall on unscaffolded side of wall.
   3. Limit access zone to workers actively engaged in constructing wall. Do not permit other persons to enter zone.
   4. Keep zone in place until wall is adequately supported or braced by permanent supporting elements to prevent overturning and collapse.

END OF SECTION

SECTION 04221

BRICK MASONRY

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Brick masonry units.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C62 - Standard Specification for Building Brick (Solid Masonry Units Made from Clay or Shale).
   2. C67 - Standard Test Methods of Sampling and Testing Brick and Structural Clay Tile.
   3. C216 - Standard Specification for Facing Brick (Solid Masonry Units Made from Clay or Shale).
   4. C652 - Standard specification for Hollow Brick (Hollow Masonry Units Made from Clay or Shale).

1.03 SUBMITTALS

A. Product data.

B. Shop drawings: Include elevations of each wall indicating type and layout of units.

C. Samples: Include samples of stretcher units in sufficient quantity to illustrate color range.

D. Test reports.

1.04 QUALITY ASSURANCE

A. Continuous inspection:
   1. Employ a qualified masonry inspector for continuous inspection of the masonry work.
      a. Acceptance by a state or municipality having a program of examining and certifying masonry inspectors will be considered adequate qualifications.
      b. The masonry inspector shall be at the site during all masonry construction and perform the following duties:
         1) Review drawings and specifications and meet with the Contractor to discuss requirements before work commences.
         2) Before masonry work commences, Contractor and the Contractor's Quality Control Representative shall attend meeting with Engineer to review the requirements for surveillance and quality control of the masonry work.
         3) Check brand and type of cement, lime (if used), and source of sand.

4) Ensure that foundation is clean, rough, and ready to receive units.
5) Check reinforcing steel dowels for straightness, proper alignment, spacing, size, and length.
6) Observe field proportioning of mortar. Visually check aggregate to determine uniformity of grading, cleanliness, and moisture.
7) Ensure that joints are full of mortar and kept tight during work.
    a) Inspect grout cells to ensure that fins will not interfere with grouting.
    b) Ensure that masons keep grout cells clean of mortar droppings and inspect to determine compliance.
8) Continuously observe placing of grout.
9) Perform or supervise performance of required sampling and testing.

2. Keep complete record of inspections. Report daily to the Contractor's Quality Control Representative the progress of the masonry inspection.

B. Mock-up:
1. Prior to starting construction of masonry, construct minimum 4-foot square mock-up.
2. Use accepted materials, containing each different kind and color of brick masonry units to illustrate wall design.
3. When not accepted, construct another mock-up.
4. When accepted, mock-up will be standard of comparison for remainder of masonry work.
5. Upon completion of Project, dispose of mock-ups in legal manner at offsite location.

C. Pre-installation conference: Conduct as specified in Section 01312 - Project Meetings.

D. Masonry prism testing: Perform masonry prism testing in accordance with 2022 CBC.

E. A letter of certification from the supplier of the materials used to verify in accordance with building code, shall be provided at the time of, or prior to, delivery of the materials to the jobsite.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Transport and handle brick masonry units as required to prevent discoloration, chipping, and breakage.

B. Locate storage piles, stacks, and bins to protect materials from heavy traffic.

C. Remove chipped, cracked, and otherwise defective units from jobsite upon discovery.

1.06 PROJECT CONDITIONS

A. Cold weather requirements:
   1. In accordance with the building code as specified in Section 01410 - Regulatory Requirements.
   2. Provide adequate equipment for heating masonry materials when air temperature is below 40 degrees Fahrenheit.

B. Hot weather requirements:
   1. When ambient air temperature exceeds 100 degrees Fahrenheit, or when ambient air temperature exceeds 90 degrees Fahrenheit and wind velocity is greater than 8 miles per hour, implement hot weather protection procedures.
   2. Wet mortarboard before loading and cover mortar to retard drying when not being used.
   3. Do not spread mortar beds more than 48 inches ahead of placing masonry units.
   4. Place masonry units within 1 minute of spreading mortar.

1.07 SEQUENCING AND SCHEDULING

A. Order brick masonry units (8 weeks minimum) well before start of installation to ensure adequate time for manufacturing.

PART 2 PRODUCTS

2.01 HOLLOW LOAD BEARING BRICK MASONRY UNITS

A. Manufacturers: One of the following or equal:
   1. Interstate Brick Co.
   2. General Shale Brick Co.

B. Type: ASTM C652, Grade SW, Type HBS with minimum compressive strength of 2,500 pounds per square inch.

C. Surface texture: To be selected by Engineer from manufacturer’s full range of available textures.

D. Colors:
   1. Soldier coursing: soldier coursing over windows and doors to be contrasting color as selected by Engineer from standard colors.

E. Size: 8 inches wide, by 4 inches high, by 12 inches long, unless otherwise indicated on the Drawings.

F. Coursing: 4 inches wide, by 8 inches high, by 8 inches deep.

G. Special sizes and shapes: As required for window and door soldier coursing and custom sills where indicated; bond beams, piers, lintels, control joints, and other special applications to minimize cutting.

PART 3 EXECUTION

3.01 PREPARATION

A. Protect adjacent construction with appropriate means from mortar droppings and other effects of laying of brick masonry units.

B. Thoroughly clean foundations of laitance, grease, oil, mud, dirt, mortar droppings, and other objectionable matter.

3.02 BRICK MASONRY UNITS

A. Provide custom level of quality in accordance with ASTM C62 and C 216.

B. Lay masonry units damp. (Wet bricks with fine spray about 4 hours prior to their use).

C. Lay units in uniform and true courses, level, plumb, and without projections or offset of adjacent units.

D. Lay units to preserve unobstructed vertical continuity of cells to be filled with grout or insulation.

E. Align vertical cells to be filled with grout to maintain clear, unobstructed continuous vertical cell measuring not less than 2 by 3 inches.

F. Place mortar with full coverage of joints at webs of all cells and face shells.

G. Butter vertical head joints for thickness equal to face shell thickness of units, and shove joints tightly together so that mortar bonds to both masonry units.

H. Solidly fill joints from face of units to inside face of cells.

I. Lay units to desired height with joints of uniform thickness.

J. Bond shall be plumb throughout.

K. Lay units to avoid formation of cracks when units are placed. Keep cells of units as free of mortar as possible as masonry wall height increases.

L. Lay masonry plumb, true to line, with courses level. Keep bond pattern plumb throughout. Lay masonry within the following tolerances:
   1. Maximum variation from the plumb in the lines and surfaces of columns, walls, and in the flutes and surfaces of fluted or split faced blocks:
      a. In adjacent masonry units: 1/8 inch.
      b. In 10 feet: 1/4 inch.
      c. In any story or 20 feet maximum: 3/8 inch.
      d. In 40 feet or more: 1/2 inch.
   2. Maximum variations from the plumb for external corners, expansion joints, and other conspicuous lines:
      a. In any story or 20 feet maximum: 1/4 inch.
      b. In 40 Feet or More: 1/2 inch.

3. Maximum variations form the level or grades indicated on the Drawings for exposed lintels, sills, parapets, horizontal grooves, and other conspicuous lines:
    a. In any bay or 20 feet maximum: 1/4 inch.
    b. In 40 feet or more: 1/2 inch.
4. Maximum variations of the linear building lines from established position in plan and related portion of columns, walls, and partitions:
    a. In any bay or 20 feet maximum: 1/2 inch.
    b. In 40 feet or more: 3/4 inch.
5. Maximum variation in cross sectional dimensions of columns and in thickness of walls:
    a. Minus: 1/4 inch.
    b. Plus: 1/2 inch.
6. When positions of units shift after mortar has stiffened, bond is broken, or cracks are formed, relay units in new mortar.

M. Remove mortar, mortar droppings, debris, and other obstructions and materials from inside of cell walls.

N. Seal cleanouts after inspection and before grouting or placing insulation.

3.03 LOOSE FILL INSULATION

A. Fill all brick masonry unit cells solidly with grout.

B. Place in lifts of 4 feet maximum when filling brick masonry unit cells.

C. Do not lay units more than 4 feet vertically ahead of units filled with loose insulation.

D. Ensure that no insulation gets into cells which are to be filled with grout.

3.04 MORTAR JOINTS

A. Make joints straight, clean, smooth, and uniform in thickness.

B. Pointing: Tool exposed joints, slightly concave. Strike concealed joints flush.

C. Joint thickness: Make vertical and horizontal joints 3/8-inch thick.

D. Where fresh masonry joins totally or partially set masonry, clean and roughen set masonry before laying new units.

3.05 BOND PATTERN

A. Lay brick masonry units in running bond pattern, unless otherwise indicated on the Drawings.

3.06 GROUTING AND REINFORCEMENT

A. Where horizontal and vertical bars are spliced and adjacent lap splices are separated by more than 3 inches, the lap splice length shall be 72 bar diameters.

B. Where adjacent lap splices are separated by 3 inches or less, the lap splice length shall be increased by 1.3 times or the lap splices shall be staggered at least 24 bar diameters with no increase in length.

C. Hold vertical reinforcing bars in position at top and bottom and at intervals not exceeding 200 bar diameters. Use steel wire bar positioners to position bars and tie reinforcing bars to dowels with wire ties.

D. Obtain acceptance of reinforcement placement before grouting.

E. Fill all spaces and cells solidly with grout.

F. Low-lift grouting:
   1. Hollow unit masonry to be grouted by the low lift method shall be constructed and grouted in lifts not exceeding 4 feet.
      a. Double wythe masonry which will be grouted by the low-lift method shall be constructed and grouted in lifts not exceeding 8 inches.
      b. Slushing with mortar will not be permitted.

G. High-lift grouting:
   1. If grouting is accomplished by the high-lift method, double wythe masonry shall be allowed to cure at least 72 hours and hollow unit masonry shall be allowed to cure at least 24 hours before grouting.
   2. In double wythe construction, vertical grout barriers shall be built across the grout space to the height of the grout lift.
   3. Grout barriers shall not be spaced more than 30 feet apart.
      a. Grout shall be placed in lifts not to exceed 5 feet in depth.
   4. Each lift shall be allowed to set for 10 minutes after initial consolidation of grout before successive lift is placed.
   5. The full height of each section of wall shall be grouted in 1 day.

H. Grout in cells shall have full contact with surface of concrete footings.

I. When grouting stops for 1 hour or longer, form horizontal construction joints by stopping grout placement 1-1/2 inches below top of uppermost unit containing grout.

J. After placement, consolidate grout using mechanical immersion vibrators designed for consolidating grout.

K. Placement:
   1. Use a hand bucket, concrete hopper, or grout pump.
   2. Place grout in final position within 1-1/2 hours after mixing.
   3. Place grout so as to completely fill the grout spaces without segregation of the aggregates.
   4. Do not insert vibrators into lower grout placements that are in a semi-solidified state.

3.07 BOND BEAMS

A. Place horizontal reinforcement and solidly grout bond beam units in place.

B. Provide wire mesh at openings in bottom of bond beams to support grout where walls are not grouted solid.

3.08 CUTTING BRICK MASONRY UNITS

A. When possible, use full units of the proper size in-lieu of cut units. Cut units as required to form chases, openings, for anchorage, and for other appurtenances.

B. Cut and fit units with power-driven carborundum or diamond disc blade saw.

3.09 CONTROL JOINTS

A. Provide in masonry walls where indicated on the Drawings.

B. Make full height and continuous in appearance.

C. Run bond beams and bond beam-reinforcing bars continuously through control joints.

D. Insert control joint filler in joints as wall is constructed.

E. Apply sealant as specified in Section 07900 - Joint Sealants.

3.10 OPENINGS AND LINTELS

A. Place horizontal reinforcement in fully grouted bond beam units.

B. Use lintel block units where underside of lintel will be exposed.

C. Provide minimum of 8-inch bearing at each end of lintel.

D. Embed reinforcing bars minimum 24 inches or 40 bar diameters, whichever is longer, into wall past edges of openings or as indicated on the Drawings:
   1. At corners, provide 90-degree bend with equivalent total embedment.

3.11 STEEL DOOR FRAMES

A. Anchor and fully grout jambs and head of steel doorframes connected to brick unit masonry.

B. Fill frames with grout as each 2 feet of brick unit masonry is laid.

3.12 BEARING PLATES

A. Provide minimum of 12 inches of grouted brick unit masonry below steel bearing plates and beams bearing on masonry walls.

3.13 ANCHOR BOLTS

A. Hold anchor bolts in place with template during grouting to ensure precise alignment.

B. Do not cut or ream members being anchored or use other means to accommodate misaligned anchor bolts in roof deck support angles.

C. Provide minimum 6-inch wide grouted brick unit masonry entirely around anchor bolts and other attachment devices.

3.14 ENCLOSURES

A. Where brick masonry units enclose conduit, pipes, stacks, ducts, and similar items, construct chases, cavities, and similar spaces as required, whether or not such spaces are indicated on the Drawings.

B. Point openings around flush mounted electrical outlet boxes with mortar, including flush joints above boxes.

C. Do not cover enclosures until inspected and when appropriate, tested.

3.15 OTHER EMBEDDED ITEMS

A. Build in wall plugs, accessories, flashings, pipe sleeves, and other items required to be built-in as the masonry work progresses.

3.16 PATCHING

A. Patch exposed brick masonry units at completion of the Work and in such manner that patching will be indistinguishable from similar surroundings and adjoining construction.

3.17 WATER CURING

A. Protect brick masonry units from drying too rapidly by frequently fogging or sprinkling for minimum 3 days.

3.18 MISCELLANEOUS

A. Build in required items such as anchors, flashings, sleeves, frames, structural steel, lintels, anchor bolts, and metal fabrications as required for complete installation.

3.19 WATER REPELLENT

A. Apply water repellent as specified in Section 07190 - Water Repellents.

3.20 FIELD QUALITY CONTROL

A. Have minimum 3 masonry units of each type proposed for Project tested in accordance with ASTM C67 to verify conformance to specifications.

B. Tests shall include compressive strength, linear shrinkage, total absorption, moisture content as percent of total absorption, and unit weight.

C. Employ and pay acceptable independent testing laboratory to perform testing.

3.21 CLEANING

A. Exercise extreme care to prevent mortar splotches.

B. Do not attach construction supports to masonry walls.

C. Wash off brick scum and grout spills before scum and grout set.

D. Remove grout stains from walls.

E. Clean exposed masonry. Remove scaffolding and equipment. Dispose of debris, refuse, and surplus material offsite legally.

F. Correct efflorescence on exposed surfaces with commercially-prepared cleaning solution acceptable to masonry unit manufacturer:
   1. Apply cleaning solution in accordance with cleaning solution manufacturer's printed instructions.
   2. Do not use muriatic acid as cleaning solution.
   3. Do not use sandblast cleaning equipment.

3.22 FORMS AND SHORES

A. Where required, construct forms to the shapes indicated on the Drawings:
   1. Construct forms sufficiently rigid to prevent deflection which may result in cracking or other damage to supported masonry and sufficiently tight to prevent leakage of mortar and grout.
   2. Do not remove supporting forms or shores until the supported masonry has acquired sufficient strength to support safely its weight and any construction loads to which it may be subjected:
      a. Wait at least 16 hours after grouting masonry columns or walls before applying uniform loads.
      b. Wait at least 64 hours before applying concentrated loads.

3.23 PROTECTION

A. Provide temporary protection for exposed masonry corners subject to damage.

B. Bracing:
   1. Adequately brace masonry walls over 8 feet in height to prevent overturning and to prevent collapse unless wall is adequately supported by permanent supporting elements so wall will not overturn or collapse.
   2. Keep bracing in place until permanent supporting elements of structure are in place.

C. Limited access zone:
   1. Establish limited access zone prior to start of masonry wall construction.
   2. Zone shall be immediately adjacent to wall and equal to height of wall to be constructed plus 4 feet by entire length of wall on unscaffolded side of wall.

3. Limit access to zone to workers actively engaged in constructing wall. Do not permit other persons to enter zone.
4. Keep zone in place until wall is adequately supported or braced by permanent supporting elements to prevent overturning and collapse.

3.24 GROUTING EQUIPMENT

A. Grout pumps:
   1. Do not pump grout through aluminum tubes.
   2. Operate pumps to produce a continuous stream of grout without air pockets.
   3. Upon completion of each day's pumping, eject grout from pipeline without contamination or segregation of the grout:
      a. Remove waste materials and debris from the equipment.
      b. Dispose of waste materials, debris, and all flushing water outside the masonry.

B. Vibrators:
   1. Internal vibrators shall maintain a speed of not less than 5,000 impulses per minute when submerged in the grout.
   2. Maintain at least 1 spare vibrator, at the site at all times.
   3. Apply vibrators at uniformly spaced points no further apart than the visible effectiveness of the machine.
   4. Limit duration of vibration to time necessary to produce satisfactory consolidation without causing segregation.

3.25 EFFLORESCENCE TESTS

A. Perform efflorescence tests on mortar which will be exposed to weathering. Tests shall be scheduled far enough in advance of starting masonry work to permit retesting if necessary.

END OF SECTION

SECTION 05120

STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Structural steel shapes and plate.
   2. Fasteners and structural hardware:
      a. All thread rods.
      b. High-strength bolts.
   3. Welding.
   4. Bolting.

E. Research Council on Structural Connections (RCSC):
1. Specification for Structural Joints Using High-Strength Bolts (RCSC Specification).

1.03 DEFINITIONS

A. Snugtight: At bolted joints, the tightness attained with a few impacts of an impact wrench, or by the full effort of an ironworker using a spud wrench to bring the connected plies into firm contact.

B. Stainless steel related terms:
1. Descaling: Removal of heavy, tightly adherent oxide films resulting from hot-forming, heat-treatment, welding, and other high-temperature operations.
2. Pickling: Chemical descaling of stainless steel using aqueous solutions of nitric and hydrofluoric acid, or various proprietary formulations as specified.
3. Passivation: Chemical treatment of stainless steel with a mild oxidant for the purpose of enhancing the spontaneous formation of the steel’s protective passive film.

1.04 SUBMITTALS

A. Product data:
1. Welding electrodes for field welds: Electrode manufacturer's data.
2. Compressible-washer-type direct tension indicators: Manufacturer’s detailed installation instructions including:
a. Requirements for type and frequency of pre-installation verification.

b. Requirements for coordination with regular washers.
c. Instructions for assembling and tightening the joint so that work progresses from the most rigid part until the connected plies are in firm contact.

3. Stainless steel: Fabricator name and qualifications, member dimensions and structural section properties, and specifications and procedures used for pickling and passivating members.

B. Shop drawings:
1. Fabrication and erection drawings.

C. Quality control submittals:
1. Welding procedure specifications (WPS) in accordance with AWS D1.1 and D1.6.
a. Submit WPS for each type of welded joint used, whether prequalified or qualified by testing.
1) State electrode manufacturer and specific electrodes used.
2) Indicate required AWS qualification for joint.
b. Submit WPS with shop drawings that indicate those welds.
c. Submit Procedure Qualification Record (PQR) in accordance with AWS D1.1 and D1.6 for welding procedures qualified by testing.
2. Welder qualifications: For each welding process and position:
a. Welder's qualification certificates.
b. Contractor's statement that certificate will be "in effect" at the time(s) welding will be performed based on the "Period of Effectiveness" provisions of AWS D1.1 and D1.6.
3. Steel fabricator's AISC certification.

D. Test reports:
1. Certified copies of mill tests and analyses made in accordance with applicable ASTM standards, or reports from a recognized commercial laboratory, including chemical and tensile properties of each shipment of structural steel or part thereof having common properties.

1.05 QUALITY ASSURANCE

A. Certification:
1. Steel fabricators shall be certified by the AISC or other certification acceptable to the Engineer and the building official having jurisdiction.

B. Welding:
1. Perform welding of structural metals in accordance with AWS D1.1 and D1.6 using welders who have current AWS qualification certificate for the process, position, and joint configuration to be welded.
2. Make Welding Procedure Specifications available at the locations where welding is performed.
3. Notify Engineer at least 24 hours before starting shop or field welding.
4. Engineer may check materials, equipment, and qualifications of welders.
5. Remove welders performing unsatisfactory Work, or require requalification.
6. Engineer may use gamma ray, magnetic particle, dye penetrant, trepanning, or other aids to visual inspection to examine any part of welds or all welds.

7. Contractor shall bear costs of retests on defective welds.
8. Contractor shall also bear costs in connection with qualifying welders.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Packing and shipping: Deliver structural steel free from mill scale, rust, and pitting.

B. Storage and protection: Until erection and painting, protect from weather items not galvanized or protected by a shop coat of paint.

PART 2 PRODUCTS

2.01 MATERIALS

A. Unless otherwise specified or indicated on the Drawings, materials shall conform to the following:

2.02 FASTENERS AND STRUCTURAL HARDWARE

A. General:
   1. Materials: Of domestic manufacture.
   2. Where fasteners and hardware are specified to be galvanized, hot-dip galvanize in accordance with ASTM A153 or ASTM F2329, unless otherwise specified.

B. All thread rods:
   1. Carbon steel:
      a. In accordance with ASTM A36 unless otherwise indicated on the Drawings.
      b. High strength all thread rods: In accordance with ASTM F1554, Grade 55.
      c. Nuts: ASTM A194.
      d. Washers: ASTM F436.
   2. Galvanized carbon steel:
      a. In accordance with ASTM A36 unless otherwise indicated on the Drawings, and hot dip galvanized in accordance with ASTM A153.
      b. High strength galvanized all thread rods: In accordance with ASTM F1554, Grade 55, and galvanized in accordance with ASTM F2329.
      c. Nuts: ASTM A194, hot-dip galvanized in accordance with ASTM A153.
      d. Washers: ASTM F436, hot-dip galvanized in accordance with ASTM A153.
   3. Stainless steel:
      a. Units descaled, pickled, and passivated as specified in “Fabrication” in this Section.
      b. Threaded rods and nuts to be the products of a single manufacturer/fabricator to ensure proper fit without galling. Ship all thread rods with properly fitting nuts attached.
      c. Alloy Type 304 or Type 316 as indicated on the Drawings.
      d. Type 304:
         1) Rod: ASTM F593, Group 1, Condition CW, coarse threads.

2) Nuts: ASTM F594. Match alloy of rod (group and UNS designation).
3) Washers: Type 304 stainless steel.

e. Type 316:
1) Rod: ASTM F593, Group 2, Condition CW, coarse threads.
2) Nuts: ASTM F594. Match alloy of rod (group and UNS designation).
3) Washers: Type 316 stainless steel.

C. Anchor bolts, anchor rods, and post-installed steel anchors: As indicated on the Drawings and as specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.

D. High-strength bolts:
1. Provide high-strength bolt assembly, with nuts, hardened flat washers, and compressible-washer-type direct tension indicators.
2. Carbon steel - Uncoated:
a. Bolts: Plain heavy hex structural bolts in accordance with ASTM F3125, Grade A325, Type 1.
b. Nuts: Heavy hex nuts in accordance with ASTM A563, Grade C.
c. Washers:
1) Adjacent to normal, oversized, and short-slotted holes: Circular, square or rectangular beveled, clipped, or extra thick washers in accordance with ASTM F436, Type 1. Flat circular washers unless otherwise indicated on the Drawings.
2) Adjacent to long slotted holes: Fabricated from 5/16-inch thick plate conforming to ASTM A36.
d. Load indicator devices: At slip critical connections, provide one of the following devices at each bolt:
1) Compressible washer type direct tension indicators (“DTI”): In accordance with ASTM F959, Type 325-1.
2) Twist-off type tension-control bolt assemblies: ASTM F3125, Grade F1852.
3. Carbon steel - Galvanized:
a. Bolt and nut assemblies fabricated, galvanized, tested for rotational capacity, and shipped accordance with the provisions ASTM F3125, Grade A325and the RCSC Specification.
b. Bolts, nuts, and washers: Hot-dip galvanized in accordance with ASTM F2329.
c. Bolts: Plain heavy hex structural bolts in accordance with ASTM F3125, Grade A325, Type 1 and galvanized as specified.
d. Nuts: Heavy hex nuts in accordance with ASTM A563, Grade DH, galvanized as specified, and lubricated in accordance with ASTM A563, Supplementary Requirement S1 to minimize galling.
e. Washers:
1) Adjacent to normal, oversized, and short-slotted holes: Circular, square or rectangular beveled, clipped, or extra thick washers in accordance with ASTM F436, Type 1 and galvanized as specified. Flat circular washers unless otherwise indicated on the Drawings.
2) Adjacent to long slotted holes: 5/16-inch thick plate washer fabricated from steel conforming to ASTM A36, and galvanized in accordance with ASTM A123.

f. Load indicator devices: At slip critical connections, provide one of the following devices at each bolt:
   1) Compressible washer type direct tension indicators (“DTI”): In accordance with ASTM F959, Type 325-1, with mechanically deposited zinc coating conforming to ASTM B695, Class 55.
   2) Twist-off type tension-control bolt assemblies: ASTM F3125, Grade F1852 with mechanically deposited zinc coating conforming to ASTM B695, Class 55.

E. Stainless steel bolts (for use in stainless steel structures):
   1. General:
      a. Bolts and nuts shall be the products of a single manufacturer/fabricator to ensure proper fit without galling.
      b. Units descaled, pickled and passivated as specified in “Fabrication."
   2. Alloy: Type 304 or Type 316 to match alloy of structural members being connected.
   3. Type 304:
      a. Bolts: ASTM F593, Group 1, Condition CW, coarse threads.
      b. Nuts: ASTM F594. Match alloy (group and UNS designation) and threads of bolts.
      c. Washers: Type 304 stainless steel.
   4. Type 316:
      a. Bolts: ASTM F593, Group 2, Condition CW, coarse threads.
      b. Nuts: ASTM F594. Match alloy (group and UNS designation) and threads of bolts.
      c. Washers: Type 316 stainless steel.

2.03 ISOLATING SLEEVES AND WASHERS

A. As indicated on the Drawings and as specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.

2.04 GALVANIZED SURFACE REPAIR

A. Manufacturers: The following or equal:
   1. Jelt, Galvinox.

2.05 THREAD COATING

A. Manufacturers: One of the following or equal:
   1. Bostik, Never-Seez.
   2. Oil Research, Inc., WLR No. 111.

2.06 SUPPLEMENTARY PARTS

A. Furnish as required for complete structural steel erection, whether or not such parts and Work are specified or indicated on the Drawings.

2.07 FABRICATION

A. Shop assembly:
   1. Fabricate structural steel in accordance with AISC 360 and AISC 303 unless otherwise specified or modified by applicable regulatory requirements.
   2. Where anchors, connections, or other details of structural steel are not specifically indicated on the Drawings or specified, their material, size and form shall be equivalent in quality and workmanship to items specified.
   3. Round off sharp and hazardous projections and grind smooth.
   4. Take measurements necessary to properly fit work in the field. Take responsibility for and be governed by the measurements and proper working out of all the details.
   5. Take responsibility for correct fitting of metalwork.
   6. Welded connections:
      a. Comply with AWS requirements for the metals to be welded.
      b. Weld only in accordance with approved Welding Procedure Specifications.
      c. Keep Welding Procedure Specifications readily available for welders and inspectors during fabrication processes.

B. Stainless steel shapes and assemblies:
   1. For structural members such as W shapes, S shapes, channels, angles, and similar rolled shapes not available in quantity, size, and type of stainless steel specified or indicated on the Drawings:
      a. Fabricate shapes using laser-fused, full penetration welds between pieces of plate to attain same or higher section modulus and moment of inertia as that of members indicated on the Drawings.
      b. Fabricate shapes from dual grade stainless steel.
      c. Fabricate beams and channels to ASTM A6 tolerances.
      d. Manufacturers: The following or equal:
         1) Stainless Structural, LLC.
   2. Cleaning and passivation:
      a. Following shop fabrication of stainless steel members and bolts, clean and passivate fabrications at point of manufacture.
      b. Finish requirements: Remove free iron, heat tint oxides, weld scale and other impurities, and obtain a bright passive finished surface with no etching, pitting, frosting, or discoloration.
      c. Provide quality control testing to verify effectiveness of cleaning agents and procedures and to confirm that finished surfaces are clean and passivated.
         1) Conduct sample runs using test specimens with proposed cleaning agents and procedures as required to avoid adverse effects on surface finishes and base materials.
      d. Pre-clean, chemically de-scale (“pickle”), passivate, and final-clean fabrications in accordance with the requirements of ASTM A380.
         1) If degreasing is required before cleaning (pickling) to remove scale or iron oxide, cleaning with citric acid treatments is permissible; however, such treatments shall be followed inorganic cleaners.
         2) Pickle and passivate stainless steel using a nitric acid solution in accordance with ASTM A380, Annex A2, Table A2.1, Part II.

3) Pickling by citric acid treatment or sulfuric acid treatment is not considered to satisfy the requirements of this Section.

e. Inspect after cleaning using methods specified for “gross inspection” in ASTM A380.

f. Improperly or poorly cleaned and passivated materials shall not be shipped and will not be accepted at the site.

C. Galvanized carbon steel:

1. Where galvanizing is required, hot-dip structural steel after fabrication in accordance with ASTM A123.
2. Do not electro-galvanize or mechanically-galvanize unless specified or accepted by Engineer.
3. Re-straighten galvanized items that bend or twist during galvanizing.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions: Examine Work in place to verify that it is satisfactory to receive the Work of this Section. If unsatisfactory conditions exist, do not begin this Work until such conditions have been corrected.

3.02 ERECTION

A. General:

1. Fabricate structural and foundry items to true dimensions without warp or twist.
2. Form welded closures neatly, and grind off smooth where weld material interferes with fit or is unsightly.
3. Install structural items accurately and securely, true to level, plumb, in correct alignment and grade, with all parts bearing or fitting structure or equipment for which intended.
4. Do not shift out of alignment, re-drill, re-shape, or force fit fabricated items.
5. Place anchor bolts or other anchoring devices accurately and make surfaces that bear against structural items smooth and level.
6. Rigidly support and brace structural items needing special alignment to preserve straight, level, even, and smooth lines. Keep structural items braced until concrete, grout, or dry pack mortar has hardened for 48 hours minimum.
7. Erect structural steel in accordance with AISC 303 unless otherwise specified or modified by applicable regulatory requirements.
8. Where anchors, connections, and other details of structural steel erection are not specifically indicated on the Drawings or specified, form, locate, and attach with equivalent in quality and workmanship to items specified.
9. Round off sharp or hazardous projections and grind smooth.
10. Paint or coat steel items as specified in Sections 09910 - Painting and 09960 - High-Performance Coatings.

B. Stainless steel. Take all necessary precautions to avoid iron contamination of stainless steel during delivery, storage, and handling.

1. Segregate stainless steel from iron.

2. Tools and handling devices.
    a. Do not use iron tools clamps, chokes, working surfaces, or brushes when fabricating, handling, and erecting stainless steel.
    b. Do not use tools that have been contaminated by contact with iron.
    c. Use stainless steel, polymer coated, or wood tools and handling equipment. Do not use tools that have been contaminated by contact with iron or steel.

C. Welding: General:
1. Make welds full penetration type, unless otherwise indicated on the Drawings.
2. Remove backing bars and weld tabs after completion of weld. Repair defective welds observed after removal of backing bars and weld tabs.

D. Welding: Carbon steel:
1. General: In accordance with AWS D1.1:
    a. Weld ASTM A36 and A992 structural steel, and ASTM A500 and A501 structural tubing with electrodes in accordance with AWS A5.1, using E70XX electrodes; AWS A5.17, using F7X-EXXX electrodes; or AWS A5.20, using E7XT-X electrodes.
    b. Field repair cut or otherwise damaged galvanized surfaces to equivalent original condition using a galvanized surface repair.

E. Welding - stainless steel:
1. General: In accordance with AWS D1.6.

F. Interface with other products:
1. Where steel members and fasteners come in contact with dissimilar metals (aluminum, stainless steel, etc.), separate or isolate the dissimilar metals with isolating sleeves and washers as specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.

G. Fasteners: General:
1. Install bolts to project 2 threads minimum, but 1/2 inch maximum beyond nut.
2. Anchor bolts and anchor rods: Install as specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.
    a. Unless otherwise specified, tighten nuts on anchor bolts and anchor rods specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry to the "snugtight" condition.
3. All thread rods in drilled holes bonded to concrete with adhesive: Install as specified in Section 03055 - Adhesive-Bonded Reinforcing Bars and All Thread Rods in Concrete.
4. All thread rods in drilled holes bonded to masonry with adhesive: Install as specified in Section 04055 - Adhesive Bonding Reinforcing Bars and All Thread Rods in Masonry.

H. Fasteners: High-strength carbon steel bolts:
1. Connections with high-strength bolts shall in accordance with RCSC Specification for Structural Joints Using High-Strength Bolts.
2. Provide slip-critical joints at bolted connections.

3. Joints: Slip-critical.
    a. Confirm that faying surfaces at connections are free of dirt and other foreign material, have been blast cleaned, and are free of coatings and inadvertent overspray in accordance with RCSC Specification.
    b. Furnish hardened flat washers in accordance with ASTM F436:
        1) On outer plies with slotted holes.
        2) When 1 or more plies of the connected material has a yield strength less than 40 ksi.
        3) Under element, nut, or bolt head, turned in tightening.
    c. Install tension indicator washers, placed in accordance with ASTM F959 Figure X1, to confirm adequate tightening of bolts.
    d. Tighten bolts to full pretension.

I. Fasteners: Stainless steel bolts:
    2. Connections shall be snugtight joints unless otherwise indicated on the Drawings.
    3. Prior to installing nuts, coat threads of stainless steel fasteners with thread coating to prevent galling of threads.
    4. Rotate nuts using a slow, smooth action without interruptions. Avoid over-tightening.

3.03 FIELD QUALITY CONTROL

A. Provide quality control as specified in Section 01450 - Quality Control.

3.04 FIELD QUALITY ASSURANCE

A. Provide quality assurance as specified in Section 01450 - Quality Control.

B. Special inspections, special tests, and structural observation:
    1. Provide as specified in Section 01455 - Regulatory Quality Assurance.

END OF SECTION

SECTION 05190

MECHANICAL ANCHORING AND FASTENING TO CONCRETE AND MASONRY

PART 1 GENERAL

1.01 SUMMARY

A. Section includes requirements for:
   1. Cast-in anchors and fasteners.
   2. Post-installed steel anchors and fasteners.
   3. Appurtenances for anchoring and fastening.

1. AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
1. Built-in anchor: Headed bolt or assembly installed in position before filling surrounding masonry units with grout.
2. Cast-in anchor: Headed bolt or assembly installed in position before placing plastic concrete around.
3. Overhead installations: Fasteners installed on overhead surfaces where the longitudinal axis of the fastener is more than 45 degrees above a horizontal line so the fastener resists sustained tension loads.
4. Passivation: Chemical treatment of stainless steel with a mild oxidant for the purpose of enhancing the spontaneous formation of the steel's protective passive film.
5. Post-installed anchor: Fastener or assembly installed in hardened concrete or finished masonry construction, typically by drilling into the structure and inserting a steel anchor assembly.
6. Terms relating to structures or building environments as used with reference to anchors and fasteners:
    a. Corrosive locations: Describes interior and exterior locations as follows:
        1) Locations used for delivery, storage, transfer, or containment (including spill containment) of chemicals used for plant treatment processes.
        2) Exterior and interior locations at the following treatment structures:
            a) Water treatment facilities: Liquids stream:
                (1) Misty Woods ASR Well.
                (2) College Lake ASR Well.
    b. Wet and moist locations: Describes locations, other than "corrosive locations," that are submerged, are immediately above liquid containment structures, or are subject to frequent wetting, splashing, or wash down. Includes:
        1) Exterior portions of buildings and structures.
        2) Liquid-containing structures:
            a) Locations at and below the maximum operating liquid surface elevation.
            b) Locations above the maximum operating liquid surface elevation and:
                (1) Below the top of the walls containing the liquid.
                (2) At the inside faces and underside surfaces of a structure enclosing or spanning over the liquid (including walls, roofs, slabs, beams, or walkways enclosing the open top of the structure).

3) Liquid handling equipment:
   a) Bases of pumps and other equipment that handles liquids.
4) Indoor locations exposed to moisture, splashing, or routine wash down during normal operations, including floors with slopes toward drains or gutters.
5) Other locations indicated on the Drawings.

c. Other locations:
1) Interior dry areas where the surfaces are not exposed to moisture or humidity in excess of typical local environmental conditions.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Calculations.

1.05 SUBMITTALS

A. General:
1. Submit as specified in Section 01330 - Submittal Procedures and the Agreement and Contract RFP in Volumes 1 and 2.

B. Product data:
1. Cast-in anchors:
   a. Manufacturer's data including catalog cuts showing anchor sizes and configuration, materials, and finishes.
2. Post-installed anchors:
   a. For each anchor type, manufacturer's data including catalog cuts showing anchor sizes and construction, materials and finishes, and load ratings.

C. Delegated Design Submittals:
1. When requesting product substitutions for post installed anchors, submit calculations, indicating the diameter, effective embedment depth and spacing of the proposed anchors, and demonstrating that the substituted product will provide load resistance that is equal to or greater than that provided by the anchors listed in this Section.

D. Samples:
1. Samples of each type of anchor, including representative diameters and lengths, if requested by the Engineer.

E. Certificates:
1. Cast-in anchors:
   a. Mill certificates for steel anchors that will be supplied to the site.
2. Post-installed anchors:
   a. Manufacturer's statement or certified test reports demonstrating that anchors that will be supplied to the site comply with the materials properties specified.

F. Test reports:
    1. Post-installed anchors: For each anchor type used for the Work:
        a. Current ICC-ES Report (ESR) demonstrating:
            1) Acceptance of that anchor for use under the building code specified in Section 01410 - Regulatory Requirements.
            2) That testing of the concrete anchor included the simulated seismic tension and shear tests of AC193, and that the anchor is accepted for use in Seismic Design Categories C, D, E, or F, and with cracked concrete.

G. Manufacturer's instructions:
    1. Requirements for storage and handling.
    2. Recommended installation procedures including details on drilling, hole size (diameter and depth), hole cleaning and preparation procedures, anchor insertion, and anchor tightening.
    3. Requirements for inspection or observation during installation.

H. Qualification statements:
    1. Post-installed anchors: Installer qualifications:
        a. Submit list of personnel performing installations. Include letter of training from manufacturer indicating date of manufacturer's training for each installer.

1.06 QUALITY ASSURANCE

A. Qualifications:
    1. Post installed anchors shall be in accordance with building code specified in Section 01410 - Regulatory Requirements.

B. Special inspection:
    1. Provide special inspection of post-installed anchors as specified in Section 01455 - Regulatory Quality Assurance and this Section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

B. Deliver post-installed anchors in manufacturer's standard packaging with labels visible and intact. Include manufacturer's installation instructions.

C. Handle and store anchors and fasteners in accordance with manufacturer's recommendations and as required to prevent damage.

D. Protect anchors from weather and moisture until installation.

1.08 PROJECT CONDITIONS

A. As specified in Section 01850 - Design Criteria.

B. Seismic Design Category (SDC) for structures is indicated on the Drawings.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. General:
   1. Furnish threaded fasteners with flat washers and hex nuts fabricated from materials corresponding to the material used for threaded portion of the anchor.
      a. Cast-in anchors: Provide flat washers and nuts as listed in the ASTM standard for the anchor materials specified.
      b. Post-installed anchors: Provide flat washers and nuts supplied for that product by the manufacturer of each anchor.
   2. Size of anchors and fasteners, including diameter and length or minimum effective embedment depth: As indicated on the Drawings or as specified in this Section. In the event of conflicts, contact the Engineer for clarification.
   3. Where anchors and connections are not specifically indicated on the Drawings or specified, their material, size and form shall be equivalent in quality and workmanship to items specified.

B. Materials:
   1. Provide and install anchors of materials as specified in this Section.

2.02 CAST-IN ANCHORS AND FASTENERS

A. Anchor bolts:
   1. Straight steel rod having one end with an integrally forged head, and one threaded end. Embedded into concrete with the headed end cast into concrete at the effective embedment depth indicated on the Drawings or specified, and with the threaded end left to project clear of concrete face as required for the connection to be made.
   2. Furnish anchor bolts with heavy hex forged head or equivalent acceptable to the Engineer.
      a. Rods or bars with angle bend for embedment in concrete (i.e., “L” or “J” shaped anchor bolts) are not permitted in the Work.
   3. Materials:
      a. Ship anchor bolts with properly fitting nuts attached.
      b. Type 316 stainless steel:
         1) Surfaces descaled, pickled, and passivated in accordance with ASTM A380.
         2) Bolts: ASTM F593, Group 2, Condition CW, coarse threads.
         3) Nuts: ASTM F594. Match alloy (group and UNS designation) and threads of bolts.
         4) Washers: Type 316 stainless steel.
      c. Type 304 stainless steel:
         1) Surfaces descaled, pickled, and passivated in accordance with ASTM A380.
         2) Bolts: ASTM F593, Group 1, Condition CW, coarse threads.
         3) Nuts: ASTM F594. Match alloy (group and UNS designation) and threads of bolts.
         4) Washers: Type 304 stainless steel.

d. Stainless steel: Type 316:
    1) Surfaces descaled, pickled, and passivated in accordance with ASTM A380.
    2) Rod: ASTM F593, Group 2, Condition CW, coarse threads.
    3) Nuts: ASTM F594. Match alloy (group and UNS designation) and threads of rods.
    4) Washers: Type 316 stainless steel.
    5) Plates (embedded): ASTM A240.
e. Stainless steel: Type 304:
    1) Surfaces descaled, pickled, and passivated in accordance with ASTM A380.
    2) Rod: ASTM F593, Group 1, Condition CW, coarse threads.
    3) Nuts: ASTM F594. Match alloy (group and UNS designation) and threads or rods.
    4) Washers: Type 304 stainless steel.
    5) Plates (embedded): ASTM A240.

2.03 POST-INSTALLED ANCHORS AND FASTENERS - ADHESIVE

A. Epoxy bonding of reinforcing bars, all thread rods, and threaded inserts in concrete: As specified in Section 03055 - Adhesive-Bonded Reinforcing Bars and All Thread Rods in Concrete.

B. Epoxy bonding of reinforcing bars, all thread rods, and threaded inserts in masonry: As specified in Section 04055 - Adhesive Bonding Reinforcing Bars and All Thread Rods in Masonry.

2.04 POST-INSTALLED ANCHORS AND FASTENERS - MECHANICAL

A. General:
    1. Post-installed anchors shall hold a current ICC Evaluation Service Report demonstrating acceptance for use under the building code specified in Section 01410 - Regulatory Requirements.
        a. Acceptance report shall indicate acceptance of the product for use under the following conditions:
            1) In regions of concrete where cracking has occurred or may occur.
            2) To resist short-term loads due to wind forces.
            3) To resist short-term loading due to seismic forces for the Seismic Design Category of the structure where the product will be used.

B. Concrete anchors:
    1. Post-installed anchor assembly consisting of a threaded stud and a surrounding wedge expansion sleeve that is forced outward by torquing the center stud to transfer loads from the stud to the concrete through bearing, friction, or both. Sometimes referred to as “expansion anchors” or “wedge anchors.”
        a. Do not use slug-in, lead cinch, and similar systems relying on deformation of lead alloy or similar materials to develop holding power.
    2. Concrete expansion bolts for anchorage to concrete:
        a. Shall have a current ICC-ES Report demonstrating that the anchors have been tested and qualified for performance in both cracked and un-cracked concrete, and for short-term loading due to wind and seismic forces for

Seismic Design Categories A through F in accordance with ACI 355.2 and with ICC-ES AC193 (including all mandatory tests and optional tests for seismic tension and shear in cracked concrete).

b. Performance in the current ICC-ES Report shall be “Category 1” as defined in ACI 355.2.

c. Manufacturers: One of the following:
   1) DEWALT/Powers, PowerStud.
   2) Hilti, Kwik Bolt TZ2 Wedge Anchor.
   3) Simpson Strong-Tie, Strong-Bolt 2 Wedge Anchor.

d. Materials. Integrally threaded stud, wedge, washer, and nut:
   1) Stainless steel: Type 316.
      a) Type 304 stainless steel acceptable for use at wet and moist locations when accepted in writing by the Engineer.
   2) Galvanized: Carbon steel, zinc plated in accordance with ASTM B633, minimum 5 microns (Fe/Zn 5).

3. Concrete anchors for anchorage to concrete masonry (fully grouted cells):
   a. Shall have a current ICC-ES Report demonstrating that the anchors have been tested and qualified in accordance with ICC-ES AC01, including all mandatory tests and optional seismic tests.
   b. Manufacturers: One of the following or equal:
      1) DEWALT/Powers, Power-Stud+ SD1.
      2) Hilti, Kwik TZ2 Wedge Anchor.
      3) Simpson Strong-Tie, Strong-Bolt 2 Wedge Anchor.
   c. Materials. Integrally threaded stud, wedge, washer, and nut:
      1) Stainless steel: Type 316.
         a) Type 304 stainless steel acceptable for use at wet and moist locations when accepted in writing by the Engineer.

2.05 APPURTENANCES FOR ANCHORING AND FASTENING

A. Anchor bolt sleeves:
   1. Having inside diameter approximately 2 inches greater than bolt diameter and minimum 10-bolt diameters long.
   2. Plastic sleeves:
      a. High-density polyethylene, corrugated sleeve, threaded to provide adjustment of location on the anchor bolt.
      b. Manufacturers: The following or equal:
         1) Portland Bolt & Manufacturing Co.

B. Isolating sleeves and washers:
   1. Manufacturers: One of the following or equal:
      a. Allied Corrosion Industries.
      b. Central Plastics Co.
   2. Sleeves: Mylar, 1/32-inch thick, 4,000 volts per mil dielectric strength, of proper size to fit bolts and extending half way into both steel washers.
   3. One sleeve required for each bolt.
   4. Washers: Inside diameter of washers shall fit over the isolating sleeve, and both the steel and isolating washers shall have the same inside diameter and outside diameter.
      a. Proper size to fit bolts.
      b. Two 1/8-inch thick steel washers for each bolt.

c. G3 Phenolic: 2 insulating washers are required for each bolt:
    1) Thickness: 1/8 inch.
    2) Base material: Glass.
    3) Resin: Phenolic.
    4) Water absorption: 2 percent.
    5) Hardness (Rockwell): 100.
    6) Dielectric strength: 450 volts per mil.
    7) Compression strength: 50,000 pounds per square inch.
    8) Tensile strength: 20,000 pounds per square inch.
    9) Maximum operating temperature: 350 degrees Fahrenheit.

C. Coating for repair of galvanized surfaces:
    1. Manufacturers: The following or equal:
        a. Jelt, Galvinox.

D. Thread coating: For use with threaded stainless steel fasteners:
    1. Manufacturers: One of the following or equal:
        a. Bostik, Never-Seez.
        b. Oil Research, Inc., WLR No. 111.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine Work in place to verify that it is satisfactory to receive the Work of this Section. If unsatisfactory conditions exist, do not begin this Work until such conditions have been corrected.

3.02 INSTALLATION - GENERAL

A. Where anchors and fasteners are not specifically indicated on the Drawings or specified, make attachments with materials specified in this Section.

B. Substitution of anchor types:
    1. Post-installed anchors may not be used as an alternative to cast-in/built-in anchors at locations where the latter are indicated on the Drawings.
    2. Cast-in/built-in anchors may be used as an alternative to post-installed mechanical anchors at locations where the latter are indicated on the Drawings.

C. Protect products from damage during installation. Protect threads and threaded ends.

D. Accurately locate and position anchors and fasteners:
    1. Unless otherwise indicated on the Drawings, install anchors perpendicular to the surfaces from which they project.
    2. Install anchors so that at least 2 threads, but not more than 1/2 inch of threaded rod, projects past the top nut.

E. Interface with other products:
   1. Where steel anchors come in contact with dissimilar metals (aluminum, stainless steel, etc.), use stainless steel anchors and separate or isolate dissimilar metals using isolating sleeves and washers.
   2. Prior to installing nuts, coat threads of stainless steel fasteners with thread coating to prevent galling of threads.

3.03 INSTALLATION - CAST-IN ANCHORS

A. General:
   1. Accurately locate cast-in and built-in anchors.
      a. Provide anchor setting templates to locate anchor bolts and anchor rods. Secure templates to formwork.
      b. Brace or tie off embedments as necessary to prevent displacement during placement of plastic concrete or of surrounding masonry construction.
      c. Position and tie cast-in and built-in anchors in place before beginning placement of concrete or grout. Do not “stab” anchors into plastic concrete, mortar, or grout.
      d. Do not allow cast-in anchors to touch reinforcing steel. Where cast-in anchors are within 1/4 inch of reinforcing steel, isolate the metals by wrapping the anchors with a minimum of 4 wraps of 10-mil polyvinyl chloride tape in area adjacent to reinforcing steel.
   2. For anchoring at machinery bases subject to vibration, use 2 nuts, with 1 serving as a locknut.
   3. Where anchor bolts or anchor rods are indicated on the Drawings as being for future use, thoroughly coat exposed surfaces that project from concrete or masonry with non-oxidizing wax. Turn nuts down full length of the threads, and neatly wrap the exposed thread and nut with a minimum of 4 wraps of 10-mil waterproof polyvinyl tape.

B. Anchor bolts:
   1. Minimum effective embedment: 10-bolt diameters, unless a longer embedment is indicated on the Drawings.
   2. Where indicated on the Drawings, set anchor bolts in plastic, galvanized steel or stainless steel sleeves to allow for adjustment.

3.04 [INSTALLATION - POST-INSTALLED ADHESIVE ANCHORS

A. Epoxy and acrylic adhesive bonding of reinforcing bars, all thread rods, and internally threaded inserts in concrete: As specified in Section 03055 - Adhesive-Bonded Reinforcing Bars and All Thread Rods in Concrete.

B. Epoxy and acrylic adhesive bonding of reinforcing bars, all thread rods, and internally threaded inserts in masonry: As specified in Section 04055 - Adhesive Bonding Reinforcing Bars and All Thread Rods in Masonry.

3.05 INSTALLATION - POST-INSTALLED MECHANICAL ANCHORS

A. General:
   1. Install anchors in accordance with the manufacturer’s instructions, ACI 355.2, the anchor’s ICC-ES Report. Where conflict exists between the ICC-ES Report

and the requirements specified in this Section, the requirements of the ICC-ES Report shall control.
2. Where anchor manufacturer recommends the use of special tools and/or specific drill bits for installation, provide and use such tools.
3. After anchors have been positioned and inserted into concrete or masonry, do not:
    a. Remove and reuse/reinstall anchors.
    b. Loosen or remove bolts or studs.

B. Holes drilled into concrete and masonry:
1. Do not drill holes in concrete or masonry until the material has achieved its minimum specified compression strength (f'c or f'm).
2. Accurately locate holes:
    a. Before drilling holes, use a reinforcing bar locator to identify the position of reinforcing steel, conduit, and other embedded items within a 6-inch radius of each proposed hole.
    b. If the hole depth exceeds the range of detection for the rebar locator, the Engineer may require radiographs of the area designated for investigation before drilling commences.
3. Exercise care to avoid damaging existing reinforcement and other items embedded in concrete and masonry.
    a. If embedments are encountered during drilling, immediately stop work and notify the Engineer. Await the Engineer's instructions before proceeding.
4. Unless otherwise indicated on the Drawings, drill holes perpendicular to the concrete surface into which they are placed.
5. Drill using anchor manufacturer's recommended equipment and procedures:
    a. Unless otherwise recommended by the manufacturer, drill in accordance with the following:
        1) Drilling equipment: Electric or pneumatic rotary type with light or medium impact. Where edge distances are less than 2 inches, use lighter impact equipment to prevent micro-cracking and concrete spalling during drilling process.
        2) Drill bits: Carbide-tipped in accordance with ANSI B212.15. Hollow drills with flushing air systems are preferred.
6. Drill holes at manufacturer's recommended diameter and to depth required to provide the effective embedment indicated.
7. Clean and prepare holes as recommended by the manufacturer and as required by the ICC-ES Report for that anchor.
    a. Unless otherwise recommended by anchor manufacturer, remove dust and debris using brushes and clean compressed air.
    b. Repeat cleaning process as required by the manufacturer's installation instructions.
    c. When cleaning holes for stainless steel anchors, use only stainless steel or non-metallic brushes.

C. Insert and tighten (or torque) anchors in compliance with the manufacturer's installation instructions.
1. Once anchor is tightened (torque), do not attempt to loosen or remove its bolt or stud.

D. Concrete anchors: Minimum effective embedment lengths unless otherwise indicated on the Drawings:

Concrete Anchors			
	Minimum Effective Embedment Length		Minimum Member Thickness
Nominal Diameter	In Concrete	In Grouted Masonry	
3/8 inch	2 1/2 inch	2 5/8 inch	8 inch
1/2 inch	3 1/2 inch	3 1/2 inch	8 inch
5/8 inch	4 1/2 inch	4 1/2 inch	10 inch
3/4 inch	5 inch	5 1/4 inch	12 inch

E. Flush shell anchors:
   1. Not permitted in the Work.
   2. If equipment manufacturer's installation instructions recommend the use of flush shell anchors, contact the Engineer for instructions before proceeding.

F. Sleeve anchors:
   1. Minimum effective embedment lengths unless otherwise indicated on the Drawings:

Sleeve Anchors			
	Minimum Effective Embedment Length		Minimum Member Thickness
Nominal Diameter	In Concrete	In Grouted Masonry	
M8 (1/2 inch)	70 mm (2 3/4 inch)	Not accepted	100 mm (8 inch)
M10 (5/8 inch)	76 mm (3 inch)	Not accepted	250 mm (10 inch)
M12 (3/4 inch)	80 mm (3 1/4 inch)	Not accepted	300 mm (12 inch)

   2. Install with the sleeve fully engaged in the base material.

G. Screw anchors:
   1. Minimum effective embedment lengths unless otherwise indicated on the Drawings:

Screw Anchors			
	Minimum Effective Embedment Length		Minimum Member Thickness
Nominal Diameter	In Concrete	In Grouted Masonry	
3/8 inch	2 1/2 inch	3 1/4 inch	8 inch
1/2 inch	3 1/4 inch	4 1/2 inch	8 inch
5/8 inch	4 inch	5 inch	10 inch
3/4 inch	5 1/2 inch	6 1/4 inch	12 inch

   2. Install using equipment and methods recommended by the manufacturer. Continue driving into hole until the washer head is flush against the item being fastened.

H. Undercut concrete anchors:
   1. Minimum effective embedment lengths unless otherwise indicated on the Drawings:

Undercut Anchors			
Nominal Diameter (bolt)	**Minimum Effective Embedment Length**		**Minimum Member Thickness**(1)
	In Concrete	**In Grouted Masonry**	
M10 (3/8 inch)	100 mm (4 inch)	Not accepted	200 mm (8 inch)
M12 (1/2 inch)	125 mm (5 inch)	Not accepted	350 mm (14 inch)
M16 (5/8 inch)	190 mm (7 1/2 inch)	Not accepted	460 mm (18 inch)
M20 (7/8 inch)	250 mm (10 inch)	Not accepted	510 mm (20 inch)

Notes:
(1) Thickness indicated is for pre-set units. If through-set units are accepted, obtain minimum member thickness requirements from the Engineer.

   2. Installations of undercut anchors shall not be allowed where edge distances are less than 12 times the nominal diameter of the anchor stud.
   3. Undercut bottom of hole using cutting tools manufactured for this purpose by the manufacturer of the undercut anchors being placed.

3.06 FIELD QUALITY CONTROL

A. Provide quality control over the Work of this Section as specified in Section 01450 - Quality Control.
   1. Expenses associated with Work described by the following paragraphs shall be paid by the Contractor.

B. Post-installed anchors:
   1. Review anchor manufacturer's installation instructions and requirements of the Evaluation Service Report (hereafter referred to as "installation documents") for each anchor type and material.
   2. Observe hole-drilling and cleaning operations for conformance with the installation documents.
   3. Certify in writing that the depth and location of anchor holes, and the torque applied for setting the anchors conforms to the requirements of the installation documents.

3.07 FIELD QUALITY ASSURANCE

A. Engineer will provide on-site observation and field quality assurance for the Work of this Section.
   1. Expenses associated with work described by the following paragraphs shall be paid by the Owner.

B. Field inspections and special inspections:
   1. Required inspections: Observe construction for conformance to the approved Contract Documents, the accepted Submittals, and the manufacturer's installation instructions for the products used.

2. Record of inspections:
    a. Maintain record of each inspection.
    b. Submit copies to the Engineer upon request.
3. Statement of special inspections: At the end of the project, prepare and submit to the Engineer and the authority having jurisdiction inspector's statement that the Work was constructed in general conformance with the approved Contract Documents, and that deficiencies observed during construction were resolved.

C. Special inspections: Anchors cast into concrete and built into masonry.
1. Provide special inspection during positioning of anchors and placement of concrete or masonry (including mortar and grout) around the following anchors:
    a. Anchor bolts.
2. During placement, provide continuous special inspection at each anchor location to verify that the following elements of the installation conform to the requirements of the Contract Documents.
    a. Anchor:
        1) Type and dimensions.
        2) Material: Galvanized steel, Type 304 stainless steel or Type 316 stainless steel, as specified in this Section or indicated on the Drawings.
        3) Positioning: Spacing, edge distances, effective embedment, and projection beyond the surface of the construction.
        4) Reinforcement at anchor: Presence, positioning, and size of additional reinforcement at anchors indicated on the Drawings.
3. Following hardening and curing of the concrete or masonry surrounding the anchors, provide periodic special inspection to observe and confirm the following:
    a. Base material (concrete or grouted masonry):
        1) Solid and dense concrete or grouted masonry material within required distances surrounding anchor.
        2) Material encapsulating embedment is dense and well-consolidated.

D. Special inspections: Post-installed mechanical anchors placed in hardened concrete and in grouted masonry.
1. Provide special inspection during installation of the following anchors:
    a. Concrete anchors.
2. Unless otherwise noted, provide periodic special inspection during positioning, drilling, placing, and torquing of anchors.
    a. Provide continuous special inspection for post-installed anchors in "overhead installations" as defined in this Section.
3. Requirements for periodic special inspection:
    a. Verify items listed in the following paragraphs for conformance to the requirements of the Contract Documents and the Evaluation Report for the anchor being used. Observe the initial installation of each type and size of anchor, and subsequent installation of the same anchor at intervals of not more than 4 hours.
        1) Any change in the anchors used, in the personnel performing the installation, or in procedures used to install a given type of anchor shall require a new "initial inspection."
    b. Substrate: Concrete or masonry surfaces receiving the anchor are sound and of a condition that will develop the anchor's rated strength.

c. Anchor:
    1) Manufacturer, type, and dimensions (diameter and length).
    2) Material (galvanized, Type 304 stainless steel, or Type 316 stainless steel).
d. Hole:
    1) Positioning: Spacing and edge distances.
    2) Drill bit type and diameter.
    3) Diameter, and depth.
    4) Hole cleaned in accordance with the manufacturer's required procedures. Confirm multiple repetitions of cleaning when recommended by the manufacturer.
    5) Anchor's minimum effective embedment.
    6) Anchor tightening/installation torque.

4. Requirements for continuous special inspection:
    a. Special inspector shall observe all aspects of anchor installation, except that holes may be drilled in their absence provided that they confirm the use of acceptable drill bits before drilling, and later confirms the diameter, depth, and cleaning of drilled holes.

E. Field tests:
1. Engineer may, at any time, request testing to confirm that materials being delivered and installed conform to the requirements of the Specifications.
    a. If such additional testing shows that the materials do not conform to the specified requirements, the Contractor shall pay the costs of these tests.
    b. If such additional testing shows that the materials do conform to the specified requirements, the Owner shall pay the costs of these tests.

3.08 NON-CONFORMING WORK

A. Remove misaligned or non-performing anchors.

B. Fill empty anchor holes and repair failed anchor locations as specified in Section 03366 - Concrete Finishes using high-strength, non-shrink, non-metallic grout.

C. If more than 10 percent of all tested anchors of a given diameter and type fail to achieve their specified torque or proof load, the Engineer will provide directions for required modifications. Make such modifications, up to and including replacement of all anchors, at no additional cost to the Owner.

3.09 SCHEDULES

A. Stainless steel: Provide and install stainless steel anchors at the following locations:
1. "Corrosive locations" as defined in this Section: Type 316 stainless steel.
2. "Wet and moist locations" as defined in this Section: Type 316 stainless steel.
3. "Other locations:"
    a. For connecting steel members to concrete or masonry: Type 304 stainless steel.
    b. For connecting aluminum members to concrete or masonry.

c. For connecting fiber-reinforced plastic (FRP) members to concrete or masonry.

4. At locations indicated on the Drawings.

B. Provide and install anchor materials as scheduled in the following table.

Required Anchoring Materials by Location			
Location/Exposure		**Materials**	**Notes**
1.	**Anchors into concrete and grouted masonry for attachment of carbon steel, including structural steel and other steel fabrications:**		
a.	Interior dry areas	Carbon steel - galvanized	
b.	Locations with galvanized steel structures or fabrications	Stainless steel - Type 304 or 316	1
c.	Exterior and interior wet and moist locations	Stainless steel - Type 316	1
d.	Corrosive locations	Stainless steel - Type 316	1
2.	**Anchors into concrete and grouted masonry for attachment of aluminum, stainless steel, or fiber-reinforced plastic (FRP) shapes and fabrications:**		
a.	Interior dry areas	Stainless steel - Type 304 or 316	1
b.	Exterior and interior wet and moist locations	Stainless steel - Type 316	1
c.	Corrosive locations	Stainless steel - Type 316	1
3.	**Anchors for attaching equipment and its appurtenances:**		
a.	All locations	Stainless steel - Type 316 (unless Type 304 is specifically indicated in the specifications for the equipment.)	1

Notes:

(1) Where anchors are in contact with a metal that differs from that of the anchor, provide isolation sleeves and washers.

END OF SECTION

SECTION 05500

METAL FABRICATIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Aluminum grating stair tread.
   2. Aluminum stair nosing.
   3. Cast iron stop plank grooves.
   4. Concrete inserts.
   5. Handrails and guardrails.
   6. Ladders.
   7. Manhole frames and covers.
   8. Manhole steps.
   9. Metal gratings.
   10. Metal tread plate.
   11. Preformed channel pipe supports.
   12. Stairs.
   13. Miscellaneous metals.
   14. Associated accessories to the above items.

1.03 DEFINITIONS

A. Passivation: Removal of exogenous iron or iron compounds from the surface of a stainless steel by means of chemical dissolution resulting from treatment with an acid solution that removes the surface contamination but does not significantly affect the stainless steel itself.

1.04 SUBMITTALS

A. Product Data:
   1. Aluminum grating stair tread.
   2. Aluminum stair nosing.
   3. Cast iron stop plank grooves.
   4. Handrails and guardrails.
   5. Manhole frames and covers.
   6. Manhole steps.
   7. Metal grating.

B. Shop drawings:
   1. Handrails and guardrails:
      a. Including details on connection attachments, gates, kick plates, ladders, and angles.
      b. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
      c. Include erection drawings, elevations, and details where applicable.
      d. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
   2. Ladders.
   3. Metal grating.
   4. Metal tread plate.
   5. Stairs.
   6. Miscellaneous metals.

C. Samples:
   1. Guardrails with specified finishes.

D. Quality control submittals:
   1. Design data.
   2. Test reports:
      a. Guardrails: 3 copies of certified tests performed by an independent testing laboratory certifying that guardrails meet current State and OSHA strength requirements.
      b. Gratings:
         1) Grating manufacturers' calculations showing that gratings will meet specified design load, stress, and deflection requirements for each size grating for each span.
         2) Reports of tests performed.
      c. Planks:
         1) Plank manufacturers' calculations showing that planks will meet specified load-bearing and deflection requirements for each size plank for each span.
         2) Reports of tests performed.

PART 2 PRODUCTS

2.01 MATERIALS

A. General: Unless otherwise specified or indicated on the Drawings, structural and miscellaneous metals in accordance with the standards of the ASTM, including the following:

Item	ASTM Standard No.	Class, Grade Type or Alloy No.
Cast Iron		
Cast Iron	A48	Class 40B
Steel		
Galvanized sheet iron or steel	A653	Coating G90
Coil (plate)	A635	--
Structural plate, bars, rolled shapes, and miscellaneous items (except W shapes).	A36	--
Rolled W shapes	A992	Grade 50
Standard bolts, nuts, and washers	A307	--
High strength bolts, nuts, and hardened flat washers	F3125, Grade A325	--
Eyebolts	A489	Type 1
Tubing, cold-formed	A500	--
Tubing, hot-formed	A501	--
Steel pipe	A53	Grade B
Stainless Steel		
Plate, sheet, and strip	A240	Type 304* or 316**
Bars and shapes	A276	Type 304* or 316**
Bolts (Type 304)	F593	Group 1 Condition CW
Bolts (Type 316)	F593	Group 2 Condition CW
Aluminum		
Flashing sheet aluminum	B209	Alloy 5005-H14, 0.032 inches minimum thickness
Structural sheet aluminum-	B209	Alloy 6061-T6
Structural aluminum	B209 B308	Alloy 6061-T6
Extruded aluminum	B221	Alloy 6063-T42
* Use Type 304L if material will be welded. ** Use Type 316L if material will be welded.		

1. Stainless steels are designated by type or series defined by ASTM.
2. Where stainless steel is welded, use low-carbon stainless steel.

2.02 MANUFACTURED UNITS

A. Aluminum grating stair tread:
   1. Manufacturers: One of the following or equal:
      a. Harsco Industrial IKG, Aluminum Grating Stair Tread with Mebac® nosing.
      b. McNichols Co., Type A-Standard with Corrugated Angle Nosing.
   2. Material: Welded aluminum grating tread with non-slip nosing and integral end plates for bolt on attachment to stair stringers.
   3. Size:
      a. Tread width: To equal tread spacing plus 1 inch minimum.
      b. Tread length: Length to suit stringer-to-stringer dimension on the Drawings.
      c. Depth: 1-3/4 inches.
   4. Bolts: Type 316 stainless steel.

B. Aluminum stair nosing:
   1. Manufacturers: One of the following or equal:
      a. Wooster Products, Inc., Type 101 Nosing.
      b. American Safety Tread Co., Inc., Style 801 Nosing.
   2. Material: Cast aluminum abrasive nosings with aluminum oxide granules integrally cast into metal, forming permanent, nonslip, long-wearing surface.
   3. For installation in cast-in-place stairs.
   4. Configuration: 4 inches wide, fabricated with integrally cast stainless steel anchors at approximately 12-inch centers. Length to extend within 3 inches of stair edge on each side.

C. Cast iron stop plank grooves:
   1. Manufacturers: One of the following or equal:
      a. Neenah Foundry Co., R-7500 Series, Type A.
      b. McKinley Iron Works, Type L.
   2. Size: 2-inch wide groove opening by 1-1/2 inch deep, unless otherwise indicated on the Drawings.
   3. Recess groove with the cast iron surface of the groove set flush with the concrete surface.

D. Concrete inserts:
   1. Concrete inserts for supporting pipe and other applications are specified in Section 15061 - Pipe Supports.

E. Handrails and guardrails:
   1. General:
      a. Design and fabricate assemblies to conform to current local, State, and OSHA standards and requirements.
      b. Coordinate layout of assemblies and post spacings to avoid conflicts with equipment and equipment operators:
         1) Indicate on the shop drawings locations of such equipment.
         2) Highlight locations where railings cannot be made continuous, and obtain Engineer’s directions on how to proceed before fabricating or installing railings.

2. Aluminum handrails and guardrails (nonwelded pipe):
    a. Rails, posts, and fitting-assembly spacers:
        1) In accordance with ASTM B429, 6005, 6063 or 6105, minimum Schedule 40, extruded aluminum pipe of minimum 1.89-inch outside diameter and 0.14-inch wall thickness.
    b. Kick plates: 6061 or 6105 aluminum alloy.
    c. Fastenings and fasteners: As recommended or furnished by the manufacturer.
    d. Other parts: 6063 extruded aluminum, or F214 or F514.0 aluminum castings:
        1) Fabrications: In accordance with ASTM B209 or ASTM B221 extruded bars:
            a) Bases: 6061 or 6063 extruded aluminum alloy.
        2) Plug screws or blind rivets: Type 305 stainless steel.
            a) Other parts: Type 300 series stainless steel.
    e. Finish of aluminum components:
        1) Anodized finish, 0.7 mil thick, applied to exposed surfaces after cutting. Aluminum Association Specification M12-C22-A41, mechanical finish non specular as fabricated, chemical finish-medium matte, anodic coating-clear Class I Architectural.
        2) Pretreat aluminum for cleaning and removing markings before anodizing.
    f. Fabrication and assembly:
        1) Fabricate posts in single, unspliced pipe length.
        2) Perform without welding.
        3) Do not epoxy bond the parts.
        4) Maximum clear opening between assembled railing components as indicated on the Drawings.
    g. Manufacturers: One of the following or equal:
        1) Moultrie Manufacturing Co., Wesrail.
        2) Golden Railings, Riveted System.
        3) Craneveyor Corp. Enerco Metals, C-V Rail.
3. Steel pipe handrails and guardrails:
    a. Schedule 40 black steel pipe with minimum 1.9-inch outside diameter, or larger where indicated on the Drawings.
    b. Fabricate posts in single, unspliced pipe length.
    c. Kick plates: Galvanized steel.
    d. Attachment devices: Provide clip angles and other fasteners necessary for securing handrails and guardrails to other construction as indicated on the Drawings.
    e. Continuously weld joints and grind smooth.
    f. Bend rails to profile indicated on the Drawings**,** without sharp bends or flat spots. Rails shall be round after bending.
    g. Neatly weld intersection of rails and posts, and grind surfaces smooth.
4. Fastenings and fasteners: As recommended or furnished by guardrail manufacturer for use with this system.

F. Ladders:
    1. General:
        a. Type: Safety type conforming to local, State, and OSHA standards as minimum. Furnish guards for ladder wells.

b. Size: 18 inches wide between side rails of length, size, shape, detail, and location indicated on the Drawings.

2. Aluminum ladders:
   a. Materials: 6063-T5 aluminum alloy.
   b. Rungs:
      1) 1-inch minimum solid square bar with 1/8-inch grooves in top and deeply serrated on all sides.
      2) Capable of withstanding 1,000 pound load without failure.
   c. Side rails: Minimum 4-inch by 1/2-inch flat bars.
   d. Finish of aluminum components:
      1) Anodized finish, 0.7 mil thick, applied to exposed surfaces after cutting. Aluminum Association Specification M12-C22-A41, mechanical finish non specular as fabricated, chemical finish-medium matte, anodic coating-clear Class I Architectural.
      2) Pretreat aluminum for cleaning and removing markings before anodizing.
   e. Fabrication:
      1) Welded construction, of size, shape, location, and details indicated on the Drawings.
      2) For ladders over 20 feet high, furnish standard ladder cages or fall prevention system designed in accordance with State and OSHA requirements.
   f. Fall prevention system: Include but not limit to railing, brackets, clamps, 2 sleeves, and 2 belts, satisfying OSHA safe climbing requirements:
      1) Manufacturers: One of the following or equal:
         a) North Consumer Products, Saf-T-Climb.
         b) Swager Communications, Climbers Buddy System.

G. Manhole frames and covers:
   1. Material: Gray iron castings, in accordance with ASTM A48, Class 30-B.
   2. Type: Heavy-duty traffic type, with combined minimum set weight of 265 pounds.
   3. Machine horizontal and vertical bearing surfaces to fit neatly, with easily removable cover bearing firmly in frame without rocking.
   4. Frame:
      a. Bottom flange type.
      b. Approximately 4-1/2 inches frame height.
      c. Dimensions as indicated on the Drawings.
         1) Minimum inside clear dimension may not be smaller than nominal diameter minus 2 inches.
   5. Cover:
      a. Skid-resistant grid pattern design stamped with name of utility service provided by manhole, such as "ELECTRICAL," "SEWER," "TELEPHONE," or "WATER."
      b. Solid type without ventilation holes.
   6. Finish: Unpainted.

H. Manhole steps:
   1. Type 316 stainless steel, of size, shape, and spacing indicated on the Drawings.

I. Metal gratings:
   1. General:
      a. Fabricate grating to cover areas indicated on the Drawings.
      b. Unless otherwise indicated on the Drawings, grating over an opening shall cover entire opening.
      c. Make cutouts in grating where required for equipment access or protrusion, including valve operators or stems, and gate frames.
      d. Band ends of grating and edges of cutouts in grating:
         1) End banding: 1/4 inch less than height of grating, with top of grating and top edge of banding flush.
         2) Cutout banding: Full-height of grating.
         3) Use banding of same material as grating.
         4) Panel layout: Enable installation and subsequent removal of grating around protrusions or piping.
         5) Openings 6 inches and larger: Lay out grating panels with edges of 2 adjacent panels located on centerline of opening.
         6) Openings smaller than 6 inches: Locate opening at edge of single panel.
         7) Where an area requires more than 1 grating section to cover area, clamp adjacent grating sections together at 1/4-points with fasteners acceptable to Engineer.
         8) Fabricate steel grating sections in units weighing not more than 50 pounds each.
         9) Fabricate aluminum grating sections in units of weighing not more than 50 pounds each.
         10) Gaps between adjacent grating sections shall not be more than the clear spacing between bearing bars.
      e. When requested by Engineer, test 1 section of each size grating for each span length involved on the job under full load:
         1) Furnish a suitable dial gauge for measuring deflections.
      f. Grating shall be aluminum, unless otherwise specified or indicated on the Drawings.
   2. Aluminum grating:
      a. Material for gratings, shelf angles, and rebates: 6061-T6 or 6063-T6 aluminum alloy, except crossbars may be 6063-T5 aluminum alloy.
      b. Shelf angle concrete anchors: Type 304 or Type 316 stainless steel.
      c. Grating rebate rod anchors: 6061-T6 or 6063-T6 aluminum alloy.
      d. Bar size and spacing: As determined by manufacturer to enable grating to support design load.
      e. Design live load: A minimum of 100 pounds per square foot uniform live load on entire grating area, but not less than the live load indicated on the Drawings for the area where grating is located.
      f. Maximum fiber stress for design load: 12,000 pounds per square inch.
      g. Maximum deflection due to design load: 1/240 of grating clear span.
      h. Maximum spacing of main grating bars: 1-1/8 inches clear between bars.
      i. Minimum grating height: 1-1/2 inches.
      j. Manufacturers: The following or equal:
         1) Harsco Industrial IKG, Swaged Aluminum I-Bar with striated finish.
   3. Aluminum grating planks:
      a. Materials: Meet requirements previously specified for aluminum grating.

b. Fabrication:
1) Meet requirements previously specified for aluminum grating.
c. Have unpunched surface with cross hatched anti-skid surface.
d. Minimum weight of 3-1/4 pounds per square foot.
e. Provide 1 inch diameter hole with smooth edges at each end for each plank.
f. Furnish planks in 2 foot widths.
g. Manufacturers: The following or equal:
1) Harsco Industrial IKG, Heavy Duty Aluminum Plank Grating HD-P.
h. Planks shall not lock with adjacent planks allowing the removal of individual planks without disturbing the adjacent planks.

4. Steel gratings:
a. Hot-dip galvanized in accordance with ASTM A123.
b. Bar size and spacing: As determined by the manufacturer to support design load.
c. Design live load: A minimum of 100 pounds per square foot uniform live load on the entire area of the grating area, but not less than the live load indicated on the Drawings for the area where the grating is located.
d. Maximum fiber stress for design load: 18,000 pounds per square inch.
e. Maximum deflection under design load: 1/240 of grating clear span.
f. Bar spacing: Maximum of 1-1/8 inches clear between bars.
g. Manufacturers: The following or equal:
1) Harsco Industrial IKG, IKG Weldforged.

5. Heavy-duty steel grating:
a. Heavy-duty type, fabricated from structural steel and designed in accordance with AASHTO Standard Specifications for Highway Bridges, using H-20 loading.
b. Hot-dip galvanized after fabrication in accordance with ASTM A123.
c. Manufacturers: One of the following or equal:
1) Reliance Steel Products Co., Heavy-Duty Steel Grating.
2) Seidelhuber Metal Products, Inc., equivalent product.

J. Metal tread plate:
1. Plate having a raised figured pattern on 1 surface to provide improved traction.

K. Preformed channel pipe supports:
1. Preformed channel pipe supports for pipe supports and other applications are specified in Section 15062 - Preformed Channel Pipe Support System.

L. Stairs:
1. Aluminum stairs:
a. Stringers: 6061-T6 aluminum alloy.
b. Stair treads:
1) Aluminum of same type specified under Aluminum Grating.
2) Of sizes indicated on the Drawings, and 1-3/4 inch minimum depth with cast abrasive type safety nosings.
c. Handrails and guardrails: Aluminum pipe specified under Aluminum Handrails and Guardrails (Nonwelded Pipe).
d. Fasteners: Type 304 or Type 316 stainless steel.
2. Steel stairs:
a. Ships ladders shall conform to local, State, and OSHA as minimum.

b. Stringers: Structural steel channels or plates.
c. Treads: Open type attached to stringers with support angles and clips. Manufacturers: One of the following or equal:
    1) Harsco Industrial IKG, "Welded Tread" with Algrip® nosing.
d. Railings: Steel pipe, sized as indicated on the Drawings.
e. Anchors: Welded or bolted brackets designed for support and anchorage at top and bottom.
f. Finish: Prime paint finish for interior locations.

M. Miscellaneous aluminum:
1. Fabricate aluminum products, not covered separately in this Section, in accordance with the best practices of the trade and field assemble by riveting or bolting.
2. Do not weld or flame cut.

N. Miscellaneous cast iron:
1. General:
    a. Tough, gray iron, free from cracks, holes, swells, and cold shuts.
    b. Quality such that hammer blow will produce indentation on rectangular edge of casting without flaking metal.
    c. Before leaving the foundry, clean castings and apply 16-mil dry film thickness coating of coal-tar epoxy, unless otherwise specified or indicated on the Drawings.

O. Miscellaneous stainless steel:
1. Provide miscellaneous stainless steel items not specified in this Section as indicated on the Drawings or specified elsewhere.
    a. Fabricate and install in accordance with the best practices of the trade.
2. Cleaning and passivation:
    a. Following shop fabrication of stainless steel members, clean and passivate fabrications.
    b. Finish requirements: Remove free iron, heat tint oxides, weld scale and other impurities, and obtain a passive finished surface.
    c. Provide quality control testing to verify effectiveness of cleaning agents and procedures and to confirm that finished surfaces are clean and passivated.
        1) Conduct sample runs using test specimens with proposed cleaning agents and procedures as required to avoid adverse effects on surface finishes and base materials.
    d. Pre-clean, chemically descale (pickle), and final clean fabrications in accordance with the requirements of ASTM A380 to remove deposited contaminants before shipping.
        1) Passivation by citric acid treatment is not allowed.
            a) If degreasing is required before cleaning to remove scale or iron oxide, cleaning (pickling) treatments with citric acid are permissible; however, these treatments shall be followed by inorganic cleaners such as nitric-hydrofluoric acid.
        2) Provide acid descaling (pickling) in accordance with Table A1.1 of Annex A1 of ASTM A380.
        3) After pickling, final cleaning of stainless steel shall conform to Part II of Table A2.1 of Annex A2 of ASTM A380.

e. After cleaning, inspect using methods specified for “gross inspection” in ASTM A380.
f. Improperly or poorly cleaned and passivated materials shall not be shipped and will not be accepted at the job site.

P. Miscellaneous structural steel:
1. Provide miscellaneous steel items not specified in this Section as indicated on the Drawings or specified elsewhere.
a. Fabricate and install in accordance with the best practices of the trade.

Q. Isolating sleeves and washers:
1. As indicated on the Drawings and as specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions:
1. Examine work in place to verify that it is satisfactory to receive the work of this Section.
2. If unsatisfactory conditions exist, do not begin this work until such conditions have been corrected.

3.02 INSTALLATION

A. General:
1. Install products as indicated on the Drawings, and in accordance with shop drawings and manufacturer's printed instructions, as applicable except where specified otherwise.
2. Interface between materials:
a. Dissimilar metals: Where steel comes in contact with dissimilar metals (aluminum, stainless steel, etc.), separate or isolate the dissimilar metals.
1) Make application so that the isolating or protective barrier is not visible in the completed construction.
2) Isolating sleeves and washers: As specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.
b. Aluminum in contact with concrete or masonry: Coat aluminum surfaces as specified in Section 09960 - High Performance Coatings.
c. Aluminum in contact with concrete or masonry.

B. Aluminum stair nosing:
1. Install stair nosings on treads of concrete stairs, including top tread on upper concrete slab.
2. Omit stair nosings where concrete is submerged.
3. Cast stair nosings in fresh concrete, flush with tread and riser faces. Install nosing in center of step.

C. Cast iron stop plank grooves:
   1. Recess stop plank grooves with cast iron surfaces of groove set flush with concrete surface.

D. Handrails and guardrails:
   1. General:
      a. Fasten pipe rails to fittings with Series 300 stainless steel pop rivets or flush set screws.
      b. Make pipe cuts clean and straight, free of burrs and nicks, and square and accurate for minimum joint-gap.
      c. Drill and countersink holes to proper size, as required for a tight flush fit of screws and other component parts.
      d. Space attachment brackets as indicated in the manufacturer's instructions.
   2. Aluminum pipe handrails and guardrails:
      a. During construction, keep exterior surfaces of handrails and guardrails covered with minimum 0.4 millimeters of heat shrink polyethylene film.
      b. Do not remove protective film before handrails and guardrails have been accepted by Engineer nor before other work in proximity of handrails and guardrails has been completed.
      c. Discontinue handrails and guardrails at lighting fixtures.
      d. Provide 1/8-inch diameter weep hole at base of each post.
      e. Space posts as indicated on the Drawings.
      f. Anchor posts into concrete by grouting posts into formed holes in concrete, into stainless steel sleeves cast in concrete; or bracket mount to face of concrete surfaces as specified and indicated on the Drawings.
      g. Space rails as indicated on the Drawings.
      h. Make adequate provision for expansion and contraction of kick plates and rails.
         1) Make provisions for removable sections where indicated on the Drawings.
      i. Make lower rails a single, unspliced length between posts, or continuous.
      j. Make top rails continuous whenever possible, and attach single, unspliced lengths to 3 posts minimum.
      k. Draw up fasteners tight with hand wrench or screw driver.
      l. Space attachment brackets as indicated on shop drawings or in manufacturer's installation instructions.
      m. Completed installation shall have handrails and railings rigid and free of play at joints and attachments.
      n. Protect handrail and guardrail finish from scratches, gouges, dents, stains, and other damage.
      o. Replace damaged or disfigured handrails and guardrails with new.
      p. Shortly before final acceptance of the work, and after removal of protective polyethylene film, clean handrails and guardrails with mild detergent or with soap and water.
         1) After cleaning, thoroughly rinse handrails and guardrails and wipe with soft cloth.
      q. Erect guardrail straight, level, plumb, and true to the positions as indicated on the Drawings. Correct deviations from true line of grade, which are visible to the eye.

3. Steel pipe handrail and guardrail:
    a. Anchor posts into concrete by grouting posts into galvanized steel sleeves embedded in concrete as indicated on the Drawings.
        1) Do not cut reinforcing bars in concrete.
        2) Where required to fasten guardrail to other construction, fasten as indicated on the Drawings.
4. Guardrail gates:
    a. Install gate to be a vertical plane with the guardrail when in the closed position.
    b. Install hinges so that each gate can swing 180 degrees from the closed position to the fully open position.
    c. Install so that the gates swing to the walkway side of the guardrail only.
        1) Install gate stops on the stationary railing posts to prohibit gates from swinging in the wrong direction.
    d. Install gate frames, hinges, stops, and latches in conformance with OSHA minimum strength requirements.

E. Ladders:
1. Secure to supporting surface with bent plate clips providing minimum 8 inches between supporting surface and center of rungs.
2. Where exit from ladder is forward over top rung, extend side rails 3 feet 3 inches minimum above landing, and return the rails with a radius bend to the landing.
3. Where exit from ladder is to side, extend ladder 5 feet 6 inches minimum above landing and rigidly secure at top.
4. Erect rail straight, level, plumb, and true to position indicated on the Drawings:
    a. Correct deviations from true line or grade which are visible to the eye.

F. Manhole frames and covers:
1. Installation: As recommended by Manufacturer.

G. Manhole steps:
1. Space as indicated on the Drawings.

H. Metal gratings:
1. General:
    a. Allow 1/8-inch maximum clearance between ends of grating and inside face of vertical leg of shelf angles.
    b. Horizontal bearing leg of shelf angles shall be 2 inches minimum.
    c. Install aluminum plate or angles where necessary to fill openings at changes in elevation and at openings between equipment and grating.
    d. Install angle stops at ends of grating.
    e. Installed grating shall not slide out of rebate or off support.
    f. Weld stops in place, unless otherwise specified or indicated on the Drawings.
    g. Top surfaces of grating sections adjacent to each other shall lie in same plane.
2. Aluminum grating:
    a. Aluminum grating: Support on aluminum shelf angles or rebates.
3. Aluminum grating planks:
    a. Support and install planks as specified for aluminum grating.

4. Steel grating:
    a. Support on hot-dip galvanized structural steel shelf angles or rebates.
5. Heavy-duty steel grating:
    a. Support on hot-dip galvanized structural steel rebates embedded and anchored in concrete.
    b. Use for roadways, traffic areas, and where indicated on the Drawings.

I. Stairs:
1. General:
    a. Install guard railings around stair wells as indicated on the Drawings or specified.

J. Stainless Steel:
1. Welding:
    a. Passivate field-welded surfaces:
        1) Provide cleaning, pickling and passivating as specified in this Section.
        2) Clean using Derustit Stainless Steel Cleaner, or equal.

END OF SECTION

SECTION 06072

PRESERVATIVE PRESSURE TREATED WOOD

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Preservative pressure treatment of wood for protection against decay and termites, including:
      a. Girders closer than 12 inches to exposed ground.
      b. Framing, including wood sheathing, that rests on exterior foundation walls less than 8 inches from exposed earth.
      c. Girder ends entering exterior masonry or concrete walls with less than 1/2-inch clear space on the top, sides, and end.
      d. Wood subject to alternate wet and dry cycles.

1.02 REFERENCES

A. American Wood Protection Association (AWPA):
   1. C1 - All Timber Products - Preservative Treatment by Pressure Processes.
   2. C2 - Lumber, Timber, Bridge Ties, and Mine Ties - Preservative Treatment by Pressure Processes.
   3. C9 - Plywood - Preservative Treatment by Pressure Processes.
   4. M4 - Standard for the Care of Pressure-Treated Wood.
   5. P5 - Standard for Waterborne Preservatives.

B. Federal Specifications (FS):
   1. TT-W-571 - Wood Preservation: Treating Practices.

1.03 SUBMITTALS

A. Product data: Include identification of preservative properties, method of treatment, and expected service life.

B. ICC Evaluation Service, Inc., Evaluation Report meeting AC78-Acceptance Criteria for Copper-Quaternary Wood Preservative Treatment Systems.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Keep materials dry during delivery and storage. Protect materials against exposure to weather and from contact with damp or wet surfaces.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Preservative treatment materials:
   1. One of the following or equal:
      a. Chemical Specialties, Inc.
      b. Osmose, Inc.

2.02 PRESERVATIVE TREATMENT MATERIALS

A. Arsenic and chromium free ammonium copper quaternary (ACQ) preservative produced in accordance with ACQ Preserve Standard ACQ - 94 and in accordance with AWPA P5:
   1. Waterborne, nonstaining, nonblooming; free from crystals, flame-supporting residue, and properties detrimental to subsequent finishes when applied.

B. Cut members to shape or size prior to pressure treating whenever possible.

C. Apply preservative treatment in accordance with AWPA C1 and C2 to achieve penetration of minimum 1/4 inch with retainage of minimum treatment material in accordance with AWPA C2 for service conditions.

D. When pressure treated wood is cut, apply minimum of 2 saturating coats of same preservative as used in original pressure treatment on cut surface.

2.03 PRESERVATIVE TREATMENT

A. Shop pressure treat wood materials in accordance with FS TT-W-571.

B. Shop pressure treat materials requiring preservative treatment in closed cylinder in accordance with AWPA C2 for lumber and AWPA C9 for plywood. Retention of ACQ shall be as follows:
   1. For wood subject to alternate wet-dry cycles: 0.25 pounds per cubic foot.
   2. For wood in contact with concrete or masonry: 0.25 pounds per cubic foot.
   3. For wood within 18-inches of the ground: 0.25 pounds per cubic foot.
   4. For wood in constant contact with ground or water: 0.40 per cubic foot.

C. Redry wood to maximum moisture content of 19 percent.

PART 3 EXECUTION

3.01 SITE TREATMENT OF WOOD MATERIALS

A. Apply preservative treatment in accordance with the manufacturer’s instructions. Redry to 19 percent moisture content.

B. Treat site-sawn ends in accordance with AWPA M4. Allow preservative to cure prior to placing members.

C. Redry wood to maximum 19 percent moisture content.

D. Allow preservative to cure prior to placing members.

3.02 INSTALLATION

A. Install wood in accordance with related work.

B. Discard treated wood which might impair quality of carpentry.

C. Do not rip or mill fire retardant treated lumber. Permit end cuts and drilling of holes adjoining cuts only.

END OF SECTION

SECTION 06074

FIRE RETARDANT TREATED WOOD

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fire retardant treated treatment for wood framing, decking, sheathing, and miscellaneous wood.

1.02 REFERENCES

A. American Wood Protection Association (AWPA):
   1. C20 - Structural Lumber-Fire Retardant Treatment by Pressure Processes.
   2. C27 - Plywood-Fire Retardant Treatment by Pressure Processes.

B. ASTM International (ASTM):
   1. D3201 -Standard Test Method of Hygroscopic Properties of Fire Retardant Wood and Wood Base Products.
   2. E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. Federal Specifications (FS):
   1. MIL-L-19140E - Lumber and Plywood, Fire Retardant Treated.

D. National Fire Protection Association (NFPA):
   1. 255 - Standard Test Method for Surface Burning Characteristics of Building Materials.

E. Underwriters Laboratories, Inc. (UL):
   1. 723 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.03 SUBMITTALS

A. Product data: Include National Evaluation Service Report discussing fire-retardant, strength, corrosion, and hygroscopic properties.

B. Manufacturer’s installation instructions.

1.04 QUALITY ASSURANCE

A. Employ services of treatment plant which is currently licensed by the manufacturer of treatment material.

B. Carbon steel, galvanized steel, aluminum, copper, and red brass in contact with fire retardant treated wood shall not corrode more than 1 mil per year when tested in accordance with FS MIL-L-19140E.

C. Fire performance and strength properties of fire retardant treated wood shall be recognized by issuance of National Evaluation Service Report.

D. Fire-retardant treatment shall provide UL FR-S Classification.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Keep materials dry during delivery and storage. Protect materials against exposure to weather and from contact with damp or wet surfaces.

PART 2 PRODUCTS

2.01 MATERIALS

A. Type: Dricon, registered for use as wood preservative by the U.S. Environmental Protection Agency, and free of halogens, sulfates, ammonium phosphate, and formaldehyde.

B. Manufacturers: The following or equal:
   1. Koppers Co., or Koppers Co.'s licensed producer.

2.02 FIRE RETARDANT TREATMENT

A. Treat wood in accordance with instructions of the fire retardant treatment materials manufacturer and AWPA C20 for structural lumber or AWPA C27 for plywood.

B. After treatment, kiln dry lumber to maximum moisture content of 19 percent and plywood to maximum moisture content of 15 percent so that fire retardant treated wood has equilibrium moisture content of not more than 25 percent when tested in accordance with ASTM D3201 procedures at 95 percent relative humidity and 80 degrees Fahrenheit.

C. Stamp fire-retardant lumber and plywood with UL FR-S rating stamp certifying 25 or less flame spread and smoke developed value, when tested in accordance with UL 723, ASTM E84, or NFPA 255.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install wood in accordance with related work.

B. Discard treated wood which might impair quality of carpentry.

C. Do not rip or mill fire retardant treated lumber. Permit end cuts and drilling of holes adjoining cuts only.

END OF SECTION

SECTION 06100

ROUGH CARPENTRY

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Carpentry normally not exposed to view, related metal items, and connectors.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B18.2.1 - Square, Hex, Heavy Hex, and Askew Head Bolts and Hex, Heavy Hex, Hex Flange, Lobed Head, and Lag Screws (Inch Series).
   2. B18.6.1 - Wood Screws (Inch Series).

B. American Softwood Lumber Standard (ASLS):
   1. PS 20 -Softwood Lumber, Product Standard.

C. ASTM International (ASTM):
   1. D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
   2. F1667 - Standard Specification for Driven Fasteners: Nails, Spikes, and Staples.

D. California Redwood Association (CRA):
   1. Redwood Inspection Service (RIS).
   2. Standard Specification for Grades of California Redwood Lumber.

E. U.S. Department of Commerce (DOC):
   1. Voluntary Product Standard PS 1-07 - Structural Plywood.

F. West Coast Lumber Inspection Bureau (WCLIB):
   1. Standard No. 17 - Grading Rules for West Coast Lumber.

G. Western Wood Products Association (WWPA):
   1. Western Lumber Grading Rules.

1.03 SUBMITTALS

A. Shop Drawings.

B. Product data.

1.04 QUALITY ASSURANCE

A. Grade lumber in accordance with the following:
   1. Douglas fir and larch lumber:
      a. WCLIB grading rules.

b. WWPA grading rules.
c. ASLS PS 20.

2. Redwood lumber: CRA and RIS grading rules.

B. Stamp each piece of lumber with grade, species, and size.

C. Identify each panel of softwood plywood with appropriate APA grade-trademark. Plywood shall be in accordance with DOC PS 1-07.

D. Grade lumber 2 inches, 3 inches, and 4 inches thick in accordance with ASLS PS 20. Identify with grade name and species only without reference to paragraph numbers.

E. Grade lumber 6 inches and larger under provisions of the WWPA.
1. Identify with grade, species, and size.
2. Equivalent members graded by WCLIB will be accepted unless specifically excluded.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Cover products for protection from damage and moisture.

B. Stack lumber to permit good air drying. Position separators at each layer and between soil and first layer.

PART 2 PRODUCTS

2.01 WOOD

A. Minimum lumber grade requirements for framing and sheathing:

Classification	Nominal Size	Species and Minimum Grade
Studs	2 by 3, 2 by 4	DF-L Number 2 or construction
	2 by 6, 2 by 8	DF-L Number 2
Roof Joists	2 by 6 through 2 by 14	DF-L Number 2
Floor Joists and Planking	2 by 6 through 2 by 14	DF-L Number 2
Headers, Beams, and Stringers	4 by 4 through 4 by 14	DF-L Number 1
	6 by 6 through 6 by 14	DF-L Number 1 (WWPA 70-11)
Posts and Timbers	6 by 6 and larger	DF-L Number 1
Boards	1 by	DF-L Construction
Framing Lumber	All sizes	DF-L Number 2
Blocking and Bridging	2 by 3 through 2 by 14	DF-L Number 3
Miscellaneous	All sizes	DF-L Number 2
DF-L = Douglas fir - Larch (North) Grouping		

B. Species shall be as specified, or any combination of species allowed by grading rules.

C. Lumber 4 inches thick and less: Seasoned or kiln-dried with maximum 19 percent moisture.

D. Lumber thicker than 4 inches: Seasoned to minimize warping and twisting.

E. Lumber surfaces: Surfaced on four sides (S4S) unless otherwise specified or indicated on the Drawings.

F. Lumber shall be free of bow, warp, or twist. Pieces with serious defects will be discarded regardless of grading.

G. Sills, cants, and nailers for fascia for roofing: Preservative pressure-treated Number 2 or better Douglas fir.

H. Roof nailers: Use preservative pressure-treated Number 2 or better Douglas fir nailers for gravel stops at edges of roof and at roof expansion joints. Match thickness of nailers and roof insulation.

I. Wood in contact with concrete or masonry: Pressure treated as specified in Section 06072 - Preservative Pressure Treated Wood.

J. Fire-retardant treatment: As specified in Section 06074 - Fire Retardant Treated Wood.

2.02 PLYWOOD

A. Structural plywood: DOC PS 1-09.

B. Plywood with edges or surfaces permanently exposed to weather: Exterior type with exterior type glue, Grade A-C.

C. Plywood roof sheathing: Exterior type with exterior type glue, of thickness and grade as indicated on the Drawings.

D. Plywood sheathing exposed at overhangs: Exterior type plywood with exterior type glue, Grade A-C or better.

E. Miscellaneous plywood: Exterior type plywood of thickness indicated on the Drawings, Grade A-C, or as otherwise indicated on the Drawings.

F. Plywood for roof diaphragms and shear walls: As indicated on the Drawings.

2.03 ROUGH HARDWARE

A. Fasteners:
   1. Nails: ASTM F1667, common wire nails or spikes with full head.
   2. Bolts, nuts, and studs: ASME B18.2.1, hot-dip galvanized.

3. Washers: Hot-dip galvanized square or round steel plate washers, or malleable iron washers with following dimensions:
   a. Hot-dip galvanized square steel washers:

Bolt Diameter	Washer Dimensions
1/2 inch	2-1/2 by 2-1/2 by 1/4 inches
5/8 inch	2-1/2 by 2-1/2 by 1/4 inches
3/4 inch	2-3/4 by 2-3/4 by 5/16 inches
7/8 inch	3-1/4 by 3-1/4 by 5/16 inches
1 inch	3-3/4 by 3-3/4 by 3/8 inches

   b. Hot-dip galvanized round steel washers:

Bolt Diameter	Washer Dimensions
1/2 inch	2-1/2 inch diameter by 1/4 inch
5/8 inch	2-3/4 inch diameter by 1/4 inch
3/4 inch	3 inch diameter by 5/16 inch
7/8 inch	3-1/2 inch diameter by 3/8 inch
1 inch	4 inch diameter by 7/16 inch

   c. Round malleable iron washers:

Bolt Diameter	Washer Dimensions
1/2 inch	2-1/2 inch diameter by 1/4 inch
5/8 inch	2-3/4 inch diameter by 5/16 inch
3/4 inch	3 inch diameter by 7/16 inch
7/8 inch	3-1/2 inch diameter by 7/16 inch
1 inch	4 inch diameter by 1/2 inch

4. Lag screws: ASME B18.2.1, hot-dip galvanized.
5. Wood screws: ASME B18.6.1.
6. Nails, screws, bolts, plates, and other fasteners exposed to weather or on building exteriors shall be hot-dip galvanized or of Series 300 stainless steel.
7. Anchor bolts, concrete anchors, flush shells, and powder actuated fasteners: As specified in Section 05120 - Structural Steel Framing.
8. Sheet metal connectors:
   a. Manufacturers: One of the following or equal:
      1) Simpson Strong-Tie Co., Inc.
      2) USP Structural Connectors.
   b. Material: Sheet steel, hot-dip galvanized after fabrication.
   c. Model numbers: As indicated on the Drawings.
   d. Nails, typical: Common, hot-dip galvanized.
   e. Nails, joist hanger: Special, hot-dip galvanized, providing full building code as specified in Section 01410 - Regulatory Requirements, lateral load resistance values for common nails.

B. Miscellaneous hardware:
   1. Clamps, expansion screws, anchors, and plates: Standard products of established manufacturers of proper size and strength to adequately fasten, support, and maintain members in place.
   2. Hardware exposed to weather or on building exteriors: Hot-dip galvanized.

C. Building paper: ASTM D226, unperforated, No. 15 unless otherwise indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that conditions are satisfactory for installation of products as specified in the Agreement and Contract RFP in Volumes 1 and 2.

3.02 GENERAL

A. Notch, cope, and miter meeting members so meeting members have full bearing without overcutting or undercutting.

B. Accurately cut, fit, and frame lumber.

3.03 SILLS AND PLATES

A. Install 2 layers of building paper under sills and members fasten to concrete or masonry.

B. Secure sills to foundation as indicated on the Drawings. When not indicated on the Drawings, anchor sills with 1/2-inch diameter hot-dip galvanized anchor bolts at 4-foot centers and within a minimum of 6 inches from each end of each member.

C. Set plates on top of masonry and concrete walls level and in same plane.

D. Anchor plates to masonry or concrete with anchor bolts of size and spacing indicated on the Drawings. Install anchor bolt within 6 inches of member ends.

E. Use cement grout, when necessary, to ensure full bedding and leveling of plates.

3.04 WALLS

A. Erect walls plumb and true to line.

B. Frame walls and partitions with studs of sizes and spacing indicated on the Drawings and at not greater than 16 inches on center.

C. Provide double studs at openings and triple studs at corners.

D. Provide double plates at top of wall studs, arranging to form continuous horizontal ties. Splice individual plates and stagger ends of double plates.

E. Provide two 2-by-6 lintels for openings up to 48 inches and two 2-by-8 lintels for openings from 48 inches to 72 inches.

F. Frame openings for large pipes and ducts and for receiving recessed work in partitions without cutting structural members.

G. Place nailing blocks and backing necessary for attachment of ground, trim, fixtures, and miscellaneous items. Cut, fur, and install backing required for plumbing and heating pipes, fixtures, and electrical work.

H. Provide fire retardant pressure-treated wood within metal-framed partitions and furring.

I. Provide blocking for attaching paneling, trim, and similar items to framing.

J. Do not cut wood beams or joists and plates in bearing walls for passage of pipes.

K. Coordinate requirements for sleepers for mechanical equipment and curb openings with work of other Sections for locations and sizes.

L. Firestopping:
   1. Where required by governing codes, install continuous row of fire stop blocking in stud walls and partitions at ceilings and floor levels and at maximum 10 feet spacing. Form complete and effective separation for entire width of wall or partition.
   2. Use fire stop blocking with minimum 2 inches nominal thickness and same width as studs.
   3. Fill openings in firestops with other firestopping materials specified in Section 07840 - Firestopping.

3.05 ROUGH HARDWARE

A. Provide nailing as indicated on the Drawings or in accordance with Fastening Schedule specified in building code, as specified in Section 01410 - Regulatory Requirements, whichever is more stringent. Do not use box and sinker nails.

B. Install bolts and other fastenings as indicated on the Drawings or in accordance with building code as specified in Section 01410 - Regulatory Requirements, whichever is more stringent.

C. Prebore nail holes where required to avoid splitting of wood members. Remove and replace split pieces.

D. Prebore holes for screws and lag screws, then screw into place. When wood screws and lag screws are defective because they have been driven into place with hammer, replace wood members involved with new members.

E. Drill holes for bolts 1/32-inch larger than bolt shank unless otherwise indicated on the Drawings.

F. Perform final bolting after structural members have been properly aligned.

G. Place washers under heads of bolts and nuts and heads of lag screws bearing on wood. Align exposed bolts.

H. Power nailing will be permitted where nails are as specified and provided installation does not mar or damage wood members.
   1. Nails shall have full head.
   2. Do not overdrive nails.

I. Drive nail heads for plywood diaphragms flush with plywood surface. Where nails have been overdriven in plywood panel, remove and replace plywood, nails, and damaged supporting members.
   1. Use common nails unless otherwise indicated on the Drawings.

END OF SECTION

SECTION 06174

SHOP-FABRICATED WOOD TRUSSES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Wood trusses, including bridging, temporary and permanent bracing, associated components, and accessories.

1.02 REFERENCES

A. American Forest and Paper Association (AF&PA):
   1. National Design Specification for Wood Construction.

B. ASTM International (ASTM):
   1. A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot Dip Process.

C. Truss Plate Institute (TPI):
   1. National Design Standard for Metal Plate Connected Wood Truss Construction.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Shop Drawings: For each type and size truss, include:
   1. Species and grades of lumber used.
   2. Design loadings.
   3. Design calculations for trusses and connections.
   4. Pitch, span, and spacing of trusses.
   5. Metal plate connectors, gauges, sizes, and name of manufacturer.
   6. Bearing and anchorage details.
   7. Truss supports.
   8. Camber.
   9. Permanent bracing and bridging.
   10. Details of field splice connections of subcomponents.

C. Product data.

D. Handling and erection instructions.

E. Design data.

F. Certificates.

1.04 QUALITY ASSURANCE

A. Manufacturer qualifications: Manufacturer of wood trusses for minimum 5 years with satisfactory performance record.

B. Lumber shall bear grade mark stamp of recognized grading association or licensed lumber inspection agency.

C. Fabricate trusses and other roof structural components in properly equipped manufacturing facility of permanent nature.

D. Employ only experienced workmen, using precision cutting and truss fabricating equipment, under direct supervision of qualified foreman.

E. Fabricate trusses under strict rules of inspection and quality control.

F. Erector qualifications: Erector of wood trusses on minimum 5 projects of similar scope as the Project with satisfactory performance record.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Handle fabricated trusses and subassemblies with care so trusses are not subject to damage.

B. When trusses are stockpiled or stored prior to erection, set trusses in vertical positions, resting upon temporary bearing supports and braced so trusses will not be subject to unusual bending or tip over.

C. Provide means for adequate distribution of concentrated loads so carrying capacity of trusses are not exceeded.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Design and fabricate wood trusses in accordance with:
   1. AF&PA - National Design Specification for Wood Construction.
   2. TPI - National Design Standard for Metal Plate Connected Wood Truss Construction.

2.02 LUMBER

A. Species and grades: In accordance with stress ratings for species and grades in grading rules of appropriate lumber association or as listed in referenced quality assurance standards, unless otherwise indicated on the Drawings.

B. Moisture content: Within limits as stipulated in quality assurance standards, but not exceeding 19 percent or less than 7 percent at time of fabrication.

C. Nominal sizes: As indicated on the Drawings.

2.03 LIGHT METAL PLATE CONNECTORS

A. Connector plate shall have series of nail-like projections.

B. Practically parallel side throughout their length.

C. No offsets, except at ends. Ends shaped to blunt points or wedges.

D. Lengths not less than 5 times their greater width.

E. Form which permits projections to separate rather than to cut wood fibers in accordance with accepted nailing techniques.

F. Minimum 20 gauge, ASTM A653, Grade 33, sheet steel, hot-dip galvanized in accordance with ASTM A653, G60 coating designation.

G. Yield strength: Minimum 33,000 pounds per square inch.

H. Ultimate tensile strength: Minimum 48,000 pounds per square inch.

I. Corrosion-resistant coating: Minimum 1.25 ounces per square foot.

J. Stamp manufacturer's name on each plate connector.

2.04 FIELD CONNECTIONS

A. One of the following, as required for trusses:
   1. Nail-on splice plates.
   2. Plates bolted connections with steel side.

2.05 TRUSS FABRICATION

A. Cut truss members accurately to length, angle, and true to line to ensure tight joints for finished truss.

B. Brush apply 2 coats of wood preservative on members in contact with sheet metal and cementitious materials.
   1. Protect sawn ends.

C. Place truss members jigs with members tightly clamped in place until.
   1. For trusses fabricated using 2x members: Plate connectors have been pressed into lumber simultaneously on both sides of joints.

D. Do not allow open joints which depend on stiffness of metal connector plates to transmit stresses of improperly fitted joints.

E. Build camber into trusses, as indicated on the Drawings, by properly positioning members in fabrication jigs.

F. Permanently stamp each truss with name and address of truss fabricator.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that conditions are satisfactory for erection of products as specified in the Agreement and Contract RFP in Volumes 1 and 2.

3.02 PREPARATION

A. Where field assembly of truss subcomponents is necessary, make approved connections.

3.03 ERECTION

A. Set and secure wood trusses level, plumb, and in correct locations.

B. Install erection bracing to hold trusses true and plumb and in safe condition until permanent truss bracing and bridging can be solidly fastened in place.

C. Keep horizontal bending of trusses to minimum.

D. Ensure truss ends have sufficient bearing area.

E. Install permanent bracing and bridging, and permanently fasten components before application of live loads.

F. Connect continuous lines of 2x minimum bridging to trusses at chord members during erection stage. Provide 1 line along top and 1 line along bottom chord.

G. Erect trusses with top and bottom chords in true vertical alignment.

H. Align top chords of trusses parallel to each other and straight with no point in plane on top chords more than 3/8 inch out of true horizontal line.

I. Do not cut or alter truss members.

END OF SECTION

SECTION 06611

FIBERGLASS REINFORCED PLASTIC FABRICATIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fiberglass reinforced plastic fabrications including:
      a. Grating.

1.02 REFERENCES

A. American Water Works Association (AWWA):
   1. F 102 - Matched-Die-Molded, Fiberglass-Reinforced Plastic Weir Plates, Scum Baffles, and Mounting Brackets.

B. ASTM International (ASTM):
   1. D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.
   2. D638 - Standard Test Method for Tensile Properties of Plastics.
   3. D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.
   4. D2583 - Standard Test Method for Indentation of Hardness of Rigid Plastics by Means of a Barcol Impressor.
   5. E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. United States Department of Agriculture (USDA).

D. United States Department of the Interior:
   1. Bureau of Reclamation (USBR):
      a. ISO 9826 - Water Measurement Manual, Measurement of Liquid Flow in Open Channel.

1.03 SUBMITTALS

A. Submit general arrangement and fabrication drawings, calculations, and elements of the design for grating and stairs.

B. Product Data.

C. Manufacture's Installation Instructions.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Parshall flume liner: Provide temporary bracing for liner to ensure maintenance of dimensions during shipment. Maintain bracing in place for installation.

PART 2 PRODUCTS

2.01 PLATES

A. Accessories:
   1. Washers: Of same material as weirs, with surfaces smooth, free of voids, and without dry spots and crazes.
   2. Assembly hardware: Concrete anchors as specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.

2.02 GRATING AND STAIR TREADS

A. Manufacturers: One of the following or equal:
   1. Fibergrate Composite Structures, Safe-T-Span.
   2. Strongwell, Duradek.

B. Materials:
   1. Core: Unidirectionally aligned glass fibers.
   2. Mat: Submit standard corrosion liner.
   3. Veil: Submit standard corrosion liner.
   4. Ultraviolet stabilizer: Added to the exterior surfaces in the type and amount recommended by the resin manufacturer.
   5. Resin: Fire retardant premium vinyl ester, antimony trioxide or pentoxide added to meet Class I flame spread rating of ASTM E84 and self-extinguishing requirements of ASTM D635.
   6. Manufacturers: One of the following or equal:
      a. Dow Derakane 530.
      b. Ashland Hetron 992.
      c. Interplastic VE 8400.
      d. Reichhold Dion VER 9300FR.
   7. Color: Grey or as indicated on the Drawings.
   8. Anti-slip coating: Permanently bonded grit of selected color.

C. Design criteria and chemical exposure:
   1. Deflection and concentrated load: Maximum 0.15 inch at span of 48 inches under concentrated load of 250 pounds.
   2. Deflection and uniform distributed load: Capable of carrying uniform distributed load of 100 pounds per square foot on simple span of 43 inches without deflecting more than 0.25 inches.
   3. Weight: Maximum 2.3 pounds per square foot for 2-inch high grating with open area of minimum 50 percent.
   4. Suitability: Use stairs and grating suitable for use in environments containing chlorine and sulfuric acid solutions at the temperatures and concentrations specified for the application.

D. Components:
   1. Bearing bars: I-bars, depth as indicated on the Drawings, I-bars spaced at 1-3/16 inch on center.
   2. Cross bars: 3/8-inch diameter spaced at 6 inches on center.
   3. Hold downs, connectors, and accessories: As recommended by grating manufacturer.

E. Fabrication:
   1. Produce grating bearing and cross bars by pultrusion process. Do not use hand lay-up construction methods.
   2. Coat ends of grating with resin.
   3. Fabricate single sections for each span. Do not clamp 2 or more grating sections together within spans.
   4. Type 316 stainless steel plates and angles at openings:
      a. Install 5/8-inch thick plate or angle where required to fill openings at changes in elevation and at openings between equipment and grating.
      b. Install angle stops at ends of grating to prevent grating from sliding.
   5. Maximum 1/8-inch clearance allowed between ends of grating and inside face of vertical leg of support angles.

F. Cutouts:
   1. Provide where required for equipment access or penetrations, including valve operators, stems, and gate frames.
   2. Seal cut edges with resin.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that conditions are satisfactory for installation of products as specified in the Agreement and Contract RFP in Volumes 1 and 2.

3.02 ERECTION AND INSTALLATION, GENERAL

A. Install products where indicated on the Drawings in accordance with manufacturer's printed instructions.

END OF SECTION

SECTION 07190

WATER REPELLENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Water repellent for concrete masonry**.**

1.02 REFERENCES

A. International Union of Testing and Research Laboratories for Materials and Structures:
   1. RILEM Test Method No. 11.4 - Measurement of Water Absorption Under Low Pressure.

B. South Coast Air Quality Management District (SCAQMD):
   1. Rule 1168 - Adhesive and Sealant Applications.

1.03 DEFINITIONS

A. Water repellent: Resistance to penetration of water from rainfall.

1.04 SUBMITTALS

A. Product data.

B. Samples: Water repellent applied on 8-inch by 8-inch substrates to receive water repellent, marked with application date and application rate.

C. Manufacturer's application instructions.

1.05 QUALITY ASSURANCE

A. Manufacturer qualifications: Manufacturer of water repellents for minimum of 5 years with satisfactory performance record.

B. Applicator qualifications: Trained, approved, and accepted by water repellent manufacturer.

C. Spray personnel qualifications: Minimum 2 years of experience spraying exotic coatings.

D. Regulatory requirements: Comply with volatile organic compound regulations.

E. Mock-ups:
   1. Apply water repellent on 8-foot by 8-foot mock-up walls. Use same equipment and procedures that will be used in applying material on walls.

2. Test mock-up for water penetration 30 days after applying water repellent in accordance with field quality control.
3. When accepted by the Engineer, mock-up walls will be standard for walls.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer's original containers with seals unbroken and labeled with manufacturer's batch number.

B. Store materials in original, unopened containers in compliance with manufacturer's printed instructions.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Sealants in compliance with SCAQMD Rule 1168.

B. Apply water repellent under temperature and relative humidity conditions before, during, and after application in accordance with manufacturer's instructions.

C. Allow surfaces to dry for minimum 5 days after rains.

1.08 PROJECT CONDITIONS

A. Make proper material allowance based upon substrate material and surface configuration when determining quantities of material.

1.09 WARRANTY

A. Warrant to furnish and apply water repellent on walls that experience water penetration because of failure of water repellent for minimum 5 years.

1.10 MAINTENANCE

A. Extra materials: Deliver water repellent in manufacturer's original unopened containers to Owner that equals minimum 1 percent of material supplied.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Water repellent sealer:
   1. One of the following or equal:
      a. Rainguard Products.
      b. ProSoCo, Inc.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Performance requirements: Surfaces with water repellent shall be uniform in color with unaltered texture.

2.03 MATERIALS

A. Water repellent sealer for concrete and concrete masonry: Silane/siloxane; volatile organic compound compliant; free of silicone oils, paraffin wax, or urethanes.
   1. Manufacturers: The following or equal:
      a. Rainguard, Blok-Lok™.

B. Anti-graffiti coating:
   1. Manufacturers: The following or equal:
   2. Rainguard, REGULAR.

2.04 EQUIPMENT

A. Spray equipment: High-volume, low-pressure, airless, with maximum 60 pounds per square inch pressure:
   1. Pump: Non-atomizing, able to flow material on walls at minimum 1 to 1-1/2 gallons per minute.
   2. Orifice size for concrete, slump block, exposed concrete aggregate, and cement plaster: 0.060 to 0.110 inches.
   3. Orifice size for brick, clay brick tile, brick veneer, stone, and wood: 0.060 inches.

PART 3 EXECUTION

3.01 EXAMINATION

A. Carefully inspect installed construction. Verify that construction is ready for repellent application.

B. Require manufacturer's representative to verify that water repellent may be installed.

3.02 PREPARATION

A. Allow concrete or masonry walls to cure at least 30 days before applying water repellent.

B. Clean wall surfaces of soil, mud, efflorescence, or other detrimental materials.

C. Tuck-point or caulk cracks, other than hairline cracks.

D. Route out defective mortar joints, point with mortar and tool.

E. Moisture content: Apply water repellent sealer when moisture content of substrate is 15 percent or less.

F. Test substrate surfaces for moisture content with "Electronic Moisture Register - Model B." Take 1 reading for each 200 square feet of wall area and tabulate results.

3.03 APPLICATION ON CONCRETE, AND CONCRETE MASONRY

A. Apply water repellent in accordance with manufacturer's printed instructions.

B. Apply flood coat using low-pressure spray equipment.

C. Start at top of wall and work down using overlapping horizontal passes.

D. Hold spray head 8 to 10 inches from surface so saturation coat runs freely down wall 6 to 10 inches below point of application on most substrates.

E. Spray by traveling horizontally to ensure uniform coverage.

F. Overlap each following pass by centering spray head on bottom line of the previous pass.

G. Trigger gun off at end of each pass to avoid applying excessive amount of material. Do not over apply.

H. Avoid application in hot or windy weather as premature drying can cause whitish residue on walls.

3.04 FIELD QUALITY CONTROL

A. 20 days after application, test water repellent on CMU surfaces using RILEM Test Method No. 11.4:
   1. Contractor shall perform a 20-minute RILEM baseline test on dry untreated CMU units of each type to receive water repellent. Test results (water loss in milliliter) shall be compared to CMU units in walls after water repellent application.
   2. On water repellant coated CMU, a RILEM tube test resulting in 5 milliliter or less after 20 minutes is necessary to qualify for 5-year warranty.

B. Notify the Engineer and manufacturer at least 72 hours in advance of test.

C. Where tested wall areas fail to pass RILEM tube test, apply additional coat of water repellent on entire wall from corner to corner.

D. Test all locations where directed by the Engineer.

3.05 CLEANING

A. Concrete, concrete masonry, and exposed concrete aggregate: Clean drips, runs, and overspray residue while still wet, using detergent and water. Clean application and spray equipment with detergent and water immediately following use.

B. Clean application and spray equipment according to the manufacturer's recommendations.

C. Remove excess materials, equipment, and debris incidental to water repellent application upon completion.

3.06 PROTECTION

A. During application, protect water repellent treated and adjacent surfaces from damage.

B. Protect glass, aluminum, and other surfaces from overspray.

C. Protect concrete sidewalks from runoff. Soak with water immediately prior to application on adjacent walls.

D. Repair damaged areas promptly.

END OF SECTION

SECTION 07220

ROOF AND DECK INSULATION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Roof and deck insulation and associated accessories.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   2. D41- Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing.
   3. D312 - Standard Specification for Asphalt Used in Roofing.

B. National Roofing Contractors Association (NRCA).

C. Underwriters Laboratories, Inc. (UL).

1.03 SUBMITTALS

A. Product data.

B. Samples: Include 6-inch square samples of each type and thickness of insulation required.

C. State thickness and R-value of insulation to be provided at each building.

D. Manufacturer's installation instructions: Include the following:
   1. Indicate special environmental conditions required for installation.
   2. Indicate adhesive recommendations.
   3. Indicate fastener recommendations and attachment pattern to meet specified requirements.
   4. Indicate installation techniques.

E. Certificates:
   1. Certify that products meet or exceed specified requirements.
   2. Certify that insulation is approved by manufacturer for use with specified roofing materials.

F. Manufacturer's field reports.

G. Warranty.

1.04 QUALITY ASSURANCE

A. Manufacturer qualifications: Manufacturer of proposed product for minimum 5 years with satisfactory performance record.

B. Installer qualifications:
   1. Manufacturer-approved installer of products similar to specified products on minimum 5 projects of similar scope as Project with satisfactory performance record.
   2. Committed to complying with manufacturer's specifications and NRCA recommendations.
   3. Committed to assuming undivided responsibility for roof insulation, roofing membrane and sheet metal flashing, and trim associated with roofing.

C. Product compatibility: Provide roofing manufacturer approved roof insulation.

D. Pre-installation conference: Conduct as specified in Section 01312 - Project Meetings.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products in accordance with manufacturer's instructions.

B. Label asphalt containers with certification of full compliance with requirements of ASTM D312, Table 1, and indicating equiviscous temperature, finished flowing temperature, and flash point.

C. Store roof system materials on pallets or dunnage at least 4 inches above ground and suitably covered to protect from weather.

1.06 SEQUENCING AND SCHEDULING

A. Apply no more insulation than can be completely covered with roofing membrane on the same day.

B. When installation of insulation and roof membrane cannot be completed within same day, install temporary water cutoffs at end of day's work and remove cutoffs prior to resumption of work.

1.07 WARRANTY

A. Manufacturer's warranty: Minimum 10 years to correct defective roofing materials, including installation.

B. Roofer's warranty: Minimum 2 years to correct defective workmanship.

PART 2 PRODUCTS

2.01 MATERIALS

A. Synthetic roofing underlayment:
   1. Self-adhering underlayment for protection from wind, rain, water, snow, and ice damns.
   2. Manufacturers: The following or equal:
      a. Roofing Corp., equivalent product.

B. Composite roof insulation:
   1. Closed cell polyisocyanurate foam core bonded to universal fiberglass reinforced facers.
   2. Utilizing environmentally compliant blowing agent.
   3. Manufacturers: One of the following or equal:
      a. GAF, Energyguard Ultra Polyiso Insulation 20.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that deck is properly graded to outlets.

B. Verify that deck surfaces are clean, dry, and where required, coated with primer.

3.02 FIELD QUALITY CONTROL

A. Roof insulation which becomes wet or damaged shall be removed and replaced with solid, dry insulation, unless installer provides written acceptance of the damaged insulation from the roofing manufacturer, whose warranty shall cover the system.

B. Inspections: Roof membrane manufacturer, whose warranty shall cover complete roof assembly, shall provide supervision and inspection necessary to secure warranty.

END OF SECTION

SECTION 07415

STANDING SEAM SHEET METAL ROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Preformed metal roofing, fascia, and associated accessories.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   2. B32 - Standard Specification for Solder Metal.
   3. D2626 - Standard Specification for Asphalt-Saturated and Coated Organic Felt Base Sheet Used in Roofing.

B. NSF International (NSF).

1.03 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Provide delegated design for the following:
   1. Roofing sheet material thickness.
   2. Connection of roofing sheets to support/hold-down clips.
   3. Strength, details, and locations of roofing support/hold-down clips.
   4. Connection of roofing support/hold-down clips to supporting structural elements.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Shop drawings: Include thicknesses and dimensions of parts, fastening and anchoring methods, details and locations of seams, joints, and other provisions for thermal movement. Show plans and elevations at minimum scale of 1/4 inch to 1 foot, and details at minimum scale of 3 inches to 1 foot.

C. Product data: Include standard color and finish options.

D. Samples: Include 8-inch square samples of color and finish on specified substrate.

E. Manufacturer's installation instructions.

F. Certificates.

G. Manufacturer's approval of installer and shop drawings.

H. Maintenance data.

I. Warranty.

1.05 QUALITY ASSURANCE

A. Installer qualifications: Manufacturer-approved installer of products similar to specified products on minimum 5 projects of similar scope as Project with satisfactory performance record.

B. Exposed sheet metal material used for roofing including roofing panels, flashings, closures, and other trim shall be product of 1 manufacturer.

C. Other materials shall be products approved or recommended by roofing system manufacturer.

D. Deliver, store, and handle products in accordance with manufacturer's recommendations.

1.06 WARRANTY

A. Roofing: Warrant to maintain roof, including flashings, in watertight condition and to maintain finish free from change in color or physical deterioration for minimum 5 years limited to ordinary wear and tear by elements or defects due to faulty materials and workmanship.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Regulatory requirements:
   1. Comply with the building code specified in Section 01410 - Regulatory Requirements.

B. Design and detailing:
   1. Design to withstand the following loads, and additional loads indicated on the Drawings.
      a. Dead loads.
      b. Live loads: Minimum 20 pounds per square foot.
         1) Reductions in uniform live load based on tributary area are not allowed.
      c. Load specified in Section 01850 - Design Criteria.
         1) Seismic load.
         2) Wind load.
   2. Load combinations: As required by the building code.
   3. Roofing system shall be suitable for wet reservoir environment.

2.02 MANUFACTURERS

A. Preformed metal roofing:
   1. One of the following or equal:
      a. IMSA Building Products.
      b. Metal Sales Manufacturing Corp.
      c. Berridge Manufacturing Co.

2.03 PREFORMED METAL ROOFING

A. Batten type, sheet steel roofing system including:
   1. Fascia, flashing, and sealants.

B. Batten spacing: 16 inches on center.

2.04 EXPOSED COMPONENTS

A. Sheet steel:
   1. ASTM A653, G90 minimum coating designation, minimum 22 gauge.

B. Finish: PVDF Kynar 500.

C. Surfaces must be prepared in accordance with coating manufacturer's recommendations.
   1. Color: As selected by Owner from manufacturer's standard colors.

2.05 ACCESSORIES

A. Underlayment: ASTM D2626, asphalt-saturated and coated organic felt, minimum 28 pounds.

B. Hold-down clips: Stainless steel of type that will allow thermal movement of roof panels.

C. Closures: System manufacturer's standard neoprene blocks shaped to fit roof metal profile.

D. Fasteners:
   1. Nails, screws, rivets, and other fasteners: Stainless steel or alloy appropriate to roofing metal.
   2. Nails: Ringed or twisted shank type, of lengths required.
   3. Screws: Stainless steel pan head wood or sheet metal screws for use with hold-down clips.

E. Sealant: As specified in Section 07900 - Joint Sealants, unless recommended otherwise by panel manufacturer.

2.06 FABRICATION

A. Panels:
   1. Fabricate with upturned edges to form standing seam joints with minimum 1-1/2-inch high edges.
   2. Fabricate to extend from eaves to ridge in a single length, with no end laps.

B. Battens: Approximately 1-1/2 inches square, and evenly spaced approximately 16 inches on center.

C. Ridge, hips, eaves, rakes, fascia, coping, and other exposed flashings: Form of sheet steel matching roofing to provide weathertight roofing system.

D. Form sheets, battens, strips, cleats, valleys, ridges, edge treatments, integral flashings, gutters, downspouts, and other components to profiles indicated on the Drawings and required for permanent leakproof construction.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify dimensions at structure where roofing will be installed.

B. Verify that substrate is firm, dry, and free of foreign materials.

3.02 PREPARATION

A. Clean and repair adjoining surfaces when necessary for proper installation of preformed metal roofing panels.

3.03 UNDERLAYMENT

A. Apply single-ply of underlayment, lapped shingle fashion, with Kraft paper side up, 3-inch head laps and 6-inch side laps, and cover with slip sheet similarly lapped.

B. Hold underlayment in place with minimum number of fasteners.

C. Install no more underlayment than can be covered by metal roofing in a single day.

3.04 ROOFING

A. Install roofing in accordance with manufacturer's recommendations.

B. Lay out pattern to place batten seams equidistant from corners and aligned with seams on other side of hip or ridge.

C. Start installation from eaves.

D. Secure roofing panels in place with concealed clips and fasteners.
   1. Exposed fasteners through roof panels, batten covers, and flashings shall not be used.

E. Locate clips in joints within 6 inches of panel ends.

F. At eaves, cut upturned edges and bend panel down to form fascia.

G. At intersections of roof slope with ridge and hips, turn up edges of roof panels 1 inch.

H. Form cross seams with 3/4-inch fold-under on lower end and 2-inch fold-over on upper end.

I. Slit folds in cross seams at each corner 1 inch in from batten to form tab.

J. Hook hold-down cleats, fold on lower end of panel into fold on upper end of underlaying panel.

K. Exposed batten ends to have neoprene closures or watertight cap.

L. Form valleys of sheets not exceeding 10 feet in length.

M. Lap joints 6 inches in direction of drainage.

N. Extend valley sheet minimum of 6 inches under roofing sheets.

O. At valley, double fold valley and roofing sheets and secure with cleats spaced 18 inches on center.

P. Install ridge and hip covers securely in place using Z closer clips and fasteners.

Q. Seal joints where necessary for watertightness.

R. Completed roof shall be watertight.

S. Exposed surfaces shall be free of dents, scratches, abrasions, stains, and other visible defects.

END OF SECTION

SECTION 07722

ROOF HATCHES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Roof hatches.

1.02 REFERENCES

A. American National Standards Institute (ANSI).

1.03 SUBMITTALS

A. Product data: Indicate general construction, configurations, and jointing methods.

B. Shop drawings: Show locations, sizes, fastening methods, and installation details.

C. Manufacturer's Installation Instructions.

1.04 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

B. Special warranty:
   1. Duration: 5 years warranty on product defects.

PART 2 PRODUCTS

2.01 ROOF HATCHES

A. Manufacturers: One of the following or equal:
   1. The Bilco Co.

2.02 BI-FOLD DOUBLE LEAF FOR EQUIPMENT ACCESS

A. Size:
   1. Equipment access applications:
      a. Nominal size: 84 inches by 84 inches.
      b. Cover opening angle: 90 degrees.

B. Cover and curb:
   1. Material:
      a. Exterior surface and curb material:
         1) Minimum 14-gauge aluminum.
      b. Interior surface material:
         1) Minimum 18-gauge aluminum liner.

2) Fully covering cover insulation.

2. Cover:
   a. Corners:
      1) 3-inch beaded flange and welded.
      2) Weathertight corners.
   b. Insulation:
      1) Nominal 1-inch thick fiberglass.
3. Curb:
   a. Height: Minimum 12 inches.
   b. Insulation: 1-inch thick fiberboard on outside.
   c. Flange: Minimum 3-1/2-inch with holes for fasteners, and welded, weathertight corners.
4. Curb and roofing interface:
   a. Metal roofing:
      1) Conform to configuration of roofing with self-draining feature to prevent water damming between ribs of roof panels, and welded, weathertight corners.

C. Finish:
   1. Aluminum hatches: Mill finish.

D. Hardware:
   1. Heavy pintle hinges.
   2. Compression spring operators enclosed in telescopic tubes.
   3. Positive snap latch with turn handles, both inside and outside.
   4. Padlock hasps, both inside and outside.
   5. Gasket:
      a. EPDM rubber gasket adhered to the liner.
   6. Automatic hold-open arm with red vinyl grip handle capable of 1-hand release.
   7. Enclosed 2-point spring latch as recommended by manufacturer.

E. Latch hardware:
   1. Hardware including latch assembly, inside and outside padlock hasps, arm guide bracket, lifting mechanism bracket, hinges, hinge pins, hold open arm, lock strike casting, springs, spring tubes, shoe castings, and fasteners.
   2. Type 316 stainless steel.

PART 3 EXECUTION

3.01 INSTALLATION

A. Hatch quantities and locations shall be as indicated on the Drawings.

B. Install roof hatches in accordance with manufacturer's instructions.
   1. Coordinate with installation of roofing system and related flashing.
   2. Provide weathertight installation.

C. Paint hatch as specified in Section 09960 - High-Performance Coatings.

END OF SECTION

SECTION 07840

FIRESTOPPING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: The requirements for providing firestopping.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. E814 - Standard Test Methods for Fire Tests of Penetration Firestops Systems.

B. International Conference of Building Officials (ICBO).

C. Underwriters Laboratories, Inc. (UL).

1.03 SUBMITTALS

A. Product data: Submit manufacturer's data and installation instructions.

PART 2 PRODUCTS

2.01 MATERIALS

A. Firestopping:
   1. Intumescent material capable of expanding up to 8 to 10 times when exposed to temperatures over 250 degrees Fahrenheit.
   2. Product shall be UL classified and have ICBO approved fire resistance rating up to 3 hours in accordance with ASTM E814.

PART 3 EXECUTION

3.01 INSTALLATION

A. Fill and seal holes or voids in fire rated floors and walls including pipes penetrating between buildings with acceptable firestopping material in accordance with manufacturer's instructions:
   1. Penetrations shall be free of dirt and debris.
   2. Dam penetrations, if required, with an acceptable material.

B. Apply firestopping material to the penetration using a caulking gun, putty knife, or other normal trade tools:
   1. Provide minimum 1/2-inch caulk or putty for 2-hour fire rating with metal pipe.
   2. Provide minimum 1-inch caulk or putty for 3-hour rating with metal or insulated metal pipe.

C. Normal curing time is 7 days; however, seal shall be immediately functional, providing cold smoke, water, and fire seal.

D. Remove damming materials if necessary after cure.

3.02 CLEANING

A. Clean surrounding areas after installation in compliance with manufacturer's instructions.

END OF SECTION

SECTION 07900

JOINT SEALANTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Acrylic-Latex sealant.
   2. Precast concrete joint sealant.
   3. Silicone sealant.
   4. Synthetic rubber sealing compound.
   5. Synthetic sponge rubber filler.
   6. Related materials.

1.02 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. M198 - Standard Specification for Joints for Concrete Pipe, Manholes, and Precast Box Sections Using Preformed Flexible Joint Sealants.

B. ASTM International (ASTM):
   1. C920 - Standard Specification for Elastomeric Joint Sealants.
   2. C990 - Standard Specification for Joints for Concrete Pipe, Manholes, and Precast Box Sections Using Preformed Flexible Joint Sealants.
   3. C1330 - Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid-Applied Sealants.
   4. C1521 - Standard Practice for Evaluating Adhesion of Installed Weatherproofing Sealant Joints.
   5. D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers - Tension.
   6. D624 - Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomer.

1.03 SUBMITTALS

A. Product data.

B. Samples, include color selections.

C. Manufacturer's Installation Instructions.

D. Warranty.

1.04 QUALITY ASSURANCE

A. Manufacturer qualifications: Manufacturer of proposed product for minimum 5 years with satisfactory performance record.

B. Installer qualifications: Manufacturer approved installer of products similar to specified products on minimum 5 projects of similar scope as Project with satisfactory performance record.

1.05 PROJECT/SITE CONDITIONS

A. Environmental requirements: Do not apply sealant on wet or frosty surfaces or when surface temperature is higher than 100 degrees Fahrenheit or lower than recommended by the manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products in accordance with manufacturer's recommendations.

B. Code date packages. Do not use material older than manufacturer’s published shelf life. Store materials at temperatures lower than 80 degrees Fahrenheit. Condition materials in accordance with manufacturer’s instructions prior to installation.

1.07 SEQUENCING AND SCHEDULING

A. Caulk joints prior to painting.

1.08 WARRANTY

A. Warrant to correct defective products for minimum 1 year in accordance with manufacturer's standard warranty.

PART 2 PRODUCTS

2.01 SEALANTS

A. General:
   1. Provide colors matching materials being sealed.
   2. Where compound is not exposed to view in finished work, provide manufacturer's color which has best performance.
   3. Nonsagging sealant for vertical and overhead horizontal joints.
   4. Sealants for horizontal joints: Self-leveling pedestrian/traffic grade.
   5. Joint cleaner, primer, bond breaker: As recommended by sealant manufacturer.
   6. Sealant backer rod and/or compressible filler made from closed cell polyethylene, polyethylene jacketed polyurethane foam, or other flexible, nonabsorbent, non-bituminous material recommended by sealant manufacturer to:
      a. Control joint depth.
      b. Break bond of sealant at bottom of joint.
      c. Provide proper shape of sealant bead.
      d. Serve as expansion joint filler.

2.02 ACRYLIC-LATEX SEALANT

A. Permanently flexible, nonstaining, and nonbleeding latex modified acrylic sealant compound, colors as selected by Engineer from manufacturer's standard options:
   1. Manufacturers: One of the following or equal:
      a. Tremco, Tremflex 834.
      b. Pecora Corp., Number AC-20.
      c. Sonneborn, Sonolac.

2.03 PRECAST CONCRETE JOINT SEALANT

A. Preformed, cold-applied, ready-to-use, flexible joint sealant in accordance with ASTM C990 and AASHTO M 198:
   1. Manufacturers: One of the following or equal.
      a. Henry Corp., Ram-Nek.
      b. Concrete Sealants Division, ConSeal.

2.04 SILICONE SEALANT

A. ASTM C920, Type S, Grade NS, Class 25, single component silicone sealant:
   1. Manufacturers: One of the following or equal:
      a. Tremco, Proglaze.
      b. Pecora Corp., Number 864.
      c. Dow Corning, Number 795.
      d. General Electric, Number 1200 Series.

2.05 SYNTHETIC RUBBER SEALING COMPOUND

A. Manufacturer: One of the following or equal:
   1. Sika Corporation, Sikaflex 2c NS or SL.
   2. Sika Corporation, Sikaflex 2c NS EZ Mix.
   3. Pacific Polymers, Elastothane 227R.

B. Material: In accordance with ASTM C920 Type M, Grade P (pourable), Class 25 and Type M, Grade NS (non-sag), Class 25; multi-part polyurethane; able to cure at room temperature to firm, highly resilient polymer; able to perform satisfactory when continuously submerged in water or sewage and exposed to direct sunlight in dry condition; with the following properties determined at 75 degrees Fahrenheit and 50 percent relative humidity:
   1. Base: Polyurethane rubber.
   2. Application time: Minimum 2 hours.
   3. Cure time: Maximum 3 days.
   4. Tack free time: Maximum 24 hours.
   5. Ultimate hardness: Non-sag 25, Pourable/SL 40, within 5 Shore A.
   6. Tensile strength: Non-sag 95 pounds per square inch minimum and self-leveling minimum 170 pounds per square inch when tested in accordance with ASTM D412.
   7. Ultimate elongation: Minimum 340 percent when tested in accordance with ASTM D412.

8. Tear resistance: Non-sag 45 pounds per inch minimum and self-leveling minimum 85 pounds per inch when tested in accordance with ASTM D624, Die C.
9. Service temperature range: Minus 25 degrees to 158 degrees Fahrenheit.

C. Color: Gray to match concrete, unless indicated on the Drawings.

2.06 SYNTHETIC SPONGE RUBBER FILLER

A. Closed-cell expanded sponge rubber manufactured from synthetic polymer neoprene base, or resilient polyethylene foam backer rod. In accordance with ASTM C1330, Type C:
1. Manufacturers: The following or equal:
a. Presstite, No. 750.3 Ropax Rod Stock.

B. Characteristics:
1. Suitable for application intended.
2. Strength: As necessary for supporting sealing compound during application.
3. Resiliency: Resistance to environmental conditions of installation.
4. Bonding: No bonding to the sealing compound.
5. Structure: Cellular, prevents absorption of water.
6. Compatibility with other materials in joint and acceptance by manufacturer of sealing compound.
7. Size: Minimum 25 percent greater than nominal joint width.

2.07 RELATED MATERIALS

A. Primer: Nonstaining type, recommended by sealant manufacturer to suit application.

B. Joint cleaner: Noncorrosive, nonstaining, compatible with joint forming materials and as recommended by sealant manufacturer.

C. Bond breaker tape: Pressure-sensitive tape recommended by sealant manufacturer to suit application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify acceptability of joint dimensions, physical, and environmental conditions.

B. Verify that surfaces are dry, clean, and free of dirt, grease, curing compound, and other residue which might interfere with adhesion of sealants.

3.02 PREPARATION

A. Allow concrete to cure thoroughly before caulking.

B. Synthetic sponge rubber filler:
   1. Prepare surfaces designated to receive filler in accordance with manufacturer's installation instructions.
   2. Do not stretch filler beyond its normal length during installation.

C. Caulking:
   1. Verify that surfaces are dry, clean, and free of dirt, grease, curing compounds, and other residue that might interfere with adhesion of sealant.
   2. Concrete, masonry, wood, and steel surfaces: Clean and prime in accordance with manufacturer's instructions prior to caulking.

D. Synthetic rubber sealing compound:
   1. Ensure surfaces to which synthetic rubber must bond are dry and free of dust, dirt, and other foreign residue.
   2. Heavy sandblasted caulking groove to sound surface, and prime with manufacturer's recommended primer for particular surface.

E. For sidewalks, pavements, and similar joints sealed with elastomeric sealants and subject to traffic and other abrasion and indentation exposures, fill joints to depth equal to 75 percent of joint width, but neither more than 5/8 inches deep nor less than 3/8 inches deep.

F. For normal moving building joints sealed with elastomeric sealants not subject to traffic, fill joints to depth equal to 50 percent of joint width, but neither more than 1/2 inch deep nor less than 1/4 inch deep.

G. For joints sealed with acrylic-latex sealants, fill joints to depth in range of 75 percent to 125 percent of joint width.

H. Use joint filler to achieve required joint depths, to allow sealants to perform properly.

I. Prepare surfaces and install synthetic sponge rubber filler in accordance with manufacturer's recommendations.

J. Do not stretch filler beyond normal length during installation.

K. Apply bond breaker when recommended by joint sealer manufacturer.

3.03 INSTALLATION

A. Synthetic sponge rubber filler: Install filler in accordance with manufacturer's installation instructions.

B. Caulking, joints, and sealing:
   1. Construct expansion, contraction, and construction joints as indicated on the Drawings.
   2. Install pipe and conduit in structures as indicated on the Drawings.
   3. Caulk doors, windows, louvers, and other items installed in or over concrete openings inside and out.

4. Use synthetic rubber sealing compound for caulking where indicated on the Drawings or as specified, except for masonry construction and where specified otherwise.
5. Complete caulking prior to painting.
6. Verify that concrete is thoroughly cured prior to caulking.
7. When filler compressible material is used, use untreated type.
8. Apply caulking with pneumatic caulking gun.
9. Use nozzles of proper shape and size for application intended.
10. Maintain continuous bond between caulking and sides of joint to eliminate gaps, bubbles, or voids and fill joint in continuous operation without layering of compound.
11. Employ experienced applicators to caulk joints and seams in neat workmanlike manner.
12. To hasten curing of compound when used on wide joints subject to movement, apply heat with infrared lamps or other convenient means.
13. Apply synthetic rubber sealing compound with pneumatic caulking tool or other acceptable method.

3.04 CLEANING

A. Clean surfaces adjacent to sealant as work progresses.

B. Remove excess uncured sealant by soaking and scrubbing with sealant cleaning solvent.

C. Remove excess cured sealant by sanding with Number 80 grit sandpaper.

D. Leave finished work in neat, clean condition.

3.05 SCHEDULE

A. Acrylic latex:
   1. Use where indicated on the Drawings.
   2. Interior joints with movement less than 7.5 percent and not subject to wet conditions.

B. Silicone:
   1. Use where indicated on the Drawings.
   2. Joints and recesses formed where window, door, louver and vent frames, and sill adjoin masonry, concrete, stucco, or metal surfaces.
   3. Door threshold bedding.
   4. Moist or wet locations, including joints around plumbing fixtures.
   5. Stainless steel doors and frames, including joints between applied stops and frames, and around anchor bolts.
   6. Plenum joints.

C. Synthetic rubber sealing compound, non-sag Type II:
   1. Use where indicated on the Drawings.
   2. Water-bearing and earth-bearing concrete structures.
   3. Joints in masonry, concrete vertical surfaces, and metal-faced panels in vertical surfaces.

4. Joints between sheet metal flashing and trim.
5. Joints between sheet metal flashing and trim, and vertical wall surfaces.
6. Small voids between materials requiring filling for weathertight performance in vertical surfaces.
7. Perimeters of frames of doors, windows, louvers, and other openings where bonding is critical to airtight performance.
8. Expansion and control joints in masonry vertical surfaces.

D. Synthetic rubber sealing compound, self-leveling Type I:
1. Use where indicated on the Drawings.
2. Expansion and control joints in masonry, concrete horizontal surfaces, and metal panels in horizontal surfaces.
3. Small voids between materials requiring filling for weathertight performance in horizontal surfaces.
4. Pavement joints.
5. Perimeters of frames of doors, windows, louvers, and other openings in horizontal surfaces where bonding is critical to airtight performance.

3.06 FIELD QUALITY CONTROL

A. Adhesion testing:
1. Perform adhesion tests in accordance with ASTM C1521 per the following criteria:
a. Water bearing structures: 1 test per every 1,000 LF of joint sealed.
b. Exterior precast concrete wall panels: 1 test per every 2,000 LF of joint sealed.
c. Chemical containment areas: 1 test per every 1,000 LF of joint sealed.
d. Building expansion joints: 1 test per every 500 LF of joint sealed.
e. All other type of joints except butt glazing joints: 1 test per every 3,000 LF of joint sealed.
f. Manufacturer's authorized factory representative provide written recommendations for remedial measures on failing tests.

END OF SECTION

SECTION 08110

HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Steel Fire Resistive Rated and Non-Fire Resistive Rated:
   1. Doors.
   2. Door frames.

1.02 REFERENCES

A. American National Standards Institute (ANSI):
   1. A250.6 - Hardware on Steel Doors (Reinforcement Application).
   2. A250.8 - Recommended Specification for Standard Steel Doors and Frames.

B. ASTM International (ASTM):
   1. A653 - Standard Specification for Sheet Steel, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   2. A924 - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
   3. A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy With Improved Formability, Solution Hardened, and Bake Hardenable.
   4. A1011 - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy With Improved Formability, and Ultra-High Strength.

C. National Association of Architectural Metal Manufacturers (NAAMM)/Hollow Metal Manufacturers Association (HMMA):
   1. HMMA 861 - Guide Specifications for Commercial Hollow Metal Doors and Frames.

D. National Fire Protection Association (NFPA):
   1. 80 - Standard for Fire Doors and Other Opening Protectives.
   2. 252 - Standard Methods of Fire Tests of Door Assemblies.

E. Steel Door Institute (SDI):
   1. SDI-111 - Recommended Details for Standard Steel Doors, Frame, Accessories and Related Components.
   2. SDI-117 - Manufacturing Tolerances Standard Steel Doors and Frames.

F. Underwriters' Laboratories, Inc., (UL):
   1. UL 10C - Positive Pressure Fire Tests of Door Assemblies.
   2. UL 102 - Sustainability Assessment for Swinging Door Leafs.

1.03 SUBMITTALS

A. Product data.

B. Shop drawings: Show the following with references to the Engineer's door marks and hardware groups:
   1. Location of door and frame types.
   2. Details of fabrication, including core construction, glass lights, louvers, weatherstripping, and factory finish for each door.
   3. Cutouts and reinforcements for hardware.
   4. Methods of installation and anchorage to adjacent construction.

C. Certificates documenting:
   1. Fire-rated units have been successfully tested as specified in this Section.

D. Manufacturer's instructions: Submit manufacturer's installation instructions.

E. Pre-Submittal Conference:
   1. Conduct conference in compliance with requirements in Section 01312 - Project Meetings with attendance by representatives of supplier and installer.
   2. Contractor to review proper methods and procedures for installing hollow metal doors and frames.

1.04 QUALITY ASSURANCE

A. Testing agency qualifications: Approved by ultimate enforcing authority for the Project; regularly engaged in inspection of materials and workmanship at factory.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Before delivery, identify type and size of each door and frame in such a way that markings will not damage finish.

B. Preassemble doorframes in shop and deliver to Project site with spreader bar at sill or tie them in pairs to form box.

C. Protect doors and frames with resilient packaging sealed with heat shrunk plastic. Break seal on-site to permit ventilation.

D. Protect doors and frames during shipment and storage to prevent warping, bending, and corrosion.

1.06 SEQUENCING AND SCHEDULING

A. Ensure timely delivery of reviewed hardware schedule and hardware templates such that no delay occurs in the work of the Contract.

PART 2 PRODUCTS

2.01 MATERIALS

A. Sheet steel: ASTM A1008, commercial quality, level, cold rolled steel, or ASTM A1011, hot rolled, pickled and oil rolled steel. Galvanize by hot-dip process with zinc-coating in accordance with ASTM A924 or with ASTM A653 and the coating designation A60 or G60.

B. Clips, bolts, screws, and rivets: sized as recommended by manufacturer.

C. Primer: Rust- inhibitive epoxy primer compatible with high-solids epoxy finish coating system as specified in Section 09960 - High-Performance Coatings.

D. Touch-up materials: Primer as recommended by manufacturer.

E. Door hardware: As specified in Section 08710 - Door Hardware.

F. Grout: As specified in Section 04220 - Concrete Unit Masonry.

2.02 DOOR AND FRAME TYPES

A. Interior and Exterior doors: ANSI 250.8, Grade III, Model 3, or NAAMM HMMA 810 Type A and NAAMM HMMA 861, flush steel rib-stiffened, minimum 16-gauge face sheets.

B. Interior and Exterior frames: ANSI 250.8 or NAAMM HMMA 861, fully welded frames HMMA 861, except minimum 14-gauge sizes and shapes as indicated on the Drawings.

2.03 FABRICATION OF FRAMES

A. Galvanize all frames installed in exterior openings.

B. Frames: Sheet steel, integral type, welded continuous to full depth of frames with minimum 5/8-inch deep stops, unless otherwise indicated on the Drawings.

C. Hardware reinforcements: Fabricate according to SDI A250.6 with reinforcing plates from same material as door face sheets.

D. Jamb Anchors: As required for adjacent wall construction, minimum 3 per jamb, unless otherwise indicated on the Drawings.

E. Floor anchors: Fixed type, except where adjustable anchors are indicated on the Drawings, 1 per jamb, with minimum 2 holes for anchorage. Where floor fill occurs, terminate bottom of frames at indicated finished floor level and support by adjustable extension clips resting on and anchored to structural slabs.

F. Anchors at masonry: Adjustable strap and stirrup, minimum 16-gauge corrugated or perforated steel at maximum of 30 inches on center and extending minimum 8 inches into masonry.

G. Anchors at previously placed concrete: Countersink machine screws through the frame into expansion devices spaced at maximum 30 inches on center.

H. Masonry angle stiffeners: Factory welded into heads of frames for installation in openings more than 48 inches wide.

2.04 FABRICATION OF DOORS

A. Galvanize all doors installed in exterior openings.

B. Reinforce face sheets with steel rib stiffeners, spaced at maximum 6 inches apart, and securely attached to face sheets by spot welds at maximum 5 inches on center.

C. Fill voids between face sheets and stiffeners with fiberglass insulation having a minimum density of 0.8 pounds per cubic foot.

D. Edges: Full weld without visible joints. Bevel striking edge 1/8 inch in 2 inches.

E. Door cores:
   1. Stiffeners: Vertical steel ribs formed from minimum 22-gauge plain sheet steel, spaced at maximum 6 inches apart and securely attached to face sheets by spot welds at maximum 5 inches on center.
   2. Core fillers: Insulation, minimum 0.60 pound density noncombustible type, installed in spaces between stiffeners for full height of door; labeled door core material shall conform to requirements of labeling authority.

F. Tops and bottoms of doors: Close with continuous recess steel channel of minimum 16-gauge, extending full width of door and spot welded to both faces.

G. Tops and bottoms of exterior doors: Flush closing channels welded to make tops and bottoms waterproof with weep holes for escape of moisture.

H. Hardware reinforcements: Fabricate according to SDI A250.6 with reinforcing plates from same material as door face sheets.

I. Astragals:
   1. Install on active leaf of double doors in accordance with UL listing requirements for fire resistive ratings as indicated on the Drawings, and for exterior pairs of doors.
   2. Do not install on doors swinging in pairs with rating of 90 minutes or less in means of egress where both leaves are required to provide building code required exiting widths.
   3. Do not provide astragal cutouts for hardware operations.

J. Astragal clearances for fire resistive rated doors:
   1. Door bottoms at doors designated to receive non-combustible threshold: Not to exceed 3/8 inch between threshold and door bottom.
   2. Door bottoms where there is no threshold: Maximum clearance between door and floor not to exceed 1/2 inch.

3. Door bottoms at doors designated to receive combustible floor coverings: Not to exceed 1/2 inch between floor covering and door bottom.
4. Clearance between door and frame and between meeting edges of pairs of doors: Not to exceed 1/8 inch.

K. Astragal clearances for non-fire resistive rated doors: Same as fire resistive rated doors, unless otherwise indicated on the Drawings.

2.05 FABRICATION OF FIRE RATED DOORS AND FRAMES

A. Fabricate to meet requirements of the building code as specified in Section 01410 - Regulatory Requirements, UL 10C, UL 102, and NFPA 252, except hose stream test shall not be required for opposite swing double egress exit doors and for doors of fire endurance rating of less than 45 minutes with or without approved glass lights.

B. Temperature rise requirements of doors at exit enclosures and exit passageways: Maximum transmitted temperature end point of less than 450 degrees Fahrenheit above ambient at end of 30 minutes when tested in accordance with the building code as specified in Section 01410 - Regulatory Requirements.

C. Apply approved testing agency labels on fire rated doors and frames.

D. Fabricate oversized fire rated doors in accordance with requirements for ratings indicated on the Drawings.

2.06 ACCESSORIES

A. Silencers:
1. Drill single leaf doorframe jamb stops for minimum 3 silencers.
2. Drill double-leaf doorframe head stops for minimum 2 silencers.
3. Do not drill doorframes for silencers when weatherstripping is to be installed.

2.07 FINISHING

A. Thoroughly clean surfaces of oil, grease, and other impurities; touch-up abraded galvanizing; and chemically etch.

B. Fill irregularities and sand smooth finish surface. Apply 1 coat of manufacturer's standard rust inhibitive baked-on primer.

C. Finish painting: High solids epoxy polyurethane system:
1. Interior and Exterior doors and interior doors in corrosive environments: As specified in Section 09960 - High-Performance Coatings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine reviewed hardware schedules and verify proper coordination of hardware and doors and frames.

B. Examine opening locations and verify the following:
   1. Correctness of dimensions, backing, or support conditions.
   2. Absence of defects that would adversely affect frame or door installation.

3.02 INSTALLATION

A. Install doors and frames in accordance with approved shop drawings and manufacturer's instructions.

B. Frames:
   1. Set accurately in position, plumb, align, and attach securely to structure.
   2. Set in place before construction of adjacent masonry or framed walls.
   3. Anchor frames to previously placed concrete.
   4. Set frames before removing spreader bars.
   5. Fully grout frames in masonry as the Work progresses.
   6. Grout frames at concrete through keyways provided at head and jambs.

C. Doors:
   1. Install at correct openings, ensure smooth swing and proper closure with frame.

D. Fire resistive frames and doors:
   1. Install to conform to NFPA 80 for fire resistive rated class as indicated on the Drawings.

E. Door hardware:
   1. Install in accordance with Section 08710 - Door Hardware.
   2. Drill and tap doors and frames to receive non-template, mortised, and surface-mounted door hardware.

F. Separate or isolate dissimilar metals with neoprene gaskets, sleeves, and washers, or with coatings acceptable to the Engineer.

3.03 TOLERANCES

A. Manufacturing and installation tolerances: As indicated on the Drawings or in conformance to SDI 117 as minimum.

3.04 ADJUSTING AND CLEANING

A. Prime coat touch-up: Immediately after installation, sand smooth and touch-up rust areas, and other areas where primer has been damaged, with prime touch-up paint.

B. Make adjustments as required for correct, proper, and free function and smooth operation without binding of hardware or doors and frames.

C. Protect doors and frames from damage to surface or profile.

END OF SECTION

SECTION 08320

FLOOR ACCESS DOORS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Non-fire-rated floor access doors.

1.02 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. Standard Specifications for Highway Bridges.

B. Occupational Safety and Health Administration (OSHA):
   1. 29 CFR 1910-Occupational Safety and Health Standards.

1.03 SUBMITTALS

A. Product data.

B. Shop drawings that include the following:
   1. Floor access door installation recommendations.
   2. Locations of floor access doors.
   3. Door size and configuration.
   4. Live load capacity.
   5. Materials of construction and finishes provided.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Identify type and size of each floor access door in way not to damage finish prior to delivery.

B. Deliver products only after proper facilities are available.

C. Deliver and store packaged products in original containers with seals unbroken and labels intact until time of use.

D. Handle carefully to prevent damage and store on clean concrete surface or raised platform in safe, dry area.
   1. Do not dump onto ground.

E. Protect floor access doors during shipment and storage to prevent warping, bending, and corrosion.

1.05 WARRANTY

A. Provide manufacturer’s warranty against defects in material and workmanship for a period of 5 years.

1.06 MAINTENANCE

A. Deliver 2 keys for each cylinder lock to Owner.

PART 2 PRODUCTS

2.01 LIGHT-DUTY FLOOR ACCESS DOORS

A. Manufacturers: One of the following or equal:
   1. The Bilco Co., Floor Doors Model K or KD (double leaf).
   2. Babcock Davis Associates, Inc., Model BFDNA-SAL or BFDNA-DAL (double leaf).

B. Style: Single leaf or double leaf as indicated on the Drawings, aluminum, capable of withstanding minimum live load of 150 pounds per square foot, and designed to open to 90 degrees and lock automatically in that position.

C. Door leaf: 1/4-inch aluminum diamond-pattern plate reinforced with aluminum stiffeners as required for specified live load.

D. Frame: 1/4-inch extruded aluminum with built-in neoprene cushion and with strap anchors bolted to exterior.

E. Hardware:
   1. Hinges: Cast steel hinges bolted to underside door leaf that pivot on torsion bars that counterbalance door for ease of operation.
   2. Lock: Snap lock with removable handle mounted on door leaf.
   3. Grip handle: Provide vinyl grip handle designed to release cover for closing.
   4. Operating mechanism: Automatic hold-open arm.

2.02 MEDIUM-DUTY FLOOR ACCESS DOORS

A. Manufacturers: One of the following or equal:
   1. The Bilco Co., Model J or JD (double leaf).
   2. Babcock Davis Associates, Inc., Model BFDDP-SAL or BFDDP-DAL (double leaf).

B. Style: Single leaf or double leaf as indicated on the Drawings, aluminum, capable of withstanding minimum live load of 300 pounds per square foot, channel frame, with drainage couplings.

C. Door leaf: Minimum 1/4-inch, diamond-pattern plate reinforced with stiffeners as required to meet specified live load.

D. Frame: 1/4-inch channel with anchor flange around perimeter.

E. Hardware:
   1. Hinges: Each leaf equipped with a minimum of 2 heavy forged-brass hinges with stainless steel pins.
   2. Lock: Snap lock with removable handle mounted on door leaf.

3. Grip handle: Provide vinyl grip handle designed to release cover for closing.
4. Operating mechanism: Spring operators designed for ease of operation and automatic hold-open arm with release handle.
5. Drainage assembly: Provide 1-1/2-inch drainage coupling located in corner of the channel frame.

2.03 HEAVY-DUTY OFF-STREET FLOOR ACCESS DOORS

A. Manufacturers: One of the following or equal:
   1. The Bilco Co., Model JH-20 or JDH-20 (double leaf).
   2. Babcock Davis Associates, Inc., Model BFDDH-SAL or BFDDH-DAL (double leaf).

B. Style: Single leaf or double leaf as indicated on the Drawings, aluminum, capable of withstanding minimum Standard Specifications for Highway Bridges, H-20 wheel load with a maximum deflection of 1/150 of the span, live load channel frame, with drainage couplings.

C. Door leaf: Minimum 1/4-inch, diamond-pattern plate reinforced with stiffeners as required to meet specified live load.

D. Frame: 1/4-inch channel with anchor flange around perimeter.

E. Hardware:
   1. Hinges: Each leaf equipped with a minimum of 2 heavy forged-brass hinges with stainless steel pins.
   2. Lock: Snap lock with removable handle mounted on door leaf.
   3. Grip handle: Provide vinyl grip handle designed to release cover for closing.
   4. Operating mechanism: Spring operators designed for ease of operation and automatic hold-open arm with release handle.
   5. Drainage assembly: Provide 1-1/2-inch drainage coupling located in corner of the channel frame.

2.04 FINISHES

A. Floor access door finishes:
   1. Aluminum: Manufacturer's standard mill finish.
   2. Aluminum in contact with dissimilar metals and concrete: Manufacturer's standard bituminous coating.
   3. Steel: Manufacturer's standard red oxide primer.

B. Hardware finishes:
   1. Provide optional Type 316 stainless steel hardware throughout, including parts of the latch and lifting mechanism assemblies, hold-open arms, and all brackets, hinges, pins, and fasteners.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine construction to receive floor access door and verify correctness of dimensions and other supporting or adjoining conditions.

3.02 PREPARATION

A. Coordinate details with other work supporting, adjoining, or requiring floor access doors.

B. Verify dimensions and profiles for each opening.

C. Verify that location will serve portion of work to which access is required.
   1. Where proposed functional location conflicts with other work, notify the Engineer before installation.

D. Apply coating to aluminum surfaces that will be in contact with dissimilar metals or concrete when there is none.

3.03 INSTALLATION

A. Install floor access doors in accordance with manufacturer's instructions.

B. Ensure correct types and adequate sizes at proper locations.

C. Securely attach frames to supporting work and ensure doors, frames, and hardware operate smoothly and are free from warp, twist, and distortion.

D. Attach drain pipe to coupling provided.
   1. Unless noted or indicated on the Drawings, provide 1-inch PVC (Sch. 80) drain line for access door.
   2. Provide necessary fittings to connect and route at least 5 feet away from door and vault perimeter.
   3. Terminate drain line 1 foot below final grade with 3 cubic feet of drain rock beneath the termination point of the drain line.

3.04 ADJUSTING

A. Adjust doors, frames, and hardware to operate smoothly, freely, and properly without binding.

3.05 CLEANING

A. Thoroughly clean surfaces of grease, oil, or other impurities; touch up abraded prime coat where applicable.

END OF SECTION

SECTION 08332

OVERHEAD COILING DOOR

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes: Manual overhead insulated rolling doors.

1.02 REFERENCES

A. ASTM International:
   1. A123 - Standard specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   2. A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process.
   3. A666 - Standard specification for Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
   4. A924 - Standard Specification for General Requirements of Steel Sheet, Metallic-Coated by the Hot-Dip Process (Referenced by ASTM A653).

1.03 QUALITY ASSURANCE

A. Regulatory requirements:
   1. Wind loading as specified in Section 01850 - Design Criteria.
   2. Seismic requirements for door anchorage and support systems as specified in Section 01850 - Design Criteria.

B. Qualifications:
   1. Manufacturer Qualifications: ISO 9001:2015 registered and a minimum of five years experience in producing doors of the type specified.
   2. Installer Qualifications: Manufacturer's approval.

C. Design Requirements:
   1. Air Infiltration to Comply With:
      a. ASHRAE® (American Society of Heating, Refrigeration, and Air-Conditioning Engineers) Standard 90.1-2007, 2010, and 2013 requirements of less than .3 CFM/FT2.
   2. Wind Loading:
      a. Supply doors to withstand design wind loads in accordance with the Structural Drawings.
   3. Cycle Life:
      a. Design doors of standard construction for normal use of up to 20 cycles per day maximum, and an overall maximum of 50,000 operating cycles for the life of the door.
   4. Seismic Performance:
      a. Provide manufacturer’s seismic calculations confirming ASCE7-10.

5. Insulated Door Slat Material Requirements:
    a. Flame Spread Index of 0 and a Smoke Developed Index of 10 as tested per ASTM E84.
    b. Sound Transmission Class (STC) rating up to 30 for the curtain and up to 22 for the entire assembly. If an STC of 32 is desired, additional options are required. All configurations are evaluated per ASTM E90 and based on testing a complete, operable assembly.
    c. Minimum R-value of 8.0 (U-value of 0.125) as calculated using the ASHRAE Handbook of Fundamentals.
    d. Insulation to be CFC Free with an Ozone Depletion Potential (ODP) rating of zero.
6. Safety:
    a. Chain operated doors shall be designed so that the door immediately stops upward or downward travel and is maintained in a stationary position when the hand chain is released by user.

1.04 SUBMITTALS

A. Product data:
    1. General: Submit data completely describing products, including rough-in diagrams.

B. Shop drawings:
    1. Drawings showing complete installation details, required clearances, relation to building structure, complete electrical rough-in requirements required for installation of motor operators for doors and for connection of such doors to fire alarm system, referenced to the door mark number.
    2. Show location and size of access doors required to perform maintenance on doors and auxiliary equipment.

C. Samples: Submit samples of finishes for finish selection.

D. Quality control submittals:
    1. Manufacturer's instructions:
        a. Installation instructions for each type and size of door, including manufacturer's data, operating instructions, and maintenance data.
        b. Furnish installer copy of diagrams and installation instructions.
        c. Provide manufacturer ISO 9001:2015 registration.
        d. Provide manufacturer and installer qualifications - see below.
        e. Provide manufacturer's installation instruction.

E. Contract closeout submittals:
    1. Project record documents:
        a. Operation and maintenance data: Provide manufacturer's operation and maintenance data for each different type of door specified, complete with manufacturer's list of recommended spare parts and their prices, electrical schematic diagrams, and name and address of nearest maintenance organization approved by door manufacturer.
        b. Certificate stating that installed materials comply with this specification.
        c. Warranty: Provide manufacturer's standard warranty.

1.05 DELIVERY STORAGE AND HANDLING

A. Packing, shipping, and storage: Protect doors during shipment and storage to prevent warping, bending, and corrosion.

B. Deliver materials only after proper facilities are available: Provide clean dry surfaces or platform as required and protect from deterioration and foreign matter.

1.06 PROJECT CONDITIONS

A. Field measurements: Field verify all opening dimensions and clearances prior to fabricating doors. Fitting doors to openings is the responsibility of the Contractor.

1.07 SEQUENCING AND SCHEDULING

A. Inserts and anchorages: Furnish inserts and anchoring devices which must be set into concrete or built into masonry. Provide setting drawings, templates, and directions for installation of anchorage devices. Coordinate delivery with other work to avoid delay to the Contract.

1.08 WARRANTY

A. Standard Warranty: Two years from date of shipment against defects in material and workmanship.

B. Maintenance: Submit for owner's consideration and acceptance of a maintenance service agreement for installed products.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Design requirements:
   1. Compatibility with space and service requirements:
      a. Doors and equipment items provided shall be compatible with space limitations specified and indicated on the Drawings.
      b. Make modifications to doors and equipment items necessary to conform with space limitations or with utility services specified for rough-in.
      c. Provide items complete including all necessary ancillary equipment as may be required for complete and trouble-free operation.
   2. Maintenance requirements: For ease of maintenance, provide overhead coiling doors complying with following requirements:
      a. Provide each door assembly as complete unit produced or supplied by a single manufacturer, including frames, sections, brackets, operating mechanisms, hardware, except hardware items specified in Section 08710 - Door Hardware, and all necessary accessories for installation of complete in openings indicated.
      b. Unless otherwise specified, all doors of particular type throughout the entire project shall be as manufactured or supplied by a single manufacturer.

2.02 MANUFACTURED UNITS

A. Manufacturers: One of the following or equal:
   1. The Cookson Co., Inc.
   2. Clopay Building Products.

2.03 PRODUCT INFORMATION

A. Model: ESD30.

2.04 MATERIALS

A. Curtain: Air infiltration rate of less than .3 CFM/FT2, as tested per ASTM E283 validated by an independent testing agency. Test report required.
   1. Fabrication:
      a. Slat Material: No. 6F, (Listed Exterior/Interior):
         1) Galvanized Steel/Galvanized Steel: Manufacturer recommended gauge based on performance requirements. Minimum 18/24 gauge, Grade 40, ASTM A 653 galvanized steel zinc coating.
      b. Insulation: 7/8 inch (22 mm) foamed-in-place, closed cell urethane.
      c. Total Slat Thickness: 15/16 inch (24 mm).
      d. Flame Spread Index of 0 and a Smoke Developed Index of 10 as tested per ASTM E84.
      e. R-value: 8.0.
      f. STC Rating: Sound Transmission Class (STC) rating up to 30 for the curtain and up to 22 for the entire assembly. If an STC of 32 is desired, additional options are required. All configurations are evaluated per ASTM E90 and based on testing a complete, operable assembly.
   2. Exterior Slat Finish:
      a. SpectraShield® Coating System (Color Selected by Architect):
         1) ASTM A 653 galvanized base coating treated with dual process rinsing agents in preparation for chemical bonding, gray baked-on base coat and gray baked-on polyester finish coat.
         2) Zirconium treatment followed by baked-on polyester powder coat, with color as selected by Architect from manufacturer's standard color range, over 180 colors; minimum 2.5 mils (0.065 mm) cured film thickness; ASTM D-3363 pencil hardness: H or better.
   3. Interior Slat Finish:
      a. SpectraShield® Coating System (Color Selected by Architect):
         1) ASTM A 653 galvanized base coating treated with dual process rinsing agents in preparation for chemical bonding, gray baked-on base coat and gray baked-on polyester finish coat.
         2) Zirconium treatment followed by baked-on polyester powder coat, with color as selected by Architect from manufacturer's standard color range, over 180 colors; minimum 2.5 mils (0.065 mm) cured film thickness; ASTM D-3363 pencil hardness: H or better.

B. Endlocks: Fabricate interlocking sections with high strength galvanized cast iron endlocks on alternate slats each secured with two 1/4-inch (6.35 mm) rivets. Provide windlocks as required to meet specified wind load.
   1. Galvanized cast iron: Required if above 21-foot-5-inch width (DBG - Distance Between Guides).

C. Bottom Bar:
   1. Configuration:
      a. Insulated Bottom Bar: Reinforced extruded aluminum interior face with full depth insulation and exterior skin slat to match curtain material and gauge. Minimum 4 inches tall by 1-1/16-inch thickness.
   2. Finish:
      a. Exterior: Match slats.
      b. Interior: Powder coat to match slats.
   3. Air Infiltration Certification Label: Must be affixed to bottom bar.

D. Guides:
   1. Fabrication:
      Thermal break required. Minimum 3/16 inch (4.76 mm) structural steel angles. Provide windlock bars of same material when windlocks are required to meet specified wind load. Top of inner and outer guide angles to be flared outwards to form bellmouth for smooth entry of curtain into guides. Provide removable guide stoppers to prevent over travel of curtain and bottom bar. Top 16-1/2-inch (419.10 mm) of coil side guide angles to be removable for ease of curtain installation and as needed for future curtain service.
   2. Finish:
      a. SpectraShield® Coating System (Color Selected by Architect): Zirconium treatment followed by baked-on polyester powder coat, color as selected by Architect from manufacturer's standard color range, over 180 colors; minimum 2.5 mils (0.065 mm) cured film thickness; ASTM D-3363 pencil hardness: H or better.

E. Counterbalance Shaft Assembly:
   1. Barrel: Steel pipe capable of supporting curtain load with maximum deflection of 0.03 inches per foot (2.5 mm per meter) of width.
   2. Spring Balance: Oil-tempered, heat-treated steel helical torsion spring assembly designed for proper balance of door to ensure that maximum effort to operate will not exceed 25 pounds (110 N). Provide wheel for applying and adjusting spring torque.

F. Brackets: Fabricate from minimum 3/16 inch (5 mm) steel plate with permanently lubricated ball or roller bearings at rotating support points to support counterbalance shaft assembly and form end closures.
   1. Finish:
      a. SpectraShield® Coating System (Color Selected by Architect): Zirconium treatment followed by baked-on polyester powder coat, color as selected by Architect from manufacturer's standard color range, over 180 colors; minimum 2.5 mils (0.065 mm) cured film thickness; ASTM D-3363 pencil hardness: H or better.

G. Hood: Minimum 24 gauge galvanized steel with reinforced top and bottom edges. Provide minimum 1/4 inch (6.35 mm) steel intermediate support brackets as required to prevent excessive sag.
   1. Finish:
      a. SpectraShield® Coating System (Color Selected by Architect):
         1) ASTM A 653 galvanized base coating treated with dual process rinsing agents in preparation for chemical bonding, gray baked-on base coat and gray baked-on polyester finish coat.
         2) Zirconium treatment followed by baked-on polyester powder coat, with color as selected by Architect from manufacturer's standard color range, over 180 colors; minimum 2.5 mils (0.065 mm) cured film thickness; ASTM D-3363 pencil hardness: H or better.

H. Weatherstripping:
   1. Bottom Bar:
      a. Manually Operated Doors: Replaceable, bulb-style, compressible EDPM gasket extending into guides.
   2. Guides: Replaceable vinyl strip on guides sealing against both sides of curtain.
   3. Lintel Seal: Double brush seal with EPDM sandwiched between the two brush seals at door header to impede air flow.
   4. Hood: Neoprene/rayon baffle to impede air flow above coil.

2.05 OPERATION

A. Manual ControlGard Chain Hoist: Provide chain hoist operator with endless steel chain, chain pocket wheel and guard, geared reduction unit, and chain keeper secured to guide. Chain hoist to include integral brake mechanism that will immediately stop upward or downward travel and maintain the door in a stationary position when the hand chain is released by the user.

2.06 ACCESSORIES

A. Locking:
   1. Padlockable chain keeper on guide. (Manual Chain operated.)

B. Trim Package: Minimum 16 gauge powder coated steel to match guides.

C. Strip Door Bracket: Assembly integral to coiling door to hang strip door on interior of building. Contact factory for sizes greater than 12 feet-0 inches by 12 feet-0 inches. Powder coated finish to match coiling door.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions: Examine openings to receive overhead coiling doors and verify:
   1. Dimensions and correctness of backing or support conditions.
   2. Absence of defects that would adversely affect installation.

B. Do not start the work until unsatisfactory conditions are corrected.

C. Examine substrates upon which work will be installed and verify conditions are in accordance with approved shop drawings.

D. Coordinate with responsible entity to perform corrective work on unsatisfactory substrates.

E. Commencement of work by installer is acceptance of substrate.

3.02 INSTALLATION

A. General: Install door and operating equipment with necessary hardware, anchors, inserts, hangers and supports in strict accordance with manufacturer's installation instructions, unless specifically otherwise indicated on the Drawings.

B. Install assemblies plumb, square, and level at their proper elevations and in their proper planes.

C. Securely anchor assemblies to interior face of openings, in manner that provides full opening clearance, perfectly aligned and adjusted for smooth operation.

D. Interface with other products: Separate or isolate dissimilar metals with neoprene gaskets, sleeves, or washers, or with an acceptable coating.

3.03 ADJUSTING

A. Following completion of installation, including related work by others, lubricate, test, and adjust doors for ease of operation, free from warp, twist, or distortion.

B. Verify that door assemblies are securely anchored to structure, guides are perfectly aligned, and doors are adjusted for smooth operation.

C. Upon completion of installation, ensure doors are free from warp, twist, or distortion and are lubricated and properly adjusted to operate freely.

3.04 CLEANING

A. Clean surfaces soiled by work as recommended by manufacturer.

B. Remove surplus materials and debris from the site.

C. Replace any damaged or otherwise disfigured doors with new prior to final acceptance.

3.05 DEMONSTRATION

A. Provide Owner's maintenance employees with a minimum of 8 hours of maintenance instruction.

3.06 PROTECTION

A. Protect installed doors from damage until final acceptance.

END OF SECTION

SECTION 08710

DOOR HARDWARE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Door hardware.

1.02 REFERENCES

A. Builders Hardware Manufacturers Association (BHMA):
   1. A156.1 - Butts and Hinges.156.2 - Bored and Preassembled Locks and Latches.
   2. A156.3 - Exit Devices.
   3. A156.4 - Door Controls.
   4. A156.13 - Mortise Locks and Latches.
   5. A156.14 - Sliding and Folding Door Hardware.
   6. A156.16 - Auxiliary Hardware.
   7. A156.18 - Materials and Finishes.
   8. A156.23 - Electromagnetic Locks.
   9. A156.26 - Continuous Hinges.
   10. A156.31 - Electric Strikes and Frame Mounted Actuators.
   11. A156.36 - Auxiliary Locks.

B. International Building Code (ICC):
   1. A117.1 - Accessible and Usable Buildings and Facilities.

C. National Fire Protection Association (NFPA):
   1. 80 - Fire Doors and Windows.
   2. 105 - Installation of Smoke Door Assemblies.
   3. 252 – Standard Methods of Fire Tests of Door Assemblies.

D. Underwriters Laboratories, Inc. (UL):
   1. 10C - Positive Pressure Fire Tests of Door Assemblies.
   2. 1784 - Standard for Air Leakage Tests of Door Assemblies and Other Opening Protectives.

1.03 SUBMITTALS

A. Product data:
   1. Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.
   2. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

B. Hardware schedule:
   1. Include references to Engineer's hardware group number, door type designations, locations, other pertinent data, and manufacturer names or suitable abbreviation opposite items scheduled.

C. Samples: Include for each different type and manufacturer for review of finish.

D. Construction key distribution list: Submit upon Owner's request.

E. Templates:
   1. Furnish hardware templates to fabricators of doors, frames, and other work to be factory-prepared for hardware.
   2. Check shop drawings of other work to confirm that adequate hardware backing is available.

F. Project record documents: Include corrected hardware schedule.

G. Operating and Maintenance Manuals:
   1. Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation.
   2. As specified in Section 01782 - Operation and Maintenance Manuals.

1.04 REGULATORY REQUIREMENTS

A. Provide hardware for fire-resistive rated openings that complies with UL and listed by UL.

B. Provide State Fire Marshall approved fire-rated cross-corridor assemblies and panic devices.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver hardware where directed in unopened packages with items packed separately, complete and ready for installation with necessary fittings, trim, fasteners, and accessories.

B. Provide packages bearing the manufacturers' labels with each item or group of items identified according to the accepted hardware schedule.

1.06 QUALITY ASSURANCE

A. Certified products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

B. Installer qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

C. Door hardware supplier qualifications:
   1. Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project.
   2. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity.
   3. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

D. Source limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
   1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.

E. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

F. Pre-submittal conference:
   1. Conduct coordination conference in compliance with requirements in Section 01312 - Project Meetings with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
   2. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products.
   3. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
   4. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
   5. Review sequence of operation narratives for each unique access controlled opening.
   6. Review and finalize construction schedule and verify availability of materials.
   7. Review the required inspecting, testing, commissioning, and demonstration procedures.

1.07 MAINTENANCE

A. Require lockset manufacturers to deliver permanent removable cylinder cores and keys and minimum 2 extractor keys to Owner directly.

1.08 SCHEDULING AND SEQUENCING

A. Upon receipt of accepted hardware schedule, coordinate accepted hardware schedule, templates, reinforcing units, and template instructions to door and frame sections.

B. Restrict distribution of construction keys to superintendents and foremen. Maintain record of persons who have received keys on construction distribution list.

1.09 MAINTENANCE TOOLS AND INSTRUCTIONS

A. Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

1.10 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.
   1. Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:
      a. Structural failures including excessive deflection, cracking, or breakage.
      b. Faulty operation of the hardware.
      c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
      d. Electrical component defects and failures within the systems operation.

B. Special warranty:
   1. Duration for electromechanical door hardware: 2 years.
   2. Duration for standard duty cylindrical (bored) locks and latches: 5 years.
   3. Duration for exit hardware: 5 years.
   4. Duration for mortise locks and latches: 10 years.
   5. Duration for manual overhead door closer bodies: 10 years.
   6. Duration for heavy duty floor closers: 10 years.

PART 2 PRODUCTS

2.01 GENERAL

A. Door hardware includes, but is not necessarily limited to, the following:
   1. Mechanical door hardware.
   2. Electromechanical door hardware.
   3. Automatic operators.
   4. Cylinders.

2.02 FASTENERS

A. Types:
   1. To concrete, marble, or masonry: Machine screws and flush shells.
   2. To wood: Wood screws.
   3. On gypsum board or plaster: Screws of sufficient length to provide solid connection to framing or backing behind gypsum board or plaster.
   4. To mineral and hollow core doors: Hex bolts.
   5. Of exit devices to doors: Thru-bolts, unless otherwise specified.

B. Screws exposed: Phillips-head type, full-threaded screws, not combination type.

C. Sizes: Suitable for heavy use.

D. Finish: Stainless steel, unless otherwise required to match material and hardware finish.

2.03 HANGING DEVICES

A. Hinges: BHMA A156.1 certified butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.
   1. Quantity: Provide the following hinge quantity:
      a. 2 Hinges: For doors with heights up to 60 inches.
      b. 3 Hinges: For doors with heights 61 to 90 inches.
      c. 4 Hinges: For doors with heights 91 to 120 inches.
      d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
      e. Hinge size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
         a. Widths up to 3 feet 0 inches: 4-1/2 inches standard or heavy weight as specified.
         b. Sizes from 3 feet 1inch to 4 feet 0 inched: 5inches standard or heavy weight as specified.
      f. Hinge weight and base material: Unless otherwise indicated, provide the following:
         a. Exterior doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
         b. Interior doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
      g. Hinge options: Comply with the following:
         a. Non-removable pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.
      h. Manufacturers: The following or equal:
         a. Ives (IV).
   2. Power transfer devices:
      a. Door hardware security is specified in Section 16752 - Security.
      b. Electrified quick connect continuous geared transfer hinges:
         a) Provide electrified transfer continuous geared hinges with a 12 inch removable service panel cutout accessible without de-mounting door from the frame.
         b) Furnish with Molex™ standardized plug connectors with sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets.
         c) Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies.
         d) Wire nut connections are not acceptable.
         e) Manufacturers: The following or equal:
            (1) Ives (IV) – TWP-CON Option.

2.04 MECHANICAL LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed. Locksets are to be manufactured with a corrosion resistant steel case and be field-reversible for handing without disassembly of the lock body.
   1. Manufacturers: One of the following or equal:
      a. Corbin Russwin Hardware (RU) – ML2000 Series.
      b. Sargent Manufacturing (SA) – 8200 Series.
      c. Schlage (SC) – L9000 Series.

B. Cylindrical Locksets, Grade 1 (Heavy Duty): BHMA A156.2, Series 4000, Operational Grade 1 Certified Products Directory (CPD) listed.
   1. Furnish with solid cast levers, standard 2-3/4 inch backset, and 1/2 inch (3/4 inch at rated paired openings) throw brass or stainless steel latch bolt.
   2. Locks are to be non-handed and fully field reversible.
   3. Manufacturers: One of the following or equal:
      a. Corbin Russwin Hardware (RU) - CL3300 Series.
      b. Sargent Manufacturing (SA) - 10 Line.
      c. Schlage (SC) - ND Series.
      d. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows unless otherwise specified.

2.05 ELECTROMECHANICAL LOCKING DEVICES

A. Electromechanical Mortise locksets, Grade 1 (heavy duty): Subject to same compliance standards and requirements as mechanical mortise locksets, electrified locksets to be of type and design as specified below.
   1. Electrified Lock Options:
      a. Where indicated in the Hardware Sets, provide electrified options including: Outside door lock/unlock trim control, latchbolt and lock/unlock status monitoring, deadbolt monitoring, and request-to-exit signaling.
      b. Support end-of-line resistors contained within the lock case.
      c. Unless otherwise indicated, provide electrified locksets standard as fail secure.
   2. Energy efficient design:
      a. Provide lock bodies which have a holding current draw of 15mA maximum and can operate on either 12 or 24 volts.
      b. Locks are to be field configurable for fail safe or fail secure operation.
   3. Manufacturers: One of the following or equal:
      a. Schlage (SC) - L9000 EU Series.
      b. Corbin Russwin Hardware (RU) - ML20900 Series.
      c. Sargent Manufacturing (SA) - 8200 Series.

2.06 CONSTRUCTION KEYING

A. Type: Removable core system.

2.07 CLOSERS

A. Manufacturers:
   1. Features:
      a. Heavy-duty.
      b. Non-handed and non-sized.
      c. Adjustable spring power from size 1 through 4.
      d. Hold open feature where specified.
   2. One of the following or equal:
      a. LCN, Model 4040XP Series.

B. Type: Full rack and pinion type with steel spring and non-gumming, non-freezing hydraulic fluid.

C. Controls: Separate set for regulating sweep speed, latch speed, backcheck and backcheck positioning, or where schedules, spring power.

D. Sizes: As recommended by accepted manufacturer.

E. Covers: Plastic, capable of being spray painted to match adjacent hardware finishes, unless otherwise specified.

F. Narrow frame provisions: Drop plates.

G. Effort to operate: As follows:
   1. Exterior: Maximum 8-1/2 pounds.
   2. Interior: Maximum 5 pounds.
   3. Fire-resistive rated doors: Maximum 15 pounds.

H. Adjust closers in accordance with manufacturer's directions for size of door.

2.08 EXIT DEVICES

A. Lever design:
   1. Manufacturers: The following or equal:
      a. Von Duprin, Lever Model 06.

B. Rim device, non-fire resistive rated:
   1. Manufacturers: One of the following or equal:
      a. Von Duprin Inc., Model Series 98.
      b. Sargent Essex Ind., Model Series 8800.

C. Rim device, fire-resistive rated:
   1. Manufacturers: One of the following or equal:
      a. Von Duprin Inc., Model Series 98-F.
      b. Sargent Essex Ind., Model Series 12-8800.

D. Material: As scheduled.

E. Non-contact magnetic door switches are specified in Section 16752 - Security.

2.09 MISCELLANEOUS DOOR HARDWARE

A. Flush bolts and surface bolts:
   1. BHMA A156.3 and A156.16, Grade 1, certified.
      a. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately 6 feet from the floor.
      b. Furnish dust proof strikes for bottom bolts.
      c. Surface bolts to be minimum 8 inches in length, UL listed for labeled fire doors, and UL listed for windstorm components where applicable.
      d. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
      e. Manufacturers: One of the following or equal:
         a. Ives (IV).
         b. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
         c. Trimco (TC).

B. Kick plates:
   1. As scheduled, 0.050-inch thick, beveled edges, 10 inches high, 1-1/2 inches narrower than single doors, 1 inch narrower than leaf of door pairs.
   2. Manufacturers: One of the following or equal:
      a. Ives.
      b. Trimco.

C. Architectural seals:
   1. General:
      a. Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets.
      b. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated.
      c. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.
   2. Smoke labeled gasketing:
      a. Assemblies in accordance with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing in accordance with UL 1784.
      b. Provide smoke labeled perimeter gasketing at all smoke labeled openings.
   3. Fire labeled gasketing:
      a. Assemblies in accordance with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing in accordance with UL 10C.
      b. Provide intumescent seals as indicated to meet UL 10C, and NFPA 252.
   4. Manufacturers: One of the following or equal:
      a. National Guard Products (NG).
      b. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).
      c. Zero (ZE).

D. Thresholds:
   1. As scheduled, extruded aluminum, maximum 1/2-inch high, maximum slope of 1 foot in 2 feet.
   2. Manufacturers: One of the following or equal:
      a. National Guard Products Inc.
      b. Pemko Mfg. Co.

E. Dustproof strike:
   1. As scheduled.
   2. Manufacturers: One of the following or equal:
      a. Ives.
      b. Trimco.

F. Coordinator with filler bar:
   1. As scheduled, non-handed, series type length as required for door sizes indicated, complete with filer lengths as required, with mounting brackets and carry bars when required for proper operation; steel with manufacturer's standard prime finish capable of receiving painted finish.
   2. Manufacturers: One of the following or equal:
      a. Glynn-Johnson Coordinators, Model COR Series.
      b. Ives, Door Co-Ordinator, Model 900 Series.

G. Door bottoms:
   1. As scheduled, extruded aluminum with vinyl insert, surface mounted, length equal to door width minus 2 inches, automatic, recessed in bottom of door.
   2. Manufacturers: One of the following or equal:
      a. Pemko.
      b. Reese.

H. Astragals:
   1. As specified in Section 08110 - Hollow Metal Doors.

I. Silencers:
   1. As scheduled, pneumatic gray rubber.
   2. Manufacturers: One of the following or equal:
      a. Trimco.
      b. Ives.
      c. Rockwood.

2.10 FINISHES

A. Brass and bronze: BHMA A156.18 626 (US26D), satin chrome.

B. Steel: BHMA A156.18 652 (US26D), satin chrome.

C. Stainless steel: BHMA A156.18 630 (US32D), satin stainless steel.

D. Aluminum: BHMA A156.18 628 (US28).

E. Plastic closer covers: Spray paint to match typical door hardware finish.

F. Metal closer covers: Plate covers to match typical door hardware finish.

G. Electromagnetic hold open devices: Manufacturer's standard brushed zinc finish.

PART 3 EXECUTION

3.01 EXAMINATION

A. Inspect doors and door frames for damage or defects and examine hardware for compatibility with receiving conditions and suitable to intended use.

B. Verify that required wall backing has been installed.

3.02 INSTALLATION

A. Install finish hardware in accordance with manufacturer's templates and instructions.
   1. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
   2. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: Hanging devices; locking devices; closing devices; and seals.

B. Accurately and properly fit hardware.

C. Securely fasten fixed parts for smooth, trouble-free, non-binding operation.

D. Fit faces of mortise parts snug and flush.

E. Ensure that operating parts move freely and smoothly without binding, sticking, or excessive clearance.

F. Mounting heights:
   1. Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
   2. Standard steel doors and frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
   3. Wood doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
   4. Where indicated to comply with accessibility requirements, in accordance with ICC A117.1 "Accessibility Guidelines for Buildings and Facilities."
   5. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

G. Retrofitting:
   1. Install door hardware to comply with manufacturer's published templates and written instructions.

2. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Section 09960 - High-Performance Coatings.
3. Do not install surface-mounted items until finishes have been completed on substrates involved.

H. Protection:
1. Protect door hardware from damage or marring of finish during construction, use strippable coatings, removable tapes, or other acceptable means.
2. Ensure door hardware displays no evidence of finish paint after final building cleanup with exception of prime-coated door hardware installed for finish painting.

I. Latch guard and dead bolts: Install so that bolts automatically engage in keeper, whether activated by closer or by manual pressure.

J. Closers:
1. Mount on opposite sides of corridors or vestibules, except at exterior doors.
2. Mount for 180-degree swing wherever possible.
3. Mount with drop plates at narrow top rail doors.
4. Adjust to operate noiselessly and evenly.
5. Have closer manufacturer regulate closers prior to final acceptance of project.

K. Kick plates: Screw on push side of doors, unless otherwise indicated on the Drawings.

L. Gasketing: Mount to provide complete contact between door and frame, finished floor, or both; and weathertight enclosure.

M. Thresholds:
1. Install immediately before inspection for Substantial Completion or protect from heavy traffic damage during construction.
2. Cope to fit door frame profile and drill to suit required flush bolts and panic bolts.
3. Unless indicated on the Drawings to be set in grout, set in double bead of sealant, tightly fit at jambs, and make waterproof.
4. Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Section 07900 - Joint Sealants.
5. Fasten to concrete slab with 5/16-inch stainless steel flat head countersunk machine screws and concrete anchors at 8-inch centers.

N. Silencers:
1. Insert into predrilled holes in frames.

O. Storage:
1. Provide a secure lock up for hardware delivered to the project but not yet installed.
2. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.03 DOOR HARDWARE SETS

A. They are a guideline only and should not be considered a detailed hardware schedule.

B. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

C. Quantities listed are for each pair of doors, or for each single door.

D. The Supplier is responsible for handing and sizing all products.

E. Where multiple options for a piece of hardware are given in a single line item, the Supplier shall provide the appropriate application for the opening.

F. Provide a list of Manufacturer's Abbreviations.

3.04 CONSTRUCTION KEYING

A. Insert construction cores in cylinders of exterior doors, and doors requiring security and access for workman, unless otherwise directed by the Engineer.

3.05 ADJUSTING

A. Examine hardware in place for complete and proper installation. Lubricate bearing surfaces for proper function.

B. Replace, rework or otherwise correct defective door hardware, including incorrect hand or function.

3.06 CLEANING

A. Remove protective materials and devices and thoroughly clean exposed surfaces of hardware.

B. Check for surface damage prior to final cleaning for acceptance of project.

3.07 HARDWARE SCHEDULE

A. While the Hardware Schedule is intended to cover all doors and other moveable parts of the building and establish a type and standard of quality, it shall be the specific duty and responsibility of the finish hardware supplier to examine the Drawings and Specifications and furnish proper hardware for all openings.

3.08 HARDWARE GROUPS

A. Door hardware security is specified in Section 16752 - Security.

B. Campus Oaks ASR Well (13):

END OF SECTION

SECTION 08910

LOUVERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. A variety of stationary, operable, and combination louvers. Also, includes stationary door louvers.

1.02 REFERENCES

A. Air Movement and Control Association International, Inc. (AMCA):
   1. 500-L - Laboratory Methods of Testing Louvers for Rating.
   2. 500-D - Laboratory Methods of Testing Dampers for Rating.
   3. 511 - Certified Ratings Program - Product Rating Manual for Air Control Devices.

B. ASTM International (ASTM):
   1. D4385 - Standard Practice for Classifying Visual Defects in Thermosetting Reinforced Plastic Pultruded Products.

C. Testing Application Standard (TAS):
   1. 100A - Standard Test Procedure for Wind and Wind Driven Rain Resistance and/or Increased Windspeed Resistance of Soffit Ventilation Strip and Continuous or Intermittent Ventilation System Installed.

D. Underwriters Laboratories, Inc. (UL).

1.03 TERMINOLOGY

A. The words and terms listed below, are not defined terms that require initial capital letters, but, when used in this Section have the indicated meaning.
   1. Drainable-blade louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.

1.04 SUBMITTALS

A. As specified in Section 15500 - Common Work Results for HVAC.

1.05 QUALITY ASSURANCE

A. Provide louvers with the following, unless otherwise specified:
   1. AMCA certification and rating in accordance with AMCA 511 for air performance and water penetration.

PART 2 PRODUCTS

2.01 GENERAL

A. Louver types: As indicated on the Drawings.
   1. Identify louvers with a letter L followed by a number referring to a louver type in this Section.
   2. Identify individual louver size and airflow rates.

B. Accessories:
   1. Provide installation clips and flanged or jamb-mounting styles suitable for the mounting locations.
   2. As indicated on the Drawings.
   3. Provide extended sills for louvers indicated as installed recessed from the exterior wall surface.
   4. Provide stainless steel fasteners unless noted otherwise.
   5. Corrosion protection.
   6. Provide gravity damper for outside air intake and exhaust louvers, unless noted otherwise.

C. Protective coatings for aluminum in contact with concrete or masonry:
   1. Manufacturers: One of the following or equal:
      a. Koppers Co., Inc.
      b. Porter Coatings.
      c. Tarmastic 100.

2.02 DESIGN AND PERFORMANCE REQUIREMENTS

A. Performance: In accordance with AMCA 511 when tested in accordance with AMCA 500.

B. Designed for 20 pounds per square foot wind load.

C. Provide instrumentation and controls to meet the equipment operating requirements as specified in Section 15936 - Instrumentation and Control Devices for HVAC.

D. Louvers for severe windstorm applications:
   1. Shall resist the cyclic pressures, static pressures, and missile impact loads in accordance with:
      a. Applicable building codes as specified in Section 01410 - Regulatory Requirements.
   2. Shall resist wind driven rain in accordance with:
      a. TAS 100A:
         1) Louvers shall not require the use of a manual damper to meet the certification requirements.

2.03 STATIONARY ACOUSTICAL LOUVERS, TYPE L-3

A. Manufacturers: One of the following or equal:
   1. Airolite Co, Model T9112.

2. Greenheck, Model AFJ-120.
3. Ruskin Co., Model ACL1245.

B. Requirements:
1. Type: Stationary acoustical louver with louver depth as indicated on the Drawings.
2. Material: Minimum 0.080-inch thick extruded or formed aluminum for frame and blades.
3. Frame: 12-inch deep formed aluminum frame with 0.100-inch nominal wall thickness.
4. Blades: 0.080-inch formed aluminum exterior surface; blades positioned at 45 degree angle and spaced approximately 6 inches center to center.
5. Screens: 3/4-inch mesh by 0.051-inch aluminum or stainless steel bird screen with removable frame.
6. Pressure drop: Maximum 0.13-inch water column pressure drop at 1,000 feet per minute free area velocity for intake louvers.
7. Free area: Minimum 13 percent.
8. Finish: Mill.
9. Acoustical performance: Attenuation at least as follows for the depth of louver indicated:

	Attenuation (dB)			
Frequency (Hertz)	**4-inch Depth**	**6-inch Depth**	**8-inch Depth**	**12-inch Depth**
125	11	8	11	8
250	9	9	11	14
500	11	12	13	17
1,000	15	16	19	22
2,000	17	20	21	21
4,000	16	18	20	21
8,000	16	18	23	20

PART 3 EXECUTION

3.01 EXAMINATION

A. Inspect areas to receive louvers.
1. Notify the architect of conditions that would adversely affect the installation or subsequent utilization of the louvers.
2. Do not proceed with installation until unsatisfactory conditions are corrected.

3.02 PREPARATION

A. Clean opening thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install louvers at locations indicated on the Drawings and in accordance with manufacturer's instructions.

B. As specified in Section 15500 - Common Work Results for HVAC.

3.04 FIELD QUALITY CONTROL

A. Test equipment performance and balance equipment as specified in Section 15954 - Testing, Adjusting, and Balancing for HVAC.

END OF SECTION

SECTION 09250

GYPSUM BOARD

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Gypsum board and associated accessories.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C475 - Standard Specification for Joint compounds and Joint Tape for Finishing Gypsum Board.
   2. C514 - Standard Specification for Nails for the Application of Gypsum Wallboard.
   3. C557 - Standard Specification for Adhesives for Fastening Gypsum Wallboard in Wood Framing.
   4. C840 - Standard Specification for Application and Finishing of Gypsum Board.
   5. C919 - Standard Practice for Use of Sealants in Acoustical Applications.
   6. C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for the Application of Gypsum Panel Products or Metal Plaster Based to Wood Studs or Steel Studs.
   7. C1047 - Standard Specification for Accessories for Gypsum Wallboard and Gypsum Veneer Base.
   8. C1396 - Standard Specification for Gypsum Board.
   9. E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. Gypsum Association:
   1. GA 216 - Application and Finishing of Gypsum Board.

C. Underwriters Laboratories, Inc. (UL).

1.03 SUBMITTALS

A. Product Data: Include manufacturer's instructions for sealing openings, penetrations, and cut edges of water-resistant gypsum board.

B. Samples: Include texture samples on minimum 6 inch square specified materials.

1.04 QUALITY ASSURANCE

A. Manufacturer qualifications: Provide gypsum board products from single manufacturer or from manufacturers recommended by manufacturer of gypsum board.

B. Regulatory requirements: When indicated, provide UL listed and labeled fire-rated components or by other recognized rating service.

C. Pre-installation conference: Convene with affected entities to review coordination and sequencing of construction to ensure that everything that will be concealed by gypsum board has been installed, and that chases, openings, supplementary framing and blocking have been completed.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store gypsum board under cover, stacked flat, off floor.

B. Store adhesives in dry place, protected against freezing.

1.06 ENVIRONMENTAL REQUIREMENTS

A. Maintain uniform room temperature between 55 and 70 degrees Fahrenheit in cold weather during application of wallboard and joint treatment until joint treatment is completely dry or building is occupied.

B. Provide adequate ventilation.

PART 2 PRODUCTS

2.01 GYPSUM BOARD

A. Regular board:
   1. ASTM C1396; 5/8 inches thick; tapered edge; Type X where required for fire rating.

B. Moisture resistant board:
   1. ASTM C1396; 5/8 inches thick; tapered edge; Type X where required for fire rating.

2.02 ACCESSORIES

A. Square corner bead reinforcement:
   1. Manufacturers: One of the following or equal:
      a. USG, Dur-A-Bead.
      b. Gold Bond National Gypsum Co., Wallboard corner bead with 1-1/4 inch flanges.

B. Metal casing bead:
   1. Manufacturers: One of the following or equal:
      a. USG, No. 200A Metal Trim.
      b. Gold Bond National Gypsum Co., No. 100 wall board casing.

C. Control joints:
   1. Manufacturers: One of the following or equal:
      a. USF, No. 093.
      b. Gold Bond National Gypsum Co., 0.093 zinc control joint.

2.03 FASTENERS

A. Screws for wood framing: ASTM C1002, Type W, minimum 1-1/4 inches.

B. Nails: ASTM C514; minimum 1-1/4 inch long, 12-1/2 gauge, 1/4 inch diameter head.

2.04 LAMINATING ADHESIVES

A. Gypsum board to metal framing:
   1. Manufacturers: One of the following or equal:
      a. USG, Durabond® 200 or 300.
      b. Gold Bond National Gypsum Co., Sta-Smooth setting type compound.

2.05 FINISHING MATERIALS

A. Moisture or water resistant sealant:
   1. Manufacturers: One of the following or equal:
      a. USG, Sheetrock W/R Sealant.
      b. Gold Bond National Gypsum Co.

B. Joint compound and tape: ASTM C475:
   1. Manufacturers: One of the following or equal:
      a. USG, Sheetrock joint system consisting of Sheetrock Reinforcement Tape and Sheetrock All Purpose Ready Mixed Compound for embedding, fill, and finishing.
      b. Gold Bond National Gypsum Co., Sta-Smooth HS tape and Sta-Smooth joint compound.

C. Texturing compound for walls:
   1. Manufacturers: One of the following or equal:
      a. USG, Spray Texture Finish.
      b. Gold Bond National Gypsum Co., Perfect Spray EM, orange peel finish.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install gypsum board systems in accordance with ASTM C840 and GA 216.

3.02 GYPSUM BOARD INSTALLATION ON WALLS

A. Cut gypsum wallboard by scoring and breaking or by sawing, working from face side.

B. Use boards of maximum practical length to minimize end joints.

C. Apply board with long dimension at right angles to framing or furring members with ends on studs. Attach upper boards first.

D. Bring boards into contact with each other but do not force into place.

E. Do not place butt ends against tapered edges.

F. Stagger end joints. Locate joint on opposite sides of partition on different studs.

G. Do not align joints with edges of openings, except for control joints. Cut board neatly to fit around openings. Locate joints at least 8 inches from openings. Center vertical end joints above openings.

H. Extend board to within 1/4 inch of floor.

I. Install fasteners proceeding from center portion of gypsum board toward edges and ends.

J. On non-fire rated walls, screw board to framing at maximum 12 inches on center in field of board at bearings and along abutting edges. Nail board to framing at maximum 8 inches on center in field at bearings and along edges.

K. On fire rated walls, nail or screw board to framing at maximum 8 inches on center in field of board at bearings and along edges, unless indicated otherwise by UL assembly requirements.

L. Drive fasteners home with maximum 1/32 inch dimple in wall surface. Avoid breaking face paper of wallboard. Remove improperly driven nails.

M. Thoroughly seal openings, penetrations and cut edges of water-resistant wallboard in accordance with manufacturer's recommendations.

N. Double stud partitions:
   1. Install strips of gypsum board 12 inches wide and of length to span partition depth by screwing to webs of opposing studs.
   2. Space strips approximately 42 inches on center.

O. Double layer partitions:
   1. Install first layer vertically then second layer horizontally.
   2. Stagger joints between layers and on opposite sides as far as is practical.

P. Sound control partitions:
   1. Apply full running beads of acoustical sealant at perimeter of sound control partitions.
   2. Apply acoustical sealant with air operated equipment.
   3. Inspect joints to receive sealant to be sure they are clean, dry and free of dust, dirt and other foreign matter.
   4. Seal around light boxes, outlets, and switches, with continuous bead of sealant.
   5. Remove excess of sealant or smears as construction progresses.

Q. Perimeter relief where non-load bearing gypsum board partitions abut structural decks or ceilings or vertical structural elements:
   1. Allow not less than 1/4 inch, nor more than 1/2 inch gap between gypsum board and structure.

2. Finish edges of board face layer with metal casing bead and caulk space between casing bead and structure with continuous sealant bead.
3. Attach board to studs not less than 1/2 inch below bottom edge of ceiling track flanges and to first stud adjacent to vertical tracks. Do not attach boards directly to tracks.

3.03 GYPSUM BOARD INSTALLATION ON FRAMED OR FURRED CEILINGS

A. Apply board with long dimension at right angles to framing or furring members with abutting ends and edges occurring over flanges.

B. Use board to maximum practical length to minimize end joints.

C. Cut gypsum board neatly to fit around openings.

D. Neatly fit a stagger end joints.

E. Nail field of boards at bearing, and along abutting edges at maximum 7 inches on center. Drive nails up to form slight dimple in board.

F. Screw field of boards, at bearings, and along abutting edges at maximum of 8 inches on center.

3.04 INSTALLATION OF CASING AND CORNER BEADS

A. Install casing beads wherever board terminates against dissimilar materials or where edges of board are exposed. Provide:
1. Type with face flange to receive joint compound except where semi-finishing is indicated.
2. L-type trim where gypsum board is tightly abutted to other construction.
3. Special kerf-type where other construction is kerfed to receive long leg of L-type trim.
4. U-type trim where edge is exposed, revealed, gasketed, or sealant filled, including expansion joints.

B. Install metal corner bead reinforcement at outside corners.

C. Where board partitions intersect masonry walls:
1. Provide control joints no less than 1/4 inch nor more than 3/8 inch wide between board and masonry.
2. Finish exposed edges of board with square-nose metal casing bead and caulk space between casing bead and masonry with continuous sealant.

D. Secure corner beads with same fasteners used for applying wallboard, spaced 8 inches maximum apart on each flange of bead with nails opposite.

3.05 INSTALLATION OF CONTROL JOINTS

A. Discontinue gypsum board at control joints.

B. In ceiling construction, discontinue gypsum board and framing at control joints.

C. In partitions, discontinue gypsum board and install framing studs on each side of control joints.

D. Position control joints to intersect light fixtures, air diffusers, door openings and other areas of stress concentration.

E. Isolate gypsum board construction at following locations:
   1. Where partitions or ceilings of dissimilar construction meet and remain in same plane.
   2. Where wings of "L," "U," and "T" shaped ceiling areas are joined.
   3. When expansion or control joints occur in base building construction.

F. Space control joints at following maximum distances:
   1. Partitions: 30 feet in either direction.
   2. Interior ceilings with perimeter relief: 50 feet in either direction.
   3. Interior ceilings without perimeter relief: 30 feet in either direction.
   4. Exterior ceilings: 30 feet in either direction.

G. Extend control joints to ceiling from both corners of door frames where control joints are required.

H. Cut end joints square, align to provide neat fit.

I. Staple control joint to board at maximum 6 inches on center in each flange.

3.06 JOINT COMPOUND

A. Mix joint and topping compound in accordance with instructions on package.

B. Apply thin layer of joint compound uniformly approximately 4 inches wide over each joint.

C. Center tape over joint and embed into compound, leaving sufficient joint compound under tape to provide proper bond.

D. Reinforce wall angles and inside corner angles with tape folded to conform to angle and embedded into compound.

E. Apply skim coat of compound immediately after embedding tape.

F. After compound is thoroughly dry, cover tape with coat of joint compound or topping compound. Spread over tape and approximately 3 inches beyond edges of tape. Feathered out edge.

G. After compound is thoroughly dry, cover tape with coat of joint compound or topping compound. Spread over tape and approximately 3 inches beyond edges of previous coat. Feathered out edge.

H. Coat inside corners with minimum of one coat of joint compound or topping compound with edges feathered out.

I. Apply 3 coats of compound to nail and screw head dimples.

J. Conceal flanges of wallboard corner beads with minimum of 2 coats of compound:
   1. Apply joint compound for first coat.
   2. Apply joint compound or topping compound for second coat.
      a. Feathered out second coat approximately 9 inches on both sides of exposed metal nose of corner bead.

K. Clean excess compound from board surface.

L. Sand coats as necessary after each application of compound has dried.
   1. Leave board uniformly smooth ready to receive texturing, to extent that after painting, board shows no distinguishable difference in appearance between taped and untapped surfaces.

3.07 TEXTURING

A. Verify that gypsum board surfaces have been primed in accordance with Section 09910 - Painting.

B. Clean surfaces of dust, dirt, and oil before application.

C. Mix and apply specified materials in accordance with manufacturer's recommendation to produce texture similar to accepted sample.

D. Apply orange peel, texture to interior walls.

E. Remove texture droppings or overspray from adjacent completed construction.

3.08 TOLERANCES

A. Offsets between planes of board faces: Maximum 1/16 inch.

B. Flatness: Maximum 1/8 inch in 96 inches.

C. Variation from plumb: Maximum 1/8 inch in 96 inches.

END OF SECTION

SECTION 09523

ACOUSTICAL PANELS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Acoustical panels and accessories:
   1. Acoustical wall and ceiling panels.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C514 - Standard Specification for Nails for the Application of Gypsum Board.
   2. C645 - Standard Specification for Nonstructural Steel Framing Members.
   3. C1002 - Standard Specification for Application and Finishing of Gypsum Board.
   4. E1264 - Standard Classification for Acoustical Ceiling Products.

1.03 SUBMITTALS

A. Product data: Include sound absorption data, cutting and fabrication, and installation details for panel systems.

B. Shop drawings: Include panel layout and mounting details:
   1. Indicate panel layout; show locations of mechanical grills, lighting, access panels, sprinkler heads, and other items affecting ceiling installation.

C. Test reports: Results of sound absorption coefficient testing by independent acoustical laboratory.

D. Manufacturer's installation instructions: Including installation instructions for suspended grid system and adhesives.

E. Samples:
   1. Submit full range of manufacturer's standard colors for color selection.
   2. Submit 12 inches square samples for each type and size acoustical unit required.
   3. Submit sample of installation system: 1 full unit.

1.04 SITE CONDITIONS

A. Deliver panels when building is closed in and in cold seasons, heated.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Performance requirements: Noise Reduction Coefficient (NRC) of minimum 85, minimum sound absorption coefficient of 2 by 8 foot panels mounted on 1-1/2 inch furring with insulation at following octave band center frequencies:
   1. 125 hertz: 0.24.
   2. 250 hertz: 0.57.
   3. 500 hertz: 1.17.
   4. 1,000 hertz: 0.87.
   5. 2,000 hertz: 0.93.
   6. 4,000 hertz: 0.87.

2.02 PERFORATED ACOUSTICAL METAL WALL PANELS

A. Manufacturer: One of the following or equal:
   1. Eckel Industries, Inc., Eckoustic Functional Panels.

B. Metal facing: 0.032 inches minimum; coated aluminum, ribbed to provide impact resistance.

C. Perforation ratio: Not less than 23 percent.

D. Panel size: 30 by 96 inches.

E. Absorber:
   1. Fiberglass or mineral wool wrapped in heat-sealed polyethylene sheet for indoor applications.
   2. Polyethylene thickness 1.5 mils.
   3. Perforation ratio 10 percent within 2 percent both sides.
   4. Blanket; semi rigid, not less than 2 inch, density of approximately 1.5 pounds per cubic foot.

F. Perforated metal facing shall be furred out on metals channels by 2 inches.

G. Mounting brackets: Minimum 4; Type 316 stainless steel.

H. Adsorption factors:

Frequency Band	125	250	500	1000	2000	4000	NRC
Wall Panel	0.34	1.11	1.48	1.15	0.74	0.56	1.10
	.031	.085	1.43	1.49	1.41	1.50	1.30

PART 3 EXECUTION

3.01 INSTALLATION

A. Install acoustical panels in accordance with manufacturer's instructions.

B. Anchor furring to concrete or masonry walls securely.
   1. Anchor horizontally at 12 inches above floor, at 24 inches on center, at ceiling, and vertically at ends.

C. Install insulation between furring.
   1. Hold insulation in place until installation of panels.

D. Place panels vertically on walls, perpendicular to direction of furring, with maximum 1/16-inch space between panels.

E. Paint nail or screw head white.
   1. Nail or screw panels to furring in manufacturer's recommended pattern.
   2. Countersink nails or screws 1/16 inch.

F. Do not cover columns and beams with panels.
   1. Hold panels back 2 inches from columns.

G. When panels require field cutting, make sharp and perpendicular cuts using jigs.

H. Make neat cutouts for pipes, supports, and other projections from wall.
   1. Install metal trim around perimeter of panels.
   2. Fasten trim to edge furring with aluminum nails.
   3. Miter corners.

3.02 SCHEDULE

A. Install wall panels as scheduled below:

Location	Coverage		
	Wall Panels	**Ceiling Panels**	**Total Treated Area**
ASR Well Building – Pump Room	90 percent of walls shown on plans	80 percent	TBD on as-built conditions
Notes: (1) Installation of acoustical panels is included as an allowance item.			

END OF SECTION

SECTION 09910

PAINTING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Field applied paints and coatings for normal exposures.
   2. Painting Accessories.

1.02 DEFINITIONS

A. Paints: Manufacturer's best ready-mixed coatings, except when field catalyzed, with fully ground pigments having soft paste consistency and capable of being readily and uniformly dispersed to complete homogeneous mixture, having good flowing and brushing properties, and capable of drying or curing free of streaks or sags.

B. Volatile Organic Compound (VOC): Content of air polluting hydrocarbons in uncured coating product measured in units of grams per liter or pounds per gallon.

1.03 SUBMITTALS

A. General: Submit as specified in Section 01330 - Submittal Procedures.

B. Shop drawings: Include schedule of where and for what use coating materials are proposed in accordance with requirements for Product Data.

C. Product data: Include description of physical properties of coatings including solids content and ingredient analysis, VOC content, temperature resistance, typical exposures and limitations, and manufacturer's standard color chips.

D. Samples: Include 8-inch square draw-downs or brush-outs of topcoat finish when requested. Identify each sample as to finish, formula, color name and number and sheen name and gloss units.

E. Manufacturer's instructions: Submit in accordance with requirements for Product Data. Include:
   1. Special requirements for transportation and storage.
   2. Mixing instructions.
   3. Shelf life.
   4. Pot life of material.
   5. Precautions for applications free of defects.
   6. Surface preparation.
   7. Method of application.
   8. Recommended number of coats.
   9. Recommended thickness of each coat.
   10. Recommended total thickness.

11. Drying time of each coat, including prime coat.
12. Required prime coat.
13. Compatible and non-compatible prime coats.
14. Recommended thinners, when recommended.
15. Limits of ambient conditions during and after application.
16. Time allowed between coats.
17. Required protection from sun, wind, and other conditions.
18. Touch-up requirements and limitations.

F. Submit notarized certificate that:
   1. All paints and coatings to be used on this project comply with the State of California Air Resources Board Rule 1113 VOC Regulations effective as of January 1, 2004.
   2. All paints and coatings to be used on this project comply with the VOC regulations of the State of California Air Management District in which the coatings will be used, effective January 1, 2004.

1.04 QUALITY ASSURANCE

A. Products: First line or best grade.

B. Materials for each paint system: By single manufacturer.

C. Applicator qualifications: Applicator of products similar to specified products with minimum 3 years of experience.

D. Regulatory requirements: Comply with by using paints that do not exceed governing agency's VOC limits or do not contain lead.

E. Field samples:
   1. Paint 1 complete surface of each color scheme to show colors, finish texture, materials, and workmanship.
   2. Obtain approval before painting other surfaces.

1.05 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products as specified in the Agreement and Contract RFP in Volumes 1 and 2.

B. Remove unspecified and unapproved paints from Project site immediately.

C. Deliver containers with labels identifying:
   1. Manufacturer's name.
   2. Brand name.
   3. Product type.
   4. Batch number.
   5. Date of manufacturer.
   6. Expiration date or shelf life.
   7. Color.
   8. Mixing and reducing instructions.

D. Store coatings in well-ventilated facility that provides protection from the sun weather, and fire hazards.
   1. Maintain ambient storage temperature between 45 and 90 degrees Fahrenheit, unless otherwise recommended by the manufacturer.

E. Take precautions to prevent fire and spontaneous combustion.

1.06 ENVIRONMENTAL CONDITIONS

A. Surface moisture contents: Do not paint surfaces that exceed manufacturer specified moisture contents, or when not specified by the manufacturer, the following moisture contents:
   1. Plaster and gypsum wallboard: 12 percent.
   2. Masonry, concrete and concrete block: 12 percent.
   3. Interior located wood: 15 percent.
   4. Concrete floors: 7 percent.

B. Do not paint or coat:
   1. Under dusty conditions.
   2. When light on surfaces measures less than 15 foot-candles.
   3. When ambient or surface temperature is less than 50 degrees Fahrenheit or unless manufacturer allow a lower temperature.
   4. When relative humidity is higher than 85 percent, unless manufacturer allows a higher relative humidity.
   5. When surface temperature is less than 5 degrees Fahrenheit above dew point.
   6. When surface temperature exceeds the manufacturer's recommendation.
   7. When ambient temperature exceeds 90 degrees Fahrenheit, unless manufacturer allows a higher temperature.
   8. Apply clear finishes at minimum 65 degrees Fahrenheit.

C. Provide fans, heating devices, or other means recommended by coating manufacturer to prevent formation of condensate or dew on surface of substrate, coating between coats and within curing time following application of last coat.

D. Provide adequate continuous ventilation and sufficient heating facilities to maintain minimum 50 degrees Fahrenheit for 24 hours before, during and 48 hours after application of finishes.

1.07 PROTECTION

A. Protect adjacent surfaces from paint and damage. Repair damage resulting from inadequate or unsuitable protection.

B. Furnish sufficient drop cloths, shields, and protective equipment to prevent spray or droppings from fouling surfaces not being painted and in particular, surfaces within storage and preparation area.

C. Place cotton waste, cloths, and material that may constitute fire hazard in closed metal containers and remove daily from site.

D. Remove electrical plates, surface hardware, fittings and fastenings, prior to painting operations.
   1. Carefully store, clean and replace on completion of painting in each area.
   2. Do not use solvent or degreasers to clean hardware that may remove permanent lacquer finish.

1.08 EXTRA MATERIALS

A. Extra materials: Deliver as specified in Section 01770 - Closeout Procedures. Include minimum 1 gallon of each type and color of coating applied:
   1. When manufacturer packages material in gallon cans, deliver unopened labeled cans as comes from factory.
   2. When manufacturer does not package material in gallon cans, deliver material in new gallon containers, properly sealed and identified with typed labels indicating brand, type, and color.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Paints: One of the following or equal:
   1. Carboline: Carboline.
   2. PPG Paints/PMC.
   3. Rustoleum: Rustoleum Corp.
   4. S/W: Sherwin-Williams Co.
   5. Tnemec: Tnemec Co.

B. Submit requests for substitutions as specified in the Agreement and Contract RFP in Volumes 1 and 2:
   1. Include certified ingredient analyses.
   2. Provide colors that match specified colors.

2.02 PRETREATMENT, PRIMERS, AND PRIMER-SEALERS

A. Aluminum primer:
   1. Manufacturers: One of following or equal:
      a. Carboline Co.: Carbocrylic 120.
      b. PPG: Pitt-Tech® Plus 4020 PF Interior/Exterior Primer/Finish, 4020PF.
      c. Sherwin-Williams Co.: DTM Wash Primer.

B. Concrete masonry filler/primer:
   1. Manufacturers: One of following or equal:
      a. Carboline Co.: Sanitile 100.
      b. PPG: Perma-Crete® Interior/Exterior Block & Masonry Surfacer/Filler, 4-100XI.
      c. Sherwin-Williams Co.: HD Block Filler, B42W46.
      d. Tnemec:
         1) Series 130, Envirofill.
         2) Series 180, Tneme-crete.

C. Concrete, porous, filler/primer:
   1. Manufacturers: One of following or equal:
      a. Carboline Co.: Sanitile 100.
      b. PPG: Perma-Crete® Interior/Exterior Block & Masonry Surfacer/Filler, 4-100XI.
      c. Sherwin-Williams Co.: HD Block Filler, B42W46.
      d. Tnemec:
         1) Series 130, Envirofill.
         2) Series 180, Tneme-crete.

D. Concrete, smooth, filler/primer:
   1. Manufacturers: One of following or equal:
      a. Carboline Co.: Sanitile 100.
      b. Carboline Co.: Carbocrylic 120.
      c. PPG:
         1) Perma-Crete® Interior/Exterior Block & Masonry Surfacer/Filler, 4-100XI.
         2) Seal Grip® Hydrosealer Exterior Bonding Primer/Sealer, 17-6001.
      d. Sherwin-Williams Co.:
         1) HD Block Filler, B42W46.
         2) Epoxy Masonry Tilt Primer White B42WW49.
      e. Tnemec: Series 180, Tneme-Crete.

E. Ferrous metal primer:
   1. Manufacturers: One of following or equal:
      a. Carboline Co.: Carboguard 890.
      b. PPG: PITT-GUARD® Rapid-Coat Direct-to-Rust Epoxy Mastic Coating, 95-245 Series.
      c. Sherwin-Williams Co.: Macropoxy 646.
      d. Tnemec: Series 104.

F. Galvanized metal surface pretreatment materials:
   1. Manufacturers: One of following or equal:
      a. Carboline Co.: Surface Cleaner 3.
      b. PPG: Duraprep® Concentrated Degreaser, Prep125.

G. Galvanized metal surface primer:
   1. Manufacturers: One of following or equal:
      a. Carboline Co.: Carboguard 890.
      b. PPG: PITT-GUARD® Rapid-Coat Direct-to-Rust Epoxy Mastic Coating, 95-245 Series Sherwin-Williams Co.: Macropoxy 646.
      c. Tnemec: Series 104.

2.03 PAINTS, INTERIOR EXPOSURE

A. Latex, flat:
   1. Manufacturers: One of following or equal:
      a. Carboline Co.: Carbocrylic 3359MC flat.
      b. PPG:
         1) Speedhide® Zero Interior Flat, 6-5110 Series.

2) Ultralast Interior Matte, 13-210 Series.
c. Sherwin-Williams Co.: Promar 200, B30W200.

B. Latex, semi-gloss:
1. Manufacturers: One of following or equal:
a. Carboline Co.: Carbocrylic 3359MC.
b. PPG:
1) Speedhide® Zero Interior Semi-Gloss, 6-5510 Series.
2) Copper Armor Interior Latex Paint + Primer Semi-Gloss, 29-1510.
c. Sherwin-Williams Co.: Promar 200, B77W3402D.

C. Acrylic, semi-gloss:
1. Manufacturers: One of following or equal:
a. Carboline Co.: Carbocrylic 3359MC.
b. PPG:
1) Speedhide® Zero Interior Semi-Gloss, 6-5510 Series.
2) Copper Armor Interior Latex Paint + Primer Semi-Gloss, 29-1510.
c. Sherwin-Williams Co.: Promar 200, B77W3402D.
d. Tnemec: Series 1029, Enduratone.

2.04 PAINTS, EXTERIOR EXPOSURE

A. Latex, flat:
1. Manufacturers: One of following or equal:
a. Carboline Co.: Carbocrylic 3359MC flat.
b. PPG:
1) Speedhide® Exterior Flat, 6-6510XI.
c. Sherwin-Williams Co.: A-100, Flat Exterior Latex A6-100.
d. Tnemec: 1028 Enduratone.

B. Alkyd, gloss:
1. Manufacturers: One of following or equal:
a. PPG:
1) 7-Line Interior/Exterior Industrial Gloss Oil, 7-282 Series.
2) Break-Through! 250 Interior/Exterior Gloss, V70-6102500.
b. Sherwin-Williams Co.:
1) Industrial Enamel, B54Z-100.
2) Water based Industrial Enamel B53W311.

C. Acrylic latex, semi-gloss:
1. Manufacturers: One of following or equal:
a. Carboline Co.: Carbocrylic 3359MC flat.
b. PPG:
1) Speedhide® Exterior Semi-Gloss, 6-901XI.Sherwin-Williams Co.: A-100, Flat Exterior Latex A6-100.
c. Tnemec: 1028 Enduratone.

PART 3 EXECUTION

3.01 INSPECTION

A. Thoroughly examine surfaces scheduled to be painted before starting work.

B. Start painting when unsatisfactory conditions have been corrected.

3.02 SURFACE PREPARATION

A. Prepare surfaces in accordance with paint manufacturer's instructions or when none, the following:
   1. Aluminum:
      a. Remove surface contamination by steam, high-pressure water, or degreasers.
      b. Abrade surface by abrasive blasting, power tool cleaning or hand tool cleaning.
      c. Apply etching primer.
   2. Reinforced concrete panels:
      a. Remove dirt, powdery residue, and foreign matter.
      b. Paint immediately; both sides when applicable.
   3. Canvas and cotton insulation coverings: Remove dirt, grease, and oil.
   4. Concrete floors:
      a. Remove contamination, abrasive blast or acid etch and rinse with clear water.
      b. Ensure required acid-alkali balance is achieved. Allow to dry thoroughly.
   5. Copper for paint finish:
      a. Remove contamination by steam, high-pressure water, or degreasers.
      b. Abrade surface by abrasive blasting, power tool cleaning or hand tool cleaning.
      c. Apply vinyl etch primer.
   6. Copper for oxidized finish:
      a. Remove contamination.
      b. Apply oxidizing solution of copper acetate and ammonium chloride in acetic acid.
      c. Rub on repeatedly for correct effect.
      d. Once attained rinse surfaces well with clear water and allow to dry.
   7. Gypsum wallboard:
      a. Remove contamination and prime to show defects.
      b. Repair and prime defects.
   8. Galvanized surfaces:
      a. Remove surface contamination and oils and wash with degreasers.
      b. Apply coat of etching type primer.
   9. Zinc coated surfaces: Remove surface contamination and oils and prepare for priming in accordance with metal manufacturer's recommendations.
   10. Concrete and concrete masonry:
      a. Remove dirt, loose mortar, scale, powder, and other foreign matter.
      b. Remove oil and grease with solution of tri-sodium phosphate.
      c. Remove stains caused by weathering of corroding metals with solution of sodium metasilicate.
      d. Rinse well and allow to thoroughly dry.

e. Spot prime exposed metal with alkyd primer.

11. Plaster:
    a. Fill hairline cracks, small holes, and imperfections with patching plaster.
    b. Smooth off to match adjacent surfaces.
    c. Wash and neutralize high alkali surfaces where they occur.
12. Unprimed steel and iron: Remove grease, rust, scale, dirt, and dust by wire brushing, sandblasting or other necessary method.
13. Shop primed steel:
    a. Sand and scrape to remove loose primer and rust.
    b. Feather out edges to make touch-up patches inconspicuous.
    c. Clean surfaces.
    d. Prime bare steel surfaces.
14. Wood and millwork:
    a. Sandpaper to smooth even surface.
    b. Wipe off dust and grit prior to priming.
    c. Spot coat knots, pitch streaks, and sappy sections with sealer.
    d. Fill nail holes and cracks after primer has dried and sand between coats.
15. Exterior wood siding:
    a. Remove dust, grit, and foreign matter.
    b. Seal knots, pitch streak, and sappy sections.
    c. Fill nail holes with exterior caulking compound after prime coat has been applied.
16. Mildew:
    a. Remove by scrubbing with solution of tri-sodium phosphate and chlorine bleach.
    b. Rinse with clean water and allow surface to dry completely.
17. Glue laminated woods:
    a. Remove grease and dirt.
    b. Wash down surfaces with degreasers.

3.03 APPLICATION

A. Apply each coat at proper consistency.

B. Tint each coat of paint slightly darker than preceding coat.

C. Sand lightly between coats to achieve required finish.

D. Do not apply finishes on surfaces that are not sufficiently dry.

E. Allow each coat of finish to dry before following coat is applied, unless directed otherwise by manufacturer.

F. Where clear finishes are required ensure tint fillers match wood.
    1. Work fillers well into grain before set.
    2. Wipe excess from surface.

G. Backprime exterior woodwork, which is to receive paint finish, with exterior primer paint.

H. Backprime interior woodwork, which is to receive paint or enamel finish, with enamel undercoat paint.

I. Backprime interior and exterior woodwork, which is to receive stain or varnish finish, with gloss varnish reduced 25 percent with mineral spirits.

J. Prime top and bottom edges of wood and metal doors with enamel undercoat when they are to be painted.

K. Prime top and bottom edges of wood doors with gloss varnish when they are to receive stain or clear finish.

3.04 MECHANICAL AND ELECTRICAL EQUIPMENT

A. Identify equipment, ducting, piping, and conduit in accordance with Related Sections.

B. Remove grilles, covers, and access panels for mechanical and electrical system from location and paint separately.

C. Finish paint primed equipment with color selected by the Engineer.

D. Prime and paint insulated and bare pipes, conduits, boxes, insulated and bare ducts, hangers, brackets, collars, and supports, except where items are plated or covered with prefinished coating.

E. Replace identification markings on mechanical or electrical equipment when painted over or spattered.

F. Paint interior surfaces of air ducts, convector, and baseboard heating cabinets that are visible through grilles and louvers with 1 coat of flat black paint, to limit of sight line.

G. Paint dampers exposed immediately behind louvers, grilles, convector, and baseboard cabinets to match face panels.

H. Paint exposed conduit and electrical equipment occurring in finished areas with color and texture to match adjacent surfaces.

I. Paint both sides and edges of plywood backboards for electrical equipment before installing backboards and mounting equipment on them.

J. Color code equipment, piping, conduit, exposed ductwork, and apply color banding and identification, such as flow arrows, naming and numbering, in accordance with the Contract Documents.

3.05 SURFACES NOT REQUIRING FINISHING

A. Stainless steel, brass, bronze, copper, Monel®, chromium, anodized aluminum: Specially finished articles such as porcelain enamel, plastic coated fabrics, and baked enamel.

B. Finished products such as ceramic tile, windows, glass, brick, resilient flooring, acoustical tiles, board and metal tees; other architectural features, such as finish hardware, furnished in aluminum, bronze or plated ferrous metal, prefinished panels, or other items that are installed prefinished.

C. Items completely finished at factory, such as preformed metal roof and wall panels, aluminum frames, toilet compartments, sound control panels, acoustical tiles, shower compartments, folding partition, and flagpole.

3.06 CLEANING

A. As work proceeds and upon completion, promptly remove paint where spilled, splashed, or spattered.

B. During progress of work, keep premises free from unnecessary accumulation of tools, equipment, surplus materials, and debris.

C. Upon completion of work, leave premises neat and clean.

3.07 INTERIOR PAINT SCHEDULE

A. Aluminum: 2 coats of following finish paints over specified primer:
   1. Acrylic, semi-gloss:
      a. Surfaces not scheduled otherwise.

B. Concrete masonry: 2 coats of following finish paints over block filler:
   1. Latex, flat:
      a. Surfaces not scheduled otherwise.
   2. Latex, semi-gloss:
      a. Walls.

C. Concrete, porous: 2 coats of following finish paints over block filler:
   1. Latex, flat:
      a. Surfaces not scheduled otherwise.

D. Concrete, smooth: 2 coats of following finish paints over specified sealer:
   1. Latex, flat:
      a. Surfaces not scheduled otherwise.

E. Gypsum board: 2 coats of following finish paints:
   1. Latex, flat:
      a. Ceilings.
   2. Latex, semi-gloss:
      a. Walls and partitions.

F. Metal, galvanized: 2 coats of following finish paints over specified primer:
   1. **Acrylic, semi-gloss:**
      a. **Surfaces not scheduled otherwise.**

G. Metal, interior doors and frames, galvanized: 2 coats of following finish paints over specified primer:
    1. Acrylic, semi-gloss:
        a. Surfaces not scheduled otherwise.

H. Metal, non-galvanized ferrous: 2 coats of following finish paints over specified primer:
    1. Acrylic, semi-gloss:
        a. Surfaces not scheduled otherwise.

I. Metal, interior doors and frames, non-galvanized ferrous: 2 coats of following finish paints over specified primer:
    1. Acrylic, semi-gloss:
        a. Surfaces not scheduled otherwise.

3.08 EXTERIOR PAINT SCHEDULE

A. Aluminum: 2 coats of following finish paints over specified primer:
    1. Acrylic, semi-gloss:
        a. Surfaces not scheduled otherwise.

B. Concrete masonry: 2 coats of following finish paints over specified block filler:
    1. Latex, flat:
        a. Surface not scheduled otherwise.

C. Concrete, smooth: 2 coats of following finish paints over specified primer:
    1. Latex, flat:
        a. Surface not scheduled otherwise.

D. Gypsum board: 2 coats of following finish paints:
    1. Latex, flat:
        a. Ceiling - Surface not scheduled otherwise.

E. Walls - Surface not scheduled otherwise. Metal, ferrous: Following finish coat over specified primer:
    1. Acrylic, semi-gloss:
        a. Surface not scheduled otherwise.

F. Metal, galvanized: 2 coats of following finish paints over pretreatment and specified primer:
    1. Acrylic, semi-gloss:
        a. Surface not scheduled otherwise.

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Coatings, including coating systems, surface preparation, application requirements, and quality control requirements.

1.02 REFERENCES

A. Abbreviations:
   1. CMU - Concrete masonry units.
   2. CSA - Coating system applicator. Specialty subcontractor retained by the Contractor to install the coating systems specified in this Section.
   3. CSM - Coating system manufacturer.
   4. CTR - Coating system manufacturer's technical representative.
   5. DFT - Dry-film thickness. Thickness of cured film, usually expressed in mils (0.001 inch).
   6. VOC - Volatile organic compound. Portion of the coating that is a compound of carbon, is photochemically reactive, and evaporates during drying or curing; expressed in grams per liter (g/l) or pounds per gallon (lb/gal). VOC is determined by EPA Method 24.
   7. WFT - Wet film thickness. Coating thickness as measured immediately after application. Usually expressed in mils (0.001 inch).

B. Standards:
   1. ASTM International (ASTM):
      a. D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications.
      b. D2200 - Standard Practice for Use of Pictorial Surface Preparation Standards and Guides for Painting Steel Surfaces.
      c. D3359 - Standard Test Methods for Rating Adhesion by Tape Test.
      d. D3960 - Standard Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings.
      e. D4262 - Standard Test Method for pH of Chemically Cleaned or Etched Concrete Surfaces.
      f. D4263 - Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
      g. D4285 - Standard Test Method for Indicating Oil or Water in Compressed Air.
      h. D4414 - Standard Practice for Measurement of Wet Film Thickness by Notch Gages.
      i. D4417 - Standard Test Methods for Field Measurement of Surface Profile of Blast-Cleaned Steel.
      j. D4541 - Standard Test Methods for Pull-Off Strength of Coatings Using Portable Adhesion Testers.
      k. D4787 - Standard Practice for Continuity Verification of Liquid or Sheet Linings Applied to Concrete Substrates.
      l. D5162 - Standard Practice for Discontinuity (Holiday) Testing of Nonconductive Protective Coating on Metallic Substrates.

m. D7234 - Standard Test Method for Pull-Off Adhesion Strength of Coatings on Concrete Using Portable Pull-Off Adhesion Testers.
n. E337 - Standard Test Method for Measuring Humidity with a Psychrometer (the Measurement of Wet- and Dry-Bulb Temperatures).
o. F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
p. F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using In-situ Probes.

2. International Concrete Repair Institute (ICRI):
   a. 310.2 - Guideline for Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair.
3. NACE International (NACE):
   a. SP0178 - Design, Fabrication, and Surface Finish Practices for Tanks and Vessels to Be Lined for Immersion Service.
   b. SP0188 - Discontinuity (Holiday) Testing of New Protective Coatings on Conductive Substrates.
4. National Association of Pipe Fabricators (NAPF):
   a. 500-03 - Surface Preparation Standard for Ductile Iron Pipe and Fittings in Exposed Locations Receiving Special External Coatings and/or Special Internal Linings.
5. NSF International (NSF):
   a. 61 - Drinking Water System Components - Health Effects.
6. Occupational Safety and Health Administration (OSHA).
7. Society of Protective Coatings (SSPC):
   a. Glossary - SSPC Protective Coatings Glossary.
   b. Guide 6 - Guide for Containing Surface Preparation Debris Generated during Paint Removal Operations.
   c. PA 1 - Shop, Field, and Maintenance Painting of Steel.
   d. PA 2 - Procedure for Determining Conformance to Dry Coating Thickness Requirements.
   e. PA 9 - Measurement of Dry Coating Thickness Using Ultrasonic Gages.
   f. QP 1 - Standard Procedure for Evaluating the Qualifications of Industrial/Marine Painting Contractors.
   g. SP 1 - Solvent Cleaning.
   h. SP 3 - Power Tool Cleaning.
   i. SP 5 - White Metal Blast Cleaning.
   j. SP 10 - Near-White Metal Blast Cleaning.
   k. SP 11 - Power Tools Cleaning to Bare Metal.
   l. SP 13 - Surface Preparation of Concrete.
   m. SP 16 - Brush-Off Blast Cleaning of Coated and Uncoated Galvanized Steel, Stainless Steels, and Non-Ferrous Metals.
   n. SP COM - Surface Preparation Commentary.
   o. SP VIS 1 - Guide and Reference Photographs for Steel Surfaces Prepared by Dry Abrasive Blast Cleaning.
   p. SP WJ-1 - Waterjet Cleaning of Metals—Clean to Bare Substrate.
   q. SP WJ-2 - Waterjet Cleaning of Metals—Very Thorough Cleaning.
   r. SP WJ-3 - Waterjet Cleaning of Metals—Thorough Cleaning.
   s. SP WJ-4 - Waterjet Cleaning of Metals—Light Cleaning.

1.03 TERMINOLOGY

A. Definitions used in this Section are in accordance with definitions referenced in ASTM D16, ASTM D3960, and SSPC Glossary of Definitions.

B. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Abrasive: Material used for blast cleaning, such as sand, grit, or shot.
   2. Abrasive Blast Cleaning: Cleaning/surface preparation by abrasive propelled at high speed.
   3. Anchor Pattern: Profile or texture of prepared surface(s).
   4. Biogenic Sulfide Corrosion: Corrosion caused by sulfuric acid formed when *Thiobacillus* bacteria metabolizes hydrogen sulfide.
   5. Bug Holes: Small cavities resulting when air bubbles are entrapped in the surface of formed concrete during placement and consolidation.
   6. Coating/Paint/Lining Thickness: Total thickness of primer, intermediate, and/or finish coats after drying or curing.
   7. Dew point: Temperature a given air/water vapor mixture starts to condense.
   8. Dry to Recoat: Time interval between material application and its ability to receive the next coat.
   9. Dry to Touch: Time interval between material application and its ability to tolerate a light touch without coating damage.
   10. Drying Time: Time interval between application and material curing.
   11. Exposed Surface: Any indoor or outdoor surface not buried or encased.
   12. Feather Edging: Reducing coating thickness at its edge to blend with existing surrounding coating.
   13. Feathering: Tapering off a wet edge with a comparatively dry brush.
   14. Ferrous: Cast iron, ductile iron, wrought iron, and all steel alloys except stainless steel.
   15. Field Coat: Application of a surface coating system at the work site.
   16. Finish Coat: Final coat in a paint system, including texture, color, smoothness of surface, and other properties affecting appearance.
   17. Hold Point: A defined point, specified in this Section, at which work shall be halted for inspection.
   18. Holiday: A discontinuity, skip, void, or pinhole in coating or coating system film that exposes the substrate.
   19. Honeycomb: Segregated and porous surface of hardened concrete due to insufficient consolidation.
   20. Hydroblast: High or ultra-high-pressure water jet surface preparation.
   21. Immersed/Immersion: A service condition in which substrate is submerged, is immediately above liquids, or is subject to frequent wetting, splashing, or washdown.
   22. Incompatibility: One coating’s inability to overlay another coating or surface as evidenced by bleeding, poor bonding, or lifting of old coating; inability of a coating to bond to a substrate.
   23. Laitance: A thin, weak, brittle layer of cement and aggregate fines on a concrete surface.
   24. Mil: 0.001 inch.
   25. Overspray: Dry spray, particularly paint bonded to an unintended surface.
   26. Pinhole: A small diameter discontinuity in a coating or coating system film, created by offgassing from a void in a concrete or masonry substrate causing

a void between coats or exposing the substrate. Usually caused by coating application while temperature is rising.

27. Pot Life: Time interval after components are mixed and coating can be satisfactorily applied.
28. Prime Coat: First full paint coat applied to a surface when using a multicoat system. Primers adhere to a new substrate, protect the substrate, and promote adhesion of subsequent coats of paint. The prime coat on metal surfaces is the first full coat and does not include solvent wash, grease emulsifiers, or other pretreatment applications.
29. Resurfacer/Resurfacing Material: A layer of cementitious and/or resin-based material used to fill or otherwise restore surface continuity to worn or damaged concrete surfaces.
30. Shelf Life: Maximum storage time a material may be stored without losing its usefulness.
31. Shop Coat: 1 or more coats applied in an off-site shop or plant before shipment to work site where field or finishing coat(s) are applied.
32. Spreading Rate: Area covered by a unit volume of paint at a specific thickness.
33. Stripe Coat: A separate brush coat of paint applied to all weld seams, pits, nuts/bolts/washers, and edges. This coat shall not be applied until previous coats have cured. Once applied, the coat shall be allowed to cure before subsequent coats are applied.
34. System: Protective film with 1 or more coats applied in a predetermined order, including surface preparation and quality control requirements.
35. Thick Film Coating System: A coating system applied with a minimum dry film thickness of 25 mils.
36. Tie Coat: An intermediate coat that bonds different types of paint material, improving succeeding coat adhesion.
37. Touch-Up Painting: Application of paint on previously painted surfaces to repair marks, scratches, and deteriorated or damaged areas to restore the appearance and performance of the coating.
38. Water Blast: An alternative to air abrasive blast cleaning that can be used with or without abrasive injection. Water cleaning at pressures up to 5,000 pounds per square inch is called low-pressure water cleaning or power washing. High-pressure water cleaning uses water pressures between 5,000 and 10,000 pounds per square inch. Water jetting is water blasting with added abrasive at pressures between 10,000 and 25,000 pounds per square inch. Ultra-high-pressure water jetting is water blasting at pressures above 25,000 pounds per square inch.
39. Weld Splatter: Beads of non-structural weld metal that adhere to the surrounding surface, removed as part of surface preparation.

1.04 SUBMITTALS

A. As specified in Section 01330 - Submittal Procedures, submit the following:
   1. Schedule of proposed coating materials.
   2. Schedule of surfaces to be coated with each coating material.
   3. Dehumidification and heating plan.
   4. Product data:
      a. Physical properties of coatings, including the following:
         1) Solids content.
         2) Ingredient analysis.

3) VOC content.
4) Temperature resistance.
5) Typical exposures and limitations.
6) Manufacturer's standard color chips.

b. Compliance with regulatory requirements:
1) VOC limitations.
2) Lead compounds and polychlorinated biphenyls.
3) Abrasives and abrasive blast cleaning techniques and disposal.
4) Methods for tenting blasting areas and methods to protect existing equipment from dust and debris.
5) NSF certification of coatings for potable water supply systems.

c. CSM's current printed recommendations and product datasheets for coating systems, including:
1) Surface preparation recommendations.
2) Primer type.
3) Maximum dry and wet-mil thickness per coat and number of coats.
a) Coating coverage worksheets.
4) Minimum and maximum curing time between coats, including atmospheric conditions for each.
5) Curing time before submergence in liquid.
6) Thinner to be used for each coating.
7) Ventilation requirements.
8) Minimum and maximum atmospheric conditions during which the paint shall be applied.
9) Allowable application methods.
10) Maximum allowable substrate moisture content.
11) Maximum shelf life.
12) Requirements for transportation and storage.
13) Mixing instructions.
14) Shelf life.
15) Material Pot life.
16) Precautions for applications free of defects.
17) Method of application.
18) Drying time of each coat, including prime coat.
19) Compatible prime coats.
20) Limits of ambient conditions during and after application.
21) Required protection from sun, wind, and other conditions.
22) Touch-up requirements and limitations.
23) Minimum adhesion of each system submitted in accordance with ASTM D4541 and ASTM D7234.

d. Samples: Include 8-inch square drawdowns or brushouts of topcoat finish when requested. Identify each sample as to finish, formula, color name and number, sheen name, and gloss units.

e. Affidavits signed by an officer of the CSM’s corporation attesting to full compliance of each coating system component with current federal, state, and local air pollution control regulations and requirements.

f. List of cleaning and thinner solutions allowed by the CSMs.

g. Storage requirements, including temperature, humidity, and ventilation for Coating System Materials as recommended by the CSMs.

h. Thick film coating systems (greater than 25 mils):
    1) CSM's detailed written instructions for coating system treatment and graphic details for coating system terminations in coated structures, including pipe penetrations, metal embedments, gate frames, and other terminations encountered.
    2) Include detail treatment for coating system at concrete joints.
    3) Manufacturer's Representative's (CTR) Field Reports.

5. Quality assurance Submittals:
    a. Quality assurance plan.
    b. Qualifications of CSA, including:
        1) List of Similar Projects.
            a) Name and address of project.
            b) Year of installation.
            c) Year placed in operation.
            d) Point of contact: Name and phone number.
        2) Provide a minimum of 5 project references, each including contact name, address, and telephone number where similar coating work has been performed by their company in the past 5 years.
    c. CSA Reports:
        1) Written daily quality control inspection reports.
    d. CTR Reports:
        1) Reports on visits to project site to view and approve surface preparation of structures to be coated.
        2) Reports on visits to project site to observe and approve coating application procedures.
        3) Reports on visits to coating plants to observe and approve surface preparation and coating application on shop-coated items.

1.05 QUALITY ASSURANCE

A. CSA qualifications:
    1. Minimum of 5 years of experience applying specified type or types of coatings under conditions similar to those of the Work:
        a. Provide qualifications of applicator and references listing 5 similar projects completed in the past 5 years.
    2. SSPC-QP 1 certified.
    3. Manufacturer-approved applicator when manufacturer has approved applicator program or when required in these specifications.

B. CTR qualifications:
    1. Certification, one of the following:
        a. NACE Level 2 or 3 Certified Coating Inspector.
        b. SSPC Level 3 Protective Coatings Inspector.
    2. Minimum of 5 years of experience evaluating application of manufacturer's coatings under conditions similar to those of the Work:
        a. Provide CTR qualifications and references listing 5 similar projects completed in the past 5 years.

C. Regulatory requirements: Comply with governing agencies' regulations by using coatings in accordance with to their VOC limits.
   1. Lead-based coatings are not permitted.
   2. Do not use coal-tar epoxy in contact with drinking water or exposed to ultraviolet radiation.

D. Pre-installation conference: Conduct as specified in Section 01312 - Project Meetings.
   1. Coordinate Hold Point schedule.

E. Field samples:
   1. Prepare and coat a minimum 100-square-foot area of each system between corners or limits such as control or construction joints.
   2. Approved field sample may be part of the Work.

F. Obtain approval before coating other surfaces. Use products by same manufacturer for prime coats, intermediate coats, and finish coats on same surface, unless specified otherwise.

G. CSM services:
   1. CSA shall arrange for CTR to attend pre-installation conferences.
   2. Visit the project site periodically to consult on and inspect specified surface preparation and application Hold Points.
   3. Visit coating plants to observe and approve surface preparation procedures and coating application of items to be shop primed and coated.
   4. CTR shall provide written inspection reports.

H. Quality control requirements:
   1. Contractor shall be responsible for the workmanship and quality of the coating system installation.
      a. Inspections by Owner, Engineer, CSA, or CTR will not relieve or limit Contractor's responsibilities.
   2. In accordance with this specification's requirements and the standards referenced in this Section. Changes in the coating system application requirements will be allowed only with the Engineer's written acceptance.
   3. Specially trained crews with experience applying the specified coating system coating are required for:
      a. Coating application using plural component spray equipment or other specialty equipment.
      b. Coating with specialty linings for severe service conditions, including floor coatings, and with linings for corrosive headspaces or secondary containment areas.
   4. CTR shall specially train personnel for coating systems as specified in Attachment B - Coating Detail Sheets.
      a. CSM shall approve personnel in writing applying the coating system.
   5. Do not use contaminated, outdated, diluted materials, and/or materials from previously opened containers.
   6. Identify inspection access points used by Owner's or Engineer's personnel.
   7. Provide ventilation, ingress, egress, or other means as necessary for Owner's or Engineer's personnel to safely access the work areas.

8. Conduct and continually inspect work so the coating system is installed as specified. CSM shall provide written directions to correct coating work not in accordance with the specifications or is otherwise unacceptable.
9. Provide written daily reports summarizing test data, work progress, surfaces covered, ambient conditions, quality control inspection test findings, and other information pertinent to the coating system application.
    a. Determine relative humidity in accordance with ASTM E337. Confirm other conditions, such as proper protective measures for surfaces not to be coated and safety requirements for personnel.
        1) Measure daily at shift's beginning and end and at intervals not to exceed 4 hours during the shift.
        2) Determine the acceptability of weather and/or environmental conditions within the structure in accordance with the CSM's requirements.
    b. Monitoring surface preparation: Spot check cleanliness, surface profile, and surface pH testing at least 3 times daily. Check each surface at least once. In accordance with:
        1) ASTM D4262.
        2) ASTM D4263.
        3) ASTM D4417.
        4) ICRI 310.2 requirements.
        5) SSPC Surface Preparation Standards.
    c. Confirm that compressed air used for surface preparation or blow-down cleaning is free of oil and moisture.
    d. Monitor surface preparation daily at shift's beginning and end and at intervals not to exceed 4 hours during the shift.
    e. Do not apply coatings when environmental conditions are outside of the CSM's published limits.
    f. Monitoring coatings application: Continuously inspect, measure, and record the wet film thickness and general film quality (visual inspection) for runs, sags, pinholes, holidays, etc., during coating.
        1) Perform WFT measurements in accordance with ASTM D4414.
    g. Post cure evaluation: Measure and inspect the overall dry film thickness on all surfaces.
        1) Conduct a DFT survey and perform adhesion testing, holiday detection, or cure testing as required in this Section and/or the CSM’s written instructions.
        2) Perform applicable tests in accordance with ASTM D4541, ASTM D4787, ASTM D5162, ASTM D7234, SSPC-PA 1, SSPC-PA 2, SSPC-PA 9, and other pertinent standards and recommended practices.

I. Inspection at Hold Points:
    1. Conduct inspections at Hold Points during the coating system application and record the results.
    2. Coordinate Hold Points with the Engineer so the Engineer can observe Contractor’s inspections on a scheduled basis.
    3. Provide the Engineer a minimum of 24 hours of notice before conducting Hold Point Inspections.

4. Hold Points shall be as follows:
    a. Conditions before surface preparation: Before starting surface preparation, observe, record, and confirm that oil, grease, and/or soluble salts are gone from the surface.
    b. Post surface preparation: After completing surface preparation, measure and inspect for cleanliness and proper surface profile as specified in this Section and in the CSM’s written instructions.
    c. Coatings application: At the beginning of any coating system application, measure, record, and confirm acceptability of surface and ambient air temperature and humidity. Inspect applicator's equipment for serviceability and suitability for coatings application.
    d. Post application inspection: Identify defects in application work on all surfaces, including pinholes, holidays, excessive runs or sags, inadequate or excessive film thickness, and other problems.
    e. Follow-up corrective actions and final inspection: Measure and re-inspect corrective coating work performed to repair defects at prior Hold Points and repeat until the surface condition is acceptable. Conduct final visual inspection with follow-up tests, such as holiday detection, adhesion tests, and DFT surveys.
    f. Coatings application: At the beginning of coating system application, measure, record, and confirm acceptability of surface and ambient air temperature and humidity. Inspect applicator's equipment for serviceability and suitability for coatings application.
        1) Observe conditions during the pre-application meeting.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products as specified in the Agreement and Contract RFP in Volumes 1 and 2.

B. Immediately remove unspecified and unapproved coatings from Project site.

C. Deliver new labeled, unopened containers:
    1. Do not deliver materials after manufacturer's expiration date or over 12 months from manufacturing date, whichever is more stringent. Store materials in well-ventilated enclosed structures and protect from weather and excessive heat or cold in accordance with the CSM’s recommendations.
        a. Store flammable materials in accordance with federal, state, and local requirements.
        b. Store rags and cleanup materials appropriately to prevent fire and spontaneous combustion.
    2. Store and dispose of hazardous waste in accordance with federal, state, and local requirements. This requirement specifically applies to waste solvents and coatings.
    3. Container labels shall show the following:
        a. Brand name or product title.
        b. CSM's batch number.
        c. CSM's manufacture date.
        d. CSM's name.
        e. Generic material type.
        f. Application and mixing instructions.

g. Hazardous material identification label.
h. Shelf life expiration date.
i. Color.
j. Mixing and reducing instructions.

4. Clearly mark containers to indicate safety hazards associated with the use of or exposure to materials.

1.07 PROJECT CONDITIONS

A. Apply coatings to dry surfaces.
1. Surface moisture: Comply with manufacturer's requirements or as specified in this Section.
a. Plaster and gypsum wallboard: 12 percent.
b. Masonry and concrete block: 12 percent.
c. Interior located wood: 15 percent.
d. Concrete floors: Moisture vapor transmission rate of no more than 3.0 pounds per 1,000 square feet per 24 hours in accordance with ASTM F1869 or relative humidity no greater than 80 percent if tested in accordance with ASTM F2170 unless the CSM's recommendations are more restrictive.
e. Concrete structures: Negative results from Plastic Sheet Test in accordance with ASTM D4263, and maximum of 80 percent relative humidity in accordance with ASTM F2170.

B. Do not apply coatings when the following conditions exist. If such conditions exist, provide containment, covers, environmental controls, and other necessary measures.
1. During rainy, misty, or damp weather, or to surfaces with frost or condensation.
2. When the surface temperature is below 10 degrees Fahrenheit above the dew point.
3. When ambient or surface temperature:
a. Is less than 55 degrees Fahrenheit unless manufacturer allows a lower temperature.
b. Is less than 65 degrees Fahrenheit for clear finishes unless manufacturer allows a lower temperature.
c. Exceeds 90 degrees Fahrenheit unless manufacturer allows a higher temperature.
d. Exceeds manufacturer's recommendation.
4. When relative humidity is higher than 85 percent.
5. Under dusty or adverse environmental conditions.
6. When light on surfaces measures less than 15 foot-candles.
7. When wind speed exceeds 15 miles per hour.

C. Apply coating only under evaporation conditions rather than condensation.
1. Use dehumidification equipment, fans, and/or heaters inside enclosed areas to maintain required atmospheric and surface temperature requirements for proper coating application and cure.
2. Measure and record relative humidity and air and surface temperatures at the start and end of each shift to confirm proper humidity and temperature levels inside the work area.
a. Submit test results.

D. Continuously ventilate, dehumidify, and heat enclosed spaces with high humidity during surface preparation, coating application, and curing.
   1. Maintain minimum air temperature of 55 degrees Fahrenheit and 10 degrees Fahrenheit above the dew point.
   2. Maintain dew point of at least 10 degrees Fahrenheit less than the temperature of the coldest part of the structure where work is performed.
   3. Reduce dew point temperature in conditioned space by at least 10 degrees Fahrenheit within 20 minutes.
   4. Seal work areas and maintain positive pressure per dehumidification equipment supplier's recommendations.
   5. Maintain these conditions before, during, and after application to ensure proper adhesion and cure of coatings for no less than:
      a. Entire curing period.
      b. 8 hours after coating.

E. Systems:
   1. Site electrical power availability as specified in Section 01500 - Temporary Facilities and Controls.
   2. Internal combustion engine generators may be used.
      a. Obtain required permits and provide air pollution and noise control devices on equipment as required by permitting agencies require.
      b. Comply with state, federal, and local fire and explosion protection measures when locating and operating generator.
      c. Locate engine generator outside hazardous classified areas in accordance with NFPA 820.
      d. Provide daily fuel service for generator for duration of use.
   3. Dehumidification:
      a. Provide desiccant or refrigeration drying.
      b. Use only desiccant types with a rotary desiccant wheel capable of continuous operation.
      c. Liquid, granular, or loose lithium chloride drying systems are not acceptable.
   4. Heating:
      a. Use electric, indirect combustion, or steam coil.
      b. Direct-fired combustion heaters are not acceptable heat sources during abrasive blasting, coating application, or coating cure.
   5. Filters:
      a. Use a filtration system for dust removal designed to not interfere with dehumidification equipment’s ability to control dew point and relative humidity inside the reservoir.
      b. Do not allow air from the working area or dust filtration equipment to recirculate through thein dehumidifier during coating application or when solvent vapors are present.
   6. Design and Submittals:
      a. Prepare and submit dehumidification and heating plan, including all equipment and operating procedures.
      b. Suppliers of services and equipment shall have at least 3 years of experience in similar applications.

F. Provide containment and ventilation system components in accordance with SSPC-Guide 6, Level 3 and as required for hazardous materials.

1.08 MAINTENANCE

A. Provide table of products applied organized by surface type. List coating manufacturer, color, color formulation, distributor name, telephone number, and address.

B. Provide extra materials:
   1. Minimum 1 gallon of each type and color of coating applied or provide additional quantities if specified in the Contract Documents:
      a. Deliver unopened factory-labeled cans when manufacturer packages material in gallon cans.
      b. Deliver material in new gallon containers, properly sealed and identified with permanently affixed, durable, printed labels indicating brand, type, and color, when manufacturer does not package material in gallon cans, deliver.

1.09 CTR RESPONSIBILITIES

A. General:
   1. Attend pre-installation conference.
   2. Perform onsite application training.
   3. Periodically inspect coating system application.

B. Coating system installation training:
   1. Provide a minimum of 8 hours of classroom and off-site training for application personnel and supervisory personnel in one of the following ways:
      a. Train a minimum of 2 supervisory personnel and 2 application personnel.
      b. Submit a letter from the CSM stating that CSM approves the supervisory and application personnel, listed by name and responsibility, and no additional training is required.
   2. CTR can train up to 14 application personnel and 3 supervisory personnel at a time.
   3. Minimum training requirements:
      a. Explain in detail the mixing, application, curing, and termination requirements.
      b. Provide hands-on demonstration of coating system mixing.
      c. Explain in detail the ambient condition requirements for temperature and humidity.
      d. Explain in detail the surface preparation requirements.
      e. Explain in detail the re-coat times, cure times, and related ambient condition requirements.
      f. Write a letter stating that training was satisfactorily completed by the personnel, listed by name and responsibility.
   4. Provide special training as specified in the Coating Detail Sheets.

C. Coating system inspection:
   1. CTR inspection is in addition to the CSA's inspection as specified in this Section.
   2. Be on-site to oversee:
      a. Coating application at least once a week.
      b. End of surface preparation.
      c. During coating application.

d. Post-cure inspection.

3. Routinely inspect and verify in writing that application personnel have successfully performed surface preparation, filler/surfacer application, coating system application, and Quality Control Inspection in accordance with this Section and to warrantable quality.
4. Perform the following activities to confirm conformance with the specifications:
   a. Inspect ambient conditions during coating system installation at Hold Points for conformance with the specified requirements.
   b. Inspect each coated surface type and coating system applied to verify the following:
      1) Cleanliness.
      2) Surface pH for concrete substrates.
      3) Confirm surface preparation of substrates where coating system will terminate or will be applied for conformance to the specified application criteria.
   c. Verify surface profile of substrates by completing the following:
      1) Inspect preparation and application of coating detail treatment at terminations, transitions, metal embedments in concrete, and joints and cracks in substrates.
      2) Inspect application of filler/surfacer materials for concrete and masonry substrates.
      3) Verify proper mixing of coating materials.
      4) Inspect application of primers and finish coats, including wet and dry film thickness.
      5) Inspect coating systems for proper cure times and conditions.
   d. Review adhesion testing of cured coating systems.
   e. Review coating system continuity testing.
   f. Inspect and record representative-localized repairs.
   g. Conduct final review of completed coating system installation.
   h. Prepare and submit site visit reports after each site visit to document that the coating work is in accordance with the CSM's Recommendations.

D. Final report:
   1. Prepare a final report, after coating work ends, summarizing each day's test data, observations, drawings, and photographs.
      a. Include substrate conditions, ambient conditions, and application procedures observed during the CTR's site visits.
      b. Include a statement that completed work was performed in accordance with the requirements of the CSM's recommendations.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Coating materials shall be formulated for environments encountered in water and wastewater treatment processes.

B. Coating materials that come in contact with water distributed as potable water shall be certified in accordance with NSF 61.

2.02 MATERIALS

A. General:
   1. Product requirements: As specified in the Agreement and Contract RFP in Volumes 1 and 2.

2.03 COATING SYSTEMS IDENTIFICATION

A. Naming conventions: Coating Systems Identifications contain the elements defined in Table 1.

Table 1. Coating System Identification Elements

First Element	**-**	**Second Element**	**-**	**Third Element**	**-**	**Fourth Element (optional)**
3 or 4 alpha characters		1-3 alpha characters		1 number		3 or 4 alpha characters
Coating Type		Substrate		System Number		Additional Substrate or Special Condition
Example: EPX	-	C	-	6	-	BSC

1. First element identifies the coating type using the following abbreviations:
   a. ACR: Acrylic.
   b. CTE: Coal tar epoxy.
   c. ELA: Elastomeric acrylic.
   d. EPU: Epoxy-polyurethane.
   e. EPX: Epoxy.
   f. POL: Polyurethane.
   g. SIL: Silicone.
   h. SILX: Siloxane or silane.
   i. VE: Vinyl ester.
2. Second element identifies the substrate using the following abbreviations:
   a. C: Concrete or masonry.
   b. F: Concrete flooring.
   c. FRP: Fiber-reinforced plastic.
   d. GM: Galvanized metal.
   e. M: Metal.
   f. PVC: Polyvinyl chloride, chlorinated polyvinyl chloride.
3. Third element identifies the sequential system number.
   a. For example, EPX-C-2 is the second standard epoxy coating system for concrete substrates.
4. Fourth element is optional and identifies the additional substrate or special condition with the following abbreviations:
   a. PWS: Potable water service applications (NSF-61 approved).
   b. BSC: Biogenic sulfide corrosion-resistant applications in wastewater.
   c. BG: Below grade or buried.
   d. OZ: Organic zinc primer, epoxy polyurethane system.
   e. SC: Secondary containment.

2.04 PRODUCTS FOR COATING SYSTEMS

A. Products: As specified in Attachment B - Coating Detail Sheets.

B. Cleaning solvents:
   1. Requirements for solvent wash, solvent wipe, or cleaner used, including, but not limited to, those used for surface preparation in accordance with SSPC-SP 1:
      a. Emulsifying type.
      b. Containing no phosphates.
      c. Biodegradable.
      d. Does not damage zinc.
      e. Compatible with the specified primer.
      f. Complying with applicable air-quality control board requirements.
   2. Use clean white cloths and clean fluids in solvent cleaning.

PART 3 EXECUTION

3.01 GENERAL PROTECTION REQUIREMENTS

A. Protect adjacent coated surfaces from coatings and damage associated with coating work. Repair damage resulting from inadequate or unsuitable protection.

B. Use drop cloths and other coverings to protect adjacent surfaces not to be coated against spatter and droppings.

C. Mask off surfaces of items not to be coated or remove items from area.

D. Furnish and deploy sufficient drop cloths, shields, and protective equipment to prevent spray or droppings from fouling surfaces not being coated and, in particular, surfaces within storage and preparation areas.

E. Place coating waste, cloths, and material that may pose a fire hazard in closed metal containers and remove daily from site.

F. Remove electrical plates, surface hardware, fittings, and fasteners before coating application.
   1. Carefully store, clean, and replace items after completing coating in each area.
   2. Do not use solvent or degreasers to clean hardware that may remove permanent lacquer finishes.

G. Erect and maintain protective enclosures in accordance with SSPC-Guide 6.

H. Protect the following surfaces from abrasive blasting by masking or by other means:
   1. Threaded portions of valve and gate stems, grease fittings, and identification plates.
   2. Machined surfaces for sliding contact.
   3. Surfaces to be assembled against gaskets.
   4. Surfaces of shafting where sprockets will be fit.
   5. Surfaces of shafting where bearings will be fit.
   6. Machined bronze surfaces, including slide gates.
   7. Cadmium-plated items, except cadmium-plated, zinc-plated, or sherardized fasteners used to assemble equipment requiring abrasive blasting.
   8. Galvanized items, unless scheduled to be coated.

I. Protect installed equipment, mechanical drives, and adjacent coated equipment from abrasive blasting to prevent damage caused by spent abrasive blast media, dust, or dirt entering such equipment.

J. Schedule cleaning and coating to keep dust and spray from the cleaning process from falling on wet, newly coated surfaces.
   1. Whenever possible, coordinate with other trades and complete surface preparation and coating work before installing hardware, hardware accessories, nameplates, data tags, electrical fixtures, and similar uncoated items that will be in contact with coated surfaces. Mask machined surfaces, sprinkler heads, and other small items that will not be coated.
   2. After completing coating, reinstall removed items.
   3. Disconnect and move equipment adjacent to walls to clean and coat equipment and walls. Replace and reconnect equipment after coating.

3.02 GENERAL SURFACE PREPARATION REQUIREMENTS

A. Prepare surfaces in accordance with CSM's instructions unless more stringent requirements are specified in this Section.

B. Coating detail sheets in Attachment B - Coating Detail Sheets include additional surface preparation requirements.

C. Follow more stringent requirement if information conflicts.

D. Where required by the Owner’s representative, a NACE International certified coatings inspector, provided by the Engineer, will inspect and approve surfaces to be coated before applying a coating.
   1. CSA shall coordinate coating inspections.
      a. Identify coating inspection Hold Points during the pre-installation conference.
      b. Provide at least 2 days' notice before inspection.
   2. Correct surface defects identified by the inspector at no additional cost to the Owner.

3.03 MECHANICAL AND ELECTRICAL EQUIPMENT PREPARATION

A. Identify equipment, ducting, piping, and conduit as specified in Section 15050 - Common Work Results for Mechanical Equipment, Section 15076 - Pipe Identification, and Section 16075 - Identification for Electrical Systems.

B. Remove grilles, covers, and access panels for mechanical and electrical system and coat separately.

C. Prepare and finish coat equipment primed by the manufacturer using specified intermediate and top coats, as applicable, and color selected by the Owner.

D. Prepare, prime, and coat both insulated and bare pipes, conduits, boxes, insulated and bare ducts, hangers, brackets, collars, and supports, except where items are covered with material not requiring coating, or with a prefinished coating.

E. Replace identification markings on mechanical or electrical equipment when coated over or spattered.

F. Prepare and coat interior surfaces of air ducts and convector and baseboard heating cabinets visible through grilles and louvers with 1 coat of flat black paint to limit of sight line.

G. Prepare and coat dampers exposed immediately behind louvers, grilles, and convector and baseboard heating cabinets to match face panels.

H. Prepare and coat exposed conduit and appurtenances occurring in finished areas with color and texture to match adjacent surfaces.

I. Prepare and coat sides' front, back, and edges of plywood backboards for electrical equipment before installing backboards and mounting equipment on them.

J. Color code equipment, piping, conduit, and exposed ductwork and apply color banding and identification, such as flow arrows, naming, and numbering, in accordance with the Contract Documents.

3.04 CLEANING OF NEW AND PREVIOUSLY COATED OR NEW SURFACES

A. Utilize cleaning agent to remove soluble salts, such as chlorides, from concrete and metal surfaces:
   1. Cleaning agent: Biodegradable non-flammable and containing no VOC.
   2. Manufacturers: The following or equal:
      a. CHLOR*RID International, Inc.
         1) Complete soluble salt removal with steam or warm water cleaning.
   3. Steam clean and degrease surfaces to be coated to remove oils and grease.
   4. Clean surfaces with decontamination agent in conjunction with abrasive blast cleaning, steam cleaning, high-pressure washing, or hand washing, as approved by the CTR and the Engineer.
   5. Test cleaned surfaces to ensure removal of soluble salts. Carry out additional cleaning as needed.
   6. Complete final surface preparation before applying new coating system in strict accordance with CSM's printed instructions.

3.05 BLAST CLEANING

A. Surface preparation requirements:
   1. Do not reuse spent blast abrasive.
   2. Ensure that filter compressed air used for blast cleaning is free of condensed water and oil.
      a. Clean moisture traps at least once every 4 hours or more frequently, as required, to prevent moisture from entering the abrasive blasting equipment air supply.
      b. Check blast air for moisture and oil after each cleaning in accordance with ASTM D4285.
   3. Install oil separators just downstream of compressor discharge valves and at the discharge point of blast pot discharges. Check separators on the same frequency as the moisture traps.

4. Keep regulators, gauges, filters, and separators on compressor air lines to blasting nozzles operational at all times.
5. Install an air dryer or desiccant filter drying unit to dry the compressed air before blast pot connections. Use and maintain the dryer throughout surface preparation work.
6. Use a venturi-type, or other high velocity-type, abrasive blast nozzles supplied with at least 100 pounds per square inch gauge air pressure at the nozzle and enough volume to obtain appropriate blast cleaning production rates and surface cleanliness.
7. Provide airborne particulate evacuation and filtering that meets OSHA safety standards. Maintain optimal visibility both to clean and provide the specified surface profile and to allow inspection of the substrate during surface preparation work.
8. If prepared and cleaned metallic substrates become contaminated between final surface preparation work and coating system application, or if the prepared substrate darkens or changes color, re-clean by water blasting, or abrasive blast cleaning as appropriate until the specified degree of cleanliness is restored.

B. Water jetting or water blasting:
1. Use water jetting or water blasting for recoating or relining where an adequate surface profile exists.
2. Perform water jetting or water blasting in accordance with SSPC-SP 13 and SSPC-WJ-1, WJ-2, WJ-3, WJ-4.

3.06 PREPARATION REQUIREMENTS FOR CONCRETE SURFACES

A. Cure for at least 28 days before coating.

B. Remove degraded concrete using abrasive blast cleaning or high or ultra-high-pressure water jetting, chipping, or other abrading tools until achieving a sound, clean substrate. Remove bruised or cracked concrete.

C. Prepare substrate cracks and areas requiring resurfacing; perform detail treatment, including, but not limited to, terminating edges in accordance with the CSM's recommendations, and as indicated on the Drawings.
1. Prepare concrete surfaces in accordance with SSPC-SP 13.

D. Prepare concrete surfaces in accordance with SSPC-SP 13.
1. Inspect concrete surfaces to select appropriate surface preparation method to provide a suitable substrate for the specified coating system.
2. Use blast cleaning or other means to expose the complete perimeter of air voids or bug holes. Do not leave shelled over, hidden air voids beneath the exposed concrete surface.
3. Repair concrete defects and physical damage.
4. Clean concrete surfaces of dust, mortar, formwork, fins, loose concrete particles, form release materials, oil, and grease.
5. Fill voids to provide surface as specified in Section 03366 - Concrete Finishes.

E. Provide clean substrate visually free of calcium sulfate, loose, coarse, or fine aggregate, laitance, loose hydrated cement paste, and otherwise harmful substances.
   1. Confirm concrete surface minimum pH of 9.0 with surface pH testing.
   2. If after surface preparation the surface pH remains below 9.0, perform additional water blasting, cleaning, or abrasive blast cleaning until additional pH testing indicates an acceptable pH level.

F. Prepare concrete surface for coating in accordance with SSPC-SP 13.
   1. Provide ICRI 310.2 minimum No. 3 concrete surface profile (CSP) or as specified on Coating Detail Sheets.
   2. Evaluate profile of the prepared concrete using ICRI 310.2 surface profile replicas.

G. Blast clean cementitious repair mortars or grouts to the same profile and degree of cleanliness requirements required for concrete substrates.

H. Blast clean polymer-based surfacers or waterborne modified cementitious surfaces only if they have exceeded the CSM's recommended recoat time.

I. Vacuum concrete surfaces before coating application, leaving a dust free, sound concrete substrate.
   1. Thoroughly clean concrete surfaces to be coated to remove loose dirt and spent abrasive.
   2. Remove debris produced by blast cleaning from the structures to be coated, and legally dispose of it off-site.

J. Test moisture content of concrete to be coated:
   1. Conduct ASTM D4263 plastic sheet test at least once for every 500 square feet of surface area to be coated.
      a. Any moisture on plastic sheet after test period constitutes a non-acceptable test, and the concrete must be dried further.
   2. Conduct ASTM F1869 test at least once for every 1,000 square feet of concrete floor surface area to be coated.
   3. Conduct ASTM F2170 one relative humidity moisture test at least once for each 500 square feet of non-floor concrete surface area where the opposite side is exposed to soil or water.
      a. Waterproof surfaces exposed to soil or water.
   4. Comply with specified minimum moisture content and CSM’s written recommendations for moisture vapor transmission rates or relative humidity values.

K. Masonry surfaces:
   1. Cure for at least 28 days before coating.
   2. Prepare masonry surfaces to remove chalk, laitance, loose dirt, dried mortar splatter, dust, peeling, or loose existing coatings, or otherwise deleterious substances to leave a clean, sound substrate.
   3. Wash and scrub masonry surfaces with clear water. Do not use muriatic acid.
   4. Seal or fill masonry surfaces with a sealer or block filler compatible with the specified primer after cleaning.

5. Confirm that masonry surfaces are dry before coating application.
    a. If using pressure washing or low-pressure water blast cleaning for preparation, allow the masonry to dry for at least 5 days under dry weather conditions or until the minimum ambient temperature is 70 degrees Fahrenheit before coating.

3.07 GENERAL PREPARATION REQUIREMENTS FOR METALLIC SURFACES

A. Remove rust, scale, and welding slag and spatter.
    1. Remove and grind smooth excessive weld material and weld spatter on metal surfaces before blast cleaning in accordance with NACE SP0178, Appendix C, Level C.
    2. Grind sharp edges on metal substrate to approximately 1/16-inch radius before abrasive blast cleaning.

B. Prepare metallic surfaces in accordance with applicable portions of surface preparation specifications of the SSPC specified for each coating system.
    1. Remove grease and oil in accordance with SSPC-SP 1.
    2. Use solvent as recommended by the CSM.
    3. Measure profile depth of the surface to be coated in accordance with Method C of ASTM D4417. Select blast particle size and gradation to produce the specified surface profile.
    4. Constantly monitor and maintain ambient environmental conditions to ensure cleanliness and that no “rust back” occurs before coating material application.

C. Prepare metallic surfaces by blast cleaning in accordance with SSPC-VIS 1 (ASTM D2200). Prepare abrasive blast representative areas for the Owner's representative to inspect on the first day of cleaning.

D. Unless otherwise specified, the requirements for blast cleaning steel, ductile iron, and stainless steel substrates are as follows:
    1. Ferrous metal surfaces not to be submerged: Abrasive blast in accordance with SSPC-SP 10 unless blasting may damage adjacent surfaces, is prohibited, or is specified otherwise. Where abrasive blasting is not possible, clean surfaces to bare metal with power tools in accordance with SSPC-SP 11.
    2. Ferrous metal surfaces to be submerged: Abrasive blast in accordance with SSPC-SP 5, unless specified otherwise, to clean and provide roughened surface profile with a depth between 2 and 4 mils.
    3. Remove traces of grit, dust, dirt, rust scale, friable material, loose corrosion products, or embedded abrasive from substrate before coating application.
    4. When abrasive blasted surfaces rust or discolor before coating, abrasive blast clean surfaces again.

E. Field preparation of shop-primed surfaces:
    1. Smooth welds and prominences with power tools before applying field-applied coatings.
    2. Clean and dry shop-primed ferrous metal surfaces and fabricated assemblies before applying field coats.

3. Prepare shop epoxy primed surfaces with light abrasive blasting or abrading and then vacuum before applying finish coats.
    a. Follow CSM instructions for surface preparation when the primer recoat limit has been exceeded.
4. Non-immersion service: Clean in accordance with SSPC-SP 2 (Hand Tool Cleaning) or SSPC-SP 3 (Power Tool Cleaning) and uniformly roughen.
5. Immersion, BSC, and SC service: Remove shop primer in accordance with SSPC-SP 5 (Near-White Blast Cleaning).

F. Damaged shop primer or rust bleeding:
1. Ferrous metals: Clean in accordance with SSPC-SP 1 (Solvent Cleaning) and spot blast in accordance with SSPC-SP 10 (Near-White Metal Blast Cleaning) to achieve a uniform surface profile between 2.0 and 2.5 mils before recoating.
2. Reject galvanized steel with rust bleeding.

G. Damaged coating: Repair by abrasive blast cleaning surfaces as specified for the coating system; feather to a smooth transition before touching up.

3.08 PREPARATION REQUIREMENTS BY SURFACE TYPE

A. Galvanized steel and non-ferrous metal surfaces:
1. Degrease or solvent clean (SSPC-SP 1) to remove oily residue.
2. Abrasive blast clean in accordance with SSPC-SP 16.
    a. If abrasive blast cannot be performed, abrade in accordance with SSPC-SP 3 (Power Tool Cleaning).
3. Apply metal pretreatment within 24 hours before coating galvanized surfaces that cannot be thoroughly abraded, such as bolts, nuts, or preformed channels.
4. Test surface for contaminants using copper sulfate solution.

B. Stainless-steel surfaces:
1. Abrasive blast clean in accordance with SSPC-SP 16 to leave a clean, uniform appearance with surface profile between 1.5 and 2.5 mils.

C. Ductile iron pipe and fittings to be lined or coated: Abrasive blast clean in accordance with NAPF 500-03.

D. Sherardized, aluminum, copper, and bronze surfaces:
1. Abrasive blast clean in accordance with SSPC-SP 16.
2. Prepare in accordance with CSM's instructions.

E. Cadmium-plated, zinc-plated, or sherardized fasteners:
1. Abrasive blast in the same manner as uncoated metal when assembling equipment designated for abrasive blasting.

F. PVC and FRP surfaces:
1. Lightly sand surfaces to be coated.
    a. Sand to remove gloss and establish uniform surface profile.
2. Vacuum to remove loose dust, dirt, and other materials.
3. Solvent clean with clean white rags and allow solvent to evaporate completely before applying coating materials.

3.09 APPLICATION REQUIREMENTS

A. Apply coatings in accordance with manufacturer's instructions.

B. Empty aboveground piping to be coated of contents when applying coatings.

C. Mechanical equipment shop primed by the manufacturer.
   1. Pumps and valves: Shop coat with manufacturer's highest quality coating system meeting the project specifications.
      a. Provide CTR shop coating reports.
   2. Non-immersed equipment: Touch up shop primer, and coat in the field with specified coating system after installation.
      a. If project requires equipment removal and reinstallation, complete touch-up coating after final installation.
   3. Immersed equipment not shop coated: Remove shop primer before surface preparation and field apply coating.

D. Verify surface preparation immediately before applying coating in accordance with SSPC-SP COM and the SSPC visual standard for the specified surface preparation method.

E. Allow surfaces to dry, except where coating manufacturer requires surface wetting before coating.

F. Wash coat and prime sherardized, aluminum, copper, and bronze surfaces, or prime with manufacturer's recommended special primer.

G. Do not apply coatings to a surface until it has been prepared as specified.

H. Use equipment designed to apply materials specified.
   1. Use compressors with moisture traps and filters that remove water and oils from the air.
      a. Perform a paper blotter test at the Engineer's request to verify air is sufficiently free of oil and moisture. Do not allow the amount of oil and moisture to exceed CSM-recommended amount.
   2. Equip spray equipment with properly sized mechanical agitators, pressure gauges, pressure regulators, and spray nozzles.

I. Where 2 or more coats are required, tint prime coat intermediate coats as necessary to distinguish each coating and to help indicate coverage.
   1. Do not use color additives with chromium, lead or lead compounds that hydrogen sulfide, other corrosive gases, might destroy or alter. Apply the specified number of coats.

J. Apply coating by brush, roller, trowel, or spray unless a specific application method is required by coating manufacturer's instructions or these Specifications.
   1. Apply primer or first coat by brush to power tool cleaned ferrous surfaces.
   2. Brush or spray-apply coats for blast-cleaned ferrous surfaces and subsequent coats for non-blast cleaned ferrous surfaces.
   3. After prime coat dries, mark, repair, and retest pinholes and holidays before intermediate or top coats are applied.

K. Spray application:
    1. With a brush, stripe coat edges, welds, corners, nuts, bolts, and difficult-to-reach areas, as necessary, before spray application to ensure specified coating thickness along edges.
    2. When using spray application, apply each coat to thickness no greater than recommended in coating manufacturer's instructions.
    3. Use airless spray method unless air spray method is required by CSM's instruction or these Specifications.
    4. Conduct spray coating under controlled conditions. Protect adjacent construction and property from coating mist, fumes, or overspray.

L. Lightly sand and thoroughly clean surfaces to receive high-gloss finishes unless CSM instructs otherwise.

M. Remove dust on coatings between coats.

N. Shop and field coats:
    1. Prime coat: Shop-apply or field-apply prime coats as specified. Use shop-applied primer compatible with the specified field coating system and apply at the minimum dry film thickness recommended by the finish coat CSM.
        a. Provide datasheets identifying the shop primer to on-site coating application personnel.
        b. Perform adhesion tests on the shop primer.
        c. Remove and recoat damaged, deteriorated, and poorly applied shop coatings.
        d. If shop primer coat meets this Section's requirements, spot prime exposed metal of shop-primed surfaces before spray applying primer over the entire surface.
    2. Field coats: Apply field coats with 1 or more prime coats and finish coats to build up coating to dry film thickness specified for the coating system.
        a. Do not apply finish coats until other work in the area is complete and previous coats are inspected.
    3. Adhesion confirmation: Perform adhesion tests after proper coating cure in accordance with ASTM D3359. Demonstrate that:
        a. Prime coat adheres to the substrate.
        b. Coatings adhere to the prime and intermediate coats.
            1) Coating 5 mils or more DFT: Achieve adhesion test result of 5A on immersed surfaces and 4A or better on other surfaces.
            2) Coating less than 5 mils DFT: Achieve adhesion test results of 5B on immersed surfaces and 4B or better on other surfaces.

O. Brush, roll, trowel, or spray and back roll coats for concrete and masonry.

P. Plural component coating application:
    1. Premix contents of component drums if required by the CSM each day.
    2. Before starting application:
        a. Verify gauges are working properly.
        b. Complete ratio checks.
        c. Sample the mix on plastic sheeting to ensure set time is appropriate and complete.
        d. Label and retain spray samples. Submit to Engineer when requested.

Q. Drying and recoating:
   1. Provide fans, heating devices, or other means to prevent condensate or dew on substrate surface or between coats and during curing after applying the last coat.
   2. Allow each coat to cure or dry thoroughly, in accordance with if required in CSM's printed instructions, before recoating.
   3. Use CSM's printed instructions and the requirements specified in this Section to determine minimum required drying time.
      a. Do not allow excessive drying time or exposure, which may impair bond between coats.
      b. Recoat coatings within time limits recommended by CSM.
      c. If time limits are exceeded, abrasive blast clean and de-gloss clean before applying another coat.
   4. If limitations on time between abrasive blasting and coating are not met before attaching components to surfaces that cannot be abrasive blasted, coat components before attachment.
   5. Ensure primer and intermediate coats of coating are unscarred and completely integral when applying each succeeding coat.
   6. Touch up suction spots between coats and apply additional coats where required to produce finished surface of solid, even color, free of defects.
   7. Leave no holidays. Repair holidays in accordance with the requirements on pertinent Coating Detail Sheets or as recommended by the CSM.
   8. Sand and feather into a smooth transition and recoat scratched, contaminated, or otherwise damaged coating surfaces so repairs are invisible to the naked eye.

R. Workmanship:
   1. Ensure that coated surfaces are free from runs, drips, ridges, waves, laps, and brush marks. Coats shall be applied to produce a smooth, even film of uniform thickness completely coating corners and crevices.
   2. Coat surfaces without drops, overspray, dry spray, excessive runs, ridges, waves, holidays, laps, or brush marks.
   3. Remove splatter and droppings after coating work is completed.
   4. Evenly apply each coat of material and sharply cut to a line created with masking tape or other suitable materials.
   5. Avoid over spraying or spattering paint on surfaces not to be coated. Protect glass, hardware, floors, roofs, vehicles, and other adjacent areas and installations by taping, drop cloths, or other suitable measures.
   6. When coating complex steel shapes, stripe coat welds, edges of structural steel shapes, metal cut-outs, pits in steel surfaces, or rough surfaces with the primer before overall coating system application.
      a. Brush apply stripe coat to ensure proper coverage.
      b. Do not stripe coat with spray or roller.
   7. Ensure that finish coat, including repairs, has a uniform color and gloss.

S. Coating properties, mixing, and thinning:
   1. Thin prime coat and apply as recommended by the CSM. Thinned coating must comply with prevailing air pollution control regulations.
   2. If maximum recoat time is exceeded, prepare surface with solvent washing, light abrasive blasting, or other procedures in accordance with CSM's instructions.

3. Allow adequate drying time between coats as instructed by the CSM, adjusted as necessary for the site conditions.
4. Ensure that coatings, when applied, provide a satisfactory film and a smooth even surface. Lightly sand glossy undercoats to provide a surface suitable for proper application and adhesion of subsequent coats. Thoroughly stir and strain coating materials during application and maintain uniform consistency.
5. Mix coatings with 2 or more components in accordance with CSM's instructions.
6. Where necessary to suit conditions of the surface, temperature, weather, and method of application, thin the coating in accordance with CSM's recommendations.
    a. Ensure that volatile organic content (VOC) of the thinned coating complies with prevailing air pollution control regulations.
    b. Thin coatings to only what is necessary to obtain proper application characteristics.
    c. Use a thinner recommended by the CSM.

T. Film thickness and continuity:
1. Apply coating to the specified thicknesses.
    a. Apply additional coats when necessary to achieve specified thicknesses, especially at edges and corners.
2. Verify WFT of the coating system first coat and after applying each subsequent coat.
3. Do not allow the minimum thickness at any point to deviate more than 25 percent from the required average.
4. Do not allow the surface area covered per gallon of coating for various types of surfaces to exceed those recommended by the CSM.
    a. Provide coating coverage worksheets listing the maximum and minimum coverage for each unit volume of coating for concrete surfaces.
5. Apply additional coats to achieve the specified dry film thickness if brush or roller application methods cannot achieve the specified film thicknesses per coat.

U. Protecting coated surfaces:
1. Do not handle, work on, or otherwise disturb coated items until the coating is completely dry and hard.
2. After installation, recoat shop-coated surfaces with specified coating system as necessary to match surrounding surfaces, and to coordinate with the specified color identification requirements.

V. Special requirements:
1. Before erection, apply all but the final finish coat to interior surfaces of roof plates, roof rafters and supports, pipe hangers, piping in contact with hangers, and contact surfaces inaccessible after assembly. Apply final coat after erection.
2. Coat structural slip-critical connections and high strength bolts and nuts after erection.
3. Areas damaged during erection:
    a. Prepare surface for spot repairs as specified for the coating system.
    b. Recoat with prime coat before applying subsequent coats.
    c. Touch up surfaces after installation.
    d. Clean and dry surfaces to be coated at time of application.

4. Coat underside of equipment bases and supports not galvanized with at least 2 coats of primer specified before setting the equipment in place.
5. Coat aluminum in contact with concrete.

3.10 APPLICATION REQUIREMENTS FOR CONCRETE COATING SYSTEMS

A. Apply filler/surfacer as recommended by CSM to fill bug holes and air voids in concrete or block texture in CMU, leaving a uniformly filled surface that does not produce blowholes or outgassing causing the coating system to pinhole.
   1. Allow filler/surfacers to cure sufficiently before applying prime coat as required by the CSM. Use the CSM-recommended drying time between coats.

B. Apply surfacer or filler and let dry before coating application.
   1. Use the drying time between filler/surfacer and coating system specified by the CSM for the site conditions.
      a. Let concrete substrate dry before applying filler/surfacers or coating system materials.
   2. If the maximum recoat time is exceeded, prepare surfaces by solvent washing, light abrasive blasting, and other procedures in accordance with CSM's instructions.
   3. Apply a complete parge coat of the specified filler/surfacer material over the entire substrate before applying the coating system.
      a. Scrub filler/surfacer into the substrate to completely fill open air voids and bug holes.
      b. Completely cover the substrate, unless otherwise specified, above such filled voids by 1/8 inch of thickness.
      c. Provide relatively flat, uniformly even surface before coating application.
   4. Secondary containment: Place surfacer or filler 1/16-inch thick above concrete plane to create a monolithic surface free of pinholes.
      a. Floor surfaces: Broadcast with aggregate to create a non-slip surface texture.
      b. Remove excess aggregates and apply base coat to encapsulate embedded non-slip aggregate.

C. Concrete substrate temperatures:
   1. Apply filler/surfacers and the coating system when temperatures are falling, typically late afternoon or evening.
      a. Do not coat concrete with rising concrete substrate surface temperatures or substrates in direct sunlight, to minimize outgassing from the substrate and formation of pinholes, and/or blistering.
   2. Should bubbles, pinholes, or other discontinuities form in the applied coating system material, they shall be repaired.
      a. Should discontinuities develop in the filler/surfacer material or in the first coat of the coating material, repair them before the next coat.
      b. When discontinuities occur, open the air void behind or beneath the discontinuities and completely fill with specified coating material. Then, abrade the coated area around the discontinuities repair reapply coating over that area.

D. Perform application detail work in accordance with these Specifications, the CSM’s current written recommendations, and Drawings, whichever is stricter.

E. Concrete coating systems application requirements:
   1. Concrete coating minimum dry film thickness excludes parge coat, block filler, and sealer.

3.11 COATING SYSTEM SCHEDULE

A. Attachment A - Schedule of Surfaces to be Coated specifies surfaces to be coated in the field with the coating systems required.

3.12 SURFACES NOT REQUIRING COATING

A. Stainless steel piping, valves, pipe supports, instrument sunshades.

B. Sliding surfaces on expansion joints, motor and pump shafts, machined surfaces at bearings and seals, grease fittings, etc.

C. Galvanized structural steel framing, galvanized roof decking, galvanized pipe supports.

D. Copper and brass pipe, fittings, valves, etc.

E. Bronze valves, bearings, bushings, and fasteners.

F. Corrosion resistant special alloys: Inconel, Alloy 20, Hastelloy, etc.

G. Exterior concrete.

H. Plastic surfaces except coat PVC, CPVC, and other plastic piping system exposed to sunlight.

I. Buried piping that is encased in concrete or cement mortar.

3.13 QUALITY CONTROL

A. Owner-provided inspection or inspection by others does not limit the Contractor's or CSA's responsibilities for quality workmanship or quality control as specified or as required by the CSM's instructions. Owner inspection is in addition to any inspection required of the Contractor.

B. Owner may perform, or contract with an inspection agency to perform, quality control inspection and testing of the coating work covered by this Section. These inspections may include the following:
   1. Inspect materials upon receipt to ensure that the CSM supplied them.
   2. Verify that specified storage conditions for the coating system materials, solvents, and abrasives are provided.
   3. Inspect and record findings for substrate cleanliness.
   4. Inspect and record pH of concrete and metal substrates.
   5. Inspect and record substrate profile (anchor pattern).
   6. Measure and record ambient air and substrate temperature.
   7. Measure and record relative humidity.
   8. Check for substrate moisture in concrete.

9. Verify that mixing of coating system materials is in accordance with CSM's instructions.
10. Inspect, confirm, and record that coating system materials' "pot life" is not exceeded during installation. Inspect to verify that recoat limitations for coating materials are not exceeded.
11. Perform adhesion testing.
12. Measure and record the coating system's thickness.
13. Verify proper curing of the coating system in accordance with the CSM's instructions.
14. Holiday or continuity testing in accordance with NACE SP0188 for coatings that will be immersed or exposed to aggressively corrosive conditions.

C. Perform holiday testing in accordance with NACE SP0188 to identify holidays or pinholes needing repair for coating over 100 percent of surfaces:
   1. Coated steel that will be immersed or exposed to aggressively corrosive conditions.
   2. Coated concrete.
   3. Perform holiday tests after proper application and coating system cure.

3.14 CORRECTIVE MEASURES

A. Repair pinholes or holidays identified by Holiday Testing as follows:
   1. Remove the coating system with a grinder or other suitable power tool.
   2. Remove coating system at pinholes and holidays at least 2 inches diameter around the defect back to expose substrate.
   3. Concrete voids: Chip back to expose entire cavity in all directions.
      a. Completely fill void with approved filler/surfacer material using a putty knife or other suitable tool and strike off. Cure in accordance with CSM's recommendations.
   4. Aggressively abrade or sand the intact coating system surface at least 3 inches beyond the removal area in all directions to produce a uniform 6- to 8-mil profile in the intact coating system.
   5. Vacuum the prepared area to remove dust, dirt, etc., leaving clean, sound surfaces.
   6. Tape to mask the periphery of the prepared intact coating area to prevent coating repair application onto the prepared area.
   7. Apply the coating system with enough coats to achieve the specified finish coat thickness over the defect and coating removal area. Feather the coating onto the abraded coated surfaces around the removal area to avoid a lip and to achieve a neat repair outline.
   8. Follow curing time between coats as specified by CSM for the site conditions. Solvent wash and abrasive blast in accordance with CSM's instructions if the maximum recoat time is exceeded.
   9. Apply coating at specified dry film thickness.

3.15 CLEANUP

A. Remove surplus materials, protective coverings, and accumulated rubbish after completing coating. Thoroughly clean surfaces and repair overspray or other coating-related damage.

3.16 FINAL INSPECTION

A. Conduct final inspection of coating system work to determine whether it meets specifications requirements.

B. Conduct subsequent final inspection with the Engineer to ensure Work is in accordance with Contract Documents requirements.

C. Mark any rework required.
   1. Re-clean and repair, as specified, at no additional cost to the Owner.

END OF SECTION

ATTACHMENT A - SCHEDULE OF SURFACES TO BE COATED

APPENDIX A
Schedule of Surfaces to be Coated

A. The following schedule is incomplete. Coat unlisted surfaces with same coating system as similar listed surfaces. Contact Engineer for clarification.

EPU-M-1	Metals, exterior, non-immersed
EPX-C-2-PWS	Concrete subfill (top surface) in filter vessel.
CTE-C-1	Concrete encased metal pipe

Notes:

1: Non-immersed ferrous metal surfaces include:
- a. Doors, doorframes, ventilators, louvers, grilles, exposed sheet metal, and flashing.
- b. Pipe, valves, pipe hangers, supports and saddles, conduit, cable tray hangers, and supports.
- c. Motors and motor accessory equipment.
- d. Drive gear, drive housing, coupling housings, and miscellaneous gear drive equipment.
- e. Valve and gate operators and stands.
- f. Structural steel.
- g. Crane and hoist rails.
- h. Exterior of tanks and other containment vessels.
- i. Mechanical equipment supports, drive units, and accessories.
- j. Bare electrical equipment: boxes, exposed conduit, and accessories.
- k. Pumps not submerged.
- l. Other miscellaneous metals.

2: Immersed ferrous metal surfaces include:
- a. Interior surfaces of ferrous metal tanks.
- b. Field priming of ferrous metal surfaces with defective shop-prime coat; including non-submerged service.
- c. Bell rings, underside of manhole covers and frames.
- d. Sump pumps, including underside of base plates and submerged suction and discharge piping.
- e. Exterior of submerged piping and valves other than stainless steel or PVC piping.
- f. Submerged pipe supports and hangers.
- g. Stem guides.
- h. Other submerged iron and steel metal unless specified otherwise.

ATTACHMENT B - COATING DETAIL SHEETS

Appendix B			
Coating Detail Sheet			
Coating System	EPU-M-1		
Coating Material	Two coats epoxy with polyurethane finish coat		
Substrate	Metal		
Products: One of the following or equal:	Primer	Intermediate Coat	Finish Coat
Carboline	Carboguard 890	Carboguard 890	Carbothane 134 VOC
International Paint	Devran 224V	Devran 224V	Devthane 379H
PPG	Amerlock 2VOC	Amerlock 2VOC	Amershield VOC
Sherwin Williams	Macropoxy 646 100	Macropoxy 646 100	Hi Solids Polyurethane 250
Tnemec	Series 69	Series 69	Series 1095
Service Condition	Interior or Exterior, subject to direct sunlight. Non-immersion.		
Surface Preparation			
General	Prepare surfaces as specified in this Section and as follows.		
Ferrous Metal	Bare surfaces: SSPC-SP10, Near-White Blast Cleaning. Shop primed surfaces: SSPC-SP2, Hand Tool Cleaning or SSPC-SP3, Power Tool Cleaning. Damaged primer or rust: SSPC-SP10, Near White Blast Cleaning and spot prime.		
Nonferrous Metal	SSPC-SP16, Brush Blast Cleaning.		
Galvanized Metal	SSPC-SP16, Brush Blast Cleaning. Test for surface contaminants.		
Surface profile			
Ferrous Metal	2.5 to 3.0 mils		
Nonferrous Metal	1.5 to 2.0 mils		
Galvanized Metal	1.5 to 2.0 mils		
System Thickness (Dry Film)			
Total	10 to 13 mils		
Primer	4 to 5 mils		
Intermediate Coat	4 to 5 mils		
Finish Coat	2 to 3 mils		
Application			
Special CTR Training	Not required.		

Appendix B			
Coating Detail Sheet			
Coating System	EPX-C-2-PWS		
Coating Material	Epoxy		
Substrate	Concrete		
Products: One of the following or equal:	Primer	Intermediate Coat	Finish Coat
Carboline	891VOC	891VOC	891VOC
International Paint	Bar-Rust 233H	Bar-Rust 233H	Bar-Rust 233H
PPG	Amerlock 2	Amerlock 2	Amerlock 2
Sherwin Williams	Macropoxy 646PW	Macropoxy 646PW	Macropoxy 646PW
Tnemec	Series V140F	Series V140F	Series V140F
Service Condition	Interior potable water tanks and reservoirs.		
Surface Preparation			
General	Prepare surfaces as specified in this Section and as follows.		
Concrete	Cure at least 28 days and dry to the CSM's recommended moisture content. Remove loose concrete and laitance from surfaces, and repair voids and cracks as specified in this Section.		
Existing Coated Concrete	Remove all existing coating to a sound substrate or intact, well-adhered coating. Abrade all surfaces to achieve required surface profile and vacuum to remove all loose dirt, paint chips, and dirt.		
Surface profile			
Concrete	ICRI CSP 3.		
Existing Coated Concrete	ICRI CSP 3.		
System Thickness (Dry Film)			
Total	15 mils		
Primer	One coat at CSM's recommended dry film thickness.		
Intermediate and Finish Coats	Each coat at CSM's recommended DFT to specified system thickness.		
Application			
Special CTR Training	Not Required.		

Appendix B			
Coating Detail Sheet			
Coating System	CTE-C-1		
Coating Material	Coal Tar Epoxy		
Substrate	Concrete		
Products: One of the following or equal:	Primer	Intermediate Coat	Finish Coat
Carboline	No product specified	No product specified	No product specified
International Paint	None applied	Devtar 5A-HS	Devtar 5A-HS
PPG	None applied	Amercoat 78HB	Amercoat 78HB
Sherwin Williams	None applied	TarGuard	TarGuard
Tnemec	No product specified	No product specified	No product specified
Service Condition	Below grade in contact with soil.		
Surface Preparation			
General	Prepare surfaces as specified in this Section and as follows.		
Surface profile			
Concrete	ICRI CSP 3.		
Existing Coated Concrete	ICRI CSP 3.		
System Thickness (Dry Film)			
Total	16 mils		
Primer	4 to 6 mils		
Intermediate Coat	4 to 6 mils		
Finish Coat	4 to 6 mils		
Application			
General	Fill all bugholes with a filler/surfacer compatible with the coating.		
Special CTR Training	Not Required.		

SECTION 10400

SIGNAGE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Plastic and metal signs for building and site use.

1.02 REFERENCES

A. American National Standards Institute (ANSI):
   1. Z535.1 - Safety Colors.
   2. Z535.2 - Environmental and Facility Safety Signs.

B. National Fire Protection Association (NFPA):
   1. 704 - Standard System for the Identification of the Hazards of Materials for Emergency Response.

C. Occupational Safety and Health Administration (OSHA).

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Manufacturer’s data indicating sign type, style, and color.

C. Shop Drawings:
   1. Include lists of sign types, sizes, text, colors, and locations.

D. Samples: Include actual materials.

E. Manufacturer’s installation instructions.

1.04 QUALITY ASSURANCE

A. Regulatory requirements: Provide signage in accordance with Americans with Disabilities Act as published in the Federal Register, Volume 56, No. 144, Friday, July 26, 1991.

PART 2 PRODUCTS

2.01 ROOM AND AREA SIGNS

A. Manufacturers:
   1. One of the following or equal:
      a. Andco Industries Corp., equivalent product.
      b. Best Manufacturing Sign Systems, System 900013.
      c. Vomar Products, Inc., equivalent product.

B. Attachment:
   1. Vinyl tape, self-adhering.

C. Lettering:
   1. Helvetica medium, 3/4 inch high.

D. Materials:
   1. Interior use:
      a. Plastic 1/8-inch thick raised letters.
   2. Exterior use:
      a. Fiberglass 1/4 inch thick with high gloss finish, raised letters, blasted from single piece of fiberglass for integral letter and background.
      b. No adhesive as mechanical fastening of letters shall be allowed.

E. Colors:
   1. As selected by the Engineer from the manufacturer's standard colors.

F. See Attachment A - Room and Area Signage Schedule for specific sign size, location, text, pictogram, and quantity.

2.02 SAFETY SIGNS

A. General:
   1. Colors: In accordance with ANSI Z535.1.
   2. Design: In accordance with ANSI Z535.2.
   3. 40-mil thick aluminum with baked enamel finish.
   4. Fasteners: Round head stainless steel bolts or screws.

B. Manufacturers: One of the following or equal:
   1. Emedco.
   2. Seton Name Plate Co., Special Wording.

C. Danger signs:
   1. Background: White.
   2. Heading: White lettering on red oval with white border in black rectangular panel.
   3. Message: Black lettering on white.
   4. Size: As scheduled.

D. Caution signs:
   1. Background: Yellow.

2. Heading: Yellow lettering on black rectangular panel.
3. Message: Black lettering on yellow.
4. Size: As scheduled.

E. Safety instruction signs:
1. Background: White.
2. Heading: White lettering on green rectangular panel.
3. Message: Black lettering.
4. Size: As scheduled.

F. Warning signs:
1. Background: Orange.
2. Heading: Black lettering on orange diamond in black rectangular panel.
3. Message: Flack lettering on orange.
4. Size: As scheduled.

G. Notice information signs:
1. Background: White.
2. Heading: White lettering on blue rectangular panel.
3. Message: Black lettering.
4. Size: As scheduled.

H. See Attachment B - Safety Signage Schedule for specific sign size, location, text, and quantity.

2.03 HAZARD MATERIAL SIGNS

A. Manufacturers: One of the following or equal:
1. Emedco.
2. Seton Name Plate Co.

B. Requirements:
1. In accordance with NFPA 704.
2. 40-mil thick aluminum with baked enamel finish panels, letters, and symbols with pressure sensitive adhesive.
3. Sizes as required for viewing distances, letters and symbols in accordance with Attachment C - Hazard Material Signage.

PART 3 EXECUTION

3.01 PREPARATION

A. Protect adjacent surfaces which may be damaged by installation of signs.

B. Prepare substrates in accordance with the sign manufacturer’s instructions.

C. Remove scale, dirt, grease, and other contaminates from substrates.

3.02 INSTALLATION

A. Install signs in accordance with the sign manufacturer's instructions.

B. Fasten signs securely in level, plumb, and true to plane positions.

C. Install signs where indicated on the Drawings or as indicated in the Attachments.

END OF SECTION

ATTACHMENT A - ROOM AND AREA SIGNAGE SCHEDULE

ROOM AND AREA SCHEDULE

A. Room Numbers:
   1. Location: On wall outside room adjacent to latch side of doors or when not enough space on latch side, on nearest adjacent wall.
   2. Height: 60 inches above floor to center of sign.
   3. Size: 6 inches square.
   4. Colors: As selected by the Engineer.
   5. Text: Room number as indicated on the Drawings.

B. Room Names:
   1. Location: On wall outside room adjacent to latch side of doors or when not enough space on latch side, on nearest adjacent wall.
   2. Height: 60 inches above floor to center or sign.
   3. Size: 6 inches square.
   4. Colors: As selected by the Engineer.
   5. Text: Signage describing room function as indicated on the Drawings.

C. Toilet Doors:
   1. Location: On wall outside room adjacent to latch side of doors or when not enough space on latch side, on nearest adjacent wall.
   2. Height: 60 inches above floor to center of sign.
   3. Size: 6 inches wide by 8 inches high.
   4. Colors: As selected by the Engineer.
   5. Pictogram: International symbol for men or women to suit application.
   6. Text: Braille characters and MEN or WOMEN as appropriate.

ATTACHMENT B - SAFETY SIGNAGE SCHEDULE

SAFETY SIGNAGE SCHEDULE

A. NON-POTABLE WATER:
   1. Location: At non-potable water hose valves.
   2. Height: As directed by Engineer.
   3. Size: 10 inches wide by 7 inches high.
   4. Heading: DANGER
   5. Wording: NON-POTABLE WATER
      DO NOT DRINK

B. HIGH PRESSURE HOSE VALVES:
   1. Location: At designated hose valves.
   2. Height: As directed by Engineer.
   3. Size: 10 inches by 14 inches.
   4. Heading: DANGER
   5. Wording: HIGH PRESSURE

C. REMOTELY CONTROLLED AUTOMATIC EQUIPMENT:
   1. Location: On front and back of equipment that starts automatically by remote control.
   2. Height: As directed by Engineer.
   3. Size: 10 inches by 14 inches.
   4. Heading: DANGER
   5. Wording: THIS EQUIPMENT STARTS AUTOMATICALLY
      BY REMOTE CONTROL

D. HIGH VOLTAGE WARNING:
   1. Location: On front and back of equipment, adjacent to doors to rooms containing devices that operate at 600 volts or greater.
   2. Height: As directed by Engineer.
   3. Size: 10 inches by 14 inches.
   4. Heading: DANGER
   5. Wording: HIGH VOLTAGE
      KEEP OUT

E. NO SMOKING WITHIN 25 FEET OF BUILDING ENTRY:
   1. Location: As indicated on the Drawings.
   2. Height: Pole mounted with top of sign at 5 feet above grade.
   3. Size: 14 inches wide by 10 inches high.
   4. Heading: NOTICE
   5. Wording: NO SMOKING WITHIN 25 FEET OF BUILDING.
   6. Pictogram: International “No Smoking” symbol.

F. NO PARKING:
   1. Location: As indicated on the Drawings.
   2. Height: In accordance with local regulations.
   3. Size: In accordance with local regulations.
   4. Wording: In accordance with local regulations.
   5. Pictogram: In accordance with local regulations.

ATTACHMENT C - HAZARD MATERIAL SIGNAGE

HAZARD MATERIAL SIGNAGE

A. HAZARD SIGNAL FOR SODIUM HYPOCHLORITE 12 PERCENT:
   1. Location: At entrances to locations where stored and on storage tanks.
   2. Height: As directed Engineer.
   3. View Distance: As directed Engineer.
   4. Health: 3
   5. Flammability: 0
   6. Reactivity: 0
   7. Special: COR

SECTION 10520

FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Fire extinguishers.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. E814-11a - Standard Test Method for Fire Tests of Penetration Firestop Systems.

B. National Fire Protection Association (NFPA):
   1. 10 - Standard for Portable Fire Extinguishers.

C. Underwriters Laboratories, Inc. (UL):
   1. 711 - Rating and Fire Testing of Fire Extinguishers.

1.03 SUBMITTALS

A. Product data.
   1. Extinguishers: Materials description for fire extinguishers; include ratings and classifications.
   2. Installation instructions for each product specified.

B. Shop drawings:
   1. Small-scale plans showing locations of individual fire extinguishers.
   2. Schedule showing each type of extinguisher to ensure proper fit and function.
   3. Indicate installation procedures and accessories required for a complete installation.

1.04 QUALITY ASSURANCE

A. Manufacturer qualifications: Minimum 5 years with satisfactory performance record.

1.05 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. The following or equal:
   1. Activar Construction Products Group – JL Industries.

2.02 FIRE EXTINGUISHERS

A. Multi-purpose chemical type:
   1. Extinguisher unit containing a fluidized and siliconized mono ammonium phosphate powder; nonconductive and nontoxic.
   2. Construction: Heavy duty steel cylinder with metal valve and siphon tube, o-ring seal, replaceable valve stem seal, visual pressure gage, pull pin and upright squeeze grip.
   3. Finish: Factory powder-coated: Red.
   4. UL Effectiveness Rating in accordance with UL 711: Class A, B, and C fires.
   5. UL Rating in accordance with UL 711: 4A-80BC.
   6. Drawing will use the symbol FE for “Fire Extinguisher”.

B. Regular dry chemical type:
   1. Extinguisher unit containing Halotron™.
   2. Size minimum: 11 pounds.
   3. Construction: Heavy duty steel cylinder with metal valve and siphon tube, o-ring seal, replaceable valve stem seal, visual pressure gage, pull pin, and upright squeeze grip.
   4. Finish: Factory powder-coated; Red.
   5. UL Effectiveness Rating in accordance with UL 711: Class B and C fires.
   6. UL Rating in accordance with UL 711: 2A-10BC.
   7. Drawing will use the symbol EFE for “Electrical Fire Extinguisher”.

2.03 WALL BRACKETS

A. Type: Standard as manufactured by fire extinguisher manufacturer.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance NFPA 10, Standard for Portable Fire Extinguishers.

3.02 LOCATIONS

A. Install fire extinguisher type, FE and EFE, as indicated on the Drawings.

B. Install fire extinguisher wall brackets as indicated on the Drawings.

END OF SECTION

SECTION 10810

TOILET ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Toilet accessories.

1.02 REFERENCES

A. Americans with Disabilities Act (ADA).

B. ASTM International (ASTM):
   1. A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

C. California Code of Regulation (CCR):
   1. Title 24 - Building Standards Code.

1.03 SUBMITTALS

A. Shop drawings: Include schedule of proposed products.

B. Product data: Include dimensions gauge, profiles, materials, fabrication details, manufacturer's installation instructions including setting drawings where cutouts are required, templates, substrate preparation instructions and directions for preparing cutouts for installation of accessories.

C. Special samples:
   1. Include 1 of each accessory type.
   2. Special samples acceptable to Engineer may be installed in the Work.

1.04 QUALITY ASSURANCE

A. Manufacturer qualifications: Manufacturer of proposed products for minimum 5 years with satisfactory performance record of minimum 5 years.

B. Installer qualifications:
   1. Manufacturer-approved installer of products similar to specified products on minimum 5 projects with satisfactory performance record.
   2. Furnish toilet accessories by 1 manufacturer, unless scheduled otherwise.

C. Requirements of regulatory agencies: In accordance with ADA, and CCR Title 24, Part 2, for provisions for the physically handicapped; materials and installation.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Maintain protective coatings or coverings on units until installation is complete.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Toilet accessories: One of following or equal:
   1. American Specialties, Inc., Division of ASI Group Bobrick Washroom Equipment, Inc.
   2. GAMCO, Division of Bobrick Washroom Equipment, Inc.

2.02 MATERIALS

A. Stainless steel: ASTM A240, Type 304 or 316; minimum 28 gauge.

2.03 TOILET ACCESSORIES

A. Accessory model numbers indicated below are from the Bobrick Equipment, Inc., line of products.

B. Types:
   1. Grab bars: B6806 (concealed fasteners), sizes and shapes indicated, with appropriate anchors.
   2. Mirror with 3/4- by 3/4-inch frame: B-293 1830.
   3. Paper towel dispenser/waste receptacle, surface mounted, plastic liner: B-3949.
   4. Soap dispenser, counter mounted, liquid soap: B-8111, with 40 fluid ounce polyethylene container.
   5. Toilet paper holder, double, surface mounted: B-686.

C. Fasteners: Concealed or tamperproof, sized to suit application.

2.04 FABRICATION

A. Weld and grind smooth joints of fabricated components.

B. Form exposed surfaces from single sheet of stock, free of joints.

C. Form surfaces flat without distortion.
   1. Maintain flat surfaces without scratches or joints.

D. Shop assemble components and package complete with anchors and fittings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that conditions are satisfactory for the installation of accessory items.

B. Verify that supports and reinforcements are in place and proper for accessory installation.

C. Do not begin installation until conditions are satisfactory.
   1. Beginning installation means acceptance of existing conditions.

3.02 PREPARATION

A. Deliver inserts and rough-in frames to site at the appropriate time for building-in.

B. Provide templates and rough-in measurements as required.

3.03 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install units plumb and level.
   1. Firmly anchor accessories.

C. Install grab bar connectors or support angles between studs securely enough to withstand horizontal pull of 300 pounds.

D. Accurately position grab bar connector assemblies and tighten to support angles before application of wall finish.
   1. After completion of wall surface, secure concealed mounting plate to connector assembly with stainless steel machine screws.

E. Use through-bolted connection for grab bars on toilet compartments.

3.04 ADJUSTING

A. Adjust accessories for proper operation and verify that mechanisms operate smoothly.

B. Replace damaged or defective products with good products.

END OF SECTION

SECTION 11242

LIQUID CHEMICAL DOUBLE DIAPHRAGM METERING PUMPS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Skid Mounted positive displacement double diaphragm pumps complete with drives, controls, and features specified and scheduled in this Section.

B. Tag numbers: As specified in Pump Schedule.

1.02 REFERENCES

A. National Electrical Manufacturer's Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 Volts Maximum).

B. NSF International (NSF):
   1. 61 - Drinking Water System Components - Health Effects.

1.03 DEFINITIONS

A. NEMA:
   1. Type 4X enclosure in accordance with NEMA 250.

1.04 SYSTEM DESCRIPTION

A. General: Provide skid mounted positive displacement, double diaphragm type chemical metering pumps; accessories, and other items required for a complete and operational system. Each chemical metering pump system shall include, but not be limited to, the following items, which shall be supplied by the chemical metering pump manufacturer.
   1. Pumps.
   2. Motors.
   3. Variable speed drives.
   4. Pressure Switches and gauges with diaphragm seals and block/bleed valves.
   5. Flowmeters.
   6. Calibration columns.
   7. Junction boxes.

B. Fluid characteristics:
   1. Sodium hypochlorite:
      a. Dry chemical formula: NaOCl.
      b. Solution concentration: 0.8 percent by weight.
      c. Solution pH: 13.
      d. Solution specific gravity: 1.02.

C. Design requirements:
   1. Pumped liquid shall be contained within pump wet end housing and shall not directly contact any metallic drive components.
   2. Pumps:
      a. Capable of being run dry without damaging effects to pump.
      b. Maximum pressure rating of 140 pounds per square inch.
      c. Maximum suction lift of 23 feet of water.
      d. No loss motion, low pulsation, low velocity output not requiring a pulsation dampener.
      e. Output adjustment range shall be from 0.05 to 100 percent in 0.1 percent increments. 2,000:1.
   3. Pump performance characteristics: As specified in Pump Schedule in this Section.
   4. Motor characteristics: As specified in this Section and in Section 16222 - Low Voltage Motors up to 500 Horsepower.
   5. Variable speed drive characteristics: As specified in this Section.

D. Performance requirements:
   1. Systems shall deliver the pressures and volumes listed for their respective services in the Pump Schedule in this Section.

E. Product requirements as specified in the Agreement and Contract RFP in Volumes 1 and 2 and 15050 - Common Work Results for Mechanical Equipment.

1.05 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15050 - Common Work Results for Mechanical Equipment.
   1. Current NSF 61 Certification for components to be in contact with associated chemical or potable water.
   2. Provide data showing chemical compatibility and history of service with the associated chemical for materials in the system.

C. Shop drawings: As specified in Section 15050 - Common Work Results for Mechanical Equipment.
   1. Dimensions, including materials of construction, size, weight, and performance data.
   2. Drawings: Provide electrical and instrumentation drawings showing coordination with electrical control devices operating in conjunction with the associated feed system.
   3. Dimensioned inlet and outlet connections.
   4. Provide data showing chemical compatibility and history of service with the associated chemical for materials in the system.

D. Calculations: As specified in Section 15050 - Common Work Results for Mechanical Equipment.
   1. For each pump type, submit calibration charts and tables relating flow rate to speed.

2. Submit calculations for each metering pump showing the suitability of each pump for the suction and discharge conditions of each application point. Pump manufacturer shall recommend and size an accumulator to be piped to the suction side of each metering pump, when required based on calculations.
3. Calibration curves for each pump relating speed to flow rate shall be supplied.
    a. Capacity control shall be 0 to 100 percent with delivery repeatable within plus or minus 0.1 percent accuracy over entire range.

E. Vendor operation and maintenance manuals: As specified in Section 01782 - Operation and Maintenance Manuals.

F. Commissioning submittals:
1. Provide Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.
    a. Manufacturer's statement that the materials of construction are compatible with the pumped fluid.
2. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

G. Chemical feed pumps:
1. For each pump type furnish data including head and capacity.
2. Calibration curves.
3. Electrical and control drawings.

H. Control panel shop drawings:
1. Control panel views showing equipment arrangement, doors, equipment layout inside the panel and dimensional information.
2. Internal interconnecting wiring diagrams showing terminal strips and all external devices connected to the panel, design submittal for loop and schematic diagrams.
3. ISA standard Loop Drawings for analog and discrete signals.
4. Complete schematic and diagrams including terminal block and wire identification numbers and device location symbols consistent with the Contract Documents.
5. Panel bill of material with detailed description of components and equipment data sheets.
6. Field cable numbers and terminations.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Packing, shipping, handling and unloading:
1. Pack for shipping and outdoor storage at the project site for up to 6 months. Apply temporary corrosion protective coatings to unpainted components and pack components to protect from the elements.
2. Ship pump and drive completely assembled.

1.07 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.
1. Provide a 2-year duration special warranty.

PART 2 PRODUCTS

2.01 GENERAL

A. A single pump manufacturer shall furnish and coordinate all drives and pump components specified in this Section, including motors, gears, couplings, supports, and other specified accessories and appurtenances to ensure compatibility and integrity of the individual components.

B. The manufacturer of the pumps shall have sole-source responsibility for furnishing the complete assemblies and meeting the specified performance requirements.

2.02 PUMPS

A. Pump manufacturer: One of the following or equal:
   1. Blue-White, model MD3.

B. Type: Duplex chemical proportioning pumps of the double diaphragm no loss motion type, skid-mounted.

C. Features:
   1. The pumphead shall be manufactured from natural PVDF material.
   2. The diaphragm shall be manufactured from a single layer of natural PVDF material. Laminated diaphragms shall not be used.
   3. The inlet and outlet pump head valve housings shall be manufactured from natural PVDF material.
   4. The dual pump head inlet valve housings and outlet valve housings shall be connected by a PVDF manifold pipe.
   5. The pump inlet (suction) adapter and the outlet (discharge) adapters may be installed in the field on either the left or right side of the pump.
   6. The inlet and outlet adapters shall be available for 1/2-inch male NPT.
   7. There shall be four check valve cartridge assemblies per pump head, two located in the inlet valve assembly and two located in the outlet valve assembly. Each cartridge check valve assembly shall contain a ceramic ball, static seal O-ring and ball seat O-ring. O-ring ball seats shall be manufactured from T/FEP elastomer material. Static adapter fitting seals shall be manufactured from FKM elastomer material.
   8. The pump head front shall be covered with a 316 Stainless Steel metal pressure support plate.
   9. The pump head shall be positively secured to the pump housing with 8 each 10-32 stainless steel socket head screws and washers.

D. Materials:
   1. All materials of construction must be suitable for constant contact with the chemical solution to be pumped and take into account current potable water practices.
      a. Sodium Hypochlorite:
         1) All wetted parts shall be suitable for use with 0.8 percent sodium hypochlorite solution.

2) All other non-specified materials are to be manufacturer's standard for continuous service with a 0.8 percent sodium hypochlorite solution.

2. Brass or bronze components are not acceptable for contact with sodium hypochlorite.
3. Material Standards:
   a. Cast Aluminum: ASTM A.
   b. Galvanized Steel: ASTM A123.
   c. Stainless Steel: AISI 316.
   d. Carbon Steel: ASTM A570 or A611.
   e. Viton: ASTM D2000.

E. Accessories: As indicated on the Drawings, pump skids shall be equipped with:
   1. Calibration column in common suction piping.
   2. Pressure relief valve in discharge piping.
   3. Flowmeter in common discharge piping.
   4. Pressure gauge and pressure switch with diaphragm seal and block/bleed valves in the common discharge piping.

F. Source quality control:
   1. Tests and inspections:
      a. As specified in Sections 01756 - Commissioning and 15050 - Common Work Results for Mechanical Equipment.
      b. As scheduled in this Section.
   2. Verification of performance.

2.03 DRIVE

A. Rating: Continuous 24-hour operation, 40 degrees Celsius ambient.

B. Supply: 120 volt, 60 Hertz, 1 phase.

C. Enclosure: NEMA 4X.

D. Housing: Cast aluminum or cast aluminum alloy with pre-treatment and exterior grade corrosion resistant polyester powder coat.

E. Pumps must meet the following minimum requirements for operator interface functionality and control panel:
   1. Provide control system with equipment protective devices for safe operation in a local control panel and with remote inputs and outputs and control devices as indicated on the P&ID Drawings to:
      a. Provide control functions as specified in Section 17101A - Specific Control Strategies.
   2. Backlit graphical LCD capable of up to four lines of text with up to 16 characters per line to display pump speed, running status, flow rate, and programming instructions.
   3. Keypad for start, stop, speed increment, speed decrement, forward/reverse direction, rapid prime, and programming.
   4. Menu driven on screen programming of manual or auto control, flow and remote signal calibration, and general programming.

5. Programmable "Auto Restart" feature to resume pump status in the event of power outage interruption.
6. Programmable "Keypad Lock" to allow operator lockout of all keys except emergency start/stop.
7. Programmable "Maximum Speed" to allow operator to set the maximum speed of the pump within 0.1-190 revolutions per minute (rpm).
8. Leak detection indication and reset options.

F. Supply auto control features to meet the following minimum functionality requirements for use with the SCADA system. All control signal features must be located internally to the pump.
   1. Remote Inputs:
      a. RUN Command from PLC.
      b. Speed control: Analog 4-20 mA from PLC.
   2. Remote outputs:
      a. Form C Dry Contacts rated for 2A at 120 VAC for the following signals:
         1) RUNNING status.
         2) REMOTE status.
         3) FAIL status.
      b. Speed Feedback: Analog 4-20 mA signal to PLC.

G. Drive motor:
   1. Brushless DC motor with integral gearbox and tachometer feedback.
   2. Speed Control Range of 2,000:1.
   3. Horsepower to meet continuous duty at maximum pump speed and pressure requirements.
   4. Circuitry complete with temperature and load compensation and protection.
   5. Mounting: Drive shall be self-supporting and shall not require anchoring.

2.04 SKID-MOUNTED SYSTEM

A. When identified on the drawings, double diaphragm pump shall be supplied as a single skid system and the frame shall be constructed of lightweight, permanently welded polypropylene or polyethylene with drip tray and back wall for mounting of piping and accessories.

B. 316 stainless steel skid mounting pads shall be provided which can be positioned to enable floor mounting of the skid. Each mounting pad shall be secured to 2 mounting holes in the skid structure by 18-8 stainless steel hardware.

C. 316 stainless steel pump mounting brackets with four mounting slots shall be provided which can be positioned to enable wall mounting of the skid. Pump mounting brackets shall be secured to the skid structure by 18-8 stainless steel hardware.

D. Custom engineered universal mounting brackets shall secure each of the ball valves to the skid structure. Valve mounting brackets shall match valve material. Valve mounting brackets shall be secured to pre-cut slots in the skid structure by 18-8 stainless steel hardware.

E. Piping: Piping shall be minimum 1/2-inch diameter schedule 80 CPVC and shall be assembled using the appropriate CPVC cement (IPS Weld-On 724).
   1. Unions shall be solvent weld schedule 80 CPVC.
   2. Seals will be specified as Viton.
   3. All pipe supports on skid shall include cushion strips by Anvil No. AS 3792 or equal.

F. Valves:
   1. Vented ball valves shall be used unless otherwise noted.
   2. Suction and discharge piping drain valves shall be provided.
   3. Check valves shall be located in the discharge side of the piping system at the pump injection point to prevent the back flow of fluid through the system.

G. Pressure relief valves:
   1. Pressure relief valves shall be located in the discharge side of the piping system to prevent excessive pressure in the system. Discharge shall be returned to the bulk storage tank(s).
   2. Manufacturers: Asahi, Griffco Valve Inc., ChemLine Plastics, or equal.
   3. Materials:
      a. Lower body, seat, ball guide, and ball: CPVC.
      b. Diaphragm: PTFE faced EPDM.
      c. Seat gasket: Viton™.
      d. Adjusting bolt, locknut, control spring, and fasteners: Stainless steel.
      e. End connections: Flanged or socket weld.
   4. In-line design, size as indicated on the Drawings and required by this Section. Valves shall be suitable for the service flow and pressure specified in this Section.
   5. The pump supplier shall provide all pressure relief valves associated with the chemical system.
   6. Set pressures shall be factory set at the levels scheduled in this Section. Valve settings shall be externally adjustable from 0 to 75 pounds per square inch.
   7. Provide 3-port configuration for all pressure relief valves where piping back to a tank or connection to drain piping is indicated on the Drawings.

H. Pump connections shall be flexible tubing rated for 200 psi maximum continuous duty and terminated compression to pipe fittings. All connection shall be compression or solvent welded. Threaded connections are prohibited.

I. A calibration cylinder shall be located in the inlet side of the system to permit metering pump output volume calibration.
   1. Valves shall permit the cylinder to be filled by gravity.
   2. The cylinder shall be clear PVC with PVC end caps, or alternative as recommended by the manufacturer for the intended service.
   3. An outlet vent shall be provided with 1/2-inch threaded FNPT PVC connection.

J. An in-line magnetic flow meter mounted on the pumps common discharge line shall be supplied. The wetted parts shall be constructed of PVDF and PEEK materials. The meter shall include a fully configurable 4-20 mA output. An integral meter mounted backlit 3.5-inch LCD display shall be included.

K. Pump-Skid Enclosure:
    1. Furnish and install chemical metering pumps, suction/discharge lines and accessories mounted on a non-metallic floor mounted skid as indicated on the Drawings.
    2. All materials must be compatible with the pumped liquid.

2.05 NAMEPLATES

A. Each pump, gearbox, and motor shall have, securely affixed in a conspicuous location, a stainless steel nameplate with raised letters providing the manufacturer's model, serial number, rating, range, speed and other pertinent data.

2.06 ACCESSORIES

A. Additional accessories required for the system but not required to be supplied by the pump manufacturer include:
    1. Diaphragm seals as specified in Section 17404 - Pressure/Vacuum Measurement: Diaphragm and Annular Seals, except as modified in this Section:
        a. Materials shall be compatible with the pumped liquid at the specified concentration and suitable for outdoor use and exposure.
        b. Shutoff valve shall be provided.
    2. Flowmeters as specified in Section 17302 - Flow Measurement: Magnetic Flowmeters.
    3. Pressure switches as specified in Section 17403 - Pressure/Vacuum Measurement: Switches.
    4. Pressure gauges as specified in Section 17404 - Pressure/Vacuum Measurement: Gauges.
    5. Isolation valves as specified in Section 15117 - Specialty Valves that details Diaphragm Valves for calibration column and suction and discharge piping as indicated on the Drawings.

B. Provide stainless steel tag for all devices with tag number as shown on the Drawings.

2.07 SPARE PARTS AND SPECIAL TOOLS

A. Spare parts:
    1. 1 complete spare parts kit for each pump provided.
    2. 1 spare parts kit for each size and type of pressure relief and backpressure valves.
    3. An initial supply of all oils, greases, and lubricants required to start operations. Supply an amount of these materials equivalent to 1 year of continuous operation for each system.

PART 3 EXECUTION

3.01 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services:
   1. Provide certificates:
      a. Manufacturer's Certificate of Source Testing.
      b. Manufacturer's Certificate of Installation and Functionality Compliance.
   2. Manufacturer's Representative onsite requirements:
      a. Installation: 1 trip, 5 day minimum.
      b. Functional Testing: 2 trips, 2 days minimum each.
   3. Training:
      a. Maintenance: 4 hours per session, 2 sessions.
      b. Operation: 2 hours per session, 2 sessions.
   4. Process operational period:
      a. As required by Owner or Contractor.

C. Source testing: As specified in Pump Schedule.

D. Functional testing: As specified in Pump Schedule.

3.02 SCHEDULES

A. Pumps:

	Misty Wood	**Campus Oaks**
Tag Number	**WD33-PUMP-36211, WD33-PUMP-36221**	**WD33-PUMP-30211, WD33-PUMP-30221**
Feed Point	Well Pump Discharge	Well Pump Discharge
Service	12.5% Sodium Hypochlorite	12.5% Sodium Hypochlorite
Pump Type	Double Diaphragm	Double Diaphragm
Number of Pumps	2 pumps, 1 skid	2 pumps, 1 skid
1st Named Manufacturer's Model	Blue-White	Blue-White
	MD1	MD1
Pump Characteristics:		
Design Conditions		
Rated Flow, (gallons per hour)	0.001 - 8.5	0.001 - 8.5
Maximum Flow, (gallons per hour)	4.4	4.1
Minimum Flow, (gallons per hour)	0.65	0.6
Maximum Pump strokes	125	125
Maximum Discharge Pressure (psi)	110	110
Relief Valve Setting (psig)	120	120
Driver Characteristics:		
Minimum Driver Horsepower	1/4	1/4
Maximum Driver Speed, (rpm)	190	190

	Misty Wood	Campus Oaks
Tag Number	**WD33-PUMP-36211, WD33-PUMP-36221**	**WD33-PUMP-30211, WD33-PUMP-30221**
Voltage/Phases/Hertz	120 volt, 60 Hertz, 1 phase	120 volt, 60 Hertz, 1 phase
NEMA Enclosure Type	NEMA 4X	NEMA 4X
Source Testing:		
Test Witnessing	Not Witnessed	Not Witnessed
Performance Test level	1	1
Vibration Test Level	None	None
Noise Test Level	None	None
Functional Testing		
Performance Test level	1	1
Vibration Test Level	None	None
Noise Test Level	None	None

B. Calibration columns:

Tag Number	Service	Graduation Volume (ml)	Graduation Scale (ml)
PMP-0110 PMP-0120	12.5% Sodium Hypochlorite	500	10

1. The volume of the calibration column should equal 100 percent of the volume delivered by the pump at maximum capacity for a period of 30 to 60 seconds.

END OF SECTION

SECTION 11249

PACKAGED FLUORIDE SYSTEM

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Requirements for complete and operational dry chemical feed and dilution system.

1.02 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15050 - Common Work Results for Mechanical Equipment.
   1. List of materials, list of equipment, including a complete list of parts and supplies with current unit prices and sources of supply.
      a. List of parts recommended by the manufacturer to be replaced after 1 and 3 years of service.
   2. Detailed specifications and shop drawings with both isometric and orthogonal views of the proposed installation, including dimensions, weights, and complete parts list.

C. Hydraulic characteristics of the mixer.

D. Shop drawings: As specified in Section 15050 - Common Work Results for Mechanical Equipment:
   1. Detailed specifications and drawings containing complete piping and flow diagrams of the proposed installation, including dimensions, weights.
      a. Drawing shall show proposed anchorage of equipment and appurtenances and equipment relationship to other parts of the work including clearances for installation.
   2. Wiring, control schematics, and control logic diagrams for electrical and control components furnished.

E. Calculations: As specified in Section 15050 - Common Work Results for Mechanical Equipment.

F. Vendor operation and maintenance manuals: As specified in Section 01782 - Operation and Maintenance Manuals.

G. Commissioning submittals:
   1. Provide Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.
   2. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.03 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds. System shall be covered by a 2-year warranty against defects in materials and workmanship. Warranty period shall commence after on-site acceptance of equipment by Owner. In addition, system shall be subject to the following provisions:
   1. If Owner is dissatisfied with system performance within 30 days of start-up by manufacturer's authorized representative, system may be returned for full refund, provided system has received reasonable use and care.
   2. If Owner and manufacturer's authorized representative determine, at time of start-up, that the system is improperly sized for the application, or if another system by the same manufacturer would be more suitable for any reason, the system will be exchanged at no penalty. Owner will be charged or credited only the difference between the original and replacement systems, plus costs of shipping and handling. Owner will not be billed for restocking the original system, nor for the second visit by the representative to start up the replacement.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. The following or equal:
   1. Prominent, Fluoride Upflow Saturator System.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. General: Provide integrated equipment package capable of automatically metering, diluting, and blending chemical with water.

B. Design requirements:
   1. Two chemical feed systems will be required, one for each well site. The chemical feed system is a sodium fluoride (NaF) make-up and storage system. The solution tank and chemical feed system described are intended to form a single integrated system. The following services will be available to the chemical feed system:
      a. Electrical power: 120 volt, 60 hertz, 1 phase.
      b. Softened water: 5 gallons per minute at 30 pounds per square inch minimum.
   2. The system shall be designed for feeding up to 1.5 mg/L of fluoride to a maximum water well flow rate of 2,700 gpm for Misty Woods well and 2,500 for Campus Oaks well at a pressure of 90 psig.
   3. The saturator tank, solution tank, metering pump, water feed system, control panel, and related components shall be mounted within the secondary containment. The complete unit shall fit in the location indicated on the Drawings.

2.03 MATERIALS

A. Materials and components shall be compatible with the chemical service and complaint with NSF/ANSI 61.
   1. Chemical Service: Sodium Fluoride.
      a. Concentration: 4 percent.
      b. Specific Gravity: 1.165.
      c. pH: 11.5-13.0.

B. All wetted components shall be non-metallic to prevent corrosion.

2.04 COMPONENTS

A. Saturator Tank:
   1. Material: Linear polyethylene.
   2. Capacity: 55 gallons.
   3. Tank Lid: Hinged type.
   4. The tank shall be designed to hold 300 pounds of sodium fluoride.

B. Distribution Header:
   1. The water shall be distributed through the bottom of the tank using a PVC distribution header with perforated lateral pipes.
   2. The saturator shall be of the automatic up-flow type, providing a distribution header at the bottom of a tank, allowing water to flow up through a layer of granular sodium fluoride to provide a saturated solution of approximately 4 percent NaF.

C. Sodium Fluoride Solution Tank:
   1. Material: Linear polyethylene.
   2. Capacity: 70 gallons.
   3. Tank shall be equipped with a radar based level sensor, model ProMinent DulcoLevel for automatic control of the saturator operation.

D. Sodium Fluoride Metering Pump:
   1. Manufacturer: One of the following or equal:
      a. Prominent, Sigma 1 Series.
   2. Characteristics: Chemical proportioning simplex pumps of the positive displacement, non-loss motion design, mechanical diaphragm type.
   3. Repeatability: Plus or minus 2 percent of full scale at constant hydraulic conditions.

Quantity (each)	Max. Strokes/ min	Capacity/pump (min/max gph)	Max. Press. (psig)	Power Supply	Input Signal
1 pump	172	0.139/13.9	145	120 VAC	4-20A

   4. Pump gearbox drive:
      a. Pump gear box shall be constructed of steel, nodular iron or cast aluminum and be water resistant and suitable for outdoor installation. Pump and gear box housing shall be sealed in an outer plastic housing.
      b. Gear box shall be oil bath lubricated.

c. Identify each pump with a corrosion resistant nameplate, securely affixed in a conspicuous location. Nameplate information to include pump tag number, equipment model number, flow capacity, output pressure and electrical data.
d. All fasteners shall be Type 316 stainless steel.

5. Drive and motor:
   a. Type: Each chemical metering pump shall be 120 VAC motor-driven through a flexible coupling or direct connected to the pump if manufacturer's standard. Pumps and motors shall be mounted on floor mountable base plates:
      1) Couplers: Manufacturers: One of the following or equal:
         a) Dodge, Para-flex.
         b) Falk, Type WA.
   b. Each pump shall be equipped with an integral variable speed drive (VSD). The VSD shall be a VFD-AC variable speed drive. The drive shall be suitable for continuous heavy-duty service and shall be suitable for controlling the motor to be furnished.
   c. Stroke length control shall be adjustable manually by means of a stroke length knob, in increments of 1 percent, from 0 to 100 percent of stroke length. Stroke length shall be determined by a sensor within the stroke adjustment knob that provides accurate feedback to the electronics of the pump for calibration and LCD display of stroke length. The digital display and optional analog output will calculate, display, and transmit the flow of the pump based on pump speed and stroke length settings.
   d. Stroke frequency control shall be done with an integral VFD and stepper motor pump controller. For the integral controller, the first 1/3 of the frequency in strokes per minute will operate with the stepper motor and frequencies greater than 1/3 of the maximum will operate with the internal VFD. In manual mode, stroke frequency control shall be manually adjusted by the touch keypad, with the set stroke rate displayed on the pump's LCD. In external mode, the pump shall be capable of receiving a 4-20 mA input via an optional external control cable. The metering pump shall be capable of remote ON-OFF operation using the PAUSE function via a voltage-free contact relay through an optional control cable.
   e. The drive shall have 100:1 constant torque speed range.
   f. The drive shall respond automatically to a remote set point speed signal (4-20 mA). The drive shall provide a 4-20 mA speed signal output proportional to pump output for remote indication. The speed signal output shall be measured independently of the remote set point speed signal. The drive shall also receive a remote start/stop signal (discrete dry contact) and provide discrete signals (discrete dry contact) for pump, failure alarm, diaphragm leak alarm, speed indication, and run indication. The manufacturer shall furnish required additional components for the drive to function as described herein and shown on the Drawings.
   g. The motor shall have TEFC enclosure with horsepower of not less than the minimum specified rating.
   h. The motor and VFD drive supplier shall carefully review the intended application of the variable speed drive and certify in writing that sizes provided are adequate for continuous or intermittent operations (whichever is the most severe operating condition).

6. Liquid end:
    a. Pumps with flat composite mechanically activated diaphragms shall be Teflon faced, fiber reinforced and bonded to an elastomeric support with a steel backing plate.
    b. The liquid end shall be sealed by means of an O-ring of material, if required, compatible with listed chemical solutions.
    c. The liquid end shall have either single ball or cartridge type check valves. Check valves shall compression seal to the pump head and pipe connections via an O-ring seal.
    d. A secondary diaphragm shall seal the liquid end completely from the gear box and drive unit, preventing cross contamination.
    e. The liquid end of each metering pump shall be fitted with a leak detection system to detect early stage diaphragm failure. The detection system shall be an electro optical sensor, mounted on the liquid end in a NEMA 4X enclosure. Upon actuation, the leak detector shall STOP the pump, light a locally visible LED, and sound a remote alarm.

E. Water Feed System:
    1. The incoming water line shall be supplied with a manual shutoff valve, water feed solenoid valve, flow control needle valve, filter, and backflow/anti-siphon valve.
    2. Water Flowmeter/Totalizer: Sensor shall be Signet Model 3-2000-21 with Signet Model 3-9900-1 flow transmitter.

F. Solution Tank Mixer:
    1. A mixer shall be provided and mounted onto the solution tank for mixing the chemical and water into a solution.
    2. The mixer operation shall be controlled by level switches in the solution tank and by an adjustable timer.
    3. Impeller and shaft material shall be 316 stainless steel.
    4. The mixer shall be driven by a 1,500 revolutions per minute, 1/20 horsepower, 115 volt, 60 hertz, single-phase TEFC electric motor.

G. Secondary Containment:
    1. The entire system shall be housed in a single piece structure made of polypropylene.
    2. The structure shall also serve as a secondary containment unit.
    3. Containment structure will have a high level switch to detect a breach event that is captured in the unit. The level switch will activate an alarm at the control panel.
    4. Containment structure shall be anchored with 316SS anchor bolts.
    5. Provide leak detection device within containment.

H. Supports:
    1. Design and provide equipment supports for the entire unit to withstand the seismic loads. The design seismic loads are specified in Section 01850 - Design Criteria.

I. Controls:
    1. Provide controls, indicator lights, and switches at a local control panel as specified in Sections 17100 - Control Strategies and 17101A - Specific Control

Strategies, or shown on instrumentation drawings, and as specified in Section 17710 - Control Systems: Panels, Enclosures, and Panel Components.

2.05 ACCESSORIES

A. Backpressure Valves:
   1. Adjustable pressure range of 0 to 150 psi.
   2. Materials shall be compatible with the associated chemical and concentration.
   3. Pressure Setpoint: Externally adjustable without removing valve from piping system. Set valve to open at half the pump discharge pressure at operating point, or as indicated on the Drawings.
   4. Manufacturer: One of the following or equal:
      a. Plast-O-Matic.
      b. Griffco.

B. Pressure relief valves:
   1. In-line design, valves shall be suitable for the service flow and pressure specified in this Section.
   2. The pump supplier shall provide all pressure relief valves associated with the chemical system.
   3. Materials shall be compatible with the associated chemical and concentration.
   4. Set pressures shall be factory set at the levels scheduled in this Section. Valve settings shall be externally adjustable from 0 to 75 pounds per square inch.
   5. Provide 3-port configuration for all pressure relief valves where piping back to a tank or connection to drain piping is indicated on the Drawings.
   6. Manufacturer: One of the following or equal:
      a. Plast-O-Matic.
      b. Griffco.

C. Flow Monitor:
   1. Type III Metering Monitor located on the pump discharge piping.
   2. Materials: PVDF/FPM.
   3. Manufacturer: One of the following or equal:
      a. Prominent.

D. Additional accessories:
   1. Additional accessories required for the system but not required to be supplied by the pump manufacturer include:
      a. Diaphragm seals as specified in Section 17401 - Pressure/Vacuum Measurement: Diaphragm and Annular Seals, except as modified in this Section:
         1) Materials shall be compatible with the pumped liquid at the specified concentration and suitable for outdoor use and exposure.
      b. Pressure switches as specified in Section 17403 - Pressure/Vacuum Measurement: Switches.
      c. Pressure gauges as specified in Section 17404 - Pressure/Vacuum Measurement: Gauges.
      d. Isolation valves as specified in Section 15111 - Ball Valves for suction and discharge piping as indicated on the Drawings.

2.06 WATER SOFTENER

A. Designed for 125 psig and in accordance with ASME code.

B. Rust-resistant and corrosion-resistant.

C. Mineral tank: Steel and lined with 0.006-inch to 0.008 inch high quality phenolic epoxy.

D. Brine System: The combination salt storage and brine production tank shall be 50 pound capacity and manufactured of corrosion resistant plastic.

E. The brine float assembly shall allow for adjustable salt settings and shall provide for a shutoff to the brine refill. The brine tank shall include a safety overflow connection to be plumbed to drain.

F. Valves and other parts which come into contact with water made of copper, with plastic, EPDM or Monel internal parts.

G. Permanent type, high capacity mineral resin bed, and high capacity resin.

H. Down flow of water during softening.

I. Automatic cycling:
   1. Controlled by a pair of sensors detecting the need for regeneration.
   2. Upflow of water on regenerating cycle.
   3. Automatic bypass to provide full supply of water at outlets during regenerating cycle.

J. Design with the following characteristics:
   1. Ability to handle water hardness indicated by water quality data provided by Engineer or Owner.
   2. Provide 8 gph of continuous softened water up to a peak flow rate of 12 gph.

K. Electrical controls: 120 volt, 60 hertz electrical service.

L. Manufacturers:
   1. Kinetico, Model S650XP.

M. Warranty:
   1. Special warranty:
      a. Duration: Provide 2-year special warranty.

PART 3 EXECUTION

3.01 INSTALLATION

A. Field finishes:
   1. Protect motors.

2. Clean equipment and prepare shop primer.
3. Apply field primer and coating systems in the field as specified in Section 09960 - High-Performance Coatings requirements.

B. Contractor to flush out potable water line until water discharged from line is clear and free of debris, before conducting disinfection of the line as specified in Section 01757 - Disinfection.

C. Identification of the health, flammability, and reactivity of hazardous materials shall be affixed to each chemical storage drum, as specified in Section 10400 - Signage.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services:
1. Provide certificates:
   a. Manufacturer's Certificate of Source Testing.
   b. Manufacturer's Certificate of Installation and Functionality Compliance.
2. Manufacturer's Representative onsite requirements:
   a. Installation: 1 trip, 2 day minimum.
   b. Functional Testing: 1 trip, 2 day minimum each.
3. Training:
   a. Electrical maintenance: 4 hours per session, 2 sessions.
   b. Mechanical maintenance: 4 hours per session, 2 sessions.
   c. Operation: 2 hours per session, 2 sessions.
4. Process operational period.
   a. As required by Owner or Contractor.

C. Source testing:
1. Test as specified in Section 15958 - Mechanical Equipment Testing.
2. Fluoride System:
   a. Test witnessing: Not witnessed.
   b. Conduct Level 1 General Equipment Performance Test.
   c. Conduct Level 1 Vibration Test.
   d. Conduct Level 1 Noise Test.
3. Electrical Instrumentation and Controls:
   a. Test witnessing: Not witnessed.
   b. Conduct testing as specified in Section 17950 - Commissioning for Instrumentation and Controls.

D. Functional testing:
1. Functional testing of the entire system to be conducted following installation and cleaning of the units.
2. Fluoride System:
   a. Test witnessing: Witnessed.
   b. Conduct Level 2 General Equipment Performance Test.
   c. Conduct Level 2 Vibration Test.
   d. Conduct Level 2 Noise Test.
3. Electrical Instrumentation and Controls:
   a. Test witnessing: Witnessed.

b. Conduct testing as specified in Section 17950 - Commissioning for Instrumentation and Controls.
c. Manufacturer's representative shall provide a calibration check.

END OF SECTION

SECTION 11309

PACKAGED GRINDER PUMP STATION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Grinder pump stations associated with odor control drain with features specified in this Section.

B. Tag Numbers: The following pumps shall be included as part of a single package grinder pump:
   1. Misty Woods:
      a. WD30-PUMP-28102.
      b. WD30-PUMP-28103.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. A48 - Standard Specification for Gray Iron Castings.
   2. A108 - Standard Specification for Steel Bars, Carbon and Alloy, Cold-Finished.
   3. A276 - Standard Specification for Stainless Steel Bars and Shapes.
   4. A582 - Standard Specification for Free-Machining Stainless Steel Bars.
   5. A743 - Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.
   6. B148 - Standard Specification for Aluminum-Bronze Sand Castings.
   7. B505 - Standard Specification for Copper Alloy Continuous Castings.
   8. B584 - Standard Specification for Copper Alloy Sand Castings for General Applications.

   2. 1.6 - Centrifugal Pump Tests.
   3. 9.1-9.5 - Pumps - General Guidelines for Types, Definitions, Application, and Sound Measurement.

C. National Electrical Code (NEC).

D. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1000 V Maximum).

E. Underwriters Laboratories, Inc. (UL):
   1. 508 - Standard for Industrial Control Equipment.
   2. 508A - Standard for Industrial Control Panels.

3. 698A - Standard for Industrial Control Panels Relating to Hazardous (Classified) Locations.
4. 1283 - Standard for Electromagnetic Interference Filters.
5. 1449 - Surge Protective Devices.

1.03 DEFINITIONS

A. Pump head (Total Dynamic Head, TDH), flow capacity, pump efficiency, net positive suction head available (NPSHa), and net positive suction head required (NPSHr): As defined in HI 1.1-1.5, 1.6 and 9.1-9.5 and as modified in the Specifications.

B. Suction head: Gauge pressure available at pump intake flange or bell in feet of fluid above atmospheric; average when using multiple suction pressure taps, regardless of variation in individual taps.

C. Tolerances: In accordance with HI 1.1-1.5, 1.6 and 9.1-9.5, unless specified more restrictively.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Submit as specified in Section 15050 - Common Work Results for Mechanical Equipment.

C. Submit design calculations signed by a registered structural engineer for concrete ballast to prevent flotation.

1.05 TOOLS AND SPARE PARTS

A. The grinder pump station manufacturer shall furnish all special tools and appliances necessary to adjust the equipment and appurtenances.

B. The following spare parts shall be furnished:
   1. One grinder pump.

1.06 QUALITY ASSURANCE

A. Manufacturer qualifications: Manufacturer of pumps similar to specified pumps as evidenced by references to minimum 5 installations of the same model and drive configuration in operation under similar conditions of head, flow, and speed for minimum 5 years.

B. Provide pumps and pump stations in this Section from the same manufacturer.

C. Pump station manufacturer:
   1. Furnish and coordinate sump, barrel/can, grinder pumps, driver, drive, and pump components as specified below.
   2. Design station bedding and backfill and anti-floatation ballast.
   3. Provide written installation and check out requirements.

1.07 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 15050 - Common Work Results for Mechanical Equipment.

1.08 PROJECT CONDITIONS

A. Environmental requirements: As specified in Section 15050 - Common Work Results for Mechanical Equipment.

1.09 SEQUENCING AND SCHEDULING

A. Coordinate work with work sequence and constraints.

1.10 WARRANTY

A. Grinder pump station manufacturer shall provide a part(s) and labor warranty on the complete station and accessories, including, but not limited to, panel and redundant check valve, for a period of 24 months after notice of Owner's acceptance.

1.11 MAINTENANCE

A. Special tools: Deliver 1 set for every furnished pump type and size needed to assemble and disassemble pump system.

B. Spare parts: Deliver the following as specified in the Agreement and Contract RFP in Volumes 1 and 2:
   1. Sump seal gaskets or o-rings.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Grinder pump station: The equipment specified shall be a product of a company experienced in the design and manufacture of grinder pumps stations for specific use in low-pressure sewage systems. Manufacturer shall provide a reference and contact list from 3 of its grinder pump station installations of the same size.
   1. Manufacturers: One of the following or equal:
      a. E/One Sewer Systems, W-Series Fiberglass Duplex or equal.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Furnish complete factory-built and tested grinder pump station(s) consisting of grinder pump(s) mounted in a basin constructed of fiberglass or high density polyethylene (HDPE), electrical quick disconnect (NEMA 6), pump removal system, shut-off valve, anti-siphon valve, and check valve assembled within the basin, electrical alarm/disconnect panel, and all necessary internal wiring and controls. Include design and supply of soil backfill and base and concrete ballast to prevent floatation.

2.03 COMPONENT MATERIALS

A. General: When materials are referenced in this Section, the compositions shall be the UNS Alloys, Types, or Grades in this Article unless specified or scheduled otherwise.

B. Cast irons:
   1. Cast Iron: ASTM A48, Class 35 B minimum.
   2. Nickel Cast Iron: ASTM A48, Class 35 minimum with 3 percent nickel added.

C. Carbon steels:
   1. Structural steel: As specified in Section 05120 - Structural Steel Framing.
   2. Steel shafts: ASTM A108, Grade or UNS Alloy as specified or scheduled.

D. Stainless steels:
   1. Castings: ASTM A743, Grade as specified or scheduled.
   2. Shafts and shapes: ASTM A276 or ASTM A582, Type or UNS Alloy as specified or scheduled.
   3. Fasteners: ASTM F593 or ASTM F594, type or grade as specified.

E. Copper alloys:
   1. Bronze: ASTM B505 or ASTM B584, UNS Alloy C83600.
   2. Zincless Bronze: ASTM B505 or ASTM B584, leaded tin bronze, UNS Alloy C92700.
   3. Aluminum bronze: ASTM B148, ASTM B505 or ASTM B584, UNS Alloy C95200.

2.04 PUMP

A. Type: Custom designed, integral, vertical rotor, motor driven, solids handling, and progressive cavity pump.

B. Pump station capacity: Duplex pump installation, each pump shall be rated for design at 11 gallons per minute at 40 pounds per square inch, gauge, discharge pressure.

C. Seal: Single mechanical seal with stationary ceramic seat and carbon rotating surface, held in position by stainless steel spring.

D. Rotor: Through-hardened, polished, precipitation hardened stainless steel.

E. Stator: Ethylene-propylene synthetic elastomer.

F. Materials: Suitable for wastewater service with resistance to abrasion, grease, water and detergent, dilute laboratory chemicals, and wear.

G. Check valve: Pump discharge shall be equipped with a gravity operated, flapper type check valve. Check valve shall provide a full port passage when opened and the pressure loss across the check valve shall be no more than 6 inches water column at maximum flow.

2.05 GRINDER

A. Type: Placed immediately below pumping elements, direct driven by a single 1-piece stainless steel motor shaft, rotating type with stationary hardened and ground stainless steel shredding ring, with 2 hardened series 400 stainless steel cutter bars.

B. Assembly: Dynamically balanced to operate without excessive noise or vibration over the entire operating range.

C. Impeller: Securely fastened to the pump motor shaft.

D. Inlet shroud: 5-inch minimum diameter.

E. Average inlet velocity: Maximum flow velocity of 4 feet per second.

F. Rotational speed: Impeller mechanism maximum speed of 3,600 revolutions per minute.

2.06 MOTOR

A. Horsepower: Minimum 1 horsepower.

B. Speed: 1,725 revolutions per minute.

C. Volts/phase/frequency: 240 Volts per single phase per 60 hertz.

D. UL listed for the application.

2.07 TANK AND INTEGRAL ACCESSWAY

A. Tank construction: Rotationally molded high density polyethylene, nominal thickness of 1/2-inch, all seams thermally welded and leak tested, capable of withstanding pressure exerted by saturated soil loading at maximum burial depth as indicated on the Drawings. All station components shall function normally when subject to maximum external soil and hydrostatic pressure.

B. Tank capacity: 275 gallons.

C. Accessway: Integral extension of wet well assembly with a lockable cover with minimum 30-inch diameter.

D. Accessway construction: Facilitate field adjustment of station height in increments of no more than 4 inches without the use of adhesives or sealants requiring cure time.

E. Discharge piping: Constructed of 304 stainless steel, termination outside the accessway bulkhead with stainless steel 1-1/4-inch female NPT fitting. Discharge piping shall include a stainless steel ball valve.

F. Disconnect: Accessway shall include a NEMA 6 quick disconnect for all power and control functions.

G. Vent: Accessway shall include a 2-inch PVC vent.

H. Penetrations: All necessary penetrations shall be molded and factory sealed.

I. Design bedding and backfill quantities and locations.

J. Ballast: Design and provide cast-in-place concrete to ensure that grinder pump station does not become dislodged.

2.08 INSTRUMENTATION

A. Liquid level shall be monitored by an integral air-bell level sensor connected to a pressure switch.

B. High level sensing shall be monitored by a separate air-bell sensor and pressure switch.

2.09 PACKAGE CONTROL SYSTEM

A. General:
   1. This Section summarizes key control system components for vendor control panels (VCP).
      a. Referenced sections can be obtained from the Contractor for complete control system requirements.
   2. Provide instruments and other components performing similar functions of the same type, model, or class, and from one manufacturer.
      a. Coordinate with Contractor to align make and model with Contractor-furnished equipment.
   3. VCP shall be completely preprogrammed, prewired, and factory tested for proper operation prior to shipment.
      a. Additional testing requirements as specified in Section 17950 - Commissioning for Instrumentation and Controls.
   4. Provide necessary control hardware, software, and components as required for a fully functional and operational installation.
   5. Design and size panels.
      a. Design panels to fit in the space as indicated on the Drawings.
         1) Panel Tags:
            a) WD37-VCPX-36901.

B. Panels, Enclosures, and Panel Components:
   1. Manufacturers: One of the following or equal:
      a. nVent/Hoffman.
      b. Saginaw Control & Engineering.
   2. Provide components and equipment with UL 508 listing.
   3. Provide control panels with UL 508A labeled.
   4. Provide fuses for equipment that is not UL listed or recognized.
   5. Provide intrinsically safe circuits and equipment in accordance with UL 698A.
   6. Provide control panel power circuits in accordance with the panel power wiring diagram included with the contract documents.
      a. Design devices and instruments to fail in a safe condition.
   7. Accept 240 VAC power source:

a. Terminate incoming power feed on main circuit breaker as specified in Section 16412 - Low Voltage Molded Case Circuit Breakers.
b. Properly rate incoming circuit breaker for the available fault current as calculated as specified in Section 16305 - Electrical System Studies.
c. Provide a buck boost transformer from the same manufacturer with ratings as indicated on the drawings.
d. Derive additional voltages as required by the application.

8. Conform panel enclosure rating to the area classifications as specified in Section 16050 - Common Work Results for Electrical.
9. Panel shall be rated as follows, unless otherwise specified:
   a. Indoor panels:
      1) Electrical/control rooms: NEMA 12, powder coated mild steel.
      2) Process floor: NEMA 4X.
         a) Non-Corrosive Areas: Type 316 stainless steel.
         b) Corrosive Areas: Polycarbonate or fiberglass reinforced polyester (FRP).
10. Provide each control panel door with a continuous steel hinge, 3-point latching mechanism and locking handle with rollers on the ends of the latch rods.
    a. Connect latch rods to a common door handle, hold doors securely, and form a compressed seal between door and gasket, at the top, side, and bottom.
11. Perform and submit thermal management calculations for each control panel.
    a. Provide heating, cooling, and dehumidifying devices in order to maintain instrumentation and control devices within their rated operational temperature range.
12. Pad lockable flange mounted disconnect switch to disconnect power from panel.
    a. Interlock with the panel door.
13. Provide nonmetallic ducts for routing and organization of conductors and cables.

2.10 CONTROL REQUIREMENTS

A. Pilot devices:
   1. Controls:
      a. Alarm silence pushbutton.
      b. Redundant pump start.
      c. Push-to-run switch.
   2. Lights:
      a. Alarms:
         1) Wet well high level: shall remain on until wet well liquid level drops below the "off" setting.
   3. Audio:
      a. Alarms:
         1) Wet well high level.

B. Monitoring and control:
   1. Dry contact rating: 24 VDC @ 6 A.
   2. Analog signal type: 4-20 mA.

3. VCP Outputs:
    a. Alarms:
        1) Wet well high level.

PART 3 EXECUTION

3.01 INSTALLATION

A. Do not drop, roll, or lay the pump station on its side.

B. Install pump station in a traffic rated manhole with minimum 6-inch clearance between manhole and pump station tank. Backfill annular space with concrete, CLSM, or similar material to prevent flotation.

C. Install pump station so that 1 to 4 inches of accessway, below the bottom of the lid, extends above the finished grade line. The finished grade shall slope away from the unit.

D. Provide bedding material under each unit as recommended by the manufacturer and meeting the requirements indicated on the Drawings.

E. A concrete anti-flotation collar, sized according to the manufacturer's instructions shall be required and shall be poured in place around the sump. Each grinder pump station shall have a minimum of 3 lifting eyes for loading and unloading purposes.

F. Unit shall be leveled, and filled with water, to the bottom of the inlet, to help prevent the unit from shifting while the concrete is being poured.
    1. Concrete must be manually vibrated to ensure there are no voids.
    2. If it is necessary to pour the concrete to a level higher than the inlet piping, an 8-inch sleeve is required over the inlet prior to the concrete being poured.
    3. Follow the manufacturer's written installation instructions.

G. Alarm/disconnect panel shall be furnished, installed, and wired to the grinder pump station by Contractor.

H. Contractor shall mount the alarm panel where indicated on the Drawings and as per national and local codes. Install all electrical and conduit between the panel and the pump station.

3.02 FACTORY TEST

A. Each grinder pump shall be submerged and operated for 5 minutes (minimum).
    1. Included in this procedure shall be the testing of all ancillary components such as, the anti-siphon valve, check valve, discharge line, level sensors, and each unit's dedicated controls.
    2. All factory tests shall incorporate each of the above listed items.
    3. Actual appurtenances and controls which will be installed in the field shall be particular to the tested pump only.

4. Certified test results shall be available upon request showing the operation of each grinder pump at 2 different points on its curve, with the maximum pressure no less than 40 pounds per square inch.
5. Engineer reserves the right to inspect such testing procedures with representatives of Owner, at the facility 21 days' notice shall be given prior to testing the pumps.

3.03 START-UP AND FIELD TESTING

A. Manufacturer shall provide the services of a qualified factory trained technician who shall inspect the placement and wiring of each station, perform field tests as specified in this Section, and instruct Owner's personnel in the operation and maintenance of the equipment before the stations are accepted by the Owner. Technician shall be onsite for a minimum of 8 hours, exclusive of travel time, to perform start-up and testing.

B. All equipment and materials necessary to perform testing shall be the responsibility of Contractor.

C. Upon completion of the installation, the authorized factory technician will perform the following test on each station:
   1. Make certain the discharge shut-off valve is fully open. This valve must not be closed when the pump is operating.
   2. Turn on the alarm power circuit.
   3. Fill the wet well with water to a depth sufficient to verify the high level alarm is operating. Shut off water.
   4. Turn on pump power circuit.
      a. Initiate operation to verify automatic "on/off" controls are operative.
      b. Pump should immediately turn on.
      c. Within 3 minutes the pump will turn off.
   5. Test remote alarm to PLC.

D. Upon completion of the start-up and testing, manufacturer shall submit to Engineer the start-up authorization form describing the results of the tests performed for each grinder pump station. Final acceptance of the system will not occur until authorization forms have been received for each pump station installed.

END OF SECTION

SECTION 11313

VERTICAL TURBINE PUMPS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Vertical turbine pumps with radial, mixed flow, or axial (propeller) type impellers and drivers as scheduled.

   7. A 516 - Standard Specification for Pressure Vessel Plates, Carbon Steel, for Moderate-and Lower-Temperature Service.
   8. A 582 - Standard Specification for Free-Machining Stainless Steel Bars.
   9. A 743 - Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.
   10. B 148 - Standard Specification for Aluminum Bronze Sand Castings.
   11. B 505 - Standard Specification for Copper Alloy Continuous Castings.
   12. B 584 - Standard Specification for Copper Alloy Sand Castings for General Applications.
   13. F 593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.
   14. F 594 - Standard Specification for Stainless Steel Nuts.

E. Hydraulic Institute (HI):
   1. 2.1-2.2 - Vertical Pumps for Nomenclature and Definitions.
   2. 2.3 - Vertical Pumps for Design and Application.
   3. 2.4 - Vertical Pumps for Installation Operation and Maintenance.
   4. 2.6 - Vertical Pump Tests.
   5. 9.1-9.5 - Pumps - General Guidelines for Types, Definitions, Application, and Sound Measurement and Decontamination.

F. International Standards Organization (ISO):
   1. ISO 9001 Certified.

1.03 DEFINITIONS

A. Pump head (total dynamic head, TDH), flow capacity, pump efficiency, net positive suction head available (NPSHa), and net positive suction head required (NPSHr): As defined in HI 2.1-2.2, 2.3, 2.6, and 9.1-9.5 and as modified in the Specifications. The pump head and efficiency are evaluated at the outlet of the discharge head and include the net losses in the pump column and discharge.

B. Flow, head, efficiency, and motor horsepower specified in this Section are minimums unless stated otherwise.

C. Suction head: Gauge pressure available at pump intake flange or bell in feet of fluid above atmospheric.

D. Tolerances: This Section and related sections contain tolerances that may be more stringent than Hydraulic Institute Standard tolerances. Where tolerances are not mentioned, Hydraulic Institute Standards 2.1-2.2, 2.3, 2.4, and 9.1-9.5 shall apply.

1.04 SYSTEM DESCRIPTION

A. Components: Pump, driver, motors, and drive arrangements as specified or as scheduled with shafts, columns, barrels, intermediate bearings, seals or packing, couplings, base plates, guards, supports, anchor bolts, necessary valves, gauges, taps, lifting eyes, stands, and other items as required for a complete and operational system.

B. Design requirements:
   1. Pump performance characteristics:
      a. As specified in the Pump Schedule.
      b. Performance tolerances shall be the same as the test tolerances specified in Section 15958 - Mechanical Equipment Testing.
      c. Pump curve shall be continuously rising throughout the design conditions listed in the pump schedule.
   2. Motor characteristics: As specified in the Pump Schedule.

1.05 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Torsional analysis: Submit as specified in Section 15050 - Common Work Results for Mechanical Equipment when scheduled.

C. Pump test report showing testing conformance to listed standards for the Engineer Of Record for review and approval prior to shipment.

1.06 QUALITY ASSURANCE

A. General: As specified in Section 15050 - Common Work Results for Mechanical Equipment.

B. Provide pumps specified in this Section from same manufacturer. Require pump manufacturer to furnish and coordinate pump, driver, drive, and pump components including barrel/can as scheduled and to provide written installation and checkout requirements.

C. Pump manufacturer must be ISO 9001 certified.

1.07 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 15050 - Common Work Results for Mechanical Equipment.

1.08 PROJECT CONDITIONS

A. Environmental requirements: As specified in Section 01850 - Design Criteria.

1.09 SEQUENCING AND SCHEDULING

A. Coordinate work with restrictions as specified in the Agreement and Contract RFP in Volumes 1 and 2.

1.10 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.
   1. Provide a 2-year duration special warranty.

1.11 MAINTENANCE

A. Special tools: Deliver 1 set for each furnished pump type and size needed to assemble and disassemble pump system.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. One of the following or equal:
   1. National Pump Company: model as scheduled.

2. Flowserve; similar to model as scheduled.
3. Peerless Pump; similar to scheduled model.
4. Sulzer/Johnston Pumps; similar to scheduled model.
5. Weir/Floway; similar to scheduled model.

2.02 MATERIALS

A. General: Materials in the Pump Schedule shall be the type and grade as specified in this Section, and shall be in conformance with all applicable ASTM Standard specifications.

2.03 GENERAL PUMP CONSTRUCTION

A. Type: Industrial, heavy duty, vertical turbine, centrifugal type pumps meeting performance requirements and features as scheduled and as specified.

B. Discharge Head: Custom fabricated discharge head with NEMA C-Face motor mount, pressure rated base flange, and pressure rated discharge flange fabricated from Type 316L stainless steel in conformance with ASTM A 312. Provide access to the pump shaft seal and coupling through the center section of the discharge head, with hinged guard, and NPT drain connections, and welded lifting lugs on either side of the head to facilitate crane removal. All components shall be fabricated from Type 316 SST.

C. Discharge flange: ASME B16.1 or B16.5 drilled; rated for 1.5 times the pump shutoff head at 120 degrees Fahrenheit.

D. Discharge head base flange: ASME B16.1 or B16.5 drilled; rated for 1.5 times the pump shutoff head at 120 degrees Fahrenheit. Provided NPT threaded taps on both sides of flange for downhole control valve hydraulic fittings and trickle flow connections as shown on the drawings.

E. Discharge nozzles: Provide 1/2-inch NPT taps for pressure gauges; install nipple and gauge with block valve. Additional ports are required for the nitrogen lines for the down hole control valve as well as the trickle flow and pre lube as shown on the mechanical drawings.

F. Bearings:
   1. Design driver/motor bearings to support the line shaft assembly and rated for ABMA L_{10} life of 40,000 hours at Design Rated Point flow and head in accordance with ABMA 9 or ABMA 11.
   2. Design motor to withstand continuous duty full load thrust and momentary upthrust that may occur during pump on/off or other operations.

G. Fasteners: Provide Type 316 stainless steel fasteners in accordance with ASTM F 593 or ASTM F 594.

2.04 PUMP SUCTION ASSEMBLY

A. Pump suction assembly: Provide suction bell. Provide anti-vortex baffles, foot valve, and strainer when scheduled.

B. Design suction bells and provide strainers and anti-vortex baffles to minimize solids plugging and vortexing. Screens to have a flow area at least 4 times the suction pipe area.

C. Materials:
   1. Pump suction bell: As scheduled.
   2. Anti-vortex baffles: Same material as scheduled for pump suction bell.
   3. Pump suction bell bearing: As scheduled.
   4. Pump suction strainer: When strainer scheduled, provide Type 316 stainless steel.

2.05 PUMP IMPELLER BOWL ASSEMBLIES

A. Pump impeller assembly:
   1. Type: As scheduled.
   2. Maximum number of vanes: As scheduled.
   3. Number of stages: As scheduled.
   4. Required balance: In conformance with the Hydraulic Institute Standards.
   5. Method of securing impellers to shafts: Keyed and secured by a bronze nut locked in place or locked by other methods acceptable to the Engineer. Provide any special tools required for removal and installation of pump impellers.
   6. Provisions for adjustment of axial clearance: Make such adjustment through use of motor adjusting nut or adjustable coupling.
   7. Impeller thrust: When appropriate for the specified impeller type, provide hydraulically balanced impeller to minimize down thrust.

B. Intermediate and discharge impeller cases:
   1. Material: As scheduled.
   2. Attached with bolting.

C. Pump impeller bowl bearings: Provide bearing for each impeller; material as scheduled.

D. Diffusion vanes: Provide vanes cast into bowl.

E. Suction bowl bearings:
   1. Provide bronze sleeved bearings with self-contained lubrication system filled with graphite type non-soluble grease when grease lubrication scheduled; provide bearing with sand cap.
   2. When service is potable water, provide non-toxic grease approved by the Food and Drug Administration for use in potable water.

F. Design with smooth water passages to reduce clogging by stringy or fibrous materials on impellers or shafting.

G. Design replaceable wear rings for both the bowl and impeller on each impeller bowl.

H. Design capable of passing solids with a sphere size as scheduled or larger.

2.06 LINE SHAFTS

A. Provide line shaft type and lubrication type as scheduled and as specified in this Section.

B. Open line shaft, product lubricated:
   1. Shaft and couplings:
      a. Provide keyed shaft type mechanical couplings with key or set screw locking of shaft couplings.
      b. Shaft threaded connections are allowed. Threads shall be cleaned before assembly.
   2. Bearings and bearing retainers: Provide bearings and retainers spaced as scheduled, but not to exceed 10 feet; provide at least 1 bearing for each line shaft length; provide grease fitting for top bearing extended to outside any guards when grease lubrication specified.
   3. Provide shaft centralizers as directed by pump manufacturer.
   4. Materials:
      a. Shaft and couplings: As scheduled; where hard faced steel shaft is specified, hard face at sleeve bearings to 550 Brinell minimum.
      b. Bearings and bearing retainers: As scheduled.

C. Strength: Able to withstand minimum 1.5 times maximum operating torque and other loads.

D. Sleeves: Provide shafting with hardened sleeves where shafts pass through bearings or stuffing boxes as scheduled; Brinell 550 or higher for hardened shaft; when the specified mechanical seals cannot be installed on a hardened shaft, hardened shafts are not required in the area of the mechanical seal.

E. Design pump line shafting in interchangeable lengths as scheduled, but not to exceed 10 feet; shaft lengths to match scheduled pump column lengths.

F. Coupling strength: Design driver to pump line shaft coupling of sufficient length and strength to maintain line shaft alignment.

G. Adjustment:
   1. Design a means to adjust shaft position to adjust impeller position.
   2. For motor driven units with solid shaft motors, design driver to pump line shaft coupling to allow adjustment of the impeller position.
   3. For motor driven units with hollow shafts, an adjusting nut may be provided at the top of the motor shaft.

H. Spacer coupling: When mechanical seals are scheduled, provide an adjustable spacer coupling to allow removal of the seal without driver removal.

2.07 PUMP COLUMN PIPE

A. Pump column pipe: Thickness and material as scheduled.

B. For each ASR well pump: Provide a suction pipe assembly which shall be connected to the coupled inlet of the pump bowl assembly. Each suction pipe assembly shall consist of a downhole control valve, and downhole inline check (foot) valve as described in the Valve Schedule on the mechanical drawings; an inlet cone

strainer shall be provided on the inlet side of the check valve as shown on the detail on the mechanical. Provide the hydraulic control lines to the downhole valve as per the manufacturer's instructions and as shown on the mechanical drawings.

C. Head connection: Design with flanged and bolted connection to discharge head.

D. Design Working Pressure: Design to withstand a design working pressure not less than 1.20 times the maximum shutoff total dynamic head with the maximum diameter impeller at the maximum operating speed plus the maximum suction static head.

E. Pressure test: Design to withstand a 5 minute hydrostatic test pressure not less than 1.5 times the design working pressure; perform test at source.

F. Lengths and connections: Design with maximum 10 foot length, or less if scheduled, interchangeable column sections with flanged or threaded with registered fit screwed connections as scheduled.

G. Diameter: Design column inside diameter for no more than 2 feet of fluid friction loss per 100 feet of column length.

H. Design of the column pipe to the pump column discharge head assembly is custom and shall be constructed as shown on the drawings.

2.08 PUMP DISCHARGE HEAD ASSEMBLY

A. Design the fabricated discharge head for pressure-rated base connection to the top of wellhead casing fittings shown on the drawings. The top of the wellhead casing is a custom casing that includes the annular recharge connection as shown on the drawings.

B. Design the discharge vertical to horizontal flow transition as a smooth pipe elbow or from a minimum of 3 pipe pieces mitered to form the elbow.

C. Design discharge head to mate with the driver as scheduled.

D. Head and base plate construction: Sufficient strength, weight, and thickness to provide accurate alignment, prevent excessive deflection and support the drive motor.

E. Stuffing box and seal:
   1. Design the discharge head with a stuffing box to accommodate packing or mechanical seals as scheduled.
   2. Packing: When packing scheduled, provide stuffing box arranged for packing (sized for bronze lantern ring and 6 packing rings minimum); provide hollow shaft motor with top adjusting nut.
   3. Mechanical seal: When scheduled, provide stuffing box suitable for the specified seal and provide a solid shaft or hollow shaft motor with spacer coupling, as scheduled.
   4. Drain: Provide drain, minimum 3/4 inch size, for pump stuffing box leakage, together with drain line to the pump can or wet well or to nearest equipment drain as shown on the Drawings.

F. Discharge vent: Provide 3/4 inch NPT threaded high point vent on discharge; install pipe nipple with threaded gate valves in vent.

G. Materials: As scheduled.

H. Pump discharge head base flange connection to top of wellhead flange connection shall be rated for a minimum operating pressure of 150 psi.

2.09 EQUIPMENT GUARDS

A. Provide equipment safety guards as specified in Section 15050 - Common Work Results for Mechanical Equipment.

B. Shop fabricate pump discharge head per Section 05120 - Structural Steel and Section 05500 - Metal Fabrications.

2.10 DRIVERS

A. Horsepower:
   1. As scheduled.
   2. Listed driver horsepower is the minimum to be supplied.
      a. Increase driver horsepower if required to prevent driver overload while operating at any point of the supplied pump operating head-flow curve including runout.
      b. When scheduled driver is a motor, increase motor horsepower if required to prevent operation in the service factor.
      c. Make all structural, mechanical, and electrical changes required to accommodate increased horsepower.

B. Motors: Provide motors as specified in Section 16222 - Low Voltage Motors up to 500 Horsepower, and as specified in this Section:
   1. RPM: As scheduled.
   2. Enclosure: As scheduled.
   3. Electrical characteristics: As scheduled.
   4. Efficiency, service factor, insulation, and other motor characteristics: As specified in Section 16222 - Low Voltage Motors up to 500 Horsepower.
   5. Motor accessories: As specified in Section 16222 - Low Voltage Motors up to 500 Horsepower, and in this Section.
   6. Coordinate motors with the variable frequency drive manufacturer to ensure compatibility between the motor and variable frequency drive.

C. Other drivers: As scheduled and as specified in sections listed in the Schedule.

D. Non-reverse ratchets: When scheduled, provide driver with non-reverse ratchets or pin mechanism to prevent reverse rotation of the pump and driver during recharge operations for the ASR well pumps.

2.11 SUPPORTS

A. Strength: Design pump discharge head and driver (motor or engine) supports to withstand a minimum of 1.5 times the maximum imposed operating loads or the imposed seismic loads, whichever is greater.

B. Resonant frequency: Design supports in conjunction with the pump, shafting, drivers, bearings, and other components to avoid natural resonant frequencies, either torsional, radial, or axial as specified in Section 15958 - Mechanical Equipment Testing.

C. Coordinate pump and drive system supports with the foundation designs as shown on the Drawings.

2.12 FINISHES

A. Prepare surfaces and apply protective coatings as specified in Section 09960 - High-Performance Coatings.

2.13 SOURCE QUALITY CONTROL

A. Witnessing: Source or factory testing shall be witnessed by the Engineer or Owner when scheduled; provide advanced notice of source testing as specified in Section 15958 - Mechanical Equipment Testing.
   1. Provide a test report showing testing conformance to listed standards for the Engineer Of Record for review and approval prior to shipment.

B. Equipment performance test: Test level as scheduled; test as specified in Section 15958 - Mechanical Equipment Testing.

C. Vibration test: Test level as scheduled; test as specified in Section 15958 - Mechanical Equipment Testing.

D. Noise test: Test level as scheduled; test as specified in Section 15958 - Mechanical Equipment Testing.

E. Motor factory tests: Test as specified in Section 16222 - Low Voltage Motors up to 500 Horsepower.

F. Hydrostatic pressure tests: As specified for components in this Section.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions and as specified in Section 15050 - Common Work Results for Mechanical Equipment.

B. Install pump discharge head per Section 05120 - Structural Steel and Section 05500 - Metal Fabrications.

3.02 FIELD QUALITY CONTROL

A. Witnessing: All field-testing shall be witnessed by the Engineer; provide advanced notice of field-testing as specified in Section 15958 - Mechanical Equipment Testing.

B. Inspection and checkout: As specified in Sections 15958 - Mechanical Equipment Testing.

C. Equipment performance test: Test level as scheduled; test as specified in Section 15958 - Mechanical Equipment Testing.

D. Vibration test: Test level as scheduled; test as specified in Section 15958 - Mechanical Equipment Testing.

E. Noise test: Test level as scheduled; test as specified in Section 15958 - Mechanical Equipment Testing.

F. Operational testing: As specified in Section 01756 - Commissioning.

G. Provide quality control as specified in Section 01450 - Quality Control.

3.03 MANUFACTURER'S FIELD SERVICES

A. Require manufacturer to inspect system before initial start-up and certify that system has been correctly installed and prepared for start-up as specified in this Section and in Sections 15958 - Mechanical Equipment Testing.

B. Training: As specified in Section 01756 - Commissioning.

SECTION 13208

POLYETHYLENE TANKS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Polyethylene storage tanks made from crosslinked polyethylene resin.

1.02 REFERENCES

A. American Concrete Institute (ACI):
   1. 318 - Building Code and Commentary.

B. American Society for Mechanical Engineers (ASME):

1.03 SUBMITTALS

A. Fabrication drawings for each tank including:
   1. Dimensions.
   2. Tank wall thickness.
   3. Materials of construction.

4. Tank fittings.
5. Tank appurtenances.
6. Tank restraint system.
7. Tank resin and hoop stress data.

B. Chemical compatibility sheet to include:
1. Chemical to be stored.
2. Percentage of chemical.
3. Temperature of chemical.

C. Engineering design calculations of restraint and anchoring system signed by a civil or structural engineer registered in the state where the project is located.

D. Installation instructions.

E. Warranty.

F. Certification to certify that each tank is suitable for the specified chemical service, no degradation within warranty period, including tank fittings and gasket material.

G. Proof of qualification: Provide lists of installation and contact information with same type of application and chemical used.

H. Color charts for proposed coating systems.

1.04 WARRANTY

A. Manufacturer warranty against defects:
1. Tank: 5 years full warranty. Prorated warranties are not acceptable.
2. Heat tracing system if scheduled: 10 years.

1.05 QUALITY ASSURANCE

A. Qualification of manufacturer: Manufacturer with experienced personnel, physical facilities, and management capacity sufficient to produce custom-made rotationally molded polyethylene tanks of the size, exposure, and chemical services specified for minimum 5 years with satisfactory performance record.

PART 2 PRODUCTS

2.01 SCOPE OF SUPPLIES

A. Provide all materials, labor, equipment, and hardware to provide all polyethylene storage tanks with specified fittings and accessories, seismic and wind load restraint systems, anchor bolts, and flange flexible connectors for complete installation in the positions and orientations indicated on the Drawings.

2.02 MANUFACTURERS

A. One of the following or equal:
1. Poly Processing Co.

2.03 DESIGN AND PERFORMANCE CRITERIA

A. Tanks: As scheduled.

B. Tank wall thickness: Calculated in accordance with ASTM D1998 using design specific gravity as scheduled. Note that design specific gravity may be higher than specific gravity of tank contents.

C. Design requirements:
   1. The minimum required wall thickness of the cylindrical shell at any fluid level shall be determined by the following equation, but shall not be less than 0.187 inches thick:

      T = P x O.D./2 SD = 0.433 x S.G. x H x O.D./2 SD
      T = wall thickness, in.
      SD = hydrostatic design stress, psi
      P = pressure (.433 x S.G. x H), psi
      H = fluid head, ft.
      S.G. = specific gravity, g/cm^3
      O.D. = outside diameter, in.

D. The hydrostatic design stress shall be determined by multiplying the hydrostatic design basis, determined by ASTM D2837 using rotationally molded samples, with a service factor selected for the application.
   1. The hydrostatic design stress is 600 pounds per square inch at 73 degrees Fahrenheit for Type I and Type II materials.
   2. The tank shall have a stratiform (tapered wall thickness) wall.

E. The hydrostatic design stress shall be derated for service above 100 degrees Fahrenheit and for mechanical loading of the tank.

F. The minimum design specific gravity shall be 1.9.

G. The minimum required wall thickness for the cylinder straight shell must be sufficient to support its own weight in an upright position without any external support.
   1. Flat areas shall be provided to allow locating large fittings on the cylinder straight shell.

H. The top head must be integrally molded with the cylinder shell.
   1. The minimum thickness of the top head shall be equal to the top of the straight wall.
   2. The top head of tanks with 2,000 or more gallons of capacity shall be designed to provide a minimum of 1,300 square inches of flat area for fitting locations.

I. Tanks with 2,000 or more gallons of capacity shall have a minimum of 3 lifting lugs integrally molded into the top head.
   1. The lifting lugs shall be designed to allow erection of an empty tank.

J. The tank shall be designed to provide a minimum of 4 tie-down lugs integrally molded into the top head.
    1. The tie-down lugs shall be designed to allow tank retention in wind and seismic loading situations without tank damage.

K. Tank shell thickness:
    1. In accordance with ASTM D1998, Section 6.1.
    2. Design tank wall thickness for liquid with specific gravity as specified.
    3. Provide adequate thickness at all fittings and connection points for mounting of fittings to the tank without damage to the tank or causing excessive deflection.
    4. Maximum allowable hoop stress used in tank wall thickness calculations per ASTM D1998 shall be based on test data in accordance with ASTM D2837.

L. Seismic and wind load restraint system:
    1. Seismic design criteria: As specified in Section 01850 - Design Criteria.
    2. Wind design criteria: As specified in Section 01850 - Design Criteria.
    3. Consist of Type 316 stainless steel angles or brackets equally spaced around the tank perimeter anchored into the concrete tie down cable.
    4. If the restraint system includes the use of tensioning and adjustment devices, such as turnbuckles, provide easy adjustment of the cables at the time of construction and as required in the future.
        a. Hardware shall be provided to attach cables to anchored brackets at the base of the tank.
    5. The tank shall be designed to provide a minimum of 4 tie-down lugs integrally molded into the top head.
        a. The tie-down lugs shall be designed to allow tank retention in wind and seismic loading situations without tank damage.
        b. Anchor bolts shall be provided by the Contractor per the instructions and the base plates for the system.

2.04 TANK MATERIALS

A. High-density crosslinked polyethylene (XLPE).

B. Resin:
    1. Manufacturers: One of the following or equal:
        a. PAXON, grade 7204 resin for crosslinkable polyethylene.

C. The material used shall be virgin polyethylene resin as compounded and certified by the manufacturer.
    1. Tanks shall be made from crosslinked polyethylene resin as manufactured by ExxonMobil Chemical, or resin of equal physical and chemical properties.
    2. Resin choice would be based on the specific application, chemical to be stored and concentration.

D. Ultraviolet stabilizer:
    1. The polyethylene resin material shall contain a minimum of a UV 8 stabilizer as compounded by the resin manufacturer.
    2. Pigments may be added but shall not exceed 0.25 percent (dry blended) of the total weight.

E. Free of holes, blisters, crazing, cracking, delamination, undispersed raw materials, and any sign of contamination from foreign matter.
   1. The finished tank wall shall be free of visual defects such as foreign inclusions, air bubbles, pinholes, pimples, crazing, cracking, and delaminations.
   2. All cut edges where openings are cut into the tanks shall be trimmed smooth.

F. Resin shall meet or exceed the following properties:
   1. Mechanical Properties of Type 1 of Tank Material: Current XLPE Resin:

Property	ASTM	Value
Density (Resin)	D1505	0.938-0.946 g/cc
Tensile (Yield Stress 2-inch/min)	D638	3,000 psi
Elongation at Break (2-inch/min.)	D638	>300 percent
ESCR (100 percent Igepal, Cond. A, F50)	D1693	>1000 hours
ESCR (10 percent Igepal, Cond. A, F50)	D1693	>1000 hours
Vicat Softening Temperature,	D1525	250
Flexural Modulus	D790	100,000 psi

G. Gel test:
   1. Inner portion of tank wall:
      a. Not less than 65 percent.
      b. ASTM D1998 requirements.
   2. Entire wall thickness: Not less than 80 percent.

H. Restraint system:
   1. Metal components, including anchor bolts:
      a. Type 304 stainless steel.
      b. The Anchor bolts shall be supplied by the tank manufacturer.
      c. The drawings and calculations for the seismic system shall be submitted for review.
   2. Concrete anchors or flush shells shall not be used.

2.05 FITTINGS

A. Terminate in socket, threaded, or flanged connections:
   1. Flanges: 150 pound ASME B 16.5.
   2. Double flanged CPVC bolted fittings with encapsulated stainless steel or Hastelloy bolts.
   3. Threaded connections: ASME B 16.4.

B. Fittings at upper tank sidewall or top:
   1. Compression threaded type, long shank, polyvinyl chloride flanged fittings with deep cut threads (not injection molded thread) and with dual wide nuts.
   2. The bulkhead fittings shall be constructed of PVC, PP, or other specified material.
   3. Gaskets shall be a minimum of 1/4 inch thickness and constructed of 60-70 durometer Viton™ or other specified material.

C. Fittings on tank top:
   1. Bosses molded into the tank.
   2. Fittings shall be vertical.
   3. The top head shall be integrally molded with the cylinder shell.
   4. The minimum thickness of the top head shall be equal to the top of the straight wall.
   5. The top head of tanks with 2,000 or more gallons of capacity shall be designed to provide a minimum of 1,300 square inches of flat area for fitting locations.

D. Flanged outlet drain fitting in the lower tank sidewall: Integrally molded into the bottom knuckle of the tank to allow full drainage of tank contents.

E. Fittings and appurtenances for each tank:
   1. Sodium Hypochlorite Tank:
      a. 1 minimum 2-inch flanged inlet nozzle entering the tank in the top.
      b. 1 minimum 2-inch full outlet/drain nozzle, integrally molded with tank wall.
      c. One 3-inch flanged overflow nozzle.
      d. One 4-inch flanged roof nozzle for mounting of tank level sensor.
         1) Provide a 4-inch diameter, 6-inch spool piece with a 4-inch flange to accommodate a non-contact ultrasonic level transducer.
      e. One 4-inch flanged roof vent.
      f. One 18 inch flanged type or molded screw type manway lid on top of the tank.
      g. Manway shall be sealed and shall be constructed of the same material as tank.
      h. The bolts shall be Hastelloy.
      i. The gaskets shall be per tank manufacturer recommendation for the chemical stored.
   2. Provide flanged flexible connectors for each of the following fittings:
      a. Sodium Hypochlorite Tank:
         1) The flanged 2 inch inlet nozzle on each tank.
         2) The flanged 2 inch outlet/drain nozzle on each tank.
         3) The flanged 4 inch roof vent on the tank.
            a) Wetted materials shall be selected by the tank manufacturer or vendor for the chemical service.
            b) Provide all mounting hardware and supports.
         4) Manufacturers: One of the following or equal:
            a) Red Valve, Redflex expansion joints with 3 arches.
            b) Snyder, Flexmaster.
            c) Proco, 445 BD.

2.06 ACCESSORIES

A. Finish coating:
   1. Waterproof and ultraviolet light resistant.
   2. Acrylic enamel or latex mastic.
   3. 2 coats.
   4. Minimum dry film thickness: 5 mil.
   5. Color: Selected by Engineer.

B. Level gauge:
   1. Provide each tank with:
      a. Level gauge shall be a magnetic flap type or "reverse float type" made of 2 inch polyvinyl chloride or PVDF stilling well tube.
      b. Float.
      c. Polypropylene rope.
      d. Clear polyvinyl chloride sight tube.
   2. Materials: Suitable for the specified chemical service for the individual tanks.
   3. Tank level staff gauge:
      a. Resistant to abrasion and corrosion.
      b. Mounted on the tank adjacent to the indicator.
      c. Calibrated in nominal 100 gallon increments.

C. Tank vents:
   1. Each tank shall be properly vented for the type of material and flow rates expected.
   2. Vents must comply with OSHA Part 1910 normal venting for atmospheric tanks or other accepted standard, or shall be as large as the filling or withdrawal connection, whichever is larger but in no case less than 2 inches nominal inside diameter with screening.

D. Leak Detection:
   1. The leak detector unit shall consist of a proximity sensor, a welded 2 inch fpt connection, a 2 inch bung plug with a 3/4 in strain relief, and an indicator box. The sensor is placed in the interstitial space between the primary and secondary tanks approximately 1 inch above the tank bottom. The indicator box shall be NEMA 4 rated and factory pre-wired for 110 VAC power. All connections shall be labeled to prevent errors in field installation. The indicator box will show a green light when power is on and the sensor is not detecting a liquid. The light is a push to test light allowing the operator to test for power outage or malfunction.

E. Internal fill/down pipes:
   1. Internal down pipes shall be prepared per the customer approved drawings and specifications. All internal down pipes shall be supported at 5 foot maximum intervals with a support structure welded to the inside of the primary tank. The support design may utilize a PVDF clamp. All internal down pipes shall be constructed of CPVC.

2.07 TANK FABRICATION

A. Rotationally molded construction in accordance with ASTM D1998.

B. Provide for each tank the following shop finishing:
   1. Shipping label identifying:
      a. Tank tag number.
      b. Chemical service.
   2. Coating:
      a. Coat each tank and appurtenances after installation as specified in Section 09960 - High-Performance Coatings.
      b. Color: Selected by the Engineer.

3. Permanent labels:
    a. Identification label.
    b. NFPA label specifically coded for the tank contents in accordance with NFPA 30.
    c. Paint or affix label onto the tank wall to be clearly visible from outside the tank enclosure.

2.08 TESTING

A. Each tank shall be leak tested by the manufacturer prior to shipment by filling with clean water for a period of at least 4 hours with all fittings installed and blinded.
    1. There shall be no measurable drop in liquid surface.
    2. Any leaks shall be noted and repaired and the tank shall be re-tested for an additional 4 hours minimum.
        a. Reason for leak and method of repair shall be recorded and submitted to the Engineer.
    3. Any defects or leaks that have not been adequately repaired will be cause for rejection of the tank.

PART 3 EXECUTION

3.01 INSTALLATION

A. General:
    1. Transportation, handling, storage of the tanks, and installation shall be in accordance with the manufacturer's printed instructions.
    2. Repair any damage to tank components or the insulation due to transportation or installation.
    3. Install piping to tank with sufficient flexibility to allow tank movement of 1 inch in any direction without damage to piping.

B. All tank fitting attachments shall be equipped with flexible couplers or other movement provisions provided by the tank customer.
    1. The tank will deflect based upon tank loading, chemical temperature and storage time duration.
    2. Tank piping flexible couplers shall be designed to allow 4 percent design movement.
    3. Movement shall be considered to occur both outward in tank radius and downward in fitting elevation from the neutral tank fitting placement.

C. For tanks with drain connections that result in flanges extending below the bottom of the tank, coordinate concrete work to provide either a blockout in the main concrete pad or raise tank on a shorter, separate pad to provide clearance between flange and pad.

3.02 FIELD QUALITY CONTROL

A. Manufacturer's field service:
    1. Inspect the installed tanks for proper installation.
    2. Instruct Owner's personnel on operations and maintenance of the tanks.

3.03 SCHEDULE

A. Tank Schedule as follows:

Tag Number	
Service	Sodium Hypochlorite at 12.5 percent solution
Chemical pH	3.5
Chemical Specific Gravity	1.33
Tank Design Specific Gravity	1.9
Number of Tanks	2
Usable Capacity, each	1,000 gallons
Type of Tank	Cross-linked polyethylene (XLPE) with medium density liner
General Design	Flat bottom, dished top, double wall
Installation	Vertical
Diameter (feet)	6 feet-5 inches
Height (feet)	7 feet-1 inch

B. Tank Fitting locations shall be as shown on the drawings.

END OF SECTION

SECTION 13447

ELECTRIC ACTUATORS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Electric motor-driven actuators for valves and gates.

B. Equipment tag numbers:
   1. As scheduled.

1.02 REFERENCES

A. American Water Works Association (AWWA):
   1. C504 - Standard for Rubber-Seated Butterfly Valves.
   2. C542 - Standard for Electric Motor Actuators for Valves and Slide Gates.

B. International Organization for Standardization (ISO):
   1. 12944 - Paints and Varnishes.

C. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures and Section 15050 - Common Work Results for Mechanical Equipment.

B. Provide a complete list/schedule of actuators being provided with their associated tag names, as indicated on the Drawings and/or Specifications, service process area and the size of the valve they are actuating.

C. Product data:
   1. Electrical ratings:
      a. Voltage and number of phases.
      b. Starting and running current.
      c. Voltage levels and source for control and status.
   2. Description of integral control interface.
   3. Remote control station components (If applicable).
   4. Environmental ratings, including NEMA enclosure rating and submergence capabilities.
   5. Gear ratios for both manual and motorized actuation.
   6. Opening and closing directions.
   7. Electric motor data.
   8. Allowable starts per hour.
   9. List of included options and accessories.

10. Full travel times.
11. Gearbox data, including gear ratio, and gearbox efficiency.

D. Shop Drawings:
   1. Wiring diagrams:
      a. Include options and expansion cards furnished with each actuator.
   2. Dimensioned drawings of each valve and actuator combination.
   3. Dimensioned drawings of each valve gearbox.

E. Calculations:
   1. Operating torque.
   2. Maximum torque calculations for seating and unseating.
   3. Maximum operating torque at starting and normal operation.
   4. Indicate factor of safety for all torque calculations.

F. Signed by Professional Engineer registered in the State of California. Installation instructions:
   1. Detail the complete installation of the equipment, including rigging, moving, and setting into place.
   2. Provide manufacturer's installation instructions.

G. Quality Control Submittals:
   1. Manufacturer's representative qualifications.
   2. Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.
   3. Manufacturer's Certificate of Installation as specified in Section 01756 - Commissioning.
   4. Manufacturer's Certificate of Functional Compliance as specified in Section 01756 - Commissioning.

H. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

I. Operation and maintenance manuals:
   1. As specified in Section 01782 - Operation and Maintenance Manuals.
   2. Include a list of configurable parameters and the final values for each.
   3. Include a troubleshooting chart covering the complete valve and controls/electrical power systems, showing description of trouble, probable cause, and suggested remedy.

1.04 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2, Section 15050 - Common Work Results for Mechanical, and the manufacturer's instructions.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 MAINTENANCE

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

B. Spare parts:
   1. Provide the following (minimum 10 percent of total number of actuators of each model type furnished, but not less than 1 for each model of actuator furnished):
      a. Stem nut.
      b. Worm shaft subassembly.
      c. Drive sleeve subassembly.
      d. Complete actuator seal kit.
      e. Actuator gearbox oil (sufficient quantity to fill 4 gearboxes).
      f. Encoder.
      g. Control module.
   2. Provide 1 spare motor for each size motor furnished.

C. Setting tool:
   1. If required for setting or configuring the actuator, provide a handheld setting tool. Furnish 1 setting tool for every 10 actuators.
      a. Capable of communicating with PC-based configuration software and transferring the following in either direction between the computer and programmer and setting tool, and between the setting tool and actuator.
      b. Actuator configurations:
         1) Capable of storing up to 10 different configurations.
      c. Diagnostic data:
         Capable of storing 4 complete sets of diagnostic data.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Lines 4 inches and larger:
   1. One of the following, or equal:
      a. Limitorque Corp.:
         1) Accutronix MX for multi-turn applications.
         2) Accutronix QX quarter-turn applications.
      b. Rotork Controls Inc. IQ3 Range:
         1) IQ for multi-turn applications.
         2) IQT for quarter-turn applications.

2.02 MATERIALS

A. Enclosures:
   1. Constructed of materials suitable for the environment where the actuator will be installed.
   2. Stainless steel external fasteners.

3. Provide O-ring seals for each of the following areas:
    a. Between the terminal compartment and the internal electrical elements.
    b. Between the mechanical and electrical portions to protect from the ingress of oil, and to protect the mechanical components of oil from dust and moisture when the electrical terminal is open.
4. Ratings
    a. As scheduled and specified:
    b. NEMA Type 6P: Double sealed and IP68 rated for prolonged submergence.
    c. XP: Factory Mutal (FM) approved for Class I, Division 1 and Division 2 locations.

B. Coatings:
1. Material requirements:
    a. Factory prime and coat with an ISO 12944 classification coating of C5M (Marine, offshore estuaries with high salinity) coating with 15 year durability.
    b. Touch-up damaged coatings with manufacturer provided coating repair kit.
2. Application requirements:
    a. Painting shall commence within 4 hours of blast cleaning.
    b. Each paint coat within the system is to be applied in accordance with the paint manufacturer's instructions.
    c. Paint thickness shall be checked for each coat on each actuator.
3. Qualification requirements:
    a. Operators shall be experienced and proficient in surface preparation and coating application techniques.
    b. Personnel shall have relevant knowledge of health and safety hazard, use of protective equipment, coating materials, mixing and thinning coatings, coating pot life, surface requirements, etc.
    c. Personnel carrying out inspection or verification shall be certified as NACE coating inspector or equivalent such as ICorr.

2.03 CHARACTERISTICS FOR ACTUATORS ON LINES 4 INCHES AND LARGER

A. Provide actuators complete and operable with all components and accessories required for operation.

B. Power supply:
1. Voltage and phases as indicated in the Motorized Actuator Schedule on the Drawings.
2. Valve or gate motion independent of power supply phase rotation.
3. Provide an internal backup power source or mechanical indicator to maintain settings and track valve position when main power is off.
4. Actuators shall incorporate major components such as the motor, starter, local controls, terminals, etc., housed within a self-contained, sealed enclosure.

C. Size actuator to move gates or valves from full open to closed position within the time indicated in the Motorized Actuator Schedule on the Drawings:
1. If an operating time is not indicated on the Motorized Actuator Schedule, size the actuator to move gates or valves at minimum 12 inches per minute under maximum load. Measure rate of closure for valves at maximum diameter of disc, plug, or ball.
2. Size actuators so that gear boxes are not required where possible.

D. Control interface:
    1. Configuration:
        a. Provide a non-intrusive, non-contacting interface for configuring input and output settings, control values, ranges, torque switch settings, valve positions switch settings, and options.
            1) Configurable from a handheld configuring tool or input devices on the actuator.
    2. Local interface, integral to actuator:
        a. Non-intrusive, non-contacting selector switches:
            1) LOCAL-STOP-REMOTE:
                a) Motor actuator operation is prevented with the switch in STOP.
            2) OPEN-CLOSE:
                a) Controls the valve when LOCAL-STOP-REMOTE is in LOCAL.
                b) Spring return to center.
                c) Configurable between maintained (actuator runs until end of travel, high torque, or a LOCAL-STOP-REMOTE is switched to STOP) and momentary (actuator stops when lever is released).
        b. Local display:
            1) Valve fully open and fully closed indicators.
            2) Numerical display showing actual valve or gate position in percent of travel.
    3. Remote control station - (VCP):
        a. For actuators located more than 5 feet above finished floor/grade or where indicated on the Drawings in the Schedule.
            1) NEMA rating to match those to the associated Actuator Schedule.
                a) Where the rating is not listed, use NEMA Type 4X enclosures for non-hazardous areas, and explosion-proof (XP) Class I Division 1 for hazardous areas.
                b) Pilot devices shall be 30 millimeters and pilot lights shall be illuminated by LEDs.
            2) LOCAL-STOP-REMOTE selector switch.
            3) LOCAL mode control devices:
                a) Operate valve when LOCAL-STOP-REMOTE integral to actuator is in REMOTE and LOCAL-STOP-REMOTE on remote control station is in LOCAL.
                b) OPEN-STOP-CLOSE maintained switch or OPEN, STOP, and CLOSE pushbuttons where Maintained operation is indicated in the Actuator Schedule.
                c) OPEN-CLOSE spring-return switch or OPEN and CLOSE pushbuttons where momentary operation is indicated in the Actuator Schedule on the Drawings.
            4) Pilots' lights to indicate valve position:
                a) Fully open.
                b) Fully closed.
    4. Control inputs:
        a. Capable of using discrete 120 VAC rated control inputs when using a remote control station and a discrete 24 VDC rated control inputs when there is not remote control station.
        b. Controls the valve when LOCAL-STOP-REMOTE is in REMOTE.
        c. Isolated inputs capable of operating from external control voltage source or internal power supply.

d. Provide the following inputs:
    1) OPEN.
    2) CLOSE.
    3) STOP.
e. OPEN and CLOSE inputs configurable between maintained (actuator runs until end of travel, high torque, or a STOP input) and momentary (actuator stops when command is removed).

5. Status outputs:
    a. Monitor relay output: Dry contact, normally closed, opens when actuator is not in REMOTE or in the event of any internal fault or alarm condition.
    b. Dry contact outputs configured for the functions indicated on the Drawings. Provide the following outputs for all actuators:
        1) Fully closed.
        2) Fully open.
        3) LOCAL-STOP-REMOTE in REMOTE position.
    c. Output contacts rated for 5 amps, 120 VAC, and 24 VDC.
6. Analog input:
    a. Provide a 4 to 20 mA analog input for analog modulating valves when indicated on the Drawings.
    b. Modulate valve to maintain position based on analog input value.
    c. Maximum input impedance 250 ohms.
7. Analog output:
    a. Provide an isolated 4 to 20 mA analog output when indicated on the Drawings.
        1) Loop power sourced from the actuator power supply.
        2) Capable of driving into a load up to 500 ohms.
        3) Output proportional to process value(s) indicated on the Drawings.
        4) Valve or gate position.
        5) Operating torque.

E. Features:
1. Time delay on reversal: Incorporate time delay between stopping actuator and starting in opposite direction to limit excessive current, torque, and heating from instantaneous reversal.
2. Data logging:
    a. Store diagnostic data and reference data.
    b. Time-stamped historical operating data, including number of operations.
    c. Torque profiles showing actual torque at each valve position through the operating range.
        1) Store reference data (recorded during commissioning) and data from last operation.
3. Provide display of logged data on the actuator, or provisions to download to a personal computer.

F. Components:
1. Motors:
    a. Specifically designed for valve actuator service with high starting torque, totally enclosed non-ventilated construction.

b. Torque ratings equal to or greater than that required for valve seating and dynamic torques with a 25 percent factor of safety.
    1) Design requirements for rubber-seated AWWA butterfly valves:
        a) Design actuators for maximum gate or valve operating torque, in accordance with and using safety factors required in AWWA C504 and AWWA C542.
            (1) Valve actuator torque requirement for open-close service: Not less than the required valve-seating and dynamic torques under design operating conditions in accordance with AWWA C504.
            (2) Valve actuator torque requirement for modulating service: Not less than twice the required valve dynamic torque under design operating conditions in accordance with AWWA C504.
    2) Design requirements for slide gates, gate valves, knife gate valves, globe valves, and diaphragm valves:
        a) Design valves and actuators for maximum operating torque, in accordance with and using safety factors required in AWWA C542.
        b) Design for the maximum torque and thrust running load over the full cycle.
        c) Maximum torque or thrust rating: Actuator stall torque or maximum thrust output shall not exceed the torque or thrust capability of the valve or gate, as determined by the valve or gate manufacturer.
c. Capable of being removed and replaced without draining the actuator gear case.
d. Motor bearings shall be amply proportioned of the anti-friction type and permanently lubricated.
e. Rated for operating under the following conditions without exceeding temperature limits with ambient temperature of 40 degrees Celsius.
    1) Continuous operation for 15 minutes or twice the open-to-close operating time (whichever is greater) at normal operating torque or 33 percent of maximum torque (whichever is greater).
    2) 60 starts per hour for open/close service or 1,200 starts per hour for modulating service.
f. Provide the following motor protection features:
    1) Jammed valve (no valve motion detected through a time delay).
    2) High motor temperature (sensed by an embedded thermostats).
    3) High torque.
    4) Single phasing protection.

G. Position sensing:
    1. Electronic and adjustable using a solid-state encoder wheel.
        a. Mechanical limit switches and potentiometers are not acceptable.
    2. Capable of retaining position and monitoring valve or gate motion when valve is manually actuated and when main power is not present.
    3. Valve range and position switch outputs field adjustable.

H. Torque sensing:
    1. Torque shutdown setting: 40 percent to 100 percent rated torque:
        a. Adjustable in 1 percent increments.
    2. Torque display: 0 to 100 percent-rated torque.
    3. Capable of interrupting control circuit during both opening and closing and when valve torque overload occurs.
    4. Electrical or electronic torque sensing:
        a. Extrapolating torque from mechanically measured motor speed is not acceptable due to response time.
    5. Independent of variations in frequency, voltage, or temperature.
    6. Actuator shall store actual operational torque curves for retrieval by plant maintenance staff.
    7. Provide a temporary inhibit of the torque sensing system during unseating or during starting in mid-travel against high inertia loads.
    8. Provide visible verification of torque switch status without any housing disassembly.

I. Manual actuators:
    1. Hand wheel for manual operation.
        a. Maximum 80-pound pull on rim when operating gate or valve under maximum load.
        b. Provide pull chain when motorized actuator is located more than 6 feet above floor surface.
            1) Chain shall be of sufficient length to reach approximately 4 feet above the operating level.
            2) Where the chain obstructs an aisle or walkway, provide holdback or other means to ensure chain does not create a nuisance or hazard to operating personnel.
            3) Provide Type 316 stainless steel.
    2. Declutch lever: Padlockable, capable of mechanically disengaging motor and related gearing and freeing hand wheel for manual operation.

J. Gearing: Hardened alloy steel spur or helical gears and self-locking, alloy bronze worm gear set.
    1. Accurately cut to ensure minimum backlash.

K. Bearings:
    1. Anti-friction bearing with caged balls or rollers throughout.
    2. Sealed-for-life type thrust bearings housed in a separate thrust base.

L. Drive bushing:
    1. Easily detachable for machining to suit the valve stem or gearbox input shaft.
    2. Positioned in a detachable base of the actuator.

M. Lubrication:
    1. Provide totally enclosed actuator gearing with oil or grease filled gear case suitable for operation at any angle.
    2. Actuators requiring special or exotic lubricants are not acceptable.

2.04 SOURCE QUALITY CONTROL

A. Source Testing:
   1. Design and performance test reports in accordance with AWWA C542.
   2. Test each actuator with a simulated load.
      a. Simulate a typical valve load.
   3. Furnish test reports and the Manufacturer's Certificate of Source Testing.

PART 3 EXECUTION

3.01 INSTALLATION

A. As specified in Section 15050 - Common Work Results for Mechanical Equipment.

B. Install the equipment in accordance with the manufacturer's instructions.

C. Position visual indicators so that they are most easily visible.

D. Installation Verification:
   1. Furnish Manufacturer's Certificate of Installation Verification.

3.02 FIELD QUALITY CONTROL

A. As specified in Section 01756 - Commissioning, Section 15958 - Mechanical Equipment Testing, and this Section.

B. Functional Testing:
   1. Installed actuator:
      a. Test witnessing: Witnessed.
      b. Conduct Level 2 General Equipment Performance Tests.
      c. Conduct Level 2 Vibration Tests.
      d. Conduct Level 2 Noise Tests.
   2. Electrical Instrumentation and Controls:
      a. Test witnessing: Witnessed.
      b. Conduct testing as specified in Section 17950 - Commissioning for Instrumentation and Controls.
   3. Furnish test reports and the Manufacturer's Certificate of Functional Compliance.

C. Manufacturer's Representative on-site requirements:
      a. Installation: 2 trips, 2-day minimum each.
      b. Functional testing: 2 trips, 2-day minimum each.

3.03 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.
   1. Number of sessions: 2.
      a. Operations: 2 hours per session.
      b. Maintenance: 4 hours per session.

3.04 INTELLIGENT ACTUATOR SCHEDULE

A. Provide actuators indicated on the Drawings:
   1. Major process actuators are listed in the Intelligent Actuator Schedule indicated on the Drawings.

SECTION 15050

COMMON WORK RESULTS FOR MECHANICAL EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Mechanical equipment requirements for:
      a. Basic design and performance criteria.
      b. Prescriptive requirements for common components.
      c. Installation requirements.

1.02 REFERENCES

A. American Bearing Manufacturers Association (ABMA):

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
    1. Definitions used in this specification and equipment Submittals for terms related to rotor-dynamic pumps shall be in accordance with HI 9.6.8, Appendix A, as clarified below.
    2. These definitions shall be applied to equipment other than pumps, unless otherwise specified in Technical Sections.
    3. Resonant frequency:
        a. Frequency of a periodic excitation force that is close to the natural frequencies of an object. Also known as critical frequency, critical speed, or resonant speed.
        b. An undamped resonant frequency within the separation margin is always considered harmful under Level 1 analysis.
        c. A resonant frequency that occurs within a separation margin of 15 percent above or below the operating speed range and has a log decrement greater than +0.3 is considered harmful under Level 2 and Level 3 analysis.
    4. Rotordynamic analysis level:
        a. Level of detail required for rotordynamic analysis is indicated in the Technical Sections schedules as None (no analysis required), Analysis Level 1, Analysis Level 2, or Analysis Level 3, which correlate to increasing levels of required detailed equipment design analysis. Analysis Levels 1, 2, and 3 are based on HI 9.6.8.
        b. Where these specifications differ from HI the more stringent shall apply.
    5. Separation margin:
        a. Span of operating speeds within which interference between excitation orders and resonant frequencies indicate the possibility of harmful vibrations.
        b. Separation margin for a specific application extends 15 percent above and 15 percent below the span of operating speed required for the specified performance conditions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Roof coordination.
    1. Show roof penetrations for mechanical equipment on roof drawing Submittal and include mechanical equipment information:
        a. Type.
        b. Size.
        c. Location.
        d. Configuration of penetration and the surround.
        e. Weight.
        f. Anchoring and support details.

1.05 SUBMITTALS

A. Items in this Section are components of equipment or systems specified in other Sections.
   1. Include data for this Section's components with the equipment or system Submittal.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. General:
   1. Equipment manufacturer's responsibility extends to selection and mounting of gear drive units, motors or other prime movers, accessories, and auxiliaries to provide a complete, operable unit.
   2. Manufacturer shall analyze rubber-bearing vertical-column pumps and equipment identified as non-reversing in the Technical Sections for reverse rotation and provide non reversing motor ratchets.
   3. Equipment that prevents reverse rotation shall be capable of both:
      a. Handling 150 percent of the maximum torque at maximum operating speed.
      b. 150 percent of torque that will be generated in reverse direction due to equipment shutoff head as calculated by the manufacturer.
   4. Motor shall be designed to run safely in the reverse direction at up to 140 percent times the reverse runaway speed under shutoff head conditions.

B. Rotordynamic analysis and vibration testing:
   1. Submit information for the rotordynamic analysis level specified for each piece of equipment as shown in the Technical Sections prior to manufacture of the equipment.
   2. Rotordynamic analysis shall be performed on "like-new" and "as-worn" conditions, representing conditions when first installed and conditions when parts wear to the manufacturer's maximum allowable operating tolerances.
      a. Conditions assumed for the "as-worn" condition shall be 2 times the "like-new" tolerances unless specified otherwise.
   3. Rotordynamic analysis criteria:
      a. Torsional excitation forcing function magnitudes shall be no less than 1 percent of the maximum transmitted torque at given speed.
      b. Motor mass elastic information in accordance with NEMA MG-1 shall be obtained from the original equipment manufacturer and included in the analysis. Motors shall be precision balanced to ISO 21940 Grade G2.5.
      c. Bearings:
         1) At maximum bearing loads an L-10 life of 100,000 hours in accordance with ABMA 9-11 to be proven.
   4. Submit factory and field testing requirements as specified in the Technical Sections and specified in Section 15958 - Mechanical Equipment Testing after manufacture and installation respectively.

5. Repair, replace, and modify equipment exhibiting vibration performance that does not meet criteria specified in this Section at no additional cost to the Owner.
    a. Acceptable remedies include adjustments to equipment component geometry, materials, energy absorbing couplings, etc.
    b. Locking out speed interval(s) within equipment specified operating range is unacceptable.
6. Vibration analysis expert:
    a. Provide when specified in the equipment Technical Sections.
        1) Must be a 3rd party, unaffiliated with the equipment vendor or Contractor.
    b. Analysis shall be provided by one of the following or equal:
        1) Engineering Dynamics Inc. (EDI, Texas).
        2) Mechanical Solutions, Inc. (MSI, New Jersey).
    c. Analysis shall be:
        1) Stamped by a registered professional mechanical engineer.
        2) Verified in-situ by the vibration analysis expert, including certification that installation conforms to field conditions assumed in the reports.
        3) Verified in-situ by the vibration analysis expert, including witness of at least 1 field vibration test, and certification that vibration measurements corroborate the rotordynamic analysis.
        4) Supplemented with additional field investigation and analysis should conditions during field vibration testing activity indicate non-compliance with these specifications; supplemental field investigation and analysis shall indicate remedies to comply with the specifications and shall be stamped by a registered professional mechanical engineer.
7. Rotordynamic Analysis Level 1:
    a. Before the equipment is released for manufacture it shall be determined that the equipment/motor structures do not have any harmful resonant frequencies in the lateral and torsional modes. Representative analysis results for identical equipment may be submitted.
    b. Calculate rotor lateral and torsional and equipment structural components' lateral frequencies with a spreadsheet calculation or finite element analysis software.
        1) Equipment structure lateral frequency shall include the motor.
        2) Speed changing drive systems (belt, gear) effects on rotational inertia and stiffness shall be incorporated.
    c. Determine the equipment system components (rotor and structure) resonant frequencies.
    d. An intersection of an equipment component resonant frequency with the 1x run speed excitation order that occurs within separation margin is unacceptable.
8. Rotordynamic Analysis Level 2:
    a. Before the equipment and motor are released for manufacture it shall be determined that the equipment/motor structures do not have any harmful critical speeds in the lateral and torsional modes.
    b. Calculate rotor lateral and torsional and structure lateral frequencies with finite element analysis software.
        1) Equipment structure lateral frequency shall include the motor.

2) Speed changing drive systems (belt, gear) effects on rotational inertia and stiffness shall be incorporated.
3) Rotational inertia of water within the impeller, in the wet well, and inside the equipment structure, e.g., the column of a vertical pump, shall be included in the calculation at both the high level and low level conditions.

c. Potentially harmful critical speeds shall be investigated further with a forced, damped analysis to determine component stresses do not exceed material properties.

d. Forced damped analysis:
1) Forced lateral analysis shall include forcing function magnitudes at least 10 percent of rotor disc weight at each disc position and hydraulic imbalance at 5 operating conditions spaced equally over the equipment operating range. If synchronous motors are used ensure that the rotor analysis includes startup, shutdown, and motor control transients.
2) Forced torsional analysis shall include not less than 1 percent of the maximum permitted torque at any given speed. Damping shall be 1 percent of critical at all shaft elements.
3) Equipment rotor total stress (steady-state and alternating torque components plus lateral-bending stresses) shall not exceed:
a) Constant torque: Total stress limited to 30 percent of the material fatigue limit and to a maximum of 18 percent of ultimate tensile strength.
b) Variable torque (including variable speed equipment): Total stress limited to 50 percent of the material fatigue limit and to a maximum of 4 percent of the material ultimate tensile strength.
c) Submit documentation of material fatigue limit.

e. Report Submittals:
1) Confirmation of compliance with this Section, or detailed exceptions taken.
2) Software used for analysis.
3) Results with interpretation.
4) Preparer’s professional engineering stamp and seal.
5) Input data, including component properties, materials and connectivity to other components.
6) Schematic diagram of model mode shapes, nodes and elements.
7) Bearing stiffness and damping properties, impeller/diffuser interaction coefficients, and seal dynamic properties.
8) Campbell diagrams showing the system natural frequencies, excitation orders, and operating speed range for both lateral and torsional analysis.
a) Include equipment operating range; excitation lines at 1x, 2x run speed, and vane pass (or equivalent); and critical speeds associated with equipment system components, including the rotor, each major equipment structural component and the motor.
9) Forced, damped analysis indicating acceptable material stress limits are maintained at interference points shown on the Campbell diagram.

9. Rotordynamic Analysis Level 3:
    a. Before the equipment and motor are released for manufacture it shall be determined that the equipment/motor structures do not have any harmful critical speeds in the lateral and torsional modes.
    b. Calculate rotor lateral and torsional and structure lateral frequencies with finite element analysis software.
        1) Equipment structure lateral frequency shall include the motor.
        2) Speed changing drive systems (belt, gear) effects on rotational inertia and stiffness shall be incorporated.
        3) Rotational inertia of water within the impeller, in the wet well, and inside the equipment structure, e.g., the column of a vertical pump, shall be included in the calculation at both the high level and low level conditions.
    c. Potentially harmful critical speeds shall be investigated further with a forced, damped analysis to determine component stresses do not exceed material properties.
    d. Forced damped analysis:
        1) Forced lateral analysis shall include forcing function magnitudes at least 10 percent of rotor disc weight at each disc position and hydraulic imbalance at 5 operating conditions spaced equally over the equipment operating range. If synchronous motors are used ensure that the rotor analysis includes startup, shutdown, and motor control transients.
        2) Forced torsional analysis shall include 1 percent of the maximum permitted torque at any given speed. Damping shall be 1 percent of critical at all shaft elements.
        3) Equipment rotor total stress (steady-state and alternating torque components plus lateral-bending stresses) shall not exceed:
            a) Constant torque: Total stress limited to 30 percent of the material fatigue limit and to a maximum of 18 percent of ultimate tensile strength.
            b) Variable torque (including variable speed equipment): Total stress limited to 50 percent of the material fatigue limit and to a maximum of 4 percent of the material ultimate tensile strength.
            c) Submit documentation of material fatigue limit.
    e. Report Submittals:
        1) Report 1: Executive Summary, including:
            a) Confirmation of compliance with this Section, or detailed exceptions taken.
            b) Software used for analysis.
            c) Results with interpretation.
            d) Preparer’s professional engineering stamp and seal.
            e) Campbell diagrams showing the system natural frequencies, excitation orders, and operating speed range for both lateral and torsional analysis.
                (1) Include equipment operating range; excitation lines at 1x, 2x run speed, vane pass (or equivalent), line- and twice-line frequency, motor-pole frequency, torsional harmonics from reciprocating drivers (including up to 6 times operating speed), control pulse frequencies induced by variable frequency drives (VFDs) (with certification from VFD

manufacturer of frequencies up to 24 times motor running speed), any torque harmonic greater than 1 percent of steady torque at primary excitation, and synchronous motor requirements; and critical speeds associated with equipment system components, including the rotor and each major equipment structural component.

f) Report 1 shall not include detailed analysis elements listed for Submittal under Report 2 below, Submittal of full analysis details in Report 1 is unacceptable.

g) Following Submittal of Report 1, submit Report 2: Detailed Analysis, including responses to comments made on Report 1: Rotor-dynamic Executive Summary.

2) Report 2: Rotor-dynamic detailed analysis, including:

a) Input data, including component properties, materials and connectivity to other components.

b) Schematic diagram of model mode shapes, nodes and elements.

c) Bearing stiffness and damping properties, impeller/diffuser interaction coefficients, and seal dynamic properties.

d) Forced, damped analysis indicating acceptable material stress limits are maintained at interference points shown on the Campbell diagram.

e) Synchronous motor information, including time-integration study results showing transient peak stresses at startup, shutdown and motor control transient events. Provide tomographic diagrams, including root and keyway stress concentration locations and the corresponding speeds that result in reported peak stresses.

2.02 POWER TRANSMISSION SYSTEMS

A. V-belts, sheaves, shaft couplings, chains, sprockets, mechanical variable-speed drives, VFDs, gear reducers, open and enclosed gearing, clutches, brakes, intermediate shafting, intermediate bearings, and U-joints:

1. Rated for 24 hour-a-day continuous service, or for intermittent service with frequent stops-and-starts, whichever is most severe.
2. Sized with a service factor of 1.5 or greater:
   a. Apply service factor to nameplate horsepower and torque of prime source of power and not to actual equipment loading.
   b. Apply service factors in accordance with AGMA, or as specified in the Technical Sections.

2.03 BEARINGS

A. Oil or grease lubricated, ball or roller antifriction type, of standard manufacture.

1. Design lubrication system based on the equipment location to operate in the temperatures as specified in Section 01850 - Design Criteria.
   a. To safely start after being shut off for 24 hours and operate safely:
      1) Suitable for the outdoor winter temperature as specified in Section 01850 - Design Criteria.

B. Oil-lubricated:
   1. Provide either pressure lubricating system or separate oil reservoir splash-type system as specified in the Technical Section.
   2. Design system to safely absorb heat energy generated in bearings when equipment is operating in the following conditions:
      a. With the highest load and the temperature 15 degrees Fahrenheit above the outdoor summer temperature as specified in Section 01850 - Design Criteria.

C. Grease lubricated, except those specified to be factory sealed:
   1. Fit with easily accessible grease supply, flush, drain, and relief fittings.
   2. Lubrication lines and fittings:
      a. Lines: Minimum 1/4-inch diameter stainless steel tubing.
      b. Multiple fitting assemblies: Mount fittings together in easily accessible location.
      c. Use standard hydraulic-type grease supply fittings:
         1) Manufacturers: One of the following or equal:
            a) Alemite.
            b) Zerk.

D. Ratings: In accordance with ABMA 9 or ABMA 11 L10 life for bearings rating life of not less than 50,000 hours.

2.04 BELT DRIVES

A. Sheaves:
   1. Separately mounted on bushings by means of at least 3 pull-up bolts or cap tightening screws.
   2. When 2 sheave sizes are specified, provide separate belts sized for each set of sheaves.
   3. Statically balanced for all; dynamically balanced for sheaves that operate at a peripheral speed of more than 5,500 feet per minute.
   4. Key bushings to drive shaft.

B. Belts:
   1. Anti-static type when explosion-proof equipment or environment is specified.
   2. When spare belts are specified, furnish 1 spare belt for every different type and size of belt-driven unit:
      a. Where 2 or more belts are involved, furnish matched sets.
      b. Identify as to equipment, design, horsepower, speed, length, sheave size, and use.
      c. Package in boxes labeled with identification of contents.

C. Manufacturers: One of the following or equal:
   1. Dodge, Dyna-V belts with matching Dyna-V sheaves and Taper-Lock bushings.
   2. T.B. Woods, Ultra-V belts with matching Sure-Grip sheaves and Sure-Grip bushings.

2.05 FLANGED PIPING CONNECTIONS

A. Unless specified otherwise in the Technical Sections or indicated on the Drawings, provide flat face flanges.

2.06 ASSEMBLY FASTENERS

A. General service: Stainless steel, Type 316:
   1. Bolts: In accordance with ASTM F593, Alloy Group 2.
   2. Nuts: In accordance with ASTM F594, Alloy Group 2.
   3. Washers: Alloy group matching bolts and nuts.

B. High-temperature service or high-pressure service: Stainless steel, Type 316:
   1. Bolts: In accordance with ASTM A193, Grade B8M, Class 1, heavy hex.
   2. Nuts: In accordance with ASTM A194, Grade 8, heavy hex.
   3. Washers: Alloy group matching bolts and nuts.

C. Low-temperature service: Stainless steel, Type 316:
   1. Bolts: In accordance with ASTM A320, Grade B8M, Class 1, heavy hex.
   2. Nuts: In accordance with ASTM A194, Grade B8M, heavy hex.
   3. Washers: Alloy group matching bolts and nuts.

2.07 GUARDS AT HIGH-TEMPERATURE SURFACES

A. Exposed surfaces having an external surface temperature of 120 degrees Fahrenheit or higher and located within 7 feet, measured vertically from floor or working level, or within 15 inches measured horizontally from stairways, ramps, or fixed ladders.

B. Cover with a thermal insulating material unless otherwise guarded against contact.
   1. Insulation thickness such that the insulation exterior temperature is below 120 degrees Fahrenheit.
   2. Insulation Type 3 and cover Type 5 as specified in Section 15082 - Piping Insulation.

2.08 GUARDS AT MOVING COMPONENTS

A. On rotating components that are within 7.5 vertical feet of an operating floor or platform.

B. Allow visual inspection of moving parts without removal.

C. Allow access to lubrication fittings.

D. Easily removable for maintenance.

E. Prevent entrance of rain or dripping water for outdoor locations.

F. Size belt and sheave guards to allow for installation of sheaves 15 percent larger and addition of 1 belt.

G. Materials:
    1. Sheet metal: Carbon steel, 12-gauge minimum thickness, hot-dip galvanized after fabrication.
    2. Fasteners: Type 316 stainless steel.

2.09 SHOP FINISHES

A. Manufacturer's standard primer and finish coatings.
    1. Primer only if field coatings are to be applied.

2.10 GEAR MOTORS

A. Parallel shaft drives: Helical gearing.

B. Right-angle drives: Worm gearing.

C. Manufacturers: One of the following or equal:
    1. Baldor Electric Company.
    2. Bodine Electric Company.

2.11 GEAR REDUCTION UNITS

A. Design and performance criteria:
    1. Gear type:
        a. Helical or herringbone.
    2. AGMA Class II service:
        a. Use more severe service condition when such is recommended by unit's manufacturer.
    3. Cast-iron housing with gears running in oil.
    4. Anti-friction bearings.
    5. Thermal horsepower rating based on maximum horsepower rating of prime mover, not actual load.

2.12 MOUNTING AND LIFTING PROVISIONS FOR EQUIPMENT

A. Equipment bases and base plates:
    1. Provide equipment bases with machined support pads, dowels for alignment for mating of adjacent items, openings for electrical conduits, and openings to facilitate grouting.
    2. Provide jacking screws in bases and supports for equipment and for equipment weighing 500 pounds or more.
    3. Materials:
        a. Match equipment material or steel.
        b. Coating: Match equipment.

B. Steel support frames:
    1. Carbon steel:
        a. At exterior locations and at interior wet or moist locations, provide continuous welds on both sides to close seams and edges between steel members.
        b. Grind closure welds smooth.

C. Lifting lugs or eyes:
    1. Equipment units weighing 50 pounds or more:
        a. Provide with lifting lugs or eyes to allow removal with lifting device.

2.13 NAMEPLATES

A. Fastened to equipment at factory in an accessible and visible location.

B. Metal engraved or stamped with text, holes drilled or punched for fasteners.

C. Material: Aluminum or stainless steel.

D. Fasteners: Number 4 or larger oval head stainless steel screws or drive pins.

E. Text:
    1. Manufacturer's name, equipment model number, equipment serial number, and identification tag number.
    2. Additional items indicated in the Technical Sections.
    3. Indicate the following additional information as applicable:
        a. Maximum and normal rotating speed.
        b. Service class in accordance with applicable standards.
    4. Include for pumps:
        a. Rated total dynamic head in feet of fluid.
        b. Rated flow in gallons per minute.
        c. Impeller, gear, screw, diaphragm, or piston size.
    5. Include for motors:
        a. Drive speed.
        b. Motor horsepower with rated capacity.
    6. Include for gear reduction units:
        a. AGMA class of service.
        b. Service factor.
        c. Input and output speeds.

2.14 PUMP SHAFT COUPLINGS

A. General:
    1. Type and ratings: Non-lubricated designed for not less than 50,000 hours of operating life.
    2. Sizes: Provide as recommended by manufacturer for specific application, considering horsepower, speed of rotation, balance, and type of service.
    3. Suitable for an ambient temperature range between -40 degrees to +200 degrees Fahrenheit.

B. Close-couplings for electric-motor-driven equipment:
    1. Manufacturers: One of the following or equal:
        a. Lovejoy.
        b. T.B. Woods.
    2. Provide flexible couplings designed to accommodate angular misalignment, parallel misalignment, and end float.
    3. Manufacture flexible component of coupling from synthetic rubber or urethane.

4. Provide service factor of 2.5 for electric motor drives and 3.5 for engine drives.
5. Do not allow metal-to-metal contact between driver and driven equipment.

C. Flexible couplings for direct connected electric-motor-driven equipment:
1. Manufacturers: One of the following or equal:
a. Rexnord.
b. T.B. Woods.
2. Provide flexible couplings designed to accommodate shock loading, vibration, and shaft misalignment or offset.
3. Provide flexible connecting element of rubber and reinforcement fibers.
4. Provide service factor of 2.0.
5. Connect stub shafts through collars or round flanges, firmly keyed to their shafts with neoprene cylinders held to individual flanges by through pins.

D. Spacer couplings:
1. Where cartridge-type mechanical seals or non-split seals are specified, provide a spacer-type coupling of sufficient length to remove the seal without disturbing the driver or driven equipment.

2.15 PUMP SEAL CHAMBER AND SEALS

A. Seal chamber (stuffing box):
1. Large enough to retrofit with double mechanical seal.

B. Seal types: Based on the following and as specified in the Technical Section:
1. Type 1: Packing:
a. Provide when specified in the Technical Section for wastewater, non-potable water, and sludge applications:
1) Asbestos free.
2) PTFE (Teflon™) free.
3) Braided graphite.
4) Manufacturers: One of the following or equal:
a) Chesterton, 1400.
b) John Crane.
b. Provide when specified for drinking water service:
1) Asbestos free.
2) Material: Braided PTFE (Teflon™).
3) Manufacturers: One of the following or equal:
a) Chesterton, 1725.
b) John Crane.
c. Design:
1) Packing gland to allow adjustment and repacking without dismantling pump, except to open up stuffing box.
2) Seal chamber (stuffing box) large enough to retrofit with double mechanical seal.
3) Manufacturers: One of the following or equal:
a) Chesterton, 1725.
b) John Crane.
2. Type 2: Mechanical seal, flushing, cartridge, single O-ring.
a. Manufacturers: One of the following or equal:
1) Chesterton, S10.

2) John Crane, 5610 Series.

3. Type 3: Mechanical seal, flushing, cartridge, double O-ring:
   a. Manufacturers: One of the following or equal:
      1) Chesterton, S20.
      2) John Crane, 5620 Series.
4. Type 4: Mechanical seal, flushing, cartridge, double split-ring:
   a. Manufacturers: One of the following or equal:
      1) Chesterton, S20.
      2) John Crane, 5620 Series.
5. Type 5: Mechanical seal, flushing, cartridge, single split-ring:
   a. Manufacturers: One of the following or equal:
      1) Chesterton, 442.
      2) John Crane, 5860.
6. Type 6: Mechanical seal, flushless, cartridge, single split-ring:
   a. Manufacturers: One of the following or equal:
      1) Chesterton, 156.
      2) John Crane, 3740 Series.

C. Mechanical seals, Types 2 to 6:
   1. Balanced hydraulically.
   2. Spring:
      a. Stationary, out of pumping fluid.
      b. Material as specified in the Technical Section. Hastelloy C; Type Elgiloy or 17-7 PH stainless steel for split seals.
   3. O-ring: Viton™ 747.
   4. Gland: Type 316L stainless steel.
   5. Set screws: Type 316L stainless steel.
   6. Faces: Reaction bonded, silicon carbide/carbon.
   7. Minimum differential pressures in either direction: 300 pounds per square inch gauge.
      a. Manufacturers: One of the following or equal:
         1) Chesterton, 1400.
         2) John Crane, equivalent product.
   8. Drinking water service:
      a. Asbestos free.
      b. Material: Braided PTFE (Teflon™).
      c. Manufacturers: One of the following or equal:
         1) Chesterton, 1725.
         2) John Crane, equivalent product.

D. Flushing system:
   1. Provide flushing connections:
      a. 3/4-inch size.
      b. Provide API 682 seal water plan arrangement as specified in the Technical Section:
         1) Plan 11 - Product stream seal water from discharge thru seal.
         2) Plan 13 - Product stream seal water through seal to suction.
         3) Plan 23 - Closed loop seal water with cooler and pumping ring.
         4) Plan 32 - Production seal water discharged to product stream.
         5) Plan 54 - Production seal water excluded from product stream.

2.16 SAFETY SIGNS

A. Material, sign size, and text: As specified in Section 10400 - Signage.

2.17 SHIPPING

A. Prior to shipment of equipment:
   1. Bearings (and similar items):
      a. Pack separately or provide other protection during transport.
      b. Greased and lubricated.
   2. Gear boxes:
      a. Oil filled or sprayed with rust preventive protective coating.
   3. Fasteners:
      a. Inspect for proper torques and tightness.

PART 3 EXECUTION

3.01 PRE-INSTALLATION

A. Field measurements:
   1. Prior to Shop Drawings preparation, take measurements and verify dimensions indicated on the Drawings.
   2. Ensure equipment and ancillary appurtenances fit within available space.

B. Sequencing and scheduling:
   1. Coordinate details of equipment with other related parts of the Work, including verification that structures, piping, wiring, and equipment components are compatible.
   2. Equipment anchoring: Obtain anchoring material and setting drawings from equipment manufacturers in adequate time for templates to be constructed and anchors to be cast-in-place.

3.02 LUBRICATION LINES AND FITTINGS

A. Support and protect lines from source to point of use.

B. Fittings:
   1. Bring fittings to outside of equipment in manner such that they are readily accessible from outside without necessity of removing covers, plates, housings, or guards.
   2. Mount fittings together wherever possible using factory-mounted multiple fitting assemblies securely mounted, parallel with equipment lines, and protected from damage.
   3. For underwater bearings: Bring fittings above water surface and mount on edge of structure above.

3.03 ALIGNMENT OF DRIVERS AND EQUIPMENT

A. Where drive motors or other drivers are connected to driven equipment by flexible coupling, disconnect coupling halves and align driver and equipment after driven equipment has been leveled on its foundation.

B. Comply with procedures of appropriate HI, AGMA standards, alignment tolerances of equipment manufacturers and the following requirements to bring components into angular and parallel alignment:
   1. Maximum total coupling offset (not the per-plane offset): Not to exceed 0.5 mils per inch of coupling length for spacer couplings based on coupling length (not dial separation).
   2. Utilize jacking screws, wedges, or shims as recommended by the equipment manufacturer and as specified in the equipment sections.

C. Use reverse-indicator arrangement dial-type or laser-type alignment indicators:
   1. Mount on the driver/coupling flange and equipment/coupling flange.
   2. Alignment instrumentation accuracy shall be sufficient to read angular and radial misalignment at 10 percent or less of the manufacturer's recommended acceptable misalignment.

D. Alignment and calculations shall include measurement and allowance for thermal growth, spacer coupling length, indicator separation, and axial spacing tolerances of the coupling.

E. When alignment satisfies most stringent tolerance of system components, grout between base and foundation.
   1. Allow minimum 48 hours for grout to harden.
   2. After grout hardens, remove jacking screws, tighten anchor bolts and other connections, and recheck alignment.
   3. Correct alignment as required.

3.04 EQUIPMENT SUPPORT AND ANCHORING TO STRUCTURES

A. Anchor equipment to structures as indicated on the Drawings and as specified.

B. Obtain final anchor bolt layouts for equipment prior to:
   1. Detailing reinforcement for equipment pads.
   2. Preparation of Shop Drawings for metal structures supporting equipment.

C. Anchor bolt templates:
   1. Provide templates as specified in the Technical Sections.
   2. Use final anchor bolt layout to construct templates for setting anchor bolts.
   3. Make templates:
      a. Rigid, and non-deformable during use.
      b. With longitudinal axes of anchors parallel.
      c. With longitudinal axes of anchors perpendicular to surface supporting the equipment.
   4. Templates may be reused for multiple locations of the same equipment only if:
      a. Templates are in "like-new" condition prior to each reuse.

b. Anchor layout has not been deformed or damaged by previous installation, removal, or handling of templates.

5. Sequence:
   a. Set and support templates prior construction of structures surrounding anchors.
   b. Position anchors in templates to provide designated embedment in supporting structure, with required projection for installation of grout, base plates, and hardware for tightening.
   c. Construct concrete or masonry around anchors using methods that preserve required anchor positions and alignment, and clearances to edges of supports or structures.

D. Anchor adjustment sleeves:
   1. Use of adjustment sleeves around anchors:
      a. Is at the option of the Contractor.
      b. Does not relieve the Contractor of obligation to construct and use templates for setting of anchors.
      c. May required increased anchor embedment length to develop the strength of the anchor in the embedded length below the adjustment sleeve.
   2. Submittal requirements for anchor adjustment sleeves:
      a. Provide within sufficient time for Engineer approval and not less than 10 working days before setting those items.
      b. Proposed locations of sleeves.
      c. Details and dimensions of sleeves.
      d. Sleeve materials of construction, and coatings.
      e. Information on sleeve filler material and means of filler removal.
      f. Type, details, and dimensions of anchor bolts or anchor rods to be used with sleeves.
      g. Calculations showing development of anchor load capacity below the bottom of the sleeve.
      h. Plan for removal of sleeve fillers, if any.
      i. Plan for placement and consolidation of flowable grout inside sleeves and to a level equal to top of concrete slab or equipment pad surrounding the sleeve.

3.05 GROUTING UNDER EQUIPMENT BASES, BASE PLATES, SOLE PLATES, AND SKIDS

A. General:
   1. Comply with the equipment manufacturer’s installation instructions, including:
      a. Tolerances for level.
      b. Tolerances for vertical and horizontal alignment.
      c. Requirements or recommendations for grouting spaces and grout installation.
      d. Recommendations for tightening of equipment anchors after grout has cured.
   2. Install equipment over grout as indicated on the Drawings or specified only after:
      a. Equipment is leveled and in proper alignment.
      b. Piping connections are complete and in alignment with no strain transmitted to equipment.

3. Install flowable grout, as specified in Section 03600 - Grouting, placed with forms and head boxes.
    a. Use flowable, non-shrink grout.
    b. Use flowable, non-shrink epoxy grout, only where indicated on the Drawings, where specified in Technical Sections, or when approved in advance by the Engineer.
    c. Grouting with dry-pack materials is not permitted.

B. Prepare equipment bases, base plates, soleplates, and skids for grouting:
    1. Concrete equipment bases:
        a. Roughen surface in accordance with ICRI, Guideline No. 310.2R, Surface Preparation Profiles CSP-3 and CSP-4.
        b. Clean roughened concrete surfaces.
    2. Base plates, soleplates, and skids:
        a. Clean surfaces in accordance with SSPC-SP-1-Solvent Cleaning, to remove dirt, dust, oil, grease, paint, and other material.

C. Level equipment for grouting:
    1. Use removable jack screws, or removable steel wedges and shims to support and level equipment bases, base plates, sole plates, and skids.
        a. Do not use leveling nuts placed on equipment anchors to support or level equipment bases, base plates, sole plates, and skids.
    2. Removable jack screws:
        a. Provide number, size, and locations of jack screws required to support and level equipment in accordance with the manufacturer’s recommendations.
        b. Drill and tap equipment base plates, sole plates, and skids for jack screws.
        c. Support jack screws on circular steel plates that have been epoxy bonded to the equipment foundation.
            1) Provide plates fabricated from Type 316 stainless steel where edges of support plates will have grout side cover of 3 inches or less in the finished Work.
        d. Make provision for removal of jack screws after grouting:
            1) Prevent grout from bonding to jack screws by wrapping jack screw threads that will be in contact with grout with multiple layers of tape or other material acceptable to the Engineer.
        e. Place and cure grout.
        f. After grout is placed and cured:
            1) Remove jack screws and material used to prevent grout from bonding to jack screws.
            2) Provide jack screws to the Owner for future use.
            3) Fill jack screw holes with grout.
            4) Cure grout as specified.
    3. Removable steel wedges and shims:
        a. Use for equipment bases, base plates, sole plates, and skids where it is not practical to use jack screws.
        b. Provide number, size, and locations of wedges and shims required to support and level equipment in accordance with the manufacturer’s recommendations.

c. Make provision for removal of wedges and shims after grouting:
    1) Prevent grout from bonding to wedges and shims by wrapping wedges and shims that contact grout with multiple layers of tape or other material acceptable to the Engineer.
    2) Locate and orient wedges and shims to allow for removal after grouting, and to facilitate placement of grout in the remaining voids.
d. Place and cure grout.
e. After grout is placed and cured:
    1) Remove wedges and shims, and material used to prevent grout from bonding to them.
    2) Fill jack screw holes with grout.
    3) Cure grout as specified.

D. Construct grout forms:
1. Provide forms:
    a. Rigid with adequate strength to withstand placement of grout.
    b. With surfaces that will produce a smooth, uniform finish for grout edges exposed in the finished Work.
    c. That allow grout to flow horizontally beyond the perimeter of the equipment base plate a distance not less than the thickness of the grout, and not less than 1 inch.
2. Install forms:
    a. Seal form cracks and joints with elastomeric sealant to make form watertight.
    b. Line form surfaces in contact with grout with polyethylene film, or coat with 2 coats of heavy-duty paste wax.
3. Construct grout “head box” over entire length of one side of form.
    a. Make head box height sufficient to force grout to flow under full dimensions of equipment base and to the surrounding form faces.

E. Pre-grouting procedures:
1. Concrete surfaces receiving flowable, non-shrink grout:
    a. Saturate concrete surface in contact with grout and concrete surfaces extending not less than at least 6 inches beyond limits of grout with clean water for a minimum of 24 hours prior to grouting.
    b. Just prior to grout placement, remove standing water using clean rags or oil-free compressed air. Provide saturated surface dry (SSD) concrete for grout placement.
2. Concrete surfaces receiving flowable, non-shrink epoxy grout:
    a. Do not saturate concrete prior to grout placement.

F. Grout placement and curing:
1. Place and cure grout as specified in Section 03600 - Grouting and in this Section.
2. Grouting:
    a. Keep level of grout in head box above bottom of equipment bases, base plates, sole plates, and skids always to drive flow under base.
    b. Maintain continuous grout flow from head box to opposite sides of forms without trapping air or forming voids.
    c. Vibrate, rod, or chain grout to facilitate grout flow, to consolidate grout, and to remove entrapped air.

3. After grout sets, remove forms and trim grout edges at 45-degree angle from bottom edge of equipment bases, base plates, sole plates, and skids.
4. Cure grout as specified in Section 03600 - Grouting.

G. After grout is cured:
1. Remove jack screws or wedges and shims, and material used to prevent grout from bonding to leveling devices.
2. Fill pockets from removed leveling devices with grout.
3. Cure filled voids as specified in Section 03600 - Grouting.
4. Tighten equipment anchors in accordance with the equipment manufacturer's requirements.

3.06 FIELD FINISHES

A. When touchup or repair is required, apply primer and coating systems as recommended by the equipment manufacturer.

END OF SECTION

SECTION 15052

COMMON WORK RESULTS FOR GENERAL PIPING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Basic materials and methods for metallic and plastic piping systems.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B1.1 - Unified Inch Screw Threads (UN, UNR, and UNJ Thread Forms).
   2. B18.2.1 - Square, Hex, Heavy Hex, and Askew Head Bolts and Hex, Heavy Hex, Hex Flange, Lobed Head, and Lag Screws (Inch Series).
   3. B18.2.2 - Nuts for General Applications: Machine Screw Nuts; and Hex, Square, Hex Flange, and Coupling Nuts (Inch Series).

   5. C151 - Ductile-Iron Pipe, Centrifugally Cast.

C. ASTM International (ASTM):
   1. A193 - Standard Specification for Alloy-Steel and Stainless Steel Bolting for High Temperature or High Pressure Service and Other Special Purpose Applications.
   2. A194 - Standard Specification for Carbon Steel, Alloy Steel, and Stainless Steel Nuts for Bolts for High Pressure or High Temperature Service, or Both.
   3. A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60,000 PSI Tensile Strength.
   4. A563 - Standard Specification for Carbon and Alloy Steel Nuts.
   5. B88 - Standard Specification for Seamless Copper Water Tube.
   6. D395 - Standard Test Methods for Rubber Property—Compression Set.
   7. D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers—Tension.
   8. D573 - Standard Test Method for Rubber—Deterioration in an Air Oven.
   9. D1149 - Standard Test Methods for Rubber Deterioration—Cracking in an Ozone Controlled Environment.
   10. D1330 - Standard Specification for Rubber Sheet Gaskets.
   11. D2513 - Standard Specification for Polyethylene (PE) Gas Pressure Pipe, Tubing and Fittings.
   12. F37 - Standard Test Methods for Sealability of Gasket Materials.

13. F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.
14. F594 - Standard Specification for Stainless Steel Nuts.
15. F2329 - Standard Specification for Zinc Coating, Hot-Dip, Requirements of Application to Carbon and Alloy Steel Bolts, Screws, Washers, Nuts, and Special Threaded Fasteners.

D. California Health and Safety Code.

E. NSF International (NSF):
1. 61 - Drinking Water System Components - Health Effects.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
1. Buried pipes: Pipes that are buried in the soil with or without a concrete pipe encasement.
2. Exposed pipe: Pipes that are located above ground, or located inside a structure, supported by a structure, or cast into a concrete structure.
3. Pipes adjacent to a wet wall: Pipe centerline within 10 inches of the wet wall.
4. Underground pipes: Buried pipes - see 1. above.
5. Underwater pipes: Pipes below the top of walls in basins or tanks containing water.
6. Wet wall: A wall with water on at least one side.

PART 2 PRODUCTS

2.01 GENERAL

A. Materials as specified in the Agreement and Contract RFP in Volumes 1 and 2 including special requirements for materials in contact with drinking water.

B. Coatings and linings requirements stated in the Pipe Schedule, as modified in the individual pipe Technical Sections, and as specified in Section 09960 - High-Performance Coatings.

2.02 LINK TYPE SEALS

A. Characteristics:
1. Modular mechanical type, consisting of interlocking neoprene or synthetic rubber links shaped to continuously fill the annular space between the pipe and wall opening.
2. Links to form a continuous rubber belt around the pipe.
3. Provide a nylon polymer pressure plate with Type 316 stainless steel hardware. Isolate pressure plate from contact with wall sleeve.
4. Hardware to be Type 316 stainless steel.
a. Provide anti-galling lubricant for threads.

B. One of the following or equal:
   1. Link-Seal.
   2. Pipe Linx.

2.03 FLANGE BOLTS AND NUTS

A. General:
   1. Washer: Provide for each nut.
      a. Shall be of the same material as the nut.
   2. Nuts: Heavy hex-head.
   3. Cut and finish flange bolts to project:
      a. Face of the bolt shall exceed face of nut by 1/8-inch minimum.
      b. A maximum of 1/4 inch beyond outside face of nut after assembly.
   4. Tap holes for cap screws or stud bolts when used.
   5. Lubricant for stainless steel bolts and nuts:
      a. Chloride-free.
      b. Manufacturers: One of the following or equal:
         1) Huskey, FG-1800 Anti-Seize.
         2) Weicon, Anti-Seize High-Tech.

B. Ductile iron pipe:
   1. On exposed pipes with pressures equal to or less than 150 pounds per square inch gauge (psig):
      a. Bolts: In accordance with ASTM A307, Grade B.
      b. Nuts: In accordance with ASTM A563, Grade A.
      c. Bolts and nuts: Hot-dip galvanized in accordance with ASTM F2329.
   2. On exposed pipes with pressures greater than 150 psig:
      a. Bolts: In accordance with ASTM A193, Grade B7.
      b. Nuts: In accordance with ASTM A194, Grade 2H.
      c. Bolts and nuts: Hot-dip galvanized in accordance with ASTM F2329.
   3. On underwater pipes and pipes adjacent to wet walls:
      a. Bolts: In accordance with ASTM A193, Grade B8M.
      b. Nuts: In accordance with ASTM A194, Grade 8M.

2.04 MECHANICAL JOINTS BOLTS AND NUTS

A. Bolts, including T-bolts:
   1. High strength low alloy steel in accordance with AWWA C111.
      a. Fluoropolymer coated.
   2. Type 316 stainless steel in accordance with ASTM F593.

B. Heavy hex nuts:
   1. High strength low alloy steel in accordance with AWWA C111.
      a. Fluoropolymer coated.
   2. Type 316 stainless steel in accordance with ASTM F594.

2.05 GASKETS

A. General.
   1. Gaskets shall be suitable for the specific fluids, pressure, and temperature conditions.
   2. Capable of being applied on surface of piping with cavities to provide for an improved seal with the internal piping pressure.

B. Gaskets for flanged joints in ductile iron and steel piping for sewage service:
   1. Suitable for pressures equal to and less than 200 pounds per square inch gauge, temperatures equal to and less than 250 degrees Fahrenheit, and raw sewage service.
   2. Gasket Material:
      a. SBR or neoprene elastomer with minimum Shore A hardness value of 70.
      b. Reinforcement: Cloth or synthetic fiber.
      c. Thickness: Minimum 3/32-inch thick for less than 10-inch pipe; minimum 1/8-inch thick for 10 inch and larger pipe.
   3. Manufacturers: One of the following or equal:
      a. Pipe less than 48 inches in diameter:
         1) Garlock, Style 7797.
         2) John Crane, similar product.
      b. Pipe 48 inches in diameter and larger:
         1) Garlock, Style 3760.
         2) John Crane, similar product.

C. Gaskets for flanged joints in ductile iron or steel water piping:
   1. Suitable for hot or cold water, pressures equal to and less than 150 pounds per square inch gauge, and temperatures equal to and less than 160 degrees Fahrenheit.
   2. Material:
      a. SBR or neoprene elastomer, compressed, with non-asbestos fiber reinforcement.
   3. Manufacturers: One of the following or equal:
      a. Garlock, Bluegard 3300.
      a. John Crane, similar product.

D. Gaskets for flanged joints in ductile iron drinking water piping in accordance meeting NSF 61 requirements:
   1. Suitable for hot or cold water, pressures equal to or less than 150 pounds per square inch gauge, and temperatures equal to or less than 160 degrees Fahrenheit.
   2. Material:
      a. EPDM material with 80 Shore A durometer rating.
   3. Manufacturers: One of the following or equal:
      a. Garlock, 98206.
      b. John Crane, similar product.

E. Gaskets for mechanical joints in ductile iron drinking water piping in accordance with NSF 61 requirements:
   1. In accordance with AWWA C110, C111, and C115.

2. Material: Vulcanized styrene butadiene copolymer (SBR).
    a. Temperature range: 20 to 150 degrees Fahrenheit.
    b. Operating pressure: 250 psi.
    c. Durometer, Shore A (within 5): 75.
    d. ASTM D412 tensile strength: 1,500 psi.
    e. ASTM D412 elongation: 150 percent.
    f. ASTM D395 B, compression set, 25 percent deflection, maximum percentage 22 hours at 158 degrees Fahrenheit: 20.
    g. ASTM D573 minimum aging: 60 percent.
    h. ASTM D1149 resistance to surface ozone: No cracking.
3. Manufacturers: One of the following or equal:
    a. American Cast Iron Pipe Co.
    b. EBAA Iron, Inc.
    c. Star Pipe Products.

F. Gaskets for integrally restrained push-on joints in ductile iron drinking water piping in accordance with NSF 61 requirements:
1. In accordance with AWWA C110, C111, and C115.
2. Material: Vulcanized styrene butadiene copolymer (SBR).
    a. Temperature range: 20 to 150 degrees Fahrenheit.
    b. Operating pressure: 250 psi.
    c. Durometer, Shore A:
        1) Main body: 50 to 65.
        2) Harder portion (if used): 80 to 85.
    d. ASTM D412 tensile strength:
        1) Main body: 2,000 psi.
        2) Harder portion (if used): 1,200 psi.
    e. ASTM D412 elongation:
        1) Main body: 300 percent.
        2) Harder portion (if used): 125 percent.
    f. ASTM D395 B, compression set, 25 percent deflection, maximum percentage 22 hours at 158 degrees Fahrenheit: 20.
    g. ASTM D573 minimum aging: 60 percent.
    h. ASTM D1149 resistance to surface ozone: No cracking.
3. Manufacturers: One of the following or equal:
    a. American Cast Iron Pipe Co, Fast-grip gasket.
    b. U.S. Pipe, Field Lok 350 Gaskets.

PART 3 EXECUTION

3.01 INSTALLATION

A. General:
1. Piping drawings:
    a. Except in details, piping is indicated diagrammatically. Not every offset and fitting, or structural difficulty that may be encountered has been indicated on the Drawings. Sizes and locations are indicated on the Drawings.

b. Perform minor modifications to piping alignment where necessary to avoid structural, mechanical, or other type of obstructions that cannot be removed or changed.
    1) Modifications are intended to be of minor scope, not involving a change to the design concept or a change to the Contract Price or Contract Times.

2. Piping alternatives:
    a. Provide piping as specified in this Section, unless indicated on the Drawings or specified otherwise.
    b. Alternative pipe ratings:
        1) Piping with greater pressure rating than specified may be substituted in lieu of specified piping without changes to the Contract Price.
        2) Piping of different material may not be substituted in lieu of specified piping.
    c. Valves in piping sections: Capable of withstanding specified test pressures for piping sections and fabricated with ends to fit piping.
    d. Grooved joints: Use couplings, flange adapters, and fittings of the same manufacturer.
        1) Manufacturer's factory trained representative:
            a) Provide on-site training for the Contractor's field personnel.
            b) Periodically visit the jobsite to verify the Contractor is following best recommended practices.
        2) Distributor's representative is not considered qualified to conduct the training or jobsite visits.
    e. Flanged joints: Where one of the joining flanges is raised face type, provide a matching raised face type flange for the other joining flange.
3. Unless otherwise indicated on the Drawings, piping at pipe joints, fittings, couplings, and equipment shall be installed without rotation, angular deflection, vertical offset, or horizontal offset.

B. Wall and slab penetrations:
1. Provide sleeves for piping penetrations through aboveground masonry and concrete walls, floors, ceilings, roofs, unless specified or otherwise indicated on the Drawings.
2. For piping 1 inch in nominal diameter and larger, provide sleeves with minimum inside diameters of 1 inch plus outside diameter of piping. For piping smaller than 1 inch in nominal diameter, provide sleeve of minimum twice the outside diameter of piping.
    a. Arrange sleeves and adjacent joints so piping can be pulled out of sleeves and replaced without disturbing the structure.
    b. Cut ends of sleeves flush with surfaces of concrete, masonry, or plaster.
    c. Conceal ends of sleeves with escutcheons where piping runs through floors, walls, or ceilings of finished spaces within buildings.
    d. Seal spaces between pipes and sleeves with link-type seals when not otherwise specified or indicated on the Drawings.
    e. Seal openings around piping running through interior walls and floors of chlorine rooms and chlorine storage rooms gastight with synthetic rubber sealing compound.
3. Provide flexibility in piping connecting to structures to accommodate movement due to soil settlement and earthquakes. Provide flexibility using details indicated on the Drawings.

4. Core drilled openings:
    a. Do not damage or cut existing reinforcing bars, electrical conduits, or other items embedded in the existing concrete without acceptance by the Engineer.
    b. Determine location of reinforcing bars or other obstructions with a non-destructive indicator device.
    c. Remove dust and debris from hole using compressed air.

C. Exposed piping:
1. Install in straight runs parallel to the axes of structures, unless otherwise indicated on the Drawings.
    a. Install piping runs plumb and level, unless otherwise indicated on the Drawings.
        1) Slope plumbing drain piping with a minimum of 1/4 inch per foot downward in the direction of flow.
2. Install after installing equipment and after piping and fitting locations have been determined.
3. Support piping: As specified in Section 15061 - Pipe Supports:
    a. Do not transfer pipe loads and strain to equipment.
4. In addition to the joints indicated on the Drawings, provide unions, flexible couplings, flanged joints, flanged coupling adapters, and other types of joints or means which are compatible with and suitable for the piping system, and necessary to allow ready assembly and disassembly of the piping.
5. Assemble piping without distortion or stresses caused by misalignment:
    a. Match and properly orient flanges, unions, flexible couplings, and other connections.
    b. Do not subject piping to bending or other undue stresses when fitting piping.
    c. Do not correct defective orientation or alignment by distorting flanged joints or subjecting flange bolts to bending or other undue stresses.
    d. Flange bolts, union halves, flexible connectors, and other connection elements shall slip freely into place.
    e. Alter piping assembly to fit when proper fit is not obtained.
    f. Install eccentric reducers or increasers with the top horizontal for pump suction piping.

D. Buried piping:
1. Bury piping with minimum 3-foot cover without air traps, unless otherwise indicated on the Drawings.
2. Where 2 similar services run parallel to each other, piping for such services may be laid in the same trench.
    a. Lay piping with sufficient room for assembly and disassembly of joints, for thrust blocks, for other structures, and to meet separation requirements of public health authorities having jurisdiction.
3. Laying piping:
    a. In finished trenches free from water or debris. Begin at the lowest point with bell ends up slope.
    b. Place piping with top or bottom markings with markings in proper position.
    c. On an unyielding foundation with uniform bearing under the full length of barrels.

d. Where joints require external grouting, banding, or pointing, provide space under and immediately in front of the bell end of each section laid with sufficient shape and size for grouting, banding, or pointing of joints.
e. At the end of each day's construction, plug open ends of piping temporarily to prevent entrance of debris or animals.

4. Concrete encase buried pipe installed under concrete slabs or structures.

E. Venting piping under pressure:
1. Lay piping under pressure flat or at a continuous slope without air traps, unless otherwise indicated on the Drawings.
2. Install plug valves as air bleeder cocks at high points in piping.
a. Provide 1-inch plug valves for water lines and 2-inch plug valves for sewage and sludge lines, unless otherwise indicated on the Drawings.
3. Provide additional pipe taps with plug cocks and riser pipes along piping as required for venting during initial filling, disinfecting, and sampling.
4. Before piping is placed into service, close plug valves and install plugs. Protect plugs and plug valves from corrosion as specified in Section 09960 - High-Performance Coatings.

F. Restraining buried piping:
2. At valves and at fittings where piping changes direction, changes size, and at ends:
a. When piping is underground, use concrete thrust blocks, mechanical restraints, or push-on restraints.
b. Determine thrust forces by multiplying the nominal cross-sectional area of the piping by the design test pressure of the piping.
3. Provide restraints with ample size to withstand thrust forces resulting from test pressures:
a. During testing, provide suitable temporary restraints where piping does not require permanent restraints.
4. Place concrete thrust blocks against undisturbed soil.
5. Place concrete so piping joints, fittings, and other appurtenances are accessible for assembly and disassembly.
6. Provide underground mechanical restraints where specified in Piping Schedule in the Drawings.

G. Restraining above ground piping:
1. At valves and fittings where piping changes direction, changes size, and at ends:
a. When piping is aboveground or underwater, use mechanical or structural restraints.
b. Determine thrust forces by multiplying the nominal cross-sectional area of the piping by the design test pressure of the piping.
2. Provide restraints with ample size to withstand thrust forces resulting from test pressures:
c. During testing, provide suitable temporary restraints where piping does not require permanent restraints.

H. Connections to existing piping:
    1. Expose existing piping to which connections are to be made with sufficient time to permit, where necessary, field adjustments in line, grade, or fittings:
        a. Protect domestic water/potable water supplies from contamination:
            1) Make connections between domestic water supply and other water systems in accordance with requirements of public health authorities.
            2) Provide devices approved by the owner of the domestic water supply system to prevent flow from other sources into the domestic supply system.
    2. Make connections to existing piping and valves after sections of new piping to be connected have been tested and found satisfactory.
    3. Provide sleeves, flanges, nipples, couplings, adapters, and other fittings needed to install or attach new fittings to existing piping and to make connections to existing piping.
    4. For flanged connections, provide stainless steel bolts with isolation bushings and washers, and full-face flange gaskets.

I. Connections between ferrous and nonferrous metals:
    1. Connect ferrous and nonferrous metal piping, tubing, and fittings with dielectric couplings especially designed for the prevention of chemical reactions between dissimilar metals.
    2. Nonferrous metals include aluminum, copper, and copper alloys.

J. Flanged connections between dissimilar metals such as ductile iron pipe and steel pipe:
    1. Provide stainless steel bolts with isolation bushings and washers, and full-face flange gaskets.

3.02 CLEANING

A. Piping cleaning:
    1. Upon completion of installation, clean piping interior of foreign matter and debris.
    2. Perform special cleaning when required by the Contract Documents.

B. Chlorine piping:
    1. General:
        a. Coordinate with the Owner and attend a pre-cleaning meeting with the Owner before cleaning chlorine piping.
        b. Work with the Owner during cleaning and conform to plant operational and shut down constraints.
        c. Clean chlorine piping in accordance with the requirements of the Chlorine Institute-Pamphlet 6 and meet the following requirements.
    2. Steel piping:
        a. Dry chlorine gas or liquid chlorine piping:
            1) Do not put water into any of the chlorine gas or liquid piping.
            2) Blow chlorine piping clean of loose debris with compressed air at 4,000 fpm.
            3) Clean chlorine piping by pulling clean cloths saturated with an approved solvent through piping:
                a) Do not use hydrocarbons or alcohols that may react with chlorine.

b) Use solvents in accordance with the manufacturer's safety recommendations to avoid serious physiological effects.
c) Remove dirt and debris of any nature from the chlorine lines.

4) Disassemble and clean valves and equipment that have oil residues before installation.
5) Dry piping immediately before effecting final connections for service.
a) Keep piping sealed to prevent moisture from entering chlorine piping.
b) Supply compressors, air dryers, and dew point testing equipment necessary to dry and test for dryness the new chlorination system piping.
6) Drying procedure:
a) Pass dry commercial-grade nitrogen gas that has a dew point of -40 degrees Fahrenheit or less through the piping until exhausted air at three engineer-approved locations has a dew point of -40 degrees Fahrenheit.
b) Confirm dew point with a hygrometer.
c) Re-dry the chlorine piping system in the event subsequent work opens any part of the system to the atmosphere.

3. PVC piping:
a. Cleaning chlorine gas vacuum piping:
1) Blow pipe clean of loose debris with instrument-grade clean and dry compressed air.
2) Ensure that pipe is open and not valved off at the end of the section to be cleaned so that pipe does not become pressurized.
3) Do not pressurize PVC with compressed air.
4) Do not flush chlorine gas vacuum piping with water.
b. Cleaning chlorine solution piping:
1) Flush with potable water to clear loose debris.

C. Conduct pressure and leak test, as specified.

D. As indicated on the Drawings.

END OF SECTION

SECTION 15057

FUSION BONDED EPOXY LINING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Fusion bonded epoxy lining for steel or ductile iron pipe and fittings.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. D1002 - Standard Test Method for Apparent Shear Strength of Single-Lap-Joint Adhesively Bonded Metal Specimen by Tension Loading (Metal-to-Metal).
   2. G8 - Standard Test Methods for Cathodic Disbonding of Pipeline Coatings.

B. American Water Works Association (AWWA):
   1. C116 - Standard for Protective Fusion-Bonded Epoxy Coatings for the Interior and Exterior Surfaces of Ductile-Iron and Gray-Iron Fittings.
   2. C213 - Fusion-Bonded Epoxy Coating for the Interior and Exterior of Steel Water Pipelines.

C. Society for Protective Coatings (SSPC):
   1. SP 7 – Brush-Off Blast Cleaning.
   2. SP 10 - Near-White Blast Cleaning.

1.03 SUBMITTALS

A. Product data.

B. Test reports: Include manufacturer's certification that lining passed tests.

C. Manufacturer's application instructions.

PART 2 PRODUCTS

2.01 EPOXY RESIN POWDER

A. Manufacturer: One of the following or equal:
   1. 3M.
   2. Morton Thiokol.

B. Material: Thermosetting, fusion bonded dry powder epoxy, 100 percent solids, with following performance characteristics when applied:
   1. Cathodic disbondment resistance: Average maximum 48 millimeters when tested in accordance with ASTM G8.
   2. Adhesion shear resistance: Minimum 4,700 pounds per square inches when tested in accordance with ASTM D1002.

2.02 FABRICATION

A. Blast clean fitting interior surfaces of pipe and fittings in accordance with SSPC-SP 7 or SSPC-SP 10.

B. Apply epoxy resin powder to blasted surfaces by either fluidized bed method or electrostatic coating method in accordance with manufacturer's instructions and AWWA C116 or AWWA C213.

C. Fuse lining to piping in accordance with manufacturer's instructions and AWWA C116 or AWWA C213.

D. Pipe and fittings: Minimum lining thickness: 16-mil.

E. Valve: Lining thickness: 10 to 12-mils, except that:
   1. Lining thickness in grooves for gaskets: 5-mil.
   2. Do not coat seat grooves in valves with bonded seat.

2.03 SOURCE QUALITY CONTROL

A. Test lining with either 100 volt per mil thickness holiday detectors or low voltage wet sponge holiday detectors.

B. Reject pipe and fitting with linings that contain pinholes, discontinuities or other defects.

C. Lining thickness: Measured with a non-destructive magnetic type thickness gauge.

D. Verify lining integrity with a wet sponge-testing unit operating at approximately 60 volts, or as recommended by the lining manufacturer.

E. Consider tests successful when lining thickness meets specified requirements and when no pinholes are found.

F. Correct defective lining disclosed by unsuccessful tests, and repeat test.

G. Repair pinholes with liquid epoxy recommended by manufacturer of the epoxy used for lining.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install pipe and fitting as specified in Section 15052 - Common Work Results for General Piping.

END OF SECTION

SECTION 15061

PIPE SUPPORTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Supports for pipe, fittings, valves, and appurtenances.

B. Contractor shall be responsible for the design of pipe supports.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   2. A380 - Standard Practice for Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems.
   3. A967 - Standard Specification for Chemical Passivation Treatments for Stainless Steel Parts.

B. Manufacturers Standardization Society (MSS):
   1. SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Design features.
   2. Load capacities.
   3. Material designations by UNS alloy number or ASTM Specification and Grade.
   4. Data needed to verify compliance with the Specifications.
   5. Catalog data.
   6. Clearly mark submittal information to show specific items, materials, and accessories or options being furnished.

C. Submit sealed and signed calculations for all pipe supports. Calculations shall meet the requirements as specified in Section 01850 - Design Criteria.
   1. Calculations and other information to substantiate supports and anchors shall meet minimum design strength as specified in Section 01850 - Design Criteria.

1.04 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

2.02 MATERIALS

A. General:
   1. Hot dip galvanized:
      a. Fabricate as specified in Section 05500 - Metal Fabrications.
      b. Hot dip after fabrication of support in accordance with ASTM A123.
      c. Repair galvanized surface as specified in Section 05500 - Metal Fabrications.
   2. Stainless steel:
      a. Fabricate as specified in Section 05500 - Metal Fabrications.
      b. Finish requirements: Remove free iron, heat tint oxides, weld scale, and other impurities, and obtain a passive finished surface.
      c. At the shop, perform pickling and passivation on all surfaces inside and out in accordance with ASTM A380 or ASTM A967.
      d. Field welding is prohibited unless specifically allowed by the Owner. All field welds shall be passivated.

B. Outdoor areas: Areas exposed to the natural outdoor environment:
   1. Hot Dip Galvanized.

C. Indoor areas: Areas exposed to an indoor environment including galleries and tunnels:
   1. Hot Dip Galvanized and coated.

D. Chemical containment areas and chemical piping:
   1. Fiberglass reinforced plastic, unless otherwise noted.

E. Fasteners:
   1. As specified in Section 05500 - Metal Fabrications.

2.03 PIPE SUPPORTS

A. Hanger rods: Sized to match suspended pipe hanger, or as indicated on the Drawings:
   1. Manufacturers: One of the following or equal:
      a. For stainless steel piping:
         1) Bergen-Power, Figure 133.
         2) Nibco-Tolco, Figure 103.
      b. For all other piping, unless indicated on the Drawings:
         1) Anvil International, Figure 140.
         2) Bergen-Power, Figure 133.
         3) Cooper B-Line Systems, Inc., Figure B3205.

B. Hanger rods, continuously threaded: Sized to match suspended pipe hanger, or as indicated on the Drawings:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) Bergen-Power, Figure 94.
            2) FM Stainless Fasteners.
        b. For steel and ductile iron piping:
            1) Anvil International, Figure 146.
            2) Bergen-Power, Figure 94.

C. Eye bolts:
    1. For stainless steel piping:
        a. Type 316 stainless steel, welded and rated equal to full load capacity of rod.
    2. For all other piping, unless indicated on the Drawings:
        a. Welded and rated equal to full load capacity of rod.

D. Welded eyebolt rod:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) FM Stainless Fasteners.
            2) Nibco-Tolco, Figure 101.
        b. For all other piping, unless indicated on the Drawings:
            1) Anvil International, Figure 278.
            2) Bergen-Power, Figure 93.
            3) Cooper B-Line Systems, Inc., Figure B3210.

E. Adjustable ring hangers: MSS SP-58, Type 7 or Type 9 (system dependent):
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) Bergen-Power, Figure 100SS.
            2) Nibco-Tolco, Figure 1C.I.
        b. For all other piping, unless indicated on the Drawings:
            1) Anvil International, Figure 69.
            2) Cooper B-Line Systems, Inc., Figure B3172.

F. Adjustable clevis hangers: MSS SP-58, Type 1:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) Cooper B-Line Systems, Inc., Figure B3100 or B3102.
            2) FM Stainless Fasteners, Figure 60.
        b. For all other piping, unless indicated on the Drawings:
            1) Anvil International, Figure 260 or Figure 590.
            2) Bergen-Power, Figure 100.
            3) Cooper B-Line Systems, Inc., Figure B3100 or B3102.

G. Adjustable clevis hangers for insulated pipe: Oversize:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) Nibco-Tolco, Figure 1A.

b. For all other piping, unless indicated on the Drawings:
1) Anvil International, Figure 300.
2) Bergen-Power, Figure 100EL.
3) Cooper B-Line Systems, Inc. Figure B3108.

H. Single rod hangers for steam pipe: MSS SP-58, Type 43; malleable iron or steel yoke and roller hangers; swivel to allow rotation of yoke on rod:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping:
1) Cooper B-Line Systems, Inc., Figure B3110.
2) FM Fasteners, Figure 81.
3) Nibco-Tolco, Figure 324.
b. For all other piping, unless indicated on the Drawings:
1) Anvil International, Figure 181.
2) Cooper B-Line Systems, Inc., Figure B3110.

I. Double rod hangers for steam pipe: MSS SP-58, Type 41:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping:
1) FM Stainless Fasteners, Figure 71.
b. For all other piping, unless indicated on the Drawings:
1) Anvil International, Figure 171.
2) Cooper B-Line Systems, Inc., Figure B3114.

J. Brackets: MSS SP-58, Type 32 with back plate; rated for 1,500 pounds:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping:
1) Cooper B-Line Systems, Inc., Figure B3066.
2) FM Stainless Fasteners, Figure 98.
3) Nibco-Tolco, Figure 30M.
b. For all other piping, unless indicated on the Drawings:
1) Anvil International, Figure 195.
2) Cooper B-Line Systems, Inc., Figure B3066.

K. Brackets, heavy duty: MSS SP-58, Type 33 with back plate; rated for 3,000 pounds:
1. Manufacturers: One of the following or equal:
a. Anvil International, Figure 199.
b. Cooper B-Line Systems, Inc., Figure B3067.

L. Standard U-bolt: MSS SP-58, Type 24:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping:
1) Cooper B-Line Systems, Inc., Figure B3188.
2) FM Stainless Fasteners, Figure 37.
3) Nibco-Tolco, Figure 110.
b. For all other piping, unless indicated on the Drawings:
1) Anvil International, Figure 137.
2) Bergen-Power, Figure 283.
3) Cooper B-Line Systems, Inc., Figure B3188.

M. Riser clamps: MSS SP-58, Type 8:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) Cooper B-Line Systems, Inc., Figure B3373.
            2) FM Stainless Fasteners, Figure 61.
        b. For all other piping, unless indicated on the Drawings:
            1) Anvil International, Figure 261.
            2) Bergen-Power, Figure 126.
            3) Cooper B-Line Systems, Inc., Figure B3373.

N. Pipe clamps: MSS SP-58, Type 4:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) Cooper B-Line Systems, Inc., Figure 3140.
            2) Nibco-Tolco, Figure 4.
        b. For all other piping, unless indicated on the Drawings:
            1) Anvil International, Figure 212.
            2) Bergen-Power, Figure 175.
            3) Cooper B-Line Systems, Inc., Figure B3140.

O. Adjustable offset pipe clamp:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) Cooper B-Line Systems, Inc., Figure B3149.
            2) FM Stainless Fasteners, Figure 63.
            3) Nibco-Tolco, Figure 4.
        b. For all other piping, unless indicated on the Drawings:
            1) Anvil International, Figure 100.
            2) Cooper B-Line Systems, Inc., Figure B3149.

P. Offset pipe clamp:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) Cooper B-Line Systems, Inc., Figure 3148.
            2) Nibco-Tolco, Figure 8.
        b. For all other piping, unless indicated on the Drawings:
            1) Anvil International, Figure 103.
            2) Cooper B-Line Systems, Inc., Figure B3148.

Q. Floor stand or stanchion saddles: MSS SP-58, Type 37. Provided with U-bolt hold down yokes:
    1. Manufacturers: One of the following or equal:
        a. For stainless steel piping:
            1) FM Stainless Fasteners, Figure 59.
            2) Nibco-Tolco, Figure 318.
        b. For all other piping, unless indicated on the Drawings:
            1) Anvil International, Figure 259.
            2) Bergen-Power, Figure 125.
            3) Cooper B-Line Systems, Inc., Figure B3090.
        c. Threaded pipe stand support stanchion. Match pipe support material:
            1) Anvil International, Figure 63T.

2) Bergen-Power, Figure 138.
3) Cooper B-Line Systems Inc., Figure B3088ST.

R. Spring hangers:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping:
1) Bergen-Power, Figure 920.
b. For all other piping, unless indicated on the Drawings:
1) Anvil International, Figure B-268, Type G.
2) Bergen-Power, Figure 920.

S. One hole pipe clamps:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping: Engineer knows of no product.
b. For all other piping:
1) Anvil International, Figure 126.
2) Carpenter & Paterson, Figure 237S.

T. Welded beam attachment: MSS SP-58, Type 22:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping:
1) Cooper B-Line Systems, Inc., Figure 3083.
2) Nibco-Tolco, Figure 304.
b. For all other piping, unless indicated on the Drawings:
1) Anvil International, Figure 66.
2) Bergen-Power, Figure 113A or 113B.
3) Cooper B-Line Systems, Inc., Figure B3083.

U. Heavy pipe clamp: MSS SP-58, Type 4:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping:
1) Nibco-Tolco, Figure 4H.
b. For all other piping, unless otherwise indicated on the Drawings:
1) Anvil International, Figure 216.
2) Bergen-Power, Figure 298.

V. PTFE pipe slide assembly: MSS SP-58, Type 35 with lateral and vertical restraint:
1. Manufacturers: One of the following or equal:
a. For stainless steel piping:
1) Nibco-Tolco, Figure 426.
b. For all other piping, unless indicated on the Drawings:
1) Anvil International, Figure 257, Type 3.
2) Cooper B-Line Systems, Inc., Figure B3893.

W. Anchor bolts, concrete anchors, concrete inserts, powder-actuated fasteners, and sleeve anchors: As specified in Section 05120 - Structural Steel Framing.

2.04 THERMAL PIPE HANGER SHIELD

A. Provided at hanger, support, and guide locations on pipe requiring insulation.

B. Consist of an insulation layer encircling the entire circumference of the pipe and a steel jacket encircling the insulation layer.

C. Same thickness as the piping system insulation specified in Section 15082 - Piping Insulation.

D. Standard shield shall be used for hot systems and the vapor barrier shield shall be used for cold systems.

E. Stainless steel band clamps shall be used where specified to protect against slippage between the pipe wall and the thermal shield.

F. Standard shield:
   1. Insulation:
      a. Hydrous calcium silicate, high density, waterproof.
      b. Compressive strength: 100 pounds per square inch average.
      c. Flexural strength: 75 pounds per square inch average.
      d. K factor: 0.38 at 100 degrees Fahrenheit mean.
      e. Temperature range: 20 degrees Fahrenheit to 500 degrees Fahrenheit.
   2. Steel jacket:
      a. Jacket shall be galvanized steel.
      b. Gauge shall be the manufacturer's standard supplied for the given pipe size.
   3. Connection:
      a. Shield shall have butt connection to pipe insulation.
      b. Steel jacket and insulation ends shall be flush.

G. Vapor barrier shield:
   1. Insulation:
      a. Hydrous calcium silicate, high density, waterproof.
      b. Compressive strength: 100 pounds per square inch average.
      c. Flexural strength: 75 pounds per square inch average.
      d. K factor: 0.38 at 100 degrees Fahrenheit mean.
      e. Temperature range: 20 degrees Fahrenheit to 500 degrees Fahrenheit.
   2. Steel jacket:
      a. Jacket shall be of galvanized steel.
      b. Gauge shall be the manufacturer's standard supplied for the given pipe size.
   3. Connection:
      a. Shield shall have butt connection to pipe insulation.

H. Insulation shall extend 1 inch each side of steel jacket for vapor tight connection to the pipe insulation vapor barrier.

PART 3 EXECUTION

3.01 INSTALLATION

A. Support, suspend, or anchor exposed pipe, fittings, valves, and appurtenances to prevent sagging, overstressing, or movement of piping; and to prevent thrusts or loads on or against connected pumps, blowers, and other equipment.

B. Field verify support location, orientation, and configuration to eliminate interferences prior to fabrication of supports.

C. Carefully determine locations of inserts. Anchor to formwork prior to placing concrete.

D. Use flush shells only where indicated on the Drawings.

E. Do not use anchors relying on deformation of lead alloy.

F. Do not use powder-actuated fasteners for securing metallic conduit or steel pipe larger than 1 inch to concrete, masonry, or wood.

G. Suspend pipe hangers from hanger rods and secure with double nuts.

H. Install continuously threaded hanger rods only where indicated on the Drawings.

I. Use adjustable ring hangers or adjustable clevis hangers for 4-inch and smaller diameter pipe.

J. Use adjustable clevis hangers for pipe larger than 4 inches in diameter.

K. Secure pipes with double nutted U-bolts or suspend pipes from hanger rods and hangers.
   1. For stainless steel piping, use stainless steel U-bolts.
   2. For all other piping, use galvanized U-bolts.

L. Support spacing:
   1. Support 2-inch and smaller piping on horizontal and vertical runs at maximum 5 feet on center, unless otherwise specified.
   2. Support larger than 2-inch piping on horizontal and vertical runs at maximum 10 feet on center, unless otherwise specified.
   3. Support exposed polyvinyl chloride and other plastic pipes at maximum 5 feet on center, regardless of size.
   4. Support tubing, PVC pipe 1-inch and smaller, copper pipe and tubing, fiber-reinforced plastic pipe or duct, and rubber hose and tubing at intervals close enough to prevent sagging greater than 1/4-inch between supports.
   5. Do not suspend or support valves, pipe and fittings from another pipe or conduit.

M. Install supports at:
   1. Any change in direction.
   2. Both sides of flexible pipe connections.
   3. Base of risers.
   4. Floor penetrations.

5. Connections to pumps, blowers, and other equipment.
6. Valves and appurtenances.

N. Securely anchor plastic pipe, valves, and headers to prevent movement during operation of valves.

O. Anchor plastic pipe between expansion loops and direction changes to prevent axial movement through anchors.

P. Provide elbows or tees supported from floors with base fittings where indicated on the Drawings.

Q. Support base fittings with metal supports or, when indicated on the Drawings, support on concrete piers.

R. Do not use chains, plumbers' straps, wire, or similar devices for permanently suspending, supporting, or restraining pipes.

S. Support plumbing drainage and vents in accordance with plumbing code as specified in Section 01410 - Regulatory Requirements.

T. Supports, clamps, brackets, and portions of support system bearing against copper pipe: Copper plated, copper throughout, or isolated with neoprene or polyvinyl chloride tape.

U. Where pipe is insulated, install over-sized supports and hangers.

V. Install thermal pipe shield in accordance with MSS SP-58, Type 40 on pipe supports for insulated pipes.

W. Install riser clamps at floor penetrations and where indicated on the Drawings.

X. Coat support system components as specified in Section 09960 - High-Performance Coatings.

END OF SECTION

SECTION 15062

PREFORMED CHANNEL PIPE SUPPORT SYSTEM

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Preformed channel pipe support system consisting of preformed channels, fittings, straps, and fasteners engineered to support piping.

1.02 REFERENCES

A. American Institute of Steel Construction (AISC).

B. American Iron and Steel Institute (AISI).

C. Manufacturer's Standardization Society (MSS):
   1. SP-58 - Pipe Hangers and Supports - Materials, Design, and Manufacture.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data.

1.04 QUALITY ASSURANCE

A. Design preformed channel pipe support system for loads in accordance with applicable provisions of:
   1. AISC Manual of Steel Construction.
   2. AISI Cold-Formed Steel Design Manual.

B. Product standards:
   1. Pipe support materials: In accordance with MSS SP-58.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fabricate preformed channel pipe support system using, as a minimum, parts specified below and meeting the requirements specified under Design Criteria.
   1. Manufacturers: One of the following or equal:
      a. Unistrut, Series P1000 or P1001; P5500 or P5501.
      b. Allied Support Systems, Power Strut, Figure PS-200 or PS-200 2TS; PS-150 or PS-150 2TS.
      c. Cooper Ind., B-Line, Channel Type B22 or B22A; B12 or B12A.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Design responsibility:
   1. The manufacturer of the preformed channel pipe support system is responsible for the design of the support system.
   2. Prepare design calculations utilizing the design criteria included in these Specifications.
   3. Prepare detailed shop drawings illustrating the layout of the support system and identifying the components of the support system.

B. Design criteria:
   1. Include live, dead, and seismic loads associated with piping, valves, and appurtenances. Consider the content of the pipes in load calculations.
   2. Minimum gauge thickness: 12-gauge.
   3. Allowable stress of channels:
      a. Steel channels: The lesser of 25,000 pounds per square inch, or 0.66 times yield stress of steel.
      b. Stainless steel channels: 0.66 times the yield stress of the stainless steel alloy.
   4. Maximum deflection: 1/240 of span.
   5. Allowable column loads: As recommended by manufacturer in published instruction for column's unsupported height and "K" value for calculating effective column length of not less than 1.0.
   6. Future loads:
      a. Support systems indicated on the Drawings may include spaces intended to accommodate future pipes.
      b. Assume such spaces are occupied by 6-inch diameter ductile iron pipes. Only the number of pipes that would physically fit into the space need be considered.
      c. Include the weight of the pipe contents in determining future loads. Assume pipe contents are water.
   7. Seismic design criteria: As specified in Section 01850 - Design Criteria as specified for mechanical equipment.
   8. Spacing of supports: As required to comply with design requirements but not more than 5 feet.

C. Supports below the top of walls of water bearing structures: Use Type 316 stainless steel for support system components.
   1. Supports in other locations: Use hot-dipped galvanized components unless other materials are specifically indicated on the Drawings.

2.03 ACCESSORIES

A. Preformed channel concrete inserts: Minimum 12 inches long:
   1. Manufacturers: One of the following or equal:
      a. Unistrut, Series P-3200.
      b. Allied Support Systems, Figure 282.
      c. Cooper Ind., B-Line Series B32I.

B. 90-degree angle fittings:
   1. Manufacturers: One of the following or equal:
      a. Unistrut, P1026.
      b. Allied Support Systems, Power Strut, P603.

C. Pipe straps:
   1. For pipes 8 inches in diameter and smaller: Use 2-piece universal strap with slotted hex head screw and nut.
      a. Manufacturers: One of the following or equal:
         1) Unistrut, Series P1109 through P1126.
         2) Allied Support Systems, PS1100.
         3) Cooper Ind., B-Line Series B2000.
   2. For pipes greater than 8 inches in diameter: Unless different material is otherwise indicated on the Drawings use 1-piece 1-inch wide by 1/8-inch thick steel strap, hot-dip galvanized after fabrication.
   3. For stainless steel pipes: Use type of strap required for the pipe sizes specified above, but use Type 316 stainless steel materials.

D. Prefabricated double channel bracket:
   1. Manufacturers: One of the following or equal:
      a. Unistrut, P2542-P2546.
      b. Cooper Ind., B-Line Series B297.

E. Touch-up paint for galvanized surfaces:
   1. Manufacturers: The following or equal:
      a. Galvinox, Galvo-Weld.

F. Touch-up paint for painted surfaces: Same formulation as factory paint.

G. Cushion strip:
   1. For solvent welded plastic pipes in elevated temperatures, use a thermoplastic elastomer, cushion wrap designed for use from -50 degrees Fahrenheit to 275 degrees Fahrenheit. Contractor to add a cushion strip at each pipe support strap that meets this criteria.
      a. Manufacturers: One of the following or equal:
         1) Anvil, AS 3792.
         2) Unistrut, P2600 Unicushion.

2.04 FABRICATION

A. Hot-dip galvanize support system components after fabrication to required length and shape.

B. Do not galvanize or paint stainless steel components.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install preformed channel concrete inserts for vertical support, quantity based on manufacturer's structural design calculations.

B. Fasten preformed channel pipe supports to existing walls using Z-fittings and concrete anchors as indicated on the Drawings.

C. Fasten preformed channel pipe supports to preformed channel concrete inserts embedded in ceiling using U-shaped fittings.

D. Suspend threaded rods from concrete inserts embedded in ceiling. Support preformed channel pipe supports with threaded rods.

E. Touchup cut or damaged galvanized surfaces.

F. Prevent contact between pipes and support components of dissimilar metals. Utilize rubber coated, plastic coated, or vinyl coated components, stainless steel components, or wrap pipe with PVC or polyethylene tape.

G. Install support as near as possible to concentrated loads.

H. Install support within 2 feet of horizontal and vertical changes in pipe alignment.

I. Adjust supports or install shims to obtain specified slope or elevation.

END OF SECTION

SECTION 15076

PIPE IDENTIFICATION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Pipe identification including the following:
   1. Pipe identification markers, flow direction arrows, tags, and bands.
   2. Underground warning tape.
   3. Tracer wire.
   4. Witness markers.
   5. Valve identification.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. A13.1 - Scheme for the Identification of Piping Systems.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Submit following:
   1. Product data.
   2. Samples.
   3. Manufacturer's installation instructions.
   4. Submit following as specified in Section 01770 - Closeout Procedures:
      a. Operation and Maintenance Data.
      b. Warranty.

PART 2 PRODUCTS

2.01 EXPOSED AND IN-CHASE PIPE IDENTIFICATION

A. For piping with outer diameter greater than or equal to 3/4-inch, provide lettered pipe markers and flow direction arrows:
   1. General requirements:
      a. Pipe markers shall include the following, minimum:
         1) Printed text identifying the pipe fluid.
            a) The text shall be all capital letters matching the text listed in the "Service" column of the Piping Schedule for the corresponding piping system.
         2) An arrow identifying the direction of fluid flow.
            a) The arrow can either be integral to the text marker or provided separately. If provided separately, the arrow must be placed immediately adjacent to each text marker, with the arrow aligned

with the text such that the text and arrow are both visible from the same viewpoint.

b) The arrow color shall match the text color, and the arrow background color shall match the text background color.

b. Suitable for outdoor application from -40 degrees to 180 degrees Fahrenheit; in accordance with ASME A13.1 requirements.

c. Lettering:

Outside Pipe Diameter Including Covering	Lettering Height
Less than 0.75 inches	N/A
0.75 to 1.5 inches	1/2-inch
1.5 inches to 2 inches	3/4-inch
2.5 inches to 4 inches	1-1/4 inches
8 inches to 10 inches	2-1/2 inches
Over 10 inches	3-1/2 inches

d. Marker colors:

Fluid service	Text/arrow color	Background color
Flammable and oxidizing fluids	Black	Yellow
Potable, cooling, boiler feed, nontoxic solutions, low hazard liquids, and other waters	White	Green
Compressed air	White	Blue
Fire quenching fluids (foam, fire water, CO_2 Halon)	White	Red
Toxic and corrosive fluids	Black	Orange
Combustible fluids	White	Brown

2. Coating: As specified in Section 09960 - High-Performance Coatings.
3. Pipe identification tags: Aluminum or stainless steel with stamped-in 1/4-inch high identifying lettering.
4. Pipe identification tag chains: Aluminum or stainless steel.
5. Self-adhesive type markers:
   a. Manufacturers: One of the following or equal:
      1) Seton, (of Brady Corporation), Opti Code Pipe Markers.
      2) Lab Safety Supply.
      3) Marking Services, Inc.
   b. Materials:
      1) Self-adhesive vinyl.
6. Snap-on markers: Markers with 3/4-inch high letters for 3/4 to 4-inch pipe or covering, or 5-inch high letters for 5-inch or larger pipe or cover:
   a. Manufacturers: One of following or equal:
      1) Brady BradySnap-On B-915.
      2) Seton (of Brady Corporation) Setmark.

B. For piping with outer diameter less than 3/4-inch, provide identification tags and flow direction arrows:
   1. Manufacturer: One of the following or equal:
      a. Seton (of Brady Corporation).
   2. Tag and chain materials:
      a. Copper piping: Brass.
      b. Ferrous piping: Type 316 stainless steel.
      c. Plastic piping: Stainless steel or Aluminum.
   3. Flow direction arrow colors shall adhere to the same requirements as for piping with outer diameter greater than or equal to 3/4 -inch, as specified in this Section.

C. Pipe bands:
   1. When bands are required by the Piping Schedule for a specific piping system, provide solid-colored 4-inch wide bands.
      a. Color as specified in the Piping Schedule.
   2. Self-adhesive type.
   3. Suitable for outdoor application from -40 degrees to 180 degrees Fahrenheit.

2.02 BURIED PIPELINE IDENTIFICATION

A. Underground warning tape:
   1. Manufacturer: One of the following or equal:
      a. Seton Name Plate Co.(of Brady Corporation).
      b. T. Christy Enterprises, Inc.
   2. Material:
      a. Polyethylene tape for prolonged underground use.
      b. Minimum tape thickness: 4 mils.
      c. Overall tape width: 4 inches.
      d. Message: “CAUTION” with the name of the service followed by “LINE BURIED BELOW.” in black lettering on colored background in accordance with approved APWA colors.

Service	**Color**
Potable water	Blue
Reclaimed water, irrigation, and slurry lines	Purple
Sewers and drain lines	Green
Gas, oil, steam, petroleum, chemicals, or other service	Yellow
Telephone	Orange

      e. Solid aluminum core.

B. Tracer wire:
   1. Manufacturers: One of the following or equal:
      a. Kris-Tech Wire.
      b. Aegion Corrpro.
   2. Materials: One of the following or equal:
      a. Solid copper conductor.
      b. Thickness minimum: 10 gauge.

c. Insulation:
1) Match insulation color to the color of the pipe being installed.
2) UF type, direct bury.
3) 30 mil HMWPE.

3. Splicing kit:
a. Manufacturers: One of the following or equal:
1) Rexel, 3M-82 A1N.

4. Station box:
a. Lid and collar materials: Cast iron.
b. Lid type: Locking.
c. Able to withstand heavy traffic loading.
d. Manufacturers: One of the following or equal:
1) CP Test & Valve Products, Inc., Glenn Test Station.
2) Farwest Corrosion Control.

C. Witness markers:
1. Manufacturers: One of the following or equal:
a. Carsonite Composites, Utility Marker.
b. Hampton Technical Associates, Inc.
2. Materials:
a. Glass fiber and resin reinforced thermosetting composite material.
b. UV resistant.
3. Constructed as a single piece.
4. Pointed at the bottom end.
5. Information to be included on the marker:
a. “Caution” (type of service) “Pipeline”.
b. Phone number for Underground Service Alert.
c. Phone number for Owner in case of emergency.
d. Station number.
e. Offset:
1) Only provide offset if marker is not directly over the pipe.
f. Name of appurtenance or fitting (e.g., 45, BO, ARV, etc.).

2.03 VALVE AND GATE IDENTIFICATION

A. Provide valve and gate schedule for each valve and gate in the Work with the following information:
1. Identification number.
2. Location.
3. Type.
4. Function.
5. Normal operating position.

B. Identification tag requirements.
1. Diameter: 2 inches.
2. Material:
a. Buried applications: Stainless steel or PVC.
b. Buried applications with concrete marker: Brass.
c. Above ground and in-chase applications: 19 gauge aluminum or PVC.
3. Stamp tags in 1/4-inch high letter.

4. Provide non-corrosive metal wire suitable for attaching the tag to the operator base.
5. Secure tags to valve or gate:
    a. Attach tags in such a way as to allow free and full operation of the valve or gate.
6. Buried applications with concrete marker: Secure tags to concrete marker.

C. Submittal requirements:
1. Submit 2 samples of the type of tag proposed and the manufacturer's standard color chart and letter styles to the Engineer for review.

D. Manufacturer: The following or equal:
1. Seton Name Plate Co.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify satisfactory conditions of substrate for applying identification.

B. Verify that conditions are satisfactory for installation and application of products as specified in the Agreement and Contract RFP in Volumes 1 and 2.

3.02 PREPARATION

A. Prepare and coat surfaces as specified in Section 09960 - High-Performance Coatings.

B. Prepare surface in accordance with identification product manufacturer's instructions.

3.03 EXPOSED AND IN-CHASE PIPING IDENTIFICATION

A. Identify exposed and in-chase piping with flow direction arrows and lettering (for piping with outer diameter greater than or equal to 3/4-inch) or tags (for piping with outer diameter less than 3/4-inch).

B. Color code: Paint piping with colors as scheduled in Piping Color Code and Marker Schedule or as selected by Owner. Where tags are used, color code pipe as scheduled.

C. Provide lettering (or tags for pipes with outer diameter less than 3/4-inch) and flow direction arrows near equipment served, adjacent to valves, both sides of walls and floors where pipe passes through, at each branch or tee, and at intervals of not more than 50 feet in straight runs of pipe.
1. Label all chemical tank fill pipelines at locations that are visible from chemical fill stations.

2. Place markers on piping so they are visible from operator's position in walkway or working platform near piping. Locate markers along horizontal centerline of pipe, unless better visibility is achieved elsewhere.
3. Do not apply markers, arrows, or tags to piping that is regularly submerged.

D. Where scheduled in the Piping Schedule, space 4-inch wide solid-color bands along piping at 10-foot intervals for stainless steel pipe and 5-foot intervals for other pipe.
1. Do not apply bands to piping that is regularly submerged.

3.04 BURIED PIPING IDENTIFICATION

A. Underground warning tape:
1. Non-detectable warning tape:
a. Place continuous run of warning tape in pipe trench, 12 inches above the pipe.
2. Detectable warning tape:
a. Place continuous run of warning tape in pipe trench, 12 inches above the pipe or a greater height if necessary to limit the tape bury depth to 36 inches. Do not bury detectable warning tape deeper than 36 inches.

B. Tracer wire:
1. Install on all non-metallic pipe.
2. Install an electrically continuous run of tracer wire along the entire length of the pipe with wire terminations in valve boxes, vaults, or structures.
3. Install tracer wire on top of the pipe and secure to pipe with tape a minimum of every 10 feet.
4. Where approved by the Engineer, splice sections of wire together using approved direct bury wire nuts.
a. Twisting the wires together is not acceptable.

C. Witness markers:
1. Install over pipe in unpaved open-space areas at intervals not greater than 200 feet.
2. Place markers at appurtenances located in unpaved areas.
3. Embed markers at least 18 inches into the soil.

3.05 APPLICATION

A. Identify piping with legend markers, directional arrow markers, and number markers; use self-adhesive arrow roll tape to secure ends of piping markers and indicate flow direction.

B. Provide legend markers, directional arrow markers, and number markers where piping passes through walls or floors, at piping intersections and at maximum 15-foot spacing on piping runs.

C. Provide piping marker letters and colors as scheduled.

3.06 PIPING COLOR CODE AND MARKER SCHEDULE

Service Fluid	Pipe Color	Marker Legend
Chemical Drain	Charcoal	CHEMICAL DRAIN
Cooling Water	Blue	COOLING WATER
Domestic Cold Water	Light Blue	DOMESTIC COLD WATER
Domestic Hot Water	Light Blue	DOMESTIC HOT WATER
Deionized Water	Blue	DEIONIZED WATER
Drain	Charcoal	DRAIN
Exhaust Gas	Yellow	EXHAUST GAS
Engine Jacket Water	Dark Blue	ENGINE JACKET WATER
Fuel Oil	Orange	FUEL OIL
Grit	Black	GRIT
Instrumental Air	Purple	INSTRUMENTATION AIR
Engine Lube Oil	Red	ENGINE LUBE OIL
Pumped Drain	Charcoal	PUMPED DRAIN
Process Water	Dark Blue	PROCESS WATER
Raw Wastewater	Buff	NONE USED
Return Water	Silver/Grey	RETURN WATER
Sample	Green	FLUID BEING SAMPLED
Sanitary Drain	Charcoal	SANITARY DRAIN
Service Air	Green	SERVICE AIR
Sodium Hypochlorite	Yellow	CHLORINE SOLUTION
Sodium Bisulfite	Yellow	SODIUM BISULFITE SOLUTION
Tank Drain	Charcoal	TANK DRAIN
Vent Pipe	Yellow	VENT PIPE
Washdown Water (W3)	Medium Blue	WASHDOWN WATER

Letters	Color of Pipe	Color of Bands	Color of Letters
Finished or Potable (cold)	Light blue	None	Black
Potable (hot)	Light blue	Red	Black
Non-potable or Raw	Light blue	Dark Gray	Black
Distilled or Demineralized	Light Blue	Black	Black

Letters	Color of Pipe	Color of Bands	Color of Letters
Service Water (lines downstream from backflow prevention unit	Dark Blue	White	Red
Sample	Dark Blue	Black	White
Fire Protection	Red	None	Black
Hydrants	Aluminum	None	Black
Filter-to-Waste	Light Brown	None	Black
Wash Water Drain	Light Gray	None	Black
Sewage	Light Gray	None	Black
Solids	Dark Brown	None	White
Scum	Dark Brown	None	White
Drain	Dark Gray	None	White
Sump Pump Pipe Line	Dark Gray	Red	White
Chlorine (gas, liquid, or vent)	Yellow	None	Black
Chlorine (solution)	Yellow	Red	Black
Ferric Chloride	Orange	Yellow	Black
Alum	Orange	Yellow	Black
Ammonia	Yellow	Dark Brown	Black
Auxiliary Chemical	Yellow	Dark Blue	Black
Sulfuric Acid	Yellow	Orange	Black
Sodium Hydroxide	Yellow	Dark Green	Black
Algaecide (Potassium Permanganate, Copper Sulfate)	Orange	White	Black
Polymer	Orange	Dark Green	Black
Polyphosphate	Orange	Dark Gray	Black
Carbon	Black	None	White
Ozone	None	Red	White
Stainless Steel Pipe	White	Red	White
Ozone Off Gas			
Stainless Steel Pipe	None	Orange	White
Other Pipe	White	Orange	White
Compressed Air	Light Green	None	Black
Instrument Air	Light Green	Dark Green	Black

Letters	Color of Pipe	Color of Bands	Color of Letters
Backwash Air (Low Pressure)			
Stainless Steel Pipe	None	None	Black
Other Pipe	Light Green	None	Black
Process Air (Ozone-Low Pressure)			
Stainless Steel Pipe	None	None	Black
Other Pipe	Light Green	None	Black
Laboratory Vacuum	Dark Green	Light Green	Red
Natural Gas	Red	Yellow	White
Refrigerant	Yellow	White	Black
Heating Water (supply)	Light Gray	White	Black
Heating Water (return)	Light Gray	Black	Black
Condenser Water (supply)	Light Gray	Dark Brown	Black
Condenser Water (return)	Light Gray	Red	Black
Chilled Water (supply)	Light Brown	Dark Gray	White
Chilled Water (return)	Light Brown	Red	White

END OF SECTION

SECTION 15082

PIPING INSULATION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Insulation for piping and related systems that are not plumbing systems.

1.02 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. Standard Specifications for Highway Bridges.

B. ASTM International (ASTM):
   1. C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.
   2. C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
   3. C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.
   4. C547 - Standard Specification for Mineral Fiber Pipe Insulation.
   5. C552 - Standard Specification for Cellular Glass Thermal Insulation.
   6. C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
   7. C929 - Standard Practice for Handling, Transporting, Shipping, Storage, Receiving, and Application of Thermal Insulation Materials for Use in Contact with Austenitic Stainless Steel.
   8. C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
   9. E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   10. E96 - Standard Test Methods for Water Vapor Transmission of Materials.

C. California Energy Commission:
   1. Title 24 - Building Energy Efficiency Standards.

1.03 DEFINITIONS

A. Buried: Piping that is installed below buildings, foundations, or finish grade, either in soil or encased in concrete in soil.

B. Concealed: Piping above suspended ceilings and within walls, partitions, shafts, or service spaces and spaces not normally exposed to view but not buried.

C. Exterior: Piping that is installed outside a building or within a pipe trench or tunnel.

D. Flame Spread and Smoke Density: Burning characteristics determined in accordance with ASTM E84.

E. Interior: Piping that is installed inside a building.

F. K Factor: Thermal conductivity determined in accordance with ASTM C177 or C518.

G. Mineral Fiber: Fibers manufactured of glass, rock, or slag processed from a molten state, with or without a binder.

H. Water Vapor Permeance: Water vapor transmission determined in accordance with ASTM E96 and expressed in units of perm-inch.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section15050 - Common Work Results for Mechanical Equipment.
   1. Insulation properties: Include K factor, thickness, density, operating temperature limits, tensile strength, compressive strength, moisture absorption, flame spread, and smoke developed in accordance with ASTM E84 and corrosivity to stainless steel piping in accordance with ASTM C795.
   2. Jacket properties: Include covering material, cover thickness, tensile strength, tear strength, permeability in accordance with ASTM E96, flame spread, and smoke developed in accordance with ASTM E84, closure type or devices, and accessories.
   3. Insulating blankets: Include materials, performance characteristics, method of attaching to equipment, listing of locations where insulating blankets will be installed.
   4. Manufacturer's application instructions: Include assembly and application drawings and detailed instructions.

1.05 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2, with additional requirements in Section 15050 - Common Work Results for Mechanical Equipment and Section 15500 - Common Work Results for HVAC.

B. In accordance with California Energy Commission Title 24.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. As specified in Sections 15050 Common Work Results for Mechanical Equipment and 15500 - Common Work Results for HVAC.

B. Insulation thicknesses: Provide insulation thickness in inches in accordance with the following table. Insulation thickness shown is nominal. Manufacturing tolerance of 15 percent variation is permissible.

TABLE 1. Required Insulation Thicknesses					
Required Insulation Thicknesses (inches)					
Service Temperature Range as Designated in Insulation Schedule at End of this Section	**Nominal Pipe Diameters**				
	1 inch and Less	**1.25 to 2 inches**	**2.5 to 4 inches**	**5 to 10 inches**	**Over 10 inches**
Above 200 degrees Fahrenheit	2.0	2.5	3.0	3.5	3.5
100 to 200 degrees Fahrenheit	1.5	1.5	1.5	2.0	2.5
40 to 100 degrees Fahrenheit	0.5	1.0	1.0	1.5	2.0
Below 40 degrees Fahrenheit	1.0	1.0	1.5	2.0	2.0
Heat Traced Pipes	1.0	1.0	1.0	1.5	2.0
Aeration Air Pipes	0.5	0.5	1.0	1.0	1.0

2.03 PIPE INSULATION

A. Insulation types: Provide in accordance with the insulation types listed and scheduled.

B. Insulation, Type 1:
   1. Insulation material: Closed cell elastomeric insulation.
   2. Minimum temperature range: Minus 40 degrees Fahrenheit to plus 220 degrees Fahrenheit.
   3. K factor at 75 degrees Fahrenheit: Not more than 0.27 BTU-inch/hour-square feet-degrees Fahrenheit.
   4. Fire ratings:
      a. Flame spread: 25 or less.
      b. Smoke density: 50 or less for insulation thicknesses up to 1.5 inches.
   5. Joints: Seal with manufacturer's recommended contact adhesive to form continuous water barrier.
   6. Manufacturers: One of the following or equal:
      a. Armacell, AP Armaflex.
      b. Aeroflex USA Inc., Aerocel® AC.

C. Insulation, Type 2:
   1. Insulation material: Preformed mineral fiberglass insulation made from glass fibers bonded with a thermosetting resin.
      a. In accordance with ASTM C547, Class 1.
      b. Provide with factory installed vapor barrier.
         1) Material: White Kraft paper bound to aluminum foil in accordance with ASTM C1136, Type I.

2) Longitudinal lap seals: Pressure-sensitive, self-sealing longitudinal lap strip with factory applied adhesive.
3) Circumferential butt seals: 4-inch wide tape or similar properties or 4-inch wide overlap with adhesive seal.
4) Vapor barrier permeability: 0.02 perms or lower.
5) Vapor barrier flame spread rating: 25 or less.

2. Minimum temperature range: Minus 0 degrees Fahrenheit to plus 850 degrees Fahrenheit.
3. K factor at 75 degrees Fahrenheit: Not more than 0.23 BTU-inch/hour-square feet degrees Fahrenheit.
4. Maximum moisture absorption, volume percent: 5.
5. Manufacturers: One of the following or equal:
   a. Owens-Corning , Fiberglas™ FLEXWRAP® ASJ.
   b. Johns Manville, Micro-Lok® HP.
   c. Knauf Insulation, Earthwool® Redi-Klad® 1000° Pipe Insulation.

D. Insulation, Type 3:
1. Insulation material: Rigid cellular glass in accordance with ASTM C552, Type II.
2. Temperature range: Minus 450 degrees Fahrenheit to plus 900 degrees Fahrenheit.
3. K factor at 75 degrees Fahrenheit: Not more than 0.32 BTU-inch/hour-square feet-degrees Fahrenheit.
4. Minimum average density: 7.5 pounds per cubic foot.
5. Maximum moisture absorption, volume percent: 5.
6. Minimum compressive strength: 87 pounds per square inch.
7. Moisture permeability: 0.00 perm-inch.
8. Manufacturers: One of the following or equal:
   a. Owens- Corning, Foamglas® One™.

E. Insulation, Type 4:
1. Insulation material: Asbestos-free, rigid calcium silicate in accordance with ASTM C533; Type I for process temperatures up to 1,200 degrees Fahrenheit.
2. K factor at 500 degrees Fahrenheit: 0.55 for Type I.
3. Maximum average (dry) density: 14.5 pounds per cubic foot.
4. Compressive strength: 100 pounds per square inch, to produce a 5-percent compression.
5. Manufacturers: The following or equal: In accordance with ASTM C533 Type I:
   a. Johns Manville, Thermo-12 Gold.

2.04 INSULATION JACKETS

A. Jacket, Type 1:
1. Material: 28 ounces per square yard polyvinyl chloride on polyester fabric; total thickness 0.028-inch minimum.
2. Fire rating: 25 maximum flame spread, smoke developed 50 or less.
3. Color: As selected by the Engineer from manufacturer's standard colors.
4. Overlap: 1-inch minimum at joints and fittings.
5. Joint seal: Self-sealing lap tape.
6. Fittings: Factory made with full thickness insulation.

7. Manufacturers: The following or equal:
    a. Techlite® Insulation, 379 SSL Series.

B. Jacket, Type 2:
1. Material: Ultraviolet-resistant polyvinyl chloride jacketing, 20 mil minimum thickness.
2. Fire rating: 25 maximum flame spread, smoke developed 50 or less.
3. Color: White.
4. Overlap: 1-inch minimum at joints and fittings.
5. Joint seal: PVC solvent welded or adhesive as recommended by the manufacturer.
6. Fittings: Factory made with full thickness insulation.
7. Manufacturers: One of the following or equal:
    a. Johns Manville, Zeston® 2000 PVC.
    b. Proto Corp., LoSMOKE PVC.
    c. Speedline® Corp., Smoke-Safe™ PVC.

C. Jacket, Type 3:
1. Material: Aluminum, Alloy 3003 or 3105; 0.016-inch (26-gauge) minimum thickness.
2. Overlap: Overlap circumferential joints 4 inches minimum; overlap longitudinal joints 1-inch minimum; longitudinal joints oriented to minimize water entry.
3. Bands: 0.5-inch wide, 0.0508-inch (16-gauge) thick aluminum, same alloy as jacket or 0.0179-inch thick Type 304 stainless steel; install on 18-inch centers, uniformly spaced and at all fitting joints.
4. Joint seal: Apply waterproof adhesive at joints and overlaps.
5. Fittings: Custom fit of same materials.
6. Manufacturers: One of the following or equal:
    a. ECOIN Insulation.
    b. Haomei Aluminum.

2.05 VAPOR BARRIERS

A. Vapor barrier, Type 1:
1. Material: White Kraft paper bound to aluminum foil in accordance with ASTM C1136, Type 1.
2. Permeability: 0.02 perms or lower.
3. Maximum flame spread rating: 25.
4. Edge seal: Pressure-sensitive tape lap seal.
5. Circumferential joints: 4-inch wide tape or 4-inch overlap with adhesive seal.

B. Vapor barrier, Type 2:
1. Material: Mastic.
2. Manufacturers: One of the following or equal:
    a. Benjamin Foster, No. 30-76.
    b. Insul-Coustic, No. I.C.-580.
    c. Foster Products, 36-10/46-10 Weatherite.
    d. Childers Products CP10/11 VI-CRYL.

2.06 RELATED MATERIALS

A. Cover adhesive: Premium adhesive as recommended by the insulation cover supplier for heavy-duty service in corrosive, wet environments. Standard-duty adhesives are not permitted.

2.07 REMOVABLE INSULATING BLANKETS

A. In piping systems specified to be insulated, use removable insulating blankets for valves, meters, strainers, filters, catalytic converters, engine exhaust silencers, pumps, and other in-line piping appurtenances and equipment requiring periodic servicing, regardless of pipe size.

B. Size limits: Use removable insulating blankets for equipment and piping appurtenances 3 inches in nominal size and larger. For equipment and piping appurtenances less than 3 inches that do not require periodic servicing, insulate with molded sections of insulation or by field cutting insulation to conform to the shape of the component and to fit tightly around the component.

C. Manufacturers: One of the following, or equal:
   1. Thermal Energy Products, Inc., Energy Wrap.
   2. Accessible Products, Thermazip 2000 Jacket.
   3. Owens Corning, Temp-Mat.

D. Low temperature insulating blankets rated up to 800 degrees Fahrenheit:
   1. Use: For service temperatures up to 800 degrees Fahrenheit.
   2. Insulation: Fiberglass fiber, K factor 0.27 at 75 degrees Fahrenheit.
   3. Cover: 17-ounce fabric with both sides covered with silicone-impregnated glass cloth suitable for temperatures up to 800 degrees Fahrenheit.
   4. Cover fasteners: Use one of the following systems:
      a. Grommets in the blanket and stainless steel wire.
      b. 1-inch wide straps with stainless steel rectangular ring buckles and Velcro on strap tail.

E. High temperature insulating blankets rated up to 1,400 degrees Fahrenheit:
   1. Rated for sustained service temperatures up to 1,400 degrees Fahrenheit.
   2. Insulation: Ceramic fiber, K factor 0.50 at 600 degrees Fahrenheit, insulation material suitable for up to 2,300 degrees Fahrenheit, thickness to match adjacent piping insulation specified thickness.
   3. Cover: 17-ounce silicone impregnated fiberglass cloth suitable for temperatures up to 1,400 degrees Fahrenheit.
   4. Cover fasteners: Use one of the following systems:
      a. Grommets in the blanket and stainless steel wire.
      b. 1-inch wide straps with stainless steel rectangular ring buckles and Velcro on strap tail.

2.08 SHIPPING, SPARE PARTS, MAINTENANCE PRODUCTS, AND SPECIAL TOOLS

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

PART 3 EXECUTION

3.01 GENERAL

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

B. Handle and store insulation for use on stainless steel in accordance with ASTM C929.

3.02 PREPARATION

A. Pressure test piping and complete application of coating system before applying insulation.

B. When piping is to be heat traced, install and functionally test heat tracing before installation of insulation.

C. Before beginning installation of piping insulation, verify that the Engineer has accepted piping tests, pipe coating applications, and heat tracing tests.

3.03 INSULATION SCHEDULE

A. Table 2. Insulation Schedule, does not include insulation required for plumbing systems. Plumbing systems insulation: As specified in Section 15400 - Plumbing Systems.

Table 2. Insulation Schedule

Service Designation(1)	Location(2)	Insulation Type(3)	Jacket Type(3)	Service Temp. °F(4)	Vapor Barrier
Hot Water Supply and Return (non-plumbing)	Interior or Exterior	2 or 3	2 or 3	100 to 200	Required
Engine Jacket Water	Interior	2 or 3	2 or 3	Above 200	Required
Heat Traced Pipes(6)	Exterior	1 or 2	2	N/A	Install on Type 2 insulation

Notes:

(1) Refer to the Pipe Schedule in Section 15052 - Common Work Results for General Piping for service designations.
(2) Insulation jackets are not required for interior installations that are concealed. See definitions for description of concealed locations.
(3) Contractor may select from options listed.
(4) Unless noted otherwise, use service temperature range provided in this table to establish insulation thickness as required by Table 1. Required Insulation Thicknesses.
(5) Service temperature based on engine rating. Use Type I calcium silicate for exhaust temperatures up to 1,200 degrees Fahrenheit; use Type II calcium silicate for exhaust temperatures above 1,200 degrees Fahrenheit.
(6) Insulate piping systems that are specified to be heat traced.

3.04 INSTALLATION

A. Install insulation and jacket materials in accordance with manufacturer's written instructions.

B. Apply insulation in smooth, clean manner with tight and finished smooth joints. Fit insulation tightly against surfaces. Insulate each continuous run of pipe with full-length sections of insulation with a single piece cut to length to complete the run of pipe. Do not use cut pieces or scraps to complete the installation.

C. Butt longitudinal and circumferential insulation joints firmly together.

D. Maintain the integrity of vapor barrier jacketing. Do not use staples to hold vapor barrier overlaps in place.

E. Apply sealant or cement when previous applications of adhesives and cement have thoroughly dried.

F. Apply insulation to permit expansion or contraction of pipelines without damage to insulation or jacketing.

G. Fittings:
   1. Insulate fittings by covering with mitered sections of insulation or utilize factory-made prefabricated fitting shapes.
   2. Terminate preformed pipe jackets or covering at sufficient distance from flanges to permit removal of bolts.
   3. Overlap flange and flanged fitting insulation on adjacent pipe covering by at least 2 inches.

H. Valves:
   1. Insulate valves 3 inches in nominal size and larger with removable insulating blankets.
   2. Size blanket to extend up to packing gland only so that replacement of packing does not require removal of insulating blanket.

I. Provide continuous insulation through and over pipe supports and provide protection saddles at supports.

J. Extend insulation against insulation end protection shields or covers so that insulation voids do not exist and provide watertight end seals and covers where insulation terminates.

K. Insulate pipeline strainers to permit removal of strainer basket without disturbing insulation on strainer body.

L. Provide continuous pipe insulation and covering through sleeves or openings in walls and floors. When buried pipe enters a building through a below grade wall or slab penetration, begin insulation system on interior side of penetration.

M. Apply pre-molded pipe insulation with extended legs when used on pipe traced with either tubing or electric cable type.

N. Thermally isolate all insulation closure locations (end caps, transitions, etc.) Type 1 or 2 jacket installation on piping with potential reach temperatures greater than 150 degrees Fahrenheit.

O. Apply piping identification on jackets as specified in Section 15076 - Pipe Identification.

END OF SECTION

SECTION 15110

COMMON WORK RESULTS FOR VALVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Basic requirements for valves.

1.02 REFERENCES

A. American Water Works Association (AWWA):
   1. C111/A21.11 - Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe Fittings.

B. ASTM International (ASTM):
   1. A126 - Standard Specification for Gray Iron Casting for Valves, Flanges, and Pipe Fittings.
   2. A480 - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip.
   3. A536 - Standard Specification for Ductile Iron Castings.

C. NSF International (NSF):
   1. 61 - Drinking Water System Components - Health Effects.

D. Society for Protective Coatings (SSPC):
   1. SP7 - Brush-Off Blast Cleaning.
   2. SP10 - Near-White Blast Cleaning.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Submit the following information for each valve:
      a. Valve type, size, pressure rating, Cv factor.
      b. Coatings.
      c. Power valve actuators:
         1) Information on valve actuator including size, manufacturer, model number, limit switches, mounting; and motor enclosure, seating and unseating torque coefficient, dynamic torque, and bearing friction for calculation of maximum operating torque.
         2) Complete wiring diagrams and control system schematics.
      d. Manual valve actuators:
         1) Information on valve actuator including size, manufacturer, model number.
      e. Certified drawings with description of component parts, dimensions, weights, and materials of construction.

f. Certifications of reference standard compliance:
    1) Submit certification that the valves and coatings are suitable in potable water applications in accordance with NSF 61.
g. Clearly mark submittal information to show specific items, materials, and accessories or options being furnished.

C. Provide vendor operation and maintenance manual as specified in Section 01782 - Operation and Maintenance Manuals.
    1. Furnish bound sets of installation, operation, and maintenance instructions for each type of manual valve 4 inches in nominal size and larger, and all non-manual valves. Include information on valve operators.

D. Provide Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.

E. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 QUALITY ASSURANCE

A. Manufacturer qualifications:
    1. Valves manufactured by manufacturers whose valves have had successful operational experience in comparable service.

1.05 DELIVERY STORAGE AND HANDLING

A. Protect valves and protective coatings from damage during handling and installation; repair coating where damaged.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Pressure rating:
    1. Suitable for service under minimum working pressures of 150 pounds per square inch gauge.
    2. When a piping system is specified in the Piping Schedule to be tested at a pressure greater than 150 pounds per square inch gauge, provide valves for that piping system with design working pressure which is sufficient to withstand the test pressure.

B. Valve to piping connections:
    1. Metallic valves:
        a. Valves 3 inches nominal size and larger: Flanged ends.
        b. Valves less than 3 inches nominal size: Screwed ends.

2. Plastic valves in plastic piping systems:
    a. Up to 4 inches: Provide solvent or heat welded unions, except for plastic butterfly valves.
        1) Plastic butterfly valves shall be flanged per Section 15112 - Butterfly Valves.
    b. 6 inches and above: Provide solvent or heat-welded flanges.

2.02 MATERIALS

A. Stainless steel: In accordance with ASTM A480, Type 316, or Type 304, UNS Alloy S31600 or S30400.

B. Valve and operator bolts and nuts (not including flange bolts and nuts, which are specified in Section 15052 - Common Work Results for General Piping):
    1. Fabricated of stainless steel for the following installation conditions:
        a. Submerged in sewage or water.
        b. In an enclosed space above sewage or water.
        c. In structures containing sewage or water, below top of walls.
        d. At openings in concrete or metal decks.
    2. Where dissimilar metals are being bolted, use stainless steel bolts with isolation bushings and washers.
    3. Underground bolts: Low-alloy steel in accordance with AWWA C111/A21.11.

C. Bronze and brass alloys: Use bronze and brass alloys with not more than 6 percent zinc and not more than 2 percent aluminum in the manufacture of valve parts; UNS Alloy C83600 or C92200 unless specified otherwise.

D. Cast iron valve bodies: In accordance with ASTM A126, Class 30 minimum.

E. Ductile iron valve bodies: In accordance with ASTM A536, Grade 65-45-12 minimum unless specified otherwise.

2.03 INTERIOR PROTECTIVE LINING

A. When specified in the particular valve specification, provide valves with type of protective lining specified in the particular valve Specification.

B. Apply protective lining to interior, non-working surfaces, except stainless steel surfaces.

C. Lining types:
    1. Fusion bonded epoxy:
        a. Manufacturers: The following or equal:
            1) 3-M Company, ScotchKote 134; certified to NSF 61 for drinking water use.
        b. Clean surfaces in accordance with SSPC SP 7 or SP 10, as recommended by epoxy manufacturer.
        c. Apply in accordance with manufacturer's published instructions.
        d. Lining thickness: 0.010 to 0.012-inch, except that:
            1) Lining thickness in grooves for gaskets: 0.005-inch.
            2) Do not coat seat grooves in valves with bonded seat.

e. Quality control:
    1) Lining thickness: Measured with a non-destructive magnetic type thickness gauge.
    2) Verify lining integrity with a wet sponge-testing unit operating at approximately 60 volts, or as recommended by the lining manufacturer.
    3) Consider tests successful when lining thickness meets specified requirements and when no pinholes are found.
    4) Correct defective lining disclosed by unsuccessful tests, and repeat test.
    5) Repair pinholes with liquid epoxy recommended by manufacturer of the epoxy used for lining.

2. High solids epoxy:
    a. Product equivalent to high solids epoxy as specified in Section 09960 - High-Performance Coatings.
        1) Certified in accordance with NSF 61 for drinking water use.
        2) Interior: Coat valve interior with manufacturer's equivalent high performance high solids epoxy coating system with a certifiable performance history for the service conditions and as approved by the Engineer. Manufacturer shall provide for approval, coating information sufficient to allow Engineer to assess equivalence to the specified high solids epoxy as specified in Section 09960 - High-Performance Coatings.
    b. Clean surfaces to meet SP-7 or SP-10, or as recommended by coating manufacturer.
    c. Quality control: After coating is cured, check coated surface for porosity with a holiday detector set at 1,800 volts, or as recommended by coating manufacturer.
        1) Repair holidays and other irregularities and retest coating.
        2) Repeat procedure until holidays and other irregularities are corrected.

2.04 UNDERGROUND VALVES

A. Provide underground valves with flanged, mechanical, or other type of joint required for the type of pipe to which the valve is to be connected.

B. Coating and wrapping:
    1. After installation, encase valves in polyethylene wrap as specified for ductile iron piping in Section 15211 - Ductile Iron Pipe: AWWA C151.
        a. Ascertain that polyethylene wrapping does not affect operation of valve.

2.05 STEAM VALVES

A. Valves in steam or steam condensate piping: Ductile iron body in accordance with ASTM A536, Grade 65-45-12 minimum or cast steel or forged steel.

2.06 VALVE BOXES

A. Provide cast-iron valve boxes at each buried valve to access valve and valve operators.

B. Do not support boxes on valve, valve operator, or pipe.

C. Boxes:
   1. 2-piece, fabricated of cast iron; provide cover, with asphalt varnish or enamel protective coating.
   2. Adjustable to grade, install centered around the upper portions of the valve and valve operator.

D. Manufacturers: One of the following or equal:
   1. Tyler Pipe Industries, Inc.
   2. Neenah Foundry Co.

2.07 VALVE OPERATORS

A. Valve operator "Open" direction: Open counterclockwise.

B. Provide valves located below operating level or deck with extensions for key operation or floor stands and handwheels, as indicated on the Drawings.

C. Provide manually operated valves located not more than 6 feet above the operating level with tee handles, wrenches, or handwheels.
   1. Make the valve operator more conveniently accessible by rolling valves, located more than 5 feet but less than 6 feet above the operating level, toward the operating side.
   2. Secure tee handles and wrenches to the valve head or stem, except where a handle or wrench so secured constitutes a hazard to personnel; in which case, stow handle or wrench immediately adjacent to the valve on or in a suitable hanger, bracket, or receptacle.

D. Fit valves located more than 6 feet above operating level with chain operated handles or valve wheels.
   1. Chains: Sufficient length to reach approximately 4 feet above the operating level.
   2. Where chains constitute a nuisance or hazard to operating personnel, provide holdbacks or other means for keeping the chains out of the way.

E. Provide an operator shaft extension from valve or valve operator to finished grade or deck level when buried valves, and other valves located below the operating deck or level, are specified or indicated on the Drawings to be key operated; provide 2 inches square AWWA operating nut, and box and cover as specified, or a cover where a box is not required.

PART 3 EXECUTION

3.01 EXAMINATION

A. Preparation prior to installation:
   1. Install valves after the required submittal on installation has been accepted.
   2. Determine after flanged valves and flanged check valves are selected, the face-to-face dimensions of flanged valves and flanged check valves.

B. Fabricate piping to lengths taking into account the dimensions of flanged valves and flanged check valves.

3.02 INSTALLATION

A. Provide incidental work and materials necessary for installation of valves including flange gaskets, flange bolts and nuts, valve boxes and covers, concrete bases, blocking, and protective coating.

B. Where needed, furnish and install additional valves for proper operation and maintenance of equipment and plant facilities under the following circumstances:
   1. Where such additional valves are required for operation and maintenance of the particular equipment furnished by Contractor.
   2. Where such additional valves are required as a result of a substitution or change initiated by Contractor.

C. Valve and actuator orientation:
   1. Contractor shall coordinate with valve supplier final orientation of valve and actuator assembly based on Contractor's selection of equipment manufacturers and the valve and piping arrangement as indicated on the Drawings.
      a. Contractor shall rotate valve and/or actuator mounting orientation as specified in this Section unless otherwise indicated on the Drawings.
   2. Install valves with their stems in vertical position above the pipe, except as follows:
      a. Butterfly valves, gate valves aboveground, globe valves, ball valves, and angle valves may be installed with their stems in the horizontal position.
      b. Install buried plug valves with geared operators with their stems in a horizontal position.
   3. Install valves so that handles clear obstructions when the valves are operated from fully open to fully closed.

D. Place top of valve boxes flush with finished grade or as otherwise indicated on the Drawings.

E. Valves with threaded connections:
   1. Install valves by applying wrench on end of valve nearest the joint to prevent distortion of the valve body.
   2. Apply pipe joint compound or Teflon™ tape on external (male) threads to prevent forcing compound into valve seat area.

F. Valves with flanged connections:
   1. Align flanges and gasket carefully before tightening flange bolts.
   2. When flanges are aligned, install bolts and hand tighten.
   3. Tighten nuts opposite each other with equal tension before moving to next pair of nuts.

G. Valves with soldered connections:
   1. Do not overheat connection to prevent damage to resilient seats and metal seat rings.

2. Position valves in full open position before starting soldering procedure.
3. Apply heat to piping rather than to valve body.

3.03 FIELD APPLIED COATING OF VALVE EXTERIOR

A. Match color and be compatible with manufacturer's coating system and as specified in Section 09960 - High-Performance Coatings.
   1. When shop applied finish coating matches field applied coating on adjacent piping, touch up shop coating in damaged areas in accordance with instructions recommended by the paint manufacturer.
   2. When shop applied coating does not match field coating on adjacent piping, or when damage has occurred to the shop applied coating that requires more than touchup, blast clean valve surfaces or utilize other surface preparation recommended by the manufacturer of the coating material and apply the coating system used for coating adjacent piping.

3.04 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services from each manufacturer for all valves supplied:
   1. Provide Manufacturer's Certificate of Source Testing.
   2. Provide Manufacturer's Certificate of Installation and Functionality Compliance.

C. As specified elsewhere for specific valve types, sizes or actuators.
   1. Source testing.
   2. Manufacturers on site services for Owner Training, Installation Testing, Functional Testing, and during the Process Operational Period.

END OF SECTION

SECTION 15111

BALL VALVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Ball valves.

B. As specified in Section 15110 - Common Work Results for Valves.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
   2. B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 through 24.

B. American Water Works Association (AWWA):
   1. C507 - Standard for Ball Valves 6 Inch Through 48 Inch.

C. ASTM International (ASTM):
   1. A48 - Standard Specification for Gray Iron Castings.
   2. A216 - Standard Specification for Steel Castings, Carbon, Suitable for Fusion Welding, for High-Temperature Service.
   3. A351 - Standard Specification for Castings, Austenitic, for Pressure-Containing Parts.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15110 - Common Work Results for Valves:
   1. Metal body ball valves: 6 inches and larger only: Submit affidavit of compliance in accordance with AWWA C507.
   2. Operation and maintenance manual.

C. Commissioning submittals:
   1. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. General: Unless otherwise indicated on the Drawings use:
   1. Metal body ball valves on metallic pipelines.
   2. Plastic body ball valves on plastic pipelines.

B. Do not use metal body ball valves in sodium hypochlorite or sodium bisulfite systems.

C. Metal body ball valves, less than 6-inch size:
   1. Manufacturers: One of the following, or equal:
      a. Conbraco Industries, Inc., Apollo Valves.
      b. Flow-Tek, Inc.
      c. Metso Automation/Jamesbury.
      d. NIBCO, Inc.
   2. General:
      a. Type: Non-lubricated, full port and capable of sealing in either direction.
      b. End connections:
         1) Threaded or solder ends for sizes 3-inch and smaller.
         2) Class 150 flanged for sizes larger than 3 inches.
            a) Flanges: In accordance with ASME B16.1 standards.
      c. Stem packing: Manually adjustable while valve is under pressure.
      d. Shafts:
         1) Rigidly connected to the ball by a positive means.
            a) Design connection to transmit torque equivalent to at least 75 percent of the torsional strength of the shaft.
      e. Handles: Stainless steel latch lock handle with vinyl grip and stainless steel nut designed to open and close the valve under operating conditions.
      f. Temperature limits: Suitable for operation between minus 20 and 350 degrees Fahrenheit.
   3. Materials:
      a. Valves in copper lines: Bronze body.
      b. Valves in steel and ductile iron piping: Ductile iron or cast steel body.
      c. Valves in stainless steel piping: Stainless steel body, material type to match piping material as specified in Section 15052 - Common Work Results for General Piping.
      d. Ball: Type 304 or 316 stainless steel, Type 316 in digester gas applications.
      e. Seats: PTFE.
      f. Stem seals: PTFE or Viton™.
      g. Bearings: Self-lubricated, corrosion resistant material that will not contaminate potable water.
      h. Valves for combustible fluid applications (digester gas, natural gas, fuel oil, etc.) must be of fire safe design.

4. Venting requirements:
    a. Metal ball valves for hydrogen peroxide service:
        1) Provide valve with factory drilled 0.125-inch hole in the upstream side of the ball.
        2) Provide an engraved Type 316 stainless steel tag permanently attached to the valve stem stating, "One side of ball drilled for sodium hypochlorite service".

2.02 PLASTIC BODY BALL VALVES – FULL PORT (BAV40)

A. Manufacturers: One of the following or equal:
    1. Asahi America.
    2. Chemtrol Division, NIBCO, Inc.
    3. Georg Fischer Piping Systems.
    4. Hayward Flow Control.
        a. For sodium hypochlorite service, provide model TB-Z. Model TBH-Z shall not be used.
    5. IPEX USA, LLC.
    6. Plast-O-Matic Valves, Inc.

B. General:
    1. Type: Non-lubricated and capable of sealing in either flow direction.
    2. End connections:
        a. 4 inches and smaller size: Socket end true unions for solvent welded connection to adjacent piping.
        b. 6-inch size: Socket end true unions with attached flanges for flanged connection to adjacent piping.
    3. All valves shall have integral ISO 5211 mounting pad for actuator installation.
    4. All valves shall have integral plate for lock-out/tag-out.
    5. Stem: Double o-ring seal with shear point above seal.
    6. Pressure rating: Suitable for the test pressure and maximum temperature of the corresponding piping system listed in the Piping Schedule.

C. Materials:
    1. Body and ball:
        a. PVC piping systems: PVC.
        b. CPVC piping systems: CPVC.
    2. Seats: PTFE (Teflon™).
    3. O-rings: FKM (Viton™).

D. Limit switches, when indicated on the Drawings:
    1. Mechanical cam type with watertight enclosure and suited for remote indication of valve open-close status.
    2. Mount on valve actuator.
    3. Contacts: 120-volt alternating current, 20 amperes at 75 to 100 percent power factor and 24-volt direct current, 5 amperes minimum.

E. Valve actuator:
    1. Valves shall be quarter turn operated with valve seat adjustability.

2. Manually operated valves: Lever.
3. Electric motor operated valves, when indicated on the Drawings: Provide electric motor operator as specified in Section 13447 - Electric Actuators.

F. Venting requirements:
1. PVC and CPVC ball valves for hypochlorite service:
a. Provide valve with factory drilled 0.125-inch hole in the upstream side of the ball.
b. Provide an engraved plastic tag permanently attached to the valve stem stating, "One side of ball drilled for hypochlorite service".
c. Provide an arrow inscribed on the valve body to indicate direction of flow.

PART 3 EXECUTION

3.01 INSTALLATION

A. General: Install each type of valve in accordance with manufacturers' printed instructions.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services:
1. Provide certificates:
a. Manufacturer's Certificate of Installation and Functionality Compliance.

C. Functional testing:
1. Valves:
a. Test witnessing: Witnessed.
b. Conduct pressure and leak test, as specified in Section 15956 - Piping Systems Testing.

END OF SECTION

SECTION 15112

BUTTERFLY VALVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Butterfly valves:
      a. As specified in Section 15110 - Common Work Results for Valves.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.1 - Cast Iron Pipe Flanges and Flanged Fittings, Classes 25, 125, and 250.
   2. B16.5 - Pipe Flanges and Flanged Fittings, NPS 1/2 through NPS 24.

B. American Water Works Association (AWWA):
   1. C110 - Standard for Ductile-Iron and Gray-Iron Fittings.
   2. C504 - Rubber-Seated Butterfly Valves.
   3. C540 - Standard for Power-Actuating Devices for Valves and Sluice Gates.
   4. C550 - Protective Interior Coatings for Valves and Hydrants.
   5. C606 - Standard for Grooved and Shouldered Joints.

C. ASTM International (ASTM):
   1. A126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.
   2. A216 - Standard Specification for Steel Castings, Carbon, Suitable for Fusion Welding, for Higher-Temperature Service.
   3. A276 - Standard Specification for Stainless Steel Bars and Shapes.
   4. A351 - Standard Specification for Castings, Austenitic, for Pressure-Containing Parts.
   5. A395 - Standard Specification for Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures.
   6. A479 - Standard Specification for Stainless Steel Bars and Shapes for Use in Boilers and Other Pressure Vessels.
   7. A515 - Standard Specification for Pressure Vessel Plates, Carbon Steel, for Intermediate - and Higher-Temperature Service.
   8. A516 - Standard Specification for Pressure Vessel Plates, Carbon Steel, for Moderate - and Lower-Temperature Service.
   9. A536 - Standard Specification for Ductile Iron Castings.
   10. A564 - Standard Specification for Hot-Rolled and Cold-Finished Age-Hardening Stainless Steel Bars and Shapes.
   11. A582 - Standard Specification for Free-Machining Stainless Steel Bars.
   12. A743 - Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.

13. A890 - Standard Specification for Castings, Iron-Chromium-Nickel-Molybdenum Corrosion-Resistant, Duplex (Austenitic/Ferritic) for General Application.
14. B462 - Standard Specification for Forged or Rolled UNS N06030, UNS N06022, UNS N06035, UNS N06200, UNS N06059, UNS N10362, UNS N06686, UNS N08020, UNS N08024, UNS N08026, UNS N08367, UNS N10276, UNS N10665, UNS N10675, UNS N10629, UNS N08031, UNS N06045, UNS N06025, UNS R20033 Alloy Pipe Flanges, Forged Fittings, and Valves and Parts for Corrosive High-Temperature Service.
15. B584 - Standard Specification for Copper Alloy Sand Castings for General Applications.
16. B691 - Standard Specification for Iron-Nickel-Chromium-Molybdenum Alloys (UNS N08366 and UNS N08367) Rod, Bar, and Wire.
17. D429 - Standard Test Methods for Rubber Property-Adhesion to Rigid Substrate.

D. Compressed Gas Association (CGA):
   1. Standard G-4.1 - Cleaning Equipment for Oxygen Service.

E. NSF International (NSF):
   1. Standard 61 - Drinking Water System Components - Health Effects.

F. United States Code of Federal Regulations (CFR):
   1. 21 - Food and Drugs.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15110 - Common Work Results for Valves.
   1. For general purpose AWWA butterfly valves, include description of the method of attachment of the disc edge to the valve disc.
   2. Interior epoxy coatings: Affidavit of compliance attesting that epoxy coatings applied to interior surfaces of butterfly valves comply with all provisions in accordance with AWWA C550.
   3. Certification, for valves and coatings in contact with potable water, that the products used are suitable for contact with drinking water in accordance with NSF Standard 61.

C. Commissioning Submittals:
   1. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Design requirements:
   1. Valve pressure rating shall be greater than or equal to the piping system test pressure specified in the Piping Schedule at the maximum service temperature.
   2. General purpose AWWA butterfly valves:
      a. Design standard: Provide valves designed and manufactured in accordance with AWWA C504.
      b. Class:
         1) Provide butterfly valves in accordance with AWWA Class 150B, unless otherwise specified.
         2) Provide butterfly valves in accordance with AWWA Class 250B in piping systems with test pressure greater than 150 pounds per square inch gauge and less than 250 pounds per square inch gauge.
   3. High pressure butterfly valves.
   4. Piping systems designed for test pressures greater than 250 pounds per square inch gauge and less than 450 pounds per square inch gauge: Provide ASME B16.5, Class 300 flanged high pressure valves.
   5. Industrial class butterfly valves:
      a. Industrial class butterfly valves capable of 150 pounds per square inch gauge leak tight shut off.
   6. Stainless steel butterfly valves:
      a. Stainless steel butterfly valves capable of a minimum of 100 pounds per square inch gauge leak tight shut off and with special cleaning, packaging, and handling.

B. Usage:
   1. Provide and install butterfly valve types as outlined in the Butterfly Valve Application Schedule at the end of this Section.

C. Design requirements for butterfly valves with power actuating devices:
   1. Design valves and actuators for maximum operating torque, in accordance with and using safety factors required in AWWA C540, using the following values:
      a. Maximum water velocity: 16 feet per second with valve fully open.
      b. Maximum pressure differential across the closed valve equal to the pressure class designation.
      c. Coefficient for seating and unseating torque, dynamic torque, and bearing friction in accordance with valve manufacturer's published recommendations.
   2. Valve disc: Seat in an angular position of 90 degrees to the pipe axis and rotate an angle of 90 degrees between fully open and fully closed positions:
      a. Do not supply valves with stops or lugs cast with or mechanically secured to the body of the valve for limiting the disc travel.
   3. Unacceptable thrust bearings: Do not provide valves with thrust bearings exposed to the fluid in the line and consisting of a metal bearing surface in rubbing contact with an opposing metal bearing surface.

D. Performance requirements:
   1. Tight shutoff at the pressure rating of the valve with pressure applied in either direction.
   2. Suitable for the following service conditions:
      a. Throttling.
      b. Frequent operation.
      c. Operation after long periods of inactivity.
      d. Installation in any position and flow in either direction.

2.02 GENERAL PURPOSE AWWA BUTTERFLY VALVES (BFV00)

A. Manufacturers: One of the following or equal:
   1. DeZURIK/Sartell Model BAW.
   2. Mueller/Pratt Co.

B. Valve body:
   1. Material: Cast iron, ASTM A126, Grade B, or ductile iron, ASTM A536, Grade 65-45-12.
   2. Body design:
      a. Flanged body valves:
         1) Usage: Comply with limitations specified in the Butterfly Valve Application Schedule.
         2) Flanges: In accordance with ASME B16.1 Class 125 flanges for Class 150B valves, in accordance with ASME B16.1 Class 250 flanges for Class 250B valves.

C. Disc:
   1. Material: Cast iron or ductile iron with Type 316 stainless steel edge that matches seat in valve body.
   2. Secure valve disc to shaft by means of smooth-sided, taper or dowel pins, Type 316 stainless steel, or Monel.
   3. Extend pins through shaft and mechanically secure in place.

D. Shaft and bearings:
   1. Shaft design:
      a. Valves 20-inches and less: 1-piece, through disc design.
      b. Valves greater than 20-inch size: 2-piece, stub shaft design.
   2. Shaft seal: Vee type, chevron design.
   3. Shaft material for Class 150B valves: Type 316 stainless steel, ASTM A276.
   4. Shaft material for Class 250B valves: Type 17-4 pH stainless steel, ASTM A564.
   5. Shaft bearings: Self-lubricating sleeve type:
      a. Valves 20 inches and less: Nylatron.
      b. Valves greater than 20-inch size: Teflon™ with stainless steel or fiberglass backing.

E. Seats:
   1. Seat materials:
      a. Match gasket material that is specified in the Piping Schedule for the specific piping system.
      b. Low-pressure air applications: EPDM.

c. In all other applications: EPDM.

2. For valves 20 inches in nominal size and smaller, bond or vulcanize seat into the valve body.
3. For valves 24 inches in nominal size and larger, retain seats mechanically or by adhesive:
   a. Mechanical retainage: Retain seat by a clamping ring with segmented clamping ring locks with adjusting locking screws.
      1) Clamping ring, ring locks, and adjusting locking screws: Type 316 stainless steel.
      2) Provide means to prevent ring locks and screws used to retain seats from loosening due to vibration or cavitation.
   b. Adhesive retainage: Inset the seat within a groove in the valve body and retain in place with epoxy injected behind the seat so that the seat expands into the body.
   c. Do not provide valves with seats retained by snap rings or spring-loaded retainer rings.
4. Resilient seat: Withstand 75 pounds per inch pull when tested in accordance with ASTM D429, Method B.

F. Valve packing:
1. Valves 4 to 48 inches nominal size: Self-adjusting V-type packing or chevron-type packing. NBR or EPDM to match seat material.
2. Valves 54 inches nominal size and larger: Adjustable V-type packing with bronze packing gland or self-adjusting V-type packing. NBR or EPDM to match seat material.

2.03 BUTTERFLY VALVE ACTUATORS

A. Manufacturers: One of the following or equal:
1. Motorized actuators are specified in Section 13447.

2.04 COATING REQUIREMENTS FOR METAL VALVES

A. Shop coat interior and exterior metal surfaces of valves, except as follows:
1. Interior machined surfaces.
2. Surfaces of gaskets and elastomeric seats and stem seals.
3. Bearing surfaces.
4. Stainless steel surfaces and components.

B. Coating material for components in contact with potable water applications:
1. Formulate interior coating material from materials in accordance with CFR 21, AWWA C550, and NSF 61.
2. Submit affidavit of compliance attesting that epoxy coatings applied to interior surfaces of butterfly valves in accordance with CFR 21, AWWA C550, and NSF 61.

C. Interior surfaces:
1. Interior surfaces, except for valves used in low-pressure air service: High solids epoxy.
2. Interior surfaces of valves used in low-pressure air service: High temperature coating for range of 150 to 350 degrees Fahrenheit.

D. Exterior surfaces:
   1. Exterior surfaces of valves, actuators, and accessories coating as specified in Section 09960 - High-Performance Coatings, Attachment A - Coating Schedule for the following conditions:
      a. Submerged valves: High solids epoxy.
      b. Buried valves: Coal tar epoxy.
      c. Other valves: High solids epoxy with polyurethane topcoat.
   2. Coating product in contact with potable water must be in accordance with AWWA C550 and NSF 61.
   3. High temperature coating: As specified in Section 09960 - High-Performance Coatings and in accordance with AWWA C550.
   4. Polished and machined surfaces: Apply rust-preventive compound:
      a. Houghton, Rust Veto 344.
      b. Rust-Oleum, R-9.

E. Field applied coatings of valve exterior:
   1. Match color and be compatible with manufacturer's coating system and as specified in Section 09960 - High-Performance Coatings.
      a. When shop applied finish coating matches field applied coating on adjacent piping, touch up shop coating in damaged areas in accordance with instructions recommended by the paint manufacturer.
      b. When shop applied coating does not match field coating on adjacent piping, or when damage has occurred to the shop applied coating that requires more than touchup, blast clean valve surfaces or utilize other surface preparation recommended by the manufacturer of the coating material and apply the coating system used for coating adjacent piping.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install valves with valve shafts horizontal, unless a vertical shaft is required to suit a particular installation, and unless a vertical shaft is indicated on the Drawings.

B. Install pipe spools or valve spacers in locations where butterfly valve disc travel may be impaired by adjacent pipe lining, pipe fittings, valves, or other equipment.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning, and this Section.

B. Manufacturer services:
   1. Provide certificates:
      a. Manufacturer's Certificate of Installation and Functionality Compliance.

C. Functional Testing:
   1. Valves:
      a. Test witnessing: Witnessed.
      b. Conduct pressure and leak test, as specified in Section 15110 - Common Work Results for Valves.

D. Manufacturer services from each supplier for all motor operated butterfly valve assemblies supplied:
   1. As specified in Section 15110 - Common Work Results for Valves.
   2. On site services.

Manufacturer Rep Onsite					
Training Requirements		**Installation Testing**		**Functional Testing**	
Maintenance (hours per session)	**Operation (hours per session)**	**Trips**	**Days (each trip)**	**Trips**	**Days (each trip)**
0.5	0.5	1	1	1	1

3.03 BUTTERFLY VALVE APPLICATION SCHEDULE

A. Acceptable butterfly valve types and body styles are listed in the Butterfly Valve Application Schedule. Furnish and install butterfly valves in accordance with this Schedule.

Butterfly Valve Application Schedule	
Valve Type and Style	**Acceptable Applications**
General Purpose AWWA Butterfly Valves - Flanged Body Design	Aboveground or submerged in the following service applications only: • Acceptable in all service applications except oxygen and ozone service and high-pressure service. • May be used in buried applications when required by the specified piping system.

   6. A582 - Standard Specification for Free-Machining Stainless Steel Bars.
   7. A743 - Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.
   8. B16 - Standard Specification for Free-Cutting Brass Rod, Bar and Shapes for Use in Screw Machines.
   9. B61 - Standard Specification for Steam or Valve Bronze Casting.
   10. B62 - Standard Specification for Composition Bronze or Q=Ounce Metal Castings.
   11. B584 - Standard Specification for Copper Alloy Sand Castings for General Applications.

D. National Electrical Manufacturers Association (NEMA).

E. NSF International (NSF):
   1. 61 - Drinking Water Components Health Effects.
   2. 372 - Drinking Water System Components - Lead Content.

F. Underwriters Laboratories, Inc. (UL).

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. As specified in the Agreement and Contract RFP in Volumes 1 and 2, and Section 15110 - Common Work Results for Valves.

C. Quality control submittals:
   1. Provide Manufacturer's Certificate of Installation Verification and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2, and Section 15110 - Common Work Results for Valves.

B. When not otherwise specified as indicated on the Drawings, provide check valves suitable for service:
   1. In either horizontal or vertical position.
   2. For working pressures up to 150 pounds per square inch.

C. Check valve materials as follows unless otherwise specified.
   1. Cast iron in accordance with ASTM A126, Grade B.
   2. Ductile iron in accordance with ASTM A536, Grade 65-45-12.
   3. Type 303 stainless steel in accordance with ASTM A582 (UNS S30300).
   4. Type316 stainless steel, in accordance with ASTM A313.

D. Flanges: Drilled in accordance with ASME B16.1 Class 125/150, unless otherwise specified or indicated on the Drawings.

2.02 GENERAL SWING CHECK VALVES (CKV00)

A. Valves 1/4 inch through 3 inches:
   1. Manufacturers: One of the following or equal:
      a. Crane Valve Co., Number 36.
      b. Lunkenheimer Co., Figure 554Y.
   2. Design:
      a. Y-pattern body with integral seat.
      b. Female threaded ends.
      c. Renewable hinged disc.
      d. Threaded cap for access to valve seat without disassembly of piping.
      e. Integral seats suitable for regrinding.

3. Materials:
    a. Body: Bronze in accordance with ASTM B62-83600.
    b. Disc: Bronze in accordance with ASTM B62 C92200.
        1) On valves less than 1-inch: Brass in accordance with ASTM B16.
    c. Hinge: Bronze in accordance with ASTM B584 C 87600.
    d. Lock nut and hinge pin plug: Brass in accordance with ASTM B16 HO2.
    e. Hinge pin: Stainless steel in accordance with ASTM A276.
    f. Cap: Bronze in accordance with ASTM B61 C92200.
    g. If used for steam service:
        1) Body and disc: S1 steam bronze in accordance with ASTM B61.

B. Valves 4 inches through 24 inches:
1. Manufacturers: One of the following or equal:
    a. APCO Model 250.
    b. Crispin SWL Series.
    c. Kennedy, Figure 106LW or M&H, Model 159.
    d. Mueller Co., Model A-2600.
2. Design:
    a. In accordance with AWWA C508.
    b. Constructed to permit top entry and removal of internal components without removing the valve.
    c. Equipped with outside lever and weight.
3. Materials:
    a. Body: Cast iron, ASTM A126, Class B, or ASTM A536, Grade 65-45-12 ductile iron.
    b. Disc:
        1) Valve disc shall be ASTM A126 cast iron, ASTM A536 ductile iron, or ASTM B584 bronze.
        2) 4-inch valves: Bronze or stainless steel rings and seats.
        3) 6 inches and larger valves: Bronze-faced or stainless steel rings and seats.
        4) Rubber seat Buna-N or EPDM.
    c. Hinge pins: Stainless steel.

2.03 PLASTIC BALL CHECK VALVES (CKV65)

A. Manufacturers: One of the following or equal:
1. Georg Fischer Piping Systems.
2. Plast-O-Matic Valves, Inc.
3. Hayward Flow Control.
4. Nibco, Chemtrol Series.

B. Design:
1. Ball type design.
2. Materials: As specified in the Check Valve Schedule.
3. Inlet pressure rating:
    a. PVC, CPVC, or PVDF: 150 pounds per square inch at 77 degrees Fahrenheit.
    b. PP: 100 pounds per square inch at 77 degrees Fahrenheit.

2.04 INTERIOR PROTECTIVE LININGS

A. As shown in the valve schedules and as specified in Section 15110 - Common Work Results for Valves.

PART 3 EXECUTION

3.01 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

3.02 FIELD QUALITY CONTROL

A. Manufacturer services:
   1. Provide the Manufacturer's Certificate of Installation Verification.

B. Functional Testing:
   1. Valves:
      a. Test witnessing: Witnessed.
   2. Conduct pressure and leak test, as specified in Section 15956 - Piping Systems Testing.

END OF SECTION

SECTION 15115

GATE, GLOBE, AND ANGLE VALVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Gate, globe, angle, plug disc and plain hose valves, and yard hydrants.
   2. As specified in Section 15110 - Common Work Results for Valves.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 through NPS 24, Metric/Inch Standard.
   2. B16.47 - Large Diameter Steel Flanges: NPS 26 through NPS 60, Metric/Inch Standard.
   3. B36 - Stainless Steel Pipe.

B. American Water Works Association (AWWA):
   1. C515 - Standard for Reduced-Wall, Resilient-Seated Gate Valves for Water Supply Services.
   2. C550 - Protective Interior Coatings for Valves and Hydrants.

C. ASTM International (ASTM):
   1. B98 - Standard Specification for Copper-Silicon Alloy Rod, Bar, and Shapes.

D. Manufacturers Standardization Society (MSS) of the Valve and Fittings Industry:
   1. SP-81 - Stainless-Steel or Stainless-Steel-Lined, Bonnetless, Knife Gate Valves with Flanged Ends.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. As specified in Section 15110 - Common Work Results for Valves.

C. Commissioning Submittals:
   1. For valves larger than 16 inches:
      a. Provide Manufacturer’s Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

B. Interior epoxy coatings: Affidavit of compliance attesting that epoxy coatings applied to interior surfaces of valves comply in accordance with all provisions of AWWA C550.

PART 2 PRODUCTS

2.01 GATE VALVES - GENERAL SERVICE (GV00)

A. Aboveground:
   1. Valves less than 3 inches in size for clean water and air service:
      a. Manufacturers: One of the following or equal:
         1) Crane, Figure 431.
         2) Jenkins, Figure 47.
         3) Lunkenheimer Co., Figure 2151.
      b. Design:
         1) Size and configuration: Indicated on the Drawings.
         2) Manufacturer's standard bronze, solid wedge disc, rising stem, screwed end, Class 150 pounds.
   2. Valves 3 inches in size and larger, single disk.
      a. Manufacturers: One of the following or equal:
         1) American Flow Control, Series 2500.
         2) M&H/Kennedy Valve Co.
         3) Mueller.
      b. Design:
         1) Size, material, configuration: Indicated on the Drawings.
         2) Resilient wedge type in accordance with AWWA C515.
         3) Flange, iron body, and bonnet rated for 200 pound working pressure.
            a) Provide O-ring seal between valve body and bonnet.
         4) Ductile or cast iron wedge encapsulated in nitrile rubber and capable of sealing in either flow direction.
         5) Bronze stem with double or triple O-ring or braided packing stem seals.
         6) Rising stem configuration with handwheel diameter sized to allow opening of valve with no more than a 40-pound pull.
         7) Coat interior and exterior surfaces of valve body and bonnet with fusion-bonded epoxy in accordance with AWWA C550.
   3. Valves 3 inches in size and larger, double disc:
      a. Flanged.
      b. Materials:
         1) 200 pound iron body.
         2) Bronze mounted.
      c. Configuration:
         1) Outside screw and yoke (OS&Y).
         2) Stems of silicon bronze in accordance with ASTM B98, Alloy No. C66100.

d. Inside configuration:
    1) Double disc; parallel seat.
    2) Handwheel.
e. Manufacturers: One of the following or equal:
    1) M&H Valve Co., Figure 68-02.
f. Design:
    1) Size, material, configuration: Indicated on the Drawings.

B. Underground:
1. Manufacturers: One of the following or equal:
    a. American Flow Control.
    b. M&H/Kennedy Valve Co.
    c. Mueller Co.
2. Design:
    a. Size, material, configuration: Indicated on the Drawings.
    b. Resilient wedge type in accordance with AWWA C515.
    c. Stem:
        1) Iron body, resilient seat, non-rising stem, double O-ring stem seal.
        2) Rising stem configuration with handwheel diameter sized to allow opening of valve with no more than a 40-pound pull.
    d. Ductile or cast iron wedge encapsulated in nitrile rubber and capable of sealing in either flow direction.
    e. Bronze stem with double or triple O-ring or braided packing stem seals.
    f. Coat interior and exterior surfaces of valve body and bonnet with fusion-bonded epoxy in accordance with AWWA C550.
    g. Valve operator: Provide standard AWWA 2-inch operating nut, matching valve key, and valve box for operating stem.

2.02 GATE VALVES - STEAM AND CONDENSATE SERVICE (GV20)

A. Valves 3 inches and smaller in size:
1. Manufacturers: One of the following or equal:
    a. Crane, No. 428.
    b. Jenkins, Figure 47U.
    c. Lunkenheimer Co., Figure 2127.
2. Design:
    a. Size and configuration: Indicated on the Drawings.
    b. Bronze, screwed, rising stem, solid wedge, screwed bonnet, suitable for service under pressures equal to and less than 125 pounds per square inch gauge, steam working pressure (SWP).

B. Valves larger than 3 inches in size:
1. Manufacturers: One of the following or equal:
    a. Crane No. 465-1/2.
    b. Jenkins, Figure 651C.
    c. Lunkenheimer Co., Figure 1430.
2. Design:
    a. Size and configuration: Indicated on the Drawings.

b. Suitable for service under pressures equal to and less than 125 pounds per square inch gauge, steam working pressure (SWP), flanged, iron body, bronze mounted, solid wedge, outside screw and yoke (OS&Y).

3. Size and configuration: Indicated on the Drawings.

2.03 GLOBE VALVES - NON-PILOT-CONTROLLED AND ANGLE VALVES (BLV00 AND GLV20)

A. General purpose globe and angle valves:
   1. Valves 3 inches and smaller:
      a. Manufacturers: One of the following or equal:
         1) Except in welded steel piping:
            a) Crane, No. 1 Globe or No. 2 Angle.
            b) Lunkenheimer Co. Figure No. 2140 Globe or No. 2141 Angle.
         2) In welded steel piping:
            a) Crane, No. 351.
            b) Lunkenheimer Co., Figure No. 1123; or equal with flanged ends.
      b. Design:
         1) Size and configuration: Indicated on the Drawings.
         2) Valve: Class 125 threaded ends, rated for 250 degrees Fahrenheit at pressure of 170 pounds per square inch.
   2. Valves larger than 3 inches:
      a. Manufacturers: One of the following or equal:
         1) Crane, No. 351.
         2) Lunkenheimer Co., Figure No. 1123.
      b. Design:
         1) Size and configuration: Indicated on the Drawings.

B. Plug disc globe valves: type for throttling or severe service:
   1. Manufacturers: One of the following or equal:
      a. Crane, No. 212P or No. 384P.
      b. Lunkenheimer Co., 72-PS or 73-PS1.
   2. Design:
      a. Size and configuration: Indicated on the Drawings.
         1) Material: Iron body stainless steel trimmed plug type seat and disc.

C. Hose valves:
   1. Manufacturers:
      a. Globe threaded valve: One of the following or equal:
         1) Crane, No. 7TF.
         2) Stockham, Figure No. B22T.
      b. Angle threaded valve: One of the following or equal:
         1) Crane, No. 17TF.
         2) Stockham, Figure No. B222T.
   2. Design:
      a. Size and configuration: Indicated on the Drawings.
      b. Valve: Globe or angle valve with threaded ends.
      c. Disc: Renewable, made of Teflon™ or Buna-N.
      d. Threaded ends rated for a pressure of 200 pounds per square inch.

D. Yard hydrants:
    1. Freezeless yard hydrant:
        a. Manufacturers: One of the following or equal:
            1) Kupferle Foundry Co.
                a) #1 Total Eclipse Yard Hydrant - 3/4 inch and 1 inch.
            2) Murdock Company:
                a) #M-75 - 3/4 inch or #M100 - 1 inch.
            3) Zurn Company:
                a) #1385 - 3/4 inch or 1 inch.
        b. Design:
            1) Self-draining, non-freezing, compression type.
                a) Inlet connection size: Indicated on the Drawings.
                b) Outlet connection size: Indicated on the Drawings.
                c) Materials:
                    (1) Exterior casing pipe material: Indicated on the Drawings.
                    (2) Interior operating rod material: Indicated on the Drawings.
                    (3) Casing guard material: Indicated on the Drawings.
                    (4) Principal interior operating parts material: Brass and/or bronze and removable from yard hydrant for servicing without excavation.
                d) Provide 4 spoke, ball wheel handle operated.
    2. Freezeless post hydrants (HYD01):
        a. Manufacturers: The following or equal:
            1) Kupferle Foundry Co.:
                a) #2 Eclipse Post Hydrant.
            2) Mueller Co.:
                a) #A-411 Post Hydrant.
            3) Murdock Co.:
                a) #M-200 Post Hydrant.
        b. Design:
            1) Self-draining, non-freezing, compression type with a 2-3/16-inch valve opening.
            2) Inlet connection size: Indicated on the Drawings.
            3) Outlet connection size: Indicated on the Drawings.
            4) Materials:
                a) Exterior casing pipe material: Indicated on the Drawings.
                b) Interior operating rod material: Indicated on the Drawings.
                c) Top stock material: Indicated on the Drawings.
                d) Principal interior operating parts material: Brass and/or bronze and removable from hydrant for servicing without excavation.
            5) Provide 1-1/2-inch pentagon operating nut operated by a hydrant wrench or 10-inch handwheel:
                a) Manufacturers: The following or equal:
                    (1) Kupferle Foundry Co.

2.04 NEEDLE VALVES (NV00)

A. Manufacturers: One of the following or equal:
    1. Crane No. 88 or No. 89.

2. Lunkenheimer Co., Figure No. 906-BS or No. 907-BS.
3. Powell, Figure No. 180.

B. Design:
1. Size and configuration: Indicated on the Drawings.

PART 3 EXECUTION

3.01 INSTALLATION

A. Mount yard hydrants on minimum 1-inch supply pipe or size indicated on the Drawings.

B. Mount post hydrants on minimum 2-inch supply pipe or size indicated on the Drawings.

C. Set yard and post hydrants in 4 cubic feet of 3/4 inch minimum crushed stone surrounding valve body to allow for proper drainage.
1. Install in accordance with AWWA recommendations for hydrants.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services: For valves larger than 16 inches.
1. Provide certificates:
a. Manufacturer’s Certificate of Installation and Functionality Compliance.

C. Functional Testing:
1. Valves:
a. Test witnessing: Witnessed.
b. Conduct pressure and leak test as specified in Section 15110 - Common Work Results for Valves.

END OF SECTION

SECTION 15117

SPECIALTY VALVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Specialty valves.

B. As specified in Section 15110 - Common Work Results for Valves.

1.02 REFERENCES

A. American Society of Civil Engineers (ASCE):
   1. 25 - Earthquake-Actuated Automatic Gas Shutoff Devices.

B. American Society of Mechanical Engineers (ASME):

   6. D2000 - Standard Classification System for Rubber Products in Automotive Applications.

E. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1000 V Maximum).

1.03 DEFINITIONS

A. NEMA Type 4 enclosure in accordance with NEMA 250.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15110 - Common Work Results for Valves.

C. Commissioning submittals:
   1. Backflow preventer certification.
   2. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.05 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 BACKFLOW PREVENTERS

A. Manufacturers: One of the following or equal:
   1. Febco backflow prevention:
      a. Model LF860 all sizes.
   2. Zurn/Wilkins:
      a. Model 975XL for 1/2-inch through 2-inch.
      b. Model 375AST for sizes 2 1/2 inch, 3 inch, 8 inch, and 10 inch.
      c. Model 375 and 375DA for sizes 4 inch and 6 inch.
   3. Watts regulator: Series LF909.

B. Design: Reduced pressure chamber type in accordance with AWWA C511.

C. Backflow preventers shall be lead-free.

D. Include shutoff valves at each end of backflow preventer with properly located test cocks.

E. Shutoff valves:
   1. Backflow preventers 2-inch and smaller: Provide with full-port, quarter turn, resilient seated ball valves.
   2. Backflow preventers larger than 2-inch: Provide with resilient seated, outside stem and yoke gate valves.

2.02 MUD VALVES

A. Manufacturers: One of the following or equal:
   1. Clow Corp., Series F-3075T.
   2. Waterman Industries, Inc., Model MV-11.

B. Design:
   1. Provide mud valves with non-rising stem.
   2. Provide standard AWWA 2-inch valve nut on stainless steel stem extension to height required.

C. Materials:
   1. Body, cover, and yoke: Cast-iron.
   2. Disc plug: Cast-iron.
   3. Seat rings: Resilient Neoprene or Buna-N seating face.

4. Stem and stem nut: Bronze.
5. Cap screws to bolt valve to cast-iron pipe flange: Type 316 stainless steel.

2.03 SOLENOID VALVES

A. 2-way solenoid valves:
   1. Manufacturers: One of the following or equal:
      a. Automatic Switch Co., Series 8210.
         1) Contractor shall provide external bypass to solenoid valve. External bypass shall use pipe of same material and size as main line and include a ball valve for manual operation.
      b. Skinner Electric Valve Division, Series C.

B. Design:
   1. Valves: Suitable for service under the following conditions:
      a. Fluid potable water.
      b. Temperature of fluid: 60 degrees Fahrenheit.
      c. Piping test pressure: 150 pounds per square inch gauge.
   2. Unless otherwise indicated on the Drawings, provide valves that meet the following requirements:
      a. Minimum NEMA Type 4 enclosure.
      b. 120 VAC operation.
      c. Suitable for use as indicated on the Drawings.
      d. Minimum Class F coil insulation.
   3. 2-way valves: Furnish with openings of size equal to or larger than the nominal size designation of the valve.
   4. Furnish with manual/bypass operators.

C. Materials:
   1. Body: Brass or bronze.
   2. Seats: Resilient material.

2.04 PLASTIC BODY DIAPHRAGM VALVES

A. Type of service: Use plastic body diaphragm valves in the following services:
   1. Sodium hypochlorite.

B. Manufacturers: One of the following or equal:
   1. Simtech.
   2. Chemtrol.
   3. Asahi-America (2-1/2 inch and less only for sodium hypochlorite service).
   4. Georg Fischer Piping Systems.
   5. Hayward Flow Control.

C. Materials:
   1. Body: PVC with reinforcing ribs at body and end connections.
   2. Diaphragm: Unless otherwise specified below, provide 2 diaphragm layers - Teflon™ diaphragm with EPDM backing or other material suitable for the intended use.
      a. For sodium hypochlorite service: 3 diaphragm layers, Teflon™ (PTFE), PVDF, and ethylene propylene diene (EPDM) or Viton™ backing cushion.

3. Bonnet: PVC with cast iron or silicon bronze drive nut, double lead acme stem threads, acrylic protective cap and visual position indicator.
    a. Adjustable travel stop: Type 316 stainless steel.
    b. Compressor: PVDF or cast iron.
4. Handwheel: Polypropylene.
5. Sleeve: Bronze or cast iron.
6. Stem: Type 316 stainless steel.
7. Bolt, nut, and washer: Type 316 stainless steel.
8. Thrust bearing: Teflon™ disc or carbon steel.
9. End connector: PVC.
10. End connector seal (flange gasket): Suitable for the intended use unless otherwise specified below.
    a. For sodium hypochlorite and sodium bisulfite solution service: Hypalon 1/8-inch thick gaskets.
11. O-rings: Viton™.
12. Position indicator: Carbon steel.

D. Valve design:
1. End connections: Flanged.
2. Operator handle: Handwheel, with position indicator and adjustable travel stop to prevent overtightening. Provide acrylic stem cap.
3. Diaphragm valves: Weir type.
4. Pressure: 150 pound per square inch gauge at 70 degrees Fahrenheit.

E. Electric actuator:
1. Manufacturers: One of the following or equal:
    a. Asahi/America.
    b. Barton/ITT Fluid Technology Corporation.
    c. Gemu.
2. General:
    a. Reversing type motor.
    b. Suitable for 115 volt, 1 phase, 60 hertz power supply.
    c. Travel stop limit switches with remote valve open and closed status indication.
    d. Brushless, capacitor-run motors with integral thermal overload protection and auto reset.
    e. Permanently lubricated gear train.
    f. Visual position indicator.
    g. Declutchable manual override.
3. Materials:
    a. Actuator housing: Aluminum.
    b. Output shaft: Type 316 stainless steel.
    c. Electrical housing: NEMA Type 4.
    d. Enclosure: NEMA Type 4.
    e. Thermally bonded epoxy powder coating with Type 316 stainless steel trim.

2.05 CORPORATION STOPS

A. Type: In accordance with AWWA C800:
   1. Manufacturers: One of the following or equal:
      a. Ford.
      b. Mueller Co.

2.06 CURB STOPS

A. Manufacturers: One of the following or equal:
   1. Ford.
   2. Mueller Co.

B. Description: Round way solid tee head stops.

2.07 COCKS

A. Gauge cock:
   1. Manufacturers: The following or equal:
      a. Lunkenheimer Co., Figure 1178 or Figure 1180.

B. Air cock:
   1. Manufacturers: One of the following or equal:
      a. Swagelok, Model B-42S4.
      b. Hoke, Inc., 7122G4B.

C. Plug cock:
   1. Manufacturers: The following or equal:
      a. Lunkenheimer Co., Figure 454.
   2. Design: Plug cocks: Bronze, straightway pattern complete with lever.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install as specified in Section 15110 - Common Work Results for Valves in accordance with manufacturer's published instructions.

B. Install with a minimum clearance of 12 inches and with maximum clearance of 30 inches between the relief port and the floor or finished grade or top of containment wall.

C. Plastic body diaphragm valves for sodium hypochlorite service:
   1. When valves are installed horizontally, install valves with valve stem position rotated as necessary such that no internal valve obstruction prevents the passage of vapors traveling along the top of adjacent piping from traveling through the valve.

D. Backflow preventers:
   1. Install with a minimum clearance of 12 inches and with maximum clearance of 30 inches between the relief port and the floor or finished grade or top of containment wall.
   2. Install with sufficient side clearance for access for testing and maintenance.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services:
   1. Provide certificates:
      a. Manufacturer's Certificate of Installation and Functionality Compliance.
   2. Manufacturer's Representative onsite requirements:
      a. For the following valves:
         1) Flow control valves.
      b. Installation: 1 trip, 1 day minimum.
      c. Functional Testing: 1 trip, 1 day minimum each.
      d. Training:
         1) Maintenance: 2 hours per session, 2 sessions.
         2) Operations: 2 hours per session, 2 sessions.

C. Functional testing:
   1. Flow control valves:
      a. Test witnessing: Witnessed.
      b. Conduct pressure and leak test as specified in Section 15110 - Common Work Results for Valves.
   2. Backflow preventer:
      a. Test witnessing: Witnessed.
      b. Conduct pressure and leak test as specified in Section 15110 - Common Work Results for Valves.
      c. Backflow preventer certification.
   3. Plastic body diaphragm valves:
      a. Test witnessing: Witnessed.
      b. Conduct pressure and leak test as specified in Section 15110 - Common Work Results for Valves.

END OF SECTION

SECTION 15118

PRESSURE CONTROL VALVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Pressure reducing and pressure relief valves for water, air, sludge and chemical service.

B. As specified in Section 15110 - Common Work Results for Valves.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.42 - Ductile Iron Pipe Flanges and Flanged Fittings: Classes 150 and 300.

B. ASTM International (ASTM):
   1. A536 - Standard Specification for Ductile Iron Castings.

C. Underwriters Laboratories, Inc. (UL).

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15110 - Common Work Results for Valves.

C. Commissioning submittals:
   1. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 METAL BODY PRESSURE REDUCING VALVES - WATER SERVICE (PRV00)

A. Metallic pressure reducing valves for water service, 2 1/2 inches and smaller:
   1. Manufacturers: One of the following or equal:
      a. Watts, Series LF223.
      b. Zurn Wilkins, 500 Series.
   2. Direct operated, single seat type pressure reducing valve.
   3. Downstream pressure adjustment range: 30 to 300 pounds per square inch gauge (psig).

4. Materials:
    a. Body and spring cover: Bronze or brass alloy meeting the zinc and aluminum requirements of Section 15110 - Common Work Results for Valves.
    b. Valve seat: Series 300 stainless steel.
    c. Diaphragm: Reinforced Buna Nitrile.
    d. Disk: Match the gasket/elastomer material of the corresponding piping system, as specified in the Piping Schedule.

B. Metallic pressure reducing valves for water service, 3 inches and larger:
1. Manufacturers: One of the following, or equal:
    a. Cla-Val Model 90-01KO. Inlet Angled pattern (vertical inlet) with X43H Strainer.
2. Design:
    a. Pilot controlled, hydraulically operated, diaphragm actuated, globe patterned valve.
    b. Include anti-cavitation trim.
    c. Rated for the test pressure of the corresponding piping system, as specified in the Piping Schedule.
    d. Downstream pressure adjustment range: 30 to 300 psig.
    e. Pilot line: Equipped with a strainer.
    f. Flanges: Class 150 , in accordance with ASME B16.42.
3. Materials:
    a. Body and cover: Ductile Iron ASTM A536.
    b. Valve trim: Bronze.
    c. Pilot control: Cast bronze with Type 303 stainless steel trim.
    d. Diaphragm: Nylon reinforced Buna N.
    e. NSF/ANSI 61 Fusion Bonded Epoxy.

2.02 PLASTIC BODY PRESSURE REDUCING VALVES - CHEMICAL OR WATER SERVICE (PRV40)

A. Manufacturers: One of the following or equal:
1. Plast-O-Matic: Series PRHM.

B. Materials:
1. Valve body:
    a. PVC piping systems: PVC.
    b. CPVC piping systems: CPVC.
2. U-cups:
    a. Match gasket/elastomer material of corresponding piping system, as indicated on the Piping Schedule.
3. Non-wetted metallic components: Stainless steel.

C. Design:
1. Diaphragm type.
2. Pressure rating: Not less than 150 pounds per square inch.
3. In-line or angle pattern design, size as indicated on the Drawings.
4. End connections: Threaded.

5. Downstream pressure set point:
    a. Externally adjustable without removing valve from piping system.
    b. Adjustable from 5 to 125 psig.

2.03 PLASTIC BODY PRESSURE RELIEF VALVES FOR CHEMICAL OR WATER SERVICE (PRV24)

A. Manufacturers: One of the following or equal:
    1. Plast-O-Matic, Series RVT, RVDT or TRVDT.
    2. Asahi/America.
    3. Georg Fischer Piping Systems.

B. Materials:
    1. Valve body:
        a. PVC piping systems: PVC.
        b. CPVC piping systems: CPVC.
    2. U-cup seals:
        a. Match gasket/elastomer material of corresponding piping system, as specified in the Piping Schedule.
    3. Adjusting bolt, locknut, control spring and fasteners: Stainless steel.

C. Design:
    1. Pressure rating: Not less than 150 pounds per square inch.
    2. In-line or angle pattern design, size as indicated on the Drawings.
    3. End connections:
        a. 1 inch and smaller: Threaded.
        b. Larger than 1 inch: Threaded.
    4. Relief set point:
        a. Externally adjustable without removing valve from piping system.
        b. Adjustment range:
            1) Valve sizes 2 inches and smaller: 5 to 125 psig.
            2) Valve sizes 3 inches and larger: 5 to 100 psig.
        c. For chemical pump discharge applications, set valve to open at 10 pounds per square inch more than pump discharge pressure at maximum operating point, or as indicated on the Drawings.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install as specified in Section 15110 - Common Work Results for Valves.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services:
    1. Provide certificates:
        a. Manufacturer's Certificate of Installation and Functionality Compliance.

C. Functional testing:
    1. Valves:
        a. Test witnessing: Witnessed.
        b. Conduct pressure and leak test as specified in Section 15110 - Common Work Results for Valves.

END OF SECTION

SECTION 15119

AIR AND VACUUM RELIEF VALVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Air release valves, air and vacuum valves, and air vents.

B. As specified in Section 15110 - Common Work Results for Valves.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
   2. B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 through NPS 24, Metric/Inch Standard.

B. American Water Works Association (AWWA).

C. ASTM International (ASTM):
   1. A126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.
   2. A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   3. A270 - Standard Specification for Seamless and Welded Austenitic Stainless Steel Sanitary Tubing.
   4. B584 - Standard Specification for Copper Alloy Sand Castings for General Applications.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15110 - Common Work Results for Valves.

C. Commissioning Submittals:
   1. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bond.

PART 2 PRODUCTS

2.01 METAL BODY AIR RELEASE VALVES - WATER SERVICE (ARV00)

A. Manufacturers: One of the following or equal:
   1. Multiplex Manufacturing Co., Crispin PL Series.
   2. Valve and Primer Corp., DeZURIK/APCO Series 200.

B. Design:
   1. Pressure rating: 150 pounds per square inch gauge unless differently indicated on the Drawings.
   2. Provide low pressure seat when the operating pressure is below 10 psi.
   3. Inlet: Screwed, 2-inch.
   4. Orifice size: 1/4-inch diameter.

C. Materials:
   1. Valve body: Cast iron.
   2. Float and internal trim: Type 316 stainless steel.
   3. Seat or valve plunger: Buna-N.

2.02 METAL BODY AIR RELEASE VALVES - SEWAGE SERVICE (ARV20)

A. Manufacturers: One of the following or equal:
   1. Multiplex Manufacturing Co., Crispin Series S.
   2. Valve and Primer Corp., DeZURIK/APCO, Series 400.

B. Design:
   1. Operation: Release accumulated air in sewage pipelines operating under pressure. After entrained air escapes through the orifice, the orifice is plugged by a needle mounted on a compound lever mechanism.
   2. Internal components removable through top cover without removing valve from pipeline.
   3. Pressure rating: 150 pounds per square inch.
   4. Provide low pressure seat when the operating pressure is below 10 psi.
   5. Orifice size: 1/4-inch diameter.
   6. Connections: 2-inch threaded inlet and 1/2-inch threaded outlet.

C. Accessories:
   1. Inlet shutoff valve. Utilize eccentric plug valve.
   2. 2 blowoff valves for backflushing.
   3. 10 feet of hose with quick disconnect couplings.

D. Materials:
   1. Body: Cast iron or ductile iron.
   2. Float: Type 316 stainless steel.
   3. Needle: Buna-N.

2.03 METAL BODY AIR AND VACUUM VALVES - WATER SERVICE (AVV00)

A. Manufacturers: One of the following or equal:
   1. Multiplex Manufacturing Co., Crispin A Series.
   2. Valve and Primer Corp., DeZURIK/APCO Series 140.

B. Design:
   1. Minimum performance requirements:
      a. Air in-flow through valve: Not less than 6 standard cubic feet per second.
      b. Air exhaust through valve: Not less than 6 standard cubic feet per second.
   2. Pressure rating: Up to 125 pounds per square inch gauge unless differently indicated on the Drawings.
   3. Inlet: Screwed.

C. Materials:
   1. Body: Cast iron.
   2. Float: Type 316 stainless steel.

2.04 METAL BODY COMBINATION AIR VALVES - WATER SERVICE (CAV00)

A. Manufacturers: One of the following or equal:
   1. Multiplex Manufacturing Co., Crispin UL Series.
   2. Valve and Primer Corp., DeZURIK/APCO, Series 140C.

B. Design:
   1. Operation: Automatic exhaust of large quantities of air from pipelines during filling and draining and release of accumulated air while pipeline is under pressure.
   2. Utilize compound lever system in conjunction with large and small orifices.
   3. Internal parts removable through top cover without removing valve from pipeline.
   4. Pressure rating: 125 pounds per square inch.
   5. Inlet: Screwed, 1-inch size.

C. Materials:
   1. Body: Cast iron.
   2. Float: Type 316 stainless steel.
   3. Needle: Buna-N.
   4. Lever frame: Cast iron or Delrin.

2.05 PLASTIC BODY DEGASSING VALVE FOR SODIUM HYPOCHLORITE SERVICE (DGV40)

A. Manufacturers: One of the following or equal:
   1. Plast-O-Matic, DGV.
   2. Primary Fluid Systems, Accu-Vent.

B. Materials:
   1. Body:
      a. PVC piping systems: PVC.
      b. CPVC piping system: CPVC.
   2. Elastomers: Match the gasket material specified in the Piping Schedule.

3. Minimum pressure rating: 150 pounds per square inch gauge.
4. Connection: 1/4-inch NPT minimum.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install as specified in Section 15110 - Common Work Results for Valves and the manufacturer's instructions.

B. Install air release valves and air and vacuum valves with suitable discharge lines to nearest drainage system.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services:
   1. Provide certificates:
      a. Manufacturer's Certificate of Installation and Functionality Compliance.

C. Functional Testing:
   1. Valves:
      a. Test witnessing: Witnessed.
      b. Conduct pressure and leak test as specified in Section 15110 - Common Work Results for Valves.

END OF SECTION

SECTION 15120

PIPING SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Piping specialties, including:
      a. Pipe couplings for stainless steel piping.
      b. Vibration control joints.
      c. Transition fittings.
      d. Pipe saddles.
      e. Tapping sleeves.
      f. Surge cushions.
      g. Sight gauges.
      h. Chemical Injector/Diffuser.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 through NPS 24, Metric/Inch Standard.

B. American Water Works Association (AWWA):
   1. C110 - Standard for Ductile-Iron and Gray-Iron Fittings.
   2. C151 - Standard for Ductile-Iron Pipe, Centrifugally Cast.

C. ASTM International (ASTM):
   1. A148 - Standard Specification for Steel Castings, High-Strength, for Structural Purposes.
   2. A193 - Standard Specification for Alloy-Steel and Stainless Steel Bolting for High Temperature or High Pressure Service and Other Special Purpose Applications.
   3. A194 - Standard Specification for Carbon Steel, Alloy Steel, and Stainless Steel Nuts for Bolts for High Pressure or High Temperature Service, or Both.
   4. A536 - Standard Specification for Ductile Iron Castings.

D. NSF International (NSF):
   1. 61 - Drinking Water System Components - Health Effects, Includes Errata.
   2. 372 - Drinking Water System Components - Lead Content.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures and Section 01601 - Product Requirements.

B. Product data:
   1. For each piping product in this Section as applicable:
      a. Design features.
      b. Load capacities.
      c. Material designations by UNS alloy number or ASTM Specification and Grade.
      d. Data needed to verify compliance with the Specifications.
      e. Catalog data.
      f. Clearly mark Submittal information to show specific items, materials, and accessories or options being furnished.

C. Installation instructions:
   1. Provide manufacturer's installation instructions.

D. Calculations:
   1. Provide calculations in accordance with NSF 372 for materials in contact with drinking water.

E. Manufacturer's Certificate of Installation as specified in Section 01756 - Commissioning:
   1. Provide as specified in this Section.

1.04 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. As specified in Section 01601 - Product Requirements.

B. Materials in contact with drinking waters: In accordance with NSF 61 and NSF 372.

2.02 PIPE COUPLINGS FOR STAINLESS STEEL PIPING

A. Flexible hose:
   1. General:
      a. Type: Flexible stainless steel hose.
         1) Unbraided for pressures up to 150 pounds per square inch.
         2) Single braided for pressures up to 225 pounds per square inch.
         3) Double braided for pressures up to 360 pounds per square inch.
      b. End connections: Flanged, or as needed to comply with the specified type of joint:
         1) Sizes 2-1/2 inches and smaller may have threaded nipples.
         2) Sizes 2 inches through 12 inches may have grooved ends.
   2. Design:
      a. Open pitch spacing of corrugation.
      b. 1 fixed and 1 floating raised face flanged end connection.
      c. Able to withstand up to 1-inch offset motion from centerline.

3. Materials:
    a. Hose: Type 304 stainless steel.
    b. Flanges: Carbon steel.

2.03 VIBRATION CONTROL JOINTS

A. Manufacturers:
    1. Braided bronze flexible vibration joints 2 inches and less in size: One of the following or equal:
        a. Flex-Weld, Inc., Keflex, Type KFCB.
        b. Senior Flexonics Canada, Inc., Type BRC bronze connectors.
    2. Flexible vibration joints larger than 2 inches: One of the following or equal:
        a. Flex-Weld, Inc., Keflex, Series 151-TR-1215.
        b. Senior Flexonics Canada, Inc., Type TCS.
    3. Corrugated stainless steel with stainless steel braid flexible vibration joints: One of the following or equal:
        a. Flex-Weld, Inc., Keflex, Type USFNSS-31.
        b. Senior Flexonics Canada, Inc., Type BSFS stainless steel connectors.

B. Design:
    1. Flexible vibration joints 2 inches and smaller: Braided bronze, suitable for pressures of not less than 250 pounds per square inch gauge.
    2. Flexible vibration joints larger than 2 inches: Flexible bellows type, suitable for pressures of not less than 150 pounds per square inch gauge, at 70 degrees Fahrenheit, except as follows:
        a. Provide vibration joints in piping subject to test pressures higher than 150 pounds per square inch gauge, suitable for such higher pressures.
        b. Bellows: Stainless steel, equipped with a stainless steel liner.
        c. Ends: ASME Class 150 flanges.
    3. Vibration joints in high-pressure air piping and in digester gas piping: Corrugated Type 316 stainless steel with stainless steel braid, suitable for pressures of not less than 150 pounds per square inch gauge.
        a. Ends: ASME Class 150 flanges.

C. Protection: Protect vibration absorbers against end loading and torsional stresses by anchoring attached piping.

2.04 TRANSITION FITTINGS

A. Manufacturers: One of the following or equal:
    1. Spears.

B. Materials:
    1. Slip socket: Schedule 80 PVC.
    2. Collar: Type 316 stainless steel.
    3. Threaded insert: Type 316 stainless steel.

2.05 PIPE SADDLES

A. For ductile iron pipe:
    1. Double strap brass type.

2. Manufacturers: One of the following or equal:
    a. A.Y. McDonald, Style 3825.
    b. The Ford Meter Box Company, Style 202B.
    c. Mueller Company, Style BR2B.
3. Materials:
    a. Pipe saddle body, straps, and nuts: Brass or silicon bronze.
    b. Gaskets: EPDM.

B. For PVC C900 or C905 pipe:
1. Manufacturers: One of the following or equal:
    a. Romac Industries, Inc., Style 202S.
    b. Smith-Blair, Inc., Style 317.
2. Materials:
    a. Pipe saddles: Ductile iron with fusion bonded epoxy finish.
    b. Straps, bolts, and nuts: Type 304 stainless steel with Teflon™ coating on nuts.
    c. Gaskets: EPDM.

2.06 TAPPING SLEEVES

A. Manufacturers: One of the following or equal:
1. Romac Industries, Inc., Style FTS 420.
2. Smith-Blair, Inc., Style 622.

B. Materials:
1. Tapping sleeves: Steel construction.
2. Bolts and nuts: Type 304 stainless steel.
3. Nuts: Teflon™ coated.
4. Gaskets: EPDM.
5. Size of tapped boss: As indicated on the Drawings.

2.07 SURGE CUSHIONS

A. Design:
1. Minimum capacity: 150 psi.
2. Inlet and outlet:
    a. Size: 1 inches.
    b. Flange: 150 pound ASME B16.5.
    c. Connection with orifice plate to prevent extrusion of bladder from shell.
3. Surge cushion unit:
    a. Steel construction.
    b. Stamped that it meets ASME B16.5 pressure vessel requirements for pressure of 275 pounds per square inch gauge.
    c. Shell with removable top for inspection of bladder.
    d. Removable top with gas precharge connection and pressure gauge.
4. Bladder:
    a. Composed of aromatic Buna N, and charged with nitrogen.
    b. Effective for pressure shock cushion and to prevent gas absorption by the fluid.

2.08 SIGHT GAUGES, INDICATING FLOW OR LEVEL

A. Manufacturers: One of the following or equal:
   1. John C Ernst.
   2. Plast-O-Matic.

B. Provide sight gauges as indicated on the Drawings.

C. Double wall construction except for hydrofluoric acid or sodium hydroxide service.
   1. Borosilicate glass inner wall.
   2. High impact acrylic for outer wall.
      a. High light transmissibility.
      b. UV light resistant.

D. Single wall construction for hydrofluoric acid or sodium hydroxide service.
   1. High impact acrylic.

E. PTFE end connections.
   1. Suitable for 50 psi working pressure at 225 degrees Fahrenheit.

F. FKM O-ring seals.

G. FKM O-ring seals on ends of wafer connections.

H. Full 360-degree visibility.

I. Vinyl fluttering streamers for flow indication sight gauge.

2.09 CHEMICAL INJECTOR/DIFFUSER

A. Design:
   1. Chemical injector/diffuser:
      a. Injector configuration: Pre-assembled single feed point into center of water main.
      b. Operating pressure: 150 psi.
   2. Heavy duty brass corporation stop or stainless steel ball valve:
      a. Thread connection shall be NPT or AWWA inlet.
      b. Corporation stop must include a safety device to prevent accidental withdrawal of Injection/Diffuser solution tube.
   3. Injector/diffuser solution tube sized to match pump discharge line or injection flow rate:
      a. Tube shall extend 1/3- to 1/2-diameter of water main into center of main.
      b. Able to safely withdraw or insert injector/diffuser tube into center of water main while under pressure and without having to shut down the main.
      c. Integral ball check valve located on injector/diffuser assembly.
      d. Stainless steel safety chain located on injector/diffuser solution tube.

B. Materials:
   1. Injector/Diffuser: Hastelloy.

C. Manufacturers: The following or equal:
   1. Saf-T-Flo.

2.10 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 01601 - Product Requirements.

PART 3 EXECUTION

3.01 GENERAL

A. As specified in Section 01601 - Product Requirements.

B. Drawings supersede conflicts with this Section.

C. Vibration control joints:
   1. Protect joints against damage during pressure test.

3.02 INSTALLATION

A. Vibration control joints:
   1. Install at piping connections to or from mechanical equipment to prevent transmitting equipment vibration through the piping system.

B. Transition couplings:
   1. Application:
      a. Use with function and design similar to flexible couplings and flanged coupling adapters for connecting piping having different outside diameters.
   2. Install products specifically designed and manufactured for that application.

C. Pipe saddles:
   1. Coat threads on bolts with anti-gall coating prior to installation.

D. Tapping sleeves:
   1. Verify existing pipe material and outer diameter prior to ordering materials.
   2. Coat threads on bolts with anti-gall coating prior to installation.

E. Surge cushions:
   1. Provide to dampen shock pressure surges due to power loss, fast closing valves, or other events that produce water hammer.

3.03 FIELD QUALITY CONTROL

A. Manufacturer services:
   1. Required only for:
      a. Transition couplings.
   2. Provide Manufacturer’s Certificate of Installation.

B. Field testing:
   1. As specified in Section 15052 - Common Work Results for General Piping.
   2. Protect vibration control joints.

END OF SECTION

B. Society of Automotive Engineers (SAE).

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15052 - Common Work Results for General Piping.
   1. Shop drawings, detailing dimensions, and materials.
   2. Installation instructions.

C. Provide vendor operation and maintenance manual as specified in Section 01782 - Operation and Maintenance Manuals.
   1. Furnish bound sets of installation, operation and maintenance instructions for each type of strainer. Include information on valves for mechanically-cleaned strainers.

PART 2 PRODUCTS

2.01 Y-TYPE STRAINERS

A. Y-type strainers 4 inches and larger in diameter:
   1. Materials:
      a. Bodies: Cast iron or semi-steel.
      b. Ends: Flanged.
      c. Screens: Brass or Type 304 stainless steel.
   2. Suitable for following minimum pressure conditions:
      a. Steam service: 250 pounds per square inch gauge.
      b. Water, oil, and gas service: 200 pounds per square inch gauge.
   3. Perforated screens:
      a. Openings: 0.045 inches.

b. Active screen opening to pipe area ratio: 2.8, minimum.
c. Free area: 37 percent minimum.

4. Manufacturers: One of the following or equal:
   a. Armstrong International Inc., Code A1.
   b. ITT/Hoffman, 460 Series.

B. Y-type strainers less than 4 inches in diameter:
1. Materials:
   a. Bodies: Cast iron or semi-steel.
   b. Ends: Flanged or threaded.
   c. Screen: Brass or Type 304 stainless steel.
2. Suitable for maximum pressure of 250 pounds per square inch gauge.
3. Screens: Perforations: 1/32 inch.
4. Manufacturers: The following or equal:
   a. Armstrong, Y-Type Strainer.

2.02 H-STRAINER

A. Provide H-strainer as indicated on the Drawings.

B. Materials:
1. Bodies: Stainless steel.
2. Ends: Flanged.
3. Screen: Stainless Steel.

C. Suitable for maximum pressure rating of 250 pounds per square inch gauge.

D. Screen: 10 mesh or 2000 micron.

E. Connections: ANSI 150 pound flanged.

F. Manufacturers: The following or equal:
1. Cla Val, X43H.

2.03 BASKET TYPE STRAINERS

A. Provide basket type strainers single or duplex as indicated on the Drawings.

B. Materials:
1. Bodies: Cast iron or cast steel. PVC shall be used for chemical systems.
2. Baskets: Low-zinc bronze or stainless steel. PVC shall be used for chemical systems.

C. Pressure rating: Where not otherwise indicated on the Drawings, 125 pounds per square inch gauge, minimum.

D. Connections: Threaded or flanged, as required.

E. Covers:
1. For strainers 6 inches and smaller in size, secured by yokes or similar quick opening devices.

2. For strainers larger than 6 inches in size, bolted or hinged and bolted with slotted washers so that bolts or nuts need not be completely removed to open the strainer.
3. Provide lifting eyes on covers weighing more than 50 pounds.

F. Baskets:
1. Screen: Mesh or perforated sheet.
2. Openings: Not greater than 1/8 inch.
3. Free area: Not less than 30 percent.
4. Free area to pipe ratio: Not less than 3.

G. Provide duplex strainers with tapered plug transfer valve or with gate type transfer valves.
1. Where action on two valve actuators is required to transfer operation from one chamber to the other, provide actuators mechanically linked for simultaneous operation.

H. Manufacturers: One of the following or equal:
1. Single basket strainers:
a. Fluid Engineering, Series 528B.
b. Mueller Steam Specialty.
2. Double basket strainers:
a. Fluid engineering, Series 534 for sizes 1-1/2 inch to 8 inch, and Series 424 for sizes 10 inch and larger.
b. Mueller Steam Specialty.
3. Basket strainers for chemical service:
a. Hayward.
b. Dual or simplex as indicated on the Drawings; baskets and bodies PVC; gaskets Viton or EPDM as required for the chemical service; basket mesh size to be specified by the Engineer during shop drawing review.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with the manufacturer's recommendations.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning and this Section.

B. Manufacturer services for mechanically cleaned strainers, only:
1. Provide certificates:
a. Manufacturer’s Certificate of Installation and Functionality Compliance.
2. Manufacturer’s Representative onsite requirements:
a. Installation: 1 trip, 1 day minimum.
b. Functional Testing: 1 trip, 1 day minimum each.
3. Training:
a. Maintenance: 2 hours per session, 2 sessions.
b. Operation: 1 hour per session, 2 sessions.

4. Process operational period:
    a. As required by Owner or Contractor.

C. Functional testing:
    1. Mechanically cleaned strainers only:
        a. Test witnessing: Witnessed.
        b. Conduct Level 1 General Equipment Performance Test.

END OF SECTION

SECTION 15211

DUCTILE IRON PIPE: AWWA C151

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Ductile iron pipe, joints, connections, fittings, and pipe linings and coatings.

B. As specified in Section 15052 - Common Work Results for General Piping.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.

B. American Water Works Association (AWWA):
   1. C104 - Standard for Cement-Mortar Lining for Ductile-Iron Pipe and Fittings.
   2. C105 - Polyethylene Encasement for Ductile-Iron Pipe Systems.
   3. C110 - Standard for Ductile-Iron and Gray-Iron Fittings.
   4. C111 - Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
   5. C150 - Standard for Thickness Design of Ductile-Iron Pipe.
   6. C151 - Standard for Ductile-Iron Pipe, Centrifugally Cast.
   7. C153 - Standard for Ductile-Iron Compact Fittings for Water Service.
   8. C600 - Installation of Ductile Iron Water Mains and Their Appurtenances.
   9. C606 - Standard for Grooved and Shouldered Joints.

C. American Welding Society (AWS):
   1. D11.2 - Guide for Welding Iron Castings.

D. ASTM International (ASTM):
   1. A536 - Standard Specifications for Ductile Iron Castings.
   2. B1000 - Standard Practices for Casting Preparation and Test Procedure of Porcelain Enamel-Lined Pipe, Fittings, and Valves for Use in the Municipal Wastewater, Sewage, and Water Treatment Industry.
   3. C33 - Standard Specification for Concrete Aggregates.
   4. C150 - Standard Specification for Portland Cement.
   5. C283 - Standard Test Methods for Resistance of Porcelain Enameled Utensils to Boiling Acid.
   6. D792 - Standard Test Methods for Density and Specific Gravity (Relative Density) of Plastics by Displacement.
   7. D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

I. Society for Protective Coatings (SSPC):
   1. SP 5 - White Metal Blast Cleaning.
   2. SP 10 - Near White Wet Blast.
   3. SP 11 - Bare Metal Power Tool Cleaning.
   4. PA 2 - Measurement of Dry Coating Thickness with Magnetic Gages.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data.

C. Manufacturer's qualifications.
   1. Manufacturer qualifications and list of projects using the specified material: 5 years minimum.

D. Manufacturer's Quality Assurance Manual:
   1. Submit manufacturer's coating and lining application quality assurance manual to the Engineer prior to beginning coating application.
      a. Strict conformance to the requirements of the manual will be required.
      b. Deviation from the requirements of the manual will be grounds for the Engineer to reject the applied coating.

E. Shop Drawings:
   1. Detailed layout drawings showing alignment of pipes, location of valves, fittings, and appurtenances, types of joints, and connections to pipelines or structures.
   2. Thrust restraint systems.
   3. Photographs, drawings, and descriptions of fittings, gaskets, couplings, grooving of pipe and fittings.

F. Calculations:
   1. Thrust restraint system design.

1.04 QUALITY ASSURANCE

A. Ductile iron pipe shall be supplied by a single manufacturer.

B. Hydrostatically test each joint of ductile iron pipe in accordance with AWWA C151.

C. Pre-installation meeting:
   1. Arrange for the coating manufacturer's technical representative to attend preconstruction conferences and to make periodic visits to the factory or shop to inspect surface preparation of pipe, fittings, and accessories; and to inspect application of linings to interior and coatings to exterior of pipe, fittings, and accessories.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Block piping and associated fittings for shipment to prevent damage to coatings and linings.

B. Carefully handle piping and associated fittings during loading, unloading, and installation:
   1. Do not drop piping material from cars or trucks.
   2. Lower piping by mechanical means.
   3. Do not drop or pound pipe to fit grade.

C. Protect gaskets and polyethylene encasement from long-term exposure to sunlight.

D. Store piping, fittings, and other accessories such that they do not accumulate and hold rainwater, dirt, and debris.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Ductile iron piping:
   1. Manufacturers: One of the following or equal:
      a. American Cast Iron Pipe Co.
      b. McWane Ductile.
      c. SIP Industries.
      d. U.S. Pipe.

2.02 THRUST RESTRAINT SYSTEM DESIGN

A. Determine the length of pipe that must be restrained on each side of the focus of a thrust load as specified in the procedures and criteria established by the DIPRA Thrust Restraint Design Manual, City of Roseville standards, and the following additional criteria.

B. Design pressure: Test pressure.

C. Laying condition: Type 5 in accordance with AWWA C150.

D. Soil type: Silt 1 as defined by DIPRA.

E. Unit friction resistance for polyethylene encasement of pipe: DIPRA factor multiplied by a safety factor of 1.5.

2.03 CONCRETE THRUST BLOCK RESTRAINT

A. Joint thrust restraint system designed by the Contractor.
   1. Concrete thrust blocks will not be permitted for DIP restraint unless shown on the Drawings.

2.04 DUCTILE IRON JOINTS AND CONNECTIONS

A. General:
   1. Pressure class or special thickness class as indicated on the Drawings.
   2. In accordance with AWWA C150 and AWWA C151.
   3. Joints:
      a. Flanged.
      b. Grooved.
      c. Mechanical.
      d. Integrally restrained push-on.
   4. Connections:
      a. Tapping saddle.
      b. Tapping sleeve.
      c. Welded outlet.
   5. Fittings.

B. Joints:
   1. Flanged joints:
      a. Screw-on flanges:
         1) Comply with the diameter, thickness, drilling, and other characteristics in accordance with ASME B16.1.
         2) Ductile iron.
         3) Long hub, threaded, and specially designed for ductile iron pipe.
         4) After attaching to pipe, machine flange face to make pipe end and flange even and perpendicular to the axis of the pipe.
      b. Bolt holes on flanges: 2-holed and aligned at both ends of pipe.
      c. Cap screw or stud bolt holes: Tapped.
      d. Bolts and nuts:
         1) As specified in Section 15052 - Common Work Results for General Piping.
      e. Gaskets:
         1) Standard styrene butadiene copolymer (SBR) unless specified otherwise in Section 15052 - Common Work Results for General Piping.
   2. Grooved joints:
      a. In accordance with AWWA C606, as complemented and modified below, radius-cut type.
      b. Couplings:
         1) Rigid type, cast from ductile iron in accordance with ASTM A536, Grade 65-45-12.
      c. Bolts and nuts:
         1) In accordance with ASTM A 183, Grade 2.

d. Gaskets:
    1) Capable of being applied on surface of piping with cavities to provide for an improved seal with the internal piping pressure. Material to be used for following services:
        a) For liquid service: NBR.
        b) For air service: Fluoroelastomer.
        c) For hot water service: EPDM.
e. Fittings:
    1) In accordance with AWWA C606, rigid radius-cut groove.
    2) Center-to-center dimensions: In accordance with AWWA C110.
    3) Wall thickness and other characteristics: In accordance with AWWA C606.
f. Flanged unit connections:
    1) Flanged to grooved joint adapters or a long enough spool with one end flanged and the other end grooved to prevent interference with the operation of adjacent valves, pumps, or other items.

3. Mechanical joints:
    a. In accordance with AWWA C111.
    b. Gaskets:
        1) As specified in Section 15052 - Common Work Results for General Piping.
    c. Bolts and nuts, including T-bolts:
        1) As specified in Section 15052 - Common Work Results for General Piping.
4. Integrally restrained mechanical joints:
    a. Manufacturers: Where restrained mechanical joints are required, use one of the following or equal:
        1) American Cast Iron Pipe Co., MJ Coupled Joint.
        2) U.S. Pipe, Bolt-Lok.
        3) U.S. Pipe, Mech-Lok.
    b. Application:
        1) Where designated mechanical restraint.
        2) Mechanical joint is specified in the Piping Schedule provided on the Drawings, supply a restrained mechanical joint piping system, which includes restrained mechanical joints where necessary based upon thrust calculations.
        3) Standard mechanical joints as specified above can be used where thrust calculations demonstrate restraint is not required.
    c. Design:
        1) Integral retainer weldment type or lugged type joint with Type 304 stainless steel rods and nuts.
        2) Restrained mechanical joints of the configuration which utilizes a gripping or friction force for restraint will not be acceptable.
    d. Gaskets:
        1) As specified in Section 15052 - Common Work Results for General Piping.
    e. Bolts and nuts, including T-bolts:
        1) As specified in Section 15052 - Common Work Results for General Piping.

5. Integrally restrained push-on joints:
    a. Application:
        1) Where designation restrained push-on as indicated on the Drawings, supply a restrained push-on joint piping system, which includes restrained push-on joints where necessary based upon thrust calculations.
        2) Standard push-on rubber gasket joints as specified above can be used where thrust calculations demonstrate restraint is not required.
    b. Design:
        1) Restrained push-on joints of the configuration which utilizes a gripping or friction force for restraint will not be acceptable.
        2) Suitable for the following working pressures:
            a) 4- through 24-inch pipe: 350 pounds per square inch gauge.
            b) 30- through 54-inch pipe: 250 pounds per square inch gauge.
    c. Gaskets:
        1) As specified in Section 15052 - Common Work Results for General Piping.
    d. Manufacturers: One of the following or equal:
        1) American Cast Iron Pipe Co., Flex Ring or Lok-Ring.
        2) McWane Ductile, TR Flex.
        3) U.S. Pipe, TR Flex.
    e. Limit buried joints to half the manufacturer's published allowable angular joint deflection for purposes of pipeline alignment and elimination of fittings.

C. Connections:
    1. Tapping saddle as specified in Owner standard specification.
        a. If Owner does not have a standard specification, provide tapping saddles as specified in Section 15120 - Piping Specialties.
    2. Tapping sleeve as specified in Owner standard specification.
        a. If Owner does not have a standard specification, provide tapping sleeves as specified in Section 15120 - Piping Specialties.
    3. Welded outlet:
        a. Not allowed without Engineer approval.

D. Fittings:
    1. Ductile iron in accordance with AWWA C110 or AWWA C153.
    2. Joint type:
        a. Same as that of the associated piping as specified in Section 15052 - Common Work Results for General Piping.
    3. Plain end-to-flanged joint connectors using setscrews are not acceptable.

2.05 CEMENT MORTAR

A. Line pipe with cement mortar in accordance with AWWA C104 and as specified in this Section.

B. Cement:
    1. Cement: In accordance with ASTM C150, Type II.

C. Water:
   1. In accordance with AWWA C104 and as specified in this Section.

D. Sand and aggregate:
   1. In accordance with AWWA C104.
   2. Provide silica sand or other aggregate that is not subject to leaching in accordance with ASTM C33.

E. Lining:
   1. Minimum thickness: Standard in accordance with AWWA C104.
   2. Apply cement mortar on clean bare metal surfaces.
   3. Extend to faces of flanges, ends of spigots, and shoulders of hubs.
   4. Line special pieces or fittings by mechanical, pneumatic, or hand placement.
      a. Extend to faces of flanges and ends of spigots.
      b. Less than 12 inches in width: Coat with epoxy bonding agent prior to applying cement mortar.
      c. Larger than 12 inches in width: Reinforced with 2-inch by 4-inch No. 13 gauge welded steel wire mesh prior to applying cement mortar.
   5. Provide plastic end caps of sufficient thickness and strength to resist shipping, handling, and storage stresses.
   6. Repair damage to the cement mortar lining, including disbondment, or cracking caused by improper curing, shipping, handling, or installation in accordance with AWWA C104 and approved by the Engineer.
      a. Reinforce coating with 2 layers spirally-wound steel wire positioned approximately in center of mortar coating positioned approximately at the third points of mortar coating:
         1) No. 12 gauge spaced at maximum 1-inch centers.
         2) No. 14 gauge steel wire at maximum 1/2-inch centers.

2.06 POLYETHYLENE ENCASEMENT

A. General:
   1. Polyethylene encasement shall be supplied by the pipe manufacturer.

B. Materials: Supply one of the following polyethylene encasements:
   1. 2 layers of linear low-density polyethylene (LLDPE) film, minimum thickness of 8 mils in accordance with AWWA C105.
   2. Single layer of high-density, cross-laminated polyethylene (HDCLPE) film, minimum thickness of 4 mils in accordance with AWWA C105.

2.07 SEAL COAT

A. Asphaltic seal coat:
   1. Apply over cement mortar linings and to outside surface of pipes that will not receive another coating.
   2. Apply in accordance with AWWA C151.

2.08 CORROSION MONITORING

A. As specified in Section 15320 - Corrosion Protection Isolation.

2.09 CATHODIC PROTECTION

A. As specified in Section 15320 – Corrosion Protection Isolation.

PART 3 EXECUTION

3.01 INSTALLATION

A. General:
   1. Install ductile iron piping in accordance with AWWA C600, or as modified in Section 15052 - Common Work Results for General Piping.
   2. For underground piping, the trenching, backfill, and compaction:
      a. Inspect coating prior to backfill.
      b. As specified in Section 02318 - Trenching.

B. Joints:
   1. Install types of joints as specified in the piping schedule provided in the Drawings.
   2. Mechanical joints are not acceptable in above ground applications.
   3. Field closure for restrained push-on pipe:
      a. Locate field closures in areas where thrust calculations demonstrate restraint is not required.
   4. Grooved joints:
      a. Install piping with grooved joints where specified in the piping schedule, or as otherwise indicated on the Drawings.
      b. Assemble grooved joints in accordance with the manufacturer's published instructions.
      c. Support grooved-end pipe in accordance with the manufacturer's published instructions.
         1) Install at least 1 support between consecutive couplings.

C. Connection:
   1. Tapping ductile iron pipe:
      a. Direct tapping of ductile iron pipe may be performed but is limited to the following conditions:
         1) Maximum allowable tap diameter by pipe diameter and pressure class:

Pipe Size (inches)	Pressure Class				
	150	200	250	300	350
	Maximum Allowable Direct Tap Size (inches)				
3	-	-	-	-	3/4
4	-	-	-	-	3/4
6	-	-	-	-	1
8	-	-	-	-	1
10	-	-	-	-	1
12	-	-	-	-	1-1/4
14	-	-	1-1/4	1-1/2	1-1/2

Pipe Size (inches)	Pressure Class				
	150	200	250	300	350
	Maximum Allowable Direct Tap Size (inches)				
16	-	-	1-1/2	2	2
18	-	-	2	2	2
20	-	-	2	2	2
24	-	2	2	2	2

b. Maximum allowable tap diameter for pipelines greater than 24 inches is 2 inches.
c. 2 layers of 3-mil thread sealant are required to minimize the torque required to effect a watertight connection.

2. When direct tapping of ductile iron pipe is not possible due to limited wall thickness, a saddle tap shall be used.

3.02 DEFECTS IN COATINGS EXCEPT TAPE WRAP AND CEMENT MORTAR COATING

A. Engineer will identify defective coating to be field repaired in accordance with the applicable AWWA standard.
   1. Pipe joints exceeding the following defect maximum will be rejected.
      a. Minor defects:
         1) No more than 1.5 per 100 square feet of surface area.
         2) 2 or more minor repairs within an 8-inch diameter circle will be considered a single repair.
         3) Repairs for adhesion testing will not be included in the total number of repairs.
         4) Repair in accordance with the manufacturer's requirements.
      b. Major defects:
         1) No more than 3 major repairs on each pipe joint.
         2) No more than 30 percent repairs on the pipe surface area with defects.
   2. Minor repairs:
      a. Less than 8 inches in the greatest dimension.
      b. Repair in accordance with the manufacturer's requirements.
   3. Major repairs:
      a. Exceed 8 inches in the greatest dimension.
      b. Repair in accordance with the manufacturer's requirements.

3.03 POLYETHYLENE ENCASEMENT

A. Wrap buried ductile iron pipe and fittings in 2 layers of loose low-density polyethylene wrap or a single layer of high-density polyethylene wrap in accordance with AWWA C105 and as specified in this Section.

B. Wrap polyethylene encasement to be continuous and terminated neatly at connections to below grade equipment or structures.

C. At wall penetrations, extend encasement to the wall and neatly terminate.

D. At slab penetrations, extend encasement to 2 inches below the top of slab and neatly terminate.

E. When rising vertically in unimproved areas, extend encasement on pipe 6 inches above existing grade and neatly terminate.

F. Repair tears and make joints with 2 layers of plastic tape.

G. Work shall be inspected prior to backfilling of pipe and associated items.

3.04 CORROSION MONITORING FACILITIES

A. Bond pipe joints and associated fittings to provide electrical continuity.

B. Install dielectric insulating fittings and corrosion monitoring facilities as indicated on the Drawings and specified in Section 15320 - Corrosion Protection Isolation.

3.05 FIELD QUALITY CONTROL

A. Testing ductile iron piping:
   1. Test as specified in Section 15052 - Common Work Results for General Piping and Section 15956 - Piping Systems Testing.

B. Repair damaged cement mortar lining to match quality, thickness, and bonding of original lining in accordance with AWWA C104.
   1. When lining cannot be repaired or repairs are defective, replace defective piping with undamaged piping.

END OF SECTION

SECTION 15229

REINFORCED CONCRETE PIPE: ASTM C76

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Reinforced concrete gravity piping with plastic liner.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C76 - Standard Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
   2. C150 - Standard Specification for Portland Cement.
   3. C361 - Standard Specification for Reinforced Concrete Low-Head Pressure Pipe.
   4. D297 - Standard Test Methods for Rubber Products-Chemical Analysis.
   5. D395 - Standard Test Methods for Rubber Property-Compression Set.
   6. D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension.
   7. D2240 - Standard Test Method for Rubber Property-Durometer Hardness.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Shop drawings:
   1. Detailed layout drawings including listing of connector pipes with size and D-Load of pipe, stations where pipe joins mainline, and number of sections of pipe, length of sections, type of sections indicating straight, horizontal bevel, vertical bevel, or other type; pipe stubs; gasket shape and size; and liner details.
   2. Gasket specifications.
   3. Design calculations.

C. Provide Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning. Include:
   1. Cement mill certificates for each load of cement delivered showing specification, type, chemical analysis, and quantity; or for stockpiled pipe, certification that cement meets Specifications.
   2. Cement content compliance with yield to cubic yard of concrete.
   3. Lack of calcium chloride or admixtures.
   4. Admixture approval.
   5. Reinforcing steel mill certificates showing heat numbers, chemical analysis, and physical tests; or for stockpiled pipe, certification that steel meets or exceeds specifications.
   6. Gasket test results showing physical properties.

D. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 QUALITY ASSURANCE

A. Manufacturer qualifications: Manufacture of proposed products for minimum 5 years with satisfactory performance record.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Maintain struts and other protective methods to prevent the formation of cracks larger than the specified tolerances.

B. Handle pipe with exterior slings or suitable forklifts.
   1. Do not use interior hooks or slings when lifting pipe.

C. Store cement in weathertight, dry, well-ventilated structures.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Determine reinforcement required for adequate pipe wall thicknesses and to support anticipated loads.

B. Calculate reinforcing steel and load requirements without consideration for sacrificial lining.

2.02 MATERIALS

A. Portland cement, aggregate, water, and steel: ASTM C76, with following exceptions:
   1. Cement: ASTM C150, Type II, low alkali.
   2. Admixtures: Without calcium chloride.

B. Gaskets: ASTM C361; o-ring type; diameter as indicated within 1/32 inch; with synthetic rubber compound containing minimum 50 percent neoprene by volume and no deleterious substances, and having the following characteristics:
   1. Tensile strength: Minimum 1,900 pounds per square inch when tested in accordance with ASTM D412.
   2. Elongation at break: Minimum 425 percent when tested in accordance with ASTM D412.
   3. Durometer hardness: Maximum Type A Shore of 55 within 3 when tested in accordance with ASTM D2240.
   4. Compression set: Maximum 20 percent after aging by the oxygen-pressure chamber for 96 hours, at 158 within 1.8 degrees Fahrenheit, and 300 pounds per square inch within 15 pounds per square inch, and tested in accordance with ASTM D395, Method B, except with 1/2-inch long disc of gasket stock.
   5. Aged tensile strength: Maximum 80 percent of pre-aged strength after aging by the oxygen-pressure chamber for 96 hours, at 158 within 1.8 degrees

Fahrenheit, and 300 pounds per square inch, and tested in accordance with ASTM D395, Method B, except with 1/2-inch long disc of gasket stock.

6. Aged durometer hardness: Maximum Type A Shore of 63 within 3, after aging in an oxygen-pressure chamber for 96 hours, at 158 within 1.8 degrees Fahrenheit, and 300 pounds per square inch within 15 pounds per square inch, and tested in accordance with ASTM D2240.
7. Specific gravity: From 1.29 to 1.31 when tested in accordance with ASTM D297.

C. Curing compound: As specified in Section 03300 - Cast-in-Place Concrete.

2.03 MIXES

A. Pipe concrete: Minimum 564 pounds cement per cubic yard of concrete, and water to produce a maximum 4-inch slump.

B. Reject lumpy concrete.

C. Allow concrete to cool to below 150 degrees Fahrenheit before use.

2.04 FABRICATION

A. Fabricate pipe in accordance with ASTM C76 as modified by the Contract Documents with Class and diameter indicated on the Drawings.

B. Fabricate pipe by vertical wet-cast or centrifugally spun process.
1. Do not use Tamped or Packer Head method.

C. Form rectangular grooves to be filled substantially with gaskets, and to compress and confine gaskets; while not reducing concrete cover over reinforcing.

D. Wrap steel reinforcement with maximum of 5 percent less wraps than wraps indicated on shop drawings.

E. Plainly mark manufacturer's identification, D-Load, class of pipe, and date poured inside pipe sections.

F. Vibrate, spade, or compact concrete against liner carefully to protect liner and to produce a dense, homogeneous concrete that securely anchors liner anchors.

G. Cure concrete by one of the following methods:
1. Steam curing:
    a. Provide adequate steam plant, piping, enclosures, and other facilities for curing pipe.
    b. Maintain enclosures between 110 and 150 degrees Fahrenheit continuously with maximum rate of rise of 30 degrees per hour.
    c. Equip steam-curing enclosures with 7-day recording thermometers.
    d. Cure pipe when concrete has attained an initial set, but not sooner than 1 hour or later than 8 hours after placing of concrete.

2. Water cure:
    a. When water curing is not started immediately, seal concrete surfaces with curing compound.
    b. Keep pipe moist during daylight hours.
    c. Cover pipe, including ends, with burlap for the first 3 days, or keep pipe constantly and completely wet with fog spray during daylight hours.

2.05 SOURCE QUALITY CONTROL

A. Require scales used to proportion materials to be calibrated and sealed by the government agency having jurisdiction over weights and measures.

B. Provide satisfactory facilities for identifying, inspection, and sampling cement at the mill, warehouse, and manufacturing site; and concrete at the manufacturing site.
    1. Engineer may inspect cement and obtain samples for testing at the mill, warehouse, and pipe-manufacturing site.
    2. Engineer may inspect concrete and obtain samples for testing at the manufacture site.

C. Pipe acceptance: Based on plant load-bearing tests, material tests, and inspection of pipe for defects in accordance with ASTM C76 as modified by the Contract Documents.

D. Concrete cylinder tests:
    1. In accordance with ASTM C76.
    2. Allow for a reasonable number of additional cylinders for testing by Owner.

E. Edge bearing tests: Perform a minimum of two, 3-edge bearing tests and determine the load needed to produce a 0.01-inch crack for each size of pipe.

F. Cracks:
    1. Sanitary sewer pipe:
        a. Reject sanitary sewer pipe with cracks that go through pipe walls, regardless of length of cracks.
        b. Repair single end cracks that do not exceed the depth of joints as measured from ends to inside shoulders.
    2. Other pipe:
        a. Reject pipe with cracks extending through pipe walls and extending for more than 1 foot; cracks measuring 0.01-inch wide, 1/16 inch or more deep, and 1 foot or more long; hairline cracks to reinforcing steel; and cracks longer than half the length of pipe.
    3. Repair pipe with single continuous hairline cracks longer than 1 foot, and not extending to reinforcing steel.

G. Porous areas:
    1. Remove porous or honeycomb concrete areas 6 inches in or less in diameter or in longest dimension, and repair areas.
    2. Reject pipe with larger porous or honeycomb concrete areas.

PART 3 EXECUTION

3.01 INSTALLATION

A. General:
   1. Lay pipe as specified in Section 15052 - Common Work Results for General Piping and this Section.
   2. Curves, bends, and closures:
      a. Make long radius curves by deflecting joints of straight pipe.
         1) Limit deflections to maximum 3/4-inch joint openings for 36-inch diameter pipe and larger.
      b. Make short radius curves by using straight pipe with beveled joints.
         1) Limit bevels to 5 degrees.
      c. Make shorter radius curves and closures by using fabricated specials.
      d. Install pipe so pipe joints fall on radii indicated on the Drawings.

END OF SECTION

SECTION 15230

PLASTIC PIPING AND TUBING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Plastic pipe, tubing, and fittings for systems that are not plumbing systems.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.12 - Cast Iron Threaded Drainage Fittings.

B. ASTM International (ASTM):
   1. D1784 - Standard Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds.
   2. D1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80 and 120.
   3. D1869 - Standard Specification for Rubber Rings for Asbestos-Cement Pipe.
   4. D2412 - Standard Test Method for Determination of External Loading Characteristics of Plastic Pipe by Parallel-Plate Loading.
   5. D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
   6. D2467 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.
   7. D2513 - Standard Specification for Thermoplastic Gas Pressure Pipe, Tubing and Fittings.
   8. D2564 - Standard Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems.
   9. D2665 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings.
   10. D2855 - Standard Practice for the Two-Step (Primer and Solvent Cement) Method of Joining Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Pipe and Piping Components with Tapered Sockets.
   11. D3034 - Standard Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
   12. D3212 - Standard Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
   13. D3261 - Standard Specification for Butt Heat Fusion Polyethylene (PE) Plastic Fittings for Polyethylene (PE) Plastic Pipe and Tubing.
   14. D3350 - Standard Specification for Polyethylene Plastic Pipes and Fittings Materials.
   15. D4101 - Standard Specification for Polypropylene Injection and Extrusion Materials.
   16. F438 - Standard Specification for Socket-Type Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe Fittings, Schedule 40.

17. F439 - Standard Specification for Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe Fittings, Schedule 80.
18. F441 - Standard Specification for Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe, Schedules 40 and 80.
19. F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
20. F493 - Standard Specification for Solvent Cements for Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe and Fittings.
21. F645 - Standard Guide for Selection, Design and Installation of Thermoplastic Water-Pressure Piping Systems.
22. F679 - Standard Specification for Poly(Vinyl Chloride) (PVC) Large-Diameter Plastic Gravity Sewer Pipe and Fittings.
23. F714 - Standard Specification for Polyethylene (PE) Plastic Pipe (SDR-PR) Based on Outside Diameter.

C. American Water Works Association (AWWA):
   1. C900 - Standard for Polyvinyl Chloride (PVC) Pressure Pipe and Fabricated Fittings, 4 Inches to 12 Inches, for Water Transmission Distribution.

D. NSF International (NSF).

E. Plastics Pipe Institute (PPI):
   1. TR 31 - Underground Installation of Polyolefin Piping.

1.03 ABBREVIATIONS

A. ABS: Acrylonitrile-butadiene-styrene.

B. CPVC: Chlorinated polyvinyl chloride.

C. DR: Dimension ratio.

D. DWV: Drain, waste, and vent.

E. HDPE: High-density polyethylene.

F. ID: Inside diameter of piping or tubing.

G. NPS: Nominal pipe size followed by the size designation.

H. NS: Nominal size of piping or tubing.

I. PE: Polyethylene.

J. PP: Polypropylene.

K. PVC: Polyvinyl chloride.

L. SDR: Standard dimension ratio; the outside diameter divided by the pipe wall thickness.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15052 - Common Work Results for General Piping.

C. Shop Drawings:
   1. Describe materials, pipe, fittings, gaskets, and solvent cement.
   2. Installation instructions.

1.05 QUALITY ASSURANCE

A. Plastic pipe in potable water applications: Provide pipe and tubing bearing NSF seal.

B. Mark plastic pipe with nominal size, type, class, schedule, or pressure rating, manufacturer and all markings required in accordance with ASTM and AWWA standards.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect piping materials from sunlight, scoring, and distortion.

B. Do not allow surface temperatures on pipe and fittings to exceed 120 degrees Fahrenheit.

C. Store and handle pipe and fittings as recommended by manufacturer in published instructions.

PART 2 PRODUCTS

2.01 MATERIALS

A. Extruding and molding material: Virgin material containing no scrap, regrind, or rework material except where permitted in the referenced standards.

B. Fittings: Same material as the pipe and of equal or greater pressure rating, except that fittings used in drain, waste, and vent piping systems need not be pressure rated.

C. Unions 2-1/2 inches and smaller: Socket end screwed unions. Make unions 3 inches and larger of socket flanges with 1/8-inch full-face soft EPDM gasket.

2.02 PVC PIPING, SCHEDULE TYPE

A. The requirements for PVC piping used in plumbing systems are found in Section 15400 - Plumbing Systems.

B. Materials:
   1. PVC Pipe: Designation PVC 1120 in accordance with ASTM D1785 and appendices:
      a. Pipe and fittings: Extruded from Type I, Grade 1, Class 12454 material in accordance with ASTM D1784.
      b. PVC Pipe: Schedule 80 unless otherwise indicated on the Drawings.
   2. Fittings:
      a. Supplied by pipe manufacturer.
      b. Pressure fittings: In accordance with ASTM D2466 or ASTM D2467.
      c. DWV fittings: In accordance with ASTM D2665.
   3. Solvent cement: In accordance with ASTM D2564:
      a. Chemical service: For CPVC or PVC pipe in chemical service, provide the following primer and cement, or equal:
         1) Primer: IPS Corp., Type P70.
         2) Cement: IPS Corp., Type 724 cement or another cement certified by the manufacturer for chemical service.

2.03 PVC GRAVITY SEWER PIPING

A. The requirements for PVC piping used in plumbing systems are found in Section 15400 - Plumbing Systems.

B. Materials:
   1. Polyvinyl chloride (PVC) gravity sewer pipe and fittings: In accordance with ASTM D3034 for piping NPS 15 and smaller diameter, and to ASTM F679 for piping NPS 18 and larger diameter:
      a. Referenced standards apply as complemented and modified in this Section.
      b. Fittings: Supplied by the pipe manufacturer.
   2. PVC compounds: Class Number 12454, in accordance with ASTM D1784:
      a. Stabilizers, antioxidants, lubricants, colorants, and other additives and fillers: Not to exceed 10 parts by weight per 100 of PVC resin in the compound.
   3. Pipe NPS 15 and smaller diameter: Wall thickness SDR 26:
      a. Joints: Push-on joints in accordance with ASTM D3212.
   4. Pipe NPS 18 and larger diameter:
      a. PVC compound: Cell classification 12454 in accordance with ASTM D1784.
      b. Minimum wall thickness: Thickness T-1 in accordance with Table 1 in ASTM F679.
      c. Joints: Integral bell gasketed joints in accordance with ASTM F679.
      d. Bell: Fabricated from pipe sections, thickness of the wall of the bell equivalent to the pipe wall thickness.
      e. Gasket ring: Locked into the bell.
      f. Spigot end of the pipe: Marked by the manufacturer to identify the final in-place position of the spigot in the bell.
   5. Fittings, including wyes, tees, elbow caps, plug adapters, and manhole waterstops: Same wall thickness as the pipe:
      a. Fittings: Factory molded with joints and gaskets equal to those of the pipe.

6. Gasket: EPDM in accordance with ASTM D3212 or ASTM F477:
    a. Keep rubber gasket in place during pipe joining.
7. Gasket for connection to manhole: Stainless steel clamp with gasket or similar device to seal the penetration.

2.04 CPVC PIPING

A. Materials:
1. CPVC pipe: Schedule 40 or Schedule 80, as specified, in accordance with ASTM F441 and Appendix, CPVC 4120:
    a. Pipe: Extruded from Type IV, Grade 1, Class 23447 material in accordance with ASTM D1784.
    b. Manufacturers: One of the following or equal:
        1) Charlotte Pipe and Foundry Co.
        2) Eslon Thermoplastics, Inc.
        3) GF Harvel.
2. Fittings: In accordance with ASTM F438 or ASTM F439 for pressure fittings, as appropriate to the service and pressure requirement:
    a. Fittings: Supplied by the pipe manufacturer.
    b. Manufacturers: One of the following or equal:
        1) Colonial Engineering.
        2) Eslon Thermoplastics, Inc.
        3) Chemtrol.
        4) Spears Manufacturing Co.
3. Solvent cement: In accordance with ASTM F493:
    a. For CPVC pipe in chemical service, utilize IPS Corp., Type 724 cement or another cement certified by the manufacturer for high strength hypochlorite service.

2.05 PFA TUBING AND FITTINGS

A. Materials:
1. Small bore PFA tubing: ASTM D 3307 Type II, Natural color, OD copper tubing size.
    a. Plastic tubing ID as follows:
        1) For NS 1/4 inch, ID of 0.125 inch.
        2) For NS 5/16 inch, ID of 0.1875 inch.
        3) For NS 3/8 inch, ID of 0.25 inch.
        4) For NS 1/2 inch, ID of 0.375 inch.
        5) For NS 3/4 inch, ID of 0.625 inch.
        6) For NS 1 inch, ID of 0.875 inch.
        7) For NS 1-1/8 inch, ID of 1 inch.
    b. Fittings: Compression fittings.
    c. Supplied in 1000 foot coiled lengths.
    d. Manufacturers: One of the following or equal:
        1) Altaflo, Altraflour 400.
        2) Parker Hannifin Corp., 104 Series Heavy Wall.

2.06 SOURCE QUALITY CONTROL

A. The requirements for PVC piping used in plumbing systems are found in Section 15400 - Plumbing Systems.

B. PVC piping, Schedule Type:
   1. Mark pipe and fittings in accordance with ASTM D1785.

C. PVC gravity sewer piping:
   1. Mark pipe and fittings in accordance with ASTM D3034. Also mark the production control code on pipe and fittings.

D. CPVC piping:
   1. Mark pipe and fittings in accordance with ASTM F441.

PART 3 EXECUTION

3.01 INSTALLATION

A. General:
   1. Where not otherwise specified, install piping in accordance with ASTM F645, or manufacturer's published instructions for installation of piping, as applicable to the particular type of piping.
   2. Provide molded transition fittings for transitions from plastic to metal or IPS pipe. Do not thread plastic pipe.
   3. Locate unions where indicated on the Drawings, and elsewhere where required for adequate access and assembly of the piping system.
   4. Provide serrated nipples for transition from plastic pipe to rubber hose.

B. Installation of PVC piping, Schedule Type:
   1. The requirements for PVC piping used in plumbing systems are found in Section 15400 - Plumbing Systems.
   2. Solvent weld joints in accordance with ASTM D2855:
      a. For PVC pipe in chemical service use IPS Corp., Type 724 cement in accordance with manufacturer's instructions.
   3. Install piping in accordance with manufacturer's published instructions.

C. Installation of PVC gravity sewer piping:
   1. The requirements for PP piping used in plumbing systems are found in Section 15400 - Plumbing Systems.
   2. Install piping in accordance with manufacturer's published instructions, as modified and complemented in this Section.
   3. Install pipe and fittings not later than 4 months after their manufacture.
   4. Provide for contraction and expansion at joints with a gasket ring.
   5. Provide plugs or caps for stubs and branch pipes left unconnected to laterals.
   6. Lubricate and assemble joints in accordance with the pipe manufacturer's published instructions.

7. Make connections to manholes with a manhole gasket that prevents infiltration and exfiltration through the penetrations:
    a. Provide opening for connection large enough to allow subsequent grouting around the manhole gasket.
    b. Grout around the manhole gasket and seal the opening.

D. Installation of CPVC piping:
1. Clean dirt and moisture from pipe and fittings.
2. Bevel pipe ends in accordance with manufacturer's instructions with chamfering tool or file. Remove burrs.
3. Use solvent cement and primer formulated for CPVC:
    a. For CPVC pipe in chemical service use IPS Corp., Type 724 cement in accordance with manufacturer's instructions.
4. Use primer on pressure and non-pressure joints.
5. Do not solvent weld joints when ambient temperatures are below 40 degrees Fahrenheit or above 90 degrees Fahrenheit unless solvent cements specially formulated for these conditions are utilized.

3.02 FIELD QUALITY CONTROL

A. Leakage test for PVC piping:
1. The requirements for PVC piping used in plumbing systems are found in Section 15400 - Plumbing Systems.
2. Polyvinyl chloride (PVC) piping: Subject to visible leaks test and to pressure test with maximum leakage allowance, as specified in Section 15956 - Piping Systems Testing.
3. Pressure test with maximum leakage allowance: Perform test after backfilling:
    a. Pressure: 125 pounds per square inch, gauge.
    b. Maximum leakage allowance as follows, wherein the value for leakage is in gallons per 100 joints per hour:

NPS, Inches	1-1/2	2	2-1/2	3	4	6	8	10	12
Leakage	0.41	0.52	0.63	0.76	0.98	1.45	1.88	2.35	2.80

B. Mandrel tests for PVC gravity sewer piping:
1. The requirements for PVC piping used in plumbing systems are found in Section 15400 - Plumbing Systems.
2. Perform initial mandrel test:
    a. After cleaning and completion of other tests.
    b. After placement and compaction of backfill.
    c. Before construction of pavement or surfacing.
    d. Not sooner than 30 days after pipe installation.
    e. Not later than 60 days after installation.
3. Perform final verification mandrel test:
    a. Not sooner than 30 days before the end of the warranty period.
    b. Not later than 10 days before the end of the warranty period.
    c. Consider the final verification mandrel test a warranty service, and include the costs related to final verification mandrel test in the Contract Price.

4. Utilize a 9 rod mandrel with minimum length equal to NPS and diameter as follows:

Nominal Pipe Size (NPS)	Mandrel Diameter, inches
6	5.50
8	7.37
10	9.21
12	10.96
15	13.56

5. Test procedure: Pull the mandrel through the line under test by 1 person, by hand, with reasonable effort, without the aid of mechanical equipment.
6. Failing test: Where the mandrel test is not successful, remove and replace the section of piping with the obstruction; test the piping again, including visible leaks test, pressure test with maximum leakage allowance, mandrel tests, and other specified tests:
    a. Correction of excessive deflection or obstructions by methods other than removal of the affected piping and replacement of the removed piping with new piping will not be accepted.

END OF SECTION

SECTION 15247

POLYVINYL CHLORIDE (PVC) PIPE: GRAVITY

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Gravity sewer pipe and fittings in accordance with ASTM D3034 and ASTM F679 standards.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. C923 - Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes, and Laterals.
   2. D1784 - Standard Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds.
   3. D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
   4. D3034 - Standard Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
   5. D3212 - Standard Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
   6. F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
   7. F679 - Standard Specification for Poly(Vinyl Chloride) (PVC) Large-Diameter Plastic Gravity Sewer Pipe and Fittings.

1.03 ABBREVIATIONS

A. PVC: Polyvinyl chloride.

B. SDR: Standard dimension ratio; the outside diameter divided by the pipe wall thickness.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15052 - Common Work Results for General Piping.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect from sunlight, scoring, and distortion.

B. Do not allow surface temperatures to exceed 120 degrees Fahrenheit.

C. Store and handle as recommended by manufacturer in published instructions.

PART 2 PRODUCTS

2.01 PIPE

A. Extruding and molding material: Virgin material containing no scrap, regrind, or rework material except where permitted in the referenced standards.

B. PVC compound: Cell classification 12454-C in accordance with ASTM D1784.

C. Stabilizers, antioxidants, lubricants, colorants, and other additives and fillers not to exceed 10 parts by weight per 100 of PVC resin in the compound.

D. Pipe less than or equal to 15-inch diameter:
   1. In accordance with ASTM D3034.
   2. Wall thickness SDR 26 or as specified in the Piping Schedule on the Drawings.
   3. Joints: Push-on in accordance with ASTM D3212.
      a. Integral bell.
      b. Factory installed gaskets meeting the requirements in accordance with ASTM F477.

2.02 FITTINGS

A. Same material as the pipe.

B. Minimum wall thickness: Same as the minimum wall thickness of the equivalent size pipe as specified in Table 1 of ASTM F679.

C. Supplied by the pipe manufacturer.

D. Factory molded with joints and gaskets equal to those of the pipe.

E. Gasket:
   1. In accordance with ASTM F477.
   2. Manhole adapter gasket: Stainless steel clamp with gasket or similar device to seal the penetration.

F. Flexible gaskets for precast bases with a flexible pipe connection: In accordance with ASTM C923:
   1. Manufacturer: One of the following or approved equal:
      a. Press-Seal Gasket Corp.: PSX.
      b. A-Lok Premium.

G. Waterstop grouting rings:
   1. Manufacturer: One of the following or approved equal:
      a. NPC.
      b. Press-Seal Gasket Corp.

2.03 SOURCE QUALITY CONTROL

A. Mark pipe and fittings in accordance with ASTM D3034 and ASTM F679 as appropriate.

B. Mark the production control code on pipe and fittings.

PART 3 EXECUTION

3.01 INSTALLATION

A. General:
   1. Install piping in accordance with ASTM D2321 and manufacturer's published installation instructions.
   2. Provide plugs or caps for stubs and branch pipes left unconnected to laterals.
   3. Lubricate and assemble joints in accordance with the pipe manufacturer's published instructions.
   4. Trenching and backfill as specified in Section 02318 - Trenching.
   5. For open cut installations, install underground warning tape as specified in Section 15076 - Pipe Identification.
   6. Install pipe with tracer wire as specified in Section 15076 - Pipe Identification.

B. Connections to manholes:
   1. Make connections to manholes with a manhole gasket that prevents infiltration and exfiltration through the penetrations using 1 of the following methods:
      a. Precast bases with a flexible pipe connection:
         1) Pipe connectors shall be cast into the base.
            a) Pipe openings shall contain flexible gaskets.
         2) Follow manufacturer's recommendation for lubrication to prevent damage to the gasket during pipe insertion.
         3) When PSX gaskets are used, the take-up screws for the gasket clamps shall be positioned a minimum of 90 degrees apart.
         4) Install and grout in place per manufacturer's instructions.
      b. Cast in place or precast bases using grouting rings:
         1) Provide opening for connection large enough to allow subsequent grouting around the grouting ring.
         2) Grout around the pipe penetration manhole gasket and seal the opening.

3.02 FIELD QUALITY CONTROL

A. Test pipe as specified in Section 15956 - Piping Systems Testing.

B. Mandrel tests:
   1. Perform initial mandrel test:
      a. After cleaning and completion of other tests.
      b. After placement and compaction of backfill.
      c. Before construction of pavement or surfacing.
      d. Not sooner than 30 days after pipe installation.
      e. Not later than 60 days after installation.

2. Perform final verification mandrel test:
3. Not sooner than 30 days before the end of the warranty period.
4. Not later than 10 days before the end of the warranty period.
5. Consider the final verification mandrel test a warranty service, and include the costs related to final verification mandrel test in the Contract Price.
6. Utilize a 9 rod mandrel with minimum length equal to NPS and diameter as follows:

Nominal Pipe Size (NPS)	Mandrel Dia (in) (SDR 35/PS46)	Mandrel Dia (in) (SDR 26/PS 115)
6	5.45	5.33
8	7.28	7.11
10	9.08	8.87
12	10.79	10.55
15	13.20	12.90
18	16.13	15.76
21	19.00	18.57
24	21.36	20.87
27	24.06	23.51
30	27.68	27.04

7. Test procedure: Pull the mandrel through the line under test by 1 person, by hand, with reasonable effort, without the aid of mechanical equipment.
8. Failing test: Where the mandrel test is not successful, remove and replace the section of piping with the obstruction; test the piping again, including visible leaks test, pressure test with maximum leakage allowance, mandrel tests, and other specified tests:
    a. Correction of excessive deflection or obstructions by methods other than removal of the affected piping and replacement of the removed piping with new piping will not be accepted.

END OF SECTION

SECTION 15286

STAINLESS STEEL PIPE AND TUBING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Stainless steel piping and tubing.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
   2. B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 through NPS 24, Metric/Inch Standard.
   3. B16.11 - Forged Fittings, Socket-Welding and Threaded.
   4. B31.3 - Process Piping.
   5. B36.19 - Stainless Steel Pipe.

B. ASTM International (ASTM):
   1. A182 - Standard Specification for Forged or Rolled Alloy and Stainless Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High-Temperature Service.
   2. A193 - Standard Specification for Alloy-Steel and Stainless Steel Bolting for High Temperature or High Pressure Service and Other Special Purpose Applications.
   3. A194 - Standard Specification for Carbon and Alloy Steel Nuts and Bolts for High Pressure or High Temperature Service, or Both.
   4. A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   5. A269 - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service.
   6. A276 - Standard Specification for Stainless Steel Bars and Shapes.
   7. A312 - Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes.
   8. A351 - Standard Specification for Castings, Austenitic, for Pressure-Containing Parts.
   9. A380 - Standard Practice for Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems.
   10. A403 - Standard Specification for Wrought Austenitic Stainless Steel Piping Fittings.
   11. A743 - Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.
   12. A744 - Standard Specification for Castings, Iron-Chromium-Nickel, Corrosion Resistant, for Severe Service.

13. A774 - Standard Specification for As-Welded Wrought Austenitic Stainless Steel Fittings for General Corrosive Services at Low and Moderate Temperatures.
14. A778 - Standard Specification for Welded, Unannealed Austenitic Stainless Steel Tubular Products.
15. A789 - Standard Specification for Seamless and Welded Ferritic/Austenitic Stainless Steel Tubing for General Service.
16. A790 - Standard Specification for Seamless and Welded Ferritic/Austenitic Stainless Steel Pipe.
17. A928 - Standard Specification for Ferritic/Austenitic (Duplex) Stainless Steel Pipe Electric Fusion Welded with Addition of Filler Metal.
18. A967 - Standard Specification for Chemical Passivation Treatments for Stainless Steel Parts.
19. B622 - Standard Specification for Seamless Nickel and Nickel-Cobalt Alloy Pipe and Tube.
20. F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.

C. American Welding Society (AWS):
   1. D1.6 - Structural Welding Code - Stainless Steel.

D. NSF International (NSF):
   1. Standard 61 - Drinking Water System Components - Health Effects.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15052 - Common Work Results for General Piping.

C. Shop Drawings:
   1. Detailed layout drawings:
      a. Dimensions and alignment of pipes.
      b. Location of valves, fittings, and appurtenances.
      c. Location of field joints.
      d. Location of pipe hangars and supports.
      e. Connections to equipment and structures.
      f. Location and details of shop welds.
   2. Thickness and dimensions of fittings and gaskets.
   3. Photographs, drawings, and descriptions of pipe, fittings, welding procedures, and pickling and passivating procedures.
   4. Material specifications for pipe, gaskets, fittings, and couplings.
   5. Data on joint types and components used in the system including grooved joint couplings and screwed joints.

D. Field welding references:
   1. Welder and weld operator qualification certificates and welding procedures.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Piping layout: Lay out and fabricate piping systems with piping sections as long as possible, while still allowing shipment, so that joints are minimized.
   1. Piping design indicated on the Drawings illustrates piping layout and configuration and does not indicate the location of every joint and flexible coupling that may be needed to connect piping sections fabricated in the shop.
   2. Where joints and couplings are specifically indicated on the Drawings, design and shop-fabricate piping sections utilizing the joint or coupling illustrated at the locations shown.
   3. Add joints and flexible couplings in a manner that achieves intent of maximizing size of individual piping sections.

B. Shop fabrication: Fabricate piping sections in the shop and pickle and passivate at point of manufacture.

C. Field assembly:
   1. Field welding is prohibited.

2.02 STAINLESS STEEL PIPE

A. General:
   1. Pipe sizes specified in the Specifications and indicated on the Drawings are nominal.

B. Wall thickness:
   1. As specified in Section 15052 - Common Work Results for General Piping.

C. Piping material and manufacturing:
   1. Comply with the requirements outlined in the following table:

Service	Stainless Steel Grade	Pipe Manufacturing Process
For low chloride water service with chloride concentrates below 200 parts per million and/or free chlorine less than 2 parts per million at ambient temperatures.		
Piping 3 inches in nominal diameter and larger	Type 304L stainless steel in accordance with ASTM A240	In accordance with ASTM A778
Piping less than 3 inches in nominal diameter	Type 304L stainless steel in accordance with ASTM A240	In accordance with ASTM A312
Digester Gas, Oxygen and Ozone Service, Membrane and Reverse Osmosis Filtration Systems with chloride concentrations less than 1,000 parts per million and/or free chlorine less than 4 parts per million at ambient temperatures.		
Piping 3 inches in nominal diameter and larger	Type 316L or LDX 2101 stainless steel in accordance with ASTM A240	Type 316L in accordance with ASTM A778
		Type LDX 2101 in accordance with ASTM A790

Service	Stainless Steel Grade	Pipe Manufacturing Process
Piping less than 3 inches in nominal diameter	Type 316L or LDX 2101 stainless steel in accordance with ASTM A240	Type 316L in accordance with ASTM A312
		Type LDX 2101 in accordance with ASTM A790
Brackish water Membrane and Reverse Osmosis Membrane Filtration Systems with chloride concentrations between 1,000 and 10,000 parts per million.		
All piping diameters	Austenitic or duplex grades of material with PREN greater than 33	In accordance with ASTM A312, ASTM A778, ASTM A790, or ASTM A928
Brackish and Seawater Membrane and Reverse Osmosis Membrane Filtration Systems with chloride concentrations between 10,000 to 20,000 parts per million		
All piping diameters	Austenitic and duplex grades of material with PREN greater than 40	In accordance with ASTM A312, ASTM A790 or ASTM A928
Brackish and Seawater Reverse Osmosis Concentrate (i.e., Brine) with chloride concentrations greater than 20,000 parts per million		
All piping diameters	Austenitic and duplex grades of material with PREN greater than 45	In accordance with ASTM A312, ASTM A778, ASTM A790, or ASTM A928
PREN: Pitting Resistance Equivalency Number PREN = Cr% + (3.3 x Mo%) + (16 x N%)		

UNS #	Alloy	Cr%	Mo%	N%	Other	PREN
N10276	C-276	14.5-16	15-17	-	W 3-4.5	64
S32750	Alloy 2507	24-26	6-8	0.24-0.32	-	48
S32654	654SMO	24-25	7-8	-	-	47

N08366	AL6XN	20-22	6-7	-	-	40
N06985	Alloy G	21-23.5	5.5-7.5	-	-	39
S32760	Zeron 100	24-26	3-4	0.2-0.3	W 0.5-1.0	37
S32205	Alloy 2205	22-23	3-3.5	0.14-0.20	-	34
N08904	904L	19-23	4-5	-	-	32
S31726	317LNM	17-20	4-5	0.1-0.2	-	32
N08825	Alloy 825	19-23.5	2.5-3.5	-	-	27
S32101	LDX-2101	21.5	0.3	0.22	-	26
S31603	316L	16-18	2-3	-	-	23
S30403	304L	18-20	-	-	-	18

D. Fittings for piping less than 3 inches in diameter:
   1. Material: In accordance with ASTM A240 stainless steel, grade to match the pipe.
   2. Manufacturing standard: In accordance with ASTM A403, Class WP.
   3. Wall thickness and dimensions of fitting: In accordance with ASME B16.11 and as required for the schedule of pipe specified.
   4. End configuration: As needed to comply with specified type of joint.
   5. Forgings in accordance with ASTM A182, or barstock in accordance with ASTM A276. Match forging or barstock material to the piping materials.

E. Piping joints:
   1. Joints in piping 2 inches in diameter and smaller: grooved, welded,press fit, or screwed with Teflon™ tape thread lubricant, as specified in Section 15052 - Common Work Results for General Piping.

F. Gaskets:
   1. Aeration air service: As specified in Section 15052 - Common Work Results for General Piping.
   2. All other service applications: EPDM, nitrile, or other materials compatible with the process fluid.
      a. Drinking water applications: NSF Standard 61 compliant materials only.

G. Fabrication of pipe sections:
   1. Welding: Weld in accordance with ASME B31.3.
   2. Weld seams:
      a. Full penetration welds, free of oxidation, crevices, pits and cracks, and without undercuts.
      b. Provide weld crowns of 1/16 inch with tolerance of plus 1/16 inch and minus 1/32 inch.
      c. Where internal weld seams are not accessible, use gas tungsten-arc procedures with internal gas purge.
      d. Where internal weld seams are accessible, weld seams inside and outside using manual shielded metal-arc procedures.

H. Cleaning (pickling) and passivation:
   1. Following shop fabrication of pipe sections, straight spools, fittings, and other piping components, clean (pickle) and passivate fabricated pieces.
   2. Clean (pickle) and passivate in accordance with ASTM A380 or ASTM A967.
      a. If degreasing is required before cleaning to remove scale or iron oxide, cleaning (pickling) treatments with citric acid are permissible.
         1) However, these treatments must be followed by inorganic cleaners such as nitric acid/hydrofluoric acid.
      b. Passivation treatments with citric acid are not allowed.
   3. Finish requirements: Remove free iron, heat tint oxides, weld scale, and other impurities, and obtain a passive finished surface.

2.03 STAINLESS STEEL TUBING

A. Stainless steel tubing:
   1. Seamless tubing made of Type 316L stainless steel and in accordance with ASTM A269, wall thickness not less than 0.035 inch.

B. Fittings: Swage ferrule design:
   1. Components made of:
      a. Type 316 stainless steel.
   2. Double acting ferrule design, providing both a primary seal and a secondary bearing force.
   3. Flare type fittings are not acceptable.
   4. Manufacturers: One of the following, or equal:
      a. Crawford Fitting Co., Swagelok.
      b. Hoke, Gyrolok.
      c. Parker, CPI.

C. Valves for use with stainless steel tubing:
   1. Ball type valves with swage ends to match tubing diameter.
   2. Constructed from:
      a. Type 316 stainless steel with TFE seats.
   3. Manufacturers: The following or equal:
      a. Crawford Fitting Co., Swagelok.

2.04 SOURCE QUALITY CONTROL

A. Visually inspect pipe for welding defects such as crevices, pits, cracks, protrusions, and oxidation deposits.

B. Provide written certification that the pipe as supplied are in accordance with ASTM A778. Supplemental testing is not required.

C. Provide written certification that the fittings as supplied are in accordance with ASTM A774.
   1. Supplementary testing is not required.

D. Thoroughly clean any equipment before use in cleaning or fabrication of stainless steel.

E. Storage: Segregate location of stainless steel piping from fabrication of any other piping materials.

F. Shipment to site:
   1. Protect pipe ends by encapsulating in dense foam.
   2. Securely strap all elements to pallets with nylon straps. Use of metallic straps is prohibited.
   3. Cap ends of tube, piping, pipe spools, fittings, and valves with non-metallic plugs.
   4. Load pallets so no tube, piping, pipe spools, fittings, or valves bear the weight of pallets above.
   5. Notify Engineer when deliveries arrive so Engineer may inspect the shipping conditions.
   6. Engineer may reject material due to improper shipping methods or damage during shipment.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install piping in such a manner as not to impart strain to connected equipment.

B. Slope horizontal lines so that they can be drained completely.

C. Provide valve drains at low points in piping systems.

D. Install eccentric reducers where necessary to facilitate draining of piping system.

E. Provide access for inspection and flushing of piping systems to remove sediment, deposits, and debris.

3.02 FIELD ASSEMBLY OF SHOP-FABRICATED PIPING SECTIONS

A. Join shop-fabricated piping sections together using backing flanges, flexible couplings, flanged coupling adapters, grooved couplings, or flanges.

3.03 FIELD QUALITY CONTROL

A. Test piping to pressure and by method as specified in Section 15052 - Common Work Results for General Piping.
   1. If pressure testing is accomplished with water:
      a. Use only potable quality water.
      b. Piping: Thoroughly drained and dried or place immediately into service.

B. Visually inspect pipe for welding defects such as crevices, pits, cracks, protrusions, and oxidation deposits.

3.04 PROTECTION

A. Preserve appearance and finish of stainless steel piping by providing suitable protection during handling and installation and until final acceptance of the Work.
   1. Use handling methods and equipment to prevent damage to the coating, include the use of wide canvas slings and wide padded skids.
   2. Do not use bare cables, chains, hooks, metal bars, or narrow skids.
   3. Store stainless steel piping and fittings away from any other piping or metals. Storage in contact with ground or outside without projection from bad weather is prohibited.
   4. Protect stainless steel piping and fittings from carbon steel projections (when grinding carbon steel assemblies in proximity) and carbon steel contamination (do not contact stainless steel with carbon steel wire brush or other carbon steel tool).

END OF SECTION

SECTION 15320

CORROSION PROTECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Galvanic anode cathodic protection systems.
   2. Corrosion protection isolation.

1.02 REFERENCES

A. American Society of Mechanical Engineers (ASME):
   1. B1.1 - Unified Inch Screw Threads (UN, UNR, and UNJ Thread Forms).
   2. B1.20.1 - Pipe Threads, General Purpose, Inch.

B. American Water Works Association (AWWA):
   1. C217 - Petrolatum and Petrolatum Wax Tape Coatings for the Exterior of Connections and Fittings for Steel Water Pipelines.

C. Association for Materials Protection and Performance (AMPP) (formerly NACE):
   1. SP0104 - The Use of Coupons for Cathodic Protection Monitoring Applications.
   2. SP0169 - Control of External Corrosion on Underground or Submerged Metallic Piping Systems.
   3. SP0286 - Electrical Isolation of Cathodically Protected Pipelines.
   4. TM0113 - Evaluating the Accuracy of Field-Grade Reference Electrodes.
   5. TM0497 - Measurement Techniques Related to Criteria for Cathodic Protection on Underground or Submerged Metallic Piping Systems.

D. ASTM International (ASTM):
   1. B3 - Soft or Annealed Copper Wire.
   2. B843- Magnesium Alloy Anodes for Cathodic Protection.
   3. C33/C33M - Concrete Aggregates.
   4. C94 - Ready-Mixed Concrete.
   5. D1248 - Polyethylene Plastics Extrusion Materials for Conductor and Cable.
   6. F436 - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions.
   7. G97 - Evaluation of Magnesium Sacrificial Anode Test Specimens for Underground Applications.
   8. G193 - Standard Terminology and Acronyms Relating to Corrosion.

E. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

F. NSF International (NSF):
   1. 61/600 - Drinking Water System Components - Health Effects.

G. Underwriters Laboratories, Inc. (UL).

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Bonded dielectric coating: Protective barrier coating system with high electrical resistivity bonded directly to underlying structure, acting to physically and electrically isolate metallic structure from electrolyte.
   2. Cathodic protection:
      a. Galvanic anode cathodic protection: Reduction of corrosion of metal in electrolyte by galvanically coupling to more anodic metal:
         1) Also referred to as sacrificial or passive protection.
      b. Impressed current cathodic protection: Reduction of corrosion of metal in electrolyte by supplying DC current through external power source and employing impressed current anode.
         1) Also referred to as active protection.
   3. Electrical isolation: The condition of being electrically separate from other metallic structures (including, but not limited to, piping, reinforcement, casings) and the environment as defined in NACE SP0169.
   4. Electrically continuous: A structure which has a linear electrical resistance equal to or less than the sum of the resistance of the structure plus the maximum allowable joint bond resistance for each bonded joint as specified in this Section.
   5. Electrolyte: Electrically conductive solution, such as soil or water:
      a. Terms for specific conductive solutions may be substituted for “electrolyte” in these definitions:
         1) Conductive solutions include:
            a) Water.
            b) Soil.
            c) Concrete.
            d) Other conductive liquid medium.
   6. Foreign structure: Buried structure not owned or operated by the Owner.
   7. Reference electrode: Electrode whose open circuit potential is constant under similar conditions of measurement; used for measuring relative potentials of other electrodes (e.g., protected structures):
      a. Sometimes referred to as reference half-cell.
      b. Copper-copper sulfate reference electrode (CSE) is often used.
   8. Structure-to-electrolyte potential:
      a. Potential of structure in electrolyte as compared to potential of reference electrode contacting same electrolyte.
      b. Static: Determined without any external current:
         1) For instance: Prior to energizing cathodic protection system, and with no galvanic couple, pH cell, interference currents, or like present.
         2) After such current source has been disconnected for an extended amount of time.
         3) Also referred to as native.
      c. Uncorrected: Determined with cathodic protection system energized and cathodic protection current flowing:
         1) Also referred to as protective potential (ON potential) and may contain significant IR drop error.

d. Polarized: Determined after cathodic protection system has been energized, but immediately after cathodic protection current is interrupted:
    1) Also referred to as “instant off” structure-to-electrolyte potential.
e. Polarization: Change from static or native potential as result of current flow across electrode/electrolyte interface:
    1) Also considered difference between polarized and native potentials.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and the Agreement and Contract RFP in Volumes 1 and 2.

B. Qualifications:
1. Cathodic protection technologist (NACE CP3) or cathodic protection specialist (NACE CP4) certifications for personnel conducting or directing testing and installation work.
    a. Include list of verifiable experience with corrosion monitoring and cathodic protection.

C. Product data:
1. Include as a minimum:
    a. Galvanic anodes.
    b. Test station.
    c. Shunts.
    d. Variable resistors (if necessary).
    e. Cables.
    f. Continuity bonds.
    g. Cable splice kits.
    h. Cable labels.
    i. Cable terminals.
    j. Conduit.
    k. Isolation flange kits.
    l. Backfill materials.
    m. Exothermic welding equipment (molds, cartridges, primer, caps).
    n. Dielectric coating systems for exothermic welds, metallurgical, and mechanical bonds.
    o. Wax tape.
    p. Corrosion coupon and holder.
    q. Permanent reference electrode.

D. Installation instructions:
1. Provide manufacturer’s installation instructions.

E. Quality Control Submittals:
1. Testing data:
    a. Indicated test equipment, test method, and criteria requirement used for each test.
    b. Placement of reference electrode during each test (if applicable).
    c. Magnesium anode in accordance with ASTM G97 current capacity test results supplied by the manufacturer.

d. Results of tests conducted.
    1) Locations of test stations, electrical continuity bonds, isolation.
        a) Use unique identifier and GPS coordinates.
        b) Include type of test station.
        c) List of cable identification in test stations.
    2) Isolation checks before and after backfill.
    3) Electrical continuity checks.
    4) Native potential readings at each test station (for commissioning only).
    5) ON and Instant-OFF potential readings at each test station.
    6) Anode potentials.
    7) Anode current output.
    8) Coupon potential readings.
    9) Permanent reference electrode checks.
    10) Indicate that exothermic welds passed the strike test with a peen hammer.
    11) Analysis and discussion of any deficiencies identified and recommendations to correct such deficiencies.

1.05 QUALITY ASSURANCE

A. Installation and testing conducted by or under direction of cathodic protection technologist (NACE CP3) or cathodic protection specialist (NACE CP4). Other qualified individuals may assist installation and testing personnel.

B. Materials, installation, and testing:
    1. Consistent with corrosion engineering principles and practices in accordance with NACE TM0497, NACE TM0113, NACE SP0104, NACE SP0286, and NACE SP0169.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2, and the manufacturer's instructions.

B. Materials:
    1. Store off the ground.
    2. Protect against weather, condensation, and mechanical damage.
    3. Handle with care.
    4. Do not sharply bend or tightly coil wires.
    5. Replace equipment or materials damaged in shipment or installation.
    6. Isolation flange kits:
        a. Do not store insulated flange gaskets at jobsites under direct sunlight or at temperatures exceeding 110 degrees Fahrenheit.
        b. Protect against mechanical damage.
    7. Anodes:
        a. Shipped in waterproof bags or wrapping and shall remain dry until installation.
        b. Coil the anode core cables and secure and package the anode in crates as required to prevent damage during shipping.

c. Ensure that the cable is not damaged and that the anodes or lead connection at the anode end are not physically stressed.
d. If anode or anode core cables are damaged, replace the complete anode.

8. Anode backfill:
   a. Bulk or bag shipping.
   b. Shipped and stored in a manner to keep it dry in order to minimize it from freezing solid.
   c. If bagged, provide and ship in waterproof bags.
   d. Bags shall be UV resistant or protected with tarps to protect from UV exposure.
9. Reference electrodes:
   a. Do not allow to freeze.
   b. Store in a protected area.
   c. Protect from UV exposure.
   d. Utilize before shelf life expires.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Electrical items shall be UL listed or labeled, where such listing or labeling is obtainable.

B. Provide cathodic protection systems for the following features as indicated on the Drawings:
   1. Campus Oaks:
      a. Ductile iron 16-inch diameter PW pipe.
      b. Ductile iron 10-inch diameter AF pipe.
   2. Misty Wood:
      a. Ductile iron 16-inch diameter PW pipe.
      b. Ductile iron 10-inch diameter AF pipe.

C. Provide wax tape corrosion protection system for ductile iron pipe smaller than 6-inch diameter.

D. Provide electrical isolation for the following features as indicated on the Drawings:
   1. Between cathodically protected and non-cathodically protected pipe.
   2. At every change in pipe material type (i.e., steel to ductile iron).
   3. Before and after entering/exiting buildings.
   4. Before entering storage tanks or wells.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide corrosion-engineering services to furnish, install, and test galvanic cathodic protection systems:
   1. Include electrical continuity bonds, isolation kits, test stations, and accessory equipment and features as directed in this Section, or otherwise indicated.

B. Galvanic cathodic protection systems shall provide a minimum service life of 20 years.

2.03 ANODES

A. Manufacturers: One of the following or equal:
   1. Anode Systems Company, Grand Junction, CO.
   2. Farwest Corrosion Control, Downey, CA.
   3. Galvotec, McAllen, TX.
   4. MESA, Denver, CO.

B. Magnesium anodes shall be GA-MG-17 HP 17D3, or equal:
   1. High potential, in accordance with ASTM B843, Grade M1C and conform to the following specifications:

TABLE 1 – HIGH POTENTIAL MAGNESIUM ANODE COMPOSITION	
Aluminum (Al)	0.010% maximum
Manganese (Mn)	0.50 to 1.30%
Copper (Cu)	0.02% maximum
Nickel (Ni)	0.001% maximum
Iron (Fe)	0.03% maximum
Silicon (Si)	0.05% maximum
Other Impurities - each	0.3% maximum
Magnesium (Mg)	Balance

   2. Open circuit potential of -1.7 volts or more negative in reference to a copper-copper sulfate reference electrode.
   3. Dimensions: Minimum bare weight of 17 pounds with an ingot length of 25.8 inches, height of 3.75 inches, and a width of 3.5 inches.
   4. Anode backfill:
      a. Furnish anodes prepackaged in special backfill material consisting of 75 percent ground hydrated gypsum, 20 percent powdered bentonite and 5 percent anhydrous sodium sulfate.
   5. Factory anode-to-cable connection: Exposed mild steel core, and exposed copper cable potted in epoxy.
   6. Silver-solder connection between anode cable and mild steel core.
   7. Anode core cable:
      a. Minimum of 50 feet in length or sufficient length to reach test station without being spliced, whichever is greater.
      b. In accordance with Table 2 of this Section.

2.04 TEST STATIONS

A. Manufacturers: One of the following or equal:
   1. Cott Manufacturing, Pittsburg, PA.
   2. Farwest Corrosion Control, Downey, CA.
   3. Gerome Electric Supply Co, Uniontown, PA.
   4. Tinker & Rasor, New Braunfels, TX.

B. Test stations:
   1. Specifically constructed for cathodic protection system installations and intended environment.
   2. Protected as required for permanency.
   3. Provide terminals and associated hardware for the number and size of cables and required accessories:
      a. Provide a minimum of 7 terminals.
   4. Terminal lugs shall be high conductivity copper alloy manufactured specifically for making electrical connections, such as:
      a. Burndy Type KLU or KA4C lugs.
      b. Ilsco Type SLU, SLUH, or CP-4 lugs.
   5. Polycarbonate, above ground type:
      a. Big Fink, ZapGard, Model T-3, or other.
   6. Flush in-ground type:
      a. Products:
         1) Brooks Model 3RT.
         2) Model G03.
      b. Details:
         1) As indicated on the Drawings.
         2) Include test station inside of box.

2.05 CABLES

A. Manufacturers: One of the following or equal:
   1. Corpro Inc., Chicago, IL.
   2. Farwest Corrosion Control, Downey, CA.
   3. MESA Products, Tulsa, OK.

B. In accordance with ASTM B3.

C. Manufactured not more than 24 months prior to notice to proceed.

D. Single-conductor:
   1. Stranded, plain, annealed copper cable.

E. Insulation:
   1. Rated for 600 volts and direct immersion or burial.
   2. In accordance with ASTM D1248.
   3. Insulation as specified in Table 2.

F. Suitable lengths to permit installation from terminus to terminus (e.g., structure-to-test station or structure-to-structure) free of splices and without stress, unless otherwise specified.

G. Cable gauges:
   1. Sizes are as specified in Table 2, unless otherwise specified.

TABLE 2 - CABLE DETAILS			
Cable Type	**Cable Size (AWG)**	**Insulation**	**Color Code**
Galvanic anode cable/core cable	#10 or larger	HMWPE	Red
Protected structure cable	#10 or larger	HMWPE	Black
Unprotected structure cable	#10 or larger	HMWPE	White
Electrical continuity bond cable	See TABLE 3	HMWPE	Black

2.06 CONTINUITY JOINT BONDS FOR PIPE

A. Manufacturers: One of the following or equal:
   1. Erico International Corp, Solon, OH.
   2. Hoff Company, Centennial, CO.

B. Connections on a joint bond shall be welded or soldered. Mechanical or compression type connections are not permitted.

C. Bonds and welds shall exhibit sufficient strength and flexibility to allow thermal movement of the pipe after pipe backfill without cracking or breakage.

D. Make bond connections to pipe with an Engineer approved welding method.

E. Insulated or coated copper with exposed copper field coated to prevent galvanic corrosion of the pipe.

F. Joint bond cable size as indicated in Table 3.

2.07 CONDUIT

A. Rigid hot dipped galvanized steel conduit and fittings.
   1. Threaded at one end (minimum).
   2. Length as required for installation requirements.
   3. Diameter based on cable needs: 2-inch minimum.
   4. For cables installed above ground.

B. Schedule 40 PVC conduit and fittings.
   1. Length as required for installation requirements.
   2. Diameter based on cable needs: 2-inch minimum.
   3. For cables installed between buried metalwork.

2.08 TEST STATION MOUNTING POST

A. As indicated on the Drawings.

2.09 STRUCTURE CONNECTIONS

A. Manufacturers: One of the following or equal:
   1. Continental Industries, Inc. (Thermo-Weld), Tulsa, OK.
   2. Erico Products Inc. (Cadweld), Cleveland, OH.

B. Exothermic metallurgical welds - Cable or strap to structure connections.
   1. Thermite weld materials consist of wire sleeves, welders, and weld cartridges according to the weld manufacturer's recommendations.
   2. Exothermic metallurgical weld system designed for:
      a. Cathodic protection systems.
      b. Metallic substrate material.
      c. Weld orientation.
      d. For cable or strap, as appropriate.
   3. Exothermic reaction must produce molten copper, which produces a permanent, high conductivity connection.
   4. Exothermic welds:
      a. Use a special alloy to provide minimum heat effect on substrate material.
      b. Shall have a current carrying capacity equal or better than that of the conductor.

2.10 DIELECTRIC COATING FOR STRUCTURE CONNECTIONS

A. Specifically designed for cathodic protection systems.

B. Applied with primer coat, as needed.

C. Suitable for intended environment.

D. Coat exposed weld nuggets, exposed cable, or structure metal using mastic coating.
   1. In accordance with NSF 61 if subject to immersion in potable water.

E. Manufacturers: One of the following or equal:
   1. Carboline, St. Louis, MO.
   2. Royston Laboratories, Pittsburgh, PA.

F. Product:
   1. Bitumastic 50.
   2. Roskote A51.
   3. Royston Handy Cap IP.

2.11 ISOLATION FLANGE KITS

A. Complete assembly shall have an AMSE rating equal to or higher than that of the joint and pipeline.

B. Materials and pre-assembled isolating flange kits shall be suitable for the intended chemical exposure, operating temperatures, and operating pressures.

C. Manufacturers: One of the following or equal:
   1. Advanced Products and Systems, Scott, LA.
   2. Central Plastics Co., Shawnee, OK.
   3. GPT Industries, Houston, Texas.

D. Flange kit:
   1. Full-face insulating gasket, an insulating sleeve for each bolt, insulating washers, and steel washers:
      a. Pipe diameters up to 36 inches: 1 insulating washer and 1 steel washer on each side of flange for each bolt.
      b. Pipe diameters larger than 36 inches: Insulating washers shall be sandwiched between a pair of matching steel washers on each side of the flange for each bolt.
   2. Isolating gaskets:
      a. Gasket retainers shall be full face, Type E, NEMA G-10 glass reinforced epoxy retainers with an ethylene propylene diene monomer (EPDM) rubber rectangular cross section O-ring seal.
      b. Minimum total gasket thickness shall not be less than 1/8 inch.
      c. Gasket shall have the same outside diameter as the pipe flange.
         1) For steel pipe, the gasket's inside diameter shall be equal to the inside diameter of the pipe's steel cylinder.
         2) At valve to pipe connections where the inside diameters are not equal, the gasket's inside diameter shall be equal to the smaller of the 2 inside diameters.
      d. Certified in accordance with NSF 61.
      e. Dielectric strength shall be not less than 550 volts per mil, and compressive strength shall be not less than 50,000 psi.
      f. Installed within 6 months of date of manufacture.
      g. Product:
         1) Linebacker 61 insulating gasket, or equal.
   3. Insulating sleeves:
      a. Full-length one-piece Mylar or fiberglass reinforced epoxy (NEMA G-10 grade).
      b. Dielectric strength shall be not less than 400 volts per mil.
      c. Length of the insulating sleeves shall provide an air gap between the end of the insulating sleeve and inside surface of the stud bolt nut with a tolerance of 1/32-inch minimum and 1/8-inch maximum.
         1) Adjusted for the actual thickness of the steel washers and insulating washer thickness.
   4. Insulating washers:
      a. Fiberglass reinforced epoxy (NEMA G-10 grade).
      b. Minimum thickness of 1/8 inch.
      c. Dielectric strength shall not be less than 550 volts per mil, and compressive strength shall not be less than 50,000 psi.
      d. Inside diameter shall be sized to fit over the insulating sleeve's outside diameter.
   5. Steel washer:
      a. In accordance with ASTM F436.
      b. Inside and outside diameter shall match those of the insulating washers.

c. Able to freely rotate around the insulating sleeve.
d. Attention must be paid to the fit between the steel washers and the insulating sleeve to avoid twisting and cracking of the sleeves when the flange bolts are torqued.

2.12 WAX TAPE COATING SYSTEM FOR BURIED ISOLATING FLANGES AND DUCTILE IRON PIPE SMALLER THAN 6-INCH DIAMETER

A. General:
1. Apply a wax tape coating system in accordance with AWWA C217.
2. Consists of 3 parts: Surface primer, wax tape, and outer covering.
a. All 3 parts shall be the product of the same manufacturer.

B. Primer:
1. Shall be a blend of petrolatum, plasticizer, and corrosion inhibitors having a paste like consistency.
2. Pour point of 100 degrees Fahrenheit to 110 degrees Fahrenheit and a flash point of 350 degrees Fahrenheit.
3. Trenton Wax-Tape Primer® or approved equal.

C. Wax tape:
1. Consists of a synthetic-fiber felt, saturated with a blend of high melt microcrystalline wax, solvents, and corrosion inhibitors.
2. Saturant pour point between 125 degrees Fahrenheit and 130 degrees Fahrenheit.
3. Dielectric strength equal to a minimum of 100 volts per mil.
4. Thickness shall be 50 mils to 90 mils in 6-inch wide rolls.
5. Trenton No. 1 Wax-Tape or approved equal.

D. Outer covering:
1. Consists of 2 layers of a plastic wrapper at total of one 150-gauge or three 50-gauge wound together as a single sheet.
2. Plastic wrapper material a clear polyvinylidene chloride, high cling membranes wound together as a single sheet.
3. Trenton Poly-Ply™ or approved equal.

2.13 CONCRETE FOOTINGS

A. ASTM C94, Ready-Mixed Concrete.

2.14 SAND BACKFILL

A. ASTM C33, fine aggregate.

2.15 PERMANENT REFERENCE ELECTRODES

A. Manufacturers: One of the following or equal:
1. Corrpro Inc., Chicago, IL.
2. GMC Electrical, Inc, Corona, CA.

B. Material:
   1. Permanent type, copper-copper sulfate reference electrode.
   2. Suitable for intended environment.
   3. Minimum design life of 25 years.

C. Cable:
   1. As specified in Table 2 of this Section.
   2. Length of 25 feet, or as required for splice free installation.

D. Backfill:
   1. As recommended by the electrode manufacturer.

2.16 CORROSION COUPONS

A. Manufacturers: One of the following or equal:
   1. Cott Manufacturing, Wexford, PA.
   2. M.C. Miller, Sebastian, FL.

B. Steel coupon:
   1. EDI Model UI-MS, board or adjustable mount as required, with activating magnet.
   2. Exposed steel area to be 0.01 square feet.
   3. Provide with 2 cables, sized as specified in Table 2 of this Section.

C. Coupon holder:
   1. PVC fitting made to fit onto a 2-inch PVC pipe.
   2. Model COU175.

D. Switch:
   1. Magnetic reed switch, normally closed, with connecting leads and terminals or equivalent.

2.17 MISCELLANEOUS MATERIALS

A. Test station wire terminations:
   1. One-piece, tin-plated crimp on ring tongue connector.

B. Compression connectors:
   1. For in-line and tap splices shall be “C” taps made of conductive wrought copper.
   2. Sized to fit the wires being spliced.
   3. Applied with the crimp tool and die recommended by the manufacturer for the wire and tap connector size.
   4. Burndy Type “YC”, or equal.

C. Electrical tape:
   1. Linerless rubber high-voltage splicing tape and vinyl electrical tape suitable for moist and wet environments.
   2. Scotch 130C and Scotch 88.

D. Warning tape:
    1. Polyethylene for anode cables:
        a. Minimum 3-inches wide.
        b. Red or yellow with black lettering.
        c. Suitable for direct burial.
    2. Print full length of tape with the following:
        a. “Caution - Cathodic Protection Cable Buried Below”.

PART 3 EXECUTION

3.01 GENERAL

A. Electrical isolation:
    1. Structures to be cathodically protected shall be electrically isolated from other extraneous metal (e.g., casings, foreign structures, and rebar in concrete).

B. Dielectric materials, other than designated non-metallic carrier pipe, that might cause shielding of cathodic protection current (e.g., plastic debris) shall not be left around structures, including areas within excavation sites.

3.02 INSTALLATION

A. Galvanic anodes:
    1. Install anodes in horizontal orientation to surface grade and parallel to pipe longitudinal axis.
        a. Anode details:
            1) Campus Oaks:
                a) Ductile iron 16-inch diameter PW pipe.
                    (1) Number of anodes: 3.
                    (2) Anode separation distance: 23 feet.
                b) Ductile iron 10-inch diameter AF pipe.
                    (1) Number of anodes: 3.
                    (2) Anode separation distance: 33 feet.
            2) Misty Wood:
                a) Ductile iron 16-inch diameter PW pipe.
                    (1) Number of anodes: 6.
                    (2) Anode separation distance: 38 feet.
                b) Ductile iron 10-inch diameter AF pipe.
                    (1) Number of anodes: 3.
                    (2) Anode separation distance: 33 feet.
        b. Minimum 1 anode length from non-metallic structures.
        c. Depth:
            1) Minimum 5 feet underneath pipe.
    2. Remove outer water-resistant covering (plastic or paper bag) on pre-packaged anodes before installation. Do not damage wettable covering containing backfill and magnesium.
    3. Do not support anodes by their cables.
    4. Do not wet pre-packaged anodes until they are in the ground, surrounded with compacted earth, and covered by at least 1 foot of compacted backfill.

5. Do not connect anodes to structures at test stations; energize systems only at time of testing.
6. Connect individual galvanic anodes to structures through individual calibrated 0.01 ohm shunts within the test station for current measurement (1 shunt for each anode).
    a. As indicated on the Drawings.
7. Connect individual anodes to structure through variable resistors within test station to allow for adjusting output current from individual anodes (if necessary).
    a. As indicated on the Drawings.

B. Test stations:
    1. General:
        a. Mount and wire the test stations as indicated on the Drawings.
        b. Uniquely label each test station.
        c. Cable sizes as specified in Table 2 of this Section.
    2. Location:
        a. Readily accessible.
        b. Not likely to be damaged or interfere with personnel and/or equipment (e.g., adjacent to above ground structures).
        c. As close to the structure connection as possible.
        d. Cathodic protection test stations:
            1) Locations:
                a) As indicated on the Drawings.
        e. Isolation test stations:
            1) As indicated on the Drawings.
            2) Locations:
                a) Each isolation joint flange kit.
            3) Where multiple isolation flanges are connected in electrically parallel configurations, only 1 isolation test station is required for each group.
            4) Provide a pair of cables exothermically welded to the pipe on each side of the insulator, 2 cables on protected side and 2 cables on unprotected side, for a total of 4 cables per isolation.
            5) Where isolation and cathodic protection test stations are next to each other, combine into one test station.

C. Cable:
    1. Inspect for insulation defects prior to backfilling:
        a. Replace cable if insulation is damaged.
    2. Install without kinks, stresses, and/or splices.
    3. Identify origin of cables terminating in an enclosure:
        a. Cable identification as to distinct originating structure or anode as indicated on the Drawings.
        b. Printed letters on shrinkable label attached to cables clearly visible within the enclosure.
        c. Encase printed labels in clear heat shrink tubing.
    4. Connect to test station with crimped, ring-tongue connectors.
    5. Size of cable as specified in Table 2 of this Section.
    6. Run cable through PVC conduit underground and rigid galvanized conduit once cable emerges from ground, as indicated on the Drawings.

7. Structure cables:
    a. 2 cables per structure at each test station.
    b. Connect cables to structures by exothermic metallurgical welding as indicated on the Drawings.
        1) Make exothermic metallurgical bond in accordance with the bonding supply manufacturer's instructions.
        2) Coat bare copper, weld nugget, and ferrous materials at metallurgical bonds with an approved dielectric metallurgical bond coating.
            a) Allow dielectric material to cure before repair of damaged structure coating or lining.
8. Anode cables (also called anode core cable):
    a. Installed free of splices.
    b. Terminate at the test station, as indicated on the Drawings, or connect to the buried metallic structure by exothermic metallurgical welding as indicated on the Drawings.
        1) Follow the same procedure indicated for structure cables above.
9. Electrical continuity joint bonds:
    a. Number and length of bond cable per TABLE 3.
    b. Connect cables or straps to structure by exothermic metallurgical welding as indicated on the Drawings.
        1) Follow the same procedure indicated for structure cables above.
        2) For straps, follow manufacturer instructions.

D. Isolation:
1. Install to electrically isolate the structure from other metallic structures or dissimilar metals.
2. Align and install isolation joints according to the manufacturer's recommendations to avoid damaging materials.
3. Test before and after backfill to ensure isolation is satisfactory.

E. Electrical continuity joint bonds:
1. Provide metallurgical bonds at mechanical type joints (e.g., non-welded joints) between ferrous parts included in a particular cathodic protection system as specified in this Section, or as necessary to ensure electrical continuity.
2. Minimum number, type, and size of bond per bond joint is shown in Table 3.
3. Bond cable installed with sufficient slack to prevent stress or tugging:
    a. Allow for minimum 1/2-inch joint movement.
4. Bond Details:
    a. Ductile Iron pipe joints:
        1) Joint bond size and number per joint, based on Table 3.

TABLE 3 -BOND DETAILS

Bond Location	Bond Type	BOND LENGTH	Number of Bonds
16-inch Ductile Iron Pipe			
Cable	#6 AWG	18"- 24"	2
10-inch Ductile Iron Pipe			
Cable	#6 AWG	18"- 24"	2

F. Reference electrode:
   1. Remove plastic or paper wrapper and place within the pipeline trench excavation 6 inches from pipe in a vertical position.
   2. Activate in accordance with the manufacturer's written instructions.
   3. Backfill hole with select native material in 6-inch layers and hand tamp each layer around reference electrode.
   4. Exercise care not to strike reference cell or lead wire with tamper.
   5. Terminate reference electrode cable in test station, free of splices.

G. Coupon:
   1. Place within 6 inches of pipe and reference electrode.
   2. Terminate each cable in test station, free of splices.
   3. Connect coupon to structure with magnetic switch as indicated on the Drawings.

3.03 FIELD QUALITY CONTROL

A. Equipment:
   1. Portable multimeter: Fluke Model 179 or equivalent. Minimum input impedance of 10 megohms and capable of measuring DC voltages between 0.1 millivolt to 100 volts.
   2. Portable CSE reference electrode.
   3. Insulation checker: M.C. Miller Model MIC or equivalent.
   4. Low resistance ohmmeter: Megger Model DLRO10 or equivalent, capable of 10 ampere test current with resolution of 0.1 micro-ohms.

B. Structure-to-soil potential:
   1. Verify that each test station is properly labeled.
      a. Unique identifier and GPS coordinates.
      b. Cable identification in test stations.
   2. Conduct testing in least 2 testing cycles:
      a. First testing cycle:
         1) Prior to energizing system:
            a) Test structure electrical continuity.
               (1) Determine voltage difference unchanged between structure cables.
               (2) Test station integrity.
                  (a) Determine voltage difference between cables within each test station.
            b) Measure native structure-to-soil potentials of coupons.
               (1) At each individual test station location.
               (2) Place portable reference electrode as close to buried metalwork as possible for structure-to-soil potential measurements.
               (3) Saturate ground with water to reduce reference cell contact resistance.
         2) After the system is energized:
            a) Determine protective (uncorrected) and polarized structure-to-soil potentials of coupons in accordance with NACE TM0497.
               (1) At each individual test station location.

(2) Place portable reference electrode as close to buried metalwork as possible for structure-to-soil potential measurements.
(3) Saturate ground with water to reduce reference cell contact resistance.

b) Determine current output of each individual anode in test stations.

c) Adjust variable resistor setting for each anode to obtain required balance of current output (if variable resistors are required).

b. Second and subsequent testing cycles:
1) Time between testing cycles shall be 30 to 60 days.
2) Cathodic protection system shall not be adjusted between testing cycles.
3) Repeat testing required after energizing the system during the first testing cycle.
4) If data indicates that cathodic protection system requires adjustment to meet requirements, adjust cathodic protection system and conduct subsequent testing cycles within 30 to 60 days.

c. Troubleshoot and correct problems.

3. Submit final data after last testing cycle when performance criteria have been met and no further adjustments are needed.

C. Electrical continuity:
1. Test completed continuity bonds prior to and after backfilling.
2. Quality control test shall be performed on bonds after installation but before backfilling or closing the structure.
3. Repair any damaged pipe coating as specified.

D. Isolation:
1. Check isolation flanges, couplings, sleeves, and washers to ensure adequate electrical isolation prior to backfilling or closing the structure using a portable multimeter, ohmmeter, or isolation checker in accordance with the manufacturer's written instructions.
2. Verify isolation of bolts used with isolation kits.
3. Use isolation checker in accordance with the manufacturer's written instructions, or other approved method.
4. Conduct additional isolation testing as needed to ensure that isolation is not electrically shorted to other equipment or concrete reinforcement.
5. Replace damaged or defective isolation identified during testing.

END OF SECTION

SECTION 15400

PLUMBING SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for materials and installation of plumbing systems.

1.02 REFERENCES

A. Abbreviations:
   1. gpf - gallons per flush.
   2. gph - gallons per hour.
   3. gpm - gallons per minute.
   4. psig - pounds per square inch, gauge.

   a. IS 03 - Copper plumbing Tube Pipe and Fittings.
10. National Electrical Manufacturers Association (NEMA):
   a. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).
11. Plumbing and Drainage Institute (PDI):
   a. WH-201 - Water Hammer Arresters Standard.
12. Underwriters Laboratories, Inc. (UL):
   a. 94 - Standard for Tests for Flammability of Plastic Materials for Parts in Devices and Appliances.
13. United States Environment Protection Agency (EPA): Water Sense.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Buried: Piping that is installed below buildings, foundations, or finish grade, either in soil or encased in concrete in soil.
   2. Exterior: Piping that is installed outside a building or within a pipe trench or tunnel.
   3. Flame spread and smoke density: Burning characteristics determined in accordance with ASTM E84.
   4. Interior: Piping that is installed inside a building.
   5. K factor: Thermal conductivity determined in accordance with ASTM C177 or ASTM C518.
   6. Mineral fiber: Fibers manufactured of glass, rock, or slag processed from a molten state, with or without a binder.
   7. Water vapor permeance: Water vapor transmission determined in accordance with ASTM E96 and expressed in units of perm-inch.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Manufacturer’s instructions.

C. Shop Drawings:
   1. System layout, mechanical, electrical power, and control diagrams.
   2. Nameplate information.
   3. Materials.
   4. Coatings and linings.
   5. Rough-in drawings.
   6. Supports, vibration isolators, and details.
   7. Primary and ancillary equipment.
   8. Proposed cutting and patching.
   9. Maximum recommended equipment vibration levels and field-testing method.
   10. Copy of factory test results.

D. Certificates: As specified in the Agreement and Contract RFP in Volumes 1 and 2:
   1. American Backflow Prevention Association for backflow prevention assembly.
   2. National Science Foundation for products when specified.

E. Field testing documentation.

F. Warranties.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Roof coordination:
   1. Provide plumbing equipment roof penetrations information required in the preparation of roofing drawings, including, but not limited to:
      a. Location.
      b. Diameter.
      c. Configuration of penetration and the surround.
   2. Provide roof mounted plumbing equipment information required in the preparation of roofing drawings, including, but not limited to:
      a. Location.
      b. Size.
      c. Weight.
      d. Anchoring and support details.

1.06 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Devices and fixtures shall be in accordance with CCR Title 24.

2.02 PLUMBING FIXTURES

A. General:
   1. ADA compliant unless specifically stated otherwise in the fixture requirements.
   2. Exposed fixture fittings and piping:
      a. Polished chrome.
   3. Stops:
      a. Fixtures, except showers, shall have stops at the fixtures' service.
      b. Stops for laboratory equipment, and for other equipment or fixtures for which stops have not been otherwise specified in this Section, shall be chrome-plated straight pattern compression stops or chrome-plated angle pattern compression stops.

4. Faucets:
    a. Motion sensor activated unless manual levers are specially stated in the fixture requirements.
        1) Provide 6 V DC transformers using 115 V power or 6 V DC CR-P2 lithium battery (or similar) when Drawings do not show 115 V connection.
        2) Manual levers: Indexed.
    b. Brass construction, 1/4 turn ceramic disc valve cartridge.
    c. Vacuum breaker.
    d. Integral check valve.
    e. Flow rates specified for an inlet pressure of 60 psig.
5. P-traps:
    a. Cast-iron, adjustable with metal strainer, gaskets, and cleanout plug.
6. Escutcheons to be used for at wall, floor, and ceiling penetrations:
    a. Manufacturers: One of the following or equal:
        1) Keeney.
        2) Plumbing Products.
    b. IAPMO listed.
    c. Material: Chrome-plated steel plate.
    d. Hinged, spring loaded, and sized appropriately for the piping.
7. Manufacturer to supply necessary mounting hardware and installation fittings suitable to complete the installation, including, but not limited to:
    a. Faucets.
    b. Brass braided hoses.
    c. Carriers.
    d. P-traps.
    e. Toilet seats.
8. Drawings indicate fixtures using designated style identifiers.

B. Service sinks:
1. General:
    a. ADA compliance not required.
    b. Sink manufacturer to supply faucet, mounting hardware, and installation fittings.
    c. Faucet:
        1) Exposed yoke, wall- mounted, top braced.
        2) Rigid spout with 3/4-inch threaded hose end and bucket hook.
        3) Deliver not more than 15 gpm.
        4) Manual lever.
    d. Center drains with strainer.
    e. Provide 5-foot hose with wall hook and rigid end spout at each service sink.
2. Type SS-1: Enamel:
    a. Manufacturers: One of the following or equal:
        1) American Standard, Akron.
        2) Kohler Co.
    b. Wall-mounted.
    c. Bowl:
        1) Cast-iron with acid-resisting enamel interior.
        2) Overall nominal: 24 inches wide by 12 inches deep.
        3) Stainless steel rim guard.

d. Backsplash:
1) 9 inch high, plain.

3. Type SS-3: Free standing:
a. Manufacturers: One of the following or equal:
1) American Standard.
2) E.L. Mustee, 19F Utilatub.
b. Free standing.
c. Bowl:
1) One-piece molded thermoplastic.
2) 13-inch tub with 18 gallon capacity.
d. Dual lever, 6-inch swing spout faucet.
1) With aerator and hose end.
2) Not more than 15 gpm.

C. Water closets and urinals:
1. General:
a. Manufacturers: One of the following or equal:
1) American Standard.
2) Kohler.
b. EPA WaterSense labeled.
2. Style WC-1: Water closet, flush valve:
a. Bowl:
1) Wall mounted.
2) Elongated white vitreous china.
3) Exposed top stud.
b. Flush valve:
1) Manual:
a) Self-cleaning brass piston.
b) Backpressure vacuum breaker.
c) Non-hold-open type handle.
d) Flush volume adjustable.

D. Lavatories:
1. General:
a. Bowl material:
1) White vitreous china.
b. Faucet:
1) Battery operated:
a) Open time adjustable.
2) Flow rate: 0.5 gpm maximum.
2. Style LAV-1:
a. Manufacturers: One of the following or equal:
1) American Standard.
2) Kohler, Pinoir.
b. Wall mounted.
c. Bowl:
1) 22 inch by 18 inch.

2.03 PLUMBING AND DRAINAGE PRODUCTS

A. Water hammer arrestors:
   1. Manufacturers: One of the following or equal:
      a. Jay R. Smith.
      b. Josam.
      c. Zurn.
   2. Determine manufacturer model:
      a. Based on Table 1 in accordance with PDI WH-201.
      b. Working pressure: 125 psig.
      c. Static pressure: 250 psig.
   3. Temperature: 300 degrees Fahrenheit.
   4. Provide water hammer arrestors on each fixture supply line branch.
   5. Casing and bellows.
      a. Material: Type 304 stainless steel.
      b. Welded bellows.
   6. Hermetically sealed air cushion.

B. Type HB-1: Hose bib stations:
   1. Manufacturers: One of the following or equal:
      a. Flexon Pro Series.
      b. Gilmore Group.
   2. Hose bib: Size and mounting requirements as indicated on the Drawings.
   3. Hose rack: Type and installation as indicated on the Drawings.
   4. Hose:
      a. Length: 75 feet.
      b. Size: 1 inch.
      c. Commercial/industrial grade rubber hose.
   5. Hose nozzle:
      a. Spray: 7-pattern select-a-spray with vinyl grip.
      b. Hold-open clip for continuous spraying.
      c. Material: Rust resistant stainless steel spring.
      d. Lifetime leak proof seal.

C. Fixed air gaps:
   1. Manufacturers: One of the following or equal:
      a. Josam.
      b. Zurn, Z1025.
   2. Provide and size as indicated on the Drawings.
   3. Coated cast iron.
   4. Slip joint inlet and no-hub outlet.
   5. Threaded outlets.

D. Trap primers:
   1. Electronic trap primers:
      a. Manufacturers: One of the following or equal:
         1) Precision Plumbing Products PTS.
         2) Sioux Chief.
      b. Provide electronic trap primer and distribution unit as indicated on the Drawings.

c. Design:
1) Supply a minimum of 2 ounces of water at 20 pounds per square inch gauge at setting of 10 seconds every 24 hours.
2) Manifold: Type L copper tubing in accordance with ASTM B88.
3) Backflow prevention.
4) Power: 120 volts.
5) Pre-assembled in a surface mounted cabinet.
a) Provide enclosure as specified in Section 16050 - Common Work Results for Electrical.

E. Cleanouts:
1. Cleanouts:
a. Cast-iron ferrule, countersunk plug, gastight and watertight seal.
b. Adjustable cleanout head extension.
c. Nickel-bronze top and securing screw.
d. Type FCO-1: Floor cleanouts, finished floors:
1) Manufacturers: One of the following or equal:
a) Josam Co.
b) Zurn Ind., Inc., ZN1400.
2) For finished floors.
3) Traffic: Heavy wheel/vehicular traffic.
e. Type FCO-2: Floor cleanouts, unfinished floors:
1) Manufacturers: One of the following or equal:
a) Josam Co., 55000.
b) Zurn Ind., Inc.
2) For unfinished floors.
f. Type FCO-3: Floor cleanout, exterior, in asphalt or ground areas:
1) Manufacturers: One of the following or equal:
a) Josam Co., 55000.
b) Zurn Ind., Inc.
2) Rated for outdoor use.

F. Drains:
1. Type, shape, and size as indicated on the Drawings with connections suitable for the piping system.
a. Provide drains of one type from the same manufacturer.
2. Type FD-1: Floor drain, finished floors, pedestrian traffic:
a. Manufacturers: One of the following or equal:
1) Josam, 30000-A.
2) Zurn.
b. Round, adjustable strainer head, floor level grate.
c. Body material: Coated cast iron.
d. Strainer:
1) Material: Nickel bronze.
2) Size:
a) 6 inch diameter for 3-inch drain.
b) 8 inch diameter for 4-inch drain.
3. Type FD-2: Floor drain, finished floors, heavy wheel traffic:
a. Manufacturers: One of the following or equal:
1) Josam.
2) Zurn Z521.

b. Adjustable extension frame with heavy-duty tractor grate.
1) Size: 12 inch diameter.
c. Material: Resin-coated cast iron top.
d. No-hub outlet.
e. Seepage pan with membrane flashing clamp.
4. Type TD-1: Trench drain:
a. Manufacturers: One of the following or equal:
1) Josam.
2) Zurn, Z664.
b. Modular linear trench drain.
c. Size: 6 inches wide by 12 inches long modules.
d. Bottom outlet, with secondary dome strainer.
e. Overall length as indicated on the Drawings.

2.04 PLUMBING PIPING SYSTEMS

A. As indicated on the Drawings in the Piping Schedule or specified in Section 15052 - Common Work Results for General Piping.

B. Cast iron soil pipe piping system:
1. In accordance with ASTM A74.
2. Bell-and-spigot, service weight.
a. Above ground: Hubless in accordance with CISPI 310.
3. Joints underground: Positive double seal compression type gaskets in accordance with ASTM C564.
4. Joints aboveground:
a. American standard taper screw threads, cut clean and made up with Teflon™ tape or an acceptable paste thread compound applied to the male threads only.
b. Slip joints permitted only in trap seals or on the inlet side of the traps.
1) Do not use long screws or bushings.
5. Cast iron drainage pattern fittings.
6. Couplings for “No Hub”: Stainless steel corrugated shield and clamp assembly over a molded 1-piece neoprene sealing sleeve, in accordance with ASTM A888.
7. Line pipe and fittings inside and coat outside with bituminous coating, except as follows:
a. Exposed, above ground piping:
1) Line inside only.
2) Coat outside with EPU-M-1, epoxy polyurethane, as specified in Section 09960 - High-Performance Coatings.
a) Color: Coordinate with the Owner.
8. Pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute.

C. Seamless copper water tube:
1. Type: ASTM B88:
a. Exposed copper piping or tubing: Type L hard-drawn, rigid.
b. Copper tubing buried in the ground or in plastic conduit: Type K soft annealed.

2. Fittings: Solder type forged or wrought copper.
    a. Manufacturers: One of the following or equal:
        1) Crawford Fitting Co., Swagelok.
        2) Hoke, Gyrolok.
        3) Parker.
3. Solder: ASTM B32, Alloy Grade Sb5.
4. Flux: ASTM B813.
5. Dielectric insulating unions or fittings:
    a. Manufacturers: One of the following or equal:
        1) Mueller Co.
        2) Watts Series 3001A.
6. Special thread to tube adapters:
    a. Manufacturers: One of the following or equal:
        1) Crawford Fitting Co., Swagelok.
        2) Hoke, Gyrolok.
        3) Parker.

D. PVC piping system:
1. Pipe: Designation PVC 1120 in accordance with ASTM D1785:
    a. Pipe and fittings: Extruded from Type I, Grade 1, Class 12454 B material in accordance with ASTM D1784.
    b. PVC pipe: Schedule 40, unless otherwise specified.
2. Fittings:
    a. Supplied by pipe manufacturer.
    b. Pressure fittings: In accordance with ASTM D2466 or ASTM D2467.
    c. DWV fittings: In accordance with ASTM D2665.
3. Solvent cement: In accordance with ASTM D2564:
    a. Chemical service: For PVC pipe in chemical service, provide the following primer and cement, or equal:
        1) Primer: IPS Corp Type P-70™.
        2) Cement: IPS Corp Type 724™ cement or cement certified by the manufacturer for chemical service.

2.05 WALL AND FLOOR SEALS

A. Single seal.

B. Seal element: Nitrile with the following physical characteristics:
1. ASTM D297 Specific Gravity: 1.15.
2. ASTM D395 Compression Set (22 hours at 158 degrees Fahrenheit): 45 percent.
3. ASTM D412 Elongation at Break: 300 percent.
4. ASTM D412 Tensile Strength: 1,300 psi.
5. ASTM D2240 Durometer Hardness (Shore A): 50±5.

C. Pressure plate: Reinforced nylon polymer:
1. ASTM D256 IZOD Impact/Notch: 11.1 ft-lb/in.
2. ASTM D638 Elongation (Break): 11 percent.
3. ASTM D638 Tensile Strength (Yield): 20,000 psi.
4. ASTM D790 Flexural Modulus: 1,124,000 psi.

5. ASTM D790 Flexural Strength (Yield): 30,750 psi.
6. ASTM D792 Specific Gravity: 1.38.

D. Bolts: Type 316 stainless steel in accordance with ASTM F593, minimum tensile strength of 85,000 psi.

E. Nuts: Type 316 stainless steel in accordance with ASTM F594, minimum tensile strength of 85,000 psi.

2.06 ANTI-SEIZE LUBRICANT

A. Manufacturers: One of the following or equal:
1. Bostik, Never Seez.
2. Oil Research Center.

B. Use with assembly of stainless steel nuts and bolts.

2.07 WATER HEATERS

A. Manufacturers: One of the following or equal:
1. A.O. Smith Corp.
2. State Ind., Inc.

B. General:
1. Size and requirements as indicated on the Drawings.
2. Provide with temperature limiting device in accordance with ASSE 1070.
3. Tanks:
    a. Glass lined.
    b. Exterior steel casing with factory standard enamel finish.
    c. 2 inches minimum fiberglass insulation.
    d. Pressure tested to 150 psig.
    e. ASME rated temperature and pressure relief valve.
    f. Magnesium anode and tank cleanout.
    g. Adjustable to store up to 180 degrees Fahrenheit water.
    h. Water heaters shall meet the requirements in accordance with CCR Title 24.
    i. Provide the manufacturer’s standard bracing in accordance with applicable codes.
4. Warranty:
    a. Special warranty:
        1) Duration: Provide 3-year warranty.

C. Tankless electric:
1. High temperature limit switch with automatic reset.
2. Flow switch.
3. Maximum operating pressure of 150 psig.
4. Heating elements:
    a. Material: Nichrome high efficiency.
    b. Automatic temperature control.
    c. Externally adjustable setting.
    d. Replaceable configuration.

e. UL listed.
5. Compression fittings.
6. Water hammer arrestor.
7. Power: As indicated on the Drawings and as scheduled.
8. Type WH-1: Water heater, tanked, single lavatory:
   a. Manufacturers: One of the following or equal:
      1) Eemax, SPEX.
      2) Keltech.
   b. Heating module with thermostatic control: 1 module.
   c. Temperature rise 40 degrees Fahrenheit at 0.5 gpm.
   d. Flow actuated at 0.2 gpm.

2.08 BACKFLOW PREVENTERS

A. Manufacturers: One of the following or equal:
   1. Febco backflow prevention:
      a. LF860, all sizes.
   2. Zurn/Wilkins:
      a. 975XL for 1/2 inch through 2 inch.
      b. 375AST for sizes 2-1/2 inch, 3 inch, 8 inch, and 10 inch.
      c. 375 and 375DA for sizes 4 inch and 6 inch.
   3. Watts regulator: Series LF909.

B. Design: Reduced pressure chamber type in accordance with AWWA C511.

C. Shutoff valves:
   1. 2-inch and smaller: Provide with full-port, quarter turn, resilient seated ball valves.
   2. Larger than 2-inch: Provide with resilient seated, outside stem and yoke gate valves.

2.09 PIPE INSULATION

A. General:
   1. Insulation thicknesses: Provide insulation thickness in inches in accordance with Table 1 in accordance with the 2021 International Energy Conservation Code (IECC). Insulation thickness shown is nominal. Manufacturing tolerance of 15 percent variation is permissible.
   2. Insulation conductivity and nominal pipe size as specified in Table 1.

Table 1 - Insulation Thickness Requirements

Fluid Operating Temperature Range And Usage (°F)	Insulation Conductivity		Nominal Pipe or Tube Size (inches)				
	Conductivity Btu x in./(h x ft^2 x °F)	Mean Rating Temperature (°F)	<1	1 to <1-1/2	1-1/2 to <4	4 to <8	>8
>350	0.32-0.34	250	4.5	5.0	5.0	5.0	5.0
251-350	0.29-0.32	200	3.0	4.0	4.5	4.5	4.5
201-250	0.27-0.30	150	2.5	2.5	2.5	3.0	3.0
141-200	0.25-0.29	125	1.5	1.5	2.0	2.0	2.0

Table 1 - Insulation Thickness Requirements							
Fluid Operating Temperature Range And Usage (°F)	**Insulation Conductivity**		**Nominal Pipe or Tube Size (inches)**				
	Conductivity Btu x in./(h x ft² x °F)	**Mean Rating Temperature (°F)**	**<1**	**1 to <1-1/2**	**1-1/2 to <4**	**4 to <8**	**>8**
105-140	0.21-0.28	100	1.0	1.5	1.5	1.5	1.5
40-60	0.21-0.27	75	0.5	1.0	1.0	1.0	1.0
<40	0.20-0.26	50	1	1.5	1.5	1.5	1.5

3. Service designation and location requirements as specified in Table 2, including the following requirements.
   a. Insulation type.
   b. Jacket type.
   c. Vapor barrier requirements.

Table 2 - Insulation Schedule					
Service Designation(1)	**Location(2)**	**Insulation Type(3)**	**Jacket Type(3)**	**Service Temp. °F(4)**	**Vapor Barrier**
Hot Water	Interior or Exterior	1 or 2	Type 1 on Exterior installations; none required on Interior installations	100-200	Install on Type 2 insulation
Tepid Water	Interior or Exterior	1 or 2	Type 1 on Exterior installations; none required on Interior installations	60-100	Install on Type 2 insulation

Notes:
(1) Refer to Plumbing Piping Schedule as indicated on the Drawings for service designations.
(2) Insulation jackets are not required for concealed interior installations in accordance with appliable plumbing code.
(3) Contractor may select from options listed.
(4) Unless noted otherwise, use service temperature range provided in this table to establish insulation thickness as required by Table 1.
(5) Insulate piping systems that are heat traced as indicated on the Drawings.

B. Type 1: Pipe insulation, closed cell elastomeric insulation:
   1. Manufacturers: One of the following or equal:
      a. Aeroflex USA Inc., Aerocel® AC.
      b. Armacell®, AP Armaflex.
   2. Insulation material: Closed cell elastomeric insulation.
   3. Minimum temperature range: -40 degrees Fahrenheit to 220 degrees Fahrenheit.
   4. K factor at 75 degrees Fahrenheit: Not more than 0.27 Btu-inch/hour-square feet-degrees Fahrenheit.
   5. Fire ratings:
      a. Flame spread: 25 or less.

b. Smoke density: 50 or less for insulation thicknesses up to 1.5 inches.

6. Joints: Seal with the manufacturer's recommended contact adhesive to form continuous water barrier.

C. Type 2: Pipe insulation, preformed mineral fiberglass:
   1. Manufacturers: One of the following or equal:
      a. Johns Manville, Micro-Lok® HP.
      b. Knauf Insulation.
      c. Owens-Corning.
   2. Insulation material: Preformed mineral fiberglass insulation made from glass fibers bonded with a thermosetting resin.
      a. In accordance with ASTM C547, Class 1.
      b. Provide with factory installed vapor barrier.
         1) Material: White Kraft paper bound to aluminum foil in accordance with ASTM C1136, Type I.
         2) Longitudinal lap seals: Pressure-sensitive, self-sealing longitudinal lap strip with factory applied adhesive.
         3) Circumferential butt seals: 4-inch wide tape or similar properties or 4-inch wide overlap with adhesive seal.
         4) Vapor barrier permeability: 0.02 perms or lower.
         5) Vapor barrier flame spread rating: 25 or less.
   3. Minimum temperature range: -0 degrees Fahrenheit to 850 degrees Fahrenheit.
   4. K factor at 75 degrees Fahrenheit: Not more than 0.23 Btu-inch/hour-square feet degrees Fahrenheit.
   5. Maximum moisture absorption, volume percent: 5.

D. Type 3: Pipe insulation, rigid cellular glass:
   1. Manufacturers: The following or equal:
      a. Owens-Corning, Foamglas® One™.
   2. Insulation material: Rigid cellular glass in accordance with ASTM C552, Type II.
   3. Temperature range: -450 degrees Fahrenheit to 900 degrees Fahrenheit.
   4. K factor at 75 degrees Fahrenheit: Not more than 0.32 Btu-inch/hour-square feet-degrees Fahrenheit.
   5. Minimum average density: 7.5 pounds per cubic foot.
   6. Maximum moisture absorption, volume percent: 5.
   7. Minimum compressive strength: 87 pounds per square inch.
   8. Moisture permeability: 0.00 perm-inch.

E. Insulation jackets:
   1. Type 1: Pipe insulation jacket, ultraviolet-resistant polyvinyl chloride:
      a. Manufacturers: One of the following or equal:
         1) Johns Manville, Zeston® 2000 PVC.
         2) Proto Corp., LoSMOKE PVC.
         3) Speedline® Corp., Smoke-Safe™ PVC.
      b. Material: Ultraviolet-resistant polyvinyl chloride jacketing, 20 mil minimum thickness.
      c. Fire rating: 25 maximum flame spread, smoke developed 50 or less.
      d. Color: White.
      e. Overlap: 1 inch minimum at joints and fittings.
      f. Joint seal: PVC solvent welded or adhesive as recommended by the manufacturer.

g. Fittings: Factory made with full thickness insulation.

2. Type 2: Pipe insulation jacket, aluminum:
   a. Manufacturers: One of the following or equal:
      1) Childers Products.
      2) Premetco International.
   b. Material: Aluminum, Alloy 5005; 0.016 inch (26-gauge) minimum thickness.
   c. Overlap: Overlap circumferential joints 4 inches minimum; overlap longitudinal joints 1-inch minimum; longitudinal joints oriented to minimize water entry.
   d. Bands: 0.5 inch wide, 0.0508-inch (16-gauge) thick aluminum, same alloy as jacket or 0.0179-inch thick Type 304 stainless steel; install on 18-inch centers, uniformly spaced and at all fitting joints.
   e. Joint seal: Apply waterproof adhesive at joints and overlaps.
   f. Fittings: Custom fit of same materials.

F. Vapor barriers:
   1. Type 1: Pipe insulation vapor barrier, white Kraft paper bound to aluminum foil:
      a. Material: White Kraft paper bound to aluminum foil in accordance with ASTM C1136, Type 1.
      b. Permeability: 0.02 perms or lower.
      c. Maximum flame spread rating: 25.
      d. Edge seal: Pressure-sensitive tape lap seal.
      e. Circumferential joints: 4-inch wide tape or 4-inch overlap with adhesive seal.
   2. Type 2: Pipe insulation vapor barrier, mastic:
      a. Manufacturers: One of the following or equal:
         1) Benjamin Foster, No. 30-76.
         2) Childers Products.
         3) Foster Products.
         4) Insul-Coustic.
      b. Material: Mastic.

PART 3 EXECUTION

3.01 GENERAL

A. Furnish and install vents required in drainage piping as part of the plumbing system, in accordance with Laws and Regulations.

B. Use anti-seize lubricant for stainless steel treads on fittings and fasteners.

3.02 INSTALLATION

A. Fixtures:
   1. Rough-in fixtures and accessories in accordance with the dimensions supplied by the manufacturers of the fixtures.
   2. Mount fixtures and accessories without cutting of finish surface.

B. Plumbing and drainage products:
   1. Traps:
      a. Install traps as near the fixtures as possible.
   2. Sizes of equipment drains and of floor drains shall be as indicated on the Drawings.

C. Plumbing piping systems:
   1. Cast iron soil pipe, PVC, polypropylene:
      a. Where not specified otherwise, install horizontal piping with a grade of 1/4 inch per foot.
      b. Provide vents, roof drains, and pipes flashed and made watertight at the roof with lead sheet flashings.
         1) Minimum 4-pound lead sheet.
      c. Extend flashing not less than 6 inches up the pipes, and counter flash with standard cast iron or malleable iron recessed roof couplings.
      d. Extend flashing for vents up to the top of the vent and turn down into the pipe.
      e. Extend flashing shields not less than 8 inches from vent and pipe in all directions.
   2. Copper tube:
      a. Install in accordance with ASTM B828 and IAPMO IS 03.
      b. Install in straight runs, supported at intervals close enough to avoid sagging.
      c. Make cuts square with a tubing cutter or with a 32-tooth hacksaw.
         1) Provide a sizing tool to correct distortions.
      d. Insulate piping as specified.
   3. Black steel:
      a. Install in accordance with applicable codes and regulations.
   4. CPVC:
      a. Install in accordance with ASTM F645 or the manufacturer's published instructions for installation of piping, as applicable to the particular type of piping.
      b. Provide molded transition fittings for transitions from plastic to metal or IPS pipe.
         1) Do not thread pipe.
         2) Do not use flanged transition fittings unless specifically indicated on the Drawings.
      c. Locate unions where indicated on the Drawings, and elsewhere where required for adequate access and assembly of the piping system.
      d. Provide serrated nipples for transition from plastic pipe to rubber hose.
      e. Clean dirt and moisture from pipe and fittings.
      f. Bevel pipe ends in accordance with the manufacturer's instructions with chamfering tool or file.
         1) Remove burrs.
      g. Use solvent cement and primer formulated for CPVC.
      h. Use primer on pressure and non-pressure joints.
      i. Do not solvent weld joints when ambient temperatures are below 40 degrees Fahrenheit or above 90 degrees Fahrenheit unless solvent cements specially formulated for these conditions are utilized.

D. Wall and floor seals:
   1. Provide seals at rated walls.
   2. Provide seals between floors.
   3. Use specified barrier seals for concrete/masonry wall and floor penetrations.

E. Anti-seize lubricant:
   1. Use with assembly of stainless steel nuts and bolts.

F. Pipe insulation:
   1. Install insulation and jacket materials in accordance with the manufacturer's written instructions.
   2. Fittings:
      a. Insulate fittings by covering with mitered sections of insulation or utilize factory-made prefabricated fitting shapes.
      b. Terminate preformed pipe jackets or covering at sufficient distance from flanges to permit removal of bolts.
      c. Overlap flange and flanged fitting insulation on adjacent pipe covering by at least 2 inches.
   3. Valves:
      a. Insulate valves 3 inches in nominal size and larger with removable insulating blankets.
      b. Size blanket to extend up to packing gland only so that replacement of packing does not require removal of insulating blanket.
   4. Provide continuous insulation through and over pipe supports and provide protection saddles at supports.
   5. Provide continuous pipe insulation and covering through sleeves or openings in walls and floors.
      a. When buried pipe enters a building through a below grade wall or slab penetration, begin insulation system on interior side of penetration.
   6. Apply pre-molded pipe insulation with extended legs when used on pipe traced with either tubing or electric cable type.
   7. Thermally isolate insulation closure locations (end caps, transitions, etc.).
      a. Type 1 or 2 jacket installation on piping with potential reach temperatures greater than 150 degrees Fahrenheit.
   8. Apply piping identification on jackets as specified in Section 15076 - Pipe Identification.

G. Backflow preventers:
   1. Include shutoff valves at each end of backflow preventer with properly located test cocks.

3.03 FIELD QUALITY CONTROL

A. Test water piping in accordance with the plumbing code as specified in Section 01410 - Regulatory Requirements.

B. Test drain, waste, and vent lines as specified and in accordance with the plumbing code as specified in Section 01410 - Regulatory Requirements.

C. Backflow preventer:
   1. Test witnessing: Witnessed.

2. Conduct pressure and leak test as specified in Section 15110 - Common Work Results for Valves.
3. Certificate of backflow prevention from a tester listed by the American Backflow Prevention Association.

3.04 CLEANING

A. Upon completion of installation, clean piping interior of foreign matter and debris.

B. Flush and disinfect potable water piping as specified in Section 01757 - Disinfection.

3.05 SCHEDULES

A. As indicated on the Drawings.

END OF SECTION

SECTION 15430

EMERGENCY EYE/FACE WASH AND SHOWER EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Emergency shower and eyewash.
   2. Water heaters.

1.02 REFERENCES

A. American Gas Association (AGA) Standards.

B. American National Standards Institute (ANSI):
   1. Z358.1 - Emergency Eyewash and Shower Equipment.

C. American Society of Mechanical Engineers (ASME).

D. American Society of Sanitary Engineering's (ASSE):
   1. 1070 - Standard for devices that limit water temperature to a fixture or fixtures such as sinks, lavatories, or bathtubs to reduce the risk of scalding.
   2. 1071 - Performance Requirements for Temperature Actuated Mixing Valves for Plumbed Emergency Equipment.

E. Americans with Disabilities Act (ADA) Standards.

F. California Code of Regulations (CCR):
   1. Title 24 - Building Standards Code.

G. California Department of Occupational Safety and Health Administration (Cal-OSHA).

H. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

I. Occupational Safety and Health Administration (OSHA).

J. Underwriters Laboratories, Inc. (UL).

1.03 ABBREVIATIONS

A. IPS - Industrial Piping Systems.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures and the Agreement and Contract RFP in Volumes 1 and 2.

1.05 QUALITY ASSURANCE

A. Regulatory requirements:
   1. As applicable, equipment of this Section shall comply with requirements of public agencies of the state where the project is located including ASME, Cal-OSHA, NFPA, OSHA, UL.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Packing and shipping: Deliver to the job site in manufacturer's original containers.

B. Delivery: After wet operations in building are completed.

C. Storage and protection:
   1. Store materials in original, unopened containers in compliance with manufacturer's printed instructions.
   2. Keep materials dry until ready for use.
   3. Keep packages of material off the ground, under cover, and away from sweating walls and other damp surfaces.
   4. Protect finished surfaces from soiling and damage during handling and installation. Keep covered with a protective covering.

PART 2 PRODUCTS

2.01 EMERGENCY SHOWERS AND EYE/FACE WASHES

A. General design requirements:
   1. Combination unit emergency shower with eye/face wash:
      a. Floor mounted fixture consisting of pipe standard, showerhead assembly, and eyewash assembly.
      b. Provide stanchion and floor flange, with interconnecting piping.
   2. Showerhead flow: 20.0 gallons per minute flow, minimum.
   3. Eye/face wash flow: 3.0 gallons per minute flow, minimum.
   4. Meet or exceed all requirements of ANSI Z358.1.
   5. Provide ANSI compliant identification sign and markings.

B. Shower/eyewash unit with integral controls to alarm the system is in use.
   1. Flow switch:
      a. Construction:
         1) NEMA Type 4.
         2) Brass or Type 316 Stainless Steel.
      b. Type: Magnetic proximity switch.
      c. Alarm Contacts: Double pole, double throw contacts rated at 2.0 amps at 120 VAC configurable for either Normally Open or Normally Closed.

C. Combination unit emergency shower and eye/face wash:
   1. Manufacturers: One of the following or equal:
      a. Haws, Model No. 8309.
      b. Guardian Equipment, Model No. G1950HFC.
      c. Bradley, Model No. S19314AC.
   2. Pipe standard:
      a. 1-1/4-inch hot-dip galvanized steel pipe, and fittings with interconnecting piping, stanchion, and 9-inch diameter floor flange.
      b. Corrosion protection:
         1) Manufacturers: One of the following or equal:
            a) Bradley Galvanized steel with BradTect® safety yellow coating.
            b) Guardian Equipment "-GC" epoxy protective coating in corrosive environments.
            c) Haws "-CRP".
   3. Shower head:
      a. Material and size: ABS plastic, 10-inch diameter with 20 gallons per minute flow control.
      b. Valve and actuator: Stay open chrome plated brass ball valve equipped with stainless steel ball and stem operated by a rigid stainless steel pull rod.
   4. Eye/face wash receptor:
      a. Valve and actuator: Stay open chrome plated brass ball valve with stainless steel ball and stem operated by a stainless steel or epoxy coated aluminum push handle and foot treadle.
      b. Spray head(s): ABS plastic or polypropylene eye/face wash type heads, with integral flip top protective dust covers releasing with water pressure.
      c. Receptor bowl: Stainless steel; 11 inches diameter.
   5. Supply: 1-1/4-inch IPS.
   6. Waste: 1-1/4-inch IPS.

D. Safety shower and eye/face wash tepid water mixing valves:
   1. Manufacturers: One of the following or equal:
      a. Bradley, Model No. S19-2250.
      b. Guardian Equipment, Model No. G3800 Series.
      c. Haws, Model No. 9201 Series.
   2. General requirements:
      a. Provide 1 mixing valve for each safety unit or group of safety units mounted within 100 feet of each other.
   3. Tepid water system to provide a minimum of 20 gallons per minute for shower and 3 gallons per minute for eye/face wash of water for a period of at least 15 minutes at a delivery temperature of 80 to 85 degrees Fahrenheit.

E. Safety shower tester:
   1. Manufacturers: One of the following or equal:
      a. Bradley, Model No. S19-330ST.
      b. Guardian Equipment, Model No. AP250-005.
      c. Haws, Model No. 9010 with No. 9009.
   2. Kit includes:
      a. Minimum 5 gallon plastic bucket.

b. 7 foot long watertight 12-gallon translucent vinyl plastic bag for attaching over drench showerhead.
    1) Bag shall have drawstring at top and be hemmed at bottom.
c. Testing record card.

2.02 WATER HEATERS

A. Size and requirements as indicated on the Drawings.

B. Provide with temperature limiting device meeting ASSE 1070.

C. Water heaters shall meet the requirements in accordance with CCR Title 24.

D. Tankless electric heater:
1. Modular heating chambers.
2. NEMA 4X Type 316 stainless steel cabinet:
    a. Internal heater protection to -30 degrees Fahrenheit.
    b. Wall mounted.
3. Flow actuated at 2.5 gpm.
4. Inlet flow:
    a. Up to 40 gpm and 150 psig.
5. Outlet flow:
    a. Minimum temperature rise: 22 degrees Fahrenheit at maximum inlet flow.
    b. Factory set maximum temperature: 115 degrees Fahrenheit.
    c. Temperature set point: 85 (within 1) degrees Fahrenheit.
6. Provide water heater piping components necessary for installation:
    a. Drain piping, material as indicated on Piping Schedule.
    b. Supply valve.
    c. Y strainer.
    d. Pressure regulating valve and gauge.
    e. Water hammer arrestor.
7. Manufacturers: One of the following or equal:
    a. Haws, Model 9327.
    b. EEMAX, similar models.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturers' recommendations.

B. Install products in accordance with code requirements and ANSI Z358.1.

C. Plumbing and mechanical work as specified in Section 15400 - Plumbing Systems and Section 15050 - Common Work Results for Mechanical Equipment.

3.02 FIELD QUALITY CONTROL

A. Functional testing:
   1. Shower/eyewash unit with integral controls:
      a. Test witnessing: Witnessed.
      b. Electrical Instrumentation and Controls:
         1) Test witnessing: Witnessed.
         2) Conduct testing as specified in Section 17950 - Commissioning for Instrumentation and Controls.

3.03 SCHEDULES

A. As indicated on the Drawings.

END OF SECTION

SECTION 15500

COMMON WORK RESULTS FOR HVAC

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. General prescriptive, design, and performance requirements for products and mechanical equipment used to heat, ventilate, cool, or otherwise condition or distribute indoor air.
   2. Specific requirements for ductwork accessories:
      a. Dampers and damper operators.
      b. Diffusers, grills, and registers.
   3. Specific requirements for refrigerant piping.

1.02 REFERENCES

A. Air-Conditioning, Heating, and Refrigeration Institute (AHRI):
   1. 210/240 - Performance Rating of Unitary Air-Conditioning and Air-Source Heat Pump Equipment.
   2. 270 - Sound Rating of Outdoor Unitary Equipment.
   3. 340/360 - Performance Rating of Commercial and Industrial Unitary Air Conditioning and Heat Pump Equipment.
   4. 430 - Performance Rating of Central Station Air-handling Unit Supply Fans.

B. Air Movement and Control Association International, Inc. (AMCA):
   1. 11 - Certified Ratings Program Operating Manual.
   2. 210 - Laboratory Methods for Testing Fans for Certified Aerodynamic Performance Rating.

G. ASTM International (ASTM):
   1. B32 - Standard Specification for Solder Metal.
   2. B75 - Standard Specification for Seamless Copper Tube.
   3. B280 - Standard Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.
   4. B813 - Standard Specification for Liquid and Paste Fluxes for Soldering of Copper and Copper Alloy Tube.
   5. B828 - Standard Practice for Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fitting.
   6. C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
   7. D1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.
   8. D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
   9. D2467 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.
   10. D2564 - Standard Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems.
   11. D2665 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings.

H. California Energy Commission (CEC):
   1. Title 24 - Building Energy Efficiency Standards.

I. National Bureau of Standards: NBS PS15-69 - Custom Contact-Molded Reinforced-Polyester Chemical-Resistant Process Equipment.

J. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1000 V Maximum).

K. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).
   2. 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.

L. National Roofing Contractors Association (NRCA).

M. International Association of Plumbing and Mechanical Officials (IAPMO):
   1. IS 3 - Installation Standard for Copper Plumbing Tube, Pipe, and Fittings.

N. Sheet Metal and Air Conditioning Contractors National Association (SMACNA).

O. Underwriters Laboratories, Inc. (UL):
   1. 555 - Standard for Fire Dampers.
   2. 555S - Standard for Smoke Dampers.
   3. 900 - Standard for Air Filter Units.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination.
   1. Provide roof mounted HVAC equipment information required in the preparation of roofing drawings including, but not limited to:
      a. Location.
      b. Size.
      c. Weight.
      d. Anchoring and support details.

1.04 SUBMITTALS

A. Where items in this Section are components of equipment or systems specified in other sections, include data for this Section's components with the equipment or system submittal.

B. When products are specified in this Section but are not referenced in other Technical Sections, submit:
   1. As specified in Section 01330 - Submittal Procedures.
   2. Product data:
      a. Sufficient to substantiate specified requirements.
   3. Description of coating system and instructions for field touch up and re-coating.

C. Projects subject to CEC Title 24:
   1. Damper operators:
      a. Electric: Wiring diagrams.
   2. Manufacturer's recommendation for testing and/or maintenance of product.

PART 2 PRODUCTS

2.01 GENERAL

A. Technical Sections product requirements supersede conflicting requirements in this Section.

B. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

C. Electrical:
   1. Components and assemblies.
   2. Carry UL Listing Marking.
   3. In accordance with NEC requirements.

D. Fans:
   1. Rated and labeled in accordance with AMCA 210 and AMCA 211.

2. Belt drive systems:
    a. Adjustable for minimum within 5 percent speed change.
    b. Rated for 150 percent of maximum motor horsepower.

E. Unitary air conditioners and heat pumps:
1. Rated in accordance with AHRI Standards 210/240 or 340/360, AHRI 270, and AHRI 430.
2. In accordance with ASHRAE Standard 15.
3. Heating: Certified in accordance with ANSI Z21-47.
4. Refrigerant: HFC R-410A.

F. Filters:
1. Media: UL 900 listed.

G. Insulation and adhesives: In accordance with NFPA 90A requirements for flame spread and smoke generation.

H. Roof curbs: Supplied by manufacturer of product requiring the curb.

I. Factory coating: For equipment with factory coatings, manufacturer to supply 2 containers (each about a pint) of the paint for Contractor/Owner touch up.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. General:
1. Environmental conditions as specified in Section 01850 - Design Criteria.
2. Provide instrumentation and controls to meet the equipment operating requirements as specified in Section 15936 - Instrumentation and Control Devices for HVAC.

B. Fans:
1. Sharply rising pressure characteristics throughout the operating range and beyond the efficiency peak.
2. Peak operating points to be as close as possible to the maximum efficiency and whose operating range is within the normal fan selection range.
3. Bearings rated per ABMA 9 or 11 for a L10 life rating of not less than 50,000 hours.
4. Total sound power levels in the 8 octave band range in accordance with, AMCA 301, not to exceed the lesser of the following or the sones level indicated on the Drawings.

Sound Power Level, decibels levels referenced to 10-12 watts								
Frequency, Hz	63	125	250	500	1,000	2,000	4,000	8,000
General	100	98	94	88	84	84	78	75

5. Shall comply with AMCA Publication 11 and bear the AMCA Certified Ratings Program seal for air performance and sound performance according to AMCA Publication 211 and AMCA Publication 311.

C. Unitary air conditioners and heat pumps:
   1. Outdoor noise levels: Outdoor noise levels in the 8 octave band ranges, as measured in accordance with AHRI 270 shall not exceed the following:

OCTAVE BANDS								
Unit Nominal Capacity (Tons)	**63**	**125**	**250**	**500**	**1,000**	**2,000**	**4,000**	**8,000**
0 to 5	64	70	71	74	74	71	67	67
6	79	85	78	74	71	73	66	59
7-1/2 to 10	64	70	73	79	82	78	74	67
12 and larger	84	88	84	83	84	78	72	68

   2. Capable of starting and cooling from 45 to 125 degrees Fahrenheit ambient outdoor air temperature and exceeding the maximum load criteria of AHRI Standard 210/240 or 340/360.
   3. Heat pumps capable of starting and heating at or above 0 degrees Fahrenheit outdoor ambient air temperature.
   4. Minimum cooling, Energy Efficiency Ratio (EER) and Integrated Energy Efficiency Ratio (IEER), as rated in accordance with AHRI 210/240 or 340/360 for split systems and packaged units is as follows:

Equipment Type	**Net Cooling Cap (British Thermal Units per hour)**	**EER(1)**	**IEER(2)**
Space Constrained, Air Cooled	<30,000	11.7	N/A
Small Duct, High Velocity, Air Cooled	<65,000	12.1	N/A
Air Cooled	<65,000	13.4	N/A
Air Cooled	>65,000 and <135,000	11.2	14.8
Air Cooled	>135,000 and <240,000	11.0	14.2
Air Cooled	>240,000 and <760,000	10.0	13.2
Air Cooled	>760,000	9.7	12.5
Water Cooled	<65,000	12.1	12.3
Water Cooled	>65,000 and <135,000	12.1	13.9
Water Cooled	>135,000 and <240,000	12.5	13.9
Water Cooled	>240,000 and <760,000	12.4	13.6
Water Cooled	>760,000	12.2	13.5
Evaporatively Cooled	<65,000	12.1	12.3
Evaporatively Cooled	>65,000 and <135,000	12.1	12.3
Evaporatively Cooled	>135,000 and <240,000	12.0	12.2
Evaporatively Cooled	>240,000 and <760,000	11.9	12.0
Evaporatively Cooled	>760,000	11.7	11.9

Equipment Type	Net Cooling Cap (British Thermal Units per hour)	EER(1)	IEER(2)
(1) Deduct 0.2°from the required EER for units with a heating section other than electric resistance heat. (2) IEER is only applicable to equipment with capacity control in accordance with AHRI 340/360.			

5. Units with heating capabilities: Meet or exceed the following:
   a. Annual fuel utilization efficiency: 80 percent.
   b. Steady state efficiency: 80 percent.
   c. Comply with CEC Title 24: Seasonal Energy Efficiency Ratio (SEER) minimum: 76.9 percent.
6. Energy efficiency requirements:
   a. Comply with CEC Title 24.
7. Unit air flows for cooling:
   a. Minimum of 300 cubic feet per minute (cfm) per ton.
8. Maximum 500 cfm per ton.

D. Filters:
1. Efficiency: 45 to 50 percent dust spot efficiency when rated in accordance with ASHRAE Test Standard 52.2.

E. Smoke detector requirements:
1. Provide all supply, exhaust, and odor control fans greater than or equal to 2,000 cubic feet per minute with smoke detectors:
   a. Duct or fan mounted smoke detector as specified in Section 15936 - Instrumentation and Control Devices for HVAC.

2.03 DAMPERS

A. General:
1. Damper type, style, and size as indicated on the Drawings.
2. Components: Include with each damper:
   a. Type, Frame, actuators, clips, connectors, and other accessories necessary for mounting.
      1) Manual actuators: Factory supplied locking quadrant on factory mounted stand-off bracket.
         a) Bracket finish to match frame.
      2) Electric actuators when indicated on the Drawings.
3. Leakage Class, when specified, to be in accordance with AMCA Standard 511 and product to bear AMCA Rating Seal for Air Leakage.
   a. Blade seals to be mechanically attached.
4. All fire dampers and combination smoke/fire dampers to have duct access door near damper as specified in technical sections.

B. Backdraft dampers (BDD):
1. BDD-1; Style 1; counterbalanced backdraft damper:
   a. Manufacturers: One of the following or equal:
      1) Ruskin: Model CBD6.
      2) Greenheck.

b. Frame:
    1) Minimum depth: 2.25 inches.
    2) Minimum thickness: 0.125-inch.
    3) Material: 6063T5 aluminum.
    4) With insect screen and water stop.
c. Blades:
    1) Minimum thickness: 0.070-inch.
    2) Material: 6063T5 aluminum.
    3) High strength nylon bearings.
    4) Elastomer edge seals.
    5) Aluminum tie-bar.
    6) Blades require no more than 4.25 inches clearance beyond frame when fully open.
d. Counterbalance:
    1) Zinc plated bar on blades.
    2) Adjustable down to 0.01-inch wg opening.
e. Finish:
    1) Mill.

2.04 DAMPER OPERATORS

A. General: Provide manual or electric damper operator for each damper furnished as indicated on the Drawings.

B. Manual operators by damper manufacturer:
    1. Operate damper manually with a force not exceeding 20 pounds.
    2. Provide with locking quadrant.
    3. Provide 3/8 inch, or larger, square double-ended drive shaft adequate for required damper torque, with machined keyways allowing for mounting in 2 positions, 90 degrees apart.
    4. Provide sufficient number of operators for torque required to operate damper.

2.05 SCREENS

A. Required on all fans and louvers unless otherwise indicated on the Drawings.

B. Characteristics and features:
    1. Bird screen: 1/2-inch mesh by 14 gauges.
        a. For exhaust applications.
    2. Insect screens: 18 by 14 mesh.
        a. For intake applications.
    3. Screens and frames, same material as ductwork, hood, louver, fan, or equipment connected to screen.
    4. Screens secured in frames.

2.06 REFRIGERANT PIPING

A. Seamless copper tube:
    1. Type:
        a. Straight lengths: ASTM B75, USN Alloy C12200, H55 Temper.
        b. Coiled lengths: ASTM B280, USN Alloy C12200, O60.

c. Outside diameter sized, minimum wall thickness in accordance with ASTM B280 and B75.

2. VRF-System Refrigerant Piping:
   a. Entire refrigerant piping system shall be brazed connections and fittings and meet test pressures required by VRF manufacturer.
3. Non-VRF System Refrigerant Piping:
   a. Solder: ASTM B32, Alloy Grade Sb5.
   b. Flux: ASTM B813.

2.07 CONDENSATE DRAIN PIPING

A. PVC:
   1. PVC Pipe: Designation PVC 1120 in accordance with ASTM D1785 and appendices:
      a. Pipe and fittings: Extruded from Type I, Grade 1, Class 12454 B material in accordance with ASTM D1784.
      b. PVC Pipe: Schedule 80 unless otherwise indicated on the Drawings.
   2. Fittings:
      a. Supplied by pipe manufacturer.
      b. Pressure fittings: In accordance with ASTM D2466 or ASTM D2467.
      c. DWV fittings: In accordance with ASTM D2665.
   3. Solvent cement: In accordance with ASTM D2564:
      a. Manufacturers: The following or equal:
         1) Primer: IPS Corp Type P-70™.
         2) Cement: IPS Corp Type 724™ cement or cement certified by the manufacturer for chemical service.

2.08 PIPE INSULATION

A. General:
   1. As specified in the Agreement and Contract RFP in Volumes 1 and 2.
   2. Insulation thicknesses: Provide insulation thickness in inches in accordance with the following table. Insulation thickness shown is nominal. Manufacturing tolerance of 15 percent variation is permissible.

Table 1 - Required Insulation Thicknesses (inches)

Service Temperature Range as Designated in Insulation Schedule at End of this Section	Nominal Pipe Diameters	
	1 inch and Less	1.25 to 2 inches
100 to 200 degrees Fahrenheit	1.5	1.5
40 to 100 degrees Fahrenheit	0.5	1.0

B. Insulation, Type 1:
   1. Manufacturers: One of the following or equal:
      a. Aeroflex USA Inc., Aerocel® AC.
      b. Armacell®, AP Armaflex.
   2. Insulation material: Closed cell elastomeric insulation.
   3. Minimum temperature range: Minus 40 degrees Fahrenheit to plus 220 degrees Fahrenheit.

4. K factor at 75 degrees Fahrenheit: Not more than 0.27 BTU-inch/hour-square feet-degrees Fahrenheit.
5. Fire ratings:
   a. Flame spread: 25 or less.
   b. Smoke density: 50 or less for insulation thicknesses up to 1.5 inches.
6. Joints: Seal with manufacturer's recommended contact adhesive to form continuous water barrier.

C. Insulation jackets:
1. Type 1:
   a. Manufacturers: One of the following or equal:
      1) Johns Manville, Zeston® 2000 PVC.
      2) Proto Corp., LoSMOKE PVC.
      3) Speedline® Corp., Smoke-Safe™ PVC.
   b. Material: Ultraviolet-resistant polyvinyl chloride jacketing, 20 mil minimum thickness.
   c. Fire rating: 25 maximum flame spread, smoke developed 50 or less.
   d. Color: White.
   e. Overlap: 1-inch minimum at joints and fittings.
   f. Joint seal: PVC solvent welded or adhesive as recommended by the manufacturer.
   g. Fittings: Factory made with full thickness insulation.

D. Vapor barriers:
1. Vapor barrier, Type 1:
   a. Material: White Kraft paper bound to aluminum foil in accordance with ASTM C1136, Type 1.
   b. Permeability: 0.02 perms or lower.
   c. Maximum flame spread rating: 25.
   d. Edge seal: Pressure-sensitive tape lap seal.
   e. Circumferential joints: 4-inch wide tape or 4-inch overlap with adhesive seal.
2. Vapor barrier, Type 2:
   a. Manufacturers: One of the following or equal:
      1) Benjamin Foster, No. 30-76.
      2) Childers Products CP10/11 Vi-Acryl.
      3) Foster Products, 36-10/46-10 Weatherite.
      4) Insul-Coustic, No. I.C.-580.
   b. Material: Mastic.

E. Insulation schedule:

Table 2 - Insulation Schedule

Service Designation(1)	Location(2)	Insulation Type	Jacket Type	Service Temp. °F(3)	Vapor Barrier
HVAC Refrigerant	Interior or Exterior	1	1	40 - 200	Required
HVAC Condensate	Interior or Exterior	1	1	Below 60	Required

Table 2 - Insulation Schedule					
Service Designation[1]	**Location[2]**	**Insulation Type**	**Jacket Type**	**Service Temp. °F[3]**	**Vapor Barrier**

Notes:
1. Refer to Piping Schedule in Section 15052 - Common Work Results for General Piping for service designations.
2. Insulation jackets are not required for interior installations that are concealed. See definitions for description of concealed locations.
3. Unless noted otherwise, use service temperature range provided in this table to establish insulation thickness as required by Table 1.

2.09 EQUIPMENT NAMEPLATES

A. Provide a nameplate with the following markings that is plainly visible after installation:
   1. Manufacturer's name, trademark, or other descriptive marking to identify specific equipment.
   2. Where equipment is electrically powered:
      a. Supply voltage, phase, frequency, and full-load current.
      b. Power source or circuit ID.
      c. Short-circuit current rating based on one of the following:
         1) Short-circuit current rating of a listed and labeled assembly.
         2) Short-circuit current rating established utilizing an approved method.

2.10 SHIPPING, SPARE PARTS, MAINTENANCE PRODUCTS, AND SPECIAL TOOLS

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

B. Inspect fasteners for proper tightness.

C. Ship units in 1 piece (or modular, if required), factory assembled, piped, internally wired, and factory tested.

D. Provide:
   1. Filters: 2 extra (3 total) sets per each unit with filters.
   2. Sheaves and belts: 1 set for change-out for final balance per unit installed.
   3. Belts: 1 extra set for each unit installed as determined by final balance.

E. Provide a 2-year supply of maintenance products as indicated in manufacturer's maintenance literature.

PART 3 EXECUTION

3.01 GENERAL

A. Technical Sections execution requirements supersede conflicting requirements in this Section.

B. As specified in the Agreement and Contract RFP in Volumes 1 and 2.

C. Inspect fasteners for proper tightness.

D. Provide temporary closures for openings designed for airflow.

3.02 INSTALLATION

A. Examine and verify details and sections as indicated on the Drawings, ascertain adequacy, and determine conflicts in dimensions and clearances.
   1. Take measurements and verify dimensions to ascertain fit of installation.
   2. Ascertain structural sufficiency to support installation.
   3. Ascertain that supports and openings are correctly located; otherwise cut new openings where required.
   4. Confirm specified thermostat or other controls are compatible with specified equipment.

B. Install in accordance with manufacturer instructions.
   1. Electrical products installation in accordance with NFPA 70 NEC.
   2. If there are conflicts, NEC supersedes manufacturer's instruction.
      a. Notify Engineer of conflicts.

C. Equipment and ducts:
   1. Remove dust and debris before installation.
   2. Protect from dust and debris by covering openings with tape or plastic during installation and until equipment is operated.
   3. Adjust alignment of ducts to resolve conflicts with the work of other trades.
   4. Install and wire unitary air conditioners, controls, and thermostats in accordance with manufacturer's recommendations.
   5. Provide flexible duct and flexible piping connections at connections to unitary air conditioners.
      a. FL-1 and FL-2, Flexible Connections:
         1) Install at building expansion joints and as indicated on the Drawings.
         2) Install with collar and metal band to form airtight joints.
         3) Install with minimum 4 inches of slack in fabric.
         4) Install with minimum 3 inches of specified material on each side of fabric.
         5) Exterior locations: Install sheet metal weather cover over fabric.
         6) Duct alignment shall be a maximum of 1/2-inch offset.
         7) The minimum/maximum gap shall be 2-inches and 6-inches.
         8) Lap longitudinal joints and glue per manufacturer’s recommendations.
   6. Lubrication lines and fittings:
      a. Support and protect lines from source to point of use.
      b. Fittings:
         1) Bring to outside of equipment in manner such that fittings are readily accessible from outside without necessity of removing covers, plates, housings, or guards.
         2) Mount together wherever possible using factory-mounted multiple fitting assemblies securely mounted, parallel with equipment lines, and protected from damage.
   7. Concrete surfaces designated to receive non-shrink grout under equipment:
      a. Heavy sandblast concrete surface in contact with non-shrink grout.

b. Clean concrete surfaces of sandblasting sand, grease, oil, dirt, and other foreign material that may reduce bond to non-shrink grout.
c. Saturate concrete with water. Concrete shall be saturated surface damp at time non-shrink grout is placed.

8. Remove dust and debris from ductwork and equipment at completion of installation.
9. Set grilles, dampers, and diffusers to achieve flows and flow patterns indicated on the Drawings.

D. Refrigerant piping:
1. Support copper tubing as specified in Sections 15061 - Pipe Supports and 15062 - Preformed Channel Pipe Support System.
2. Clean copper lines with high-pressure air after first disconnecting piping at instruments, filters, pressure reducers, valve operators, and other special devices.
3. Installation of copper tubing:
a. Install copper tubing in accordance with ASTM B828 and IAPMO IS 3.
b. Install copper tubing in straight runs, supported at intervals close enough to avoid sagging.
c. Make cuts square with a tubing cutter or with a 32-tooth hacksaw.
1) Provide a sizing tool to correct distortions.
4. Ream the inside of the tubing and remove burrs from the outside, holding the end of the tubing downward and preventing chips and fillings from entering the tubing.
5. Perform flaring with a flare block and yoke type screw feed flaring tool:
a. After removing the tubing from the flare block, inspect both surfaces of the flare for splits, cracks, or other imperfections.
b. Where there are imperfections, cut off the imperfect flare and prepare a new flare.
6. Insulate piping as specified in Sections 15400 - Plumbing systems.

E. Gas, water piping, drains, and venting in accordance with the authority having jurisdiction and applicable codes.

F. Roof curbs: Install in accordance with NRCA Manual.

G. Completed equipment installations must have confirmation that:
1. The equipment is properly assembled.
2. The equipment moves or rotates in the proper direction.
3. Shafting, drive elements, and bearings are installed and lubricated in accordance with proper tolerances.
4. No unusual power consumption, lubrication temperatures, bearing temperatures, or other conditions are observed.
5. The installation meets the requirements for intended use as well as the specified vibration and noise tolerances.

END OF SECTION

SECTION 15739

VRF HEAT PUMPS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. VRF Heat Pump and Heat Recovery Systems.

1.02 REFERENCES

A. Air-Conditioning, Heating, and Refrigeration Institute (AHRI):
   1. 210-240 - Performance Rating of Unitary Air-Conditioning and Air-Source Heat Pump Equipment.
   2. 270 - Sound Rating of Outdoor Unitary Equipment.
   3. 1230 - Performance Rating of Variable Refrigerant Flow (VRF) Multi-Split Air-Conditioning and Heat Pump Equipment.

B. Air Movement and Control Association International, Inc. (AMCA):
   1. 210 - Laboratory Methods for Testing Fans for Certified Aerodynamic Performance Rating.

C. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE):
   1. 15 - Safety Standard for Refrigeration Systems.
   2. 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.

D. ASTM International (ASTM):
   1. B117 - Standard Practice for Operating Salt Spray (FOG) Apparatus.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Roof coordination.
   1. As specified in Section 15500 - Common Work Results for HVAC.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.05 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Design features.
   2. Load capacities.
   3. Efficiency ratings.
   4. Dimensions.
   5. Weight.
   6. Shipping and operating.
   7. Manufacturer's recommendations for handling, storage, and installation.

C. Shop Drawings:
   1. Component layout and identification.
   2. Views:
      a. Front, side, rear elevations, and top and bottom views, with dimensions.
      b. Connection locations including electrical, mechanical, and other.
   3. Cut away drawings.
      a. Parts list.
      b. Material specification lists.
   4. Wiring, control schematics, control logic diagrams and ladder logic or similar for computer-based controls.
   5. Refrigerant piping diagram with pipe diameters, lengths, and refrigerant volume.
   6. Details for supports, isolators, and bracing.
   7. Nameplate data.

D. Calculations:
   1. Structural: Supports, vibration isolators, and seismic bracing calculations, if applicable.

E. Delegated Design Submittals:
   1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria.
      a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
      b. For equipment installed outdoors.

F. Engineering data:
   1. Manufacturer's published data for compressor, evaporator coil, condenser, evaporator fan, refrigerant, filter, etc.
   2. Maximum equipment vibration levels and field-testing method.
   3. Sound power level in each of 8 octave bands and overall sones.

4. Fan performance curves showing specified operating condition.
5. Bearing life.

G. Vendor operation and maintenance manuals: Manufacturer's standard instruction manual for operation and maintenance.

1.06 WARRANTY

A. Provide warranty as specified in Section 01783 - Warranties and Bonds.

B. Special warranty:
1. Refrigerant compressors and closed or sealed refrigerant systems warranty duration: Provide 5-year warranty.
2. Evaporator and condensing coils warranty duration: Provide 10-year warranty.

PART 2 PRODUCTS

2.01 GENERAL

A. As specified in Section 15500 - Common Work Results for HVAC.

B. Supplied components of the unit shall be furnished and fully integrated by the unit system supplier:
1. Furnish and install piping, valves, dampers, sensors, and wiring within the unit package.
2. Provide a prewired, unit mounted control panel to dampers and sensors within the unit.

C. Motors:
1. Totally enclosed.
2. Voltage and number of phases as scheduled.
3. Compressor motors:
   a. Cooled by refrigerant gas passing through windings.
   b. Provided with line break thermal and current overload protection.
4. Fan and blower motors:
   a. Permanently lubricated ball bearings.
   b. Integral automatic reset thermal overload protection.

D. Electrical:
1. Provide a single conduit connection in the unit for both power and control wiring.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Design requirements:
1. Seismic supports: Design supports to comply with the criteria specified in Section 01850 - Design Criteria.
2. Wind supports: Design supports to comply with the criteria specified in Section 01850 - Design Criteria.
3. Control sequences of operations: As specified in Section 15936 - Instrumentation and Control Devices for HVAC.

4. Electrical components: UL listed and meeting the design and installation requirements of the NEC.
5. Water piping, drains, and venting: In accordance with building code, mechanical code, and plumbing code as specified in Section 01410 - Regulatory Requirements and in accordance with NFPA 90A.
6. Fans supplied with heat pump units: Rated in accordance with AMCA 210.
7. Unit heat pumps: Rated in accordance with AHRI Standards 210-240 and AHRI 270 and in accordance with the latest version of ASHRAE 15.
8. Roof curbs: Designed in accordance with NRCA standards.
9. Insulation and adhesives: In accordance with NFPA 90A requirements for flame spread and smoke generation.
10. Refrigerant: HCFC R-410A.

B. Performance requirements:
1. Performance requirements as specified and as scheduled on the VRF Heat Systems Schedule indicated on the Drawings.
2. Maximum nominal sound pressure shall be as shown and measured in accordance with AHRI Standard 270:

Capacity (MBH)	Sound Pressure Level dB(A)
72	57
96	60
120	60
144	60
168	62
192	62
216	63
240	63
264	64
288	64
312	64
336	65
360	65

3. Air filters: 25 to 30 percent efficiency when rated in accordance with ASHRAE Tested Standard 52.2.
4. Capable of starting and providing cooling from 45 to 125 degrees Fahrenheit ambient outdoor air temperature and exceeding the maximum load criteria of AHRI Standards 210-240.
5. Capable of starting and providing heating at or above -10 degrees Fahrenheit outdoor ambient air temperature.
6. Minimum energy efficiency ratios IEER, EER, COP values for systems sized 300 MBH and smaller shall be certified to AHRI Standard 1230. Systems sized larger than 300 MBH shall be rated to AHRI Standard 1230. System shall meet the efficiencies in the tables below.

Capacity (MBH)	System IEER* (part load - ducted)	System IEER* (part load - non-ducted)	System IEER* (part load - mixed)
72	21.5	25.8	23.7
96	18.8	23.0	20.9
120	17.2	20.4	18.8
144	22.1	21.5	21.8
168	20.2	22.0	21.1

2.03 VARIABLE REFRIGERANT FLOW (VRF) SYSTEM

A. System description:
   1. Variable capacity, heat pump, air conditioning system shall be a variable refrigerant flow (VRF) (heat and cool model) split system as specified.
      a. System shall consist of multiple evaporators, piping joints and headers, a refrigeration distribution system using PID control and a VRF outdoor unit.
      b. Outdoor unit is a direct expansion (DX), air-cooled heat pump, multi-zone air-conditioning system with variable speed inverter driven compressors using HCFC R-410A refrigerant.
      c. Zones are each capable of operating separately with individual temperature control.
   2. Outdoor unit(s) shall be interconnected to indoor unit models.
      a. Indoor units shall be connected to the outdoor utilizing specified piping joints and headers.

b. Each indoor unit or group of indoor units shall be independently controlled.

3. Operation of the system shall permit cooling or heating of each indoor unit. Each indoor unit or group of indoor units shall be able to provide set temperature independently via a local remote controller, a centralized controller, or a BMS interface.
4. Controls as specified in Section 15936 - Instrumentation and Control Devices for HVAC.

B. Manufacturers: One of the following, or equal:
1. Daikin VRV®.
2. Mitsubishi.
3. Samsung.

C. Refrigerant piping:
1. Provide piping as specified in Section 15500 - Common Works for HVAC.
2. Modular systems shall require outdoor refrigerant kits for module connection provided by the manufacturer.
3. Between indoor and outdoor units shall be sized and installed by manufacturer factory trained service professional.
4. Insulate as specified in Section 15500 - Common Works for HVAC.

D. Indoor/evaporator units:
1. General: Factory assembled and tested DX fan-coil units, with electronic proportional expansion valve, control circuit board, factory wiring and piping, self-diagnostics, auto-restart function, 3-minute fused time delay and test run switch.
2. Recessed ceiling units:
a. Ceiling cassette with central return air grille, for installation in lay-in ceiling grid.
1) Type: 4-way 24x24.
2) Exposed housing: White, impact resistant, with washable decoration panel.
3) Return air filter: As indicated on the Drawings.
4) Minimum capacity: As indicated on the Drawings.
5) Condensate pump: Built-in with minimum lift of:
a) 19 inches for 2-foot by 2-foot units.
b. Ventilation air option: As indicated on the Drawings.
c. Air discharge: Provided with vane control and swing mode.
3. Refrigerant circuit factory-charged with dehydrated air, for field charging.
4. Evaporator coils:
a. Nonferrous construction with fins on copper tubing.
b. Tubing shall have inner grooves for high efficiency heat exchange.
c. Braze tube joints with phos-copper or silver alloy. Factory tested.
5. Fans:
a. Direct-drive with statically and dynamically balanced impellers.
b. High and low speeds unless otherwise indicated; motor thermally protected.
c. Bearings shall be permanently sealed ball bearing type and permanently lubricated.

6. Condensate drainage: Built-in condensate drain pan with PVC drain connection.
    a. Units with built-in condensate pumps: Provide condensate safety shut-off and alarm.
    b. Units without built-in condensate pumps: Provide manufacturer recommended external condensate pump, minimum 10 feet of head.
        1) See Drawings for required flow rate.
        2) Provide with built-in condensate float switch and wiring connections for condensate safety shut-off and alarm.
7. Control: As specified in Section 15936 - Instrumentation and Control Devices for HVAC and below:
    a. Temperature Control Mechanism: Return air thermistor and computerized Proportional-Integral-Derivative (PID) control of superheat.
    b. Unit shall have controls provided by the manufacturer to perform input functions necessary to operate the system.
    c. Unit shall be compatible with interfacing with a BMS system via optional LonWorks or BACnet gateways.
    d. Unit shall be compatible with the VRF System primary controller.

E. Outdoor/condensing units:
1. General: Air-cooled DX refrigeration units, designed specifically for use with indoor/evaporator units; factory assembled and wired with necessary electronics and refrigerant controls; modular design for ganging multiple units.
    a. Refrigerant circuit: Scroll compressors, motors, fans, condenser coil, electronic expansion valves, solenoid valves, 4-way valve, distribution headers, capillaries, filters, shut-off valves, oil separators, service ports, and refrigerant regulator.
    b. Refrigerant: Factory charged.
    c. Variable flow control: Modulate compressor capacity automatically to maintain constant suction and condensing pressure while varying refrigerant flow to suit heating/cooling loads.
    d. Capable of heating operation at low end of operating range as specified, without additional low ambient controls or auxiliary heat source; during heating operation, reverse cycle (cooling mode) oil return is not permitted due to potential reduction in space temperature.
    e. Power failure mode: Automatically restart operation after power failure without loss of programmed settings.
    f. Provide refrigerant auto-charging and refrigerant charge check functions.
    g. Safety devices: High pressure safety switch, over-current protection, crankcase heater.
    h. Provide refrigerant sub-cooling to ensure the liquid refrigerant does not flash when supplying indoor units.
    i. Defrost mode: Unit shall be capable of continuous heating function during defrost of separate coil circuits.
2. Unit cabinet:
    a. Weatherproof and saltwater corrosion resistant; rustproofed mild steel panels coated with baked enamel finish.
    b. Designed to allow side-by-side installation with minimum spacing.
3. Fans:
    a. One or more direct-drive propeller type, vertical discharge, with multiple speed operation via DC (Digitally Commutated) inverter.

b. External static pressure:
    1) Factory set at 0.12-inch WG, minimum.
    2) External Static Pressure capability dependent upon type of unit.
c. Fan motors: Factory installed; permanently lubricated bearings; inherent protection; fan guard; output as indicated for specific equipment.

4. Condenser coils:
    a. Outdoor coil shall be of nonferrous construction with lanced or corrugated plate fins on copper tubing.
    b. Provide corrosion resistant coating to withstand ASTM B117 salt spray test for a minimum of 2,500 hours or ISO 9277 salt spray test for minimum of 960 hours.
5. Compressors:
    a. Inverter driven scroll hermetic type to modulate capacity.
    b. Variable speed control: Capable of changing the speed to follow the variations in total cooling and heating load as determined by the suction gas pressure; high/low pressure calculated by samplings of evaporators and condenser temperatures every 20 seconds, with compressor capacity adjusted to eliminate deviation from target value by changing inverter frequency or on/off setting of fixed speed compressors.
    c. Multiple condenser modules: Balance total operation hours of compressors by means of duty cycling function, providing for sequential starting of each module at each start/stop cycle, completion of oil return and completion of defrost, or every 8 hours.
    d. Failure mode: In the event of compressor failure, operate remaining compressor(s) at proportionally reduced capacity; provide microprocessor and associated controls specifically designed to address this condition.
    e. Inverter driven compressors: PWM inverter driven, highly efficiency reluctance DC (Digitally Commutated), hermetically sealed scroll.
    f. Provide each compressor with crankcase heater, high pressure safety switch and internal thermal overload protector.
    g. Provide oil separators and intelligent oil management system.
    h. Provide spring mounted vibration isolators.

F. Controls and equipment safety features:
1. Advanced zoning: A single system shall be capable of providing for up to 50 zones.
2. Each system shall have a refrigerant auto-charging function.
3. Oil return heating: Each system shall maintain continuous heating during oil return operation. Reverse cycle (cooling mode) oil return during heating operation shall not be permitted due to the potential reduction in space temperature.
4. Each indoor unit shall use a dedicated electronic expansion valve for independent control.
5. VFD inverter control: Each condensing unit shall use a high efficiency, variable speed inverter compressor coupled with inverter fan motors for superior part load performance.
6. Compressor capacity shall be modulated automatically to maintain constant suction and condensing pressures while varying the refrigerant volume for the needs of the cooling or heating loads.
7. Systems shall be capable of up to 540 feet of linear piping between the condensing unit and furthest located indoor unit.

8. Systems shall have a vertical (height) separation of up to 160 feet between the condensing unit and the indoor units.
9. Systems shall be capable of 50 feet between indoor units.
10. Condensing units shall be supported with a fan motor ESP up to 0.30 inches WG as standard to allow connection of discharge ductwork and to prevent discharge air short circuiting.
11. Simple wiring: Systems shall use 2 wire, multi-stranded, non-shielded, and non-polarized daisy chain control wiring.
12. Systems shall provide outside air capability, when required.
13. Advanced controls: Each system shall have at least 1 remote controller capable of controlling up to 16 indoor units.
14. Provide outdoor units with corrosion resistant coating to withstand ASTM B117 or ISO 9277 salt spray test.
15. Hail guard: Outdoor units shall be provided with a manufacturer supplied snow/hail guard, providing protection from hail damage and projectiles in severe climates.
16. Unit defrost:
    a. Unit must defrost all circuits simultaneously in order to resume full heating more quickly.
    b. Partial defrost which may extend “no or reduced heating” periods shall not be allowed.

PART 3 EXECUTION

3.01 EXAMINATION

A. Inspect components for shipping damage, conformance to specifications, and proper torques and tightness of fasteners, as specified in Section 15500 - Common Work Results for HVAC.

B. Examine and verify that Work is in condition to receive installation specified in this Section.
1. Take measurements and verify dimensions to ascertain fit of installation.
2. Ascertain structural sufficiency to support installation.
3. Ascertain that supports and openings are correctly located; otherwise cut new openings where required.
    a. Submit details of proposed cutting and patching.
4. Confirm specified thermostat or other controls are compatible with specified equipment.

C. Examine and verify structural details and sections indicated on the Drawings, ascertain adequacy, and determine conflicts in dimensions and clearances.

3.02 PREPARATION

A. Before installation, remove dust and debris from equipment and ducts.

B. During installation and until equipment is operated, protect equipment and ducts from dust and debris by covering openings.

C. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.03 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. Adjust alignment of ducts where necessary to resolve conflicts with architectural features or to resolve conflicts with the work of other trades.

C. Install outdoor units on a solid longitudinal foundation (steel beam frame, rail curb, or concrete) as recommended by unit manufacturer.

D. Upon completion of installation, remove debris from ductwork and equipment and clean ducts.

3.04 SCHEDULES

A. As indicated on the Drawings.

END OF SECTION

SECTION 15762

HEATING UNITS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for electric, gas fired, steam, hot water unit heaters and thermostats for heaters.

1.02 REFERENCES

A. American Gas Association (AGA).

B. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

C. Underwriters' Laboratories, Inc. (UL).

1.03 ADMINISTRATIVE REQUIREMENTS

A. Roof coordination as specified in Section 15500 - Common Work Results for HVAC.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.05 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Catalog cuts, bulletins, and brochures:
   1. Design features.
   2. Load capacities.
   3. Efficiency ratings.
   4. Dimensions.
   5. Weight: Shipping and operating.

C. Drawings:
   1. Component layout and identification.
   2. Views:
      a. Front, side, rear elevations, and top and bottom views, with dimensions.
      b. Connection locations including electrical, mechanical, and other.
   3. Cut away drawings:
      a. Parts list.
      b. Material specification lists.

4. Wiring, control schematics, control logic diagrams and ladder logic or similar for computer-based controls.
5. Details for supports, isolators, and bracing.

D. Delegated Design Submittals:
1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria.
a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
b. For wall mounted equipment weighing 125 pounds or more.

E. Engineering data:
1. Manufacturer's published data for fan, burner, and filter.
2. Maximum equipment vibration levels and field-testing method.
3. Sound power level in each of 8 octave bands and overall Sones.
4. Fan performance curves showing specified operating condition.
5. Bearing life.

F. Manufacturer's recommendations for handling, storage, and installation.

G. Nameplate data.

H. Seismic certification.

I. Vendor operation and maintenance manuals: Manufacturer's standard instruction manual for operation and maintenance.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2 with additional requirements in Section 15500 - Common Work Results for HVAC.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. As specified in Section 15500 - Common Work Results for HVAC.

B. Provide instrumentation and controls to meet the equipment operating requirements as specified in Section 15936 - Instrumentation and Control Devices for HVAC.

2.03 ELECTRIC UNIT HEATER (EUH)

A. Manufacturers: One of the following or equal:
1. Indeeco, Type TRIAD.
2. Trane.

3. Markel.
4. Chromalox.

B. Fan type: Aluminum axial flow:
1. Provide fan guards.
2. Dynamically balance.
3. Fan designed for quiet operation.
4. Permanently lubricated ball bearings.
5. Automatic reset thermal overload protection.

C. Heating element characteristics:
1. Rated capacity at entering air temperature of 65 degrees Fahrenheit.
2. Fin type, Type 316 stainless steel plated heater elements, with elements brazed to common fins, designed for maximum strength and maximum heat transfer.
3. 3-phase designed for balanced phases.
4. Over temperature cutout with automatic reset.

D. Features:
1. Built-in magnetic contactors.
2. Control transformer for 24-volt or 120-volt control as indicated in the Heating Unit Schedules.
3. Required mounting brackets.
4. Individually adjustable outlet louvers.
5. Heavy 16 gauge stainless steel louvered outlet grille and plated rear grille.
6. Cabinet formed of minimum thickness 18-gauge steel with steel stiffeners. Listed for corrosive areas and NEMA 4X hose down requirements.
7. Controls:
   a. Provide thermostat as specified in this Section.
   b. Provide control transformer suitable for 24-volt or 120-volt control as indicated in the Heating Unit Schedules.

E. Finishes:
1. Casing finish backed enamel in manufacturer's standard color.

2.04 THERMOSTATS FOR UNIT HEATERS

A. Type: Wall mounted, heat only with fan AUTO-ON selector switch when fan part of unit and separate system ON-OFF selector switch.

B. Dial or lever temperature setpoint adjustment with 45 to 90 degrees Fahrenheit setpoint range.

C. Setpoint and temperature indication.

D. Control voltage as indicated in the Heating Unit Schedules.

E. The use of mercury within the thermostat is not acceptable.

F. Bi-metallic contacts suitable for 1- or 2-stage unit heater control as specified for the heater size or as scheduled.

2.05 SHIPPING, SPARE PARTS, MAINTENANCE PRODUCTS, AND SPECIAL TOOLS

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2, with additional requirements in Section 15500 - Common Work Results for HVAC.

PART 3 EXECUTION

3.01 GENERAL

A. As specified in Section the Agreement and Contract RFP in Volumes 1 and 2, with additional requirements in Section 15500 - Common Work Results for HVAC.

3.02 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.03 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

3.04 TESTING

A. Test equipment performance and balance equipment as specified in Section 15954 - Testing, Adjusting, and Balancing for HVAC.

3.05 FIELD QUALITY CONTROL

A. Verify equipment operation is within manufacturer's standards and that noise levels do not exceed levels specified.

3.06 SCHEDULES

A. As indicated on the Drawings.

END OF SECTION

SECTION 15830

FANS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fans, motors, and accessories.

1.02 REFERENCES

A. Abbreviations:
   1. As used in this Section and on the Drawings, abbreviations and Fan Schedule headings have the following meaning:
      a. EF or EXF: Exhaust Fan.
      b. Hp: Fan motor horsepower.
      c. SF or SPF: Supply Fan.
      d. Size: Nominal fan blade or wheel diameter in inches.
      e. SP or ESP: Fan External Static Pressure in inches water column.
      f. Type: Fan type as specified in this Section.
      g. V/Ph: Fan motor voltage and power phases.

B. Standards:
   1. Air Movement and Control Association International, Inc. (AMCA).
   2. American Bearing Manufacturers Association (ABMA):
      a. 9 - Load Ratings and Fatigue Life for Ball Bearings.
      b. 11 - Load Ratings and Fatigue Life for Roller Bearings.
   3. ASTM International (ASTM):
      a. A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.
      b. D4167 - Standard Specification for Fiber Reinforced Plastic Fans and Blowers.
      c. E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   4. National Fire Protection Association (NFPA):
      a. 820 - Standard for Fire Protection in Wastewater Treatment and Collection Facilities.
   5. National Roofing Contractors Association (NRCA).
   6. Occupational Safety and Health Administration (OSHA).

1.03 ADMINISTRATIVE REQUIREMENTS

A. Roof coordination as specified in Section 15500 - Common Work Results for HVAC.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.05 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Materials.
   2. Primary and ancillary equipment.
   3. Sound Power Level in each of 8 octave bands and overall Sones.
   4. Fan system layout, mechanical, electrical power, and control diagrams.
   5. Supports, vibration isolators, and seismic bracing calculations and details.
   6. Calculated fan vibration levels and field-testing method.
   7. Bearing life.
   8. Fan performance curves showing specified operating condition.

C. Drawings:
   1. Component layout and identification.
   2. Views:
      a. Front, side, rear elevations, and top and bottom views, with dimensions.
      b. Connection locations including electrical, mechanical, and other.
   3. Cut away drawings.
      a. Parts list.
      b. Material specification lists.
   4. Wiring, control schematics, control logic diagrams and ladder logic or similar for computer-based controls.
   5. Details for supports, isolators, and bracing.

D. Delegated Design Submittals:
   1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria.
      a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
      b. For equipment installed outdoors.
      c. For wall mounted equipment weighing 125 pounds or more.

E. Manufacturer's recommendations for handling, storage, and installation.

F. Nameplate data.

G. Vendor operation and maintenance manuals: Manufacturer's standard instruction manual for operation and maintenance.

H. Provide manufacturers reports on factory testing.

PART 2 PRODUCTS

2.01 GENERAL

A. As specified in Section 15500 - Common Work Results for HVAC.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instrumentation and controls to meet the equipment operating requirements as specified in Section 15936 - Instrumentation and Control Devices for HVAC.

B. Roof curb:
   1. Factory fabricated to match fan material.
   2. Capable of supporting entire unit weight.
   3. Suitable for installing and connecting ductwork to curb.
   4. In accordance with NRCA Standards.
   5. Extend a minimum of 8 inches above top of built up roofing.
   6. Curb shall be a minimum height of 12 inches.
   7. Flashing: In accordance with NRCA Standards and roof manufacturer.

2.03 TYPE 4, SIDEWALL PROPELLER FANS

A. Manufacturers: One of the following or equal:
   1. Greenheck, Model SBE, or SBS.
   2. Loren Cook, similar series.
   3. Penn Ventilator, similar model.

B. Characteristics:
   1. Wall-mounted, low noise propeller type, packaged unit.
   2. Fan: Statically and dynamically balanced propeller with aluminum blades, unless noted otherwise.
   3. Motor: Permanently lubricated; selected to avoid running in the service factor.
   4. Finishes: Provide 2 coat finish with a 2.0 to 3.0 mils thick epoxy primer base coat and 2.0 to 3.0 mils thick polyester powder coated topcoat or approved equal finish on fan and accessories.

C. Accessories:
   1. Mounting brackets: Necessary for installation.
   2. Motor and fan side OSHA guards.
   3. Wall mount collar when necessary for.
   4. Dampers with damper guards when damper scheduled.
   5. Weather hood when scheduled.
   6. Provide other accessories as scheduled.

2.04 TYPE 5, CENTRIFUGAL CEILING EXHAUST FANS

A. Manufacturers: One of the following or equal:
   1. Greenheck, Model SP, CSP.
   2. Loren Cook, similar series.
   3. Penn, similar series.

B. Characteristics:
   1. Type: Cabinet type centrifugal fan.
   2. Fan: Steel, forward-curved, squirrel-cage type wheel.
   3. Housing: Heavy gauge carbon steel housing.
   4. Access: Removable access panel.
   5. Finish: Galvanized fan, housing, and damper.

C. Accessories:
   1. Exhaust grille, egg-crate pattern, aluminum, or PVC construction.
   2. Factory installed backdraft damper on discharge of fan.
   3. Provide other accessories as scheduled.

2.05 SOURCE QUALITY CONTROL

A. Factory test fans listed on the Fan Schedule for proper operation, performance, and electrical controls.

2.06 SHIPPING, SPARE PARTS, MAINTENANCE PRODUCTS, AND SPECIAL TOOLS

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2, with additional requirements in Section 15500 - Common Work Results for HVAC.

B. Deliver units in 1 piece, factory assembled, internally wired, and lubricated.

PART 3 EXECUTION

3.01 GENERAL

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2, with additional requirements in Section 15500 - Common Work Results for HVAC.

3.02 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.03 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

3.04 TESTING

A. Test equipment performance and balance equipment as specified in Section 15954 - Testing, Adjusting, and Balancing for HVAC.

3.05 FIELD QUALITY CONTROL

A. Verify equipment operation and unit vibration is within manufacturer's submitted maximum.

3.06 SCHEDULES

A. As indicated on the Drawings.

END OF SECTION

SECTION 15936

INSTRUMENTATION AND CONTROL DEVICES FOR HVAC

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Controls for Heating, Ventilating, and Air Conditioning (HVAC) Systems.

1.02 REFERENCES

A. California Code of Regulations (CCR):
   1. Title 24 - Building Standard Code.

B. CSA International (CSA).

C. National Electrical Code (NEC).

D. Restriction of Certain Hazardous Substances (RoHS).

E. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 Volts Maximum).

F. National Fire Protection Association (NFPA):
   1. 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.

G. Underwriters' Laboratories, Inc. (UL):
   1. 13 – Standard for Safety Power-Limited Circuit Cables.
   2. 268A - Standard for Smoke Detectors for Duct Application.
   3. 508 - Standard for Industrial Control Equipment.
   4. 1479 - Fire Tests of Through-Penetration Firestops.
   5. 1685 – Standard for Safety Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables.

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Product data: As specified in Section 15500 - Common Work Results for HVAC.

C. Shop drawings:
   1. Manufacturer's information including:
      a. Catalog information clearly marked to show specific products, models, and sizes being furnished.
      b. Component cut sheets.
   2. Control diagrams showing the interconnection of control components including wiring terminal strip diagrams.

3. Detail drawings showing control panel layout and dimensions including control panel terminal strips for wiring to outside control devices and panels.
4. Provide certification that components and systems meet CCR Title 24 and are approved by the California Energy Commission.

D. Provide vendor operation and maintenance manual as specified in Section 01782 - Operation and Maintenance Manuals.

E. Provide Manufacturer's Certificate of Installation and Functionality Compliance as specified in Section 01756 - Commissioning.

1.04 QUALITY ASSURANCE

A. The control system shall be designed in accordance with UL and CSA standards.

B. Regulatory requirements: In accordance with CCR Title 24.

1.05 DELIVERY, STORAGE, AND HANDLING

A. The system control products shall be stored and handled per manufacturer's recommendations.

1.06 SITE CONDITIONS

A. Elevation and ambient conditions as specified in Section 01850 - Design Criteria.

1.07 WARRANTY

A. Special warranties: Warranty period begins at date of Project Acceptance or first date of Beneficial Use by the Owner:
1. 1 year: Parts and on-site labor for components, systems, and programming.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. General requirements:
1. All electrical components shall be UL-listed and meet the design and installation requirements of the NEC.
2. Complete, functional system: Provide all necessary electrical power and control systems, components, and wiring to make a complete functioning system.
3. Comply with electrical Sections for electrical power and control systems.
4. System control functions to perform as described in Products.
5. Materials: New, free from defects, and of the quality specified.
6. Common manufacturer: Provide components, component accessories, and devices, as much as possible, by the same manufacturer throughout the work.
7. Mounting: Mount control components and devices in accessible locations for maintenance and as recommended by the manufacturer; provide necessary

manufacturer-approved mounting and configuration hardware for mounting and operation of control components and devices.

8. Components and systems must in accordance with CCR Title 24 energy conservation regulations and be listed with the California Energy Commission as approved for sale in California.

B. Fire detection system design requirements:
   1. Provide all supply and exhaust fans greater than 2,000 cubic feet per minute with a smoke control system including the following minimum components.
      a. Fan and air handling unit interlocks interlock to shut down upon smoke detection signal from fire alarm control panel.
      b. Field wiring terminal blocks for connection of shut down signals from local fire alarm control panel.

2.02 VRF SYSTEM WALL MOUNTED THERMOSTAT CONTROLLER

A. Each indoor/evaporator unit shall be supplied with a wall mounted thermostat controller. The controller shall have a backlit LCD display and be able to support the following display items and user input operations:
   1. On/Off control.
   2. Manual change of mode of operation.
   3. Set-point adjustment.
   4. Reading of both heating and cooling set-point temp.
   5. Reading of actual room temp.
   6. Fan speed setting.
   7. Mode of operation on the unit display.
   8. Individual heating and cooling (dual) set-point adjustment.

B. The controllers shall be capable of diagnostic use and provide malfunction codes to indicate the type of failure that has occurred. The user shall be able to read superheat temperatures, return air and discharge air temperature values directly from the wall mounted thermostats.

C. The controllers shall be capable of accepting independent set-points for cooling and heating operation. The use of a common set-point is not allowable.

D. The system shall provide automatic changeover from heating to cooling mode of operation. If, in heating mode, the space temperature rises 1 degree above the cooling set-point, the system shall change from heating to cooling mode. If, in cooling mode, the space falls 1 degree below the heating set-point, the system shall change from cooling to heating mode. Auto-change-over is required for all systems (heat pump and heat recovery). If not available in heat pump system, then manufacturer must provide system capable of meeting this requirement.

E. Adjustable setback temperature - The controllers shall allow for independent and adjustable setback temperature at each unit. The setback temperature (adjustable) shall determine the "override" temperature to start the system when in setback mode if the temperature rises or falls outside of the specified range.

F. Manufacturers: The following or equal:
   1. Daikin: Model BRC1E73.

2. Mitsubishi: Similar Model.
3. Samsung: Similar Model.

2.03 THERMOSTATS

A. General:
1. Thermostat types: Thermostat types are called out on the drawings by the letter T followed by a number; this designation refers to the specified thermostat types specified in this Section; where no type is called out, provide 1 of the specified types that will match the controlled equipment requirements and provide a functioning system.
2. Manufacturers: One of the following or equal:
   a. Johnson Controls, model as specified with each type.
   b. Honeywell, Tradeline, equivalent models.
3. Thermostat cable:
   a. Conductor: Number of conductors required to be determined by HVAC system, solid bare copper, 18/20 American Wire Gauge (up to 250 feet); provide sufficient length to accommodate the thermostat locations as indicated on the Drawings.
   b. Insulation: Heat and moisture resistant colored Polyvinylchloride (PVC) or Polypropylene insulation.

Thermostat Terminal	Wire Color (Typical)	Function Description
R	Red	24V AC/Heat Single Transformer
Rc	Red	24V for Dual Transformer - AC
Rh	Red	24V for Dual Transformer - Heat
C	Black/Blue	Common 24VAC Power Source
Y	Yellow	Primary Cooling
Y2	Light Blue/Yellow	Secondary Cooling
W	White	Primary Heating
W2	Brown	Secondary Heating
G	Green	Fan Relay
O	Orange	Reversing Valve

   c. Jacket: White or Brown Polyvinylchloride.
   d. In accordance with:
      1) UL 13 in accordance with NEC Article 725.
      2) UL Listed Type CL2, Sunlight Resistant.
      3) UL 1685 Vertical Tray. RoHS compliant.
   e. Temperature Rating: 140 degrees Fahrenheit.
   f. Voltage Rating: Up to 150V.

B. T-2, Type 2 Thermostat, Cooling Only, Line Voltage:
   1. Manufacturers: The following or equal: Johnson Controls Model:
      a. Dry locations (no hose bibs or open water processes in room): Model A19BBC-2C in NEMA 1 enclosure.
      b. Wet locations (hose bibs or open water processes in room): Model A19QSC-1C in rain and dusttight enclosure.
   2. Switch action: Single-pole double-throw, close on rising temperature.
   3. Sensing element: Coiled bulb and capillary.
   4. Setpoint: 30 to 110 degrees Fahrenheit with knob adjuster and visible scale.
   5. Electrical ratings: 16 amps alternating current at 120 volts, 9.2 amps alternating current at 208 volts.
   6. Differential range: For dry locations, 3 to 12 degrees Fahrenheit adjustable; for wet locations, 5 degrees Fahrenheit fixed.

2.04 RESISTANCE TEMPERATURE DETECTOR (RTD) TYPE TEMPERATURE TRANSMITTER

A. Manufacturers: The following or equal:
   1. Omega Engineering, Model EWSA-PT100-TX.
   2. Greyston Energy Systems Inc., Model TDHRBF12XA002.

B. Characteristics and features:
   1. Sensor: Platinum RTD 100 ohm or 1000 ohm.
   2. Power supply: 10 to 30 Vdc, loop powered.
   3. Probe sensing range: 32 to 158 degrees Fahrenheit.
   4. Output signal: 4-20 mA.
   5. Transmitter accuracy: Within 0.1 percent of span.
   6. Enclosure:
      a. NEMA 4X (IP65) for non-hazardous areas.
      b. NEMA 7 for hazardous areas.
   7. Wiring connection: Screw terminal block, 2-wire.

2.05 HVAC CONTROL DESCRIPTIONS

A. General: Provide control systems that will maintain room or area comfort under changing ambient conditions and varying use; descriptions in this Section are general in nature and do not cover every mode of operation.

B. Chemical Room Control Sequences:
   1. Exhaust Fan WD37-FANx-13302/WD37-FANx-19302 will run continuously to provide 6 ACH to the space.
      a. WD37-FANx-13302/WD37-FANx-19302 will be hardwired to a break-glass emergency shutdown switch. Upon switch activation, the supply fan will de-energize.
      b. WD37-FANx-13302/WD37-FANx-19302 will send a “General HVAC Fault” alarm to the SCADA system upon unit de-energizing.
   2. Electric Unit Heater WD37-HEAT-13203/WD37-HEAT-19203 will be controlled by a thermostat with an adjustable set-point. The heating set-point will be 55 degrees Fahrenheit. When the temperature falls 3 degrees below the set-point, the unit will energize. When the temperature rises 3 degrees above the set-point, the unit will de-energize.

C. Pump Room Control Sequences:
   1. Exhaust Fan WD37-FANx-13301/Exhaust Fan WD37-FANx-19301 will be controlled by a thermostat with an adjustable set-point. The cooling set-point will be 80 degrees Fahrenheit. When the temperature rises 3 degrees above the set-point, the unit will energize. When the temperature falls 3 degrees below the set-point, the unit will de-energize.
   2. Electric Unit Heaters WD37-HEAT-13201/WD37-HEAT-19201 and WD37-HEAT-13202/WD37-HEAT-19202 will be controlled by thermostats with an adjustable set-point. The heating set-point will be 55 degrees Fahrenheit. When the temperature falls 3 degrees below the set-point, the unit will energize. When the temperature rises 3 degrees above the set-point, the unit will de-energize.

D. Campus Oaks Electrical Room Control Sequences:
   1. The variable refrigerant flow (VRF) will be comprised of the outdoor heat pump unit WD37-HVAC-13101 and indoor fan coil units WD37-HVAC-13102, WD37-HVAC-13103, and WD37-HVAC-13104. The indoor units will be controlled by a single thermostat with adjustable set-points. The cooling set-point will be 90 degrees Fahrenheit. When the temperature rises 3 degrees above the set-point, the unit will energize. When the temperature falls 3 degrees below the set-point, the unit will de-energize. The heating set-point will be 55 degrees Fahrenheit. When the temperature falls 3 degrees above the set-point, the unit will energize. When the temperature rises 3 degrees below the set-point, the unit will de-energize.
      a. Provide lockbox for thermostat. Setpoint shall be locked out from being set below 90 degrees Fahrenheit, or below 55 degrees Fahrenheit.
   2. Electric Unit Heater WD37-HEAT-13204 will be controlled by a thermostat with an adjustable set-point. The heating set-point will be 50 degrees Fahrenheit. When the temperature falls 3 degrees below the set-point, the unit will energize. When the temperature rises 3 degrees above the set-point, the unit will de-energize.

E. Misty Woods Electrical Room Control Sequences:
   1. The variable refrigerant flow (VRF) system will be comprised of the outdoor heat pump unit WD37-HVAC-19101 and indoor fan coil units WD37-HVAC-19102, WD37-HVAC-19103, WD37-HVAC-19104, and WD37-HVAC-19105. The indoor units will be controlled by a single thermostat with adjustable set-points. The cooling set-point will be 90 degrees Fahrenheit. When the temperature rises 3 degrees above the set-point, the unit will energize. When the temperature falls 3 degrees below the set-point, the unit will de-energize. The heating set-point will be 55 degrees Fahrenheit. When the temperature falls 3 degrees above the set-point, the unit will energize. When the temperature rises 3 degrees below the set-point, the unit will de-energize.
      a. Provide lockbox for thermostat. Setpoint shall be locked out from being set below 90 degrees Fahrenheit, or below 55 degrees Fahrenheit.
   2. Electric Unit Heater WD37-HEAT-19204 will be controlled by a thermostat with an adjustable set-point. The heating set-point will be 50 degrees Fahrenheit. When the temperature falls 3 degrees below the set-point, the unit will energize. When the temperature rises 3 degrees above the set-point, the unit will de-energize.

F. Restroom Control Sequences:
   1. Restroom Exhaust Fan WD05-FANx-13303/WD05-FANx-19303 will be interlocked with the lights of restroom. When the lights are turned on, the fan will energize. When the lights are turned off, the fan will de-energize.

2.06 ELECTRICAL MATERIALS

A. Provide conduit as specified in Section 16010 - General Requirements for Electrical, and Section 16130 - Conduits.

B. Provide control and instrumentation wire as specified in Section 16123 - 600-Volt or Less Wires and Cables.

PART 3 EXECUTION

3.01 PREPARATION

A. Before installation remove dust and debris from equipment and accessories.

B. During installation and until equipment is operated, protect equipment and accessories from dust and debris.

3.02 INSTALLATION

A. Install as indicated on the Drawings, in accordance with NFPA 90A, and per the manufacturer's written instructions.

B. Coordinate installation of HVAC control systems with other trades.
   1. Prior to installation, coordinate wiring and conduit requirements with electrical subcontractor.

C. Mount remote annunciator and test station on wall near smoke detector.
   1. Devices shall be easily accessible from floor level.
   2. Label annunciator and test station.

D. Provide all electrical work to support smoke detector.
   1. Coordinate with electrical subcontractor.

E. Thermostat cable conduit installation:
   1. As specified in Electrical Sections - 16050 - Common Work Results for Electrical, 16123 - 600-Volt or Less Wires and Cables, and 16130 - Conduits.

F. Sensor and control station mounting:
   1. Where not otherwise indicated, mount 5 feet above floor or walking level.
   2. Provide insulating back plates when mounting is on an exterior wall or a wall adjoining an unconditioned space.
   3. Shield outside thermostats or sensors from the sun; provide thermostats with remote bulb and compensated capillary.
   4. Install locking covers where indicated on the Drawings.

3.03 TESTING

A. Test witnessing: Witnessed.

B. Test each control component and system as part of HVAC system testing, adjusting, and balancing as specified in Section 15954 - Testing, Adjusting, and Balancing for HVAC.

END OF SECTION

SECTION 15954

TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Requirements for testing air systems installed as part of this contract and existing air systems affected by the installation of new equipment.

1.02 REFERENCES

A. Associated Air Balance Council (AABC):
   1. National Standards Total System Balance.

B. National Environmental Balancing Bureau (NEBB):
   1. Procedural Standards for Testing, Adjusting, and Balancing Environmental Systems.

C. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
   1. HVAC Systems - Testing, Adjusting, and Balancing.

D. Testing, Adjusting, and Balancing Bureau (TABB):
   1. TAB Procedural Guide.

1.03 SUBMITTALS

A. Resumes of proposed supervisor and personnel showing training and qualifications.
   1. Include courses, exams, or tests relating to HVAC testing - taken and passed.

B. Testing plan:
   1. At least 30 days prior to starting field work.
   2. Set of report forms completed with design flow values and installed equipment pressure drops, and required cubic feet per minute for air terminals.
   3. Heating, ventilating, and air conditioning system schematic similar to Figure 6-1 in SMACNA HVAC Testing, Adjusting, and Balancing.
   4. Complete list of instruments proposed to be used, organized in appropriate categories, with data sheets for each showing:
      a. Manufacturer and model number.
      b. Description and use when needed to further identify instrument.
      c. Size or capacity range.
      d. Latest calibration date.
   5. Proposed schedule for testing and balancing.

C. Report:
   1. Not more than 45 days prior to Contractor's request for final inspection, submit draft report on applicable reporting forms.

2. At least 15 days prior to Contractor's request for final inspection, submit 3 copies of final reports incorporating Engineer's comments on draft report.
3. List of instruments used and last date of calibration of each.
4. Procedures followed for testing, adjusting, and balancing.
5. Identification and succinct description of systems included in report.
6. Initial balance test results made with all dampers and air control devices in full open positions.
7. Description of final locations and sizes, including opening area and dimensioned configuration of orifices and other restrictions used to achieve final balanced flows.
8. Description of final location and opening positions of dampers, registers, louvers, and valves.
9. Schematics of systems included in report; use schematics as part of testing, adjusting, and balancing report to summarize design and final balanced flows.
10. Testing, adjusting, and balancing report forms.
11. Final field results established for system balancing including airflow, fan speeds, and fan static pressures at the fan inlet and outlet.
12. Appendices.
    a. Raw field data taken during testing.
    b. Sample calculation sheet for each type of calculation made to convert raw field data to final results.
    c. Initial air balance results with dampers and registers in full open position; include airflow at all inlets and outlet, initial fan speed and fan suction and discharge pressures.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 EXAMINATION

A. Work of testing, adjusting, and balancing of heating, ventilation, and air conditioning systems to be by an independent testing agency and a certified member in good standing with AABC, NEBB, or TABB.

B. Field testing to be performed or directly supervised by personal who have passed a Test and Balance course or exam and is an AABC, NEBB, or TABB certified supervisor.

3.02 PREPARATION

A. Prior to start of testing, adjusting, and balancing, verify that:
    1. System installation is complete in accordance with the requirements for completed equipment installations in Section 15500 - Common Work Results for HVAC and capable of full operation.
    2. Outside conditions are within reasonable range relative to design conditions.
    3. Lighting fixtures are energized.

4. Special equipment such as computers, laboratory equipment, and electronic equipment are in full operation.
5. Requirements for preparation for testing and balancing have been met for elements of each system which require testing.

3.03 FIELD QUALITY CONTROL

A. Test, adjust, and balance each separate complete heating, ventilating, and air conditioning systems.
   1. Include existing heating, ventilating, and air conditioning components when effected by the Work.

B. Perform testing, adjusting, and balancing cycles until airflows meet acceptance criteria.
   1. Ascertain airflow balance between overall requirements and flow in individual supply and exhaust grilles.

C. Initial testing, adjusting, and balancing:
   1. Test each system with dampers, grilles, orifices, and other variable airflow devices in their full open position; measure and report initial airflows, fan speed, and fan static pressures at fan inlet and outlet.
   2. Adjust total system flow downward or upward by adjusting fan speed until one inlet or outlet is at indicated flow and all other flows exceed indicated flows.
   3. Adjust fan speed by changing fan drives or sheaves as necessary.

D. Subsequent testing, adjusting, and balancing:
   1. Perform adjustments by adjusting dampers, louvers, or size of orifices or plates.
   2. Measure and record air volume discharged at each inlet and outlet and adjust air inlets and outlets to design air volumes within 0 to 5 percent over design rates.
   3. Adjust fan speeds and motor drives within drive limitations, for required air volume.
   4. Measure air flow and static pressures and adjust air supply and exhaust fan units to deliver at least 100 to 105 percent of the design air volume.
   5. Measure and record static air pressure conditions on fans, including filter and coil pressure drops, and total pressure across the fan.
   6. Evaluate building and room pressure conditions to determine adequate supply and return air conditions.
   7. Evaluate space and zone temperature of conditions to determine adequate performance of the systems to maintain temperatures without draft.
   8. Permanently mark final balance positions of balancing dampers.

E. Develop heating, ventilating, and air conditioning system schematics similar to Figure 6-1 in SMACNA Testing, Adjusting, and Balancing.

F. Accurately record the required data on AABC, NEBB, or TABB test and balance report forms.

G. Measure amperage draw of fan and pump motors at final balance.

H. Test primary source equipment in accordance with AABC, NEBB, or TABB procedures.
   1. Primary source equipment includes items listed in this Section not previously tested as part of this testing, adjusting, and balancing work.
   2. Complete appropriate AABC, NEBB, or TABB equipment test forms for each piece of equipment.
   3. Calculate cooling and heating capacities to show conformance with specified capacities.
   4. Adjust equipment as needed to deliver specified cooling and heating loads.
   5. Record final equipment performing characteristics and adjustment settings in the final design report.

I. Testing, adjusting, and balancing acceptance criteria:
   1. Procedures successful and complete when heating, ventilating, and air conditioning systems and components are functioning properly and system air flows are within specified tolerances of design flows.

END OF SECTION

SECTION 15956

PIPING SYSTEMS TESTING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Test requirements for piping systems.

1.02 REFERENCES

A. National Fuel Gas Code (NFGC).

B. American Society of Mechanical Engineers (ASME):
   1. B31.1 - Power Piping.
   2. B31.3 - Process Piping.
   3. B31.8 - Gas Transmission and Distribution Piping Systems.

C. Underwriters Laboratories Inc. (UL).

1.03 TESTING REQUIREMENTS

A. General requirements:
   1. Testing requirements are stipulated in Laws and Regulations; are included in the Piping Schedule in Section 15052 - Common Work Results for General Piping; are specified in the specifications covering the various types of piping; and are specified in this Section.
   2. Requirements in Laws and Regulations supersede other requirements of Contract Documents, except where requirements of Contract Documents are more stringent, including higher test pressures, longer test times, and lower leakage allowances.
   3. Test plumbing piping in accordance with Laws and Regulations, the plumbing code, as specified in Section 01410 - Regulatory Requirements, and UL requirements.
   4. When testing with water, the specified test pressure is considered to be the pressure at the lowest point of the piping section under test.
      a. Lower test pressure as necessary (based on elevation) if testing is performed at higher point of the pipe section.

B. Furnish necessary personnel, materials, and equipment, including bulkheads, restraints, anchors, temporary connections, pumps, water, pressure gauges, and other means and facilities required to perform tests.

C. Water for testing, cleaning, and disinfecting:
   1. Water for testing, cleaning, and disinfecting will be provided as specified in Section 01500 - Temporary Facilities and Controls.

D. Pipes to be tested: Test only those portions of pipes that have been installed as part of this Contract. Test new pipe sections prior to making final connections to existing piping. Furnish and install test plugs, bulkheads, and restraints required to isolate new pipe sections. Do not use existing valves as test plug or bulkhead.

E. Unsuccessful tests:
   1. Where tests are not successful, correct defects or remove defective piping and appurtenances and install piping and appurtenances that comply with the specified requirements.
   2. Repeat testing until tests are successful.

F. Test completion: Drain and leave piping clean after successful testing.

G. Test water disposal: Dispose of testing water at locations specified by the City of Roseville in accordance with requirements of federal, state, county, and city regulations governing disposal of wastes in the location of the Project and disposal site. All requirements and costs associated with notifications and obtaining any discharge permit or approvals shall be responsibility of Contractor.

1.04 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Schedule and notification of tests:
   1. Submit a list of scheduled piping tests by noon of the working day preceding the date of the scheduled tests.
   2. Notification of readiness to test: Immediately before testing, notify Engineer in writing of readiness, not just intention, to test piping.
   3. Have personnel, materials, and equipment specified in place before submitting notification of readiness.

1.05 SEQUENCE

A. Clean piping before pressure or leak tests.

B. Test gravity piping underground, including sanitary sewers, for visible leaks before backfilling and compacting.

C. Underground pressure piping may be tested before or after backfilling when not indicated or specified otherwise.

D. Backfill and compact trench, or provide blocking that prevents pipe movement before testing underground piping with a maximum leakage allowance.

E. Test underground piping before encasing piping in concrete or covering piping with slab, structure, or permanent improvement.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 TESTING ALIGNMENT, GRADE, AND DEFLECTION

A. Alignment and grade:
   1. Visually inspect the interior of gravity piping with artificial light, reflected light, or laser beam.
   2. Consider inspection complete when no broken or collapsed piping, no open or poorly made joints, no grade changes that affect the piping capacity, or no other defects are observed.

B. Deflection test:
   1. Pull a mandrel through the clean piping section under test.
   2. Perform the test not sooner than 30 days after installation and not later than 60 days after installation.
   3. Use a 9-rod mandrel with a contact length of not less than the nominal diameter of the pipe within 1 percent plus or minus.
   4. Consider test complete when the mandrel can be pulled through the piping with reasonable effort by one person, without the aid of mechanical equipment.

3.02 AIR TESTING METHOD FOR PRESSURE PIPING

A. Air test piping, indicated with "AM" in the Piping Schedule, with air or another nonflammable or inert gas.

B. Test gas, air, liquefied petroleum gas, liquid chlorine, and chlorine gas piping by the air test method:
   1. Test chlorine piping with dry air or nitrogen having a dew point of minus 40 degrees Fahrenheit or less. Supply temporary air dryers as necessary.

C. Test at pressure as specified in the Piping Schedule on the Drawings:
   1. Provide temporary pressure relief valve for piping under test:
      a. Set at the lesser of 110 percent of the test pressure or 50 pounds per square inch gauge over the test pressure.
   2. Air method test pressures shall not exceed 110 percent of the piping maximum allowable working pressure calculated in accordance with the most stringent of ASME B31.1, ASME B31.3, ASME B31.8, or the pipe manufacturer's stated maximum working pressure.
   3. Gradually increase test pressure to an initial test pressure equal to the lesser of 1/2 the test pressure or 25 pounds per square inch gauge.
   4. Perform initial check of joints and fittings for leakage.
   5. Gradually increase test pressure in steps no larger than the initial pressure. Check for leakage; at each step increase until test pressure reached.
   6. At each step in the pressure, examine and test piping being air tested for leaks with soap solution.
   7. Consider examination complete when piping section under test holds the test pressure for 15 minutes without losses.

3.03 TESTING GRAVITY FLOW PIPING

A. Test gravity flow piping indicated with "GR" in the Piping Schedule, as follows:
   1. Unless specified otherwise, subject gravity flow piping to the following tests:
      a. Alignment and grade.
      b. For plastic piping test for deflection.
      c. Visible leaks and pressure with maximum leakage allowance, except for storm drains and culverts.
   2. Inspect piping for visible leaks before backfilling.
   3. Provide temporary restraints when needed to prevent movement of piping.
   4. Pressure test piping with maximum leakage allowance after backfilling.
   5. With the lower end plugged, fill piping slowly with water while allowing air to escape from high points. Keep piping full under a slight head for the water at least 24 hours:
      a. Examine piping for visible leaks. Consider examination complete when no visible leaks are observed.
      b. Maintain piping with water, or allow a new water absorption period of 24 hours for the performance of the pressure test with maximum leakage allowance.
      c. After successful completion of the test for visible leaks and after the piping has been restrained and backfilled, subject piping to the test pressure for minimum of 4 hours while accurately measuring the volume of water added to maintain the test pressure:
         1) Consider the test complete when leakage is equal to or less than the following maximum leakage allowances:
            a) For concrete piping with rubber gasket joints: 80 gallons per day per inch of diameter per mile of piping under test:
               (1) Advise manufacturer of concrete piping with rubber gasket joints of more stringent than normal maximum leakage allowance.
            b) For vitrified clay piping: 500 gallons per day per inch of diameter per mile of piping under test.
            c) For other piping: 80 gallons per day per inch diameter per mile of piping under test.

3.04 TESTING HIGH-HEAD PRESSURE PIPING

A. Test piping for which the specified test pressure in the Piping Schedule is 20 pounds per square inch gauge or greater, by the high head pressure test method, indicated "HH" in the Piping Schedule.

B. General:
   1. Test connections, hydrants, valves, blowoffs, and closure pieces with the piping.
   2. Do not use installed valves for shutoff when the specified test pressure exceeds the valve's maximum allowable seat differential pressure. Provide blinds or other means to isolate test sections.

3. Do not include valves, equipment, or piping specialties in test sections if test pressure exceeds the valve, equipment, or piping specialty safe test pressure allowed by the item's manufacturer.
4. During the performance of the tests, test pressure shall not vary more than plus or minus 5 pounds per square inch gauge with respect to the specified test pressure.
5. Select the limits of testing to sections of piping. Select sections that have the same piping material and test pressure.
6. When test results indicate failure of selected sections, limit tests to piping:
    a. Between valves.
    b. Between a valve and the end of the piping.
    c. Less than 500 feet long.
7. Test piping for minimum 2 hours for visible leaks test and minimum 2 hours for the pressure test with maximum leakage allowance.

C. Testing procedures:
1. Fill piping section under test slowly with water while venting air:
    a. Use potable water for all potable waterlines and where noted on the Piping Schedule.
2. Before pressurizing for the tests, retain water in piping under slight pressure for a water absorption period of minimum 24 hours.
3. Raise pressure to the specified test pressure and inspect piping visually for leaks:
    a. Consider visible leakage testing complete when no visible leaks are observed.

D. Pressure test with maximum leakage allowance:
1. Leakage allowance is zero for piping systems using flanged, National Pipe Thread threaded and welded joints.
2. Pressure test piping after completion of visible leaks test.
3. For piping systems using joint designs other than flanged, threaded, or welded joints, accurately measure the makeup water necessary to maintain the pressure in the piping section under test during the pressure test period:
    a. Consider the pressure test to be complete when makeup water added is less than the allowable leakage and no damage to piping and appurtenances has occurred.
    b. Successful completion of the pressure test with maximum leakage allowance shall be achieved when the observed leakage during the test period is equal or less than the allowable leakage and no damage to piping and appurtenances has occurred.
    c. When leakage is allowed, calculate the allowable leakage by the following formula:

        $L = S \times D \times P^{1/2} \times 148{,}000^{-1}$

        wherein the terms shall mean:

        L = Allowable leakage in gallons per hour.

        S = Length of the test section in feet.

D = Nominal diameter of the piping in inches.

P = Average observed test pressure in pounds per square inches gauge, at the lowest point of the test section, corrected for elevation of the pressure gauge.

x = The multiplication symbol.

3.05 TESTING LOW-HEAD PRESSURE PIPING

A. Test piping for which the specified test pressure is less than 20 pounds per square inch gauge, by the low head pressure test method, indicated "LH" in the Piping Schedule.

B. General:
   1. Test pressures shall be as scheduled in Section 15052 - Common Work Results for General Piping.
   2. During the performance of the tests, test pressure shall not vary more than plus or minus 2 pounds per square inch gauge with respect to the specified test pressure.
   3. Test connections, blowoffs, vents, closure pieces, and joints into structures, including existing bell rings and other appurtenances, with the piping.
   4. Test piping for minimum 2 hours for visible leaks test and minimum 2 hours for the pressure test with maximum leakage allowance.

C. Visible leaks test:
   1. Subject piping under test to specified pressure measured at the lowest end.
   2. Fill piping section under test slowly with water while venting air:
      a. Use potable water for all potable waterlines and where noted on the Piping Schedule.
   3. Before pressurizing for the tests, retain water in piping under slight pressure for the water absorption period of minimum 24 hours.
   4. Raise pressure to the specified test pressure and inspect piping visually for leaks. Consider testing complete when no visible leaks are observed.

D. Pressure test with maximum leakage allowance:
   1. Pressure test piping after completion of visible leaks test.
   2. Accurately measure the makeup water necessary to maintain the pressure in the piping section under test during the pressure test period:
      a. Consider the pressure test to be complete when makeup water added is less than the allowable leakage of 80 gallons per inch of nominal diameter, per mile of piping section under test after 24 hours, and no damage to piping and appurtenances has occurred.
      b. Successful completion of the leakage test shall have been achieved when the observed leakage is equal or less than the allowable leakage and no damage to piping and appurtenances has occurred.

E. Optional joint test:
   1. When joint testing is allowed by note in the Piping Schedule, the procedure shall be as follows:
      a. Joint testing will be allowed only for low head pressure piping.

b. Joint testing does not replace and is not in lieu of any testing of the piping system or trust restraints.

2. Joint testing may be performed with water or air.
3. Joint test piping after completion of backfill and compaction to the top of the trench.
4. Joint testing with water:
   a. Measure test pressure at the invert of the pipe. Apply pressure of 4 feet plus the inside diameter of the pipe in water column within 0.20 feet in water column.
   b. Maintain test pressure for 1 minute.
   c. Base the allowable leakage per joint on 80 gallons per inch nominal diameter, per mile of piping, per 24 hours equally distributed to the actual number of joints per mile for the type of piping.
   d. Consider the pressure test to be complete when makeup water added is less than the allowable leakage.
   e. Successful completion of the joint test with water shall have been achieved when the observed leakage is equal or less than the allowable leakage.
5. Joint testing with air:
   a. Apply test pressure of 3 pounds per square inch gauge with a maximum variation of plus 0.20 and minus 0.00 pounds per square inch.
   b. Maintain test pressure for 2 minutes.
   c. Consider the pressure test to be complete when the test pressure does not drop below 2.7 pounds per square inch for the duration of the test.

END OF SECTION

SECTION 15958

MECHANICAL EQUIPMENT TESTING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Testing of mechanical equipment and systems.

1.02 REFERENCES

A. American National Standards Institute (ANSI):
   1. S1.4 Specification for Sound Level Meters.

B. Hydraulic Institute (HI).

C. National Institute of Standards and Technology (NIST).

1.03 SUBMITTALS

A. Provide Source Test Plans as specified in Section 01756 - Commissioning.

B. Provide Installation and Functional Testing Plans as specified in Section 01756 - Commissioning.

C. Provide vendor operation and maintenance manual as specified in Section 01782 - Operation and Maintenance Manuals.
   1. Include motor rotor bar pass frequencies for motors larger than 500 horsepower.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 GENERAL

A. Commissioning of equipment as specified in:
   1. This Section.
   2. Section 01756 - Commissioning.
   3. Equipment sections:
      a. If testing requirements are not specified, provide Level 1 Tests.

B. Test and prepare piping as specified in Section 15956 - Piping Systems Testing.

C. Provide necessary test instrumentation that has been calibrated within 1 year from date of test to recognized test standards traceable to the NIST or approved source.
   1. Properly calibrated field instrumentation permanently installed as a part of the Work may be utilized for tests.
   2. Prior to testing, provide signed and dated certificates of calibration for test instrumentation and equipment.

D. Test measurement and result accuracy:
   1. Use test instruments with accuracies as recommended in the appropriate referenced standards. When no accuracy is recommended in the referenced standard, use 1 percent or better accuracy test instruments.
      a. Improved (lower error tolerance) accuracies specified elsewhere prevail over this general requirement.
   2. Do not adjust results of tests for instrumentation accuracy.
      a. Measured values and values directly calculated from measured values shall be the basis for comparing actual equipment performance to specified requirements.

3.02 VARIABLE SPEED EQUIPMENT TESTS

A. Establish performance over the entire speed range and at the average operating condition.

B. Establish performance curves for the following speeds:
   1. The speed corresponding to the rated maximum capacity.
   2. The speed corresponding to the minimum capacity.
   3. The speed corresponding to the average operating conditions.

3.03 PUMP TESTS, ALL LEVELS OF TESTING

A. Test in accordance with the following:
   1. Applicable HI Standards.
   2. This Section.
   3. Equipment sections.

B. Test tolerances: In accordance with appropriate HI Standards, except the following modified tolerances apply:
   1. From 0 to plus 5 percent of head at the rated design point flow.
   2. From 0 to plus 5 percent of flow at the rated design point head.
   3. No tolerance for head and flow when ranges are specified.
   4. No negative tolerance for the efficiency at the rated design point, and other specified conditions.
   5. Use of specified test tolerances shall not result in motor overload while operating at any point on the supplied pump operating head-flow curve, including runout.
   6. No positive tolerance for vibration limits. Vibration limits and test methods in HI Standards do not apply, use limits and methods specified in this or other Sections of the Specifications.

3.04 DRIVERS TESTS

A. Test motors as specified in Section 16222 - Low Voltage Motors up to 500 Horsepower.

B. Test other drivers as specified in the equipment section.

3.05 NOISE REQUIREMENTS AND CONTROL

A. Perform noise tests in conjunction with vibration test analysis.

B. Make measurements in relation to reference pressure of 0.0002 microbar.

C. Make measurements of emitted noise levels on sound level meter meeting or exceeding ANSI S1.4, Type II.

D. Set sound level meter to slow response.

E. Unless otherwise specified, maximum free field noise level not to exceed 85 dBA measured as sound pressure level at 3 feet from the equipment.

3.06 PRESSURE TESTING

A. Hydrostatically pressure test pressure containing parts at the appropriate standard or code required level above the equipment component specified design pressure or operating pressure, whichever is higher.

3.07 INSPECTION AND BALANCING

A. Statically and dynamically balance each of the individual rotating parts as required to achieve the required field vibration limits.

B. Statically and dynamically balance the completed equipment rotating assembly and drive shaft components.

C. Furnish copies of material and component inspection reports including balancing reports for equipment system components and for the completed rotating assembly.

D. Critical speed of rotating equipment:
   1. Satisfy the following:
      a. The first lateral and torsional critical speed of all constant, variable, and 2-speed driven equipment that is considered rigid such as horizontal pumps, all non-clog pumps, blowers, air compressors, and engines shall be at least 25 percent above the equipment's maximum operating speed.
      b. The first lateral and torsional critical speed of all constant, variable, and 2-speed driven equipment that is considered flexible or flexibly mounted such as vertical pumps (vertical in-line and vertical non-clog pumps

excluded) and fans shall at least 25 percent below the equipment's lowest operating speed.

c. The second lateral and torsional critical speed of all constant, variable, and 2-speed equipment that is considered flexible or flexibly mounted shall be at least 25 percent above the maximum operating speed.

E. Vibration tests:

1. Definitions:
    a. Root mean square: for pumps operating at speeds greater than 600 rpm, the vibration measurement shall be measured as the overall velocity in inches per second root mean square (RMS).
    b. Peak-to-peak displacement: The root means squared average of the peak-to-peak displacement multiplied by the square root of 2.
    c. Peak velocity: The root mean squared average of the peak velocity multiplied by the square root of 2.
    d. Peak acceleration: The root mean squared average of the peak acceleration multiplied by the square root of 2.
    e. High frequency enveloping: A process to extract very low amplitude time domain signals associated with impact or impulse events such as bearing or gear tooth defects and display them in a frequency spectrum of acceleration versus frequency.
        1) Manufacturers: One of the following or equal:
            a) Rockwell Automation, Entek Group, "Spike Energy" analysis.
            b) CSI, "PeakVue."
    f. Rotor bar pass frequency (RBF), for detecting loose rotor bars.
    g. Low speed equipment: Equipment or components of equipment rotating at less than 600 revolutions per minute.
    h. High speed equipment: Equipment and equipment components operating at or above 600 revolutions per minute.
    i. Preferred operating range: Manufacturer's defined preferred operating range (POR) for the equipment.
    j. Allowable operating range: Manufacturer's defined allowable operating range (AOR) for the equipment.
2. Vibration instrumentation requirements:
    a. Analyzers: Use digital type analyzers or data collectors with anti-aliasing filter, 12-bit A/D converter, fast fourier transform circuitry, phase measurement capability, time wave form data storage, high-frequency enveloping capabilities, 35 frequency ranges from 21 to 1,500,000 cycles per minute, adjustable fast fourier transform resolution from 400 to 6,400 lines, storage for up to one hundred 3,200 line frequency spectra, data output port, circuitry for integration of acceleration data to velocity or double integration to displacement.
        1) Manufacturers: One of the following or equal:
            a) Computational Systems Inc., (CSI) Division of Emerson Process Management, Model 2120A, Data Collector/analyzer with applicable analysis software.
            b) Pruftechnik, VIBXPERT II.
    b. Analyzer settings:
        1) Units: English, inches/second, mils, and gravitational forces.
        2) Fast fourier transform lines: Most equipment 1,600 minimum; for motors, enough lines as required to distinguish motor current

frequencies from rotational frequencies, use 3,200 lines for motors with a nominal speed of 3,600 revolutions per minute; 3,200 lines minimum for High Frequency Enveloping; 1,600 lines minimum for low speed equipment.

3) Sample averages: 4 minimum.
4) Maximum frequency (Fmax): 40 times rotational frequency for rolling element bearings, 10 times rotational frequency for sleeve bearings.
5) Amplitude range: Auto select but full scale not more than twice the acceptance criteria or the highest peak, whichever is lower.
6) Fast fourier transform windowing: Hanning Window.
7) High pass filter: Minus 3 dB at 120 cycles per minute for high speed equipment. Minus 3 dB at 21 cycles per minute for low speed equipment.

c. Accelerometers:
   1) For low speed equipment: Low frequency, shear mode accelerometer, 500 millivolts per gravitational force sensitivity, 10 gravitational force range, plus/minus 5 percent frequency response from 0.5 hertz to 850 hertz, magnetic mount.
      a) Manufacturers: One of the following or equal:
         (1) Wilcoxon Research, Model 797L.
         (2) PCB, Model 393C.
   2) For high speed equipment: General purpose accelerometer, 100 millivolts per gravitational force sensitivity, 50 gravitational force range, plus/minus 3dB frequency response range from 2 hertz to 12,000 hertz when stud mounted, with magnetic mount holder.
      a) Manufacturers: One of the following or equal:
         (1) Wilcoxon Research, Model 793.
         (2) Entek-IRD Model 943.

3. Accelerometer mounting:
   a. Use magnetic mounting or stud mounting.
   b. Mount on bearing housing in location with best available direct path to bearing and shaft vibration.
   c. Remove paint and mount transducer on flat metal surface or epoxy mount for High Frequency Enveloping measurements.
4. Vibration acceptance criteria:
   a. Testing of rotating mechanical equipment: Tests are to be performed by an experienced, factory trained, and independent authorized vibration analysis expert.

b. Vibration displacement limits: Unless otherwise specified, equipment operating at speeds 600 revolutions per minute or less is not to exhibit unfiltered readings in excess of following:

Operating Conditions and Application Data	Overall Peak-to-Peak Displacement	
	Field, mils	Factory, mils
Operation within the POR	3.0	4.0
Operation within the AOR	4.0	5.0
Additive value when measurement location is greater than 5 feet above foundation	2.0	2.0
Additive value for solids-handling pumps	2.0	N/A
Additive value for slurry pumps	2.0	N/A

c. Vibration velocity limits: Unless otherwise specified, equipment operating at speeds greater than 600 revolutions per minute is not to exceed the following peak velocity limits:

HI Pump Type	Horsepower	Field Test	Factory Test
		Overall RMS	Overall RMS
Horizontal Solids Handling Centrifugal Pumps	Below 33 hp	0.25	0.28
Horizontal and Vertical In-Line Centrifugal Pumps (other than Non-Clog type)	Between 33 and 100 hp	0.28	0.31
	100 hp and above	0.31	0.34
Vertical Solids Handling Centrifugal Pumps	Below 33 hp	0.30	0.33
Vertical Turbine, Mixed Flow, and Propeller Pumps (solids-handling type pumps)	Between 33 and 100 hp	0.32	0.35
	100 hp and above	0.34	0.35
Non-Solids Handling Centrifugal Pumps	Below 268 hp	0.15	0.19
HI Types BB1, BB2, BB3, BB4, BB5, OH1, OH2, OH3, OH4, OH5, and OH7	268 hp and above	0.19	0.22
Vertical Turbine, Mixed Flow, and Propeller Pumps HI Types VS1, VS2, VS3, VS4, VS5, VS6, VS7, and VS8	Below 268 hp	0.13	
	268 hp and above	0.17	
Slurry Pumps		0.25	0.30
Motors		See Applicable Motor Specification	See Applicable Motor Specification

HI Pump Type	Horsepower	Field Test	Factory Test
		Overall RMS	Overall RMS
Gear Reducers, Radial		Not to exceed AGMA 6000-B96 limits	Not to exceed AGMA 6000-B96 limits
Other Reducers, Axial		0.1	N/A

d. Equipment operation: Measurements are to be obtained with equipment installed and operating within capacity ranges specified and without duplicate equipment running.
e. Additional criteria:
    1) No narrow band spectral vibration amplitude components, whether sub-rotational, higher harmonic, or synchronous multiple of running speed, are to exceed 40 percent of synchronous vibration amplitude component without manufacturer's detailed verification of origin and ultimate effect of such excitation.
    2) The presence of discernable vibration amplitude peaks in Test Level 2 or 3 vibration spectra at bearing inner or outer race frequencies shall be cause for rejection of the equipment.
    3) For motors, the following shall be cause for rejection:
        a) Stator eccentricity evidenced by a spectral peak at 2 times electrical line frequency that is more than 40 percent of the peak at rotational frequency.
        b) Rotor eccentricity evidenced by a spectral peak at 2 times electrical line frequency with spectra side bands at the pole pass frequency around the 2 times line frequency peak.
        c) Other rotor problems evidenced by pole pass frequency side bands around operating speed harmonic peaks or 2 times line frequency side bands around rotor bar pass frequency or around 2 times the rotor bar pass frequency.
        d) Phasing problems evidenced by 1/3 line frequency side band spectral peaks around the 2 times electrical line frequency peak.
    4) The presence of peaks in a High Frequency Enveloping spectra plot corresponding to bearing, gear or motor rotor bar frequencies or harmonics of these frequencies shall be cause for rejection of the equipment; since inadequate lubrication of some equipment may be a cause of these peaks, lubrication shall be checked, corrected as necessary and the high frequency envelope analysis repeated.

5. Vibration testing results presentation:
    a. Provide equipment drawing with location and orientation of measurement points indicated.
    b. For each vibration measurement take and include appropriate data on equipment operating conditions at the time vibration data is taken; for pumps, compressors, and blowers record suction pressure, discharge pressure, and flow.
    c. When Vibration Spectra Data required:
        1) Plot peak vibration velocity versus frequency in cycles per minute.
        2) Label plots showing actual shaft or part rotation frequency, bearing inner and outer race ball pass frequencies, gear mesh frequencies

and relevant equipment excitation frequencies on the plot; label probable cause of vibration peaks whether in excess of specification limits or not.

3) Label plots with equipment identification and operating conditions such as tag number, capacity, pressure, driver horsepower, and point of vibration measurement.

4) Plot motor spectra on a log amplitude scale versus frequency.

d. For low speed equipment, plot peak vibration displacement versus frequency as well as velocity versus frequency.

e. Provide name of manufacturer and model number of the vibration instrumentation used, including analyzer and accelerometer used together with mounting type.

3.08 TESTING LEVELS

A. Level 1 Tests:

1. Level 1 Performance Test:

a. General:

1) For equipment, operate, rotate, or otherwise functionally test for 15 minutes minimum after components reach normal operating temperatures.

2) Operate at rated design load conditions.

3) Confirm that equipment is properly assembled.

4) Confirm the equipment moves or rotates in the proper direction.

5) Confirm shafting, drive elements, and bearings are installed and lubricated in accordance with proper tolerances.

6) Confirm that no unusual power consumption, lubrication temperatures, bearing temperatures, or other conditions are observed.

b. Pumps:

1) Comply with general performance test requirements as specified in this Section.

2) Measure flow and head while operating at or near the rated condition; for factory testing, testing may be at reduced speeds with flow and head corresponding to the rated condition when adjusted for speed using the appropriate affinity laws.

a) Use of a test driver is permitted for factory tests when actual driver is given a separate test at its point of manufacture as specified in Section 16222 - Low Voltage Motors up to 500 Horsepower or the applicable equipment section.

b) Use actual driver for field tests.

3) Record measured flow, suction pressure, discharge pressure, and make observations on bearing temperatures and noise levels.

2. Level 1 Vibration Test:

a. Test requirement:

1) Measure filtered vibration spectra versus frequency in 3 perpendicular planes at each normally accessible bearing housing on the driven equipment, any gears and on the driver; 1 plane of measurement to be parallel to the axis of rotation of the component.

2) Vibration spectra versus frequency shall be in accordance with Vibration Acceptance Criteria.

b. Equipment operating condition: Test at specified maximum speed.

3. Level 1 Noise Test:
   a. Measure unfiltered overall A-weighted sound pressure level in dBA at 3 feet horizontally from the surface of the equipment and at a mid-point of the equipment height.

B. Level 2 Tests:
   1. Level 2 Performance Test:
      a. General:
         1) For equipment, operate, rotate, or otherwise functionally test for at least 2 hours after components reach normal operating temperatures.
         2) Operate at rated design load conditions.
         3) Confirm that equipment is properly assembled.
         4) Confirm the equipment moves or rotates in the proper direction.
         5) Confirm shafting, drive elements, and bearings are installed and lubricated in accordance with proper tolerances.
         6) Confirm that no unusual power consumption, lubrication temperatures, bearing temperatures, or other conditions are observed.
      b. Pumps:
         1) Comply with general performance test requirements as specified in this Section.
         2) Test 2 hours minimum for flow and head at the rated condition; for factory testing, testing may be at a reduced speeds with flow and head corresponding to the rated condition when adjusted for speed using the appropriate affinity laws.
            a) Use of a test driver is permitted for factory tests when actual driver is given a separate test at its point of manufacture as specified in Section 16222 - Low Voltage Motors up to 500 Horsepower.
            b) Use actual driver for field tests.
         3) Test for flow and head at 2 additional conditions; 1 at 25 percent below the rated flow and 1 at 10 percent above the rated flow.
         4) Record measured flow, suction pressure, discharge pressure, and observations on bearing temperatures and noise levels at each condition.
   2. Level 2 Vibration Test:
      a. Test requirement:
         1) Measure filtered vibration spectra versus frequency and measure vibration phase in 3 perpendicular planes at each normally accessible bearing housing on the driven equipment, any gears and on the driver; 1 plane of measurement to be parallel to the axis of rotation of the component; measure actual rotational speeds for each vibration spectra measured using photometric or other tachometer input connected directly to the vibration data collector.
         2) Vibration spectra versus frequency shall be in accordance with Vibration Acceptance Criteria.
      b. Equipment operating condition: Repeat test requirements at design specified maximum speed and at minimum speed for variable speed equipment.

c. Natural frequency test of field installed equipment:
1) Excite the installed equipment and support system in 3 perpendicular planes, use same planes as operating vibration measurement planes, and determine the as-installed natural resonant frequency of the driven equipment, the driver, gears, and supports.
2) Perform test at each bearing housing, at each support pedestal, and for pumps on the suction and discharge piping.
3) Perform with equipment and attached piping full of intended service or process fluid.

3. Level 2 Noise Test:
a. Measure filtered A-weighted overall sound pressure level in dBA for each of 8 octave band mid-points beginning at 63 hertz measured at 3 feet horizontally from the surface of the equipment at mid-point height of the noise source.

C. Level 3 Tests:
1. Level 3 Performance Tests:
a. General:
1) For equipment, operate, rotate, or otherwise functionally test for at least 4 hours after components reach normal operating temperatures.
2) Operate at rated design load conditions for 1/2 the specified time; operate at each of any other specified conditions for a proportionate share of the remaining test time.
3) Confirm that equipment is properly assembled.
4) Confirm the equipment moves or rotates in the proper direction.
5) Confirm shafting, drive elements, and bearings are installed and lubricated in accordance with proper tolerances.
6) Confirm that no unusual power consumption, lubrication temperatures, bearing temperatures, or other conditions are observed.
7) Take appropriate capacity, power or fuel consumption, torque, revolutions per minute, pressure, and temperature readings using appropriate test instrumentation to confirm equipment meets specified performance requirements at the design rated condition.
8) Bearing temperatures: During maximum speed or capacity performance testing, measure and record the exterior surface temperature of each bearing versus time.

b. Pumps:
1) Comply with general performance test requirements as specified in this Section.
2) Test 4 hours minimum for flow and head; begin tests at or near the rated condition; for factory and field-testing, test at full speed.
a) Use of a test driver is permitted for factory tests when actual driver is given a separate test at its point of manufacture as specified in Section 16222 - Low Voltage Motors up to 500 Horsepower.
b) Use actual driver for field tests.
3) Test each specified flow and head condition at the rated speed and test at minimum as well as maximum specified speeds; operate at each test condition for a minimum of 15 minutes; or longer as

necessary to measure required performance, vibration, and noise data at each test condition. For factory testing, test at other speeds may be omitted if test driver at reduced speeds is used for rated condition testing.

4) Record measured shaft revolutions per minute, flow, suction pressure, discharge pressure; record measured bearing temperatures (bearing housing exterior surface temperatures may be recorded when bearing temperature devices are not required by the equipment section) and record observations on noise levels.

5) Perform efficiency and/or Net Positive Suction Head Required (NPSHr) and/or priming time tests when specified in the equipment section in accordance with the appropriate HI standard and as follows:

a) Perform NPSHr testing at maximum rated design speed, head and flow with test fluids at ambient conditions; at maximum rated speed, test at 15 percent above rated design flow, and 25 percent below rated design flow.

b) Perform efficiency testing with test fluids at maximum rated speed.

c) Perform priming time testing with test fluids at maximum rated speed.

2. Level 3 Vibration Test:
   a. Requirements: Same as Level 2 vibration test except data taken at each operating condition tested and with additional requirements below.
   b. Perform High Frequency Enveloping Analysis for gears and bearings.
      1) Measure bearing element vibration directly on each bearing cap in a location close as possible to the bearing load zone that provides a smooth surface and direct path to the bearing to detect bearing defects.
      2) Report results in units of acceleration versus frequency in cycles per minute.
   c. Perform Time Wave Form analysis for gears, low speed equipment and reciprocating equipment; plot true peak amplitude velocity and displacement versus time and label the period between peaks with the likely cause of the periodic peaks (relate the period to a cause).
   d. Plot vibration spectra on 3 different plots; peak displacement versus frequency, peak acceleration versus frequency and peak velocity versus frequency.
3. Level 3 Noise Test: Measure filtered, un-weighted overall sound pressure level in dB at 3 feet horizontally from the surface of the equipment at mid-point height and at 4 locations approximately 90 degrees apart in plain view; report results for each of 8 octave band mid-points beginning at 63 hertz.

D. Level 4 Tests:
   1. Level 4 Performance Test:
      a. General:
         1) For equipment, operate, rotate, or otherwise functionally test for at least 8 hours after components reach normal operating temperatures.

2) Operate at rated design load conditions for 1/2 the specified time; operate at each of any other specified conditions for a proportionate share of the remaining test time.
3) Confirm that equipment is properly assembled.
4) Confirm the equipment moves or rotates in the proper direction.
5) Confirm shafting, drive elements, and bearings are installed and lubricated in accordance with proper tolerances.
6) Confirm that no unusual power consumption, lubrication temperatures, bearing temperatures, or other conditions are observed.
7) Take appropriate capacity, power or fuel consumption, torque, revolutions per minute, pressure and temperature readings, using appropriate test instrumentation to confirm equipment meets specified performance requirements at the design rated condition.
8) Bearing temperatures: During maximum speed or capacity testing, measure and record the exterior surface temperature of each bearing versus time.

b. Pumps:
1) Comply with general performance test requirements as specified in this Section.
2) Test 8 hours minimum for flow and head; begin tests at or near the rated condition; for factory and field-testing, test with furnished motor at full speed.
3) Test each specified flow and head condition at the rated speed and test at minimum as well as maximum specified speeds; operate at each test condition for a minimum of 20 minutes or longer as necessary to measure required performance, vibration, and noise data at each test condition.
4) Record measured shaft revolutions per minute, flow, suction pressure, discharge pressure; record measured bearing temperatures (bearing housing exterior surface temperatures may be recorded when bearing temperature devices not required by the equipment section) and record observations on noise levels.
5) Bearing temperatures: During maximum speed or capacity testing, measure and record the exterior surface temperature of each bearing versus time.
6) Perform efficiency and/or Net Positive Suction Head Required (NPSHr) and/or priming time tests when specified in the equipment section in accordance with the appropriate HI standard and as follows:
a) Perform NPSHr testing at maximum rated design speed, head and flow with test fluids at ambient conditions; at maximum rated speed, test at 15 percent above rated design flow, and 25 percent below rated design flow.
b) Perform efficiency testing with test fluids at maximum rated speed.
c) Perform priming time testing with test fluids at maximum rated speed.

2. Level 4 Vibration Test: Same as Level 3 vibration test.
3. Level 4 Noise Test: Same as Level 3 Noise Test except with data taken at each operating condition tested.

END OF SECTION

SECTION 16050

COMMON WORK RESULTS FOR ELECTRICAL

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for electrical:
      a. Basic design and performance criteria.
      b. Installation.

B. Contract Drawings:
   1. Schematic diagrams:
      a. Controls are shown as de-energized.
      b. Add relays, where required, to provide necessary contacts for the control system or where needed to function as interposing relays for control voltage coordination, equipment coordination, or control system voltage drop considerations.
      c. Mount devices shown on motor controller schematic diagrams in the controller compartment enclosure, unless otherwise noted.
   2. Plan drawings:
      a. Electrical drawings show desired locations, arrangements, and components of the electrical Work in a diagrammatic manner.
      b. Locations and sizes of equipment are approximate only.
   3. Installation details:
      a. Contract Drawings include typical installation details the Contractor is to use to complete the electrical Work. For cases where a typical detail does not apply, develop installation details that may be necessary for completing the Work, and submit these details for review by the Engineer.
      b. Not all typical installation details are referenced within the drawing set. Apply and use typical details where appropriate.

1.02 REFERENCES

A. Abbreviations:
   1. FAT: Factory acceptance test that is also referred to as source test.
   2. ICSC: Instrumentation and controls subcontractor.
   3. PCIS: Process control and instrumentation system.

B. Standards:
   1. American National Standards Institute (ANSI).
   2. National Electrical Manufacturers Association (NEMA):
      a. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).
   3. National Fire Protection Association (NFPA):
      a. 70 - National Electrical Code (NEC).
   4. Underwriters Laboratories, Inc. (UL).

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. LCP: Local control panel: Operator interface panel that may contain pilot type control devices, operator interface devices, control relays, etc., and does not contain a PLC or RIO.
   2. PCM: Process control module: An enclosure containing any of the following devices: PLC, RTU, or RIO.
   3. Space: Portion of a switchgear, motor control center, panelboard, switchboard, or control panel that does not physically contain a device but is capable of accepting a device with no modifications to the equipment.
      a. Furnish hardware to accommodate installation of future circuit breakers, instruments, relays, and controls.
      b. Wire relay and circuit breaker control power and network connections to the compartment and provide terminations.
      c. Space for future devices shall include:
         1) All necessary bus.
         2) Device supports and mounting equipment.
         3) Device connections to bus work.
         4) Wire troughs or raceway space.
   4. Spare: Portion of a switchgear, motor control center, panelboard, switchboard, or control panel that physically contains a device with no load connections to be made.
   5. Unequipped space: Portion of a switchgear, motor control center, panelboard, switchboard, or control panel that does not physically contain a device, standoff, bus, hardware, or other equipment.

1.04 DELEGATED DESIGN

A. Requirements for Delegated Design are specified in the Technical Sections.

1.05 QUALITY ASSURANCE

A. General:
   1. Furnish equipment listed by and bearing the label of UL or of an independent testing laboratory acceptable to the Engineer and the Authority Having Jurisdiction.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Shipping precautions:
   1. After completion of shop assembly and successful factory testing, pack equipment in protective crates, and enclose in heavy duty polyethylene envelopes or secured sheeting to provide complete protection from damage, dust, and moisture.
   2. Place dehumidifiers, when required, inside the polyethylene coverings.
   3. Skid-mount the equipment for final transport.
   4. Provide lifting rings for moving without removing protective covering.
   5. Display boxed weight on shipping tags together with instructions for unloading, transporting, storing, and handling at the job site.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Loop drawings:
      a. Provide electrical information required in the preparation of loop drawings, including, but not limited to:
         1) Conduit numbers and associated signal(s) contained within each conduit.
         2) Wire numbers.
         3) Equipment terminal numbers.
         4) Junction boxes and signal(s) contained within each junction box.
         5) Equipment power sources, and associated circuit numbers.
         6) As-built drawings detailing wiring.

B. Meetings:
   1. As specified in Section 01312 - Project Meetings.

C. Sequencing and scheduling:
   1. Equipment anchoring: Project construction schedule must include an event for obtaining the anchor layout drawings from equipment manufacturers in adequate time for templates to be constructed and anchors to be cast-in-place.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide field wiring and terminations.

B. Equipment mounting and anchoring:
   1. Design equipment anchorage, supports, and connections for dead load, running loads, loads during start-up, seismic load specified in Section 01850 - Design Criteria, and other loads as required for proper operation of equipment.
      a. For equipment with an operating weight of 400 pounds or greater and equipment that is supported higher than 4 feet above the floor, provide calculations for:
         1) Operating weight and location of the centroid of mass for the equipment.
         2) Forces and overturning moments.
         3) Shear and tension forces in equipment anchorages, supports, and connections.
         4) Design of equipment anchorage, supports, and connections based on calculated shear and tension forces.
   2. Anchorage of equipment to concrete or masonry:
      a. Perform calculations and determine number, size, type, strength, and location of anchor bolts or other connections.

b. Unless otherwise indicated on the Drawings, select and provide anchors from the types specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.
c. Provide bolt sleeves around cast-in anchor bolts for 400 pounds or greater equipment.
1) Adjust bolts to final location and secure the sleeve.

3. Anchorage of equipment to metal supports:
a. Perform calculations and determine number, size, type, strength, and location of bolts used to connect equipment to metal supports.

2.02 MATERIALS

A. Enclosures:
1. Provide enclosures for electrical, instrumentation, and control equipment, regardless of Supplier or Subcontractor furnishing the equipment, that meet the requirements of NEMA Standard 250.
a. Provide metallic enclosures unless specifically indicated otherwise.

B. Stainless steel:
1. Where stainless steel is indicated or used for any portion of the electrical Work, provide a non-magnetic, corrosion-resistant alloy, ANSI Type 316, satin finish.
2. Provide exposed screws of the same alloys.
3. Use stainless steel hardware, when chemically compatible, in all chemical areas or areas requiring NEMA Type 4X construction.
4. Do not use stainless steel in any area containing chlorine, gas or solution, chlorine products or ferric chloride.

C. Plant area electrical Work requirements:
1. Provide electrical materials in accordance with the following table, unless otherwise specifically indicated on the Drawings:
a. Conduit installation requirements: As specified in Section 16130 - Conduits.

Table 1. Electrical Material Requirements

Plant Area	Environment: W = Wet D = Damp C = Clean/dry X = Corrosive H = Hazardous	NEMA Enclosure Type	Exposed Conduit Type (as specified in Section 16130 - Conduits)	Support Materials
Electrical Room	C	1, 12	GRC	GRC
Pump Room	D	4X Stainless Steel	GRC	GRC
Chemical Room	X	4X non-metallic	PCS	Fiberglass
Outdoors	W	4X Stainless Steel	PCS	Stainless steel

PART 3 EXECUTION

3.01 INSTALLATION

A. Equipment:
   1. Where the Drawings do not show dimensions for locating equipment, install equipment in the approximate locations indicated on the Drawings.

B. Provide NEC required working space in front of electrical equipment as if it could be worked on energized.

C. Circuits of different service voltage:
   1. Voltage and service levels:
      a. Low voltage:
         1) Power and controls: 120 V to 480 V.
         2) Instrumentation: Less than 50 VDC.
      b. Fiber.
   2. Install different service voltage circuits in separate raceways as well as underground manholes and hand holes.
   3. Install different service voltage circuits in separate junction boxes and pullboxes or provide physical dividers where boxes can be divided.

D. Conductors shall not pass through equipment they are not terminating in unless indicated on the Drawings or approved by the Engineer.

3.02 FIELD QUALITY CONTROL

A. Workmanship:
   1. Leave wiring in panels, manholes, boxes, and other locations neat, clean, and organized:
      a. Neatly coil and label spare wiring lengths.
      b. Shorten, re-terminate, and re-label excessively used, as well as spare, wire and cable lengths, as directed by the Engineer.

B. Inspection activities conducted during construction do not satisfy the inspection or testing requirements specified in Section 16950 - Field Electrical Acceptance Tests.

C. Provide onsite assistance for troubleshooting and correcting electrical issues discovered during installation and testing for the Project.

3.03 CLEANING

A. General:
   1. Clean and vacuum enclosures to remove metal filings, surplus insulation and any visible dirt, dust, or other matter before energization of the equipment or system start-up:
      a. Use of compressors or air blowers for cleaning is not acceptable.
   2. Clean luminaries in the areas affected by the construction.

END OF SECTION

SECTION 16060

GROUNDING AND BONDING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Grounding materials and requirements.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. B3 - Standard Specification for Soft or Annealed Copper Wire.
   2. B8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
   3. B33 - Standard Specification for Tin-Coated Soft or Annealed Copper Wire for Electrical Purposes.

B. Institute of Electrical and Electronics Engineers (IEEE):
   1. 81 - IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Grounding System.

C. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).

D. Underwriters Laboratories, Inc. (UL):
   1. 467 - Ground and Bonding Equipment.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Catalog cutsheets.

1.04 QUALITY ASSURANCE

A. Grounding components and materials shall be UL listed and labeled.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Ground equipment and raceway systems so that the completed installation is in accordance with applicable code requirements.

B. Provide a complete electrical grounding system as indicated on the Drawings and as specified including but not limited to:
   1. Grounding electrodes.
   2. Bonding jumpers.
   3. Ground connections.

2.02 MANUFACTURERS

A. Compression connectors: One of the following or equal:
   1. ABB.
   2. Burndy.
   3. Erico.
   4. Harger.
   5. Panduit.

B. Ground rods: One of the following or equal:
   1. Erico.
   2. Harger.
   3. Nehring.

C. Ground cable: One of the following or equal:
   1. Erico.
   2. Harger.
   3. Nehring.
   4. Southwire.

D. Precast ground well boxes: One of the following or equal:
   1. Brooks Products, 3-RT Valve Box.
   2. Christy Concrete Products, G12 Valve Box.

2.03 MATERIALS

A. Ground rod:
   1. Minimum: 3/4-inch diameter, 10-feet long.
   2. Uniform 10 mil covering of electrolytic copper metallically bonded to a rigid steel core:
      a. Copper-to-steel bond shall be corrosion resistant.
   3. In accordance with UL 467.
   4. Sectional type joined by threaded copper alloy couplings.
   5. Fit the top of the rod with a threaded coupling and steel-driving stud.

B. Ground cable:
   1. Requirements:
      a. Soft drawn (annealed).

b. Concentric lay, coarse stranded in accordance with ASTM B8.
c. Bare copper in accordance with ASTM B3.

2. Size is as indicated on the Drawings, but not less than required by the NEC.

C. Compression connectors:
1. Manufactured of high copper alloy specifically for the particular grounding application.
2. Suitable for direct burial in earth and concrete.
3. Identifying compression die number inscription to be impressed on compression fitting.
4. Barrels prefilled and sealed with oxide-inhibiting and anti-seizing compound.

D. Grounding electrode conductors:
1. Minimum size in accordance with the NEC.

E. Main bonding jumpers and bonding jumpers:
1. Minimum size in accordance with the NEC.

2.04 ACCESSORIES

A. Precast ground well boxes:
1. Minimum 10-inch interior diameter.
2. Traffic-rated cast iron cover.
3. Permanent “GROUND” marking on cover.

PART 3 EXECUTION

3.01 INSTALLATION

A. Provide bonding jumpers and wire, grounding bushings, clamps and appurtenances required for complete grounding system to bond equipment and raceways to equipment grounding conductors.

B. Provide a separate grounding conductor for each motor and connect at motor terminal box. Do not use bolts securing motor box to frame or cover for grounding connectors:
1. When grounding motors driven by variable frequency drives (VFD) comply with the requirements of the VFD manufacturer.

C. Provide a grounding type bushing with lug for connection of grounding conductor for conduits that originate from each motor control center section, switchboard, or panelboard:
1. Individually bond these raceways to the ground bus in the equipment.

D. Provide grounding type bushings with lugs for connection of grounding conductor at both ends of metallic conduit runs. Bond ground bushings to the grounding system.

E. Provide a green insulated wire-grounding jumper from the ground screw to a box grounding screw and, for grounding type devices, to equipment grounding conductor.

F. Interconnect the secondary switchgear, switchboard, or panelboard neutral bus to the ground bus in the secondary switchgear, switchboard, or panelboard compartment, only at service entrance point or after a transformer.

G. Duct bank ground system:
   1. Provide a bare copper grounding conductor the entire length of each duct bank, embedded in the concrete of the duct bank as indicated on the Drawings and specified in the Specifications.
   2. Bond duct bank ground conductors together where duct banks join, merge, intersect, or split.

H. Grounding at service (600 V or Less):
   1. Connect the neutral to ground only at one point within the enclosure of the first disconnecting means on the load side of the service transformer.

I. Ground connections:
   1. Connections to the ground grid system, the duct bank grounding system, equipment, ground rods, etc., shall be made using compression type grounding connectors as indicated on the Drawings, UL listed, and labeled for the application.
   2. Make ground connections in accordance with the manufacturer's instructions.
   3. Do not conceal or cover any ground connections until the Engineer or authorized representative has established and provided written confirmation that every grounding connection is as indicated on the Drawings and specified in the Specifications.

J. Grounding electrode system:
   1. Ground ring:
      a. Provide trenching and materials necessary to install the ground ring as indicated on the Drawings.
      b. Ground ring conductor shall be in direct contact with the earth, or where embedded, concrete, of the size as indicated on the Drawings.
      c. Minimum burial depth 36 inches or as indicated on the Drawings.
      d. Re-compact disturbed soils to original density in 6-inch lifts.
   2. Ground rods:
      a. Locations as indicated on the Drawings.
      b. Length of rods forming an individual ground array shall be equal in length.
      c. Drive ground rods and install grounding conductors before construction of concrete slabs and duct banks.
      d. Pre-crimp ground rods, as recommended by the manufacturer, before crimping connector to ground rod.
   3. Metal underground water pipe:
      a. Bond metal underground domestic water pipe to grounding electrode system.
      b. Cathodically protected systems: Bond in accordance with cathodic protection system design requirements.
   4. Metal frame of building or structure:
      a. Bond metal frame of building or structure to grounding electrode system.
   5. Extend grounding conductors through concrete to accessible points for grounding equipment and electrical enclosures.

6. Where grounding conductors are exposed and subject to physical damage, install in Schedule 80 PVC conduit for protection.
7. Install grounding system at each structure where switchgear, motor control centers, switchboards, panelboards, panels, or other electrical equipment are installed.

K. Ground magnetic flowmeters as indicated on the Drawings.

L. Shield grounding:
1. Analog signal cables shields shall only be grounded at a single point in the loop. Unless otherwise noted, ground signal cable shields at control panel.
2. For communication and data line signal cable shields and drain wires should be grounded at both ends of the cable run.
3. Insulate the shielding and exposed drain wire for each signal cable with heat-shrink tubing.
4. Terminate the signal cable shield on a dedicated grounding terminal block.

M. Where indicated on the Drawings, install ground rods in precast ground wells.

3.02 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
1. As specified in Section 16950 - Field Electrical Acceptance Tests.

B. Ground system resistance (electrode to ground) of the completed installation, as determined by tests, shall be:
1. 5 ohms or less for industrial systems.
2. 1 ohm or less for electrical buildings.

C. Measure grounding electrode system resistance to ground in accordance with IEEE 81.

3.03 ADJUSTING

A. Under the direction of the Engineer, add additional parallel connected ground rods and/or deeper driven rods until the ground resistance measurement meets the specified resistance requirements:
1. Use of salts, water, or compounds to attain the specified ground resistance is not acceptable.

END OF SECTION

SECTION 16070

HANGERS AND SUPPORTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Mounting and supporting electrical equipment and components.

1.02 REFERENCES

A. American National Standards Institute (ANSI).

B. ASTM International (ASTM):
   1. A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   2. A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
   3. A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   4. D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.
   5. E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Anchor: Elements (including hardware) connecting hangers and supports to the structure.
   2. Hardware: Nuts, bolts, straps, clamps, threaded rod, etc.
   3. Supports: Preformed channel or other structural member on which the electrical equipment or raceway is mounted.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
    1. Supports:
        a. Materials.
        b. Geometry.
        c. Manufacturer.
    2. Hardware:
        a. Materials.
        b. Manufacturer.

C. Shop Drawings:
    1. Dimensioned and scalable Shop Drawings of hangers and supports for distribution systems and equipment.
    2. Complete details for:
        a. Member sizes and arrangement in hangers and support assemblies.
        b. Connections between members in hangers and support assemblies.
        c. Anchoring hangers and supports to structures.
        d. Bracing for hangers and supports and anchoring of bracing to structures.
    3. Include data on connections, attachment hardware and construction to demonstrate that hangers and supports will satisfy the design loading, bracing, and anchoring criteria.

D. Delegated Design Submittals:
    1. Hangers and supports - General:
        a. Locations and conditions:
            1) Hangers and supports inside structures.
            2) Hangers and supports that resist cable pulling/rigging loads.
        b. Required Submittals: Details with supporting calculations for:
            1) Support member arrangement, sizes, and connections.
            2) Bracing to resist cable pulling/rigging loads.
            3) Connections of hangers, supports, and bracing to the structure.
            4) Connections between supports and the equipment or raceway(s) thereon.
    2. Hangers and supports - Exterior and seismic conditions:
        a. Locations and conditions:
            1) Hangers and supports at structures designated as Seismic Design Category (SDC) C, D, E, or F in Section 01850 - Design Criteria.
            2) Hangers and supports for outdoor installations.
        b. Required Submittals:
            1) Interior: Bracing to resist seismic design loads specified in Section 01850 - Design Criteria.
            2) Exterior: Bracing to resist seismic, wind, and other environmental loads specified in Section 01850 - Design Criteria.
    3. Hangers and supports anchored to concrete and masonry:
        a. Locations and conditions:
            1) Post-installed mechanical anchors in tension.
            2) Post-installed adhesive-bonded all-thread rods in tension.
        b. Required Submittals:
            1) Calculations demonstrating that anchors have a demand/capacity ratio (D/C) not greater than the following when anchor capacity is

adjusted for moisture conditions, anchor spacing and edge distances, and sustained loading conditions present at the location of installation.
a) Post-installed mechanical anchors maximum: 85 percent.
b) Post-installed adhesive-bonded anchors maximum: 75 percent.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Mount raceways, cabinets, boxes, fixtures, instruments, and devices on Contractor-fabricated supports unless otherwise indicated on the Drawings.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Hangers and supports individually and as a system shall resist weights and code-required forces without deflections and deformations that would damage the supporting elements, the raceway or equipment supported, or the surrounding construction.
   1. Provide the necessary sway bracing to keep support structures from swaying due to lateral forces, including wire and cable pulling forces.
   2. Lateral deflection at top of slab mounted supports shall not exceed support height divided by 240, unless otherwise approved by the Engineer.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. Preformed channel:
      a. Eaton B-line.
      b. Power-Strut.
      c. Robroy.
      d. Tyco.
      e. Unistrut.

2.04 MATERIALS

A. Hot dip galvanized steel:
   1. Supports:
      a. In accordance with ASTM A123 or A153.
      b. Minimum zinc coating thickness of 2.5 mils.
      c. Nominal dimensions: 1-5/8 inch by 1-5/8 inch.

2. Hardware:
    a. Electro-galvanized.
    b. In accordance with ASTM A153.

B. Stainless steel:
1. Supports:
    a. In accordance with ASTM A240.
    b. ANSI Type 316 material.
    c. Nominal dimensions: 1-5/8 inch by 1-5/8 inch.
2. Hardware:
    a. ANSI Type 316 material.

C. PVC coated galvanized steel:
1. Supports:
    a. Hot dip galvanized steel as specified in this Section.
    b. PVC coating thickness of 10 to 20 mils.
    c. Nominal dimensions: 1-5/8 inch by 1-5/8 inch.
2. Hardware:
    a. ANSI Type 316 material.

D. Fiberglass:
1. Supports:
    a. Vinyl ester.
    b. Nominal dimensions: 1-5/8 inch by 1-5/8 inch.
    c. Flame spread rating of 25 or less in accordance with ASTM E84.
    d. Tested in accordance with ASTM D635.
2. Hardware:
    a. Polypropylene.
    b. Thermal plastic elastomer.
    c. Fiberglass reinforced plastic.

2.05 COMPONENTS

A. Fabricated metal supports: As specified in Section 05500 - Metal Fabrications.

2.06 ACCESSORIES

A. Anchors:
1. As specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.

2.07 FINISHES

A. Paint and finish structures as specified in Section 09960 - High-Performance Coatings.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Use materials appropriate for the area as specified in Section 16050 - Common Work Results for Electrical.

B. General:
   1. Refer to the Drawings for details. Equipment, cabinets, boxes, instruments, and devices in damp or wet locations on minimum of 7/8-inch preformed mounting channel.
   2. Mount channel vertically along the length of the device so that water or moisture may run freely behind the device.

C. Corrosion protection:
   1. Isolate dissimilar metals, except where required for electrical continuity.
      a. Use neoprene washers, 9-mil polyethylene tape, or gaskets for isolation.

D. Anchoring methods:
   1. Solid concrete:
      a. Anchor bolts, anchor rods or post-installed anchors as specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.
   2. Metal surfaces: Machine screws or bolts.
   3. Hollow masonry units:
      a. Post installed anchors as specified in Section 05190 - Mechanical Anchoring and Fastening to Concrete and Masonry.
   4. Wood and metal studs:
      a. When supporting devices on metal or wood stud construction, bridge studs with preformed channel, and mount the devices to the channel.

E. Recoat or seal drilled holes, cut or scratched surfaces or with products recommended by the manufacturer.

F. Group raceway and position on racks to minimize crossovers.

END OF SECTION

SECTION 16075

IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Identification of electrical equipment, devices and components.
   2. Material, manufacturing and installation requirements for identification devices.

1.02 REFERENCES

A. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

B. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).

C. Occupational Safety and Health Administration (OSHA).

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Nameplates:
      a. Color.
      b. Size:
         1) Outside dimensions.
         2) Lettering.
      c. Material.
      d. Mounting means.
   2. Nameplate schedule:
      a. Show exact wording for each nameplate.
      b. Include nameplate and letter sizes.
   3. Wire numbers:
      a. Manufacturer’s catalog data for wire labels and label printer.

C. Record documents:
   1. Update the conduit schedule to reflect the exact quantity of wire numbers, including spares and destination points for all wires.

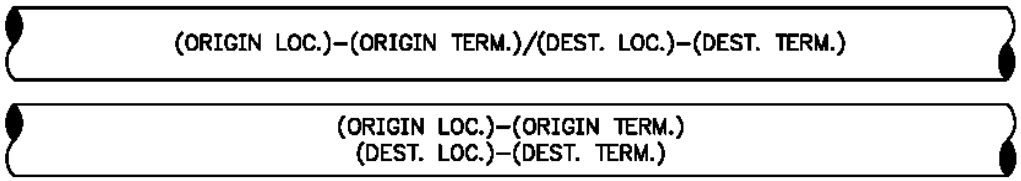
1.04 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.05 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS



2.01 GENERAL

A. Nameplates:
   1. Provide for control panel operator devices (e.g., pushbuttons, selector switches, pilot lights, etc.):
      a. Same material and same color and appearance as the device nameplates to achieve an aesthetically consistent and coordinated system.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Nameplates:
   1. Provide for each piece of electrical equipment, device, control panel, and control panel components.
   2. Identical style, color, and material throughout the facility.
   3. Device nameplates information:
      a. Equipment tag number as indicated on the Drawings.

B. Wire numbers:
   1. Coordinate the wire numbering system with vendors of equipment so that every field wire has a unique number associated with it for the entire system:
      a. Correspond to the wire numbers on the control drawings or the panel and circuit numbers for receptacles and lighting.
      b. Correspond to the terminal block number to which they are attached in the control panel.
      c. Internal panel wires on a common terminal shall have the same wire number.
      d. Multi-conductor cables shall be assigned a cable number that shall be attached to the cable at intermediate pull boxes and stub-up locations beneath freestanding equipment. Multi-conductor and instrumentation cables shall be identified at pull points as described above:
         1) Label armored multi-conductor cable using the conduit number as indicated on the Drawings, following the requirements for conduit markers specified in Section 16130 - Conduits.
   2. Provide the following wiring numbering schemes throughout the Project for field wires between process control module (PCM), vendor control panels (VCP), motor control centers (MCC), field starters, field instruments, etc.

OR:

Where:

ORIGIN LOC. = Designation for originating panel or device

ORIGIN TERM. = Terminal designation at originating panel or device

DEST. LOC. = Designation for destination panel or device

DEST. TERM. = Terminal designation at destination panel or device or PLC

3. I/O address at destination panel:
   a. Identify equipment and field instruments as the origin.
   b. PCMs are always identified as the destination.
   c. Location is the panel designation for VCP, LCP, or PCM. For connections to MCCs, location is the specific starter tag and loop number. Location is the tag and loop number for motor starters, field instruments and equipment. Any hyphen in the panel designation or tag and loop number shall be omitted.
   d. Terminal designation is the actual number on the terminal block where the conductor terminates at field devices and vendor control panels. For multi-conductor cables, all terminal numbers shall be shown, separated by commas.
   e. Terminal designations at motor leads shall be the motor manufacturer's standard terminal designation (e.g., T1, T2, T3, etc.).
   f. Terminal designations at PCMs where the field conductor connects to field terminal blocks for a PLC input or output shall be the PLC address (Note: The following PLC I/O numbering scheme is typical for Allen-Bradley. The numbering scheme should be modified to match that of the actual PLC manufacturer used for the Project):

      Discrete Point: W:X:Y/Z.

      Analog Point: W:X:Y.Z.

      Where:

      W = I for input, O for output.

      X = PLC number (1, 2, 3…)

      Y = Slot number (01, 02, 03…)

      Z = Terminal number (00, 01, 02…) for a discrete point or a word number for an analog point (1, 2, 3…)

   g. Terminal designations at PCMs where the conductor does not connect to a PLC I/O point shall be the terminal number with a "C" prefix (e.g., C0010). For common power after a fuse or neutrals after a switch, the subsequent points shall have and capital letter suffix starting with "A" (e.g., C0010A).

2.03 MANUFACTURERS

A. Nameplates and signs:
   1. One of the following or equal:
      a. Brady.
      b. Seton.

B. Conductor and cable markers:
   1. Heat-shrinkable tubing:
      a. One of the following or equal:
         1) Brady.
         2) Kroy.
         3) Panduit.
         4) Raychem.
   2. Non heat-shrinkable tubing:
      a. One of the following or equal:
         1) Brady.
         2) Panduit.
         3) Seton.

C. Conduit and raceway markers:
   1. Brass: One of the following or equal:
      a. Panduit.

2.04 MATERIALS

A. Nameplates:
   1. Colors:
      a. Warning: White-center, red face.
      b. Other: Black-center, white face.
   2. Laminated plastic engraving stock:
      a. 3/32-inch thick material.
      b. 2-ply.
   3. With chamfered edges.
   4. Lettering:
      a. Block style engraved characters of adequate size to be read easily from a distance of 6 feet.
      b. Minimum letter height: 1/8 inch.

B. Signs:
   1. Automatic equipment and high voltage signs:
      a. Suitable for exterior use.
      b. In accordance with OSHA regulations.

C. Conductor and cable markers:
   1. Lettering:
      a. Machine printed black characters on white tubing.
      b. Minimum letter height: 10-point type or larger.

D. Conduit and raceway markers:
    1. Solid brass:
        a. Minimum thickness: 0.036 inches.
        b. Minimum dimensions: 1/2- inch wide, 2-inches long.
        c. Letter and number characters: Engraved.
        d. Minimum letter height: 1/4-inch.

PART 3 EXECUTION

3.01 INSTALLATION

A. Nameplates:
    1. Attach to equipment with rivets, bolts, or sheet metal screws, approved waterproof epoxy-based cement or install in metal holders welded to the equipment.
    2. Provide for each disconnecting means with the following:
        a. Equipment served, voltage, and fuse size as required.
        b. Identification of the circuit source that supplies the disconnecting means.
    3. On NEMA Type 4 or NEMA Type 4X enclosures, use epoxy-based cement to attach nameplates.
    4. Aligned and level or plumb to within 1/32 inch over the entire length:
        a. Misaligned or crooked nameplates shall be remounted or new enclosures shall be provided at the discretion of the Engineer.

B. Conductor and cable markers:
    1. Apply before termination.
    2. Heat-shrinkable tubing:
        a. Shrunk using a heat gun that produces low temperature heated air.
        b. Tight on the wire after it has been heated.
        c. Characters shall face the open panel and shall read from left to right or top to bottom.
        d. Marker shall start within 1/32 inch of the end of the stripped insulation point.

C. Conduit markers:
    1. Furnish and install markers for every conduit in the electrical system that is identified in the conduit schedule or part of the process system:
        a. Markings shall match the conduit schedule.
    2. Mark conduits at the following locations:
        a. At each end of the conduit.
        b. Within 3 feet of any pull box, electrical equipment, or control panel.
        c. Where the conduit penetrates a wall, structure, manhole, or handhole.
        d. Where the conduit emerges from the ground, slab, etc.
    3. Position conduit markers so that they are easily read from the floor.
    4. Attach brass tags with 18 gauge Type 304 stainless steel wire.
    5. Mark conduits before construction review by the Engineer for punch list purposes.

D. Signs and labeling:
   1. Furnish and install permanent warning signs at mechanical equipment that may be started automatically or from remote locations:
      a. Fasten warning signs with round head stainless steel screws or bolts.
      b. Locate and mount in a manner to be clearly legible to operations personnel.
   2. Furnish and install warning signs on equipment that has more than one source of power.
      a. Warning signs to identify every panel and circuit number of the disconnecting means of external power sources.
   3. Place warning signs on equipment that has 120 VAC control voltage source used for interlocking.
      a. Identify panel and circuit number or conductor tag for control voltage source disconnecting means.
   4. Label service entrance equipment, switchgear, switchboards, MCCs, panelboards, and transfer switches with the available short circuit current, equipment label, and date of application in accordance with NEC. Coordinate with Section 16305 - Electrical System Studies for available fault current data.

3.02 FIELD QUALITY CONTROL

A. Replace any nameplates, signs, conductor markers, cable markers, or raceway labels that in the sole opinion of the Engineer do not meet the Engineer's aesthetic requirements.

END OF SECTION

SECTION 16123

600-VOLT OR LESS WIRES AND CABLES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. 600-volt class or less wire and cable.

1.02 REFERENCES

A. Abbreviations:
   1. AWG: American wire gauge.
   2. BCCS: Bare copper-covered steel.
   3. CPE: Chlorinated polyethylene.
   4. FHDPE: Foam high-density polyethylene.
   5. FPE: Foam polyethylene.
   6. OD: Outside diameter.
   7. PVC: Polyvinyl chloride.
   8. XHHW: Cross-linked high heat water resistant insulated wire.

B. Standards:
   1. ASTM International (ASTM):
      a. B3 - Standard Specification for Soft or Annealed Copper Wire.
      b. B8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
   2. CSA International (CSA).
   3. Insulated Cable Engineers Association (ICEA):
      a. S-90-661 - Individually Unshielded Twisted Pair Indoor Cables for Use in Communication Wiring Systems.
   4. National Electrical Manufacturers Association/Insulated Cable Engineers Association (NEMA/ICEA):
      a. NEMA WC 66/ICEA S-116-732 - Standard for Category 6 and 6A, 100 Ohm, Individually Unshielded Twisted Pairs, Indoor Cables (With or Without an Overall Shield) for Use in LAN Communication Wiring Systems.
      b. NEMA WC 70/ICEA S-95-658-1999 - Standard for Power Cables Rated 2,000 Volts or Less for the Distribution of Electrical Energy.
   5. National Fire Protection Association (NFPA):
      a. 70 - National Electrical Code (NEC).
      b. 262 - Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces.
   6. Telecommunications Industry Association (TIA):
      a. 568.2-D - Balanced Twisted-Pair Telecommunications Cabling and Components Standard.
      b. 569-B - Commercial Building Standards for Telecommunications Pathways and Spaces.

7. Underwriters Laboratories Inc. (UL):
    a. 44 - Standard for Thermoset-Insulated Wires and Cables.
    b. 1666 - Standard for Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
1. Manufacturer of wire and cable.
2. Insulation:
    a. Type.
    b. Voltage class.
3. AWG size.
4. Conductor material.
5. Pulling compounds.

C. Shop Drawings:
1. Show splice locations.
    a. For each proposed splice location provide written justification describing why the splice is necessary.

D. Test reports:
1. Submit test reports for meg-ohm tests.

E. Calculations:
1. Submit cable pulling calculations for cables that will be installed using mechanical pulling equipment. Show that the maximum cable tension and sidewall pressure will not exceed manufacturer recommended values:
    a. Provide a table showing the manufacturer's recommended maximum cable tension and sidewall pressure for each cable type and size included in the calculations.
    b. Submit the calculations to the Engineer a minimum of 2 weeks before conduit installation.

F. Cable lengths:
1. Submit installed cable lengths using a conduit measuring tape for 3-phase circuits.
2. Submit installed lengths of cable for the following single-phase circuits:
    a. Circuits feeding single-phase transformers.
    b. Circuits feeding single-phase panelboards.

1.04 QUALITY ASSURANCE

A. Wires and cables shall be UL listed and labeled.

1.05 PROJECT OR SITE CONDITIONS

A. General Site and Project conditions:
1. As specified in Section 01850 - Design Criteria.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Color-coding:
   1. Color-coding shall be consistent throughout the facility.
   2. The following color code shall be followed for 240/120-volt and 208/120-volt systems:
      a. Phase A: Black.
      b. Phase B: Red.
      c. Phase C: Blue.
      d. Single phase system: Black for 1 hot leg, red for the other.
      e. Neutral: White.
      f. High phase or wild leg: Orange.
      g. Equipment ground: Green.
   3. The following color code shall be followed for 480/277-volt systems:
      a. Phase A: Brown.
      b. Phase B: Orange.
      c. Phase C: Yellow.
      d. Neutral: Gray.
      e. Equipment ground: Green.
   4. The following color code shall be followed for 120 VAC control wiring:
      a. Power: Red.
      b. Neutral: White.
   5. The following color code shall be followed for general purpose DC control circuits:
      a. Grounded conductors: White with blue stripe.
      b. Ungrounded conductors: Blue.
   6. Switch legs shall be violet. 3-way switch runners shall be pink.
   7. Wires in intrinsically safe circuits shall be light blue.
   8. Wire colors shall be implemented in the following methods:
      a. Number 2 AWG and smaller: Wires manufactured of the desired color.
      b. Number 1 AWG and larger by one of the following:
         1) Wire manufactured of the desired color.
         2) Continuously spiral wrap the first 6 inches of the wire from the termination point with colored tape:
            a) Colored tape shall be wrapped to overlap half of the width of the tape.

2.02 MANUFACTURERS

A. One of the following, or equal:
   1. 600-volt class wire and cable:
      a. Okonite Co.
      b. Prysmian General Cable.
      c. Service Wire.

d. Southwire Co.
2. 600-volt VFD cable:
   a. Prysmian General Cable.
   b. Service Wire.
   c. Southwire Co.
3. Instrumentation class wire and cable:
   a. Alpha Wire Co.
   b. Belden CDT.
   c. Okonite Co.
   d. Prysmian General Cable.
   e. Rockbestos Surprenant Cable Corp.
4. Network cables:
   a. Belden.
   b. CommScope.
   c. General Cable.

2.03 MATERIALS

A. Conductors:
   1. Copper in accordance with ASTM B3.

2.04 MANUFACTURED UNITS

A. General:
   1. Provide new wires and cables manufactured within 1 year of the date of delivery to the Site.
   2. Permanently mark each wire and cable with the following at 24-inch intervals:
      a. AWG size.
      b. Voltage rating.
      c. Insulation type.
      d. UL symbol.
      e. Month and year of manufacture.
      f. Manufacturer's name.
   3. Identify and mark wire and cable as specified in Section 16075 - Identification for Electrical Systems:
      a. Use integral color insulation for #2 AWG and smaller wire.
      b. Wrap colored tape around cable larger than #2 AWG.

B. 600-volt class wire and cable:
   1. Provide AWG or kcmil sizes as indicated on the Drawings or in the Conduit Schedules:
      a. When not indicated on the Drawings, size wire as follows:
         1) In accordance with the NEC:
            a) Use 75-degree Celsius ampacity ratings.
            b) Ampacity rating after derating factors, equal to or greater than rating of the overcurrent device.
         2) Provide #12 AWG minimum for power conductors.
         3) Provide #14 AWG minimum for control conductors.
   2. Provide Class B stranding in accordance with ASTM B8:
      a. Provide Class C stranding where extra flexibility is required.

3. Insulation:
    a. XHHW-2.
    b. 90-degree Celsius rating.

C. 600-volt VFD cables:
    1. Conductor:
        a. Provide Class B stranding in accordance with ASTM B3 and B8.
        b. Copper conductor.
    2. Insulation:
        a. Cross-linked Polyethylene, XLPE.
        b. 90-degree Celsius rating.
        c. UL 44 Type RHH/RHW-2 or XHHW-2.
        d. 2,000 volts.
    3. Ground:
        a. Provide Class B compressed stranded bare copper in accordance with ASTM B3 and B8.
        b. 3 symmetrically placed bare copper conductors in direct contact with shield.
        c. Equivalent ground size 50 percent of the phase conductor size.
    4. Filler:
        a. Cable sizes 8 and 6 use polypropylene filler.
        b. Other cable sizes use paper filler.
    5. Metallic shield:
        a. Overall 5 mil bare copper tape shield with 50 percent overlap.
    6. Outer jacket:
        a. UL 1277 Type PVC.
    7. Cable tray rated, UL Type TC-ER.

D. Instrumentation class cable:
    1. Type TC.
    2. Suitable for use in wet locations.
    3. Voltage rating: 600 volts.
    4. Temperature rating:
        a. 90-degree Celsius rating in dry locations.
        b. 75-degree Celsius rating in wet locations.
    5. Conductors:
        a. Insulation:
            1) Flame-retardant PVC, 15 mils nominal thickness, with nylon jacket 4 mils nominal thickness.
        b. #16 AWG stranded and tinned.
        c. Color code: ICEA Method 1:
            1) Pair: Black and white.
            2) Triad: Black, white and red.
            3) Multiple pairs or triads:
                a) Color-coded and numbered.
    6. Drain wire:
        a. #18 AWG.
        b. Stranded, tinned.
    7. Jacket:
        a. Flame retardant, moisture and sunlight resistant PVC.
        b. Ripcord laid longitudinally under jacket to facilitate removal.

8. Shielding:
    a. Individual pair/triad:
        1) Minimum 1.35-mil double-faced aluminum foil-polyester tape overlapped to provide 100 percent coverage.
    b. Multiple pair or triad shielding:
        1) Group shield: Minimum 1.35-mil double-faced aluminum foil-polyester tape overlapped to provide 100 percent coverage.
        2) Completely isolate group shields from each other.
        3) Cable shield: 2.35-mil double-faced aluminum and synthetic polymer backed tape overlapped to provide 100 percent coverage.
    c. Shielding to be in contact with the drain wire.

E. Network cables:
1. Copper Ethernet cable:
    a. Provide copper Ethernet cable types as indicated on the Drawings and Specifications.
    b. General requirements:
        1) Cables shall meet the standards set by TIA-568.2-D and verified by third-party testing laboratory.
        2) Conductors:
            a) 4 balanced twisted pairs.
                (1) #22 to #24 AWG thermoplastic insulated solid copper conducts enclosed by a thermoplastic jacket. Copper clad aluminum is not allowed.
        3) Insulation:
            a) Non-Plenum: Polyolefin.
            b) Plenum: Fluoropolymer.
        4) Color coded per T568B.
        5) Outer jacket with ripcord.
        6) Shielding:
            a) Provide F/UTP cables with drain wire for cables inside any equipment or enclosure with 480 VAC and above, outdoor installations, and where indicated on the Drawings.
        7) Voltage rating:
            a) At a minimum provide 300 VAC rated jacket.
            b) 600 VAC rated jacket when cables are inside equipment or enclosures that contain 480 VAC power.
        8) Approvals and listings:
            a) Meets any necessary NEC and NFPA requirements for each application.
            b) Riser applications: CMR in accordance with UL 1666.
            c) Plenum applications: CMP in accordance with NFPA 262.
        9) Certification:
            a) Provide Category 6 cables with NEMA WC 66/ICEA S-116-732 certification.

2.05 ACCESSORIES

A. Wire ties:
   1. One of the following, or equal:
      a. Panduit, cable ties.
      b. T&B, “Ty-Rap” cable ties.

B. Wire markers:
   1. As specified in Section 16075 - Identification for Electrical Systems.

2.06 SOURCE QUALITY CONTROL

A. Assembly and testing of cable shall comply with the applicable requirements of NEMA WC 70/ICEA S-95-658-1999.

B. Test Type XHHW-2 in accordance with the requirements of UL 44.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install conductors only after the conduit installation is complete, and enclosures have been vacuumed clean, and the affected conduits have been swabbed clean and dry:
   1. Install wires only in approved raceways.
   2. Do not install wire:
      a. In incomplete conduit runs.
      b. Until after the concrete work and plastering is completed.

B. Properly coat wires and cables with pulling compound before pulling into conduits:
   1. For #4 AWG and larger, use an approved wire-pulling lubricant while cable is being installed in conduit:
      a. Ideal Products.
      b. Polywater Products.
      c. 3M Products.
      d. Greenlee Products.
      e. Or equal, as recommended by cable manufacturer.
      f. Do not use oil, grease, or similar substances.

C. Cable pulling:
   1. Prevent mechanical damage to conductors during installation.
   2. For cables #1 AWG and smaller, install cables by hand.
   3. For cables larger than #1 AWG, power pulling winches may be used if they have cable tension monitoring equipment.
   4. Provide documentation that maximum cable pulling tension was no more than 75 percent of the maximum recommended level as published by the cable manufacturer. If exceeded, the Engineer may, at his discretion, require replacement of the cable.
   5. Ensure cable pulling crews have calculations and cable pulling limitations while pulling cable.

6. Make splices or add a junction box or pullbox where required to prevent cable pulling tension or sidewall pressure from exceeding 75 percent of the manufacturer's recommendation for the specified cable size:
    a. Make splices in manholes or pull boxes only.
    b. Leave sufficient slack to make proper connections.

D. Install and terminate wire in accordance with the manufacturer's recommendations.

E. Neatly arrange and lace conductors in switchboards, panelboards, pull boxes, and terminal cabinets by means of wire ties:
    1. Do not lace wires in gutter or panel channel.
    2. Install wire ties with a flush cutting wire tie installation tool:
        a. Use a tool with an adjustable tension setting.
    3. Do not leave sharp edges on wire ties.

F. Terminate stranded conductors on equipment box lugs such that conductor strands are confined within the lug:
    1. Use ring type lugs if box lugs are not available on the equipment.

G. Lighting circuits:
    1. Each circuit shall have a dedicated neutral.

H. Splices:
    1. Provide continuous circuits from origin to termination whenever possible:
        a. Obtain the Engineer's approval prior to making any splices.
    2. Lighting and receptacle circuit conductors may be spliced without prior approval from the Engineer.
    3. Where splices are necessary because of extremely long wire or cable lengths that exceed standard manufactured lengths:
        a. Splice box NEMA rating requirements as specified in Section 16050 - Common Work Results for Electrical.
        b. Make splices in labeled junction boxes for power conductors.
        c. Make splices for control and instrument conductors in terminal boxes:
            1) Provide terminal boards with setscrew pressure connectors, with spade or ring lug connectors.
    4. Power and control conductors routed in common raceways may be spliced in common junction boxes.
    5. Clearly label junction and terminal boxes containing splices with the word "SPLICE LOCATED WITHIN".
    6. Leave sufficient slack at junction boxes and termination boxes to make proper splices and connections. Do not pull splices into conduits.
    7. Install splices with compression type butt splices and insulate using a heat-shrink sleeve:
        a. In NEMA Type 4 or NEMA Type 4X areas, provide heat-shrink sleeves that are listed for submersible applications.
    8. Splices in below grade pull boxes, in any box subject to flooding, and in wet areas shall be made waterproof using:
        a. A heat shrink insulating system listed for submersible applications.
        b. Or an epoxy resin splicing kit.

I. Apply wire markers to wires at each end after being installed in the conduit and before meg-ohm testing and termination.

J. Instrumentation class cable:
   1. Install instrumentation class cables in separate raceway systems from power cables:
      a. Install instrument cable in metallic conduit within non-dedicated manholes or pull boxes.
      b. Install cable without splices between instruments or between field devices and instrument enclosures or panels.
   2. Do not make intermediate terminations, except in designated terminal boxes as indicated on the Drawings.
   3. Shield grounding requirements as specified in Section 16060 - Grounding and Bonding.

K. Copper Ethernet cables:
   1. In accordance with TIA-568.2-D.
   2. Pathways:
      a. For initial installation, the maximum fill capacity for pathways (i.e., conduit, raceways, trays, baskets) is 40 percent. The maximum fill capacity of 60 percent is allowed to accommodate future additions after initial installation.
      b. Conduit should be run in the most direct route possible with no more than two 90-degree bends between pull boxes and serve no more than 3 outlet boxes.
   3. Cable bend radius:
      a. Proper cable bend radius control must be maintained throughout the pathways. Bend radius needs to be at a minimum 10 times the cable diameter.
   4. Cable pulling:
      a. Provide cable pulling swivel system to prevent winding and tangling of rope and cables during pull.
      b. Maximum pulling tension is not to exceed the manufacturer's recommendations. Cable installation should not in any way deform the cable jacket.
      c. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
   5. Cable management:
      a. Organize and manage cables for quick and easy moves, adds and changes.
   6. Cable termination:
      a. Install equipment outlet connector hardware (e.g., RJ45, M12, etc.), and connect to field equipment outlet (e.g., instrument, VFD, actuator, etc.).
      b. Use shielded connectors as required by the installation.
      c. Coordinate cable termination at copper patch panels with ICSC and General Contractor.
   7. Testing:
      a. Copper Ethernet cable testing requirements as specified in Section 16950 - Field Electrical Acceptance Tests.

8. Separation from EMI sources:
    a. Comply with TIA-569-B recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
    b. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
        1) Electrical equipment rating less than 2 kVA: A minimum of 5 inches.
        2) Electrical equipment rating between 2 and 5 kVA: A minimum of 12 inches.
        3) Electrical equipment rating more than 5 kVA: A minimum of 24 inches.
    c. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
        1) Electrical equipment rating less than 2 kVA: A minimum of 2-1/2 inches.
        2) Electrical equipment rating between 2 and 5 kVA: A minimum of 6 inches.
        3) Electrical equipment rating more than 5 kVA: A minimum of 12 inches.
    d. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
        1) Electrical equipment rating less than 2 kVA: No requirement.
        2) Electrical equipment rating between 2 and 5 kVA: A minimum of 3 inches.
        3) Electrical equipment rating more than 5 kVA: A minimum of 6 inches.
    e. Separation between communications cables and electrical motors and transformers, 5 kVA or HP and larger: A minimum of 48 inches.

L. Signal cable:
    1. Separate and isolate electrical signal cables from sources of electrical noise and power cables by a minimum of 12 inches.

M. Wiring allowances:
    1. Equipment locations may vary slightly from the Drawings. Include an allowance for necessary conductors and terminations for motorized equipment, electrical outlets, fixtures, communication outlets, instruments, and devices within 10 linear feet of locations indicated on the Drawings.
    2. Locations for pull boxes, manholes, and duct banks may vary slightly from the Drawings. Include an allowance for necessary conductors and related materials to provide conductors to pull boxes, manholes and duct banks within 20-linear feet of locations indicated on the Drawings.

3.02 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
    1. As specified in Section 16950 - Field Electrical Acceptance Tests.

END OF SECTION

SECTION 16125

FIBER OPTIC CABLE AND APPURTENANCES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fiber optic cable.
   2. Fiber splices and terminations.
   3. Accessories.

1.02 REFERENCES

A. Abbreviations:
   1. N/Cm: Newtons per centimeter.
   2. OTDR: Optical Time Domain Reflectometer (Tier 2 test).
   3. OTLS: Optical Loss Test Set (Tier 1 test).

B. Standards:
   1. Bellcore Standards:
      a. GR-409 - Generic Requirements for Indoor Fiber.
   2. Electronic Industry Association (EIA):
      a. FOTP-25 - Impact testing of Fiber Optic Cables and Cable Assemblies.
      b. FOTP-33 - Fiber Optic Cable Tensile Loading and Bending Test.
      c. FOTP-41 - Compressive Loading Resistance of Fiber Optic Cables.
      d. FOTP-81 - Compound Flow (Drip) Test for Filled Fiber Optic Cable.
      e. FOTP-104 - Fiber Optic Cable Cyclic Flexing Test.
      f. FOTP-181 - Lightning Damage Susceptibility Test for Fiber Optic Cables with Metallic Components.
   3. Insulated Cable Engineer's Association (ICEA):
      a. S-83-596 - Optic Fiber Premises Distribution Cables.
      b. S-87-640 - Optic Fiber Outside Plant Communications Cable.
      c. S-104-696 - Indoor-Outdoor Optic Fiber Cable.
   4. TIA/EIA Standards:
      a. 598 - Optical Fiber Cable Color Coding.
      b. 11801 - Information technology - Generic cabling for customer premises.
   5. Underwriters Laboratories, Inc. (UL):
      a. 1666 - Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts.
      b. 1685 - Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables.

1.03 TERMINOLOGY

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Complete manufacturer's brochures that identify materials and options.
   2. Completed datasheets, including catalog number and source for determining catalog number.
   3. Manufacturer's installation instructions.
   4. Include the following:
      a. Manufacturer's data on testing equipment used on this Project.
      b. Manufacturer's specifications and datasheets for all fiber types.
      c. Manufacturer's specifications and datasheets for all connectors, bulkheads, splicing kits, breakout devices, and appurtenances used in connecting and terminating fiber spans.
   5. Catalog data on testing devices proposed for use plus certifications of accuracy, calibration, and traceability to standards of the NIST.
   6. Manufacturer's test procedures and quality assurance procedures:
      a. After review, the Engineer may require that additional tests be performed before installation.

C. Shop Drawings:
   1. Interconnection cabling diagrams for the complete system including every fiber in each cable.
   2. Drawings indicating locations of all pull boxes including pull box identifiers and lengths.
   3. Submit optical power budget calculations for fiber segments. Include the following:
      a. Minimum transmit power of active devices.
      b. Minimum receive sensitivity.
      c. Available power, in dBm.
      d. Loss for each segment in dBm, including cable attenuation and connector losses. Use manufacturer's data for cable attenuation at the wavelength to be used. Assume 0.5 dB per connector.
      e. Demonstrate that remaining power budget at each receiver is equal to or greater than 3.0 dBm.

D. Calculations:
   1. Cable pulling calculations for conduit runs:
      a. Indicate on the Submittal any additional pull boxes that are required, including pull box identifiers and a written description of the location.

E. Installation instructions:
   1. Submit a cable pulling and splicing work plan that includes the following:
      a. Pull tension calculations.
      b. Detailed description of pull operation methods for conduit runs.
      c. Tools and equipment to be used for cable installation and testing.
      d. Physical location of equipment setup and type.
      e. Exact locations of splice points.
      f. Safety and manual assist cable-pulling operations.
      g. Detailed schedule for pulling and testing cables.

h. Name and qualifications of the supervisory personnel directly responsible for installation of the conduit system.
i. Sample fiber optic cable test sheets.
j. Signed test sheet results.

F. Quality Control Submittals:
1. Manufacturer's representative qualifications.
2. Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.
3. Manufacturer's Certificate of Installation as specified in Section 01756 - Commissioning.

G. Test reports:
1. Submit results of specified tests to the Engineer.
2. Submit 3 copies of test reports showing results of tests specified in this Section or in Section 16950 - Field Electrical Acceptance Tests:
a. Test forms shall include the following information at a minimum:
1) Test type.
2) Test location.
3) Test date.
4) Wavelength.
5) Index of refraction.
6) Cable identification.
7) Fiber type.
8) Fiber number.
9) Fiber color.
10) Result of the value of the tested parameter.
3. Furnish hard copy and electronic copy for OTDR traces.
4. Submit certification that the fiber optic cable has passed each testing stage:
a. Submit separate documentation for each testing stage result.

H. Operation and maintenance manuals:
1. As specified in Section 01782 - Operation and Maintenance Manuals.

I. Record documents:
1. Furnish updated electrical drawings, network diagrams, and fiber cable block diagrams at the end of construction and submit as record drawings.

1.05 QUALITY ASSURANCE

A. Furnish cable and appurtenances manufactured within 1 year of installation.

B. Proof test optical fibers by the fiber manufacturer at a minimum load of 50 kpsi.

C. Provide 100 percent attenuation testing for optical fibers:
1. Include with each cable reel the attenuation of each fiber.

D. Provide information on at least 5 successful fiber optic cable installations of comparable size and complexity in the past 3 years with name, address, and telephone number of facility owner, name of project with completion date, and type of conduit system and length of cable pulled.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Package cable for shipment on wooden reels:
   1. Seal both ends of cable to prevent ingress of moisture.
   2. Place fiber cable assemblies on reels such that both cable ends are available for testing.
   3. Weatherproof cable reel markings shall include the following:
      a. Manufacturer.
      b. Date of manufacture.
      c. Shipping date.
      d. Cable identification.
      e. Cable configuration/fiber count.
      f. Cable length.
      g. Gross weight.
      h. Cable test date.
      i. Handling instructions.
      j. Direction to unreel.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Submit a cable pulling and splicing work plan a minimum of 45 days before the planned initiation of cable pulling. Cable pulling and splicing work plan must be approved a minimum of 15 days before pulling cable.
   2. Testing sequence:
      a. Perform testing of each fiber in each cable as follows:
         1) At factory before shipment.
         2) At Project Site upon delivery.
         3) Submit copies of test results to the Engineer within 5 days after the delivery to the site.
         4) After installation, before breakout and terminations.
         5) After installation is complete.
      b. Submit test reports following each set of tests as specified in this Section.

B. Scheduling:
   1. Schedule Engineer, 5 days before installation, to witness cable installations.
   2. Notify the Engineer and Owner a minimum of 15 days before post-installation testing.

1.09 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Furnish a complete fiber optic network as indicated on the Drawings.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Install fiber optic system components in accordance with the recommendations of the manufacturer.

2.03 MANUFACTURERS

A. Acceptable manufacturers are indicated with each component type as listed in the remainder of this Specification.

2.04 MANUFACTURED UNITS

A. General fiber cable requirements:
   1. Suitable for the installed environment.
   2. Color-coded fibers according to TIA/EIA-598.
   3. Color-coded buffer tubes according to TIA/EIA-598.
   4. Furnish buffer tubes of a single layer nylon construction or of a material with similar mechanical performance.
   5. Fillers may be included in the cable core to lend symmetry to the cable cross-section where needed.
   6. Apply binders with sufficient tension to secure buffer tubes to the central member without crushing the buffer tubes:
      a. Provide binders that are:
         1) Non-hygroscopic.
         2) Non-wicking (or rendered so by the flooding compound).
         3) Dielectric with low shrinkage.
   7. Provide a minimum of 1 ripcord under the cable sheath.
   8. Provide high tensile strength Aramid yarns, Kevlar, and/or fiberglass helically stranded evenly around the cable core:
      a. No metallic elements whatsoever are allowed in non-armored cable.
   9. Jacket or sheath shall be free of holes, splits, and blisters.
   10. Mark jacket or sheath with:
      a. Manufacturer’s name.
      b. “Optical Cable”.
      c. Year of manufacture.
      d. Sequential meter marks.
      e. Repeat markings every 1-meter.
      f. Actual length of the cable to be within 1 percent of the length marking.
      g. Marking must be in a contrasting color to the cable jacket.
      h. Height of the marking:
         1) Approximately 2.5 millimeters.
   11. Shipping, storage, and operating temperature range of the cable shall be -40 degrees Celsius to +70 degrees Celsius.

12. General performance characteristics:
    a. Rated tensile load of the cables:
        1) Indoor/outdoor:
            a) Short term: 1,330 N.
            b) Long term: 400 N.
    b. Non-armored fiber optic cables: Compressive load withstand of 220 N/cm applied uniformly over the length of the cable.
    c. Armored fiber optic cables: Compressive load withstand of 440 N/cm applied uniformly over the length of the cable.
    d. Average increase in attenuation for the fibers: Less than or equal to 0.10 dB at 1,550 nm for a cable subjected to this load:
        1) With no measurable increase in attenuation after load removal.
    e. Test in accordance with EIA FOTP-41 except that the load must be applied at the rate of 3 millimeters to 20 millimeters per minute and maintained for 10 minutes.
    f. Capable of withstanding 25 cycles of mechanical flexing at a rate of 30 within 1 cycles/minute.
    g. Average increase in attenuation for the fibers: Less than or equal to 0.10 dB at 1,550 nm at the completion of the test.
    h. For armored cables, any visible cracks causing separation of the armor and propagating more than 5 millimeters constitutes failure.
    i. Outer cable jacket cracking or splitting observed under 10X times magnification, constitutes failure.

B. Indoor/outdoor cable:
    1. Cable construction:
        a. General:
            1) Cable type: Indoor/Outdoor - Flame retardant, low smoke, zero halogen, UV resistant.
            2) Fiber count: As indicated on the Drawings.
            3) Fiber type: As indicated on the Drawings.
            4) Buffer tube: Loose tube.
            5) Armoring: None.
            6) Waterproofing: Water blocking layer.
            7) Strength member:
                a) Loose tube: Utilize a central, nonmetallic strength member with a coefficient of thermal expansion similar to the fibers as the central anti-buckling member.
            8) Approvals and listings: UL 1666 and UL 1685.
            9) Design and test criteria: In accordance with ICEA S-104-696.
        b. Testing:
            1) Fibers in the cable:
                a) Proof test of 100 kpsi.
                b) Each optical fiber: Bellcore GR-409 strip force testing.
                c) No gaps are allowed between the coating material and the buffer material visible under a 50-power microscope.
        c. Outer jacket material:
            1) Linear low-density polyethylene.
            2) Meet requirements of the NEC for use in indoor/outdoor areas (excluding plenums) without being enclosed in conduit.
            3) Flame retardant OFNR riser rated conforming to UL 1666.

4) Printed with necessary UL marks and manufacturer identification.
5) Sequential printing of footage in 2-foot increments.
6) With a ripcord incorporated under the cable jacket.

C. Single mode fibers:
1. Fibers in the cable must be usable fibers and meet required specifications.
2. Each optical fiber shall consist of a doped silica core surrounded by a concentric silica cladding.
3. Single mode fiber characteristics:
a. Category: OS2 compliant with ITU-G.657.A1.
b. Jacket color: Yellow.

D. Indoor/outdoor:
1. Tight buffer:
a. Corning Cable Systems, Freedm® One.
b. Optical Cable Corporation, DX-Series.
c. CommScope, LazrSPEED/TerraSPEED.

2.05 ACCESSORIES

A. Patch cords:
1. General:
a. Connector types to match supplied equipment and patch panel terminations.
b. Maximum length of patch cords: 25 feet.
c. Provide 2 spare patch cords (or 1 duplex patch cord) of each type used at each PLC or network cabinet.
d. Factory assembled and optically tested.
e. Provide mode-conditioning cords for multimode fibers operating at 1,310 nm.
2. Manufacturers: One of the following or equal:
a. CommScope.
b. Corning Cable Systems.

B. Fiber connectors:
1. As specified in Section 17733 - Control Systems: Network Materials and Equipment.

C. Fiber optic identification/warning tags:
1. Black letters on orange or yellow background.
2. UV resistant polyethylene or other suitable material:
a. Manufacturers: The following or equal:
1) Almetek.

2.06 SOURCE QUALITY CONTROL

A. Source Testing:
1. Before shipment and while on the shipping reel, test 100 percent of fibers for attenuation:
a. Copies of the results shall be:
1) Maintained on file.

2) Attached to the cable reel in a waterproof pouch.
3) Submitted before the delivery of the cable to the job Site to the Engineer for approval.

2. Conduct the flex test in accordance with EIA FOTP-104 test condition I and III with a maximum sheave diameter of 20 times the cable OD.
3. Verify that the cable withstands 25 impact cycles with:
   a. Average increase in attenuation for fibers less than 0.20 dB at 1,550 nm.
   b. No evidence of cracking or splitting.
   c. Conduct test in accordance with EIA FOTP-25.
4. Certify that the cable withstands a tensile load of 2,700 N (600 pounds):
   a. Without exhibiting an average increase in attenuation of greater than 0.10 dB.
   b. Test in accordance with EIA FOTP-33 using a maximum mandrel and sheave diameter of 560 millimeters.
   c. Apply the load for 1 hour in test condition II.
5. Certify that the cable withstands a simulated lightning strike:
   a. Peak value of the current pulse greater than 105 kA.
   b. Use a test current with a damped oscillatory maximum time-to-peak value of 15 µs (which corresponds to a minimum frequency of 16.7 kHz) and a maximum frequency of 30 kHz.
   c. Time to half-value of the waveform envelope 40 to 70 µs.
   d. Conduct the test in accordance with the EIA FOTP-181.
   e. In addition to the analysis criterion set forth in EIA FOTP-181, the integrity of the buffer tubes (or analogous loose tube, i.e., core tube) and strength members must be intact after removal of the cable specimens from the test box.
6. Furnish test reports and Manufacturer's Certificate of Source Testing.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify the condition of the conduit system before installation of the fiber optic cable or inner duct.

B. Pass a test mandrel through fiber optic conduits prior to pulling fiber or installing inner duct.
   1. Run the mandrel in both directions.

C. Examine materials and equipment before installation and verify they are free from physical damage and defects.

3.02 PREPARATION

A. Equipment support and anchoring to structures:
   1. Prepare anchor setting template(s) and use to position anchors during construction of supporting structures.
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

B. Before fiber splicing terminating or testing activities, verify sufficient workspace is available to perform the activity without interferences from other trades.

C. Pre-installation test:
   1. Upon arrival at the site:
      a. Inspect the cable and reel for damage.
      b. Test fibers with an optical time domain reflectometer (OTDR) for fiber integrity.
      c. Verify that the fiber lengths are consistent with the cable manufacture.
      d. Verify that traces yield no point discontinuities.
   2. Complete test sequence and obtain approval from the Engineer of submitted test results before cable installation.

3.03 INSTALLATION

A. Install fiber optic patch cords in open network trays or in dedicated conduits no longer than 25 feet in length.

B. Install fiber optic cable in continuous lengths without intermediate splices, except where approved by the Engineer.

C. Cable installation:
   1. Properly attach the fiber optic cable's strength elements to a 600-pound breakaway swivel containing tension or shear pins using Kellums pulling grips that are a minimum of 18 inches long.
   2. Certify that cable tensile limits do not exceed cable pull tension and bend limits using tension monitoring devices.
   3. Leave an extra loop of fiber optic cable in each pull box.
   4. Conform with the cable manufacturer's specifications, practices, and the following requirements:
      a. When power equipment is used to install fiber optic cables, use low speeds and do not exceed a rate of 30 meters per minute.
      b. Do not exceed the tensile and bending limitation for fiber optic cables under any circumstances.
      c. Use large diameter wheels, pulling sheaves, and cable guides to maintain the specified bending radius.
      d. Use commercial dynamometers or load cells to monitor pulling tension.
      e. A nonfreezing type of swivel inserted between the pulling line and cable pulling grip to prevent twisting under strain.
      f. Cable to be installed using a breakaway swivel.
   5. Apply to conduits a lubricant at each conduit ingress and egress location during the pull operation:
      a. Pour or pump lubricant into the end of the conduit at the feed location at a nominal application rate of 3 gallons per 1,000 feet of cable.
      b. If the conduit is open at intermediate locations, then apply the appropriate proportion of lubricant at each opening.
      c. Continuously lubricate the cable as it is being pulled by pouring or pumping the lubricant into the conduit at the feed location and at each intermediate location.
      d. Station workers at each intermediate location as required.
      e. Remove excess lubricant that has collected.

f. Remove and clean the surrounding area after cable installation.

6. Install using a hydraulic capstan or winch equipped with a recording running line dynamometer graph which measures and records pulling tensions:
   a. Use pulling equipment with slip-load capability to allow the winch to maintain a constant pulling force without taking up the winch line.
   b. Use pulling equipment equipped with a hydraulic bypass set so that a maximum tension of 600 pounds is not exceeded.
   c. Use only equipment designed to prevent a preset pulling tension from being exceeded.
   d. Fiber optic cable manufacturer to provide the pulling tension setpoint.
   e. If during the pulling operation excessive tension is detected, cease operations and notify the Engineer.
7. Position the cable reel at the feed point in alignment with the raceway and in such a position that the cable can be passed from the top of the reel in a long, smooth bend into the raceway system:
   a. Use of a cable feeder is required unless the cable is hand-pulled.
8. Supply bull wheels, blocks, split wheels, cable feeders, and necessary equipment required to provide a clean and safe operation:
   a. Cable shall not be allowed to travel over any wheel or block that has a radius less than the minimum radius allowed by the cable manufacturer.
9. Minimize the use of snatch blocks and rollers to guide the cable into the conduit at the feed point:
   a. Slack feed by hand the cable into the feed point and raceway without the use of rollers.
10. Tend the cable reel at all times and turn by hand to provide the required cable slack:
    a. Under no circumstances shall the cable tension be allowed to turn the cable reel.
11. Use a rim roller, with a wheel radius greater than the minimum cable bending radius placed at the manhole or vault opening to prevent the cable from dragging on the manhole rim or steps.
12. Perform a continuous thorough visual inspection for flaws, breaks, and abrasions in the cable sheath as the cable leaves the reel and maintain a slow pulling speed to permit this inspection.
13. Damage to the sheath or finish of the cable is cause for rejecting the cable:
    a. Replace any cable damaged in any way during installation.
14. If the cable becomes damaged during installation, stop operations and notify the Engineer immediately:
    a. Engineer to determine whether to replace the entire reel of cable or to install a termination panel to eliminate the damaged section.
15. Document pulls by a graph which is annotated with the following information:
    a. Reel number.
    b. Pull point ID.
    c. Date and time.
    d. Explanations for abnormalities in readings or interruptions.
    e. Sign-off by the Contractor and Engineer.
16. Under no conditions shall the fiber optic cable be left exposed or unattended.

D. After the cables are installed and spliced:
    1. Rack the cables:
        a. Loosely secure in racked position with wire ties.
        b. Attach imprinted plastic-coated cloth identification/warning tags to each cable in at least 2 locations in each handhole/manhole.

E. Splices:
    1. Provide field splices in a splice tray located in a waterproof splice enclosure:
        a. Manufacturers: The following or equal:
            1) Tyco/Raychem, FOSC style splice enclosure.
    2. Loop the individual fibers a minimum of 1 full turn within the splice tray to avoid macro/micro bending.
    3. After completion of cable terminations, neatly dress cables.
    4. Protect splices with a thermal shrink sleeve.
    5. Provide fusion type fiber optic cable splicing meeting the following requirements:
        a. Joins multimode or single mode fibers.
        b. Establishes a permanent fusion splice.
        c. Waterproof.
        d. Re-enterable, rearrangeable, and reusable.
        e. Splice loss less than 0.10 dB.
        f. Protected by a splice enclosure.
    6. Requirement for outdoor fiber splice enclosures:
        a. Seal.
        b. Bond.
        c. Anchor.
        d. Protect fiber optic cable splices.
        e. Stand-alone unit that does not require an outer enclosure.
        f. Provide for a maximum of 6 cable entries in a butt-end configuration.
        g. Used in aerial, underground, and direct buried applications.
    7. Requirement for indoor fiber splice enclosures:
        a. Anchor.
        b. Protect fiber optic cable splices.
        c. Stand-alone unit that does not require an outer enclosure.
        d. Suitable for the minimum number of splices at that location plus additional capacity for reconfigurations.
    8. Re-splice any splice that has a loss greater than 0.10 dB.
    9. Leave a minimum of 20 feet of fiber optic cable at each end of splice.

F. Terminations:
    1. Terminate fiber inside a patch panel:
        a. Direct landing to a switch, router hub, or PLC will not be allowed.
    2. Terminate outdoor cables using a breakout kit that seals the cable and provides physical protection for the fiber strands.
    3. Terminate indoor cables using factory assembled terminations pig tail spliced to the cable ends.
    4. Labeling:
        a. Permanently label cable terminations. Use labels produced by a wire printer using pressure sensitive polyester labels.
        b. Label patch panels as specified in Section 16075 - Identification for Electrical Systems.

G. Installation Verification:
    1. Furnish Manufacturer's Certificate of Installation Verification.

3.04 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
    1. As specified in Section 16950 - Field Electrical Acceptance Tests.

B. Utilize personnel certified by the manufacturer with specific knowledge of the cable manufacturer's recommended installation procedures.

C. General:
    1. Test results shall meet or exceed manufacturer specifications:
        a. Test each fiber of each cable for breaks, abnormalities, and overall attenuation characteristics.
    2. Pre-installation tests and post-installation tests to be witnessed and signed off by the Engineer and Owner.
    3. Perform OLTS test with equipment capable and calibrated to show anomalies of 0.1 dB as a minimum:
        a. Test multimode fibers at 850 nm and 1,300 nm.
        b. Test single mode fibers at 1,310 nm and 1,550 nm.
    4. Perform OTDR tests on fiber cables less than 100 meters with the aid of a launch cable:
        a. Adjust OTDR pulse width settings to a maximum setting of 1/1,000th of the cable length or 10 nanoseconds.

3.05 CLEANING

A. Clean fiber optic connectors after termination and before testing. After cleaning, cover unterminated connectors with a protective boot.

B. At the completion of construction, touch up the finish on fiber patch panels and enclosures.

3.06 PROTECTION

A. Protect the fiber system from physical damage and the encroachment of dust, before, during, and after installation.

END OF SECTION

SECTION 16130

CONDUITS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Metallic conduits.
   2. Nonmetallic conduits.
   3. Conduit bodies.
   4. Conduit fittings and accessories.
   5. Conduit installation.

1.02 REFERENCES

A. Abbreviations:
   1. FRD: Fiberglass-reinforced duct.
   2. GRC: Galvanized rigid steel conduit.
   3. NPT: National pipe thread.
   4. PCS: Polyvinyl chloride (PVC) coated rigid steel conduit.
   5. PVC: Polyvinyl chloride rigid nonmetallic conduit.
   6. SLT: Sealtight-liquidtight flexible conduit.

B. Standards:
   1. American National Standards Institute (ANSI):
      a. C80.1 - Electrical Rigid Steel Conduit.
   2. National Electrical Manufacturers Association (NEMA).
      a. RN-1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Steel Conduit.
   3. National Fire Protection Association (NFPA):
      a. 70 - National Electrical Code (NEC).
   4. Underwriters Laboratories (UL), Inc.**:**
      a. 1 - Standard for Safety Flexible Metal Conduit.
      b. 6 - Standard for Safety Electrical Rigid Metal Conduit - Steel.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Conduit bodies: A separate portion of a conduit system that provides access through a removable cover to the interior of the system at a junction of 2 or more conduit sections. Includes, but not limited to, shapes C, E, LB, T, X, etc.
   2. Conduit fitting: An accessory that primarily serves a mechanical purpose. Includes, but not limited to, bushings, locknuts, hubs, couplings, reducers, etc.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures and Section 16070 - Hangers and Supports.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Manufacturer's catalog sheets for every type and size of conduit, fitting, conduit body, and accessories to be used on the Project.
   2. Manufacturer's recommended special tools to be used for installation, if required.
   3. Certified test results for PVC-coated metallic conduit showing the adhesive bond is stronger than the tensile strength of the PVC.

C. Shop Drawings:
   1. Furnish conduit routing plans for conduits before the installation of any conduits embedded within concrete.
   2. Detail the intended routing of each conduit, conduit material and include supporting methods.
   3. Number conduits in accordance with the Contract Documents.
      a. Provide conduit labels as specified in Section 16075 - Identification for Electrical Systems.

D. Delegated Design Submittals:
   1. As specified in Section 16070 - Hangers and Supports.

E. Certifications:
   1. Furnish PVC-coated conduit manufacturer's valid, unexpired certification for each installer.

F. Record documents:
   1. Incorporate changes in conduit routing on electrical plan drawings.
   2. Dimension underground and concealed conduits from building lines.
   3. Furnish hard copy drawings.

1.06 QUALITY ASSURANCE

A. Conduits, conduit bodies, and fittings shall be UL listed and labeled.

B. Every installer of PVC-coated metallic conduit shall be certified by the manufacturer for installation of the conduit, and be able to present a valid, unexpired installer certification card prior to installation beginning.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Do not expose non-metallic conduit to direct sunlight.

B. Do not store conduit in direct contact with the ground.

1.08 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.09 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide conduits, conduit bodies, fittings, junction boxes, and necessary components, whether or not indicated on the Drawings, as required, to install a complete electrical raceway system.

B. Provide location and protection of existing underground utilities, underground conduit trenching, conduit and backfill necessary for the complete installation of underground conduits.

2.02 MANUFACTURERS

A. Galvanized rigid steel conduit:
   1. One of the following or equal:
      a. Allied Tube and Conduit.
      b. Western Tube and Conduit.
      c. Wheatland Tube Co.

B. PVC-coated rigid steel conduit:
   1. One of the following or equal:
      a. Allied.
      b. Calbond.
      c. NEC, Inc. BlackGuard.
      d. Ocal, Inc.
      e. Robroy Ind.

C. Sealtight-liquidtight flexible conduit:
   1. One of the following or equal:
      a. AFC Cable Systems.
      b. Anaconda.
      c. Electri-Flex Co.
      d. Southwire.

D. Rigid nonmetallic PVC conduit:
   1. One of the following or equal:
      a. Cantex.
      b. Carlon.
      c. Triangle Conduit and Cable.

E. Fiberglass reinforced duct:
   1. One of the following or equal:
      a. Champion Fiberglass.
      b. FRE Composites.
      c. Smith Fiberglass.

F. Conduit bodies:
   1. One of the following or equal:
      a. Appleton.
      b. Calbond.
      c. Carlon.
      d. Crouse-Hinds.
      e. O-Z/Gedney.
      f. Ocal, Inc.
      g. Robroy Ind.

G. Joint compound:
   1. As recommended by the conduit manufacturer.

H. Galvanized rigid steel conduit expansion fittings:
   1. One of the following or equal:
      a. Appleton.
      b. Crouse-Hinds.
      c. O-Z/Gedney.

2.03 COMPONENTS

A. GRC:
   1. NPT standard conduit threads with a 3/4-inch taper per foot:
      a. Running conduit threads are not acceptable.
   2. Hot-dip galvanized inside and out:
      a. Ensures complete coverage and heats the zinc and steel to a temperature that ensures the zinc alloys with the steel over the entire surface.
      b. Electro-galvanizing is not acceptable.
   3. Manufactured in accordance with:
      a. UL 6.
      b. ANSI C80.1.

B. PCS:
   1. Steel conduit, before PVC coating, shall be new, unused, hot-dip galvanized material, in accordance with to the requirements for Type GRC.
   2. Coated conduit NEMA Standard RN-1:
      a. Galvanized coating may not be disturbed or reduced in thickness during the cleaning and preparatory process.
   3. Factory-bonded PVC jacket:
      a. Exterior galvanized surfaces shall be coated with primer before PVC coating to ensure a bond between the zinc substrate and the PVC coating.
      b. Nominal thickness of the exterior PVC coating shall be 0.040 inch except where part configuration or application of the piece dictates otherwise.

c. PVC coating on conduits and associated fittings shall have no sags, blisters, lumps, or other surface defects and shall be free of holes and holidays.
d. PVC adhesive bond on conduits and fittings shall be greater than the tensile strength of the PVC plastic coating:
1) Confirm bond with certified test results.

4. Urethane coating shall be uniformly and consistently applied to the interior of conduits and fittings:
a. Nominal thickness of 0.002 inch.
b. Conduits having areas with thin or no coating are not acceptable.
c. Threads shall be coated with urethane.
5. PVC exterior and urethane interior coatings applied to the conduits shall afford sufficient flexibility to permit field bending without cracking or flaking at temperature above 30 degrees Fahrenheit (-1 degree Celsius).
6. PCS conduit bodies and fittings:
a. Malleable iron.
b. Conduit body, before PVC coating, shall be new, unused material and shall be in accordance with appropriate UL standards.
c. PVC coating on the outside of conduit bodies shall be 0.040-inch thick and have a series of ribs to protect the coating from tool damage during installation.
d. 0.002-inch interior urethane coating.
e. Utilize PVC coating as an integral part of the gasket design.
f. Stainless steel cover screw heads shall be encapsulated with plastic to ensure corrosion protection.
g. PVC sleeve extending 1 conduit diameter or 2 inches, whichever is less, shall be formed at each female conduit opening.
1) Inside diameter of the sleeve shall be the same as the outside diameter of the conduit to be used.
2) Sleeve shall provide a vapor- and moisture resistant seal at every connection.
3) Fittings shall be Form 8 and supplied with plastic encapsulated stainless steel cover screws. Fittings shall be UL Type 4X. Fittings shall be from the same manufacturer as the conduit in order to maintain system continuity and warranty.

C. SLT:
1. Temperature rated for use in the ambient temperature at the installed location but not less than the following:
a. General purpose:
1) Temperature range: -20 degrees Celsius to +80 degrees Celsius.
b. Oil-resistant:
1) Temperature range: -20 degrees Celsius to +60 degrees Celsius.
2. Sunlight-resistant, weatherproof, and watertight.
3. Manufactured from single strip steel, hot-dip galvanized on all 4 sides before conduit fabrication.
4. Strip steel spiral wound resulting in an interior that is smooth and clean for easy wire pulling.
5. Overall PVC jacket.
6. With integral copper ground wire, built in the core, in conduit trade sizes 1/2 inch through 1-1/4 inch.

D. PVC:
   1. Extruded from virgin PVC compound:
      a. Schedule 40 unless otherwise specified.
      b. Schedule 80 extra-heavy wall where specified.
   2. Rated for 90 degrees Celsius conductors or cable.
   3. Rated for use in direct sunlight.

E. FRD:
   1. Suitable for use at -40 degrees Celsius to 110 degrees Celsius.
   2. Integral bell and spigot either glued together or assembled with an integral urethane tri-seal gasket held in place with a retainer ring.
   3. For underground use only.
   4. Conduits and fittings shall be pigmented with UV-inhibiting carbon black.

F. Conduit bodies:
   1. Material consistent with conduit type:
      a. Malleable iron bodies and covers when used with Type GRC.
      b. PVC-coated malleable iron bodies and covers when used with Type PCS.
   2. Conduit bodies to be in accordance with to Form 8, Mark 9, or Mogul design:
      a. Mogul design in accordance with to NEC requirements for bending space for large conductors for conduit trade sizes of 1 inch and larger with conductors #4 AWG and larger, or where required for wire-bending space.
   3. Gasketed covers attached to bodies with stainless steel screws secured to threaded holes in conduit body.

2.04 ACCESSORIES

A. Connectors and fittings:
   1. Manufactured with compatible materials to the corresponding conduit.

B. Insulated throat metallic bushings:
   1. Construction:
      a. Malleable iron or zinc-plated steel when used with steel conduit.
      b. Positive metallic conduit end stop.
      c. Integrally molded non-combustible phenolic-insulated surfaces rated at 150 degrees Celsius.
      d. Use fully insulated bushings on nonmetallic conduit system made of high-impact 150 degrees Celsius rated non-combustible thermosetting phenolic.

C. Insulated grounding bushings:
   1. Construction:
      a. Malleable iron or steel, zinc-plated, with a positive metallic end stop.
      b. Integrally molded non-combustible phenolic-insulated surfaces rated at 150 degrees Celsius.
      c. Tin-plated copper grounding saddle for use with copper or aluminum conductors.

D. Electrical unions (Erickson Couplings):
   1. Construction:
      a. Malleable iron for use with steel conduit.

b. PVC-coated malleable iron for use with PCS conduit.
c. Concrete tight, 3-piece construction.
d. Rated for Class I Division 1 Group D in hazardous areas.

E. SLT fittings:
1. Construction:
a. Malleable iron.
b. Furnished with locknut and sealing ring.
c. Liquidtight, raintight, oiltight.
d. Insulated throat.
e. Furnish as straight, 45-degree elbows, and 90-degree elbows.
f. Designed to prevent sleeving:
1) Verify complete bonding of the raceway jacket to the plastic gasket seal.
g. Equipped with grounding device to provide ground continuity irrespective of raceway core construction. Grounding device, if inserted into raceway and directly in contact with conductors, shall have rolled-over edges for sizes under 5 inches.
h. Where terminated into a threadless opening using a threaded hub fitting, a suitable moisture-resistant/oil-resistant synthetic rubber gasket shall be provided between the outside of the box or enclosure and the fitting shoulder. Gasket shall be adequately protected by and permanently bonded to a metallic retainer.
2. Corrosion-resistant and outdoor SLT fittings:
a. Construction:
1) PVC-coated liquidtight fittings with a bonded 0.040-inch-thick PVC coating on the metal connector to form a seal around the SLT conduit.
2) Insulated throat and an integral sealing ring.

F. Hubs for threaded attachment of steel conduit to sheet metal enclosures:
1. Construction:
a. Insulated throat.
b. PVC-coated when used in corrosive areas.
c. Bonding locknut.
d. Recessed neoprene O-ring to ensure watertight and dusttight connector.
e. 1/2-inch through 1-1/4-inch steel zinc electroplated.
f. 1-1/2-inch through 6-inch malleable iron zinc plated.
2. Usage:
a. Conduits in damp, wet, outdoor, and corrosive areas shall use threaded hubs for connections to sheet metal enclosures.

G. Expansion/deflection couplings:
1. Use to compensate for movement in any directions between 2 conduit ends where they connect.
2. Shall allow movement of 3/4 inch from the normal in all directions.
3. Shall allow angular movement for a deflection of 30 degrees from normal in any direction.
4. Constructed to maintain electrical continuity of the conduit system.
5. Materials:
a. End couplings: Bronze or galvanized ductile iron.

b. Sleeve: Neoprene.
c. Bands: Stainless steel.
d. Bonding jumper: Tinned copper braid.

H. Expansion couplings:
1. Shall allow for expansion and contraction of conduit:
a. Permitting 8-inch movement, 4 inches in either direction.
2. Constructed to maintain electrical continuity of the conduit system.
3. Materials:
a. Head: Malleable or ductile iron.
b. Sleeve: Steel.
c. Insulating bushing: Phenolic.
d. Finish: Hot-dip galvanized.
e. PVC-coated steel when used with Type PCS.

I. Conduit markers:
1. As specified in Section 16075 - Identification for Electrical Systems.

PART 3 EXECUTION

3.01 EXAMINATION

A. Before installing any conduit or locating any device box:
1. Examine the complete set of Drawings and Specifications, and applicable Shop Drawings.

B. Verify all dimensions and space requirements and make any minor adjustments to the conduit system as required to avoid conflicts with the building structure, other equipment, or the work of other trades.

3.02 INSTALLATION

A. General:
1. Conduit routing:
a. Electrical drawings are diagrammatic in nature:
1) Install conduit runs as specified with schematic representation indicated on the Drawings and as specified.
2) Modify conduit runs to suit field conditions, as accepted by the Engineer:
a) Make changes in conduit locations that are consistent with the design intent but are dimensionally different, or routing to bypass obstructions.
b) Make changes in conduit routing due to the relocation of equipment.
c) Install conduits and equipment in such a manner as to avoid obstructions and to preserve headroom and keep openings and passageways clear.
3) Where the Drawings do not indicate the exact mounting and/or supporting method to be used, use materials and methods similar to the mounting details indicated on the Drawings.

4) Electrical drawings do not indicate all required junction boxes and pull boxes:
    a) Provide junction boxes and pull boxes to facilitate wire pulling as required:
        (1) To meet cable manufacturer's pulling tension requirements.
        (2) To limit total conduit bends between pull locations.
    b) Install junction boxes and pull boxes at locations acceptable to the Engineer.

b. Contractor is responsible for any deviations in general location, conduit size, routing, or changes to the conduit schedule without the express written approval or direction by the Engineer:
    1) Engineer is the sole source in determining whether the change is constituted as a deviation.
    2) Perform any changes resulting in additional conduits, or extra work from such deviations.
    3) Incorporate any deviations on the Record Documents.

2. Use only tools recommended by the conduit manufacturer for assembling the conduit system.
3. Provide adequate clearances from high-temperature surfaces for conduit runs. Provide minimum clearances as follows:
    a. Clearance of 6 inches from surfaces 113 degrees Fahrenheit to 149 degrees Fahrenheit.
    b. Clearance of 12 inches from surfaces greater than 149 degrees Fahrenheit.
    c. Keep conduits at least 6 inches from the coverings on hot water and steam pipes, 18 inches from the coverings on flues and breechings, and 12 inches from fuel lines and gas lines.
    d. Where it is necessary to route conduits close to high-temperature surfaces, provide a high-reflectance thermal barrier between the conduit and the surface.
4. Support conduit runs on water-bearing walls a minimum of 7/8-inch away from wall on an accepted preformed channel:
    a. Do not run conduits within water-bearing walls unless otherwise indicated on the Drawings.
5. Do not install 1-inch or larger conduits in or through structural members unless approved by the Engineer.
6. Run conduits exposed to view parallel with or at right angles to structural members, walls, or lines of the building:
    a. Install straight and true conduit runs with uniform and symmetrical elbows, offsets, and bends.
    b. Make changes in direction with long radius bends or with conduit bodies.
7. Install conduits with total conduit bends between pull locations less than or equal to 270 degrees.
8. Route exposed conduits to preserve headroom, access space and workspace, and to prevent tripping hazards and clearance problems:
    a. Install conduit runs so that runs do not interfere with proper and safe operation of equipment and do not block or interfere with ingress or egress, including equipment-removal hatches.
    b. Route conduits to avoid drains or other gravity lines. Where conflicts occur, relocate the conduit as required.

9. Conduits may be run in concrete members or slabs with permission of the Engineer or as indicated on the Drawings:
    a. Refer to the typical details for conduit spacing and size requirements.
10. When installing conduits through existing slabs or walls, make provisions for locating any possible conflicting items where the conduit is to penetrate. Use tone signal or X-ray methods to make certain that no penetrations will be made into the existing conduits, piping, cables, post-tensioning cables, etc.
11. Plug conduits brought into pull boxes, manholes, handholes, and other openings until used to prevent entrance of moisture.
12. Install conduits through wall and floor seals where indicated on the Drawings.
13. For existing and new 2-inch and larger conduit runs, snake conduits with a conduit cleaner equipped with a cylindrical mandrel of a diameter not less than 85 percent of nominal diameter of the conduit:
    a. Remove and replace conduits through which mandrel will not pass.
14. Provide sleeves and openings required for the passage of electrical raceways or cables even when these openings or sleeves are not specifically indicated on the Drawings.
15. Install complete conduit systems before conductors are installed.
16. Provide metallic conduits terminating in transformer, switchgear, motor control center, or other equipment conduit windows with grounding bushings and ground with a minimum No. 6 AWG ground wire.
17. Underground conduits:
    a. Install underground conduits, including conduit runs below slabs-on-grade in concrete-reinforced duct bank construction:
        1) As specified in Section 16133 - Duct Banks.
    b. Make underground conduit size transitions at handholes and manholes.
    c. Install spare conduits in underground duct banks towards top center of runs to allow for ease of installation of future cables as conduits enter underground manholes and handholes.
    d. Seal around conduit penetrations of below grade walls with a mechanical seal.
18. Underground conduit trenching:
    a. Perform trenching as specified in Section 02318 - Trenching.
    b. Trench must be uniformly graded with the bottom, rock free and covered with select material.
    c. Damage occurring to existing ducts, conduits, cables, and other utilities during underground conduit installation shall be remediated to the satisfaction of the Owner.
    d. Whenever possible, use the walls of the trench as forms for concrete encasement:
        1) Forms are required where the soil is not self-supporting.

B. Equipment grounding conductors:
    1. Provide a separate, green insulated, grounding conductor in each raceway independent of raceway material:
        a. Multi-conductor power and control cables shall include an integral green insulated grounding conductor.
        b. Provide a separate grounding conductor in each individual raceway for parallel feeders.

2. Conductors shall be the same type and insulation as the circuit conductors:
   a. Use 600-volt insulation for the equipment grounding conductors for medium voltage systems.
3. Minimum size in accordance with the NEC.

C. Lighting and receptacle conduits:
1. Provide conduit runs for lighting and receptacle circuits, whether or not indicated on the Drawings.
2. Install conduits in accordance with the requirements of this Section unless otherwise indicated.
3. Minimum conduit size:
   a. 3/4-inch for exposed conduits.
   b. 1-inch for underground or in-slab conduits.
4. Provide conduit materials for the installed location as specified in Section 16050 - Common Work Results for Electrical.

D. Conduit usage:
1. Exposed conduits:
   a. Rigid conduit:
      1) Install the rigid conduit type for each location as specified in Section 16050 - Common Work Results for Electrical.
      2) Minimum size: 3/4-inch.
   b. Flexible conduit:
      1) Use flexible conduit for final connections between rigid conduit and motors, vibrating equipment, instruments, control equipment, or where required for equipment servicing:
         a) Use Type SLT with rigid metallic conduit.
      2) Minimum size: 3/4-inch:
         a) 1/2 when required for connection to instruments.
      3) Maximum length:
         a) Fixed equipment:

Conduit Trade Size	Flexible Conduit Length (inch)
3/4	18
1	18
1-1/4	18
1-1/2	18
2	36
2-1/2	36
3	36
3-1/2	38
4	40

         b) Removable instruments or hinged equipment:
            (1) As required to allow complete removal or full movement without disconnecting or stressing the conduit.

2. Concrete-encased and embedded conduits:
    a. Straight runs and bends less than 45 degrees:
        1) Type PVC Schedule 40.
    b. Bends with total deflection greater than 45 degrees:
        1) PCS, or FRD.
    c. Entering and exiting duct bank, underground or embedded conduit runs a minimum 12 inches above and below grade, finished floor, or entering equipment:
        1) PCS.
    d. Minimum size:
        1) 2-inch in duct banks.
        2) 1-inch for in-slab conduits.
        3) Provide conduit fittings to enlarge the conduit from the exposed size in the conduit schedule as required.
3. Direct-buried conduits:
    a. Type PCS.
    b. Minimum size: 1 inch.
4. Below-slab conduits:
    a. Type PCS.
    b. Minimum size: 1-inch.
5. PVC-coated rigid metallic conduit:
    a. Use specifically manufactured or machined threading dies to manufacturer's specifications to accommodate the PVC jacket.
    b. Repair damage to PVC coatings with manufacturer supplied touchup compound or PVC Coating Repair Kit for PVC Coated Raceway Systems.
6. GRC:
    a. Conduit shall be cut square and reamed before threading.

E. Conduit joints and bends:
1. General:
    a. Where conduit is underground, under slabs on grade, exposed to the weather, or in NEMA Type 4 or NEMA Type 4X locations, make joints liquidtight.
    b. Keep bends and offsets in conduit runs to an absolute minimum.
    c. Bends shall be symmetrical.
    d. The following conduit systems shall use large-radius sweep elbows:
        1) Underground conduits.
        2) Conduits containing shielded cables.
        3) Conduits containing fiber optic cables.
    e. Provide large-radius factory-made bends for 1-1/4-inch trade size or larger.
    f. Make field bends with a radius of not less than the requirements found in the NEC:
        1) Minimum bending radius of the cable must be less than the radius of the conduit bend.
        2) Make field bends with power bending equipment or manual benders specifically intended for the purpose:
            a) Make bends so that the conduit is not damaged and the internal diameter is not effectively reduced.
            b) For the serving utilities, make bends to meet their requirements.
    g. Replace deformed, flattened, or kinked conduit.

2. Threaded conduit:
    a. Cut threads on rigid metallic conduit with a standard conduit-cutting die that provides a 3/4-inch per foot taper and to a length such that bare metal exposed by the threading operation is completely covered by the couplings or fittings used. In addition, cut the lengths of the thread such that joints become secure and wrench-tight just preceding the point where the conduit ends would butt together in couplings or where conduit ends would butt into the ends or shoulders of other fittings.
    b. Thoroughly ream conduit after threads have been cut to remove burrs.
    c. Use bushings or conduit fittings at conduit terminations.
    d. On exposed conduits, repair scratches and other defects with galvanizing repair stick, Enterprise Galvanizing "Galvabar™," or CRC "Zinc It."
    e. Coat conduit threads with an approved electrically conductive sealant and corrosion inhibitor that is not harmful to the conductor insulation:
        1) Apply to the male threads and tighten joints securely.
        2) Clean excess sealant from exposed threads after assembly.
    f. Securely tighten threaded connections.
    g. Any exposed threaded surfaces must be cleaned and coated with a galvanizing solution so that exposed surfaces have a galvanized protective coating.
3. PVC:
    a. Use approved solvent-weld cement specifically manufactured for the purpose. Spray-type cement is not allowed.
    b. Apply heat for bends so that conduit does not distort or discolor. Use a spring mandrel as required to ensure full inside diameter at bends:
        1) Utilize a heater specifically for PVC conduit as recommended by the conduit manufacturer.

F. Conduit sealing and drainage:
1. Other than required for hazardous and classified areas:
    a. Provide sealing and drainage in vertical drops of long (in excess of 20 feet), exterior, above-grade conduit runs at the points at which the conduit enters buildings, switchgear, control panels, lighting panelboards, and other similar enclosures.
    b. Provide seal fittings with drains in vertical drops directly above grade for exterior and above-grade conduit runs that are extended below grade.
    c. Provide conduit seals with drains in areas of high humidity and rapidly changing temperatures:
        1) Where portions of an interior raceway pass through walls, ceilings, or floors that separate adjacent areas having widely different temperatures.
    d. Provide conduit seals similar to O-Z/Gedney (Type CSM) on conduits between corrosive and non-corrosive areas.
    e. Seal 1 end only of underground conduits at highest point with O-Z/Gedney sealing (non-hazardous) filling, or equal.
2. Install seals with drains at any location along conduit runs where moisture may condense or accumulate. This requirement includes, but is not limited to, the following locations: Control panels, junction boxes, pullboxes, or low points of the conduit.

G. Hangers and supports:
   1. General:
      a. Provide appropriate hangers, supports, fasteners, and seismic restraints to suit applications:
         1) As specified in Section 16070 - Hangers and Supports.
         2) Provide support materials consistent with the type of conduit being installed as specified in Section 16050 - Common Work Results for Electrical.
      b. Support conduit at the intervals required by the NEC.
      c. Perforated strap and plumbers' tape are not acceptable for conduit supports.
   2. Conduit on concrete or masonry:
      a. Use 1-hole malleable iron straps with metallic or plastic expansion anchors and screws or support from preset inserts.
      b. Use preset inserts in concrete when possible.
      c. Use pipe spacers (clamp backs) in wet locations.
   3. Suspended conduit:
      a. Use malleable-iron factory-made split-hinged pipe rings with threaded suspension rods sized for the weight to be carried (minimum 3/8-inch diameter), Kindorf, or equal.
      b. For grouped conduits, construct racks with threaded rods and tiered angle iron or preformed channel cross members. Clamp each conduit individually to a cross member. Where rods are more than 2-feet long, provide rigid sway bracing.
   4. Supports at structural steel members:
      a. Use beam clamps.
      b. Drilling or welding may be used only as specified or with approval of the Engineer.
   5. PVC-coated rigid metal systems:
      a. Provide right-angle beam clamps and "U" bolts specially formed and sized to snugly fit the outside diameter of the coated conduit. Provide "U" bolts with PVC-encapsulated nuts that cover the exposed portions of the threads.
      b. Securely fasten exposed conduits with Type 316 stainless steel clamps or straps.

H. Expansion or expansion/deflection fittings:
   1. General:
      a. Align expansion coupling with the conduit run to prevent binding.
      b. Follow manufacturer's instructions to set the piston opening.
      c. Install expansion fittings across concrete expansion joints and at other locations where necessary to compensate for thermal or mechanical expansion and contraction.
      d. Furnish fittings of the same material as the conduit system.
   2. For metallic conduit, provide expansion or expansion/deflection couplings, as appropriate, where:
      a. Install expansion fittings a minimum of every 200 feet in straight conduit runs.

I. Empty conduits:
   1. Provide a pull tape in each empty conduit more than 10 feet in length.

2. Seal ends of conduits with approved, manufactured conduit seals, caps, or plugs immediately after installation:
    a. Keep ends sealed until immediately before pulling conductors.

J. Miscellaneous:
1. Seal roof penetrations for raceways and other items that penetrate the roof in accordance with roofing manufacturer's instructions and as indicated on the Drawings.
2. Provide electrical unions at all points of union between ends of rigid conduit systems that cannot otherwise be coupled:
    a. Running threads and threadless couplings are not allowed.
3. Replace any conduits installed that the Engineer determines do not meet the requirements of this Specification.
4. Provide conduit housekeeping curb around embedded or below-grade conduits exiting or entering the slab, in accordance with the Typical Details.

END OF SECTION

SECTION 16133

DUCT BANKS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Electrical underground duct banks.
   2. Duct bank installation requirements.

1.02 REFERENCES

A. Underwriters Laboratories, Inc. (UL).

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. PVC conduit spacers.
   2. Detectable underground marking tape.
   3. Pull line.

C. Shop Drawings:
   1. Submit Site plan drawings of duct banks, including underground profiles indicating underground utilities.
   2. Submit cross section of each duct bank with dimensions.
   3. For duct bank routings crossing under building footers or foundations alternative to designed routings indicated on the Drawings:
      a. Submit Shop Drawings detailing the new building footer crossing locations and plan drawings labeling equipment to be installed on top of the new routing for approval by the Project structural Engineer.

1.04 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Before performing any trenching locate existing underground utilities:
      a. As specified in Section 02280 - Subsurface Utility Engineering.

B. Scheduling:
   1. Schedule a coordination meeting to adjust duct bank configurations and routing for each duct bank section after trenching and exposure of any underground utilities withing the vicinity of the duct bank route. Meeting shall determine the final configuration of the duct bank before installation.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Duct bank sections indicated on the Drawings are an initial arrangement and may need to be modified due to existing Site conditions, existing underground utilities, and infrastructure.
   1. Reorganize duct bank section with approval of the Engineer.
   2. Make changes required to accommodate duct bank configuration and routing changes due to field conditions.
      a. Where changes in a duct bank configuration extend to a manhole or handhole, coordinate manhole/handhole blockouts and size with the new configuration.

B. Provide location and protection of existing underground utilities, duct bank, trenching, forming, rebar, spacers, conduit, concrete, backfill, and compaction necessary for the complete installation of the duct banks.

C. Provide reinforced concrete duct banks for conduits installed below grade, on the Site, below structures, or in contact with the earth, unless otherwise indicated on the Drawings.

2.02 MANUFACTURERS

A. Conduit spacers:
   1. One of the following or equal:
      a. Cantex.
      b. Osburn Associates, Inc.

B. Detectable underground marking tape:
   1. One of the following or equal:
      a. Blackburn Manufacturing Co.
      b. Panduit.

C. Pull line:
   1. One of the following or equal:
      a. Arnco.
      b. Greenlee.
      c. Osburn Associates, Inc.

D. Duct seal:
   1. The following or equal:
      a. O-Z/Gedney type DUX.

2.03 MATERIALS

A. Provide conduit as specified in Section 16130 - Conduits.

B. Provide reinforcing steel as specified in Section 03200 - Concrete Reinforcing:
   1. Provide minimum Number 4 reinforcing steel.

C. Concrete:
   1. Mix requirements as specified in Section 03300 - Cast-in-Place Concrete.
   2. Provide a red-oxide conduit encasement coloring agent as specified in Section 03300 - Cast-in-Place Concrete.

2.04 MANUFACTURED UNITS

A. Conduit spacers:
   1. Recommended by the conduit manufacturer or specified above.
   2. Saddle type.
   3. Non-metallic, non-corrosive, non-conductive.
   4. Interlocking type:
      a. Vertical interlocking.
      b. Horizontal interlocking.
   5. Suitable for concrete encasement.
   6. Molded-in rebar holder.
   7. Accommodates 2-inch through 6-inch conduit sizes.
   8. Relieves the conduit from both horizontal and vertical stresses.

B. Pull line:
   1. Minimum 1/4-inch wide, flat design.
   2. Polyester.
   3. Minimum pulling strength 1,200 pounds.
   4. Sequential footage markings.

C. Detectable marking tape:
   1. Locatable by a cable or metal detector from above the undisturbed grade.
   2. Aluminum core laminated between polyethylene film.
   3. 6-inch-wide red tape imprinted with black lettering stating “CAUTION - BURIED ELECTRIC LINE BELOW”, or equivalent.

D. Duct seal:
   1. Non-hardening sealing compound.
   2. Flexible, can be applied by hand.
   3. UL Listed for use with installed conductors.

PART 3 EXECUTION

3.01 INSTALLATION

A. Duct banks:
   1. Encased in concrete at least 24 inches below finish grade, unless otherwise indicated on the Drawings.

2. Damage minimization:
    a. Conduit should not be left exposed in an open trench longer than is necessary.
    b. Protect underground duct banks against damage during pouring of concrete or backfilling.
3. Plastic conduit fittings to be joined should be exposed to the same temperature conditions for a reasonable length of time before assembly.
4. Provide No. 4/0 American Wire Gauge bare copper ground wire the entire length of duct bank and bond to the grounding system at each end of the duct bank:
    a. Where duct bank terminates at structures with a grounding electrode, bond duct bank ground wire to the grounding electrode.
    b. Where duct bank terminates at electrical equipment, bond duct bank ground wire to the equipment ground bus.
    c. Where duct bank terminates at structure without either a grounding electrode or electrical equipment, provide ground rod adjacent to structure and bond duct bank ground wire to ground rod.
5. Install underground ducts to be self-draining:
    a. Slope duct banks away from buildings to manholes, handholes, or pullboxes.
    b. Slope a minimum of 1/4 inch per 10 feet.
6. Install pull line in spare conduits:
    a. Provide adequate pull line at both ends of conduits to facilitate conductor pulling.
    b. Cap above ground spare conduit risers at each end with screw-on conduit caps.

B. Trenching:
1. Perform as specified in Section 02318 - Trenching.
2. Trench must be uniformly graded with the bottom rock free and covered with select material.
3. Whenever possible, use the walls of the trench as forms for concrete encasement:
    a. Forms are required where the soil is not self-supporting.
4. Damage occurring to existing ducts, conduits, cables, and other utilities during duct bank installation shall be remediated to the satisfaction of the Owner.

C. Duct spacing:
1. Separate conduits with manufactured plastic spacers using a minimum space between the outside surfaces of adjacent conduits of 2 inches, unless otherwise indicated on the Drawings:
2. Install spacers to maintain uniform spacing of duct assembly a minimum of 4 inches above the bottom of the trench during concrete pour. Install spacers on 8-foot maximum intervals:
    a. Due to some distortion of conduit from heat, and other means, it may be necessary to install extra spacers within the duct bank:
        1) Install the intermediate set of spacers within normal required spacing to maintain the proper horizontal clearance:
            a) Clearance is required to allow the proper amount of concrete to infiltrate vertically among the duct to ensure proper protection.

3. Spacers shall not be located at the center of a bend:
    a. Locate spacer in the tangent, free of the coupling on fabricated bends.
    b. Locate spacers midway between the tangent and the center bend on trench formed sweeps.

D. Terminating:
1. Use bell ends in duct at entrances into cable vaults.
2. Make conduit entrances into cable vaults tangential to walls of cable vault.
3. Form trapezoidal transitions between duct bank and cable vaults as needed in order to ensure adequate cable bending radius for the duct bank-to-vault transition.
4. Install duct seal in all conduits, including spare conduits, at entrance to manholes/handholes. Form by hand to conduit and around cables to develop moisture barrier.
5. New manhole or handhole applications, provide a single opening or “window” per duct bank, sized to accommodate the duct bank envelope.

E. Concrete:
1. Install concrete as specified in Section 03300 - Cast-in-Place Concrete.
2. Provide tie wires as specified in Section 03200 - Concrete Reinforcing to prevent displacement of the conduits during pouring of concrete:
    a. Tie wire shall not act as a substitute for spacers.
3. Install minimum 3-inch cover around conduit and rebar.
4. Consolidation of encasement concrete around duct banks shall be by hand puddling. Mechanical vibrators are acceptable for use outside of the rebar cage.
5. Conduit is subject to temperature rise. As concrete cures, allow the free end to expand by pouring the concrete from the center of the run or from one tie in point.

F. Marking tape:
1. Install a detectable marking tape 12 inches above the duct bank the entire length of the duct bank.

G. For conduit installations beneath building slabs:
1. Duct banks shall be continued under building slabs to the final destination of the conduits.
    a. Construct separate duct banks as required.
    b. Concrete for encasement under building slabs need not be colored red.
    c. For duct banks crossing under building footers or foundations, install the top of the duct bank a minimum of 6 inches below the footer.
    d. Where duct banks enter through building walls, foundation walls, stem walls, etc., make connections as indicated on the Drawings.
    e. Where duct banks terminate with conduit risers entering building walls, install an expansion/deflection fitting or a flat-wise elbow (elbow parallel to building wall) in order to accommodate differential movement between the conduits and structure.

3.02 CLEANING

A. Clean conduits of dirt and debris by use of an appropriately sized steel mandrel no less than 1/2 inch smaller than the inside diameter of the conduit.

3.03 PROTECTION

A. Provide shoring and pumping to protect the excavation and safety of workers.

B. Protect excavations with barricades as required by applicable safety regulations.

END OF SECTION

SECTION 16134

BOXES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Device boxes.
   2. Raceway system boxes.

1.02 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. Standard Specifications for Highway Bridges.

B. ASTM International (ASTM):
   1. A47 - Standard Specification for Ferritic Malleable Iron Castings.

C. Joint Industry Conference (JIC).

D. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

E. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).

F. Underwriters Laboratories, Inc. (UL).

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Arcing parts: Circuit breakers, motor controllers, switches, fuses, or any device intended to interrupt current during its operation.
   2. Raceway system boxes: Boxes that are used for wire and cable pullboxes, conduit junction boxes, or terminal boxes.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Manufacturer.
   2. Materials.
   3. Dimensions:
      a. Height.
      b. Width.
      c. Depth.

d. Weight.
e. NEMA rating.
4. Conduit entry locations.
5. Catalog cutsheets.
6. Installation instructions.

C. Shop Drawings:
1. Include identification and sizes of pullboxes.

1.05 QUALITY ASSURANCE

A. Regulatory requirements:
1. Outlet boxes shall comply with applicable standards of:
a. JIC.
b. NEC.
c. NEMA.
d. UL.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide outlet boxes for wiring devices, security systems, junction, and pullboxes for use in the raceway systems, etc.

B. Provide boxes as indicated on the Drawings or as needed to complete the raceway installation.

C. Size pullboxes in accordance with NEC requirements and to provide sufficient room for any future conduits, components, and cables as indicated on the Drawings.

D. Provide materials and construction suitable for environmental conditions at the location of the box as specified in Section 16050 - Common Work Results for Electrical.

E. For boxes not indicated:
1. Provide types and mountings as required to suit the equipment and that will be consistent with the conduit system and environmental conditions as indicated in Section 16050 - Common Work Results for Electrical.

2.02 MANUFACTURERS

A. One of the following or equal:
   1. Plastic and/or fiberglass boxes:
      a. Carlon.
      b. Hoffman.
      c. Stahlin.
   2. Plastic coated boxes:
      a. OCAL.
      b. Rob Roy.
   3. Cast device boxes:
      a. Appleton.
      b. Crouse - Hinds.
      c. O-Z/Gedney.
   4. Formed steel enclosures:
      a. Hoffman.
      b. Rittal
      c. Stahlin.
   5. Stainless steel enclosures:
      a. Hoffman.
      b. Rittal.
      c. Stahlin.

2.03 MANUFACTURED UNITS

A. Cast device boxes:
   1. Construction:
      a. With internal green ground screw.
      b. Furnished with a suitable gasketed cover.
      c. With integral cast mounting lugs when surface mounted.
      d. Conduit sizes range from 3/4 inch to 1 inch.
      e. Tapered threaded hubs with integral bushing.
   2. Aluminum (copper free) boxes:
      a. High strength copper free 4/10 of 1 percent maximum alloy for use with aluminum rigid conduit.
   3. Malleable iron boxes:
      a. In accordance with ASTM A47 Grade 32510.

B. Plastic coated cast device boxes:
   1. Construction:
      a. With internal green ground screw.
      b. Furnished with a suitable gasketed cover.
      c. With integral cast mounting lugs when surface mounted.
      d. Conduit sizes range from 3/4 inch to 1 inch.
      e. Double coated with a nominal 0.002-inch (2 mil) urethane on both the interior and exterior before application of PVC coating.
      f. With a minimum 0.040-inch (40 mil) PVC coating bonded to exterior.
      g. With pressure sealing sleeve to protect the connection with conduit.

C. Fiberglass boxes:
   1. NEMA Type 4X.

2. Constructed of molded fiberglass reinforced polyester.
3. Integral neoprene gasket on cover attached with an oil-resistant adhesive.
4. Enclosures to have internal pads for mounting optional panels and terminal kits.
5. Covers:
    a. Screw cover enclosures:
        1) Covers held in place with captive, stainless steel, or Monel® screws.
        2) Covers attached to body with internal zinc-plated steel hinges.
    b. Quick release latches covers:
        1) Corrosion resistant fiberglass hinges.
        2) Spring loaded fiberglass latches with a Monel® or stainless steel bail attached with Monel® or stainless steel screws.
        3) With a Type 316 stainless steel padlock hasp.
6. With external mounting feet.

D. Formed steel enclosures:
    1. Steel:
        a. NEMA Type 12.
        b. Fabricated from 14-gauge steel, minimum.
        c. Seams continuously welded ground smooth.
        d. Door:
            1) Rolled lip around 3 sides.
            2) Attached to enclosure by means of a continuous stainless steel hinge and pin.
        e. Neoprene door gasket to provide a watertight, dusttight, oiltight seal:
            1) Attached with an adhesive.
            2) Retained by a retaining strip.
        f. Fabricate external removable hardware for clamping the door to the enclosure body from zinc-plated heavy gauge steel:
            1) With a hasp and staple for padlocking.
        g. Provide large enclosures with door and body stiffeners for extra rigidity.
        h. No holes or knockouts.
        i. Finish:
            1) ANSI 61 gray electrostatically applied polyester powder inside and out over cleaned and primed surfaces.
            2) White electrostatically applied polyester powder mounting plate.
        j. Heavy gauge steel external mounting brackets when surface mounted.
    2. Stainless steel:
        a. NEMA Type 4X:
            1) Boxes in locations subject to flooding or temporary submersion:
                a) NEMA Type 6.
        b. Fabricated from 14-gauge Type 316 stainless steel.
        c. Seams continuously welded.
        d. Door:
            1) Rolled lip around 3 sides.
            2) Attached to enclosure by means of a continuous stainless steel hinge and pin.
        e. Neoprene door gasket to provide a watertight seal:
            1) Attached with an adhesive.
            2) Retained by a retaining strip.

f. Fabricate external removable hardware for clamping the door to the enclosure body from heavy gauge stainless steel:
   1) With a hasp and staple for padlocking.
g. Provide large enclosures with door and body stiffeners for extra rigidity.
h. No holes or knockouts.
i. Finish:
   1) Brushed.
j. Stainless steel external mounting brackets when surface mounted.

2.04 ACCESSORIES

A. Fasteners:
   1. Electroplated or stainless steel in boxes with wiring devices.
   2. Screws, nuts, bolts, and other threaded fasteners:
      a. Stainless steel.

B. Provide breather and drain fittings where appropriate.

C. Internal panels:
   1. Provide internal panels where required for mounting of terminal strips or other equipment.
   2. With plated steel shoulder studs.
   3. Steel with white polyester powder finish.

PART 3 EXECUTION

3.01 INSTALLATION

A. General:
   1. Provide outlet box materials to match the conduit system:
      a. GRC - Cast ferrous boxes.
      b. PCS - PVC coated cast ferrous boxes.
   2. Solid type gang boxes:
      a. For more than 2 wiring devices.
      b. For barriered outlets.
   3. Support wall mounted NEMA Type 4 or NEMA Type 4X boxes to maintain a minimum of 7/8-inch free air space between the back of the enclosure and the wall:
      a. Use machined spacers to maintain air space; built-up washers are not acceptable.
      b. Use stainless steel or nylon materials for spacers.
   4. Use cast malleable iron boxes when box must support other devices.
   5. Boxes serving luminaires or wiring devices:
      a. Use as pullboxes wherever possible.
   6. In terminal boxes, furnish terminals as indicated on the Drawings with a minimum of 20 percent spare terminals:
      a. Furnish wireways for discrete and analog/DC wiring.
      b. Separate analog wiring from 120 V discrete or power wiring.
   7. For fire-rated construction, provide materials and installation for use in accordance with the listing requirements of the classified construction.

B. Outlet boxes:
   1. Locate outlet boxes as indicated on the Drawings:
      a. Adjust locations so as not to conflict with structural requirements or other trades.
   2. Use deep threaded-hub malleable iron boxes:
      a. In hazardous areas.
      b. Where exposed to the weather.
      c. In unheated areas.
      d. Where subject to mechanical damage:
         1) Defined as exposed boxes less than 10 feet above the floor.
      e. To act as a pullbox for conductors in a conduit system.
      f. Accommodate wiring devices.
   3. Use deep threaded-hub plastic coated malleable iron boxes in corrosive and NEMA Type 4X area and when the exposed conduit system is PVC coated steel.
   4. Outlet boxes may be used as junction boxes wherever possible.

C. Pullboxes and junction boxes:
   1. Install pullboxes such that access to them is not restricted.
   2. Outlet, switch, and junction boxes where surface mounted in exposed locations:
      a. Cast ferrous boxes with mounting lugs, zinc or cadmium plating finish.
   3. Outlet, control station, and junction boxes for installation in corrosive locations:
      a. Fiberglass reinforced polyester, stainless steel, or plastic-coated steel to match the conduit system.
      b. Furnished with mounting lugs.
   4. Fire rated construction: Use materials and methods to comply with the listing requirements for the classified construction.

END OF SECTION

SECTION 16140

WIRING DEVICES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Switches.
   2. Receptacles.
   3. Plates.

1.02 REFERENCES

A. Federal Specifications (FS):
   1. W-C 596 - Connector, Electrical, Power, General Specification for.
   2. W-S 896/2 - Switches, Toggle (Toggle and Lock), Flush Mounted (General Specification).

B. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

C. Telecommunications Industry Association (TIA):
   1. T568A - Eight-position jack pin/pair assignment.
   2. T568B - Optional eight-position jack pin/pair assignment.

D. Underwriters Laboratories, Inc. (UL):
   1. 20 - General Use Snap Switches.
   2. 498 - Standard for Attachment Plugs and Receptacles.
   3. 943 - Ground-Fault Circuit-Interrupters.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. GFCI: Ground fault circuit interrupter.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Catalog cutsheets.

C. Shop Drawings:
   1. Engraving schedule:
      a. Furnish complete engraving schedule for engraved nameplates.

1.05 QUALITY ASSURANCE

A. Wiring devices shall be UL listed and labeled.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Switches, receptacles, and plates as indicated on the Drawings, wired and operable to form a complete system.

2.02 MANUFACTURERS

A. Switches:
   1. One of the following or equal:
      a. Cooper Wiring Devices.
      b. Hubbell.
      c. Leviton.

B. Receptacles:
   1. General purpose:
      a. One of the following or equal:
         1) Cooper Wiring Devices.
         2) Hubbell.
         3) Leviton.

C. Plates:
   1. General location:
      a. One of the following or equal:
         1) Cooper Wiring Devices.
         2) Legrand.
   2. Wet or corrosive areas:
      a. One of the following or equal:
         1) ABB.
         2) Cooper Wiring Devices.
         3) Hubbell.
         4) Pass and Seymour.
   3. In-use covers:
      a. One of the following or equal:
         1) ABB.
         2) Cooper Wiring Devices.

3) Pass and Seymour.
4) TayMac.

2.03 MANUFACTURED UNITS

A. Switches:
1. General:
a. 120 to 277 VAC.
b. 20-amp.
c. Listed in accordance with UL 20.
d. Designed and constructed in accordance with FS W-S-896/2.
e. Back and side wired unless otherwise indicated.
f. Integral grounding terminal.
g. Totally enclosed:
1) Color-coded body with color corresponding to amp rating.
h. Provide switches with the operator style and contact arrangement as indicated on the Drawings and as required for proper operation.
i. Color:
1) Ivory in finished areas.
2) Brown in all other areas.
2. General purpose switches:
a. Toggle type.
3. Switches for office areas:
a. Rocker type.
b. Rectangular.
4. Switches for use with photocell:
a. Maintained contact.
b. 2 circuit.
c. 3 position:
1) Center off.

B. Receptacles:
1. General purpose receptacles:
a. Single or duplex as indicated on the Drawings.
b. 125 VAC.
c. 20 amp or as indicated on the Drawings.
d. NEMA Type 5-20R configuration for 20 amp receptacles.
e. Other NEMA configurations as indicated on the Drawings.
f. Listed in accordance with UL 498.
g. Designed and constructed in accordance with FS W-C-596.
h. Back and side wired.
i. 1-piece, rivet-less mounting strap.
j. Color:
1) Ivory in finished areas.
2) Brown in all other areas.
3) Orange when powered by a UPS.
2. Ground fault interrupter receptacles (GFCI):
a. 125 VAC.
b. 20 amp.
c. Trip level 4 to 6 mA.
d. Individual and feed through protection.

e. UL 943 and UL 498 listed.
f. NEMA Type 5-20R configuration.
g. For damp or wet locations:
1) Weather resistant, in accordance with UL 498.

C. Plates:
1. General location:
a. Type 302 or 304 stainless steel.
b. Brushed satin finish.
c. Minimum thickness: 0.032 inches.
d. Rectangular or square shape.
e. Engraving:
1) Engrave each switch plate with the following:
a) Area served.
b) Panelboard and Circuit.
2) Engrave each receptacle plate with the following:
a) Panelboard and Circuit.
3) Treat engraving to improve visibility.
4) Characters shall be block letter pantograph engraved with a minimum character height of 1/8-inch.
f. Coordinate the number of gangs, number, and type of openings with the specific location.
2. Outdoor and wet areas requiring NEMA Type 4 or NEMA Type 4X enclosures:
a. General:
1) UL listed for wet locations.
2) Gasketed.
3) Die cast metal:
a) Match material to box material.
b. Switches:
1) Lever operated:
a) Provide toggle switch.
c. Receptacles:
1) Weatherproof in-use cover:
a) Die cast metal construction with electrostatic powder coating for corrosion resistance.
b) Gasketed.
c) Lockable.
d) UL listed and in accordance with NEC.
3. Corrosive areas:
a. Neoprene.
b. Gasketed.
c. Weatherproof.

PART 3 EXECUTION

3.01 INSTALLATION

A. Mounting heights:
1. Process and production areas:
a. Switches and receptacles 48 inches from finished floor to top of plate.

2. Offices and finished areas:
    a. Switches: 48 inches from finished floor to top of plate.
    b. Receptacles: 18 inches from finished floor to center of plate.

B. Receptacles:
1. Provide GFCI receptacles as indicated on the Drawings.
    a. Provide weather resistant GFCI receptacles in wet or damp areas.
2. Mount receptacles vertically:
    a. Ground slot down.

C. Ensure plates make a firm seal with wall for recessed mounted devices:
1. Outside edges of plates parallel with building lines.

END OF SECTION

SECTION 16150

LOW VOLTAGE WIRE CONNECTIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Wire connecting devices.
   2. Terminations.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. D3005 - Standard Specification for Low-Temperature Resistant Vinyl Chloride Plastic Pressure-Sensitive Electrical Insulating Tape.

B. CSA International (CSA):
   1. C22.2 - No. 197-M1983 (R2208) - PVC Insulating Tape.

C. Underwriters Laboratories, Inc. (UL):
   1. 486A-B - Standard of Safety for Wire Connectors.
   2. 510 - Standard for Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape.
   3. 1953 - Outline of Investigation for Power Distribution Blocks.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Catalog cutsheets.
   2. Installation instructions.

1.04 QUALITY ASSURANCE

A. Materials shall be UL listed.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide a complete system of wiring connectors, terminators, fittings, etc., for a complete wiring system suitable for the cables and conductors used.

2.02 MANUFACTURERS

A. Manufacturers for each type of technology are specified with the equipment in this Section.

2.03 EQUIPMENT

A. Control connections:
   1. Use insulated ring type wire terminators for connections to screw terminals:
      a. With chamfered/funneled terminal barrel entry.
      b. Deep internal serrations.
      c. Long barrel design to reduce electrical resistance and increased insulator-barrel surface area to ensure that the insulator remains in contact with the barrel.
      d. Electroplated-tin copper conductor.
      e. Manufacturers: The following or equal:
         1) ABB, Sta-Kon.
   2. For process equipment connections, work from manufacturer's drawings.

B. Joints, splices, taps, connections, and terminations:
   1. 600-volt conductors:
      a. Use solderless connectors.
      b. Copper pigtail adaptors.
         1) For use on select applications as approved by the Engineer.
         2) 600 volt, 90 degrees Celsius rated.
         3) UL 486A/B listed.
         4) Manufacturers: The following or equal:
            a) Burndy APY series.
            b) ILSCO CPM series.
      c. Use only plated copper alloy connectors or lugs:
         1) Aluminum connectors or lugs are not acceptable for copper conductors.
      d. Under those specific conditions where aluminum conductors have been allowed or are specified then the connectors for aluminum conductors shall be specifically designed for that purpose.
      e. For wire Number 10 AWG and smaller, use compression splice caps, with insulating caps:
         1) Manufacturers: The following or equal:
            a) Buchanan, 2006S or 2011S, with 2007 or 2014 insulating caps.
      f. For wire Number 8 AWG and larger, use heavy duty copper compression connectors:
         1) Manufacturers: One of the following or equal:
            a) ABB.
            b) Burndy.

g. Heat shrink tubing:
1) Suitable for indoors, outdoors, overhead, direct burial or submerged applications.
2) Minimum shrink ratio: 4 to 1.
3) Continuous operating temperature: -55 degrees Celsius to 110 degrees Celsius.
4) Internally applied adhesive sealant.
5) Cross-linked polyolefin:
a) Manufacturers: One of the following or equal:
(1) 3M, ITCSN.
(2) ABB, Shrink-Kon.

C. Insulating tape:
1. General purpose insulating tape:
a. Minimum 7 mil vinyl tape.
b. Suitable for application in an ambient of -18 degrees Celsius (0 degrees Fahrenheit).
c. Operating range up to 105 degrees Celsius (220 degrees Fahrenheit).
d. Flame retardant, hot- and cold-weather resistant, UV resistant.
e. For use as a primary insulation for wire cable splices up to 600 VAC.
f. Meeting and complying with:
1) ASTM D3005 Type I.
2) UL 510.
3) CSA C22.2.
g. Manufacturers: The following or equal:
1) 3M, Scotch Number Super 33+.
2. General purpose color-coding tape:
a. Minimum 7 mil vinyl tape.
b. Suitable for application on PVC and polyethylene jacketed cables.
c. For use indoors and outdoors in weather protected enclosures.
d. Available with the following colors:
1) Red.
2) Yellow.
3) Blue.
4) Brown.
5) Gray.
6) White.
7) Green.
8) Orange.
9) Violet.
e. For use as phase identification, marking, insulating, and harnessing.
f. Meeting and complying with:
1) UL 510.
2) CSA C22.2.
g. Manufacturers: The following or equal:
1) 3M, Scotch Number 35.

PART 3 EXECUTION

3.01 INSTALLATION

A. Load connections:
   1. Connect loads to the circuits as indicated. Color-code branch circuits as specified in Section 16123 - 600-Volt or Less Wires and Cables.

B. Zero to 600-volt systems:
   1. Make connections with the proper tool and die as specified by the device manufacturer.
   2. Use only tooling and dies manufactured by the device manufacturer.
   3. Insulate connections and splices with Scotch 33+ tape and Scotchfill, or pre-molded plastic covers, or heat shrink tubing and caps.
   4. Number power and control wires before termination.

C. Motor connections (600 volts and below):
   1. Terminate leads and wires with compression type ring lugs.
   2. Terminations on motor leads, including leads that are connected together to accommodate the motor voltage, and the machine wires entering the motor terminal box from the power source, shall have ring type compression lugs.
   3. Cover bolted connectors with a heat shrinkable, cross-linked polyolefin material formed as a single opening boot:
      a. In damp and wet locations, use a complete kit containing mastic that shall seal out moisture and contamination.
      b. Shrink cap with low heat as recommended by the manufacturer.
   4. Wire markers shall be readable after boot installation.
   5. Manufacturers: The following or equal:
      a. Raychem, MCK.

END OF SECTION

SECTION 16210

UTILITY COORDINATION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Coordination with the utility companies to provide service.
   2. Contractor's responsibilities for connecting to utilities and providing utility service to the facilities.
   3. Descriptions of utility services required.

B. Utility contacts:
   1. Electric utility:
      a. Name: Joey Mckinney.
      b. Utility: Roseville Electric Utility.
      c. Address: 2090 Hilltop Circle, Roseville, CA 95747.
      d. Phone number: (916) 774-5691.
      e. E-mail: JMcKinney@roseville.ca.us.

1.02 REFERENCES

A. Underwriters Laboratories, Inc. (UL).

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Certification:
   1. Submit certification that the intended installation has been coordinated with the utility companies.
   2. Include a narrative description of the utility's requirements and points of connection, names and telephone numbers for contacts at the utilities.

1.04 QUALITY ASSURANCE

A. Materials and equipment used in performance of Electrical Work shall be listed or labeled by UL, or other equivalent recognized independent testing laboratory, for the class of service intended.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 ADMINISTRATIVE REQUIREMENTS

A. Scheduling:
   1. General:
      a. Before the start of Site Work, make arrangements for temporary telephone and electrical service as required.
   2. Electrical systems:
      a. Before bidding, contact the utilities to determine the Work and materials that will be required from the Contractor for inclusion in the bid.
      b. Coordinate Work with the Engineer to minimize downtime of existing operating equipment and electrical distribution systems and to preclude unsafe operation:
         1) Notify Owner 10 days before power interruptions.
         2) Coordinate downtime with Owner and local electric utility.
      c. Before commencing Work, coordinate electric service entrance requirements with local electric utility to ensure that the installation will be complete:
         1) Confirm the utility transformer size, electrical characteristics, and location are consistent with the design and service voltage provided by the electric utility.
         2) Arrange for utility revenue meter.
         3) Coordinate installation of metering CTs and PTs furnished by the electric utility.
   3. Before commencing Site Work, coordinate underground conduit installations with other Work to eliminate conflicts and avoid interferences with other underground systems.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Electrical service:
   1. Temporary construction power:
      a. As specified in Section 01500 - Temporary Facilities and Controls.
      b. Provide all Work and materials not provided by the electric utility.
      c. Pay fees and costs for temporary construction power.
   2. Provide all Work and materials for providing the permanent electrical service, including, but not limited to:
      a. Work and materials not provided by the electric utility.
      b. Provide electrical ducts, raceways, conductors, and connections indicated on the Drawings, and all other Work and materials required for a complete electrical service.

B. General:
   1. Coordinate and obtain inspections and final installation approval from the serving utilities and authorities having jurisdiction.

2.02 MATERIALS

A. Provide materials in accordance with the applicable requirements of the utilities and as specified in these Specifications.

2.03 EQUIPMENT

A. Provide equipment in accordance with the applicable requirements of the utilities and as specified in these Specifications.

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 16222

LOW VOLTAGE MOTORS UP TO 500 HORSEPOWER

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Low voltage motors up to and including 500 horsepower (hp).

1.02 REFERENCES

A. Standards:
   1. American Bearing Manufacturers Association (ABMA):
      a. 9 - Load Ratings and Fatigue Life for Ball Bearings.
      b. 11 - Load Ratings and Fatigue Life for Roller Bearings.
   2. ASTM International (ASTM):
      a. B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.
   3. Institute of Electrical and Electronic Engineers (IEEE):
      a. 43 - IEEE Recommended Practice for Testing Insulation Resistance of Rotating Machinery.
      b. 112 - IEEE Standard Test Procedure for Polyphase Induction Motors and Generators.
   4. National Electrical Manufacturers Association (NEMA):
      a. MG 1 - Motors and Generators.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Submit completed motor data sheets for each motor supplied:
   1. As specified in Attachment A - Motor Data Sheet.
   2. Manufacturer’s or other data sheets are not acceptable.

C. Product data:
   1. Descriptive bulletins.
   2. Machine tag and loop number as indicated on the Drawings and in the specification section number of the driven machine.
   3. Complete electrical data.
   4. Manufacturer’s storage recommendations.
   5. Torque, current, and power factor versus speed curves:
      a. At 100 percent rated voltage for full voltage started and VFD-driven motors.
      b. For motors on reduced voltage start at 70, 80, 90, and 100 percent rated voltage.
   6. Accessories data:
      a. Power factor correction capacitors:
         1) Size in KVAR for motors not connected to variable frequency drives.

b. Motor winding heaters:
    1) Voltage.
    2) Watts.
c. Winding temperature detectors:
    1) Type.
    2) Rating.
d. Moisture detectors.

7. Mechanical data:
    a. Bearing design and bearing life calculations.
    b. Resonant frequencies for VFD-driven motors 50 hp or greater.

D. Shop Drawings:
1. Motor weight.
2. Frame size.
3. Conduit box(es), size(s), and location(s).
4. Outline drawings with dimensions.
5. Installation details for the project seismic criteria.

E. Calculations:
1. Where Site conditions specified in Section 01850 - Design Criteria exceed manufacturer's ratings, provide derating calculations for each motor.

F. Quality Control Submittals:
1. Manufacturer's representative qualifications.
2. Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.
    a. With test reference standard identified.

G. Certification:
1. When motors are driven by variable speed drive systems, submit certification that selected motor:
    a. Is capable of satisfactory performance under the intended load.
    b. Meets the requirements of the latest edition of NEMA MG 1 Part 31.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Store motors in accordance with the manufacturer's recommendations.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.
1. Provide a 2-year duration special warranty.

PART 2 PRODUCTS

2.01 GENERAL

A. Furnish and install electric motors and accessories as specified in this Section and the Sections specifying driven equipment to provide a complete and operable installation.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide equipment and components that are fully rated for the site elevation and operating environment where the equipment will be installed as specified in Section 01850 - Design Criteria and as indicated on the Drawings.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. Baldor.
   2. General Electric.
   3. Reliance.
   4. Toshiba.
   5. US Motors.

2.04 EQUIPMENT

A. 3-phase induction motors - general:
   1. Voltage:
      a. Motors 1/2 hp and larger shall be rated 460 V, 3-phase unless otherwise indicated on the Drawings.
      b. Dual voltage motors rated 230/460 V; 3-phase are acceptable provided all leads are brought to the conduit box.
   2. Motors driving identical machines shall be identical.
   3. Motors greater than 1 hp and up to 500 hp shall meet the NEMA Premium Efficiency percent listed in NEMA MG 1.
   4. Horsepower as indicated on the Drawings:
      a. Horsepower ratings indicated on the Drawings are based on vendor's estimates. Provide motors sized for the load of the actual equipment furnished without operating in the service factor.
   5. Service factor:
      a. 1.15 service factor on sine wave power.
      b. 1.0 when driven by VFD.
   6. Torque:
      a. Provide motors that develop sufficient torque for acceleration to full speed at voltage 10 percent less than motor nameplate rating.
      b. When started using reduced voltage starters:
         1) Provide motors that develop sufficient torque for acceleration to full speed.
      c. NEMA Design B except where driven load characteristics require other than normal starting torque:
         1) In no case shall starting torque or breakdown torque be less than the values specified in NEMA MG 1.

7. Enclosures:
    a. As specified in the individual equipment Specifications or in this Section.
    b. Totally enclosed fan cooled:
        1) Cast iron conduit box.
        2) Tapped drain holes with Type 304 stainless steel plugs for frames 286 and smaller, and automatic breather and drain devices for frames 324 and larger.
    c. Explosion proof:
        1) Tapped drain holes with corrosion resistant plugs for frames 286 and smaller and automatic breather and drain devices for frames 324 and larger.
    d. Lifting devices: Motors weighing 265 pounds (120 kilograms) or more shall have suitable lifting devices for installation and removal.
8. Manufactured with cast iron frames in accordance with NEMA MG 1 or manufacturer's standard material for the specified rating.
9. Nameplates:
    a. Provide motors with a permanent, stainless steel nameplate indelibly stamped or engraved with:
        1) NEMA standard motor data:
            a) Indicate compliance with NEMA MG 1 Part 31 for inverter duty motors.
        2) AFBMA bearing numbers and lubrication instructions.
10. Hardware:
    a. Type 304 stainless steel.
11. Conduit boxes:
    a. Cast iron or stamped steel.
    b. Split from top to bottom.
    c. Provide gaskets at the following interfaces:
        1) Frames and conduit boxes.
        2) Conduit boxes and box covers.
    d. Rotatable through 360 degrees in 90-degree increments:
        1) Where available based on the size of the conduit box.
    e. Exceeding the dimensions defined in NEMA MG 1.
    f. Provide grounding lugs inside conduit boxes for motor frame grounding.
12. Motor bearings:
    a. Antifriction.
    b. Regreasable and initially filled with grease for horizontal motors and vertical motors in accordance with the manufacturer's standard design.
    c. Bearings and lubrication suitable for ambient temperature and temperature rise.
    d. Suitable for intended application and have a rate for ABMA 9 or 11, L-10 rating life of 60,000 hours or more.
    e. Fit bearings with easily accessible grease supply, flush, drain, and relief fittings using extension tubes where necessary.
    f. Where specified in the equipment Specifications, provide split-sleeve type hydrodynamic radial bearings. Provide a bearing isolator to protect bearings from contaminants.
    g. Install a ball valve on the lubrication drain port.
13. Insulation systems:
    a. Motors installed in ambient temperatures 40 degrees Celsius or less:
        1) Provide Class F insulation.

2) Design temperature rise consistent with Class B insulation.
3) Rated to operate at an ambient temperature of 40 degrees Celsius at the altitude where the motor will be installed.

b. Motors installed in ambient temperatures between 40 degrees Celsius and 50 degrees Celsius:
1) Provide Class F insulation.
2) Design temperature rise consistent with Class B insulation.
3) Rated to operate at an ambient temperature of 50 degrees Celsius at the altitude where the motor will be installed.

c. Motors installed in ambient temperatures between 50 degrees Celsius and 65 degrees Celsius:
1) Provide Class H insulation.
2) Design temperature rise consistent with Class F insulation.
3) Rated to operate at an ambient temperature of 65 degrees Celsius at the altitude where the motors will be installed.

14. Motor leads:
a. Insulated leads with non-wicking, non-hydroscopic material. Class F insulation.

15. Noise:
a. Maximum operating noise level in accordance with NEMA MG 1.

B. Vertical motors:
1. Enclosures:
a. As specified in the equipment specifications.
2. Thrust bearings:
a. Selected for combined rotor and driven equipment loads.
b. Coordinate with driven equipment supplier for maximum vertical thrust of driven equipment.
3. Anti-reverse ratchet.

C. Motors driven by variable frequency drives:
1. Compatible with the variable frequency drives specified.
2. Inverter duty rated and labeled.
3. Meet the requirements of NEMA MG 1 Part 31.
4. Winding insulation meets the requirements of NEMA MG 1 Part 31.4.4.2.
5. Capable of running continuously at 1/10th of full speed, with no harmful effects or overheating.
6. Shaft grounding ring:
a. Provide a manufacturer-installed shaft grounding ring for each VFD-driven motor.
b. Aluminum frame and internal components.
c. Conductive microfiber brushes.
d. Maintenance free design.
e. Colloidal silver compound installed on shaft under the shaft grounding ring.
f. High frequency ground strap.
g. Grounding ring:
1) Installed inside motor housing on drive end (DE).
2) Installed on exterior of motor housing on drive end with written permission from the Engineer.

h. Refer to the following table for specific requirements based upon the driven motor:

Motor Size	<100 hp	100 hp to 500 hp	>500 hp
Voltage	<600 VAC	<600 VAC	<600 VAC
AEGIS® Ring	SGR	SGR	PRO
Bearing Insulation	No	NDE	NDE & DE
Colloidal Sliver	Recommended	Required	Required
HF Grounding Straps	Required	Required	Required

Notes:
DE - drive end.
HF - AEGIS® High Frequency Grounding Strap.
NDE - non-drive end.
PRO - AEGIS® PRO Series Shaft Grounding Rings.
SGR - AEGIS® Shaft Grounding Ring Series.

i. AEGIS® bearing protection ring, as manufactured by Electro Static Technology, or equal.

7. Insulated bearings:
   a. Provide motor manufacturer's standard insulated sleeve or ceramic bearings.
   b. Motors 100 hp to 500 hp: Provide insulated bearing on non-drive end (NDE) of the motor the end opposite the shaft grounding ring as recommended by the motor manufacturer.
   c. Motors larger than 500 hp: Provide insulated bearings on both the DE and NDE, and AEGIS® PRO Series shaft ground ring externally mounted on the DE.

D. Motors installed in corrosive environments:
   1. Nameplate indicating conformance to IEEE 841.
   2. Stator double dipped in varnish and baked.
   3. Stator and rotor coated with corrosion resistant epoxy.
   4. Frame, brackets, fan guard and conduit box coated with minimum of 2 coats of epoxy paint.
   5. Withstand salt spray tests in accordance with ASTM B117.

E. Single-phase motors:
   1. Capacitor start type rated for operation at 115 volts, 60 hertz, unless otherwise specified or as indicated on the Drawings.
   2. Totally enclosed fan cooled (TEFC) motors manufactured in accordance with NEMA MG 1.
   3. Ball bearings: Sealed.
   4. 1/2 hp or less fan motors:
      a. Split-phase or shaded pole type when standard for the equipment.
      b. Open type when suitably protected from moisture, dripping water, and lint accumulation.
   5. Wound rotor or commutator type single-phase motors only when their specific characteristics are necessary for application and their use is acceptable to the Engineer.
   6. Integral overload protection.

2.05 ACCESSORIES

A. Motor winding heaters:
   1. Provide 3-phase motors with belted or cartridge space heaters mounted within the motor enclosure.
   2. Space heater rating shall be 120 volts, single-phase, unless otherwise indicated on the Drawings.
   3. Power leads for heaters wired into conduit box.
   4. Installed within motor enclosure adjacent to core iron.

B. Winding temperature detectors:
   1. Provide factory installed winding temperature detector with leads terminating in the conduit box:
      a. Where required by the driven equipment Specification or as indicated on the Drawings.
      b. RTD type, 2 per phase, 100-ohm platinum.
   2. Temperature switches with normally closed contacts as indicated on the Drawings.

C. Bearing temperature detectors:
   1. Where required by the driven equipment Specification or as indicated on the Drawings.
   2. RTD type and wiring matches the winding RTDs.

2.06 SOURCE QUALITY CONTROL

A. Source testing:
   1. Motors less than 250 hp:
      a. Perform manufacturer's standard production tests, including, but not limited to:
         1) No load current.
         2) High potential test.
         3) Winding resistance.
      b. Furnish copies of standard test reports on prototype or identical units.
   2. Motors 250 hp and larger:
      a. Perform tests in accordance with IEEE 112 or IEEE 43.
      b. Tests shall include the following:
         1) Winding resistance (cold).
         2) Locked rotor test.
         3) Temperature rise test.
         4) Load test.
         5) Breakdown torque test.
         6) No-load test.
         7) High-potential test.
         8) Insulation resistance test.
         9) Vibration test in accordance with NEMA MG 1.
         10) Speed-torque curve.
         11) Shaft voltage.
         12) Bearing insulation resistance.
         13) Efficiency and power factor versus load test performed at rated speed and 50 percent, 75 percent, 90 percent, and 100 percent of

rated load. Curves from the motor tests shall be submitted for information.

14) Maximum allowable residual unbalance in each correction plane (journal) shall be calculated using the following equation:

U = 4 W/N

where:

U = residual correction plane unbalance, in ounces-inches
W = static correction plane journal loading, in pounds
N = maximum specified operating speed, in revolutions per minute

c. Furnish test reports and Manufacturer's Certificate of Source Testing.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install motors in accordance with the manufacturer's instructions.

B. Install shaft grounding ring on VFD-driven motors in accordance with the manufacturer's instructions.

3.02 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
   1. As specified in Section 16950 - Field Electrical Acceptance Tests.

B. Before start-up, perform insulation resistance test on each motor furnished or installed on this project:
   1. Windings energized to 1,000 volts DC for 1 minute.
   2. Resistance measured at the end of the test, recorded, and submitted to the Engineer for review.
   3. Inform the Engineer of any unusual or unacceptable test results.
   4. This test is in addition to the acceptance tests in Section 16950 - Field Electrical Acceptance Tests.

SECTION 16239

GENERATOR CONNECTION CABINET

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Generator connection cabinets.

1.02 REFERENCES

A. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 Volts Maximum).

B. Underwriters Laboratories, Inc. (UL):
   1. 1773 - Standard for Termination Boxes.

1.03 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Manufacturer of generator connection cabinet.
   2. Bill of material.
   3. Assembly ratings including:
      a. Voltage.
      b. Phase.
      c. Short-circuit rating.
      d. Continuous current amperage rating.

C. Shop Drawings:
   1. Product technical data.
   2. Overall product dimensions: Height, width, depth.
   3. Front and side elevation views.
   4. Foot/wall print.
   5. Line and load connection details.
   6. Conduit entry location(s).

D. Delegated Design Submittals:
   1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria:
      a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
      b. For equipment installed outdoors.
      c. For wall mounted equipment weighing 125 pounds or more.

E. Installation instructions:
   1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
   2. Provide manufacturer's installation instructions.

F. Quality Control Submittals:
   1. Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.

1.05 QUALITY ASSURANCE

A. Manufacturer of this equipment shall have produced similar electrical equipment for a minimum of 5 years.

B. Generator connection cabinet shall be UL 1773 listed and labeled.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Generator connection cabinets shall be a standard design and manufacture, not a custom-built piece of equipment.

2.02 MANUFACTURERS

A. One of the following or equal:
   1. Berthold Electric.
   2. Powertron Standard Series.

2.03 EQUIPMENT

A. Ratings:
   1. Voltage and amperage: As indicated on the Drawings.
   2. Short circuit withstand: 35,000 ASC.

2.04 COMPONENTS

A. Enclosure:
   1. Pad mount.
   2. NEMA Type 3R.
   3. Lockable latches on front door.
   4. Access panel door for field terminated cables held captive by front door.
   5. Drip hood.

B. Construction:
   1. Bus material: Tin-plated copper.
   2. Bus supported with UL recognized component insulators.
   3. Permanent bus connection:
      a. Long barrel compression lugs.
      b. Quantity: As required for the number of conductors indicated on the Drawings.
   4. Field (temporary) wiring connections:
      a. Cam-Loks:
         1) Color coded male 400A.
         2) Quantity: 1 connection per 400A.

2.05 ACCESSORIES

A. Cam-Lok snap covers.
   1. Color-coded to match Cam-Loks.
   2. Spring activated to close when not connected.
   3. Thermoplastic covers and bodies.

2.06 FINISHES

A. Electrostatic powder coat.

B. Manufacturer’s standard color.

2.07 SOURCE QUALITY CONTROL

A. Source Testing:
   1. Perform standard factory tests on the generator connection cabinets.
   2. Test in accordance with the latest version of NEMA and UL standards.
   3. Furnish test reports and Manufacturer’s Certificate of Source Testing.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. General:
   1. Mount as indicated on the Drawings.

END OF SECTION

SECTION 16265

REDUCED HARMONIC VARIABLE FREQUENCY DRIVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Reduced harmonic 18 pulse or active front end, variable frequency drives (VFD), 60 to 500 hp for control of standard NEMA Design B squirrel cage induction motors.

1.02 REFERENCES

A. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

B. Underwriters Laboratories, Inc. (UL):
   1. 508A - Standard for Safety for Industrial Control Panels.
   2. 61800-5-1 - Standard for Adjustable Speed Electrical Power Drive Systems.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. AFE: Active Front End.
   2. IGBT: Insulated Gate Bipolar Transistor.
   3. VFD: Variable Frequency Drive.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures:
   1. Custom prepared by the VFD manufacturer and specific for the equipment furnished.

B. Product data:
   1. Manufacturer of the VFD.
   2. Manufacturer of all components of the VFD.
   3. Dimensions:
      a. Height.
      b. Width.
      c. Depth.
   4. Weight.

5. Nameplate schedule.
6. Bill of material.
7. Ratings:
    a. Voltage.
    b. Phase.
    c. Input current.
    d. Output current.
    e. Interrupting rating.
    f. Momentary current rating.
8. Catalog cutsheets for major components.
9. Surge protection data.
10. Design data:
    a. Efficiency and power factor values.
    b. Certification that the drive is sized for the full nameplate motor hp and current (at rated RPM) of the driven load at the installed altitude.
    c. Certification that based upon VFD design, cable length to motor, and motor dielectric insulation level that the VFD will not damage motor insulation due to carrier frequency, reflected wave, dv/dt, or other VFD produced characteristics.
    d. Certification that electronic circuits and printed circuit boards are conformably coated.
    e. Certification that the VFD will operate with all power sources (including alternate utilities and on-site generation when applicable).
11. List of recommended spare parts.
12. For equipment installed in structures designated as seismic design category C, D, E, or F, submit the following as specified in Section 01850 - Design Criteria:
    a. Manufacturer's statement of seismic qualification with substantiating test data.
    b. Manufacturer's special seismic certification with substantiating test data.

C. Shop Drawings:
1. Complete plan and elevation drawings showing:
    a. All dimensions.
    b. Panel, sub-panel and component layout indexed to the bill of material.
    c. Conduit connections.
    d. Required clearance around equipment.
2. Block diagram showing the basic control and protection systems identifying the protection, control, trip and alarm functions, the reference signals and commands and the auxiliary devices.
3. Complete schematic, wiring and interconnection diagrams showing connections to both internal and external devices:
    a. Wiring diagrams shall include terminal number and wire numbers.
4. Complete 1-line and 3-line diagrams, including, but not limited to, circuit breakers, motor circuit protectors, contactors, instrument transformers, meters, relays, timers, control devices, and other equipment comprising the complete system:
    a. Device electrical ratings shall be clearly indicated on the Drawings.

D. Calculations:
    1. Harmonic study:
        a. Perform a preliminary harmonic analysis:
            1) Measure conductor lengths and obtain other information required for the analysis from Drawings.
            2) A power system short circuit ratio of 20 shall be used.
            3) VFDs shall be assumed to be operating at maximum speed and maximum load.
            4) Short circuit current (ISC) utilized for the harmonic analysis calculations is defined as:
                a) ISC = 20 * (Sum Total Full Load Amps of all VFDs).
    2. Detailed calculations or details of the actual physical testing performed on the VFD to prove the VFD is suitable for the seismic conditions at the Project Site.

E. Delegated Design Submittals:
    1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria:
        a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
        b. For equipment installed outdoors.

F. Installation instructions:
    1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
    2. Provide manufacturer's installation instructions.

G. Quality Control Submittals:
    1. Manufacturer's representative qualifications.
    2. Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.
    3. Manufacturer's Certificate of Installation as specified in Section 01756 - Commissioning.
    4. Test reports.
    5. Report listing the setting of VFD adjustable parameters and their values after start-up.

H. Owner Training Submittals:
    1. As specified in Section 01756 - Commissioning.

I. Certifications:
    1. Certification letter from the VFD manufacturer stating that the VFD(s) are capable of operating with new and existing sources (utility sources and on-site generation in possible operating configurations).
    2. Certification letter from the VFD manufacturer stating that the VFD(s) are capable of operating with new and existing VFDs in the existing and new distribution system.

J. Control descriptions and control logic program:
    1. Provide control descriptions describing the full control functionality to be incorporated into the programming of the drive including the following:
        a. Functionality in local and remote.
        b. Software and hardware interlocks.
        c. Control response upon loss and restoration of power.
    2. Provide complete register list of all IO available to the plant PCS.
    3. Submit the completed control logic program for each and every device supplied.
    4. Submit a list of networking address tables.
    5. Submit configuration settings in accordance with actual motor and field equipment being supplied.

K. Operation and maintenance manuals:
    1. As specified in Section 01782 - Operation and Maintenance Manuals.
    2. Spare parts list with supplier names and part numbers.
    3. Start-up and commissioning instructions and data.
    4. Complete bill of material indexed to the drawings identifying the catalog or part numbers, manufacturer, and quantities of components of the VFD system.
    5. Operating manuals:
        a. Submit operating instructions and a maintenance manual presenting full details for care and maintenance of each model of VFD provided under this Contract.
    6. Operating instructions:
        a. Written descriptions shall detail the operational functions of controls on the front panel including keypad functions and parameters.
    7. Maintenance manual:
        a. Furnish maintenance manuals with instructions covering details pertaining to care and maintenance of equipment, as well as identifying all parts.
        b. Manuals shall include, but are not limited to, the following:
            1) Adjustment and test instructions covering the steps involved in the initial test, adjustment and start-up procedures.
            2) Detailed control instructions that outline the purpose and operation of every control device used in normal operation.
            3) Schematic wiring and external diagrams:
                a) Furnish drawings in a fully legible reduced 11-inch by 17-inch format.

1.06 QUALITY ASSURANCE

A. Qualifications:
    1. Any third-party certification, safety or protection requirements shall be applied to the VFD system as a whole. Certification or protection of system elements or individual components by themselves is not acceptable.
    2. UL 61800-5-1 listed and labeled.
    3. Systems (packaged VFD panels) shall be UL 508A listed and labeled.
    4. Manufactured by the VFD manufacturer at its own facility, which shall have a quality assurance program that is certified in accordance with ISO 9001.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Ship VFDs to the job site on a dedicated air ride vehicle that will allow the Contractor to utilize on site off-loading equipment:
   1. VFDs shall be delivered to the site pre-assembled and wired.
   2. Ship each VFD with 2 tamperproof accelerometers that record the maximum shock and vibration experienced by the VFD during shipping and handling.

B. Furnish temporary equipment heaters within the VFD to prevent condensation from forming.

1.08 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.09 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Conduct programming and data exchange coordination meeting.
   2. Conduct factory acceptance test and submit certified test results for the Engineer's review.
   3. Ship equipment to Project Site after successful completion of factory acceptance test.
   4. Assemble equipment in the field.
   5. Conduct field acceptance tests including harmonic testing and submit results for the Engineer's review:
      a. Utility power sources and on-site generation shall be installed and operable for field test.
   6. Submit manufacturer's certification that equipment has been properly installed and is fully functional for the Engineer's review.
   7. Conduct Owner Training sessions.
   8. Commissioning and process start-up as specified in Section 01756 - Commissioning.

1.10 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.
   1. Provide a 2-year duration special warranty.

1.11 SYSTEM START-UP

A. VFD manufacturer shall be responsible for start-up of the VFDs in the presence of the equipment suppliers, Contractor, Engineer, and Owner.

1.12 MAINTENANCE

A. Manufacturer shall describe the field service system available to support the proposed VFD system. As a minimum describe:
   1. Type of technical support available (e.g., system engineering and technician).
   2. Location of field service personnel.

3. Field service daily rates in dollars per hour and dollars per day.
4. Guaranteed response times to service requests.

B. Spare parts:
1. The following spare parts shall be furnished:
   a. 1 set of power and control fuses for each VFD.
   b. 1 spare fan for each VFD unit.
   c. 2 sets of ventilation filters for each VFD unit (if applicable in VFD cabinet louvers).
   d. 1 power input module of each sized furnished.
   e. 1 power output module of each size furnished.
   f. Any special dedicated tools for emergency service and troubleshooting.
   g. Hardware and software required for configuration, maintenance, troubleshooting and inquiry of drive parameters.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide equipment and components that are fully rated for the site elevation and operating environment where the equipment will be installed as specified in Section 01850 - Design Criteria, and as indicated on the Drawings.

B. Design requirements:
1. Each VFD system shall consist of all components required to meet the performance, protection, safety, testing and certification criteria of this Section.
2. VFD system:
   a. Is a fully integrated package.
   b. Includes material necessary to interconnect VFD system elements, even if shipped separately.
3. Any modifications to a standard product necessary to meet this Section shall be made only by the VFD manufacturer.
4. Each VFD shall be completely factory pre-wired, assembled and then tested as a complete package by the VFD manufacturer to ensure a properly coordinated, fully integrated drive system.
5. VFD shall be capable of operating standard NEMA Design B motors. It is the responsibility of the VFD manufacturer to ensure that the drive will not damage motor insulation due to high carrier frequency, reflected wave, dv/dt or other drive electrical characteristics:
   a. VFD manufacturer shall furnish equipment necessary to mitigate potential damage to motor insulation.
   b. Coordinate bearing protection methods with the supplier of the driven equipment.
   c. Motors as specified in Section 16222 - Low Voltage Motors up to 500 Horsepower.

C. Performance:
1. Operating envelope:
a. Speed and torque requirements:
1) Provide a variable torque or constant torque VFD as required by the driven load.
2) VFD shall be capable of producing a variable alternating voltage/frequency output to provide continuous operation over the 40 to 110 percent (25 to 66 hertz) speed range.
b. Current requirements:
1) Provide 100 percent of rated output current on a continuous basis.
2) Variable torque VFD:
a) Minimum 110 percent current overload for 1 minute.
3) Constant torque VFD:
a) Minimum 150 percent current overload for 1 minute.
2. Harmonics:
a. VFD shall meet the following distortion limits at 2 percent line voltage unbalance measured at the input terminals of the VFD:
1) Voltage harmonics: Maximum allowable total harmonic distortion, THD, for each VFD shall not exceed 5 percent.
2) Current harmonics: Maximum allowable total harmonic current distortion limit, TDD, for each VFD shall not exceed 5 percent as measured at the input terminals of the VFD system.
3. Efficiency:
a. VFD system minimum efficiency shall be 93 percent at rated kilowatt output of the VFD. VFD system efficiency shall be calculated as follows:

$$Efficiency\ (\%) = \frac{Power\ (Load)}{Power\ (Supply)}\ X\ 100$$

b. Power:
1) Load power is the total 3-phase power measured at the output terminals of the drive system, including the output filter.
2) Supply power is the total power measured at the input terminals of the VFD including phase shifting transformer or active front end components and auxiliary equipment (e.g., controls, fans) for complete system operation.
4. Total power factor:
a. Minimum of 0.96 lagging across the entire speed range.
b. Under no operating conditions shall the VFD have a leading power factor.
5. Frequency accuracy:
a. Minimum of within 0.01 percent.
6. Speed regulation:
a. Minimum of within 0.5 percent across the entire speed range.
7. Capable of working with all available power sources (utility and on-site generation) and with new and existing VFDs.

2.02 MANUFACTURERS

A. One of the following or equal:
1. ABB.
2. Allen-Bradley.

3. Eaton.
4. Schneider-Electric.

2.03 EQUIPMENT

A. General:
   1. Sinusoidal pulse width modulated, (PWM), voltage source type drive shall consist of the following:
      a. Rectifier section.
      b. Direct current link with capacitors.
      c. Insulated gate bipolar transistor (IGBT), inverter section.
      d. Microprocessor based controls.
      e. Output filter.
   2. Rectifier section:
      a. Provide VFDs with either an 18-pulse rectifier section or an active front end.
      b. 18-pulse rectifier:
         1) Integral phase shifting auto-transformer:
            a) Converts 3-phase utility power to 3 sets of 3 power circuits with each set phase shifted and powering its own 3-phase bridge rectifier.
         2) Minimum 18-pulse diode rectifier section consisting of three 3-phase bridge rectifiers:
            a) Specifically designed as a system to share currents between the bridges to within 1 percent.
      c. Active front end rectifier:
         1) IGBT based converter module:
            a) 6 IGBTs minimum.
         2) Inductor/capacitor/inductor, LCL, harmonic filter:
            a) Low pass filter.
            b) Filter shall be disconnected from the line when the VFD is not running or powered off.
            c) Installed within same enclosure as VFD.
      d. 6-pulse rectifiers with harmonic filters are not allowed.

B. Ratings:
   1. Voltage:
      a. Input voltage: 480 volts plus or minus 10 percent, 3-phase, 3-wire, 60 hertz.
      b. Solidly grounded.
   2. Short-circuit rating:
      a. 65 kA RMS symmetrical.

C. Operational features:
   1. Protective features:
      a. Annunciated at the keypad and available via network connection.
      b. Include the following protective features:
         1) Motor overload protection.
         2) Instantaneous overcurrent.
         3) Instantaneous overvoltage.
         4) Undervoltage.
         5) Power unit overtemperature.

6) Phase loss.
7) VFD output short circuit.
8) VFD output ground fault.
9) Blown fuse with blown fuse indication.
10) IGBT protection.
11) Cooling fan failure.
12) Component failure.
13) Motor overtemperature protection:
a) Winding and bearing temperature:
(1) From 100 ohm, platinum RTDS.
(2) Quantity as specified in Section 16222 - Low Voltage Motors up to 500 Horsepower and the driven equipment specification, or as indicated on the Drawings.

2. Control mode:
   a. VFD shall operate in either a constant volts/hertz or sensorless vector mode. Selectable using the programming keypad.
3. Frequency control:
   a. Minimum of 3 selectable skip frequencies with adjustable bandwidths.
   b. Programmable minimum frequency.
   c. Programmable maximum frequency.
4. Acceleration/Deceleration:
   a. Separately adjustable acceleration and deceleration rates.
   b. Each rate shall be adjustable from 0.01 to 1,800 seconds.
5. Spinning load:
   a. Capable of determining the speed and direction of a spinning load, “catch” the load and accelerate or decelerate it without damage to the load.
6. Programmable loss of signal:
   a. Upon loss of reference speed signal the VFD shall be programmable to either stop, maintain current speed, or default to preselected speed.
7. Power interrupt ride through:
   a. Capable of continuous operation in the event of a power loss of 5 cycles or less.
8. Hardwired inputs and outputs:
   a. Manufacturer’s standard number the following:
      1) Analog inputs:
         a) Configurable as either 0 to 10 volts or 4 to 20 mA.
      2) Analog outputs:
         a) Programmable 4 to 20 mA isolated.
      3) Discrete inputs:
         a) Programmable.
      4) Discrete outputs:
         a) Programmable.
         b) Form C relay contacts.
      5) Potentiometer 3-wire input.
   b. Provide additional inputs and outputs as required to meet the control functions indicated on the Drawings.
9. Communications:
   a. Provide each VFD with a Modbus TCP communications interface module.
   b. Use of gateways is not acceptable.
   c. Control and monitoring of the bypass starter shall be available over the communications network.

d. Protocols shall be certified by the governing authority.

10. Real-time clock:
    a. Capable of providing time-stamped events.
    b. Set locally or via a remote controller.
    c. Programmable for day, month, year, local time zones in hours, minutes and seconds.
11. Diagnostics:
    a. Minimum of 4 fault conditions in memory on a first in - first out basis.
    b. Time stamped.
    c. Operating frequency, drive status and power mode shall also be stored at the time of the fault.
    d. Fault memory shall be maintained in the event of a power outage.
    e. Fault memory shall be accessible via RS-232, RS-422, RS-485, or USB.
12. Automatic restart:
    a. User selectable, automatic restart feature allowing the VFD to restart following a momentary power failure or other VFD fault:
        1) Programmable for up to 9 automatic restart attempts with an adjustable time delay between restart attempts.

2.04 COMPONENTS

A. Enclosure:
1. NEMA Type 12.
2. Provide cooling devices required to maintain the VFD within the manufacturer's specified temperature limits for the Project conditions:
    a. Provide cooling device alarm.

B. Power disconnect:
1. Flange mounted thermal magnetic circuit breaker:
    a. Lockable in the OFF position.

C. Phase shifting transformer for 18-pulse VFDs:
1. Auto-transformer.
2. Integral part of the VFD assembly and factory mounted and wired within the VFD enclosure.
3. Embedded thermal protection.
4. Rated for rectifier duty.
5. Copper or aluminum windings with 180-degree Celsius insulation.

D. Output filter:
1. 3 percent load reactor.

E. Keypad:
1. Furnished with a keypad for programming and control.
2. Password security to protect drive parameters.
3. Mounted on the door of the VFD.
4. Back-lit LCD with a minimum of 2 lines of a minimum of 16 characters each.
5. Programming and display features language: English.
6. Capable of displaying the following parameters:
    a. Speed (percent).
    b. Input current (amperes).

c. Output current (amperes).
d. Output frequency (hertz).
e. Input voltage.
f. Output voltage.
g. Total 3-phase kilowatt.
h. Kilowatt hour meter.
i. Elapsed run time meter.
j. Revolutions per minute.
k. Direct current bus voltage.

7. In addition to keys required for programming, keypad shall have the following:
   a. Automatic/Manual selector.
   b. Start pushbutton.
   c. Stop pushbutton.
   d. Jog pushbutton.
   e. Speed increment.
   f. Speed decrement.
   g. Forward/Reverse selector.
   h. RUN indicator.
   i. PROGRAM indicator.
   j. FAULT indicator.
   k. DRIVE READY indicator.
   l. Diagnostics.
8. Provide the VFD with the hardwired controls indicated on the Drawings.

F. Control power transformer:
   1. Mounted and wired inside the drive enclosure:
      a. Primary and secondary fusing.
   2. Size transformer to supply power to all VFD controls and options as well as any external devices indicated on the Drawings including the motor winding heater.

G. Bypass starter:
   1. Where indicated on the Drawings, the VFD shall be furnished with an integral full voltage non-reversing bypass starter.
   2. Provide motor overload protection for bypass operation.
   3. Provide mechanically/electrically interlocked contactors for bypass operation.
   4. Provide a VFD/Off/Bypass selector switch on the VFD front panel.

H. Line side tuning for AFE VFDs:
   1. Provide 2 sets of line side tuning parameters: One for the normal utility supply, another for the alternate (generator) supply.
   2. Parameters shall be selectable via the communications network or a digital input from a contact enclosure at the automatic transfer equipment or PCIS.
   3. When more than 1 generator source is used, VFD shall be capable of storing multiple generator profiles to use as the alternate supply based on command inputs.

2.05 ACCESSORIES

A. Surge protection:
   1. Metal oxide varistors:
      a. Provide protection for the VFD against:
         1) Line transients: 5,000-volt peak minimum.
         2) Line to ground transients: 7,000-volt peak minimum.

B. Conformal coating:
   1. Provide conformal coating material applied to electronic circuitry and printed circuit boards to act as protection against moisture, dust, temperature extremes, and chemicals such as H_2S and chlorine.

C. Air filters:
   1. Mounted on the outside of the VFD enclosure:
      a. Replaceable without requiring that the VFD be turned off or the door opened.
   2. Located on the front or top of the VFD enclosure:
      a. Side or rear mounted air filters are not acceptable.

2.06 FINISHES

A. Enclosure finish shall be manufacturer's standard gray.

2.07 SOURCE QUALITY CONTROL

A. Source Testing:
   1. Not witnessed.
   2. Testing procedures specified are the minimum acceptable requirements. Manufacturer may perform additional tests at its discretion.
   3. Failure of any component during testing requires replacement of the faulted component and a complete retest.
   4. Component tests:
      a. Preliminary inspection:
         1) Verify that components are correct.
         2) Verify that connections are properly torqued.
      b. Printed circuit boards:
         1) Test each printed circuit board in accordance with the manufacturer's standard testing procedure.
      c. Wiring:
         1) Control and power wiring continuity verified point-to-point.
         2) Hi-pot power and control wiring at manufacturer's recommended levels.
         3) Verify ground bond resistance.
      d. Load testing:
         1) No load testing in accordance with the manufacturer's standard factory test procedure.
         2) Full load testing:
            a) Test each VFD and all control logic with a representative motor or dynamometer load to simulate field operation conditions at 25 percent, 50 percent, and 100 percent full load current.

b) Tests shall be conducted in a manner in which the inverter (IGBT) section supplies all the output power (kw) of the VFD system. Control strategies using a contactor or other means of bypassing the VFD when operating at the line frequency shall not be permitted.
c) Tests shall be conducted using a minimum output frequency of 60 hertz, and a minimum switching frequency of 2.5 kHz.

5. Submit control description checklist and IO checklist organized by VFD for use during the control logic portion of the testing.
6. Furnish test reports and the Manufacturer's Certificate of Source Testing. Include the following:
   a. Efficiency at rated power output and output frequency of 60 hertz.
   b. Power factor at 0 percent, 25 percent, 50 percent, 75 percent, and 100 percent speed.
   c. Harmonics at the input terminals of the VFD at 100 percent speed and 100 percent load:
      1) Voltage distortion: Measure individual harmonics up to and including the 50th harmonic and total harmonic distortion.
      2) Current distortion: Measure individual harmonics up to and including the 50th harmonic and total demand distortion.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. General:
   1. Furnish cables, conduit, lugs, bolts, and other accessories needed to complete installation of the VFD (free-standing or within motor control center).
   2. Assemble and install the VFD in the locations and with the layouts indicated on the Drawings.
   3. Perform Work in accordance with the manufacturer's instructions and Shop Drawings.
   4. Furnish components and equipment as required to complete the installation.
   5. Replace any hardware lost or damaged during the installation or handling to provide a complete installation.
   6. Install free-standing enclosures on a raised concrete housekeeping pad:
      a. Provide structural leveling channels in accordance with the manufacturer's recommendations to provide proper alignment of the units.
      b. Weld and/or bolt the VFD frame to the leveling channels.

7. Provide openings in top or bottom of the VFD (free-standing or within motor control center) enclosure for conduit only, no additional openings will be allowed:
    a. Improperly cut holes will require that the entire panel be replaced:
        1) No hole closers or patches will be allowed.
8. Bundle circuits together and terminate in each unit:
    a. Tie with nylon wire ties. As specified in Section 16123 - 600-Volt or Less Wires and Cables.
    b. Label wires at each end with wire numbers shown on the approved Control Drawings.
    c. Connections to and from the VFD (free-standing or within motor control center) enclosure must be made via terminal blocks.

C. Installation Verification:
1. Furnish Manufacturer's Certificate of Installation Verification.

3.03 FIELD QUALITY CONTROL

A. As specified in Section 16050 - Common Work Results for Electrical.

B. Field electrical acceptance testing:
1. As specified in Section 16950 - Field Electrical Acceptance Tests.

C. Provide the services of a VFD manufacturer representative for start-up assistance and training:
1. Inspection and field adjustment:
    a. Supervise the equipment installation and confirm controls have been properly installed, aligned, adjusted, and readied for operation.
    b. Configure AFE drives for new and existing sources (utility sources and on-site generation in possible operating configurations).
2. Start-up field testing:
    a. Provide technical direction for testing, checkout, and startup of the VFD equipment in the field.
    b. Under no circumstances are any portions of the drive system to be energized without authorization from the manufacturer's representative.
    c. Compliance with the following specified parameters shall be verified by the VFD manufacturer:
        1) Motor terminal voltage:
            a) Make field measurements at the motor connection box.
            b) Make measurements of the full speed range of the VFD.
            c) Make measurements with a recording type oscilloscope.
        2) Harmonics:
            a) Make field measurements at the input terminals of the VFD with and without the VFD in operation.
            b) Make measurements with a recording type harmonic analyzer displaying individual and total harmonic currents and voltages:
                (1) Record currents and voltages for a minimum of 10 minutes.
                (2) Analyzers using snapshots are not acceptable.
    d. Utility sources and on-site generation shall be operational for start-up field testing.

3. Furnish field acceptance test procedures and forms used during the tests:
    a. Certification that the actual measured harmonic distortion for both voltage and current is within the specification limits at the installed site.
    b. Certification that the actual measured peak voltage at the motor terminations is less than 90 percent of the motor insulation dielectric withstand level.

3.04 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.

3.05 ADJUSTING

A. Make adjustments as necessary and recommended by the manufacturer, Engineer, or testing firm.

B. Provide the services of a VFD manufacturer factory technician to make drive parameter and protective device settings:
    1. Protective device settings provided by the VFD manufacturer in accordance with the manufacturer of the driven equipment requirements.
    2. Provide documentation of VFD settings, including, but not limited to:
        a. Minimum speed.
        b. Maximum speed.
        c. Skip speeds.
        d. Current limit.
        e. Acceleration time.
        f. Deceleration time.
        g. Carrier frequency.

C. Programming:
    1. Manufacturer/Supplier may contract with the Project programmer for portions of the tasks below.
    2. Provide network communication card between the drive to the Owner’s control system as required.
    3. Provide control logic as indicated in the control descriptions.
    4. Configure network communications with applicable security settings, IP addresses and any other addressing tables required to provide a fully functioning system.
    5. Coordinate IP addresses with the Owner.
    6. Coordinate data exchange approach for efficient communications to the Owner’s control and maintenance systems. This effort will include a coordination meeting to discuss the data exchange approach including formatting and mapping.
    7. Provide witnessed Source Testing to prove out overload control logic as well as interaction with the Owner’s control and maintenance systems at the Supplier’s facility. ICSC/programmer shall attend witnessed testing.

END OF SECTION

SECTION 16272

DRY-TYPE TRANSFORMERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Enclosed dry-type transformers:
      a. Rated 1 to 1,000 kilovolt-amperes, single and 3-phase.
      b. Primary voltage 600 volts and below.

1.02 REFERENCES

A. Institute of Electrical and Electronics Engineers (IEEE):
   1. 389 - IEEE Recommended Practice for Testing Electronics Transformers and Inductors.
   2. C57.96 - IEEE Guide for Loading Dry-Type Distribution and Power Transformers.

B. Underwriters Laboratory (UL):
   1. 1561 - Standard for Dry-Type General Purpose and Power Transformers.

C. United States Department of Energy (DOE):
   1. 10 CFR Part 431 - Energy Efficiency Program for Certain Commercial and Industrial Equipment.

1.03 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Catalog cutsheets.
   2. Nameplate data.
   3. Dimensions:
      a. Height.
      b. Width.
      c. Depth.
   4. Inrush current.
   5. Insulation system and temperature constraints.
   6. Number and rating of taps.
   7. Sound levels.

8. Connection diagrams:
    a. Primary.
    b. Secondary.
9. BIL rating.
10. Required clearances.
11. Percent impedance.
12. Efficiency.
13. Certification of full capacity capability at the Project elevation and ambient conditions.
14. For equipment installed in structures designated as seismic design category C, D, E, or F, submit the following as specified in Section 01850 - Design Criteria:
    a. Manufacturer's statement of seismic qualification with substantiating test data.
    b. Manufacturer's special seismic certification with substantiating test data.

C. Delegated Design Submittals:
1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria:
    a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
    b. For equipment installed outdoors.

D. Installation instructions:
1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
2. Provide manufacturer's installation instructions.

E. Quality Control Submittals:
1. Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide equipment and components that are fully rated for the site elevation and operating environment where the equipment will be installed as specified in Section 01850 - Design Criteria and as indicated on the Drawings.

B. Provide 3-phase or 1-phase, 60 hertz dry-type with voltage ratings, kilovolt-ampere capacities, and connections as indicated on the Drawings:
   1. Transformers shall provide full capacity at the Project elevation and environmental conditions as specified in Section 01850 - Design Criteria after all derating factors have been applied.
   2. Suitable for continuous operation at full rating with normal life expectancy in accordance with IEEE C57.96.

2.02 MANUFACTURERS

A. One of the following or equal:
   1. ABB.
   2. Eaton.
   3. Jefferson.
   4. Schneider Electric.

2.03 MATERIALS

A. Cores:
   1. Non-aging, grain-oriented silicon steel.
   2. Magnetic flux densities below the saturation point.

B. Windings:
   1. High-grade magnet wire.
   2. Impregnated assembly with non-hydroscopic, thermo-setting varnish:
      a. Cured to reduce hot-spots and seal out moisture.
   3. Material electrical grade:
      a. Copper.

2.04 EQUIPMENT

A. General:
   1. 10 kilovolts BIL for 600-volt class windings.
   2. Sound levels, in accordance with IEEE 389 test conditions, not to exceed:

Kilovolt-Amperes Range	Audible Sound Level (dB)
1-9	40
10-50	45
51-150	50
151-300	55
301-500	60
501-700	62
701-1,000	64

   3. Taps:
      a. 15 kilovolt-amperes and less:
         1) Two 5 percent full capacity primary taps below rated voltage.
      b. 25 kilovolt-amperes and larger:
         1) Four 2.5 percent full capacity primary taps below rated voltage.

2) Two 2.5 percent full capacity primary taps above rated voltage.
c. Operated by a tap changer handle or tap jumpers accessible through a panel.
4. Terminals:
a. UL listed for either copper or aluminum conductors.
b. Rated for 75 degrees Celsius.
5. Daily overload capacities, at rated voltage and without reduction in life, in accordance with IEEE C57.96.

B. Transformers less than 15 kilovolt-amperes:
1. Insulation class: 185 degrees Celsius.
2. Temperature rise: 115 degrees Celsius.

C. Energy efficient transformers 15 kilovolt-amperes and larger:
1. Insulation class: 220 degrees Celsius.
2. Temperature rise: 115 degrees Celsius, except as noted below:
a. 150-degree Celsius rise for dry-type transformers located in motor control centers.
3. Efficiency:
a. In accordance with DOE 10 CFR Part 431.

D. Enclosures:
1. Heavy gauge steel:
a. Indoor: NEMA Type 2.
2. Louvers to limit coil temperature rise to the value stated above, and case temperature rise to 50 degrees Celsius.
3. Built-in vibration dampeners to isolate the core and coils from the enclosure:
a. Neoprene vibration pads and sleeves.

2.05 ACCESSORIES

A. Nameplates:
1. Non-corrosive metal or UL listed non-metallic:
a. Stamped, engraved or printed with the following information:
1) Phases.
2) Frequency.
3) Kilovolt-ampere rating.
4) Voltage ratings.
5) Temperature rise.
6) Impedance.
7) Insulation class.
8) BIL rating.
9) Connection diagram.
10) Weight.
11) Manufacturer.
12) Identification “transformer”.
13) Classes of cooling.
14) Tap voltage(s).
15) Vector diagram.

2.06 FINISHES

A. Finish to consist of de-greasing, phosphate cleaning, and an electrodeposited manufacturer's standard gray enamel rust-inhibiting paint.

2.07 SOURCE QUALITY CONTROL

A. Factory tests:
   1. Applied voltage test to each winding and from each winding to the core:
      a. 600-volt class winding 4.5 kilovolt.
   2. Induced voltage test at 2 times normal voltage and 400 hertz for 1,080 cycles.
   3. Voltage ratio and polarity.
   4. Sound level, performed in a test room with ambient sound level not exceeding 24 dB.
   5. Perform tests in accordance with UL 1561.
   6. Furnish test reports and Manufacturer's Certificate of Source Testing.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. General:
   1. Mounted as indicated on the Drawings.
   2. Install where not in direct contact with building structure.
   3. Install on single layer vibration pad under the entire mounting surface:
      a. Manufacturers: The following or equal:
         1) Korfund.
   4. Make any necessary connections to the enclosure with liquidtight flexible conduit having neoprene gaskets and insulated ground bushings.
   5. Ground the enclosure:
      a. To an equipment ground conductor in the conduit.
      b. To the facility grounding electrode system.
   6. Floor mounted transformers:
      a. Install transformers on housekeeping pads.
      b. Install transformers with adequate space from walls or other enclosures for proper ventilation in accordance with the manufacturer's recommendations.

3.03 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
   1. As specified in Section 16950 - Field Electrical Acceptance Tests.

3.04 ADJUSTING

A. Set the transformer taps as required to obtain nominal output voltage on the secondary terminals.

END OF SECTION

SECTION 16285

SURGE PROTECTIVE DEVICES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. High-energy surge protective devices.

1.02 REFERENCES

A. Institute of Electrical and Electronics Engineers (IEEE):
   1. C62.41.1 - Guide on the Surge Environment in Low-Voltage (1,000 V and less) AC Power Circuits.
   2. C62.41.2 - Recommended Practice on Characterization of Surges in Low-Voltage (1,000 V and Less) AC Power Circuits.
   3. C62.45 - Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage (1,000 V and Less) AC Power Circuits.
   4. C62.62- Standard Test Specifications for Surge Protective Devices (SPDs) for Use on the Load Side of the Service Equipment in Low Voltage (1,000 V and less) AC Power Circuits.

B. International Electrotechnical Commission (IEC).

C. National Electrical Manufacturers Association (NEMA).

D. National Fire Protection Agency (NFPA):
   1. 20 - Standard for the Installation of Stationary Pumps for Fire Protection.
   2. 70 - National Electric Code (NEC).
   3. 75 - Standard for the Fire Protection of Information Technology Equipment.
   4. 780 - Standard for the Installation of Lightning Protection Systems.

E. Underwriters Laboratory (UL):
   1. 96A - Standard for Installation Requirements for Lightning Protection Systems.
   2. 1283 - Standard for Electromagnetic Interference Filters.
   3. 1449 - Standard for Surge Protective Devices.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. I_n: Nominal discharge current.
   2. MCOV: Maximum continuous operating voltage.
   3. MOV: Metal oxide varistor.
   4. SAD: Silicon avalanche diode.
   5. SCCR: Short circuit current rating.

6. SPD: Surge protective device.
7. VPR: Voltage protection rating.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Furnish complete product data confirming detailed compliance or exception statements to all provisions of this Section.
   2. Manufacturer's catalog cutsheets indicating:
      a. Manufacturer and model numbers.
      b. Ratings of each SPD, including, but not limited to:
         1) Short circuit current rating.
         2) Nominal discharge current.
         3) Maximum continuous operating voltage.
         4) Voltage protection rating.
         5) System voltage.
         6) System frequency.
         7) Surge current capacity.
   3. Submit independent test data from a nationally recognized testing laboratory verifying the following:
      a. Overcurrent protection.
      b. UL 1449.

C. Shop Drawings:
   1. Electrical and mechanical drawings that detail:
      a. Unit dimensions.
      b. Weights.
      c. Components.
      d. Field connection locations.
      e. Mounting provisions.
      f. Connection details.
      g. Wiring diagram.

D. Quality Control Submittals:
   1. Manufacturer's representative qualifications.
   2. Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.

E. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

F. Operation and maintenance manuals:
   1. As specified in Section 01782 - Operation and Maintenance Manuals.
   2. Provide the manufacturer's manual with installation, start-up, and operating instructions for the specified system.

1.05 QUALITY ASSURANCE

A. Provide SPD units that are designed, manufactured, tested and installed in compliance with the following codes and standards:
   1. IEEE C62.41.1, C62.41.2, C62.45, C62.62.
   2. Federal Information Processing Standards Publication 94 (FIBS PUB 94).
   3. NEMA.
   4. NFPA 20, 70, 75, and 780.
   5. UL 1449 current edition and UL 1283.

B. IEC 801.

C. Provide surge protective devices that are suitable for application in IEEE C62.41.1, C62.41.2 Category A, B, and C3 environments, as tested to IEEE C62.45.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Coordinate with and provide SPD equipment to the electrical equipment manufacturer before final assembly and factory testing.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

B. Extended warranty:
   1. Furnish a manufacturer's standard parts and labor warranty from date of shipment against any part failure when installed in compliance with the manufacturer's written instructions, UL listing requirements, and any applicable national, state, or local electrical codes.
   2. Warranty shall include:
      a. Direct, factory trained employees must be available within 48 hours for assessment of the problem.
      b. A 24-hour toll-free 800-number for warranty support.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide surge protection as indicated on the Drawings.

2.02 MANUFACTURERS

A. One of the following or equal:
   1. ABB.
   2. Eaton.

3. Southern Tier Technologies.
4. Schneider Electric.

2.03 EQUIPMENT

A. Provide Type 1 or Type 2 SPD units as required for the locations indicated on the Drawings.

B. Electrical requirements:
   1. SPD ratings are to be consistent with the nominal system operating voltage, phase, and configuration as indicated on the Drawings.
   2. MCOV:
      a. For the SPD and all components in the suppression path (including all MOVs, SADs, and selenium cells): Greater than 115 percent of the nominal system operating voltage.
   3. Operating frequency:
      a. 47 to 63 hertz.
   4. SCCR:
      a. 65 kAIC minimum, but not less than the equipment it is connected to as indicated on the Drawings.
      b. Marked on the SPD in accordance with UL 1449 and the NEC.
   5. Nominal discharge current I_n:
      a. 20 kA.
   6. Maximum VPR:

Modes	240/120 3W	208Y/120	480Y/277	480 V
L-N, L-G, N-G	700	700	1,200	1,800
L-L	1,200	1,200	2,000	1,800

   7. Peak surge current:
      a. Service entrance locations:
         1) 240 kA per phase minimum.
         2) 120 kA per mode minimum.
      b. Branch locations:
         1) 120 kA per phase, minimum.
         2) 60 kA per mode minimum.

C. Protection modes:
   1. Provide SPD protection modes as follows:
      a. Line to Neutral (L-N) where applicable.
      b. Line to Ground (L-G).
      c. Neutral to Ground (N-G), where applicable.

D. Environmental requirements:
   1. Storage temperature:
      a. -40 to 122 degrees Fahrenheit.
   2. Operating temperature:
      a. 32 to 140 degrees Fahrenheit.
   3. Relative humidity:
      a. 5 to 95 percent.

4. Audible noise:
    a. Less than 45 dBa at 5 feet (1.5 m).
5. Operating altitude:
    a. Zero to 12,000 feet above sea level.

2.04 COMPONENTS

A. Enclosure:
    1. Located in electrical equipment as indicated on the Drawings.

B. Internal connections:
    1. Provide low impedance copper plates for intra-unit connections:
        a. Attach surge modules using bolted connections to the plates for low impedance connections.
    2. Size connections, conductors, and terminals for the specified surge current capacity.

C. Surge diversion modules:
    1. MOV:
        a. Where multiple MOVs are used in parallel, utilize computer matched MOVs to within 1 volt variance and tested for manufacturer's defects.

D. Overcurrent protection:
    1. Individually fuse components, including suppression, filtering, and monitoring components:
        a. Rated to allow maximum specified nominal discharge current capacity.
        b. Overcurrent protection that limits specified surge currents is not acceptable.

E. Connections:
    1. Provide terminals to accommodate wire sizes up to #2 AWG.

2.05 ACCESSORIES

A. Unit status indicators:
    1. Provide red and green solid-state indicators, with printed labels, on the front cover to redundantly indicate on-line unit status:
        a. The absence of the green light and the presence of the red light indicate that surge protection is reduced and service is needed to restore full operation.
        b. Indicates the status of protection on each mode or phase.

B. Dry contacts for remote monitoring:
    1. Electrically isolated Form C dry contacts (1 A/125 VAC, or 2 A/24 VDC) for remote monitoring of system integrity, and indication of under voltage, phase and/or power loss.

C. Provide an audible alarm which activates under any fault condition:
    1. Alarm On/Off switch to silence the alarm.
    2. A visible LED will confirm whether alarm is On or Disabled.
    3. Locate both switches and the audible alarm on the unit's front cover.

D. Provide transient counter to count transient voltage surges:
   1. LCD readout located on the unit's front cover.
   2. Counter to utilize batteries with a 10-year nominal life or non-volatile memory to maintain accurate counts in the event of power loss.

2.06 SOURCE QUALITY CONTROL

A. Source Testing:
   1. Perform manufacturer's standard factory test:
      a. Perform testing in accordance with UL 1449.
   2. Furnish test reports and Manufacturer's Certificate of Source Testing.

B. Permanently affix surge rating to the SPD.

PART 3 EXECUTION

3.01 INSTALLATION

A. Follow the manufacturer's recommended installation practices and comply with all applicable codes.

B. Special techniques:
   1. Do not subject SPD to insulation resistance testing.

3.02 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
   1. As specified in Section 16950 - Field Electrical Acceptance Tests.

3.03 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.

END OF SECTION

SECTION 16290

ELECTRICAL POWER MONITORING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Power meters and accessories.

1.02 REFERENCES

A. American National Standard Institute (ANSI):
   1. C12.20 - Electricity Meters - 0.2 and 0.5 Accuracy Classes.

B. Institute of Electrical and Electronics Engineers (IEEE):
   1. C57.13.6 - Standard for High Accuracy Instrument Transformers.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. FS - Full scale.
   2. SSM - Solid state multifunction power meter.
   3. THD - Total harmonic distortion.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Power meter data, including, but not limited to:
      a. Power requirements.
      b. Communications protocols.
      c. Input/outputs.
      d. Dimensions.
      e. Measurement functions.
      f. Front panel controls.
      g. Display characteristics.
   2. Accessory data:
      a. Test switch dimensions and wiring diagrams.

C. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

D. Operation and maintenance manuals:
   1. As specified in Section 01782 - Operation and Maintenance Manuals.
   2. Descriptive and technical bulletins and sales aids edited to reflect only the equipment to be provided and covering each of the components in the system.

3. A maintenance section including instruction leaflets and technical data necessary to setup, change setup and maintain the power meters.
4. Original licensed copies of software and software manuals.

E. Configuration files and reports:
1. Settings, including, but not limited to:
a. Device tag name.
b. IP addresses.
c. Alarm settings.
d. Time synchronization settings.
e. Security settings.
2. Configuration files are to be provided in the selected manufacturer's native format.
3. Configuration reports are to be submitted in .PDF format, listing each configured parameter setting and description of each parameter.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. One of the following or equal:
1. ABB.
2. Allen-Bradley.
3. Eaton.
4. Electro Industries/GaugeTech Power Meters.
5. GE Multilin.
6. Schneider Electric.

2.02 COMPONENTS

A. Power meters:
1. Power meter shall include at a minimum:
a. Individual phase currents, within 0.5 percent FS.
b. Phase-to-phase and phase-to-neutral voltages, within 0.5 percent FS.
c. Watts, VARs, VA, within 1 percent FS.
d. Watt-hours, VAR-hours, VA-hours, within 1 percent FS.
e. PF (apparent and displacement), within 2 percent FS.
f. Frequency, within 1 percent hertz.
g. Demand:
1) Ampere, within 0.5 percent FS.
2) Watt, VAR, VA, within 1 percent FS.

h. Minimum and maximum values:
    1) Volts (L-L), volts (L-N), current, watts, VARS, VA.
    2) Power factor:
        a) Apparent.
        b) Displacement.
        c) Frequency.
i. Synch-input kilowatts utility.
j. LCD with LED backlight.

2.03 ACCESSORIES

A. Current transformers:
    1. Ring type:
        a. Suitable for service within low or medium voltage equipment as indicated on the Drawings.
        b. Designed to have a mechanical and thermal rating to withstand short-circuit current, stresses, and heating effects equal to the rating of the equipment of the application.
    2. Current ratio: As indicated on the Drawings.
    3. Rated in accordance with IEEE C57.13.6 with accuracy of the current transformers suitable for relay accuracy class and rated for 200 percent burden for the required connected devices.
    4. Identify polarity with standard marking or symbols.
    5. Capable of carrying rated primary current continuously without damage.
    6. Install secondary wiring from current transformers in a suitable wiring trough, or conduit to proper short-circuiting type terminal blocks for connection to relays, instruments, and other devices.
    7. 3 CTs for 3-wire systems. 4CTs for 4-wire systems.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install power meters in accordance with the manufacturer’s instructions in the electrical equipment as indicated on the Drawings.

3.02 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
    1. As specified in Section 16950 - Field Electrical Acceptance Tests.

3.03 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.

END OF SECTION

SECTION 16305

ELECTRICAL SYSTEM STUDIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Short-circuit fault analysis studies.
   2. Protective device coordination study.
   3. Arc-flash hazard study.

1.02 REFERENCES

A. American National Standards Institute (ANSI).

B. Institute of Electrical and Electronics Engineers (IEEE):
   1. 1584 - IEEE Guide for Performing Arc-Flash Hazard Calculations.

C. National Fire Protection Association (NFPA):
   1. 70E - Standard for Electrical Safety in the Workplace.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Modified: Equipment with load additions or with loads being removed that affect fault current, include new overcurrent protective devices that require settings and device coordination, or require additional/removal/replacement of arc flash labels.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Signed and sealed electrical system study reports.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Credentials of the individual(s) performing the study and the individual in responsible charge of the study.

C. General:
   1. Format and quantity:
      a. 6 bound copies of all final reports.
      b. 3 complete sets of electronic files on CD or DVD media, including the electrical system model(s), configuration files, custom libraries, and any

other files used to perform the studies and produce the reports. Also provide an electronic version of the bound reports in PDF format.

2. One-line diagrams:
    a. The following information shall be included at a minimum:
        1) Motor horsepower.
        2) Transformer data:
            a) kVA.
            b) Configuration.
        3) Cable data:
            a) Insulation.
            b) Size.
            c) Length.
    b. Fully legible at 11-inch by 17-inch size.

D. Initial short-circuit fault analysis:
    1. Based on the Contract Documents and electric utility information.
    2. Include a description of all operating scenarios.
    3. One-line diagrams.
    4. Indicate the estimated available short-circuit current at the line side terminals of each piece of equipment covered by the scope of the study.
        a. Measure conductor lengths from the Drawings. Use of arbitrary short conductor lengths is not allowed.
        b. Provide a list of assumptions used in the initial study.

E. Delegated Design final studies and reports:
    1. Include the following sections at a minimum:
        a. Copies of correspondence and data obtained from the electric utility company.
        b. Letter certifying the inspection and verification of existing equipment and incorporation of applicable RFI's and change orders.
        c. Short-circuit fault analysis:
            1) Modify the initial short-circuit fault analysis as follows:
                a) Utilize the actual equipment provided on the project.
                b) Utilize conductor lengths based on installation.
                c) Update one-line diagrams to show as-built conditions.
            2) Descriptions, purpose, basis, assumptions, recommendations, and scope of the study.
            3) Normal system connections and those that result in maximum fault conditions.
            4) Tabulation of circuit breaker, fuse, and other protective device ratings compared to maximum calculated short-circuit duties.
            5) Fault current calculations for the cases run including a definition of terms and guide for interpretation of computer software printouts.
        d. Protective device coordination study shall include:
            1) Descriptions, purpose, basis, assumptions, recommendations, and scope of the study.
            2) List requirements used in the selection and setting criteria for any protective devices.
            3) TCCs graphically indicating the coordination proposed for the system on log-log graphs:
                a) All TCCs shall be in color.

4) Tabulation of relay, fuse, circuit breaker, and other protective devices in graphical form with a one-line diagram to display area coordination.
5) Where coordination could not be achieved, an explanation shall be included in the report to support the statement along with recommendations to improve coordination. Recommended equipment modifications or settings shall be in a tabulated form.
6) Protective device settings in a tabulated format.

e. Include in the arc-flash hazard study:
1) Descriptions, purpose, basis, assumptions, recommendations, and scope of the study.
2) Normal system connections and those that result in maximum arc-flash conditions.
3) Arc-flash raw data, calculations, and assumptions.

f. Form and format of arc-flash labels.
1) Label data:
a) Identifying the content of each label.
b) Identifying the location of each label.

F. Submit course outline for Owner Training.

1.06 QUALITY ASSURANCE

A. Qualifications of the entity responsible for electrical system studies:
1. A minimum of 5 years of experience in power system analysis is required for the individual in responsible charge of the studies.
2. Short-circuit fault analysis, protective device coordination, and arc-flash hazard studies shall be performed with the aid of a digital computer program:
a. Point-to-point calculations are not acceptable.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. The individual performing the studies shall visit the site and collect necessary field data in order to perform and complete comprehensive electrical system studies.
2. Obtain, for all equipment, the required data for preparation of the study, including, but not limited to:
a. Transformer kilovolt-ampere (kVA), nameplate data, and impedances.
b. Generator impedances, kilovolt-ampere (kVA), and voltage.
c. Generator decrement curves.
d. Bus withstand ratings.
e. Cable and bus data.
f. Protective device taps, time dials, instantaneous pickups, and time-delay settings.
g. As-built lengths for new wire and cable installations covered by the studies.
h. Grounding schemes (solidly grounded or resistive grounded).
3. Obtain the electric utility information on the minimum and maximum available fault current, minimum and maximum utility impedances, utility protective device settings including manufacturer and model number, interrupting ratings, X/R ratios, and model information one level above the point of connection:
a. Utility tolerances and voltage variations.

b. Coordinate with the utility for changes to their protective devices and settings to achieve a coordinated system between the utility and the Owner.

4. Obtain equipment layouts and configurations from the manufacturer's final Submittal requirements and Project layout drawings as required.
5. Bus and conductor data:
   a. Use impedances of the actual installed or specified conductors, unless otherwise indicated.
   b. Use cable and bus impedances calculated at 25 degrees Celsius, unless otherwise indicated.
   c. Use 600-volt cable reactance based on typical dimensions of actual installed or specified conductors, unless otherwise indicated.
   d. Use bus withstand values for all equipment having buses.

B. Use medium-voltage cable reactance based on typical dimensions of shielded cables with 133 percent insulation levels, unless otherwise indicated.

C. Certification:
1. Submit written certification signed by the professional engineer conducting the study, equipment supplier, and electrical subcontractor, stating that the data used in the study is correct and captures all RFIs, as-builts, and change orders affecting the study.

D. Meetings:
1. Electrical system study meetings:
   a. As specified in Section 01312 - Project Meetings.
   b. The individual conducting the electrical system studies leads the meeting.
   c. Meet with the Owner and Engineer 3 times.
   d. First meeting:
      1) Discuss the scope of the studies.
      2) Confirm electrical system operating modes.
      3) Confirm assumptions to be used in the electrical system study with the Owner, including, but not limited to:
         a) Maximum protective device fault clearing time.
      4) Discuss the Owner's operational requirements for both normal operation and maintenance.
   e. Second meeting:
      1) Inform the Owner of the results of the study and impacts on normal operation and maintenance including:
         a) Protective device coordination problems and recommended solutions.
         b) Explanation of the arc-flash hazard study results and its potential impact on operations.
         c) Recommendations for reduction of arc-flash category levels including reduction of protective device settings or changes in operational practices.
   f. Final meeting:
      1) Prior to substantial completion.
      2) Discuss changes to the studies based on the previous meeting.
      3) Discuss with the Owner how changes to the electrical system may change the arc-flash hazard category.

E. Sequencing:
    1. Below is an outline of the typical work sequence. Proposed changes to the work sequence may be reviewed and approved by the Engineer.
        a. First system study meeting.
        b. Submit the initial short-circuit fault analysis study before submittal of any electrical equipment.
            1) Only the initial short-circuit results will be reviewed.
        c. Site visit to gather data on the existing facility systems for all studies:
            1) Make multiple trips as required to obtain data for the short-circuit fault analysis, protection device coordination, and arc flash hazard studies.
        d. Submit the preliminary short-circuit fault analysis, protective device coordination, and arc-flash hazard studies after the approval of all electrical equipment.
        e. Second system study meeting for preliminary results.
        f. Update the model with changes to the electrical system made during start-up and commissioning.
        g. Final system study meeting.
        h. Submit the final electrical system studies.
        i. Label equipment with approved arc-flash labels.
        j. Owner Training.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. General study requirements:
    1. Scope:
        a. Short-circuit fault analysis, protective device coordination, and arc-flash hazard studies shall include all equipment in the power distribution system, including, but not limited to:
            1) Utility equipment (utility transformer and primary protective device).
            2) Available utility fault contribution current.
            3) All electrical equipment including:
                a) Dry-type transformers.
                b) 240- and 208-volt panelboards.
            4) Motors.
            5) Vendor control panels.
            6) HVAC equipment.
        b. Study scenarios:
            1) Include all possible electrical system configurations.
    2. Motors:
        a. Each motor shall be individually modeled:
            1) Grouping of motors for fault contribution current is not acceptable.

b. Motors with variable frequency drives (VFDs) may be assumed to have no contribution to fault current, unless VFDs are equipped with bypass contactors.
    1) If VFDs are equipped with bypass contactors, perform the fault current and arc flash study assuming the of bypass contactor is in the closed position.
3. Use the equipment, bus, and device designations as indicated on the Drawings for all studies.

B. Short-circuit fault analysis study additional requirements:
1. Calculate 3-phase bolted fault, line-to-line fault, line-to-ground fault, double line-to-ground fault, short-circuit 1/2 cycle momentary symmetrical and asymmetrical RMS, 1-1/2 to 4 cycle interrupting symmetrical RMS, and 30-cycle steady-state short-circuit current values at each piece of equipment in the distribution system.
2. Evaluate bus bracing, short-circuit ratings, fuse interrupting capacity and circuit-breaker-adjusted interrupting capacities against the fault currents, and calculate X/R values:
    a. Identify and document all devices and equipment as either inadequate or acceptable.
3. Calculate line-to-ground and double line-to-ground momentary short-circuit values at buses having ground-fault devices.
4. Provide calculation methods, assumptions, one-line diagrams, and source impedance data, including utility X/R ratios, typical values, recommendations, and areas of concern.

C. Protective device coordination study additional requirements:
1. Furnish protective device settings for functions indicated on the Drawings, including, but not limited to:
    a. Current.
2. Provide log-log form time-current curves (TCCs) graphically indicating the coordination proposed for the system:
    a. Include with each TCC a complete title and one-line diagram with legend identifying the specific portion of the system covered by the particular TCC:
        1) Typical TCCs for identical portions of the system, such as motor circuits, are acceptable as allowed by the Engineer.
    b. Include a detailed description of each protective device identifying its type, function, manufacturer, and time-current characteristics:
        1) These details can be included on the TCC.
    c. Include a detailed description of each protective device tap, time dial, pickup, instantaneous, and time delay settings:
        1) These details can be included on the TCC.
3. TCCs shall include all equipment in the power distribution system where required to demonstrate coordination. Include utility relay and fuse characteristics, medium-voltage equipment protective relay and fuse characteristics, low-voltage equipment circuit breaker trip device characteristics, transformer characteristics, motor and generator characteristics, and characteristics of other system load protective devices:
    a. Include devices down to the largest branch circuit and largest feeder circuit breaker in each motor control center, main breaker in branch panelboards, and fused disconnect switches.

b. Provide ground fault TCCs with adjustable settings for ground fault protective devices.
c. Include manufacturing tolerances and damage bands in plotted fuse and circuit breaker characteristics.
d. On the TCCs, show transformer full load currents, transformer magnetizing inrush, ANSI transformer withstand parameters, and transformer damage curves.
e. Cable damage curves.
f. Terminate device characteristic curves at a point reflecting the maximum symmetrical or asymmetrical fault current to which the device is exposed based on the short-circuit fault analysis study.
g. Coordinate time interval medium-voltage relay characteristics with upstream and downstream devices to avoid nuisance tripping.

4. Suggest modifications or additions to equipment rating or settings in a tabulated form.

D. Arc-flash hazard study additional requirements:
1. Include the calculated arc-flash boundary and incident energy (calories/square centimeter) at each piece of equipment in the distribution system:
a. Perform study with 15 percent arcing fault variation in accordance with IEEE 1584.
b. Perform arc-flash calculations at minimum and maximum utility fault contributions.
c. Perform arc-flash calculations for both the line side and load side of the switchgear, switchboard, motor control center, and panelboard main breakers.
d. Perform arc-flash calculations for short-circuit scenarios with all motors on for 3 to 5 cycles and with all motors off.
2. Provide executive summary of the study results:
a. Provide summary based upon worst case results.
3. Provide a detailed written discussion and explanation of the tabulated outputs:
a. Include all scenarios.
4. Provide alternative device settings to allow the Owner to select the desired functionality of the system:
a. Minimize the arc-flash energy by selective trip and time settings for equipment maintenance purposes.
b. Identify the arc-flash energy based upon the criteria of maintaining coordination and selectivity of the protective devices.

2.02 MANUFACTURERS

A. Electrical system study software: The following, no equal:
1. SKM Systems Analysis, Powertools.

2.03 COMPONENTS

A. Arc-flash hazard labels:
1. Dimensions:
a. Minimum 5 inches by 3.5 inches.
2. Materials:
a. Polyester with polyvinyl polymer over-laminate.

b. Self-adhesive.
c. Resistant to:
1) UV.
2) Chemicals and common cleaning solvents.
3) Scuffing.
4) Wide temperature changes.

3. Contents:
a. Short-circuit bus identification.
b. Calculated incident energy (calories/square centimeter) range:
1) Based on worst-case study results.
c. Arc-flash protection boundary.
d. Shock hazard boundary:
1) Contractor may provide separate labels for indication of the shock hazard boundary.
e. Fed from:
1) Identify the tag number of the upstream equipment providing power.

4. Color scheme:
a. For locations above 40 calories/square centimeter:
1) White label with red “DANGER” strip across the top.
2) Black lettering.
b. For locations below 40 calories/square centimeter:
1) White label with orange “WARNING” strip across the top.
2) Black lettering.

PART 3 EXECUTION

3.01 INSTALLATION

A. After review and acceptance of the arc-flash hazard study by the Engineer, install arc-flash hazard labels:
1. At all locations required by NFPA, ANSI, or IEEE standards.
2. At a minimum, in the following locations:
a. Front of each main or incoming service compartment.
b. Front of each low-voltage switchgear section.
c. Front of each medium-voltage circuit breaker door.
d. Front of each accessible auxiliary or conductor compartment.
e. Each accessible rear or side vertical section.
f. Each motor control center vertical section.
g. Each panelboard covered by the study.
h. Each control panel, individual starter or VFD, or other equipment covered by the scope of the study.

3.02 OWNER TRAINING:

A. Including, but not limited to:
1. Introduction and basics of NFPA 70E: 1 hour 1 session.
2. Detailed review of the electrical system study: 1 hour 1 session.

3.03 FIELD QUALITY CONTROL

A. Individual performing the arc-flash hazard study shall direct the installation of the arc-flash hazard labels:
   1. Remove and replace any improperly applied labels.
   2. Repair the equipment finish damaged by removal of any label.
   3. Install labels level or plumb across the entire dimension of the label.

3.04 ADJUSTING

A. After review and acceptance of the draft arc-flash hazard study and protective device coordination study by the Engineer, adjust protective device settings in accordance with final study prior to equipment energization.
   1. Devices that require power for configuration may be set during energization, but before any subfed loads are energized.
   2. Ensure that settings for upstream equipment are set prior to energizing downstream devices. Provide documentation that protective devices are set in accordance with the study recommendation.

END OF SECTION

SECTION 16411

DISCONNECT SWITCHES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Knife blade fusible and non-fusible disconnect switches.
   2. Switch-rated plugs and receptacles.

1.02 REFERENCES

A. National Electric Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).
   2. KS 1-2001 - Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).

B. Underwriters Laboratories Inc. (UL):
   1. 98 - Enclosed and Dead-Front Switches.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Safety switches and disconnect switches are to be considered synonymous.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Manufacturer.
   2. Manufacturer’s specifications and description.
   3. Ratings:
      a. Voltage.
      b. Current.
      c. Horsepower.
      d. Short circuit rating.
   4. Fused or non-fused.
   5. NEMA enclosure type.
   6. Dimensions:
      a. Height.
      b. Width.
      c. Depth.
   7. Weight.
   8. Cross-referenced to the disconnect schedule indicated on the Drawings.

C. Shop Drawings:
   1. Manufacturer's installation instructions:
      a. Indicate application conditions and limitations of use stipulated by product testing agency specified under Quality Assurance, Regulatory Requirements below.
      b. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.
   2. For each switch, indicate nameplate inscription, including voltage, circuit, fuse size (if applicable), and equipment served.

D. Installation instructions:
   1. Provide manufacturer's installation instructions.

1.05 QUALITY ASSURANCE

A. Regulatory requirements:
   1. NEMA Type KS 1- Enclosed and Miscellaneous Distribution Switches (600 V Maximum).
   2. UL 98 - Enclosed and Dead-Front Switches.

B. Disconnect switches shall be UL listed and labeled.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Conduct the initial fault current study as specified in Section 16305 - Electrical System Studies and submit results for the Engineer's review.
   2. After successful review of the initial fault current study, submit complete equipment Submittal.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Provide knife blade disconnect switches and switch-rated plugs and receptacles as indicated on the Drawings and specified in the Contract Documents.

B. Provide equipment with the number of poles, voltage, current, short circuit, and horsepower ratings as required by the load and the power system.

2.02 MANUFACTURERS

A. Knife-blade disconnect switches:
   1. One of the following or equal:
      a. ABB.
      b. Appleton.
      c. Crouse-Hinds.
      d. Eaton.
      e. Schneider Electric.
      f. Siemens.

2.03 EQUIPMENT

A. Knife-blade style switch disconnects:
   1. Switch mechanism:
      a. Quick-make, quick-break heavy-duty operating mechanisms:
         1) Provisions for padlocking the switch in the Off position.
         2) A minimum of 90-degree handle travel position between Off and On positions:
            a) Provide handle position indicators to identify the handle position.
         3) Full cover interlock to prevent opening of the switch door in the On position and to prevent closing the switch mechanism with the door open:
            a) With an externally operated override.
   2. Switch interior:
      a. Switch blades visible when the switch is Off and the cover is open.
      b. Lugs:
         1) Front accessible.
         2) Removable.
         3) UL listed for 60/75-degree Celsius copper conductors.
      c. Current carrying parts completely plated to resist corrosion.
      d. Removable arc suppressors to facilitate easy access to line side lugs.
      e. Furnish equipment ground kits for every switch.
   3. Fused switches:
      a. Furnish with fuses as indicated on the Drawings:
         1) Provide fuses as specified in Section 16494 - Low Voltage Fuses.
      b. UL approved for field conversion from standard Class H fuse spacing to Class J fuse spacing:
         1) Ratings 100 amps through 600 amps at 240 volts.
         2) Ratings 30 amps through 600 amps at 600 volts.
         3) Provide spring reinforced and plated fuse clips.
   4. Ratings:
      a. UL horsepower rated for AC or DC with the rating not less than the load served.
      b. Current:
         1) 30 to 1,200 amps.
      c. Voltage:
         1) 250 volts AC, DC.
         2) 600 volts (30 A to 200 A, 600 volts DC).
      d. Poles:
         1) 2, 3, 4, and 6 poles.

e. UL listed short circuit ratings:
    1) 10,000 RMS symmetrical amps when used with or protected by Class H or K fuses (30 to 600 amps).
    2) 200,000 RMS symmetrical amps when used with or protected by Class R or J fuses (30 to 600 amps employing appropriate fuse rejection).
    3) 200,000 RMS symmetrical amps when used with or protected by Class L fuses (800 to 1,200 amperes amps).

B. Where not indicated on the Drawings, provide switches with the NEMA ratings specified in Section 16050 - Common Work Results for Electrical for the installed location.

C. Size, fusing and number poles as indicated on the Drawings or as required:
    1. Provide solid neutral where indicated on the Drawings.

2.04 ACCESSORIES

A. Disconnect switches to have provisions for a field installable “B” type electrical interlock for position indication as indicated on the Drawings.

B. Disconnect switches to have provisions for a field installed insulated groundable neutral kit as indicated on the Drawings.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
    1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
    2. Install anchors of type and material indicated on approved anchoring designs.
    3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. General:
    1. Use Myers hubs or bolt-on hubs for conduit penetrations on NEMA Type 12, Type 4, and Type 4X enclosures.
    2. Provide mounting brackets, stands, supports and hardware as required:
        a. Match finish and materials for brackets, stands, and hardware with the switch installed.
        b. Provide adequate supporting pillar(s) for disconnect switches in accordance with the approved seismic calculations, and locate aboveground or above decks, where there is no structural wall or surface for box.

3. When possible, mount switches rigidly to exposed building structure or equipment structural members:
    a. For NEMA Type 4 and Type 4X locations, maintain a minimum of 7/8 inch air space between the enclosure and supporting surface.
    b. When mounting on preformed channel, position channel vertically so that water may freely run behind the enclosure.
4. Provide a nameplate for each disconnect switch:
    a. As specified in Section 16075 - Identification for Electrical Systems.

3.03 FIELD QUALITY CONTROL

A. As specified in Section 16050 - Common Work Results for Electrical.

B. Field electrical acceptance testing:
    1. As specified in Section 16950 - Field Electrical Acceptance Tests.

END OF SECTION

SECTION 16412

LOW VOLTAGE MOLDED CASE CIRCUIT BREAKERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Low voltage molded case circuit breakers.

1.02 REFERENCES

A. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).

B. Underwriters Laboratories (UL):
   1. 489 - Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures.

1.03 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Catalog cutsheets.
   2. Manufacturer’s time-current curves for molded case circuit breakers furnished.

C. Delegated Design Submittals:
   1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria.
      a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
      b. For equipment installed outdoors.
      c. For wall mounted equipment weighing 125 pounds or more.

D. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

1.05 QUALITY ASSURANCE

A. Low voltage molded case circuit breakers shall be UL listed and labeled.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Molded case thermal magnetic, solid-state, or motor circuit protector type circuit breakers as indicated on the Drawings and connected to form a completed system.

2.02 MANUFACTURERS

A. One of the following or equal:
   1. ABB.
   2. Eaton.
   3. Schneider Electric.

2.03 MANUFACTURED UNITS

A. General:
   1. In accordance with UL 489.
   2. Operating mechanism:
      a. Quick-make, quick-break, non-welding silver alloy contacts.
      b. Common Trip, Open and Close for multi-pole breakers such that all poles open and close simultaneously.
      c. Mechanically trip free from the handle.
      d. Trip indicating handle - automatically assumes a position midway between the manual ON and OFF positions to clearly indicate the circuit breaker has tripped.
      e. Lockable in the “OFF” position.
   3. Arc extinction:
      a. In arc chutes.
   4. Voltage and current ratings:
      a. Minimum ratings as indicated on the Drawings.
      b. Minimum frame size 100A.
   5. Interrupting ratings:
      a. Minimum ratings as indicated on the Drawings.
      b. Modify as required to meet requirements of the short circuit fault analysis as specified in Section 16305 - Electrical System Studies.
      c. Not less than the rating of the assembly (panelboard, switchboard, motor control center, etc.).

B. Motor circuit protectors:
   1. Instantaneous only circuit breaker as part of a listed combination motor controller.
   2. Each pole continuously adjustable in a linear scale with “LO” and “HI” settings factory calibrated.

2.04 COMPONENTS

A. Terminals:
   1. Line and load terminals suitable for the conductor type, size, and number of conductors indicated on the Drawings and in accordance with UL 489.

B. Case:
   1. Molded polyester glass reinforced.
   2. Ratings clearly marked.

C. Trip units:
   1. Provide thermal magnetic or solid-state trip units as indicated on the Drawings.
   2. Thermal magnetic:
      a. Instantaneous short circuit protection.
      b. Inverse time delay overload.
      c. Ambient or enclosure compensated by means of a bimetallic element.
   3. Solid state:
      a. With the following settings as indicated on the Drawings:
         1) Adjustable long time current setting.
         2) Adjustable long time delay.
         3) Adjustable short time pickup.
         4) Adjustable short time delay.
         5) Adjustable instantaneous pickup.
         6) Adjustable ground fault pickup as for breakers rated1000 amps and higher.
         7) Adjustable ground fault delay as for breakers rated 1000 amps and higher.
      b. Energy reducing maintenance switch on breakers 1,200 amps and above and on additional breakers as indicated on the Drawings.

D. Provide ground fault trip devices as indicated on the Drawings.

E. Molded case circuit breakers for use in panelboards:
   1. Bolt-on type:
      a. Plug-in type breakers are not acceptable.
   2. Ground fault trip devices as indicated on the Drawings.

2.05 SOURCE QUALITY CONTROL

A. Test breakers in accordance with:
   1. UL 489.
   2. Manufacturer’s standard testing procedures.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install breakers to correspond to the accepted Shop Drawings.

3.03 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
   1. As specified in Section 16950 - Field Electrical Acceptance Tests.

3.04 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.

3.05 ADJUSTING

A. Adjust trip settings in accordance with Protective Device Coordination Study as accepted by the Engineer and in accordance with manufacturer's recommendations.

B. Adjust motor circuit protectors in accordance with NEC and the manufacturer's recommendation based on the nameplate values of the installed motor.

END OF SECTION

SECTION 16413

LOW VOLTAGE INSULATED CASE CIRCUIT BREAKERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Low voltage insulated case circuit breakers.

1.02 REFERENCES

A. Underwriters Laboratories (UL):
   1. 489 - Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Catalog cutsheets.
   2. Manufacturer's time-current curves for all trip devices furnished.

C. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

1.04 QUALITY ASSURANCE

A. Insulated case circuit breakers shall be UL listed and labeled.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Insulated case circuit breakers as indicated on the Drawings and connect to form a completed system:
   1. Used to open and close a circuit, and to open a circuit automatically on a predetermined overload or overcurrent, without damage to itself when properly applied within its ratings.

2.02 MANUFACTURERS

A. One of the following, or equal:
   1. ABB.
   2. Eaton.
   3. Schneider Electric.

2.03 MANUFACTURED UNITS

A. Operating mechanism:
   1. Manual or electric as indicated on the Drawings:
      a. Manual operation:
         1) Circuit breaker closing spring is energized by no more than 6 operations of the constant-force charging handle.
         2) Pushing the “CLOSE (ON)” button will close the breaker’s contacts and pushing the “OPEN (OFF)” button will open the breaker’s contacts.
         3) Opening springs are automatically charged when the breaker is closed.
      b. Quick-make, quick-break, non-welding silver alloy contacts.
      c. Common trip, open and close for multi-pole breakers such that all poles open and close simultaneously.
      d. Mechanically trip free from the handle.
      e. Trip indicating handles - automatically assumes a position midway between the manual ON and OFF positions to clearly indicate the circuit breaker has tripped.
      f. Lockable in the “OFF” position.

B. Arc extinction:
   1. In arc chutes.

C. Voltage and current ratings:
   1. Minimum ratings as indicated on the Drawings.

D. Interrupting ratings:
   1. Minimum ratings as indicated on the Drawings:
      a. Modify as required to meet requirements of the Contractor’s Short Circuit Fault Analysis as specified in Section 16305 - Electrical System Studies.
   2. Matching the rating of the assembly.

E. Circuit breaker mounting shall be as indicated on the Drawings and consist of one of the following configurations:
   1. Draw out type capable of being racked to the disconnect position with the door closed:
      a. Interlocks shall be provided to prevent connecting or disconnecting the circuit breaker unless the breaker is in the open position.
      b. Breaker shall be prevented from being closed during any racking operation.
      c. A test position shall be provided to permit operating the breaker while it is disconnected from the power circuit.

d. Equipped with interlocks to discharge stored energy spring before the circuit breaker is withdrawn from the cell.
2. Plug-in (stationary) type capable of being removed with the main bus power off.
3. Individually mounted in a separate enclosure.

2.04 COMPONENTS

A. Terminals:
1. Line and load terminals suitable for the conductor type, size, and number of conductors indicated on the Drawings and in accordance with UL 489.

B. Case:
1. Molded polyester glass reinforced.
2. Double level of insulation between primary current-carrying parts and operating personnel.
3. Ratings clearly marked.
4. Open contact indication.
5. Closed contact indication.
6. Charging spring charged indication.
7. Charging spring discharged indication.
8. Open pushbutton.
9. Close pushbutton.
10. Retractable charging handle.

C. Trip units:
1. Microprocessor based with positive action flux-shifting trip device and a solid state type with the following functions:
a. Adjustable ampere setting:
1) To determine the value of current that the breaker will carry indefinitely.
b. Adjustable long time delay:
1) Varies the time it will take the breakers to trip under sustained overload.
c. Adjustable short time pickup:
1) Controls the level of high current the breaker will carry for short periods.
d. Adjustable short time delay:
1) Controls the length of time the breaker will carry a high current without tripping.
e. Adjustable instantaneous pickup:
1) Controls level at which immediate tripping of breaker occurs.
f. Adjustable ground fault pickup:
1) Controls the level at which the breaker will trip under a ground fault condition.
g. Adjustable ground fault delay:
1) Controls the time that a ground fault can exist without tripping the breaker.
h. Long time pickup indicator:
1) Provides a visual indication that the breaker is experiencing an overload condition.

i. Energy reducing maintenance switch:
   1) Allows for input of alternative trip settings for arc flash hazard reduction during maintenance procedures.
   2) Enabled by the following:
      a) Hardwired input.
      b) Trip unit controls.
      c) Trip unit network.
   3) Status:
      a) Contact for remote indication.
      b) Indication on trip unit.
      c) Status communicated over trip unit network.

D. Fault indicators:
   1. Powered from a lithium battery.
   2. LED indicators for:
      a. Overcurrent fault trip on long-time feature.
      b. Overcurrent fault trip on short-time feature.
      c. Short circuit fault trip on the instantaneous feature.
      d. Ground fault trip.

2.05 ACCESSORIES

A. Provide circuit breakers with the following accessories as indicated on the Drawings and required for proper operation of the system:
   1. Electrical operator (field convertible by adding a plug-in motor operator):
      a. Circuit breaker closing spring is energized by an electric motor-driven charging mechanism.
      b. Control voltage:
         1) 120 VAC.
   2. Remote close solenoid.
   3. Shunt trip device.
   4. Key interlock device.
   5. Anti-pump provision to prevent closing or reclosing operations when used with a normally closed contact in the “close” circuit.
   6. Terminal blocks.
   7. Operations counter.

2.06 SOURCE QUALITY CONTROL

A. Test breakers in accordance with:
   1. UL 489.
   2. Manufacturer’s standard testing procedures.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install breakers to correspond to the accepted Shop Drawings.

3.02 FIELD QUALITY CONTROL

A. As specified in Section 16050 - Common Work Results for Electrical.

B. Field electrical acceptance testing:
   1. As specified in Section 16950 - Field Electrical Acceptance Tests.

3.03 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.

3.04 ADJUSTING

A. Adjust trip settings in accordance with the Protective Device Coordination Study as accepted by the Engineer and in accordance with the manufacturer's recommendations.

END OF SECTION

SECTION 16422

MOTOR STARTERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Motor starters and contactors.

1.02 REFERENCES

A. Abbreviations:
   1. FVNR: Full voltage non-reversing.
   2. FVR: Full voltage reversing.
   3. PWS: Part winding start.
   4. RVAT: Reduced voltage auto transformer.
   5. RVSS: Reduced voltage solid state.
   6. TS1W: 2 speed 1 winding (consequent pole).
   7. TS2W: 2 speed 2 winding.

B. Standards:
   1. Institute of Electrical and Electronics Engineers (IEEE).
   2. International Electrotechnical Commission (IEC):
      a. 801-1 - Electromagnetic Compatibility for Industrial-Process Measurement and Control Equipment - Part 1: General Information.
      b. 947-4 - Low-Voltage Switchgear and Control Gear.
   3. National Electrical Manufacturer's Association (NEMA):
      a. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).
      b. ICS 2-230 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays Rated 600 V.
   4. Underwriters Laboratories, Inc. (UL):
      a. 508 - Standard for Industrial Control Equipment.
      b. 508A - Standard for Industrial Control Panels.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Overload relay class: A classification of an overload relay time current characteristic by means of a number which designates the maximum time in seconds at which it will operate when carrying a current equal to 600 percent of its current rating.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures:
   1. Submit motor starter data with equipment Submittal.

B. Product data:
   1. Manufacturer.
   2. Catalog cutsheets.
   3. Technical information.
   4. Complete nameplate schedule.
   5. Complete bill of material.
   6. List of recommended spare parts.
   7. Confirmation that the overload relay class for each starter meets the requirements of the equipment and motor supplier.
   8. Electrical ratings:
      a. Phase.
      b. Wire.
      c. Voltage.
      d. Ampacity.
      e. Horsepower.
   9. Furnish circuit breaker submittals as specified in Section 16412 - Low Voltage Molded Case Circuit Breakers.

C. Shop Drawings:
   1. Elementary and schematic diagrams:
      a. Provide 1 diagram for every starter and contactor.
      b. Indicate wire numbers for control wires on the diagrams:
         1) Wire numbering as specified in Section 16075 - Identification for Electrical Systems.
      c. Indicate interfaces with other equipment on the Drawings.

D. Delegated Design Submittals:
   1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria:
      a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
      b. For equipment installed outdoors.
      c. For wall mounted equipment weighing 125 pounds or more.

E. Quality Control Submittals:
   1. Manufacturer’s representative qualifications.
   2. Manufacturer’s Certificate of Source Testing as specified in Section 01756 - Commissioning.
   3. Test reports.

F. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

G. Operation and maintenance manuals:
   1. As specified in Section 01782 - Operation and Maintenance Manuals.
   2. Submit complete operating and maintenance instructions presenting full details for care and maintenance of equipment furnished or installed under this Section, including, but not limited to:
      a. Electrical ratings:
         1) Phase.
         2) Wire.
         3) Voltage.
         4) Ampacity.
      b. Complete bill of material.
      c. Manufacturer's operating and maintenance instructions starter and/or contactor component parts, including:
         1) Protective devices (fuses, breakers, overload relays, heater elements, etc.).
         2) Pilot devices.
      d. Complete renewal parts list.
      e. As-built drawings:
         1) Furnish as-built drawings for each starter and contactor indicating final:
            a) Wire numbers.
            b) Interfaces with other equipment.
         2) 11-inch by 17-inch format.

1.06 QUALITY ASSURANCE

A. Regulatory requirements:
   1. Starters and components shall be UL listed and labeled:
      a. UL 508 - Industrial Control Equipment.
      b. UL 508A - Industrial Control Panels.
   2. NEMA ICS 2 - Industrial Control and System Controllers; Contactors and Overload Relays Rated: 600 Volts.
   3. Combination starters shall be UL listed and labeled.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Conduct the initial fault current study as specified in Section 16305 - Electrical System Studies and submit results for the Engineer's review.
   2. After successful review of the initial fault current study, as specified in Section 16305 - Electrical System Studies, submit complete equipment Submittal.
   3. Conduct factory acceptance test.

4. Ship equipment to the Project Site after successful completion of factory acceptance test.
5. Assemble equipment in the field.
6. Submit Manufacturer's Certificate of Installation Verification.
7. Conduct field acceptance test and submit results for the Engineer's review.
8. Conduct Owner Training sessions.
9. Commissioning and process start-up as specified in Section 01756 - Commissioning.

1.09 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.10 MAINTENANCE

A. Spare parts:
   1. Provide the following spare parts, suitably packaged and labeled with the corresponding equipment number:
      a. 1 spare fuse of each size and type per starter.

PART 2 PRODUCTS

2.01 GENERAL

A. Starters for motor control centers, individual enclosed starters, or control panels.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide equipment and components that are fully rated for the Site elevation and operating environment where the equipment will be installed as specified in Section 01850 - Design Criteria and as indicated on the Drawings.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. NEMA starters and contactors:
      a. ABB.
      b. Allen-Bradley.
      c. Eaton.
      d. Schneider Electric.

2.04 MANUFACTURED UNITS

A. General:
   1. Provide combination type starters with motor circuit protector or thermal-magnetic circuit breaker and control power transformer with ratings as indicated on the Drawings.
   2. NEMA size, design, and rated:
      a. NEMA Size 1 minimum.

3. Coordinate motor circuit protector, thermal magnetic circuit breaker, or fusible disconnect, and overload trip ratings with nameplate horsepower and current ratings of the installed motor.
    a. If motors provided are different in horsepower rating than those specified or indicated on the Drawings, provide starters coordinated to the actual motors furnished.
4. Provide starters NEMA Size 2 and larger with arc quenchers on load breaking contacts.
5. Mount extended overload reset buttons to be accessible for operation without opening starter enclosure door.

B. Full voltage starters (FVNR, FVR, TS1W, TS2W):
1. Across-the-line full voltage magnetic starters.
2. Rated for 600 volts.
3. Electrical characteristics as indicated on the Drawings.
4. Provide positive, quick-make, quick-break mechanisms, padlockable enclosure doors.
5. Furnish starter with solid state electronic overload relays.
6. Double-break silver alloy contacts.
7. Reversing starters provided with both mechanical and electrical interlocks to prevent line shorts and energizing both contactors simultaneously.
8. Provide 2-speed, 2-winding motor starters consisting of two 3-pole contactors and 2 sets of overload relays assembled together:
    a. Provided with contactors that are both mechanically and electrically interlocked to prevent energizing both contactors simultaneously.

2.05 COMPONENTS

A. Molded case circuit breakers:
1. Circuit breaker type and ratings as indicated on the Drawings.
2. Provide as specified in Section 16412 - Low Voltage Molded Case Circuit Breakers.

B. Contactors:
1. NEMA size as indicated on the Drawings.
2. Electrically held:
    a. For lighting loads designed to withstand the initial inrush currents of ballast and lamp loads.
3. Factory adjusted and chatter free.
4. Auxiliary contacts:
    a. Contact ratings in accordance with NEMA A600 rating:
        1) Auxiliary contacts rated 10 amps at 600 volts.
    b. Provide contacts indicated on the Drawings and any additional contacts required for proper operation.
    c. Provide at least 1 normally open and 1 normally closed spare auxiliary contact.
5. Constructed in accordance with the following standards:
    a. UL 508.

b. IEC 947-4:
    1) Type 1 coordination when protected by a circuit breaker.
    2) Type 2 coordination when protected by a suitable UL listed fuse.
c. IEC 801-1 parts 2 through 6.

C. Overloads:
1. Solid state electronic:
    a. Selectable Class 10, 20, 30 protection.
    b. Ambient insensitive:
        1) Operating temperature: -20 to 70 degrees Celsius.
    c. Thermal memory.
    d. Protective functions:
        1) Motor overcurrent.
        2) Phase unbalance (adjustable).
        3) Phase loss.
        4) Ground fault protection.
    e. Self-powered.
    f. Provide current transformers for metering of motor current.
    g. Visible trip indicator.
    h. Push-to-trip test.
    i. Isolated normally open alarm contact.
    j. Normally closed trip contact.
    k. Manual reset.

D. Control power transformer:
1. Furnish integral control power transformer capacity to power:
    a. Motor controls: Motor and starter accessories indicated on the Drawings or specified.
2. Primary and secondary fusing as indicated on the Drawings:
    a. Fusing sized by the manufacturer for the rating of the transformer furnished.
3. Control power transformer secondary voltage:
    a. As indicated on the Drawings.

2.06 ACCESSORIES

A. Lugs and terminals:
1. For external connections of No. 6 AWG and larger.
2. UL listed for either copper or aluminum conductors.

B. Surge protective devices:
1. Furnish surge protection devices across the coil of each starter, contactor, and relay.

C. Pilot devices:
1. Provide pilot lights, switches, elapsed time meters, and other devices as specified or as indicated on the Drawings.
2. As specified in Section 17710 - Control Systems: Panels, Enclosures, and Panel Components.

D. Nameplates and wire markers:
1. As specified in Section 16075 - Identification for Electrical Systems.

E. Conformal coating:
   1. Provide conformal coating material applied to electronic circuitry and printed circuit boards to act as protection against moisture, dust, temperature extremes, and chemicals such as H_2S and chlorine.

2.07 SOURCE QUALITY CONTROL

A. Source Testing:
   1. Not witnessed.
   2. Furnish test reports and Manufacturer's Certificate of Source Testing.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. Starters in motor control centers:
   1. As specified in Section 16444 - Low Voltage Motor Control Centers.

3.03 FIELD QUALITY CONTROL

A. Field electrical acceptance testing:
   1. As specified in Section 16950 - Field Electrical Acceptance Tests.

3.04 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.

3.05 ADJUSTING

A. Make adjustments as necessary and as recommended by the manufacturer, Engineer, or testing firm.

B. Set overloads and motor circuit protectors based on the nameplate values of the installed motor.

END OF SECTION

SECTION 16442

INDIVIDUALLY MOUNTED CIRCUIT BREAKER SWITCHBOARDS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Free standing, dead-front type metal-enclosed, low voltage switchboards with individually mounted circuit protective devices.

1.02 REFERENCES

A. Electric Utility Service Requirements Committee (EUSERC).

B. International Organization for Standardization (ISO):
   1. 9001 - Quality Management Systems - Requirements.

C. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).
   2. PB 2 - Deadfront Distribution Switchboards.

D. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code.
   2. 70E® - Standard for Electrical Safety in the Workplace®.

E. Underwriters Laboratories, Inc. (UL):
   1. 891 - Switchboards.

1.03 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Manufacturer of switchboard.
   2. Manufacturer of component parts of switchboard.
   3. Dimensions:
      a. Width.
      b. Length.
      c. Height.
      d. Weight.
   4. Nameplate schedule.
   5. Bill of material.

6. Ratings:
    a. Voltage.
    b. Phase.
    c. Current.
    d. Interrupting rating (circuit breakers and fuses).
7. List of recommended spare parts.
8. Certification that the utility metering compartment meets the requirements of the serving electrical utility.
9. Name of dealer's repair facility and parts stocking agreement with the factory:
    a. Agreement shall outline in detail the manufacturer's parts stocking requirements and the method by which the manufacturer's representative verifies that the stock is at an acceptable level.
    b. Agreement should also outline the method by which the manufacturer's representative determines that the service personnel meet factory standards.
    c. A toll-free or local phone number with 24/7 emergency monitoring/call back is required.
10. Furnish circuit breaker Submittals as specified in:
    a. Section 16412 - Low Voltage Molded Case Circuit Breakers.
    b. Section 16413 - Low Voltage Insulated Case Circuit Breakers.
11. For equipment installed in structures designated as seismic design category C, D, E, or F, submit the following as specified in Section 01850 - Design Criteria:
    a. Manufacturer's statement of seismic qualification with substantiating test data.
    b. Manufacturer's special seismic certification with substantiating test data.

C. Shop Drawings:
1. Complete, detailed, and scaled switchboard layout:
    a. Front panel.
    b. Sub-panels.
    c. Interior panels.
    d. Top and bottom conduit windows.
2. Complete electrical wiring diagrams:
    a. Point-to-point connections.
    b. Internal compartment-to-compartment interconnection wiring diagrams.
    c. Wiring identification and terminal numbers.
3. Complete 3-line diagrams for each switchboard lineup.
    a. These Drawings shall indicate devices comprising the switchboard assembly, including, but not limited to, circuit breakers, control power and instrument transformers, meters, and control devices.
    b. Clearly indicate electrical ratings of devices on Drawings.
4. Complete interface and connection diagrams for metering system.
5. Complete bill of material list and equipment datasheets identifying appropriate information specific to the switchboard being supplied.
6. Nameplate schedule.
7. Interfaces to other equipment.

D. Delegated Design Submittals:
   1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria:
      a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.

E. Installation instructions:
   1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
   2. Provide manufacturer's installation instructions.

F. Quality Control Submittals:
   1. Manufacturer's representative qualifications.
   2. Manufacturer's Certificate of Source Testing as specified in Section 01756 - Commissioning.
   3. Manufacturer's Certificate of Installation as specified in Section 01756 - Commissioning.
   4. Test reports.

G. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

H. Operation and maintenance manuals:
   1. As specified in Section 01782 - Operation and Maintenance Manuals.
   2. Operating instructions:
      a. Printed and framed instruction chart suitable for wall hanging.
      b. Detail the operational functions custom controls which have been placed on the front of the switchboard.
   3. Maintenance manual:
      a. Furnish maintenance manuals with instructions for maintenance of equipment and data identifying all parts.
      b. Include information needed to maintain the switchboard, including, but not limited to, the following:
         1) Instructions for testing, adjustment, and start-up.
         2) Detailed control instructions which outline the purpose and operation of every control device used in normal operation.
         3) Schematic and wiring diagrams:
            a) Showing internal and external connections.
            b) Furnished in a reduced 11-inch by 17-inch fully legible format.

1.05 QUALITY ASSURANCE

A. Switchboard and components shall be UL listed and labeled.

B. The switchboard shall be UL labeled and listed Suitable for Service Entrance.

C. Equipment shall be designed and constructed in accordance with the following standards and requirements:
   1. NEMA PB 2.
   2. UL 891.

D. Manufacturer shall be ISO 9001 certified.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Ship switchboards to the site in dedicated air ride vans that will allow the Contractor to utilize onsite off-loading equipment.

B. Furnish temporary equipment heaters within the switchboard to prevent condensation from forming.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Conduct the initial fault current study as specified in Section 16305 - Electrical System Studies and submit results for the Engineer's review.
   2. After successful review of the initial fault current study, submit complete equipment Submittal.
   3. Conduct factory acceptance test and submit certified test results for the Engineer's review.
   4. Ship equipment to the Project Site after successful completion of the factory acceptance test.
   5. Assemble equipment in the field.
   6. Conduct final fault current and coordination study.
   7. Conduct field acceptance test and submit results for the Engineer's review.
   8. Submit manufacturer's certification that the equipment has been properly installed and is fully functional for the Engineer's review.
   9. Conduct Owner Training sessions.
   10. Commissioning as specified in Section 01756 - Commissioning.

1.09 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Factory assembled, wired, and tested switchboards, with major components being products of a single manufacturer, including circuit breakers, and other equipment specified in this Section and indicated on the Drawings.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide equipment and components that are fully rated for the site elevation and operating environment where the equipment will be installed as specified in Section 01850 - Design Criteria and as indicated on the Drawings.

B. Non-conditioned spaces:
   1. Provide additional temperature conditioning equipment to maintain the equipment temperature within a band of 10 degrees Fahrenheit above the minimum operating temperature and 10 degrees Fahrenheit below maximum operating temperature.

C. Outdoor installations:
   1. Provide conditioning equipment incorporated into the equipment to maintain the enclosures within the equipment manufacturer's specified operating ranges.

D. Provide complete and functional switchboards with required controls.

E. Furnish and install devices or accessories not described in this Section but necessary for the proper installation and operation of the equipment.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. ABB.
   2. Eaton.
   3. Schneider Electric.

2.04 EQUIPMENT

A. Voltage ratings:
   1. Voltage level and configuration: As indicated on the Drawings.
   2. Frequency: 60 hertz.
   3. Insulation level:
      a. Twice the rated voltage plus 1,000 volts.

B. Bus:
   1. General:
      a. Tin-plated copper.
      b. Bus cross-section in accordance with UL heat rise requirements.
      c. Current density of 1,000 amps per square inch.
      d. Mounted on supports of high-impact, non-tracking insulators.
      e. Phase A-B-C bus arrangement:
         1) Top-to-bottom, left-to-right, front-to-back throughout the switchboard.
      f. Symmetrical short circuit current bracing of as indicated on the Drawings.
      g. Continuous current rating as indicated on the Drawings.
   2. Horizontal bus:
      a. Provisions for future connections to additional switchboard sections.
   3. Ground bus:
      a. Sized in accordance with UL 891.

C. Space for future devices:
   1. Provide spaces as indicated on the Drawings.
   2. As specified in Section 16050 - Common Work Requirements for Electrical.

D. Utility metering compartment:
   1. When indicated on the Drawings, furnish an integral utility current and voltage transformer cabinet for utility company metering.
   2. EUSERC compliant.
   3. Instrument transformer mounting, connections and metering sequence shall conform to electric utility requirements.
   4. Dimensions, ratings, spacings, and standards shall conform with the requirements of the electric utility.
   5. Service entrance cables to enter the utility metering compartment as indicated on the Drawings.

E. Enclosure:
   1. General:
      a. Self-supporting structures bolted together to form the required line-up.
      b. All sections rear aligned.
      c. Dead-front.
      d. Conduit entry:
         1) Open bottom.
         2) Removable top cover.
   2. Frame:
      a. Die-formed 12-gauge steel.
   3. Covers:
      a. Bolt-on.
      b. Code gauge steel.
      c. Removable front covers:
         1) Held in place by captive screws.
   4. Rating:
      a. NEMA Type 1.

2.05 COMPONENTS

A. Circuit breakers:
   1. As specified in Section 16412 - Low Voltage Molded Case Circuit Breakers and Section 16413 - Low Voltage Insulated Case Circuit Breakers.
   2. Individually mounted with line and load bus connections.
   3. Main circuit breakers shall be 100 percent rated, fixed mounted insulated case breaker with frame and trip ratings as indicated on the Drawings.
      a. Breaker with rating of 1,000 amps or more shall be provided with ground fault shunt trip.
   4. Individually fixed mounted feeder devices shall be insulated case circuit breaker with ratings as indicated on the Drawings.
   5. Have a minimum interrupting rating equal to the bus rating or as indicated on the Drawings.

B. Wiring:
   1. Provide necessary internal wiring, fuse blocks, and terminal blocks as required. Number wires at each end and indicate wire numbers on Shop Drawings.

2. Control wiring within the equipment shall utilize type SIS switchboard wire with at least 26 strands. Minimum wire size shall be No. 14 for control circuits and No. 12 for voltage and current transformer circuits.
3. Wires shall be numbered and labeled as specified in Section 16075 - Identification for Electrical Systems.

2.06 ACCESSORIES

A. Surge protective devices:
   1. As specified in Section 16285 - Surge Protective Devices.

B. Nameplates:
   1. As specified in Section 16075 - Identification for Electrical Systems.
   2. Furnish an individual nameplate for each breaker and/or switch identifying the load served.
   3. Furnish an individual nameplate for each vertical section identifying the vertical section:
      a. Mounted and centered on the top horizontal wireway for each vertical section.
   4. Furnish an individual nameplate for each cubicle:
      a. 1 nameplate to identify cubicle designation.
      b. 1 nameplate to identify load served.
   5. Manufacturer's labels:
      a. Each vertical section shall have a label identifying:
         1) Serial number.
         2) Shop order number.
         3) Bus rating.
         4) Vertical section reference number.
         5) Date of manufacture.

C. Warning signs:
   1. Voltage:
      a. Provide a minimum of 2 warning signs on the front of the switchboard lineup and 2 on the back.
      b. Red laminated plastic engraved with white letters approximately 1/2-inch high.
      c. Signs shall read:
         1) "WARNING-HIGH VOLTAGE-KEEP OUT".
   2. Arc flash:
      a. Provide 1 warning sign for each switchboard compartment.
      b. Signs shall have read a minimum of:
         1) "DANGER ELECTRIC ARC FLASH HAZARD."
         2) Signs shall meet the requirements of NFPA 70E and NEC Article 110.16.

D. Lugs:
   1. For external connections of No. 6 AWG or larger, plated or otherwise suitable for copper or aluminum and UL listed for copper or aluminum.

2. Shall be of the compression type in design requiring a hydraulic press and die for installation as manufactured by:
    a. Burndy.
    b. T&B.

E. Key interlocks:
    1. Provide key interlocks as indicated on the Drawings.

2.07 FINISHES

A. Chemically clean steel surfaces before painting.

B. Exterior color manufacturer's standard gray over phosphate-type rust inhibitor.

2.08 SOURCE QUALITY CONTROL

A. Source Testing:
    1. Not witnessed.
    2. Test in accordance with manufacturer's standard testing procedures.
    3. Furnish test reports and Manufacturer's Certificate of Source Testing.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
    1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
    2. Install anchors of type and material indicated on approved anchoring designs.
    3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. General:
    1. Furnish cables, conduit, lugs, bolts, and other accessories needed to complete the installation of the switchboard.
    2. Physically assemble and install the switchboard in the location and layout indicated on the Drawings.
    3. Make bus splice connections.
    4. Perform Work in accordance with the manufacturer's instructions and Shop Drawings.
    5. Furnish components and equipment as required to complete the installation.
    6. Replace hardware lost or damaged during the installation or handling to provide a complete installation.
    7. Install the switchboard on a raised concrete housekeeping pad:
        a. Provide structural leveling channels in accordance with the manufacturer's recommendations to provide proper alignment of the units.

b. Weld and/or bolt the switchgear frame to the leveling channels.

8. Provide openings in top or bottom of the enclosure for conduit only, no additional openings will be allowed:
   a. Improperly cut holes will require that the entire panel be replaced:
      1) No hole closers or patches will be allowed.

C. Installation Verification:
   1. Furnish Manufacturer's Certificate of Installation Verification.

3.03 FIELD QUALITY CONTROL

A. As specified in Section 16050 - Common Work Results for Electrical.

B. Field electrical acceptance testing:
   1. As specified in Section 16950 - Field Electrical Acceptance Tests.

C. Provide the services of a qualified manufacturer's representative to:
   1. Inspect, verify, and certify that the mechanical installation meets the manufacturer's requirements.
   2. Make control connections across the shipping splits.
   3. Install and align circuit breakers.
   4. Make bus splice connections.
   5. Make control connections across shipping splits.
   6. Ensure that items furnished are in proper operating condition:
      a. Technician must be completely knowledgeable in the operation, maintenance, and start-up of the electrical system.

3.04 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.

3.05 ADJUSTING

A. Make adjustments as necessary and recommended by the manufacturer, Engineer, or testing firm.

END OF SECTION

SECTION 16444

LOW VOLTAGE MOTOR CONTROL CENTERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Low voltage motor control centers.

1.02 REFERENCES

A. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).
   2. ICS 18-2001 - Motor Control Centers.

B. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).

C. Underwriters Laboratories (UL):
   1. 845 - Motor Control Centers.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. SELV: Safety extra-low voltage.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Manufacturer of motor control center.
   2. Manufacturer of motor control center parts.
   3. Nameplate schedule.
   4. Bill of material.
   5. Enclosure:
      a. NEMA rating.
      b. Finish color.
   6. Ratings:
      a. Voltage.
      b. Phase.

c. Current:
1) Horizontal bus ampacity.
2) Vertical bus ampacity.
3) Ground bus ampacity.
d. Short circuit withstand rating.
e. Protective device interrupting rating.
7. List of recommended spare parts.
8. Catalog cutsheets:
a. Submit complete manufacturer's catalog information:
1) Clearly indicate the features of the equipment including any options necessary to meet the required functionality.
9. Furnish component Submittals as specified in the appropriate Section.
10. For equipment installed in structures designated as seismic design category C, D, E, or F, submit the following as specified in Section 01850 - Design Criteria:
a. Manufacturer's statement of seismic qualification with substantiating test data.
b. Manufacturer's special seismic certification with substantiating test data.

C. Shop Drawings:
1. Layout drawings:
a. Provide fully dimensioned and to scale layout drawings which include:
1) Dimensions:
a) Overall length.
b) Overall width.
c) Overall height.
d) Overall weight and weight of individual shipping splits.
2. Interfaces to other equipment.
3. Shipping splits.
4. Allowable top and bottom conduit windows.
5. Complete component and unit layout drawings, including control, networking, and metering components.
6. Indicate lug sizes, type, and manufacturer based on the cable size specified in the Contract Documents and as indicated on the Drawings.
7. Elementary schematics:
a. Provide 1 custom schematic diagram for each compartment:
1) Include remote devices.
2) Show wire numbers on the schematics:
a) Provide wire numbering as specified in Section 16075 - Identification for Electrical Systems.
8. External connection diagram showing the wiring to the external controls and devices associated with the motor control center.
9. One-line diagrams:
a. Provide complete one-line diagrams for each motor control center, including, but not limited to: Protective devices, starters, drives, metering, and other equipment.
b. Indicate electrical ratings of the equipment shown on the one-line diagrams.

D. Delegated Design Submittals:
    1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria:
        a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
        b. For equipment installed outdoors.

E. Installation instructions:
    1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
    2. Provide manufacturer's installation instructions.

F. Quality Control Submittals:
    1. As specified in Section 01756 - Commissioning, including the following:
        a. Manufacturer's representative qualifications.
        b. Certificates:
            1) Requirements as specified in this Section.
        c. Test Plans:
            1) Test requirements as specified in this Section.
        d. Test Reports.
        e. Manufacturer's representatives field notes and data.
        f. Owner Training.

G. Operation and maintenance manuals:
    1. Provide complete operating and maintenance instructions presenting full details for care and maintenance of all types of equipment furnished and/or installed under this Section. Include the following:
        a. Electrical ratings:
            1) Phase.
            2) Wire.
            3) Voltage.
            4) Ampacity.
            5) Bus bracing and protective device interrupting ratings.
        b. Manufacturer's operating and maintenance instructions for the motor control center and component parts, including:
            1) Starters.
            2) Overload relays and heater elements.
            3) Variable frequency drives.
            4) Protective devices, including, but not limited to, fuses, circuit breakers and protective relays.
            5) Pilot devices.
        c. Complete renewal parts list.

H. Test forms and reports:
    1. Submit complete factory acceptance test procedures and forms used during the test.

I. Record documents:
   1. Elementary schematics:
      a. Furnish as-built elementary schematics indicating final:
         1) Wire numbers.
         2) Interfaces with other equipment.
      b. Provide 1 custom schematic diagram for each compartment:
         1) Include remote devices.
         2) Show wire numbers on the schematics.
      c. Layout drawings: Provide complete dimensioned component and unit layout drawings.
   2. Record documents shall reflect modifications made during the submittal review process and during construction.

J. Calculations:
   1. Detailed calculations or details of the actual physical testing performed on the motor control center to prove the motor control center is suitable for the seismic requirements at the Project Site.

1.06 QUALITY ASSURANCE

A. All portions of the motor control center, vertical bays, and components shall be UL listed and labeled.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Ship the motor control center and associated equipment to the job site on a dedicated air ride vehicle that will allow the Contractor to utilize onsite off-loading equipment.

B. Furnish temporary equipment heaters within the motor control center to prevent condensation from forming.

1.08 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.09 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Conduct the initial fault current study as specified in Section 16305 - Electrical System Studies and submit results for Engineer’s review.
   2. After successful review of the initial fault current study, as specified in Section 16305 - Electrical System Studies, submit complete equipment submittal.
   3. Conduct factory acceptance test.
   4. Submit manufacturer’s test results.
   5. Ship equipment to the Project Site after successful completion of factory acceptance test.
   6. Assemble equipment in the field.
   7. Conduct field acceptance test and submit results for Engineer’s review.
   8. Submit manufacturer’s certification that the equipment has been properly installed and is fully functional for Engineer’s review.

9. Conduct Owner's training sessions.
10. Commissioning and process start-up as specified in Section 01756 - Commissioning.

1.10 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.
   1. Provide a 2-year duration special warranty.

PART 2 PRODUCTS

2.01 GENERAL

A. Factory assembled, factory wired and factory tested motor control centers:
   1. Motor control centers and major components to be products of a single manufacturer.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide equipment and components that are fully rated for the site elevation and operating environment where the equipment will be installed as specified in Section 01850 - Design Criteria and as indicated on the Drawings.

B. Outdoor installations:
   1. Provide conditioning equipment incorporated into the equipment to maintain the enclosures within the equipment manufacturer's specified operating ranges.

2.03 MANUFACTURERS

A. One of the following, or equal:
   1. ABB.
   2. Allen-Bradley.
   3. Eaton.
   4. Schneider Electric.

2.04 EQUIPMENT

A. General:
   1. Furnish motor control centers as specified in the Contract Documents and indicated on the Drawings.
   2. Arrange the equipped sections to form continuous motor control center lineups as indicated on the Drawings:
      a. Identify any deviations from the Drawings in writing and submit for approval.
   3. Provide wire markers at each end of every wire as specified in Section 16075 - Identification for Electrical Systems.
   4. Provide complete and functional motor control centers.
   5. Provide devices or accessories not specified in this Section but necessary for the proper installation and operation of the equipment.

B. Design and construct motor control center to operate at the voltage level and configuration indicated on the Drawings.

C. Bus system:
   1. Material:
      a. Tin-plated copper.
      b. Short-circuit rating:
         1) As indicated on the Drawings.
      c. Bus bar supports:
         1) High impact strength, non-tracking glass-polyester material that is impervious to moisture and gases.
   2. Horizontal power bus:
      a. Current-carrying capacity as indicated on the Drawings.
      b. Mounting:
         1) Mount horizontal bus bars edgewise, one above the other, and fully isolated from wireways and units.
      c. Temperature rise:
         1) In accordance with UL 845.
         2) De-rate the temperature rating of the bus for the specified conditions of ambient temperature and altitude as specified in Section 01850 - Design Criteria.
   3. Vertical power bus:
      a. Current-carrying capacity of not less than 600 amps.
      b. Mounting:
         1) Enclose the vertical bus in a polyester-glass cover with small openings to permit unit stabs to mate with the bus:
            a) Provide a shutter mechanism to cover the stab openings when plug-in units are removed.
         2) Provide top and bottom bus covers for insulation and isolation of the ends of the bus.
      c. Isolated from the unit compartments by a full height barrier.
   4. Ground bus:
      a. Horizontal ground bus:
         1) Current-carrying capacity:
            a) 300 amps when the horizontal bus is 2,000 amps or less.
            b) 600 amps when the horizontal bus is greater than 2,000 amps.
         2) Mounting:
            a) Full width, firmly secured to each vertical section structure:
               (1) Located in the top or bottom wireway.
            b) Pre-drilled and furnished with lugs for connection to equipment ground wires:
               (1) Furnish a minimum of 10 lugs per vertical section of MCC.
      b. Vertical ground bus:
         1) Mounting:
            a) Furnish in each vertical section.
            b) Bolted to the horizontal ground bus.
            c) Install parallel to the vertical power bus.
            d) Mount vertical ground bus such that plug-in units engage the ground bus before any connection to the power bus is made. Upon removal of plug-in units, ground stabs are disconnected

from the ground bus after the power stabs have been disconnected.

5. Bus splice bars:
   a. Provided to join the bus at the splits.
   b. Connected to each horizontal bus bar with a minimum of 2 bolts.
   c. Employ conical or spring washers at connections, designed to maintain constant pressure against the splice joint.
   d. Same ampacity rating as the horizontal bus.
6. Provide bus system configured for back-to-back MCCs, where required.

D. Enclosures:
   1. Each motor control center shall consist of 1 or more vertical sections bolted together:
      a. Freestanding.
      b. Totally enclosed.
      c. Dead-front assembly.
      d. Designed for modification and/or addition of future vertical sections.
      e. Form each vertical section of heavy gauge steel.
      f. Designed for back-to-back arrangement installation, where required and/or as indicated on the Drawings.
   2. Enclosure rating:
      a. Indoor:
         1) NEMA Type 1 gasketed.
   3. Standard section dimensions:
      a. Nominal height: 90 inches.
      b. Nominal depth: 20 inches.
      c. Vertical section width as indicated on the Drawings.
   4. Wireways:
      a. Provide each vertical section with a horizontal wireway at the top and bottom of the section:
         1) Arranged to provide a full-width metal enclosed wiring trough across the entire motor control center assembly.
      b. Provide each vertical section with a full-height vertical wireway.
      c. Completely isolated from the vertical and horizontal bus bars.
      d. Provide a removable, hinged door.
   5. Shipping splits:
      a. No more than 3 vertical sections and not more than 60 inches in width.
      b. Solid bussing between vertical sections in a shipping split is not acceptable.
   6. Lifting angles:
      a. Furnish each vertical section and/or shipping split with a removable lifting angle mounted to the top of the enclosure:
         1) Extending the entire width of the shipping split.
   7. Mounting channels:
      a. Mount each vertical section and/or shipping split on an external 1.5-inch by 3-inch mounting channel.

E. Units:
   1. A plug-in unit consists of:
      a. Assembly.
      b. Support pan.
      c. Door assembly.

2. Completely enclosed and isolated from adjacent units, buses, and wireways, except for conductor entries into the unit, by a metal enclosure.
3. Supported and guided by a removable unit support pan:
    a. Re-arrangement of units and the removal of a unit so that a new and possibly larger unit can be added without the removal of an in-service unit to gain access to the unit support pan.
4. Held in place by screws or other positive locking means after insertion.
5. Provide a test position with the unit supported in the structure but disengaged from the bus.
6. Integral plug-in ground stab.
7. Stabs:
    a. Free floating.
    b. Self-aligning.
    c. Backed by spring steel clips to ensure high pressure contacts.
    d. Electrolytically tin-plated copper.
8. Handle:
    a. Provide a flange mounted handle mechanism to operate each disconnect switch or circuit breaker.
    b. Door mounted operators or operator handles are not acceptable.
    c. Engaged with the disconnect device at all times as an integral part of the unit independent of the door position.
    d. Lockable in the “OFF” position with up to 3 padlocks.
    e. Mechanically interlocked so that the door cannot be opened with the handle in the “ON” position:
        1) Provide a means for qualified personnel to defeat this interlock.
    f. Interlocked so the unit cannot be inserted or withdrawn with the handle in the “ON” position.
    g. Lockable in the “ON” position:
        1) This shall not prevent the circuit breaker from operating and opening the contacts in the event of a fault condition.
    h. Color-coded to indicate position.
    i. Located so the center of the grip when it is in its highest position is not more than 6 feet 7 inches above the finished floor, including the height of the housekeeping pad and mounting channels.
9. Space for future devices:
    a. Provide spaces as indicated on the Drawings.
    b. As specified in Section 16050 - Common Work Requirements for Electrical.

2.05 COMPONENTS

A. Provide components contained within the motor control center as specified in:
    1. Section 16075 - Identification for Electrical Systems.
    2. Section 16123 - 600-Volt or Less Wires and Cables.
    3. Section 16150 - Low Voltage Wire Connections.
    4. Section 16290 - Electrical Power Monitoring.
    5. Section 16412 - Low Voltage Molded Case Circuit Breakers.
    6. Section 16422 - Motor Starters.
    7. Section 17710 - Control Systems: Panels, Enclosures, and Panel Components.

2.06 ACCESSORIES

A. Wiring:
   1. Wire the motor control center in accordance with the following NEMA Class and Type as defined by NEMA ICS 18-2001:
      a. NEMA Class II-S:
         1) Furnish wiring diagrams for individual units consisting of drawings that identify electrical devices, electrical connections, and indicate terminal numbering designations.
         2) Furnish individual unit diagrams with each unit and include inter-wiring between units, i.e., electrical interlocking, etc., as specifically specified in the Contract Documents.
         3) Provide custom drawings with unique terminal numbering designations in lieu of standard manufacturer drawings.
      b. NEMA Type B wiring:
         1) Control wiring:
            a) Type B-T pull-apart terminal blocks.
         2) Power wiring:
            a) Type B-T for Size 1 starters.
            b) Type B-T or B-D for Size 2 and 3 starters.
            c) Type B for Size 4 and larger starters and feeder units.

B. Lugs and terminals:
   1. For external connections of No. 6 AWG wire or larger:
      a. UL listed for copper or aluminum conductors.
   2. Compression type, requiring a hydraulic press and die for installation.
   3. Provide additional terminal blocks as needed for control conductors passing through the MCC.
   4. Provide 30 percent spare control block terminals.

C. Nameplates:
   1. Provide nameplates as specified in Section 16075 - Identification for Electrical Systems:
      a. Identifying the motor control center designation as indicated on the Drawings.
   2. Furnish individual nameplates for each unit indicated on the Drawings:
      a. 1 nameplate to identify the unit designation.
      b. 1 nameplate to identify the load served.
      c. Furnish space units with blank nameplates.
   3. Manufacturer's labels:
      a. Furnish each vertical section with a label identifying:
         1) Serial number.
         2) Bus rating.
         3) Vertical section reference number.
         4) Date of manufacture.
         5) Catalog number of section.

2.07 FINISHES

A. Finish metal surfaces and structural parts with phosphatizing, or equal, treatment before painting.

B. Finish interior surfaces including bus support angles, control unit back plates, and top and bottom barrier plates with baked white enamel.

C. Finish exterior of enclosure with manufacturer's standard gray.
   1. Finish NEMA Type 3R exterior cabinets with ultraviolet resistant enamel paint that is UL recognized for outdoor use.

2.08 SOURCE QUALITY CONTROL

A. Source Testing (Factory Acceptance Tests):
   1. Not witnessed.
   2. Test the complete motor control center at the manufacturer's establishment. Completely assemble, wire, and test the motor control center:
      a. Detailed inspections before and after assembly to ensure correctness of design and workmanship.
   3. Provide groups of wires leaving the shipping-assembled equipment with terminal blocks with suitable numbering strips.
   4. Furnish test reports and Manufacturer's Certificate of Source Testing.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. General:
   1. Furnish cables, conduit, lugs, bolts, and other accessories necessary to completely install the motor control center for the line, load, and control connections.
   2. Assemble and install the motor control center in the locations and with the layouts as indicated on the Drawings.
   3. Make bus splice connections.
   4. Perform work in accordance with manufacturer's instruction and Shop Drawings.
   5. Furnish components and equipment necessary to complete the installation.
   6. Replace hardware, lost or damaged during installation or handling, in order to provide a complete installation.

7. Install the MCC on a raised concrete housekeeping pad:
    a. Provide structural leveling channels in accordance with the manufacturer's recommendations to provide proper alignment of the units:
        1) Remove the manufacturer's supplied mounting channels as required by the manufacturer's installation instructions.
    b. Weld and/or bolt the motor control center frame to leveling channels.

C. Provide openings in the top or bottom of the motor control center for conduit only:
    1. No additional openings will be accepted:
        a. Miscut holes will require that the entire vertical section or removable panel be replaced.
        b. No hole closers or patches will be accepted.

D. Bundle circuits together and terminate in each unit:
    1. Tie with nylon wire ties as specified in Section 16123 - 600-Volt or Less Wires and Cables.
    2. Label wires at each end with wire markers as specified in Section 16075 - Identification for Electrical Systems as shown on the approved elementary schematics.

E. Installation Verification:
    1. Furnish Manufacturer's Certificate of Installation Verification.

3.03 FIELD QUALITY CONTROL

A. Provide the services of a manufacturer's representative to:
    1. Inspect, verify, and certify that the motor control center installation meets the manufacturer's requirements.

B. Functional Testing:
    1. As specified in Section 16950 - Field Electrical Acceptance Tests.

3.04 OWNER TRAINING

A. Owner Training:
    1. Perform Owner Training as specified in Section 01756 - Commissioning.

3.05 ADJUSTING

A. Make adjustments as necessary and recommended by the manufacturer, Engineer, or testing firm.

END OF SECTION

SECTION 16445

PANELBOARDS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Panelboards serving feeder circuits and branch circuits.

1.02 REFERENCES

A. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

B. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).

C. Underwriters Laboratories, Inc. (UL):
   1. 67 - Standard for Panelboards.

1.03 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Manufacturer of panelboard.
   2. Bill of material.
   3. Assembly ratings including:
      a. Voltage.
      b. Phase.
      c. Continuous current.
      d. Short circuit interrupting rating.
   4. NEMA enclosure type.
   5. Cable terminal sizes based upon actual feeder and sub-feeder conductors used.
   6. Furnish circuit breaker Submittals as specified in Section 16412 - Low Voltage Molded Case Circuit Breakers.
   7. For equipment installed in structures designated as seismic design category C, D, E, or F, submit the following as specified in Section 01850 - Design Criteria:
      a. Manufacturer’s statement of seismic qualification with substantiating test data.
      b. Manufacturer’s special seismic certification with substantiating test data.

C. Shop Drawings:
    1. Overall panelboard dimensions, interior panel dimensions, and wiring gutter dimensions:
        a. Height.
        b. Length.
        c. Width.
    2. Weight.
    3. Anchoring locations.
    4. Breaker layout drawing with dimensions:
        a. Location of the main, branches, solid neutral, and ground.
    5. Conduit entry/exit locations:
        a. Identify conduit entry/exit locations and restrictions.
    6. Individual panel schedules identifying breaker locations, ratings, and nameplate designations within the panelboard, for every panelboard.

D. Calculations:
    1. Detailed calculations or details of the actual physical testing performed on the panelboard to prove the panelboard is suitable for the seismic requirements at the Project Site.

E. Delegated Design Submittals:
    1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria:
        a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
        b. For equipment installed outdoors.
        c. For wall mounted equipment weighing 125 pounds or more.

F. Installation instructions:
    1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
    2. Provide manufacturer’s installation instructions.

G. Quality Control Submittals:
    1. Manufacturer’s Certificate of Source Testing as specified in Section 01756 - Commissioning.
    2. Test reports.

H. Operations and maintenance manual:
    1. As specified in Section 01782 - Operation and Maintenance Manuals.
    2. Provide a complete manual for the operation and maintenance of the panelboard, circuit breakers, devices, and accessories:
        a. Including, but not limited to:
            1) Instruction narratives and bulletins.
            2) Renewal parts lists.
            3) Time-current curves for all devices.

1.05 QUALITY ASSURANCE

A. Where indicated as service entrance equipment, panelboards shall be UL listed and labeled “Suitable for Service Entrance.”

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Circuit breaker panelboards as indicated in the panelboard schedules, one-lines, and where indicated on the Drawings:
   1. Service voltage and configuration as indicated on the panel schedules.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide equipment and components that are fully rated for the site elevation and operating environment where the equipment will be installed as specified in Section 01850 - Design Criteria and as indicated on the Drawings.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. ABB.
   2. Eaton.
   3. Schneider Electric.

B. Circuit breakers:
   1. Same manufacturer as the panelboard.

2.04 EQUIPMENT

A. Provide panelboards with:
   1. Molded-case circuit breakers with trip ratings as shown on the panel schedules.
   2. Spares and spaces for future circuit breakers in panels as shown on the panel schedules.
      a. Space for future devices as specified in Section 16050 - Common Work Requirements for Electrical.

B. Short circuit rating:
   1. Provide as indicated on the Drawings.
   2. Testing method in accordance with UL 67.

3. Mark each panelboard with its maximum short circuit rating at the supply voltage.
4. Panelboards shall be fully rated.

2.05 COMPONENTS

A. Enclosure:
   1. NEMA enclosure type as indicated on the Drawings:
      a. Where not indicated on the Drawings, as specified in Section 16050 - Common Work Results for Electrical for the installed location.
   2. Minimum width: 20 inches.
   3. Gutter space in accordance with the NEC:
      a. Minimum of 4 inches.
   4. Dead-front, no live parts when the panelboard is in service.
   5. Enclose entire panelboard bus assembly in a corrosion resistant galvanized steel cabinet.
   6. 4-piece front to provide ease of wiring access.
   7. Lockable, hinged door over the protective devices with a flush, cylinder tumbler-type lock with catch and door pull:
      a. Minimum 2 keys per panelboard.
      b. Key all panelboard locks alike.
   8. Circuit directory frame and card on the inside of the door.
   9. Door-in-door construction consists of a one-piece front with 2 doors:
      a. Smaller door provides access to device handles and rating labels and shall be lockable.
      b. Larger door provides access to conductors and wiring terminals.
   10. Interior design such that replacement of circuit breakers does not require disturbing adjacent units or removal of the main bus connectors.
   11. Outdoor locations: Provide NEMA Type 4X enclosures with a NEMA Type 4X stainless steel outer enclosure (with a hinged door) and a NEMA Type 1 interior panelboard, unless otherwise indicated.

B. Bus:
   1. General:
      a. Tin-plated copper.
   2. Phase bus:
      a. Full size and height without reduction.
      b. Dimensions and temperature rise in accordance with UL 67:
         1) Limit current density to less than 1,000 amps per square inch.
      c. Insulate current carrying parts from ground and phase-to-phase with a high dielectric strength insulator.
   3. Ground bus:
      a. Copper, solidly bonded.
   4. Neutral bus:
      a. Provide where indicated on the Drawings.
      b. 100 percent rated.
      c. Provide lugs for each outgoing feeder requiring a neutral connection.
   5. Provide insulation barriers over the vertical bus behind the dead front shield to provide increased safety during field service.

C. Lugs:
   1. UL listed for copper and aluminum wire:
      a. Rated for 75-degree Celsius terminations.
      b. Provide bolted or compression main lug terminations as required for the incoming cable size.

D. Circuit breakers: As specified in Section 16412 - Low Voltage Molded Case Circuit Breakers and as indicated on the Drawings:
   1. Provide with bolt-on connections:
      a. Plug-in circuit breakers are not allowed.

2.06 ACCESSORIES

A. Surge protective devices:
   1. Furnish panelboards with surge protective devices as indicated on the Drawings.
   2. As specified in Section 16285 - Surge Protective Devices.

B. Nameplates:
   1. As specified in Section 16075 - Identification for Electrical Systems.
   2. Install on outside of door.
   3. Indicating:
      a. Panel designation.
      b. Voltage.
      c. Number of phases and configuration.

C. Circuit identification labels:
   1. Provide index cards behind heavy clear plastic in cardholders on the inside of the doors.
   2. Type all information on the cards using designations in the panel schedules.
   3. Laminated on both sides.

D. Pad locking mechanism:
   1. Provide a pad locking attachment to allow circuit breakers to be locked in the off position.
   2. At a minimum, provide 1 mechanism per panelboard:
      a. Provide multiple mechanisms if required to accommodate all circuit breaker frame sizes in the panelboard.

2.07 FINISHES

A. Finish stand-alone panelboards with a primer, rust-resistant phosphate undercoat, and 2 coats of oven-baked enamel with manufacturer’s standard gray.

B. Finish panelboards mounted in motor control centers to match the motor control center finish and color.

2.08 SOURCE QUALITY CONTROL

A. Source Testing:
   1. Perform standard factory tests on the panelboards.

2. Test in accordance with NEMA and UL standards.
3. Furnish test reports and Manufacturer's Certificate of Source Testing.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. General:
   1. Mounted as indicated on the Drawings.
   2. Mount rigidly to structural members with exposed surfaces plumb and level to within 1/32 inch.
   3. Perform Work in accordance with the manufacturer's instructions and Shop Drawings.
   4. Provide brackets, hangers, supports, and hardware for mounting as required.
   5. In NEMA Type 4 and NEMA Type 4X locations, mount panelboards on 7/8-inch deep stainless steel preformed channel, with channel running vertically from top to bottom of panelboard:
      a. Use only stainless steel mounting hardware.
   6. Mount panelboard so that top operating handle is not more than 6 feet-7 inches above the operating floor.

C. Provide typewritten schedule in each panelboard.

3.03 FIELD QUALITY CONTROL

A. As specified in Section 16050 - Common Work Results for Electrical.

B. Field electrical acceptance testing:
   1. As specified in Section 16950 - Field Electrical Acceptance Tests.

END OF SECTION

SECTION 16494

LOW VOLTAGE FUSES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fuses: 600-volt class and lower.

1.02 REFERENCES

A. As specified in Section 16050 - Common Work Results for Electrical.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. Catalog cut sheets.
   2. Complete fuse schedule.
   3. Manufacturer original 11-inch by 17-inch, time current curves for all fuses furnished.

C. Shop Drawings:
   1. Include drawings of spare fuse cabinets.

1.04 QUALITY ASSURANCE

A. Low voltage fuses shall be UL listed and labeled.

1.05 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.07 MAINTENANCE

A. Spare parts:
   1. Provide 3 spare fuses for each size and type used or supplied under any Section of the Contract Documents.
   2. Provide spare fuse cabinet(s):
      a. Metal cabinet with hinged door and shelves or fuse holders.
      b. Gray enamel finish.
      c. Mount near equipment and label “Spare Fuses” on face of cabinet.

d. Suitable pocket inside door of each cabinet with typewritten spare fuse inventory in clear plastic protective insert.
e. Provide as many cabinets as required to hold entire spare fuse inventory.

PART 2 PRODUCTS

2.01 GENERAL

A. Fuses for overcurrent protection and/or current limiting applications as indicated on the Drawings.

2.02 MANUFACTURERS

A. One of the following or equal:
   1. Bussmann.
   2. Ferraz Shawmut.
   3. Littelfuse.

2.03 MANUFACTURED UNITS

A. General:
   1. Provide durable, readily visible label inside each fuse enclosure, clearly indicating the correct type, size, and ratings of replacement fuse:
      a. Label shall not cover or interfere with the equipment manufacturer's instructions.
   2. Affix a label indicating recommended torque for fuse mounting bolts or studs to the inside of fuse access doors.
   3. To ensure selective coordination of protective devices:
      a. Provide fuses for new facilities by the same manufacturer.
      b. Provide fuses for renovations of the same manufacturer as existing fuses.
   4. Provide fuses rated for the voltage and available short circuit current at which they are applied.

B. Fuses for services, switchboard mains, feeders, and branch circuits:
   1. 600 amperes and less:
      a. Provide UL listed RK1 dual-element, time-delay fuses with ampere ratings as indicated on the Drawings, except as may be modified by the Contract Documents.

C. Fuses for motor branch circuits:
   1. Ampere ratings shall not exceed the motor controller manufacturer's recommended values:
      a. If the manufacturer does not have such standards, provide fuses as specified in this Section.
   2. Provide Class RK1 fuses or fuses as indicated on the Drawings and as specified in the Contract Documents, rated in accordance with the fuse manufacturer's recommendations for backup running protection of motor circuits containing overload relays.
   3. Determine fuse ratings for overload protection of motor branch circuits by actual full-load currents of motors provided.

4. Fuses in motor control centers may be time-delay Class J or Class CC fuses, if MCC manufacturer's standard designs use these fuse types:
    a. Time-delay Class J fuse ratings shall not exceed 150 percent of motor full load current except as permitted.
    b. Follow the fuse manufacturer's recommendations for Class CC fuses.
    c. A motor having starting duty or other special characteristics requiring larger fuses than specified above may have branch circuit fuse ratings increased as necessary to meet the motor's requirements, but no larger than maximum permitted by the NEC.
        1) Increased requirements for an individual motor shall not be cause for increasing size of all fuses.

PART 3 EXECUTION

3.01 INSTALLATION

A. General:
    1. Properly aligned, electrically and mechanically secure.
    2. Evenly torque mounting bolts and nuts to ASTM recommendations for type and diameter of mounting bolts or studs provided.
    3. Paralleling of fuses is not permitted.
    4. Install fuses so that the fuse nameplate and rating are easily readable in the equipment.

B. Replace fuses, on all phases, for any fuses that opened during start-up and testing.

C. After completion of testing, deliver spare fuses in quantities specified:
    1. New, in manufacturer's original packaging, and stored in a clean, dry location.

D. Install spare fuse cabinets where instructed by the Owner.

END OF SECTION

SECTION 16510

LIGHTING: LED LUMINAIRES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. LED luminaires, drivers, poles, and accessories.

1.02 REFERENCES

A. Illuminating Engineering Society (IES):
   1. LM-79 - Approved Method: Optical and Electrical Measurements of Solid-State Lighting Products.
   2. LM-80 - Measuring Luminous Flux and Color Maintenance of LED Packages, Arrays and Modules.
   3. RP-7 - Recommended Practice for Lighting Industrial Facilities.
   4. TM-21 - Projecting Long Term Lumen, Photon, and Radiant Flux Maintenance of LED Light Sources.

B. Institute of Electrical and Electronics Engineers (IEEE):
   1. C62.41 - IEEE Recommended Practice for Surge Voltages in Low-Voltage AC Power Circuits.

C. National Electrical Manufacturers Association (NEMA):
   1. 410 - Performance Testing for Lighting Controls and Switching Devices with Electronic Drivers and Discharge Ballasts.

D. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).

E. Underwriters Laboratories (UL):
   1. 1598 - Luminaires.
   2. 8750 - Light Emitting Diode (LED) Equipment for Use In Lighting Products.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. CCT (correlated color temperature) - Scientific scale to describe how “warm” or how “cool” the light source is, measured in Kelvin. The lower the Kelvin temperature, the warmer the light feels, or appears.
   2. CRI (color rendering index) - A quantitative measure of the ability of a light source to reveal the colors of various objects faithfully in comparison with an ideal or natural light source.
   3. Driver - Device that manages power and controls the current flow from AC to DC for an LED lighting product.

4. Efficacy - Lumen output of a light source per unit of power supplied to that source (lumens per watt).
5. EMI (electromagnetic interference) - Electrical interference (noise) generated by electrical and electronic devices.
6. FC (foot candles) - Measure of light level on a surface being illuminated.
7. L70 - Extrapolated life in hours of the luminaire when the luminous output depreciates 30 percent from initial values.
8. LED (light emitting diode) - A solid-state semiconductor device that produces light when electrical current flows through it.
9. LED light source - See LED luminaire.
10. LED luminaire - A complete lighting unit consisting of LED-based light emitting elements and a matched driver together with parts to distribute light, to position and protect the light emitting elements, and to connect the unit to a branch circuit.
11. Lumen - International (SI) unit of luminous flux or quantity of light. The amount of light that is spread over a square foot of surface by 1 candle power when all parts of the surface are exactly 1 foot from the light source.
12. Lumen ambient temperature multiplier - LED light source relative lumen output when compared to a standard ambient temperature.
13. Lumen maintenance factor - How well an LED light source is able to retain its intensity when compared to new.
14. Luminaire - Lighting unit.
15. THD (total harmonic distortion) - Combined effect of harmonic Distortion on the AC waveform produced by a driver or other device.

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing for light poles.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data:
   1. LED luminaires:
      a. Catalog literature for each luminaire specified, cross-referenced to the luminaire type on the Luminaire Schedule, in the Drawings.
      b. Provide for each luminaire type:
         1) Materials.
         2) Type of diffuser.
         3) Hardware.
         4) Gasketing.
         5) Reflector.
         6) Chassis.
         7) Finish and color.
         8) Driver type and protection.
         9) LED luminaire:
            a) Initial lumen output at 40 degrees Celsius ambient.
            b) Correlated color temperature.

c) Lumen maintenance factors.
d) Lumen ambient temperature multipliers.
e) Drive current.
f) Efficacy.

10) Picture of luminaire.
11) IES optical distributions.
12) Dimensioned drawings:
    a) Effective projected area rating for pole mounted luminaires.
13) Weight.
14) Photometric data:
    a) Coefficient of utilization tables based on the IES zonal cavity system by an approved testing laboratory.
    b) Luminaire dirt depreciation factor.
    c) Candlepower distribution curves.
    d) Average luminaire brightness.
    e) Lumen output charts.
15) Furnish support method for interior luminaires weighing more than 30 pounds and all wall-mounted luminaires:
    a) Support methods shall be based on seismic requirements at the Project Site as specified in Section 01850 - Design Criteria.

c. Luminaire substitutions:
    1) Provide complete literature for each luminaire substitution:
    2) Submittals for substituted luminaires shall be sufficient for competent comparison of the proposed luminaire to the originally specified luminaire:
        a) Photometric data:
            (1) IES file in standard IES format.
            (2) Coefficient of utilization tables based on the IES zonal cavity system by an approved testing laboratory.
            (3) Candlepower distribution curves.
            (4) Average luminaire brightness.
            (5) Lumen output charts.
            (6) Power requirements in watts and volt-amperes.
        b) Calculations:
            (1) Provide software generated calculations showing illuminance levels in footcandles and power usage in watts per square foot for each of the areas in which substitutions are proposed:
                (a) Use surface reflectance values in accordance with IES RP-7.
                (b) Use manufacturer projected lumen maintenance factor for minimum of 60,000 hours to perform all calculations.
        c) Specification sheets:
            (1) If lacking sufficient detail to indicate compliance with Contract Documents, standard specification sheets will not be accepted. This includes, but is not limited to, luminaire type designation, manufacturer’s complete catalog number, voltage, LED type, CCT, CRI, specific driver information, system efficacy, L70 life rating, and any modifications necessary to meet the requirements of the Contract Documents.

3) Substitutions for specified luminaires will be evaluated upon quality of construction, light distribution, energy use, appearance, and maintenance.
4) Substitutions shall comply with all applicable building and energy codes.

2. Driver: Provide for each driver type:
   a. Catalog number.
   b. Type of driver.
   c. Output wattage.
   d. Input voltage.
   e. Operating voltage range.
   f. Maximum input power.
   g. Efficiency.
   h. Operating line current.
   i. Power factor.
   j. Operating temperature range.
   k. Current output range in ambient temperatures of 30 to 55 degrees Celsius.
   l. Surge suppression data.
3. Photocell:
   a. Provide for each photocell type:
      1) Switching capacity.
      2) Life expectancy when used on LED sources.
      3) Means of adjusting the lighting pickup level.
      4) Enclosure type.
      5) Mounting method.
4. Luminaire poles:
   a. Submit complete data for each pole type including, but not limited to:
      1) Material.
      2) Finish and color.
      3) Handholes.
      4) Anchoring.
      5) Luminaire attachment methods and fittings.
      6) Pole height.
      7) Pole dimensions.
      8) Bolt hole circle layout and hardware.
      9) Accessories.
      10) Provide the EPA wind load rating.
      11) Installation instructions for rigging, moving and setting into place.

C. Delegated Design Submittals:
   1. Project-specific calculations with anchoring and bracing details based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria.

D. Record documents:
   1. Update the Luminaire Schedule in the Drawings to reflect the acceptable substitutions, after the substitution has been reviewed and accepted by the Engineer.

1.06 QUALITY ASSURANCE

A. Luminaires shall be UL listed and labeled.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 ADMINISTRATIVE REQUIREMENTS

A. Scheduling:
   1. Exterior and outdoor lighting system operation shall be demonstrated during the hours of darkness.
   2. Lighting demonstration shall occur within 2 weeks before substantial completion.

1.09 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

B. LED luminaire:
   1. 5-year warranty from the date of installation including material, workmanship, photometrics, driver, and LED modules.

1.10 MAINTENANCE

A. Furnish 1 complete spare LED luminaire, with driver, of each type used.

PART 2 PRODUCTS

2.01 GENERAL

A. Individual luminaire types are indicated on the Drawings and on the Luminaire Schedule.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide luminaires and accessories for all lighting systems, complete and operable, in accordance with the requirements of the Contract Documents.

2.03 MANUFACTURERS

A. Luminaires:
   1. The following or equal:
      a. As noted on the Luminaire Schedule.

B. Drivers:
   1. One of the following or equal:
      a. eldoLED.
      b. Philips Advance.
      c. Thomas Research.

C. Photo-electric cells:
   1. One of the following or equal:
      a. Cooper.
      b. Hubbell-Killark.
      c. Intermatic.
      d. Tork.

D. Substitutions:
   1. Lighting design and luminaire selection has been based upon the photometric data of the identified luminaire. It is the Contractor's responsibility to ensure and prove to the Engineer at time of Submittal the substitutions meet the quality and photometric requirements of the original design.

2.04 EQUIPMENT

A. LED luminaires:
   1. General:
      a. Pre-wired with leads of 18-AWG, minimum, for connection to building circuits.
      b. Provide the luminaires furnished as indicated on the Luminaire Schedule in the Drawings:
         1) Specifications noted in this Section are an addition or supplement to the Luminaire Schedule.
      c. Individual LEDs connected such that a catastrophic loss or the failure of 1 LED will not result in the loss of the entire luminaire.
   2. Minimum ambient temperature range of 0 degrees Celsius to 40 degrees Celsius.
   3. Minimum rated life:
      a. Office areas: 70,000 hours when operated at 25 degrees Celsius.
      b. Process areas: 100,000 hours when operated at 40 degrees Celsius.
      c. Hazardous areas: 100,000 hours when operated at 40 degrees Celsius.
   4. Minimum efficacy of 70 lumens/watt.
      a. Hazardous areas: Minimum 60 lumens/watt.
   5. Minimum Color Rendering Index of 70.
   6. Tested according to IES LM-79 and LM-80.
   7. Lumen maintenance projection in accordance with IES TM-21.
   8. RoHS compliant.
   9. Integral driver.
   10. Suitable for dry, damp, or wet locations as indicated on the Drawings or on the Luminaire Schedule.
      a. Wet or damp locations: UL 1598 listed.
   11. Designed as a complete LED assembly. Retrofit LED lamps in luminaires not designed specifically for LED light sources shall not be used.
   12. Exterior/outdoor luminaires:
      a. Luminaires in combination with their mounting pole and bracket shall be capable of withstanding:
         1) Wind levels at the Project Site without damage.
         2) Seismic levels at the Project Site.
      b. Corrosion-resistant hardware and hinged doors or lens retainer.
      c. Luminaires furnished with integral photoelectrical control shall be of the luminaire manufacturer's standard design.

d. California Energy Code Light Pollution Reduction Compliance:
    1) Provide exterior luminaires with cutoff photometrics.
        a) Luminaire design shall allow no more than 0.01 horizontal footcandles to escape beyond the site boundary.
    2) Provide exterior luminaires with photocells to automatically control exterior lighting dusk to dawn to turn off or lower the lighting levels during inactive periods. Reference the Drawings for specific luminaires to be controlled.

B. Photo-electric cells:
    1. Weatherproof.
    2. In Class I Division 2 locations:
        a. Rated for used in Class I Division 2, Groups A, B, C, D locations.
        b. Factory sealed.
    3. Photoelectric cells for control of multiple luminaires:
        a. Self-contained.
        b. Provided with time-delay features.
        c. Sized to meet switching capacity of the circuit:
            1) Based on luminaire VA as indicated on the Drawings.
    4. Photoelectric cell for control of a single luminaire:
        a. Integral to the luminaire.

C. Luminaire control:
    1. Lighting control relays or contactors as specified in Section 16422 - Motor Starters.

D. Drivers:
    1. Dimmable, with dimming signal protocol of 0-10 VDC or DALI.
    2. Input power source:
        a. As indicated on the Drawings.
    3. Drive current:
        a. As indicated in the Luminaire Schedule.
    4. Power factor: Greater than 0.90.
    5. Efficiency: Greater than 80 percent.
    6. Total harmonic distortion (THD) of the input current less than 20 percent.
    7. Rated life of 60,000 hours in an LED luminaire operated at an ambient temperature of 40 degrees Celsius.
    8. Minimum operating temperature of 0 degrees Celsius.
    9. Sound rating: Class A+ or quieter.
    10. UL listed Class 2 Outdoor in accordance with UL 8750.
    11. In accordance with IEEE C62.41 Category A for transient protection.
    12. Driver must limit inrush current:
        a. Meet or exceed NEMA 410 driver inrush standard:
            1) 230 amps per 10 amp load with a maximum of 106 amps squared-seconds at 120 V.
            2) 430 amps per 10 amp load with a maximum of 370 amps squared-seconds at 277 V.

2.05 COMPONENTS

A. Luminaire poles:
   1. As indicated on the Luminaire Schedule.
   2. Anchor bolts:
      a. Use anchor bolts, bolts, or welded studs for anchors for resisting seismic and wind forces.
         1) Standard hex bolt head.
         2) Do not use anchor bolts fabricated from rod stock with an L- or J-shape.
      b. Complete with leveling shims.
   3. Anchor base:
      a. Fabricated from the same type of material as the pole shaft.
      b. Base plate to telescope the pole shaft.
      c. Welded top and bottom along the entire perimeter.
      d. With slotted bolt holes on the bolt circles as submitted.
   4. Pole shaft:
      a. As indicated on the Luminaire Schedule.
   5. Handhole:
      a. Reinforced handhole located approximately 18 inches above the base.
      b. Complete with cover fabricated from the same material as the pole shaft and stainless steel attachment screws.
      c. With an integral ground connection nut, 1/2 inch by 13 inch UNC welded to the pole for connection to the grounding system.
   6. Shroud:
      a. Fabricated from the same type of material as the pole shaft.
      b. 1-piece formed channel section that shall conform to the pole shaft taper.
      c. Secured by a locking device with provisions for a padlock to prevent accidental lowering.
   7. Fastening hardware:
      a. Stainless steel.
   8. Finish:
      a. As indicated on the Luminaire Schedule.

PART 3 EXECUTION

3.01 PREPARATION

A. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.02 INSTALLATION

A. Install the equipment in accordance with the accepted installation instructions and anchorage details.

B. Special techniques:
   1. Support luminaires from structural elements capable of carrying the total weight.
   2. Install luminaires plumb and square with building and wall intersections:
      a. Suspend pendant-mounted luminaries that are mounted from sloping ceilings with ball hangers, unless otherwise indicated on the Drawings.
      b. Install luminaires in machinery rooms after machines have been installed, so as to ensure no conflict with machinery, piping, or ductwork.
   3. In all cases, coordinate luminaire locations with work of other trades to prevent obstruction of light from the fixtures:
      a. Locate bottom of luminaire approximately at the bottom of ductwork, unless otherwise specified or indicated on the Drawings.
   4. Support luminaires weighing more than 25 pounds independently of the outlet box and the conduit.
   5. Provide ceiling or pendent mounted luminaires with a safety chain connecting the lens, driver, and other components to the building structure.
   6. Provide recessed luminaires with auxiliary safety supports attached directly to the building structure:
      a. Safety supports shall consist of number 12 AWG soft drawn galvanized wires.
   7. Provide luminaires equipped with battery backup with an additional unswitched conductor from the power source circuit designated on the Drawing. Wall switches shall be wired to switch luminaires on and off, while maintaining power to the backup batteries.

C. Luminaire poles:
   1. Set poles on anchor bolts and secured with double nuts on each bolt.
   2. Dry-pack the pole base, after the luminaire and pole has been leveled and plumbed.
   3. Bond metal poles to the plant grounding system, utilizing a ground lug connection within the pole:
      a. Route ground conductor through pier and pole base sleeve using Schedule 40 PVC conduit.

3.03 ADJUSTING

A. Aim and verify exterior and outdoor luminaires alignment, during dark evening hours, as directed by the Owner or the Engineer.

3.04 CLEANING

A. Clean lenses, diffusers, and reflectors.

B. Refinish luminaires' trim, poles, and support brackets, where finish has been damaged.

C. Clean LED luminaires (new and old), used during construction for construction lighting, before substantial completion.

3.05 SCHEDULES

A. Refer to the Luminaire Schedule in the Drawings.

END OF SECTION

SECTION 16710

FIRE ALARM SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Design and installation of fire alarm systems.

1.02 REFERENCES

A. Regulations:
   1. As specified in Section 01410 - Regulatory Requirements.

B. Standards:
   1. Federal Communications Commission (FCC).
   2. National Fire Protection Association (NFPA):
      a. 1 - Fire Code.
      b. 70 - National Electrical Code.
      c. 72 - National Fire Alarm and Signaling Code.
      d. 75 - Standard for the Protection of Information Technology Equipment.
      e. 90A - Standard for the installation of Air Conditioning and Ventilation systems.
      f. 1221 - Standard for the Installation, Maintenance, and Use of Emergency Services Communications Systems.
   3. National Institute for Certification in Engineering Technologies (NICET).
   4. Underwriters Laboratories, Inc. (UL):
      a. 864/1730 - Standard for Control Units and Accessories for Fire Alarm Systems.

1.03 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Fire alarm system design.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Delegated Design Submittals:
   1. Product data for fire alarm system components and materials.
   2. Shop Drawings:
      a. Furnish all Shop Drawings required to obtain approval of the fire alarm system by the authority having jurisdiction (AHJ).
   3. Calculations.

C. Installation instructions:
   1. Provide manufacturer's installation instructions.

D. Quality Control Submittals:
   1. Designer and installer qualifications.
   2. Manufacturer's representative qualifications.
   3. Manufacturer's Certificate of Installation as specified in Section 01756 - Commissioning.
   4. Manufacturer's Certificate of Functional Compliance as specified in Section 01756 - Commissioning.

E. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

F. Operation and maintenance manuals:
   1. As specified in Section 01782 - Operation and Maintenance Manuals.

1.05 QUALITY ASSURANCE

A. Installer qualifications:
   1. NICET Level II Fire Alarm System Technician.
   2. Installation to be supervised by NICET Level III Technician.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in the Agreement and Contract RFP in Volumes 1 and 2, and the manufacturer's instructions.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:
   1. Furnish Submittals to the local authority having jurisdiction (AHJ), for review and approval of the proposed system.
      a. Pay all plan check, permit, and inspection fees.
      b. Submit AHJ's approval to the Engineer.

1.09 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.10 MAINTENANCE

A. Furnish service and maintenance of fire alarm system for 1 year from date of Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL

A. Design, furnish, and install fire alarm systems in the following locations:
   1. Campus Oaks Pump Station.
   2. Misty Woods Pump Station.

2.02 MANUFACTURERS

A. One of the following or equal:
   1. Edwards Signaling Solutions.
   2. Honeywell.
   3. Siemens Fire Safety Solutions.

2.03 DESIGN AND PERFORMANCE CRITERIA

A. Provide a complete, non-coded, microprocessor-based fire alarm system with initiating devices, notification appliances, controls, and supervisory devices.

B. HVAC shutdown:
   1. Shutdown all HVAC equipment serving an area in the event of an alarm.
   2. Related HVAC equipment as indicated on the Drawings.

C. Alarms from the fire alarm system shall be routed to:
   1. PLC.

2.04 EQUIPMENT

A. All fire alarm system equipment and materials shall be UL listed.

B. Fire alarm equipment shall be rated for the installed location as indicated on the Drawings.

2.05 COMPONENTS

A. Conduit:
   1. Use the conduit type for the installed location as specified in Section 16050 - Common Work Results for Electrical.
   2. Provide conduit as specified in Section 16130 - Conduits.

B. Boxes:
   1. Provide boxes as specified in Section 16134 - Boxes.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install system components and associated devices in accordance with applicable NFPA Standards and manufacturer's recommendations.

B. Smoke detectors shall not be installed until after construction cleanup on all trades is complete and final in accordance with NFPA 70, NFPA 72, NFPA 75, NFPA 90A, FCC, and other codes applicable to the individual installation location.

C. Locate the fire alarm control panel as indicated on the Drawings.

D. Wiring:
   1. Conduit and wiring systems:
      a. Size, provide, and install necessary conduits and wiring systems necessary to meet the requirements of the approved fire alarm system design.
      b. Installed in accordance with the NEC, state, and local codes.

E. Installation Verification:
   1. Furnish Manufacturer's Certificate of Installation Verification.

3.02 FIELD QUALITY CONTROL

A. Provide services of a factory-authorized service representative to:
   1. Supervise the field assembly and connection of components and the pre-testing, testing, and adjustment of the system.
   2. Verify proper installation, correct deficiencies, and be present at the jobsite during final inspection by the Engineer.

B. Functional testing:
   1. Witnessed.
   2. Notify the Engineer and the AHJ in writing a minimum of 2 weeks before the scheduled day for the field acceptance tests.
   3. Furnish the services of a field service engineer, and any special tools, equipment, and labor to perform the tests.
   4. Each device and control function shall be individually witness tested and recorded:
      a. Acceptance tests shall be witnessed by and signed off by the Engineer, the FASS's field engineer, the installing Subcontractor, and a representative of the AHJ.
   5. Furnish test reports and the Manufacturer's Certificate of Functional Compliance.

3.03 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.

END OF SECTION

SECTION 16752

SECURITY

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Access system hardware:
      a. Cameras.
      b. Card readers.
      c. Card reader panel.
      d. Non-contact magnetic door switch.

1.02 REFERENCES

A. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code (NEC).

1.03 TERMINOLOGY (NOT USED)

1.04 SYSTEM DESCRIPTION

A. Refer to Contract drawings. The security system will comprise of card readers, cameras, video recorders, and an access controller. The access controller and video recorders will be connected to the Owner's information network via Ethernet TCP/IP at the project site and be available to City personnel via access from SCADA workstations and other authorized computers. The Contractor will provide and install the material listed in this Section per engineer and manufacturer's direction. After installation, the Owner will configure the security components and interface them with the SCADA system and other Owner systems. The contractor will not need to provide separate workstations for the security system. The Owner has specified the exact material they'd like for the security system. All card readers, door hardware, and cameras, will be tested after configuration to ensure operability. The Contractor will work with the engineer and owner to conduct and complete testing. Testing of the security system components shall be part of the site acceptance testing procedure.

1.05 ADMINISTRATIVE REQUIREMENTS (NOT USED)

1.06 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

1.07 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and the Agreement and Contract RFP in Volumes 1 and 2.

B. Product data.
   1. Model numbers of all components furnished on the job.
   2. Manufacturer's catalog data sheets for all components.
   3. Input power requirements for all components.
   4. Warranty information.

C. Shop Drawings.
   1. Complete engineered drawings indicating:
      a. Layout, wiring diagrams, and dimensions.
      b. Point-to-point wiring diagrams for all devices.
      c. Termination details for all devices.
      d. Single-line system architecture drawings representing the entire system.

D. Calculations.

E. Schedules.

F. Delegated Design Submittals:
   1. Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria.
      a. For equipment installed in structures designated as seismic design category C, D, E, or F.
      b. For equipment installed outdoors.
      c. For wall mounted equipment weighing 125 pounds or more.

G. Installation instructions:
   1. Detail the complete installation of the equipment including rigging, moving, and setting into place.
   2. Provide manufacturer’s installation instructions.

H. Quality Control Submittals:
   1. Manufacturer’s representative qualifications.
   2. Manufacturer’s Certificate of Source Testing as specified in Section 01756 - Commissioning.
   3. Manufacturer’s Certificate of Installation Verification as specified in Section 01756 - Commissioning.
   4. Manufacturer’s Certificate of Functional Compliance as specified in Section 01756 - Commissioning.

I. Owner Training Topics and Details Submittals:
   1. As specified in Section 01756 - Commissioning and 3.05 Owner Training.

J. Operation and maintenance manuals:
   1. As specified in Section 01782 - Operation and Maintenance Manuals.
   2. Complete documentation shall be provided with the system.
   3. The documentation shall completely describe all operations, each program, data sets, and the hardware and peripherals.
      a. All updates, addendum, and adjustments to the documentation shall be provided at no additional charge, in the same quantities as originally required.

b. System administrator manual:
    1) Overview and step-by-step guide and instructions detailing all system administrator responsibility and authority.
c. User manual:
    1) Step by step guide and instructions detailing all system user functions and responsibilities.

4. Photo imaging user's manual:
    a. Step-by-step guide and instructions detailing all image capture, badge creation, cardholder modification and all Photo Imaging user functions and responsibilities.
5. Alarm monitoring manual:
    a. Step-by-step guide and instructions detailing all alarm monitoring system user functions and responsibilities.
6. Technical maintenance manual:
    a. Shall be a comprehensive and detailed document providing all maintenance action, system testing schedules, troubleshooting flowcharts, functional system layout, and block diagrams and schematic diagrams of all system wiring.

1.08 QUALITY ASSURANCE

A. SMS supplier/installer qualifications:
    1. Company specializing in the integration of ACS, IDS, closed circuit television (CCTV), networked digital video management systems (NDVMS), and design and installation of cabling and fiber infrastructures with a minimum of 5 years documented experience in successful completion of a minimum of 3 projects similar in scope and cost.
    2. Minimum of 2 factory-trained and certified technicians on staff for the duration of the Project and the warranty period.

B. Permits and inspections:
    1. Material and workmanship will conform to all applicable legal and code requirements, and as specified in the Contract Documents.
    2. Perform all tests required to demonstrate conformance with the Contract Documents.

C. Job conditions:
    1. The installation is to be supervised on a regular basis by a person designated by the Contractor. This person will be authorized and will be competent to be in charge of the Project.

1.09 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 01601 - Product Requirements, Section 16050 - Common Work Results for Electrical, and the manufacturer's instructions.

1.10 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.11 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds and Section 16050 - Common Work Results for Electrical.

1.12 SYSTEM START-UP

A. After installation is complete and signed off and the required material in configured then conduct tests to provide the operability of the material and that the required information is shared with SCADA and other authorized systems. The acceptance test and performance demonstration plan shall be developed and documented by the Contractor.
   1. These requirements shall apply to all system components and software, including, but not limited to:
      a. All system computers.
      b. Field controllers.
      c. Card reader devices.
      d. PIN pads.
      e. Photo imaging system peripherals.
      f. CCTV cameras and equipment.
      g. Interface capability.
   2. Operational scenarios shall be developed and used by the Contractor to simulate the actual use of the system in the normal environment of the facility.
   3. Perform the tests and document the results under the supervision and witnessing of the Engineer and Owner.

B. The Engineer upon Owner approval reserves the right to modify the Contractor's plan or develop new operational test and evaluation procedures to effectively document system operations.

1.13 MAINTENANCE (NOT USED)

PART 2 PRODUCTS

2.01 GENERAL (NOT USED)

2.02 MATERIAL

A. If any of the material listed below is obsolete or no longer available, consult the Engineer for a possible replacement.

B. Cameras:
   1. Axis Communications (No equal).
      a. Part number Q3536-LVE (No equal).

C. Card readers:
   1. HID Signo Reader 40 Black (No equal).
      a. Part number 40NKS-0000044C (No equal).

D. Card reader panel:
    1. Software House (No equal).
        a. Part number GSTAR004-POE (No equal).

E. Non-contact magnetic door switch:
    1. Edwards Signaling (No equal).
        a. Part number 151-6Z-12K (No equal).

F. Video recorder:
    1. Razberi (No equal).
        a. SSIQ8-R2-8S (No equal).

2.03 FIELD HARDWARE POWER SUPPLIES

A. Power supplies for field hardware shall be compatible with the SMS equipment installed.
    1. Power supplies shall be regulated, linear and isolated versions for the field controllers and other equipment and shall be UL listed for specific application.
    2. Each version shall be available in UPS with battery backup models only.
    3. All power supplies shall be housed in tampered, locked enclosures.

2.04 DOOR SECURITY HARDWARE

A. Ancillary door hardware shall meet the following minimum specifications:
    1. A surface-mounted magnetic switch shall be used for roof hatch alarms (NIC).
    2. A wide gap overhead door contact shall be used for overhead loading dock doors.
        a. A low profile in rugged aluminum housing shall mount directly to the floor.
        b. Connection to the alarm circuit junction box shall be armored cable to protect the wiring.
        c. The magnet shall also be protected by a rugged aluminum housing mounted on the bottom of the overhead door.
        d. Both the switch and the magnet assembly shall be weatherproofed and resistant to shock with multiple layers of protection.
    3. All exterior doors shall be provided with a latch position indicating switch (monitor strike) which shall be internal to the door and concealed from view.
    4. An electro-mechanical lockset shall be used for specific doors, with an access control CR.
    5. The strikes shall operate on 24 VDC signal.
        a. A double signal switch shall be provided for the purpose of indicating the status condition of the latch but when not energized, and to activate a local alarm.
        b. The types of electric door latch shall be as follows:
            1) Fail secure:
                a) At the loss of electric energy, these locks shall lock.
                b) At restoration of electrical energy, these locks shall return to open.
                c) The door shall be opened with a key.
            2) Fail safe:
                a) At the loss of electric energy, these locks shall open.

b) At the restoration of electric energy, the locks shall automatically lock.
c) The door shall be unlocked and opened with a key.

6. All card reader controlled doors will include card reader, door contact, and request to exit (REX). The REX shall be integrated into the lever/lockset.

B. Related hardware:
1. Magnetic door switches, door strikes, door strike indicators, panic hardware, door closures, etc., to complete the system. Contractor shall be responsible for providing all necessary hardware, and for the complete operation of all related hardware.

C. Input power requirements:
1. Major components of the AC/IDS-Add-On, such as ACUs, shall operate on 120 VAC, 60 hertz, single phase input power.
2. Monitoring alarm devices and access control devices, such as door strikes, latches, etc., shall be powered by 24 VDC (2 wire-ungrounded), class 1 power limited circuits. Appropriate sized transformers, rectifiers or power supplies shall be provided for monitoring alarm devices by the Contractor, which shall receive its electricity from the building. Appropriate power supplies shall be provided for access control devices which shall receive their electricity from the building.

D. Spare parts:
1. A recommended spare parts list shall be provided, including part price and quantity of each item and for the lot.

E. Door types:
1. Door types for the Project have been grouped as follows:

Type	Configuration	Strike Type	Exit Control	Operation	Local Alarm
A	Double	Lockset	PIR/REX switch	Fail-Secure	No
B	Single	Lockset	PIR/REX switch	Fail-Secure	No
C	Single	Lockset	Hinge Switch	Fail-Secure	No
D	Double	Crashbar	Microswitch	Fail-Secure	No
E	Double	Auto opener	PIR/REX switch	Fail-Secure	No
F	Single	Strike	PIR-REX switch	Fail-Secure	No
G	Single	Crashbar	Microswitch	Fail-Safe	Yes

2. Secured door type "A" (double doors to the facility):
a. Opening either door of secured door type "A" shall cause a change in state of the magnetic switch (MS) or the monitor strike (MST) and an alarm condition shall be generated by the AC/IDS. Either the MS or the MST or both devices shall cause an alarm condition to be generated by the AC/IDS. Only 1 device shall be required to generate an alarm condition.

b. Entry through a secured door type "A" shall require the use of an authorized access card.
    1) The access card shall be presented to the CR and the AC/IDS shall verify that the individual is authorized for the particular access point at that particular time of day and day of the week.
    2) If the individual is authorized the AC/IDS shall grant access by momentarily energizing the electro-mechanical lockset and shunting the alarm condition that shall be generated by the MS and MST when the door is opened.
    3) The alarm condition shunt shall only be effective for a programmable maximum time period to prevent the door from being propped open after a valid access.
    4) If the door remains open for the programmable maximum time period after a valid access, the AC/IDS shall generate an alarm condition and a local alarm.
c. Exit through a secured door type "A" shall be similar to the entry procedure, except that the change of state of an IR motion detector shall be used in place of the CR. In an emergency the exit shall Fail-Open but shall cause the AC/IDS to generate an alarm condition.

3. Secured door type "B" (single door to the facility):
    a. Opening the door of secured door type "B" shall cause a change in state of the magnetic switch (MS) or the monitor strike (MST) and an alarm condition shall be generated by the AC/IDS. Either the MS or the MST or both the devices shall cause an alarm condition to be generated by the AC/IDS. Only 1 device shall be required to generate an alarm condition and a local alarm.
    b. Entry through a secured door type "B" shall require the use of an authorized access card.
        1) The access card shall be presented to the CR and the AC/IDS shall verify that the individual is authorized for the particular access point at that particular time of day and day of the week.
        2) If the individual is authorized the AC/IDS shall grant access by momentarily energizing the electro-mechanical lockset and shunting the alarm condition that shall be generated by the MS and MST when the door is opened.
        3) The alarm condition shunt shall only be effective for a programmable maximum time period to prevent the door from being propped open after a valid access.
        4) If the door remains open for the programmable maximum time period after a valid access, the AC/IDS shall generate an alarm condition and a local alarm.
    c. Exit through a secured door type "B" shall be similar to the entry procedure, except that the change of state of a hinge-mounted-switch shall be used in place of the CR. In an emergency the exit shall Fail-Closed and shall cause the AC/IDS to generate an alarm condition.
4. Secured door type "C" (single door to facility):
    a. Opening the door of secured door type "C" shall cause a change in the state MS or the MST and an alarm condition shall be generated by the AC/IDS. The door type shall not have a local audible alarm.

b. Entry through a secured door type "C" shall require the use of an authorized access card.
    1) The access card shall be presented to the CR and the AC/IDS shall verify that the individual is authorized for the particular access point at that particular time of day and day of the week.
    2) If the individual is authorized the AC/IDS shall grant access by momentarily energizing the electro-mechanical lockset and shunting the alarm condition that shall be generated by the MS and the MST when the door is opened.
    3) The alarm condition shunt shall only be effective for a programmable maximum time period to prevent the door from being propped open after a valid access.
    4) If the door remains open for the programmable maximum time period after a valid access, the AC/IDS shall generate an alarm condition (no local alarm).
c. Exit through a secured door type "C" shall be similar to the entry procedure, except that the change of state of a hinge-mounted or lockset internal switch shall be used in place of the CR. In an emergency exit the exit shall Fail-Closed and shall cause the AC/IDS to generate an alarm condition.

5. Secured door type "D" (double door interior to the facility):
    a. Opening the door of secured door type "D" shall cause a change in state of the MS or the MST and an alarm condition shall be generated by the AC/IDS. The door type shall not have a local audible alarm.
    b. Entry through a secured door type "D" shall require the use of an authorized access card.
        1) The access card shall be presented to the CR and the AC/IDS shall verify that the individual is authorized for the particular access point at that particular time of day and day of the week.
        2) If the individual is authorized the AC/IDS shall grant access by momentarily energizing the latch retraction solenoid and shunting the alarm condition that shall be generated by the MS and MST when the door is opened.
    c. The alarm condition shunt shall only be effective for a programmable maximum time period to prevent the door from being propped open after valid access. If the door remains open for the programmable maximum time period after a valid access, the AC/IDS shall generate an alarm condition (no local alarm).
    d. Exit through a secured door type "D" shall be similar to the entry procedure, except that the change of state of a crash-bar mounted micro-switch shall be used in place of the CR. In an emergency exit the exit shall Fail-Closed and shall cause the AC/IDS to generate an alarm condition.

2.05 SOURCE QUALITY CONTROL (NOT USED)

PART 3 EXECUTION

3.01 EXAMINATION (NOT USED)

3.02 PREPARATION

A. Perform a layout check to ensure that adequate access is available for construction, installation, and maintenance of equipment and devices furnished. The Contractor shall consult the Owner and Engineer in the design of the monitoring workstation area.

B. Anchoring and bracing to structures:
   1. Prepare equipment anchor setting template(s) and use to position anchors during construction of supporting structure(s).
   2. Install anchors of type and material indicated on approved anchoring designs.
   3. Install anchors with embedment indicated on approved anchoring designs.

3.03 INSTALLATION

A. Although expected locations are indicated on the Drawings, all equipment locations, shall be field verified with the Engineer.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details.
   1. Installation of the security system material shall include the appropriate material and shall be performed by a factory-trained and certified contractor. The installation shall be completed per this Section and Project Drawings as required by the Owner. The installation shall include the following:
      a. Site planning of field hardware.

C. Furnish Manufacturer’s Certificate of Installation Verification.

3.04 FIELD QUALITY CONTROL

A. Perform acceptance tests to show system is properly installed and that it meets the Specifications and applicable codes. The acceptance tests will include demonstration of the integration to the existing head end, and the capability to be monitored and controlled form other workstations on the Enterprise.

B. Performance specification requirements:
   1. Where Specifications require compliance with performance requirements, provide products that comply with these requirements, and are recommended by the manufacturer for the application indicated.
   2. General overall performance of a product is implied where the product is specified for a specific application.
   3. All equipment shall be installed per applicable UL listing for that device or component.

C. Comply with manufacturer's instructions and recommendations for installation of product in the applications indicated. Anchor products securely in place, accurately located and aligned with other work.

D. Site Acceptance Testing:
   1. Witnessed, in-person.
      a. Number of Owner and Engineer representatives in person: 1.

2. Testing requirements:
    a. Card Readers are fully functionable and operate as intended.
    b. Door hardware and power is fully functional and operate as intended.
    c. Exit buttons are fully functional and operate as intended.
    d. Cameras are fully functional and operate as intended.
    e. Required data is shared with the SCADA and other systems as intended.
3. Furnish test reports and the Manufacturer's Certificate of Functional Compliance.

3.05 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.
    1. Number of sessions:
        a. Operations: 4, each 2 hour duration.
        b. Maintenance: 4, each 2 hour duration.

3.06 ADJUSTING (NOT USED)

3.07 CLEANING

A. As specified in Section 16050 - Common Work Results for Electrical.

3.08 PROTECTION

A. As specified in Section 16050 - Common Work Results for Electrical.

3.09 SCHEDULES (NOT USED)

END OF SECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Responsibilities for testing the electrical installation.
   2. Adjusting and calibration.
   3. Acceptance tests.

B. Copyright information:
   1. Some portions of this Section are copyrighted by the InterNational Electrical Testing Association, Inc. (NETA). See NETA publication ATS for details.

1.02 REFERENCES

A. Project references:
   1. Specification sections for the electrical equipment being tested.
   2. Electrical equipment Shop Drawings.

B. Standards:
   1. American National Standards Institute (ANSI).
   2. ASTM International (ASTM).
   3. Institute of Electrical and Electronics Engineers (IEEE):
      a. 43 - IEEE Recommended Practice for Testing Insulation Resistance of Rotating Machinery.
      b. 81 - IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Grounding System.
      c. 95 - IEEE Recommended Practice for Insulation Testing of AC Electric Machinery (2,300 V and Above) With High Direct Voltage.
      d. 450 - IEEE Recommended Practice for Maintenance, Testing, and Replacement of Vented Lead-Acid Batteries for Stationary Applications.
      e. 1106 - IEEE Recommended Practice for Installation, Maintenance, Testing, and Replacement of Vented Nickel-Cadmium Batteries for Stationary Applications.
      f. 1188 - IEEE Recommended Practice for Maintenance, Testing, and Replacement of Valve-Regulated Lead-Acid (VRLA) Batteries for Stationary Applications.
      g. C57.13 - IEEE Standard Requirements for Instrument Transformers.
      h. C57.13.1 - IEEE Guide for Field Testing of Relaying Current Transformers.
      i. C57.13.3 - IEEE Guide for Grounding of Instrument Transformer Secondary Circuits and Cases.
      j. C57.104 - IEEE Guide for the Interpretation of Gases Generated in Oil-Immersed Transformers.
   4. Insulated Cable Engineer's Association (ICEA).
   5. InterNational Electrical Testing Association (NETA).
      a. ATS- Standard for Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
   6. International Electrotechnical Commission (IEC).
   7. National Electrical Manufacturers Association (NEMA):
      a. MG1 - Motors and Generators.

8. National Fire Protection Association (NFPA):
    a. 70 - National Electrical Code (NEC).
    b. 110 - Standard for Emergency and Standby Power Systems.
9. National Institute of Standards and Technology (NIST).

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
    1. Testing laboratory: Organization performing the acceptance tests.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Copper Ethernet test form:
    1. Cable test reports:
        a. Submit 3 copies of test reports showing the results of all tests specified in this Section:
            1) Test type.
            2) Test location.
            3) Test date.
            4) Cable number.
            5) Cable length.
            6) Certification that the cable meets or exceeds the specified standard.
        b. Furnish hard copy and electronic copy for all traces.

C. Manufacturers' testing procedures:
    1. Submit manufacturers' recommended testing procedures and acceptable test results for review by the Engineer prior to beginning testing.

D. Test report:
    1. Include the following:
        a. Summary of Project.
        b. Description of equipment tested.
        c. Description of tests performed.
        d. Test results.
        e. Conclusions and recommendations.
        f. Completed test forms.
        g. List of test equipment used and calibration dates.
        h. LAN cable test reports.

E. Test data records:
    1. Include the following:
        a. Identification of the testing organization.
        b. Equipment identification.
        c. Nameplate data.
        d. Humidity, temperature and or other conditions that may affect the results of the tests and or calibrations.
        e. Dates of inspections, tests, maintenance and or calibrations.

f. Indication of the inspections, tests, maintenance, and or calibrations to be performed and recorded.
g. Expected results when calibrations are to be performed.
h. Indication of as-found and as-left results as applicable.
i. Indication of test results outside specified tolerances.

F. Testing laboratory qualifications:
1. Submit a complete resume and statement of qualifications from the proposed testing laboratory detailing their experiences in performing the tests specified:
a. This statement will be used to determine whether the laboratory is acceptable, and shall include:
1) Corporate history and references.
2) Resume of individual performing test.
3) Equipment list and test calibration data.

G. Division of responsibilities:
1. Submit a list identifying who is responsible for performing each portion of the testing.

1.05 QUALITY ASSURANCE

A. Testing laboratory qualifications:
1. May be qualified testing personnel from the electrical subcontractor's staff or an independent testing company.
2. NETA certification required.
3. Selection of the testing laboratory and testing personnel is subject to approval by the Engineer based on testing experience and certifications of the individuals and testing capabilities of the organization.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. General requirements:
1. Testing of electrical equipment installed under this Contract in accordance with the manufacturer's requirements and as specified in this Section.
2. Conduct tests in the presence of the Engineer or the Engineer's representative:
a. Engineer will witness visual, mechanical, and electrical tests, and inspections.
3. Testing and inspections shall verify that the equipment is operational within the tolerances required and expected by the manufacturer, and these Specifications.

B. Responsibilities:
1. Contractor responsibilities:
a. Ensure that resources are made available for testing and that testing requirements are met.
2. Electrical subcontractor responsibilities:
a. Perform routine tests during installation.

b. Demonstrate operation of electrical equipment.
c. Commission the electrical installation.
d. Provide the necessary services during testing, and provide these services to the testing laboratory, Contractor, and other subcontractors, including, but not limited to:
    1) Providing electrical power as required.
    2) Operating of electrical equipment in conjunction with testing of other equipment.
    3) Activating and shutting down electrical circuits.
    4) Making and recording electrical measurements.
    5) Replacing blown fuses.
    6) Installing temporary jumpers.

3. Testing laboratory responsibilities:
    a. Perform acceptance tests specified in this Section.
    b. Provide required equipment, materials, labor, and technical support during acceptance tests.

C. Sequencing:
1. Prior to testing:
    a. At least 30 days before commencement of the acceptance tests, submit the manufacturer's complete field testing procedures to the Engineer and to the testing laboratory, complete with expected test results and tolerances for equipment to be tested.
2. Perform testing in the following sequence:
    a. Perform routine tests as the equipment is installed including:
        1) Insulation-resistance tests.
        2) Continuity tests.
        3) Rotational tests.
    b. Adjusting and preliminary calibration.
    c. Acceptance tests.
    d. Demonstration.
    e. Commissioning and plant start-up.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 PREPARATION

A. Test instrument calibration:
1. Utilize a testing laboratory with a calibration program which maintains applicable test instrumentation within rated accuracy.
    a. Calibrating standard shall be of better accuracy than that of the equipment tested.
2. Accuracy shall be traceable to the NIST in an unbroken chain.

3. Calibrate instruments in accordance with the following frequency schedule:
    a. Field instruments: 6 months maximum.
    b. Laboratory instruments: 12 months maximum.
    c. Leased specialty equipment where the accuracy is guaranteed by the lessor (such as Doble): 12 months maximum.
4. Dated calibration labels shall be visible on test equipment.
5. Maintain an up-to-date instrument calibration record for each test instrument:
    a. Records shall show the date and results of each calibration or test.
6. Maintain an up-to-date instrument calibration instruction and procedure for each test instrument.

B. Requirements prior to testing:
1. Do not begin testing until the following conditions have been met:
    a. Instruments required are available and in proper operating condition.
    b. Required dispensable materials such as solvents, rags, and brushes are available.
    c. Equipment handling devices such as cranes, vehicles, chain falls, and other lifting equipment are available or scheduled.
    d. Instruction books, calibration curves, or other printed material to cover the electrical devices are available.
    e. Datasheets to record test results are available.

3.02 INSTALLATION

A. Test decal:
1. Testing laboratory shall affix a test decal on the exterior of equipment or equipment enclosure of protective devices after performing electrical tests.
2. Color coded to communicate the condition of maintenance of the protective. Color scheme for condition of maintenance of overcurrent protective devices shall be:
    a. White: Electrically and mechanically acceptable.
    b. Yellow: Minor deficiency not affecting fault detection and operation, but minor electrical or mechanical condition exists.
3. Shall include the following information at a minimum:
    a. Testing organization.
    b. Project identifier.
    c. Test date.
    d. Technician identifier.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

B. Functional Testing:
1. Also called Field Acceptance Testing.

C. Panelboards:
1. Cleaning:
    a. Visually inspect panelboard for evidence of discoloration, abnormal dust accumulation, metal shards, or any other indication of overheating, wear, or other abnormal conditions prior to cleaning.

b. Clean cabinet with a brush, vacuum cleaner, or clean, dry, lint-free rags to remove any accumulation of dust, dirt, or other foreign matter. Do not use liquids, solvents, or detergents when cleaning panelboards or components.
c. Avoid blowing dust into panelboards. Do not use a blower or compressed air.
d. Clean supports, terminals, and other major insulating surfaces with clean, dry, lint-free rags or soft bristled brushes.
e. Remove dust, soot, grease, moisture, and foreign material from surface of circuit breakers.

2. General:
   a. Compare equipment nameplate data with the Contract Documents.
   b. Check panelboard circuit schedule for accuracy.
   c. Verify appropriate anchorage, required area clearances, and correct alignment.
   d. Inspect overall general condition for physical damage.
      1) Check for broken studs and loose or damaged wires, connector, terminations, etc.
      2) Check bolts, nuts, washer, and pins for tightness.
      3) Tighten or use manufacturer's replacement parts as required.
   e. Inspect cabinets for signs of rust, corrosion, or deteriorating paint. Inspect cabinets for evidence of localized heat damage to the paint. Investigate sources of heat. Repair painted surfaces.
   f. Check that covers are in place and fastened. Plug any open unused knockouts.
   g. Inspect panelboard for moisture. Seal off any cracks or openings which have allowed moisture to enter the cabinet. Inspect component devices. Replace any components that show evidence of damage from moisture.
   h. Look for any recent changes in sprinklers or other plumbing that might expose indoor panelboards to a source of liquids. Eliminate sources of water, moisture, or liquids, or provide adequate barriers to protect panelboards from sources of water, moisture, or liquids.
   i. Inspect panelboards and internal components for evidence of overheating, arc spatter, sooty deposits, and tracking.
      1) Investigate and correct sources of arcing or overheating.
      2) Consult the panelboard manufacturer for recommendations.
   j. Verify that fuse and/or circuit breaker sizes and types correspond to record drawings, if available, as well as to the circuit breakers' address for microprocessor communications packages, if equipped.
   k. Set adjustable circuit breakers in accordance with engineering coordination study.

3. Terminations, connections, and lugs:
   a. Inspect bolted electrical connections for high resistance using one of the following methods:
      1) Use of low-resistance ohmmeter.
         a) Compare bolted connection resistance values to values of similar connections:
            (1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.

2) Verify tightness of accessible bolted electrical connections by the calibrated torque wrench method:
a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.

b. Inspect terminations, connection, and lugs for alignment, physical damage, burns, corrosion, discoloration, flaking, heat damage, arcing, pitting, melting, deterioration, carbonization, cracks, chips, breaks, partial discharge, or moisture. Investigate and eliminate sources of any damage.
c. Follow manufacturer recommendations for cleaning, repairing, and replacing damaged parts.
d. Replace overheated connections. Tighten connections to proper torque levels as specified above.

4. Conductors and raceways:
a. Inspect supply conductors and terminations for overheating, discoloration, and oxidation. Investigate and correct any deficiencies.
b. Ensure the conductors are protected within their ampacities.
c. Visually check panelboard, cables, and raceways for proper bonding and grounding. Correct improper bonding and grounding.
d. Inspect conductors for discoloration, arcing, pitting, melting, flaking of insulation and/or metal parts. Repair or replace damaged components in accordance with the manufacturer's recommendations.
e. Inspect for frayed or broken wires. Replace or repair damaged components in accordance with manufacturer recommendations.
f. Inspect for frayed or broken wires. Replace or repair conductors as necessary.
g. Inspect conduits for moisture. Seal conduits which are a source of moisture and provide means to drain moisture away from the panelboard.

5. Circuit breakers:
a. Perform visual and mechanical inspection as specified in this Section.
b. Operate several times in order to exercise the mechanisms and the contacts, and to ensure smooth operation. Do not oil or grease parts of molded case circuit breakers.
c. Visually check for evidence of overheating and thermal damage. Investigate and eliminate sources of overheating.
d. Check for visual defects, chipping, cracks, breaks, burns, and deterioration. Replace damaged circuit breakers.
e. Verify correct operation of any auxiliary features such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free, and antipump function.
f. Inspect interchangeable trip-unit circuit breakers for tightness of trip units.
g. Check terminals and connections for tightness as specified above.
h. Breakers rated 100 A and higher:
1) Perform electrical tests as specified in this Section.

D. Switchgear and switchboard:
1. Visual and mechanical inspection:
a. Compare equipment nameplate data with the Contract Documents.
b. Inspect physical and mechanical condition.
c. Inspect anchorage, alignment, grounding and required area clearances.
d. Verify the unit is clean and shipping bracing, loose parts, and documentation shipped inside cubicles have been removed.

e. Verify that circuit breaker/fuse sizes and types correspond to the approved Submittals and the coordination study as well as to the circuit breakers address for microprocessor-communication packages.
f. Verify that current and voltage transformer ratios correspond to those indicated on the Drawings.
g. Verify that wiring connections are tight and that wiring is secure to prevent damage during routine operation of moving parts.
h. Inspect bolted electrical connections for high resistance using one of the following methods:
    1) Use of low-resistance ohmmeter.
    2) Verify tightness of accessible bolted electrical connections by the calibrated torque wrench method:
        a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
i. Verify operation and sequencing of interlocking systems:
    1) Attempt closure on locked-open devices.
    2) Attempt to open locked-closed devices.
    3) Make/attempt key-exchanges in all positions.
j. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
k. Inspect insulators for evidence of physical damage or contaminated surfaces.
l. Verify correct barrier and shutter installation and operation.
m. Exercise active components.
n. Inspect mechanical indicating devices for correct operation.
o. Verify that filters are in place and/or vents are clear.
p. Perform visual and mechanical inspection of instrument transformers as specified in this Section.
q. Perform visual and mechanical inspection of surge arresters as specified in this Section.
r. Control power transformers:
    1) Inspect for physical damage, cracked insulation, broken leads, tightness of connections, defective wiring, and overall general condition.
    2) Verify that primary and secondary fuse/circuit breaker ratings match the Submittal Drawings.
    3) Verify correct functioning of drawout disconnecting contacts grounding contacts, and interlocks.

2. Electrical tests:
    a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.
    b. Perform insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground for 1 minute.
        1) Perform test in accordance with NETA ATS tables.
    c. Perform electrical tests on instrument transformers as specified in this Section.
    d. Perform ground-resistance tests:
        1) Perform point-to-point tests to determine the resistance between the main grounding system and major electrical equipment frames, system neutral and derived neutral points.
    e. Test metering devices as specified in this Section.

f. Perform current injection tests on the entire current circuit of each switchgear or switchboard:
    1) Perform current tests by secondary injection with magnitudes such that a minimum current of 1.0 ampere flows in the secondary circuit:
        a) Verify the correct magnitude of current at each device in the circuit.
g. Perform system function tests.
h. Verify operation of space heaters.
i. Perform electrical tests of surge arresters as specified in this Section.

3. Test values:
    a. Compare bolted connection resistance values to values of similar connections:
        1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
    b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    c. Insulation-resistance values of bus insulation shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
        2) Investigate insulation values less than the allowable minimum.
        3) Do not proceed with dielectric withstand voltage tests until insulation-resistance values are above minimum values.
    d. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric withstand test, the test specimen is considered to have passed the test.
    e. Instrument transformer test values shall be as specified in this Section.
    f. Meter test values shall be as specified in this Section.
    g. Investigate grounding system point-to-point resistance values that exceed 0.5 ohm.
    h. Results of system function tests shall match the Drawings and Specifications.
    i. Heaters shall be operational.
    j. Phasing checks shall prove the switchgear or switchboard phasing is correct and in accordance with the system design.
    k. Results of electrical tests on surge arresters shall be as specified in this Section.

E. Dry type transformers:
    1. Visual and mechanical inspection:
        a. Compare equipment nameplate data with the Contract Documents.
        b. Inspect physical and mechanical condition.
        c. Inspect anchorage, alignment, and grounding.
        d. Verify that resilient mounts are free and that any shipping brackets have been removed.
        e. Inspect equipment for cleanliness.
        f. Inspect bolted electrical connections for high resistance using one of the following methods:
            1) Use of low-resistance ohmmeter.

2) Verify tightness of accessible bolted electrical connections by the calibrated torque wrench method:
a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.

g. Verify that as-left tap connections are as specified.

2. Electrical tests:
a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.
b. Perform insulation-resistance tests winding-to-winding and each winding-to-ground:
1) Apply voltage in accordance with the manufacturer's published data.
a) Refer to NETA ATS tables in the absence of the manufacturer's published data.
c. Calculate dielectric absorption ration or polarization index.
d. Verify correct secondary voltage, phase-to-phase and phase-to-neutral after energization and before loading.

3. Test values:
a. Compare bolted connection resistance values to values of similar connections:
1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
c. Tap connections are left as found unless otherwise specified.
d. Minimum insulation-resistance values of transformer insulation shall be in accordance with the manufacturer's published data:
1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
2) Investigate insulation values less than the allowable minimum.
e. Dielectric absorption ratio or polarization index shall not be less than 1.0.
f. Turns-ratio results should not deviate more than 1/2 percent from either the adjacent coils or calculated ratio.
g. Phase-to-phase and phase-to-neutral secondary voltages shall be in agreement with nameplate data.

F. Low voltage cables, 600 volt maximum:
1. Visual and mechanical inspection:
a. Compare cable data with the Drawings and Specifications.
b. Inspect exposed sections of cable for physical damage and correct connection as indicated on the Drawings.
c. Inspect bolted electrical connections for high resistance by one of the following methods:
1) Use of low-resistance ohmmeter.
2) Verify tightness of accessible bolted electrical connections by the calibrated torque wrench method:
a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
d. Inspect compression applied connectors for correct cable match and indentation.

e. Inspect for correct identification and arrangement.
f. Inspect cable jacket insulation and condition.

2. Electrical tests:
   a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.
   b. Perform insulation resistance test on each conductor sized #8 AWG or larger with respect to ground and adjacent conductors:
      1) Applied potential shall be 500 volts DC for 300-volt rated cable and 1,000 volts DC for 600-volt rated cable.
      2) Test duration shall be 1 minute.
   c. Perform continuity tests on power and control conductors to ensure correct cable connection.
   d. Verify uniform resistance of parallel conductors.

3. Test values:
   a. Compare bolted connection resistance values to values of similar connections:
      1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
   b. Insulation-resistance values shall be in accordance with the manufacturer's published data:
      1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
      2) Investigate values of insulation-resistance less than the allowable minimum.
   c. Cable shall exhibit continuity.
   d. Deviations in resistance between parallel conductors shall be investigated.

G. Low voltage molded case and insulated case circuit breakers:

1. Visual and mechanical inspection:
   a. Compare equipment nameplate data with the Contract Documents.
   b. Inspect physical and mechanical condition.
   c. Inspect anchorage and alignment.
   d. Verify the unit is clean.
   e. Operate the circuit breaker to ensure smooth operation.
   f. Inspect bolted electrical connections for high resistance by one of the following methods:
      1) Use of low-resistance ohmmeter.
      2) Verify tightness of accessible bolted electrical connections by the calibrated torque wrench method:
         a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
   g. Perform adjustments for final protective device settings in accordance with the coordination study.

2. Electrical tests:
   a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.

b. For breakers 100 A and higher:
    1) Perform insulation-resistance tests for 1 minute on each pole, phase-to-phase and phase-to-ground with the circuit breaker closed and across each open pole:
        a) Apply voltage in accordance with the manufacturer's published data.
        b) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    2) Perform a contact/pole-resistance test.
    3) Determine long-time pickup and delay by primary current injection.
    4) Determine short-time pickup and delay by primary current injection.
    5) Determine ground-fault pickup and delay by primary current injection.
    6) Determine instantaneous pickup value by primary current injection.
    7) Perform minimum pickup voltage tests on shunt trip and close coils in accordance with the manufacturer's published data.
    8) Verify correct operation of any auxiliary features such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free, anti-pump function and trip unit battery condition:
        a) Reset trip logs and indicators.
    9) Verify operation of charging mechanism.

3. Test values:
    a. Compare bolted connection resistance values to values of similar connections:
        1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
    b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    c. Insulation-resistance values shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
        2) Investigate values of insulation-resistance less than the allowable minimum.
    d. Microhm or DC millivolt drop values shall not exceed the high levels of the normal range as indicated in the manufacturer's published data:
        1) If the manufacturer's data is not available, investigate any values which deviate from adjacent poles or similar breakers by more than 50 percent of the lowest value.
    e. Long-time pickup values shall be as specified, and the trip characteristic shall not exceed the manufacturer's published time-current characteristic tolerance band including adjustment factors:
        1) If the manufacturer's curves are not available, trip times shall not exceed the value shown in NETA ATS tables.
    f. Short-time pickup values shall be as specified, and the trip characteristic shall not exceed the manufacturer's published time-current tolerance band.
    g. Ground fault pickup values shall be as specified, and the trip characteristic shall not exceed the manufacturer's published time-current tolerance band.

h. Instantaneous pickup values shall be as specified and within the manufacturer's published tolerances:
    1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
i. Pickup values and trip characteristics shall be within the manufacturer's published tolerances.
j. Determine energy reducing maintenance switch pickup value by primary current injection.
k. Breaker open, close, trip, trip-free, anti-pump, and auxiliary features shall function as designed.
l. Charging mechanism shall operate in accordance with the manufacturer's published data.

H. Instrument transformers - current transformers:
1. Visual and mechanical inspection:
    a. Compare equipment nameplate data with the Contract Documents.
    b. Inspect physical and mechanical condition.
    c. Verify correct connection of transformers with system requirements.
    d. Verify that adequate clearances exist between primary and secondary circuit wiring.
    e. Verify the unit is clean.
    f. Inspect bolted electrical connections for high resistance using one of the following methods:
        1) Use of low-resistance ohmmeter.
        2) Verify tightness of accessible bolted electrical connections by calibrated torque wrench method:
            a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
    g. Verify that required grounding and shorting connections provide contact.
    h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
2. Electrical tests:
    a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.
    b. Perform insulation-resistance test of each current transformer and its secondary wiring with respect to ground at 1,000 VDC for 1 minute:
        1) For solid state devices that cannot tolerate the applied voltage, follow the manufacturer's recommendation.
    c. Perform a polarity test of each current transformer in accordance with IEEE C57.13.1.
    d. Perform a ratio verification test using the voltage or current method in accordance with IEEE C57.13.1.
    e. Perform an excitation test on current transformers used for relaying applications in with accordance with IEEE C57.13.1.
    f. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1.
    g. When applicable, perform insulation-resistance tests on the primary winding with the secondary grounded:
        1) Test voltages shall be in accordance with NETA ATS tables.
    h. Perform power-factor or dissipation-factor tests in accordance with the test equipment manufacturer's published data.

i. Verify that current transformer secondary circuits are grounded and have only 1 grounding point in accordance with IEEE C57.13.3:
    1) That grounding point should be located as specified by the Engineer in the Contract Documents.

3. Test values:
    a. Compare bolted connection resistance values to values of similar connections:
        1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
    b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    c. Insulation-resistance values of instrument transformers shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    d. Polarity results shall agree with transformer markings.
    e. Ratio errors shall be in accordance with IEEE C57.13.
    f. Excitation results for current transformers shall match the curve supplied by the manufacturer or be in accordance with IEEE C57.13.1.
    g. Measured burdens shall be compared to instrument transformer ratings.
    h. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric withstand test, the primary winding is considered to have passed the test.
    i. Power-factor or dissipation-factor values shall be compared to the manufacturer's published data:
        1) In the absence of the manufacturer's published data, use the test equipment manufacturer's published data.
    j. Test results shall indicate that the circuits have only 1 grounding point.

l. Instrument transformers - voltage transformers:
1. Visual and mechanical inspection:
    a. Compare equipment nameplate data with the Contract Documents.
    b. Inspect physical and mechanical condition.
    c. Verify correct connection of transformers with system requirements.
    d. Verify that adequate clearances exist between primary and secondary circuit wiring.
    e. Verify the unit is clean.
    f. Inspect bolted electrical connections for high resistance using one of the following methods:
        1) Use of low-resistance ohmmeter.
        2) Verify tightness of accessible bolted electrical connections by calibrated torque wrench method:
            a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
    g. Verify that required grounding and connections provide contact.
    h. Verify correct primary and secondary fuse sizes for voltage transformers.
    i. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
    j. Perform as-left tests.

2. Electrical tests - voltage transformers:
    a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.
    b. Perform insulation-resistance tests winding-to-winding and winding-to-ground:
        1) Test voltage shall be applied for 1 minute in accordance with NETA ATS requirements.
        2) For solid state devices that cannot tolerate the applied voltage, follow the manufacturer's recommendation.
    c. Perform a polarity test on each voltage transformer to verify the polarity marks on H_1- X_1 relationship as applicable.
    d. Perform a turns ratio test on all tap positions.
    e. Measure voltage circuit burdens at transformer terminals.
    f. Perform a dielectric withstand test on the primary windings with the secondary windings grounded:
        1) Dielectric voltage shall be in accordance with NETA ATS tables.
        2) Apply the test voltage for 1 minute.
    g. Perform power-factor or dissipation-factor tests in accordance with the test equipment manufacturer's published data.
    h. Verify that voltage transformer secondary circuits are grounded and have only 1 grounding point in accordance with IEEE C57.13.3:
        1) That grounding point should be located as specified by the Engineer in the Contract Documents.
3. Test values:
    a. Compare bolted connection resistance values to values of similar connections:
        1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
    b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    c. Insulation-resistance values of instrument transformers shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    d. Polarity results shall agree with transformer markings.
    e. Ratio errors shall be in accordance with IEEE C57.13.
    f. Measured burdens shall be compared to instrument transformer ratings.
    g. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric withstand test, the primary winding is considered to have passed the test.
    h. Power-factor or dissipation-factor values shall be compared to the manufacturer's published data:
        1) In the absence of the manufacturer's published data, use the test equipment manufacturer's published data.
    i. Test results shall indicate that the circuits have only 1 grounding point.

J. Metering devices, microprocessor based:
    1. Visual and mechanical inspection:
        a. Compare equipment nameplate data with the Contract Documents.

b. Inspect meters and cases for physical damage.
c. Clean front panel.
d. Verify tightness of electrical connections.
e. Record the following:
    1) Model number.
    2) Serial number.
    3) Firmware revision.
    4) Software revision.
    5) Rated control voltage.
f. Verify operation of display and indicating devices.
g. Record passwords.
h. Verify the unit is grounded in accordance with the manufacturer's instructions.
i. Set required parameters including instrument transformer ratios, system type, frequency, power demand methods/intervals, and communications requirements.

2. Electrical tests:
    a. Apply voltage or current as appropriate to each analog input and verify correct measurement and indication.
    b. Confirm correct operation and setting of each auxiliary input/output feature including mechanical relay, digital and analog.
    c. After initial system energization, confirm measurements and indications are consistent with loads present.
3. Test values:
    a. Nameplate data shall match the Contract Documents.
    b. Tightness of electrical connections shall ensure a low resistance connection.
    c. Display and indicating devices shall operate in accordance with the manufacturer's published data.
    d. Measurement and indication of applied voltages and currents shall be within the manufacturer's published tolerances for accuracy.
    e. Auxiliary input/output features shall operate in accordance with the settings and the manufacturer's published data.
    f. Measure and indications shall be consistent with energized system loads.

K. Grounding systems:
1. Visual and mechanical inspection:
    a. Inspect ground system for compliance with the Contract Documents and the NEC.
    b. Inspect physical and mechanical condition.
    c. Inspect bolted electrical connections for high resistance using one of the following methods:
        1) Use of low-resistance ohmmeter.
        2) Verify tightness of accessible bolted electrical connections by calibrated torque wrench method:
            a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
    d. Inspect anchorage.
2. Electrical tests:
    a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.

b. Perform fall of potential test or alternative test in accordance with IEEE 81 on the main grounding electrode or system.
c. Perform point-to-point tests to determine the resistance between the main grounding system and major electrical equipment frames, the system neutral and any derived neutral points.

3. Test values:
   a. Grounding system electrical and mechanical connections shall be free of corrosion.
   b. Compare bolted connection resistance values to values of similar connections:
      1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
   c. Bolt-torque levels shall be in accordance with the manufacturer's published data:
      1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
   d. Resistance between the main grounding electrode and ground shall be as specified in Section 16060 - Grounding and Bonding.
   e. Investigate point-to-point resistance values that exceed 0.5 ohm.

L. Rotating machinery, AC induction motors and generators:
1. Visual and mechanical inspection:
   a. Compare equipment nameplate information with the Contract Documents.
   b. Inspect physical and mechanical condition.
   c. Inspect anchorage, alignment, and grounding.
   d. Inspect air baffles, filter media, cooling fans, slip rings, brushes, and brush rigging.
   e. Inspect bolted electrical connections for high resistance using one or more of the following methods:
      1) Use of low-resistance ohmmeter.
      2) Verify tightness of accessible bolted electrical connections by calibrated torque wrench method:
         a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
   f. Manually rotate the rotor and check for problems with the bearings or shaft.
   g. Rotating equipment:
      1) Operate at rated design load conditions.
      2) Confirm that equipment is properly assembled.
      3) Confirm the equipment moves or rotates in the proper direction.
      4) Confirm shafting, drive elements, and bearings are installed and lubricated in accordance with proper tolerances.
      5) Confirm that no unusual power consumption, lubrication temperatures, bearing temperatures, or other conditions are observed.
   h. Verify correct application of appropriate lubrication and lubrication systems.
   i. Verify that resistance temperature detector (RTD) circuits conform to that indicated on the Drawings.
2. Electrical tests - AC induction:
   a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.

b. Perform insulation-resistance test in accordance with IEEE 43:
    1) On motors 200 horsepower and smaller, test duration shall be 1 minute. Calculate dielectric absorption ratio for 60/30-second periods.
    2) On motors larger than 200 horsepower, test duration shall be 10 minutes. Calculate polarization index.
c. On machines rated at 2,300 volts and greater, perform dielectric withstand voltage tests in accordance with:
    1) IEEE 95 for DC dielectric withstand voltage tests.
    2) NEMA MG1 for AC dielectric withstand voltage tests.
d. Perform phase-to-phase stator resistance test on machines rated at 2,300 volts and greater.
e. Perform insulation-resistance test on insulated bearings in accordance with the manufacturer's published data.
f. Test surge protection devices as specified in this Section.
g. Test motor starter as specified in this Section.
h. Perform resistance tests on resistance temperature detector (RTD) circuits.
i. Verify operation of motor space heater, if applicable.
j. Perform vibration test while machine is running under load.

3. Test values:
    a. Inspection:
        1) Air baffles shall be clean and installed in accordance with the manufacturer's published data.
        2) Filter media shall be clean and installed in accordance with the manufacturer's published data.
        3) Cooling fans shall operate.
        4) Slip ring alignment shall be within the manufacturer's published tolerances.
        5) Brush alignment shall be within the manufacturer's published tolerances.
        6) Brush rigging shall be within the manufacturer's published tolerances.
    b. Compare bolted connection resistance values to values of similar connections:
        1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
    c. Bolt-torque levels shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    d. Airgap spacing and machine alignment shall be in accordance with the manufacturer's published data.
    e. Recommended minimum insulation-resistance ($IR_{1\ min}$) test results in megohms shall be in accordance with NETA ATS tables.
        1) Polarization index value shall not be less than 2.0.
        2) Dielectric absorption ratio shall not be less than 1.4.
    f. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric withstand test, the test specimen is considered to have passed the test.
    g. Investigate phase-to-phase stator resistance values that deviate by more than 5 percent.

h. Power factor or dissipation factor values shall be compared to the manufacturer's published data:
    1) In the absence of the manufacturer's published data, compare values of similar machines.
i. Tip-up values shall indicate no significant increase in power factor.
j. If no evidence of distress, insulation failure, or waveform nesting is observed by the end of the total time of voltage application during the surge comparison test, the test specimen is considered to have passed the test.
k. Bearing insulation-resistance measurements shall be within manufacturer's published tolerances:
    1) In the absence of the manufacturer's published data, compare values of similar machines.
l. Test results of surge protection devices shall be as specified in this Section.
m. Test results of motor starter equipment shall be as specified in this Section.
n. RTD circuits shall conform to the design intent and machine protection device manufacturer's published data.
o. Heaters shall be operational.
p. Vibration amplitudes of the uncoupled and unloaded machine shall be in accordance with the manufacturer's published data:
    1) In the absence of the manufacturer's published data, vibration amplitudes shall not exceed values in NETA ATS tables.
    2) If values exceed those in the NETA ATS tables, perform a complete vibration analysis.

M. Motor starters, low voltage:
1. Visual and mechanical inspection:
    a. Compare equipment nameplate information with the Contract Documents.
    b. Inspect physical and mechanical condition.
    c. Inspect anchorage, alignment, and grounding.
    d. Verify the unit is clean.
    e. Inspect contactors:
        1) Verify mechanical operation.
        2) Verify contact gap, wipe, alignment, and pressure is in accordance with the manufacturer's published data.
    f. Motor-running protection:
        1) Verify overload element rating/motor protection settings are correct for its application.
        2) If motor running protection is provided by fuses, verify correct fuse rating.
    g. Inspect bolted electrical connections for high resistance using one of the following methods:
        1) Use of low-resistance ohmmeter.
        2) Verify tightness of accessible bolted electrical connections by calibrated torque wrench method:
            a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
    h. Lubrication requirements:
        1) Verify appropriate lubrication on moving current-carrying parts.
        2) Verify appropriate lubrication on moving and sliding surfaces.

2. Electrical tests:
    a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.
    b. Perform insulation-resistance tests for 1 minute on each pole, phase-to-phase and phase-to-ground with the starter closed, and across each open pole for 1 minute:
        1) Test voltage shall be in accordance with the manufacturer's published data.
        2) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    c. Test motor protection devices in accordance with the manufacturer's published data.
    d. Test circuit breakers as specified in this Section.
    e. Perform operational tests by initiating control devices.
3. Test values:
    a. Compare bolted connection resistance values to values of similar connections:
        1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
    b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    c. Insulation-resistance values shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
        2) Investigate values of insulation-resistance less than the allowable minimum.
    d. Motor protection parameters shall be in accordance with the manufacturer's published data.
    e. Circuit breaker test results shall as be specified in this Section.
    f. Control devices shall perform in accordance with system design requirements.

N. Motor control centers, low voltage:
1. Visual and mechanical inspection:
    a. Compare equipment nameplate data with the Contract Documents.
    b. Inspect physical and mechanical condition.
    c. Inspect anchorage, alignment, grounding and required clearances.
    d. Verify the unit is clean and shipping bracing, loose parts, and documentation shipped inside cubicles have been removed.
    e. Verify that circuit breaker/fuse sizes and types correspond to the approved Submittals and the coordination study.
    f. Verify that current and voltage transformer ratios correspond to those indicated on the Drawings.
    g. Verify that wiring connections are tight and that wiring is secure to prevent damage during routine operation of moving parts.
    h. Inspect bolted electrical connections for high resistance using one of the following methods:
        1) Use of low-resistance ohmmeter.

2) Verify tightness of accessible bolted electrical connections by the calibrated torque wrench method:
a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.

i. Verify operation and sequencing of interlocking systems:
1) Attempt closure on locked-open devices.
2) Attempt to open locked-closed devices.
3) Make/attempt key-exchanges in all positions.

j. Lubrication requirements:
1) Verify appropriate lubrication on moving current-carrying parts.
2) Verify appropriate lubrication on moving and sliding surfaces.

k. Inspect insulators for evidence of physical damage or contaminated surfaces.

l. Verify correct barrier and shutter installation and operation.

m. Exercise active components.

n. Inspect indicating devices for correct operation.

o. Verify that filters are in place and/or vents are clear.

p. Perform visual and mechanical inspection of instrument transformers as specified in this Section.

q. Perform visual and mechanical inspection of surge arresters as specified in this Section.

r. Inspect control power transformers:
1) Inspect for physical damage, cracked insulation, broken leads, and tightness of connections, defective wiring, and overall general condition.
2) Verify that primary and secondary fuse/circuit breaker ratings match the Submittal Drawings.
3) Verify correction functioning of grounding contacts.

s. Perform visual and mechanical inspection of motor control center components as specified in this Section.

2. Electrical tests:
a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.

b. Perform insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground for 1 minute:
1) Perform test in accordance with NETA ATS tables.

c. Perform a dielectric withstand test on each bus section, each phase-to-ground with phases not under test grounded, in accordance with the manufacturer's published data or NETA ATS tables. Apply the test voltage for 1 minute.

d. Perform electrical tests on instrument transformers as specified in this Section.

e. Perform ground-resistance tests:
1) Perform point-to-point tests to determine the resistance between the main grounding system and major electrical equipment frames, system neutral and derived neutral points.

f. Control power transformers:
1) Perform insulation-resistance tests, winding-to-winding and winding-to-ground:
a) Test voltages shall be in accordance with NETA ATS tables or as specified by the manufacturer.

2) Perform secondary wiring integrity test:
a) Disconnect transformer at secondary terminals and connect secondary wiring to a rated secondary voltage source:
(1) Verify correct potential at all devices.
3) Verify correct secondary voltage by energizing primary winding with system voltage:
a) Measure secondary voltage with the secondary wiring disconnected.

g. Verify operation of space heaters.
h. Perform electrical tests of motor control center components as specified in this Section.

3. Test values:
a. Compare bolted connection resistance values to values of similar connections:
1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
c. Insulation-resistance values for bus and control power transformers shall be in accordance with the manufacturer's published data:
1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
2) Investigate insulation values less than the allowable minimum.
3) Do not proceed with dielectric withstand voltage tests until insulation-resistance values are above minimum values.
d. Bus insulation shall withstand the over potential test voltage applied.
e. Instrument transformer test values shall be as specified in this Section.
f. Investigate grounding system point-to-point resistance values that exceed 0.5 ohm.
g. Meter accuracy shall be in accordance with the manufacturer's published data.
h. Control power transformers:
1) Insulation-resistance values of control power transformers shall be in accordance with the manufacturer's published data:
a) Refer to NETA ATS tables in the absence of the manufacturer's published data.
b) Investigate insulation values less than the allowable minimum.
c) Do not proceed with dielectric withstand voltage tests until insulation-resistance values are above minimum values.
2) Secondary wiring shall be as indicated on the Drawings and specified in the Specifications.
3) Secondary voltage shall be as indicated on the Drawings.
i. Heaters shall be operational.
j. Test values for motor control center components shall be as specified in this Section.

O. Variable frequency drive systems:
1. Visual and mechanical inspection:
a. Compare equipment nameplate data with the Contract Documents.

b. Inspect physical and mechanical condition.
c. Inspect anchorage, alignment, and grounding.
d. Verify the unit is clean.
e. Ensure vent path openings are free from debris and that heat transfer surfaces are clean.
f. Verify correct connections of circuit boards, wiring, disconnects, and ribbon cables.
g. Motor running protection:
    1) Verify drive overcurrent setpoints are correct for their application.
    2) If drive is used to operate multiple motors, verify individual overload element ratings are correct for their application.
    3) Apply minimum and maximum speed setpoints. Verify setpoints are within limitations of the load coupled to the motor.
h. Inspect bolted electrical connections for high resistance using one of the following methods:
    1) Use of low-resistance ohmmeter.
    2) Verify tightness of accessible bolted electrical connections by the calibrated torque wrench method:
        a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
i. Verify correct fuse sizing in accordance with the manufacturer's published data.
j. Perform visual and mechanical inspection of input circuit breaker as specified in this Section.

2. Electrical tests:
    a. Perform resistance measurements through bolted connections with low resistance ohmmeter.
    b. Test the motor overload relay elements by injecting primary current through the overload circuit and monitoring trip time of the overload element.
    c. Test for the following parameters in accordance with relay calibration procedures specified in NETA ATS, or as recommended by the manufacturer:
        1) Input phase loss protection.
        2) Input overvoltage protection.
        3) Output phase rotation.
        4) Overtemperature protection.
        5) Direct current overvoltage protection.
        6) Overfrequency protection.
        7) Drive overload protection.
        8) Fault alarm outputs.
    d. Harmonic distortion measurements for both voltage and current is within the specification limits at the installed site.
    e. Peak voltage at the motor terminations is less than 90 percent of the motor insulation dielectric withstand level.
    f. Perform continuity tests on bonding conductors as specified in accordance with NETA ATS.
    g. Perform start-up of drive in accordance with the manufacturer's published data. Calibrate drive to the system's minimum and maximum speed control signals.

h. Perform operational tests by initiating control devices:
    1) Slowly vary drive speed between minimum and maximum. Observe motor and load for unusual noise or vibration.
    2) Verify operation of drive from remote start/stop and speed control signals.
i. Perform electrical tests of input circuit breaker as specified in this Section.
j. Measure fuse resistance.

3. Test values:
    a. Compare bolted connection resistance values to values of similar connections:
        1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
    b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
        1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
    c. Overload test trip times at 300 percent of overload element rating shall be in accordance with the manufacturer's published time-current curve.
    d. Test values for input circuit breaker shall be as specified in this Section.
    e. Continuity of bonding conductors shall be in accordance with NETA ATS.
    f. Control devices shall perform in accordance with system requirements.
    g. Operational tests shall conform to system design requirements.
    h. Investigate fuse resistance values that deviate from each other by more than 15 percent.

P. Surge arresters, low-voltage:
1. Visual and mechanical inspection:
    a. Compare equipment nameplate data with the Contract Documents.
    b. Inspect physical and mechanical condition.
    c. Inspect anchorage, alignment, grounding, and clearances.
    d. Verify the arresters are clean.
    e. Inspect bolted electrical connections for high resistance using one of the following methods:
        1) Use of low-resistance ohmmeter.
        2) Verify tightness of accessible bolted electrical connections by the calibrated torque wrench method:
            a) Refer to the manufacturer's instructions for proper foot-pound levels or NETA ATS tables.
    f. Verify that the ground lead on each device is individually attached to a ground bus or ground electrode.
    g. Verify that stroke counter is correctly mounted and electrically connected, if applicable.
    h. Record stroke counter reading.
2. Electrical tests:
    a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter.
    b. Perform an insulation-resistance test on each arrester, phase terminal-to-ground:
        1) Apply voltage in accordance with manufacturer's published data.
        2) Refer to NETA ATS tables in the absence of the manufacturer's published data.

c. Test grounding connection as specified in this Section.

3. Test values:
   a. Compare bolted connection resistance values to values of similar connections:
      1) Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
   b. Bolt-torque levels shall be in accordance with the manufacturer's published data:
      1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
   c. Insulation-resistance values shall be in accordance with the manufacturer's published data:
      1) Refer to NETA ATS tables in the absence of the manufacturer's published data.
      2) Investigate insulation values less than the allowable minimum.
   d. Resistance between the arrester ground terminal and the ground system shall be less than 0.5 ohm.

Q. Fiber-optic cables:
   1. Visual and mechanical inspection:
      a. Compare cable, connector, and splice data with the Contract Documents.
      b. Inspect cable and connections for physical and mechanical damage.
      c. Verify that connectors and splices are correctly installed.
   2. Optical tests:
      a. Perform cable length measurement, fiber fracture inspection, and construction defect inspection using an optical time domain reflectometer (OTDR):
         1) OTDR test performed on fiber cables less than 100 meters shall be performed with the aid of a launch cable.
         2) Adjust OTDR pulse width settings to a maximum setting of 1/1,000th of the cable length or 10 nanoseconds.
      b. Perform connector and splice integrity test using an optical time domain reflectometer.
      c. Perform cable attenuation loss measurement with an optical power loss test set:
         1) Perform attenuation tests with an optical loss test set capable and calibrated to show anomalies of 0.1 dB as a minimum.
         2) Test multimode fibers at 850 nanometer and 1,300 nanometer.
         3) Test single mode fibers at 1,310 nanometer and 1,550 nanometer.
      d. Perform connector and splice attenuation loss measurement from both ends of the optical cable with an optical power loss test set:
         1) At the conclusion of all outdoor splices at 1 location, and before they are enclosed and sealed, splices shall be tested with OTDR at the optimal wavelengths (850 and 1,300 for multimode, 1,310 and 1,550 for single mode), in both directions. Splices shall be tested for integrity as well as attenuation.
      e. Perform fiber links integrity and attenuation tests using each link shall be an OTDR and an optical loss test set:
         1) OTDR traces shall be from both directions on each fiber at the 2 optimal wavelengths, 850 nanometer, and 1,300 nanometer for multimode fibers.

2) Optical loss testing shall be done with handheld test sets in 1 direction at the 2 optimal wavelengths for the appropriate fiber type. Test equipment shall equal or exceed the accuracy and resolution of Agilent/HP 8147 high performance OTDR.

3. Test values:
   a. Cable and connections shall not have been subjected to physical or mechanical damage.
   b. Connectors and splices shall be installed in accordance with industry standards.
   c. Optical time domain reflectometer signal should be analyzed for excessive connection, splice, or cable backscatter by viewing the reflected power/distance graph.
   d. Attenuation loss measurement shall be expressed in dB/km. Losses shall be within the manufacturer's recommendations when no local site specifications are available.
   e. Individual fusion splice losses shall not exceed 0.1 dB. Measurement results shall be recorded, validated by trace, and filed with the records of the respective cable runs.

R. Copper Ethernet cable installation testing:
   1. Pre-installation:
      a. Immediately prior to installation, verify that cable to be installed matches that which was submitted.
      b. Verify that no damage has been done to the cable during shipping or handling.
      c. Inspect cable for physical and mechanical damage.
      d. Engineer shall be notified if a cable fails to meet inspection and the cable shall not be installed unless otherwise directed by the Engineer.
   2. Post-installation:
      a. Prior to copper Ethernet cable termination, perform cable end-to-end continuity validation testing on installed cables, conductor pairs and cable shields using toner and probe kit. Any cable that fails testing shall be removed and replaced.
      b. Inspect equipment outlet connectors for damage and ensure connectors hold tightly in field device ports.
   3. Test equipment:
      a. Certification equipment used for the testing shall be capable of verifying twisted pair cable installation with end-to-end continuity testing.
      b. Use only test cords and adapters that are qualified by the test equipment manufacturer for channel or link test configuration.
      c. Manufacturers: The following or equal:
         1) Fluke Networks, IntelliTone Pro 200 Toner and Probe Kit, MT-8200-60-KIT.
      d. Permanent link testing requirements: As specified in Section 17950 - Commissioning for Instrumentation and Controls.

3.04 CLEANING

A. Dispose of testing expendables.

B. Vacuum cabinets.

C. Sweep clean surrounding areas.

END OF SECTION

SECTION 17050

COMMON WORK RESULTS FOR PROCESS CONTROL AND INSTRUMENTATION SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Process control and instrumentation systems requirements for common components including installation, including, but not limited to, the following:
      a. Hardware.
      b. Software.
      c. Programming.
      d. Testing.
      e. Commissioning.
   2. Loop drawings:
      a. Provide complete loop drawings for all systems, including packaged equipment furnished as part of a vendor furnished package, and pre-purchased equipment.
      b. The form, minimum level of detail, and format for the loop drawings must match that of the sample loop drawings included in the Contract Documents.
      c. Owner and Engineer are not responsible for providing detailed loop diagrams for Contractor furnished equipment.
   3. Requirements of the Instrumentation and Control Specifications apply to all Instrumentation and Control Work specified in Technical Sections, including packaged mechanical systems, LCPs, VCPs, etc.
   4. Carollo Engineers Inc will be providing the PLC programming and SCADA programming; and is referred to as the programmer in this section.

B. Contract Drawings:
   1. Schematic diagrams:
      a. Use schematic diagrams in conjunction with the descriptive operating sequence in the Technical Sections to furnish a coordinated and fully functional control system.
      b. Schematic diagrams show control function only.
         1) Incorporate other necessary functions for proper operation and protection of the system.
      c. Controls are indicated on the Drawings as de-energized.
      d. Add relays, where required, to provide necessary contacts for the control system or where needed to function as interposing relays for control voltage coordination, equipment coordination, or control system voltage drop considerations.
      e. Mount devices shown on motor controller schematic diagrams in the controller compartment enclosure, unless otherwise noted or indicated on the Drawings.

1.02 REFERENCES

A. Abbreviations:
   1. ACB: Automatic current balance.
   2. ATS: Automatic Transfer Switch.
   3. CCS: The PCS central computer system (CCS) consisting of computers and software. The personal computer-based hardware and software system that includes the operator interface, data storage, data retrieval, archiving, alarming, historian, reports, trending, and other higher level control system software and functions.
   4. DPDT: Double-pole, double-throw.
   5. ECP: Electronic circuit protector.
   6. ES: Ethernet Switch.
   7. FAT: Factory acceptance test also known as Source Test.
   8. HART: Highway addressable remote transducer.
   9. HMI: Human machine interface is a software application that presents information to an operator or user about the state of a process, and to accept and implement the operators control instructions. Typically, information is displayed in a graphical format.
   10. HOA: Hand-Off-Auto control function that is totally PLC based. In the Hand mode, equipment is started or stopped, valves are opened or closed through operator direction under the control of the PLC software. In the Auto mode, equipment is started or stopped, and valves are opened or closed through a control algorithm within the PLC software. In the Off mode, the equipment is prohibited from responding from the PLC control.
   11. I/O: Input/Output.
   12. ICSC: Instrumentation and control system contractor: Subcontractor who specializes in the design, construction, fabrication, software development, installation, testing, and commissioning of industrial instrumentation and control systems.
   13. IJB: Instrument junction boxes: A panel designed with cord sets to easily remove, replace, or relocate instrument signals.
   14. IP: Internet protocol or ingress protection.
   15. LAN: Local area network: A control or communications network that is limited to the physical boundaries of the facility.
   16. LCP: Local control panel: Operator interface panel that may contain an HMI, pilot type control devices, operator interface devices, control relays, etc. and does not contain a PLC or RIO.
   17. LOI: Local Operator Interface is an operator interface device consisting of an alphanumeric or graphic display with operator input functionality. The LOI is typically a flat panel type of display mounted on the front of an enclosure with either a touch screen or tactile button interface.
   18. LOR: Local-Off-Remote control function. In the Remote mode, equipment is started or stopped, and valves are opened or closed through the PLC based upon the selection of the HOA. In the Local mode, equipment is started or stopped, valves are opened or closed based upon hardwired control circuits completely independent of the PLC with minimum interlocks and permissive conditions. In the Off mode, the equipment is prohibited from responding to any control commands.

19. NJB: Network junction box. An enclosure that contains multiple access points to various networks within the facility. Networks could be Ethernet, Ethernet/IP, Fieldbus, RIO, etc.
20. P&ID: Process and instrumentation diagram.
21. PC: Personal computer.
22. PCIS: Process control and instrumentation system: Includes the entire instrumentation system, the entire control system, and all of the Work specified in the Instrumentation and Control Specifications and depicted on the Instrumentation Drawings. This includes all the PCS and instruments and networking components as well as the various servers, workstations, thin clients, etc.
23. PCM: Process control module: An enclosure containing any of the following devices: PLC, RTU, or RIO.
24. PCS: Process Control System: A general name for the computerized system that gathers and processes data from equipment and sensors and applies operational controls to the process equipment. It includes the PLCs and/or RIOs, LOIs, HMIs, both LCPs, VCPs and all data management systems accessible to staff.
25. PJB: Power junction box: An enclosure with terminal blocks that distribute power to multiple instruments.
26. PLC: Programmable logic controller.
27. PS: Power supply.
28. RIO: Remote I/O device for the PLC consisting of remote I/O racks or remote I/O blocks.
29. RTU: Remote telemetry unit: A controller typically consisting of a PLC, and a means for remote communications. The remote communications devices typically are radios, modems, etc.
30. SCADA: Supervisory control and data acquisition system: A general name for the computerized system that gathers and processes data from sensors and equipment located outside of the facility, such as wells, lift stations, metering stations, etc.
31. SELV: Safety extra-low voltage.
32. SFP: Small form-factor pluggable.
33. SPDT: Single-pole, double-throw.
34. SPST: Single-pole, single-throw.
35. UPS: Uninterruptible power supply.
36. VCP: Vendor control panel: Control panels that are furnished with particular equipment by a vendor other than the ICSC. These panels may contain PLCs, RIO, LOI, HMI, etc.
37. WAN: Wide area network: A control or communications network that extends beyond the physical boundaries of the facility.

B. Standards:
    1. American Petroleum Institute (API):
        a. RP 550 - Manual on Installation of Refinery Instruments and Control Systems; Part II-Process Stream Analyzers; Section 5-Oxygen Analyzers.
        b. RP 551 - Process Measurement Instrumentation.
    2. International Organization for Standardization (ISO):
        a. 9001 - Quality Management Systems - Requirements.
    3. International Society of Automation (ISA):
        a. 5.1 - Instrumentation Symbols and Identification.

b. 5.4 - Instrument Loop Diagrams.
c. 20 Instrument Forms Plus Pro-Combo-Enterprise Version (Microsoft SQL Server Express Database Software based).

4. National Electrical Manufacturers Association (NEMA).
5. National Fire Protection Association (NFPA):
   a. 70 - National Electrical Code (NEC).
6. National Institute of Standards and Technology (NIST).
7. Underwriters Laboratories, Inc. (UL):
   a. 508 - Standard of Safety for Industrial Control Equipment.
   b. 508A - Standard of Safety for Industrial Control Panels.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. 2-Wire transmitter (loop powered): A transmitter that derives its operating power supply from the signal transmission circuit and requires no separate power supply connections. As used in this Section, 2-wire transmitter refers to a transmitter that provides a signal such as 4 to 20 mA 24 VDC regulation of a signal in a series circuit with an external 24 VDC driving potential:
      a. Fieldbus communications signal or both.
   2. Control circuit: Any circuit operating at 120 volts alternating current (VAC) or direct current (VDC) or less, whose principal purpose is the conveyance of information (including performing logic) and not the conveyance of energy for the operation of an electrically powered device.
   3. Digital bus: A communication network, such as PROFIBUS, Foundation Fieldbus, or DeviceNet, allowing instruments and devices to transmit data, control functions, and diagnostic information.
   4. Instrument: A measurement device that includes a sensor for taking the measurement and one or both of the following:
      a. A local display.
      b. A device for communicating the measurement to a remote location such as a PLC or DCS.
   5. Modifications: Changing, extending, interfacing to, removing, or altering an existing circuit.
   6. Panel: An instrument support system that may be a flat surface, a partial enclosure, or a complete enclosure for instruments and other devices used in process control systems.
   7. Power circuit: Any circuit operating at 90 volts (AC or DC) or more, whose principal purpose is the conveyance of energy for the operation of an electrically powered device.
   8. Powered transmitters: A transmitter that requires a separate power source (120 VAC, 240 VAC, etc.) in order for the transmitter to develop its signal. As used in this Section, the produced signal may be a 4 to 20 mA 24 VDC signal, a digital bus communications signal, or both.
   9. Programmer: Responsible for PLC programming and SCADA/HMI software configuration.
   10. RS-485: RS-485 is also known as TIA-485 or EIA-485, is a standard defining the electrical characteristics of drivers and receivers for use in serial communications system. Electrical signaling is balanced, and multipoint

systems are supported, can be used with data rates up to 10 Mbit/s or at lower speeds distances up to 1,000 meters (4,000 feet).

11. Signal circuit: Any circuit operating at less than 50 VAC or VDC, which conveys analog information or digital communications information.

1.04 DELEGATED DESIGN

A. The requirements for Delegated Design are specified in the Technical Sections.

1.05 SUBMITTALS

A. General:
   1. Adhere to the wiring numbering scheme as specified in Section 16075 - Identification for Electrical Systems throughout the Project:
      a. Uniquely number each wire.
      b. Wire numbers must appear on Equipment Drawings.
   2. Some items of Work are represented schematically, and are designated for the most part by numbers, as derived from criteria in ISA-5.1:
      a. Employ the nomenclature and numbers designated in this Section and indicated on the Drawings exclusively throughout Shop Drawings, datasheets, and similar Submittals.
      b. Replace any other symbols, designations, and nomenclature unique to a manufacturer's, Supplier's, or Subcontractor's standard methods with those identified in this Section and indicated on the Drawings.

B. Specific Submittal requirements:
   1. Control Panel Drawings:
      a. General Requirements:
         1) Submit panel, enclosure, console, furniture, and cabinet layout drawings for all items provided.
         2) Use equipment and instrument tags as depicted on the P&IDs for all Submittals.
         3) Nameplates and Wire Labeling:
            a) Nameplate legend including text, letter size, materials, and colors.
            b) As specified in Section 16075 - Identification for Electrical Systems or as indicated on the Drawings.
         4) Structural Requirements:
            a) Anchoring method and leveling criteria, including manufacturer's recommendations for the Project site seismic criteria.
            b) Weight.
         5) Clearly show modifications to existing circuits:
            a) Show existing unmodified wiring to clearly depict the functionality and electrical characteristics of the complete modified circuits.
      b. Required for materials and equipment listed in this and other Technical Sections.
      c. Front, side, rear, internal, external elevations, and top and bottom views, showing all dimensions and all to scale.
         1) Locations of conduit entrances and access plates.
         2) Component layout and identification.

3) Complete and detailed bills of materials:
    a) Including quantity, description, manufacturer, and part number for each assembly or component for each control panel.
    b) Include all items within an enclosure.
4) Requirements for physical separation between control system components and 120 VAC, 480 VAC, and medium-voltage power cables.
5) Complete grounding requirements for each system component including any requirements for PLCs, process LANs, and Control System equipment.
6) PLC rack and card layout:
    a) Provide a count of current I/O allocation.
    b) Future I/O allocation.
    c) Quantity of spares provided.
7) NEMA rating.
8) Material and finish.

2. Schematics and Wiring Diagrams:
    a. General Requirements:
        1) Submit panel wiring diagrams for every panel that contains wiring.
        2) Use equipment and instrument tags as depicted on the P&IDs for all Submittals.
        3) Nameplates and Wire Labeling:
            a) As specified in Section 16075 - Identification for Electrical Systems or as indicated on the Drawings.
        4) Clearly show modifications to existing circuits:
            a) Show existing unmodified wiring to clearly depict the functionality and electrical characteristics of the complete modified circuits.
    b. Include the following information:
        1) Name of panel.
        2) Wiring sizes and types.
        3) Terminal strip numbers.
        4) Terminal identification for device and field connections.
        5) Wire tags and labels.
        6) Functional name and manufacturer’s designation for items to which wiring are connected.
        7) Set points for relays and control or alarm contact settings.
    c. Incorporate equipment manufacturer’s Shop Drawing information into the schematic diagrams in order to document the entire control system.
3. Loop drawings:
    a. General Requirements:
        1) Submit loop drawings for every analog, discrete, fieldbus signal, vendor supplied equipment packages, and control panels.
            a) Includes monitoring, alarming, interlocks, and control devices.
        2) Use equipment and instrument tags as depicted on the P&IDs for all Submittals.
        3) Show and identify each component of each loop or system using requirements and symbols from ISA-5.4.
        4) Provide Drawings for every instrumentation loop system:
            a) Furnish a separate Drawing sheet for each system or loop diagram.

5) Nameplates and Wire Labeling:
a) As specified in Section 16075 - Identification for Electrical Systems or as indicated on the Drawings.
6) Clearly show modifications to existing circuits:
a) Show existing unmodified wiring to clearly depict the functionality and electrical characteristics of the complete modified circuits.
7) Provide loop drawings in the format indicated in the Contract Drawings.

b. Provide a complete index in the front of each bound volume:
1) Index the loop drawings by systems or process areas.

c. In addition to the ISA-5.4 requirements, show the following details:
1) Functional name of each loop.
2) Reference name, drawing, and loop diagram numbers for any signal continuing off the loop diagram sheet.
3) Show all terminal numbers, regardless of the entity providing the equipment.
4) MCC panel, circuit, and breaker numbers for power feeds to the loops and instrumentation.
5) Terminal assignments associated with every manhole, pull-box, junction box, conduit, and panel through which the loop circuits pass.
6) Show vendor control panel, instrument panel, conduit, junction box, equipment and PCS terminations, termination identification, wire numbers and colors, power circuits, and ground identifications.
7) Cables required for communication requirements.

4. PLC I/O List:
a. A complete listing of the PCS system point I/O database:
1) Include for each data point relevant parameters such as range, contact orientation, limits, incremental limits, I/O hardware address, and PLC assignment.
2) Organize on a site-by-site basis and separate by point type.
3) In addition to the active I/O points, list the implemented spare I/O points and the available I/O points remaining on each card, as well as other defined future points specified or shown.
4) Upon completion of the Work, update I/O lists to indicate the final as-built configuration of the systems:
a) Organize as-built I/O list on a site-by-site basis, separated by equipment and point type.

5. Instrument Datasheets:
a. The datasheets provided with the instrument specifications are preliminary and are not complete but are provided to assist with the completion of final instrument datasheets. Additional datasheets may be required.
b. Furnish fully completed datasheets for each instrument and component according to ISA-20 Specification Forms for Process Measurement and Control Instruments, Primary Elements and Control Valves.
c. Format: Provide datasheets in Microsoft Word or Microsoft Excel.
1) Features and options that are furnished.
d. Provide completed datasheet as specified in the Technical Sections and for each control system component.

6. Instrument Installation Drawings:
    a. Provide instrument installation, mounting, and anchoring details for components and assemblies, including access requirements and conduit connection or entry details.
    b. Each installation shall be identified by the equipment or instrument by tag number.
    c. Provide certification by the instrument manufacturer that the proposed installation is in accordance with the instrument manufacturer's recommendations and is fully warrantable.
    d. Provide, at a minimum, the following contents for each detail:
        1) Necessary sections and elevation views required to define instrument location by referencing tank, building, or equipment names and numbers, and geographical qualities such as north, south, east, west, basement, first floor, etc.
        2) Ambient temperature and humidity where the instrument is to be installed.
        3) Corrosive qualities of the environment where the instrument is to be installed.
        4) Hazardous rating of the environment where the instrument is to be installed.
        5) Process line pipe or tank size, service, and material.
        6) Process tap elevation and location.
        7) Upstream and downstream straight pipe lengths between instrument installation and pipe fittings and valves.
        8) Routing of tubing and identification of supports.
        9) Mounting brackets, stands, anchoring devices, and sunshades.
        10) Conduit entry size, number, location, and delineation between power and signal.
        11) NEMA ratings of enclosures and components.
        12) Clearances required for instrument servicing.
        13) List itemizing manufacturer makes, model numbers, quantities, lengths required, and materials of each item required to support the implementation of the detail.
7. Product data:
    a. Provide a technical brochure or bulletin ("cutsheet") for each instrument or equipment on the project labeled with equipment and instrument tags as depicted on the P&IDs.
        1) Submit with the corresponding datasheets.
        2) Organization: Index product data in the Submittal by systems or loops.
    b. Engineering data:
        1) Test data and performance curves, when applicable.
    c. Manufacturer's technical reference manuals.
8. Commissioning Submittals:
    a. As specified in Section 01756 - Commissioning.
    b. Manufacturer representative qualifications.
    c. Manufacturer certificates.
    d. Test plans.
    e. Test reports.
    f. Owner Training Submittals.

g. Operation and maintenance manuals.
    1) Organize the operation and maintenance manuals for each process in the following manner:
        a) Section A - Process and Instrumentation Diagrams.
        b) Section B - Control Panel Drawings.
        c) Section D - Schematics and Wiring Diagrams.
        d) Section E - Loop Drawings.
        e) Section F - Network Diagrams.
        f) Section G - PLC I/O List.
        g) Section I - Instrument Datasheets.
        h) Section J - Instrument Installation Drawings.
        i) Section K - Product Data.
        j) Section L - Sizing Calculations.
        k) Section M - Test Results.
        l) Section N - Operational Manual.
        m) Section O - Spare Parts List.

1.06 QUALITY ASSURANCE

A. Manufacture instruments at facilities certified to the quality standards of ISO 9001.

B. Provide equipment listed by and bearing the label of UL or of an independent testing laboratory acceptable to the Engineer and the Authority Having Jurisdiction.

C. The ICSC must have their own operating UL listed panel fabrication facility.
    1. Panels must be fabricated at this facility and meet UL 508/508A requirements.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Upon receipt of instruments in the field:
    1. Outside of the package: Prominently display tag number identification.
    2. On each instrument: Provide a nameplate as specified in this Section.

1.08 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

B. Area classifications:
    1. Furnish enclosures that match the area classifications as specified in Section 16050 - Common Work Results for Electrical.

1.09 ADMINISTRATIVE REQUIREMENTS

A. Project PCIS overview meeting (kickoff meeting):
    1. Contractor leads the meeting.
    2. Timing:
        a. Prior to start of ICSC and Programmer Work.
    3. Attendees:
        a. Engineer, Owner, ICSC, and Programmer.
        b. Contractor.
        c. Electrical subcontractor.

d. Manufacturers furnishing major pieces of equipment must attend, including, but not limited to:
    1) Vendor control panels.
    2) Chemical feed systems.
    3) Motor control centers.
    4) Variable frequency drives.

4. Agenda:
    a. Meeting purpose:
        1) Ensure parties listed in 3.a above are aware of and in agreement to the details of the items listed below in b. thru k.
    b. Review entire project.
    c. Review equipment lists.
    d. Review control philosophy.
    e. Review schedules.
    f. Review Submittal requirements.
    g. Discuss Construction activities
    h. Discuss Commissioning activities
    i. Safety and security.
    j. Action items.
    k. Next meeting.

B. Construction Meetings:
1. Contractor leads the meeting.
2. Timing:
    a. As necessary and determined by the Contractor.
3. Attendees:
    a. As the Contractor sees fit but the Owner and Engineer must be notified (invited to) 2 weeks prior of all meetings; unless the meeting is an emergency.
4. Agenda:
    a. Determined by the Contractor.
5. Final review meeting:
    a. Contractor leads the meeting.
    b. Timing:
        1) After initial completion of configuration work.
        2) Prior to the Source Test.
    c. Attendees:
        1) Engineer, Owner, Programmer, and ICSC.
    d. Agenda:
        1) Meeting purpose:
            a) Ensure parties listed in 5.c above are aware of and in agreement to the details of the items listed below in 2. thru 9.
        2) Review the PLC and SCADA system configuration.
        3) Review the PLC and SCADA HMI system database.
        4) Review the control schemes.
        5) Review the PLC HMI and SCADA HMI displays.
        6) Review the report formats.
        7) Safety and security.
        8) Action items.
        9) Next meeting.
    e. Make final format revisions after this review.

f. Additional requirements as specified in the following:
    1) Section 17100 - Control Strategies.
    2) Section 17101A - Specific Control Strategies.
    3) Section 17720 - Control Systems: Programmable Logic Controllers.

6. Pre-Commissioning Meeting:
    a. Contractor leads the meeting.
    b. Timing:
        1) 1 week prior to commissioning commences.
    c. Attendees:
        1) Owner, Engineer, ICSC, Programmer, and packaged equipment vendors.
    d. Agenda:
        1) Meeting Purpose:
            a) Discuss and agree to Who, What, When, Why, Where, and How as detailed in the Commissioning plan.
                (1) Commissioning plan to contain but not limited to:
                    (a) Procedure.
                    (b) Forms/Documentation.
                    (c) Schedule.
                    (d) Resourcing.
7. Commissioning Meetings:
    a. Contractor leads the meeting.
    b. Timing:
        1) As necessary and determined by the Contractor.
    c. Attendees:
        1) As the Contractor sees fit but the Owner and Engineer must be notified (invited to) 2 weeks prior of all meetings; unless the meeting is an emergency.
    d. Agenda:
        1) Determined by the Contractor.
8. Post Commissioning Meeting (Lessons Learned):
    a. Contractor leads the meeting.
    b. Timing:
        1) Determined by the Contractor.
    c. Attendees:
        1) Owner, Engineer, ICSC, Programmer.
    d. Agenda:
        1) Results of Commissioning.
        2) Lessons Learned.
            a) Successes.
            b) Opportunities to improve.

PART 2 PRODUCTS

2.01 GENERAL

A. Furnish meters, instruments, and other components that are the most recent field proven models marketed by their manufacturers at the time of Submittal of the Shop Drawings unless otherwise specified to match existing equipment.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Non-conditioned spaces:
   1. Provide additional temperature conditioning equipment to maintain equipment in non-conditioned spaces subject to these ambient temperatures, between 60 and 90 degrees Fahrenheit.

B. Outdoor installations:
   1. Provide electrical, instrumentation and control equipment suitable for operation in the ambient conditions where the equipment is located.
   2. Provide heating, cooling, and dehumidifying devices incorporated into and included with electrical equipment, instrumentation and control panels to maintain the enclosures within the rated environmental operating ranges as specified in the Sections for the equipment.
      a. Assume an external temperature range of -5 to 120 degrees Fahrenheit.

C. This facility includes classified areas:
   1. As specified in Section 16050 - Common Work Results for Electrical.
   2. Provide enclosures suitable for the area classification.
   3. Where suitable enclosures are not available, utilize other methods such as intrinsic safety barriers.

D. Unless otherwise specified, furnish individual instruments that have a minimum accuracy of within 0.5 percent of full scale and a minimum repeatability of within 0.25 percent of full scale.

E. Discrete circuit configuration:
   1. Configure discrete control circuits to fail safe, on loss of continuity or loss of power.
   2. Alarm contacts: Fail to the alarm condition.
   3. Control contacts fail to the inoperative condition unless otherwise indicated on the Drawings.

F. Grounding:
   1. Analog signal cables shields shall only be grounded at a single point in the loop. Unless otherwise noted, ground signal cable shields at control panel.
   2. For communication and data line signal cable shields and drain wires should be grounded at both ends of the cable.
   3. Insulate the shielding and exposed drain wire for each signal cable with heat-shrink tubing.
   4. Terminate the signal cable shield on a dedicated grounding terminal block.
   5. Provide isolating amplifiers within control panels for field equipment possessing a grounded input or output, except when the panel circuit is galvanically isolated.

G. Terminal blocks:
   1. Schematics do not reflect the actual conductor routing. Add intermediate terminal in enclosures and equipment as needed based on the actual conductor routing.

H. Signal transmission:
   1. Analog signals:
      a. Furnish analog measurements and control signals that vary in direct linear proportion to the measured variable, unless otherwise indicated.
      b. Furnish electrical analog signals outside control panels that are 4 to 20 mA 24 VDC, except as indicated.
      c. Electrically or optically isolate analog signals from other signals.
      d. Furnish regulated analog signals that are not affected by changes in supply voltage or load resistance within the unit's rating.
      e. Maintain the total 4 to 20 mA loop impedance to 10 percent below the published value at the loop operating voltage.
      f. Where necessary, reduce loop impedance by providing current-to-current (I/I) isolation amplifiers for signal re-transmission.
   2. Discrete input signals:
      a. As indicated in the controller hardware specification.
   3. Discrete output signals:
      a. Dry contacts or TRIAC outputs (with express written approval by the Engineer) as needed to coordinate with the field device.
      b. Provide external terminal block mounted fuse with blown fuse indication for discrete outputs.
      c. Provide interposing relays for discrete outputs for voltage and/or current compatibilities.
      d. Provide interposing relays as required for functionality of the control circuit.
   4. Signal performance and design criteria:
      a. Stability:
         1) After controls have taken corrective action, oscillation of the final control element shall not exceed 2 cycles per minute or a magnitude of motion of 0.5 percent of full travel.
      b. Response:
         1) Any change in setpoint or controlled variable shall produce a corrective change in position of the final control element and stabilized within 30 seconds.
      c. Agreement:
         1) Setpoint indication of controlled variable and measured indication of controlled variable shall agree within 3 percent of full scale over a 6:1 operating range.
      d. Repeatability:
         1) For any repeated magnitude of control signal, from either an increasing or decreasing direction, the final control element shall take a repeated position within 0.5 percent of full travel regardless of force required to position the final element.
      e. Sensitivity:
         1) Controls shall respond to a setpoint deviations and measured variable deviations within 1.0 percent of full scale.
      f. Performance:
         1) Instruments and control devices shall perform in accordance with the manufacturers' specifications.

2.03 ACCESSORIES

A. Provide flow conditioning devices or other required accessories as needed to meet the accuracy requirements in the Contract Documents.

PART 3 EXECUTION

3.01 INSTALLATION

A. Field instruments installation:
   1. Install field instruments as specified in the Contract Documents, API RP 550 and RP 551, and the manufacturer's instructions.
   2. Mount field instruments so that they can be easily read, readily approached, and easily serviced, and so they do not restrict access to mechanical equipment:
      a. Mount field instruments on a pipe stand or local panel, if they are not directly mounted, unless otherwise indicated on the Drawings.
      b. Provide sun shields for field electronic instruments, panels, and enclosures located outdoors. Sun shields shall include standoffs to allow air gap between shield and equipment.
      c. Orient LED, LCD, or other readout screens north to minimize sun glare and reduce potential of sun damage.
   3. Make connections from rigid conduit systems to field instruments with PVC coated flexible conduit:
      a. Type of flexible conduit required for the area classification:
         1) Area classification as specified in Section 16050 - Common Work Results for Electrical.
      b. Maximum length of 18 inches.
   4. Connect field instruments with cable as specified in the Electrical Specifications, except when the manufacturer requires the use of special cable, or otherwise specified in this Section:
      a. Special cable applications shall be in accordance with the NEC.
   5. Verify the correctness of each installation:
      a. Polarity of electric power and signal connections.
   6. Ensure process connections are free of leaks.

B. Process sensing lines and air tubing:
   1. Install individual tubes parallel and/or perpendicular to and near the surfaces from which they are supported.
   2. Provide supports for rigid tubing at intervals of not more than 3 feet.
   3. Slope horizontal runs of instrument tubing at a minimum of 1/16-inch per foot to allow for draining of any condensate.
   4. Bends:
      a. Make bends for parallel lines symmetrical.
      b. Make bends without deforming or thinning the walls of the tubing.
   5. Square-cut and clean ends of tubing before being inserted in the fittings.
   6. Provide bulkhead fittings at panels requiring pipe and/or tubing entries.

7. Use stainless steel tubing for piping hard piped from the air header, unless otherwise indicated on the Drawings or not compatible with the fluids or atmosphere in the area:
    a. Use flexible connections only on moving equipment and under the constraint that the length shall be less than 1.5 times maximum travel of the equipment.

C. Cable and conductor termination:
    1. Terminate cables and conductors on terminal blocks.
    2. Terminal block enclosures:
        a. Suitable for the area classification as specified in Section 16050 - Common Work Results for Electrical.

D. Surge protection:
    1. Provide outdoor field instrument loops with voltage surge protection units installed on the instruments and the panel.
    2. Individually fuse each 4 to 20 mA DC loop with a 1/2-amp fuse between power supplies and receiver surge protectors.
    3. Provide voltage surge protection for 4 wire transmitters and analyzers:
        a. Protect both power source and signal loop.

3.02 RE-INSTALLATION

A. Existing instrumentation:
    1. Clean, recondition and re-calibrate each existing instrument to be reused, removed, or reinstalled using an authorized service facility of the instrument manufacturer.
    2. Provide certification of this Work before reinstallation of each instrument.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning and Section 17950 - Commissioning for Instrumentation and Controls.

3.04 ADJUSTING

A. Control valves:
    1. Stroke control valves, cylinders, drives and connecting linkages from the control system as well as local control devices and adjust to verify proper control action, hand switch action, limit switch settings, torque settings, remote control actions, and remote feedback of valve status and position.
    2. Check control valve actions and positioner settings with the valves in place to ensure that no changes have occurred since the bench calibration.

B. Make revisions necessary to the control system software, as directed by the Engineer.
    1. It is understood that the Contractor knows and agrees that changes will be required in the control system software during commissioning.

3.05 CLEANING

A. Vacuum clean control panels and enclosures before process start-up and again after final completion of the project.

B. Clean panel surfaces.

C. Return to new condition any scratches and/or defects.

D. Wipe instrument faces and enclosures clean.

E. Leave wiring in panels, manholes, boxes, and other locations in a neat, clean, and organized manner:
   1. Neatly coil and label spare wiring lengths.
   2. Shorten, re-terminate, and re-label excessive spare wire and cable lengths, as determined by the Engineer.

END OF SECTION

SECTION 17100

CONTROL STRATEGIES

PART 1 GENERAL

1.01 SUMMARY

A. PLC programming and SCADA configuration/programming for Campus Oaks and Misty Wood well sites will be performed by Carollo Engineers Inc. Programming Services. Carollo Programming Services will acquire the PLC program for the Roseville Solaire Well site and duplicate/modify the program to work for Campus Oaks and Misty Wood well sites. Carollo Programming Services already knows the City's PLC and SCADA programming standards; because of this Part 3.02 – Programming Requirements is not used.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 SUBMITTALS

A. Submit the configuration files and logic files.
   1. Full annotation and descriptions for all PLCs files involved in the project, both new and modified.
   2. Highlight each aspect of the logic that complies with the End User's specifications or the Engineer's specification.
   3. Denote in the logic that does not comply with the End User's or the Engineer's specification.
   4. The Engineer's specifications can be located in this Section and Section 17101A - Specific Control Strategies - [Process Area].
   5. Logic files shall be submitted in an organized manner with searchable text and book marked.
   6. Logic files and configuration files shall be submitted together with the submittal requirement in Section 17101A - Specific Control Strategies - [Process Area].
   7. Submittals shall comply with additional submittal requirements specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 ERECTION, INSTALLATION, APPLICATION, CONSTRUCTION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.02 PROGRAMMING REQUIREMENTS (NOT USED)

3.03 COMMISSIONING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems and 01756 - Commissioning.

END OF SECTION

SECTION 17101A

SPECIFIC CONTROL STRATEGIES - [PROCESS AREA]

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Loop descriptions:
   2. Specific control requirements and functional descriptions for individual control loops.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 DEFINITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.04 SYSTEM DESCRIPTION

A. Abbreviations:
   1. **[None.]**

B. Definitions:
   1. Loop description: Specific control requirements and functional descriptions for individual control loops.
   2. **[None.]**

C. Setpoints:
   1. **[See P&IDs, Instrument Datasheets, and I/O List.]**

1.05 SUBMITTALS

A. Develop an overall control strategy for the project.

B. Develop detail loop descriptions based on loop number and title to adhere to the following:
   1. References:
      a. List P&IDs that are specifically referenced.
   2. Abstract:
      a. General description of how the loop works, what devices are involved, and how the process will be controlled.
      b. For each control loop, provide a detailed functional description of the operation of the equipment, signals, and controls shown on the P&IDs.
      c. Include all functions depicted or described in the Contract Documents.

d. Include the following within each loop description:
    1) All requirements specific to that loop.
    2) Submit loop descriptions with all implemented modifications from this Section clearly marked.
    3) Remove all markings on final loop.
    4) Common control requirements applicable to that loop.
e. Include within the Control Description content:
    1) Specific requirements.
    2) Common requirements that pertain in general to all loops.
    3) Listing ranges, setpoints, timers, values, counter values, etc.
    4) Manual keyboard entries.
    5) Entry codes.
    6) System responses.
    7) Modes:
        a) Startup.
        b) Routine and normal operation.
        c) Regulation and control.
        d) Shutdown under specified modes of operation.
        e) Emergency operating shutdown.
f. Process values, setpoints, and limits, including units and ranges:
    1) Show span and range values for analog inputs and outputs, and operating point and deadband for discrete inputs.

3. Hardwired control:
    a. Detailed description of the control functions at the local level.
    b. Function of local operator interfaces.
    c. Operation of hardwired field pilot controls:
        1) Pushbuttons.
        2) Selector switches.
        3) Potentiometers.
        4) Pilot lights, indicators, and other displays.
4. Hardwired interlocks:
    a. Explanation of the operation of system interlocks and hardwired permissive conditions.
5. PLC control:
    a. Detailed description of the control functions that are under control of the PLC.
    b. Operator controls and automatic controls.
    c. Setpoints, alarms, etc.:
        1) Include units and ranges for analog values.
        2) Include span and range for analog inputs and outputs.
        3) Include operating point and deadband for discrete inputs, and identify conditions where contacts are open, and when they close.
    d. Control sequences.
    e. Software interlocks:
        1) Operation of system software interlocks.
6. PCS/LOI/HMI control:
    a. Detailed description of the operator controls.
    b. Setpoints, alarms, etc.
7. Indicators and alarms:
    a. List any indicators and alarms specific to the loop that are not covered in the common control strategies.

8. Failure modes:
    a. List any failure modes specific to the loop that are not covered in the common control strategies.

C. Where there are similar loops with identical control, such as multiple loops for individual raw water pumps, only 1 loop description need be developed and the remaining loops may reference that loop description.

1.06 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 ASR WELL CONTROL

A. Aquifer Recharge Operation (AR in AS/AR):
    1. References:
        a. P&ID 13N01.
        b. P&ID 19N01.
        c. P&ID 13N02.
        d. P&ID 19N02.
        e. P&ID 13N03.
        f. P&ID 19N03.
    2. Abstract:
        a. Aquifer Recharge (AR) operating mode consists of directing the flow of water into the well or recharging the well using water from the Roseville distribution system for storage in the aquifer. The operational sequence is done in stages. First is to vent all air in the above ground piping. This is done by first having all valves (20, 30, 40, 50, 60) closed, including the Baski DHCV (11). Then open WD34-MOVX-30150/ WD34-MOVX-36150. Second is purge all air in the column pipe. This will be done by opening WD34-MOVX-30130/WD34-MOVX-36130 which will allow the flow of water to prime the column pipe. All venting will happen with the AVRV valves located at the above ground piping sections. Once all air is purged out the above ground piping and column pipe the modulating BASKI Down Hole Control Valve (DHCV) will regulate the recharge flow rate via control of nitrogen which actuates the BASKI valve. Purging of the air to atmosphere is to mitigate the well being clogged with entrapped air in the water.
        b. The recharge mode is used to store excess water from the Roseville system for later use. The rate of recharge flow shall be measured by the main piping discharge magmeter along with the trickle flow magmeter, and integrated over time by the PLC to determine the volume during the recharge period. (The main piping magmeter is located in a drop-loop section of piping in order to keep the unit full of water during periods when the piping may otherwise drain down when not in the recharge mode. If

allowed to drain there would be a lag in reliable flow information from the magmeter during start-up operation. The trickle flow magmeter is located near the wellhead.) The instantaneous flowrate and totalized quantity recharged shall be added to the total quantity stored information which will be displayed on the local OIT and transmitted from the PLC to the centralized historian system via the SCADA interface. Below are the steps for PLC programming to complete a Recharge cycle: (all set-points, unless noted, are specified in the set-points screen).

c. During Recharge the system uses two (2) flow control valves in series to control the flow of water.
    1) The purpose of the downhole Baski control valve (Inflate) is to create enough backpressure to keep the ASR pump vertical column pipe full so as to prevent cascading and possible air entrainment during recharge. The pump assembly below the downhole control valve has its own check valve (below the bowl assembly) that will prevent flow backwards through the pump.
    2) The rate of recharge flow will be mainly controlled by modulating the pressure (inflation / deflation of nitrogen) on the downhole control valve (BASKI valve). A secondary option, should the BASKI valve have issues, would be to modulate the flow rate using the Recharge Flow Control Valve (WD34-MOVX-30130/WD34-MOVX-36130) located on the surface piping downstream of the pressure reducing valve on the incoming recharge pipe from the system.
    3) If desired recharge rates are not met with the DHCV valve fully open and if the annular water column is brought above surface at a minimum of 2 psi, the installed Annular Recharge Valve WD34-MOVX-30120/WD34-MOVX-36120 may be used to provide additional flow capacity down well. Additionally the annular recharge valve is the third valve that will provide additional means for recharge in the well. This valve is only opened after recharge is taking place through the down hole control valve, the well annular pressure is above 2 psi (this allows for the water in the annular column space to be brought to ~4.5 feet above land surface and purging of air through the ARV attached to the annular piping), and if the desired set flow rate is not yet achieved. This valve is a fully open or closed valve. As a result, if opening the valve does create excess capacity than the set flow rate, then the DHCV shall still be modulated to decrease flow down the pump column to bring the system to the set flow rate.
    4) Recharge Mode should be initiated either by:
        a) An operator manually engaging the recharge mode.
        b) An inputted date time start/stop and/or set total volume of recharge amount.

3. Hardwired control:
    a. The following valves required for Recharge have LOCAL-STOP-REMOTE mode, when placed in LOCAL mode each valve can be either fully opened, fully closed or somewhere in between:
        1) WD34-FCVX-30150, Recharge Flow Control Valve.
        2) WD34-MOVX-30130, Pump Column Recharge Valve.
        3) WD34-MOVX-30120, Well Annulus Recharge Valve.
        4) WD34-MOVX-30140, Waste Valve.
        5) WD34-MOVX-30160, Aquifer Recovery to Production Valve.

6) WD34-FCVX-36150, Recharge Flow Control Valve.
7) WD34-MOVX-36130, Pump Column Recharge Valve.
8) WD34-MOVX-36120, Well Annulus Recharge Valve.
9) WD34-MOVX-36140, Waste Valve.
10) WD34-MOVX-36160, Aquifer Recovery to Production Valve.

4. Hardwired interlocks/Overload Programmed Interlocks:
   a. None.
5. PLC Control:
   a. Step 1 – Initiate.
      1) The operator selects the Recharge button on the local OIT.
   b. Step 2 – Maintenance Check.
      1) The ASR system will automatically go to maintenance mode where all valves are to be closed (except the trickle flow).
   c. Step 3 – Preliminary Flow.
      1) The WD34-MOVX-30150 / WD34-MOVX 36150 flow control valve shall fully open. This allows water to enter the surface piping through the modulating flow control valve and to force any air in the above ground piping to vent through air release valves (during normal recharge operation where the DHCV controls recharge rates the flow control valve should be set to fully open). After a preset time-delay sufficient to vent the air from the piping (to be determined during startup) the next downstream recharge valve for pump column recharge can be opened; however, the downhole recharge valve shall remain closed.
   d. Step 4 – Auto Control (Flow).
      1) Once the air is purged from the above ground piping the Pump Column Recharge Valve will open to allow recharge flow to begin down the pump column. As the pump column fills the air is vented out through the air release valve on the pump discharge pipe. The flow will stabilize to 0 gpm once all the air is vented. A time step (which will be determined during start up of each well) will need to be entered as a minimum set time prior to proceeding to the next recharge step.
      2) The downhole flow control valve (Baski valve) located in the pump column above the bowl assembly will open and modulate to the pre-set recharge desired flow rate which will begin recharge through the well annular space. The Baski valve opens and closes based off of low and high pressure limits of the nitrogen pressure lines attached from the above ground tanks and controls. The low pressure (fully open) and high pressure (fully close) are determined during startup but can range from 100 psi to 250 psi respectively. The programing shall regulate the nitrogen pressure to meet the set recharge desired flow rate. Pressure ranges of operation for valve settings in closed, partially opened and fully opened positions shall be established during start-up and then entered in the programing function for automatic operation. (Note the ASR pump is OFF and the non-reverse ratchet is in place to prevent any backspin. There is also a check valve on the suction of the bowl assembly to prevent reverse flow through the bowls.) As the recharge continues down the pump column and the recharge water enters the well through the downhole

control valve, the water level in the well casing annulus will rise based off the Specific Injectivity (S_i) of the aquifer.

3) If the annular pressure is greater than 2 psi and if the targeted recharge rate is not achieved with the DHCV (Baski) valve fully open, then the PLC starts a pre-set time delay to account for fluctuations in the level transducer. When the timer is done, the control sequence will continue to step 6, skipping step 5.

6. Step 5 – Auto Control (Pressure).
    1) The downhole control valve is switched to auto control based on pressure. Pressure on the Baski valve shall modulate to set recharge flow rate. The PLC shall be connected to two valves on the Baski operation panel. One valve controls the pressurization of the DHCV by opening and supplying nitrogen down hole, the other opens an above ground vent line that will depressurize the DHCV. A deadband range shall be established during startup so that there's no excess ventilation of nitrogen gas as it is a finite source.

b. Step 6 – Opening Annulus Recharge Valve (FCVX-30120 / -36120).
    1) The annulus recharge valve opens when is safe to recharge. Air entrapment is the main issue that is needed to be mitigated for annular recharge. As the water level in the well casing rises air will be released through the air and vacuum release valve on the annular recharge piping. Once the well annular pressure reaches 2 psi the water should be at ~6 feet above surface. This is above the proposed annular recharge valve WD34-MOVX-30120 (and -36120). A time step delay should be set (to be determined during startup) to verify pressure does not dip below the target 2 psi prior to opening the annular recharge valve (when the well level set-point is met). After the valve is opened, the sequence will continue to step 7.

c. Step 7 – Recharge into the well/Done.
    1) This is the last step of recharge. In this step, the PLC will maintain a steady flow based on a flow rate set-point using the downhole control valve. Water flows down the pump column, and if needed to achieve the flowrate set-point, down the annular column allowing greater flows. The annular valve shall not be shut off unless the target recharge volume is exceeded and the down hole control valve is completely closed. In that case the PLC shall open up the down hole control valve to fully open and close the annular recharge valve. A 15 minute time delay will start (may be adjusted during start up) prior returning to step 6 (this is done to manage looping between steps 6 and 7 continuously given the set flow rate may exceed the rate allowed down pump column but may exceed with annular recharge and pump column closed).
    2) The following actions will take the system out of recharge mode:
        a) Operator putting the system in Maintenance mode.
        b) As set by the inputted schedule described in 3.01.A.2.c.4(b).
        c) The PLC is constantly monitoring the well empty level. If it gets below the level set-point, a 20 second time delay will start. After the timer finishes, it will close the well annulus recharge valve and return to step 5 to control the flow based on pressure to wait for optimal conditions where the annular valve can be opened again.

7. Indicators and alarms:
    a. As mentioned in A.5 and as indicated on the Drawings.
8. Failure modes:
    a. As mentioned in A.5 and as indicated on the Drawings.

B. Waste Only (Backflush) Operation:
1. References:
    a. P&ID 13N01.
    b. P&ID 19N01.
    c. P&ID 13N02.
    d. P&ID 19N02.
    e. P&ID 13N03.
    f. P&ID 19N03.
2. Abstract:
    a. The Waste Only (or Flushing or Backflushing) operating mode consists of flushing water out of the aquifer through the well screen, pump column, and aboveground piping to the proposed air gap structure. This typically is done prior to recovery or, when specific capacity (or specific injectivity) of the well decreases 70 percent - 80 percent or after prolonged inactivity during storage season. The flushing rate of the well should be greater than the recovery rate of the well and typically would last up to an hour but the time duration, frequency and flow rates will be determined during the well development period one to two years after startup. The rate of flow will be measured by magmeter, and integrated over time by the PLC to determine the volume during the flushing period. The instantaneous flowrate and totalized flush quantity shall be deducted from the stored quantity information will be displayed on the local OIT and transmitted from the PLC to the centralized historian system via the SCADA interface. Below in C.5 are the steps the PLC is programmed to do to complete a Flushing cycle.
3. Hardwired control:
    a. The following valves required for Recharge have LOCAL-STOP-REMOTE mode, when placed in LOCAL mode each valve can be either fully opened, fully closed or somewhere in between:
        1) WD34-FCVX-30150, Recharge Flow Control Valve.
        2) WD34-MOVX-30130, Pump Column Recharge Valve.
        3) WD34-MOVX-30120, Well Annulus Recharge Valve.
        4) WD34-MOVX-30140, Waste Valve.
        5) WD34-MOVX-30160, Aquifer Recovery to Production Valve.
        6) WD34-FCVX-36150, Recharge Flow Control Valve.
        7) WD34-MOVX-36130, Pump Column Recharge Valve.
        8) WD34-MOVX-36120, Well Annulus Recharge Valve.
        9) WD34-MOVX-36140, Waste Valve.
        10) WD34-MOVX-36160, Aquifer Recovery to Production Valve.
        11) Downhole Control Valve.
    b. In LOCAL mode, VFD can be operated via the VFD HMI.
4. Hardwired interlocks/Overload Programmed Interlocks:
    a. Well Pump discharge HiHi Pressure Switch.
    b. Well Pump seal Water Lo Flow Switch.
    c. Well Pump motors HiHi Temperature.
    d. Well Pump VFD Fault.

5. PLC Control:
    a. Step 1 – Initiate.
        1) The operator inputs the Flushing rate and time for flushing on the OIT (the interface shall have the max flowrate from any prior Recovery cycle along with the max flow rate from the last set of recovery cycle(s) back to the prior Flushing Operation. Note there is a minimum flow rate required for the pump to bring the water column to surface, through the aboveground piping and to the discharge structure. This minimum flow rate shall be listed on the HMI. If operator selects flow rate less than minimum and ERROR message shall be shown on the HMI and the programing shall not progress to Step 2. The minimum flow rate shall be established during start-up).
        2) The operator hits the Flushing button on the local OIT.
    b. Step 2 – Maintenance Check.
        1) If the ASR system is coming from recharge mode or recovery mode, the sequence will continue to step 4. If the ASR system is in any other mode, it will automatically go to maintenance mode to close every valve. If all valves are closed, the sequence will continue to step 3.
    c. Step 3 – Priming Column and Above Ground Piping.
        1) The Recharge flow control valve shall open to prime the above ground piping.
        2) Once open the Pump Column Recharge Valve shall be opened.
        3) A specified time delay shall be initiated to allow for pre-lubrication of the pump shaft (the time delay is to be determined during start-up). After the time delay is completed, it will continue to step 4.
            a) Additionally the well is configured with pre-lube and is connected into the pump and controlled via a solenoid and can be programmed as a secondary option for lubrication of the line shaft. This should be programmed into the PLC and set with an initial timer of < 1 minute and adjusted during start-up.
    d. Step 4 – Open the Aquifer Flush Valve.
        1) The aquifer flush valve is commanded to open to start flowing water from the well to well to waste airgap structure. When the valve gives confirmation of being opened, the sequence will continue to step 5.
    e. Step 5 – Auto Control (Flow).
        1) The pump is turned on and set to control the flow of water based on the operator-specified flow set-point. After the pump starts running, it will continue to step 6.
    f. Step 6 – Auto Flush/Done.
        1) The flushing mode continues to flush for a user adjustable amount of time. The HMI shall show the countdown timer on the screen. When the timer is done, it will take the system into Maintenance mode to close and stop everything.
6. Indicators and alarms:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
7. Failure modes:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.

C. Recovery Operation – Flow Control Mode:
   1. References:
      a. P&ID 13N01.
      b. P&ID 19N01.
      c. P&ID 13N02.
      d. P&ID 19N02.
      e. P&ID 13N03.
      f. P&ID 19N03.
      g. P&ID 13N04.
      h. P&ID 19N04.
      i. P&ID 13N05.
      j. P&ID 19N05.
      k. P&ID 13N06.
      l. P&ID 19N06.
   2. Abstract:
      a. Recovery operating mode consists on pumping water out of the aquifer to the Roseville distribution system. As the water flows out of the ASR well is disinfected with NaOCl and fluorinated with NaF as the water is being returned to the distribution system. The instantaneous flowrate and totalized quantity recovered shall be deducted to the total quantity stored information which will be displayed on the local OIT and transmitted from the PLC to the centralized historian system via the SCADA interface. Below in D.5 are the steps the PLC is programmed to do to complete a Recovery cycle.
      b. There shall be two initiation modes for the Recovery Operation:
         1) Recovery based off of distribution system's zonal pressure – This option allows the operator to set a minimum system pressure to start up the well. The intent of this mode is to automate the starting and stopping of the well as the distribution system's zonal pressure set point. A programmed delayed response shall be included and set during start-up to prevent the pump pre-maturely starting and/or stopping due to pressure fluctuations in zonal system pressure with small differential time steps.
         2) Recovery based off of operator assigned flow rate – This option allows the operator to initiate the recovery flow rate by inputting a desired flow rate of recovery (so long as it's greater than the minimum flow rate as established during start-up).
   3. Hardwired control:
      a. The following valves required for Recharge have LOCAL-STOP-REMOTE mode, when placed in LOCAL mode each valve can be either fully opened, fully closed or somewhere in between:
         1) WD34-FCVX-30150, Recharge Flow Control Valve.
         2) WD34-MOVX-30130, Pump Column Recharge Valve.
         3) WD34-MOVX-30120, Well Annulus Recharge Valve.
         4) WD34-MOVX-30140, Waste Valve.
         5) WD34-MOVX-30160, Aquifer Recovery to Production Valve.
         6) WD34-FCVX-36150, Recharge Flow Control Valve.
         7) WD34-MOVX-36130, Pump Column Recharge Valve.
         8) WD34-MOVX-36120, Well Annulus Recharge Valve.
         9) WD34-MOVX-36140, Waste Valve.
         10) WD34-MOVX-30160, Aquifer Recovery to Production Valve.

11) Down Hole Control Valve.

b. In LOCAL mode, VFD can be operated via the VFD HMI.

4. Hardwired interlocks/Overload Programmed Interlocks:
   a. Well Pump discharge HiHi Pressure Switch.
   b. Well Pump seal Water Lo Flow Switch.
   c. Well Pump motors HiHi Temperature Switch.
   d. Well Pump VFD Fault.
5. PLC Control:
   a. Step 1 – Initiate.
      1) The operator sets the desired Recovery flow rate on the local OIT.
      2) The operator sets the desired Backflush flow rate and time on the OIT.
      3) The operator selects the Recovery Mode on the local OIT. The HMI will record the date and time when this mode is initiated.
   b. Step 2 – Maintenance Check.
      1) If the ASR system is coming from recharge or backflush mode, the sequence will continue to step 4. If the ASR system is in any other mode, it will automatically go to maintenance mode to close every valve. If all valves are closed, the sequence will continue to step 3.
   c. Step 3 – Priming Column and Above Ground Piping.
      1) The Recharge flow control valve shall open to prime the above ground piping.
      2) Once open the Pump Column Recharge Valve shall be opened.
      3) A X minute time delay shall be initiated to allow for pre-lubrication of the pump shaft. After time delay is completed, it will continue to step 4.
   d. Step 4 – Backflush Check.
      1) If a flow rate and time frame is entered in the Backflush flow OIT and it meets the minimum flow rate then the aquifer flush valve is commanded to open to start flowing water from the well to well to waste airgap structure. When the valve gives confirmation of being opened, the sequence will continue to step 5.
      2) If a flow rate and time frame = 0 then the sequence will continue to step 7.
   e. Step 5 – Auto Control (Backflush Flow).
      1) The pump is turned on and set to control the flow of water based on the operator inputted waste flow set-point. After the pump starts running, it will continue to step 6.
   f. Step 6 – Auto Flush / Done.
      1) The flushing mode continues to flush for a user adjustable amount of time. The HMI shall show the countdown timer on the screen. When the timer is done, it will continue to step 7.
   g. Step 7 – Aquifer Recovery to Production Valve OPEN.
      1) The Aquifer Recovery to Production Valve is commanded to open to start flowing water to the distribution system. When the valve gives confirmation of being opened, the sequence shall continue to step 8.
   h. Step 8 – Recovery Flow.
      1) A check shall initiate to confirm that the pump is ON. If pump is ON proceed to Step 8.2, if pump is OFF turn pump on and set to control the flow of water based on the operator entered production flow

set-point. After the pump starts running, the sequence will continue to step 9.

2) The ASR Well will adjust to the entered flow setpoint for recovery. When done the Waste Valve will be set to CLOSE. Once the valve is CLOSED the sequence will continue to step 9.

i. Step 9 – Flowing to Distribution/Done.

1) The ASR Well Pump is set to control the flow of water based on a flow set-point. The system will remain in this step, flowing water at a specific set-point until maintenance mode is initiated by the operator at the OIT.

6. Indicators and alarms:
   a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
7. Failure modes:
   a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.

D. Recovery Operation – Pressure Control Mode:
1. References:
   a. P&ID 13N01.
   b. P&ID 19N01.
   c. P&ID 13N02.
   d. P&ID 19N02.
   e. P&ID 13N03.
   f. P&ID 19N03.
   g. P&ID 13N04.
   h. P&ID 19N04.
   i. P&ID 13N05.
   j. P&ID 19N05.
   k. P&ID 13N06.
   l. P&ID 19N06.
2. Abstract:
   a. Recovery – Pressure control operating mode consists of having an option to turn ON or turn OFF an automated process to initiate the Recovery mode based on system pressure. Like the Recovery mode this mode initiates pumping water out of the aquifer to the Roseville distribution system. As the water flows out of the ASR well is disinfected with NaOCl and fluorinated with NaF as the water is being returned to the distribution system.

      This mode will become active if the mode is set to “ON”. Active means this mode wont necessarily start but will start if the following parameters are met: If the system pressure drops below the operator entered minimum system pressure valve the Pressure Control Mode Operation will begin. Likely the system will turn to OFF if the system pressure exceeds the operator entered maximum system pressure value in the OIT (for both start up and shut down there shall be a time interval programmed to eliminate the small description in pressure changes).

      The instantaneous flowrate and totalized quantity recovered shall be deducted to the total quantity stored information which will be displayed

on the local OIT and transmitted from the PLC to the centralized historian system via the SCADA interface.

Below in E.5 are the steps the PLC is programmed to do to complete a Recovery cycle.

3. Hardwired control:
   a. The following valves required for Recharge have LOCAL-STOP-REMOTE mode, when placed in LOCAL mode each valve can be either fully opened, fully closed or somewhere in between:
      1) WD34-FCVX-30150, Recharge Flow Control Valve.
      2) WD34-MOVX-30130, Pump Column Recharge Valve.
      3) WD34-MOVX-30120, Well Annulus Recharge Valve.
      4) WD34-MOVX-30140, Waste Valve.
      5) WD34-MOVX-30160, Aquifer Recovery to Production Valve.
      6) WD34-FCVX-36150, Recharge Flow Control Valve.
      7) WD34-MOVX-36130, Pump Column Recharge Valve.
      8) WD34-MOVX-36120, Well Annulus Recharge Valve.
      9) WD34-MOVX-36140, Waste Valve.
      10) WD34-MOVX-30160, Aquifer Recovery to Production Valve.
      11) Down Hole Control Valve.
   b. In LOCAL mode, VFD can be operated via the VFD HMI.
4. Hardwired interlocks/Overload Programmed Interlocks:
   a. Well Pump discharge HiHi Pressure Switch.
   b. Well Pump seal Water Lo Flow Switch.
   c. Well Pump motors HiHi Temperature Switch.
   d. Well Pump VFD Fault.
5. PLC Control:
   a. Step 1 – Initiate.
      1) The operator sets “Minimum System Pressure to turn pump ON” to a X (psi) value on the local OIT.
      2) The operator sets “Maximum System Pressure to turn pump OFF” to a X (psi) value on the local OIT.
      3) The operator sets “Desired System Pressure” to indirectly set target pump recovery speed.
      4) The operator sets the desired Backflush flow rate and time on the OIT.
      5) This setting will still allow for other modes of operation to still happen. It will however override any other system operation if the system pressure falls outside these parameters. If the system falls outside these parameters the HMI will record the date and time when this mode is initiated and it will proceed to step 2
   b. Step 2 – Maintenance Check.
      1) If the ASR system is coming from recharge or backflush mode, the sequence will continue to step 4. If the ASR system is in any other mode, it will automatically go to maintenance mode to close every valve. If all valves are closed, the sequence will continue to step 3.
   c. Step 3 – Priming Column and Above Ground Piping.
      1) The Recharge flow control valve shall open to prime the above ground piping.
      2) Once open the Pump Column Recharge Valve shall be opened.

3) A X minute time delay shall be initiated to allow for pre-lubrication of the pump shaft. After time delay is completed, it will continue to Step 4.

d. Step 4 – Backflush Check.
   1) If a flow rate and time frame is entered in the Backflush flow OIT and it meets the minimum flow rate then the aquifer flush valve is commanded to open to start flowing water from the well to well to waste airgap structure. When the valve gives confirmation of being opened, the sequence will continue to step 5.
   2) If a flow rate and time frame = 0 then the sequence will continue to step 7.

e. Step 5 – Auto Control (Backflush Flow).
   1) The pump is turned on and set to control the flow of water based on the operator inputted waste flow set-point. After the pump starts running, it will continue to step 6.

f. Step 6 – Auto Flush / Done.
   1) The flushing mode continues to flush for a user inputted amount of time. The HMI shall show the countdown timer on the screen. When the timer is done, it will continue to step 7.

g. Step 7 – Aquifer Recovery to Production Valve OPEN.
   1) The Aquifer Recovery to Production Valve is commanded to open to start flowing water to the distribution system. When the valve gives confirmation of being opened, the sequence shall continue to step 8.

h. Step 8 – Recovery Flow.
   1) A check shall initiate to confirm that the pump is ON. If pump is ON proceed to step 8.2, if pump is OFF turn pump on and set to control the flow of water based on the operator entered production flow set-point. After the pump starts running, the sequence will continue to step 9.
   2) The ASR Well will adjust to the entered flow setpoint for recovery. When done the Waste Valve will be set to CLOSE. Once the valve is CLOSED the sequence will continue to step 9.

i. Step 9 – Flowing to Distribution / Done.
   1) The ASR Well Pump is set to control the flow of water based on desired system pressure. The system will remain in this step, flowing water at a specific set-point until maintenance mode is initiated by the operator at the OIT or the Maximum system pressure set point is reached. Once reached consistently for X minutes system shall go into maintenance mode.

6. Indicators and alarms:
   a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
7. Failure modes:
   a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.

E. Maintenance Operation:

2. Abstract:
   a. Maintenance mode consists of closing all valves and stopping all pumps. This mode puts the system in “stand-by” mode. The operator should take the system into Maintenance mode after finishing with every other mode. Below in F.5 are the steps the PLC is programmed to complete a Maintenance cycle.
3. Hardwired control:
   a. The following valves required for Recharge have LOCAL-STOP-REMOTE mode, when placed in LOCAL mode each valve can be either fully opened, fully closed or somewhere in between.
      1) WD34-FCVX-30150, Recharge Flow Control Valve.
      2) WD34-MOVX-30130, Pump Column Recharge Valve.
      3) WD34-MOVX-30120, Well Annulus Recharge Valve.
      4) WD34-MOVX-30140, Waste Valve.
      5) WD34-MOVX-30160, Aquifer Recovery to Production Valve.
      6) WD34-FCVX-36150, Recharge Flow Control Valve.
      7) WD34-MOVX-36130, Pump Column Recharge Valve.
      8) WD34-MOVX-36120, Well Annulus Recharge Valve.
      9) WD34-MOVX-36140, Waste Valve.
      10) WD34-MOVX-30160, Aquifer Recovery to Production Valve.
      11) Down Hole Control Valve.
   b. In LOCAL mode, VFD can be operated via the VFD HMI.
4. Hardwired interlocks/Overload Programmed Interlocks:
   a. None.
5. PLC Control:
   a. Step 1 – Initiate.
      1) The operator hits the Maintenance button on the local OIT.
   b. Step 2 – Pump OFF.
      1) This step makes sure the pump/VFD is set to OFF and ZERO speed. This step also resets internal PLC bits and internal modes. When the VFD gives confirmation of not running, the sequence will continue to step 3.
   c. Step 3 – Chemicals OFF.
      1) This step makes sure the chemical pumps are set to OFF and ZERO speed. When the pumps give confirmation of not running, the sequence will continue to step 4.
   d. Step 4 – Trickle Flow ON.
      1) This step makes sure the trickle flow solenoid is CLOSED. There’s no confirmation in this step, so the sequence continues to step 5 immediately.

e. Step 5 – Down Hole Control Valve CLOSED.
    1) This step confirms that the down hole control valve is fully CLOSED with position set to XXX psi as determined during start-up. When the valve pressure transducer gives confirmation of set point, the sequence will continue to step 6.
f. Step 6 – Recharge Valve CLOSED.
    1) This step makes sure the flow control valve is set to OFF and ZERO percent opening. When the valve gives confirmation of closed, the sequence will continue to step 7.
g. Step 7 – Aquifer Flush Valve CLOSED.
    1) This step makes sure the Aquifer Flush valve is set to CLOSED. When the valve gives confirmation of closed, the sequence will continue to step 8.
h. Step 8 – Recovery Valve CLOSED.
    1) This step makes sure the Recovery valve is set to CLOSED. When the valve gives confirmation of closed, the sequence will continue to step 9.
i. Step 9 – Well Annulus Recharge Valve CLOSED.
    1) This step makes sure the Well Annulus Recharge valve is set to CLOSED. When the valve gives confirmation of closed, the sequence will continue to step 10.
j. Step 10 – Done.
    1) The system stays in this step until an operator input.

6. Indicators and alarms:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
7. Failure modes:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.

F. Sodium Hypochlorite Feed System:
1. References:
    a. P&ID 13N02.
    b. P&ID 19N02.
    c. P&ID 13N04.
    d. P&ID 19N04.
2. Abstract:
    a. During Recovery operations the chlorine residual will be restored for the recovered water via feeding a liquid Sodium Hypochlorite solution. The feed pump rate per stroke shall be operator adjustable. Below in G.5 are the steps the PLC is programmed to control the chemical feed system.
3. Hardwired control:
    a. TBD.
4. Hardwired interlocks/Overload Programmed Interlocks:
    a. TBD.
5. PLC Control:
    a. Step 1 – Initiate.
        1) The selected active feed pump will start when the Recovery mode is selected.

b. Step 2 – Flow Pacing with Closed Loop and Analyzer Trim, reference Section 17100 - Control Strategies.
    1) The feed rate shall be paced with the recovery flowrate to achieve the desired disinfection level.
c. Step 3 – Done.
    1) Once the Recovery mode is deselected the operation of the selected feed pump shall stop.

6. Indicators and alarms:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
7. Failure modes:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.

G. Sodium Fluoride Feed System:
1. References:
    a. P&ID 13N02.
    b. P&ID 19N02.
    c. P&ID 13N05.
    d. P&ID 19N05.
    e. P&ID 013N06.
    f. P&ID 19N06.
2. Abstract:
    a. During Recovery operations, if necessary, the fluoride residual will be restored for the recovered water via feeding liquid Sodium Fluoride solution. The feed pump rate per stroke shall be operator adjustable.
    b. Below in H.5 are the steps the PLC is programmed to control the chemical feed system.
3. Hardwired control:
    a. TBD.
4. Hardwired interlocks/Overload Programmed Interlocks:
    a. TBD.
5. PLC Control:
    a. Step 1 – Initiate.
        1) The selected active feed pump will start when the Recovery mode is selected.
    b. Step 2 – Flow Pacing with Closed loop and Analyzer Trim, reference Section 17100 - Control Strategies.
        1) The feed rate shall be paced with the recovery flowrate to achieve the desired disinfection level.
    c. Step 3 – Done.
        1) Once the Recovery mode is deselected the operation of the selected feed pump shall stop.
6. Indicators and alarms:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
7. Failure modes:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.

H. Nested Monitoring Well (containing Zone B, and C):
   1. References:
      a. P&ID 13N06.
      b. P&ID 19N06.
   2. Abstract:
      a. Water from Zone B and C of the monitoring well will be individually sampled as needed. A sump pump will deliver each sample of the monitoring well water to the ASR building.
   3. Hardwired control:
      a. In LOCAL mode, VFD can be operated via the VFD HMI.
   4. Hardwired interlocks/Overload Programmed Interlocks:
      a. Well Pump VFD Fault.
   5. PLC Control:
      a. Sampling will be done at the end of a timer interval or when initiated by the operator at the VFD or via the OIT.
      b. When initiated either automatically or manually, the timer will reset when the pump is confirmed not running.
      c. The automatic duty cycle of the sump pump is TBD.
      d. The speed profile of the VFD is TBD.
   6. Indicators and alarms:
      a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
   7. Failure modes:
      a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.

I. Nested Monitoring Well (containing Zone A):
   1. References:
      a. P&ID 13N06.
      b. P&ID 19N06.
   2. Abstract:
      The water level in Zone A of the monitoring well will be continuously monitored.
   3. Hardwired control:
      a. None.
   4. Hardwired interlocks/Overload Programmed Interlocks:
      a. None.
   5. PLC Control:
      a. None.
   6. Indicators and alarms:
      a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
   7. Failure modes:
      a. As specified in Section 17100 - Control Strategies.

J. Filters (for future installation):
   1. References:
      a. N/A.
   2. Abstract:
      a. Filter System Overview: The filter system consists of several pressure filters used to remove iron and manganese from the well water before

sending the water to the distribution system. This system will be programmed by the supplier of the equipment with a dedicated operator interface terminal (OIT). This section provides a general overview of the filter operation and the filter system submittal will provide the additional details. A master PLC at the site will both provide inputs to the OIT and received outputs from the OIT in an effort to coordinate overall processes on the site. Other systems that require coordination with the filter system include the Backwash Waste Tank, Well, and Sodium Hypochlorite chemical feed.

b. Filter Operations: Filters will be operated in one of several modes:
    1) Filtration: Water is filtered and going to the system. Valves are positioned accordingly.
    2) Backwash: Filter is washed and washwater is going to the backwash waste tank. Valves are positioned accordingly.
    3) Maintenance: Filter is taken out-of-service (no water flow either direction) for inspection and/or repair. The filter cannot be automatically brought into an active state (Filtration or Backwash) until removed from Maintenance Mode.
    4) Offline: Filter is taken-of-service and all valves are closed. The filter can automatically be brought into an active state.
c. Water Production to System: Flow meters on each filter train will measure individual flow rates per train and summed together to provide a total flowrate. Likewise a totalized volume for both individual trains and combined trains will be calculated by the Filter System PLC. During a backwash there may be flow backwards across the flow meter. This change in direction (negative value) will be accounted for in the calculations.
d. Backwash Flow: When a filter is washed a backwash flow meter and control valve will be used to adjust the wash rate. The flow rate will be measured and the totalized volume will be calculated.
e. Backwash Event: A filter can either be brought into a backwash mode automatically through setpoints or manually initiated by the treatment operator. Setpoints for automatic operation include filter run time, differential pressure across the filter train, and totalized volume treated since last backwash.

3. Hardwired control:
    a. The following valves required for Recharge have LOCAL-STOP-REMOTE mode, when placed in LOCAL mode each valve can be either fully opened, fully closed or somewhere in between:
        1) WD34-FCVX-30150, Recharge Flow Control Valve.
        2) WD34-MOVX-30130, Pump Column Recharge Valve.
        3) WD34-MOVX-30120, Well Annulus Recharge Valve.
        4) WD34-MOVX-30140, Waste Valve.
        5) WD34-MOVX-30160, Aquifer Recovery to Production Valve.
        6) WD34-FCVX-36150, Recharge Flow Control Valve.
        7) WD34-MOVX-36130, Pump Column Recharge Valve.
        8) WD34-MOVX-36120, Well Annulus Recharge Valve.
        9) WD34-MOVX-36140, Waste Valve.
        10) WD34-MOVX-30160, Aquifer Recovery to Production Valve.
        11) Down Hole Control Valve
    b. In LOCAL mode, VFD can be operated via the VFD HMI.

4. Hardwired interlocks/Overload Programmed Interlocks:
    a. Well Pump discharge HiHi Pressure Switch.
    b. Well Pump seal Water Lo Flow Switch.
    c. Well Pump motors HiHi Temperature Switch.
    d. Well Pump VFD Fault.
5. PLC Control:
    a. Step 1 – Initiate.
        1) The operator selects the Recovery Mode on the local OIT. The HMI will record the date and time when this mode is initiated.
    b. Step 2 – Maintenance Check.
        1) If the ASR system is coming from recharge mode, it will automatically go to maintenance mode to close every valve. If not, the sequence will continue to step 3.
    c. Step 3 – Preliminary Flow.
        1) The pump is started to a specific initial speed set-point for a specific time. After the time has passed, it will continue to step 4. At the same time, the primary chemical pumps are started, supply the chemicals based on dosage set-points. When the timer is done, the sequence will continue to step 4.
    d. Step 4 – Opening Recovery Valve.
        1) The recovery valve is commanded to open to start flowing water to the distribution system. When the valve gives confirmation of being opened, the sequence will continue to. step 5.
    e. Step 5 – Flowing to Distribution/Done.
        1) The pump is set to control the flow of water based on a flow set-point. The system will remain in this step, flowing water at a specific set-point until maintenance mode is initiated by the operator at the OIT.
6. Indicators and alarms:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.
7. Failure modes:
    a. As indicated on the Drawings and specified in Section 17100 - Control Strategies.

3.02 DEMONSTRATION AND TRAINING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.03 TESTING

A. As specified in Section 17950 - Commissioning for Instrumentation and Controls.

END OF SECTION

SECTION 17201

LEVEL MEASUREMENT: SWITCHES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Conductivity probe level switch.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide complete documentation covering the traceability of calibration instruments.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions, including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

C. Manufacture instrument facilities certified to the quality standards of ISO 9001 - Quality Systems - Model for Quality Assurance in Design/Development, Production, Installation and Servicing.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. Project environmental conditions as specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or Specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.09 MAINTENANCE

A. Furnish parts, materials, fluids, etc., necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver these supplies before Project Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed Site conditions, including, but not limited to, material compatibility, Site altitude, Site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. Conductivity level switch:
      a. Standard applications:
         1) Ametek Drexelbrook, Model 6012/6013 probes with Series 5200 relay.
         2) E+H, Liquipoint FTW.
         3) Warrick Controls, Model 3 series probes with 16 VM relay.
      b. Intrinsically safe:
         1) B/W, Control High Sensitivity Series 5200 N7.
         2) Warrick Controls, Model 27.

2.04 MANUFACTURED UNITS

A. As specified in this Section, including Attachment A - ISA Datasheet - Level Measurement: Switches.

B. Conductivity level switch:
   1. General:
      a. Probe type conductivity level switches integrating a control relay, control and reference electrode probes as required, and electrode probe holder. Electrode probes shall be rigid stainless steel and probe holder pressure tight.

b. All components provided by the same manufacturer.

2. Element:
   a. Rigid type:
      1) For probe lengths of 6 feet and less, provide Type 316 stainless steel rigid probes.
      2) Electrode probe shall be threaded at one end to fit electrode holder threads and insulated with 1/32-inch PVC sheath down to 1 inch from the other end.
   b. Electrode probe holder.
   c. Suspended probes:
      1) For probe lengths longer than 6 feet, provide wire suspended probes within a protective plastic shield suspended and PVC insulated wires.
      2) Provide suitable adapters for fastening upper end to electrode fitting.
3. Switch: Control relay senses the liquid level by conductance through electrode probes and the process liquid:
   a. Provide a solid-state general-purpose control relay designed for single level or differential control.
   b. Electrical connection: One 1/2-inch NPT conduit entry.
   c. Power supply:
      1) As indicated in the datasheets.
4. Output:
   a. Relay outputs:
      1) As indicated in the datasheets.
      2) Enclosure:
         a) As indicated in the datasheets.
      3) Configurable for fail-safe operation.
5. Components:
   a. Adjustable time delay on increasing or decreasing level.

2.05 SOURCE QUALITY CONTROL

A. FM approval certification or equal when installed in classified areas.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

3.04 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:
   1. Instruments may be as indicated on the Drawings, as specified in the Specifications, or both.

SECTION 17208

LEVEL MEASUREMENT: RADAR PULSE TIME OF FLIGHT (PTOF)

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Non-contact radar (PTOF) level instruments.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Abbreviations:
   1. PTOF: Pulse Time of Flight.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Quality Control Submittals:
   1. Manufacturer's representative qualifications as specified in Section 01756 - Commissioning.

C. Owner Training Submittals:
   1. As specified in Section 01756 - Commissioning.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide instruments manufactured at facilities certified to the quality standards of ISO 9001.

C. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions, including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed Site conditions, including, but not limited to, material compatibility, Site altitude, Site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. Endress+Hauser, Micropilot FMR51.

2.04 MANUFACTURED UNITS

A. Pulse Time of Flight:
   1. General:
      a. Instrument emits radar pulses via a transmitter, with a frequency range of up to 80 GHz.
      b. Pulses reflect from the surface being measured and are received back at the instrument via a sensor.
      c. Instrument measures the pulse travel time between the transmitter, surface, and receiver to calculate the level.
      d. Safety:
         1) Shall not generate frequency waves with power levels hazardous to humans.

2. Performance requirements:
    a. Accuracy: Level:
        1) 0.25 inch.
3. Element:
    a. Level element must conform to the process material compatibility as indicated in Attachment A - ISA Datasheet - Level Measurement: Radar Pulse Time of Flight (PTOF) or the Instrument Index.
    b. Connections:
        1) Process: Antenna design shall be suitable for mounting in a nozzle as indicated in Attachment A - ISA Datasheet - Level Measurement: Radar Pulse Time of Flight (PTOF) or the Instrument Index.
        2) Design shall be such that product condensation on the antenna shall not affect the performance of the gauge. It shall be possible to choose between parabolic-, cone-, or rod-shaped antennas.
4. Transmitter:
    a. Microprocessor-based signal converter/transmitter.
    b. Power supply:
        1) As indicated in the datasheets.
    c. Outputs:
        1) As indicated in the datasheets.
    d. Backlit digital display for level or volume.
    e. Self-diagnostics and automatic data checking.
    f. Signal integrity:
        1) Immune to radio frequency and electromagnetic interference with field strength of 15 volts/meter or less over a frequency range of 50 Hz to 460 MHz.
        2) Able to ignore momentary level spikes or momentary loss of echo and indicate loss of echo condition on indicating transmitter unit.
    g. Protected terminals and fuses in a separate compartment, which isolates field connection from electronics.
        1) Indication: Local - 5-digit display.
    h. Enclosure:
        1) As indicated in the datasheets.
    i. Electrical connection: 1/2-inch male NPT.

2.05 ACCESSORIES

A. Software: Provide Windows based PC software for configuration and echo mapping.

B. Provide sun shield for outdoor installations.

C. Configurable additional remote mountable display.

2.06 FINISHES (NOT USED)

2.07 SOURCE QUALITY CONTROL

A. Factory calibrate each level transmitter at a facility that is traceable to NIST.

B. Provide complete documentation covering the traceability of calibration instruments.

C. FM approval certification or equal when installed in classified areas.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Coordinate the installation with trades to ensure that the mechanical system has necessary appurtenances, including weld-o-lets, valves, etc., for proper installation of instruments.

3.03 CALIBRATION AND TESTING

A. As specified in Section 17950 - Commissioning for Instrumentation and Controls.

3.04 OWNER TRAINING

A. Perform Owner Training as specified in Section 01756 - Commissioning.
   1. Number of sessions:
      a. Operations: 2, 1 hour duration.
      b. Maintenance: 2, 1 hour duration.

3.05 ADJUSTING

A. Verify factory calibration of instruments in accordance with the manufacturer's instructions:
   1. Return factory calibrated devices to the factory if they do not meet the field verification requirements for calibration.

3.06 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

SECTION 17301

FLOW MEASUREMENT: SWITCHES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Thermal dispersion flow switches.

B. Provide all instruments identified in the Contract Drawings.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 DEFINITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Sections 01330 - Submittal Procedures and 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide complete documentation covering the traceability of all calibration instruments.

1.05 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that all required accessories are provided and are compatible with the process conditions and physical installation.
   3. Notify the Engineer if any installation condition does not meet the instrument manufacturer’s recommendations or specifications.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide instruments suitable for the installed site conditions including, but not limited to, material compatibility, site altitude, site seismic conditions, humidity, and process and ambient temperatures.

1.08 WARRANTY

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.09 MAINTENANCE

A. Furnish all parts, materials, fluids, etc. necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver all of these supplies before project substantial completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. One of the following or equal:
   1. Thermal dispersion type:
      a. Fluid Components International LLC, FLT93. (This was selected at Westbrook and Solaire.)
      b. Kayden.

2.02 MANUFACTURED UNITS

A. As specified in this Section including Attachment A - ISA Data Sheet - Flow Measurement: Switches.

B. Thermal dispersion type:
   1. General:
      a. Instrument uses a heated probe and a reference probe.
         1) Deviation in the amount of heat measured by the reference probe deviates beyond the setpoint an adjustable relay closes.
         2) Switch:
            a) Micro-processor based with continuous self-diagnostics, “Smart Heater” to prevent sensor failure, no mechanical jumpers or trim pots, and a 3-year warranty.

3) Seal water applications:
a) For clean water flow applications in line sizes 1-inch or smaller, provide in-line pre-assembled flow switch assembly with NPT process connections.

2. Performance requirements:
1) Accuracy: Within 2 degrees Fahrenheit.
b. Repeatability: Within 1 percent of setpoint range.
c. Response time: 0.5 to 2.5 seconds.
d. Adjustable bypass delay timer.
e. Adjustable range.

3. Switch characteristics:
a. Exposed parts: Powder coated aluminum housing.
b. Wetted parts:
1) Materials as recommended by the manufacturer and approved by the Engineer.
c. Power supply:
1) 120 VAC.
2) Power consumption: 13 VA maximum.
3) Operating temperature range: -40 degrees Fahrenheit to 350 degrees Fahrenheit.
d. Enclosure:
1) Non-hazardous area:
a) NEMA Type 4X.

2.03 ACCESSORIES

A. Provide sunshades for outdoor installations.

2.04 SOURCE QUALITY CONTROL

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Factory calibrate each instrument with a minimum 3-point calibration or according to Manufacturer's standard at a facility that is traceable to the NIST.
1. Submit calibration data sheets to the Engineer at least 30 days before shipment of the instruments to the project site.

C. FM approval certification or equal when installed in classified areas.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.
1. Notify the Engineer promptly if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.03 FIELD QUALITY CONTROL

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.04 ADJUSTING

A. As specified in Section 17950 - Commissioning for Instrumentation and Controls.

3.05 CLEANING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.06 DEMONSTRATION AND TRAINING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.07 PROTECTION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.08 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications or both.

SECTION 17302

FLOW MEASUREMENT: MAGNETIC FLOWMETERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Full-body magnetic flowmeters.

B. Provide all instruments identified in the Contract Drawings.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.
   1. International Organization for Standardization (ISO):
      a. 9000 - Quality management systems -- Fundamentals and vocabulary.
      b. 17025 - General requirements for the competence of testing and calibration laboratories.
   2. National Institute of Standards and Technology (NIST).
   3. NSF International (NSF).

1.03 DEFINITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Sections 01330 - Submittal Procedures and 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Include sizing information from the manufacturer that includes:
   1. Chart of the measurement error from zero to maximum measured volumetric flow range indicated in data sheets.
   2. Indication of all input parameters and their values used in the calculations.

1.05 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.

c. Accessories: Verify that all required accessories are provided and are compatible with the process conditions and physical installation.

3. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.08 WARRANTY

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.09 MAINTENANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. One of the following, no equal:
   1. Endress+Hauser:
      a. Promag W flowtube with 500 series transmitter.
      b. Promag H flowtube with 500 series transmitter.

2.02 MANUFACTURED UNITS

A. As specified in this Section including Attachment A - ISA Data Sheet - Flow Measurement: Magnetic Flowmeters.

B. Magnetic flowmeter:
   1. General:
      a. Include for each magnetic flow metering system:
         1) A metering tube with electrodes (sensor).
         2) Signal cable.
         3) Transmitter integral or remote as indicated on the Drawings.
         4) Flowmeter grounding rings.
   2. Element:
      a. Metering tube:
         1) Per Attachment A - ISA Data Sheet - Flow Measurement: Magnetic Flowmeters.

2) Liner material in conformance with:
    a) Manufacturer's recommendations for the intended service.
3) Electrodes type and material in conformance with:
    a) Manufacturer's recommendations for the intended service.
4) Meter terminal housing NEMA Type 4, unless installed in locations such as vaults that will experience submergence. In those applications NEMA 6P is required.
    a) Unless specifically noted otherwise in Attachment A - ISA Data Sheet - Flow Measurement: Magnetic Flowmeters.
5) Meter coating consisting of epoxy painted finish.
6) Components:
    a) 2 grounding rings:
        (1) Which are in conformance with the manufacturer's bore and material recommendation for the meter's intended service.

3. Transmitter:
    a. Power supply:
        1) As indicated in the data sheets.
        2) Power consumption: 60 VA maximum.
    b. Outputs:
        1) As noted in Attachment A - ISA Data Sheet - Flow Measurement: Magnetic Flowmeters.
    c. Microprocessor-based signal converter/transmitter.
    d. Utilize DC pulse technique to drive flux-producing coils.
    e. Contain a 6-digit display for flow rate, percent of span, and totalizer.
    f. Operator keypad interface.
    g. Integral zero return to provide consistent zero output signals in response to an external dry contact closure.
    h. Integral low flow cut-off zero return.
    i. Programmable parameters including:
        1) Meter size.
        2) Full-scale flow rate.
        3) Magnetic field frequency.
        4) Time constant.
    j. Data retention for a minimum of 5 years without auxiliary main or battery power.
    k. Self-diagnostics and automatic data checking.
    l. Protected terminals and fuses in a separate compartment which isolates field connection from electronics.
    m. Ambient operating temperature limits of -5 to 140 degrees Fahrenheit (-20 to 60 degrees Celsius).
    n. Enclosure:
        1) Non-hazardous area:
            a) NEMA Type 4.
        2) For more information, see Attachment A - ISA Data Sheet - Flow Measurement: Magnetic Flowmeters.
    o. The transmitter should support commissioning options via a service interface or via an internal web server accessible through an RJ-45 Ethernet port.
    p. The Transmitter should retain all setup parameters and accumulated measurements internally in non-volatile memory in the event of power failure.

2.03 ACCESSORIES

A. Provide stainless steel tags for each instrument. Tags shall be labeled as specified in the Contract Documents.

B. Provide sunshades for all transmitters located outdoors.

C. Provide galvanic isolation gaskets, nylon/Teflon™ flange bolt insulation bushings and nylon washers on all meters installed on pipes with cathodic protection.

D. Furnish 1 spool piece for every size of magnetic flow tube being provided.

2.04 SOURCE QUALITY CONTROL

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Factory calibrate each flow metering system at a facility that is traceable to the NIST.
   1. ISO-17025 accredited test facility with certified accuracy traceable to NIST.

C. Evidence of accreditation shall originate from a national verification agency such as A2LA.

D. FM approval certification or equal when installed in classified areas.

E. A real-time computer generated printout of the actual calibration date indication actual velocities and as read values of the flow tube.
   1. Flow calibration report of the manufacturers flow lab calibration procedure shall be shipped with the meter system.
   2. Minimum calibration shall be a 3 point calibration including 1, 3, and 10 feet per second velocities for every meter and transmitter system.
   3. Manufacturer shall archive all calibration reports for future reference.

PART 3 EXECUTION

3.01 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. For instruments located outdoors or where instrument elements and transmitters are separated by conduit located outside the building envelope, provide surge protection devices at the transmitters.

3.02 FIELD QUALITY CONTROL

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide manufacturer’s services to perform installation inspection.

3.03 ADJUSTING

A. Field verification:
   1. Verify factory calibration of all instruments in accordance with the manufacturer's instructions.
   2. The Transmitter and sensor to include a method to verify flow meter performance to the original manufacturer specifications.
   3. Verification should be traceable to factory calibration using a third party, attested onboard system pursuant to ISO standards.
   4. The Verification report should be compliant to common quality systems such as ISO 9000 to prove reliability of the meter specified accuracy.
   5. Return factory calibrated devices to the factory if they do not meet the field verification requirements for calibration.

3.04 CLEANING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.05 DEMONSTRATION AND TRAINING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Demonstrate performance of all instruments to the Engineer before commissioning.

3.06 PROTECTION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.07 SCHEDULES

A. Instrument Data Sheets included in this Section.

B. The provided information does not necessarily include all required instruments.

C. Provide all instruments identified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

SECTION 17316

FLOW MEASUREMENT: ROTAMETERS (VARIABLE AREA FLOWMETERS)

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Rotameters (variable area flowmeters).

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions, including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the instrument manufacturer’s recommendations or specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed Site conditions, including, but not limited to, material compatibility, Site altitude, Site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. ABB.
   2. Brooks.
   3. King Instrument Co.

2.04 MANUFACTURED UNITS

A. Rotameters:
   1. General:
      a. Variable area type flowmeters with local flow indication.
      b. Material construction:
         1) As indicated in the datasheet.
   2. Performance requirements:
      a. Flow range:
         1) As specified in instrument datasheets or instrument index.
      b. Accuracy:
         1) Glass tube: Within 2.0 percent of range.
         2) Metal tube: Within 5.0 percent of range.
         3) Repeatability: 0.50 percent of range.
   3. Element:
      a. Flow tube:
         1) Glass tube: Borosilicate glass, or as required to be compatible with the process conditions.
      b. Metal tube with magnetic follower:
         1) Type 316 stainless steel.
      c. Turndown: 10 to 1.
      d. Process temperature:
         1) As indicated in the datasheet.
      e. Maximum process pressure:
         1) As indicated in the datasheet.
         2) Range:
            a) As indicated in the datasheet.

3) Polycarbonate operator protection shield.

f. Float:

1) Design to provide the widest possible immunity band change for lowest pressure loss.

2) Metal tube rotameters: Float with encapsulated magnet.

4. Components:

a. Seals: O-rings or packing glands fully compatible with process fluid.

b. Integral needle valve for flow control.

5. Scale:

a. Metal tube: Dial indicator with rotatable magnet coupled to magnet encapsulated in rotameter float.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Coordinate the installation with trades to ensure that the mechanical system has necessary appurtenances, including weld-o-lets, valves, etc., for proper installation of instruments.

3.03 CALIBRATION AND TESTING

A. As specified in Section 17950 - Commissioning for Instrumentation and Controls.

3.04 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:

1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

PRESSURE/VACUUM MEASUREMENT: DIAPHRAGM SEALS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Diaphragm seals.

B. Provide all seals identified in the Contract Documents.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 DEFINITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Sections 01330 - Submittal Procedures and 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Additional requirements:
   1. Product data:
      a. Manufacturer’s installation instructions.
      b. Seal type.
      c. Body materials.
      d. Diaphragm material.
      e. Fill fluid type.
      f. Seal size.
      g. Options.
      h. Process connection.

1.05 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify the compatibility with the installed conditions including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.

c. Accessories: Verify that all required accessories are provided and are compatible with the process conditions and physical installation.

3. C.Notify the Engineer if any installation condition does not meet the manufacturer's recommendations or specifications.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.08 WARRANTY

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.09 MAINTENANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide spare annular seal for every size indicated in the project.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Diaphragm seals:
   1. For chemical applications, liquids containing solids, and liquids with pulsating flow having pressures less than or equal to 15 pounds per square inch gauge: One of the following or equal:
      a. Ashcroft:
         1) Flushing connection: Type 741.
         2) Without flushing connection: Type 740.
      b. Mansfield and Green:
         1) Flushing connection: Type SGT.
         2) Without flushing connection: Type SBT.
      c. Wika, Type L990.40.
      d. Emerson, Rosemount.
   2. For chemical applications, liquids containing solids, and liquids with pulsating flow having pressures greater than or equal to 15 pounds per square inch gauge: One of the following or equal:
      a. Ashcroft:
         1) Flushing connection: Type 201.
         2) Without flushing connection: Type 200.
         3) Saddle mount: Type 205.

b. Mansfield and Green:
    1) Flushing connection: Type SG.
    2) Without flushing connection: Type SB.
    3) Saddle mount: Type SJ.
c. Wika:
    1) Type L990.10.
    2) Saddle mount: L910.ZA.

2.02 MANUFACTURED UNITS

A. Diaphragm seals:
    1. General:
        a. Diaphragm seal and pressure instrument shall be assembled by pressure instrument manufacturer and shipped as an assembly.
    2. Requirements:
        a. Seal type:
            1) Metallic diaphragm: Welded to upper housing.
            2) Elastomer diaphragm: Bonded to upper housing.
        b. Process connection: 1 inch NPT.
        c. Instrument connection: 1/2inch NPT.
            1) Material Construction: Type 316 stainless steel.
        d. Provide 1/4-inch flushing connection in diaphragm lower housing or provide flushing ring.
        e. Flush port plug: Same material of construction as diaphragm lower housing.
        f. Provide fill/bleed connection.
        g. Mounting: As indicated in the Contract Documents.
        h. Provide Type 316 stainless steel armored capillary for all remote installations.
        i. Nuts and bolts: Type 316 stainless steel.
        j. Materials of construction:
            1) Chlorine:
                a) Diaphragm: Tantalum.
                b) Lower housing: Hastelloy C.
                c) Upper housing: Manufacturer’s standard.
                d) Fill fluid: Halocarbon.
            2) Fluorosilicic acid:
                a) Diaphragm: Viton™.
                b) Lower housing: PVC.
                c) Upper housing: Manufacturer’s standard.
                d) Fill fluid: Silicone oil.
            3) Engineer’s approval.

2.03 ACCESSORIES

A. Provide field fill kits.

2.04 SOURCE QUALITY CONTROL

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

PART 3 EXECUTION

3.01 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation System.

B. Coordinate the installation with all trades to ensure that the mechanical system has all necessary appurtenances including weld-o-lets, valves, etc. for proper installation of instruments.

C. Do not use Teflon™ thread seal tape on pressure instruments with silicone oil fill fluid.

3.02 FIELD QUALITY CONTROL

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.03 CLEANING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.04 DEMONSTRATION AND TRAINING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.05 PROTECTION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

END OF SECTION

SECTION 17402

PRESSURE/VACUUM MEASUREMENT: INSTRUMENT VALVES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Valve manifolds and instrument valves.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 SUBMITTALS

A. Furnish submittals as specified in Sections 01330 - Submittal Procedures and 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Additional requirements:
   1. Product data:
      a. Valve type.
      b. Body material.
      c. Size.
      d. Options.
   2. Shop drawings:
      a. Mounting details for all manifold valves.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the valves are compatible with the installed conditions including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that all required accessories are provided and are compatible with the process conditions and physical installation.

C. Provide valves manufactured at facilities certified to the quality standards of ISO 9001.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Protect valve manifolds and protective coatings from damage during handling and installation. Repair coating where damaged.

1.06 PROJECT OR SITE CONDITIONS

A. Project environmental conditions as specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the valve manufacturer's recommendations or specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.09 MAINTENANCE

A. Furnish all parts, materials, fluids, etc. necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver all of these supplies before project substantial completion.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide all valves identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide valves suitable for the installed site conditions including, but not limited to, material compatibility, process, and ambient temperatures.

2.03 MANUFACTURERS

A. Valve manifold:
   1. One of the following or equal:
      a. Anderson Greenwood.
      b. Hex Valve.
      c. Noshok.
      d. Emerson, Rosemount.

B. Block and bleed valve:
   1. One of the following or equal:
      a. Anderson Greenwood.
      b. Hex Valve.

C. Gauge valve:
   1. One of the following or equal:
      a. Anderson Greenwood.
      b. Hex Valve.

D. Level sensor isolation valve:
   1. One of the following or equal:
      a. Indu-Tech, Level Sensor Isolation Valve.
      b. DeZURIK, Level Sensor Isolation Valve.
      c. Tyco, Rovalve Isolation Knife Gate Valve.

2.04 MANUFACTURED UNITS

A. Valve manifolds:
   1. General:
      a. Provide 2-valve, 3-valve, blowdown type 5-valve, or metering type 5-valve manifolds as indicated on the Drawings.
      b. Valve manifolds shall have one piece bonnet with a metal-to-metal seal to the valve body below the bonnet threads.
   2. Requirements:
      a. Bonnet lock pin to prevent accidental loosening.
      b. Gas leak tested metal-to-metal hard seat design for hard seat valves.
      c. Gas leak tested soft seat design with replaceable seat for soft seat valves.
      d. Manifold valves shall have straight through portion for bi-directional flow and easy roddable cleaning.
      e. Manifold valves shall allow for direct or remote instrument mounting.
      f. Shall be able to withstand pressures up to 6,000 psi for soft seat valves and 10,000 psi for hard seat valves at maximum 200 degrees Fahrenheit.
      g. Materials of construction:
         1) Body material: Type 316 stainless steel.
         2) O-ring: Teflon™.
      h. 2-Valve manifolds:
         1) 1 isolation valve and 1 drain/vent and calibration valve.
      i. 3-Valve manifolds:
         1) 2 isolation valves and 1 equalizing valve for differential pressure applications.
         2) Plugged vent connections used for vent/drain or calibration.
      j. Blowdown 5-valve manifold:
         1) 2 isolation valves, 1 equalizing valve, 2 blowdown valves for differential pressure applications.
      k. Metering 5-valve manifold:
         1) 2 isolation valves, 2 equalizing valves, 1 vent/drain and calibration valve for differential pressure applications.

B. Block and bleed valves:
   1. General:
      a. Valve shall provide process isolation and venting/draining capabilities.
      b. Gas leak tested metal-to-metal hard seat design for hard seat valves.
      c. Gas leak tested soft seat design with replaceable seat for soft seat valves.
      d. Valve shall not be used with fluids with high solids content, such as raw wastewater or sludge.
   2. Requirements:
      a. Materials of construction:
         1) Body material: Type 316 stainless steel.
         2) O-ring: Teflon™.

C. Gauge valves:
   1. General:
      a. Valve shall provide process isolation from pressure instrument.
      b. Gas leak tested, metal-to-metal hard seat design for hard seat valves.
      c. Gas leak tested soft seat design with replaceable seat for soft seat valves.
   2. Requirements:
      a. Materials of construction:
         1) Body material: Type 316 stainless steel.
         2) O-ring: Teflon™.

D. Level sensor isolation valves:
   1. General:
      a. Valve shall provide process isolation from level diaphragm.
      b. Gas leak tested, metal-to-metal hard seat design for hard seat valves.
      c. Gas leak tested soft seat design with replaceable seat for soft seat valves.
   2. Requirements:
      a. Materials of construction:
         1) Body material: Type 316 stainless steel.
         2) Flange diameter size: 3 inches.

2.05 ACCESSORIES

A. Provide tube fitting, female NPT, or pipe butt weld connections if necessary.

B. Provide stainless steel concentric or eccentric pipe nipples when necessary.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location and verify the valve will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Coordinate the installation with all trades to ensure that the mechanical system has all necessary appurtenances including weld-o-lets, valves, etc. for proper installation of all valves.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

END OF SECTION

SECTION 17403

PRESSURE/VACUUM MEASUREMENT: SWITCHES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Pressure/vacuum switches.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Product data:
   1. Accessories.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. Project environmental conditions as specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.09 MAINTENANCE

A. Furnish parts, materials, fluids, etc. necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver these supplies before project substantial completion.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments specified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed site conditions, including, but not limited to, material compatibility, site altitude, site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. Mechanical type pressure switch: One of the following or equal:
   1. Ashcroft, B Series Type 400. (This was selected for Westbrook and Solaire.)
   2. United Electric Controls Series 400.
   3. ASCO, S-Series.

2.04 MANUFACTURED UNITS

A. As specified in this Section including Attachment A - ISA Data Sheet - Pressure/Vacuum Measurement: Switches.

B. Mechanical type pressure switches:
   1. General:
      a. Pressure switch shall be diaphragm or diaphragm-sealed piston type.
   2. Performance requirements:
      a. Pressure range:
         1) As shown on the P&IDs.
      b. Accuracy:
         1) Within 1.0 percent of range.
      c. Repeatability:
         1) Within 1.0 percent of range.

3. Element:
    a. Type: Diaphragm, diaphragm-sealed piston, or Bourdon® tube.
    b. Overpressure:
        1) Minimum 130 percent of maximum range pressure without damage to switch or sensing element.
        2) Minimum 400 percent of nominal range without leakage or rupture.
    c. Sensing element shall not require ambient temperature compensation.
    d. Wetted materials: Stainless steel.
    e. Setpoint:
        1) Single.
        2) Switch shall activate at setpoint on increasing pressure for high-pressure alarm applications and on decreasing pressure for low-pressure alarm applications.
        3) Fixed deadband.
    f. Switch elements:
        1) Snap acting.
            a) Single-pole double-throw (SPDT).
        2) Rated at 5 A, 125/250 VAC.
            a) Automatic reset type.
    g. Enclosure: Epoxy coated:
        1) Non-hazardous area:
            a) NEMA Type 4X.
        2) For more information, see Attachment A - ISA Data Sheet - Pressure/Vacuum Measurement: Switches.
    h. Switch mounting:
        1) Process connection: 1/2-inch NPT.
4. Components:
        1) Provide all necessary hardware for pressure switch mounting.

2.05 ACCESSORIES

A. Pulsation dampeners and snubbers:
    1. Provide pulsation dampener or snubber with each pressure switch installed on discharge of positive displacement type pump.
    2. Materials: Stainless steel.
    3. Mount pulsation dampener or snubber integrally to the pressure switch.
    4. Connection: 1/2-inch NPT.

B. Provide diaphragm seals as specified in datasheets or as indicated on the Drawings and as specified in Section 17401 - Pressure/Vacuum Measurement: Diaphragm and Annular Seals:
    1. Diaphragm seal and pressure switch shall be assembled by manufacturer and shipped as an assembly.

C. Furnish block and bleed valves as specified in Section 17402 - Pressure/Vacuum Measurement: Instrument Valves.

D. Furnish gauge valves as specified in Section 17402 - Pressure/Vacuum Measurement: Instrument Valves.

E. Provide stainless steel tags for each instrument. Tags shall be labeled as specified in the Contract Documents.

2.06 SOURCE QUALITY CONTROL

A. Factory calibrate each instrument with a minimum 3-point calibration or according to Manufacturer's standard at a facility that is traceable to the NIST.
   1. Submit calibration datasheets to the Engineer at least 30 days before shipment of the instruments to the project site.

B. FM approval certification or equal when installed in classified areas.

PART 3 EXECUTION

3.01 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Coordinate the installation with trades to ensure that the mechanical system has necessary appurtenances including weld-o-lets, valves, etc., for proper installation of instruments.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

3.03 ADJUSTING

A. Verify factory calibration of instruments in accordance with the manufacturer's instructions:
   1. Return factory calibrated devices to the factory if they do not meet the field verification requirements for calibration.

3.04 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments specified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

SECTION 17404

PRESSURE/VACUUM MEASUREMENT: GAUGES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Pressure/vacuum gauges.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Standards:
   1. American Society of Mechanical Engineers (ASME):
      a. B40.100 - Pressure Gauges and Gauge Attachments.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Product data:
   1. Accessories.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments specified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed site conditions, including, but not limited to, material compatibility, site altitude, site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. One of the following or equal:
   1. Ashcroft:
      a. Maximum pressure less than 10 pounds per square inch: Model 1188.
         1) If a stainless steel dial casing is required:
            a) Model 1009.
      b. Maximum pressure greater than or equal to 10 pounds per square inch: Model1279.
         1) If a stainless steel dial casing is required:
            a) Model 1009. (This was selected for Westbrook and Solaire.)
      c. Removable Gauges:
         1) Model 1082.
   2. Wika.
   3. Ametek U.S. Gauge.

2.04 MANUFACTURED UNITS

A. General:
   1. Pressure gauge assembly shall include pressure sensing element, gauge case, and dial mechanism.

B. Performance requirements:
   1. Pressure range:
      a. As specified in the Contract Documents.

2. Accuracy:
    a. Grade 2A, as defined by ASME B40.100.
    b. Within 1.0 percent of span after friction errors are eliminated by tapping or vibration.
    c. Maximum allowable friction inaccuracy: Within 1.0 percent of span.
3. Element:
    a. Where the maximum pressure is less than 10 pounds per square inch, provide socket and bellows; for all other pressure ranges, employ a Bourdon® tube.
    b. Socket tips for bellows and Bourdon® tube:
        1) Materials: Type 316 stainless steel.
    c. Overpressure: Minimum 130 percent of maximum range pressure without damage to gauge or sensing element.
    d. Wetted materials: Type 316 stainless steel.
4. Dial gauge:
    a. Dial size: 4-1/2 inches.
    b. Dial case material:
        1) Maximum pressure less than 10 pounds per square inch:
            a) Phenolic.
        2) Maximum pressure greater than or equal to 10 pounds per square inch:
            a) Stainless steel.
    c. Provide safety gauge with safety blow out through the back or top of the unit.
    d. Dial face: Gasketed shatterproof glass or polycarbonate.
    e. Provide gauge locks on all pressure gauges directly connected to diaphragm seals.
    f. Provide gauge locks where possible.
    g. Connection and mounting:
        1) Direct mounted and suitable for outdoor installation.
        2) 1/2-inch NPT.
        3) Connection material: Stainless steel.
    h. Pointer: Externally adjustable.

2.05 ACCESSORIES

A. Pulsation dampeners and snubbers:
    1. Provide pulsation dampener or snubber with each pressure gauge installed on discharge of positive displacement type pump.
    2. Provide piston-type snubber if pressure spikes will exceed 130 percent of gauge maximum range.
    3. Materials: Type 316 stainless steel.
    4. Mount pulsation dampener or snubber integrally to the pressure gauge.
    5. Connection: 1/2-inch NPT.
    6. Provide diaphragm seals as specified in the Contract Documents and in Section 17401 - Pressure/Vacuum Measurement: Diaphragm and Annular Seals:
    7. Diaphragm seal and pressure gauge shall be assembled by manufacturer and shipped as an assembly.

B. Provide means for gauge isolation as specified in Section 17402 - Pressure/Vacuum Measurement: Instrument Valves:
   1. Mount valve manifold integrally to the gauge.
   2. Valve manifold and pressure gauge shall be assembled by manufacturer and shipped as an assembly.

C. Provide stainless steel tags for each instrument. Tags shall be labeled as specified in the Contract Documents.

2.06 SOURCE QUALITY CONTROL

A. Factory calibrate each pressure gauge at a facility that is traceable to the NIST.

B. Provide complete documentation covering the traceability of calibration instruments.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Coordinate the installation with trades to ensure that the mechanical system has necessary appurtenances including weld-o-lets, valves, etc., for proper installation of instruments.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

3.04 ADJUSTING

A. Verify factory calibration of instruments in accordance with the manufacturer’s instructions:
   1. Return factory calibrated devices to the factory if they do not meet the field verification requirements for calibration.

3.05 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

SECTION 17405

PRESSURE/VACUUM MEASUREMENT: DIRECT

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Pressure transmitters and indicators.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Calibrated range: Range that the pressure transmitter is configured to measure.
      a. Low end of the calibrated range must be greater than the lower range value (LRV) of the transmitter.
      b. High end of the calibrated range must be less than or equal to the upper range value (URV).
      c. Calibrated range corresponds to the flow signal sent from the transmitter.
   2. Lower range value (LRV): Lowest pressure that the pressure transmitter is capable of measuring.
   3. Upper range value (URV): Highest pressure that the pressure transmitter is capable of measuring.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide complete documentation covering the traceability of calibration instruments.

1.05 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions, including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.

b. Location within the process.
c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

C. Provide instruments manufactured at facilities certified to the quality standards of ISO 9001.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

1.09 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.10 MAINTENANCE

A. Furnish parts, materials, fluids, etc., necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver these supplies before Project Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed Site conditions, including, but not limited to, material compatibility, Site altitude, Site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. One of the following or equal:
1. ABB, 266 Series.
2. Emerson, Rosemount 2051 Series with high performance option.
3. Emerson, Rosemount 3051 Series.

4. Endress & Hauser, Cerabar S Series.
5. Yokogawa, EJA Series.

2.04 MANUFACTURED UNITS

A. Pressure transmitters - direct:
   1. General:
      a. Pressure transmitter assembly shall include a diaphragm type pressure transducer and microprocessor-based transmitter for measurement of gauge, vacuum, or absolute pressure.
   2. Performance requirements:
      a. Maximum ratio of total instrument range to calibrated span: 10 to 1.
      b. Accuracy:
         1) Reference accuracy: Within 0.075 percent of calibrated span, including effects of hysteresis, nonlinearity, and repeatability.
         2) Total performance accuracy: Within 0.30 percent of calibrated span, including reference accuracy effects, static pressure and ambient temperature effects.
         3) Stability: Within 0.15 percent of upper range limit over 5 years.
   3. Element:
      a. Diaphragm type transducer integral to pressure transmitter.
      b. Diaphragm material: Stainless steel or ceramic.
      c. Process material compatibility:
         1) Verify material compatibilities with the instrument manufacturer.
      d. Process connection: As specified in Attachment A - ISA Datasheet - Pressure/Vacuum Measurement: Direct.
   4. Transmitter:
      a. Power supply:
         1) As indicated in the datasheets.
      b. Outputs:
         1) As indicated in the datasheets.
      c. Provided with electronic microprocessor.
      d. Adjustments: Adjustable electronic zero and span, with elevated or suppressed zero as required by application. Adjustment shall be possible without mechanical fulcrum points or handheld configurator.
      e. Local display:
         1) 5-digit LCD.
         2) Scaled in engineering units.
      f. Enclosure:
         1) As indicated in the datasheets.
      g. Over range protection: To maximum process line pressure.
      h. Conduit: 1/2-inch male NPT.
   5. Components:
      a. Transmitter mounting:
         1) As indicated in the datasheets.
         2) Provide necessary hardware for transmitter mounting.

2.05 ACCESSORIES

A. Furnish instrument isolation as indicated in the datasheets and specified in Section 17402 - Pressure/Vacuum Measurement: Instrument Valves:
   1. Mount isolation device integrally to the instrument.
   2. Isolation device and instrument shall be assembled by the manufacturer and shipped as an assembly.

B. Provide remote or integral diaphragm seals as indicated on the Drawings or as indicated in the datasheets.

C. Provide sunshades for outdoor installations.

D. Provide stainless steel tags for each instrument. Tags shall be labeled as specified in the Contract Documents.

2.06 FINISHES (NOT USED)

2.07 SOURCE QUALITY CONTROL

A. Factory calibrate each instrument with a minimum 3-point calibration or according to the manufacturer's standard at a facility that is traceable to the NIST.
   1. Submit calibration datasheets to the Engineer at least 30 days before shipment of the instruments to the Project Site.

B. FM approval certification or equal when installed in classified areas.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Coordinate the installation with trades to ensure that the mechanical system has necessary appurtenances, including weld-o-lets, valves, etc., for proper installation of instruments.

3.03 CALIBRATION AND TESTING

A. As specified in Section 17950 - Commissioning for Instrumentation and Controls.

3.04 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

SECTION 17406

PRESSURE/VACUUM MEASUREMENT: DIFFERENTIAL

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Differential pressure transmitters and indicators.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Calibrated range: Range that the pressure transmitter is configured to measure.
      a. Low end of the calibrated range must be greater than the lower range value (LRV) of the transmitter.
      b. High end of the calibrated range must be less than the upper range value (URV).
      c. Calibrated range corresponds to the pressure signal sent from the transmitter.
      d. When a Low-Flow Cut-Off is considered, the calibration set points need to be 10 percent, 25 percent, 50 percent, 75 percent, and 100 percent of the output flowrate rather than starting form 0 percent.
   2. Lower range value (LRV): Lowest pressure that the pressure transmitter is capable of measuring.
   3. Upper range value (URV): Highest pressure that the pressure transmitter is capable of measuring.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Product data:
   1. Accessories.

C. Provide complete documentation covering the traceability of calibration instruments.

1.05 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions, including:
    1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
    2. Physical conditions:
        a. Installation and mounting requirements.
        b. Location within the process.
        c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.07 PROJECT CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
    1. Notify the Engineer if any installation condition does not meet the instrument manufacturer’s recommendations or specifications.

1.09 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.10 MAINTENANCE

A. Furnish parts, materials, fluids, etc., necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver these supplies before Project Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments specified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed Site conditions, including, but not limited to, material compatibility, Site altitude, Site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. One of the following, no equal:
    1. Emerson, Rosemount 3051S Series.

2. Endress + Hauser, Deltabar S Series.
3. SMAR, LD300 Series.

2.04 MANUFACTURED UNITS

A. As specified in this Section, including Attachment A - ISA Datasheet - Pressure/Vacuum Measurement: Differential.

B. Pressure transmitters - differential:
   1. General:
      a. Differential pressure transmitter assembly shall include a diaphragm-type pressure transducer and microprocessor-based transmitter for measurement of differential pressure.
      b. Differential pressure transmitters shall be used for differential pressure, flow, or liquid level measurement as indicated on the Drawings.
   2. Performance requirements:
      a. Maximum ratio of total instrument range to calibrated span: 10 to 1.
      b. Accuracy:
         1) Reference accuracy: Within 0.075 percent of calibrated span, including effects of hysteresis, nonlinearity, and repeatability.
         2) Stability: Within 0.30 percent of upper range limit over 5 years.
   3. Element:
      a. Diaphragm-type transducer integral to differential pressure transmitter.
      b. Diaphragm/wetted material: As indicated in Attachment A - ISA Datasheet - Pressure/Vacuum Measurement: Differential.
      c. Wetted materials: As indicated in the datasheets.
      d. Process material compatibility:
         1) Verify material compatibilities with the instrument manufacturer.
      e. Diaphragm fill fluid: **[Silicon oil][Inert halocarbon]**.
      f. Process connection: As indicated in the datasheets.
   4. Transmitter:
      a. Power supply:
         1) As indicated in the datasheets.
      b. Outputs:
         1) As indicated in the datasheets.
      c. Provided with electronic microprocessor.
      d. Adjustments: Adjustable electronic zero and span, with elevated or suppressed zero as required by application. Adjustment shall be possible without mechanical fulcrum points or handheld configurator.
      e. Square root extraction for flow calculation.
      f. Local display:
         1) 5-digit LCD.
         2) Scaled in engineering units.
      g. Enclosure:
         1) As indicated in the datasheets.
      h. Overrange protection: To maximum process line pressure.
      i. Conduit connection: 1/2-inch male NPT.
   5. Components:
      a. Transmitter mounting:
         1) As indicated in the datasheets.
         2) Provide necessary hardware for transmitter mounting.

2.05 ACCESSORIES

A. Provide seals as indicated on the Drawings and as indicated in the datasheets.
   1. Diaphragm seals and instrument shall be assembled by the manufacturer and shipped as an assembly.

B. Furnish device isolation as indicated in the datasheets and specified in Section 17402 - Pressure/Vacuum Measurement: Instrument Valves:
   1. Mount isolation device integrally to the instrument.
   2. Isolation device and instrument shall be assembled by the manufacturer and shipped as an assembly.

C. Provide flanged diaphragm for tank or vessel level measurement:
   1. Flanged diaphragm and transmitter shall be assembled by the manufacturer and shipped as an assembly.

D. Provide sunshades for outdoor installations.

E. Provide stainless steel tags for each instrument. Tags shall be labeled as specified in the Contract Documents.

F. Sensing (impulse) lines:
   1. Provide sensing lines for each instrument.
   2. Seamless stainless steel.
   3. Pressure rated for the actual field service conditions.
   4. Diameter based on the overall length.
      a. Up to 10 feet: 3/8-inch.
      b. From 10 feet to 20 feet: 1/2-inch.
      c. From 20 feet to 40 feet: 1-inch.
      d. Increase the diameter 1 increment for medium to heavy viscosity fluids, very dirty fluids and sludges.

2.06 FINISHES (NOT USED)

2.07 SOURCE QUALITY CONTROL

A. Each differential pressure transmitter shall be factory calibrated with 5-point calibration at a facility that is traceable to the NIST.

B. Provide complete documentation covering the traceability of calibration instruments.

C. FM approval certification or equal when installed in classified areas.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Coordinate the installation with trades to ensure that the mechanical system has necessary appurtenances, including weld-o-lets, valves, etc., for proper installation of instruments.

C. Install sensing lines in accordance with the Contract Documents and the line manufacturer.

3.03 CALIBRATION AND TESTING

A. As specified in Section 17950 - Commissioning for Instrumentation and Controls.

3.04 ADJUSTING

A. Verify factory calibration of instruments in accordance with the manufacturer's instructions:
   1. Return factory calibrated devices to the factory if they do not meet the field verification requirements for calibration.

3.05 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

SECTION 17407

PRESSURE MEASUREMENT: SUBMERSIBLE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Submersible pressure transmitters.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures, and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide complete documentation covering the traceability of calibration instruments.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions, including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

C. Provide instruments manufactured at facilities certified to the quality standards of ISO 9001.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. Project environmental conditions as specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.09 MAINTENANCE

A. Furnish parts, materials, fluids, etc., necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver these supplies before Project Substantial Completion.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed Site conditions, including, but not limited to, material compatibility, Site altitude, Site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. Submersible level measurement with 2-wire integral transmitter:
   1. One of the following or equal:
      a. Endress+Hauser, Waterpilot FMX21. (This was selected for Westbrook and Solaire.)
      b. Druck, PTX-1830.
      c. Siemens, SITRANS LH100.
      d. Measurement Specialties, KPSI 700 Series.

2.04 MANUFACTURED UNITS

A. As specified in this Section, including Attachment A - ISA Datasheet - Pressure Measurement: Submersible.

B. Submersible level measurement with 2-wire integral transmitter:
   1. General:
      a. Pressure is measured through a diaphragm-type measuring cell and converted to linear pressure measurement.
      b. Each submersible pressure transmitter system shall include:
         1) Signal cable, including pressure compensation tube.
         2) Transducer probe with integral transmitter.
         3) Transmitter cable termination box.

2. Performance requirements:
    a. Accuracy:
        1) 0.3 percent of range.
    b. Repeatability:
        1) 0.25 percent of full scale.
    c. Rangeability:
        1) 3:1.
    d. Range:
        1) As indicated on the contract documents.
3. Element:
    a. Sensor housing shall be Type 316L stainless steel or titanium with ceramic, Teflon™-coated, or titanium diaphragm.
    b. Protective cap shall be manufacturer's recommended material, chemically resistant to process fluid.
        1) Slip resistant extension cable with pressure compensation tube with Teflon™ filter.
    c. Enclosure for probe and transmitter assembly shall be NEMA Type 6P.
4. Transmitter:
    a. Power supply:
        1) 24 VDC: 2wire loop powered.
        2) Power consumption: 18 VA maximum.
    b. Outputs:
        1) Isolated 4 to 20 milliamperes DC.
    c. Without display.
    d. Ambient operating temperature limits of -10 to 70 degrees Celsius (-14 to 158 degrees Fahrenheit).
    e. Transmitter shall be integral to probe housing.
5. Transmitter cable termination box:
    a. NEMA Type 4X.
    b. Equipped with filter or desiccant chamber to eliminate moisture from the pressure compensation tube.
    c. Termination for signal wires and pressure compensation tube.

2.05 ACCESSORIES

A. Type 316L stainless steel mounting clamp with Type 304 stainless steel mounting screws.

B. Provide cable clamp and strain relief.

C. Provide remote display with backlight or loop indicator with backlight as indicated on the Drawings and as specified in Section 17710 - Control Systems: Panels, Enclosures, and Panel Components.

D. Provide sunshade for outdoor installations.

2.06 SOURCE QUALITY CONTROL

A. Factory calibrate each instrument with a minimum 3-point calibration or according to the manufacturer's standard at a facility that is traceable to the NIST.
   1. Submit calibration datasheet to the Engineer at least 30 days before shipment of the instruments to the Project Site.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Coordinate the installation with trades to ensure that the mechanical system has necessary appurtenances, including weld-o-lets, valves, etc., for proper installation of instruments.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

3.04 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

SECTION 17505

ANALYZERS: RESIDUAL CHLORINE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Residual chlorine analyzers.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide complete documentation covering the traceability of calibration instruments.

C. Furnish commissioning Submittals listed below, as specified in this Section, and Section 01756 - Commissioning:
   1. Manufacturer's representative qualifications.
   2. Owner training.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that required accessories are provided and are compatible with the process conditions and physical installation.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. Project environmental conditions as specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.09 MAINTENANCE

A. Furnish parts, materials, fluids, etc., necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver these supplies before project substantial completion.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide instruments identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed site conditions including, but not limited to, material compatibility, site altitude, site seismic conditions, humidity, and process and ambient temperatures.

B. Sensor probe and transmitter must be from the same manufacturer.

2.03 MANUFACTURERS

A. Colorimetric residual analyzers:
   1. The following or equal:
      a. HACH, CL17sc.
         1) Transmitter Model sc4500.

2.04 MANUFACTURED UNITS

A. As specified in this Section, including Attachment A - ISA Datasheet - Analyzers: Residual Chlorine.

B. Colorimetric residual analyzers:
   1. General:
      a. Residual chlorine analyzer utilizing the DPD colorimetric method to provide accurate measurements independent of swings in pH or alkalinity levels in the sample source.

b. Convert from free to total chlorine by changing reagents:
    1) Measure a sample blank before each sample measurement to provide zero reference compensation for sample color and turbidity, changes in light intensity due to voltage fluctuations, or light intensity.

2. Performance requirements:
    a. Complete analysis every 2.5 minutes for free or total chlorine residual.
    b. Designed for 30 days of unattended operation, with less than 500 milliliters of reagent used per month.
    c. Accuracy:
        1) Within 5 percent of reading or within 0.035 milligrams per liters.
    d. Range:
        1) 0 to 5 milligrams per liters free or total residual.
    e. Repeatability:
        1) Within 5 percent or 0.05 milligrams per liters.

3. Transmitter:
    a. Microprocessor-based signal converter/transmitter:
        1) Self-diagnostic functions available via the alphanumeric, menu-driven keyboard.
    b. Power supply:
        1) 120 VAC.
    c. Outputs:
        1) Isolated 4 to 20 milliamperes DC.
        2) As indicated on the instrument data sheets.
        3) Relay outputs:
            a) SPST relay contacts: 2.
            b) Selectable to activate on the following conditions:
                (1) High or low sample concentration.
                (2) Analyzer system warning.
                (3) Analyzer system shutdown.
    d. Enclosure:
        1) Rating: NEMA 4X.
        2) Clear polycarbonate windows.
        3) Wall mounted.
    e. Display:
        1) LCD, 3-digit readout, and 6-character alphanumeric scrolling text line.
    f. Light source:
        1) Class I LED (light emitting diode), with peak wavelength of 520 nanometer; 50,000 hours estimated minimum life.

2.05 ACCESSORIES

A. Provide sun shades for outdoor installations.

B. Provide surge suppression for outdoor installations.

2.06 SOURCE QUALITY CONTROL

A. Factory calibrate each instrument with a minimum 3-point calibration or according to Manufacturer's standard at a facility that is traceable to the NIST.
   1. Submit calibration datasheets to the Engineer at least 30 days before shipment of the instruments to the project site.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

3.04 SCHEDULES

A. The provided information does not necessarily include all required instruments. Provide all instruments identified in the Contract Documents:
   1. Instruments may be indicated on the Drawings, specified in the Specifications, or both.

1.03 SUBMITTALS

A. Furnish submittals as specified in Section 01330 - Submittal Procedures and 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Furnish commissioning submittals listed below and specified in this Section as specified in Section 01756 - Commissioning:
   1. Manufacturer's representative qualifications.
   2. Owner training.

1.04 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Examine the complete set of Contract Documents and verify that the instruments are compatible with the installed conditions including:
   1. Process conditions: Fluids, pressures, temperatures, flows, materials, etc.
   2. Physical conditions:
      a. Installation and mounting requirements.
      b. Location within the process.
      c. Accessories: Verify that all required accessories are provided and are compatible with the process conditions and physical installation.

C. Provide instruments manufactured at facilities certified to the quality standards of ISO 9001.

1.05 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 PROJECT OR SITE CONDITIONS

A. Project environmental conditions as specified in Section 01850 - Design Criteria.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Notify the Engineer if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.09 MAINTENANCE

A. Furnish all parts, materials, fluids, etc., necessary for operation, maintenance, and calibration purposes throughout the warranty period. Deliver all of these supplies before project substantial completion.

B. Furnish the following spare parts:
   1. Spare pump.
   2. Spare sensor.
   3. 3 Pump tubes.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide all instruments as identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide instruments suitable for the installed site conditions including, but not limited to, material compatibility, site altitude, site seismic conditions, humidity, and process and ambient temperatures.

2.03 MANUFACTURERS

A. One of the following, no equal:
   1. Prominent, same as what is installed at Westbrook and Solaire facilities.

2.04 MANUFACTURED UNITS

A. Fluoride analyzer:
   1. Model D1Cb: D1CBW00601000VF1211G00EN.
   2. Package to include the following:
      a. Sensor module: DLG IV.
      b. Backboard 24-inch W x 24-inch H.
      c. Sample valve.
      d. PT100 temperature probe (P/N 1002856).

e. Reference electrode (P/N 1083790).
f. Fluoride sensor 0-10 PPM (P/N 1028279).
g. Transducer (P/N 1028280).

2.05 SOURCE QUALITY CONTROL

A. Factory calibrate each instrument with a minimum 3-point calibration or according to Manufacturer's standard at a facility that is traceable to the NIST:
   1. Submit calibration data sheets to the Engineer at least 30 days before shipment of the instruments to the project site.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the installation location for the instrument and verify that the instrument will work properly when installed:
   1. Notify the Engineer promptly if any installation condition does not meet the instrument manufacturer's recommendations or specifications.

3.02 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Design, fabrication and assembly of instrumentation enclosures, control panels and components provided under this Contract, including, but not limited to:
      a. Custom built instrumentation and control panels, including enclosures for hand stations controllers, low voltage power distribution and marshalling panels.
      b. Control panels furnished as part of equipment systems specified in other Divisions, such as vendor control panels (VCPs) and chemical feed panels.
      c. Control components.
      d. Control panel installation.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Standards:
   1. Institute of Electrical and Electronics Engineers (IEEE):
      a. C62.41.1 - Guide on the Surge Environment in Low-Voltage (1,000 V and less) AC Power Circuits.
      b. 802.3af - Standard for Information Technology Telecommunications and Information Exchange Between Systems - Local and Metropolitan Area Networks - Specific Requirements Part 3: Carrier Sense Multiple Access with Collision Detection (CSMA/CD) Access Method and Physical Layer Specifications.
      c. 802.3at - Standard for Information Technology -- Local and Metropolitan area networks -- Specific requirements -- Part 3: CSMA/CD Access Method and Physical Layer Specifications Amendment 3: Data Terminal Equipment (DTE) Power via the Media Dependent Interface (MDI) Enhancements.
   2. International Electrotechnical Commission (IEC):
      a. 61643-11 - Low-Voltage Surge Protective Devices - Part 11: Surge Protective Devices Connected to Low-Voltage Power Systems - Requirements and test methods.
      b. 61643-21 - Low-Voltage Surge Protective Devices - Part 21: Surge Protective Devices Connected to Telecommunications and Signaling Networks - Performance Requirements and Testing Methods.
   3. National Fire Protection Association (NFPA):
      a. 70 - National Electrical Code (NEC).
   4. Underwriters Laboratories Inc. (UL):
      a. 248-14 - Low-Voltage Fuses - Part 14: Supplemental Fuses.
      b. 497B - Standard for Protectors for Data Communications and Fire-Alarm Circuits.
      c. 508 - Standard for Industrial Control Equipment.
      d. 508A - Standard for Industrial Control Panel.
      e. 698A - Standard for Industrial Control Panels Relating to Hazardous (Classified) Locations.

f. 913 - Standard for Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, III, Division 1, Hazardous (Classified) Locations.
g. 1077 - Standard for Supplementary Protectors for Use in Electrical Equipment.
h. 1283 - Standard for Electromagnetic Interference Filters.
i. 1310 - Standard for Class 2 Power Units.
j. 1449 - Standard for Surge Protective Devices.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. The term “panel” in this Section is interchangeable with the term “enclosure.”

1.04 DELEGATED DESIGN

A. As specified in Section 01357 - Delegated Design Procedures.

B. Anchoring and bracing.

1.05 SUBMITTALS

A. Provide Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide a control panel hardware Submittal for each control panel/enclosure being provided on this Project, including, but not limited to:
   1. Product data:
      a. Enclosure construction details and NEMA type.
      b. Manufacturer’s literature and specification datasheets for each type of equipment to be installed within or on the panel or enclosure.
   2. Shop Drawings:
      a. Scaled, detailed exterior panel (front and side views) and interior panel layout showing equipment arrangement and dimensional information:
         1) Provide draft for review and approval by the Engineer. Engineer has the authority to substantially alter initial panel layouts.
      b. Complete nameplate engraving schedule.
      c. Structural details of fabricated panels.
   3. Calculations:
      a. Cooling calculations, including, but not limited to:
         1) Highest expected ambient temperature for the enclosure’s location.
         2) Internal heat load.
         3) Exposure to direct sunlight.
         4) Dimensions of the enclosure in inches.
         5) Maximum allowable temperature inside the enclosure, based on the lowest operating temperature limit of the installed components.

C. Delegated Design Submittals:
    1. Anchoring and bracing: Provide project-specific calculations based on support conditions and requirements to resist loads specified in Section 01850 - Design Criteria:
        a. To structures for equipment installed in structures designated as seismic design category C, D, E, or F.
        b. For equipment installed outdoors.
        c. For wall mounted equipment weighing 125 pounds or more.

1.06 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Assemble panels, enclosures, and rack systems along with internal and external devices, wiring, equipment, and materials in a facility that is recognized by UL to assemble and certify UL-labeled control panels:
    1. Provide components and equipment with UL 508 listing.
    2. Control panels shall be UL 508A labeled, unless the equipment in the panel and the design in the Contract Documents cannot be reasonably modified to meet the requirements for UL 508A labeling.
    3. Provide fuses for equipment that is not UL or UR listed.
    4. Install intrinsically safe circuits and equipment in accordance with UL 698A.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide control panels identified in the Contract Documents.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Panel dimensions:
    1. It is the responsibility of the Contractor or manufacturer to design and size panels:
        a. Size panels to provide space for equipment, wiring, terminations, and other items in the panel, including 20 percent of the total back panel area shall remain empty.
        b. Maximum panel depth: 16 inches, unless approved by the end user.

B. Provide equipment and components that are fully rated for the Site elevation and operating environment where the equipment will be installed as specified in Section 01850 - Design Criteria and as indicated on the Drawings.

C. Non-conditioned spaces and outdoor installations:
   1. Provide additional temperature conditioning equipment to maintain the equipment temperature within a band of 10 degrees Fahrenheit above the minimum operating temperature and 10 degrees Fahrenheit below maximum operating temperature.

D. As listed below in the individual component paragraphs.
   1. Provide conditioning equipment incorporated into the equipment to maintain the enclosures within the equipment manufacturer's specified operating ranges.

2.03 MATERIALS

A. Construct and finish enclosures using materials capable of withstanding the mechanical, electrical, and thermal stresses, as well as the effects of humidity and corrosion that are likely to be encountered in normal service:
   1. Enclosures shall have the following properties:
      a. NEMA Type 1: Steel.
      b. NEMA Type 4: Steel with gasketed door, raintight.
      c. NEMA Type 4X: Type 316 stainless steel.
      d. NEMA Type 12: Steel with gasketed door, dusttight.
      e. NEMA Type 7: Cast aluminum.

B. Bolting material:
   1. Commercial quality 1/2-inch diameter, stainless steel hex-head Grade 5 bolts, nuts, and washers, with unified coarse (UNC) threads.
   2. Carriage bolts for attaching end plates.
   3. Other bolted joints shall have S.A.E. standard lock washers.

2.04 MANUFACTURED UNITS

A. Panels/enclosures:
   1. Manufacturers: One of the following or equal:
      a. nVent/Hoffman.
      b. Rittal.
      c. Saginaw Control & Engineering. (This was selected for use at Westbrook and Solaire).
   2. Panel assembly:
      a. General guidelines for panel fabrication include:
         1) Continuous welds ground smooth.
         2) Exposed surfaces free of burrs and sharp edges.
         3) Base formed of heavy channel iron, either galvanized or powder coated, minimum 1/2-inch holes at 12-inch spacing to accommodate anchoring of freestanding enclosures to floor.

b. Construct enclosure and mounting panel using stretcher-level quality sheet metal having minimum thickness not less than the following sizes (U.S. Standard Gauge):

Enclosure Height (inches)	Minimum Enclosure Steel Thickness (gauge)	Minimum Back Mounting Panel Thickness (gauge)
Wall-mounted up to 48	14	14
Up to 57	12	12
57 to 69	12	10
69 to 82	12, except 10 on back	10
82 or more	10	10

1) Use heavier sheet metal to meet seismic requirements at the Project Site or when required due to equipment requirements.

c. For Rittal or engineer-approved equal free-standing modular enclosure, construct enclosure and mounting panel using stretcher-level quality sheet metal having minimum thickness not less than the following sizes (U.S. Standard Gauge):

Enclosure Height (inches)	Minimum Enclosure Steel Thickness (gauge)	Minimum Back Mounting Panel Thickness (gauge)
Wall-mounted up to 48	16	14
Up to 57	14	13
57 or more	16	11

d. Construct supporting frame structure with angled, channeled, or folded rigid section of sheet metal, rigidly attached to and having essentially the same outer dimensions as the enclosure surface and having sufficient torsional rigidity to resist the bending moments applied via the enclosure surface when it is deflected.

e. Provide stiffeners for back mounting or C folded back panels in enclosures larger than 4 feet. In addition, secure the panels in place by collar studs welded to the enclosure.

f. Door construction:
   1) Turned-back edges suitably braced and supported to maintain alignment and rigidity without sagging.
   2) Sufficient width to permit door opening without interference with rear projection of flush-mounted instruments.
   3) Heavy-gauge stainless steel hinges.
   4) For NEMA Type 12, Type 4, and Type 4X, provide oil-resistant neoprene sealing gasket and adhesive to seal cover to enclosure.
   5) Gasket installed to seal against roll lip on the enclosure opening.

g. Latches:
   1) For panels, provide each door with an oil tight 3-point latching mechanism and locking handle with rollers on the ends of the latch rods. Latch rods shall be connected to a common door handle, hold doors securely, and form a compressed seal between door and gasket, at the top, side, and bottom.
      a) Provide padlock for each enclosure with padlock provisions.

b) Provide 2 keys per panel.
c) All locks keyed alike.

2) For Rittal or engineer-approved equal free-standing modular enclosure, provide each door with a 4-point latching mechanism, if available, or a 2-point latching mechanism if a 4-point is not available.
3) For cabinets not available with 3-point latching hardware, provide multiple clips and padlock hasps.

h. Panel cut-outs:
1) Cut, punch, or drill cutouts for instruments, devices, and windows. Smoothly finish with rounded edges.
2) Allow a minimum of 3-inch envelope around displays, controllers, and monitors.
3) Reinforce around cut-outs with steel angles or flat bars for the following:
a) Large panel cutouts; for example, openings for local operator interfaces.
b) Pilot device groupings, where the removed metal exceeds 50 percent of the available metal.

i. NEMA Type 4X powder-coated stainless steel enclosures are not an acceptable substitute for stainless steel unless indicated on the Drawings.

3. Indoor enclosures shall be NEMA 12.
4. Outdoor panels. Supplementary requirements for panels located outdoors are as follows:
a. Shall be NEMA 4X.
b. Enclosures located outdoors shall be explicitly designed and rated for outdoor service by the manufacturer.
c. Door hardware: Stainless steel.
d. Provide factory installed rain canopy and sun shield for enclosures with operator interface panels.
e. Bases: Heavy channel, gasketed stainless steel bases, flanges up, for anchoring to pad.

B. Arrangement of components:
1. Arrange panel internal components for external conduit and piping to enter into panel either from above or below.
2. Arrange panel instruments and control devices in a logical configuration, associating pushbutton and selector switches with related readout devices.
3. Mount internal control components on an internal back panel. Devices shall not be mounted on the side panel.
4. Control panel mounted operator interface devices shall be mounted between 3 feet and 5 feet above finished floor.
5. Components shall be install according to their manufacturer’s instructions and recommendations.
6. Heat generating components shall be install towards the top of the enclosure.
7. The PLC shall be mounted between 42 inches and 60 inches above the finished floor. The finished floor is considered the floor that a person would stand on comfortably to access the PLC (i.e., housekeeping pad).
8. Panels not containing a PLC shall have a maximum depth of 18 inches.
9. Panels shall be designed such that there is a sufficient clearance to allow air flow for cooling, heating, and condensate prevention, within the maximum

depth requirement. Components requiring ventilation shall follow the manufacturer's installation instructions to ensure proper air flow.

10. Panels shall be sized such that all terminal strips and components such as relays and isolators are mounted on the enclosure back panel. Mounting of wiring terminals strips and panel components on the panel side walls is not allowed.

C. Overcurrent protection:
   1. Main overcurrent device:
      a. Control panels supplied with 120 VAC:
         1) Provide an internal breaker with the line side terminals covered by a barrier.
         2) Provide a nameplate prominently positioned on the control panel identifying the location of the power source and a warning statement requiring the source to be disconnected before opening the door to the enclosure.
         3) Provide a nameplate prominently positioned on the control panel stating "CAUTION Risk of Electric Shock - UPS equipment outputs remain energized with main disconnect in off position" for any panel containing a UPS.
   2. Provide circuit breakers as specified in Section 16412 - Low Voltage Molded Case Circuit Breakers.
   3. Selection and ratings of protective devices:
      a. Interrupting ratings: Not less than the system maximum available fault current at the point of application.
      b. Voltage rating: Not less than the voltage of the application.
      c. Select current rating and trip characteristics to be suitable for:
         1) Maximum normal operating current.
         2) Inrush characteristics.
         3) Coordination of the protective devices to each other and to the source breaker feeding the panel.
      d. Circuit breakers, fuses, and motor overcurrent protection devices used for branch circuit protection must be UL 508A compliant.
         1) Circuit breakers listed under UL 1077 Standard for Supplementary Protectors that do not comply with UL 508A requirements are not acceptable.
         2) Miscellaneous, miniature, and micro fuses listed under UL 248 Part 14 that do not comply with UL 508A requirements are not acceptable.
         3) Manual motor controllers provided with an instantaneous-trip overcurrent mechanism listed under UL 508 that do not comply with UL 508A requirements are not acceptable.
   4. Provide a separate protective device for each powered electrical device:
      a. An individual circuit breaker for each 120-VAC instrument installed within its respective control panel and clearly identified for function.
      b. An individual fuse for each PLC discrete output. Provide with individual blown fuse indication external of the I/O card:
         1) Size external fuse to open before any I/O-card-mounted fuses.

c. Individual discrete inputs shall use a 1/2-amp fuse.
    1) The Carollo standard has been overruled by the City standard which is.
        a) Discrete and Analog inputs shall use a knife disconnect with each individual input.
d. Individual discrete output:
        a) Size external fuse to open before any I/O-card-mounted fuses.
    2) Analog loop powered from the control panel:
        a) 0.25-amp fuse.
        b) The Carollo standard has been overruled by the City standard which is.
            (1) No fuse is required for individual analog loops.
e. Install protective devices on the back mounting panel and identify by a service nameplate in accordance with the wiring diagrams.

5. Fuses for analog and discrete control loops:
    a. Provide durable, readily visible label for each fuse, clearly indicating the correct type, size, and ratings of replacement fuse:
        1) Label shall not cover or interfere with equipment manufacturer's instructions.
    b. Provide fuses rated for the voltage and available short-circuit current at which they are applied.
    c. Manufacturers: One of the following or equal:
        1) Bussmann.
        2) Ferraz Shawmut.
        3) Littelfuse.
6. Fuse holders:
    a. Modular type:
        1) DIN rail mounting on 35-millimeter rail.
        2) Touch-safe design: Connection terminals to be protected against accidental touch.
        3) Incorporates blown-fuse indicator with an ampere draw less than 2.3 mA.
        4) Plug-in style fuse terminals and fuse plugs are not acceptable.
    b. Provide nameplate identifying each fuse:
        1) As specified in Section 16075 - Identification for Electrical Systems.
    c. Manufacturers: One of the following or equal:
        1) Allen-Bradley, 1492-FB Series B. (This was selected for Westbrook and Solaire.)
        2) Phoenix Contact, UT4-HESI Series.
7. Control circuit breakers:
    a. DIN rail mounting on 35-millimeter rail.
    b. Manual OPEN-CLOSE toggle switch.
    c. Rated for 250 VAC.
    d. Interrupting rating: 10 kA or available fault current at the line terminal, whichever is higher.
    e. Current ratings: As required for the application.
    f. Provide nameplate identifying each circuit breaker:
        1) As specified in Section 16075 - Identification for Electrical Systems.
    g. Manufacturers: One of the following or equal:
        1) ABB.
        2) Allen-Bradley. (1489-M was selected for Westbrook and Solaire.)

3) Phoenix Contact, TMC Series.
4) Square D.

8. Electronic circuit protectors:
   a. Used where a NEC Class 2 power circuit is required.
   b. Confirms to NEC Class 2 according to UL 1310.
   c. DIN rail mounting on 35-millimeter rail.
   d. Power source:
      1) Operating voltage: 24 VDC.
      2) Output current ratings: As required for the application.
      3) Maximum output current: 4 A.
      4) Maximum nameplate rating: 100 VA.
   e. LED for status indication.
   f. Remote status contact.
   g. When using multi-channel electronic circuit protectors, distribute devices such that a failure is limited to a single network or segment.
   h. Provide nameplate identifying each circuit electronic circuit protector module:
      1) As specified in Section 16075 - Identification for Electrical Systems.
   i. Manufacturers: One of the following or equal:
      1) Single channel:
         a) Allen-Bradley, 1694 series.
         b) Phoenix Contact, PTCB E1 series.
      2) Multi-channel:
         a) Rockwell Automation 1692-TD014.
         b) Puls PISA11 series. (This was selected for Westbrook and Solaire.)

D. Conductors and cables:
   1. Power and control wiring:
      a. Materials: Stranded, soft annealed copper.
      b. Insulation: 600 VAC type MTW.
      c. Minimum sizes:
         1) Primary power distribution: 12 AWG, no smaller.
         2) Secondary power distribution: 14 AWG.
         3) Indicating light circuits shall be 18 AWG.
         4) Control: 16 AWG.
      d. Control Panel and Instrumentation Wire Color:
         1) (+) 24 VDC: Red.
         2) (-) 24 VDC: Gray.
         3) Analog Signal: Positive (+) = Black, Negative (-) = Clear.
         4) Discrete Events and Low Voltage Control: Positive (+) = Red, Negative (-) = Gray.
         5) Ground: Green.
         6) 120 VAC Power (L1): Black.
         7) 120 VAC Neutral (L2): White.
         8) 120 VAC Control: Violet.
         9) 120 VAC Ground: Green.
   2. Signal cables:
      a. Materials: Stranded, soft annealed copper.
      b. Insulation: 600 VAC, PVC outer jacket.
      c. Minimum size: 18 AWG paired triad.

d. Overall aluminum shield (tape).
e. Twisted pair.
f. Copper drain wire.
g. Color:
    1) 2-conductor:
        a) Positive (+): Black.
        b) Negative (-): Clear.
    2) 3-conductor:
        a) Positive (+): Black.
        b) Negative (-): Clear.
        c) Signal: White.
h. Insulate the foil shielding and exposed drain wire for each signal cable with heat-shrink tubing.

E. Conductor identification:
1. Identify each conductor and cable with unique wire numbers as specified in Section 16075 - Identification for Electrical Systems.
2. Readily identified without twisting the conductor.

F. General wiring requirements:
1. Wiring methods: Wiring methods and materials for panels shall be in accordance with the NEC requirements for General Purpose (no open wiring) unless otherwise specified.
2. Install components in accordance with the manufacturer's instructions included in the listing and labeling.
3. Provide a nameplate on the cover of the control panel identifying sources of power supply and foreign voltages within the control panel.
4. Provide transformers, protective devices, and power supplies required to convert the supply voltage to the needed utilization voltage.
5. Provide power surge protection for control panels.
6. Provide signal surge protection within control panels for each analog I/O, discrete I/O, and data line (Copper Ethernet, Coax, Fieldbus signals) that originates from outdoor devices.
7. Provide non-metallic ducts for routing and organization of conductors and cables:
    a. Provide wiring separation plan.
    b. Size ducts for ultimate build-out of the panel, or for 50-percent spare, whichever is greater. Duct shall not exceed 50 percent capacity.
    c. Provide separate ducts for signal and low voltage wiring from power and 120 VAC control wiring:
        1) 120 VAC: Grey colored ducts.
        2) 24 VDC: White colored ducts.
8. Cables shall be fastened with cable-mounting clamps or with cable ties supported by any of the following methods:
    a. Screw-on cable tie mounts.
    b. Hammer-on cable-tie mounting clips.
    c. Fingers of the nonmetallic duct.
9. Wire ties:
    a. No wire ties inside wire duct. Outside duct is allowed at intervals not exceeding 6 inches unless longer unsupported runs are required for

access or maintenance. Wiring to doors shall be installed such that bending is axial.
    b. Use a cable tie installation tool, with tension control/cutoff.
        1) Verify cut ends are cut flush filed smooth after installed, not sharp.
10. Flexible stranded copper wiring shall be used throughout.
11. Where shielding is required, shields shall be continuous foil or metalized plastic providing 100 percent coverage. A drain wire in continuous contact with the shield shall be included. Drain wires shall only be terminated at the PLC panel to prevent ground loops.
12. Provide supports at the ends of cables to prevent mechanical stresses at the termination of conductors.
13. Support panel conductors where necessary to keep them in place.
14. Wiring to rear terminals on panel-mount instruments shall be run in nonmetallic duct secured to horizontal brackets run adjacent to the instruments.
15. Conductors and cables shall be run from terminal to terminal without splice or joints. Exceptions:
    a. Factory-applied connectors molded onto cables shall be permitted. Such connectors shall not be considered as splices or joints.
16. Control panel shall be the source of power for 120 VAC devices interconnected with the control panel, including, but not limited to:
    a. Solenoid valves.
    b. Instruments both mounted in the control panel and remotely connected to the control panel.
17. Field wiring shall be run into a pull box mounted adjacent to a PLC panel. There shall be no conduit penetrations directly into the top or bottom of the PLC enclosure field wiring for other types of panels should be routed to minimize the possibility of moisture accumulation inside panels.

G. Provide power circuits for Contractor- and vendor-furnished PLC cabinets in accordance with the PLC and instrument power wiring diagrams indicated on the Drawings or as specified.

H. Thermal management:
    1. Provide heating, cooling, and dehumidifying devices in order to maintain instrumentation and control devices to within a range as specified in Section 17050 - Common Work Results for Process Control and Instrumentation.
    2. Enclosure temperature sensor:
        a. Provide wall-mounted RTD transmitter to measure internal cabinet temperature in enclosures containing electrical components such as PLCs, RTUs, RIO, and VFDs.
        b. Sensor and electronic enclosure.
        c. Accuracy: Within 2 degrees Fahrenheit.
        d. Platinum RTD.
        e. 4-20mA DC output:
            1) Manufacturers: One of the following or equal:
                a) Veris, TEC00. (This was selected for Westbrook and Solaire.)
                b) Omega, EWS Series.
                c) TCS Basys Controls, TS Series.
    3. Status relays and discrete inputs for switches, and power supplies):
        a. Provide as indicated on the Drawings or as specified.

4. Air conditioning units and strip heaters shall be provided on outdoor panels or panels which are not in I temperature controlled environment. Panels located within a temperature controlled environment may use internal fans to provide panel ventilation. Filters are required on intake and exhaust openings.

I. Pilot devices:
   1. General:
      a. Provide operator pushbuttons, switches, and pilot lights, from a single manufacturer.
      b. Size:
         1) 30.5 millimeters.
      c. Heavy duty.
      d. Pushbuttons:
         1) Contacts rated:
            a) NEMA Type A600.
         2) Furnish 1 spare normally open contact and normally closed contact with each switch.
         3) Equipment shutdown (ESD): Palm or mushroom-head type with self-latching feature. ESD device will remain in the actuated position until deliberately reset.
      e. Selector switches:
         1) Contacts rated:
            a) NEMA Type A600.
            b) Knob type.
         2) Furnish 1 spare normally open contact and normally closed contact with each switch.
         3) Provisions for locking in the OFF position where lockout provisions are indicated on the Drawings.
      f. Pilot lights:
         1) Type:
            a) LED for interior installations.
         2) Push to test.
         3) Lamp color:
            a) On/Running/Start/Closed: Red.
            b) Off/Stop/Opened: Green.
            c) Power/Auto: White.
            d) Alarm: Amber.
   2. Indoor and outdoor areas:
      a. NEMA Type 4/13.
      b. Manufacturers: One of the following or equal:
         1) Allen-Bradley, Type 800T.
         2) General Electric, Type CR104P.
         3) IDEC, TWND Series.
         4) Schneider Electric, Class 9001, Type K.
   3. Corrosive areas:
      a. NEMA Type 4X.
      b. Corrosion resistant.
      c. Exterior parts of high-impact strength fiberglass-reinforced polyester or multiple-layer epoxy-coated zinc.
      d. Manufacturers: One of the following or equal:
         1) Allen-Bradley, Type 800H.

2) Cutler Hammer, Type E34.
3) IDEC, TWND Series.
4) Schneider Electric, Class 9001, Type SK.

4. Hazardous (classified) areas/Class I Division 2:
   a. NEMA Type 4X.
   b. Corrosion resistant.
   c. Exterior parts of high-impact strength fiberglass-reinforced polyester or multiple-layer epoxy-coated zinc:
      1) Contacts contained within a hermetically sealed chamber:
         a) Pushbuttons.
         b) Selector switches.
         c) Push-to-test contacts on pilot lights.
      2) UL listed and labeled for Class I Division 2 areas.
   d. Manufacturers: One of the following or equal:
      1) Allen-Bradley, Type 800H.
      2) Cutler Hammer, Type E34.

J. Signal isolators and converters:
   1. Signal interface modules shall be used on each circuit to isolate PLC analog input (AI) modules from the external field instruments and circuits. They may also be used for signal conversion, i.e., a voltage signal to a current signal (E to I).
   2. The end user's standard is that all hardwired PLC analog inputs are 4-20mA, and that isolators are used. These are typically, current to current convertors, however voltage to current converters are sometimes used when the field device provides a voltage signal. Analog input isolators shall be din rail mountable and grouped together within the panel. Circuits shall be designed such that the failure of one field device or isolator shall not cause multiple points to fail.
   3. Isolator linearity deviations shall be no greater than +/-0.02 percent of span, and shall be rated at no greater than +/- 0.02 percent deviation per degree Celsius throughout the specified interior temperature of the panel. Zero and span settings shall be adjustable for all signals isolators.
   4. Furnish signal isolators that provide complete isolation of input, output, and power input:
      a. Minimum isolation level: 1.0 kilovolts AC/50 hertz for at least 1 minute.
      b. Adjustable span and zero.
      c. Ambient temperature range: -4 degrees to 149 degrees Fahrenheit.
   5. Manufacturers: One of the following:
      a. Phoenix Contact, Mini Analog Pro.
      b. Acromag, 1500, 600T, 800T, Flat Pack, or ACR Series.
      c. Action Instruments, Q500 Series or Ultra SlimPakII.
      d. AGM Electronics, Model TA-4000.
      e. Moore Industries, MIT 4-Channel.

K. Relays:
   1. In PLC panels, provide interposing relays for signal isolation between external circuits and PLC discrete output (DO) modules.
   2. Provided relays for incoming AC power and power supply failure alarms. Note that the relays mentioned here do not include motor contactors installed in MCCs, Control relays in the control panels shall be relays within panels shall

be of the “ice cube” style, which plug onto din rail mountable sockets. All relays of this type shall contain an LED illuminator, which indicated when the relay is energized. Relays shall be segregated by type, i.e., all PLC outputs relays shall be grouped together. PLC output interposing relays shall use 24 VDC as the coil operating voltage. Other types of relays within the panel should use 24 VDC as much as reasonably possible; however, 120 VAC relays can be used for purposes such as incoming power failure alarming. Relays installed for similia purposes should be from the same manufacturer to provide uniform appearance, operating characteristics, and spare parts inventory.

3. Other types of relays may be used, based upon purposes and load requirements.
4. General:
    a. For all types of 120-VAC relays, provide surge protection across the coil of each relay.
    b. For all types of 24-VDC relays, provide a free-wheeling diode across the coil of each relay.
    c. For plug in type relays, provide a relay base from the same manufacturer as the relay manufacturer.
5. Control:
    a. Magnetic style.
    b. For use as standard control relay for motor and starter relay logic.
    c. NEMA ratings:
        1) 300 volts.
        2) 10 amps thermal continuous test current.
        3) 60 amps make.
        4) 6 amps break.
    d. Plug-in type.
    e. LED indication for energization status.
    f. Coil voltages: As required for the application.
    g. Minimum poles: DPDT.
    h. Touch-safe design: Connection terminals to be protected against accidental touch.
    i. Enclose each relay in a clear plastic heat and shock-resistant dust cover.
    j. Quantity and type of contact shall be as indicated on the Drawings or as needed for system compatibility.
    k. Relays with screw-type socket terminals.
    l. Provide additional relays when the following occurs:
        1) Number or type of contacts shown exceeds the contact capacity of the specified relays.
        2) Higher contact rating is required in order to interface with starter circuits or other equipment.
    m. DIN rail mounting on 35-millimeter rail.
    n. Ice-cube-type relays with retainer clips to secure relay in socket.
    o. Integrated label holder for device labeling.
    p. Manufacturers: One of the following or equal:
        1) Allen-Bradley: Type 700 HC. (This was selected for Westbrook and Solaire.)
        2) IDEC: R* Series (* = H, J, R, S, U).
        3) Potter and Brumfield: Type KRP or KUP.
        4) Square D: Type K.
6. Isolation:

a. Electromechanical style.
b. For use as an interposing relay for PLC based discrete I/O signals.
c. NEMA ratings:
    1) Switching voltage: 250 volts AC/DC.
    2) Limiting current: 6 amps continuous.
    3) Interrupt: 1,500 volt-amperes.
d. Plug-in type.
e. LED indication for energization status.
f. Coil voltages: As required for the application.
g. Minimum poles: SPDT.
h. Touch-safe design: Connection terminals to be protected against accidental touch.
i. Quantity and type of contact shall be as indicated on the Drawings or as needed for system compatibility.
j. Relays with screw-type socket terminals.
k. DIN rail mounting on 35-millimeter rail.
l. Integrated label holder for device labeling.
m. Manufacturers: One of the following or equal:
    1) Allen-Bradley, Type 700 HL TBR Series.
    2) Eaton, XR TBR Series.
    3) IDEC, RV8H Series.
    4) Phoenix Contact, PLC-INTERFACE Series.

7. Time delay:
    a. Provide time-delay relays to control contact transition time.
    b. Contact rating:
        1) 240 volts.
        2) 10 amps continuous.
        3) 3,600 volt-amperes make.
        4) 360 volt-amperes break.
    c. Coil voltage: As required for the application.
    d. Provide pneumatic or electronic type with on-delay, off-delay, and on/off-delay:
        1) For off-delay, use true power-off time-delay relays. Where the required timing range exceeds capability of the off-delay relay use, signal off-delay where power loss will not cause undesirable operation or pneumatic time-delay relays.
    e. Minimum contacts: DPDT.
    f. Units include adjustable dial with graduated scale covering the time range in each case.
    g. Minimum timing range: 0.1 second to 10 minutes, or as required for the application.
    h. Manufacturers: One of the following or equal:
        1) Allen-Bradley, Type 700-HR.
        2) IDEC, RTE Series.
        3) Tyco Electronics, Agastat 7000 Series (pneumatic).

L. Terminal blocks:
    1. DIN rail mounting on 35-millimeter rail.
    2. Rated for 15 amps at 600 volts.
    3. The end user has adopted Spring Cage Clamp type. Screw terminal type shall not be utilized unless approved by the end user.

4. Provide mechanism to prevent wire connection from loosening in environments where vibration is present. This mechanism shall not cause permanent deformation to the metal body.
5. Finger-safe protection for terminals for conductors.
6. Construction: Polyamide insulation material capable of withstanding temperature extremes from -40 degrees to 221 degrees Fahrenheit.
7. Terminals: Plainly identified to correspond with markings on the diagrams:
    a. Permanent machine-printed terminal identification.
8. Disconnect-type field signal conductor terminals with socket/screw for testing.
9. Identify terminals suitable for use with more than 1 conductor.
10. Position:
    a. So that the internal and external wiring does not cross.
    b. To provide unobstructed access to the terminals and their conductors.
11. Manufacturers: One of the following or equal:
    a. Allen-Bradley, 1492-L Series.
    b. Phoenix Contact, ST4 Series. (This was selected for Westbook and Solaire.)
12. Terminal block are grouped based upon purpose. The following terminal block designations shall be used to ensure uniformity in all panels.
    a. TB-1: 24 VDC Power (+) Bus.
    b. TB-2: 24 VDC Common (-) Bus.
    c. TB-3: 120 VAC L1 Bus.
    d. TB-4: 120 VAC L2 Bus.
    e. TB-5: Discrete Inputs.
    f. TB-6: Discrete Outputs.
    g. TB-7: Analog Inputs.
    h. TB-8: Analog Outputs.
    i. TB-9: 110VAC Instrument Source Bus.
    j. TB-10 UPS Loads.

M. DIN rail grounding:
1. Grounding terminal blocks used exclusively for bonding each DIN rail section to panel grounding busbar shall:
    a. Mount to DIN rail via grounding foot with mounting screw.
    b. Connect to the panel grounding busbar shall be via a green insulated conductor sized in accordance with NEC.
    c. Not be used for grounding signal cable shields.
2. Screw terminal type.
3. DIN rail mounting on 35-millimeter rail.
4. Provide mechanism to prevent wire connection from loosening in environments where vibration is present. This mechanism shall not cause permanent deformation to the metal body.
5. Finger-safe protection for terminals for conductors.
6. Terminals: Plainly identified to correspond with markings on the diagrams:
    a. Permanent machine-printed terminal identification.
7. Manufacturers: One of the following or equal:
    a. Allen-Bradley, 1492-LG Series.
    b. Phoenix Contact, ST 4-PE Series. (This was selected for Westbrook and Solaire.)

N. Wire duct:

1. Provide flame retardant plastic wiring duct, slotted with dust cover.
2. Type:
    a. Wide slot.
    b. Narrow slot.
    c. Round hole.
3. Manufacturers: One of the following or equal:
    a. ABB.
    b. Iboco.
    c. Panduit. (This was selected for Westbrook and Solaire.)
    d. Phoenix Contact.

O. DIN rail:
1. Perforated steel.
2. 35-mm width.
3. 15-mm deep.
4. Provide 2-inch offset using one of the following:
    a. Offset brackets.
    b. Preformed standoff DIN Rail Channel.

P. Surge protection devices (SPD):
1. 120 VAC control panel power SPD:
    a. Provide SPD for all panel 120 VAC power entrances:
        1) Non-faulting and non-interrupting design.
        2) Provide line to neutral and neutral to ground surge protection.
    b. Provide surge protection at secondary of main circuit breaker:
        1) Surge protection is not required for 120 VAC circuits that are only used for panel lights and receptacles.
        2) For panels receiving power at 480 VAC, provide surge protection on the 120 VAC control power transformer secondary.
    c. DIN rail mounting.
    d. Attach wiring to the SPD by means of a screw-type cable-clamping terminal block:
        1) Gastight connections.
        2) Visual status indication of MOV status on the input and output circuits.
        3) Dry contact rated for remote status indication.
    e. Approvals:
        1) Tested in accordance with IEC 61643-11.
        2) Tested in accordance with UL 1283.
        3) Tested in accordance with UL 1449.
        4) Surge protection minimum requirements: Withstand a minimum 10-kA test current of an 8/20 µs waveform in accordance with IEEE C62.41.1 Category C Area.
    f. Manufacturers: One of the following or equal:
        1) ASCO, Model 277.
        2) Phoenix Contact, Type SFP Filter. (This was selected for Westbrook and Solaire.)
        3) Rockwell, 4983-DC series.
        4) Sola HD, STFE Elite series.
2. 24 VDC control panel power SPD:
    a. Provide SPD for 24 VDC power circuits.

b. Provide surge protection at DC power supply output.
c. DIN rail mounting.
d. Attach wiring to the SPD by means of a screw-type cable clamping terminal block:
    1) Optical status indicator.
    2) Dry contact rated for remote status indication.
e. Approvals:
    1) Tested in accordance with IEC 61643-11.
f. Manufacturers: One of the following or equal:
    1) Field instruments that require auxiliary power:
        a) Emerson, Model 265 (SLAC) series.
        b) Phoenix Contact, Plugtrab PLT--SEC-T3-24-FM-UT. (This was selected for Westbrook and Solaire.)
    2) Loop powered field instruments:
        a) Emerson/Edco, Model SS65-036-2.

3. Panel mounted control, signal, and data line SPD:
    a. General:
        1) This section applies to SPD located in a control panel, field panel, network junction box, or marshalling panel.
        2) Approvals:
            a) Tested in accordance with IEC 61643-21.
            b) Tested in accordance with UL 497B.
        3) SPD shall consist of 2 parts:
            a) Base module:
                (1) DIN rail mounting.
                    (a) Grounded to DIN rail via mounting rail foot.
            b) Plug protection module:
                (1) Replacing a plug shall not require the removal of any wires nor interrupt the signal.
        4) Provide indirect shield ground style SPD unless otherwise noted.
        5) Provide ability to locally identify and indicate SPD health.
        6) SPD shall be provided with controller module with dry contact for remote status monitoring of SPD device health.
        7) SPD modules shall be compatible with signal, communication bus type, data type, or control power being protected.
        8) Provide dedicated SPD for each signal, communication bus type, or data line being protected.
    b. Manufacturers: One of the following or equal:
        1) Dehn, Blitzductor XTU Series.
        2) Phoenix Contact, Plugtrab PT-IQ Series. (This was selected for Westbrook and Solaire.)
4. Copper Ethernet SPD:
    a. Protects network equipment from lightning or other surge events.
    b. Suitable for Gigabit networks.
    c. Shielded RJ-45 ports.
    d. Compliant with PoE standards IEEE 802.3af and 802.3at.
    e. Nominal discharge surge current: 10 kA.
    f. Approvals:
        1) Tested in accordance with IEC 61643-21.
        2) Tested in accordance with UL 497B.
    g. Manufacturers: One of the following or equal:

1) Citel, MJ8-C6A.
2) Eaton/MTL, ZoneBarrier High Energy Ethernet.
3) Phoenix Contact, DT-LAN-CAT6+.
4) Weidmuller, VDATA CAT6.

5. Field device mounted SPD:
   a. Conduit entry mounting.
      1) Provide parallel or through wiring configurations as required by the application.
         a) Use parallel wiring configuration if there is an available cable gland at the device.
         b) Use through wiring configuration if there is no available cable gland at the device.
      2) Provide screw connections compatible with field device.
   b. NEMA 4X stainless steel material housing.
   c. Approvals:
      1) Tested in accordance with IEC 61643-21.
   d. 4-wire field device:
      1) Module shall provide simultaneous protection of signal cable, communication bus, or data line, and power supply line.
         a) Maximum continuous voltage:
            (1) DC:
               (a) Signal: 32 VDC.
               (b) Power supply: 255 VDC.
            (2) AC:
               (a) Signal: 22.6 VAC.
               (b) Power supply: 255 VAC.
      2) Manufacturers: The following; Engineer knows of no equal:
         a) Endress+Hauser, HAW569-CB2C.
   e. 2-wire or 3-wire field device:
      1) Module shall provide protection for the signal cable, communication bus or data line.
      2) Manufacturers: One of the following or equal:
         a) Eaton/MTL, TP Series.
         b) Endress+Hauser, HAW569 Series.
         c) Phoenix Contact, Surgetrab S-PT Series.

Q. Horns and beacons:
   1. Beacons/horn combination units:
      a. Manufacturers: One of the following or equal:
         1) Edwards, Multi-Status LED 108i with tone module.
         2) Federal Signals, AV1ST Strobe Combination Audible/Visual Signal.
      b. LED Colors: Red, Green, and Amber.
      c. Power: 120 VAC.
      d. Provide accessories such as pipe mount flange, pipe extensions, corner mount brackets, or wall mount brackets as needed.
      e. Horn rated 80 dB minimum at 10 feet.
   2. Dedicated beacon unit:
      a. Manufacturers: One of the following or equal:
         1) Allen-Bradley, 855 B *-* 10 Series.
         2) Edwards, 102 Series.
         3) Federal Signal Corp., Starfire Series.

3. Dedicated horn unit:
    a. Electromechanical:
        1) Manufacturers: One of the following or equal:
            a) Edwards, 878EX or 879EX Series.
            b) Federal Signal, 350 or 31X Series.
    b. Electronic:
        1) Manufacturers: One of the following or equal:
            a) Allen-Bradley, 855H or 855XH Series.
            b) Edwards, 5530M or 5533MD Series.
            c) Federal Signal, 300GCX or 300X Series.
    c. Rated for 80 dB minimum at 10 feet.

R. Power supplies:
1. Configure power supply system so that either the primary or backup supply can be removed, repaired or replaced, and returned to service without disrupting the system operation.
2. Convert 120 VAC to 24-volt DC or other DC voltages required or as required for the application.
3. Provide redundant backup 24 VDC power supply units to automatically supply the load upon failure of the primary supply.
4. Provide power supply arrangement that is configured with several modules to supply adequate power in the event of a single module failure in either a 1+1 or N+1 configuration as required:
    a. Provide automatic switchover upon module failure.
    b. Alarm contacts monitored by the PLC.
5. Provide protective isolation between power supply units either by means of Diodes, Diode Modules, MOSFET Modules, or use power supplies with built in redundancy. Power supplies with built in redundancy must actively isolate each power supply and be designed as such.
6. Sized to provide 40-percent excess rated capacity.
7. UL 508 listed to allow full-rated output without de-rating.
8. Provide fuse or short-circuit protection.
9. Provide a minimum of 1 set of dry contacts for each power supply configured to change state on failure for monitoring and signaling purposes.
10. Output regulation: Within 0.05 percent for a 10-percent line change or a 50-percent load change.
11. Operating temperature range: 32 degrees to 140 degrees Fahrenheit.
12. Touch-safe design: Connection terminals to be protected against accidental touch.
13. DIN rail mounting on 35-millimeter rail:
    a. Mount the power supply in the proper orientation as recommended by the manufacturer to ensure adequate thermal dispersion without derating the power supply.
14. Provide self-protecting power supplies with a means of limiting DC current in case of short circuit.
15. Manufacturers: One of the following or equal:
    a. Fully redundant:
        1) IDEC, PS5R Series:
        2) Phoenix Contact, Quint Power Supply with SFB technology.
            a) Phoenix Contact, Quint.
        3) PULS. (This was selected for Westbrook and Solaire.)

4) Sola.
b. Redundancy module:
1) Phoenix Contact, O-ring redundancy module. (This was selected for Westbrook and Solaire.)

S. Limit switches:
1. NEMA Type 4X.
2. AC contact rating 120 volts, 10 A.
3. DC contact rating 125 volts, 0.4 A.
4. Provide robust actuation mechanism not prone to degradation.
5. Provide complete actuator mechanism with required hardware.
6. Allows for contact opening even during contact weld condition.
7. UL approved.
8. Operating temperature range: 0 degrees to 230 degrees Fahrenheit).
9. Manufacturers: One of the following or equal:
a. ABB.
b. Allen-Bradley, 802 Series.
c. Eaton, E47, E49, E50.
d. Honeywell, HDLS Series.
e. Omron, D4 Series.

2.05 ACCESSORIES

A. Provide panels with an inside protective pocket to hold the panel drawings. Ship panels with 1 copy of accepted Shop Drawings, including, but not limited to, schematic diagram, connection diagram, and layout drawing of control wiring and components in a sealed plastic bag stored in the panel drawing pocket.

B. Provide a folding shelf for enclosures that contain programmable controllers. Shelf shall be mounted on the inside surface of the door, capable of supporting a laptop computer.

C. Provide nameplate to each panel as indicated on the Drawings:
1. As specified in Section 16075 - Identification for Electrical Systems on internal and external instruments and devices.
2. With the following markings that is plainly visible after installation:
a. Manufacturer’s name, trademark, or other descriptive marking by which the organization responsible for the panel can be identified.
b. Supply voltage, phase, frequency, and full-load current.
c. Power source or circuit ID.
d. Short-circuit current rating of the panel based on one of the following:
1) A listed and labeled assembly.
2) Established utilizing an approved method.

D. Lighting:
1. Provide 1 luminaire for each section, on the interior of the panel, spaced evenly along the top-front of the enclosure door opening(s):
a. Covered or guarded.
b. Provide On-Off door-activated switches where indicated on the Drawings.
c. 120-volt, single-phase, 15-amp style plug.
d. Provide 4,000 K, 900 lumens LED fixture.

1) Provide additional fixtures for every 36 inches of width.

E. Receptacles:
1. Provide 1 duplex receptacle located every 6 feet of enclosure width, spaced evenly along the back mounting panels.
2. GFCI, 120-volt, single-phase, 15-amp style plug.
3. Provide circuit breaker or fuse to limit receptacle draw to 5 amps.

F. Grounding:
1. Provide the following:
   a. Grounding strap between enclosure doors and the enclosure.
   b. Equipment grounding conductor terminals.
   c. Provide equipment grounding busbar with lugs for connection of equipment grounding wires.
   d. Bond multi-section panels together with an equipment grounding conductor or an equivalent grounding busbar.
2. Identify equipment grounding conductor terminals with the word “GROUND,” the letters “GND”, the letter “G”, or the color green.
3. Signal cable shields shall only be grounded at a single point in the loop. Unless otherwise noted, ground signal cable shields at control panel.
4. Ensure the continuity of the equipment grounding system by effective connections through conductors or structural members.
5. Design so that removing a device does not interrupt the continuity of the equipment-grounding circuit.
6. Provide an equipment-grounding terminal for each incoming power circuit, near the phase conductor terminal.
7. Size ground wires in accordance with NEC and UL Standards, unless noted otherwise.
8. Unless otherwise noted, connect exposed, noncurrent-carrying conductive parts, devices, and equipment to the equipment-grounding circuit.
9. Connect the door stud on the enclosures to an equipment-grounding terminal within the enclosure using an equipment-bonding jumper.
   a. Control panel ground lugs and ground bar shall be copper mechanical or compression connection type. Aluminum connectors or lugs are not acceptable for use with copper conductors.

G. Sunshades:
1. Provide panel-mounted sunshades for outdoor installations.
2. Provide thermally insulated standoff.
3. Provide deburred cutouts for access to exterior panel accessories.
4. Material of sunshade and mounting hardware shall match enclosure.

2.06 FINISHES

A. Finishes:
1. Metallic (non-stainless):
   a. Metal surfaces of panels shall be prepared by chemical cleaning and mechanical abrasion in accordance with the finish manufacturer’s recommendations to achieve a smooth, well-finished surface.

b. Scratches or blemishes shall be filled before finishing. 1 coat of zinc phosphate shall be applied according to the manufacturer's recommended dry-film thickness and allowed to dry before applying the finish coat.
c. Finish coat shall be a baked polyester-urethane powder, aliphatic air-dry polyurethane, or epoxy enamel to meet NEMA rating specified application.
d. Exterior of enclosures located outdoors shall be UV-resistant polyester powder coating. Total dry film thickness shall be 3 mils, minimum.

2. Stainless steel:
   a. Stainless enclosures shall be provided with a Number 4 brushed finish - not painted.

B. Colors:
1. Exterior color of panels mounted indoors shall be manufacturer's standard light gray.
2. Exterior of panels mounted outdoors shall be manufacturer's standard white.
3. Panel interiors shall be manufacturer's standard white.

PART 3 EXECUTION

3.01 PREPARATION

A. Equipment support and anchoring to structures:
1. As specified in Section 01850 - Design Criteria, including, but not limited to:
   a. Anchor bolt layout.
   b. Equipment templates.
   c. Anchor installation.

3.02 INSTALLATION

A. Install enclosures so that their surfaces are plumb and level within 1/8-inch over the entire surface of the panel: Anchor securely to wall and structural supports at each corner, minimum. Direct attachment to drywall is not permitted.

B. Install the equipment in accordance with the accepted installation instructions and anchorage details.

C. Provide floor stand kits for wall-mounted enclosures larger than 48-inches high.

D. Provide concrete housekeeping pads for freestanding enclosures.
1. Refer to the structural typical details.

E. Install gasket and sealing material under panels with floor slab cutouts for conduit:
1. Undercoat floor-mounted panels.

F. Provide a full-size equipment-grounding conductor in accordance with NEC included with the power feeder. Terminate to the incoming power circuit-grounding terminal.

G. Holes for field conduits, etc., shall be cut in the field. No additional holes, factory cut holes, or hole closers allowed. Incorrect holes, additional holes, or miscut holes shall require that the entire enclosure be replaced.

H. Protect wiring from sharp edges and corners.

I. Control panels that are adjacent to motor control centers shall be fully wired to the motor control centers using wireways integral to the motor control center or additional conduits as needed. These interconnections are not shown or reflected on the Conduit Schedule but shall be shown on the loop drawings prepared by the Contractor.

J. Provide individually fused analog input module points with blown-fuse indicator lights, mounted external of the module on the output terminal strip.

K. Side panels:
   1. Side panels shall be kept free of control equipment and devices. Any deviation must be sent to the Engineer in writing asking for a deviation.

3.03 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

END OF SECTION

SECTION 17712

CONTROL SYSTEMS: UNINTERRUPTIBLE POWER SUPPLIES 10 KVA AND BELOW

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Single-phase double conversion uninterruptible power supplies rated 10 kVA and below.

1.02 REFERENCES

A. As specified in Sections 16050 - Common Work Results for Electrical and 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Standards:
   1. Federal Communications Commission (FCC):
      a. FCC Part 15:
         1) Class A.
         2) Class B.
      b. C62.41 - IEEE Recommended Practice for Surge Voltages in Low-Voltage AC Power Circuits.
   2. National Electrical Manufacturers Association (NEMA):
      a. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).
   3. Underwriters Laboratories, Inc. (UL):
      a. UL 1778 - Standard for Uninterruptible Power Supply Systems and Equipment.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Critical load: Load supplied by the UPS.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Product data:
   1. Manufacturer and model number.
   2. Catalog data.
   3. Dimensions:
      a. Height.
      b. Width.
      c. Depth.

d. Weight.

4. Ratings:
   a. Input voltage.
   b. Output voltage.
   c. Input/output power factor.
   d. Efficiency.
   e. Harmonic distortion.
   f. Runtime.
5. Noise specifications.
6. Heat dissipation.
7. Warranties and maintenance contracts:
   a. Documentation to demonstrate conformance to Specifications noted in this Section.
   b. Descriptive package of offerings of preventative and full-service maintenance contracts for both UPS system and batteries.
   c. Extended warranty options available.
8. Communications requirements such as software, cards, etc.
9. Alarms and status available for remote monitoring and system health.

C. Shop Drawings:
1. Power distribution block diagrams.
2. Front and rear views of equipment enclosures:
   a. Front elevation, including control and indicating devices.
3. Support points and weight of overall equipment.
4. Schematic and control wiring diagrams, including, but not limited to:
   a. Line and load terminals.
   b. Alarm and status terminals.
   c. Manual maintenance bypass switch terminals.
   d. External battery or step-down/step-up transformers, if any.
   e. External wiring requirements for communication signals.
5. Switching and overcurrent protective devices.

D. Calculations:
1. Include derating for temperature and elevation as necessary.
2. UPS sizing computation:
   a. Apply safety factors as specified in this Section.
   b. Provide itemized list of critical loads, including individual VA and watt ratings.
3. Battery time calculation based on specified runtime for total load with the safety factor multiplied to it. Table/graph for back-up time calculation.
4. Load calculation shall include power for all shown in the power distribution drawing, which includes, but is not limited to, PLC power supply, field instruments (120 VAC and 24 VDC), instrument power, Ethernet switches, and I/O modules. Refer to network drawings for additional information and notes.
5. Total battery recharge time as a function of capacity utilized.

E. Design data:
1. Design mounting and anchorage for seismic design criteria specified in Section 01850 - Design Criteria:
   a. Provide seismic kits as required to meet design criteria.

F. Record documents:
   1. Provide record drawings of installed unit(s), including layout and wiring.

G. Manufacturer's field reports.

H. Operation and maintenance manuals:
   1. As specified in Section 01782 - Operation and Maintenance Manuals.
   2. System instruction manuals that describe troubleshooting, installation, operations, and safety procedures.
   3. Recommendations for maintenance procedures and intervals.
   4. Battery data/replacement information.
   5. Parts list.

1.05 QUALITY ASSURANCE

A. Manufacturer qualifications:
   1. A minimum of 10 years' experience in the design, manufacture, and testing of solid-state UPS systems.
   2. ISO 9001 certified.

B. Regulatory requirements for complete UPS system:
   1. UL listed in accordance with UL 1778.
   2. IEEE C62.41, Category B.
   3. FCC 15:
      a. Greater than 2,000 VA - Class A.
      b. Less than 2,000 VA - Class B.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide complete, factory-assembled, wired, and tested, true on-line double conversion UPS equipment, including, but not limited to, rectifier, DC bus, inverter, battery charger, batteries, automatic bypass, and ancillary components as specified in this Section.

B. The Uninterruptable Power Supplies (UPS) shall be used to power critical panel components, PLCs, communication equipment, etc. In general all circuits within the

panel, with the exception of convenience outlets, temperature control systems, and panel fluorescent lighting should be powered from the UPS.

C. UPS's location in outdoor enclosures shall be rated to operate in temperatures up to 40 degrees Celsius, regardless whether the enclosure in air conditioned or not.

D. UOS's shall be sized such that 120 VAC power is maintained within the panel for a minimum of 30 minutes after loss of source power. The UPS shall be provided with outputs wired to the local PLC to monitor: UPS online, low battery, UPS in bypass mode, and UPS fail alarms. UPSs shall be provided with maintenance bypass switches to allow maintenance on the UPS without disturbing panel power.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Critical loads as indicated on the Drawings.

2.03 MANUFACTURERS

A. Double conversion true online UPS system:
   1. One of the following or equal:
      a. Eaton, 9PX Series.
      b. Vertiv, Liebert GXT5 Series.

2.04 MANUFACTURED UNITS

A. Design requirements:
   1. Minimum VA rating of the UPS shall be greater than or equal to the safety factor (as indicated in the UPS schedule) times the connected load or 700 VA, whichever is greater.
   2. UPS system input:
      a. Voltage:
         1) Less than or equal to 3 kVA UPS:
            a) 120 VAC within 3 percent, single-phase, 2-wire plus ground (L1, N, G).
         2) Greater than 3 kVA UPS:
            a) 208 VAC within 5 percent, single-phase, 3-wire plus ground (L1, L2, N, G).
         3) Frequency: 60 hertz:
            a) Auto sensing on initial power up.
            b) User configurable.
      b. Current harmonic distortion (THDi%):
         1) Less than or equal to 5 percent at full load operation.
      c. Power factor:
         1) Greater than or equal to 0.99 lagging at rated load.
      d. Connections:
         1) As specified and as indicated on the Drawings.
   3. Mounting:
      a. Configurable for rack and tower mounting applications.
      b. Provide manufacturer's standard mounting kit as required by the application.

4. Cooling:
    a. UPS shall have integral forced air cooling.
5. Output connections:
    a. Receptacles:
        1) Less than or equal to 3 kVA UPS:
            a) Provide a minimum of four NEMA Type 5-15R or Type 5-20R receptacles.
            b) Provide at least one NEMA Type L5-30R receptacle.
        2) Greater than 3 kVA UPS:
            a) Provide a minimum of four NEMA Type 5-20R receptacles.
            b) Provide at least one NEMA Type L14-30R receptacle.
        3) Provide hardwired connections as required and as indicated on the Drawings.

B. Environmental requirements:
1. Operating ambient temperature:
    a. UPS module: 50 degrees Fahrenheit to 104 degrees Fahrenheit (10 degrees Celsius to 40 degrees Celsius).
    b. Battery: 68 degrees Fahrenheit to 86 degrees Fahrenheit (20 degrees Celsius to 30 degrees Celsius).
2. Operating altitude:
    a. Project Site conditions as specified in Section 01850 - Design Criteria.
3. Surge protection:
    a. UPS shall be accordance with IEEE C62.41, Category B.
4. Audible noise:
    a. Less than 46 dB at 1 meter.

C. Communications:
1. Relay outputs:
    a. Provide low voltage signals for On Battery, Low Battery, Any Mode Shutdown, and Battery Mode Shutdown.
    b. Connections on a terminal block on the rear panel.
2. Serial:
    a. RS-232 serial connection.
3. USB:
    a. Provide a USB connection that is HID compliant for network connection.

2.05 ACCESSORIES

A. External maintenance bypass:
1. Manufacturers: One of the following or equal:
    a. Eaton, HotSwap MBP Series.
    b. Vertiv, Liebert Micropod Series.
2. Properties:
    a. Provides isolation of the UPS for maintenance purposes.
    b. Provide maintenance bypass from the same manufacturer as the UPS manufacturer.
    c. UL 1778 listed.
    d. Provide manufacturer’s recommended mounting kit as required by the application.

e. Make-before-break design so that UPS can be isolated from the critical loads by placing these loads on source power without interruption of operation.
f. Utility and UPS status indications.
g. Rated to carry the full input current of the UPS.
h. Connections to match UPS connections and as indicated on the Drawings.
i. Supply necessary input/output cords and receptacles for connections with power source and UPS.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install equipment in accordance with the manufacturer's instructions.

B. Do not utilize extension cords, adapters, or other electrical connectors for UPS input.

3.02 FIELD QUALITY CONTROL

A. Perform inspections and test procedures before UPS startup:
1. Inspect equipment for signs of damage.
2. Verify installation as indicated on the Drawings and specified in the Specifications.
3. Inspect cabinets for foreign objects.
4. Verify neutral and ground conductors are properly sized and terminated.
5. Inspect battery cases.
6. Inspect batteries for proper polarity.
7. Check power and control wiring for tightness.
8. Check terminal connectors for tightness.
9. Ensure connection and voltage of the battery string(s).

3.03 SCHEDULES

Tag	Minimum Runtime	Input Voltage/ Connection	Safety Factor	Notes
WD31-UPSX-30101	30min	120VAC/5-15P	1.5	Control Panel WD31-PLCP-30101
WD31-UPSX-36101	30min	120VAC/5-15P	1.5	Control Panel WD31-PLCP-36101

END OF SECTION

SECTION 17720

CONTROL SYSTEMS: PROGRAMMABLE LOGIC CONTROLLERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Programmable logic controller (PLC) based control systems hardware.
   2. Development software to be used with the specified PLC hardware.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Abbreviations:
   1. CPU: Central processing unit.
   2. I/O: Input/Output.

C. Standards:
   1. Institute of Electrical and Electronics Engineers (IEEE).

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Application software: Software that is programmed specifically for the Project.
   2. Development operating software: Software provided by the PLC manufacturer for use in programming the PLC.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures and 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Product data:
   1. CPU:
      a. Processor type.
      b. Processor speed.
      c. Memory.
      d. Internal processor battery backup time.
   2. I/O modules:
      a. Type.
      b. Standard wiring diagram.
   3. Programming languages.
   4. Operating system requirements.

C. Calculations:
   1. Calculations or documented estimate to verify that memory requirements of this Section are met, including spare requirements. If possible, use the PLC manufacturer's calculation or estimating worksheet.
   2. Calculations to verify that spare I/O requirements of this Section are met.
   3. Calculations to verify that PLC power supply requirements of this Section are met.

D. Control logic:
   1. Fully annotated copy of programmed PLC logic.
   2. Cross-referenced index of PLC registers or points.

E. Provide application software for the specific Project process requirements:
   1. Fully annotated copy of programmed PLC logic in its native format.
   2. Cross-referenced index of PLC registers or points.

1.05 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Provide PLC hardware manufactured at facilities certified to the quality standards of ISO 9001.

1.06 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 WARRANTY

A. As specified in Section 01783 - Warranties and Bonds.

1.09 MAINTENANCE

A. Furnish the following if part of the original design:
   1. CPU: 1 spare for each type of CPU in the system.
   2. I/O cards: 3 spares for each type of I/O card in the system.
   3. Power supplies: 2 spares for every power supply in the system.
   4. Network/communications cards: 1 spare for every network or communications card in the system.
   5. Communication cable: 1 spare for each type of cable used in the system.

B. Installed spare requirements:
   1. I/O points:
      a. Provide total of 25 percent spare I/O capacity for each type of I/O at every PLC/RIO rack using the following calculation:

$$\left(1 - \frac{\text{UTILIZED IO POINT COUNT}}{\text{TOTAL IO POINT COUNT}}\right) * 100 = \%\text{SPARE}$$

      b. Wire spare I/O points to field terminal blocks in the same enclosure the PLC/RIO resides in.
   2. PLC backplane capacity:
      a. Provide 25 percent or 3 spare backplane slots, whichever is greater, in racks containing I/O.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide PLC hardware as specified in this Section.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Provide PLC system components by a single manufacturer:
   1. Third-party communication modules may be used only for communication or network media functions not provided by the PLC manufacturer.

B. Use PLC manufacturer approved hardware, such as cable, mounting hardware, connectors, enclosures, racks, communication cable, splitters, terminators, and taps.

C. PLC hardware, CPUs, I/O devices, and communication devices shall be new, free from defects, and produced by manufacturers regularly engaged in the manufacture of these products.

D. Wherever possible, use the same model of each PLC module type throughout the Project.

2.03 MANUFACTURERS

A. The following, no equal:
   1. Modicon:
      a. M340, BMXP3420 Series.

2.04 MANUFACTURED UNITS

A. Programmable logic controller:
   1. PLC power supply:
      a. Model: BMXCPS – Standalone.
      b. Input: 120 VAC.
      c. Sized to power modules mounted in that housing including an average module load for any empty housing slots plus 50 percent above that total.

2. PLC input/output, I/O modules:
    a. Discrete input modules:
        1) Model: BMX-DDI-1602.
        2) 24VDC.
        3) Isolated channels.
        4) 20 pin terminal block.
    b. Discrete output modules:
        1) Model: BMX-DRA-1605.
        2) Relay.
        3) 16 relay channels.
        4) 20 pin terminal block.
    c. Analog input modules:
        1) Model: BMX-AMI-0810.
        2) Signal type: Provide 4-20 mA for most applications; other levels are acceptable to interface to vendor control panels.
        3) Analog-to-digital conversion: Minimum 12-bit precision with the digital result entered into the processor.
        4) The analog-to-digital conversion updated with each scan of the processor.
        5) Individually isolated each input.
        6) Coordinate the size of the external fuse with the protection located on the module, so that the external fuse opens first under a fault condition.
    d. Analog output modules:
        1) Model: BMX-AMO-0410.
        2) Signal type: Provide 4-20 mA for most applications; other levels are acceptable to interface to vendor control panels.
        3) Individual isolated output points each rated for loads of up to 1,000 ohms.
3. Communications modules:
    a. Network communications modules:
        1) General:
            a) Install communications modules in the PLC backplane external to the PLC housing.
        2) Modbus:
            a) Model: BMX-NOE-01x0.
            b) Ports: 1 RJ-45.
            c) Communication rate: 100 Mbit/s.
        3) Ethernet:
            a) Model: BMX-NOC-0401.
            b) Ports: 4 RJ45.
        4) Provide all network taps, connectors, termination resistors, drop cables, and trunk cables necessary for remote I/O communications.
4. PLC backplane housing:
    a. Model: BMEXBP – Dual Ethernet and X bus rack.
    b. Mount the PLC power supply, CPU, communications module, and I/O modules in a suitable standard PLC backplane or housing.
    c. Provide spare slots in each PLC and RIO location in accordance with the requirements of this Section.
    d. Provide a blank slot filler module for each spare slot.

B. PLC programming software:
   1. PLC software shall be Modicon, Control Expert v14.1.

PART 3 EXECUTION

3.01 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Utilize personnel to accomplish or supervise the physical installation of all elements, components, accessories, or assemblies:
   1. Employ installers who are skilled and experienced in the installation and connection of all elements, components, accessories, and assemblies.

C. All components of the control system, including data network cables, are the installation responsibility of the ICSC unless specifically noted otherwise.

D. Control system logic program shall reside at the PLC level.

E. Use the tag and loop identifications found on the P&IDs for all tags used and/or assigned as part of the application software work provided by the ICSC.

3.02 COMMISSIONING

A. As specified in Section 01756 - Commissioning.

B. Owner Training:
   1. As specified in Section 17950 - Commissioning for Instrumentation and Controls.

END OF SECTION

SECTION 17730

CONTROL SYSTEMS: PCS COMPUTER EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. PC-based PCS system hardware, including:
      a. Operator workstations (thin clients).
      b. Industrial LCD monitors.

1.02 REFERENCES

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.03 DEFINITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Specific definitions:
   1. CAL: Client access license.
   2. RAID: Redundant array of independent disks.
   3. SNMP: Simple network management protocol.

1.04 SYSTEM DESCRIPTION

A. Provide all PCS computer equipment identified in the Contract Documents.

B. Miscellaneous requirements:

C. All Material used in satisfying the equipment requirements shall be new and unused and must be actively marketed by the original equipment manufacturer for new applications at the time of the factory demonstration test. The Contractor shall not use equipment destined for installation or spare parts for the Owner’s system for any reason other than development and testing of the system.

1.05 SUBMITTALS

A. Furnish Submittals as specified in Sections 01330 - Submittal Procedures and 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.06 QUALITY ASSURANCE

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.07 DELIVERY, STORAGE, AND HANDLING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.08 PROJECT OR SITE CONDITIONS

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.09 WARRANTY

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Workstations (Thin Client):
   1. Manufacturers: the following no equal:
      a. Dell, Wyse 5070.
   2. General:
      a. General purpose, PC-architecture thin computers. Operating system shall be Ubuntu 20.04 operating system as coordinated with the Owner.
      b. Thin workstation.
      c. Form factor: Mini.
      d. Processor: Pentium Silver J5005.
      e. Memory: 16GB eMMC.
      f. Network card: 10/100/1000-Base-TX.
      g. Ports:
         1) 4 USB 2.0.
         2) 1 RJ-45.
         3) 2 DVI or DisplayPort.
      h. Mouse:
         1) Optical.
         2) Wheel-type, 3-button (count wheel click as one button).
         3) Wired.
         4) A touchpad mouse is NOT acceptable.
      i. Keyboard: Windows 104-key.
         1) Full-size.
         2) A touch pad is NOT acceptable.
      j. Color: Black.
      k. Folding vertical mounted keyboard and mouse rack.
         1) Manufacturers (or equal):
            a) Rack Solutions: Model 104-4846.

B. LED monitor:
   1. LED panel mounted monitors shall meet the following minimum requirements:
      a. LED manufacturers: the following no equal:
         1) Hope Industrial Systems, HISML23.8-STTC.
      b. Viewing area: 23.8 inches.
      c. Aspect ratio: 16:9.
      d. Resolution: 1920 x 1080, 16.7 million colors.
      e. Interface:
         1) Digital Visual Interface connectors (DVI-I).
         2) DisplayPort.

PART 3 EXECUTION

3.01 INSTALLATION

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. General:
   1. Install equipment and cabling so that, in the event of an earthquake, seismic movement will not damage cables. In particular, provide appropriate slack in cables.

C. Each device with a unique IP address shall be individually labeled with its IP address. The labeling must be printed; Handwritten labels will not be accepted.

3.02 FIELD QUALITY CONTROL

A. As specified in Section17950 - Commissioning for Instrumentation and Controls.

3.03 CLEANING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

3.04 DEMONSTRATION AND TRAINING

A. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

B. Training:
   1. As specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

END OF SECTION

SECTION 17733

CONTROL SYSTEMS: NETWORK MATERIALS AND EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Materials and equipment used in process control and LAN networks, including:
      a. Network switches.
      b. Patch panels and other data network hardware.
      c. Related accessories.
